Unemployment shows a slight increase, the first increase since February. Publicly supported unemployed, on July 15th, numbered 198,067, against 195,005 on July 1st. The official wholesale prices index for August 5th is 133.8, against 133.9 one week earlier. The *Frankfurter Zeitung's* wholesale prices index number for July 30th is 143.31, against 142.63 on June 30th, and 147.14 at the end of January. The average skilled wage in eleven branches of employment (including State railways) in June was 42.46 marks, against 41.77 marks in May; unskilled, 31.90 marks, against 31.34 marks. The Railways Corporation's employees demand a wages increase of 12 pf an hour, which would cost about 144,000,000 marks a year. From August 14th are removed the import prohibitions on a number of articles, including upholstery textiles, upholstered furniture, furs, fine wood wares, celluloid goods, letter-paper in containers, jewellery, ordinary pottery wares, optical glass, gold wares, and most silver wares, iron tubes, pens, jewellery, and ornaments of base metals, and bicycle parts. Syndicate deals designed to promote export of finished goods are increasing. The paper industry, which charges high prices at home, is negotiating with the paper-ware manufacturers for delivery to the latter at specially low prices of paper consumed in manufacture of articles for export. This is the system already practised in the steel and aluminium trades. The syndicates for bar-iron and for bands have at last been negotiated, and the chain of subordinate syndicates designed after the creation last November of

the Raw Steel Syndicate is practically complete. No increase in the new activity in steel has been reported, but the higher prices reached at the beginning of August have been maintained, and for some sorts have increased. The new Bars Syndicate has fixed its price at 135 marks per metric ton ex works, against a low point in July of 124 marks. Prices of semi-finished steel did not share in the rise, ingots remaining at the July lowest rates of 105 marks per metric ton, blooms 112½. Other prices are:—Structural forms 132 marks, universal iron 145 marks, bands (as fixed by the syndicate) 155 marks, thick sheets (over 5 mm.) 145 million; thin ditto (under 1 mm.) 185 marks. The coal industry is still negotiating for official favours. The Association for Mining Interests publishes the following comparisons of coal finance before and after the war (the 1925 figures are for July):—

Average price received per ton:—1913, 11.93 marks; 1925, 15 marks. Production per cap per shift:—1913, 934 kilos; 1925, 908 kilos. Wages per cap per shift:—1913, 5.60 marks; 1925, 7.30 marks. Wages per ton of output:—1913, 6.38 marks; 1925, 8.92 marks. Salaries per ton of output:—1913, 0.51 marks; 1925, 1.07 marks. Employer's contribution to social insurance per ton of output:—1913, 0.44 mark; 1925, 1.06 mark. Cost of labour, including social insurance, per ton:—1913, 7.33 marks; 1925, 11.05 marks. Percentage of labour, including insurance, to selling price:—1913, 61.44; 1925, 73.67.

Stocks have been extremely weak. A slight recovery on the last two Bourse days of last week was followed by new weakness yesterday and to-day. From September 1st trading in stocks for future settlement will be resumed in Berlin. At first this is to be limited to a list of 48 stocks, on which are all the chief industrial, banking, and shipping stocks. No fixed-interest securities are on the list. The opening of the Bourse in Saturdays is expected from September 5th.

ITALY.—RESIGNATION OF SIGNOR DE STEFANI—PUBLIC FINANCE—STOCK MARKETS—DUTY ON CEREALS—WHOLESALE PRICES.

(FROM OUR CORRESPONDENT.)

TURIN, July 27.

SINCE my last letter of July 4th the Minister of Finance, Signor Alberto De Stefani, has resigned. He had been Minister from October, 1922, and his work in these 32 months will be long remembered. During his tenure of office the Italian Budget position was turned from a huge deficit to a small surplus. The last year of surplus was 1910-1911, when revenue exceeded expenditure by 11.6 million lire. The subsequent story is best told by the following figures:—

Financial Years.	Deficits in Millions of Lire.
Lybian War—	
1911-12	111.8
1912-13	257.8
1913-14	163.9
European War—	
1914-15	2,835.4
1915-16	6,891.5
1916-17	12,250.2
1917-18	17,766.1
1918-19	22,775.7
War liquidation—	
1919-20	7,885.9
1920-21	17,409.0
1921-22	15,760.4
Return to peace budgets—	
1922-23	3,028.8
1923-24	418.4
1924-25	209.0

The 1922-23 Budget was begun by Signor De Stefani's predecessors; and successive Governments, from the suppression of the bread subsidy by Signor Giolitti onward, may justly claim a part of the credit for the improvement. Signor De Stefani was a strong opponent of new expenditure, and, so far as he could go, worked against Protection. On leaving office he was able to state that the Budget for 1924-1925 was closed with 209 million lire surplus.

His successor, Senator Volpi, does not come, as did

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:

67 Milk Street.

BUENOS AYRES:
99 Florida.

HAVANA:
Pedro Gomez Mena Bldg.

One of the largest and strongest Banks in America. Resources of \$300,000,000.

Special Representative:
24, OLD BROAD STREET, LONDON.

Signor De Stefani, from the ranks of university professors, but from business circles. He was a director of Banca Commerciale Italiana, president of the Società Adriatica l'Elettricità, a much-esteemed practical administrator, and until recently Governor of the Lybian Colony.

No great changes were announced by Signor Volpi, but he is endeavouring to keep himself in close touch with banking and business circles. Signor De Stefani was rather drastic in his handling of Stock Exchange machinery. In a well-meant endeavour to revalue the lira, he shook financial markets; the lira, instead of improving, followed the slump in securities, and fell from 116 to the pound sterling to 133 lire in the month of July. Money became dear, and securities, especially speculative issues, went from bad to worse. July 23rd was a new black day. Banca Commerciale shares, which closed at 1,530 in June—and had already lost some 200 points from the highest level touched in February—went down to 1,390; Snia Viscosa, after rising as high as 450, were at the end of June at 334, and continued to be had at 240 on July 23rd. Small operators had to sell at almost any price, as it was rumoured that money would be extremely scarce at the settlement. However, as the market was almost cleaned, settlement was easy, and markets recovered.

Closing prices were generally higher by 20 to 30 points than the bottom of July 23rd. The first fiscal act of the new Minister was favourably received by the Stock Exchanges—i.e., the abolition of the tax of 15 per cent. on dividends on bearer securities. The tax was originated in 1920 as a means to induce security holders to inscribe them in the books of companies. Bearer securities were always in Italy a great stumbling-block against taxes on total income. From the business point of view, the suppression of the tax is favourable to the easy sale and marketing of bearer securities. Signor Volpi also proposed to reinstate the Customs duty on wheat and other cereals at the pre-war rate of 75 lire per ton for wheat, 115 lire for wheat flour, 13 lire for corn, 31.50 for corn-flour, &c. The purpose of the duty is to promote wheat production and diminish the need for importing wheat from foreign countries. A great pro-wheat campaign was initiated recently by Signor Mussolini, and experts were appointed to suggest means to improve technical methods of growing cereals.

Bachi's index number has risen by 16.7 per cent. On the 1913 basis the general index was 682.6, on the 1901-1905 basis 860.1. There continues, notwithstanding this rise, a lag between home and external prices. If we multiply the index 682.6 for June by 0.19, which is the present gold value of the lira, we get internal prices of 130, against 160 in the United States, Great Britain, Netherlands, and other gold countries. Living is cheaper in Italy than in gold countries; and that fact is not the least obstacle against a speedy return to a gold system.

GREECE.—THE GROWTH OF THE BANKS—ECONOMIC EXPANSION—SHORTAGE OF MONEY—THE REFUGEE SETTLEMENT.

(FROM OUR CORRESPONDENT.)

ATHENS, July 27.

THE recent growth of the Greek banks, as reflecting the economic development of the country, becomes evident by a comparison of the following figures compiled from the balance-sheets of the principal banks of the country:—

(Millions of Drachmæ.)

	December 31.		
	1920.	1923.	1924.
Cash	808	1,545	1,272
Discounts	133	285	761
Loans and advances—			
On securities	207	431	769
" merchandise	331	564	822
" mortgages	104	242	464
Sundry loans	226	552	1,053
Deposits	2,264	4,659	5,138

It may be recalled that in 1914 there existed in Greece only seven banks, with a share capital and reserve funds

of 146,000,000 dr, and deposits of 481,000,000 dr; and that, contrary to practice in England and America, deposits represent only actual money deposited with the banks, and not credits entered to the banks' customers' deposit accounts. Inflation is, of course, to a certain extent the cause of the increases observed. That a real economic progress has none the less taken place, however, is further proved by the appended table of those Greek joint-stock companies for which it has been possible to obtain data:—

(Amounts in Millions of Drachmæ.)

Nature of Companies.	End of 1914.		End of 1924.		June, 1925.	
	Number of Companies.	Share Capital & Reserve Funds.	Number of Companies.	Share Capital & Reserve Funds.	Number of Companies.	Share Capital & Reserve Funds.
Banks	7	145.8	30	726	34	880
Communication	14	123.3	21	179	25	231
Mining	8	40.1	17	97	18	103
Building	4	7.6	18	104	20	134
Trading	3	2.6	33	68	41	134
Industrial	17	54.5	65	470	76	629
Insurance	2	3.1	12	31	12	32
Sundry	3	25.5	30	108	33	119
Totals	58	402.5	226	1,783	259	2,262

The tendency towards expansion is manifest in both the above tables. In either case, the actual earning assets are considerably higher than the figures for the paid-up capital and the reserve funds would indicate. But they are kept down at low figures, or written off from profits, as a precaution against a possible lowering of the level of prices, and also to avoid taxation, which is higher in the case of joint-stock companies than in that of other companies and individual enterprises, much to the detriment of the interests of the country. The increases shown in the number and the capital of companies and in the banks' figures for discounts and loans are significant of the growing economic development of Greece. They account also to a large extent for the shortage of money complained of since 1924, and especially during the current year; the more so since the use of the cheque as a means of payment is ignored for all practical purposes, and actual cash has to be paid down for the settlement of each transaction.

With regard to the incident between the Refugee Settlement Commission and the Greek Government as the result of the action of the Greek judicial authorities against certain officials of the Commission, it should be stated that this event, showing rather the susceptibility with which the Greek authorities and the public regard the administration of the money devoted to the refugee settlement, lacks any great importance. The prospect of a speedy solution of the difficulty is foreshadowed by a recent pronouncement of General Pangalos, the Premier, to the effect that the Greek Government is confident of a peaceful solution, and that it has been decided that the legislative measure complained of is to apply no longer to the R.S. Commission officials.

JAPAN.—BANK DIVIDENDS—TRADE DEPRESSION—SHIPPING—TRADE BALANCE.

(FROM OUR CORRESPONDENT.)

TOKIO, July 9.

WITH the approach of the dividend season the Department of Finance has again issued instructions to the banks that they should be conservative in distributing dividends for the period ending June 30th. According to a Treasury official, the reasons actuating the Department are summarised thus:—Firstly, with a lower Bank rate and market rate of discount banking profits have been falling; secondly, losses suffered by a number of banks from the earthquake disaster of 1923 and certain big business failures have not been sufficiently provided for; and, thirdly, there has recently been a considerable decline in the ratio of quick assets to deposit liabilities; and the financial authorities can urge with much justification that the banks should, by a more conservative method of allocating profits, provide for losses, bad debts and internal reserve, and so strengthen their position.

Following the official instruction, it has been agreed among nearly 600, or one-third of the total local banks throughout the country, to pay smaller dividends for the half-year just closed. But so far as Tokio and Osaka are concerned, it is said, there will be no organised reduction of bank dividends. The balance of opinion of the leading bankers in Tokio is that the Government has no power of veto or restriction in such matters as disposal of banking profits, and reduction in dividends is not a matter to be carried out in unison as is suggested, for there are differences in the banks' respective positions. Apart from the question of lower dividends, the bank reports, most of which should be available during the latter part of this month, are expected to show poorer results than for the previous period.

Besides banking institutions, company reports recently issued show that industrial profits are not rising. Though dividends were largely maintained by many of them, smaller dividends were paid by some of the sugar refineries, muslin mills, and shipbuilding companies. Of all the industries, shipping and shipbuilding companies have been the hardest hit by the continued depression. Their profits have been steadily on the decrease. The Nagasaki Dockyard owned by the Mitsubishi interests, one of the biggest shipbuilders in this country, have recently discharged a thousand of its employees for the fourth time since 1923. Shipping companies have also been very hard hit. Nippon Yusen Kaisha, Nisshin Kisen Kaisha, and Osaka Shosen Kaisha have suspended their China Sea service or placed fewer steamers on the routes, owing to the prevailing anti-alien agitation, and, consequently, they are suffering a loss of from 400,000 to 500,000 yen per month.

The trade returns for June show an excess of imports over exports amounting to 20,079,000 yen, which brings the total adverse balance for the first half of the year to 518,544,000 yen. It is true these figures are not of a nature to restore confidence. But the heavy import season came to a close a little earlier, and there was a small balance of exports in the last ten days of last month. Japan's exports to China during the first half of the year totalled 258,751,000 yen, and imports from China totalled 155,520,000 yen, showing a balance of 103,229,000 yen in favour of exports, as against 86,996,000 yen in the corresponding period of last year. The anti-foreign agitation along the Yangtse has inevitably affected the trade with Central China during June, and there is a decrease of 9,223,000 yen in exports to those parts as compared with the same period of last year. But the falling-off in exports to Central China has been more than offset by a steady expansion to North China.

While town-dwellers complain of hard times, farmers are prospering on account of high prices for silk and rice. Coupled with an earlier turn of the trade and with further signs of monetary ease after Bon Festival Settlement, the general tone of the stock markets and commodity markets has been strong in recent weeks, despite the absence of any marked recovery in the leading industries.

Books and Publications.

SUBURBS OR SATELLITE TOWNS?*

A SATELLITE town is the scientific alternative to the unchecked expansion of our overgrown cities, and is thus entirely distinct from a garden suburb. After an exposition of general principles and a review of the satellite towns built or proposed in foreign countries, Mr Purdom devotes nearly all the rest of this handsome and well illustrated volume to the two successful examples of modern town planning in England—the First (or Letchworth) Garden City and Welwyn Garden City. The first was designed expressly as a satellite of London, and the second lies near enough to count as one; both aim at drawing industries as well as individuals from the congested metropolis. To qualify as a Garden City, a town-building scheme should cover an area sufficiently large to include a permanent belt of farm land, which must not be developed for commercial purposes; somewhere about 3,000 to 4,000 acres seems to be the minimum.

In their financial plans and histories the two Garden Cities differ considerably. Letchworth had to fight its way and pay for its experience, but it had the advantage of starting in 1904, when prices were low and capital comparatively cheap. Welwyn started in 1920, when prices were high and capital scarce; but it could profit by the lessons learnt at Letchworth. Each company obtained its land at the reasonable price of £42 and £44 10s per acre respectively; each was hampered by difficulties in securing capital for continuous development. Since it is essential to keep the ownership of residential and business sites in its own hands, a garden city company cannot replenish its capital account by selling off blocks of land as they become ripe. Thus a continuous influx of capital is required, and the revenue from ground rents rises slowly. Experience shows that you don't get inflated land values unless you have congestion, and the basic idea of a garden city is to have ample space for a limited population.

Mr Purdom explains why Letchworth took so long to pay a dividend on its ordinary shares—"the revenue account was made to bear expenditure which should have been charged to capital." Since the return from growing land values at Letchworth had proved disappointing, the directors of the Welwyn Company resolved to secure part of the values created by an increasing population through the ownership of subsidiary enterprises, a notable experiment being the general stores which have the monopoly of the retail trade. While the Letchworth Company lease sites for shops in the ordinary way, it has discovered that its revenue comes mainly from its gas, water, and electricity undertakings.

THE WOOL TEXTILE TRADES.*

STUDENTS of the war and post-war history of the British textile industries will find statistical material for a complete review of the wool trade, from sheep's back to finished article, in a book of some 87 pages (with charts), published by a well-known firm of London wool brokers. The tables are unusually full, and as a work of reference this small volume should be invaluable. In a preface, Messrs Dawson show that, while our export trade in woollens has increased quantitatively since 1913, in worsteds a serious decline has occurred. In woollens there has been a distinct tendency in favour of light cloths, while in worsteds the current has set the other way. Commenting on the present position and outlook, the authors state:—"For three years manufacturers have been squeezed between ever-rising wool prices and low world purchasing power, and now all consuming centres seem to be determined that this experience shall not be repeated. No large volume of business is likely to emerge until users are satisfied that prices are more

nearly in line with the buying capacity of the ultimate consumer, and will also allow of a reasonable margin for conversion." It is to be hoped that further editions will be issued to bring the figures up to date from time to time.

STOCK EXCHANGE NEWS.

SETTLING DAYS,

TICKET, August 26.	ACCOUNT, August 27.
Stock Exchange markets were inclined to look for a reduction in the Bank rate to 4 per cent. on Thursday in this week. There was a good deal of advance talk concerning the probability of such a change, and gilt-edged stocks advanced in various departments, encouraged by the expectation. When the announcement was made of no change, the members of the Stock Exchange who happened to be in the Consol market—and there were a good many there—laughed a little self-consciously. Prices, however, held their ground, and it seems to be the general opinion in the House that a fall in the Bank rate is not unlikely to take place in the near future.	Conversion 3½ per cent. stock will go ex dividend in a week's time, a consideration that has assisted in strengthening the price. The War Loan is good on Bank rate hopes, and other British Government stocks strengthened in sympathy. Most of the newly-issued scrip varieties have risen an ½ to ¾, demand being persistent for the lightly-paid and for the fully-paid stock as well. West Ham Threes have fallen to the neighbourhood of 65, and are difficult to sell.
The visit to this country of Monsieur Briand has had little effect upon prices of French Government and French railway bonds. These keep steady without any special feature. Middle European issues are better, and there have been a few fluctuations in Scandinavians, caused by the movements of the rates of exchange. Rio Tintos, after a spurt, went back. Brazilian bonds are harder, because of the assumption that the recent rise in the price of rubber will assist to stimulate production of the produce in Brazil, and so to increase the value of Brazilian Government, State, and City bonds.	Home Railway prices are now quoted ex dividend, but the deductions, most of which were made on Thursday, failed to bring support into a market that was rendered more suspicious than ever of the Labour outlook owing to reported fresh threats on the part of the miners' leaders. Argentine Railway stocks have spurted, thanks to the dividend hopes and the traffics that are now being secured. Foreign rails are good, as a whole, though Mexicans have not moved.
The rubber market is steady. The carry-over on Tuesday disclosed a fairly heavy bull position in some of the leading shares, and the reaction from 4s 6d per lb to 3s 5d per lb in the price of the raw material brought in a good deal of scattered selling. This was met by fresh support later in the week. Some firms connected with the market worked all through the ticket-night, while a good many others were in their offices until the early hours of Thursday morning. Tea shares keep dull. British Controlled stand out as the most cheerful spot in the oil market, where otherwise prices were heavy, owing to talk of a cut in the price of crude oil in the United States. Courtaulds have been a wild and excited market. At one time the price touched 6½, from which it fell back to 6¼ upon sales on behalf of weak bulls who found themselves unable to carry over. The contango rate was extraordinarily stiff. Other textiles are holding most of their rises.	The iron and steel market had been going better, but its prices were checked by the labour considerations already mentioned. Insurance and banking shares are better. The tobacco group remains very hard. The wireless group is inclined to be dull. Cable construction shares have regained the ground which they lost when the price of rubber was so

briskly hoisted. Nitrates have taken a turn for the better, and Sudan Plantations, on the knowledge that the reorganisation plan is on the point of being published, enjoyed one of their periodical spurts. The trust companies' stocks are featureless. Amongst illumination shares, gas stocks are a little better, in sympathy with other investment securities, while electricity varieties have hardly moved. Breweries have gone ahead, Watney deferred crossing 300.

The majority of prices of the South African producing companies' shares were quoted ex dividend on Thursday. It had been expected that this might bring in buyers, more particularly as the market showed a firmer tendency beforehand, and prices had been rising. In point of fact, however, the disposition moved contrary to expectation, the Cape and Paris, both of which had been buyers previously, sending small numbers of selling orders. In the platinum group Transvaal Consolidated Lands have given way, owing to disappointing developments. Tin share markets are easier with the metal. Great excitement accompanied a spectacular rise from 1s 6d to 6s 3d in Colombian mining shares on the circular just issued by the company. The price reacted from the top, but hundreds of thousands of shares must have been turned over in the course of a few days. Diamonds spurred on the formation of a new diamond trade arrangement, and this directed attention to Johannesburg Consolidated, which stand out with a noticeable advance.

An International Service

THE Central Union Trust Company of New York is equipped with every facility for the prompt and efficient handling of financial transactions throughout the world. Foreign banks and business houses with banking interests in the United States are invited to avail themselves of this service, which includes the purchase and sale of foreign exchange, collections, and the issuance of commercial and travelers letters of credit. In addition, the Company conducts a general banking business and acts as Executor, Trustee, Transfer Agent, Registrar of Stocks and in every other Fiduciary capacity.

COMPANY MEETINGS, &c.

MITCHELLS AND BUTLERS, LIMITED.

SATISFACTORY YEAR'S TRADE.

IMPROVED PUBLIC HOUSES—BIRMINGHAM'S LEAD.

"FEWER AND BETTER" SYSTEM.

The thirty-eighth annual general meeting of the shareholders of this company was held at the White Horse Hotel, Birmingham, on the 13th instant, under the presidency of Mr W. Waters Butler.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen, While the shareholders of the company should feel fully satisfied with the result of the past year's trading, at the same time they may wonder how such an improvement has come about during a time when the commercial prosperity of the country has been at a very low ebb. It is mainly due to the company fortunately being in possession at the beginning of the financial year of a large stock of high quality, well-bought barley and malt. The whole benefit of this stock, however, was not retained by us, but part was passed on to the consumer in the form of stronger beers.

I question whether any brewery of the size and standing of ours sells its products at such a low profit per barrel, notwithstanding that the beer is produced in a most up-to-date plant under economical conditions.

That giving a good article at the lowest possible rate of profit is a wise policy is evidenced by the fact that the increase in our output has far exceeded our anticipations during a year when one would least expect such a result. Particularly is this the case in our bottled beer department, which has shown a largely increased turnover, chiefly in the bottlings of the company's own products. The plant and efficiency of our bottling stores are not excelled.

BEER AND "COST OF LIVING" FIGURE.

The Budget unfortunately brought no reduction in the high beer and spirit duties. While I have no desire to obtain an increase in our rate of profit by relief of taxation, I am fully satisfied that if it were possible to lighten the duties on beer and spirits—particularly on beer, so as to make it cheaper—it would do much to remove the spirit of unrest which unfortunately prevails. We cannot get away from the fact that the working man and his wife look upon a certain quantity of beer as forming part of their daily diet. It is no use thinking that in estimating the weekly cost of living such an item as beer can be ignored, and though it is omitted from the calculation made by the Board of Trade in arriving at its "cost of living" figure for comparison with pre-war expenditure, beer ought to be included.

The figures of the balance-sheet call for no special comment, as they are quite normal. We have continued to expend large sums in building new licensed premises, and in improving others.

I am thankful to say we continue to meet with co-operation at the hands of the licensing justices, which it will always be our endeavour to maintain. The treatment we have received is principally responsible for our continuing to set aside a substantial portion of our annual profits for the carrying out of the policy of "fewer and better" houses, which we have supported for so many years.

MIDLAND BREWERY INSTALMENT.

Attention has been called in the report to the fact that this year we have not paid off any part of the balance of the loan in connection with the purchase of the Midland Brewery, as the instalment of £40,000, which in the ordinary course of events would have been paid this year, was paid in advance last year. A payment of at least £40,000 will be made during the current year.

An increased amount, namely, £7,228, has been paid away in pensions during the past year. The pension fund now totals the large sum of £135,778, and is not treated as an asset in the balance-sheet, but is invested in sound securities.

CURRENT YEAR—SATISFACTORY OUTPUT.

I am pleased to say the current year in regard to output has opened in a very satisfactory manner. Our brewing costs will not be less than in the past year, but the gratifying and ever-increasing popularity of the company's products gives one hope that increased costs of production will be more than counterbalanced by an increased output during the year.

Ladies and gentlemen, following the practice of the late Mr Henry Mitchell, I have during the past ten years delivered at these annual meetings addresses upon the prevailing conditions in the licensed trade, and have expressed my personal opinion

thereon—and here, to avoid any misunderstanding, I should like to emphasise again the fact that any views I have then expressed, or may now offer, upon the thorny problem of licensing reform are purely personal, and are not put forward in any way as being held by any trade organisation, or by my co-directors. My only desire is to give the conclusions I have arrived at after being in the closest touch with the manufacture and retail distribution of beer throughout my life, and as one who, I hope it will be allowed, has taken his full share in the defence and advancement of the industry.

I do not intend to trouble you to-day with a repetition of my views upon such subjects as State or municipal ownership of the licensed trade, which may appear to some of us as an ideal solution of the problem, nor will I speak on local veto and Sunday closing, the insidious methods by which the prohibitionist hopes to gradually attain his end, which is, of course, total prohibition.

What I wish to urge to-day is: do let us get down to fundamentals!

STEPS TAKEN TO CURE DRUNKENNESS.

Every man has a right to eat and drink what he prefers. The great majority of the inhabitants of Great Britain choose to consume alcoholic beverages, and feel they benefit thereby, but as the consumption of an excessive quantity is detrimental to the individual and those around him, the places of supply should be of such a character as to discourage any excess, and should be in charge of person of good character who may be expected to exercise proper supervision and control, and render good service to the users of such premises. To attain this, premises are licensed, and those in charge are registered as licence-holders after careful inquiry into their character, and are liable to heavy penalties—usually entailing the loss of their occupation—if breaches of the licensing laws take place; serious infringements may result in the renewal of the licence of the premises being refused, causing great loss to be inflicted upon the owners. Laws are in force to protect the consumer against impure and adulterated beverages. While the drinking of alcoholic beverages is popular, all agree that drunkenness is an evil, and although it is a rapidly decreasing weakness of a small section of mankind, anything we can do to bring about conditions conducive to the moderate consumption of such beverages the better, not only for the consumers, but also for traders. Let us see what steps have been taken to bring about these conditions.

COMMITTEE OF INQUIRY.

Lord Lamington in March this year again asked in the House of Lords that a Government Inquiry should be held. The Marquis of Salisbury, in reply, stated that the Government was prepared to grant this Inquiry, and in May announced that the form of Inquiry would be a Departmental Committee and not a Royal Commission, as the subject matter of the Inquiry was of a very limited character. The terms of reference were as follows:—

"To consider the several systems of disinterested management of public-houses which have been put into practice, whether in connection with private enterprise or otherwise, and report whether the experience already gained affords grounds for the development of any such system by an amendment of the Licensing Law."

The Committee is now taking evidence.

"DISINTERESTED MANAGEMENT."

I do not think it necessary to again explain what the term "Disinterested management" implies, as last year I went fully into the subject; but, shortly, it is said to apply to systems in connection with which the licensee in charge of a licensed house is a manager having no direct pecuniary interest in the profits derived from the sale of alcoholic beverages. Such a manager may be in the employ of a brewery company owning licensed houses, or a person or firm leasing a number of licensed houses belonging to a brewery company, such as one finds in London, or may be the servant of a company or of an association formed for the purpose of conducting licensed houses upon so-called reform lines, the shareholders in which are only permitted to hold a limited amount of capital, and agree that the dividend upon their capital shall not exceed that of an ordinary average investment. This yield at one time was limited to 5 per cent., but it has been

gradually raised, until in one company it may be 7 per cent., free of tax, equal to-day to 8½ per cent., subject to tax. There does not appear to be a limit to the amounts which may be placed to reserve, and in some cases the dividend is cumulative.

It is difficult to understand how it is possible to obtain desirable conditions from the point of view of good service to the public if the person conducting trading operations is made absolutely disinterested. While such a man's service has no direct connection with the amount of profit realised through such service, yet his own personal advancement must, of course, depend upon his efficiency in carrying out his duties.

The fact is all this talk of so-called disinterested management is founded upon the idea that a licensed trader should differ from an ordinary trader, in that he should not by any act push the sale of his goods, and that he should adopt an air of independence and give the impression that he does not care whether would-be patrons enter his premises or not, but, should they enter, attempts should be made to divert them from alcoholic beverages—which is nonsense. It is not a question of whether the patron of a licensed house should be persuaded to consume any particular beverage, but rather that he should have what he desires, and that the trader should be in a position to supply his requirements, whether they are alcoholic or non-alcoholic beverages, or foodstuffs.

PRESENT POSITION.

We should realise that the position to-day does not appear to give satisfaction to the broadminded man who, while recognising that the vast majority look upon alcoholic beverages as part of their daily requirements, thinks that those requirements are not provided for under the best conditions by licensed traders. Do we know of any undesirable conditions, and if so, how may they disappear?

I think we all agree that a person's conduct is greatly influenced by that of the people with whom he comes in contact, and their general environment. Also, that any trader, no matter what business he may carry on, will give the best service to his patrons if the conditions in his trade are such that, without having to resort to bad practices in his salesmanship, he can gain a living, or satisfactory remuneration for his labour, and an adequate return upon the capital he invests. Should, however, his business have to be carried on in the face of most strenuous competition, with that competition either leaving him without a living wage, or afraid to invest money in increasing or improving his business operations, then we have the conditions created under which the licensed trader now suffers, which are detrimental not only to his patrons, but also to the public welfare. This must result in demands for reform, and if they are not met the State might take the matter into its own hands and carry out the necessary reforms.

UNPROFITABLE PROPERTIES—POOR SERVICE.

Accepting these views and their application to the licensed trade, we must confess that in many of the licensed houses the environment of the patrons is not as satisfactory as it should be, and conditions are prevalent detrimental to good service and good order. We find that this is due to certain trading establishments doing so small a volume of trade as not to yield an adequate living wage to the occupiers, and to the severe competition arising from the existence of the large number of similar properties, intensified by the rapid and continued growth of clubs. This state of affairs results not only in poor service being given in these smaller unremunerative houses, but also in a tendency to weakness of management and supervision; unfair and undesirable to those who patronise them. The greater the number of small, low profit-earning houses you have, the poorer must be the type of person who will be attracted to occupy and control the business carried on. We are thus led up to this position—the business of every licensed house should be remunerative. To-day that is not so. Many small traders, in consequence of their poor turnover, obtained in the face of severe intensive competition, and the burden of onerous taxation, find it extremely difficult to get a living profit.

"FEWER AND BETTER" SYSTEM.

We know that capital invested in the licensed trade under the right conditions proves remunerative. How can we get rid of the undesirable conditions in the industry and be encouraged to invest more capital? One is inevitably driven to the policy which the brewers of Birmingham, and particularly your own company, have supported for the past 28 years, namely, that of "Fewer and Better" public-houses. Much has been accomplished in Birmingham by the operations of their organisation, which is known as the Birmingham Property Company, of which I have had the honour of being chairman during the past 22 years. By working in co-operation with the Licensing Justices they have been able to arrange for the closing of 557 small redundant licensed houses—practically 20 per annum—in addition to the houses closed by the Licensing Justices under the provisions of the Licensing Act

of 1904, which total about 300, but which number might have been greatly augmented had the Home Office consented, as it had power to do, to the Licensing Justices raising a loan on the security of the Compensation Levy, thereby being able to compensate the redundant houses at a lower cost than when closing them in a piecemeal fashion. The small number closed under the Act during the past 21 years would have been almost a negligible improvement without the aid of the brewers, who voluntarily closed approaching double that number. To give some indication of how your own company has freely supported this policy of "Fewer and Better" houses, it has been responsible for voluntarily closing in the City approximately 300 licences (of which now fewer than 155 have been closed, or arranged to be closed, during the past seven years) in connection with grants made to us by the Justices.

SUCCESS OF THE AWARDS.

This could not have come about had it not been for our large ownership in the City of Birmingham, and the application of the regulations of the Birmingham Property Company, whereby any licensed trader gaining benefit from the voluntary closing of a licensed house is assessed and pays for the "betterment" he obtains thereby. So successful has been the settlement of these awards that during my twenty-two years' chairmanship of the Birmingham Property Company no member to my knowledge has demanded the arbitration proceedings to which he is entitled in the event of being dissatisfied with the amount his fellow-members decide he should pay. A better example of co-operative working I think it would be difficult to find. Unfortunately, all firms trading in the city have not seen their way clear to join the movement, and, consequently, while reaping the advantages of the closing of licensed houses, they have not contributed their due share of the cost. One can quite understand that at times the small owner with his few houses does not welcome joining in any scheme for reducing the number of licences.

AMALGAMATION AND PRODUCTION COSTS.

This difficulty has been greatly eased by the large firms buying up the smaller firms, or by the amalgamation of businesses. The Prime Minister said, in effect, a few weeks ago that lower costs of production, and consequently efficiency in industry, would have to come about by amalgamation, resulting in larger trading concerns. This is advice which the brewing trade should well consider, particularly from the point of view of improving the conditions therein, although I, myself, would not favour a monopoly under private ownership. I also hold the view that there is a limit to the magnitude of a business, for beyond it the savings in overhead charges which should come about through concentration are more than balanced by the dilution of the individuality directing the business, for unless the directing heads can keep well in touch with the whole of a business organisation there is a weakening in direction and effort all down the line, with consequent losses.

While Birmingham has done so much in the way of putting into operation this "Fewer and Better" policy, and justly enjoys a reputation which is the envy of many traders in other districts, there is still much to be done in the improvement of the licensed house.

Unfortunately, the Birmingham Property Company has not the power, and no private body is likely to obtain it, to compel the recalcitrant owner to join in this policy of "Fewer and Better." Notwithstanding this fact, one feels that if brewers in other parts of the country had worked on similar co-operative lines to those of the Birmingham Property Company, which has now been in existence for the past 28 years and has received the commendation of the Licensing Justices for the time being throughout that period, it is probable we should not have heard so much about the necessity for State or municipal ownership, which policies I have on more than one occasion advocated, not because I think the State or a municipality can, generally speaking, carry on an industry better than under private ownership, but solely for the reason that the desired conditions will be only thus attained if traders ignore what the public demands, and will not take part in any reforming movement.

ABOLITION OF REDUNDANT HOUSES NECESSARY.

It is said that while the trade is anxious to bring about reforms, it is checked by the action of certain licensing benches in refusing to give sanction to improvements. Also, that the trade does not enjoy the same facilities for making improvements as the State has at Carlisle, but I would remind those who so contend that the State as part of its scheme reduced the number of licences in Carlisle and its Scottish areas by 40 to 50 per cent. I emphatically state that without the abolition of the truly redundant licensed house the appearance of the improved licensed house must be slow in large towns. Its erection in the midst of redundant houses is not a commercial proposition, and its presence would only aggravate the evils associated with them, as it would still more intensify the competitive conditions.

NARROW VIEWS OF REFORMERS.

I am sorry to say that the action of some Benches in refusing to sanction improvements has given an opening for complaint, due to there being among the occupants of the licensing Bench persons holding such narrow and out-of-date views as expressed by the Rev. James Barr, M.P. for Motherwell, who said that he was afraid of the public-house becoming respectable. Also, Lord Astor, I regret to say, when surveying the different remedies for the drink problem, said the improved public-house was the most dangerous.

Thus we see that these two reformers think the prospects of attaining their ends will be very remote if improved and respectable licensed houses increase in number. Their only hope is that licensed houses will tend to become disreputable and repulsive in the eyes of the public, and cause action to be taken to carry out their so-called reforms which would practically result in the ruination of traders. I think my trade will not be so suicidal as to allow such a position to develop, but rather will respond to the call on the part of the public for improved public-houses, and avoid the interposal of the State or municipalities.

LORD ASTOR'S UNFAIR ATTACK.

I am also sorry to note Lord Astor, at a meeting of what is known as the Liberal Summer School—a curious place for a man, who professes to be a Conservative, to be delivering an address—is reported to have used the word "blackmail" in connection with the activities of the trade, and warned Labour that they would lose many votes to "more honest parties" if they went on "funking" the brewers and whisky merchants; also that the trade was holding up the industrial programme of Labour. This comes strangely from one who seems to be obsessed with the bogey of subterranean political activities. He is annoyed at his own party turning down such a Bill as that which bore the name of the late Bishop of the Oxford, but of which it is well known he was not the author. The truth appears to be that Lord Astor is wandering around trying to find some organised body that will give him a backing. He is well aware that his ultimate goal of Prohibition, which he endeavours to cover up, but which his utterances from time to time betray, is strongly opposed by the industrial population of the country, who are determined to have their necessary requirements in the form of alcoholic beverages provided for them in the licensed

houses of the country, or in their own clubs; facilities he desires should disappear at the earliest moment.

I can assure you the majority of my fellow-traders are most anxious not to weaken their position in the eyes of their patrons, and resent the foolish imputation of Lord Astor that the trade seeks to blackmail or dominate political parties or persons to maintain its position. I am confident that the trade is anxious to conduct its trading operations in such a manner as to gain the support of friends in all parties. We have no desire to attach ourselves as a body to any political party, but that every trader should be free to take his part in the political activities of the country in the direction he thinks proper; nevertheless, so long as we are attacked in the unfair manner that Lord Astor and his co-extremists adopt we are compelled to make our trade our politics, and will support those who will see justice done to our industry.

With these remarks, ladies and gentlemen, I beg to move the adoption of the report, and will ask Mr Herbert W. Bainbridge to second the resolution.

Mr Herbert W. Bainbridge seconded the resolution, which was carried unanimously.

MERCANTILE AND GENERAL INSURANCE COMPANY, LIMITED.

SATISFACTORY RESULTS—STRONG POSITION.

The ordinary general meeting of the Mercantile and General Insurance Company, Limited, was held, on the 5th instant, at the London office, 25-31 Moorgate, E.C.

Mr Richard Guinness (the chairman) presided.

The secretary (Mr H. P. Hewitt) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I presume you will take the report and statement of accounts as read. (Agreed.)

Your directors feel much satisfaction in submitting to you the report and accounts for the past year, which show a considerable development both in our general departments and in our life business.

PREMIUM INCOME INCREASE.

The premium income on fire and miscellaneous account amounts to £1,176,740 gross, an increase of £327,954 over 1923, while our net retentions are £508,379, against £382,911 in 1923. As I have mentioned on previous occasions, we give you both the gross and the net figures to convey to you the growth in our business and the careful limit that, at the same time, is placed upon net retentions.

You may be surprised to see that in a year of general depression our premium income should show so satisfactory an increase. As regards home business, this increase is a small one, but the foreign income, owing to certain Treaty rearrangements and to the fact that your company becomes better known from year to year, shows a considerable increase. Our figures do not include any fire business from the United States, as we hold to our policy of not entering that field, anyhow for the present.

LOSS RATIO.

Our loss ratio at 52.6 per cent. shows a considerable improvement over 1923, but no doubt this improvement is principally due to the increase in premium income, which tends to reduce the immediate claims average. We must, therefore, anticipate that the loss ratio will probably, in the coming year, readjust itself to a more normal basis; meanwhile, the satisfactory result enables us not only to provide the necessary increase in reserve to meet the growth in premium income, but also to transfer a balance of £17,853 to the credit of profit and loss account. You will note that this reserve against unexpired risks, calculated at 40 per cent. of our net premium income, stands at £203,351, an increase of £50,187 over the corresponding figure in 1923.

Commission and management expenses also show a moderate decrease in ratio; here, again, increased premium income is helpful. You may rest assured that while every effort is made for economy, we are watchful that the efficiency of our organisation is not impaired either in the direction of close classification and limit of individual risks, an expensive but essential precaution, or in the effort necessary to expand our business connections.

LIFE AND MARINE ACCOUNTS.

The life assurance account shows again a satisfactory increase in premium income, the net figure being £52,100. We continue our policy of building up this department at a minimum cost, the management expenses debited to the account being the moderate figure of some £1,900. During the past year, we have extended the scope of our business, and welcome new connections which we have made with leading British offices.

The marine account is once again an unprofitable branch of our business. In spite of the fact that as from January 1, 1922, we largely reduced our marine retention so that the premium

income for 1922 amounted to only £24,404, the belated claims of previous years necessitate the transfer of £10,182 from profit and loss to close the 1922 account. The amount carried forward in the marine fund is £51,551, while our income for 1923 and 1924 amounted to £48,317 and £48,955 respectively. Under any ordinary conditions the balance of the fund should, therefore, be more than ample to liquidate all outstanding claims at the date of the account. Our policy remains to write as small a marine account as possible during these difficult times, consonant with maintaining our position as reinsurers.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, our receipts on account of interest show an increase of £1,344, and there is also profit of £604 on investments realised. The usual adjustment of exchange differences is this year on the credit side. Additional expenses show a welcome decrease, and after providing transfer to marine account, reduction in book values of leaseholds, &c., and income-tax, we have a balance of £52,932 to deal with. Of this, we transfer £4,000 to the reserve fund set under Article 106A, and also £8,000 to general reserve, thus increasing these two reserve funds to a total of £50,000. We recommend to you a dividend of 5 per cent., free of income-tax, and carry forward £37,882 to the credit of profit and loss account. You will appreciate that this item is in fact an additional reserve available to provide for abnormal losses in any department of our business should they arise.

LIQUID RESOURCES.

Our balance-sheet shows a strong and liquid financial position. Our invested funds total £372,737, of which £209,731 is in British Government securities, including issues guaranteed under Trade Facilities Acts; the market value as at December 31, 1924, is well in excess of our book values. Cash at bankers and in hand amounts to £103,910, so that our invested funds and cash total £476,647. We tender our grateful thanks to those ceding offices whose support has enabled us to upbuild our business, and we feel sure that the figures we place before you will convince them that the security we offer justifies the continuance and extension of that support which we value so much.

I would ask you to join in a hearty vote of thanks to the management and staff for the excellent report we are able to submit to you as the result of their careful management and zeal to maintain and extend our connections.

I beg to move the adoption of the report and accounts and the declaration of a dividend at the rate of 5 per cent. per annum, free of income-tax, on the paid-up capital.

Mr Roland A. Elliot (general manager) seconded the motion, which was carried unanimously.

ANGLO-AUSTRIAN BANK, LIMITED.

STEADY EXPANSION OF BANK'S BUSINESS.

The third ordinary general meeting of the Anglo-Austrian Bank, Limited, was held, on the 14th instant, at Winchester House, Old Broad Street, London, General the Hon Sir Herbert A. Lawrence, K.C.B., chairman of the company, presiding.

The secretary (Mr M. McK. Turnbull) having read the notice convening the meeting, and the report of the auditors,

The chairman, in moving the adoption of the report and accounts, said there would be noticed a general increase in the figures of the balance-sheet as compared with the previous year. Generally speaking, that might be taken to imply a steady expansion of the business of the bank. The reduction in the profit for the year was what might be expected, in view of conditions of trading in Austria. However, when the board's plans for a reduction of staff in Austria was completed, they saw no reason why the bank's branch in Vienna should not regain some of its former prosperity. Shareholders would remember that the Anglo-Austrian Bank had taken a prominent part in placing on the foreign markets the Austrian and Hungarian reconstruction loans issued under the auspices of the League of Nations.

During the period under review important commercial credits had been arranged under the leadership of their bank, for the development of trade in Central Europe. Substantial amounts of short-term credits had been provided in the London market for financing industry last year in Austria, the movement of crops in Hungary, the production of sugar in Czechoslovakia, and of tobacco in Yugoslavia. The internal organisation of the bank had had to be adapted to those aims, and the board had endeavoured to facilitate and improve direct contact between their main branches and the head office in London. Their policy was to refrain from all political matters, and to confine themselves to banking operations.

CZECHO-SLOVAKIA AND JUGOSLAVIA.

The past year had witnessed a slight but marked progress towards the restoration of normal conditions in Central Europe. Czechoslovakia had made a notable effort to extricate herself from the industrial crisis which had resulted from the drastic deflation policy of 1922. It would be rash to prophesy that the crisis had been entirely overcome, but there was every reason to believe that the worst was passed, and that that country would now reap the benefit of a policy which in itself was sound. In Czechoslovakia the company's interests were represented by the Anglo-Czechoslovakian Bank, which was making steady progress. As to Yugoslavia, the action of the board in acquiring a large participation in the Croatian Discount Bank had been fully justified. The State finances of the country had been put on a sound basis, and though, as a result of measures taken to that end, a certain economic crisis had arisen, it was a healthy one, and formed an inevitable stage in the financial recovery of the country.

CONDITIONS IN AUSTRIA.

Their position in Austria was, unfortunately, not so satisfactory. The year 1924 had been a period of trial, with a severe Stock Exchange crisis, which, combined with industrial stagnation and unemployment, had placed a heavy burden on the financial resources of the country. Austrian currency, however, had maintained its stability, public revenues had continued to be favourable and the Budget was nearing the equilibrium provided for in the League of Nations Reconstruction Scheme. The position of the National Bank was satisfactory, and the new Bill prescribing the drawing up of gold balance-sheets for all joint-stock companies would help to restore confidence. He would explain that the bank had no intention of reducing its business in Austria; on the contrary, they were glad to see it expanding, and in the right direction. Their deposits and general banking business were increasing, which the board believed to be due to rigid adherence to sound banking principles. They hoped they were now in a position to make a good choice among the industrial concerns connected with their bank in that country, supporting and developing such undertakings as showed promise, and eliminating concerns which had been proved to have no vitality.

In pursuance of their intention to extend the bank's business in Italy, a branch in Milan was opened in January; a small exchange office had been opened in Grado for the benefit of travellers, and the same course would be followed in Venice. All information went to show that economically Italy was prospering; industry was active, the Budget had been brought into order, and there was little unemployment and labour trouble. On the other hand, the currency continued to fluctuate in a disturbing manner, and it was difficult to predict how long that instability was likely to continue. In Hungary the bank had had a good year, and the branches in Roumania had had a satisfactory year. To sum up, the general position of the bank was greatly improved. Everywhere, excepting in Austria, they were earning good profits, and in Austria they believed that with an improvement in industrial conditions their prospects were reasonably good.

Mr M. Spencer-Smith, D.S.O., M.C. (the vice-chairman) seconded the resolution, and it was carried unanimously.

WATNEY, COMBE, REID AND COMPANY, LIMITED.

SUCCESSFUL YEAR—STRONG POSITION.

The ordinary general meeting of Watney, Combe, Reid and Co., Limited, was held, on the 14th instant, at the Charing Cross Hotel, Strand, London, Sir H. Cosmo O. Bonsor, Bart. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: I feel that I may congratulate you all on a very successful year. If you will take the balance-sheet, the first remark I wish to make is that you will see that we have restored our liquid assets to a sum of £1,600,000, £520,000 of which is invested in short-term Government securities. That is all liquid, and that amount is practically a reserve, which I consider essential to keep as regards the liabilities on the other side.

If you will look on the liabilities side you will see that they also are reduced. During the year we were able to settle with the Inland Revenue authorities the actual amount due for income tax. A large amount for income-tax and corporation profits tax appeared in last year's sundry creditors, and we wiped them off in the autumn of last year, and consequently there is something like £150,000 less in sundry creditors owing to the Government. We paid up two years' corporation profits tax, and still have one year's tax to pay, which falls due on January 1st.

PROFITS AND LOSS ACCOUNT.

Taking the profit and loss account, you will observe that we received a net sum of £360,000 in rents. That sum, curiously enough, is just sufficient to pay the interest on the debentures, the dividend on the first preference stock, and the dividend on the

preferred ordinary stock. Consequently, the whole of the profits on manufacturing go to the deferred stockholders. I think I may say that that is a very remarkable and also a very strong position. Our profits, I think you will admit, are excellent, and the question is: Why are they so good this year? As a matter of fact, this year all our investments, which you have been good enough to allow us to make with undivided profits, have become remunerative. We have bought several breweries in the past three or four years. As a rule, in our experience, when a brewery changes ownership, a certain amount of trade is lost, and it takes some time to recover it. In the past year we have had full remuneration from all the breweries which we bought; they have all shown a better trade than the figures at which we bought them, and all show bigger profits. I can include Isleworth in that category. The Isleworth Brewery we bought and did not change the management. It was only a change of ownership, and the trade and the profit have both increased since we bought it.

Then we also had in the year under review the first full year of profits from our improved licensed houses. When you are rebuilding or altering a licensed house, it is only natural that trade falls away and goes somewhere else, and it takes a little time to bring it back again. All our improved public houses which are open show excellent returns of profit, and are all doing a very good business in catering and the provision of food. I think I may say that during the year under review we have really had no drawback at all. All our beers have been very good, and, I am proud to say, also very popular. Our bottled beers show a large increase, practically all sold in our own licensed houses.

Another item of interest in the profit and loss account is that last year we collected taxes and paid beer duty amounting to £3,600,000. I have not added to that the other taxes which fall upon us all, income-tax, rates, and so forth. The sum which we propose to divide among our shareholders is £400,000. That comparison is very interesting.

REBUILDING AND IMPROVEMENTS PROGRAMME.

Passing on from the balance-sheet and profit and loss account, we come to the report. We have a very big programme of rebuilding and general improvements in our licensed properties. You are aware that it has been our policy for several years to do what we can to convert the old-established public houses into proper refreshment houses for the people. We have met with considerable difficulties, and until quite recently the licensing authorities were very reluctant to increase the floor space of a licensed house. They were always prepared to receive plans for improvement, but they wished always to limit those plans to the extent of the old licensed premises, and it was absolutely impossible to add dining-rooms, luncheon-rooms, and tea-rooms to a licensed house when we were absolutely limited as to floor space. We have now contracts running for upwards of £200,000, and we are preparing plans which will come to a very substantial outlay—I think I may reckon upon more than another £200,000, making something over £400,000 which will be spent in the current year. That money is to be provided for, if you are good enough to pass these accounts, by the sum which we are adding to reserve for capital expenditure. In our report we recommend also that £550,000 should be added to reserve, bringing it up to over £800,000, and that enables us, if you wish it, to restore the capital to what it was when the company was first floated. We tell you in the report that we are considering the advisability of capitalising a portion of the reserve. All that reserve and those undivided profits are your property, and it is only right that you should be consulted as to whether or not we should capitalise them.

Sir Richard Garton, G.B.E. (deputy-chairman) seconded the motion.

UNION GOLD STORAGE COMPANY, LIMITED.

GOOD RESULTS AND PROSPECTS.

The annual meeting of the Union Gold Storage Company, Limited, was held on the 14th instant, at Winchester House, London, Mr Roger P. Sing, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said: Since our last meeting we have offered 3,220,000 new 6 per cent. £1 preference shares to our shareholders and the public. These have all been taken up, and it is a matter of congratulation, according to my views, that we were able to make this issue on satisfactory terms.

During the year that has now almost elapsed since our last annual meeting, our company has come into some prominence owing to the Government Food Commission Inquiry, at which we were called upon to give evidence. The Commission's Report has been issued, and most of you, no doubt, have read it, and I think you will agree with me that our prestige, of which we are proud, has been enhanced by the result of that inquiry.

The balance of working accounts amounts to £84,069, which, when added to the carry-forward from the previous year, gives

a total of £975,910. This figure is again a record. After provision has been made for depreciation reserve, interest on debenture stock, and specific mortgages, dividends on the 6 per cent., 7 per cent., and 10 per cent. preference shares and directors' fees, there remains a balance of £249,278. This enables us to recommend the usual dividend of 10 per cent. on the ordinary shares, leaving £149,278 to be carried forward to next year, as compared with £127,840 brought into the accounts from the previous year. The usual purchase of debenture stock for cancellation has been made, the actual amount of stock so retired during the year under review being £63,465. The total of the debenture stock redeemed and specific mortgages repaid to date amounts to £1,242,806.

I have now dealt with the year 1924, and you will expect me to say something regarding 1925. As I have told you on previous occasions, I am no better at forecasting the future than other people, but, seeing that we are well advanced in the second half of the year 1925, what I state is based on actual facts and not on a claim to prevision. I, therefore, have pleasure in stating that I believe, should it be my duty and pleasure to place before you the 1925 accounts in a year's time from now, that the statement I shall then have to make will be one as gratifying alike to both the directors and shareholders as the present one is. Our business continues to grow in size and importance.

The report and accounts were adopted.

CURRENT RATES IN NEW YORK.

BURMA CORPORATION.—During July, 30,669 tons of ore were mined, including 2,344 tons of high grade ore; 26,400 tons of ore were milled in the treatment plant, producing 11,075 tons of lead concentrates; 12,054 tons of lead-bearing material, including 2,305 tons of high-grade ore, were smelted in the blast furnaces.

producing 4,337 tons hard lead for treatment in the refinery. Refinery products were 3,704 tons lead, and 385,012 ozs silver. Of silver production, 53,091 ozs were recovered from the treatment of copper matte. Experimental zinc plant produced 1,450 tons zinc concentrates, assaying 13.3 ozs silver, 7.4 per cent. lead, and 44 per cent. zinc. In addition to the above, 743 tons copper matte were produced from the treatment of accumulated smelter by-products, and 3,877 tons copper ore. 100 tons of antimonial lead were also produced. Included in the tonnage of refined lead is 401 tons recovered from the smelting of copper ore.

BROKEN HILL SOUTH.—For the six weeks ended August 8th, 35,950 tons of crude ore and 21,530 tons of de-leaded slime residues were treated, and produced 6,881 tons of lead concentrates, assaying 65 per cent. lead and 26 ozs silver per ton; also 12,462 tons of zinc concentrates, assaying 47 per cent.

NORTH BROKEN HILL, LIMITED.—For the five weeks ended Aug. 1st the production was as follows:—39,950 tons of crude ore were treated, producing 7,030 tons lead concentrates, averaging 63.7 per cent. lead, 29.7 ozs silver per ton, and 7.2 per cent. zinc; also 6,200 tons zinc concentrates, averaging 47.3 per cent. zinc, 6.8 per cent. lead, and 7.7 ozs silver per ton.

SAN FRANCISCO MINES OF MEXICO, LIMITED.—For July: Ore treated, 13,310 tons; lead concentrates produced, 1,427 tons; zinc concentrates produced, 2,392 tons. Estimated net smelter return on lead concentrates \$132,850 (U.S. currency), and on zinc concentrates, \$70,405; total, \$203,255. Operating expenses, \$92,058. Estimated operating profit, \$111,197. Capital expenditure, \$51,578. Office Note.—The above return includes \$10,584, being excess of realisations of products over valuations in respect of previous months.

Reports and Notices.

Mr John Nevile Buchanan, D.S.O., M.C., has been elected a director of the Rio Tinto Company, Limited, to fill a vacancy on the board.

GOVERNMENT STOCKS, &c.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1 to June 30, 1925, compared with those for the same period in 1924:—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
Gross receipts, June, 1925.....	Drachmæ. 7,352,587.05	Drachmæ. 43,189,728.10
Do do do 1924.....	8,443,756.35	32,447,545.40
Estimated receipts for six months (Law of Control)....	14,450,000.00	5,350,000.00
Actual receipts for 1925 (six months).....	57,334,526.65	254,814,627.70
Actual receipts for 1924 (six months).....	51,380,059.70	(a) 198,249,231.85
Difference between estimated and actual receipts for six months.....	1925 + 42,884,526.65 1924 + 36,930,059.70	+ 249,464,627.70 (b) 192,899,231.85

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos Emery, 49 r-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893. As regards receipts subject to the system of plus-values, increases in duties and prices are excluded therefrom in the above table. (a) (b) In addition to these amounts, import duties equivalent to £6,098 were paid in gold at the Piræus Customs.

RAILWAYS.

ARGENTINE TRANSANDINE RAILWAY.—Receipts for the week ended August 8, 1925, £2,538, against £2,463 for the corresponding week last year—increase £75. Aggregate receipts from July 1st, £15,130, against £13,373—increase £1,757.

RUBBER, &c.

HANWELLA RUBBER ESTATES.—A circular issued by the secretaries of the Hanwella Rubber Estates, dated July 24th, states that since the annual meeting on April 21st the directors have purchased Koratota Estate for a sum of rather over £19,000. This property consists of approximately 250 acres of eight-year-old rubber, which has not, as yet, been tapped. It is situated on the Hanwella-Colombo cartroad, about five miles from Hanwella proper, and has been extremely well reported on. The directors have arranged to finance the purchase by means of a loan, and they are of opinion that it will make a valuable addition to the company's property. In addition, a further 15 acres of unplanted land have been purchased in the immediate vicinity of the Alupota division, and this is now being opened. The following are the sales made on account of the years 1925 and 1926:—1925—Sales to date, 101,132 lbs. at 25.06d net average; sales contracted for July-December, 67,200 lbs. at 2s 3d, London landed terms; estimated amount to

be exported, 289,500 lbs. 1926—Sales contracted for January-December, 241,920 lbs at 2s, London landed terms; estimated amount to be exported at 90 per cent. of the standard allowance, 400,000 lbs.

Mark Lane, Friday Evening.

