

The Economist,

WEEKLY COMMERCIAL TIMES

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

ON Monday, the last day of the half-year, the market was still busy borrowing at the Bank, so that the total debt there must have reached about the same large figure as twelve months ago. From Tuesday onward it was being paid off, but the surplus of money was such that loans were to be had each afternoon at 1 per cent. The discount rate, however, was firm throughout, owing to the growing belief that rates are too low, and that a rise in Bank rate

or deposit rates is due this month. The supply of commercial bills did not justify the rise, for it was less than before, but the genuine strength of the market's view was shown by the fact that the rate did not weaken when "No change" was announced on Thursday.

	July 4, 1924.	June 27, 1924.	June 20, 1924.	June 13, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses' Notices	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills	3½	3½	2½	2½	..

Thursday's Bank return showed increases of £4,400 in the gold stock and of £1,291,300 in the note circulation, the Reserve being thus £1,286,900 lower. Government and market borrowings were reflected in increases of £6,635,000 and £14,263,400 in Government and Other securities respectively, and deposits were nearly £20 millions higher, Public declining by nearly £8 millions, while Other rose by £27½ millions. Currency notes outstanding increased this week by £1,799,700 to £292,115,500, which includes £1,384,300 for notes called in but not yet cancelled. The fiduciary issue is £241,281,600, or £6,909,300 below the maximum.

THE STOCK MARKETS.

Money market developments and fears of a rise in Bank rate caused uneasiness in the Stock Markets, and declines in the gilt-edged market were reflected in other departments. The announcement of "no change" had little effect, the Stock Exchange persisting in the belief that it was merely a postponement, and that a rise in Bank rate is imminent. In the foreign market there was some gambling in German Threes, following the sharp rise in Berlin, and the speedy closing of the Hungarian Loan lists caused a rise in Austrian Sixes. Brazilian bonds have lost much of their recent rise. Home Railway stocks have been heavy, but the Underground issues have shown some resistance. One or two rubber shares have improved, and tea shares show signs of a return to favour, while oil shares are better all round. There are a few good features in the industrial market, but mines are on the whole neglected.

THE COMMODITY MARKETS.

Most of the commodity markets exhibit weak features. The slump in raw cotton rates towards the end of the week has had an unsettling effect upon trade. The fears expressed in some quarters that wool prices at the London auctions this week would show a serious decline have not been realised; the decline, as compared with prices ruling in May, is not surprising in view of the quiet state of trade in the manufacturing centres. The Cardiff coal market is depressed, and in the pig-iron market prices are weaker. The steel trade is in an unfavourable condition. Tin was in demand at first, but prices subsequently weakened. Copper followed on similar lines. Vegetable oil and oilseed quotations lack stability. Wheat is firm. The position in the hide market is at least steady. The general tone of the sugar market remains quiet. Competition was active at the Indian tea auction. Rubber was firmer. Further details and prices will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

The foreign exchange market has again had a quiet week. The chief subject of interest has been the further rise in the Paris rate during the last few days. The rate of 81.80 which ruled last Friday was maintained more or less until Tuesday, when it fell to 84, owing, it was said, to large French purchases of dollars for the purpose of meeting the maturing Japanese loan to France of £2,500,000. There was a slight recovery during the next day, but the publication of the Bank of France report on Thursday, showing an increase of 450 million francs in the note circulation and 100 million francs in advances to the State, brought about a further lack of confidence, so that yesterday morning the quotation was 85.40. It should, however, be noted in this connection that these half-yearly increases in the note issue and advances to

the State are considerably smaller than was the case last year. Brussels has followed the same course, rising from 93.85 on 27th to 95.25 on the 1st and 96.85 yesterday morning. Forward quotations are slightly narrower, at 27 centimes per month above spot in Paris and 5 centimes in Brussels. The New York rate showed some improvement over the week-end, touching 4.33½ at one time on Tuesday. Since then, however, there has been a slight reaction, and the rate yesterday was 4.32½, as against 4.32½ a week ago. Forward rates for one month are now ½ cent below, while for longer periods the rates are approximately at par. Italy has more or less followed the movement of the franc, and after a steady rise, with a slight reaction on Wednesday, now stands at 101½, as against 100½ a week ago. Amsterdam has shown considerable minor fluctuations, and from 11.50½ on 27th, was quoted yesterday at 11.49½. Switzerland has also fluctuated considerably, but has moved against us on balance from 24.40 to 24.30. In Madrid the reports of fresh trouble in Morocco has had an adverse effect on the rate, which rose from 32.21 to 32.87 during the week. In Northern Europe, Stockholm has not varied greatly from 16.31, but Christiania has risen from 32 to 32.29. Copenhagen has suffered from unfavourable trade returns and rumours of fresh loans, and the rate has risen sharply, from 26.10 to 27.38. Helsingfors has recovered slightly, from 173 to 172½, while Warsaw and Riga are steady round 22.50. In Central Europe Berlin continues at 18½ billion and Vienna at 307,500. With regard to Budapest, the loan had been so long anticipated that its actual issue has had little effect on the rate, which remains at 350,000. Prague is slightly weaker at 147, and Bucharest 1,085. This latter movement is attributable to fears regarding the terms of the new mining law, but the latest advices are more reassuring on this point. The rupee is ½d weaker at 1s 4 31-32d, but the yen is steady at 1s 11½d. There is little to report in the silver market, where prices have not shown much variation. Such demand as there has been came from the Continent, but it was rather the absence of offerings which maintained prices. Hongkong, after touching 2s 4½d, is once more 2s 4½d, while Shanghai, after remaining steady at 3s 3½d during the week, weakened to 3s 3½d yesterday morning, and Singapore, after a similar movement, stood at 2s 3 31-32d. In South America, Rio has reacted from 6 3-32d to 6d, on the publication of the report of the Financial Mission. Buenos Ayres has been steady round 41d, and Monte Video round 43d. In Valparaiso, where there has been little dealing owing to holidays, the peso has depreciated from 41.30 to 42.50.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the nine days ended June 30th:—

EXPENDITURE.		(000's omitted.)		REVENUE.	
Supply Services	8,725	From Revenue	11,779		
Interest, &c., on Debt	5,786	Amount borrowed	5,79		
Sinking Fund	1,945				
Added to Exchequer Balances ..	189				
Sundries	905				
	15,530				15,530

Revenue amounted to £11,787,000 during the nine days ended June 30th. Customs yielded £2,440,000 and Excise £935,000. Estate, &c., duties brought in £2,300,000, Property and Income-tax yielded £2,433,000 and Super-tax £930,000. The nine days' operations increased the National Debt by £3,743,300, and caused the following changes:—

EXPENDITURE.		(000's omitted.)		REVENUE.	
Bank of England Advances ..	+ 12,250	National Savings Certificates ..	1,114		
Public Debt Advances	+ 4,086	Treasury Bills	1,114		
Treasury Bonds	+ 425				
Sundries	+ 691				
	+ 17,452				15,530

The floating debt was increased by £2,796,000 to £798,301,500.

FINANCIAL YEAR, 1924-1925 (April 1 to June 30).

EXPENDITURE.		REVENUE.	
Total Expenditure ..	215,090,464	Raised by Revenue ..	176,231,39
		Decrease in Balances ..	3,441,34
		Amount borrowed ..	35,417,72
Total	215,090,464	Total	215,090,464

ESTIMATES FOR YEAR 1924-25.

EXPENDITURE.		REVENUE.	
Ordinary Expenditure ..	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure ..	3,178,000	Special Receipts ..	30,000,000
Total	790,026,000	Total	794,050,000

THE WEEK IN PARLIAMENT.

MONDAY, JUNE 30TH.—*Lords*: Debate on Liquor Control Bill. *Commons*: Finance Bill, Committee stage. Government defeat on the Entertainment Tax.

TUESDAY, JULY 1ST.—*Lords*: Church of Scotland Bill debated War Charges (Validity) No. 2 Bill rejected. Imperial Institute Bill amended. *Commons*: Second reading of Public Health (Scotland) Bill, and Old Age Pensions Bill. Third reading of County Courts Bill. Telephone money resolution passed.

WEDNESDAY, JULY 2ND.—*Lords*: Second reading of Reorganisation of Offices (Scotland) Bill. Debate on the Diocese of Winchester adjourned. Palestine Loan discussed. *Commons*: Bill dealing with M.P.'s subscriptions introduced and read a first time. Finance Bill Committee stage, income-tax debated.

THURSDAY, JULY 3RD.—*Lords*: Second reading of Seditious and Blasphemous Teaching to Children Bill. *Commons*: Scottish Estimates.

FRIDAY, JULY 4TH.—*Commons*: Third reading of Summary Jurisdiction (Separation and Maintenance) Bill.

Company Meetings of the Week.—On later pages of this issue will be found reports of the meetings of the following companies:—National Bank of New Zealand, British Empire Trust, Bank Holdings, Ohlsson's Cape Breweries, Bisichi Tin Company (Nigeria), and Lobitos Oilfields. The chairman at the meeting of the National Bank of New Zealand reported a prosperous year in the Dominion. At the meeting of Bisichi Tin Company, the chairman, in reporting a large increase in working profits, gave good prospects for an interim dividend in the autumn.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

PROGRESS AT LAST.

ONCE again Europe approaches in the next few weeks a crisis in her fate. But on this occasion the omens are more favourable than at any time since she was overwhelmed in the Great Catastrophe. When the Dawes report was issued the world ventured timorously to hope again; after the French elections expectations began to rise. Since M. Herriot came into power two things have happened which make us think that our optimism is well grounded, and that the malignant fate that has hitherto defeated all efforts to secure peace is at last to be overcome by a conscious and determined effort of the nations. The first step was the amnesty to those expelled from the occupied areas. This was an act of courage and great statesmanship which showed that M. Herriot meant business. Observers tell us that nothing is changed in the Ruhr, there are no joybells, no one knows where to house the returning men whose homes have been occupied by others, and there is still a dull feeling of scepticism bred of shattered moral. But acts speak for themselves. Germany knows that a fresh chapter has opened; a new spirit is abroad, and a new method at work which calls for a fresh response on her part. The result is to be seen in the German reply to the Allies accepting a fresh armament inspection. The reply admits that certain breaches of the treaty exist in respect of personnel, but claims—rightly, we believe—that no artillery has been made in Germany since the armistice. The note is full of excuses and verbiage, and there are those who regard its

pacifist phrases as hypocrisy. But we prefer the simpler, and we believe truer, explanation that it is the natural reply to the first generously worded communication Germany has received from the Allied Powers.

But though "well begun is half done," we should be foolish to imagine that all is now plain sailing. On the contrary, there are many and scarcely perceived difficulties in Germany, in France, and in England. Let us begin with the problems of M. Herriot. Frankly the French Premier's stock has already appreciably fallen since the morrow of his victory through mistakes due to over-confidence, a tendency to talk too freely, and inexperience of diplomacy. But France wishes him well. No one can visit France to-day without realising that on one point there is almost national unanimity, and that is the desire to reach an understanding with Great Britain. One of the underlying currents that caused the turnover of May was the feeling that whatever one might think of his policy, M. Poincaré could not talk with England. This is an attitude full of hope; but it is one which we need to meet with wisdom and understanding; for it means that if M. Herriot fails there may be a most dangerous reaction in France. If two men so fitted by temperament and policy as our present Premiers cannot find a basis of common action, then the hope of co-operation is vain, and France must rely on her own right arm. But M. Herriot will be given his chance, and we believe that when he comes to London he will carry with him the sincere good wishes of many of his party opponents.

There are, however, difficulties. Some of these are technical. For example, the Organising Committee charged with the task of preparing a Bill for the mortgage on German industry has had to be reconstructed, and M. Wallenberg, of Sweden, brought in as a mediator. No one with a knowledge of business can suppose that it is an easy matter in a short time to draft detailed plans for imposing a first charge on the whole of the nation's industrial undertakings. But M. Wallenberg is well fitted by business training and by his knowledge of the Austrian and Hungarian League of Nations schemes to handle this problem, and we wish him a speedy success. While such problems as this may cause inevitable delay, the real difficulty lies deeper. We are accustomed to think of the French as being an extremely logical people. But we doubt whether France has ever made up her mind whether her motive in going into the Ruhr was to secure Reparations or to obtain security. The fact, therefore, that there seems now to be a chance that the Reparations question may be put on a more certain basis has, as a consequence, had the effect of turning opinion towards the second problem. On this issue there is perhaps a difference of view in Northern and Southern France. The latter never suffered the immediate horrors of war and occupation which befell the Northern Provinces, and Frenchmen in the occupied areas do not forget that even in 1914 the support of Great Britain did not save them from a five years' experience which they can never altogether obliterate from their memory. It may be easy to argue, as many French military authorities do, that the Ruhr is not a source of strength, and very few Frenchmen, we think, now conceive this occupation as a permanent thing; but we cannot get over the fact that if this occupation ceases, and still more, when the Rhineland is evacuated, there will be an instinctive feeling that the danger of Germany being able to renew aggression has come nearer. There seems little doubt, however, that, generally speaking, French opinion has reached the point where it was prepared to accept the security offered by such a device as Lord Cecil's Treaty of Mutual Assistance, which has during the last two years been elaborated by the League of Nations. Unfortunately, the events of the last two years have raised doubts in Liberal and Labour circles as to the wisdom of Great Britain committing itself even to the extent of only promising military assistance if the Council of the League declares an act of aggression to have been committed.

Certainly the British Government, which holds the occupation of the Ruhr to be illegal (but has wisely refrained from insisting upon this point of view under present circumstances), could not offer this Treaty as a definite *quid pro quo* for the military evacuation of the Ruhr.

M. Herriot has gone so far as to commit himself to the view that the economic evacuation of the Ruhr shall begin when the Dawes Report is put into operation, and further, we understand that his intention is steadily to proceed with a military withdrawal, though, for the sake of French *amour propre*, not under a signed and sealed time-table or by agreement. On the other hand, M. Herriot will undoubtedly find this task difficult if not impossible, if in the meantime no progress is made on the question of security; and we therefore think that if he is to put through his policy in France, Great Britain must make up her mind as soon as possible to make some advance in this matter. Last September Belgium rallied to the League on the Corfu dispute on the ground that she could not afford to see the League of Nations' authority flouted since she had accepted Article 10 of the Covenant, in lieu of the neutrality guarantee, which brought Great Britain into the war on her behalf. We think that if France is to take a similar attitude of confidence in the League, she is entitled to ask us to define what we understand our obligations to be under Article 10, and to give an undertaking to discuss with her at a definite date what steps Great Britain is prepared to take to assist in enforcing the new era in Europe.

Thus the French time-table, as we understand it, is that the resolutions for enforcing the Dawes Report should be taken at the July Conference; that steps should forthwith be taken to set up the new machinery and dismantle the old economic machinery in the Ruhr; that discussion should commence on the problem of security, and that meantime France should commence military evacuation. Will this programme satisfy Germany, whose national sentiment has naturally been engaged in three directions, viz., the return of the exiles, a restoration of the economic unity of Germany (including full civilian control of her railways), and the military evacuation of the Ruhr? The first of these is being carried out; the second will come as part of the Dawes Report; but we can understand their point of view if the German Nationalist Party insist upon the military evacuation of the Ruhr as a condition of facing the necessary legislation to enforce the Dawes Report. This is, perhaps, the chief obstacle which remains. We think it, however, unlikely that the Nationalists will jeopardise the new movement by demanding a preliminary recantation by France. Indeed, Germany has every reason to fall in with the Allied plans, for the present situation is an intolerable one. The M.I.C.U.M. Agreements are putting a very great strain on the Rhineland industry, and the whole nation is haunted with the fear that a new inflation may, if a settlement is delayed, break out and renew the nightmare of 1923. Moreover, the British Prime Minister has committed this country to the view that we accept the Dawes Report without condition, and desire to see it carried into effect.

We believe that the best way to overcome Germany's hesitations would be for France and Great Britain to define their attitude towards her by making it clear, either before or as soon after the Conference meets as possible, that they intend to use the machinery of the League of Nations in their relations with Germany in such matters as the supervision of armaments, the inspection of a demilitarised zone, &c., and that they desire to admit her to the Councils of Europe by supporting an application for membership of the League, and by giving her a seat upon the Council as soon as the new military inspection gives her a clean bill on armaments and the Dawes conditions are brought into operation. The Allied Prime Ministers are to be present at Geneva in September, but if this programme is to be carried out it will probably require that the Assembly be prorogued, or possibly a special meeting called later in the year. But if success is to be obtained the sequence of events is all important. The British Government should make forthwith to the French public a declaration that we will not run away from our undertakings under Article 10, or strive to make them vain and meaningless, and, in the second place, France and

England should leave Germany in no doubt as to their intentions towards her. If these steps are taken, we have every hope for the success of the July Conference, and believe that we shall be able to show America that Europe is at last putting her house in order.

THE HALF-YEAR'S NEW CAPITAL.

CIRCUMSTANCES associated with the change of Government assisted in restricting the activity of London's new capital market during the first quarter of 1924, for which the total of new issues did not exceed £36 millions. However, the second quarter saw a substantial revival, and provided a total of nearly £70 millions. During this period there was a crescendo of activity, and the half-year closed with a heavy flood of new flotations. Taking the half-year as a whole, the total is considerably lower than that for the first half of 1923, whether British Government borrowings be included in or excluded from the comparison. Our figures include British Government borrowings in the form of Treasury Bonds and National Savings Certificates, but exclude temporary borrowings in the form of Ways and Means Advances and Treasury Bills. In the following table we classify the quarterly totals since 1919 by groups:—

(In Million £'s.)

	Total	British Government	Foreign and Colonial Govts.	British and Foreign Corpns.	Foreign Railways	Mines, & Quarries	Public Works	Rubber and Rubber Plantations	Oil	Balance Home Industry
1919—1st quarter	291.9	262.6	3.0	..	..	1.0	..	..	..	25.2

* In 15 months after April, 1920, £60,000,000, mostly Housing bonds.

The most striking point about this table is the increase in the amount made available for home industry. This deserves especial notice because it is in relation to its lendings abroad that the new capital market has recently been the subject of controversy. In actual fact, the amount loaned abroad in the past half-year has not been as large as in recent corresponding periods or as large as in 1913. This is brought out by the following analysis of new capital applications according to destination:—

DESTINATION OF NEW CAPITAL.

	First Half of Year.					
	1912.	1913.	1921.	1922.	1923.	1924.
United Kingdom—Government	£ nil	£ nil	£ 20,067,000	£ 304,258,900	£ 63,727,000	£ 10,542,900
Other	24,159,400	20,324,400	50,174,000	44,444,400	28,627,600	33,839,500
British Possessions—Government	24,159,400	20,324,400	70,241,000	348,703,300	92,354,600	44,382,400
Other	5,422,900	14,324,300	27,603,500	41,582,300	39,937,900	25,231,000
Foreign countries—Government	22,509,300	28,678,300	9,959,000	7,917,000	12,250,700	12,724,500
Other	27,932,200	43,002,600	37,568,600	49,499,300	52,188,600	37,955,500
Grand total	110,343,600	120,359,600	128,574,500	446,774,200	241,301,800	105,584,000

The position regarding London's lendings abroad this year and in previous periods becomes clearer still if we set out the following details:—

	FIRST HALF-YEAR.			
	1913.	1922.	1923.	1924.
Total of new issues	Mln. £ 120.3	Mln. £ 448.8	Mln. £ 181.3	Mln. £ 105.6
Destined for domestic use	20.3	348.7	92.4	44.4
British possessions	43.0	49.5	52.2	38.0
Foreign countries	57.0	50.6	36.7	23.2

The first half of 1923 included the Austrian loan, whereas the Hungarian loan just misses inclusion in the

figures of the first half of 1924. But this does not seriously affect the general conclusion that recent controversy may have given the public a rather exaggerated idea of the rate at which overseas countries are at present drawing upon London's resources. The half-year's borrowings are analysed in greater detail in the next table:—

Description.	Total, First Half-year, 1923.	First Quarter, 1924.	Second Quarter, 1924.	Total, First Half-year, 1924.
British Government loans	£ 63,727,000	£ Dr 1,300,000	£ 11,842,900	£ 10,542,900
Colonial Government loans	39,937,900	4,900,000	20,531,000	25,231,000
Foreign Government loans	25,561,900	14,240,000	1,766,200	16,025,200
British Municipal and County loans	nil	780,000	2,385,000	3,165,000
Colonial Corporations	3,257,200	321,300	3,253,500	3,574,800
Foreign Corporations	nil	2,412,500	nil	2,412,500
British railways	1,199,700	nil	nil	nil
Colonial railways	1,963,000	nil	nil	nil
Foreign railways	522,500	nil	171,000	171,000
Australian mines	1,656,800	150,000	250,000	400,000
South African mines	778,000	1,787,000	175,000	1,962,000
Other mines	3,944,600	1,550,200	805,200	2,355,400
Exploration, financial, and investment trusts	3,975,000	81,000	nil	81,000
Breweries and distilleries	nil	nil	nil	nil
Merchants, importers, &c.	6,636,000	2,726,200	6,725,000	9,451,200
Manufacturing	1,382,000	nil	nil	nil
Stores and trading	755,800	25,800	2,394,700	2,420,500
Estate and land	2,041,000	159,100	23,400	175,500
Rubber	4,431,700	142,500	7,300	149,800
Oil	6,810,700	992,500	2,396,100	3,388,600
Iron, coal, steel, and engineering	6,567,000	750,000	5,927,200	6,677,200
Electric lighting and power	nil	731,500	73,500	805,000
Tramways, omnibuses, &c.	292,500	571,700	213,300	784,500
Motor traction and manufacturing	262,100	nil	nil	nil
Gas and water	74,000	359,500	nil	431,500
Hotels, theatres, and entertainments	17,600	nil	nil	nil
Patents and proprietary articles	550,000	1,775,000	nil	1,775,000
Docks, harbours, and shipping	230,100	nil	1,750,000	1,750,000
Banks and insurance	4,828,500	2,827,000	9,023,000	11,850,000
Miscellaneous	121,301,800	36,012,800	69,571,200	105,584,000

The chief financial operation by the British Government during the half-year was the conversion offer to holders of £200,000,000 of 5 per cent. War Loan, which was made in April. According to a statement by the Chancellor of the Exchequer, about £149 millions of War Loan were converted, but this, being a purely conversion operation, does not fall within the scope of our statistics. The British Government's net borrowings, which our figures include, were as follows:—4 per cent. Treasury Bonds, £13.1 millions (all allocated in the second quarter), less £2.6 millions, representing the excess of encashments over new sales of Savings Certificates. With the exception of £3 millions raised by Southern Rhodesia, the whole of the total under the heading of Colonial Government Loans was taken by Australasia, of which the Commonwealth Government took £10,000,000, the New Zealand Government £4½ millions, and the various Australian States over £7 millions between them. The yields offered on these loans ranged from £5 3s to £4 18s per cent. Of foreign Governments, only Czechoslovakia figured in the second quarter, Japan and Siam having borrowed in February and March respectively. Newport, Edinburgh, and Sheffield were the three British corporations in the market in the half-year, the yields running from £5 3s to £4 15s per cent. Colonial municipalities were busy in the last quarter, when five of them took £3½ millions, while the City of Amsterdam, with its £2½ millions loan in March, was the only foreign municipality to borrow publicly in London in the past half-year. British, Colonial and foreign railways show a blank list. Mining issues, if fairly numerous, were small in amount, while oil and rubber contributed little. A feature has been the large number of electric light and power issues, the June quarter having seen no fewer than eight separate operations in this class. In the iron, coal and steel group the largest operation was the £2,000,000 debenture issue by Vickers in March, of which £1,500,000 was for the redemption of existing 7 per cent. notes. Shipping is not represented at all in the June quarter, and only by a single issue, that of the Bank Line, under the Trade Facilities guarantee, in the whole of the half-year. The lists of borrowings in the manufacturing and trading classes are more remarkable for the number of borrowers than for the size of individual issues. There were, however, two operations of outstanding size in these groups, namely, the issues of £4½ millions in 8 per cent. preference shares by Allied Newspapers, and of £5 millions 7 per cent. preference shares by Lever Brothers, the latter being offered to shareholders only. Another interesting issue of recent date was that of £2½ millions in

BANK ESTABLISHED IN 1884.

SKANDINAVISKA KREDITAKTIEBOLAGET

GOTHENBURG. STOCKHOLM. MALMÖ.

Branches in all parts of Sweden.

Paid-up Capital and Reserves - - Kr. 182,000,000

Telegraphic Address: "Kreditbolaget."

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

7½ per cent. preference shares and £150,000 in ordinary shares by the British Goodrich Rubber Co., this marking a notable extension of American manufacturing activity into Great Britain. Throughout the past quarter, and, one might almost say, almost throughout the half-year, the public have continuously given evidence both of the possession of large resources available for investment and also of a willingness to respond with avidity to any offer that possessed reasonable merit or attraction. With the swelling of the volume of issues in the latter part of the half-year, "stagging" has again become prominent—a phase of the investment situation which is discussed by a Stock Exchange correspondent on a later page of this issue.

COMMUNISM AND THE LABOUR PARTY.

(BY OUR LABOUR CORRESPONDENT.)

WHEN, last week, the Conservatives tried, and failed, to force an inquiry into the Tube strike on the Ministry of Labour, fireworks were expected. They did not come off. The official line was to pooh-pooh the suggestion that Communism or Communists had anything to do with the strike; it was urged, with truth, that actual conditions and wages are such that men might be supposed to be ready to strike against them, without the assumption of external or internal incitement. This is the case; but, in a way, it proves too much. Conditions generally are such that, if people believed that to down tools would mend them, tools would be downed. The vast majority do not believe that it would; they are thoroughly British in their patience and in their acceptance of the method of gradual change.

Communist activity remains a fact, however; not a very important fact, but one whose existence it is idle to deny. How much of it is there in Great Britain to-day? It is an extremely hard question to answer. The Communist Party has always been a reticent body; reticent as to its membership, still more reticent as to its finances. In its heyday, about 1920, some thirty thousand adherents were officially claimed; now there cannot be more than a few thousands—certainly well under ten. This decline naturally encourages economy in statement. The Communist method has always been conspiratorial; designed to feed the starved sense of drama, and give to the chosen ones the sweet pride of not being as other men are. Latterly, moreover, the instructions of the Third International have been all for "underground" work. "Penetration" and "infiltration" are, obviously, more efficiently accomplished by men who are not marked as Communists, though, as a matter of fact, they function as such. In so far as Communist is read as "member of the Communist Party of Great Britain," there are, certainly, very few of them in the Labour Party to-day, and not very many even in the metal and mining unions, where Communist feeling and thinking are most definitely present.

Even when the hopes of the Third International ran highest, in the years between the Bolshevik coup in Russia and our General Election of 1922, their plans for Britain were directed rather to "capturing" existing bodies than to creating a definite party of their own. In 1919 and 1920 they were engaged in trying to win over

the I.L.P.; by the time of the 1921 conference of the I.L.P. their failure there was patent. Communist activity against Mr MacDonald, at the time of the Woolwich bye-election in that year, finished them off, so far as the I.L.P. was concerned. The Communists in the party left it. Attempts since at securing affiliation to the Labour Party have likewise collapsed, year after year, though there have always been sentimentalists for unity, as well as Unions inside which Communist influence was strong, who have voted for it, in smaller and smaller minorities. Communist feeling waned as political labour became more active and effective. The "revolt" against Parliament, of which so much was heard between 1918 and 1922, died when Labour in Opposition was vital and well led, as from 1922 to 1923.

Although affiliation has been refused to the Communist Party as a party, individual Communists have not been barred from membership. They have even been endorsed as candidates. The most recent case of such endorsement—that of the Kelvingrove bye-election—has shown the danger of this; but to see how the Labour Party can protect itself effectively is not easy. It could, of course, refuse endorsement to Communist candidates, and, from the point of view of its appeal to the general public, it would probably be well advised to do so. But the protection thus secured would be more apparent than real. Every official candidate of the party, as it is, has to accept a definite, written constitution; if he does so, how can either the local body or the central organisation go behind his acceptance and impugn his bona-fides? Until proved guilty, he has to be assumed to be honest. A formal decision not to accept members of the Communist Party would hardly help, for, as has been said, there are many individuals, some well known, some obscure, who function as Communists but are not members of the Communist Party, and the whole present tactic of the Third International is directed to increasing their activity and numbers, notably inside the Unions, which affiliate to the Labour Party as societies.

Two things have, hitherto, always prevented Communism from achieving any general hold on the British Labour Movement. One is the tradition and character of the movement itself, to which Communist theory, with its insistence on violence, is alien. The physical force argument has never appealed, from Chartist times down. Then, as now, it has been opposed, precisely in those quarters where the working-class itself is most intelligent and alert. The I.L.P., nine-tenths of which is pacifist, dominates in Scotland, the North, and the industrial areas generally; its hold on London has been growing with striking rapidity in the last three or four years. The other reason is the objection of the average British Socialist to having his politics dictated to him from outside. To-day, Communists, however widely and loosely that term be interpreted, represent a very small fraction of the Labour movement. It is a very noisy fraction; the existence of a Labour Government, and its failure to produce the millennium in five or six months has, inevitably, as anyone could have foreseen, accumulated a certain body of fresh adherents to the "short cut" theory, which the Communists know how to exploit. But the fraction seems larger and more effective than it really is, mainly because of the considerable resources, of a financial kind, over which it has control. Where do those resources come from? Not from the party membership. However high the rate of contribution, subscriptions could hardly cover the fringe of an expenditure which includes several papers ("The Worker," "The Workers' Weekly," "The Labour Monthly," and so on), none of which show any considerable array of advertisements, as well as numerous other propaganda "lines," none of them run on a voluntary basis. Since the Party publishes no balance-sheet, no answer can be given to this query. Such strength as Communism has is in money rather than in numbers. The guarded answer given by the Home Secretary the other day at least indicates, what was already pretty well known, that the sinews of war come, not from inside the country, but from outside it. They do not come, as is the case with the Labour Party, from the workers themselves.

The problem is, in the main, one for the Trade Unions. It is inside the industrial rather than inside the political

organisation of Labour that Communist influences are now active, and they are concentrated, in the main, in certain localities. There, as on the political side, the remedy for a movement which trades on despair is in constructive work.

OUR INDEX NUMBER.

PRACTICALLY no change in June is recorded in our Index Number of commodity wholesale prices, the actual alteration being an increase of 4 points, raising the total from 4527 to 4531. The latter compares with 4580 at the end of December, so that during the half-year there has been a net decline of 49 points. Fluctuations during the six months have not been wide, the highest point being 4668 at the end of February and the lowest 4527 at the end of May. Last month's changes were all of small dimensions, the largest movement in any group being an increase of 11 points in the minerals section, as may be seen from the following table:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, Ber, Oils, &c.).	Total.	%
Basis (avg. 1901-5) ..	500	500	500	400	500	2200	100.0
End July, 1914	879	882	816	464	583	2865	116.6
" Dec., 1915	897	446	731	711	848	2634	165.2
" Dec., 1917	1286	686	1684	839	1348	5845	265.2
" Nov., 1918	1289	782	1848	808	1389	6212	282.6
" Mar., 1920	1508	914	2974	1246	1709	8882	379.6
" Dec., 1921	1344	805	1284	1216	1275	5924	269.8
" Dec., 1921	921	638	1106	762	931	4357	198.0
" Dec., 1922	861	706	1184	705	807	4264	193.8
" Mar., 1923	824	752	1178	840	797	4392	199.6
" June "	815	773	1177	773	761	4301	195.5

" Sept. "	823	782	1214	732	745	4297	195.8
" Dec. "	853	815	1382	774	755	4580	208.2
" Jan., 1924	909	845	1349	789	769	4662	211.9
" Feb. "	899	859	1308	819	783	4668	212.2
" Mar. "	897	843	1313	805	780	4640	210.9
" Apr. "	904	802	1364	788	778	4637	210.8
" May "	912	730	1357	753	774	4527	205.8
" June "	914	736	1347	764	769	4531	205.9

In primary foodstuffs there was an appreciable increase in wheat and flour, but this was partially offset by declines in barley and potatoes. Tea accounts for the bulk of the increase in other foodstuffs, a slight increase in butter being neutralised by a further drop in sugar. In the textile group American cotton is lower, but there was an advance in Egyptian cotton. Both cotton yarn and cloth are lower. There was a further decline in silk, but hemp and jute were higher. Changes in the minerals section were practically confined to the non-ferrous metals, both lead and tin being slightly higher than a month ago. The only change of importance in the miscellaneous group was a decline in indigo.

Changes in individual commodities over the six months show substantial variation. In the table below we show the changes in each commodity's index number, in comparison with that for the end of December last, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	90	+ 12	Cotton, A	158	- 35	Copper	51	+ 8
English	88	+ 8	Cotton, B	163	- 44	Minerals	764	- 10
Flour	80	+ 8	Yarn	155	- 17	Baltic timber	103	..
Barley	83	+ 24	Cloth	144	- 16	Amer. timber	89	..
Oats	80	+ 7	Wool, Eng.	159	+ 15	Leather	60	+ 13
Potatoes	131	+ 53	Silk	91	- 54	Petroleum	108	+ 16
Rice	117	- 14	Do Aust.	91	- 54	Oils	75	..
Beef	85	+ 3	Flax	180	+ 7	Oilseed	82	..
Mutton	89	- 6	Hemp	57	+ 1	Tallow	70	- 2
Pork	69	- 31	Jute	94	+ 13	Indigo	75	- 3
Cereals & meat	914	+ 61	Textiles	1,347	- 35	Crytals	11	..
Tea	156	+ 14	Pig-iron	95	- 12	Rubber	11	..
Coffee	116	+ 24	Steel rails	75	..	Miscellaneous	769	+ 14
Sugar, cane	130	- 102	Iron bars	98	..	Total	4,531	- 49
Sugar, beet	130	- 2	Coal, steam	135	..			
Butter	87	- 14	House coal	13	..			
Tobacco	116	..	Lead	134	+ 19			
Other foods	736	- 79	Tin	88	- 5			

It will be seen that one or two individual commodities are responsible for the half-year's decline. The drop in sugar prices, which coincided with the halving of the duty, has produced a net decline of 79 points in other foodstuffs. Pork and butter are also lower on balance, but all other food items are higher. In the textile group, American cotton and silk are substantially lower, and these declines offset a general advance in other directions. In the minerals group changes are very slight, the chief being the reduction of 12 points in pig-iron. The minor metals are practically unchanged, after considerable fluctuations during the period. The rise in petroleum which occurred in March is the only change of importance in the miscellaneous group.

The relative positions of the five sections are shown in the table below, in which the indices for the end of July, 1914, are taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec., 1921	233	229	809	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6
June, 1922	174	192	184	149	160	171.1
Sept. "	151	194	181	150	148	163.3
Dec. "	149	200	193	152	146	166.2
June, 1923	141	220	191	167	137	167.7
Dec. "	148	231	225	167	136	178.6
Jan., 1924	157	241	219	170	139	181.8
Feb. "	165	244	212	176	142	182.0
Mar. "	155	240	213	173	141	181.0
Apr. "	156	228	221	170	141	180.8
May "	157	208	220	162	140	176.5
June "	158	210	219	164	139	176.6

The increase in the total over the pre-war level of 76.6 per cent. compares with 67.7 per cent. at the end of June last year, and 63.1 per cent. at the end of July last. Textiles and primary foods are considerably higher than they were at this time last year, but other food and minerals are lower, and the miscellaneous section is practically unchanged.

THE AMERICAN OIL SCANDALS.

(BY A CORRESPONDENT.)

A RECKONING up in the American oil world is taking place concurrently with, but independently of, that in the political world. In the suits brought by the Government against Mr Albert Fall, ex-Secretary of the Interior, and the two oil magnates, Messrs Doheny and Sinclair, four criminal indictments have been returned by the grand jury. The first charges the Dohenys (father and son) with conspiracy to defraud the Government in the leasing of the Californian naval oil reserve, the second Messrs Fall and Sinclair with conspiracy to defraud in the leasing of the Teapot Dome (Wyoming) reserve, the third Mr Fall with accepting a bribe of \$100,000 for using his influence in the Californian leases on behalf of Mr Doheny, the fourth the two Dohenys with inducing Mr Fall to take unlawful action by the felonious payment of \$100,000. This is the direct outcome of the Senate Committee's investigation. Meanwhile, Mr Senator Walsh, of Montana, Democrat, who acted as chairman, has presented the committee's report. He is to be commended on making a report which does not anticipate the result of the criminal actions impending in the courts, yet is judicial in tone and gives a well-balanced recital of the facts. It has been called "tame" by those who had been attacked; but that is prejudiced comment. It has been called "political," because it does not mention Mr McAdoo and rather implicates the late President Harding. But Mr McAdoo had nothing to do with the leases under investigation, and the committee merely stated that the executive order by which President Harding transferred the oil reserves from the Navy to the Interior Department, then under Mr Albert Fall, was illegal. It does not seem to be a report out of which much political capital could be made.

The committee declared that the manner in which the oil leases were negotiated secretly by ex-Secretary Fall

with Messrs Doheny and Sinclair was in flagrant disregard of the statutes, and laid it down in their recommendations that no oil or gas leases of Government reserves should be entered into without competitive bidding, and that no such lease should be considered except to protect the oil reserves from drainage. Mr Fall's acceptance of \$100,000 from Mr Doheny was described as "in the last degree reprehensible." "The essentially corrupt character of a loan made under such circumstances required no comment." It continued: "It would be impossible for an officer to accept a loan of such an amount, or perhaps of any amount under the circumstances, without a sense of obligation to the lender, which, unless his character was cast in heroic mould, would be revealed in subsequent official transactions with him. Its sinister import is appreciated when it is borne in mind that, without competitive bidding, Mr Doheny got from Mr Fall, in the month of April following, the contract for the construction of the tanks at Pearl Harbour, and with it a preference right to a lease of a large share of naval oil reserve No. 1, to be followed, without competitive bidding, by a lease of the entire reserve comprising over 30,000 acres, estimated to contain 250,000,000 barrels of oil, out of which, Mr Doheny told the committee, he would be in bad luck if he did not make \$100,000,000 profit." Equally scathing were the committee's comments on Mr Sinclair. "Not only was the Teapot Dome lease awarded to Mr Sinclair without competition, but he paid a fabulous sum to procure the elimination of a potential rival. One seeking only a fair contract from the Government does not buy off his competitors; neither does he, when he secures it ordinarily, submit to blackmail in connection with it; nor does he, while negotiations are pending, accommodate the awarding officers with loans." The shipment of a consignment of blooded cattle by Mr Sinclair to Mr Fall's ranch in New Mexico, and Mr Sinclair's subsequent employment of Mr Fall on his retirement from the Cabinet, are cited without comment.

There is a white side to this very black report. The committee found "no facts of sufficient importance to report" in support of the accusation that public officers had speculated in Sinclair and Doheny oil stocks, and that "the evidence failed to establish the existence" of any conspiracy between oil operators and others at the Republican National Convention in 1920 for the exploitation of public resources. Most important of all, the committee exonerated Mr Edwin Denby, former Secretary of the Navy, and Mr Theodore Roosevelt, Assistant Secretary, "from any part whatever" in the negotiations leading up to the leases. The committee were only astonished that they should have been so thoroughly ignorant of what was going on in their Department. It would thus appear that Mr Denby and Mr Theodore Roosevelt, in being driven from office, were martyred to popular clamour. The real importance of these oil leases was the point of principle "whether it is better for the Government to have 22,000,000 barrels of oil in the ground, or 1,666,666 barrels in tanks at the seaboard." According to the committee, this question should have been left to Congress to decide. To abolish oil reserves altogether would seem to be a step towards peace, domestic and international.

THE POSITION IN HONGKONG.

(BY A CORRESPONDENT.)

HONGKONG, May 9.

THE total trade of Hongkong for 1923 amounted to £123 millions, an increase in sterling values of one million, but, owing to a fall in the rate of the dollar, marking an actual increase of some 5 or 6 per cent. over 1922. Hongkong exchanges goods with countries far and near, but there is a big entrepôt trade, for Hongkong is the clearing house of South China. Its position in this respect is due to proximity to Canton, a wonderful natural harbour, efficient shipping facilities, and, above all, to a benevolent and uncorrupt Government.

Local industries are by no means negligible, and comprise shipbuilding, sugar refining, cement and rope-making, all of which have been steadily brought to their present flourishing condition by careful European man-

agement. Of recent years Chinese enterprise has led to the starting of biscuit, confectionery, tobacco, and knitting factories, which have already achieved a high standard of output. These concerns supply native consumers at a low cost with requirements hitherto imported from European and American sources.

Total exports for 1923 were £61,000,000, of which slightly under £25 millions went to the neighbouring provinces of Kwangtung, Kwangsi, and Fukien. It is remarkable, in view of the chaos which has prevailed throughout these provinces during the past few years, that business to such an extent has been possible at all. Demand has undoubtedly been restricted, but foreign goods are required to supplement home supplies, which cannot support the population of the Southern Provinces, estimated to be approximately 60 millions. Therefore goods are transported to the distributing centres of the interior in spite of the considerable risk, at enhanced cost to the consumer, and exchanged for local produce, which eventually finds its way to the market here.

At the general meeting of the Chamber of Commerce, held at the end of March, the greater portion of the chairman's very able review of the past year was devoted to matters which would appear to be more political than commercial. Piracy prevention, the transfer of military lands to the Civil Government, typhoon signals, wireless communication with gunboats, telephone service, &c., were all dealt with, but the first-mentioned subject is of the gravest concern to all engaged in the commerce of this part of the world.

Piracy in South China waters is a menace from which Hongkong has never been free, but of recent months it has developed to an alarming extent, and, with little or no assistance obtainable from the rulers of Canton, its prevention is a problem which has so far baffled the authorities here. In most cases the pirates embark at this port as passengers, and, despite a thorough search at the wharves, arms are smuggled on board, to be produced when the signal for the attack is given, usually after getting clear of Hongkong waters.

Government regulations for dealing with piracies have been amended from time to time, and in themselves are quite stringent. Ships' officers are obliged to carry revolvers, Indian guards with loaded rifles patrol the decks, the interior of the ship is divided into sections by iron grills, the bridge is protected by barbed wire and various other precautions are taken. Yet the outrages continue, and one loop-hole after another is disclosed in defensive arrangements leading to further regulations. River steamers now sail in convoys with an armed launch in attendance, but this protection can only be afforded as far as the Canton River. There the convoy has to split up, as some steamers go on to Canton while others are bound for West River ports. Constant patrolling by British gunboats would mitigate the evil, but there are only a few vessels available, and naturally the Home Government cannot be expected to rush out reinforcements. The easiest remedy would be to wipe out the pirates' headquarters, but the Canton Government will not take action, and in most cases are powerless to do so. The British naval authorities would no doubt be prepared to exterminate these pests in a very thorough manner, but any such action would create international difficulties, which the Home Government are quite accountably anxious to avoid. All that can be done at present, therefore, is to see that regulations are strictly complied with, and to carry out a thorough search for arms before departure of the steamer. The latter precaution can only be relied upon at this end, and for the return journey there is no security against embarkation of armed pirates.

Piracy is by no means the only obstruction to the normal flow of trade in these parts. Even when a steamer has run the gauntlet of the high seas successfully, there is danger lurking along the banks of the inland waterway. Most of the country bordering the big rivers is overrun with bandits and lawless soldiers, who perform musketry practice at the expense of passing steamers, and every magistrate who is powerful enough levies a "squeeze" (which he terms "protection tax") on goods passing through his territory. Needless to say, this tax gives no security at all. The various militarist leaders fighting for supremacy in the South keep in close touch with the rivers, and communication by steamer is held up from time to

time by sporadic fighting. These so-called leaders move about the country with their hired armies, leaving a trail of devastation behind them, burnt villages, destroyed crops, and commandeered supplies being the usual consequence.

This is the situation in most of the country districts at the present time, and if the towns and cities are spared a good deal of this misery, the inhabitants have to contend with troubles of their own in the shape of extortionate taxation and interference with business through labourers being impressed to serve in the armies.

This tale of woe will indicate some of the difficulties which hamper commerce here. As has been said time and time again, the remedy lies in the hands of the Chinese themselves, and foreign intervention can do little to assist. This state of anarchy is, of course, detrimental to the trade of Hongkong, and the outlook is as black as it has ever been. Formerly an outbreak of hostilities was viewed with equanimity, as it was usually localised. Even more general warfare was not regarded very gravely because of the wonderful recuperative powers of the Chinese. This faith is now being seriously undermined as matters go from bad to worse, and the situation here is viewed with considerable anxiety. What the future has in store no one can tell, but caution is the watchword of the day, and there is little likelihood of any expansion in trade for some time to come.

SUDAN DEVELOPMENT.—II.

(BY A CORRESPONDENT.)

WITH settled government and the resulting steady development of resources and trade, it is but natural that the external trade of the Sudan should exhibit a remarkable extension. Much of this is undoubtedly due to imports on Government account for the railways, official building, irrigation construction, and other public works, but the increase does not all arise from these causes. Nor will the general rise of prices account for the increased importance of the external trade. The following table exhibits the figures in some detail:—

EXTERNAL TRADE of the SUDAN
(In Thousands of Egyptian Pounds).

Year.	Imports.			Exports and Re-Exports.	Transit.	Specie (Including Banknotes).		Balance of Trade.
	Pub.	Gov.	Total.			Imports.	Exports.	
1907..	916	688	1,604	498	33	102	...	1,208
1910..	1,213	718	1,931	1,036	46	126	0	1,021
1914..	1,400	491	1,891	1,108	57	38	155	666
1918..	3,036	988	4,025	4,210	14	618	160	273
1920..	3,988	3,019	7,007	5,076	68	393	113	2,211
1921..	3,120	2,686	5,806	2,319	55	75	135	3,437
1922..	2,556	1,697	4,253	2,299	70	24	132	1,846
1923..	..	..	4,669	2,758	69	..	..	1,911

In the 14 years since 1910 there has been an excess of imports amounting in all to £E.16,313,000. This represents the import of foreign capital, payments on account of Egyptian-paid officials, the British garrison, tourists, and sportsmen, shipping, &c., less the sums spent outside the country by Sudan officials and other residents on leave. These sums can only be conjectured, but it seems not improbable that the import of foreign capital in this interval approaches 14 millions of Egyptian pounds, of which this country has contributed some 10 millions and Egypt the balance. Of the latter sum, the Sudan loans have produced some 8½ millions (allowing for money retained here to provide for the dividends), the Sudan Plantations Company about one million, the Kassala Railway Company £E.300,000, and the balance of half a million represents the contributions of gold-mining and prospecting companies, transport, navigation, and other companies and private merchants. It must not be forgotten, however, that the contribution of Egypt during the preceding 14 years reached the sum of £E.7,140,000 for extraordinary expenses. These are mostly sunk in railway expenditure, which in the 18 years to 1914 amounted to £E.6,800,000.

The relative importance of trade directions is indicated in the following table:—

DIRECTION of TRADE of the SUDAN, in Percentages.

	1910—		1920—		1923—	
	Imp.	Exp.	Imp.	Exp.	Imp.	Exp.
Egypt	45	65	31	46	33	24
United Kingdom...	31	10	34	42	33	36
British Empire....	12	2	19	4	11	1
Abyssinia	2	1	4	3	4	3
United States	..	..	1	..	..	11
France	..	..	0.5	..	..	9

The economic future of the Sudan depends mainly on the development of cotton growing, for which the soil and climate are exceptionally favourable, provided water can be found. True, at present gum (of the production of which the Sudan has a practical monopoly) accounts for 24 per cent. of the exports, and cotton for only 18 per cent., but the possibility of development of the gum trade is very limited, whereas there is every reason to expect that the production of cotton will be doubled and even trebled in the near future. Cotton is grown on rain land, on land naturally irrigated by the Nile flood and on land irrigated by artificial works. The former is insignificant, though the Government is making efforts to increase its cultivation; the chief difficulty lies in the fact that the region where this is possible is inhabited by the negroid tribes, who are not sufficiently advanced to appreciate the possibilities of this crop. The area planted in cotton under flood conditions is very variable, and the yield precarious. It has shown a tendency to decrease of late years, owing probably to the poorness of the floods. On the other hand, there has been a steady increase in the area of land under artificial irrigation, from 8,366 Egyptian acres in 1917 to 24,058 in 1922. This bears witness to the energy of the authorities in extending their experimental cultivation, which, however, is always on a practical scale, in all likely directions. The crop is generally sakellarides or long-staple American, the quality satisfactory, and the yield (400 lbs per acre) higher on the average than is secured at present in Egypt (350 to 370 lbs per acre). If, as is confidently expected, the Gezira and Kassala schemes result in the ultimate addition of 200,000 acres to the area under cotton, production should be increased thereby by some 800,000 kantars of ginned cotton, worth about 2½ millions of pounds, with seed worth half-a-million more. This addition to the exports would restore the trade balance, and the shares received by the Government and foreign capital interested would provide the wherewithal to meet the dividends.

Besides cotton the chief articles of export are livestock (in 1922), £E.165,000; millet, £E.240,000; sesame £E.183,000; gum arabic, £E.530,000. These values are not widely different from those for the period 1913-1921, except in the case of livestock, where a very large export trade arose during the war years to meet the requirements of the British Army in Egypt and Palestine.

The chief articles of import consist of wheat flour, £E.105,000; sugar, £E.450,000; coffee, £E.246,000, almost entirely from Abyssinia; timber, £E.117,000; coal and patent fuel, £E.259,000; cotton fabrics, £E.788,000, chiefly from this country and India; and metals and metal manufactures, £E.607,000. The last item is swollen temporarily from the import of material for the extensive irrigation and other constructional works.

In studying the detailed figures given in the annual reports of the Director of the Central Economic Board, one cannot but be favourably impressed with the numerical records of steady advance in prosperity there set forth. Can it be claimed by opponents of the joint rule in the Sudan, as it was objected of British rule in Egypt, that this increase of material good has been accompanied by a neglect of moral advancement? The answer lies in the annual reports of the Governor-General, transmitted through His Majesty's High Commissioner in Egypt. We read of young natives being trained and employed in administration, of a healthy decrease in slave-trading, of provinces where crime is practically unknown, of centralised and local education on practical and enlightened grounds, covering such subjects as medicine, engineering, Moslem divinity, female education, midwifery. There is no better equipped research laboratory than that attached to the Gordon College, and the resulting effects on public health are indicated in the control of such dangerous

tropical diseases as sleeping sickness, small-pox, ankylostomosis and leprosy.

But, above all, the native now enjoys security and justice. In twenty-five years what was a black blot on the map of Africa has been converted into a quiet, contented, prosperous and steadily advancing community. The foundations of the advance were laid by Lord Kitchener, the labour of building fell on the capable and sympathetic shoulders of Sir Reginald Wingate, and the work has been continued by his successor, Sir Lee Stack. Foundation and superstructure have been well and truly built, and when the future historian comes to appraise the achievement of the British Empire at the end of the nineteenth and beginning of the twentieth centuries, a high place, if not the highest, will be assigned to its work in the Anglo-Egyptian Sudan. It is satisfactory to learn from Lord Parmoor's recent speech in the House of Lords that this work is not to be interrupted.

Notes of the Week.

The Quarter's Revenue.—The Revenue Return for the first quarter of the current financial year, which is printed in detail on another page, shows that revenue for the period amounted to £176,231,400, which compares with £187,001,700 in the corresponding quarter of 1923-24, a decrease of £10,770,300. This decline is largely accounted for by Customs and Excise, which are down by £7,429,000 and £6,198,000 respectively. Other decreases include £860,000 under stamps, £690,000 under corporation profits tax, £1,320,000 under miscellaneous ordinary receipts, and £2,675,600 under special receipts. The principal increases are £3,110,000 in estate duties, £1,492,000 in income-tax, £2,970,000 in super-tax, and £850,000 in the postal, telegraph and telephone services. Expenditure at £215,090,500 compares with £214,414,000 twelve months ago, the deficit at the end of the first quarter thus being nearly £39 millions, as against £27½ millions at this time last year. Changes on the expenditure side include a saving of nearly £2 millions on Consolidated Fund Services, and increases of £2 millions in the Civil Services and of half a million in the Revenue Departments and Post Office. It is, of course, impossible to make any deductions from a comparison of these figures with the estimates, but it may be mentioned that revenue is over £22 millions below its quota, while expenditure is £18½ millions above. Expenditure, however, includes a half-year's instalment of the American debt service, while revenue collections are, of course, always smaller in the first quarter. The decline of over £7 millions in Customs receipts is, no doubt, in part attributable to the halving of the sugar, tea, &c., duties, but the decline of £13½ millions in Customs and Excise together is considerably heavier than might have been expected. The floating debt at the end of the quarter stands at £798 millions, as against £819 millions at this time last year. Treasury Bills are £24 millions lower at £580 millions, advances from Public Departments £6 millions lower at £205 millions, but advances by the Bank of England stand at £13 millions, against £4 millions a year ago.

The Report of the Brazil Mission.—Two articles on Brazil by "A Brazilian Bondholder," which recently appeared in the *Economist*, covered much of the ground which is traversed by the Report of the English financial Mission to Brazil, which was made public on Monday; and we can find no contradiction between the general conclusions of the two. We do not propose, therefore, to examine in any great detail the text of this Report. It is a practical and well-balanced review of Brazilian finances and potentialities, presented in a style, the lucidity of which reminds us that one of the signatories is Mr Hartley Withers. In brief, the story of Brazil's trouble is the story of constantly recurring deficits; these deficits are attributed partly to the lack of a proper Budget system, and the Mission recommend the establishment of such a system very much on the British pattern. To reduce expenditure a "Geddes" Committee is recommended, while strong exception is taken to the

Exemption of agriculture from the income-tax. Having dealt with the Budget problem the Report turns to the question of the unwieldy floating debt built up through the persistent deficits, which it is now sought to eliminate. Here it is insisted that Brazil must not look merely to a foreign loan, but must make efforts also to raise an internal loan. It is also suggested that the Government should sell its shares in the bank and other enterprises, such as railway and shipping companies. Improvements of the currency and exchange situation are outlined, and the Government's participation in the coffee valorisation scheme comes in for criticism. A large part of the Report deals with the transport organisation and development, which is essential to the utilisation of the great resources of the country. Stress is laid on the obvious fact that if the potentialities which Brazil possesses in her rich natural resources are to be brought to fruition, this must mainly be done by the aid of foreign capital, and that foreign capital will not flow to Brazil or anywhere else unless it is assured of proper treatment and opportunity. We do not quite see why the market for Brazilian bonds in London should have found this Report disappointing. Perhaps too much had been expected. Obviously reform, financial and economic, in Brazil must at the best be slow; and, of course, everything depends upon the willingness and determination with which her rulers practise the preachings of the British Mission. Fortunately the new Brazilian régime, under Dr Bernardes, is giving proof of its intentions to turn over a new leaf. Those who read the financial section of the Presidential Message of Dr Bernardes, which was printed in full in last week's *Economist* (pp. 1310 to 1316), will see that something tangible in the way of reform has already been attempted. A "Bank of Issue" has been established, and a "Geddes" Committee is already sitting. Further progress along the road to recovery outlined by the British Mission will be watched with interest and sympathy. It is a long road, but, if persistently followed, it should lead to rewards that will fully compensate Brazil for all the effort entailed.

The Franc and French Public Finance.—In view of the weakness of the franc, which has fallen from less than 70 to the £ at the time of the May elections to 84 during the present week, developments in the French Budget situation are being watched with special interest. An account of recent discussions in the Senate is given on a later page by our Paris correspondent, from which it is evident that the enormous size of the floating debt leaves the position of the franc very vulnerable in the event of any renewed lack of confidence. It is, however, future policy rather than the present technical position which will influence opinion, and the Government has as yet given no sign except the promise to make an intelligible inventory of the finances of the country before the next Budget is presented. In the meantime, however, there are one or two points that are worth noting. In the first place, the new Government does not propose to maintain the "decrees" which did so much to overturn the late administration. This, however, does not mean an irrevocable blow at Budget equilibrium. The taxation side of the Poincaré reforms were specifically voted by the Chamber, and remain in force. It is doubted whether any changes will be made in these except a small transfer from indirect to direct taxation in pursuance of election promises. The decrees already made relate to economies in the public services estimated to reduce expenditure by about a milliard francs. The Government apparently rely on meeting any deficit due to non-enforcement of the decrees from (a) the elasticity of revenue resulting from the good commercial situation in France, and (b) by enforcing the existing taxes and collecting arrears. As to the future, the Government cannot altogether avoid new capital expenditure. But the most significant fact in the situation is that the Government apparently intends practically to suspend further expenditure on the devastated areas. How it will satisfy new or outstanding claims we do not know; but we suspect some means will be found of adjusting payments already made. If the Government can enforce this policy, they will have plugged the really big leak, and may hope to make the Budget really seaworthy.

The Hungarian Loan.—The efforts of the League of Nations in the field of financial reconstruction met with further success this week in the floating of the English portion of the Hungarian loan, full details of which are given among "New Capital Issues." The negotiations have been more difficult than those for the Austrian loan, as the Governments have not guaranteed the issue on this occasion. Moreover, the Hungarian Budget still includes a small reparations payment, and the political status of the country is such that the risk of strife with her neighbours is not quite so remote as in the case of Austria. But the Great Powers, as well as her neighbours, all have interests in maintaining the financial as well as the political *status quo* in Hungary, and this is perhaps the chief security for investors. The British public, at any rate, took this view, and heavily oversubscribed a loan which gives a very good return. As in the case of Austria, small subscriptions were very numerous, and proved once more the widespread confidence in and desire to support the work of the League. It is significant that when it comes to practical support of reconstruction efforts, Great Britain is finding nearly £8 millions out of a total loan of less than £12 millions. We would add one word of warning. It is useless to float financial schemes of this kind if they are to be thwarted by economic obstructions such as tariffs, and we would have wished that Hungary should have been asked to give definite undertakings on this point. The report of the League recognises this danger very clearly, and the British investor will certainly look to the Economic and Finance Committee and to the Commissioner-General to watch carefully that the scheme is not prejudiced by an unwise economic policy dictated by a narrow nationalist outlook.

Irish Finance and Trade.—Our Dublin correspondent writes:—The revenue figures just published for the first quarter of the current financial year make satisfactory reading. Outgoings in respect of Central Fund Services (the Free State analogue of the Consolidated Fund in Great Britain) and of Supply Services are reduced by comparison with the corresponding period of 1923 from £3,688,700 to £5,970,875—a substantial reduction of close upon two and three-quarter millions. On the other side of the account, revenue receipts showing increases under the headings of Customs, income-tax, and Post Office, and decreases for Excise, estate duties, stamps, and corporation profits tax, are also down by £1,066,749, by comparison with last year. Thus, while there is efficient collection of taxes, the present business depression is reflected in the returns, which all the same are better than last year, for the following reason. The Excise figure for last year was swollen by special receipts of a non-recurrent character relating to the transition period, and this more than accounts for the whole falling off this year in the Excise figure which, amounting to £1,211,000, put the apparent balance on the wrong side. The figures generally are better than the forecast in Mr Blythe's Budget speech. Progress is thus being made towards Budget equilibrium. Trade figures for the first four months of this year show imports at £21,776,150 and exports £14,150,581—figures the precise significance of which will probably be the subject of much controversial comment. The railway receipts for the period January 1 to June 30, 1924, for the majority of the Free State lines have just been published. They, too, reflect at once the return to normal conditions and the depressed condition of commerce and industry. A British Treasury White Paper, not received here yet, but referred to in the public Press, has been published in explanation of the Government proposals for guaranteeing the Free State land purchase loan. The principal and interest of the securities to be issued by the Irish Government within a period of eight years from the date of the empowering Act are to be guaranteed within a total of £30,000,000, and the securities will consist of bonds, and bear interest at 4½ per cent. It is not anticipated that any charge will, in fact, fall upon the Imperial Government under the proposed guarantee—which is to be given in fulfilment of the undertaking of the late Government by agreement of the Government of the Free State and by its announcement in Parliament that it would ask Parliament to

guarantee the bonds referred to. This undertaking is stated to have originated in the obligations assumed by a preceding Government in pre-Treaty days to facilitate the completion of land purchase in Ireland. There is no likelihood of any friction over the terms and conditions of the guarantee as set forth in the White Paper, the appearance of which will undoubtedly be of a reassuring character to Irish landowners and ex-landowners, who are to receive payment for their land in Irish Free State 4½ per cent. bonds, as stated many months ago in this column.

The Crisis in Italy.—Since the week before last, when we discussed the political situation created in Italy by the murder of Signor Matteotti, the speed with which events were moving has slackened. A few more arrests have been made, but the trial has not yet opened. Parliament has adjourned—probably for two or three months—and the personnel of the Government has been largely reconstructed. The most striking event has been Signor Mussolini's apologia in the Senate on June 24th, in which he insisted that the Fascists were as profoundly horrified at the crime as anybody else; promised that justice would be done without respect of persons; attempted to demonstrate that equal atrocities had been committed by foreign nations and by non-Fascist Italians—in which connection he raked up the few outrages committed against Fascists during the past four years, without facing the question of the proportion borne by these to crimes of which Fascists had been the perpetrators; and, finally, he made an appeal on the personal question. "The selection of individuals according to their capabilities and their probity is difficult enough in normal times—it is much more difficult in abnormal times." This speech—which the Opposition welcomed and the more extreme Fascists deplored as a defensive gesture—was lacerated in the Senate by Count Sforza, the distinguished Italian diplomatist, over whom Signor Mussolini rode roughshod soon after he came into power. "A crime committed by hierarchs, who deceived the Duce as to their criminal activities? So be it. But in that case the head of the Government bears the blame for the inexcusable fault of having been warned against them.....and having pertinaciously defended them." The Count reminded the Senate of the persistent condonation of Fascist violence in Signor Mussolini's Press. Although, however, he has bowed before the storm, Signor Mussolini has not abandoned his position on any essential sector. "There is no question of my clinging to office," he said, at the close of his speech, "but I should regard myself as the most cowardly of men if I shirked my moral and political responsibilities in a difficult moment." He refused to hear of a dissolution or to disband the National Militia; and on this programme he ultimately received in the Senate a vote of confidence of 225 to 21, with 7 abstentions. The status of the National Militia seems likely to be the crucial issue in the event of a trial of strength between Fascism and a united Opposition. The Militia has now been demobilised, and the Dictator has agreed that "its organisation must be brought within the constitution." Yet it is hard to see how constitutional Government—in the sense now generally accepted in Western society—can be more than a name in a country where one political leader is able to call up armed men, at a moment's notice, to do his bidding. On this question, therefore, the Opposition are not inclined to compromise, but at present they do not seem to have advanced beyond the negative tactics of boycotting the Government as unclean, and these tactics will embarrass Signor Mussolini very little until Parliament meets again. Probably he calculates that the momentarily united Opposition front will not hold out during several months of inactivity. The Opposition could usefully employ this interval in a great campaign of political propaganda throughout the country, thereby challenging Fascism again to suppress constitutional action by unconstitutional means. In that case, Signor Mussolini might find himself in difficulties between his own extremists, who would probably insist on recommencing their familiar operations, and the public opinion of the country, which has given the Fascist Government a reprieve, but on condition of good behaviour. Meanwhile, the reconstruction of the Government shows that

Signor Mussolini can still enlist the support of respectable and distinguished personalities. The philosopher, Signor Gentile, has left the Ministry of Education, only to become an under-secretary in the Ministry of Justice, and Signor Scialoja has accepted an under-secretaryship in the Ministry of Public Works.

The Irish Boundary Problem.—Our Dublin correspondent writes:—Mr Justice Feetham, the member of the South African Bench who has been nominated by the British Government to preside over the Boundary Commission, arrived in England this week, and has since visited both Dublin and Belfast. Doubtless, as suggested by Mr Ramsay MacDonald, his visits are determined by a desire to see whether agreement can be reached by preliminary negotiations before the assembling of the Commission and the taking of the opinion of the Judicial Committee of the Privy Council as to the position of the British Government, its powers and duties in the event of Northern Ireland persisting in its refusal to nominate its representative on the Commission. In view of the persistent misrepresentation of the position in some quarters, it appears necessary to repeat that the advice to be given by the Judicial Committee relates solely to the internal or domestic side in Great Britain of the difficulty alleged to exist by reason of Northern Ireland's refusal. The Committee is no party to the reference to the Judicial Committee, and remains wholly unaffected by its view. Great Britain, if impeded in fulfilling her Treaty obligations by the action of Northern Ireland, and having regard to existing British law, will doubtless proceed so to amend her laws as to enable her to honour her signature to the Treaty with the fullest good faith.

Miners' Wages and Coal Profits.—The first audit under the new wages agreement has been announced this week in the South Wales coalfield. A new procedure has been adopted in the ascertainment of trading results for wage purposes. Under the 1921 agreement the audits were taken monthly, and the audit for any particular month governed the wages paid two months later. That practice was altered at the request of the miners' leaders, and it was substituted by a system of two-monthly audits, which governed the wages paid two months later. It has now been agreed that the audits should cover three months, but that they should actually apply monthly. Thus, subject to the minimum clause, the wages in July are regulated by the proceeds of the trading results of the industry in March, April, and May; in August they will be governed by the trading results in April, May, and June, and so on. In the South Wales coalfield the audit for March, April, and May certifies a general wage rate of 31.41 per cent. on the standard rates of 1915. The minimum wage rate in that coalfield, however, is 42.22 per cent. on the 1915 standard rates, and the deficiency between the 31.41 per cent. certified and the actual wage of 42.22 per cent. payable must be met out of the owners' profits. That deficiency absorbed not only the whole of the owners' 12 per cent. share of the surplus profits available after deduction from the total proceeds, the standard wages cost, other costs, and standard profits, but also more than one-third of the owners' standard profits. The

total sum thus surrendered by the owners for the purpose of the minimum wage amounts to £428,529, and, with a previous deficiency of £429,153, brings the total deficiency to be carried forward and recouped, if possible, out of future profits, to £857,682. The worst feature of the audit was the lowness of the profit realised in May. In March and April the profit per ton had averaged about 2s 4d. In those months the general wage rate stood at 28 per cent. on the 1915 standard rates, and prices had been favourably affected by the fears of a national stoppage. In May, however, the wages cost per ton increased from about 11s 9d to 13s, and other costs from 5s 11d to 6s 1d, while the proceeds per ton fell from about 20s to 19s 3½d. The cumulative effect of these causes was a fall in the rate of profit to only 2½d per ton. That rate of profit means that at least two-thirds of the colliery companies in the coalfield produced their coal in May at a loss, and it is feared that the audit for April, May, and June will show even more unsatisfactory trading results.

World's Crop Prospects.—According to information collected by the International Institute of Agriculture and published in its crop report for June, in most parts of Europe temperature and fine weather alternating with rain-storms prevailed during the latter half of May, and proved favourable to cereal growth, thus partially repairing the damage caused by the inclement season in the northern and central regions. At the beginning of June crop conditions were almost everywhere better than those of a month earlier, although the situation in Northern Europe generally and in parts of Russia was less satisfactory than at the same period in 1923. Prospects in Danubian and Balkan countries were, however, more promising. In North America crop conditions at the beginning of June were generally below those of June, 1923, while growth is backward, especially in Canada. The area sown with spring wheat in the United States is less than last year's, though the decrease is not quite so marked as had been expected. Some decline has also taken place in the areas under rye and barley. For Canada, the figures of areas sown with cereals will not be available before July 10th. For wheat, estimates from five countries usually growing about one-fourth of the world's yield afford an aggregate of 745.1 million centals, as compared with 816.4 millions in 1923, thus showing a predicted decrease of 8.7. The most serious decline is in the United States, where the outlook is for a crop of 55.5 million centals less than last year's, and 112.7 millions below the average of the previous five years; in Spain and in India results appear likely to be less favourable than in 1923, but better than the five years' average yields; Belgium expects crops rather larger than in 1923, and over their previous average out-turns. These data deal with a number of countries too limited for any authoritative opinion on the season's aggregate results; but taking into account the reduced acreage and the present aspect of spring-sown crops generally, there is good reason to believe that the Northern Hemisphere wheat crop of 1924 will, as a whole, be inferior in quantity to that of last year.

American Cotton Crop.—Our Manchester correspondent writes:—Late on Wednesday evening the Department of Agriculture of the United States Government published important statistics on the cotton crop for 1924-25. The condition of the growth on June 25th was reported as 71.2 per cent., against 65.6 per cent. a month earlier, and 69.9 per cent. at the same time last year. The statement was better than expected, and it is evident that climatic conditions in the belt during the past month have been very favourable. The same authority has estimated the area under cultivation at 40,403,000 acres, against a revised acreage for the current season of 38,709,000 acres, thus showing an increase of 4.4 per cent. This forecast was about equal to anticipations. The reports were interpreted in market circles as being very bearish, and there was a fall in the New York market of about 100 points, or a cent per lb. On Thursday the Liverpool market was affected and prices there were reduced over ½d per lb. According to the information so far available, there is an indication of an output of American cotton for next season of

12,144,000 bales, exclusive of linters. At the corresponding period of last year the growth was estimated at 11,412,000 bales, but owing to less favourable conditions later the yield will only turn out to be about 10,200,000 bales. A great deal depends upon the weather in the belt during the next couple of months, but it is satisfactory to know that during June the late start was recovered to a considerable extent. Mr. Arno S. Pearce, the secretary of the International Cotton Federation, has sailed for the United States this week for the purpose of making an investigation into the position of the cotton manufacturing industry, and he will also inquire as to the prospects for raw cotton supplies. It is probable that he will cable reports from time to time, and these will be circulated amongst the members of the International Federation. Many people are of opinion that with larger supplies of raw cotton at a reasonable price a distinct trade revival in spinning and manufacturing circles in Lancashire will show itself.

The American Crude Oil Situation.—It is reported, writes a correspondent, that a "shut-down" of production, to last for 30 days, has been arranged among operating oil companies in one of the newer fields in Oklahoma, and that similar "shut-downs" are being negotiated in two other mid-continent fields whose output has been rising. It is hoped by these means to keep off 100,000 barrels a day from the market. Artificial measures of this kind call attention to the critical nature of the American crude oil situation. The price of Pennsylvania crude oil has been reduced twice in the last two months—by 25 cents on May 10th and by 50 cents on June 15th. The new range of prices is now from \$3.25 to \$3.75 per barrel, 50 cents above the level at which it started the year. Producers have been anxious to point out that the Pennsylvania situation is independent of the mid-continent, and that, as the Pennsylvania crude oil production is only an insignificant proportion—about 7 per cent.—of the total American output, the price reduction is of no real importance. But the mid-continent price structure is by no means strong. It has already been broken twice by one of the smaller purchasing companies, but the major companies seem determined to maintain their prices, and are undoubtedly responsible for bringing about these voluntary "shut-downs." Up to the present, the daily average crude oil production of the whole country has been steadily mounting. For the week ending June 14th, it was 1,988,200 barrels as compared with 1,884,050 barrels at the beginning of the year. There is no doubt but that if the newer fields were rapidly opened up, another serious state of over-production would result. There is reason to believe, however, that "more prudent working-methods," as the Royal Dutch directors put it, are now being applied.

The Bank Dividends.—The first batch of banking interim dividends which has been announced this week shows no change as compared with the first half of last year, as will be seen from the table below, which shows the interim dividends year by year from 1917:—

	Per Cent. per Annum.							
	1917	1918	1919	1920	1921	1922	1923	1924
Bank of Liverpool and Martin's	16	16	16	16	16	16	16	16
Barclays Bank "B" shares...	17½	20	20	14	14	14	14	14
Lancashire and Yorkshire	16	16	16	16	19	19½	20	14
Lloyds	18½	18½	18½	16½	16½	16½	16½	16½
Midland Bank	18	18	18	18	18	18	18	18
Westminster Bank	18	20	20	20	20	20	20	20
Manchester and County	13½	15	15	15	15	15	16½	16½
District Bank	17½	17½	17½	18½	18½	18½	18½	18½
National Provincial Bank	16	16	16	16	16	16	16	16
Williams, Deacon's	14	14	12½	12½	12½	12½	12½	13
Alexanders Discount	10	12	13	14	15	15	15	15
National Discount "A"	10½	11½	12½	12½	12½	12½	10	10
Do "B"	11	11	11	11	11	11	11	11
Union Discount	13	13	14	14	14	15	15	15

* Final dividend. † On old capital.
(t) Also a special cash bonus of 10s per share, free of tax.

The interim dividends of the discount houses are also the same rate as a year ago.

U.S. Banking Profits.—The report of the Comptroller of the Currency for 1923 states that since the inauguration of the Federal Reserve System, the resources of the 12 Federal reserve banks have grown from \$270 millions in November, 1914, to \$5,091 millions at the end of October last. The gross earnings of the Federal reserve banks from November, 1914, to June 30, 1923, were \$573 millions, and current expenses (salaries \$82 millions, and all other expenses \$71½ millions) totalled \$153½ millions. The annual rate of dividend was 6 per cent. as provided by law. The Government has received from the franchise tax \$135 millions. The paid-up capital of the banks on June 27th last was \$109½ millions, and the surplus \$218 millions. From November, 1914, to October, 1923, the gold held has expanded from \$228 millions to \$3,111 millions, and bills discounted and bought from \$7 millions to \$1,088 millions. Federal reserve notes have increased from \$2½ millions to \$2,225 millions, and member bank deposits from \$249 millions to \$1,895 millions. After writing off \$160 millions for losses and depreciation, the net addition to the profits of the national banks last year was \$203½ millions, and dividends to the amount of \$179 millions, or \$13 millions more than in 1922 were paid. Loans and discounts increased by \$600 millions, or 5 per cent., while investments in bonds, &c., expanded by 11 per cent. The paid-up capital rose by \$25½ millions, and the surplus by \$26 millions, while the note circulation, at \$731 millions, was greater than in any year since 1915 and \$4½ millions higher than in 1922. Compared with September, 1922, the banks' deposits show an increase of over \$441 millions, while total assets increased by over \$786 millions. Although the number of national bank failures was 52, the aggregate capital of these was only \$3,205,000, with assets of approximately \$30 millions. "Assuming that the ultimate loss is not greater than the average loss sustained by creditors of insolvent banks, the affairs of which have been settled, the recovery from failures during the current year should approximate at least 80 per cent. of the claims."

The Budget Idea in U.S.A.—In this country the idea of the importance of a complete and co-ordinated budget of revenue and expenditure is ingrained, and has for many a long decade been accepted as a commonplace. We accept as a truism Mr Gladstone's words: "Budgets are not merely affairs of arithmetic, but in a thousand ways go to the root of prosperity of individuals, the relations of classes, and the strength of kingdoms." We find it hard, therefore, to remember that the "budget idea" is, comparatively speaking, in its infancy in the United States, where twenty years ago it was regarded as purely academic. How the United States came to adopt the budget system is the subject of an interesting article in the May issue of *The Annals of the American Academy of Political and Social Science*. It is only since 1912 that its adoption has become at all general for public bodies in America; and it was not until 1921 that the United States had a real national Budget. The campaign for its institution gained its first real impetus from the studies of President Taft's Commission on Economy and Efficiency, one of whose most important productions was a report on "The Need for a National Budget." Legislation of 1921 set up a "bureau of the budget" under a director and staff. "During the first year of its existence," says the article in question, "the Bureau of the Budget was under the direction of General Charles G. Dawes, who, because of his unusual energy... did much to bring public attention both to himself and to the national budget system."

The Experiences of Underwriters.—A Stock Exchange correspondent writes:—In the rush of new issues that has taken place during the past few weeks the underwriters have experienced some chequered results. In a good many cases they got out without being called upon to shoulder any of their obligations. The prompt way in which the Hungarian subscription lists closed on Wednesday in this week, after having been open for less than a couple of hours, shows that there is plenty of money available for such speculative investment as these bonds offer. In this particular instance the underwriting

commission of 1½ per cent. was in such eager demand that before the prospectus appeared as much as 1½ per cent. was bid for the underwriting commission by people who were willing to run the risk of being left with the stock for the sake of only ½ per cent. commission. Underwriters of some of the recent industrials have fared less well. In the case of the Whitehall Electric Investments, they got out of the debentures without liability, but they had to underwrite an equal amount of preference shares at the same time with the debentures, and they were left with 80 per cent. of the preferences. The commission did little more than cover the discount of 1s per share at which the price of the preferences opened. There was, in short, no profit at all to those underwriters who sold their preference shares at the opening of the market. Barcelona Traction 6½ per cent. prior lien bonds were left with underwriters to the extent of 89 per cent., which was not an altogether unexpected result, seeing that the issue was somewhat complicated. The price of the bonds opened at 2 discount, and went back to 2½ discount, on the issue price of 91. That the Lautaro Nitrate Company would be successful with its offer for sale at 100 of £1½ million 6½ per cent. first mortgage debenture stock was a foregone conclusion, and underwriters in this case were practically certain of getting their commission for nothing. The public are beginning to deal in underwriting to an extent quite unknown even five years ago. Every broker nowadays knows what it is to be besieged with requests for underwriting whenever a popular new issue is reported to be on the point of emission. The difficulty is that in a great many cases this demand for underwriting comes from people who are out simply to take the commission, and who, if they get left with the stock, are immediately sellers. The consequence is that the market starts off badly, nor does it pull itself together until such time as the underwriters have finished their selling, and the influence of the more genuine buyer makes itself felt. This gives an opportunity, of course, to the public for the acquisition of cheap stock, because the weaker underwriters, unable to meet the calls as the money falls due, want to get out at any reasonable discount. It is said that in the case of this week's issue of the Hungarian Loan efforts were made by the firms in charge to spread the underwriting as widely as possible, if only to relieve the loan from any possible suspicion of its having been planted amongst a comparatively small circle of favoured underwriters. The trouble is in a case of this sort that, if underwriting is distributed over a wide area, some people talk as though the promoters found themselves obliged to hawk round the underwriting to as many people as possible. On the other hand, if the stock is confined to a limited field, the charge at once arises of undue favouritism having been shown towards the larger capitalist at the expense of the smaller. Candour compels the admission that the true interest of the public is best served by underwriting going into the hands of strong people who are able to nurse stock if they should be left with it.

The Tin Position.—In view of the fact that all the Eastern "pooled" surplus tin will be dispersed by the end of November, considerable interest (writes a correspondent) is being shown in the statistical position of the commodity. There is some difference between the trade authorities, but this is explained by the adjustment in the Banka shipments. According to Messrs Ricard and Freiwald's return for July, the world's visible supply of tin on June 30th stood at 19,442 tons, there having been an increase of 829 tons on the month. This compares with 17,762 tons a year ago and 22,485 tons on June 30, 1922. The Straits shipments for all June aggregated 5,700 tons, and the total supplies work out at 8,046 tons, as compared with 10,631 tons in May. The deliveries were rather disappointing, but they reveal the slack condition of trade everywhere. The world's deliveries of tin for all June amounted to only 7,217 tons, of which the United States took 4,310 tons, the United Kingdom 1,335 tons, the Continent (except Holland) 1,173 tons, and Holland the remaining 399 tons. This is a decline of over a thousand tons on the previous month, but it is pleasing to note an expansion in the Continental takings. Of the world's total supply of tin the United

States holds no less than 10,067 tons in the shape of stocks and tin afloat, and thus more than half the visible supply is in American hands. Supplies in the twelve months ended June 30th last exceeded deliveries by 1,680 tons, the former being 105,924 tons and the latter 104,244 tons, whereas for the year ended June 30, 1923, the total supplies at 97,372 tons were 4,723 tons less than the deliveries, which amounted to 102,095 tons. There has in two years been a reduction of just over 3,000 tons in the visible supply of tin, and in the last fourteen months the greater portion of the tin surplus held in the East has been marketed usually at satisfactory prices. Thus the claim that tin is thoroughly sound statistically does not appear to be unreasonable. The technical position also may be regarded as healthy. There is no big bull account open, nor have the bears many commitments. Since March last there has been a rise to over £298 and a subsequent fall to just over £200, but tin during the last month or so has been moving largely on its own merits. After the publication of the monthly figures, the three months' position moved up to £230, or close on £30 over the lowest touched at the close of May, and sentiment was bullish, although there was some subsequent fluctuation. Numerous inquiries were reported from America, but the holidays there checked business somewhat. Seeing that September and October tin is now being dealt in, and the Government stocks will be exhausted in four months' time, the market should be able to hold its own, and no doubt further improvement will be seen after the holiday period.

Lipton's Year.—The report of Lipton's, Limited, for the year ended March 31st last states that the market values of most of the principal commodities dealt in by the company have continued to fall during the period, necessitating further depreciation in the value of stocks in hand, which has been borne by the year's trading. Gross profits are, however, down. The following table summarises results for some years past:—

Year Ended March.	Gross Profits.	Expenses, &c.	Net Profits.	Depreciation.	Div.
	£	£	£	£	%
1902.....	228,202	39,441	188,761	19,063	8

* Including £220,889 drawn from "premium on shares account."

A satisfactory feature is the fall in expenses, while it should not be overlooked that £10,000 more is allocated to depreciation than a year ago. In the circumstances the decision to reduce the ordinary dividend to 10 per cent. is a wise one. This enables £42,884 to be carried forward, as against £35,640 brought into the accounts. In the balance-sheet, goodwill and property is £81,000 higher, mainly on account of the fact that the company has purchased several freehold and leasehold properties. Cash is £76,303 lower. Stocks at £1,161,016 are £105,851 lower. Savings Bank deposits are returned as £153,409, which compares with £151,942 a year ago. We should like to see the item goodwill and property separated.

Spiers and Pond.—Although earnings are a little lower it is evident that this old-established refreshment firm is holding its own in these competitive days. Profits for the 12 months ended March 31, 1924, amounted to £148,614, as against £155,901 for the previous year. The following table shows how the undertaking has fared since

1918. It may be recalled that the company was reorganised six years ago:—

	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.

	(10%)	(12½%)	(12½%)	(12½%)	(12½%)	(12½%)
Carried forward ..	15,355	15,652	22,531	13,114	19,348	17,699

The directors are maintaining their policy of building a strong reserve position, this year's appropriation of £15,000 bringing general reserve to £135,000. Stocks of wines and spirits at £74,407 show an increase of £11,232. Real property remains by far the most important item among the assets, being valued at over £1,000,000 in a balance-sheet total of £1,600,000. The balance-sheet might be rendered a little more attractive if the directors could see their way clear to indicate how much represented freehold properties, and the nature of the leases in leasehold properties.

The Distillers' Company.—This company has been able to turn the prevailing conditions of the past year to such good account as to produce a gross profit of £906,744, which surpasses all previous records. The following table shows the remarkable progress made by the undertaking over a period of years:—

	1914.	1915.	1920.	1921.	1922.	1923.	1924.
Gross profits	£ 310,993	£ 502,379	£ 669,464	£ 597,582	£ 642,337	£ 815,100	£ 906,744

	(10%)	(10%)	(10%)	(10%)	(10%)	(10%)	(10%)
Carried forward	21,025	70,435	100,526	108,994	98,770	107,546	119,531

As authorised by meetings of the company held in July and August, 1923, the directors duly carried through the subdivision of the £10 ordinary and preference shares into shares of £1 each. They also carried through the new issue of 1,822,840 6 per cent. preference shares then agreed upon, 10s per share having been paid by capitalising £911,420 from the reserve fund, and 10s being paid in cash by the allottees. In the course of the year the directors, in exercise of their powers, have made a further issue of 39,320 ordinary and 540 preference shares fully paid in part settlement of the purchase-price of an old-established London rectifying business. The effect of these various operations has been to increase the issued capital of the company as at May 15, 1924, to within £165,000 of the total amount authorised, viz., £6,000,000. The reserve fund stood at £950,000 last year. From this, £911,240 was taken as mentioned above. There has now been added £211,420, making the total £250,000. Thus distilling is not a vanishing industry as far as the financial aspects are concerned. The balance-sheet will be found fully analysed in our usual column.

Life Association of Scotland.—A valuation of the assets and liabilities of this association has been made for the three years ended April 5th last. At the previous valuation in 1921 the sum of £349,663 was written off for depreciation of investments, and a revaluation of assets at April 5th last showed an aggregate market value considerably in excess of the book value as written down. The investment reserve fund of £150,000 was consequently transferred back to the life and annuity fund. The

valuation of liabilities was made at 3 per cent., while the net yield of the funds during the past three years averaged £4 9s 3d per cent. per annum. The life funds of £5,988,226 showed a surplus over liabilities of £569,226, of which £142,772 was carried forward. The amount allotted to policyholders was £373,459, and to shareholders £41,495. In the principal class, A3, reversionary bonuses were declared at the rate of £2 10s per cent. per annum for the three years, the intermediate bonus on claims subsequent to April 5th last being fixed at £1 15s per cent. per annum. In 1921 the A3 class policies received a bonus of 15s per cent. per annum for two years, and in 1916 there was no distribution of surplus. During the year ended April 5th last 1,498 new assurances were issued for £849,530 net. The death claims were 72 per

cent. of the amount expected, and the average net rate of interest yielded by the funds was £4 10s 6d per cent. The total funds increased during the year by £167,181 to £6,083,837.

West Australian Mining.—The subject of gold mining in Western Australia—to be exact, at Kalgoorlie—has received an unusual degree of attention just lately. Following the annual meeting of the Ivanhoe Gold Corporation—which was unable to pay any dividend for last year—a number of disappointed shareholders threw their holdings on the market, and the price fell to about 9s. A proposal has just been approved for sale of the property to the

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned period of the Year ending March 31, 1925, as compared with the corresponding period of the preceding Year.

Treasury, June 30, 1924.

Lake View and Star. The announcement of this scheme had the effect of causing a spurt in the quotation of the Ivanhoe shares. The terms provide for the distribution of five Lake View shares in respect of every two Ivanhoes. Then the Ivanhoe will go into liquidation, and realise its other assets, which comprise cash and numerous investments, estimated to represent 10s per share. The salient point on the mining side is that the Ivanhoe, with its antiquated plant, cannot treat its existing ore reserves except at a loss; whereas, with its new works, the Lake View and Star should be able to make a small profit. The annual report of that veteran undertaking, the Great Boulder Proprietary, shows a further contraction in both profits and ore reserves, the former coming out at £58,300, as against £110,500 for 1922, while the latter figure at 143,100 tons in place of 182,700 tons, 13.2 dwts in each case. Some 107,400 tons having been crushed during the year, it follows that 67,800 tons were opened up. Still, the "runs" of payable ore at the lower levels are becoming shorter and shorter. It can only be a question of a comparatively short time before the original mine is exhausted. There are, however, possibilities in connection with the two leases to the north recently purchased. These were worked years ago with small plants, all the known oxidized ore being extracted; but sulphide ore has been proved to exist at depth. It is estimated that the bottom levels contain sufficient ore to repay the purchase money. For 1923 one dividend of 4d per share has been paid, as against 1s in respect of 1922. The accounts of the Golden Horseshoe Company show the slightly reduced surplus of £24,300. The dividend was 2s per share, tax free, in place of 2s 6d. At 506,900 tons, value 8.31 dwts, the ore reserves display a slight shrinkage under both headings. Labour and other conditions continued such as to force unsound procedure upon these companies. Indeed, the general manager of the Horseshoe states that it was necessary last year to treat ore 4.39 dwts above the average of the reserves. However, a measure of relief will be experienced from the moderate reduction in wages awarded last November, and the increase in hours of the engineers; while for the whole of the current year the companies will get the benefit of the cut from 7s to 3s per 1,000 gallons of water made by the Government as from July 1, 1923. It is satisfactory to learn that labour is now adopting a more reasonable attitude than of late.

Argentine Currency.—A cable received by the Bank of London and South America, Limited, from their Buenos Aires office, states that an Argentine Government project, published in the Press, proposes a reform of the monetary system by blending the Banco de la Nacion Argentina and the Conversion Office, the latter as an issue department, with minting facilities, the currency being a single-type gold standard, guaranteed by 50 per cent. in gold, 15 per cent. in public funds, 15 per cent. bills rediscounted for banks. New money—gold, silver, nickel and notes—is to be issued, with a basic value of 20 cents gold, styled Nacionales, of which 2.20 will be the equivalent of the present paper dollars. This will be the rate for conversion. The Government may use the gold over 50 per cent. aforesaid to meet obligations, replacing gold by bonds. The total new currency proposed is 2,243 millions Nacionales.

THE Institute of Cost and Works Accountants announces a costing conference on Friday, July 25th. Morning session 11 a.m., at which Lord Leverhulme will preside. Subject, "Administration and Selling Costs, their Nature and Distribution." Afternoon session, 2.45 p.m. Subject, "The Function of Costing in Industrial Relations."

Oversea Correspondence.

UNITED STATES.—LARGE TREASURY SURPLUS FOR FISCAL YEAR—PUBLIC DEBT—COTTON CONSUMPTION—MONEY EASIER.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 24.

THE Government's financial condition at the close of the present fiscal year will be much better than was anticipated. Despite the 25 per cent. reduction in Federal taxes payable this year on 1923 incomes, preliminary estimates indicate that the year's surplus will approximate and probably exceed half a billion dollars. It will be at least \$170,000,000 greater than the estimate of some \$329,600,000 made by the Treasury Department last November, because of results which could not then be foreseen. Ordinary expenditures have been less, while revenues have been larger than expected. To June 20th the Government realised, for instance, \$87,860,208, or about \$71,360,000 more than had been anticipated, and miscellaneous receipts amounted to \$204,613,859, as compared with the November estimate of \$161,301,421. Income-tax collections this fiscal year up to June 20th have greatly exceeded the total for the corresponding period of last year, amounting to \$1,764,723,989, against \$1,594,917,960. Just to what extent the 25 per cent. tax reduction allowed to individual taxpayers will affect the Government's revenues it will be impossible to determine until the fiscal year closes. Taxpayers were permitted to deduct one-half of the 25 per cent. reduction when they paid their second quarterly instalments on June 15th. The full reduction, therefore, will not be borne entirely by the present fiscal year, since the second half of the reduction will be spread over the next two income-tax payments which fall due on September 15th and December 15th, and will to that extent cut down the surplus for the fiscal year beginning July 1st. Total income and profits taxes for the month of June up to the 20th amounted to \$262,509,080, or about \$20,900,000 less than for the same period in June of last year. As indicated, however, this loss is much more than offset by the heavy increase in previous quarters, and Government officials consider the results very gratifying. Some authorities estimate that, in spite of the heavy expenditures which will result from the recently enacted soldier bonus legislation, and notwithstanding the reduction in income and profits taxes, the fiscal year ending June 30, 1925, will show a surplus approximating \$60,000,000. But it is much too early to make any definite predictions as to results in the ensuing year.

Statistics of Treasury operations during the present fiscal year show that up to June 18th the public debt of the United States was reduced by \$1,009,727,888 in that period. This was accomplished by reducing the net working cash balance to the extent of \$168,659,603; by applying to the public debt a surplus of revenues, amounting to \$383,079,185, and by making public debt retirements, totalling \$457,989,100, chargeable against ordinary receipts, as required by law. The principal items in the last-mentioned sum were:—Sinking fund, \$295,987,350; purchases from foreign repayments, \$38,509,150; and receipts from foreign Governments under debt settlements, \$110,878,450. Up to June 18th the Treasury reduced the public debt by \$3,211,802,987, but issued new obligations aggregating \$2,202,075,099. The above redemption sum covered retirement of certificates of indebtedness, Treasury notes and bonds, war savings and Treasury savings securities, Liberty bonds, Victory notes, and other debt items. The new issues consisted of certificates of indebtedness, Treasury notes and bonds, Treasury savings certificates, and postal savings bonds. The public debt of the United States, which reached the peak of \$26,596,701,648 on August 31, 1919, nine months after the Armistice, has been reduced, on an average, more than one billion dollars yearly to \$21,339,979,477 on June 18th of this year.

That cotton goods manufacture is being extensively curtailed in this country is fully borne out by the Census Bureau's report for May of cotton consumption and of active spindles. The report shows the smallest consump-

tion in any month since July, 1921, and the lowest number of active spindles since December, 1920. The total May consumption, 413,659 bales, represents a decrease of 14 per cent. from that of April and of 33 per cent. from May, 1923. For ten months of the present cotton year consumption reached only 4,973,020 bales, showing a decrease of 12 per cent. from the corresponding period a year ago. Exports last month were 326,357 bales, a total slightly larger than in April, but more than double that for May, 1923, while for the ten months exports show an increase of nearly 19 per cent. Only 30,493,000 spindles were active in May; that number is 14 per cent. below the peak of April, 1923, and less than 2 per cent. above the low point of December, 1920, when industry generally in this country was at a low ebb.

Money rates here continue to decline, further easiness having developed this week, especially in time funds and in commercial paper discounts. On the Stock Exchange the rate for call loans seems to be "pegged" at 2 per cent.; it has not moved from that level since June 10th. Time money up to 60 days is now quoted nominally at $\frac{3}{4}$ per cent., for 90 days at 3 per cent., and for four months at $3\frac{1}{2}$ per cent. Funds are freely offered for five and six months, and even into January, at $3\frac{1}{2}$ per cent., with most of the current transactions for six months at $\frac{1}{2}$ per cent. Time money for 90-day loans secured by Stock Exchange collateral has not been so freely offered at 3 per cent. since the early part of 1916. Commercial paper discounts, which, compared with the rapid decline in money rates generally, have receded slowly, have now become decidedly easy. Prime names are moving at $\frac{1}{4}$ per cent. and other good paper at 4 per cent., while exceptionally choice names are discounted at $3\frac{1}{2}$ per cent. The business paper market is now lower than at any time since the beginning of 1917. Money continues to accumulate in all centres throughout the country, and available supplies greatly exceed current borrowing. The volume of wholesale purchasing generally is far below normal for this time of the year in practically all lines of trade and industry. More Federal Reserve Banks in different centres have cut their official rediscount rates, following the recent reductions in New York and Boston. The Chicago, St. Louis, Richmond, and Atlanta institutions lower their rate from $4\frac{1}{2}$ to 4 per cent., while the Philadelphia Federal Reserve Bank made a reduction of 1 per cent. to $3\frac{1}{2}$ per cent., the same as that of the New York and Boston banks. Three of the twelve Federal Reserve banks, therefore, have cut their rediscount rate to $3\frac{1}{2}$ per cent., six have reduced to 4 per cent., and three—namely, those in Minneapolis, Kansas City, and Dallas, Texas—will maintain a $4\frac{1}{2}$ per cent. rate.

RANCE.—NATIONAL FINANCES—THE FLOATING DEBT—RECONSTRUCTION EXPENDITURE.

(FROM OUR CORRESPONDENT.)

PARIS, July 2.

INTERESTING revelations as to the actual financial situation of France have emerged from Monday's discussion in the Senate. The main object of the discussion was to authorise *douzièmes provisoires*, or votes on account in respect of the "Recoverable Budget" for the unexpired portion of the current year, which period was expressly left unprovided for by the Poincaré Government, in order that the financial provisions for the year should not be entirely taken out of the hands of the two Chambers. Incidentally, the discussion afforded several fresh proofs of the confusion that continually results from the incoherent methods adopted in regard to the national bookkeeping. A striking instance of this was the fact that, in the Bill authorising the opening and the cancellation of certain edits, for the purpose of formally closing the accounts under the General Budget for 1923, the Rapporteur of the Credits Commission of the Chamber based his report on the statement that this Budget had been balanced with a deficit of 1,203,614,000f. M. Henry Bérenger, the Rapporteur of the Senate Finance Commission, had no difficulty in showing that "a series of material errors on both sides of the accounts" had been committed in the Lower House, and that, instead of resulting in a deficit, the year's operations really closed

with a surplus of 39 million francs. That the Senator's conclusions were justified was proved by the fact that the account, as thus amended by him, was accepted as correct when sent back to the Chamber for final approval.

One outstanding feature of the discussion was that it furnished proof that M. Herriot's assertion that his Government intends to take an exact inventory of the nation's financial position before the Budget for 1925 is taken up is likely to be fulfilled. M. Bérenger, in the course of his statement, said he was able "for the first time," thanks to information that had been furnished him by the Treasury, to set forth "the exact situation of the home and foreign commitments for 1924-5, as well as the amounts owing to the Bank of France and other French and foreign banks." "Our internal public debt," he stated, "exceeds 277,000,000,000f, and our foreign debt, at par, amounts to 39,000,000,000 gold francs." The internal debt, according to M. Bérenger's figures, is made up as follows:—

	Francs.
Irredeemable or long term debt.....	150,000,000,000
Short term debt	39,000,000,000
Advances by the banks	24,000,000,000
Floating debt of less than a year	64,000,000,000

The annual interest charges on this internal debt are equivalent to an annual charge on the Budget of nearly 15 milliards. This annual burden, the Senator added, after the vote of the *douzièmes provisoires* in respect of the Recoverable Budget for the current year, would be increased by the interest that would have to be paid on the 9 to 10 milliards that the Treasury would have to provide this year for the reconstitution of the devastated regions, as the new *double décimes* and their accessory taxes would furnish this year only about 3,500,000,000f towards the amount required for that purpose.

Even when the present year is safely got over, there will still remain to be found a further 20,000,000,000f to meet the capital expenditure that will have to be made on the devastated regions during the next two years (at the rate of 10 milliards a year); and this money will have to be found even if (1) taxation continues to come in at the same rate as at present, and (2) Germany begins to pay. During 1925 and 1926, moreover, the Treasury will have to provide for the redemption (at the will of the holders) of short-term bonds and obligations amounting to a total of at least 23,000,000,000f, and also to pay off nearly 7,000,000,000f of foreign commercial debt, due to Japan, the Argentine, Uruguay and Great Britain, and also payable on demand, making a further total of about 30,000,000,000f that must be found. In such circumstances it is not surprising that both the Senate and the Chamber renewed without hesitation the law prohibiting the export of capital for a further six months.

M. Bérenger puts his finger on the weakest spot in the whole French financial fabric when he insisted that the problem to be solved is much more a Treasury problem than a Budgetary one. The Budget calls for, roughly speaking, some 30,000,000,000 a year. The Treasury, however, in addition to requiring over 10 milliards of fresh money during each of the two coming years, as well as the 30 milliards a year furnished by taxation, will have to face the problem of how to continue to finance the 60 odd milliards of floating debt. The sum in question crystallises, of course, the accumulated deficits of past years. As this cannot be paid off it must be renewed, and the only way in which this can be done is to issue fresh short-term bonds, from the sale of which to pay off those that mature. As these bonds are, on an average renewable every six months, sales totalling about 120 milliards have at present to be effected during the twelve months. This total will be increased during 1925, owing to the number of bonds that will then become due for payment, to at least 150 milliards. From these figures it will be seen that only a very small portion of the national credit depends upon the honesty of the taxpayer, the greater part being dependent on the maintenance of confidence in the franc. In plain language, so long as the weather continues reasonably fair the ship should weather the storm. If there should occur, however, another cataclysm like that of two or three months ago, when the weekly statement of the Bank of France showed that the note issue had been appreciably increased, with the result that the franc suddenly fell, disaster may be within sight.

Whether the Herriot Government will be able to devise means to reinforce this notoriously weak spot in the country's financial armour remains to be seen. For the moment it appears wisely to be marking time and is putting off as long as it can any attempt at carrying out the rash promises of reduced taxation and increased subsidies at the expense of the general body of taxpayers that were so lavishly made during the elections. It is beginning to be recognised by the bulk of the new deputies that the problem of how France is to make both ends meet during the next two years is much more important than even that of the high cost of living, and that the solution of the latter is, after all, very directly allied to that of the former. The announcement by M. Clementel, the new Finance Minister, that France will not participate in the international loan to Hungary is regarded as significant, not only of the real situation of the country, but of the growing realisation of the real facts of the case. One fundamental principle appears to have been definitely accepted. There is to be no more borrowing to meet current expenditure, and any fresh expenditure that is voted is to be met by increased taxation. The new issue of Crédit National Bonds, which was to have been made before the end of the current year, to furnish further money for reconstitution purposes, has been for all practical purposes abandoned. The Budget Bill for this year authorised further issues by the Crédit National of 5,000 millions, towards which the issue made a few months ago furnished 1,382 millions. The authorisation to raise five milliards through this channel during the present year is maintained in the text that has just been voted, for the purpose of enabling the Government to carry on until the end of November. But the clause, as the Rapporteur bluntly informed the Senate, is purely illusory, as the Government has no intention of utilising the power it confers upon it. The intention at present is that, including the amount of 1,382 millions already raised this year through the Crédit National, that organisation will not increase the national indebtedness during the present year by more than between 1,500 to 2,000 millions, in any case. Moreover, whatever further amount may be raised this year for reconstruction purposes will, in all probability, take the form of ten- or thirty-year bonds.

Meanwhile, after having been slowed down gradually since the beginning of the year, reconstruction work has now practically been brought to a standstill. The thirty milliards that have still to be raised to compensate sufferers from war losses will not increase the annual burden of the country by more than 2,000 millions a year, but it has yet to be ascertained whether the nation is in a position to support this addi-

tional burden from its own resources. It is to be hoped that the "inventory" which M. Helriot has promised to take of the nation's situation, before the Budget for 1925 comes up for consideration, will include not only its financial balance-sheet as a State, but also its economic balance-sheet. The latter, if impartially drawn up, should reveal many facts as to which all reliable data have been lost under stress of the war, and particularly it should disclose more exact details as to the real ratio of existing taxation to the national fortune than are at present available. The election of M. Vincent Auriol, a militant Socialist, as the new President of the Finance Commission of the Chamber, and the fact that the majority of that body profess the same political faith, gives reason to believe that any serious inquiry in this direction in the near future would be likely to produce interesting results.

GERMANY. — REPARATIONS — TARIFF PREPARATIONS — FINANCES — CREDIT — FOREIGN TRADE — INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, July 1.

THE action of the French Cabinet in deciding to permit the return of the expelled Ruhr citizens has made a very good impression here. But there is increasing doubt as to what is going to happen at the coming London conference. The first reports cabled here concerning last week's meeting of the British and French Premiers implied that an agreement had been come to on certain essential questions, but at present it seems as if not even the programme of the conference has been settled. Official circles here are increasingly anxious for a speedy settlement, in the belief that this will restore normal trade relations, and lead to an inflow of capital. The fact is usually ignored that the expected large foreign investments, which are to revive native industry, will put new, lasting burdens on the foreign payment balance, so that the annual amounts laid down in the Dawes Scheme will represent considerably less than the total liability.

Apart from the currency, many internal questions of importance are tied up with Reparations. One of these, the *Aufwertung* question, the position of which was described last week, has made new progress by the appointment of a Reichstag Commission to consider no less than nine proposals. Even such an expert financier as Dr Dernburg demands the partial restoration of interest on the old debt. The party proposals for giving further compensation to creditors are inconsistent with one another, and with both party and official views on the financial and credit questions. It is impossible to resume partial payment of interest on the old State debt without imposing new taxes; and it is impossible to restore bonds and mortgages without putting new burdens on industry and agriculture. But it is declared by the representatives of these interests that they cannot get along as it is. It is difficult for most classes of producers to raise money to cover their present outlay; but it is demanded by one party that interest payments on old debts be at once resumed, and by some enthusiasts that the pre-war gold debts be fully revived, this although the Dawes Report, which most parties accept, proposes a new bond burden of 5 milliard gold marks on industry, on the assumption, which is now in doubt, that the old bonds were wiped out. The President of the Disconto Bank, Dr Salomonsohn, declares that in no case distributed over all kinds of business, which means agriculture, city real estate, &c. The present burden of the shape of Rentenbank mortgages or bonds and about 750 million gold marks, representing the restored 15 per cent. of the pre-war bond debt. The addition of the 5 milliard Reparations bonds would bring the total to 6,950 million gold marks, as against an estimated 4,600 milliards (on the present German area) before the war.

The Food Minister, Count von Kanitz, last week made a statement showing clearly that the Government, as was expected, intends to include food duties, abolished in 1914, in the new tariff. The Agrarian Press indicates that this policy is the result of an agreement for higher duties on industrial imports also. Count von Kanitz

laid stress on the fact that home-produced food sells on the whole cheaper than before the war, and is much cheaper than abroad, whereas the cost of food production has gone up. Bills are to be submitted with the aim of equalising home and foreign prices. In order to compensate consumers a reduction of taxation on other articles of consumption is promised.

The Finance Ministry's return for the ten days. June 11-20, shows revenue received 180,974,108 gold marks; expenditure, 182,635,854 gold marks, whereof 87,295,097 gold marks was for general administration, 75,118,177 gold marks for subventions to State and municipalities, and 20,222,580 gold marks for repurchase of gold loan. The credit crisis continues. Dr Schacht has again told the Reichsbank Central Committee that no general change in his policy is intended, but he promised help in individual cases where credit stringency was really the cause of a threatened suspension of payment. The Reichsbank, however, has discovered that the great majority of recent bankruptcies and cases of "operating supervision" concerned new firms which were founded during the inflation time. The weekly report for June 23 of the Gold Discount Bank shows, for the first time, a decline in outstanding credits, from £6,524,182 to £6,244,745. The Reichsbank's statement for June 23 shows a decline in discounts and advances from 2,141 to 2,045 trillion paper marks, and a decline in circulation by 32 trillions to 891 trillions. State and private deposits rose by 70 trillions to 1,071 trillions; and as a result of the repayment of a foreign credit, the bookable free gold reserve increased by 14,184,000 gold marks to 462,187,000 gold marks. Dr Schacht communicated the following details of the coming Bank of Issue. This bank will be the present Reichsbank. The nominal capital, at present 180,000,000 marks, will be reduced to half, leaving 90,000,000 marks of the old capital, one share being issued for every present two; and the minimum capital of the reconstructed bank will be 300,000,000 gold marks, maximum 400,000,000 gold marks. Shareholders in the Gold Discount Bank will be allowed to exchange into new Reichsbank shares. The fixing of the discount rate will remain in the hands of the directorate. The Reichsbank's gross profits in 1923 are returned at 63,780,223 billion marks, net profits 13,003,810 billion marks. Of this, the Republic gets 10,302,667 billion marks, and 900,381 billion marks go to reserve, while a dividend of 10 billion marks per 1,000 marks share, equal to 1 per cent. gold, is paid.

The foreign trade balance is becoming increasingly passive. On both sides trade shows a tendency to increase, but imports increase out of proportion to exports, and on the whole five months January-May exceed them by more than 50 per cent. The cause of this movement is hard to define. The operations of the Gold Discount Bank are confined to helping such importers of raw materials as can repay their debts out of the yield of exported goods manufactured from these materials; but this operation sets free exchange for general imports, and of late imports of manufactured goods have risen rapidly. The monthly trade balances so far are (in millions of gold marks):—

	Imports.	Exports.	Imp. Surplus.
January	567	431	136
February	718	466	252
March	692	456	236
April	803	482	321
May	870	516	354

	Imports.	Exports.	Imp. Surplus.
In detail, imports and exports were (thousands of gold marks):—			
Imports—			
Livestock	9,250	9,934	38,920
Food and drink	169,584	175,377	847,841
Raw materials	408,261	372,374	1,684,176
Half-finished materials	79,769	84,086	346,308
Manufactured goods	202,499	158,607	729,093
Gold and silver	782	2,778	14,180
	870,185	803,156	3,660,518
Exports—			
Livestock	620	484	2,082
Food and drink	32,792	29,623	119,697
Raw materials	31,883	32,536	143,664
Half-finished materials	33,526	28,662	147,752
Manufactured goods	415,129	389,831	1,932,171
Gold and silver	2,267	1,193	6,812
	516,217	482,129	2,352,078

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
 Capital Authorised ... £3,000,000
 Paid-Up Capital ... 1,050,000
 Reserve Fund and Undivided Profits 1,407,811

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances. JAMES STEWART, Chief Manager.

The increase in imported raw materials is largely due to wool and woollen yarn. Raw cotton imports, which increased in earlier months, declined. On the whole five months, imports of raw materials are materially larger than in the same period of 1922, which is regarded as a normal year. In 1923 raw cotton imports and some other kinds of raw textiles fell off very much. The Ruhr strike caused a slight increase (to 900,000 tons) of imports of coal. The greatest imports increase is in manufactured goods, and again textiles led, in particular yarns of all kinds, and cotton cloth, the latter of which came mainly from Alsace-Lorraine. Exports of chemicals increased. Exports of rolled iron and of iron goods show very little change. Machinery exports totalled 21,723 metric tons, against 21,537 metric tons in April, and a monthly average of 39,895 metric tons in 1922.

Complaints of insufficient orders and of cancelling of orders come from most branches of industry, and in nearly all cases shortage of working capital is stated as the cause. Although the Berlin City unemployment report, which is most up-to-date, shows a small increase in the number of unemployed, it seems that these complaints are exaggerated; and that the credit shortage is not yet wreaking any worse havoc than the inflation did. The credit crisis has now lasted some months, but the Labour report for June 1st shows only 210,000 publicly supported unemployed in unoccupied territory, against 307,000 on May 1st, 702,000 on April 1st, and 1,533,000 on January 1st. There are, of course, other unemployed, and the number of partly unemployed is probably increasing, after declining in a few months from 848,735 to only 90,133. Unemployment in occupied territory, for which there are no figures, seems to have increased considerably.

HOLLAND.—SIGNS OF RECOVERY—LOWER WAGES—GOVERNMENT ECONOMY—IMPORT DUTIES—THE GOLD STANDARD.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, June 21.

ALTHOUGH it can hardly be said that the crisis is over for Holland, or that within a reasonable time a better prospect for commerce and industries will be opened up, yet there are unmistakable signs which, if not indicating a strong improvement, still show a satisfactory adaptation to present conditions. This of itself can have a reassuring influence. Here and there reports are received from industrial circles which indicate greater activity. A Rotterdam shipbuilding company, by submitting lower bids, was able to secure orders for the construction of four steamships, each of 3,200 tons deadweight, for the account of steamship companies at Newcastle, four steamships for account of a firm in Glasgow, besides a ship for one of the largest English lines. Smaller orders were also received from our own country. This is very significant, particularly if one views it in connection with the fact that not so very long ago one of the largest Netherlands steamship companies had to have a ship built in France because wages in this country were too high. This turn of affairs is notable, although the reduction in the rate of wages in most cases does not take place without a struggle. Not many strikes of long duration, it is true,

are taking place, except that in the textile trade, which has now been in progress for some months. Still, often even small wage reductions are only results of extremely long and difficult negotiations. The necessary complete adjustment to the altered conditions will on that account no doubt be a long drawn-out affair.

Notwithstanding these facts, the future is looked forward to hopefully by those capable of judging. Evidence of this is given in the annual report of the Netherlands Bank, which has just appeared. The president, Mr Vissering, speaks of the expectation of a balanced Budget for 1925 being attained as the purpose of the Government, but emphasises the fact that the Government will not have to be afraid of taking drastic measures. As a matter of fact, the proposed retrenchment measures, which were fully discussed in a previous letter, are being gradually carried out. In addition, the Government is now also trying to increase the income side of the Budget. A Bill has been introduced to revise the tariff. True enough, this Bill is announced as being purely a technical revision, and is, amongst other things, grounded on the principle that more uniformity should be established in the articles subjected to the tax. Yet at the same time the import duty on the goods taxed is increased from 5 per cent. to 8 per cent. Criticism on these tariff measures will not be lacking in the discussion of the Bill in Parliament, for the application of the increased Customs duties contains an element of danger to free trade.

That this country, with its extremely important through traffic, has the greatest interest in free trade is once more shown by the business transactions which have been brought about with Russia. Notwithstanding the fact that the negotiations between the representatives of the Netherlands and Russia concerning a *de jure* acknowledgment of the latter have been temporarily suspended, very important business transactions have been accomplished. Large grain shipments have taken place through Rotterdam from Russia, while large quantities of cotton at Rotterdam and of wool at Amsterdam have been purchased for Russian account. The cotton purchases especially are of interest here, because Bremen (Germany) has always been the great emporium for American and other cotton. That Bremen is now passed over is explained principally by the fact that only a portion of the purchase price is paid at shipment, and the rest on arrival in a Russian port. In the Netherlands it is possible to finance such transactions. Germany, with its capital shortage and lack of credit, must decline this. In this way the natural economic conditions of themselves lead the course of Russian trade over the Netherlands. For the present, however, long-term credits are only extended in very exceptional circumstances, although the Russians are strongly urging these.

As to other matters, there is great hope that a revival of international trade, together with severe retrenchment measures, will in the end have a good influence on the standing of the guilder, and make the return to the gold standard possible. The president of our circulation bank is, in principle, strongly inclined towards re-establishment of the gold standard, but is of the opinion that one or more of the smaller countries will not be able to bring about such a result independently. Therefore he believes that exchange of ideas, and finally co-operation with powerful central banks in the larger countries of Europe, is indispensable. It is not improbable that the president of the Netherlands Bank, in this, has in mind the Bank of England in the first place. Still, it remains to be seen if the efforts of Sweden, which on its own initiative has returned to the gold standard, although with some restrictions, will not have such a success that in the end, Holland, without too great danger, will also be able to follow her example even if the Bank of England be not inclined to do so. The balance of payments for 1923 was already about even, so that on this point there need be no special objection. If, in addition, the Government and cities become more moderate in their money requirements, it may be possible that the time for the establishment of the gold standard will prove to be not so very far off.

POLAND.—MR GRABSKI'S STATEMENT—INCREASING REVENUE—REDUCTION OF IMPORT DUTIES—THE CREDIT POLICY OF THE POLISH BANK—OIL PRODUCTION.

(FROM OUR CORRESPONDENT.)

WARSAW, June 17.

WHEN Mr Grabski took over the Ministry of Finance in January he asked the Diet to grant him dictatorial powers for one year. The Sejm divested itself of its privileges only for six months, so that Mr Grabski is now obliged to ask for a renewal of the Bill which enabled him to put Polish finance on a solid basis. In introducing the new Bill Mr Grabski delivered a long exposé, in which he dealt less with financial problems than with the economic crisis from which the country is suffering. The emphasis laid on economic difficulties is natural, because a prolonged industrial crisis would necessarily undermine the financial foundations which have been built up during recent months. The importance of what has been accomplished may best be judged from a comparison of the revenue statistics for the last three years, reproduced below (million gold francs):—

	1922.	1923.	1924.	Increase in 1924 Compared with 1923.	1922.
Direct taxes ..	8.0	11.4	58.1	512	725
Capital levy ..	50.8	..	94.3	..	185

Total.....	124.4	60.8	303.3	500	244

Total revenue for the first four months of the year was in 1924 five times greater than in 1923. This favourable result has been obtained partly by the collection of the capital levy, but also to a great extent by the increase of all taxes and duties. The abnormal increase in the yield of export duties is due to a modification of export policy. While hitherto licences for the export of different goods were given by the Ministry of Industry and Commerce without any special payment, they are now accorded to the highest bidder.

In his exposé Mr Grabski tried to prove that the industrial crisis is not so severe as is generally supposed. The number of unemployed, which exceeded 120,000 in May of last year, did not reach 110,000 in March of this year, and fell to 109,000 in April, to 93,000 in May, and to 95,000 in June. These statistics are, however, partly misleading, because they do not contain data relating to the very great number of workers on short time.

The present crisis is the result of the four years of inflation, which have weakened the whole productive machine and the credit system of the country.

Mr Grabski has promised to lower the import duties which contribute to the high cost of living. For instance, the import duties on shirts amount to 65 per cent., on boots to 43 per cent., on soap to 75 per cent. The new tariff will be less protective, and will aim at making the rural and industrial products smaller. The rural population is suffering very much from the low relative value of its products. For example, 100 units of rye enable the farmer to acquire only 50-75 per cent. of the manufactured goods which he obtained before the war.

The Polish Bank is supporting the industry of the country by facilitating credit operations. The value of the circulation, which amounted to 75 million gold francs in January, rose to 374 millions at the end of May, and to 439 on June 3rd. This, however, is only a small fraction of the pre-war circulation, which is estimated at 1,750,000,000 gold francs. The credit policy of the Polish Bank is framed in such a manner as to prevent an inflation of the currency. With the quantity of gold and of foreign currencies possessed by the Bank, the circulation could be increased to 1,100,000,000 zlotys without infringing the legal ratio of 30 per cent. Mr Grabski declared, however, that the Bank will not go below a reserve of 50 per cent. With such a limit the present circulation can be increased by a further amount of 231 million zlotys. Under such conditions a fall of the zloty in the near future seems to be improbable.

Polish oil production, which since 1909 has steadily declined, has shown during the last two years a small improvement, as may be seen from the figures below:—

	Tons.		Tons.
1916	919,090	1920	765,020
1917	849,730	1921	704,870
1918	822,740	1922	713,100
1919	831,701	1923	737,180

This increase is due to the exploiting of new oil deposits in South-Eastern Galicia. The production in the district of Boryslaw, which is the principal source of Polish oil production, is declining, and it is estimated that in 10-20 years these deposits will be exhausted. The Polish Government attaches, in consequence, the greatest importance to the development of new deposits. In this respect there are great possibilities, because hitherto only 7 per cent. of the known oil deposits have been exploited. During the last year a number of new shafts of 1,600-1,700 metres depth have been bored. The Government is facilitating these operations by allowing the free import of materials necessary for the construction of the new shafts.

CZECHO-SLOVAKIA.—PROTECTION—UNEMPLOYMENT—INDUSTRY AND AGRICULTURE.

(FROM A CORRESPONDENT.)

PRAGUE, June 20.

AN interesting situation presents itself at the present time in Czecho-Slovakia, where the question of an extension of Protection is under consideration. Parliamentary government is naturally very difficult in a country in which there are three distinct nationalities and five political parties—the Agrarians, the Socialists, the Clericals, the National Democrats, and the People's Party—and only by a series of coalitions can any legislation be enacted. It would be untrue to say that the "coalition crisis" which has arisen is due entirely to divergent views on the question of Protection—the position of the Socialist Party in the Cabinet, and the desire for control of the Ministry of Education by this or that party has much to do with it—but the strong appeal of the Agrarians for some form of Protection with regard to agricultural produce has really brought matters to a head.

For the last five years Protection in the form of Customs duties upon industrial products has been the accepted policy of the country. It is essential—so most of the political leaders maintain—for Czecho-Slovak industrial stability. But the Agrarians declare that the severe burden of taxation which has been imposed since the creation of the new State has hit the agricultural classes most, and the farmer, so reduced has his purchasing power become by taxation and bad harvests, is not able to supply himself with even the necessary farm machinery. They demand either a proportional agricultural tariff, or the abolition of the industrial products tariff.

The Socialists, on the other hand, are opposed to any taxes on foodstuffs, as they see it must lead to an increase in the cost of living. But they are also unwilling to abolish the duties on industrial products. Such a "drastic measure," they say, would seriously affect industrial employment and lead to a social crisis.

The Socialists must tread very warily, as it is very evident that if they do not give satisfaction to the Agrarians in this matter, then the latter will not give their support to the Social Insurance Bill, which the Socialists are anxious to see pass into law in the immediate future. The National Democrats (Liberals) seem inclined "on economic grounds" to support the Agrarians in their demand for an agricultural tariff, with the proviso that the needs of the State, and not the wishes of the farming community, must determine the amount of the tariff. What such a condition means in practice is hard to tell. A committee of five—petka—made up of one representative of each of the parties, has been appointed to inquire into and report upon the position. What will probably take place will be a compromise, by which there will be a slight reduction in the industrial products' tariff, and the introduction of a small agricultural tariff.

Every Description of Home and Foreign Banking Business transacted

But a country, 85 per cent. of the industrial products of which are exported—and very little of the agricultural produce of which goes abroad—will have to think very carefully before extending Protection to agriculture. Taxation is already 14 to 20 times higher than in 1914, and the Czech "korun" one-sixth its pre-war value.

The latest bank return shows that the circulation of paper money is kept well within the legal maximum. The total paper currency is now 7,882 million (Czech crowns), as against a legal maximum of 10,871 millions, i.e., 2,929 millions on the right side.

Unemployment is not so serious in Czecho-Slovakia as in many other European countries, and is on the decline. According to the figures issued for May by the Czecho-Slovak Ministry of Social Welfare, the number of persons in receipt of unemployment pay was 29,000, as against 48,600 in the previous month. This does not include those persons on short time who receive support from the State through their individual employers, but that number, too, is greatly reduced.

It is, however, not total unemployment as much as the poor pay of many of those in employment—especially in the State service—which is a serious matter. Rasin's policy of balancing the Czech Budget, while it stabilized things in the State, did it at the expense of State officials in particular. The "cuts" which they experienced were very, very great, and only love of country enabled them to be carried out quietly. The teaching profession suffered worst of all.

The middle classes are experiencing great hardships, especially lawyers, doctors, and "chemical engineers," and, I am told on the word of a very good authority, that only a small percentage of those leaving the universities and schools can be absorbed in the professions.

CANADA.—CROP PROSPECTS—BUSINESS CONDITIONS—C.M.A. CONVENTION—THE BUDGET—DECLINE IN REVENUES—BANKING AND COMMERCE COMMITTEE—STATE INSPECTION OF BANKS—RURAL CREDITS—STATE RAILWAYS AND MARINE.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 9.

AN abnormally wet and inclement May has retarded both the planting and growth of crops in every quarter of Canada except British Columbia, which curiously has been suffering from the effects of a severe drought. In the prairie provinces seeding, except for coarse grains in some backward districts, has been practically completed; there is a decline of at least 25 per cent. in the wheat acreage of Manitoba, and a smaller decrease, not more than 8 per cent., in Saskatchewan, but a substantial increase in Alberta helps to offset these losses. Moreover, a larger acreage of other grains, especially flax, has been planted. The cool weather which has prevailed has enabled the crops to get well rooted, and as timely rains have fallen in the places where they were most needed, the prospects in the West are rated reasonably good. In Eastern Canada the weather since June began has changed for the better; the soil being saturated with moisture, a week's steady heat has promoted very rapid growth, and crops of all kinds have been regaining the ground which had been lost. Pastures are excellent, and the hay crop is very promising.

The more cheerful tone of the crop reports has given an optimistic tinge to the business outlook, which had been growing steadily blacker, and still is not bright if industrial and commercial conditions alone are reviewed. The slump in the United States could not fail to have reactions in Canada, and by all the usual criteria there has been evidence of a steady slackening of production during the past two months. Bank clearings have shown a very substantial decrease, and railway traffic returns have been falling ominously. The backward weather has deprived retailers of a large part of their normal spring business, and they have only the balance of June to get rid of their summer stocks before the holiday season, with its inevitable slackening of trade, begins. Steel production was quite satisfactory in May, but there is now a slackening, and many plants are almost at the end of their orders. The record of employment is also less favourable than might have been expected at this season. New building construction still lags, and there is a disappointingly small demand for building materials. The provincial governments have either abandoned or curtailed the road building programmes, which in recent years have absorbed large quantities of labour and material, and as many cities and towns have a housing surplus, there is little residential building.

Last week the Canadian Manufacturers' Association held its annual convention at Montreal, and its officials attributed a large decrease in its membership to hard times and failures, which had wiped out numerous establishments. The association expressed its strong disapproval of the recent tariff changes, and insisted that the maintenance of a consistent policy of protection was indispensable to the economic salvation of Canada. They also went on record as favouring, if not the actual cancellation of the British preference, a readjustment of tariff schedules which would equalise the disparity between costs of production in Britain and Canada, and stem the present tide of British competition.

In Parliament the Budget has passed through practically all its stages in the House of Commons, and in the discussion in committee the Government offered some further concessions by way of reduction of the sales tax on implements of production. The Conservatives complained that the Government for political purposes had shown favour to special industries, and moved for other reductions on commodities like lumber, but the Government had their proposals voted whole. The measure amending the Customs Tariff Act gave the Conservatives an opportunity to move an amendment reaffirming their belief in protection, but it was defeated by 135 to 36, two Liberal Protectionists voting with the Conservatives. From the Government's point of view the most disturbing development is the sharp downward curve in the revenue. They had budgeted for a decline of about 2½ millions per month, but in the first two months of the current fiscal year there is an actual decrease of \$9,554,000 in customs and excise revenue alone. Not only are prices falling, but the public is buying less freely, and there is little hope of any immediate improvement. The income-tax also shows a substantial decrease, and unless there is a bumper crop, which will stimulate general business, the Government seems likely to be involved next spring in all the complications of a serious Budget deficit.

The Banking and Commerce Committee has been sitting continuously at Ottawa and examining a series of important witnesses. The air was cleared when Mr C. E. Neill, the general manager of the Royal Bank and the vice-president of the Canadian Bankers' Association, announced his willingness to accept a system of Government inspection. He entered a caveat that he spoke only for his own bank, but his open accession to the ranks of the advocates of this change, who already numbered some influential bankers, evidently decided the Government upon definite action. On June 5th Mr Robb, the acting Minister of Finance, appeared before the committee and outlined the proposals of the Government. There will be appointed an inspector-general of banks responsible to the Minister of Finance, who shall hold office during good behaviour. He will be empowered to equip himself with the necessary staff, and will once each year make a careful inspection of the head offices of all the banks. There will be supplied to him all the confidential reports now made by bank auditors to the directors, and he will have

authority to examine all bank officials on oath. If the inspector is convinced that a bank is insolvent he will report the fact to the Minister of Finance, who, without waiting for the institution to suspend payment, may ask the Canadian Bankers' Association to appoint a curator. The expense of this inspection and all matters pertaining thereto will be met by an assessment upon the banks in proportion to their assets. Some members are not completely satisfied with these proposals, and amendments will be suggested, but it is quite certain that some system or other of State inspection will be inaugurated. It has general support from the Press and public, and the more intelligent bankers hold that, in view of recent disasters, it is the only method of restoring public confidence in the banks.

If Parliament can find time it may also tackle the problem of agricultural credits. Dr. Tory, who made a report upon it, advocates emergency measures to meet the pressing debt situation among the prairie farmers. Accounts of the number of farmers who feel that their debt burden is intolerable, and have left or are threatening to leave the country have alarmed the Government, and the feeling is that the situation can hardly wait upon the development of a full-blown scheme of farm credits. Dr. Tory suggested that a sum of \$10,000,000, if applied with care and sympathy, would help many semi-insolvents to work themselves back to prosperity.

The Minister of Railways has presented to Parliament the annual report of the State-owned railways and merchant fleet, and while it contains some heartening features, the general feeling is one of disappointment at the comparative smallness of the betterment. 1923 was the first year of unified operation of the amalgamated systems and great economies and increased efficiency were expected from the change. On operating account there was a betterment of, roughly, 17 million dollars, but on non-operating account there was a setback of some 2 millions, and in the matter of rentals, hire of freight cars, &c., there was another diminution as compared with last year of 3 million dollars. Since the burden of fixed charges had increased, the deficit of 52 million dollars which the Treasury has to meet is only 6 millions less than the 58 millions demanded last year. Such figures do not support the optimistic prediction of Sir H. Thornton—that the railways would be meeting all their fixed charges in three years, for these charges now stand at least 65 million dollars. The record of the Canadian Government Marine is still a mournful tale; it has lost millions every year since its creation, and this year, when many of its ships are lying rusting in port, or travelling the seven seas with half cargoes, it shows another deficit of \$9,368,670.

NEW ZEALAND.—A REVENUE SURPLUS—THE DEBT POSITION.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH (N.Z.), May 19.

THE Minister of Finance has just made the much-belated announcement of the revenue and expenditure for the final quarter of the financial year 1923-24. The figures announced cover receipts and expenditure from the Consolidated fund, and do not present a complete statement of the financial position; but they include the bulk of the revenue and expenditure of the Dominion, which turns out to be £1,812,366, as against £1,315,683 for the year 1922-23. There is a good deal to be said against the practice of budgeting for a large surplus in this way; but it is an established practice in the Dominion. The Minister of Finance into a weak position when dealing with demands for reduced taxation on the one hand and increased expenditure on the other. If the surplus went

automatically to reduction of the Public Debt, as in Great Britain, there would be little to worry about; but as it is, tax reduction seems certain, though the pressure for increased expenditure on public works, on housing, and on Civil Service salaries shows no sign of easing.

The surplus has resulted mainly from an increased yield of import duties from £6 millions in 1922-23 to £7½ millions in 1923-24. This reflex of the import boom is responsible for the only considerable increase on the revenue side. Total revenue works out at £27,960,370 in 1923-24, as against £27,579,443 the previous year. There is a slight decrease in expenditure from £26,263,760 to £26,148,004, due largely to reductions in pensions; but if the Railway and Post Office, and other employees of the public service, succeed in their present agitation for higher rates of wages, the halt that has been called to the upward march of expenditure is likely to prove but temporary. The successful flotation of the £5,000,000 loan has caused general satisfaction, though it appears from the large volume of applications that the Dominion might have obtained a better price than 4½ per cent. at 95. The strength and buoyancy of New Zealand finances is, however, very gratifying, and there is reason to feel satisfied with the position of the public debt as a whole. The total of the debt is large, but for the deadweight unproductive portion of it adequate sinking funds have been provided. The bulk of the war debt will be liquidated under present arrangements in less than 40 years from the date on which the loan was incurred; a sum of over £27 millions has been funded with the Imperial Government, and will be repaid in 36 years from 1922. The remainder of the debt consists of investments such as advances for housing or land settlement, which are adequately secured; directly reproductive investments such as railways and hydro-electric works, and less productive expenditure in comparatively small degree. More adequate provision for rapid repayment of these portions of the debt is all that is needed to place New Zealand's finances upon a basis that would be above criticism.

Letters to the Editor.

THE GOLD STANDARD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I emphasise the note of caution you sound in your leader of to-day in regard to restoration of the gold standard? This may now be practicable; I should think it is. But it should be done by arrangement between us and the United States, not by raising the Bank rate in an isolated way here. Isolated action of this kind would probably improve sterling exchange temporarily, at the cost of intensifying unemployment, and would have to be followed by reduction of the Bank rate and set-back to sterling exchange.—Your obedient servant,

A. HOARE.

37 Fleet street, E.C. 4, June 28th, 1924.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Advocates of what is called "a return to the gold standard" attach peculiar importance to the price of £3 17s 10½d which the English mint offered before the war, and still offers, for an ounce of gold. They seem to think that that price has some especial significance, and to entertain grave fears of possible disaster to the commerce and finance of this country, so long as gold cannot be purchased at that price.

It would be interesting to know on what evidence they base their opinion. It certainly has no historical basis.

For very many centuries fluctuations in the price of the precious metals were quite usual in all countries. In fact, they rarely remained for long at the same price, and edicts fixing and altering the official value succeeded each other, sometimes with great rapidity.

What happened with regard to the price of gold in England was, shortly, as follows:—The guinea, which

was originally coined to be worth 20s, rose in value till, towards the end of the seventeenth century, it was commonly current for 30s. Financial measures taken to re-establish English credit, and doubtless still more Marlborough's victories and the exhaustion of foreign countries, caused a rapid rise in the exchange value of the pound, and the price of the guinea fell again, till in 1717 it was decided to fix it at 21s. This price worked out at £3 17s 10½d an ounce of gold, which was slightly above that given by the neighbouring countries. Under these circumstances there was no difficulty in maintaining it at this figure, till the Republican and Napoleonic wars obliged the Government to declare a suspension of specie payments, which lasted for twenty-six years (1797-1823). When it was decided to resume specie payments, there was no difficulty in re-establishing gradually the old rate, which remained effective till the late war.

There was nothing scientific about the fixing of the price. Exchange conditions round the year 1717 made the price of £3 17s 10½d a reasonable one, and till lately there has been no reason to alter it. That is all.

Mr Leaf seems to think that if the pound could be forced up to its former value in terms of gold, it would necessarily stay there, and the exchange would become stable. But is this so? It is the stability of the exchange which produces the fixed value in terms of gold, and not the converse.

Mr Leaf believes that a higher Bank rate would reduce the index figure; in other words, reduce prices. But we are taught that the rate of interest is a factor in the cost of production. If this is so, an increased Bank rate would tend to produce higher, not lower, prices. That is to say, it might cause a depreciation rather than an appreciation of the pound.

It can hardly be doubted that the instability of the exchange is in part caused by our enormous war debt, and it would seem that stability must be sought rather in a progressive reduction of the debt than in any such inconvenient experiment as that which Mr Leaf proposes.

Whether gold will return to its old price no one can tell, but experience and history indicate that this is not a matter of great moment.—Yours faithfully,

A. MITCHELL INNES.

Books and Publications.

COMPANY ADMINISTRATION.

IN view of the tendency, most marked since the war, of transforming old-established family businesses into private companies, Mr Jordan's booklets,* summarising the technicalities of registration, the periodical returns to be rendered to Somerset House, the legal position, rights, and duties of directors and secretaries, have an obvious value. These compact little works of reference have attested their popularity by running into numerous editions since their first publication in 1913, 1914, and 1915 respectively. No fresh company legislation has to be chronicled since the last issue, but at least one important legal decision has been noted, i.e., that in *Dey v. Pullinger Engineering Company*, 1921, in which it was held that where the directors of a company resolved that bills of exchange should be signed by a director and the secretary, a bill signed by a director only was held to be binding on the company in the hands of a holder who did not know of the resolution.

The author draws on his experience as a company registration agent to recall some amusing examples of uncommon company formation, such as that of the Federal Bank, Stock Exchange, Stores and Publishing Company, Limited, which proposed not merely to carry on the busi-

* "How to Form a Company." By Herbert W. Jordan. (London) Jordan and Sons, Limited. Sixteenth Edition. 1924. 1s 6d.

esses indicated by its title, but also to "acquire and turn to account mines, railways, concessions and monopolies"—all on a capital of £100. In this case the promoters were possibly wise to make provision in their memorandum for taking "all such steps as may seem best calculated to uphold and support the credit of the company, and to obtain and justify public confidence, and to avert or minimise financial disturbance which might affect the company." Though no private company has yet been registered with the minimum capital under the Acts—viz., two shares of one farthing each—two or three £1 registrations have been effected (the capital being divided into 960 shares of a farthing), and a large number of £5 registrations are on record. That the capital of a company however, does not necessarily bear any relationship to the magnitude of its operations is exemplified by the registration of an insurance concern with a capital of £101, which proceeded, nevertheless, to deposit in court the £31,000 required by the Assurance Companies Act.

THE MERCHANTS, MANUFACTURERS, AND TRANSPORTERS OF THE WORLD.*

THIS is an ambitious record. Here we have collected from the four quarters of the globe for our guidance and information the names and addresses of those people who cause the world's industrial wheels to revolve. A stupendous task. In two volumes this publication consists of some 5,000 pages, and gives information as to 20,000 foreign and colonial cities and towns, over 1,500,000 trade descriptions being given. The first volume deals with foreign countries and their dependencies, while the second gives information concerning England, Scotland, Ireland, and Wales, and the British Dominions and Possessions. For each of the foreign towns and cities carefully classified lists are given of those engaged in trade and commerce, with the class of goods in which they deal. In the section devoted to Great Britain and Ireland, classified trade lists are given for (1) London and its suburbs, and (2) for the rest of the country. It is indexed in four languages, and information is very accessible to the reader. In the present edition we notice that there is an alphabetical list of the telegraphic addresses of the individuals and firms whose names appear in the section devoted to Great Britain and Ireland. Those who are blind to the wonders of commerce may content themselves with allocating these volumes to a shelf labelled "Directories." But for our part we regard a compilation of this description as an official story of the world's commercial progress.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, July 9. ACCOUNT, July 10

THE money market assumed the position of chief importance amongst Stock Exchange factors in the week just ended. The turn of the half-year failed to bring reassurance that the Bank rate would remain at 4 per cent., and the powerful advocacy of an increase in the rate, with a view to ultimate restoration of the gold currency, aroused uneasiness in the gilt-edged market. Declines which occurred in British Government stocks found quick reflection in other prices round the Stock Exchange. Debentures, preferences, and fixed-interest bearing securities of all kinds have taken on a dull appearance, though no particular volume of stock came to market; again, the Stock Exchange says that there is more tone than trade. Business has been interfered with by the festival of sport at Henley, Wimbledon, Lord's, and other places, but the Stock Exchange does not feel at all inclined to resign itself to the idea that its trade has yet arrived at the usual midsummer minimum.

No change in the Bank rate merely brought forth the impression that the Bank Court had decided to postpone action for a week or so.

Mild gambling in German Threes continues as the sequel to the extraordinary Berlin rise in the price of the German national war loan. There is, however, no real excitement on this side. French bonds have been moving up and down in somewhat inconsequent fashion. The unexpectedly sharp closing of the Hungarian loan lists caused a rise in Austrian Sixes. Japanese bonds showed a tendency to recover, though nervousness is still apparent on account of the relations between Japan and the United States. Brazilians did not succeed in maintaining rises which occurred earlier in the week. Mexican bonds are flat, non-receipt of interest payments causing great disappointment.

Home Railway stocks have been heavy, the only members of the market to show any resistance to the prevailing heaviness being those of the Underground lines, with Metropolitan a particular favourite owing to the bumper traffics secured by reason of the Exhibition. Dearer money and rumours of fresh labour trouble are causing the public to eschew Home Railway stocks as investments. Argentine railways hold their ground, being bought on the strength of the excellent traffics reported, Brazilian railways went ahead; the full improvement was not maintained, but nitrate railways are better, in sympathy with the strength shown by nitrate-producing companies' shares.

Notwithstanding the continued dryness of the rubber market, several substantial lines of shares have changed hands this week. Rubber Trusts improved, on an official statement to the effect that the company has disposed of its tea crop for three years ahead at good prices. Anglo-Dutch hardened, because the 12 per cent. dividend is 2 per cent. better than had been expected. Oil shares are materially better, there being a tendency to entertain a more favourable view of the outlook for the industry. Courtaulds gave way from the best, on subsidence of the excitement produced by the cutting of the long-expected melon. Other textiles are quiet. Tea shares are again coming into favour, and the market is a good one.

The shipping market is firm. Banking shares have eased off with gilt-edged stocks, but the insurance group is decidedly good, fresh buyers coming in every day for the shares in the best-class companies. Dealings have started this week in the issues of a number of new stocks and shares, and, in those cases where underwriters got left with a proportion of their commitments, there has been a discount in each instance. Nitrates are strong, thanks to the promising outlook for the new 12 months' period which has just started. The tobacco market is uninteresting, movements being very slight. Cable stocks further recovered; in wireless, Marconis strengthened on hopes of an early and amicable agreement with the Post Office. Trust companies' stocks once more show improvement, though British Steamship deferred shed a few points upon disappointment with the dividend. Sudan Plantations gave way on the interim dividend announcement of 7½ per cent., although this is 2½ per cent. more than the rate of a year ago. Buyers came in on the fall, and Hudson's Bays are harder. The electricity supply list holds its strength. Stores,

hotels, catering, and similar shares attract a moderate degree of attention, without this having an appreciable effect upon prices.

The Kaffir market fails to receive public notice. Declaration of a modest bonus on De Beers shares, in the shape of the offer of new deferred at £10 per share, had a strengthening effect upon the price. Rhodesians are quiet. With the Dominion doing little in Canadian mining shares, the tendency is for the market to sag. Upon tin recovering a little, mild rallies occurred in a few of the favourites, West Africans and Malaysians being in request, the latter from the Middle East. Russians have given way. Rio Tintos follow the lead set daily by French bonds, and interest in most of copper shares is at a very low ebb. Ivanhoes and Lake Views are hard; other mining shares hold no feature of new interest.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

State Loan of the Kingdom of Hungary, 1924.—Issue in London of £7,902,700, 7½ per cent. sterling bonds at 88 per cent. This loan is the sequel to the financial reconstruction scheme for Hungary drawn up by the Financial Committee of the League of Nations. Its object is to effect stabilisation of the Hungarian crown, and to secure budgetary equilibrium on a durable basis by June 30, 1926. It is issued in accordance with Geneva Protocols dated March 14, 1924, the Hungarian Law No. IV. of 1924, and the Resolution dated June 14, 1924, of the Council of the League of Nations, in bonds of various currencies for amounts sufficient to yield, in the aggregate, a sum not exceeding the equivalent of 250,000,000 Hungarian gold crowns. It is pointed out that 250,000,000 gold crowns at exchange 21.35 equal £11,709,602. Arrangements have been made for portions of the loan to be issued in Great Britain, the United States of America, Czechoslovakia, Holland, Italy, Sweden, Switzerland, and Hungary. The proceeds of the loan will be used to meet Budget deficits until July, 1926, and are to be applied, under the supervision of the Commissioner-General for Hungary, Mr Jeremiah Smith, of Boston, U.S.A., in accordance with the scheme of the Council of the League of Nations, which has been approved by the Reparation Commission. The Commissioner-General will continue his administration until, in the opinion of the Council, the financial situation in Hungary is assured. Bonds are to be redeemed by the operation of a cumulative sinking fund, to be used in the purchase of stock below par or in drawings at par, beginning in 1926, which will be sufficient to redeem the loan by February 1, 1944. The Hungarian Government has the option of redeeming the loan after 1934 on giving six months' notice. It is a first charge on the gross receipts of the Customs duties, the sugar tax, and the tobacco monopoly, and on the net receipts of the

salt monopoly. These receipts will be paid into a special account controlled by the Commissioner-General. Receipts from these revenues for the first four months of the currency year were at the rate of 80 million gold crowns per annum, and as the service of the loan only requires about 31 million gold crowns per annum, there is a wide margin available for security. Payment of principal and interest will be in London in sterling. The security consists of a general bond of the Government, and the chairman of the Financial Committee of the League is appointed trustee for the bondholders, who will be succeeded later by three trustees appointed by the Council of the League. If the Commissioner-General and trustees deem it necessary, other specific revenues and assets, except the State railway revenues, will be furnished as security. No charge can be created ranking in priority to or *pari passu* with the loan, except for its redemption. Further, a sum sufficient to cover one half-year's interest and sinking fund is to be deposited with the trustees in advance, and this fund is to be maintained. It must be admitted that the League of Nations has taken every precaution to safeguard investors' interests. The yield, allowing for redemption in 20 years, works out at approximately £8 16s per cent. This is a high yield, and indicates to some extent the measure of risk involved. Its immediate success reflects great credit upon all concerned in arranging the loan and bringing it before the public.

The Lautaro Nitrate Company, Limited.—Share capital £4,000,000, of which £2,700,000 has been issued and is fully paid. This is an offer for sale at par of £1,500,000 6½ per cent. first mortgage debenture stock, to be secured as a first charge upon the combined properties of the Lautaro and Lastenia Companies. The company owns £1,700,000 out of a total of £3,000,000 of the share capital of the Lastenia Nitrate Company, and has made arrangements for acquiring the balance and for the transfer of the entire assets of the Lastenia Company. The debenture stock is "redeemable" by the application of a sinking fund based on nitrate sales, commencing in 1926. Any stock not redeemed will be repaid at par on December 1, 1940; the company has the option to redeem at 102 on December 1, 1932. The stock is to be secured by a trust deed, which provides for the creation of first specific mortgages under Chilean law. Nitrate establishments and grounds are valued at £3,990,270, and total assets are £5,724,024. Annual revenue is estimated at £1,072,500. On these facts and figures the issue is not without attraction. What the future holds out we may not be able to predict with any degree of confidence, but in the past it has yielded a generous return to investors.

Taf Fechan Water Supply Board (Incorporated by the Taf Fechan Water Supply Act, 1921) This is an issue of £324,324 5 per cent. redeemable stock, 1945-55, with the sanction of the Ministry of Health. The stock is redeemable at par on June 1, 1955, or at the option of the board on or after June 1, 1945, on giving six calendar months' notice to the stockholders, unless previously cancelled by purchase in the open market or by agreement with the holders. The board is authorised to borrow up to £2,000,000. Up to the present £530,000 has been raised. The stock will be charged upon all the "revenues of the board," which are defined by the Act as including "the revenues of the board from time to time arising from their undertaking or from any land or other property for the time being belonging to the board and the money receivable by them from the constituent authorities." Such revenues include:—(i.) The moneys receivable by the board for supplies in bulk. When the Taf Fechan reservoir is completed the constituent authorities are under statutory obligation to pay for specified minimum quantities of water. The minimum amount so receivable is £99,462 per annum, and the maximum reservations would yield £188,888 per annum. (ii.) The right to pre-empt upon the constituent authorities for deficiencies (if any) in the net revenue of the board. The assessable value liable to such precepts, spread over a population of over 400,000 and an area of over 100,000 acres, is some £1,250,000, and a penny rate yields over £5,000. Our interest in the issue is somewhat lessened by the accompanying announcement that the information is given merely in connection with an application to the London Stock Exchange for leave to deal in the stock. We assume that those responsible for the advertisement know that eventually the public will be interested in the issue if there are to be open dealings in the stock.

Jamaica Sugar Estates, Lim.—Authorised share capital £400,000, divided into ordinary shares of £1 each, all of which are offered at par. The company has been formed to cultivate cane estates and to manufacture raw sugar in Jamaica, properties and assets being acquired from the Jamaica Sugar Syndicate, which has arranged the purchase of estates of a total area of about 8,665 acres, at a cost of £120,222, giving an average of £13 17s 6d per acre. The enterprise is being granted assistance under the Trade Facilities Acts, the British Government having agreed to guarantee a loan of £115,000 against a first charge on assets, and payable on a subscribed capital of £350,000. The board has also been notified "that a grant from the Jamaican Government in aid of interest on all capital expenditure in that island for five years has been condi-

The Nus River Gold Mines, Limited.—Authorised share capital £200,000, divided into shares of 10s each. The company has been formed to work an area in the Province of Antioquia, Colombia, covering more than 40,000 acres. It is

The general improvement has been reflected in the public figures of the banking business done in the Dominion. On the quarterly average figures of last March, deposits showed an excess of £2,630,000 over advances, while both had increased. In 1921, you may remember, advances exceeded deposits by five millions and a quarter, and though in 1922 deposits exceeded advances, it was by somewhat less than a million.

Mr Reeves then drew attention to the "suggestive and thoughtful observations" made by Mr Baldwin on June 18th, during the debate on Preference in the House of Commons, in which the Unionist leader referred to the necessity for investigating the whole question of Empire development, including the discrepancy between the prices received by the producers for their goods and the prices paid by those who consumed them. He spoke of Mr Baldwin's query as to whether it was not possible to enter into some arrangement with the Dominions by which their foodstuffs could be obtained, brought into this country at cost price and distributed with the least possible margin. This, the speaker pointed out, opened up very large questions. Still, things might move in that direction in the future. At any rate, Mr Baldwin's sentences deserved full consideration overseas. The same could be said of a statement made by a Unionist leader elsewhere on the need for providing cheaper and speedier communication between the Dominions and the Mother Country, a practical question of most vital importance. Furthermore, it was encouraging to note that the necessity for a permanent Economic Imperial Committee was at last being recognised by political leaders here.

The report and accounts were adopted.

At a subsequent extraordinary general meeting the following resolution was carried unanimously:—

"That the capital of the company be increased to £6,000,000 by the creation of 200,000 new shares of £7 10s each, and that such shares may be issued at such times and on such terms and conditions as the directors may deem advisable."

The proceedings then terminated.

BRITISH EMPIRE TRUST COMPANY, LIMITED.

CHAIRMAN'S REVIEW OF COMPANY'S INTERESTS.

The twenty-third ordinary general meeting of the shareholders of the British Empire Trust Co., Limited, was held, on the 30th ult., at the Abercorn Rooms, Great Eastern Hotel, Liverpool street, London.

Mr J. Davidson (deputy-chairman and managing director) presided, in the absence, through ill-health, of Mr R. M. Horne-Payne, the chairman of the company, and read a speech prepared by that gentleman, in the course of which he said:—

"The revenue for the year from trusteeships, registrarships, and secretaryships, together with interest and dividends from investments, although slightly less than last year, is well maintained and calls for no special comment.

"The profit on investments, however, was much lower than in 1922 or 1923, but, as I pointed out at our last meeting, the profit from this source for these years was exceptional and would certainly not be repeated in the year under review; in fact, I am very pleased that we have secured some profit on investments, as I had anticipated that we might have had some depreciation to face following upon the substantial appreciation of the previous years. In spite of the fact that throughout the year we have had to be content to employ at very low rates of interest the large surplus liquid funds which we are compelled by prudence at all times to hold, we are in the happy position of being able to recommend you to declare dividends of 5 per cent. on the preferred ordinary shares and 7 per cent. on the deferred ordinary shares—the same rates as last year—and after paying these dividends, of having £104,226 15s 9d to carry forward, as compared with £94,849 10s 4d last year.

"The directors had hoped to revert during the past year to the pre-war practice of paying interim dividends on the preferred and deferred shares, and possibly of paying increased dividends. They have considered both matters very carefully, and they feel strongly that as the amount carried forward forms a reserve on which the company depends for the protection of its capital against depreciation or unforeseen losses, the first care of the board should be to maintain it at a very substantial sum, say a clear £100,000, and thus ensure the continuity of the present dividends until such time as they feel certain that the dividends can not only be increased, but maintained at a higher level. I think that this happy time is fast approaching, and meanwhile I would ask you to rely upon the discretion of the board both in the matter of the resumption of payment of interim dividends and of increasing the distributions.

WEST GLOUCESTERSHIRE POWER COMPANY.

"Last year I told you that we had undertaken the finance of the West Gloucestershire Power Co., Limited. During the year great progress has been made. Thirty-seven miles of high-tension transmission lines are now built, and by the West Gloucestershire Electricity Special Order, 1924, confirmed by Parliament, with effect from May 6th last, the company becomes the authorised undertakers for the supply of electricity over an area of some 300 square miles, which includes the coal mining industrial area in and around the Forest of Dean, as well as the industrial area of the Stroud and Nailsworth Valleys. Large contracts have already been made with consumers of electricity, and other contracts are in negotiation. The progress made confirms our confidence in the success of the undertaking. Issues of 5½ per cent. first mortgage sinking fund debenture stock and 6½ per cent. participating preference shares are advertised to-day, and we can confidently recommend both as sound investments.

BRITISH COLUMBIA ELECTRIC RAILWAY

"This magnificent enterprise continues to grow in importance and strength. It and its subsidiaries supply electric power, electric light, electric traction, and/or gas to Vancouver, Victoria, New Westminster, and to other growing cities and towns in the Province of British Columbia. Never has the outlook for this wonderful country been more encouraging. The combined capital of the British Columbia Electric Undertaking is now over \$76,000,000, and the demand for increased facilities, principally electric power, electric light and gas, is continuous and insistent.

"To meet this demand further important works for the development of additional supplies of electric energy from water power have had to be undertaken, and additions to the plant for the manufacture and supply of gas have had to be put in hand.

"To provide the necessary capital expenditure, an issue was made by the company in February last of £770,000 5 per cent. (income-tax free) 1944 debenture stock at 95 per cent. The issue met with great success, being applied for more than 21 times over.

"The company's net revenue continues to show increases month by month.

MONTEREY RAILWAY LIGHT AND POWER.

"The progress of the Monterey Railway Light and Power Company continues to be impeded by political conditions in Mexico.

"It has not yet been found possible to arrive at a settlement with the Government of the State of Nuevo Leon regarding the moneys due to the company under the guarantee by that State in connection with the water and sewage concessions.

"Conditions in Mexico have also resulted in increased working costs, especially in the price of fuel.

"Notwithstanding these conditions, the company has been able to meet regularly the interest on its 5 per cent. 'A' first mortgage debenture stock.

"Last year I told you that it would not surprise me if the result of the operations of the Canadian Western Lumber Company for the year 1923 would be such as to enable it to complete the payment of arrears of interest on its 5 per cent. first mortgage debenture stock. This forecast turned out to be correct.

WINNIPEG ELECTRIC COMPANY.

"At a meeting of holders of Winnipeg Electric Railway Four and a-Half per cent. perpetual consolidated debenture stock in March last a resolution was unanimously passed agreeing to the company's proposal whereby, subject to confirmation in Canada (which has not yet been obtained), the debenture stock, of which your company are trustees, was altered from a 4½ per cent. perpetual consolidated debenture to a 5 per cent. 30-year refunding mortgage stock.

"The company conceded these terms in return for concessions by the debenture-holders allowing the company to issue the balance of these securities in a form suitable for the Canadian or New York markets.

CANADIAN WESTERN NATURAL GAS.

"It will be recollected that at the last annual meeting I reviewed the position of the Canadian Western Natural Gas Light Heat and Power Company down to a point when the Public Utilities Commissioners had intimated that, if the supplies of gas were not augmented by October 1, 1923, the question of supply and price of gas to the City of Calgary would be reviewed by the board.

"As the result of an agreement reached between the City of Calgary and the company, the Board of Public Utilities Commissioners, upon a joint application, issued an order extending the present rates for gas for two years—namely, until October 31, 1926—conditional upon the completion of the pipe-line to connect the Foremost field with the company's present main line by October 31, 1924, the drilling of at least one additional well in the Foremost field during the season of 1924 and several other minor conditions.

"We understand that the conditions called for by the Board of Public Utilities Commissioners will be duly complied with, and that the company are proceeding to construct the pipe-lines to Foremost and do not anticipate any difficulty in completing the work by October 31, 1924, the date laid down in the order."

The report and accounts were unanimously adopted.

BANK HOLDINGS, LIMITED. SATISFACTORY OUTLOOK.

The first ordinary general meeting of Bank Holdings, Limited, was held, on the 2nd instant, at Winchester House, Old Broad street, London, Mr Norman Holden (the chairman) presiding.

The secretary (Mr H. F. Tattersall, A.C.A.) having read the notice convening the meeting and the auditors' report, The Chairman, in moving the adoption of the report and accounts and the payment of a dividend of 9 per cent., less tax, said: You will recollect that in the statutory report last June the receipts and payments account showed that we had purchased 170,000 Niederösterreichische Escompte Gesellschaft shares at a cost of £85,000. Since that date our total holding has been slightly increased, and it is now 173,400 shares at a cost of £87,040, or approximately 10s 6d per share. It will be seen that 6,000 of this company's shares have been issued at par since the date of the report referred to, so that two Bank Holdings shares are equivalent to one Niederösterreichische Escompte Gesellschaft share. The reserve account represents profits in selling our rights to subscribe for the recent issue of Austrian bank shares, less the preliminary expenses of this company.

The dividends received consist entirely of one dividend of Kr.3,000 and one of Kr.15,000 per share. It is the practice of the Niederösterreichische Escompte Gesellschaft to distribute annual dividends in April or May, but when we made the original pur-

chase of shares in 1923, the dividend on them was not, in fact, declared. In future years it is probable that only one dividend per annum will be received from the Niederösterreichische Escompte Gesellschaft, but I feel confident that our income from this source will not diminish.

You will have gathered that the bank in which you are now interested is a very prosperous undertaking. It is obvious that there are large secret reserves, as the real estate and furniture have been written down to the nominal figure of Kr.100. The stabilising of the Austrian crown and the consequent increase in business activity in Austria are reasons for the bank's success during last year. For the last 60 years it has never failed to pay dividends, and has now got to a position where it has resumed paying "real" economic dividends, and we hope that year by year these will increase. No doubt the assets value of the institution is very much higher than the market capitalisation. It should also be borne in mind that the activities of the bank go into all the Succession States, and, for example, the stabilisation of Hungary will have a beneficial effect on the bank's business.

As you are aware, there has been a Stock Exchange crisis in Austria, but I believe this is a transient thing, chiefly the result of the amazing rapidity with which Austria recovered after the League of Nations loan. On the whole, in spite of the crisis, the outlook is a good one, and I feel that Bank Holdings is a shareholder in a first-class institution with a great future in store for it. The resolution was carried unanimously.

OHLSOHN'S CAPE BREWERIES, LIMITED.

INCREASED PROFIT AND DIVIDEND.

The ordinary general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 3rd inst., at the Great Eastern Hotel, London.

Mr Gerald Buxton (the chairman), in moving the adoption of the report, said that during the past year his father, who had been trustee for the debenture stockholders since the commencement of the company in 1889, had died at a ripe old age, and the company had done his (the speaker's) son, Major E. N. Buxton, the honour of appointing him to the vacant position. He also had to refer with regret to the fact that since the report was printed Sir Charles Hunter, who had been a director of the company for 15 years, had passed away.

Continuing, he said that they had done better in the year under review than in the previous year. He was sorry to say that there had been no improvement in the amount of trade, and he believed that that was a matter which affected practically every business in South Africa. They were always hoping for an improvement in trade, and some day or other it was bound to come, but during the year up to March last their actual turnover was no better. On the other hand, the profit was very considerably better than that of the previous year, and that was mainly owing to economies. Mr W. D. Buxton, who had been connected with the company from the commencement, had recently returned from South Africa, and spoke most highly of the way in which the business was conducted. Altogether, the directors thought they could look forward to as good a year in the period now current.

The balance-sheet indicated that the cash position of the company was considerably better than in the previous year. They were paying a final dividend of 5 per cent., making 7½ per cent. for the year—an increase of 50 per cent.

They owned a considerable amount of property, especially in

Cape Town, and, in spite of conditions out there, that property was gradually increasing in value, and at the present moment the rents—after fully covering the debenture interest—produced a considerable balance in favour of the preference shareholders. It was very satisfactory that the first charge on the profits was more than paid out of rents, without their having to encroach upon the brewing profit. It was also satisfactory that they now had a much better class of tenants than had been the case for many years. That was especially satisfactory, as the trade always had a sword hanging over its head in whatever country it was, though it was true that in that respect the position in South Africa was not so bad as it was in this country. There were, however, always people who, from the best of motives, attacked the trade through legislation.