Further rains over most parts of the countries during the past week have interrupted harvesting operations. The best crop appears to be wheat, but recent rains have caused some discoloration and sprouting in barley and oats. In the aggregate, however, the harvest is likely to result in a very satisfactory yield. The market generally displayed firm features, though slightly irregular at times, in sympathy with fluctuating forward offers. In the floating and forward wheat cargo market holders generally adopted reserved measures in face of higher American advices, but buyers were reluctant to follow the upward movement, and business was on a limited scale. A feature was provided by liberal sales of South Russian wheat to U.K., and Continent August-September shipment at 56s to 56s 3d, and with a good chartering movement in evidence it would appear that comparatively substantial quantities will be forthcoming from this direction during the season. Steamers of choice white Karachi expected to load 17th inst. sold at 59s, West Australian June 16 bill of lading 59s 3d, and a sailer South Australian arrived at 58s 9d. Maize cargoes in fair support, and general tone of the market is firm. Steamers of La Plata afloat sold 43s to 44s 3d as to size and position, July-August 41s 9d to 42s, August-September 41s 3d, September 41s 9d, September 15 41s 7d, all per 480 lbs c.i.f. terms. Wheat firm. No. 1 Northern Manitoba, ex ship, quoted 66s 6d, No. 2 ditto 65s 6d, No. 3 64s 6d, Australian 62s 6d, Rosafé 62½ lbs ex ship to arrive 62s, all per 490 lbs. English new quoted 11s 2d to 11s 8d per 112 lbs, free on rail. Flour steady. London standard grade quoted 50s, patents 52s to 53s, town whites 50s per sack delivered in the Home counties, with 6d to 1s per sack less delivered in London districts. Of imported, Manitoba patents range from 47s 6d to 50s 6d, Minneapolis 47s 6d to 49s, Kansas range from 47s 6d to 50s 6d, Australian 42s 6d to 43s per 280 lbs ex store. Patents 46s to 47s, Australian 42s 6d to 43s per 280 lbs ex store. Maize quieter. Plate ex ship to arrive quoted 45s 6d, ditto landed 48s 3d, white flat African ex ship 43s 6d per 480 lbs. Barley steady. Californian quoted 45s to 52s, Chilian Chevalier 58s to 65s, brewing 52s to 56s according to quality, Australian 57s to 65s ex store per 48 lbs. No. 3 Canadian Western ex ship 38s 6d, Karachi 40s, Morocco 38s, both landed, Tunisian ex ship 36s 6d, landed 27s 9d, No. 2 Canadian feed ex ship 25s 9d, landed 26s 9d, landed 33s 6d, No. 2 Canadian feed ex ship 25s 9d, landed 26s 9d,

Chilian tawny landed 27s 6d, No. 2 white clipped American ex ship to arrive 24s 6d, all per 320 lbs. English new quoted 9s 4d to 10s 4d per 112 lbs, free on rail. Millers' offals firm, with a good demand. Broad bran quoted 8s 6d, middlings 8s 6d, fine ditto 10s, bags included, ex mill, powdered oat husks 6s 3d, feed oatmeal 8s 3d, ground oats 12s 9d per cwt free on rail. Oatmeal maintained. London made flaked 19s, rolled oats 18s, medium, also fine cut, 18s, coarse also medium pinhead 18s ex mill, ordinary Scottish oatmeal 19s 6d, American ditto 17s 6d to 18s per cwt.

AMERICAN WHEAT MARKETS.

Weakness in the early part of the week owing to reports of improved weather conditions in Europe and a generally inactive export demand was accentuated by the publication of official estimates showing much larger figures than were expected. A firmer movement succeeded, largely owing to speculative buying. Recent market quotations are:—

† Tax free.

* Half-year.

The Canadian Bureau of Statistics has issued the following official forecasts of this year's harvest of the principal grain crops, based on the condition of the crops at the end of July in the three prairie provinces. Wheat, 21,000,000 acres sown; estimated yield, 350,000,000 bushels, as compared with 235,000,000 bushels last year. Oats, 9,391,000 acres sown; estimated yield, 272,000,000 bushels, as compared with 229,000,000 bushels last year. Barley, 3,492,000 acres sown; estimated yield, 78,000,000 bushels, as compared with 68,000,000 bushels last year. Rye, 731,000 acres sown; estimated yield, 13,000,000 bushels, as compared with 11,500,000 bushels last year. Flax seed, 1,114,000 acres sown; estimated yield, 8,556,000 bushels, as compared with 9,577,000 bushels last year. The following are the forecasts for this year's harvest for the whole of Canada, based on the preliminary estimates of autumn wheat and rye, and the condition of the other crops at the end of July:—Wheat, 375,000,000 bushels; oats, 446,000,000 bushels; barley, 94,000,000 bushels; rye, 15,000,000 bushels; flax seed, 8,666,000 bushels.

IRON, STEEL, AND COAL.

We extract the following from the weekly report issued by the London Iron and Steel Exchange:—The annual holidays are now over in most of the industrial districts, and this week the majority of the iron and steel works have resumed operations. In the pig-iron department a comparatively small amount of business has been transacted, at prices which represent concessions on the figures ruling before the holidays. The demand for pig-iron from all the consuming industries is still restricted. In the semi-finished steel department the comparative lack of interest shown by British consumers has resulted in Continental makers showing some anxiety to effect sales, and business has been reported at cut prices. Quotations vary very considerably, and while some Continental producers are asking the figures in force a week or so ago, others are offering at cheaper rates. The demand for finished steel materials remains poor, but lately the export business has shown signs of reviving, and the volume of inquiry from several overseas markets has expanded.

Our Middlesbrough correspondent writes:—Pig-iron: On account of the approaching race holidays, most of the foundries are postponing taking deliveries. A few small lots of No. 3 Cleveland G.M.B. have been sold, and although 70s per ton is the generally quoted price, it could be shaded for a good order. A good deal of business has been done in hematite, and it is still possible to buy mixed numbers at 75s 6d per ton. Manufactured iron and steel: Rather better business has been reported, chiefly on foreign account. Quotations are unaltered at the following:—Steel ship plates, £8 10s; steel ship angles, £8 5s; iron bars, £11 12s 6d; steel rails, £8 10s. Iron ore: There is still no great demand for foreign ore, and best Bilbao Rubio is quoted nominally at 20s 6d per ton, c.i.f. Tees.

Our Glasgow correspondent writes:—A quiet tone prevails in the iron and steel markets. The accumulated orders over the holidays will be easily overtaken. The shipments last week amounted to 1,111 tons, of which 74 tons went coastwise, and 1,037 tons overseas, an increase of 49 tons as compared with the corresponding week of 1924. Steel works which had extended the holidays over last week have reopened, but business all round is quiet. Shipbuilding requirements having fallen off, there is keen competition for the few export specifications coming on the market. Structural engineers are well supplied with work. Ship plates are now quoted at £8 10s per ton f.o.r. Clyde area, export prices being 10s lower. Bar iron is in poor demand. Makers of black sheets are busy, and have in some instances advanced prices, £11 10s per ton f.o.b. being now generally quoted for close annealed quality 24 gauge. Over 1,000 tons of galvanised corrugated sheets have been placed locally this week for Indian shipment, and makers report full order books for delivery two months ahead.

Our Sheffield correspondent writes:—The resumption of activities is not yet complete, and the uncertainty of coal prices is checking buying in the pig-iron market. A substantial reduction in coal prices would probably be followed by a further drop in pig-iron. The same influence is felt in billets and semi-materials generally. Derbyshire foundry iron is now being quoted as low as 60s f.o.t., and Lincolnshire a trifle less. Basic pig can be bought at the same figure in Lincolnshire. No further reductions have occurred in billets, but prices would be shaded to secure a good order. The rail mills need work. Axle tyre and spring plants continue to book work from British railways, but little is coming in from abroad. A valuable order for locomotives has been placed in this country by an Argentine railway. Good and bad trade is found side by side in Sheffield, the weakness being in crude metals. The highly finished branches continue to be progressive. Russia is buying files, saws, edge tools, and steel, but the quantities are limited by considerations of credit. The file branch is working at nearly 90 per cent. capacity, and is busier than at any time since 1920. Tools generally are selling freely. The cutlery and plate branches are quiet. The patching-up of the coal trade dispute has been followed by a lull in buying, consumers preferring to wait events. There are no settled quotations at the moment.

Our Cardiff correspondent writes:—The sagging tendency of prices has continued. Salesmen were at first able to arrest the

downward movement on the strength of moderate contract bookings, but the few buyers with spot business in hand can now secure concessions of 3d to 6d on quotations for nearly all classes. Business passing is mainly for small parcels, and except for an inquiry from the French Navy, forward demand is negligible. The following are the current approximate quotations:—Best Admiralties, 24s 6d to 25s 6d; seconds, 24s to 24s 6d; best drys, 24s to 24s 6d; Black Veins, 23s 9d to 24s; Western Valleys, 22s 9d to 23s 3d; Eastern Valleys, 22s 6d to 23s; best steam smalls, 14s to 14s 3d; ordinary cargo smalls, 11s 9d to 12s; coking smalls, 14s to 14s 3d; anthracite, best large, 43s to 47s 6d; Red Vein, large, 27s 6d to 31s; machine-made cobbles, 51s 6d to 53s 6d; French nuts, 52s 6d to 55s; stove nuts, 48s to 51s; rubbly culm, 13s to 14s; coke (special qualities), 40s to 45s; patent fuel, 23s to 25s 6d; pitwood, ex-ship, 30s to 32s 6d. The tin-plate market is steadier, but a continued lack of substantial orders restricts business. It is rumoured that an attempt is being made to revive the stabilisation of prices scheme.

CUMBERLAND IRON.

The Cumberland and North Lancashire hematite pig-iron trade remains featureless. The volume of business is smaller because users are taking delivery on a fairly considerable scale of the iron that has been in stock during the past three or four months. These stocks are now being depleted, and it is expected that in the Furness district it will be possible to relight two furnaces next month. There is, however, little evidence of any such improvement in trade as would compel an appreciation of values, and Bessemer mixed numbers at £4 5s c.i.f. Welsh ports, £4 10s at Glasgow, £4 12s 6d at Sheffield, and £4 15s at Birmingham are still being shaded. Low phosphorus iron is in quietly steady request at £4 16s at Glasgow. Ferro is being sold from stocks at £15 10s per ton. There is little doing in the steel trade, but it is hoped to restart the fish-plate mill at Workington next week and the rail mill in September. Rails are £8 10s, sleepers £10 10s 6d, fish-plates £12 10s per ton. The production of native hematite ore is small on account of the decline in the local wants. A few good parcels are going weekly to Scotland. Superior sorts are from 19s to 20s per ton, and ordinary kinds from 15s to 16s per ton. The coal trade is slow. The weekly shipments to Ireland average at present about 9,000 tons per week, and some part of those are on gas contracts account. Scottish and Lancashire competition has adversely affected the Cumberland export trade, and best round at 22s, gas coal at 22s, and house nuts at 21s are all between 4s and 6s per ton higher than those of competitors' figures. Local landsale is dull, with best house at 34s 10d, best steam is 27s 6d, and washed steam 26s 6d. Coke is a smallish make for the local smelters of ordinary iron at 19s to 20s, according to carbon content.

ARCOS LTD.

Sole Purchasing and Selling Agency in Great Britain for the Government of the U.S.S.R.

TURNOVER TO
APRIL 1, 1925, £56,000,000.

Exports from Russia to Great Britain include timber, flax, furs, ores, metals, crude drugs, petroleum products, etc., to a total value of £18,000,000.

The more important items of import to Russia are agricultural machinery, locomotives, tools, motors, scientific apparatus, drugs, clothes, boots, etc., to a total value of £38,000,000.

49, Moorgate, London, E.C.2

METALS.

Values of tin declined sharply, due to selling pressure, chiefly for distant positions, combined with lower Eastern advices, but at the lower level buyers became more prominent and a good deal of irregularity was noticeable at times. Standard cash sold at £263 5s to £256 7s 6d and £259, and three months at £266 10s to £261 17s 6d. Sales in the East were reported at £272 15s to £268 10s per ton. Copper also declined in face of liberal selling orders while influenced by lower American cables, though offers were fairly well absorbed. Standard cash changed hands at £63 3s 9d to £62 10s, and three months £64 5s to £64 7s 6d, and £63 11s 3d per ton. Antimony firm. English special brands quoted £75 to £85 as to make and quantity. China crude August-September sold £50, regulus ditto £63 10s per ton. Antimony ore-sulphide August-September 6s 10d per unit. Aluminium nominal. Home and export £118 to £120 per ton. Quicksilver firm. Spot quoted £14 per bottle. Wolfram firm. Spot also August-September quoted 18s 6d per unit. Lead easier, but irregular, with business on a liberal per unit. August sold £37 7s 6d to £36 15s, and £37 12s 6d, September £36 18s 9d to £36 10s, and £37, October £36 10s to £36 and £36 10s, November £36 7s 6d to £35 13s 9d and £36 6s 3d per ton. Spelter in good request, but prices declined on liberal offerings. August sold £36 13s 9d to £36 15s, September £36 7s 6d to £36 13s 3d, October £36 6s 3d to £35 17s 6d and £36 5s, and November £36 5s to £35 16s 3d and £36 3s 9d per ton.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Business generally is still more or less stagnant owing to wages dispute. Further efforts are being made to find a solution, and representatives of the employers and employees are conferring in London to-day with the Minister of Labour. In the meantime, there is not sufficient business in tops or yarns to test values. Comparatively small weights of merino and crossbred tops are being taken up by the few isolated spinners who are still working. The most interesting feature is the demand on export account for

raw material. France has been buying heavily in the primary markets recently, and she is also taking some fair quantities of matchings. The prices paid are well above what can be obtained here for corresponding qualities of tops (allowing, of course, for conversion costs), and it would seem that existing conditions favour the development of the Continental industry. No doubt business could be done on home account if the textile outlook became more settled, but as things are there is a general disinclination on the part of users to do any forward buying. There is also the possibility that if the strike continues much longer there will be a number of cancellations owing to the inability of manufacturers to deliver goods on due dates. In the interests of all concerned, therefore, it is to be hoped that work will soon be resumed throughout the West Riding.

COLONIAL WOOL. (FROM A CORRESPONDENT.)

During recent weeks two meetings have been held in Bradford under the auspices of the British Wool Federation, the chief subject discussed being the New Zealand programme of sales for the next season. Mr. Walter Hill, the biggest individual buying broker in New Zealand, and representing Messrs. James Hill and Sons, probably the largest topmakers in the world, is here from Christchurch. As Bradford buys the bulk of the New Zealand crossbred clip, it has been decided to make representation in favour of lengthening the New Zealand season, and even if the whole of April is put on to the selling season, it will relieve the position very materially. Another important matter concerned the repeated demands which have been made to the New Zealand Selling Brokers' Association for the commencement of sales at Gisborne, in Poverty Bay. Buyers believe there is no justification for such a step, since the wool can be forwarded as before to Napier, or else direct to London. The wisdom of establishing sales at Gisborne, which would mean going there at least three times during the season, must be left to the decision of selling brokers, who no doubt will pay due regard to the buyers.

One very much regrets the continuance of the textile strike in the West Riding. The employers have published a statement offer-

ing an immediate resumption of work; payment of wages at the new rates posted; an impartial Court of Investigation composed of two representatives of neutral operatives and two representatives of neutral employers, sitting under a neutral chairman, and to abide by the findings and recommendation of that Court. The employers have further offered from the date of resumption of work until the completion of the investigation to pay into a fund the differences between the new and the old rates of wages. This would mean that the operatives would be certain to get every penny of back pay to which the agreement resulting from the findings of the Court of Investigation entitled them.

THE COTTON TRADE.

* Hand-ginned 40 points less.

MANCHESTER, August 13.

Business in the market has been on a rather smaller scale. Inquiry has kept up fairly well, but bearish sentiment with regard to values has been more pronounced. A feature of interest has been the big contracts in yarn and cloth for Russia. In piece-goods for India there has been a reduced turnover, but fair orders have been booked in light cloths. Only scattered transactions have been reported for China. Demand for the Near East remains slow. Some fairly encouraging lines have been put through for the Continent and the United States. Not much has been done in home trade fabrics. Quotations in American and Egyptian yarns have shown some irregularity, and buying has not been important, but the undercurrent of demand continues rather healthier.

VEGETABLE OILS AND OILSEEDS.

Markets generally have had a better tone. Linseed oil is scarce on spot, and has been in good demand at advancing prices, current values being £42 10s for prompt and £42 5s per ton naked ex Hull mill August to December. Crude Egyptian oil to be crushed from the new seed has been in good request. Meanwhile, stocks of old oil are small, crude Egyptian being held for £44 and ordinary refined for £44 10s per ton ex Hull mill. Crude soya oil is rather firmer at £42 15s, and palm kernel oil unchanged at £43 10s. Rape oil is a shade more money, but ground nut and castor oils are quiet and without quotable change. In the oilseed section, linseed is firm and slightly dearer, the strength being due to the rise in wheat and the report that the American linseed crop is not likely to be so good as expected. For Plate to Hull £20 10s has been paid for September-October shipment, and new seed has been done at £19 7s 6d January-February. Calcutta linseed on passage to London has commanded £22 7s 6d, Egyptian cottonseed is firm, and a fair trade has been done at enhanced values. For new black to be shipped at the end of this month £14 has been conceded. Old crop is moving off better, current value being about £13 7s 6d for shipment.

HIDE, LEATHER, AND ALLIED TRADES.

Although the general position of the hide market remains firm, there was a slight weakness at the sales held in Bermuda on Thursday. Best ox hides sold from 6½d to 8½d per lb, showing a drop in three classes of ½d per lb. Cows, bulls, and casualty hides were also a shade weaker, and fell in some cases ½d to ¾d per lb. Calf were steady at 7½d for heavy to 14½d for best lights. The imported hide market is quiet, with Argentine ox quoted at round about 8½d. Dry hides remain fairly firm, but holders' ideas are still rather in advance of buyers' ideas. Cables from New York report the Chicago position as steady, with best heavy packers still selling at 17½ cents.

The sole leather trade remains quiet. A communiqué issued this week by the United Tanners' Federation states that the input of hides in July showed a reduction of approximately 25 per cent. on the input in January last. The Executive Committee have advised members not to relax the reduction in input at the present time, and recommend that a reduction equivalent to one-third of their normal input should be maintained for a further three months. Merchants are criticising the policy, on the ground that if English sole leather is "restricted" there is abundance of leather on the Continent which would probably be promptly sent to this country if the price permitted.

Upper leather is rather quiet, but sampling for winter requirements is going on with prices firm all round.

The boot section is not well employed, and so far orders received for winter goods have not come up to expectations.

OVERSEAS PRODUCE MARKETS.

Mining Lane, Friday, August 14.

SUGAR.—The general tone of the market remained steady, and a moderate amount of business resulted in spot parcels at previous rates. Meantime holders are reserved pending developments as to the extent of German purchases now that white sugar is allowed to be imported. U.K. imported during last month totalled 187,258 tons, against 114,526 same time last year; consumption 178,221, against 158,169. Of British refined, Messrs Tate and Lyle's cubes quoted 34s 9d to 35s 9d; granulated from 30s 4½d to 30s 10½d, as to quality; yellow crystals, 27s 10½d. Dutch granulated, J quality, spot, 29s 6d; August-September, 16s 9d; November-December, 16s, f.o.b. Rotterdam. Czech granulated, August-September, 17s; November-December, 16s, f.o.b. Hamburg. American granulated, spot, 29s 3½d; August-September, 16s 7½d London, and 16s 10½d out-ports. Belgium granulated, prompt, 16s 4½d; November-December, 15s 9d, f.o.b. Antwerp. Polish crystals, ready, 16s, f.o.b. Danzig. White Mauritius, spot, 27s 6d to 28s 6d, as to sample. White Java, spot, 28s 6d to 28s 7½d; July-August, 15s 10½d, c.f. and i. London. White Java, October-December, to India, quoted 15s 7½d; January-September, 12s 1½d, c.f. and i. U.K. White terminal steadier. Fair

THE BANK OF TAIWAN, LIMITED.

(Registered in Japan, 1899.)

Capital Subscribed : - - - - - ¥60,000,000
Capital Paid Up : - - - - - ¥22,500,000
Reserve : - - - - - ¥14,800,000

Head Office - - - - - TAIPEH, FORMOSA.
London Office 25 OLD BROAD STREET, E.C.2

BRANCHES:
Amoy, Batavia, Bombay, Calcutta, Canton, Foochow, Hankow, Hongkong, Keelung, Kobe, New York, Osaka, Samarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

transactions include August, 15s 8½d; October, 15s 9½d; November, 15s 9d; December, 15s 9d to 15s 9½d; March, 16s to 16s 0½d; May, 16s 2½d to 16s 3d cwt. Java shipments for last month are as follows: Port Said and Suez, 50,636 tons; U.K. and Continent, 53,186; India, 131,871; Singapore, &c., 51,971; Hong-Kong, 19,186; Black Sea, 15,543; Japan, 62,961 tons, making a total of 385,354 tons, against 363,000 in 1924; Cuban stock, 968,300 tons, against 535,500 same time last year.

COFFEE.—Business proceeded very quietly during the week, but prices show no material change, while supplies of fine qualities are limited. In auction bold mountain-grown Jamaica sold 18½s to 19s; East Indian, Shevaroy, bold, sold 13½s; Neilgherry, 13½s 6d; fine Costa Rican peaberry, 18½s 6d. Brazilian kinds for shipment firmer, but quiet.

COCOA.—Only a small amount of business was effected in spot lots on mostly former terms. Accra, F/F grade, October-December, sold 43s 6d to 43s, f.o.b. terms.

TEA.—Indian sales totalled 40,600 packages during the week, of which about 33,000 packages consisted of new season's. All useful liquoring teas met a fair demand at steady prices, but lower kinds were only saleable at a 1d to 1½d per lb decline. Pekoe, sold, 11d to 1s 7½d; broken orange pekoe, 1s 1½d to 2s 5d. 30,000 packages Ceylon mostly cleared, fine flavour teas being in request at a steady range, but undergrades, sold, in buyers' favour. Pekoe, sold, 10½d to 1s 9d; broken ditto, 11½d to 1s 11d; broken orange, 1s 5d to 2s 1d per lb, in

bond. Java and Sumatra auctions totalled 12,000 packages, and which experienced a very irregular market. Apart from useful liquoring qualities being fairly steady, prices otherwise declined 1½d to 2d per lb, while a fair amount was withdrawn from sale.

RICE.—Reserve on the part of Burma shippers was again marked, as steady inquiries in local centres coincide with but scanty arrivals from up country. Two stars, spot, 16s 4½d; August-September, 16s. 1,000 tons No. 3 cleaned Rangoon, September-October, double bags, sold, 16s, c.f. and i. terms to the Levant. Saigon quiet, unaltered. Siam steady. New crop Spanish still in request, with business in September-October, oiled, at 23s 6d, c.f. and i. London. Broken rice firm, but quiet. Beans and peas generally quiet. Japanese peas, September-October, quoted 24s 4½d; October-November, 24s 3d, c.f. and i. London, per cwt.

SPICE.—A quiet and easier tone prevailed for pepper in forward positions. Black Singapore, L.S., October-December, quoted 8½d; Lampong, August-October, sold, 8½d; October-December, 8½d; Muntok, August-October, done, 1s 1d; October-December, 1s 1½d to 1s 1d and 1s 1½d; January-March, 1s 1½d. Tellicherry, spot, 9½d; Aleppy, 9½d per lb. Tellicherry, September-October, 8½d; Aleppy, 8½s per cwt, c.f. and i. Pimento, spot, 4½d per lb; and August-September, 38s; September-October, 36s per cwt, c.f. and i. London. Cloves dull. Zanzibar, spot, 11½d to 11½d; October-December, 11½d per lb. Sago flour again dearer. Sarawak, July-August, sellers, 17s 1½d; August-September, 17s; September-October, 17s, c.f. and i.

i., London/Liverpool. Tapioca firm forward, and Singapore flake, September-October, held for 19s 6d to Havre. Penang seed, September-October, London value, 18s 9d per cwt. Desiccated coconut dull.

JUTE in fair request and market steady. Firsts, August, Continent, quoted £42 15s; September, £41 12s 6d; October, £41; November-December, £41 ton. Hessians and twills quietly steady.

HEMP.—Manila qualities in poor support and market weaker, since steadier. J grade, August-October, sellers, £44; K and L, £39 10s; M, £34; G, quoted £49. New Zealand slow. H.P.F., August-October, £39; fair, £35 10s. African sisal, No. 1 Tanganyika, August-October, quoted £45 10s; Kenya, £45 ton.

SHELLAC steady, quiet. T.N., fair quality, spot, 225s to 230s; August, 212s 6d; October, 210s; December, 207s 6d cwt.

COPRA.—A dull and weaker market resulted. F.M.S. Straits, July, to Rotterdam, sold, £30 12s 6d to £30 7s 6d; July-September, quoted £30 6s 3d; October-December, £30 2s 6d. Dutch E.I., July-September, £30 5s; August-October, £30 2s 6d; October-December, £29 18s 9d. Ceylon, August-September, sellers, £32. South Sea F.M.S., £30; ditto smoked, August-September, to Marseilles, sold, £29 17s 6d. Palm kernels dull. July-September, to Liverpool, quoted £22 7s 6d ton.

RUBBER.—Market firmer forward, with fair transactions and slight irregularity in attendance at times. Standard plantation, spot, also August, sold, 3s 5d; September, 3s 1d, 3s 1½d, 3s 1¾d, 3s 3¼d and 3s 3½d; October-December, 2s 7½d, to 2s 9½d and 2s 9¾d; January-March, 2s 4½d to 2s 6½d and 2s 6d; January-December, 2s 2½d to 2s 3½d. To New York, Standard estate sheet, August, sold, 2s 9½d; August-September, 2s 8½d to 2s 9d; October-December, 2s 5½d to 2s 6½d lb, c.f. and i.

FRUIT (Dried).—Market quiet, and prices barely steady. Of currants, Pyrgos quoted 31s to 32s; Amalia, 33s to 35s; Patras, 36s to 38s; Gulph, 38s to 41s; Vostizza, 45s to 50s; Sultanas, Smyrna, good quality, 63s to 68s; finer, 70s to 75s; Cretan, good, 70s to 75s; Australian, 66s to 72s; South African, 70s to 80s. Figs: Naturals, in bags, quoted 27s to 29s. Dates: Spot trade quiet, but forward positions active. First tide Hallowee, 20s 6d; Khadrowie, 17s 6d; Siar, 14s 3d. Raisins: South African, 40s to 50s; Lexias, 44s to 50s. Evaporated fruits quiet. Californian apricots, standard new extra choice, 127s 6d; fancy, 135s; Australian, 120s to 130s; Californian peaches, choice, 62s to 63s; extra choice, 65s to 60s; fancy, 70s. Plums: Oregon, new, size 30/40, quoted 71s to 72s; 40/50, at 52s to 53s; Californian, new, 40/50, 58s to 60s; 50/60, 50s to 51s; 70/80, 44s to 45s. Pears, choice, 90s; extra choice, 102s to 103s. Apple rings, Californian, extra choice, 63s to 64s; Oregon, extra choice, 65s per cwt.

CANNED GOODS.—Sardines continue in quiet support, but full prices are asked for best quality as available supplies are on a limited scale. Portuguese, ½ flats quoted 4s 3d; clubs, 5s; 12 ozs, 7s 6d; 18 ozs, 12s per dozen tins. Salmon firm, but generally quiet. ½ lb, flat reds, labelled, 77s to 78s; tall, 1 lb, 52s to 53s; ½ lb, tall, pink, 26s to 27s. Lobsters firm, with scanty offerings. Halves quoted 165s.

CANNED FRUITS.—There is a steady trade passing at generally late rates, with Californian apricots and loganberries in limited supply. Singapore pines, 48-1½'s quoted 86s 6d to 87s 6d; cubes, 2½'s, 13s to 13s 6d; slices, 24-2's, 12s 6d to 13s 6d; South African are coming to hand freely, and realised steady rates. Californian pears, 15s 6d to 17s; peaches, 12s 3d to 14s; cherries, 13s 6d to 14s; apricots, 10s 10 to 13s 6d; loganberries, 13s 6d to 16s; fruit salad, 1½'s, 12s 6d to 14s; 2½'s, 21s 6d to 22s 6d; Australian pears, 24-2½'s, 16s to 16s 6d; Canadian, 14s to 14s 6d.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn: Ceylon, £25 to £39; Cochín, £30 to £35. Ceylon bristle £18 to £24; cinnamon leaf oil, 4½d; citronella, Ceylon, 2s; Java, 3s 9d.

OILSEEDS.—Linseed firm, with a moderate business in force. Calcutta to London, August-September, sold, £22 7s 6d; bold Bombay, ditto, £23 2s 6d. Plate to Hull, August-September, sold, £20 10s; September-October, £20 10s; January-February, £19 7s 6d to £19 10s. Rapeseed firm. Toria to Continent, August-September, £22 5s. Cotton-seed firm. Egyptian black, to Hull, August, sold, £13 10s 6d; November-January, £13 2s 6d; white, August, £12 13s 9d; November-January, sold, £12 7s 6d; Bombay, August-September, £9 17s 6d. Castorseed quiet. Bombay, August-September, £22 7s 6d. Gingly seed quiet. Chinese to Continent, July-August, £27 17s 6d; large Bombay ditto, £26 7s 6d. Ground-nuts dull. Coromandel machined, July-August, £25 7s 6d; Nigerian, July-August, £25 10s per ton.

OILS.—Linseed firm. Spot, net, naked, 43s 6d; September-December, 42s 4½d; January-April, 41s 10½d. Rape steady. Crude, spot, 48s 6d; refined, 51s 6d. Castor-oil quiet. First pressure, spot, quoted 56s 6d; second pressure, 54s 6d; and pharmaceutical, 61s 6d per cwt. Hull, with London, 2s per cwt extra. Cotton dearer. Crude Egyptian, spot, 45s; Bombay, 41s; common edible, 50s; deodorised, 52s. China-wood dull. Hankow, spot (barr-1s), 65s; July-August, 65s. Coconut quiet. Ceylon, spot, 47s 6d; August-September, 46s 3d; Cochin, ditto, ordinary packages, 60s. Soya quiet. Oriental, barrels, August-September, 45s; bulk, 42s 3d. Cod steady. English, spot, 34s to 35s. Ground-nuts steady. English, crushed, naked, spot, 49s 6d; deodorised, barrels, 57s 6d. Turpentine irregular. American, spot, 69s 6d; September-December, 69s 9d; January-April, 72s. Rosin firmer. American, grade B/D, 21s 9d; E, 22s 6d; F/G, 22s 9d; W/G, 28s; W/W, 30s 6d per cwt. French FG, nominal; W/W, 27s per cwt. Petroleum quiet. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on August 12th as follows: The tallow market was steady during the week, and prices were occasionally 6d dearer to-day. The margin between the different grades has continued to increase, especially between the best and medium sorts. The stock in London on July 31st, as returned by the wharves, amounted to 11,308 packages, showing an increase during the month of 1,111 packages. At auction to-day 993 casks mutton: Fine, 50s; good to fair, 48s 6d to 46s; dull to dark, 43s to 39s; hard, 48s 6d. Australian beef: Fine, 50s; good to fair, 47s 3d to 44s 6d; dull to dark, 42s 6d to 38s; sweet, 50s. Present shipment from Australasia: Good mixed, 46s 6d. Present shipment from South America, 47s 3d. The market letter is unchanged. Town tallow, 42s 6d per cwt. Rough fat per 8 lbs, 4½d; melted stuff, 33s per cwt. Quotations are:—Town, 43s, net cash, naked, ex works. Country: Frail casks, 43s; home melted, shipping casks, net, f.o.b., good coloured, 45s 6d; fair to dull, 43s 6d to 42s 6d. Bone fat: white, none; pale, none; benzine, 40s; melted stuff, 39s f.o.b.

THE MONEY MARKET.

MONEY has been plentiful owing to a considerable reflux of currency from circulation, and the small amounts due to the Bank of England at the beginning of the week were easily repaid. Hopes of a reduction in Bank rate on Thursday ran high until Wednesday afternoon, when the announcement of a considerable sale of gold bars caused them to be generally abandoned for the moment. The

tendency of the discount market, however, remained weak, and fine bank bills were placed readily at $3\frac{1}{2}$ per cent.

	Aug. 21, 1925.	Aug. 14, 1925.	Aug. 7, 1925.	July 30, 1925.	Previous Rate and Date Changed.
Bank Rate	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	5	$4\frac{1}{2}$ (Mar. 5, '25)
Banks' Deposit Rate	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	3	2 (Mar. 5, '25)
Discount/Call	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	3	2 (Mar. 5, '25)
Houses' Notices	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Mar. 5, '25)
Market rate (3 months' bills)	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$4\frac{1}{2}$	..

The Bank return showed a decrease of £224,000 in the stock of coin and bullion, the amount announced as having been withdrawn on balance being £227,000; on the other hand, the note circulation had declined by £1,070,000, and so there was a net increase of £846,000 in the Reserve, and its proportion to liabilities was .6 higher at 31.2 per cent. There were small decreases in Government and Other securities, and an increase of £802,000 in the Public deposits; the Other deposits had declined by near half-a-million. Currency notes outstanding were reduced this week by £3,943,700 to £297,272,400, which included £1,329,800 for notes called in but not yet cancelled. The fiduciary issue is £239,692,600, or £8,452,800 below the maximum for the year.

NEW YORK MARKETS.

Our New York correspondent cables:—Markets continue buoyant, with sharp gains in high-priced speciality shares off-setting profit-taking in motor and other groups. Railroad issues are coming into favour, and there has been some short covering in oils. The buying of shares of all descriptions for investment is still a feature, and there are no signs yet of higher money rates. The possibility of a reduction in the Federal Reserve rediscount rate is discussed in Wall street, but no change seems likely at this time. The weekly statement shows only a moderate increase in discounts for the System and a similar decline in acceptances and Government security holdings, with the reserve ratio virtually unchanged. A good impression has been made by the Belgian debt settlement, and there is a hopeful attitude in connection with the French debt. The oil industry is believed to be in a sound condition, in spite of the cuts in gasoline prices. Buying of steel is on the increase, though prices are barely steady. Commodity markets are quiet pending further Government crop estimates.

THE STOCK MARKETS.

The Stock Exchange was again anticipating a 4 per cent. Bank rate this week, and prices eased off a little on Thursday when no change was made. Gilt-edged stocks, however, remain a good market, and the foreign market keeps firm. Home rails have been irregular, and little public business is being transacted. American railroads and Brazilian rails have been good, the latter on the improvement in the exchange. The rubber market is fairly quiet, but prices are fairly well maintained. Courtaulds and other textiles have reacted from their recent high levels, but Dunlops have again advanced, and insurance shares are in keen demand. Renewed interest in platinum shares is being shown from the Cape, and diamonds have again improved, but gold shares are neglected.

THE COMMODITY MARKETS.

Though slightly more active conditions have prevailed in a few instances, markets as a whole show little change over the week. Uncertainty as to future prices is a handicap to business in pig-iron, while the demand for steel remains much below normal. Renewed weakness has been apparent in coal prices. The general inquiry for cotton textiles continues encouraging, a feature being the increased demand from China. A moderate turnover has been recorded in wool tops and yarns, though prices have not yet been seriously tested. Wheat is fairly steady, potatoes and fruit in good supply, with business on quiet lines. A steady tone characterises the sugar market. Coffee has been more active, and cocoa steady; the better grades of tea are in good demand, but quota-

tions for the coarser varieties have declined. The rubber market has been somewhat unsettled. Among metals, tin has been less active than last week, but copper and lead are firmer.

FOREIGN EXCHANGES.

There has been slightly more activity on the foreign exchange market during the week. This has centred chiefly on the Allied currencies, and in particular on the Belgian rate. The debt funding negotiations in Washington have been closely followed, and are well reflected in the fluctuations during the past week. On Saturday there was no change from the rate of 107.95 of the 14th, but on Monday, on rumours of a hitch, it fell to 108.80. An improvement to 108.15 on Tuesday was followed by a jump back to 106.90, when agreement was announced on Wednesday. A slight reaction to 107.25 followed yesterday, but the general satisfaction with the important step taken by Belgium led to a further recovery to 106.80 on opening yesterday morning. The weakness apparent at the end of last week in the Paris rate continued over the week-end, and on Monday it stood at 104.50, as against 104 on the 14th. The recovery to 103.85 on Tuesday is believed to have been due to official intervention, and since that day fluctuations have been confined between 103.45 and 103.65, the rate opening at the former figure yesterday. Forward rates in Paris are slightly higher at 50c-55c per month above spot, but in Brussels are steady at par—2c below. Italy followed a similar though less marked movement, rising over the week-end from 134 $\frac{1}{2}$ to 135, and then falling to 134 by Wednesday. After a reaction to 134 $\frac{1}{2}$ on Thursday, it stood at 133 $\frac{1}{2}$ yesterday morning. New York has shown little variation during the week, standing unchanged at 4.85 $\frac{1}{2}$ from 14th till Monday. By Tuesday rumours of a further reduction in the Bank rate were sufficiently strong to lead to a fractional decline to 4.85 $\frac{1}{2}$. This continued to 4.85 $\frac{1}{2}$ on Wednesday, but in the absence of any change in the Bank rate, resulted in an improvement to 4.85 $\frac{1}{2}$ on Thursday, and yesterday's opening rate was unchanged from that figure. Forward rates are 3-32 cent narrower at $\frac{1}{2}$ cent per month below spot. Amsterdam continued to move against us from 12.07 on 14th to 12.05 $\frac{1}{2}$ on 19th, but reacted again slightly to 12.05 $\frac{1}{2}$ by yesterday. The reasons for this movement are somewhat obscure, but are probably accounted for in part, at any rate, by an increase in demand for Dutch East Indian commodities, and by the effect of the fall in the Bank rate on Dutch balances in this country. Switzerland has risen from 25.01 to 25.04, and Madrid, after falling from 33.75 to 33.65 at the end of last week, has reacted again to 33.72. The Scandinavian markets have been rather steadier, Stockholm remaining round 18.07, though Oslo has fallen from 26.35 to 26.00 and Copenhagen from 21.25 to 21.05. Helsingfors is steady at 192 $\frac{1}{2}$. Berlin, Vienna, Budapest, and Prague are unchanged. Warsaw has moved from 27 to 28 $\frac{1}{2}$, but little business has been transacted. In the East the rupee has been steady round 1s 6 $\frac{1}{2}$ d, and is so far unaffected by the announcement of the establishment of the expected Currency Commission. Japan is 1-32d cheaper at 1s 8 $\frac{1}{2}$ d. In the silver market, Chinese and Indian demand raised the price $\frac{1}{8}$ d to 32 $\frac{1}{8}$ d by 17th, but a reaction occurred later. Hongkong improved $\frac{1}{4}$ d to 2s 4 $\frac{1}{2}$ d by Tuesday, but weakened again to 2s 4 $\frac{1}{2}$ d later, and Shanghai followed a similar movement from 3s 2d to 3s 2 $\frac{1}{2}$ d on Tuesday, and later to 3s 2d. In South America, Rio has had a welcome advance from 5 29-32d to 6 $\frac{1}{8}$ d, as the effect of the export of the cotton and sugar crops begins to be felt. Buenos Aires is steady at 45 $\frac{1}{2}$ d, but Monte Video is $\frac{1}{2}$ d stronger at 49 $\frac{1}{2}$ d. Valparaiso has also appreciated from 40.30 to 40.00 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 15th:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	6,770	From Revenue	12,916
Interest, &c., on Debt	756		
Sinking Fund	270		
Increase in Exchange Balances	192		
Decrease in Debt	4,924		
Sundries	4		
	12,916		12,916

The Revenue for the week amounted to £12,916,000, as compared with £12,415,800 in the corresponding week

last year. Customs were higher, at £1,484,000, against £1,190,000, but Excise was lower at £1,535,000, against £2,215,000. Property and Income-tax brought in £4,946,000, as compared with £4,871,000, and Super-tax amounted to £640,000 against £580,000. Ordinary and Special receipts were both higher at £584,800 and £514,100, against £267,800 and £500,000 respectively. The week's operations reduced the National Debt by £4,923,500, and caused the following changes:—

(000's omitted.)			
Treasury Bills	+ 8,765	National Savings Certificates ..	50
Sundries	+ 91	Public Department Advances ..	13,730
	+ 8,856		13,780

The floating debt was reduced by £5,005,000 to £773,201,000.

FINANCIAL YEAR, 1925-1926 (April 1st to August 15th).

£		£	
Total Expenditure ..	296,264,504	Raised by Revenue ..	265,094,713
		Decrease in Balances ..	3,510,896
		Amount borrowed ..	27,658,895
Total	296,264,504	Total	296,264,504

ESTIMATES FOR FINANCIAL YEAR 1925-1926.

£		£	
Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—National Bank of South Africa and Oroville Dredging Company. The chairman of the National Bank of South Africa referred at some length to the proposed fusion with the Colonial and Anglo-Egyptian banks under the control of Barclays Bank, and recommended its adoption.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a statistical review of the world's coal position.

THE BELGIAN SETTLEMENT AND AFTER.

THE agreement reached in Washington between the American and Belgian Debt Funding Commissions is another step towards the adjustment of the complicated international obligations arising out of the war. Whether these long-term arrangements, lasting in the present instance until 1982, will in fact still be in force in the next generation but one may be open to doubt. But the fact that they are for the time being removed from the sphere of international discussion, that a source of friction is thus eliminated and that the Governments concerned know where they stand and can set about the business of putting their Budgets in order, are immense advantages.

The Belgian-American settlement contains three important concessions which will lighten the burden during the next decade. In the first place, America recognises that the debt incurred by Belgium during the war stands on a different footing from all other war debts. She therefore agrees that it should be repaid free of interest. Secondly, the repayment of this principal is to be extended over 62 years, part of the first six annual instalments being postponed to a date in the future. This cancellation of interest and deferred payment system is, of course, equivalent to a very substantial writing down of the debt. The principal involved is 171.8 million dollars (£34 millions), and the annual payments after the first six years will be 2.9 million dollars (£540,000). There remains the post-war debt, which is now estimated to amount to 246 million dollars, or £49 millions (interest having accumulated at $4\frac{1}{2}$ per cent. until September 15, 1922, when the British Debt Settlement became effective, and at $3\frac{1}{2}$ per cent. since that date). The repayment of

principal will be spread over 62 years, and interest will be charged at $3\frac{1}{2}$ per cent. This rate, however, will not become the effective rate for ten years. In the meanwhile, interest will be charged on a graduated scale, which takes into account Belgium's present difficulties in obtaining foreign exchange by reason of her unfavourable trade balance and the deficiency of income from foreign investments, foreign tourists, and other invisible exports. This reduction of interest is the third important concession. It is mainly in this connection that the United States has attempted to apply the principle of ability to pay. The maximum to be reached under this arrangement at the end of ten years will amount to 9.8 million dollars (£1.98 millions). The total annual payment will therefore ultimately be 12.7 million dollars (£2,540,000).

The net effect of the settlement is that Belgium gets a substantial moratorium for several years, but that in form the United States retains the main features of the British Debt Settlement and, in particular, that of charging $3\frac{1}{2}$ per cent. as the rate of interest for the main period of repayment. But whereas Belgium pays very reduced figures during this early period, Great Britain pays 3 per cent. The steepness of this graduation may be seen from the following:—

	British Settlement. Mln. Dollars.	Belgian Settlement. Mln. Dollars.
1st year	161	3.8
7th year	160.6	7.95
11th year	183.9	12.7

The Belgian payments are likely to be substantially exceeded by her reparation receipts.

It is not unnatural that other debtors should scrutinise this settlement carefully to see what light it may throw on their own fate. The suggestion has often been made by private persons of influence in America that it is reasonable to distinguish various forms of war debt such as that incurred for munitions as contrasted with that raised for other purposes, or the distinction now admitted of pre-armistice and post-armistice debts. But the spokesmen of America have hastened to assure the world that the latter distinction as embodied in the Belgian settlement is not a precedent which can be applied to other debtors. Indeed, it is emphasised that there is no legal obligation on the United States to give specially favourable treatment to the pre-armistice debt of Belgium, but that this action was taken in view of the special moral obligations towards Belgium admitted by President Wilson in Paris. This is a dangerous admission to make for those who can see no difference between an Allied war debt and a commercial debt, but it will doubtless pass muster in the Senate. France and Italy, however, cannot expect that the principle will be admitted, in form, at all events, for them. So far as the present agreement has any bearing on the remaining negotiations, it suggests that America will attempt to insist upon the $3\frac{1}{2}$ per cent. rate of interest at the end of ten years, but that substantial concessions may be made in the rate of interest in the interval. Before we can begin to consider whether France can pay such terms we have first to bear in mind that the United States Government, in fact, though not as yet in form, admits the principle that Great Britain and America should receive equal treatment from France. The debt of Great Britain to the United States amounts to 940 millions sterling, that of France to Great Britain and the United States together to 1,423 millions sterling. On the basis of the British debt settlement France would have to pay at the end of ten years 56 millions sterling a year, of which 31 $\frac{1}{2}$ millions sterling would be due to America and 24 $\frac{1}{2}$ millions sterling to this country. She could do this if and when the Dawes annuities were paid in full, though it means that she would have to bear the cost of reconstructing her own devastated areas and that Britain and the United States would get the payments from Germany. But if, as is much more probable, it ultimately proves possible to get only a portion of the Dawes annuities, then France would pay out a substantial net sum over and above her Reparation receipts. Moreover, any such plan would leave Britain with a net surplus of receipts, from her Allies and from Germany, over her payments to the United States. Great Britain has repeatedly declared that she has no intention of asking for such a surplus. At the same time, Great Britain is not in the mood to see the

United States paid on a more liberal scale than herself. Are we to be pushed by the United States into driving an unreasonably hard bargain with France? The problem is even more difficult in the case of Italy, for if England and America insist on $3\frac{1}{2}$ per cent. from Italy, who is to get no Reparations from Austria, and little from Germany, the result would be a burden which it is quite impossible for Italy to bear. Moreover, Italy has been quick to point out that, whereas the total debt to be settled by Belgium was very small, the debt due by Italy to America and to Great Britain amounts to rather more than the total of Great Britain's debt to America. A settlement on the $3\frac{1}{2}$ per cent. basis would ultimately mean that while Italy gets quite a small sum from Germany, she would have to pay to the United States and to England about as much as Great Britain is paying America to-day. Again, Italy's wealth per head is estimated at less than half that of Belgium, and an important means by which she has hitherto been able to make payments abroad—namely, the remissions of emigrants—has been restricted by the recent immigration policy of the United States.

We see no way out of this difficulty unless the United States is prepared to concede a lower rate of interest to France and Italy than she has conceded to Great Britain. In this connection we would recall that several months ago we published some calculations showing what the annual debt payments would be on various assumptions. Assuming that the Reparation annuities ultimately yield two-thirds of the maximum under the Dawes plan, and (a) that Great Britain is willing to settle with France for a fixed annual sum of $6\frac{1}{2}$ millions sterling (1 per cent. of the nominal debt), plus about $5\frac{3}{4}$ millions sterling (15 per cent. of France's estimated Dawes receipts), varying with the Dawes annuities; (b) that on a similar calculation Italy would pay Great Britain a fixed sum of $2\frac{3}{4}$ millions sterling ($\frac{1}{2}$ per cent. of the total debt), plus $\frac{1}{4}$ million (10 per cent. of Italy's estimated Dawes receipts), on a fluctuating basis; (c) that the United States is prepared to accept a 2 per cent. maximum interest rate from France; and (d) that the United States accepts a $\frac{3}{8}$ per cent. interest rate from Italy, it is possible to work out a practicable balance-sheet as follows:—

ANNUAL RECEIPTS AND PAYMENTS (in Million £), assuming the Dawes Annuities yield £72 millions net a Year.

Receiving Countries.	Payments to be Made by					
	Germany.	Smaller Allies.	Italy.	France.	U.K.	U.S.A.

* This figure is already exceeded by the present Belgian agreement.
† The British payments at their maximum will exceed this figure.
‡ If the British account is to balance the rates charged to France and Italy must exceed those used in the calculation.

Detailed figures were given in the article referred to (see *Economist*, February 14th, p. 287), which show what the situation would be if the Dawes annuities yielded more or less than these figures. It has constantly been argued in the United States that the Dawes annuities are irrelevant to the calculation; but this, of course, is not a practicable view. America has already recognised that capacity to pay must affect the debt settlements, and the Dawes annuities are undoubtedly a large element in determining that ability to pay.

Whether something like the figures in this table present a practicable basis for settlement will soon be put to the test; for Mr Mellon has announced that the French Commission will shortly arrive in the United States, and so far as the French debt to England is concerned, M. Cailiaux will take up the discussion with Mr Churchill tomorrow. The Anglo-French discussions started with a wide margin between the parties, the British demand starting at £20 millions. It is now said to have fallen to 16, and France has got up to 8 or 9 millions. The Anglo-French figure in the preceding table seems, therefore,

not an unlikely one, provided always that the United States is not going to insist upon the $3\frac{1}{2}$ per cent. basis. If she does so, it will make it harder for Great Britain to conclude a final settlement now on a lower basis.

We have yet to see whether the United States is ready to face a practical solution of the two most difficult cases—namely, those of France and Italy. It is quite evident that a really substantial measure of cancellation such as might have been made in the first year after the war is to-day politically impossible. In our view the arguments for such a course, both in the interests of America as well as that of Europe, are, and will continue to be, overwhelming. But it is no good crying over spilt milk. In the circumstances, it is greatly to the advantage of all concerned to get a settlement that is tolerable for at least the next decade. If America were to succeed in making Italy and France pay $3\frac{1}{2}$ per cent. on their debts, she would receive from her former associates about £90 millions sterling a year for over half-a-century. This represents three-quarters of the maximum of German Reparation payments, and probably more than it will in practice be possible to obtain from Germany. It is not an impossible figure for a country to receive by way of interest from its foreign debtors; but whereas most foreign investments are designed to increase the productive power of the borrowers, those of America in the world war were sunk in an undertaking which impoverished them. In these circumstances, it is perhaps to be expected that America's business instincts will come to the top, and that she will realise that the only way to make these payments possible is to nurse her debtors and foster their productive power. To encourage American citizens to ship their goods and their persons on French, Italian, or British ships, to secure for the debtor countries an increasing share of the expanding American market by low tariffs and a national campaign in favour of foreign goods, and to offer to citizens of her debtor countries a chance to come and sell their labour for dollars at profitable prices to American employers—these are a few among the many ways in which America can hope to make these doubtful debts good, and postpone indefinitely the troublesome question of their further revision.

THE POLITICAL SITUATION IN SOUTH AFRICA.

(BY A SOUTH AFRICAN CORRESPONDENT.)

THE Prince is just about to leave our shores, and the long Parliamentary session which began early in February is rushing along now to a much-desired close. The moment seems suitable for an attempt to review recent events and tendencies, and in particular to attempt some estimate of the possibilities to which the events of the past twelve months seem to point.

The result of such a survey can be regarded as reassuring. Even unfriendly critics have to admit that the Pact has not done so badly. By-elections have shown that its hold upon the electorate is not at all shaken as yet. Whatever scenes may have been enacted behind the closed doors of the Cabinet room, there have been no overt signs of any serious rift between the two sections that compose the governing majority. A Bill has been introduced at the very end of the session to increase the number of Ministers from ten to eleven, and it is an open secret that the additional portfolio is to go to Labour. On this matter there certainly are some indications of trouble. Many of the Nationalists have no enthusiasm either for the proposal itself or for the offer of the place to Labour. That is putting the statement somewhat mildly. Further, the acceptance of office by Labour leaders and the interminable canvassings and ballotings in the Labour Party itself to determine who shall have the third portfolio are not likely to strengthen the bonds between the leaders and the rank and file. The total strength of the party is only 18, as against over 60 Nationalists, and the Nationalists would still have a comfortable majority if the whole Labour Party abstained. Thus the centre of gravity, so far as Labour is concerned, has shifted from Parliament to the Cabinet, and that does not augur well for the Party as such. Its leaders are tied in Cabinet and its rank and file are largely impotent in Parliament.

The situation is one that makes for nervelessness and disintegration in the party sense. Yet Labour still counts in the Cabinet, and there are signs that its presence there may help to bring on a division among the Nationalists. For the Nationalist Party is hardly a more stable combination than is the Pact itself. It came together on an issue which was not likely to be permanent, and was lacking in constructive fertility—that of the constitutional relationship of the Union to the British Commonwealth. The circumstances produced by the Great War and the fact that Nationalists remained in opposition while the Government was taking grave risks and incurring heavy responsibilities in the general cause of the Commonwealth, gave to Nationalism a quite adventitious importance. General discontent came with economic depression and retrenchment, and the chance for the Nationalists arrived. Now they have had a year to face the problems of real Government. Differences of political temper and standpoint within the party which were comfortably concealed in opposition by an all-covering cloak marked "Smuts Must Go!" have now emerged, and two grains of Labour reagent have been dropped into the Cabinet beaker to assist the inevitable process of precipitation. The Pact itself is unstable; no more than an expedient and a makeshift. Its constituent elements may prove to be even more unstable, and the Nationalists almost certainly are so. It is no secret that there are two distinct groups in the Cabinet, that there are Nationalists in each group, and that the Labour Ministers are to be found in only one of them.

Whether there is the same instability to be found in the South African Party is not so certain. That party has already undergone a considerable purge. But even it contains elements which might prove disparate and incapable of fusion if the lines of a new grouping showed themselves strongly on the Government side. One can only say that the immediate future is entirely uncertain, and that a very natural desire to hold on to office may stave off for some time yet the open appearance of the cracks and cleavages which are certainly developing within.

It is possible that what we see happening now is the beginning of the process by way of which the grouping of South African parties may move on to a permanent basis. The immediate heritage of Union was a constitutional issue which had either to destroy Union or itself sink into insignificance. The Great War gave it a longer life than it might have had otherwise, and the coming of the Pact into power deflated the thing and left it moribund and anæmic. Only some bad blunder on the other side, or some new world upheaval, can put fresh life into it.

For no Government can ignore for long the grave permanent issues of South African life in order to occupy itself with academic and largely futile discussions on theories of constitutional right or of Socialist organisation. The pressure of the problems themselves is too insistent and too continuous. Hence the policy of one Government is likely to be more like that of another. But the parties must hold themselves together if they can, and so they have to exaggerate the differences. While your Government is in reality carrying on and developing the policy of its predecessor—the only thing to do very often—you send some of your supporters into the street to make a noise like a Bolshevik, and some into the backveld to dress up like Republicans. Also you talk a good deal about "jobs for the Afrikaner," just to irritate the other side and so make the cleavage look real. Another thing you do is to introduce Bills, like the "Colour Bar" Bill and the Diamond Control Bill, as a sort of skull and cross-bones to make you look fiercely piratical and a devil of a fellow. Yet all the time the persistent pressure of the abiding economic and social facts continues, and will achieve its result in the end. That result can only be the emergence of real Conservative and Radical parties agreed in facing the same complex set of facts, but taking different attitudes towards them. When that line comes to be drawn it will cut across both the Nationalist and the South African parties as they are at present, but Labour will be merged into the Radicals. The time for a real Labour Party in South Africa is not yet. It will be long before those who really do the heavy work of the country will reach the level of party organi-

sation. In the meantime, the title "Labour" does but cover what is no more than a special group of the dominant whites, who, all alike, draw a great part of their sustenance from the patient labour of the coloured masses.

THE DIRECTION OF OVERSEAS TRADE.

THE usual figures showing the geographical distribution of our overseas trade for the first half of the past three years are given in the August trade returns, and from them we have compiled the following tables. The first shows our imports from and exports to the principal European countries for the first six months of the past three years and of 1914:—

JANUARY TO JUNE.
(000's omitted.)

	Imports from				Exports to			
	1914.	1923.	1924.	1925.	1914.	1923.	1924.	1925.

Czechoslovakia	..	4,245	7,221	5,971	..	426	687	796
Greece	676	2,017	1,007	837	1,851	1,873	2,660	3,180
Russia	15,282	1,952	4,591	9,148	8,505	1,293	664	2,879
Latvia	..	2,458	2,660	3,061	..	501	772	510
Poland	..	2,628	3,468	2,584	..	1,351	1,560	2,057
Austria	3,803	971	1,137	1,563	2,188	74	168	287
Hungary	..	454	16	171	..	1,573	1,379	1,794
Roumania	1,776	839	1,196	961	1,433	1,622	1,694	1,451
Turkey in Europe	652	696	557	456	..	443	291	291
Estonia	..	530	1,100	860	..	..	..	..
Total	118,808	171,445	187,833	221,272	88,940	140,211	133,869	130,098

The tendency of the excess of imports from these countries to increase continues. The total imports have increased by over £33 millions, as compared with the first half of 1924, of which imports from Germany account for nearly £10 millions. The only exceptions to the general increase are slight declines in imports from Sweden, Poland and Czechoslovakia. On the export side only eight of the 22 countries record an increase, the most prominent of which are Italy, Holland, and Poland. British exports to Germany in the past half-year were exceeded by imports, but as will be seen from a later table, re-exports to Germany amounted to over £16 millions, so that the visible trade balance in trade with Germany is in our favour to the extent of over £14 millions.

In the next table we show trade with the United States and other foreign countries:—

JANUARY TO JUNE.
(000's omitted.)

	Imports from				Exports to			
	1914.	1923.	1924.	1925.	1914.	1923.	1924.	1925.
United States ..	70,447	104,175	113,664	129,510	17,769	31,899	26,291	26,663
Argentina ..	18,004	35,013	37,303	36,149	9,645	14,554	13,231	14,473
China	2,724	6,858	7,776	6,643	890	1,398	1,505	1,456
Brazil	5,183	3,686	3,502	2,663	4,034	5,692	6,155	8,350
Mexico	985	2,946	2,616	3,222	319	1,271	1,057	1,726
Japan	2,047	3,723	3,574	4,135	5,146	12,472	14,431	8,310
Persia	..	3,255	3,919	3,672	..	833	815	1,445
China	1,976	6,055	5,507	6,892	8,345	8,197	10,822	11,191
Peru	1,180	2,632	3,374	3,420	706	1,332	1,499	1,316
Chile	2,996	3,218	6,369	7,760	2,569	3,474	2,477	2,421
Uruguay	1,564	3,050	3,522	2,867	1,127	1,686	1,573	1,615
Colombia	..	830	893	944	..	1,553	1,111	1,913
Turkey in Asia ..	..	1,648	492	687	2,877	466	451	504
Egypt	11,858	16,948	18,680	20,051	4,936	7,722	7,938	8,890
Other Far Countries	11,835	7,807	10,028	10,969	13,744	5,047	6,390	7,576
Total	132,447	200,718	222,054	239,944	72,477	97,477	94,843	95,019

The increase in imports from these countries is almost entirely accounted for by those from the United States, which are nearly £16 millions higher. British exports to the United States increased by only £370,000, but re-exports expanded by £2,600,000. The excess of imports in trade with the United States for the half-year was £881 millions, as against £751 millions in the first half of 1924, and £341 millions in the first six months of 1914. We have imported this year more from China and Japan, but less from most of the South American countries. Exports to Japan and China, on the other hand, have fallen off

substantially, whereas we have sent more to South America.

Our trade with the Dominions is shown in the next table:—

JANUARY to JUNE.
(000's omitted.)

	Imports from				Exports to			
	1914.	1923.	1924.	1925.	1914.	1923.	1924.	1925.
	£	£	£	£	£	£	£	£
Australia.....	21,431	34,234	30,852	42,655	17,711	29,112	28,495	29,871
New Zealand.....	16,068	29,172	31,802	37,428	4,689	9,850	9,060	11,117
India & Ceylon.....	22,615	36,830	40,548	46,375	36,676	47,131	47,144	47,433
Canada.....	9,899	21,240	23,617	27,372	9,580	13,586	13,321	13,662
South Africa.....	7,179	7,732	9,446	12,410	10,830	13,573	15,436	14,885
West Africa.....	3,394	6,494	6,647	7,303	3,931	6,021	4,571	6,374
Straits Settlements.....	7,134	4,426	5,330	6,067	2,612	3,862	4,177	4,722
West Indies.....	1,373	3,341	2,907	3,313	1,233	1,699	1,724	1,876
Irish Free State.....	10,141	22,831	19,303	19,303	6,883	21,050	20,906	20,906
Other Possessions.....	5,536	13,005	14,552	14,090	6,979	13,204	14,795	16,606
	94,629	166,615	188,532	216,328	94,241	144,921	159,773	167,442

Both imports from and exports to the Irish Free State show a decline, but there is now an excess of British exports, and including re-exports there is a favourable balance of some £7 millions. Trade with all the other countries in the table shows an increase with the one exception of exports to South Africa, which have declined by a small amount. In 1914, it will be seen, imports and British exports almost balanced, but there is now a very heavy excess of imports.

The final table gives re-exports:—

JANUARY to JUNE.

Re-exports to	1914.	1922.	1923.	1924.	1925.
	£	£	£	£	£
United States.....	18,210,000	10,376,000	17,576,000	11,792,000	14,409,000
Germany.....	11,396,000	10,226,000	10,389,000	17,972,000	16,237,000
France.....	6,205,000	10,224,000	10,494,000	9,707,000	10,303,000

Norway.....	108,000	189,000	153,000	143,000	141,000
Japan.....	4,556,000	186,000	612,000	2,766,000	6,512,000
Russia.....	..	82,000	109,000	109,000	80,000
China.....	..	100,000	1,862,000	5,274,000	5,651,000
Irish Free State.....	10,554,000	6,679,000	7,033,000	7,823,000	6,918,000
Other Countries.....	59,276,000	55,672,000	63,864,000	74,128,000	77,449,000

Apart from the increase in re-exports to the United States, already mentioned, the feature of this table is the large expansion in re-exports to Russia.

ELECTRIC POWER AND COAL CONSUMPTION.

(BY A CORRESPONDENT.)

A FACTOR which has received attention recently in the discussion of electrical development and coal utilisation has been the actual efficiency of the power stations operating in Britain, and opponents of any revolutionary schemes of a super-power nature have asserted that, even under the present régime, technical progress has been rapid enough to justify a policy of *laissez-faire*. There has been no sure method of testing the truth of such assertions, owing to the impossibility of instituting international standards in power-station efficiency. It is exceedingly doubtful whether this can ever be achieved in practice, although theoretically there are few obstacles; conditions of supply and demand are dissimilar in every country, and those conditions are a fundamental factor in determining the efficiency of a modern power station. Without going into technicalities, it may be interesting here to outline some outstanding features of the subject, since some part of the reorganisation for better utilisation of our coal resources rests on the policy of intensive electrical development.

To generate one unit of electricity, under theoretically perfect conditions, 3,412 British thermal units, the heat content of the unit, are required.* This ideal is, of course, unattainable, and a greater number of British

* This refers to the thermic power station, and not to hydro-electric stations.

thermal units than the foregoing must be consumed before the unit of electricity leaves the power station. In the early power stations over 60,000 British thermal units were necessary, equivalent to 17.5 times the theoretical minimum, yielding thus an efficiency, heat to heat, of 5.7 per cent. Technical progress since that time has been directed towards improvement of this efficiency, with the result that a modern steam-power station may consume only 16,000 British thermal units in the generation of one unit of electricity, equivalent to a thermal efficiency of over 21 per cent.

In spite of the fact that several American stations working under test conditions have raised this to 28 per cent. and over, 21 per cent. represents the highest standard achieved at present under ordinary operating conditions. In the future this level will be passed without doubt, and improvements in design and materials may make a figure of 30 per cent. not impossible. The important point to note is that, under the most favourable conditions, the super-power station at its highest, as in the United States, generates electricity at a maximum efficiency of 20-21 per cent.

Several factors combine to reduce the efficiency of the modern steam-power station—inequalities in the calorific value of the coal causing variations in boiler efficiency, changes in the temperature of condenser cooling water, and, above all, inadequate utilisation of the generating plant. The generating plant is operating at its highest capacity, with a minimum steam consumption (or fuel consumption if thermal efficiency is considered) when the load on it remains constant for every hour of the year. A station with a load of 100,000 h.p. constant for 8,760 hours in the year (a load factor of 100 per cent.) is much more economical than a station with a load of 150,000 h.p. at one period and 10,000 h.p. at another. The nearer the percentage load factor is to 100 per cent., the more efficient the power station, and this question of inadequate load factor (28 per cent. in 1923) has been of great significance in the delay to electrical development in Britain. Generating costs increase almost in direct proportion to the decrease in load factor.

Under those circumstances a reasonable standard of thermal efficiency in British power stations would be from 16 per cent. to 18 per cent. at the present moment. Using this as a basis, we can now examine the returns issued recently by the Electricity Commissioners for the year 1924-25.* These stations reached an efficiency of 18 per cent. and over this year—Carville (B) 18.78 per cent., with a maximum load of 55,400 kilowatts, or 68,000 h.p.; Barton, 19.85 per cent., with a maximum load of 48,870 kilowatts; and North Tees, 18 per cent. The last two stations are of recent construction, while we know that two other stations, at Dalmarnock and Grove road, also of recent construction, have also reached the 18 per cent. level. This means that there are six stations at least in Britain which can bear comparison with American super-power stations at the same period—an important fact. Proceeding further, we find three other stations with a thermal efficiency above 17 per cent.—Rotherham, 17.38 per cent., with a maximum load of 21,800 kilowatts; Percival lane, 17.42 per cent., with a maximum demand of 9,100; and Clyde's Mill, 17.27 per cent. In each case the addition of modern plant has raised the efficiency of the station, and reduced generating costs.

Some idea of the progress that has taken place in a number of representative stations during the last three years may be derived from the following table:—

POWER STATION EFFICIENCY IN BRITAIN, 1922-1925.

Station.	Fuel Consumption. (Lbs of Coal per Unit Generated.)			Thermal Efficiency (%).		
	1922-23.	1923-24.	1924-25.	1922-23.	1923-24.	1924-25.

* Generation of electricity in Great Britain, 1924-25.

efficiency of 17.42 per cent., should be included in 1924-25, so that we have now nine stations in Britain capable of being compared with the best stations operating abroad. The improvement in thermal efficiency that has taken place in three years is little short of remarkable, especially in stations like Radcliffe and Clyde's Mill, where generating units of 10,000 kilowatts have been responsible for the results obtained. In Barton, Rotherham, and Dalmarnock units of 18,750 kilowatts to 30,000 kilowatts are installed; in North Tees, of 20,000 kilowatts; while in Grove road units of 10,000 kilowatts and 15,000 kilowatts have been in operation since December, 1923. In those eight stations there are examples of generating units of 10,000 kilowatts, 15,000 kilowatts, 18,750 kilowatts, 20,000 kilowatts, 27,500 kilowatts, and 30,000 kilowatts, so that the preference can scarcely be extended to any one size for efficiency. Above 10,000 kilowatts the plant now manufactured in this country is giving good economic results.

The total number of units generated in Britain was 5,456 millions in 1922-23, 6,342 millions in 1923-24, and 7,091 millions in 1924-25 for steam-power stations; including oil and gas producer, waste heat and water-power stations, the totals were 5,739 millions, 6,682 millions, and 7,415 millions respectively, an increase in 1923-24 of 16.14 per cent., and in 1924-25 of 11 per cent. over the previous year. Of these totals, steam-power was responsible for 95.08 per cent., 94.93 per cent., and 95.63 per cent. in the years in question; water-power for 0.55 per cent., 0.66 per cent., and 0.69 per cent.; waste heat for 3.21 per cent., 3.26 per cent., and 2.51 per cent.; the New castle area being responsible for the latter. This shows that steam-power is the only form of power of significance for the generation of electricity in Britain. In thermal efficiency the national improvement has been steady, 2.78 lbs of coal being consumed per unit generated in 1922-23, 2.67 lbs in 1923-24, and 2.53 lbs in 1924-25. Allowing a calorific value of 10,500 British thermal units per lb of coal, the national thermal efficiency in 1924-25 was of the order of 12.8 per cent., compared with 11.7 per cent. in 1922-23, an improvement of some value, although the number of inefficient power stations in the total of 584 is still abnormally high. It is significant that in 1924-25 only 142 stations were responsible for an output of 6,449 million units, or 87 per cent. of the total output of the whole country; 442 generated 966 million units, an average of 2.2 million units per station, compared with over 45 million units in the other stations.

THE OIL SITUATION.

(BY A CORRESPONDENT.)

THE decline in gasoline prices in America, and the two recent cuts of 25 cents each in the price of Pennsylvania crude oil appear to have taken the oil share market by surprise. For the last month or so the optimistic reports cabled from New York of the condition of the oil industry have been somewhat misleading. It is true that favourable signs have not been wanting. In the first place, the total production of crude oil in the United States has declined from 2,347,984 barrels a day at the end of May to 2,132,865 barrels a day at the end of July. What encouraged optimism the more was the proportionately bigger decline in the output of light crude oil, the supply of which forms the basis of refined oil prices. In the middle of January the daily average production of light crude oil was 1,525,220 barrels, and at the end of July 1,389,068 barrels, a decline of 136,152 barrels a day. The following figures, given by the *Oil and Gas Journal*, will bring out the significance of this division of the American crude oil output:—

U.S. DAILY AVERAGE CRUDE OIL PRODUCTION.

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
67 Milk Street.

BUENOS AYRES: HAVANA:
99 Florida. Pedro Gomez Mena Bldg.

One of the largest and strongest Banks in
America. Capital and Surplus, \$40,000,000.

Special Representative:
24 OLD BROAD STREET, LONDON.

In the second place, simultaneous with this decline in output of light crude oil has gone a record-breaking consumption of gasoline. The latest figures of the U.S. Bureau of Mines are for June. In this month the consumption of gasoline set a new high record of 868,000,000 gallons, an increase of 7 per cent. over consumption in May, while stocks declined by 22,000,000 gallons to 1,695,000,000 gallons, representing 55 days' supply at the current rate of consumption, as compared with 61 days' supply at the end of the previous month. It has also been observed with satisfaction (not in all quarters) that the registrations of motor vehicles in the United States totalled 17,548,377 on July 1st last, an increase of 2,108,407, or 13.7 per cent., over those on July 1, 1924. There is one motor vehicle to every 6.47 persons in the United States to-day. In the third place, until recently there had been substantial advances in oil prices. Before the recent cut of 25 cents, Pennsylvania crude oil had risen from a range of \$3.00-\$3.10 (on December 27th last) to a range of \$3.80-\$3.90 per barrel. Gasoline prices had been advanced to levels above the highest reached in 1924. Only last month the Prairie Oil and Gas Company posted a new range of prices for mid-Continent crude oils, which had the effect of increasing prices from 5 to 33 cents a barrel, while the Standard Oil Company of Indiana advanced the price of gasoline in eleven mid-Continent States.

These were the outward signs of prosperity which have been responsible for the optimism prevalent in the oil industry. To what extent were they misleading? First, the price advances ignored the fact, which is fundamental, that, taking production of crude oil with the imports of all oils as the new supply, and deducting exports and domestic consumption of all oils as the demand, there has been an over-supply each month since March. Stocks of crude oil and refined oils have increased steadily since the end of February, and this increase has only been halted in the last two months. There has been no substantial diminution in total stocks. The end-June stocks of gasoline, 1,695,000,000 gallons, were yet 242,000,000 gallons above those existing at the end of January. The supply of oil in America is still enormous. Secondly, the increase in gasoline consumption merely led to an enormous addition in "cracking" plant at refineries for the greater recovery of gasoline from the crude oil run. This meant that the increase in gasoline demand could be met without increasing proportionately the supply of the raw material. At the end of June American refiners began to realise that they were producing too much gasoline, and prices began to droop. The advance made by the Standard Oil Company of Indiana last month was merely another case where a Standard Oil company has preferred, for domestic reasons, to take action contrary to the economic trend. Finally, the decline in light oil production seems to have blinded the industry to the possibility of another flood of fresh production in the early autumn. Several new pools of light oil have been discovered which promise well—for instance, the Garber, Braman, and Thomas pools in Oklahoma, and the new deep sand in the Smackover field, Arkansas, which may possibly yield a high grade of oil. Hundreds of being drilled down to these new sands, and increase in light oil production at the end of the year was caused by the new output from the In another month the increase in production is considerable. What, then, is the real position of oil in the country, with a

"cracking" facilities at refineries, and with the prospect of more flush production in the fields this autumn, the economic position is none too stable, and reductions in prices are to be expected rather than advances. This prospect was becoming clear about a month ago. The increased earnings reported by a number of American oil companies for the first six months must not be taken as any indication of the prospects of the oil industry for the remainder of the year.

CHARTERED.

TWELVE months ago the issued capital of the British South Africa (Chartered) Company had a market value of £4,818,000, or 11s a share; the same capital is now assessed at £12,702,000, or 29s a share, two-and-a-half times greater. So remarkable a change affords reason for a detailed examination of the company's assets, earning powers, and prospects.

Assets stood in the balance-sheet of September 30, 1924, at a total of £12,469,000, of which £5,063,000 is represented by mineral rights, concessions, and land rights; estates, townships, live stock, movable assets, &c., appear for £1,213,000; debtors, £543,000; cash, £66,000; and stock, bonds and shares, £5,584,000. From these have to be deducted creditors, £240,000, and dividend since paid, £424,000, making a net total book value of £11,800,000. The first-mentioned asset covers ownership of the mineral rights over the whole of Rhodesia, and concessions covering very large mineral rights in the Bechuanaland and Nyasaland Protectorates. The next, that of ranches and estates, comprises 4 million acres in Southern and 2½ million acres in Northern Rhodesia, about 700 thousand acres in the Bechuanaland Protectorate, and 2½ million acres in the Nyasaland Protectorate, making a total of 10,200,000 acres. The entries, "debtors" and "cash," do not call for further description, while the remaining item, "Stocks, bonds, &c.," requires detailing more explicitly, as it produced 95 per cent. of the profit earned last year. Of the total sum, investments in first-class liquid securities amounted to £2,496,535; shares, debentures, and interests, consisting mainly of holdings in Rhodesian and South African enterprises, other than railways, stood at £1,347,706, and the company's holding of Rhodesia Railways Trust at par, £1,740,151—in all £5,584,392. Since September 30th last £1,000,000 of gilt-edged securities have been deposited as security for guarantees given by the company in connection with various Rhodesian railway debentures and note issues, and, although revenue-bearing, these will not be available for any other purpose of the Chartered Company for an indefinite period.

Dividing assets into two categories of real estate and shareholdings, the former appear in the balance-sheet at £6,276,000, which yielded a gross profit last year of £59,000, showing prospects capitalised at a big figure in the meantime. Shareholdings as to £2½ millions invested in first-class securities are generally at the same level of value as a year ago; the balance of £3 millions, mostly in Rhodesian enterprises, fluctuates in value and income, and has improved both in prices and dividend outlook. The major holdings now consist of 1,740,000 Rhodesia Railway Trusts, 1,000,000 10s Wankie Colliery shares, and considerable interests in Victoria Falls Power and Bwana M'Kubwa shares, which we estimate to have appreciated by £700,000 since the last balance-sheet was closed. Adopting the company's valuation of real estate interests, and taking the improvement in shareholdings, assets would appear at £12,500,000 against market capitalisation, at 29s per share, of £12,702,000.

The net profit in 1924 was £415,000, and the dividend of 15 3d per share paid amounted to £424,000. There was, however, a credit of £66,000 and a debit of £21,000 which are non-recurring, so that if there were no change in revenue or expenses the profit for this year would come out at £45,000 less, namely, £370,000, representing on the present capitalisation a return of only 3½ per cent. This is obviously inadequate, and one naturally

inquires how it is to be supplemented. From the ample particulars supplied in the directors' report, added to the lucid exposition of the chairman at the general meeting and some further known facts, the profits of the current year may be approximately gauged with some confidence. An increase in the Rhodesia Railway Trust dividend of 1 per cent. already declared brings an additional £17,500; Wankie Colliery may pay 5 per cent. more, though we gather this is doubtful, but if so it would bring £25,000 increase on the Chartered holding; possibly 1 per cent. or 2 per cent. more may be forthcoming from Victoria Falls Power shares. Little increase can be expected from royalties, and Ranch and Estate interests, which showed £24,000 loss last year, may turn level this year, though, having regard to the fact that the profit and loss account is swollen by taking in from this source an unknown figure for "increase in value," a not over sound method of calculating increment, this particular estimate is perhaps too sanguine. However, granting even results here, a slight increase in royalties and the other mentioned increases, the income for 1925 from all producing elements would be an added £73,000, against £45,000 decrease in non-recurring revenue, making the total profit for 1925 £443,000, equivalent to 3½ per cent. on the present price of the shares.

THE POLISH ZLOTY.

(BY OUR POLISH CORRESPONDENT.)

THE Polish zloty, which since the foundation of the Bank Polski in May of last year was maintained at a stable level, was exposed during the last days of July to a very hard test. The exchange of the zloty declined in London, Vienna, Berlin, and Prague by nearly 10 per cent. This loss has been to a great extent regained. Nevertheless, it is interesting to inquire if this unexpected depreciation is due to speculative movements or to inherent weakness, attributable to an increase of paper notes not covered by gold.

For examining the truth of this allegation it is necessary to describe the structure of the Polish monetary system.

The Polish currency is composed of three different units:—

- (1) The bank notes issued by the Bank Polski.
- (2) Paper notes of one, two, and five zlotys issued by the Treasury.
- (3) Silver, nickel, bronze, and copper coins issued equally by the Treasury.

According to the last return of the Polish Bank of July 20th, the circulation of notes amounted to 408 million zlotys. This is a very low figure, the lowest registered since September 10th. This very small circulation is due to a restrictive credit policy of the bank, which considers a high reserve as a fundamental condition of stability. By this reduction of the circulation the Bank Polski, which since the beginning of this year has been subject to a steady drain of foreign currencies, has maintained a reserve of about 50 per cent. (on July 10th, 50.9 per cent.; on July 20th, 48 per cent.).

In this respect the position of the zloty is very strong, and the bank is able to resist all speculative attacks.

It must be pointed out, however, that this restrictive credit policy of the bank has a disastrous influence on the economic life of the country. According to the most trustworthy estimates which we possess, the circulation of the territories which form actually the Polish Republic amounted before the war to 1,500 to 2,000 million zlotys. Actually, with prices which are 50 per cent. higher, the whole economic machine has to be maintained in motion to-day with less than one-fourth of the pre-war circulation.

As pointed out above, the circulation of bank notes is supplemented by paper notes and by coins issued by the Treasury. The paper notes are to be exchanged against silver coins as soon as the Government will dispose of a sufficient stock. The maximum amount of these paper notes is fixed at 150 million zlotys.

The quantity of subsidiary coins cannot exceed eight

zlotys per head for silver and four zlotys for nickel, copper, and bronze coins.

The circulation of paper notes amounts actually to nearly 80 millions, and of coins to 100 million zlotys.

Since the end of June the Treasury has not increased this subsidiary circulation and the rumours which are current are probably due to the issue of new Treasury notes of five zlotys. These notes, however, are exchanged against smaller notes of one and two zlotys, so that the total amount remains unaltered.

If the issue of bank notes corresponded to the pre-war level (1,500 to 2,000 millions), these subsidiary coins and notes would cause no harm. Per head of population the quantity of subsidiary coins and notes amounts to five zlotys, which is much below the legal limit and the subsidiary circulation in other countries.

In comparison with a circulation of bank notes of 400 millions, these 180 millions are, however, superabundant. The obligation to accept subsidiary coins and notes is limited to 100 zlotys for each payment. As the Bank Polski is not allowed to have more than 5 per cent. of its circulation in this currency, it was obliged to refuse payments above 100 zlotys in subsidiary coins and notes issued by the Treasury. Some difficulties have resulted, and a small agio for bank notes was quoted, private banks also having refused equal payments in subsidiary coins.

These difficulties have been accentuated by the restrictive credit policy of the Polish Bank. The disproportion between the subsidiary circulation and bank notes has become greater during the last weeks, not in consequence of the issue of new Treasury notes, but in consequence of a reduction of the issue of bank notes, which declined from 560 millions in March to 408 millions in July.

The Ministry of Finance cannot completely be freed of the charge of failing to take into account the proportion of these coins and notes in comparison to the total circulation. It may be said, however, that the evils from which Poland is suffering are due not so much to an over-issue of subsidiary coins and notes, but to much too low a circulation of bank notes. To a certain extent the situation may be improved by the increase of the reserve of foreign currencies of the Bank Polski, which is expected as a result of the excellent crops. It is certain, however, that an increase of the issue of bank notes by 100 or by even 200 million zlotys, which may be the result of an improved trade balance, will not enable Poland to return to normal monetary conditions, which necessitate a circulation of not less than 1,500 million zlotys. The attainment of this minimum in the near future without foreign assistance is impossible. The Polish Bank's capital of 100 million zlotys is too small, and the accumulation of a reserve of 600 to 700 million zlotys as a result of a favourable balance of payments could be only the result of a very protracted process.

The originality of Mr Grabski's financial reform consisted in the fact that he realised it without foreign aid. In this respect his achievement surpassed the expectations even of those who believed with him in the internal economic strength of the new Poland. But after the experience of more than one and a-half years, it may be considered as certain that for bringing the reform to a successful end foreign capital is necessary. In this respect a very characteristic symptom is a pamphlet published in English by the vice-president of the Bank Polski, Dr Mlynarski, who in the realisation of Mr Grabski's reform plan took a prominent part. In this pamphlet, entitled "The Genoa Resolutions and the Currency Reform in Poland," Dr Mlynarski, referring to the resolution which entrusted the Bank of England with the task of convoking an international conference of Central Banks, writes:—"The necessity of such a conference becomes more and more urgent, as the stabilisation of the currency situation has made great headway in Europe" (p. 18).

In a pamphlet, published in Polish and devoted to England's return to gold, the same author, drawing attention to the credit arrangement made by the British Government and the Bank of England in the United States, says:—"Our Budget is and will be necessarily high during the coming years. Our currency is based on a shallow foundation in relation to the fluctuations of our balance of indebtedness and of our reserve of gold and foreign currencies. In consequence, we must possess not only a finan-

cial, but also a monetary reserve in foreign currencies. These are the two fundamental postulates. I think that we shall not be able to realise them so long as our reform does not form a part of an international arrangement, and so long as we remain outside of great international problems."

No one, observing the monetary difficulties through which Poland is passing, can deny the correctness of Dr Mlynarski's diagnosis. The situation of Poland closely resembles that of Germany in April of last year, when the economic conditions of the country were studied by the experts of the Dawes Committee. In the report, the monetary situation was characterised as "an unstable equilibrium," which without a great foreign loan could not be put on a more solid and durable basis. The same may be said actually of the Polish zloty. Its stability is maintained by a restrictive credit policy, which makes it impossible for Poland to bring into full motion the economic forces of the country. Such conditions cannot be considered as a permanent foundation of currency stabilisation.

Notes of the Week.

India: The Viceroy's Review.—The address delivered by Lord Reading on Thursday at the opening of the autumn session of the Legislative Assembly at Simla was awaited with keen interest, because it was expected to reflect the result of his visit to London and his conferences with the Secretary of State. But if it failed, as did Lord Birkenhead's speech in the House of Lords in July, to satisfy the expectations of those who looked for indications of a new orientation of policy, it was by no means devoid of importance. For one thing, the Viceroy announced the terms of reference and the composition of the Indian Currency Committee. The terms are as follows:—"To examine and report on the Indian exchange and currency system and practice, to consider whether any modifications are desirable in the interests of India, and to make recommendations." The investigation, which will inevitably be of profound importance to the future of Indian finance and commerce, will be in the hands of a representative body. The chairman is to be Lieutenant-Commander Hilton Young—who passed from a career of financial journalism, begun on the staff of the *Economist*, to the post of Financial Secretary of the Treasury in Mr Lloyd George's post-war Coalition Government, and has also the experience of many international financial conferences and inquiries. Among his colleagues will be Sir Henry Strakosch, a sound and recognised authority on currency problems; Sir Norcot Warren, managing-governor of the Imperial Bank of India; Mr W. E. Preston, chief manager of the Chartered Bank of India, Australia, and China; and Sir Alexander Murray, a prominent Anglo-Indian industrialist. The personnel is completed by the appointment of four Indian members. These are Professor Coyajee, of the Presidency College, Calcutta, one of India's best-known economists; Sir Ragen-dranath Mukerjee, a leading industrialist in Bengal; Sir M. D. Dadabhoi, a cotton manufacturer and member of the Council of State; and Sir P. Thakurdas, who in the Legislative Assembly has been the mouthpiece of Bombay business criticisms of the Finance Department. Altogether this team would appear to satisfy the primary requirement that it possess sufficient prestige to obtain general acceptance for any recommendations and conclusions that it may be able unanimously to reach. On the constitutional question, Lord Reading's address adds little to Lord Birkenhead's pronouncement discussed in our issue of July 11th. But he expressed very emphatic regret that that pronouncement had been so vigorously criticised in India. "The impression on my mind," he said, "is that its importance and value to India have not been sufficiently appreciated. I look upon the Secretary of State's address as a message of sympathetic encouragement to India, at least to those who are desirous of advancing to responsible self-government within the British Empire. It is an emphatic indication that political opinion in England stands firm upon the declarations made in 1917 and 1919 without distinction of political parties." Later in his address Lord Reading referred to Lord Birkenhead's invi-

tation to Indians to "produce a constitution which carries behind it a fair measure of general agreement among the great peoples of India." In this connection he emphasised the point that there is no special sanctity attaching to the year 1929 as the date for re-examining the existing constitution. If favourable circumstances developed, it could be forestalled. The Viceroy's address ended on a personal note, with a reference to the approaching end of his term of office, and it may be that the lack of any suggestion of any new facet of policy may be explained by a natural wish to leave behind no unnecessary embarrassment for his successor.

Developments in China.—The situation in China shows little sign of improvement. Full agreement has indeed now been reached on the Customs conference to be held under the Washington agreement, and the conference is expected to meet in the beginning of October. Such an arrangement had been looked forward to as the most hopeful turn the situation could take, but the outlook may have changed so considerably before October comes that it is doubtful whether the conference, which will no doubt deal with other questions than Customs, will not be too late to arrest the subversive movements now in progress. The optimism the prospect of an actual conference might have inspired has, indeed, been to a large extent neutralised by the action taken by the Chinese Government in declaring the coastal trade in China to be open under certain conditions to the ships of all nations except Japan and Great Britain. That, so far as the ban on British and Japanese ships goes, is a clear breach of treaty, and has been described, with not too much exaggeration, as something not far short of a declaration of war. The question is being energetically taken up by the British Consul-General, and further declarations by Peking are awaited. That is, however, only one of many disquieting signs. The strike at the British Legation in Peking continues, the Government combining assurances of assistance with an attitude of ostentatious indifference. It seems, moreover, that China rejects absolutely the proposal of a new and more formal inquiry into the Shanghai disorders, and has expressed herself on the subject in a Note marked by considerable violence of language and a flat refusal to recognise the findings of any such commission as is proposed. Meanwhile difficulties have been further increased by a postal strike at Shanghai, a fact which has some special significance in view of the fact that the Powers at Washington agreed to abolish their own post-offices in China on the strength of definite pledges that China would assure as safe and punctual a service as had ever existed in the past. Under these circumstances the Western Powers will no doubt continue to place reliance in the Customs conference as an opportunity of getting to close grips with the Peking Government, for the rather unsatisfactory reason that there appears to be nothing else to place reliance in at all. That, however, must depend on what results from the ban on British and Japanese coasters, for unless that is lifted forthwith, a situation much too serious to be left for another six weeks will arise. The object of China is manifestly to test the solidarity of the Powers, and, unfortunately, one or two of them have given her reason to set some hope in the possibility of driving a wedge between them.

The Coal Inquiry.—The terms of reference for the Royal Commission on the coal industry were announced on Thursday. They are as follows:—

To inquire into and report upon the economic position of the coal industry, and the conditions affecting it, and to make any recommendations for the improvement thereof.

The inclusion of the words "and the conditions affecting it" reflects the anxiety of all parties, the Government, the owners, and the miners, that the inquiry should be as comprehensive as possible. The terms were approved by the national delegate conference of the Miners' Federation held in London on Thursday. This conference also discussed and accepted a report on the terms of the truce arranged with the Government, and instructed the committee to take steps to put the miners' case before the Commission. The terms of reference appear to be wide enough to allow the nationalisation issue to be raised. In

spite of hitches in applying the truce terms in one or two localities, these events seem to have cleared the way for the Commission, and to give reason to hope that peace will be preserved in the industry during its deliberations. The collection of a sufficiently strong and authoritative personnel for the Commission will, however, take time, and the investigation is hardly likely to open before next month. The Government adheres to its determination that neither owners nor miners should be directly represented, but that the composition of the inquiring body should be entirely impartial and detached. It is obviously desirable that the inquiry should begin at the earliest possible moment, and we trust that holiday influences will not be allowed to cause any preventable delay.

Our Share in the World's Carrying Trade.—Among the many excellent tables included in the Balfour Committee's "Survey of Overseas Markets" (a summary of the main features of which will be found in our *Monthly Supplement* of July 25th last), mention may be made of the statistics of tonnage and nationality of ships passing through the Suez Canal in the years 1910 to 1913, 1923 and 1924, and through the Panama Canal in 1920, 1923, and 1924. The figures have a special interest since they give, as it were, the results of a yearly census of the shipping employed on many of the most important commercial routes of the world. The tables are shown below:—

The increase of traffic in late years, as compared with the pre-war period, is a somewhat surprising feature of the Suez Canal returns. Possibly holds have been less well filled than was the case in 1913. The tonnage of British ships passing through the Suez Canal remains, as before the war, equal roughly to that of vessels of all other nations together, and, if exception is made for United States ships, a similar statement applies more or less to the Panama Canal. In both cases the British tonnage is approximately six times as large as that of Great Britain's nearest competitor.

Empire Produce and Home Consumption.—The task set to the Imperial Economic Committee by the Government was officially stated as follows:—"To consider the possibility of improving the methods of preparing for market and marketing within the United Kingdom the food products of the overseas parts of the Empire, with a view to increasing the consumption of such products in the United Kingdom in preference to imports from foreign countries, and to promote the interests both of producers and consumers." It has just produced two Reports, one general and the other on meat. A further Report on fruit will follow. The Committee had also to consider and advise on the expenditure of the sum of £1,000,000 allocated by the British Government for the purpose in hand. We have frequently pointed out in the *Economist* the futility of attempting to make any sudden or substantial diversion of natural trade routes, and the humdrum nature of the Reports suggests a realisation on the part of the committee of the limitations of useful action. The general Report recommends such measures as effective identification in marking of Empire produce, and the appointment of an Executive Commission to supervise the expenditure of the £1,000,000 grant. As to the allocation of this annual grant, the Committee suggest that 65 per cent. should be employed "for the promotion of trade in Empire produce," 15 per cent. for research, and 20 per cent. for certain schemes, including the promotion of fruit-growing in the tropical parts of the Empire and the carriage of pedigree stock from the United Kingdom to the overseas countries of the Empire. The Report on meat urges the reconsideration of the existing legislation concerning imports of cattle into the United Kingdom. But Mr Baldwin, in a statement promising careful consideration to the Reports in general, announces categorically that the cattle-import regulations cannot be reconsidered. The Committee has not yet concluded its work, but its first efforts do not suggest that either home consumer or overseas producer will reap any commensurate benefit from the taking of a rough £3,000 a day from the pocket of the British taxpayer.

Cost of Living.—According to the index number calculation of the Ministry of Labour, no measurable change took place in July in the general level of the cost of living, which remained 73 per cent. above the level of July, 1914. Monthly movements and comparisons with previous years are given in the following table:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items.
(Food, Rent, Clothing, Fuel, and Light, &c.)

If allowance is made for the changes in taxation on commodities since July, 1914, the average increase over the pre-war level is stated to be about 2 per cent. less. For food alone the average increase over July, 1914, was at the end of last month 68 per cent., as compared with 67 per cent. a month earlier, the increase evidently being due to seasonal rises in prices of butter, eggs, milk, and

margarine, which, however, were largely offset by a decline in the prices of potatoes, and a slight reduction in bread and flour.

Employment in July.—A substantial decline in unemployment took place in July. This is mainly due to a considerable recovery in the coal industry. In iron and steel, cotton and wool textiles, linen, jute, and other important industries, employment conditions became worse. Among the 11½ million workers covered by the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed, states the *Ministry of Labour Gazette*, was 11.5 on July 27th, as compared with 12.2 on June 22nd, and 9.9 a year ago. The total of registered unemployed fell from 1,368,000 at June 29th to 1,262,000 on July 27th. The improvement shown in July by the trade union unemployment percentage was even greater than that shown by the percentage for all insured workers, as the following table shows:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

* Excluding coal miners.

The trade union figures refer chiefly to skilled workers.

Conditions in Northern Ireland.—Our Belfast correspondent writes:—Since the annual July holidays there has been a slight improvement in general conditions in Northern Ireland. There are at the present time three 22,000-ton motor ships under construction at the Harland and Wolff yards, in addition to a large amount of repair work which is in hand. According to the Minister of Labour there are several thousand more men at work in the shipyards than was the case twelve months ago, but even to-day conditions are far from being good. The general engineering industry of the city, and especially that engaged on textile machinery for export, is fairly satisfactorily employed. In the linen industry the outlook is slightly better than a month ago. The high prices of flax, however, tend to keep back business. At the present moment we are between seasons in the raw material market, and the outlook is uncertain. In any case, and from whatever angle the situation is considered, it must be admitted that flax is a short raw material. Before the war, when a plentiful supply of flax was available from Russia, the position was not too bad; but to-day conditions are entirely altered. At the present time even there is a shortage of suitable material for tow yarns, with the result that prices are becoming firmer. If such conditions arise when the industry is only on about half its productive capacity, the outlook if demand broadens and more machinery is placed in commission cannot but be viewed with grave concern. The Irish crop will certainly be less this year than last, and consequently we are driven more and more to depend upon foreign supply. But even here we are faced with a serious problem. In 1913 the imports of raw material totalled 102,453 tons, of which 81,577 tons came from Russia; last year our imports of raw material totalled 49,869 tons. As yet the Baltic and Soviet areas cannot put forward anything like pre-war supplies, and even if they do we are faced with the fact of their economic combine dictating prices. The only solution appears to be a greater supply of home-grown, or Empire-grown flax. So far as the latter is concerned it makes little progress, consequently we are compelled to consider the home position. In 1913 the home supply of raw material was about 13,500 tons; in 1923 about 7,400 tons, whilst in 1918 it reached over 20,000 tons. This year we may have an Irish flax acreage of about 50,000, which is a little

above the average for the years 1921-24, taken as a whole. But compare this with the average for the four years 1917-20, which was 118,500 acres, and it will be at once seen how serious is the position. It is true that attempts are being made to increase the supply of pedigree flax seed, which will in time lead to a much greater yield of fibre per acre, but in the meantime the available supply of raw material is hardly sufficient for the very much reduced demand for linens. Last year our exports of linens were only about half our pre-war exports, and these exports were considerably better than the exports in the three preceding years. If, therefore, exports are to be brought up to the pre-war level, more attention will have to be paid to the provision of an increased supply of raw material. During the past month considerable discussion has taken place on the proposal to apply to the Board of Trade, under the Safeguarding of Industries Act, for the protection of the home market from foreign linen manufacturers. In the first six months of this year the total imports of foreign linen manufactures were valued at £607,004, which included 6,570,235 square yards of piece goods valued at £424,884. The total exports of linen piece goods for the same period totalled 49,506,800 square yards, valued at £4,116,880. These imports of foreign linens are made at prices with which the home manufacturer cannot compete, and come mainly from Belgium and Czecho-Slovakia.

European Wheat Areas.—A correspondent writes:—While the bounty of Nature varies from year to year, the control of man over acres sown is determined and has its own lessons. The agricultural returns of home areas issued on Wednesday, August 12th, complete our knowledge of wheat cultivation in the interesting and well-farmed area of the North-West and North of Europe. The returns are as follows:—

	1925. Acres.	Five Years Average. Acres.
England and Wales	1,499,000	2,014,000
Belgium	375,000	328,000
Holland	130,000	161,000
Denmark	145,000	194,000
Sweden	300,000	357,000
Total	2,449,000	3,054,000

Belgium, profoundly influenced by France, especially in the Walloon districts, has made a great effort to grow wheat for patriotic and non-economic reasons, but the rest of the North-Western group shows an entire uniform tendency, which is not devoid of significance. Turn the figures about as we will, there remains the one interpretation that high farming does not pay so far as wheat, and it is the leading example, is concerned. The man who makes two grains of wheat grow where one grew before is not justified if he does it at an outlay of two and a-quarter times his previous expenditure. The yields of the group as compared with countries where wheat areas are increasing is magnificent. World fertility in wheat dubiously exceeds a thousand lbs to the acre, but Sweden averages 1,650, England and Wales 1,950, Holland 2,150, and Denmark 2,300 lbs. But home-grown wheat tends more and more in these lands to become a rural curiosity of the cottage table, as in England, a miller's ingenious addition to his mixture "to give that nutty flavour." Stockholm, London, Amsterdam, and Copenhagen, to follow the order of these country's yields per acre, get more and more to depend on the weekly arrival of the foreign grain ships. Many of ours come from our own colonies, but the smaller overseas lands of high farming are differently situated, for their colonies produce little or no wheat.

Agricultural Economics.—The increased attention now given to the economics of agriculture is a hopeful sign of the times. Like most progressive movements in agriculture it has been initiated and stimulated from above, and still finds its chief obstacle in the indifference of the average farmer. Shortly before the war the Ministry—then the Board—of Agriculture, realising the importance of the subject, took active steps, which included the extraction of limited funds from a reluctant Treasury, to promote its study, and, *inter alia*, made a grant which

enabled the Agricultural Economics Research Institute at Oxford to be established. The responsibility for the control of the Institute was entrusted to a Committee, which at once proceeded to appoint Mr C. S. Orwin as Director. In a pamphlet recently issued the Director gives an interesting account of the progress of the Institute, which has now a staff of sixteen, and is doing very valuable work. Its most continuous, and in some respects its most directly useful, work has been that of stimulating farmers to keep accounts. The system of cost-accounting, which has now become general among commercial firms, has been persistently advocated by the Institute, which has collected data from a large number of farms to provide material for an economic analysis of the factors of farm management. It is doubtful if the costing system has yet been, or will be, very widely adopted by farmers, as it involves an amount of clerical labour which they are not as a rule prepared either to undertake themselves or to pay for. But undoubtedly the influence of the Institute has tended greatly to extend the practice of keeping farm accounts. Among the other operations of the Institute are a series of surveys of rural industries, a study of the organisation of agricultural marketing, an investigation of the cost of sugar-beet growing, and a scheme of experimental work to determine the best means of maintaining the area of arable land under present economic conditions.

American Cotton Crop.—Our Manchester correspondent writes:—By the American mail to hand this week there has been received the annual report on the cotton crop of the United States for 1924-25, compiled by the well-known authority, Mr H. G. Hester, the secretary of the New Orleans Cotton Exchange. The commercial crop for the season amounted to 14,698,356 bales, an increase on the previous year of 3,407,959 bales. It may be mentioned that the actual growth in 1924-25 was 14,808,000 bales, as compared with 10,985,000 bales in the previous season. The average grade of the past year's crop was middling. Mr Hester says that the year was prosperous for cotton producers. What was lacking in values per pound or bale, as compared with the previous season, was made up in quantity produced, which sold at prices showing no violent fluctuations, but moving off steadily and satisfactorily as the season progressed. Mr Hester adds: "Above all is the crowning fact that the South is resuming her position as the great arbiter of the world's cotton supply. Weather greatly assisted in suppressing the ravages of the boll weevil, but no little credit is due to the individual efforts of the farmers in fighting the pest, and the campaign of education of the past several years has been fraught with results that justify anticipations of future success in combating the evil. It is quite evident our people are not going out of cotton-raising on a large scale, and they are confident of their ability to supply the world's spindles with a sufficiency at living prices that will successfully compete with other sections in producing cotton of a character that may not be obtained in quantity elsewhere. Of the eight and a quarter millions of bales exported during the season (which have not been equalled since 1914-15), Great Britain increased her takings by upwards of 830,000 bales, and we sent to Germany in round figures 1,885,000 bales, against 1,300,000 bales in the previous year. We exported to France and other Continental countries liberal increases, while Japan and China took from us 923,000 bales, against 574,000 bales in the previous year. Of the 14,247,000 bales consumed during the past year, 7,787,000 bales were used by foreign mills. Not before, since 1915-16, has the consumption of American cotton abroad passed the seven-million mark. The average price of middling qualities was 24.27 cents per lb, compared with 31.67 cents in the previous year."

Brazilian Industrial Production.—A correspondent writes:—It is to be regretted that official speeches made of late regarding Brazilian trade and commerce afford but little genuine reflection of the condition of economic affairs. This remains in many respects unsatisfactory, while the financial situation, which dominates the entire position, has not yet derived any advantage from the Government efforts at reform. It is, however, but fair

to point out that the existing industrial depression is due partially to the large amount of unproductive capital that has latterly been invested by both banks and private individuals in manufacturing concerns which have had insufficient time to develop to the point of returning anything substantial in the form of profits. According to figures recently issued by a Government department, the number of industrial concerns established within a period of five years up to the end of 1920 exceeded 13,340, representing a capital equal to 2,240,000,000 milreis; the number of persons employed exceeded 360,000, and the annual output of products were valued at 3,000,000,000 milreis. The majority of the factories are owned individually, but there are a not inconsiderable number owned by partnership firms. Of the first category the majority are the property of Brazilians, and represent an aggregate investment of 279,000,000 milreis; of the second class, a considerable proportion are wholly, or partly, foreign-owned—British, North American, Italian, Portuguese, German, and Spanish—and represent capital of 262,000,000 milreis. The largest share of industrial investments has been taken by corporations, the value being estimated at over 1,128,000,000 milreis. In certain cases, factories have been producing more than public consumption has demanded. This would seem to account for the poor returns yielded; but, on the other hand, there have been a not inconsiderable number of important domestic products which have failed to meet the demands of consumers, such, for example, as building materials, refined sugar, several other foodstuffs, perfumery and soap, jewellery and stamped metal ware. The trade suffering from equal or over-production include tobacco products, matches, boots and shoes, textiles, certain grocery products and wearing apparel, including hats. Of textile establishments there are now in operation over 1,200, and Brazilian manufactures, although showing a tendency to congest the market, have reached a high standard of quality. The finest grades of cotton are now being produced, and its cultivation is offering encouragement to extensions in other suitable districts.

Gambling in Industrials.—A Stock Exchange correspondent writes:—It is a matter for daily surprise in the Stock Exchange that business in a good many popular shares should retain its flexibility and activity, considering the time of year. People all over the country are dealing in Courtaulds, tobacco shares, Zambesias, and the rest, from which it is evident that interest does not flag entirely in stocks and shares when people are away on holiday. The remarkable rises which have occurred have had the undesirable effect of stimulating the activities of the bucket-shop division, some of whom have discovered a better method for fleecing the public than that upon which the bucket-shops of the old brigade were wont to rely. The latter dealt on the tape prices. The man who sent money for the purchase on margin of Courtaulds, say, received a contract, if the shares were quoted on the tape at 6 $\frac{1}{8}$ –6 $\frac{3}{8}$, at 6 $\frac{1}{8}$, which meant, of course, that he had immediately against him the market turn of 2s 6d in favour of the bucket-shop. If the price fell $\frac{1}{8}$ to 6 $\frac{1}{8}$ –6 $\frac{3}{8}$, this was regarded by the bucket-shop as a drop of $\frac{1}{8}$, in that the closing price was considered to be 6 $\frac{1}{8}$, against the 6 $\frac{3}{8}$ which the client paid. On the other hand, if the price rose $\frac{1}{8}$ to 6 $\frac{1}{8}$ –6 $\frac{3}{8}$, the operator was merely square, because a sale would have been effected at 6 $\frac{1}{8}$, the price which he gave. The odds, although apparently level, were about three to one in favour of the bucket-shop, owing to the market-turn shown by the prices sent out on the tape. The modern bucket-shop has gone one better. For the past few months the country has been flooded with circulars begging people to buy Courtaulds, Imperial Tobacco, and other shares that have risen substantially. On the face of it, the bucket-shop can point triumphantly to extraordinarily big profits that might have been made by people who bought popular shares on the advice tendered, and it is unfortunately the case that these baits have proved so attractive as to draw into the net hundreds of people, some of whom might well have been supposed to understand the risks that they run in opening such operations. The bucket-shop of to-day takes, say, Imperial Tobacco at the market price, and invites subscrip-

tions of a shilling, two shillings, or some usually quite small amount per share, which is ostensibly supposed to cover the speculator against a fall of that particular amount, while it leaves him free to take a profit either limited or unlimited in extent. He may be asked to fix some price at which the shares should be sold, and this is, generally, a few shillings above the quotation at which the transaction is opened, though, on the other hand, the amount demanded as margin is always modest. The bucket-shop, taking Imperials at, say, £5 per share and asking 1s per share cover at that figure, claims the right to close the shares directly there is a bargain recorded in any of the Stock Exchange lists at a shilling per share below the price at which the so-called bargain is started. If, that is to say, Imperials mark 99s, the cover is lost. Everyone who watches Stock Exchange prices knows that in all the popular shares, and in many others, there are daily records of bargains being done at exceptional prices. The Stock Exchange official lists print a particular sign to indicate what are special bargains, these being the result, as a rule, of the sale of some oddment of stock or shares at a price that has to allow for the jobber losing the stamp and fee, and taking the shares in his own name. If Imperial Tobacco shares stand at £5, and can be sold, in round numbers, at that price, the sellers of three shares will be content to take 98s, because the buyer will have to allow for 5s 6d stamp-and-fee expenses in dealing with such a scrap. But the bucket-shop, lynx-eyed, seizes upon the mark of 98s—although the price of the shares in level amounts is £5 bid all the time—and a client's money is swept into the till on the ground that the client's cover has run off. This is happening every day. It is, of course, a matter of gambling with the dice heavily loaded against the public. A rising market under this system affords no guarantee that a client will be permitted even a fair prospect of making money, and this particular form of betting—for it is nothing else—is outrageously unfair to people who are induced to enter upon it with a bucket-shop.

African and Eastern Trade Corporation.—The accounts for the year 1924 of the African and Eastern Trade Corporation, Limited, show some improvement on the previous year, the net profit at £471,000 being £29,000 better than for 1923, though substantially below the 1922 figure, as may be seen from the following comparative table:—

	1921.	1922.	1923.	1924.
Net profit	Dr 1,794,736 ..	739,774 ..	442,353 ..	471,049
Brought forward	207,596 ..	41,003 ..	242,394 ..	271,985
	Dr 1,587,200 ..	780,777 ..	684,747 ..	743,034
Depreciat'n, reserve, &c. Dr 1,750,000 ..	200,000 ..	60,000 ..	67,500	
Prof. dividend	121,797 ..	128,322 ..	133,799 ..	134,921
Ord. dividend	..	210,061 ..	218,963 ..	220,743
	..	(8%)	(8%)	(8%)
Carried forward	41,003 ..	242,394 ..	271,985 ..	319,870

The depreciation fund is credited with £25,000, and £30,000 goes to income-tax reserve, while £10,000 is transferred to superannuation fund and £2,500 is written off furniture and fixtures. After repeating the ordinary dividend of 8 per cent., a substantial addition is made to the carry forward. The balance-sheet shows a new bank overdraft of £213,100, while cash has declined by £44,000. Shares in and current accounts with subsidiary companies have increased by over £950,000 to £8,591,800, but sundry debtors have fallen from £439,100 to £194,400. An analysis of the balance-sheet will be found in a later column.

Oroville Dredging.—Our mining correspondent writes:—This group may be regarded as having attained something like a crisis in its career. Of the two dredging subsidiaries, one—the Nechi—was on Thursday last placed in voluntary liquidation, the company's property having been exhausted. The other—the Pato—has still quite a period of work ahead of it. The manager reports that the main untreated area now stands at 272 $\frac{1}{2}$ acres containing 11,131,400 cubic yards, gross value \$2,775,500.

At the 1923-24 rate this quantity would occupy one dredge for about seven years. Then there is a "flat" outside the tested area which may give two or three years' work for one dredge; also an hydraulic area estimated to contain 1,671,800 cubic yards, value \$262,400. The exploitation of the latter has not yet been commenced. Last year the Pato dredge treated the increased quantity of 1,505,300 cubic yards for the improved average of 32.6 cents per cubic yard; owing to heavy repairs the average cost rose from 10.09 cents to 12.64 cents. The Nechi dredge—hired from that company—placed on the lower river flat above referred to, dug 1,364,400 cubic yards for an average of 22.7 cents. Thus the income from gold amounted to £161,250, as against £98,050, the net profits being respectively £67,600 and £58,050; the latest financial period had to bear higher tax and other charges. The company, however, paid only 14s per share in place of double that amount for 1922-23. This apparent anomaly is explained by the circumstance that the directors in 1922-23 drew heavily upon the carry forward, reducing that balance from £171,700 to £89,750. Attention is directed to the fact that at the date of the balance-sheet "an amount of £143,776 was represented by gold on hand, cash, and Government securities." In common fairness it should also have been stated that there were creditors for £87,200. The Oroville's holding of Pato shares constituting its chief source of income, it naturally follows that last year's revenue amounted to only about half that of the preceding period. Moreover, it was cut into by greatly increased requirements for interest and taxation, as well as by a net deficit of £20,900 upon the operation of the Dos Bocas road. The concession for the latter, it may be recalled, was taken over from the Colombian Corporation, which had not the means to carry it through. According to Stock Exchange rumour, the Oroville company has abandoned the operation of the said road. If so, this has been a costly experiment, expenditure on Dos Bocas road, river steamers and barges having run into £197,000. The balance-sheet of the Oroville shows a bank loan increased by £37,000 to £93,000, with the Colombian Corporation figuring as a debtor for £23,100 instead of a creditor for £27,150. It has been understood that the financing of the Colombian Corporation was mainly responsible for the absence of the Oroville from the dividend list since the interim payment of 9d made in December last. Actually the disbursement in question absorbed somewhat more than the year's net profit. At Thursday's meeting the chairman announced that the Colombian Government had been petitioned to take over the Dos Bocas road; he also foreshadowed a scheme for scaling down the capital of the company.

Rhodesian and General Asbestos Corporation.—This mining-industrial undertaking has fully justified the forecast put forward when the last issue of shares was made. For the year ended March 31, 1924, there was a net profit of £73,100, and dividends totalling 15 per cent. were paid. The report just published shows a net surplus of £123,600, and a balance dividend of 12½ per cent. is declared, making a total of 20 per cent. for the year. Asbestos at the mines, in transit and in stock at cost figures in the balance-sheet at £89,700. The directors might very well have given some information as to the nature of the operations carried out last year and the contracts entered into. On the former point they merely say that the position of three mines "continues to be satisfactory." It is rumoured in the Stock Exchange circles, however, that the company has entered into forward contracts covering the next two or three years at prices exceeding those which were realised during the past financial period. If this is correct, the point is one upon which the shareholders certainly are entitled to be informed. No doubt particulars will be given at the meeting, but this is not to be held until October 19th.

A SMOKE ABATEMENT CONFERENCE, arranged by the Smoke Abatement League of Great Britain, is to be held at the Palace Hotel, Buxton, from Friday evening, October 2nd, to Monday morning, October 5th.

UNITED STATES.—STOCK MARKETS AND MONETARY OUTLOOK—CROP ESTIMATES—STEEL—AUTOMOBILE PRICE CUTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 11.

THE markets retain their firm tone with continued strength in high-priced and high-grade specialties the feature. Stocks like American Can, Mack Trucks, and General Electric, whose companies are in extremely strong cash positions and are making large profits, find little difficulty in continuing their advances, even after crossing two or three hundred. The buying in these stocks is strong and concentrated; nothing like an attempt at distribution seems to be going on. Rich investors are convinced that these particular shares will show handsome profits if put away in strong boxes. Meanwhile the body of the market continues just about to maintain itself, and the professionals around the brokerage houses remain bearish. It must be admitted, however, that the market has yet to show any real inclination to go down.

The reduction in your bank rate, which came as something as a surprise to our financial community, but which is considered a perfectly natural step, served to reinforce optimism on this side of the water. Good judges expressed the opinion that the Bank of England authorities, who have the facilities with which to feel the pulse of the money market here, must have felt pretty sure that our money market would not harden greatly this fall before they decided to cut their discount rate. In addition, it was pointed out that the reduction on your side makes an advance in the Federal Reserve Bank rate more improbable. It is assumed that co-operation still is the watchword in international finance, and that our leaders are as eager for the general re-establishment of the gold standard as ever. Under these circumstances it is inferred that the Federal Reserve Banks will be inclined to help keep an easy money market on this side of the water. Your bank rate cut, in other words, serves to support the contentions of the party that expects money to continue cheap this fall. It still remains to be seen, however, whether the commercial demand for money will increase materially, and, if it does, whether the Reserve banks will attempt and will be able to keep the money market undisturbed while the additional credit is being created. Needless to say, the new turn to the money market situation is encouraging to stock market enthusiasts. They maintain that good business and cheap money are assured.

As for the broader aspects of the cut in your bank rate, it is thought that such a move was inevitable, the only uncertainty being as to the time. The financial measures that were put in force to assist the return to the gold standard have been regarded from the first as temporary. Everything considered, the plan for returning to gold payments is considered to have worked out with remarkable speed and gratifying success. Our good people, incidentally, deprecate the notion that your industrial troubles are due to the gold standard. The claims that have been set up in this connection are considered to be grossly exaggerated.

More crop news now is coming in, but even the latest returns are far from conclusive. The Department of Agriculture estimates the cotton crop on the basis of August 1st condition at 13,588,000 bales. This is 22,000 bales less than were forecast in the estimate of a fortnight ago. However, since August 1st there have been rains in certain areas of the cotton belt which should help the yield somewhat, while trade news has been rather unfavourable. In addition, market followers have come to lack confidence in the Government figures. They remember the huge underestimates made last summer of the crop growing at that time. In any event, cotton sold off on the latest estimate, losing about 50 points a pound and dropping to a price about 2 cents a pound under that reached on the previous estimate.

The grain trade also was disappointed with a new Government estimate of the grain crops. Wheat had had a sharp run up of some 18 cents on bullish private crop

reports. The Government report as of August 1st disclosed a reduction of 13,000,000 bushels in the spring wheat estimate; but this was partially offset by an increase of 12,000,000 bushels in the estimate for winter wheat. The net result was an estimate for the total yield that amounted to 679,000,000 bushels, which is only 1,000,000 bushels less than were called for in the July 1st estimate. Meanwhile, the trade, which had been counting on a reduction in the Canadian estimates, found that the Dominion experts put their figure at 375,000,000 bushels. When it is remembered how badly our Department of Agriculture underestimated the spring wheat crop at this time last year, it is not surprising that the recent speculative boom in wheat prices collapsed. In the first day after the publication of the Government figures the leading futures dropped six cents. No one here believes that wheat prices are likely to be low, as the carry-over and world supply position are thought to be fairly tight. On the other hand, ideas of two dollar wheat have pretty well disappeared. Up to the present the farmers have shown little disposition to market their wheat rapidly, a circumstance that has helped the recent rally. At the same time the attitude of the farmers has had a retarding effect on trade in many of the rural districts. One of the odd features of the situation in the agricultural regions, is the disappointment of country bankers over the farmers' disinclination to borrow. This has resulted in the unusual spectacle, at this time of the year, of a great many country banks keeping large amounts of money in the New York call market.

The Government estimate on corn also calls for a sizeable reduction in yield. The crop is now placed at 2,950,000,000 bushels, as compared with 3,095,000,000 in the July 1st estimate. The present indicated crop is, however, a very large one, and, if realised, will do much to restore prosperity in the middle west. It must be remembered that while the wheat growers have, during the last year or two, been making a good recovery, the corn and livestock raisers have been having a very difficult time. The present indications are that the corn and livestock people are now about to have their innings. If such is the case, prosperity will be much more evenly distributed throughout the farming districts.

The steel industry continues to maintain its steadier tone, and to act as if an autumn revival in its activity is on the cards. The United States Steel Corporation's unfilled orders declined 170,000 tons during July, which was about in line with expectations. The loss during the month compares with one of 339,000 tons during June. The decline that started in March apparently is coming to a close. Buying has shown an improvement, and prices of steel and iron are firmer. The price of steel scrap has been advancing.