The report and accounts were unanimously adopted.

BISICHI TIN COMPANY (NIGERIA), LIMITED.

IMPROVED RESULTS—GOOD PROSPECTS.

The thirteenth annual general meeting of the Bisichi Tin Company (Nigeria), Limited, was held on the 1st instant, at the Cannon Street Hotel, London, Mr James Gardiner (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the working profit in Nigeria for the year under review had been £40,769, as compared with £10,334. The improvement was due, first to an increase of 205 tons in the output; secondly, to a reduction in working costs of £5 14s 2d per ton; and, thirdly, to an increase of £37 15s 7d per ton in the price at which concentrates had been realised. The directors recommended a dividend of 5 per cent. (less tax), which would leave a balance of £4,326 to be carried forward. The reserves of tin ore were given at the very substantial figure of 9,564 tons, but he wished to emphasise the fact that that only represented ground actually proved by pitting and boring.

No credit had been taken for other areas known to be tin-bearing, but yet to be prospected. The output for the year had been wholly obtained from the company's old holdings, and though the average tin contents per cubic yard of ground treated had risen from 1.52 lb to 1.80 lb, that figure fell very short of the company's main reserve on E.P.L. 1,060, where the average was 2.57 lb. The board had been criticised for not having attacked that portion of the property before, but it was their considered opinion that its exploitation, except on very definite lines, could only have been effected at the expense of the future.

The plant which they had finally decided on as being the type best suited for the working of that deposit was the suction cutter dredge. An order had been placed in May last for one machine and its accessories, and it should be delivered on the property before the break of the next rainy season. The machine was designed to treat 80,000 cubic yards per month, but the estimate of the engineers was that on a capacity of 60,000 cubic yards only, the monthly output should average 70 tons. The estimated cost of the plant was between £25,000 and £26,000, which was to be satisfied out of revenue—a sound policy, far preferable to increasing the capital. But for the fact that the dredge had to be paid for, an interim dividend would have been declared out of the satisfactory profits of the current year, but, provided always that the price of the metal maintained a reasonable figure, the board hoped to be in a position to pay an interim dividend some time during the autumn.

The report and accounts were adopted.

LOBITOS OILFIELDS, LIMITED.

SUCCESSFUL RESULTS—RECORD PROFITS.

The sixteenth annual ordinary general meeting of Lobitos Oilfields, Limited, was held, on the 30th ultimo, at Winchester House, Old Broad street, London, Lord Forbes, P.C. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said the results of the year's working were satisfactory, and disclosed continued progress both in the quantity of oil produced and in the profits, which were again a record. The net profit for the year amounted to £661,923, and the directors recommended the payment of a final dividend of 5s per share, and a bonus of 8s per share, free of income-tax, which he trusted the shareholders would consider a very satisfactory result. Last year he told the shareholders that the board were in negotiation for the concession from the Peruvian Government of a large area of land adjoining and surrounding their present property on three sides. This matter had now been carried through, and the directors had reason to believe that this was an important acquisition for the company, and would, in course of time, greatly increase production. With regard to the future, re-drilling amongst the old wells, but to a greater depth, had resulted in the obtaining of very satisfactory results from deeper strata. Chiefly in consequence of this, the production had been steadily mounting up. One of these wells had reached 5,340 feet, which was considerably the deepest hole ever made in the crust of South America. They had disposed of the bulk of their estimated production for 1924, and of a portion of what they expected to produce in 1925, at prices which, the directors believed, would yield reasonable profits. It was, he thought, unlikely, and possibly undesirable, that the price of fuel oil would increase greatly, if at all, but the price of other oils might well be subject to further enhancement as demand increased in greater proportion to supply. Fortunately for them, their oil was exceptionally endowed with a large proportion of petrol, and it also possessed the rare quality of producing lubricants suitable for Northern climates and aeroplanes, which did not congeal at low temperatures. Lord Forbes concluded by referring to the excellent and efficient services of the staff both abroad and at home.

Mr H. W. Sillem (managing director) seconded the motion, which was agreed to unanimously, and a resolution was unanimously passed that the directors' fees for the past year should be doubled, the increase to be free of income-tax.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Crop prospects in this country continue favourable, growth being abundant and rapid under a spell of sunshine and warm showers, otherwise poor yields would have resulted, as wheat fared badly during the winter months. Harvesting may be a little later than usual as the plant appears slow in coming into ear. Spring oats are in excellent condition, and promise the best crop of the year. Native wheat is practically out of supply, limited sales being made chiefly for feeding purposes at full rates. Imported descriptions have again moved in sellers' favour, with Canadian descriptions in small supply, the tendency being influenced by higher forward offers. No. 1 Northern Manitoba quoted 54s 9d, No. 2 ditto 51s 9d, Barusso, 63½ lbs, 49s 6d, and Australian 51s 6d, all ex ship per 496 lbs. Very firm conditions prevailed in the floating cable advices from the United States and Argentina, due largely to adverse crop reports. A fair business transpired in wheat, but buyers generally were reluctant to follow the upward movement, as available supplies appear adequate for present requirements. Sales include steamers of Australian due at 49s 9d Karachi, August, 49s 3d to 49s 6d, August 50s 9d, choice white and Rosafe, 63½ lbs, on passage, 48s 4½d per 480 lbs. Maize cargo active and dearer on improved inquiries from the Continent and

North America. Plate steamers, afloat, sold 33s 6d, June-July 34s 4½d, July-August 34s, November-December 34s 6d to 35s, yellow Novorossisk, afloat, 33s 6d, white South Russian, July, also August-September, 35s per 480 lbs. and a cargo of Azov Black Sea barley, afloat, at 33s 6d per 400 lbs. Flour prices were further advanced in sympathy with the wheat position, with a fair business in force. London standard straight run quoted 41s 6d, patents 43s 6d to 44s 6d, town whites 41s 6d per sack, delivered in Metropolitan area. Imported in better demand and firmer. Manitoba patents range from 39s 6d to 41s, and Australian sold at 36s 6d per 280 lbs ex store. Barley, English, quoted at 11s 3d to 12s 6d per 112 lbs, free on rail. Imported firmer. Californian 55s to 59s, and Chilean brewing 50s to 52s per 448 lbs, ex ship. No. 3 Canadian Western, ex ship, 34s 9d, Karachi, ex ship, 34s 9d, ditto, landed, 36s, Plate ex ship, 34s 9d, Russian, landed, 36s, all per 400 lbs. Oats steady. Plate, f.a.q., ex ship, 21s, ditto landed, 22s 3d. No. 2 Canadian Western, ex ship, 25s 9d. Ditto, landed, 27s. No. 2 Canadian feed, landed, 24s 9d per 320 lbs. English ranges from 9s 9d to 11s 3d per 112 lbs, free on rail. Maize irregular. Plate, ex ship, 34s 9d to 34s 6d as to position, and landed 36s 6d per 480 lbs. Millers' offals firm. Broad bran quoted at 7s, ordinary 6s 3d, middlings 8s 9d to 9s, fine ditto, 10s to 10s 3d, bags included ex mill, light oats 6s 3d, powdered oat husks 7s 3d, feed oatmeal 9s 6d, ground oats 12s per cwt, free on rail. Oatmeal quiet. London made, flaked, 17s, rolled oats 16s 6d, medium and fine cut 16s 6d, coarse and medium pinhead 16s 6d, ordinary Scottish oatmeal 17s 6d to 18s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated July 3rd, is as follows:—Pig-iron: There is no improvement in the pig-iron market. Meantime prices are weaker, and No. 3 Cleveland G.M.B. is nominally 88s 6d per ton, with East Coast mixed numbers hematite at 96s 6d per ton. These prices, however, might be shaded for prompt business. Manufactured iron and steel: The steel trade is also in a rather unfavourable condition, and makers complain of lack of specifications. Prices, however, remain unchanged: Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: There is very little business doing in foreign ore, as consumers have fairly large stocks, and sufficient coming forward against old contracts. The nominal price of best Bilbao rubio remains at 23s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—The state of depression which developed in the iron and steel trade a short while ago has both deepened and widened, and the condition to-day is undoubtedly the worst that has been experienced in recent years. The position is reflected in the wholesale fashion in which the large steel plants of the district have been set down for stock-taking. Where this latter operation is not being carried on a number of furnaces have had to be stopped in Sheffield, Lincolnshire, and Leeds for want of orders. There being no sign of a revival in the buying, the outlook is such as causes widespread anxiety. The slump covers pig-iron, mild steel billets, and rolled and forged steel and bar iron, besides several minor branches of the trade. Ironmasters have found it necessary to concede reductions in prices of basic, foundry, and hematite pig. Some large firms in the local steel trade are losing money on their main productions, the local steel trade are few and far between. A bar iron and remunerative works are few and far between. A bar iron works at Thornhill, Yorkshire, has been closed through bad trade. This material cannot be produced at the current prices, but owing to the poor demand it is not deemed expedient to increase them. The demand for motor steels, though large, has slackened somewhat, and there is considerable activity in railway work, although there is practically no building of private owners' wagons at the present time. Belgian iron and steel works are busy on home orders, and makers are refusing to consider contracts for delivery during the next two months. Activity is still fairly general in tools, and many branches of engineering are quiet. Tools and material for builders and contractors are wanted in large quantities. Shipbuilders' requirements are also looking up. The quietude in the coal market has led to the accumulation of stocks of household fuel at the pits, and in the absence of revival short time working

will have to be resorted to at many of them. Coke is neglected both in the home and foreign markets, and prices are down. Quotations per ton at pits are:—Best hand-picked branch, 34s; Barnsley best Silkstone, 28s; Yorkshire steams, 23s to 24s; Derbyshire do., 21s; Blyth and Tyues, 19s 6d to 20s; Durhams, 24s to 25s; rough slacks, 12s; smalls, 10s; blast furnace coke, 20s 6d.

Our Glasgow correspondent writes:—The demand for galvanised sheets continues, although there is less speculative buying than was the case a few weeks ago. Enquiries, however, come in from South Africa, Australia, and the Far East, including Dutch East Indies, in good quantities and bookings have been made at £18 5s per ton for delivery as far ahead as October/December. Black sheets are also in brisk demand, with prices for export 10s per ton higher than could be done quite recently. Apart from a few home and foreign Government orders, no particular interest is taken in steel plates and sections, and makers are now occupied clearing off work on hand in view of the annual stoppage for holidays and repairs. An enquiry is going around for a large quantity of rails and fish plates from one of the railway companies. Steel works are anticipating a fair number of orders after the holidays on account of the good shipbuilding contracts which have recently come to this district, the specifications for which have not yet been issued. In the meantime only very small orders are being placed by consumers, to meet immediate requirements, and these for the most part are delivered promptly. This applies also to bar iron makers, and re-rollers who find business very difficult to secure, and are slackening considerably their output. The pig-iron market is in a depressed condition momentarily, owing to the scarcity of orders. Prices are not, however, appreciably lower. Tube works are very well employed at present with export orders. One order for galvanised tubes amounting to about 500 tons has just been placed. Among other contracts reported within the past week is a large number of buildings for the Anglo-Persian Oil Co., secured by a Glasgow firm of structural engineers.

Our Cardiff correspondent writes:—Conditions on the Cardiff coal market this week have been very depressed. Inquiries have been extremely inactive, and it is with great difficulty that even the best steam coal collieries have been able to maintain their prices. A slump in the foreign demand has affected all the coal exporting centres of the country, and the North-East Coast ports are competing more actively in the South Wales overseas markets. Tonnage supplies have been plentiful, and rates of freight are for some directions lower than they have been at any period since the war, but even this advantage of cheap transport has failed to stimulate foreign demand, and there has been a great deal of lost time in the coalfield. The general position is as bad as it was towards the end of June, 1922. The best steam collieries are fairly well stemmed under contracts, but for the inferior classes of coal the market is exceptionally weak, and extensive stoppages of work are feared. The following are the current approximate quotations:—Best Ad- miralties, 28s 6d to 29s; second Admiralties, 26s 9d to 27s 6d; best drys, 26s 6d to 27s. Black Veins, 26s

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

SUPPLIES of floating money have been contracting rapidly during the week, owing to further large repayments to the Bank on Monday and Tuesday, and to repayments of Government indebtedness to the Bank, out of the proceeds of Treasury bills. In the early part of the week up to 10 per cent. was sometimes paid in the morning for new loans, and $2\frac{1}{2}$ per cent. has been the general charge for renewals of daily money. Discount rates have continued

to harden, in deference to the view that without such movement an advance in Bank rate might be expected in order to raise the level of rates in the open market, and the three months' Bank bill rate has almost attained the 3½ per cent. level, which is supposed to represent the requirements of the moment. Last week's Treasury bills became practically unsaleable at a profit to allottees, and the rate for yesterday's bills reflected the higher tendency to some extent. But with money becoming decidedly easier at the end of the week, it was evident that there may be some difficulty in maintaining discount rates in the face of more plentiful supplies of short money.

	July 11, 1924.	July 4, 1924.	June 27, 1924.	June 20, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills) 3½	3½	3½	3½	2½	..

The Bank return showed a reduction of £530,600 in the note circulation, following upon the large increase in the previous week, and the bullion stock was £3,800 higher, so that there was a gain of £534,400 in the Reserve. Market repayments were reflected in a decline of £25,405,600 in Other securities, and Government securities were reduced by £6,165,000, accompanied by a fall of £1,814,000 in Public deposits, so that Private deposits were lower by £29,260,000. The currency notes outstanding showed a further increase of £1,570,200 at £293,685,700, which includes £1,383,400 for notes called in but not yet cancelled. The fiduciary issue is £242,852,300, or £5,338,600 below the maximum.

THE STOCK MARKETS.

Investment markets are unsettled by the hardening in the money market, and by apprehensions of a higher bank rate. The Stock Exchange regarded Thursday's announcement of "no change" merely as a postponement of the threatened rise. Most stocks in the gilt-edged market are therefore a trifle easier, but the set-back is nowhere severe. Prior-charge railway stocks have followed this tendency, while the ordinary stocks have been further depressed by threatened Labour trouble. Rubber shares, after months of stagnation, advanced on the rise of the produce over 11d per lb. The oil market has been irregular. In the mining markets the chief feature is the gamble in East Rands, while Malayan tin shares are steadily advancing.

THE COMMODITY MARKETS.

Market dullness is the general theme of our trade correspondents' reports this week. From Cardiff we are informed that there is no improvement in the coal market. There is no demand for pig-iron, and the hematite position shows no better signs. A little more business is noticeable in the steel trade, but prices remain unchanged. Tin is lower, but copper is steady. No fresh development of any importance is announced in the cotton trade, but in contrast a rally in the wool market is reported. Wheat was in demand. The sugar market is quiet, but tea and coffee are firm. Rubber is slightly dearer. The boot trade is well employed. Further details and prices of markets will be found on later pages.

FOREIGN EXCHANGES.

In the foreign exchange market business has again been very quiet, although movements both in the Paris and New York rates have been more pronounced than for some little time past. From \$4.33 on the 4th (when, of course, the New York market was closed), the rate has risen steadily to \$4.35 yesterday morning, and for the moment at least still seems firm. The hardening of market rates on this side, and the growing impulse towards a more liberal policy in America, especially with regard to foreign credits, may in part account for this, but the future is still by no means clear. Forward rates remain at ½ to ⅓ cent per month below spot. The recent political complications and further sharp reminders of the instability of the posi-

tion of Government finances have been reflected in a reaction in the franc. On the 4th the Paris rate closed at 85.25, and reached 86.35 on the following day. Considerable uneasiness is being caused by the rapid increase in the issue of National Defence Bonds, and there is a strong demand that the new Government should substitute some effective form of finance for this indirect inflation. On Monday there was a recovery down as far as 84.15. Since then it has fluctuated sharply with a higher tendency, and was quoted yesterday morning at 85.25. Brussels, although at one time on the 8th it reached 98, makes a better showing on the week, having moved from 96.74½ at the close of the 4th to 96.25 yesterday morning. Forward rates in Paris are a little narrower at 20 to 23 centimes per month above spot. In Brussels they have widened from 5 to 8 centimes above. Last week's weakness in the lira has continued, the rate having moved up again from 101½ to 102. In Amsterdam, after a sharp movement against us on Saturday, the quotation has moved from 11.50 on the 4th to 11.52½ yesterday morning. Switzerland, however, has appreciated from 24.31½ to 24.11½, having dropped sharply on the 10th for some reason at present unexplained. Madrid at 32.83½ is also slightly better, although it has lost much of a sharp improvement at the beginning of the week. In the North Stockholm at 16.33½, after being considerably lower, compares with 16.34½ a week ago. Christiania has further depreciated from 32.40 to 32.58½, and Copenhagen is also slightly worse at 27.22½, as compared with 27.19½, and Helsingfors shows a slight depreciation from 172½ to 173½. Of the gold stabilised currencies in Warsaw and Riga, quotations have followed the dollar, while Berlin and Vienna, attached more directly to sterling, show practically no change. It should also be noted that the Budapest rate, on the successful flotation of the loan, has been stabilised for the time at 355,000 kronen. It is of some interest to record that in Esthonia, where for some months financial conditions have been increasingly unsatisfactory, a first step towards stabilisation has been taken in the establishment as the unit of account of the "kroon," the equivalent of the Scandinavian krone. Quotations for the time being will continue in the Esthonian mark, but rates are to a large extent arbitrary. Prague remains unchanged at 147½; Bucharest shows some improvement to 1025, as compared with 1075 a week ago. In the East the rupee shows an appreciation on the week of 1½d to 1s 5 3-64d, while the yen has fallen away from 1s 11½d to 1s 11d. The silver market has been extremely quiet, the Far East taking little part, and small offers from America being absorbed by the Continent. Quotations are slightly higher. Hong Kong has fallen ½d to 2s 4½d, and Shanghai has depreciated from 3s 3½d to 3s 3¼d respectively. In South America, Rio has depreciated on unfavourable political news from 5 63-64d to 5 17-64d, while both Buenos Ayres and Montevideo are lower at 40½ and 42½ respectively. Valparaiso, however, has appreciated from 42.50 to 41.80 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the five days ended July 5th:—

EXPENDITURE.		REVENUE.	
Supply Services	7,940	From Revenue	12,394
Interest, &c., on Debt	3,834	Amount borrowed	87
Sinking Fund	274		
Added to Exchequer Balances ..	48		
Sundries	265		
	12,361		12,361

Revenue amounted to £12,323,500 during the five days ended July 5th. Customs yielded £2,057,000 and Excise £852,000. Estate, &c., duties brought in £530,000, Property and Income-tax yielded £4,184,000, and Super-tax £1,040,000. The five days' operations increased the National Debt by £37,200, and caused the following changes:—

EXPENDITURE.		REVENUE.	
Treasury Bills	+ 12,749	National Savings Certificates ..	50
Treasury Bonds	+ 715	Bank of England Advances ..	9,600
Sundries	+ 186	Public Dept. Advances	4,041
	+ 13,650		13,991

The floating debt was reduced by £873,000 to £797,428,500.

FINANCIAL YEAR, 1924-1925 (April 1 to July 5).

Total Expenditure ..	£ 227,403,831	Raised by Revenue ..	£ 188,554,943
		Decrease in Balances ..	3,393,915
		Amount borrowed ..	35,454,973
Total	227,403,831	Total	227,403,831

ESTIMATES for YEAR 1924-25.

Ordinary Expenditure ..	£ 786,848,000	Ordinary Receipts ..	£ 764,050,000
Special Expenditure ..	3,178,000	Special Receipts	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

THE WEEK IN PARLIAMENT.

MONDAY, JULY 7TH.—*Lords*: Debate on the trade situation. *Commons*: Premier's statement on the Chequers Conversations and the Allied Conference. On the Foreign Office vote a debate took place on relations with Russia.

TUESDAY, JULY 8TH.—*Lords*: Debate on Liquor Control, the Bishop of Oxford's Bill rejected. *Commons*: Committee stage of the Finance Bill.

WEDNESDAY, JULY 9TH.—*Lords*: Government statements on Turkish bonds, and the Rodeo show. Legitimacy Bill passes second reading, and Guardianship of Infants Bill passes Committee stage. *Commons*: Unemployment Insurance Bill debated and adjourned. Committee stage of Finance Bill continued.

THURSDAY, JULY 10TH.—*Lords*: London Traffic Bill debated and read a second time. *Commons*: Premier's statement on his visit to Paris. Debate on the position of the Sudan.

FRIDAY, JULY 11TH.—*Commons*: Committee stage of Old Age Pensions Increase Bill.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of British West Africa, General Electric, Howard and Bullough, Lipton, Mond Nickel, and Spiers and Pond. The chairman at the meeting of the General Electric Company said that exactly as steam came to the rescue of the world, and particularly of this country, after the Napoleonic wars, so he was convinced the electric unit, properly produced and distributed, would save the world from the much greater ordeal through which it had recently passed, and would play a particularly great part in the linking up and development of the British Empire.

INSURANCE SUPPLEMENT.

With this number our readers will find a Supplement reviewing the progress and prospects of insurance. The topics dealt with include the recent experience of life offices, the increase of business, mortality, an analysis of their funds, valuation results and bonuses; the results of fire insurance in the past year; and the results recorded in the latest reports from the marine insurance world. The Supplement is not a mere record of company results, but a general survey of the insurance problems of the day.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE ANGLO-FRENCH CRISIS.

WHEN we wrote a week ago the prospects of the July Conference, though not entirely free from difficulties, seemed bright. But owing to a combination of technical blunders and genuine misunderstandings the project has in the meantime come very near to shipwreck. Although the facts are not yet fully revealed, and some points remain to be cleared up at Monday's debate, the general outline of this short crisis is public property. The storm arose over the issue of invitations to the Conference with which the Foreign Office included a memorandum indicating the points for settlement, the natural assumption being that this outline of resolutions that might be taken by the Conference represented the results of the Chequers' conversation. Unfortunately, no formal invitation or official copy of this document were

sent to France, and although French officials knew the substance of the memorandum, it leaked out in Rome and Brussels. The document suggested that the economic occupation of the Ruhr and the economic sanctions in force in the Rhineland should come to an end at a fixed date, say, a fortnight, after the necessary measures had been taken by Germany to put the Dawes Report into effect; and, further, that as the Dawes Report seemed to go outside the terms of the Treaty of Versailles, the question of default by Germany under the terms of the plan should be determined by some organ other than the Reparation Commission. These views and the manner in which they became known naturally aroused suspicion in France, and prompt steps were taken to indicate that the document was purely a British suggestion, and did not represent an Anglo-French agreement. But the storm of criticism in France threatened to overthrow M. Herriot, and to prevent the Conference being held at all. In order to save the situation, Mr MacDonald acted with promptitude and hurried to Paris, where after a day and night consultation he came to an agreement with M. Herriot, as a result of which a new common basis for the discussions at the Conference was reached by England and France. Thus the Conference has been saved, and in view of the delicacy of the situation, Mr MacDonald has made an appeal to the public not to make his task more difficult by damaging criticism. We yield to no one in our desire to see this Conference a success, but the issues are so vital that Mr MacDonald will, we think, be strengthened and not weakened by free and full discussion.

Frankly, we regard Wednesday's communiqué with misgiving. Apparent changes of front and hasty compromises are very disturbing to public opinion, and for once we find ourselves in agreement with the *Echo de Paris* in thinking that there is great danger in tête-à-tête settlements between Prime Ministers who have only recently come into power, and cannot possibly be thoroughly conversant with all the complicated issues of the European tangle. It would be an expensive way of educating our new negotiators if we ran the risk of stirring up fresh international misunderstandings.

Last week we briefly indicated the time-table that M. Herriot was then willing to adopt; but it is not surprising that he has been driven to recede from this position, and to require some more definite assurances that the subjects of security and of inter-Allied debts will be taken up forthwith. Indeed, it is increasingly evident that Mr MacDonald cannot hope to make much progress with French opinion until he can give a satisfactory assurance on the first of these points. Wednesday's communiqué is very vague on the matter, declaring merely that the Governments have had a preliminary exchange of views on the question of security, "and have agreed to seek the best means of achieving this object, whether through the League of Nations or otherwise, and to continue the examination of the question until the problem is finally solved." The debt question is to be the subject of discussion between Treasury experts. But this carries us very little farther, since this question depends primarily upon America, and not on Great Britain.

On the subject of the Dawes Report and its enforcement the communiqué is more precise. But it does not seem to us to suggest a satisfactory solution of the problem of what is to happen if Germany defaults, and what are to be the conditions of further intervention. Mr MacDonald has apparently withdrawn from the view that defaults under the Dawes scheme should be taken out of the hands of the Reparation Commission, and has substituted a plan which, according to the *Figaro*, the British Prime Minister thought of in the middle of the night. The plan is to add an American representative to the Reparation Commission when the question of default is being discussed. But the Prime Ministers evidently think that this may be difficult, and they suggest that, "if this were not possible," and in the event of disagreement on the Commission in their reading of the situation, the Agent-General for Reparations—who should be an American—should be called in. In other words, a paid agent of the Commission (who, incidentally, will be the plaintiff in the case and report the default to the Commission) is to come in and give a casting vote on a question involving peace

or war. The *communiqué* goes on to say that "the Governments concerned will undertake, in the event of the Reparation Commission declaring an *important* voluntary default on the part of Germany, to confer together immediately as to the means of carrying out such measures as they shall have agreed upon, with a view to their own protection and that of the interests of the lenders. The italics are ours. From the point of view of future peace, any voluntary default is important. The root problem is whether France is willing to surrender her claim to what is in effect, under the present constitution of the Reparation Commission, a deciding voice as to whether Germany has defaulted or not; and secondly, her insistence on the right of independent action if default occurs. If France is prepared to accept either the judgment of Europe or the joint opinion of Germany's creditors, progress is possible. If not, it is difficult to see how the Dawes Report can be put into effect, for it is certain that no money will be forthcoming for a German loan so long as France claims this liberty of action.

This week the view of Germany has been somewhat out of the picture. But German opinion has not been unaffected by the events of the last few days. In particular, the latest *communiqué* of Paris says nothing about the date at which the economic evacuation of the Ruhr will take place. This is a very unwise omission. It can do no possible harm to France, and will make it much easier for the Dawes Report to put into effect in Germany if France gives a definite time-table for evacuation. Moreover, M. Herriot's change of front will, unfortunately, dissipate much of the goodwill he has acquired in Germany by the recall of the exiles, and by the pacific tone of the joint note on disarmament, for the recent crisis has shown how little he is master in his own house. But, after all, the chief thing is that the Conference has been saved, and that the Premiers now know what are the chief difficulties they are up against.

We regret that we cannot congratulate the Foreign Office on the way in which these negotiations have been handled. The week's events inevitably suggest unfavourable comparisons with the able work of Sir Maurice Hankey and the permanent bureau with which he organised so efficiently the work of a long series of international conferences. But the episode suggests the reflection even more forceably of the enormous advantage of a really international secretariat such as that which serves the League of Nations. The public may have been disposed to think that the technique of international diplomacy is not of great importance; this week's crisis will have disillusioned them. The misunderstanding and suspicion aroused by the form and manner of the invitation to the July Conference could not possibly have arisen if the machinery of Geneva had been used. In the one case, the instrument is a national servant approaching the problems at issue from a national standpoint; at Geneva, perhaps, the most lasting success of the League has been to create a corps of international diplomatic officials. In the one case, the diplomatist scores a success if his side's view prevails. In the other, the only test of success is to secure an agreement which harmonises the views of both sides.

BRANCH BANKING IN THE UNITED STATES.

THERE has recently been a good deal of discussion in New York and elsewhere on the question of branch banking in the United States. The American banking system differs radically from our own in that it includes a very large number of National banks which are deterred by their charters from engaging in branch banking. But alongside of these there exist banks acting under State charters, many of which permit branch banking. The issue that must ultimately be settled is, which system will ultimately adapt itself best to the needs of the country. To quote a paragraph in a recent issue of *Bradstreet's*:—"Some of the largest national banks in New York City are considering the advisability of surrendering their national charters and taking out New York State charters, in order that they may be on an equal footing with State institutions in competing for new business. As is well known, national banks at present

are subject to various restrictions that are not imposed on State banks. Whether any of the national banks located in New York City take the step indicated will depend largely upon the outcome of efforts to secure legislation by congress, which will liberalise the existing national bank regulations and give national institutions 'a fair chance in competition with State banks,' as one official remarked. With many of the national banks here the question of branch banking is a vital one, and the present regulations in that respect are described as unsatisfactory. It is pointed out, among other things, that State banks may not only become members of the Federal Reserve System, and, as such, enjoy practically the same prestige which national banks command, but they may also lend money on real estate, whereas national banks are not permitted to make such loans."

On the other hand, the sixty-first report of the Comptroller of the Currency, covering the activities of the Currency Bureau in the year ended October 31, 1923, takes the form of a defence of the existing banking system of the United States. In the first paragraph of his report the Comptroller makes the assertion that "the well-fortified position of the national banking system, as disclosed by the character of assets, and the volume of increase in assets during the year, is evidence of the fact that the national banks occupy an outstanding place in our financial structure, and are abundantly able to meet the demands of commercial and industrial enterprises."

There are approximately 8,300 national banks already members of the Federal Reserve System, as against some 1,600 State banks. A joint committee was appointed at the last session of Congress "to consider the effect of the limited membership of State banks and trust companies in the Federal Reserve System in the agricultural sections of the United States," and to make recommendations to bring about, in such sections, a larger membership of these banks in the system. The membership of the State banks is a voluntary membership, and one from which they can, at pleasure, withdraw. The membership of the national banks is compulsory, and the only way in which the interests controlling a national bank can withdraw from the system is by going out of business as a national bank. The Comptroller points out that, although there are over five times as many national banks in the system as there are State banks, the assets of the national banks are only approximately \$21,700 millions, as compared with \$12,000 millions for the State banks, and argues that, as the smaller banks of the system are national banks, "if these are hampered in their growth through existing conditions, or the enactment of new legislation, the smaller communities and agricultural sections will be the principal sufferers. It is to be hoped that in the present campaign for membership the interests of the existing members will not be sacrificed, nor the greater desirability of fortifying the system by encouraging the organisation of new national banks be forgotten."

After a short eulogy on the Federal Reserve system, and the "great service" it rendered to the country during the financial stress of the war, the Comptroller claims that, while the flexibility of the national banking system in meeting the diversified conditions in the United States has been very great, "it is doubtful if the law could be so modified as to produce such a degree of flexibility that all the banks of the United States could operate under one law in such a way as to meet the different community requirements as well as is being done under the present system of National and State banks.....So far as general operations are concerned, the one important point upon which the interests of banks operating under some State charters are prejudicial to the interests of the national banks is that of branch banking." The report continues at considerable length in this strain, and much of the argument savours of special pleading. Branch banking is permitted with various modifications in seventeen States. Some of these States restrict the establishment of branches to the city or county of the parent bank, while others permit branches to be established in any part of the State. In California, for example, 82 of the State banks are operating a total of about 475 branches. Branch banking, therefore, "must now be dealt with as a practical condition to be met, and not as a theory." The Comptroller divides his discussion of branch banking into three main

The New York Trust Company

COMPLETE INTERNATIONAL BANKING FACILITIES

100 Broadway

New York City

questions: (1) Is a reserve system either governmentally or privately controlled necessary? (2) Can the present Federal reserve system survive the imposition upon it of large powerful chains of branch banks which, in practice as well as in theory, are privately owned and privately controlled reserve systems? (3) Can a general system of branch banks exist simultaneously with a system of independent unit banks? And he comes to the conclusion that "the issue is a clean cut one as to whether the country prefers a system of privately owned branch banks or a reserve system under Federal control," and that "the decision on the part of the authorities to limit definitely the extent to which member banks may indulge in the establishment of branch banks" is justified.

The Comptroller proceeds to criticise the system of branch banks, on grounds which will sound strange to British readers. He contends that "branch banking is, in its essence, monopolistic. The financial resources of a number of communities are put under the control of a single group of individuals. Funds liquidated in one community may be used to develop other communities at the discretion of the officers of the central bank. The economic development, therefore, of a given territory under the control of a branch would depend upon the policy of the bank. The bank would have the power to retard or to encourage the development of a given community or individual enterprise. In this connection it has been well said that if the sudden creation of great branch banking systems resulted in withdrawing funds from the support of rural communities in order that they may be invested in self-liquidating commercial paper originating elsewhere, then it will be true that sound abstract banking principles will have been applied, but at a cost to the future development of the rural communities that will far outweigh any advantages that may be gained." The Comptroller goes on to claim that the "rapid economic development of America has been largely due to the policy of the pioneering unit banks," and uses all the arguments which have been current here for 30 years or more as the private banks have been gradually absorbed by the joint stock institutions.

We have quoted the above remarks at some length as showing the official opposition with which banking development on lines akin to that of this country will meet in the United States. The past 25 years have seen a reduction in the number of banks in England and Wales from about 90 to about 20, and an increase in the number of branches from less than 4,000 to over 8,000. We do not propose here to argue the merits of the small private bank as against the large joint stock enterprise, but it would seem that in his case against branch banking the Comptroller of the Currency has overlooked the possibility of competition between large banking concerns. Clearly, the branch bank system might conceivably lead to a complete monopoly; but in this country, where it has reached, perhaps, its highest development, it is far from having done so. In this country there are very few districts in which the prospective customer has not a choice of banks with which he can transact his business, and the facilities

available are therefore likely to be at least as favourable as those which the single bank in days gone by could offer. Possibly, the rules under which our branch banks have to act may be a little rigid and inelastic; but against this must be set their much larger resources and staying power—as many embarrassed borrowers have had good reason to realise in the last two or three years. The national banks of America may be free from head office restrictions; but instead they are bound by legal reserve requirements.

It is apt to be very misleading to apply arguments from the banking system of one country to that of another in which the conditions may be entirely different, and it is conceivable that in a territory so vast as that of America, if the branch bank system drove out that of national banks, particular areas might come under single institutions instead of being served, as in this country, by overlapping organisations. But the crop of failures of national banks in recent years shows that the reserve provisions of the system do not guarantee solvency, and that a price has to be paid for keeping in existence a large number of independent and competing units. We doubt whether the Comptroller of the Currency has said the last word on this very important issue.

THE NEW BALTIC STATES.—I. ESTHONIA.

THE Esthonians, although closely related to the Finns by race and language alike, were for centuries under the direct rule of the German Baltic Barons, supplemented of later years by an imported Russian bureaucracy. Serfdom, which never really existed in Finland, remained in full force right down to the nineteenth century, and has left a deep mark on the character of the people. As a consequence of the World War, however, the servants of yesterday are now the masters, and the smallest member of the new European family of nations began its career in an atmosphere poisoned by centuries of racial animosity.

One of the first acts of the new State legislature was the wholesale expropriation of all the baronial landowners, whose land passed directly into State ownership. The stock and capital equipment of the farms was purchased from the former owners at fixed prices, which were, in fact, well below those ruling on the open market. Up to the present no compensation has been paid for the land, although this has been leased to the peasantry, who have paid rentals to the Government. This legislation is looked upon by the Esthonians themselves as the righting of an historic wrong, while the Baltic Barons naturally describe it in less complimentary language. In reality, however, an agrarian revolution was probably the only practicable alternative to Bolshevism, while the breaking-up of the estates appears, up to the present, at any rate, to have had surprisingly little effect on agricultural production in the country.

Esthonia, with a population of only some million and a

quarter, is, of course, predominantly an agricultural State. The people are good workers, and the number of illiterates is a negligible quantity. In addition to the agricultural land, the Government of the new State acquired large and important forest properties, and the former possessions of the Russian State—which include the railways—free of all charge. Moreover, the country was relatively very little affected by the war, and the national debt is quite small. In many ways, then, the situation was, and still is, most favourable, while the balancing of the Budget has in the main been accomplished.

Unfortunately, however, the new rulers have had virtually no previous experience in the world of banking and finance. In the first place, as was certainly inevitable, the establishment of the new State, and its war with the Bolsheviks in 1919, necessitated recourse being had to the printing press. In course of time, however, the general soundness of the country's economic position made itself felt, and by 1922, though the balance of trade was still unfavourable, the real balance of payments was nevertheless well on the right side.

FOREIGN TRADE. (In Millions of Estonian Marks.)				
	1921.	1922.	1923.	
Imports	4,486	5,589	9,332	
Exports	2,287	4,812	5,712	
Import surplus	2,199	777	3,620	

The difference between the real and the apparent balance is made up largely by the profits of the transit trade with Russia—both licit and illicit—while factors such as the smuggling trade to prohibitionist Finland are also perhaps of some importance. In the second half of 1922, therefore, the exchange was stabilised. Instead of playing for safety, however, the Bank was far too free with its credits for all sorts of dubious industrial schemes, and the wretchedly bad harvest last year brought matters to a head. The country had already been indulging in imports it could not afford, and now came the need for the importation of essential foodstuffs. The exchange fell considerably in 1923, and the movement has more or less continued this year. It should be remembered, in this connection, that the official quotations give no idea of the rates at which business is actually done.

The solution will depend largely upon the manner in which the unsound credit position within the country is liquidated by the present finance minister, Mr Strandmann, and a few bankruptcies would be a healthy sign that things were going the right way. The application of the axe to the Civil Service is also urgently needed, and, in general, development will be all the surer for being slow. The attempt to industrialise Estonia seems absurd, particularly when it is remembered that the earlier undertakings, such as the important textile mills at Narva, existed primarily for the Russian market, and are now forced to work short time for lack of consumers. While the oil shale industry of the country appears at present to be in an interesting stage of development, the mainstay of the Estonian export trade will probably long continue to be her timber, of which Great Britain took nearly 90 per cent. last year. A rational exploitation of the forests is thus a matter of the greatest importance.

The country is, however, too small to form an independent economic unit, and to allow, at the same time, for the greatest possible development of her existing capital equipment. The Treaty which was signed with Latvia on November 1, 1923, and was intended to prepare the way for a complete Customs Union between the two countries, thus appeared to be an obvious step in the right direction. Its terms, which, incidentally, did away with the passport nuisance, should have come into force in May, but, for some obscure reason, this has not yet taken place. Technical difficulties are alleged by way of excuse, though it seems not impossible that sectional interests have been at work behind the scenes. Whether this is altogether bad for the British exporter of textiles to Latvia is, however, quite another question.

Hitherto Great Britain and Germany have enjoyed the greatest share of Estonian trade. In 1922 and 1923 Germany provided over half the total imports, machinery, textiles, foodstuffs, and chemical goods being the principal articles. British imports to the country have, however, increased considerably, both absolutely and relatively, and last year amounted to nearly 20 per cent. of the total. The

principal products sent were cotton and coal. The shortage of foreign balances, however, makes it very difficult at present to obtain sterling in Estonia in settlement of outstanding accounts, and a reduction of imports is almost certain to take place this year. In any case, however, German firms seem to be finding it more difficult to compete, despite the energy with which their travellers are working the new Baltic market.

In 1922 Russia took the first place in Estonian exports, with nearly a quarter of the total. This was, however, a passing phase, as foodstuffs ranked very large that year. Great Britain, second in 1922, took first place last year with over one-third of Estonian exports, the principal articles being wood and flax.

For the moment, the economic situation of the country is not altogether satisfactory, and the exchange is rather shaky. Discussions are, however, taking place for the introduction of a new currency based on the Swedish crown, and if the harvest this year is up to expectations, the commercial balance may soon be restored. As is the case with all predominantly agricultural countries, the economic problems are here relatively simple, and if the political element can be kept on one side, the financial situation ought soon to be cleared up, and a stable exchange achieved once again.

OUR PROGRESS IN AEROPLANE MANUFACTURE.

SEEMING that it was only about the beginning of the present century that the mastery of the air began to be achieved, the British aeroplane industry has made amazingly good progress. During the last two decades of the nineteenth century there had been many attempts at flight by Har-Graves, Phillips, Maxim, Langley, Tatin, Richet, Ader, and others, some of them meeting with moderate success. The most striking of the early achievements, however, were those of the Wright Brothers in 1903 and 1905, while towards the end of 1906 M. Santos-Dumont made his public flights, which were mostly confined to heights of a few feet. A great spurt was made from 1908 onwards, contributed to by Farman, Wilbur Wright, Bleriot (the first to fly over the Channel), Paulhan, the Hon. C. S. Rolls, Sopwith, and others.

So rapid was the progress made, that by 1910 our own Board of Trade woke up to the necessity of treating seriously the industry of aeroplane and airship manufacture. It recorded in that year imports of "aeroplanes, airships, balloons, and parts thereof," valued at £56,000, while British exports were valued at only £15,000. For five years imports continued to grow much more rapidly than exports, and many feared that France was going to secure as long a start of us in this industry as she had earlier done in the motor trade. The war caused feverish activity, but the trade records show little of it, since it was mainly directed to military needs. During the year in which the war ended (1918) imports soared to more than 6½ millions sterling, while exports were only about half a million, but in the following year our manufacturers began to make rapid headway. So dramatic have been the various changes in the trade that the figures are worth setting out for all the 14 years during which they have been recorded:—

BRITAIN'S OVERSEA TRADE in AEROPLANES, AIRSHIPS, BALLOONS, and PARTS.
(In Thousand £'s.)

	Imports.	Re-Exports.	Net Imports.	British Exports.	—Excess of Imports.
1910.....	56	12	44	15	29

1923.....	18	17	1	1,008	1,007

* Excess of re-exports over imports.

The great flood of imports in 1918 and 1919 came from France and the United States. In 1918 we received from across the Channel five millions' worth, and from America over 1½ millions' worth. In 1919 the respective proportions were rather over 1¼ millions, and about 2 millions. The dwindling of imports since then, and their virtual cessation during the past three years, seems to show that we are now entirely self-reliant in this industry.

Greater satisfaction, however, is to be derived from the post-war exports of British goods, as contrasted with those of pre-war days. Shipments are despatched to a wide area. In 1922—the last year for which particulars are available—they went to Russia, Belgium, Spain, France, Norway, Sweden, and Holland; Java, China, Japan, the United States, and Argentina; India, Australia, New Zealand, and Canada.

Down to 1919 the Board of Trade entered all these goods under one heading. In 1920 six headings were introduced—three for aeroplanes (complete machines, engines, and other parts) and the same for airships and balloons. This enables us to realise that the trade is almost entirely in aeroplanes, airships and balloons being a very minor feature. As an example, we may say that for 1922 the £15,000 worth of imports contained only £100 worth attributable to airships and balloons, while the exports of £1,337,000 embraced only £10,995 worth of airships, balloons, and parts thereof.

In showing the distribution of exports as between foreign countries and British Possessions, we shall therefore deal with aeroplanes and parts only.

BRITISH EXPORTS of AEROPLANES and PARTS THEREOF.

* Recorded by value only. † Excluding parts other than engines.

Similar particulars for 1923 have not yet been published, but the three years' figures already available show how largely the trade with foreign countries preponderates over that with Dominions and colonies. In 1922 Japan alone took £396,000 worth of these goods—a larger amount than was taken by all the Imperial countries combined. On the other hand, China bought virtually nothing in that year, though in 1921 her purchases had amounted to £520,000, no less than £387,000 being for complete machines, which numbered 83, and were, therefore, valued at £4,662 each. Indeed, fluctuation in the demand from particular countries is a very marked feature of this trade, as is but natural in its present early stage of development. Doubtless this will be remedied in the future, when large numbers of regular aeroplane lines are being run by all the civilised nations.

The great variations in average values of machines shipped to different countries is very striking. Here are a few particulars for 1922:—

	Machines.	Value £.	£ per Machine.
To Belgium	86	90,000	1,046
Java	8	48,000	6,000
Russia	4	21,000	5,250
United States	4	17,000	4,250
India	62	126,000	2,030
Japan	39	200,000	5,128
Argentina	10	21,000	2,100
Portugal	9	21,000	2,333
Greece	9	35,000	3,888

These, of course, are all average prices. Each year's shipments to any given country would doubtless include machines varying widely in value one from another.

Average prices of complete aeroplanes shipped to all destinations rose from £1,258 in 1920 to £2,118 in 1921 and £2,204 in 1922.

The success achieved in this comparatively new industry will be highly gratifying to those of us who have a firm faith in the ability of British manufacturers to hold their own against all comers in the great majority of our trades. It must not be forgotten that the industry did not have its origin in this country, but in France and America. That should have given those two countries a considerable advantage over us. It apparently did so, but only for a very short period. A great impetus to the industry was imparted by the war, but the advantage of that was shared equally by our competitors abroad. It in no way specially favoured us. In short, at the inception of the industry our competitors may be said to have enjoyed a good start. They got off promptly, but in spite of our handicap, we rapidly drew up with them, and though the demand for aircraft is not at the moment expanding, we seem to be able to hold our share of the market.

NITRATE POSITION AND RESULTS.

It is estimated that the world's consumption of nitrate of soda for the year ended June 30, 1924, amounted to 2,192,000 tons, as against 2,159,500 for the previous year. European demand at 1,104,000 tons was slightly higher when compared with the figures of 1,030,500 tons for a year ago. At 937,000 tons a small decline of 42,000 tons is recorded for the United States. It must be remembered, however, that in the previous year the United States had jumped from 565,000 tons to 979,000. Thus there is here the possibility of a slight reaction showing itself. But while we are dealing with American figures, it is perhaps not without significance to mention that cotton growers in the United States are becoming favourably disposed towards Chilean nitrate, recognising in it a weapon for service against the attacks of the boll weevil. In the half-yearly report of Henry Bath and Son, Limited, it is pointed out that: "Consumption in the United States of America was slightly smaller than in 1922-23, but an encouraging increase is noticeable in certain European countries, such as Scandinavia, Poland, Czechoslovakia, Jugo-Slavia and also in Egypt, while the requirements of 'other countries' give satisfactory evidence of a growing consumption, though a smaller demand in Japan is recorded. Germany has again subsisted on synthetic nitrogen, only about 9,000 tons of Chilean nitrate having been imported for home consumption, but however desirable nitrogen may be for German soil in the form of sodium nitrate, instead of ammonium sulphate, the difficulty of financing large imports precludes the early probability of Germany becoming once more a great consumer. So far as Europe is concerned, climatic conditions this year have been favourable for the consumption of nitrate of soda, and the restricted output of Norwegian nitrate, due to labour troubles, has been of some assistance to the Chilean variety."

The following table, showing shipments, production, and stocks for various periods, is compiled from statistics presented in the half-yearly report of Messrs Aikman (London), Limited. The figures for the six and twelve months ended June 30, 1914, 1922, 1923, and 1924 are shown:—

(In Thousand Tons.)				
	1914.	1922.	1923.	1924.
Shipments to Europe and Egypt for six months ending June 30	Tons. 831	Tons. 103	Tons. 800	Tons. 358

Visible supply for Europe and Egypt at June 30 ..	84	38	54	*147
„ „ United States ..	11	6	26	*13
„ „ other countries ..	754	1,601	997	*1,075
Stocks in Chile at June 30	1,265	1,873	1,250	1,250

* Estimating production in June at 190,000 tons, and shipments at 40,000 tons to Europe, 30,000 tons to the United States, and 10,000 tons to Japan and other countries. † Excluding about 60,000 tons reserve stock held by the American Government.

The European consumption would undoubtedly have been greater but for the severe fluctuations in Continental currencies, which, so far as France and Belgium were concerned, checked sales for several weeks at a critical time of the year. A shortage of supplies on the spot in March and April was, to a great extent, responsible for the smaller consumption, and it is believed that more nitrate would have been used had it been available during that period. Countries outside Europe and America maintained last year's increase at 151,000 tons, against 150,000 and 84,000 tons respectively for the two previous years.

Our next table summarises 1923 results, and compares with those of 1922 of a number of Chilean nitrate producing concerns whose reports have been issued:—

	Net Profits.		Ordinary Dividend.		To Reserves, &c.		Carried Forward.

+ 15 months.

The increase in the demand for nitrate is happily reflected in these figures. The Angela resumed manufacture in March, 1923, and work has proceeded steadily since that date; in the accounts profit has been taken on 123,698 metric quintals. The Anglo-Chilean produced 532,000 metric quintals; gross revenue totalled £305,494, out of which £35,650 went in "stoppage expenses." The Lautaro returns 675,319 quintals as its output; gross revenue is shown as £230,292, and "stoppage expenses" took only £7,564, while £11,128 went in compensation to nitrate buyers. The Rosario takes profit on 325,161 quintals, as compared with 294,458 in 1922; revenue totalled £102,290, and "stoppage expenses" are down as £7,903.

In the following table we show the principal assets and liabilities of these nine nitrate producing companies as shown by the balance-sheets at December 31st last:—

	Principal Liabilities.				Principal Assets.

Anglo-Chilean accounts should appeal to shareholders. Reserves are maintained, while liquid assets are higher; stocks are down from £170,895 to £111,598. The Rosario shows liquid assets

slightly lower, but stocks at £161,996 are higher.

The whole table is good evidence of the undeniable fact that the industry is in an excellent position, which is remarkable when the many adverse factors are taken into consideration. The most important changes in these figures are those shown for the Lautaro. The authorised share capital of the undertaking is now £4,000,000, of which £2,700,000 has been issued and is fully paid. Recently an offer for sale at par of £1,500,000 6½ per cent. first mortgage debenture stock was announced, secured as a first charge upon the combined properties of the Lautaro and Lastenia Companies. The company owns £1,700,000 out of a total of £3,000,000 of the share capital of the Lastenia Nitrate Company, and has made arrangements for acquiring the balance and for the transfer of the entire assets of the Lastenia Company. Nitrate establishments and grounds are valued at £3,990,270, and total assets are £5,724,024. Stocks are down from £466,357 to £249,956.

Our final table shows prices, dividends, and yields of the companies listed above:—

Company.	Share.	June 30, 1922.			June 30, 1923.			June 30, 1924.		
		Price.	Div.	Yield.	Price.	Div.	Yield.	Price.	Div.	Yield.

* Free of income-tax.

The share market has responded reasonably well to the better position of the commodity. We notice a happy suggestion in "Nitrate Facts and Figures, 1924." It is that nitrate companies should publish monthly output figures. It may be that the information would not tell the whole story of commercial progress, but it would certainly be a step in the right direction. It would bring into the industry fresh investors, who could follow the fortunes of the companies closer and, as Mr. Brodie James puts it, "a little publicity would be more in accordance with modern methods, and appreciated at its proper worth."

With reference to future demand for nitrate, it is pointed out, by a responsible firm, that a recently compiled estimate of 2,350,000 tons may not be unduly optimistic. The political outlook in Europe to-day is more hopeful than for some time past, and, with a greater measure of exchange stability and a consequent broadening of trade, the industry should have another prosperous 12 months in front of it.

STOCK EXCHANGE COMMISSION CHARGES.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THE matter of Stock Exchange charges for brokerage invariably comes to the fore at any time when business happens to be quiet in the House, and when, also, the tendency is for prices to droop. If markets are good, and people are making money, clients do not cavil at commissions, but in dull days brokerage charges are closely scanned, inasmuch as they add to the loss of the speculator, and increase, of course, the cost of stock to the investor who is a buyer. In the Stock Exchange itself, the usual quiet time experienced in the summer provokes discussion as to whether it is desirable to have a minimum scale at all; whether it would not be better to do away with such restriction and to let everyone charge what he pleases. It may be taken for granted that the minimum scale of commission is so firmly established as an integral part of Stock Exchange machinery that its

abolition is not at all likely. One point which clients are apt, it may be, to overlook, is the fact that the official scale of commissions is a minimum, though the minimum is liable to become the maximum. The scale is fairly well known, but it will be useful to repeat it at length, according to the Stock Exchange Appendix, which deals especially with the rules relating to commissions. The scale is as follows:—

MINIMUM SCALE OF COMMISSIONS.	
Securities of or Guaranteed by the British or Indian Government having a currency of not more than Twelve years, in bargains of not less than £20,000 (Stock)	1/2 per cent. on Stock.

moderate estimate, to 50 per cent. of his gross receipts, and he returns 50 per cent. commission, the business is done for the client at next to nothing, so far as the broker's own pocket is concerned. There are plenty of brokers in the Stock Exchange who would be not only willing, but glad, to see concessions made in the way of commission, on the ground that these would stimulate public dealings all round, and it goes without saying that the majority of jobbers would heartily favour such a reduction as would quicken activity in Stock Exchange markets. The austere purist pleads that encouragement of speculative business is undesirable, and that, if anything, speculation should be made more difficult and more expensive, a point of view which fails to take into account the obvious factor that speculation in every branch of life furnishes a powerful incentive to progress as well as profit, though the latter may not always go to the speculator himself. Without any wish to defend mere gambling, it may be suggested that, shorn of speculation, the markets of the Stock Exchange and other exchanges would lose a great measure of what flexibility and liquid character they possess. Freedom of market is one of the assets that every investor likes to find in the stocks and shares into which he directs his capital.

Notes of the Week.

The Bank Rate Decision.—Another Thursday has passed without a rise in Bank rate—a decision which on balance was anticipated in the City, and one which in all the circumstances seems a wise one. It is true that there is still some anxiety about the exchange position, for it is thought that there has been more delay than usual in covering seasonal dollar requirements needed in the early autumn, and that in the present state of the market these needs will have to be very carefully handled if they are not to cause a serious depression of the exchange. It is, however, very doubtful if a small rise of Bank rate—and ½ per cent. has recently been much discussed—would influence the exchange for more than a few days, and it would give the Bank a less favourable starting point for action in the autumn if it were decided to make a serious effort to lift the exchange to par. The ½ per cent. rise was contemplated rather as a warning signal against too free foreign advances; but for the moment the desired result has been attained by the market itself raising the price of three months' bills to 3½. Whether this figure can be maintained with a 4 per cent. Bank rate remains to be seen, but the market knows the views held in the Bank of England on the need for caution, and it may, therefore, be assumed that what may be called an "admonitory" rise is now unlikely. The autumn situation presents a more difficult problem. The Federation of British Industries has written to the Governor of the Bank expressing concern at the possibility of a rise, and informing him that a committee has been appointed to examine and report upon the effect upon industry. The Government, on the other hand, refuse to be drawn. The Chancellor of the Exchequer would give no information in the House of Commons in answer to questions, while in his speech at the Mansion House on Thursday he declined to discuss the questions of the gold standard or of the Bank rate, contenting himself with the sound generalisation that the maintenance of British credit was of fundamental importance, not merely to the City and financiers, but to every wage earner in the country. The Government, in short, seems disposed to leave the matter severely alone, and the responsibility is thus thrown back upon the Bank Court, which for the moment will probably wait upon events.

do the same. After this there were a few more ballots, in which Mr J. W. Davis went to the top and increased his lead over Senator Underwood. Finally, Mr Davis was acclaimed the candidate of the Democratic party. The decision is of special interest to this country, which retains happy memories of the able and tactful manner in which Mr Davis filled the post of American Ambassador in London. During his tenure of this office he performed yeoman service in cementing Anglo-American relations, and established himself in the public esteem as a friend of Britain. It also appears that the Democratic party have chosen one who without doubt is the strongest candidate available. Inevitably Mr McDoo would have found himself hampered in the campaign by the mud-slinging which he has had to endure in connection with the oil scandals. The Democrats, therefore, face up to the Coolidge candidature with a first-rate leader. But although their chances are enhanced by their choice of candidate, these are not at the moment rated very high. Indeed, with a progressive candidate in the field in the person of Senator La Follette, there seems to be a considerable likelihood of an indecisive election; in which case the choice of President would devolve upon Congress. But November is a long way off, and much may happen before then to upset current forecasts.

The Anglo-Russian Negotiations.—This question was debated (without division) for six hours in the House of Commons last Monday without much fresh light being thrown upon the state which the negotiations have reached. Mr Ponsonby pleaded that the debate "had come at a very awkward moment"; insisted that the proceedings had been going on not for five months but for three, which he considered to be "a very short time"; mentioned that the commercial treaty was drawing to a conclusion, and that a special committee of the conference on territorial waters had been set up; and promised that the text of all these instruments, if and when they were ready, would be laid before the House, and that an opportunity would be given for full discussion. Beyond this, he threw himself on the mercy of the House for the niggardliness of his information, without giving any reassuring indication that other results had been achieved. At the same time, Sir Arthur Steel-Maitland's opening attack, while it may have been damaging to the Government, was almost entirely negative, and he hardly proved his point that the negotiations, wearisome though they have been, have altered the situation for the worse up to the present moment. Mutual disillusionment may be a first step towards mutual comprehension; and, supposing that the negotiations lose themselves in the sand, the Soviet Government will at least have learnt that they cannot get something for nothing, while the Labour Party will have realised that it was not mere difference of party outlook which prevented their predecessors in office from coming to an agreement with Moscow. The sluggishness of the negotiations suggests that the motive for the resumption of commercial relations must be somewhat weak on both sides. As far as the British position was concerned, this was borne out by Mr. E. C. Grenfell, who made the most interesting speech of the evening. He reminded the House how greatly the total sum annually available in Great Britain for foreign investment had been reduced since the war. With our demand for foreign fields of investment so reduced, would not our investments in Russia have diminished, even if there had been no Revolution and no repudiation of debts? Meanwhile, painful experience and present stringency have made our investors more discriminating; and Russia, on her side, having thrown off her top-dressing of Western organisation, and having reverted, at the cost of grievous loss and suffering, to a more primitive economic condition, has less need than before to borrow Western manufactures and Western skill in order to lead her life at its present reduced level, and is therefore less willing than post-war Austria or Hungary to give the guarantees, or, in more disagreeable language, to accept the controls, which any possible Western creditor would demand, in the circumstances, as the condition for a reconstruction loan. If the three months' negotiations have proved anything, it is that those guarantees which alone will produce fresh

British credits are not forthcoming from the Russian side. This is made abundantly clear by the letter which the Council of Foreign Bondholders, through their secretary, have addressed to the Press this week. And since the outstanding debts—to whatever exact figure they may be scaled down—cannot be settled at all without a reconstruction loan to start Russia's economic life again on something like a Western basis, we may assume—for all that Mr. Ponsonby had to tell us last Monday that, substantially, the negotiations are doomed to be abortive. If so, it will not do the Government much good to protract them in order to secure agreement on side-issues which do not touch the central question.

Overseas Trade in June.—As we go to press the Board of Trade returns for June reach us. The principal comparisons of value figures with June, 1923, and May, 1924, are as follows:—

	June, 1924. Million £.	June, 1923. Million £.	May, 1924 Million £.
Imports	88.5	89.3	122.0
British exports	62.0	62.9	70.3
Re-exports	10.0	11.0	13.1
Total exports	72.0	73.9	83.4
Excess of imports over total exports	16.5	15.4	38.6

A comparison of the value figures for the first half of this year and last works out as follows:—

	Jan.-June, 1923. Million £.	Jan.-June, 1924 Million £.
Imports	538.8	598.4
British exports	382.7	388.4
Re-exports	63.9	74.1
Total exports	446.6	462.5
Excess of imports over exports	92.2	135.9

Coal exports are £12½ millions down on the half-year. Of the import increase this year more than half is accounted for by raw cotton and wool. The increase in the import excess is substantial. It must, however, be remembered that the half-year's comparison is vitiated by the Irish factor, the separation of the Irish Free State figures having been begun in April, 1923.

Japan's Financial Position.—In introducing supplementary estimates in the Japanese House of Commons on July 2nd, Mr Hamaguchi, the Finance Minister, gave a review of the country's financial position. The supplementary estimates amount to nearly 163 million yen, and are required almost entirely for supplementary post-earthquake reconstruction work. Against this, however, there will be a substantial increase over the estimated revenue from taxation. Turning to his borrowing policy, the Minister gave the amount to be raised in 1924-25 as 294.9 million yen. Considering that the floating of any further loans in the open market is not expedient in the present economic condition of Japan, the Government has planned to meet the expenditure by appropriating 105 million yen from the recent loans issued in London and New York, 154 millions from the deposits section of the Finance Department of Japan named "Yokinbu," and by obtaining 35 millions by means of popular savings bonds offered through the Post Office. The Government has decided not to float any further loans in the open market in the current year, and even in subsequent years it has "decided to adopt a fiscal policy of refraining from the issue of loans, except in cases of emergency and of decreasing the amount in the open market as much as possible." The Minister of Finance proceeded to say that public and private enterprises for repair and restoration demanded much money, and also since the earthquake the foreign exchange has fallen heavily against Japan, owing to the excess of imports, which amount to say, 622,000,000 yen for the whole of last year and 672,600,000 yen for the first five months of this year. He declared that in these circumstances of adverse trade balance and exchange depreciation, retrenchment and habits of thrift are imperative, and this policy is the only key to the solution of the problems of prices, industry, and exchange.

A Quarter's Shipbuilding.—The shipbuilding returns of *Lloyd's Register* for the quarter ended June 30th show increases as compared with the previous quarter, and also a year ago. The total tonnage under construction at the end of June was 1,516,746 tons, which is 43,000 tons more than the end of March total, and 179,000 tons more than at the end of June, 1923. The present total, however, includes 52,000 tons on which work is suspended. Deducting this tonnage in order to enable a comparison to be made with figures for normal times, it will be seen that the tonnage actually under construction at the end of June amounts to about 1,465,000 tons, which figure is the highest reached since the end of March, 1922; although, of course, far below the average tonnage building during the twelve months immediately preceding the war, which was 1,890,000 tons. Another favourable point about the returns is the substantial increase which the June quarter shows in the matter of new tonnage commenced, which was 375,210 tons, as compared with 227,786 tons during the March quarter. As compared with the tonnage of 1,465,000 tons under construction in British yards, the tonnage building in the rest of the world is 960,000 tons. The figures for the leading countries abroad are:—Germany and Danzig, 340,749 tons; France, 144,240 tons; Italy, 127,772 tons; United States, 103,665 tons; and Holland, 96,453 tons. The most remarkable feature of the figures is the development which they show in the use of the internal combustion engine. The tonnage of vessels now building in the world which are to be fitted with internal combustion engines amounts to 810,655 tons, while the tonnage of steam vessels under construction is 1,785,480 tons. The motor tonnage thus equals nearly 45½ per cent. of the steam tonnage, showing the remarkable development which is taking place in the adoption of this system of propulsion. Of the total tonnage building in Germany nearly 60 per cent. consists of motorships. The total figures include 69 motorships, each of between 5,000 and 10,000 tons; 5 of between 10,000 and 15,000 tons; and 7 of between 15,000 and 22,000 tons. The predominance of British yards in the construction of the largest type of vessels is very marked. There are at the present time under construction in the world 35 vessels of between 10,000 and 20,000 tons each, and 8 of 20,000 tons and upwards. Twenty-one out of the 35, and all the larger vessels, are building in Great Britain and Ireland.

Shipping Freight Index.—A further reaction was recorded in June by our Index of Tramp Freights, the figure for the month being 126.37, or 4.9 per cent. below that for May. The movements of each of the geographical groups are shown in the following table:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100

January, 1924.....	130.69	137.49	128.33	124.88	139.45	156.68	136.25
February ".....	138.11	146.26	145.36	129.28	142.17	162.91	144.01
March ".....	143.72	147.62	145.92	132.08	135.20	147.77	142.05
April ".....	141.67	146.28	142.35	127.36	128.79	131.75	136.37
May ".....	134.96	148.71	139.02	127.67	124.45	122.85	132.94
June ".....	128.56	133.80	129.22	129.47	118.33	118.84	126.37

The month's changes in the index of each group and subgroup are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Ino. or Dec. Points.		Index No.	Ino. or Dec. Points.
Home trade.....	113.39	+ 9.55	S. America—outwards ..	99.67	+ 2.51
Bay—outwards	129.31	+ 3.69	" homewards	158.76	+ 2.12
homewards	147.68	+ 2.42	India—outwards	140.51	+ 4.21
Mediterranean—outwards ..	140.98	+ 9.25	" homewards	128.40	+ 0.82
homewards	117.95	+ 3.93	Far East, &c.	118.33	+ 0.12
North America	133.80	+ 1.49	Australia	118.84	+ 0.01

The feature of the month was the marked reduction in the volume of fixtures to carry grain from South America, Similar dullness characterised business from Canada and the United States. Except in the case of Bombay, which chartered a fair number of vessels for July and August loading, there was no compensating development of demand from the East or Australia, while European coal and ore business remained quiet, with a tendency for rates to fall still lower through more than ample tonnage offering. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	(1913 = 100.)	1921.	1922.	1923.	1924.
January	194.59	..	131.60	..	117.11
February	164.54	..	135.76	..	123.78
March	162.17	..	135.53	..	122.09
April	147.48	..	129.46	..	117.22
May	158.42	..	125.12	..	114.55
June	165.73	..	117.45	..	106.82
July	169.87	..	114.52	..	103.39
August	170.60	..	113.16	..	109.16
September	154.47	..	110.37	..	103.04
October	141.85	..	114.42	..	107.86
November	136.47	..	119.43	..	111.21

Unless stimulated by a renewal of grain purchases on European account, the market for tramp tonnage now seems likely to be confined to narrow limits during the next month or two. Any further reduction on the current rates would have to be met by laying up less efficient vessels.

Half-Year's Coal Output.—A calculation based on the figures of weekly coal production, published by the *Board of Trade Journal*, shows that the total output of coal from the mines of Great Britain in the first half of this year was 139,061,600 tons. How this compares with recent half-years is shown below:—

	Tons.		Tons.
July-December, 1921	109,879,000	January-June, 1923..	140,791,000
January-June, 1922..	119,754,000	July-December, 1923	137,708,600
July-December, 1922	132,096,000	January-June, 1924..	139,061,600

The weekly average for the past half-year is 5,348,500 tons, as compared with a weekly average of 5,530,000 tons in 1913. In only five out of the 26 weeks of the past half-year did the output fall below five million tons.

Misrepresentation in Insurance.—A case of an insurance claim made under a marine policy decided by Mr Justice Bailhache at the end of last week has attracted a good deal of notice. The action failed owing to the broker, who was unaware of the true circumstances, having made to the insurance company a representation which the Judge said was unnecessary and untrue. It was, however, on a material point. The insurance in question in the case, taken out by Messrs Hamilton and Co. through a broker with the Eagle, &c., Insurance Company, covered apples from America, and contained a prolongation of voyage clause that, if the voyage took more than a certain time and in consequence the apples deteriorated, the insurers would make good the loss. The claim was under that clause. The broker was unaware that the clause had been deleted from the existing insurance, and represented incorrectly that it included the clause. He omitted to say that the old insurers had refused to continue the insurance unless the prolongation clause was struck out. The judge pointed out that a person applying for an insurance was not bound to disclose that someone else had refused to grant it. (This is the rule in marine insurance, but the decisions do not establish it in relation to other kinds of insurance proposals.) On the ground, however, of misrepresentation of a material fact judgment was given for the insurance company. If the broker had said there had been trouble about the prolongation clause and that it had been deleted, the information would, the judge considered, have influenced the company in deciding whether they would accept the risk, and, if so, on what terms. The omission made the broker's statement untrue in a very material respect.

Home Output of Iron Ore and Ironstone in 1923.—The publication by the Mines Department of the figures of output and employment at metalliferous mines, quarries, &c., for the fourth quarter of 1923 enables us to arrive at the total output of the country for that year for ores of iron, lead, tin, and zinc. The figures for iron ore and ironstone by kinds and districts were as follows:—

PRODUCTION OF IRON ORE AND IRONSTONE BY KINDS AND DISTRICTS in 1923.

Kind of Ore Obtained.	Principal Districts of Production.	1922.		1923.		Total Number employed at end of December, 1923.
		Total Output.	Total Output.	Average Percentage of Iron in Clean Raw Material.	Average Net Selling Value per Ton at the Mine or Quarry.	
West Coast...	Cumberland	Tons. 629,935	Tons. 982,661	52	22 11	3,813
Hematite (non-phosphoric)	Lancashire...	213,866	207,375	50	21 10	583
Jurassic ironstones—	Total	839,801	1,190,036	52	22 9	4,396
(a) Lower lias ironstone (Frodingham)	N. Lincs.	1,363,575	2,434,058	22	2 2	717
(b) Middle lias ironstone (York)	Yorkshire	1,169,754	2,079,964	28	7 7	4,123
(c) Middle lias ironstone (Leicester, Northampton, and Oxford)	S. Lincs.	906,432	1,549,335	26	2 9	997
(d) Inferior oolite ironstone (Northampton, and Rutland)	S. Lincs.	2,210,065	2,981,352	33	3 2	2,195
Coal measure ironstones (Blackband & clay ironstone.)	Total	5,649,826	9,044,709	28	3 10	8,032
Other occurrences of iron ore, (Hematite brown ore, &c.)	Devonshire, Forest of Dean, Somerset, Wiltshire, Glamorgan, Isle of Man ..	151,951	417,520	30	12 5	2,018
	S. Staffs.	16,595	14,076	30	16 4	66
	Not. and ...	86,530	99,755	31	12 1	397
	Other coalfields	18,076	17,443	33	15 2	131
	Total	273,152	548,794	30	12 6	2,612
	Total, 1923	1,089,580	31	6 5	15,413	
	1922	6,867,512	31	7 0	12,079	

* Average employed throughout the year.

The total home output of iron ore thus increased by approximately 60 per cent.; the output of hematite ore from Cumberland and Lancashire increasing by about 42 per cent., and that of the lower grade phosphoric ore by 62 per cent. The output of tin ore (dressed) amounted to 1,760 tons in 1923, compared with 650 tons in 1922; of lead ore (dressed) 12,499 tons, compared with 11,079 tons, and of zinc ore (dressed) 2,124 tons, compared with 1,620 tons.

More Bank Dividends.—The following table provides a comparison of the interim dividends just declared by the leading joint stock banks, with the corresponding declarations of previous years:—

	Per Cent. per Annum.									
	1917	1918	1919	1920	1921	1922	1923	1924

Union Discount	13	13	14	14	14	15	15	15		

* Final dividend. † On old capital.
(t) Also a special cash bonus of 10s per share, free of tax.

During the half-year the paid-up capital of the National Provincial Bank has been increased to £9,479,416, and the reserve fund has been brought up to an equal amount, namely £9,479,416. It will be noticed that in no case

do the declarations vary from those made a year ago. We shall deal with the bank statements at June 30th in a future issue.

Mexican Eagle Oil Company, Limited.—Whether the results of the Mexican Eagle Oil Company for the year to December 31, 1923, may be regarded as worse than ever, or not so bad as they might have been, is largely a matter of temperament. The report and accounts may be read to support either view. The production of oil, in the first place, showed a decline of 25 per cent. as against 1922, and of 75 per cent. as against the year ending June, 1921. On the other hand, the purchases of oil were more than double, so that the total shipments of the company (including products sold in Mexico) were about the same—21,609,000 barrels, as against 22,619,149 barrels in 1922. The shipments in 1922 included crude oil sales of 1,500,000 barrels, whereas no crude oil sales were made in 1923. The following table of oil produced and purchased is given in the report:—

	Production.	Oil Purchased.
	Bls.	Bls.
Year to June 30, 1921	38,298,729	nil
6 months to Dec. 31, 1921	10,449,920	4,303,942
Year to Dec. 31, 1922	12,390,429	5,418,910
" " " " 1923	9,251,501	11,100,000

Net profits, at \$11,993,424, in the second place, show a decline of \$13,290,791, or 52 per cent., from the 1922 figures. On the other hand, this decline is entirely accounted for by exchange differences due to the rise in the sterling value of the Mexican peso, and by increased expenditure on exploration. The results for the year 1922 included an exchange profit of nearly 3,400,000 pesos, whereas those for 1923 include an exchange loss of over 4,000,000 pesos. The exploration expenditure, at \$7,604,970, is higher by \$6,079,477. These items, totalling \$13,479,477, more than cover the decline in net profits. Considering that 1923, with falling oil prices, was an exceptionally bad year for trading, we incline to the view that the company did much better than might have been expected. Great economies must have been made in working costs. The financial results for the past three and a half years may be compared as follows:—

	Year Ended June 30, 1921.	Half-Year Ended Dec. 31, 1921.	Year Ended Dec. 31, 1922.	Year Ended Dec. 31, 1923.
Gross profit (including interest)	Mex. Gold \$ 85,320,429.00	Mex. Gold \$ 26,818,322.58	Mex. Gold \$ 26,815,709.30	Mex. Gold \$ 19,598,394.86
Exploration outlays	11,279,508.68	3,134,976.00	1,525,493.45	7,604,970.40
Forward from previous year	74,040,920.32	23,683,346.38	25,290,215.85	11,993,424.46
Transfer to depreciation and other reserve accounts	3,814,189.52	1,373,181.03	1,682,130.44	4,632,559.66
Provident Fund	77,855,109.84	25,056,527.41	26,972,346.29	16,625,904.12
Distributed in dividends	38,336,161.81	3,475,255.47	6,141,464.71	7,390,804.70
Expenses of issue of 1st preference shares	39,518,948.03	21,581,271.94	20,830,881.58	9,235,079.42
Carried forward	1,500,000.00	500,000.00	500,000.00	...
	38,018,948.03	21,081,271.94	20,330,881.58	9,235,079.42
	36,645,767.00	19,399,141.50	12,786,726.15	4,093,687.13
	1,373,181.03	1,682,130.44	7,544,155.43	5,141,392.29
	...	...	2,911,595.77	...
	1,373,181.03	1,682,130.44	4,632,559.66	5,141,392.29

The prospects of the company remain extremely uncertain. No new oilfield has been discovered, but the directors are determined to carry through their extensive programme of exploratory drilling. Work in the field has been interrupted by revolutionary troubles, and the completion of the programme may now require a longer time than was originally anticipated. A strong feature is that ample funds are available. British Treasury bonds and cash at bankers and on hand are shown as \$26,336,403. The affairs of the company must, however, be regarded as distinctly more speculative than ever. If it is possible that a huge oilfield may be discovered one day, it is also possible that on the next the properties may be seized by local Bolsheviks. Since the employees seized the company's plant at Tampico this year and set up for a time a Workers' Committee, the political menace has become as serious for the company as the menace of salt water in the wells. The directors do not recommend the payment of any dividends other than the full 7 per cent. distribution on the first preference shares. This enables a larger provision to be made for depreciation and the substantial sum of \$5,141,392 to be carried forward.

Tin Dredging Results.—Our mining correspondent writes:—The average price of the metal in 1923 having exceeded that of the previous year, it follows that—other things being equal—an advance is shown in last year's earnings on the part of the British-owned companies operating in the Malay States. The shareholders, however, have by no means reaped the full benefit of the difference, the directors in several cases utilising a portion of the increased earnings in strengthening the financial position. Thus with a surplus of £49,700 in place of £41,800, the board of the Tronoh devoted £20,000 towards writing down the property account. As a result the mine, with the three dredges and accessory plant, figures at no more than £70,600. After payment of dividends totalling 4s per share, or double the 1922 total, the slightly reduced balance of £42,400 goes forward. An important point in the position of this company consists in its holdings. These include 71,800 shares in the Sungei Besi, 14,300 in the Kepong, and 16,500 preference in the Pengkelen. Shares and stocks standing in the balance-sheet at £130,400 now possess a market value of £304,000; this, with the cash, represents fully 35s per share, leaving only 10s to cover the remainder of the company's assets. Amongst the important statements made at the meeting held last Wednesday was that the life of the mine might be estimated at 12 years. Adjoining property is, however, being tested, and if found suitable will be worked. A new interest is a large block of shares in the Sungei Way Dredging, taken on the strength of a very favourable report made on the property by the Tronoh company's engineer. Last year the profit of the Sungei Besi company amounted to £30,600, or nearly double the 1922 total; dividends of 4s per share as against 2s left the substantially increased balance of £15,000 to be carried forward. This company also has an interest in the Kepong, to which it has sold property. Arrangements are on foot for the installation of a steam shovel for the removal of the overburden, and for hydro-electric power, the necessary facilities having been obtained from the authorities. The Idris Hydraulic earned £11,000 in place of only £2,100, and paid 1s 6d per share as against nothing. At the meeting it was announced that the life of the existing property could be computed at 15 years, but additional lands may be acquired. The Siamese Tin Syndicate, whose annual report was issued a few weeks ago, did better than before, some decrease in the richness of the ground being more than offset by the higher price of tin and a reduction in costs. Although the profit of £50,000 nearly doubled the result for 1922, the directors were content to raise the dividend from 15 per cent. to 25 per cent. The equipment of two additional areas is to be proceeded with; dredging should start in 1925. Altogether, the shareholders in these undertakings are faring pretty well just now, and the outlook is hopeful.

The Strength of Pig Lead.—There has been another display of firmness in the lead market, and the position has now become very uncomfortable for the short interest. Apparently some of the lead refiners sold against ore purchases, and they now find themselves compelled to buy in on the market. It will be remembered that at the close of last month, prompt lead jumped very suddenly to £33 7s 6d, representing a gain of £3 on the month. There was then a backwardation of 60s per ton, and supplies of nearby metal were very difficult to find. After the turn of the month there was a little easing of the position generally, but this week the market began to tighten up again, and on Wednesday buyers had to pay £32 17s 6d for the prompt position, with buying from a good quarter noted. The bears have been reckoning on Mexican lead coming to this side pretty freely, but it is perfectly obvious that there will be some difficulty about closing out the July and August contracts. The building trade dispute is against the commodity, but, on the other hand, the very small supplies in public warehouse, and the prospect of a change for the better in the European political situation must not be overlooked. Lead early in March rose to close on £40 per ton, and the market this week has been very firm, with offers remarkably scarce. It is well known that lead consumers hold little in the shape

of supplies, and with arrivals moderate the outlook certainly favours firm markets, despite the dull tone in other non-ferrous metals.

Universal Cotton Standards.—Serious differences have arisen, writes our Manchester correspondent, between the Department of Agriculture of the United States Government and the Liverpool Cotton Association on the question of universal cotton standards. A year ago conferences took place in Washington between representatives of the American Government and of the Cotton Exchanges of the world, when an agreement was reached, it being provided that the universal standards should come into operation on August 1, 1924. A month or two ago there was some difference of opinion as to the samples being uniform, and it was decided to have a further conference in Washington. The position of affairs has just been considered at a meeting of the members of the Liverpool Cotton Association, when it was decided that, in view of actions which have been taken by the Department of Agriculture at Washington, the directors of the association consider a breach of the agreement with regard to universal standards has been made. It was therefore resolved that the Liverpool Cotton Association should give notice to terminate the agreement, which notice will take effect as from July 31, 1925. It was further resolved that, in the event of the Department of Agriculture at Washington signing not later than August 31, 1924, a satisfactory supplementary agreement, the whole matter be placed before a general meeting for reconsideration. According to the Liverpool Cotton Association, the Department of Agriculture has adopted the attitude that it was entitled to cancel and replace standards which had been agreed upon as the original standards by the conference held in Washington last year. It must be said there is some difference of opinion on this point, and some of the delegates from other exchanges do not agree that the agreement has been broken. Unless the difficulties which now present themselves are overcome, there is bound to be considerable confusion in the near future. It is understood that at the end of next week a conference of representatives of the European Cotton Exchanges will be held in London, and it is probable that on that occasion some progress may be made towards a settlement of the points in dispute.

Transvaal Output in June.—The output of gold from the mines of the Transvaal during June amounted to 773,953 ounces fine (against 809,003 ounces in May). The output in June last year was 755,309 ounces. The following table shows the output for every month since 1918:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
January..	Fine Ozs. 714,182	Fine Ozs. 676,059	Fine Ozs. 670,503	Fine Ozs. 681,593	Fine Ozs. 764,469	Fine Ozs. 706,768	Fine Ozs. 706,768

Total (12 months) ..	8,420,560	8,330,091	8,153,625	8,114,516	7,020,110	9,133,060	9,133,060

In the table below are given the numbers of natives employed at the end of last month by members of the Witwatersrand Native Labour Association and Contractors:—

	Nov., 1923.	Dec., 1923.	Jan., 1924.	Feb., 1924.	Mar., 1924.	Apr., 1924.	May, 1924.	June, 1924.
Gold mines	177,674	177,779	181,659	182,055	176,483	173,022	172,586	174,198
Coal mines	16,246	16,142	16,109	15,958	15,763	15,800	15,863	16,042
Diamond	2,997	3,239	3,482	3,419	3,170	2,762	2,863	2,999
	196,917	197,160	201,250	201,432	195,416	191,584	191,312	193,239

It will be noted that the number of natives employed at the gold, coal and diamond mines has increased also during the month.

Oversea Correspondence.

UNITED STATES.—BONDS EXCEPTIONALLY STRONG—AUTOMOBILE OUTPUT—WAGES—SLACKING TRADE AND EASY MONEY.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 1.

INTERESTING comparisons of automobile production in this country are afforded by Department of Commerce returns just published. The figures show that 279,439 cars and 33,374 trucks were turned out by all manufacturers during May, as against 337,045 cars and 36,154 trucks in April, and 350,460 cars, and 43,730 trucks in May, 1923. The statistics reveal a decrease of about 17 per cent. in cars, and more than 7 per cent. in trucks from April, and of 20 per cent. in cars and 23 per cent. in trucks from May a year ago. The combined automotive output in May was 16 per cent. less than that of April, and 20 per cent. below the peak reached in May of last year. Owing to the heavy production earlier this year, the total number of automobiles and trucks manufactured in the first five months of 1924 was 1,752,277, representing an increase of 6 per cent. over the like period of 1923, and double the output for the first five months of 1922.

In view of the further slackening in manufacturing activity, some interesting facts are revealed in the National Industrial Conference Board's latest monthly compilation of weekly earnings of workers in twenty-three representative industries in the United States. As for some time past, news and magazine printers lead the list in amount of earnings, with an average rate of \$36.14. This compares with \$17.44 in 1914. The iron and steel industry ranks second, with average earnings for all employees of \$33.57 a week. While the latter sum shows a drop of \$1.26 from March, the decrease is in line with that which has characterised all industries during the past three months. A decade ago the average earned by iron and steel workers was \$14.96 a week. Third in the order comes the automobile factory workman, who received for April an average of \$31.12 a week, or \$16.03 more than he was paid in 1914. Book and job printers had an average weekly wage of \$31.01 last April, while foundry and machine shop employees received \$28.88, the latter comparing with \$13.61 ten years ago. Agricultural implement workers, chemical factory employees, those in electrical plants, and rubber workmen, all had weekly wages near the \$30 mark.

Pronounced activity and strength continue in the bond market here. For some time past weekly transactions in bonds on the New York Stock Exchange have totalled about \$100,000,000, to say nothing of business done over the counter, and investment demand shows no sign of abatement. On the contrary, with many millions of July interest and dividend money added to the plethora of funds already seeking employment, demand for investment securities promises to become even more extensive than heretofore. During the past week trading continued heavy, at steadily rising prices in all classes of bonds, the average price of forty representative domestic corporation issues establishing a new high record for this year. The foreign Government list is also conspicuously strong; the volume

of transactions in that department last week was the largest of the year, and many issues recorded substantial gains. New securities are being offered on a large scale, especially those of railroads, in the form, mostly, of short-term issues. Other corporations, including public utility companies, are offering large amounts in the aggregate of new stocks and bonds in order to take advantage of the exceptionally favourable conditions for such financing. Foreign Governments, and to some extent foreign corporations, are seeking loans here. One of the latest offerings is the \$7,500,000 of the 1924 State loan of the kingdom of Hungary, which is part of the loan offered simultaneously in Europe. The United States portion of the loan is in the form of 7½ per cent. 20-year sinking fund gold bonds, priced to the public at 87½, to yield about 8.85 per cent. Negotiations are now under way between the Industrial Mortgage Bank of Finland and a group of American banking houses for a loan of some \$10,000,000, secured by first mortgages on strong properties, and, in addition, guaranteed as to principal and interest by the Finnish Government.

The reason for the almost unprecedented demand for investment bonds and stocks is found, of course, in the continued easiness of money rates, and the increasing accumulation of idle funds here and at other centres throughout the country. The Kansas City Federal Reserve Bank has reduced its rediscount rate from 4½ to 4 per cent., leaving only two federal reserve banks that are still maintaining a 4½ per cent. rate, namely, those at Minneapolis and Dallas.

FRANCE.—THE LONDON CONFERENCE AND FRENCH FINANCE—M. HERRIOT'S POSITION—COST OF LIVING—A NEW COMMITTEE.

(FROM OUR CORRESPONDENT.)

PARIS, July 9.

It may be said without hesitation that the impending inter-Allied conference in London is by far the most important, from the French point of view, of the whole of the gatherings of this kind that have yet taken place. For all practical purposes France is now at the end of her tether, as will have been gathered from the statements made in the Senate (as reproduced in this column last week) during the discussion on the financial situation. She has raised, by various expedients, a sum which is variously stated to be between 80 and 100 milliards for the purpose of carrying out the reconstruction of the devastated regions, but it is now evident that she is reaching, if she has not already reached, the limits of her effort to compensate for the failure of Germany to carry out her treaty obligations. That French statesmen blame Great Britain for the plight in which she now finds herself may be taken for granted. The French view was recently put in a nutshell by M. Louis Dubois, the predecessor of M. Barthou as chairman of the Reparations Commission, when he stated: "The truth is that each time the Reparations Commission has been on the point of forcing Germany to pay, an inter-Allied conference has intervened, and when concessions have been made they have always been made against us, on the initiative of certain Allied Governments. That is why we are in our present situation."

As matters now stand, France's own urgent needs for a speedy settlement furnish the best augury for the success of the pending conference. At the same time, M. Herriot's situation is by no means stable. Quite apart from the heterogeneous character of his majority in the Chamber, which ever since the elections has caused impartial observers to feel that the chance of his Cabinet having more than a brief tenure of office is a poor one, there can be no doubt that French public opinion has been very unfavourably impressed by the whole atmosphere of the Chequers interviews. That somebody was guilty of blundering in connection with the manner in which the invitations to the conference were handled is regarded here as established. M. Herriot made use of

this factor to retrieve some, at least, of the ground he lost owing to the contradictory statements that were attributed to him in the report of an interview which he is said to have given to the representatives of one of the Brussels newspapers during the visit he paid there on his way back from London. There are indications, however, that a feeling persists in certain circles here that the French Premier showed too great a willingness to yield to British pressure, in order to secure some kind of a settlement. The effect of this is that M. Herriot will not be able to claim, on entering the conference, that he has behind him the same whole-hearted support of his country that was enjoyed by his predecessor in similar circumstances. There are also indications, further, that M. Herriot may find himself, on his return to Paris, in a very similar situation—and for similar reasons—to that filled by M. Briand on the morrow of the abortive Cannes Conference of January, 1922. M. Briand fell, on that occasion, because he was regarded as having been too ready to accept the policy urged by Mr Lloyd George. Curiously enough, it is to M. Briand himself that a substantial section of French opinion, which distrusts M. Herriot's inexperience, is now looking to succeed the latter, if he fails to secure due satisfaction for French reparation claims. M. Briand, it is argued, is extremely unlikely to fall a victim a second time to British pressure, and if, in the result, he proved to have achieved only as much as M. Herriot might have done, there would be less inclination to express dissatisfaction.

The new Government has lost no time in making known the steps it proposes to take for the purpose of reducing the present high cost of living, but so far it cannot be said that the measures proposed have been very enthusiastically welcomed by the public. The Government proposals are three in number, and comprise (1) the creation of a body which is to be known as the Superior Consultative Committee for Commerce and Industry, (2) the creation of a commercial office, the function of which will be to centralise all possible information on the prices of foodstuffs and raw materials in such a manner that by their aid it will be possible to follow, from day to day, the economic life of the country, and (3) the institution of a policy for raw materials. The idea of organising this consultative committee was originated by M. Loucheur, who laid down the basis of the new body in a decree which was promulgated on May 22nd last, when he was still Minister for Commerce. It was left to his successor, M. Raynaldy, however, actually to constitute the new body, and to nominate the members, and this morning the decree instituting the committee and appointing the members thereof is promulgated in the *Journal Officiel*. The decree shows that the new Government regards it as necessary, in view of the pressing importance of the questions involved, that the scope of the committee as originally conceived shall be considerably enlarged. The committee, which will act under the direct presidency of the Minister for Commerce, will have the duty of considering "all questions interesting to commerce and industry that will be sent to it by the Minister," and will "preside over all inquiries concerning commerce and industry."

The Statistique Générale has now issued the index figure for wholesale commodity prices for the month of June, which shows a rise of six points as compared with that for May, and of 15 as against that for April. The detailed figures (worked out for a base of 100 as representing prices in July, 1914) are as follows:—

Commodities.	June.	May.	April.
General index figure	45 .. 474 ..	468 ..	459 ..
Foodstuffs as a whole	20 .. 426 ..	425 ..	423 ..
Vegetable foodstuffs	8 .. 417 ..	423 ..	392 ..
Animal foodstuffs	8 .. 406 ..	401 ..	424 ..
Sugar, coffee, cocoa	4 .. 492 ..	488 ..	491 ..
Raw materials as a whole	25 .. 517 ..	506 ..	492 ..
Minerals and metals	7 .. 456 ..	440 ..	431 ..
Textiles	6 .. 650 ..	653 ..	594 ..
Various	12 .. 474 ..	456 ..	467 ..

The rise has been chiefly, as will be seen, in raw materials, which have increased in price by eleven points, while foodstuffs show a rise of only a single point. Retail prices in Paris at the end of June continued to show a tendency to fall, the index figure for the month being returned as 370, as compared with 378 for May and 380 for April.

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER
President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits \$13,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

GERMANY.—REPARATIONS—FINANCES—CURRENCY—PRICES—CROPS—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, July 8.

THE Anglo-French differences following the meeting at Chequers have tended to confirm German belief that the putting into force of the Dawes scheme, if it is to be put into force, will take a long time. This would be as much against German as against Ally interest, perhaps more, because there is an increasing tendency here to regard the scheme not as a lasting solution, but as a means out of immediate difficulties. Against the scheme as a lasting solution a great deal of criticism is directed, mostly to the effect that the necessary active payment balance will not be attained. It is noted that the Dawes Report professes only to provide the mechanism by which Reparations can best be collected if the payment balance admits, and even on the first question, viz., whether the Reparations sums can be raised internally in native currency, expresses only opinions. The unfavourable foreign trade reports of this year are naturally taken as a text. Against this must be said that the Marx Cabinet seems to have no plan for attaining export surpluses. Their attainment as the result of taxation (counting the railway and industrial bond interest as taxes) does not, as the Dawes report admits, necessarily follow; by this means only economy in consumption is attained. A positive foreign-trade policy, to be entered upon from the beginning and as part of an agreement with the Allies, seems to be called for. The chief German optimist on this question, the Reichsbank president, though convinced that Germany can spare the annual sums fixed in the Report, always adds that the Allied and some neutral Governments show no sign of welcoming the necessary German flood of exports. Some of the High-Protectionists, who are just now very active, connect their demand for higher duties on industrial goods with the wished for improvement of the payment balance; in other words, foreign goods must be excluded. From

such exclusion these Protectionists, who are mostly manufacturers, would gain, while being guaranteed an improving export market.

It is plain that the mere formal putting through of the Dawes scheme, by which is meant the passing of the necessary Bills and the creation of the control and collection organisations, will still leave the main question open. The skeleton, indeed, will be ready, but it will not be made clear whether Reparations are to be achieved by a conscious international trade policy, or whether they are to be left to chance—to be paid or not paid according as German trade may happen to develop. If they are left to chance, there seems to be no particular reason for assuming that an active trade balance will come within any particular term of years, if at all. Although the Cabinet here is aware of this, it never refers even indirectly to the matter; in the few official utterances so far on the coming tariff, Reparations were not mentioned. The Dawes scheme, one suspects, is welcomed here mainly because it promises an immediate, if only temporary, solution of certain German difficulties; and for that reason Germans are much more in a hurry about it than the Allied Governments seem to be. One of the chief difficulties is the Ruhr. The renewed "Micum" agreement, contracted until the Dawes scheme came into force, was made terminable on notice at the end of any month; and the German parties, having got Berlin's refusal to finance them, have already given notice to terminate on August 1st. The situation on the Ruhr is bad as it is; production is declining and unemployment is increasing; and local industry cannot continue the "Micum" system indefinitely. The Finance Ministry is also very anxious to get the army occupation costs, and the other non-Reparations liabilities which are classed as "for execution of the Peace Treaty," incorporated, as proposed, in the general Reparations total. Finally, there is the belief that foreign private capital will flow in here as soon as a formal settlement is come to. Germany, therefore, stands to gain immediately, while the question whether the Allies will really gain can only be proved later.

The Finance Ministry's return for the ten-day term, June 21st-30th, shows revenue 158,934,000 gold marks, and expenditure 160,802,200 gold marks, of which 2,178,500 gold marks went on redemption of Gold Loan. In all, June revenue totalled 439,560,000 gold marks; expenditure, 440,985,000 gold marks, of which 26,500,000 gold marks went on redemption of Gold Loan; and 179,600,000 gold marks on subventions to states and communes; so that the Federal expenditure proper was only 235 million gold marks. The gross debt on May 31st (omitting the depreciated paper marks debt) was 1,742,000,000 gold marks; the net, after deducting the unexpended part of the Rentenbank credit and the Budget operation fund, was 1,376,700,000 gold marks, against 1,939,700,000 gold marks at the end of 1923. The final report for the financial year 1923-24, which has interest only as an indicator of the inflation, shows that as against estimated revenue of 5,207,422 million paper marks was received 1,879,429,367,000,000 million paper marks, of which 1,601,186,044,000,000 million paper marks came from direct taxes.

The money situation has been somewhat easier. Total note circulation on May 31st was of value 2,917,600,000 gold marks. Of this 931,000,000 gold marks consisted of paper money, 926,900,000 gold marks being Reichsbank notes, so that all paper money except 4,100,000 gold marks had disappeared; 138,500,000 gold marks were coins; and 1,848,100,000 gold marks stable-guaranteed money, of which 1,728,500,000 gold marks were Rentenmarks. The Gold Discount Bank's return for June 30th shows an increase in discounts during the preceding week from £6,244,745 to £6,789,582. The Reichsbank's statement for June 30th shows that the month-end demand was mainly met by withdrawing deposits. While discounts and advances increased by only 37,700,000 billion paper marks, deposits fell by 231,900,000 billion paper marks. Paper-mark circulation increased by 205,900,000 billion paper marks, and Rentenmark circulation by 196 million Rentenmarks, the bank's holding of Rentenmarks falling to 278 millions. The Reichsbank's report for 1923 shows clearings of 61,678 trillion paper marks. The gold reserve fell during the year from 1,004,800,000 gold marks to

467 million gold marks. The bank in 1923 sold 165,000 kilograms of fine silver, in order to buy foreign currencies. The main change in the bank's credits, which on December 31st totalled 591,100,000 billion paper marks, was the disappearance towards the end of the year of discounted Treasury bills, while credits to private business continued to increase. Note circulation rose from 1.3 billion paper marks to 496½ trillion paper marks. Expropriated in occupied territory was paper money worth 26 million gold marks. Shareholders in the bank, on December 31st, were 16,466 Germans and 2,503 foreigners. The Prussian State Bank's (*Seehandlung*) first gold mark balance-sheet reduces capital from 560 million marks to 10 million gold marks, the new reserve being 3 million gold marks.

Prices still move downward. The official wholesale number on July 1st was 112.6. The cost of living on July 2nd was 117, against 111 a week earlier, the rise here being mainly due to an increase in rents. In general, prices are likely to fall further, owing to the impending reduction of the Sales Tax (the Bill has already been submitted), and to a cut averaging 20 per cent. in coal prices. The Finance Minister, Dr Luther, says that "the condition of German industry is now beginning to be desperate"; but there is no sign of this. The number of unemployed (unoccupied territory only) rose from 209,101 on June 1st to 214,486 on the 15th, but was still less than a seventh of the number reported at the beginning of the year. The building trade has somewhat improved. Rents at the beginning of this month were raised to 62 per cent. of the pre-war, but of this a third (20 per cent. of the pre-war) is the new rents tax imposed on tenants instead of that part of the pre-war rent which went to pay mortgage interest.

The crop reports for July 1st are relatively favourable. The condition of winter rye, the most important grain crop, was still behind the condition of July, 1923, but spring rye, winter and spring wheat, winter and spring barley, and oats were better. At best the rye crop will be about average; but wheat is reported to be particularly good in quality as well as quantity. The fodder crops are good, the hay crops extremely good, and a very good potato harvest is expected. A large increase in the number of livestock is expected if favourable weather conditions continue. The condition of sugar beet is slightly behind that of last year. The stock market continues inactive, and has no particular tendency.

CANADA—THE POSTAL STRIKE—AGRICULTURAL PROSPECTS—BUSINESS CONDITIONS—FEDERAL BOND ISSUES—SMUGGLING—PARLIAMENT AND BRITISH PREFERENCE.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 24.

DURING the past week the business world has been subjected to great trouble and confusion by a postal strike which arose out of the employees' displeasure at a readjustment of their wages. Luckily the strike did not spread to any serious extent to the Western and Maritime Provinces, but there was an almost complete walk-out of the postal workers in Montreal and Toronto, and many smaller urban centres in Central Canada were seriously affected. The Government were severely criticised by papers like the *Toronto Globe*, which normally support them, for failing to handle the situation in its incipient stages with sufficient vigour. However, they have now taken a firm stand, and as a result the strike has collapsed at a number of points, and at others the postal service is being manned by new recruits. But meanwhile business could not fail to suffer through the blockade of mails at such important nerve centres as Toronto and Montreal. The telephone and telegraph are being used for urgent matters, but transmission of funds and orders and general correspondence is seriously hampered.

There is more cheerful news in the realm of agriculture. Crops in the East are still backward, and are not likely to show any large yield. But from the West, which is now much the most important centre of production, the reports continue to be very encouraging. What is also very welcome is that prices have been steadily

mounting in the grain markets, and No. 1 Northern in Winnipeg is now within measurable distance of \$1.20, and is expected to go to \$1.25 in the near future. The strength of the market is attributed to the prospects of a smaller surplus available for export this year from the chief producing countries. There has also been a very substantial reduction in the North American wheat acreage this year, and although the latest reports about the American crop are more optimistic, it had a bad start, and it is expected that the ultimate yield will show a marked shortage (possibly as high as 100 million bushels) as compared with last year's figures. Another bull factor is the improvement in the political situation in Europe, which is held to promise a great betterment in the most important market, and more than one European country is showing signs of an ability to buy and consume wheat on a larger scale than anyone had looked for.

But general trade is still far from satisfactory. The general feeling is that no substantial improvement in business can be expected before autumn, and it will only come then if the present hopes of a good crop in the West and improved returns for it are realised.

The banks and financial houses have now come to believe that the placing of heavy bond issues in the domestic market by the Federal and provincial Governments last autumn was a serious mistake, as it drained off all the available money, and left too little for the needs of private enterprise. Accordingly there was some protest when the Minister of Finance secured from Parliament powers for a further issue of Federal Government bonds to the amount of \$300,000,000. Apprehensions were allayed by a subsequent announcement that this sum would cover three years' requirements, and that during the present year not more than \$200,000,000 would be needed to meet the 1924 Victory bonds maturing November 1, 1924, and Treasury bills totalling \$91,215,000. In all probability there will be a new loan floated this autumn, and pressure will be exercised to have a substantial proportion of it raised outside Canada. The Government are also seeking authority to increase their powers of guarantee for National Railway bonds, but there is some opposition in Parliament. At present the financial methods pursued by the C.N.R. administration are the subject of an investigation by a special Parliamentary committee, and the further daylight which has been thrown upon the strange transaction whereby the Hotel Scribe in Paris was purchased for a European headquarters for the C.N.R. has not strengthened public confidence. The C.N.R. are planning a new equipment loan, probably for 10 million dollars. The City of Toronto also expects to be in the market soon for an equal sum to pay off the shareholders of the Toronto Street Railway Company, whose lawsuit against the city will be decided by the Privy Council this month.

Manufacturers and merchants are making loud complaint of the volume of smuggling which now goes on across the international boundary. Numbers of people who had acquired valuable experience in outwitting the Customs officers with consignments of liquor have now turned their talents to other fields, and large quantities of cigarettes, silks, laces, and goods of all kinds are being smuggled in without paying any duty. The late Minister of Labour recently stated in the Senate that 500 million cigarettes were now being smuggled into Canada each year. On a package of cigarettes selling for 15 cents the manufacturer to-day gets 3.98 cents, the wholesaler and retailer 3.71, and the Federal Government collects 7.69 cents. Tobacco taxation in the United States is on a much lower scale, and the result is that cigarette prices in the United States of ordinary brands, like Players', are 40 per cent. lower than in Canada, and successful smuggling is very profitable. Cigarette manufacturers calculate that their turnover has declined 20 per cent., and the loss to the revenue is placed at a million dollars.

Parliament is still in session, and while negotiations are afoot to accelerate business by morning sessions, drop some legislation, and secure prorogation by July 5th, it is doubtful, in the view of the highly controversial character of some legislation still to be dealt with, whether this end can be accomplished. The Senate has exercised a judicious pruning knife with part of the elaborate branch line programme of the C.N.R., and has thereby done some service in the interests of economy. The Upper Chamber

has also been the scene of an interesting attack upon the British preference. It was initiated by Senator L. A. David, a Liberal, who was one of Laurier's closest friends, and he and other speakers contended that, while the preferential concessions made to Britain had in their day had valuable results, they were now producing adverse effects upon many domestic industries, and in this light should be reconsidered. However, except for this criticism, there has been no serious volume of protest in Canada at the decision recently reached by the British Parliament in regard to the preferences offered at the Imperial Conference.

The organisers of the co-operative wheat pools in the West profess themselves completely satisfied with the results of the special drive which was staged in the first two weeks of June to secure the indispensable minimum acreage. It has been achieved in Saskatchewan, which is by far the largest producer of grain, and although the objective aimed at in Manitoba was not quite reached, yet the organisers in that province will go ahead in concert with their neighbours. The result is that the wheat pool system will be functioning this year in all the prairie provinces, and while each of the three will have a separate board of management, the same export machinery will be used.

AUSTRALIA—BANK FIGURES—EXCHANGE AND CURRENCY.

(FROM OUR CORRESPONDENT.)

MELBOURNE, May 29.

THE quarterly average returns to March 31st of the ordinary banks in Australia and New Zealand (exclusive of the Commonwealth Bank of Australia) show, as compared with the preceding quarter, an increase of £17,803,674 in deposits and a decrease of £2,709,673 in advances, the figures relating only to local liabilities and assets within Australia and New Zealand. These movements are in the usual direction for the first quarter of the year, when the realisation of wool, wheat, and other articles of annual production places large amounts of fresh money in the hands of country producers, wherewith to increase their credit balances or reduce their indebtedness to banks and others. This year the good wheat harvest in Australia and the high prices obtained for wool both in Australia and New Zealand have helped to swell the figures, while in Australia the woolgrowers have received a further distribution of Bawra money on account of extra profits on clips purchased some years ago by the British Government. As compared with a year ago, deposits show an increase of £15,307,336, and advances an increase of £16,599,435. In these movements there is a divergence between Australia and New Zealand, as in Australia deposits have increased by £12,273,422 and advances by £14,451,093, the increase in advances being the larger by over 2 millions, whereas in New Zealand the increase of £3,033,914 in deposits is nearly a million greater than the increase of £2,148,342 in advances. The following is a comparison of the principal totals with those for the previous quarter and the corresponding period last year:—

	March 31, 1923.	Dec. 31, 1923.	March 31, 1924.
Deposits—			
Australia	232,000,840 ..	231,741,642 ..	244,274,262
New Zealand	48,659,637 ..	46,422,497 ..	51,693,551
Total deposits	280,660,477 ..	278,164,139 ..	295,967,813
Advances—			
Australia	197,994,984 ..	213,316,033 ..	212,446,077
New Zealand	48,347,815 ..	52,335,874 ..	50,496,157
Total advances	246,342,799 ..	265,651,907 ..	262,942,234
Cash items—			
Coin and bullion (Australia and N.Z.)	27,287,078 ..	27,393,510 ..	27,877,587
Australian notes	26,353,024 ..	22,969,183 ..	24,778,237
Legal tender notes of other banks (N.Z. only) ..	501,218 ..	350,362 ..	448,308
	54,141,320 ..	50,713,055 ..	53,104,132

Against the increase in liabilities there is no increase in cash holdings, owing to the rigidity with which in Australia the Notes Board kept the note issue at practically a fixed amount, at a level below the requirements of trade,

especially during the active export season. In this the Board has acted against banking advice, and an examination of the various figures shows that the total amount of gold and paper currency in existence in Australia was thus kept below the amount that would have been in existence under a free gold system similar to the pre-war system. The financing of the wool season has consequently been a task of exceptional difficulty to those banks which did not decline the purchase of wool bills, and the general feeling is that a reform is necessary before the new wool season in order that the existing system may be rendered sufficiently elastic for proper trade requirements at the busy export period of the year, as is the case in other parts of the world. Between the unsatisfactory character of the policy followed during the past season and the peculiar character of some of the circumstances attending outside exchange operations, a decided feeling of estrangement has arisen between the ordinary banks and the Commonwealth Bank. The subject was referred to by Sir John Grice, chairman of the National Bank of Australasia, at the annual meeting in Melbourne on May 28th, when he stated, with reference to exchange and currency, that it is necessary for the present that Government and municipal borrowings in London for the purpose of expenditure in Australia should cease, and that until the present exchange difficulty passes the Notes Board, after ascertaining banking and trading needs, should allow such reasonable and secured expansion of the issue as may be required. He also advocated that steps should be taken to replenish gold holdings, setting the cost against the profits on the note issue.

The principal average figures (within Australia) of the Commonwealth Bank of Australia, not included above, compare as follows:—

	March 31, 1923.	Dec. 31, 1923.	March 31, 1924.
Deposits	28,386,080 ..	32,430,948 ..	29,940,516
Savings Bank deposits	38,148,904 ..	39,212,776 ..	38,739,378
Discounts, loans, &c.	13,863,996 ..	14,987,389 ..	13,935,591
Government and municipal securities	36,006,146 ..	39,108,182 ..	39,464,547
Coin and bullion	2,637,705 ..	2,543,932 ..	2,226,862
Australian notes	2,774,221 ..	4,912,595 ..	3,990,336

SWITZERLAND.—THE INDUSTRIAL EMIGRATION—ECONOMIC DEPRESSION—THE OUTLOOK.

(FROM OUR CORRESPONDENT.)

GENEVA, June 19.

A QUESTION which is agitating the minds of Swiss economists is the emigration of Swiss industry in consequence of the economic crisis which began after the war, and which was aggravated by the collapse of the currency in many countries to which Switzerland used to export her goods. When examining this question one has to consider three classes of facts: the direct signs of industrial emigration, that is, the total or partial transfer of Swiss factories to foreign countries; the indirect signs which include the emigration of labour, of skilled workers and engineers, and the trade returns; the foreign invasion which is the consequence of emigration. A close and impartial examination of the situation shows that these signs are unquestionable.

The value of Swiss exports, which reached 1,376 millions of francs in 1913, was only 1,716 millions in 1923, while prices have in the meantime risen by 60 per cent. As regards the adverse balance, it was 135 million francs in 1919, 965 in 1920, 156 in 1921, 225 in 1922, and 582 millions in 1923. The economic depression from which Switzerland suffers is benefiting the neighbouring countries. A great number of factories and trade concerns were compelled to close down, but a great number of others which were on the verge of being closed down have been taken up by foreigners. Foreign capital (mostly German) has in many cases replaced Swiss capital invested abroad, and foreign immigrants are gradually taking the place of native labour which emigrated. This explains why, in spite of the increase in emigration, the population of Switzerland suffered no reduction; in 1923 alone 30,000 foreigners, 21,000 of whom were Germans, came to reside and work in Switzerland, and were thus added to the 400,000 foreign residents who already formed

11 per cent. of the total population. If this native emigration and foreign immigration continue in the same proportion, the number of foreign residents will, 70 years hence, outnumber the native population.

It is true that Switzerland has been over-industrialised in the course of the last 50 years. While 42 per cent. of the population were getting their living from industry in 1870, this percentage rose to 48 per cent. in 1913, and 50 per cent. during the war. The number of factories rose from 7,905 in 1911 to 9,327 in 1918, but has since fallen to 7,871 in 1923. This industrial impetus was too great for a small country possessing no raw material, and for industries which can only live on exports; a readjustment was fatal, and this is what is happening at the present time. Though the situation looks very gloomy at first sight, one must bear in mind that, thanks to the ever-increasing use of water-power for the production of electricity, Swiss manufactures will, in a few years hence, be in a position to produce more and at a lesser cost. Moreover, some new industries have been created or developed—such as the chemical, aluminium, artificial silk industries—so that all hopes are not lost of seeing Swiss industry recover from the present grave crisis.

NORWAY.—REAL TRADE BALANCE—MONEY AND STOCKS—THE LABOUR POSITION.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, June 26.

At the initiative of Det Statistiske Centralbureau, a review will be made of Norway's relation to foreign countries with regard to sums payable by and payable to this country. A similar review was arranged in 1919. The items there definitely determined were only such as were to the credit of this country; but an estimate was made of the chief debit items. The total of credit items presented the considerable sum of very nearly 2½ milliard kroner. As a set-off to this large sum, a total indebtedness to foreign creditors of about 800 million kroner was calculated, leaving one milliard, 700 million kroner as the credit balance of this country in foreign countries. The calculation now to be undertaken will certainly reveal great changes. Large sums have been lost, no doubt; the passive trade balance of the country has also produced its effect. But the renewal of the mercantile fleet of the country may be supposed to have claimed the main sum. There is hardly any doubt that this renewal has cost perhaps about one milliard kroner. Therefore, the Norwegian mercantile fleet is at present as efficient and up-to-date as ever before in its existence, and possesses a money-earning capacity that is doing good service to the country, and will do so still more as soon as the general world trade conditions recover.

Money is plentiful for legitimate demands. Several considerable municipal loans have been contracted, the rate being generally 6½ per cent., at par; the Government recently borrowed 25 millions at 6 per cent. Otherwise the bond and stock markets are quiet, which may be partly a seasonal phenomenon. While the great strike of industrial workers ended about a month ago, the dockers' strike is dragging on. There seems, however, to be reasonable hope of a speedy settlement now. In about six weeks a number of wage agreements expire, and already overtures for negotiations between the parties have commenced. So far, the respective views are very divergent, the workmen asking very considerable additions to their wages, and the employers demanding reductions, generally equal to about 5 per cent.

GREECE.—EXCHANGES—BRITISH CAPITAL IN PUBLIC WORKS—DECLARATIONS OF SOVIET REPRESENTATIVE.

(FROM OUR CORRESPONDENT.)

ATHENS, June 18.

CONTRARY to expectations, foreign exchanges have shown a further upward movement, the pound having reached at one time 269 drachmæ. The unfavourable influence exercised by the enforcement of exchange regulations was further increased by the abnormality of the political situa-

tion, by the neutrality professed to be kept by the Government in the seamen's strike, which lasted more than a fortnight, and, more recently, by rumours of friction between the Government and the Refugee Committee, in consequence of which, it was stated, the latter would suspend its work, and the Bank of England would not pay the second advance of £1,000,000 already agreed to. The combined effect of all these factors compelled bears to cover with considerable losses, while, on the other hand, a demand from speculators and easily frightened capitalists developed. To-day the situation seems clearer, at least as regards the attitude of the Refugee Committee, whose disagreement with the Government seems to have been exaggerated, while, on the other hand, the report of the suspension of the payment of the second advance by the Bank of England has been officially denied. From 262 yesterday evening the London rate fell back to 243 to-day. However, the fear of a possible overthrow of the Cabinet, whose position in the Assembly has weakened, acts for the moment as a deterrent to a greater improvement of the exchanges.

British industry has recently scored a success against foreign competitors by securing a contract with the Greek Government for the installation and exploitation of new up-to-date telephones in Greece. The contract was signed by Mr Frederick Kerr on behalf of the K.A.M., Limited, and provides for the installation and exploitation of telephones, obligatorily in towns of 10,000 people and upwards, and voluntarily in smaller places. The contract will run for 66 years, the Government having the option to purchase the telephones after 15 years. The new system must be ready for use in Athens, Piræus, and Salonica within three years, and in the remaining towns within five years. An exemption from all customs duties is granted for all goods that will be imported from abroad for the construction and maintenance of the lines. The Representative of Soviet Russia arrived a few days ago, and official diplomatic relations with Russia have now been resumed.

HUNGARY.—FOREIGN TRADE—CROP PROSPECTS—TRADE OUTLOOK.

(FROM OUR CORRESPONDENT.)

BUDAPEST, July 2.

SINCE the foreign loan for Hungary is now an accomplished fact, the figures of the foreign trade of Hungary in the present year are more important and interesting than usual. These figures show that for the first five months of 1924 the excess of imports over exports is in value no less than 40 million gold crowns less than in 1923, the figures being 45 and 85 millions respectively. Now the excess for the whole of last year amounted to 82 millions, so that the next seven months there must have been an active balance. Consequently there should be almost certainly at the end of 1924 a balance in favour of exports. Further, an examination of the items affords a still stronger presumption that such a desirable state of things should come about.

On the other hand, it must be noted that while April and May last year showed a smaller passive balance than any other month, this year they are larger than any month except February. The import excess for April, 1923, was 4.8 million gold crowns, against 8.4 millions for 1924, while in May, 1923, it was 10.9, against 11.5 millions in 1924. This is accounted for probably by the increase in the import of machinery, wood, leather, and paper goods. The increased importation of machinery must not be viewed with disfavour, the probability being that it means more intensive cultivation with the aid of up-to-date machines. No doubt the restrictions on imports which are still in force account largely for the improved balance, not to mention that restrictions upon exports have been practically abolished. It will be interesting to see how the latter is affected by the removal of import restrictions other than the tariffs, which is due in a comparatively short time.

Estimates of the yield of certain cereal crops are being published. Wheat is estimated to yield 17.13 millions of quintals, against 18.42 actually produced last year. As the area under wheat is somewhat smaller in 1924, this would

BRANCHES:
COLOMBO QUILON MEDAN KOBE
CALCUTTA BATAVIA SOURABAYA MONTREAL

be a very satisfactory yield. Rye is put at 7.34, against 7.94 for last year produced. It has been damaged by the storms of rain and hail in some parts, but the outlook on the whole is good. Barley is expected to be produced to a slightly larger amount than last year, an average crop being looked for. Much the same may be said of oats. Wheat, barley, and oats are the only crops as to which estimates have been made by the agricultural authorities. There should be a plentiful crop of maize, some of the land formerly used for wheat having this year been sown with maize. The sugar beet crop, which also should be better than last year, promises well, but not exceedingly well. An average crop is expected, and as the area is likewise increased by some of the wheat lands, the yield should be satisfactory. Potatoes, roots, hemp, flax, tobacco, and most vegetables and fruits all promise well. Grapes, on the whole, are not so good, and there is likely to be a decrease in wine production. It may be mentioned that Hungary's fruit trade has made great strides of late. Fruit in 1923 was exported to the amount of nearly 1½ million quintals, as against 450,000 in 1922, and is thus becoming an important item. Also the trade in poultry, game, and fish has taken an immense jump, from slightly over 300,000 quintals in 1922, to 1,100,000 last year. Taken generally, the prospect seems to be bright enough, and *ceteris paribus* a good year for trade is sure.

Letters to the Editor.

THE GOLD STANDARD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Will you allow me to offer some observations on the letters of Messrs A. Hoare and A. Mitchell Innes, which have been published in your issue of the 5th inst.? I am glad Mr Hoare thinks that the restoration of the gold standard may now be practicable, but doubts the advisability of raising the Bank rate, and advises the restoration should be done by arrangement between this country and the United States. He does not state what form this arrangement is to take, and I am at a loss to imagine it. In common with some authorities, I also do not believe that raising the Bank rate will alone be sufficient, but I believe it will facilitate that contraction of the currency which I venture to state is the key to the situation.

Mr A. Mitchell Innes states that a suspension of specie payments lasted for 26 years, 1797-1823. This, I think, is wrong, and should be 24 years, as the Bank of England resumed payment by its own wish and the permission of Parliament on May 1, 1821.

Mr Innes argues that a higher Bank rate would tend to produce higher, not lower, prices. This might be true if it was permanent, but your correspondent must know that in pre-war days, when the Bank rate was raised, it tended to produce lower, not higher, prices. The enormous war debt, and the payment of the charge on the foreign portion of it no doubt affects the rate of exchange to some extent, but not in my humble opinion sufficiently to prevent the restoration of the gold standard and a stable currency and exchange.

There is one additional comment I should like to offer. A number of people believe that parity of exchange will be reached with America through a rise in prices in that country. I do not believe it. First, because I do not anticipate any great rise in gold prices, either in America or elsewhere without an increase in the world's production of gold. The accumulation of the metal in the U.S.A. no doubt has some effect, but it is merely a removal from one part of the world to another. Secondly, as Sumner points out, that where there is convertibility, as in America, "speculation in the widest and best sense

controls the amount of the currency," whereas "on an inconvertible system like ours, the amount of the currency controls speculation.—I am, Sir, your obedient servant,
D. M. MASON.

July 7, 1924.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Mitchell Innes, in his letter published in your issue of July 5th, forgets that when guineas were first coined the standard of this country was nominally silver, practically bi-metallic. Proclamations from time to time regulated the exchange as between silver and gold.

This exchange was bound to fluctuate, and in theory should correspond approximately with market values of the two metals.

But from 1670 onwards a guinea has always contained a fixed number of grains of gold of a fixed standard.

From 1817 onwards a sovereign has always contained a fixed and corresponding amount of gold of a like standard.

The pound notes with which we pay our debts bear on their face a statement that they are issued under an Act which entitles the holder to receive under certain prescribed conditions the last-mentioned amount of gold.

Special payments were not resumed easily a hundred years ago, nor can we anticipate that the resumption will be easier when the plunge is taken, as eventually it must be taken.

But it is difficult to see what advantage is to be gained by telling our debtors in foreign countries that instead of paying us 100 ounces of gold, as they have promised, they need only pay 90 ounces or 80 ounces, or 70 ounces, or whatever the suggested figure may be.—Yours faithfully,
R. B. TURTON.

Books and Publications.

A LEADER'S SPEECHES.

IT is easier to make an omelette with bad eggs than a readable book out of a politician's speeches. The sentence that sounds to an enthusiastic party audience like a prophet's clarion call reads between the two covers of a book like the empty platitude that it probably is, and the whole effect, instead of being effervescent and stimulating, is flat and depressing. The rhetoric of a Burke may make a speech live for ever, and the fighting spirit of a Chamberlain or a Lloyd George may give it a life of a few months, but most political speeches are best forgotten as soon as possible after delivery, and it is needless cruelty to submit them to the ordeal of publication.

Mr Baldwin, who is, we fear, an indifferent judge of his own oratory, survives the test no better than one would expect. We are prepared to believe that the atmosphere of the Connaught Rooms or the Albert Hall helped him to carry things off with satisfaction to himself when the speeches were delivered, but it is beyond belief that he can read his own book,* composed of his own speeches, with anything but a heavy heart or that his following can be filled by them with anything but dismay. No one reading the book can imagine that Mr Baldwin, admirable and engaging as he is, was meant by his Maker to be the leader of a fighting party.

The general impression left on the reader's mind is of an amiable man groping pathetically and a little hopelessly after the truth. On most subjects he is far from clear, and on all economic subjects he is dreadfully muddled. We read, for example, in the introductory paragraphs that:

Unemployment remains the most serious of our home problems. The Unionist Government had vigorously attacked it by such means as the Trade Facilities Act.....

And in the first of the speeches we read that:

Our grandfathers were prepared to risk the whole future of our country to realise the paltry ideal of underselling our neighbours.

* "Looking Ahead." (London) National Unionist Association. Price 6d.

Why it should be a noble thing to "attack vigorously by such means as the Trade Facilities Act" the most serious problem of unemployment and "the pursuit of a paltry ideal" to facilitate trade by underselling our neighbours and so provide employment, baffles us. Apparently it is a sound patriotic thing to talk of the necessity for markets and a paltry thing to capture them by cheap material and low costs.

In the matter of Protection Mr Baldwin makes his position clear:

We of the Unionist party accept the verdict which the country gave in December, and we do not intend to put forward again proposals for a general tariff except upon clear evidence that the cat is jumping.....

No, we misquote; he actually said:

Except upon clear evidence that on this matter public opinion is disposed to reconsider its judgment.

Was ever party in such fashion led?

SOCIAL INSURANCE.*

THE economic experience of the last four years, and in particular the problem of unemployment, which has so far defied the efforts of three Governments to find a solution, has directed an increasing volume of attention and enquiry to our system or lack of system of social insurance.

The leaders of all political parties are now committed to an attempt to extend and consolidate the different forms of insurance and public assistance in what is usually described as an "all-in" policy of insurance against the loss of the means of livelihood due to ill-health, accident, premature death of the bread-winner, unemployment, and old age; but very few of their followers have any conception of the difficulty and complexity of unifying and completing existing arrangements. Mr Alban Gordon, in "Social Insurance—What it is and What it Might Be"—in a mere matter of 145 pages, gives an admirably lucid and concise account of our present ill-ordered series of services, with their overlapping, deficient benefits, and (taking them altogether) costly administration. Those who wish to obtain a clear introduction to this subject, unburdened with too much detail, will find it in this work, which emphasises the lesson of Sir William Beveridge's recent pamphlet, "Insurance For All and Everything," that the extension of a policy of real "Security" against social risks requires imagination and re-organisation rather than more money, or in other words, that we are not getting value for our money under present conditions.

There is a suggestive chapter on the prevention of sickness and unemployment, and the second part of the work is devoted to the outlines of a comprehensive scheme for consolidating and completing a National system of social insurance, embracing the functions now carried out by the employment exchanges, approved societies, customs and Excise in the administration of old age pensions, trades union and the Poor Law; the whole to be administered by a new insurance authority to be elected on the same franchise on which boards of guardians are now elected for areas corresponding to administrative counties, county boroughs, or municipal areas of more than 50,000 inhabitants.

The whole project is provocative of thought, but if consideration is given to the powerful vested interests which are entrenched in the way, it is clear that an attempt to give it legislative effect would provoke a controversy second only to that which would be aroused by an attempt to codify and consolidate the various religious denominations of the country in one comprehensive faith.

* "Social Insurance." By Alban Gordon. George Allen and Unwin. Price 6s.

A SHIPPING ANNUAL.

THE annual volumes issued by the Chamber of Shipping of the United Kingdom form a valuable record of the progress of the shipping industry, and the latest addition to the series, covering the period 1923-24,* is no exception. The economic side of shipping is dealt with in comprehensive statistical tables and diagrams relating to shipping tonnage, movements, imports and exports, coal

* Chamber of Shipping of the United Kingdom Annual Report 1923-24. (London) 28 St Mary Axe.

and oil, and sundry miscellaneous matters. Politically, the outstanding events of the past year were the holding of the Imperial Economic Conference—to which ship-owners as an organised body submitted a memorandum strongly emphasising the necessity for adhesion to Free Trade—and the progress of the international movement against flag discrimination. The last-mentioned matter was the subject of an international convention adopted at Geneva by representatives of nearly all maritime countries, the United States being an exception. The convention laid down the principle of equality of treatment of shipping in ports irrespective of flag, and the unanimity with which it was agreed to was, it appears, largely due to the efforts of the British delegates.

Besides the annual report of the Chamber of Shipping, with its appendices and statistics, the volume now issued contains an account of the proceedings at the last annual meeting of the Chamber and the report of the Shipowners' Parliamentary Committee. Upon this committee are representatives not only of the Chamber of Shipping, but of the Shipping Federation and the Liverpool Steam Ship Owners' Association, so that the watch it keeps on legislative proposals is maintained on behalf of the whole body of shipowners.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, July 23.	ACCOUNT, July 24.
Stock Exchange nerves have been unsettled by the possibility of the Bank rate being raised to 5 per cent., and this played an important part in most parts of the House. Business is not very good. A number of recent new issues have been left in temporary hands that are anxious to get out of stock which they have received through underwriting contracts. This exercises a depressing effect upon securities of kindred character to those of which the holders desire to dispose. The meeting of the British and French Premiers at the beginning of the week caused a gleam of hopefulness in regard to the foreign political situation, but served, on balance, merely as a mild corrective to the dull sentiment caused by Bank rate apprehensions. Upon the announcement on Thursday that no change would be made, members of the House simply said that the rise had been again postponed.	Most of the stocks of the Consol market are easier, not so much, according to the jobbers, by reason of sales, but because there has been a noticeable absence of public buyers. Government purchasing orders helped to stiffen the market in gilt-edged stocks on Tuesday, and the declines on the week are not serious. Colonial and home railway prior-charge secu-

rities have followed the tendency of the Consol market as a whole.

French and German bonds developed mild activity on the meeting between Mr Ramsay MacDonald and M. Herriot. In no case, however, was there any marked improvement in prices. Mexicans are flat. Dealings started in the new Hungarian loan on Monday last. Larger applicants received about 40 per cent. of their subscriptions, and the price opened at $\frac{1}{2}$ premium, from which it fell to a slight discount. Weakness in Brazilians is attributed to vague reports concerning a rumoured insurrection, which are also responsible for dullness in Brazilian Railway stocks. Turkish and Egyptian bonds gave way somewhat sharply on Paris sales.

The latest phase of Labour unrest in connection with home railways intensifies the previous disinclination of the public to buy home railways even at the present comparatively low range of prices. Undergrounds kept tolerably firm, though the best prices were not held, and Underground incomes, after their dramatic spurt on the declaration of the full 3 per cent. dividend for the half-year, shed a point or so. American railways are better. Argentines gave way, partly on monetary considerations, partly on a little turning-out of their stock by the bull party.

Rubber shares, after months of quiescence and sagging prices, advanced smartly as the price of the produce went over 11d per lb. Tea shares are buoyant, fresh public attention having been directed to this department on account of the favourable outlook which seems to promise well for the next year or so. Nitrate shares, after being better, rather hung fire. The new Lautaro Nitrate debenture stock, offered at 100, is now being negotiated on the basis of 12s 6d premium. Another newcomer is the British Insulated debenture stock, which opened at $\frac{1}{4}$ premium. British Automobile Traction debenture started off at $\frac{3}{4}$ discount. Excitement in Courtaulds has died down, but the price is well maintained. The shares will go ex-rights after the meeting next Thursday. Other textiles have moved within narrow limits. Banking shares remain a dullish market, owing to the heaviness of gilt-edged stocks, while insurance shares continue to rise, and the buyers openly declare their hopes of increased dividends, or of slightly better in consequence of the absorption of a fair amount of stock which had been recently overhanging this section. Iron and steel shares are firmer in places, as the House says, and shipping descriptions are exceedingly quiet.

In the brewery market a jump in Watney deferred is the outstanding feature of a generally strong list, thanks to dividend anticipations. The oil market has been irregular, a poor report by the Mexican Eagle Company negating the optimistic expectations recently aroused in regard to the position. Shells went ex 2s 6d dividend, free of tax, on Thursday. A fair amount of activity prevails in this market. Amongst new issues, West Gloucester Power debentures are about $\frac{3}{4}$ discount, and the preference is 6d discount. Shropshire debentures are $\frac{1}{2}$ premium, Whitehall Electric debenture $\frac{1}{4}$ discount, and the preference shares 1s discount.

In the Kaffir Circus, the lively gamble in East Rands is again the principal point of interest. The price has been run up sharply amid all kinds of favourable rumours. Deep Level shares have strengthened, the idea being that when dividends are taken off the prices next month, the shares will begin to look cheap again. A little spasmodic animation in Rhodesians had no influence over Chartered, which remain at a trifle over 11s. De Beers and other diamond shares held their ground on the statement that the companies had renewed their agreement for selling stones. Consolidated Diamonds have rallied noticeably. A modest rise in Russians reflects the hope that business relations between this country and Russia are working toward a practical basis. Amongst tin shares, the Malayan list goes steadily ahead. Lake Views, both old and new shares, are better. Mexicans, in spite of conflicting reports regarding the political conditions of the country, hardened up in a few cases. Several Indians are a trifle harder on the week. The copper group attracts but little attention and business.

NEW ISSUES.

The Daily Sketch and Sunday Herald, Limited.—

Authorised capital £1,000,000 in ordinary shares of £1 each, all of which are issued with 2s per share paid. This is an offer for sale of £1,000,000 6½ per cent. guaranteed mortgage debenture stock at £99 per cent. It is repayable at 107 by a cumulative sinking fund. The company reserves the right of redemption at 107 on giving two months' notice. The company has agreed with the trustees to pay no dividends on share capital until all debenture stock has been redeemed. This stock will be secured by a trust deed, and constitutes a first specific charge upon freehold land and buildings. It is not clearly stated, however, what the exact value of such property is. As further security the payment of interest and repayment of capital are guaranteed by Daily Mirror Newspapers, Limited, and Sunday Pictorial Newspaper, 1920, Limited. There is an additional security provided in the form of uncalled capital liability on the ordinary share capital of the company. The value of this, however, depends upon the financial status of shareholders. Profits of the guaranteeing companies are more than sufficient to cover interest and sinking fund payments, but the term "mortgage debenture stock" is usually applied to stock covered by assets of a more tangible nature.

The Second Guardian Trust, Limited.—

Authorised capital £500,000, in £1 shares. This is an issue of 500,000 ordinary shares at 21s each. The object of the company is denoted by its title. It is stated that it will be "intimately associated" with the Guardian Investment Trust Company, Limited. The latter is a company which has made good progress. The prospectus is well drafted, and shareholders are protected by excellent safeguards against unduly large management expenses. The 1s per share premium strikes, perhaps, an optimistic note, but we see no reason why success should not be achieved.

The Traction and Power Securities Company, Limited.—

Authorised capital £1,829,176, of which £683,280 has been issued. An announcement in the Press to comply with Stock Exchange regulations gives particulars concerning the issue of £300,000 4½ per cent. debenture stock. The stock is a floating charge upon assets, and there will be a trust deed, which will contain a covenant limiting the amount of debenture stock to the amount of subscribed capital of the company. The stock is repayable at par on July 1, 1974. Surplus assets are valued at £699,603. Profits are shown from 1914. We are informed that the stock is being placed at 89½. Although a prospectusless issue, the information given is sufficient for us to say that the debentures are well covered, both as regards capital and interest.

The South Wales Power Company, Limited.—

Authorised ordinary share capital £600,000, of which £529,330 has been issued and converted into ordinary stock. This is an issue of 250,000 6½ per cent. preference shares of £1 each at par, and constitutes the entire issued preference capital. There is issued and outstanding £600,000 of 6 per cent. first mortgage debenture stock, being part of a total authorised issue of £750,000. The company, which was formed in 1907, controls the South Wales Electrical Power Distribution Company by having acquired under a scheme of exchange 98 per cent. of the ordinary stock and 99 per cent. of the preference shares of that undertaking. The loan capital of the Distribution Company issued and outstanding, or under agreement to be issued to the holding company, consists of £988,696 of 5 per cent. prior lien debenture stock (of which £876,156 is held by the holding company) and £295,000 5 per cent. debenture stock. The surplus of profit for 1923, it is stated, was £64,000, while for the first quarter of 1924 it has been at the rate of £112,000 per annum. The annual charges having priority to the present issue amount to £59,377 per annum, representing the interest payable upon £600,000 first mortgage 6 per cent. debenture stock of this company (together with a sinking fund thereon of ½ per cent.), £112,540 of prior lien debenture stock of the Distributing Company (being the only part of that stock not held by this company), and £295,000 5 per cent. debenture stock of the Distributing Company. The directors possess influence, and there is good reason to think that the undertaking will continue to develop.

The British Automobile Traction Company, Limited.—

Authorised capital £500,000, of which £439,982 has been issued. This is an issue of £250,000 5½ per cent. first debenture stock at 95. The stock is secured as a first floating charge on assets, and the amount of stock ranking *pari passu* with this issue is to be limited to one-half the subscribed share capital for the time being. An annual sinking fund will be applied in the purchase of the stock under par or by drawings at par, the latest redemption date being January 1, 1959. But the right is reserved to repay the outstanding amount at £105 per cent. on six months' notice. The company was formed in 1905, and holds interests in 15 transport undertakings in the provinces. Over 70 per cent. of the company's issued share capital is held by the British Electric Traction Company and Thomas Tilling, Limited. The last balance-sheet, as at December 31 last, showed net assets of £474,343. "Balance available for appropriation, including the amount brought forward," is shown for five years. But one would have preferred to see "net profits" shown? Ordinary dividends for these years were at the rate of 10 per cent. We recognise that the floating charge is here a necessity; interest payments should be well covered.

Welwyn Garden City, Limited.—

Authorised capital £250,000, divided into 250,000 7 per cent. cumulative shares of £1 each. Subscriptions are invited for £150,000 6 per cent. ten-year development bonds at par. Subject to £150,000 6 per cent. debentures, the bonds constitute a floating charge upon assets, but not on uncalled capital. Loans amounting to £185,712 have also been obtained from the Public Works Loan Commissioners, which also rank in front of the present issue. The bonds are repayable on June 30, 1934, at the rate of £105 per cent. Surplus assets available for security are valued at £275,768. Thus there is a comfortable margin here. Altogether £27,600 per annum will be required for interest on borrowed capital. Development is naturally slow. For the year ended March 31, 1923, a profit of £9,143 was shown "before meeting a proportion of the interest charges." The investment is a well secured one for those to whom marketability is not of first importance, and the undertaking is one which firms and individuals should support in a practical way by subscribing for these bonds.

Burgess Dairy, Limited.—

Share capital £84,000, divided into 80,000 8 per cent. cumulative preference shares of £1 each and 80,000 ordinary shares of 1s. each. There are no debentures, and none can be created other than to secure bankers' advances, except by permission of preference shareholders. This is an issue at par of the whole of the capital. The company has been formed to acquire a dairy business in Manchester. Surplus assets are valued at £57,736, and in addition the goodwill is valued at £20,264. The purchase price is £78,000, all of which is payable in cash, of which £70,000 is to go to the actual vendor. Out of the balance the promoter is to pay the preliminary expenses. The last five years' earnings are set out in the advertised prospectus. If the whole of the shares now offered for subscription are taken up, the preference shareholders will hold all except £4,000 of the £84,000 capital. This only needs a sharp decline in profits to take away the margin holders. The issue does not attract us.

Hereford (Travancore) Tea Estates, Limited.—

Share capital £40,000, divided into shares of £1 each, of which 35,000 have been issued. Of these 25,000 are now offered for subscription at par and 10,000 shares will be allotted in part payment of the purchase price. The abridged prospectus

states that the estates cover an area of 1,585 acres in the Shecottah District of Travancore, and the company will be entitled to all crops as from February 14th last. The purchase price is £20,000, of which £10,000 is payable in cash. The directors will not proceed to allotment unless 20,000 shares are subscribed for, and it is stated that on this basis sufficient should be available out of the present issue to bring the planted area up to 750 acres. A valuation of the estate at £26,000 is submitted. A speculative proposition.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

DEB

GENERAL ELECTRIC, LIMITED.

IMPROVED RESULTS OF YEAR'S TRADE.

"The annual general meeting of this company was held, on the 3th instant, at Magnet House, Kingsway, London.

Mr. Hugo Hirst (chairman and managing director), who presided, said that, comparing the profit and loss account with last year, it would be noticed that the total earning capacity of the company had increased by £84,000, or, roughly, 11 per cent. If the major part of this increase was due to income from investment, it should be understood that the increased revenue from investment was not due to successful speculation of any kind. He regretted that the directors had still been unable to deal with the items "premium on purchase of Fraser and Chalmers" and "expenses of issue of debenture stock." They could not expect the full results of their courageous forward policy until the world's effort towards more stabilised political and economic conditions was nearer realisation.

General export business had not yet come back to normal; a little over 20 per cent. of their total business last year went overseas, and whilst the volume of this business materially contributed towards the efficiency of the company's works and helped them generally in their overhead charges, the prices obtained abroad had been so close that they left little or no profit to most of their overseas organisations, though a considerable improvement was showing itself in South America, Australia, and New Zealand.

HOME TRADE.

The home trade in most of the company's products had been very satisfactory. They had maintained their predominant position in the lamp business. Thanks to the improvement in the building trades and the greater activity in the supply industry, their fittings and accessories business throughout the country had progressed favourably. Their cable and wire business had grown sufficiently to lift them into the front rank of the cable makers of this country.

The wireless department had rapidly developed, and was adding to the company's revenue. The telephone industry was enjoying at present a state bordering on prosperity, and their new Coventry works were actually full with work. Heavier electrical engineering had benefited largely from the works undertaken by Government, municipal, and railway concerns to alleviate distress in the employment market, though the prices obtained for this were not, in his opinion, commensurate with the risks involved.

Amongst the more notable contracts which they had received were a number of turbo generators, ranging from 15,000 to 25,000 kilowatts, for the Corporations of Birmingham, Marylebone, Sydney, Adelaide, and Brisbane; also a large number of traction rotary converters for the Southern Railway. They had further been fortunate in securing a contract for the equipment of 46 motor-coaches for the London Underground Railway, and for a number of motors for various tramway undertakings. At present they were building rolling mill motors up to 20,000 h.p. They had orders on hand for large steam winders and for some of the largest material-handling plant ever built, for Barking and Beckton. They had further perfected on a system of their own plant for the use of powdered fuel, which they thought was highly successful, and a number of orders were in course of execution.

The most satisfactory feature of last year's activities was that there had been more work coming their way. They had been able to put on the company's pay-roll over 2,000 more breadwinners, making their total employees about 17,500. He always felt that our leaders in politics, in law, in the Press, and generally in the classes that ruled us and made our laws, did not sufficiently realise and understand the importance of what an industrial concern like the G.E.C. meant to the country. If they understood it there would have been no repeal of the McKenna duties.

FUTURE OF THE INDUSTRY.

His belief in the future of the electrical industry was unbounded. The whole world, damaged, disfigured, and badly mauled as a result of the war, was waiting for reconstruction, for better means of transport and communication. Electricity alone could supply it. Exactly as steam came to the rescue of the world, and particularly of this country, after the Napoleonic wars, so he was convinced the electric unit, properly produced and distributed, would save the world from the much greater ordeal through which it had recently passed, and would play a particularly great part in the linking up and development of the British Empire. The company, by developing its manufacturing resources in every branch of electrical engineering, by establishing sales organisations at home and overseas, had made itself technically and commercially fit to meet all demands, whether they came for the home or the factory, for the mine or the land, or for transport by rail, air, or sea. Whatever the present difficulties, the future of the company should and must be bright.

The report and accounts were unanimously adopted.

HOWARD AND BULLOUGH, LIMITED.

COMPANY'S POSITION AND PROSPECTS.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The thirtieth annual ordinary general meeting of the shareholders of Howard and Bullough, Limited, was held at Globe Works, Accrington, on Wednesday, the 9th inst., at 12 o'clock noon. The chairman of the company (Sir George Bullough, Bart.) presided.

The report of the directors and auditors and balance-sheet were taken as read.

In moving the adoption of the reports and accounts, the Chairman said: "When we met last year I alluded to the causes which had brought in their train the good results then experienced; but I also drew attention to the change that had already set in and to the restricted business available at low price levels consequent upon the depression in the cotton trade. This necessitated a curtailment of working hours per week during the whole of the year under review, and a corresponding reduction of weekly output. Hence the turnover and trading profits as compared with last year's are less, and we must look to an early revival in the cotton trade for a brisker demand for machinery. I am, however, glad to be able to say that there are signs of improvement discernible, and for the time being the works are on full time."

SALE OF AMERICAN SHARES.

"In the mutual interests of all concerned, it was deemed by your directors good policy to transfer by sale a block of common stock in the Howard and Bullough American Machine Co., hitherto held by us, to the principal American shareholders who have the control and management of the Pawtucket Works. This sale, in consequence of the enhanced value of the stock since the American firm's reconstruction in 1912, resulted in an additional profit for this financial year, and we are able to recommend the payment of 2½ per cent. over and above the customary 10 per cent. dividend to our ordinary shareholders, making in all 12½ per cent. for the year. The remaining sum of £152,999 7s 11d we propose to carry forward to next account."

"I trust these recommendations may have your approval, and I now beg to move that the report of the directors and auditors as presented in the balance-sheet be allowed and passed."

Mr J. W. Carlisle, of Clitheroe, seconded, and the resolution was carried.

DIVIDEND RESOLUTION.

Mr William Lancaster, of Burnley, moved that a dividend be paid for the half-year ending May 31, 1924, at the rate of 6 per cent. per annum, less income-tax, on the preference shares; and a fourth quarterly dividend of 2½ per cent. less income tax, together with an additional payment of 6d per ordinary share, less income-tax, on the ordinary shares, making with the dividend already paid 12½ per cent. for the year on the ordinary shares.

Mr W. I. Bromiley, of Bolton, seconded, and the resolution was agreed to.

RE-ELECTION OF DIRECTORS AND AUDITORS.

Colonel H. Wilson, of Mirfield, said he had very great pleasure in moving the re-election of Mr James Redman and Mr William D. Smith as directors of the company.

Mr C. Moorhouse, of Altham, seconded, and the resolution was agreed to.

Mr Redman expressed thanks on behalf of Mr Smith (who was absent on business) and himself for their re-election.

Mr Jos. E. Dooley, of Accrington, proposed the re-election of Messrs John Adamson, Son and Co., of Manchester, as auditors of the company, on the same terms as before.

Mr V. Murphy, of Blundellsands, seconded, and it was approved.

Mr William Woodcock, of Haslingden, proposed a vote of thanks to the chairman and co-directors, and to the staff and workers for their services.

Mr W. Bannister, of Accrington, seconded.
Sir George Bullough suitably responded.

LIPTON, LIMITED.

EFFECT OF FALL IN MARKET VALUES.

The annual general meeting of Lipton, Limited, was held, on the 7th instant, at Winchester House, Old Broad street, London. Sir Thomas Lipton, Bart., presided.

The Chairman, after a few introductory remarks, called upon Mr Alfred Bowker (a director) to deal with the accounts.

Mr Bowker, in the course of his statement, pointed out that the balance of net profit was £292,244, compared with £337,056 a year ago.

In moving the adoption of the report and accounts, the Chairman said that the main cause in bringing about the set back in the profits was the continued fall in market values of most of the

principal commodities the company supplied to the public. This item alone represented a loss of profit greater than the total decrease in net profit shown in the accounts. They had made, during the year under review, an exceedingly large number of reductions in prices affecting the majority of the lines they handled, as the directors believed it to be good policy to pass on to the consumer any benefit obtained from lower market prices at the earliest possible moment. These reductions in prices had almost always been caused by falling market values of the various commodities concerned. A striking illustration of the effect of these falling market values could be found in a comparison of the average prices of some of the company's biggest lines during last year compared with those of the previous year. For instance, several of the most important lines sold by the company, including bacon, cheese, and butter, showed decreases in value ranging as high as 30 per cent. They were, of course, obliged to keep considerable stocks of these lines in their branches, warehouses, and in transit, and it was impossible to avoid altogether the losses caused by the fall in market values, but such losses were kept down to the absolute minimum.

REDUCING COST OF LIVING.

In lowering prices they had the satisfaction of knowing they were doing their share towards reducing the cost of living, and it had always been their policy to supply their customers at prices fixed on the smallest possible margin of profit for the highest quality of goods. Whilst the trade of the country was improving, and there were indications of a gradual return to pre-war conditions, we were still handicapped by a very large measure of unemployment, which, coupled with heavy taxation, greatly curtailed the purchasing power of the people. He feared we had yet a long way to go before we got back to normal conditions. In order to counteract, as far as possible, the effect of the shrinkage in the values of their stocks and the consequent decrease in their profits, they had introduced throughout their organisation all possible economies consistent with maintaining proper efficiency. During the period under review they had opened a further number of new branches, and others were now in course of being fitted up, whilst negotiations for selected sites in promising markets were in progress.

DEVELOPMENT AND EXTENSION.

This policy of development and extension they intended to continue, opening up wherever and whenever favourable opportunities presented themselves, as they firmly believed that, however extensive their business might be, there was no limit to the possibilities of further profitable expansion. This was particularly the case in the sale of their tea and the food commodities manufactured in their own factories, all of which carried that guarantee of quality and value which was always associated with their name, and were retailed direct to the public, without intermediate profits of any description. In this connection they had considered it advisable to purchase the freehold or long leasehold premises of several of their branches on sites which the board regarded as specially favourable for their particular class of business in order to extend their trade in these markets. The goods of their own manufacture continued to enjoy a growing popularity with their customers, and they were at this moment actively engaged in extending largely their present factories in order to cope with the increasing demand for these products. Their general export trade continued steadily to expand and showed improvement, despite the fact that many countries which were formerly amongst their best customers were still in a very disturbed condition. Fluctuations in exchange continued to be a disturbing feature, and they had had their full share of difficulty in this connection, but during the year under review they had carried on their export department with practically no bad debts at all. Finally, he said they could have paid a dividend on the ordinary shares of 12½ per cent. for the year, as had been done for some years past, but the directors deemed it wiser and in the best interests of the company to recommend a final dividend of 6 per cent., making 10 per cent. for the year, leaving £42,884 to be carried forward, subject to corporations' profit tax.

The resolution was carried unanimously.

The formal business was transacted, and the proceedings terminated with a vote of thanks to the chairman, directors, and staff.

THE MOND NICKEL COMPANY, LIMITED.

EXPLORING CANADA'S MINERAL DEPOSITS.

The tenth annual general meeting of the Mond Nickel Co., Limited, was held, on the 10th inst., at Caxton Hall, Westminster, London, the Right Hon. Sir Alfred Mond, Bart. (the chairman), presiding.

The Chairman, in moving the adoption of the report, dealt at some length with the accounts, and pointed out that the credit balance for the year was £276,457, which showed a slight reduction as compared with the previous year. The decrease, he said, was due almost entirely to the low prices which had prevailed during the year for the company's main products—nickel and copper sulphate. Owing to severe competition the price of nickel was

The Anglo-South American Bank Limited.

Head Office: 62, Old Broad Street, London, E.C. 2.

Authorised Capital	- £10,000,000	Issued Capital	- £8,734,660

THE BRITISH BANK OF SOUTH AMERICA, LTD., and
THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.,
54 Offices in the principal countries of LATIN AMERICA.

AUXILIARIES:

ANGLO SOUTH AMERICAN TRUST COMPANY, NEW YORK
(Incorporated under laws of State of New York), and
BANQUE ANGLO-SUD AMERICAINE, Soc. Anon., PARIS.

unduly depressed during the first part of the year, but during the latter part prices had shown some signs of recovery, and there was a prospect that in the future the price of nickel would reach a more reasonable figure. He also hoped that the same might apply to copper, although he could not speak with very much confidence on this point. Any rise in the price of copper would naturally affect the price which the company obtained for its copper in the form of copper sulphate, and they would benefit thereby in a considerable degree. France and Italy had been disturbed by exchange fluctuations, making it extremely difficult indeed both to the buyer and to the seller to carry on any normal kind of business. Abnormal conditions did not last for ever, and the time must come when prices would become stabilised. He thought, therefore, they could look with more confidence to the results of the next financial year. There was a gratifying increase of 47 per cent. over the previous year in the tonnage of nickel sold, and he was pleased to say that the demand for the company's nickel showed a very steady increase. It might interest the shareholders to know that while at the beginning of last year the company had definite commitments on its books to the extent of about 30 per cent. of their annual nickel production, this year they started with orders in hand for about 70 per cent. of their production.

He was pleased to announce that they had recently associated themselves with the Central Mining and Investment Corporation in the formation of a syndicate called "The Victoria Syndicate, Limited," for the purpose of exploring the rich mineral deposits which undoubtedly existed in Canada. They were fortunate in being associated in this venture with some of the ablest and most experienced men in the mining world.

The report and accounts were unanimously adopted.

SPIERS AND POND, LIMITED.

"STRONG AND HEALTHY FINANCIAL POSITION."

The fortieth annual general meeting of Spiers and Pond, Limited, was held, on the 6th instant, at the Hotel Cecil, Strand, London.

Sir J. S. Harmood Banner, Bart., M.P. (the chairman), said there was an increase in profit of some £4,000 as compared with the previous year. A year ago the profit and loss account was swollen by a windfall of over £12,000, surplus on realisation of investments. The net result was that they had carried to the balance-sheet a profit of £113,600 against £119,700 a year ago. The directors recommended a total dividend of 12½ per cent. for the year, of which 5 per cent. had already been paid, and the balance would be paid on the 11th inst. The balance-sheet showed that the company was in an exceedingly strong and healthy financial position. The company had extended their railway catering business by taking over the London, Chatham and Dover section of the Southern Railway, which included the very important business at Victoria Station, and had also taken over the Isle of Wight Railways. They were now responsible for the catering arrangements over all the constituent lines of the Southern Railway, with one exception. It was an important business involving a turnover of hundreds of thousands of pounds a year.

As to the company's hotels, they had well held their position and their deservedly high reputation. A considerable amount of money had been spent in improving the accommodation at their two London hotels, Bailey's and the South Kensington Hotel.

With regard to the Hotel Metropole at Blackpool, this magnificent property once more gave satisfactory returns. The Empire Hotel at Bath went steadily on maintaining its high reputation and doing even better than before, and the future of this property gave the directors no anxieties. As to the Granville Hotel at Ramsgate, he supposed that they had had more letters of appreciation of the solid comfort it afforded to its guests than they had had in connection with any other of the company's properties. The Valley of Rocks Hotel at Lynton, surely one of the most beautifully situated hotels in the country, had given them a good return on their investments, and the Bushey Hall Hotel, with its facilities for golf and tennis, to say nothing of its proximity to Wembley, was continuing to attract many guests. On the hotel side of their business the last year was one of steady and satisfactory progress. They had acquired a site of some 20 acres in one of the most favoured resorts, with business practically all the year round. The directors believed this to be one of the finest hotel sites in the country.

The report and accounts were unanimously adopted.

The Unending Search

The triumphs of science are the results of controlled imagination, close calculation, and unswerving devotion to a definite ideal.

Seventy years of thought and experiment lie behind the complete security represented by The Chatwood Safe and Strong Room of to-day. During that period the skill of the burglar has increased enormously. The modern Bill Sikes uses such scientific aids as the electric drill, the almost soundless high explosive and—perhaps most powerful of all—the oxy-acetylene flame, which cuts through ordinary steel as a hot knife passes through butter.

It has been no easy matter to provide a sure defence against attacks by such weapons, but through concentration on this one high aim every possible risk has been foreseen and countered in The Chatwood Safe and Strong Room.

THE Since 1858
CHATWOOD
SAFE —————

THE CHATWOOD SAFE BOOK, containing full details of the security system and offered, also expresses in some measure the high ideals of the firm. A copy is sent gratis on receipt of a postcard.

	Other countries .. 325
Total declared value of imports .. £ 833,747	Total declared value of exports .. £ 1,178,028

Messrs Samuel Montagu and Co. write, on July 9th, as follows:—

GOLD.

Of the fair amount of gold on offer this week only a small proportion has been taken for India. We are officially informed that the law fixing the unit of the gold standard currency was passed by the Estonian Parliament on the 20th ultimo. This law lays down that the unit of the gold standard currency system of the Estonian Republic is to be a crown ("kroon"), containing 0.403226 grammes of fine gold, which, calculated at the present price of gold (95s 2d), is equal to 1s 2.8d. At the pre-war gold price (84s 10d) this unit would be worth about 1s 1.2d.

SILVER.

There has been considerable lassitude displayed during the week. Neither buyers nor sellers have been eager to operate. A certain amount of bear covering has taken place, and the Continent has again taken some silver for coinage purposes, but the Far East has been slow to do anything on this side. America has kept in touch with the market by moderate offerings, and the Continent has been a seller on a small scale. The production of silver in Germany appears to have recovered from the restrictions imposed upon it by the war. The output for 1912 was 4,984,677 fine ounces; for the years 1914-19 no returns have been published. The total for 1920 was 3,305,000 ounces, and for 1921 3,387,400 ounces, but that for 1922 rose to 5,372,600 ounces; that is to say, about 8 per cent. above the pre-war total. A recent bulletin of the American Mining Congress stated that Representative Richards (Democrat, Nevada), in urging the passage of the Bill to require the U.S. Treasury to purchase 14,000,000 ounces of silver at \$1 the ounce under the Pittman Act, said that the Government had failed to carry out the law, to the detriment of the silver industry. He deplored antagonism toward silver as money, and advocated giving silver a fixed money value.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	June 15.	June 22.	June 30.
Notes in circulation ..	17,455	17,126	17,249
Silver coin and bullion in India ..	7,671	7,742	7,865

Securities (Indian Government) ..	1,399	1,399	1,399
Securities (British Government) ..	400	400	400

No silver coinage was reported during the week ending June 30th. The stock in Shanghai on the 7th inst. consisted of about 40,400,000 ounces in sycee, 41,500,000 dollars, and 2,560 silver bars, as compared with about 39,500,000 ounces in sycee, 41,000,000 dollars, and 1,930 silver bars on the 28th ult.

BROKEN HILL SOUTH, LIMITED.—For the four weeks ended June 28, 1924, 21,270 tons of crude ore and 7,732 tons of de-leaded slimes residues were treated and produced, 3,320 tons of lead concentrates, assaying 67 per cent. lead and 20 oz silver per ton; also 5,472 tons of zinc concentrates, assaying 44 per cent. zinc.

BURMA CORPORATION, LIMITED (Incorporated in India).—Cable advices received this day report:—During the month of June 23,078 tons of ore were mined, 22,160 tons of ore were milled in the treatment plant, producing 11,516 tons of lead concentrate, 11,449 tons of lead-bearing material were smelted in the blast furnaces, producing 4,581 tons of lead for treatment in the refinery. Refinery products were 4,102 tons of refined lead, 432,675 oz of refined silver. Of silver production 6,000 oz were recovered from the treatment of copper matte. Experimental zinc plant produced 1,700 tons zinc concentrate, assaying 105 oz silver, 72 per cent. lead, 45.2 per cent. zinc. In addition to above, 350 tons copper matte were produced from the treatment of 1,702 tons copper ore and accumulated smelter by-products.

NORTH BROKEN HILL, June:—North section—22,950 tons of crude ore were treated, producing 3,930 tons lead concentrates, averaging 64.5 per cent. lead, 32 oz silver per ton, and 7.8 per cent. zinc; also 3,530 tons zinc concentrates, averaging 48.7 per cent. zinc, 7 per cent. lead, and 8 oz silver per ton. British rates, averaging 63.2 per cent. lead, 27.7 oz silver per ton, and 6.5 per cent. zinc; also 2,000 tons zinc concentrates, averaging 44.9 per cent. zinc, 7.2 per cent. lead and 8.7 oz silver per ton.

SAN FRANCISCO MINERS OF MEXICO, LIMITED.—Cable advice of operations for June:—Ore treated, 12,690 tons; lead concentrates produced 2,354 tons; zinc concentrates produced 2,522 tons. Estimated net smelter return on lead, \$124,837 (U.S. currency); on zinc, \$70,866; total, \$195,703. Operating expenses, \$74,583; estimated operating profit, \$121,118. Capital expenditure, \$37,662.

TRANSVAAL SILVER AND BASE METALS, LIMITED.—Output for June:—419 long tons of silver-lead bullion, containing 43,539 oz of fine silver. Output is higher than usual, owing to the treatment during the month of June of the sinter, which accumulated while the blast furnace was closed down for repairs in the previous month.

out that the result of the year's trading would have revealed a larger profit but for the heavy working expenses and the loss on remittances.

AUSTRALIAN ESTATES AND MORTGAGE.—The gross profit for 1923 amounted to £311,423, and after deducting the current expenditure and English and Australian income-tax, a balance of £166,619 is brought down. After providing for the interest on all the debenture stocks of the company and carrying £25,000 to the credit of the reserve account, bringing this up to £185,000, there remains £55,502, which, with the £8,553 brought forward from last year, leaves a credit balance of £64,055. Out of this the directors recommend the payment of a dividend of 6 per cent. on the consolidated ordinary stock and the capital paid up on the ordinary shares as appearing on the register at July 2nd, which will absorb £56,664, leaving £7,391 to be carried forward. The report goes on to say that the past year has been one of severe drought over large areas, in both Queensland and New South Wales; the rains which fell in June and July, and which were referred to as encouraging in our last report, being followed by a long spell of dry weather. The results of this unfavourable season are reflected in a decrease in the wool clip, an increased mortality of stock, a reduction in lambing, and a heavy outlay on drought expenditure. Moreover, the sales of cattle have been very disappointing, and the sugar crops of the year have been a practical failure. On the other hand, there has been a good market for wool during the year at high and advancing prices. The drought which has more or less affected New South Wales and Queensland for the past two years came to an end in the early months of the present year, and since then very good rains have fallen in both States, especially in Queensland, and the outlook generally is now satisfactory. While there has been a slight reaction from the highest prices, the condition of the wool market is strong, and the prospects are encouraging. Prices for cattle continue depressed, with little promise of any early recovery.

BENSON AND HEDGES, LIMITED.—The balance-sheet and accounts for the year 1923 represent the 13th year of the company's operations. The trading profits have been well maintained. The directors state that the New York Corporation reports expanding business, and the latest returns point to increased profits for the current fiscal year. The position of the Canadian company, to which attention was called in the letters addressed to the preference shareholders in December and January last, does not warrant a change in the policy then indicated, although the directors are glad to report that prospects have considerably improved. While the Canadian company has been enabled to meet all its obligations, the directors have decided to postpone the payment of the preference dividends due on July 1st and July 31st next, and to make an addition to the reserve account of £10,000, increasing this to £15,000, and to carry forward the balance. The net profit of £13,023 compares with £15,270 for 1922.