Cutting of automobile prices has become general, and it is quite evident that competition is becoming closer. The lower prices are quoted, in most instances, furthermore, on new and improved models. The strong apparently are to become stronger, while more of the weak are likely to be eliminated. The largest reductions have been made on the closed models, a circumstance that is explained by the great increase that has occurred in the proportion of closed cars sold. The increased production has permitted a large reduction in costs of manufacture. Sales and production of automobiles are holding up extremely well.

FRANCE — SOCIALISTS AND THE GOVERNMENT — BRITISH DEBT NEGOTIATIONS — REPARATION PAYMENTS.

(FROM OUR CORRESPONDENT.)

PARIS, August 19.

THE long threatened split between the Socialist party and the Poincaré Government has now become an accomplished fact. The Socialists, at a special national congress yesterday, passed by an overwhelming majority a resolution pledging the party no longer to support the present Ministry, and declaring war to the knife against their friends in power as from the resumption of the session after the summer holidays. Exactly what effect this will have is not yet clear. The Cartel des Gauches, which brought M. Herriot into power in May, 1924, to

replace M. Poincaré, and which apparently emphasised its victory at the various local elections that have taken place since, was smashed beyond repair when M. Poincaré openly defied the Socialist wing a few weeks ago in the Chamber, when he proclaimed a purely Nationalist policy in regard to the Rif War, and challenged the Socialists to upset his Ministry. The Socialists took their defeat on that question badly, and their dissatisfaction was intensified when M. Poincaré again defied them by refusing, through M. Caillaux, to include their capital tax proposals in his Budget. Their declaration of war is the outcome of those defeats. Their object, of course, is to bring back M. Herriot, whom they are assured would be more amenable to their peculiar policy. The return of M. Herriot, indeed, is the only hope at present left to the Socialist party. The latter, although it comprises over one-quarter of the total voting strength of the Chamber, is helpless unless it can detach a sufficiently large number of Socialistic Radicals and Radicals from the Centre bloc, which generally rules France. At the same time, it is sufficiently strong to prove fatal to any Government in the event of any question arising on which the rest of the House is fairly equally divided. The Socialists having apparently completely failed in their effort to bring about the return of a Herriot Cabinet, the next move obviously rests with M. Poincaré.

The possibility of a reshuffling of portfolios in the near future is already spoken of. In that case the modified Poincaré Cabinet would doubtless include one or two members drawn from the groups towards the Right. It is quite possible, at the same time, that, with or without M. Poincaré, a Ministry of Republican Concentration, or coalition of the Centre groups, may develop, and this, in turn, may be followed by what may be described as a mildly Bloc-National Ministry. Anything in the way of a radical change in French foreign or domestic policy, however, remains most unlikely.

M. Caillaux, according to present plans, will leave for London on Sunday, to resume the negotiations begun between the two Governments through their respective experts a few weeks ago for the settlement of the French debt to Great Britain. According to unofficial reports, the British Government suggested when the French experts were last in London that this country should liquidate its debt by instalments of £20,000,000 per annum, which figure is on this side of the Channel considered far too high. The French thesis is that Lord Balfour, Mr Bonar Law, Lord Curzon, and Mr Churchill have all in turn since 1922 successively laid down the doctrine that Great Britain will in no case demand from its European debtors, Germany included, more than she has herself contracted to pay to the United States. On this principle, the French claim, the French war debt to Great Britain, French claim, the French war debt to Great Britain, which amounts nominally to £600,000,000, would be automatically reduced to about £150,000,000. In view of the fact that, when Great Britain receives from the operation of the Dawes plan her 22 per cent. share of the total reparation payments, she will have to pay to the United States, it is argued, not £33,000,000, but sums varying from £25,750,000 in the present year to £20,300,000 in 1928, £11,000,000 in the four following years, and only £16,000,000 per annum from 1933 onwards (when the nominal amount to be paid to America will have been raised to £38,000,000 a year). In these circumstances, the French argument is that this country's payment to Great Britain on debt account ought not to exceed £12,875,000 in 1925, £12,000,000 in 1926 and 1927, £10,150,000 in 1928, £5,500,000 in each of the four following years, and £8,000,000 a year from 1933 onwards. Referring to the settlement of the American debt, M. Caillaux himself informed me a few days ago that he did not consider the American Government could reasonably expect to ask the French to agree to more onerous terms than had been given to "those who were on the other side of the barricade during the war." It is to be expected that this principle will form the basis of the French Minister's thesis during his coming visit to London.

Obviously, the French are basing their whole attitude on the theory that their payments to Great Britain and America will be based largely on whether the Dawes Plan proves as successful as its authors expect it to be. The accounts presented by Mr Parker Gilbert setting forth

the results obtained from the Plan during the first eleven months it has been in operation—that is down to the end of July—disclose that the revenue amounted to 840,315,236 gold marks, out of the total of 1,000,000,000 gold marks which it is stipulated in the Plan the German Government shall pay during its first year's operation. It must not be forgotten, however, that this first eleven months' revenue was derived as to 729,920,422 gold marks from the foreign loan of 800 million gold marks made to Germany to start the Plan going, while a further 200,000,000 gold marks is represented by the interest from the German railway bonds.

The French share of the total payments of 828,352,124 gold marks made during the first eleven months since the Plan came into operation amounted to 360,148,272 gold marks, or between 40 and 45 per cent. of the total yield. Great Britain received 178,140,775 gold marks, Belgium 85,732,770 gold marks, Italy 55,900,653 gold marks, Serbia 26,848,437 gold marks, Rumania 6,805,959 gold marks, Portugal 4,423,929 gold marks, Japan 3,721,409 gold marks, Greece 2,434,073 gold marks, and Poland (in July) 40,179 gold marks. Of the total payments made to the Allies during the eleven months, coal and other combustibles represented 46 per cent. of the whole. The 26 per cent. tax on German exports accounted for another 20 per cent., and the cost of the armies of occupation about 21 per cent. The services of the German loan cost a little over 8 per cent. of the total expenditure, and administration and control represented slightly under 3 per cent.

The 360,148,272 gold marks received by France was made up as follows:—

	Gold Marks.
Deliveries of coal, coke, and lignite	116,397,071
" chemical manures	16,847,554
" dyes and pharmaceutical products	5,107,975
" by-products of coal	159,946
" barges and other river craft	1,379,440
" various materials	13,397,299
Transport of coal, coke, lignite, and residuals	18,671,775
Exploitation of collieries and coke plants	7,662,456
26 per cent. tax on German goods entering France ..	21,692,293
Pay of army of occupation	30,347,822
Requisitions, damages, supplies under Rhineland arrangement	71,724,640
Supplies delivered in the Ruhr	24,760,000

From this it will be seen that, during the 11 months, the French have taken only a little over 13,397,299 gold marks' worth of German manufactured and similar goods (with the exception of some 17 millions of chemical manures and 5 millions of dyes and pharmaceutical products) in the form of payments in kind—or less than one-half of 1 per cent. of the total they have received under the plan. Obviously, in view of Germany's financial situation, this may lead to the breakdown of the whole Plan, unless German trade improves sufficiently during the coming year to enable her to make large payments in cash. The danger has already been foreseen here. The minimum sum for which orders for German goods will be accepted under the machinery of the Dawes Plan for Reparation payments in kind has been reduced to 1,000 gold marks (say 5,000 paper francs), and steps are being taken to encourage *sinistrés*, and particularly the smaller sufferers, to avail themselves of the system of payments in kind. *Sinistrés* who have actually reconstructed are henceforward to have the right to buy all kinds of German goods under the Dawes Plan machinery, which they will be under no obligation to utilise, but which they will be allowed to sell in order to reimburse part of the money advanced for reconstruction purposes. It is doubtful whether this effort will appreciably improve the situation.

On paper, France should receive, under the Dawes Plan, some 1,300 million paper francs from Germany in 1925, 1,800 millions in 1926, about 3,000 millions in 1927, about 4,000 millions in 1928, and in subsequent years still larger sums. The weakness of the scheme lies in the fact that, during these years of the immediate future, these payments will be made almost entirely in kind; while later on, when France will be entitled to about 6,000 million francs a year as her share, she will still have to accept, according to the experts, some three-fifths of the total in the form of merchandise. The most serious feature of the whole situation in this regard is that if any Allied Power fails to absorb its full proportion of pay-

ments in kind, the amount represented by the deficit will remain in the hands of the agent for Reparation payments until it reaches a total of 5,000 millions of gold marks, and will then be handed back to the German Government for the purpose of being used in reduction of German taxation. A movement is already beginning which aims at enforcing the acceptance of German goods on a large scale for the purpose of developing the water-power and transport systems of the country and to carry out other public works which are at present impossible owing to the financial situation. "The Dawes Plan," Senator Henry de Jouvenel insists, "will oblige us, in our own interests, to equip France on modern lines." That way salvation lies, both for the Dawes Plan and for France.

GERMANY.—BANKS AND INDUSTRY—STINNES CRISIS—FINANCE—CREDIT.

(FROM OUR CORRESPONDENT.)

BERLIN, August 18.

THE Stinnes affair in its latest phase of a "liquidity crisis" in the business of Dr Edmund Stinnes has brought up in an acute form the relations between banks and business. Two reversals in these relations have taken place since the war. Originally the banks in great measure dominated industry for the good reason that they had created it, and were themselves created for its creation, deposit banking of the English kind being a later development. Industrial holdings constituted a great part of the banks' assets, and the *Aufsichtsräte* of many great manufacturing concerns were little more than mandatories of the banks. When, as a result of currency depreciation the banks' own capital strength and also their credit operations with depositors' money shrank, industry to a great extent began to dominate the banks. Unlike banking, industry lost none of its substance through the mark collapse; on the contrary, it increased it; and it became very easy for steel and coal kings and finishing manufacturers to acquire large parcels of banking stock, and to put their nominees in turn into the *Aufsichtsräte*. The Stinnes concern entirely captured the important Barmer Bankverein, and in late 1922, by a secret and somewhat sensational deal, acquired a third interest in the Berliner Handels-Gesellschaft, so that it could demand and obtain *Aufsichtsrat* representation. Although as late as June, 1924, Hugo Stinnes, junior, acquired further Barmer Bank shares and increased the Concern's influence, it is in general true that with the stabilisation of November, 1923, the banks began to regain power. Their capital shrinkage ceased, their deposits increased, and simultaneously the industrial magnates, having tied up their acquisitions of majority interests in other industrial companies, began to be short of working capital. The banks charged very high interest for credits, and obtained considerable supervision rights. The first Stinnes crisis, of banking syndicate at first appeared in the light of helper and adviser; but when it became plain that the debts were larger than was believed and the assets less began to act much as receivers in bankruptcy.

The Edmund Stinnes crisis, which became acute only last week, is a phase in the banks' struggle to regain full domination of industry. Dr Edmund Stinnes, Hugo Stinnes' elder son, who until recently was head of the Concern, abandoned his interests and his control immediately before the May crisis, taking with him as his own Motor-Car Company, and some other interests, and retaining a long-term claim for some 6,000,000 marks against the Concern. When the banking syndicate saw that it was doubtful whether the Concern's assets, even with the addition of outside old Stinnes family properties, would cover the debts, they required Edmund Stinnes

to guarantee any deficit. Edmund Stinnes offered only a qualified guarantee. The banks thereupon put into force a credit boycott, with the result that the Motor-Car Company, which is stated to have abundant and profitable orders, could not pay its workmen, and had to appeal for a State loan of 3,000,000 marks, which has not yet been granted. For motives not known, but apparently in order to flout the banks and to withdraw some of his assets from their claims, Edmund Stinnes offered to present half of his shares in the company, some 2,000,000 marks nominal, to his workmen. The Aga Motor-Car Company has now the prospect of being acquired by an American group. The banks to-day issued a declaration that the information given them in May as to the condition of the Concern by its chief was incorrect, that they contest the family agreement by which Edmund Stinnes acquired Concern properties which were liable for the general debts, and that they in particular resent his sale of certain holdings (including the Nordstern Insurance Company) to purchasers abroad. According to one account, the whole affair is primarily a struggle between Edmund Stinnes and Jakob Goldschmidt, of the Darmstaedter Bank, who regard themselves as champions of industry and banking respectively.

Although the Edmund Stinnes affair is relatively small, it has made a great sensation, and has done harm to the Bourse and to business confidence. In regard to the liquidation of the Concern no authoritative statement has been made. But it seems that as against debts now estimated at 180,000,000 marks, the forced sales so far made have realised only 60-70,000,000 marks, although all the most valuable properties, with the exception of the Hugo Stinnes Reederei (Shipping Company), which owns 250,000 tons, have been sacrificed. The sold properties include the Concern's holdings in the Berliner Handelsgesellschaft Bank and Barmer Bank, in the Deutsch-Luxemburg (nucleus of the whole Concern), Gelsenkirchen, Bochum Cast Steel, Siemens und Halske, Stinnes-Riebeck Mining-Oil, Stinnes-Riebeck Oil, the main departments of the Stinnes Trading Company of Hamburg, and stock in the Rhenish-Westphalian Electricity Company. The last-named company—the personal creation of Hugo Stinnes—was a mixed municipal and private-capitalistic undertaking, which supplied power and light to a large industrial area. Dock land at Hamburg and about 10,000 hectares of agricultural and forest land were also sold. Unsold, so far, in addition to the fleet, are the Hamburg Traffic Company, which owns six hotels, the Koholyt (paper and cellulose) Company, and the Norddeutsche Verlagsanstalt, with the financial daily newspapers *Deutsche Allgemeine Zeitung* and *Industrie und Handelszeitung*. Outside the Concern are "family interests" consisting of an iron company, the Matthias Stinnes coal mines, and a coal-trading company with a large river and canal fleet, and an interest in the Mülheim Mining Union. No stock was sold in the open market, and the effect upon the Bourse was indirect. The question yet to be decided is whether the remaining Concern properties, even with the Edmund Stinnes properties and the family properties thrown in, will suffice to cover the rest of the debts. The Concern is, of course, finally dead and buried, though the Electro-Mining Trust—which is an understanding between some of the above-mentioned companies—in which Stinnes was merely a stockholder, remains.

The Treasury report for July shows revenue received 692,672,198 marks, including 150,300,000 marks June pledged revenues refunded by the Commissioner, but not including the July pledged revenues, which totalled 174,400,000 marks. Expenditure was 629,712,215 marks, of which 224,059,557 marks was subventions to States and municipalities. The Reichstag at the last moment reduced the Sales Tax from October 1st from 1½ to 1 per cent. Receipts of professional men and artists are henceforth sales-tax free in so far as they do not exceed 6,000 marks a year. The company-foundation tax has been reduced from 5 to 4 per cent. on capital; from 2½ to 2 per cent. for company fusions. The tax on debenture issues is reduced from 30 pf to 20 pf per 10 marks, on share issues from 50 pf to 40 pf per 10 marks. The Bourse transfers stamp duties have also been again reduced. The stamp duty on bills of exchange has been reduced by half, to 10 pf per 100 marks, for bills for

longer than three months term to 20 pf. The duty is reduced further by 50 per cent. on bills drawn in Germany on abroad and payable abroad. The income-tax, as finally passed, contains some new features. Where outlay visibly exceeds returned income, and where it exceeds 15,000 marks a year, the taxpayer may be assessed on his outlay. Profits from sales of securities are tax-liable only in case of short sales, or when less than three months has elapsed between purchase and sale on a long sale. Profits from sales of real estate are liable when less than two years has elapsed between purchase and sale.

The money market has much improved. Day money last week fell from 10½-11½ per cent. to 7½-9 per cent. Only part of the short-term money offered could be placed, and yesterday the rate fell to 7 per cent. Money for longer terms remained almost unobtainable, at unchanged rates. The Reichsbank's return for August 7th shows a decline in discounts of 83 millions to 1,706 millions, in advances of 36½ millions, in circulation 57½ millions to 2,472 millions, while deposits increased by 110½ millions to 810 millions. New rules have been issued for conduct of insurance by foreign companies. It is stated that many applications for permits have been received, mainly from Great Britain. In case of fire, liability, and accident insurance, there is required initial security of 500,000 marks, to be increased annually by a variable sum equal to 50 per cent. of the gross premiums from German business; for life insurance the security must be at least 10 per cent. of the premium reserve. Companies must maintain a responsible representative who is a German citizen. Applications by a single company to conduct both fire and life insurance will not be considered. Native insurance business is rapidly increasing, but competition is severe, there being 250 companies where there were only 70 before the war; and fire premiums were until lately charged at rates below the safety limit, although the average risk has increased. An agreement against rate-cutting was come to last year. Policies may still be contracted in gold marks, but as a result of increased confidence in the new currency they are now largely contracted in reichmarks.

INDIA.—TRADE IN JUNE QUARTER—COTTON MILL CRISIS—LIVERPOOL FUTURES CONTRACT—JUTE FORECAST—STEEL PRODUCTION.

(FROM OUR CORRESPONDENT.)

CALCUTTA, July 23.

INDIA'S foreign trade in 1924-25 showed record exports resulting in a balance in favour of India in respect of merchandise exceeding Rs.150 crores, the deficiency in imports of merchandise being offset to an abnormal extent by purchases of bullion of colossal and unprecedented dimensions. The trade returns for the first three months of 1925-26 (March to June) show the same broad tendencies still operative. While the net imports of gold in this period last year totalled Rs.8,76 lakhs, in the last three months they have aggregated Rs.6,84 lakhs, silver purchases meanwhile declining from Rs.6,07 lakhs to Rs.4,79 lakhs. The final result is that in the June quarter India's visible balance of trade in merchandise and treasure was Rs.35,77 lakhs in her favour, as compared with only Rs.16,02 lakhs in the corresponding period of the preceding year. In relation to exchange, the governing factor is the diminishing supply of remittance. Piece goods orders remain inelastic, and bullion imports are lower. Meanwhile, exports remain buoyant, and unless the monsoon defeats present expectations may equal and perhaps exceed the record values recorded in 1924-25. Per contra, it is maintained that piece goods imports correspond to minimum requirements, and can, therefore, reveal only a temporary reduction, while bullion purchases will remain attractive as long as uncertainty persists concerning the permanent ratio of exchange. In face of so many uncertainties, the commercial community learned with some satisfaction that official policy has crystallised to the extent that, as far as Government resources permit, exchange will not be permitted to rise above 1s 6d, and little doubt is now entertained that this pledge can be redeemed. Apart from 23 crores still to be remitted to meet Home expenditure, the Government of India will also, if needed, bring into operation the large resources of the Paper Currency Department, and buy sterling practically without limit. It has been tentatively suggested that an immediate modification of the statutory ratio from 2s to 1s 6d would assist confidence by facilitating conversion of gold into currency, but, for obvious reasons, the Government of India, in view of the impending inquiry, prefer not to take the initiative in this matter, while quite ready to accept a resolution if submitted to and passed through the two Houses of the Central Legislature. But for various reasons there is little reason to anticipate such action being taken.

At the August session of the Legislative Assembly a resolution will be tabled, on behalf of the Indian members, urging State assistance to Indian cotton mills. The abolition of the cotton excise duty, though strongly pressed, will not be conceded until provincial contributions to central revenues have been entirely remitted, a consummation that cannot be relied upon for two years, if then. An export duty on raw cotton, the second proposal embodied in the resolution, is also likely to be negated. The third suggestion, viz., a variation of the import tariff to secure a larger measure of protection for the special classes of cotton goods in which Indian mills are interested, is expected to produce an interesting debate. In India the failure of Japan to ratify the Washington Labour agreement lays Japanese mill competition open to strong criticism, and the recent appeal at Geneva having failed to induce the Japanese Government to honour its signature, there is a strong disposition here to try the effect of a penalising tariff. On the other hand, there are Treaty obligations to take into account, and, as I understand the position, it is the official view that the only fiscal expedient to which Japan could raise no legal objection would be the imposition of a tariff on cotton goods based upon the principle and procedure of Imperial Preference, a form of fiscal and political co-operation with

Great Britain to which Bombay industrialists and politicians hitherto have always professed themselves strongly opposed. It is not for Government to take the initiative; that must come from the Legislature. It is also doubtful whether Japanese competition is as serious a factor as over-production arising from rapid expansion of mill productivity at a time of high prices, when consequently the Indian demand for piece-goods is at a minimum. Short time has been discussed, but on united action in any direction Bombay mill owners can rarely agree, lack of unity being only disguised when there are petitions to be made to Government to raise the tariffs on everything the mill owners sell and to lower it on any articles, such as machinery, &c., they are compelled to import. A 10 per cent. reduction in wages is proposed, but this will help very little. The net result will not probably be, in view of accumulating stocks, and the financial difficulties thereby created, that many mills will be forced to suspend operations, and their stocks will be thrown, with demoralising effect, on the market. The one point in this crisis upon which the Bombay newspapers are apparently in absolute agreement is that many of the cotton mills are grossly mismanaged, and will return to prosperous working only as the sequel to drastic reforms.

As I write, information has arrived of the fixation of the new Liverpool futures contract, which, if it includes India staples, will prove a potent stimulus to the wider production of better cotton in this country. Lancashire, it is true, is only a small user of Indian cottons, Indian mills, Japan, and the Continent being vastly more important. But in 1924, Lancashire spinners' takings of Indian cottons exceeded 250,000 bales, as compared with an average of 97,000 for the previous five years. Of the five to six million bales India produces annually, only about two millions are used in her own mills, and consequently any measure which improves facilities for export is of direct benefit to the grower. Particularly is this the case with Indian long-stapled cottons. Though the exportable margin of such cottons is relatively small, say half to one million bales out of a total export over three million bales, it is of the greatest importance to the grower that he should have as free as possible an access to the world's markets. If Bombay, which, like New Orleans, is mainly a sellers' market, can be more closely linked with Liverpool, which is a buyers' market and the best staple cotton market in the world, the prices for India's best cottons will be stabilised, and their production encouraged.

On the acreage figures issued by the Director of Agriculture, which point to under-estimating, the market is inclined to forecast an out-turn of jute ranging between 90 and 93 lakhs of bales, against nearly 87 lakhs obtained last season. The increase seems small, considering that jute cultivators are officially estimated to have realised over Rs 50 crores against less than half that sum in the preceding season, but the large sowings are partially offset by heavy damage by floods, leading, on many thousands of acres, to jute lands being ploughed up and diverted to other crops. The receipts last season exceeded the official forecast by 5 lakhs of bales, leaving 38½ lakhs available for export, a figure that should be raised this year to 43 to 45. As the forecast fell short of commercial expectation, mills immediately received large orders previously suspended in the hope of a year of cheap jute.

The immediate effect of the Tariff Board inquiry concerning steel production has been to reveal dangerous competition between the State-aided Tata works and the unaided pig-iron companies which rely mainly upon export. The Bengal Iron Co., in consequence of underselling by Tatas, has been forced to dismiss 5,500 employees, not including 34 Europeans. The Tata steel plant is incomplete, with the result of throwing 150,000 tons of pig-iron on the market that would otherwise be absorbed in production of ingots. The capital required for these extensions is not forthcoming, pending the capital reconstruction of the Tata Steel Company admitted to be necessary, but not yet effected. It is suggested here that, in the absence of private capital, the Government of India should find the money by accepting debentures. The Tariff Board's recommendation is awaited, and will be discussed in August by the Legislative Assembly.

ARGENTINA.—THE 1926 BUDGET—EXCHANGE—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, July 27.

WITHIN a week of publication of the Budget Committee's final report on the proposed inclusion of income-tax among the sources of revenue for 1926, the Argentine Government has put the estimates before Congress—and the thirty million dollars paper which the tax on incomes was to have produced is not included in the estimated receipts. Indeed, except for the inclusion of contributions from the profits of the two national banks, one is hard put to it to find any difference in the main items of the proposed Budget of 1926, and that of its last fully discussed predecessor, the Budget of 1923. There is the inevitable increase in expenditure, ordinary charges amounting to \$650,276,875 paper, with supplementary sums for public works obtainable by the issue of internal credit bonds of the nominal value of \$103,000,000 paper. A further \$24,639,473 paper, spent on charitable subsidies, hospitals, asylums, and the like items, is covered by lottery and special taxation outside the general revenues. On the service of the debt, including supplementary credits and the new provision for amortizing the floating debt, a sum of no less than \$180,755,000 will be required, while in the various Ministries the amounts called for have also been increased. In the introductory message the Government admits that expenditure is effectively 37½ million paper over the total recommended by the Budget Committee, but adds that such an increase seemed preferable to running the risk of having the Administration's work handicapped by delay arising out of subsequent supplementary requests for credit. The increase of the sum needed for service of the debt was partly attributable to the fact that in 1926 the service of recently-contracted loans would have to be met, and as for income-tax, though not included in the regular receipts, it would still be kept to the fore, inasmuch as the Government was convinced of the need for radically altering the present defective methods of taxation. This, of course, may mean anything or nothing; and the same statement applies to the 1926 Budget as a whole. With the 1925 Budget still undiscussed, and half the session gone, the 1926 position may appear of little immediate moment. It should, however, be borne in mind that Congress is capable of dealing with the provisions for 1925 in a sitting, and might thereafter tackle the question of income-tax, not as a replacement of existing imposts, but rather in the form of an addition. This is but guesswork, and pessimistic at that; its origin lies in the stress laid by the Committee, who approved the measure, on the advisability of applying the income-tax by compartments; interest, rents, agrarian and pastoral profits, and the profits of joint-stock companies being separately assessed and taxed. And as the Committee point out that all these forms of income need not necessarily be taxed at the outset, the new imposition being gradually increased as the taxpayers become accustomed to paying direct dues, there is reason to fear that in such case the line of least resistance would be taken, and the tax applied to the one section statistically susceptible of control, to wit, the joint-stock companies, and, in all likelihood, to the salaried classes at the same time. Customs receipts and inland revenue are both higher than they were at this period of 1924, the increase being close on 40 million dollars; a favourable condition of affairs, which, taken in conjunction with the recent loans in the United States and the steady absorption of internal obligations by the various pension funds, must be held accountable for the absence of any great stringency in the national administration. Nothing has, however, been done towards settling the many outstanding accounts incurred by the State railways, nor has any plan been devised whereby the floating debt of that department may be consolidated. Yet there is reason to think that this matter will ere long be the subject of much private complaint, the Government being thereby forced to take action.

HARRISONS & CROSFIELD, LTD.

EASTERN MERCHANTS.

AGENTS AND SECRETARIES OF TEA AND RUBBER ESTATES. GENERAL EXPORTERS AND IMPORTERS. 1-4, GREAT TOWER STREET, LONDON, E.C.3.

Again the question of opening the Conversion Office has been raised, this time in the Senate and by a Senator, Dr Alejandro Ruzo, who is closely affiliated with the official Radical party. He has brought forward a measure proposing that the emergency legislation of 1914 be rescinded, and his arguments in favour of free gold movement are unanswerable. He points out that, even under the partial authorisation to ship gold held outside the Conversion Office, no bullion or specie has left the country, but, on the contrary, small parcels have been received from abroad. Indeed, it certainly looks as if there was reason to think that the artificial depreciation of the Argentine dollar which is brought about by the present state of closure is held to be beneficial, in the first instance, to producers of exportable wares, and, secondly, to the local industries now clamouring for additional protection. The power of the latter has grown considerably of recent years, and various articles, ably worded but manifestly inspired, have been published by the Argentine Press, drawing comparisons with the industrial movement in Brazil, and urging the adoption of a similar policy in the treatment of foreign merchandise.

General business continues quiet, but with a healthy undertone, while the financial position as evidenced by the banking statistics at June 30th is decidedly easy. Deposits have risen by some 95 million paper during the past six months, and cash in hand by 173 millions, discounts and advances being but 10 million higher, another argument in favour of removing all restriction from the natural operation of the Conversion Law. There is no speculative position to be noted either in produce or in real estate, and the moment was never more timely for the considered reorganisation of the National debts on a permanent footing. Unfortunately, as has been said in previous correspondence, Congress, collectively considered, refuses to grasp the importance of present action. Political, that is to say party, matters take precedence of practical business, and until something tantamount to the pressure of public opinion, combined with a more reasonable quorum, can be brought to bear, reform in this direction is hopeless to expect. Rates in the local money market are unchanged from last month at 6½ to 7½ per cent. per annum for discount trade lists, but for advances in current account, though nominally 8 per cent., there is a marked readiness on the part of banks to do business with first-class signatures at much lower figures, 6½ to 7 per cent. being fairly general in such cases. Deposit rates vary greatly, but the admittedly first-class institutions are well favoured, and have not found it necessary to raise their figures, which may be taken as being 4 per cent. for three months and 5 per cent. for six months deposits. A feature of the present banking situation is the activity shown by the two local branches of U.S. banks in providing temporary accommodation for official needs, both national and provincial, but more especially for the latter. In the Province of Buenos Aires, engaged as it is in important public works, this activity is particularly noticeable, while the results to the lenders should be highly satisfactory. As far as one can ascertain such operations are inspired from New York, being part and parcel of the policy of financial and commercial penetration which marks American business with Argentina at the present time. Exchange quotations during the past month show little variation.

The local tendency to undue optimism as regards prices for local products was never better illustrated than has been the case this year, and generally speaking one may say that Argentina is not yet fully alive to the fact that the consuming markets are not sufficiently flourishing to leave the price factor out of their account when supplying their needs. The same reasoning applies to hides and to wool, while this year's yield of cotton is far from satisfactory. An authoritative estimate has it that there will be some 48,500 tons obtained from an area of 104,500 hec-

tares, or a little under last year's total of 50,000 tons, obtained from 62,000 hectares. Drought and insect plagues account for the diminution, while the quality is also reported as being inferior. In the local freight market rates at the moment of writing are rising sharply, but it is reasonable to suppose that threat of labour trouble at home largely explains the change.

CZECHOSLOVAKIA.—RELATIONS WITH THE VATICAN.—POLITICS.—BALANCE OF TRADE.—CZECHOSLOVAKIA AND RUSSIA.—EMIGRATION.

(FROM OUR CORRESPONDENT.)

PRAGUE, August 11.

IN a new State, in which racial and religious feelings tend at times to run high, it is natural that the sudden departure of the Papal Nuncio from Prague should have some political as well as religious importance. The relations between the new Republic and the Vatican have not been too happy in the past, though it must be admitted that in the matter of the observance of holidays and saints' days the Czechs have done all in their power to bring about a real understanding with the Pope. The Hussite Celebrations, to which Monsignor Marmiggi took exception on the ground that they were anti-Catholic in character, were really not so much a tribute to Huss as a theologian, but as a national leader and "Awakener." Perhaps this affair has supplied the Czech Socialist party with rather a cheap pretext for posing as the only legitimate heirs of the valiant Hussites; but no one knows better than Dr Benes, who was responsible for the establishment of relations with the Vatican, and is himself a "modern Hussite," that only by compromise can a permanent understanding be obtained. The average Czech is at present much too indifferent to organised religion to want to stir up religious quarrels, and he knows the great devotion of so many Germans and Slovaks to Rome.

The "Petka"—never really out of difficulties—is still engaged in a "*bellum omnium contra omnes*," and most of the political parties are busy looking for money and votes in preparation for an early election. The new Franchise Bill, which aims at reducing the number of political parties, is all for the best. At present there are more than 20 political parties represented in the Czech Parliament, and it is this lack of unity which alone justifies the existence of such an oligarchy as the Petka.

The trade balance for the first six months of the present year, just published by the Statistical Bureau, shows that exports exceeded imports to the amount of 875 million kc, and that there has been an increase in the total trade of the country, as compared with the same period in 1924, of 1,870 million kc. The figures are as follows:—

(Million Kc.)

	January to June—	1925.
	1924.	1925.
Exports.....	7,832	8,920
Imports.....	7,263	8,045
Total	15,095	16,965

In the month of June, 1925, imports exceeded exports to the value of 22 million kc, owing to increased imports of raw cotton.

While the trade between England and Czechoslovakia is well maintained, imports from Germany have increased since 1924 by 552 million kc.

Commercial relations between the Republic and Soviet Russia are annually becoming of greater importance. During the period October 1, 1924-June 30, 1925, the volume of trade transacted by the Russian Trade Mission in Prague was four times that done in the period October, 1923-June 30, 1924. The figures for the latest period are:—Exports to Russia, 215 million kc; imports from Russia, 3 million kc. Czechoslovakia sends machinery, textiles, hops, and sugar in return for foodstuffs.

While the opening of Russia to Western trade means much to England, no people await the return of stable conditions to that country as do the Czechoslovaks. For, though the latest returns of the State Statistical Office show a reduction in the number of emigrants for the first quarter of 1925, this is to be interpreted rather as due to the greater difficulties experienced in being able to get to the United States and Canada than to a falling-off in the

desire to emigrate. Now that North America is almost closed (the quota is closed for many years to come) to them, many Czechoslovaks have their eyes on Russia, and particularly Siberia, where so many of them spent five years of the Great War, where they married, and would return again willingly. Before the war many Czechoslovaks went to Russia as educators and physical culture instructors; with a thorough knowledge of the language and well trained as skilled workers in industry and agriculture, they may yet play a very important part in the reconstruction of that undeveloped country.

ROUMANIA.—CROP SITUATION.—EXPORT TAXES.—EXCHANGE.—OIL.—WAR DEBTS.

(FROM OUR CORRESPONDENT.)

BUCHAREST, August 15.

CROP developments in Roumania during the past month have been entirely favourable. The output of wheat, it is now officially estimated, will not be less than 1,800,000 metric tons, which would leave a surplus for export of about half a million tons. The barley crop, it is expected, will yield about 1,000,000 tons, with rye and oats somewhat less. The sugar crop will probably exceed the country's internal requirements by more than 50,000 tons. Maize, however, will be the big crop this year, and a total yield of four million tons is now being anticipated if the weather remains favourable. A yield of four million tons would leave about two millions available for export—if the country's transport system were capable of moving it.

The Government has reduced the export tax on wheat from the present season's crop to 30,000 lei per 10-ton car-load (from 45,000 lei). The tax on the other principal grains is meanwhile held at 20,000 lei per car-load. Roumanian agriculturists are up in arms against these taxes. Wheat in the interior, they point out, sells for 100,000 lei the car-load, which is approximately the equivalent of the world-market price plus transport costs and the export tax. Why, they ask, should the Roumanian farmer sell wheat for export at 65,000 lei per car-load when the internal price is 100,000 lei? The reply that the difference goes towards meeting the services of the Sterling Consolidation Loan of 1922 does not seem to be appreciated. What has been said of wheat applies equally, of course, to barley and maize, and strong pressure is being brought to bear on the Government to reduce the export taxes so that grain from the present season's harvest can begin to move out.

Presumably in anticipation of the coming outward movement of grain, exchange during the past month has gone from 1,050 to 925 to the pound, the tendency being towards further improvement. It seems to be the consensus of opinion that this buying of lei is in anticipation of grain purchases still to be made, and not for contracts that have already been closed. Shippers report that only very small parcels of grain from the present crop have actually been sold for export. It will be another month yet before wheat and barley are ready for export in sizable amounts, and the maize crop will not be ready until late October. Lei exchange at the moment is in a strong position for "bull" speculation, but as a too rapid rise would interfere with exports, the Government would presumably attempt to check any strong upward movement that might develop. At all events, those who are supposed to be in control of the situation are being warned of the danger of rising exchange at this time.

A crude oil production of 185,622 tons in June brought the total for the first half of 1925 to 1,062,374 tons—a 25 per cent. increase over 1924, and the highest six-monthly figure so far recorded in Roumania. Exports of refined products during the first half of the year (with June estimated at 70,000 tons) reached a total of 360,000 tons, or more than double the 1924 figure. In response to the persistent demands of the oil companies, the Government has recently approved the export of 50,000 tons of fuel oil from stocks now on hand at refineries, the export tax having been fixed at 1,000 lei per car-load. Further to assist the export of residues, the export tax on gas oil has been reduced from 4,000 to 2,000 lei per car-load.

Presumably intending it to be a reply to the debt Note delivered to the Roumanian Government some three

months ago, Foreign Minister Duca verbally informed the American Chargé d'Affaires last week that the Roumanian Government was disposed to send a commission of financial experts to the United States to discuss a preliminary basis for funding the post-war relief debt, now amounting with accrued interest to some \$45 millions. Although no official announcement on the matter has since been given out, it is the understanding here that the United States Government has replied to Minister Duca that the sending of a commission for the purpose of a preliminary discussion does not entirely meet the wishes of the Washington Administration. What is wanted, in other words, is a visit from Government representatives fully empowered to negotiate a funding agreement. Such a commission will probably leave for the United States in the early part of October.

It is also the understanding here that Mr Vintila Bratianu, the Minister of Finance, who is now in France, and will shortly visit London, intends to discuss with the British and French Governments some plan for the so-called "regulation" of inter-Allied debts, in so far as they affect Roumania. What the Finance Minister is apparently turning over in his mind is a scheme whereby Roumania can off-set against her debts to the Allied Powers certain credits to which she considers she is entitled, and so arrive at a net figure that could be used as a starting-point for funding arrangements. A Government Commission is now at work on the preparation of a "Green Book," which, it is said, will set forth in detail Roumania's war liabilities to the Allied Governments and also the credits for which claims have been, or will be, made.

Books and Publications.

UNEMPLOYMENT INSURANCE.*

If they had done nothing more than make the admirably lucid and comprehensive survey of the actual machinery for unemployment insurance as it exists to-day, which occupies the first four or five pages of this pamphlet, the authors would have deserved much gratitude. Thanks in part to the inherent complexity of the subject, and, partly to the extent to which legislation has been modified and amended since the first Act of 1911 was waterlogged by casting on to the fund then established practically the whole of the demobilised wage earners of the country, the widest confusion prevails, even among many of those directly affected, whether as employers or employed, as to the exact provisions governing unemployment insurance. Even the fundamental fact that it is insurance is constantly overlooked, as is shown by the loose use of the word "dole." Much of that confusion is cleared by the simple fact, adduced in this Report, that "during the year ending July, 1924, the contributions paid by employers and workers together equalled the sums paid out in benefit, the State contribution going towards the deficit from previous years."

But the introduction, able as it is, is not the most valuable portion of a document in which the authors of "The Third Winter of Unemployment" and "Is Unemployment Inevitable?" bring up to date the analysis there made, and provide a timely answer to the question so often put, does the "dole" diminish normal incentives to find work? The answer given is no merely theoretic one. The main body of this pamphlet of 68 pages is occupied by a series of reports, undertaken by special investigators into certain representative areas—Birmingham, Bolton, Cardiff, Glasgow, Leeds, Reading and Shoreditch. The investigators tested the work of the Rota Committees in such fashion as to be able to declare that the possibility of fraud is reduced to a minimum. Their Reports should be read, as the details give a more vivid picture than any summary can do. Here, however, more cannot be done than to indicate the main lines of that summary, as given in the pamphlet on pp. 60-68. On the main question, already given, the reply is that, although many employers expressed the view that the

system of unemployed insurance diminished the normal incentive to find work, "actual cases which stood the test of investigation could very rarely be cited." It must not be assumed that, because there are cases of persons who have given up the search for work, they were beginning to prefer doles to employment. "The Glasgow investigation points out that the longer a man remains out of work the more reluctant are employers to engage him.....Yet the evidence which the local investigators have collected shows that the least real hope of a job brings scores of applicants of this type. Their disheartenment must not be confused with unwillingness to work." Men are, of course, anxious to obtain work in an insured trade so as to keep in benefit, and this desire, with the acute housing difficulty limits mobility, but there is ample evidence that skilled engineers, for example, "are seeking and obtaining employment in a great variety of jobs, many of them labouring.....Frequently the change really means the degradation of the skilled craftsman." The evidence of this movement is quite conclusive..... Other evidence shows that the fear of unemployment, especially in trades which cater principally for foreign markets, has led to the suspension of many trade union regulations, and has persuaded the workers, in the words of one informant, to accept humiliations which they would never have dreamt of in normal times."

As to the efficiency of the exchanges, the Report states that, "in the main, benefit is only received by those for whom it was intended, extreme care being taken to prevent malingering and abuse, both in respect of standard and of extended benefit." One modification in the scheme itself is suggested. It concerns young men aged from 18 to the early twenties. There is a "tendency for employers to use juvenile labour (14-17) at low wages. Then, when the young person reaches the age at which the normal wage is 20s and upwards, he is turned off and another school-leaver is engaged. Employers in many cases would like to retain the young worker at a wage little, if at all, above the unemployment benefit, and complaints are frequent that young people try to get dismissed to 'go on the dole.'" To meet this, the Report suggests that "the rate of benefit for young people (18-21) should not jump from 7s 6d to 18s (for males) at the age of 18 as at present, but should advance by stages, the full rate of 18s being payable at the latter age." On the question, Is extended benefit a form of Poor Law relief? the Report states, "In point of fact, the scale of Unemployment Insurance benefit for dependents is at present insufficient to enable the unemployed married man with children to maintain his family in health without falling back on the Poor Law if his unemployment has been of long duration and his savings are exhausted and he has no other resources. The insurance payments are therefore insufficient in such cases to fulfil the ostensible purpose of the Act." Generally speaking, "the application of the word 'dole' to 'standard' benefit is wholly misleading, and even 'extended' benefit is very different from Poor Law Relief."

Enough has perhaps been said to show that this is a pamphlet which every citizen ought to read.

A SILENT REVOLUTION.*

Mr Wood, in one of his first public speeches as Minister of Agriculture, referred to "a silent revolution" in British agriculture. By the agricultural community generally the significance of the phrase has been missed, but the authors of this little book have taken it seriously. Emanating as it does from the sedate precincts of the Agricultural Economics Research Institute at Oxford, this brochure may be regarded as a portent. Accepting the revolution—which, shortly stated, is the break-down of the old land system—as an inevitable fact, the authors ask, "Why should the State stand on one side and content itself with the contemplation of the steady deterioration of its greatest wealth-producing asset?" They then give an excellent summary of the proposals made for the acquisition of the land by the State by a succession of "land reformers," from Thomas Spence to Henry George and Joseph Hyder. They state that in all schemes

* "Unemployment Insurance in Great Britain: a Critical Examination." By the Authors of "The Third Winter of Unemployment" and "Is Unemployment Inevitable?" Macmillan. 1s net.

* "The Tenure of Agricultural Land." By C. S. Orwin and W. R. Peel. Cambridge University Press, 1925. 3s 6d net.

which are not "merely confiscatory in their intent" the outstanding practical difficulty is "the formation of workable proposals for land purchase," and they proceed to suggest a scheme. After eliminating all urban and semi-urban land, they propose that the State should purchase the land on the basis of Schedule A assessment at 2½ years' purchase, payment being made in National land stock bearing interest "at a rate comparable with the yield of other long-dated British Government stocks at the time of its issue." An outline of the administration of the land after its acquisition is sketched, the general idea being the establishment of a new branch of the Ministry of Agriculture and the appointment of a Chief Administrator of lands with county and district officers under him.

In a chapter on the present distribution of land, figures are given showing the extent of agricultural land now owned by the Crown, the Duchies, the Ecclesiastical Commissioners, Universities, and County Councils. The total area thus publicly or semi-publicly owned is nearly 1½ million acres. Statistics are also quoted from the Agricultural Returns showing the increase of agricultural land owned by the occupiers, from 3,329,000 acres in 1910 to 6,574,000 acres in 1924. This chapter opens with the statement, also purporting to be quoted from the official returns, that "the cultivated area of England and Wales extends to 29,739,000 acres, besides which there are 1,085,000 acres of waste." Reference to Part I. of the Agricultural Statistics, 1924, shows the following:—

	Acre.
Total acreage under crops and grass (not including rough grazings)	25,876,797
Rough grazings	4,946,338
	30,823,135

The authority for the figures given by the authors appears therefore to be dubious.

The authors claim to have given dispassionate consideration to a great economic problem "having no necessary connection with the aims and objects of any one of the political parties of the State." They are unable, by the nature of their subject, to avoid altogether any allusion to such aims and objects, but it is evident that they are imperfectly acquainted with the proposals, for example, of the Liberal Party, which were discussed in the *Economist* last November, and have since been expounded in various articles and speeches. It will, consequently, surprise them to learn that, apart from details of finance and administration, their interesting brochure is an able and forcible statement of the case embodied in the Liberal land policy.

CAPITALISM AND AGRICULTURE.*

THE proposal which is put forward in this book is somewhat obscured by a lack of coherency in its presentation, and by the medley of quotations which encompass it. Statistics of widely varying dates, some of them, by the lapse of time, now irrelevant and many of them merely the surmises of ready writers, are mingled with others which are recent and authoritative. Nevertheless, the book is distinctly readable, and will probably be widely read by an indiscriminating public. The author takes some pains to show that since 1909 he has persistently advocated the "taxation to extinction" of "overseas investment profits imported into this country," but that in 1915 he modified his original proposal by restricting the term "overseas" to foreign countries. He gives a number of quotations to demonstrate the "thoroughness of the conversion of Socialists," including himself, "from critics of to upholders of the development of the British Commonwealth." His ultimate aim is to prevent altogether the investment of British capital, except within the Empire, with the object of restricting imports of food from countries such as the Argentine and the United States. It is assumed that the amount of capital seeking investment will not be diminished, but that the amount now invested in foreign countries will be devoted to the

* "British Agriculture Versus Foreign Tributes." By Joseph Burgess. Francis Johnson. 4s.

development of British agriculture. Half the book is devoted to the familiar theory that production from the land of this country can be increased indefinitely, and one of the methods by which this end could be achieved is the settlement on the land of 500,000 persons now "permanently on the dole," and paying each of them, out of the tax on foreign investments, a weekly wage of 50s. It is claimed that the proposal would make the country self-supporting in food supplies, food and wheat being regarded, as is common in such theories, as synonymous. But the development of British agriculture is not the only result anticipated by the author as the result of his proposals. He says: "How long would capitalism last in this country if it failed to find an outlet for its new investments abroad? It is this safety valve that enables capitalism to exist. Weight down the safety valve, and the capitalist system in the country doing it is blown to pieces." This triumphant conclusion appears at the end of the book, and leaves the reader doubting whether, after all, the development of agriculture or the destruction of capitalism is the main purpose of the author.

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, August 26. ACCOUNT, August 27.

Stock Exchange markets professed to look for a reduction to be made to 4 per cent. in the Bank rate this week. When the news came through on Thursday morning, the House was inclined to laugh at its previous hopes, but evidently a feeling of disappointment was felt through a good many markets, for prices eased off, and the tendency was for business to become very quiet. According to Stock Exchange wagers, however, it was not mathematically expected that the Bank rate would fall last Thursday, so it can hardly be said that there was much justification for a set-back in industrials owing to the action of the Bank Court.

The War Loan Conversion 3½ per cent. and other British Government stocks remain a good market. There is persistent talk of a possible new issue of 3½ per cent. Conversion stock in the near future. Meanwhile, investment securities are being steadily absorbed by the public, and everything with a gilt edge can count upon a careful examination of its claims by the investor.

Various French bonds rose on the week, the railway stocks being particularly active on a little Paris-inspired bidding. Middle European bonds also are better, and the foreign market as a whole keeps firm, with Brazilians again rising by reason of the movement in the milreis.

Home Railway stocks underwent a heavy fall on Monday and Wednesday, but recovered a good part of the losses on Tuesday and Thursday. There is little public business being transacted in this department. American railroad shares are better. Argentine railroad shares continue to mount. United of Havana has once more been above 100 and Brazilian railways, with Leopoldinas leading, have strengthened in consequence of the Brazilian exchange.

The rubber share market, while moderately occupied, as compared with its exertions of three or four weeks ago, manages to maintain its prices, with a tolerable degree of firmness. On the other hand, tea shares are weak, in consequence of the disappointing prices secured at the tea auctions. Amongst textiles, Courtaulds receded from their top price of £6 13s 6d, going back to the neighbourhood of 6½. Other textiles have followed in the wake of Courtaulds, though less dramatically.

The iron and steel market is dull by reason of the unsettlement which continues to be felt in regard to labour. Amongst tobacco shares, one feature was a violent rise of 12s in Godfrey Phillips to 72s, after which there followed a reaction. Watney deferred at 314 reacted about 10 points from the top on a little profit taking after the meeting. Other brewery stocks are steady. Insurance shares have advanced; prices of some of the leading issues look very high, but buyers are very eager. The banking market is quiet. Dunlops went ahead on rumours of the profits which the company is making. Hudsons Bays have hardened, and Sudan Plantations enjoyed a brisk rise, due to expectations that the reorganisation plan will soon be published.

The Cape is displaying renewed interest in platinum shares, and prices are better. Gold shares have been stagnating in neglect. Chartered keep good, though Tanganyikas and Zambesias parted with some of their recent resiliency. Diamonds are up again, with Jagersfontein prominently harder on the new agreement in the diamond trade.

Columbian Mining, which changed hands at 10½d a fortnight ago, and at 6s 6d last week, fell back to 3s 9d after Thursday's meeting. Broken Hill and other Barrier shares are good on Australian support. Malayan and other tin shares have been disposed to sag. The mining markets are not affected by talk of possible trouble maturing as a sequel to some of the recent feverish excitement in the industrial market.

The failure of a firm of brokers was announced yesterday.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

1922	388,978,203
1921	367,549,656
1920	1,036,059,951

Central Johore Rubber Estates, Limited.—Authorised share capital £150,000, in 2s shares. This is an issue of 1,350,000 shares at par. The company has been formed to acquire three rubber plantations in Johore, having a total area of 6,101 acres, of which 1,177 acres are fully matured. The total purchase price is £102,600, and is equal to £45 per planted acre.

Rubber and Tropical Trust, Limited.—Capital £500,000 in shares of £1 each. This is an issue of 250,000 shares, of which 100,000 have been subscribed for, and the remaining 150,000 are now offered for public subscription at par. It is stated in the prospectus that the issue has been guaranteed without cash commission, in consideration of an option to subscribe for 125,000 shares at par. The company has been formed to undertake the usual business of a trust, and chiefly to interest itself in rubber and tropical produce generally. Preliminary expenses are estimated at £8,000.

being able to announce that the directors had been successful in concluding a provisional agreement for an amalgamation with a group of very powerful banking interests. Other parties to this agreement, which would be subject to ratification by the shareholders in extraordinary general meeting, were Barclays Bank, Limited, the Colonial Bank, and the Anglo-Egyptian Bank, Limited.

THE AMALGAMATION.

Continuing, Mr Leisk said: Briefly, the scheme is that the Colonial Bank should be reincorporated by Act of Parliament, with an increase of registered capital to ten millions and extended powers; that the Colonial Bank should acquire the business of the National Bank and the Anglo-Egyptian Bank by means of an exchange of shares of the reincorporated bank for the entire interests of the shareholders in the National and Anglo-Egyptian Banks; that the reincorporated bank should become responsible for the discharge of all the responsibilities of the National Bank towards its staff; that the present directors of the National Bank should form a local South African Board of the enlarged concern, with representation of certain of their number on the parent Board; that of the registered capital of ten millions there should be issued meantime 1,793,000 8 per cent. cumulative preference shares of £1 each, fully paid; 2,682,500 "A" shares of £1 each, fully paid, and 500,000 "B" shares of £5 each, £1 paid; that the "A" and "B" capital should participate equally in the profits according to the amount paid up on each; that the preference and "A" shares should all be used in the acquisition of the businesses of the National Bank and the Anglo-Egyptian Bank, as well as for the exchange of shares of the reincorporated bank for the former issued capital of the Colonial Bank; that all the 500,000 "B" shares of £5 each (£1 paid) should be subscribed for and taken up by Barclays Bank at a premium which will enable the combined institution, after making certain adjustments and adding to the internal reserves, to fix the published reserve fund in the initial stage at £1,000,000, Barclays Bank thus assuming a callable liability for a further £2,000,000 of capital; that the "B" shares should possess a voting power that would give Barclays Bank the controlling interest in the reincorporated bank; that the shareholders of the National Bank should receive, for each National Bank £7 share, two 8 per cent. cumulative preference shares of £1 each, and five "A" shares of £1 each in the reincorporated bank, both denominations of shares ranking for dividend as from July 1, 1925.

In view of the proposed developments mentioned above, the Colonial Bank will change its name to Barclays Bank, Dominion, Colonial and Overseas, and Mr F. C. Goodenough, chairman of Barclays Bank, Limited, will assume also chairmanship of the new bank.

ADOPTION RECOMMENDED.

After giving some particulars as regards the standing of the other parties to the provisional agreement, the Chairman concluded by saying: The whole matter naturally has given your directors food for a great deal of thought. In the result they are perfectly satisfied that the scheme is one that they can recommend to shareholders with the utmost confidence. In place of having to wait for a year at least, probably for more than a year, for a dividend on their present shareholdings, our shareholders will be entitled as from July 1, 1925, to a dividend at the rate of 8 per cent. per annum on two-sevenths of their holding and to a dividend of such amount as the amalgamated profits may permit on the remaining five-sevenths of their holding.

What the rate of such dividend will be I am not prepared to express an opinion to-day, but, having regard to the established position of the Colonial and Anglo-Egyptian Banks, and to our own improving prospects as a profit-earning machine, and having regard, too, to the expansion in our business that may confidently be expected to flow from the powerful backing that we should gain by entering the proposed merger, I have no manner of doubt that the shareholders will have no cause to regret it if, as I expect, they affirm the provisional agreement at the forthcoming extraordinary general meeting. Apart from our own personal interest in the scheme, I venture to think that South Africa as a whole will receive with satisfaction the news that banking in this country is to receive such an impetus as is involved in this project.

Your directors, too, are pleased to think that the bank will now have an opportunity of playing a much more prominent part than has hitherto been practicable in forwarding the interests of South Africa. I think, too, that the fact of Barclays Bank, Limited, being prepared to take a substantial share interest in the new bank, and being willing to assume an additional liability of two millions of the uncalled capital, is an eloquent testimony to the confidence of that powerful bank in the future of South Africa, and to its belief that the time is ripe to introduce fresh capital for the purpose of aiding in the development of our great natural resources.

OROVILLE DREDGING COMPANY, LIMITED.

REORGANISATION OF CAPITAL FORESHADOWED.

The ordinary general meeting of the Orville Dredging Company, Limited, was held yesterday at River Plate House, London, Mr Frederick W. Baker (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the company has received by way of dividend on its holding in the Pato Mines (Colombia), Limited, £62,700, and the total profit was £69,458, the available balance being £163,488. After deducting the dividend paid in December, 1923, of 9d per share, they had £136,651 to carry forward.

There was total loss on the road and transport services of £24,487, and, contrary to expectation, instead of finding themselves with a profit-earning road and river transportation service, they found themselves burdened with interests which showed large operating losses, while their financial position had been weakened by the capital outlays to finance the two enterprises. A petition had been lodged with the Colombian Government with a view to the latter taking over and maintaining the road, and negotiations were under way for the disposal of their river steamer and barges.

The board felt that in due course proposals should be submitted to the shareholders for the writing down of the capital. No reduction in the number of shares would be suggested, but a reduction in the nominal value of the shares. They hoped to make recommendations within the next few months. The object they had in view was the resumption of dividends immediately they had discharged their liabilities, and to attain that a reduction of capital was imperative.

The accounts of the Pato Company showed a profit of £67,639. The dredging area of the Nechi Company had been exhausted, and it had been decided to wind up that company. With regard to the Colombian Corporation, the future of the property would turn entirely on how developments in depth worked out. Drill-hole results below the fifth level gave ground for reasonable optimism. They did not despair of the future of that corporation, but the position was one which required the most careful watching. The latest report indicated that the manager was now at least covering all treatment charges.

The board regretted the unsatisfactory statement which he had to make to the meeting. He thought he was correct in saying

Reports and Notices.

The Board of Trade announce that they have appointed Mr J. F. Ronca, O.B.E., to be Director of Gas Administration as from September 1, 1925, in succession to Mr H. C. Honey, O.B.E., who is retiring from that post after 42 years' service in the Board of Trade.

British North Borneo (Chartered) Company, Sablas North Borneo Rubber, Limited, North Borneo State Rubber, Limited, Membakut Rubber, Limited, Langkon North Borneo Rubber, Limited, are vacating their premises at 37 Threadneedle street on the 19th instant, after which date their address will be 17 St. Helen's place E.C. 3.

The Royal Trust Company (Montreal) announce that Mr Norman J. Dawes and Mr Walter M. Stewart have been appointed directors of the company.

BANKS.

IMPERIAL BANK OF INDIA.—The report for the half-year ended June 30th shows net profits of Rs. 69,39,700, as against Rs. 78,81,700 for the first half of 1924. The dividend is maintained at the rate of 16 per cent. per annum, free of tax, Rs. 10,00,000 is transferred to reserve and Rs. 5,00,000 to pension funds, leaving Rs. 21,97,900 to be carried forward, against Rs. 12,58,200 brought in. The report states that nine new branches were opened during the half-year, leaving 15 to be opened before January 27, 1926, in accordance with the undertaking to the Government to open 400 new branches in five years.

MISCELLANEOUS.

AMALGAMATED PRESS, LIMITED.—Profit for the year ended June 30th last amounted to £541,544, as against £505,403, and after transferring £50,000 to reserve fund, and £10,000 to pensions and allowances fund, the ordinary dividend of 15 per cent. is repeated. The report states that revenue from advertisements during the year was the largest in the history of the business. The balance-sheet shows cash at £701,900, and investments of £1,302,600, while the property item, including goodwill, stands at £2,067,500.

CALICO PRINTERS' ASSOCIATION, LIMITED.—It is announced (subject to audit) that, after providing for maintenance, depreciation, repairs, renewals, and upkeep, and £128,000 for debenture interest, the accounts for the year ended June 30, 1925, show a net profit of £532,597. To this is to be added the sum of £167,708, being the realised profit on the sale of the French works, together with the accumulated balances against loss on exchange released by this transaction, which, with £218,614 brought forward from last year, makes the total to the credit of the profit and loss account £918,919. Out of this sum an interim dividend for the half-year ended December 31, 1924, amounting to £75,402, has already been paid on the preference shares, leaving £843,517, and at their meeting on August 17th the directors resolved to recommend to the shareholders that £150,000 be placed to the credit of the reserve account, and £100,000 to the credit of the employees' benefit fund, and that a dividend be declared on the preference shares for the half-year ended June 30th last at the rate of 5 per cent. per annum (less income-tax), and on the ordinary shares for the year ended June 30th a dividend at the rate of 10 per cent. per annum (less income-tax), and a bonus out of the surplus on the French transaction of 5 per cent. (less income-tax), leaving the sum of £216,503 to be carried forward.

FRAS. HINDE AND HARDY, LIMITED.—The accounts for the year ended June 30, 1925, show a net profit of £41,863, after providing for interest, taxation, and depreciation. To this amount is added £13,818, balance brought forward at June 30, 1924, making a total of £55,681. After paying preference dividend, the sum available is £42,880. Directors recommend dividend of 10 per cent. on ordinary shares, and the balance appropriated as follows:—£12,750 to special reserve (being profits accrued prior to incorporation), £8,517 written off preliminary expenses, £5,000 to reserve, £6,847 carried forward. Results are satisfactory, showing substantial increase on previous figures; £45,500 for year to June 30, 1925, comparing with £31,000, the three years' average mentioned in prospectus. Owing to increasing demands for company's productions, additional capital will be required for new buildings and plant, and the directors seek powers to increase authorised capital to £400,000.

W. H. CHAPLIN AND CO., LIMITED.—The directors' report states that the balance of profit for the year ended March 31, 1925, is £50,006 15s 9d, which, with the carry forward from last year's account, makes a total of £72,088 6s 8d. Of this sum £15,000 was absorbed by interim dividends for the first six months, viz., on the 5 per cent. preference shares paid on October 1, 1924, of £2,500, and on the ordinary shares at the rate of 10 per cent. per annum paid on April 1, 1925, of £12,500, leaving a balance of £57,088 6s 8d now to be disposed of. This sum the directors recommend shall be appropriated as follows:—£2,500 in payment of the remaining half-year's dividend (and income-tax) on the 5 per cent. preference shares (already paid April 1, 1925); £12,500 in payment of the remaining half-year's dividend (and income-tax) on the ordinary shares at 10 per cent. per annum; £12,044 10s for managing director's remuneration, directors' fees, and staff bonus fund; leaving £30,044 16s 8d to be carried forward to next year's account, subject to liability for adjustment of corporation profits tax, income-tax, and excess profits duty.

Commercial Reports.

THE COGN TRADE

Mark Lane, Friday Evening.

Weather conditions during the past week have been mostly favourable for harvesting, and the outlook points to a general improvement, with an average yield. Very quiet conditions prevailed in the market, prices being irregular, with an easier tendency both for bread and feeding stuffs following weaker forward offers. In the floating and forward cargo section, buyers continue to adopt an attitude of reserve. Holders, however, were by no means pressing, though rates disclosed slight irregularity and weakness. Steamers of Australian afloat sold 58s 3d, ditto due 58s, Rosafé 62½ lbs on passage 60s 6d, early August 58s 6d, and Baril 62½ lbs August 8th bill of lading 57s 7½d, with No. 1 Northern Manitoba August 62s 6d. Of maize, Plate steamer October 16th-November changed hands at 40s 7½d, all per 480 lbs at c.i.f. terms. Wheat firm but irregular. No. 1 Northern Manitoba ex ship quoted 67s 6d, No. 2 ditto 66s 6d, No. 3 65s 6d, Australian 62s 6d, Rosafé 62½ lbs ex ship to arrive 61s 6d, all per 496 lbs. English new quoted 11s 2d-11s 8d per 112 lbs, free on rail. Flour quietly steady. London standard grade quoted 50s, patents 52s-53s, town whites 50s per deliveries in London districts. Of imported, Manitoba patents range from 47s 6d-50s 6d, Minneapolis 47s 6d-49s 6d, Kansas patents 46s-47s, Australian 43s-45s 6d, per 280 lbs ex store. Maize dull. Plate ex ship to arrive quoted 44s 9d, ditto landed 47s 6d, fornia new ex ship 43s per 480 lbs. Barley slow. California new ex ship quoted 45s-52s, Chilean Chevalier landed 58s-65s, brewing 52s-54s, according to quality, Australian 57s-63s ex store per 448 lbs. No. 3 Canadian Western ex ship 37s 6d, Karachi 40s, Morocco 37s 6d, both landed, Tunisian ex ship 36s 6d per 400 lbs. English new 11s 10d-16s 3d, the latter for malting quality per 112 lbs. Oats quiet but steady. Plate ex ship quoted 26s 6d, landed 27s 9d, No. 2 Canadian Western ex ship to arrive 29s 9d, landed 33s 6d, No. 2 Canadian feed ex ship 25s 6d, landed 26s 9d, Chilean Tawny landed 27s 6d, No. 2 white clipped American ex ship to arrive 24s 6d, all per 320 lbs. English new for middlings, with a steady demand. Broad bran quoted 8s, oat husks 6s 3d, feed oatmeal 8s 9d, ground oats 13s 3d per cwt free on rail. Oatmeal easier. London-made flaked 18s 6d, rolled oats 17s 6d, medium, also fine cut, 17s 6d, coarse, also medium pin-head, 17s 6d ex mill, ordinary Scottish oatmeal 19s, American ditto 17s 6d-18s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1924-25, 1923-24, 1922-23, 1921-22.

AMERICAN WHEAT MARKETS.

The wheat markets have lost ground to some extent after a short period of firmness in the middle of the week. The decline in prices, which is not very considerable, can be set down chiefly to reports of fairly satisfactory harvest conditions in most parts of the wheat belt, with the possibility of smaller European requirements owing to increased home crops this year. Recent market quotations are:—

	Aug. 22, 1924.	Jan. 2, 1925.	Aug. 6, 1925.	Aug. 13, 1925.	Aug. 20, 1925.
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs	137	183	(a) 146½	(a) 146½	(a) 144½
Chicago (No. 2 Winter)—Cents per 60 lbs	131½	177	(b) 160	(b) 165½	(b) 159½

(a) October delivery. (b) September delivery.

The Canadian Government estimates the value of the Canadian harvest this year, on the prices quoted for October delivery, of the five principal grain crops as follows:—Wheat, \$544,000,000; oats, \$223,000,000; barley, \$76,000,000; rye, \$15,000,000; flax-seed, \$20,000,000. It is estimated that the increased value over last year of the five principal grains will be \$264,000,000. The total estimated value of this year's harvest of field crops is \$1,318,000,000, which exceeds last year's actual returns by \$398,000,000.

IRON, STEEL, AND COAL.

We have extracted the following from the weekly report of the London Iron and Steel Exchange:—Although business has been quiet this week, a somewhat better tone is noticeable. It is anticipated that at the end of the present month, or early in September, buying of a more important character will develop. In the pig-iron department prices are easy, and fresh competition is being experienced from Continental manufacturers, some rather large purchases of Continental foundry iron having been reported from Scotland. The inquiry for semi-finished material has been more active, but the actual amount of business transacted has not been large. The demand for finished materials, although it has shown some revival from the dullness experienced at the beginning of August, is still poor. The has been a certain amount of activity in the home market, but the export demand has been confined to small parcels, the one exception to this being a fair business in sheets, principally for the Far East.

Our Middlesbrough correspondent writes:—Pig-iron: Owing to the local holidays, the usual weekly market was not held, and very little business is passing. To-day No. 3 Cleveland G.M.B. is no more than 60s 6d per ton, and for a good order this could be shaded. Owing to the liquidation of hematite stocks, the price is steadier, and East Coast mixed numbers are still quoted 75s 6d per ton. Manufactured iron and steel: Most of the steel works are closed this week, and prices weak, but unchanged. Steel ship plates, £8 10s; steel ship angles, £8 5s; iron bars, £11 12s 6d; steel rails, £8 10s. Iron ore: There is still no general buying

movement in foreign ore, and best Bilbao Rubio is nominally quoted 20s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—Producers of pig-iron and crude steels are still awaiting the long-expected buying movement. To some extent the uncertainty of price movements is holding buyers off the market. The cheaper steels are suffering most of all, but sales of high-grade steels, in which foreign competition scarcely counts, are also on a meagre scale. Extreme quietude prevails in the wire and cold rolled strip departments, but enquiries are rather more numerous than of late. Makers of railway rolling stock steel could handle much more work than is coming forward, and the plants are less active than a month ago, owing to reduced specifications by the British railways. Merchants dealing in alloys of special steel report unfavourably of the state of their order books. Good business is being done in files, hand-saws, and edge tools, the overseas demand being on a large scale. In the cutlery and plate branches there is no considerable amount of trade outside special contracts for ship and hotel furnishing, restaurants, and coupon gifts. Turnover generally has dropped off, and profits are low. Coke is rather firmer, as the excess of output over consumption is less considerable. The coal market is still out of joint, and the trade is quieter than ever. Merchants are endeavouring to increase the price of house coal.

Our Glasgow correspondent writes as follows:—Producers of pig-iron are finding increasing difficulty in effecting sales, owing to the low prices at which Continental material is offered. Exports are diminishing, and there are very few enquiries from overseas. Consumers of foundry iron in Scotland are buying from hand to mouth on a falling market. The finished iron and steel position is unaltered. Plate makers have officially reduced the price of boiler plates to £11 10s per ton, the former price having been £12 10s. A steady trade is passing with structural engineers, but plates are in small request. Shipyards are getting through with the work on hand, and, as few new orders are coming forward, the outlook is far from satisfactory. The only contract reported this week was for a passenger and cargo steamer for the Glasgow Campbelltown service. The successful contractors are Messrs R. Duncan and Co., of Port Glasgow, for the hull, and Messrs D. Rowan and Co., of Glasgow, who will supply the engines. Bar iron is in poor demand, and the output is small. Re-rollers and black sheet makers are fairly busy. Thin sheets for export to the Far-East are keeping some of the local works fully employed. Galvanised and corrugated sheets retain their place as the best and only busy market in the finished steel trade. Demand is steady, both for home and export, and prices are firm at £16 5s per ton f.o.b. for 24 G. Prices of Scotch coal have been further reduced, but demand is poor, owing chiefly to consumers having taken in good stocks in anticipation of a stoppage. Exports are slightly better than in recent weeks.

Our Cardiff correspondent writes:—Renewed weakness has been apparent in coal prices during the past week. Orders have been scarce, with concessions of 3d to 9d offered freely to prompt shippers. Forward business is at a standstill, and supplies of tonnage at the docks, although poor, are more than sufficient to cover the meagre enquiry. The following are the current approximate quotations:—Best Admiralties 24s 6d to 25s 6d; seconds, 23s to 24s; best drys, 23s 6d to 24s 6d; Black Veins, 22s 9d to 23s 3d;

CANNED MEATS.—Corned beef in slow demand, and prices un-

tered, but a good inquiry continues for Danish lunch tongues at full rates.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn: Ceylon, £25 to £30; English, £30 to £50. Ceylon bristle £18 to £24; cinnamon leaf oil, 44d; citronella, Ceylon, 2s 1d; Java, 3s 9d.

OILSEEDS.—Linseed quiet and easier. Calcutta to London, August-September, sold, £21 17s 6d; bold Bombay, ditto, £22 17s 6d. Plate to Hull, August-September, sold, £19 17s 6d; September-October, £20; January-February, £19 2s 6d. Rapeseed firm. Toria to Continent, August-September, £22 7s 6d. Cotton-seed easier. Egyptian black, to Hull, new August, £13 12s 6d; November-January, £12 12s 6d; white, August, £12 10s; November-January, sold, £11 17s 6d; Bombay, August-September, £9 12s. Castor-seed quiet. Bombay, August-September, £22 10s. Gingelly seed quiet. Chinese to Continent, August-September, £27 17s 6d; large Bombay ditto, £26 7s 6d. Ground-nuts ull. Coromandel machined, August-September, £25 12s 6d; Nigerian, uly-August, £25 2s 6d per ton.

OILS.—Linseed easier. Spot, net, naked, 41s 6d; September-December, 40s 7½d; January-April, 40s 4½d. Rape firmer. Crude, spot, 49s; refined, 52s. Castor-oil quiet. causes scepticism as to the benefit, in the shape of abundant cash, that will actually be experienced. Discount rates were a shade firmer, continued gold exports damping hopes of an early reduction in the Bank rate, while higher rates in New York and a slight adverse movement in the dollar exchange revived expectations of dearer money there this autumn. Three months' bank bills, however, were still placed easily at $3\frac{1}{8}$ per cent., but the Treasury bills were allotted at a slightly higher level.

	Aug. 28, 1925.	Aug. 21, 1925.	Aug. 14, 1925.	Aug. 7, 1925.	Previous Rate and Date Changed.

Houses (Notice	$2\frac{1}{4}$	$2\frac{1}{4}$	$2\frac{1}{4}$	$2\frac{1}{4}$	3 (Aug. 6, '25)
Market rate (3 months' bills)	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	4

The Bank return showed a decrease of £838,000 in the stock of coin and bullion, £833,000 on balance having been announced as withdrawn for export; the note circulation expanded by £83,000, and the Reserve was thus £921,000 lower, and its proportion to liabilities declined .6 per cent. to 30.6 per cent. An increase of £1,425,000 in Government securities was balanced by a decrease of £1,209,000 in Other; Public deposits expanded by $5\frac{1}{2}$ millions, and Other deposits were thus six millions lower. There was a reduction of £2,186,300 in Currency Notes this week, making total outstanding £295,086,100, which includes £1,329,400 for notes called in but not yet cancelled. The fiduciary issue is £237,506,700, or £10,638,700 below the maximum.

NEW YORK MARKETS.

Our New York correspondent cables:—The advance in the share market continues, but with greater irregularity. Railway securities are being supported on splendid earning statements for July and record traffic in the present month. Money is somewhat firmer, and this is tending to check speculative enthusiasm. Call money is $\frac{1}{2}$ per cent. higher at $4\frac{1}{2}$ per cent., and acceptance rates have moved up $\frac{1}{8}$ per cent., but funds are still plentiful. This week's Federal Reserve statement reflects preparation for the end-of-the-month requirements. Discounts are \$20 millions higher, and other earning assets have risen by \$15 millions. The reserve ratio for the whole system is 75 per cent., and for New York 79.8 per cent. The market for oil shares has been unsettled by further cuts in gasoline prices. Cotton quotations are slightly easier on the publication of the Government crop estimate of 13,990,000 bales.

THE STOCK MARKETS.

The general volume of business, as in the earlier weeks of this month, has continued to be well above the normal August level. The abandonment of Bank rate hopes, and the somewhat firmer tone of the money market, led to a slightly easier tone in the gilt-edged market. The market for foreign bonds is good. Brazilian and Chilean have risen substantially, and French have been well supported on the strength of M. Caillaux's conversations with Mr Churchill. Home rails were a little better, while Argentine Rails were good on dividend prospects, and Brazilian Rails followed the lead of Brazil Government bonds. Good rubber shares continued to be steadily absorbed, but tea shares sagged, and the oil market was very dull. Shipping stocks have felt the effect of the strike threat. Feverish gambling in Courtaulds was followed by a severe shake-out. Tobacco shares reacted and recovered. Rhodesias attracted much attention, and Chartered, rising above 30 shillings, provided a feature of the week.

THE COMMODITY MARKETS.

Business remains quiet in most markets. Demand for pig-iron is confined to immediate requirements, and few steelworks have much work in hand, apart from makers of steel sheets and constructional material. The coal market is very depressed, Cardiff prices being now from 2s 6d to 3s a ton less than a month ago. An easier tendency in raw cotton rates has rendered buyers in Manchester less willing to operate, but Lancashire spinners as a whole continue steadily to improve their position. Work has been resumed throughout the woollen textile factories of the West Riding, but no large increase of business is reported up to the present. The wheat markets are quiet, in sympathy with conditions in American centres. Sugar remains steady, with spot business confined largely to British refined varieties. Demand for both coffee and tea is centred on the better qualities, common grades remaining weak. The rubber market has again been unsettled, with a fair amount of business passing at times. Among metals, tin pursues a downward course, copper has declined further, and lead, though better supported, remains irregular.

FOREIGN EXCHANGES.

In the foreign exchange market, business has shown more activity, and in especial the Paris rate, in sympathy with the debt negotiations, has fluctuated rather more widely than in the immediate past. From a closing rate of 103.45 on the 21st it improved at one time on Monday down to 103, but reacted to as high as 103.80 on Tuesday, and reached 104.20 on Wednesday, recovering again to 103.85 at the close. On Thursday it was down again for a time to 103, but yesterday morning, at 103.42 $\frac{1}{2}$, was much the same as a week ago, and the market after this week's excitement seems more inclined again to reserve judgment. Brussels, after last week's recovery, depreciated again slightly and stood at 107.37 $\frac{1}{2}$, as compared with 106.95 a week ago. Forward rates in Paris have widened from 50.55 centimes to 75.80 centimes per month above spot; on Brussels they are again unchanged at par—2 centimes below. After being rather stronger in the earlier part of the week the dollar has shown some tendency to sag, and at \$4.85 17-32 yesterday morning compared unfavourably with the quotation of \$4.85 $\frac{1}{4}$ a week ago. A stronger demand for forward is also shown by the narrowing of the rate from $\frac{1}{2}$ cent per month below spot to 1-32 cent below to parity. The movement is not unexpected, in view of the season, and of the London Bank rate policy. Of other European currencies the most decided movement has again been in Oslo and Copenhagen, where, in spite of a further reduction in bank rates, anticipations of a return to parity have brought a further fall in rates from 25.80 to 24.47 in Oslo and from 20.80 to 19.58 in Copenhagen. Stockholm, in the meantime, has moved in favour of this country from 18.06 $\frac{1}{2}$ to 18.09. The lira also shows a sharp recovery from 133 $\frac{1}{2}$ to 129 $\frac{1}{2}$ on a more optimistic view of the political outlook. Amsterdam, after a slight rise, has gone down again to 12.05 $\frac{1}{2}$, as compared with 12.05 $\frac{1}{4}$ a week ago. Switzerland stands at 25.06, as compared with 25.04 $\frac{1}{2}$ a week ago. Berlin, at 20.40, has moved slightly against us, as has also Vienna. Warsaw at 28 shows a slight improvement, and the recent fears of a collapse would seem now to be disappearing again. Prague and Belgrade are steady, Bucharest has depreciated a little. In the East the rupee stands at 1s 6 5-32d, or 1-32d dearer than last week, but the yen has moved from 1s 8 15-64d to 1s 8 3-32d. With indications of better demands from China and the satisfactory monsoon in India, the silver market, although still quiet, has been firm, with indications of strength in the near future. Hong Kong has moved up from 2s 4 $\frac{1}{4}$ d to 2s 4 $\frac{1}{2}$ d, but Shanghai has dropped from 3s 2 $\frac{1}{2}$ d to 3s 2 $\frac{1}{4}$ d. In South America Rio has continued to improve from 6 1-64d to 6 $\frac{1}{4}$ d, and discussion is already in progress for the right level for stabilisation. Buenos Ayres at 45 $\frac{1}{2}$ d is 5-32d lower, and Monte Video has fallen from 49 $\frac{1}{2}$ d to 49 $\frac{1}{4}$ d. Valparaiso is unchanged at 40 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 22nd:—

(000's omitted.)		Receipts.	
EXPENDITURE.	£	From Revenue	£
Supply Services	8,850	Decrease in Exchequer Balances	330
Interest, &c., on Debt	435		
Sinking Fund	490		
Decrease in Debt	4,791		
Road Fund	1,010		
Sundries	1,320		
	16,806		16,806

Revenue amounted to £16,469,900, against £18,437,300 in the corresponding period of last year. Customs yielded £2,135,000, against £2,809,000. Excise produced £7,221,000, against £6,668,000. Estate, &c., duties amounted to £1,080,000, against £2,030,000. Property and Income-tax yielded £3,792,000, against £3,569,000. Super-tax yielded £500,000, against £460,000. Special receipts yielded £52,800, against £521,400. The week's operations reduced the National Debt by £4,791,000, and caused the following changes:—

(000's omitted.)		Public Department Advances..	
Treasury Bills	£		£
National Savings Certificates ..	100		12,200
	7,409		12,200

The floating debt was reduced by £4,890,000 to £768,311,000.

FINANCIAL YEAR, 1925-1926 (April 1st to August 22nd).

£		£	
Total Expenditure..	308,279,581	Raised by Revenue..	281,564,630
		Decrease in Balances	3,847,056
		Amount borrowed ..	22,867,895
Total	308,279,581	Total	308,279,581
ESTIMATES for FINANCIAL YEAR 1925-1926.			
Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Amalgamated Press, Illingworth, Morris and Co., Amalgamated Dental, and W. H. Chaplin.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE REPLY TO GERMANY.

The two main events of the week—namely, the Churchill-Caillaux conversations and the publication of the French reply to Germany—both denote progress in the sphere of international settlement. If in the case of the approach towards a Pact the progress is slow, we must content ourselves with remembering that slow and sure progress is infinitely better than the dash that fails. The best feature about the Allied Note to Germany is that it marks the end of written and the beginning of oral discussions. That decision having once been reached, no time is being lost in establishing the necessary contacts, for the legal advisers of the British, French, Belgian, and German Foreign Offices are to begin mapping out plans of procedure next week before the three former go to Geneva for the League Assembly. The fact is emphasised, and no doubt with justice, that nothing more than ways-and-means and legal technicalities will be brought under discussion at these preliminary conversations. At the same time, the personal position of Sir Cecil Hurst, M. Fromageot, M. Henri Rolin, and Dr Gaus happens to be such in relation to their respective Foreign Offices (though M. Rolin is not actually an official of the Belgian Government) that any agreement they may reach, and any direction they may give to future discussions, will represent a good deal more than merely an individual accord.

As to the actual Note handed by the French Ambassador to Dr. Stresemann on Monday, it might very well have been presented a good deal earlier than it was. It is now well over six months since the first German proposals were put forward, and for the leisurely rate of progress achieved since then the Allied Powers have been almost wholly responsible. There was, of course, no occasion for precipitate action. That might very well have wrecked the negotiations altogether. But one unfortunate result of the delay is that there now appears to be no prospect of an application by Germany for membership of the League of Nations during the coming Assembly. If the Allies had acted more in accord with their repeated declarations as to the imperative necessity of Germany's entry into the League, they would have robbed her of what are now very plausible reasons against applying at this eleventh hour. Even as things are, a bold policy might well be the soundest for the German Government itself. If even yet it decided to enter the League here and now, Dr. Luther and Dr. Stresemann would be in a position in three weeks or less to turn round and confound their domestic opponents by pointing to the spectacle of a German representative sitting at the League Council table on terms of absolute equality with the delegates of Great Britain and France and other States. Such a bold throw, however, is not in the German manner, and it is not to be reckoned among reasonably likely contingencies.

German objections to entering the League without reservations, indeed, are in no way diminished by the reply now sent by the Allies to the arguments in the German Government's Note of July 20th. Whether the objections themselves—they whittle down to criticism of the obligations that would be laid on Germany to take part in the possible imposition of sanctions by the League—have any real substance is a matter of opinion, but the Allies have clearly more than a merely technical justification for their contention that the question, if it is to be discussed at all, must be discussed by the League itself, not by two or three individual members of the League. It was the Council which replied to Germany on this point last March (and it is worth recalling that one of the most cogent arguments against special treatment for Germany was framed in a communication at an earlier date than that by the Swedish Government), but even the Council could take no final resolution on such a point. Only the Assembly can decide on the admission or otherwise of new States to the League, and its opinion cannot well be tested till Germany's actual application is before it. On every ground, therefore, the Allies are well advised to confine themselves, as they have done, to urging Germany to lay aside her misgivings and place a normal and unconditional application before the Assembly.

That is one of the three points to which the Allied communication professes to limit itself. The other two concern the inviolability of the Peace Treaties and the nature and implications of the proposed new treaties of guarantee. What the Allies have said about the Peace Treaties is what they might have been expected to say. It carries matters no further, but neither does it leave Germany any ground for complaint. There was never any real reason for taking exception to the view expressed in the last German Note that the Pact, if concluded, might have the effect of creating an atmosphere in which the whole question of occupation of German territory and other kindred matters would look different. It might, and it might not. If the Germans choose to predict that it would, their venture in vaticination hurts nobody. On the other hand, the Allies are perfectly justified in pointing out once more that the Peace Treaties constitute to-day the basis of the public law of Europe, and that any new agreements at present contemplated must take the existing treaties as starting-point. One passage in the Allied Note makes it clear that its authors have by no means forgotten Article XIX. of the Covenant, and to go beyond Article XIX. at the present moment is quite certainly not practical politics.

In many ways the most important part of the Allied reply is that dealing with the difficult question of the proposed guarantees. Their basis is to be a series of arbitration treaties to be concluded between Germany and her neighbours East and West. But what is the nature of

those treaties to be? It was inevitable that a difference of opinion should arise about that, Germany having in the last twelve months shown a marked preference for a type of treaty which submits all justiciable questions to compulsory arbitration, but provides in the case of non-justiciable disputes, that they shall be dealt with by a conciliation board whose recommendations neither disputant need accept. France, on the other hand, as well as Italy, Switzerland, Czechoslovakia, Poland, and other States, has been contracting treaties which provide for the peaceful settlement of all disputes, leaving no room for war between the contracting parties at all. Germany's first Note suggested that she contemplated in this case the more comprehensive type of treaty. Her second Note, however, made it clear that she did not, and it is not surprising that the Allies should now make it equally clear that they do. In the case of Germany and her neighbours, arbitration treaties that left loopholes for war would be of relatively small value, and it is interesting to observe that the British Government, which remains resolutely opposed to the principles of the Geneva Protocol, and even to so modest an approach towards a more comprehensive arbitration system as is represented by acceptance of the universal jurisdiction of the Permanent Court of International Justice, is completely at one with France in insisting that the treaties to be concluded between Germany and her neighbours shall cover every class of dispute.

From Germany's point of view the least satisfactory part of the Allied communication is the reply to the perfectly intelligible German objections to France's proposal to constitute herself guarantor of the contemplated treaties with Poland and Czechoslovakia. The new Note marks a distinct advance on its predecessors, in that it reveals a real appreciation of Germany's point of view. Its Allied authors are at pains to disclaim any idea of an "autocratic" or "unilateral" decision by the guarantor as to whether conditions have arisen which call his guarantee into play, and it is frankly admitted that the whole question needs further study. It certainly does, as everyone familiar with the discussions on the Treaty of Mutual Assistance and the Geneva Protocol knows well. What both Great Britain and France apparently want is to go as far as they can towards making the League Council the arbiter as to whether a *casus foederis* under an arbitration has arisen, but there remains the genuine difficulty of a case of sudden aggression in the face of which the interests of one party might be seriously prejudiced either by lack of promptitude on the part of the Council, or by failure to reach unanimity. In none of the Geneva discussions of the past three years has this difficulty been satisfactorily solved, and a great deal more thought must be given to it yet.

But if the Allied Note changes the actual situation relatively little, its chief value, as has been said, being that it marks the transition to oral negotiations, its temper is good, and so far as there is movement, it is movement in the right direction. The first indications are that the Note has made a good impression in Germany. On the whole, it should, for it is a hopeful prelude to conversations that show a reasonable promise of yielding tangible results.

PROTECTION AND WORLD TRADE.

THE possibility of a settlement of the Inter-allied debt problem, and that the United States may shortly find itself in the position of being the only recipient of the sums which Germany is to pay under the Dawes scheme, is once more reviving interest in America in the problem of how these debts are to be paid. The fact revealed by the recent report of the Balfour Committee that the United States is by far the most highly protectionist of the great industrial countries—with an average tariff on British goods of 32 per cent., compared with 19 per cent. before the war—lends special point to these discussions. In the current number of the *Chase Economic Bulletin*, the problem is discussed by Dr Anderson, who takes occasion to point out some home truths about the effects of tariffs.

His dissertation starts with this illuminating statement, which we commend to the attention of our tariff re-

formers. "A protective tariff is effective only to the extent that it reduces supplies in the domestic market." He then proceeds to explain that "a protective tariff can build up an industry which would not otherwise be developed in a country because the country's aptitudes in other lines are greater. It does this, however, only at the expense of other industries, by drawing labour and supplies away from them, or by imposing burdens on them." Dr Anderson then goes on to develop this thesis by explaining the character of the industries which the United States is not naturally adapted to develop, but has stimulated artificially by means of her high protection. His view is, however, that the group of industries dependent upon the tariff, though important, are a minority of American industries which in the main rely upon their high efficiency, high quality labour supply, and the abundance of natural resources and of capital. The removal of the tariff would not destroy the hot-house industries, but would greatly reduce their size. Dr Anderson proceeds to point out in orthodox fashion that "the rest of our industries are injured by the tariff in one or both of two ways—(1) because their costs are raised to the extent that they have to make use in the processes of production of commodities which are higher priced because of the tariffs on them, or on their component parts, and (2) because in many cases the rest of our industries are dependent in a greater or less degree upon foreign markets, and their foreign markets are injured by the reduced ability of their foreign customers to sell goods in the United States and get dollars with which to buy the goods they wish to export." Instances of this are agriculture, whose costs are raised and whose foreign markets are reduced; export industries such as the Ford works; and occupations working exclusively for the domestic market, which are injured by high costs. We have not space to follow Dr Anderson through his lengthy list of industries, which are in one way or another damaged by the tariff. It includes most of the big industries of America. Lastly, says Dr Anderson, "everybody is hurt by the tariff as a consumer." Everybody pays more than would be necessary if there were no tariff. This extra payment "constitutes the subsidy which the country supplies to certain industries to enable them to bid away labour and capital from other industries which could use the labour and capital better if there were no tariffs."

After this unimpeachable *exposé*, however, Dr Anderson somewhat shirks the logical conclusion by observing that his analysis is not a demand for Free Trade, but an argument for moderate tariffs. The argument, he says, is consistent with the view that in early periods the tariff has had the useful result of stimulating industries and bringing them into existence earlier than would otherwise have been the case, and in giving a greater diversification of industry than America would otherwise have had. "Recognition may also be given to political and military arguments on behalf of tariffs in certain key industries needed for self-sufficiency in time of war." But above all it would, in his view, be unwise to disturb abruptly the existing situation. He is, however, anxious that America should recognise that it is paying the price, and should give great weight to the new world situation which requires that America must become on balance an importing nation. In Dr Anderson's view, if this day is constantly postponed by an excessive tariff, and American exports financed by American capital, "we may continue, despite our existing tariff policy, to have a large volume of exports for a long time with an appalling credit congestion when the day of reckoning finally comes."

America, however, can perhaps afford the luxury of a tariff with comparatively little damage to herself. Europe cannot. The volume of production in the old world is still well below normal, and shows very little resilience and power of expansion. One of the conditions necessary for trade recovery is rapidly being created by the fixing of the major currencies of Europe in relation to one another. The recent depression of the Polish zloty has raised a doubt as to whether these stabilisation plans are as secure as has been assumed. But there are special reasons to account for this Polish failure, and we do not think it need be taken as indicating a fundamental weakness in the laboriously constructed network of

rehabilitated currencies. Monetary stability, however, is not sufficient in itself to lift the level of production. We cannot expect to enjoy a general recovery so long as the nations impoverished by the war pursue the impracticable ideal of self-sufficiency. There are signs that the nations are slowly realising that the restoration of freer interchange constitutes the second great step in European recovery. This problem, so far as it affects Central Europe, where tariffs have run to excess, is likely to come under discussion at the forthcoming meeting of the League of Nations. An even more important aspect of it is the policy of Germany, which has just passed through the Reichstag a new tariff bill. We have had occasion recently to point out that the effect of rising prices has been to make the existing German tariff a relatively low one. We have not yet had an opportunity of examining in detail the new duties; but they will probably raise the average level of the tariff to something like the pre-war level, possibly even higher. Leading features of the new Bill are (a) that the new duties are provisional only, pending the final readjustment of the 1902 tariff, which it is expected will be completed by 1927; (b) the food duties, which were swept away by the war, are restored in the form of moderate agricultural protection; this has been most strenuously opposed by the urban population, but it has been impossible to resist the argument that if industrial protection is to be increased the counter-claim of agriculture cannot be ignored; (c) the present tariff imposes maximum duties, with wide powers to the administration to reduce them in return for tariff concessions. In other words, the present tariff is in form largely a bargaining weapon. But its opponents are convinced that its real intention is to retain the new maximum duties.

The expectation that countries may have to bargain for concessions from Germany has already had the effect of inducing Poland to impose a ludicrously high tariff in order to have something to give away, and if other countries follow suit it will justify the German opponents of the present bill in saying that it will inevitably raise additional barriers to Germany's own export industries. It would be deplorable if, at a moment when organised efforts to set Europe on its legs seem to be nearing success, the whole situation should be thrown back into the melting pot by an outbreak of economic war. While it is improbable that the new German tariff will do more than restore the pre-war situation, it is nevertheless a retrograde step. As soon as Germany comes into the League of Nations the time will be fully ripe for an international conference, the first object of which should be a tariff armistice to prevent the present situation degenerating into a series of minor tariff wars; and, secondly, to see if by general discussion it may not be possible to assist the economic recovery of Europe by allowing the specialisation of industry to follow its normal course.

The world is in two minds about Protection. Nationalist instincts, the pressure of interested parties, and the desire to ward off competition, and seek economic shelter, are as strong as ever. But the painful experience of recent years has shown that the nation, like the individual, which tries to be Jack-of-all-trades, impoverishes itself; that to ruin one's customers means ruin to oneself; that, on the other hand, international trade enriches both parties concerned, and that no nation in Europe can hope to lift itself into an assured state of material prosperity unless the standard of well-being of the whole Continent is raised. If and when these lessons have been learned, and taken to heart, we may be confident that the Protectionist tide will begin to ebb.

THE FRENCH DEBT.

THE Anglo-French negotiations have this week reached a point at which a settlement of France's debt to England is within sight. After three days of vigorous discussion Mr Churchill proposed, with the approval of the Cabinet, that we should accept an annuity of 12½ millions sterling a year for 62 years, and M. Caillaux has gone home to lay the suggestion before his colleagues. This offer constitutes a substantial writing

down of the British debt, and it is made only on the assumption that America is prepared to settle on a similar basis. It would clearly contribute little towards the settlement of Europe for Great Britain to make this sacrifice if the only effect is that France is asked to pay more to the United States. The agreement, therefore, can only be signed, sealed, and delivered when France's negotiations in Washington are concluded. Moreover, there are some outstanding details in the Anglo-French agreement, which are of considerable importance. In the first place, it is intended that the annuities should be modified in the first few years while France's Budgetary position is strengthened. The annuities lost in this way will be added to future payments. The case for this partial moratorium is largely that France is already committed to pay during the next few years substantial sums in connection with her commercial debts. (The amount of these payments is fully set out in a later column by our Paris correspondent.) In the second place, France still desires that part of this annuity should be contingent upon her receipts from the Dawes plan; public opinion in France still firmly holds to the doctrine that the total demand which England and America make upon her should not exceed her receipts from Germany. If America settles on a similar basis to the English offer France will be covered if the Dawes annuities yield from 50 to 60 per cent. of their maximum. The risk she runs, therefore, is not a very serious one. As Great Britain has agreed to pay the United States in any case, it is not unreasonable that France should be asked to run this risk unless America is prepared to make her settlements contingent on German payments.

A more serious consideration is, however, the fact that the present proposal is for 62 years. No one knows how long the Dawes annuities will last. The Dawes Committee left the question indeterminate, and it will remain so until the final total of Germany's debt is fixed. Clearly if the Dawes annuities are to cease in, say, 30 years, the Allies would be left with a heavy burden for a generation. That, however, is a problem that may perhaps be safely left to the future. A third point is the French suggestion that the annuities should be subject to modification if the French exchange is in danger. This is not likely to happen. Apart from the fact that France may be covered by her Dawes receipts, she is in a strong position to make payments abroad. Her trade balance is already affording a surplus available for investment abroad. Her main difficulty, unlike that of Germany, is therefore not a question of "transfer," but a budgetary problem. Moreover, as Lord Bradbury has pertinently observed, it is reasonable to make payments contingent upon the state of the exchanges if a country's creditors have some control over internal monetary and budget policy. It is a very different matter for payments to be dependent upon the exchange situation in the case of a country where no such supervision is practicable. Our readers will remember that as long ago as last February we suggested that 12 millions sterling was a sum on which a practicable agreement might be reached provided America will fall into line on a similar basis. In our view, France can well afford to accept the British offer without conditions.

Lord Bradbury, in commenting upon the settlement, suggests that it is very desirable for this annuity to be converted into an obligation of the French Government to private individuals by raising a French loan in England, with the proceeds of which the annuity of £12½ millions would be redeemed. There is very much to be said for this course. It is, however, desirable on one condition only, namely, that the whole of the debts, including that of Germany to the Allies, are similarly converted into private obligations. Debts between governments are capable of being modified by negotiation if political conditions change. The time will be ripe for commercialising the debts, and finally taking the whole question of international war payments out of politics when we know how much the Dawes annuities will yield, and whether transfers under that scheme are practicable. Almost before M. Caillaux has reached Paris the cables are busy with disturbed American com-

ments. The New York Press appears to regard the London conversations as a plot between two cunning politicians to embarrass Washington. Such a view has no substance. All that has been attempted is a tentative agreement, conditional upon America taking a similar view, based on the simultaneous regard for Britain's proper claim and France's capacity to pay; and French capacity to pay is a factor which Washington will presumably find it as necessary as London to take into account.

THE DISPUTE IN THE WOOLLEN TRADE.

(BY A CORRESPONDENT.)

THE recent dispute in the wool textile industry and the forthcoming inquiry has drawn attention to the condition of one of our staple industries. During the war no industry was under more complete Government control than the wool textile trade, whose output was primarily needed for the clothing of the British and Allied forces. After the war, when the Wool Control Board was abolished, the industry entered upon a period of extraordinary prosperity. It will be remembered that during the régime of the Profiteering Act Department various branches of the industry were the subject of investigation by Sub-Committees set up by the Central Profiteering Committee. The Reports showed that in certain branches of the trade substantial profits were being made. This, in the circumstances, was natural enough. After the boom, however, the wool textile trades had their bad time.

It is doubtful, however, whether they have suffered as acutely as the cotton industry, and they certainly have not passed through such a period of unrelieved gloom as, say, the tin, iron, and steel trades, or the engineering industry. They have, nevertheless had their own peculiar difficulties. Whereas the bulk of the looms in the cotton trade work for export, the majority of the production of the wool textile trades is for the home market. Probably about two-thirds of the total output of the industry is consumed at home, though the proportion is rather less as regards the various worsted products. In consequence, therefore, any serious restriction of home consumption must have a serious adverse effect on the woollen trades. It is generally admitted in the West Riding of Yorkshire that curtailment of purchasing power, as a result of both wage reductions and unemployment, is one of the chief reasons for the present plight of the industry, more especially as clothing is a necessary on which economy is possible. Attenuated dresses and the use of knitted fabrics have also helped to restrict the consumption of the West Riding products. Moreover, clothing prices rule much higher than the general level of retail prices, and tend, therefore, to a restriction of purchase. The latest Ministry of Labour figure puts the rise in the cost of living at 73 per cent. over July, 1914, whilst the "prices of men's suits and overcoats, underclothing and hosiery, textile materials and boots" appear to be from 125 to 130 per cent. higher than before the war.

As regards the export of woollen and worsted yarns and fabrics, there has been since the war, except in the worsted goods, a steady increase up to the end of last year. A change in the method of calculating exports renders comparisons between pre-war and post-war exports difficult. But it appears that the quantity of woollen tissues exported was last year and the previous year about the pre-war level. The export of worsted yarns was in 1924 about 90 per cent. of the export in 1913, whilst the export of worsted tissues was barely three-quarters of what it was in the year before the war. This year, however, on all three classes of exports, shows a decrease on the first months of last year, due principally to a fall in the trade with the Far East. It may be noted that the decline in the export of worsted tissues is not a post-war phenomenon, as the export was declining in the years before the war.

The restriction of exports is due to a variety of reasons, of which the chief are the impoverishment of foreign customers, high prices of British products, and collapsed exchanges abroad. Very considerable emphasis has been placed on French competition, both in the home market and abroad, because of the advantageous position France enjoys, so far as exports are concerned, because of a depreciating exchange, and the disparity between her internal price level and external prices. There is clearly an obvious advantage in this respect; but all but an insignificant fraction of her raw wool is imported from abroad, and for this she has to pay world prices. Whilst, therefore, her exchange has been a subsidy on exports of manufactured goods, it is a handicap on the imports of raw materials, which latter offsets to some extent her advantages under the former head.

There is, however, no doubt about the expansion of the French wool textile trades, though the real position is obscured by the cession of the textile centres of Alsace-Lorraine to France, the trade of which now swells the French total. It is not, however, the exchange position which is solely responsible for the growing activity of the French wool textile industry, nor, indeed, the lower wages of the French operatives. A more significant, and more permanent, factor is the re-equipment of the industry. Four-fifths of its machinery lay in the direct path of the German invasion during the war. "During the war," we are told, "France was deprived of nearly all its working mills." Since the war the industry has been largely reconstructed. The wool textile centres developed during the war—Vienne, Lyons, Castres, Mazamet, &c.—have been further expanded; the older centres have been re-established. "The net result appears to be that the French woollen industry, which lost in the war through destruction or removal 50 per cent. of its carded wool spindles, over 60 per cent. of its combed wool spindles, and about the same percentage of its looms, has refitted its formerly existing or its newly-built and greater-scale factories with the most modern machinery, has received the accession of over half-a-million spindles and 7,000 looms from Alsace, has seen the uprising of new factories in erstwhile non-woollen centres, has increased its range of production, and accordingly emerges as a greater force and contains greater potentialities in 1924 than in 1914."†

Apart from French competition, however, there is the growing home production of wool textile fabrics of countries which hitherto were unimportant. Italy, for example, is manufacturing more. Japan is an increasing consumer of wool, though the quality of her products is as yet inferior. Australia has ambitions to become a woollen manufacturing, as well as a wool-producing, area. Further, it must be said, the British producer has had, particularly since the war, to surmount a rising wall of tariffs.

As regards its foreign trade, however, the wool textile industry is in no worse case than other British industries endeavouring to cultivate impoverished markets and facing the competition of new rivals. For these difficulties there are no real solutions apart from general international reconstruction, with all its implications, and increased efficiency in British industry.

This raises a point which the West Riding must face. The wool textile industry is one of our most complex trades. In some respects, perhaps, it does not lend itself to unification to the same extent as the cotton industry. But the variety of organisation with the woollen and worsted trades seems to indicate that the industry is searching for a more effective grouping of its various branches and processes. The industry is still, in general, a small-scale industry. This is not the occasion to enter upon a description of its organisation. It is sufficient to point out that it is only in the preliminary process of combining and the later stages of dyeing and finishing that large-scale production has established itself, though there are a few large-scale businesses in the intermediate processes. It is, of course, unwise to dogmatise, but it is clear that in view of the economic outlook the wool textile industry cannot avoid a serious consideration of its whole organisation, not because it has failed in the past, but because it

* "Economic Conditions in France, 1924." Department of Overseas Trade.
† *Ibid.*

may not prove adequate to meet the needs and requirements of the future.

Moreover, few of our industries have that respect for research which is essential under modern conditions. The wool textile industry has its Research Association, which has fully justified itself, but which has not, as yet, won that support from the industry to which it is entitled, though with the renewal of Government help, which it has obtained for a further period, it will, it may be hoped, become a powerful ally to the whole industry.

A further difficulty which menaces the industry is the supply of raw material. There was reason for perturbation before the war; there is far greater reason to-day. So far as can be ascertained, the world's output of wool is to-day appreciably less than it was before the war. This is largely a problem for the British Empire, which is the largest producer. The number of sheep in Australia is less than in pre-war days, whilst there has been a slight fall in the New Zealand flocks. Our own supplies have fallen, as have those of both South and North America. But for the large stock of Australian wool which fell into the hands of the British Australian Wool Realisation Association after the war, the situation would have been desperate. This stock, however, is now exhausted, and a shortage appears to be imminent.

Unfortunately, there has been no concerted policy to deal with this situation. There is no wool textile equivalent of the Empire Cotton Growing Corporation. There is an opportunity in this direction for the development of Empire trade, as, apart from the extension of the present Commonwealth sources of supply, there are other parts of the Empire which might develop wool production.

The wool textile industry has since the war been handicapped by the high prices of raw wool. This year, however, has witnessed an appreciable fall in price, which, whilst it should be of some assistance to the industry, cannot be regarded as a return to lower basis, as with a strengthening demand and no immediate prospect of an appreciable increase in supplies, prices may again rise.

Whilst it may be true that the post-war story of some of our industries is more tragic, the situation in which one of our oldest industries finds itself to-day illustrates the real difficulties with which British industry and commerce are faced, and from which they can escape only by persistent effort, foresight, and statesmanship.

WAGES IN AGRICULTURE.

As a result of the agreements arrived at in recent months by the Agricultural Wages Committees, and confirmed by Orders of the Agricultural Wages Board, a new level of wages has been established in the agricultural industry in England and Wales which appears likely to be maintained for some considerable time. It is opportune, therefore, to review the position and to examine briefly the stages by which the present level of wages has been reached.

The minimum weekly rates now in force for ordinary labourers range from 29s in Norfolk and 29s 2d in Berkshire and Suffolk to 37s 6d in North Lancashire and Glamorgan and 42s in East Lancashire, the weighted average being about 31s 6d a week. In only three areas are the rates below 30s, and in five above 35s. In nearly half the areas the rates are 30s or 31s a week. These minimum rates are subject to deductions of specified amounts in cases where allowances in kind are granted, and for purposes of comparison with rates before 1918, when rates of a similar nature were first fixed, it is necessary to use, for the earlier years, statistics as to cash wages, plus the value of allowances. On this basis the average rate of 31s 6d compares with one of 18s in 1914, thus showing a rise of 75 per cent. The increase in the weekly rates has not shown much diversity between one district and another, being usually 13s to 16s a week; but there has been a much wider dispersion in the increases expressed as percentages on the pre-war rates. In the following table a selection of the rates in 1914 and at the

present time is given for a few of the more important areas:—

	1914.	1925.	Increase	
	s d	s d	Per Week.	Per Cent
Berkshire	15 3	29 2	13 11	91
Cambridgeshire	15 1	30 0	14 11	99
Cheshire	19 10	35 0	15 2	77
Derbyshire	21 4	36 0	14 8	69
Dorsetshire	14 7	30 0	15 5	106
Herefordshire	17 2	31 0	13 10	81
Kent	18 0	32 6	14 6	81
Norfolk	14 4	29 0	14 8	102
Salop	16 5	31 6	15 1	92
Wiltshire	15 0	30 0	15 0	100
Yorkshire (North Riding) ..	19 9	33 0	13 3	67

Briefly, the figures show that the pre-war position in the wages scale of the various countries has been generally maintained, and that as the money amount of increase has been more or less uniform, the percentage increase has been smaller in the higher-paid areas than in those where the lower rates prevail.

The material available for the purpose of tracing the course of wages since 1914 is, unfortunately, not of a homogeneous nature, but it is possible to derive from it certain general indications. By the summer of 1917 the pre-war average rate of 18s had been raised to about 26s 3d a week. In the following year a minimum of 30s became payable under the Corn Production Act. Between May, 1919, and September, 1921, the minimum rates fixed by the Agricultural Wages Board were as follows:—

	Range of Rates.	Average Rate.	Increase Over 1914.
	s d	s d	%
May, 1919	36 6 to 42 6	37 9	110
April, 1920	42 0 to 46 6	43 0	139
August, 1920	46 0 to 52 0	46 9	160
September, 1921 ..	42 0 to 47 0	42 6	135

With the repeal of the Act and the setting up of the voluntary conciliation committees wages fell rapidly. By June, 1922, the average had fallen to 32s a week, or 78 per cent. above the pre-war level, and by December in the same year to 28s, an increase of only 55 per cent. The actual range of rates at the latter date was 25s to 35s a week. This marked the bottom of the depression, however, and wages remained practically stationary till the Act of 1924 came into operation. The Committees appointed under this Act quickly got to work, and, as indicated above, have now fixed rates which show an average rise of about 3s 6d a week over those previously prevailing. It will be observed that at their highest point, from August, 1920, to September, 1921, agricultural wages showed an increase over the pre-war level not markedly below the average increase in the cost of living. During the greater part of the subsequent three years, however, a distinctly low level was reached, from which recovery has only been made in the last few months. A further feature of the wage history since 1914 has been the fact that when the rates were at their highest the margin between the lowest and the highest paid districts was at a minimum. In 1914 the rates ranged from 13s to 21s a week, a difference of 8s. In 1919 to 1921 the difference fluctuated at various dates from 4s 6d to 6s. By the end of 1922 it had increased to 10s (25s to 35s), and to-day it is 13s.

In making wage comparisons over a series of years it is necessary to refer to the changes which have occurred in the length of the working week. In 1914 the hours varied considerably, and although no comprehensive details are available on the subject, it is probable that they were generally 60 per week or more. At the present time the statutory minimum rates for ordinary labourers are payable in respect of a week of 50 to 54 hours in nearly all areas in summer and 48 to 54 hours in winter. For work in excess of these hours overtime rates are payable.

In most of the counties the Wage Committees have specified the amount which may be deducted from the minimum rates in respect of cottages provided by the employer, or of board and lodging. In a few districts also values have been assigned to other allowances, such as milk and potatoes. The deduction for board and lodging for adults ranges from 14s to 17s a week, being usually 15s, and that for a cottage from 2s to 4s, usually 3s a week. A strict comparison between these amounts and the pre-war value of allowances is not practicable, but before 1914 the weekly estimated value of all allowances granted to men provided with food, or board and lodging was about 8s a week for the country as a whole.

In conclusion, it is of interest to compare the course of wages in agriculture with those of unskilled workers in certain other industries. This is done in the following table:—

End of Year.	Agriculture. (Average).		Railway Porters (Rural).		Engineering (Average).		Shipbuilding (Average).		Iron and Steel (N. of England).	
	s	d	s	d	s	d	s	d	s	d
1914.....	18	0	18	0	22	10	22	10	23	0
1917.....	26	3	39	0	44	10	44	10	45	0
1918.....	30	0	51	0	54	6	54	6	59	0
1919.....	37	9	51	0	64	0	64	0	64	6
1920.....	46	9	65	0	70	6	70	6	71	6
1921.....	36	9	57	0	59	0	59	0	47	0
1922.....	28	0	47	0	40	2	39	0	32	9
1923.....	28	0	45	0	40	2	38	5	33	6
1924.....	28	6	45	0	40	2	38	5	41	2
1925 (Aug.)..	31	6	46	0	40	2	38	5	41	2

It will be seen that in the years 1917 to 1920 agricultural wages failed to maintain their position in the wages scale relative to those of the other classes of unskilled workers specified. In 1914 the agricultural labourer received about 80 per cent. of the wages paid to labourers in the engineering, shipbuilding, and iron and steel trades. In 1920 he received only about 65 per cent. The decline in wages in 1921 and 1922 was more marked in the metal trades than in agriculture, however, and the relative position of the farm worker improved. In fact, at the end of 1921 certain of the agricultural rates exceeded those paid to some iron and steel works labourers. At the present time the relationship is almost identical with that of 1914. The comparison of agricultural wages with those of rural railway porters, who are frequently of a similar type to the farm worker, and live under identical conditions, is of considerable significance.

CHARTERED.—II.

WE dealt last week with the latest balance-sheet and income prospects for the current year. The deductions arrived at indicated a yield incommensurate with the price ruling, and consideration is now given to how far, within the reasonably near future, returns to shareholders are likely to increase. Sources of revenue may be classified under three headings—investments, mineral royalties, and land.

Investments represent the largest aggregate item in the balance-sheet, and their composition has already been referred to. The principal holding is 87 per cent. of the issued capital of the Rhodesia Railways Trust. By an interlocking of ordinary share capitals and guarantees in respect of bond issues of the companies forming the whole Rhodesian railway system, the British South Africa Company is virtually residuary owner of all assets and profits after preferential capital and interest are provided for,

and this is embodied in their trust holding. Profits from this source brought £86,000, or 5 per cent. in 1923-4, and £104,000, or 6 per cent. for the present year. Expansion in gross and net traffics continues, and profits should be higher again next year. After that period the position will probably undergo a change, due to two causes. The first arises from the fact that one-third of the total traffic last year was derived from the great Union Minière mine, operating in the Belgian Congo, which, on completion of the Benguela railway, will naturally divert its traffic over that line, saving several hundred miles of land journey and a much longer ocean distance, while the newly equipped Bwana M'Kubwa mine will require, like the Union Minière, lessened import of plant, and avail itself of this route for shipment out and in of its production and requirements. The second and somewhat indefinite factor is the necessity of large railway extensions foreshadowed by the chairman of the "Chartered" Company at the last meeting, involving fresh capital expenditure, and time for development of new traffic. Different influences considered, it seems as though not more than 7 per cent. annually may be looked for from this holding for considerable years to come, which would give £120,000 annual income. The only other important investment which on known prospects may bring any large added profit is the Wankie Colliery holding. Unique as being the only important coal producer in Rhodesia, and possessing inexhaustible supplies which are increasingly in demand, this company's dividend in a few years might conceivably rise to 30 per cent. per annum. This figure would bring a yearly revenue of around £150,000 gross to the Chartered Company. The company also holds one-third of the vendors' shares, against commuted royalties, in Bwana M'Kubwa, at present a lively medium for speculation. On a favourable computation dividends will not give the Chartered Company more than £20,000 to £30,000 a year. Other fluctuating income from investments, using due optimism, might rise by £30,000 yearly. Therefore, by 1927 onwards gross annual return under this heading may total something like £460,000.

Discussing next Mineral Rights, these may be regarded as the biggest gambling potentiality in the company's assets, but only because of the great territory over which they are owned. Nothing is at present known to indicate any early material growth of income from this quarter, and the cautious investor might wisely examine with care the intangible, optimistic reports at present circulating in regard to Rhodesian mining generally. The only two new mineral propositions which may contribute in any magnitude to value of output within the next few years are the Bwana M'Kubwa and Rhodesian Brokenhill mines. The former may pay a moderate maiden dividend next year, and the latter is not likely to resume distributions for at least three years. Up to the present the sum invested by the public in Rhodesian mining ventures has given a wholly inadequate return in dividends, although to the end of last year £74,138,917 represented the total mineral output in 35 years, apex of production being reached in 1916. Royalties, &c., in 1924 brought £110,000 to the British South Africa Company on a production of £4½ millions, and until this is considerably added to, revenue from this asset cannot be much increased.

Land rights covering over 10 million acres will perhaps in years to come prove the most valuable of all assets. Infusion of new mercantile activities by accession to the board of gentlemen associated with important commercial interests implying bigger agricultural development ought in time to yield material results to shareholders, but pioneer work is only now passing to a problematical profit-earning stage, and the chairman at the annual meeting pronounced against undue expectations in regard, for instance, to cotton growing by warning shareholders of the need for experiment and patience. The funds which the company has invested in various forms of husbandry are not sufficient, meanwhile, to add any great sum to revenue.

Looking broadly at the land position, two main essentials are still required, first, largely developed branches, as feeders for the trunk line of railway already established, and next a constant and important flow of immigrants. In the interval it is difficult to see from what

sources a net revenue amounting to anything like £1,300,000 annually is forthcoming, which would be the sum required to pay 10 per cent. on present capitalisation.

Notes of the Week.

Working of the Coal Subsidy.—The first month of the operation of the coal subsidy, writes our Cardiff correspondent, has been marked by a serious decline in the market f.o.b. prices of South Wales coals. The prices of these coals had been steadily falling up to the middle of July. The pace of the recession was slow—as a matter of fact, slower than that at the other coal-exporting centres of the country. In July the average f.o.b. price of all the coal exported from South Wales was 23s 4d, compared with 23s 11d in January, a decrease of 7d per ton, compared with a decrease of 1s 6d per ton over the same period in the average f.o.b. price of all the coal exported from the United Kingdom. There was one good reason for this relatively steadier course of South Wales prices. The loss on production in the South Wales coalfield has been greater than that in any of the other coalfields, and on this account colliery companies have been more reluctant to make concessions to consumers. In the last fortnight of July, when the menace of a national stoppage was hanging over the industry, prices hardened, and they closed on an average from 1s to 2s per ton above the price level at the end of June. How sharp has been the fall during the past month is shown in the following table comparing the prices of representative coals on July 28th and August 28th:—

	July 28th.	August 28th.
Best Admiralty large....	27/- to 27/6	24/- to 25/-
Second large	26/- to 26/6	23/- to 24/-
Best dry large	26/- to 27/-	23/6 to 24/-
Black vein large	26/- to 26/6	22/9 to 23/-
Western valley large	25/9 to 26/3	22/3 to 22/6
Eastern valley large	25/- to 25/6	22/- to 22/3
Best small steams	16/6 to 17/-	12/6 to 13/6

The decreases, it will be seen, range from 2s 6d per ton in the better classes of large steam coals to 3s 6d per ton in the case of the Monmouthshire large coals. Under the Government settlement the South Wales coalowners are paying for the month of August a general wage rate of 17.95 per cent. on the standard rates. The difference of 24.27 per cent. between that rate and the minimum rate of 42.22 per cent. is met out of the subsidy, and it is estimated that the contribution of the State to the wages bill is equivalent to from 2s to 2s 6d per ton. The average fall in the price of coal, measured by current market quotations, and not by the average pit-head price realised by the colliery owners for all the coal sold by them during the month is, therefore, actually greater than the reduced labour cost now borne by the coalowners. In other words, on current market rates the whole of the benefit of the subsidy has been remitted to the consumer, principally foreign. Attention may be drawn to one or two considerations that are suggested by these price movements. One is that the 13 per cent. of the divisible proceeds conceded to the owners under the Government settlement has been largely, if not wholly, fictitious. It is probable that the next ascertainment will show that the proceeds were almost entirely absorbed by the 17.95 per cent. general wage rate of the standard which the owners have to pay, and by costs of production other than wages. Another is that the drain on the subsidy from South Wales during September will be greater than it was in August. There has been a considerable decrease in the volume of trade as well as in prices. Proceeds have, therefore, declined, and costs of production other than wages have increased relatively to the output. The gap between the minimum wages which must be paid and the wage the owners can pay after the deduction of 13 per cent. of the divisible balance will be very much widened, but the Treasury must fill the whole of that gap, and its contribution for September may quite possibly be equivalent to over 3s per ton on the total quantity of coal raised. The position in the other coal-exporting coalfields is very much the same.