CLAUDIUS ASH, SONS, AND CO.—This dental manufacturing under taking has experienced better times in 1923. The report just issued reveals a net profit of £48,890, against £4,590 for 1922. The ordinary shareholders receive 5 per cent., against nothing for 1922, and £13,759 is carried forward, against £13,759 brought in. The directors report that the improvement in business during 1923 has produced encouraging results, but the non-stabilisation of foreign exchange in many of the European countries still prevents expansion of the export trade which had been expected. A substantial amount has been recovered in liquidation of the pre-war assets in ex-enemy countries, and it is anticipated that the full amount outstanding will be received in course of time.

COURTAULDS.—The directors have decided to pay on August 1, 1924, an interim dividend in respect of the year ending December 31, 1924, of 1s per share, and a bonus of 3d per share, making together 1s 3d per share, free of income-tax, to the holders of the existing shares of the company whose names are registered in the books of the company on June 26, 1924. They have placed a value of £16,013,628 17s 9d upon the shares held by the company in the American Viscose Corporation, and have carried the additional value thus shown, amounting to £8,209,607 11s, to the credit of capital reserve account. They have also decided to recommend to the shareholders that the capital of the company be increased to £20,000,000 by the creation of 8,000,000 5 per cent. cumulative preference shares of £1 each, dividends payable half-yearly, less income-tax, and that the sum of £8,000,000 out of the amount standing to the credit of capital reserve account be capitalised and be applied in making payment in full at par for the said preference shares, and that such fully-paid preference shares be distributed among the holders of the existing shares of the company whose names are registered in the books of the company on June 26, 1924, at the rate of two fully-paid preference shares in respect of every three existing shares of the company then held by such shareholders respectively. A formal notice of the shareholders' meeting of the company to be held on July 17, 1924, and the resolution to be passed thereat in order to give effect to this proposal has been sent to the shareholders. If this recommendation is agreed to, the first dividend on the new preference shares will be payable on January 1, 1925, for the first six months ending December 31, 1924, at the rate of 5 per cent. per annum, less income-tax.

DE TREY AND CO., LIMITED.—This well-known dental concern has increased its net profit from £58,228 for 1922 to £62,902 for 1923. For 1922 the ordinary shareholders received no dividend, but for 1923 they received 7 per cent., less income tax. The sum of £6,290 goes to reserve, making it £83,507. Goodwill and contingency reserves remain at £26,000 and £15,779 respectively. The sum of £20,674 is carried forward, against £30,762 brought in. The ordinary issued capital is £1,139,488 in £1 shares, and there are £100,000 in 7 per cent. cumulative preference shares. There are no debentures. Creditors at £42,642 compare with £39,834. Total assets are £1,586,947. Cash is at £44,605, against £46,907.

Debtors stand at £614,060, against £429,091. Stocks at £247,461 compare with £318,522. Investments in subsidiaries amount to £454,536, against £355,447. The company's holding of British, Colonial, and foreign Government securities has been reduced from £211,615 to £130,594.

DUMONT COFFEE COMPANY, LIMITED.—We are informed that the crop for the year 1923, which was estimated in the December interim report at over 77,000 cwt, has weighed out 84,422 cwt. The delays in marketing the crop due to the regulation of supplies by the Brazilian Government, and in a measure to railway disorganisation, have continued, and only about 20,000 cwt have been sold to date. The coffee has realised good prices, and the statistical position being strong, the market outlook is favourable. With such a large proportion of the crop unsold, the annual accounts cannot conveniently be submitted by the customary date, and it is proposed to defer issuing them until such time as a substantial proportion of the crop shall have been sold. It is expected that during the next few months regular arrivals of the coffee may be counted on. Payments on account of the arrears of the preference dividend will be made as and when the sales of coffee permit.

INTERNATIONAL TEA COMPANY'S STORES.—This well-known concern has had a good year. The trading profit has jumped up from £396,983 to £431,348 for the year ended April 26, 1924. The ordinary dividend has been raised from 18 per cent. to 19 per cent. The sum of £100,000 is again put to reserve, and the carry forward has been increased from £100,205 to £134,848. Total assets are £2,816,514. Goodwill account is unchanged at £626,675. Freeholds at £734,047 compare with £678,275. Stocks stand at £704,759, against £677,718. Debtors are at £265,500, against £271,181. Cash has increased from £103,100 to £112,793. With regard to liabilities, issued ordinary and preference share capital is unchanged at £1,700,000. There are no debentures. Creditors at £406,317 compare with £390,774. Reserve account now stands at £384,906.

J. W. BENSON.—This well-known firm of watch makers, jewellers, &c., of Ludgate hill, London, have succeeded in maintaining their net profit during the year ended March 31, 1924. The net profit amounts to £46,383, and includes dividend on the shares held by the company in Hunt and Roskell to end of 1923. This compares with a net profit of £45,074 for year ended March 31, 1923. Including £93,308 brought in, there is £139,691 to credit of profit and loss account. The dividend on the ordinary shares is again 12½ per cent. After paying this, there is a balance of £98,628 to carry forward. Assets total £885,496. Cash is higher at £32,871, as against £30,065. Investments at cost remain the same at £220,310. Stock and book debts stand at £174,564, against £174,835. With regard to liabilities, reserve stands at £161,000, against £150,000. Creditors are lower at £14,926, against £27,198.

LAGUNAS NITRATE.—For the year 1923, gross profit, including transfer fees, interest on investments and bank deposit, after allowing £3,249 for caliche extracted and used, amounted to £36,360. Deducting the usual administration charges, provision for income-tax, corporation profits tax, and the cost of new belt conveyor, there remains a net profit of £18,774. A dividend of 2 per cent., free of income-tax, is recommended. To facilitate the installation of the belt conveyor, the Maquina was closed at the end of last December, but working operations were resumed on April 15th of this year.

PLATT BROTHERS AND CO.—This large undertaking of Hartford Iron Works, Oldham, has experienced a decline in net profits from £735,951 for year ended March 31, 1923, to £372,322 for the year ended March 31, 1924. The ordinary dividend has been reduced from 20 per cent. to 15 per cent. No allocations are made to reserve, but the carry forward is increased from £66,447 to £118,484. Turning to the balance-sheet, we find that total assets are £6,521,778, against £6,672,078. They are shown in four items—i.e., land, buildings, machinery, tools, plant, collieries, and convertible stock and goodwill, £3,728,164, against £3,823,449; home and foreign investments, consisting of Government stocks and trustee securities, £1,647,294, against £1,396,518; debtors at £1,005,683 compare with £1,133,336, and cash and bills have been reduced from £319,176 to £140,637. No changes have taken place in capital during the past year. Ordinary £1 shares amount to £1,855,080. The 7 per cent. preference shares total £618,360, and 4½ per cent. preference shares £1,236,720. There are 3½ per cent. debentures amounting to £1,030,600. Creditors have been reduced from £276,175 to £138,765. Reserve fund is £1,000,000, and taxes reserve fund £380,000.

TRUSTEES CORPORATION, LIMITED.—After providing £23,056 for interest, less income-tax, on the debenture stocks, the profit and loss account for the year shows a credit balance of £80,729. To this has to be added £50,604 brought forward at May 31, 1923, making the amount to be dealt with £131,423. Preference dividend absorbed £18,309, leaving £113,114. The ordinary dividend transfers have been made:—To provide for placing rents and trustee and agency fees on a cash basis, £12,749; to reserve fund contingencies account, £5,000; leaving to be carried forward, £22,815. The report adds that, according to a valuation, based on the market prices at May 31, 1924, the amount at which the investments of the corporation stand in the balance-sheet is fully represented. Quotations have been obtained for more than 90 per cent. of the securities, and the value of the balance has been estimated. The transfer of £12,748 from profit and loss account for rents and trustee and agency fees accrued to May 31, 1923, has been made in order to place all the revenue of the corporation on a cash basis, as has long been the practice in the case of the investment income.

STEAUA ROMANA (BRITISH).—This company have received a telegram from the Steaua Romana, Bucharest, advising that the new mining law has been passed after substantial favourable alterations, and that the future prospects of the company are satisfactory. A further telegram advises that their newly opened well No. 1A, at Runcu, is now flowing at the rate of 100 tons per day. Steaua Romana also report that they have brought in a new well, No. 300, at Runcu, which is in eruption and likely to prove a productive well. Well No. 1A Runcu continues to flow at the rate of 80 to 90 tons per day.

Commercial Reports.

THE CORN TRADE

Mark Lane, Friday Evening.

Growing crops in the United Kingdom are making rapid progress under ideal weather conditions. Spring sowings have made up considerable leeway, while winter wheat presents a very healthy appearance, and promises a good yield. Native wheat continues in very small supply, and prices have further hardened at most of the principal Statute markets, 12s to 12s 6d being paid per 112 lbs free on rail. Imported descriptions opened the week with a quiet and easier tone, but subsequently improved on higher forward offers. Strong Canadian kinds continue to be sparingly offered. No. 1 Northern Manitoba quoted 54s, No. 2 ditto 53s, No. 3 ditto 51s 6d, Barusso 63½ lbs 49s 9d, and Australian 52s, all ex ship per 496 lbs. The floating and forward cargo section displayed more activity, and prices moved in sellers' favour. Steamers of Pacific, 6,800 tons, August 10th loading, sold at 52s, South Australian loading 50s 6d, Barusso 63½ lbs afloat, also July 47s, choice white Karachi July 49s, and August 49s to 49s 1½d per 480 lbs. Maize cargoes were also accorded better support, particularly on Continental account, owing to adverse condition of

North American crops, which accounts for fairly liberal bookings in that direction from Argentina. Steamers of Plate afloat sold at 33s to 33s 6d, ditto expected to load 20th inst. 35s 3d, July-August 34s 9d, October 35s 7½d, November-December 35s 7½d, white South Russian July 36s, and Dan.-Gal.-Fox-Bulgarian afloat 36s 6d per 480 lbs. Flour in moderate request, but prices fully steady. London standard straight run quoted 41s 6d, patents 43s 6d to 44s 6d, town whites 41s 6d per sack delivered in London area. Imported quietly steady, with a moderate demand for best grades. Canadian patents range from 40s to 41s, and Australian 36s 6d to 37s per 280 lbs ex store. Barley, imported, firmer. Californian quoted at 58s-64s, Chilean brewing 50s-52s, both ex ship per 448 lbs. No. 3 Canadian-Western ex ship 36s, Karachi ex ship 35s 9d, ditto landed 37s, Russian landed 36s 9d, all per 400 lbs. English nominal. Oats steadier for Plate descriptions. Plate f.a.q. ex ship 21s 3d, ditto landed 22s 6d, No. 2 Canadian-Western ex ship 25s 9d, ditto landed 27s, No. 2 Canadian feed landed 24s 9d per 320 lbs. English ranges from 9s 9d-11s 3d per 112 lbs free on rail. Maize firmer. Plate ex ship 35s 3d, ditto landed 37s 3d, Odessa landed 37s per 480 lbs. Oatmeal steady. London make flaked 17s, rolled oats 16s 6d, medium and fine cut 16s 6d, coarse and medium pinhead 16s 6d, ordinary Scottish oatmeal 17s 6d-18s per cwt. Millers' offals firm, with a good demand. Broad bran quoted at 7s 6d, ordinary 6s 6d-7s, middlings 9s 3d, fine ditto 10s 6d, bags included, ex mill, light oats 6s 3d, powdered oat husks 7s 3d, feed oatmeal 9s 6d, ground oats 12s per cwt free on rail.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-1924.	1922-1923.	1921-1922.	1920-1921.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated July 10th, is as follows:—Pig-iron: Although there has been a little fresh business done this week, the market remains quiet on the whole, with No. 3 Cleveland G.M.B. unchanged at 88s 6d per ton. For a fairly large order, however, no doubt this figure could be shaded. The hematite position shows no signs of improvement, and the quotation for mixed numbers is still at 96s 6d per ton, but for firm business it could doubtless be put through at 96s per ton. Manufactured iron and steel: There has been a little more doing in the street trade this week. Prices remain unchanged. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: Business in foreign ore is practically stagnant, as consumers are fairly well situated with what they have coming forward against running contracts. Best Bilbao Rubio is nominally 23s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—The week has brought no relief to the extreme depression which recently descended upon the iron and mild steel branches, and the local open hearth melting plant is not operating to a third of its capacity. As the drop in output compared to a year ago is very large, the trouble cannot be explained by seasonal influences. July and August, however, are generally the quietest months of the year. A rather heavy decline in exports is a considerable factor in the present unsatisfactory condition. No contracts for billets of any weight have been booked for a long period, and there is but little inquiry. Re-rollers report a meagre demand for rods and bars; sheets and sections are less affected by the slump, and one of the busiest sections of local industry is the manufacture of alloy steels for the motor trade. Railway steel is also being specified freely, and cold rolled steel is receiving a good deal of attention. Rolling mills in Sheffield maintain half-time working. Unemployment is increasing. In the pig-iron market there are no signs of a buying movement, and the reduction in coke has caused users to hold off the market in the expectation of lower prices. Foundry and hematite pig are easier, and basic quality is quiet. The demand for forge iron is negligible. The finished branches are looking up a little, and the receipt of substantial orders from Russia is responsible for increased activity in the file department. Most kinds of hand tools are selling freely, but buying has quietened down on account of the holiday season. Business in the fuel market is slow, and very little coke is wanted either by the home market or for export. A graded scale of prices for coke based on its moisture and ash content has been adopted, and will be worked to in the future. The basis price for blast furnace coke having 20 per cent. moisture and ash content is now 20s 6d per ton at ovens. Slacks are the only classes of fuel which show any evidence of strength. Railways are taking a substantial tonnage of steam coal. Prices generally tend downwards. Current quotations per ton at pits are: Best hand-picked branch, 34s; Barnsley best Silkstone, 28s; Yorkshire hards, 23s; Derbyshire do., 21s 6d; rough slacks, 12s 6d to 13s 6d; smalls, 8s to 10s.

Our Glasgow correspondent writes as follows:—Apart from the customary urgent calls for special lots required for delivery before the holidays, there is not much business passing in the iron and steel trades this week. Several of the steel works are busy at stocktaking, and all are making preparations for next week's annual stoppage. A good deal is heard about Continental competition in semi-raw materials, and it is understood that 8,000 tons of billets and sheet bars of Belgian manufacture have been sold to Scotch re-rollers at £7 5s per ton delivered. The same applies to steel bars and joists, which are being offered here at about 20s per ton below local makers' prices. Shipbuilders are negotiating the placing of their steel requirements for the work in hand, and it is anticipated rolling mills will have some substantial orders on their books when operations are resumed after the vacation. Iron makers are just able to keep going, bars for common use being increasingly preferred in re-rolled steel owing to an advantage in price of about £3 per ton; but real puddled iron for work that matters is not likely to be displaced, and it is remarkable that there are inquiries on the market at the present time for considerable quantities of plate and bar material, with the proviso that steel will not be accepted. Sheet makers are still busy with export orders, and delivery for late September is about the best promise buyers can obtain. Galvanized sheets are in strong request. Although the demand is not quite so great as

it was, makers are so well booked that any reduction in price is not to be expected in the immediate future. The pig-iron market has been quiet, with values weakening slightly. For the week ending Saturday last the shipments from Glasgow Harbour totalled 1,722 tons.

Our Cardiff correspondent writes:—There has been no improvement this week in the state of business on the Cardiff coal market. The volume of the coal export trade continues to fluctuate from week to week. The shipments in the week ending July 4th were higher than for some weeks past, and included heavier exports both to France and Italy; but these increases were merely incidental to the arrangement of charters for the carriage of contract coal, and all the collieries have this week been complaining of the acute dearth of orders. There are few collieries working full time, and at some employment has been found possible on only four or five days of the week. The financial position is causing grave alarm. It is estimated that more than three-fourths of the pits are now working at a loss, and that at some of the pits the losses are so heavy as to involve eventual bankruptcy. The following are the current approximate quotations:—Best Admiralties, 28s 6d to 29s; second Admiralties, 26s 9d to 27s 6d; best drys, 26s 6d to 27s; Black Veins, 26s 6d to 27s; Western Valleys, 26s to 26s 6d; Eastern Valleys, 24s to 26s; best bunker smalls, 17s to 17s 6d; ordinary cargo smalls, 15s to 16s 6d; coking smalls, 17s 6d to 18s; anthracite Big Vein, large, 52s to 53s; machine-made cobbles, 57s 6d to 62s 6d; French nuts, 60s to 62s 6d; stove nuts, 50s to 55s; rubble culm, 15s 3d to 15s 9d; coke for export, 52s 6d to 57s 6d; inland blastfurnace coke at ovens, 30s to 35s; patent fuel, 28s to 29s 6d; pitwood, ex ship, 25s 6d to 26s 6d. In the tin-plate trade the position is slightly easier. Minimum prices are being maintained, but foreign demand is less active.

METALS.

Tin displayed slight irregularity and weakness on some pressure to sell, with business on a moderate scale. Standard cash sold at £225 5s to £223 10s, and three months £226 10s to £225 15s to £227, while finally at £224 5s. Sales in the East occurred at £226 5s c.i.f. At Thursday's market standard cash quoted at £220 10s to £220 15s, with business in three months at £224 to £222 5s to £222 10s. Tendency of prices ruled in sellers' favour at the close, though offers were only moderately absorbed. Standard cash sold at £222 and three months £224 to £223 15s to £224 2s 6d. English ingots quoted at £224 to £224 10s. Copper.—A fair turnover resulted during the week, and prices on balance were fully steady. Standard cash sold at £61 to £60 13s 9d to £60 15s, and three months £61 17s 6d to £61 18s 9d to £61 13s 9d. On Thursday

THE DAILY SKETCH and SUNDAY HERALD LIMITED.

(Incorporated under The Companies Acts, 1908 to 1917.)

CAPITAL:

£1,000,000 in Ordinary Shares of £1 each, all of which are issued with 2s. paid up.
£1,600,000 Six and one-half per Cent. Guaranteed Mortgage Debenture Stock.

OFFER FOR SALE OF

£1,600,000 Six and one-half per Cent. Guaranteed Mortgage Debenture Stock at £99 per Cent.

(Interest payable half-yearly—1st May and 1st November.)

Repayable at 107 per cent. by a Cumulative Sinking Fund of 3 per cent. per annum, the first payment to be made 1st November, 1925, and the last in 1944, to be applied in purchases on the market at or below 107, or failing such purchases by drawings at 107. Drawings will be made in September of each year, and the Stock so drawn paid off in the following November.

The Stock will be secured by a Trust Deed containing a First Specific Mortgage on the Freehold Lands and Buildings in course of erection, plant, machinery, &c., a first charge on £900,000 being the uncalled capital of the Company, and a first floating charge on the undertakings and other assets of the Company.

The due payment of principal, premium and interest will be unconditionally guaranteed, jointly and severally, by the Daily Mirror Newspapers Limited, and Sunday Pictorial Newspapers (1920), Limited. Neither of these Companies has issued any Debentures or Debenture Stock, and each will covenant that it will not during the currency of the Debenture Stock of this issue, create any Debentures or Debenture Stock charged upon its undertaking or assets.

The Company reserves the right to redeem the Debenture Stock, or any part thereof, at 107 per cent. on two months' notice, and also reserves the right to purchase Debenture Stock on the market at any price not exceeding 107 per cent., but such purchases will not be in substitution for annual drawings or for purchases out of the Sinking Fund.

The Company has agreed with the Trustees to pay no dividends on its Share Capital until all the Debenture Stock now issued shall have been redeemed.

The Debenture Stock will be registered, and transferable in multiples of £1.

THE BRITISH, FOREIGN & COLONIAL CORPORATION, LIMITED,
B.F.C. House, Gresham Street, E.C.2,

will receive applications for the purchase from them of the above £1,600,000 Debenture Stock through their Bankers

MIDLAND BANK LIMITED, 5, Threadneedle Street, London, E.C.2, and Branches,

LLOYDS BANK LIMITED, 72, Lombard Street, London, E.C.3, and Branches
at 99 per cent.

TRUSTEES FOR DEBENTURE STOCK HOLDERS.

THE LAW DEBENTURE CORPORATION, LIMITED, 24, Old Broad Street, London, E.C.2.

DIRECTORS:

SIR S. HARDMAN LEVER, Bt., K.C.B. (Chairman).
JAMES HEDDLE (Managing Director).
SIR FREDERICK H. SYKES, G.B.E., K.C.B., C.M.G., M.P., Director Underground Rlys., Ltd.
HAROLD C. A. HARMSWORTH, Director E. Hulton & Co., Ltd.
JOHN COWLEY, Chairman The Daily Mirror Newspapers, Ltd.
SIR MAYSON M. BEETON, K.B.E., Director Anglo-Newfoundland Development Co., Ltd.
LT. COL. WILFRED H. WILD, D.S.O., Director Associated Newspapers, Ltd.

SOLICITORS:

To THIS OFFER, CLIFFORD TURNER & HOPTON, 81/87, Gresham Street, E.C.2.
To THE TRUSTEES, BIRCHAM & CO., 50, Old Broad Street, E.C.2.

BROKERS TO THE OFFER:

J. & A. SCRIMGEOUR, 6, Austin Friars, London, E.C.2.
READ & BRIGSTOCK, English House, 58, Gresham St., E.C.2.
BUCHANAN, GAIRDNER & TENNANT, 19, St. Vincent Place, Glasgow.

COPPOCK & BRATBY, 80, Cross Street, Manchester.
HORNBY, TOBIN & OOKLESTON, 8, Tithebarn St., Liverpool.
FISHE & HORTON, 8 Temple Row West, Birmingham.
WISE, SPEKE & CO., 53, Grey Street, Newcastle-on-Tyne.

In addition to a charge upon the valuable copyrights of the two publications, the Debenture Stock is secured upon the Freehold Lands and Buildings in course of erection and all the other assets of the Company representing £812,000; also on the uncalled liability of 18s. per share on the million shares subscribed by the Guaranteeing Companies and the Board, amounting to £900,000, and has further security by virtue of the guarantee already referred to in the net assets of the "DAILY MIRROR" and "SUNDAY PICTORIAL" certified as at February 29th, 1924, at £1,719,558, without the inclusion of goodwill.

The net profit of the "DAILY SKETCH" and "ILLUSTRATED SUNDAY HERALD" for the year ended June, 1924, after allowing for all charges other than taxation, was over £180,000, and the Guaranteeing Companies have realised profits, as shown by the Accountants' Certificate, of £489,479 for the year ended February last, the average for the last eight years being £274,680. The Debenture interest of £104,000 per annum is therefore amply covered.

Copies of this Offer for Sale can be obtained from the Company,
the Bankers, the Brokers, the Trustees and the Issuing House.

THE MONEY MARKET.

ALTHOUGH the end of June influences are now fully spent, the demand for loans in Lombard Street has remained fairly strong, and up to 3 per cent. has frequently been paid for fresh accommodation, with a charge for renewals in some quarters. This has helped to sustain the level of discount rates, aided by the possibility that a higher level of loan rates might be stabilised without reference to Bank rate or deposit rates, so rendering Bank rate fully effective at the present level. Though

success in this should have the effect of postponing an actual advance in the official rate, fine three months' bills have not been quoted below $3\frac{1}{2}$ per cent., and the rate for October Treasury bills has been kept close up to $3\frac{1}{2}$ per cent., but business has been small, especially at the end of the week, pending the removal of uncertainties on the subject of money rates.

	July 18, 1924.	July 11, 1924.	July 4, 1924.	June 27, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses' Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate 3 months' bills	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	..

The Bank return showed an increase in the Reserve of £1,069,100, of which £1,067,300 was attributable to the inflow of notes from circulation. Government securities were reduced by £2,870,000, and Other securities rose by £230,500, while Public deposits increased by £1,811,100. Consequently, Other deposits showed a contraction of £3,428,400, and the ratio of the reserve to liabilities improved from 17.1 per cent. to 18.2 per cent. Currency notes outstanding were reduced by £841,200 to £292,844,500, which includes £1,382,200 for notes called in but not yet cancelled. The fiduciary issue is £242,012,300, or £6,178,600 below the maximum.

THE STOCK MARKETS.

The fading away of fears of an early rise in Bank rate produced a good effect in the stock markets, which would have been greater had not the revolution in Brazil created anxiety. Gilt-edged stocks have been decidedly firm, and a strong recovery followed the initial slump in Brazilian securities. Foreign stocks have not been much affected by the inter-Allied conference in London. Business in Home Rails remains quiet, in spite of the approach of dividend announcements. The rubber share market responded to the rise of the price of the commodity, while tea shares fell and recovered. Brewery stocks are conspicuously strong on dividend expectations. Apart from a little excitement in East Rand shares, the Kaffir market spent a quiet week.

THE COMMODITY MARKETS.

In one or two directions a recovery in markets is noticeable this week. Demand in the cotton trade is rather more active; although lower values are anticipated in some quarters for manufactures, in others it is thought that the raw material may not be cheaper in the future. Some improvement in the wool trade is recorded by our Bradford correspondent. Lower prices and an acute dearth of business is the burden of our Cardiff correspondent's report upon the coal trade. From Middlesbrough we are informed that the export of pig-iron is practically stopped owing to foreign competition. The tin market was weak, but copper ruled steady. Wheat was in good demand, and the price moved upward. Further details of the markets, together with prices, will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

In the foreign exchange market business, on the whole, has remained quiet under the influence of somewhat anxious expectations aroused by the London Conference. Interest has been concentrated mainly upon the dollar rate, which has shown more violent fluctuations than have been customary for some time past. From \$4.35 $\frac{3}{4}$ at the close of business on the 11th, the rate rose rapidly to \$4.38 $\frac{1}{2}$ at Monday's close. On the following day there was a sharp reaction, the quotation falling at one time to as low as \$4.36 $\frac{3}{4}$, but ending with a partial recovery at \$4.37. On Wednesday it was up at one time to \$4.38, but closed at \$4.37 $\frac{1}{2}$, and fell the next day to \$4.36 $\frac{3}{4}$. Yesterday morning it showed a slight recovery to \$4.37 $\frac{1}{2}$. This reaction was only to be expected after the recent rapid rise, but the immediate future is by no means clear. At this time of the year the weight of autumn requirements might be expected to depress rates, but on the other hand, the money market position in the two countries might at the moment

be expected to work the other way, while the position has been further complicated by certain special operations on Continental account. The forward rate has widened to about $\frac{1}{2}$ cent below par for one month up to three. The Paris rate, which recovered to 83.05 on Monday, has gradually reacted to an increasingly doubtful attitude towards the results of the Conference, and yesterday morning stood at 85.70, as compared with 85.50 a week ago. Business, however, has been on a relatively small scale. Brussels, while following roughly the same course, has continued its recent relative improvement, and stood yesterday at 96, as compared with the previous week's 96.50. Forward rates for Paris show little change at about 20 centimes per month above spot, while Brussels has narrowed rather to 5 to 8 centimes below. The lira, after its recent slight depreciation, shows some recovery, and is steady at 101 $\frac{1}{2}$ as compared with 102.10 a week ago. The German mark continues unaffected by the present negotiations at 18 $\frac{1}{2}$ billion. Among the neutrals, Amsterdam has followed fairly closely the fluctuations of the dollar, moving from 11.54 to 11.55 $\frac{1}{2}$ on the week. Switzerland, after continuing its recent sharp improvement, has reacted somewhat to 24.02 $\frac{1}{2}$, as compared with 23.97 $\frac{1}{2}$ a week ago. Madrid, after remaining fairly steady during the week, moved somewhat sharply yesterday morning to 32.94 $\frac{1}{2}$ from 32.90. In Northern Europe, Stockholm has gone in our favour from 16.36 $\frac{1}{2}$ to 16.42 $\frac{1}{2}$, Christiania at about 33.55 shows little movement, while Copenhagen has appreciated slightly to 27.12 $\frac{1}{2}$. Helsingfors, on the other hand, has moved up from 173 $\frac{1}{2}$ to 174 $\frac{1}{2}$, while Riga and Warsaw continue to maintain their gold parity. In Central Europe, Vienna has followed the dollar to 310,500, while Budapest retains its temporary stability with sterling at 355,000 and Prague also remains steady at 147 $\frac{1}{2}$, while Bucharest at 985, as compared with 1,025, is better, probably on requirements in connection with the harvest. In the East, the rupee has improved in value from 1s 5 $\frac{1}{2}$ d to 1s 5 $\frac{1}{4}$ d, but the yen has fallen back from 1s 10 $\frac{1}{2}$ d to 1s 10 21-32d. The silver market has been quiet and steady, with little or no movement in price. America is still selling only sparingly, and demand from both India and China is dull. Hong Kong and Shanghai, after remaining quite steady through the week at 2s 4 $\frac{1}{2}$ d and 3s 3 $\frac{1}{2}$ d respectively, fell yesterday morning to 2s 4 $\frac{1}{2}$ d and 3s 3 $\frac{1}{2}$ d. In South America the revolt in Brazil continued to have a depressing effect on the Rio quotation, but there was a recovery yesterday to 5 $\frac{1}{2}$ d, as compared with 5 $\frac{1}{4}$ d on the 11th. Buenos Aires fell on the week from 40 $\frac{1}{2}$ d to 40d, and Monte Video from 42 $\frac{1}{2}$ d to 41 $\frac{1}{2}$ d, while Valparaiso also depreciated a little from 41.80 to 42.80 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 12th:—

(000's omitted.)			
EXPENDITURE.	£	REVENUE.	£
Supply Services	8,650	From Revenue	12,460
Interest, &c., on Debt	707		
Sinking Fund	100		
Added to Exchequer Balances ..	33		
Reduction of Debt	2,781		
Sundries	189		
	12,460		12,460

Revenue came in on a reduced scale as compared with the corresponding period, amounting to £12,460,300, against £16,874,000. The chief cause of the decline was the lower receipts from Property and Income-tax, which amounted to £5,717,000, against £7,488,000. Super-tax receipts, however, were higher at £980,000, against £650,000. Customs receipts were reduced from £2,455,000 to £1,821,000, and Excise from £1,409,000 to £1,115,000. The week's operations reduced the National Debt by £2,781,050, and caused the following changes:—

(000's omitted.)			
	£		£
National Savings Certificates ..	+ 50	Treasury Bills	565
Treasury Bonds	+ 284	Bank of England Advances ..	2,500
Sundries	+ 350	Public Dept. Advances	400
	+ 684		3,465

The floating debt was reduced by £3,430,000 to £793,998,500.

FINANCIAL YEAR, 1924-1925 (April 1 to July 12).

	£		£
Total Expenditure ..	237,049,740	Raised by Revenue ..	201,015,213
		Decrease in Balances ..	3,360,604
		Amount borrowed ..	32,673,923
Total	237,049,740	Total	237,049,740

ESTIMATES for YEAR 1924-25.

	£		£
Ordinary Expenditure ..	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure ..	3,178,000	Special Receipts	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

THE WEEK IN PARLIAMENT.

MONDAY, JULY 14TH.—*Lords*: Discussions on League of Nations and on the Singapore base. *Commons*: Full dress debate on the British and French attitude to the Reparations problem, the Chequers and Paris conversations, and the London Conference.

TUESDAY, JULY 15TH.—*Lords*: Debate on the division of the Diocese of Winchester. *Commons*: Report stage of the Finance Bill concluded.

WEDNESDAY, JULY 16TH.—*Lords*: Debate on compensation claims in Ireland. *Commons*: Committee stage of the Housing Bill begun.

THURSDAY, JULY 17TH.—*Lords*: Committee stage of the Legitimacy Bill concluded. *Commons*: Further progress made with the Committee stage of the Housing Bill.

FRIDAY, JULY 18TH.—*Commons*: Unemployment Insurance Bill third reading. Government defeated on an amendment.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Imperial Ottoman Bank, Imperial Bank of Persia, Bank of New South Wales, P. and O. Banking Corporation, Baker Perkins, Australian Estates and Mortgage, Apollinaris and Johannis, Anglo-Ceylon and General Estates, Argentine Navigation, Claudius Ash, De Trey, and International Tea Stores. Sir Herbert Lawrence, at the meeting of the Imperial Ottoman Bank, said that in the economic world any general improvement of the situation is to be sought in stimulating demand, thereby causing increased production, in a wider exchange of commodities, in the restraint, so far as that may be possible, of speculation, and not, as some people are disposed to believe, in artificial measures of assistance, which at best are merely palliatives. Sir Hugh Barnes, at the meeting of the Imperial Bank of Persia, referring to the failure of the Republican movement in Persia, said that the Persian merchant, who understands little of politics, and probably cares less, pursues his lawful business unperturbed.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE CONFERENCE GETS TO WORK.

AFTER the usual formal speeches and the appointment of Mr Ramsay MacDonald as President of the Conference, the Allied delegations have quickly settled down to work. Three committees have been set up. The first is dealing with the problem of possible German default, what body is to decide whether such default has occurred, and what steps may be taken to that effect. The second is considering machinery for restoring German economic and fiscal unity, while the third is considering methods of transferring German payments from the receiving body in Berlin to the creditor countries. The third committee has apparently nearly completed its work. After all, it can only deal with the fringe of this subject by setting up the necessary machinery. Nothing that is done now can really ensure that the necessary transfers can be made. The problem is one on which there is the widest room for difference of judgment, and the answer can

only be furnished by experience. The first and second committees are dealing with matters of more immediate importance. The path of the first committee has been unexpectedly smoothed by the declaration of the Americans that, while the United States could not consider appointing a full member to the Reparation Commission, it would have no objection to the appointment of an American citizen to deal with the question of German default if and when this arises. This is an encouraging start for the committee, which has still many difficult fences to jump, the most difficult of all being the claim of France to complete liberty of action if default occurs, and if she is not satisfied with the action proposed by her former Allies. We are strongly of opinion that it would be disastrous to allow any obscurity to remain on this point, or to arrive at a patched-up settlement, such as that proposed in last week's memorandum, namely, that when default has occurred the Allies will meet and consider the matter. It is imperative that a definite and final interpretation should be given to the disputed clauses under the Treaty of Versailles on this question. What action may legitimately be taken if Germany deliberately puts difficulties in the way of reparation payments? Are military measures justified, or are these a breach of the peace? If military measures are not permissible, what form of pressure is to be employed? Until definite answers are given to these questions the money markets of the world will naturally refuse to advance the loan needed to initiate the Dawes scheme. But there will be an even more serious consequence, for so long as this possible source of international dispute remains we can make no headway with France towards the political understanding which is needed to stabilise conditions in Europe, or secure the co-operation of Germany towards this end in the League of Nations.

We venture to hope that France may be encouraged to accept some limitation on the right of independent military action by the debate in the House of Commons on Monday, in the course of which Mr Asquith made a statement of very considerable significance. Speaking on the question of security, he used the following carefully considered words:—"What are the conditions under which we ought to proceed to attain that great purpose? First of all, in our view, any assurance or guarantee given to France ought to be given not as a separate guarantee to France, but as part of this country's general undertaking under the Covenant of the League of Nations. Next, the security offered, whatever it is, to France should be offered on equal terms to Germany. Thirdly, in order that that may be possible, it is obvious that Germany must be admitted to membership of the League of Nations and also through her representative to a seat on its Council. But that is not enough. The French will demand and will, I think, be entitled to demand something more. The opinion of this country is coming increasingly to believe that the British Empire—not only this country, but our Dominions—should undertake to guarantee both to France and Germany to use all its powers against either State which pressed a quarrel against the Allies without calling into use the machinery of the League." The formula in the last two or three lines of this statement is different from the plan proposed in the Treaty of Mutual Assistance, which commits the signatories to take definite action in the event of the Council declaring that some country has committed an act of aggression. Under it the Council of the League has to decide very promptly on the merits of the problem at issue, a decision which might be very difficult to settle at short notice. Mr Asquith's present formula commits us to definite action, not according to the merits of the particular dispute, but on the point that the machinery of the League must be used and a delay of a certain number of months enforced before war breaks out. In other words, the undertaking is not to carry out sentences hastily imposed by the Council of the League, but to prevent a breach of the peace. The formula is one which would have given France the assurance of our intervention in 1914, and it is one which is much more likely to be acceptable here than any other form of undertaking. Mr Ramsay MacDonald deliberately refrained from discussing this question fully, but on it he made the significant remark that "the line which the right hon. gentleman (Mr

Asquith) takes this afternoon is precisely the line I have been taking all through."

Monday's debate was notable in one other respect, namely, the large number of speeches from the back benches on all sides of the House in which scepticism was expressed on the whole Reparation policy. One or two speakers took the line of Mr Morel, that whatever might be the responsibility of particular leaders or statesmen, whether in Germany or in Allied countries, the people of Germany were as much the victims of pre-war diplomacy as the Allied peoples, and it was unjust to saddle them with these economic burdens for many decades.

But most of the speakers took the other line, that payment of large indemnities was either impracticable without a complete upset of the exchanges, or that the stimulus to German exports would be so great as to be a disaster to the industrial communities in competing countries. We believe these fears to be greatly exaggerated. The argument that if Germany is to increase her exports she must enormously increase her import of raw materials as compared with pre-war days, and therefore build up a colossal overseas trade, is unconvincing. On the basis of the raw material which Germany imported before the war, she could have considerably increased her exports in the form of metallurgical, chemical, and textile manufactures if her internal development had been proceeding at a less rapid rate and a smaller proportion of her production had been consumed at home. Unlike Great Britain, Germany before the war was putting all her savings into internal development, and not to any large extent into foreign investment. Some change in the proportion of home and export trade is not economically impossible. Again, the extent to which the creation of a substantial German export surplus involves the redistribution of the world's foreign commerce is apt to be exaggerated, for the amounts involved in the Dawes report are not enormous in comparison with the total of the world's foreign commerce. And, finally, we would call attention to the argument of an American economist referred to in another column, that the payment of these sums abroad will add to the purchasing power of the countries to whom reparations are paid. The reparation plan will undoubtedly exercise for a period of years some influence on the distribution of international trade, but to what extent it is at present very uncertain. In our opinion, it is a mistake to look for trouble of this kind, which cannot compare in importance with the stimulating effect on the world's economic activity and developments which would be produced by a general reparation settlement, by more stable exchange conditions, and by political peace.

Before, however, we allow ourselves to be carried away by optimism as to the results of the Conference, we would again emphasise the need of taking stock of the present situation in Germany. As yet we see no sign of overcoming the dilemma that Germany will not put into effect the necessary measures for carrying out the Dawes report until the Ruhr is evacuated, while France will not evacuate the Ruhr until the report is put into effect. As soon as the committees are ready, Germany must be called into consultation to help to break this vicious circle.

THE STATUS OF THE SUDAN.

THE crisis over the future of the Sudan, which has arisen during the last few weeks, and which was the subject of a debate in the House of Commons on July 10th, has been latent ever since the question was placed among the four "reserved points" of the British Declaration of February 28, 1922, in which the independence of Egypt was recognised conditionally by His Majesty's Government. This declaration was, of course, unilateral, and Saad Zaghlul Pasha has on several occasions repudiated it as a basis for negotiations, both before and after taking office. On the other hand, the British Government has been equally careful to keep its hands free in regard to the Sudan, ever since the abrogation of the British Protectorate over Egypt has been under consideration. In 1920, for example, the Milner Commission expressly excluded

the Sudan from the scope of their discussions. Thus the point of departure for any Anglo-Egyptian negotiations on the subject remains the Anglo-Egyptian Agreement of January 19, 1899. The text of this instrument appears never yet to have been made public, but its substantial purport is well known, and it is in conformity with the practical facts of the situation both before and after the Sudan was reconquered from the Mahdists. It was agreed, apparently, that Great Britain was entitled "by right of conquest" to share in the settlement and future working and development of the Sudan. The Sirdar or Governor-General is appointed, under this Treaty, by Khedivial decree on the recommendation of the British Government. In practice he has always been a soldier of British nationality, with Englishmen filling the higher and Egyptians the lower posts in the administrative service. A large part of the Egyptian Army is stationed in the Sudan, the cost being borne by the Egyptian Government. The régime may be described as a condominium, which is symbolised by the fact that the British and Egyptian flags are hoisted side by side. Since the War, the world-shortage of cotton has drawn the attention of the British cotton trade to the Sudan as a potential source of supply, and this has resulted in the initiation of the Gezira irrigation scheme, which has been discussed in two recent issues of the *Economist*. An important amount of British capital has been invested in this scheme, and the Treasury has given a guarantee under the Trade Facilities Bill. These were the main circumstances at the moment when the whole question was raised by the debate in the House of Lords on June 25th. Lord Parmoor's blunt statement that "the Government was not going to abandon the Sudan in any sense whatever" was restated on the 30th by the Prime Minister in more conciliatory terms, and with a plea for a free discussion between the British and Egyptian Governments on a basis of reality. Meanwhile, on the 28th, Lord Parmoor's statement had drawn from Zaghlul Pasha an uncompromising speech in the Egyptian Chamber, in which he announced his resignation, in spite of the manifestations of support which he received and of the vote of confidence which the Chamber passed at the close of the sitting. Upon King Fuad's refusal to accept his resignation he resumed office; but it remains to be seen whether Mr MacDonald, charm he never so wisely, will succeed in inducing him to come to London and open negotiations, although the British Government has made it clear that an interchange of views would commit neither party in any way. These are the material facts, but the problem can only be solved by an adjustment between the British, the Egyptian, and—last, but not least—the Sudanese points of view. The view held by informed British observers (irrespective of party) is that the Egyptians conquered the Sudan with some barbarity half a century ago, lost it through prolonged incompetence and oppression, were only saved by British intervention from themselves being conquered by the revolted Sudanese, would never have been capable of reconquering the country without British leadership and assistance, and would lose it again, if it were now handed over to them exclusively, with results probably as disastrous for all parties concerned as those which occurred in the eighties of last century. British efforts (military, administrative, and economic), we believe, have alone redeemed the Sudan from barbarism, and alone prevent it from relapsing. On the other side, the Egyptians claim superior title by previous "right of conquest"; point out that the present administration of the Sudan is dependent on the presence of Egyptian officials and troops, and the expenditure of £478,000 for military expenditure in the Sudan during the financial year 1921-2; and argue with force that, so long as Great Britain holds the Sudan as well as the sea, the independence of Egypt is at her mercy. The economic, as distinct from the strategic, aspect of this last House of Lords debate, that the allocation of Nile water commission under American chairmanship. But what of the Sudanese themselves? The difficulty here is that the

people of the Sudan are in a rudimentary state of political development, and therefore both the Egyptians and ourselves can each attribute any Sudanese manifestations hostile to us respectively to the suggestion or propaganda (not necessarily illegitimate in itself) of the other party. In fact, the Sudanese are in much the same stage as the populations of certain mandated territories, and the whole complicated problem might fruitfully be referred, failing a direct agreement, to the Permanent Mandates Commission of the League for an expert advisory opinion.

This last proposal was definitely put forward by Mr T. Johnston in the debate of Thursday, the 10th, in the House of Commons, and to judge by the temper of the Egyptian Parliament and Press, it seems not unlikely that some reference to an impartial outside authority may prove to be the best issue out of the difficulty in the last resort. Mr Ormsby-Gore, however, very rightly urged that the utmost effort ought first to be made to reach a friendly settlement by direct negotiation, and this point was taken up and emphasised by the Prime Minister, who carefully differentiated our relations with Egypt over the Sudan from our relations with Turkey over Mosul. Can direct negotiations be initiated with any prospect of success? Mr MacDonald informed the House that Zaghlul Pasha hoped to leave Egypt before the end of the month, but two days after the debate the Egyptian Prime Minister was the victim of an attempted assassination at the hands of a young Egyptian student freshly returned from abroad, and the criminal confessed that his motive was to prevent the Anglo-Egyptian negotiations from taking place. Happily the wound has not proved serious, but Zaghlul Pasha's journey will no doubt be considerably delayed, and it is impossible to foresee as yet how this deplorable incident will affect Anglo-Egyptian relations, though it is permissible to hope that the bodily injuries which the veteran Egyptian statesman has suffered will lighten, indirectly, his political task.

Meanwhile, the debate in the House of Commons showed that there was a consensus of opinion among all parties in this country upon certain vital points. It was agreed that the situation in the Sudan had been fundamentally altered by the recognition of Egyptian independence; that the present arrangements could not stand, and that a fresh settlement ought to be reached as soon as was reasonably possible. Mr MacDonald was able to give a guarantee, on behalf not only of the present Government but of the House of Commons as a whole, that we were prepared to come to an agreement with Egypt on the question of the Nile water which Egypt herself would regard as satisfactory, and that the independence of the Sudan would not mean that the Egyptian cultivator would receive "a single pint of water less" than if the Sudan were politically in his possession. Sir Murdoch Macdonald pointed out that the cotton crop of Egypt herself was so important for the textile industry of Great Britain that no British authorities in the Sudan would be tempted to reduce the supply of water available for the cultivation of that crop in order to open up potential cotton fields higher up the river. Mr T. Johnston raised the question of the Sudan sugar tax, which he condemned as oppressive, and he drew from the Prime Minister the information that the Sudan Plantation Syndicate at present paid no taxes in the Sudan. The most important statement in the debate was, of course, the Prime Minister's declaration that "Great Britain cannot throw off its responsibilities, contracted to the Sudan and the Sudanese, by withdrawing and handing the country over to any other Government," but the debate ended on a conciliatory note. The Prime Minister associated himself with Sir Murdoch Macdonald's opinion that the Egyptians, in demanding political sovereignty over the Sudan, were not actuated by any desire to re-institute the old régime of exploitation and oppression, but by an anxiety to safeguard Egyptian interests which it might not be proper to safeguard in this way, but which were perfectly legitimate in themselves. Earl Winterton, who had opened the debate with a somewhat controversial review of Egyptian misgovernment in the past, took occasion at this point to associate himself with the Prime Minister. "If the negotiations are approached in this spirit on both sides, they will start under the conditions most favourable for success."

INDUSTRIAL PROFITS.

OUR quarterly figures of the profits of industrial companies show a further slowing up in the rate of expansion, the percentage increase in the past quarter, which covers the greatest number of companies, having dropped to 3 per cent. During April, May and June the results of 466 industrial concerns have been analysed in our weekly summary of profit and loss accounts, and these show aggregate net profits for their past financial year (after meeting debenture interest, &c.) of £51½ millions, which compares with £49½ millions earned by the same companies in their preceding financial year. As there is considerable divergence in the promptitude with which accounts are submitted to shareholders after the close of the financial year, the periods covered by these 466 reports vary a little, but the bulk refer either to the years ended December 31, 1923, or March 31, 1924. Some, of course, are for earlier dates, and a few cover even later periods. During the past twelve months 1,406 reports have been examined, and these show an increase of 11.8 per cent. in profits, as may be seen from the following table, which gives the actual figures:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports published in		Increase.	
		1922.	1923.	£	%
Third quarter	209	10,469,118	17,317,482	6,848,364	65.2
Fourth quarter	312	23,382,776	26,043,934	2,661,158	11.4
1923. 1924.					
First quarter	419	37,155,048	40,382,901	3,227,853	8.7
Second quarter	466	49,794,417	51,292,944	1,498,527	3.0
	1,406	120,801,359	135,037,261	14,235,902	11.8

At this time last year our analysis of the reports of 1,358 companies showed an increase of 16.1 per cent. It will be seen that there has been a progressive decline in the rate of increase in profits, but this is explained to a considerable extent by a comparison with the results of our analyses in preceding quarters, which is set out below:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
First quarter	-1.0	+10.4	+2.9	+3.5	-4.4	+4.4	+8.7
Second quarter	-5.8	-5.1	+3.7	-8.4	-3.7	+2.1	+3.0
Third quarter	+12.3	-3.4	+4.9	-4.4	-2.5	+6.2	...
Fourth quarter	+4.7	+10.5	+27.1	-52.9	+5.9	+11.4	...

Thus, the increase of 65.2 per cent. recorded in the third quarter of last year followed a substantial decrease twelve months previously, whereas the small increases of this year follow substantial increases a year ago.

In the table below we classify the profits disclosed during the past twelve months into 20 groups of companies, showing how they compare with those earned in the preceding financial year:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Year Ended June 30.		Increase.		Decrease.	
		1923.	1924.	£	%	£	%
Breweries	83	8,995,000	9,385,408	400,408	4.5	...	...
Canals	7	477,023	537,531	60,508	12.6	...	...
Electric light & power	39	3,046,573	3,790,526	743,953	24.5	...	...
Gas	49	3,575,319	3,331,794	...	...	343,525	9.6
Hotels, restaurants, &c.	26	1,602,951	1,686,273	83,322	5.2	...	...
Iron, coal, and steel	103	9,814,657	11,595,613	1,780,956	18.1	...	...
Land, mortgage, &c.	77	4,035,764	4,973,687	937,923	23.2	...	...
Motor and cycle	26	33,921	702,571	668,650	1971.5	...	...
Nitrate	19	364,073	806,273	442,200	121.5	...	...
Rubber	275	1,886,368	3,394,010	1,507,642	79.9	...	...
Oil	14	1,947,858	2,910,094	962,236	49.4	...	...
Shipping	29	5,779,135	5,474,508	...	...	304,627	5.3
Shops and stores	50	4,010,672	4,843,688	833,016	20.8	...	...
Tea	73	3,330,310	4,397,278	1,066,968	32.0	...	...
Telegraphs, &c.	30	5,921,688	5,097,039	...	...	824,649	13.8
Textile	48	12,011,693	12,995,194	983,501	8.2	...	...
Tramways	24	1,680,382	1,810,843	130,461	7.8	...	...
Trust	27	3,394,125	4,790,191	1,396,066	41.2	...	...
Water	77	680,411	680,411	...	...	...	...
Miscellaneous	340	37,623,251	44,360,477	6,737,226	17.9	...	...
Total	1,406	120,801,359	135,037,261	14,235,902	11.8	...	...

Prominent increases are shown by the motor and cycle, nitrate, rubber and tea groups. A year ago the last two groups also recorded substantial increases, but in the nitrate group of 20 companies a decline of 55 per cent. was shown. The oil and shipping groups were last year

among the companies showing decreases, as were also the iron and steel companies, now among the increases. The expansion in profits shown by the electricity group, retail shops and stores and the investment trust companies follow appreciable increases twelve months ago.

We next show how profits have been distributed in each of the past four quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1923.				
Third quarter.....	17,317,482	9,553,962	558	3,039,838
Fourth quarter.....	26,043,934	16,424,429	631	4,595,984
1924.				
First quarter.....	40,382,901	24,069,835	596	7,291,651
Second quarter.....	51,292,944	31,153,288	608	11,465,051
	135,037,261	81,299,514	602	26,390,526
				27,347,221

The final column here and in the next table includes, in addition to specific allocations to reserve, the differences between the amounts brought forward from the previous year and the amounts carried forward to the next account. In the twelve months over £27 millions, or 20.3 per cent. of total profits, was not distributed to shareholders, whereas in the preceding twelve months only 15.2 per cent. of total profits was so withheld. In the past quarter the proportion of profits reserved shows an appreciable drop, the amount going to preference shareholders being considerably above the average for the year. This is partly due to payment of arrears of preference dividend by one or two companies, and also partly to the fact that there happens to be a larger proportion of preference capital in the last quarter than in the preceding quarters.

The table below shows the method of distribution adopted by each of the groups:—

	Net Profits.	Ordinary Dividend.	Pref. Dividend.	Carried to Reserve, &c.
Breweries.....	9,396,406	5,879,507	625	1,763,561
Canals.....	597,531	260,196	493	242,769
Electric light & power.....	3,790,155	1,176,954	310	660,122
Gas.....	3,231,794	2,501,778	774	373,989
Hotels, restaurants, &c.....	1,885,273	736,741	473	487,855
Iron, coal, and steel.....	11,596,613	6,551,964	565	2,700,839
Land, mortgage, &c.....	4,973,657	2,823,118	588	873,996
Motor and cycle.....	702,571	412,929	59	166,265
Nitrate.....	806,273	1,048,819	130	nil
Oil.....	9,910,994	8,045,680	813	1,668,415
Rubber.....	3,294,030	2,772,122	834	88,556
Shipping.....	1,474,300	2,543,065	465	1,353,538
Shops and stores.....	6,843,868	2,575,722	532	1,197,986
Tea.....	4,587,379	3,011,104	657	274,380
Telegraphs, &c.....	5,057,039	3,391,859	671	341,146
Textile.....	13,696,124	7,844,082	573	1,654,276

Trust.....	4,784,190	2,742,722	574	1,286,604
Water.....	680,944	446,547	655	90,639
Miscellaneous.....	44,350,477	25,758,856	581	10,606,212
	135,037,261	81,299,514	602	26,390,526
				27,347,221

In the matter of reserve appropriations the best showing is made by the electricity and textile groups, the former showing by far the most conservative policy of profit distribution. At the other end of the scale the nitrate group shows a draft upon reserves; but this is largely due to one company, which paid out a dividend of £500,000, although the profits earned in the year were less than £200,000, the deficiency being made good by reducing the balance forward. The oil group appears to have paid dividends and neglected to strengthen reserve funds.

Turning to the question of earnings on capital, we show below the ratio to total ordinary and preference capital of net profits and of amounts reserved in each of the past four quarters:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1923.			
Third quarter....	195,420,900	17,317,482	4,623,682
Fourth quarter....	255,094,800	26,043,934	5,027,521
1924.			
First quarter....	390,545,000	40,382,901	9,021,413
Second quarter....	517,002,006	51,292,944	8,674,605
	1,358,062,706	135,037,261	27,347,221

The ratio of net profits to capital at 9.9 per cent. compares with 9.1 per cent. a year ago, 6.8 per cent. in 1922, and 13.2 per cent. in 1921. The ratio of the amount reserved a year ago was 1.4 per cent. The average rates paid on the three classes of capital quarter by quarter

since the beginning of 1921 will be found in the next table:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1921.	1922.	1923.	1924.	1921.	1922.	1923.	1924.	1921.	1922.	1923.	1924.
1st quarter.....	4.43	4.70	4.61	4.62	5.0	5.3	5.7	5.3	10.3	8.5	9.2	8.6
2nd quarter.....	4.61	5.00	5.08	5.17	5.0	5.0	5.4	5.5	10.3	8.5	9.2	10.1
3rd quarter.....	4.45	5.21	4.90	..	5.0	4.5	4.3	..	9.7	7.6	7.8	..
4th quarter.....	4.52	4.83	5.03	..	5.1	5.6	5.4	..	7.6	8.6	9.6	..

The average rates paid on debenture capital are a little higher than they were three years ago, as a result largely of the issue of short-term notes at a high rate of interest during the post-war boom. The average rate of ordinary dividend for the past quarter is the highest since the corresponding quarter of 1921. In the final table we show the average rates paid by each of the groups during the past 12 months, giving also the average rate of ordinary dividend shown in our article a year ago:—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.	a Year Ago.
Breweries.....	34,123,931	4.2	32,310,821	5.5	39,643,728	14.8	13.6
Canals.....	1,904,784	3.6	5,154,800	4.7	7,288,474	3.6	3.4
Electric light and power.....	15,803,022	5.1	13,455,951	4.9	14,387,338	8.2	7.2
Gas.....	12,887,584	4.1	8,907,283	4.2	45,750,642	5.5	5.4
Hotels, restaurants, &c.....	5,601,761	4.6	8,351,316	5.1	8,637,864	3.2	6.7
Iron, coal, and steel.....	48,638,329	5.9	54,301,088	5.0	130,634,301	5.0	4.9
Land, mortgage, &c.....	24,148,426	4.5	19,701,391	4.5	40,757,046	6.9	6.8
Motor and cycle.....	6,187,676	4.9	6,389,358	2.6	14,621,820	2.8	2.2
Nitrate.....	520,300	5.1	nil	..	7,334,325	14.3	10.2
Oil.....	8,062,472	5.8	26,147,646	6.3	44,217,508	18.2	22.2
Rubber.....	1,987,113	5.5	1,671,449	5.3	46,235,124	6.0	3.6
Shipping.....	24,912,368	5.6	24,310,130	5.6	43,181,707	6.0	8.3
Shops and stores.....	7,945,044	4.8	21,370,025	5.6	35,293,861	10.2	11.1
Tea.....	1,123,356	5.5	4,338,427	6.3	9,324,082	33.6	19.2
Telegraph.....	8,720,265	4.5	8,245,568	4.2	25,288,394	13.4	8.9
Textile.....	15,264,606	4.6	40,867,566	4.0	70,706,870	11.1	13.8
Tramway.....	21,714,247	4.6	11,855,109	5.2	13,795,701	5.2	4.1
Trust.....	36,001,924	4.2	30,373,980	4.2	38,150,383	7.2	6.1
Waterworks.....	5,494,149	4.3	3,337,138	4.6	6,296,327	7.1	6.8
Miscellaneous.....	80,449,800	5.3	180,067,841	5.9	225,882,793	11.4	10.9
	339,384,136	5.0	501,446,947	5.3	856,315,799	9.6	9.0

The result of short-term note issues is clearly reflected in the average rate paid for loan capital by the iron and steel group. The low figure of average preference dividend for the rubber group is due to the passing of the dividend by one company with a large amount of preference capital. In the ordinary dividends the feature is the rate paid by the tea group, which appears to provide some justification for the share boom which took place last year. Fifteen of the 20 groups show increases in the average rate of ordinary dividend, the most conspicuous declines being shown by the oil, shipping, and textile sections.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

THE general position of the cotton industry in Lancashire has not shown any marked change during the last three months. After increased activity in the earlier part of the year, demand was quieter between Easter and Whitsuntide. During the past month there has been a revival of inquiry, and there are now indications of an increasing turnover. Actual business, however, is very irregular, and merchants do not seem to be in a position to give out orders steadily. The spinning mills engaged on American cotton are still working only 26½ hours a week instead of the usual 48. Spinners engaged on Egyptian cotton are busy, and there is practically no unemployment in Bolton and district. Order lists of cloth manufacturers are very irregular, and probably not more than 75 per cent. of the looms in Lancashire are running at the moment.

During the quarter there have been many ups and downs in raw cotton rates, but recently there has been a movement towards a lower level of values. On March 31st the quotation for Fully Middling American cotton on the spot in Liverpool was 17.06d. The tone was stronger early in April, the price on the 12th being 19.42d. By

the 30th, however, the rate had fallen to 17.45d. May brought rather higher values, the figure on the 31st being 18.66d. There was a downward movement early in June to 17.48d on the 11th, 17.11d on the 25th, and 17.04d on the 30th. The figure on July 3 was 16.57d, and 16.95d on the 16th. Business in the raw material has been hampered by the wide margin in prices between old and new crop months in futures. The sales on the spot have been small. Imports from the United States to this country have been very limited, and from week to week stocks have been reduced. Increased attention has been centred on the prospects for the crop in the United States for 1924-25. During May the germination of the plants was kept back by heavy rains and low temperatures. June brought a distinct improvement, and the crop recovered a good deal of the lateness. At the beginning of July the Government Condition report was better than expected, and the same authority estimated the increase in the acreage at 4.4 per cent. The statistics indicated a yield of over 12,000,000 bales, exclusive of linters. Since then some advices have been less favourable, but in Lancashire trade circles the opinion is held that the crop on the whole is doing well, and lower values are expected. Sentiment is certainly bearish, and it is feared that in some quarters a rather serious short interest is being created, not only in the raw material but also in yarn and cloth. With regard to Egyptian cotton, the quotation for Fully Good Fair Sakellaris on the spot in Liverpool on March 31st was 21.05d. By April 26th the price had advanced to 23.70d, and there was a further rise on May 6th to 24.05d. There followed a rather easier movement, but 24.10d was posted on June 2nd. The figure on June 30th was 23.05d, with 23.35d on July 16th. The outlook for the Egyptian crop for 1924-25 is excellent. According to private advices there is every likelihood of a record output of 8,000,000 cantars. It must be pointed out, however, that the consumption of Egyptian cotton is increasing rapidly, and all the material grown will be wanted.

There has been much irregularity in the business passing in piece-goods in the Manchester market during the past three months. Some shipping houses have been more prepared to operate freely, but it is undoubtedly a fact that numerous firms, owing to their limited financial resources, are not in a position to adopt a policy of enterprise. There is ground for believing, however, that dealers in distributing centres abroad are in more urgent need of larger supplies than for a long time back, and the hand-to-mouth purchasing which has occurred is resulting in a distinct shortage of particular makes. The all-round inquiry for India has been on broader lines. A much larger turnover has taken place in light bleaching cloths, especially for Calcutta. Manufacturers in Blackburn and district have obtained some relief. Freer operations have also taken place in grey shirtings. The reports relating to the monsoon season have varied, but on the whole the rains are satisfactory, and leading authorities have expressed the opinion that the trade outlook in India is healthy. The same can scarcely be said with regard to China, and although a fair miscellaneous business has been done from week to week for Shanghai and Hong Kong, especially in white goods and fancies, exporters have restricted their commitments. The political situation in the Far East is too uncertain for merchants to buy freely. Rather more activity has now and again shown itself for Java, Singapore, and the Straits Settlements. Buying for Egypt and the Near East has been patchy, but conditions in that part of the world seem to be rather more encouraging than a little time ago. There are indications of rather more activity for some of the South American outlets. Owing to increased nervousness with regard to finance, a falling off has occurred in buying for European countries, especially Germany. Fine fancy materials have continued to move off fairly well for the United States, and much interest has been taken in the attempts of manufacturers in America to get the Government to increase the tariff on imported cotton goods. There has not been very much life in the home trade section. Buyers for the most part have been cautious, but recently clearances in the retail and wholesale establishments have shown some improvement.

The following is a comparative table of cloth shipment from the United Kingdom, the figures being given for the six months ended June in each year:—

	Yards.	£
1913.....	3,582,788,800	48,756,738
1922.....	1,850,860,000	67,391,014
1923.....	2,106,868,600	70,098,846
1924.....	2,224,012,700	75,635,829

Despite the organised curtailment of production, spinners of American yarns have not been able to secure any definite relief. The reduced supplies seem to be quite equal to the requirements of users. The prices ruling in practically all counts and qualities are very unsatisfactory, and, as is usual at this time of the year, spinners are feeling the ill effects of the annual holidays in weaving centres. The turn of spinners will come at the end of August, when the stoppage at Oldham takes place. There have been bursts of buying during the past quarter, but for the most part users have been content to purchase from hand to mouth. On the whole, producers of medium and fine counts have done rather better than spinners of coarse numbers. There is no probability at the moment of the Masters' Federation deciding to abandon the short-time scheme, and according to present arrangements the mills will continue to run 26½ hours per week until the end of September. With regard to yarns spun from Egyptian cotton, the general position of producers continues healthier. The demand during the past three months has been sufficient to enable spinners to maintain their improved position. It may be said that mills engaged on fine combed qualities are more strongly fortified with orders than factories on the coarser-carded counts. The undercurrent of inquiry in yarns suitable for shipment abroad has been fairly extensive. Now and again encouraging contracts have been put through for India in the higher counts. Up to about a month ago a big trade took place for Germany, but recently the financial crisis has upset business to a serious extent. Attempts have been made to cancel contracts, and owing to remittances not being received, exports have been stopped. Some Manchester merchant houses are feeling the position rather acutely. According to an analysis of the stocktaking announcements of 91 spinning companies at the end of June, the directors of 65 concerns were not able to recommend any dividend on the ordinary shares. The ordinary share capital of these companies amounts to £10,859,700, and the mills contain 8,821,567 spindles.

The following is a comparative table of shipments of cotton yarns from the United Kingdom, the figures being given for the six months ended June in each year:—

	Lbs.	£
1913.....	106,409,000	7,512,063
1922.....	106,309,100	14,242,341
1923.....	70,225,700	10,170,024
1924.....	87,486,600	14,682,791

The cotton industry in this country has been in varying states of depression during the last four years. Spinners and manufacturers have been hit by the falling off in raw cotton supplies, especially from the United States, and consequent high prices. It must be remembered that about 75 per cent. of the machinery in Lancashire is usually engaged on foreign contracts. The people in the poorer countries of the world, such as India and China, have not been able to pay the relatively high prices for cotton goods, and consume the same quantities as in pre-war times. Dealers and merchants, therefore, have restricted their purchases as much as possible, and stocks have been allowed to run down very low. There is now justification for believing that the time has arrived when supplies will have to be replenished. There is a probability of the cotton crop in the United States for next season being over 12,000,000 bales against 10,000,000 bales in the current season, and only 8,000,000 bales in the previous year. The outlook for the cheaper values, therefore, is favourable. In the Manchester market a big business is pending at the present time. Buyers cannot make up their minds that the price level is safe. Immediately there are indications of no further decline, there is every probability of active operations in manufactured goods. Most people, therefore, are looking forward to more contracts for spinners and manufacturers in the near future, and increased employment for the operatives.

THE BANKING HALF-YEAR.

As no profit and loss accounts are issued by the English joint stock banks at this time of the year, the only indication as to the results of the operations of the half-year is afforded by the interim dividend declarations. As we showed in last week's *Economist*, the rates declared for the past six months were all at the same rates as for the corresponding period of 1923. This was in accordance with anticipations, since the monetary history of the half-year did not point to a possibility of any great change in profits. The margin between average market rate and the average short-loan rate was 17s 8d per cent., or 3s 9d per cent. wider than in the corresponding period of 1923, but the rate paid on deposits was 2 per cent., as against 1 per cent. a year ago, while the average rate of interest received on loans and advances was probably very much the same as it was in the first half of last year, for although the Bank rate has this year been at 4 per cent. instead of 3 per cent., the usual terms for bank advances usually provide for a minimum rate, which is generally 5 per cent. The increase from 3 to 4 per cent. in Bank rate has probably, therefore, had little effect upon the average rate received for advances. The volume of advances, however, as will be seen from the balance-sheet figures below, has been greater. Bad and doubtful debts have perhaps not required such heavy allowances out of profits as in recent years, but on the expenditure side there has probably been little change.

Turning to the actual figures of the half-yearly statements as at June 30th, we append a comparison of the aggregate figures of the "big five" banks with those of December 31st last and June 30, 1923:—

	June 30, 1924.	Compared with Dec. 31, 1923.	Compared with June 30, 1923.
(Million £'s.)			
Paid-up capital	60.5	+ 1.3	+ 1.3
Reserves	45.7	+ 1.5	+ 1.7
Acceptances and endorsement	73.0	+ 13.4	+ 8.5
Deposits (including undivided profits)	1,518.7	+ 21.9	+ 14.5
Total	1,700.9	+ 32.5	+ 26.0
Cash, notes, balances at bank, and cheques in course of collection ..	246.2	+ 8.9	+ 16.2
Ratio to deposits	(16.2%)	(+0.3%)	(+1.0%)
Money at call and short notice	88.8	+ 3.1	+ 12.9
Investments	319.0	+ 15.6	+ 5.8
Discounts	219.9	+ 37.0	+ 25.6
Loans and advances	729.2	+ 38.2	+ 45.0
Premises and sundries (including cover for acceptances)	97.8	+ 12.3	+ 9.1

So far as the past half-year is concerned, the feature has been the substantial increase in loans and advances, which has not been accompanied by any expansion in deposits. The latter, according to the monthly average figures, continued the upward movement which began in October last in January, but during the next two months there was a sharp fall, which has been followed by only a moderate increase. Advances, on the other hand, have been slowly but steadily expanding, and are now at the highest figure for two or three years. The increase in advances has apparently been met by a reduction in bills discounted, which is probably largely explained by smaller Treasury bill holdings. Investments and cash are both lower than they were six months ago, with a slight decline in the ratio of the latter to deposits. Acceptances, according to the monthly figures, have been steadily declining since January. As compared with June 30th last year, the increase in advances is greater still, but the reduction in discounts is smaller, and deposits show a small increase. Cash is also considerably higher, and the ratio to deposits shows an improvement of 1 per cent.

A comparison of the individual balance-sheets shows that on the whole the movements of the past six months are mostly common to all the banks:—

COMPARISON WITH DECEMBER 31, 1922.
(Million £'s.)

June 30, 1924.	Barclays.	Lloyds.	Midland.	National Provincial.	Westminster.
Deposits	5.8	5.5	3.4	6.4	0.8
Acceptances ..	+ 1.6	+ 3.7	+ 6.2	+ 2.3	+ 2.7
Cash, &c.	0.5	4.1	+ 0.9	2.1	3.1
Money at call ..	+ 1.2	+ 0.4	+ 2.1	+ 0.5	+ 0.3
Investments ..	6.7	5.8	+ 0.9	4.2	0.3
Discounts ..	9.8	8.8	11.0	2.3	5.1
Advances ..	+ 9.8	+ 12.9	+ 5.9	+ 2.3	+ 7.3

The increase in advances and the reduction in discounts and deposits is general. The increase in the Midland's advances is, however, relatively small, and this bank is exceptional, with small increases in cash, money at call, and investments. The Midland's holding of investments is the smallest of the five, at £46 millions, but cash, &c., is easily the highest, at £70 millions. Lloyds, on the other hand, has £93 millions in investments, of which over £82 millions are in British Government securities and £46 millions in cash. The Westminster records only a very small decline in deposits and a substantial increase in advances. Barclays provides an exception to the general decline in acceptances.

The figures of the five principal provincial banks show less important changes:—

COMPARISON WITH DECEMBER 31, 1923.
(Million £'s.)

June 30, 1924.	Bank of Liverpool & Martins.	District Bank.	Lancashire and Yorkshire.	Manchester & County.	Williams, Deacons.
Deposits	3.1	3.4	0.8	0.6	0.3
Acceptances ..	3.0	2.8	0.1	0.6	2.1
Cash, &c.	1.0	0.2	0.4	+ 0.4	1.1
Money at call ..	1.4	+ 0.4	0.4	1.5	0.4
Investments ..	0.9	+ 1.0	0.1	1.5	1.2
Discounts ..	..	2.6	+ 0.1	0.5	0.5
Advances ..	..	+ 0.1	0.3	+ 0.5	+ 1.4

There is a similar general decline in deposits, but advances are less than £2 millions higher, while discounts have been reduced by £2 millions. Williams, Deacons shows the largest increase in advances, and has also a slightly larger bill holding, these increases being met by considerable reductions in cash and investments. The District Bank has reduced its bills discounted, and there has been no corresponding increase in advances, but investments are higher. All the five banks show lower totals for acceptances.

We conclude with a table showing the ratios of the advances of the big five banks to their deposit liabilities at the dates named:—

RATIO OF ADVANCES TO DEPOSIT LIABILITIES.

	June 30, 1914.	June 30, 1922.	June 30, 1923.	Dec. 31, 1923.	June 30, 1924.
Barclays	45.0	40.1	45.4	44.0	48.1
Lloyds	52.7	36.1	41.1	41.3	45.9
Midland	56.9	48.0	54.6	52.1	54.2
National Provincial ..	45.0	45.1	48.4	48.1	50.1
Westminster	48.1	35.0	36.5	37.5	40.3
Total	50.7	41.0	45.4	44.9	48.0

There has been a substantial increase in these ratios owing to the increase in advances and the decline in deposits, and in two cases the figure is higher than it was in the middle of 1914. The ratio for total advances, however, is still below the pre-war average.

The increase in advances is a welcome indication of the progress of trade expansion, which is, however, as yet far from being universal. The absence of any expansion in the corresponding figures for the provincial banks, for example, is clearly due to the comparative stagnation in Lancashire, in which county they chiefly operate. As regards deposits, it is not abnormal for the figures to be lower in June than in December; but we have not yet had a long enough series of comparable statistics to enable us to estimate this seasonal movement.

THE NEW BALTIC STATES.—II. LATVIA.

ALTHOUGH the former Russian Governments which now constitute Esthonia and Latvia had all developed in general along very similar lines, the trend of events in these two countries has been in some respects very different during their five years of independent Statehood. Unlike its northern neighbours, Latvia suffered very severely during the war, and the important industries of Riga and Libau were practically wiped out. As, however, they existed almost entirely for the Russian market, which is regarded as being likely long to remain of but secondary importance, virtually no attempt has been made to restart the large-scale industrial undertakings of pre-war days. The main concern has rather been the reorganisation of agricultural production, and although revolutionary changes have been effected in the land-holding system of the country, the work of reconstruction has gone forward very rapidly during the last few years. About 50,000 homesteads have, however, still to be built, and several years must elapse before normal conditions are re-established.

In Latvia the expropriated land has for the most part already been divided amongst the peasantry, and this solution is certainly more satisfactory than the attempt at nationalisation, coupled with short-term leases, which has been adopted in Esthonia. About two years ago a fresh start was made in organising the rural co-operative societies, which had been very severely shaken by the war, and it is hoped that much progress will be made in this direction in the near future. Many of the larger organisations, however, appear to resemble ordinary capitalistic undertakings rather than co-operative societies in the proper meaning of the term. The total area down to cereals has been steadily increasing, and is now not so very far removed from that of pre-war days, while the country's livestock is already almost normal.

The most important factor in modern Latvia is the stress which has been laid on agricultural development. The total population, which in 1914 amounted to over two and a half millions, is now well under two millions, for whom there is plenty of room in a country with an area of about 25,000 square miles. Considerably over one-third of Latvian territory is, however, forest land, and it is to be feared that much of the success which has attended the financial consolidation of the new State has been due to an irrational exploitation of its timber resources. This process cannot, of course, continue indefinitely, but, with the development of agricultural production, and more particularly with the further growth of the export of dairy produce, it is hoped that the timber capital of the country will be exploited on sounder lines in the near future.

The trade balance during the last few years has been unfavourable, though the real balance of payments has been on the right side since 1922:—

FOREIGN TRADE.

	In Million Roubles.	In Million Lats.
Imports	4,685	5,352
Exports	1,953	4,475
Exports as % of imports ..	42%	84%

Last year imports were particularly high, partly on account of the bad harvest, and partly because they included a large number of speculative consignments from Germany, many of which were later forwarded to Russia. Indeed, 45 per cent. of the imports came from Germany, as against 17 per cent. from Great Britain, while of the exports—of which flax and timber and its derivatives are the principal products—Great Britain took 46 per cent., as against Germany's 7 per cent.

The proceeds of the legitimate transit trade with Russia—to which must also be added the profits of an active smuggling trade—and the reinvestment of foreign capital in the country have between them made good the unfavourable trade balance. Together with the existence of a balanced budget, this has made possible the stabilisation of the currency and the introduction of a new unit, the lat, or gold franc. In the early years of national independence the proceeds of the State monopoly of flax

and the sale of timber from the State forests led to the accumulation of a reserve fund of foreign currencies, with which stabilisation was later effected. Since the end of 1922, indeed, the Latvian currency has been one of the most stable in the world. By the end of this year it is expected that the rouble notes will all be withdrawn from circulation and their place taken by notes and silver coins in lats. At present, some confusion is caused by the concurrent existence of both currencies, one lat being worth 50 roubles. Latvian banknotes are convertible into gold, but it is to be hoped that the project of issuing gold coins for circulation will not materialise, in view of the virtual certainty that they would at once be hoarded by the peasantry.

While the financial and currency position is thus quite sound, thanks very largely to the energy and determination of the present Finance Minister, Mr. Kalning, the lack of experience, which is so characteristic of the new men in the Baltic States, has made itself felt in the general administration of the country. The Civil Service is much too large, and in most respects quite inefficient. An excess of red tape characterises all Government enterprise, and a sound administrative tradition has yet to be established. The importance of the bureaucracy is still further increased by the instability of the political life of the country. In a Parliament of 100 members, some 28 political parties are represented—a figure which must surely be a record even for post-war Europe—and Governments come and go with amazing rapidity.

These factors naturally impede national development, while the credit of the country has not exactly been improved by the recent refusal to recognise the liabilities of the City of Riga in respect of its 1914 sterling loan. Rumours as to the possibilities of a foreign loan are of frequent occurrence, but at present, at any rate, reliance should be placed rather upon the slow but sure process of self-help, which has already been adopted with a considerable measure of success, as is shown by the exchange situation.

Reference has been made above to the transit trade with Russia, and the geographical situation of Esthonia and Latvia merits more than a passing mention. The percentages of the value figures of Russian imports and exports which were handled in Esthonian and Latvian ports is given in the following table:—

RUSSIAN FOREIGN TRADE.

	Via Esthonia.		Via Latvia.	
	Imports.	Exports.	Imports.	Exports.
	%	%	%	%
1913	8.0	2.2	20.5	28.2
1922	4.8	9.5	5.2	12.9
1923	3.6	5.5	1.7	11.6

In both of the post-war years the total turnover of Russian trade was only about one-seventh of the 1913 figure, and yet the percentages handled in Latvian ports were enormously less than those of pre-war times. It is, of course, true that the 1913 figures represent merely the value of the goods which passed through Esthonian and Latvian ports, and it is therefore impossible to estimate how much was consumed locally. Moreover, the disappearance of the large industrial undertakings at Riga, which worked mainly with imported raw materials for the Russian internal market, is also a factor of the greatest importance in this connection. As Esthonia was the first State to make peace with the Bolsheviks, it enjoyed a certain initial advantage in Russian transit trade, though this was not of very long duration. The present situation is, of course, so abnormal that it would be dangerous to attempt to deduce anything further from recent statistics than the simple fact that, of recent years, the relative importance of the Esthonian and Latvian ports in Russian foreign trade is considerably less than in pre-war days. Small as is the absolute importance of this transit trade to-day, it, nevertheless, represents a valuable asset to these new States*, though, politically, it is, of course, a factor of some danger as well as profit.

* It may be of interest to give the weights of goods in transit—most of which came to or from Russia—on the Esthonian and Latvian railways in 1923. These were: Esthonia, 152,328 tons; Latvia, 334,628 tons.

ALFRED MARSHALL, 1842-1924.

ON Sunday last, at the age of 82, there passed away at Cambridge one of the small band whose privilege it is to add to the renown of their country and of their generation. The stress of the great war and the fact that for the last 16 years he has been in secluded retirement together explain why Dr Alfred Marshall, Emeritus Professor of Political Economy in the University of Cambridge, has recently been much less known as a living personality than he was to the world of 30 or 40 years ago. Nevertheless, everyone whose study or work leads them into the field of economics realises that by the death of Marshall we have lost one of the intellectual giants.

Marshall's greatness is due to his qualities as an economist, as a teacher, and as a man. As an economist he must be compared with the three or four great names which have made English economics a power all over the world. In a recent memorial to Marshall on his 80th birthday, from old pupils, and professors of political economy, not only in England but in Europe, America and the distant dominions, the signatories said with truth: "Through you, British economists may boast among their foreign colleagues that they have a leader in the great tradition of Adam Smith and Ricardo and Mill, and of like stature." We cannot here attempt to analyse or enumerate Marshall's many contributions to the theory of economics. Perhaps the most far-reaching in its influence on subsequent thought was his treatment of the theory of value in which he harmonises the conception of the early English economists, who based value on cost of production, with that of the Austrian school represented in this country by Jevons, who attached chief importance to utility as reflected in demand. By his analysis of the variations in cost of production and in supply on the one hand and in demand on the other, and by his exposition of value as being determined at the margin where these varying forces are in equilibrium, he gave a unity to economic theory and provided an analytical mechanism for studying the forces which determine not merely the price of commodities, but also the level of wages, the remuneration of business ability, the payment for the use of capital, and all other elements of economic life. Another contribution which may be specially mentioned is his demonstration that the rent of land does not require a separate theory of value to itself, but is a particular case of the many surpluses which arise throughout the economic field. Finally, his statement of the theory of money and prices before the Gold and Silver Commission of 1888 may be regarded as the basis of recent discussions on this very important problem. We only mention these as outstanding features among original contributions covering an immense field. In the last two or three years Marshall published two volumes, one on Industry and Trade and one on Money, Credit, and Commerce, which embodied the observations of a lifetime, and the doctrines which formed the basis of his teaching—a substantial part of these later volumes having already been published piecemeal in various articles and papers. But Marshall's contribution to economics really belongs to the end of the nineteenth century, and his greatest work is undoubtedly embodied in the first volume of his "Principles," published in 1890.

Marshall's influence on modern thought has, however, been exercised at least as much through his pupils as through his writing. Though he succeeded Fawcett as Professor of Political Economy at Cambridge in 1885, he did not carry out his idea of establishing a separate tripos until 1903. But while the establishing of a Cambridge School of Economics in the technical sense was delayed for nearly 20 years, a constant succession of students reading economics while taking degrees in history or in philosophy had come under his influence during this period, and they are to be found to-day as teachers of economics in all parts of the world, as publicists, and even as politicians in all political parties. It would be difficult to describe Marshall's method, if he can be said to have had one. The title of his lectures gave the student little

guide as to what he would speak about, for as often as not he would take as his text some apparently obscure incident or fact from that morning's *Times*, and lead his class through the fascinating highways and byways of thought which the incident had suggested to him. His lectures were, therefore, always vivid, up-to-date, and realistic, without ever falling from their own high standard of accurate analysis and reasoning.

But the great influence which Marshall exercised over his pupils was in the main due to personal qualities. Unswerving and tireless in the pursuit of truth, it was ever Marshall's ambition to peer into the future, to extend the bounds of human knowledge a little more, and to contribute something which would help to mould the thought of future generations. "If I have helped," he said in his reply to the memorial mentioned above, "in putting some young students on the way to grapple with the economic problems of the coming age, that is far more important than anything which I have been able to do myself." Marshall would take endless pains with his students, but he would always expect work of the highest quality of which they were capable. A visit to his study was to many an intellectual and spiritual tonic. But his sympathies were not limited to an academic circle. Marshall was wont to declare that no economist of the first rank had ever become an economist without having first been in the broadest sense a philanthropist. Whether this was true of the rest, it was certainly true of the speaker. The combination of the highest intellectual standard and of encyclopædic knowledge with deep-seated idealism formed the source of his inspiration and of the wide influence exercised by one who never took an active part in public affairs. A great theorist, it may truly be said of Marshall that he humanised economics.

But Marshall was not without his weaknesses, which were far more apparent to his colleagues in university administration than to his students. His love of paradox, his pleasure in discovering unexpected grounds for differing with the general view, and a certain love of combat made him a difficult colleague to work with, and caused a certain bitterness in his relations with those who gave their adherence to a different school of economic thought. With greater tact his influence might have been even greater at Cambridge than it was. Marshall also suffered throughout most of his life from lack of a robust constitution, and he could never have achieved great results but for the unremitting care of his wife, who was also one of his first students, the joint author of one of his earliest works, and a collaborator and assistant in the larger volumes which embodied his teaching.

The esteem in which Marshall was held abroad is well expressed in the following appreciation by Prof. Rist, the noted French economist:—"La mort du grand économiste anglais affectera douloureusement les économistes français, qui, avec ceux du monde entier, considéraient le professeur Alfred Marshall comme un doyen vénéré. A vrai dire son œuvre a mis quelque temps à conquérir en France la popularité scientifique qu'elle mérite. Même l'excellente traduction de M. Sauvaire-Jourdan ne l'a fait pénétrer d'abord que dans un cercle assez restreint d'économistes: ceux que n'effrayent pas les raisonnements et les symboles mathématiques dont Marshall cependant n'a usé qu'avec une si grande discrétion. Dans ce cercle l'œuvre de Marshall est depuis longtemps hautement appréciée. Il est rare en effet de trouver réunies chez un seul écrivain un ensemble aussi harmonieux de qualités qui se rencontrent plus souvent isolées chez des économistes différents; le souci du raisonnement rigoureux, allié à la chaleur des sentiments et à la préoccupation généreuse des problèmes sociaux. Marshall a d'une part continué l'œuvre de Cournot et d'autre part conservé à un haut degré le sens de l'évolution historique des sociétés. Il a ainsi participé aux deux grands courants de pensée qui ont contribué à renouveler dans les dernières cinquante années l'économie politique classique; le courant mathématique, et le courant sociologique-historique. Ce n'est pas le lieu de marquer la grande place qu'il a tenue dans cette œuvre de rénovation. Le nombre et la qualité de ses élèves suffiraient à la démontrer. Ce que je veux seulement dire ici c'est le charme personnel inimitable que donne aux ouvrages de Marshall son admirable scrupulosité scientifique. Nul économiste n'a plus que lui craint d'être injuste pour ses

adversaires. Nul n'a fait plus d'effort pour les interpréter "libéralement." Nul n'a mieux su marquer dans les doctrines comme dans les faits cette continuité de la pensée et de la vie, dont il a toujours eu le profond sentiment, et à laquelle il attachait tant d'importance. Nul n'a apporté plus de soin que lui à préciser toujours les limites exactes de sa pensée, et la vraie portée des termes qu'il employait. (Je songe en ce moment à son admirable déposition devant la Gold and Silver Commission de 1888.) Nul autant que lui, ne s'est montré l'ennemi du dogmatisme. Nul enfin n'a mieux compris et fait comprendre que chacun de nous n'apporte qu'un anneau à la chaîne continue du progrès intellectuel, comme l'époque à laquelle nous appartenons n'est elle-même qu'un instant dans la chaîne infinie des siècles. Admirable leçon de modestie et d'éclectisme que seul un vrai maître pouvait donner. L'anneau que Marshall a apporté à la chaîne de la science économique, est de ceux qui n'ont rien à redouter de l'épreuve du temps.

Notes of the Week.

The Progress of the Housing Bill.—The development of the situation in committee of the Housing Bill fills us with something like despair. When the Bill appeared we gave our reasons for thinking it a bad Bill. Nothing has occurred to change our view, which we believe is very generally held in the House of Commons in two and perhaps in all three parties, tempered by the thought that it is very unlikely to work according to plan. But the merits have sunk into the background. Mr Wheatley is commonly credited with the hope that the Bill will be defeated, or so drastically amended as to enable him to withdraw it and go to the country on the popular cry that Liberals and Tories have combined to smash a large, moderate, and statesmanlike effort to deal with the housing problem. The Liberals and Tories for the most part dislike the Bill, but do not wish to defeat it altogether. They would prefer to make it more tolerable by substantial amendment, but are desperately afraid of pressing their amendment to the point of defeating the Government and giving Mr Wheatley an opportunity of carrying out the tactics with which he is credited. If this is the true reading of the situation, we can hardly conceive one more likely to bring all parties into discredit. We cannot believe that in the long run it can be tactically sound to support, and therefore to take part responsibility for a measure which is unsound in several essentials on the feeble excuse that it will not work. Mr Wheatley is apparently opposed to any increase in the size of houses to be built under the scheme, and insists that the rent must be substantially less than that for which similar houses are now letting. Indeed, he seems determined to build down to the standard of the poorer wage-earner, and refuses to accept the sound view that the way to improve the standard of housing in the country generally is by up-grading, that is to say, by building more medium-sized houses, and by moving into them the more highly-paid wage-earners and clerks, &c., to leave a larger number of smaller houses, apartments, or flats, of which there are far too many already in the country, available for those whose means will only enable them to live in a very restricted accommodation.

An American View of the Dawes Report.—The Dawes Report is receiving serious and searching analysis at the hands of American writers, a fact which augurs well for the contribution which America will ultimately make to the world's settlement. Thus Mr Anderson, the Economist of the Chase National Bank, anticipates that opinion will crystallise on the following two points:—(1) That the proposed new Bank of Issue can and should immediately redeem its notes in gold or gold exchange. (2) That it will not be nearly so difficult, as is often assumed, to convert the mark payments made by Germany under the plan into sterling, francs, or dollars, unless the problem is timidly handled. On the second point Mr Anderson thinks that too sharp a distinction is made between the raising of money in Germany and its payment abroad. Indeed, he argues

that they are closely connected, for if the funds in Germany are raised by taxation, they reduce the available buying power of the German people by an equal amount, which means that "prices of goods in Germany will tend to go below the world level of prices." Germany thus becomes an unusually good market in which to buy and an exceptionally poor market in which to sell. This will increase the flow of goods outward and diminish the flow inward. Nor will this outward volume of goods merely compete with other countries on the world market; there will actually be an increased demand. For if payments are made to the creditor countries, either the Government expenditure of those countries will be increased, or taxation reduced. In either case, the total demand will rise. This argument does not, of course, tell the whole story, for the increased demand is not necessarily for the goods that Germany can export, and an artificially created export surplus may be a disturbing influence on business by causing a readjustment in the industries of competing countries. Mr Anderson's point is, however, one the importance of which is very liable to be overlooked. He goes on to point out that if the Agent of the Allies, who receives mark payments, spends these marks in Germany by investing them in German industry, to that extent he creates a new demand in Germany which tends to prevent a German export surplus. "The very measure, in other words, which he may use to avert the difficulties of transferring his funds to foreign countries will thus intensify those difficulties." On the other hand, if the new bank adopts a plan of immediate convertibility and relies on banking methods for protecting this gold reserve, he considers that domestic saving will be stimulated by high rates, and that economical consumption will go with this saving. Mr Anderson is impressed by the subtle ingenuity of the Dawes scheme, which at every point holds out some inducement to every party in the business to perform his part. "In general, the whole report shows a marvellous ingenuity, in making it to the interest of the various parties involved to do the thing that is expected of them." The only flaw he finds in the report is that the period of years for which payments are to run was not finally fixed, and Mr Anderson is strongly of opinion that France would serve her interest best by coming to an early agreement with Germany on this matter. "We are glad to see that he adds, 'the Government of the United States will be well advised to throw into the general settlement the question of the debts of France, Belgium, and Italy, so that all these vexatious, unsettled points may be cleared up.'

The Half-year's Overseas Trade.—The Board of Trade Returns for June appeared in time for us to give in our last issue a brief summary of the totals of imports and exports for June and for the first half-year in comparison with the corresponding periods of 1923. Analysing the figures more closely, we find the following comparison by categories of imports and British exports for the first six months of 1924 and 1923:—

IMPORTS.				
	1923.	1924.	Ino. or Dec. in 1924.	
	Mil.£	Mil.£	Mil.£	%
Food, drink, and tobacco.....	254.8	263.3	+ 8.5	+ 3.3
Raw materials and articles mainly unmanufactured	155.1	192.1	+ 37.0	+ 24.9
Articles wholly or mainly manufactured	126.5	140.1	+ 13.6	+ 10.8
Total (including other imports)	536.9	595.4	+ 58.5	+ 11.1

BRITISH EXPORTS.				
	1923.	1924.	Ino. or Dec. in 1924.	
	Mil.£	Mil.£	Mil.£	%
Food, drink, and tobacco.....	19.9	25.3	+ 5.4	+ 27.1
Raw materials and articles mainly unmanufactured	67.7	55.8	- 11.9	- 17.6
Articles wholly or mainly manufactured	289.6	301.3	+ 11.7	+ 4.0
Total (including other exports)	382.7	388.5	+ 5.8	+ 1.6

On the import side there has been a certain increase in imports of manufactured goods, but the feature is the rise in imports of raw materials. This is almost entirely accounted for by cotton and wool, in the case of which commodities the following figures show how much of the rise was due to an advance in the quantities imported and how much to higher prices:—

	Quantity.		Value.	
	1923.	1924.	1923.	1924.
Raw cotton ..	5,416,717	6,852,389	35,588,585	56,281,785
Raw wool....	5,223,675	5,187,770	32,696,187	44,294,524

Whereas the rise in the value of cotton imports is to a considerable extent due to higher prices, the large advance in the value of the six months' wool imports has taken place in spite of a small decline in the actual quantity imported. A fall in coal exports, due to the fact that the past half-year compares with a period in 1923 when the "Ruhr boom" was at its height, accounts wholly for the drop in exports of raw materials. Nevertheless, as will be seen below, coal exports in the past half-year were higher than in 1923:—

	Quantity.	Value.
	Tons.	£
First half of 1922.....	27,183,960	30,847,763
" " " 1923.....	39,808,881	50,415,430
" " " 1924.....	31,131,057	38,002,992

As compared with January to June, 1923, there is a drop of 8½ million tons and in quantity over £12 millions in value. The quantity figures of certain leading British exports in the first half of the past three years compare as follows:—

	1922.	1923.	1924.
Iron and steel and manufac- tures thereof	1,539,938	2,215,643	2,024,549
Cotton yarns	106,309,100	70,225,700	87,486,600
Cotton piece goods	1,850,860,000	2,106,868,600	2,224,012,700
Woolen tissues	56,740,900	69,365,500	75,503,000
Machinery	187,675	222,755	219,509

The drop in exports of iron and steel is due to reasons not entirely dissimilar to the reasons for the decline in coal exports. But an advance is to be noted in a number of leading exports of manufactures. The following figures for bullion and specie are worthy of notice:—

Six Months Ending—	Imports.	Exports.
	£	£
June, 1922	18,926,265	21,791,840
" 1923	29,464,791	33,669,767
" 1924	25,488,405	38,692,492

The most important point about these figures is that during the past six months we exported over £25 millions of gold coin and bullion to the United States.

Iron, Steel, and Coal Production in June.—According to the figures issued by the National Federation of Iron and Steel Manufacturers, the production of pig-iron and steel in June showed a substantial decline, the production of pig-iron falling from 650,900 tons in May to 607,800 tons in June, and of steel from 809,700 tons to 651,500 tons. The number of furnaces in blast at the end of the month was 185, a net decrease of six compared with the end of May. The imports of iron and steel declined from the high total of 300,100 reached in May to 175,500 tons, and exports also declined from 406,900 tons to 324,400 tons. The output of coal in the four weeks ending June 28th averaged 4,674,800 tons per week, compared with an average weekly production of 5,461,600 tons in May, the decline being partly due to the Whitsun holidays. The following table shows the production, imports and exports of coal, pig-iron and steel in the first six months of 1924, compared with the first half of 1923 and 1920:—

PRODUCTION, IMPORTS AND EXPORTS OF COAL, PIG IRON AND STEEL. FIRST SIX MONTHS 1920, 1923 AND 1924.				
	Coal.	Pig iron.	Steel ingots.	
Production, first six months—				
1920.....	120,269,000	4,145,000	4,877,000	
1923.....	140,791,000	3,804,200	4,481,800	
1924.....	139,161,600	3,795,000	4,451,500	

Imports, first six months—		Other Manufactures of Iron and Steel.	
1920.....	109,081	315,455	
1923.....	68,592	596,645	
1924.....	159,962	1,011,659	

Exports, first six months—			
1920.....	14,431,533	360,292	1,292,396
1923.....	39,808,881	533,147	1,682,496
1924.....	31,131,057	321,136	1,703,413

The production in all cases in the first half of 1924 is practically equal to that in the first half of 1923, but the significant figures are the decline in the exports of coal and the great increase in the imports of iron and steel, which are now at a higher rate than in 1913. The decline in the exports of coal is due, of course, to the fact that in 1923 the European countries were importing on a large scale on account of the Ruhr occupation. Exports to France have declined in the two periods from 9,510,200 tons to 7,678,700 tons, to Germany from 7,964,200 tons to 3,926,000 tons, to Belgium from 3,474,800 tons to 1,631,800 tons, and to the Netherlands from 2,705,000 tons to 1,603,300 tons. Exports of metallurgical coke in the first half of 1924 amounted to 896,900 tons, a decrease compared with the first half of 1923, when the figure reached 987,200 tons. No comprehensive information exists as to stocks of these commodities. There is, however, no indication that stocks have risen, and the figures seem to indicate that there has been a substantial increase in the internal consumption of coal, pig-iron and steel as compared with a year ago.

Free State Government's Position.—Our Dublin correspondent telegraphs as follows:—The overwhelming victory of the Government as a result of the recent vote of censure debate has been followed by a narrow defeat on Thursday night in the committee stage of the Finance Bill. On this occasion the Minister of Finance himself was absent owing to ill-health. Mr Cosgrave expressed his willingness to resign, but no serious development from this defeat need be expected. An indication of the strength of the present régime is afforded by the release of Mr de Valera and one of his principal lieutenants from prison, where they had been detained as a preventative measure so long as serious elements of trouble remained.

The Disturbance in Brazil.—The revolt which broke out on July 5th in the City of Sao Paulo is still unsuppressed, but there seems no reason to regard it as otherwise than purely local, in spite of the alarming reports from Buenos Ayres and Montevideo. The news is very scanty, and purely official, but it indicates that the State police, who are military in equipment and character, and have been trained by French army officers, won over part of the local Federal garrison, and attempted to seize the Government of the State of Sao Paulo. A minority of the garrison, and the Federal troops throughout the rest of the Republic, remain loyal, and reinforcements have been rushed to the disturbed area. The foreign residents appear to be safe, and though there are rumours of an extension of the disturbance towards Santos, the Government seems to be successfully coping with the insurgents. It has ceased to bombard them, through a desire to avoid the destruction of property, but the latest reports indicate that it is gaining ground. It is natural to connect the revolt with the hostility felt by certain politicians and military officers to President Bernardes, which found expression in the unsuccessful rising just two years ago in Rio Janeiro, and may have been intensified by his plans of financial reform. The Times correspondent, indeed, has stated that the two risings had the same promoters; but, if so, their scheme has failed. The position and privileges of the military are not threatened by the proposed retrenchments, and there is no evidence (beyond vague and uncertain rumours) of general sympathy with the outbreak outside the State. The rigour of the censorship, which keeps out all non-official telegrams, has caused some apprehension, but Brazilian bonds, and the exchange, are recovering.

The New Order in Turkey.—The report for 1922-24 of the Commercial Secretary to the British Embassy at Constantinople, just issued by the Overseas Trade Department, shows—as might be expected—that the financial and commercial conditions have decidedly become worse. Trade has been hampered by the prohibition of certain imports as luxuries, by greatly increased duties, imposed partly to encourage native industries (which have not proved responsive) and partly to discourage luxury expenditure, by excessive taxation of foreign firms, and by varied and vexatious restrictions, some of which it has been impossible to maintain. Commercial correspondence with Government Departments must now be conducted in Turkish, which as yet has not the necessary technical terms; and the railways have been required to employ a large proportion of Turks, who are seldom competent for the work. The Government, however, is profiting by its experience; some of the Customs restrictions, the burdens on shipping, and other hindrances to the trade of Constantinople have been modified, and foreign experts are to be employed in the administration. But British insurance companies have withdrawn from Turkey through the attitude of the Government as regards their liability on their Smyrna policies; foreign vessels are excluded from the coasting trade; the sudden prohibition of alcoholic liquors has been financially disastrous, and their sale will probably be restored as a State monopoly. Production, especially of grain, was far below the average, though the weather was favourable and the actual crops good, especially of raisins and figs. The latter are recovering their position in foreign markets, though a railway strike and a shortage of packages interfered with the export of both. But the output of tobacco is less than the pre-war amount by 45 per cent., that of wool by 80 per cent., that of silk by 90 per cent., and the exchanges of population now proceeding with the Balkan States must delay a recovery. The reconstruction of the devastated regions has not got beyond the stage of preliminary planning. Industry has suffered heavily through the military operations and the exodus of skilled Greeks and Armenians. So have the railways, and the Chester concession, which would have provided lines greatly needed, has fallen through for lack of capital; but the Government proposes to construct some of these lines itself. Motor transport is precluded by the state of the few existing roads. The position of the public finances and foreign trade is so obscure that the figures are hardly worth quoting; the deficit for 1923-24 was probably about £112,000,000; for 1924-25 it is estimated at £177,900,000. For the service of the Ottoman Public Debt the amount allotted in 1923-24 (£13,178,000) only covered the cost of the administration; for 1924-25 it was £16,388,000. The total public debt is about £442,000,000, of which £287,000,000 represents floating debt; this includes nearly £115,000,000 of paper currency, but none has been issued for nearly six years; its gradual withdrawal is contemplated, and measures have been taken to check speculation in it; but it continues to depreciate. The values of imports and exports are stated as follows:—

	1923.	1924.
	£.	Jan.-June.
Imports.....	144,722,517	63,507,979
Exports.....	84,648,468	31,841,383

Great Britain held the first place, Italy the second; their competition was severe in cotton goods, the Italian fabrics being better suited to the local demands. Much advice is given as to openings for British trade in agricultural machinery, railway material, and motor vehicles, and as to the choice of agents, the despatch of goods, and the need of enterprise in advertisement. The labour of Constantinople is being organised in one large union, excluding Christians; but the Government, while not hostile, is not favourable to the scheme. Wages are from 14 to 20 times the pre-war figure; but the average rise is only commensurate with the cost of living, which continues to go up. Government mismanagement aggravates this and other evils, but there are some signs of a change for the better.

The Sea Carriage Bill.—The Third Reading of this measure in the House of Commons on July 11th completed its stages in both Houses. Reintroduced early this year

in the Lords, it has been proceeded with as an agreed Bill, as was suggested in the *Economist* of December 8th would probably be the case. The history of the matter having already been given in these columns, it will suffice to recall that the material part of the Parliamentary measure is the schedule, which contains a modified version of "The Hague Rules, 1921." These rules are standard clauses, and will, as from a date to be fixed by Order in Council (which may probably be an early one), compulsorily form part of all bills of lading issued in this country. In other countries similar provisions will apply when legislation proposed has been passed. The rules define the liabilities of sea carriers in respect of goods for the period of the voyage, and definitely impose liability, subject only to a limit of £100 per package or unit on claims for loss or damage. As the Bill was not amended in the Commons, it will be unnecessary that it should return to the Upper House for any purpose other than to be voted, and no doubt it will be included among measures to which the Royal Assent will be given before the summer recess.

South Wales Coal Anxieties.—The financial position of the South Wales mining industry (writes a Cardiff correspondent) is a source of grave anxiety to the colliery owners. They have been called upon under the new wages agreement to meet a considerable increase in the labour cost of production, but that increase in the total cost has been accompanied by a great falling off in the export demand, and the Customs returns of the quantities and values exported in June point to the probability of a big loss on the working of the coalfield in June. Under the audit for March, April, and May the owners had to surrender £428,000 of their standard profits to meet the cost of the increased minimum wage payable in July, and the profits which they retained in May averaged only about 2½d per ton. In that month there were only two districts of the coalfield which showed a profit, while in one district the loss suffered amounted to several shillings per ton. The Customs figures for June reveal a decrease in the f.o.b. revenue of over £510,000. That sum is twelve times the net profits retained in May, but owing to the irregular working of the collieries the costs per ton last month were considerably greater than they were in the preceding month, and it is, therefore, feared that the total loss on the working of the industry in June will exceed £500,000. Under the terms of the agreement the coalowners are nominally given power of recoupment in respect of all losses or surrendered standard profits incurred in the payment of the minimum wage. By the end of June the sum nominally recoverable will probably amount to over £1,300,000, but no one expects such an improvement in trade as would make it possible to recover this large sum from future surpluses, and it is already regarded as irretrievably lost. There is a general feeling that something should be done to protect the industry from the bankruptcy with which it is threatened, but no one has come forward with a remedy, and schemes of sales centralisation and price and output regulation are still condemned. It was the view of the late Lord Rhondda that under such abnormally depressed conditions as those which now prevail in the industry, the adoption at any rate of a scheme of output regulation would be justified, but it has never been found possible to secure for such a scheme the measure of support that would be necessary to make it effective, and no indication has been

Given that the owners are as a body more in favour of such an expedient than they were thirty years ago, when it was first proposed. A widespread financial and industrial collapse is apparently inevitable unless trade improves or some drastic scheme of regulation involving considerable increases in the price of coal is introduced.

The Chilean Exchange.—A correspondent writes:—Among nervous investors some alarm has recently been entertained regarding exchange rates prevailing in Chile. The precipitate fall which occurred latterly has been attributed to a variety of disturbing conditions. It is not unnatural for investors to regard the occasional chaos of values resulting in South American (as in European) countries to a lack of sound organisation in their monetary systems. Undoubtedly upon occasions exchange in the Latin American States has been left largely to the mercy of certain interested banks and reckless local speculators. In the case of Chile, however, there seems little reason for the acute anxiety of investors referred to. The gold reserve, known as the Conversion Fund, amounts to over £8,000,000 sterling, held partly in the Bank of England and partly in the Moneda, at Santiago. While this large sum of money lies absolutely idle, bringing in no interest, it is more than sufficient to cover all the paper money in circulation at an exchange of 18d to the peso, or even at a higher figure, if the emission were not fully guaranteed. As a matter of fact, rates of foreign exchange, although frequently referred to as a primary factor in Chilean prosperity, indicating, as does a barometer, the economic advancement or depression of the country, may be regarded as an effect rather than a cause. Sometimes movements of exchange serve to foreshadow later developments, and in this respect they may even render a useful purpose by indicating certain expectations anticipated in the market. In forming opinions from exchange movements, however, and to avoid difficulty in distinguishing between merely temporary fluctuations and long-time swings or levels, careful consideration should be given to those fundamental influences affecting the integrity of the currency and the condition of the principal industries of the country. Investors in Chilean stocks should, moreover, bear in mind that the paper currency of the country has no par value, and that, inasmuch as prices tend to adjust themselves to new quotations, active business may actually be in existence while exchange itself remains heavily depressed. While it would be fallacious to declare that there is no cause for misgiving respecting the present financial situation of Chile, it would be a senseless exaggeration to declare, as have some critics, that "the peso is on the same road as that of the rouble and the mark." Should success attend the President's efforts to cut down reckless expenditure, and put an end to further borrowing, there seems no reason why Chilean finances, in view of the ample credit enjoyed by the country, which has made it possible upon previous occasions to find resources with which to offset poor years, should not be again placed upon a satisfactory basis.

Foreign Capital in Peru.—A correspondent writes:—The preliminaries which, in spite of denial, are known to be in hand for the raising of a further Peruvian Government loan have occasioned some researches, without altogether favourable results, into the position of foreign investors in this important South American Republic. The subject looms into greater importance in view of the considerable volume of British capital which has already found its way into Peru, and which at the end of last year was estimated to amount to nearly £27,000,000 sterling. Upon this total during the course of the twelvemonth something like £917,000 was paid in interest, thus yielding a return of little more than 3.4 per cent. On the other hand, investments representing over £10,000,000 (and including the whole of the ordinary capital of the Peruvian Corporation) received no return whatever. The newest loan, which is said to vary in amount between \$4,000,000 and \$7,000,000, will, it is expected, be handled by a combination of foreign interests, including North American, Dutch, and German, the latter represented by Gildemeister and Co. and the Stinnes interests. Last March Congress gave its formal consent to negotiations, in order to wipe

out the deficit in the 1922 Budget. It is recognised that under efficient government and with the necessary foreign financial assistance Peru might prove economically one of the more remunerative of the ten South American States. On the basis of certain figures recently made public, the total foreign trade of the country for the past year (1923) has exceeded in value \$185,000,000 at par of exchange, comparing with a total trade of \$142,620,000 in the previous year, and thus showing a gain of 30 per cent. Exports increased about 29 per cent., while imports showed a gain of 33 per cent. So far as the participation of British interests are concerned there has been little reason for dissatisfaction. The 1923 figures show imports from Great Britain to the value of £2,676,000, marking the best year's return since that of 1920, when United Kingdom exports to Peru amounted to £2,694,000. That period also proved remarkable for the total of exports to Great Britain, the sum of £12,682,000 being the largest since 1914. For 1923 exports to the United Kingdom amounted to £7,773,000, showing an improvement of as much as £1,181,000 over the figures of 1922. For the purposes of further economic development of Peru a considerable addition to the foreign capital already invested will, however, be needed; not alone in the form of loans to the Government to enable it to carry into effect some of the various reproductive projects which it has now in hand, but in order to finance a number of private enterprises connected with irrigation, manufactures, and exploitation of the vast mineral deposits, which hitherto have been left almost untouched owing to their inaccessibility. Tobacco, cotton, and wool, all of which could be made to appreciate in export value were sufficient capital available for their development, ought not to be lost sight of. British enterprise, notwithstanding the discouragement encountered in the fate of the Dunsmuir concessions, which, in lapsing occasioned, it is thought, heavy financial losses to the initial syndicate, is expected to manifest itself in the form of several new schemes. Among such undertakings is the Sullana-Morropón Railway, the concession for which is held by important London interests, which hope shortly to raise the necessary capital on this side.

Stock Exchange and Advertisement.—The advertising Convention at Wembley, writes a Stock Exchange correspondent, brings to the front as nothing else has done for many years past the matter of modern methods of publicity. Professional men will no doubt feel that it affects them but little, but the feelings of the Stock Exchange, speaking of the House as a whole, and not of the individual member, must be a little confused. Mr. Archibald Campbell, chairman of the Stock Exchange Committee, said at a recent dinner that he had been assured by a high authority that the Stock Exchange was no longer a business, it had become a profession, and the obvious inference is that, as a profession, its members would lose in dignity and caste if they were to advertise. Not that they are likely to press the question of personal advertisement with any great vigour. House men know perfectly well that if unrestrained individual advertisement were permitted, the result would be to quicken the present-day tendency whereby business flows more and more into the hands of big firms able to command extensive financial facilities, and, through them, a predominant position in various financial directions. From time to time the matter is raised (in the Press) as to whether the rule prohibiting advertisement by individual members should not be rescinded, but if a vote were to be taken amongst Stock Exchange brokers—exclusive of jobbers—the majority would be cast, it is almost certain, in favour of retaining the present rule. When it comes to advertisement of the Stock Exchange itself, however, that is a different matter altogether. The managers and trustees spent less than £1,000 a year in small-type advertisements which appear in newspapers from time to time, stating that members of the Stock Exchange are not allowed to advertise, and are not allowed to issue circulars to other than their own principals. The advertisement contains nothing beyond this which could be construed as offering protection to the public through any assurance that it is safer, in some ways, to deal with a member of the Stock Exchange than with outsiders. Nor does it so much as hint at the fact

that if a member of the public considers himself aggrieved over a transaction with a member of the House, the client can appeal to the Stock Exchange Committee, whose judgment is at all times founded upon the theory that the interest of the public and that of the client is identical. Accordingly, every possible consideration is, and must be, given to genuine complaints or misunderstandings that are liable to arise between stockbroker and client. Bucket-shops and outside brokers take liberal advantage of the prohibition laid upon Stock Exchange individual advertisement. The bucket-shops, in particular, have no hesitation in parading the alleged facilities which they claim to be able to offer to the public as compared with those afforded by the Stock Exchange member. They are subject to no jurisdiction other than that of laws that they know perfectly well are seldom put into force, and which they can afford, as a rule, to ignore with impunity when it comes to the matter of choosing whether they shall pay their losses or not. The majority are out to secure money from the public in the shape of call options, or other speculative engagements into which the public enter, but clients have no assurance that they will get their money, even if they should be so lucky as to make any on paper. The London Stock Exchange meanwhile looks on in dignified silence, and allows the public to be duped by bucket-shop allurements, for want of a vigorous programme of publicity to which the public are entitled. Clients have a claim to as full a measure as can be obtained in the way of protection, and a more liberal policy would have considerable effect upon diverting money into the Stock Exchange.

English Sewing Cotton.—Shareholders will receive the results of the English Sewing Cotton Co., Limited, for the year ended March 31, 1924, with considerable satisfaction. Indeed, it would appear from the steady figures given in the accounts that conditions are being stabilised on the basis of a 20 per cent. distribution on ordinary capital. The following table shows how the company has fared in recent years:—

	1913-14.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
Trading profits	376,365	598,105	794,136	254,242	414,915	725,328	712,352

* Includes £200,000 transferred from stock contingencies reserve.

The balance-sheet item of stock-in-trade, at cost or market value, at £813,240 shows only a slight decline from last year's figure of £822,846. It may be recalled that three years ago it stood at £1,324,696. Reserves, with this year's allocation, will stand at £1,050,000. Property, plant, and investments in subsidiaries are put together in one item of £3,357,598, but the presence of investments in British Government securities to the tune of £1,169,669 makes the position a fairly liquid one. The balance-sheet is analysed on the usual page.

The Chartered Report.—The report of the British South Africa Company, published this week, covers the period of eighteen months ended September 30th last, that being the date on which the company ceased to be responsible for the administration of Southern Rhodesia, and on which it was also in effect relieved of financial liability for the administration of Northern Rhodesia. It is also the earliest date from which it becomes possible to prepare a profit and loss account, because it is the date as from which the settlement with the Crown arrived at in July, 1923, "has removed any uncertainty as to what the assets and rights of the company really are." In future a profit and loss account will be submitted annually. In the present accounts the amount received from the British Government (£3,750,000) is shown in a special account, in which the administrative accounts and other assets show an excess of expenditure of £5,140,400, this figure appearing in the balance-sheet under "mineral rights,

3 & 5, PLACE VENDOME
CABLE ADDRESS: BANKTRUST, PARIS

concessions, land and land rights, &c." The report lays stress on the fact that this figure does not purport to be a valuation of the assets and rights, which are enumerated, but is the net expenditure of the company to date not specifically attributable to other assets in the balance-sheet. Important changes have been made in the balance-sheet, and since it was drawn up there has been a return to shareholders of 5s per share, reducing the nominal value of the shares from £1 to 15s, and the issued capital from £8,767,964 to £6,575,973. Certain items have been eliminated, and the total of the balance-sheet at £15,625,000 is over £2 millions lower than at March 31, 1922. Investments stand at £4,806,200, or nearly a million more than in the previous balance-sheet, the increase being due to the valuation of "further assets," consisting of shares in railway, mining, and other properties, and showing no value in 1922, at £829,300. The holding of 1,732,151 shares in the Rhodesia Railways Trust has been valued at par instead of at cost—namely, £1,281,000. The excess of revenue over expenditure for the eighteen months was £306,883, to which is added £705,382, the balance from the previous accounts after writing down various assets to the extent of £659,060. The total profit and loss balance is thus £1,012,265, out of which the first dividend in the company's history, at the rate of 6d per share, free of tax, will absorb £220,000, leaving £793,100 to be carried forward. The dividend distribution is to be made in November.

Glasgow Corporation Tramways.—The results of this highly successful undertaking for the year ended May 31st continue to show that a municipal transport monopoly may under favourable circumstances combine a cheap, efficient service with profits which make the mouths of "capitalists" water. It has been a conspicuous success, because it has always been a rigid monopoly—no competitive motor omnibuses are allowed—and because the corporation has followed financial principles of the highest capitalist standard. The total income for the year 1923-24 was £2,323,246, and the working expenses, £1,691,171. The net revenue, including interest on investments, was £634,565. After providing for interest, sinking fund, and income-tax, carrying £260,168 to depreciation and £203,319 to permanent way renewals fund, a net balance of £49,199 was transferred to the common good of the City of Glasgow. Between 1895 and 1924 the common good account—which represents the private property of the Glasgow Corporation as distinct from rates—has benefited from the tramways to the extent of £1,216,504. The capital account of this undertaking is unique. The total amount borrowed has been £5,404,702, of which £3,890,551 has been repaid out of the sinking fund and the original depreciation and renewals fund, leaving £1,574,151 outstanding. But since the new depreciation and renewals fund accumulated since 1917 amounts to £1,072,424, the actual amount of capital outstanding is no more than £501,727. In 1917 the Glasgow tramways undertaking cleared off the whole of its borrowed capital, and by this time next year will probably be in a position to do it again. During the year 1923-24 the tramways carried 430 million passengers, at an average revenue per head of 1.29d. The average fare charged per head per mile was slightly over 1d.

Fuel Oil.—The reductions of 5s per ton in the prices of fuel oil and diesel oil, made effective from July 4th, a correspondent writes, clearly reflect the principles governing the making of oil prices, which have lately been examined in the *Economist*. In fact, in the light of what was then said about the increase in the supply of heavy oil, this fall in the price of oil fuel was to have been anticipated. Before these reductions were made the spot prices of fuel oil and diesel oil (ex tank) stood at 87s 6d and 107s 6d per ton respectively. They had thus risen by 25 per cent. and 26 per cent. respectively above the low levels to which they had fallen by the end of last year. This was entirely due to the shrinkage in supplies at the beginning of this year and the fear of a serious shortage. As soon as production went up in the heavy oil fields, and supplies were increased, this 5s reduction was made, and if production holds up another reduction is not improbable. Whether the present spot price of 82s 6d per ton for bunker fuel oil compares favourably with the price of bunker coal may safely be left to the judgment of ship-owners. Shipowners do not give much away, certainly not to the Press, but it is common knowledge that whereas for coal bunker contracts they secure a reduction of only 1s to 1s 6d per ton below the spot price, they secure much larger reductions from the spot price in the case of oil bunker contracts and generally manage to work in the "fall clause" in addition. Particulars were given in the *Economist* of last week of the steady growth of new tonnage using oil fuel. Between 1914 and 1923 the proportion of gross tonnage using oil for steam-raising had risen from 2.65 per cent. to 24.23 per cent., and of those using oil in internal combustion engines from 0.45 per cent. to 2.56 per cent. "It is clear from these figures," said Sir George Beilby, the Director of Government Fuel Research, at the World Power Conference, "that in view of the immediate advantages which result from the replacement of coal by oil, shipowners are prepared to pay from two to three times the price per ton for oil as compared with coal. It is equally clear that the great oil distributing firms must have been prepared to guarantee to shipowners supplies of oil for a number of years ahead at prices which have not been regarded as prohibitive by the buyers." The shrewd remark of the scientist may usefully be quoted when next the ship-owners are expressing their fear that the use of oil fuel is being handicapped by its price. The price, of course, must vary with the chronic fluctuations in supply peculiar to the oilfields.

The Baltimore and Ohio.—The report for 1923 of the Baltimore and Ohio Railroad Company shows a substantial increase both in gross and net revenue, the ratio of expenses having dropped from 82.16 to 77.98 per cent. The following table compares the year's results with those for 1922:—

	1923.	Inc. or Dec.
Railway operating revenues	255,594,435	.. +54,751,266
Railway operating expenses	199,323,961	.. +34,302,587
Net railway revenue	56,270,474	.. +20,448,679
Other operating charges	14,137,345	.. +2,050,555
Net railway operating income.....	42,133,129	.. +18,398,124
Gross corporate income	48,165,650	.. +18,243,512
Net corporate income	22,422,036	.. +18,046,663

After payment of dividend on the preferred stock, there remained a balance of \$20,067,500, showing an earning of 13.21 per cent. upon the outstanding common stock. After suspension since 1919, dividends on the common stock are now resumed, a dividend at the rate of 5 per cent. per annum for the second half of the year being now paid. The accounts unmistakably reflect the trade activity of last year in the United States. Of the increase in operating revenues, freight receipts account for no less than \$49,081,400, the tonnage handled being the largest in the history of the company. An extensive programme of improvement and enlargement of the property was carried out during the year, and this is reflected in the balance-sheet, which shows an increase of \$31,756,600 in investment in property used in transportation service. The directors suggest, in the report, that "stockholders ought

to use their influence to prevent, if possible, any change in the Transportation Act until it has had a further and more complete trial."

The Standard Life Assurance Company's Capital.

This Scottish life office, which completes its centenary next year, has produced a plan for turning a proprietary into a mutual office—in the sense of transferring control from the shareholders to the policyholders. It is proposed to give the shareholders a fixed annual dividend on a definite amount of stock, and, apart from this dividend, which will be a first charge on the divisible profits, to wipe out their control and their claim to a proportion of the profits. At present the capital is £500,000 in £10 shares, of which £175,000 is paid up and £325,000 an uncalled liability. The shareholders receive 5 per cent. on the paid-up capital and one-tenth of the balance of the divisible surplus. The proposed plan is that the uncalled liability should be cancelled, and that for each £10 share (£3 10s. paid up) the holders should be allotted £17 of fully-paid 5 per cent. stock. This means that in place of the present dividend of 10s per share, tax free (12s 11d gross), there should be a fixed dividend of 17s a share, subject to tax. The paid-up capital of £175,000 (with uncalled liability of £325,000) would be converted into £850,000 stock, credited as fully paid. The benefit to the shareholders of this arrangement is obvious. On the other hand, the policyholders would acquire control and become entitled to all the divisible profits after payment of the fixed dividend to stockholders of £42,500 a year, less tax. This dividend net, after deducting tax, is rather more than 3½ per cent. of the present premium income. There is one rather interesting point to which no reference is made in the memorandum on the "mutualisation" scheme which the company has issued. The present paid-up share capital of £175,000 is represented by investments. The conversion into a nominal paid-up capital stock of £850,000 would amount to a writing-up of capital by £675,000, and there would be a hiatus in the balance-sheet if the assets were not written up on re-valuation to meet the capital. The market value of the investments as at November 15th last was certified to be in excess of the amount stated in the balance-sheet, which was based, we believe, on the values at November, 15, 1920. It may be that the investments will stand being written up by £675,000—the life and annuity funds appear in the balance-sheet at over 14 millions—but it is clear that if this be done, much restraint will need to be exercised by the new policyholder control at the next valuation of assets and liabilities. A large part of the apparent surplus will then have to be carried forward as a provision for possible depreciation in the future.

An Insurance Fusion.—We learn that the directors of the State Assurance Company have provisionally accepted an offer of the Royal Exchange Assurance Corporation to buy the company's shares at a price which works out at £11 a share. The State Company's 100,000 shares are £8 each (£1 paid), and the purchase consideration is £1 of Royal Exchange Corporation stock and £5 12s cash. The equivalent of £11 a share compares with a recent market valuation of about £9 a share. The State Assurance Company of Liverpool is a reputable company, which has lately been not quite so successful in the United States as possibly it deserved. Rather heavy losses for a small office were incurred in America in 1922 and 1923, as may be seen by reference to our "Insurance Supplement" of last week. The fusion with so well established an office as the Royal Exchange should be of substantial advantage.

The Anglo-Dutch Year.—As it may be possible that there are some directors who do not appreciate our reiterated remarks as to publicity in accounts, we would commend them to the annual accounts published by the Anglo-Dutch Plantations of Java. At the present price of the shares the yield is £6 4s per cent., and the shareholder has the satisfaction, whichever way the shares move, that he has been provided with copious facts and figures as to the

progress of the undertaking. A summary of results for recent years is shown below:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.
Share capital.....	1,163,216	1,286,780	1,286,780	1,930,170	1,930,170	1,930,170	1,930,170
Loan capital.....	..	..	..	..	..	..	149,918
Net profit	81,615	89,317	215,350	147,186	116,556	231,653	233,735

Rate per cent.	5	8	17½	10 on old shares 2½ on new shares	6	9	12
Carried forward	71,937	58,311	48,475	50,898	51,644	109,581	111,696

In November last £500,000 5 per cent. first mortgage debenture stock, convertible into ordinary shares, was offered to shareholders; this was fully subscribed, and the figure of £149,918 loan capital represents instalments on account. In a report of such length it is difficult to pick out one paragraph as more interesting than others. It is observed that "the average capital figure of £43 11s per acre, representing a capital of £2,762,357, includes the cost of areas existing at the formation of the company, and all expenditure on clearing, planting, and upkeep of new gardens, buildings, factories, electric power stations, and high-tension lines, water and lighting installations, Kampoenes, roads and railways, and the above expenditure on the sisal block, together with all salaries and general management expenditure capitalised. The figure also includes the cost of the new properties acquired, together with capital expenditure since date of purchase, amounting to £704,948 os 1d. If the reserves (excluding the insurance reserve) appearing in the accounts be taken into consideration, the average capital cost figure is reduced to £34 11s 7d per planted acre." New properties have been acquired with an area of 24,104 planted acres and 20,406 acres in bearing at a cost of £704,948, which is equivalent to £29 5s per planted acre.

Improved Rand Mining Methods.—At present, writes a South African correspondent, the Transvaal gold mines are gradually replacing hammer boys and the larger types of drilling machines by small "Jack-hammer" machines, which have been evolved after detailed investigations by their technical advisers. Mr A. J. Brett, the consulting engineer to the Central Mines Corporation, has furnished a very lucid statement with regard to these Jack-hammers. He shows that the outstanding feature of the underground work during the past year has undoubtedly been the extended use of the Jack-hammer. As a consequence of the larger number of these at work on the mines of the Central Mining-Rand Mines group, and the better efficiency obtained, the fathoms broken by machines in December, 1923, had increased by 22 per cent., and the development footage by 15 per cent., when compared with December, 1922, while 2.5 per cent. fewer machines had been used. As an example of the very remarkable progress made in Jack-hammer work, one finds that while in January, 1923, 1,768 natives broke 11,282 fathoms of rock, in January, 1924, 1,158 natives broke 12,789 fathoms—that is to say, 610 fewer natives broke 1,507 more fathoms. The costs for machine stoping on the mine referred to, which were 94s 10d per fathom in 1921, and in January, 1923, 71s 1d, dropped in January, 1924, to 53s 10d per fathom, the efficiency per Jack-hammer shift having risen from .68 fathom per machine shift in January, 1923, to 1.58 fathoms in the latter period. The following comparison of costs for machine stoping on some of the other mines of the group quoted by Mr Brett clearly demonstrate the effect of the Jack-hammer; in each case the costs are those for the last quarter of the year:—

	1921.	1922.	1923.
Mine B	77 5	56 4	46 3
" C	71 4	50 7	45 10
" D	90 9	71 3	55 9
" E	75 3	46 0	41 4

In conclusion, Mr Brett says: "With efficiencies such as are now being obtained, one Jack-hammer will break as much ground as 15 to 20 hammer-boys. If, then, it is reckoned that it takes two natives to run one Jack-hammer, the very marked effect of the substitution of the

Jack-hammer for hammer-boys, on the demand for labour by the mines, can be clearly realised. When substituted for other classes of machines on the Central Rand, Jack-hammers in the majority of cases stope at a narrowed width, are more economical in the use of compressed air, and actually break more ground per machine shift. The benefit of the use of these machines has probably not yet been fully demonstrated, so that a further small saving in working costs from this cause may be expected."

The Gamble in East Rands.—One great attraction of the mining department of the Stock Exchange is that every now and again some concern, believed to be virtually defunct, Phoenix-like rises from its ashes. A case in point is the East Rand Proprietary. At one time this year the price of the shares was down to about 5s. In their report for 1923 the directors, while recording the opening up of a larger payable tonnage than in recent years, emphasised the point that the prospects were entirely bound up in the results to be obtained from the energetic development programme in hand; further, the consulting engineer again commented upon the inadequacy of the ore reserves. About the middle of June rumours became current as to an improvement in the developments; and on the 17th a confirmatory official cable was issued. The latter also referred to the reduction which had been effected in working costs, stated that the first five months of the year showed a working profit of £60,050, as against a loss in the corresponding period of 1923; added that the outlook for the company was materially improving, and foreshadowed a re-entry to the dividend list. On this optimistic intimation the shares were further run up. Then came private advices—quickly confirmed by official news—that the developments at a particular point had from high-grade become unpayable. Down fell the price of the shares. A renewed buying campaign carried the quotation up to 14s, from which there was a gradual descent. On a cable from the head office stating that the values at the point in question continued unpayable, the shares in the early dealings on Monday morning touched 12s, but immediately after the official opening of business were up to 13s. They subsequently improved to 13s 9d, but on Friday morning were under 13s again. Altogether shareholders and speculators are having much excitement for their money. The broad features are, however, these. During the past month or so large purchases have been made on behalf of a certain interest; it may be inferred that they have not been based upon rich developments in one section of the mine. Moreover, there is reason to believe that the rumours as to buying for control are well founded. A similar procedure was followed by the same group in the case of the adjoining Witwatersrand Deep property. And it is stated that developments in the section of the Witwatersrand Deep which adjoins the East Rand are of an encouraging character.

Abbontiakoon.—Our mining correspondent writes:—The recent experiences of this West African undertaking rather remind one of the quotation acent the good man struggling against adversity. The mine is quite good; at the end of last year the ore reserves totalled 459,500 tons, although in May, owing to the strength of the position in this respect—the tonnage representing between six and seven years' supply for the mill—the rate of development was reduced. The value goes just over half an ounce of gold to the ton—a good average. The yield secured from the 84,940 tons crushed in 1923 represented practically 40s per ton. Yet operations again resulted in a loss, although not a very great one, the expense ratio being nearly 42s 6d. An important factor in the results of this and other West African gold companies is the continued shortage of native labour. From time to time during the past few years endeavours have been made by those at the back of the industry to secure a better supply of coloured workers, but so far little success has been achieved. Indeed, in his report, the consulting engineer of the Abbontiakoon company states that as regards the Northern Territories—the chief source of supply—various restrictions have been imposed by the Government authorities, and recruiting is now only permitted during a few months of the year. As a partial compensation, a

few hundred natives were received as the outcome of an experimental recruiting campaign in Nigeria; but the tin-mining companies in that country are also suffering from shortage of labour, and are not likely to view with equanimity the continuation of any such campaign. Reverting to the affairs of the Abbotiakoona, last year's loss amounted to £10,700, increasing the debit balance to £15,500. The financial position is now becoming somewhat straightened, the net surplus cash assets, including stores, figuring out at no more than £33,000.

Odhams Press.—Yet another undertaking finds it necessary to reorganise its capital. The object is to remove from the balance-sheet certain items of "an intangible nature," to establish justifiable relations between the book value of the assets and the capital. "Intangible" items are given as £244,591. The existing issued capital comprises £506,257 8 per cent. cumulative preference shares, £225,000 10 per cent. "A" cumulative preference shares, and £522,180 ordinary shares, all of £1 each. Dividends on the 8 per cent. preference shares are in arrear from July 1, 1922, and on the 10 per cent. preference shares from April 1st of the same year. Under the scheme the capital of the preference shareholders will remain intact, but the dividend on the 8 per cent. shares is to be reduced to 6 per cent., and that on the 10 per cent. shares to 7½ per cent., while rights to dividends up to December 31, 1924, are to be surrendered. As compensation, the preference shareholders are to receive two 4s ordinary shares for every £1 of dividend surrendered, while, for reduction of dividend, the 8 per cent. shareholders will be given fourteen 4s ordinary shares in respect of every 100 shares now held, and the 10 per cent. holders ten ordinary shares for every 100 shares now held. The ordinary shareholders are to exchange each £1 share for two 4s ordinary shares. The report for 1923 shows net profit of £88,689, compared with £71,144 for 1922. In these proposals preference shareholders at least have little to complain, while ordinary shareholders cannot very well help themselves.

UNITED STATES.—TREASURY'S FISCAL YEAR—GOVERNMENT COTTON REPORT—IMMIGRATION QUOTAS—OIL PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 8.

COMPLETE returns, showing results of Treasury operations for the fiscal year ended June 30, 1924, are now available. The Government's total ordinary receipts for the year were \$4,012,044,702, and total expenditures chargeable against such receipts amounted to \$3,506,677,715, leaving an actual surplus for the year of \$505,366,986. In October of last year, when the fiscal year had eight more months to run, the probable surplus was estimated at only \$329,639,624. The wide difference was due to unknown financial and other factors. The actual results show that receipts were over-estimated last October to the extent of \$32,000,000, while expenditures were over-estimated by \$208,000,000, including \$50,000,000 of foreign debt payments of interest in June made in cash instead of American securities, as had been expected, and therefore, as Secretary Mellon explains, "showing up as a receipt with no corresponding expenditure on account of the cancellation of the securities so received." The change in the money market since the first of the calendar year, he points out, was perhaps the most material factor in bringing about the increase in the actual surplus over the October estimate. Liberty bonds went above par, and were not used in payment of foreign interest obligations. Furthermore, railroad securities heretofore acquired by the Government could be refunded at lower interest rates by the railroads, and were, there-

fore, paid off or purchased, and instead of a net cash outgo in the railroad account, there was a net cash income, making a difference of some \$120,000,000 over the earlier estimate. Customs receipts for the fiscal year totalled \$545,637,504, as against \$570,000,000 estimated. Internal revenue receipts, on the other hand, even after giving the 25 per cent. credit on six months of the 1924 personal income-taxes, were \$2,975,157,036, or \$11,572,036 above the estimate. On June 30th of this year the gross public debt stood at \$21,250,812,989, representing a decrease during the past fiscal year of \$1,098,894,376. The Government entered the present fiscal year with a general fund balance of \$235,411,482, as against \$370,939,121 a year ago.

The Government's July cotton report was a big surprise. The Department of Agriculture's estimates of condition, acreage planted, and prospective yield all greatly exceeded preliminary forecasts by trade authorities. The condition of the crop as at June 25th was given by the Department as 71.2 per cent. of normal, which compares with 65.6 per cent. on May 25th of this year, 69.9 per cent. on June 25th a year ago, and a ten-year average on June 25th of 74.8 per cent. Private estimates had averaged 68.2 per cent. The area of cotton under cultivation on June 25th was placed at approximately 40,403,000 acres, representing an increase of 1,702,000 acres, or more than 4 per cent. over the revised estimate of the acreage under cultivation a year ago. This is the largest area ever indicated in the history of the American cotton industry, and is considerably above private estimates, which have ranged from 38,500,000 to 39,100,000 acres. Based on the June 25th acreage and condition, the Department of Agriculture forecast a crop of 12,144,000 bales, as against private estimates ranging from 11,200,000 to 11,700,000, and averaging 11,500,000. The Government's report precipitated heavy selling in speculative cotton markets, and caused a break of more than one cent a pound. Renewed selling pressure in the past few days, due to favourable crop advices, has resulted in further declines to the lowest levels recorded in three months. The liquidation has occurred in spite of the fact that not much reliance can be placed upon the Government's July crop forecast. During the past three or four years actual results have shown that the Department of Agriculture, in its July prediction, far over-estimated the yield. The present estimate is the highest made by the Government at this time of the season in any year since the war.

The proclamation recently issued by President Coolidge, declaring the new immigration law in effect on July 1st, fixes the quotas in accordance with the provisions of the Act. As previously mentioned, the new statute limits the annual quota of any nationality to 2 per cent. of the number of foreign-born individuals of such nationality resident in continental United States as determined by the Census of 1890, providing the minimum quota of any nationality is 100. Only aliens eligible to citizenship in this country are included in the quotas. A study of the latter reveals the interesting fact that, under the Census year specified in the law, Germany is entitled to the largest quota of all countries, namely, 51,227. The quota for France is fixed at 3,954, while Great Britain and Northern Ireland are given a quota of 34,007, and the Irish Free State 28,567. Belgium is assigned a quota of only 512, and Australia 121. Thirty-eight countries are named as entitled to the minimum of 100 each. No quota restrictions are imposed upon Canada or Newfoundland.

Prices of crude oil continue to decline. Pennsylvania crude was lowered 50 cents a barrel this week in the Bradford district to \$3.25, and 25 cents outside of that district to \$3. The latest reduction, the third so far this year, brings the price of Pennsylvania crude \$1.25 below the 1924 high of \$4.50 reached last January; the present price is only 65 cents a barrel above the low of \$2.60 last November. According to the latest report of the Geological Survey, the daily average production of petroleum in the United States during May increased 4,126 barrels. Pipe-line and tank-farm stocks increased 4,823,000 barrels in that month, bringing the total on May 31st up to 346,751,000 barrels, as compared with 277,785,000 on May 31st of last year.

FRANCE.—AMNESTY BILL—SOCIALISTS AND STRIKERS' REINSTATEMENT—SIX MONTHS' REVENUE.

(FROM OUR CORRESPONDENT.)

PARIS, June 16.

M. HERRIOT, taking a leaf from his predecessor's book, succeeded, for better or for worse, in forcing the Amnesty Bill through the Chamber by keeping the House at work all through the great national festival of the Fourteenth of July, and was thus able to leave for the Interallied Conference in London with the satisfaction of having at least done his best to fulfil one of the promises he made to his Communist and Socialist supporters at the last election. Whether he will secure the acceptance of the Bill by the Senate remains to be seen, but it is generally regarded as unlikely. The Senate, in spite of the reputation it has enjoyed for many years past of being more radical than the Lower House, has already shown its independence by refusing on at least two occasions to follow the lead of the Chamber, and little doubt is felt but that it will considerably water down the extremely popular Chamber in an atmosphere of party passion. The far-reaching measure that has been rushed through the desire of the Communists, and also of many of the Socialists, was to bring about a general gaol delivery, but this proved too strong a proposition for the vast majority of the House, although the Bill still goes much further than any previous measure of the kind.

From the economic point of view, the most noteworthy clauses of the Bill are those that provide not only for the amnesty of but for the reinstatement in their jobs of the railwaymen who were dismissed by the State and the private companies for their share in the disastrous although abortive general railway strike of 1920. The debate on this portion of the Bill revealed in a striking manner the deliberately laid plans that are being carried into operation by the revolutionary element to utilise political machinery for the purpose of securing control above all of the public transport systems, with a view to paralysing the present social order. In this country it has been the fixed policy of the revolutionary element for many years past to secure control of the railways by having at every essential point sympathisers among the working staff, who would thus be able to bring the economic life of the country to a standstill whenever a suitable moment came.

The attractiveness of this policy lies in the fact that in the circumstances of the case a comparatively small number of men would be needed to bring about the desired end. In 1920 only 122,000 *cheminots* took part in the strike out of a total of over 450,000. Of the 18,338 who were dismissed a large number have been reinstated already. Many others have been absorbed by private industry. It is estimated that between 4,000 and 4,500 still remain reinstatable, and these include many of the ringleaders of the strike. An agitation has been in progress ever since the strike for these men to be given back their jobs, but was always resisted by M. Le Trocquer and his predecessors at the head of the Ministry of Public Works, on the ground that their return would be dangerous to the nation's interests.

During the debate on the Amnesty Bill M. Le Trocquer quoted speech after speech from militant railway men, in which they openly boasted that their real reason for wishing these men reinstated is because the revolutionary element is now non-existent on the railways, and because it is "impossible to prepare the revolution unless we have the railway men with us." M. Cachin, the Communist leader, admitted without hesitation that this was the fixed object of his party.

The most serious feature of the present Government's attitude on this question is the fact that M. Peytral, the new Minister for Public Works, in the course of the debate on the Amnesty Bill, thought fit to utter a veiled threat to the railway companies by hinting that the Government may find it necessary to compel them to reinstate the men whom they have hitherto, for what they regard as sound reasons, declined to take back. M. Peytral's threat may be only an empty one, as it may be regarded as certain the Senate would never consent to the Government being authorised to exercise powers of this

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

JAMES STEUART, Chief Manager.

kind. But the mere fact that it should have been made has undoubtedly given rise to a good deal of justifiable alarm.

The effect of the penalty clause inserted in the last Budget Bill of the Poincaré Government, imposing a fine of 10 per cent. of their assessments on all taxpayers who failed to pay their rates and taxes on or before the end of June, is strikingly shown by the taxation returns for the last month. The total revenue (exclusive of that received from the Department of Posts, Telegraphs, and Telephones, which now has an autonomous Budget) amounted during June to 2,122,133,400f, as compared with 1,968,611,200f in May. Of this total 2,001,173,900f was derived from "normal and permanent" resources (as against 1,700,659,000f in May). Most of the increase of 536,604,200f may be regarded as directly due to the operation of the penalty clause. This was especially emphasised in the revenue from income-tax, which amounted to 501,034,100f in June, or nearly three times the amount recovered in June, 1923, when only 163,299,700f was obtained from this source.

The total revenue for the month was 35,679,500f in excess of Budget estimates, and this was almost entirely due to the fact that the tax on turnover—which is proving, as its inventor predicted would be the case, the milch cow of the Treasury—yielded over 37 more than M. de Lasteyrie expected it would during June. The abolition of this tax was one of the promises made by M. Herriot's supporters at the recent General Elections, but it is now appearing more and more doubtful whether the promise will be kept. M. Raynaldy, the Minister of Commerce, was reported in the Press to have stated, in a speech last Sunday, that "from the fiscal point of view the double décime and the tax on turnover would soon be abolished." The effect of this report was to elicit on the following day from the Minister concerned a hasty official denial to the effect that all he had said was that the Government was considering whether it would not be possible to exempt foodstuffs of the first necessity from this tax. In the present state of the country's finances, it is difficult to see how it can be possible to dispense with a tax which, although it undoubtedly tends to maintain the cost of living at its present high level, is now yielding nearly 4,000 millions a year.

The total revenue from normal and permanent sources for the first half of 1924 is now known to have been 11,759,533,100f, as compared with 9,215,266,100f for the corresponding period of 1923. The greater part of this increase of 2½ milliards is admittedly due to the imposition of the double décime, and much of the rest to the increase in the yield from *ad valorem* taxation owing to the rise in commodity prices. The tax of 25 per cent. on spirits yielded 341,162,000f, or 70 millions more than during the first half of last year, wines yielded 283 millions (or 14½ millions more), beers 46½ millions (7 millions more), alcohols 390 millions (an increase of 26½ millions), and mineral waters 10,866,000f (or 2½ millions more). The increased taxation on rail transports yielded 201 millions, or 20½ millions more than during the first period of last year (and about 56 millions more than had been expected); taxes on amusements 32 millions (an increase of three millions); the motor-car tax yielded 98,474,000f, or 23 millions more than during the same period last year, and nearly 12½ millions more than Budget estimates; and bicycles produced 31½ millions, or over 1½ millions more. The match monopoly yielded 51,155,000f during the half-year, while tobacco produced 996,110,000f, or 109½ millions more than expectations.

GERMANY. — REPARATIONS — FOOD DUTIES — CURRENCY AND CREDIT — INDUSTRY — PRICES — BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, July 15.

THE public attitude here to the London Conference is passive, and not optimistic. The arrangement come to at the Anglo-French meeting in Paris was not very well taken. It is now feared that the Dawes project, which was at least clear and in principle acceptable, will be swamped under preliminary semi-political questions, which were not raised, or were forgotten, when the project was published. From this might be concluded that the greatest obstacles to Reparations lie outside the merely economical domain of Reparations proper. The Ruhr military occupation, the question of the invitation of Germany as a consenting party or merely as a signatory, and the questions of "sanctions" in case of failure, have all nothing to do with the practicability of the plan, but they seem to be the chief matters on which Ally minds are bent. The prominence of the "sanctions" question is not considered reassuring. Many Germans think that even with the best will the Dawes scheme could not be carried through beyond the stage of initiation; and when they read that the question of compulsion or punishment is the chief matter in Ally minds, they begin to suspect that Ally politicians also do not believe in the plan. In view of the indispensability of the international loan, and of the statement on July 10 of Mr Ramsay MacDonald as to the guarantee required by intending lenders against damage to their security by military or political action—which statement entirely agrees with utterances of the American financial Press—the domination of the London Conference by plans for action in case of failure seems considerably to increase the chances of failure.

Official and semi-official utterances here mostly confine themselves to emphasising Germany's dependence in the meantime upon the progress made on the Allies' side in regard to the Dawes scheme proper. The necessary Bills, it is declared, can almost certainly be got through the Reichstag. The bank project has already been delivered to the Reparations Commission; and the Bills concerning the railways and the industrial bonds are to be ready by the end of this week. A mere delay in London in deciding the political questions would not prevent progress here if once the details of the Bills were finally approved of, because the Reichstag, when passing the Bills, can be asked to give the Cabinet authority to put them into force only if, in its judgment, satisfactory agreements on these political questions have been come to with the Allies.

The attitude of the German-Nationals is threatening. The Party seems to have no better policy than to break up the Cabinet coalition; and as the Socialists, as was inevitable, are violently opposing the new Agrarian Duties plan, the minority Cabinet's position is weaker. The Socialists profess to believe that Dr Marx's motive for submitting the Agrarian Duties Bill at this juncture is to buy German-National support for the Dawes Bills; but the Nationals deny this, and they show no sign of weakening their opposition. The Agrarian Bill has been submitted to the Reichswirtschaftsrat. It is associated with a Bill reducing the Sales Tax from the present 2½ to 2 per cent., which is to compensate consumers for higher food prices. The preamble to the Bill mentions that agricultural products are about 15 per cent. under pre-war prices, while materials used in agriculture are about 15 per cent. above pre-war prices. Food prices are kept down, not only by free importing, but also by the existing prohibition on export. A sharp decline in the area sown next autumn is inevitable unless prices are raised. The live-stock statistics of the last months indicate that present home production will cover the whole home demand for meat, which has sunk much since 1913. In view of this, the Bill rescinds the war ordinance of August 4, 1914, which abolished the import duties on rye, wheat, barley, oats, potatoes, cattle, sheep, pigs, meat, and pork, also a later law of 1915 removing the duties from fresh vegetables. The law of June 21, 1921, giving the Government power temporarily to reduce

or abolish duties is prolonged until June 30, 1926, and the Government has power to fix the duty on fodder barley at under 4 marks per double centner. Another clause prolongs until June 30, 1926, the law of August, 1922, authorising the Government to alter duties temporarily. This in principle means that the autonomous food tariff of 1902 is restored, but that the Government has power to reduce its rates either in order to prevent too heavy a burden on the consumer or for the purpose of negotiating with other countries. The Government yesterday authorised the "Reichsgetreidestelle" to license the export of grain, flour, and grain waste products, on the ground that a market must be found for the excessive supply.

Duties in the Tariff of 1902, which is now to be restored, were per double-centner (200 metric lbs), wheat 7.50 marks, rye 7 marks, fodder barley 7 marks, maize 5 marks. These rates were reduced under the commercial agreements of 1904-5 to: Wheat 5.50 marks, rye 5 marks, barley (Russia) 1.30 marks, maize 3 marks. For cattle, sheep, and pigs the Tariff of 1902 introduced duties according to live weight, the rate being in all cases 18 marks per double-centner, which under the commercial treaties was reduced for cattle and sheep to between 8 marks and 14.40 marks for pigs to between 9 marks and 14.40 marks. The meat duties were 45 marks to 120 marks, reduced under the treaties to between 35 marks and 75 marks per double-centner. It seems likely that if the Cabinet does not break down on the Reparations question it will put this plan through, the main factor being the weakness of the opposing Socialists. Incidentally, the Cabinet justifies the plan on the ground that it will help to create a foreign-trade balance.

The decline in industrial activity continues. The June railways report shows a decline in traffic. Present sales of coal are stated to be only about half the normal output; and the Ruhr producers are having a struggle to regain the Central and Western markets lost during the time of passive resistance. Silesian coal, which formerly never got west of the line Berlin-Chemnitz, recently sold at Hamm and Mannheim. In the second half of June the number of unemployed in unoccupied territory rose 13 per cent. to 241,000. Berlin in the last report week had 25,410 publicly supported unemployed. From occupied territory are reported many cases of stoppage of production. Krupps have introduced shortened hours in certain branches, and given notice to discharge 5 per cent. of their employees. Owing to lack of credit a large Mannheim machinery firm, employing 5,000 men, has decided to close down altogether. The iron and steel market is very weak, and prices are tending downward. Ingots have fallen to 90 marks per metric ton, blooms 96 marks, billets 105 marks, slabs 106-110 marks, bars 120-125 marks, thin sheets (under 1 mm) 175 marks. Earlier this year bars sold at 150-160 marks. The above are average prices ex works. The works declare that they lose 30-40 marks on a ton of bars. Dealers with old stocks are selling below the above rates. The official wholesale price index number fell on July 8th to 112; but the cost of living rose on the 9th to 119. Earlier in the year the wholesale index was higher than the cost of living. Apart from the considerable rise in officially regulated rents, the reversal seems to be due to the fact that the recent big declines in prices of coal, iron and other standard commodities have not yet had time to reflect themselves on retail prices.

AUSTRIA. — POLITICAL DIFFICULTIES — THE ECONOMIC CRISIS — ACTION BY THE NATIONAL BANK — FOREIGN CREDITS.

(FROM OUR CORRESPONDENT.)

VIENNA, July 1.

THE attempt on Chancellor Seipel's life has had one good effect: it has moderated the antagonism existing between the Christian Socialist and the Social Democrat parties, and thus facilitated the legislative work in Parliament. On the other hand, the unsatisfactory result of the Geneva Conference has caused great resentment among both parties, and the action of Commissioner-General Zimmermann has been severely criticised. He is, however, in a very difficult position, as he is obliged to bring into accord

the interests of the foreign creditors with the alterations suggested by the Austrian Government in the original reconstruction scheme. The greatest disillusion in the result of the Geneva Conference was the fact that the desired increase of expenditure in the "Normal Budget" and the credits for investments were not granted. This has postponed the very urgent question of the increase of State employees' salaries and the anticipated improvement in employment in industries and trade at least until autumn. Moreover, the Commissioner-General demands the repayment of certain credits which the National Bank has granted during the present period of financial depression, which, however justified this demand was, has also created a great amount of dissatisfaction. In any case, the fact is worth noticing that not only Social Democrat leaders, but even some members of the Christian Socialist party have attacked the Commissioner-General in public meetings. The Minister of Finance, Dr Kienböck, has also been subject to severe criticism on account of his failure in Geneva and his unbending attitude towards the State officials. Moreover, many of his opponents blame him for his inefficiency in the present financial crisis.

During the month of June further insolvencies of banks and commercial firms occurred. The general opinion prevailing is, however, that the crisis has reached its height. Up to now the following banks have been obliged to close down:—The "Industriebank," the "Austro-Polnische Bank," the "Austro-Orient Bank," the "Deutsche Bodenbank" (these four were small concerns of no importance), the "Lombard und Escomptebank" (a middle bank) and a few days ago the "Depositenbank" (a big bank); this latter bank was already in a difficult situation on May 5th, when the five big banks came to its assistance. Upon a thorough examination of the books, however, it was found that the bank could not be made solvent, and the big banks reluctantly felt obliged to withdraw their support. Negotiations with a British group for the reconstruction of the "Depositenbank" on a smaller scale are now in progress. The number of arrangements with creditors also shows an increase. The statistics for July and December, 1923, show an average of 8 and 21 arrangements per week respectively; this figure rose during the months of May and June, 1924, to an average of 46 weekly. The sums in question are in some cases only small amounts. As a matter of fact, a part of these insolvencies is only due to the systematic campaign of defamation led by various financial circles abroad by spreading false or exaggerated rumours. These rumours had in many cases the consequence that foreign credits granted to Austrian banks and firms suddenly ceased, bringing these concerns into temporary difficulties. With regard to this, it seems, however, that a certain amount of confidence is gradually returning, as at least the big banks and leading industrial concerns have recently again succeeded in securing foreign credits. One must expect, nevertheless, that some of the lesser banks, most of which have been founded since the war, and which are quite superfluous from an economic point of view, will have to disappear before long; some of these are endeavouring to save their existence by merging with other small banks. The index figure for the cost of living for the month of June shows a further increase of 2 per cent. The number of unemployed fell from 82,551 in May to 68,475. This shows the satisfactory development on the labour market, considering that in March this year the number of unemployed was 125,783.

As is known, the Government intends an alteration of the present Budget scheme, which contemplated the expenditure for 1925 of 350 million gold kronen, to a figure amounting to 500 million gold kronen. For the time being, however, this alteration cannot be made, as the League of Nations' Council has decided that it will be necessary to see how the present crisis is passed before any change can be undertaken. Whilst some taxes on commodities, especially tobacco, are showing very satisfactory returns, it is to be expected that the prevailing crisis will adversely influence the returns of companies' earnings tax and personal income-tax.

As a consequence of the critical financial and economic situation during the last two months, there was a large demand upon the National Bank, which caused a reduction of the gold reserve and a great increase of its bills

holding. On April 15th the gold reserve amounted to 3,939 milliard, on June 15th to 3,191 milliard paper kronen; during the same period the amount of bills discounted rose from 1,759 milliard to 2,709 milliard paper kronen. The Commissioner-General, who had put certain amounts of the League of Nations' Loan at the disposal of the National Bank, has recently informed this bank that the short-term loans in foreign currencies granted to Austrian firms out of these funds must be limited in future to the sum of 80 million gold kronen. He has further demanded that the short-term loans in Austrian kronen which the bank had used for the support of the Stock Exchange shall be repaid by instalments in the near future. At the beginning of the month the National Bank raised the discount rate from 10 to 12 per cent. The hope, however, that the measure would help the bank to regain the control of the money market and to ease the situation has not been realised. The practical result was only that all other banks and savings banks increased their rates, too. An increased influx of foreign capital, however, is to be noticed of late, which no doubt would have been larger if the financial position of the Vienna market had been better. 69241

A great number of leading Austrian industries intend creating an organisation with the object of issuing mortgage bonds which will have to be guaranteed by all the industrial concerns interested in the scheme. These mortgage bonds, which will be made out in gold kronen, will be placed mainly in U.S.A. The negotiations for this scheme seem to be far advanced; the first issue, amounting to 5 million dollars, will be placed in U.S.A.

There was little business on the Stock Exchange during the past month. The improvement in prices noted at the end of May was again lost, as prices slowly but continuously crumbled away. The money market was also very quiet, as Stock Exchange requirements have fallen to a minimum. Contango rates seldom exceeded ½ per cent. The foreign money market was equally quiet, especially because since the creation of the Independent Hungarian National Bank, the purchase of foreign currencies on the Vienna market by Hungarian banks has practically ceased. Rates of exchange showed but slight fluctuations. The sterling rate of exchange at the beginning of the month was 306,300 kronen; at the end of June 306,700 kronen.

SWEDEN. — SHIPPING AND FREIGHTS — TRADE BALANCE — MATCH INDUSTRY — AGRICULTURAL OUTLOOK.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, July 2.

FOR the moment the business world is rather quiet. The shipping season, which is now fully opened, is not very bright, and is considered much more unfavourable than last year, owing to the abundance of tonnage, and the depression of freights to such a level that it is very difficult for ship-owners to make ends meet. However, freights might stiffen later on at the end of the shipping season, when there may be a rush to have the sold timber shipped. The timber market is rather slow at present, but the quantity now sold, amounting to about 50,000 standards, is considered good, compared with the position at the same time during recent years. The tendency to buy from hand to mouth remains, while in normal times contracts used to be closed early in the year for the whole season. For the moment, Spain and Holland seem to be the keenest buyers. Prices are far from favourable, and in the northern districts the mills have curtailed production. The pulp market is unusually lively for the season, and big sales have been made, especially to the United States. During May an export record in iron ore was reached. The total of the iron ore exported by the big mining concern, the Grangesberg-Ototosund Company (the principal ore exporter in Sweden), was no less than 825,385 tons, while it was 530,000 during April and only 254,400 during May last year. The previous high record was 703,000 tons in September, 1916. For June this year the figure has just been announced as 601,298 tons.

The import surplus for May was 22.7 million crowns, a considerable reduction as compared with April. No

doubt the reduction would have been greater had not weather conditions been so very unfavourable for export. The shipping season for the northern ports could not commence until very much later than usual. Heavy imports of raw materials are still prominent; this is especially the case with spinning materials, the value of imports of this class being more than double the figure for May last year. On the export side the difference in the export of timber compared with May last year is specially notable. The trade balance, however, for the five months January-May this year is much more favourable than for the same period last year. The outlook for the crops is still difficult to gauge, but the reports are quite favourable. The situation on the labour market is steadily improving, and in some places it is almost impossible to obtain the necessary hands for farm work.

In some quarters there has been a keen desire to have the discount rate raised, but the proposal has been strongly opposed by representatives of trade and industry. An increase of the discount would hit industry first of all, and industry still has rather heavy commitments left over from the crisis. The Riksbank report for last week shows that the note circulation during that period was increased by 17.8 million crowns, which, of course, is due to the beginning of the new half-year. There is an increase, although very small indeed, in the bank's stock of gold.

The Swedish match-making industry's new issue of shares has had a very good sale in this country. According to reports from India, the import of matches from Sweden was almost double during March this year, compared with March last year, while the total import had fallen off considerably, owing to the very much reduced import from Japan. The sales to Russia made after the trade treaty was signed are estimated to amount to a value of about 4 million crowns, consisting chiefly of paper, pulp, agricultural machinery, sheet iron, and lighting material. As a rule credit for three to six months, or even for longer time, has been granted, but some goods have been paid for in cash. The quarterly index issued by the Board of Social Welfare (including all necessities of life) has gone down two points since April 1st, and is now 171.

CANADA.—CROP CONDITIONS—HINTS OF A DECLINE IN FEDERAL REVENUES—BETTER GRAIN PRICES—BUSINESS CONDITIONS—AUTHORITY FOR NEW LOAN—CREDIT REFORMERS' PROPOSALS—MATURING OBLIGATIONS—ADMINISTRATIVE REFORMS—TWO COMMERCIAL TREATIES.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 5.

It is yet too early to make any definite prophecies about the Canadian crops, but good hopes are still cherished of the Western grain crop. However, in the latest reports a note of anxiety has been visible. Throughout the whole of the three prairie provinces crops are a fortnight later than usual, and such a condition renders them more liable to the onslaught of early frosts. In Manitoba prospects have recently been improved by some timely rains followed by warm weather. In Saskatchewan the present conditions foreshadow at least an average crop in the Eastern and Northern areas, but west of Saskatoon there is a serious lack of moisture, and cold, raw weather has retarded growth. A similar disability has afflicted the Edmonton district till the last week, but Alberta has for the past five days been visited by an abnormal heat wave, and as no rains had fallen for some time, grain suffered severely. From the most easterly regions of the province come very gloomy reports about burnt-up crops, and the chance of a repetition of last year's bumper crop for Alberta is now faint. Areas north of Edmonton report some damage from frost. However, there were some heavy rainfalls in the Calgary district before the heat wave came, and conditions there and around Lethbridge are rated good. The hay crop in the West is, however, very light, and in many districts cattle are very thin owing to the poverty of pasture. In Ontario and Quebec the

crop is likewise very late, but recently a happy combination of heavy rains and warm weather has accelerated the growth. In the Maritime provinces recent rains have been a saving factor, and the hay and potato crops promise a good yield. British Columbia has suffered from a lack of rain, and many areas have been afflicted with severe drought. Taken all round, however, the crop prospects for 1924 are considerably less favourable than they were at the corresponding date of 1923, but there is time enough yet, especially in the case of the all-important grain crop, for a great improvement to take place.