Swarajists and the Assembly.—The election of Mr. V. J. Patel to succeed Sir Frederick Whyte as president of the Legislative Assembly in India (by 58 votes against 56 given for the Madras Independent, Mr. Rangachariar), was a victory for Swaraj over its political opponents. The speech by which Mr. Patel signalled his accession to office was a victory for public spirit and common sense over Swaraj. The mere acceptance of the office of Speaker by a leading Swarajist was in itself a complete abandonment of the policy of non-co-operation, and as if that were not sufficiently obvious, Mr. Patel, in an altogether admirable declaration, said he had from that moment ceased to belong to any party, and asked his political associates to pass a resolution absolving him from all the obligations of a Swarajist. The Swarajists, he observed, had been described as destructive critics; their duty was now to show that they knew how to construct. For himself he was entirely ready to co-operate with the official benches. The declaration, as was not surprising, met with a warm response from every quarter of the Assembly, and the *Times* correspondent goes so far as to describe the sitting at which the declaration was made as the most extraordinary ever held. Welcome as so striking and unexpected a manifestation is, not too much must yet be built on hopes of a new measure of co-operation by the Swarajists, for almost the first division taken after the new President had assumed office resulted in the adoption of a Swarajist resolution condemning the *personnel* of the Currency Commission, whose appointment was announced by the Viceroy in his speech at the opening of the Assembly ten days ago. There is no ground whatever for such criticism of a thoroughly competent and impartial body of men, though no harm might be done by the appointment of one or two more Indian members, so that it could not be said that the British members were designedly in a majority.

The Canton Boycott.—Apart from its aspect as a deliberate act of hostility, the embargo on British and Japanese shipping proclaimed by the Canton Government has caused more serious apprehension in this country than is warranted by the circumstances. It can hardly worsen the present trade paralysis of Hong Kong, and if made really effective, a somewhat doubtful contingency, it would cause as much harm to Chinese interests as to those against which it is directed. Hong Kong and Canton are complementary to one another, for while the British Colony is a clearing house at which steamers from all parts of the globe load and discharge, Canton is the principal distributing centre for South China, and the collecting point for much of the produce of the interior, silk being the most valuable commodity in that category. Through neglect of port development opportunities, Canton has no facilities for the reception of large ocean-going vessels and its shipping is confined to native junks and coasting steamers. The bulk of China's coasting trade is in British hands, and there are few regular steamers excluded from the ban. Of Canton's imports, a certain proportion of coal and rice is received direct, but the balance is largely drawn from Hong Kong, whence it is transported by junk or river steamer, which return with silk and native produce for transshipment abroad. The river steamers play an important part in the commerce of Hong Kong, serving the various ports of the Canton River delta. Statistics for 1924 show a total tonnage for river steamers, i.e., arrivals and departures at Hong Kong, amounting to 7,365,000 tons, of which 6,524,000 were British. Some idea of the dislocation of trade which would ensue were the Canton embargo on British and Japanese shipping to be strictly enforced, or become general, may be gleaned from the following figures, which have reached us from a Chinese source:—

SHIPPING IN CHINESE WATERS, 1920-1924.
(Thousand Tons.)

Flag.	1920.	1921.	1922.	1923.	1924.
British	40,316	42,326	47,698	51,965	55,716
Japanese	28,192	31,739	32,961	33,289	34,760
Chinese	27,653	31,791	32,858	32,434	33,388
All other nations	8,106	8,764	10,614	13,617	17,569
Total	104,267	114,620	124,131	131,305	141,433

In 1924, British and Japanese tonnage was no less than 64 per cent of the whole, Chinese 24 per cent., while shipping of all other nations accounted for only 12 per cent. It is obvious that if the Canton Executive succeeds in obstructing this service, the millions inhabiting South China will be the greatest sufferers, and will be thrown back to the state which prevailed before China was opened to foreign trade. Such a result seems hardly in accordance with the highly-coloured visions of national prosperity which is to ensue when the foreigners, or rather the British, are cast out, but the tyrants in control of Canton are blinded by their passion for the destruction of British trade, and cannot foresee the outcome of their scheming. From recent Hong Kong mail advices, one gathers that the Chinese traders there are patiently waiting for the troubles to pass away. There is no evidence of anti-foreign feeling amongst those whose livelihood depends upon trade, and if it had not been for the highly-organised campaign of intimidation there would have been no cessation of business previous to the boycott decreed by Canton. Meanwhile, however, the situation in Hong Kong goes from bad to worse, and the future of the colony is imperilled. Whether relief will come before it is too late remains to be seen, but if the near future sees a return to normal the losses sustained by all commercial concerns will greatly hamper trade development, for which there is ample scope in the provinces of South China.

Agricultural Acreage in England and Wales.—We have extracted the following from the Ministry of Agriculture's annual return of the acreage under crops and grass on June 4th last on holdings above one acre in extent in England and Wales:—

	1924. Acres.	1925. Acres.
Total acreage under all crops and grass	25,877,000	25,755,000
*Rough grazings	4,946,000	5,028,000
Arable land	10,929,000	10,680,000
Permanent grass—		
For hay	4,501,000	4,312,000
Not for hay	10,447,000	10,763,000
Total	14,948,000	15,075,000
Wheat	1,545,000	1,499,000
Barley	1,314,000	1,319,000
Oats	2,038,000	1,867,000
Mixed corn	134,500	124,400
Rye	58,600	50,300
Beans	241,700	190,800
Peas	171,200	131,000
Potatoes	452,200	493,200
Turnips and swedes	832,500	806,400
Mangold	389,700	359,000
Sugar beet	22,400	54,700
Hops	25,900	26,200
Small fruit	73,500	68,400
Oorchards	239,500	238,000
For hay	1,752,000	1,722,000
Not for hay	796,000	852,000
Total	2,548,000	2,574,000
Bare fallow	355,600	462,800

* Mountain heath, moor, down, and other rough land used for grazing.

The area of arable land shows a further decline this year, and is about 3 per cent. less than in 1914. Practically every county shares in this year's decline. In spite of the unfavourable weather for sowing last autumn the acreage of wheat is only 46,000 acres less than in 1924. The barley area is little changed; the north-eastern counties have increased areas, but in others reductions are fairly general. Every county has less land under oats than last year, and the total area is the lowest since 1888. Beans cover the smallest area ever recorded and peas the smallest since 1917. Less land has been cut for hay, both seeds and meadow hay showing reductions. The large increase in bare fallow is not unexpected, as heavy land worked very unkindly after the wet winter.

Cotton Crop Estimates.—Late on Monday afternoon the Agricultural Department of the United States Government published further statistics regarding the cotton crop in America. Private authorities estimated that a growth of around 14,200,000 bales would be forecasted. The

actual report, however, gave a condition of 62.0 per cent., indicating a yield of 13,990,000 bales, as compared with 13,566,000 bales a fortnight earlier. If linters are added present indications point to a crop in the neighbourhood of 14,800,000 to 15,000,000 bales. The Census Bureau also reported that the amount of cotton ginned from the crop of the current season to August 15th was 578,000 bales, against 159,000 bales in the last report. These ginning figures, however, express nothing useful, and merely indicate the earliness of the crop. The condition report was received in Liverpool with placid indifference, and prices have since slightly eased. From Manchester's point of view, however, the report was quite satisfactory, inasmuch as it points to the probability of a big crop being grown, sufficient, at any rate, to satisfy the requirements of world spinners without causing any big upward movement in quotations. The Egyptian Government has this week stated that the area under cotton cultivation is estimated at 1,924,000 feddans, as compared with 1,787,000 feddans a year ago. Of the total cultivated this year, 1,128,000 feddans are planted with Sakellaridis, as against 827,000 feddans last season.

Stock Exchange Contango Charges.—No little feeling, writes our Stock Exchange correspondent, has been aroused at the last two Stock Exchange settlements, including that which finished on Thursday this week, at the extremely onerous contango-rate levied upon bulls of Courtaulds shares. In some cases the contango was as high as 7½d per share, which, at the making-up price of 6½, works out to an annual charge of about 15 per cent. on the money employed. The people who bought Courtaulds, and who, for one reason or another, did not wish to pay for the shares, are loud in their protests against what they describe as an iniquitous charge made for the accommodation they require. As this kind of complaint arises periodically in respect of shares in which a bull account is created, and which the buyers desire to carry over at the Stock Exchange settlement, it may be useful to examine the grounds of the objection, taking this rate upon Courtaulds as a text. At the outset it will be obvious that even a contango of 15 per cent. per annum is temporarily cheaper than the payment of the 1 per cent. transfer stamp duty. Upon 100 Courtaulds at 6½ the stamp on the transfer deed amounts to £6 10s; the company charges 2s 6d fee, and the interest on the money should also be taken into account. Leaving the last-named out of the calculation, however, the stamp and fee of £6 12s 6d upon 100 shares is equal to 1s 4d per share—twice the contango of 7½d per share. It is conceded, of course, that the stamp and fee charge occurs but once, and that the carrying-over of Courtaulds for two Stock Exchange settlements is equivalent to payment of the full stamp and fee. After the two settlements the contango charge is extra to the burdensome transfer duty. At this point it becomes necessary to observe that we are dealing with an abnormal contango rate created by the conditions of an extensive bull account. The buyers, who are also the plaintiffs, have the matter in their own hands. Their purchases of Courtaulds are made, in the vast majority of cases, without any stipulation that the seller shall take in the shares, if required by the purchasers so to do. The buying of any shares does not entitle the purchaser to demand, as a matter of right, that the shares shall be contangoed. Some firms, amongst whom are numbered tangoes. They maintain, whether rightly or narrow-Exchange and for the public. If a buyer says, when giving an order, that he may require the shares to be carried over, then it is for the broker or the jobber he may approach to undertake or to refuse to deal upon such terms. But most clients buy shares without notifying their intention to carry over, and the tacit understanding is that the bargain shall be duly completed either by sale of the shares before the contango day or by payment for them. The client is presumed to have the money or access to facilities for its provision such as is obtainable through a loan from his bank. A jobber who sells shares, if he has bought them from somebody else and has to pay for them, can finance his commitments

up to a point, but manifestly there must come a position at which he is obliged to stop. His bank will afford him all the facilities which the high credit of a trusted customer can command. Yet, to carry the case to extreme lengths, a jobber might be asked to contango an aggregate of, say, a million Courtaulds, upon which, at 6, a bank margin of only 10 per cent. cover would require £600,000 that he would have to provide. The client is not compelled to carry over his purchase unless it suits him to do so. He can sell, pay for, or borrow money with which to take up his purchase, and, having this option, he is hardly justified in charging with usury, the lender of carry-over facilities. Nevertheless, the same condition of affairs arises in every market where a busy and spirited rise in some popular stock has attracted public buying. Courtaulds happen to furnish a topical illustration, and if this presentment of the case suffices to illuminate previous misunderstandings on the point, its recollection upon future occasions may serve to remove the sense of grievance that sometimes creeps into a client's mind.

South Africa's Trade.—A correspondent writes:—For various reasons—the principal being some alterations by the Statistical Department in the method of presenting the figures—there has been very great delay this year in the publication of the monthly Blue-books showing the Union's imports and exports. So far only those for the months of January and February are available. During these two months the total value of the imports was £10,638,746, as compared with £10,034,695 for the corresponding months of 1924. The total value of the exports was £9,896,203, as against £14,436,024 for the same months of last year. The large difference in the value of the exports is partly accounted for by the fact that the export of gold in the two months of this year was only £3,108,746, as compared with £7,045,091 for the same months in 1924. On the other hand, diamonds shipped this year were valued at £1,405,462, against £984,163 for 1924. The reason that the export of gold has been so much less in 1925 than in 1924 is not because less has been produced, but because so much of it has been taken by the local banks and the Pretoria Mint. At the same time, owing to the premium on gold having disappeared when sterling reached parity with gold, the value of the production for the first half of 1925 is about 1½ millions less than for the first half of 1924. For the first six months of this year there are available the monthly Customs returns, which, while they do not include some items, yet give a close approximation to the real position. According to the Customs returns, the imports for the first six months of 1925 amount to £32,491,279, as compared with £31,371,836 for the same period of 1924. The exports for the six months were £33,795,098, as compared with £37,575,689 in 1924. But the exports of gold have continued to be less than during last year, for the reasons given above. If gold and diamonds are deducted, it appears that there has been a trifling increase in value of South African produce exported this year as against 1924, the respective figures being £13,960,698 and £13,786,265. But against this small credit of less than £200,000 has to be put the reduced value of the gold produced in the first half of 1925, which is approximately 1½ millions. At present the Reserve Bank is shipping gold to England, and probably all, or practically all, the 1925 production will be shipped away as in past years. It may be taken, therefore, that had all the gold been shipped as produced the value would have been nearly 1½ millions less than for the first half-year of 1924, and that the trade position up to June 30, 1925, is therefore approximately as follows:—Imports have increased by about £1,120,000, as compared with 1924, and exports have decreased by over one million. The trade balance was only barely favourable to South Africa last year, and when the amounts due overseas for interest on loans, dividends, freights, &c., are included, it is evident that for this year, so far as it has gone, the position is not nearly as good. The export of the maize crop is now commencing, and as there are 10,000,000 bags available for shipment this will put about an extra four millions on the value of the exports in the second half of the year, but if the slump in wool prices continues the loss in that direction will more

than wipe the maize gain out. For January and February the value of the wool exported was £1,629,307 less than for the same months in 1924.

Swiss Industry and Tariffs.—A Geneva correspondent writes:—Swiss foreign trade returns for the first half-year are satisfactory when figures only are taken into account. During the first six months of 1925 the value of imports reached £49,095,667, as against £47,260,562 during the corresponding period of 1924; and exports totalled £22,595,923, compared with £19,572,658 in 1924. While the rise in imports is normal, the increase in exports is accidental, and only results from the big purchases made by Great Britain in Switzerland before the enforcing of the McKenna Duties. During the above period, imports from France totalled £9,629,044; from Germany £8,915,962, from Italy £5,251,476, from the U.S.A. £4,821,040, and from Great Britain £4,345,386. While Great Britain comes out fifth among the countries exporting to Switzerland, she comes out first as regards takings from Switzerland, with a total of £11,713,042—that is, over one half of Swiss exports—followed by Germany £7,149,435, France £3,601,231, U.S.A. £3,297,265, and Italy £2,017,810. While the monthly average of British purchases in Switzerland was £1,140,000 for the period January-April, it rose to £2,509,342 in May and £3,436,997 in June, and the surplus of British purchases during the first half-year reached £3,066,338, which nearly corresponds to the rise of £3,023,265 in Swiss exports when compared with 1924. If there had not been that surplus of British purchases, Swiss exports would have been lower than last year. This abnormal increase in exports resulted in the curious and unprecedented instance of the trade balance being in favour of Switzerland in June, when exports were by £640,000 superior to imports. As it was easy to foretell, there was an important drop in July exports, which reached £6,124,000—£12,000 less than in July, 1924, and £2,076,000 less than in June last, and Britain's share in these exports was only £826,000, or £614,000 less than the average for the first six months. It is very likely that the drop in exports will continue in August unless Swiss exporters succeed in securing new markets for their goods in order to replace the British market, which was so far the best for Swiss products, in particular for watches, silk, lace and embroideries. As for imports, they were normal in July, with a total of £8,222,000, compared with £8,400,000 in July, 1924. This shows that the crisis of Swiss exports, mentioned in a previous article, is not a fiction but a reality. It is further proved by an increase in unemployment and in emigration, and by the fact that the embroidery industry has asked the Federal Government for a subsidy so as to enable it to carry on and to prevent the dismissal of hundreds of workers. As previously stated, the remedy for the difficult situation of the Swiss export trade would be a reduction of Customs duties, which would finally result in a decrease in the cost of living, in the price of raw materials, and in production cost. Bureaucracy is the only powerful obstacle to that reduction. The most important trade associations of Switzerland—among which the Union of Exporting Industries, the Swiss Union of Commerce and Industry, the Swiss Art and Craft Union, the Employers' Union, backed by public opinion and the greater part of the Press, earnestly requested the Federal Government to lower the Customs duties so as

to ease the situation of trade and commerce and of the consumers, but the Government refused. Swiss industrialists are very much concerned, and one of them recently said to me: "If the Government persists in its refusal, Swiss industries will be compelled either to emigrate or to close down, and this will mean ruin for the country. It is impossible to compete with other countries when retail prices, in Switzerland, are 168-170 per cent. higher than pre-war figures, and when production costs in industry are 30 per cent. greater than they ought to be. This is the unquestionable result of the over-protectionist policy followed by the Government since the end of the war." Swiss industrialists are therefore very pessimistic, the outlook for trade and industry is very black at the present moment, and the responsibility for the present crisis rests with the Government which, in matters of interior economic policy and administration, is ruled by the high officials of the Federal Bureaux. But the high cost of living in Switzerland is a result not only of the direct effect of high Customs duties, but also of the fact that there are important concerns—one ought even to say trusts—which are purchasing goods and foodstuffs from the producers and selling them to the consumer after making an excessive profit.

Finland and Timber Prices.—A correspondent writes:—

The statistics of Finnish foreign trade for the first half of the present year show that Great Britain during that period ceased to occupy its former position as the second largest exporter, after Germany, of goods to Finland, and that our place was taken by the United States of America. Finnish import statistics for January-June, compared with those for the corresponding months in 1924, show a decline of 2.3 per cent. in imports (c.i.f. value) from Great Britain, while imports from Germany and the United States rose respectively by 4.4 per cent. and 2.7 per cent. Finnish exports (f.o.b. value) to Russia amounted during the first half of 1925 to 9.1 per cent. of all Finnish exports, as against 6.3 per cent. during the corresponding period of 1924. In spite of low prices, the Finnish timber market continued active during July; sales of timber aggregated by the end of that month 680,000 stds.—a figure that was not reached before the middle of August in 1924; of this output England is credited with 310,000 stds. Sales were effected during July at prices that exclude the likelihood of a rise in price during the autumn, or possibly in the present year. Many exporters are of opinion that bottom prices have not yet been reached, though 7-inch battens were sold (f.o.b.) during July as low as £12 10s, or even £12. In the Finnish view the situation of Finland in regard to timber is similar to that of Great Britain in regard to coal, that is to say, the prices obtainable for timber in the world's markets are at present below the costs of production. At the prices prevailing about the middle of July it was estimated that the loss to the producer amounted in East Finland to 100-200 marks per standard. In Finland generally timber prices have fallen by 25 per cent. to 30 per cent. since the beginning of the present year. The cause of the decline in prices cannot in one sense be attributed to over-production. The whole European production has, in fact, decreased. The Russian production of timber (including timber exported from Latvian and Lithuanian ports) does not amount to more than 50 per cent. of Russia's exports of timber before the war. Swedish exports of timber have in recent years fallen below former levels. But, on the other hand, demand has declined to an even greater extent; there is, therefore, over-production in the economic sense. And there is nothing to indicate that the present situation is merely of a transient nature. Existing wages are already so low that there can be no question of reducing them further. Improvements in methods of production are conceivable, but for this capital and time would be required. There remains to consider the policy of restricting output. For this policy to be effective, it is pointed out, it is essential that it should be generally adopted by producers in all the principal timber-producing countries. In one quarter the interesting suggestion is made that producers should combine to restrict output as a temporary measure of

relief, and in future to take such measures as may be necessary in order to adjust the supply to the demand on the model of the British control of the rubber industry.

Trade Conditions in Esthonia.—A commendable feature of the report by the Consul-General at Reval, Mr Montgomery Grove, issued by the Department of Overseas Trade (1925, price 1s) is the admirable and brief historical and geographical summary which precedes it. Occupying no more than a single page, it gives, in this small compass, all the information that the general reader or trader needs to have to enable him to grasp intelligently the general conditions of the very peculiar little country with which he may have to deal. 1923 was a disastrous year for Esthonia. "There was no summer, but constant rain went on till snow began and winter set in." In a 90 per cent. agricultural, peasant community the result was starvation; "everyone was applying to the Bank of Esthonia for loans, and the Government had to make loans of State money to the Bank." The exchange fell away deplorably. Not until the Agrarian Government was replaced in April, 1924, by a democratic one, with a Finance Minister of unusual courage and resource, did things begin to mend. He proceeded, with a strong hand, to balance the Budget, to cut down the expenses of the State and the number of State employees, to raise the Customs duties and fix the exchange of the Esthonian mark by establishing the rate of 1 gold krone or thaler to 100 Esthonian marks. The result of the increases in the Customs tariff was a heavy drop in imports; "not," says Mr Grove, "an unmixed evil, as importation had taken place on an excessive scale," and, in particular, there were large stocks of some goods (e.g., German textiles) accumulated in the hope of their re-exportation into Russia, a hope which has not matured. Germany, of course, is geographically in a strong position; further, German firms make easier arrangements about credits. "The question of credits is always a sore point. Complaints have been made that British merchants are inclined to tighten credit, and are suggesting that, before sending out goods, they would like to see the Esthonian firms opening deposit accounts in London banks. It should be remembered that it is very difficult for Esthonian firms, few of whom are wealthy, to keep deposit accounts in London banks, where the interest is low, while the local rate for short loans is exceptionally high. If the Esthonian firm is a sound one, bank guarantees can be obtained." One of the most interesting developments in Esthonia is that of the oil shale industry. "Factory after factory in Esthonia is passing from wood or coal to oil shale, and now the Esthonian railway system is taking the same step." The result will be a huge drop in coal imports. British goods are popular in the country and "unless their trade competitors' prices are much lower the preference is for British goods."

Scrapped Shipping Tonnage.—According to statistics published by Lloyd's Register of Shipping, the gross reduction in the mercantile marine of the world in 1924 through total losses, breaking up, &c., amounted to 1,016 ships of 1,857,679 tons, excluding all ships of less than 100 tons. Of this total, 777 ships of 1,614,662 tons were steamers and motorships, and 239 of 243,017 tons were sailing ships. These figures, compared with those for 1923, show an increase of 157,792 tons as regards steamers and motorships, but a decrease of 16,892 tons for sailing ships—the net increase for 1924 being 140,900 tons. This total increase is not due to actual casualties—the figures and motorships—but to the large amount of tonnage broken up during 1924, viz., 1,326,134 tons. This tonnage exceeds the similar figures for 1923 by 185,927 tons, and owned in Great Britain and Ireland, which were broken up, dismantled, &c., during 1924, amounts to 261,575 tons. The number and tonnage of ships of all nationalities

lost, broken up, &c., during the last ten years are given as follows:—

Year.	Steamers and Motorships.		Sailing Ships.	
	No.	Tons (Gross).	No.	Tons (Net).
1915	992	1,893,718	316	223,398
1916	1,284	2,271,401	511	284,224
1917	2,605	6,607,261	748	520,206
1918	1,294	3,332,791	325	159,919
1919	425	524,172	241	112,658
1920	370	518,595	215	*138,959
1921	344	536,537	215	*137,720
1922	511	743,886	205	*143,646
1923	709	1,456,870	259	*259,909
1924	777	1,614,662	239	*243,017

* Gross.

WAR LOSSES included in the above TABLE.

Year.	Steamers and Motorships.		Sailing Ships.	
	No.	Tons (Gross).	No.	Tons (Net).
1915	659	1,380,657	67	57,516
1916	942	2,189,079	245	139,609
1917	2,211	5,957,913	523	392,449
1918	911	2,674,428	141	69,744

Strandings and kindred casualties which are comprised under the term "wrecked" are the most prolific cause of disaster. To such casualties are attributable 50 per cent. of the losses of steamers and motorships, and 50 per cent. of sailing ships. Cases of abandoned, foundered, and missing ships are, no doubt, frequently more or less similar in the circumstances of loss; and, if these be taken collectively, they comprehend 27 per cent. of steamers and motorships, and 36 per cent. of the sailing ships removed from the mercantile marine during 1924, owing to casualty. A large proportion of the tonnage annually removed from the merchant fleets of the world comes to what may be called a natural end, being broken up, dismantled, condemned, &c., for reasons not known to be consequent upon casualty or stress of weather. During 1924, the ships so broken up, condemned, &c., amounted to no less than 72.73 per cent. of the tonnage of the steamers and motorships, and 62.45 per cent. of the sailing ships included in the tables under review. Excluding the five war years 1914-18, the average percentage of loss of steamers and motorships belonging to Great Britain and Ireland during the remaining eighteen years amounts to less than 1 per cent. per annum of the tonnage owned. The percentage for the year 1924 is 0.57.

Rothamsted.—The Rothamsted Experimental Station was established in 1843 by the late Sir John Lawes, and for nearly 60 years was equipped and maintained by him. Apart from the provision of the necessary land and laboratory, it cost him about £2,400 per annum. In 1889 he provided for the future maintenance of the station by an endowment of £100,000, and after his death, in 1900, the Goldsmith's Company gave a further endowment of £10,000. Up to 1911—that is, for a period of 68 years—this work of the greatest national, and, indeed, cosmopolitan, importance and value was carried on without any assistance from the State. In that year the first Government grant was given, and the rapid development of State-aid is indicated by the fact that for the year 1924-25 the annual grant was £26,480, in addition to a grant of £21,135 for new buildings. A report, recently issued, for the years 1923-24, shows the wide scope of the work, and, incidentally, the extent to which science has now been harnessed to the service of agricultural progress. Comprehensive as the scope appears to be, it nevertheless covers only one branch of agricultural research, although it is the most fundamental. The soil and the plant are the subjects of investigation at Rothamsted. These are the primary factors of food production, but all those problems which arise in connection with the conversion of crops into meat and milk are dealt with at other institutions. This admirably-compiled report

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,458,221

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS, SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

demonstrates not only the complexity of what is popularly regarded as a simple undertaking, viz, the cultivation of the soil, but also the immense amount of skilled zeal which is now devoted to the improvement of farming. But the interested reader cannot fail to regret that so much valuable information should be so little known to those whom it most concerns. Knowledge grows, at Rothamsted and other research stations, but wisdom lingers, on the farm.

Industrial Alcohol in the U.S.A.—A correspondent

writes:—At the thirty-first annual convention of the American Manufacturers of Toilet Articles lately held in New York, the most important business was that of the legislation committee, which has had a full programme during the past year, especially in connection with industrial alcohol. Strong action was taken against the Cramton Bill brought forward by the Anti-Saloon League, and aiming, like the previous Ernst-Wood Bill, at the drastic restriction of the industrial use of alcohol, amounting almost to prohibition. The Bill has been defeated for the present, but it is realised that it will probably be revived in the new Congress, and that the utmost vigilance will be required to deal with the attempted legislation of "petty politicians, fanatics, and dishonest individuals." These terms were used in a series of resolutions adopted by the Convention in vigorous protest against excessive legislation by "propagandists of so-called uplift organisations and professional lobbyists, who, wholly ignorant of the problems that confront the users of alcohol, seek only their own glorification, and do not stop to count the cost to industry." It is pointed out that alcohol is no longer a beverage, and therefore has no status as such, and there is no justification whatever for almost prohibitively taxing a product which is as important to the chemical industry as sulphuric acid. Excessive taxation of industrial alcohol to a considerable extent defeats its own ends, for it only extends the field of operations of the bootlegger, and gives him greater encouragement and greater profit. There are several unprincipled manufacturers who will get their alcohol from bootleg sources more cheaply than through legitimate channels; so that, notwithstanding all the talk in the U.S.A. about business ethics, fraud and corruption abound, as they are sure to do under excessively puritanical legislation. The Convention therefore registered a vigorous protest against such legislation, and is co-operating with other associations of manufacturers using alcohol as raw material in resisting unfair restriction. Under the present scale of duties, pure non-beverage alcohol is taxed at the rate of \$2.20 per proof gallon, or \$4.18 per wine gallon, equivalent to an *ad valorem* duty of no less than 1,000 per cent. Half of this tax was imposed in October, 1917, as an emergency war measure, on the understanding that it would be repealed when the emergency ended. In view of this fact, and of the further considerations that the alcohol is non-potable, and that the present tax is a gross discrimination against manufacturers, it is hoped that the Treasury will include this particular tax among the war taxes which will be considered by Congress next December with a view to complete repeal. A strong resolution to this effect has been unanimously adopted, and copies have been sent to the various Government officials concerned.

South Africa's Mineral Output.—Our Johannesburg correspondent writes:—The issue of the June statements of the Mines Department and of the Chamber of Mines enables the output and profit figures for the first six months of this year to be presented, with the comparative figures for the corresponding period of 1924:—

MINERAL PRODUCTION, TRANSVAAL.		First Six Months, 1924.	First Six Months, 1925.
Gold	fine ozs	4,703,798	4,783,449
Value	£	19,980,467	20,318,802
		*22,365,734	
Silver	fine ozs	641,796	610,903
Value	£	96,265	86,882
Osmiridium	ozs	1,352	2,564
Value	£	36,320	68,195
Diamonds	carats	1,215,416	1,193,829
Value	£	3,926,066	3,950,095
Coal	tons	6,084,419	6,460,990
Value	£	1,858,746	1,948,047
Copper	£	217,916	276,636
Tin	£	148,206	138,172
Miscellaneous	£	129,946	132,904
Total value	£	26,393,932	26,919,733
		*28,779,199	

* Including increase due to premium.

The results of the Rand Gold Mines may be tabulated as follows:—

	First Six Months, 1924.	First Six Months, 1925.
Tons, milled	13,886,336	14,070,044
Declared yield	4,579,880	4,659,856
Dwts	6,525	6,557
Working revenue	£ 21,136,529	£ 19,703,071
" costs	£ 13,766,414	£ 13,529,000
" profit	£ 7,370,115	£ 6,174,071
Dividends	£ 4,610,111	£ 4,137,388

In spite of an increase in tons milled, there was a very substantial reduction in working profit, the elimination of the gold premium being, of course, the dominant factor.

New Jagersfontein.—Our mining correspondent writes: The report of this important diamond-producer for the year ended March 31st last makes a somewhat mixed showing. On the one hand, "diamond account" figures at £609,200 in place of £502,600, and the working surplus at £290,500 as compared with £253,100. No increase was, however, made in the rate of dividend, the final of 15 per cent. again bringing the total up to 27½ per cent. Hence an expanded balance remains to go forward of £103,600, whereof £11,350 is represented by stones unsold. Despite certain difficulties in working, and shortage of native labour, an increased quantity of ground was treated; but the yield—145,000 carats—did not show a corresponding advance, due to forced loading from poor areas in the mine and an increase of reef. For the current year, however, the prospects are hopeful. During the period the power station should be completed, also the additional washing gear; and fresh levels will become available for exploitation. The idea is entertained in usually well-informed quarters that, in view of the prospect of enhanced prices for the stones as from the beginning of 1926, owing to the reconstitution of the Diamond Syndicate, the directors of producing companies may adopt a liberal policy in fixing the distributions for the second half of this year.

Colombian Mining.—Few concerns of the kind have had a more extraordinary history than this. Its shares have been up to £4 and down to 1s 6d. The capital of the company has been reduced and increased. Statements have been put forward as to the existence of mineral deposits of exceptional richness; but those deposits have failed to become transmuted into dividends. Early in August the shares stood at about their lowest level. Then a sudden demand came along, and in a few days the price trebled. The only explanation available was a rumour that certain American oil interests desired to acquire a portion of the company's property. On the evening of August 12th a circular was issued stating that the Colombian Government had taken over two of the company's concessions, and that a valuation of £2,641,800 had been placed upon them. The following morning the price of the preference shares was at first

further advanced, but quickly relapsed, in the main as a result of profit-taking by operators favoured with prior information. Much scepticism was evinced as to whether the Colombian Government could, or would, pay anything like the amount of compensation indicated. At the meeting the chairman expressed his belief both in the willingness and the ability of the Government to pay, but intimated that some time might elapse before a settlement was arrived at, and he could not say definitely what shape it would be likely to take. On Tuesday evening last a communication was issued on behalf of the Colombian Government stating that the inventory in question included private and national property, and that in any case the amount the Government might have to pay would be greatly inferior to that suggested in the report of the company. On this the shares had a fresh slump, from which they quickly recovered. On Wednesday evening the board of the company issued to the Press a letter contesting several of the points in the Government statement. Altogether, a pretty kettle of fish.

We regret to have to record the sudden death, from pneumonia, of Mr C. P. Fitzgerald, who for several years had been a regular contributor to the *Economist*.

Oversea Correspondence.

UNITED STATES.—STOCK MARKET POSITION — MONETARY CONSIDERATIONS — COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 18.

THE stock market continues to absorb interest, and to furnish fresh surprises for its watchers. On each minor reaction much more is heard of the great height to which the market has risen. The professionals continue bearish. Critics point to the great volume of bank credit that has been diverted to the market, and infer that the autumn trade revival will draw money away from the market, and precipitate a severe reaction. Yet the market continues to advance. Up to the present the reactions have been relatively insignificant affairs; they have been followed by fresh demonstrations of strength in high-priced shares. The latter advances have been accompanied during the last few days by a rather good rise in railroad shares.

Several factors seem to be responsible for the market's ability to rise in the face of so much scepticism. For one thing, business prospects continue favourable. Purchasing power is high, and an industrial pick-up seems to be developing. Meanwhile, the much-discussed rise in money rates has failed to develop. During the past week, in fact, the tone of the money market has become slightly easier. Stock Exchange money has been obtainable officially at 4 per cent. Outside the Exchange, call money is reported to have been available at as low a figure as 3½ per cent. There is now more of a disposition to believe in an easy money market throughout the fall. Another reason for the continued rise in securities is the very large supply of investment funds. It must be remembered that the United States is now a creditor instead of a debtor country. Whereas before the war the country faced a shortage of capital, that was overcome by borrowing abroad, it now has a surplus, and is able to lend abroad. Our capital fund is now replenishing itself; the re-investment demand is growing. With this strong flow of investment money coming into the markets, the supply of new capital issues recently has diminished. With this falling off in new issues has come a recovery in the bond market, which now seems to have ended its mid-year slump.

Still another explanation of the continued rise in the

stock market may be found in the claims of those who maintain that many of the so-called "high-priced" stocks really are cheap. American Can common, for example, is now selling for about 240. This compares with a low level for the year of 158. Yet the American Can enthusiasts point out that the company has been showing earnings of \$20 a share, and claim that the company really has been earning much more. They say that American Can is earning more than National Biscuit was just before the shares of that company were split seven for one. The new Biscuit shares were placed on a \$3 dividend basis, although the company never had shown earnings sufficient to pay that much before the split-up was made. Yet, National Biscuit has found it easy to maintain the \$3 dividend, and the shares now sell around \$75. The American Can adherents maintain that a similar split-up is coming in their stock. No one can deny the plausibility of their case. Similar claims are set up in the case of such stocks as General Electric. The general argument is that many of our strong industrial companies have been writing off enormous sums, and concealing earnings in this fashion; but that the subjects for write-offs are about exhausted, and that the real earnings soon will have to be shown. When that time arrives the stocks, it is argued, will be split up into shares of lower market value.

Just why the money market has failed to harden is a subject for considerable reflection. It is premature, perhaps, to say that money will not harden this fall. After all, relaxation during the first half of August is quite the usual thing. Since the Federal Reserve system went into operation, rates normally have reached a seasonal low about two-thirds of the way through August. Nevertheless, with the markets active, and with industry picking up, most observers expected a firmer tendency. Now that it has failed to appear, they are giving weight to such factors as the reduction in your Bank rate, the small demand for funds in the agricultural districts, and the extraordinarily strong cash positions of our leading industrial concerns. The General Motors Corporation, for example, has over \$140,000,000 in cash, and is a lender rather than a borrower of money. The Ford cash position also is understood to be the strongest in history. Meanwhile, country bankers report a surplus of loanable funds. In one Kansas community of 12,000 population four banks were reported to have \$1,000,000 which they wished to lend to the farmers, but which they were forced to place in bonds and short-term paper. While some tightening in the money market still is anticipated in most circles, additional credence is being given to the possibility of an undisturbed money market during the fall.

Confirmation of the firmer trend of commodity prices is furnished by the Bureau of Labour Statistics' index for July. The average level of wholesale prices, as represented by this index, was 1.6 per cent. higher than during June, the index standing 59 per cent. above the average for 1913. The advance was due largely, however, to higher prices for certain farm products and foodstuffs. Three groups were higher, three were lower, and three were unchanged. Industrial groups were little better than steady. Meanwhile, reductions in the prices of oil and automobiles have continued. Another cut has been made in the price of Pennsylvania crude, and one grade of Gulf crude has been lowered. There are still rumours of a reduction in mid-continent crude, but none has taken place as yet. The trouble with the oil situation, pretty plainly, is unexpectedly large production. Californian oil, also, is a disturbing factor. Production there has increased again, and the Standard Oil company is said to be bringing large amounts through the Panama Canal once more. An official statement by the Standard of New Jersey explained its reductions in gasoline as being due to the necessity of meeting a situation in which companies that found themselves with more oil than they could handle were cutting prices.

As for the automobile industry, the price cutting, which has become general, plainly is going to work hardships on the weaker companies. The stronger organisations, however, seem in good condition to profit by the cuts, as they have lowered their production costs, particularly on closed models, and seem likely to secure an increased volume of sales.

FRANCE.—THE CAILLAUX-CHURCHILL CONVERSATIONS—DEBTS POLITICAL AND COMMERCIAL —JULY TRADE—COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, July 26.

IN well-informed quarters here the conversations which are at present going on in London between the British and the French Finance Ministers are regarded as merely preliminary to the definite settlement of the debt problem, the final solution of which must depend primarily on Washington. There is a general tendency here to recognise that Great Britain, after all, is anxious only to recoup from her European creditors a total that will be equivalent to the amount she has to find to satisfy the American Government; and it is equally realised that this attitude is very different from that of the Washington Government, whose policy towards the Powers with which it was associated during the common war is now felt to be merely that of a creditor who is determined to extract as much as possible from his former partner. That *perfidie Albion* should be prepared to forgo her legal claims, provided the United States Government will act in a similarly generous spirit, has impressed the French mind as nothing has done since Great Britain entered the Great War on the side of this country, and augurs well for the future of the recently rewelded Entente Cordiale.

The settlement of the French debts to Great Britain and the United States Government being a two-sided matter, it may be well to set forth the bald figures of the situation as nearly as they can be stated. In July, 1924, according to the "Inventaire" prepared by M. Clementel, the then French Finance Minister, the capital of the "political" debt owing to the American Government was as follows:—

Amount advanced	\$ 2,997,477,800
Less paid off	64,212,568
Balance due	2,933,265,231

To this must be added the amount due for interest, which, without being capitalised and calculated at the agreed rate of 5 per cent., represented on November 15, 1923, a sum of \$650,051,228, which, added to the balance already mentioned, would bring the grand total owing to \$3,583,316,459. The capital of the debt owing by France to Great Britain amounted at the end of 1920 to £449,030,286, less annulations amounting to £3,811,900, leaving a total capital balance due of £445,218,386. To this must be added interest charges, which M. Clementel estimated last year at £174,181,514, making a grand total of £619,402,900. The addition of interest which has accrued since the date of M. Clementel's inventory will, of course, substantially increase both the British and the American totals.

One of M. Caillaux's principal difficulties in the settlement of the "political" debt owing to Great Britain and America lies in the fact that alongside it lies a "commercial" debt of (originally) £60,000,000, which was advanced by the Bank of England to the Bank of France, and another of £6,000,000, which was the amount it was agreed in March, 1923, France should pay for the British war material and other stocks left in France, this sum to represent both capital and interest. France also owes Great Britain a further sum of £2,226,000 for "divers other war stocks," which it has been arranged shall be

paid during the present year. The "commercial" debt due by this country to the United States amounted on July 31, 1924, to 3,156,463,000 gold francs (or, say, \$631,000,000). Of this amount, 2,110,026,000 gold francs represents the price at which the American Government ceded to France the stocks of war supplies left in this country at the end of the war, and which France paid for in its own Government bonds. The balance of this debt is in respect of various loans since 1920. There are also other "commercial" debts owing to Japan, Canada, Holland, the Argentine, Uruguay, and Egypt, which amounted in July, 1924, to within a shade of 480½ million francs.

According to agreements that are now undergoing execution, the whole of these "commercial" debts, with the exception of a balance of \$163,015,850 that would be still owing to the United States, should be paid off by the end of 1930. The difficulty in which M. Caillaux finds himself in estimating the amount France can pay towards the extinction of her "political" debts to England and the United States during the six years 1925-1930, is based upon the fact that his country has already arranged to meet her "commercial" debt (with the exception of the balance to America already referred to) by the following annual instalments:—

	1925.	1926.	1927.	1928.	1929.	1930.
U.S.A.	14,500,000	8,500,000	4,000,000	4,000,000	404,000,000	11,341,145
Great Britain ..	8,976,069	8,250,000	9,000,000	10,250,000	16,000,000	5,600,000
Holland	..	..	30,000,000	..	25,000,000	..
Argentine	..	19,425,795	..	..	..	..
Uruguay, gold pesos	3,000,000	3,000,000	3,000,000	3,000,000	..	..
Canada	..	230,000	..	..	..	..
Egypt	1,000,000	1,000,000	..	..	..	..

On the face of it, there seems to be little probability of M. Caillaux making any kind of offer that can be satisfactory to his British and American colleagues unless some radical modification can be made in the agreements that have already been entered into for the liquidation of the various commercial debts. Little hope can be expected from the operation of the Dawes plan, if the pessimistic reports from London to the effect that Mr Churchill and his advisers are already discounting the estimated revenue from it by 50 per cent. Therefore some kind of moratorium appears to be inevitable.

The foreign trade returns for July disclose very slight variations in either exports or imports on the month, as will be seen from the following comparative figures:—

	July, 1924.	June, 1925.	July, 1925.
	Francs.	Francs.	Francs.
Total exports ..	3,005,581,000	3,506,534,000	3,484,373,000
„ imports ..	3,066,133,000	2,991,243,000	3,033,549,000

Compared with the figures for July last year, imports show a drop of 32½ million francs, due chiefly to a drop of 152 millions in foodstuffs of foreign origin, which was not compensated for by an increase in the purchases of foreign manufactured goods to the extent of 20½ millions, and of raw materials to the extent of an additional 99 millions. Exports show an increase, as compared with July, 1924, of 479 millions (due to an increase in the sale abroad of French manufactured goods and raw materials). The month resulted in a surplus of exports to the value of 450,826,000 francs, as compared with an adverse balance in July, 1924, of 60½ millions. The comparative figures for the first seven months of 1924 and 1925 are as follows:—

	First Seven Months of		Difference in 1925.
	1924.	1925.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	4,947,845,000	4,254,344,000	— 693,501,000
Raw materials	15,053,812,000	14,610,419,000	— 443,393,000
Manufactured goods ..	2,918,000,000	3,005,309,000	+ 87,309,000
Totals	22,919,657,000	21,870,072,000	— 1,049,585,000
Exports—	Francs.	Francs.	Francs.
Foodstuffs	2,272,033,000	1,933,066,000	— 338,967,000
Raw materials	6,325,141,000	6,826,875,000	+ 501,734,000
Manufactured goods ..	14,558,879,000	15,189,216,000	+ 630,337,000
Postal parcels	1,088,778,000	1,159,601,000	+ 70,823,000
Totals	24,244,831,000	25,108,758,000	+ 863,927,000

The figures disclose a falling off in imports of about 4½ per cent., as compared with the first seven months of 1924, and an increase of about 3½ per cent. in exports.

The increase in exports of manufactured goods was equivalent to 4.3 per cent., and of raw materials to nearly 8 per cent. The seven months' figures disclose a favourable trade balance of 3,238,686,000 francs, as against 1,325,174,000 francs in the corresponding period of 1924.

The index figure of wholesale prices at the end of July, which has now been issued by the Statistique Générale, is returned as 569 (calculated on the base of 100 as representing the same 45 commodities in July, 1914), representing a rise of 15 points on the month, and of 38, as compared with the figure for May. The detailed figures are as follows:—

	Articles.	July.	June.	May.
General index figure.....	45	569	554	531
Foodstuffs—				
General figure	20	497	486	470
Vegetable foods	8	514	529	503
Animal foods	8	480	448	447
Sugar, coffee, cacao	4	498	477	446
Raw materials—				
General figure	25	632	614	584
Minerals and metals	7	562	550	510
Textiles	6	758	739	705
Various other categories.....	12	597	577	557

An analysis of the figures reveals strikingly the influence of the exchange value of the franc on current prices. The index figure for retail prices in Paris (which comprises 13 articles of prime necessity, and of which only petroleum is of foreign origin), is returned as 421, as against 422 in June, 418 in May last, and 360 in July, 1925, a difference of 61 points on the year.

CANADA.—CROP PROSPECTS—WESTERN WHEAT HARVEST BEGUN—FEDERAL REVENUES—THE RAILWAY SITUATION—THE POLITICAL SITUATION—LIBERAL DEFEAT IN NEW BRUNSWICK—PRICES—BUSINESS CONDITIONS—GRAIN SMUGGLING—GOLD REFINING AT OTTAWA DEMANDED—ALIEN ENEMY PROPERTY.
(FROM OUR CORRESPONDENT.)

August 15.

THE wheat harvest has now commenced in earnest in Western Canada, and except in some backward northerly districts the binders are everywhere busy. In a substantial area of southern Saskatchewan and southern Alberta the July drought wrought damage which is irreparable, but elsewhere a combination of cool weather and generous showers during the first half of August has materially improved the situation by helping the grain to fill well and retarding rust development. Rust has appeared in many districts of Manitoba and Saskatchewan, but reports indicate that it has done little harm, and is not likely to spread much before the grain is safely cut. Estimates of the volume of the Western wheat crop still vary, but a general average of the forecasts would place it in the neighbourhood of 350 million bushels. The oat crop is much better than last year's, and while rye is only fair, barley is very good. The hay crop in many areas of the West has been exceptionally heavy, and generally speaking pastures have been abundant. The local markets have recently been flooded with cattle coming fat off the grass, and prices, which were not too satisfactory before, have been declining. In Eastern Canada the grain harvest is practically completed, and while the yield has been variable, the average farmer is prepared to reckon 1925 a good season.

The improvement shown in the Federal revenues during the first quarter of the year was not maintained in July, for the increase from \$28,872,111 to \$29,147,742 is trivial, about 3 million dollars, the comparative figures being \$138,807,253 and \$141,739,416. On the other hand, however, the ordinary expenditure in July rose by about 2 million dollars, and the decrease for the four-month period is spread demand for drastic economies in administrative expenditure. On July 31 the figure for the total net debt of Canada stood at \$2,375,249,305, which is a decrease of some 16 million dollars from the figure at the corresponding date of 1924.

The railway situation still presents a baffling problem,

and although Sir Henry Thornton, by rigid economies, has on the Canadian National system been able to offset a decline of 9 million dollars in gross receipts by a cut of 10 million dollars in operating expenses, and to claim a betterment of about a million dollars in net earnings for the first half of 1925, there is no prospect of any serious diminution of the annual deficit and the drain involved upon the Treasury. It is understood, however, that the King Government, taking the Report of the recent Senatorial Committee as a base of operations, are conducting a thorough exploration of the problem, and contemplate producing for the general election a new railway policy, which may aim at some sort of merger between the C.N.R. and the C.P.R., and even making it the chief basis of their appeal for a renewal of confidence. At least a recent speech of Mr Cardin, the Minister of Marine, indicated that the Ministry hoped to make the railway problem the chief issue, and the *Montreal Gazette*, which is credited with voicing the opinions of the C.P.R. directorate, has been insistently demanding that Mr Meighen and the Conservative party make preparations to meet such a move on the part of the Government by evolving a solution of their own. The political difficulties of producing any railway policy before a general election are obvious, for a plan which would be calculated to arouse the enthusiasm of the C.P.R. and their allies would be certain to arouse fierce antagonism, not merely in the prairie provinces, but also in Ontario, where the principle of public ownership has a very strong following, especially in the ranks of the Conservative party. Sir H. Thornton recently announced that a thorough financial survey of the Canadian National system is being at present undertaken, partly with a view to the promotion of economy and partly to ascertain what, if any, action should be taken towards writing off capitalisation.

The King Government will certainly need some effective political war-cries when they go to the country, for the provincial elections in New Brunswick, held on August 10th, provide further evidence of an ominous recession in the fortunes of the Liberal party. Their substantial majority in the Legislature was wiped out, and the Conservatives now hold 35 out of the 48 seats. The chief issues of the election were the extravagance of the old Government, and especially a contract for the development by the State of extensive water powers at Grand Falls on the St John River. The defeated Government had already signed contracts for most of the work, and there is some speculation whether the incoming Premier, Mr J. B. M. Baxter, who has migrated from the federal to the provincial arena, will cancel them. The sharp defeat in the New Brunswick contest has naturally strengthened the hands of the section of the Liberal party which is urging a postponement of the Federal election till 1926, but the shrewder minds of the party realise that with the tide of public sentiment clearly running against the Liberal party, postponement, which would involve the charge of clinging to office in contempt of public opinion, might result next year in a ruinous debacle, and in the end the election will probably take place early in November. At any rate, all parties are continuing their preparations, and the Conservative leader is making a series of campaign speeches in the West.

The index number of the Dominion Bureau of Statistics, weighted according to the commercial importance of 236 commodities, is virtually stationary, the figure for July being 158.4, as compared with 158.8 for June; 40 quotations were higher, 37 lower, and 159 unchanged. The chief decline was in vegetables and their products, and the chief increase in hogs, butter, cheese and eggs. Retail trade in the cities is still suffering from the usual holiday dullness, but wholesalers report that country storekeepers are purchasing on a more lavish scale than in previous years. Every year regions like British Columbia and the shores of the St Lawrence attract an increasing number of American tourists, and their presence provides a great variety of employment for the native residents as well as a market for farm produce and ample business for local storekeepers. The stock markets have also been experiencing holiday dullness, but the stock of the Montreal Power Company, which has gathered many minor companies to its bosom, is continuing a spectacular rise which began about a year ago.

As the result of the 42 per cent. bushel duty existing on Canadian grain, the American authorities are confronted with another smuggling problem. In the present state of the grain markets it pays Canadian farmers living near the border to run their grain across it for sale in the United States, and for this purpose motor cars as well as trucks and wagons are being freely used, the trips generally being made at night. Accordingly five new patrolmen, equipped with fast motors and armed with rifles have been placed on the 125-mile stretch of the northern border of Minnesota, and seven men are being added to the North Dakota stretch. If the Canadian millers succeed in their present agitation for an export tax on wheat, the Canadian Government will be compelled to duplicate this border patrol, and even then there will be no guarantee that grain smuggling will cease.

The Ontario Mining Association, acting on behalf of the producers of gold in Ontario, and with the backing of the Toronto Board of Trade and other bodies, is taking up with the Federal Government the question of refining gold at Ottawa. At present the Canadian dollar is at a small premium in New York, and if this premium were to rise to half a cent., it would entail a loss of about \$250,000 on the year's gold output for the Canadian producers of gold who to-day send most of their ore to Philadelphia for refining purposes. During the war the Government placed an embargo upon gold export and refined in Ottawa, paying under heavy pressure in New York funds for the gold refined. Some time ago they refused to continue refining, and permitted mines to export gold to the United States under licence. Indeed, this policy was favoured by the mineowners, for as long as the Canadian dollar was at a discount they found it profitable to ship to New York. The Royal Mint at Ottawa has an excellent equipment for refining work, and the Finance Department points out in a public statement that producers are still at liberty to send any quantity of gold to it. But the producers apparently want the Government to pay them the value of their gold in Ottawa and bear the expense of shipping it to the New York market for sale, and this the Finance Minister declines to do, pointing out that the arrangement would enure solely to the benefit of the gold producers and would entail very heavy expenses on the Government.

The King Government is considering the problem of the disposition of alien enemy property which they are holding. The total amount realised through the sequestration of German property in Canada was about 18 million dollars, and from this sum 6 million dollars has been paid out in satisfaction of claims for war indemnities; a shipping company of St. John got \$1,350,000, and the Massey-Harris Company, an implement firm, were allocated \$1,500,000. There remains in the hands of the Secretary of State about 12 million dollars, and it is not improbable that the Government will follow the example of the United States and give full release in all cases where the seized property of individuals did not exceed 1,000 dollars in value.

POLAND.—CROPS—TRADE BALANCE—COAL EXPORTS—FINANCES—CIRCULATION—BANK RATE.

(FROM OUR CORRESPONDENT.)

WARSAW, August 14.

ACCORDING to the estimates of the Bureau of Statistics this year's crops gave the following results:—Wheat, 13,986,000 metric centals; rye, 60,710,000; barley, 13,773,000; oats, 28,695,000. In comparison with the previous year there is a very marked increase, which amounts for wheat to 58.1 per cent., for rye to 66.1 per cent., for barley to 14 per cent., for oats to 2 per cent. The average pre-war level has been nearly reached by wheat (83.1 per cent.) and by barley (91.9 per cent.), and surpassed by rye (107.3 per cent.) and by oats (102.1). It is expected that Poland will be able to send abroad great quantities of cereals. The surplus available for export is estimated at 6,000,000 metric centals for rye, 1,200,000 for barley, and 550,000 for oats, altogether 770,000 tons, of a value of more than 200 million zlotys.

These excellent crops will exercise a beneficial influence on Poland's trade balance, which since the beginning of this year has been showing a steady and marked excess of imports. During the first six months of the year the imports amounted to 1,047 million zlotys, the exports to 630 millions, so that the excess of imports amounted to 417 millions. The efforts of the Government, which is trying to correct the trade balance by an increase of import duties, did not give the expected results, as may be seen from the figures below:—

	(Million Zlotys.)			
	Imports.	Exports.	Excess	
January.....	172.7	107.6	65.1	
February.....	151.1	103.0	48.1	
March.....	190.1	120.4	69.7	
April.....	182.7	89.6	93.1	
May.....	185.6	105.9	79.7	
June.....	169.4	103.6	65.8	

The excess of imports in May and June was not smaller than during the first three months of the year, though the new import duties and prohibitions were already in force. As the imports of cereals and flour during these six months surpassed 150 million zlotys, and as the exports of these products were unimportant, it may be assumed as certain that during the second half-year the Polish trade balance will assume a much less unfavourable aspect. The view of the Government that it will again become favourable must, however, be received with a critical eye.

Since July the export of Polish coal to Germany, which during the first half-year amounted to 474,000 tons monthly, has ceased completely. The Polish coal industry has been deprived of its most important foreign market. Coal exports to other foreign countries did not exceed 308,000 tons monthly. Efforts are made to give to Poland's coal export another outlet which would make it independent of the German market. A newly-formed syndicate (Sindicato Italio-Polacco Carbone) is organising the export of Polish coal to Italy. The coal is sent to Danzig, and from there by ship to Italy. As much as 30,000 tons are to be delivered monthly to the Italian railways. The first shipments have been already sent from Danzig on Italian ships to Senoa.

During the first half-year the revenues of the Government amounted to 990.0 million zlotys, the expenditure to 952.5 millions. The revenues were distributed as follows (million zlotys):—Ordinary revenues, 788.0; extraordinary revenues, 202.9. The most important item among the extraordinary revenues was the profit from the issue of silver coins and paper notes. Nearly 150 million zlotys were obtained from this source. This enabled the Government to balance revenue and expenditure, but the results of such a policy are detrimental to the monetary system, which is suffering from a disproportion between banknotes and coins and notes issued by the Treasury. This is shown by the following table:—

	(Million Zlotys.)			
	Bank Notes.	Treasury Coins.	Polish Marks.	Total Circulation.
July 31, 1934....	394.3	8.4	109.1	19.0
Dec. 31, 1924....	550.9	34.3	88.7	1.8
March 31, 1925...	563.2	86.3	103.7	1.7
June 30, 1925...	503.2	136.1	107.9	..
July 10, 1925...	467.5	135.9	112.3	..
July 20, 1925...	440.8	133.6	112.0	..

On July 20th the circulation of coins and notes issued by the Treasury amounted to 245.6 millions, as compared with 440.8 million banknotes. This amounts to more than 55 per cent., a certainly abnormal proportion. The circulation of Treasury notes has since July of last year been subject only to small variations. But since the beginning of the year there has been an increase of nearly 100 million zlotys in the issue of coins. Since the end of June the circulation of coins has been stationary.

The month of July did not bring the expected improvement in the state of the Polish Bank. The reserve of foreign currencies increased during the first decade by 3 millions, but during the second there was a drain of 23 millions, and during the third of 9 million zlotys. The amount of foreign currencies held by the bank decreased between the end of March to the end of July from 259 to 91 millions. This steady drain of its reserve has obliged the bank to apply a restrictive credit policy. The selling of foreign bills by the bank is also subject to different restrictions. The Polish Bank, which has obtained in New York a six months' loan of 6 million dollars at 7½ per cent., has raised its rate from 10 per cent. to 12 per cent.

NORWAY.—PULP AND PAPER DISPUTE SETTLED—EXCHANGE—TRADE BALANCE—SPITZBERGEN—BANK DEPOSITS—UNEMPLOYMENT.

(FROM OUR CORRESPONDENT.)

OSLO, August 19.

THE labour conflict in the pulp and paper industry so long looming on the horizon has been ended, both sides having in the main acquiesced in the *status quo*. A consequence of the peace is a fresh drop in the exchange to 26.20 kr to-day. How to deal with the vexatious question of the exchanges constantly forms the chief topic of discussion in commercial circles and in the papers. Many of those who partake in the discussions advocate a stabilisation at some suitable level and point of time, whereas others are for bringing the krone back again to pre-war parity—but slowly—and the major part of the community presumably side with the latter.