The customs and excise returns for June, which were \$19,705,916, as compared with \$26,255,540 in June, 1923, and almost four million dollars less than the May figures, provide further evidence that the Government is confronted with serious financial problems. It is true that there has been an increase of some five million dollars in the income-tax collections, most of which are now in, but during the first quarter customs and excise revenues show a total loss of about 16 million dollars. Unless there is a marked improvement during the last three quarters of the financial year, there will be a decline in revenue of at least 50 million dollars, which is double the amount allowed for by the Budget. The C.N.R. returns are also showing an ominous retrogression instead of the improvement which had been hoped for. Unless a serious deficit is to be admitted, the next Budget must probably embody fresh taxation proposals or an increase of the existing rates, and any Government which undertakes this unpleasant duty at a time when tax reductions in the United States have emphasised the disparity between the rates of levy in the two countries, is bound to arouse a storm of unpopularity. There has been a rapid rise in grain prices during the past fortnight, and some competent authorities prophesy that before the new crop is reaped wheat will be selling at \$1.50. If this price is reached, and the crop is reasonably good, there will be an enormous enhancement of the purchasing power of the rural community, particularly in the West, and business everywhere is bound to benefit.

When the acting Finance Minister lately sought authority from Parliament to issue another \$300,000,000 of bonds chiefly for refunding purposes, he stirred up the very active group of credit-reformers in the Progressive party to formulate proposals that the Government, instead of appealing to the public or investing houses, should raise the money required by a plan of currency inflation—i.e., through the issue of new Federal notes for the amount required. The champions of financial orthodoxy, however, found little difficulty in exposing the futility of this proposal, and Mr. Robb secured the necessary authority. A number of members took the opportunity to urge the raising of the money required abroad, on the ground that heavy Governmental loans placed last year had stripped the country of most of its ready capital and left far too little for the needs of private enterprise.

The power now secured will suffice to cover the financial operations of the next three years, and there is still unused some 35 million dollars of borrowing power secured in 1922. The Government obligations which mature before the end of 1927 total \$382,184,933. Of course, it is anticipated that a considerable proportion of the holders of these obligations will renew. The Government have also introduced a Bill for the consolidation of its tax-collecting agencies. Its object is to bring under the control of the Department of Customs and Excise the machinery for the collection of the income-tax and business profits levies. The Bill also provides for the constitution of an advisory board consisting of three experts, who will investigate the various systems of taxation with a view to their improvement. There are also to be attached to the Finance Departments at least two special tariff experts, but they will not function as an independent commission and will merely perform work of investigation. The Opposition have raised strong objections to these proposals on the ground that they are simply added to an overloaded bureaucracy, and will produce no fruitful results.

Canada has lately concluded two commercial treaties with European countries. By the first, Belgium grants Canada "most-favoured nation" treatment, and receives in return the benefits of the Canadian intermediate tariff. By the other, Finland likewise gets the benefit of the inter-

mediate tariff, and gives to Canadian goods "the same treatment as is enjoyed by similar goods manufactured in the United Kingdom, as set out in Article 23 of the Treaty of Commerce and Navigation between the United Kingdom and Finland."

INDIA.—COAL PRODUCTION—CROP FORECASTS—TARIFFS AND NATIONALISATION—MATCH MANUFACTURE—RAILWAY COLLIERIES.

(FROM OUR CORRESPONDENT.)

CALCUTTA, June 19.

In 1923, according to official statistics, India's output of coal was 18,763,967 tons, a moderate production, traceable to the three main difficulties of colliery proprietors in this country, viz., inadequate transport facilities, inefficient labour, and limited markets, official restrictions at a critical period having involved a loss of export business not yet regained. Irregular in attendance, mining labourers, though working rarely over 50 hours a week, have in recent years received substantial advances in their wages, with the inevitable result that, finding they can maintain their low standard of living with a smaller expenditure of energy, they do less work. Coal companies, in consequence of these and other handicaps, pay an average dividend, according to a recent authoritative calculation, of only 7 per cent., and half the companies, as a rule, pay no dividend at all. The Government of India so far acknowledge the necessity of investigation that, in conjunction with the recognised Mining Associations, they contemplate initiating an expert and comprehensive inquiry into Indian coal production in all its phases. If this scheme materialises, one of the points referred for investigation will be the proposed penalising import duty on South African coal, a knotty suggestion supported by the Legislative Assembly on two separate grounds: (1) commercial, viz., to counteract the South African bounty on exported coal; (2) as a form of political retaliation arising from South Africa's severe restrictions on domiciled Indians.

The fourth official wheat forecast estimates the Indian yield at 9,689,000 tons, compared with 10,777,000 tons at this date last year. Estimates of the exportable surplus vary from 350,000 tons, valued approximately at 5 crores, to 800,000 tons, valued approximately at 12 crores of rupees. The two uncertain factors are the final output, and the domestic consumption, the latter showing a rapid increase arising from the ability and tendency of the peasantry to resort to richer types of foodstuffs than have been customary. In May, wheat exports from Karachi were negligible compared with May last year. According to the final forecast, rape and mustard will yield 1,154,000 tons, against 1,209,000 tons last year, a decrease of 4 per cent. Linseed is expected to reach about 500,000 tons. Crop forecasts in India, however, have never proved meticulously accurate, so much so that in commercial circles they are subject to a heavy discount. Unofficially, cotton is expected to reach 5½ million bales, and if prices are maintained, this will bring India an enormous amount of money. The semi-official "Bengal Agricultural Journal," alluding to the jute forecast, laments that "retrenchment should have chopped off the staff so essential in collecting reliable figures."

In India, to some extent, we have State Socialism in operation. We have State ownership of land and railways, State aid to industries, what is, in effect, a State Bank, &c., and if some of our politicians had their way, the State would also take over every industry needing and receiving tariff aid. In the case of the steel industry, it nearly came to that. I can best summarise the course of events by quoting the following passage from a Minute of Dissent attached to the Select Committee's report on the Steel Tariff Bill, the author being Mr. D. Chaman Lal:—"Politically," he wrote, "the history of Protection is no doubt wrapped up with the history of Nationalism—a fact which explains the vehement demand on the part of the middle classes and the manufacturing classes for its adoption in India. But it is equally true that the interests of the masses have been ignored, in so far as they conflict with the interests of the classes. If sustenance and support are to be given to the steel industry in India, let that be done for the benefit of the masses, and not for

the benefit of the profit-making private producer. Not Protection *sans phrase*, not subsidies and bounties without conditions, but nationalisation, it seems to me, is the only method which can secure this end. That this proposition was defeated in the Select Committee by only one vote gives hope to its supporters." Nor, in reality, would nationalisation be inherently alien to the Indian tradition and genius. The same member described British investors in Tata bonds, as they may be interested to hear, as "international brigands"; the "brigands" in question, it would seem, having lent the Steel Company 4½ crores.

Incidentally, the latter act has an important bearing on the amendment introduced in the Bill, under Swarajist influence, endeavouring to limit future bounties to companies not already manufacturing steel rails or wagons, to concerns with rupee capital, and having a proportion of Indian directors satisfactory to the Government of India. To what extent this regulation will prevent investment of sterling capital in the additional steel enterprises the Tariff Board deemed essential, only experience can establish. When a firm with the prestige of the Tatas is forced to resort to external investors for the essential funds, the inadvisability of hampering the foreign capitalist ready to promote new industries in India is fairly manifest. It is equally clear, however, that considerable advantages will attach to enterprises joining Indian and British capital under one direction. The "dyarchal" stage is, indeed, as inevitable in the industrial evolution of this country as it has proved to be, as a half-way house on the road to full Dominion autonomy. That the sequel would be identical is not necessarily a sound inference. Probably more than half the capital invested in jute mills is now held by Indian investors. None the less, the former control remains unqualified, investors apparently being content to "let well alone."

The Swedish Match Company's Indian programme, which will give that world-wide enterprise something approaching a monopoly of the Indian market, is causing considerable anxiety among the smaller Indian concerns, which have consequently banded themselves together in an association whose practical utility remains to be demonstrated. Match production on a large and efficient scale will arrive only with the opening of the Swedish factories, and, in this connection, it seems a pity that no part of the recent issue of new shares was offered in, and to, India. The loss of revenue to the Government of India by the consequent reduction in imported matches marks an aspect of the new Protectionist régime which the Finance Member will regard with mixed feelings.

ARGENTINA.—OPENING OF CONGRESS — PUBLIC FINANCE — NEW BANKING LAW — CURRENCY PROPOSALS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, June 24.

CONTRARY to general expectation, President Alvear's inaugural Message at the opening of Congress on June 20th has done little or nothing to shed light on a position that is becoming decidedly involved, not to say disquieting. The major part of the Message was devoted to the political situation, and it is worthy of mention that the supporters of the previous President of the Republic, Dr Hipolito Irigoyen, publicly announced their intention of abstaining from the inaugural session, and did so abstain; their absence being made all the more noteworthy in that it was led by Dr Elpidio Gonzalez, the Vice-President of the Republic, a staunch friend and supporter of Dr Irigoyen. Nevertheless, a quorum was obtained for both Houses, and the Message read; but

there is a general fear in business circles that this move portends a long and sterile session consumed in political recriminations, and therefore unlikely to discuss and despatch the many important items of practical business, the Budget for 1925 included, which are down on the Agenda. Such statistics as were given in the Message were of little interest and less practical value. They did not go beyond the end of 1923, and their reference to the financial position of the National Debt, including the estimated liabilities of the State's railways, is nullified owing to the fact that on more than one occasion since that period semi-official statements and estimates have appeared which lead one to assume that such figures are no good guide to the present position. Nor is it easy to reconcile known facts with the generalities which were uttered on this occasion, save by assuming that the Message was prepared at least five months ago, and but little re-touched previous to being presented to Congress.

Thus while speculation has been rife concerning the probability of an important foreign loan, and colour has been lent thereto by the recent borrowing of \$10,000,000 U.S. in New York for the term of 12 months—in two half-yearly periods—and the renewal of the \$20,000,000 U.S. due on August 25th next for a further six months, the Minister of Finance has just made an official declaration to the effect that the Government is not thinking of further loans, having all the money it requires for the time being. Popular opinion of this attitude is best expressed by the Spanish proverb, *si fuera cierto tanta belleza*, "would that such beauty were real"; and nowhere has this declaration occasioned more surprise than among the various contractors and mercantile firms engaged upon the work called for by the State railways. The paper of this Department, which is nominally part and parcel of the Public Works, is to-day viewed askance, for the good and sufficient reason that its collection has become exceedingly difficult. A well-informed journal, which one must in fairness add is in opposition to the Government, states that there are at the present time close on six million dollars paper of protested bills and cheques drawn by the State Railways Department, that the departmental account is overdrawn to the extent of three million dollars paper with the Banco de la Nacion, and that a large number of cheques are passing from hand to hand which have been issued during the past month, but cannot, nevertheless, be encashed for lack of funds. What the total indebtedness is one cannot say, the highest official figures being those mentioned by the Minister of Finance some two months ago, when it was put at more or less a hundred and twenty million paper dollars. A Ministerial Conference is at the moment of writing being held for the purpose of determining on the best way to enable the State railways to meet these and future debts, and it is freely repeated that the official solution will be found in the direction of legislative means whereby they may be legally enabled to borrow such funds as they need. It is said, though confirmation is still awaited, that arrangements have been made with a group of local bankers to advance \$40,000,000 paper wherewith to take up past-due obligations and meet such as have to expire down to the end of September, by which date the Government expect to have made permanent arrangements for the consolidation of this particular branch of the short-date debt of the nation.

So many, however, are the projects, and so slight the probability of their discussion owing to the purely political obstacles before mentioned, that even important Government measures such as the suggested unification of Internal Revenue taxation and the new banking law are hardly looked on as coming within the sphere of practical application during the current year. The first-named plan proposes to abolish provincial taxes for Internal Revenue, to establish a national tax, and to distribute the receipts *pro rata* to the provincial population. Considered from a business standpoint, the idea is sound, but, given the jealous attachment of the provinces to their States rights, its acceptance is highly problematical, protest being already general. The new banking legislation would imply several changes. It would call for special registration, the deposit of 10 per cent. of a bank's capital with the Banco de la Nacion, a minimum paid-up capital of \$1,000,000; in Argentina paper for a locally consti-

tuted bank, and in gold for a foreign institution; and a statement as to whether the head office in the latter case stood solidly behind its branch commitments, or limited its obligations to the amount of the declared Argentine capital. Cash in hand would not be allowed to fall below 18 per cent. of sight and 30-day deposits, plus 7 per cent. of the long-term deposits, these proportions being reduced to 15 per cent. and 5 per cent. for those institutions availing themselves of the faculty of rediscounting, this faculty being, however, dependent on the deposit of 6 per cent. of the total of sight cum 30-day deposits, plus 4 per cent. of the long-term deposits, with the Banco de la Nacion, such deposits being permissible either in money or in national bonds. An official Committee of Control, presided over by a functionary appointed *ad hoc* by the Government with the endorsement of the Senate, would be constituted by representatives from the Argentine and the foreign banking institutions here, plus two industrial or commercial representatives named by the Government. To detail the duties and attributes of this proposed committee is hardly possible here. Roughly, they would apparently combine the functions of the Federal Reserve Board and the U.S. Treasury in its relations with the National banks of the United States, with various semi-inquisitorial functions of more than doubtful utility. Among other novelties, they would be charged with the limitation of loans to an amount bearing a relation to the registered capital of the lenders; revise month by month the balances of the banks; analyse their deposits; question the amount of money invested or held abroad by institutions working in the Argentine market; and generally determine whether or no the several members of the banking body corporate were fulfilling their obligations under the law. That even in modified form the measure will go through is most unlikely, but, given the general entanglement that marks official finance here and now, its introduction is in the highest degree untimely. Almost as untimely as the proposed alteration of the national monetary system, implying as it does the modification of the Banco de la Nacion and the virtual disappearance of the Conversion Office. Semi-official details have been published, the main idea being to establish a new unit, the "argentino," worth 20 cents gold, which shall be represented by paper money, the old distinction between gold and paper being abolished. As the principle rather than the detail is for the moment the most important thing to be placed before foreign readers, one may be allowed to leave the latter aside and to translate, as literally as possible, the paragraph in the Presidential Message which covers this most important question. It runs thus:—

"To maintain our monetary system on the basis of a conversion which gives guarantees and security to the holder of the paper money is a healthy and respectable practice which the Government will have well in view. In consequence, it will zealously care for the existing metallic reserves and their destiny, even though it does not believe that the regimen created by Law 3,871—the law founding the Conversion Office (translator's note)—may be that which agrees with the development of the country, seeing that 25 years have gone by since the Law was sanctioned. The Executive Power is pre-occupying itself, therefore, with the preparation of a proposal which shall give greater elasticity to the exchange, which allows its control, taking it away from the mechanical organisation of the law cited, and gives emission to a banking entity, either official or composed of mixed capital, which shall regulate it in accordance with an effective system of fiscal control and the needs of the market, releasing the notes or withdrawing them from the channels of circulation according to such counsel as the observation of the interests concerned may suggest."

In the foregoing paragraph, the word "cambio" in the original, taken in conjunction with the preceding words of the sentence, manifestly refers, not to the exchanges, but to the delivery of notes against gold, while the conclusion that the Conversion Office disappears if the scheme becomes law is logically involved in the threat to take away note issue from "the mechanical organisation" of the law, which is, in effect, the root and bedrock of Argentina's present monetary system, and, may one add, of her unquestioned financial strength during the quarter of a century during which it has been in operation.

Letters to the Editor.

A CURRENCY PROBLEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—A few weeks ago I was travelling on a bus, and, disregarding the request to pay in copper, I tendered a shilling for a twopenny fare. The conductor gave me my change in pennies, and later I noticed that one was of French origin, bearing the image and superscription of Napoleon III. Since then that coin has disturbed my peace of mind, for knowingly to pass it on would make me feel that I have criminal tendencies; to keep it troubles me, for I know I am breaking economic laws.

Before it came into my possession I presume it passed freely from hand to hand, and functioned as money. It was not good money; therefore, according to Gresham's Law, it should have driven good money out of circulation. Instead I am keeping it out of circulation, and circulating the good money. I have a guilty feeling that I have wilfully interfered with the working of a great economic law.

That is the first count in this self-indictment; the second is that I am guilty of hoarding. Economic science tells me that hoarding is against economic and social advancement. Knowing this, I wilfully, owing to my scruples about passing on the coin, leave part of the wealth of the universe lying idle in one of my pockets. Surely I am between the Scylla of ethics and the Charybdis of economics.

The third thing which troubles me is not the fact that I have offended against economic laws, nor that I am a potential criminal, but that I have helped to set in motion economic forces which have operated to my disadvantage. Much has been said and written about inflation and deflation, and the Quantity Theory of Money. I feel that I am a deflationist of the most miserable kind, for I have withdrawn one penny from circulation. Retribution in this case has been swift and severe. The cost of living index number has fallen, and I have lost many shillings from my monthly salary.—Yours, &c. W. H. BOLANE.

Books and Publications.

COVETED REGIONS.

BOTH these pamphlets* include lengthy histories of little-known and much-coveted countries, and possess an importance concealed by their modest form. The first, an outcome of Wembley, is a full and learned account of the sociology, ethnology, history, trade and resources of the Zanzibar Protectorate, with a very extensive bibliography, and we hope it will be reproduced in a shape more suited to recommend it as a standard work of reference. Some of the sociology might better have been "veiled in the decent obscurity" of Latin, or even Swahili; the region has always been a field of racial admixture and seafaring adventure, and the native paganism is overlaid with a thin veneer of Mohammedanism. The region is specially interesting for these and other reasons, not least because Zanzibar now produces nine-tenths of the world's supply of cloves, though the tree was only introduced from Reunion by the Arabs in 1818, and because its position has made it a distributing centre for the East African coast. Two-thirds of its trade is with the British Empire.

The other book, circulated by the Japanese Embassy in London, is the translation of an article in a Japanese diplomatic publication. Its purpose is to vindicate the Japanese claims to Saghalien (why not Sakhalin?)

* "Zanzibar: an Account of its Peoples, Industries, and History." (Zanzibar) The Local Committee of the British Empire Exhibition, 1924.
"The Historical Relations Between Japan and Saghalien." (Tokio) 1923.

Japan's connection with the island has existed, with prolonged interruptions, over 18 centuries or more; Russian relations with it began towards the end of the 18th century, and developed into attempts at "pacific penetration." Muravieff in 1857 claimed the whole island as an appendage of the Amur Territory, and Ignatieff pressed the claim in 1862. The conversations in both cases are reproduced verbatim, after the manner of the dialogue between the Athenian and Melian envoys reported by Thucydides. On both occasions the Japanese representatives contested the claim successfully, and Ignatieff was very cleverly outwitted; but in 1875 a treaty was concluded exchanging Japanese sovereignty for 18 of the Kurile Islands and certain rights of residence for Japanese fishermen. The island had previously been divided between Russia and Japan at lat. 50 deg., and the pamphlet does not say why the exchange was not carried out. The story ends with 1875. The historical details are hard to follow, and there are some obvious misprints in the dates. When the dispute is resumed the Japanese Government will do well to supplement this account by a statement of the subsequent history.

THE POPULATION PROBLEM.

IN recent times the problem of population has enjoyed considerable attention. The latest study* of this question attempts once more to direct thought to the relations subsisting, in the long run, between the numbers of mankind and the improvement of their state. Mr Swinburne's main proposition is that "population pressure" ultimately determines social welfare. Although he is unable to answer the question, what causes determine the equilibrium established between numbers and wealth in communities where civilisation raises the bulk of the population above a bare level of subsistence, his book suggests that the explanation is not dependent on the circumstances of a single nation alone. Occasionally Mr Swinburne places the problem in spacial and temporal perspective; a feat which lends his work its chief merit. Irrelevancy, prejudice, and failure to appreciate the human element are its main flaws. Whilst scarcely repaying careful study, "Population and the Social Problem" deserves to be turned over for the suggestions which may be gleaned here and there.

SOME YEAR BOOKS AND A CATALOGUE.

"The Canada Year-Book, 1922-23." (Ottawa) F. A. Acland, Government Printer. 1924.
"Official Year-Book of New South Wales, 1922." By H. A. Smith, F.S.S., Government Statistician. 30th issue. (Published by authority of the State Government.) Sydney, 1924.
"Handbook of the Netherlands East Indies." Edition 1924. (Published by the Commercial Division of the Department of Agriculture, Industry, and Commerce. Buitenzorg, Java.)
"Statistical Year-Book of the Kingdom of Siam, 1923." 8th number. (Prepared by the Department of General Statistics, and published by the Minister of Finance, 1924.)
"City of Edmonton, Canada. Financial Statement and Report for 1923 (to December 31st)." (Edmonton) Mackenzie-Stower Press, Limited.
"Union of South Africa." British Empire Exhibition, South African Section. Official catalogue.

OFFICIAL publications are usually regarded as dull reading, but that is not the case with the books before us. To master any one of them would take weeks, to review it properly volumes; we can only commend them to the attention of traders, investors, and students of contemporary economic history. The first three may be described, in the words of the "Canadian Year Book," as compendia of "official data on the physiography, history, institutions, population, production, industry, trade, transportation, finance, labour, administration, and general economic conditions" of the country dealt with, "presenting its more salient statistics against a background of interpretative matter in order to bring out their significance." The Canadian volume contains also a useful historical summary and an "Annual Register" of events and legislation, and deals with all the resources of the country—agriculture, mining, power, industry, the fisheries, and the fur trade—and gives special attention

"Population and the Social Problem." By J. Swinburne, F.R.S. (London) George Allen and Unwin, 1924. 15s.

to the canal and express systems and the railway history. The "New South Wales Handbook" may be specially commended for its account of the State constitution and State and local government, and also of land legislation and conditions of settlement, which should be useful to intending emigrants and students of the agrarian side of colonial history. The volume dealing with the Dutch East Indies, largely descriptive and extensively illustrated, deals with a region long served by British banking, but now increasingly attracting the attention of British and American investors. Since 1915, owing to heavier official expenditure and the rise of prices and destruction of capital through the world-war, its public debt has risen from two 3 per cent. domestic loans of a little over 100 million guilders to an aggregate of 1,050 million guilders, issued at from 5 to 7 per cent. in Holland, the colony, and since 1919 in the United States and London. But the accounts of the resources and revenue of the island should give the bondholders confidence. We can only note the good character given to Javanese labour, the descriptions of the legal and administrative systems, of the enlightened sanitary and veterinary services, and of the leading ports. All these volumes contain maps. The work on Siam is purely statistical, and is illustrated by "graphs" and diagrams. Holders of the three Siamese loans will be interested in the "comparative tables" exhibiting twenty years' progress, showing an increase of 26 per cent. in the population, 95 per cent. in the ordinary revenue (per head of population 55 per cent. increase), 98 per cent. in the ordinary expenditure, and 98 per cent. in the total foreign trade. The railway mileage in 1903 was 285; in 1923, 1,495.

The City of Edmonton's little pamphlet gives very full particulars of the municipal finances, and lays down sound principles for their administration. It frankly admits the city's financial difficulties, but shows that there is no reason for pessimism. The city has suffered from the speculation in town lots characteristic of Western Canada. It collects 80 per cent. of its nominal revenue, and it is expected that the demand for forfeited lots will increase and the number of forfeitures diminish. It runs its own gas, water, telephone, and street car services at a substantial profit, and its amusement grounds at a loss. But its bonds stand high in London.

The catalogue of the South African Section of the Wembley Exhibition has a "Foreword" by General Smuts, and a specially interesting section on the mining exhibits, with explanations of the maps exhibited. Further descriptions and elucidations, however, must be sought in the Publicity Bureau, but the catalogue and the objects catalogued deserve the attention of all those interested in the resources of South Africa.

BOOKS RECEIVED.

New Hand-Map of Europe, Illustrating Territorial Changes Since 1914. Edited by George Philip, F.R.G.S., under the auspices of the League of Nations Union. (London) George Philip and Son, Limited. 2s 6d.

The combination of boldly marked boundaries representing the pre-war condition of Europe, and distinctive colouring representing present territorial divisions, makes this map one of the clearest we have seen for showing at a glance the changes caused by the great war. It will fill a useful place on the wall of the school-room, study, or the office.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, ACCOUNT,
July 23. July 24.

FEARS of a rise in the Bank rate faded away from the Stock Exchange markets as money showed a tendency to become easier. This removed the main apprehension which had overhung markets previously, but in its place there arose to check business the revolution in Brazil, which spread anxiety throughout wide circles. Towards the end of the week a sharp recovery occurred from the worst. The fresh efforts which are now being made in the direction of international peace did a little towards promoting a firmer sentiment in gilt-edged markets. New issues continue to be taken none too well, the result being that, in various parts of the Stock Exchange, there is a good deal of undigested stocks in the hands of underwriters, who are known to be on the lookout for an early opportunity to realise some of their obligations, especially in view of the other big new issues that are pending.

The War Loan has kept closely to 101½, Victory Bonds went better on a shortage of stock being revealed when a few fairly large purchasers came into the market. The Consol catalogue, as a whole, is firm, and several of the newly issued Colonial scrip stocks are better. Home Railway prior-charge issues did little more than mark time.

Brazilian bonds fell heavily on the lack of news respecting the revolution, but movements have been very meteoric; directly sentiment changed, and bargain-hunters wanted to pick up stock cheaply, prices rebounded violently. Another feature was a slump in Hungarian scrip to 1½ discount below the issue price of 88, this being caused by reports that the New York portion of the Hungarian Loan had gone badly in America, although the Italian part was over-subscribed in Rome. The drop brought in buyers, and the price of the scrip partially recovered. German and French bonds have been little affected by the Peace Conference meetings. Argentines are dull. Some of the Chinese loans went better.

Although several interim dividend announcements are due next week from Home Railway companies, prices of stocks in the Home Railway market are dull and depressed; business remains quiet. Argentine Railways went back on realising by speculative holders who have grown tired of their engagements. San Paulo fell at one time to 142, but recovered 10 points in a couple of days, and Leopoldinas followed the same course, though in much more leisurely fashion. The fixed-interest stocks in this market are weak, each day lengthening the list of falls which have occurred in Foreign Railway debenture and preference descriptions.

The Rubber market is better, thanks to a rise in the price of the raw produce to 1s per lb. Tea shares have hesitated, but, on a fall, buyers came forward, and the list recovered to some extent. The market is not a bad one. Dunlops improved on the statement that a fresh scheme is on the point of being put before shareholders. Bank shares show more firmness, and the Insurance market keeps strong. Trust companies' stocks are again higher. Textiles have been in favour, owing to the good profits which the industry is reported to be making. Courtaulds fell on ex-rights next week. Public interest has subsided from Tobacco shares, nor are the shares of companies closely connected with the British Empire Exhibition in any particular fall upon quiet days. Increased interim dividends from County of London Electric and the South London Electric companies failed to influence prices in this department. Gas stocks held their ground. Eastern Telegraph stock went back a couple of points, and Marconis continue to be supported on the hope of an early intimation in regard to a wireless development policy in which the Government and the Marconi Company will join hands. A drop of 40 points in United States Lumber bonds possessed no special interest, in that the previous quotation did not represent the actual price. Brewery stocks are conspicuously strong, as previously reported, on dividend expectations.

Apart from a little excitement in East Rands, the Kaffir market has spent a quiet week, the Cape contributing a very modest amount of business, and people on this side being con-

tent to remain onlookers. The Chartered report had no particular influence over the price of the shares. Diamonds have been inclined to ease off. Mexican mining shares, Indians, Russians, and West Australians have scarcely moved. With a rise in the price of tin, a greater feeling of cheerfulness became infused into West African and Malayan tin shares, although the Cornish group moved hardly at all. Copper shares also continue to be a very quiet market.

NEW ISSUES.

Government of India Rs. 15 Crores Rupee Loan, 1924.—The Government of India announce the issue of a loan in India for Rs. 15 crores in two forms, of which the following is a summary of the main terms:—Subscriptions to both forms of the loan, whether in cash or Indian War Bonds, will be received from July 28, 1924. The lists will be closed not later than August 16th, but will be closed earlier without previous notice as soon as it appears that the total subscriptions amount to approximately Rs. 15 crores. The loan will be issued in two forms:—(a) Nine-year 5 per cent. (Indian income-tax free) bonds, repayable at par on September 1, 1933. (i.) Issue price, Rs. 98 as. 4 for every Rs. 100 of the bonds applied for. (ii.) Interest at the rate of 5 per cent. per annum, payable half-yearly, on March 1st and September 1st. Interest will be free of Indian income-tax throughout the currency of the bonds, but will be taken into account in determining the rate of tax leviable on other income, and will be liable to Indian super-tax. (b) Long-term 5 per cent. (Indian income-tax free) loan, repayable at par not earlier than October 15, 1945, and not later than October 15, 1955. (i.) Issue price, Rs. 99 for every Rs. 100 of the loan applied for. (ii.) Interest at the rate of 5 per cent. per annum, payable half-yearly, on April 15th and October 15th. Interest will be free of Indian income-tax throughout the currency of the loan, but will be taken into account in determining the rate of tax leviable on other income, and will be liable to Indian super-tax. (iii.) Depreciation fund.—To provide against depreciation in market value of the long-term loan, 1½ per cent. of the aggregate amount of the loan, inclusive of the 1919, 1920, 1923, and this year's issues, will be set aside annually to form a fund to be used for its purchase and cancellation when the market value falls below 99 per cent. Subscriptions may be made in the following forms, viz.:—(a) Cash; (b) Indian War Bonds, 1925 and 1928, at their nominal value, subject to the following conditions, viz.:—(i.) These War Bonds will be accepted as subscription to the long-term loan only; and (ii.) War Bonds tendered in subscription to this loan will carry interest at 5½ per cent. up to the day preceding the date of tender. The London office of the Imperial Bank of India are prepared to receive subscriptions in cash, or, in the case of the 5 per cent. loan of 1945-55, in the form of Indian

War Bonds, from July 28, 1924, until the lists are closed. Cash subscriptions will be payable at the sterling equivalent of the purchase price of the bonds or loan applied for at the rate of exchange for immediate telegraphic transfers on Calcutta on the date of payment.

The Scottish National Trust Company, Limited.—Authorised capital £500,000, divided into shares of £10 each, which are now offered for subscription at par. Applications have already been made for 30,000 shares, and these will be allotted in the terms of the prospectus. When fully paid up the shares will be converted into preference and ordinary stock as from December 1, 1924, in the proportion of 60 per cent. of the former and 40 per cent. of the latter. The preference stock will be entitled to a cumulative preferential dividend at the rate of 5 per cent. per annum, and to priority as to capital, but will have no further participation in profits or assets. The object of the company is to carry on the usual business of an investment company. The articles of association provide that, except in the case of British Government securities, not more than 5 per cent. of the combined subscribed share and debenture capital, nor more than 10 per cent. of the subscribed share capital, whichever is greater, shall be invested in any one security. It is further provided that no investment shall be made upon which there is unlimited liability. The amount which the directors may borrow by way of debenture stock or otherwise is restricted to the amount of the subscribed capital. In addition, the directors may borrow up to £100,000 for temporary purposes. In order to facilitate prompt investment, if that should be considered desirable, the directors may obtain advances from banks or otherwise in anticipation of the receipt of calls or debenture money. A carefully drawn up prospectus, and an undertaking which should follow a smooth course under efficient control.

Burt, Boulton, and Haywood, Limited.—Authorised capital £500,000, of which £496,003 has been issued. This is an offer for sale of £300,000 first mortgage 6 per cent. debenture stock, being part of an authorised issue of £500,000, at 97½ per cent. There is loan capital outstanding for £251,700, all of which will be paid out of the proceeds of the present issue. The company was formed in 1898 to acquire the business of Burt, Boulton, and Haywood, timber merchants, &c., which was originally established in 1856. The debenture stock now offered will be redeemed at par on or before July 1, 1954, by means of an annual cumulative sinking fund of 1½ per cent. per annum, commencing in December, 1925, and operating by purchase in the market at or below par, or by annual drawings at par. The company will have the right to redeem the stock as a whole or in part by drawings at par on July 1, 1939, or on any subsequent interest date on giving three months' notice. Trading results are given from 1914. Net assets are valued at £559,726, without taking into consideration the net proceeds of the present issue, which is estimated as £274,500. The average rate of dividend on the ordinary share capital since 1899 has been 10½ per cent. Freehold properties are valued at £54,645, and plant and buildings at £298,583. Thus here the margin for security is narrow. But based on published profits, interest is well covered.

The Financial Times, Limited.—An advertisement appears in the Press in connection with an application to the Stock Exchange concerning an issue of £150,000 6 per cent. first mortgage debenture stock. This stock constitutes a first specific charge upon property and plant. We extract the following from the *Financial Times*:—"The trust deed provides that the company shall not create any mortgage or charge upon its general assets in priority to the floating charge unless the amount of the general assets, after deducting liabilities, exceeds £200,000 in value, and then such mortgage or charge shall not amount to a greater sum than the excess over £200,000. Redemption will take place at par by the operation of a cumulative sinking fund of 2½ per cent., commencing on July 1, 1925, and operating by purchase or drawings. The final redemption date is July 1, 1946. The company reserves the right to repay the whole or part of the stock at 2 per cent. premium at any time on giving three months' notice." The same journal also states that "the company has a capital of £275,000 in £1 shares, of which £100,000 are 5 per cent. cumulative preference and £175,000 ordinary." The company was established in 1888, and owns the *Financial Times*, with which has recently been incorporated the *Financier and Bullionist*. It also owns the St Clements Printing Works, which are equipped with the most up-to-date machinery, and, in addition to the *Financial Times*, print the *Sunday Times*, and a number of other weekly newspapers and periodicals, including the *Economist*, which has benefited from their efficiency and the progressive development over a long series of years. The proceeds of the debenture issue will be applied in payment for the *Financier and Bullionist*, additional plant, &c. It is said that the company has been conducted with successful results for many years past, but actual figures are lacking. The issue has been purchased by a well-known firm at 92½ per cent., and is to be offered at 94 per cent.

The Victoria Wine Company, Limited.—Share capital £300,000 in ordinary shares of £1 each. Debenture capital has been authorised for £300,000, and this is an issue of the

whole amount, at 96, of 6½ per cent. first mortgage debenture stock. The company has been formed to take over and extend the business of the private limited company of the same name. Originally established in 1865, the business has over 100 depots in this country. Surplus assets are valued at £600,000, but this includes £168,776 for "wholesale and private trade agencies and trade marks and goodwill." Properties are valued at £329,347. Thus for a first specific charged debenture the margin of security is not wide. Profits are given from 1919; the sum needed annually for debenture interest—namely, £19,500—is well covered. The prospectus states that "the company will pay to the trustees for the debenture-holders annually a sum of £27,500 for interest and redemption, which amount is sufficient to redeem the whole of the stock on January 1, 1945, at 102 per cent."; and that the "company reserves the right, in addition, at any time to purchase stock in the open market, and, on giving six months' notice, to pay off all the then outstanding debentures at 103 per cent."

United Lubricants, Limited.—Authorised share capital £120,000, divided into 100,000 8 per cent. cumulative preference shares of £1 each and 400,000 ordinary shares of 1s each. The whole of the 100,000 preference and 50,000 ordinary shares are now offered for public subscription at par. Applicants for the preference shares have the right to subscribe for ordinary shares in the proportion of one ordinary for every two preference shares applied for. This company has been formed with the immediate object of acquiring the whole of the issued shares of London Lubricants (1920), Limited. Of the ordinary shares 300,000 are to be allotted as fully paid under various agreements, and 50,000 are reserved for cash applications at par by underwriters of the preference shares. Profits are given from 1918, and a balance-sheet is published showing the state of London Lubricants at December 31, 1923. In this goodwill is valued at £39,008, out of assets totalling £117,071. Debtors come next with £23,946, and "investments at cost" £23,000. Stock on hand is returned at £7,004. The net proceeds of the present issue, after payment of the purchase price payable to the vendor and the preliminary expenses, will amount to approximately £50,000. The purchase price payable to the vendor company is £52,500, to be satisfied as to £42,500 in cash, and the balance (£10,000) in fully-paid ordinary shares of 1s each. In view of the capital employed heretofore, profits appear to be generous. Indeed, one wonders that competition has not shown itself.

The Redhill Gas Company.—Incorporated by special Act of Parliament in 1865. Authorised stock capital £413,220, of which £179,613 remains to be issued. Issued loan capital amounts to £46,499. This is an offer for sale by tender of £20,000 5½ per cent. irredeemable preference "A" stock, the minimum price of issue being £95 per cent. Net revenue for the year ended December 31st amounted to £17,554, without deducting the interest on loan capital, which needs £2,896. The dividend on the preference stock, including the present issue, will require £4,293. Thus £10,364 is left for ordinary stock, amounting to £179,500. A good issue of its type.

William Melhuish (Proprietors), Limited.—Authorised share capital £115,000, divided into 100,000 10 per cent. cumulative preference shares of £1 each, and 300,000 ordinary shares of 1s each. The company has issued £68,000 6½ per cent. five-year registered notes at £98 per cent., to be paid off at par on January 1, 1930, or earlier, at the company's option. This is an issue of 100,000 preference and 300,000 ordinary shares, all at par. It is, however, stated that 200,000 ordinary shares have been subscribed for in cash, and that a further 50,000 are reserved for underwriters of the preference shares. Thus preference share applicants can expect one ordinary share for every two preference shares applied for. The company has been formed to acquire the shares in a flour factors, and the price to be paid for its issued capital, namely, £42,000, is £168,000 in cash. Profits are shown from 1921. A balance-sheet is provided, and other useful information is supplied. Total assets are given as £131,991. The purchase price appears to be on the high side. While profits are sufficient to cover dividend payments, it should be observed that assets do not allow a substantial margin for preference share capital.

East Worcestershire Waterworks Company.—Incorporated 1877. This is an offer for sale by tender of £20,000 5½ per cent. irredeemable preference stock of the above company, or such an amount as will, with premiums, realise the net sum of £20,000. The minimum price of issue is par. The additional capital is required to modernise and extend the works, mains, &c., thereby enabling the company to effect economies in working and to meet the increasing demands for new supplies. For the year 1923 the net revenue, after deducting debenture interest, was £7,326; the dividend on the present issue will amount to £1,100. Thus a comfortable margin remains for security.

Dudley, Stourbridge, and District Electric Traction Company, Limited.—Authorised and issued capital £200,000, divided into 20,000 ordinary and 20,000 preference shares, all of

£5 each. Debenture capital issued and outstanding amounts to £72,500, and consists of 4½ per cent. debenture stock. For information only, details are published of an issue of £105,000 of 6 per cent. debenture stock. The debentures are guaranteed as to principal and interest by the Birmingham District Power and Traction Company. The £72,500 of 4½ per cent. debenture stock now in existence will be converted into a like amount of the 6 per cent., the remaining £32,500 having been offered at par to shareholders and stockholders of the company. The stock is "redeemable" at 105 at any time on six months' notice from the company, no final date having been fixed.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 3 Arundel Street, Strand, London, W.C.2.

BAKER PERKINS, LIMITED.

DIRECTORS' REPORT

For the 52 weeks ending December 25, 1923.

This year's trading had two main characteristics which should be borne in mind in reading the report and accounts. Firstly, the amount of goods invoiced during the period is substantially lower than in any of the three preceding years, and your works have therefore had a larger unemployed capacity. Secondly, the volume of orders booked during 1923 is substantially greater than in 1922, and your works therefore have better prospects of employment for 1924. In view of these circumstances the results obtained may be considered encouraging, and justify the hopes entertained from the adoption of budgetary control.

Your directors are glad to report that settlement of long outstanding tax liability for munitions levy, excess profits duty, and income-tax has been made with the Inland Revenue authorities. Settlement is complete up to December 31, 1922, with the exception of corporation profits tax for that year. Subject to the small corrections noted below, the figures now presented disclose the exact position of the company for the first time since the amalgamation with Perkins Engineers, Limited.

Profit at £46,975 5s 11d is almost the same as last year, and is not unsatisfactory since it has been earned on a lower turnover. Allowance has been made for income-tax and depreciation, but not for corporation profits tax in arriving at this figure.

Dividends upon our investments in Canadian Baker Perkins, Limited (£3,125) and David Thomson, Limited (£881 5s 4d) in respect of the year 1922 were received during 1923, and are included in the accounts for the period under review.

ACCOUNTS.

The form of the profit and loss account has been slightly altered, and fresh headings have been added to the balance-sheet, in order to give shareholders more information.

RESERVE.—The addition of £7,647 11s 10d is due to a supplementary realised surplus from fire salvage.

The plant and buildings at your works have been maintained in a high state of efficiency out of revenue, and an adequate addition has been made to depreciation reserve.

LOANS.—£10,000 has been paid off the loan from Lloyds Bank, Limited.

Trade creditors and bills payable are higher than in the previous year by £29,128, and balances to customers' credit by £5,933. The increase in both figures is due to the greater activity of the works at the end of 1923 as compared with December, 1922.

UNDIVIDED PROFIT.—The decrease of £19,517 15s 3d is, of course, due to the settlement of arrears of taxation alluded to above and management remuneration consequent thereon. The balance is still subject to corporation profits tax for 1922 and 1923, and adjustment of income-tax for nine months of 1923 in respect of which allowance has been made though the assessment has not yet been agreed.

Land, buildings, plant, and machinery have increased by £34,343 13s 10d. During 1923 we exercised our option to purchase from the London, Midland, and Scottish Railway Company for £9,027 13s the five acres of land at Willesden already partially covered with buildings pertaining to the works which we previously held upon lease from them. The offices at Peterborough have been enlarged at a cost of £7,751 15s 8d by the addition of another floor to accommodate the new development department of the drawing office, the chemical machinery department, and the commercial direction of the bakery equipment sales, which latter have been transferred from Kingsway. The balance is accounted for by the additional fire salvage in respect of which an addition has been made to reserve as noted above, and by normal purchases of machine tools and factory equipment.

STOCK-IN-TRADE.—Work in progress and trade and sundry debtors are higher than at December, 1922, and reflect the increase in trade in the latter part of the period.

Prepaid insurances, prepaid advertising, and items of a similar nature, as well as loans to our associated companies, have been separated from trade debtors, so that the latter now represent only moneys due to the company on trading account.

Loans receivable from associates are in the main temporary advances made to our American company, and this item and the repayment of Lloyds Bank and the greater activity in the shops noted above are largely responsible for the shrinkage of cash.

INVESTMENTS.—Baker, Perkins Company, Inc., which has abbreviated its name (thus keeping in line with your company), and Baker, Perkins Manufacturing Corporation have again had a good year. Taking consolidated figures, and after payment of taxation and preference dividends \$56,294.71, the sum of \$188,405.14 has been added to surplus account, which accordingly stood at

December 31st at \$536,456.67. In the last few months Baker, Perkins Manufacturing Corporation have made an issue of 7,000 7 per cent. cumulative preference shares of \$100 each, redeemable at 102½, which were readily taken up locally. The proceeds of this issue were used in part to redeem the whole of the existing 8 per cent. cumulative participating preference shares, and as to the balance for extra working capital.

Canadian Baker Perkins, Limited, have had another successful year, and have again declared a dividend of 30 per cent., which will come in to our 1924 accounts.

The British Arkady Company, Limited, in which your company has a substantial holding, have declared a dividend of 10 per cent., free of income-tax, in respect of the year 1923, which will also come in to our 1924 figures.

AUSTRALIA.—Your Melbourne branch, under the management of Major Prior, has again done well, and has made a substantial contribution to the profits.

The directors again wish to draw your attention to the excellent work done by all members of the management, staff and workmen in your employ in a period of general trade depression and difficulty.

A resolution will be laid before the general meeting proposing that a special grant of £500, free of tax, be made to the secretary, Mr J. Newman, who has rendered a very great service to the company entailing a great deal of extra labour of an exacting character, extending over several years, in settling up taxation matters, and also in acting as liquidator of Perkins Engineers, Limited, at the time of the amalgamation. It is proposed to take this sum from undivided profits, and provision has been made for the payment in the accounts now presented.

PENSIONS.—Your directors are anxious to initiate a contrib

IMPERIAL BANK OF PERSIA.

STRONG AND LIQUID FINANCIAL POSITION.

AFFAIRS IN PERSIA—RENEWAL OF CHARTER.

The thirty-fifth ordinary general meeting of the members of the Imperial Bank of Persia was held, on the 16th instant, at the Cannon street Hotel, London, Sir Hugh S. Barnes, K.C.S.I., K.C.V.O., the chairman, presiding.

The manager and secretary (Mr Sydney Rogers) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—At the general meeting in December last I explained the reasons why we had decided to close our financial year in future on March 20th instead of September 20th. Our meeting to-day is the first under the new arrangement, so the accounts presented to you are for six months only—viz., from September 21st to March 20th.

TRIBUTE TO THE LATE MR HUNTER.

Before I refer to them I think you will wish me to place on record our sense of the loss we have sustained through the sudden death last December of our colleague, Mr H. E. R. Hunter. Mr Hunter was a banker of wide experience in the East. He had been for many years manager of the Shanghai branch of that great institution the Hongkong and Shanghai Bank. He was also a director of Hambros Bank, and, when he joined us early in 1916, shortly after the death of your former chairman, Sir Thomas Jackson, we believed, and the event proved, that we had obtained a very valuable addition to the board.

His death came as a very great shock to us all. We feel we have lost not only a colleague, on whose advice we could confidently rely, but also a very charming friend and companion whose cheery presence at our weekly meetings is greatly missed. You will, I am sure, unite with us in expressing our sorrow that he has been taken from us, and our sympathy with his relatives.

FAILURE OF THE REPUBLICAN MOVEMENT.

As regards affairs in Persia, so short a time has elapsed since I last addressed you on the subject that there is not much to relate. His Majesty the Shah is still on tour in Europe, and, though there have been several changes in the Cabinet in Teheran, the Sirdar Sepah Reza Khan, of whose achievements in regard to the improvement of the army and the maintenance of order I gave you some account in December, has succeeded in maintaining his position as Prime Minister and Commander-in-Chief. He appears to have established the authority of the Government throughout Persia in a remarkable degree. There have, it is true, been some disturbances among the tribesmen in Luristan, but I understand these have now been satisfactorily composed.

You have no doubt seen in the newspapers that at one time in the early spring there arose in Teheran a considerable agitation in favour of the establishment of a Republic in Persia. The movement evidently lacked popular support, since, for the time at any rate, it seems to have died down. In the circumstances it is not surprising that such a proposal should have been put forward and should have captured the imagination of many people. The widespread unrest in the East which followed the war has led already to the downfall of the Sultan of Turkey, and to the disorder in the Chinese Empire, and it would have been strange if the ferment had failed to penetrate into Persia. But the Persians, fortunately, are a cautious and conservative people, proud of their country's great past, and I am inclined to think their ancient institutions are likely to display much more stability than they are commonly supposed to possess.

At any rate, the examples presented in Russia and elsewhere are hardly calculated to encourage in others a desire for violent constitutional changes. Meanwhile, despite such unrest as exists, the Persian merchant, who understands little of politics and probably cares less, pursues his lawful occasions in business unperturbed, and it is to his class we look to take advantage of the facilities which the bank offers for carrying on and financing the local and foreign trade of the country.

THE ACCOUNTS.

With this brief introduction I turn to the accounts. I do not propose to compare in detail the results of the past half-year with those of the previous 12 months. The only items in the balance-sheet to which I need direct attention are the increase of nearly £130,000 in our note circulation and, on the assets side of the account, the large sum shown under the head of cash in hand, at bankers, and money at call. In proportion to other items this may seem unduly large, but it is a good fault, and, if you add to it our investments—which are all in first-class securities—and the total under bills receivable, you will see that our financial position is very strong and liquid.

As regards the profit and loss account, including the balance brought forward, the total sum at our disposal, £87,738, enables us to transfer £20,000 to our reserve account—which now stands at the substantial figure of £390,000—to write £5,000 off bank premises, to pay you a dividend of 5s a share, free of tax, and to carry forward £34,552. You will, I hope, regard this as very satisfactory. Our bank premises now stand in our books at only £51,100, notwithstanding the fresh expenditure which our expansion has called for.

THE DIVIDEND.

The only remark I would make about the dividend is that you must not suppose that the payment now of 5s, as against the 3s paid this time last year, foreshadows any increase in the 9s which we have paid you annually for the last two years. The present dividend is a final one. Next December's dividend will only be an interim dividend. We cannot, of course, predict what it will be, but we hope it will be sufficient to prevent your losing anything in the current 12 months owing to the change in our financial year.

RENEWAL OF CHARTER.

It will interest you to know that in recent correspondence which has taken place between his Majesty's Treasury and the bank we have been informed that our Royal Charter will be renewed for the period necessary to carry us on to the expiration of our concession—that is to say, for nearly another 25 years. The bank's concession from the Persian Government is for 60 years from February, 1889. The Royal Charter granted by the British Government in the following September was for 30 years. In 1919 the charter was renewed for five years, and it will now be extended further so as to cover the whole period of the concession.

PERSIA'S FOREIGN TRADE.

We have just received the figures of Persian foreign trade for the year ended last March. Imports amounted to Ts. 69,400,000 and exports to Ts. 76,700,000, a total of Ts. 146,100,000, an increase over last year's figures of Ts. 11,000,000.

In conclusion, I may add that our relations with the Persian Government continue to be very satisfactory. We fully recognise our responsibilities as the State bank, and have given and are always prepared to give to the Persian Government all the assistance in our power.

TRIBUTE TO THE STAFF.

I have only to add that during the past six months we have received very valuable assistance from our staff, who have done their work in a most excellent way, as usual. I have now to move: "That the report presented be adopted, that the accounts to March 20th, as rendered, be accepted, and that the final dividend of 5s per share, payable free of income-tax, on July 17th, be, and is, hereby confirmed."

Mr E. A. Chettle seconded the resolution, and it was carried unanimously.

The Chairman next proposed the re-election of the retiring directors, Mr V. A. Caesar Hawkins, and Mr E. A. Chettle.

This resolution was seconded by Col. Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., and unanimously approved.

On the proposition of Mr Turton, seconded by Lieut-Col. G. K. C. Westropp, the auditors, Messrs Kemp, Chatteris, Nichols, Sendell and Co., were unanimously re-appointed.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS AND STAFF.

Mr Vere H. Smith: Mr. Chairman and gentlemen, before we separate, if I may be allowed to do so, I wish to propose a vote of thanks to you, Sir, for your conduct in the chair to-day, to the board of directors generally, and to the staff here in London, for the good work they have done for us during the past year. I should like to associate with that vote of thanks the staff of this bank abroad. I feel—and you have already referred to the fact—that we owe a great deal to our staff and our employees who work for us in the East, and I do not think we should forget them to-day.

Col. Westropp: I have great pleasure in seconding that vote, which I am sure we all realise to be thoroughly deserved. The vote was unanimously accorded.

The Chairman: I am very much obliged to Mr Vere Smith for his kind reference to myself and to the board, and I am very glad that he has been good enough to include the staff in his vote of thanks. I am much obliged to you all for so kindly passing that vote. I need hardly say that our staff has rendered us excellent service. As I said the last time we met, they have very responsible work, and they have done it to our entire satisfaction during the past six months.

The proceedings then terminated.

IMPERIAL OTTOMAN BANK.

UNFAVOURABLE FACTORS OF PAST YEAR.

POLITICAL AND FINANCIAL CONDITIONS IN THE EAST.

SIR HERBERT LAWRENCE'S REVIEW.

The annual general meeting of shareholders of the Imperial Ottoman Bank was held, on the 16th instant, at Winchester House, Old Broad-street, London.

General the Hon Sir Herbert A. Lawrence, K.C.B., presided.

The secretary of the London agency (Mr Charles E. L. Corthorn) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen,—I have been informed that this meeting is properly constituted, and I presume it will be your pleasure that the report and accounts, as printed and circulated among you, shall be taken as read. (Agreed.)

You will regret, as we do, that we have lost the valuable collaboration of Lord Goschen, who has been called upon to fill one of the most important posts in the Government of India. We congratulate him most heartily on the honour conferred upon him. The public service has certainly gained a devoted administrator.

THE PAST YEAR.

Before proceeding into detail with regard to our affairs, it will be perhaps better to make a short survey of the circumstances under which we have been conducting the business of the bank during the year under review.

The Near East in 1923 did not see the arrival of the prosperity and calm which it had been hoped that peace would bring. Various factors, political and economic, tended rather to aggravate the state of uneasiness which for years now has paralysed business in the countries with which our establishment is chiefly concerned.

The Conference of Lausanne met on November 20, 1922. For 11 weeks it pursued its course amid difficulties so serious that at times the precarious Peace of Mudania seemed endangered. On February 4, 1923, the Conference was suddenly suspended without any agreement being reached. Only on April 23rd negotiations were resumed, and up to the last moment the result was in doubt, the Treaty of Peace not being signed until July 24th.

To this day it awaits the ratification by three Allied Powers, without which it cannot enter into force—and without which there can be no definite restoration of normal relations with the Near East.

NEW POLITICAL ORDER IN TURKEY.

The new political order in Turkey has been slow in settling down. Elections first, then a Ministerial crisis, and, finally, on October 29th, the proclamation of the Republic, all contributed during the second half of 1923 to keep alive those feelings of uncertainty and apprehension which are inevitable in times of political change.

The new Government found itself faced with the arduous task of restoring a country exhausted by 12 years of continuous warfare, and of directing its adaptation to a new order. From an economic point of view, then, it is not surprising that the year 1923 should have been marked by a stagnation even more pronounced than that of the year preceding.

MARKET INACTIVITY IN CONSTANTINOPLE.

In Constantinople the market has remained inactive, and business has been limited to operations of little importance. The principal causes of this inactivity are the uncertainty as to the internal policy of Turkey and to the general policy of Europe; the danger to peace which arose in the early months of the year on the check to the negotiations at Lausanne; and, lastly, the destruction of capital resources in various forms, caused by 12 years of warfare and the consequent inability of the population to produce and therefore to purchase commodities.

QUESTION OF PRODUCTION.

Let us now turn to the question of production. This, together with the important transit trade of Constantinople, forms the future basis of Turkish prosperity. Anatolia is an agricultural country, and, as such, one of the richest in the world. During the last year, however, crops were below the average. In the regions traversed by lines of railway, and for the plateaux of Central Anatolia, the cereal harvest was only moderate. On the other hand, in the eastern provinces, at Diarbékir, for instance, the yield was abundant, but, owing to the absence of means of communication, the crop could not be conveyed to the centres of consumption.

Other crops were equally unsatisfactory; opium only yielded 2,000 cases, as against an average of 5,000 cases; mohair, 25,000 bales, as against 100,000 bales. The cultivation of silk attained only 10 per cent. of the results which were usual before the war. Cotton showed some improvement at Adana, with 60,000 bales, as against 30,000 bales of the preceding year. These poor results are largely due to the diminution of the population. Certain products, such as

figs and raisins, could not be entirely exported owing to the lack of labour available for packing.

IMPORTS AND EXPORTS.

With regard to the commercial movement in Constantinople, published statistics are incomplete, and, therefore, I can only give you the figures for the imports of the first half-year. The value, in Turkish pounds, was as follows:—

First half of—	£T
1921	58,523,000
1922	39,173,000
1923	38,475,000

The export market, on the other hand, shows some animation. Certain articles have been sold at remunerative prices above those for the preceding year. As in the case of imports, I can only give you the figures for the first six months of the year:—

First half of—	£T
1921	12,360,000
1922	13,177,000
1923	12,942,000

EXCHANGE MOVEMENTS.

Movements in exchange have contributed to the stagnation of business. Sudden and violent fluctuations of the rate in the course of a month have caused important losses and produced panic among importers, some of whom have found themselves unable to take delivery of goods which they had ordered. During the period under review the sterling rate has varied between 690 piastres and 811 piastres to the pound.

The variation in the franc exchange has had its obvious effect on the working of our bank, and it is to be hoped that the expressed determination of the French Government to balance its Budget, and the inherent soundness of the economic position in France, will tend to eliminate these violent fluctuations in the future. It is to be regretted that speculation should have been able to play so large a part in the unsettlement of monetary conditions.

In Turkey the currency question is free from one difficulty, which obtains in so many other countries: there has been no inflation of the currency. The note issue has not been increased in the slightest degree since the war.

In the economic world any general improvement of the situation is to be sought in stimulating demand and thereby causing increased production, in a wider exchange of commodities, in the restraint, so far as that may be possible, of speculation, and not, as some people are disposed to believe, in artificial measures of assistance which at best are merely palliatives. This attitude towards trade and speculation we have adopted ourselves, and we continually endeavour to induce other establishments in our sphere to take a similar stand.

BANK'S AFFAIRS.

From these general considerations I now turn to those which may be more accurately described as our own affairs. The unfavourable factors which I have just brought to your attention had their inevitable influence on the volume of the operations and on the results of our Constantinople office, and a large number of our branches in Anatolia. However, certain regions of Asia, notably Adana, have shown an important commercial movement in which our branches have had their part.

In Palestine, Egypt, Mesopotamia, and Persia the state of stagnation which we described last year has shown an improving tendency. In Greece our business shows a very appreciable progress, which is most encouraging for the future of our branches in that country. The financial and banking operations of our western agencies pursue their normal course.

In Syria, the year 1923 has been marked by continued progress in the general organisation of the mandated territory, and an improvement of the economic situation, which has had a happy reaction on public finances. Our Filiale, the Banque de Syrie et du Grand Liban, has profited thereby, and has been able to maintain its previous dividend of 5 per cent. The Banque Franco-Serbe and the Bank of Roumania have equally had a satisfactory year.

PROLONGATION OF BANK'S CONCESSION.

Our concession in Turkey, as you know, is due to expire next year. In view of this fact we entered recently into negotiations with representatives of the Turkish Government in order to determine the basis and conditions of its renewal and prolongation. We are glad to be able to say that our delegates signed a convention to

this effect on March 10th with the Government of the Turkish Republic.

This agreement provides for the prolongation of our concession until March 1, 1935. It will be submitted to the Grand National Assembly of Turkey for ratification on the opening of the next session of the Assembly in October. This will permit our establishment to render to Turkey important services, which it has never withheld in the past, towards the maintenance of its credit and towards its economic development.

It is with this expectation, and in order to be prepared to meet any objection which the Turkish Government under its new Constitution may make to the word "Imperial," that we have embodied in the agenda of the present meeting notice of a resolution to empower the committee to modify the title of the bank as and when they may deem advisable.

THE ACCOUNTS.

Referring to the balance-sheet, as shown in the report, assets and liabilities in foreign currencies have been converted into sterling at the rates prevailing on December 31st last—that is to say, so far as francs are concerned, at the rate of 85f to the pound, as against 64f on December 31st of the preceding year.

The accounts made up to December 31, 1923, after providing for bad and doubtful debts out of revenue and provisions previously made, show an amount available of £128,370 15s 4d, after taking into account an amount of £194,693 6s 10d brought forward from the previous year and the amount required for difference on conversion.

Disappointing as this result may appear at first sight, we cannot but congratulate ourselves that it is not more unsatisfactory, in view of the difficult circumstances with which we have had to contend.

The situation still remaining uncertain, not only in our sphere in particular, but in the world in general, and in view of the fluctuations in exchanges which have occurred—notably in the franc, which March of this year touched 120 to the pound sterling—we have again to propose that this balance be carried forward.

HOPE FOR THE FUTURE.

I can only repeat the hope expressed at our meeting last year that a revival may take place in Turkey's economic development in the near future, and that we may then reap the reward of our preparedness.

Our staff abroad and at home has continued to display the efficiency and devotion which we have experienced in the past, and we wish to express to the directions of Constantinople, London, and Paris, and the branches, as well as to all the members of the staff, our hearty thanks and appreciation.

If there are any questions you would like to ask me, I shall be pleased to answer them. If not, I will move, "That the report and accounts be now received and adopted."

The Lord Oranmore and Browne, K.P., P.C.: I have much pleasure in seconding the resolution.

Lieutenant-Colonel William Parker, D.S.O.: Would you mind telling us whether your franc assets exceed your franc liabilities, and, if so, by what amount, approximately?

The Chairman: I am informed by our auditor that our assets in francs exceed our liabilities in francs.

Mr Smallwood: Could you say, roughly, by how much? On the assets side you have lumped together British and French Treasury bills, and, in the item of investments, you have "British and French Government securities." Can you tell us, roughly, the proportions of British and French securities?

The Chairman: I have not the details here, but they can be obtained by shareholders at the office.

The resolution was then put, and was carried unanimously.

FORMAL BUSINESS.

The Chairman: I now move: "That M. Charles de Cerjat, M. Horace Finaly, Mr E. W. H. Barry, and Lord Hillingdon be and they are hereby re-elected members of the general committee."

The resolution was seconded by the Earl of Chichester, O.B.E., and carried unanimously.

The Chairman: I now move, "That the committee be and is hereby empowered, under Articles 35 and 43 of the Statutes, to modify the title of the bank as and when they may deem advisable."

Lieutenant-Colonel Sir Albert Stern, K.B.E., C.M.G., seconded the resolution, and it was agreed to unanimously.

The Chairman: That concludes the business of the meeting.

VOTE OF THANKS TO COMMITTEE, MANAGEMENT, AND STAFF.

Mr Arthur Hood: On more than one occasion it has been my privilege to propose a vote of thanks to the committee, the management, and the staff. I think we can sum up in two mottoes the way in which our business is conducted and the masterly speech we have heard from the chairman—the first is "Safety first," and the second is "Looking ahead." On this side of the table we

are all very much obliged to you, because things might have been very much worse than they are now. In view of the conference which is being held in London, we are hoping—not idiotically, I suppose—that the franc will improve, and when we hear of the franc having been 120 to the pound, we hope it will be told to our grandchildren as a wonderful fact which was caused by speculation, and that we shall get the franc down to half that figure. There is no doubt in my mind that but for the enormous amount which has had to be put away as loss on exchange, satisfactory dividends would have been paid to the shareholders, but we have got to wait. In my vote of thanks, which I am sure will be supported by every one in the room, I should like to include especially the staff in the remote and remotest branches of the bank. We little know what they have to put up with, and I am sure they all have our sincere sympathy.

Mr J. Rosselli seconded the resolution, and the vote was unanimously accorded.

The Chairman: Thank you, gentlemen. I have to thank you for the kind compliment paid to me and my colleagues, and also to the staff, who will appreciate greatly the remarks that have been made.

The proceedings then terminated.

BANK OF NEW SOUTH WALES. SUCCESSFUL RESULTS—INCREASED PROFIT. LONDON LOANS AND EXCHANGE RATES.

The half-yearly general meeting of the Bank of New South Wales was held at the Chief Banking House, Sydney, on Friday, May 30, 1924, the chairman, Mr Thomas Buckland, president of the bank, presiding.

The Chairman, in moving the adoption of the report, said: Gentlemen,—

Before moving the adoption of the report and balance-sheet I will briefly review the figures, comparing them with those of March, 1923.

BALANCE-SHEET FIGURES.

Note circulation in New Zealand has increased £200,000—due mainly to the purchase of produce bills on London, and illustrates the elasticity of the note issue there in relation to financing the primary products of the country.

Deposits show a decrease on the year of £926,000. This is fully accounted for by the disappearance of the item "War gratuities." Under the Government scheme, notes were deposited by the Government to meet advances made on their account to soldiers, and this cross-entry was recently adjusted by the Treasury. Government deposits have decreased by £350,000, but the deposits by customers have increased, and bearing in mind that our last year's figures included over a million of deposits in suspense which were distributed by the companies concerned in May and June, the increase is all the more satisfactory.

Bills payable.—As you are aware various large items are grouped under this heading, and the decrease of £353,000 is of no particular moment.

The reserve fund has increased £225,000 on the year and the profit by £27,000.

ASSETS.

Turning to the assets:—

Coin, notes, and cash balances at bankers have decreased £188,000, and due by other banks have increased £278,000. In London British Treasury bills are lower by £1,150,000. Money at short call £650,000, and remittances £186,000 less. At this time last year our balances in London were exceptionally high, and although they still remain much higher than we require, we have, at great cost, managed some reduction urgently required for the conduct of our business in Australia. Securities have decreased by £1,188,000, and advances have increased £2,880,000. Of this £400,000 is increase in import bills discounted by London, and £2,480,000 in advances to customers in the various States in Australia and in New Zealand. The ratio of bills discounted and advances in Australia and New Zealand to deposits, excluding bills negotiated in London, which stand at £2,315,000, is 70 per cent., which is considered reasonable. Bills negotiated by London against shipping documents for imports to Australasia, although grouped under "Advances," are more in the nature of short-dated loans maturing within 90 days. If there were facilities here as in London for rediscount, this item would be included in our first line of assets.

PROSPECTS FOR ENSUING SEASON.

Pretty generally throughout Australia reports are coming in to us which speak in optimistic terms of the prospects of production for the ensuing season. In the majority of districts livestock are reported to be in excellent condition, with grass in abundance, and the forecasts for increased returns from wool, meat, butter, cheese, &c., are practically universal. Also the reports and forecasts in

regard to a splendid outlook for wheat and other cereals are equally encouraging.

Therefore, as far as human eye can see or human brain can penetrate, it would appear that we are justified in anticipating a time of plenty in the immediate future. So far so good, and very good indeed, but it is not the whole question. This great producing continent of ours being so limited in the matter of population, and consequently in the matter of local consumption and local markets, we have to seek buyers of our produce in other parts of the world, and whether our goods are shipped to America, Japan or any other part of the globe, they have to be paid for in London just the same as if they were all shipped there direct, consequently our funds accumulate in London to the detriment of our available cash resources in Australia, and necessarily to the restriction of Australian trade. This restriction would not obtain if the finances governing this commerce with outside countries were left unmolested, our exports and imports would more or less balance themselves, but the natural commerce of the country is not left unmolested, it is interfered with in a most serious manner.

BORROWING IN LONDON AND EXCHANGE RATES.

There is evidence that some of our Governments, municipalities, and public bodies are borrowing money in London, apart from conversion requirements, which might or might not be excusable if the English investor were to forward them the gold or other commodities of value for the loans, but nothing of the kind happens. The said investor simply provides the credit in London, and the borrowers themselves have to transfer the money out to Australia, which they have been doing at ruinously high exchange rates, and thereby not only disorganise exchange values, but they absorb and divert from natural commercial channels the funds which, in the ordinary business course, would be available to finance the exports of the country.

Another injurious result of the public bodies mentioned creating these ruinous exchange rates for getting money out of London is forcing the banks, in self-protection, to put up the cost of negotiating drafts against produce, and thus imposing a heavy tax upon Australia's most useful citizen, viz., the man on the land.

If imports over exports very largely predominated, the borrowing abroad, however harmful it might otherwise be, would not prejudicially affect the position, but just now it does most adversely affect it, and if the practice is allowed to continue it is difficult to see how it will be possible in the ordinary way, and without extraneous methods, to finance the large exports which we hope for from our next harvests, and which are so essential to our prosperity.

TRIBUTE TO STAFF.

Our staff continues to render to the bank loyal and efficient service, and in recognition thereof you will, I am sure, be pleased to learn that the board have decided to reward them with a bonus on their salaries.

In a few minutes you will be asked to resolve yourselves into a special general meeting to consider some alterations and amendments to the deed of settlement. They are for the most part rendered necessary consequent upon the passing of the Bank's new Act of Parliament, and are directed to bringing the deed more up to date, and fitted to meet modern conditions.

P. AND O. BANKING CORPORATION, LIMITED. SATISFACTORY RESULTS—DIVIDEND MAINTAINED.

BOARD'S SOUND POLICY.

The fourth ordinary general meeting of the P. and O. Banking Corporation, Limited, was held, on the 11th instant, at 122 Leadenhall street, London.

The Right Hon. the Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E., chairman of the company, presided.

The secretary (Mr H. J. Rolt) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Is it your pleasure, ladies and gentlemen, that the report and accounts, which have been in your hands for some days, be taken as read? ("Agreed.") That being the case, I do not propose on this hot afternoon, when, no doubt, many of you are anxious to get off and go to Lord's, to inflict upon you a long oration.

THE PAST YEAR.

The results for the past year have not been achieved without strenuous efforts on the part of the management, both at home and abroad, to whom we are greatly indebted for having realised the surplus which we are able to show on the year's operations. This surplus which we are able to show on the year's operations, to be sufficient to enable us to pay the same dividend as last year, to place £20,000 to reserve, and to carry forward about £2,000 more than we brought in. We are going slowly; we are showing no

disposition to push our business. It is coming to us by degrees. We are gradually building up our reserves without distributing too much in the way of dividends, which I am sure you will agree with me is the right policy for a young bank to adopt. If we fell on bad times, I should, so far as I am concerned, have no hesitation in recommending a lower dividend. I trust, however, that will not be necessary.

CURRENT YEAR'S OUTLOOK.

As regards the outlook for the current year it is too early to make any forecast; only three months have gone, and much will depend on the working of the nine months ahead of us, but I would ask you not to reckon on a larger dividend, as it is the board's object to build up our reserves.

Turning to the figures for 1923-24, you will observe that the total of the balance-sheet shows a contraction on the figures of 1922-23. That is a feature which is common to most banking institutions. Current and deposit accounts stand at £9,491,000, against £10,360,000 last year; our loans payable have contracted by £1,300,000, and there is a small decline in our acceptances. On the other hand, we have taken a larger part in the financing of the trade to and from the East, as will be observed from the increase of over £2,000,000 in the bank's holdings of bills. Our advances to customers have expanded from £2,850,000 to £3,832,000, while we have simultaneously decreased our holdings of investments.

ALLAHABAD BANK.

I should like to add a word or two about our affiliated institution, the Allahabad Bank. After making full provision for all bad and doubtful debts out of the year's profits, the bank has paid its usual dividend and a bonus of 18 per cent. It has also added materially to its reserves by appropriating thereto from the current year's profits the sum of Rs. 3,00,000, and at the same time increasing slightly its carry-forward, and it has also found it possible to transfer to the reserve fund the sum of Rs. 6,00,000 hitherto held in a contingency fund, as this is not now required for the purpose for which it was created. The total reserves of the Allahabad Bank now stand at Rs. 44½ lacs, with a paid-up capital of Rs. 35½ lacs. I think you will agree that that is not an unsatisfactory position.

I notice that a great trade boom in the near future is prophesied in some quarters. I hope the prophecy may come true. It is badly wanted. If we could only get Europe working again, not only the P. and O. Bank, but also the P. and O. Company would benefit, as would every other commercial undertaking in the country. I now beg to propose:—"That the directors' report and statement of accounts for the 12 months ended March 31, 1924, be and the same are hereby adopted."

Mr F. A. Johnston seconded the motion, and it was carried unanimously.

DIVIDEND RESOLUTION.

The Chairman then moved: "That a dividend of 5½ per cent. per annum, less income-tax, at 4s 6d, on 259,416 shares be and the same is hereby declared payable on July 17, 1924, to the members who were on the London and Bombay registers of the corporation respectively on July 4, 1924."

The Right Hon. the Earl of Selborne, K.G., seconded the motion, and it was unanimously adopted.

Mr W. O. Grazebrook proposed:—"That the retiring directors, namely, the Right Hon. the Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E., Sir Montagu Cornish Turner, and Alexander Kemp Wright, Esq., C.B.E., D.L., be and the same are hereby re-elected directors of the corporation."

The Hon. Alex. Shaw seconded the motion, and it was unanimously approved.

Mr F. Ritchie moved: "That Messrs W. B. Peat and Co. be re-elected auditors of the corporation, to hold office until the next annual general meeting, and that they be paid an annual fee of £300 for the audit of the corporation's accounts."

Mr W. Langridge seconded the motion, and it was carried unanimously.

VOTE OF THANKS TO CHAIRMAN.

Mr E. Darlington, C.I.E.: Gentlemen,—Before we separate, I beg to propose a vote of thanks to the chairman. I think that, taking everything into consideration, and taking into account the state of business, we have had a very satisfactory year, and we are glad that the dividend has been kept up to what we received previously.

Mr F. O. Green seconded the vote, and it was unanimously accorded.

The Chairman: Mr Darlington, Mr Green, and gentlemen, I thank you very much indeed on my own behalf and on behalf of my colleagues. I am sure that you would also wish to include our staff, both at home and abroad, in your vote of thanks. I shall have much pleasure in passing it on to them. Thank you very much.

The proceedings then terminated.

ANGLO-CEYLON AND GENERAL ESTATES COMPANY, LIMITED.

GOOD YEAR—INCREASED CROPS AND BETTER PRICES.

The thirty-eighth annual ordinary general meeting of the Anglo-Ceylon and General Estates Company, Limited, was held, on the 17th instant, in the Council Room of the Ceylon Association in London, 6 Laurence Pountney hill, Cannon street, London, Sir Edward Rosling (the chairman) presiding.

The secretary (Mr H. J. Hitchcock) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:

In Ceylon, in spite of the south-west monsoon being one of the severest on record, the tea crop shows the satisfactory increase of 425,970 lbs over the previous year.

The whole of the season's crop has now been sold, realising the net average price of 1s 4½d per pound, as compared with 1s 3½d per pound in the previous year and 1s 1½d in 1921-22.

The cost per pound shows a further increase, and is ½d more than last year; it now shows the very high rate of nearly 11d, but in considering this cost it must be remembered that buildings and machinery have absorbed nearly 2d per pound, and loss on rice another ½d.

The cacao crop amounted to 6,032 cwts, as against 5,369 cwts in the previous season. This is the second biggest crop we have harvested in the last ten years, Kondesalle giving over 6½ cwts per acre and Mahaberiatenne about 3½ cwts.

The price obtained was 58s 3d per cwt net, as compared with 55s 9d net last year. The price would have been higher if it had not been for the large proportion of black cacao, due to the severe monsoon.

The rubber harvested amounted to 247,684 lbs, as compared with 223,588 lbs in the previous season, and the price realised 11.81d, as against 12.55d in 1922-23. Under restriction the crop is, of course, no criterion as to what the yield might be, but the enforced rest is undoubtedly benefiting the trees.

EXTENSION OF CULTIVATED AREA.

You will see from the schedule of estates that we have increased our area under tea in bearing by 388 acres.

In August of last year we purchased Gavattenne estate for £11,530, which is equal to £38 8s 8d per acre for the tea in bearing. This estate is not capable of turning out such fine teas as is the case with our recent purchase of Coombewood, but, at the price we paid for it, it should give quite satisfactory returns.

In Mauritius we have again to report a short crop, largely due to adverse climatic conditions, but partly to the unsatisfactory labour position.

As a set-off to the short crop, higher prices were realised, and we still hope that the Indian Government will permit resumption of emigration on an increased scale.

Here, again, we have added to our acreage by the purchase of 100 acres of land at Hermitage, which is included with Highlands at a cost of £6,927 18 8d.

The year's working results in a profit from the Ceylon estates of £79,234 10s 9d, which is an increase of £10,300 over the previous year. Mauritius leaves a profit of £23,923 9s 10d, which is an increase of nearly £5,000, and there is an increase in interest, commission, &c., of rather more than £3,000. The London expenses show a reduction of £707 0s 3d.

The stock of tea, &c., on March 31st shows an increase in value of nearly £17,000. This was the result of the dock strike delaying our tea sales, but, as I have already mentioned, all our tea has since been sold.

With £40,651 6s 6d brought forward from last year, there is—after making provision for taxation—a sum of £147,257 9s 8d to be dealt with. Out of this a 5 per cent. dividend, amounting to £25,000, has already been paid, and it is now proposed to pay a final dividend of 15 per cent., which will absorb £75,000, to place £5,000 to the general reserve, and carry forward a balance of £42,257 9s 8d, or £1,606 3s 2d more than we carried forward a year ago.

PROSPECTS FOR CURRENT SEASON.

In regard to the prospects for the current season, prices for Ceylon tea are on a slightly higher level than they were a year ago, and, on the whole, the tea position generally may be regarded as very sound.

In regard to rubber, one cannot forecast this crop, as that varies with the price.

This company has approved the principle of some form of co-operative selling of rubber, or a central selling agency, and if the proposals for the foundations of such an association materialise, it should, with the existing restriction of exports, have a sufficiently stabilising effect on the market to ensure a price in the neighbourhood of 1s 3d per lb.

In regard to sugar, the prospects for the coming crop are better than they were a year ago, but, unfortunately, prices are not so good, largely due to increased quantities of Continental beet sugar finding its way here.

Mr. H. K. Rutherford seconded the resolution, which was carried unanimously.

THE AUSTRALIAN ESTATES AND MORTGAGE COMPANY, LIMITED.

MR. ANDREW WILLIAMSON ON POSITION AND PROSPECTS OF WOOL INDUSTRY.

The annual general meeting of this company was held, on the 16th instant, at the Cannon street Hotel, London.

The Chairman (Mr Andrew Williamson) said that the past year had been one of severe drought over large areas in both Queensland and New South Wales, and it had resulted in poor lambings, abnormal mortality, a light and faulty wool clip, and heavy drought expenditure. The sales of cattle were most disappointing, owing to the abnormally depressed condition of the frozen meat trade, and the sugar crops on the company's sugar estates had yielded little or no profit. One bright spot in the past year had been the excellent returns from wool, the wool market having been firm, with high and advancing prices. The British Australian Wool Realisation Association in 1923 made good progress with the realisation of the old stocks and a return of share capital to the shareholders of 10s a share. The directors recommended the payment of a dividend of 6 per cent. on the paid-up capital.

QUEENSLAND LAND ACT AMENDMENT ACT.

Referring to the controversy between the holders of Australian pastoral leases and the Government of Queensland which had prevailed since the passing of the Queensland Land Act Amendment Act, 1920, Mr Williamson said: When addressing you last year I expressed the hope that a wise statesmanship would yet find a way by which, without the sovereign rights of the State being in any way affected, all grounds of protest from the pastoral lessees would be removed. I am heartily glad to be able to say to you to-day that the controversy has been ended and an agreement arrived at under which a final settlement is provided for. This has come about through negotiations with Mr Theodore, the Premier of Queensland, on the occasion of his recent visit to this country in connection with the conversion of maturing loans falling due in this and next year. While maintaining the position of his Government,

Mr Theodore, with the insight of true statesmanship, determined that all doubt as to his State's fidelity to contractual obligations must be removed, and he expressed his willingness to confer with the representatives here of the holders of these pastoral leases with a view to composing the differences. At the conferences which ensued the whole subject was exhaustively and dispassionately considered and a settlement reached. I gladly bear my tribute to the manner and the spirit in which Mr Theodore conducted the negotiations. That the effect of this friendly settlement on investors in this country was immediate was evidenced by the success of Mr Theodore's conversion loan, to which we and other Anglo-Australian pastoral companies gave substantial support.

WOOL POSITION.

The Chairman proceeded to deal with the wool position, and stated that the last bale of B.A.W.R.A. wool having been sold in May this year, the world had to depend on the annual production, which meant that there was now a shortage of wool, for it was clear that the annual demand was far in excess of the annual production. The production of wool in the world was not sufficient to keep the world's textile machinery going full time by a very substantial percentage. This placed the raw material in a very strong position. It was hoped that the current year, with the greatly improved season, might be sufficiently good to show no shortage in the Australian wool clip, but come out at a normal figure. During the past year they had been fortunate in being able to sell at high and advancing prices. At the present time they were witnessing a pause in the upward movement of merinos and some actual reaction in the prices of crossbreds, caused mainly no doubt by the financial stringency at present affecting more or less most countries and some acutely. In the case of Germany, which in normal times was a large buyer of Australian wool, the severe restriction of credit by the Reichsbank and the joint-stock banks had adversely affected all industrial activity in that country. Another adverse influence had been the restriction of wool credits in Australia, and the high exchange rates owing to the monetary stringency there. This temporary stringency had restricted wool credits and curtailed buying.

It seemed reasonable to regard the position both in Germany and in Australia as temporary phases. In the case of Germany the expected adoption of the Report of the Expert Committee on Reparations would probably have an early beneficial effect on Germany's credit and lead to her appearance both here and in Australia as a regular buyer. In the case of Australia much was hoped from the new Commonwealth Banking Bill, which had been passed by the House of Representatives. When the Bill passed the Federal Parliament and came into operation, and the board of directors of the Commonwealth Bank was appointed and took over the control of the note issue, it was hoped that the required temporary increase of currency would be provided and the situation relieved. A further adverse influence on the wool market had been the poverty or almost the absence of demand from America. It seemed probable that ere very many months were passed necessity would require America to again enter the market here as a substantial buyer.

The report and accounts were unanimously adopted.

APOLLINARIS AND JOHANNIS, LIMITED.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The twenty-seventh ordinary general meeting of Apollinaris and Johannis, Limited, was held, on the 15th instant, at the Holborn Restaurant, London.

Mr Alfred R. Holland (chairman), presiding, stated that during the past year business showed satisfactory expansion, but that the profits had not correspondingly increased owing to the higher cost of production; however, sufficient profits had been earned to cover fully the interest on the debentures and on the debenture interest certificates, as well as the requirements for the two sinking funds.

Referring briefly to the year's trade, the chairman reminded shareholders that the Apollinaris spring was situated on the left bank of the Rhine, in the sector occupied by France, and that consequently the business had been greatly affected by the crisis of last year in the neighbouring Ruhr district, though the French authorities had done everything possible to assist the company. For months the Continental business had been virtually stopped. Necessary raw materials had been difficult to secure. Timber for packing cases had had to be purchased at high cost from Finland and Sweden. Coal and chemicals had been unobtainable for a considerable time, and the bottle works consequently had to be kept closed during the greater part of the year. Matters were, however, improving, and the bottle works were working again, but the current year would still be influenced to some extent by the results of the past period of stress. Export trade had shown distinct improvement, and had it not been for prohibitive duties in many countries, results would have been much more favourable. Business

in the United States and in Canada had shown a distinct turn for the better, and the managing director had paid a prolonged visit to both these markets during the past winter. Home sales showed further expansion. The "Baby Polly" had become a universal favourite, and was now firmly established. Referring to the settlement of the company's claims against the German Government, since the report a year ago a further 12s 6d in the £, or about £23,000, had been received. Such moneys belonged to the capital account and strengthened the financial position of the company, which was very sound.

A business such as the company's, concluded the chairman, could only prosper when general trade was flourishing, international commerce unhampered, and conditions in general normal. He concluded his remarks with a note of optimism, and stated that unless new political complications arose, he was justified in saying that the high-water mark in production cost had been touched, that the price of materials was coming down, and that, with the steady good increase in the business, it was hoped that the accounts for the current year would show increased profits.

ARGENTINE NAVIGATION COMPANY (NICOLAS MIHANOVICH), LIMITED.

IMPROVED POSITION—ARGENTINE PENSION LAW.

The fifteenth ordinary general meeting of this company was held, on the 15th instant, at Winchester House, London.

The Lord Kylsant, G.C.M.G. (the chairman), said that the accounts showed a gross profit for the past year of £163,785, which, when deducted from the debit balance brought forward, reduced the unfavourable balance to £501,466. It was satisfactory that the position again showed an improvement over the previous year. The profit, though moderate, indicated an upward tendency, notwithstanding some adverse conditions with which they were still faced.

The fleet had been well maintained. The fine new tugs referred to last year entered service during 1923, as well as a small cargo steamer. In spite of the disorganisation caused by the prolonged strike, practically the whole of the fleet, with the exception of necessary reserve vessels, resumed service before the end of the year. Whilst the earning of the vessels for the 12 months under review showed increases both in passage money and freight, the working expenses of the ships advanced considerably. During the year under review there were no protracted periods of actual strikes, but the company suffered from a number of minor stoppages. During the present year trouble of a more serious nature had arisen. The Argentine Congress passed a pensions law providing for the compulsory deduction by employers of 5 per cent. from the wages and salaries of all permanent employees, to be paid, together with a similar 5 per cent. from the employers, into a pension fund. He believed that no statistics had been published to show what the proceeds of these moneys would provide, and no indication had been given of what benefits were guaranteed to the men. As a result of the men's strong opposition to the Pensions Law, the Government postponed its application temporarily, but subsequently put it into operation. This led to a general strike of the trades affected. According to latest advices, the Government had applied to Congress to amplify and clarify the provisions of the Pensions Law, and it was hoped that its application might be suspended.

As regarded the future, whilst it is satisfactory that during the early months of the present year the gross takings of the company had continued to improve, the directors could not but view with some concern the progressive increases in the wages bill and the uncertainties contingent upon the enforcement of the Argentine Pensions Law. Whilst, however, the position was not free from difficult factors beyond their control, they could, in his opinion, look forward to the future more confidently than they had been able to do for some years past.

The report and accounts were unanimously adopted.

INTERNATIONAL TEA COMPANY'S STORES, LIMITED.

RECORD PROFITS—18 PER CENT. DIVIDEND.

The annual general meeting of the shareholders of the International Tea Company's Stores, Limited, was held, on the 17th instant, at Winchester House, Old Broad-street, London, Mr G. A. Tonge (governor-director and chairman) presiding.

The secretary (Mr E. Davies) having read the notice convening the meeting and the report of the auditors.

The chairman said:—Gentlemen,—I am very satisfied with our progress during the past 12 months, and I expect you are. We have made £431,348, which is £34,500 more than we have made in any previous year. This, with the amount of £100,204 brought forward from the last account, leaves us with a substantial sum of £531,552 to deal with—enough to pay the dividends on both classes of preference shares ten times over, and you must remember that there are no debentures to rank in front of them. We have depreciated our fixtures and fittings by £50,000, and have placed

The Anglo-South American Bank Ltd.

Head Office: 62, Old Broad Street, London, E.C. 2.

Authorised Capital - £10,000,000	Issued Capital - £8,734,660
Reserve Fund - £4,000,000	Paid-Up Capital - £4,367,330

The Bank, in addition to 6 branches in SPAIN, has, with its AFFILIATED INSTITUTIONS

THE BRITISH BANK OF SOUTH AMERICA, LTD., and
THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

64 offices in the principal countries of LATIN AMERICA.

AUXILIARIES:
ANGLO SOUTH AMERICAN TRUST COMPANY, NEW YORK
(Incorporated under laws of State of New York) and
BANQUE ANGLO-SUD AMERICAINE, Soc. Anon., PARIS.

£100,000 to the reserve account. With these and some other small allocations the payment of the preference dividends, the interim dividends on the ordinary shares, and the final dividend we are now declaring (making 19 per cent. for the year), we are left with £134,848 to carry forward, subject to corporation profits tax. You have had the balance-sheet, and I do not think there are many points in it on which I need enlarge. Freeholds stand at £734,046. These comprise shops in our own occupation, and are mostly worth considerably more than they stand at here. With regard to the stock in trade, £704,759, this is taken at cost or less and will realise every penny, plus a profit. The item of debtors, at £265,500, consists chiefly of amounts due from our wholesale customers, to whom we naturally give short credit, and no doubt by now has been liquidated.

As to the future of the business, I have shown you that the profits are considerably larger, and the turnover, both in weight and cash, is also greatly on the right side. I am confident, as I think I have said on former occasions, that with proper management the same rate of progression is bound to be maintained; at least, I cannot see anything that is likely to bring about a different result. Before moving the adoption of the report I feel I cannot conclude my remarks without a very sincere word of thanks to the entire staff for their loyal and efficient service during the year under review.

Mr. G. Collier (vice-chairman) seconded the resolution, which, in the absence of questions, was carried unanimously.

CLAUDIUS ASH, SONS, AND COMPANY, LIMITED. AMALGAMATION NEGOTIATIONS WITH DE TREY AND CO.

The nineteenth annual general meeting of this company was held, on the 16th instant, at Broad street, Golden square, London.

Mr E. Russell Polden, who presided, said that it was a pleasing duty on the first occasion of his chairmanship of the company to present a report and accounts which showed such a decided improvement upon those of the two preceding years. The improvement, although below the pre-war standard of profits, was in the right direction, and the directors fully believed that, as the economic conditions in Europe became more settled, international trading would be resumed in proportion to the stabilisation of exchanges. Given such conditions, the directors felt that the company would be able to hold its own in spite of competition, relying upon the reputation and quality of their goods and their long and devoted service to the dental profession. The demand for dental requisites was not dependent upon the fickleness of fashion, but grew with the knowledge gained by the community of the necessity of the preservation of teeth as an essential to good health, and there was, therefore, a wide field for the expansion of their business. The profit for the year was £60,937, against £7,838, and the amount available for distribution was £59,833, as compared with £10,993. For 1921 and 1922 they paid the preference dividend out of reserves, but this year they were able to pay the dividend out of the profits for the year. The directors now recommended a dividend of 2½ per cent., making 5 per cent. for the year, less tax, leaving £13,758 to be carried forward. The sales for the current year showed a considerable increase upon those of the previous year. Bearing in mind the ramifications of the business, which extended throughout the world, and while anxious to live up to their reputation of being pioneers of dental requisites in all quarters of the globe, it was necessary to exercise great prudence in the matter of credits. There was a distinct improvement in 1923 for the development of their business abroad, and in the trying circumstances under which business was carried on, including severe competition, they had reason to be gratified, if not entirely satisfied, with the results. Referring to the rumours as to amalgamation between Messrs De Trey and Co. and themselves, the chairman stated that negotiations had been proceeding for some time past and were well advanced. He was of opinion that the members of the two boards who were discussing this matter were desirous of bringing about the amalgamation, not only for the benefit of their shareholders, but in the best interests of the trade and the dental profession, and he was hopeful that before long they would be in the position to place the proposal before the shareholders.

The report and accounts were unanimously adopted.

DE TREY AND CO., LIMITED.

NEGOTIATIONS FOR AMALGAMATION WITH CLAUDIUS ASH, SONS, AND CO.

The twelfth annual general meeting of the shareholders of De Trey and Co., Limited, was held, on the 14th instant, at 6 Swallow street, London, W., Mr X. Castelli (the chairman) presiding.

The Chairman, in moving the adoption of the report, said that the substantial dividend they received on their holding in the Dentists' Supply Company of New York had, in a great measure, enabled them to make the distribution of 7 per cent. for 1923, since the recovery in trade had been slow. The appreciation of the dollar

and the depreciation and fluctuation of the French and Belgian exchanges had considerably handicapped their undertaking, in common with all businesses of an international nature. Another factor which had had a very appreciable effect on their results had been the continuance of competition between themselves and one of their important competitors—Messrs Claudius Ash, Sons, and Co., Limited. In order to keep customers supplied with their goods they had had to cut prices to such an extent that their profit on turnover had been very considerably reduced. That, of course, must affect their competitors as well as themselves, and the sooner dental goods could be manufactured and marketed at prices yielding a reasonable profit all round, the better it would be for all parties concerned.

Shareholders were probably aware that for some time there had been rumours going about as to an amalgamation between Messrs Claudius Ash, Sons, and Co., Limited, and themselves. As a matter of fact, negotiations had been proceeding for some time past, and were at present well advanced. The ramifications of both companies were so great and covered so large an area and so many branches of the dental trade that it took some time to reach a common basis for amalgamation. It was too early to speak definitely, for, until a preliminary agreement had been reached, difficulties might present themselves which would render all their negotiations abortive, but, with good will shown on both sides and an earnest desire to do what was best in the interests of the dental profession, of the trade, and of the shareholders of both companies, the directors had reason to hope that they would soon be in a position to call them together and place before them a concrete proposal.

As regarded the outlook, he pointed out that their sales for the last six months compared favourably with those for the same period of 1923, and the returns of certain of their Continental branches were quite satisfactory.

Mr C. A. Barbezat seconded the motion, which was unanimously agreed to.

SIDNEY TURNER, Accountant-General.

India Office, July 11, 1924.

The Government of India have announced that £8,115,000 has been remitted to the Secretary of State for India during the quarter ending June 30, 1924, by means of purchases of sterling in India.

Messrs Samuel Montagu and Co. write, on July 16th, as follows:—

GOLD.

A fair amount of gold has been on offer this week, but only a small proportion was taken on Indian account. Gold valued at \$4,000,000 has been received in New York from London. The United Kingdom imports and exports of gold during the month of June, 1924, were as follows:—Imports, £2,933,646; exports, £3,764,277.

SILVER.

On the whole, the market has been quiet throughout the week. Notwithstanding a depreciating dollar exchange, supplies from the United States have not been easy to obtain, for the American silver quotations rose so as to counteract the tendency of the dollar. This indicated the firmness of the undertone. The monsoon appears to be pursuing a favourable course, but Indian bazaar orders have been scarce. Few China sales have been in evidence. Most of the buying has been on behalf of the Continent or of bears covering commitments. Under date of July 14th, the rainfall was reported as nearly general in Lower Burma, Assam, Konkan, and Malabar throughout the week, in Chota Nagpur of four days, in Bengal, East United Provinces, North Hyderabad and Mysore on three days, in West and South Central Provinces and Orissa on two days, and in other important areas of India on one day. A cable from Assam on July 7th announced that the outturn of tea, autumn rice and jute, and the prospects of sugar-cane are normal. We are informed from Bombay by the mail which

left on the 27th ultimo that Continental purchases being then the principal feature in the market, on any news from London of these purchases the dealers operated freely, and bought large amounts for the settlements.

INDIAN CURRENCY RETURNS.

Reports and Notices.

Messrs Mullens, Marshall, Steer, Lawford and Co. announce that they have taken Mr Terence Eden into partnership.

The Banca Commerciale Italiana per l'Egitto, an affiliation of the Banca Commerciale Italiana, Milan, have opened at Alexandria, and will open a branch at Cairo on the 21st instant.

Mr William Bowie, who has been appointed London manager of Goldsbrough, Mort and Co., Limited, has recently arrived from Australia. Mr H. A. Wilson, formerly accountant, has been appointed London secretary of the company.

The Mozambique Company is informed by its African administration that the African results for the year 1923 show a profit of £81,252. This compares with £1,978 for 1922.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1st to May 31, 1924, compared with those from January 14th to May 31, 1923:—

NOTE.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper and Naxos emery, 49·15 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1892.

(a) (b) In addition to these amounts, import duties equivalent to £4,331 in the case of (a), and to £6,097 in the case of (b) were paid in gold at the Piraeus Customs. Owing to the change in the Greek calendar from old to new style, both the estimated and actual receipts in the above statement are for 14 days less in 1923 than in 1924. As regards receipts, subject to the system of plus values, all increases in duties and prices are excluded therefrom in the above table. Minimum receipts have, however, been fixed in order to guarantee the plus values against eventual diminution in the consumption.

LIBERIAN LOAN.—With reference to the Liberian Loan of 1913, the Council of Foreign Bondholders have received information from the National City Bank of New York that the amount applicable to sinking fund on the 1st instant was \$26,479.87; that offers of bonds ranged from 75 to 95, and that offers between 75 and 79 were accepted in full and part of those at 79%. The total amount of bonds redeemed was \$34,000.

AGRICULTURAL AND GENERAL ENGINEERS, LIMITED.—We are informed that before charging any contribution towards the expenses of the parent company, the combined trading of the associated companies for the year ending March next last, showed

an approximate net profit of £2,400. The capital reorganisation proposals, authorised by the shareholders' meetings of April 15th last, are now being submitted to the Court for approval, so that the distribution of ordinary shares provided for under the scheme may be made. The company's accounts for the financial year ending March 31st last are in preparation, and will be issued to the shareholders immediately afterwards. The payment of dividend on the first and second cumulative preference shares of this company as from April 1st last will be dependent upon the trading results of the present year, which, owing to the depression of the

resulting for the present year, which terminates on March 31st next.

BOMBAY, BARODA AND CENTRAL INDIA RAILWAY.—The annexed table extracted from the report shows the main results of working for the last four years ended March 31st :—

Year.	Gross Earnings.	Working Expenses.		Net Earnings.	Company's Share of Surplus, after Deducting Indian Income-tax and Super Tax.
		Amount.	Per Cent. on Gross Earnings.		
	Rs.	Rs.		Rs.	Rs.
1920-21	9,97,27,563	6,79,07,202	68 09	3,18,20,361	6,57,946
1921-22	10,32,38,837	7,94,67,047	76 97	2,37,71,790	2,97,187
1922-23	11,75,38,574	8,23,63,785	70 07	3,51,74,789	4,80,783
1923-24	11,90,70,786	7,09,80,343	59 61	4,80,90,443	9,85,711

Out of Rs. 9,85,711 due to the company in respect of the year 1923-24, Rs. 1,78,714 was remitted to England in October and November, 1923, producing £12,531; and Rs. 7,49,500 in May 1924, producing £52,699. An interim dividend of $\frac{1}{2}$ per cent. was paid in January last, in addition to the guaranteed interest of 1 per cent. then due, and the directors recommend the payment in July next of a final dividend of $\frac{1}{2}$ per cent., making, together with the guaranteed interest of $\frac{1}{2}$ per cent. for the half-year, a total payment in July of 3 per cent., and a return for the year 1923-24 of 6 per cent., compared with 6 per cent. for each of the years

1922-23 to 1920-21, 7 per cent. for 1919-20, and 6½ per cent. for each of the two previous years.

COSTA RICA RAILWAY.—The thirty-ninth report, with accounts from July 1, 1923, to June 30, 1924, this being the nineteenth year of the working of the company's railway by the Northern Railway Company, have just been issued. The rental dealt with in the accounts in terms of the working agreement is £149,100. Add interest on investments, £15,632, transfer and registration fees £58, £164,790; add balance brought forward from 1922-1923, £19,496; making £184,286. Deducting fixed charges, &c., amounting to £118,758, there is a balance of £65,528. Out of this balance the directors recommend that a dividend of 2 per cent. (less income-tax) be paid on the capital stock of the company (which will absorb £36,000), and that the balance, viz., £29,528 8s rod, be carried forward, subject to Corporation Profits Tax as if, for any three years. The company's appeal against any assessment being made upon it for Corporation Profits Tax was heard before the Commissioners on July 30th last, and was decided in the company's favour. The Crown, however, asked the Commissioners to state a case for the High Court, and this has been delivered, but it has not yet been put down for hearing. The directors are to be congratulated on publishing a list of the company's investments in the report.

NIPPON YUSEN KAISHA.—This important Japanese shipping undertaking has just issued its report. The net profit for year ended March 31, 1924, after providing for the depreciation of the fleet, insurance, and ships' structural repair funds, amounts to Yen 1,618,211, which shows an increase of Yen 504,285, as compared with that of the last term. Adding thereto Yen 324,694, and Yen 1,500,000, the amount brought forward from the last term, and the amount transferred from the dividend equalisation fund respectively, we obtain a total surplus of Yen 3,442,906. The directors now propose that this surplus be appropriated as follows:—Legal reserve fund, Yen 90,000; directors' and auditors' fees, Yen 140,000; dividend (10 per cent. per annum), Yen 2,900,000—Yen 3,130,000; leaving a balance of Yen 312,906 to be carried forward. In order to meet the new situation, it is proposed that the amount of loss sustained through the great earthquake, Yen 6,101,990, and a sum of Yen 4,000,000 required to augment the decreased pension fund, the two totalling Yen 10,101,990 be covered out of a portion of the long-standing reserves, viz.:—Insurance fund, Yen 5,101,990; mercantile marine schools fund, Yen 2,000,000; reserve for construction and repair of buildings, Yen 3,000,000—Yen 10,101,990.

EAST INDIAN RAILWAY.—The report of this important Indian railway undertaking for the year ended March 31, 1924, has just been issued. It contains much interesting matter and valuable statistical comparisons. From the summary below one is able to see the trend of operations at a glance:—

The train mileage and the receipts, cost and net earnings per train mile, for the years ended March 31, 1923 and 1924, have been as under :—

BANKS

BANK OF NEW SOUTH WALES.—The one hundred and forty-seventh half-yearly report to March 31, 1924, shows the net profits for the half-year, after deducting rebate on current bills, interest on deposits, paying income, land, and other taxes, amounting to £106,635, reducing valuation of bank premises, providing for bad and doubtful debts, and fluctuations in the value of investment securities, and including recoveries from debts previously written off as bad, amount to £458,620, to which is added undivided balance from last half-year £154,539, making £613,159. An interim dividend at the rate of 10 per cent. per annum for the quarter ended December 31st last was paid on February 26th, out of the half-year's profits in terms of Clause CV. of deed of settlement, absorbing £150,000, leaving a balance of £463,159, which the directors recommend to be dealt with as follows:—To payment of quarter's dividend to March 31, 1924, at the rate of 10 per cent. per annum out of the half-year's profits, £150,000; augmentation of the reserve fund, £150,000; balance carried forward, £163,159. During the half-year branches of the bank have been opened at Cessnock, Chatswood, Hurstville, and Katoomba (in N.S.W.); Melbourne East and South Melbourne (in Victoria), and Taihape (in N.Z.). The branches and agencies of the bank now number 100.

IMPERIAL OTTOMAN BANK.—The fifty-seventh report for the year 1923 states that assets and liabilities in foreign currency have been converted into sterling at rates ruling at December 31, 1923. The sum of £194,693 is brought into the accounts from December 31, 1922, and the profit is £131,511, which makes £326,205 available. The sum of £197,834 is applied to difference on conversion,

and the remaining £128,371 is carried forward. The latest balance-sheet totals £22,018,728, against £21,353,971 at December 31, 1922. With regard to liabilities, the capital is unchanged at £5,000,000. Bank notes in circulation amount to £821,146, against £977,683. Bills payable stand at £706,420, against £744,389. Current accounts and sundries amount to £13,264,932, against £12,843,692. Deposits stand at £847,859, as against £343,513. Statutory reserve is unchanged at £1,250,000. With regard to assets, cash at £4,892,644 compares with £4,067,076. Money at call and notice is at £1,607,886, against £1,376,992. Bills receivable are at £6,498,427, against £7,268,969. Investments are at £3,345,628, and of this sum £2,261,941 is in British and French Government securities. Investments in preceding balance-sheet amounted to £4,309,091, of which £3,037,266 was in British and French Government securities. Current accounts at £3,019,925 compare with £1,968,361. Advances on securities stand at £2,157,750, against £1,864,160.

NATIONAL BANK OF AUSTRALASIA, LIMITED.—This bank continues to make satisfactory progress. For the year ended March 31, 1924, a net profit of £498,168 is disclosed. This compares with a net profit of £442,178 for year ended March 31, 1923, and £350,168 for year ended March 31, 1922. Adding £81,324 brought in, there is an available balance of £579,492. The ordinary dividend remains unchanged at 10 per cent., but it should be explained that it absorbed £307,973, against £272,500 in preceding year. The sum of £123,177 goes to reserve fund, bringing it up to £2,040,000, while £40,000 goes to reduction of bank premises, and £108,342 is carried forward. The report adds that owing to the expansion of the bank's business the directors consider it advisable to increase the paid-up capital to £4,000,000.

STANDARD BANK OF SOUTH AFRICA.—This important South African banking institution has had a good year. The net profit for the year ended March 31, 1924, amounted to £456,397, against £388,825 for preceding year. The balance brought forward from March 31, 1923, was £117,967, making £574,364 available. The dividend of 14 per cent. for the year (same as previous year) absorbed £312,083. The sum of £50,000 has been appropriated to bank premises account, and £100,000 is placed to officers' pension fund. The sum of £112,281 is carried forward. The principal items in the balance-sheet under liabilities, which total £625,800,335, are: capital £2,229,165, reserve fund £2,893,335, notes in circulation £601,334, against £722,191 on March 31, 1923, deposits, current and other accounts £48,518,049, against £48,946,880, drafts and acceptances £1,684,321, against £2,151,362, and customers' bills: £6,285,809, against £6,937,239. The principal assets are: cash £1,030,650, against £1,088,043, investments £5,103,817, against £5,230,160 (standing at or under cost taken below market values at March 31, 1924), bills of exchange £6,168,956, against £6,108,393, bills discounted £31,931,857, against £33,065,099, customers' bills £6,285,809, against £6,937,239, and bank property £1,247,305 against £1,134,112.

UNION BANK OF AUSTRALIA.—The report and accounts for the year ended February 28, 1924, exhibits a net profit of £550,292, as compared with £552,804 in the preceding year. The dividend is unchanged at 15 per cent., free of income-tax, for the year. The dividend will absorb £450,000. The sum of £90,003 is carried forward, against £89,711 brought into the accounts. The reserve is again strengthened by £100,000, which makes it now stand at £3,450,000. Total liabilities are £44,393,295. Circulation stands in the balance-sheet at £674,690, against £562,081. Deposits have risen from £31,390,819 to £32,838,018, while bills payable amount to £4,115,663, against £3,707,570. Investments amount to £2,200,000, all in British Government securities. Specie on hand and cash balances amount to £5,597,684. Money at call stands at £790,000, against £1,060,000. Balance of remittances, &c., amount to £9,355,039, against £5,759,791. Bills discounted, &c., stand at £25,983,206, against £26,350,356. The meeting will be held at 71, Cornhill, on July 28th, at 1 o'clock.

NORTH HUMMOCK (SELANGOR) RUBBER.—The profit for the year ended March 31, 1924, after writing off the sum of £1,511 for depreciation of buildings, machinery, &c., was £7,304, to which must be added the balance brought forward from last year, £4,786, leaving to be dealt with the sum of £12,060. The directors now recommend that a dividend of 3 per cent. (less income-tax) for the year ended March 31, 1924, be paid, absorbing £7,200, and that the sum of £4,860 be carried forward to next year, subject to corporation profits tax for 1923-24. The rubber crop, which in the previous year amounted to 630,518 lbs, was reduced, owing to a full year's working of the restriction of exports, to 483,222 lbs. The amount licensed to be exported during the year was 509,212 lbs, less licences used for balance of previous year's crop, 79,474 lbs —421,758 lbs, leaving an excess of 63,463 lbs, which has been taken into the accounts at under cost price. Of the amount licensed to be exported during the year, viz., 509,212 lbs, there has been sold to date 479,954 lbs at a net average price of 1s.8d per lb; the remaining 21,278 lbs have been estimated in the accounts at under the current market price. Owing to the restriction of exports the f.o.b. cost was 7.84d per lb, as compared with 6.11d in the previous year. The company's standard production has been revised, and is now fixed at 830,700 lbs, an increase of 20,888 lbs on the previous assessment. The general condition of the estate is reported as being satisfactory.

MALAYALAM PLANTATIONS.—This important concern has enjoyed a good measure of prosperity in the year ended March 31, 1924. The trading profit has improved considerably amounting to £224,918, against £124,951 for the preceding year. The dividend has been raised from 5 per cent. to 15 per cent. Apart from the

COLOMBIAN MINING.—June:—Gross receipts, \$8,900; expenditure, \$7,500; also expenditure, \$1,600 on further unit for Echeandia plant and development of Marmato and Echeandia.

PALCOO.—June:—Crushed, 16,752 tons of ore, producing 334½ short tons of blister copper, containing 2,274 ozs of gold, 4,884 ozs of silver. Estimated value, \$24,18. Taking copper at \$56 per short ton, gold at 94s per oz, and silver at 2s 6d per oz.

FAIRBANKS GOLD DREDGING.—Cable:—Dredge worked 218 hours and recovered 546 lbs gold; cubic yards, 10,000. No. 2 dredge worked 36½ hours and recovered 132 lbs gold; cubic yards, 8,000.

SOUTH AMERICAN COPS.—During June 3,716 tons of ore were produced; 3,022 tons, with approximately 900 ounces of gold; thus added, were smelted, producing 320 tons copper matte, assaying 22 per cent. Since the beginning of the month water power has considerably improved.

increase in dividend, £50,000 is to be transferred to reserve against nothing in preceding year. The sum of £19,783 is to be carried forward against £17,823 brought in. With regard to rubber, the voluntary restriction scheme, inaugurated in September, 1921, which the company decided to join, was continued throughout the year under review. 2,276,658 lbs were harvested at a cost of 7.41d per lb, f.o.b., and realised an average net price of 1s 0.62d per lb. The tea crop yielded 7,718,902 lbs at a cost of 7.64d per lb, f.o.b., and realised an average net price of 1s 1.21d per lb. With regard to cardamoms, 22,431 lbs were harvested at a cost of 2s 2.86d per lb, f.o.b., and realised an average net price of 5s 4.51d per lb. It is estimated that 7,675,000 lbs tea, 60,000 lbs cardamoms, and a restricted crop of 2,185,000 lbs rubber will be harvested during the 12 months ending March 31st next.

MISCELLANEOUS.

ARGENTINE LIGHT AND POWER.—The report for year ended March 31, 1924, points out that during the year practically the whole of the share capital and all the outstanding debenture stock of the Argentine Tramways and Power Company, Limited, owning and operating electric supply and tramway systems in the City of Santa Fé, Argentine Republic, were acquired on the terms of the agreement submitted to and approved by meetings of shareholders and debenture stockholders held on July 16, 1923. The gross receipts of the combined electric lighting, power supply, and traction businesses showed a satisfactory expansion, but increased taxes and wages and additional steam operation expenses prevented a corresponding improvement in the net receipts. During the year an agreement was signed with the municipality of Cordoba providing for the settlement of long outstanding questions and also for the electrification of the San Vicente horse tramways, and for certain other extensions of the electric tramway system in the city of Cordoba. In common with other British companies carrying on business in the Argentine Republic, this company and its subsidiaries suffered severe loss on exchange on remittances made to London, owing to the low rates obtainable throughout the year for Argentine currency. The loss on exchange for the year is £41,538. The accounts show a credit balance of £90,173, to which is added £5,825 brought in, making £95,998 available. The sum of £11,270 is set aside for debenture stock redemption. Preference dividend absorbs £46,970. The sum of £5,000 is set aside for redemption of preference and ordinary capital. The sum of £18,992 is applied in writing off balance of suspense account, and £13,766 is carried forward.

BAKER, PERKINS, LIMITED.—The accounts for the year ended December 25, 1923, show a net profit of £46,975, as compared with £47,582 for the preceding period, both figures being exclusive of corporation profits tax. The turnover for 1923 was slightly less than that for 1922, so that the result of the company's trading during the period now under review can certainly be regarded as satisfactory. Assets, exclusive of goodwill and patents, are shown in the balance-sheet at a value of £1,046,724, whilst the total amount due to creditors, including the company's bankers, H.M. Treasury, and other loans, is £438,116. The paid-up capital consists of 188,716 7 per cent. cumulative preference shares and 221,083 ordinary shares, all of £1 each and fully paid. Reserves total £172,182, and there is a balance of undivided profit amounting to £74,704, subject, as already mentioned, to corporation profits tax for 1922 and 1923. At the annual general meeting a final dividend on the ordinary shares at the rate of 5 per cent. per annum was declared, making with the interim dividend paid on December 28, 1923, a total of 8 per cent., free of income-tax, for the year, which reduced the balance of undivided profit to be carried forward to £57,017, out of which the shareholders have authorised £5,000 to be set aside to act as a nucleus for a contributory pension scheme for the employees. The company specialises in the design and manufacture of food-producing machinery, and is exhibiting the equipment in the Palace of Industry at Wembley for the biscuit factory, which is being worked in turn by Messrs Huntley and Palmer, Limited, Messrs Peek, Frean and Co., Limited, and Messrs W. and R. Jacob, Limited, that in the bread factory being worked by Messrs H. W. Nevill, Limited, and the chocolate and confectionery plant which Messrs Carsons, Limited, are working. Associated companies are Baker-Perkins Co., Inc., in the United States and Canadian Baker-Perkins, Limited, whilst there is a branch in Melbourne, and the company has representatives in all parts of the world. It is stated that orders booked during 1923 were substantially greater than in 1922, and we understand that during the first six months of this year they are still improving, so that prospects for 1924 are also satisfactory.

HOARE AND CO., LIMITED.—Some interesting changes have taken place in the capital of this well-known brewing undertaking during the year ended April 18, 1924. There are now 1,251,796 ordinary shares of £1 each, as against 75,250 shares of £10 each in preceding balance-sheet. Debenture stock totals £613,972, against £800,000 in preceding balance-sheet. The total liabilities have increased from £2,451,787 to £3,074,575. Deposits have increased from £31,354 to £99,785. Loans stand at £62,750, a new item in the balance-sheet. Creditors, including reserve for contingencies, has jumped from £386,008 to £535,652, and reserve has been increased from £300,000 to its present figure of £400,000. With regard to assets, properties stand at £2,382,391, against £1,599,715. Goodwill remains at £150,000. Stock of beer, &c., has jumped from £50,033 to £123,792. Book debts are higher at £122,662, against £41,572. Cash has been reduced from £175,143 to £54,646, while investments have been reduced from £362,043 to £50,038. The purchase of the Lion Brewery Company's assets was completed on January 31st last, and the profits of that company up to that date, after making full provision for all the usual outgoings, have been utilised to write off the value of the lease and goodwill of

brewery premises, and to provide for the expenses of the purchase and possible loss on realisation, and after setting aside an amount for the superannuation fund, the balance has been carried to the reserve for properties. The net profit, after payment of debenture interest, for year ended March 31, 1924, amounts to £207,656, against £186,375. The ordinary dividend has been doubled, being 10 per cent., as against 5 per cent. for preceding year.

MANCHESTER SHIP CANAL.—Half-year's working to June 30 1924:—The traffic receipts for the half-year ended June 30, 1924, showed a decrease of £26,697, compared with the corresponding period of last year. There was also a decrease of £32,657 in the surplus from the working of dock labour and railways. The net revenue for the half-year, after providing for increased expenditure, interest, and fixed charges was £67,734 less than the corresponding half-year in 1923. It has to be borne in mind that the company's revenue for the half-year was adversely affected through the national strike of dock workers and the national railway strike, which took place in February and January last respectively.

OIL OUTPUTS.

MEXICAN EAGLE OIL COMPANY, LIMITED.—The production for the week ended July 5, 1924, was 147,000 barrels. About 4,500 barrels daily were shut in owing to the strike at Tampico Refinery.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—The combined production for the week ending Wednesday, July 9, 1924, amounted to 950 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

The spell of fine weather has had a beneficial effect on growing crops in this country, and same now present a much better appearance. Hay making is proceeding rapidly, a large yield being assured. English wheat of the old crop is largely nominal owing to dearth of supplies, but transactions in new crop are reported on the basis of 11s 2d per 112 lbs, free on rail. The market for imported descriptions was again stronger under the influence of higher forward offers, but business checked. No. 1 Northern Manitoba quoted 59s, No. 2 ditto 57s 6d, No. 3 56s, No. 4 54s 6d, Barusso, 63½ lbs, 55s, Australian 56s 6d, and choice white Karachi 55s, all per 496 lbs, ex ship terms. The floating and forward section showed more activity, and prices hardened sharply under stimulating advices from North America, due to adverse crop reports. Droughty conditions in Canada and low estimates of the Dominion crop proved dominating factors, and which caused shippers to exercise marked reserve, particularly in face of increased inquiries on Continental account. Steamers of No. 2 hard winter, August 25th, sold at 50s 6d, and since resold at 51s 9d, white Pacific, end August early September, 52s 6d, and resold at 54s 6d, choice white Karachi, August, 52s to 53s 9d, choice white Delhi 53s 6d, Rosate, 63½ lbs, shipping or shipped, 53s 7½d, Barusso, 63½ lbs, August, 52s 6d to 53s 9d, and Chilian, afloat, 52s 3d per 480 lbs. Maize in good request, and prices continue to harden in the cargo section. Latest sales include steamers of Plate, July-August, at 37s, October-November 38s, white Novorossiisk, expected to load 21st inst., 38s per 480 lbs. Flour firmer in sympathy with the wheat position, but business on a moderate scale. London standard straight run quoted 44s 6d, patents 46s 6d to 47s 6d, town whites 44s 6d per sack, delivered in. Imported also dearer. Manitoba patents range from 43s to 46s, and Australian 40s per 280 lbs, ex store. Barley.—Imported firm and sparingly offered. Californian quoted 58s to 64s, Chilian brewing 50s to 52s, both ex ship per 448 lbs. No. 3 Canadian western, ex ship, 38s, Karachi, landed, 39s, Rossian, ex ship, 37s, all per 400 lbs. English nominal. Oats firmer. Plate, f.a.q. ex ship, 22s 9d, landed 24s 3d. No. 2 Canadian western, ex ship, 27s 6d, ditto, landed, 28s 6d. No. 3 ditto, landed, 27s 9d. No. 2 Canadian feed, landed, 26s 3d, mixed feed ditto, landed, 21s 6d, all per 320 lbs. English nominal. Maize firm. Plate, ex ship, 37s, landed 39s, Bessarabian, landed, 39s 6d per 480 lbs. Millers' offers fully steady. Broad bran quoted at 7s 6d, ordinary 6s 6d to 7s, middlings 9s 3d, fine ditto 10s 6d, bags included, ex mill. Light oats 6s 3d, powdered oat husks 7s 3d, feed oatmeal 9s 6d, ground oats 12s 3d per cwt. Oatmeal firm. London made flaked 17s 6d, rolled oats 17s 6d, medium and fine cut 17s, coarse and medium pinhead 17s, ordinary Scottish oatmeal 18s to 18s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated July 17th, is as follows:—Pig-iron: The export of pig-iron is practically stopped, owing to foreign competition. Shipments coastwise are also very low, owing to the holidays in Scotland. No. 3 Cleveland G.M.B. is quoted 87s per ton f.o.b., with very little business doing. The East Coast hematite trade is very depressed, and there are sellers of practically numbers hematite at 95s per ton. The iron trade is practically stagnant, with the price of best Bilbao rubio at 23s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—Members of the iron and steel trade report a further extension of the severe depression which has overtaken their industry, and the position in Sheffield is undoubtedly worsening. Consumers appear to have lost confidence in the future, and there is a widespread belief that a revival of commerce from the Continent will bring about a lower level of prices. Orders are so scarce that sellers will readily make big cuts from their regular quotations to tempt one. Pig-iron and steel billet values are considerably down compared with a few weeks ago. It is said that not one-fourth of the open-hearth steel furnaces are

working, and unemployment figures are rising. The export figures for June show a reduction in iron and steel on the month, but are nearly equal to a year ago. Production is also down considerably, and last month's total of steel made is below the monthly average of 1913, when capacity was 50 per cent. less. The trade in wire and wire rods, which has been fairly active, is now extremely quiet. Rolling mills are on short time in the bar department, whereas the call for sheets is exceptionally strong, and deliveries are getting into arrears. The demand for steel for automobile and railway purposes is being maintained at a high level. German competition in hand tools is less formidable than in the past, and as the surplus war stocks are practically used up, makers are finding plenty of occupation for their workpeople. Overseas demand for tools and cutlery tends to increase. Silver and electro plate is now moving. A substantial Russian order for files and saws has been placed in Sheffield. The fuel market is weak in most departments. The demand for steam coal for both home and export continues to dwindle. The depression in iron and steel is reflected in a reduced call for coke, but there is a fair demand for foundry sorts. Nominal prices per ton at pits are:—Best hand-picked branch, 34s; Barnsley best Silkestones, 28s; Yorkshire hard, 23s; Derbyshire ditto, 21s; Blyth ditto, 24s to 26s; rough slacks, 12s 6d; smalls, 8s; blast furnace coke, 20s 6d

The iron and steel trade generally anticipate that the result will be fierce competition from Germany in the export trade. The outlook from this point of view is none too cheerful, but this pessimistic attitude is not in our opinion justifiable. Immense difficulties confront the Germans before they will be again in a position to recapture even the export trade they held prior to 1914, and meantime British traders have been steadily gaining a footing in new markets and consolidating the trade previously held. Steel sheets, black and galvanised, experience steady demand from all markets. Home trade is slightly quieter, but in the export trade for galvanised sheets makers of the better qualities report considerable activity among buyers, and some moderate sized parcels have been placed during the week. Deliveries in September and later are the best that can be had from most works. Prices are held firm at round £18 10s per ton, basis common quality. Iron makers and re-rollers have no fresh business of consequence. Export specifications are keenly sought, and price cutting to secure the orders is prominent. Home prices remain unchanged.

Our Cardiff correspondent writes:—On the Cardiff coal market this week there has been again an acute dearth of new business, and the colliery salesmen through their weekly meetings have not been able to resist the effects of the depression on current market prices. For practically every quality the spot and prompt prices have been reduced, and even at these reduced prices the demand is so small as to be wholly inadequate to absorb the normal output of the coalfield. In these circumstances few of the collieries have been able to keep their pits fully employed, and the accumulations on the sidings, and the consequent scarcity of empty wagons are aggravating the general situation. Everybody on the market is declaring that "something must be done," but neither amongst the colliery owners, coal exporters, nor even among the miners' leaders is there anyone prepared to advocate a drastic and water-tight scheme for the regulation of prices and of outputs. Foreign inquiries are even less active than they were during the depressed days of June, 1922, and with Continental outputs steadily improving, there are no prospects of any early revival either in the European or in the more distant markets. In the first half of the

Total	62,883,559	62,024,238	382,679,027	388,464,802

current year the total quantity of coal exported from the South Wales ports to foreign destinations amounts to about 13 million tons compared with over 15½ million tons in the corresponding period last year, while in June the shipments totalled only about 2 million tons compared with 2,638,000 tons in June, 1922. From the colliery point of view the financial position was never as bad under the old agreement as it is now under the new wages agreement.

The following are the current approximate quotations:—Best Admiralties, 28s to 28s 6d; second Admiralties, 26s 6d to 27s; Black Veins, 26s 6d to 27s; Western Valleys, 25s 6d to 26s; Eastern Valleys, 23s 6d to 25s; best bunker smalls, 17s to 17s 6d; ordinary cargo smalls, 14s to 15s; coking smalls, 17s to 17s 6d; anthracite big vein large, 50s to 52s 6d; machine-made cobbles, 55s to 57s 6d; French nuts, 60s to 62s 6d; stove nuts, 50s to 55s; rubbly culm, 14s 6d to 15s; coke for export, 52s 6d to 55s; inland blast-furnace coke at ovens, 30s to 35s; patent fuel, 27s 6d to 29s 6d; pitwood ex ship, 25s 6d to 26s 6d.

In the tinplate trade the general position is very satisfactory. Current prices are slightly above the minimum, and both the inland and the foreign demands are active. In the heavier branches of the iron and steel trade a reaction has set in, and the Ebbw Vale Company is contemplating the closing down temporarily of some of its steelworks.

CUMBERLAND IRON.

(BY OUR WORKINGTON CORRESPONDENT.)

The Cumberland and North Lancashire hematite pig-iron trade remains in a sluggish condition, a tendency for the already limited volume of business to diminish rather than to increase having recently become somewhat accentuated, though it is hoped that the next six weeks, during which the Scotch holidays are held, and Scotch requirements are smaller, may pass without recourse to furnaces in blast between Workington and Carnforth. The trouble still is that users will buy only what they can sell, and as they themselves see little hope of improvement, they refuse to enter into commitments more than a week or two ahead. While this is their

attitude, the industry must just go on working from hand to mouth, and it will certainly be the autumn before any satisfactory change can be expected to set in. The small extent of the business offering has compelled a reduction in prices, Bessemer mixed numbers now being 2s 6d per ton lower at £5 7s per ton delivered at Glasgow, £5 10s at Sheffield, and £5 15s at Birmingham. For special qualities of iron there is only a fair demand by Sheffield steel-makers, and as regards manganese alloys business is very dull, with ferro at £16 10s per ton export, and spiegel £9 per ton home. The position in the steel trade exhibits no improvement. In the southern part of the district makers are assured some weeks' activity, but at Workington the rail mill works seldom more than one week in three. Foreign competition for rail orders is very severe, and here, as elsewhere in the country, the steel rolling plants have had a poor time the whole of the year. Native hematite iron ore production is largely, and, indeed, almost entirely, being absorbed by the local smelters, East Coast and Scotch needs rarely being more than 800 tons per week. Superior sorts of low-phosphoric ore are quoted at 22s to 24s, and ordinary kinds at 17s to 18s per ton.

The coal trade has been in a bad way since Scotch owners began to undersell Cumberland in the Irish market. Irish merchants will give little business to owners here for best house quoted at 26s per ton f.o.b., against the Scotch figure of 21s per ton, and there has been such a decline in the shipments across Channel that the pits cannot maintain their outputs, and many men have been dismissed, and two collieries have had to close down. Other prices are unchanged, best steam for the ironworks and iron ore mines being 30s, and washed steam 29s per ton delivered, while best house for local householders is at 38s 2d per ton at pit. Gas coal for export is 25s per ton f.o.b. Coke is a substantial make for the local smelters of ordinary iron at 25s to 26s 6d per ton, according to carbon content. Residuals are all dull.

METALS.

Tin displayed firmer features, though slight irregularity was noticeable at times, chiefly with regard to forward positions, while offers were fairly well absorbed. Standard, cash, sold at £225 15s to £231 10s, and three months £227 10s to £233. Eastern cables reported sales on the basis of £229 10s, c.i.f. At Thursday's market, prices, after opening firmer, gave way. Standard, cash, quoted at £229 10s to £229 15s, with business in near dates at £230 10s to £230, and three months at £235 10s to £231. Tin closed firmer, standard cash being dealt in at £231 12s 6d, and three months £232 10s to £233 5s to £232 10s to £233. English ingots quoted at £233 10s to £234. Copper ruled fully steady, with business on a fair scale, forward positions being accorded most support. Standard, cash, sold at £61, and three months £61 12s 6d to £62 to £61 18s 9d. The tendency on Thursday ruled in buyers' favour, with chief interest again confined to forward positions. Standard, cash, quoted at £60 12s 6d to £60 15s, with sales in three months at £61 17s 6d to £61 15s. Copper dealer at the close. Standard cash quoted at £61 2s 6d to £61 5s, with sales in three months at £61 15s to £62 to £61 18s 9d. Electro £65 to £65 10s, strong sheets £92, wire bars 65s 10s, strong sheets £92 per ton. Lead firm, and quoted at £32 10s 3d to £30 12s 6d, as to position. Spelter quiet at £31 18s 9d to £31 15s, according to position. Aluminium, home, £125; export, £130. Antimony, English regulus, £44 10s to £47 10s.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—One is able to report some improvement in the market to-day, though it cannot be said that any section of the industry is really active. The recovery in wool values in London last week has certainly helped this centre, and inquiries for matchings and tops have been more numerous. A fair turnover has also been done in both merinos and crossbreds during the last few days, and prices for all qualities are slightly firmer. There are plenty of offers about for good 64's at about 5s 10d, but most of the larger topmakers are now wanting more money, and in some cases 6s is quoted. The attitude of topmakers, however, is largely dictated by the price of the raw material, for it is realised that prices obtainable for tops in Bradford to-day are well below the cost of production based on the cost of wool in London. Another encouraging feature is that cabled reports from the United States show that confidence is returning in that country, and there is more doing in wool, tops, and yarns at higher prices. In this market, however, the effects of the financial trouble in Germany are still apparent, and to a very large extent the disappointing position in which spinners are placed is directly due to the holding up of the export trade with the Continent. Stocks of yarn continue to accumulate, and prices are simply anywhere, according to the position of the seller. Spinners of botany mixture yarns are not so badly off for work, but in the other departments it is becoming more and more difficult to keep machinery running. Business in piece goods is being conducted on hand-to-mouth lines, and manufacturers experience difficulty in obtaining prices to fit in with the cost of production.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The aftermath of the recent auctions appears to be fairly good, and as one reflects upon what took place recently in Coleman street Wool Exchange, we think that the final results were quite as good

as, if not better than, the majority expected. We are satisfied that things might have been very different, and had two or three importers decided to let their stocks go at any old prices bid, there would have been nothing short of a debacle. Wool is in strong hands, and half-a-dozen firms can be said to have financial resources which are adequate to very largely determine any market. It is quite true that in Coleman street there was no Japanese or American competition to support prices, it needing such outside competition to lift the whole market into a state of real confidence. There seems to us to be nothing wrong with the wool end of the trade; it is in piece goods where the mischief is being done. Those with a full knowledge of existing stocks and machinery requirements know full well that supplies are no more than sufficient to meet the requirements of the trade, but spinners and manufacturers bewail the unprofitableness of prices and the uncertainty regarding the future. We would like to see a real improvement commence in the demand for yarns and pieces, and until that does take place the home trade cannot possibly be said to be in a healthy state. The struggle to get orders and make ends meet is tremendous; in fact, as soon as one gets away from the raw material it is incredible the state of affairs which obtains. It is no uncommon thing to hear of botany yarns (2-48's) being offered at 1s and even less for spinning, whereas no man can possibly get back his own under 1s 6d per lb. on the price of the top, and yet manufacturers frankly say that they cannot get orders at prices current six months ago; in other words, the greatest difficulty is being experienced in selling worsted fabrics. However, we have known such times before, and it is to be hoped that spinners and manufacturers will eventually strike a better period. At present they are having to do the best they can under very adverse circumstances. One regrets American competition was markedly absent at the London auctions. The general impression prevails that with Boston houses doing a little nibbling in Bradford and making inquiries for the new clip English wools and colonial crossbred matchings, some trade will be doing with that important market before long. At the same time we cannot think America will be a big buyer until after the Presidential election. All the time American dealers are liquidating stocks, mills are running a good half-time, and this means stocks being shifted.

THE COTTON TRADE.

MANCHESTER, July 17.

Demand in the market this week has been rather more active. Inquiry has been of large dimensions, and has covered a wide range of fabrics. Although many people still anticipate lower values, some operators are less convinced that the raw material will be cheaper in the near future. In the cloth section the feature of interest has been the increased turnover in standard grey shirtings

for India, some substantial contracts being arranged. Further operations have also occurred for India in light bleaching descriptions, and the undercurrent of demand for that outlet remains healthy. There have been a few more attempts at transactions for China, but no weight of business has been done. In small lots shippers to Egypt have given increased support. A little more activity has shown itself in home trade goods. In some weaving districts there is a tendency for production to increase. American and Egyptian yarns for home use have been firmer in quotation, and in certain quarters buying has been on freer lines. Trade has also been rather better in yarns suitable for India.

THE TIMBER TRADE.

FROM OUR OWN CORRESPONDENT.

It has been a source of satisfaction to the wood trade that the arrivals of cargoes to the United Kingdom were on a smaller scale last month compared with June of previous years, as the country was so well supplied with building woods in the early part of the year as to relieve any anxiety on the part of consumers as to a sufficiency of supplies. On the spot market there has been little change during the past month, the demand has continued disappointing from both consumers and merchants, competition has continued keen, and the auction sales have failed to come up to the anticipations of the moderates, and a surprise to those who, a few months ago, predicted a shortage of supplies and a rise in values. In the f.o.b. market the very cautious policy of United Kingdom

importers in holding off buying late summer and autumn requirements have been fully justified by results, and though probably the shippers of first-class stocks in Sweden and Finland would claim that they still stand out for the full figures of £18 and £17 for unsorted 7-in. redwood bases respectively, the lesser known mills have already made concessions owing to Russian and mid-European competition, and the announcement of a shading off in prices of good stocks would not be surprising. Deals of the moderate qualities have fallen very much in value since the opening of the year, the tendency being for the narrower widths and for the more inferior qualities—cheap and nasty, but which are comparatively dearer than the good sorts. The most favoured dimension in the building trade is 2-in. by 4-in. wood.

In Canadian spruce the competition with mid-European white-wood has been a feature of the market for some considerable time. The Canadian producers are now making some efforts to regain the trade that had been lost to them, prices are lower, and if they can come down a little more, good business should result. Freight for Canadian cargoes are also slightly easier at about 65s to 67s 6d St John to West coast, Great Britain, which should help the Canadian market here.

The improved condition in the shipbuilding trade should call for more quantities of teak, the trade in which has been very disappointing of late months, both here and on the Continent. In the furniture wood market the mahogany logs still take first place with good prices and demand for well-squared and dimensioned logs. American woods have been overdone in import; buyers are carrying large stocks, and prices are unsteady. Cedar wood is not much in request, neither are the fancy woods in the hardwood branch of the market.

VEGETABLE OILS AND OILSEEDS.

Market conditions generally are fully steady, and there is a good tone though the volume of trade possibly is not very heavy. Raw linseed oil has had an improved demand, and this and dearest seed have caused prices to harden again to about £30 per ton naked ex Hull mill for spot and delivery to December. Cotton oils, too, have become firmer, with a substantial advance in value. Other vegetable oils are steady, and late values maintained.

Plate linseed has recovered from the recent set-back, the official estimate of the yield of the new American crop not having justified the optimistic reports of the market, but showing no more than a possible increase of 50 per cent. over last year which had been generally anticipated. Up to £19 12s 6d has been paid for Plate linseed on passage to Hull, with sellers now holding out for £19 15s for afloat and shipment to August. London has been a buyer of Calcutta at £21 5s, July-August loading. Egyptian cottonseed has been in brisk demand, and new crop is much dearer on the week,

FRENCH LINE

Regular Express Passenger Service

Carrying the French, American and British Mails, and sailing regularly from

PLYMOUTH

Phone: Regent 3270.

£12 15s being quoted for September shipment. Manchurian soya beans are in demand by the Continent, Hamburg having paid £12 10s for July, August. A good trade in ground nuts to the Continent is also reported.

HIDE, LEATHER, AND ALLIED TRADES.

BY OUR OWN CORRESPONDENT.

Ox and heifer hides were unchanged at the public auctions held in Bermondsey this week, as was also the case with bulls. Light-weight cows made 4d per lb less money, while most classes of calfskins appreciated in value by from 4d to 4½d per lb. Pelts made from 4s 6d to 6s 4d, and lambs from 3s 9d to 10s per skin. An improvement has been noticed during the week in regard to the inquiry for foreign hides, and transactions have been fairly frequent at firm to slightly advancing prices. At origin parcels of frigorifics have changed hands on United States and Continental account, while Saladeros have been bought for this market. In regard to dry River Plates the Continent has been the best buyer, but business has been small on account of the firm attitude adopted in regard to price by shippers. Other descriptions of foreign hides have come in for attention at round about recent dates.

Sole leather has not experienced an active sale in Bermondsey during the week, and there seems to be a general impression that prices, if anything, are somewhat weaker. At any rate, offers have been made by tanners which show a reduction on the prices ruling a short time back, and this is attributed by the merchanting houses to the lack of demand. Shoe manufacturers have reduced their demand for light-weight bends, and so far trading in other weights have been of meagre dimensions. There is also less inquiry for bellies and shoulders, although so far prices for these goods show no alteration.

In upper leather the bulk of the business being done is in connection with box side leathers, presumably of German origin, which are being offered on this market at a low figure. Full chrome leathers are only in small request, as is also the case with glacé kid—the call for the latter in colours being practically nil. Patent is a fairly good seller, but the price must be low to attract business.

Boot manufacturers, on the whole, are well satisfied with the number of orders on the books, and in some of the provincial shoe centres the present demand is expected to keep them busy for some time to come.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 18.

SUGAR.—The market appears generally quiet though distributors record steady clearances with spot prices on balance showing no alteration. Moderate quantities of white Java are now reaching the London market. Of British refined and which continues to receive a good share of what demand arises at the moment, Messrs Tate and Lyle's cubes quoted 42s 3d to 43s 3d; crushed, 40s 9d; granulated, 38s 10d; fine and coarse grain, 38s 10d; No. 1, 38s 7½d; No. 2, also London and T.L., 38s 4½d; ditto, August, 38s 3d; yellow crystals, spot, 35s 10d; castor, 39s 6d to 41s 7½d as to quality. West India crystallised 34s to 38s 6d as to sample. White Java, spot, 35s 3d to 35s 6d; May-June, steamer, 21s 9d; June-July, 21s; July-August, 20s c.f. and i. London. American granulated, spot, 37s 6d; July-August, steamer, 24s 7½d c.f. and i. London. Czech granulated, spot, 37s; July shipment, 25s 3d; November-December, 20s f.o.b. Hamburg. Dutch granulated, spot, 36s 9d to 37s; November-December, 20s f.o.b. Rotterdam. Belgian granulated, November-December, nominally, 20s f.o.b. Antwerp. Cuban basis, 96 c.f., July, 18s c.f. and i. terms U.K. White Terminal market presented a rather quiet tone, and August delivery sold 22s 7½d to 22s 6d; October, 20s 7½d to 20s 6d; December, 19s 3d to 19s 1½d; October-December, 19s 9d; March, 19s 4½d cwt. Java shipments for June 247,650 tons against 240,300 last year.

COFFEES.—General firmness continues, and there is a sustained demand, particularly for the finer qualities, as supplies on offer are small. Bold sizes of Costa Rica, sold, 135s to 162s; Matagalpa, bold, 138s 6d to 145s 6d.

COCONUTS.—Only retail transactions were effected in spot parcels on about former terms. Accra, F/F grade, October-December, sold, 32s, f.o.b. terms.

TEA.—Indian auctions amounted to 12,380 packages, and with active and well distributed competition, full rates were obtained in most cases. Some new season's Darjeelings fetched higher figures. Pekoe, sold, 1s 5½d to 2s 0½d; broken orange, 1s 6½d to 2s 4½d. Ceylon sales of 24,221 packages met a good reception regarding all the finer qualities at firm rates, but common proved occasionally a shade easier. Java and Sumatra auctions embraced some 9,800 packages. The more attractive qualities of broken, also fannings and dust, sold well, but demand otherwise proved rather quieter. Pekoe, sold, 1s 1d to 1s 4½d; broken ditto, 9½d to 1s 5½d; pekoe, souchong, 11d to 1s 3½d; orange, 1s 4½d to 1s 7½d; broken orange, 1s 2d to 1s 9d per lb in bond.

RICE.—Market remains firm for Eastern grain, owing to reserved offers on the part of shippers, but general demand is not fast. Two stars Rangoon, spot, London, quoted 16s 3d; August-September, 15s 7½d. 1,000 tons S.Q. shipment to Cuba, double bags, sold, 15s 9d, c.f. and i. terms. New crop, Italian, September-October, 15s 9d, with business rumoured in new crop, Spanish, September-October, at 21s, c.f. and i., London. Japanese peas steady, quiet. Spot, 20s. Madagascar butter beans, spot, 34s per cwt.

PEPPER.—Pepper steadily held, but demand only moderate. Black Singapore, L.S., July-September, quoted 4½d; Lampong, October-December, 4½d; Mentok, spot, 8d; ditto, August-October, 8½d; October-December, 8½d. Zanzibar cloves, spot, 1s 1d to 1s 1½d;

October-December, sold, 10d. Tapioca steady, quiet on spot. Singapore, fair flake, spot, 3½d; fine Bendorejo, 4d per lb. Singapore, June, August, Havre, quoted 28s 6d. Penang seed ditto, to London, 22s. Sago flour, June-August, 14s 4½d. Desiccated coconut steady. Fine cut, spot, 39s; medium, 39s 6d per cwt. Ginger unaltered.

JUTE. received moderate attention, and market ruled generally steady. Firsts, new crop, August, quoted £28 17s 6d; August-September, £28 5s; September-October, £27 10s per ton. Hessians quiet, and forward positions easier. 10 oz, July-September, 32s 9d; October-December, sold, 31s 6d. 8 oz, July-September, sellers, 25s; October-December, 24s 9d per 100 yards. A twills, July-September, 98s 6d; B ditto, 82s; sugar, 97s; flour 98s 6d per 100 bags.

HEMP.—Manila again sparingly offered on the part of shippers, and a steady inquiry was experienced. J grade, July-September, quoted £41 10s; K ditto, £38 10s; L, £37 10s; M, August-October, sold, £35 per ton. New Zealand mostly nominal. African sisal quiet at the moment, but held for recent rates.

SHELLAC met with quiet support. Fair T.N., spot, 270s; August, 255s; October, 252s 6d per cwt.

COPRA.—With no extension in demand, prices were barely steady, though sellers were not pressing. F.M.S. Straits, April-June, Rotterdam, quoted £29 7s 6d; May-July, £29 3s 9d; June-August, £29; July-September, £28 17s 6d; August-October, £28 16s 3d. Dutch East Indies, April-June, £29 5s; June-August, £28 17s 6d; August-October, £28 13s 9d. Ceylon, July-August, £30 5s. Cebu, £28 12s 6d. F.M.S. South Sea, July-August, £28 5s. Palm kernels quiet. April-June, Liverpool, quoted £20 17s 6d; May-July, £20 18s 9d; June-August, £20 6s 3d, ex quay terms; July, to Hull, sold, £21 6s 3d; August, £20 6s 3d, ex quay terms; July, to Hull, sold, £21 6s 3d; and ditto to Hamburg, £21 8s 9d per ton, both ex ship terms.

RUBBER.—In fair demand, but market rather unsettled. Standard plantation crepe and sheet, spot, sold, 11½

THE BALTIMORE & OHIO RAILROAD COMPANY.

Synopsis of ANNUAL REPORT for Calendar Year 1923.

The Annual Report for the calendar year 1923, which the President and Directors of The Baltimore and Ohio Railroad Company submit to-day to the Stockholders of the Company, marks the ninety-seventh year of the Railroad Company's existence.

The operated mileage of the Company is 5,207 miles and including 104 miles of its subsidiary companies, the total first main track mileage of the System is 5,811 miles. The total mileage of all tracks is 10,697 miles. In addition the Company exercises trackage rights for passenger traffic only from Philadelphia to New York, a distance of approximately 97 miles.

The Company's equipment, valued at \$189,764,832, consists of 2,546 steam locomotives, 11 electric locomotives, 100,036 freight train cars, 1,333 passenger train cars, 3,697 work equipment units and 172 marine equipment units.

The recorded investment at December 31, 1923, of the property devoted to and used in transportation service is \$753,130,840, an increase over the previous year of \$31,756,585.

The year 1923 was notable for the general revival in business and industrial activity in which the Baltimore and Ohio Railroad Company shared to a gratifying extent. In gross and net revenues and in the tons of revenue freight carried the year was the largest in the history of the Company, and clearly demonstrated the high physical standard of the property, and with an ease that indicated a capacity and ability to perform a much greater service with substantially the same facilities. At the same time the Company carried on an extensive programme of improvements to the line and in the rebuilding of its equipment. There was some congestion at times in the marine terminals at Baltimore caused by insufficient facilities, which situation will have been overcome upon completion of the large new grain elevator and new pier now in process of construction and in the readjustment of yard tracks incident thereto, all of which will be completed during 1924.

The financial results were equally satisfactory. The net railway operating income, that is, the amount earned in the actual operations of the railroad property was \$42,133,129 while the return from other investments was \$6,032,521

making a total income of \$48,165,650 from which was deducted for fixed charges, etc., \$25,743,614

leaving a balance of \$22,422,036 and after payment of dividend on the preferred stock of \$2,354,527

there remained \$20,067,509 showing an earning of 13.21 per cent. upon the outstanding common stock of the Company. These results, together with the underlying conditions, in the judgment of the Directors, justified the resumption of dividend payments upon the common stock which had been suspended in 1919 after nineteen years of continuous payments averaging about 5 1/2 per cent. per annum. Consequently declarations were made of two quarterly dividends at the rate of 5 per cent. per annum, effective for the second six months of the year.

The physical property, both road and equipment, was well maintained. The relations between the Company and the shipping public were increasingly satisfactory, and at no time has there been a better spirit of co-operation between the officers and the employees than exists at present. It is due in large part to the combination of circumstances just mentioned that the Company was able to make such a creditable showing during the year under consideration.

It is noted from the income account that the net railway operating income of the Company for the year 1923 was \$42,133,129, an increase over 1922 of \$18,398,124, or 77.51 per cent. For the purpose of the "Recapture" provisions of the Transportation Act of 1920, net railway operating income of the Company and its separately operated subsidiaries is combined and the rate of return computed on the investment in property used in transportation of the system as a whole. The combined net railway operating income for the Baltimore and Ohio System for 1923, including its separately operated subsidiaries, was \$43,026,131, equal to a rate of return of 5.37 per cent. on the recorded "Property Investment" aggregating \$800,648,023. The decrease in other corporate income and the increase in deductions from gross corporate income were relatively small.

The net income for the year 1923 transferred to surplus was \$22,422,036, an increase over 1922 of \$18,046,683, out of which there was appropriated \$5,250,000 to be devoted to capital expenditures, making \$17,500,000 which the Company had appropriated for similar purposes since July 1, 1919, and thus completing the Company's obligation with respect to the provisions of its \$35,000,000 loan agreement of July 1, 1919.

The Company declared the regular dividends on the preferred stock at the rate of 4 per cent. per annum as has been the custom since the year 1900. Dividend declarations on the Company's common stock were resumed in September, 1923, at the rate of 5 per cent. per annum, and two quarterly dividends aggregating 2 1/2 per cent. were declared during the last six months of the year. In determining the question of resumption of dividends upon the common stock of the Company the Board concluded, in harmony with what has become the general practice, to adopt the plan of payment quarterly on both the preferred and common shares of the Company instead of semi-annually as heretofore.

The surplus income for the year, plus the appropriations for capital purposes, together with the net credit arising out of settlement with the United States Government for Federal Control and the Guaranty Period and certain other adjustments, brought the total corporate surplus from \$40,932,180 in 1922 to \$56,725,098 for the year 1923, a gain of \$17,792,918, or 43.47 per cent.

During the year there was carried out a more extensive programme for the betterment and enlargement of the property and for the purchase of additional equipment for the more efficient and economical handling of the business of the Company. The expenditures incident thereto are reflected

in the balance sheet, which shows there was an increase of \$31,756,585 in Investment in Property used in Transportation Service, as follows, viz:

Additions and betterments to road	\$ 6,704,907
Additions and betterments to equipment	25,094,423
Less—Net decrease in other accounts.....	\$31,799,330
Net increase	42,745
	\$31,756,585

During the year there was expended for additions and betterments to road the gross sum of \$10,749,968, and after deducting the cost of renewals and retirements there was a net increase in the investment amount of \$6,704,906.

Of the more important work undertaken during the year was the construction of a new grain elevator at Locust Point, Baltimore, Md., to replace elevators "B" and "C" destroyed by fire caused by lightning on July 2, 1922. The new elevator is of concrete construction throughout of the most modern type and reflects the latest development in elevator construction and practice. The elevator will have an initial capacity of 3,800,000 bushels and can be expanded indefinitely by the erection of additional storage units. The work house and storage bins are set back 500 feet from the water front, the grain being handled between the elevator and wharves by six continuous belts having a capacity of 150,000 bushels per hour. Storage tracks for 500 cars will be provided and the grain will be delivered to the elevators by means of will be a marine tower with a capacity of eight cars per hour. There unloading grain received by water. A drying and cleaning plant with structure will be equipped with dust-collecting devices, and no efforts have been spared to insure fire prevention and safety in operation. Most satisfactory progress has been made in this work and it is expected that the elevator will be ready for the reception of grain about August 1, 1924. To meet the increasing demands for wharfage at Locust Point, Pier 3 is under construction. This is a new pier and will be 1,000 feet long by 185 feet wide with a two-storey superstructure. Pier 10 is also being extended, and Pier 5 is being remodelled and a storage shed erected thereon.

To permit the more extended use of heavier power 187 bridges were reconstructed and reinforced during the year. To enable the Company to discontinue the use of lines of other carriers and to facilitate the movement of traffic a new double track line is being constructed between Millvale and Etna, Pa., 2.18 miles in length, and its completion is anticipated in the latter part of 1924.

The following equipment was acquired during the year: 115 locomotives, 91 passenger train cars, 11,659 freight train cars, 19 work equipment units and 6 floating and miscellaneous equipment units at a cost of \$31,259,059. After allowing for equipment retired and reduction account of age, the net increase in the value of equipment owned and in service at the end of the year was \$25,094,423.

There was an increase in tractive power of locomotives acquired over locomotives retired of 2,031,350 pounds and an increase in tonnage capacity of freight cars acquired over freight cars retired of 348,628 tons.

As of July 1, 1923, the Company disposed of all its interests in the Railroad Company, and also, as of November 1, 1923, disposed of its interest in the Long Fork Railway Company. These properties are all owned and operated by your Company, access thereto being dependent upon the lines of other carriers over which your Company did not have trackage rights. The original purposes for which the Company acquired these properties having been accomplished their further retention was deemed not necessary to the future interests of the Company, and they were disposed of to advantage. Each of the companies was separately operated in the interest of your Company up to the date of sale, and the results of such operations are included in the income account of the Company.

There were 63,974 employees in the service of the Company at December 31, 1923, of whom 54,037 were members of the Relief Department.

Pension payments to retired employees, while administered through the officers of the Relief Department, are contributed wholly by the Company and constitute a special roll. The number of pensioners on the roll at the end of 1923 was 1,274, a net increase of 41 for the year. Pension payments for 1923 amounted to \$435,502, an increase of \$27,775 over the previous year. Since the inauguration of the pension feature in October, 1884, the Company has expended \$5,473,605 on account of pensions to superannuated employees.

At the annual meeting of the Baltimore and Ohio Stockholders in November, 1921, the President, after presenting the Annual Report of the affairs of the Company for 1920, made the following statement:

"Notwithstanding all that I have said concerning the difficulties of the present situation, I am personally optimistic concerning the future, and I feel confident that if the Transportation Act of 1920 is left in its present shape until the railroads have had time and opportunity to give the law a fair trial, that we will be able, slowly and perhaps, but certainly able, to work out of our present difficulties, and I hope under the terms of the present Transportation Act to see public. While the Transportation Act of 1920 does not afford a perfect or final solution of the railroad problem, it is, in my opinion, a distinctly in advance of anything which we have heretofore had in that direction, and to my mind the Act, even in its present shape, is susceptible of being so applied as to measurably, if not fully, meet the requirements of the situation. In any event, I think it ought to be given a fair trial before any attempt is made to materially amend it."

The Baltimore and Ohio Railroad Company—contd.

The real essence of the Transportation Act of 1920 is contained in that part of the Act known as Section 15a which provides, among other things, a rule for rate-making for the guidance of the Interstate Commerce Commission. While there have been demands from certain quarters for the repeal of this section of the Act, Congress wisely it is believed has so far refrained from making any changes in the Act as originally passed.

Realizing the necessities for the greatest improvement and expansion possible of the country's transportation facilities the Association of Railway Executives early in 1923 perfected arrangements for a more complete co-operation between the railroads themselves and with the shipping public, and an announcement was made at the same time that the railroads as a whole had authorized expenditures estimated at \$1,100,000,000 for new equipment and additional facilities. In that connection the following statement on behalf of the railroads was made:

"The railroads of the country are raising this enormous amount of additional capital largely through borrowed money, on the abiding faith in the fairness of the American people, and reliance on the continuance of the policy announced in the Transportation Act of 1920, as a measure of reasonable protection to investment in railroad property."

The programme then adopted resulted in the actual expenditure of \$1,059,149,000 during the year 1923 for new equipment and other improvements. It is extremely doubtful if such an enormous expenditure would have been undertaken at that time had it not been for the assurance, implied at least, in Section 15a of the Transportation Act.

During the year the railroads handled successfully and efficiently a volume of traffic greatly in excess of that ever previously handled during a similar period and did so with practically no car shortage and with no congestion. The more than 10 per cent. reduction in freight rates, effective in the last half of 1922, was, with further reductions subsequently made, fully effective throughout the year 1923. The return on property earned by the Class I railroads of the country as a whole was approximately 5.19 per cent.

THE BALTIMORE AND OHIO RAILROAD COMPANY. INCOME ACCOUNT AND BALANCE SHEET.

CORPORATE INCOME ACCOUNT.	Year 1923.	Year 1922.	Increase or Decrease.

Italics indicate decrease.
*Excludes the 96.71 miles of passenger trackage rights between Philadelphia and New York.

As its participation in the 1923 programme of betterments the Baltimore and Ohio Company expended for new equipment and additions to its property \$31,799,329, and operating under the terms and subject to all the restrictions of the present Act, the Company, as previously stated herein, moved in 1923 the largest volume of traffic in its entire history and realized therefrom the greatest gross and net earnings ever earned during a similar period of time. The surplus remaining after providing for upkeep, fixed charges and taxes, was over \$22,000,000, a larger sum than ever realized before from one year's operation, and after providing for the dividends declared upon the preferred and common stocks there remained a balance of approximately \$16,000,000 available for the payment of capital obligations and for improvements and additions to the property. It is believed that the results of the Company's operations in 1923 fully confirm the President's forecast to the stockholders in 1921 quoted from above.

Once more it is suggested that stockholders ought to use their influence to prevent, if possible, any change in the Transportation Act until it has had a further and more complete trial. It is not true, as sometimes claimed, that the Act guarantees to the railroads any fixed rate of return. At most, it simply assures to the roads an opportunity to earn a fair but limited return upon the lawfully ascertained value of the property used for transportation purposes, provided, however, that they are able to earn such return from the business to be moved and at the rates fixed in accordance with the rule prescribed by Congress itself. A further trial of the Act in its present form is urged not only in the interest of the stockholders, but in the larger interest of the public as well.

At December 31, 1923, there were 33,573 stockholders of the Company of record. The Board takes pleasure in according its appreciation of the fine spirit of loyal and efficient co-operation manifested by the officers and employees during the year. Its continuance should insure real and lasting benefits to the Company, to all those in its employ and to the public as well.

DANIEL WILLARD,
President.

(Continued from page 129.)

amber, £25 2s 6d. Ground-nuts firmer. Coromandel, machine-dried, July-August, £24 10s; Chinese decorticated, f.a.q., ditto, £22 17s 6d; Mombassa, ditto, £22 15s. Soya beans quiet. Manchurian, afloat, £12 10s; June-July, £12 10s. Castor seed dearer. Bombay, June-July, £27 17s 6d; Cawnpore, ditto, £27 12s 6d per ton.

OILS.—Lined firm, with a fair demand. Spot, net, naked, 40s 9d; July-August, 39s 3d; September-December, 39s 6d; January-April, 38s 6d. Rape firmer. Crude, spot, 45s 6d; refined, 48s 6d. Castor-oil firm. First pressure, spot, quoted 65s; second pressure, 63s; and pharmaceutical, 70s per cwt. Hull, with London 2s per cwt extra. Cotton firm. Crude Egyptian, spot, 41s 6d; Bombay, 38s 6d; common edible, 47s; deodorised, 49s. Chinawood firmer. Hankow, spot (barrels), 75s; June-July, 62s. Coconut firm. Ceylon, spot, 48s; June-July, 44s 9d; Cochin, ditto, nominally 58s. Soya quiet. Oriental, barrels, June-July, 42s; bulk, 37s 6d. Cod easier. English, spot, 33s 6d to 34s 6d. Groundnuts firmer. English, crushed, naked, spot, 47s 6d; deodorised, barrels, 53s 6d. Turpentine irregular. American, spot, 65s 9d; July-December, 66s 9d; January-April, 68s 6d. Rosin quiet, but pale grades steady. American, grade B, 13s 6d; G, 14s; W, 17s; WW, 21s 6d per cwt. French WW, 17s 6d per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on July 16th as follows:—The tallow market was firm during the week, and prices were mostly 6d dearer to-day. Inferior qualities have not shown the same advance as the best kinds, and good medium sorts were scarcely represented in to-day's catalogues. At auction to-

day 785 casks tallow were offered, and 317 were sold. Quotations are:—Australian mutton: Fine, 40s; good to fair, 44s 6d to 44s; dull to dark, 39s to 38s 3d; hard, 45s 6d. Australian beef: Fine, none; good to fair, 44s to 41s 6d; dull to dark, 38s 6d to 38s; sweet, none. Present shipment from Australasia: Good mixed, nominal. Present shipment from South America, 43s 6d to 41s 6d. The market letter is unchanged. Town tallow, 39s 6d per cwt. Rough fat, per 8 lbs, 33d; melted stuff, 29s 6d per cwt. Quotations are:—Town, 38s 6d, net cash, naked, ex works. Country: Frail casks, 39s; home melted, shipping casks, net, f.o.b., good coloured, 40s; fair to dull, 39s to 38s. Bone fat: White, none; pale, none; benzine, 35s; melted stuff, 34s 6d, f.o.b.

METROPOLITAN CATTLE.—JULY 17.

Beasts not offered owing to foot and mouth disease restrictions.
British Beasts, per stone of 8 lbs to sink the offal. Sheep, per stone.
Beasts—Herefords nominal
Short-horns nominal
Devons nominal
Norfolks nominal
Scottish nominal
Irish nominal
Fat Cows nominal

STATE BANK OF THE PORTUGUESE COLONIES.

suggest that but little effort has been made to minimise the effect of the July tax collections. Up to $3\frac{1}{2}$ per cent. has been freely paid for daily money at times, and there was a report that fixtures might be advanced. On Thursday $3\frac{1}{2}$ per cent. was paid for week-end money, but its repayment will rather coincide with Bank repayments, and the market is not looking for any change in the direction of easier conditions next week. Discount rates have continued to harden under the influence of money, fine three months' bills being fully $3\frac{1}{2}$ per cent. towards the close of the week, and the hardening tendency was reflected in yesterday's allotment rate for Treasury bills, which went at 3 21-32.

	July 25, 1924.	July 18, 1924.	July 11, 1924.	July 4, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	8	2	2	2	1 (Jly. 5, '23)
Houses' Notice	2	2	2	2	1 (Jly. 5, '23)
Market rate 3 months' bills	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	..