Just about three months ago the bank rate was reduced by ½ per cent. to 6 per cent. There is now quite a strong demand for a further reduction, and as the position in the money market is quite easy, it may be that the Bank of Norway will find it opportune to comply with this wish. A quite appreciable increase in price has taken place in the staple export article of wood pulp. One might have ascribed this to the fact that a stoppage of the mills was probable. Though this notion may have been to some extent influencing prices, the rise certainly is founded on two other solid facts, namely, that the unsold stocks are comparatively small, a large proportion of the output in 1926 having even been already sold, and that the world markets, and especially the American market, exhibit an insatiable need of wood pulp and chemical pulps, which the increased output both of Canada and Scandinavia together find it difficult to supply.

August 14, 1925, will be likely to remain an important date in the history of Norway, the large territory of Svalbard—i.e., Spitzbergen and several surrounding islands—having on that day, by the common consent of the world at large, become an integral part of Norway. The event was celebrated in a solemn manner at Svalbard and in Norway at large. The territory added to this country is 80,000 square kilometres, and though as yet only in the initial stage of development, and containing hardly 2,000 people, it is believed that a good future is in store for the country, which is rich in coal and other valuable products.

The trade balance for the second quarter of 1925 shows a considerable improvement on that of last year. The total imports, according to the statement of Det Statistiske Centralbureau, were this year 354 million kr and last year 384 million kr. Exports were 252 million kr and 208 million kr respectively. The excess of imports over exports consequently was this year about 102 million kr against about 176 million kr last year, or an improvement of 74 million kr.

Statistics have been published regarding the position of the private banks for the first half-year of 1925. Deposits, which in January were 2,081.6 million kr, fell to 2,020.4 million kr at June. The reduction appears to have taken place mainly during the first quarter; the last two months show little change. Loans were at January 2,119.1 million kr, and at June 2,110.9 million kr, or only about 9 million kr down. There is, unfortunately, some increase in unemployment. On August 10th the total was 9,231 persons, as compared with 8,786 on July 10th. In August, 1924, it was 5,350.

JUGOSLAVIA.—HARVEST PROSPECTS—LOWERED INTEREST RATES AND EXPORT DUTIES—BUDGET SURPLUS—TARIFF INCREASES.

(FROM OUR CORRESPONDENT.)

BELGRADE, August 11.

ALTHOUGH reports are not yet complete, it is certain that this year's harvest will exceed even the abundant yield of 1924, as the area of cultivation is larger and the quality of corn better. Wheat alone was somewhat damaged by rains in July, but plums, which failed entirely last year, are very plentiful. The surplus of maize for export is estimated at 80,000 trucks, and that of plums at 4,000. The total export capacity for the 1925-26 season is calculated at 12,000 millions, as against 10,000 million dinars in 1924-25. Of this amount, 1,200 represents wheat and 750 millions eggs.

It is owing to such prospects that Viennese banks, anticipating a heavy export season, started buying dinars in advance in June, and sent them down from a sterling rate of 290 to 270. Italian traders have also hastened to buy dinars, especially because of the continual fall in the lira. This large influx of money from abroad has had a beneficial influence in bringing down the rate of interest. Thus, while at the beginning of the year the interest rate was still about 18-22 per cent., the banks began to offer in July at 18 per cent. and below, and reduced the interest on deposits by ½ per cent. This explains the transfer of many investments to Government stock, which consequently rose considerably.

Besides the lowered interest rate, a reduction of some of the freight charges, notably on timber, and of most of the export duties, has done much to remove the danger of the threatened deadlock in Yugoslav export. Export duties have been decreased from 1.30 to 1 gold dinar per 100 kgs. on wheat, from 0.80 to 0.50 on maize, rye, and oats, from 2 to 1 on beans, by 50 per cent. on cattle, horses, and wood, while hay has been freed altogether. A further stimulus to export has been supplied by the fall of internal prices—the first serious fall since the war. Thus the index, which was highest in December, 1924—viz., 2,112—registered in April, 1925, 2,004; in May, 1,933; in June, 1,842; and in July, 1,785—i.e., a fall of over 11 per cent., which roughly corresponds to the improvement of the dinar since December, when it quoted about 300.

In addition to this economic advancement, the solution of the political friction between the Serbs and Croats by the formation of a coalition cabinet of the Pashitch Radicals and the Raditch party, has helped not a little towards a definite feeling of economic stability and optimism in the agrarian and business world. It is certainly remarkable that, while doubting its permanency, the Opposition has approved of the new coalition as very beneficial to the country. The state of the Government finances has also given confidence. The budgetary year 1924-25 has realised receipts of 11,190 millions, and expenditure of 10,599 million dinars, as against an estimated balanced budget of 10,405 millions, thus giving a surplus of 611 million dinars. Direct taxation alone yielded 1,519 million dinars, where the estimate was 1,369. Parliament has voted four more "twelfths" of the 1925-26 Budget, making a total of eight, the total estimate for the year being 11,910 million dinars.

The actual export figures for the first six months of 1925 are:—

	Tons.	Gold Dinars.
Export—January-June, 1924..	1,584,939	288,788,070
" " 1925..	2,146,337	379,699,845

giving an increase of 35 per cent. in tonnage and 31 per cent. in gold value.

While export trade is satisfactory, import trade has been stagnating since the publication of the new import Customs tariff, which is protectionist in character. Some of the more important increases are:—Coffee, 50-80; tea, 100-120; oil, 40-50; benzine, 10-13; rice, 10-16; soap, 30-60; lemons, 10-20; and artificial dyes from 10-20. The tariff for textiles is also much stiffer, varying according to kind, while that on motor cars has been raised from 6 per cent. to 30 per cent. of their value. The lowering of the Customs *agio* from 12 to 11, and then to 10, together with the improvement of the dinar, has since done somewhat to ease the situation, but it is hoped that much more will be achieved by the revision of many of the charges demanded by the merchants.

TURKEY.—FOREIGN AID—SMYRNA DRIED FRUIT—COTTON—BANKING—AIDIN RAILWAY.

(FROM OUR CORRESPONDENT.)

SMYRNA, August 15.

THE political situation at present is fairly steady, which means that Turkey is having an opportunity to devote itself to internal rehabilitation and economic reform. The execution of forty Kurdish chieftains and insurgents last June closed the chapter of that rebellion. The next important question to face the Government is the decision about Mosul; Turkey is insistent as to its claims and rights to the province, and will likely cause as much embarrassment as possible in the event of a verdict unfavourable to Turkey.

Foreign business interests are active at Angora, and concession hunters are numerous. The Government so far is making encouraging promises and offers, but in reality is making business difficult by stupid methods and dilly-dallying, with neither satisfying terms nor sufficient security. The tendency toward protectionism is dying away slowly, but not nearly rapidly enough for the country's interests. Turkey is still unwilling to admit outside assistance or capital, and discourages the import of foreign goods which might affect native industry adversely. The exchange has been steadily declining over a long period, on account of the annual budgetary deficits and the country's unfavourable trade balance every year. Temporary recoveries, as at the present moment, are not very reassuring when a general retrograde trend is evident.

The criticisms levelled earlier in the summer against the Smyrna dried fruit industry did not succeed in diverting to Empire sources the British import business in dried fruits, chiefly for the reason that the seasonal difference of Australian and New Zealand production is too great to adapt it to English needs. The agitation caused by Dr Haden Guest's exposures of Smyrna packing methods will, however, have served a good purpose in stimulating a more careful attitude and better sanitary precautions in the packing houses. It is suggested that the American practice be adopted of having a regular Consular officer specially appointed to inspect and supervise the packing, and to certify all fruit exported to Great Britain as being properly packed. The Department of Overseas Trade has caused an inquiry to be made on the subject.

Turkish cotton production and methods continue to improve. Realising the careless classification and irregularity hitherto existent, the Government is making every effort to make reforms, and to ensure shipment of cotton in a regular and proper manner. The Liverpool Cotton Association is taking an interest in these reforms.

The Banca Commerciale Italiana, the Banca Commerciale Triestina, and several other Italian companies have recently founded a new company for the purpose of trading in cotton, wool, flax, and hemp, and other products of Turkish origin. Branches of the new company will be opened at all the chief trading centres in Turkey, and business, especially exportation, will doubtless be considerably stimulated by this company. Several other new business firms and banks have lately been established, including a Russian Soviet bank, and the National Industrial and Commercial Bank of Turkey, in Constantinople.

An agreement between the Government and the Imperial

Ottoman Bank extends for another ten years the position held by the bank, which thus remains the official financial institution of the Turkish Government.

The Imperial Ottoman Railway from Smyrna to Aidin showed in its last report for the half-year to December 31, 1924, an increase of 12½ per cent. in gross receipts over the corresponding second half-year of 1923, and expenses show a decrease of 5 per cent. The increase in receipts was the result chiefly of a higher tonnage of general goods traffic, which increased nearly 16 per cent. This shows a further recovery of production in the interior, as well as an increasing resort to railway transportation in place of the traditional camel caravans. Railway building in Turkey progresses steadily, and is constantly opening up and tapping new regions and connecting important centres. Most of the building is being carried on by Turkish engineers and native labour, and is mostly financed by the Turkish Treasury, making it a completely Turkish undertaking.

Books and Publications.

BRAZIL'S FIRST CENTURY.*

It was, perhaps, unfortunate that the year of the Brazilian centenary should have proved one of the worst in the country's economic records, when the public credit most needed strengthening, trade had fallen to a low level, and urgent demands were being made for the consolidation of the unwieldy floating debt. The completion of 100 years of independent statehood, coupled with Brazil's entrance into the World War on the side of the Allied Powers, afforded a favourable opportunity for reviewing the actual position of the country extending over a full century of activity. Among other native and foreign writers who availed themselves of this opportune moment, the American author, Mr Herman G. James, has produced a substantial volume, extremely well printed, and covering nearly 600 pages of interesting matter. Its title, "Brazil After a Century of Independence," might, however, have been better altered to, say, "Brazil During a Century of Independence," since the volume before us contains neither figure, fact, nor comment concerning any economic event in Brazil subsequent to 1922. None the less, it contains a great deal of information gathered from admirably translated or skilfully adapted matter already available in Portuguese, and supplied by the Government in preparation for the centenary. Mr James is an American, and throughout his volume, where any personal impressions or conclusions are to be found, they are mostly presented from an American point of view.

All who wish well to Brazil and its people would have liked to have seen the centennial solemnised under conditions more satisfactory from the point of view of the country's national finances. But the financial cloud in which the largest of the South American Republics has been shrouded of late has not entirely lifted. In view of the source, however, from which the author has drawn the greater part of his information, this fact has been treated leniently, and, as a record of history, is little to be depended upon.

The book is divided into 16 chapters, four of which are devoted to early history, and the remainder to subjects such as governmental system, natural resources, population, agriculture, industries, foreign commerce, and transportation. It is to be regretted that so little individual attention should have been given to the latter subject, the description of the railways of the country occupying little more than 16 pages. Considering that the State's railways, although no doubt insufficient for so vast a country, number no fewer than 50, this allotment of space cannot be regarded as generous or helpful. Moreover, we look in vain for any mention of such important systems as the Great Western (of Brazil) or the Leopoldina, both British-owned, while a few words only are devoted to the equally important Government-owned Central Railway. Nevertheless, during the years covered by Mr James's volume the history of these Brazilian railways went through

several striking phases which, at least, should have been recorded.

Upon more than one page of his book the author recommends Brazil as a favourable country for foreign investment, as no doubt it is. The best local investments, however, are unknown in this country, and find no mention in Mr James's volume. The local stock exchanges (Rio de Janeiro, Sao Paulo, Santos, &c.) deal daily in hundreds of different securities which pay their shareholders regular quarterly, half-annual, or annual dividends at rates ranging between 10 and 25 per cent. per annum. There is, however, the other side of the question upon which the author remains equally silent. British investors have lent substantial sums to Brazil, and have experienced temporary suspension of solemnly-contracted obligations, not all of which have yet been regulated. There are still five Brazilian loans—provincial and municipal—figuring on the Defaulters' List, coupons being in arrear and principal outstanding.

The long-sustained efforts of the Great Western (of Brazil) Railway to maintain a mere existence against the hostile policy of successive administrations are not referred to, any more than are its lines described; the years of endeavour made by the Leopoldina Railway to obtain the tariff concessions, indispensable to its continuance, are ignored. While, yet again, the misfortunes attending the Port-Alegre-New Hamburg (Brazilian) Railway Company, whose hopeless task of extracting compensation from the Rio Grande do Sul Government, constituting an important chapter in Brazilian economic history, find no mention, nor yet the case of the Rio de Janeiro Harbour and Docks Company, which fell well within the period covered by Mr James's book, extending, in fact, over 12 years.

Moreover, while President of the Board of Trade, Mr Stanley Baldwin, in reply to an interrogation put by Sir John Norton Griffiths in the House of Commons, publicly deplored the act of the Brazilian Government "in granting substantial favours to 16 American and eight Belgian products against the interests of British merchants," while the threatened application of other discriminating and destructive tariffs against British imports was only averted by strong diplomatic action. Such happenings as these should find place in any history that purports to be an authoritative account of a country's economic progress.

AGRICULTURAL DEBT IN THE PUNJAB.

This book presents in a vivid narration of the remarkable material development of the Punjab during seventy years of British rule; the work teems with facts and figures, and Mr M. L. Darling writes with authority on every aspect of rural economy*. The author describes the Punjab peasant with sympathy and knowledge, and shows insight into the psychology of the sturdy races which did so much for the Empire during the Great War.† The Punjab is agriculturally the most prosperous province in India, and it is probably also the most indebted, but debt reflects prosperity rather than the reverse. Debt and credit have gone hand in hand, and this is the author's central theme. Under Sikh rule the State took all the spare produce and nothing was left on which the cultivator could borrow. The British Government "converted collective into individual ownership of land, plus the right to alienate it at pleasure. By so doing an unconditional gift of a valuable estate was made to every peasant proprietor in the Punjab, and his credit was raised from the former limit of the surplus of an occasional good crop to the market value of the proprietary right conferred." It is not surprising that the moneylender was most accommodated, and that an improvident and illiterate peasantry exploited their new opportunities to the full. The drastic remedy, and led to the passing of the famous alienation Act of 1900, which forbade permanent alienation to non-agriculturists. This was followed by an Act to encourage and regulate the practice of economic

* "The Punjab Peasant in Prosperity and Debt." By M. L. Darling. I.C.S., with foreword by Sir Edward Maclagan. (London) Oxford University Press. 1925. H. Milford. Pp. 298. 14s net.

† Nearly half-a-million Punjabis (from a total population of 21 millions) served, most of them abroad.

co-operation by means of co-operative credit societies, "the most useful and the most hopeful means of dealing with the problems of agricultural credit." The Punjab Government has devoted much care and attention to this Department, and Mr Darling has an excellent description of its manifold activities.

Agriculture is the only important industry in the Punjab, and the peasant proprietor is everywhere predominant; he is the steel frame of the rural structure. The climate is dry with extremes of heat and cold. Rainfall is precarious, but twenty thousand miles of canals and distributaries, all made within the last sixty years, have secured one-third of the province from famine. Man is safe though cattle may suffer severely. The soil on the whole is fertile, and produces two harvests a year; wheat is abundant, and there is a big surplus in the canal colonies. The village community is still largely self-governing and self-sufficient. Eight acres appears to be the size of the average cultivated holding. The problem of debt is mainly that of the small proprietor. The fact of wide-spread indebtedness is patent, but there is a dearth of exact information in spite of many inquiries. The question is obscured by political prejudice, while the interplay of economic causes is hampered and complicated by caste, custom, religion, superstition, ignorance and oriental fatalism. There are many tribes, which belong to no less than three great religions—Hindu, Mohammedan, and Sikh. Our author finds that more than 80 per cent. of the proprietors are in debt. Much of the debt is unproductive, and probably half of it is unsecured. The cultivator's chief extravagance is his love of ostentation and litigation. Marriage now absorbs a full year's income, as there is a shortage of women, and brides are costing more and more. Mr Darling calculates that liabilities are equal to about three years of net income. Still, in any Western country a debt of £50 millions would be considered very small for a population of 21 million inhabitants. The standard of living has much advanced in recent years. Since 1868 population has expanded by 22 per cent., and cultivation by 50 per cent. The value of land per acre has increased from Rs.10 (in 1866) to Rs.198. Prices of agricultural produce have risen over 50 per cent. in the last ten years. But debt has doubled in thirty years, an increase which coincides with a period of unexampled prosperity and development. Outside India similar influences have been at work. The great increase in peasant indebtedness in Europe during the latter half of the nineteenth century was due *inter alia* to a rise in the value of land.

Mr Darling concludes on a note of chastened optimism. Unearned prosperity is illusory. In a country where marriage is a religious duty and is consummated at an early age, material blessings are soon neutralised by an increase of population. The author advocates reasonable and intelligent co-operation, education, and self-control.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, September 9. ACCOUNT, September 10.

No expectations were entertained this week by the Stock Exchange of a reduction in the Bank rate. The tendency of the money market has been a shade harder, and, in consequence, the buying of gilt-edged stocks suffered something of a pause. Various scrip stocks weakened a trifle and Conversion 3½ per cent., now quoted ex dividend, is a trifle lower on the week, allowing for the deduction from the price of £1 8s per cent. net interest payable on October 1st.

The foreign market is good. Most of the Brazilian bonds have risen, thanks to the improvement in the milreis and to the rise in the price of rubber. A dozen Chilean prices have been marked up one or two points apiece. French Government bonds strengthened substantially by reason of the result of the visit of M. Caillaux to London. Mexicans advanced on rumours of recognition. What are called the Reconstruction Loans of Middle Europe have hung fire, but Foreigners as a whole present a very firm front, and the bonds are being bought fairly extensively by the speculative investor. Argentines are harder for the sentimental reason that the visit of the Prince of Wales has attracted attention to these securities. Chinese issues are being picked up by the bolder purchasers,

VENEZUELAN OIL CONCESSIONS, LIMITED, announce that Well R.31 at La Rosa was brought in on August 19th from the second oilsand at a depth of 2,059 feet. The initial production was unsteady at the rate of about 350 tons per day through a 1½-inch flow-plug with 150 lbs pressure.

COMPANY MEETINGS, &c.

THE AMALGAMATED PRESS (1922), LIMITED.

SATISFACTORY RESULTS OF YEAR'S BUSINESS.

RECORD ADVERTISING REVENUE.

SUCCESS OF OLD AND NEW PUBLICATIONS.

The ordinary general meeting of the Amalgamated Press (1922), Limited, was held, on the 27th instant, at the Memorial Hall, Farringdon street, London, E.C.

Sir George A. Sutton, Bart. (chairman of the company), presided.

The notice convening the meeting and the auditors' report were read by Mr J. R. Sumpter (joint secretary).

The Chairman said:—Gentlemen, although we are met here to-day at a time of acutest industrial depression, the report which I have the pleasure to present to you shows so little reflection of the prevailing troubles that you will, I am sure, consider it highly satisfactory.

The profits, as you will have seen from the balance-sheet which has been placed before you, amount to £541,199 5s.

INVESTMENTS.

Before I proceed to comment very briefly upon the year's activities, I would mention an item in the balance-sheet which perhaps calls for some explanation. It is that of investments, the total of which has been considerably increased since last year.

The ideal form of investment for a company such as ours is one which produces revenue, and at the same time insures the business against shortage of the essential supplies which are so regularly required, and in continuance of this policy we have during the year increased our holdings in the Anglo-Newfoundland Development Company, Limited, and the Imperial Paper Mills, Limited, by the purchase of further preference shares of these two companies, thus strengthening our position with regard to the supply both of mechanical pulp and manufactured paper.

We have also increased our holding of Five per Cent. War Loan by the purchase of a further £50,000 of the stock at a price slightly below par.

As it is common knowledge—and I have made it my first remark—I need not accentuate the fact that the past year, in the matter of trade depression and abnormal unemployment, has been one of the worst ever known. Indeed, for a state of things at all comparable with the industrial plight of the present time, it would probably be necessary to go back to the period immediately subsequent to the Napoleonic wars.

NEW PUBLICATIONS.

For this reason the working year just completed has not been a favourable one for the starting of new periodicals and magazines, yet during that year—in addition to remodelling and bringing up to date with marked success some of our existing papers—we have launched three new fortnightly publications, on the lines which have won so much approval from subscribers in every part of the world. These are:—

Harmsworth's Home Doctor,
The Harmsworth Children's Music Portfolio, and
The Harmsworth's Business Encyclopædia,
and in *The Children's Pictorial* we have issued an illustrated weekly companion paper to *The Children's Newspaper*.

But I am especially pleased to be able to tell you that your older-established papers have done well. *Answers*, in particular, has maintained its position as the predominant popular periodical, while *Home Chat*, *Woman's Weekly*, and *Woman's World* all, I am glad to say, show gratifying increases of circulation over the previous year.

RECORD ADVERTISING REVENUE.

Then again you will, I know, be pleased to hear that, despite the long-continued trade depression, the revenue from advertisements during the past year was the largest in the history of the company. Last year's record total has been exceeded by a generous margin—a very noteworthy achievement indeed.

The continuous growth of advertisement revenue is the best evidence you could wish of the ever-growing popularity of your magazines and periodicals among advertisers and advertising agents. So great, indeed, has been the demand for space in three of them, *Answers*, *Home Chat*, and *Woman's Weekly*, that we have had to make certain increases in the advertisement rates. The net sales of each of these three papers are, of course, very much larger to-day than when the original rates were fixed, and I have no

hesitation in saying that they will continue to prove themselves increasingly excellent and profitable media.

Other periodicals of yours have also beaten all their previous advertisement revenue records, but these I need not specify. Taken together, the publications of the Amalgamated Press constitute a self-contained national publicity machine unrivalled in the world. They offer to every advertiser (but especially to advertisers appealing to women) facilities and opportunities for profitable business on the widest scale. Every year, I might almost say every month, sees an addition to the number of advertisers who recognise and avail themselves of the advantages offered by your great groups of media.

INCREASING COSTS.

Now, I would not have you suppose that in a time of national trade depression your directors have found any golden road to prosperity unknown to others. It might be thought we were treading it with these increases of revenue in view, but I must point out that against this increased advertising revenue we have the continual increase in costs of production in all departments. There has been little alleviation of the crushing taxation from which all businesses are suffering.

PULP MILL, PAPER MILL, INK FACTORY ASSETS.

As I pointed out last year, this company does not derive its entire profits from the sale of periodicals and magazines. The Imperial Paper Mills, in which we hold the controlling interest, is now the second largest paper mill in the country, and, in addition, owns a controlling interest in timber limits in Canada. Further, your share interest in the largest printing ink works in the country, and your vast printing and publishing factories, place us in the fortunate position of being a great self-contained organisation.

THE FUTURE.

In conclusion, I wish I could offer you a hopeful forecast of the industrial future, but at present there are, unfortunately, few signs of any lifting of the clouds of trade depression and unemployment. When the trade revival comes, however, as assuredly it must, this company—by reason of its great resources and its financial strength—will be able to take full advantage of any opportunities that present themselves. A business such as ours is quickly sensitive of benefit in times of prosperity. More than that it would be unwise to say as to the future, but I would add that at the moment the indications for next year, so far as they affect our activities, are not unfavourable.

I now have to move: "That the report of the directors produced, together with the annexed statement of the company's accounts at June 30, 1925, be received, approved, and adopted, and that a final dividend for the year of 2s a share, less income-tax at 4s 3d in the £, be now declared on the ordinary shares." I will ask the vice-chairman, Mr Linforth, to second the resolution.

Mr Arthur E. Linforth (vice-chairman): I beg to second the resolution.

There being no questions or comments, the resolution was put to the meeting and carried unanimously.

Mr C. B. Rawlings then proposed the reappointment of the auditors, Messrs Turquand, Youngs, and Co., and Messrs E. Layton Bennett, Sons, and Co.

Mr Charles Steele seconded the resolution, which was unanimously agreed to.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS, AND STAFF.

Mr Wm. Haley: Mr Chairman, I have no question to ask, but I should like to offer you, sir, the warmest congratulations of all present on the wonderful report you have produced under most difficult commercial conditions. We, as shareholders, have every reason to be gratified with the excellent results produced. The figures speak for themselves. Now, such results could only be produced by the closest co-operation of all departments and by harmonious working for the common good of the company, and we, as shareholders, would be very lacking in common gratitude if we did not express our hearty and sincere thanks to those responsible. A remark was passed years ago in my hearing that "there are directors and directors." The inference of that remark is obvious, but I can assure you, with a fairly close association of 30 years with this company, that you need have no misgivings as to the directing powers of our present board. Through our esteemed

chairman, Sir George Sutton, and the no less esteemed right-hand colleague, Mr Arthur Linforth, and their colleagues all the elements of energy, enterprise, and enthusiasm are radiated through the many branches of this wonderful business. The outlook, as you have said, Mr Chairman, cannot be analysed, but we, as shareholders, may rest assured that the affairs of this company are in the hands of most capable men, and in thanking you we offer you our fullest confidence, and we can safely anticipate continued success. I have pleasure in moving that the best thanks of this meeting be given to the chairman, the directors, and the staff.

Mr E. S. Baring Gould seconded the vote, which was unanimously accorded.

The Chairman: I am much obliged to you for the kind words with which you have proposed this resolution. I can only say, as I have said in previous years, that we will continue to do our best, and I hope the trade position for the current year will give us some encouragement. Gentlemen, I thank you, and that concludes the business of the meeting.

ILLINGWORTH, MORRIS, AND COMPANY, LIMITED.

DIFFICULT TRADING CONDITIONS.

The fifth ordinary general meeting of Illingworth, Morris, and Co., Limited, was held, on the 26th instant, at the Cannon street Hotel, London.

Sir Arthur H. Marshall, K.B.E. (the chairman), in moving the adoption of the report and accounts, said:—I regret that the report and balance-sheet show a very heavy loss on the year's working. The hope expressed at the last annual meeting of a better year has not been realised. But, taking the figures as they stand, the actual trading loss is certainly, though serious, not one that is out of proportion to those experienced by other manufacturers engaged in similar business. Towards the end of 1924 there was a slight improvement, but this was followed by a further fall in wool prices and a period of unprecedented bad trade. Taking worsted tissues alone, on a completed seven months ended July 31, 1925, our national exports show a decline of practically 4,000,000 square yards, or about 12 per cent., as compared with the corresponding period in 1924. A general trade depression has, of course, also affected the purchasing power of the home community. There, in a few words, is the explanation of the losses recorded in this balance-sheet.

STRICTEST ECONOMY.

In face of this general situation it was necessary to go most carefully into the possibility of organising the business of the company on the basis of the strictest economy. The London offices of the company have been transferred to Bradford, which is the natural centre of all our manufacturing and trading, and affords our managing director, Mr. Turner, an opportunity for the closest supervision. With added responsibilities which he and his technical colleagues have undertaken for the present, expenses have been reduced, and that without any loss of efficiency. It has been a very difficult period of trade, and upon the managing director the heaviest responsibilities have devolved, and these he has shouldered with characteristic courage. His work and the directing force of his skill and energy have kept down the actual trading losses.

I cannot emphasise too strongly the fact that, after most careful observation and personal investigation, I am convinced that, if production costs at each of the company's mills are such that, if and when full time working becomes possible, our results will be very different from a profit-making point of view. If we can reach stability of prices in raw material it is probable that a demand for yarn will increase, and I do confidently assert that, when trade improves, the company's works are likely to be among the first to benefit, as the quality of our production is known to every manufacturer. I move the adoption of the report and balance-sheet, and call on the managing director to second the motion.

MANAGING DIRECTOR'S STATEMENT.

Mr F. W. Turner (managing director):—As Sir Arthur has already stated, at the time of our last annual meeting trade appeared to have taken a turn for the better, but, unfortunately, this was not continued. There was, first, the disturbing influence of a General Election; and then early in the present year a fall in wool values set in, and by the end of May we had experienced a drop of approximately 40 per cent. This naturally had a most adverse effect upon the trading returns of our subsidiaries, and also on the values of the various stocks held. These were properly depreciated at stocktaking, and since then values have been steadier. Taking this tremendous fall into account, I wish to say that, in comparison with the results of firms of a similar size, we have every reason to congratulate ourselves upon the smallness of our trading losses. At the same time, it must be borne in mind that, until we can run all our factories full time, the present-day costs of pro-

£700,000 IN A YEAR

duction are so heavy that profit-making will continue to be a difficult matter.

As regards the factories, they are all now very well equipped, and if and when trade does revive we are in a splendid position to take advantage of any such revival. The reconstruction of Zetland Mills has enabled us to install about 20 per cent. more spinning machinery than they formerly held, because of the transference of the dyeing department to our central dyeworks. These mills now are among the best in the district, and are fitted throughout in the best possible manner.

I wish to take this opportunity of thanking all my colleagues at the various branches for the loyal support they have given me during the last 12 months, without which we could not have accomplished what we have done.

The motion was carried after some discussion.

THE AMALGAMATED DENTAL COMPANY, LIMITED.

BENEFITS OF THE FUSION.

The annual general meeting of the Amalgamated Dental Company, Limited (formerly Claudius Ash, Sons, and Co., Limited, and De Trey and Co., Limited), was held, on the 27th instant, at the Cannon street Hotel, London.

Mr E. Russell Polden (chairman of the company) presided, and in moving the adoption of the report and accounts, having referred with regret to the death of Mr W. H. Ash, dealing with the accounts, said that the board felt that they could adopt no other course than the prudent one of placing £40,000 to reserve, which was the only avenue at the present time for providing the necessary resources for expansion of business. This policy might be a disappointment to holders of deferred ordinary shares, but he would say in the case of either a De Trey or a Claudius Ash ordinary shareholder who still retained a full holding under the amalgamation scheme, that the dividend return was somewhat better than in respect of 1923.

The Chairman continued: The fusion of our two businesses naturally causes an amount of overlapping and redundant energies; these difficulties are gradually being straightened out, with the result, the directors believe, of a definite saving of superfluous exertions in certain directions and greater concentration in other ways where there is definite scope for development.

Our company with its subsidiary and associated companies and sole agencies is now the greatest dental sales organisation in the world, and can supply the dentist with everything that is necessary to enable him to satisfy the requirements of the most exacting of his clients. The teeth, equipment, instruments, and other articles we manufacture and sell are of the best quality, and our prices are based so as to give us a reasonable profit, and compare favourably with the prices charged by other firms catering for the dental profession.

Although the movement is slow and the horizon still far from clear, I think, in comparing the position with this time last year, that we may say that on the whole the outlook in Europe appears to be somewhat brighter and that serious efforts are being made to adjust political differences.

Our organisation is being concentrated and strengthened throughout the world, our policy being to leave no stone unturned for the further expansion of the business, and I can safely say that when we take into consideration all our subsidiary and associated companies, that our efforts know no rest, that is to say, that night never

intervenes for a moment to completely check our activities throughout the world.

Mr Percy C. M. Ash (a managing director) seconded the motion, which was carried unanimously.

W. H. CHAPLIN AND COMPANY, LIMITED. SATISFACTORY RESULTS DESPITE DIFFICULTIES.

The twenty-eighth ordinary general meeting of W. H. Chaplin and Co., Limited, was held, on the 26th instant, at Winchester House, London, Mr Percy F. Chaplin presiding.

The Chairman, in moving the adoption of the report and accounts, said: Having regard to the general depression which still unfortunately continues both in this country and elsewhere, your directors think that the results should be considered satisfactory. The profit for the year amounts to £50,006 15s 9d. Dividends have already been paid on the preference shares at the rate of 5 per cent. and an interim dividend at the rate of 10 per cent. has been paid on the ordinary shares. From the balance of profit remaining the directors recommend that a final dividend be paid on the ordinary shares at the rate of 10 per cent. per annum, making in all 10 per cent. for the year. This, with other appropriations in accordance with the articles, leaves a balance of £30,943 16s 8d to be carried forward to next year's accounts, subject to liability for adjustment of excess profits duty and corporation profits tax, which has not yet been agreed. During the year under review our trade has been suffering, with others, from the general scarcity of money. The present very high spirit duty is rapidly making itself felt, accentuated by the decreased spending power of the public. So much is this the case that the actual home consumption is considerably less than half the consumption of six years ago.

We have referred in our report to the acquisition of new and enlarged premises in the Minorities. We have been in occupation of a part of these premises for some months, having transferred our bonded warehouse to that site, and the new bond is working very efficiently and showing the company considerable saving. At the end of this week we hope to move from Mark lane to the same address, where we are just completing new and more commodious offices, which, we hope, will enable us to work with increased efficiency. Our Scottish branch has entered its fourth year of trading, and shows increasing turnover and again improved results for the year. The company's brands "Concord" port and

"Bowen's Old Invalid" port have continued to enjoy their established popularity, and the sales of "Long John" whisky show a very satisfactory increase over the sales of the previous year.

Our tobacco department continues to expand and show satisfactory results. The company's stock has been well maintained, and is valued on a conservative basis.

Mr George McKechnie seconded the resolution, which was carried unanimously.

Messrs Samuel Montagu and Co. write on August 26th as follows:—

GOLD.

The following movements of gold to and from the Bank of England have been announced since our last letter:—

Aug. 20	Received.	Withdrawn.
" 21	nil	nil
" 22	nil	nil
" 23	nil	17,000
" 24	nil	258,000
" 25	nil	558,000
" 26	nil	558,000

Of the above withdrawals, £100,000 was in the form of sovereigns, the destinations of which were given as follows:—£55,000 to India, £18,000 to Straits Settlements, £17,000 to Java, and £10,000 to Singapore. During the week under review £833,000 on balance has been withdrawn from the Bank. The net influx since the resumption of an effective gold standard is now £7,351,000. The prohibition on the exportation of gold coin, gold bullion, and fine gold bars from Canada, except under licences issued by the Minister of Finance, has been further continued from July 1, 1925, to July 1, 1926, by proclamation of the Governor-General. The following figures last—Imports of private merchandise, 17,74; exports of private merchandise (including re-exports), 28,26; net imports of gold, 2,56; net imports of silver, 1,99; net imports of currency notes, 3. The total visible balance of trade in merchandise and treasure was Rs. 6,09 lacs in favour of India. The balance of Government transfers of funds was Rs. 2,54 lacs against India.

SILVER.

There has been a quiet and steady market during the week; owing to stronger advices from China the undertone is fairly good. At present no wide movements in prices seem likely, though, as the year progresses, the satisfactory monsoon in India ought to create a healthy demand from the Indian bazaars. America has again been a reluctant seller, and the Continent has not figured importantly either as a buyer or a seller. Owing to a change from silver to nickel coins, Norway is disposing of a quantity of small silver pieces equivalent to about 3,000,000 fine ounces, which may eventually be sold in this market. No fresh Indian currency returns have come to hand. The stocks in Shanghai, on the 22nd inst., consisted of about 58,300,000 ozs in sycee, 50,000,000 dollars, and 4,100 silver bars as compared with about 58,800,000 ozs in sycee, 49,000,000 dollars, and 3,580 silver bars on the 15th inst.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The situation has remained practically unaltered during the past week, and there are strong anticipations of a revival in business in iron and steel in September. There has

METALS.

Tin values pursued a downward course, despite comparatively steady advices from the East, the tone being influenced by liberal selling orders which were somewhat reservedly met. Movements consequently were attended by slight irregularity. Standard cash sold at £257 2s 6d to £253 7s 6d, three months £260 15s, £259 5s, £260, and £256 5s. Sales in the East were reported at £265 15s, £265, 265 10s, and £264. Copper also marked a steady decline, in face of selling pressure and lower American advices, though offerings were fairly well absorbed. Standard cash sold £63 2s 6d to £62 10s, three months fluctuating between £64 2s 6d to £63 2s 6d. Lead irregular, while accorded good support. Good soft foreign pig September sold £38 8s 9d to £39 5s and £38 8s 9d, October £37 15s to £38 2s 6d and £37 12s 6d, November £37 2s 6d to £37 12s 6d and £36 16s 3d, December £36 17s 6d to £37 3s 9d and £36 17s 6d. Spelter slightly irregular and on balance the turn easier, but dealings were on a fairly liberal scale. September sold £36 16s 3d to £36 13s 9d, October £36 13s 9d to £36 10s, November £36 12s 6d to £36 6s 3d, December £36 8s 9d to £36 3s 9d per ton. Antimony firm. English specials quoted £75 to £85 as to make and quantity, foreign refined £64 10s to £65 10s per ton ex warehouse. Aluminum: English quoted at £120 to £125 ton. Quicksilver quiet. Spot quoted £13 15s per bottle. Wolfram firm. Spot 18s 6d to 10s per unit.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market presents a more normal appearance to-day, work having now been resumed throughout the West Riding. On the whole, more interest is displayed in wool than in its products, the strange thing being that the raw material can be sold at remunerative prices, whereas both yarns and tops are pence per lb below to-day's replacement values. The explanation of this anomaly is to be found in the demand from America and the Continent. It is known that France is buying heavily in Australia—indeed, French buyers appear to be setting the pace in the primary markets—and American and Japanese support is also freely given. There is not much quotable change in topmakers' quotations for spot delivery, but most firms are more difficult to deal with for forward delivery. Wool values are being so well maintained that most sellers of tops are now either wanting more money for future delivery or extended dates. Spinners have recently booked a fair amount of new business, but prices generally are anything but satisfactory. Perhaps the most hopeful feature is the renewed interest in worsted fabrics, some substantial orders having been booked recently in both plains and fancies.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

A three days' series of sales has been held at Brisbane this week. The quantity catalogued was 34,000 bales, and should include a fair quantity of new clip. It will be most interesting to have details of the prices realised. We suggest that when the selling brokers cable the results it will be a good thing to mention half a dozen clips and the highest price made. From the price catalogues to hand this mail, the values ruling on July 15th appear to have been reasonable. The whole of the Katandra clip, which was new wool, was withdrawn, only 23d being bid for the top line of combing, buyers clearly thinking of wool in very different terms from those of the last four months of 1924.

According to all the reports received, the Queensland clip will be lower in quality this season, the sheep having been on fat pasture during the whole of the year, which always encourages the growth of a somewhat stronger staple. The Queensland clip this season should be larger than ever. It is to be hoped that Queensland pastoralists will not put themselves out of the way to produce large bodied sheep growing wool of no more than 64's quality. They have made a name for the production of good 70's fleece, and will make a mistake if they follow the same policy as South Australia, West Australia, and the Riverina and produce big, shaggy wools, for these will not sell anything like as well as good 70's fleece during the coming season.

Last week-end a cable issued from the Prime Minister's department in Melbourne stated that the forthcoming clip in Australia was expected to reach 2,300,000 bales. This will be a record clip. Our chief concern is not so much the quantity of wool in sight as the ability of the trade to absorb it. The manufacturing industry in this country is in anything but a satisfactory condition. Bradford importing topmakers are still struggling with last season's dear purchases, and until these have been cleared further buying cannot be expected to show any real freedom. Surprise has been frequently expressed at Bradford's buying so little in Australia since the resumption of the sales, but this is entirely due to the serious losses incurred. Prices will have to be very reasonable to tempt buyers, or manufacturing conditions will have to show a very great improvement.

THE COTTON TRADE.

MANCHESTER, August 27.

A bearish sentiment continues in the Manchester market. The undercurrent of inquiry has been encouraging, but buyers display no inclination to operate on a free scale, owing to nervousness as to whether prices will be maintained. This attitude has been borne out by the easier tendency in raw cotton rates since the beginning of the week. Manufacturers of cloth generally have reported rather a slower demand than recently. There has been less business offering for India, and only unimportant sales have taken place, chiefly in light cloths and fancies. Most of the offers in grey staples have been roughly 5 per cent. out. Improved advices have continued to be received from China, and considering the chaotic state of affairs prevailing in that country, the turnover can be labelled as good. Spinners are gradually improving their position, and very few sales are taking place which show a loss.

VEGETABLE OILS AND OILSEEDS.

Markets generally have been quiet during the week. Linseed oil has continued to fall in sympathy with seed, until £40 has now been touched for spot and September-December delivery. The premium on spot oil has about disappeared. A fair trade with consumers has been done at the lower levels. Cotton oils are active, and are not so firmly held, current values being £43 per ton, naked, ex Hull mill, for crude Egyptian, and £43 10s for ordinary refined. Soya and palm kernel oils are in poor demand, and are somewhat cheaper to buy. Ground nut oil is unchanged, and rape oil 10s per ton dearer.

In the oilseed section, the feature has been a further decline in Plate linseed. For seed to Hull, £19 7s 6d has been accepted for August-September, and £19 10s for September-October, while for Calcutta to London, August-September, £21 10s has been paid. New crop Plate has been dealt in at £19, January-February shipment. Egyptian cottonseed is easier and lower, new crop black now offering at £13 for September and October loading, and £12 10s November-January. The Continent has been a fair buyer of soya beans, £14 5s being the value in near positions.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market remains fairly steady, with a few fractional advances and declines. Best ox sold at Thursday's auctions in Bermondsey from 6½d to 8½d per lb, and seconds from 5½d to 8½d. Best cows at 6½d to 6½d showed a decline of ½d on last prices. Calfskins were a shade weaker, best heavy selling from 7d-9½d, and light at 13½d, declines of ½d to ½d being noted. The S.A. tanned ox now selling at 8½d, and Uruguay held for 8½d, with no of Lagos hides have been made on a basis of 10½d and 12d. The American position is steady, with best heavy packers still selling at 17½ cents. Although there is a slightly better demand for sole but medium and heavy wet-salted are hanging fire. Stocks of lights The upper leather section seems fairly lively, and tanners have advanced prices on some selections by 2d or more per foot. Patent is a good seller, followed by light willow calf, whilst box calf and box sides have been going out in fair-sized quantities. The boot

trade remains quiet. There is a slight improvement in centres specialising on stout artisans' footwear.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 28.

SUGAR.—Market steady, but at the same time generally quiet, with business on spot mainly confined to British refined sugars. Consumption is maintained at a high level in Germany, figures for last July being 172,169 tons, against 114,453 same month last year. Of British refined, Messrs Tate and Lyle's cubes quoted 35s to 36s; crushed, 33s; granulated, fine and coarse, 31s 1½d; No. 1, 30s 10½d; No. 2, also London and T.L.S., 30s 7½d; ditto, month forward, 30s 6d; yellow crystals, spot, 28s 1½d; caster, finest, 34s 10½d; A, 34s 4½d; B, 32s 9d. Crystallized West India sells slowly at 24s 6d to 29s 6d, as to quality. Good muscovado Barbadoes, 25s. Czecho granulated, November-December, 16s 1½d, f.o.b., Hamburg. Dutch granulated, J, spot, 29s 9d; September, 16s 9d; November-December, 16s 1½d, f.o.b., Rotterdam. American granulated, spot, 29s 3d; August-September, London, 16s 7½d; outports, 16s 10½d, c.f. and i. terms. American cables report further business on Russian account, with inquiries from Germany circulating. White Java, spot, 28s 9d; afloat, steamer "Theseus," sold, 16s, c.f. and i., London. Hamburg houses are still willing to pay up to 16s 4½d, c.f. and i. for near at hand, parcels with offers still extremely scarce. White Java, c. and f., Calcutta, October-December, quoted 15s 7½d; and January-March, 15s 10½d. Consumption in Germany for last month, 172,169 tons, against 114,453 same time last year. White terminal steady, and moderate transactions include December, 15s 9d; March, 16s; May, 16s 2½d. Cuban, basis 96 per cent., August-September, 12s 3d, c.f. and i.

COFFEE.—The market maintains a steady tone with fair inquiries for all the better liquoring grades which are reservedly offered. Lower qualities, however, experienced a quiet sale. East India mid colour sold 139s; Kenya, ditto, 127s to 128s; Costa Rica, common bold, 139s to 144s; good greyish-h, 135s; mid greenish, 159s; Nicaragua, good peaberry, 154s; Vera Paz, fair to good, bold 137s 6d to 161s per cwt.

COCOA.—Spot market remained quiet at former level of prices. For shipment, Trinidad, August-September sellers, 73s; Bahia, ditto, 49s 6d; St. Thome, 53s; Guayaquil Epoca, 69s; and Caraquez 66s c.f. and i. Accra F/F grade, October-December, also December-February, 42s 6d f.o.b. terms.

TEA.—Indian offerings at public sales were on a much larger scale than last week, and comprised 54,78 packages. With a better selection available, and quality generally showing improvement, proceedings were marked by more animation than for some time past. All the best liquoring grades were accorded strong support at firm to occasionally dearer rates, while low medium and common teas, although slightly irregular, disclosed weaker features. Pekoe, sold, at 1s 0½d to 1s 4½d; broken orange pekoe, 1s 9d up to 3s 0½d. 28,000 packages of Ceylon were submitted, and good competition prevailed for finest broken and best leaf grades at full to dearer rates, while quality frequently showed a further improvement. Plain medium and common sorts, especially broken, however, were in less request, and values tended in buyers' favour. Pekoe, sold, 1½d to 2s 2d; and broken orange pekoe, 1s 2½d to 2s 5½d per lb. The market for China remained without new feature, business being comparatively quiet for common kinds. New season's Keemun, sold, from 1s 10d to 2s 6d, with a small demand for fine up to 3s 3d per lb in bond. Java and Sumatra sales totalled 6,272 packages. A steady tone governed proceedings, competition being good and well distributed. Pekoe, sold, 10½d to 1s 1½d; broken, ditto, 7½d to 1s 6½d; pekoe souchong, 10d to 1s; orange, 1s 3d to 1s 6½d; broken orange, 8½d to 1s 7½d per lb in bond.

RICE.—Quiet but steady, and there is no new development in the general situation. Two stars, spot, 16s 6d; afloat, 16s; August-September, 16s 1½d, c.f. and i., London, S.Q.; single bags, for shipment, 13s 10½d, f.o.b. terms. No. 1 garden Siam, September-October, 17s 6d. No. 3, Spanish, September-October, 22s 6d; oiled, 23s, c.f. and i., London. Beans and peas meet a quiet reception. Japanese peas, spot, 25s 9d; September-October, 24s per cwt, c.f. and i., London.

SPICE.—Business in pepper proceeded on quiet lines, and prices in forward positions disclosed weakness. Fair black Singapore, on spot, quoted 9d; October-December, L.S., 8½d; Lampong, spot, 8½d; August-October, buyers, 8d; October-December, 8½d; Muntok, spot, 1s 1½d; August-October, 1s 0½d; October-December, 1s 1d per lb. Cloves dull. Fair Zanzibar, spot, 1½d; October-December, sold, 10½d per lb, c.f. and i. Tapioca unaltered on spot. Singapore flake, September-October, to Havre, quoted 18s 9d; October-November, 19s 3d. Penang seed nominal. Sago flour steadier. Sarawak, August-September, sold, 16s 7½d, now quoted 16s 9d; October-December, buyers, 16s 6d. Desiccated coconut, spot, halves, 41s; afloat, 39s 6d; September-October, 39s 9d, c.f. and i. Pimento nominal on spot. August-September, steamer, from second hands, quoted 42s 6d; September-October, 41s per cwt, c.f. and i., London. Shippers have practically withdrawn. Ginger quietly steady.

JUTE.—A steady inquiry was met with a fair reserve, and stability ensued. Firsts, August, Continent, sold, £45; September quoted £43 5s; ditto to Dunkirk, sold, £43 10s; November-December, usual £41 15s; Lightnings, August, quoted £43 5s; Hearts, August-September, £39 15s per ton. Market quiet for both Hessians and twills, but sellers required full prices.

HEMP.—Man la again sparingly offered, and, with a fair demand, a firmer tone resulted. J grade, October-December, sold, £44 5s, £44 10s; K and L, £39 10s; M quoted £34 10s; K, also L, July-September, changed hands at £38 10s. New Zealand largely nominal. African sisal, No. 1 Tanganyika, August-October, £45 10s; Kenya, £45 per ton.

SHELLAC.—Market steady, quiet. Fair T.N., spot, 220s to 225s; October, 210s; December, 205s per cwt.

DATES.—Market steady for shipment, with business in first-tide Hallowee, 19s 6d; second, 19s. Siam, first, 14s; second, 13s 3d cwt, landed terms, London.

COPRA opened steadily and improved, but closed quietly. F.M.S. Straits, July-September, also August-October, to Rotterdam, sold, £29 17s 6d to £30 2s 6d and £30; October-December, £29 13s 9d, £29 18s 9d, and £29 17s 6d. Ceylon, August-September, Hamburg, done £31 7s 6d. South Sea F.M.S., August-September, quoted £29 7s 6d; ditto, smoked, to Marseilles, £29 5s. F.M., Straits, ditto, £29 15s. Palm kernels, July-September, to Liverpool, quoted £21 12s 6d; October-December, £21 10s 10d.

RUBBER.—Market again slightly unsettled at times, with a fair amount of business in force. Plantation standard, spot, and August, sold, 3s 4½d to 3s 5d; September, 3s 4½d to 3s 4½d; October, 3s 0½d to 3s 0½d; October-December, 2s 10½d, 2s 11d, 2s 10½d, 2s 10½d; January-March, 2s 7½d to 2s 7½d; January-December, 2s 4½d lb. Wild quietly steady.

FRUIT (Dried).—Currants in fair demand, and market steady. Pyrgos quoted 30s to 31s; Amalia, 33s to 35s; Patras, 36s to 38s; Gulph, 38s to 41s; Vostizza, 46s to 50s. Sultanias steady. Australian, 65s to 72s; South African, 70s to 80s. Figs quiet. Naturals, in bags, quoted 27s to 29s. Dates spot demand quiet, but forward positions continue in request. First tide Hallowee, 19s 6d; Khadrowie, 17s 3d; Siam, 14s. Raisins: South African, 40s to 50s; Lexias, 42s to 44s 6d. Evaporated fruits in moderate demand. Californian apricots, standard new extra choice, 127s 6d; fancy, 135s; Australian, 120s to 130s; Californian peaches, choice, 62s to 63s; extra choice, 65s to 65s; fancy, 70s. Plums: Oregon, new, size 30/40, quoted 71s to 72s; 40/50, at 52s to 53s; Californian, new, 40/50, 58s to 60s; 50/60, 50s to 51s; 70/80, 45s to 46s. Pears, choice Californian, 90s; extra choice, 102s to 103s. Apple rings, Californian, extra choice, 63s to 64s; Oregon, extra choice, 65s per cwt.

CANNED GOODS.—Sardines dull of sale and rates barely steady Portuguese, ½ flats quoted 4s 3d; clubs, 5s; 12 ozs, 7s 6d; 18 ozs, 12s per dozen tins. Salmon very firm, and red tails sparingly offered. ½ lb, flat reds, labelled, 77s to 78s; tall, 1 lb, 54s 6d to 56s; ½ lb, tall, pink, 25s to 27s. Lobsters meet with good support at full rates. Halves quoted 16s, and quarters up to 100s.

CANNED FRUITS.—In steady request and apricots tend dearer on scanty offerings. Singapore pines quiet. 48-1½'s quoted 86s 6d to 87s 6d; cubes, 2½'s, 13s to 13s 6d; slices, 24-2's, 12s 6d to 13s 6d. South African are moving off quietly on former terms. Californian pears, 15s 6d to 17s; peaches, 12s 3d to 14s; cherries, 13s 6d to 14s; apricots, 10s 0 13s 6d; loganberries, 14s to 16s 6d. Fruit salad, 1½'s, 12s 6d to 14s; 2½'s, 21s 6d to 22s 6d; Australian pears, 24-2½'s, 16s to 16s 6d; Canadian, 14s to 14s 6d.

CANNED MEATS.—Corned beef moves off quietly, but a good demand continues for Danish lunch tongues at steady rates. A few

An International Service

THE Central Union Trust Company of New York is equipped with every facility for the prompt and efficient handling of financial transactions throughout the world. Foreign banks and business houses with banking interests in the United States are invited to avail themselves of this service, which includes the purchase and sale of foreign exchange, collections, and the issuance of commercial and travelers letters of credit. In addition, the Company conducts a general banking business and acts as Executor, Trustee, Transfer Agent, Registrar of Stocks and in every other Fiduciary capacity.

THE MONEY MARKET.

MONEY was in strong demand on Monday, as usual on the last day of a month, but Tuesday brought the beginning of the disbursement of about 29 millions by the Government on account of interest payments and debt redemption. Credit thus became very plentiful, though the banks maintained 3½ per cent. as the rate for weekly fixtures, and large offers of October Treasury bills at 3½ per cent. were suspected to be semi-officially designed to absorb the surplus. At the same time gold continued to go out, and

the dollar exchange continued to go down. These considerations kept the discount market steady, but fine bank bills were still taken at $3\frac{1}{2}$ per cent., and efforts to get a better rate on the weekly batch of Treasury bills had very partial success.

	Sept. 4, 1925.	Aug. 28, 1925.	Aug. 21, 1925.	Aug. 14, 1925.	Previous Rate and Date Changed.
Bank Rate	4 $\frac{1}{2}$	4 $\frac{1}{2}$	4 $\frac{1}{2}$	4 $\frac{1}{2}$	5 (Aug. 6, '25)
Banks' Deposit Rate	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	3 (Aug. 6, '25)
Discount Call	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	3 (Aug. 6, '25)
Houses' Notice	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	3 $\frac{1}{2}$ (Aug. 6, '25)
Market rate (3 months' bills)	3 $\frac{1}{2}$	3 $\frac{1}{2}$	3 $\frac{1}{2}$	3 $\frac{1}{2}$	4 ..

The Bank return showed a reduction of £663,000 in the stock of coin and bullion, £656,000 having been announced as withdrawn for export. The note circulation had expanded by £711,000, and the Reserve was thus £1,374,000 lower, with a decline of 1.8 per cent. to 28.8 per cent. in its proportion to liabilities. The heavy Government disbursements were reflected in an increase of $4\frac{1}{2}$ millions in Government securities, and a decrease of nine millions in Public Deposits. Other deposits were $12\frac{1}{2}$ millions higher. There was a small increase in Other securities, and £99,000 had been added to the Rest, in preparation for the half-yearly dividend. Currency notes for the week were increased by £709,500 to 295,795,700, which includes £1,328,700 for notes called in, but not yet cancelled. The fiduciary issue is £238,217,000, or £9,928,400 below the maximum for the year.

NEW YORK MARKETS.

Our New York correspondent cables:—A pronounced reaction in the share market is the feature of an otherwise quiet week. The selling began in securities in which an excessive speculative account had been built up, and then became more general. Towards the end of the week a rally took place. Little attention is being paid to the anthracite strike, as coal reserves are ample. There is, however, some anxiety lest the trouble should spread to the bituminous coalfields. A moderate improvement in business continues. Railway traffics have touched new high records, but there are no signs of inflationary tendencies. *Dun's* commodity price index number shows a drop of 1.2 per cent. to 161.9. *Bradstreet's* index figure is also down by 1.1 per cent. to \$14.0878. These declines are due to a fall in grain and farm products owing to seasonal marketing. Metals show a slight rise. Call money rates are easier, but acceptance rates have risen by $\frac{1}{4}$ per cent. in anticipation of a pressure of cotton and grain bills. Bankers are not expecting tight money conditions. The Federal Reserve system reports a slight decline in discounts and in Government securities, and further purchases of acceptances. The reserve ratio is 74.8 per cent., as against 75 per cent. last week.

THE STOCK MARKETS.

Although there have been elements of uncertainty tending towards a waiting attitude, capital continues, in the absence of new issues, to flow freely into the stock exchange markets. The gilt-edged section, especially War Loan, benefited from the re-investment of money released by Tuesday's repayment of National War bonds. A strong demand also developed for Victory bonds. In the foreign market Mexican descriptions rose several points on the announcement of British recognition, and speculators were busy with mid-European loans. Home Rails, after an early slight advance, reacted because of the shipping strike. American and Mexican rails improved, but Argentines sagged, and other foreign rails were inclined to ease off. Rubber shares enjoyed renewed activity, and in the oil share market Mexican Eagles were a bright spot. Kaffirs have been good as a whole, while Rhodesian favourites recovered well after a spell of profit-taking.

THE COMMODITY MARKETS.

Conditions in the chief markets are generally unchanged. Iron and steel has not yet shown much animation after the holidays, and the works are short of orders, but a slightly more hopeful feeling is, nevertheless, gaining ground. The coal markets remain depressed, price concessions having

failed to stimulate demand. In the textile trades, buyers of cotton yarns and cloth are still acting with caution, but the situation as a whole is fairly healthy, and spinners of American yarn in particular have improved their position. A slightly better feeling obtains in the wool markets, where important transactions have been put through, or are in prospect. The wheat markets have been dull this week. A moderate trade is being done in potatoes, and the demand for fruit remains steady, with ample supplies on offer. Sugar prices have fallen slightly. Coffee is in moderate demand at steady rates, while good liquoring teas have sold freely, the commoner grades are more than ever difficult of sale. Rubber remains irregular. In the metal markets copper has been firmer, and tin has recovered somewhat after a weak opening. Lead still shows considerable irregularity, though a fair turnover has been recorded this week.

FOREIGN EXCHANGES.