The Bank return showed an increase of £70,100 in the note circulation, and the Reserve was £71,500 lower. Other securities were £3,329,200 higher, as the result of market borrowings, but this was counterbalanced by repayments on Government account, which were reflected in a decline of no less than £5,505,000 in Government securities, accompanied by a decline of £402,800 in Public deposits. Other deposits consequently were lower by £1,871,900. Thus market resources had been contracted in the week ending Wednesday, notwithstanding market borrowings on the two previous days. Currency notes outstanding were reduced by £542,600 this week to £292,301,900, which includes £1,381,200 for notes called in, but not yet cancelled. The fiduciary issue is £241,470,800, or £6,720,100 below the maximum.

The statement of the London Clearing Banks of their average weekly balances for June, which is printed in full on a later page, shows an increase in deposits and a further decline in acceptances as compared with May. The following table compares the aggregate figures of the nine English banks:—

	Dec., 1922.	June, 1923.	Dec., 1923.	Mar., 1924.	May, 1924.	June, 1924.
Capital and reserves	116.0	116.3	116.3	118.7	119.1	119.2
Acceptances	72.8	73.8	76.1	89.2	92.0	85.3
Deposits (incl. undiv. profits, &c.) ..	1,684.7	1,637.7	1,673.1	1,603.2	1,617.8	1,651.9
Total Liabilities	1,873.5	1,827.8	1,885.5	1,821.1	1,828.9	1,856.4
Coin, notes, balance at bank, and cheques in course of collection	253.0	240.7	254.2	230.2	232.6	249.1
Money at call	106.0	113.3	111.3	93.5	101.1	108.1
Investments	384.5	355.5	363.8	361.7	352.4	349.3
Discounts	238.3	270.8	275.3	224.0	235.3	245.0
Loans and advances	732.7	746.9	756.5	785.5	788.2	791.7
Cover for accept., premises, &c.	99.0	100.6	123.4	126.2	119.3	113.2
Total Assets	1,873.5	1,827.8	1,885.5	1,821.1	1,828.9	1,856.4

Cash, money at call, and bills discounted show a substantial increase, and there was a slight increase in advances, but there was a further reduction in investments. As compared with June, 1923, deposits show an increase of about £14 millions, while advances are £45 millions higher, and discounts £26 millions lower.

THE STOCK MARKETS.

Monetary considerations and the proceedings at the Inter-Allied Conference have been the principal factors influencing the Stock Exchange, which has this week entered upon a 21 day account. British Government stocks have dropped a little, but Home Railway prior charge stocks are better, though little business has passed. The output of new issues shows signs of slackening. Brazilian bonds have experienced another fall, and the possibility of a spread of the trouble to Argentina has depressed Argentine stocks. The dividend announcements of the Home Railway companies at the same rates as last year have stimulated a small amount of buying of Home Rails. Rubbers continue to harden, and oils have recovered slightly on bear covering. Among industrials, textiles have been prominent under the lead of Bradford Dyers. In the mining markets tin and copper descriptions have been the feature.

THE COMMODITY MARKETS.

There has been no improvement this week in the position on the Cardiff coal market, the volume of export trade continuing a good deal below the average. From Middlesbrough our correspondent writes that the market is weak, with no sign of change. In manufactured iron and steel, some works are keeping fairly well employed, but others are working only partly or have entirely stopped. Our Sheffield correspondent writes that "the continued stagnation of the iron and steel market has resulted in the inevitable cutting of prices." Tin advanced sharply, while copper was firmer. There has been rather more life in the wool trade. In the cotton trade the event of importance has been the rise in raw material rates, as a result of the official report of the American crop being worse than expected. Further details of markets and prices will be found on later pages.

FOREIGN EXCHANGES.

In the foreign exchange market interest has again been centred largely in the dollar, business in most Continental currencies being quiet under the restraining influence of the Conference. From a closing price of \$4.37 $\frac{1}{2}$ on the 18th, rates continued to rise steadily until \$4.41 $\frac{1}{2}$ was reached on the 22nd and \$4.42 in the earlier part of the 23rd. Later in the day came a sharp reaction down to \$4.39 $\frac{1}{2}$, followed by a recovery to \$4.40 $\frac{1}{2}$ on Thursday, and a somewhat hesitating quotation of \$4.40 $\frac{1}{2}$ on Friday morning. The main influences at work have already been referred to in these columns, Conference expectations, the exceptionally heavy tourist traffic, Continental selling of dollars, the hardening of money rates of this side, and the signs of a possible beginning of inflation in America. As the reaction on Thursday suggests, however, when the strong attitude of the bankers on the question of the German loan became known, sentiment is playing a large part in the movement, which makes it very difficult to see far ahead. A point of much interest is the extent to which our autumn requirements have already been covered, and whether or not the rate has still to bear the weight of the pressure normal at this season. Forward quotations are slightly wider at $\frac{1}{2}$ cent per month below spot. The Paris rate has been influenced almost entirely by Conference expectations. From 85.70 a week ago, there was a recovery in the early part of the week down to as low as 84.55, but after some fluctuations the hitch over the loan has brought a reaction to 85.95 yesterday morning. Brussels has continued to reduce the margin between itself and Paris, being quoted yesterday morning at 95.80, as compared with 96 $\frac{1}{2}$ a week ago. Forward quotations in Paris have narrowed to 6-10 centimes per month above spot, while Brussels stands at par-2 centimes per month above. The lira has moved up somewhat, but later recovered to 101 $\frac{1}{2}$, as compared with 101 $\frac{1}{2}$ on the 18th. Germany at 18 2-5 billions shows a slight depreciation from the 18 $\frac{1}{2}$ quoted a week ago. Amsterdam, contrary to its usual tendency of moving roughly with the dollar, has gone against us from 11.52 $\frac{1}{2}$ to 11.51 $\frac{1}{2}$, after being lower. Switzerland also has appreciated from 24.03 to 23.92 $\frac{1}{2}$. Madrid at 32.94 $\frac{1}{2}$ shows little change. In Northern Europe, Stockholm has moved in our favour with the dollar from 16.43 $\frac{1}{2}$ to 16.52 $\frac{1}{2}$. Copenhagen, where monetary conditions still give cause for uneasiness, shows some improvement at 27.20, but Christiania has depreciated further from 32.60 to 32.83 $\frac{1}{2}$, and Helsingfors at 175 $\frac{1}{2}$ is $\frac{1}{2}$ mark higher. Warsaw and Riga maintain their nominal parity with the dollar. In Central Europe, Vienna has also followed the dollar from 309,500 to 312,000, while Budapest retains its recently stabilised quotation of 360,000. In the East the rupee remains very firm, and stands at 15 5 $\frac{1}{2}$ d, as compared with 15 5 15-64d a week ago. The yen, however, is a little cheaper at 15 10 $\frac{1}{2}$ d. The silver market has been quiet, with a slight price reaction on the fall in the value of the dollar. There is still no Eastern demand, but a fair amount of bear covering and Continental purchases. As compared with a week ago, Hong Kong and Shanghai are unchanged at 2s 4 $\frac{1}{2}$ d and 3s 3 $\frac{1}{2}$ d respectively. In South America the Rio rate has fallen sharply from 5 15-32d to 5 $\frac{1}{2}$ d on unsatisfactory news of the revolt. Buenos Aires, however, has recovered some-

what from 40 $\frac{1}{2}$ d to 40 $\frac{1}{2}$ d. Montevideo at 41 $\frac{1}{2}$ d is rather cheaper than the 41 $\frac{1}{2}$ d quoted a week ago, while Valparaiso has also depreciated slightly.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 19th:—

EXPENDITURE.	£	REVENUE.	£
Supply Services	9,625	From Revenue	18,350
Interest, &c., on Debt	598		
Sinking Fund	500		
Added to Exchequer Balances ..	277		
Reduction of Debt	6,516		
Sundries	824		
	18,350		18,350

Revenue came in very well during the week, and amounted to £18,350,000, against £17,569,500 in the corresponding week of 1923. The yield from Customs amounted to £1,217,000, against £2,317,000; but Excise receipts were higher at £7,407,000, against £5,923,000. Estate, &c., duties at £1,610,000 compare with £960,000. The yield from Property and Income-tax amounted to £5,756,000, against £4,841,000. Super-tax produced £550,000, against £520,000. Nothing came in from Special Receipts, as against £1,514,200 a year ago. The week's operations reduced the National Debt by £6,515,700, and caused the following changes:—

	£		£
Treasury Bills	+ 2,807	National Savings Certificates ..	50
Treasury Bonds	+ 47	Bank of England Advances ..	1,250
Unemployment Insurance	+ 350	Public Dept. Advances	8,400
	+ 3,184		— 9,700

The floating debt was reduced by £6,880,000 to £787,118,500.

FINANCIAL YEAR, 1924-1925 (April 1 to July 19).

	£		£
Total Expenditure ..	248,606,374	Raised by Revenue ..	219,365,213
		Decrease in Balances ..	3,082,913
		Amount borrowed ..	26,158,248
Total	248,606,374	Total	248,606,374

ESTIMATES FOR YEAR 1924-25.

	£		£
Ordinary Expenditure ..	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure ..	3,178,000	Special Receipts	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

THE WEEK IN PARLIAMENT.

MONDAY, JULY 21ST.—*Lords*: Debate on the position in India. *Commons*: Committee stage of Housing Bill concluded.

TUESDAY, JULY 22ND.—*Lords*: Committee stage of London Traffic Bill concluded. *Commons*: Debate on education.

WEDNESDAY, JULY 23RD.—*Lords*: Debates on the British Garrison in Egypt, and the Drink Problem. *Commons*: Finance Bill passes third reading; Government statement on financial policy. Report stage of Old Age Pensions Bill concluded.

THURSDAY, JULY 24TH.—*Lords*: Debate on the growth of armaments. *Commons*: Report stage of the Housing Bill concluded. Old Age Pensions Bill read a third time.

FRIDAY, JULY 20TH.—*Commons*: Housing Bill—third reading.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Standard Bank of South Africa, Distillers, Anglo-Dutch Plantations of Java, and Malayalam Plantations. Mr W. D. Graham Menzies, at the meeting of the Distillers' Company, said that the directors hoped that they had at last found a substitute for molasses, the high cost and scarcity of which, as the chief source of raw material, had marred the success which had attended the introduction of "Discol" as a practical motor fuel. The Hon. C. H. Strutt, at the Anglo-Dutch Plantations of Java meeting, in giving an interesting review of the position and prospects of the rubber industry, said that the main cause of the fall in prices was the large output of the native producers. In referring to the question of

a selling combine, he said that he could not share the hopes and expectations of those who had turned to the possibility of a selling combine for salvation, but rather fixed his hopes on new uses for rubber, and heartily supported the propaganda scheme of the Rubber Growers' Association.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an examination of the world's wool situation.

THE CONFERENCE AT A DEADLOCK.

THE proceedings of the Conference during the past week have justified our doubt whether the Allied politicians were in sight of an agreement on the difficult problem of France's claim to liberty of action if Germany defaults. To a great extent the discussion seems to have been carried on in an atmosphere of unreality, for it has shirked the fundamental issues. The French thesis is that France, as Germany's chief creditor, must retain the right to act again as she acted in 1923 if she considers that she has occasion to do so. A great part of the public opinion of Great Britain, the United States, and the neutral countries of Europe, holds that this action was not justified by the Treaty of Versailles, that the possibility of its recurrence is a formidable stumbling-block to the restoration of really peaceful relations in Europe, which would patently prejudice the solvency of Germany as a debtor. In the present negotiations Great Britain has carefully refrained from raising this question, but there can be no really harmonious agreement on any basis which by implication admits the French proposition or leaves a loophole for a repetition of the Ruhr adventure. The French journals of the Left seem to desire to leave the impression that France realises the ineffectiveness of the policy of the last eighteen months, that Great Britain can rest assured that she is not likely to repeat the experiment, but that France's present spokesman cannot formally throw over the Ruhr method without courting certain defeat when he returns to Paris. But whatever the motive, and however much he might wish to do otherwise, M. Herriot, like M. Poincaré, still maintains the claim to "liberty of action."

In these circumstances, the only sound line for this country to take would be to strengthen M. Herriot's hand at home by going as far as possible in the direction of satisfying France's natural desire for security, and of offering very liberal treatment of the war debt, while, at the same time, insisting that the claim to Reparations affords no ground for extending the military occupation of Germany; that the collection of German payments—which was only made possible at all by the joint victory of the Allies—must be a joint Allied task carried out by methods agreed upon by the Allies; and that the reconstruction of economic conditions in Germany and Central Europe is a world interest of paramount importance. The events of the last three weeks make us doubt whether Mr MacDonald sees these essentials as clearly as some of his colleagues or the bankers through whom must be floated the loan which is to start the Dawes scheme. This doubt first arose through what appeared to be the hasty proposals and patched-up agreements of the recent Paris conversations. It has, unfortunately, been greatly strengthened by the publication last week of the British reply to the League of Nations on the subject of the Treaty of Mutual Assistance—a reply which, in our opinion, has enormously diminished the prospects of a settlement. It was not expected that the British Government would give a categorical approval to this draft treaty as it stood. But it was to be expected that

the Government, whose representatives on the League were responsible for its initiation, would accept it as a basis of discussion, or, at all events, would suggest some definite alternative means of endeavouring to set at rest the fear which has underlain French national psychology since the tripartite agreement of 1919 fell to the ground. Instead, however, of sending a helpful answer, the Government bluntly rejects the Treaty. It declares—without any justification that we can see—that it would involve an increase in Britain's naval armaments; that it would throw too onerous a duty on the Council of the League, which it says should only be a consultative body; and it adds as a rider that it considers that when the time comes there should be a conference to discuss and, if possible, arrive at a scheme of disarmament which should not be under the League, but should include outside nations. This extremely ill-timed document overlooks several vital considerations. In the first place, the Council of the League is not merely a consultative body, but, according to the Covenant, has many highly important functions to perform in regard to the administration of territories under the Treaty of Versailles, the trusteeship of national minorities and many other similar tasks; and in its supreme duty of preserving the peace of the world it has many semi-judicial functions, including that of calling upon its members in certain circumstances to apply an economic blockade and to take other steps against a nation which commits an act of aggression. Moreover, the suggestion that a disarmament conference, merely called to discuss land armament, could make any headway if it were a merely temporary undertaking is an illusion. Disarmament can only be attained in so far as the sense of security is fostered, and this can only take place under a permanent organisation such as the League of Nations. We regard the Government's reply, therefore, as a distinctly retrogressive move. But it was also tactically foolish. Progressive opinion in France has for some time been endeavouring to find an alternative to M. Poincaré's sterile policy of relying upon military power, and has increasingly been turning its attention to the possibilities of the security which might be offered by the Covenant of the League—a guarantee which Belgium has definitely accepted as the alternative to the protection afforded to her before the war by the limited guarantee of England and other Powers. By the substance and the form of this reply—which bears the stamp of the ultra-pacifist tradition represented in the Cabinet by Lord Parmoor, fortified, curiously enough, by arguments supplied by the fighting services—Mr MacDonald has cut the ground from under the feet of the parties of the Left in France, with whom he is trying to reach an understanding. He has failed to move towards France on the only ground on which he could possibly make a real approach, but is endeavouring to meet her on matters which may seem to be matters of machinery, but are really questions of principle.

In the last few days, however, it has become increasingly evident that if France does not modify her claim to the right of independent action, the Dawes report cannot genuinely be put into operation, unless, indeed, the Allied Governments are prepared to ensure the success of the loan by putting their own guarantee behind it—a solution which is in the highest degree improbable. The attitude taken up by English and American bankers is no new thing. In the schemes that have been carried through in Austria and Hungary, the first conditions of the agreements have been ones under which the neighbours of the country in question have guaranteed the territorial integrity of the debtor. No one in London would have subscribed a penny to the Austrian loan without this undertaking, the assurance that Austria would carry out her part of the bargain being afforded solely by the fact that means of economic pressure were retained in the hands of the Council of the League acting on the one hand in the interests of Austria's own financial restoration, and on the other in those of Austria's creditors as a whole. There are two ways in which a similar result may be achieved in the case of Germany. One is that a satisfactory interpretation should be definitely laid down of the position of individual creditors under the Reparations section of the Treaty of Versailles—a conclusion which might be reached by submitting the disputed clauses to the Hague Court. The other is to treat the situation created

by the Dawes' Report as setting up entirely new conditions, which afford an opportunity of laying down fresh provisions in regard to default. The latter method avoids re-opening the question of France's action in 1923, but it will be abortive if the new rules leave any loopholes or ambiguities. The bankers, who have made their opinion known this week, will have done a great service if they have prevented the Conference from putting on record a superficial agreement which really conceals two conflicting principles. But it is not yet time to abandon hope. It would be too tragic a commentary on human folly if the tenth anniversary of the outbreak of the Great War is to be celebrated by the breakdown of the most promising attempt yet made to restore peace to Europe.

LABOUR AND IMMIGRATION IN THE U.S.A.

FROM the American employer's point of view the new immigration restrictions, which came into force on June 30th, are by no means regarded as an unmixed blessing. Wage rates are already at the straining point, and have reached unprecedented heights. The possibilities of labour shortage and further wage inflation, largely due to the falling off in immigration since 1914, and accentuated by recent legislation, are engaging the serious attention of industrial executives in the U.S.A. A few figures will quickly show the extent to which immigration has declined. For many years before 1914 the number of emigrants to American shores was often well over a million persons per annum, but in 1914 there was naturally a considerable decline, and the total dwindled to 326,000 in 1915. This decline continued during the war, and was further emphasised by the Restricted Immigration Act of 1917, and that of 1921, when "quotas" were first instituted. The net alien immigration in 1922, according to figures given by the National Bureau of Economic Research, was 265,194, and in 1923 680,440. The low figure for 1922 is accounted for in part by the effects of the quota law, and in part by the influence of the industrial depression of 1921. The large rise in 1923 is due to a marked increase in immigration from Canada and Mexico, which countries are not within the scope of the quota limit law. The following table, compiled by the same authority, gives for the years 1920 to 1923 inclusive the net alien immigration into the United States from the principal countries of origin:—

Country of Last Permanent Residence	Net Alien Immigration.
British North America	366,611
Italy	258,326
United Kingdom	244,780
Mexico	167,497
Germany	126,974
Poland	83,520

The total for the four years was 1,710,402. In 1923 alone the net immigration from Canada was 179,782.

The new restriction Act of 1924, among other things, (a) preserves the basic immigration law of 1917; (b) retains the principle of numerical limitation as inaugurated in the Act of May 19, 1921; (c) changes the quota base from the Census of 1910 to the Census of 1890; (d) reduces the percentage from 3 per cent. to 2 per cent., plus a small base quota for each country. Probably the most significant clause is that which changes the quota basis from the Census of 1910 to that of 1890. The aim here is not only to reduce the number of immigrants, but also radically to change the type of immigrant. The real significance of this clause will become apparent from a consideration of the fact that in the decade ending with 1890 the bulk of the immigrants were coming from north-western Europe, whilst in the later decade ending with 1910 the majority of the new arrivals came from south-eastern Europe. These latter were held to be much less desirable than those from the north-west; they introduced a lower standard of living were a less efficient type of worker, and were more prone to unrest and revolution. By changing the quota basis therefore, from the Census of 1910 to that of 1890, it is hoped to restore the racial balance in favour of the north-western type of immigrant. The report of the House Committee on Immigration and Naturalisation presented at the first session of the 67th Congress, say that during the decade from 1900 to 1910 immigration from Germany fell off more than 11 per cent., and from Ireland more than 16 per cent. All the countries of

southern and eastern Europe registered large increases. The increase from Greece was 1,089 per cent., from Italy 177 per cent., from Russia and Finland 170 per cent., and from Austria-Hungary 162 per cent. In fact, 72 per cent. of the immigration for that decade was from south-east Europe, and the same is doubtless true of the decade ending with 1920. One of the results of this unrestricted influx from South and Eastern Europe is shown in the remarkable fact that the care of the foreign-born in the prisons and eleemosynary institutions of the various States in the Union cost 7 per cent. of the gross income of the various State Governments. States with large alien populations, like New York, Pennsylvania, Mass., and Illinois, pay much more, but the average is 7 per cent. But this is not all. A more sinister aspect of the question is revealed in a recent official statement, to the effect that the present high cost of clothing in the States is not due to a shortage of workers, but to the tactics of the labour union known as the Amalgamated Clothing Workers of America, which recently received from the Soviet Government of Russia a concession to manufacture clothing in Moscow, an enterprise for which this labour union sold 5,000,000 dollars' worth of stock among its members in the U.S.A. This union's weekly organ, *Advance*, is one of the "reddest" permitted to circulate in America. Thousands of Russians without any experience of tailoring have been encouraged by the union to go to the States, where they have been able to earn—or rather to obtain—from 40 to 60 dollars per 44-hour week.

These things clearly indicate how imperative it was not only to limit the extent of immigration, but also to change fundamentally its character. Whether the change of quota basis from the census of 1910 to that of 1890 was the best method for accomplishing this, and whether it was indeed worth while, since labour in north-west Europe may be quite as intractable as that from the south-east, may well be open to question; but since it is supplemented by other important provisions in the Act of 1924, including preliminary examination overseas, the main object will probably be achieved.

From the standpoint of labour supply the reduction in quota from 3 per cent. to 2 per cent., and the change in basis will cause a net annual decrease of approximately 150,000 wage-earning immigrants. At an average daily wage of \$3.50—a low estimate—this represents a yearly wage bill of \$150,000,000. If American industry is to maintain its present level of productiveness this anticipated labour shortage must be made good. The view is generally held that this can only be done by means of better management and greater use of machinery. Increased effort by the workers themselves is presumably implied in this, since better management is meaningless otherwise. Some figures recently supplied by Mr Cadbury to the *Economist* are of interest here. In discussing how the effects of reduced hours—another form of labour shortage—could be counterbalanced, Mr Cadbury analysed the best means to this end, under the three heads of (a) increased effort, (b) better organisation and management, and (c) mechanical development. Doubtless these three factors are intimately related and interwoven, and difficult to estimate separately, but yet cost accounting at Bourneville seems to have been so perfected that Mr Cadbury was able to show how a percentage increase in total output per employee was to be exactly divided up among, or attributed to, these three factors (*Econ.*, May 17, 1924, pages 1014-5).

For some years, during and since the war, there has been a serious labour shortage in the U.S.A., and consequently a very considerable development in the use of machinery, and in what is called "scientific management," in order to maintain output at a high level. It has been generally supposed that this increased use of machinery had almost reached its limits in the U.S.A., but many of the leaders of industry in that country, anticipating a still more acute shortage of labour, intensified by immigration restriction, see no other way but by a great extension of the use of machinery, and a still more scientific management, to a degree indeed never before contemplated, even in America. It is urged by some that whilst American manufacturers have gone far in this direction they have merely scratched the surface; and the new immigration

restrictions, regarded as calamitous by many industrialists, may yet prove a blessing in disguise if they stimulate a wider appreciation and application of more efficient management and better mechanical methods.

THE FINANCIAL CRISIS IN AUSTRIA.

(FROM A CORRESPONDENT.)

THE financial crisis which has just swept over Vienna is declared by many to be the most severe since 1873. Of the eight big banks which dominated the market, only two can be said to have come out not only unshaken, but with resources undrained and unfettered. One, an institution closely connected with England, has kept its resources liquid, but the control imposed upon it by its English board has driven it into a position of splendid isolation, where little business can be done. The others have suffered if not in their credit, at least by the complete loss or tying up of their assets. The last of them, the Depositenbank, has succumbed to the strain, and is at present being compulsorily wound up. Of the so-called Mittelbanken (banks of medium size), the Lombard and Escomptebank share the fate of the Depositenbank, while the others, with one exception, find themselves confronted with the same difficulties as their once so powerful brethren. The smaller banks and private banking firms have mostly disappeared altogether. Some of them are being wound up under an official supervisor, but in many cases the public prosecutor had to intervene, and the directors and managers of some of these institutions are already in prison, or awaiting trial. On the Stock Exchange a similar state of affairs exists. The index of securities, which in September, 1923, stood at about 2,200, has been calculated for June last at 1,168. That it has not fallen lower is only due to the Intervention Syndicate, formed by the big banks at the outbreak of the crisis, which chiefly occupied itself in taking up their own and associated shares, and now finds itself saddled, as a result of its activities, with securities at a cost price of something like 2½ million pounds sterling. The position can best be gauged from the reports of the Austrian Nationalbank, where bills discounted rose from 1.6 milliard kronen at the end of March to 2.1 in the middle of May, reaching the figure of 3.1 at the end of last month.

At the outbreak of the crisis the reason given was chiefly the taxation policy both of the State and the municipality of Vienna, which it was said acted as an incentive to credit extension and stock exchange speculation. The rise in the value of the French franc was also blamed. Subsequent events have, however, done much to revise this judgment. Whatever the guilt of the authorities the chief blame to-day must be attached to the bankers and financiers themselves. The Austrian Republic celebrated its foundation, among other things, by the complete abolition of titles and decorations. Thus the upstart who in former times, eager to jump the social ladder, would have paid hundreds of thousands of gold crowns into the Exchequer for a prefix to his name or a star for his breast, robbed of this chance of social advancement, now turned his ambition and activity into the only channel left to him: to become a member or even the chief of the board of directors of an old-established institution and to rub shoulders with the pick of the industrial families of Austria. The history of the rise and financial deeds of these people is of an almost schematic likeness. An obscure youth, a somewhat chequered voyage into business, then the war, successful speculation in foreign exchanges, boots, shoes, foods, or anything else capable of being hoarded, and the start is made. Higher ambitions make themselves felt, and the slow acquisition of shares in respectable banking houses is indulged in. Thus the Depositenbank, the Lombard and Escomptebank, and other banks changed their masters. Sometimes this process failed, or the intruders' attacks were successfully withstood by the old owners. In this case a smaller firm is acquired, or a new one set up, and the board of directors staffed by the scions of old families and high civil servants themselves who have fallen upon evil times. The omnipotent master of the whole concern usually then proceeded to conclude an agreement with the bank, by which its resources are chiefly placed at his or his industrial concern's disposal, and a division of profits fixed,

by which he gained almost everything and risked nothing.

Even the "old institutions" were not altogether immune from the prevailing spirit of the time. Their managerial staff had been changed during the war, and most of the old figures in Austrian banking and finance had died. Their successors everywhere succumbed to the inflation spirit. Their speculation on the Stock Exchange, and on the foreign exchange market for their own and the bank's account, reached unprecedented proportions to the other business. This was all right as long as money came in easily, and the margin between debit and credit rates could be kept at 15 per cent. at least. The public clamoured and complained, but the banks remained adamant. This attitude towards the public is by no means confined to Vienna, but is unfortunately general east of the meridian of Zurich.

But there is one difference which has probably played a considerable part in shaking confidence in Vienna. In Czechoslovakia the bankers, after the sudden deflation of the krone, found their resources locked up almost within a single day, and in most cases their assets, measured by English standards, can by no means be called liquid, even to-day. Their plight was great and the danger of a collapse imminent. But in Prague the "higher authorities," as the banking office and the Ministry of Finance are somewhat euphemistically called, exercise an iron control over banking, industry, and newspapers; not a single word was breathed, and the banks stuck together in a solid phalanx—outwardly, at least. With one exception none failed, and bear attacks, both on exchange and shares, were successfully encountered or severely punished. In Austria, on the other hand, rumours set in almost before the crisis began. There can hardly be a firm in the City of London having any connection with Austria at all which has not received letters from correspondents, known and unknown, extolling their own position and slaughtering recklessly the credit of the others. The result was that foreign creditors who in March, in many cases, had withdrawn their deposits to probe the liquidity of their debtors, and had afterwards returned the money, now begun to call in their credits from Vienna in earnest, especially the English and American, many of whom paid the agreed penalty in cases where the money was not yet due. Austrian depositors soon followed, and for the first time since 1873 even the biggest banks had to experience a run, with the exception of three out of the five banks with English interests, and of the institutions under French influence.

If the Stock Exchange barometer can be trusted, the crisis in Vienna seems to have spent its force, but there is no use denying that, at least as far as London is concerned, it will take a long time for Vienna to regain its position. It is not for England to interfere with the internal affairs of the organisations of finance and banking in Austria. But as it is obvious that the present crisis has been created by reckless over-speculation on all sides, resulting in the complete locking up of all assets, it is the business of all friends of Austria to ask the question how similar events can best be avoided in future.

In the Austrian Parliament there is at present a Bill under consideration which by introducing a sort of unlimited liability for bankers will probably do more harm than good. Against these attempts to make banking safe by penalties a few proposals gained by reference to English and Canadian banking history and experience may be submitted which, if accepted by Austrian bankers, will certainly go further to restore their credit quickly than all assurances of their undoubted standing and complaints of foreign conspiracies against the supremacy of Vienna. The Association of Bankers in Vienna is a most powerful body, as far as the fixing of terms to be charged by the banks to the public is concerned. It would be certainly a good thing if the institutions united in this body would in future, whenever an emergency arises, declare somewhat earlier than this time that they will be liable for each other's obligations, as the Canadian, Dutch, and German banks have done, by word or deed, on many recent occasions. Further, that the associated banks do agree to publish as soon as possible balance-sheets, under the authority of the association, of their status on June 30, 1924, and continue to do so every month, like the London clearing banks and the Federal

Reserve Board. Thirdly, the rates on debit and credit accounts ought to be brought in accordance with each other, and a definite margin to the Bank rate fixed and readjusted from time to time. Fourthly, Austrian bankers should stop once for all attempting to undermine each other's credit abroad. It will always be easy to deal with anonymous correspondents, but what is the English or American investor to do if the recognised institutions assure him that others are on the verge of bankruptcy? There are many other points, amongst them chiefly the Revaluation Law, of which nothing has been heard of late, which cannot be touched upon here. The National Bank no doubt has by the course of events gained a new position among the bankers, and it is to be hoped that it will exercise in future as watchful and efficient control as the Bank of England in the City of London.

THE NEW BALTIC STATES.—III. LITHUANIA.

THE Lithuanian Republic has a population of a little over two millions within its present frontiers, and is even more completely agricultural than the other new Baltic States. The land is also in the main richer, though methods of cultivation are, for the most part, more primitive than in the former Baltic Provinces. The introduction of a fairly far-reaching agrarian reform has taken place here also, but its provisions, which were somewhat less radical, have been carried through more slowly than has been the case in Estonia and Latvia. Since 1922 agricultural production has actually been greater than in pre-war days, and the rapidity with which the Lithuanian peasant has carried through this work of reconstruction after the damages caused by the war augurs well for the economic future of the new State.

	Area in 1,000 Hectares.			Yield in 1,000 Metric Tons.		
	Average 1909-13.	1922.	1923.	Average 1909-13.	1922.	1923.
Rye	552.4	554.0	583.5	993.3	1,231.9	1,210.7
Oats	317.2	311.2	330.6	551.8	840.2	661.2
Barley	183.2	168.6	175.0	317.6	467.0	346.5
Potatoes	119.1	132.0	143.0	1,591.7	3,696.0	3,260.4
Flax*	55.2	51.2	52.1	48.3	41.0	60.4

* Yield of flax in hails.

In judging the figures of yield it must, of course, be remembered that during the last two years the harvest has been exceedingly good, though prospects for this year's crop are also very bright.

The chief difficulty facing the young Republic is that of transport. At present the railway system is not only totally inadequate, but such railways as do exist are not distributed as to encourage the maximum development of the country's resources. The roads, too, are for the most part primitive, and, apart from the river Niemen and one or two of its small tributaries, which are of importance for timber floating, there are no internal waterways worth mentioning. In view of the inadequacy of the national equipment in these respects, the trade returns of the last few years are in many ways surprisingly good:—

FOREIGN TRADE. (In Millions of Lits.)

Year.	Imports.	Exports.	Exports as % of Imports.
1920	72.3	55.2	76.3
1921	95.3	57.6	60.4
1922	74.9	76.9	102.7
1923	156.6	146.8	93.7
1924 (4 months) ..	73.0	80.3	110.0

The most noticeable feature is the marked improvement in exports, the temporary setback last year, which was due to the disorganisation of rural transport by the bad autumn season, being made good this spring. While imports and exports have thus been about equal during the last two years or so, the actual balance of payments has throughout been favourable to Lithuania. This is due to the remittances from the Lithuanian emigrants in America, who number three-quarters of a million. This item was as high as some six to seven million dollars yearly from 1919 to 1921, while since that date it has stood at at least three millions dollars. In consequence of stable budgetary conditions and a favourable balance

of payments, the introduction of a sound currency was a relatively simple affair. The situation since the Armistice has, however, been so exceptional that a brief review of the currency policy of the new State may not be without interest.

The modern territory of Lithuania was occupied by the German armies during the latter part of the war, and its currency needs were supplied by the printing activities of the so-called Darlehenskasse Ost at Königsberg. These Ost marks gradually replaced the Russian roubles, which depreciated very rapidly after the revolution; and when the German troops were withdrawn from the country, the new Lithuanian Government maintained the Ost mark, which was interchangeable with the German mark as legal tender. In so far as this implied a renunciation of recourse to the printing press as a means of covering budgetary deficits, it was certainly a good thing, and in fact, from the very start, Lithuania was obliged to have a balanced Budget. On the other hand, however, several million dollars sent by Lithuanian emigrants were exchanged for marks, and found their way into Germany—a present that the little Republic could ill afford to make. Again, when the German mark itself depreciated rapidly, the country suffered all the disadvantages of this worst form of taxation without the Government profiting in the least thereby. It was not, indeed, until October, 1922, that the new currency, the lit, equal to one-tenth of an American dollar, was actually introduced, and the value of the marks presented for conversion in the whole country was then only 30 million lits. The delay in introducing the new currency was due in part to the general political insecurity of the earlier post-war years, but even more to fact that confidence in the mark was long maintained in the country. The Darlehenskasse Ost had won over the small business community by its open-handed credit policy, and several Lithuanian banks were closely interested in speculation in the mark.

The new notes were covered in part by the three million gold roubles, which were paid to Lithuania by the Bolsheviks in 1920 in settlement of outstanding claims, but since 1922 the reserves have increased to such an extent that the holding of gold and foreign currencies by the Lithuanian Bank, and its correspondents are together greater than the notes in circulation. The Bank itself buys dollars at par, and is a seller of dollars at a discount which varies from $\frac{1}{2}$ per cent. for Government purposes, to $1\frac{1}{2}$ per cent. to any exchange dealer. In this manner fluctuations are kept within very narrow limits, although exchange dealings are completely free.

The general policy of the bank is frequently criticised, as it has led to a very acute shortage of credit in the country. It is argued, however, that before normal methods can be resumed, complete confidence must be established in the currency, and, with the experience of depreciation in both roubles and marks fresh in their memory, it may be that the policy of veritably Spartan virtue must be pursued a little longer. It would seem probable, however, that the time is now at hand for a fresh consideration of the whole question, though when judging the total currency at present in circulation, it should not be forgotten that large numbers of American dollars are in active use in the country.

The chief need for the present is an extension of the railways in order to establish more direct communication with the port of Memel, which was acquired by force last year, and which has recently been recognised *de jure* as forming part of Lithuania. A credit for one million sterling was sanctioned under the Trade Facilities Act some months back for the purchase of the material necessary for carrying through a definite and well-thought-out scheme of railway construction, provided that the Lithuanian Government, for its part, provided the necessary funds for expenditure on the scheme within the country itself. The conditions were duly accepted, but a few weeks ago the whole question was once again thrown into the melting pot by the refusal of the Lithuanian Parliament to accord budgetary sanction for the expenditure of the sums involved, and the proposal at the last minute of an alternative construction policy. It is to be hoped, however, that this manoeuvre, which appears to have been undertaken for reasons of internal party politics, and which has had the desired effect of overthrowing the

Cabinet, will not be allowed to wreck the whole scheme upon the execution of which the future of Lithuanian trade so largely depends.

In Memel the country has acquired its natural outlet to the sea, and it is hoped that the Treaty according local autonomy to the region itself will soon be ratified by the Lithuanian Parliament. With the status of its only port, and the outstanding difficulties with regard to the railway loan once definitely settled, a new chapter should open in the history of what is perhaps economically the most promising of the new Baltic States. Conditions are still very primitive, and progress must needs be slow, but not any the less sure on that account, unless, indeed, political considerations once again make havoc of this sorely tried corner of Europe. Relations between Lithuania and Poland are at present anything but neighbourly. The frontier is closed, and through railway communications have long since ceased. The Lithuanians, for their part, are very sore that the terms of the Treaty of Suwalki, which gave them Vilna, should not have been carried out by its Polish signatories. The Poles, on the other hand, assert that the Lithuanians have no shadow of a claim to the territory in question, and affect to regard the whole matter as engineered by an interested third party. Whatever the rights or wrongs of the case, however, it is certain that until a solution of the Vilna question can be arrived at in a manner acceptable to both parties, the cause of peace in this part of Eastern Europe cannot be regarded as assured.

THE TINPLATE INDUSTRY.

THE manufacture of tinplates is one of the few branches of the iron and steel industry which have withstood successfully the depressing influences of recent months. The chief centre of the industry in this country is South Wales, and at the present moment the volume of the trade in that district is greater than it was in pre-war years. During the past twelve months its organisation has undergone one or two important changes. Towards the end of 1922 there was inaugurated a scheme for the regulation of prices, but another development has been the extension of the principle of amalgamation, and the Richard Thomas-Grovesend combination is now by far the greatest undertaking of its sort in this country. Last year the proposal was made for the centralisation of all the sales of tinplates. That proposal was supported by Richard Thomas and Co., but opposed by the majority of the manufacturers and merchants; but while for the time being it has been found impracticable to create a centralised sales agency for the whole of the industry, the Richard Thomas-Grovesend combination has formed a new company for the sale of the whole of its output, and that output amounts to about 60 per cent. of the total production in South Wales. These factors have served to add to the stability of the industry, and it is doubtful whether there are many employments in the country where the relations between employers and workmen are so amicable, and which can claim so notable an immunity from strikes. The relations between manufacturer and workmen are regulated by a Conciliation Board, whose constitution and operations exercise a very considerable influence on the scheme for the co-operation of Capital and Labour proposed by the Whitley Committee. During the past few years there have been many occasions when differences of an acute character have arisen concerning wages, but except for one or two local irregular stoppages, these differences have been adjusted without any break in the continuity of work.

The output of tinplates in 1923 was greater than in any previous year in the history of the industry. It amounted to over 720,000 tons, and of that over 605,000 tons were exported. The output during the first half of the current year, as well as the exports, are on a scale even greater than that of 1923. The average monthly output of tin, terne, and blackplates last year was 60,600 tons; in the first quarter of the current year the production averaged 66,100 tons; and it is quite probable that the figures for the second quarter of the year will show that that increased rate of production has been maintained. The

number of works open and the mills in operation are greater than they were in the first half of 1923, and the statistics also show increases in the number of sheet mills in operation. Moreover, both the export and the inland demand has been more active. The uses of tinplate for canning purposes are increasing, and in the six months ending last June the total quantity exported to foreign countries (including black plates) amounted to 321,600 tons, compared with 310,400 tons in the corresponding period of last year. In coated plates there has been an increase this year of about 22,000 tons, but blackplates have fallen off to the extent of about 10,000 tons.

Most of the iron and steel countries of the world have their own tinplate industries, and all foreign countries, as well as oversea possessions impose heavy tariffs for the protection of the native industry. The latest market to strengthen its tariff walls is that of India, where the Tata Steam Company, which is operating in conjunction with the Burmah Oil Company, and has built near Calcutta a magnificent tinplate works in which the best American and Welsh processes of manufacture have been combined, has been able to secure the support of the Government under the new tariff laws. Notwithstanding, however, the obstacles which these tariffs offer to the tinplate trade, the foreign demand for South Wales tinplates is increasing, and increasing at a greater rate than the inland demand. Moreover, the foreign demand possesses a remarkably world-wide character. It is not predominantly limited to any one particular market, as was the case before the McKinley tariff led to the loss of the United States demand. The evenness of the trade done with foreign countries and the relation of the exports during the first half of the current year to those in the first half of 1923, are shown in the following table giving exclusively the exports of tinplates:—

To—	First Half. 1923. Tons.	First Half. 1924. Tons.
Europe	98,847	97,605
Far East	57,505	53,245
Australia	20,986	30,753
Argentina	15,752	20,366
Canada	15,105	16,920
United States	8,772	819
Other countries	64,905	83,926
Totals	281,872	303,634

The markets included under the term "Europe" are Norway, Germany, Netherlands, Belgium, France, Portugal, Italy, and Roumania, but it is probable that the term "Other Countries" also includes European markets. It may safely be estimated, therefore, that Europe absorbs at least one-third of the total quantity of tinplates exported from this country, and in Europe the largest market is that of Germany, in spite of the fact that it was in Bohemia that the industry originated, and that the German industry continues under the protection of tariffs. The United States, it will be seen, has recovered practically the whole of the rebate trade which it lost last year owing to the enormous pressure of the inland demand, but the Canadian requirements and those of Australia are increasing, and in the first half of the year our exports to those two Dominion markets were 32 per cent. more than they were in the first half of 1923.

The most disturbing of the factors affecting the cost of production this year has been that of the price of tin. It is estimated that roughly one-third of the world's output of tin is absorbed by the tinplate industry, and the prices of this commodity this year have fluctuated between about £210 and £286 per ton. Every £5 rise or fall in the price of tin means about 3½d difference in the cost of tinplates per box, and in the light of this fact it will be easily realised how embarrassing to the tinplate manufacturers was the price of tin, when in March last it reached about £286 per ton. At that period the minimum price of tinplates was 23s 6d basis I.C. f.o.b. works port, at which it had been unchanged since November, 1923. The higher cost of tin, accompanied as it was by an active demand for tinplates, led to an advance in prices of about 1s per box above the minimum, but with the collapse in the price of tin in April and May the market prices of tinplates eased off, and as from the beginning of June the minimum basis price of tinplate boxed was reduced from

23s 6d to 22s 7½d, at which it has since been stationary. Under the stabilisation agreement, which provides the machinery for the fixing of the minimum prices for tinplates, the local tinplate manufacturers receive their supplies of tinplate bars from the local bar-makers at a rebate of 7s 6d below the minimum prices of such bars. Simultaneously with the reduction in the prices of tinplates at the beginning of June, tinplate bars were reduced from £8 18s 9d to £8 12s 6d. The imports of foreign blooms, billets, and bars have been phenomenally heavy during the past six months, but practically all these imports have been absorbed by the manufacturers of corrugated and other heavy sheets, rails, &c., in South Wales and the Midlands, for tinplate manufacturers who are parties to the stabilisation agreement—and over 95 per cent. of the output of tinplates falls under the control of that agreement—are under an obligation to take their supply of bars from the local mills. This is one of the reasons why the production of steel ingots and castings in South Wales continues greater than that of any other district in the United Kingdom. The tinplate industry in that district consumes over one million tons of steel ingots per annum, or nearly half the total output of steel ingots and castings produced in South Wales, and the latest returns published by the National Federation of Iron and Steel Manufacturers show that in the first half of the current year South Wales and Monmouthshire have been producing at the rate of over 200,000 tons per month, and that this quantity represents, on an average, about 27 per cent. of the country's total output of steel ingots and castings. The general opinion is that the stabilisation agreement has justified itself, but it still remains to be seen whether it will be able to stand the strain of a prolonged period of depression.

THE RUBBER POSITION AND OUTLOOK.

(BY A CORRESPONDENT.)

THE rubber position since the end of June has undergone a very welcome change for the better, and sentiment would appear to be gradually improving. Demand is chiefly for spot rubber, but forward business is coming in also. The supplies of actual rubber are not too plentiful considering the potential needs of consumers with contracts maturing, and in the circumstances it is not surprising to find that some of the larger holders are becoming very reserved.

A careful survey of the whole position would certainly seem to justify fully the view that the market is now on the threshold of a gradual and more permanent recovery than anything witnessed since the official scheme of restriction came into force. About the middle of last May the London spot price of fine rubber collapsed to 9½d per lb. Last month it rallied at one time to well over 11d, but relapsed almost to the worst in the last week in June. This, however, has been followed by a much firmer feeling, and this week the commodity has been firm at round about 1s per lb, with a little more paid for forward deliveries. The recovery from the lowest of the year is thus fully 2½d per lb, and that this striking rally should have taken place in what may be termed the dead season of the year and very significant. It may be taken for granted that there will be a further curtailment of the standard production by 5 per cent. on August 1st, and this reduction will remain in force for a period of three months or longer, unless the average price within that period rises to at least 1s 3d per lb. Considering that the accumulations of stocks at the sources of production and in the consuming markets are now estimated to be considerably less than they have been at any time since the official restrictions came into force, and that the extreme spot prices recorded here last year were 1s 6½d and 1s 1½d, there is certainly a reasonable prospect of a further rise in the price from the present comparatively low level, although, of course, the ultimate course of the market will depend more on an increased and regular consumptive demand rather than fresh speculative activity.

There is no doubt, in any case, that a more hopeful sentiment has begun to characterise the market, and there

are pretty definite indications that all the adverse factors have spent themselves during the recent period of depression, and this remark may be applied with all truth to the American trade. The United States is the largest world consumer of the commodity; thus it is obvious that the bearish tactics pursued by the American rubber-consuming interests in order to pick up cheap rubber have rendered the recent depression more acute at times, especially when a good deal of "distressed" rubber was forced on to the market. With the elimination of weakly-held commitments, it was found that with the chief holders of actual rubber on this side completely out of the market at the low level of prices, the filling of only moderate trade requirements became more difficult except in a rising market, and this, together with the continuation of light imports, resulted in a steady depletion of the warehouse stocks at this end. These stocks, which amounted at the close of last year to over 61,000 tons, were within the last six months reduced by fully 12,000 tons down to about 50,000 tons, and they have varied only slightly from this amount within the last few weeks, the total at present being about 51,500 tons. This is a clear reflex of the falling off of our imports, which for the first half of this year were appreciably less than for the same period in either of the previous two years. The official figures of imports and re-exports, covering a six months' period for three years, reveal the fact that this country has been exporting rubber on balance to a considerable extent, the returns being as follows:—

	(In Centals of 100 lbs.)		
	1922.	1923.	1924.
U.K. imports January-June....	733,294 ..	749,844 ..	701,953
U.K. re-exports January-June..	643,808 ..	948,009 ..	791,089
Deficit or excess in re-exports ..	89,486 ..	+198,165 ..	+ 89,136

It will thus be seen that, whereas we imported 89,486 centals on balance in the first half of 1922, our re-exports for the same period of last year and this year indicated an excess of 198,165 and 89,136 centals respectively over the quantities imported. The large excess in the re-exports in 1923 was due to the exceptionally heavy American takings, which alone represented considerably more than half of the total re-exports in six months of 948,009 centals. For the first half of this year, however, the American takings were substantially reduced to only 319,167 centals out of the total shown above of 791,089 centals, but thanks to the considerably better takings from other countries the total re-exports, nevertheless, overlapped imports. In contrast to the decreased American takings from this side, which were so far this year, however, even better than in the first half of 1922, it is very satisfactory that the Continental takings have been generally steadily on the increase. As compared with two years ago, quite large increases are shown (with the exception of Germany) in the case of the chief Continental consuming countries. This more particularly refers to France, whose takings increased by roughly 50 per cent., which certainly speaks well of her absorbing capacity under somewhat adverse economic conditions. Italy's takings in two years were fully doubled on the six months' period, although her takings are only about one-fourth of those of France. Scandinavia and even Russia are also becoming more important buyers, and Canada has increased her importations continuously from this side. Fair quantities have been shipped in the last few months to Germany, but her takings are a good deal less than they were two years ago, and they are likely to be kept down until her trade can be restored.

On the other hand, the leading American consuming branch—viz., the tyre industry—has been this year most seriously handicapped by a considerable excess of output, combined with the hold-up of the outlet for tyres either through unseasonable weather over the spring period, or the introduction of a new style of tyres at a reduced cost. Owing to this, the disposal of the large stocks of old high-cost tyres has presented great difficulty even under persistent price-cutting, and consequent loss of profits in most directions in that important industry. Naturally enough, American tyre manufacturers have shown themselves the more circumspect in their dealings in raw material. Manufacturers' operations in the U.S. have been perforce more restricted owing to political and

BUYING AND SELLING AGENTS IN LONDON AND ABROAD.
DEALERS IN ALL CLASSES OF EASTERN PRODUCE.

industrial uncertainties, but the difficulties under which the American tyre trade is labouring are only temporary.

According to the returns issued by the Rubber Association of America, the total American imports of crude rubber during the month of May this year amounted to 23,914 tons, of which 22,466 tons consisted of the plantation product, as against the exceptionally heavy returns for May last year of 36,184 tons and 34,609 tons respectively. The total imports of all rubber for the five months up to the end of May were 137,476 tons, which is roughly 20,000 tons short of the corresponding period of the previous year. While the returns have varied considerably from month to month, the monthly average out of the total given above represents about 27,000 tons, which is certainly not so bad as might have been expected in the light of the rather alarming reports so freely circulated about the state of the U.S. industry, possibly to some extent with the idea of influencing the market for raw rubber. Assuming that American conditions improve towards the autumn, and seeing that the deficit in the American imports is not very large so far this year, this setback may easily be made up over the remainder of the year in the event of a stabilised market as confidently expected from its present improved aspect.

The slump in rubber, accompanied as it was by a decline in tin (the two staple products of the Malay Peninsula), has hit a very important Empire industry rather hard, and thus it is satisfactory to be able to write about a recovery. There is not much in the recovery so far, but well-informed opinion is inclined to take a somewhat optimistic view of the outlook.

STOCK EXCHANGE RESPONSIBILITY.

(BY A STOCK EXCHANGE CORRESPONDENT.)

IT says something for the financial education of the public to find that the affairs of the Anglo-Burma Oil Company, Limited, have been brought to the notice of Parliament, and that they should be the cause of a good deal of comment in the Press. Hundreds of similar cases equally flagrant have passed into the limbo of oblivion in the past without a query being raised about them, and with no effort being made either to fix responsibility upon those who caused the loss, or to obtain any guarantee that further losses of the same kind shall be guarded against by the action either of Parliament or the Stock Exchange Committee. In this particular case of the Anglo-Burma Oil Company, the sum of £365,000 was called up, and the number of shareholders is stated in the official summary of the High Court of Justice as 1,710. There is a deficiency altogether of £516,372 14s 4d, against estimated total assets of 2s 8d. The report of the Assistant Official Receiver discloses an extraordinary state of affairs, and the public's interest is briefly summarised in the statement that: "In the meantime, there had been a settlement of 3,200,070 shares on the Stock Exchange, and there had been very heavy dealings on the Stock Exchange in buying and selling the shares by or on behalf of Munroe and the Constitutional Trust in order to make a market, apparently with disastrous results to almost everyone concerned in the transactions." The President of the Board of Trade, Mr Sidney Webb, promised in the House of Commons on Tuesday last that the Government will give consideration to the request that a departmental committee may be appointed to examine the Companies Acts for the purpose of ascertaining in what particular

these could be amended. The object of such amendment would be to render it less easy for the principles of liability to be used in future in such a way as to permit of results such as those disclosed in relation to the Anglo-Burma Company. Mr A. M. Samuel, M.P., asked whether protection should not be given to the public, and Mr Sidney Webb replied that if the question were repeated later he would be able to give him an answer. The shares were actively dealt in at one time by the Oil market in the Stock Exchange. The price was run up, and it may be shrewdly assumed that a severe proportion of the heavy losses sustained fell upon jobbers in the House, who were left holding substantial blocks of shares when the company came to grief. It is not the habit of Stock Exchange members to cry over spilt milk. They are too accustomed, in the first place, to making losses as well as profits for them to regard the results from dealings in any shares as more than an item in the year's work. The public, however, are not so easily satisfied, and, in the outcry which has arisen in connection with this concern, the matter of the Stock Exchange Committee's responsibility in having granted permission to deal in shares which subsequently turned out to be worthless is being discussed. It may be useful to remark in this connection that in applications for permission to deal in shares, the practice is for a Stock Exchange firm to supply, to the Share and Loan Department of the House, certain specified particulars which have to be produced, and to show that the company has complied with the requisitions demanded by the Stock Exchange Committee before permission to deal in the shares will be granted. Between permission to deal, and a quotation in the Stock Exchange Official List, there is a difference, not so subtle but what it can be generally understood by the public, although people may well be tempted to ask why the same amount of information, &c., shall not be required in all cases, whether shares receive or not an official quotation in the Stock Exchange lists. It is obvious enough that the Stock Exchange official attitude of disclaiming any approach at censorship is reasonable and businesslike. If the House were to affix its *cachet* to any stock or share, this would imply the shouldering of a grave obligation, and one which would, sooner or later, lead to undesirable complications. At the same time, the mere fact of the Stock Exchange Committee insisting upon certain formalities of detail from a company before permission to deal in its shares will be granted is, in itself, an oblique acceptance of a responsibility which the public understand to mean that examination has been made into the affairs of the concern. The Committee cannot grant in one case, and refuse to grant in another, permission to deal or an official quotation without by so doing taking upon themselves a certain degree of responsibility. Up to what point censorship shall extend is the matter now at issue. People who have lost money in swindles whose shares have been marketed in the Stock Exchange are apt to rush to the conclusion that the House lends its machinery without due examination into the affairs of a company, and so widens immensely the circle of harm which a ramp can do in the way of causing loss to the public. The case of the Anglo-Burma Oil Company makes an illustration of the way in which Stock Exchange, as a market, can be used as the happy hunting-ground for swindlers who want to sell worthless shares. It is not surprising that a demand should have arisen, from within the House as well as outside it, that the Stock Exchange Committee shall do more in the future than they have done in the past to see that a company shall have at least some foundation for making its appeal to the public for cash. Putting it bluntly, the present process is held to be too formal and mechanical for it to give the public that protection to which they are justly entitled to look from the Stock Exchange as the upholder of honesty and fair-play in the financial world. A gamble will always be a gamble, but there is wide distinction between that which offers a man at least a run for his money, and another which is nothing more than a trumped-up concern devised for the purpose of extracting money from the pockets of people who are impressed, *inter alia*, by the fact that permission to deal in its shares in the Stock Exchange has been granted by the Stock Exchange Committee.

Notes of the Week.

Coal and Power.—Mr Lloyd George has performed a useful and timely service in reviving the discussion of the basic problems of the coal industry. For the time being the position of the coal mining industry is better than some years ago owing partly to the existence of a sound wage agreement, which, though open to objection in detail, is sound in principle. Nevertheless, it cannot be long before its problems come up again in an acute form, and it is well that we should be well prepared in advance, and not find ourselves, as so often, trying to shut the stable door after the horse has bolted. The two or three main theses which Mr Lloyd George puts forward are none of them new. They are, in fact, a summary of opinions which have been developing in various quarters over the last five years. He proposes that the State should buy out the owners of mining royalties; that something should be done, by means of district and pit committees, to give labour a real voice in management; and that the ideas underlying the Electricity Bill of 1919 should be revived. All these proposals have in the past been discussed and supported by the *Economist*. The most important of them—namely, the proposal to purchase mining royalties, was advocated by all the parties to the Sankey Commission. As the Lloyd George Report* puts it, the function of the State is not to undertake productive functions, but to "see to it that the necessary conditions shall exist in which the creative enterprise and energy of its citizens can most effectively operate." The reasons which we advanced five years ago (*Economist*, May 24, 1919) in favour of royalty purchase still hold good. It would give the State the right at definite intervals to dictate the terms of exploitation, and enable it to proceed step by step by way of experiment in various districts. It would, from the financial point of view, be far less speculative than buying out the companies; and it would relieve the Government of the necessity of organising stereotyped management or becoming a great direct employer of industrial labour. "The control of mining leases would, moreover," as we then wrote, "gradually enable the State to group the mines into such units as experience proves to be the most economical." Since that time the State has compelled the production of accounts in a form which shows the public and the miners how the industry is faring. With the State as the granter of leases, more might be done in this way, and the plan for appointing advisory pit committees and the association of both consumers and miners with the Ministry of Mines would be a further practical and helpful step. We shall find future occasion to discuss these matters in more detail, and do not suggest that the plan which the Lloyd George Report puts forward may not need readjustment in some important particulars. Its framers themselves would regard their proposals as rigid and unalterable in detail, but they form a useful basis for practical discussion. Nor is less attention deserved by the section of the Report devoted to the problem of electric power. Hitherto the proper development of electric power in this country has been obstructed in two ways. It has grown up piecemeal, and has felt the obstructive power of vested interests in opposition to the development of large scale production. Secondly, it has been hampered by legal restrictions. As things are at present, the Electricity Commissioners' only weapon is persuasion. With the retail system in force, compulsory powers will be needed to attain electrical progress comparable to that of our industrial competitors. The vital points are, as is shown by the tenor of the discussions at the Power Conference at Wembley, that one of England's immediate necessities is a much more rapid development of large-scale power plant; and, secondly, that there is need to economise to the utmost in the use of our most important raw material of wealth.

The Problem of the Gold Standard.—Mr Graham, Financial Secretary of the Treasury, committed himself last Wednesday a little more definitely than any other members of the Government have yet done on the subject

* "Coal and Power." The report of an enquiry presided over by the Right Hon. D. Lloyd George. Hodder and Soughton. 1s.

of the gold standard. Having observed that, in his opinion, this country would never embark upon a policy of inflation, he said that, "weighing up the disadvantages and advantages of the situation, I think clearly the duty of this country is to work gradually and safely along the lines of deflation, and to make the best contribution we can towards the re-establishment of the gold standard." Mr Graham, who was careful to explain that he was speaking only for himself, and not for the Government, did not attempt to say how and when the policy should be carried out, or touch upon the vital question what we are to do if the American price level behaves in an unfriendly way and sinks away from the British level. Nor did he attempt to estimate the very baffling and conflicting forces that will operate on the exchanges in the next few months. But we may perhaps draw two firm conclusions from this, and from other recent Ministerial statements. The first is that so long as the present Ministers remain at the Treasury, the Labour Government will not succumb to the temptation to meet financial demands by the easy road of inflation—direct or indirect—and, secondly, that the Government will not attempt in any way to control or influence the monetary policy of the Bank of England. The recent strength of the dollar exchange is, we think, in part, at all events, due to removal of the fears of an inflationist tendency on the part of a Labour Government, and to the signs in the City of London of a more active determination to use every opportunity to foster and to hasten the return to parity.

Indian Problems.—Nearly two months have elapsed since the publication of the Report of the Lee Commission on the Indian Civil Services. In the House of Lords, on Monday night, Viscount Peel raised a debate on the state of affairs in India, and both he and Lord Lee himself emphasised the urgent need for taking action on the lines of the Report. The dual aim of its recommendations—which was discussed in the *Economist* of June 7th—was to satisfy the native desire for speedier Indianisation of the Services, and to remove grievances as regards pay and anxieties regarding security, which are felt acutely by the British members of Indian Civil Services. It cannot be said that the debate in the House of Lords throws any new light on these problems. The Lee Commission, like the Dawes Committee, presented their proposals as an homogeneous and indivisible plan, to be put into operation in its entirety. The Secretary of State for India, Lord Olivier, pleaded that before action could be taken upon so comprehensive and important a report, a considerable time for consideration was necessary, and Lord Lee admitted that the constitutional procedure was to submit the Report to discussion in the Legislative Assembly. The latter, however, and others with him, fear that majorities which have rejected Budgets and refused to vote Ministerial salaries are hardly likely to say, "Let us do the generous thing by the Civil Service." On the other hand, it is of urgent importance that some scheme of the nature of that propounded by the Lee Commission should be put into force without delay. Lord Lee went so far as to say that, unless the proposals of his Commission were adopted, there could not be stability and contentment in the Services, without which "no reform which could be devised for the government of India could possibly succeed." In a sense, the Lee Report has given to India the unique opportunity which the Dawes Report gave to Europe, and, like the Dawes Report, it carries the weight of unexpected unanimity among members of widely divergent views. Surely these facts will impress themselves upon the Legislative Assembly, sufficiently, at any rate, to preclude purely obstructionist opposition. In the debate in the House of Lords reference was also made to the recent disorders in the Punjab, but Lord Olivier carries us little further with his statement that: "The Punjab Government, with the approval of the Government of India, intended to maintain order and peaceful security by consistent application of the law against all offenders, while neglecting no means of arriving at a speedy and equitable solution with regard to the matters in controversy." He also proclaimed his faith that the Montagu-Chelmsford Constitution has not failed. Whether that statement can be repeated a year hence must in some

measure at least depend on the fate of the Lee recommendations.

Irish Free State Affairs.—The Oireachtas, writes our Dublin correspondent, is winding up its session and the holiday season, beginning with the famous Dublin Horse Show and the Tailtean games revived on a grandiose scale, is imminent. The Free State Government, as was stated last week, has released Mr. de Valera and his lieutenants. This is a sign of strength and a symptom of stability—yet the position is not free from causes for anxiety. The last two seasons were marked by great agricultural depression, and Ireland's principal industry is agriculture. The depression itself depending largely, as it did, upon world causes, was grievously accentuated by the insurrectionary sabotage of Mr. de Valera's friends and their Communist allies. The financial dislocation due to the change of political systems and the pensioning of officials on a large scale, has helped to bring prosperity to a low ebb—and the strictness of the Government in its collection of arrears of rates, taxes, and land purchase annuities has drained the country of money. There are some signs of nerves beginning to show a raw edge. Newspapers which have lectured the Government upon the necessity for the strictest orthodoxy in financial methods—upon the vital need of balancing the Budget—are beginning to cry out about the burden of taxation. It is a not unpopular cry, naturally, but the public understands that neither it nor the Press can have it both ways—and it sees that the Government is making great efforts to pull things through. But, of course, there is some grumbling amongst those who can, and have to, pay, and some discontent amongst those who are compulsorily kept standing idle. There is no serious harm done yet. The half-yearly reports of the principal banks—the Bank of Ireland has none, and the Royal Bank of Ireland period ends only on August 31st—show a perfectly sound position, though not without reflections of the prevalent depression. Nor must the ease with which the National Loan of £10,000,000 was subscribed be forgotten. Again the revenue is coming in abundantly—income-tax from April 1st to July 19, 1924, is £1,616,000, against £1,177,000 for period from April 1st to July 21, 1923; Post Office receipts are £400,000, as against £350,000 in the previous year; Customs duties are somewhat higher, in spite of the Government, in imposing certain increased duties, having provided a long interval for the benefit of traders desiring to fill up with stocks at the earlier and lower rates; and there is a cash balance in the exchequer of £5,315,731. Much will depend on the weather during the next few weeks—the crops are abundant, with heavy growth, but are badly in need of sunshine and warmth if the ear is to fill, the roots to swell, and the crops to be saved. A bad harvest would be a really serious calamity—and a recurrence of policies of violence might give the *coup de grace* not so much to our new political institutions, but to the whole machinery, economic and financial, upon which the well-being of the country in the present and the hopes of its future prosperity depend.

Employment in June.—Statistics published by the Ministry of Labour Gazette show that there was a decline in employment in the early part of June, followed by a recovery in the latter part of the month. Thus the total of registered unemployed in Great Britain and Northern Ireland rose from 1,022,000 on May 26th to 1,052,000 at June 16th, and fell again to 1,015,000 at June 30th. The net result is a faint improvement, and the percentage unemployed of all the workers covered by the Unemployment Insurance Acts fell from 9.5 to 9.4. On the other hand, the trade union percentage of unemployment, which refers mainly to skilled workers, moved slightly, in the other direction, namely, from 7 per cent to 7.2 per

cent. Monthly movements of the trade union percentage over recent years and before the war are traced below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

* Excluding coal miners.

The chief industries in which employment conditions became worse in June were coal mining and wool textiles, but there was some improvement in the engineering and shipbuilding industries.

Cost of Living.—After ling for four successive months, the level of the cost of living to an average working-class family rose slightly in June, to become on July 1st 70 per cent. above the level of July, 1914, as compared with 69 per cent. above on June 1st and 69 per cent. a year ago. Monthly movements of this index figure, as calculated by the *Ministry of Labour Gazette*, since the beginning of 1918, are shown below:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)

December ..	120	125	169	99	80	77	..

The figure is still hovering around the low level touched just a year ago. The slight advance in June was due to a rise of 2 points in the figure for retail food prices, which at July 1st were 62 per cent. above the level of July, 1914. Sugar showed on an average a further fall of about ½d per lb, and imported meat prices declined slightly, but these movements were more than balanced by small increases in quotations for eggs, butter, potatoes, bacon, British meat, and cheese.

Wheat Prices.—A Mark lane correspondent writes that the sensation created by the rise in imported wheat at the close of the old crop season is apparently due solely to the greatly increased dependence in the last months of the cereal year on the overseas sources of supply. The home crop last autumn opened at 9s per cwt, and is now closing at 12s 3d, an increase of 3s 3d to those who stored. The imported wheat measured not unfairly by the control type of best Canadian opened at 10s and is closing at 13s, a rise of 3s per cwt. To an inquiry, "Can a rise at the end of a season be prevented?" our correspondent's answer is, "Only by an equal distribution of the rise over the entire season." If growers, whether British or overseas, had refused to sell in early months at 9s to 10s they would not now be getting 12s 3d to 13s, but the total prices made for a whole season are governed by world production and not by local policy of holding or freely proffering for this or that month. The present stringency is, however, increased by the depleted state of the London granaries, which on July 1st held 14,000 quarters of wheat only.

The Advance in Cotton Prices.—Our Manchester correspondent writes:—Since last week important developments in the raw cotton markets of the world have taken place, there being a striking rise in prices. On Monday last the Department of Agriculture of the American Government published a sensational report on the crop for 1924-25. The condition figure was 68.5 per cent., against 71.2 per cent. a fortnight earlier. In market circles the general opinion was held that since the previous report there had been an improvement in the condition, and a report of about 71.5 per cent. was anticipated. When the official announcement was made, the effect in the New York market was described as amazing. Prices were pushed up in a short time by nearly two cents. In Lancashire trade circles there is a disposition to discredit the Government Report, but the fact remains that information from this source is the most reliable that can be obtained, and whether the Report be correct or not, operators take their lead from the Government statistics. The indicated crop is now 11,934,000 bales, exclusive of linters, against 12,144,000 bales a fortnight earlier. It may be said that October futures in the Liverpool market on Monday evening were done at 14.80d, but on Thursday sales were put through at 16.84d. For several weeks Lancashire traders have adopted "bearish" tactics, and it must be admitted that many local operators have been caught "short." The necessity for cover has resulted in the higher prices being maintained, as buyers have met with a scarcity of contracts in Liverpool. The crop in the United States has still to pass through a critical period, and the chief reason for "bullish" activity is the absence of rain in Texas, where it is needed. If the position in that State is relieved, there may be heavy selling and a fall in prices. It is feared that the rise in values which has taken place will have a detrimental effect upon trade in Lancashire, and those people who have expressed optimistic views as to industrial conditions this autumn are beginning to modify their views. The position at the moment is very unsettled, but in another month traders will be more favourably situated to estimate the probable crop for next season and the likely course of prices.

The Economic Situation in Denmark.—The very full Report (to April, 1924) from the Commercial Secretary to the British Legation at Copenhagen, recently issued by the Overseas Trade Department, indicates that Denmark, like other countries, is recovering from post-war depression. The recovery is perhaps obscured by the almost continuous fall in the krone—from 20.55 to the £ in July, 1922, to 28 last March, and about 27 at present, a fall which has defied all efforts to stop it, and is ascribed chiefly to the recurrent Budget deficits and the large adverse balance of foreign trade. The current deficits, however, are gradually being lessened; public expenditure is largely on "social" objects, such as care of children and old-age pensions; the adverse trade balance is mitigated by the profits from shipping and the transit trade; the excess of imports is largely due to exceptional expenditure on fertilisers, cattle food, coal, and raw materials, and on replenishing stocks depleted by the war; and shipping, agriculture, and industry have profited by the depreciation. The apprehensions inspired by it, however, have led to extensive purchases of foreign currencies, defeating the influence towards stabilisation exercised by the Exchange Equalisation Fund. The Government is combating the adverse trade balance by fresh taxation, especially on luxuries; but the population clings to the higher standard of living set up by the war. The Landsmansbank has been reorganised under a Government guarantee, the insurance crisis has passed, bankruptcies are fewer, and the rise in shares of all descriptions indicates optimism. On the other hand, it is noted that the number of income-tax payers and the revenue from the tax have declined, but this may be the effect of past rather than present conditions, and revenue from indirect taxation has increased considerably. Labour troubles have been averted, and the harvest, in spite of a wet summer, was above the average, the hay especially; the arable area was considerably extended, the decline in pasturage being partly affected by the increased production of lucerne. More sugar beet was grown than in 1922, though less than in 1921, and Polish skilled labour is to

be imported for its cultivation; it is hoped to export beet sugar. The number and export of horses decreased through the growth of motor traction and the decline in the German demand. That of cattle remained nearly the same, except for a slight increase of milch cows; but pigs increased from 1,900,000 to 2,900,000. The export of butter, bacon, and eggs was greater than in the record year 1914. Great efforts are being made to improve the quality of the dairy produce and the bacon. Of the latter, 99 per cent. goes to Great Britain; the production is thought to have been overdone, but, were it reduced, the keen competition of the Dominions would seize and hold the ground lost. A full account is given of Danish agricultural co-operation. The fisheries, depressed by the loss of the German market, now export mainly to Great Britain. Of the import trade, the most salient feature, apart from those already noted, is the growing demand for motor vehicles, of which hardly any are manufactured locally, though many are now "assembled" from parts imported from America. Shipbuilding has shown renewed activity, in spite of the closing of many small yards, and there has been a notable Danish improvement in Diesel motor-engines. Trade agreements have been concluded with Russia, Roumania, Finland, Esthonia, and Lithuania, and renewed with Austria and Hungary. The mercantile marine, reduced by the elimination of sailing vessels and old steamers, seems to have gained in efficiency, and motor propulsion is being largely substituted for steam. Emigration is increasing, notably to Canada; a Danish colony in Nicaragua has failed. The Report almost defies summary, but it may be commended to the attention of all concerned with Danish trade.

American Silver Exports.—For the first time in nearly two years, writes our New York correspondent, commercial bar silver for future delivery has lately been commanding a premium over the spot quotation in the New York market. The spot price continues quite firm, having advanced last week to within ½c of this year's high record of 67½c reached in the early part of June, although for the present it has eased off more than one cent from that top level. It is still 3c above the year's lowest of 62½c on January 11th. The market's strength is due to the growing demand, especially from abroad. During the fiscal year just closed, silver exports were larger than at any time since 1920, when the heavy movement to India was under way. Complete figures for the fiscal year are not yet available, but for the ten months ended with April silver shipments from this country totalled \$80,450,570 in value. This compares with the preceding full fiscal years as follows:—\$55,906,956 in 1923, \$62,694,677 in 1922, \$52,536,171 in 1921, and \$179,037,260 in 1920. April was the seventh consecutive month to show an increase in silver exports, and the aggregate for that month, \$3,893,944, was the largest for any month in the past fiscal year to that date. Some bullion dealers report that Russia is acquiring silver here on a large scale for coinage purposes, but most authorities declare that the extent of the Russian demand has been exaggerated. The latest Department of Commerce figures available show that the heaviest shipments have been made to India and China. Of the \$80,450,570 exported in the ten months of the past fiscal year, \$66,957,529 went to those two countries; India took \$35,096,893, as compared with \$12,091,149 in the corresponding period of the preceding fiscal year, while exports to China amounted to \$31,860,636, as against \$19,183,061 in the first ten months of the previous year. The domestic market for silver has continued strong, despite the failure of Congress to enact legislation designed to complete transactions under the original Pittman Act. Pressure had been brought to bear by silver interests to complete such purchases, and the Senate passed a Bill directing the Treasury to purchase 14,589,730 fine ounces of domestic silver at \$1 an ounce; the measure, however, was not adopted by the House of Representatives. The sustaining influence, as indicated, has been the heavy outward movement to foreign countries, particularly for currency purposes in the Far East and Europe. As European political and economic conditions improve, there appears to be a growing demand for metallic currency, and that demand is

reaching this country. Evidence thereof is found in the order recently placed here by the Government of Poland for new silver coins. A contract was entered into with various leading companies to furnish the necessary silver and alloys to provide 12,000,000 one-zloty and 6,000,000 two-zloty silver coins, which will be made by the United States mint. It is estimated that the contract calls for about \$4,800,000 worth of the new coins. This is said to be the first time since the war that an order for coins has been placed by a foreign Government with the United States mint.

Standard Bank of South Africa.—At the annual meeting on Wednesday, Mr Stanley Christopherson, chairman of the Standard Bank of South Africa, Limited, gave his usual interesting survey of conditions in South Africa, which will be found printed in full in a later column under company meetings. He touched briefly on the change in the constitution of the South African Reserve Bank, under which the bank representatives are no longer eligible for a seat on the board, and although opposed to the change made by the Government, "needless to say, we readily accepted their decision." On the question of the gold standard, he urged that before the Union Government takes any definite steps, it should give the question the most careful and critical consideration. "It should not be a decision arrived at by a Department of the Government. The question bristles with difficulties and with debatable points, and all interested should be allowed to state their case." In reply to accusations of a policy of credit restriction, Mr Christopherson emphatically stated that, "given security and a good reason for a loan, 99 out of every 100 will obtain accommodation, but I say equally emphatically, that we are not going to be stampeded into undesirable advances by criticism from whatever quarter."

Furness, Withy, and Co.—A slight increase in profits is recorded in the report of Furness, Withy, and Co. for the year ended April 30th last, but the report mentions that owing to the continued depression in the shipping industry the profits are again derived mainly from other branches of the company's business and from dividends on investments. As will be seen from the table below, profits are now below the level of the years immediately preceding the war:—

	Total Profit.	Depreciation.	Reserve, &c.	Dividends.	Ord. Rate.
	£	£	£	£	%
1908-9	267,075	114,897	..	166,361	5

1921-22	655,207	..	200,000	452,500	10
1922-23	552,511	200,000	..	356,250	7½
1923-24	572,443	200,000	..	358,122	7½

* After payment of two years' Excess Profits Duty.

The depreciation fund is again credited with £200,000, and the ordinary dividend is maintained at 5 per cent., with a bonus of 2½ per cent., both free of income-tax, leaving £216,600, or £14,000 more, to be carried forward. The balance-sheet shows an increase of £1,003,700 in the item, "Steamships, investments in associated shipping companies, and payments on account of new tonnage," which stands at £5,402,900. General investments are £64,600 higher at £3,661,100, but debtors at £2,072,500 show a decline of £446,200, while creditors have risen by £900,200 to £496,800. An analysis of the balance-sheet will be found in a later column.

The Half-Year's Oil Trade.—The figures of petroleum imports published by the Board of Trade for the first six months of this year show an increase in quantity of 11.3

per cent. and a decline in value of 8 per cent. as compared with the figures for the corresponding period of 1923. The imports of crude oil are up by 29 per cent., of motor spirit by 17 per cent., of fuel oil by nearly 10 per cent., of lubricating oil by 9 per cent., and of gas oil by 2 per cent. There is, on the other hand, a decline of 28 per cent. in the imports of lamp oil. The quantities and values are as follows:—

SIX MONTHS' OIL IMPORTS for 1924.

	Gallons.	Value.
Crude oil	189,589,135 ..	3,243,389
Lamp oil	49,711,251 ..	1,265,712
Motor spirit	184,990,147 ..	8,181,275
Other spirit	1,035,296 ..	38,937
Lubricating oil	56,567,354 ..	3,400,950
Gas oil	36,448,191 ..	643,115
Fuel oil	181,464,408 ..	2,539,380
Other sorts	176,411 ..	22,696

699,982,193 .. 19,335,454

(Figures exclude direct foreign trade of the Irish Free State.)

It is interesting to observe the percentage of the total trade held by the large distributing companies. The imports of the four groups—Shell, Anglo-American, Anglo-Persian, and British-Mexican—amounted in this period to 89 per cent. of the total imports into the country, as against 87.2 per cent. in the corresponding period of 1923. This does not suggest that the big companies are losing any part of their trade to the small independent companies—in spite of the advent of the Blue Bird Motor Company and the more conspicuous marketing of unbranded petrol in the London district. Taking the companies individually, the percentages of the total imports this year work out as follows:—Shell, 29 per cent.; Anglo-Persian, 29 per cent.; Anglo-American, 24.7 per cent.; and British-Mexican, 6.3 per cent. The Anglo-Persian percentage is largely explained by the growth of the crude oil imports following upon the operation of its new refinery at Grangemouth in addition to its main refinery at Llandarcy. A proportion of these imports is exported from the country in the form of refined products. The exports of oil products have, in fact, increased during the six months' period by 34 per cent.—50,342,522 gallons as against 37,435,831 gallons in the first half of 1923. The Anglo-Persian share of the total trade is therefore probably less than that of the Anglo-American Oil Company.

Van den Berghs, Limited.—A slight improvement is recorded in the accounts of Van den Berghs, Limited, for the year ended December 31, 1923. Profits at £358,757 compare with £346,842 for the previous year. A settlement of "items accumulated during the war" apparently has not yet been arrived at. After payment of dividends on preference and preferred ordinary shares, a dividend of 2s 6d per share, absorbing £93,750, has been declared on the ordinary capital of £187,500. This leaves £114,624 to be carried forward, as against £108,327 brought into the accounts. Total assets are £5,655,733, as against £5,742,096 a year ago. Goodwill is still shown as £656,463, and the reserve as £500,000. It should be observed that this is partly a holding company, and that further "goodwill" is located in the holdings of "associated and subsidiary companies" at £1,476,342. Sundry debtors amount to £1,186,008, and include £407,233 in respect of "ex-enemy pre-war debts."

Transvaal Gold Mining Estates.—Few gold mining companies operating in districts of the Transvaal other than the Witwatersrand can claim any considerable degree of success; but the undertaking above-named has in the course of its career paid dividends totalling 305 per cent. For both 1921-22 and 1922-23 the shareholders went empty away; in respect of the 12 months ended March 31st last, the company re-entered the list with a disbursement of 5 per cent. An improvement in the value of the ore was the chief factor, assisted by a moderate reduction in costs. At 685,700 tons the ore reserves stand at a higher total than for several years, the value being maintained at 8.3 dwts. Of this total, however, more than two-fifths is temporarily unavailable, being contained in safety pillars, &c.; and while this condition of affairs exists, it is difficult to control the mill grade. The results obtained on outside properties are described as "not very encouraging."

Work at the Elandsdrift property will be facilitated should the proposed new power-station be erected by the Electricity Supply Commission.

Tanganyika Group.—Our mining correspondent writes:—

A compilation of the capital engaged in the group of mining and railway enterprises connected with the mineral deposits of the Belgian Congo—more particularly copper—would give a rather astonishing aggregate. At the end of last year the "liabilities to the shareholders" of the Union Minière du Haut Katanga (excluding the "dividend" shares, but including the premiums received) totalled 134,000,000f, plus 60,000,000f of debentures, and powers have been taken for a large increase. Then there are the Benguela and Katanga Railway companies, &c. British capital is interested through the Tanganyika Concessions and Zambesia Exploring companies. The former last year made an issue of 400,000 preference shares, following upon an emission of some 750,000 shares in 1922. These shares carry 10 per cent. interest, and until the end of June, 1927, are convertible into ordinary at 22s. One year's interest has been paid; the second has just been announced, presumably following upon the receipt by the company of the dividend declared in respect of 1923 by the Union Minière Company, whose distribution of 35f per share in respect of 1922 brought £60,200 into the coffers of the Tanganyika Company. For 1923 the Union Minière dividend is at the rate of 80f per share. Despite the preference issue above referred to, the free resources of the Tanganyika Company are very limited, the bulk of the proceeds having been advanced to the Benguela Company. At December 31st last cash and loans totalled £37,600; loans from bankers stood at £170,000, as compared with £283,000 twelve months previously. The profit and loss account shows a surplus of £18,900 in place of a small loss. As regards the Union Minière, last year's working profit amounted to 78,872,800f, against 48,059,100f previously, and as the special appropriations are on much the same scale as before, the balance available for allocation comes out at 51,031,600f in place of 20,200,600f. The quantity of copper produced totalled 57,900 tons, a fresh record. Of this, some 1,000 tons were contributed by the test leaching works at Panda. Presumably, the results of the experiments were satisfactory, as a permanent plant is to be put up for the treatment of low-grade ores by this process. During the first half of the current year 36,850 tons of the red metal have been turned out, and it is expected that the total for the twelve months will approach 75,000 tons. From the Busanga Mine 705 tons of tin ore were obtained in 1923. Treatment of the company's copper-cobalt ores has lately been commenced. Last year the Union Minière supplied about two-thirds of the world's consumption of radium. At the end of 1923 the ore reserves were computed at the increased figure of 72,666,000 tons, containing 4,802,000 tons of copper. Altogether, the potentialities of this enterprise are decidedly good. An important factor in the future will be the completion of the Benguela Railway. Another section was finished last year, but some two-thirds of the distance from the coast to the copper area yet remains to be traversed. The investments of the Union Minière Company include participations in the Katanga Railway, the Hoboken Metallurgical Works, the Luena Collieries, and the Compagnie Foncière du Katanga. The Tanganyika's investments include 2,700,000 shares in the Benguela Railway, to which it has advanced £1,215,700; shares in the Katanga and Rhodesia-Katanga Railway companies; 103,050 capital shares of 100f each and 78,000 "dividend" shares in the Union Minière Company; also 10,750 shares in the Nile-Congo Divide Syndicate, whose operations have "confirmed the existence of large mineralised areas." The principal assets of the Zambesia Exploring Company comprise holdings in the undertakings above referred to, and on this basis the shares are considered to be relatively undervalued. Only a small surplus is shown by the accounts, but the directors announce that further profits have since been made, and they declare a dividend of 1s per share. This, in effect, is a maiden distribution. The company has been in existence since 1891.

Aramayo Tin.—Our Mining correspondent writes:—This international enterprise is one of the largest tin producers of the world, the monthly output ranging around 200 tons, supplemented by something over 100,000 ozs of silver. As was only to be expected, the report for 1923 shows an increased profit, but the increase is comparatively small, last year's net gain of 4,798,700f comparing with 4,557,500f in respect of 1922. The inference is that the advance in the price of tin was partially offset by decline in the output; but this is one of numerous points upon which the report, as usual, is silent. By the declaration of a bonus of 15 per cent. the distributions are brought up to the same total (35 per cent.) as for the preceding year. The directors explain that the absence of any increase is due to the fact that they have invested approximately 2,800,000f in the acquisition of new mining properties, "to which reference will be made at the meeting." As a matter of fact, the dividends of each of the past two years have somewhat exceeded the profits earned, the difference coming out of the substantial balances brought forward. The cost of the additional properties above referred to is met from the same source. A note in the balance-sheet explains that the profit and loss balance is subject to this investment, as well as to exchange account. It would have been preferable, perhaps, to have placed the 2,800,000f to the reserve account. Thanks to the appreciation of the Bolivian dollar, the exchange account has become reduced to less than 1,000,000f. The additional properties include a couple of British undertakings. Doubtless the shareholders will welcome the particulars to be given at the meeting, which is to be held on the 28th inst.

The fifth Norwegian Industries Fair is to be held at Christiania from August 31st to September 7th.

Oversea Correspondence.**UNITED STATES.—GOVERNMENT CROP REPORT—COMMODITY PRICES—STEEL INDUSTRY OUTLOOK—BUILDING ACTIVITY—MONEY, STOCKS, AND BONDS.**

(FROM OUR CORRESPONDENT.)

NEW YORK, July 11.

AMONG the outstanding features of the Government's July crop report are the marked improvement in the wheat crop outlook and the exceptionally heavy indicated loss in corn, compared with the prospect at this time last year. The report shows a recovery of about half the loss in the wheat yield forecast on June 1st, and an unprecedentedly low July 1st condition of corn, this being due to the prolonged cold and the generally wet spring season experienced in many sections of the corn belt. There is shown also a substantial increase in the prospective yield of oats, with smaller gains in barley and rye, over the June 1st estimates. As compared with a year ago, present indications point to a wheat yield 46,000,000 bushels less, and a corn crop smaller by 531,000,000 bushels, despite a fairly large increase in corn acreage this year; while the yield of white potatoes promises to be 39,000,000 bushels less, and that of tobacco 181,000,000 pounds less. The present outlook is for larger yields of oats and flaxseed, but no record crops seem possible except, perhaps, in the case of flaxseed, which was extensively planted this year to replace some spring wheat. One encouraging result of the heavy indicated decrease in yields of some crops, at least from the farmers' standpoint, is the expected advance in prices, which has already begun. This week crop passed the dollar mark for July delivery.

Prices of commodities moved irregularly last month, the most notable features being the strength in grain and the weakness in cotton, wool, and livestock. The net result of the changes was another slight drop in the average level of prices—the seventh reduction since December 1, 1923. Bradstreet's July 1st index number of commodity prices was \$12.2257, which represented a decline of one-half of 1 per cent. from June 1st, of 9 per cent. from December 1, 1923, and of 6.6 per cent. from July 1st of last year, but an advance of 15 per cent. over

LONDON REPRESENTATIVE
2 & 3 Crosby Square, Bishopsgate,
London, E.C.3

the low point on June 1, 1921. Of the 106 articles used in computing the price index, only 22 advanced in June, while 35 declined and 49 remained unchanged.

Although the planning for new buildings usually slackens in June, the total sum involved in new building undertakings for which permits were granted last month was the largest for June in any year, while the total for the first six months of this year is much greater than that for any like period in this country's history. The aggregate expenditure at 159 cities for June, as shown by the permits issued, was \$247,868,460, as compared with \$281,196,883 at the same cities in May, and \$229,408,696 in June a year ago.

Much significance is attached to the United States Steel Corporation's report this week of unfilled orders on its books at the end of June. The total amounted to 3,262,505 tons, as against 3,628,089 on May 31st, and 6,386,261 on June 30th a year ago. The aggregate of forward business on hand at the beginning of this month was the smallest since November, 1914. Nevertheless, the latest report issued by the corporation is favourably construed in most quarters. A further decrease in unfilled tonnage had generally been expected, but it was considerably less than was anticipated, amounting to 365,584 tons; whereas the decrease in May was 580,358 tons, and in April 574,360 tons. The showing for June indicates the cutting into forward business is now less drastic, and this fact is regarded as a sign that the steel industry has passed the worst part of its depression. The corporation's shipments last month averaged 33,000 tons a day, or approximately 825,000 tons for the 25 working days. Since cancellations were few and light in the aggregate tonnage involved, new business for the month probably amounted to about 450,000 tons. Orders on hand on June 30th represent nearly four months' business at the June rate of shipments. Although June shipments were nearly 200,000 tons less than those in May, new business improved last month. While authorities in the steel trade do not look for any pronounced betterment until August, or possibly September, the outlook

is considered much brighter than it was a month ago.

In view of the exceptionally low rates prevailing in the Money-market, it is not surprising that the United States Treasury Department has suspended all sales of Treasury savings certificates and stamps, effective July 15th. For many weeks money rates have ruled at 2 per cent. for call loans, and at 2½ to 3½ per cent., depending upon maturity, for loans secured by Stock Exchange collateral. Bankers, generally, look for no pronounced change in money rates during the next month or two. Much will depend upon the extent of the expected revival in trade and industry.

Securities markets continue to display a strong undertone. Stocks enjoyed another substantial rise this week, the average price of representative railroad shares reaching a new high record for this year at \$87.32, while leading industrials rose, on the average, to \$97.56, which compares with the peak level for 1924 of \$101.31 touched early in the year. Easy and abundant money and the necessity of finding employment for surplus funds are the main factors responsible for the activity and strength in both stocks and bonds. In the past few days profit-taking sales, encouraged by the recent sharp advances, have resulted in some set-back from top levels, but all offerings have been readily absorbed. Market sentiment shows the relief felt over the nomination of a conservative Presidential candidate by the Democratic National Convention. Political considerations, however, are at present a minor factor, apparently, in shaping the course of securities prices.

FRANCE. — LONDON CONFERENCE — DEVASTATED AREAS—CREDIT NATIONAL—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, July 23.

FRENCH economic life is to a great extent marking time, pending the conclusion of the London conference, which, it is universally hoped, will produce some kind of practicable solution of the present deadlock in Europe. Now that the bankers have taken control of the problem, there is a widespread feeling that such a solution will be reached, but there is undoubtedly a fear that M. Herriot, in his anxiety to secure a settlement, will be inclined to go further in the way of concessions than the Chambers, when they come to pass on the details, will sanction, in which case much of the work may have to be done over again. The outstanding subject of nervousness is the fear that the supremacy of the Reparation Commission has been prejudiced by the inclusion of the American "referee," or, in other words, that a principle has been grafted on to the status of the Commission that will render it impossible for this country in future to exercise in that body the power which she claims to be entitled to in virtue of the fact that she has a claim to 52 per cent. of whatever reparation payments may eventually be extracted from Germany.

M. Herriot has pledged himself not to allow himself to be bound by any decision that may be come to until it has been approved by the Chamber and the Senate, and this factor accounts for much of the uncertainty surrounding the doings of the conference. For it must not be overlooked that, when it comes to a straight vote in either of the Chambers on the decisions of the conference, mere nominal party political strength will count for little. To a very great extent the reparation question and the question of French security stand above party considerations in the eyes of the vast majority of both deputies and senators, who will not hesitate to overthrow M. Herriot if they feel that he is allowing French interests to be sacrificed (just as they were prepared to dismiss M. Briand after the Cannes Conference if he had not anticipated defeat by resigning without venturing to meet the Chamber). There is undoubtedly a growing feeling of weariness here in regard to the reparation question, and expressions such as "*Le fantôme des réparations*" are becoming more and more common; but if French opinion is convinced that the decisions of the London Conference mean that France will not only have to leave the Ruhr, but will be unable to occupy it again, in the event of Germany again making default, there is little chance of those decisions becoming effective.

The suspension, for all practicable purposes, of the work of reconstituting the devastated area, which is now within an appreciable distance, is causing a good deal of anxiety, and there is much discussion as to the best means of minimising the hardships that must ensue. A meeting of contractors interested in operations in the devastated area is to be held in Paris at the end of this month, at which it is hoped some means may be found to enable private financiers to come to the rescue. M. Louis Marin, the Minister for the Liberated Regions, has advanced the suggestion that as a first step *sinistrés* shall be given a certificate recognising the debt owing to them by the State. The principal objection to this proposal is that such certificates would not be negotiable through the usual channels. M. Reibel, M. Marin's predecessor, urges that the whole of the cash credits still available shall be reserved for building construction alone, otherwise the skilled labour already mobilised will be dispersed, and much time would be required to get it together again. With most of the industrial plants reconstituted, he points out, it is useless to expend money that is badly wanted in other directions on furniture that would be useless if the houses to put it into do not exist. It would be difficult at present, M. Reibel agrees, to induce the public to subscribe to further loans. The principle of raising funds by lottery has already been admitted, but it is doubtful whether this method of raising money will ever be seriously considered.

Detailed figures of the operations of the Crédit National, which are now available, disclose that since this institution began work in 1920 the State has disbursed, in payment of war losses to *sinistrés*, a grand total of 56 milliard francs. These payments have been made either through the medium of the Crédit National (which has paid out a total of 24,162,586,978 francs down to the end of May) or directly by the State (through the Treasury through the Offices de Reconstitution Industrielle et Agricole, or in the form of advances in kind, &c.). The latest estimates place the amount yet to be secured for the purpose of completing the restoration work at "about 25 milliards." The total number of accounts with *sinistrés* that have been opened by the Crédit National alone is 1,542,241, representing 4,318,008 different credits of various amounts. It was originally estimated that the total number of accounts that would have to be opened would be about 1,500,000, but this figure has already been surpassed, and is eventually expected to reach 1,600,000. During 1923 the Crédit National granted new loans to traders and manufacturers for a total of 66,805,290 francs. The total amount of loans of this kind made down to the end of 1923 was 417,001,700 francs (which has since been increased to 441,561,489 francs). Practically the whole of these are long-term loans, which accounts for the fact that so far the total repayments by borrowers has amounted to only 14,681,090 francs. The categories of borrowers are shown by the following table:—

	Francs.
Food industry	73,611,023
Builders and builders' materials	32,383,399
Hotel industry, &c.	12,293,490
Electrical industries	4,918,000
Metallurgical industries	114,491,596
Chemical products	21,226,300
Textile industries	152,077,890

The loans made during the past year closely reflect the industrial activity of the country. Of these totals over 27 millions have been advanced to the textile industry during the past year, 20 millions to metallurgical interests, 9 millions to the foodstuff industry, and an appreciable sum to the brewing industry, which is gradually assuming pre-war importance in the devastated area.

The French foreign trade returns for June, which have been issued this week, show that during the month the value of French exports decreased appreciably, as compared with those for the previous month, while imports remained practically stationary. Exports, which had a value of 3,360,148,000 francs in May, fell to 2,922,304,000 francs in June, or a decrease of 438 millions as compared with May. As compared with March last, French exports showed a falling off of nearly 33 per cent. in June. This is attributed largely to the improvement in the value of the franc, the month's figures being consistent, from this point of view, with those for the previous three months. The drop

was especially in manufactured goods, which fell off from 2,453 million francs in April to 2,060 millions in May, and again to 1,794 millions last month. The effect of this comparatively heavy decline was that the visible foreign trade of the country, for the first time for several months, in June again showed an adverse balance, imports having exceeded exports by about 256½ millions. The detailed figures of French foreign trade for the first six months of 1924, as compared with the corresponding period of 1923, are as follows:—

	First Six Months of		Increase in 1924.
	1923.	1924.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	3,368,953,000	4,143,540,000	+ 774,587,000
Raw materials	9,201,393,000	13,191,862,000	+ 3,990,469,000
Manufactured goods	2,089,078,000	2,537,254,000	+ 448,176,000
Total	14,659,424,000	19,872,656,000	+ 5,213,232,000
Exports—			
Foodstuffs	1,485,157,000	1,996,841,000	+ 511,684,000
Raw materials	4,407,586,000	5,658,338,000	+ 1,250,752,000
Manufactured goods	7,459,927,000	12,689,197,000	+ 5,229,270,000
Postal parcels	796,193,000	937,924,000	+ 141,731,000
Total	14,148,863,000	21,282,300,000	+ 7,133,437,000

GERMANY.—REPARATIONS—TARIFF POLICY—FOREIGN TRADE—FINANCES—CREDIT AND INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, July 21.

THE London Conference proceedings are commented on in the Press unfavourably, and semi-officially there are threats that the Cabinet will refuse to go further with the Dawes scheme if the final London decisions do not differ radically from the lines so far indicated. These threats may not mean anything. In the end, German Governments always give way, because their immediate interest is to avoid an acute crisis, and as the Allies always have their way, the responsibility for later failures and disappointments can be thrown on them. It is sometimes noticed that Ally policy closely resembles German, in that although Ally conferences begin by seeking ultimate satisfactory solutions, they are usually content with any kind of a solution that prevents a formal breakdown. The London Conference, as Germans see it, is repeating history; the real Reparations question is being pushed into the background by the necessity of escaping conflicts. The majority of Germans take quite as little interest as the Allies apparently take in the ultimate development of the Dawes scheme. That, apart from other indications, is shown by the neglect to formulate the comprehensive economical and social programme by which alone the execution of the scheme over a long term of years could be assured.

The Minister for Occupied Territory publishes a long programme of what he understands to be the restoration of economic unity recommended as essential in the Dawes Report. He includes not merely the complete evacuation of the Ruhr, but also the restoration of legal conditions in the old occupied territory, the abolition of the Rhine-land Commission's delegate system in the local administrative centres, of the veto right claimed against German laws where military security is not involved, and of the restrictions upon freedom of entry from unoccupied territory. The Foreign Minister's organ complains that even the British proposal recognises territorial sanctions in principle, contrary to the British Note of August 11, 1923, and declares that Germany will not accept this, and further complains that the British view that sanctions must be unanimously decided on has been abandoned. The Marx Cabinet's attitude to the whole Dawes scheme, it is declared, depends upon the ultimate decision on these points.

The project for Food Duties is being proceeded with. The only organised opposition is from Socialist and Labour quarters. A Trades Union deputation of protest to the Food Minister received an emphatic negative. There is a good deal of expert criticism. The Commercial Treaties Association, which fought high Protection before the war, has condemned the scheme, and the *Frankfurter Zeitung* shows that even without duties agricultural prices

were rising and industrial prices falling, so that the disparity, which is a main reason for the duties, was disappearing. The Government's announcement of suspension of the absolute export prohibition on wheat and rye led to a sharp price rise, but prices are still lower than before the war. Brandenburg wheat (average price in 1913, 198.85 marks per ton) rose from 138-143 marks on July 8th to 170-177 marks on July 19th; Brandenburg rye (average price in 1913, 164.30 marks) from 125-133 marks to 137-144 marks. The Minister of Industry, Dr Hamm, has made a statement to the Press concerning tariff policy generally. Germany, he says, is more than any country interested in the free exchange of goods, but the general tendency of the world is the other way. German trade is still hampered by Ally and neutral import prohibitions, differential duties, and even "exchange dumping" supplementary duties, though the excuse for the last no longer exists. The new German Tariff will not have high-protectionist tendencies. But the world will not voluntarily open its markets to German goods, and it must be induced to. Further, the German import prohibitions, as far as they now exist, will soon be entirely abolished, and in view of the general rise in gold prices, the old duties would prove too low. In some cases the home Sales Tax is higher than the duty on imports, and so constitutes an import premium.

Starting from January, the Government has resumed, after a ten years' break, the publication of trade with separate countries and continents. The following table shows that, while the absolute volume of trade has heavily fallen, the proportions done with the different continents have changed very little. If, however, allowance is made for the fact that the foreign trade figures of 1924 include trade with former German territory, and with Luxemburg, Europe's share in Germany's imports has increased 9.7 per cent. since 1913, her exports 5 per cent. :—

	Millions of Gold Marks		Percentage of Total.	
	First Quarter, 1924.	Quarterly Average, 1913.	First Quarter, 1924.	Quarterly Average, 1913.
Imports—				
Europe	1,041.5	1,475.2	52.4	54.8
America	578.2	748.7	29.1	27.8
Asia	184.4	262.5	9.3	9.8
Africa	102.9	124.2	5.2	4.6
Australia	80.9	81.9	4.0	3.0
Total	1,987.9	2,692.5	100.0	100.0
Exports—				
Europe	981.6	1,922.0	72.6	76.2
America	213.7	386.7	15.8	15.3
Asia	126.3	137.0	9.3	5.4
Africa	27.7	52.7	2.0	2.1
Australia	4.5	25.9	0.3	1.0
Total	1,353.8	2,524.3	100.0	100.0

The present trade balance with ceded territories is heavily passive, but Customs frontier conditions in the west make the exact extent of the passivity uncertain. All recent foreign trade reports have been issued, with the qualification that they are defective, owing to lack of full details from occupied territory. It is now stated that the real imports exceed those given in the reports by at most 100 million gold marks, and the real exports exceed those given by at most 150 million gold marks per month. As the following table (in millions of gold marks) for groups of European countries shows, export trade to Russia and England has suffered most as compared with before the war:—

	Exports.		Imports.	
	1924.	1913.	1924.	1913.
	First Quarter.	Quarterly Average.	First Quarter.	Quarterly Average.
Former Russia	56.9	356.2	74.7	220.0
Former Austria-Hungary ..	145.6	206.8	181.5	276.2
Balkans, Turkey	53.6	49.8	45.7	78.1
Great Britain	179.8	219.0	113.0	359.6
France, Belgium	61.2	232.2	36.8	335.2
Netherlands	83.3	83.3	134.4	173.4
Northern States	103.2	135.8	176.5	193.2
Switzerland, Italy, Spain, Portugal	163.7	188.8	148.9	281.2

In comparing value figures of 1913 and 1924, the price rise should be allowed for. The present imports index (100 in 1913) is 131, exports index 121. In volume, exports to the United States were only half of the pre-war totals, while imports from there have declined a little.

Revenue received in the first ten days of July totalled 106,680,142 gold marks, expenditure 96,829,185 gold marks. After allowing for 3 millions spent on redemption of Gold Loan, there was a surplus of nearly 13 millions. Revenue in all June was 472,296,794 gold marks, against 518,737,345 gold marks in May. Revenue in the whole first quarter of the current financial year was 1,514,810,191 gold marks. The interest fine on unpaid taxes has been reduced from 5 per cent. to 2 per cent. per fortnight of delay. The Gold Discount Bank's outstanding credits to importers increased in the week ending July 15th to £6,980,163. The Reichsbank has been slowly increasing its gold reserve by buying gold, which is paid for out of its exchange holding. The money situation continues to become easier. Following their reduction of interest rates on current accounts, the Berlin banks have reduced the rate on deposit accounts from 15 to 12 per cent. The Reichsbank is relaxing its rigorous credit policy a little, apparently in the belief that the deflation policy has gone far enough. Since the embargo on credit was imposed in April, prices have fallen heavily, the home exchange market has been brought into equilibrium, and a large reserve of exchange has been accumulated. In trade quarters the demand for a moderate increase in the circulation, by means of expanding credit, is still heard.

The industrial situation shows no sign of improvement. The number of workmen on short time in the textiles branches is particularly high, and is rapidly increasing. The automobile branch is in a very bad condition. Germany, which before the war and after was a motor-car exporting country, in every month of this year imported more cars than she exported. As late as 1922 the net exports of cars were higher than before the war. In May only 80 passenger and 41 commercial cars were exported. Smelting is falling off on the Ruhr. The home market for Solingen steel products is very dull, and exports to most of the old chief customer countries have fallen badly. The total exports of fine steel cutlery in the first quarter of 1924 totalled 12,535 double centners (of 1-roth metric ton), against 16,442 double-centners in the corresponding quarter of 1923, and 22,068 double-centners in the corresponding quarter of 1922. Exports to the United States were only 977 double-centners, as against 4,599 double-centners in the same quarter of 1922 (the last normal year); to Great Britain, 1,141 double-centners, against 2,691 double-centners. The scrap-iron market is almost dead, and prices are less than half those of March. Ore prices are down. The Siegerland iron-ore mines have cut prices by 2 marks a ton. Most of the iron mines in the Lahn-Dill district have stopped work altogether.

HOLLAND.—ROTTERDAMSCH BANKVEREENIGING—GENERAL BANKING POSITION—STATE FINANCES.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, July 20.

On July 1st, at the request of the Netherlands Bank, a communication appeared in the newspapers stating that the various reports in circulation concerning the financial position of the Rotterdamsche Bankvereniging had induced the management of that bank to apply to the president of the Netherlands Bank, before whom they placed all particulars as to the position of the Rotterdamsche Bankvereniging. The president of the Netherlands Bank, after examining the information submitted, declared himself prepared to co-operate with the management of the Rotterdamsche Bankvereniging to maintain its liquidity should this be found to be necessary. This communication was, shortly before, preceded by the sudden resignation of one of the principal managers of the institution, so that it is not surprising that all sorts of rumours were afloat—the more so because it was said that the Government was concerned in the communication issued by the Netherlands Bank. No definite information has as yet

been given by any of the parties concerned, except the very pertinent declaration of one of the managers of the Rotterdamsche Bankvereniging that the condition of the bank is perfectly sound. The communication of the Netherlands Bank, although well intended, could not prevent large offerings of stock on the Stock Exchange, that were taken up by a group, of which the composition is not known. Notwithstanding this, the quotation dropped from 92½ per cent. to 84½ per cent. The amount of stock taken up must be considerable.

The banking situation of the Netherlands, however, taken as a whole, may be looked upon as undisturbed. The shares of the other large banks have experienced no disturbance, or, at most, very little, and at no time was there, even for a moment, anywhere, any question of a run. Although the expansion during the war was rather too rapid, still the condition remained intrinsically sound. With the exception of a few small banks in the provinces, only two of the larger institutions have suffered very serious losses—these were Marx and Co.'s Bank, which liquidated, and the Bank-Association, which has greatly curtailed its operations.

The condition of the Dutch banks, as at December 31st last, shows up well in the following statistics:—

SIX LARGE DUTCH BANKING INSTITUTIONS—Amsterdamsche Bank, Twentsche Bank, Rotterdamsche Bankvereniging, Nederlandsche Handel-Maatschappij, Incasso-Bank, Bank-Associatie.

From what has happened, apart from the institution immediately concerned, lessons of general interest may be drawn. The growth and the concentration of the banking business in this country has come about so suddenly that the organisation and, above all, the publication of the most important data have not been kept up to date.

The principal balance-sheets (with a few exceptions, where monthly reports of assets and liabilities are made) appear once a year, and then usually only four or five months after the closing of the year, so that one is entirely in the dark as to any changes which have taken place in that period. In addition, the composition of the various items is very different for the different banks, so that comparison is often impossible.

From the radio-speech of the Minister of Finance, made shortly before Parliament rose for the recess, it appears that the efforts made to balance the Budget have now practically succeeded. The shortage to be covered amounted to Fl 130,000,000. Of this, so far, the following has been found:—Through economies Fl 27,500,000. Savings in defences will have to develop Fl 12,500,000 more. On salaries of Government officials, which before the reduction amounted in all to Fl 210,000,000, Fl 35,000,000 less will be expended in 1925. The postal service will show a surplus, by which the shortage on the railways of some Fl 20,000,000 will be evened up. Further retrenchments could not be introduced, so that the balance of about Fl 35 to Fl 40 millions had to be obtained by new taxes. The taxes on tea, beer, and bicycles have already been put through. There still remain the increased tax on tobacco and the revision of the tariff law. Should both be accepted by Parliament, the Minister considers that for 1925 a practically balanced Budget may be looked forward to.

DENMARK.—EXCHANGES—CROP PROSPECTS—SECURITY PRICES.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, July 12.

A LONG period of steadiness in the exchange market was at the end of June succeeded by a new drop in the krone rate, the demand for foreign exchange far exceeding the supply. For three days about the beginning of the half-year it was even necessary to make an allotment of the foreign exchange supplied, which fact caused further difficulties for trade. On June 27th sterling was quoted Kr.26, and dollars Kr.601.50, but the rates rapidly rose, the quotations on the 1st inst. being Kr.27.50 for sterling and Kr.638 for dollars. Subsequently, however, the krone rate has appreciated, the rates quoted to-day being Kr.27.18 and Kr.624 respectively. It is now believed that the worst unrest has subsided, and the market has once more become so well supplied, that it transpires that the Nationalbank and the Exchange Equalising Fund have been able to supplement their holdings, which had gradually become very much depleted.

The cause of the tightening of the exchange rates has no root in the economic conditions, which cannot be said to have changed for the worse. For instance, unemployment is actually less in evidence than last year, the number being only 14,099, as against 21,800 a year ago—and a glance at the balance of trade will show that the deficit of the first five months of the year is on the average Kr.20,000,000 per month, as against about Kr.35,000,000 last year for the corresponding period. Neither has there been any appreciable rise of prices, the index of the *Finanstidende* for wholesale prices having risen from 227 to 228 points only during June. Generally speaking, the drop of the krone rate must therefore be ascribed to psychological causes and to the exchange transactions effected in various quarters, resulting in only part of the foreign exchange at disposal reaching the market. This is, for instance, indicated by the Census of the Danish exchange holdings at home and abroad undertaken on June 30th, which proved that, in spite of the exchange restrictions in force, which make it more difficult than before to obtain foreign exchange in the normal manner at the banks, the total holdings exceeded those of three months ago. This fact is favourable, inasmuch as the future exchange market is concerned, but it also indicates that some foreign exchange has been withheld from the market.

The general view on the exchange situation is more confident than at the beginning of the month. As previously reported, the "Valuta Central" has at an earlier date proposed that, provided certain measures be carried out, a loan of \$40,000,000 should be contracted, but this scheme did not entail a Government proposition, as the "Rigsdag" closed its session last month. From other quarters, however, it is maintained that, sooner or later, it will be necessary to contract a similar loan, and at the same time it is pointed out that just at present the money market in America is said to be favourable for a transaction of this description. It is known that the principal private banks, as well as the Nationalbank, are in favour of such a way out of the exchange trouble, as in their opinion the economical situation in itself is not unfavourable, but owing to the big investments of capital since the end of the war, there is a momentary shortage of working capital. Likewise the theorists maintain that a foreign loan would be required by the present conditions.

The prospects of the crops have improved to a not inconsiderable extent lately. Autumn-sown cereals have recovered somewhat in most places, and the badly wanted heat has benefited the spring-sown crops. It is believed that the spring-sown cereals will show an average return, while this result will not quite be reached from the autumn-sown crops.

Apart from bank shares, the Stock Exchange shows a general and considerable rise in quotations during the year July, 1923-July, 1924. During the last month, however, the tendency has been weak, which fact appears from a summary in the *Finanstidende*, showing that the average quotation for 33 companies has dropped from 122½ to 118½ from the beginning of June until July 4th.

The only exception is trading and transport concerns, which generally have maintained their quotations unchanged. The market for bonds is decidedly weak, the quotation early in July for 3½ per cent. unredemable Danish Government bonds of 1886 being 64½ per cent. only, as against 66½ per cent. a month ago and 70½ at the same time last year.

ROUMANIA.—THE CROP SITUATION—EXCHANGE AND POLITICS—BUSINESS SITUATION—MINING LEGISLATION—TARIFF REVISION.

(FROM OUR CORRESPONDENT.)

BUCHAREST, July 15.

THE abundant rains which fell during June have at least saved the crops from ruin. Official data on this year's crop situation, both as to sowings and condition, are still incomplete; but the final figures are expected to show that wheat has been planted over an area of about 3,000,000 hectares—or a little more than last year. It requires the production of 2,000,000 hectares of a normal wheat crop to satisfy the domestic needs, and as this year's crop will undoubtedly be below normal, there will be no considerable amount available for export. Although the price of wheat on the domestic markets has recently increased by more than 50 per cent. over the controlled (but no longer enforced) price of 45,000 lei per carload, the Government has wisely announced that this grain is not to be restored to the "prohibited for export" list, from which it was removed only last December.

The areas sown to rye, barley, and oats this year are also slightly greater than last, but—as in the case of wheat—the increased sowings will be neutralised by the spring drought. Probably the combined total of these grains available for export will be less than 500,000 tons. Maize, however, as was the case last year, will provide a considerable surplus, and an export of 1,000,000 tons of this grain during the present year is being anticipated, or 25 per cent. more than last year. This, in brief, would leave the agricultural situation showing about the same rate of progress as was made during the years 1922 and 1923—disappointing, measured by pre-war standards, but at least on the road to recovery from the disturbing effects of agrarian reform. The basis of real agricultural prosperity in Roumania would be the sowing to wheat of 5,000,000 hectares.

A great deal of pessimism was let loose a week or so ago when lei exchange dropped to 1,100 to the £, and to 2.14 centimes on Zurich, which brought the gold value of the lei to 2.14 per cent., or the lowest ever recorded. Predictions were freely made that the country was on the verge of an economic and financial disaster, and Mr Vintila Bratianu's handling of the national finances came in for renewed criticism—with insistent demands that the Government resign. The later view, however, is that the decline was due to a "bear drive" engineered by foreign interests to express disapproval of recently enacted legislation—particularly the mining law.

While it is true that the financial policies of Mr Vintila Bratianu have done much to bring about the almost complete stagnation which is at present paralysing commercial activity throughout Roumania, his policies, nevertheless, in general are based upon sound economics. He has secured an almost complete documentation of external and internal liabilities, and arranged a large part of them so that they have become a definite charge on the country's productive capacity over a long period of years; the State Budget is expected to show a surplus this year of more than 2,000 million lei; an "active" trade balance has been definitely restored; and currency inflation ceased last December.

What is now needed is a large foreign loan to tide over the present acute financial distress, and a thorough reorganisation of the country's transportation system. A useful step as a preliminary to the latter is the recent decision to increase railway rates by 25 per cent. as from August 1st. The difficulties which the Government has so far experienced in obtaining foreign credits will certainly not be lessened by the enactment of the new mining law and the law for the commercialisation of State enterprises—with the provision in the latter for creating a

Government monopoly for the sale of petroleum products in the home market. While these legislative acts are naturally disturbing to foreign capital interested in the Roumanian oil industry, the practical application of the laws will be much more difficult than their Parliamentary enactment. A serious discussion on the new mining law is hardly merited; first, because no Roumanian Government would ever be likely to attempt to enforce it in its entirety; and, secondly, because the law could not be completely enforced except by confiscation.

The Tariff Commission has been at work for several months preparing a general revision of the import tariff schedule, which has been in effect since 1921, and which—owing to currency depreciation—no longer affords any real protection to domestic industries. The new rates will show a great increase over those at present in force, and it is expected that they will go into effect during the coming month.

HONG KONG.—OPIUM MONOPOLY—THE SUN YAT SEN RUMOUR—TAXATION IN CANTON.

HONG KONG, May 29.

(FROM OUR CORRESPONDENT.)

THE Imports and Exports Department of the Hong Kong Government is a creation of comparatively recent years, but the annual report of its superintendent is of more importance to the community than that of any of the older branches of the Government service. The report for 1923 has just been issued, and, of course, contains full details of the complex trade of this colony. I have, in a recent letter, referred to the principal figures for the past year, and on this occasion I wish to touch on that portion of the report which is concerned with the trade in opium and arms.

The opium monopoly is now controlled by the Hong Kong Government, and contributes an appreciable sum to the Treasury chest. The Government has, from time to time, expressed its readiness to sacrifice the revenue brought in and prohibit the import of opium entirely, but until China falls into line it is useless to do so, for whatever penalties were imposed, the traffic and consumption would continue. When the cultivation of opium was officially prohibited by the Chinese Government it was hoped that in course of time the use of the drug would gradually diminish. The rapid weakening of authority in China has obscured any prospect of this coming to pass, and nowadays the poppy is grown on as large a scale as ever before in practically all the provinces of the Republic. It is therefore useless for the Hong Kong Government to take any further steps in the matter, and the present aim is to reduce local consumption gradually by maintaining the selling price at a high level, while at the same time doing all that is possible to keep in check the illicit traffic in cheap opium originating in the neighbouring provinces. The Preventive Service has to contend with enormous difficulties, for the drug is easily smuggled in, and any seizures are the result of information which has to be paid for at stiff rates.

The report states that the gross revenue from the sale of opium amounted to \$5,759,443 (approximately £670,000), the net profit being in the neighbourhood of \$3,500,000. The Government issued some 304,000 taels of prepared opium at \$14.50 per tael, but it seems that more than double this quantity was actually consumed in the colony. The Preventive officers seized 284,824 taels of raw and 15,659 taels of prepared opium, and documents which fell into the hands of the Government disclosed evidence of 600,000 taels of the raw drug having been smuggled into the colony, although probably a good portion of this was subsequently exported. The Department carried out a systematic campaign against opium divans, but suppression of these places is exceedingly difficult. The superintendent states:—

"Many of the divans are managed by paid keepers, one man owning several places while the real owner keeps in the background and is rarely caught. . . . The use of children to act as managers of divans is increasing, it being impossible to imprison children or punish them for doing what their parents or employers would punish them for refusing to do."

Nevertheless, 716 keepers of divans and 286 boilers of illicit opium were convicted during 1923, while 284 persons were banished for opium offences.

As regards the traffic in firearms, 1,685 weapons, including 11 machine-guns, were seized during the year under review, as well as 149,383 rounds of ammunition. The number of convictions obtained was 32. The United States was the principal source of supply, but a certain number of Mauser pistols came from Paris. The superintendent adds:—

"There were no seizures of Browning automatics, which used to be popular among the pirate and robber class of South China."

The reported death of Sun Yat Sen caused tremendous excitement amongst the Chinese, and the delay which occurred in issuing a denial appeared to be proof of the event. The stupidity of Sun's personal staff in making a mystery of their chief's illness led to a good deal of confusion, and although the English newspapers of the colony were ultimately satisfied that Sun was far from dead, there was considerable doubt expressed by the Chinese; and, even now, some are by no means convinced that the original report was untrue. The Chinese editor of a newspaper published in Canton in the English language has been held responsible for the rumour, and has been shamefully treated by the Canton authorities. He represented Reuter's, but it is stated that the news of Sun's death was circulated by Reuter's correspondent in Hong Kong, and that the Canton man was in no way responsible. However, the blame was fixed on him, and although he was not tried, he was promptly sentenced to ten years' imprisonment. Intervention on the part of European missionaries has resulted in the imprisonment being cancelled and the sentence amended to ten years' banishment. The incident will no doubt have its effect in the "Fleet Street" of Canton.

Trade in Hong Kong has been decidedly dull for months past, and there is little prospect of any improvement. The situation in Canton becomes more complicated every day, and the latest development is an attempt on the part of Sun's Government to impose a heavy tax on silk cocoons. The silk merchants were up in arms at once, and their remedy was the very one advocated by Sun Yat Sen in the days before the revolution, viz., the general strike. Other branches of trade were also apprehensive of extra taxes about to be enforced, and the whole commercial community had announced its intention of going on strike last Tuesday. The day before the threat was to be carried out the Government agreed to withdraw the new taxes, and so business has gone on without interruption. The Canton Treasury must be very nearly empty, and the Government is at its wit's end to replenish it. It looks as if the merchants have scored, for there have been other attempts to interfere with business, but these have been successfully repelled, and it would not be surprising to find a "public opinion" forming. Hitherto this has been lacking in China, but if it ever develops, there will be some hope of a stable government coming into power.

Letters to the Editor.

THE CHILEAN EXCHANGE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to what your correspondent writes that the "Conversion Fund amounting to £8,000,000 is more than sufficient to cover all the paper money in circulation at an exchange of 18d to the peso, or even at a higher figure," I would beg to point out that this is entirely fallacious and misleading. The paper issue against the Conversion Fund amounts to 150,000,000 pesos, so that the £8,000,000 held in gold against same would only give an equivalent of about 12½d per peso. The amount of paper money actually in circulation is considerably more than 150,000,000 pesos, and, I believe, is in the neighbourhood of 300,000,000 pesos, caused by issues against the internal loans.

The last Presidential address, however, only states the amount of the internal loan owing by the Chilean Govern-

ment, and does not give the figures of the actual paper money in circulation. It is, therefore, difficult to arrive at this figure.

During the war, owing to the large exports of nitrate, copper, wool, and other produce, and the high prices obtained, exchange rose to 16d or over. When the Armistice came there was a sudden cessation of nitrate shipments, and consequently exchange began to drop. The fall in exchange was accentuated by the Chilean Government giving loans in Chilean currency to the nitrate companies to enable them to go on working and accumulate a stock of nitrate. These loans, however, have now been practically all repaid.

Owing to the falling off of the exports of nitrate, from which the Chilean Government obtains a large part of its revenue, the Government has had large deficits yearly. It has not only borrowed money both in London and New York, but it has had to raise internal loans from banks. All these factors have caused exchange to fall, and the first thing to be done in order to stabilise exchange is for the Government to balance its income and expenditure. The President is fully aware of this, and in his Presidential address has mentioned that he has no intention of trying to raise further foreign loans. His idea is to sell valuable sheep-farming lands which are at present rented to sheep-farming companies, and also nitrate grounds, and with the proceeds pay off the outstanding deficits. If this is done exchange ought to improve, but the most vital point of all for the future is that the expenditure of the Government should not exceed its income. The country has great natural resources, and there is really no reason why, with a little effort, exchange should not be stabilised.

Books and Publications.

THE TARIFF COMPLEX.

At the time, just twenty-one years ago, when the late Mr Joseph Chamberlain opened his campaign to convert this country to Imperial Preference, one of his right-hand men was Mr W. A. S. Hewins, then Director of the London School of Economics. Mr Chamberlain was a politician who had decided that the policy of Imperial Preference was necessary as a cement to keep the Empire from splitting up; he was not an economist. "I do not pretend to be an economic expert," said he to Mr Hewins. "I once read Mill and tried to read Marshall. You must supply the economic argument." Mr Hewins accepted the charge, he abandoned his career that he might supply arguments for Mr Chamberlain's campaign, and he has been doing his utmost with admirable sincerity and persistence to supply arguments ever since. His latest effort is entitled "Trade in the Balance: Protection or Free Imports?"

This book is not a history of the Tariff Reform movement; that history may come some day from Mr Hewins's pen—he hints the possibility. Told with the full knowledge which he possesses, and without regard to the feelings of living politicians, it would be an entertaining work. We should then read how it came about that Mr Chamberlain, who entered upon his last campaign on fire with red-hot zeal for the future of the Empire, allowed himself within a few months to be "nobbled" by the Protectionists, whose enthusiasm for a tariff on imported goods—which competed with their own—far surpassed any tepid sentiments which they may have felt for Imperial Preference. Mr Hewins would probably be able to tell us that campaigns cost much money, and that though there is not much money for Imperial Preference, there is any quantity on tap for a protective tariff. That happened which was bound to happen. While the ideal of a self-sufficing Empire attracted the young and ardent spirits of the Unionist party, the direction of the whole campaign fell into the hands of the crude Protectionists. What they wanted were "arguments" for a general tariff which might delude the country into acceptance. Mr Chamberlain, driven by those who supplied the sinews of war, became less and less a Missionary of Empire and

* Philip Allan and Company. 7s 6d net.

more and more a Jeremiah of British Trade. We remember as if they had been delivered last week that famous series of speeches in which it was sought to prove that coal, iron, wool, cotton, shipping were going, going, going and would soon be gone—unless a tariff of 10 per cent. were imposed upon imports of manufactured goods. Mr Chamberlain, in the desire to win support for Imperial Preference, killed himself in doing propaganda work for British Protectionists.

What is so surprising about Mr Hewins is not his deep-rooted tariff complex—for that is ineradicable from certain types of mind—but that he should still believe in the practical possibility of a general tariff, combined with Imperial Preference, in this country. He has passed like a Shadrach through the general elections of 1906 and 1923, and has carried away not even a smell of smoke. He lays down "An Immediate Policy" for this country—of course, a tariff—and regards confirmation by the people as wholly unnecessary. "My view certainly is," he writes, "that without asking for any further powers from the electorate, the responsible leader of any party which happens to be in power should forthwith introduce such a tariff as the circumstances require to prevent these great industries from being undermined by foreign competition." Mr Hewins maintains that the information in possession of the Government offices is sufficient to enable an effective tariff to be drawn up in a month. He himself, as a member of the Tariff Advisory Board, helped to draw one up last autumn in readiness for Mr Baldwin's victory at the polls. He does not worry about that election. His view is that since Parliament—and, maybe, the country—accepted the "principles" of the Safeguarding of Industries Act in regard to "dumping" and "collapsed exchanges," the method of interpreting them into legislation is no more than "machinery." It is easy to understand how a man with such naive views on practical politics did not succeed in Parliament as a politician, and is not likely to be any more successful as a supplier of "arguments" to politicians.

On the subject of Imperial Preference—the real love of Mr Hewins as of his chief, Mr Joseph Chamberlain—Mr Hewins is slightly disingenuous. He emphasises more than once in this book that "the Dominions have never asked us to put a duty on in order to give a preference," but only that we shall give all the preference possible in respect of duties which we have in force. Mr Hewins is, of course, carefully distinguishing between the official requests of Dominion Governments—delivered, so to speak *ex cathedra*—and the declared wishes of individual Prime Ministers of Dominions. It is true that, officially, no Dominion Government has asked us to put on duties in order to give a preference. But the whole burden of the speeches of the Prime Minister of Australia, for example, last year was that Imperial Preference was illusory unless we put on duties against foreign foodstuffs and remitted them for Dominion products. Many people, however they may disagree with the principle, are prepared to continue a preference on the duties which the Chancellor of the Exchequer sees fit to impose—in the interests of Great Britain and its revenue. But they and the country generally are totally opposed, and are likely to remain opposed, to the imposition of duties on foodstuffs in order to give remission to Dominion products. The Dominions may not ask us officially to do this. They cannot very well, because it amounts to a direct subsidy of the Dominions by Great Britain. Yet Dominion Ministers and Parliaments want us to do just this, and have no hesitation in saying so.

FRENCH GOVERNMENT.

M. JOSEPH-BARTHELEMY'S volume* is an exceedingly competent and convenient handbook on a subject of which the British public is strangely ignorant, considering the intimate bearing of French politics and institutions upon the fortunes of Great Britain. The book will thus be welcome to English readers for the mere information which it offers in a short and easily accessible form. At the same time, this is not a mere text-book or compendium, for the author has treated his subject throughout in its historical setting and from a broad point of view.

* "The Government of France." By Joseph-Barthelemy. Authorised translation by J. Bayard Morris. Allen and Unwin, 1924. 6s net.

COMPANY MEETINGS, &c.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

SATISFACTORY RESULTS OF THE YEAR.
THE GOLD STANDARD—STATE BANK AND COMPETITION.
POSITION AND PROSPECTS OF SOUTH AFRICAN INDUSTRIES.

DIST

Bank Property and Premises. Bank property and premises show an increase of, roughly, £113,000, chiefly on account of the expenditure on our premises in London and Cape Town, and also the purchase or erection of premises in various places in South Africa.

Profit and Loss Account. If you will turn now to the profit and loss account, you will see that the net profits for the year amounted to £456,396, as compared with £388,824 for the previous year, an increase of £67,572. The result is that, although the amount of undivided profits brought forward was about £73,000 less, the total is restored to within £6,000 of what it was a year ago.

Having regard to all the difficulties of the past year, I venture to think that the result of the year's working will be regarded by you as satisfactory and hopeful. (Applause.)

Allocation of Profit. With the sum of £117,967 brought forward from the previous year, and net profits amounting to £456,396, there is available a total of £574,364, from which we have already taken £156,041 for the payment of the interim dividend in January.

We have also appropriated £50,000 to write down bank premises, leaving £368,322 still to be disposed of. Out of this we recommend that £100,000 be allocated to the bank's pension fund, and a final dividend of 7s per share be paid, amounting to £156,041, leaving £112,281 to be carried forward to the next account.

Officers' Pension Fund. Perhaps I should say a few words with regard to the allocation to the officers' pension fund, as the amount is comparatively large. The Chairman explained to you at the meeting last year that the advice of a competent actuary is taken periodically with regard to the fund, and the amounts set aside each year are such as the board, in their discretion, think it right to recommend to the shareholders, and are not in excess of what the actuary recommends—indeed, they are less. You will realise that the staff of the bank has increased considerably during the last few years, chiefly owing to the absorption of the African Banking Corporation, and, in addition to this, the scale of salaries is, of course, much higher than it was a few years ago, with the result that the liability on account of pensions has been correspondingly increased. There is no doubt that the shareholders will recognise the importance of making adequate provision year by year for the retiring allowances to old officers who have spent the best years of their lives in our service.

In dealing with the accounts, I am glad to have one further item to speak to you about, as it is one, I feel sure, that will appeal to you.

Settlement in Respect of Dominion Income-tax. You will remember that, when the interim dividend was paid in January, British income-tax was deducted therefrom at the full rate of 4s 6d in the £ without the usual allowance for relief in respect of Dominion income-tax. This allowance could not then be dealt with, as the actual amount had not been ascertained. After protracted negotiations with the Inland Revenue authorities, a final settlement of the relief to be allowed has been effected, not only in regard to the current year, but also in respect of previous years, with the result that an adjustment of tax can now be made. On the basis of a final dividend at the rate of 14 per cent. per annum, the amount of relief due is about 5s 2½d in the £. Of this amount, as you will know for yourselves, 4s 6d in the £ will cover British income-tax, and the balance of about 8½d in the £, or about 3d per share, will naturally be added to the dividend.

For your dividend, therefore, on this occasion, you will receive about 7s 3d per share, free of income-tax, in place of 7s, less tax. I congratulate you on this little bonus. (Cheers.)

Trade Returns. You will, I am sure, be interested in the particulars of the trade returns for the period under review, and some details in connection with the most important of the South African industries.

The year 1923 showed a substantial improvement in the gold mining industry. Increased economy and efficiency have resulted in a great addition to the reserves of payable ore. Working costs have been reduced, and the appreciable advance in the price of gold has further assisted the industry.

Gold Mining. The Transvaal gold output during 1923 totalled 9,133,060 ounces, valued at £39,894,743, constituting a record in the history of the Transvaal gold mining industry, excepting only the year 1916, when 9,296,618 ounces were recovered.

Owing to the premium on gold, however, the value of the output for 1923 exceeded that of 1916 by £405,221, and is the highest on record.

Remarkable Improvement in the Mines. The total dividend distribution of the Transvaal Gold Mining Companies for the year 1923, viz., £8,482,421, is an indication of the remarkable improvement that has taken place in the mines since the pre-strike period.

A very satisfactory feature in connection with the operations of the mines for 1923 is that 29 out of the 37 producing properties on the Witwatersrand declared dividends during the year, whereas only 19 companies were in a position to do so during 1922.

Shipments to India. Under the new agreement with the Bank of England, which came into force on August 1st last, the gold producers were permitted to ship gold direct to destinations other than the United Kingdom. A number of shipments have since been made from Durban to Bombay, and the Transvaal Chamber of Mines reports that there are prospects of this trade assuming considerable dimensions. During the latter part of 1923 shipments of gold direct to India totalled 209,403 standard ounces.

Increased Activity in Rhodesia. The value of the Rhodesian gold output during the last three half-years was as follows:—

Half-year ending:	Value.
December 31, 1922	£1,523,255
June 30, 1923	1,441,568
December 31, 1923	1,467,591

The gold mining industry in Rhodesia is beginning to show signs of increased activity both as regards the small workers and the larger mining companies, since they are both assisted by the premium.

Diamond Mining. The diamond industry had a fairly good year in comparison with the previous year.

The exports of diamonds from South Africa during 1923 show an increase of £3,898,566 over the 1922 exports, the figures being £8,630,320 and £4,731,754 for 1923 and 1922 respectively. For the Union the figures were 2,428,849 carats, valued at £7,207,807 in 1923, and 1,330,664 carats, valued at £4,386,554 in 1922.

Coal. Coal production in 1923 was benefited by the French occupation of the Ruhr, the consequent shortage in Europe and higher prices affording the Union coal mines an opportunity to enter other markets.

The year 1923 opened quietly, cargo business being difficult to obtain. Increased cost of production in the British industry, coupled with the coal strike in Britain, created a big demand for both bunkers and cargoes which continued throughout the last nine months of the year.

The total output in the Union amounted to 11,915,000 tons, valued at £3,714,000 approximately, as against a production of 9,725,000 tons in the previous year.

Copper and Tin. Both copper and tin-mining witnessed an expansion of activity and growth of output during 1923 owing to the rise in the price of these metals, particularly tin. The outlook for the tin mines appears favourable, since tin-using industries in England and America are well engaged.

During recent years copper production had materially diminished as the result of poor demand and low values. For the year under review, however, a tonnage of 9,489,090 was produced in the Union as against 705,570 tons in the previous year.

Revival in the Industries. The expansion in electrical enterprises in the Union, notably the electrification of the Natal main line between Pietermaritzburg and Glencoe Junction, coupled with the Government bounty in respect of production in the Transvaal, have undoubtedly been the main causes of the revival in the copper-mining industry.

In South-West Africa and the Belgian Congo the copper production shows satisfactory improvement.

Tin-mining in the Union is almost exclusively confined to the Transvaal. Encouraged by the rise in price and improved demand, operations are being energetically pushed forward, while in South-West Africa alluvial tin mines which had been abandoned for years have lately resumed operations.

Asbestos. The value of asbestos produced in the Union and Rhodesia shows improvement, the output figures for the year being £121,453 in the Union and £626,880 in Rhodesia.

Farming. The very severe drought experienced in most parts of the country in 1923, and the ravages of locusts, affected farming industries, but did not in any way undermine the soundness of the position, which, on the other hand, was favourably affected by the strength of the wool market and the record maize crop harvested last year. The exceptionally good late rains have ensured winter feed for sheep, and made ploughing for winter crops possible.

In districts where mixed farming does not exist, the distress resulting from drought and locusts was more acute, and the Government introduced special legislation during the last session of Parliament providing for financial assistance to enable farmers who have suffered severely to tide over, and good rains have fallen in most parts of the country.

In Southern Rhodesia livestock of all descriptions are in very fair condition, and practically free from disease; but the market remains very inactive, and other than exceptionally good slaughter cattle are procurable at very low figures. The seasonal rainfall

just ended has proved to be far below normal. Maize prospects are fairly good. Cotton, despite weather conditions, is proving satisfactory.

Heavy rains fell in the South-West Protectorate at the beginning of last year, but the growth following the rains was practically eaten off by locusts. Since then the rainfall has been very patchy and rather late for the maize districts. The opening up of artesian wells in different parts of the country has done much to assist the position.

Nyasaland weather conditions have been satisfactory on the whole, and a record tobacco crop is expected. No serious damage has been done by rust. For cotton, too, the climatic conditions have been favourable, and the crop would have been better but for the severe damage caused by boll-worm.

In the East Africa Protectorate the seasons have been favourable on the whole, and good crops have been harvested.

Wheat and Maize. Last season's Western Province wheat did not command such a good price as in the previous year, owing to very good crops in the principal wheat-growing countries of the world. Large quantities of Australian, Canadian, and Argentine wheat were imported during 1923, with consequent depression of price for the local product.

Imports of wheat into the Union for 1923 were valued at over £1,292,000, representing over 140,000 tons and being over three times the value and quantity of wheat imported in 1922.

The acreage under wheat is being extended in East Africa. In 1920 only 2.6 per cent. of the entire area under cultivation in Kenya Colony was devoted to wheat production, while this has increased to 5.6 per cent. in 1923.

Last season's maize crop was excellent, and good prices were obtained, particularly on the local market towards the end of the year, owing to the serious drought in maize-growing districts in addition to damage done by locusts. Over 5½ million bags of maize were exported from the Union out of a total of approximately 17,000,000 bags produced. The production of maize in 1921-22 was 13,347,235 bags, and in 1922-23, 11,946,000 bags. The 1924-25 crop will not approach the 1923-24 figures, but a fair result is looked for. Exports will, however, be on a much smaller scale.

The grain elevators at the different points in the country, now rapidly getting into working order, will make for the more efficient marketing of grain.

In the East Africa Protectorate maize is proving a very valuable crop, and its cultivation is being largely extended. In 1920, 18.2 per cent. of the total cultivated areas in Kenya Colony was under maize; in 1923, 36.4 per cent. During the year ending June 30, 1924, the estimate of the crop for export is 700/750,000 bags.

Livestock. The ravages of locusts and drought resulted in heavy losses to many farmers, but the exceptionally good late rains have ensured winter grazing for sheep. Cattle are in good condition at present, but, on account of drought and the lateness of the rains, the winter veld will not be so good for big stock.

Prices of all classes of cattle, with the exception of prime slaughter oxen, remain low. The market for sheep has been very firm throughout the year as a result of the strong position of the wool market.

The total value of wool, mohair, and ostrich feathers exported from the Union in the last three years compares as follows:—

	1921	1922	1923
Wool, Mohair, and Ostrich Feathers, £	8,236,835	11,000,942	12,388,186
Wool	583,643	1,152,470	947,883
Mohair	461,533	393,919	339,903
Ostrich Feathers			

These figures indicate that while wool and mohair values have greatly increased, ostrich feathers have shown a progressive decline, but it is satisfactory to note that at the auctions in London recently concluded there was a good demand for feathers, and values improved.

The past season has been an exceptionally good one for wool farmers. In spite of political and economic complications abroad, the wool values maintained an upward trend during the whole of the year. At the close of 1923 fine crossbreds were about 20 per cent. dearer than in December, 1922, and medium crossbreds 25 per cent. and coarse 50 per cent. higher. Merinos, which were at a high level a year ago, advanced a further 15 per cent.

After a period of depression, mohair has regained some of its former popularity, and prices have substantially improved.

PERSONAL ACCIDENT and SICKNESS

Policies providing
CAPITAL SUMS
in case of Death or Loss of Limbs or Eyes by Accident,

ANNUITIES
for Permanent Total Disablement,

WEEKLY COMPENSATION
during Disablement through Accident or Illness and during Convalescence, are issued by The

LIVERPOOL & LONDON & GLOBE INSURANCE CO., LTD.

Prospectus free on request.

Head Office:—
1 Dale St., Liverpool. Chief Office, 1 Cornhill, E.C.3.
Branches and Agencies throughout the World.
General Manager and Secretary:—HUGH LEWIS.

The production of mohair is far below that of pre-war days, and, with increasing consumption, there is every indication of keener competition and wider markets. Bradford is the principal buyer, very little going to America.

Hides and Skins. The skin market was very firm in March, 1923, but weakened during the ensuing six months, particularly for capes and goatskins. About September last, however, sheepskins, in sympathy with the wool market, showed an improved tendency at increased prices.

South African prices for all classes of skins and hides have been for some time above London parity, and there has consequently been a scarcity of supplies on the London market, where little actual business has taken place.

The value of hides and skins exported in 1923 was £2,485,906, as against £1,953,355 in 1922.

Hides and skins exported from the East Africa Protectorate through Kilindini and Mombasa during 1923 were valued at £152,911, as compared with £141,084 during 1922.

Wine and Brandy. It is hoped that the passing of the Wine and Spirits Control Act during the last session of the Union Parliament will have the effect of assisting the industry, which has been in an unsatisfactory condition for the past few years. Owing to the short crop, and the drying of a portion of the wine grapes, it is expected that there will be little or no surplus this year, and wine farmers will consequently receive a better price.

A good trade is being done with Mauritius in certain wines; the export to England has also increased, and very fair prices are being obtained.

The Fruit Industry. South Africa is very well suited for the growth of almost any kind of fruit, and the fruit industry is making good progress.

Fresh Fruits. The values of shipments for the past four years are:

	1920.	1921.	1922.	1923.
£173,561 ...	£421,591 ...	£521,500 ...	£539,114	

South African fruit has recently been meeting with consistent demand overseas at very fair prices, and it is encouraging to learn that fruit has this season been arriving in England in a much more satisfactory condition than before.

The drying, canning, and preserving of fruit are making rapid strides in the fruit-growing districts of the Union, and the immediate prospects for dried fruits are satisfactory on the whole.

The statistics of output and export for the past three years are as follows:—

	Total Output of Sugar.	Export.
The Sugar Industry.	Tons of 2,000 lbs.	Tons of 2,000 lbs.
Season.		
1921-22	155,194	34,500
1922-23	158,300	33,754
1923-24	203,300	32,150

The season has been a profitable one to both millers and planters, and, with the firm market overseas and the co-operation between the distributors, prices, after a temporary set-back in September, have steadily risen.

The capital employed in the industry is estimated to be well over £6,000,000.

This year's crop was even better than had been expected, but prospects for the coming crop are not so bright, as rain is badly needed in many parts, especially on the north coast of Natal.

There appears to be a good future for cotton growing within certain areas in South Africa, but transport costs will probably prove a heavy burden in many cases. In this connection keen interest is being taken by the Government in the possibility of opening up over a quarter of a million acres of suitable land in Zululand, by the construction of a railway line from near Somkele to the Pongola.

The production of cotton (not ginned) in the Union rose from 796,610 lbs in 1918 to 3,576,400 lbs in 1921. In 1922, the year when the last agricultural census was taken, the production was 2,806,367 lbs.

In Rhodesia cotton growing is still in the experimental stage. Crops have been grown in different parts of the country with varying success, but on the whole satisfactory results have been achieved. An encouraging feature of much importance is that the cotton plants have generally shown good drought-resisting qualities.

Exports of cotton from Nyasaland for the year 1923 amounted to 2,182,537 lbs, as compared with 2,227,674 lbs in 1922.

In East Africa cotton has begun to be cultivated by the natives in the Kavirondo Province (Kenya Colony), and great hopes of its future are entertained. In 1923 the exports of cotton from Uganda amounted to 92,642 bales of 400 lbs each, and this year it is estimated that the crop will amount to 120,000 bales.

Drought has unfavourably affected production, and considerable decreases in the yield are expected in many districts of the Union.

Exports of tobacco (all kinds) from the Union for 1922 totalled 1,677,667 lbs, valued at £66,541, and for 1923, 2,381,010 lbs, valued at £71,421.

The prospects for the coming tobacco crop in Rhodesia, which is the most important crop for export purposes, although very doubtful at the beginning of the season owing to the late rains, are now far better than for some years. Disease is almost totally absent, and this will mean a larger yield and better prices than for the two previous seasons, when disease did so much destruction among crops. In 1924 Virginia crop is not likely to be less than 2,000,000 lbs, while growers report fair prospects for Turkish tobacco.

The exports of wattle bark and bark extract from the Union during the past two years were as follows:—

	Year.	Weight. Lbs.	Value. £
Wattle bark	1922 ..	271,716,264 ..	799,942
	1923 ..	241,324,585 ..	659,297
Bark extract	1922 ..	24,341,472 ..	203,197
	1923 ..	34,935,358 ..	266,084

Coffee has proved a valuable crop in East Africa, and thrives in Kenya, Tanganyika, and Uganda. It is of high quality, and fetches good prices. Increased acreages have been planted in Kenya and Tanganyika. In the former colony 19 per cent. of the total area under cultivation was devoted to coffee in 1923, as against 15.8 per cent. in 1920.

The value of coffee exported from Kilindini and Mombasa during 1923 amounted to £620,897, compared with £544,876 for 1922.

The Nyasaland tea industry is growing, and in 1923 the exports of tea were valued at £756,674 compared with £737,165 for 1922. Satisfactory conditions have again prevailed this season, the estimate for the crop being considerably above the average.

In 1920 the areas under sisal in Kenya Colony amounted to 17.4 of the total areas under cultivation; in 1923 this had declined to 14.2 per cent. Sisal, however, is still a valuable crop in this colony. In the Tanganyika territory it is regaining its importance, and during the year some 10,000 tons were shipped from Tanga and 1,509 from Dar-es-Salaam, while regular shipments are commencing from Lindi.

The value of sisal hemp exports from Kilindini and Mombasa totalled £236,044 in 1923; the exports from Dar-es-Salaam for the same period were valued at £44,306.

I will now conclude by moving the first resolution:—"That the report and balance-sheet to March 31, 1924, now presented, be adopted," and I will ask Sir David Barbour to second it.

Sir David M. Barbour, K.C.S.I., K.C.M.G.: I have much pleasure in seconding that resolution.

The Chairman: Gentlemen, before I put that resolution I shall be glad to endeavour to answer any questions shareholders may wish to put.

Mr Milton: You have already answered the questions I was going to put, but there is one point. I think we as shareholders should know what is the total amount of the pension fund up

to our last balance-sheet. I also want to ask why it is necessary to put £100,000 to this fund for two years running, and what the total of the pension fund is going to be.

The Chairman: It has never been the custom to publish the figures of this fund, but I am quite sure that, after your suggestion, the directors will consider the matter.

Mr Milton: My question was, what was the amount you expect the pension fund to reach? When are we going to be done with the amount of £100,000 a year?

The Chairman: That depends on the report of our actuaries, the growth of our staff, and other circumstances.

Capt. Chas. Slack, F.R.G.S.: I rise only to suggest whether it will not be useful to add to the information you give the number of those who receive pensions. There is another point I would urge that in the balance-sheet the figures for the previous year be also given for purposes of comparison. It is a convenience, that is all. Of course, we can refer to the previous accounts, but if we have them side by side they are useful.

The Chairman: We will certainly consider the suggestion.

Mr T. L. Gilmour: I do not want to detain the meeting, but I do not think it would be the wish of the majority of the shareholders that the board should have the impression that shareholders have not the most absolute and entire confidence in the way in which the board are dealing with the officers' pension fund.

There can be no objection to the question being considered as to whether any further information can be given to the shareholders, but my only object in rising is to assure the board, as I feel I can on behalf of the great majority of the shareholders, that in this, as in other matters, we have the most entire confidence in the way they are handling the situation, and particularly any question that affects the staff, because I think every member present is very fully conscious of the obligations under which we are to the staff, and anything that is done to improve their condition, and make their minds more easy, will, I am perfectly certain, receive at all times the support and approval of the great majority of the shareholders.

The Chairman: Thank you, Mr Gilmour. Now, with the permission of the meeting, I will put the resolution.

The resolution was carried unanimously.

The Chairman: I have now to make the formal declaration of dividend by reading the following:—

"As empowered by the articles of association, on behalf of the board, I now declare a dividend for the six months ending March 31st of 7s per share on 445,833 shares, as a final dividend for the twelve months ending on that date (making with the interim dividend a total distribution at the rate of 14 per cent. per annum), subject to income-tax, to be paid to those shareholders whose names appeared on the register on June 25th, and to become payable on the 26th instant."

The Right Hon. the Earl of Selborne, K.G.: I beg to propose:—

Re-election of Directors. "That W. Reiersen Arbuthnot, Esq., the Right Hon. Lord Sydenham, G.C.S.I., F.R.S., and Sir David M. Barbour, K.C.S.I., K.C.M.G., be re-elected directors of the company."

Mr R. E. Dickinson: I beg to second the resolution.

The resolution was carried unanimously.

Mr W. R. Arbuthnot: Thank you, gentlemen, for your kindness in re-electing us.

Mr W. H. Skeel then proposed the following resolution:—

Re-election of Auditors. "That A. T. Turquand-Young, Esq., F.C.A., Sir Gilbert Garnsey, K.B.E., F.C.A., and Roderick M. Peat, Esq., F.C.A., be re-elected auditors of the company for the ensuing year at a remuneration of 400 guineas each." I will call upon Captain Slack to second that.

The resolution was seconded by Captain C. Slack, F.R.G.S., and unanimously adopted.

The Chairman: The next resolution is one proposed by myself, and seconded from the other side of the table. My duty is to propose the usual vote of thanks to the general managers and the officers of the bank. In the word "officers" I include the staff generally from top to bottom. Sometimes I think we all of us fail to realise exactly what this vote of thanks means. We directors appear here before you, and we give you an account of our stewardship, and you of your kindness often have given us a vote of thanks; but where should we be if we failed to find a loyal and devoted staff? To our high officers we owe very much; they have piloted us through a troublous time, and it has meant to them much anxiety, much

work—accepted ungrudgingly; and do not let us forget the managers of our branches scattered throughout this enormous territory—do not let us forget their accountants, their cashiers, their ledger clerks, and the many minor positions filled, and loyally filled, by a staff of something over 3,600. And then, what of our London and New York staff? Unhesitatingly I say that here, again, we on this side of the table and you on yours, in passing this resolution, must do so as no mere formality. We tender them genuine thanks for services well and faithfully done, and I would ask them to realise that what I have said is all contained in the somewhat stereotyped phraseology in which I propose:—"That the thanks of the meeting be given to the general managers and other officers for their valuable services."

Mr A. Dodds Fairbairn: I have great pleasure in seconding the resolution, and in doing so I must say that we must all be indebted to the chairman for the interesting and full account of our work in Africa, and I am sure, with regard to the officers to whom we vote these thanks, that we are in very safe and good hands.

The vote was accorded with acclamation.

The Chairman: That, gentlemen, concludes the business of the meeting.

The Right Hon. the Earl of Midleton, K.P.: Vote of Thanks Gentlemen, I am sure we shall not wish to separate without expressing our thanks to the Chairman and Directors for their care and charge of the bank in the past year. We are very fortunate in our board. The admirable result we see in the balance-sheet before us is largely due to them. With regard to our chairman, he has made a most interesting speech to us to-day, and I venture to say we will all feel that his presence on the board is in itself a guarantee of the solidity of any concern with which he is connected. I have great pleasure in proposing "That the cordial thanks of the meeting be awarded to the directors for their attention to the affairs of the bank, and to the chairman for his conduct in the chair."

Mr J. J. Retallick: I have great pleasure in seconding the resolution. The past year has been a very difficult one, and I am glad to know that the prospects for the present year are most favourable in South Africa, and that continuing success is anticipated.

The vote was unanimously accorded.

The Chairman: On behalf of my colleagues and myself, I thank you very much.

The proceedings then terminated.

THE DISTILLERS COMPANY, LIMITED.

DIVIDEND MAINTAINED AND RESERVES STRENGTHENED.

The forty-eighth annual general meeting of the Distillers Company, Limited, was held within the Caledonian Station Hotel, Edinburgh, on the 22nd instant, when Mr W. D. Graham Menzies, chairman of the company, presided.

Before moving the adoption of the report, the Chairman said: With your approval I propose to hold the directors' report as read. Also with your permission I intend to follow the precedent established last year, and ask the managing director in due course to make such explanations of the accounts as may be necessary.

SUCCESSFUL RESULTS OF PAST YEAR.

My first duty, then, is to congratulate you on the result of our operations during the past year. These operations have by no means been free from anxiety and difficulty. Nevertheless, as the accounts show, we have weathered the storm fairly successfully, and are able, notwithstanding the large increase of capital, to maintain the same uniform rate of dividend, with something over to strengthen our reserves. So far as industrial strife is concerned which has affected so many other trades we have been particularly free, and where any question of wages has arisen we have been able to meet our workmen's representatives, and adjust matters with them to our mutual satisfaction. The production of potable spirits has been well controlled during the past year with the object of preventing if possible that glut on the market which over-production inevitably brings about. Our difficulty, however, in so regulating the production is to forecast what the consumption of spirits is likely to be three years hence, when the present production is set free for home use. Sales of new potable spirits have been well maintained, while the business done through our subsidiary companies in blended whiskies has been satisfactory.

MOTOR FUEL SUPPLIES.

The only unsatisfactory feature under this head is the continuance of the present high rate of duty on spirits which stifles trade, and places spirits in a much more unfavourable position than any other commodity. Successive Chancellors of the Exchequer have been appealed to in vain for relief from this unfair differentiation and we are hopeful that in time this will make up in large measure for the shrinkage in the other. The success which has attended the introduction of "Discol" as a practical motor fuel has been marred by the high cost and scarcity of the chief source of raw material from which it is made, viz., molasses. Your directors have been unceasing in their efforts to find an alternative raw material, which might take the place of ordinary cane molasses, upon which we are now so dependent. While it is too early yet to say if their efforts have been successful, they have reason to hope that they have at last found a substitute made possible by the application of two Continental processes which have been amalgamated and formed into one company with the view of development. This company, which has been registered as an English company, under the name of the International Sugar and Alcohol Company, Limited, represents various participating interests, but our company has the controlling vote.

TRIBUTE TO STAFF.

Before closing I would again, as in past years, extend to the whole staffs both of the parent and subsidiary companies the grateful thanks of the directors—and, if I may be permitted, I would also include the thanks of the shareholders—for their loyal

service during the past year, which has produced such an excellent result.

I have now great pleasure in moving that the directors' report be adopted; that, after making provision for the various reserves mentioned therein, a final dividend of 3 per cent., equivalent to 6 per cent. per annum, less tax, be declared on the preference shares; a dividend of 6 per cent., making 10 per cent. per annum, free of tax, be declared on the ordinary shares—both payable August 1st next—and that the sum of £119,530 16s 1d be carried forward to next year.

MANAGING DIRECTOR'S SPEECH.

In seconding the adoption of the report, Mr W. H. Ross, the managing director, said: Before fulfilling the duty imposed upon me by the chairman, will you allow me to make an explanation? A year ago I indicated that it was the intention of the directors to form a new holding company to take over the shares of the various subsidiary companies engaged in the sale and distribution of blended whiskies. It was thought that this might be the best means of consolidating these interests, while preserving the distinctive names of the various brands of whisky. On further consideration it transpired that this would involve considerable expense out of all proportion to the benefits sought to be obtained, and the scheme in its original form was consequently abandoned. It was, however, deemed advisable to separate the export blending business carried on at South Queensferry from the strictly manufacturing portion of the company's business.

CO-ORDINATING THE SUBSIDIARIES.

A new company, which is called the Distillers' Agency, Limited, has accordingly been formed with a paid-up capital of £1,000,000, and embraces not only the blending business already referred to, but also the Highland Distillery at Knockdhu, Banffshire, hitherto carried on in connection with that business. While our various subsidiary blending companies, including the agency, will still be retained as individual units, and be separately managed, the directors have been fortunate in securing the services of Mr. Thomas Herd, one of the late managing directors of James Watson and Co., Limited, Dundee, to whom has been entrusted the work of co-ordinating the policies of these concerns so as to obtain the same advantages for the parent company as if our original scheme had been put into execution. This explanation will help to simplify my analysis of the balance-sheet which I now propose to deal with.

DISTILLERY VALUES WRITTEN DOWN.

Turning first to the credit side of the balance sheet and contrasting the figures with 1923, you will observe that the combined values of land and buildings and plant and utensils show a reduction of £90,000 compared with last year. This in part is accounted for by the value of the properties at South Queensferry and Knockdhu, which have now been transferred to the Distillers' Agency, but, after making such deduction and placing against same the new capital expenditure incurred during the year at our various works, there has been written off from the value of redundant distilleries no less than £132,000.

INVESTMENTS CONSERVATIVELY VALUED.

We next come to investments, which this year stand at £4,051,655, against £3,227,895, or an increase of £823,760. I have already explained that these investments have been added to by

the transference of other assets into shares of the Distillers' Agency, Limited, to the extent of £1,000,000. Other new investments during the year account for £113,763, while the whole has been written down by £288,019. As this item in the balance-sheet has become a very important one, it will be satisfactory for you to know that the value at which it now stands in the books, whether regarded from an asset or a dividend-earning point of view, is on an extremely conservative basis.

Sundry debtors and stocks of spirits, grain, &c., are both materially affected by the proportions of these assets transferred to the Distillers' Agency, which now appear under the heading of investments, or as loans to subsidiary companies.

Cash in bank and in the form of bills receivable show a better position this year, while loans to subsidiary companies have, as indicated, been largely increased through the parent company having to finance to some extent the stocks requisite for the agency and other subsidiary companies.

ACQUISITION OF RECTIFYING BUSINESSES.

Turning now to the debit side of the balance-sheet, capital account has been enhanced by the issue of the new preference shares, also by the further issue of ordinary and preference shares mentioned in the report in part satisfaction of the price paid for a London rectifying business. While on this subject it may be appropriate to mention that the directors are in negotiation with and have practically concluded the purchase of two other rectifying businesses in London, which will secure to their company their outlet for spirits. These purchases, if ratified, will involve the issue of the remaining authorised share capital of the company.

Reserve fund has been affected by the withdrawal of the amount which it was agreed to capitalise, but you will observe that a substantial sum has again been carried to this fund from the past year's profits. A further £5,000 has also been added to the fire insurance fund and £25,000 to the superannuation and provident fund. The latter fund carries interest at 5 per cent. per annum against the company, and our aim is to make it self-supporting, so that in time it will be able to meet all claims made upon it without further capital contributions.

DIRECTORS' OPTIMISM JUSTIFIED.

The other items in the balance-sheet call for no special comment, but you will observe that the rather heavy overdraft of £518,000 which appeared in the previous year's balance-sheet has

now been wiped out, and the temporary security placed with the bank against that overdraft has consequently been returned.

YEAR'S PROFIT.

If you will now glance for a moment at the profit and loss account, you will see that the actual profit earned, after making the very special provisions for depreciation already referred to, is £57,277 greater than the previous year, while the sum required to pay the additional dividend on the extra capital issued, together with the higher rate of dividend on the preference shares, is £47,647, or about £10,000 less.

On the whole, I think you will agree with me that these figures fully justify the optimism of the directors in carrying through the large financial readjustment of the capital, and I have accordingly much pleasure in seconding the adoption of the report.

SHAREHOLDERS' CONGRATULATIONS.

The Chairman having invited questions, Mr. J. M. Rusk, S.S.C., said that, seeing there were no questions, he would like to be permitted on behalf of the shareholders to offer the directors their congratulations on the presentation of such an excellent report. Last year the directors presented a scheme which was enterprising, ambitious, and promised good things to the shareholders. To-day they found the scheme completed and presented to them in a simple and intelligent manner, with an additional share certificate in their pockets, which would bear fruit in the future. The scheme was ambitious and enterprising, as he had said, and reflected very great credit upon the management of the company, because, as was apparent to the shareholders who took an interest in the company, the time was ripe for recognising its strength and dealing with its assets. The shareholders were satisfied that that had been done most effectively and intelligently, and had not been carried out without much thought and business acumen. Not only that, but after carrying through this very substantial transaction, including the flotation of a new company, which they hoped would bear good fruit, they found that the profit and loss account showed such a substantial balance that the directors were not only able to maintain the dividend and pay the dividend on the new preference shares, but to provide a very substantial nest egg with which to start a new reserve. The shareholders were encouraged to hope that the nest egg would prove as fertile as those that had gone before, although he could hardly venture to ask the managing director how long the incubation would take. The shareholders could await that incubation with

patience. On rising he did not intend to make a speech, but he thought it his duty to convey on behalf of the shareholders their thanks and congratulations, and, if it were in order, he would like to suggest that such acknowledgment and thanks should be recorded in some appropriate manner in the minutes of the company.

The Chairman said that, on behalf of the directors, he had to thank Mr Rusk for his kind remarks, and hoped that he voiced the feelings of all the other shareholders of the company.

REPORT AND ACCOUNTS ADOPTED.

The report and accounts were unanimously adopted.

Sir James Calder moved the re-election of the retiring directors, Messrs David Alexander, J. B. Fergusson and A. A. Watt, and Mr Ebenezer Dawson seconded. The motion was carried unanimously.

Mr William Stewart moved the re-election of the auditors, Messrs Moores, Carson and Watson, C.A., Glasgow, and Mr William D. Nairn seconded. The motion was carried unanimously.

The proceeding terminated with a vote of thanks to the chairman for presiding, moved by Mr William M. Yool.

THE ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED. INCREASED PROFIT AND DIVIDEND.

POSITION AND PROSPECTS OF THE RUBBER INDUSTRY.

The fourteenth ordinary general meeting of the Anglo-Dutch Plantations of Java, Limited, was held, on the 24th instant, in London, the Hon. C. H. Strutt (chairman of the company) presiding.

The Chairman, in the course of his speech, said: We have taken one important step since we last met. We have separated what we may call the engineering part of our business from the agricultural. In our engineering part we include our railways, electrical works, telephone, water supplies, and shipping. We have accordingly floated a company, in which the Anglo-Dutch Company hold all the shares, called the Anglo-Dutch utilities, and in which we have issued 6 per cent. debentures for £350,000, and have sold them at 96 per cent. to a syndicate with our guarantee for principal and interest.

PROFIT AND DIVIDEND.

Perhaps some of you will be astonished to see that the profit of the year is quoted as only £2,000 more than in 1922, in spite of which you find we pay a 12 per cent. instead of a 9 per cent. dividend, and carry over more than the year before. This is easily explained. The profit in the 1922 accounts included a sum taken from the sale of investments, amounting in all to £100,000. This was a windfall which we could not expect to recur, and we thought it would be very bad finance to pay it in one year as dividend. This year a large portion of our profit has come from Java; that is, has come from the real business in which we are engaged—the production of tropical agricultural commodities—and even that is not the whole story. We have taken out £400,000 or more from the investments in 1923, and have spent it in development and improvements of our cultures, which up to the present bring no return, but which we hope will in the end bring our profits to a higher figure than the yield from Stock Exchange investments.

RUBBER MARKET.

The position of the rubber market, though not quite so bad as a month ago, is not satisfactory. It was generally expected that the price would, under the Stevenson scheme, be fairly stabilised round 1s 3d. This has not, so far, proved to be the case, without doubt due to the fact that only a portion of the industry is undergoing restriction. It was always felt that the refusal of the Dutch growers to come into the scheme would prejudice the position to a certain extent, but that is not the main cause of difficulty. It is the native cultivation in the Dutch East Indies, which is not subject to restriction, which is of greater extent than was formerly believed to be the case.

It is now, I think, generally accepted that the native, or, rather, non-European, acreage in Malaya alone is equal to the European. The extent of the native cultivation in the Dutch East Indies is not known at present. There are very different estimates made, and it is very important that the facts should be ascertained. Some well-informed people believe that the native cultivation throughout the Dutch East Indies is very large—nearly equal to the European. If this be the case, it would be obvious that there is too large an area of rubber not subject to restriction. We are credibly informed that this large area was only moderately tapped during the low prices before the days of compulsory restriction. Thus, when the prices were low there were large areas untapped. The lower price taken by the natives on account of their inferior produce may not continue for long, for we hear that the Chinese

have in some degree arranged to supply the native producers with machinery on the payment by instalments plan. Their first output from the new machines, we are informed, has produced very good quality light brown crêpe. If these schemes develop, the competition by native growers will be even more formidable to Europeans. I believe that the main cause of the fall in prices is the large output of the native producers; the Dutch planters have also ridden on our backs. The interesting question is at what price the native ceases to produce to such an extent as lately. It is considered that at 10d the natives would largely reduce their production, and some have even thought that a year or two at 10d would be the best under the circumstances for the European industry.

SELLING COMBINE.

It is very natural, under the present circumstances of the rubber industry, that the producers should look for further remedies to improve their position, and some of them have turned to the possibility of a selling combine for salvation. I wish I could share their hopes and expectations. There are only two ways of keeping a market artificially at a paying level—by restriction and by holding stocks. We have now restriction, and therefore a selling combine would only give us an advantage by encouraging outside capital to hold stocks which rubber combines are unable to do themselves. Personally, I much prefer restriction. Large stocks seem always a danger. A further objection to the selling combine is that the rubber companies who join will have to pay a considerable sum for the use of the capital for holding the stocks. We are now told of the large quantities grown by Dutch natives. In competition with us they will then not only have the advantages arising from our restriction, but also from the payments we make to banks to enable us to hold stocks. This may not only result in the natives producing to the extreme limit, but also in large extensions on their part provided we were in any way successful in raising the prices. I believe that we cannot afford to be opposed to the selling combine like that suggested to us a year or so ago, in which so large a proportion, if not half, of the producers would be outside. I have no idea of what the Rubber Growers' Association Committee intend to recommend, but it can only be a very moderate proposal that I could advise accepting, for the reasons I have advanced. To have our future results jeopardised, if not entirely destroyed, by the natives increasing their plantations fills me with dismay.

PROPAGANDA SCHEME OF THE R.G.A.

My hopes are fixed more on new uses for rubber. I heartily support the propaganda scheme of the Rubber Growers' Association. It appears that the consumption per head of raw rubber in the United Kingdom is one-fifth that of America, and is considerably less than in France, so there is still room for propaganda at home. I have been, and still am, in favour of the restriction policy, though my enthusiasm has been very much damped by the amount grown by those who do not restrict.

It is fairly obvious that the effects of the Stevenson scheme, if persevered in, will in the next few months raise the price to the neighbourhood of 1s 3d. When the scheme has its intended effect we shall perhaps be able to see whether the price of 1s 3d encourages still more native cultivation. While waiting to see what the result will be, surely it is better to hold our hands rather than enter into new schemes at the moment.

LOW COST OF PRODUCTION.

Our profit on rubber was over £100,000, but, then, we had advantages of climate, soil, and labour more than a great many other estates elsewhere. You will see that we averaged 1s 2½d per lb, with costs reduced to the satisfactory level of 6½d a lb. There have been some criticisms raised lately as regards selling our crop forward at whatever price may be realised on the London market. What tempted us to do this was that we were offered London prices for our rubber in our factories on the estate, and thus saved the whole of what would have been the cost of transport from our factories to London. It will be, I think, impossible to reduce the cost much lower in any direction except in bonuses than we have done during the past year, and therefore our profit on the lower price realised must tend to be smaller. The crop we are allowed under the restriction scheme by the Rubber Growers' Association is 3,202,500 lbs, compared with 2,692,500 lbs in 1923.

TEA

Our tea profit, as naturally expected, surpassed the results of the other products, and amounted to £112,000. This is a very large increase over the previous year. Our first forward sale of tea was at too low a price. This year we are doing considerably better—sufficiently better, we hope, to bring into revenue a much larger sum than what we expect to lose by the decline in the price of rubber. We have sold in advance at quotation average of 1s 1½d per lb when the spot price was 1s 2½d one-third of our crop of

The Anglo-South American Bank Limited.

The Bank, in addition to 6 Branches in SPAIN, has, with its
AFFILIATED INSTITUTIONS,

THE BRITISH BANK OF SOUTH AMERICA, LTD., and
THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.,
54 Offices in the principal countries of LATIN AMERICA.

AUXILIARIES:

ANGLO SOUTH AMERICAN TRUST COMPANY, NEW YORK
(Incorporated under laws of State of New York), and
BANQUE ANGLO-SUD AMERICAINE, Soc. Anon., PARIS.

[July 26, 1924.]

practically all grades over the next three years. Our crop of tea for the first six months of this year amounted to 4,536,700 lbs. We are planting up 175 acres of tea on the P. and T. lands and 316 acres on our new estates.

COFFEE AND CINCHONA.

The coffee produced a nice profit of nearly £20,000. Owing to the heavy drought we had in 1923 the crop this year is smaller all over Java. The loss of crop will be somewhat compensated by the increase in price obtained, which, so far as we are concerned, is satisfactory.

Cinchona has done extremely well during the past year. The profit, though not reaching in total the level of tea and rubber, has produced a larger percentage on its capital than any other culture in which we are engaged.

SISAL.

We have already planted 2,625 acres of sisal in 1923, and we hope to extend it by 4,375 acres during the present year, and they anticipate in Java that they will be able to do still more. Unless the price falls to a great extent, I think there is no doubt that this will produce satisfactory results in the next few years.

The report and accounts were unanimously adopted.

MALAYALAM PLANTATIONS, LIMITED.

FORWARD SALE OF TEA CROPS.

The third ordinary general meeting of Malayalam Plantations, Limited, was held, on the 24th instant, in the Council Room of the Rubber Growers' Association, 3 Idol Lane, London, Mr Charles Heath Clark presiding.

The Chairman, in moving the adoption of the report and accounts, said: The tea crop harvested was 7,718,902 lbs, as compared with an actual crop of 6,718,842 lbs from the same area in 1923, showing a satisfactory increase of over 1,000,000 lbs. The f.o.b. cost of production (excluding loss on exchange, .21d per pound) was 7.64d per pound, against 7.69d per pound in the previous year, while the average net price realised was 13.21d per pound, against 13.38d per pound in 1923. The yield per acre was 607 lbs, against 492 lbs in 1923. The estimate for the current year is 7,675,000 lbs, of which we had harvested to the end of June 1,859,172 lbs.

The whole output of tea for the current year has been sold forward at an average gross price of 1s 3.79d per pound landed London terms. As just recently announced in the Press, the board have considered it wise to accept an offer made them for the whole of our output of tea for the three years 1925, 1926, 1927, at a price showing an improvement on the current year's contract. I have no doubt whatever that you will approve the board's action in this matter. It secures us the benefit of the satisfactory rates at present ruling, and amid the uncertainties by which all business is at present beset, and may still be for some time to come, ensures the company getting a price for their tea crop, which, I estimate, upon a conservative basis, should show us 15 per cent. on the total capital of the company, without any addition to our profits from our large areas of rubber and our cardamoms crop.

RUBBER CROP.

The rubber crop harvested was 2,276,658 lbs, as against an actual crop of 1,135,419 lbs in 1923. The f.o.b. cost of production (excluding loss on exchange, .20d per pound) was 7.41d per pound, against 10.72d per pound in the previous year, while the average

net price realised was 12.62d per pound, against 12.64d per pound in 1923. The average yield per acre was 225 lbs, against 197 lbs in the previous year. The estimate for the current year is 2,185,000 lbs, of which 690,223 lbs have been harvested to the end of June. Forward contracts have been made for the sale of 35 tons at an average net price of 1s 4½d per pound.

Our cardamom crop was 22,431 lbs, which was harvested at a cost of 2s 2.86d per pound f.o.b., and realised an average net price of 5s 4.51d per pound. The estimate for the current year is 60,000 lbs.

Perhaps here I might mention to you the only point in any sense of an adverse character which I have to place before you to-day, and that is, that just before I came to this meeting we had news that there had been abnormal rainstorms in Southern India, and that these storms had affected—to what extent at present we are unable to tell you—districts in which some of our estates are situated. There is no reason to suppose that any damage which the company may have sustained will prove of a character in any way seriously to interfere with the prosperity of the company in the current year, but the probability is that there may be a certain amount of damage to be repaired.

The net profit for the year was £209,450, and adding thereto the balance of profit brought forward from last year, £17,823, and deducting the interim dividend of 5 per cent. paid in February, leaves £176,610 available for distribution. Out of this the directors propose to write off the increase of capital expenses, £4,500, to transfer to reserve account £50,000, to pay directors' additional remuneration, £1,000, to pay a final dividend of 10 per cent., less tax, making a total of 15 per cent. for the year, and to carry forward the balance of £19,783.

OUTLOOK FOR TEA AND RUBBER.

The future outlook for tea appears quite satisfactory. I think the current year will show again some increase in the world's production, but not on the same scale as in 1923, when the increased production amounted to about 80,000,000 lbs, in spite of which the stocks at the end of June showed only 10,000,000 lbs more, and, provided coarse plucking is not resorted to, I do not see anything at present threatening the continuance of good prices.

With regard to rubber, at the present time I am also inclined to be somewhat optimistic. During the first six months of the current year the world's stocks of crude rubber have been reduced by about 35,000 tons, and I believe the net reduction in the stocks of rubber for the present year will not be much less than 25,000 tons, allowing for the falling off in demand which commonly characterises the latter half of the year. The industry cannot go on indefinitely drawing on stocks, and with the further restriction which now appears inevitable under the Stevenson scheme, I do not think it unreasonable to expect a very considerable further advance in prices.

The report and accounts were unanimously adopted.

Since July 21, 1920, notes and certificates outstanding include notes called in by the Bank of England for £320,600,000, but not yet cancelled. Maximum fiduciary issue for 1920 fixed at £270,183,800, and for 1921 at £317,555,200, for 1922 at £309,968,400, for 1923 at £270,183,800, and for 1924 at £248,190,900.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from July 28-Aug. 2 were opened on July 25, 1924, and the total amount applied for was £50,035,000. For bills at three months dated Monday to Friday at £99 is 7d, about 62 per cent., and above in full. Saturday at £99 is 10d, above in full. The amounts allotted were as follows:—In bills at 3 months, £35,000,000; in bonds nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
1924.	£	£	£ s d	£ s d
June 20	35,000,000	47,995,000	2 19 3.39	94 13 0

good demand for middlings. Broad bran quoted 7s 6d, ordinary 6s 6d-7s, middlings 9s 6d, fine ditto 11s 3d, bags included, ex-mill, light oats 6s 3d, powdered oat husks 7s 3d, feed oatmeal 9s 6d, ground oats 12s 3d, per cwt. Oatmeal maintained. London-made, flaked 17s 6d, rolled oats 17s, medium and fine cut 17s, coarse and medium pinhead 17s, ordinary Scottish oatmeal 18s-18s 6d per cwt.

Our Middlebro' correspondent's report, dated July 24th, is as follows:—Pig-iron: There is no change here, and the market is as very weak indeed, with no signs of improvement at present. Ship-Cleveland G.M.B. is still offered at 87s 6d per ton. No. 3 export, and 87s per ton f.o.t. for home consumption, but the iron market, although makers are willing to accept 94s 6d per ton for mixed numbers and 95s for No. 1. Manufactured iron and steel: are only working partly, or entirely stopped. The demand for material shows no sign of improvement at present, and the following prices are still quoted:—Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9 10s; steel ship iron is no business doing in iron ore, with the exception of odd cargoes based on best rubio at about 22s 6d per ton c.i.f. Tees.

Our Sheffield correspondent writes:—The continued stagnation of the iron and steel market has resulted in the inevitable cutting of prices and the usual quotations are now merely nominal. Consumers having firm orders to place can book pig-iron and billets at from 5s to 10s below recent prices, and Continental works are offering very low figures for forward delivery. Short-time is still the order of the day in local open-hearth steel, and unemployment is steadily increasing. There are leading members of the trade who seem fairly confident of a good recovery after August. The authorities, however, are preparing to deal with greatly increased unemployment during the coming winter. While things are about as bad as they can be in the heavy steel section, conditions continue active in the lighter and finished branches, such as motor steel, tool steel, files, machine knives and tools, the output of which steadily increases. Further Russian orders for steel, files and saws have been booked in Sheffield, and the work is causing a number of plants to run at their fullest capacity. The cutlery and plate branches are a little busier. While the conditions in the coal trade have not changed materially on the week, the tendency

Our Glasgow correspondent writes as follows:—Very little business was transacted in the pig-iron market last week, with prices tending lower. Shipments were below the total of the previous week on account of the holidays, which commenced on Thursday last. In the iron and steel trades quiet conditions prevail, and with the works at a standstill business is likely to remain quiet for some days. Shipyards, iron and steel works, engineering works, and all factories in this district are now closed down until the middle of next week. Some engineering and structural firms, however, are resuming operations on Thursday of this week, and others with urgent orders on hand have squads of men at work during the holiday period. Shipbuilders are fairly well off for work, most of the Clyde yards having several boats in hand. The tonnage under construction is 650,000, or about one-third more than last year's total at the corresponding date. This satisfactory advance in the volume of work, it is hoped, is the prelude to greater expansion, as we understand a number of modern cargo vessels will be placed as soon as trade generally shows sufficient increase to justify this. Structural firms and tube works are very well booked with orders, and generally the post-holiday outlook is considerably brighter than was the case a year ago. Inquiries for black and galvanised sheets continue to be numerous, and makers are now quoting October and later delivery for export parcels of galvanised sheets.

Our Cardiff correspondent writes:—There has been no improvement this week in the position on the Cardiff market. The volume of the export trade continues a great deal below the average, and the demand from the European markets is still diminishing. Prices, however, have not given way to any appreciable extent. The colliery salesmen are doing their utmost to maintain stable quotations, and they are helped in this task by the absence from the market of any considerable quantity of free coal under the control of the middlemen. There is no co-ordinated policy being pursued in the restriction of output, but in a haphazard way this restriction is taking place by the closing down of the more unremunerative pits and the irregular working of the others. The colliery owners are making an effort to secure some concessions from the workmen with a view of reducing costs. One of the proposals which they have made to the workmen is one under which they would be conceded a greater freedom of action in the working of double shifts. In 1922 this expedient was supported even by some of the extreme Labour leaders in the Taff-merthyr area, but then on the ground only that the working of double shifts might help to absorb unemployed labour. The proposal, however, is now being resisted, and this is one of the reasons why a new local agreement has not yet been arranged to displace that which ended automatically last April with the termination of the national agreement of 1921.

The following are the current approximate quotations:—Best Admiralties, 28s to 28s 6d; second Admiralties, 26s 3d to 27s; best

The event of importance in the market this week has been the striking rise in raw material rates as a result of the official report on the American crop being decidedly worse than expected. Business in yarn and cloth has been thoroughly disorganised. Some local operators have been caught short, and have been compelled to secure cover. Trade in cloth for India, which for some little time has been more active, has been checked. Operations for China have been practically at a standstill. More business has been done for Egypt than anticipated. American and Egyptian yarn quotations have been put up, but it has been quite impossible for spinners to obtain adequate advances, and apart from isolated transactions trade has been blocked. The higher prices for raw cotton are very detrimental to a revival of trade in Lancashire.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There has been rather more life in the trade during the last few days, and the market to-day reveals a firmer tone so far as wool and tops are concerned. Some fair transactions have been put through in wool in the bale and matchings, and a nice turnover has been recorded in merino tops. Crossbreds have not moved to the same extent, but here, also, the tendency is better for choice, and quotations are all against the buyer. A general market quotation for warp 64's tops is now 6s, a few sellers being willing to take slightly less, while others are wanting more. Sixty-fours average are now quoted at 5s 10d, and 60's are firmer at 5s 4d for super and 5s 1d for ordinary. In crossbreds, 58's are about 1d dearer on the week, average now being quoted at 4s 5d. In carded qualities, 46's and 48's are a fraction dearer, and 46's prepared are ½d up at 27d. Spinners are buying with caution, but it is evident that some are covering for future requirements in view of the scarcity of fine wools. Orders for yarn, however, are few and far between, and prices are still most disappointing. Weak sellers are standing in the way of those firms who are endeavouring to make prices more in keeping with costs, but price-cutting is likely to continue as long as stocks are accumulating. There is no real improvement in the export trade, and little is expected until the German financial question is settled. In the piece goods trade a moderate amount of business is being done, both on home and export account, but wholesale fabric buyers show no disposition to buy forward. The greatest activity is seen in the heavy woollen district, the bulk of the demand being for the cheaper lines of woollens.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

The entire trade is again indebted to Messrs Dalgety and Co., for issuing an important circular regarding the exports of wool from Australasia during the year ended June 30th. Their monthly list of exports from Australia and New Zealand is always useful, and none the less so to-day. It enables every section to see how supplies are moving, and their figures are now taken as authoritative. The appended details of exports during the year just finished (which are Messrs Dalgety's own figures) clearly show that the views entertained at the beginning that there would be a less clip have been fully confirmed:—

	Bales.	Decrease.
From Australia	1,705,000	610,000
From New Zealand	601,000	51,000

Total exports

2,306,000 ... *661,000
* As compared with the corresponding period last year.
It will be seen from the above that the decline in exports is actually 661,000 bales, a quantity which is larger than any New Zealand clip that has ever been produced. This appears to be a serious deficiency for a period of twelve months, but it must be borne in mind that for the wool year 1921-22 large quantities of old B.A.W.R.A. wool were included in the list of exports, these helping somewhat to give a false impression of the weight of wool grown. Last year's exports from Australia and New Zealand do not represent the actual production, and one would be glad to know what it was. To the above exports from Australia and New Zealand must be added the quantity of wool absorbed by the mills of Australia and New Zealand, but in any case the year's production must be down at least 250,000 to 270,000 bales. This is too much, but it just shows what one year's drought can do, and when there is a continuance of droughts for several years in succession it plays havoc with sheep flocks and wool supplies. It is to be sincerely hoped that we shall not have four to five years of drought such as terminated in 1902, for the repetition of such an experience would put the whole trade into queer streets. However, we are glad to know that so far there has been no actual shortage in West Riding consuming centres, and if it was possible to take stock, we are satisfied that the lessened consumption of both merino and crossbred wool would be found to be about equal to the shortage in the clip named above. What the trade will do when Europe and America begin to be busy it is difficult to foretell, but in the meantime we are glad to think that the clip which is now beginning to be shorn in Australia bids fair to wipe out the deficiency of last year. All our reports confirm the statement that Australia generally is having a bountiful season; sheep are clipping heavier fleeces, and therefore we may expect a larger aggregate production.

VEGETABLE OILS AND OILSEEDS.

Abnormal conditions have ruled in respect of linseed and linseed oil, the market having been largely in the hands of speculators. Plate linseed (following wheat) has been very firm at advancing prices, £20 having been touched for seed afloat to the U.K. A reaction in Argentine options have caused a slightly easier tone and a reduction in values. On the whole, however, the market is firm, and forward positions at 5s premiums over "afloat." New crop for January-February shipment is now offering at £18 15s. London has been a buyer of Calcutta linseed up to £21 17s 6d for shipment. Crushers have not followed the rise. With regard to linseed oil, demand has fallen away in consequence of the high prices, which, on profit-taking, have, however, eased to £39 naked ex Hull mill. New Egyptian cottonseed continues to be dealt in, chiefly for early shipment, £13 being the value for September shipment to Hull. Quite a big trade has been done in crude Egyptian cotton oil round £41, with sellers now asking more. Castor oil has been advanced to £68 (barrels free) for first pressure owing to dearer seed. Other vegetable oils are in fair demand at late values.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market is steady to firm, as best ox sold from 6½d to 8½d at the Bermondsey auctions on Thursday, seconds making from 5½d to 7½d, and best cows 6½d to 6½d. Calf were decidedly firmer, and advances of ½d to 1d were made all round, best selling from 7d for heavy to 14½d for light. Lambs sold from 3s 9d to 10s 6d, and pelts from 4s 8d to 7s 6d each.

The demand for sole leather is still fairly good, a feature of business being a better trade in medium grades for repairing work. A good deal of rubbish from dry hides is, however, still going to shoe manufacturers, shoulders, bellies, and even cheeks being utilised for soles in extreme cases. Prices are fairly firm, but tanners prepared to concede a trifle for a large deal. French and Australian sole leather is again selling, and I hear of renewed attempts being made to unload American sole leather on this market again.

Dressed leather is slow of sale, and domestic manufacturers seem to have almost lost heart, in view of the heavy imports and low prices for their own productions. Imports of dressed leather up to the end of June were valued at £3,499,050, exports of British leather of all kinds for the same period being valued at £2,636,631.

The boot trade is well employed except in the districts catering for the artisan class of boots. Retailers are pressing for holiday delivery, and the export section remains good. Exports of British footwear of all kinds to the end of June were valued at £2,448,229, as against £1,904,110 for the January-June period of 1923. The figures, however, are inflated by the inclusion of the Irish Free State trade this year.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 25.

SUGAR.—The general tone of the market remains distinctly quiet, and there appears to be nothing in the general situation to induce distributors to operate beyond wants of actual necessity. No alteration was made in spot quotations, while offers from continental producing countries remain small. Certain quantities of Java are arriving, with offers of American sugars on a moderate scale. Messrs Tate and Lyle's cubes quoted 42s 9d to 43s 9d; crushed, 41s 3d; granulated, stoved, 40s ½d; fine and coarse grain, 38s 10½d; No. 1, 38s 7½d; No. 2, also London and T.L., 38s 4½d; ditto, forward to August, 38s 3d; yellow crystals, spot, 35s 10½d; castor, 38s 4½d to 40s 3d to 42s 1½d, as to quality. West India crystallised 34s to 38s 6d, as to sample. White Java, spot, 34s 9d; May-June, 21s 6d; June,

CONSULTING ENGINEERS.

London—PELLEW-HARVEY & Co., 59a, London Wall, E.C.2. Canada—W. E. SIMPSON, A.R.S.M., M.Inst.M.M., M.Canadian M.I., Swastika, Ontario.

LONDON SECRETARY AND OFFICES.

ROBT. B. AUCLAND, 316, Winchester House, Old Broad Street, London, E.C.2.

A Prospectus will be published on Monday next offering for subscription 750,000 shares at 4s. each, payable 1s. per share on application, 1s. per share on allotment, and the balance two months thereafter. Allottees will be entitled to an option at 5s. per share to 30th June, 1925, of one share to each three shares allotted.

The Prospectus will give full particulars of the properties and interests to be acquired, which consist of:—

- (1.) A large interest in three claims, known as the Keeley Extension Claims, adjoining the properties of the Keeley Silver Mines, Ltd., in respect of which arrangements have been already made to float them in conjunction with other properties under influential auspices.
- (2.) A large interest in the Bellel Silver Mine, which has already produced silver and is situated adjacent to the Frontier Mine, of the Mining Corporation of Canada. Sinking on this Mine to the Keewatin-Diabase contact is proceeding.
- (3.) A large interest in the British Porcupine Mines, Ltd., owning the Thomson Krist and Porcupine Crown claims adjoining the properties of the famous Hollinger Gold Mine and the Vipond Consolidated Mines. A complete milling and treatment plant is erected on the Porcupine Crown claim from which \$3,000,000 of gold has already been recovered.
- (4.) A contract for the purchase of the Taylor-Conkey claim adjoining the Bellel Silver Mine.

A copy of the full Prospectus, with Reports and Maps, will be forwarded on receipt of a postcard addressed to the Secretary, Robt. B. Auckland, 316, Winchester House, Old Broad Street, London, E.C.2.

July, 20s 6d; July-August, 19s 10½d, c.f. and i., London. Czecho granulated, spot, 36s 9d; ready for shipment parcels largely nominal in absence of offers; November-December, 19s 10½d, f.o.b., Hamburg. Dutch granulated, spot, 36s 6d. American ditto, spot, 37s; July-August, 24s; c.f. and i., U.K. Cuban basis, 96%, August, 17s 6d, c.f. and i., U.K. White Terminal market steady, but business moved rather quietly. August sold, 22s 3d to 22s 9d; December, 19s 1½d to 19s 4½d.

COFFEE.—With sustained inquiries both on home and export account, the market continues v.r.y firm, with prices in most cases again higher on the week. Meantime, only small supplies of mild kinds are available. Costa Rica, good to fine bold colour, sold, 137s to 160; Kenya peaberry, 122s.

COCOA.—There was a moderate movement in spot parcels, and recent rates were maintained. Accra, F/F grade, October-December, sold, 32s 6d to 33s 3d, f.o.b.

TEA.—Only 14,850 packages Indian were submitted to auction during the week, and met a fair demand at about steady prices. Some fine Darj elings and choice Assams were well competed for and realised higher figures. Pekoe sold, 1s 4d to 2s 1½d; broken orange, 1s 6½d to 3s 3½d. Ceylon sales of 25,000 packages passed with some irregularity. Fine, while in small supply, fetched full rates, but other kinds moved in favour of the buyer. Pekoe sold, 1s 3½d to 1s 8½d. There was a fair call for new season's China, especially for Keemuns of fine quality, round about 2s 6d per lb, in bond. About 8,000 packages Java and Sumatra were catalogued in auction, and with more active and better-distributed competition, firm to occasionally dearer prices were secured. Pekoe sold, 1s 3½d; broken ditto, 10½d to 1s 6½d; pekoe souchong, 1s 3½d; orange, 1s 4½d to 1s 5½d; broken orange, 1s 1½d to 1s 10d per lb, in bond.

RICE.—This market again disclosed very firm features, and in the case of Burma grain the situation was somewhat obscure, as shippers virtually withdrew from the market. Two stars, spot, London, quoted 17s, with 16s 6d bid and refused for August-September shipment. S.Q. double bags, August-September, to Cuba, quoted 16s 9d. No. 3 cleaned Rangoon, August-September, to Levant, 16s 9d, c.f. and i. terms. Spanish new crop for shipment, 21s 6d, c.f. and i., London. Japanese peas, spot, 19s 9d; September-October, done 20s 6d. Madagascar butter beans, spot, 34s; afloat, 3 s 6d cwt, c.f. and i., London. Rangoon bran, October-December, quoted £7 15s per ton, ex ship, London-Liverpool.

SPICE.—Pepper in fair request, chiefly forward, and market firm. Black Singapore, fair quality, spot, quoted 5d; July-September, steamer, L.S., 4½d, buyers. Lampung, October-December, done 4½d. Muntok, spot, 8½d; August-October, sold, 8½d; October-December, quoted 8½d. Zanzibar cloves, spot, 1s 1d to 1s 1½d per lb. Tapioca quiet on about former terms. Sago flour, June-August, 14s 7½d. Desiccated coconut firm. Halves, on spot, sold, 39s 6d to 39s 9d; August-September, quoted 39s; October-November, sold, 39s 9d cwt. Ginger quietly steady.

JUTE.—A further substantial advance was registered in face of active support accorded, partially on Calcutta account, and meantime inquiries for manufactured goods are on a liberal scale. Firsts, old crop, July-August, Continent, sold £29 15s to £30; new, August, crop, July-August, Continent, sold £29 10s to £29 15s, £29 5s to £29 10s; ditto, August-September, sold £29 10s to £29 15s, £29 5s to £29 10s; September-October, £28 15s to £29 5s, £28 10s to £28 15s per ton.

HESSIANS firm, with a good demand. 10-oz, August-September, sold, 33s 6d; October-December, 32s 6d; 8-oz, August-September, quoted 25s 7½d; October-December, sold, 24s 9d 100 yards. B twills, August-September, quoted 85s; A, ditto, 100s. Bran bags, 56 by 28, August-September, 60s 9d 100 bags.

HEMP.—Holders of Manila required steady prices, but there was only moderate response from buyers. J grade, July-September, quoted £42; K, £38 10s; L, £37 10s; M, £35. New Zealand nominal, with only limited quantities finding their way to the U.K. market from time to time. Mexican sisal steady, with further business in good white; August-September, £40, c.f. and i., U.K./continental ports. African sisal quiet on about former terms.

SHELLAC quiet. T.N., spot, 270s; August, 250s; October, 247s 6d cwt.

COPRA dearer, with reserve shown on the part of sellers, and a good inquiry predominated. F.M.S. Straits, April-June, Rotterdam, quoted £30; May-July, £29 16s 3d; June-August, sold, £29 11s 3d; August-October, £29 7s 6d. Dutch East Indies, April-June, quoted £29 17s 6d; June-August, sold, £29 10s; August-October, quoted £29 5s. Ceylon, August-September, quoted £30 15s; South Sea £29 5s. ditto, £28 12s 6d; with ditto, kiln-dried, to Marseilles, £28. F.M.S., ditto, £28 12s 6d; with ditto, kiln-dried, to Marseilles, £28. Palm kernels firmer. April-June, Liverpool, quoted £21; May-July, £20 16s 3d; June-August, sold, £20 13s 9d; and August-October, to Hull, sold, £20 15s ton.

RUBBER.—A moderate volume of business resulted, and general tone of market proved steady. Plantation standard crepe and sheet, spot, also July and August, sold, 1s; September, 1s to 1s 0½d; October-December, 1s 0½d; January-March, 1s 0½d. To New York, standard European estate sheet, August-September, sold, 1s per lb, c.f. and i. terms. Wild sorts steady, unaltered.

DRUGS.—Public sales met with quiet support. Rhubarb easier in price. Cardamoms bought in, seed selling at 5s 3d to 5s 9d; pods, 4s 9d to 5s 5d. New crop senna, sold, 7d; pods, 8d; with Alexandria leaf, 9d per lb.

FRUIT (Dried).—The market remained without new feature, general tone being steady, though business was confined to very narrow limits. Currants: Pyrgos, ½ bags, quoted 41s; ½ cases, 46s to 47s; Patras, 50s; Gulph, 52s; Panarit, 56s; Vostizza, 60s to 65s; Aus-tralian, new, ½ cases, 55s to 60s. Raisins: Valencia, ½ boxes, 38s to 40s; Cape, new, 40s to 44s. Sultanias: Greek, ½ cases, 48s; Smyrna, boxes, 50s to 54s; fine, 60s to 62s; Cape, sulphured, 55s. Figs: Genuine naturals in bags, 36s; fine, 38s. There was a moderate call for dates at steady prices. Hallowses quoted 28s; Siar, 18s to 19s. Evaporated fruits: Californian standard apricots quoted 72s to 76s; choice, 85s; extra choice, 96s; fancy, 110s. Peaches, choice, 48s; extra ditto, 50s; new crop, fancy, 65s. Apples rings, 70s to 80s.

and the day's indebtedness to the Bank was liquidated. For daily money $3\frac{1}{2}$ and 4 per cent. have been commonly paid; and the weekly fixtures have been renewed at $2\frac{1}{2}$ per cent. The discount market has kept firm under the influence of the stringency of the money market, fine three months' bills seldom being taken below $3\frac{1}{2}$ per cent., though at the end of the week the usual tendency towards slightly easier conditions, both in money and in discounts, was apparent. A line of £2,500,000 Port of London bills for three months was placed on Tuesday at just over $3\frac{1}{2}$ per cent.

	Aug 2, 1924.	July 25, 1924.	July 18, 1924.	July 11, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills)	3½	3½	3½	3½	3 (Jly. 5, '23)

The Bank return showed an increase of £819,400 in the circulation, presumably to meet holiday requirements, and an addition of £38,900 to the gold stock, leaving the Reserve £780,500 lower. Government securities rose by £6 millions and Other securities by £2 millions, while Public deposits were less than a million higher. Other deposits were thus £6½ millions higher. Currency notes outstanding increased by £3,264,000 this week to £295,565,900, which includes £1,380,300 for notes called in but not yet cancelled. The fiduciary issue is £244,735,600, or £3,455,300 below the maximum.

THE STOCK MARKETS.

Holiday influences, though strong, have been partly offset by the political developments, and there has been some activity, although of the small-order variety, in the gilt-edged market. There is also more activity than usual in the oil market, and rises in the base metals have directed attention to copper and tin shares. In the foreign market, Brazilian bonds have fluctuated in accordance with the character of the news, though little stock has changed hands. Home rails have lacked support, and with the exception of the Underground group are dull, but Argentine rails have improved. Rubber shares have been better on the rise in the commodity, but industrials are mostly quiet, while South African mines have received a little speculative support.

THE COMMODITY MARKETS.

Business in the cotton market has again been adversely affected by the unsettled raw cotton situation and the violent changes in prices, it being difficult to fix a basis on which to trade in yarn and cloth. The general tone in the wool trade at Bradford is good, and during the week evidence was forthcoming of greater confidence in the raw material. Prices for coal at Cardiff are on the easy side, although the approach of the August holidays has stimulated deliveries. The pig-iron market is very quiet, and the steel trade is stated to be suffering from foreign competition. Tin moved in an upward direction, but copper fell back on sellers becoming prominent. Wheat prices have advanced all round. Tea was firm. Rubber opened weak, but as the week drew to its close a steadier tone manifested itself. Further details will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

In the foreign exchange market the shadow of the Conference was again a depressing influence, and business throughout was on a restricted scale. The Paris rate, which closed at 86.35 on Friday last, rallied a little on Saturday under the influence of more optimistic views, but early in the week moved up to 87, and on Thursday morning was quoted at 88.90. The main influence has been, of course, the pessimism resulting from the failure, at any rate up to the present, to reach an understanding with regard to the issue of a German loan, but it is not to be forgotten that with the approaching autumn the pressure of French purchases abroad is becoming increasingly felt, and the difficulties of the internal financial situation are becoming more and more apparent. Brussels

has again slightly reduced the spread between the two currencies, having moved during the period from 95.87½ to 97. Forward rates in Paris have widened about 2 centimes to 8-10 centimes per month above spot; in Brussels they have also widened to 4-6 centimes above. The dollar rate, which closed on Friday at \$4.39½, was fairly steady on Saturday at \$4.40, but fell at one time on Monday to as low as \$4.38½. Afterwards there was another slight recovery to round about \$4.40, and on Thursday morning the rate was again quoted at \$4.41½. It is difficult to say how long this rate will hold, but it would appear that the movement of funds towards London remains strong, and as long as the marked discrepancy in money rates continues, this should exercise a powerful influence unless counteracted by political events. Forward rates have narrowed a little to about ½ cent per month below spot, as compared with ¾ cent per month a week ago. The lira, which has remained fairly steady, was quoted yesterday morning at 101½. Berlin also, at 18.4 billion, shows little movement. Among neutral currencies, Switzerland has continued its recent sharp appreciation from 23.94 to 23.74½. Amsterdam, however, has gone in our favour from 11.51 to 11.51½, and Madrid from 32.85 to 33.02½. In Northern Europe, Stockholm shows little change at 16.54½, but Christiania has recovered from 32.72½ to 32.38½, while Copenhagen has depreciated further from 27.20 to 27.28½. Helsingfors has moved from 175½ to 175. Riga and Warsaw retain their nominal parity with the dollar. In Central and Eastern Europe, Vienna is unchanged at 312,000, and Budapest at 355,000, while Prague has moved in our favour from 148 to 148½. Bucharest for the moment remains fairly steady at about 1,010. In the East, the rupee has moved from 15 21-64d to 15 5½d, while the yen has depreciated slightly from 15 10-32d to 15 10½d. The silver market has shown a stronger tone, and although India has been holding back slightly owing to uncertainties as to the monsoon, any offerings have been absorbed by bear covering. Hong Kong is unchanged at 2s 4½d; Shanghai at 3s 3½d. In South America, Rio at first recovered sharply on news of the reoccupation of Sao Paulo, but reacted later on less favourable reports to 5½d, the same quotation as on Friday last. Buenos Aires has appreciated from 40 10-32d to 40½d, Monte Video remains unchanged at 41½d, but Valparaiso has depreciated rather sharply from 43 to 44.60 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 26th:—

EXPENDITURE.		RECEIPTS.	
Supply Services	£ 5,550	From Revenue	£ 11,693
Interest, &c., on Debt	445	Reduction in Exchequer Balances	139
Sinking Fund	713		
Reduction of Debt	4,843		
Sundries	281		
	11,832		11,839

Revenue amounted to £11,693,000 for the week ending July 26, 1924, against £12,469,000 for the corresponding period of 1923. Customs receipts were slightly lower at £2,331,000, against £2,339,000, but Excise yielded £1,036,000, against £947,000. Estate duties brought in £1,510,000, against £1,450,000, and Post Office receipts were also higher at £1,400,000, against £1,250,000. Property and Income-tax showed a decrease at £3,641,000, against £4,474,000, but Super-tax produced £730,000, against £540,000. Special receipts reached the small figure of £3,000, against £400,000. The week's operations reduced the National Debt by £4,842,700, and caused the following changes:—

(000's omitted.)		(000's omitted.)	
Treasury Bills	£ 3,762	National Savings Certificates	£ 150
Treasury Bonds	48	Public Debt Advances	8,750
Unemployment Insurance	250	Housing Act	1,903
	4,060		

The floating debt was reduced by £4,920,000 to £782,198,500.

FINANCIAL YEAR, 1924-1925 (April 1 to July 26).

EXPENDITURE.		RECEIPTS.	
Total Expenditure ..	£ 255,594,517	Raised by Revenue ..	£ 231,057,871
		Decrease in Balances ..	3,221,073
		Amount borrowed ..	21,315,573
Total	255,594,517	Total	255,594,517

ESTIMATES for YEAR 1924-25.

EXPENDITURE.		RECEIPTS.	
Ordinary Expenditure ..	£ 786,848,000	Ordinary Receipts ..	£ 764,050,000
Special Expenditure ..	3,178,000	Special Receipts	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

THE WEEK IN PARLIAMENT.

MONDAY, JULY 28TH.—*Lords*: Statement on the position in Brazil. Committee stage of the Unemployment Insurance Bill and Report stage of the London Traffic Bill concluded. *Commons*: Agricultural Wages Bill read a third time. Resolution on Irish Land Purchase passed.

TUESDAY, JULY 29TH.—*Lords*: Finance Bill and Housing Bill pass their second readings. *Commons*: On Colonial Office votes debates took place on our position in Iraq, and on the Dominions and foreign policy.

WEDNESDAY, JULY 30TH.—*Lords*: London Traffic Bill passes third reading. *Commons*: Ministry of Labour vote, and the Chancellor's statement on the Government programme of schemes for alleviating unemployment, followed by a debate.

THURSDAY, JULY 31ST.—*Lords*: Adjourned debate on India continued. *Commons*: Debate on the Navy.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Union Bank of Australia, Furness Withy, Cie. Aramayo de Mines en Bolivie, Van Den Berghs, Odhams Press, Threlfall's Brewery, Tanganyika Concessions, Transvaal Gold Mining Estates, and Zambesia Exploring. Sir Frederick Lewis, at the meeting of Furness, Withy and Co., said that British goods were, on the whole, renowned for their better quality, and, on equal terms so far as costs are concerned, he was convinced they would soon regain their old pre-eminence in the world's trade, more particularly as this country could give credit that was not possible with the greater number of its competitors.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

TEN YEARS AFTER.

ANNIVERSARIES are keys which open the floodgates of memory. The floodgates are opened this week, and the rush of memories which is let loose by the tenth anniversary of the outbreak of the Great War is still, even after the lapse of years, strong enough to sweep many of us off the plane of calm judgment or practical reflection. But the time has surely come when we should attempt to stand fast against the stream, and, looking across the span of a decade, to view in their true perspective the march of events which staggered the world in July, 1914, and the main lessons of the years that followed; for if we are yet too near for final judgments, we are far enough off to see, at least, the outline of the picture as it will be presented to posterity. If we cannot yet see with the eye of the historian, we can at least take a rather clearer view than the contemporary observer. Turn over the pages of newspaper files of ten years ago, and you will be surprised how easy it is now to see the errors of judgment and prophecy which in the business world were then accepted as commonplaces. Things that now seem small were hailed as portentous: things which almost escaped notice then now loom larger.

A perusal of the Press of August, 1914, reminds us at once of two profound miscalculations of which the consensus of opinion among experts was guilty. The first was that war on the grand scale among modern nations

could not last long. Financial exhaustion, it was confidently believed, would set narrow limits to the conflict. Few, indeed, were there in the City who took Lord Kitchener's three-years' estimate seriously. What did Lord Kitchener know of finance? But Kitchener was right, and the business world was wrong. The world now knows, to its cost, that whatever means may be found to prevent wars, to confine them to short duration, little reliance can be placed in the financial factor. The other belief which is writ large in the Press of ten years ago was that widespread unemployment would be one of the greatest of war problems. In the event, after the first shock of dislocation, unemployment fell to, and remained at, an abnormally low figure, and the requirements of the fighting services left trade and industry with an acute shortage of labour, in spite of the mobilisation of every hand capable of service. Unemployment, we now know, is not the concomitant, but the aftermath, of modern war.

How curious, too, it is to read to-day of the panic language used to describe a fall of 5 points or so in the price of Consols in the last three weeks of July, when Europe was slowly drifting to the crisis. British credit had—so some reputable authorities would have had us believe—received its death-blow. It was on the downward path that led to the level of credit enjoyed by a Balkan State or Central American republic. It must, of course, be assumed that the fall in Consols would have been greatly accentuated had the Stock Exchange not closed its doors on July 30th, and afterwards re-opened with minimum prices in force. Quotations were not freed until the public had adjusted themselves to war ideas and war conditions. But a glance back at those days, and a comparison of prophecies with results, is highly instructive. What the critics of those days overlooked was the immense economic strength of Britain, which enabled her to finance a £10,000 million war burden and emerge with her credit in relation with all other nations but one unimpaired or even enhanced. The war left all its participants poorer, but with Britain the impoverishment was relatively slight. The human loss was grievous. But the costs of the war were largely met by hard work and abstinence. To some extent we lived on capital, and to some extent mortgaged our assets. But to take the place of the millions drawn to the fighting services we mobilised female labour and other labour not normally employed. The new and the old workers worked harder than they or those they superseded had worked in times of peace. Industry abstained from new capital. The whole population adopted ascetic standards of consumption. We did not suffer the physical damage, the destruction of plant, the deterioration of health, the break up of the business machine, which fell upon Central Europe. Our present ills are traceable not so much to the degree of impoverishment which Britain has suffered, but to the greater impoverishment of other nations, the temporary exit of Russia from the orbit of world trade, the decline in the volume of world production, and the breakdown of the exchanges.

Perhaps the most striking economic feature of the decade that has just closed is that, roughly speaking, the first quinquennium saw prosperity and activity, the second quinquennium depression and difficulty. Soaring profits, in spite of drastic taxation, and labour shortage, owing to mobilisation, marked the first stage; unemployment and industrial struggles the second. For a while after the war ended we could not see clearly what had happened. The great demand for replenishing the world's stocks hid from us the facts of impoverishment and low world production. We awoke to these facts with a rude shock in 1920, when the great slump came upon us. The story of the years since then is a story of painful and gradual recovery of world production. Had the economists known ten years ago what everyone knows to-day, it would have been the economic problems, not of the war period, but of the long years after the war that would have claimed their apprehensions.

Amid the many anxieties of the present position, a brief retrospect over the past decade is peculiarly useful in that it provides deep reason for thankfulness and confidence. There was a time when it seemed, to the timid, almost inevitable that London's position as the world's financial centre should pass across the Atlantic. This has not hap-

pened. It might have been expected that the complete upset of the channels of international trade would have produced disastrous embarrassments to our overseas commerce. In the event the constancy of the proportions of our export trade with various parts of the world has been remarkable. We have retained our customers in much the same general geographical proportions as before the war. We have retained, too, or even increased our share of the world's trade. It is the fact that the aggregate of world-trade has diminished that lies at the root of our difficulties. A world that is under-producing is also under-consuming, and, incidentally, under-consuming British goods. It is upon the restoration of real peace, which is the only condition on which stability and recovery in Europe can be founded, that the eyes of all must be turned. At the moment the fate of the most hopeful of the great disappointing series of conferences for European settlement is hanging in the balance. That peace is so much more difficult to make than war is the greatest of all the examples of the frailty of the human mind. As a celebration of the tenth anniversary of the war's beginning a failure of the present conference would be an unthinkable tragedy. Although differences of view between the conferring statesmen appear still to be deep and dangerous, we cling firmly to the hope that the celebration of this anniversary will be an agreement to give Europe at long last a new chance. Must we really conceive it possible that the statesmen, with full knowledge of what incalculable results a failure might entail, will not move heaven and earth to take advantage of the unique opportunity for peace and settlement that has now appeared? The solemn memories which the present anniversary arouses should provide the last straw of compelling incentive to that harmonious team-work for peace and settlement for which after ten long weary years the world is still waiting.

THE SHIPPING POSITION AND OUTLOOK.

THERE is no industry more sensitive than shipping to movements, however slight, of the world's trade barometer, and none which under present conditions reflects more closely the underlying instability of European finance. Thus, in the period of six months between September, 1923, and March of this year a moderate expansion in general trade, accompanied in this country by a slight upward trend in commodity prices, resulted in a rise in the average level of cargo freights amounting to nearly 25 per cent. Notwithstanding the release from the Far East of a considerable quantity of shipping lately employed on "earthquake account," much laid-up tonnage continued to be re-commissioned during the spring. In view of the enormous surplus of grain available for export from the Argentine, and the patent potential requirements of Europe in the way of raw materials as well as foodstuffs, hopes were expressed in shipping circles that staple cargoes would continue in good supply throughout the summer, and freights be well maintained. So far as "tramp" shipping is concerned, these hopes have been falsified. Between March and June the barometer visibly ceased to rise; if tapped, it was perhaps inclined to fall. British trade as a whole might be just holding its ground; American production was certainly slowing down. Above all, the reparation issue was drawing to another crisis. This halt in upward progress was associated with a reaction on shipping as exaggerated as the improvement of the previous autumn. By June, charter rates had fallen over 10 per cent. Movements of grain were dwindling, the North American market was brought almost to a standstill, tonnage was everywhere too plentiful. The potential cargoes were there, but once more it had become apparent that, in spite of signs of broadening demand earlier in the year, the Continent of Europe, on whose purchases the shipping of all nations ultimately depends, still lacked power to finance sustained shipments. Repercussions of currency speculation intensified shippers' difficulties, and added to the dulness in sea-borne trade. Optimism in the shipping industry gave place to unrestrained pessimism and fears

that the summer of 1924 would outdo the depression of a year ago. Fluctuations in "tramp" charter rates, however, tell by no means the whole story, and require to be checked by other data if a fair estimate of the general position of shipping is to be attained. In the following table the first six months of the current and two preceding years are contrasted from the point of view of shipping activity.

TRAFFIC (In Millions).			
	First Six Months of—		
	1922.	1923.	1924.
Net tonnage cleared with cargoes from U.K. ports—			
British	16.8	19.6	17.8
Foreign	10.0	14.3	11.7
Per cent. British	62.7	57.8	60.3
Net tonnage entered with cargoes U.K. Ports—			
British	13.3	14.7	15.2
Foreign	6.6	8.3	8.4
Per cent. British	66.8	64.0	64.4
Bunkers shipped—			
Coal (tons)	8.8	9.1	8.7
Fuel oil (gallons)	50.1	104.9	123.8
Seamen shipped	23	24	24
Exports—			
Coal, coke, &c. (tons)	28.8	41.8	33.0
Manufactured goods	£281	£290	£301

The inferences which it is permissible to draw from these traffic figures are, on the whole, encouraging. It is true that, reflecting a diminution of coal exports as compared with the abnormal "Ruhr boom" of a year ago, clearances of shipping with cargoes in the first six months of 1924 were considerably below the 1923 level. Even so, the figures record a substantial improvement on 1922, and it is satisfactory to note that, as contrasted with 1923, British tonnage has fared relatively better than foreign in the competition for outward cargoes. The comparative figures given above of our manufactured exports probably afford a fair indication of gradual improvement in the volume of cargoes available for liners. As regards inward traffic, it will be observed that a steady recovery is continuing, while the fall in the quantity of bunker coal absorbed by shipping is more than offset by the expansion in oil bunkers shipped. The average voyage of each vessel has probably been longer in the first half of 1924 than in the first half of 1923, when so much shipping was concentrated on the near Continental trade—a consideration which reinforces the conclusion that the past half-year witnessed a greater volume of sea traffic than any period since the post-war depression began.

The pressure of available tonnage on demand continues, however, to act as a depressing factor on "free" charter rates, and in spite of temporary and seasonal fluctuations, the curve of freights as measured by the *Economist* Index still fails to show any definite signs of mounting to a permanently higher level. The highest and lowest points touched by the Index in the past three years indicate roughly the movement:—

Average, 1898-1913=100.			
	High.	Low.	
1922	157.95 (Feb.)	128.40 (Sept.)	
1923	134.31 (April)	116.53 (Aug.)	
1924 (1st 6 months) ..	144.01 (Feb.)	126.37 (June)	

On the analogy of the two preceding years it is doubtful if June will represent the lowest point of the Index in 1924. As an additional basis for comparison, the average Index Figure of each of the main trade groups is given in the following table for the first half of the last three years:—

Average, 1898-1923=100.			
	First Six Months of—		
	1922.	1923.	1924.
European waters	151.86	142.43	136.28
North America	160.60	125.35	143.36
South America	147.85	130.69	138.37
India	146.74	124.95	128.46
Far East and Pacific	120.78	134.07	131.40
Australia	167.73	132.27	140.13
Total	150.26	131.63	136.33

New York City

When it is borne in mind that the figure for European waters was inflated in the spring of 1923 by the artificial demand for coal shipments to Germany, the otherwise uniform improvement in 1924 over the past year is the more satisfactory. At the same time the general level is still unduly low in comparison with the price of commodities and other services, and it is possible that the situation will have to be met by many more "tramp" managements being absorbed by the strong groups operating liners on controlled freights. The running of vessels at a profit, with freights not only depressed but subjected to wide fluctuation from month to month, has not been rendered easier by the tendency of wages, particularly in the docks, to increase. The corresponding additions given recently to ships' crews are a less considerable factor. Fortunately the price of bunker coals has fallen sharply in the last three months, and substantially cheapened running costs. To illustrate the relative movements of charter rates and bunker prices, the quarterly averages of the *Economist* Freight Index are shown in the first column of the following table for each quarter since the beginning of 1922. In the second and third columns freights and bunker costs (based on the price of best steam coal) are expressed as a percentage of their respective means for the whole period:—

Period.	Freights. Av., 1898-1913 =100.	Freights. Mean, 1922-24 =100.	Bunker Costs. Mean, 1922-24 =100.
1922—1st quarter	156.24	116	94
2nd quarter	144.28	107	90
3rd quarter	131.09	97	92
4th quarter	136.21	101	99
1923—1st quarter	132.63	98	117
2nd quarter	130.62	97	126
3rd quarter	118.90	88	94
4th quarter	128.32	95	97
1924—1st quarter	140.77	104	99
2nd quarter	131.89	98	90
Mean	135	100	100

It will be seen from the above that the relation between freights and bunker costs in 1924 has favoured shipowners more than at any time since the first half of 1922. As the bulk of British shipping is still coal-driven, it is reasonable to infer that this reduction in the cost of bunkers accounts largely for the fact that without much consistent improvement in freights idle British tonnage continues (with fluctuations) to diminish, the net tonnage of laid-up British vessels in ports of the United Kingdom being now substantially less than a year ago, though slightly above the figure for April of this year:—

IDLE BRITISH TONNAGE ON JULY 1st. (Thousands of Net Tons.)	
1922	1,025
1923	687
1924	448

A sign of good augury for the future of shipping is that the total tonnage afloat in June, 1924, shows a drop, as compared with the previous June, of over a million gross tons. The net yearly increases, now converted for the

first time since the war to a decrease, have been as under:—

Year Ended	Million Tons.
June, 1913	+ 2.4
" 1920	+ 6.4
" 1921	+ 4.7
" 1922	+ 2.4
" 1923	+ 0.8
" 1924	- 1.1

When it is considered that the shipping depression has now lasted four years, the time taken by the industry to bring tonnage expansion to a standstill is remarkable. By this year, however, the process of scrapping surplus and obsolete tonnage can be described as fairly under way. In the period June, 1923, to June, 1924, about 1½ million tons of new shipping were launched in the world. Comparison of this figure with the net decrease shown above would suggest that, after allowance is made for vessels lost at sea, and for some American tonnage in Government employment withdrawn this year from the Mercantile Register, close on two million tons have been broken up during the twelve months. Continued scrapping of inefficient vessels remains a desideratum for shipowners of all countries. From the 15 million tons by which the world's fleet still exceeds that afloat in 1914, there can probably be deducted:—

	Million Tons.
Increase in tanker tonnage	4
War built, inefficient vessels	5½
Increase in tonnage over 25 years of age	3

There remains, after all permissible deductions, a net increase of 2½ million tons over 1914, and the sooner vessels whose keels were laid down before the South African war are handed to the shipbreaker the better. It is somewhat disconcerting to find that the British proportion of this class of vessel has increased since June, 1923, from 1,557,622 tons to 1,617,864 tons. Apparently the normal foreign buyers of our old vessels are no longer effective purchasers. The need for continued breaking-up of inefficient units is the greater in that shipbuilding construction is now on the upward grade once more, after its long decline:—

TONNAGE UNDER CONSTRUCTION in the WORLD.	
	Million Tons.
1922, July	3.8
1923, January	3.0
1923, July	2.5
1924, January	2.4
1924, July	2.6

Stimulated to some extent by the Trade Facilities Act, this renewal in building betokens nevertheless increasing confidence on the part of shipowners that better times are in sight, but has not been accompanied, as would be expected, by rising values of new tonnage, values, in fact, being lower than a year ago, and likely to remain depressed while so much out of date and inefficient, but still potentially usable, tonnage continues to exist as a "casual" reserve liable to flood whichever market is temporarily profitable.

A considerable proportion of British cargo tonnage re-

mains hopelessly over-capitalised, and it is satisfactory to record that in several instances managements are appreciating the desirability of reducing the book values of fleets acquired during the boom to figures representing current market prices by means of a drastic writing down of capital. Nothing is to be gained by an industry carrying a deadweight of nominal capital which is not represented by equivalent assets, and in the case of many shipping companies the necessary capital reconstruction involves for the original subscribers nothing more than a squeezing out of "water" from the share capital.

THE AUSTRIAN CROWN.*

By far the most dramatic and happy of the monetary events that have surprised us since the war ended was the conversion, as if by magic and in the twinkling of an eye, of Austria's currency conditions from chaos to stability. Many of us, while hoping for the best, have felt a lurking fear that it was too good to be true. Everybody who takes any interest in the solution of the problems that now beset all nations wants to know exactly how it was done, what it means, and whether it will stand wear and tear; and will find the answer to these questions, in so far as they are yet answered, in the pages of this book.

As a member of the Secretariat of the League of Nations, Dr De Bordes has long been closely concerned with Austrian problems, both at Geneva and at Vienna, and we gather from an expression in his preface that the League authorities gave him the leisure necessary for conducting the inquiry that produced his book. No better means could have been taken by the League for winning that prestige which is so essential to the peace of the world. If it can bless distracted countries with the gift of sound currencies, and then give clear and convincing accounts of the conditions under which this miracle has been achieved, it will have gone far to establish its claim to solve the much easier task of keeping the peace between nations sick of the horrors of war.

With this wide claim on the attention of all mankind, Dr De Bordes at the same time throws a flood of interesting light on the currency problems that are exercising students, namely, the connection between changes in the amount and velocity of purchasing power, as compared with those of goods, the movements of prices and fluctuations in rates of exchange. With inexhaustible patience he has investigated the available facts that, in the case of Austria, help us to grope after answers to the questions whether an increase in currency precedes a rise in prices, and whether the price level has the influence on rates of exchange that seems to be assumed by exponents of the theory of the purchasing power parity. Exceptional difficulties faced him in this investigation. Since the pre-war Austria was a quite different area from the after-war fragment, it was impossible to be even as approximately certain as we could be in England of the difference in the amount of purchasing power at one date and another. And this difficulty was increased by the fact that even if a well-founded estimate could be made of the amount of Austrian currency circulating at one time or another, the problem is still complicated by another most elusive item, because during the time of extreme depreciation of the Austrian crown a large part of the business transacted in Austria was conducted not in Austrian currency, but in Swiss francs or other foreign currencies. As to the price level, the difficulties that lay the most carefully devised index numbers open to question as a sure guide were enhanced by the fact that in Austria no index number at all was regularly published before 1921, and no index number of wholesale prices before 1923; and prices, as need hardly be said, were warped from their natural course by the controls and regulations that the Government found it necessary to establish. Only in the matter of foreign rates of exchange was it possible to work with anything like a complete set of tools; and even here, though quota-

tions were available, it is difficult to be sure about their significance, owing to the severity of the restrictions on international trade and on international money dealings, with the complications of the Auslandskrone and the Inlandskrone, and of the crowning absurdity by which at one time the import of Austrian notes into Austria was prohibited.

From the patient and lucid exposition that Dr De Bordes gives of the result of his investigations, the chief conclusion that seems to arise is the need for extreme caution in expecting any particular result from currency fluctuations in influencing prices, or from price movements in influencing rates of exchange. As he puts it:—

"We have seen that the quantity theory, if sufficiently qualified, holds good even in the case of severe depreciation. The same cannot be said of the purchasing power parity theory. Exponents of that theory have explained the differences which often exist in practice between the purchasing power parity and the rate of exchange as being caused by the under- or over-estimations of the value of a currency on the exchange market due to psychological reasons. This would suggest an amendment to the purchasing power parity theory in the sense that during periods of depreciation the rates of exchange tend to coincide, not with the actual, but with the *expected future purchasing power parity*. In other words, the foreign exchange market may be so completely dominated by speculation and movements of capital that the rates of exchange move independently from the purchasing power parity, i.e., from the price levels. In Austria during 1922 a subsequent stage was, however, experienced; the rate of exchange and the price level no longer moved independently—on the contrary, the Austrian price level closely followed the movements of the foreign exchange rates, Austrian prices in general being fixed in accordance with the foreign exchange rate. We may, therefore, conclude that, whilst there exists a tendency of the rate of exchange and the purchasing power parity to coincide, in cases of deviation between the two factors, sometimes the one and sometimes the other will prove the stronger."

Dr De Bordes considers that "certainly the most surprising of all the remarkable phenomena which Austria has produced in the sphere of economics," is the fact that an enormous increase in the circulation, from 1,148 milliard crowns on August 23, 1922, to 7,126 milliards on December 31, 1923, had practically no influence at all on the price level, which reacted immediately on the stabilisation of the foreign exchange rates. As he explains, as soon as stabilisation had been effected Austrian merchants were able, for the first time for many years, to calculate selling prices with accuracy, while the public, "which in its flight from the crown had bought goods of every sort and description, regardless whether it had any use for them or not," could wait to see whether the League's action would bring a further fall in prices. Here, then, we find the expectation of a fall, with other influences, sufficing to resist the effect of a huge increase in currency.

Indeed, the overwhelming effect of psychology, under certain conditions, in economic matters seems to be the chief conclusion to be drawn from Dr De Bordes' very interesting study. "Just as we have seen," he writes, "that Austria was being ruined by lack of confidence, by pessimism, so now we see her reviving, when once she had regained confidence in herself. In this process there was a reciprocal action. Each step on the path to recovery increased confidence, and this increased confidence enabled the next onward step to be taken. Confidence was the chief benefit which the League of Nations conferred on Austria." This confidence, as need hardly be said, could only succeed because it was shared by foreigners; in fact, implies that foreign confidence made Austria's recovery almost too rapid and easy. After observing that the quickness with which the League's plan "has reacted on the economic life of Austria, has surpassed the most sanguine hopes of its supporters," he cautions us against the conclusion that this development is wholly normal, and adds that it is probably due less to the exertions of Austria than to the misfortunes of her neighbours. Disorder in their currencies led to flight from the German and Polish marks and the Hungarian crown, while confidence in the stability of Austria's crown quickly raised her to the proud rank of a centre of safety. "A steady stream of foreign savings flowed into Austria, stimulating

trade and commerce, and rapidly raising the revenues of the State, so that her public accounts had balanced more than 15 months earlier than was anticipated under the League's plan. But an equilibrium largely produced by the rather fortuitous flow of capital in such circumstances rests on precarious foundations. Austria will not have put her house in order until she is able to balance her Budget by revenues of a truly permanent character and of a size which will not handicap her productive capacity, even when she has to face the full blast of international competition. That competition will become a formidable factor when tolerably ordered conditions have been re-established in the countries surrounding her. She has made great strides towards that goal, and we need not doubt that she will reach it."

TEA PLANTATION COMPANIES IN 1923.

THE year 1922 witnessed in the tea-growing industry the inauguration of a remarkable period of prosperity, whilst in 1923 the grower made profits which have never been equalled. Last year saw some improvement in labour conditions, but good food crops and the establishment of manufacturing and mining concerns in many districts are competitive factors in the labour market. Other difficulties which hampered trade in previous years, such as fluctuating exchange, high freights, &c., have caused little trouble during the year under review. The rupee exchange has been fairly steady in the neighbourhood of rs 4d, while freights have been steady, ample tonnage being available from all markets.

The general statistical position of the progress made in the industry may perhaps be best gathered from a study of the following table of tea imports and exports:—

IMPORTS AND EXPORTS OF TEA.

From—	1913.	1922.	1923.	1913.	1922.	1923.
	Lbs.	Lbs.	Lbs.	£	£	£

The consumption of tea continues to make big strides both at home and abroad. We do an excellent trade in the export of tea, although the larger markets are becoming increasingly interested in direct shipments from countries of production. Export trade from London has shown a gratifying increase of late, orders having come from various Continental countries. Russia, too, has been a spasmodic buyer. There is little doubt that quite considerable quantities of tea are now finding their way into Russia by various routes. Consumption in the United States is increasing slowly, prohibition not having the effect that was anticipated. But the quantity of tea taken by this country should steadily grow during coming years.

The following table shows crops and financial results over a period of four years of 13 selected undertakings:—

	Crops.				Net Profits.

* Net profit.

It will be seen that, with one exception, every company experienced a loss on working during 1920. No words

of ours can convey more adequately the remarkable change which has overtaken the industry since the "black" year than the figures set out above. The Consolidated Tea and Lands Company has allocated £100,000 out of profits to reserve; the average price obtained for its tea was 17.07d per lb, being 1.26d per lb higher than the average price for the previous year. The Amalgamated placed £25,000 to reserve; its average price for tea was 18.25d per lb, being .65d per lb higher. Dooars is an undertaking which commands our attention because of its excellent table, giving a summary of results for 39 years; for 1920, when it made a loss of £46,347, the sale price of its tea was 9.07d, as against a cost of 11.56d; for 1921, sale price improved to 15.60d and cost was 10.33d; for 1922, costs had fallen to 8.55d per lb and sales increased to 16.61d, while for 1923 costs had a further fall to 8.00d and sales at 17.76d per lb were the highest in its history.

The following table shows the principal assets and liabilities of a number of leading tea concerns over the past four years:—

	Name.	Principal Liab.			Total Liabilities.	Principal Assets.				
		Total Share & Deb. Capital.	Re-serves.			Prop-erties.	Stocks.	Cash.	Invest-ments.	Debtors

‡ 45 shares. † £10 shares.

Share splitting on tea company shares provides speculative investors with an interesting field for exploitation. As the example has been set by some leading undertakings, it will probably be accepted as a *sine qua non* that share-splitting shall be accompanied by a bonus share issue. It is here, perhaps, worth while calling attention to the instructive table given in the accounts of the British Indian Company. In our table it will be observed that this company has distributed 5, 15, 30 and 40 per cent. over a period of four years. In the table drawn up by the company, it is shown that the average dividend for 21 years is £11 1s 11d per cent.—a not very generous yield when politico-geographical considerations are taken into account. We see no reason why tea drinking should decline. Masses of the people may waver from time to time in their allegiance to the beverage, but it apparently fills a definite place in our daily lives, and it would need much skilful propaganda to compel us to jettison the plant.

FINANCIAL RECONSTRUCTION IN POLAND.—I.

AFTER five years of inflation, the Polish currency had depreciated in value to such an extent by the beginning of this year that the economic life of the country threatened to become completely disorganised. It was admitted on all hands that drastic remedies were essential, and on January 15th a law was passed granting full powers to the new Minister President, M. Grabski, to restore order in the national finances without reference to Parliament. This state of affairs was to last until June 30th, and this month (July) the full powers have been renewed, though in a modified form, down to the end of the year.

In his "Report on Financial Conditions in Poland,"* Commander Hilton Young pointed out that, as the trade balance of the country was favourable in 1923, the depreciation of the currency was to be ascribed solely to the failure to balance the Budget. Indeed, last year the total receipts amounted only to 366 million gold francs, while the expenditure totalled nearly 962 million. Under such conditions, the introduction of a new currency ought not to be attempted until true Budgetary equilibrium is achieved. This conclusion was further supported by a consideration of the serious consequences which would ensue if the new currency should break down, and by the particular administrative difficulties of the new Polish State, of which the reader will find an admirable summary in the Report itself. In a word, the British experts counselled caution and a thorough cleansing of the finances before a limited currency, on a sound basis, should be substituted for the old Polish mark. As against this view, M. Grabski appears to have argued that such a solution would not be in accordance with Polish psychology, and he therefore decided to appeal to the patriotism of his compatriots for a united and immediate effort to stabilise the exchange, and to save the national finances. His plan was thus fundamentally different from that of Commander Hilton Young, though many of the detailed recommendations were duly incorporated in the Government scheme. The recent course of events in Poland is thus of very great interest to all students of

post-war economic conditions. It represents, in fact, a break with counsels of caution in financial and monetary policy, and shows us the picture of a young and inexperienced State, without even a tradition of settled monetary conditions and without external help, attempting the difficult problems of financial reconstruction and currency reform concurrently.

On February 1st last the new policy was inaugurated, and on the 7th of the same month the exchange was stabilised by Government intervention at the rate of 1,800,000 Polish marks to one gold franc. On April 28th the Bank of Poland, a new and semi-independent bank of issue, was solemnly inaugurated, and began straightway to put notes into circulation in zloty (or gold franc) denominations. By July 1st the zloty was declared sole legal tender for transactions throughout the country. Since the initial stabilisation was achieved in February, the rate of exchange has, in fact, remained constant, at 1.8 million marks = 1 zloty = 1 gold franc.

In order to achieve this somewhat remarkable success, the Government has carried through a vigorous budgetary policy. The stabilised exchange made revenue collection much easier, and this, in turn, by tending towards a balanced Budget, made it possible to abstain from inflation, and thus keep the exchange stable. It is, of course, often asked whether this state of affairs is likely to be permanent. While it must be admitted that it is as yet too soon to pronounce a final judgment on the whole experiment, the Budget returns for the first half-year throw considerable light on the general trend of events. The adoption of the principle of monthly Budgets, recommended by the British experts, has fortunately made it possible to follow developments in considerable detail—quite apart from the additional merit of making Treasury control much simpler. The summary of the first six months of this year presents the following picture:—

(In Millions of zloty.)		Total.
Revenue	472.9	581.7
Extraordinary	108.8	
Expenditure	559.9	693.1
Extraordinary	133.2	
Deficit	111.4	

At first sight, this may not appear entirely satisfactory, although it shows an enormous improvement on the returns for 1923. A closer analysis is, however, essential to a proper understanding of the situation. The following table gives further details of revenue during the six months. In the first column will be found the estimates for the whole year; in the second, the results for the six months January to June; in the third column (2) as a percentage of column (1); and, finally, in the fourth column, the average of the five months (February to June) during which the new scheme has been in progress, multiplied by eleven, with the January result added:—

	REVENUE. (In Millions of Zloty.)			
	(1.)	(2.)	(3.)	(4.)
Direct taxes (other than Property Tax)	297.8	110.0	%	234.7
Excise, &c.	173.7	86.9	50.0	181.2
Customs	120.0	79.9	66.6	169.3
Stamp duties	48.9	31.2	63.8	65.6
Export taxes	9.6	8.2	85.4	17.8
Monopolies	89.0	53.5	60.1	113.4
Total	739.0	369.7	50.0	782.0
Property tax	333.0	102.4	30.7	223.1
Other revenue	350.7	109.5	31.2	228.3
Grand total	1,422.7	581.6	40.8	1,233.4

One is struck by the fact that the revenue from taxes (other than the property tax) and monopolies during the six months was exactly half the total estimated for the year. This result was due, however, not to direct taxes (turnover tax, land tax, income-tax, &c.), but to the great improvement in the yield of indirect taxes which followed revenue, as compared with last year, is only explained in relatively small measure by receipts on account of the property tax (the Polish "capital levy"), on which there are many arrears for the half-year.

The next question of importance is the extent to which the figures given in our fourth column can be regarded as being likely to be realised when the books are closed at the end of the year. Here a number of unknown factors enter into the problem, the importance of which can only be guessed at. Poland is essentially an agricultural country. Much depends, therefore, on the harvest, which promises this year to be at least up to the average. It is true that rye, which is the principal crop, suffered considerably from the long and severe winter, and is therefore not quite so good as usual. The other crops, however, are practically all above normal. Unless anything unforeseen happens, therefore, no particular difficulty should arise from this quarter. It is worth remembering, too, that the financial position of the agriculturists is normally better in the autumn than in the spring, and the returns from the various direct taxes paid by them—including the property tax, one-half of the assessment of which falls on the rural classes—should therefore prove better in the second half of the year. It should be added further that our average, which is based primarily on the five months February to June, includes the first two months of stabilisation, during which the ordinary revenue had only partially recovered from the evils of previous period; and also the two months of May and June, which are normally rather difficult, from the fiscal point of view, in a predominantly agricultural country. The heading "other revenue" consists mainly of the proceeds of the State forests and of the postal service. The former is naturally more productive in the second half of the year, while the latter has been improving steadily in consequence of the reorganisation of the charges in terms of a stable currency. The yield from the tobacco monopoly has also increased rapidly with the restoration of more normal conditions. As against these factors, however, must be set the difficulties which now face the industrial life of Poland, a consideration of which must be postponed to a second article.

In order to complete this brief review of the budgetary situation, some attention must also be given to the expenditure side. The total realised expenditure, as we have already seen, amounted in the first half-year to 693.1 million zloty, or about 43½ per cent. of the estimate for the whole year, which was 1,592.3 million. Of this total, the Army accounted for over 38 per cent., and a reduction below this figure is not regarded as possible by reason of the general political situation of the country. In other directions, however, economies have been effected, and many more are either in process of execution or else in active contemplation. In the first five months of the year over 20,000 State employees were dismissed, though, as they received a grant of three months' salary, the relief to the Budget was not immediately apparent. Under this heading, therefore, the second half-year should show an improvement on the figures for the first six months. Again, the Budget for the year allowed for a loan to the railways for construction purposes of 100 million zloty, of which approximately 65 million has already been made available, thus reducing the burden for the second half-year.

At this point it may be possible to attempt a tentative conclusion. If revenue can be maintained at the estimate for the year contained in our fourth column, and if expenditure in the second half-year is the same as that of the first six months—less 50 million zloty on account of diminished expenditure on railways and on officials already dismissed—the budgetary year will close with a deficit of a little over 100 million zloty. (Expenditure 1,336 million, as against revenue 1,232 million.) This deficit would present no terrors to the Government, since two items, which are not included in any of the figures already given, would provide more than sufficient cover. These are the profits accruing to the State from the liquidation of the old Polish State Loan Bank, which already amount to over 100 million zloty; and, secondly, from the emission of small change, which is expected to provide a similar sum.

Of course, conditions are far from normal, and prophecy in the realm of economics is at best a highly doubtful undertaking. Even should this estimate prove too optimistic, however, it is nevertheless clear that Poland has already gone far to restore order in a financial organisation which had become truly chaotic, and six months

BANK ESTABLISHED IN 1864.

THE BRITISH GOVERNMENT AND THE LEAGUE.

(BY A GENEVA CORRESPONDENT.)

THE British Government's reply to the League of Nations Secretariat, for circulation to the members of the League, on the draft Treaty of Mutual Assistance has excited a good deal of discussion. Much of it has been confused, some of it has taken the form of League abuse, and some of it has been marked by a too eager desire to back anything that emerges from the League; or even that has been blessed by the League of Nations Union. Those who rejoice in the reply as a "snub to the League," must be generously credited with pitiable ignorance of what the League is and of what the circumstances are. It would be just as ridiculous to speak of a British snub to the inter-allied conference in London because Britain refuses to do certain things. Great Britain is a member of the League, and if not already will probably be with the majority of Governments in the League in its objections to the draft treaty. What happened was that the League Governments appointed a more or less unofficial committee to consider and submit proposals for the reduction of armaments: this committee presented the draft which was sent for discussion to the last Assembly. Considerable differences were apparent and were frankly recognised. The arguments and difficulties were set out in a report which, together with the draft treaty itself, was circulated to all States for the purpose of obtaining considered observations before the following Assembly. The last Assembly took no other decision, and now the Governments are pooling or exchanging their views on a draft plan to see whether or not it is the most promising approach to a highly complicated problem. The Assembly in September will thus be thoroughly prepared to consider future action. The consequences of the British reply do not, however, seem to have been fully realised. The arguments, which in many respects are lamentable in their misunderstanding of the League and even of the facts of the draft treaty, lead to the conclusion that the British Government is unprepared to give its assent to any measure involving ultimate military or naval assistance to any State wrongfully attacked, and this conclusion is reinforced by Lord Parmoor's speech in the Lords unless and until it be repudiated by the Prime Minister. Neutralised zones under international control may be of considerable value, but the British constructive suggestions are so vague as to be virtually negligible, and such neutralised zones, without the assistance of force in some ultimate given circumstances, would be open to the same objections of inadequacy as the Government attributes to the draft treaty. This means inevitably that unless the Government goes to the Assembly in September with carefully considered—and feasible—proposals, there will be a postponement of any effective reduction of armaments, and if these proposals omit any eventual resort to armed resistance, States will seek their security in their own ways, one of which may be an increase in partial

* Published by Waterlow and Sons, London, 1924. Price 3s 6d.

treaties, which the British Government regards as provocative of war. Perhaps it might not be wholly unwise to risk that, provided the situation is not allowed to drift, for the reduction of armaments depends primarily on the settlement of political difficulties, and the development of international good feeling; what might appear as an artificial arrangement of peace by threat of war might not be effectual in the long run, but this is all dependent upon a deep change of spirit. Armaments are not a single problem of humanitarian or moral character only: it is fundamentally part of the whole problem of international politics, and cannot be isolated. What the British Government seems to be aiming at is a deepening and extension of more rational ways of settling differences, and thus eliminating to the greatest possible extent the chances of war. Its reference to the Court of International Justice implies this, but it is arguable whether that is enough, and the Government's reply completely loses sight of the fact that the Covenant already places Britain under obligations in certain defined circumstances to go to the armed assistance of another State. If the Government objects, or thinks it impossible to arrange (for which purpose it makes its own the out-and-out militarist theses to prove a ridiculous case) its only honest course is to bring forward definite proposals for the amendment of the Covenant. It is, in fact, extremely difficult to classify the British reply. It contradicts itself, and lays itself open to damning analysis; nor is there any doubt that it constitutes a complete reversal of the Prime Minister's recent reply to a speech by Mr Asquith in the Commons. It is hard to believe that the Prime Minister could have given any attention to the subject beyond appending his signature to the reply placed before him. Its author is entitled to no congratulations.

Finally, if the British Government, in speaking of a general conference on armaments, has in mind a non-League Conference such as Genoa, it will be performing an ill service to the cause of the League which it says it has so devoutly at heart, and it will reap no advantages either for itself or for the cause of peace. A full League policy needs tenacity, courage, understanding, a knowledge of League constitution and League facts, and some initiative. Negatives and perorations are not enough. Since January the other States members of the League have been vainly awaiting something more than immobile goodwill, and Britain will cut a very poor figure at the Assembly if the Government does not realise this within the short interval that remains. It has so far succeeded in thoroughly disheartening both League realists and League idealists, and in rejoicing the hearts of the reactionaries.

Notes of the Week.

The Progress of the Conference.—It was expected that the middle of this week would have seen either the failure or the success of the inter-Allied Conference. But that expectation has been falsified. No very pronounced change in the position has occurred since we wrote last week. It would be foolish to deny that the delay arises from deep cleavage of opinion on fundamental issues. But it would be equally wrong to suppose that the cleavage is unbridgeable. In fact, in spite of the doubts and difficulties that have marked the past few days, the week ends on a more hopeful note. If the main basis of hope is nothing more tangible than the refusal to believe that the statesmen can face the responsibility of rejecting the present unique opportunity, there are also some more concrete foundations. The French and Belgian delegates have completed a new memorandum on the Ruhr evacuation question, while the French have also produced a new and elaborate proposal with a view to satisfying the doubts of the bondholders. Whether these will prove to be stepping-stones to settlement it is too early to say. The members of the Reparation Commission, summoned from Paris for consultation, have arrived in London, and it is obvious that the critical moment of the Conference cannot now be long postponed. The amount of delay and deadlock that has already taken place has not made the position easier in Germany, and time is becoming an increasingly important factor.

The Government's Unemployment Programme.—In the House of Commons on Wednesday evening the Chancellor of the Exchequer gave a detailed exegesis of the Government's programme for relieving the pressure of unemployment by carrying out various public works. Prefacing his able speech with a remark that "positive remedies for chronic diseases did not effect a cure in a day or a night"—a variant on Mr Shaw's much-quoted metaphor on an identical theme—the Chancellor showed that "abnormal" unemployment was almost entirely the result of depression in three industries—shipping, engineering, and cotton—all mainly or largely dependent on foreign trade. While there was no evidence that Great Britain was failing to maintain her proportion of the world's commerce, the fact that her exports were priced at 90 per cent. above the pre-war figure, whilst the corresponding figure for imports was but 50 per cent., suggested that home costs of production were unduly high. The Government's object, he declared, was the cheapening of these costs by bringing about the full development of the nation's natural resources, on lines of scientifically organised production, and the elimination of waste in every department. Mr Snowden then proceeded to give a practical interpretation to these somewhat nebulous ideals, along two main lines—improved transport and improved power. The Government was to expend £5,000,000 on the reconstruction of main trunk roads. Approval had been given for a further road programme of £13,500,000, of which the Government would contribute £10,400,000. The first sod of the Glasgow-Edinburgh road would be cut in a few days' time, and the question of the much-debated Liverpool-Manchester road would be settled one way or the other in the very near future. Definite progress had been made with the plans for a new Thames tunnel, a big new road to the London docks was under consideration, and the Government had undertaken to pay the cost of obtaining a report on the engineering aspects of the proposed Tay tubular bridge. On the subject of electric power, Mr Snowden expressed views similar in many respects to those put forward in Mr Lloyd George's "Coal and Power." The process of retrieving the mistakes of our piecemeal policy of the last forty years would be expensive, but would be amply justified, he believed, by ultimate results. Legislation would be introduced giving to the Electricity Commissioners the compulsory powers denied to them in 1919. Frequency of current would be standardised throughout the country, at a cost of £10,000,000, spread over three years. The various electricity bodies would be consulted as to the laying down of main transmission cables, with State subsidy. A Board of Trade Committee would examine the practicability of the Severn Barrage scheme, £95,000 being allocated to cover the necessary technical inquiries. Schemes for municipal works amounting to £3,000,000 would be carried out in the coming winter. The four main railway companies had agreed to spend a total of £55,500,000 on maintenance, renewal, and reconstruction. Negotiations for carrying out the Great Ouse drainage scheme had reached an advanced stage. Finally, the home sugar-beet industry was to be encouraged by a system of excise duties, and subsidies during the next ten years. Altogether Mr Snowden's list of contemplated developments reached an imposing total, and though the Government's widely advertised plans turn out to be largely an anthology of the idea put forward by members of the other two political parties, the Government deserves a certain amount of credit for the courage and vigour with which, apparently, these schemes are to be taken up. The underlying idea that work of a public or capital nature as is frequently the case, undertaken chiefly in periods of trade activity, is sound enough. Whether some of the grandiose schemes contemplated are expedient at the present, or at any time, is another matter. In particular, the Government's declared intention of feeding the sugar-beet industry with the bread of financial subsidies is likely to provoke a good deal of criticism in quarters hostile to all forms of protection, whether direct or inverted.

The Trade Enquiry.—The Board of Trade announced on Wednesday that the Government has appointed a Committee to enquire into the conditions and prospects of British industry and commerce. The *personnel* was simultaneously announced as follows:—Sir Arthur Balfour, K.B.E. (chairman), Mr John Baker, Sir W. H. Beveridge, K.C.B., Mr Henry Boothman, Mr W. T. Charter, Mr C. T. Cramp, Mr Hugh Dalton, Sir Harry Goschen, K.B.E., Mrs M. A. Hamilton, Mr F. A. Hargreaves, Sir Norman Hill, Bt., Sir John S. Hindley, Mr David Landale, Sir W. Clare Lees, O.B.E., Mr P. J. Pybus, C.B.E., Mr Arthur Shaw, Sir Allan Smith, K.B.E., Sir Hubert Llewellyn Smith, G.C.B. Although it might be possible to strengthen the team, the list includes some first-class names, and the blend of various views and interests appears to be satisfactory. Industrial capital is well represented by Sir Norman Hill, Sir Allan Smith, Mr Pybus, and the chairman, and banking by Sir Harry Goschen. Mr Cramp will be the chief exponent of official trade unionism, while Mr. Dalton and Mrs. Hamilton represent the intellectual side of the Labour movement. The abundant official experience of Sir H. Llewellyn Smith will be useful, while Sir William Beveridge is a very sound choice from the ranks of economists. The terms of reference are as follows:—"To inquire into and report upon the conditions and prospects of British industry and commerce, with special reference to the export trade, and to make recommendations in regard thereto." These terms are so wide that the Committee will obviously be faced with the danger of ranging superficially over an almost unbounded field. Whether or not they can escape this temptation depends in the main on the organising ability of the chairman, who, in this case has also the assistance of an official memorandum which, without attempting to define the enquiry, enumerates some of the subjects on which investigation is specially required. Even so, the task of presenting a thorough and practical report is exceedingly formidable, and the likelihood of minority reports obvious.

Wheat Supplies and Prices.—The latest advance in wheat prices, as and from July 29th, brings the official London figure to 48s 6d per sack of 280 lbs, as against 37s as recently as the beginning of May last. The steepness of the rise during the last three or four weeks has taken the market by surprise to some extent, and excited considerable comment in the Press and in Parliament. A week ago a Mark Lane correspondent pointed out that wheat prices tend always to be unusually sensitive in the last few weeks of the cereal year, owing to the increased dependence of consuming countries on overseas rather than on home sources of supply. "The Agricultural Market Report" refers to another factor, namely, uncertainty as regards Canadian crop prospects, aided, as is usual in such circumstances, by market speculation. Imperfect crop reporting systems and the climate and other vagaries to which wheat is subject from seed-time to harvest make it impossible to forecast the ultimate yield of this season's harvests with anything like accuracy at this stage, but the following table, showing areas sown in some of the chief producing countries north of the Equator (based on data given in the July Bulletin of the International Institute of Agriculture), may serve as a corrective to undue pessimism:—

AREAS SOWN (in Thousand Acres).				
Country.	Average, 1918-22.	1923.	1924.	
United States—				
Winter wheat	42,682	39,522	36,898	
Spring wheat	21,724	18,786	16,920	
Canada	20,079	22,672	21,676	
India	28,645	30,835	30,919	
France	12,648	13,673	13,464	
Spain	10,311	10,489	10,158	
Italy	11,257	11,554	11,243	
Jugo-Slavia	3,640	3,843	4,071	
Hungary	3,042	3,320	3,460	
Roumania	5,898	6,648	7,245	
Poland	2,574	2,514	2,441	
Czechoslovakia	1,549	1,507	1,515	
Algeria	3,070	3,166	3,435	
French Morocco	2,004	2,249	2,331	
Tunis	1,379	1,559	1,025	
Total (14 countries) ..	170,502	172,337	166,801	

While the United States shows an appreciable decline as compared both with last year and the 1918-22 average,

the sown area in Canada and India is well above the latter level, and the same applies to Roumania, Hungary, France, and most of the French North African colonies. The total area in the fourteen countries (which do not, however, include Russia) is 3 per cent. less than in 1923, and 2 per cent. behind the average for the preceding five years. On the basis of information available at the time of publication of the July Bulletin, the International Institute of Agriculture gives the following figures for prospective yields:—

(Million Centals of 100 lbs.)				
Countries.	Average, 1918-22.	1923.	1924.	
European (8 countries) ..	241.0	303.8	257.1	
United States	528.6	471.5	444.0	
Asiatic (3 countries)	215.3	239.4	232.2	
African (2 countries)	24.5	30.3	24.9	
Total (14 countries) ..	1,009.4	1,045.0	958.2	

These totals omit Canada, the doubtful quantity in the equation. The latest returns under this head seem to indicate a "good" crop, though not a "bumper" crop like last year's, which was exceptional. The first official forecast puts the possible yield at 171,000,000 cwts, compared with the 1923 final estimate of 254,000,000 cwts. Home consumption and seed requirements averaging about 52,000,000 cwts annually, an exportable surplus of 120,000,000 cwts is indicated, and as climatic conditions have improved lately, this figure may quite possibly be exceeded. The United States should be in a position to export something over 70,000,000 cwts. Argentine and Australian crops have been unusually good this year, India has a substantial surplus of the 1923 crop in hand, and stocks in Canada and the United States are thought to be far from negligible. About Russia little is known. Last year a certain amount of wheat export took place, but it is improbable that supplies from this quarter will have much influence on the general situation. On the whole, the facts seem to bear out the Ministry of Agriculture's conclusion that, while prices may for some time remain at higher levels than last year, there is no justification at present for suggesting a coming shortage, much less a dearth of wheat.

The Rising in Brazil.—The city of Sao Paulo was captured by the Federal forces on Monday, at a heavy cost in lives, and probably in material damage, and the rebellion has apparently been definitely overcome. Non-official news is again permitted to come through from Brazil: hitherto the direct information obtainable has been scanty, and purely official, while that from Buenos Ayres and Montevideo has been brought there by travellers and ships' crews, and must have been largely con-

jectural. South American politics are so little studied in Europe that it is not easy for observers at a distance to account for the rebellion. It appears to have been provoked by unspecified grievances of the Sao Paulo military police; but an interesting article in Monday's *Times* suggests that it is a secessionist movement on the part of the progressive commercial population of Sao Paulo, which is chiefly of Italian and German origin, and resents the domination of the Portuguese population of the northern States, which is largely of mixed blood. There are reports that the disaffection has spread southwards among the so-called "Germans" (mostly, however, born in Brazil, and many of them descended from Austrians, Holsteiners, and Poles), who have been occasionally suspected by their Brazilian neighbours of disloyalty, but, in spite of the efforts of Pan-German emissaries, have never, we believe, been actively political. But it is hard to understand why a commercial population should scare away the foreign capital needed for their own enrichment, or why the placid "Germans" of the adjacent States should support them. The heavier taxation contemplated by the present Federal Government, and necessary to put the country in a sound financial position, is also assigned, with perhaps greater probability, as one cause of the rebellion; but it seems hardly an adequate one. The revolt, again, is stated to have been engineered by disaffected Army officers, belonging to the group who acted similarly just two years ago at Rio Janeiro. President Bernardes is notoriously detested by them, but it is difficult to understand why they should take part in a movement the success of which would split the Federal army into two separate bodies and so reduce their own importance—even if it created two War Offices, and consequently a greater number of official posts. Besides, the pay and numbers of the army are apparently not menaced by the financial reforms.

Home Railway Dividends.—The interim dividends of the Home Railways so far announced are all at the same rate as at this time last year, with the exception of the Metropolitan, which has increased its distribution by $\frac{1}{2}$ per cent. actual. In the table below we show comparative dividends, together with present prices and yields, and the lowest prices of 1923:—

Name of Line.	Interim Dividends R. to % per Annum.		Prices of Ord. Stocks.		Present Yield.
	1923.	1924.	Lowest, 1923.	July 28, 1924.	
Great Western ord. stock	6	6	106 $\frac{1}{2}$	108 $\frac{1}{2}$	5 8 d
London and North-Eastern pref. ord. stk.	7 $\frac{1}{2}$	7 $\frac{1}{2}$	75	82	7 7 d
London, Midland, and Scottish ord. stk.	5	6	101 $\frac{1}{2}$	97	6 2 d
Metropolitan cons. stock	3	4	59 $\frac{1}{2}$	81 $\frac{1}{2}$	7 4 d
Southern pref. ord.	5	5	76 $\frac{1}{2}$	85 $\frac{1}{2}$	6 10 d

The increase in the Metropolitan dividend was discounted some months ago in the price, which was pushed up in anticipation of heavy Exhibition traffic. We have calculated the yield on Metropolitan stock on the basis of the dividends for the past two half-years, namely, $4\frac{1}{2}$ per cent. per annum for the twelve months. For the current half-year the dividend may quite possibly be at the rate of 6 per cent. per annum, as against 5 per cent. for the second half of last year. In this case the yield will work out at £6 2s 8d per cent. The Southern Company leaves the declaration of a dividend on its deferred stock until the close of the year.

Bawra's Future.—At the annual meeting at Melbourne of the British Australian Wool Realisation Association, Limited, on May 29th, the full report of which has now reached this side, Sir John Higgins threw some light on the company's future. He said:—"The carry-over wool having been realised, your directors feel that a great portion of their labours has been completed; on the other hand, they recognise that the settlement of many matters, embracing sums of money exceeding £3,000,000 sterling, connected with the winding-up of the association's affairs, will give those responsible a great deal of worry and anxiety. In view of threatened legal proceedings, and the uncertainty of the position respecting taxation, your directors cannot recommend the association going into im-

mediate liquidation. Indeed, the weight of legal advice received is strongly against the adoption of such a course until all litigation is out of the way. Many of the matters to which your directors will have to direct their attention during the next six or nine months require a great deal of thought, and these complex problems would appear perhaps still more involved to men unfamiliar with the operations of the Central Wool Committee and B.A.W.R.A. It is the earnest desire of your directors to call an extraordinary meeting of shareholders at the earliest moment to consider the question, and determine the method of liquidation of the association. As such procedure is mainly of a legal character, your directors must be guided largely by their legal advisers, but shareholders may be assured that the meeting will be convened at the earliest date possible compatible with due regard to the protection of their interests." The accounts to December 31st last, to which reference was made in the *Economist* of May 10th (p. 956), showed a surplus to date of £2,547,200. From January 1st to May 24th last there was a net surplus of £1,340,300, making a total of £3,887,500.

Stock Exchange Loan Accounts.—A Stock Exchange correspondent writes:—In recent months a public demand has quickened for carry-over facilities. It frequently happens that misunderstanding arises in the public mind over various restrictions which are laid upon this branch of Stock Exchange practice. Under Law 82 of the Stock Exchange, a member "shall not transact speculative business directly or indirectly for or with an official or clerk in any public or private establishment without the written consent of his employer." Like so many other rules of the Stock Exchange, this law can be reduced to absurdity by showing that, whereas the broker is at liberty to transact speculative business for a costermonger who owns his barrow and stall in the Old Kent road, yet, at the same time, the broker is forbidden to undertake such dealings for the manager of a big bank, for instance, unless the latter client receives the written consent of his employers. A recent Stock Exchange case had to do with a request from an employee who wanted his brokers to buy him industrial shares and to finance the purchase for him with their own bankers upon his putting up 20 per cent. of the purchase money as cover. If the client in such a case went direct to his banker, no doubt the latter would willingly carry through the transaction, provided, of course, that the shares were sound, and such as commend themselves for loan operations in the ordinary way. The bank would buy the shares in the market and would receive half commission, with the result that the Stock Exchange, if it refused this particular business, would receive only 50 per cent. of the brokerage, and the bank would get the order in the first place. As a matter of fact, a good deal of this kind of business has been going on for the last year or so. While there is nothing like the speculative account open now that there was before the war, speculation is not so dead as to refuse to snatch at some of the chances which come its way. Some Stock Exchange firms flatly refuse to carry over stocks and shares, and others transact this kind of business only with reluctance. Clients, however, who remember the opportunities offered them in pre-war days are sometimes persistent in their desire for contango facilities, and in such instances as those where a man is consent of his employer, a way round is sometimes sought upon payment of a certain proportion of the cash as cover. This condition of affairs has now been brought to a head by the case before the Stock Exchange Committee, whose ruling was simply that, in the circumstances stated, the consent of the employer would be required, from which it is obvious that this class of business is regarded by the Stock Exchange Committee as permissible, provided that the employer knows about it. As a matter of fact, not many employees care for their heads to know anything about their speculative dealings, and doubtless the ruling just quoted of the Stock Exchange Committee will curb activities in a transaction which, after all, is not altogether unlike a carry-over. The objection will be raised at once that, if the Stock Exchange refuses such business,

outsiders will rush in, gladly enough, to fill the gap. The danger is that where the business is transacted with an outsider the latter may not buy the shares at all, but merely run them as a bear against his client, taking from him his deposit money and the rate of interest, trusting to the accident of fortune to come home with a profit. Many of the "bucket shop" fraternity do indeed invite the public to deal with them on this instalment plan. To this objection, the Stock Exchange would answer, of course, that a good deal of the business which might reach it on loan account, if general encouragement were afforded, would be of a character neither desirable nor profitable. The Committee's attitude in reference to the question just discussed is logical and wise, in that it neither turns away possible good business on the one hand, nor opens the door to laxity on the other.

Universal Cotton Standards.—Our Manchester correspondent writes:—A most unfortunate state of affairs has arisen with regard to standards for American cotton. The conference of representatives of European Cotton Exchanges, which was attended by officials of the Washington Department of Commerce, held in London at the beginning of last week, failed to achieve a settlement of the differences. Since then further meetings have been held of the Liverpool Cotton Association and the Manchester Cotton Association, but we do not appear to be any nearer a definite settlement. The Manchester Cotton Association has accepted the supplementary agreement proposed by the United States Department of Commerce. On the other hand, the Liverpool Cotton Association are not satisfied with the position, as, in their opinion, the agreement does not offer any security for the future. According to Liverpool, the original universal standard which is kept at Washington is stated by the Department of Commerce to be liable to change from its original form. In making up copies of this standard, however, the experts who have to do this work would not be permitted to make up copies of the standard as it exists at the time of working, but as it was when originally made. It is, therefore, contended that naturally this creates uncertainty in the minds of persons trading in contracts based on these standards. This is admitted by the Department of Commerce, as they have pointed out the physical properties of cotton, particularly with regard to colour and lustre, may, and undoubtedly will, change after a reasonable length of time. These boxes, therefore, may not at any particular date truly represent the original standards. Liverpool also objects to the clause in the supplementary agreement which provides for experts to go to Washington at the expense of the American Government every year to make up copies of the standards for the ensuing year for arbitration purposes, and they say that, quite apart from the fact that this is exceedingly responsible and laborious work, as it would mean passing 800 to 1,000 boxes, it is felt that it would be impossible to ask any members of the Liverpool Cotton Association to give up practically two months of their time to travel to Washington every year to agree with these standards. The Liverpool Cotton Association entered the scheme last year with the intention to make every effort to carry out the agreement which was adopted, not only in the letter but also in the spirit, but now, after only twelve months, it has been found that its provisions are quite impracticable, and that the Department of Commerce in Washington is not able to carry out its terms in a reliable or satisfactory manner. Owing to the uncertain outlook, the Liverpool Cotton Association has decided not to allow for the present trading in futures in any month beyond July, 1925.

Rubber and Rubber Shares.—For the next three months the standard of production allowed to the rubber companies which have given their adhesion to the Stevenson Restriction scheme, becomes lowered to 55 per cent. of the normal amount that was taken as the criterion by which the percentage of production was to be gauged. All rubber shareholders know that if the price of the raw produce does not stand at an average of 1s 3d per lb over a period of three months, it follows that, at the beginning of the next quarterly term, the ratio of production is lowered by 5 per cent. From this week it will be 55 per

cent., and appearances point to the possibility of a still further reduction being made on November 1st next, which would bring down the production to exactly half the standard by which the companies work. The effect of this is already seen in an advance to about 1s 0 $\frac{1}{2}$ d per lb in the price of rubber as compared with 9 $\frac{1}{2}$ d, the lowest touched this year, in May last. An advance of 3d per lb from the minimum seems to be an extremely modest acknowledgment by the raw market of the altered state of affairs which will prevail in the matter of production, more particularly in view of the possible further decrease to 50 per cent. on November 1st already referred to. The share market in the Stock Exchange reflects the continued uncertainty which is felt in regard to the outlook. Several of the chairmen at recent rubber companies' meetings have candidly confessed that the prospects for raw rubber are still obscure, though others take the robust view that, in a few years' time, the companies will be making very substantial profits out of their raw rubber. Obviously it is impossible to dogmatise in regard to what the future will hold. America takes by far the greater quantity of rubber which is produced, and the United States demand for the raw produce has fallen far short of what anticipation held would be the practical certainty of her requirements for the past twelve months. Meanwhile, in spite of all that is being done to-day in connection with the Exhibition, conferences, competitions, and such-like efforts, no fresh outlet of magnitude is discovered for the utilisation of rubber in such quantities as will make an appreciable difference to the output from the plantations. The good-class rubber companies can get along without difficulty—can, in fact, make respectable profits, with rubber standing at 1s per lb, but these producers are up against the continual competition from Dutch, Chinese, and other planters to whom the Stevenson Restriction scheme is a boon and a blessing, in that it enables them to produce as much rubber as they like, while their competitors are bound, voluntarily, of course, to curtail their own output. Last month certain of the Dutch interests were professing uneasiness at the prospect of British-owned companies in Java and Sumatra having to close down altogether, or to struggle along on a basis of profit so meagre that the money derived from taxation by the Dutch Colonial Government would be seriously diminished. This led to a suggestion that it might pay the Dutch-owned rubber companies to fall in with some scheme of restriction, though nothing has been done in this direction, and it speaks well for the loyalty of the British producers that there have been hardly any cases of going back upon the terms of the Stevenson plan. In the rubber share market the position is simply that most of those holders who became apprehensive of the outlook of rubber, when the price fell away so substantially, have cleared out of their shares. Proprietors that are left are of the type which will hold on indefinitely until such time as the industry fulfils their faith in it. This consideration it is which keeps the prices of rubber shares so firm. There are few shares about, and, at the same time, in spite of the quietude of business, it is common knowledge that a band of buyers stands behind the rubber market, eager to pick up any shares which come cheaply to market. As the price of rubber tends to improve, so will share quotations probably harden. Without ignoring the fact that the rise

in rubber must be due to restriction of output, the prospective purchaser will look ahead, as he has always been accustomed to in the case of rubber shares, and bank upon the day when these restrictions shall be removed.

The Outlook for Rice.—A correspondent writes:—It is at this time of the year very unusual to witness a brisk demand for such a commodity as rice, the real business not being done as a rule until the autumn, but the position now is so peculiar that users are evincing marked anxiety over the future of supplies. There has already been a certain amount of speculation, and reports from Rangoon tell of very firm markets there, with prices much about the level ruling at this time last year. On the London market the tone has been strong, with all descriptions well held, the stocks here being very moderate at 4,350 tons. Hamburg, of course, is the leading European market for rice, and values there have begun to advance. Thus it is perfectly certain that there will be some excitement in this commodity very shortly after the holidays are over owing to a very short supply and a brisk demand. In India, the chief producing country, the crops according to the Government figures, are several million tons below previous years, and the Burmah crop showed a falling off of fully 500,000 tons. The actual stocks in Burmah still unshipped are reduced to 275,000 tons, which compares with 1,250,000 tons a year ago, and this gives some idea of the stringent position that is developing. India will naturally turn to Burmah for supplies; thus this surplus may not be shipped to outside destinations. Saigon rice does not find much favour on this side, but China buys a lot of Indo-China rice, and there will not be much of this for Europe. The European takings of Indo-China rice for the past seven months have not been much over 40,000 tons compared with 175,000 tons in the same period of 1923. Siam should have an exportable surplus of about a million tons, but probably the bulk of this will be absorbed by Japan, China, and Cuba. Both Japan and China have had bad crops this year, and thus there is a very eager demand for Siam rice at high prices. The Japanese crop is fully 500,000 tons less than last year's output, and Japan, unable to buy wheat so much as formerly at current high rates, will have to look to Saigon, Siam, and Burmah for her supplies. Some rice came from Brazil to Europe last year, but that country has been placing orders recently for rice in Hamburg and also London. North America has been caught short, and already appreciable quantities have been shipped from Germany to New Orleans, &c. The total shipments from Burmah, Saigon, Siam, and Bengal for the first half of this year were a little over 650,000 tons, against 630,000 tons for the first six months of 1923. About half this quantity went to Germany. The stocks in Hamburg are reported to be down to 125,000 tons or so, and Germany will feel the loss of the importations from Burmah this year very keenly; in fact, it is impossible to avoid a shortage. The buying movement for rice should begin to develop about September, but old crop stocks are very short, and seeing that the bulk of the new crops will not be available until early in 1925 the outlook favours very firm prices. Holders everywhere are very cautious about accepting bids, and the marked strength displayed by wheat and maize, with prospects of still higher prices later on, serves to complicate the position still more. Buyers all over the world must come into the market shortly, and they will find a very stringent state of affairs. Well-informed opinion favours the view that all reserves will be quickly snapped up, and that there will be very strong markets for many months to come.

The Fishing Industry.—The landings of fish from the deep sea fisheries in the second quarter of the year were, with better weather conditions operating, larger than in the preceding quarter, and moreover a substantial increase on the corresponding period of last year. Though there has also been an increase in the aggregate of the first-hand value, it has not been proportionate to the larger quantity, thus indicating a slightly lower average price realised per cwt. The landings of wet fish by British-owned fishing vessels at ports in England and Wales, according to the returns of the Ministry of Agriculture and

Fisheries, in the April-June period amounted to 2,712,182 cwts, comparing with 2,463,559 cwts in the corresponding period of last year, the first-hand value (including shell-fish) being returned at £3,560,522, against £3,422,183. The landings at Scottish ports were 1,879,289 cwts, against 1,246,667 cwts, and the values £1,043,409, against £780,567, no advance being further indication of the improved conditions in the Scottish industry when contrasted with a year ago. In addition, foreign-owned vessels landed in the whole of Great Britain direct from the fishing grounds 545,943 cwts, against 475,348 cwts, the respective values being £292,897, against £323,951. Since the foreign landings at English and Welsh ports show a marked diminution, it would appear that a greater proportion is finding its way to Scottish ports, which from time to time have made complaint against the inroads made into the markets by the arrival of vessels under a foreign flag. Imports of wet fish from abroad in the quarter amounted to 309,555 cwts, against 517,057 cwts, the falling off being due in some measure to reduced imports of herrings from Norway, and to smaller arrivals from Denmark and Holland. The proportions of the various classes of fish caught in the deep sea fisheries are about the same. The main feature, however, is the inadequate quantities of prime fish (soles, turbot, &c.) to meet market demands, and this has led to the importation at Hull in particular of large quantities of this class of fish from Norway, the products of the fishing by Norwegian craft. The imports have met with a good reception from the merchants, and have been readily absorbed at apparently satisfactory prices. Another new departure is the importation of fresh salmon from Newfoundland and Labrador, several cargoes having arrived at Hull this season. Each cargo consists of approximately 200 tons packed in ice, and has been sold at prices enabling the fish to be sold retail at from 1s 6d to 2s 6d per pound in the inland markets. The statistics of the landings and imports of wet fish in Great Britain during the past half-year and the corresponding period of 1923 are as under:—

	Weight.		Value.	
	1923.	1924.	1923.	1924.
By British-owned vessels—				
England and Wales	Cwts.	Cwts.	£	£
Scotland	4,601,423	4,810,451	6,864,044	6,596,041
	2,185,428	3,442,569	1,586,954	2,096,166
By foreign-owned vessels	6,786,851	8,253,020	8,450,998	8,692,207
Imports from abroad	869,207	978,774	668,806	612,540
	996,824	796,211	1,322,942	1,414,532

The values of landings in England and Wales by British vessels include those of shell-fish, viz., £201,653, against £191,616 in the January-June half of last year. The magnitude of the trade in wet fish derived from the three sources embraced in the above tables is shown by the fact that in the past half-year the quantity handled at British ports exceeded ten million cwts, and that the value on landing was more than £10,500,000.

Assurance Companies Act Inquiry.—Recent events, more particularly the failure of the City Equitable insurance group, and the liquidation of the City Life Office, have led the Board of Trade to set up a Departmental Committee of Inquiry to examine the working of the Assurance Companies Act, 1909, and to report what amendments are desirable. The Committee is a strong one; there is a legal chairman in Mr A. C. Clauson, K.C., representative of the Government departments interested, and standing, who have been nominated by the highest insurance organisations. The official representatives are Mr Aliin, of the Government Actuary's Department; Sir Gilbert Garnsey, of Price, Waterhouse and Co. (nominated by the Board of Trade); Mr C. M. Knowles, of the Home Office; the Industrial Insurance Commissioner (Mr Stuart Robertson, K.C.), and Mr Winearls, Controller of the Companies' Department of the Board of Trade. The Accident Offices' Association have nominated Mr J. C. McBride, accident manager of the Commercial Union; the Fire Offices' Committee have selected Mr Morgan Owen, general manager of the Alliance Assurance Company; Lloyd's is represented by its chairman, Mr A. L. Sturge;

the Institute of Actuaries and the Faculty (of Scotland) are jointly represented by Mr Phelps, manager of the Equity and Land; and the organisations of life offices of England and Scotland have a joint representative in Mr H. M. Trouncer, actuary and manager of the London Life Association. It would not have been possible to have chosen five insurance men of higher standing in their profession, or men whose judgment on the subject matter of the inquiry will be more likely to command general support. It is recognised that the Assurance Companies Act of 1909 needs to be stiffened, and the new Committee of inquiry should succeed in reaching conclusions acceptable to responsible insurance opinion as well as commendable to those who regard the public as not adequately protected at present. One considerable advantage of inquiry by a mixed Committee of officials and insurance representatives will be that legislation on the lines of the Committee's report should become non-controversial, and not more difficult to put through than was the Industrial Assurance Act of last year.

Watney, Combe.—Accounts for its last financial year have now been issued by Watney, Combe, Reid, and Co., Limited. These show that this important brewery undertaking has maintained its prosperous position in 1923-4:—

	YEAR ENDED JUNE 30.	1921.	1922.	1923.	1924.
	£	£	£	£	£

Carried forward	150,961	194,494	215,372	185,503	
* Deferred ordinary capital doubled by capitalisation of £796,353 from reserves.					

The amounts showing how profits have been distributed are approximate figures in some cases. The deferred ordinary stockholders receive a 20 per cent. distribution, representing 10 per cent. on the original deferred stock of the company. The report states that the purchase during the year of Isleworth Brewery has fully realised anticipation. On turning to the balance-sheet (which will be found fully analysed on another page) we find that assets have increased from £13,689,569 to £14,297,072. As regards item "brewery buildings, freeholds, leaseholds, copyholds, goodwill and utensils," £10,862,775, it would be interesting to learn what value was placed on "goodwill."

Oroville Group.—Our mining correspondent writes:—The shareholders in the Oroville Dredging Company are, at the moment, almost more concerned with the affairs of the Colombian Corporation—by reason of the fact that the first-named company has since December last suspended the payment of dividends for the purpose of financing the latter—than with those of their own undertaking. The balance-sheet is made up to September 30th. In respect of the year ended on that date, the company paid four dividends of 9d each, leaving the slightly increased balance of £142,200 to be carried forward, subject to Excess Profits duty and certain contingent liabilities. It may be recalled that the Oroville Company took over from the Colombian Corporation a concession for the construction of a road from the mine to the Nechi River, reimbursing that company the amount it had expended thereon. The road in question was completed and opened for transport for its whole distance in October last. The steamer and barges were also placed in commission, but owing to the abnormal drought, have been able to give little service. Still, to the end of April last the tolls showed a small surplus over operating charges. With regard to the Constancia mine—the property of the Colombian Corporation—it is stated that all steps are being taken to accelerate the erection of the plant, so as to enable milling to begin at the earliest date; but no suggestion is put forward as to when that is likely to be. In reference to the position of the Oroville Company's two subsidiaries, the Pato Mines last year did not treat so large a quantity of ground as before, but the value recovered—

1-4, GREAT TOWER STREET - LONDON, E.C.3.

\$404,200—represented 29.9 cents per cubic yard, as against 24.3 cents. On the other hand, the field cost rose from 9.01 cents to 10.09 cents. The profit came out at £58,050, but the dividends paid totalled £140,000, the carry forward being thereby reduced to £89,750. It is estimated that the proved ground will provide work for a further 6½ years. This may be regarded as conservative, although in some degree a revision of last year's estimate. The manager reports that there are several hills which can be hydraulised at a profit; the gross value of their contents he computes at \$268,400. Possibilities also exist in connection with an old river channel lately discovered. Owing to unforeseen circumstances, it was found impracticable on the part of the Nechi Mines to dredge certain ground which had been counted upon, and work was suspended in November last. Since that time the company's dredge has been operated on hire by the Pato Company. The intention is to liquidate as soon as possible. The amount which the shareholders are likely to receive in the shape of liquidation dividends depends upon the arrangement which may be arrived at with the Inland Revenue authorities in regard to Excess Profits duty. This is also a factor in the position of the Pato and the Oroville.

Rhodesia Broken Hill.—Some disappointment was recently occasioned by the postponement of the dividend announcement and the offer to extend the balance of the options subject to a proportion of the shares being taken up forthwith. The latter measure was interpreted to indicate the need for additional funds. This conclusion is correct, but not as regards the near future. At Monday's meeting of the Bechuanaland Exploration Company Mr Edmund Davis, who is the chairman of both undertakings dealt at considerable length with the position of the Rhodesia Broken Hill. On the question of finances he stated that the company had in hand the funds to provide the hydro-electric and certain treatment plant, but added that on the completion of that programme, zinc would be produced at such a cost that the board would be faced with the proposition of raising additional capital, so as to produce on a scale warranted by the large ore reserves on the property. The first unit of the zinc plant is due for completion in September.

Oversea Correspondence.

UNITED STATES.—FOREIGN TRADE FOR THE YEAR.—ADVANCE IN GRAIN PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 18.

BOTH imports and exports of merchandise for the month of June were smaller in value than a year ago; export in fact, showed the smallest total of any month since February, 1923, while imports were the lightest since July of that year. The value of last month's export \$307,000,000, was more than 8 per cent. below May, nearly 4 per cent. below June of last year, and about one-third the total for the peak month of June, 1919, but 12 per cent. above post-war minimum of February, 1922. June imports, valued at \$277,000,000, showed a decrease of 8½ per cent. from May, about 13 per cent. from June 1923, and were approximately one-half those of the record month in imports—namely, June, 1920; they were, however, 55 per cent. above the low level recorded for July 1921. The June returns thus far published by the Department of Commerce make it possible to present some figures for the past fiscal year. Exports in the twelve months ended June 30th totalled in value \$4,311,625,795

or 9 per cent. more than in the preceding year and 14 per cent. above 1921-1922, but one-third under 1920-1921 and 46 per cent. less than in the peak fiscal year of 1919-1920. As compared with the pre-war year of 1913-1914, exports were 81 per cent. larger in value. The total value of imports for 1923-1924 was \$3,557,147,532, representing a decrease of nearly 6 per cent. from the preceding fiscal year, but an increase of 36 per cent. over 1921-1922. The falling-off from 1919-1920 was 32 per cent., while the gain over 1913-1914 was 87 per cent. The percentage increases of exports and imports over the year immediately preceding the war are strikingly similar. During the past fiscal year the excess of exports over imports totalled \$754,478,265, or nearly five times that of the previous year, when the excess amounted to only \$175,774,408. Last year's excess of exports, however, contrasts sharply with the record total of \$4,136,562,618 in 1918-1919. A study of foreign trade returns for the past eleven years shows that the total balance of merchandise exports in favour of the United States in that period reached the enormous sum of \$22,268,000,000, approximately. Details of foreign trade for the entire fiscal year are not available, but statistics for eleven months show that the slump in imports, as compared with the preceding year, was due to lighter imports of crude materials, the decrease amounting to \$246,000,000, or 18 per cent., whereas importations of manufactured goods were practically the same in value. The export figures show that the value of crude materials shipped out increased by \$390,000,000, or 41 per cent., and manufactured goods by \$262,000,000, or 15 per cent., while exports of foods declined \$199,000,000, or more than 20 per cent.

Imports of gold in the past fiscal year totalled \$417,025,638, and exports \$10,206,941, showing excess imports of \$406,818,697, or nearly double the previous year's excess. Silver exports amounted to \$98,785,586, or \$18,845,601 more than imports, as compared with an excess of \$9,040,069 in imports during the preceding fiscal year. In the past eleven years imports of gold into the United States have exceeded exports by \$2,220,201,514.

An important development in the grain trade, which is attracting considerable attention, is the formation this week of the largest co-operative grain marketing company in this country, through the amalgamation of five big Western grain companies. The concerns mentioned as being in the combination are the Armour Grain Company, the Rosenbaum Grain Corporation, J. C. Schaffer and Co. and Rosenbaum Brothers of Chicago, and the Davis-Noland-Merrill Grain Company of Kansas City. The new company, which is intended to be owned, controlled and operated, eventually, by farmers, and is to be known as the Grain Marketing Company, has been incorporated with an authorised capital of \$26,000,000 under the Illinois co-operative marketing law, which conforms to the national marketing Act. The company will control, it is said, grain elevator space in Chicago and other cities, including a number of export points, with an aggregate of more than 50,000,000 bushels. The financial plan, as officially announced, calls for the issue of one million shares of common stock of one dollar par value, a like number of preferred "A" shares of \$25 par value, and 500,000 of preferred "B" shares with a par value of \$50. The proposal is to sell the preferred "A" stock only to farmers, who are to have an opportunity to purchase an equal number of common shares. The common stock is not to be disposed of in any other way. According to the plan as announced, the preferred "B" stock will be redeemed as rapidly as the preferred "A" shares are sold, so that farmers eventually will become the only stockholders. Both classes of preferred stock are to bear an annual dividend rate of 8 per cent., and will be identical as to assets and in other respects. The preferred "B" stock will not be offered to the public; it will be used partly to pay for elevators and intangible assets of the companies forming the merger, and partly for working capital. The results which this enterprise is expected to accomplish include: Ownership by farmers of their own marketing agency; the adoption in a practical way of the principle of co-operation; control of ample credit for any transactions the company may undertake, and participation in economies resulting from the merger, as well as in the company's earnings. The new concern,

it is stated, will be at the service of all co-operative elevators and of any other farm organisations, and individual farmers. The directorate is to include farmers (who will constitute a large majority of the board), and representatives of elevator companies, grain dealers, bankers, and railroads.

Another development of far-reaching importance is the further sharp advance in grain prices. At this week's highest levels, wheat prices were 20 per cent., and corn prices 30 per cent. above last month's low points; both, in fact, reached the highest figures recorded in a number of years. The recent vigorous upturn in wheat is due largely to speculation based on the impairment of the domestic crop, although most of this week's advance is attributed to unfavourable reports regarding the Canadian crop. The rise in corn has occurred despite improvement lately in the condition of the crop. Other farm products have greatly appreciated in price, notably hogs, which, after last week's slump to this year's lowest levels, have rallied to top figures. This seems to bear out predictions that higher prices for corn, and less active breeding of hogs, would result in higher markets for pork. The advance in prices of grain and other farm products is considered of prime importance for a number of reasons. It will increase the purchasing power of agricultural communities, and place them in a much better position financially than they have occupied for some time past; the brighter outlook is, in fact, "putting new heart" into the farmers of the West. In some western districts frozen credits, which were largely responsible for numerous bank failures, are being thawed out, and banks are now able to liquidate their loans. The rise in grain prices is likely to have a very important bearing upon the political situation, and promises to be a big factor in the November election. Extremely low prices for grain heretofore prevailing have caused a great deal of dissatisfaction and unrest among agricultural communities of the West and North-West.

Largely on account of the advance in the grain market, and consequently the improved outlook for farmers, the Interstate Commerce Commission has refused to order a reduction in western railroad rates on grain, which was strongly urged by various interests as a measure of relief for grain growers. The commission, in a majority decision (five members dissented), held that present rates were reasonable, and, furthermore, that the financial position of western railroads did not warrant a cut in grain tariffs. The reduction had been requested by farm organisations in several States of the Mississippi and Missouri valley grain belt.

A more cheerful feeling prevails in most lines of trade, and in some directions business is beginning to revive. Retail trade generally is more active, and while wholesale merchants are still operating cautiously, they are buying somewhat more freely, and apparently with more confidence than in recent weeks. Industry generally, however, lags, and is operating in most lines at a very low rate of capacity. There are signs, nevertheless, of a change for the better. In primary textile markets especially there is a noticeable, though only moderate, improvement. Dry goods business continues light in volume in practically all lines, but inquiries and orders are more numerous, and actual purchases are larger in volume than for some time past. Demand is chiefly for supplies to meet current or nearby requirements. Buyers, however, in many instances are now showing interest in merchandise available for later deliveries, and are covering some of their future needs—in marked contrast with their refusal heretofore to make forward commitments. Cotton trade in cottons is attributed to a more general realisation that the prolonged and extensive curtailment of production has greatly reduced available supplies. Many merchants are now feeling the necessity of replenishing depleted stocks. Since a substantial part of business in dry goods comes from agricultural sections, the rise in grain prices is another factor responsible for the recent improvement in textile markets, because the increased purchasing power of farmers is expected to lead eventually to a more active demand from such interests for cottons and other fabrics. The recent advance in the staple has also helped trade sentiment.

FRANCE.—THE CONFERENCE AND FRENCH OPINION —RECONSTRUCTION PAYMENTS—NEW LOAN— RENT PROBLEMS.

(FROM OUR CORRESPONDENT.)

PARIS, July 30.

At the time of writing the Interallied Conference in London has reached a point which French opinion regards as critical, and feeling here is wavering between indifference and pessimism as to what the eventual result may be. French hopes as to the probability that any settlement of the reparation question that might be arrived at by the Conference would result in this country receiving any tangible payments from Germany for several years to come, vanished long ago. No illusions now remain, and it is recognised that, even if a miracle be accomplished and real cash is extracted from Germany, the 52 per cent. of it to which France would be entitled would be more than swallowed up in other directions (interallied debts, maintenance of the Army of Occupation, and so on).

The Bourse, indeed, has already discounted whatever result the Conference may produce. If an agreement should be arrived at to apply the Dawes report, the fact would be received without enthusiasm here. In that event, it is anticipated there would be a substantial improvement in the position of the franc, but the good effect of this would probably be immediately neutralised by the appreciable rise in raw material and other commodity prices which has already begun in New York. On the other hand, if the Conference results in a failure, and consequent disappointment in London and New York, and the possibility of a return by France and Belgium to a policy of independent action, the fall in the franc that would follow would not, it is widely believed, make the situation much worse than it is, while France would have her hands still free (1) to take such steps as she thinks fit to make her creditor pay, or (2) to maintain her strangle-hold on the Ruhr. The colourless reception given in both the Senate and the Chamber yesterday to M. Herriot's telegram, explaining the situation at the London Conference, and the reasons why he was unable to meet the two Houses on their reassembly and ask their approval of his work, was strikingly significant of the general feeling here.

To the average Frenchman the whole tendency of the London Conference has been to reveal an organised attempt, under the influence of British and American finance, to get the French out of the Ruhr and prevent them from returning there again. Until this impression is removed, the chances of M. Herriot being able to make any really substantial concessions to British wishes that he could feel sure his own Parliament would ratify are distinctly remote.

The critical situation in the devastated regions was the subject of discussion by an important meeting of 400 architects and contractors in Paris yesterday, at which it was sought to find means to prevent the complete stoppage of reconstitution work, owing to the cessation of further payments of sums due by the Government to the *sinistrés*. At the present moment, it was reported, the Government is no less than 1,800,000,000 in arrears with payments of indemnities that have been authorised. The result of the Government's failure to furnish money due is alleged to have already been responsible for 109 failures or compulsory liquidations by contractors and others (exclusive of others in the department of the Nord, which is the most important of the devastated departments), and the most important of the devastated departments in Paris. Of yet other firms having their headquarters in Paris. Sixty other failures are forecast for the end of the present month. M. Despagne, vice-president of the organisation known as the Public Works Office for the Devastated Regions, and president of the Builders' and Public Works Contractors' National Federation, who presided, stated that, independent of money that would be derived from the sale of ten-year bonds, the Government had given him assurances that 565,000,000 of fresh money, which was theoretically requisitioned from the Crédit National for distribution during the first six months of the present year, but which has not yet been paid, will be paid out within the next three months, instead of being spread over the whole of the second half of the year, as previously arranged. Apart from these sums,

however, the amount that will be available for carrying on work during the second half of the current year will be only 35 millions, or about 4½ per cent. of the amount required for the work already in hand.

It is understood that the Government proposes to issue an important new loan in October or November next, for the purpose of consolidating part at least of the floating debt. The assembled contractors and architects passed practically unanimous resolutions urging the Government to allow *sinistrés* to subscribe to this loan for the amount of the indemnities due to them, which they have undertaken to re-employ; to deliver immediately and without further delay, to *sinistrés* who demand them, certificates of debt convertible into scrip of the forthcoming loan; to authorise *sinistrés* to hand such certificates over to their contractors or bankers in payment or as guarantee; to enable contractors, or holders of such certificates, to hand them to their bankers as collateral for credit already made or to be made; and to arrange for such certificates to be compulsorily converted into public loan scrip, from the day of the subscription of the projected loan, and to be negotiable on the Bourse in the same way as all other public debt scrip. The meeting decided that contractors should be asked not to continue work except to the extent of the amount of fresh money furnished by the Government.

A curious instance of paternal legislation is afforded by the promulgation last week of the law prohibiting the transformation into furnished houses, flats, or single rooms of premises that have normally been let unfurnished. This law is the sequel to an attempt made by many property owners in this country during the past two or three years to avoid the law passed to prevent profiteering in rents, which prohibits the increase of rents by more than 75 per cent. of the pre-war rate. No sooner was this law brought into force than property owners transformed their premises in a large number of cases into "furnished" holdings, which placed them outside the provisions of the new law. It is estimated that during the past three years 50,000 holdings in Paris alone have been transformed in this way, exclusive of some 2,000 houses that have been converted into residential hotels. An attempt was made to check this form of profiteering by rendering it obligatory on house-owners to notify the local authority of their intention to transform their property, but this failed to modify the practice. In the period January-July, 1924, 5,162 declarations of new *garnis*, or furnished holdings, were made in Paris alone. The new law provides for fines ranging from 2,000 to 10,000 francs to be inflicted on all who infringe it. As the Bill left the Chamber, the new law was made retroactive as from 1922, but the Senate decline to make it apply to cases that occurred prior to the end of 1923. The effect of this provision is that the whole of the 5,162 holdings that have been transformed since the beginning of the present year must now be restored to their former status, and will tend appreciably to diminish the shortage of unfurnished flats that has for so long prevailed in Paris.

AUSTRALIA.—COMMONWEALTH BANK OF AUSTRALIA.

(FROM OUR CORRESPONDENT.)

MELBOURNE, June 26.

The Commonwealth Bank Bill, which was introduced in the House of Representatives on June 13 by the Treasurer, Dr Earle Page, includes provision for a board of directors for both the general and issue departments in place of the present board, which controls only the note issue of the present board, and also a provision compelling the ordinary banks to settle clearing balances between themselves by means of cheques drawn on and paid into the Commonwealth Bank. The present system of settlement is based upon gold pools established by the ordinary banks themselves in connection with the clearing house system. Probably a system of clearing by means of cheques on the Commonwealth Bank would meet with friendly consideration by the banks if it were introduced as a voluntary matter by mutual arrangement. The mandatory provision of the Bill now before Parliament is, however, objected to, and in this and some other matters the Bill bears marks of having been framed with only moderate regard for

actual circumstances. If this provision is adopted by Parliament, it will necessitate balances being kept by the ordinary banks with the Commonwealth Bank for settlement purposes. These balances, however, would not require to be large. The Treasurer expresses the hope that "confidence in the new management will bring about voluntary placing of considerable credits with the Commonwealth, just as is the case with the Bank of England, which holds practically all the cash reserves of the ordinary banks, and which, in the true sense of the term, is a bankers' bank." That the ordinary banks would place any large amount with the Commonwealth Bank appears, however, unlikely. A question which would doubtless arise would be whether the amount would be really available if required by the banks, and whether the amount would be kept in cash by the Commonwealth Bank or used for lending purposes either to the Government or for general business in competition with the ordinary banks. On such matters there is nothing in the Bill or the Treasurer's speech to throw any particular light, while it is always necessary to keep in view possible political developments in the future.

The board of eight directors for the whole bank, including the issue department, is to consist of the Governor of the Bank (whose own position will then be practically that of general manager but not chairman of the board, unless elected by his fellow directors), the Secretary to the Treasury, two persons who are or have been associated with manufacturing industries or commerce, two similarly associated with agricultural, pastoral, or other primary industries, and two with a knowledge of currency and "declared by the Governor-General to have been chosen because of that knowledge." The Governor of the Bank and the Secretary to the Treasury, together with the two "currency" directors, will form a sort of inner board of four, as a decision of the whole board which affects the note issue department shall not be effective unless the directors voting for it includes two out of the four in question. This would mean that the Governor of the Bank and the Secretary to the Treasury, in conjunction with a sufficient number of the commercial and industrial directors to form altogether a majority of the whole board, could overrule the two currency directors, so that purely abstract theory, unconnected with any regard for actual circumstances and figures, need not form an obstacle to business of such primary importance as the financing of export trade. Other combinations of voting on the board are, of course, equally possible. In addition to the board of directors, local boards of advice are to be appointed in the principal Australian cities. Directors and members of local boards are to be appointed for terms of years, but in all cases subject to good behaviour.

No alteration is proposed in the gold reserve against the note issue, which remains not less than one-fourth of the outstanding notes. The portion not covered by gold may be invested (as hitherto) on deposit with any bank, or in securities of the United Kingdom, or the Commonwealth or a State, or in trade bills with a currency of not more than 120 days. These provisions continue to leave room for elasticity, subject to the discretion of the board in managing the currency, upon which the success of the issue in meeting necessary requirements and yet avoiding excess depends until an effective return to gold is possible.

The Labour Party, by which the Commonwealth Bank was founded, object to the present proposals, and their leader has moved in Parliament an amendment to the second reading. He proposes that "in order to preserve the Commonwealth Bank as a national institution, and to extend its operations for the purpose of controlling credit and exchange, it is desirable that financial experts, to be fully employed in the service of the bank, should be appointed to its management. The proposal of the Government to appoint persons representing squatting and commercial interests, who are diametrically opposed to national banking, is designed more in the interests of private financial institutions than of the people's bank."

The foregoing terms are of interest in view of the possibility of the return of Labour to power, in which case any arrangements made under the present Bill, if passed into law, would obviously be open to further alteration with the view of making the Commonwealth Bank a more active competitor against the ordinary banks.

UNION OF SOUTH AFRICA.—THE NEW GOVERNMENT—RAILWAY DEFICIT REDUCED—RESERVE BANK'S POLICY—EX-ENEMY SHARES—RAND PRODUCTION AND DIVIDENDS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, July 2.

THE Nationalist-Labour political combination, familiarly known as the "Pact," achieved a far larger majority than was generally expected, namely, of 28 altogether. The Nationalists have not at present a majority over the S.A. Party and Labour combined, a combination which does not, of course, come within the range of practical politics, but a defection of five members from the S.A. Party to the Nationalist ranks, a by no means extreme contingency, would give a majority over all other sections. The understanding between the Nationalists and Labour avoided triangular contests so general in earlier elections, and there is no doubt that the forced deflation policy of the Minister for Finance, the Hon. Henry Burton, and the severe economies of the Minister of Railways, the Hon. J. W. Jagger, caused a large turnover of votes from the S.A. Party. The Ministerial appointments were announced on Monday. That of Mr Havenga to the portfolio of Finance has been well received. General Hertzog, the Prime Minister, has avoided any "provocative gesture," to quote the *Star*, in refraining from appointing Colonel Creswell to the Ministry of Mines (to be occupied by Mr F. W. Beyers) or General Kemp to Defence. The former becomes Minister of Defence and Labour, the latter of Lands. Mr Tielman Roos, K.C., is Minister of Justice and Deputy-Prime Minister. General Hertzog, at a meeting last night, declared that "the development of their industries would be in consonance with the motto, 'South Africa first.'" This would imply that he is as keen a protectionist as General Smuts. It is understood that there was a sharp cleavage of opinion in the late Government, Mr Jagger (Railways) and Mr Burton (Finance) being of the Free Trade school. Since the result of the elections, the share market has been remarkably steady, and there is a general disposition to give the new Ministry every chance to see what it can do. It is a hopeful augury that General Smuts was not opposed for Standerton.

The Union State Railways have a capital of £111,310,000; the net revenue last year was £5,613,910, after charging £1,261,625 depreciation. Interest on capital accounted for £4,025,800, interest on superannuation and other funds, rents of leased lines, and miscellaneous expenditure £410,000, leaving a balance of £1,725,000, after allowing for various credits, including £400,000 interest and £100,000 miscellaneous receipts. Harbours reduction of stores, stock, and betterment, each £250,000, and of £98,250 to reduce deficiency in pension fund, reduced the available balance to £1,450,000. The accumulated deficiency has been brought down to £770,000, practically only a third of what it was at the beginning of the financial year.

At the annual meeting of the S.A. Reserve Bank, Mr W. H. Clegg, the governor, and formerly a well-known officer of the Bank of England, explained that the bank was not entitled to increase its dividend beyond 6 per cent. per annum until the reserve fund was increased to £250,000, and so long as any restrictions on the export of gold or the convertibility of gold certificates were in force in the Union. The bank was being built up on a thoroughly sound foundation; indeed, it could not fail, if it followed its present lines, to occupy in course of time the same relative position in South Africa as the great central banks in Europe. It was a profound delusion to say that its policy in preventing either of the commercial banks from giving credit except on exorbitant security was strangling business and development.

The Reserve Bank, he said, had no such policy, and even if it had, could not impose it on the other banks. The restriction of credit had been caused by the slump in world prices. This caused trade depression, and the bank's customers had less security to offer. Commercial banks were bound to adopt a much severer criterion than

before the slump as to what constituted good securities. The commercial banks "did not cut down advances for the fun of the thing. They earned their main profits out of advances and discounts, and they refrained from making them only from motives of sheer prudence." The Reserve Bank had been in existence for barely three years, and in full operation for barely two, and began its life in the profoundest trade depression which the world had ever seen. To understand and appreciate the working of a central bank, its operation must be examined over periods of commercial activity and inactivity. The South African Reserve Bank had not had a chance of showing its full usefulness, yet that it had been useful was abundantly manifest. So far from causing restriction of credit, it had provided a means by which other banks could obtain additional resources for carrying on business such as they never had before. There was no lack whatever of available credit in South Africa to meet any possible development of business; the credit machinery was ample, and what was required was development of sound business to justify the increased use of that machinery. Credit-elasticity in this country was founded on the Reserve Bank's rate for the discounting of trade bills.

Up to the end of last year the Union custodian of enemy shares had sold some £6,500,000 of gold mining shares, the largest transactions being New Modderfontein 505,056 shares, which realised £1,674,473; Modder B., 241,760 shares, which realised £325,990; Geduld, 76,300 shares, which realised £191,203; Johannesburg Consolidated Investment, £181,585; Rand Mines, £160,639; and Brakpan, £154,696. Arrangements are being made to expedite the closure of the Custodian's office.

Some interesting predictions are being made regarding the progress of the Rand, which "should this year produce a larger gold value than has ever before been produced in any one year." The Transvaal output for May, given by the Chamber of Mines at 809,003 ounces, and by the Department of Mines and Industries at 807,805 ounces, is the highest ever recorded for a clear month's run, as the 830,723 ounces recorded as far back as March, 1912, included over 70,000 ounces from reserve, the carrying of which was abolished in that month. While it is scarcely likely that an aggregate of ten million ounces will be achieved this year, it is not at all improbable that the rate will be attained, thanks mainly to the inclusion of West Springs in the producing list, but also to expansion elsewhere, in July or October, which comprise only four week-ends, and modern plants are not allowed to run on Sundays. There are usually four companies which produce over 50,000 ounces a month, Government Areas having latterly wrested supremacy from the Crown Mines, but these two are actually in the 71,000—67,500 ounce range. For the five months completed the profits of Rand gold mines have exceeded £6,150,000; as this includes February, it may well be, assuming a good "currency" premium, from our viewpoint, that the year's profits will touch £15,000,000.

For the first half-year the dividends declared by Rand gold mining companies total £4,610,100. This takes no account of the 10 per cent. dividend of Randfontein Estates, which was not strictly a gold producer at the time of notification in April, though it has since become one consequent upon the absorption of Randfontein Central. Assuming that 5 per cent. is paid for the final half, and that the other companies paid the same rates, the indicated total for the year is about £9,375,000. But, as a rule, the final period is the better half, and the record of £9,310,750 is certain to be surpassed, while, if conditions continue satisfactory, a total of ten millions may be attained, which would imply a reasonable though by no means lavish return on the capital invested in the industry, after allowing for the redemption of capital inevitably associated with a wasting asset such as a mine, whose dividend is really in the nature of a terminable annuity. Out of 35 producers, 25 are in the dividend list, while 16 pay higher rates than in the corresponding period, the largest increase being from £100,000 to £287,500 being rapidly wiped off, while Crown Mines pays £115,400 more. Far ahead of all rivals is the New Modder, with a distribution of £700,000, compared with £455,000 by Government Areas (whose shareholders receive rather less

than does the Union Government in terms of its lease), while the only other company to exceed £400,000 is Modder B (where development values latterly have improved), with £420,000.

RUSSIA.—HARVEST—FINANCE.

(FROM OUR CORRESPONDENT.)

MOSCOW, July 18.

THE main interest in the economic position in Russia is concentrated at present in the harvest estimates. According to the official declaration of Mr Rykoff, 5½ million of the 77 million dessiatines sown this year will be practically without harvest. Mr Popoff, head of the Central Statistical Office of the Soviet Union, says that on present estimates of yield the gross production of cereals will reach 2,600 million poods (43.3 million tons). After deduction of seed requirements, say 550 million poods, for next year's crops and allowing for the same carry over of stocks—estimated at present at about 62 million poods (1 million tons)—the net production on Mr Popoff's estimate would give a surplus over the actual consumption requirements of the population (say 1,900 million poods) of 150 million poods, or 2½ million tons. It should be borne in mind that Mr Popoff's figure of 43.3 million tons gross yield is considered by well-known Russian economists as optimistic, and that in fact the harvest will be less. The problem which now faces the Soviet authorities is the contrary of that which they had to solve last year. Instead of a depression of prices in the agricultural areas the prices of agricultural products are now rising, and threaten to increase further the cost of living. It is difficult to forecast exactly the consequences of the comparatively bad harvest, but they may prove to be grave—this has been recognised by the Government in the appointment of a special Commission with Mr Rykoff as President to "fight against the consequences of the bad harvest." Up to now the export of cereals has always played an important part in Russia's external trade, and for the next cereal year an export of 6 million tons was originally budgeted for. This figure, as a matter of fact, represents the present capacity of grain export from Russia as limited by the possibilities and slowness of rail and water transport and lack of elevators. The reduction of this grain export figure to 2½ million tons maximum will be reflected in the Government's financial arrangements for the next budget year. On the general question of the reconstruction of Russia's agricultural economy it seems clear that a radical revision of the Government's agricultural policy is called for if Russia is to resume her place as an important grain exporting country: as examples, the initiative and individual efforts of the hard-working and more intelligent peasants must be given freer play, and the large agricultural estates in the hands of the Sovkhs (Soviet agricultural economies) must be worked more rationally.

Professor Sirinoff, discussing possibilities for the 1924-25 budget, estimates the gross revenues of the Union, including the Transcaucasus and the Far Eastern Republic, at 1,350 to 1,400 million roubles on the supposition that the single agricultural tax will yield 170 million roubles, which is slightly less than in the present financial year, and that other direct taxes (industrial tax and taxes on property and revenue) will amount to 85 million roubles. Excise revenue is estimated at 200 million roubles, and Customs at 60 million roubles. Other tax revenue he puts at 60 million roubles. Gross revenues

from State industry, railways, &c., Professor Sirinoff puts at 780-800 million roubles. The deficit in the budget estimates (400 million roubles is the estimated deficit for 1923-24), Professor Sirinoff states, cannot be covered by credit operations only as the outlook is not favourable. This year's experience has shown that long term loans have encountered great difficulties. The peasant loan for 50 million roubles has given to date only 11 million roubles, the guarantee loan of 100 million roubles has given only 7,865,000 roubles, the second 6 per cent. lottery loan for 50 millions has only been placed for 7,980,000 roubles. Thus a serious deficit has resulted which can only be covered by money issue. The emission of rouble notes by the Finance Commissariat is based on the supposition that the trade of the country will increase and assimilate a further emission of rouble notes made necessary by the deficit in the budget, but the present economic position does not give hopes of any great development. The greater number of the State commercial and industrial organisations are in a position of financial embarrassment. The metal industry, for example, cannot obtain payment of 16.5 millions of gold roubles owed by various consumers. On June 13th, State industrial enterprises owed to their workers 13 million roubles (delay in wages payments), and at the same date the total debts of the industries amounted to 70 million roubles (excluding repayment of bank advances). The railways have contracted important debts to the naphtha industry (11.5 million roubles), and to the metal industry (13.5 million roubles), and their unsatisfactory financial position naturally stands in the way of the re-establishment of normal working and provokes difficulties in raising fuel supplies; in the Donetz, for example, the stocks of coal which had diminished in June (164,166,000 poods as compared with 188,798,000 poods on April 1st) are increasing alarmingly again in July. The possibilities of production of coal and naphtha are by no means unfavourable, but the limiting factor is that of disposal on the internal market. Thus the naphtha trust forecasts that in the year ending October 1, 1924, it will not be able to dispose internally of 10 to 11 million poods included in the year's programme of 195 million poods. This means in effect a reduction of earmarked income for further constructional work from 23½ million roubles to 13 millions. The foreign markets for Russian goods cannot be utilised at present to any large extent for the following reasons:—(1) Foreign values having depreciated on the Russian market (£1 on July 18th = 8.49 roubles), the State exporting organisations cannot realise profits on exports. Moreover, as the imports are strictly limited by the Commissariat for Foreign Trade, the sums realised abroad by exports do not come back to the country in the shape of goods at cheap cost. (2) The high cost of State production does not permit of organising the export of Russian goods on any scale, and the attempts made, for example, to conquer eastern markets (e.g., Turkey and Persia) have not given any noteworthy results.

NORWAY.—CABINET AND PROHIBITION—CHRISTIANIA'S NEW NAME—DOCKERS' STRIKE ENDED.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, July 21.

AFTER an existence of about a year and a half, the Cabinet of Abraham Berge has just fallen. Although the Berge Cabinet to a great extent had the sympathy and respect of all the political parties—the Communists, of course, excepted—there were naturally very considerable divergences of opinion between it and those parties in several directions. The question which brought about the catastrophe was Prohibition, which is closely connected with the State finances. The plebiscite, or referendum, does not form any part of the Norwegian constitution. Still, it has twice or thrice been resorted to for ascertaining the general trend of public opinion on specific questions. The Storting is not constitutionally bound to adhere to the opinion thus expressed, but naturally the view expressed by the majority of the people carries great weight. During the later stages of the World War the question

was put to the nation whether, with certain limitation, there ought to be a prohibition to the free sale of spirits, and there was a considerable majority in favour. When the outward aspects of things had changed, a few years later, the question was put, and the previous vote confirmed. Meanwhile, smuggling and private distillation became more and more rampant. Sobriety, so far from increasing, was thought by many persons to be decreasing among the people, and coupled with this circumstance was the evil fact that law-breaking and immorality, as some contended, increased. To put a stop to this presumed evil, the Berge Cabinet proposed to repeal the prohibitory Act founded upon the plebiscites. But this was only one side of the question. The Finance Minister had calculated that there will be a deficit in his budget of upwards of 30 million kroner for this year. He calculated that by making legal the importation and sale of strong liquors he will be able, through the charges on the trade, to cover that deficit. The Cabinet made it plain that the acceptance or refusal of their proposal would settle the question as to whether they would leave the helm of the State in other hands. There was, however, a majority against them. So they leave their posts. The new Prime Minister is a radical, and a well-known man in political life. He is an ex-Minister, and was for a great number of years a member of the Storting, of which, for a couple of years, he was a very capable president. He is a large shipowner from Bergen. His Cabinet has not yet been definitely nominated, but it is generally supposed that by far the most important seat, that of Finance Minister, will be filled by a Mr A. Holmboe, a bank manager, who is supposed to be a careful man. As far as can be gathered, he will make strict economy and retrenchment his aim to make up for the loss on income on the liquor trade.

About a fortnight ago the Storting, by a very large majority of members among all parties, from the Communists to the Conservatives, decided that as from January 1, 1925, the name of the Norwegian capital will no longer be Christiania, but Oslo. For about 900 years there was a town on the eastern side of the very innermost part of the present Christiania fjord which was called Oslo—a name that has puzzled etymologists up to this day. This town, by degrees, became the capital of Norway, splendidly situated as it is for that purpose. In 1624, however, it was devastated by fire. In September the King, Christian IV., who was also King of Denmark and resided at Copenhagen, came here, and he decided that the town should be removed to the western side of the fjord, just opposite to the old place, and renamed Christiania. This decision showed great foresight and wisdom, for the new place was in every way a better site for the new capital than the old one.

The dockers' strike, having lasted for about half a year, has at length been terminated, and normal work is going on. A number of wage rates will come up for settlement in a few weeks, and some of them have already been settled while others are in abeyance. The position is not a very easy one, as the cost of living certainly has increased, but at the same time competition from other quarters makes it difficult for the industry to increase wages.

The bright crop outlook is considerably darkened by excessive rains. Dry weather will have to set in soon if the crops, chiefly the hay and cereals, are to be saved. There is not much business to be recorded in any section of trade—which, of course, to a great extent is a seasonal phenomenon. The political crisis may, however, have terrors there is a rather strong demand for a reduction of the rather high rate of discount—7 per cent. Up till now stirred, and they may probably hesitate before they yield to pressure.

SPAIN.—BUDGET—MOROCCO—EXCHANGE—FOREIGN COMPANY TAXATION—RAILWAY PROBLEMS.

(FROM OUR CORRESPONDENT.)

MADRID, July 22.

THE Budget for 1924-25, which came in force on July 1st, compares as follows with that for 1923-24, which ended March 31st. There has been a supplementary Budget for the three months of April-May-June.

	(In Million Pesetas.)		
	1923-24.	1924-25.	Differences.
Expenditure....	3,048.38	2,941.72	— 106.66
Income	2,617.04	2,777.84	+ 160.80
Initial deficit .	431.34	163.88	— 267.46

Although the deficit has not yet disappeared, it is brought to small proportions which will allow doing away with it in one year more, as it is the intention of the Directory to achieve this result by degrees, having recourse to reductions in expenditure and to obtaining the full yield from the present system of taxation, by the prosecution of fraud rather than by the introduction of higher taxation. The main reductions are 125 millions in the Army expenditure, 32 millions in Morocco expenses, and 27 millions in the Public Works Ministry. On the other hand, there are increases of 43 millions for the Navy and 10 millions for educational purposes.

The favourable impression made by the Budget in financial circles should have improved exchanges and helped the stock markets, which were favoured also by the receipt of money from July dividends and interest on public funds, but everything was overshadowed by the fresh trouble arising in Morocco.

The President of the Directory, who personally has always grasped the dangers of the system of military occupation, had recently announced a change of policy in Morocco to bring the problem within the economic possibilities of Spain, by restricting the armed occupation to lines nearer the coast and easily defensible. He has for that the full support of the country, but recent events may delay the change and strengthen the resistance to his project, coming mainly from the Army. The Marquis de Estella is now visiting Morocco for the purpose of getting direct information which will be the basis of future decisions.

Under that disturbing factor the peseta, which was already falling steadily during June, slumped heavily to 33 to the pound in the first days of July. The dollar appreciated from 7.31 to 7.46 in June, reached 7.60 at the beginning of July, and is now about 7.55. Public funds were also depressed, but have reacted since.

An agreement was signed on June 27th between the United Kingdom and Spain by which the companies or firms of one of the contracting parties doing business in the other country will be subject only to the same taxes as the national firms of the second country, and the taxation will only be applied to the portion of capital really invested in the second country; to the volume of business done in it, or to the profits obtained in the second country, according to which may be the basis of the tax, i.e., capital, business turnover, or profits. By exception any British bank with branches in Spain will pay the same taxes as a Spanish bank, on the capital, turnover, or profits corresponding to its Spanish branches, but in addition it may be subject to a tax not exceeding a quarter of one per mille on the whole capital and reserves after deducting the capital and reserves assigned to Spain. The most favoured nation clause is mutually granted by the parties.

On July 12th was signed the Royal Decree, so long expected, for a new organisation of the railways prepared by the Directory after careful study of the several projects discussed by Parliament in the last few years. The main difficulty with the railways is that the concessions of the lines are approaching the date of reversion to the State, and therefore the companies are reluctant to undertake any large work of extension or repair of the lines, not even the buying of the necessary rolling stock. By the new system the State will come to the assistance of the companies and afford the capital required for improvements in the services, so permitting the work of renovation and extension of the whole system to go on in spite of the approaching reversion to the State, as the law also provides new rules for such reversion to be effected under basis equitable to the companies and the State. The companies are free to come under the new organisation, or to abide by their present concessions, but only those which are in a sound economic position will be admitted to it. All the companies who are granted admission will come under the supreme authority of a railway council who will dictate a general policy aiming at the national interest instead of the private convenience of each company. Under the full authority of the railway council a new and

more organic regrouping of the lines may be effected for the best administration of the sectors of lines independent of the companies to which they belong; it will facilitate a general revision of the tariffs, avoiding the present elements of competition; it will permit the solution of the problems of wages on broad and general lines, and will allow the full employment of the rolling stock belonging to the several companies on all the lines with more economic results. The State assistance will, above all, afford the means for the construction of new subsidiary lines which are so necessary to complete the deficient system of railways. All these expenses will be provided for by the issue of a special Railway Debt and by certain taxes, as well as the surplus profits of the companies after paying all their obligations and a moderate dividend on the share capital. The financing of the system will be in charge of the "State Railway Fund." The new organisation will prepare gradually the nationalisation of the railways as the leases of the companies expire and the lines come to be the property of the State.

GREECE.—ANNUAL REPORT OF THE INTERNATIONAL FINANCIAL COMMISSION—COST OF LIVING—THE POLITICAL SITUATION.

(FROM OUR CORRESPONDENT.)

ATHENS, July 22.

THE annual report of the International Financial Commission has just been published. On account of the change of the calendar, the report covers a period of 352 days only. The yield of the revenues for some years past has been steadily increasing, as the following table shows:—

(In Millions of Drachmæ.)	
Year.	Gross Receipts.
1918	90
1919	158
1920	210
1921	259
1922	462
1923	970 and £104,232

Receipts from Customs amounted in 1923 to 499 million drachmæ and £104,232, as against 270 million drachmæ in 1922. The Commission attributes this increase to the valuation of the gold drachma as expressed in paper drachmæ, which was much higher in 1923 than in 1922. The rise in Custom dues resulted in a decrease in the quantity consumed of monopoly articles, with the exception of Naxos emery. Receipts from stamp duty show, moreover, an increase in 1923. However, despite the apparent favourable returns of the year, interest on some of the old gold loans will be lower in 1924 than in 1923, and this because the conversion into foreign exchange of receipts in paper drachmæ was made in 1923 in higher rates, the exchange purchased during the year averaging 298.19 drachmæ to the pound. On the other hand, a substantial improvement in the interest to be paid next year may be anticipated, in view of the larger yield of the revenues, and the appreciation of the drachma during the current year. Imports from abroad show an increase in many articles, but total imports for the year have declined slightly as compared with the previous year.

Receipts from the assigned revenues for 1923, and for the four previous years, have been applied as follows:—
(In Millions of Drachmae.)

	1919.	1920.	1921.	1922.	1923.
A. Yield of revenues	158	210	259	462.5	970.2 and £104,232
B. Applied for—					
Fees and expenses of the Société de Régie	7.5	11.3	17	31.5	41 and £347
Administration expenses of the International Financial Commission .	0.4	0.4	0.8	1.5	3.9
Service of the Foreign Debt	48.4	78.3	125.6	209.2	599
Service of the Internal Debt	6.6	6.6	6.6	6.6	6.6
Total	62.9	96.6	150	248.8	650.5 and £347
Balance handed over to the Government	95.1	113.4	109	213.7	319.7 and £103,885
Grand total	158	210	259	462.5	970.2 and £104,232

The report again draws attention to the prejudicial effect of uncovered issues of money paper. It further contains some data regarding rates of exchange, money circulation, and Treasury bills, which have appeared from time to time in these columns.

Index numbers for the cost of living in Athens show a further decline in June, standing at 1,240.4, as against 1,285.4 in May, and 100 in 1914. The figures for the first and the second quarter of the year are 1,332.6 and 1,289.6 respectively, the average figure for the first half-year being 1,311. The improvement is attributed to the relative stability of the rates of foreign exchanges at lower levels.

After the fall of the Government, which was expected at any moment, the political situation seems somewhat clearer, and hopes are entertained that a strong, though temporary, Cabinet will be formed by the co-operation of various groups. Public opinion resents greatly any further intervention of militarists in the administration of the country, and it is hoped that the new Cabinet will be constituted exclusively of political persons. Foreign exchanges show already an improvement of about ten points, the pound standing around 253 drachmae.

BULGARIA.—THE BUDGET.

(FROM OUR CORRESPONDENT.)

SOFIA, July 22.

AFTER somewhat summary debates the budget for 1924-25 has been voted and published in the July 19th number of the Journal Officiel. Its figures, the highest Bulgaria's finances have ever known, run up to a total of Leva 6,604,931,002 (about £11 millions sterling) for expenditure, and Leva 6,604,250,000 for receipts. The most important items on the expenditure side are:—

National Debt Service	Leva. 1,226,579,686
Ministry of War	1,167,961,980
Ministry of Railways, Posts, and Telegraphs..	1,035,075,644
Ministry of Public Instruction	747,271,500
Ministry of Commerce, Industry and Labour..	439,578,651
Ministry of the Interior	424,108,750
Ministry of Roads and Communications	316,086,570
Ministry of Finance	301,244,780
Ministry of Agriculture	246,852,290

The high figure for the National Debt Service is accounted for by the heavy indebtedness of the country after the war. The volunteer army system has proved to be an expensive one and thoroughly out of proportion with the real capacities of Bulgaria's finances. Rebuilding of railways and purchase of new rolling stock and materials are the most imperative of the country's economic requirements. The fairly heavy expenditure of the budget is to be covered chiefly out of the following resources:—

Direct taxation (of which land property tax Leva 340,000,000; and income-tax 236,000,000)	£30,000,000
Indirect taxation (of which Customs and Excise duties represent Leva 2,382,000,000)	2,717,000,000
Different duties for State Services	441,500,000
Revenue of Railways and Ports	917,000,000
Posts, Telegraphs, and Telephones	278,000,000
State Domains and Investments	637,600,000
Revenue of districts and municipalities	494,000,000

To everyone acquainted with Bulgarian affairs there can be no doubt that a fiscal charge of Leva 1,300 (about £2 3s 4d) per head is a heavy burden. The high proportion of indirect taxes to the whole sum to be collected gives a fair illustration of the influence of the existing fiscal methods on the cost of living.

An extraordinary budget of Leva 1,437,000,000 has also been voted in the course of the final meetings of the Chamber. It is to be covered by the "proceeds of home and external borrowing, of short term advances by the National Bank, of profits obtained through the exchange of the old note currency and out of other sources to be determined later on." The official text states that for the current fiscal year no expenditure on account of the extraordinary budget will be effected, unless effective funds are available. The main items of the extraordinary budget concern railways and ports, Leva 733,000,000; commerce, industry and labour, Leva 190,000,000; army, Leva 200,000,000; public premises, roads, and communications, Leva 178,000,000. These sums are to be spent exclusively on constructive purposes, and will by no means serve to meet the regular running costs of the respective services.

Both budgets have met with sharp criticism in trade and financial circles. Expenditure is considered as thoroughly out of proportion with the present economic situation. The necessity of a serious and well organised policy of cutting down expenses is urged by all business corporations, and there is a growing disapproval of the Government's failing to take this matter into real consideration. The officially announced reduction of State officials had almost no practical application, and for the future there is little hope of a plain dealing in that direction. On the contrary, the Government has once more indulged in the very dangerous practice of raising salaries simultaneously with taking drastic measures for "fighting down speculation and high prices," all of which had the only effect of handicapping the still uneasy course of trade and industry and contributing to the rising of cost of living by about 40 per cent.

Letters to the Editor.

"THE PROBLEM OF THE GOLD STANDARD."

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of the 26th inst. you refer to the favourable attitude of Mr Graham, the Financial Secretary of the Treasury, towards the restoration of the gold standard in this country, but at the same time you point out that he has not attempted to say how and when the policy should be carried out. May I venture to offer some suggestions? The present price of gold in our market is about 94 shillings per ounce in our currency. The mint price is £3 17s 10½d per ounce. The difference is approximately the measure of the depreciation which exists in our currency. Our object is to resume specie payments, and restore a free market in gold. If the Act which prohibits the export of gold was repealed to-morrow our gold would leave us, because it would be profitable to ship it to America at the present rate of exchange. I suggest, therefore, that the Government should fix a time, say, six months hence, when specie payments would be resumed, and the Gold and Silver (Export Control, &c.) Act, 1920, would be repealed. This would compel the Treasury and the Bank of England to contract their issues until their paper was equal in value to the gold they represented, and the mint price and the market price of gold was the same. The exchange would then become normal, and London would again resume its proud position as a free market in gold.—I am, sir, your obedient servant,
July 28th, 1924.

D. M. MASON.

FOREIGN CAPITAL IN PERU.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to the article in your issue of the 19th inst., headed "Foreign Capital in Peru," if, as is stated, the Government of Peru are proposing to raise another external loan it is very desirable that it should be known that Peru is still in default in respect to thirteen

quarterly coupons from January, 1918, to March, 1921, on £80,000 Deuda Interna Consolidada 7 per cent. bonds, which bonds came into my possession on my appointment as receiver for the debenture holders of the Chimbote (Peru) Coal and Harbour Syndicate, Limited.

Notwithstanding correspondence which I have had with the Peruvian Minister in London, and even with the President of the Republic himself, these coupons remain unpaid, and the President, in a letter to me dated the 12th ult., intimates that the coupons will only be paid "when and as the Government find it convenient to do so."

A Government which adopts this attitude is not likely to meet with much success in raising loans in Great Britain.

Yours truly,

WM. H. STENTIFORD, Receiver.

1 Broad street place, London, E.C. 2. July 25th, 1924.

Books and Publications.

LOMBARDY IN TRANSITION.*

THIS massive volume of nearly 500 pages exhibits the patient industry and wide knowledge now characteristic of Italian scholarship even more than of its German prototype. Lombardy, exhausted by the century and a half of Spanish rule, warfare, and exploitation following the death of the Emperor Charles V., passed in 1706 under the dominion of Charles VI. of Austria; but not till more than 50 years later could his daughter, Maria Theresa, turn her energies from the defence of her territories to the restoration of the prosperity of the naturally richest of them all. The interval, however, demanded fuller examination, especially in its economic and financial aspects, than it had received hitherto. Signor Pugliese fills the gap. From a careful and minute examination of the archives—often fragmentary and badly arranged—he has collected masses of interesting statistical and general information respecting the agriculture, land tenure, manufactures, taxation, and finance of the region during the period in question. He can even compare the productivity of the soil with that at present, and describe fully the terms of the metayer tenure; and he shows that the manufacturing system, even in the later Middle Ages, was in some cases decidedly "capitalistic." The nobles supplied part of the capital, and the workers, sometimes 40 or 50 in one establishment, were merely wage-paid. He notes, too, the disjointed character of the financial administration in Lombardy, Spain, and elsewhere—different departments with reciprocally independent chiefs and different financial years. He began the work in 1908, and notes how the economic regulations favoured by statesmen generally till well on in the nineteenth century, and then universally discredited, were reintroduced by the world-war—currency inflation, import and export prohibitions, price fixing, and so forth—and expresses a suspicion that, after all, they may not have been quite unjustified. We can only admire his zeal and energy, and commend the book to all students of economic history.

BUSINESS ECONOMICS.

THIS book* is essentially a text-book for persons studying in business colleges. The author has endeavoured "to set forth the modern development and the present structure of business in so far as it (sic) is based upon economic principles." This task Mr Stephenson approaches with much detailed knowledge of the modern business world. He can explain the technicalities of naked mortgage, fixed, floating, legal, equitable, bearer, registered, terminable or redeemable, and perpetual or irredeemable debentures; and he is able to discover the mysteries of the charter party, the sales note, the stemming note, the bill of health, the bill of lading, the manifest, and the

* "The Principles of Business Economics." By James Stephenson Pitman. 1924. 10s 6d.

marine insurance policy. The book is crammed with many details—about the Stock Exchange, mint parities, the organisation of businesses, advertising, and taxation, to pick out examples almost at random.

So far as economic principles are concerned, the laws of diminishing utility and of diminishing returns are ignored; no form of the theory of value is stated; rent is never referred to (not even in the index); and the distribution of wealth remains unexplained. The chief principles which guide Mr Stephenson through the economic maze appear to be two: first, "it is the result of human nature which leads every economy (i.e., economic organisation) to give as little as possible to other economies, and in turn to receive as much as possible in exchange" (p. 5); secondly, "it is the function of the undertaking to produce goods and sell them in a market in such a manner as to leave a profit to the entrepreneur.....that is, the sum total of all receipts should exceed the sum total of all expenditure" (p. 183). One need not be surprised, therefore, to learn that inflation is never mentioned, or to observe that, whilst the merits of receipt stamps are discussed in seventeen lines (p. 479), the issues raised by the Capital Levy are dismissed in five (p. 459). Nevertheless, those for whom the book was especially designed may possibly find it useful.

PRACTICAL DIRECTORSHIP.

THIS volume,* which is addressed primarily to the director accepting office for the first time, might be perused to advantage by many directors who have been interested in joint stock enterprise for many years without realising the full burden and duties of the term "directorship." The book is not concerned with the explanation of the statutory duties of directors, but is devoted to the more practical work of control, the supervision of joint stock trading, the formulation of policy, and the presentation of accounts to the directors' employers—the shareholders. Recent unfortunate events have shown clearly that the time may possibly come when a standard of knowledge of practical direction will be as necessary a precedent to the appointment of a director as is a degree of experience in the case of all subordinate appointments. Information is given which should enable the inexperienced director to visualise the general organisation of companies, to understand the principles upon which accounts are prepared, the methods by which a board governs working capital and production and dictates the policy of companies. Chapters are devoted to internal audit as affecting the director, an outline of taxation, the control of foreign branches, the financing of subsidiaries, and the basis of speeches to shareholders.

TRADE TERMS.

MR MAUGHAN has brought together in very readable form in this small volume* a quantity of useful information about business phrases and commercial custom. He seems to have been directly in touch with those who actually use, in their everyday business, the trade terms which he explains. Special words employed in various trades are dealt with, as well as shipping and insurance phrases, so that a wide field is covered. The work has the defects, however, which unfortunately mar so many volumes based on newspaper articles. The matter appears to have been reprinted very much as originally published serially in "The Times Trade and Engineering Supplement." Consequently, it lacks co-ordination, and even cross references, which at the least might have been expected, as the author in some instances qualifies earlier statements in subsequent pages. There is an index by means of which scattered references to a particular matter may be traced, but it seems rather a pity that information which is good and first-hand was not condensed and the classified, so that the risk of error by missing part of the matter might have been removed. Still, many readers will be glad to have these particulars within the covers of a handy volume.

STOCK EXCHANGE NEWS.
SETTLING DAYS.

TICKET,	ACCOUNT,
August 13.	August 14.

POLITICS rule the markets more than holiday influences do. The Stock Exchange does not expect to be busy at this time of year, and it is a little unusual to find so much activity, although of the small-order variety, in gilt-edged stocks. There is also more animation than usual in the oil market, and the rises in base metals serve to direct attention to copper and tin shares, the F.M.S. sending insistent buying orders for local favourites. That new issues can still count upon support is shown by the prompt manner in which the subscription lists were closed for the Glass Houghton and Castleford Collieries 6 per cent. debenture stock, and for the Witan Investment Trust shares. Underwriters of the Hastings Corporation 4½ per cent. stock, which was offered at 95½, were left with 74 per cent., but support was forthcoming at 1 discount. In other recently issued securities, it is still obvious that a substantial amount of undigested stock remains with underwriters. While monetary conditions continue to check speculative energy, it is not surprising that a good many discounts still prevail in new-issue prices.

The statement may be ventured that the Stock Exchange will be heartily glad when the Bank rate rises to 5 per cent., and thus put an end to the suspense which is undoubtedly holding in check a good deal of investment willingness. The War Loan clings closely to 101, and other Consol market issues are moving within extremely circumscribed orbits. Some of the newly-issued colonial and municipal scrip stocks are slightly harder.

Brazilian bonds attract most of the attention in the foreign market. The movements in these have been lively and erratic. Prices were marked down, and then up, in accordance with the character of the news. Comparatively little stock changed hands. People who wanted to buy the bonds, upon the news that the rebels had weakened, found themselves unable to get the offer of stock at anything like the previous figures. San Paulo Railway ordinary rose from 142, at which it closed one night, to 149 24 hours later. Other Brazilian descriptions, municipal, railway, and industrial, were influenced similarly by the news. French bonds show little alteration, and Germans, after being good, drooped on the assumption that the Peace Conference may do nothing material in the way of advancing German credit at present. The Hungarian scrip remains at a discount, and Mexican bonds are flat.

Home Railways, after their improvement on the dividend announcements, took on a dull appearance for want of public interest or support. Nobody seems to be taking any interest in the stocks, and the prices, except those of the Underground group, reflect the lack-lustre character of the market. American Rails have gone back. Argentine Railway stocks move in sympathy with Brazilians. After being weak, an appreciable recovery occurred in the leading quartette.

Rubber shares are better, on a rise to a shade over 1s per lb in the produce. The oil market shows more activity than it has done of late, with the good-class shares on the rise. Another dramatic jump in Lobitos is an outstanding feature. Tea shares eased off, there being sporadic profit-taking. Reports of floods in Southern India led to a general decline in prices. The Egyptian group is firmer, upon advices to the effect that the country is settling down after the recent reported disturbances in Cairo and Alexandria.

Insurance shares go steadily higher, and the banking market is quiet, nor do shipping shares show noticeable movement. Textiles maintain their strength. The interest aroused by the Courtauld melon-cutting has given way to quietude in their market. Increase of the Imperial Tobacco Company's interim dividend led to a modest advance in tobacco shares. The wireless group, after being decidedly better, reacted as people took their profits on the eve of the holidays, and cable stocks tend to be dull, although the manufacturing companies connected with the cable industry are going ahead. On the other hand, electric manufacturing shares tend to be lower. Brewery stocks are firm, the Watney dividend of 20 per cent., against 16 per cent. in the previous year, serving to support this market as a whole, but there is little doing in hotel shares or in those of the big stores companies. Mexican utilities have gone back. The motor share market is unaffected by the rising of the McKenna duties this week. Cement and road-making shares are inclined to be a shade harder, in spite of the crisis in the building trade.

South Africans have hardened upon support by speculative investors attracted by the yields obtainable from the principal shares. In Rhodesians, the outstanding point of interest is a further fall in Cam and Motors. Diamonds are dull and neglected. Copper, lead, and tin shares strengthened, thanks to the rises in the metals, and, as already mentioned, Singapore and Kuala Lumpur have been persistent buyers of Middle-East tin shares. West Africans make a better showing as regards prices, though business in them is very meagre. A few buying orders from Sydney and Melbourne made their effect felt amongst certain of the sulphide and lead companies' shares. There is nothing doing in Indians, Russians, or Mexicans, and what little trade has been transacted in Canadian shares turned out to be mostly of the selling order.

The Railway Debenture and General Trust Company, Limited.—Authorised share capital £3,000,200, all of which has been issued and is fully paid. This is an issue of £750,000 4½ per cent. debenture stock, ranking *pari passu* with the existing 4 per cent. debenture stock. It is to be repaid August 1, 1964, at par, but the company has power to repay at par the whole or any part of the stock at any time after August 1, 1945, on three months' notice. The interest on the present issue of stock is payable half-yearly, on February 15 and August 1st in each year; the first payment (being for full half-year) will be made on February 1, 1925. Debentur

stock certificates will be ready for delivery on or before September 1, 1924. Of this issue £500,000 has been offered to holders of existing 4 per cent. debenture stock, and £250,000 has been sold by the company at the price of 90 per cent., less 1 per cent. brokerage. A prospectusless issue.

The Century European Timber Corporation, Limited.—Authorised capital £750,000, divided into 500,000 8 per cent. cumulative participating preference shares of £1 each, and 500,000 ordinary shares of 10s each. Of the former, 250,000 have been underwritten and taken firm by the concessionaires and their associates, including certain Polish interests, and the remaining 250,000 are offered for public subscription at par. After payment of an 8 per cent. fixed cumulative dividend on the preference shares, any remaining distributable profits are divisible equally between the two classes of shareholders. Until a reserve fund of £500,000 has been accumulated, no dividend can be paid on the ordinary shares in respect of any year unless a sum of at least £40,000 out of the profits of such year has been first carried to reserve. The undertaking has been formed to acquire two concessions for the cutting and purchase of timber granted by the Polish Government. The forests cover a total area of over 700,000 acres, and it is stated, are well served by rail and water transport. During the war the Bialowieza forest was occupied for a time by the Germans, who equipped it with plant, light railway, &c., which the corporation is to use at a moderate rental. The timber in this forest was valued (standing) by German experts at £32,800,000. The purchase price is £15,000 and £212,500 in ordinary shares. The vendors have underwritten the £500,000 preference capital for a commission of £17,500 in cash and £37,500 in fully paid ordinary shares. These costly underwriting terms probably reveal the highly speculative character of the undertaking.

The Glass Houghton and Castleford Collieries (1924), Limited.—Share capital £650,000. This is an offer for sale of £550,000 6 per cent. first mortgage debenture stock at 96½ per cent. This stock is the total amount authorised, and is to be redeemed on or before January 1, 1945, by the operation of an accumulative sinking fund of 3 per cent. per annum, to be applied annually in purchasing debenture stock at or under 102 per cent., exclusive of accrued interest, or in drawings at 102 per cent., the first redemption to be made in respect of the year ending December 31, 1925. Power is reserved to the company to redeem all or any of the debenture stock outstanding on any interest date at 105 per cent. and accrued interest upon giving six months' notice. The company has entered into a contract to purchase from the Glass Houghton and Castleford Collieries, Limited (a private company incorporated in 1902), its collieries and other assets. The excess of the assets being acquired over liabilities is certified at £1,279,375. The aggregate average annual profits for the past five years are certified to have amounted to £131,615; for 1923 the profit is certified at £215,910. The amount required for the annual service of the debenture stock now offered is £49,500. Although an "offer for sale," the document is a clear statement of affairs.

The Witan Investment Company.—Authorised capital £2,200,000, of which £2,100,000 has been issued in £1,050,000 4½ per cent. cumulative preference stock and £1,050,000 ordinary stock. This is an issue of £100,000 in 10,000 shares of £10 each at £11 per share. These shares will, on October 15th next, when fully paid, be converted into equal amounts of preference and ordinary stock, and carry dividend from that date, and will rank thereafter in all respects *pari passu* with the other stocks of the company. The prospectus states that the company was formed in 1909 to carry on the business of a trust concern, and that it had as at April 15 last holdings of a book value of £2,148,487, of which 6.47 per cent. consisted of British Government and corporation stocks, 38.72 per cent. of railway and tramway securities, and 42.79 per cent. of commercial and industrial scrip. The revenue for the three years ended April 15th was £130,835, £132,736, and £152,955 respectively, after providing income-tax and expenses, and for the last year 6½ per cent., free of tax, was paid on the ordinary stock. It will be interesting to see how the market values the stock of the company.

COMPANY MEETINGS, &c.

CIE. ARAMAYO DE MINES EN BOLIVIE.

(ARAMAYO MINES IN BOLIVIA COMPANY.)

CHAIRMAN'S REVIEW OF POSITION AND PROSPECTS.

OUTPUT AND DEVELOPMENT.

The fourth ordinary general meeting of Cie. Aramayo de Mines en Bolivie was held, on Monday, July 28, 1924, at the company's offices, 16 Quai de la Poste, Geneva, the chairman of the company (Mr F. A. Aramayo) presiding.

The Chairman said:
Ladies and gentlemen,—I have the honour to present to you the result of the operations of our company during the year 1923, the accounts, directors', and auditors' report of which have already been sent you.

As you will have seen from this report, the profit and loss account to December 31, 1923, remitted to us by the local administration in Bolivia, shows as a result of the year a profit of Fr. Swiss 4,870,432.12, after deduction of differences in exchange on local operations of 148,670.19f.

YEAR'S NET PROFIT.

This result is modified on the credit side by interest on cash on deposit and investments in Geneva, and on the debit by loss by depreciation of investments and exchange account in Geneva, leaving the sum of Fr. Swiss 4,798,698.87 as net profit for the year. Your attention is drawn to the fact that the account of exchange appearing in the balance-sheet has been considerably reduced this year, from Fr. Swiss 2,306,533.25, as it stood last year, to Fr. Swiss 997,879.59. The result is due to the enhancement of the Bolivian dollar from Fr. Swiss 1.60 in 1922 to Fr. Swiss 1.70 in 1923.

The sale of tin barrilla during the period under review amounted to 2,590.62 tons, at a mean price of £101 3s 5d, against 3,208 tons at the price of £68 16s 7d in the preceding year. The sale of silver sulphides was 815,798.42 ounces troy, at a mean price of 33.70d, against 762,405.72 ounces at 37.20d in the previous year; rich silver mineral amounted to 619,997.53 ounces at 29.77d, against 476,403.86 ounces at 34.56d in the preceding year. The sale of copper cement has been 124.6 tons at £37 11s 10d per ton mean, against 123.20 tons at £33 6s 11d of the year before. The sales of bismuth have been moderate, and we have been forced to again reduce the production and treatment of this product on account of competition.

The total production of tin barrilla in the various mines amounted to 2,506 tons, against 2,756.4 tons in the year 1922. Production of metallic bismuth in bars, flue dust, and export ores has been 163,635 kilos, against 10,208 of last year. The total production of silver in sulphides, export ore, and copper cement amounted to 1,369,497 ounces troy, against 1,330,984 ounces in the year 1922. Copper produced was 66.6 tons, against 70.3 tons of the previous year.

The cost of production of tin concentrates was Bs. 899.27 per ton, against Bs. 851.76 during the preceding year. That of silver has remained normal, and that of bismuth has been considerably reduced, due to the greater tonnage.

EXPLORATION AND DEVELOPMENT WORK.

Work of exploration and development has continued with the necessary activity, and the total number of metres run in this work during the year is 2,349.35, against 3,205 in the year 1922. The reduction is due to limitation of work in Chorolque and Chocaya. In Chorolque work is limited to exploration in depth, and with this end in view we are installing a new and much more powerful pump.

In Tasna preparatory work upon bismuth, being in advance of what production demands, has been limited, and that on the tin section remains normal.

Developments in Chocaya on silver and tin continue to be satisfactory, the reserves of mineral prepared for extraction having been increased this year by 36,743 metric tons of an assay value of 0.2646 per cent. silver and 4.284 per cent. tin.

RESERVES.

The reserves amount to 234,679 tons of 0.22625 per cent. silver and 6 per cent. tin, including the veins Llampera and Judios, which are poor in tin values.

The metallurgical establishment at Telamayu is working satisfactorily, fed by an aerial ropeway, upon the lixiviation of silver and the concentration of tin. Ore which is purely argentiferous is being treated at Asllani.

CURRENT YEAR.

In referring to the results of the six months of the present year—that is to say, to June last—I have to say the production of silver has increased by 40,000 ounces troy in comparison with the same period of 1923. On the other hand, tin has been lower by 87 tons. This decrease is due to the falling off of Chorolque. The production of bismuth is 33.5 tons more than during the same period of the preceding year; but, as stated before, this production has been suspended.

I have pleasure in stating that the technical staff under the direction of Mr Carlos Victor Aramayo, continues to give every satisfaction.

DIVIDENDS AND CARRY FORWARD.

Returning to the final results of the operations of the year under review, your directors propose that the interim dividends, amounting to 20 per cent. should be confirmed, that a bonus of 15 per cent. for the year 1923 be voted, and that the balance of 11,993,068.37f be carried forward. The carry forward is lower by 451,301.13f than that of the year 1922. As stated in the report which you have, a part of the carry forward is earmarked to cover payment for new properties acquired at a cost of £113,000, or approximately 2,800,000f. One of these properties, the mines of the Anglo-Bolivian Syndicate, has already been incorporated with the Compania Minera de Potosi, and we can hope that it will become soon an important enterprise.

TRIBUTE TO MR NICOLAS VEGA.

I cannot conclude my speech without making reference to the memory of my much-regretted colleague Mr Nicolas Vega, who died on December 5th last. This gentleman was during many years a faithful, intelligent, and devoted servant of our company. Your directors have nominated as a member of the board Dr Charpentier, one of our principal shareholders, who has already before filled a similar position, and I ask you to confirm his nomination.

It is also necessary to proceed to the nomination of four other directors, as the term of office of these gentlemen—viz., Messrs F. A. Aramayo, Léon Martin, Gustave Ferrière, and Louis Patry—expires on December 31st of this year.

These gentlemen, being eligible, offer themselves for re-election. If any shareholder desires to have any further particulars, I shall be glad to answer any questions they may wish to ask.

THE RESOLUTIONS.

No questions being asked, and after the reading of the auditors' report, the statement of accounts to December 31, 1923, was approved, and the following resolutions passed by the board were carried unanimously:—

- (1) The meeting approves the statement of accounts presented by the board for the year 1923, and gives entire discharge to the directors.
- (2) The four interim dividends, totalling 20 per cent., paid during 1923 are confirmed.
- (3) The declaration of a bonus of 15 per cent., making the total of 35 per cent. for the year 1923, is approved.
- (4) Mr Albert Charpentier is duly elected as director of the company in the place of Mr Nicolas Vega, deceased.
- (5) The four other directors are duly re-elected.
- (6) Messrs Tribe, Clarke, Painter, Darton, and Co. are duly re-elected as auditors of the company.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

A hearty vote of thanks to the chairman (Mr F. A. Aramayo) and directors for their services during the past year was duly proposed and carried. Mr Aramayo, in responding thereto, stated that he would like to refer to the able services rendered by Mr Malcolm Roberts, the company's consulting engineer, and the staff in Bolivia under the direction of Mr Carlos V. Aramayo, the general manager.

The proceedings then terminated.

FURNESS, WITHY, AND COMPANY, LIMITED.

SATISFACTORY RESULTS OF THE YEAR.

GOVERNMENT-AIDED COMPETITION.

The thirty-third annual general meeting of Furness, Withy, and Co., Limited, was held, on the 30th ultimo, at the registered office of the company, Furness House, Leadenhall Street, London.

Sir Frederick W. Lewis, Bart., presided, and in moving the adoption of the report and accounts, said:—

There has been no general improvement in trade as a whole, and consequently I think the shareholders will be satisfied to see that our profits for the year show a small increase, at £572,442, as compared with £552,510 in 1923. Even so, I am afraid we cannot place this slight improvement to the credit of the ship-owning business, and were it not for the fact, as I have pointed out on previous occasions, that we have a great many diversified interests, it would not have been possible to have achieved this result.

The final item in the balance-sheet is the carry forward, viz., £216,636 17s 10d, an increase of £14,321 4s 11d compared with last year. Altogether, including the amount brought forward, the profit and loss account shows £774,758 10s 7d available for disposal. The directors propose, after providing for the half-yearly preference dividend, and for the dividends on the ordinary shares, to make a bonus distribution of 2½ per cent. to the ordinary shareholders, making a total of 7½ per cent., free of tax, and to transfer £200,000 to depreciation, leaving £216,636 17s 10d to be carried forward, as shown in the balance-sheet.

FURNESS (PACIFIC), LIMITED.

We have during the past year opened offices at San Francisco and Vancouver under the title of Furness (Pacific), Limited, primarily to attend to the steamers engaged in our United Kingdom-Pacific Coast Service. The advantages of our own direct representatives, both to the ships and to the merchants and shippers, have already been clearly discernible. The service from New York to Bermuda, in which we are interested, carried a larger number of passengers than in any previous year, and the new Hotel "Bermudiana" at Hamilton, in which we have a financial interest, has had a most successful opening season. It would be wearisome if I were to refer in any detail to each of our regular trade routes, and whilst some of these services have necessarily had to be curtailed on account of scarcity of cargo offering, we have, nevertheless, maintained our full organisation and equipment in readiness for any eventualities.

During the year, in association with other important British groups, we became interested with the Russian authorities in the formation of the Russo-British Grain Export Company, Limited, and I am glad to be able to state that the export of grain from the Russian Black Sea ports was revived on a considerable scale last season. It has been a matter of great satisfaction to us to participate in this business, and after making due allowance for the difficulties which had to be overcome in the early stages, and which were perhaps natural in view of the complete suspension of this business for several years past, and the consequent necessity of building up an entirely new organisation for handling it, I am very pleased to be able to state that the shipping arrangements have all been dealt with satisfactorily, and we look forward to a continuance of this market, which in pre-war days afforded employment for a very large amount of shipping.

During the year one of our associated companies has entered into a contract for the construction of a large refrigerated steamer for the South American trade, and we have also ordered a new passenger and cargo vessel for our Liverpool-Newfoundland and Boston service. In this connection liner companies are, of course, in quite a different position from the ordinary tramp shipowner. The liners have the goodwill of their trade to maintain, and are under moral, and in some cases contractual, obligations to their merchant supporters to provide regular sailings on the trade routes, but, apart from this necessity, in my view the present is not a favourable moment for building new ships. When circumstances justify, your company will be in the market for additional ships.

SHIPPING CONDITIONS.

It may be that we are much nearer a trade revival than the present outlook would justify us in believing, but whether that is so or not, it is still an indisputable fact that on the one hand trade is still considerably short of the volume in 1913, and on the other hand the available tonnage is considerably in excess of requirements, as is evidenced by the fact that at July 1st there was approximately 1,150,000 tons d.w. of shipping laid up in British ports, apart altogether from that laid up in foreign ports, which I have no means of calculating. Whilst this state of affairs continues, and so long as foreign and Colonial Governments are prepared, as they apparently are, to operate State-owned ships at a great loss, it is impossible to expect trade to improve to a

sufficient extent to justify the building of new ships at the prices that are being quoted, although a certain number of new orders have been placed for liners, special types of vessels such as oil tankers, &c., and other orders have been placed no doubt under the encouragement of the financial facilities afforded by the Trades Facilities Act.

As a matter of fact, the statistics compiled by Lloyd's Register of Shipping show that there is at present under construction in this country about 179,000 gross tons of shipping more than at the same period twelve months ago, viz., 1,516,746 gross tons, which is the highest figure reached since March, 1922. On the other hand, the world tonnage on the Register shows a decrease during the past twelve months of about 820,000 tons of steam tonnage; this decrease being mainly due to the large amount of tonnage which has been broken up during the year, but it should not be overlooked that the bulk of this broken-up tonnage was previously laid up, and, therefore, its removal from the Register has not had any beneficial effect upon the world's freight markets.

We are still accustomed to make comparisons with pre-war days, although it is not by any means a reliable guide, and it is interesting to note that the world tonnage of steam and motor ships at present on the Register is some fifteen million tons in excess of the 1914 figures. This tonnage excludes wooden and composite ships, but it includes a considerable number of vessels of a special type, such as oil tankers, &c., and I think we can safely conclude that the serviceable cargo tonnage at present on the Register is much in excess of the supply in 1914.

BUILDING ABROAD.

I have made reference to the possibility of building abroad at lower prices than those quoted by British builders, and in this connection I am informed that apart altogether from the question of wages and cheaper material, Continental yards have in some instances received financial assistance from their Governments for the purpose of relieving unemployment. It is, of course, a perfectly natural thing for Governments to make every possible endeavour to relieve unemployment amongst their citizens, and the question of the best methods to be adopted to achieve this object is more or less for each Government to decide for itself. None the less, the artificial stimulation of shipbuilding when the supply of ships is already in excess of demand is a very serious menace to the shipping industry.

As a matter of passing interest it is common knowledge that all the Governments that have become steamship operators through circumstances arising out of the war have lost very considerable sums of money. The United States Shipping Board, it is stated, lost no less than \$40,000,000 last year. The Canadian, Australian, French, Brazilian, and Portuguese Government fleets all lost large amounts in trading, apart altogether from huge depreciation in capital values, and it is scarcely to be wondered at that freights keep at an unremunerative level when there are large volumes of tonnage being operated under conditions which could not possibly be maintained under private ownership.

I believe the French Government have already denationalised their fleet, but the continued existence and operation of the other fleets is a definite obstacle in the way of any substantial and permanent improvement.

The maintenance of the foreign trade of Great Britain is a matter of great importance to shipowners and merchants, and I am very glad to see this morning that the Government are appointing a Committee to inquire into these matters, and I hope it will be possible to evolve some satisfactory scheme for reducing the cost of living and the cost of labour, the effect of which, I feel sure, will be a speedy revival in our foreign trade. British goods are, on the whole, renowned for their better quality; and on equal terms so far as costs are concerned, I am convinced we would soon regain our old pre-eminence in the world's trade, more particularly as this country can give credit that is not possible with the greater number of our competitors.

MOTOR-SHIP CONSTRUCTION.

You will have gathered from my remarks that we have in commission and under construction several vessels fitted with Diesel engines. As a matter of fact, our experts are making a most careful study and comparison of different types of motor engines with a view to determining which type is most economical and suitable for our purposes. There is no doubt that from the point of view of operation the Diesel engine has already established itself; that is to say, the consumption of fuel is less, the number of men required in the engine-room is less, the space occupied in the ships is less than in the case of a steam engine, and the motor engine gives a very consistent performance at sea.

On the other hand, however, owners have to take into account the very heavy initial cost as compared with other types of marine engines; the amount that it is necessary to set aside for upkeep and depreciation is still unproved. Constant improvements are being effected; and, finally, but by no means the least important point,

the price of oil supplies and the very difficult question of the continuity of supplies, having regard to the enormous increase in oil consumption. Prices have been forced up to a level which is entirely disproportionate to the cost of coal, and many vessels which were fitted for burning oil have been reconverted to coal. The whole question of the supply and demand for oil is a most difficult one; but the oil companies should bear in mind that it is a matter of great importance to them to retain the constant business of supplying oil to steamers and motor ships; and it would doubtless mean considerable loss to them if, through excessive prices, there was not sufficient business to maintain the various oil fuel stations which have been established and upon which a considerable amount of capital expenditure has been incurred. The whole question of motor-ship construction is being very carefully considered by us, and it is to be hoped that as the Diesel engine becomes more standardised considerable economies may be effected in the cost of construction.

The resolution was seconded by Mr R. E. Burnett, and carried unanimously.

UNION BANK OF AUSTRALIA. CAPITAL INCREASE SANCTIONED.

The annual general meeting of the Union Bank of Australia was held, on the 28th ultimo, at 72 Cornhill, London.

The Chairman (Mr Henry P. Sturgis) said that the net profit for the past year, after provision for doubtful debts and contingencies, amounted to £640,003, inclusive of £89,711 brought forward from the previous year. From this the directors had made an appropriation of £100,000 as an addition to the bank's reserve fund, which was thereby increased to £3,450,000, and had declared a dividend at the rate of 15 per cent. per annum, free of income-tax, carrying forward £90,003. The figures of the balance-sheet, compared with those of the year to February, 1923, showed an increase of £2,068,000. The increase in deposits was of a general character, and was very gratifying, in view of the increasing competition in many directions at high rates of interest. The liquid assets amounted to 9s 7d in the £ of the bank's total liabilities to the public.

The exports from Australia for the year ended December, 1923, amounted to £114,000,000, showing a decrease of £14,000,000 compared with 1922. The smaller amount of wheat exported in 1923 would probably account for some £8,000,000 of the above sum. Imports, at £136,000,000, showed an increase over the preceding year of £14,000,000, due largely to the increased imports of metal goods, machinery, and motor-cars. As regarded New Zealand, exports for 1923 were valued at £45,000,000, while the value of imports was £43,000,000. In 1922 the exports were £41,000,000 and the imports £35,000,000.

The financing of the Australian exports during the past season had presented many difficulties, but the general manager had conducted his exchange operations with great ability, and the requirements of the bank's customers had been adequately met. The wheat harvest was estimated to have yielded 126,000,000 bushels, leaving an exportable surplus of nearly 80,000,000 bushels. The wool clip showed a decrease in quantity from the previous season of nearly 300,000 bales, and the condition of a large proportion had been adversely affected by drought. Prices had been, and still were, very satisfactory, and the prospects for the current clip appeared to be very good. In a cablegram received last week the general manager stated that the season throughout the Australian Commonwealth generally was satisfactory, the crop outlook was favourable, and pastoral conditions were fair generally, but rain was still wanted in various districts. Wool clips were

estimated to be much larger than last season. In New Zealand conditions were favourable and prospects good. Since the receipt of the cablegram there had been useful rains in many of the districts to which the general manager referred.

The report was unanimously adopted, and at an extraordinary general meeting it was resolved that the capital of the company be increased to £10,500,000 by the creation of 100,000 additional ordinary shares of £15 each.

The Chairman stated that whenever an issue was decided upon the shareholders would be the first to be advised, and the shares would be offered to them in the first instance.

ODHAMS PRESS, LIMITED. SCHEME OF ARRANGEMENT APPROVED.

The fourth annual general meeting of Odhams Press, Limited, was held, on the 28th ultimo, at the Hotel Cecil, Strand, London. Lieut.-Colonel W. Grant Morden, J.P., M.P. (chairman of the company), presided, and in moving the adoption of the report and accounts said that the improvements in the company's trading foreshadowed at the last annual general meeting had been realised during 1923, the gross profits for that year aggregating £139,729, as compared with £111,320 for 1922, while the profit carried to the balance-sheet had been increased during the past year to £88,689, as against £71,144 for 1922.

Having regard, however, to the large extraordinary expenditure which had been incurred and which was essential to re-establish *John Bull*, perhaps the best-known of the company's properties, it had been deemed expedient by the directors to prepare a scheme of arrangement adjusting the company's capital between its members which would also permit the re-establishment of dividends at an early date.

Turning to the accounts, he referred to the improvement which had taken place during 1923, and said he would like to state that, having regard to the special circumstances in which the company found itself, the directors, including the managing director, had again waived the claim to the commission payable to them under the company's articles of association and other agreements. While on that subject he would like to remind the shareholders that during the five years that he had been chairman of the company he had by agreement not received any commission for his services.

PROGRESS OF COMPANY'S PAPERS.

The chairman then gave particulars of the progress of the company's various activities. Naturally, he said, one thought first of the journal which was perhaps most in the public eye, and which had been the chief source of anxiety to the directors for some time past, namely, *John Bull*. Two years ago the company was faced with a very serious position in regard to that journal, owing to the proceedings against its former editor in regard to transactions in which the company was in no way concerned. As he had reported to the shareholders last year, the board had decided upon a bold policy of expenditure to re-establish the property, at the same time seeing that this expenditure was backed up by the production of a journal of the best possible value to its readers. The result of a further year's working proved that the expenditure had been well justified, and *John Bull* was now on a thoroughly sound foundation. Its net sales were well over 800,000 copies per week—the largest circulation of any twopenny weekly periodical in the world—and this without the adventitious aid of any free competitions; and, what was more important, it was now independent of the personality of any one man. As a consequence, advertisers had returned to the paper, and were returning in increasing numbers.

With regard to the company's other newspapers and journals, he was able to report, in almost every instance, a satisfactory and steady progress. *Sporting Life* continued to be the premier sporting daily newspaper in this country, and was a very successful property from a financial point of view. In the *Ideal Home* the company was fortunate in possessing a journal which was extremely successful and of substantial and profit-earning value to the company. The *Kinematograph Weekly* had done very well in the year under review. The *Passing Show* had been reconstructed and improved in the early part of this year, and the circulation had considerably more than doubled itself during the past six months, and was still increasing. The business of the Borough Billposting Company owned by Odhams Press—which was the largest outdoor publicity business in the country, had been extremely satisfactory during the year under review, and had shown a steady increase upon its trade of 1922; and the business of Messrs Dean and Son, the publishers of *Debrett's Peerage* and allied publications, and the owners of the well-known toy books, was making very satisfactory progress under the company's ownership.

THE CURRENT YEAR.

The improvement in the year under review was well maintained in the present year, and the directors had every confidence in stating that after the two very difficult years through which the company had passed, owing to circumstances over which it had no control, its business was now thoroughly re-established on a sound basis.

Mr. W. J. B. Odhams (deputy-chairman) seconded the motion, which was carried.

Separate meetings of the holders of the preference shares, the holders of "A" preference shares, and the holders of ordinary shares were subsequently held, at each of which the scheme of capitalisation was considered and voted upon. The result of the vote will be reported to the court.

In view of the large number of proxies received in favour of the scheme, Sir Arthur Whitney stated that they could congratulate themselves that the scheme commended itself to the general body of shareholders.

At an extraordinary general meeting the resolutions approving the scheme of arrangement were approved.

TANGANYIKA CONCESSIONS, LIMITED.

'MR ROBERT WILLIAMS' REVIEW OF POSITION AND PROSPECTS.

The ordinary general meeting of this company was held, on the 30th ultimo, in London, General Sir Francis R. Wingate, Bart. (the chairman), presiding.

The Chairman, after a brief speech, moved the adoption of the report and accounts.

Mr Robert Williams (managing director) dealing with the accounts, said that shares and debentures in other companies stood in the accounts at cost—namely, £3,996,631. At the date of the balance-sheet at the exchange and market price in Brussels, the sterling value of the Union Minière shares alone exceeded the amount by about £1,400,000. At to-day's quotation and exchange their Union Minière shares had a value of about £8,000,000, which was £4,000,000 over the book value of all their shares and debentures in other companies.

Since the last general meeting there had been an increase of about £3,600,000 in capital value of the Union Minière shares. Having regard to the credit balance on the profit and loss account, which did not include the substantial dividend recently paid by the Union Minière, shareholders were asked to sanction the preference dividend of 10 per cent. With regard to the operations of the Union Minière, a dividend had been paid for 1923 amounting to 80 francs a share, less Belgian tax of 6.40, which was more than double the dividend paid for 1922 of 32.20 francs a share after deducting Belgian tax. The proportion of the 1922 dividend transferred at an exchange of 96.82 francs to the pound had realised £60,212, and their proportion of the 1923 dividend transferred to an exchange of 96 francs to the pound had realised £138,600, which would appear in the next accounts.

BENGUELLA RAILWAY.

A satisfactory increase in traffic over the Benguela Railway had resulted during 1923, in spite of the fact that early in the year the line had suffered severely from abnormal rains, which necessitated the closing of the line for about a week and the curtailment of trains for nearly a month. The crops also suffered extensive damage, which resulted in a loss of receipts towards the end of 1923 and the beginning of 1924. The subsequent crops had been satisfactory, and the railway traffic would benefit accordingly. At the last meeting, he mentioned, it was hoped that after the introduction of the new rates at the end of March, 1923, the net receipts of the railway would realise nearly £70,000 per annum. The actual net receipts from April 1, 1923, to March 31, 1924, only

realised 6,083,648 escudos, which at the rate of exchange taken for the estimate would have represented £60,836, and at the actual exchange in force realised only £47,000. The railway company had succeeded in obtaining the consent of the Angola Government to a further increase of rates by means of a sliding scale. The net earnings for May, 1924, which was the first month of the new maize crop traffic, amounted to 1,120,000 escudos, which at the quoted rate of exchange of 160 escudos to the pound represented £7,000, or at the rate of £84,000 per annum. The Rhodesia-Katanga Junction Railway continued to show very satisfactory results. There was a surplus of receipts over expenditure of £95,583, of which the Rhodesia-Katanga Company's proportion was about £69,000, of which £44,000 was paid away for interest on debentures. The receipts for the current year showed further improvement, and it was estimated that the proportion to be received by the Rhodesia-Katanga Company would exceed the above sum, and would enable a further substantial payment to be made in reduction of this company's loan.

LEACHING PROCESS ADVANTAGES.

The results obtained by the Union Minière, excellent though they were, had been obtained by treatment recovering less than half the copper contents of the ore. The other half lay in stocks of rich fines and in tailings standing in the accounts at practically no cost, and would be recovered chiefly by the reverberatory furnaces and other processes to be installed, and this alone would carry the output of copper far beyond 100,000 tons per annum. It was, however, to the leaching process on a big scale that he looked for the great results from the Union Minière.

In his opinion, it was by that process alone and by the Benguela Railway that the Union Minière would be able to deliver copper on the market cheaper than any other company in the world, and it was necessary to do this to assure complete success. The copper which was recoverable by the present and contemplated processes from the reserves of concentrating and smelting ores amounted to about 1,262,000 tons, from which gross profits of about £24,000,000 would be made. If the same ore was treated direct by the hydro-electric leaching process, there would be a recovery of 1,489,000 tons of electrolytic copper, which, with the Benguela Railway available, would give a gross profit of £52,000,000.

The reserve of 40,402,000 tons of leaching ores, which would only be treated by the leaching process now about to be installed, would produce about 2,000,000 tons of electrolytic copper, giving about £8,000,000 gross profits. Taking the lowest figures, there was a recoverable tonnage of copper in the reserve of oxidised ores other than low-grade amounting to 3,262,000 tons.

The estimated gross profits from that tonnage by present methods and by leaching was £82,000,000. Taking the highest figures, the recoverable tonnage of copper would be 3,489,000 tons, and the gross profits from that tonnage would be about £110,000,000.

The report and accounts were unanimously adopted.

VAN DEN BERGHS, LIMITED. A SUCCESSFUL YEAR'S TRADING.

The twenty-fourth ordinary general meeting of Van den Berghs, Limited, was held, on the 30th ultimo, at Winchester House, Old Broad Street, London, Mr Henry Van den Bergh (the chairman) presiding.

The secretary (Mr A. G. Hales) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Since I last had the pleasure of addressing you another year has passed—a year that, like its predecessors, has not been without its difficulties. Under these circumstances, it is gratifying to me to be able to put before you such a satisfactory statement of the trading for the last 12 months. During the year under review the prices of raw materials have undergone important fluctuations, but I am glad to say that in our operations we have been successful in turning these fluctuations to our advantage.

Although the aggregate sales of margarine have remained at much the same level as last year, we are getting a larger share of the trade which is going. We attribute the former fact to the high prices which have ruled for butter, and the latter to the excellence of our qualities. The policy of your directors in promoting the sale of the higher grades of margarine has proved to be a sound one, and to this policy the success of last year's trading is largely due, and to this policy the success of last year's trading is following the attributable. Our associated company in Holland is following the same policy, and has successfully introduced the "Blue Band," which brand has in a very short time established in that country the same high reputation which it possesses in this country.

With regard to our allied companies abroad, you are aware that the chaotic conditions of trade in some parts of the Continent became accentuated during the past year, the great fluctuations in the rates of exchange bringing with them certain consequences that have a great influence on trading results. All possible precautions,

The Anglo-South American Bank Ltd.

Head Office: 62, Old Broad Street, London, E.C.2.

Authorised Capital - £10,000,000	Issued Capital - £8,734,660
Reserve Fund - £4,000,000	Paid-Up Capital - £4,367,330

The Bank, in addition to 6 branches in SPAIN, has, with its AFFILIATED INSTITUTIONS

however, were taken, and the directors are satisfied that these have prevented what might have otherwise proved serious losses.

KEEN COMPETITION.

The keen competition which I indicated last year continues, and, in fact, in certain directions it has become more acute. This competition among manufacturers finds its counterpart in the retail provision trade. To our knowledge provisions are retailed at a very low rate of profit. It is, therefore, surprising to learn that people are under the impression that profiteering is going on in that trade. This is not a fact. The chairman of a well-known provision company expressed the same opinion a little while ago, and the Grocers' Federation stated that the retailers courted a public inquiry into the matter. We feel confident that such an inquiry would fully vindicate the retailers.

There are two points to which your directors have given very careful attention. The first is economy and the other is uniformity. Efforts have been made to effect economies in the manufacture, and in this I am glad to say we have been successful. We have also managed to produce qualities of a uniformity never before attained. The importance of this is very great, inasmuch as the retailer can only build up a sound trade by regularly offering his customers goods of a uniform standard. At one time it was necessary for the retailer to come to market and pick out his goods, but now he can safely conduct his business by correspondence. The factories of your company and of its associated companies have all been maintained in the highest state of efficiency, and nearly all of them have been visited by members of your board during the year.

THE ACCOUNTS.

Now, with regard to the accounts, I would like to draw your special attention to the balance carried forward. This amounts to £114,624, against £108,327 last year, being an increase of £6,297. The item "associated and subsidiary companies" is £2,408,608, against £2,332,652 last year, an increase of £76,046. "Sundry debtors" appears as £1,186,008, against £1,231,201, being a decrease of £45,193. "Stocks" are £328,590, against £454,526, being a decrease of £125,936. "Sundry creditors" are £1,023,163, against £1,076,512 last year, a decrease of £53,349. "Associated and subsidiary companies" are creditors for £83,765, against £2,458, an increase of £81,307. The profits, together with the balance brought forward from last year, amount to £467,084. After deducting dividends paid during the year—namely, £219,979—the sum of £247,105 is available. The directors propose that this should be applied in accordance with the proposal in the report before you. They recommend the payment of a final dividend of 1s 6d per share on the ordinary shares, making, with the interim dividend already paid, 2s 6d per share for the year. After providing for the payment of all the dividends, therefore, the sum of £114,624 remains available, which it is proposed to carry forward to next year's accounts. It is evident from these figures that our financial position is a very strong one.

Mr. Jacob Van den Bergh (one of the managing directors) seconded the resolution, and it was carried unanimously.

THRELFALL'S BREWERY COMPANY, LIMITED. SUCCESSFUL RESULTS OF THE YEAR.

The thirty-seventh annual general meeting of shareholders in this company was held, on the 30th ultimo, at the Cannon street Hotel, London, Major Charles Morris Threlfall (chairman of the company) presiding.

The Chairman said: Ladies and gentlemen, your board feels that the result of the trading for the year ended June 30, 1924, will be considered very satisfactory by the shareholders, especially when the existing disorganised state of the labour market in Lancashire is taken into consideration. In fact, little improvement can be observed in the industrial situation in the country as compared with a year ago, and great credit must be given to the management, and all who have worked under them in the interests of the company, in having achieved, in spite of many set-backs, the splendid result put before you to-day. You will observe from the balance-sheet that, compared with last year, the company's holding of Five per Cent. War Loan has been reduced by £130,000. This means that we have found an opening for a large portion of our unexpended capital in additions and improvements to our houses and in the purchase of valuable licensed properties situated in Lancashire and North Wales.

Opponents of our trade have been very active during the past year, and threaten to be more so in the future. I understand that still another Bill will be introduced for the establishment of Local Veto throughout England and Wales. Whilst there is little chance of this Bill making any progress this session, the situation will have to be carefully watched, and shareholders and debenture stock holders are urged to co-operate with your directors in their endeavours to uphold the little liberty left to this country.

I am pleased to say we are once more in a position to give all

our employees a substantial bonus, thereby ensuring them a direct interest in the welfare of the company; and another small mercy we have to be thankful for is the abolition of the Corporation Profits Tax, which ceased to be operative as from June 30th last. I informed you at our last meeting that it was intended to appoint Mr. G. M. Galloway a director of the company. He was duly appointed an assistant managing director in September last, in the place of Mr. Binns, who retired from the managerial board and became an ordinary director. Mr. Galloway comes before you to-day for election to our board.

Now, referring to the balance-sheet, the gross profit for the year is £404,228 15s 8d, and, after writing off for depreciation in the value of leasehold properties and plant, and making reserves for corporation profits tax to June 30, 1924, and salary and wages bonus to employees, amounting in all to £45,646 15s 8d, there remains a net trading profit of £358,582. After deducting interest on debenture stock, interest on deposits, directors' fees, and compensation levy, and adding transfer fees, bank interest, and interest on War Loan, there is a net profit for the year of £295,269 8s 4d, which, together with the carry forward of £244,562 16s 4d from last year, makes a total of £539,832 4s 8d to be dealt with.

I now beg to move the adoption of the report and accounts, and that a dividend be paid at the rate of 6 per cent. per annum on the preference shares, and a dividend at the rate of 20 per cent. per annum on the ordinary shares for the half-year ended June 30, 1924, which, with the interim dividends, make 6 per cent. on the preference and 20 per cent. on the ordinary shares for the year. These payments will absorb £276,517 18s, leaving £263,314 6s 8d to be carried forward—a slight increase on last year.

Mr. J. G. West (managing director) seconded the motion, which was agreed to unanimously.

TRANSVAAL GOLD MINING ESTATES, LIMITED.

INCREASED REVENUE—LOWER WORKING EXPENDITURE.

A meeting of shareholders of Transvaal Gold Mining Estates, Limited (incorporated in the Transvaal), whose registered address is elsewhere than in South Africa, was held, on the 29th ultimo, at Winchester House, London.

Mr. M. T. Brown, who presided, said the revenue from gold account at £324,819 showed an improvement of £45,579, while apart from outside prospecting the working expenditure at the mine at £266,299 was less by £12,528. The mine profit was £58,519, as compared with £413 last year. The board some time ago felt that, in view of all the contingencies, as a mining company like theirs was liable to the possibility of being called upon to equip new mines that might be discovered by prospecting operations, it would be a prudent policy to maintain a minimum cash reserve of £150,000, and that only when that amount should be exceeded would it be wise to distribute the surplus in dividends. It was in pursuance of that policy that the dividend recently distributed was fixed at 1s per share. On one side of the balance-sheet they had cash assets £205,444, while on the other side they had sundry creditors £24,526, unpaid and unclaimed dividends £29,300—together making £53,826, leaving in hand £151,618, which was just over the reserve amount desired.

In regard to prospecting, the greater part of their 300 square miles of land was situated within the same geological horizon as their existing mines, and it would be a foolish and short-sighted policy not to continue to examine it in a systematic way as they were now doing. As regarded the prospecting and development of their three groups of mines, Central, Elandsdrift, and Vaalhoek, the result of the vigorous policy that had been pursued had been the satisfactory increase by 39,175 tons of the ore reserve of the Central Mines with only a very slight decrease in the average value of 0.07 dwt. per ton. At Elandsdrift the reserves had been increased by 16,437 tons, with again a slight decrease of 0.39 dwt. in value; while at Vaalhoek the tonnage had increased by 4,300 tons, with a small improvement in the value of 0.14 dwt. The total ore reserves were now 685,712 tons, with an average value of 8.3 dwt., compared with 625,800 tons of practically the same value a year ago. The report for the quarter ended June 30th last showed a net profit of £13,236, as compared with £6,025 in the corresponding three months last year.

ZAMBESIA EXPLORING COMPANY, LIMITED.

"HIGHLY FAVOURABLE PROSPECTS."

The ordinary general meeting of the Zambia Exploring Company, Limited, was held, on the 30th ultimo, at River Plate House, London.

General Sir Francis Reginald Wingate, Bt. (chairman of the company), presided, and, after a brief speech, moved the adoption of the report and accounts.

Mr. Charles Frederick Rowsell seconded the motion.

Mr. Robert Williams, the managing director, in the course of his address, said that the profit for the year had been £9,536, which, added to the previous amount carried forward, made a total credit balance of £59,821. In view of the favourable position of the company, the board felt justified in declaring a dividend of 1s a share, less tax. As to the operations of the Union Minière du Haut Katanga, results had been very satisfactory, and the dividend declared had been 80 francs, or more than double that for 1922. This company's proportion of the 1922 dividend had realised £5,478, while the proportion of the 1923 dividend, which had realised £10,391, would appear in the next accounts. Although there had been a big increase in the dividend, the equivalent in sterling was still adversely affected by the exchange, which in both cases had been about 96 francs to the pound. In accordance with the programme laid down by the experts of the Bovril group of companies, their partners in Angola Estates, Limited, the land interests in Angola were being steadily developed.

As to the profit-earning capacity of the Union Minière, the copper recoverable by the present and contemplated processes from the reserves of concentrating and smelting ores amounted to about 1,262,000 tons, from which gross profits of about £24,000,000 sterling would be made. If the same ore were treated direct by the Hydro-Electric Leaching process, there would be a recovery of 1,489,000 tons of electrolytic copper, which, with the Benguela Railway available, would give a gross profit of £52,000,000 sterling, or £28,000,000 in favour of leaching and the Benguela Railway route. The reserve of 40,402,000 tons of leaching ores, which could only be treated by the leaching process now to be installed, would produce about 2,000,000 tons of electrolytic copper, giving about £58,000,000 sterling gross profits. Taking the highest figures, the recoverable tonnage of copper would be 3,489,000 tons, and the gross profit from that tonnage would be about £110,000,000 sterling. Shareholders would thus appreciate that the prospects of their company as regarded the undertakings with which they were closely connected, were highly favourable in view of the great developments which were bound to take place in Katanga and Angola.

The report and accounts were unanimously adopted.

BRIMINGHAM RAILWAY CARRIAGE announce that they will pay the usual half-yearly dividend on the preference shares, but in view of the uncertainty of the outlook in trade and the keenness of competition both at home and abroad, they have decided not to make any interim distribution on the ordinary shares, but to wait until the end of the financial year.

PERRY and Co., Perry and Co. announce that no dividend on either preference or ordinary shares will be paid.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Wednesday Evening.

Climatic conditions during the week have not been altogether favourable to growing crops; heavy rains and storms furnished more than sufficient moisture for the time being, so that a spell of sunshine is necessary to absorb same from the rain-soaked land. In some districts cereals have been laid, while hay-making was interrupted, though fortunately the bulk of a heavy crop has been safely secured. Marked stability was again apparent with regard to all cereals, and prices were carried to still higher levels, particularly for breadstuffs, in sympathy with buoyant markets in North America and the Argentine, combined with a good general demand from Europe. Crop reports from Canada and the United States are of a variable character, but official advices do not confirm the gloomy accounts previously received regarding Dominion prospects. English wheat of the old crop is practically out of supply, but there is a small speculative inquiry for new wheat, in view of the present situation. Of imported, No. 1 Northern Manitoba quoted at 64s 6d, No. 2 63s 6d, No. 3 62s, No. 4 60s 6d, Barusso 63½ lbs 59s, Australian 60s, choice white Karachi 58s 6d, and fed ditto 57s 6d per 496 lbs ex ship terms. In the floating and forward cargo section prices responded to a good demand, and stimulating foreign advices. Steamers of Rosafé 63½ lbs July sold 56s 6d, August 57s 7½d, August 15th September 15th 57s 3d, and resold at 58s, while a steamer of 35,000 quarters No. 2 hard winter August 25th loading was resold at 56s 6d, being an advance of 6s per quarter on the original sale just over a fortnight ago. Barusso 63½ lbs August realised up to 56s 3d, and a sailer of South Australian afloat 56s 6d per 480 lbs. Flour prices were advanced by 3s per sack in sympathy with the wheat position, and a good business transpired. London standard straight run quoted 48s 6d, patents 50s 6d to 51s 6d, town whites 48s 6d per sack delivered. Imported also dearer. Manitoba patents range from 46s to 51s, with Australian at 43s to 44s per 280 lbs ex store. Maize cargoes also in active request, and prices firmer owing to the American crop position and higher prices ruling in Argentina. Steamers of Plate afloat sold at 36s 6d to 36s 9d, July-August 37s 6d, and September-October 38s 3d per 480 lbs. Barley, firmer. Californian quoted at 60s-64s, Chilean brewing 56s-59s per 448 lbs ex ship. No. 3 Canadian Western ex ship 39s 6d, landed 41s, Karachi ex ship 39s 6d, ditto landed 40s 6d, Russian landed 40s all per 400 lbs. English, nominal. Oats, dearer. Plate f.a.q. ex ship 24s 3d, landed 25s 3d, No. 2 Canadian Western ex ship 29s 6d, landed 30s 6d, No. 3 ditto 29s, No. 2 Canadian feed landed 27s 9d, mixed feed ditto landed 23s 3d per 320 lbs. English, nominal. Maize, firmer. Plate ex ship 38s, landed 39s 6d, Bessarabian landed 40s per 480 lbs. Millers' offals, firm. Broad bran quoted at 7s 9d, middlings 9s 6d, fine ditto 11s 3d, bags included, ex mill, light oats 6s 3d, powdered oat husks 7s 3d, feed oatmeal 9s 9d, ground oats, 12s 3d per cwt free on rail. Oatmeal, firmer. London-made flaked 18s, rolled oats

17s 6d, medium and fine cut 17s 6d, coarse and medium pinhead 17s 6d, ordinary Scottish oatmeal 18s-19s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.
Estimated sales of home-grown wheat—				
1 week to July 26	Cwts. 20,030	Cwts. 38,413	Cwts. 74,144	Cwts. 23,060
47 weeks to July 26	12,673,340	16,834,362	15,928,310	12,183,621
Average price of English wheat per cwt.	12 3	11 6	12 4	17 8

IRON, STEEL, AND COAL.

Our Sheffield correspondent writes:—Business in the iron and steel market appears to be at its lowest, and little improvement is expected until the holidays are well out of the way. Pig-iron is in very little request, and such buying as is done is merely in small lots to meet early requirements. There is an almost complete absence of forward business, consumers apparently being rather apprehensive about the immediate future. The finished iron outlook is also depressing. The demand for acid steel is much below the level of production capacity, and basic steel similarly is on the quiet side. After a very busy period the steel tool section is becoming less active, and the railway material departments are completing orders faster than new ones are coming in. Makers of plant and machinery for the iron and steel industries have still plenty of work on hand. Some of the lighter trades are also well occupied, makers of hacksaws particularly so. In the cutlery trades business is only moderate. Makers of table cutlery are engaged almost entirely in the production of stainless. Solingen competition has fallen off, but considerable stocks of German knives are still held by merchants in this country. The silver and electroplate trades are by no means fully engaged. There is general weakness in the coal market. Best seam hards are moderate, with a good home demand, but little doing on export account. Cobbles and nuts are still weak, and spot lots are on offer at reduced prices. Slacks of good quality are in a strong position, and house coal is a shade better. Furnace and foundry coke shares the general weakness, but gas coke is moving upwards. Current quotations per ton at pits are: Best hand-picked branch, 32s to 33s; Barnsley best Silkstone, 26s to 28s; Derbyshire best brights, 25s to 27s; ditto best house, 23s to 25s; Yorkshire hards, 21s 6d to 22s 6d; Derbyshire hards, 21s to 23s; rough slacks, 12s 6d to 15s 6d; nutty slacks, 12s to 14s; smalls, 8s to 10s.

Our Glasgow correspondent writes:—Very few transactions took place in pig-iron during the past week, buyers being inclined to mark time until the works get into operation. The shipments from Glasgow Harbour were again small, the total being only 187 tons, as compared with 2,923 tons in the corresponding week of last year. Steel and iron works have not all resumed this week, but in most of the shipbuilding and engineering establishments in this district a good start was made on Monday morning, and, as there is a very fair amount of work in hand and several good contracts pending, the outlook for the immediate future is not unpromising. It is reported that Messrs Fleming and Ferguson, of Paisley, have contracted to build and engine for the Crown Agents for the Colonies a steamer of 750 tons gross and 950 i.h.p., which is intended for service on the West African Coast. Inquiries for bar iron and steel structural work have been fairly numerous during the holiday period, and steel sheetmakers have resumed work on the heavy commitments already booked. Demand for galvanised and corrugated sheets has only slightly slackened, and it is fully expected that the autumn season will be marked by further heavy purchasing from overseas. Generally speaking, the prospects in the iron and steel trades may be said to be brighter than was anticipated in some quarters a short time ago. Prices for steel materials, bar iron, and sheets remain unchanged, and for G. and C. sheets makers are holding out for £18 10s per ton for October delivery.

Our Middlesbrough correspondent's report, dated July 30, 1924, is as follows:—Pig-iron: The market remains absolutely stagnant. Makers are willing to sell at 86s 6d, and would even accept lower for definite business in No. 3 Cleveland G.M.B. The hematite trade is also very dull, with very few orders passing, and whilst makers are quoting 94s 6d per ton for mixed numbers, this figure could be shaded for definite business. Manufactured iron and steel: We cannot report any improvement in the steel trade, as German billets and bars are being delivered into this district at about 30s per ton less than our local works can produce at. However, the prices are unchanged at:—Steel ship plates, £10 to 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9 to 5s; steel market is very quiet. Odd cargoes are being sold on the basis of 22s 6d per ton for best Bilbao Rubio ore, c.i.f., Tees.

Our Cardiff correspondent writes:—The approach of the August holidays has stimulated the shipment of prompt coal at the South Wales docks, but there has been no appreciable change in the state of the market, and, perhaps with the exception of those of the leading Admiralty large coals, prices have continued on the easy side. The weakest coals have been those of the dry steam

qualities, and these are a glut in the market. A new factor has been introduced into the market by the renewed uncertainty of the situation in the Ruhr. During July the German Government undertook to finance the delivery of reparation coals, but the Rhenish Westphalian coalowners have been informed by the Government that this assistance cannot be extended in August in consequence of the severity of the restrictions on credit facilities. For this reason the conference held at Dusseldorf early in the week between the representatives of the colliery owners and the M.I.C.U.M. proved abortive, and was adjourned until Friday to allow further communication between the colliery owners and the German Government. It is only necessary to extend the existing agreement until the provisions of the Dawes Report are brought into operation, and under the proposals of the London Conference the economic evacuation of the Ruhr is to be completed in the autumn; but the German coalowners protest that it is a financial impossibility for them to carry the burden of the cost of the reparation deliveries, partly in consequence of the exhaustion of their financial resources, and partly in consequence of the severity of the present depression in the Ruhr mining industry. These developments are being closely watched, but it is very uncertain what, if any, effect they will have upon the demand for South Wales and other British coals. The following are the current approximate quotations:—Best Admiralties, 28s to 28s 6d; seconds, 26s 3d to 27s; best drys, 26s to 26s 6d; Black Veins, 26s to 27s; Western Valleys, 25s 6d to 26s; Eastern Valleys, 23s 6d to 25s; best bunker smalls, 16s to 16s 6d; ordinary cargo smalls, 13s to 14s; coking smalls, 16s 6d to 17s; anthracite Big Vein large, 50s to 52s 6d; machine-made cobbles, 55s to 57s 6d; French nuts, 57s 6d to 60s; stove nuts, 50s to 55s; rubbly culm, 14s to 14s 3d; coke for export, 52s 6d to 55s; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 27s 6d to 29s 6d; pitwood, ex ship, 28s to 29s. In the tinplate industry business continues active and prices firm, but in pig-iron trade is very slack and production has been considerably reduced.

METALS.

Tin commenced the week with an easier tone due to selling pressure, though offers were fairly well absorbed. Standard cash sold at £244, and three months £243 15s to £245 10s to £242 10s. Eastern cables reported sales on the basis of £245 10s c.i.f. By the middle of the week rates moved in an upward direction, with business on a liberal scale. Cash sold at £246 to £246 5s, and three months £244 10s to £246 10s. Copper: Firmer at commencement on better American cables and reserve on the part of sellers, with trading on a liberal scale. Later, however, values gave way on sellers becoming more prominent. Cash was dealt in at £63 12s 6d, and three months at £64 2s 6d to £64 17s 6d to

FRENCH LINE

Regular Express Passenger Service

Carrying the French, American and British Mails, and sailing regularly from

Our Bradford correspondent, writing on Wednesday, says:—The general tone of this market is well maintained, and during the week some further good business has been reported in wool and tops. There is evidence of greater confidence in the strength of the raw material position, and as stocks of fine combing wools are known to be light, there is a disposition on the part of spinners to buy quietly in anticipation of future requirements. While there is not much quotable change in prices, practically all qualities of tops are firm and against the buyer. Some of the larger top-makers are definitely adopting a more independent attitude with regard to new business in merinos, and while 6s may be taken as a general market quotation for good warp 64's tops, some firms are not sellers at that price. There are also indications that America is beginning to take more interest in the wool position, and as reports from that country clearly show that the trade is recovering from the stagnation of recent months, there is some probability of American operators exercising a decided influence on values in the not distant future. On the other hand, it is realised that business in semi and fully-manufactured goods is bound to be uncertain until conditions on the Continent become more satisfactory, and while wool will doubtless continue to sell well at firm prices, it will be more difficult to move tops and yarns on to a corresponding basis. The interference with the export trade in yarns, caused by the financial trouble in Germany, has had a serious effect on this centre, and business will continue to be conducted under difficulties until there is a wider outlet for the production. There is not much change in the piece goods trade, but hopes are entertained of a better demand after the holidays.

(FROM A CORRESPONDENT.)

The Australian mail to hand this week makes very satisfactory reading. Reviewing the last season's business at all the selling centres throughout the Commonwealth and New Zealand, nothing but satisfaction is expressed, and growers appear to be well satisfied with the prices they realised in their own markets. The other side of the question is that so far there has been a very poor response in the manufacturing industry. The arrival of the wools in Europe has brought to the purchasers the realisation that they paid the utmost value for them; indeed, the opinion is frequently expressed that in many cases limits were exceeded. Many are feeling rather sore, because notwithstanding the partial improvement that has taken place in values since the close of the London sales, an advance of 10 per cent. is needed in both merinos and crossbreds if importers are to get back their own on the wools that remain unsold. This advance is well within the range of possibility between now and September 16th, when the next London sales open, but we doubt very much if that will materialise unless

**Banking and Exchange
Business
of every description.**

London Bankers:—Hambros Bank, Limited Westminster Bank, Limited; Midland Bank, Limited; Cox & Co.

Markets on the eve of the holiday showed firmness practically all round. Plate linseed has continued to advance until £21 15s is required by holders for seed afloat and in any position up to December. A feature has been that crushers who had not hitherto followed the rise have been steady buyers of old seed, while there is a strong speculative demand for the new crop, which has advanced from £18 15s to £19 15s for January-February. The Argentine surplus available over the remaining months of the year has been reduced to 292,000 tons, which, with 117,000 tons yet to come from India, gives a total of 409,000 tons to meet world requirements between now and the end of December, against 300,000 tons actually shipped in the same period of last year. In addition the quantities of linseed (Plate and Indian) afloat to the U.K. and the Continent is 140,500 tons, against 90,500 tons a year ago. A better demand for linseed oil has been experienced for export, America being the principal buyer for shipment in bulk from Hull. The value on spot is about £40, naked, ex Hull mill, a slight premium being asked for August to December delivery. Egyptian cottonseed has continued a firm market, and prices for shipment show a further advance. Cotton oils are steady, but not very active, crude Egyptian now offering at £41 15s, and soap makers' grade of refined at £44 per ton, naked, ex Hull mill.

The hide market is distinctly firmer, and higher prices are expected to be made at the Bermondsey auctions this week. Prices have appreciated at the leading provincial markets, and best ox are now selling from 7d to 9d per lb. The imported hide market is also more active, and cables from the River Plate report sales of about 75,000 hides, the quantity being distributed between British, American, and Continental buyers. At the conscription of Liebig hides last week, 21,000 hides were sold, best grades making as high as 8½d. Dry hides are firming up again, and tanners seem very keen on buying very cheap parcels to fill the demand for a low-priced bend for shoe manufacturers' requirements. Latest cables from New York report a firm packer market, with advances in several directions. Best heavy packers are selling now at 15 cents, and native cows have gone up to 13 cents.

Upper leathers are quiet, although there has been a demand for cheap box and willow, glacé and patent. German chrome calf is again arriving, and competes seriously with the domestic production. Carriers are closing down for the whole of next week.

The boot section is well employed, and large deliveries have been sent out to retailers this week for the holiday trade. Most of the factories, however, will be closed for at least a week for the August holidays.

SUGAR.—The market remains quiet and rather featureless at the moment, and it is apparent that quite a holiday tone already pervades the market. Of British refined, Messrs Tate and Lyle's reduced prices of granulated, mineral-water and crystals by 6d per cwt, also forward granulated. Cubes quoted 42s 9d to 43s 9d; crushed, 41s 3d; nibs, 43s 9d; mineral-water, 38s 3d; granulated, fine and coarse grain, 38s 4½d; No. 1, 38s 1½d; No. 2, also London

RUBBER opened with a quiet tone, but disclosed more steadiness later on, buyers becoming more prominent. Standard plantation crepe and sheet, spot, also August delivery, sold, 15 cgd to 15 cgd September, 15 cgd to 15 cgd; October-December, 15 cgd to 15 cgd January-March, 15 cgd to 15 cgd. To New York, standard European estate sheet, August-September, sold, 15 cgd; September-October, 15 cgd per lb. c.f. and i. Wild steady, but trade quiet.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

CORRESPONDENTS TO THE ROYAL ITALIAN TREASURY
Every description of Banking business transacted.

loans $3\frac{1}{2}$ and 4 per cent. have been common rates on most days, while fixtures have been renewed at $2\frac{3}{4}$ per cent. by the clearing banks. Towards the latter part of the week a little buying of short Treasury bills by the banks has suggested that supplies of cash were increasing slightly, but the general tone of the discount market has remained very firm indeed, and the November Treasury bills have been freely offered at $3\frac{1}{4}$ per cent. For fine three months' bills $3\frac{1}{4}$ per cent. has generally been maintained as the minimum quotation. On Thursday the New York Federal Reserve Board reduced its rate of rediscount from $3\frac{1}{2}$ to 3 per cent., the latter rate to become effective as from yesterday.

	Aug. 9, 1924.	Aug. 2, 1924.	July 25, 1924.	July 18, 1924.	Previous Rate and Date Changed.

The Bank return showed a slight further increase in circulation, amounting to £14,150, and a loss of £1,100 in the bullion stock left the Reserve £15,200 lower. Other securities increased by £2,641,900, as the result of market borrowing, but Government securities were £2,520,000 lower, and there was an increase of £1,117,300 in Public deposits. These movements were reflected in a reduction of £1,055,000 in Private deposits, and the ratio of the Reserve was unchanged at 16.8 per cent. The circulation of currency notes increased by £3,259,000 to £298,824,700, which includes £1,379,100 for notes called in, but not yet cancelled. The fiduciary issue is £247,995,600, which is only £195,000 below the maximum.

THE STOCK MARKETS.

Renewed hopefulness has sprung up in Stock Exchange markets as a result of developments at the London Conference over the week-end, and prices have been marked up, while a certain amount of business has been attracted. Violent gambling in German and Prussian bonds sprang up, and French bonds improved. The foreign market was also treated to some excitement in an all round rise in Russian bonds on the agreement between the British and Soviet Governments. Home Railway stocks have improved on the better showing of the traffic returns, but apart from an improvement in the rubber and tea share markets, and increased activity in Kaffirs there were few changes of importance.

THE COMMODITY MARKETS.

Most of the commodity markets have been under the influence of the August holidays. In South Wales there was only a partial resumption of work even on Thursday. There has been no pig-iron market. Some steel works are idle, some are partly employed, while others are going fairly steadily. In the cotton trade an improvement is recorded, while the wool market continues to manifest many sound features. Wheat quotations were easier. Sugar was steady, and rice inclined to quietness. Rubber was irregular, but firm towards the close of the week. No hide sales were held at Bermondsey. Linseed shows signs of a hardening movement.

FOREIGN EXCHANGES.

The sudden agreement reached by the Inter-Allied Conference resulted in a lively week in the foreign exchange market. Most of the Allied countries, led by Great Britain, experienced a remarkable rise in the value of their currencies in terms of gold. The New York rate quoted in London, which had risen from \$4.41 on Friday last to \$4.42½ on Saturday, jumped to \$4.47 on Tuesday, and after a slight reaction on Wednesday, mounted further to \$4.47½ on Thursday. Yesterday morning it touched \$4.52, which is the highest rate recorded since last October. In addition to the news of the Conference, it would seem that a further factor in this movement has been

the extent to which dollars purchased at the time of the inflation scare in this country last autumn have been reconverted into sterling. In particular, yesterday's sudden movement is largely attributable to the reduction in the rediscount rate of the New York Federal Reserve Bank from $3\frac{1}{2}$ per cent. to 3 per cent. So far there has been little indication on the market of any large purchases of dollars to meet the autumn seasonal requirements, but they can scarcely now be long delayed. Forward rates are steady at $\frac{1}{2}$ cent for one month and $\frac{3}{4}$ cent for three months below spot. The Paris rate has also shown a great recovery, but has followed more closely the day-to-day current of feeling. Thus from 85.80 on Friday last and 84.85 on Saturday it had fallen to 80.85 on Tuesday. A reaction to 82.35 on Wednesday was followed by a further fall to 81.70 on Thursday and to 80.35 yesterday morning. This movement is the more remarkable in that the note issue of the Bank of France has recorded considerable increases during the past few weeks. Brussels has been subjected to the same influence, falling from 95.00 on the 1st to 88.60 on the 5th, and after a relapse to 89.35 on 7th stood yesterday morning at 88.25. Forward rates in Paris are 2 centimes narrower at 6-8 centimes per month above spot, but in Brussels they have changed to 1 centime per month above spot. The lira has, however, shown little variation, and stands at 101, as against 101½ a week ago. Berlin, somewhat surprisingly, has risen from 18½ to 18¾ billion. Among neutral currencies, Switzerland continued to appreciate from 23.72 on 1st to 23.66 on 7th, but reacted yesterday to 23.90. The improvement in the value of the Swiss franc is attributed chiefly to the exceptional tourist traffic this year, coupled with the return of money which had left the country for New York at the time of the proposal to introduce a capital levy. The fall in the rate has, however, been so rapid that a certain reaction was to be anticipated. Amsterdam has once again moved with the dollar, and stood yesterday at 11.61½, as against 11.53½ a week ago, while Madrid has moved in our favour from 33 to 33.40. In Northern Europe Stockholm and Copenhagen have also followed the dollar, moving from 16.55 to 16.72, and from 27.40 to 27.75 respectively. Christiania, on the other hand, has fallen from 32.53 to 32.38. Helsingfors has followed the general movement, and stands at 180, as against 175½ a week ago, and Warsaw also has moved from 22.85 to 23.30. Riga, after rising from 22.80 on the 1st to 23.16 on the 7th, fell again to 22.38 yesterday morning. In Central and Eastern Europe, Vienna has risen from 312,000 to 318,000, and Prague from 148½ to 152. Budapest has fallen from 355,000 to 345,000, and Bucharest from 1,020 to 1,000. In the East, the rupee has moved from 1s 5½d to 1s 5½d, and the yen from 1s 10½d to 1s 10½d. In the silver market the appreciation of sterling as against the dollar led to a restriction of business and weakening prices. The Eastern markets did little business, but small purchases are reported from the Continent. Hong Kong is ½d cheaper at 2s 4½d, and Shanghai ½d cheaper at 3s 3d. In South America, Rio has recovered from 5½d to 5½d on better reports of the situation. Buenos Aires is unchanged at 40½d and Valparaiso at 44.60 pesos, but Monte Video has appreciated from 41½d to 42d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 2nd:—

(000's omitted.)			
EXPENDITURE.	£	From Revenue	£
Supply Services	6,510	Increase in National Debt	14,233
Interest, &c., on Debt	8,861		2,625
Sinking Fund	500		
Sundries	902		
Increase in Exchequer Balances ..	85		
	16,858		16,858

Revenue for the week ending August 2, 1924, amounted to £14,233,000, against £14,551,000 for the corresponding period of 1923. Customs and Excise were lower at £1,722,000 and £971,000, against £2,052,000 and £1,063,000 respectively. Estate duties were £310,000 higher at £1,420,000, and Post Office receipts yielded £1,400,000, against £1,250,000. Property and Income-tax brought in £7,086,000, against £6,971,000, and Super-tax £590,000, against £570,000. Ordinary receipts were under £1,000, compared with £200,776 last

year. The week's operations increased the National Debt by £2,625,000, and caused the following changes:—

(000's omitted.)			
	£		£
Unemployment Insurance	270	Treasury Bills	2,411
Land Settlement	16	National Savings Certificates ..	100
Public Dept. Advances	4,850		
	5,136		2,511

The floating debt was increased by £2,440,000 to £784,638,500.

FINANCIAL YEAR, 1924-1925 (April 1 to August 2).

THE WEEK IN PARLIAMENT.

MONDAY, AUGUST 4TH.—*Lords*: Committee stage of Housing Bill concluded. *Commons*: Premier's statement on Inter-Allied Conference agreement. Debate on trade disputes on motion for second reading of Appropriation Bill.

TUESDAY, AUGUST 5TH.—*Lords*: London Traffic Bill and Agricultural Wages Bill debated. *Commons*: Debate on London Conference agreement. National Health Insurance Bill passes third reading.

WEDNESDAY, AUGUST 6TH.—*Lords*: Agricultural Wages Bill debated. *Commons*: Colonial Secretary makes statement on Government's Irish Boundary question proposals. Treaties arranged with Soviet delegates explained by Under Secretary for Foreign Affairs and debated. *Lords*: amendments to London Traffic Bill, Housing Bill, and Agricultural Wages Bill debated.

THURSDAY, AUGUST 7TH.—Russian Treaties debated in both Houses. Appropriation Bill read a third time in Commons. Both Houses adjourn.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—General Mining and Finance Corporation, Watney, Combe, Reid and Co., British North Borneo Co., Oroville Dredging, and Transvaal and Rhodesian Estates.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE WORK OF THE CONFERENCES.

THE first phase of the Conference came to an end last week-end with the conclusion of an agreement among the Allies on some of the main questions at issue, and the second phase has begun with the arrival of the Germans in London. To have reached this stage is in itself a sign of very definite progress, for which the principal negotiators must be given full credit. Certainly none of them have spared personal effort, time, and trouble in reaching this result. Moreover, it is all to the good that in this new phase the Conference will be face to face even more definitely than before with the realities of the situation, and will have to deal with the German side of the situation at first hand. But the Conference has in its favour the enormously important incentive that all parties are desperately anxious to settle. The national interest of each of the chief countries concerned calls loudly for agreement. For Germany, it is probably the last chance of avoiding complete economic collapse, of which 1923 gave so serious a foretaste. France, also, cannot afford to drift into a position of political and

military isolation and of financial insecurity, while Great Britain is anxiously concerned to see a general revival of world trade. Moreover, the position of the parties in power is, in each case, no less engaged to the same end for internal political reasons. This desire to agree makes it likely that some sort of arrangement will be reached. Whether the settlement arrived at will be the right one or a lasting one, or one that will give an opportunity to the spirit of goodwill to grow up and overcome the rank weeds of hatred, suspicion and enmity which have flourished so abundantly in the last five years in Europe is another matter, and the whole world is anxiously watching to see whether the foundations of real peace are being firmly and squarely laid.

Let us look at what has so far been accomplished. The Allies have agreed upon a time-table for the economic evacuation of the Ruhr, and after discussion with the Germans the schedule has been put forward by ten days. We also understand that outside the agreement, of which the text has been published, much progress has been made in arranging the detail of the transference of duties to the new officers to be appointed under the Dawes scheme, e.g., the apparatus for transferring assigned revenues to the Agent-General. But the most substantial achievement is the agreement on the method by which will be decided whether or not Germany is in default. The agreement provides for the amendment of the default section of the Reparation clauses of the Versailles Treaty. An accusation of default will continue to come, as at present, to the Reparation Commission, but if the Commission is not unanimous, any dissenting member may ask within eight days that the issue go to an arbitral commission, to be composed of three impartial persons appointed for five years by a unanimous vote of the Reparations Commission, or, failing unanimity, by the President of the Permanent Court at the Hague. In any case, the President of the Arbitral Commission is also to be an American, and to the Reparation Commission is to be added, whenever questions of default are under consideration, an American member. This plan is a radical change from the present situation, under which France, in effect, controls decisions so long as she has the support of Belgium, since her member is President and has a casting vote. It ensures that Germany's case will at least attain a fair hearing. The scheme has in the last two or three days been further improved by France's reported acceptance of the phrase, "wilful default," as a result of which Germany will not be condemned unless the arbitral tribunal is satisfied that she has deliberately evaded her obligations and failed to make payment which lay within her power.

As a counter-weight, the agreement has modified the Dawes Report in certain details. For example, the transfer Committee, as outlined in that Report, was a sovereign body, taking its decisions purely on economic considerations. To it was assigned the difficult task of deciding whether German financiers were conducting manoeuvres to prejudice its own operations. The agreement now provides that if the Transfer Committee is divided on such a question, the matter shall be referred to an arbitrator appointed by the members of the committee or by the Court of International Justice. But in spite of such changes, the work of the Expert Committee has undoubtedly advanced the technical side of putting the Dawes Report into effect.

But this is far from being the whole or most difficult part of the problem. There remains the question of the military evacuation of the Ruhr—a matter on which the Conference is keeping up the absurd pretence that it is a subject which concerns only Belgium, France, and Germany. French troops are in the Ruhr to-day for the purpose of safeguarding the civilians who are carrying out the economic occupation. That, at all events, is the only explanation which France has ever vouchsafed to her Allies and to the world. What ground is there for dissociating the military from the economic evacuation now that a joint effort is to be made to secure such payments as Germany is in a position to make? Behind this is the even more important question of principle as to what may be done if Germany defaults. The relevant clauses of the Conference report state that if default is declared, the Repara-

tion Commission shall report to the interested Powers, and make such recommendations as it may think necessary. But the signatory Governments undertake not to take action against Germany without first conferring on the nature of the sanctions to be applied and the method of their application, "acting with the consciousness of joint trusteeship for the financial interests of themselves and those of the persons who advance money upon the lines of the said plan." If sanctions are taken, the Allies "will safeguard any specific securities which may be placed to the service of the loan." The Allied Powers further consider that the service of the loan is "entitled to absolute priority in relation to any resources of Germany on which a general lien may have been given to the loan, as well as in relation to any resources which may arise as the result of the application of sanctions." In other words, bondholders would be entitled to any proceeds, for example, that the French are to-day getting out of the Ruhr. The report, however, contains one ominous provision. *If the Allies do not agree upon their sanctions*, "the existing rights of the signatory Powers under the Treaty of Versailles read with the Dawes Report are reserved."

The meaning of these last words is that, in France's view, she retains the right to re-enter the Ruhr at her option if Germany defaults and if the Allies do not happen to agree on the next step. Great Britain, it is true, still maintains that the treaty rights do not justify such action. But the world must inevitably conclude that if a turn of the wheel should ever tempt France to repeat the costly experiment of 1923, Great Britain would stand by and do what she did last year, that is—nothing. In short, no advance has been made towards clearing up the fundamental basis of international rights and duties in the next few decades, nor is it settled whether military action is a justifiable means of collecting Reparations, or whether such action may be taken by a single country. In our view, this is a fatal flaw in the basis of Germany's credit, which, as Sir John Simon pointed out in the House last Tuesday, is in curious contrast with the Austrian and Hungarian schemes of reconstruction, the first clauses of which contain declarations by the signatory Powers guaranteeing the territorial integrity of those countries. If it were certain that this problem would never arise again, it would be a good political reason for shirking the issue. But bitter experience since the war has proved again and again that where arrangements have embodied unsound principles of international rights, sooner or later—and usually sooner than later—the chain has snapped at the weak link. In any case, if the negotiators hoped that these issues could be evaded by silence, the expectation has been in vain, for the Germans have inevitably raised as their first question the military evacuation of the Ruhr. The desire of France to reach a solution—to which we have already referred—leads us to hope that the success so far achieved may be followed by an understanding also on these more vital and certainly more delicate issues. M. Herriot's action in exchanging calls with the German Chancellor has created a very good impression, and ensures that the problems will at all events be discussed in a more accommodating spirit than formerly.

The effect of the Agreement announced last week has been a sharp recovery of the exchanges. This does not mean, however, that the bankers see their way more clearly to raise the loan that is needed to initiate the Dawes report. Under pressure of various kinds large sums can doubtless be placed with the more important finance houses of London and New York. But it is not pleasant for these institutions to be left with a mass of stock that the investor will not touch, and under present circumstances it will require very skilful manoeuvring indeed to persuade the private investor to take up a German loan. Hence the talk last week of a partial guarantee by the British Government to the German loan. But the credit of the British Government is an asset which must be very jealously guarded indeed, and should only be pledged to foreign Governments on the most stringent conditions. These conditions were fulfilled in the case of Austria; we do not think they are fulfilled in the Conference report in the case of Germany. The decision of the Government to ask Parliament to give a British guarantee to a Russian Government loan is a proposal which has produced some-

thing like consternation. The eleventh hour settlement has naturally created a very bad impression by the haste in which it was rushed through, leaving the Government spokesman in the House of Lords ignorant of whether it had been passed or not, the Prime Minister himself unacquainted with its terms, and the House of Commons without papers of any kind when the matter was discussed. But these evidences of the Government's disregard of Cabinet responsibility and the democratic control of foreign policy are less disturbing than the terms of the Agreement itself, for it embodies the proposal not merely that the Russian debts to Great Britain, together with Russian counterclaims, are to be put into cold storage, but that the claims of British bondholders are to be met in part only if the Government persuades Parliament to attach a British guarantee to the Russian loan—a condition not far removed from blackmail. We believe it to be very much to our interest that British capital should continue to be wisely used not merely in overseas development, but in the furtherance of European reconstruction; but we cannot afford to waste our substance in ventures where the elementary conditions of sound finance and of respect for obligations are lacking. The best test of Russia's credit as a borrower will be furnished by her fortune in the open market. We most strongly protest against the credit of the taxpayer being lightly pledged to Russia, or any other country which cannot otherwise satisfy the investor that it is fundamentally solvent and creditworthy.

FINANCIAL RECONSTRUCTION IN POLAND—II.

THE stabilisation of the Polish exchange and the introduction of a new currency on a gold basis, which we briefly described last week, have naturally had a very considerable influence on the general economic and industrial situation of the country. In the main the position is very similar to that of other countries where the process of inflation had suddenly been checked. Prices have risen rapidly, and, in certain cases, are now even higher than the general world level. There is a great shortage of circulating capital, and long-term credits are virtually unobtainable. The legal maximum rate of interest has been fixed at 2 per cent. a month, but in practice it is practically impossible to obtain accommodation at this figure. As the relative level of prices for agricultural products throughout the world has fallen, the purchasing power of the rural masses in Poland has naturally been diminished, a phenomenon the full effect of which has only been felt since the currency has been stabilised. There are thus, not unnaturally, complaints of a lack of demand within the country itself. Manufacturers, who have been virtually cut off from the Russian market, which, before the war, was by far the most important, are finding it almost impossible to compete abroad, and the present financial situation in Germany adds enormously to the difficulty of exporting to that country, which, since the annexation of Polish Upper Silesia, has been Poland's best customer. To add to all these difficulties, the burden of taxation has this year made itself felt virtually for the first time since the war, though the actual amount paid in taxes remains very low when compared with British standards. For example, the three taxes in respect of which complaints are most frequently heard are the income-tax, which only yielded 16.2 million zloty in the half-year; the turnover tax, which yielded 62.1 million; and the property tax (half of which falls on the rural classes), with 102.4 million during the six months. Of course, the payment of arrears will make the second half-year more trying, but while admitting to the full the difficulties of the present situation, one cannot but feel that the importance of the burden of the taxes actually paid has been overestimated by the industrialists, a phenomenon which is perhaps not confined to Poland!

During the earlier years of inflation, the uncertainty as to the future status of important portions of Polish territory, such, for example, as Upper Silesia, combined with the lack of cohesion between the different parts of a country which had previously been divided between three

Empires with widely divergent economic and industrial interests, to encourage the production of goods for direct consumption. In this respect, then, Poland differs considerably from Germany, where permanent capital investments were made on a large scale during the years of financial dislocation.* This factor has, of course, also been present in Poland; but more important, perhaps, was the tendency to produce goods for sale, where possible, abroad, and to accumulate supplies of foreign currency. How important this tendency really was it is virtually impossible to say, but one thing appears to be reasonably certain. Prior to stabilisation, an accumulation of stocks was already an item of some importance. At first the institution of a new currency led to a rise in prices, when measured in gold, and certainly did not check production. With the gradual return to more normal conditions, however, the lack of real purchasing power in the hands of the masses has made itself felt, and manufacturers are now faced with an accumulation of stocks which they are finding it virtually impossible to liquidate. The situation has been made all the worse by the policy which they have themselves pursued hitherto. Counting, no doubt, in part on the possibility that the new currency might itself depreciate, and influenced by what may be termed inflationist psychology, they have hitherto been most unwilling to cut their losses. At last, however, the necessity for something of the sort has become clearly apparent, and this way out of the impasse has recently been advocated in public by M. Wierzycki, the President of the Federation of Polish Industry.

It is, however, of the greatest importance that the cost of production should be reduced. Poland enjoys what is virtually a universal forty-six-hour week. Workers receive an annual holiday, on full pay, of from eight to fourteen days, according to their years of work, and religious holidays are of very frequent occurrence. All this, of course, leads to a diminution in productive capacity and to an increase in costs which Polish industry is at present ill able to afford. Again, the high protective policy hitherto adopted, with duties ranging from 30 to 100 per cent., and even more, has certainly not made for industrial efficiency, but has rather encouraged uneconomic production, and has enabled thoroughly unsound concerns to keep their heads above water. The high rate of interest or, better expressed, the difficulty of obtaining money at any price, to which reference has already been made, is also of the very greatest importance in this connection. It must be emphasised, however, that the real need is not for short-term accommodation, but for long-term credits, or, in other words, industry suffers not so much from a shortage of credit as from a lack of capital. In the absence of help from abroad, a readjustment of the balance by a resumption of saving, that is to say, by an excess of production over direct consumption, must take a long time to effect.

Perhaps the most striking thing of all to the foreign observer of Polish economic conditions is the wide divergence between wholesale and retail prices. This, it is true, is a frequent phenomenon in all countries which have passed through a long period of inflation, and was, in any case, a noticeable feature of pre-war Poland on account of the faulty organisation of the mechanism of distribution. To-day, however, the margin has grown to almost incredible dimensions. As this is a factor of the greatest importance in determining the cost of living, and has important fiscal consequences, it is receiving considerable attention on the part of the Government. The large number of small retailers, the relative absence of a large-scale organisation of commerce, and last, but not least, the prevalence of inflationist psychology together go far to account for the present unsatisfactory state of affairs. Moreover, having regard to the number of hands through which goods must pass on their way from the producer to the consumer, the high rate of interest and the turnover tax—which probably has as important an influence on prices when payment is avoided as when it is actually made—also tend to widen the margin still further. In certain centres, again, the shortage of such institutions as slaughter-houses and bakeries have led to the establishment of local monopolies,

though in this last case attempts are being made to counteract the evil effects of the situation by a manipulation of railway rates with a view to establishing increased competition within the country.

At the present time, then, Poland is still suffering acutely from conditions inherited from the period of inflation. The official returns of unemployment stood at 109,500 at the beginning of April fell during the month to 84,300, the figure for May 1st, but have risen steadily since that date, and stood at 130,000 on July 7th. Short time is, however, very widespread, and the number working only one day a week is quite large. It is believed that the number of workpeople who would be in receipt of unemployment relief if the scheme which is now in contemplation were already law, would exceed 200,000, a figure which probably represents about one-seventh of the total industrial workers of the country. At present, however, the situation is made somewhat easier by the fact that this is the busy season of the agricultural year, and large numbers of industrial workers, temporarily unemployed in their own occupations, are finding work with relatives and friends on the land, the mobility of labour in this respect being infinitely greater in Eastern Europe than it is in the West.

In certain well-informed quarters—unofficial as well as official—it is believed that the industrial crisis is now at its height. The liquidation of stocks is already being slowly effected, and in two or three months' time the situation, from this point of view, should be more normal. By then, too, the purchasing power of the agricultural community will have increased as a result of the harvest. It seems not unlikely, therefore, that a certain improvement will be noticeable by the autumn, though many of the unsatisfactory features of the general economic situation will take many months, if not years, to right themselves.

Some attempt must now be made to estimate the bearing of this industrial crisis on the budgetary situation which, for the moment, is the paramount consideration. The total yield from taxes (including the tax on property) and monopolies was as follows during the first five months of stabilisation; in February, 63.5 million zloty; in March, 103.7 million; in April, 108.6 million; in May, 83.9 million; and in June, 84.7 million. If the June figure (which only contained 4.2 million on account of the property tax) is maintained during the second six months of the year, the total revenue from taxes and monopolies for the whole year will only be 25 million short of the estimate given in our article last week, on the basis of the first six months.* But the industrial crisis was already well under way in June, and, indeed, the official returns of unemployment for the middle of the month were not far short of those ruling in July (June 14th, 126,900, as against 130,000 on July 7th). The present time is thus a turning point in the whole experiment of financial reconstruction in Poland. If the industrial crisis is, indeed, at its height, and an improvement is to be looked for by the autumn, the budgetary problem this year can be regarded as practically solved. It is necessary to add, of course, that it has been assumed throughout that no unforeseen events will arise in the political sphere, and that Poland will not be disturbed by her Eastern or her Western neighbour.

To re-establish the financial and economic life of the country on a sound basis, further economies must still be made by the Government itself. The reduction of customs duties, which has already been effected for one or two articles, is a necessity in order to diminish the cost of living, and thus increase the competitive power of Polish industry in foreign markets. In all probability this could be effected without loss of revenue to the State. A consolidation and reorganisation of the private joint stock banks is also of the very greatest importance, as Commander Hilton Young pointed out in his Report, while every possible step should be taken to bring retail and wholesale prices into a more healthy relationship with one another. With the advent of a stable currency, reorganisation, in these as in many other respects, has become much easier to accomplish, but much united effort will be necessary before Poland can play the part in economic life of the world to which she is entitled by the great natural resources of her territories.

* As, for example, the development of electrical power production. *Vide Economist of June 7th last.*

* Cf. *Economist*, Aug. 2nd, p. 184: fourth column of the table.

OUR INDEX NUMBER.

OUR Index Number for the end of July shows a substantial rise for the month owing largely to an advance in cotton, wheat and flour prices. The total is now 4,657, which is 126 points higher than a month ago, and is the highest point recorded since the end of February last. At this time last year the figure was at the lowest level touched since the Armistice, namely, 4,182, or 475 points below the latest figure. The following table compares the figures for the five groups and the total for the end of July with those of preceding months:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
End July, 1914	500	300	500	400	500	2200	100.0
Dec., 1915	579	352	516	464	553	2565	116.6
Dec., 1917	897	446	731	711	848	3634	165.1
Dec., 1918	1286	686	1684	839	1348	5845	265.2
Nov., 1918	1289	782	1848	908	1389	6212	282.6
Mar., 1920	1808	914	2974	1246	1709	8352	379.6
Dec., 1921	1344	805	1284	1216	1275	5924	269.8
Dec., 1922	921	636	1106	762	931	4357	198.0
Dec., 1923	861	706	1184	705	807	4264	193.8
Mar., 1923	824	752	1178	840	797	4392	199.6
June	815	773	1177	773	761	4301	195.5
July	819	756	1155	744	746	4182	190.1
Sept.	823	782	1214	732	745	4297	195.8
Dec.	853	815	1382	774	755	4580	208.2
Jan., 1924	899	845	1349	789	769	4662	211.9
Feb.	899	859	1308	819	783	4668	212.2
Mar.	897	843	1313	805	780	4640	210.9
Apl.	904	802	1364	788	778	4637	210.8
May	912	730	1357	753	774	4527	205.8
June	914	736	1347	764	769	4531	205.9
July	951	732	1423	777	773	4657	211.7

The increase of 37½ points in primary foodstuffs is almost entirely accounted for by wheat and flour. During July the price of flour was raised in successive stages from 40s to 47s 6d per sack of 280 lbs. The price of wheat, both home and imported, has also risen almost proportionately. Wheat prices tend to be sensitive towards the close of the cereal year, and the position has this year been accentuated by uncertainty as to crop prospects and the consequent market speculation. In last week's issue (p. 187) we gave some figures which indicated that the pessimism in regard to crop prospects has been overdone, and that there is no ground for suggesting a coming shortage of wheat supplies. Other cereals have also risen, including rice, in which a shortage of supplies has produced considerable speculation. There has been a seasonal fall in potatoes, and beef is also lower on the month. In other foodstuffs small declines in tea, coffee and sugar have been partially offset by a rise in butter.

In the textile group the principal movement was in raw cotton. Here, again, crop reports have been largely responsible, the third American crop report of the season giving the condition as 68.5, whereas the market had expected a report of 71.5. The present crop is now forecast as 11,934,000 bales, against 12,144,000 bales a fortnight earlier. Prices naturally rose on the publication of this report, and quotations for Egyptian cotton have moved in sympathy, while yarn and cloth prices have also hardened. In their monthly report Messrs Robt. Barbour and Brother write: "Had prices only remained steady there is a general belief that a fair quantity of the substantial inquiry before the market would have materialised into orders. The world generally is still reported to be bare of supplies of cotton goods, but dealers are showing very great reluctance to raise their limits, which are in the majority of cases hopelessly inadequate." Home-grown wool has risen, but there is no change in Australian wool. Silk, hemp and jute have contributed to the rise of 7½ points in textiles.

In the mineral group there was a further small reduction in pig iron and rises in the non-ferrous metals. A rise in vegetable oils was the only movement of note in the miscellaneous section.

In the table below we show the changes in each commodity's index number in comparison with that for the end of

June, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	102	+ 12	Cotton, A	174	+ 16	Copper	52	+ 1
English	98	+ 10	Cotton, E	180	+ 17	Minerals	77	+ 13
Flour	95	+ 15	Yarn	160	+ 5			
Barley	91	+ 8	Cloth	154	+ 9			
Oats	81	+ 13	Wool, Eng.	169	+ 10	Baltic timber	103	..
Potatoes	112	+ 18	Do Aust.	145	..	Amer. timber	89	..
Rice	131	+ 13	Silk	96	+ 5	Leather	60	..
Beef	81	+ 5	Flax	180	..	Petroleum	108	..
Mutton	90	+ 1	Hemp	59	+ 2	Oils	78	+ 3
Pork	69	..	Jute	104	+ 10	Oilseed	83	+ 1
						Tallow	68	..
Cereals & meat	951	+ 37	Textiles	1,423	+ 76	Indigo	83	..
Tea	152	..	Pig-iron	95	..	Crystals	12	+ 1
Coffee	112	..	Steel rails	73	..	Rubber	12	..
Sugar, cane	128	..	Iron bars	96	..			
Sugar, beet	130	..	Coal, steam	136	..	Miscellaneous	77	+ 3
Butter	92	+ 5	House coal	88	..			
Tobacco	116	..	Lead	140	+ 6	Total	4,657	+ 126
			Tin	96	+ 8			
Other foods	732	..						

These changes have raised the percentage increase over the pre-war level from 76.6 per cent. at the end of June to 81.6 per cent., as may be seen from the table below in which the indices for the end of July, 1914, are taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec., 1921	233	229	209	261	230	230.9
Dec., 1922	159	180	180	164	168	169.6
June, 1922	174	192	184	149	160	171.1
Sept. "	151	194	181	150	148	163.3
Dec. "	149	200	193	152	146	166.2
June, 1923	141	220	191	167	137	167.7
Dec. "	148	231	225	167	136	178.8
Mar., 1924	155	240	213	173	141	181.0
Apl. "	156	228	221	170	141	180.8
May "	157	208	220	162	140	176.5
June "	158	210	219	164	139	176.6
July "	164	208	231	167	140	181.6

At the end of July last year the percentage increase was 63.1 and two years ago 71.4.

RUSSIAN HARVEST PROSPECTS.

(BY A CORRESPONDENT.)

THIS year Russia is once again faced with a partial failure of the harvest. According to Soviet statistics, out of 67,000,000 desyatins (1 desyatin is equivalent to 2.7 acres) said to be in cultivation 10,000,000 are estimated to be affected by this failure. The harvest over an area of 52,000,000 desyatins is regarded as about normal, while 5,000,000 desyatins—most of which lie in the so-called consuming region, where more grain is required than can be produced locally—are above the average. Some doubt may be entertained as to whether 67,000,000 desyatins is not an optimistic estimate of the total area in cultivation this year, for while the resumption of cereal export last year might be expected to stimulate an extension of sowing, the widespread complaints of the inadequate return made to the peasant-producer by the Soviet Government's grain-collecting organisations suggests that the encouragement afforded by export must be discounted to a considerable extent. It is, in any case, significant that *Economic Life* (Moscow) for July 24th shows that serious criticisms of the Soviet Cereal Export Company (Export-Khleb) have been made by the Commissariat for State Control, which draws attention in its report to the fact that the overhead charges of this body are 100 per cent. above those of private firms operating before the war; that not one of the local organisations actually engaged in collecting grain in the Ukraine has found it possible to get any final settlement of its accounts with the Export-Khleb; and that the existing system of paying grain-producers is cumbrous and calculated to discourage them.

THE COPPER OUTLOOK.

THE first half of the year did not give much encouragement to the copper producers. Price movements, both here and in the United States, were generally in favour of buyers, and usually below the average for the three years from 1921 to 1923.

COPPER: Standard Cash.

	Official London Quotations.				Price of Electrolytic, New York.	
	Highest.		Lowest.		Per lb (cents)	
	£	s	d	£	s	d
1921	75	12	6	65	5	0
1922	66	2	6	57	0	0
1923	76	17	6	59	5	0
1924 (Jan.-June) ..	68	15	0	60	10	0

From the above table it will be noticed that the lowest price officially recorded on the London market for standard copper during the first half of the present year was 25s per ton above the worst registered during the whole of 1923, and this figure of £60 10s is 25s below the lowest seen in 1913. The highest reached during the six months from January 1st to June 30th last is, however, no less than £8 7s 6d below the best recorded in the year 1913, and the low level of the quotation for electrolytic in New York is also very striking. The average price of electrolytic copper in New York for all 1913 was 15.52 cents per lb. For the first half of the current year we get 12.98 cents; thus the claim that copper has been selling below the pre-war level and at too low a price would appear to have some justification, as obviously the production cost is heavier than it was ten years ago. The average selling price in New York for the first half of 1924 was no less than 2.54 cents below the full average for 1913, and this does much to support the theory that an upward reaction is more than overdue.

People who follow the movements of the non-ferrous group of metals have been rather puzzled by the way the commodity has persistently clung to this low level, but actually there is no great mystery about it. The wildest statements have been made about the prospects of copper, many writers on commercial matters having rushed in where the experts fear to tread, and some of the sanguine forecasts have done nothing much except keep buyers out of the market. The reason for the low level of values lies in the heavy production, the absence of demand from German sources, and the competition among the sellers. There have been spurts in the American price from time to time, but this has always attracted larger offers, and it was only after the turn of the half-year that standard copper on the London Metal Exchange began to attract attention again, this being due, of course, to enlarging speculative interest based on the better prospects for the metal, assuming that the Dawes scheme would go through before the close of the year, and that Germany would be helped financially. All the American predictions that electrolytic copper would rise to well over 15 cents before June 30th turned out to be as false as the forecasts emanating from the same source that tin would fall well below £200, and even a burst of aggressive buying on this side in support of the commodity was unable to change sentiment. During the last month or so, however, the feeling has been much more confident, and after weighing up carefully all the points for and against the copper market, it must be admitted that there are fairly hopeful prospects of producers doing better before the close of 1924.

The statistical position is certainly much healthier than it was. Copper figures, it is true, have to be very carefully handled, but it is possible to obtain a very satisfactory idea of supply and demand from the data available, although the American producers do not seem to be so willing to publish their returns as they used to be:—

COPPER PRODUCTION, DELIVERIES, AND STOCKS.

	U.S. Production.	U.S. Deliveries.	U.S. Stocks.	Great Britain.
	Tons.	Tons.	Lbs.	Tons.
1921	507,000	569,000	459,000,000	16,655
1922	675,000	820,000	216,000,000	26,780
1923	965,000	1,025,000	310,000,000	30,211
1924 (half-year)	578,500	617,750	220,000,000	36,515
			(June 30)	(June 30)

From the above it is possible to gain a very good insight into the general position, and also to gauge to a certain extent the future course of prices. The U.S. production

based on the half-year's returns is at the rate of 1,157,000 tons per annum, which is 192,000 tons in excess of last year's full outturn, and the deliveries are at the rate of 1,235,500 tons a year, or more than 200,000 tons over the full figures for 1923. The deliveries for the first six months were 39,250 tons over the production, and the stocks, at 220 million pounds at the end of June last, must be regarded as extremely moderate. The falling off in the U.S. domestic consumptive demand has turned out to be only temporary, and this is a point that must be kept in mind now that the export inquiry shows signs of expanding.

The chief factor in the export market over the next five months should be German buying. The success that so far has attended the London Conference and the prospect that the £40 million loan to Germany may be floated in another month or two, point to a brisk autumn demand for the commodity, and this is bound to influence prices, as they are at present too low. Previous to the war Germany was the largest foreign buyer of American copper, and in 1913 two-thirds of the copper exported from the United States went to German destinations. For all 1923 Germany took 20 per cent. of the U.S. exports of the metal, against 22 per cent. for this country and 21 per cent. for France, but during the first half of the present year Germany has been unable to buy copper in the States in any quantity, and the actual supplies in Germany are cut down to next to nothing. The reduction in the U.S. stocks (assuming, of course, that the returns are correct) to 220 million pounds by the close of the half-year, in the face of the slowing-down of the home demand and the absence of German business, is certainly very striking, and it is perfectly obvious that if there is a general improvement in European industrial and economic conditions over the remainder of the year following a settlement of the Reparations question, a considerable expansion in the demand for copper is bound to arise, and this should have a very favourable effect upon the present low values.

The producers have about a full month's requirements on hand, and that is all. The production looks heavy, but if European developments are favourable to the copper producers, they should have no difficulty about holding their own. It has been reported that there are stocks in Europe running into 100 million pounds held at the expense of the U.S. producers, and this, if correct, would do much to hold back the rise; but, of course, a lot depends on the weight of the Continental demand after the Dawes scheme has been adopted. Presumably the German users would wish to restock at once while the price is comparatively low; thus electrolytic should be able to move over the 14-cent level, and possibly get near to the 1913 average before the end of the year.

Towards the close of last month and early this month increased attention was given to the standard copper market here, and sales very often went over 2,000 tons per day. The rise in values was not very important. Cash copper, which on June 30th last stood at £61 16s 3d, rose on July 31st to £62 18s 9d, and at the beginning of August went over £63. The American price for electrolytic just before the holidays was put up to 13½ cents, and some large sales were made to France round about this level. The tendency since then has been a little harder, but there is no desire to force matters. The U.K. stocks at the end of July were 783 tons above the total for June 30th at 37,298 tons, but this is mostly rough copper, and the Havre stocks are under 10,000 tons. The technical position of the market, taking it all round, is sound enough, and the upward movement so far has been very gradual, which is as it should be, as there is nothing to be gained by trying to push prices up before the real demand sets in. Should the Reparations settlement go through, it will not be difficult to hold the gains made since the half-year ended, and from that point copper should share in any general buying movement of metals, raw materials, and commodities which may be expected under improved financial conditions in Europe. Prices, once the second-hand metal is absorbed, should move more in favour of the producers. Sentiment in regard to the metal is much more optimistic than it was, but it would be a mistake to try to carry the rise too far under the present movement, as it will take the German and other Continental users a long time to settle down.

BRANCH SHOP COMPANIES.

In our issue of April 26th last we reviewed the accounts of a number of companies engaged in retail trade in London. We now propose to supplement this with a brief survey of the reports of a number of retail companies whose business is run on somewhat different lines, namely, that of branch distributing centres with centralised management. Our list comprises fifteen branch shop companies, including four grocery concerns, three drapers, four men's outfitters, and two chemists. In most cases the latest reports refer to the year 1923, but in one or two instances come down to a later date. On the whole the results disclosed by the accounts are better than in the previous year, although set-backs here and there are recorded. Four companies, however, have raised their rate of dividend, while one has reduced it, as may be seen from the record below:—

	1911	1912	1913	1914	1915	1916	1917	1918	1919	1920	1921	1922	1923

* Free of income-tax.

A year ago the only company to make a reduction was the Home and Colonial, but it should be mentioned that this concern two years ago raised its capital from £100,000 to £400,000. This year the old dividend rate is paid on the increased capital. The deferred capital of the Maypole Dairy was also increased three years ago from £1,233,300 to £2,158,300. On the whole the dividend list is a fairly good one from the shareholders' point of view, considering general conditions during the past few years.

Net profits also make quite a favourable showing, as may be seen from the summary below:—

	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
Bobby and Co.	£ 19,456	£ 29,595	£ 32,249	£ 51,136	£ 44,400	£ 52,900	£ 75,704	£ 70,285

Meadow Dairy	..	..	..	..	..	..	18,301	17,832

Five companies show a decrease. The chairman of Lipton's, in explaining the set-back, stated that "the main cause in bringing about the set-back in the profits was the continued fall in market values of most of the principal commodities the company supplied to the public. This item alone represented a loss of profit greater than the total decrease in net profit shown in the accounts. They had made, during the year under review, an exceedingly large number of reductions in prices affecting the majority of the lines they handled, as the directors believed it to be good policy to pass on to the consumer any benefit obtained from lower market prices at the earliest possible moment. These reductions in prices had almost always been caused by falling market values of the various commodities concerned. A striking illustration of the effect of these falling market values could be found in a comparison of the average prices of some of the company's biggest lines during last year compared with those of the previous year. For instance, several of the most important lines sold by the company, including bacon, cheese, and butter, showed decreases in value ranging as high as 30 per cent. They were, of course, obliged to keep considerable stocks of these lines in their branches, warehouses, and in transit, and it was impossible to avoid altogether the losses caused

by the fall in market values, but such losses were kept down to the absolute minimum."

The Maypole Company ascribes its decrease "mainly to the continued and severe competition, and consequent reduced margin of profit." We are now officially informed that the Home and Colonial Stores have acquired a substantial interest in the Maypole Company.

The amount of money provided by the recent Home and Colonial issue of its ordinary shares was rather more than £600,000. It has been pointed out that this would represent the value of just about 3,000,000 Maypole deferred shares. Bobby and Co. continue to expand, but the fire at its factory resulted in a considerable disturbance of trade during the year.

The following table shows the principal assets and liabilities of 15 companies over three years:—

We have included Boots Drug Stores in our list this year. It may be recalled that last year a dividend of 360 per cent. was paid on the £100,000 ordinary shares in the company, while the issued capital bearing fixed interest amounts to £1,400,000, and receives a little less than one hundred thousand pounds. This remarkable dividend did not comprise all the good fortune of the ordinary shareholders. Certain reserves, both in this and subsidiary companies, which were built up against a fall in prices, were not all required. Altogether there was a surplus account, amounting with the balance from the previous year to £1,443,071. As a sequel, the issued share capital of the company has been increased to a total of £2,400,000. Under resolution of the company, 900,000 unissued ordinary shares were paid up in full by the appropriation of £900,000 from the surplus account, and distributed amongst the holders of ordinary shares. Thus the 360 per cent. distribution is maintained.

The Meadow Dairy has increased its share capital from 504,727 £1 preference shares to 600,000, and 3½ million 1s

ordinary shares to 7½ millions. The International Tea Stores still retain the goodwill account at £626,675, a rather startling item in assets totalling £2,816,514. There is a reserve account of £384,906.

We conclude with a table of share prices and yields:—

Description.	Share.	Price July 30, 1914.	Price July 31, 1920.	Price July 31, 1921.	Price July 21, 1922.	Price Aug. 27, 1923.	Price End July, 1924.	Present Yield.

foreign competition, its capital and labour can be transferred, and must be, in order to provide goods to pay for the imports; and (g) that left to themselves, people will buy what they want at the cheapest price; "this, therefore, must be their interest. And since the State is a collection of consumers, and individual interest is social interest, the ultimate criterion of the interest of the State is the interest of consumers."

In these propositions and their corollaries, Sir William contends, "consists the whole of the generally accepted economic doctrine of the century which followed upon the great work of Smith." With one very important exception, this contention may be granted; and surely most people who read them with a mind clear of fiscal prejudice must agree that they are, in the main, and with the qualifications which their exponents would certainly have admitted, as true to-day as when they were first written, and that the present economic conditions under which the world is groaning can only be cured by the recognition of their truth and the practical application of them to the guidance of the policy of the nations.

One of the most difficult to swallow is the first, because Sir William has very cunningly confused it with the irrelevant doctrine of the beneficence of Nature. But when we translate this first proposition into plain business language it becomes a very simple truism. For it merely means that every normal man, in his economic activities, naturally tries to secure his own advantage, and consequently works to produce some commodity or service that is wanted by his fellows, so that by selling it to them he can get as many as possible of the goods and services that they produce. In an economic society, each man can only prosper by serving the rest, or some of them; and to leave each man free to carry out that service according to his lights is a policy which may not necessarily be perfect—for Sir William rightly reminds us of the necessity for Factory Acts and sanitation laws—but certainly has a great deal to be said for it when compared with its only possible alternative—public regulation. And it is this alternative of public regulation that, by its blunderings and futilities, inspired the old economists with their passionate devotion—doubtless carried to the point of prejudice, but justified a thousandfold in the main—for "the simple system of Natural Liberty." In the fourth proposition every individual is said to know his own interest "better than anybody else." Sir William gives McCulloch's authority for this view, but the well-known passage in the "Wealth of Nations" puts the matter in a different and much more convincing light:—"What is the species of domestic industry," it says, "which his capital can employ, and of which the produce is likely to be of the greatest value, every individual, it is evident, can, in his local situation, judge much better than any statesman or lawgiver can do for him." It may be that some day we shall breed a race of statesmen and lawgivers able to teach every citizen the best way to earn his living, and so, as Adam Smith says, necessarily to "labour to render the annual revenue of the society as great as he can." But at present, in the midst of the wreckage caused by the failure of statesmen to carry out their chief business, of preserving and promoting the peace of the world, few of us will feel inclined to entrust to them the highly complicated task that would seem to be involved, if we are to follow Sir William Ashley in thinking that the doctrines on which Free Trade is founded are false. Their falsity, however, he implies rather than argues. He carps, nibbling at the fringe of the subject, but he never tells us that this or that proposition is wrong, still less does he attempt to provide an alternative. He quotes Bastiat's description of the State as the "great fiction by means of which everyone tries to live at the expense of everyone"; and Professor Sumner, of Yale, who wrote that "the State in practice is a little group of men chosen in a very haphazard way by the majority of us," and added that it, "instead of offering resources of wisdom, right, reason, and pure moral sense beyond what the average of us possess, generally offers much less of all these things." These views concerning the State are likely to be largely agreed with, at least by a considerable number of those engaged in business; and Sir William's candour compels him to admit that State action is now somewhat discredited; he says that "in the last half-century we have seen a high

doctrine of the State entering into England, and in a lesser measure into America, as part of the influence of the Hegelian philosophy and of a renewed appreciation of the Greek view of the State. We have seen the High-State doctrine confirmed by the visible efficacy of much positive State action. We have seen it, more recently, somewhat discredited.....and although the State in all countries undertook during the Great War, with quite unexpected success, novel functions, its activity has, for the time, undoubtedly left behind a certain soreness in some of the business interests affected. Moreover.....there are schools of political thought who are so indignant with the use which Governments calling themselves 'the State' have made of their powers that they propose to abolish the State altogether.....For these reasons," he continues, "I naturally do not intend to set forth any view of my own either as to Society or the State. I am content to have reminded you of the view entertained by the economists of the century we are considering. I do not suppose it would satisfy any serious thinker now. He might think Free Trade expedient; but he would not base it upon so one-sided and unhistorical a conception of the social union." In other words, Sir William, instead of lighting an economic beacon to illuminate the darkness of a distressed world, gives us a cloud of learned verbiage which leads to no conclusion for or against Free Trade. He cites Professor Taussig as a witness to the success of Protection in the case of the American iron industry, but surely all Free Traders admit that it is possible to benefit a particular industry by Protection at the expense of the rest of the community; and he is easily able to show that the diversion of capital and labour from one industry to another, owing to foreign competition, causes loss and friction, and that Governments can, by a Protective policy, encourage an influx of foreign capital into given industries; but he does not thereby prove that the balance of advantage, to the community as a whole, is against foreign competition in the one case, and in favour of Protection in the other. In fact, we have good reason to thank Sir William very heartily for his exposition of the foundations of international Free Trade. At a time when the barriers set up by after-war nationalism, developed to the point of hysteria, are gradually being weakened by commercial treaties forced on the new nations by recognition of the benefits brought by the exchange of commodities across the frontiers, it is most pleasant and timely that this distinguished Protectionist should vindicate Free Trade by his clear exposition of its doctrine and by the thin trickle of his criticism.

Notes of the Week.

The Irish Crisis.—The fond hope of the majority of people in Great Britain that they had done with the Irish question has received a disagreeable shock. When the Privy Council decided the other day that the refusal of Ulster to appoint its member of the Boundary Commission could not be overcome by the British Government appointing a member on Ulster's behalf except by special legislation amending the Act by which the Free State was established, the Government was immediately faced by the demand of the Free State that it should take the necessary steps to implement the Treaty. Clearly it had no other course than to decide to do so, and after several days of acute and critical negotiations a Bill for this purpose has been given a first reading in Parliament. At the same time, the Government has wisely decided not to rush by agreement. On the other hand, it has gone some way to meet the difficulties of the Free State Government by undertaking to call Parliament together on September 30th, which is a month earlier than had been intended, for the purpose of carrying the Bill through its remaining stages. Mr MacDonald has indeed already signed an agreement with Mr Cosgrave, subject, of course, to the ratification of Parliament to remedy the defect in the treaty. His Government is therefore deeply committed to carry the Bill if it can. If Ulster will appoint its member, in return for some understanding with the Free State with regard to what kind of modification the Boundary Commission is to make, all may yet be well. But if the Free State adheres to its hope of securing the

transfer of the counties of Tyrone and Fermanagh while Ulster insists that nothing but the smallest adjustments are to be made, the question may yet precipitate a political crisis in this country, and put in peril the whole Treaty under which the status of the Free State is at present determined. The Free State Government has accepted the Government's plan, and public feeling in Southern Ireland as well as in Ulster is marked by a greater restraint than might perhaps have been feared. But Ireland is an explosive country, and it is impossible to over-estimate the importance of straining every nerve to reach a settlement by consent. Our Dublin correspondent writes of the situation in the South that "The Boundary controversy is the subject of the moment, and is canvassed in all its aspects by the Press. The newspaper campaign in England in favour of the Treaty, followed by the announcement by Mr Baldwin that the Conservative party is once more committing its fortunes to the Ulster die-hards, is causing serious reactions upon the public mind. The pressure of public feeling is making it difficult for the Government here; arguing from the precedents of 1914, of 1916, of 1918, and of 1920, Nationalists of various complexions are beginning to believe that the anti-Irish elements in British public life will again be victorious even to the point of swaying British State policy to an open violation of the Treaty. A good many, consequently—some in mere irritated and unreasoning precipitation, others from a desire to be in the lead of popular feeling—are beginning to demand repudiation of the Treaty on this side. The Government, however, may be trusted to realise the extreme unwisdom of any such step or of any other course which would give any pretext or excuse for the British would-be Treaty breakers. It must be realised that the attitude of the British Government is scrupulously correct, though the pending delay is very trying, and fraught with many sinister possibilities. It is suggested here that the Free State should withdraw all its uniformed men a few miles behind its north-east frontier, as France did in July, 1914, in order to avoid all opportunities for frontier incidents which might be created or used to precipitate matters."

The Russian Treaty.—A correspondent writes:—"People in the City struggled very manfully with the bewilderingments of the Russian Treaty situation in the concluding days of this week, trying to keep calm heads in the strangest diplomatic whirlpool of modern times. When it was officially announced early on Tuesday that the four months of Anglo-Soviet negotiations had broken down on a somewhat mysterious Article 14, many City prophets said they had told us so. Then on Wednesday morning came the astonishing news of a resumption of negotiations, and on Wednesday evening the announcement in the House of Commons of the fact that an understanding had been arrived at. The Treaty, or treaties, were not then forthcoming, although Mr Ponsonby gave a somewhat indefinite and halting outline of what they contained. The extremely hard service he had done, including a final all-night sitting in conference, and the haste of the last hours of the negotiations, certainly form a considerable excuse for any shortcomings in his announcement. To say that anything which could justly be called City opinion was formed from Thursday's newspapers would be ridiculous. A few people hastily ran away with the notion that an immediate loan to the U.S.S.R. was to be guaranteed by the Government, and, of course, bristled with indignation at such a possibility. More patient and painstaking people made sure of the facts which were available, and said that "satisfaction" of at least 50 per cent. of the bondholders by an arrangement as to their claims and the payment of some compensation to our nationals, including juridical persons (companies) for confiscated properties, were envisaged as indispensable preliminaries to the recommendation to Parliament that a loan to the Soviet Government should be guaranteed. But, although the fear that the credit of the country might have been misused was thus partially set at rest, the actual position remained too vague on the vital points of our investors' and our industrialist and commercial claims for any just opinion to be formed. Yesterday came the publication of the two Treaties—a

Rubber Plantations Investment Trust, Ltd.

Paid-up Capital and Reserves over £2,500,000.

TEA — RUBBER — COCONUTS.

1-4, GREAT TOWER STREET - - LONDON, E.C.3.

General Treaty and a Treaty of Commerce and Navigation. Since these documents run to nearly seven columns of newspaper space, it is manifestly impossible to digest or summarise them in half a day. The above sketch of the position as to the loan and the British claims is, however, substantially correct. There are limitations as to the bondholders whose claims are recognised. They are those of loans issued or guaranteed by the former Imperial Russian Government or municipalities of towns in the territory now included in the Union, payable in foreign (non-Russian) currency, and the holdings to be negotiated upon must be other than such as were acquired by purchase since March 16, 1921, being in other than British ownership on that date. When the figures of these claims have been agreed upon, as well as those for compensation for confiscations, a second treaty will be made containing the sums, and on the signature of that document, the guarantee of a Russian loan of undefined amount will be recommended to Parliament. It is very important to note, however, that the Treaty is so drawn that Chapter III. of the Treaty, dealing with claims and loan, are stated in Article 13 to "constitute a single and indivisible unit." In other words, it would seem, no loan, no compensation. In general, it may be said that the feeling is that Moscow has made some small advance towards what we regard as honest dealing. Since Russia's insolvent condition is recognised in the Treaty itself, and has long been recognised in financial circles, it would be ostrich-like blindly to expect a promise of full satisfaction of all claims at the first definite asking. But she will need to go a great deal further than this agreement before any confidence in her will return to the City.

The Housing Act of 1924.—On Wednesday evening the House of Commons rejected the chief amendments which the House of Lords had made in the Housing Bill, and as the Lords did not insist, the Bill has become law. This is the most considerable measure of the session, and we should like to think that it will be a great and beneficent measure for the amelioration of the home conditions of a great part of the nation. But an Act which, in our view, is based upon unsound finance, fails to tackle adequately the causes of the shortage of houses, takes no steps to consider in a big way the distribution and layout of the 2½ million houses which it aims at building; and introduces a new and confusing level of rents, is not likely to remain long without radical modification. Indeed, few of the members who have voted for it expect that it will work according to plan. One of the Lords' amendments would have done something to remedy the last, at all events, of these anomalies. The Bill contains a vague clause, under which the rents to be charged are those now paid for pre-war houses in the locality occupied by the working classes, which, of course, will vary very much from place to place. It was proposed to lay down that the comparison should be with pre-war houses of similar class and amenity. The Minister of Health declared that this would wreck the Bill. It would, of course, do nothing of the kind from the point of view of getting more houses. It would only modify the type of tenant who occupies them. Manchester experience shows that 48 per cent. of the houses built under the Addison and Chamberlain schemes are occupied by artisans and 48 per cent. by clerks, and there is still a large unsatisfied demand at current rents. Clearly, then, the policy is relieving the housing pressure in the only reasonable way in which it can be relieved. But Mr Wheatley is determined to get into similar type houses a poorer class of tenant, and is therefore insisting on a lower basis of rent. In other words, as Mr E. D. Simon

clearly pointed out in the debate, there is to be discrimination, and the community, including all classes who pay rates as well as taxes, is to contribute to the rent of the favoured few. Thus an additional confusion is introduced in regard to rents, and we have postponed yet again the time when the free play of economic forces will be allowed to revitalise the building industry.

The New Crisis in Mexico.—The atrocious murder of Mrs Evans has again directed attention to the condition of Mexico and the anomalous relations between Great Britain and President Obregon's Government. It may be convenient to recapitulate such of the antecedent circumstances as are not in dispute. Mrs Evans, an American by birth, but a British subject by marriage, had inherited from her deceased husband a ranch of 2,300 acres in the State of Puebla, some 50 or 60 miles from the City of Mexico. Part of it had been designated in 1922 for expropriation and division into small holdings under a recent agrarian law. The expectant holders, aided by the State authorities, had repeatedly attempted to anticipate the transfer and occupy the land by force. In 1922 she had sought the aid of President Obregon, and had received satisfactory assurances, followed by protection, at various times, by Federal troops. But in July of last year he had issued a decree of expropriation, and since then the State authorities and peasants had repeatedly attempted to carry it out. She had appealed to the Supreme Court for a stay of execution, and had also, very properly, sought the aid of Mr Cummins, the diplomatic representative of Great Britain in Mexico. But his attitude in this and other matters offended President Obregon's Government, which had already demanded his supersession, and last June it made the manner of his interference an excuse for expelling him from Mexico. Last Saturday, when Mrs Evans was returning from Texmelucan, her nearest town, with about \$1,200 to pay her employees, she was murdered, her overseer wounded, and the money carried off. If, as the Mexican Government contends, the motive was robbery, the crime is one that might have been committed in any wild and imperfectly policed region—in Sicily, or Southern Italy, or Texas, for instance, thirty or forty years ago. But, apart from the probability that it was agrarian, an explicit statement has been made to the American Embassy in Mexico that the murderers were members of the Rural Guards, a force nominally under direct Federal control. In any case, they were encouraged by the previous attitude of President Obregon's Government. Dr Dillon's article in the *Fortnightly Review* for August (substantially a plea for the recognition of Mexico and an attack on Mr Cummins) shows that the Press had ridiculed her efforts at self-defence, and that President Obregon's Government had made light of her danger. It has been shocked and startled by her murder, and has hastened to promise a thorough investigation and the punishment of the criminals. A telegram has even announced—probably prematurely—that the executions have begun. But the crime suggests that the Government does not, or cannot, adequately control either the State authorities or its own police. Until it has fully made such reparation as is possible, the visit of Sir Thomas Hohler must be postponed, and with it the questions of a settlement of the outstanding difficulties and the recognition of the Mexican Government. Meanwhile, the defence of the ranch has been undertaken by Mrs Pettus, sister of Mrs Evans and an American subject, backed by her Government, which President Obregon is especially anxious to placate. It remains to be seen whether the Nationalists and Agrarians will be too strong for him, and whether he will be able to achieve the settlement with the American oil companies, of which there have been hopeful predictions in the New York Press.

The Financial Crisis in Austria.—The President of the Union of Vienna Banks, who is at present in London, has been in communication with us in regard to an article

which appeared in the *Economist* a fortnight ago on this subject. He considers—and his opinion is supported by the authority of the chairman of the Austrian National Bank—that this article gave too unfavourable a view of the effect of the crisis upon the big Vienna banks, and in particular that it conveyed a false impression to say that the majority of these banks had suffered from either complete loss or tying up of their assets. Clearly our correspondent did not intend to convey that all the assets of these important institutions were either lost or tied up, for if this had been the case they would have been compelled to close their doors. If the impression of our article was that these institutions are on the brink of bankruptcy, we hasten to disclaim any such suggestion, and nothing was farther from our thoughts than to increase the embarrassments of an already difficult enough situation. Exception was also taken to the statement that newcomers who had got a footing in the older institutions had speculated both for their own and for their banks' account on the Stock Exchange and foreign exchange markets to an unprecedented extent, and the director of one of these large banks, who believes his experience to be representative, has given his personal assurance that none of the bank's funds were used for franc speculation, though naturally it is impossible for any banker to be absolutely sure that none of the advances made by his bank were used by individuals for such purposes. Indeed, generally, it is objected that the account of the Banks of Vienna was too highly coloured, and that to speak of the withdrawal of deposits from the big banks as amounting to a "run" is unjustified. Readers of our article will appreciate that our correspondent was careful to say nothing that could undermine the position of particular institutions, and we are delighted to receive and give publicity to assurances of the essential soundness of important institutions of Vienna. This journal has strongly supported and done all it can to encourage measures for the economic restoration of Austria. Our article was not published without consideration, but because, in our opinion, banking conditions in Vienna have suffered from the undoubted fact that the element of speculation has been much too closely associated with the banking community in that city than is desirable, at all events according to British standards. An unsound financial situation in the capital is one of several ways through which the whole campaign for Austrian economic rehabilitation might be jeopardised. We suggested in the article in question some ways in which Viennese financiers might restore their credit, not the least important of these being the monthly publication of bank balance sheets on a systematic and uniform basis.

World Crop Estimates.—A correspondent writes:—The most important producing regions for wheat and oats lie in the zones or belts which see those crops ripen in the months of June, July, and August, and the "intensive period" during which two-thirds of the harvesting has to be accomplished is from June 15th to August 15th. With respect to barley and rye, these are still more the products of this same belt, for rye is completely neglected in the Southern Hemisphere and barley is a much less important crop than wheat or maize, oats, or linseed in South America. Wheat, of the regular cereals—for maize belongs to another botanical group, more fattening, but less digestible—still holds the leading position for the 20 countries of the north temperate and north sub-tropical regions. In Great Britain oats are the chief cereal, and still more so is this the case in Germany, Poland, and Scandinavia. India, however, with an immense area under wheat, does not grow oats at all; Italy, France, Spain, and Hungary all go to swell the wheat total, and rank emphatically as wheat countries. The crops of 1924 are, of course, not yet at all fully ascertained, but four main features may be regarded as already determined. Wheat will be quite 10 per cent. less as a total crop than in 1923. In Great Britain, India, the United States, and Germany the decline is less than this, but in Canada, France, Italy, and Roumania it is more. Barley is decidedly deficient in Canada, the United States, and Rou-

mania, but it is not much below an average in Great Britain, France, Spain, or Germany, and it is a good crop in India and North Africa. Oats are the crop over which opinion this season has been slowest to crystallise, but the general lateness of growth, combined with the wetness of July all over Western Europe, induces the latest estimators to state their belief in a full average crop of inferior quality. The estimates of oats, however, must be taken as the least assured of the four white crops. Rye is extremely important to Germany, Poland, and Czechoslovakia, and if these three great consumers of "dark bread" do not get enough of it they eat white bread; but much against their will, for they are all thrifty people. The cost of transport, however, makes their wheat cheaper than imported rye would usually be. The rye yields this year are probably a full average.

Unit: One million cwt.	Wheat.	Barley.	Oats.	Rye.
Great Britain	30	20	42	1
France	140	18	90	20
Spain	80	40	9	16
Italy	100	4	10	3
Germany	60	45	125	125
Czechoslovakia	20	20	25	25
Jugoslavia	35	5	5	3
Roumania	50	20	15	4
Bulgaria	22	5	3	10
Austria	5	3	6	8
Hungary	35	9	6	15
Poland	30	30	65	120
Belgium	7	2	12	3
Holland	2	1	6	7
Scandinavia	10	20	50	18
North Africa	50	45	4	1
India	200	65	none	none
Japan	12	35	2	none
Canada	225	32	150	10
U.S.A.	400	72	425	30

Twenty countries: Total.. 1,513 .. 491 .. 1,050 .. 419

The above estimates are not carried nearer than a million cwt, and are conservative in the sense of not accepting current rumours at a very high level. They are, moreover, based on the new areas, and where, as in the case of Canada, the United States, and France, these show a marked diminution, a corresponding decline in production is inevitably shown as a result. The decline in white crop area is chiefly in wheat. In the above listing of 20 countries, Scandinavia includes Denmark, Norway, Sweden, and Finland; North Africa includes Egypt, Tunis, Algeria, and French Morocco, but not the Sudan or the quite appreciable areas of native Morocco, now cultivated under French auspices. The Japanese estimates include all the islands, Formosa, &c., but not the mainland possessions and protectorates. Russia it is impossible to estimate, neither is any very important surplus to be expected even of rye, the one crop which is usually above the home wants even under the rule of the Soviets. It is a North Russian crop, and that is the portion of the whilom Russian Empire which has had the most unfavourable weather from May to the end of August. The export of barley from French possessions in North Africa was prohibited by decree on August 6th, but it is not yet known if this veto is intended to be permanent.

American Cotton Crop.—Our Manchester correspondent writes:—The 1923-24 cotton season ended on July 31st, and Mr H. G. Hester, the Secretary of the New Orleans Cotton Exchange, has lost no time in publishing his statistics for the twelve months. The actual growth is given as 10,988,000 bales, against 10,300,000 bales in the previous year. The commercial crop is stated to be 11,290,000 bales, as compared with 11,283,000 bales in the previous season. The world consumption of American cotton is given as 11,242,000 bales, against 12,630,000 bales in the previous year. The carry-over on July 31st is estimated at 2,319,000 bales, as compared with 2,573,000 bales at the same date in 1923. The growth for the new season is now passing through a very critical period. At the end of this week the Department of Commerce at Washington will publish an important condition report, and the figures will probably give some indication of the yield. On Thursday this week reports were received from America of rains in Texas. These were badly wanted, and prices weakened. There seems to be a likelihood of an output of 13,000,000 bales, given favourable climatic conditions henceforward.

Shipping Freight Index.—As measured by our index of "tramp" chartering, shipping freights in July were 4.5 per cent. lower than in the previous month, the July index figure, 120.70, being almost identical with that recorded in July, 1923. The movements of the component groups of the index are given below:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920.....	814.31	529.89	757.52	744.81	587.02	712.16	690.95
December ".....	268.90	277.17	244.10	256.79	286.72	347.18	280.14
December, 1921.....	160.06	164.07	163.72	144.43	141.25	166.47	156.67
December, 1922.....	137.09	135.15	129.19	122.61	136.08	159.34	136.57
December, 1923.....	134.03	132.72	120.09	124.35	125.07	144.21	130.08
January, 1924.....	130.69	137.49	128.33	124.88	139.45	156.68	136.25
February ".....	138.11	146.26	145.36	129.28	142.17	162.91	144.01

The month's changes in the index of each group and subgroup are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	112.90	- 0.49	S. America—outwards	96.33	- 3.34
Bay—outwards.....	132.11	- 12.10	India—outwards	147.99	- 11.27
homewards.....	135.48	- 12.10	India—homewards	122.10	- 8.43
Mediterranean—outwards	134.34	- 12.62	" homewards	118.16	- 10.24
homewards	114.27	- 3.68	Far East, &c.	114.69	- 3.64
North America.....	121.87	- 11.93	Australia.....	121.96	+ 3.12

Tonnage was taken up by the Plate fairly steadily throughout the month, and rates from this market were latterly firm on the somewhat lower level established. Elsewhere demand for "tramp" vessels was very quiet, and rates tended to weaken all round. Coal exporters found tonnage ample for their requirements; unfixed tonnage discharging in the Mediterranean proved to be in excess of ore shippers' demands; unexpectedly little chartering was done on North American account; and the East was satisfied almost completely by "liner" space available. Exceptionally, chartering at improved rates for winter loading was effected towards the end of the month on Australian account. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	(1913 = 100.)	1921.	1922.	1923.	1924.
January.....	194.59	..	131.60	..	114.05

Mean for year.....	158.40	..	122.02	..	109.69

While there are no positive signs as yet of a seasonal revival in freights for whole cargoes, there are indications that the recent downward movement is approaching, if it has not already reached, a turning point.

South Wales Coal Audit.—Our Cardiff correspondent writes:—It is doubtful whether the South Wales coalfield has been worked in any month in its history, excluding the period of State control, at so heavy a loss as it was last June. The official audit for that month shows a deficit of £241,198, without making any allowance for capital and other necessary charges that are excluded by the terms of the national agreement from the audit, and on the reduced output for the month that was equivalent to a loss of 1/4.9 per ton at the pit-head. This is the first month since December, 1922, when the South Wales coalfield has not been worked at a profit. There were four months in 1922 when the costs per ton exceeded the pit-head proceeds per ton, but the loss in June was more than twice the heaviest loss incurred in any single

month that year. The two chief factors responsible for the deficit were an increase in the cost of production and a decrease in the volume of trade. The fall in the average selling price was very slight. The pit-head value realised was 19/2.67, compared with 19/3.64 in May, and the practically stationary character of this pit-head price is in a measure due to the operation of the scheme originally introduced in 1922, under which the colliery salesmen, representing different groups of collieries, meet weekly with a view, as far as possible, of avoiding unnecessary underselling and of stabilising prices. A fairly stable price, however, has failed to meet the increased costs arising partly from the national wages agreement and partly from the reduced production. Under the national agreement the South Wales miners now receive a minimum wage of 42.22 per cent. on the 1915 standard rates compared with a minimum of 28 per cent. under the 1921 agreement. The new agreement also secures for the lower paid workmen larger subsistence allowances than they received under the old agreement, and, as the result of these two concessions, the wages cost per ton in June was 13/10.81 per ton, compared with 11/10.75 in April. There was an increase also of between 4d and 5d per ton in other costs. The production of coal in June was the smallest, with one exception, in any month since 1921, while the quantity of coal exported from the South Wales ports was the lowest since July, 1922. The wage certified for August under the June audit is only 24.05 per cent. on the 1915 standard rates. That is 18.17 less than the general wage rate which the coalowners must pay under the national agreement, and to fulfil their obligations under that agreement the coal owners have not only had to forgo the whole of their standard profits of 15 per cent. of standard wages, but also to find an additional sum of over £240,000 to pay the new minimum wage. The deficiency carried forward now amounts to over £1,000,000.

Norway: Trade and Finance.—Like other countries, Norway has lately experienced currency depreciation, exceptional foreign competition, monetary stringency, and deficiency in public revenue; and the report (to March 1924) of the Commercial Secretary to the British Legation at Christiania, recently issued by the Overseas Trade Department, shows how these difficulties have been intensified by special factors at home. The banking crisis in the spring of 1923, due to deflation, was perhaps made worse by the earlier of the remedial measures. There were prolonged labour conflicts (ended last May); a poor harvest; a lessened catch of fish, with consequent difficulties in the fishery districts; the yield of the direct taxes fell far short of the estimate, that of indirect taxation was kept down by the continuance of restrictions on the liquor traffic—which the legislature a fortnight ago declined to remove. The National Debt in 1914 was 363 million kroner, in 1923 1,503 million; the municipal debts in the same period rose from 223 millions to 1,391 millions; the floating debt, consequent on accumulated Budget deficits, has been met by new loans. But the currency depreciation assisted exports and favoured home industries, already aided by increased protective duties, and latterly by the rise of prices in competing countries, notably in Germany; bankruptcies were fewer and unemployment less; the prices of agricultural produce and the value of the fish exported were higher, and the markets for Norwegian fish have been reopened by the commercial treaties with Portugal and Spain. The whaling industry, extending now to South Georgia and West Africa, and shortly to Kamschatka, has been profitable; new Government and municipal electric power schemes are projected, and improved organisation is contemplated under Government control. Power is to be exported to Denmark whenever the Danish demand becomes adequate. The old stocks of imported goods have been cleared off, with some exceptions, chiefly in certain textiles, and the rise of prices on the Continent may give British exporters their opportunity; but the shipping communications from British ports are insufficient, and the demand so far is moderate. Commercial treaties have been concluded with Portugal, Czecho-Slovakia, and Lithuania; that with Spain is to be revised; others are pending with various Baltic and Succession States, Roumania, and (as regards shipping) Finland. Details are given of the increase of

Customs duties, temporarily and for revenue, but the majority of the Tariff Commission appointed in 1915 has reported in favour of Protection. Industries, on the whole, improved, especially pulp and paper, mining, granite (of which Great Britain takes by far the largest share), aluminium, and matches. British exporters should study the particulars given of the manufactures for home consumption, and may note that the Public Works Department prefers home-made goods. Railway extension and electrification goes on; but some of the smaller lines planned may be abandoned in favour of public motor services, which are multiplying. Apparently there is an opening for a certain type of car. The mercantile marine seems to have gained in efficiency, in spite of decreased tonnage and scanty profits: very little tonnage was laid up, and 25 per cent. now consists of liners regularly trading with or between foreign ports. State grants are a feature of the economic policy, especially in aid of home colonisation, unemployment, road maintenance, and motor traffic, and the import of grain and flour is still a Government monopoly. Very full particulars are given of the recent labour troubles and of legislation affecting labour and the liquor trade. The general impression left by the report is decidedly hopeful.

Politics and Finance in Ecuador.—While it was hoped that the considerable vote, a majority of more than 30,000, in favour of the new President, Dr Gonzalo S. Córdoba, would have led to the establishment of more peaceful conditions in Ecuador, late reports from that South American Republic prove that a revolutionary movement is still in progress. The new Executive takes office this month, is not regarded as a particularly strong man, and it seems doubtful whether he will be permitted to complete his full period of four years of office without some further disturbances among the partisans of the Conservative, Dr Lasso, one of the three candidates for the Chief Magistracy. While Señor J. Fredérico Intrigao, the rival Liberal candidate, withdrew his candidature, it is not expected that he will long remain quiescent under the injunction imposed by Dr Córdoba; the pretensions of General Plaza, who has also announced his intention of moving when Congress meets on the 10th inst., at Quito, cannot either be disregarded. The law passed by the Legislature in February, guaranteeing freedom of suffrage, making Government intervention impossible, and punishing corruption, bribery, and fraud, has proved, as it was feared, a dead letter. Up till now recorded, while the main source of revenue derived from agricultural products, such as cacao, rubber, &c., promises a less favourable yield than that of last year. To divert the attention of the labouring classes from the pursuit of mineral production to a wider and more successive cultivation of the soil has been the object of even in part, a steady flow of foreign capital to assist in the agricultural development of the country might be depended upon. Funds for this purpose have already been promised from several different directions. Swiss, United States, and Italian syndicates have promised to cattle-breeding capabilities of the country, the new President having also promised Government co-operation. This will necessarily depend upon the Administration being left undisturbed in the pursuit of their offices. Unfortunately, the troubles of Ecuador do not end here. The national Treasury is practically empty, while revenue is pledged almost up to the limit. Liens have been granted upon Customs receipts, special taxes, and other outstanding, and is in default with interest and sinking fund payments upon all except the Prior Lien 6 per cent. Bonds of the Guayaquil and Quito Railway. The total foreign debt at the end of last year amounted to about £21,000,000 (£4,200,000).

The Oil Depression.—Over-production in the American oilfields is not yet checked, but the usual preventive measures—organised limitation of pipe-line runs and the posting of lower prices—are now being put into practice. The daily average crude oil production reached its highest

level this year in the week ending July 12th with 1,992,850 barrels, but began to drop off in the following week with a decline of 15,350 barrels a day. The fall in oil prices this year has not, however, been severe, as will be appreciated from the following index numbers, published by a well-informed firm of stockbrokers in their monthly oil report:—

INDEX NUMBERS OF AMERICAN OIL PRICES (1913 = 100).						
	Crude Oil.	Gasoline.	Kerosene.	Fuel Oil.	Lubricating Oils.	
1924.						
January	151	97	164	124	137	
February	182	113	170	144	156	
March	189	115	171	137	158	
April	194	115	171	127	162	
May	192	114	166	121	157	
June	187	108	165	118	150	

During July the fall in crude oil prices was much more pronounced. A mild war was also waged in gasoline prices. The one chance that the American oil industry has of higher prices next year lies in the continued fall in the production of California. During the first half of this year Californian shipments to the Atlantic seaboard averaged rather less than 100,000 barrels a day, as compared with 200,000 barrels in the period of its peak production. As the consumption of oil on the Pacific coast approaches a balance with the production of oil in California, there will be less crude oil available for the Atlantic coast, and if, at the same time, the production in the Mid-continent fields declines as a result of the restricted operations, the oil position in the whole of the United States will begin to improve. But it will take time.

Canadian National Railway Finance.—The report of the Canadian national railways for 1923 is a much more hopeful document than its predecessor, but much scope clearly exists for further improvement. Revenue amounted to \$254,900,000, an increase of \$20,900,000 on 1922, while expenses, at \$234,700,000, were but \$3,500,000 more than those of the preceding year. Net earnings were thus returned at \$20,200,000, as compared with \$2,900,000 in 1922. This represents a considerable achievement, credited in the report to better crop conditions, but also, one may imagine, not altogether unconnected with the general "tightening-up" of the administration under the presidency of Sir Henry Thornton. For the first six months of 1924 gross earnings amounted to \$114,862,558, and operating expenses to \$112,233,128, net earnings thus amounting to \$2,629,429. But these surpluses exist only on paper. The accounts for 1923, the last completed year, show that when various charges are deducted (including \$65,000,000 for interest on funded debt, and on Dominion Government advances), a "net income deficit" of \$51,700,000 is revealed. The debit balance to profit and loss of \$235,000,000 brought forward from 1922 is increased to \$289,700,000. Apparently the Canadian Government and the Canadian investor have shared the burden of financing the national system. Of the \$74,550,000 voted by the Dominion Parliament for the fiscal year ended March 31, 1924, there was advanced in cash by the Government to the railways \$24,550,000, the balance being represented by \$50,000,000 of 30-year 5 per cent. guaranteed bonds issued in February, 1924. As at August 1, 1923, an issue was made of \$22,500,000 of 15-year 5 per cent. bonds guaranteed by the Dominion Government. The report makes it clear that the question of writing down the Government's investment in the railways is receiving serious attention. A solution is sought which would give due weight to the interests of the Canadian people, whose trustees the Government are, and would not, at the same time, burden the national railways with a load beyond their conceivable earning capacity. The varied nature of the securities outstanding complicates an already difficult position, as is shown by the following enumeration:—

HARRISONS & CROSFIELD, LTD.
1-4, GREAT TOWER STREET, LONDON, E.C.3,
AND BRANCHES THROUGHOUT THE EAST.
ESTATE MANAGEMENT. GENERAL EXPORTS AND IMPORTS.
ESTATE SUPPLIES. SHIPPING AGENCIES.
ENGINEERING. SALES OF PRODUCE.
BANKING AND INSURANCE.

Securities held by public	\$ 823,099,056.10
" Dominion Government	33,048,000.00
Receiver's certificates re Grand Trunk Pacific	53,177,668.18
Loans from Dominion Government, including interest	580,314,081.34
Appropriations account, Canadian Government railways	447,643,526.03
Governmental grants in aid of construction	16,204,520.40
Total	1,953,486,852.05

The question of freight charges is also intimately connected with present difficulties. Railway rates in Canada are, and have been for many years, the lowest in the world. At the end of 1920 they stood at an average of 75 per cent. above the pre-war level. A series of reductions, beginning in January, 1921, has forced down the general level to 32 per cent. above 1914, while the cost of labour, materials, and supplies averaged last year 90 per cent. over the pre-war year. As the report puts it: "The Canadian national railway system is the property of the people of Canada, and it is for the people, through their duly elected parliamentary representatives and the Board of Railway Commissioners, to determine what the freight and passenger rate policy of the Dominion in its relation to the Canadian national railway system shall be; but there is no way by which freight and passenger rates can be continually reduced, and net earnings at the same time increased; and, moreover, restricted net earnings must inevitably mean additional taxes to provide for annual deficits."

The Marconi Report.—The directors of Marconi's Wireless Telegraph Company, Limited, in issuing their accounts for the year ended December 31, 1923, state that profits have been adversely affected, from three causes. These are given as (1) losses through currency depreciation, (2) losses on account of broadcasting licences being held up, and (3) loss of revenue in consequence of the destruction of Clifden station. Although our figures do not reveal it, the report states that the volume of business showed an improvement over the preceding year. In the following summary we show the progress of the company over a number of years:—

	1913.	1918.	1919.	1920.	1921.	1922.	1923.
Gross profits	£ 246,682	£ 766,263	£ 1,538,040	£ 564,838	£ 554,515	£ 557,419	£ 552,924
Expenses	124,359	168,325	317,500	267,156	279,154	254,471	380,381
Net profit	122,323	597,938	1,220,540	297,682	275,361	302,948	172,543
Prof. dividend	42,500	55,000	117,500	30,000	30,000	30,000	17,500
Ord. dividend	150,000	305,912	617,824	391,567	397,098	412,507	275,007
To reserve	..	150,000	..	..	..	..	..
Balance	Dr 70,177	87,026	491,416	Dr 123,883	Dr 151,737	Dr 139,559	Dr 119,964
Brought forward	146,726	376,760	463,786	944,452	818,567	664,830	523,272
Carried forward	76,549	463,786	955,802	820,567	666,830	525,271	403,308

Thus the preference shares obtain their minimum dividend of 7 per cent. and the ordinary shares 10 per cent., as against 12 and 15 respectively a year ago. The balance-sheet has been made clearer since our comments on the accounts previously issued. Patents and patent rights are shown separately at £352,942, and "shares and debentures" as £2,346,575. These, the directors state, now figure in the accounts at the price at which they were quoted on June 30th last. "Where there is no market quotation for shares they have been taken into the accounts upon what your directors consider a conservative basis." The most important changes in the balance-sheet are the drastic writing down of various assets and the substantial amount taken from reserve for this purpose. In the last balance-sheet the general reserve was £3,986,355. From this has been taken £2,335,609, leaving £1,650,746. In the report it is not clearly stated how much of this may be regarded as a total loss and how much is in the nature of special reserve. It is stated that the claim against the General Post Office in respect of war service "is expected to be disposed of within a

few days." The report also announces the signing of the agreement between the Government and company for the provision of stations between this country and distant parts of the Empire.

Dunlop Rubber Scheme Revision.—The directors of the Dunlop Rubber Company announce that after conference with the representatives of the "A," "B," and "C" preference and ordinary shareholders an agreement has been arrived at for the reorganisation of the capital of the company, and the scheme will be submitted in detail to the shareholders in general meeting in September. Briefly, the terms of agreement are as follows:—1. The payment in cash of practically the same dividends as under the original scheme were to be satisfied by the issue of ordinary shares. 2. The "C" preference shares to be reduced to 16s each, and rank for 20s on a winding-up, while the dividend is to remain, as originally proposed, at 10 per cent. (equal to 8 per cent. on £1). 3. The ordinary shares to be reduced to 6s 8d each, but preserving to the ordinary shareholders the entire equity.

Guinness's Progress.—In the accounts now issued for the financial year ended June 30th last, the directors of Arthur Guinness, Son, and Co., Limited, announce a final dividend of 8 per cent., making, with the interim dividend paid in March last, a total of 14 per cent., and, in addition, they recommend a bonus of 12 per cent., both dividends and bonus being free of income-tax. This makes a total distribution of 26 per cent. It will be recalled that a bonus distribution took place in May, 1923. The paid-up ordinary stock was then increased from £5,000,000 to £7,500,000. To calculate dividends upon the basis of the stock as it stood prior to this bonus distribution, the rate for the year just closed is equivalent to 39 per cent., as against 36 per cent. for 1922-3. The net profit, as may be seen from the following comparative record, is the lowest since 1918-19, though it is still more than double that of the last pre-war year:—

	Gross Profit.	Ex-penses.	Net Profit.	Reserve, Depreciation, &c.	Ordinary Dividend.	Rate %
1908-9	£ 2,218,160	£ 1,096,522	£ 1,121,638	£ 280,000	£ 700,000	14
1909-10	2,465,713	1,195,090	1,270,623	325,000	775,000	15½
1910-11	2,629,180	1,301,511	1,327,669	335,000	825,000	16½
1911-12	2,541,030	1,328,241	1,212,789	255,000	825,000	16½
1912-13	2,527,237	1,443,119	1,084,118	185,000	825,000	16½
1913-14	2,752,974	1,514,726	1,238,248	235,000	700,000	14
1914-15	4,181,655	2,721,206	1,460,449	585,000	700,000	14
1915-16	5,472,922	3,962,122	1,510,800	531,000	800,000	16
1916-17	4,920,287	3,014,157	1,906,129	235,000	800,000	16
1917-18	4,105,393	2,083,307	2,022,086	235,000	800,000	16
1918-19	5,858,854	3,808,174	2,050,680	285,000	800,000	16
1919-20	12,941,420	9,677,513	3,263,907	735,000	1,000,000	20
1920-21	18,187,514	14,558,324	3,629,190	519,407	1,250,000	25
1921-22	14,570,320	11,691,967	2,878,353	235,000	1,450,000	29
1922-23	13,759,584	11,084,264	2,675,320	235,000	1,800,000	24
1923-24	12,528,137	10,017,504	2,510,633	200,000	1,950,000	26

Expenses consist mainly of Excise and licence duties, which, in the latest accounts, took £9,130,202, as against £10,854,679 for 1922-23. The reserve fund is credited with £200,000, bringing this item to £1,100,000. In addition to this there remains, after providing for the dividend and reserve, £715,822 at credit of profit and loss account. Total assets are £17,707,130, as against £17,431,781 a year ago. The balance-sheet will be found fully analysed in another column.

Venezuelan Oil Concessions, Limited.—The "affair" staged between the Royal Dutch-Shell group and the independent directors and shareholders of the V. O. C. Holding Company with regard to the position of the subsidiary, Venezuelan Oil Concessions, Limited, has been suitably composed. The committee which negotiated with the Royal Dutch-Shell managers of the V. O. C., Limited, claims a decided victory. In a circular issued to the shareholders it declares that the Royal Dutch-Shell group have given way all along the line—that is, they have agreed to waive their right to appoint a majority on the boards of the two companies, that they have agreed to a new sale-of-oil con-

tract to run from January 1st this year to June 30, 1936, on terms favourable to the V. O. C., Limited, and that they have consented to waive the perpetual royalty payable to them by the V. O. C., Limited, as from December 31, 1924. The Royal Dutch-Shell group, on the face of it, have acted handsomely. What we suspect to be the case is that they have in the meantime purchased in the open market sufficient shares of the V. O. C. Holding Company to give themselves control, so that they could afford to act handsomely without hurting the shareholders of the Royal Dutch and Shell Transport and Trading companies. The feelings of the ordinary shareholders of the V. O. C. Holding Company have been somewhat mixed by the announcement that followed that the company was to make a new issue of 600,000 shares at 45s. If the V. O. C., Limited, is to maintain its important position in the Venezuelan fields, it will have to incur heavy expenditure on drilling and tank-steamship construction. Already the Lago Corporation, in which the British Mexican-Agwi group is interested, is offsetting the V. O. C. wells at La Rosa, and has a large drilling programme on hand, while the British Mexican-Agwi group is building six "lake" tankers at Messrs Harland and Wolff's Belfast yards to carry their production away. The V. O. C. will perforce have to go forward now at a greater pace.

Bass, Ratcliff, and Gretton.—The accounts of Bass, Ratcliff, and Gretton, Limited, for the year ended June 30, 1924, show a considerable improvement as against the slight setback experienced in 1923. The following table gives results for a number of years past:—

Year ended June 30.	1914.	1919.	1920.	1921.	1922.	1923.	1924.
Gross trading profit.....	£ 749,607	£ 890,294	£ 1,113,121	£ 1,158,172	£ 1,205,795	£ 1,167,115	£ 1,222,864
Expenses	455,611	568,151	817,546	880,771	925,946	857,617	851,301
Sundry revenue.....	293,996	322,143	295,575	277,401	279,849	309,518	371,563
Balance forward.....	143,153	232,693	282,965	236,894	200,528	204,394	236,796
	64,593	61,570	60,080	61,970	73,085	66,748	63,571
Deb. interest	501,742	616,406	638,620	576,265	553,462	580,660	671,930
Bad debts and invest. depreciation	80,800	80,800	80,800	80,800	80,800	80,800	80,800
Ord. dividend	34,266	24,646	43,450	29,980	13,514	43,889	64,501
Prof. dividend	68,000	68,000	68,000	68,000	68,000	68,000	68,000
Rate	204,000	217,500	224,400	224,400	224,400	224,400	255,200
Reserve, &c.	15 %	16 %	11 %	11 %	11 %	11 %	13 %
	50,020	165,280	150,000	100,000	100,000	100,000	100,000
Carried forward	64,676	60,080	61,970	73,085	66,748	63,571	83,429

The actual dividend this year is 11 per cent., which compares with 8 per cent. for the preceding 12 months. This, together with a bonus distribution of 2 per cent., makes 13 per cent. in all, as against a total of 11 per cent. a year ago, and is payable free of tax. Turning to the balance-sheet, we find that, including the £100,000 allocated this year, the reserve fund amounts to £950,000. Total assets are £8,762,053, in which goodwill and trade-marks represent £800,000; investments, £1,908,562, and stocks, £1,419,957. A year ago investments amounted to £1,781,469, and stocks, £1,690,030; total assets were £8,802,153. Cash in hand, at £665,879, shows little change.

Jagersfontein Diamond.—Our mining correspondent writes:—At first blush it seems a little anomalous that with a substantially increased output last year's dividend total should fall somewhat below that of 1922-23. The position, however, is this:—The actual sales for the 12 months ended March 31, 1924—£496,000—only exceeded those of the preceding period by some £40,200, the sales for 1922-23 mainly coming out of stock. After the payment of an interim dividend of 3s per share, and a final of 2s 6d—as against 6s in all for 1922-23—the reduced balance of £86,500 goes forward. Of this, £19,000 is represented by diamonds unsold. The actual surplus of cash assets over liabilities amounts to £147,000—a sum substantial, but by no means excessive in view of the fact that the company is faced with an expenditure of about £100,000 upon a new power plant and additional treatment machinery. At the annual meeting, which was held in Kimberley on July 4th, the shareholders were promised a dividend in September and another in March next, the company having sold its output of diamonds for the second half of 1924-25. In the course of his speech at the said meeting, the chairman, Colonel Sir

David Harris, dealt at some length with the change which has taken place in the position of the Cape diamond producers. Prior to 1902 the De Beers and Jagersfontein mines (excluding the alluvial diggings) furnished approximately 85 per cent. of the world's output; to-day their proportion does not exceed 35 per cent. This is the result of the new discoveries in British Guiana and Angola, with the developments in South-West Africa and the Belgian Congo. Increase in the supply of stones would exert an adverse effect upon the price. As a matter of fact, the Jagersfontein company last year received 5 per cent. less per carat than in 1922-23.

West Springs.—Much interest has attached to the initial return of this, the latest entrant to the ranks of Witwatersrand gold producers. In anticipation of such event, the shares were earlier in the year up to nearly 30s. Then came rumours that the first output was likely to be a poor one, and that further substantial expenditure upon the treatment plant would be found necessary. On the strength of these statements a considerable amount of "bear" selling was indulged in. As officially intimated would be the case, the actual figures relative to the preliminary runs during May and June have not been published. The return for July is 37,700 tons, giving the satisfactory profit of £28,400, equivalent to rather over 15s per ton. With reference to the rumours anent the plant, there would appear to have been a certain amount of fire behind the smoke. It is explained that as the new type of tube mill liner has not come up to expectations, orders have been placed for two additional tube mills, with accessory plant. These appliances will, however, increase the capacity of the reduction works by 25 per cent. As we pointed out when commenting upon the annual report, the date of the commencement of dividends will depend largely upon the policy followed in connection with the loan which has been found necessary in addition to the debenture issue of £350,000.

Conditions in Japan.—Cable advices from Tokyo state that, although short money has risen to the basis of about 8 per cent. per annum, the general tendency of the market for longer date loans is still weak in anticipation of easier conditions in future. Issues of various debentures have increased, and although the yield on these issues is somewhat lower compared with those of last spring, the results have been good. Stock exchange business and commodity markets remain dull. There have been rather big transactions in raw silk since the middle of July, and the price has risen about two hundred yen above the low price of last June, being quoted at 1,750 yen. The export of cotton yarn is not brisk, but the tendency is expected to improve. During the last ten days of July the exports of the eight principal ports of Japan exceeded the imports, although the excess was only slight.

Industrial Welfare.—The value of the work done by a host of agencies for smoothing the relations between employers and employed is usually underestimated by the general public, who are more impressed by one strike or lock-out than by 99 disputes amicably settled without, in many cases, the outside world's having been cognisant of their occurrence. For the sake of a right perspective it is as well at times that such bodies as the Industrial Welfare Society should bring their achievements into the limelight. The society has for the last six years been responsible for bringing to the notice of employers the value of welfare work as an instrument for creating better relations with their workers, and as an aid to practical management. The fruits of its endeavours are seen in the existence of organised schemes for ensuring the safety, health, and comfort of the worker in more than a thousand industrial concerns, covering all the branches of manufacturing, as well as the distributing and retail trades. The evidence of those responsible for the management of representative concerns such as the British Thomson-Houston Company, General Electric Company, Salt McVitie and Price, Josiah Wedgwood and Sons, the Salt Union, and Stewarts and Lloyds, is a testimony to the seriousness with which the work is taken by those in the

best position to judge of its merits. Industrial welfare schemes entail a certain amount of expenditure, but provided they are wisely administered so as to arouse no doubts as to their *bona-fide* intention in the mind of a possibly hostile worker, the evidence given in the society's latest publication* seems fairly conclusive that the gain in reduced absenteeism, less frequent staff changes, fewer accidents, &c., leaves in the long run a significant balance on the right side.

UNITED STATES.—RISE IN SECURITIES—MONEY SITUATION AND OUTLOOK—BANKING PROBLEMS—SIGNS OF BUSINESS REVIVAL.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 25.

INCREASED activity and buoyancy are the feature of markets for securities, particularly stocks. Daily transactions in the latter have been exceptionally heavy this week, approximating 1,300,000 shares in some sessions, with trading on a broader scale than in many months. While buying has been largely for the account of speculative operations for the rise, there has also been an extensive investment demand, as well as some purchasing by the outside public. All groups of stocks, including rails, industrials, public utilities and specialties have participated in the vigorous upturn, although lately the tremendous activity in railroad shares has overshadowed dealings in other groups. Numerous stocks have reached new high levels, not only for this year, but in many instances the highest in a number of years. The average price of 20 representative rails establishes a new high record for 1924 at \$90.10, while the average for an equal number of industrials rose to \$99.40, or less than \$2 under the best previous level for this year. The continued easiness of money rates and the enormous supply of funds seeking employment are still largely responsible for the heavy buying at rising prices. But other factors have contributed. Perhaps the most important are the signs of improving business in some basic industries, notably steel and textiles, and expectations of a general revival of trade as the result of the increased purchasing power of agricultural communities, due in turn to the higher prices now prevailing for grain, cotton, and farm products generally. The rise in sterling to a new high point for this year, and further advances in commodities, particularly cotton, have also made a strong impression upon stock market sentiment. Interest in railroad shares has been stimulated by the increased volume of traffic, as disclosed by the latest car-loading figures, and rumours of impending consolidations of carriers into new systems. Among industrials, the advance has been led by steel, oil, copper, and motor shares, all of which have been heavily bought on indications of a turn for the better in their respective fields. Bonds, though somewhat less active than in recent weeks, are still being purchased extensively by institutions, corporate interests, and individuals, and most issues have enjoyed further sharp gains, notably railroad bonds.

Money rates, as indicated, continue extremely easy. On the Stock Exchange the call-loan rate seems to be virtually pegged at 2 per cent., for it has remained unchanged at that figure for both new loans and renewals since the early part of July; although demand for accommodation has increased somewhat with the greater activity in the stock market, the volume of borrowing is sufficient to absorb only a small part of the daily offerings. Time money is in abundant supply at 2½ to 3½ per cent., depending upon maturities. The fact that loans against Stock Exchange collateral are readily obtainable at 3½ per cent. for periods up to six and eight months is taken to indicate that bankers expect present interest rates will prevail for some time. Whether or not such expectations will be realised will depend largely upon commercial and crop-moving requirements. Should such demands reach

* "Industrial Welfare: Opinions of Manufacturing Firms." Issued by the Industrial Welfare Society, 51 Palace street, Westminster S.W. 1.

tions raised in direct defence of German interests, there is, in impartial circles, doubt whether the resource of arbitration, even if it makes for fairness, is suitable for the solution of commercial and currency questions, which are mainly matters of policy and opinion. However, not much faith is felt in the German delegation's ability to attain radical amendment of a scheme which the Ally representatives themselves agreed upon only after differences and compromises, and the separate provisions of which are largely inter-dependent. The general public here hopes that the scheme, in the best practicable, if not in a satisfactory, form, will be put through, it being realised that immediate advantages will be gained by Germany in the shape of relief from Ally pressure, and of a substantial improvement in the Ruhr situation. The details under debate in London, which at present seem to be of dominant importance, are likely soon to be submerged by the question of principle which lies in Germany's ability or non-ability to make the payments at all.

The financial situation continues to be fairly satisfactory, but the trade decline is sharply affecting the yield of some important taxes. The Federal Economical Council has approved in principle of the Food Duties Bill and of "the Government's plan to provide a system of homogeneous protection for the whole national work." It has recommended that the sales tax be reduced from the present 2½ per cent. to 1½ per cent., instead of to 2 per cent., as the Bill proposes. The reopened question of the restoration (*Aufwertung*) of secured debts is still before a Reichstag Committee. Representatives of the banks, mortgage banks, insurance companies, industry, and wholesale trade, expressed themselves against increasing the 15 per cent. already conceded, the grounds given being that debtors and creditors have adapted themselves already to the 15 per cent., that a further increase would merely disturb business, and that debtors could not bear a higher rate. Labour representatives also oppose the demand, complaining that the petty savers, who also lost everything through the currency depreciation, have been shown no consideration. On certain conditions the houseowners are willing to have their mortgage debts restored beyond the 15 per cent. They demand the abolition of the present house-rents tax, which is levied in order to take for public purposes part of the gross rents which formerly went in paying interest on mortgages. The creditors' agitation for further *Aufwertung* continues. The question is of great importance for Reparations, because even though the proposed industrial bonds are first charges, an increase of private bonded indebtedness would weaken the position of industrial and commercial concerns.

The Finance Ministry's report for July 11th-20th shows receipts 166,549,298 gold marks, expenditure 143,813,993 gold marks, surplus 22,735,305 gold marks, the expenditure containing 2,114,942 gold marks spent on redeeming Gold Loan. Receipts in the financial year so far (April 1st to July 20th) total 1,949,021,139 gold marks, expenditure 1,951,482,084 gold marks, deficit 2,460,945 gold marks. Expenditure included 228,785,779 gold marks for Gold Loan redemption. If expenditure on this redemption is left out of account, every month of the first half calendar year 1924 except February showed a surplus, but the surpluses tended to decline. Whereas receipts from Customs and Excise increased without a break, yielding 93.5 millions in June, against 76.2 millions in March and 41.2 millions in January, the yields of taxes directly connected with trade activity have of late gone back. The sales tax yield increased from 104.2 millions in January to 165.9 millions in April, but fell to 134.6 millions in June; the corporation (income) tax fell from 34.9 millions in January to 20.9 millions in June; the capital transactions tax (Bourse transfers, &c.) fell from a maximum of 33.9 millions in February to 20.9 millions in June. The highest yield from all taxes of this class taken together was reached in April, the month when the Reichsbank initiated its credit-restriction policy. The Bourse transfers tax is now yielding only about a third of its maximum (February) yield.

The money situation still improves. Interest rates on long-term loans have declined, but the security conditions are ever severer, and not much lending is done. The rate for day money, which for some time past had been fall-

ing, stiffened last week, and is at present around ½ per mille per day, double the rate of a fortnight ago. Deposits in the banks are increasing. Balance-sheets are still not published, but the Reichsbank states that deposits in private banks about doubled in the first four months of the year. This is mainly a result of the currency stability. The Reichsbank announces that it will in principle adhere to the credit restriction policy adopted three months ago, but that it is inclined to help in individual cases, while continuing to be guided by currency-stability considerations. The Bank is supporting the Prussian State Bank in giving agriculture a credit of 200,000,000 gold marks to facilitate realisation of the harvest. The Reichsbank has further decided to lend in future on security of the "real value" (coal, rye, gold, &c.) loans up to 40 per cent. of the Bourse value of loans in units of commodities, and 50 per cent. of the value of loans expressed in gold or foreign currencies. The demand for foreign exchange has increased, and quotations last week rose. The Gold Discount Bank denies the report that it is about to relax its rules by granting credit to importers of raw materials, who cannot guarantee repayment out of the yield of the re-exported finished goods. The Bank's discounts on July 31st totalled £6,471,911, against £6,394,387 on July 22nd. The Reichsbank's return for July 23rd shows a decline of paper mark circulation by 52,330,191 billions to 1,009,529,887 billions, and of Rentenmarks circulation by 66,365,046 Rentenmarks to 1,607 million Rentenmarks. The Bank's discounts and loans in paper marks and Rentenmarks together fell by 33.8 trillion to 1,942.9 trillion paper marks. The gold reserve has risen further by 8,680,000 gold marks to 478,052,000 gold marks, half of the increase being attained by exchange of foreign bills for gold. The circulation of all kinds of currencies on June 30th was equal to 3,128,600,000 gold marks, against 2,917,600,000 gold marks on May 31st. The former figure is 51.54 per cent. of the pre-war combined note and gold circulation. The increase in May mainly comes under the headings Reichsbank and Rentenmark notes. In May disappeared the last paper marks other than those issued by the Reichsbank, while the Gold Loan emergency note circulation fell to 9,500,000 gold marks, against 234,700,000 gold marks at the beginning of the year, and the railway emergency note circulation to 55,500,000 gold marks, against 141,900,000 gold marks. With the exception of 65,500,000 gold marks, the whole circulation at the end of June consisted of Reichsbank notes, Rentenmark notes, and coins (value, 194,700,000 gold marks). The withdrawal of the numerous emergency currencies is, therefore, nearly complete.

The industrial situation is getting worse. The Prussian Trade Ministry's monthly report shows serious stagnation in the iron, machinery, cutlery, chemicals, textiles, and boot branches. Building alone improves. Few new orders are being given, and old orders are being cancelled. Despite the May strike, the coal production of the first half of the year was satisfactory, being 51,498,099 metric tons, against 38,776,959 tons in the first half of 1923, and 69,878,503 tons in the first half of 1913 (within the present German area). Brown coal production is declining. The renewal of the Ruhr Coal Syndicate, which is itself only a provisional organisation due to expire at the end of 1924, is in doubt, owing to differences between the member firms, and the formation of a compulsory syndicate is being discussed. The mutual trade boycott with Russia, which arose in May through a conflict between the Berlin police and the Russian Trade Mission, has been brought to an end by an agreement in which Germany admits the irregularity of the police action. An agreement facilitating import on both sides has been concluded with Czecho-Slovakia. The Cabinet has authorised free export of fodder products, sugar beet, oil cakes, and buckwheat. The People's Party has demanded immediate submission to the Reichstag of the Food Duties Bill, and from this is concluded that the party has come to an agreement with the Agrarians for higher industrial duties. The Reichsrat's slowness with this Bill had created the impression that the Cabinet wished to postpone the inevitable sharp controversy until the parties' attitude on the Dawes Report became clear. The June foreign trade report shows a

slight decline in the import surplus. Comparative figures (in 1,000 gold marks) are:—

	IMPORTS.		
	June.	May.	Jan.-June.
Livestock	4,871	9,090	44,488
Food and drink	138,237	169,584	1,033,705

POLAND.—TRADE DEPRESSION—FINANCIAL SITUATION—POLISH BANK—SPECIAL POWERS BILL—ALCOHOL MONOPOLY.

(FROM OUR CORRESPONDENT.)

WARSAW, July 25.

THE trade depression from which Poland has been suffering since May has become more acute. The number of unemployed has reached 135,000. The Government has hitherto tried in vain to master the crisis. Its causes are very deep-rooted, and it will be several months before the present depression can disappear. The circulating capital which has been destroyed during the period of inflation cannot be reproduced in a few weeks. The lowering of the high costs of production is proceeding equally very slowly. The crisis is accentuated by the events in the Ruhr. During last year Poland benefited by the French occupation, because the Reich was obliged to import coal and iron from Polish Upper Silesia. Since conditions in the Ruhr have become more normal Poland has lost this market and is obliged to seek new outlets for her products.

Upper Silesia has been unable to compete with German products since the introduction of a ten-hours day in the Reich. After long negotiations the Government suspended for a period of three months the eight-hours legislation for the iron industry. Though pressed by the Industrial Union the Government refused to apply the same measure in the mining industry. The suspension of the eight-hours day is considered as a purely temporary expedient, and efforts will be made by Poland to persuade Germany to bring her labour legislation into conformity with the generally applied international standards.

When the trade depression began to make itself felt, it was generally believed that the difficult economic conditions would necessarily react on Polish finances and on the stability of the zloty. These fears, however, were unfounded. Mr Grabski has succeeded, during the last very difficult months, in balancing the budget. The revenue is even increasing.

The comparatively favourable financial situation is partly reflected in the returns of the Polish Bank. The amount of gold and of foreign coins and bills held has been steadily increasing since the issue of the first zlotys at the end of April, as shown by the figures below (million zlotys):—

	Gold.	Foreign Coins and Bills.	Total.
May 10	70.3	207.2	277.5
" 20	70.8	203.5	274.3
" 31	71.7	214.2	285.9
June 10	72.3	223.4	295.7
" 20	82.8	224.4	307.3
" 30	83.4	256.9	340.4

The zloty was maintained during the whole period on a stable level without a diminution of the reserve of foreign coins and bills held by the bank. During May and June this amount increased by 50 million zlotys. The upward movement of this item may be partly due to the small imports of raw materials from abroad. The industry requires actually only small amounts of foreign currencies for this purpose, and is obliged to convert the reserves accumulated during better times in dollars, pounds, &c.,

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits \$14,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 & 3 Crosby Square, Bishopsgate,
London, E.C.3

into zlotys, which are necessary for the liquidation of liabilities and for the payment of taxes.

The ratio of gold and of foreign bills and currencies to the zlotys in circulation is comparatively high, as may be seen from the figures below (million zlotys):—

	Zlotys in Circulation.	Gold, Foreign Bills and Currencies.	Ratio.
May 10	111.1	249.9	224.9
" 20	136.0	246.1	180.9
" 31	244.9	258.3	105.4
June 10	256.9	264.1	102.8
" 20	267.1	275.6	103.2
" 30	334.4	280.5	83.9

The legal minimum ratio is fixed by the statute of the Polish Bank at 30 per cent. The authorities of the bank have, however, decided not to let it fall below 60 per cent.

The old currency—the Polish mark—is disappearing very rapidly. On July 1 it had ceased to be legal tender, and of 596,000 milliards which were printed only 141,000 milliards remained at the end of June in circulation. Their value corresponds to 8 million zlotys, so that the total Polish circulation amounts to 413 million zlotys. This is only a small fraction of the pre-war circulation, which is estimated for the territories forming the Republic of Poland at two milliard gold francs.

Mr Grabski's task during the second half of this year will be very much facilitated by the Special Powers Bill, which was read the third time in the Diet and passed. Though the Sejm was very reluctant to divest itself for another six months of its prerogatives, it did not oppose the Bill, and introduced only modifications of secondary importance. The Bill does not simply renew the powers given to Mr Grabski six months ago, but covers partly a wider field. Not only matters connected with public finance, but partly also with the reorganisation of the credit system of the country, are to be administered according to the rules of the Special Powers Bill. The modifications of the existing legislation will not be presented to Parliament for approval, but they will become law by a decree signed by the President of the Republic.

The most important reforms which the Government will

be able to effect under the Special Powers Act are:—(1) Changes of the existing organisation of the different departments of the State with the purpose of securing a more economic working of the whole administration. (2) Formation of independent undertakings for the exploiting of State railways and State forests. (3) Extension of the salt monopoly, which hitherto exists only in the former Austrian Poland. (4) Sale of Government property for an amount not surpassing 100 million zlotys. (5) Floating of a loan to the amount of 300 million zlotys. For securing this loan the Government may give special privileges and guarantees, which, however, cannot involve a lease of monopolies and of State railways. In the domain of credit the Government is empowered to give special facilities to institutions issuing bonds. The control of banks, the organisation of savings banks, the unification of the usury legislation are equally subject to the provisions of the Special Powers Bill.

Together with this Bill, the Bill establishing the Government monopoly for alcohol passed the third reading. This monopoly will be organised in a similar manner as the alcohol monopoly in Russia before the war. The Government will control the production and marketing of alcohol. It is expected that the revenue from the monopoly will be much greater than the amount obtained hitherto from the excise duties. Probably the yield of this monopoly will serve as a guarantee for a loan which Mr Grabski intends to place abroad.

SWITZERLAND.—HOME AND FOREIGN BORROWING—TRADE IMPROVEMENT.

(FROM OUR CORRESPONDENT.)

GENEVA, August 5.

THE rise in money rates, which originated last year in Switzerland, continued during the first half of 1924, so that interest on public loans rose from 4½ to 5½ per cent. This is principally due to the fact that there has been recently an increasing demand for capital, a demand which was emphasised in consequence of the financial requirements of the federal railways for electrification purposes. The most important loan offered for public subscription in Switzerland during the first half-year was the 150 million francs 5 per cent. loan issued by the Federal Railways at 98½. The Federal Government did not borrow from Swiss finance, but placed in the U.S.A. a 5½ per cent. loan for 30 million dollars at 97½. The placing of this loan in New York was widely criticised in Swiss financial circles on the ground that the loan might have been placed in Switzerland on better, or at least on equal, conditions. The Federal Government stated that it took the step in order to ease the Swiss financial market, to prevent, if possible, a further drop in the value of the Swiss franc, and to avoid a new rise in money rates in Switzerland. It was also said that as the value of the dollar was very high when the loan was launched, the Swiss Government got the most out of its 30 million dollars, which it intends to repay by purchasing dollars when they are at a lower value.

The fact that during the first half-year borrowings by industrial concerns totalled 10,700,000f, against 46,009,000f during the corresponding period of 1923, shows that the situation of Swiss industry has slightly improved, though business is not as active as had been expected. The position is good in agriculture, owing to the high prices fetched by land products; it has very much improved in the building industry, which is very active in many cantons, and especially in some agricultural districts, where the peasants are employing their profits of previous years to improve and develop their farmhouses; it is very satisfactory in the watchmaking industry, the exports of which are steadily progressing, and in various classes of the foodstuffs industry, which is well protected by Customs duties. On the other hand, business remains difficult in all export trades, which are handicapped by the competition of countries with a low currency; by Customs barriers, and principally by the high cost of production, as well as by the fact that it has been impossible to increase the number of working hours, as had been proposed.

If the economic situation is far from being normal in Switzerland, it would be wrong to infer that trade and

industry are in a hopeless state. It is now believed that the worst of the crisis is over, and that Switzerland is now on the way towards recovery, but that it will take many years before trade and industry will recover their former prosperity. This mainly depends on the stabilisation of foreign exchanges, and on the settlement of those post-war problems which are maintaining a feeling of uneasiness and insecurity in the world.

Positive signs of a general improvement may be found in the fact that the number of Swiss unemployed has decreased by over 20,000 since the beginning of the year, and that the receipts of the various federal services are on the increase, while their expenses are generally decreasing. The receipts of the federal railways, for instance, totalled, for the first half-year, £7,417,600, or £502,781 more than during the corresponding period of 1923, and expenses reached £5,180,178, thus leaving a profit of £2,237,422, or £476,211 more than that of the 1923 first half-year.

Moreover, the foreign trade returns for the second quarter, and for the first half-year, are very satisfactory indeed. During the second quarter the value of imports reached £23,770,280 (594,257,000f), compared with £20,161,240 (504,031,000f) in 1923, and with £21,201,520 (530,038,000f) during the first quarter of 1924; the value of exports amounted to £19,572,200 (489,305,000f), as against £14,615,800 (365,395,000f) during the corresponding period of 1923, and £21,561,560 (539,039,000f) during the first 1924 quarter; the fact that the value of exports is lower for the second quarter than for the first is not surprising, and is generally recorded every year.

During the first half-year the value of imports reached £47,279,480 (1,181,987,000f), compared with £41,363,400 (1,034,085,000f) in 1923, while exports totalled £41,133,760 (1,028,344,000f), as against £32,268,800 (806,721,000f) in 1923. The first half-year's results leave an adverse balance of £6,145,720, which advantageously compares with an adverse balance of £9,094,600 at the end of the first half of 1923. The rise in exports is especially striking in cotton, silk, and woollen goods, ready-made clothing, copper, aluminium, gold and silver goods, machines, watches, and chemicals.

It may be added that the recovery of the hotel industry, in consequence of the great influx of foreign tourists during last winter, is compensating to a certain extent the adverse trade balance, and also indirectly encouraging trade and industry. The economic situation in Switzerland can therefore be described as steadily improving.

INDIA.—JUTE CROP—CURRENCY AND EXCHANGE—INDUSTRIAL FINANCE—COTTON PROFITS AND LOSSES.

(FROM OUR CORRESPONDENT.)

CALCUTTA, July 17.

THE consolidated jute forecast is 2,690,684 acres, against 2,741,434 acres, the revised forecast for 1923. This should imply, according to market estimates, a crop of anything up to 80 or 85 lakhs of bales, of which Indian mills may take 55 lakhs, there or thereabouts, leaving the balance for export, Continental requirements necessarily depending largely upon general trading conditions, as determined to no small extent by the Reparation negotiations now in progress. The mills remain on short time, but nevertheless manage to earn respectable profits, as instanced by two reports just issued, disclosing a dividend in each case of 80 per cent. The smaller acreage allotted to jute suggests that, while political propaganda may have exerted some effect, their profits are not in proportion to mill dividends; indeed, they never have been, and they were never more poorly remunerated than during the war years, when mill profits mounted to figures probably unequalled by any industrial undertakings in any part of the world. It is the rapacious army of middlemen who are mainly responsible, it being estimated that if cultivators receive a fifth of the published prices of the raw material, they count themselves fortunate representatives of their day and generation. Schemes are frequently submitted for curtailing middlemen's profits, but until the landholders, who are mainly interested in rent considerations, join hands with the mills in some large buying and financial corporation, progress will be nil. It is difficult to feel optimistic of action on these lines.

The Finance Member's speeches at Bombay and Calcutta disclose no new orientation of policy concerning exchange, Sir Basil Blackett preferring to hold his hand pending a Reparation settlement, conjoined with more reliable indications than are yet forthcoming concerning the ultimate disposal of the enormous stocks of gold in America. He had no difficulty in converting his Bombay critics to the view that, in present conditions, the only method of forcing the rupee to 1s 4d gold would be to create a certain increase of stringency in the money market, a suggestion the mere enunciation of which sent a shiver down the spine of every business man in the country. Last season 24 crores of emergency currency was issued, without, however, preventing the bank rate rising to 9 per cent., or even from remaining in force longer than in previous years. Sir Basil Blackett, much to the indignation of exchange bankers, ascribed this impasse partly to the latter's supposed action in taking undue advantage of official promises of help, thus:—"If one of the results of the provision of emergency facilities is to lead to the locking-up during the summer by banks and others of funds which they would otherwise have kept liquid for use in the winter, the emergency provisions can contribute nothing to a solution of the problem, and we are just as well off without them"; an insinuation the exchange banks took immediate steps, through the accredited commercial organisations, to repudiate. In the Finance Member's view, which nobody combats: "It is the function of the banker to immobilise some part of the currency in Calcutta, Bombay, &c., in order to keep his resources liquid against the period of stress. If, in addition, banking can spread up-country, it will be able to render an additional service by increasing the rapidity of circulation in the up-country districts, and thereby tend to make the rate at which money circulates more even between the mofussil and the banking centres. In course of time it will thus provide both up-country and in money centres an agency practised in the art of regulating the flow of currency."

India's greatest handicap is the existence of what may be described as a series of independent currency circles, linked neither with one another nor with any common centre. The difficulties thus created have, however, been temporarily accentuated in the past season by two abnormal circumstances, both, curiously enough, arising from the situation in the cotton industry: (1) The abnormal demand and value of India's export of raw cotton, due to the American shortage in three successive seasons; (2) arising from dear cotton, the reluctance of consumers to take the normal quota of piece-goods which serve normally to bring money paid out for crops back to the monetary centres. The present year should see more normal conditions in both these directions.

An important point alluded to by Sir Basil Blackett concerns the peculiar methods of industrial finance in operation exclusively at Bombay. He said: "An industrial concern ought not to be in the position of being liable to have to repay to the lender on demand or at short notice any part of its capital which it has locked up in bricks and mortar and plant, or even which it requires for the purpose of day-to-day working capital. So long as it runs the risk of a sudden demand to repay deposits, an industrial concern, however well managed and however adequate its rate of profit, may be forced to close down by some unforeseen monetary development leading to a general demand on the part of depositors for the return of their money. The habit of using short deposits to provide capital for industrial concerns has the further disadvantage that it restricts the supply of good industrial securities—shares, preference, debentures—available for the ordinary investor, and unduly narrows the market for such investments."

According to *Capital*, the lesson of the parable is so lost on India as to make it possible for the cotton manufacturing companies of Bombay to be involved to the extent of 50 crores through this pernicious system, so akin to wild-cat speculation. "Is it any wonder," it is asked, "that the once magnificent cotton industry of Bombay is dying of galloping consumption?" Certainly the depression is acute, and some mills, in consequence, are changing hands. The above system of finance is, indeed, already breaking up, and its disintegration is producing exactly the difficulties which the disappearance of an old-

established financial prop might be expected to produce. As reported from Bombay, the system of managing industries through the intervention of managing agents must undergo serious change in future on account of the serious defects which are now coming to light. "Shareholders' interests are not always safeguarded even in the best firms of managing agents, who, it is well known, keep their own commissions in the sale of yarns and cloth, and in brokerages, transport, and other charges with reference to cotton. Some of the best firms in Bombay are not free from these charges of overpaying on behalf of the mill for services rendered. It is further known that most of the mill agents pocket considerable sums by way of discounts offered by insurance companies."

It is now calculated that in 1923-24 India received for exported raw cotton little, if anything, short of 100 crores of rupees. Meantime, partly in consequence of these high values, mill exports and profits show declines, in most cases verging upon actual losses on working. Export markets for manufactured cottons are surrendering to the Japanese attack, and India, in the pursuit of new markets, is being pushed further and further West.

JAPAN.—FOREIGN TRADE—NEW IMPORT TARIFF.

(FROM OUR CORRESPONDENT.)

TOKYO, July 2.

JAPAN's new import tariff, increasing enormously the duties on certain items of trade, is quite in accord with the nation's traditional protective policy, to keep up the specie reserve and to promote home industry, and is the result of the great earthquake, with its colossal losses and consequent necessity of imports. With a heavy adverse balance of trade at the close of last year, and still steadily piling up, the national specie reserve is dwindling to an alarming extent. For the four months ending April last, the excess of imports over exports amounted to more than 682,000,000 yen, over 400,000,000 yen more than for the same period last year. For the month of April alone the excess was nearly 100,000,000 yen. At this rate the national gold holdings must fast decline, in spite of the embargo on export of gold, which still obtains.

The situation is thus somewhat disappointing to a country that so vastly increased its specie holdings during the European war; and the yen has fallen lower than for a long time. When Japan entered the war her specie holding did not total more than 341,000,000 yen. At the end of the war it had increased to over 2,000,000,000 yen. With the adverse trade balance of the last three years it has now fallen to something below 1,600,000,000 yen. Of course, the situation is to some extent extraordinary owing to the abnormal import of construction materials after the earthquake and to the 20 per cent. decline of output for export due to destruction of factories. Shops and offices not only have to be rebuilt, but restocked. Orders for over 27,000,000 cubic feet of timber have been placed in Canada, and other orders elsewhere. For the first four months of this year the increase in value of imports was over 372,000,000 yen. The principal items of increase were 78,138,000 yen in foodstuffs, of which 40,506,000 yen was for wheat only; and the increase in rice imports was over 18,167,000 yen. There was an enormous increase of 132,814,000 yen in raw materials, of which 53,971,000 yen represents raw cotton, the total value of raw cotton imports being 275,000,000 yen for the four months ending April last. Construction wood and timber imports increased to the extent of 43,801,000 yen in value, the total value of imports for the period amounting to 62,888,000 yen. The increase in semi-manufactures, too, was considerable, amounting to 97,639,000 yen, of which 71,391,000 yen is taken up in iron bars, rods, sheets, and tubes; and there is an increase of 10,740,000 yen in worsted yarns; while in articles wholly manufactured the increase in imports was valued at 59,422,000 yen, of which the largest items are machinery and motor-cars or parts.

As to exports, the only important increase is one of 19,213,000 yen in cotton tissues. Other increases of over a million yen were in aquatic products, waste silk, silk tissues, and vegetable oil, as well as menthol crystal. But

various other European descriptions. The Foreign market has another, though mild, excitement in an all-round rise in Russian bonds, in consequence of the agreement that has apparently been reached between the British and the Soviet Governments.

Home Railway stocks are up on balance. The traffics are beginning to make a more favourable showing, and trade is "talked" better. Good Argentine Railway returns had little effect upon the market for these stocks, though prices keep tolerably steady. Brazilian rails are inclined to harden again, and nitrate rails are better, though Mexican railway stocks have weakened. In nitrate-producing shares there is a firm tendency.

Rubber shares are a little better, owing to the further rise in the price of the produce, caused, of course, by the latest restriction of output from the companies. The tea market took a turn upwards, and thus attracted prospective purchasers who had sold their shares earlier, and were waiting for an opportunity to replace them when the recent depression appeared to be wearing off. Amongst oil shares, Mexican Eagles are noticeably good, though the market as a whole shows comparatively few changes of importance. The iron and steel group is higher, thanks to the idea that any peace settlement is likely to be followed by early resumption of trade activity, a consideration which is affecting some of the other branches of industrialism whose shares are negotiated in the miscellaneous market. The shipping market, however, is dormant.

Banks are good, and so are insurance shares. Marconis are disposed to ease off after their spurt, and the cable group shows no improvement. Most of the Exhibition stocks, amongst which may be reckoned the shares of the stores, hotels, catering, and other such companies, are marking time, Whiteleys being something of a feature of strength. Dunlops were little affected by the new reorganisation proposals. The brewery market is strong, by reason of the excellent dividends just announced by Guinness, Bass, and some of the other leading companies. New issues, as a whole, fail to make headway. Harland and Wolff preference came on offer at 2s 6d discount.

The Kaffir Circus is hardening up again, and a good deal of trade is taking place in a few speciality shares, of which Central Wests and West Springs are outstanding examples. Diamonds have sympathised with the advance, and a number of copper shares improved. The tin markets, West African, Cornish and Malayan, are decidedly firm, the Middle East shares being in persistent request from the Straits Settlements. Russian mines went a little better, on the reported completion of the treaty. Other mining shares are steady, and exhibit no conspicuous features of interest.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

OIL OUTPUTS.

THE CALTEX OIL COMPANY.—July production, 2,780 barrels, or 461 tons. MacFarland well closed on account of high water.

THE TRINIDAD FRIENDSHIP PETROLEUM COMPANY.—The production from No. 1 well for the month of June was approximately 70 tons. The well was only pumped at intervals owing to sanding-up troubles. The directors are considering the advisability of deepening the well some 300 feet, as they are informed there is every prospect of obtaining considerably increased production at that depth.

STEAUA ROMANA COMPANY.—Production for July was 24,920 tons, as compared with a production of 22,000 tons for the previous month, and 17,843 tons for July of last year.

LOMITOS OILFIELDS, LIMITED.—Production for July is cabled as 15,988 tons.

THE VENEZUELAN OIL CONCESSIONS, LIMITED.—Production of crude oil from the La Rosa Field for the four weeks ending July 26th was 32,444 metric tons (production for the previous five weeks having been 31,947 metric tons).

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during July, 19,700 tons; oil purchased during July from other companies, 8,400 tons.

The NET COST
of an **ANTICIPATED BONUS POLICY**
in the **NATIONAL PROVIDENT**
is considerably less
than that of
any **NON-PROFIT** policy.

COMPANY MEETINGS, &c.

GENERAL MINING AND FINANCE CORPORATION, LIMITED.

[INCORPORATED IN THE TRANSVAAL.]

IMPROVED RESULTS—BOARD'S SOUND DIVIDEND POLICY.

The twenty-fourth annual general meeting of shareholders was held at Johannesburg, on Friday, July 4, 1924, Sir George Albu, Bart., presiding.

The Chairman, in moving the adoption of the report and accounts, said: I feel sure that you have all been pleased to see that the financial position of the corporation has been further considerably strengthened.

BALANCE-SHEET ITEMS.

The net figure of issued capital, at £1,014,580, shows a decrease of £13,218, representing an equivalent number of shares purchased from the Custodian of Enemy Property during 1923.

Deposits, at £162,059, reflect a decrease of £51,327, representing amounts refunded to sundry companies during the year.

The amount of £233 appearing against "Creditors for stock bought not yet taken up" is insignificant, and is no less than £39,700 below the figure for the previous year. The reduction represents the value of ex-enemy shares of companies of our group delivered by the custodian and paid for during 1923.

Sundry creditors and credit balances, at £53,144, also exhibit the substantial decrease of £114,235, being the net amount liquidated during the period under review.

The next item on the balance-sheet, under the head of "General reserve, £100,000," is a new departure as far as this corporation is concerned, but I hope this item will continue to appear regularly in future balance-sheets, and at a greatly enhanced figure. It would have been possible to declare a dividend to shareholders instead of carrying the whole of this sum to reserve, but your directors felt that our first consideration should be the financial stability of the corporation, so that when the distribution of dividends is resumed there will be some prospect of these being continued on a reasonable scale.

The assets of the corporation still consist mainly of shares and debentures in mining companies under its control, and at £814,812 show a decrease in value of £38,777, representing in the main the net result of share transactions during the year. All our shares and debenture holdings appear in the balance-sheet at or under the market prices at the end of the last financial year, and I am pleased to say that, even at the present time, in a dull market, there is a very substantial margin in our favour between the figure at which our holdings stand in the balance-sheet and the market quotations now ruling.

Mining properties, claim holdings, real estate, &c., at £57,315, are practically unchanged, and the balance-sheet figure is more than represented by the realisable value of the assets which fall under this heading.

Advances against securities are decreased by £15,332, and the balance of £22,476 is fully covered by the security held.

Sundry debtors at £263,566 exhibit a decrease of £38,324, this being the amount of sums recovered during the year on account of loans made by us to certain of our subsidiary companies.

The item "Debtors for stock sold but not yet delivered," at £1,225, has decreased by £13,481, and does not call for any comment.

Cash at banks and in hand, £197,834, shows an increase of £3,241 over the balance at the end of 1922. In view of the fact that our total liabilities, other than to shareholders, have been reduced during the year by over £200,000, it must be considered extremely satisfactory that we are still able to show this increase in our cash, the total of which is now only £21,575 less than the entire sum of the liabilities I have just referred to, so that the whole of the other assets, which are very conservatively valued, are available to represent the value of the net issued capital of the corporation.

PROFIT AND LOSS-ACCOUNT.

From the profit and loss account you will see that the revenue in respect of dividends, &c., has decreased by £6,784, but this is more than counterbalanced by an increase of £14,306 in the profit on stocks and shares.

Interest, at £7,304, represents amounts actually received on loans, less interest paid by us. Following our usual practice, all interest which, for the time being, we were unable to collect has been carried to suspense, and not included in revenue.

Administration expenses exhibit a decrease of £6,446 for the year. The other items of expenditure are small, and call for no special comment.

The net profit of £100,332, carried to appropriation account, shows an increase of £21,474 over the previous year, which must be considered very satisfactory. To this falls to be added the difference between the par value and purchase price of ex-enemy shares of the corporation acquired during the past year, amounting to £11,678, giving, together with the balance brought forward from 1922, a total amount available for appropriation of £123,240. Of this sum £100,000 was placed to general reserve for reasons which I have already given you, and the remainder, amounting to £23,240, was carried forward to the current year.

The Chairman having referred briefly to the results of the various working mines, the usual formal business was transacted and the proceedings terminated.

WATNEY, COMBE, REID, AND CO., LIMITED.

TEMPERANCE ADVOCATES AND PROHIBITION.

The annual general meeting of Watney, Combe, Reid and Co. was held, on the 8th instant, at the Charing Cross Hotel, London.

Mr H. Cosmo C. Bonsor, J.P. (the chairman), presided, and in moving the adoption of the report said that after providing for debenture interest and the first preference dividend they had a profit this year of £671,889 to deal with, out of which they proposed to pay a final dividend of 2 per cent. on the preferred ordinary stock—making the full 4 per cent. for the year—and a final dividend on the deferred stock of 14 per cent.—making 20 per cent. for the year—and to carry £200,000 to the general reserve, and carry forward £185,202. The trading profit showed an increase of £65,000. It would be remembered that in their report for 1923 the directors viewed with concern the burden thrown on the trade by the Budget of that year, and in his speech he had pointed out that its consequences might be serious unless they had an increased trade to help them. Happily, they had had an increase of about 10 per cent. This increased trade, fortunately for them, had been in their higher class of products, which gave them the best profit.

TEMPERANCE ADVOCATES' METHODS.

This year had not been free from attack by those who would like to see their trade "exterminated," and he trusted the shareholders would forgive him if, for a few minutes, he criticised the methods of those so-called "temperance advocates." He would remind shareholders that these "temperance advocates" to-day were better organised, more active, and better financed than at any time in their history. They stated that their desire was to educate the people to the acceptance of local option, and the number of meetings they held and the amount of literature they published was a proof of considerable financial power.

It was a hopeful sign that citizens were beginning to see the danger signal of prohibition, and to fight for their rights and liberty as individuals. He would state at once that the temperance party did good so long as they preached and taught temperance habits, and so long as they confined themselves to that propaganda they would always have the support of brewers and licensed victuallers. They had, however, adopted a legislative programme which they claimed to be moderate, but which in reality was framed by the Anti-saloon party in America. As evidence of that connection he would quote the Rev. Henry Carter, the leading advocate of local option and of the legislative programme of the Christian churches. That gentleman said at the National Convention in Washington in 1919: "In the name of the living God let us federate ourselves as friends of mankind and servants of the Almighty God, that in our day and our generation mankind may see the last days of the dominance of this curse upon the earth." The "curse" alluded to was British beer produced by this and other firms. This was the statement of the advocate of the Temperance Council of the Christian churches, and following it was Mr Hopkin Morris's Local Veto Bill for Wales. Despite the suggestion that this Bill would allow the people of Wales to settle an important social problem, it met with such violent opposition, particularly in South Wales, that the House of Commons would not entertain it.

BISHOP OF OXFORD'S BILL.

Then they had had the Bill promoted by the Bishop of Oxford in the House of Lords; that Bill was adopted by the Temperance Council of the Christian Churches. Mr. Carter again. The Bill was described by many members of the House of Lords, both spiritual and temporal, as undemocratic, disingenuous, spoliation. The Bishop of Durham said: "The compensation offered was disguised as confiscation." Lord Long, Lord Cave, and Lord Sumner, among others, opposed the Bill, and endeavoured to show what it would lead to. Lord Astor supported the Bill, and quoted the Carlisle experiment as justifying its financial proposals. Other noble Lords quoted Carlisle as a wonderful instance of the success of State Control, but one noble Lord opposing quoted the hon. treasurer of the United Kingdom Alliance as stating that from a teetotal point of view it was a failure. The brewers had paid large

sums under the 1904 Act into the compensation fund. They were to-day investing large sums out of earnings in the cause of temperance, and if the Bill had become law, all their licences might have been taken away in four years without any compensation. The Bill was defeated by a large majority.

There was no doubt that the conscience of the country and the action of licensing justices had lately moved for the provision of an improved type of public house. He thought he might claim that for many years the board had advocated this reform. They were using their reserves in this direction, and their programme of works in progress, plans approved by the magistrates, and plans to be submitted to the magistrates, amounted to the large total of £426,000. Surely they deserved fair consideration and just security for this outlay of capital, which certainly was in the cause of true temperance.

The report was unanimously adopted.

BRITISH NORTH BORNEO (CHARTERED) COMPANY.

PRESIDENT'S CONFIDENCE IN THE FUTURE.

The eighty-third half-yearly meeting of the British North Borneo (Chartered) Company was held, on the 5th instant, at River Plate House, London, the Right Hon. Sir West Ridgeway, G.C.B., G.C.M.G., K.C.S.I., the president, being in the chair.

The President, in moving the adoption of the report and accounts, said that although in the year 1923 there was no marked increase of prosperity, the year's results gave no ground for despondency. It was true that their hopes of a revival of trade had not materialised, but the industrial activity of the country had on the whole been satisfactorily maintained. A bright feature was the steadily rising ratio of exports to imports. For every £100 worth of goods imported £102 had left the country in 1921. In 1922 the ratio had improved to £121, and in 1923 it had mounted to the high figure of £159.

In conclusion, the President said: I shall not have many more opportunities of addressing you. Possibly this may be the last occasion on which I shall enjoy that privilege. Consequently it is, I assure you, very disappointing to me that towards the end of my long term of office as president of the company that owing to the devastating war, and still more to its withering aftermath of trade depression, I have been obliged to disappoint you in the matter of the dividends which under happier conditions you would have been entitled to expect for the money which you have invested

in the territory. In these circumstances shareholders naturally are inclined to turn on the men who have the management of their affairs and blame them for reverses of fortune for which in their calmer moments they must admit that they cannot be held responsible. We have worked for you to the best of our power; we have not spared ourselves and have suffered many moments of anxiety, for I assure you that it is no easy matter to administer a territory under Royal Charter.

I am making no apology; we have nothing to apologise for. On the contrary, we maintain that your territory has been wisely and efficiently administered. Indeed, you are fortunate not to have suffered more than you have, for you have fared better than your neighbours.

You have not to lament the financial retrogression of your territory. For many years prior to the war the prosperity and revenue of your territory increased by leaps and bounds. Even during the war it steadily but slowly increased. In 1914 the revenue was £209,000; in 1923 it was £357,000. When the clouds which now darken the world have finally dispersed North Borneo will again thrive and prosper, and you will be compensated for the sacrifices and disappointments which you have suffered during recent years.

A discussion followed, and the report and accounts were adopted.

OROVILLE DREDGING COMPANY, LIMITED.

PATO MINES SUCCESSFUL RESULTS.

The thirteenth ordinary general meeting of Oroville Dredging Company, Limited, was held, on the 6th instant, at River Plate House, London, Mr F. W. Baker presiding.

The Chairman, in moving the adoption of the report and accounts, said the company received by way of dividends from its holding in the Pato Mines (Colombia) £125,400. Four dividends of 9d per share had been paid, and they proposed carrying forward a balance of £142,198. In his annual report of field operations the manager of the Pato company (Mr John Doyle) stated that 1,337,886 cubic yards were dredged, as compared with 1,966,287 yards in the previous year. The gross value of the gold recovered was \$404,232, averaging 29.9 cents per cubic yard, with an average depth of gravel dredged of 31.4 feet, as against \$479,247, averaging 24.3 cents, with an average depth of 28.1 feet. The field cost for the year averaged 10.09 cents per cubic yard, as compared with 9.01 cents. In addition, 447,308 cubic yards of tailings were dredged, the gross value of gold recovered being \$81,344, so that,

KANSALLIS-OSAKE-PANKKI

allowing for rehandling of these tailings, the results for the year under review compared favourably with the previous year's operations. Results of drilling carried out on one section of the property outside the tested areas had disclosed an old river channel estimated to contain 4,000,000 cubic yards, averaging 24 cents per cubic yard, of which 18 cents was considered recoverable. Further discoveries of payable gravel on the extension of this river channel were more than probable, and should materially add to the life of their property.

In regard to Nechi Mines (Colombia), Limited, Mr Doyle reported that field operations to September 30th showed that 1,260,708 cubic yards were dredged from the ground, as compared with 2,251,336 for the previous year. The gross value of the gold recovered was \$209,286, as against \$323,551. It was the intention of the directors to liquidate the Nechi Company at the earliest possible moment. As to the Colombian Corporation, Limited, a report had been received from Mr Hoffman, who states that he was not able to see or sample the reserves of the Constanca mine mentioned by Mr Prichard at the time of the purchase. Mr Hoffman did not say the reserves did not exist; what he did say was that he was not able to see or sample those reserves because he was not able to get at that portion of the mine from which the tonnages indicated by Mr Prichard were disclosed, as at these points cavings had taken place. The board felt to-day that no evidence had been produced which would shake their confidence in Mr Prichard's views as to the ultimate outcome of this property.

The report and accounts, after some discussion, were unanimously agreed to.

TRANSVAAL AND RHODESIAN ESTATES, LIMITED.

CAPITAL REORGANISATION APPROVED.

The ordinary general meeting of the Transvaal and Rhodesian Estates, Limited, was held, on the 1st instant, at River Plate House, London.

Mr H. G. Latilla (chairman of the company) presided, and, in moving the adoption of the report and accounts, said that, including loans and a minimum of £50,000 for quoted shares held, they had roughly £135,000 in liquid resources, and this did not include any Gem share or Globe Oilfields shares. Referring to the reorganisation proposals, he said there was really no loss of capital, most of the assets having been written down to a figure well below their value, and were it not for the fact that the directors thought the shareholders would appreciate a distribution free of tax it would be difficult to justify the recommendations before the meeting. To deal with the Fred Mine, the reorganisation scheme and the future of the Gem Company in one paragraph was a little difficult. The Fred Mine, although only a small proposition, had been running since 1913 and never looked better than it did now. Since February work at the 11th level had continued to open up a very rich body of ore, and these results were expected to continue below this level. In the meantime they had secured the Redwing property, situated about two miles from the Fred. The ore from the Redwing would be treated at the Fred mill. It should not cost more than £2,000 to establish whether or not it had the makings of a mine. The Gem Company had also secured a 40 per cent. interest in a property which was being worked by the Goldfields Rhodesia Development Company, and upon which highly satisfactory results were being obtained. To put the matter as shortly as possible, the position was that the Gem Company would be freed of its liabilities, and if the resolutions were passed the Transvaal

and Rhodesian Estates would possess, even after making the proposed distribution, the controlling interest in the Gem Rhodesia Company. There should be no difficulty of finance in any of the properties mentioned, and, to come to the crux of the whole matter, he could say that as a setoff against the sale of one-fourth interest in the Fred they had, in effect, acquired the whole of the Redwing, an option of 40 per cent. interest in the property now being worked by the Goldfields Rhodesia Company, and the option on the ground adjoining the Turkois mine. His view was that, as from November next, when the Gem Company should be able to haul and treat the rich ore now being opened up at the Fred, and also ore from the Redwing, profits would be earned at the rate of 10 per cent. per annum on the increased capital—which rate should be improved upon during the next twelve months.

The report and accounts were unanimously adopted, and the resolutions for the reorganisation of the capital were approved.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from Aug. 11-Aug. 16 were opened on Aug. 8, 1924, and the total amount applied for was £46,625,000. For bills at three months dated Monday to Friday at £99 os 9d, and above in full. Saturday at £99 os 11d, about 62 per cent., and above in full. The amounts allotted were as follows:—In bills at 3 months, £32,000,000; in bonds nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
1924.	£	£	£ s d	£ s d
July 4.....	30,000,000	65,220,000	3 6 5-43	94 13 0

Reports and Notices.

Lovell and Christmas, Limited, announce the resignation of Mr. V. G. Graae of his seat on the board of the company, and his appointment of chairman and managing director of the Maypole Dairy Company, Limited.

The Council of the Institute of Public Administration has approved of the appointment of Mr Michael F. Duggan (of the Accountant-General's Department, G.P.O.) to the honorary secretaryship to the Publicity Committee. Mr Duggan (whose address is the Post Office, Tunbridge Wells, Kent) will answer inquiries, and furnish information as to the activities of the institute from time to time.

GOVERNMENT STOCKS, &c.

CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—The Council of Foreign Bondholders notify the payment of the August instalment of the Debt Service in respect of the half-year ending December 31, 1924.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the first fortnightly instalment of the Debt Service payable to the Council in respect of the half-year ending December 31, 1924.

NICARAGUAN GOVERNMENT.—According to latest news received from Nicaragua, the Government has been able to cancel its debt with the American bankers, and has redeemed the Pacific Railway, which is now completely under Government control. Nicaragua has now paid all its debts, excepting the Ethelburga Loan of 1909, the service of which is being paid regularly, including the sinking fund. The internal revenue leaves monthly a surplus, which is being utilised for the development of the country.

ORIENTAL REPUBLIC OF URUGUAY.—Uruguay Consolidated 3½ per cent. Debt.—Sinking Fund.—Tenders of bonds of the above debt for redemption were opened at the office of Messrs Glyn, Mills and Co., 67 Lombard street, London, E.C., the amount available being £76,893 os 6d. Tenders received ranged from £57 to £59 5s per cent. Tenders under £58 10s were accepted in full.

RAILWAYS.

CANADIAN PACIFIC RAILWAY.—The London office of the National City Company has received cable advice that the \$10,000,000 Canadian Pacific 4 per cent. Consolidated Debentures which were offered in New York on Monday at 81 and interest, New York terms, by the National City Company and the Guaranty Company of New York, has been oversubscribed. They have further been advised that the National City Company is heading a syndicate which offered in New York \$25,000,000 Kingdom of Norway 6 per cent. Bonds at 97½ and interest, New York terms.

MISCELLANEOUS.

HUDSON'S BAY COMPANY'S LAND SALES.—For quarter ended July 31, 1924:—

	1923.	1924.
Farm lands—		
Acres.....	5,700	14,188
Sold for.....	£14,916	£40,407
Town lots—		
Sold for.....	£4,348	£9,018
Total receipts.....	£19,264	£49,425

For six months ended July 31, 1924:—

	1923.	1924.
Farm lands—		
Acres.....	10,158	25,057
Sold for.....	£28,210	£70,499
Town lots—		
Sold for.....	£10,396	£10,055
Total receipts.....	£38,606	£80,554

STEWARTS AND LLOYDS.—The directors, at their board meeting in view of the large expenditure incurred on additions to plant and works, decided to take steps to increase the share capital of the company by the creation of 2,700,000 additional deferred shares of £1 each, and to offer 1,335,579 of such deferred shares at par to the existing deferred shareholders in the proportion of one share for every two shares held, 10s per share to be paid on September 30 and 10s on November 29, 1924, the shares thus offered to rank for dividend from the respective dates of payment of instalments.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Recent heavy rains over most parts of the United Kingdom have not improved crop prospects, while retarding field work, except in Southern counties, where fair progress is being made with cutting of winter oats. Drier conditions and sunshine is needed, and given a spell of favourable weather, the outturn of wheat should be very little below the average. The market remained largely under holiday influences, consequently business was on a limited scale. Prices displayed irregularity and weakness for imported wheat on lower forward offers, but feeders generally maintained a steady level. The small quantity of English wheat available at country markets ranged from 13s 3d to 13s 9d per cwt, free on rail. Of imported, No. 1 Northern Manitoba quoted 62s 6d, No. 2 ditto 61s 6d, No. 3 60s 6d, Barusso 61½ lbs 57s 6d, Australian 58s 6d, choice white Karachi 57s 6d, and red ditto 56s 6d per 400 lbs, ex ship. Dull conditions prevailed in the floating and forward cargo section, buyers being reluctant to operate in view of

weaker cable advices from North America, and pressure to sell hard winter wheat. Maize cargoes also quieter, and prices inclined to sag on liberal Argentine shipments. Steamer of Dan-Gal-Foxanian loading sold at equal to 40s 9d to Continent, and yellow La Plata on passage at 38s 1½d per 480 lbs, c.i.f. terms. Flour in quieter request, and prices barely steady. London standard straight run quoted 48s 6d, patents 50s 6d to 51s 6d, town whites 48s 6d per sack, delivered in London area. Of imported, Manitoba patents range from 44s 6d to 49s, and Australian 42s to 44s per 280 lbs, ex store. Barley firm, with few offers. Californian quoted at 60s-63s, Chilean brewing 57s-60s per 448 lbs, ex ship. No. 3 Canadian western ex ship 40s 6d, landed 42s, Karachi ex ship 40s 6d, ditto landed 41s, Russian landed 40s 6d per 400 lbs. English nominal. Maize steady. Plate ex ship 38s 9d, landed 40s 3d, Bessarabian ex ship 39s, landed 40s 6d per 480 lbs. Oats firmer. Plate f.a.q. ex ship 24s 9d, landed 26s 3d. No. 2 Canadian western landed 31s, No. 3 ditto landed 29s 6d. Mixed Canadian feed, ex ship, 22s 6d per 320 lbs. English nominal. Millers' offals firm. Broad bran quoted at 8s 3d, middlings 9s 9d, fine ditto 11s 3d, bags included, ex mill; light oats 6s 3d, powdered oat husks 7s 9d, feed oatmeal 10s 3d, ground oats 13s 3d per cwt, free on rail. Oatmeal maintained. London-made flaked 18s, rolled oats 17s 6d, medium and fine cuts 17s 6d, coarse and medium pin-head 17s 6d, ordinary Scottish oatmeal 18s-19s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.
Estimated sales of home-grown wheat—				
1 week to Aug. 2.....	Cwts. 19,783	Cwts. 33,269	Cwts. 78,727	Cwts. 92,228
48 weeks to Aug. 2.....	12,693,123	16,867,631	16,007,637	12,295,849
Average price of English wheat per cwt.....	12 9	11 5	12 6	17 5

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1920 to 1923:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1924.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated August 7, 1924, is as follows:—Pig-iron: There has been no pig-iron market this week owing to the holidays, but the position is unchanged. There is no improvement in the demand for pig-iron, either for shipment or home consumption. No. 3 Cleveland G.M.B. is offered at 86s per ton f.o.t. or f.o.b., and mixed numbers East Coast hematite at 94s 6d per ton. Manufactured iron and steel: The local steel works report no improvement. Some of them are idle, some are partly employed, whilst others are going fairly steadily. Prices are unchanged, as follows:—Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: There is practically nothing doing. Odd cargoes have been sold on the basis of 22s 6d for best Bilbao Rubio, c.i.f. Tees.

Our Sheffield correspondent writes:—Business had not been fully resumed after the holidays at the time of the despatch of this report, but there is reason to fear that most branches of the iron and steel industry have lost some ground since the stoppage began, and the immediate outlook for many of the large producing companies is such as to cause grave anxiety for the future. While pessimism is rampant, however, a fair sprinkling of traders still retain confidence that there will be a turn in the tide of depression before matters drift into a critical position. Some of the lighter branches of the steel trade are looking up at certain of the works, and there is more doing in tool steel and files. The demand for automobile and railway steel is the only bright spot in the situation at Sheffield, and the withdrawal of the McKenna duties has not affected appreciably the former, while builders of automobiles do not apprehend any considerably increased competition from foreign sources. British cars are now being made to a pattern and at a price which gives them a firm grip of the home market, and the export trade is improving. The motor-cycle and push-cycle trades are enjoying a spell of great prosperity, both at home and in the overseas markets. The output of steel in this district has been declining heavily since the beginning of the year, and if the downward movement continues it will soon fall to the pre-war level, when capacity was 50 per cent. below what it is to-day. The fuel market is going from bad to worse, as the demand from all sources declines week by week. Trade with the Continent is now quiet, and the home consumption of manufacturing coal and coke is 25 per cent. or more less than it was three months ago. Prices are weakening, and the official quotations may be regarded as nominal. Best hand-picked branch, 32s; Barnsley best Silstone, 26s; best Yorkshire hards, 21s 6d to 22s 6d; Derbyshire ditto, 21s to 22s; Blythe ditto, 20s to 21s; Durham ditto, 24s; rough slacks, 12s 6d to 13s 6d.

Our Cardiff correspondent writes:—The South Wales collieries were idle until Wednesday night, in consequence of the usual August official holidays, and even on Thursday there was only a partial resumption of work. Shipping was resumed on Wednesday, but loading operations did not become active until Thursday. Under these circumstances, hardly any business has been transacted on the market, but in so far as tendencies were apparent they showed a slightly firmer tone. Holidays also involved a general stoppage of work in the iron and steel industries, and the usual weekly meeting of the Swansea Metal Exchange was only very sparsely attended. The tinplate market was very firm, with prices tending upwards. Preparations are being made for a resumption of work at the Ebbw Vale steel-works, which were closed down a month ago in consequence of the trade depression.

Formerly THE LONDON & RIVER PLATE BANK, LIMITED, which is amalgamated THE LONDON & BRAZILIAN BANK, LIMITED.
MANCHESTER. BRADFORD.

Affiliated with LLOYDS BANK LIMITED.

Fairly large purchases of Cleveland pig-iron have been made by Scottish foundries, as a result of the lower prices which have been accepted recently. Scotch pig-iron makers are quiet, with moderate demand and slightly reduced values. Shipments from the Clyde for the week ending Saturday last totalled 635 tons. Work has been resumed at all the iron and steel plants here after the holiday cessation, but buying on the part of consumers is on a very small scale so far, and in the export side considerable hesitation is observable in quarters from which business is usually expected at this season. The reason for this is probably the persistent reports of cheap offers from the Continent of finished and semi-finished materials, especially the former, which are stated to have been quoted £5 17s 6d, f.o.b. Antwerp. German billets have been offered, delivered Glasgow, at £6 5s per ton, but no sales are reported. Re-rollers and bar iron makers are only moderately employed, and the home demand for black sheets does not show up very well. Black sheets for export are in request for Australia, Canada, and the Continent, but in the thin sheet trade with Japan no new business is reported, and so far as fresh buying is concerned the market seems entirely blank. Makers are still engaged on the tonnage of these which was placed during the May buying movement. Galvanised sheet manufacturers are full up till well on in October, and are holding prices firm at £18 5s to £18 10s for 24 gauge. Small lots only, and these by special arrangement, can be procured in August or September.

METALS.

Tin advanced sharply on stimulating advices from the East, also United States, combined with a good demand for all positions. Cash sold at £256 10s to £259 5s, and three months £254 to £257 2s 6d to £256, while later at £259 10s. Eastern cables reported sales on the basis of £258 5s, c.i.f. At Thursday's market values ruled irregular and easier. Standard cash sold at £256 to £255 10s, three months £258 to £256 10s to £257 to £255 10s to £256 5s. Irregular and easier at close, standard cash quoted at £255 5s, with sales in August at £255 15s to £255 5s, and three months £257 10s to £255 to £255 10s, English ingots £256 to £256 10s. Copper also firmer, with business on a liberal scale, though slight irregularity was noticeable at times. Standard cash sold at £63 15s to £64 7s 6d to £64 5s, and three months £64 12s 6d to £63 2s 6d to £65 10s to £65 5s. The tendency ruled in buyers' favour on Thursday, with active trading in force. Standard cash sold at £64 5s to £63 18s 9d, and three months £65 5s to £64 17s 6d to £65. Easier, but offerings were well absorbed. Standard cash quoted at £63 12s 6d to £63 15s, with August sold at £64 to £63 17s 6d, and three months £64 15s to £64 17s 6d to £64 12s 6d. Electrodes £67 10s to £68s, best selected £66 5s to £67 10s, strong sheets £94, wire bars £68 per ton. Lead easier, and quoted at £31 17s 6d to £31 7s 6d as to position. Spelter irregular at £31 17s 6d to £32 according to position. Aluminium, home, £125; export £130. Antimony, English regulus, £44 10s to £47.

THE COTTON TRADE.

LIVERPOOL OFFICIAL QUOTATIONS—August 1, 1924.

37 Avenue de L'Opera.

AFTER a slight relaxation on Monday in the stringent conditions which prevailed, the demand for short loans became as persistent as before, and although the market cancelled its indebtedness to the Bank of England, considerable difficulty was apparently experienced in doing so, short loans having been quoted up to 4 per cent. and occasionally $4\frac{1}{2}$ per cent. On Thursday a further small amount was borrowed from the Bank for a week at $4\frac{1}{2}$ per cent. Yester-

day the disbursement of large amounts in railway and other dividends brought some relief. The discount market has been firm throughout the week, with $\frac{3}{4}$ per cent. practically the minimum for three months' bills, November Treasury bills being quoted at $3\frac{1}{8}$ per cent.

	Aug. 15, 1924.	Aug. 8, 1924.	Aug. 1, 1924.	July 25, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate 3 months' bills	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	..

Thursday's Bank return showed a decline of £1,072,000 in the circulation, and, with a small addition to the gold stock, there was an increase of £1,080,000 in the Reserve. Market repayments to the Bank were reflected in a reduction of £2,727,200 in Other securities, while Government securities were £385,000 lower. Public deposits rose by £95,000, leaving Other deposits £2,140,000 lower. The proportion thus rose by 1.2 per cent. to 18 per cent. The circulation of currency notes declined by £3,247,000 to £295,578,000, which includes £1,377,800 for notes called in but not yet cancelled. The fiduciary issue thus becomes £244,750,200, or £3,440,700 below the maximum.

The monthly statement of average weekly balances of the London Clearing Banks for July, printed in full on a later page, shows a drop of £9 millions in deposits, as compared with June. The July total, however, is still £25 millions higher than the May figure, and £5 millions higher than at this time last year. In the table below we summarise the aggregate figures for the nine English banks:—

	Dec., 1922.	June, 1923.	Dec., 1923.	Mar., 1924.	June, 1924.	July, 1924.
Capital and reserves	116.0	116.3	116.3	118.7	119.2	119.4
Acceptances	72.8	73.8	73.1	79.2	85.3	79.0
Deposits (incl. undiv. profits, &c.)	1,684.7	1,637.7	1,673.1	1,603.2	1,651.9	1,642.9
Total liabilities	1,873.5	1,827.8	1,885.5	1,821.1	1,856.4	1,841.3
Coin, notes, balance at bank, and cheques in course of collection	253.0	240.7	254.2	232.2	249.1	236.7
Money at call	106.0	113.3	111.3	93.5	108.1	98.3
Investments	384.5	355.5	363.8	361.7	349.3	348.1
Discounts	298.3	270.8	276.3	224.0	245.0	259.3
Loans and advances	732.7	746.9	756.6	785.5	791.7	791.6
Cover for accept., premises, &c.	99.0	100.6	123.4	126.2	113.2	107.3
Total assets	1,873.5	1,827.8	1,885.5	1,821.1	1,856.4	1,841.3

Cash and money at call have declined by £12½ millions and £10 millions respectively, while bills discounted have expanded by over £14 millions, but advances, which had been steadily increasing in preceding months, have remained stationary.

THE STOCK MARKETS.

The usual holiday influences in the Stock Exchange have been counteracted by political developments and other incidents which have served to quicken business in some directions. The volume of trade, however, is restricted. Gilt-edged stocks have hardened a little, deriving benefit from the rise in New York Exchange, but the trouble in Egypt has produced a cautious tone in the foreign market. The excitement in German bonds has subsided to some extent, but dealings are still active. Home rails have moved up a little on good traffics, and there have been one or two bright features among industrials, but rubber shares are inclined to droop. In the oil market the feature has been a rise in Mexican Eagles. There has been very little doing in Kaffirs, but the shares of the base metal groups have improved.

THE COMMODITY MARKET.

Business in Manchester continues to be hampered by wide fluctuations in raw cotton rates. Our Bradford correspondent states that with the improved conditions in America wool prices are expected to advance. The wheat market ruled easier, owing to weaker American and Argentine cable advices. A slight improvement is reported on the Cardiff coal market, but pig-iron prices are weak. Our Middlesbrough correspondent points out that there

will be no market next week on account of the local holidays. The tin market developed a weaker tone, and prices declined on selling pressure. Copper was slightly irregular, but sales were good. The tea market was firm, Ceylon and Java descriptions advancing $\frac{1}{2}$ d to 1 d per lb. Rubber lacked support, and the price was slightly lower. Other details of markets, together with prices, will be found on later pages from special correspondents.

FOREIGN EXCHANGES.

Considerable activity once again ruled in the foreign exchange market during the week. The first few days witnessed a continuation of the improvement in the Allied currencies compared with gold, as the result of the settlement of the French political crisis, and a consequent rise in the rates of most other European countries. Later a slight reaction, owing to rumours of a hitch in the Conference, set in, but yesterday morning the market showed a firmer tendency. The New York rate jumped from \$4.51½ on Saturday to \$4.58 at one time on Monday, though the closing rate was only \$4.55½. This was the highest quotation since last July. On the two following days there were considerable fluctuations between \$4.56 and \$4.52½, but the closing quotation on both days was \$4.54½. On a continuation of the reaction, which is attributed chiefly to profit-taking on a general feeling that the top had been reached, the rate on Thursday was \$4.53½, but yesterday morning improved to \$4.55½. There is still little indication of autumn buying of dollars. Forward rates are steady at $\frac{3}{8}$ cent per month below spot. The Paris rate has followed similar tendencies in following the course of the Conference. Thus it rose from 81.40 on Friday to 82.25 on Saturday, as a result of M. Herriot's return to Paris, but after the agreement reached there it recovered to 79.15 at one time on Monday, though the closing rate was 80.50. A reaction to 81.80 on Tuesday was followed by a gradual recovery to 80.90 on Thursday and 80 on Friday morning. It would seem, therefore, that the Germans' opposition to M. Herriot's stand with regard to the period fixed for military evacuation of the Ruhr was not regarded as serious. Brussels has, as usual, followed the French franc, and, after rising from 89.25 on Friday to 89.80 on Saturday, fluctuated between 87.95 and 88.50 during the early days of this week, and was quoted as low as 87.25 yesterday morning. Forward rates in Paris are 2 centimes narrower at 4-6 centimes for one month and 11-14 centimes for two months above spot, while in Brussels they are slightly broader at 1-3 centimes per month above spot. Italy has not undergone such fluctuations, falling from 100.80 on Friday last slowly to 100.50 on Tuesday, and then rising again to 100.75 yesterday. Berlin has risen from 18½ to 19 1-5 billion, but this is due to the appreciation of sterling, and the dollar quotation has remained unchanged. Among neutral currencies, Switzerland is once more moving with the dollar, rising from 23.83 on Friday last to 24.16 on Monday, and then gradually becoming somewhat erratic, falling from 11.64½ to 11.61½ on Saturday, and after a recovery to 11.64 on Monday, falling again to 11.60½ on Tuesday. Since then it remained fairly steady till yesterday morning, when it rose to 11.61½. Madrid, after rising to 33.75 on Monday, is now 33.65, as compared with 33.70 a week ago. In Northern Europe, Stockholm and Christiania both followed the dollar, and after rising to 17.12 and 32.65 respectively on Monday now stand at 17.07 and 32.44. Copenhagen also rose from 27.87 to 28.18 over the week-end, but reacted again to 27.87 yesterday, and Helsingfors in the same way stands at 181 as against 180 a week ago. Warsaw and Riga also followed the general movement, and stand at 23.70 and 23.55, as compared with 23.35 and 23.45 respectively last Friday. In Central and Eastern Europe, Vienna has moved from 318,000 to 322,000, but Prague is once more at 152. Budapest is steady round 346,000 and Bucarest at 1,000. In the East the rupee has depreciated from 1s 5½d to 1s 5 1-32d, and the yen from 1s 10d to 1s 9½d. The silver market has been dominated by the sterling dollar exchange, and has fluctuated accordingly. On the whole, prices have fallen through Chinese sales and an absence of purchasers. Hong Kong is $\frac{1}{2}$ d cheaper at

2s 4½d, and Shanghai $\frac{1}{2}$ d cheaper at 3s 2½d. In South America, Rio has moved from 5½d to 5½d, but Buenos Aires has varied little from last week's figure of 40½d. Valparaiso, after some fluctuations, is at 43.90, as against 44.60 pesos a week ago, but Monte Video has weakened $\frac{1}{2}$ d at 41½d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 9th:—

EXPENDITURE.	£	REVENUE.	£
Supply Services	5,631	From Revenue	12,240
Interest, &c., on Debt	2,604		
Sinking Fund	100		
Increase in Exchequer Balances	306		
Decrease in National Debt	3,599		
	12,240		12,240

Revenue for the week ending August 9, 1924, amounted to £12,240,000, against £14,927,000 for the corresponding period in 1923. Customs and Excise receipts were down at £1,753,000 and £849,000, against £2,302,000 and £924,000 respectively. Post Office receipts were £300,000 higher at £1,800,000. Ordinary receipts were slightly lower at £248,588, against £357,956, and Special receipts only brought in £599, against £1,502,345. Property and Income-tax yielded £5,384,000, against £6,319,000, and Super-tax £610,000, against £470,000. The week's operations decreased the National Debt by £3,599,000, and caused the following changes:—

	£		£
Anglo Persian Oil Co.	+ 23	Public Dept. Advances	- 3,800
Treasury Bills	+ 1,759	Unemployment Insurance	- 1,250
		W.I. Islands (Telegraph)	- 181
		National Savings Certificates	- 150
	+ 1,782		- 5,381

The floating debt was decreased by £1,995,000 to £782,643,500.

FINANCIAL YEAR, 1924-1925 (April 1 to August 9).

	£		£
Total Expenditure ..	280,702,205	Raised by Revenue ..	257,531,199

Total	280,702,205	Total	280,702,205

ESTIMATES for YEAR 1924-25.

	£		£
Ordinary Expenditure ..	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure ..	3,178,000	Special Receipts ..	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—National Bank of South Africa, Mitchells and Butlers, and Marconi's Wireless Telegraph. The chairman at the meeting of Mitchells and Butlers emphasised the need for an improvement in licensed premises, and discussed the means for attaining this end.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

A SACRIFICE TO EXPEDIENCY.

At the time of writing the Conference is at the crisis of its fate. For several weeks the delegates have been trying to maintain the fiction that the Dawes plan has no connection with the military evacuation of the Ruhr, and that the inauguration of the scheme could be arranged without discussing the subject. But the pretence could not be maintained, and the only result has been that Mr MacDonald has been manoeuvred into an entirely false position. The result was seen this week in the astonishing spectacle of the British Prime Minister urging the German delegates in private and in general conference to agree to the occupation continuing for another year,

instead of terminating on January 10th, which was the latest date the Germans were prepared to accept. The latter date can be justified on practical considerations connected with the evacuation. The prolongation for a year can only be based on ulterior motives. It is true that Mr MacDonald continues to repeat that he has not changed his view about the occupation, but he urges the Germans to accept the best terms they can get, for he declares—what is manifestly incorrect—that it is a matter that concerns only Germany, France, and Belgium. We can better imagine than describe what the British public would have thought of a statesman who had said in 1918 that the question whether French troops should or should not occupy a vital part of German territory was a matter on which we should have no say. Mr MacDonald committed a disastrous blunder in agreeing that the matter should be excluded from the Allied discussions, or rather in not coming to an understanding with France on the matter before the Conference opened.

On the merits of the case there is very little difference of opinion in this country. In the opinion of the British Law Officers of the Crown the Treaty of Versailles affords no ground whatever for the military invasion of the Ruhr by France and Belgium. If this view is sound, the occupation was and is, under international law, an act of aggression. On the thesis of France and Belgium, the occupation was only undertaken for the purpose of making possible the economic exploitation of the Ruhr, which is to come to an end forthwith. But there is now no pretence that the soldiers are to remain in the Ruhr to protect civilians; on the contrary, the French actually put in a claim, which has since been withdrawn, that civilian railwaymen should be retained on certain strategic railways in order to protect the military. Even if France had ever claimed (and she has never formally done so) that the occupation was a punishment for default and a means of creating a willingness to pay, Germany's acceptance of the measures prescribed for her by the experts removes the ground for continued "punishment." But British policy rejects any such thesis, and as late as last week the Prime Minister himself declared in the House of Commons that if anything in the protocol of the present Conference seemed to imply approval of the policy of occupation, he would append a note categorically affirming that we had not in any way changed our attitude on this subject. Yet a week later his action has made us morally an accessory after the fact, for his attitude on the matter has made it almost impossible for the Germans to refuse their acquiescence. It is true they can reject the settlement altogether, but it is equally clear that they cannot turn the French out of the Ruhr. If they refuse the proposal everything is thrown once more into the melting-pot. If they accept, and succeed in what at the moment seems to be the impossible task of persuading the Reichstag to approve of the acceptance, at best the hope of the new régime being smoothly inaugurated has been gravely menaced.

While fully appreciating Mr. MacDonald's difficulties, we cannot regard this week's events in any other way than as a humiliating diplomatic defeat, for they advertise to the world that the attitude which has been taken up for the past 18 months by British statesmen with the approval of Parliament counts for nothing. This will no doubt affect British prestige in Europe generally; but it is particularly important *vis-à-vis* Germany. Every instinct of statesmanship and of fair play demands that towards a defeated adversary it is particularly important to be scrupulously just. Germany had every right to suppose that we shared her view of the Ruhr occupation, and to expect that in any discussion of the matter she would have our diplomatic support. Instead of that, we have acquiesced in a renewed period of occupation, from the supposed necessity of conciliating a certain section of French opinion. We believe this view to be based on a complete misjudgment of the position in France. By going some way to meet the natural misgivings prevalent in France in regard to security, Mr. MacDonald could have so strengthened the hands of the French Prime Minister that the latter could have safely followed the course indicated by his own expressed convictions. But this week pressure has been brought to bear upon him by M. Loucheur, and by a messenger from M. Poincaré.

The former, at all events, has always been willing to bargain, and, indeed, he is reported to have introduced once more the old subject of inter-Allied debts. Mr. MacDonald has it in his power to meet France in both these matters, and in our view he ought to do so on the merits. But he has preferred to acquiesce in a prolonged occupation rather than move a step forward on these related questions.

We cannot pretend to foresee on what grounds Mr MacDonald will justify the attitude he has taken up; but it clearly has imposed a new handicap in the way not only of putting the Dawes plan into effect, but also of restoring European peace generally. It has, for example, almost certainly delayed the admission of Germany to the League of Nations, for her first action as a member of the League would naturally be to demand the restoration of her territory. A point of more immediate importance is the effect of the decision on the prospects of raising the contemplated loan. Clearly this will now be more difficult. If political difficulties were out of the way, a loan at, say, 8 per cent. which is a first charge on German assets would be an excellent security. But from the point of view of the investor the questions asked by the Germans are very pertinent ones. What assurance is there that M. Herriot will remain in power and carry out his undertaking? What safeguards will be taken to prevent unpleasant incidents, reprisals, &c., particularly when the expelled Germans are reinstated? What assurance is there that some new ground may not be found for again prolonging the occupation? What security will the Dawes scheme officials have against arbitrary interference? Who is to pay the cost of these twelve months of occupation? Is it to come out of the loan? The course of the Conference discussions had already made the investor shy, and such questions as these will make him doubly so. Indeed, if the loan is to be put through on the present terms, it is fairly clear that it can only be done by the use of pressure on the large finance houses of London who will have to "carry the baby" until the course of events creates confidence in the mind of the general investor.

It is perhaps possible that the final decision may be better than appears likely at the moment of writing. M. Herriot must clearly be most anxious to prevent a breakdown, and it is possible that, having secured formal acceptance of a year's occupation, he may see his way to whittle down the conditions of occupation in regard to areas, numbers of troops, and other matters to such an extent as to reduce very much the dangers that we have suggested. We cannot, however, undo the fact that the Prime Minister has failed to safeguard an important principle of international right on grounds of supposed expediency.

A BAD TREATY.

OPPOSITION to the Russian Treaty, which broke out before Mr Ponsonby had finished his curiously vague speech in the House of Commons, is not dying away, and does not seem likely to do so. To a certain extent critics of the Treaty have weakened their own case by indiscriminate denunciation of everything that it contains, and by talking at large about matters of which only experts of a particular trade have any knowledge. The fishing claims, for example, have been described as sacrificing British interests, but it is doubtful whether any of the critics could tell us where the "parallel of 67° 40' North latitude" lies, or know where the British trawlers which penetrate to these remote waters have been in the habit of fishing. Trawling is not an industry that we Londoners understand, and it is certainly not a subject on which we can dogmatise with safety. Actually the trawling interests do not appear to be dissatisfied, for the Murmansk Coast Fishing Committee meeting recently at Hull, passed a resolution approving the fishing sections of the treaty, while the Fleetwood President of the British Trawlers Federation estimates at 4,200 square miles the area that will be opened up by the new agreement. In view of these opinions, it is ridiculous to taunt the Government with having sacrificed British fishing interests to Soviet greed.

It is particularly unwise to take bad points in attacking the Treaty, because the Treaty itself, and the method of its signature, are full of points that can and ought to

be attacked as bad business, bad diplomacy, and bad precedent. It has been brought out with every sign of haste, every indication of having been forced to premature birth, to satisfy the clamour or avert the anger of its expectant God-parents. It is an embryo unfit to bear the fierce light of day, and we may safely prophecy for it either a death in infancy, or a sterile and fruitless existence.

Leaving aside the fishing sections and the commercial sections, we may concentrate on the financial chapter which carries the essence of the scheme; and, ungainly and shapeless as it is, is by the last article declared to constitute a single and indivisible unit—a significant condition that throws a clear light on the bargaining that has been going on already, and the still more oriental bargaining that is expected in the future, a "cash against documents" condition that proves the confidence of each side in the integrity of its opponents, and their capacity to carry the bargain through. Briefly, the chapter may be summarised as follows:—

Great Britain undertakes, after certain things shall have happened, to guarantee for the Soviet Republics a loan. The amount of the loan is not stated in the treaty, nor is the relation that the size of the loan shall bear to the *quid pro quo* payments of the Soviets.

In consideration of this promise to guarantee, and forming with it part of "an indivisible unit," we have promises from the Soviet Republics that they will:—

(a) By way of exception to their principles do something to satisfy the claims of British holders of Russian Imperial Government bonds acquired before March, 1921, on terms which must obtain the agreement of holders of not less than one-half the total value.

(b) Reserve for discussion at a later date debts and claims outstanding between the two Governments.

(c) Agree to a settlement by way of lump sum payment of the claims of nationals for loss or injury due to events between 1914 and 1924, the claims to be inspected by a committee of six persons, who will report the sum at which they consider the lump sum should be fixed. Whether the committee will have the power to fix the lump sum below the equitable figure if they decide that the equitable figure is too large to be practical is not clear.

(d) Agree, again by way of exception, to negotiate with British nationals for compensation for businesses nationalised by the Soviets. Again, a commission of six persons is to sit, and in this matter if the members are unable to agree on a joint report in respect of any particular property, they may "present separate reports," but what is to happen to these separate reports, and what effect they will have on the final agreement is not clear.

(e) Agree, when all these agreements to agree with one another, and to agree with thousands of other parties have finally led to agreement with them all, to sign another treaty with Great Britain, and so reach a final agreement.

The moment the terms of the treaty are expounded it becomes obvious that here is no proper matter for a treaty. There is no real understanding or agreement, no single concrete fact on which the two Governments can honestly claim to be at one. After long bickerings and disputes, negotiations have reached a point which might ultimately have proved to be an early milestone on the road to an agreement, and—if the cardinal principles of the negotiation had been sound—we are prepared to believe that some memorandum could have usefully been drawn up (but not published) showing the stage at which the discussion should subsequently be resumed. But to cast into treaty form this embryonic shapeless mass is simply to open the floodgates of criticism and make a final understanding practically impossible. The British public is filled with suspicion, wondering why so extraordinary a step has been taken, speculating on the political and party intrigues which have made it necessary, and guessing things that have not been agreed (must surely have been provisionally and secretly agreed between Mr Ponsonby and the Russians). It is too much to imagine that all these claims have been drafted and printed without any understanding as to how large the loan—final objective of the whole proceeding—is to be.

Secondly, the Treaty is objectionable because it has been rushed through and signed before any of the Dominions have been consulted, and because it raises in

acute and undesirable form the very difficult problem of adjusting British diplomacy to Imperial policy. That the Dominions will like the Treaty; that they are pleased to hear of its signature without their advice being asked or given; that it will make them more willing in the future to back up the policy and action of our Foreign Office, is unbelievable. They have for years been feeling that if the Empire is for diplomatic purposes to be one they ought on all important matters to be consulted and considered, and few things could make them more dissatisfied with the present loose arrangement than the hugger-mugger signing of an important treaty at the dictates of one section of one party in the British Parliament.

Lastly, the Treaty is bad because it is based on a vicious principle. We will, say the Soviet Republics, consent to recognise certain obligations, and consent to discuss the payment of our debts to you, if you will lend us money. We have declared ourselves free of all those obligations that elsewhere are universally recognised; we still declare ourselves free of them and refuse to admit that they have any binding power. But for a cash consideration we are prepared to make an exception in your favour, and agree to certain *ex gratia* payments, which will spring, not from any alterations in our principles, but from our need of ready money. That is an utterly vicious chain of reasoning, and already sums are being worked out in Moscow to decide how much of the loan will be left over after the necessary payments have been made out of it to fulfil the obligations taken on under the Treaty. Payments to bondholders and others are to be made out of the loan, and the balance will be used for any purposes that seem good to the Bolshevik Government, which is apparently to have unfettered enjoyment of the money. It is bad morality and bad business suitably incarnate in a bad Treaty.

GOVERNMENT CONTROL OF INVESTMENTS.

ONE of the consequences of recent international negotiations is likely to be that Government influence may shortly be brought to bear in the London money market to persuade British investors to lend their money to Germany—possibly even to Russia. It is even proposed in the latter case that the credit of the British taxpayer should be pledged in order to make the loan a success. In both cases the reasons for the Government using its influence are partly political and partly economical. But whatever the grounds for action may be, the suggestion naturally raises the question whether it is proper for the Government to seek in this way to influence the investment of British capital, and, if so, what principles should guide it in directing these resources, which are very far from limitless. The discussion naturally broadens into the wider question of foreign investment generally; whether the interests of the nation as a whole are in this respect the same as those of the individual investor, and whether existing custom or legal restraint produce the best results. On this subject Mr Keynes' paper recently delivered at Oxford is much the most arresting statement. In it he deals with two separate subjects. On the one hand he brings forward a number of criticisms against the accepted view that it is best to leave the investor to place his money where he thinks he can get the best return, and on the other he discusses the influence of the Trustee Acts.

Mr Keynes commences by dividing foreign investment history into three periods, or perhaps we should say three overlapping phases. Firstly, there are investments in trading, mining, and other speculative occupations—a custom of immortal antiquity, which Mr Keynes heartily approves. The second type of investment is associated with the railway age. Railways and other public utility works were to an enormous extent promoted during the last half of the 19th century by British capital, and hastened the rate at which distant parts of the world were opened up. These also, at all events at the outset, are held to have been to our advantage. Mr Keynes, however, points out in this connection that there are few countries in the world in which a foreign investor can rely absolutely upon the impartial treatment in the matter of fixing rates in taxation, &c., that would be accorded to investors if the capital had been provided by the nationals of the country in question. British capital in-

vested in such undertakings is, therefore, not as secure as the investor originally believed it to be. Thirdly, the latest phase relates to loans to foreign or colonial Governments. Mr Keynes makes a trenchant attack on these investments on the ground that they have often been used for purposes of armament and of war, and that a very large part of them have been lost as a result of repudiation through bankruptcy or revolution. The enormous pre-war investments in Russia of the French middle classes are a notable case to which both criticisms reply. Mr Keynes does not give quite the whole story in regard to these classes of investment. We have not attempted to make a detailed analysis, but we are disposed to think that the greater part of the loans made to Governments outside Europe have been used for development purposes. For example, a very large proportion of colonial and Indian loans prior to 1914 were raised for the purpose of building railways, and have thus directly increased the openings for international trade. At the same time, there is much force in Mr. Keynes' criticism, for it can hardly be of any lasting benefit that large amounts of British and French savings should have been used for such purposes as, say, the financing of the Russo-Japanese War.

Mr Keynes, however, does not limit his criticism of foreign investment to Government loans, and he uses some arguments against foreign investment generally which we find unconvincing. Thus he imports prejudice into the argument in citing the case of Brazil, to whom, he estimates, British investors have lent some £250,000,000, which "yields at present a precarious rate of interest of barely 4 per cent., and, allowing for the fall in the value of money since the investment was made, about 2½ per cent." But this effect in the fall of the value of money is not confined to foreign investments. It applies equally to both speculative and gilt-edged pre-war investments in this country. For example, the real returns on all categories of British railway stock have fallen in something like this proportion. Again, Mr Keynes suggests that much more serious consequences follow from the point of view of our national wealth when foreign than when home investments respectively are repudiated. Thus, if a popular housing loan is repudiated, we still have the houses; but if a colonial railway loan is repudiated the railway belongs to the colony, and not to the shareholders. This, again, is only part of the story. If it is to our national advantage to employ our industrial resources in building equipment for a port, say, in some Crown colony where it is badly needed to open up trade rather than for a British port where it may be needed—but less urgently—it is to be presumed that in the former case the higher rate of profit is a true indication that the general benefit to trade will be greater. If in the end the loan is repudiated and the equipment not paid for—or, rather, is paid for by the lenders of the capital—the port will in both cases have got its equipment at less than cost. In both cases the equipment will continue to function and influence trade development, though not repaying its cost to the lender. The experience is one not confined to foreign investment. It is hardly a ground for confining capital to home uses that by so doing, some people in Britain rather than people overseas may sometimes get windfalls of this kind.

Lastly, Mr Keynes doubts whether there is as much merit in export trade as is commonly assumed, and throws out the suggestion that perhaps, after all, it would be best for Great Britain if our exports were restricted to what is necessary to pay for our imports, and for any surplus production that we might have invested abroad to be invested in home development. It is at this point that we join issue. We are strongly of opinion that the advance of the standard of life in this country will depend in the twentieth century, as it depended in the nineteenth, mainly upon the extent to which we engage in foreign trade, or are able to persuade foreign countries to make use of our shipping and other commercial services. The idea that the dense population of this country can rapidly progress from the material standpoint by an intensive investment of capital, and thus "developing our own estate" seems to us doubtful. We are likely to make more headway by extending our over-seas activities and by

specialisation along what may be called our natural lines of development.

In his analysis of the effect of the Trustee Acts, Mr Keynes' argument is a very strong one. The Trustee Acts are in themselves an artificial interference with the natural flow of capital. The total loans to Colonial Governments he estimates at about £670 millions, and to the Government of India at £260 millions, and in both cases the total is rapidly rising. This development has occurred since the Colonial Stock Act of 1900, which, in effect, brought almost all the loans of Colonial Governments within the field of trustee investment. The result is that loans for harbour works in New South Wales can be borrowed more cheaply in London than loans for the Port of London itself. Again, to quote an extreme case, early this year £2 millions was borrowed by Southern Rhodesia on about the same terms as a large English borough would have to pay, and more cheaply than most of our great industrial undertakings at home can borrow. These colonial investments are given an artificial appearance of safety by the fact that they are legally available for trustee funds, of which there was an increasing amount available for investment before the war. The discrimination was originally made partly for political reasons, and to some extent these reasons still exist. But there is little doubt that the Acts do in fact place colonial credit on a more favourable basis than it would enjoy in open competition.

Mr Keynes' solution is twofold. He proposes to abolish the Trustee Acts, and to give the British Treasury the power of licence which presumably would cover a much wider range than the present Trustee Acts, and would judge each case upon its merits. Secondly, he would refrain from repaying Government debt unless at the same time there were being created new trustee stocks in which the funds repaid could find an outlet. These proposals are ingenious, but we doubt whether they are the right solutions. In the first place, the power of licence is one which we should hesitate very much to commit to the Treasury. Nor do we think it is one the Government would care to undertake, for the Treasury would be taking a much more definite responsibility for each issue than is now the case when whole classes of security are enumerated. The second proposal was not perhaps very seriously intended, but it enables Mr Keynes to bring out the fact that as time goes on there will be need for an increasing field for safe investments into which the growing mass of small savings can be placed. Even in theory the suggestion is not entirely logical. If funds of a trustee character are growing, the opening for such funds should not merely remain constant, but should increase at the same rate. Mr Keynes would hardly suggest that the Government should borrow at the rate required to meet this growing demand. The fact of the matter is that the total volume of securities in which trustees can invest is so large that sinking-fund payments form only a small proportion of the total. We estimate that at par value the chief classes of trustee securities amount to the following totals :—

	Million £.
Trustee securities included in the National Debt	5,350
Local Loans Stock	217
Irish Land Purchase Loans	130
Miscellaneous guaranteed loans	60
Loans guaranteed under the Trade Facilities Act	20
Total of British Government securities	5,777
Indian Loans	285
Colonial Loans	633
Loans of Corporations and Public Boards	300
Home Rails	950
	7,945

On the basis of market value these totals would be reduced to about £7,560 millions. On the other hand, repayments of Government debt are only in part made to people who are limited to trustee investments. For example, the repayment of floating debt exerts no influence on trustee investments when the result is merely to cause the banks to substitute trade bills for the Treasury bills in their portfolio.

But the problem of finding an outlet for trustee investments is not answered by these criticisms. Perhaps, after all, the conclusion to be drawn from Mr Keynes' indictment of the effect of Government interference with the

investment of capital is to do away with such interference altogether. Financial knowledge on the part of trustees and the means of finding out the true position of a Government or a joint stock company are not sufficiently developed for this conclusion to be a practical one as yet, but we believe the solution lies in this direction. The development of the Investment Trust Company and the custom of entrusting large funds to insurance companies and other similar investing institutions will gradually introduce a skilled intermediary between the investors and the actual investment business, which will make it possible to leave the actual choice much more to individual judgment without running too great a risk of the loss of modest savings.

OUR TIMBER IMPORTS.

THE timber import trade is under a shadow at present, both for free on board and spot business. As regards the former, it is still an open question whether the Swedish and Finnish shippers will bring their free-on-board prices of best unsorted quality down to attract British importers, or whether, by some chance—it will have to be speedy—the Continental consuming demand will assert itself, or a boom in trade here stimulates the call for timber on the spot. Fortunately we have got away from the days of early 1921, when unsorted 3 x 9 Swedish red deals were offered free on board at about £40 to £42 a Petrograd standard of 165 cubic feet, with 7-inch battens at £30 to £32 basis prices. Those basis prices caused a buying strike in the summer of 1921, which terminated in a great fall in the market in July of that year, when prices fell to almost pre-war level. Values later stiffened, and are at present about £22 for deals and £18 to £18 10s for best quality Swedish unsorted red, as against £10 10s to £11 for deals and £8 10s for battens ruling before the war.

From the beginning of this year the heavy stocks on the spot have been a source of great anxiety to operators abroad and at home, but hopes were high in the first quarter that big house-building schemes would be started early—hopes that have been shattered, at least for a time. With slackness in other leading industries, notably shipbuilding, iron and steel, furniture and cabinet, packing-cases and boxes for export, little encouragement has been afforded the importer and merchant of building woods. Spot prices from the opening of the year have failed to come up to the grandiose ideas of foreign exporters of good-class stocks, the result being that shippers of the second-class qualities have been more in evidence, and ready to meet the demand of buyers here as regards free-on-board prices.

More than once reference has been made in the *Economist* to the fact that Russia and the Middle European timber-producing States (Poland, Latvia, Memel, &c.) would have a great influence on free-on-board prices of our imported timber, and this has been proved during the past half-year. The Russian supplies of good-class timber have been most successful in competition with the best Swedish productions; the increase in export of Soviet wood from the former is so far this year 6½ per cent. of our total import of soft woods (against only 2.2 per cent. last year), and reports reach us that the volume of import from Russia this season will show a decidedly greater improvement unless unforeseen circumstances forbid. In the lower qualities, Sweden and Finland have felt the effects of mid-European competition. In Polish wood there are great expectations, much British money having lately been invested in the exploitation of the vast forest resources there. The following statistics will show at a glance from whence we obtained our imported building and general wood requirements during the first half of this year, and, for comparison, the first half of 1923 and 1922 :—

	1922.	1923.	1924.
Russia	4.1	2.2	6.5
Finland	17.6	10.6	11.4
Latvia	8.7	13.9	14.7
Sweden	24.0	26.7	19.2
Norway	8.0	5.2	1.8
Poland	4.0	6.7	12.7
Germany	2.1	2.0	1.0
United States	8.0	11.8	8.0
Canada	10.5	9.5	7.8
Other countries	12.6	11.0	16.6

Our imports of sawn soft woods for building and general construction work were as follows, the figures being in thousands :—

	1922.		1923.		1924.	
	Loads.	£	Loads.	£	Loads.	£
Russia	42	248	27	171	82	413
Finland	179	819	133	740	145	800
Latvia	89	392	174	802	187	922
Sweden	244	1,379	335	1,810	242	1,417
Norway	81	436	65	394	23	130
Poland (including Danzig)	40	195	84	457	161	786
Germany	21	123	25	119	12	67
U.S.A.	81	727	148	1,323	102	1,012
Canada	107	696	118	767	99	700
Other countries	128	658	137	708	211	1,039
Total	1,016	5,677	1,251	7,295	1,269	7,290

PLANED OR DRESSED.

	1922.		1923.		1924.	
	Loads.	£	Loads.	£	Loads.	£
Finland	0.2	1	5	29	3	27
Sweden	57	380	81	594	114	805
Norway	79	525	78	546	34	222
Germany	0.6	5	0.3	0.4	0.2	1
U.S.A.	1	27	2	40	3	55
Other countries	0.6	6	3	31	3	27
Total	139	946	171	1,243	159	1,140

With the position fairly favourable to consumers during the early months of the year (we have already mentioned that the wood trade was depending upon hopes of a much larger consumption which have not yet been realised), it is surprising that the free-on-board market has kept up so well, and even now there are many under the impression that the market will firm up later in the year owing to the smaller purchases for autumn requirements. Taking the quantities and c.i.f. values for the first six months of 1924, 1923, and 1922, as supplied by the Government returns, we find that this year the sawn soft woods, the most important item of import for general purposes, cost, c.i.f., £5 14s 10d a load, compared with £5 16s 6d a load last year, and £5 11s 9d in 1922. Imports of planed wood have cost us, c.i.f., £7 3s 5d this year, against £7 4s 5d for the corresponding half of 1923 and £6 15s in 1922. This branch of the market would have been more favourable had not labour troubles (now happily passed) occurred in the Norwegian planing mills.

In other departments of the trade c.i.f. prices are fluctuating. Mahogany logs are still a strong feature (perhaps the strongest) of the market, and owing to short supplies the c.i.f. prices are 7d a cubic foot over those of last year (6s 3d—5s 8d). But in other hewn hard woods c.i.f. prices per cubic foot are 4s 1d, against 5s 8d last year; in hewn soft woods £6 1s a load, against £5 12s 4d. In sawn hard woods, mahogany boards are a small fraction under the 7s 10d a cubic foot of last year, but 5d a cubic foot higher than 1922 c.i.f. prices. Other sawn hard woods have cost us 5s 7d a cubic foot against 5s 5d, and would have been dearer but for very large supplies from the United States.

From the above it will be observed that in spite of good stocks and only a moderate demand, we cannot congratulate ourselves on any great fall in our timber costs. Indeed, for sawn and planed soft woods they show increases on the 1922 figures, whereas consumers are looking forward to a cheaper time for wood requirements.

In the colliery timber department of the wood trade—a branch totally exclusive from the others—we see a diminution of import values, a load costing, c.i.f., £1 13s 6d, against £1 19s 2d last year and £1 16s 6d in 1922.

The table below shows our timber imports for the first half of each of the past three years :—

	1922.		1923.		1924.	
	Loads.	£	Loads.	£	Loads.	£
Hewn, hard	1,684	606	2,801	797	3,801	920

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

The total value of wood supplies for the first half of 1924, 1923, and 1922 are respectively £16,433,191, £16,522,379, and £12,365,083.

THE PULP AND PAPER INDUSTRY IN CANADA.

(BY OUR OTTAWA CORRESPONDENT.)

THE manufacture of pulp and paper which has during the last decade proved itself an invaluable buttress of Canada's economic life, is a comparatively recent development in the Dominion. It is true that as far back as 1803 a group of Americans, after obtaining concessions from the local seigneurs, established a paper mill at St. Andrews on the Quebec bank of the Ottawa River and made paper out of rags, straw, esparto grass and other substances. Later, in 1825, a Mr Crooks built at Crooks' Hollow the first paper mill in Upper Canada and obtained a bounty of \$100 for the first sheet of paper produced in that province. But almost half a century was to elapse before any realisation came that Canada, in the possession of vast forest resources adjacent to unlimited water powers, had available the basic materials for a great and profitable industry. The conversion of trees into pulp requires an enormous expenditure of energy—about 100 h.p. per ton of paper—and steam-driven machinery is too expensive by far. The only form of power which can be used economically in this industry is hydro-electric power, and it is this ideal combination of abundant water powers and forest resources of the pulp-wood species which makes Canada the logical theatre for a huge paper industry.

Although the census report of 1871 contains no mention of wood pulp mills, it is claimed that the first mill of this type was erected by Logan and Co. at Windsor Mills in Quebec in 1870. Soon afterwards the Riordans, a lumbering firm, began to manufacture groundwood pulp, and in 1887 Charles Riordan brought the sulphite process from Austria and installed at Merriton, in Ontario, the first sulphite mill, which is still in existence. From five mills in 1881, with only 68 employees and an output valued at \$63,000, the industry by 1901 was able to show an expansion to 25 mills. But it is since this century began that the industry has really got into its stride and made phenomenal progress. The latest data given by the Dominion Bureau of Statistics indicate that there are to-day in Canada about 50 pulp mills.

The industry in Canada includes three forms of industrial activity—the operations in the woods with pulpwood as a product, the manufacture of pulp, and the manufacture of paper. In the first form it is inextricably involved with the lumber industry, some pulp companies operating sawmills to utilise the large timber on their limits, and many lumbermen diverting a large proportion of their spruce and balsam logs to sawmills. Paper-makers have experimented with fibres from the stems, leaves and other parts of various annual plants, but the amount of paper-making material recoverable was trivial in comparison with what could be obtained from wood, and it has been definitely settled that spruce and balsam fir are the most suitable for the production of all but the finest grades of papers. Most of the pulp and paper mills own their own limits and employ their own gangs of men to secure the pulpwood, but large supplies are also obtained from indi-

vidual settlers, who cut them off their own woodlots. The wood is delivered to the mills in different ways. Logs eight feet and upwards are, wherever facilities are available, floated to the mills in booms or rafts, but the smaller lengths are delivered by cart or railway or barges. Generally speaking, wood delivered by farmers is cut to short lengths and peeled by hand in the woods. The longer logs are reduced to two or four-foot lengths in the "cut-up mill," and their bark is removed in a "rossing" mill.

The following are some figures showing the production, consumption and export of pulpwood in some recent years:—

	Total Production of Pulpwood.			Used in Canadian Mills		Exported Unmanufactured.	
	Quantity.	Total Value.	Average Value per Cord.	Quantity.		Quantity.	
	Cords.	\$	\$	Cords.	%	Cords.	%
1908..	1,325,085	7,732,055	5.84	482,777	36.4	842,308	63.6
1912..	1,846,910	11,911,415	6.46	866,042	46.8	980,868	53.2
1916..	2,833,119	19,971,127	7.05	1,764,912	62.3	1,068,207	37.7
1920..	4,024,826	61,183,060	15.22	2,777,422	69.0	1,247,404	31.0
1921..	3,273,131	52,900,872	16.16	2,180,578	66.6	1,092,553	33.4
1923..	3,923,940	50,735,361	12.93	2,912,608	74.2	1,011,332	25.8

Since the laws of all the pulpwood-producing provinces but Nova Scotia decree that wood cut upon Crown lands must be manufactured into pulp in Canadian mills, it is pulpwood cut on lands held in fee simple, usually by individual settlers, that has furnished all the exports. The quantity of the latter, which go almost exclusively to the United States, has remained practically stationary since 1912, during a period when the volume consumed in Canadian mills has increased about 236 per cent. But recently the pulp and paper mills in Canada, faced with a shortage of pulpwood in many districts, commenced a campaign for a general embargo upon all export. Their demand was resisted by American mills who get their supplies from Canada, and by the representatives of the farmers who rely for part of their income on pulpwood; the latter contend that they get better prices from the American mills and do not want to be left at the mercy of the Canadian companies. The Government met the difficulty by appointing a Royal Commission which has held sittings all over Canada. Its report is not yet published, but since the weight of evidence was against any embargo it is not likely to be recommended.

In 1917 the total pulp and paper production of Canada was 853,689 tons valued at \$58,750,341, of which newsprint accounted for 689,847 tons (value \$38,868,084). The year 1920 was the banner year for the pulp and paper industry with a production of 1,214,951 tons valued at \$132,022,767, of which newsprint furnished 875,696 tons (\$80,865,271). In the last three years the production of book, writing and wrapping paper and paper boards, as well as other paper commodities, has tended to show a decline, especially in value, but the newsprint industry continues to flourish and expand at an amazing rate. In 1923 Canada's production of newsprint was 1,263,000 tons, an increase of 83 per cent. over the figures of 1913. Old mills increase their capacity and new mills are built, but the additional tonnage so far has been consumed as fast as it has been available. The reason for this state of affairs lies in the insatiable appetite of the American Press and the enormous size of its papers. The average edition of the *Chicago Sunday Tribune* requires 500 tons of newsprint for whose manufacture a million gallons of water and 50,000 h.p. are needed. Every day of the year there are 29 million daily papers printed in the United States, and the thousands of weekly papers and monthly magazines account for many millions more.

To meet such a rate of consumption the domestic resources of the United States have been utterly inadequate, and more and more has reliance come to be placed on Canadian supplies. The Hearst papers, the *Chicago Tribune*, and many other of the great newspaper organisations of the States either control or have established close relations with Canadian pulp and paper firms, and the grip of American capital upon this branch of Canadian industry is notorious. In 1913 the United States pro-

duced 1,305,000 tons of newsprint; they imported 220,000 tons and exported 43,000, having thereby available for domestic consumption 1,482,000 tons. In 1923 they produced 1,485,000 tons, only 185,000 more than ten years before, but their consumption had jumped to 2,778,000 tons. Their exports had fallen to 16,000, and they had to import 1,309,000 tons, of which 1,100,000 tons came from Canada and the balance chiefly from the Scandinavian countries and Germany. How useful this trade has been to Canada can be judged from that in the fiscal year just ended pulp and paper contributed one-seventh of the total exports of Canada. Another gratifying feature of the record is that the exports of paper are growing more rapidly than those of pulp, for paper, being a completely finished product, brings more money to Canada for the same amount of raw material. Experience has shown that mills which produce paper have had better financial results than the mills manufacturing only pulp. In 1911 newsprint was responsible for only 45 per cent. of the total value of the pulp and paper exports, but in 1923 it accounted for 67 per cent., indicating a growing tendency to complete all the processes in Canada.

But while the pulp and paper industry has been enjoying great prosperity, there is another side to the picture which is receiving serious consideration. It is possible that if there comes a collapse of the American boom, of which there are now visible some signs, there will be a marked diminution of the American demand for newsprint, for poor business means less advertisements and smaller papers. But if the present rate of pulp and paper exports continues, the drain upon the forest resources of Canada is bound to have serious consequences in the near future. The depletion is not all caused by the saw, for the Bureau of Statistics estimates that while 2,377,845,182 cubic feet of timber was cut in 1922, a somewhat larger amount was lost through such destructive agencies as fire and fungi. It is very difficult to secure any accurate estimate of the forest resources of Canada, but one of the leading forestry authorities in the Dominions was recently responsible for the statement that at the present rate of depletion a serious crisis would be reached in 26 years. Mr F. J. D. Barnum, of Annapolis, N.C., a public-spirited lumberman, has been conducting at his own expense vigorous propaganda to enlighten the public upon the dangers of the situation, and the authorities at Ottawa have given their benediction to a "Save the Forests" campaign throughout the country. What is needed above all things is a national policy of reforestation, but there are difficulties about provincial control. However, the Commission appointed by the King Government will report upon the whole problem, and public opinion may thereafter force some action.

IS WOMEN'S EMPLOYMENT INCREASING?

(FROM OUR LABOUR CORRESPONDENT.)

In the remarkable analysis of population figures which he has recently published, Professor Bowley indicates that there will be no appreciable labour surplus after 1931, and, in 1941, a shortage is probable. Two factors, he suggests, might counteract this tendency—a rise in the "age of retirement," or an increase in the number of occupied women. Is there any probability of such an increase?

Prima facie, it might seem that there is. The proportion of women to men in the population has risen, partly, of course, as a result of war casualties; for 1921 there was a surplus of nearly two million women. The active co-operation of women, in every department of life, is one of the striking facts of the day. The barriers which excluded them, artificially, have largely gone; the war not only called vast numbers into new forms of work, but showed that, in most cases, they were quite fit, so far as competence went, to remain there. The official reason for the extension of the suffrage was this proved competency. Certainly, the general expectation was, after the war, that "women had come to stay"; and, as time went on, their numbers in industry and the professions would steadily and rapidly increase.

The figures actually available, however, give very little support to this contention. It is true that, so far as they refer to trade unions, they all show, mainly, the effect of the slump of the last three years, which has decreased membership, largely as a consequence of unemployment and wage reductions. But, in the case of women, the fall applies to practically all categories of employment. The movement in the general figures covering women's membership of unions affiliated to the Trades Union Congress, is striking. In 1913 there were 358,000 women in affiliated unions; in 1921, women's membership touched the million mark; next year there was a sharp drop, the total being 615,349; for 1923 the estimated figure shows another drop, at 480,000. The more detailed figures, given by the General Registrar of Friendly Societies, show the same downward trend. These figures included employees' associations of all kinds, and take in many groups not recognised by, or affiliated to, Congress. They show the number of women in unions as 433,000 in 1913, rising to 1,209,000 in 1918 and to 1,341,000 in 1920, falling, in 1921, to 1,003,000, and, in 1922, to 868,000; the 1923 figures, not yet issued, will certainly disclose a further fall. The decline, it is true, is not so marked as in the case of men, but it is striking, and becomes even more striking when the figures are analysed in detail, as is done in the following table:—

WOMEN IN TRADE UNIONS.

	1921.	1922.	Per Cent. + or — 1922 on 1921.
Agriculture	2,221	1,506	— 32.2

General labour	72,033	48,922	— 32.1
Total	1,003,253	868,077	— 13.5

Except for small percentage rises in the teaching and furnishing groups, there is a fall in every department. There is no evidence, here, of any increase in the volume of women's employment, or of any effective tendency to their substitution in any category. The teaching profession is the only one where there is any marked gain of ground.

The war-time expectation that women had come in as effective competitors with men in men's employments was based on an insufficient study of the facts. It is true that at the time of the Armistice the number of women directly or indirectly replacing males was close on two millions. Of these, 363,000 were in the metal trades, 232,000 in Government establishments, 34,000 in agriculture, 55,000 on railways, 27,000 on buses and trams, 66,000 in banking and finance, 411,000 in "commerce," 155,000 in the

Civil Service, 107,000 in the textile trades. But practically all these women were governed by the pledge, faithfully maintained by the women and their leaders, to support and press for the "restoration of pre-war practices," i.e., an understanding that the men's claim for replacement was to be observed. "The women," said Miss Bondfield at the time, "are in honour bound to do everything they can through their organisations to see that the Government fulfils the pledges it gave to the men who went out." It was with a view to the redemption of that pledge that the men insisted upon the women coming into the unions, though, in some cases, e.g., the engineers, they refused to admit them to their own. For the same reason they put their weight behind the women's claim for "equal pay for the same job." The very success of the women in securing something approximating to equal rates meant that they were holding, but not keeping, the places of the men for whom they were temporarily substituted. In this they did much to clear from the minds of the men the old suspicion of and antagonism to female labour; and secured not only an effective and lasting solidarity between the sexes in industry, but security in the jobs for which they were specially fitted; but, at the same time, they prevented, on any large scale, lasting replacement of men by women. Such substitution, had it been effected, would mainly have lowered the standards of pay and employment without doing anything to increase the effective labour force. The ground women have actually won they will hold, but its extent is not yet very large.

There are, however, forces operative which are likely, gradually, to increase the industrial employment of women. Important among these is the change in opinion, which can be discerned as slowly going on, in all classes, and is affecting the view taken by parents of the future of their daughters. What this means, however, is that the employment of women will be in addition to, and not in substitution of, the employment of men. "Equal pay for the same job"—a formula which has a meaning, whereas the older one, "equal pay for the same work," very often has not—will compel the women to be at least as competent as the men. So far, however, there are no surface signs that the process is going on at all rapidly, or that the net addition of working women is more than offset by the emigration which, at present, affects them even more than it affects men.

Notes of the Week.

The Trouble in the Sudan.—The outbreaks on the part of Egyptian railway troops last Monday at Port Sudan and at Atbara (the junction of the railway connecting Port Sudan with the Nile Valley line) are an unfortunate prelude to the conversations between Mr MacDonald and Zaghul Pasha, which are expected to take place during the Egyptian Prime Minister's visit to Europe. At Port Sudan the men broke barracks and demonstrated in the town, but were induced to return to their quarters without the use of force. At Atbara, unhappily, there were casualties among the mutineers, who attempted to break through the cordon of loyal troops surrounding them, so that the latter were compelled to fire, killing two mutineers and wounding eighteen others, of whom two died later. Though a British warship has been sent to Port Sudan as a precautionary measure, there is no indication at present that any native Sudanese elements have taken part in the movement, and indeed the troops who fired upon the Egyptians at Atbara were Sudanese mounted rifles of Arab nationality. There seems to be little doubt that the mutiny was instigated by the "White Flag" Society—an Egyptian propagandist organisation supported by Egyptians on service in the Sudan, and directed, it is alleged, from Cairo. On June 28th last this organisation appears to have embarked upon a campaign of violence, owing to Lord Parmoor's somewhat brusquely worded declaration on June 25th in the House of Lords. Already, on June 24th and 25th, they had fomented riots in Omdurman and Khartum, as a result of which their leader was arrested, and it was in protest against this arrest that the cadets of the Military School at Khartum made an armed

demonstration on the 8th of this month. The main object of the organisation is, of course, to show that the native population of the Sudan are at one with the Egyptians in their desire for the union of the two countries, and from this point of view the present mutiny and its outcome must be regarded as a setback to their cause, since Egyptian malcontents acted alone and were put down by Sudanese. The last thing, however, that sensible British opinion desires is that a feud should be created between the two peoples, who must of necessity agree with one another over the allocation of the water supply and the other gifts of the Nile valley which they share between them; for if such a feud is fomented by misguided Egyptian action, it will make the future more difficult for all parties concerned—including ourselves, so long as we retain interests and responsibilities in any part of the Nile Basin. The Egyptian Nationalists possibly intended the mutiny as a demonstration that certain services indispensable to the promotion of civilisation and orderly government in the Sudan depend upon an Egyptian personnel, and as a warning to Great Britain that she would find it a harder and more expensive task to govern the Sudan without Egyptian co-operation. The latter proposition is no doubt true, but the Egyptians will gain nothing by attempting to prove it by violence. If they wish to put the question to the test, it is open to them to withdraw their financial, administrative, and military contribution to the maintenance of the Sudan, and leave us to carry on as best we can without them. The objection to this course from the Egyptian point of view is that it would be tantamount to a resignation of their rights to a condominium over the Sudan under the Anglo-Egyptian Convention of 1899—rights which are valuable to Egypt, since Great Britain cannot possibly abrogate the convention unilaterally, whether she wishes to or not, so long as Egypt holds to it and at the same time loyally discharges her obligations under it. The worst policy from the Egyptian point of view would be to retain the condominium as an instrument of sabotage, for that policy would almost certainly end in the ejection of the Egyptian personnel from the Sudan and the forfeiture of Egypt's moral and diplomatic rights into the bargain. The wisest policy for both parties is to reserve their existing rights—either by the continuation of the 1899 Convention or by the free negotiation of some mutually preferred substitute for it—to arrive at an early and definitive settlement of the economic question, and to leave the political settlement to time. Ultimately, the political orientation of the Sudan can only be determined by the Sudanese themselves, and at present they are in that transitional stage of political development which is described in the definition of "A" mandates in the Covenant of the League of Nations.

U.S. Election Programmes.—Mr Davis on Monday and Mr Coolidge on Thursday delivered important speeches when formally accepting the nominations of the Democratic and Republican parties respectively for the Presidential contest. The passages referring to American policy towards Europe naturally claim principal attention on this side of the Atlantic. President Coolidge described the foreign policy of the United States by the single word "Peace." He announced the Government's intention to become a member of a Permanent Peace Court, and further to call another Conference for the limitation of armaments and the codification of international law as soon as the Dawes plan has been put into operation. For the rest, Mr Coolidge's speech was in the main a studied defence of the work and policy of the present Administration. Mr Davis's statement was to a large extent an indictment of that work and policy, but his references to Europe were of first-rate importance. He went so far as to advocate the entry of the United States into the League of Nations, so soon as American public opinion is ready for such a step—which, in his view, it will be some day. "I refuse," he said, "to accept the dictum, unauthorised by any expression of the popular will, that the League of Nations is a closed incident so far as we are concerned." Russia, Germany, and Mexico, he predicted, would soon take their seats at the Council of the League, leaving only America's seat vacant. Meanwhile, he pronounced it the duty of the President to co-operate with all proper endeavours to prevent war, whether such endeavours

emanate from the League or not. Of the contribution of the present Administration to the cause of world peace he spoke in scathing terms. Turning to domestic questions, Mr Davis naturally made capital out of the oil scandals, and on the fiscal question pronounced for a tariff "designed primarily to raise revenue for the support of Government, and framed on a competitive basis." The idea of helping the farmer by a tariff he denounced as "the baldest political false pretence." The American fiscal issue is, of course, of direct and profound interest to this country. But for the moment the most arresting feature of the overtures to the Presidential campaign is the fact that Mr Davis should have devoted the major part of his speech to the League of Nations.

The Free State and the Boundary.—Our Dublin correspondent writes:—Dail Eireann in special session on Tuesday last voted by 64 to 10 the first reading of the Bill to validate the supplementary agreement with Britain for the complete implementation of Article XII. of the Treaty. Dignity and restraint marked the utterances of Mr Cosgrave and Mr O'Higgins, the Government spokesmen, and their speeches have had a good effect upon the hotheads on both sides. It cannot be too clearly or too often stated that from the Free State point of view there can be no discussion or compromise of the basis of Article XII. being left unfulfilled. No Free State Government could stand for five minutes if it permitted a cutting down of the Treaty. But once it is assured of the execution of Article XII., discussion will be easy, and even probably compromise; but the compromise will have to be put into effect through the machinery of the Boundary Commission. It is stated that the Anglo-Irish Treaty has now been duly registered with the League of Nations, as the objection of Mr Baldwin's Government to this course has been withdrawn by Mr Ramsay MacDonald's Government. The origin of the objection, so far as law, international and constitutional, and reason were concerned, was never very clear. In the last resort, therefore, there is a further tribunal which may have to consider Article XII.

Overseas Trade in July.—The Board of Trade Returns of overseas trade for July show an all-round expansion in comparison both with the preceding month and with July of last year. A year ago, however, it must be remembered, the figures were affected by the dockers' strike then in progress. Below we compare the figures for July with those of June 1924, and of July, 1923, and also those of the first seven months of this year with those of the corresponding period of 1923:—

	July, 1923.	June, 1924.	July, 1924.	Increase in Comparison with	
	Mill. £.	Mill. £.	Mill. £.	July, 1923.	June, 1924.
Imports	76.9	88.5	108.1	+ 40.6	+ 22.2
British exports	59.5	62.0	71.3	+ 19.8	+ 15.0
Re-exports	8.8	10.0	10.0	+ 15.9	+ 2.0
Total exports	68.3	72.0	81.5	+ 19.3	+ 13.2
Excess of imports	8.6	16.5	26.6	..	..

	Jan.-July, 1923.	Jan.-July, 1924.	Increase.
	Mill. £'s.	Mill. £'s.	%
Imports	615.6	706.5	+ 14.8
British exports	442.2	459.7	+ 4.0
Re-exports	72.6	84.3	+ 16.1
Total exports	514.8	544.0	+ 5.7
Excess of imports	100.8	162.5	..

As compared with July of last year, the increase in imports is accounted for as to £12½ millions by food, drink, &c., as to £10½ millions by raw materials, and as to £8 millions by manufactured goods. From the figures quoted below it may be seen that the bulk of the increases are due to the larger volume imported:—

	July, 1923.	July, 1924.	Value, 1923.	Value, 1924.
	Quantity.	Quantity.	£	£
Grain and flour (cwt.) ..	13,671	22,893	7,220	11,800
Beef and mutton (cwt.) ..	1,454	2,017	3,903	5,248
Butter (cwt.)	419	443	3,086	4,051
Raw cotton (centals)	462	790	2,972	6,308
Raw wool (centals)	402	431	2,562	4,061

Higher prices have affected the value figures for wool and cotton, but increased quantities are mainly responsible for the higher total in the case of cereals and meat. On the exports side the increase of nearly £12 millions is accounted for entirely by manufactured goods, an increase of £1½ millions in food and drink being more than offset by a drop of £2½ millions in raw materials. The latter is accounted for entirely by the coal figures, the export values of which have dropped from £8,841,300 to £6,363,600, the quantity figures being 6,767,300 tons and 5,487,900 tons respectively. For the seven months the quantity figures have declined from 46.6 million tons to 36.6 million tons. The extent to which these figures are affected by the Ruhr episode may be seen from the fact that Germany, France, Holland, and Belgium together took from us in the first seven months of the year 16.2 million tons in 1922, 27.7 million tons in 1923, and 17 million tons in 1924. Exports to countries outside this area were 16, 18.9, and 19.6 million tons respectively. Among manufactured goods the principal increases are in machinery, cotton and woollen manufactures, and vehicles. In the last category the value of exports of motor-cars and parts increased from £280,700 to £587,600. For the first seven months of the year the increase of £91 millions in imports is made up of £21 millions in food and drink, £47½ millions in raw materials, and £21½ millions in manufactured goods. On the export side, food and drink increased by £7 millions and manufactured goods by £24 millions, coal exports being down by nearly £15 millions. The quantity figures of some of the leading exports for the first seven months of each of the past three years compare as follows:—

	1922.	1923.	1924.
Iron and steel and manufactures thereof	1,791,681	2,523,313	2,364,297
Cotton yarns	126,161,400	79,740,100	100,151,600
Cotton piece goods .. sq. yds.	2,294,469,800	2,422,952,200	2,607,773,600
Woollen tissues	68,282,700	83,990,700	96,279,300
Machinery	211,786	252,287	262,219

In another column we give the figures of motor-car exports, which show a substantial increase over the seven months. We hope to refer next week to the figures giving the direction of our overseas trade.

American Money Policy.—In view of the improvement in the dollar exchange and the cheapening of money in America on the one hand, and the certainty that we shall have to face difficult decisions in the coming autumn in connection with German credit hunger on the other, it is important that Europe should understand America's monetary situation. The current number of the *Chase Economic Bulletin* contains a striking commentary on this subject by Dr Anderson, who develops the thesis that while there has been very extensive long-term investment in America in which the banks have become heavily committed, and a large volume of short-time money market funds have been diverted to capital uses, Federal Reserve Bank policy has created an artificial cheapness in the money market. Contrary to expectation, the expansive capacity of the Federal Reserve banks, consequent on the influx of gold, has not caused prices to rise sky high, "but even if we have not blown up a price bubble we have been blowing up a credit bubble, especially in the form of long-time debts." But Dr Anderson does not think that investment capital is really abundant, and when the time comes when this capital ought once more freely to diffuse itself throughout the world the illusion will be dispelled. In his view the situation is "abnormal and dangerous." Dr Anderson thinks that the Federal Reserve banks have helped to produce the illusion of cheap money by their extensive investment in earning assets, a policy which he attributes to their desire to earn profits for their stockholders. But they also have a public responsibility, and he urges that they should reverse their policy by selling 100 to 200 million dollars worth of Government securities, and thus reduce the balance of Member Banks by this amount. He suggests, incidentally, that the difficulty about paying dividends should be met by the Reserve banks charging a commission for the services which they render at present to the

Government and the Member Banks free of cost, and that the enormous overhead expenses of these banks, which swelled during the war and post-war years to abnormal dimensions, are capable of being severely economised. Dr Anderson agrees with Prof. Cassel in thinking that for some years America could continue to absorb gold if this policy of restricting money market resources were followed, and if the National Bank note circulation were replaced by more gold or gold certificates in circulation. He does not, however, think that this is a permanently satisfactory state of affairs, and sums up his policy:—"The abnormal gold and money situation calls for two lines of operation. For the long run, we must earnestly co-operate with Europe toward such a stabilisation of European affairs as will restore the gold standard in the important countries of Europe, and restore European credit so that there may be a normal redistribution of capital throughout the world. We must lower our tariffs so as to permit Europe to send us more goods instead of gold in payment of debts here, we should throw into the general settlement the problem of the debts of our European Allies to our Government, and, above all, we must do everything possible to effect the prompt adoption of the Dawes plan. Pending this change in the European situation, we must, for the next two or three years, be prepared to offset the evil effects of inflowing gold. The main point here is a change of Federal Reserve Bank policy. Rediscount rates should be regularly kept higher than market rates, and open market policy should be reversed as explained above."

Agricultural Wages.—The imminence of the introduction of new machinery for the regulation of wages in agriculture warrants a brief examination of the position as regards such wages as it exists immediately before the coming into operation of the Government's new measure. The Corn Production Acts (Repeal) Act of 1921, which abolished the machinery for the fixing of legal minimum rates, provided for the establishment of local joint conciliation committees for the purpose of making agreements as to wages in the various districts. These committees could, if they wished, submit their agreements to the Minister of Agriculture for confirmation, and the rates embodied therein then became statutory minima to be observed by all employers in the area. During the first year, agreements were arrived at by about 55 of the committees, confirmation being obtained in five cases. By the autumn of 1922, however, some of the earlier agreements, which had been made for specific periods, had lapsed, and the committees had found themselves unable to agree for further periods. This process continued, and the number of agreements actually in operation declined till at the present time agreed conditions apply in only 12 out of 63 areas, though in two other areas agreements are in force arrived at by methods other than through the committees. The agreed rates for ordinary labourers in the 15 areas are as follows:—

Northampton (North) 32s (52½ hours)	Suffolk	25s (50 hours)
Cumbria and Westmorland	Ashby (Bosworth District)	31s (54 hours)
Lancashire (South)	Loughborough District	30s (52 hours)
Lancashire (North)	Devon	30s (51 hours)
Cheshire	Carnarvon	30s (50 hours)
Shropshire	Denbigh and Flint	27s 1d (50 hours)
Staffordshire	Merioneth and Montgomery	30s (54 hours)
Norfolk		

In about six other areas, where no agreement has been reached, the National Farmers' Union has recommended its members to pay rates ranging from 27s to 30s a week. No information has been published as to the rates prevailing in the remaining areas, though the Minister of Agriculture has stated that cases have been found where rates as low as 20s a week are paid. From such information as is available, however, the Ministry of Agriculture estimate the average of the rates in England and Wales as a whole in 1923 to have been about 28s a week, or 56 per cent. above the average of the rates prevailing in 1914. As wages have been almost stationary since early in 1923, this figure is probably about correct for the present date. The particulars given above relate to ordinary adult male labourers. Except in a very few cases, no rates have been agreed upon or recommended for special classes of workers—horsemen, shepherds, and cattlemen—or for women and young persons. For such

workers there has, generally speaking, been no attempt at the regulation of wages since the Agricultural Wages Board ceased to function in 1921. Moreover, very few rates have been fixed since that date for hay and corn harvest, or for mid-week and week-end overtime. The district boards under the Corn Production Act dealt with all these points in considerable detail. The difficulties, therefore, which have arisen in the last three years, and which, in the majority of cases, have proved insuperable to the conciliation committees, appear likely to arise in even greater volume when the new bodies begin the task of formulating the new wage conditions.

Austrian Finances.—The financial condition of Austria will once again engage the attention of the League of Nations Austrian Committee during the current month. The members who have to reconsider the terms of Austria's normal budget when they meet in Vienna will be faced with a situation of considerable complication. Briefly, the facts are that during the past twelve months stabilisation has had such good effects upon the revenue that estimates of receipts have been very considerably exceeded. The recent financial crisis, however, makes it certain that the revenue and direct taxes will now shrink, while that from indirect sources has already fallen. The flourishing condition of the revenue has, however, created an undue sense of prosperity in Austria; expenditure has not in fact been kept down according to programme, and as our readers will remember, the Austrian Government recently asked the League that the normal budget figures should be substantially modified to allow of considerably larger expenditure and revenue. The League Council has agreed in principle to a modification of the budget, but since the application was put forward the effects of the recent financial crisis upon the probable budgetary situation have become more evident. According to our Vienna correspondent, whose letter will be found on a later page, it is now thought improbable that the budget will balance at the end of this year, and that it will be necessary for the control of the League to be extended over the year 1925. The situation has caused a slight setback in the price of Austrian 6 per cent. bonds, but, of course, the interest on the loan is still very amply covered by the receipts from Customs and the tobacco monopoly.

Iron, Steel and Coal Output.—The figures just issued by the National Federation of Iron and Steel Manufacturers, giving the production of pig-iron and steel in July, show that, although there were 11 fewer furnaces blowing at the end of July than at the end of June, production of pig-iron in July was 611,800 tons, compared with 607,800 tons in June. That the loss of 11 furnaces did not result in a decreased production of pig-iron was due partly to the fact that there was one more day in July than in June, partly that the furnaces went out towards the end of the month, and partly that three furnaces were blown in during the month which were of a higher average capacity than the average of those which were blown out. The production of steel ingots and castings, which had been exceptionally low in June owing to the Whitsun holidays, rose from 651,500 tons to 693,300 tons, the decrease in Scotland due to the holidays being more than offset by increases in other parts of the country. Imports of iron and steel in July amounted to 201,200 tons, of which 66,900 tons were billets, blooms, and slabs, 32,000 tons sheet and tinplate bars, 24,300 tons iron bars, shapes, &c., and 17,500 tons pig-iron. Exports of iron and steel rose by 15,300 tons compared with June, and amounted to 339,700 tons, of which 57,100 tons were galvanised sheets, 46,900 tons tinplates and sheets, 44,300 tons pig-iron and ferro alloys, 34,800 tons black plates and sheets, 29,400 tons steel bars, rods, angles, &c., 29,400 tons steel bars, rods, sections, &c., and 26,800 tons cast and wrought tubes, pipes, and fittings. The output of coal in the five weeks ending August 2nd averaged 4,878,500 tons per week, compared with an average of 4,674,800 tons in June, when output was affected by the Whitsun holidays. The exports of coal were the highest since December last, and amounted to 5,487,889 tons. Of the total, 1,222,100

tons went to France, 702,400 tons to Italy, 518,700 tons to Germany, and 391,300 tons to Sweden. Exports of metallurgical coke amounted to 144,600 tons, compared with 111,200 tons in June and 234,600 tons in July, 1923.

Cotton Trade Short Time.—Our Manchester correspondent writes:—Since last March organised short-time has been in operation in the cotton spinning mills of Lancashire producing American yarns. The scheme provides for the factories to run only 26½ hours per week instead of the usual 48 hours. Some time ago it was agreed that this curtailment of production should go on until the end of September. The state of trade has again been considered by the General Committee of the Master Spinners' Federation, and it has been decided to recommend the members to continue the restriction of output until the end of the year. It may be said that out of the 56,000,000 spindles in Lancashire and adjacent counties about 36,000,000 are engaged on American cotton, and the owners are affected by this short-time scheme.

Pig-Lead Prices and Supplies.—There has been a very firm tone in the pig-lead market this week, and the recent setback has been more than offset. On Wednesday the market ruled very strong, with September commanding a small premium over August, this being followed by a general advance on Thursday, when both current position and next month were sold on the open market at £33 2s 6d per ton. At the close of last month there was some talk of a squeeze coming, and at one time prompt foreign lead rose to £34, but this was followed by a collapse. It is difficult to see what justification there is for the rise. The imports during July were on a liberal scale, the total being 24,536 tons, which makes 130,329 tons for the seven months. This is fully 6,000 tons above the average, and there can be no actual shortage of supplies, although it is true that there is no reserve in public warehouses. The market in the States is very firm again, and the rise this week owes something to that. The cable-makers are well engaged just now, but there is not much business doing in lead products and commodities; thus the upward movement and activity in pig-lead is based largely on speculative purchases, on the theory that there will be a brisk autumn demand after the London Conference, and when the building dispute is settled. Lead is now several pounds per ton over the price ruling this time last year, and certainly looks high enough. The available supplies seem to be in very firm hands, and this gives rise to the suggestion that the strength of the market is due in part to manipulation. Of course, if the political and industrial situation took a turn for the better shortly, and the lead consumers entered the market, there would be a shortage, as Continental requirements would show a very big expansion; but for the time being the interests of producers might be better served by steadier markets rather than these irregular up-and-down movements.

Some Motor Trade Statistics.—August 1st, the day on which the much-discussed McKenna duties of 33½ per cent. were allowed to lapse, has come and gone, and we have been spared a repetition of the hysterical outbursts on the part of some sections of the motor trade which greeted Mr Snowden's proposal to abolish them. In fact, the only outward and visible sign that we have seen of this historical event has been a reduction in the price in this country of a number of foreign cars and a somewhat naïve reference in the advertisement of a well-known brand of British car to the "stabilisation" of the motor trade, now that the duties have gone. The average reduction, according to the *Autocar*, is in the neighbourhood of 12½ per cent., a figure which we have checked so far as we are able. What will be the precise effect upon employment in the British motor industry of these reductions we will not attempt to forecast, but how utterly groundless were the jeremiads of certain sections of the motor trade as to the threatened wholesale unemployment which would immediately result if the proposal to drop the duties were sanctioned by Parliament may be seen from the official

monthly figures of unemployment from December, 1923, to June, 1924, under the heading "Construction and Repair of Motor Vehicles, Cycles, and Aircraft":—

	Males.	Females.	Total.
End December, 1923.....	18,199	1,254	19,453
" January, 1924.....	17,403	1,328	18,731
" February, ".....	15,949	1,254	17,203
" March, ".....	13,769	1,079	14,843
" April, ".....	12,139	1,048	13,187
" May, ".....	12,639	1,121	13,760
" June, ".....	12,560	1,058	13,618

The very substantial reduction in the numbers unemployed over the six months may be partly due to a seasonal increase in output, but the figures give the lie direct to the absurd talk indulged in three or four months ago. The total number engaged in the motor industry in July was 194,420, of whom 175,590 were males and 19,830 females. Up to the end of July the figures of overseas trade in motor-cars and parts thereof show that the British motor trade has been very much more than holding its own, while the statistics for the month of July alone show a substantial increase in the export of British cars, as may be seen from the following table:—

	July.		Seven Months.	
	1923.	1924.	1923.	1924.
Touring cars.....No.	236	1,238	1,176	5,659
" ".....value	£85,819	£286,737	£480,034	£1,495,994
Commercial vehicles.....No.	69	328	479	942
" ".....value	£34,787	£78,585	£373,804	£444,497
Total cars.....No.	305	1,566	1,655	6,601
" ".....value	£120,606	£365,322	£853,838	£1,940,491

The export of cars thus increased fivefold in number and threefold in value in July, as compared with July, 1923, a striking increase which may be partly explained by the dockers' strike of last year. Imports of cars, on the other hand, show a substantial decline, the total imported for the seven months being 6,884, valued at £1,196,700, as against 12,128, valued at £1,932,428, for the first seven months of 1923. The return of motor vehicles registered in this country from December 1st to May 31st last, issued by the Ministry of Transport, shows a substantial increase in private cars licensed, in comparison with the corresponding period of the previous year, the total amounting to 433,212, as compared with 346,423, the revenue amounting to £5,943,300, against £5,013,400.

Irish Currency Questions.—Our Dublin correspondent writes:—Premonitory symptoms, which it is impossible to ignore, indicate that strong influences are at work to push the Free State Government into measures profoundly affecting the currency. The daily Press has so far fought shy of the subject, but a new weekly called *Irish Truth* has brought the matter into the open, and bankers and merchants at least (the general public has not yet realised its significance) are relieved that public discussion has supervened to prevent dangerous hole-and-corner decisions. It is not believed that the Government has considered the matter (certainly it has not fully or exhaustively considered it), and the Minister of Finance is absent through illness from his Department. But *Irish Truth* has alleged that the whole issue may be prejudiced in advance by certain secret and confidential discussions recently undertaken with a view to immediate action touching (a) coinage, (b) legal tender, and (c) State policy as to the discharge of its obligations in future. There are known advocates of far-reaching changes in the Department of Finance, and it is feared that their influence may avail to such an extent that Irish currency policy may be virtually determined in advance and without adequate consideration, and that Irish credit may be affected very seriously. One or two advocate a change openly, and point to the circulation of British Bank and Treasury notes to the alleged amount of upwards of £22,000,000 in the Free State as constituting an interest-free loan to Great Britain. They advocate the Free State issue of notes to replace them, that the new issue alone shall be legal tender, and that the replaced notes shall be expended in the purchase of interest-bearing gilt-edged securities as collateral for the new issue. *Irish Truth* strongly urges exhaustive consideration of the whole

subject before any decision is come to, and points out the wisdom of taking the Irish bankers fully into consultation as representing Irish depositors.

South African Banking.—At the annual meeting of the National Bank of S. Africa, at Pretoria last week, Mr James Leisk, the chairman, criticised the proposal to form a State Bank for South Africa, expressing the opinion that from the point of view of the general public interest the entry of the State into the province of banking would be fraught with considerable danger. The expectation of cheap credit, from which the movement appeared to derive most of its support, could only be realised at the expense of the taxpayer. He presumed, however, that before any policy was decided upon the new Government and Parliament would fortify themselves with the advice of a commission of inquiry, and that the commercial banks, whose experience in these matters was extensive, would be given every opportunity of ventilating their views. With regard to the question of the gold standard, Mr Leisk said that the only safe course for South Africa to follow was to extend from time to time, as required, the period of inconvertibility in the confident expectation that the measures adopted in Great Britain to restore the gold standard would be successful, and thus pave the way for the restoration of a free gold market in South Africa with the minimum of risk and of local economic disturbance. He added, as a practical illustration of the uncertainties of the situation from the point of view of the South African banks: "We have established a reserve against the possibility of depreciation in our overseas sterling branches. The precise meaning of that precaution is that, if South Africa goes back to a free gold basis before the pound sterling moves closer to its gold parity, then all those South African concerns which have surplus balances in London will automatically see those balances depreciated in value by the amount which it would cost to return them to this country. Obviously that cost under conditions such as I have indicated would be greatly in excess of the present rates of exchange for remitting from London to South Africa." With regard to conditions in South Africa, the chairman said that, given a satisfactory solution to the reparations problem, South African conditions were ripe for an upward movement to share in the resultant prosperity.

Lithuanian Finance and Trade.—In spite of the loss of Vilna, and the dispute, now happily settled, over the possession of Memel, Lithuania last year made considerable progress, as is shown by the Report (to April, 1924) just issued by the Overseas Trade Department, from the British Consul at Kaunas (Kovno). Last year's Budget accounts closed with an unexpected surplus of 5,000,000 lits (about £113,000). The excess of the actual tax-revenue over the estimate was far more than counter-balanced by large deficits on the yield of the State forestry and on the payments under the new agrarian law, which reached only 5.3 per cent. of the estimate; but these deficits were more than covered by drastic retrenchment, and for 1924 the estimated surplus is 8,000,000 lits (about £181,000). The military expenditure, though swelled by difficulties arising out of the strategic position of the country and the uncertain conditions in Eastern Europe, is much less than in 1923. Railway extension and road improvement, the next largest item of expenditure, has been temporarily checked by the Legislature since the Report was written; the plans involve the opening up of important grain and timber districts and the improvement of thorough and transit traffic. The new currency (dealt with in our article of July 26th) is fully secured on gold (deposited abroad) and reserves of foreign currencies, chiefly American dollars, a coin in use through the remittances of emigrants; but the care taken by the new State Bank (founded in October, 1922) to avoid inflation keeps the quantity of the circulating medium far below the national need; credits are restricted, and the usual rate of interest is 36 per cent. per annum. Business is thereby hampered, unemployment has been increased by the retrenchment in the State services, and the cost of living has risen 10.5 per cent. since September, 1923. Industry has suffered from the political situation and the

loss of the Polish and Russian markets, but the timber, paper, and match manufacturers are making progress. Still, agriculture must always be predominant; and here the Government is encouraging improvement—for which there is ample room—through the importation of pedigree cattle and pigs, and assistance to the co-operative societies to set up modern dairies, in the belief that Russian competition will eventually necessitate the production of meat, cheese, and butter, rather than grain. Possibly the peasants are as yet hardly fit to profit by these efforts; but Danish farmers have immigrated, and may show them the way. The creation of small holdings is proceeding rapidly, but as yet the expropriated owners have received no compensation. Timber, linseed, flax, and foodstuffs are now the staple exports; of these Great Britain takes a large share. Her exports to Lithuania are 5.27 per cent. of the total, Germany's (including the transit trade) 81.89 per cent.; but there are openings for an increase of British exports, notably in woollens, agricultural machinery, tools, and railway and telegraph material for the Government. British prices, however, are often too high, and credit must be given; but competition with Germany is now becoming more practicable. "Stability of political and social conditions, sound currency and a wise financial policy are needed for the attraction of foreign capital"; and the readiness of foreign States, especially Sweden and Great Britain, to grant loans to Lithuania in the form of manufactured goods, for her reconstruction argues an increasing confidence in her future.

African and Eastern Trade Corporation.—A year ago the report of the African and Eastern Trade Corporation, Limited, stated that owing to the complicated nature of the computation in connection with the excess profits duty adjustment a final settlement had not been reached, but taking into account the adjustment so far accomplished, a trading profit for the year of £739,800 was recorded. This permitted of a payment of an 8 per cent. dividend on the ordinary shares, after allocating £200,000 for depreciation of stocks and paying the preference dividend for the year, the balance carried forward being £242,394. The directors transferred £300,000 from the reserve to make "ample provision for future contingencies," and also transferred £650,000 from reserve to reduce further the book values of investments in subsidiary companies. A sum of £250,000 was also set aside to meet claims during the next three years for income-tax on excess profits duty repayments, so far received by the corporation and credited to subsidiary companies. In the accounts now before us profits for the year ended December 31, 1923, are shown as £442,353, which, added to the amount brought forward, make an available balance of £684,747. How profits compare with those set out for the previous year is not quite clear. Apparently the generous allocation for depreciation and other contingencies a year ago are considered ample by the directors, for this year, after payment of preference dividends, only £25,000 is placed to depreciation fund, £25,000 to income-tax reserve, and £10,000 to other reserves. It should be added that profits this year are shown after providing for "the usual depreciation on stocks." The dividend on the ordinary shares is 8 per cent., the same as for the previous twelve months, and £271,985 is carried forward. The directors report that trade during the year under review has shown a gradual improvement, and the outlook in their opinion is now better than it has been for some years.

Grand Trunk Pacific Debentures.—Holders of Grand Trunk Pacific 4 per cent. debentures received a pleasant surprise on Monday when it was announced that they were to receive the full rate of interest for 1923, and the welcome news was reflected in a rise of 14 points to 58 in the price of the stock. Less than three months ago stockholders were officially informed that the surplus revenue of the guarantor company, the Grand Trunk, available for meeting the interest was equivalent to less than 1 per cent. Now, as a result of an audit on behalf of the debenture holders by a private firm, a sum of nearly \$2 million has been brought forward, "on which the railway legal department has ruled in favour of the debenture holders." Further

details from Ottawa will be awaited with interest for an explanation of this striking alteration in the position, for the sum mentioned covers the amount required for the 4 per cent. interest by a wide margin.

Malayan Tin Shares.—Tin, the metal, has been up to nearly £300 and down to £202 per ton in the course of the present year. The margin of £95 per ton within seven months is sufficient in itself to show the extraordinarily meteoric character of the fluctuations which occur in tin, and which render, therefore, the dealing in shares of tin companies a matter of so considerable speculation. At present the price of tin stands about £250 per ton, and as this allows a very substantial profit to most of the sound companies working in the Malay States, a good deal of quiet interest is being taken in the shares of these concerns. This interest is stimulated by the persistency of the demand for such shares from Singapore and Kuala Lumpur. British speculation in these Malayan tin shares is spasmodic, the reason being that the market in most of them is strictly limited. The companies mostly possess capitals so comparatively modest, that this tends to restriction of activity, because there can never be an active market in any shares, for long at a time, if there is no supply wherewith to meet demand. Moreover, the wildness of the fluctuations in the price of tin serves to enforce caution upon the ordinary speculator, who is apt to complain that whereas on one day he may find it exceedingly difficult to buy shares, the course of a few days, or even hours, may result in his discovery that it is then quite as difficult to sell them. Nevertheless, the good shares pay well on the money, and taking dividends over a period of years, the share proprietors have little cause for complaint in cases where they have acquired their holdings at reasonable prices. The year 1922 proved a severe test for tin companies as a whole, for in that year the price of tin fell to £140 per ton, whereas in 1920 it soared at one time to £420 per ton. The speculative investor in mining shares will find it interesting to glance at the dividends paid by a selection of the leading companies for the past half decade, and these can be tabulated as follows:—

Company.	Dividends per Share.					1924 (to date).
	1920.	1921.	1922.	1923.	1924.	
Gopeng Consolidated	4 0	3 0	3 0	3 0	3 0	2 3
Idris Hydraulic	4 0	0 6	..	..	1 0	1 6
Iphoh Tin Dredging, 16s shs.	2 0	..	..	..	0 6	3 3
Kramat Pulai	4 0	3 0	2 0	2 0	2 0	2 0
Kinta Tin Mines	5 0	1 0	2 0	2 0	2 0	2 6
Kamunting Tin	2 0	..	..	..	1 0	2 0
Malayan Tin Dredging	4 0	..	..	..	3 0	2 0
Pengkalan	1 0	..	..	..	1 0	5 0
Rambutan	3 0	2 0	2 8	2 0	2 0	2 4
Renong Tin	3 0	..	..	..	1 6	..
Siamese Tin Syndicate	7 0	2 0	1 0	5 0	7 0	..
Sungei Besi	4 0	..	2 0	4 0	2 0	..
Tekka	0 9	0 9	0 9	1 6	1 1	1 1
Tekka Taiping	1 0	1 0	..	1 0	2 0	..
Tronoh Mines	2 0	..	..	4 0	2 0	..

In putting money away through the purchase of these Malayan tin companies' shares, it is advisable to obtain as much information as possible in regard to the number of dredges which are at work. Obviously, if a company has only one dredge, it is liable to mischances which would affect to a considerably lesser extent a company which owned two or more dredges. There is a tolerably free market in a few of the shares, for instance, in Malaysians and Siamese Syndicate, but the prospective purchaser will do well to bear in mind that in all these Middle East undertakings he cannot expect to find such flexibility of market as characterises the shares, say, of the leading South African gold producers.

Esperanza.—Our mining correspondent writes:—It is seldom—fortunately—that the Stock Exchange is subject to such a bombshell as that received this week in connection with the Esperanza. The original company was a highly successful undertaking, for one year paying as much as 160 per cent. Following the exhaustion of the abnormally rich ore, the dividends fell away, until for 1918 only 5 per cent. was paid. This proved to be the last. In 1920 rich ore was again struck, and in the hope that

it might be another "bonanza," the shares were rushed up to £2 10s. The deposit, however, turned out to be only a patch. Subsequently the company secured an option on a property on the West Coast of Mexico, but the results of exploration did not justify acquisition. About the middle of last year the company was reconstructed, the shareholders being offered two 10s shares credited 8s paid for every five £1 shares. It was stated that a portion of the new capital was to be devoted to the alteration of the treatment plant, so as to permit of the crushing of 30,000 tons a month of low-grade ore—whereof it was calculated that 1,000,000 tons were available and could be dealt with at a profit of 50 cents per ton. The first return from the modified plant showed the disappointing result of \$15,000 loss, but the manager reported that the June loss would be much lower, and that money would be made in July. He added: "We now feel justified in giving you positive assurance of future profitable operations." In these circumstances it is no matter for surprise that indignation and astonishment should have been aroused on the part of those interested by the publication on Tuesday of a cable from the consulting engineer announcing the low-grade programme to be a failure, and intimating that as a "last resort" operations are to be confined to the treatment of 10,000 tons monthly of the highest-grade ore available. On Monday evening the price of Esperanza shares closed at about 4s; on Tuesday it was only 2s, and some unfortunate holders who elected to sell got as little as 1s 5½d. The shares were picked up on the fall by people who have a penchant for such speculations, but the outlook is very uncertain. The company's resources must have been pretty well depleted by the alterations above mentioned, the payment of the old company's liabilities, and the losses since incurred; the June deficit, by the way, was almost as great as that for May. No very substantial profits can be expected to result from the new programme, and the chance of another rich discovery—although it exists—is small. Meantime, an explanation is required of the divergence between the official statements.

Parent Tyre.—The net revenue of the Parent Tyre Company, Limited, for the 16 months ended April 30, 1924, amounted to £96,703. This compares with £53,321 for the preceding 16 months. The balance brought forward amounts to £3,483, thus making a total of £101,186 available for distribution. Preference shareholders secure £38,245, being an interim dividend at the rate of 5 per cent. per annum, less income-tax for the 12 months ended December 31, 1923, leaving a balance of £61,941 to be carried forward. The directors report that the company is emerging from "a somewhat prolonged period of difficulty, with its assets steadily appreciating, its business prospects enhanced, and its earning power increased." Gross profits for the 16 months amounted to £175,683, as compared with £86,156 for the previous 16 months. Of this profit, approximately £63,000 was derived from old investments, and £112,000 from new business. In this connection, it is stated that the investment in Joint Industries, Limited, and the working agreement with that company have operated satisfactorily. It is observed that no income was derived from the company's holding of Dunlop Rubber preference shares, and dividends have accrued to the company on this investment for three years and five months to April 30th, the date of the company's accounts. The scheme of capital reorganisation recently submitted to the shareholders of the Dunlop Rubber Company, it is stated, was found to be unacceptable, and was therefore withdrawn. A committee representing all classes of Dunlop shareholders was thereupon appointed to confer with the board, and unanimous agreement has since been reached by the committee, a fresh scheme having been approved which is to be submitted for the approval of Dunlop shareholders without "undue" delay. Under this scheme it is proposed that Dunlop "C" preference shareholders will be paid a sum of £470,000 net in cash, in settlement of the arrears of their dividends up to December 31, 1923, while their £3,000,000 of capital, carrying interest at the rate of 8 per cent. per annum (i.e., £240,000 per annum) will be reduced to £2,400,000 of capital, carrying interest at the rate of 10 per cent. per annum (i.e., £240,000 per annum), with, however, the right to

a return of £3,000,000 on a winding-up. Under this arrangement the company should receive this year a sum of, approximately, £300,000 in cash, in settlement of its arrears of Dunlop dividends for the 37 months to December 31, 1923. The directors of the Dunlop Company have announced that they expect to resume the payment of regular dividends as from January 1, 1924. Although the company's earnings, it is stated, during the past six months have been more than sufficient to pay dividends on the preference and ordinary shares to date, "all available cash resources are, at the moment, embarked against the current transactions of the company." Upon the passing of the Dunlop scheme of reorganisation the directors propose to convene the annual general meeting of the company, when they "will be in a position to clear off all accrued dividends, to recommend the payment of substantial dividends on the deferred shares, and thereafter, as they hope, to resume the payment of regular dividends on all classes of the company's shares."

Transvaal Gold Output.—The production of gold from the mines of the Transvaal in July was 829,437 fine ounces, which is easily the highest monthly total since the war, and compares with 773,053 ounces in June, and 754,306 ounces in July, 1923. The following table gives the monthly outputs since the beginning of 1918:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January ..	714,182	676,059	670,503	651,593	639,728	704,469	798,768
February ..	652,759	636,728	625,330	558,137	639,728	704,469	768,617
March ..	696,281	712,379	707,036	671,123	639,728	704,469	768,617
April ..	717,000	694,944	686,979	681,382	511,338	743,651	788,923
May ..	741,317	724,995	699,041	687,776	629,786	786,564	809,003
June ..	727,696	702,379	715,957	678,490	675,697	755,309	773,053
Total (6 months) ..	4,256,235	4,147,484	4,104,846	3,928,501	2,456,549	4,516,549	4,704,035
July ..	732,199	725,697	736,029	689,555	730,635	754,306	829,437
August ..	740,310	706,659	702,083	711,526	752,490	769,371	..
September ..	708,206	698,558	682,173	691,028	747,089	739,504	..
October ..	679,764	723,722	662,472	707,825	778,159	793,842	..
November ..	658,701	677,970	633,737	704,236	764,476	780,639	..
December ..	641,245	650,191	632,215	681,847	790,712	778,949	..
Total (12 months) ..	8,420,560	8,330,091	8,153,625	8,114,516	7,020,110	9,133,060	..

The average monthly output for the first six months of this year was 772,005 ounces, as against 761,090 ounces for the whole of 1923. In the table below are given the numbers of natives employed at the end of each of the past eight months by members of the Witwatersrand Native Labour Association and Contractors:—

	Dec., 1923.	Jan., 1924.	Feb., 1924.	Mar., 1924.	Apr., 1924.	May, 1924.	June, 1924.	July, 1924.
Gold mines ..	177,779	181,659	182,055	176,483	173,022	172,586	174,198	174,247
Coal mines ..	16,142	16,109	15,958	15,763	15,800	15,863	16,042	16,074
Diamond	3,239	3,482	3,419	3,170	2,762	2,863	2,999	3,158
Total ..	197,160	201,250	201,432	195,416	191,584	191,312	193,239	193,479

The number of natives at work in the gold mines is the highest since March, but well below the average for the winter months.

Russian Harvest—A Correction.—In the article in our last week's issue on Russian Harvest Prospects, our correspondent inadvertently stated that the Agricultural Tax will be collected this year entirely in kind. He now informs us that the opposite is the case, and that the tax will be collected entirely in money.

UNITED STATES.—STEEL CORPORATION'S EARNINGS—GERMAN SUGAR CREDIT—RESERVE BANKS AND GERMAN TRADE BILLS.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 5.

CONSIDERING the lessened activity in the steel industry during the second quarter of this year, the earnings statement of the United States Steel Corporation for that period made a very favourable showing. A substantial decrease in profits was looked for, but the actual falling off was much less than had generally been expected. Total net earnings for the quarter ended June 30th amounted to \$41,381,039, as against \$50,075,445 for the quarter ended March 31st, which was the record total for any peace-time quarter in the corporation's history, and with \$47,859,181 for the second quarter of 1923. After taxes and all other charges, the surplus available for dividends in the June quarter was \$23,775,291, or the equivalent after preferred dividends of \$3.44 a share earned on the \$508,302,500 common stock. This compares with \$31,918,836, or \$5.03 a share on the common, in the first quarter of the current year, and \$29,864,112, or \$4.63 a share, in the second quarter of last year. The net earnings by months reflected the slackening of steel business. The corporation's profits dropped from \$19,065,475 in March to \$16,048,011 in April, \$13,419,194 in May, and \$11,912,934 in June, which was one of the worst months experienced by steel manufacturers for years. Nevertheless, the second quarter's earnings were more than sufficient to meet all charges, as well as preferred and common dividends, including the extra distribution to common stockholders. On account of the trade depression, and especially since one of the largest independent steel companies, the Bethlehem, recently passed its quarterly common dividend, there was much speculation as to action the Steel Corporation would take with respect to an extra dividend. But the directors declared the usual 50 cents a share additional dividend, thus virtually establishing the common stock on a 7 per cent. annual basis. The corporation has always emphasised the fact that any extra distribution to common shareholders will depend upon earnings and prospects. Since the extra dividend was made at the same rate as heretofore, despite the well-known depression in the industry in recent months, and since steel business has now begun to revive, it is considered highly probable that at least the same extra distribution will be made in future quarters, barring, of course, any unforeseen and adverse developments. The corporation's report for the first six months of this year showed exceptionally large net earnings. The total amounted to \$91,456,484, as compared with \$82,638,250 in the first half of 1923, while net income, after all charges, reached \$55,694,127, as against \$47,382,163 in the corresponding period of last year. After taxes, charges, and preferred dividends, the net income for the first six months of this year was equivalent to \$8.47 a share on the common stock, compared with \$6.83 in the like period of last year. In other words, the corporation's net income of \$55,694,127 for the six months was sufficient to pay the full year's preferred dividends and leave a balance equal to \$6 a share on the common stock. That is to say, in the first half of this year the corporation earned all but \$1 a share of its total 1924 dividend requirements, including extra quarterly distributions of 50 cents a share on the common stock.

The recent announcement that an American banking group, headed by the Equitable Trust Company, had arranged a credit here for the German sugar industry to finance a part of the German crop, its refining and exportation, attracted much interest in financial circles. It is understood that the credit is for approximately \$4,000,000, and that it is to run for six months with interest at the rate of 7 to 7½ per cent. While the amount of the credit is rather small, the undertaking is regarded as an important development in that it enables American bankers, individually, to secure a foothold in Germany

and compete for business on even terms, apparently, with British banks. The machinery set up by the American banking group for this financing, in order to eliminate any element of risk in the operation, is quite unique. In a general way it may be described as a combination of some features of the contract covering cotton loans advanced to southern co-operative associations, and certain principles established in the recent acceptance credit provided for German industrialists, and the new Schacht Gold Bank. The basis security for this sugar credit is the commodity itself. Bills are to be drawn by German sugar mills on German refining companies, endorsed by prime German banks, and then forwarded to the New York banking group, which will advance the dollar credits. As a further measure of protection, the American banks or institutions will not advance the sums requested until presentation has been made by the borrower of export licences received from the German Government as evidence that German sugar has actually been shipped in amounts sufficient to repay the sums advanced. Although no official statement has been made, it is said that the loans will be secured by such export contracts on the basis of less than 2 cents per pound of sugar. In some respects the German sugar loan is similar to credits arranged by other American bankers, headed by the Chase National Bank, for the Russian textile industry. Under that arrangement, credit was provided for the importation of raw cotton into Russia, the loan to be repaid by sales in world markets of finished Russian cotton fabrics.

In anticipation, evidently, of the adoption of the Dawes plan by the Allied Governments, the Federal Reserve Board at Washington recently ruled that the Federal Reserve banks may purchase German trade bills endorsed by the German Gold Rediscount Bank. This step was taken in order to make the machinery of the Federal Reserve system available for facilitating financial transactions that are expected to take place in the United States following the adoption and application of the Dawes plan. Regulations of the Federal Reserve Board prescribe that a bill of exchange or trade acceptance eligible for rediscount shall be payable in the United States in dollars. There is no requirement, however, that the bill be drawn in the United States.

The fact that the Federal Reserve Board made this ruling in advance of any actual offer of such bills for purchase is taken to indicate that American banking interests, who will handle this country's portion of the proposed loan to Germany in connection with the establishment of the gold banks, are prepared to advance the necessary credits. With German trade bills endorsed by the German bank, eligible for absorption in the Federal Reserve system, the extension of credits to the proposed German gold bank will be greatly facilitated.

FRANCE.—REPARATION COMMISSION'S FIGURES—REVENUE RETURNS—COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, August 13.

THE critical point of the Inter-Allied Conference in London, from the French point of view, was reached yesterday, when M. Loucheur arrived in the British capital for the purpose of conferring with M. Herriot. M. Loucheur has gone to London in the rôle of stormy petrel. Although a member of M. Poincaré's last Cabinet, in which he was Minister of Commerce, it is a matter of common knowledge that, when the victory of M. Herriot was assured, he was ambitious to enter the new Ministry, but failed to attain his object. Since then M. Loucheur has created in the new Chamber the group known as the Gauche Radical, whose voting strength of 44 deputies has hitherto been thrown on the side of M. Herriot. This group may be regarded as holding the fate of the Herriot Ministry in its hands. M. Herriot has a normal majority of 70 at the best, so that the transfer of the 44 votes of the Gauche Radical group would place him in a minority of 18. The Loucheur group may be said to represent to an appreciable extent the big French industrial interests, who are by no means anxious to see German industry rise from its ashes, by the aid of an inter-Allied loan, and wrench itself free from

French domination. The friends of the group include political leaders of the first rank, like M. Klotz, one of the framers of the Versailles Treaty, who, like M. Loucheur, are dismayed at seeing not only French security more menaced than ever, as the result of M. Herriot's work in London, but the whole French system of alliances and the European order created by the Versailles Treaty in imminent danger of collapse. In the circumstances, it will be well to focus attention closely on M. Loucheur's action in London, for the result of his conferences with the French Premier—or rather, of his negotiations—may quite possibly bring about either the success of the effort to apply the Dawes Reports, or the downfall of the present French Ministry and the conclusion of quite different inter-Allied agreements.