In the foreign exchange market dealings in the dollar have been more active than of late, with rates moving steadily against London. From a closing price of \$4.85 $\frac{1}{2}$ on the 29th, the quotation has moved down quietly to \$4.84 $\frac{1}{8}$ yesterday morning, not very far from the present-day gold point. There was some tendency at the end of last week to ascribe the movement to the sentimental reaction in America against the French debt proposals, but the real cause would appear to be the relative movement of money rates in the two centres, and a steady pressure of commercial demand. Forward quotations have now closed in to about 1-32 cent either side of parity. Business in Continental currencies has, on the whole, been quiet. The distinguishing feature has been the further recovery in the lira, which from 129 $\frac{1}{2}$ on the 29th has moved down to 121 $\frac{3}{8}$ yesterday. This movement would seem to have been assisted by active intervention and by new regulations prohibiting overdrafts, &c., on foreign accounts. At the same time, the rapid widening of the forward rates would suggest that the recovery is not yet accepted with complete confidence. In the Norwegian rate there has been a further recovery from 24.74 $\frac{1}{2}$ down to 22.95, while Copenhagen has also moved down from 19.87 $\frac{1}{2}$ to 19.25. It would seem, however, that speculative buying of these currencies is now slowing down. The Paris rate has been featureless, having kept closely to sterling, although yesterday morning the franc showed a slightly weaker tendency at 103.47 $\frac{1}{2}$, as compared with 103.40 a week ago. Brussels, however, for reasons not yet clear, has again shown a sharp depreciation from 107.45 to 109.05. Forward rates in Paris have narrowed slightly to 67-70 centimes per month above spot; in Brussels they are much the same at parity to 3 centimes above. Madrid has depreciated somewhat again, from 33.79 to 33.96 $\frac{1}{2}$. Of the gold currencies Amsterdam, Berlin, &c., have moved against us with the dollar; Stockholm shows little change; while Switzerland has actually gone in our favour, from 25.05 $\frac{1}{2}$ to 25.09. In Eastern Europe, Bucharest, in spite of good harvest prospects, has depreciated, but the Polish zloty would seem to be steady, after the recent sharp movements, at an unofficial rate of somewhere round 27 $\frac{1}{2}$, after being lower for a time on the announcement of a credit to the Bank Polski from the Federal Reserve Bank of New York. In the East, the rupee is practically unchanged at 1s 6 5-32d, while the yen, after weakening further, has now also recovered to last week's figure of 1s 8 1-32d. The recent weakness would seem to have been due to heavy import purchases, but prospects of an excellent rice crop and good silk sales give assurance against any considerable depreciation. In the silver market the persistently strong Chinese demand has sent prices up further, until a rate has been reached higher than at any time since the end of last year. There has been some Continental selling, but this has been easily absorbed. India has now come into the market as a seller, and the price is weakening again somewhat. Hongkong stands at 2s 5d, as compared with 2s 5 $\frac{1}{2}$ d; Shanghai at 3s 2 $\frac{1}{2}$ d, as compared with 3s 3d. In South America, Rio has moved up again from 6 $\frac{1}{2}$ d to 6 21-32d, while Buenos Aires is also stronger at 45 $\frac{1}{2}$ d, as compared with 45d, and Monte Video at 49 $\frac{1}{2}$ d, as compared with 49 $\frac{1}{8}$ d. Valparaiso also has appreciated from 40 to 39.70 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 29th:—

EXPENDITURE.	(000's omitted.)	RECEIPTS.	£
Supply Services	8,211	From Revenue	11,530
Interest, &c., on Debt	1,062	Increase in Debt	675
Sinking Fund	1,848		
Road Fund	970		
Sundries	40		
Increase in Exchequer Balances	124		
	12,255		12,255

The Revenue for the week amounted to £11,579,900, as compared with £10,576,900 in the corresponding week last year. Customs were higher at £2,125,000, against £1,699,000, but Excise was slightly lower at £927,000, against £973,000. Property and Income-tax brought in £3,468,000, as compared with £4,258,000, while Super-tax amounted to £380,000, against £290,000. Ordinary receipts were lower at £249,900, against £296,900, and Special receipts were nil, as compared with £500,000. The week's operations increased the National Debt by £675,000, and caused the following changes:—

	(000's omitted.)	£
Treasury Bills	+ 1,365	
Public Department Advances	+ 50	
	+ 1,415	
Sundries		740
		740

The floating debt was increased by £1,380,000 to £769,691,000.

FINANCIAL YEAR, 1925-1926 (April 1st to August 29th).

	£		£
Total Expenditure ..	320,410,961	Raised by Revenue ..	293,144,566
		Decrease in Balances ..	3,723,500
		Amount borrowed ..	23,542,895
Total	320,410,961	Total	320,410,961

ESTIMATES FOR FINANCIAL YEAR 1925-1926.

	£		£
Expenditure	799,400,000	Revenue	801,060,000
Surplus			£1,660,000.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Australian Bank of Commerce, Mid-European Corporation, African and Eastern Trade Corporation, and Klabang Rubber Company. At the meeting of the Australian Bank of Commerce the chairman said that since they met last year the exchange position had become most difficult, and special measures were needed to ensure the marketing overseas of their primary products. The reintroduction of the Gold Exchange Standard had now brought about normal rates, and the difficulties that had been experienced since the war were at an end for the time being. At the meeting of the mid-European Corporation, the chairman reviewed conditions in Germany and Austria. At the meeting of the African and Eastern Trade Corporation, the chairman gave figures relating to the growing revenue and export trade of Nigeria.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE SHIPPING DISPUTE AND THE TRADE UNION CONGRESS.

HAVING occasion to refer, as a birthday exercise, to the first issue of the *Economist*, published just 82 years ago this week, we were rewarded for our piety by deriving therefrom a salutary reminder that many of our present difficulties, which look so new and so formidable, are by no means peculiar to this generation, but have been faced and survived by those who have gone before. Two instances will suffice. "Never," we read in the *Economist* of September 2, 1843, "was the hosiery trade of Nottingham in so depressed and forlorn a state as at the present time.....The hands are, many of them, stinted to earn about 3s a week, and how they subsist

is to us a mystery; at the same time, the masters, having the rents of large houses to pay, and doing but little, find themselves sinking in their affairs." This complaint, quoted from a Nottingham paper of that time, has about it the familiar ring of a recent controversy. Even more apposite, in view of to-day's affairs, is the 82-year-old headline: "Turn-out of Seamen at Liverpool." That strike was doubtless a trivial affair, but the coincidence may serve to remind us of the extent to which current troubles are, *mutatis mutandis*, but a repetition of history.

This fact does not, however, detract from the importance of the present seamen's strike which began spasmodically some weeks ago, and has this week blazed up into full prominence. Its importance is both substantial and many-sided. If the disturbance becomes extensive or protracted, the resultant check upon the already unsatisfactory level of overseas trade will be felt severely in many lines of business both at home and in other countries, especially South Africa and Australia, where refusals to sail have been more important than in this country. It is, further, the clearest possible instance of the unofficial and unrecognised strike, and of the repudiation by a section of the rank and file of an agreement signed by trade-union officials with the authority of a delegate conference behind them. It is, in fact, the type of occurrence which strikes a blow at the root of the system of collective bargaining. Of even greater importance, perhaps, is the political aspect, not merely in Australia, where Mr Bruce's resort to deportation machinery has aroused an electoral issue fraught with imponderable consequences, but in Great Britain, where the occasion has been seized upon by the leaders of the Minority Movement as an opportunity for advancing a stage further their offensive against official trade unionism. This phase of the trouble is of the more significance because it throws the limelight upon the efforts which the Minority Movement is expected to put forth at the Trade Union Congress, which opens at Scarborough on Monday.

Since it is the contention of the strike leaders that the rank and file were insufficiently consulted before the present wage reduction was agreed upon, it is necessary to look into the history of the negotiations. In May of last year the officials of the National Sailors' and Firemen's Union obtained from the shipowners an immediate advance of 10s per month, a further advance of 10s per month to follow three months later, and in return promised that if a reaction in the trade took place they would be willing to reconsider the position. In July last the owners pointed out that the improvement in the shipping trade had not taken place, and asked the union leaders to carry out their promise and reconsider the wage position. A conference of delegates representing all the ports in the United Kingdom was called, and a compromise with the owners approved, by which the advance of £1, made last year, was to be removed as from August 1st. This is the wage reduction which is the cause of the present trouble. A report on the matter was afterwards submitted to the Executive Council of the union, and at the annual general meeting, which followed, a resolution was unanimously passed declaring the revised agreement to be in the best interests of the seamen. Those are the facts as stated by Mr Have-lock Wilson, the president of the union, and, so far as we are aware, they have not been seriously challenged. Conditions in the shipping industry are so difficult that the owners had little difficulty in persuading the trade union leaders that a withdrawal of last year's wage advance was a necessity; they, in their turn, obtained the approval of the members of their union through the normal channels. Unless the strikers can show that this account of the matter, as given by Mr Wilson, is incorrect, they cannot justify themselves on the ground that their leaders acted improperly or unconstitutionally. Even weaker still is the position of the strikers in Sydney and Cape Town. The articles for the round voyage

which they signed contained a retrospective clause providing that any alteration in wage rates that came into force before the completion of the voyage should apply immediately and automatically.

Seamen, naturally, do not appreciate a reduction in their wages, any more than other sections of the community; and a certain amount of unrest is in their case peculiarly easy to understand. By the nature of their calling they are scattered over the face of the globe, absent for long periods, out of touch with the facts of the industry and with the negotiations of union leaders or employers. To discover on landing at a far-off foreign port that wage rates have suddenly been reduced by £1 per month is doubtless conducive to a frame of mind ready to accept the extravagant statements and incitements of agitators. Nevertheless, we are assured that, in spite of temptation, the vast majority of British seamen have remained loyal to the agreement signed by their accredited representatives. The strike efforts of the disloyal minority were, so far as this country is concerned, developing into a complete failure, until the strike agitators received reinforcement from the Amalgamated Marine Workers' Union—the bitter rival of Mr Wilson's union—with Mr Shinwell, the ex-Minister of Mines, as leader. At the moment a certain amount of delay and confusion persists at certain British ports; but the authorities hold to their view that the strike will collapse, just as a similar effort collapsed in 1921, and the general appearance of affairs favours this view. The dramatic sailing of the *Majestic* and other big liners, the failure of the attempt to stop the Channel services, and the disclosure of the existence of large numbers of willing substitutes, has given the strikers serious food for thought.

This new ebullition of activity on the part of that section of Labour, which is out to discredit official trade unionism, lends, as we have said, peculiar interest and importance to next week's Trade Union Congress, for the debates and the voting will reveal the strength or weakness of the Minority Movement. There will no doubt be many skirmishes, but the real battle will, as Mr Frank Hodges pointed out in an article in last Sunday's *Observer*, be joined over the question whether the Labour movement is to continue on present lines or whether the grand cleavage is to be made between industrial trade unionism and political labour. Mr Hodges, who argues strongly against such a severance, is anxious about the strength of the forces which aim at its achievement. "The keen observer," he writes, "cannot fail to detect a tendency on the trade union side to be less enthusiastic than was the case a few years ago to co-operate with the Political Labour Party in the active pursuit of industrial objectives. Such a tendency is to be deplored, but it exists and grows." The growth of this movement, which Mr Hodges describes as "the beginnings of a difference which almost imperceptibly is dividing the Labour movement into two camps," he frankly ascribes in part to the attitude of the MacDonald Government towards organised industrial labour. "There was an aloofness, a frigidity, an irritation, sometimes a disdain displayed by 10 Downing street to 33 Eccleston square." The movement was stimulated by the fact that it was a purely industrial trade union sub-committee which, at the time of the recent coal crisis, negotiated with Ministers. Mr Hodges, then, puts the great issue of next week's Congress as follows:—"Will the industrial movement march on to complete independence and isolation, as in America? Or will it be big enough to benefit by the experiences of the last year to break down the half-erected barriers built up by the accidental circumstance of an immature Labour Government, which, by its very composition, failed to secure a complete understanding between industrial and political Labour? Will the circumstances, on the other hand, be exploited by the very vocal, but very few, Communists and members of the Minority Movement to proclaim that this is a perfect example of the utter futility of the Parliamentary method, and a concrete proof of the superiority of the industrial method and the doctrine of force? Let the General Council be on its guard, for the attempt will be made." The proceedings at Scarborough will therefore be anxiously scanned for the bearing that they may have on the political as well as the industrial future.

THE SIXTH LEAGUE ASSEMBLY.

THE League of Nations Assembly, which opens on Monday, is apparently to be notable for the presence of M. Painlevé, and the absence of Mr Baldwin. There is no special reason why the British Prime Minister should attend the Assembly except that his French colleague intends to do so, a fact which will rather emphasise Mr Baldwin's combined proximity (he is on holiday at Aix-les-Bains, almost within hail, at it were, of Geneva), and abstention. M. Painlevé has explained to an interviewer that the reason he is going to Geneva is to demonstrate his sympathy with the League, as his predecessor, M. Herriot, did before him. Mr Baldwin's sympathies are not in doubt, and so far as the actual business of the Assembly is concerned, Mr Chamberlain and Lord Cecil form a combination that needs no strengthening.

This year, even more than in past years, the prospects of the three weeks or more of the Assembly session are singularly difficult to forecast. So far as the actual agenda goes the only item of outstanding importance is the Geneva Protocol, and regarding that nothing more than a series of eloquent funeral orations is likely to be uttered, though one or more of the Assembly's *enfants terribles* may quite well take the opportunity of addressing to the British delegation polite criticisms calculated to throw Mr Chamberlain on the defensive. It will be hard, for example, for so ardent a supporter of the Protocol as M. Paul Boncour, completely to restrain his emotions at the fate that seems to be befalling his handiwork, though so far as the official French attitude is concerned, M. Briand is understood to have assured Mr Chamberlain that no attempt will be made to create complications by endeavours to galvanise the corpse into new life.

But in some form or other the Protocol will be discussed, and it is hard to see how delegates can talk Protocol without talking Pact. Theoretically the Pact in no way concerns the Assembly, though if the ultimate text is anything like what the British and French draftsmen contemplate, it will directly concern the Council at more than one point, and anything that affects any organ of the League can with propriety be discussed by the Assembly. But discussion will certainly be deprecated by the principal negotiators, and delegates generally are likely to show the discretion that the present delicate stage of the conversations with Germany dictates. There are, however, to be unofficial German observers at Geneva, and it is safe to predict that other interest.

The corridors, indeed, look like being the most important part of the Assembly this year, for the Pact is only one of three or four outstanding questions which will no doubt be regarded as half-forbidden topics so far as the floor of the Assembly goes. One is China, another is Morocco, another is Syria. To keep Syria off the floor will hardly be date for that area, but anything that happens there is a matter not merely of legitimate but of imperative concern to the League. Iraq stands in a rather different category, but if the Assembly wants to discuss Iraq, over which to prevent it. As regards China, the contention of most of the European Powers is likely to be that any action can best be taken under the Washington agreement, to which China was a consenting party, and by itself should think it a sound diplomatic move to raise the whole question of the extra-territoriality treaties under the much-discussed Article XIX. of the Covenant (as to the right of the Assembly to recommend the reconsideration of treaties no longer applicable, or a source of possible strife) a debate of marked interest and importance might result.

All along the line, indeed, it is the uncertainties of the situation that give the Assembly of 1925 its interest. The League, of course, has its routine business to deal with every year, and it is not always recognised how varied and important that business is. There will, for example, be the different European reconstruction schemes, in

The New York Trust Company

Austria, in Hungary, and in Greece, to consider, and in spite of the difficulties, both political and economic, through which Austria has been passing, the League has good reason to be satisfied with the results of its intervention in all three fields. There will be a crop of little problems connected with Poland, in relation to Germany, to Lithuania, and to Danzig, to pass in review. The Polish Foreign Minister will bring to Geneva the latest impressions of the situation in America, where he has been lecturing at Williamstown, and incidentally talking behind closed doors with various members of the Administration. Poland, moreover, is openly aspiring for a seat on the League Council, and the hope of election may be counted on to accentuate those conciliatory tendencies which Count Skrzynski has consistently exhibited at Geneva in the last twelve months. The formation of an anti-Nationalist coalition at Danzig has given the Poles a great opportunity in one difficult corner, and if at the same time the League can by discreet pressure do something to ease the friction, which still impedes the Memel settlement, holds up the timber trade on the Niemen, and keeps relations between Poland and Lithuania virtually on a war basis, a good deal may be done both for trade and for political stability in Eastern Europe.

The main strength of the Sixth Assembly will be the quality of its delegates. Whether the number of foreign Ministers present will equal the high total reached last year is still uncertain, but the fact that Great Britain and France, Holland and Belgium, the three Little Entente States, Sweden and Poland are all to be represented by the Ministers actually directing their foreign policy is enough in itself to save the Assembly from the danger of losing sight of practicalities, while Signor Mussolini's sardonic gesture in including in the Italian delegation one of the most voluble and unrestrained opponents of the League of Nations is more calculated to produce a convert than to produce a disturbance.

If, therefore, the unexpected fails to happen, what is in store is a fairly quiet Assembly devoted largely to a survey of the work carried on in the name of the League, not merely by the Council, but by the expert commissions to whom so much of the League's activities is now delegated in different fields. There may be the usual mild discontents over the allocation of contributions towards the League's severely limited expenses. There may be the usual industrious but comparatively innocuous lobbying over the election of the non-permanent members of the Council. And there may, on the other hand, be the unlooked-for introduction of matter considerably more momentous as the result either of an application by Germany for membership of the League or of the concentration of discussion on those principles of arbitration which, after being rejected by a British Cabinet which condemned the Geneva Protocol, are being given a new actuality by British concurrence in the terms of the recent French Note to Germany. It would be neither surprising nor improper if the Assembly, taking note of the arbitration treaties which are springing up spontaneously between various pairs of States all over Europe, and

being contemplated by many more, should think it useful to attempt to reach agreement on the essential provisions any such treaties, whatever their special adaptation to particular needs, ought to embody. The predictions of a dull Assembly, in short, may be well founded. On the other hand, there is plenty of time for them to be falsified yet.

CUSTOMS DUTIES IN ENGLAND AND ABROAD.

AMONG the unfortunate but inevitable results of Great Britain's futile and uncertain tariff policy since the war is the widespread belief on the Continent of Europe that Great Britain has become, or is well on the way to becoming, a Protectionist country. Our coal policy in 1920, the old Safeguarding of Industries Act, and more recently, the ostentatious re-imposition of the McKenna duties, and the interested publicity given to certain applications under the new "Safeguarding" rules, are certainly calculated to produce an unduly unfavourable impression in the minds of foreign observers, unacquainted with the real strength of the national feeling in England against anything remotely resembling a protective system. Our European critics are apt to point out, also, that a scale of customs duties which produced nearly £100,000,000 last year, and nearly £120,000,000 in 1923-24, must be regarded as a serious obstacle from the foreign exporter's point of view. Indeed, this figure is higher in proportion to the total value of British imports than the ratio of customs receipts to total trade in most protected countries. To assume, however, that this large revenue is a barrier to trade, overlooks the fact that it is derived almost entirely from duties on such commodities as wine, beer, sugar, tea, coffee, tobacco, which are either not produced in Great Britain at all, or are subject to counter-vailing excise duties. The latter are, in fact, the more productive from the Exchequer point of view, Excise receipts having exceeded Customs by £35,000,000 last year, and £28,000,000 in 1923-24. In the earlier period the McKenna duties, which were operative for the whole year, produced £2,591,000, or 2.6 per cent. of the total Customs receipts, while the "key industry" and "depreciated currency" duties—frankly Protectionist in design—brought in the magnificent sum of £631,000, or 0.5 per cent. of the whole. Mr Churchill estimated in his Budget statement this year that his proposed changes would affect Customs receipts by no more than £7,040,000 in a full year (of which the new silk duties were to be responsible for £5,500,000). On this evidence Great Britain stands acquitted of being a Protectionist country at present. That Customs and Excise duties were estimated to provide £239,260,000 (35 per cent. of the total tax revenue), this year, reflects the commendable stoicism of the British taxpayer under his heavy burden rather than a national drift towards protective measures.

Further proof—if any were needed—is afforded by a White Paper published this week by the Board of Trade*. In this document are set out details of our trade with ten of the most important foreign countries, showing the value of goods imported into Great Britain "free of duty" and "subject to duty" respectively, and, *per contra*, similar particulars as regards British exports entering foreign markets. Particulars in the first case are as follows:—

VALUES of the IMPORTS of MERCHANDISE into GREAT BRITAIN and NORTHERN IRELAND from the COUNTRIES NAMED in the YEAR 1924:—

Country Whence Consigned.	Total Imports of Merchandise into Great Britain and Northern Ireland.			Per Cent. of Total Subject to Duty.
	Free of Duty.	Subject to Duty.	Total.	
United States.....	£ 215,543,000	£ 26,448,000	£ 241,991,000	10.9
Germany.....	33,838,000	3,059,000	36,897,000	8.4
France.....	60,544,000	5,938,000	66,532,000	8.9
Austria.....	2,339,000	171,000	2,510,000	6.8
Russia.....	19,955,000	39,000	19,994,000	0.2
Italy.....	17,429,000	808,000	18,237,000	4.4
Spain.....	18,386,000	1,318,000	19,704,000	6.7
China (a).....	12,115,000	1,650,000	13,765,000	12.0
Japan (b).....	7,365,000	87,000	7,452,000	1.2
Argentine Republic.....	79,097,000	3,000	79,100,000	.004

(a) Excludes Hong Kong, Macao, and territories leased to foreign Powers. (b) Includes Formosa, and Japanese leased territories in China.

To the Board of Trade figures we have added a column showing the proportion of "Taxed" to "Untaxed" imports, and have given total figures for the 10 countries, which accounted for some 40 per cent. of our total import trade last year. "Taxed" imports varied between 12 per cent. of the whole in the case of China, and roughly 11 per cent. in that of the United States, and negligible proportions as regards Russian and Argentine goods. The ratio would, of course, be minute if we counted only those duties which are protective, *i.e.*, are not balanced by an equivalent internal excise.

When we consider the reverse of the picture, a very different result is shown. The following table indicates the treatment meted out to British exports by the countries enumerated:—

IMPORTS of MERCHANDISE from GREAT BRITAIN and NORTHERN IRELAND into the COUNTRIES NAMED for the LATEST YEAR AVAILABLE.

		Imports of Merchandise from Great Britain and Ireland.			
Countries.	Year.	Free of Duty.	Subject to Duty.	Total.	% of Total Subject to Duty.
		£	£	£	£
United States (c)...	1923	30,728,000	57,611,000	88,339,000	65.2
Germany	1924	23,361,000	21,484,000	44,845,000	47.9
France	1923	19,137,000	49,223,000	68,360,000	72.3
Austria	1924	1,432,000	1,676,000	3,108,000	54.1
Russia (d)	1924-5	576,000	5,438,000	6,014,000	90.4
(Six months only).	(Oct. 1924-Mar. 1925).				
Italy	1924	13,648,000	7,800,000	21,448,000	36.2
Spain	1924	..	6,534,000	6,534,000	100.0
(Six months only).	(Jan.-June				
China (e)	1923	35,000	20,909,000	20,944,000	99.7
Japan (f)	1921	1,572,000	21,389,000	22,961,000	93.0
Argentine Repub.	1923	9,981,000	25,505,000	35,486,000	71.9

(c) Includes Continental United States, Alaska, Porto Rico, and Hawaii. (d) The particulars relate to imports over the European, Black Sea, and Caucasian frontiers. (e) Direct trade with the United Kingdom as recorded by the Chinese Maritime Customs. (f) The particulars relate to imports into Japan Proper and Karafuto (Saghalien).

We have again added a percentage column. The figures give no indication of the amount of duty paid in each case, which one would need to know in making a true comparison. The Board of Trade points out, furthermore, that (1) the particulars in the above statements are exclusive of bullion and specie. (2) It has

not been possible, in certain cases, to distinguish dutiable goods imported free of duty under the régime of temporary importation. (3) The imports into some of these countries, officially recorded as from the United Kingdom, include merchandise consigned from Great Britain and Ireland both of British origin and originating elsewhere; there is reason to suppose that, owing to the nature of the goods, the dutiable proportions of the imports consigned from the United Kingdom but originating elsewhere were generally lower than in the case of imports of British origin. When all allowances have been made, however, the figures show quite conclusively that our present customs system has a much more restricted scope than that of most overseas countries, and the fears of our friends abroad that a fiscal revolution has occurred in England are greatly exaggerated. It remains for Mr Baldwin and his colleagues to set these fears entirely at rest by seeing that no further "gestures" are made which, while too small to influence the general trade situation in Great Britain, are big enough to destroy our influence in the direction of freer trade among the countries of Europe.

SOME AFTER-EFFECTS OF INFLATION.

(BY OUR BERLIN CORRESPONDENT.)

WHILE recent European experience suggests that the stabilisation or replacement of badly depreciated currencies is a relatively simple problem, it shows that the consequences of depreciation are not so easily removed. One observed phenomenon, the deflation crisis, tends to disappear automatically through readjustment of prices. A more difficult post-depreciation problem is the revolution in the distribution of property; the difficulty, that is, of bringing about a partial counter-revolution in the interest of investors and creditors. This problem will have to be faced sooner or later by every country whose currency has depreciated so much that there is no hope of a return to pre-war value; by all Europe, that is, with exception of Great Britain and some neutral countries. Naturally, the question does not become acute as long as depreciation is under way, but currency reform inevitably brings it up. Such is the experience of Germany, Poland, Danzig, and Lithuania. In Austria, though there have been initiatives in the Nationalrat, the Government has so far refused valorisation, and the Courts have held to the legal fiction that "a crown is a crown." Czechoslovakia, Finland, and some other countries with *de facto*, but not formally, stabilised currencies have done nothing. The problem will certainly become acute in Latin Europe as soon as currency reform takes the probable shape of franc and lira devaluation.

A valuable lesson may be learnt from Germany's attempt to valorise, and the lesson may fairly be summed up in the advice "Don't." The main point to be dealt with here is valorisation of private debts. Valorisation of public debts is a simple problem, the solution of which is determined by State financial exigencies. Valorisation of private debts is contentious, complicated, disappointing to both creditor and debtor interests, unfair in its effort to restore fairness, injurious to public confidence, and fruitful of litigation. In principle, no distinction exists between valorisation of public claims and private claims, both of which have been depreciated by currency collapse. In both cases the losses are caused by the same State Act, in both cases the proportion of loss is the same, and in both cases the ultimate gainers are private individuals, the gainer in the case of State debts being the taxpayer. The German Government, however, from the first discriminated on lines of practicability. Complete restoration of the Federal Debt alone would have cost £3,500,000,000; the 25 per cent. valorisation rate ultimately conceded to private creditors would, if applied to the Republic, have cost about £900,000,000, and would

have cost the States and Municipalities further large sums. For this reason the first valorisation enactment, the Third Taxation Decree of February 14, 1924, while conceding 15 per cent. of the original gold value of secured private debts, conceded nothing to public bondholders beyond an admission that interest and principal payments might be resumed after Reparations are fully paid.

The later law of July 16, 1925, gave to a preferred minority class of "old" holders (those who acquired before July 1, 1920) a considerable dote, while treating later acquirers (that is, holders of 50 milliards out of 70 milliards outstanding of Federal Debt) no better than the February, 1924, measure. Claimants for private debts were treated much more liberally. Unlike the State, ran the argument, private debtors can afford to pay; the securing properties have already recovered a great part of their pre-war value, and will recover it wholly. Therefore, mortgagees and debenture-holders are given (with certain qualifications) 25 per cent. of the original gold values of their claims. The lost 75 per cent. is no clear gain to the debtors. Part of it is taken for public purposes in form of a tax. So summarised, this valorisation of private debts seems simple, and certainly not oppressive to the debtor class. It has, however, satisfied nobody.

After successive Cabinets had declared that there would be no valorisation whatever (abandoning this standpoint first in 1923), valorisation was officially taken up on the ground that it was "necessary in order to stop a social conflict." After the Reichsgericht in November, 1923, repudiated the legal fiction that "a mark is a mark" (*i.e.*, that a mark worth a shilling and a mark worth the one-billionth of a shilling are equally good for payment of debts), a furious controversy arose. The creditor and investor class, being the aggrieved party, got the upper hand. But the law of July, 1925, has not settled the social conflict. The well-organised creditor class denounces the law as unconstitutional (as it probably is), demands a referendum, threatens to fight in the courts, and—the appetite comes in eating—is less thankful for the 25 per cent. valorisation of 1925 than for the 15 per cent. valorisation of 1924. A second trouble is that attempts to bring about an equitable counter-revolution in the distribution of property threaten new expropriation and ruin. Without ruining many creditors, summary valorisation, whether by 15 or 25 or 50 per cent., cannot be consistently enforced. Nearly every debtor-and-creditor case is individual; some citizens could pay more; some, owing to depreciation of their property (city houses sell at around one-fifth of pre-war prices), cannot pay as much; some debtors have incurred new debts; others, while gaining from the extinction of their debts, lost by the depreciation to nothing of their claims upon non-securing debtors or upon the State. It was, therefore, at first suggested that instead of summary or "schematic" valorisation, the essence of which is a uniform percentage, there should be "individual" valorisation; that is, that the relations between all creditors and all debtors should be inquired into by a court, which should consider also the degree of prosperity of both parties, and should attempt to restore something like pre-war conditions. This proposal was rejected; it would have meant hundreds of thousands of minute inquiries, would have delayed the final settlement for years, and would have afforded rich opportunities for concealment, fraud, and perjury. Therefore, "schematic" valorisation was adopted. But as "schematic" valorisation, if rigidly enforced, would plainly have produced a crop of ruin and bankruptcy, the lawmakers hedged. While retaining the uniform percentage valorisation, they allowed individual debtors to plead "privation" (*Härte*), to prove that they could not take on again the valorised debt without hardship or ruin, that they had themselves suffered losses by the depreciation, that the creditor is well off even without the revival of his claim, and so on. Naturally, proofs will have to be given. The debtor who can prove "privation" will either escape the whole debt or the 25 per cent. will be reduced. This will be done after inquiry by a Valorisation Board (in general the *Amtsgericht* court will function). This compromise contains all the inconveniences of both "schematic"

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

and "individual" valorisation. The complexity of property relations will allow tens of thousands, probably hundreds of thousands, of claims for exemption; and it is likely that the settlement of all cases will not be achieved for many years.

The law violates many legal principles, and deals a serious blow to confidence. In spite of the expansion of the original Bill to enormous length, many probable contingencies have not been provided for. Contracts which have been valid for more than three years are annulled, and the records of the real estate registers, which have hitherto had categorical validity in the matters of titles and charges, are summarily repudiated. During the depreciation years many mortgages were paid off in paper marks, with the consent of the mortgagees, and were duly erased from the registers. Sometimes the mortgagee accepted as solatium a sum over and above his legal claim (which was only for the nominal amount in paper marks). The law revives such mortgages in so far as they were paid off after June 15, 1922, and orders their re-entry in the registers to the standard 25 per cent. The estate owner may have in the meantime contracted new mortgage loans and entered them in the register as first mortgages. Where this happened after a stated date the law gives the revived mortgages precedence, and the new creditor, who lent in good faith and according to then valid law, is threatened with loss. Ground stated for this breach of faith is that the new lender "ought to have known" that the extinguished mortgages would be revived, though the Government itself did not know until the last minute in what form the law would pass. Similar in principle is the situation where real estate has changed hands. Buyers of estates or houses after the Decree of February, 1924, usually took over the newly valorised 15 per cent. mortgage debts. The new law imposes upon them the extra 10 per cent., which was never their own debt, and they and their estate are liable. Again the ground given is that, although in February, 1924, the 15 per cent. valorisation was officially proclaimed to be final, and though that was the whole debt shown by the estate registers, the purchaser ought to have foreseen that the amount would be increased. Even where (in the case of paid-off mortgages) a new buyer purchased land which the register showed to be entirely free of charges, he may in certain cases have put on his shoulders an enormous revived debt of which he had probably never heard when he bought. In the majority of such cases, however, the seller of the property is liable; but here also great difficulties arise, because for city real estate sold during the inflation the seller usually received only a fraction of the revived mortgage which he must now shoulder.

The capital of mortgages and debentures cannot be claimed until January 1, 1932; meantime, the mortgagee receives only interest. The capital of all mortgages falls due on that day, and the total is 25 per cent. of an estimated 44,000,000,000 marks. The law-makers have not arranged for payment of this money. Voluntary prolongation by the mortgagees is unlikely because the mortgages will bear at most 5 per cent. interest, which is likely to be much below the interest rate (at present around 15 per cent.) five years hence. Hence, if the law is not amended, and if no credit is provided, the beginning of 1932 would see a financial crash. Various suggestions have been made for gradual mobilisation or conversion of the mortgage claims during the six years, but nothing has so far been done.

THE LACE TRADE.

OUR trade in lace has recently been made one of the victims of Protectionist experiments, revived after having been abandoned 75 years ago in the light of the bitter experience gained during centuries of Protection. The fact that no case was made out (even on the lines of Mr Baldwin's own requirements) by the committee which examined the industry does not appear to have weighed with those who imposed the duty. Indeed, the whole inquiry turned out to have been a solemn farce, for it soon became clear that there were enough fanatical Protectionists in the Government's ranks to compel the imposition of a duty, whatever the result of the committee's deliberations might be.

On the products of the lace industry, however, only the makers of clothing depend, and these were not sufficiently numerous to make their opposition effective. It is a powerful object-lesson of the way in which Protectionist wire-pulling operates, to the detriment of other industries and of the vast body of consumers among the general public.

Let us see what has been the history of this trade which it has been deemed necessary to "protect" after 75 years of flourishing development under Free Trade. The record can be traced back to the 'seventies of last century, and this is what it shows:—

BRITAIN'S OVERSEAS TRADE IN LACE OF ALL KINDS.
(In Thousand £'s.)

5-Year Averages.	Imports.	Re-exports.	Net Imports.	British Exports.
1874-78.....	511	..	..	..
1879-83.....	538	..	..	..
1884-88.....	1,020	84	936	..
1889-93.....	981	132	849	2,238
1894-98.....	1,277	356	921	2,239
1899-1903.....	2,031	814	1,217	2,941
1904-08.....	3,427	1,768	1,659	4,187
1909-13.....	2,868	1,545	1,323	4,224
1914-18.....	914	660	254	3,774
1919-23.....	1,270	1,135	135	4,335
1924 (single year).....	2,267	1,756	511	2,574

N.B.—Imports cover lace of cotton, silk, silk mixtures, and "other materials," but lace of "other materials" is not included in exports.

It will be seen that in all the pre-war years British exports made steady progress in every lustrum. Not so the net imports—goods received and retained here for sale to home consumers. These dropped considerably in the five years immediately preceding the war. The fall in net imports amounted to £336,000 at the same time that British exports rose £37,000, so that the position of our home producers was £373,000 better in each of the five years to 1913.

Now let us note how the pre-war figures compare with those of the single year 1924. Exports have fallen since 1909-13 by about 40 per cent., and net imports have dropped more heavily still—by about 62 per cent. The cause of this severe decline in both sections is well known to everyone acquainted with the trade. Fashion unfortunately decreed that lace curtains should give place to "casement" curtains, and from the verdict of Fashion there is no appeal. Moreover, not only was lace largely banished from our windows, but it was displaced along with garments which it had always been lavishly used to decorate. Vast were the quantities which used to be consumed in the beautifying of white under-garments. Those garments are now things of the past, and in their stead we have prosaic vestments of tweed—more useful and sensible, no doubt, but not lending themselves to lace embellishments.

It is for these and other similar reasons that the demand for lace has declined enormously. As for the demand that still remains, our manufacturers appear to supply as large a share of it as they ever did. For the five years to 1913, net imports at £1,323,000 represented 31 per cent. of the British exports. For last year net imports at £511,000 represented only 19 per cent. of the British exports. The slump in imports had been relatively much greater than the slump in exports.

Let us now enquire where the exports go to. Foreign nations have always been better customers to us for these goods than the British Dominions and colonies, but there are features of interest in both sections of the trade:—

DESTINATIONS OF EXPORTS OF BRITISH LACE AND ARTICLES THEREOF
(In Thousand £'s.)

5-Year Averages.	To Foreign Countries.			To British Possessions.		
	Cotton.	Silk & Silk Mixtures.	Total.	Cotton.	Silk & Silk Mixtures.	Total.
1894-98 ..	1,636	124	1,760	454	25	479
1899-03 ..	2,125	91	2,216	705	19	724
1904-08 ..	3,252	80	3,332	832	22	854
1909-13 ..	3,279	79	3,358	855	13	868
1914-18 ..	2,620	152	2,772	986	16	1,002
1919-23 ..	3,182	87	3,269	1,010	55	1,065

During the first 20 years covered by the table, purchases by foreigners grew by £1,598,000, while those by Imperial customers overseas grew by £389,000 only. Of course, the war hit foreign business much more than colonial. Indeed, the colonial trade continued to progress in the war years (1914-18). Since the war, however, foreign business has made a gratifying recovery, and if we compare the beginning and the end of the 30-year period we find that foreign custom has improved by £1,599,000, and Imperial custom by £586,000. On the other hand, the remarkable steadiness of the colonial increase is very encouraging. It would doubtless continue if Dame Fashion were to relent, and command the return of lace curtains to our windows.

When we consider what has been demonstrated above—that our factory-owners are doing a better share of what business there is now than they did of the business in pre-war days, and that they have been doing three times as much with foreign countries as with British Possessions—we shall not wonder that some of the witnesses at the lace inquiry felt impelled to discover, by hook or by crook, some further aggravation of their alleged grievance.

There were dark hints as to enormous quantities of lace coming in through the parcel post. Doubtless, presents of Maltese and other foreign lace are thus sent into the country; and doubtless, also, many presents of home-made lace are thus sent out. The two probably about balance each other, and, in any case, the search for such trivial allegations bespeaks a poverty of argument which is significant.

Other witnesses surmised that much lace came in classed as embroidery, though why such smugglers' tactics should be adopted is difficult to understand, seeing that there were at that time no taxes on either of these classes of articles. Also, it would argue rather lax performance of duty on the part of our Customs officials to suppose that they failed to discover any such alleged misclassification.

However, we will humour these hard-pushed pleaders for Protection, and help them by including all the embroidery among the imports, comparing the net imports of lace and embroidery with the exports of British lace only. In doing so, we would mention that there has been no such serious fall in the demand for embroidery as in that for lace. Beautiful embroidery always has been and always will be popular, though the duties now imposed may be expected to prevent many of the poorer classes from enjoying its possession in the future as much as in the past.

Here, then, is the comparison:—

NET IMPORTS OF LACE AND OF EMBROIDERY COMPARED WITH BRITISH EXPORTS OF LACE ONLY.
(In Thousand £'s.)

5-Year Averages.	Net Imports.			British Exports.
	Lace.	Em- broidery.	Total.	
1894-8 ..	921	706	1,627	2,239
1899-03.....	1,217	988	2,205	2,941
1904-08.....	1,659	1,698	3,357	4,187
1909-13.....	1,323	2,411	3,734	4,224
1914-18.....	254	2,184	2,438	3,774
1919-23.....	135	2,903	3,038	4,335
1924 (single year).....	511	2,037	2,548	2,574

As we have said, there has been no great decline in the call for embroidery. Moreover, British firms and workers have never shone in that line, and the exports of British embroidery are virtually negligible, and have been left out. Nevertheless, it will be seen by a glance over the table that for all the 31 years exports of British lace have been larger than the net imports of lace and of embroidery combined!

BUILDING SOCIETIES—I.

THERE is little information available as to the origin of building societies. The oldest building society, as far as patient research shows, appears to be the Greenwich Union Society. This was founded in 1809. Membership was limited to 50, and the shares were to number not more than 200, of a value of £210 each. Members paid two guineas per share per month for each share they held until the full £210 had been paid up. As often as the society had £100 in hand lots were drawn for an advance. A share was reckoned to be equal to a "dwelling house of the best materials, to be completed in a workmanlike manner," and from the time the house should be finished the member owning it paid the society 5 per cent. per annum on the £210 share until the termination of the society by each member having paid £210 on each share held by him.

In 1836 the first Building Societies Act was passed, which conferred on building societies the same privileges as those given to friendly societies. In 1874 the Incorporating Act was passed, under which further advantages were extended. In the event of a winding-up, for instance, the liability of members was limited to the arrears due from them, or the amount actually due under a mortgage, while it was also provided that societies should have the right of incorporation. In 1876 total assets of societies amounted to only 21 millions, and for many years after 1880 it remained comparatively stationary in the neighbourhood of £50 millions. Then, in 1892, came the "Liberator" failure, followed by the Birkbeck disaster, which combined to put the clock of progress back very considerably. Public confidence in building societies, in fact, was badly shaken. A certain amount of reassurance, however, followed the passing of the Building Societies Act of 1894, which rendered it imperative for all incorporated societies to make returns of individual mortgages for amounts exceeding £5,000, of properties which had been taken possession of by the societies for more than twelve months through default of mortgagors, and mortgages more than twelve months in arrears of repayment subscriptions.

It is interesting to attempt to trace the reasons for the general tendency in the past to treat building societies with indifference. That they served a useful purpose no one could deny. The banks did not wish for their business; indeed, in some directions they might have welcomed them, for long-term loans at fixed interest for stated periods could not have interested the banks. Perhaps some suspicion was engendered by the political activities of a number of the most ardent workers connected with the societies in their early years, while in latter years the Liberator smashes and the Birkbeck troubles brought them into the limelight and created unfavourable impressions. These two concerns, of course, were not building societies as we know them to-day, but, none the less, they were instances of abuse of the basic principles. One critic has reminded us that the Liberator and Birkbeck crashes were no worse than has happened to so-called banks in this country. Moreover, the effect of the Act of 1894, which was the direct result of the two failures referred to, has been all to the good.

It has been suggested that the competition for deposits has not been welcomed by the banks, especially as, it is contended in some quarters, the societies have the advantage of paying interest on deposits free of income-tax. That interest on building societies' deposits was free of tax is, however, disputed. A prominent building society official points out that in the ordinary course of business building societies are liable to pay income-tax on their profits in the same way as any banking institution. In the normal course of doing this they would have to allow

income-tax from all the mortgage interest received from borrowers, and recoup this by deducting tax from the interest credited to shareholders and depositors. But as a very great percentage of their members are even to-day not liable to pay income-tax, an arrangement was made with the Inland Revenue Department that if the societies would pay on an agreed percentage of the interest credited to shareholders and depositors, the Inland Revenue would exempt all borrowers from tax on their mortgage interest, and all investors and depositors from tax on their interest. "I think it will be therefore clear," continues our correspondent, "that it is simply a bookkeeping arrangement with the Inland Revenue, and I believe all building society managers are convinced that if the Inland Revenue had to collect this from individuals it would not come to as much as the societies are paying direct to-day, in addition to which they are saving themselves the trouble of thousands of claims for the refund of tax which would have been deducted from the interest. You will see, therefore, that we have not the advantage of paying interest on deposits free of tax."

Building societies emerged from the chaos of post-war reconstruction with reputations considerably enhanced. The Government quickly realised that they filled a much-needed void in our economic machinery; but, unfortunately, the public were inclined to hold aloof, partly from ignorance of their methods, and partly from a suspicion that these societies were not sound in principle. The historian may perhaps one day find some connection between the view of the public in this direction and the failure in this country to establish co-operative credit societies. It is to be hoped that vulgar prejudices which existed have been by now completely dissipated.

The assistance to be given by local authorities to building societies is laid down under Section 5 (1) (b) of the Housing, &c., Act, 1923, which states that a local authority may "undertake to guarantee the repayment to a society incorporated under the Building Societies Acts, 1874 to 1894, or the Industrial and Provident Societies Acts, 1893 to 1913, of any advances made by the society to any of its members for the purpose of enabling them to build houses or acquire houses the construction of which was commenced after the 25th day of April, 1923." And in Section 5 (2) (a) it is enacted that "the advance with interest thereon shall be secured by mortgage, and the advance shall not exceed 90 per cent. of the value of the interest of the mortgagor in the property; and the mortgage deed may provide for repayment being made either by instalments of principal or by an annuity of principal and interest combined, so, however, that in the event of any of the conditions subject to which the advance is made not being complied with, the balance for the time being unpaid shall become repayable on demand from the local authority."

In commenting upon this belated piece of legislative work, Mr Walter Harvey, at the annual meeting of the Building Societies Association at Hastings in June last said, "The building society movement is not merely local. Had a Government guarantee been available instead of a permissive power of guarantee by local authorities, a national scheme would readily have been devised under which building societies could have employed their funds freely. As things are, local authorities, in their anxiety to avoid financial risk, attempt to shift their responsibilities by offers of arrangements under conditions which are frequently quite unreasonable. We can sympathise in a refusal to take chances of increase in local rates, but it is not the business of building societies to take over municipal responsibilities. Our heads rather than our hearts must lead us where the people's savings are concerned. There are signs at the moment of the power of guarantee by local authorities becoming a menace to the position of building societies rather than a help and a safeguard. I have often thought that a guarantee by the Treasury similar to that given under the Trade Facilities Act should be substituted for the local authorities' guarantee, and I suggest that the Executive should examine the question. I believe that with a Treasury guarantee behind generous valuation, the subsidy system could be dropped, or, at any rate, substantially modified. Just as many houses would, I am confident, be built, and a large saving to the country be effected."

OUR INDEX NUMBER.

THE substantial advance recorded by our Index Number of wholesale commodity prices in July was not repeated in August, our latest figure showing a very modest rise of 4 points in the total, namely, from 4446 to 4450. This figure compares with 4550 at the end of April of this year, and with 4855 at the end of December, 1924. The small August change was the net result of a number of important and contradictory movements, the features being a rise in each of the food groups, and a notable decline in textiles, while the other two groups also show rather lower totals. The table appended shows the latest position of the five groups, and of the total in comparison with preceding months:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, &c.).	Total.	%
Basic (avg. 1901-5) ..	500	500	500	400	500	2200	100.0
End July, 1914	879	852	616½	464½	853	2568	116.6
" Dec., 1915	897	446	731	711½	848½	3634	165.1
" Dec., 1917	1286½	686	1684½	839½	1348½	6845	268.2
" Nov., 1918	1289	782½	1848½	903	1389½	6212	282.6
" Mar., 1920	1508	914	2974½	1246	1709½	8352	379.6
" Dec., 1920	1544	805	1284	1216	1275	5924	269.3

" May, "	956	706	1261½	745	789½	4458	203.6
" June, "	885½	704½	1234	736	791	4351	197.8
" July, "	908	698	1274½	756	809½	4416	202.1
" Aug., "	952	718½	1235½	748	796	4450	202.3

In the first group barley recorded an important rise, while imported wheat and pork also contributed to the higher group aggregate. In the second, the August rise is due to the upward movements of tea and butter. Among textiles, silk, flax, and English wool all rose, but the effect of this movement was greatly outweighed by the decline in raw cotton (both American and Egyptian), and in cotton cloth and cotton yarn. In the mineral group the chief movement is the fall of roughly half a crown per ton in steam coal, which was discussed in last week's *Economist*. Pig-iron and tin quotations also declined, but the lead market made a recovery. In the miscellaneous section a recession in rubber prices from the high end-of-July level is the chief point of interest. The next table shows the changes in the Index Number for each commodity in comparison with that for the end of July, the figure 50 in each case representing the average level during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For...	111½	+ 6½	Cotton, A	115½	- 11	Copper	61½	+ ½

May, "	165	201	205	160	143	173.8
June, "	153	200	200	159	143	169.6
July, "	157	158	207	163	146	173.3
Aug., "	164	204	200	161	144	173.5

At this date last year the increase over the pre-war level was 80.4 per cent., cereals and meat standing at 162, other food at 211, textiles at 225, minerals at 168, and miscellaneous at 140.

Notes of the Week.

Coal Commission Appointed.—Five weeks after the announcement of a Royal Commission on the coal industry the names of the Commissioners have been published. It is to consist of four members. The chairman is Sir Herbert Samuel, until recently High Commissioner of Palestine, a former Home Secretary, an ex-President of the Royal Statistical Society, and a keen student of financial problems. With him will be Sir William Beveridge, now director of the London School of Economics, who combines with his high reputation as an economist a wide experience in administration. The other two members are General Sir Herbert Lawrence, now a managing partner of Glyn, Mills, Currie, and Co., and the holder of the chairmanships or directorships of several banking and railway companies, and Mr Kenneth Lee, a prominent figure in the Lancashire cotton industry. The members will have with them four assessors. These are Mr William Brace, formerly President of the South Wales Miners' Federation, and from 1915 to 1918 Under-Secretary of the Home Department in the Coalition Government; Dr Walcott Gibson, a geological expert; Major Hudspeth, a divisional inspector of mines, largely concerned with safety questions; and Dr C. H. Lander, the head of the fuel research department at Greenwich. The small size of the Commission should facilitate speedy working—an essential point in this inquiry. It is understood that Sir Herbert Samuel is abroad at the moment, but we hope that there will be no unavoidable delay in getting to work, and that all parties to the mining trouble will to the best of their ability assist the Commissioners in their arduous task.

The Admiralty and Economy.—In the course of the debate in the House of Commons in the middle of July on the building of new cruisers, several speakers alluded to the economies which the Admiralty might effect by closing several dockyards. Commander Hilton Young, in particular, declared that "it was notorious in all naval circles that the dockyards of Chatham, Sheerness, and Pembroke were wholly unnecessary and excessive for the requirements of the Navy." The emphasis laid on this subject during the debate seems to have borne fruit, for the Admiralty announced on Thursday that two dockyards, those at Rosyth and Pembroke, are to be reduced as soon as possible to "a care and maintenance basis." There is a slight hint in the official statement that other dockyards may be added to the list. The statement says: "The closing of any other yard is not necessary at present, but the question will receive further consideration when all the inquiries now in progress have been completed and the effect of all changes bearing on the amount of dockyard work in subsequent years can be estimated."

The pursuit of economy in this and in all other feasible directions is the more urgently required, since the burden of the new coal subsidy bids fair to go far beyond original estimates of cost.

Changes in the National Debt.—A return issued this week by the Treasury* sets out the changes which have taken place in the National Debt during the last 25 years. The most interesting figures are, of course, those relating to post-war years, which are as follows (figures for 1913-4 being given for comparison's sake):—

DEAD WEIGHT DEBT of the UNITED KINGDOM.
(000,000 Omitted.)

Beginning of Financial Year.	Amount of Dead Weight.			Provision for Interest and Man-agement.	Budgetary Provision for Repay-ment.	Budget Surpluses Applied to Debt Reduction.
	Internal.	Ex-ternal.	Total.			
1913-14..	£ 656.5	£ ..	£ 656.5	£ 16.9	£ 7.6	£ 0.2*
1918-19..	4,823.2	1,048.7	5,871.9	268.0	2.0	..
1919-20..	6,070.1	1,364.9	7,435.0	326.6	5.4	..
1920-21..	6,553.0	1,278.7	7,831.7	328.3	21.3	230.6
1921-22..	6,423.8	1,161.6	7,585.4	307.3	25.0	45.7
1922-23..	6,587.6	1,088.7	7,676.3	299.3	24.7	101.5
1923-24..	6,616.7	1,155.7	7,772.4	307.3	40.0	48.3
1924-25..	6,554.8	1,125.8	7,680.6	312.2	45.0	3.7
1925-26..	6,524.8	1,121.6	7,646.4	..	..	..

* Old Sinking Fund. † From 1920-21 onwards this column includes Funding Loan and Victory Bonds tendered for Death Duties, and held by National Debt Commissioners.

Including "Other capital liabilities," the total national debt on April 1, 1925, was £7,714 millions, as compared with £7,481 millions on April 1, 1919, and £711 millions in 1913. The above table, as it stands, may give a misleading idea of recent reductions in our debt burden. Almost every figure has some qualification attached to it. The dead-weight total of £7,646 millions includes £48½ millions of Funding Loan and Victory Bonds tendered for Death Duties and not yet paid off. Our internal obligations have been affected by recent conversions of 5 per cent. and other stocks into 3½ Conversion Loan, which have reduced the burden while increasing the nominal amount outstanding. The apparent increase in external debt in 1923, again, was due to the capitalisation of arrears of interest on our debt to the United States. A better idea of the national effort can be obtained from the last two columns of the table, which show that in the last five years we have devoted to debt reduction £156 millions by budgetary provision and another £430 millions from annual budget surpluses. External debt, the least desirable of all forms, has been reduced at an average rate of £40 millions per annum. These results are highly creditable to all concerned, and it will be the more regrettable, therefore, should the present financial year witness a reversal of recent tendencies.

The World's Wheat Supply.—The current issue of the Ministry of Agriculture's "Market Report" contains a review of the world's probable wheat position in 1925-26, based on the most recently available estimates. The broad feature, it is stated, is the relative abundance of the European and Canadian crops, and the shortage in the United States' production. The position is thus practically the reverse of that which obtained last year. Leaving Argentina and Australia out of account for the present, since their crops are only just growing, it seems fairly certain that the total harvest of the world will be somewhat larger than last year. If, however, to the production of the year we add the stocks remaining over from the previous harvest, then the margin is diminished, for the carry-over on August 1, 1924, from the generally abundant harvest of 1923 was large, whereas now the stocks remaining on hand from the 1924 harvest are small. Nevertheless, provided there be no startling failure in the Southern Hemisphere, the total available will probably prove slightly larger than last season, and should permit of a practically normal carry-over next August. The apparent difference in total supply between the two seasons is accordingly too

small to warrant any forecast of a material change in the level of wheat prices during the next few months. As regards the chief sources of Great Britain's supplies, the United States has a total harvest of 364 million cwt, which only slightly exceeds those of the lean years 1915 and 1916, and will contribute but a small proportion of our imports. The latest estimate from Canada (200 million cwt) is about half-way between the bumper crop of 1923 (254 millions) and the bad crop of last year (140 millions). The Dominion should, therefore, spare more than last year, though not enough to cover the United States' deficiency. In Argentina and Australia the crop has only recently been sown, but is well spoken of. India is likely to export less than last year. The Danubian States have much better harvests, though how much they can spare is a speculative matter, while Russian wheat has already been offered on the British market. As regards importing countries, the official forecast on August 1st was for a crop, in England and Wales, of nearly 25½ million cwt, or 1½ millions less than in 1924. It seems likely, therefore, that our requirements will be very similar to or slightly greater than last year, when we imported some 124 million cwt (August 1, 1924, to July 31, 1925). A good crop is expected in France, and her import requirements should be much less than in 1924-25. The Italian crop is officially considered very good, totalling about 120 million cwt, or 30 per cent. above last year. Present indications seem to suggest that Germany's importation of wheat may not be much more than half to two-thirds of last year's. Poland has a very good harvest, and should be fully self-supporting, and Spain should also require a minimum of imports. Altogether Europe should import appreciably less wheat this year than last.

Conditions in the Irish Free State.—Our Dublin correspondent writes:—Prospects generally are improving in the Free State. The weather—a very important factor in a predominantly agricultural community—has been uniformly good since Whitsuntide, and the harvest is in progress under satisfactory conditions. Hay, though not a heavy crop, was so quickly made and saved as to be of excellent quality; potatoes, a very important item, are abundant, and of good quality; grain crops, average or more, and roots somewhat light owing to dry weather. The presence of money in the country will be welcome to retail and wholesale traders, as well as to the banks. The country had been drained of money by prolonged depression from a succession of bad seasons, and from industrial and other stagnation following on political troubles. This was reflected in the trade figures for the first six months of 1925, which showed an adverse trade

balance on visible trading approximately equal to that of last year. There was, however, a substantial falling off of both exports and imports, due almost entirely to diminished livestock exports and a corresponding lack of demand for imports. Sheep and cattle had fallen off owing to over-selling last year, and to losses from bad weather and resultant disease last winter—also from money shortage preventing the smaller farmers from raising stock, and from raising and feeding pigs. But the healing virtues of good harvest prospects, with other causes, have caused many signs of revival and of hope. The Dublin Horse Show this month with record entries and enormous crowds was the most successful of this century—even allowing for Royal visits—and the quality of the exhibits, not merely amongst the livestock, but of industries implicated in the pursuit of agricultural success was of a high level. The figures of the national revenue are well maintained on the whole. There has been a certain falling off under Customs and Excise, as might be expected from the diminished exports and imports, and also from the Finance Minister's remissions of indirect taxation, and there have been moderate increases under most of the other headings. The discussions, following upon the coal crisis and its settlement, about the resumption by Britain of the gold standard have not escaped notice. Apart from socialists and the idealists, who think that whatever is new must be true, serious students, having watched the change and its timing with grave interest, have welcomed its success. If, however, they feel that wisdom is justified of her children, and are inclined to congratulate the British financial authorities, it must be admitted that they have felt Irish interests to be involved in the matter. Rough estimates here place Irish investments in Great Britain at somewhere about two hundred millions. If the proposals for a devaluation of the pound and its stabilisation at a lower level, which have been so lightly propounded, had been adopted, this substantial nest egg of Irish savings would have been subjected to an automatic shrinkage. This would have been a blow which, in present circumstances, would have hit the people of the Free State very hard. And there is no other convenient channel for the re-investment of these savings elsewhere. There are few, if any, suitable openings for it as yet in the Free State, and apart from the lack of ready-made and suitable openings, the question of confidence is involved. The sad plight of the railway shareholders and the depressed conditions in the liquor trade, from the breweries (apart from Guinness) and the distilleries to the retail traders, is not without its effect in this direction. It would be idle to deny that there is a widespread feeling that the Government is somewhat arbitrary and inconsiderate in its handling of the problems affecting these enterprises, and that capital is safer where more conventional methods of administration and legislation are the rule. The report of the Boundary Commission is expected shortly, and there is renewed talk of conferences, with a view to a possible agreement, embracing wider issues.

Conditions in Shanghai.—A vivid impression of the difficulties under which trade is at present being carried on in China is furnished by a letter sent to a large British concern by their representative in mid-July last. The writer states that retail dealers appear quite friendly and willing to order supplies of goods as required, but wholesale dealers find trade very difficult, as they are unable to re-export British cargo. The only steamers running are Chinese boats, and before any goods are allowed to be put on board the original Customs declaration has to be produced, showing the initial port of shipment. Cargo is thereupon held up if shipped from England, but allowed to pass if from Continental ports or America. A merchant who attempted to ship a case of British goods had his property seized on the wharf, and was compelled to pay \$60 to the local students on pain of confiscation. In some cases, goods are being forwarded to the out-ports by parcel post, since not only is transport by river steamer impossible, but, the railway station being situated in a Chinese suburb of Shanghai, and the coolies afraid to handle British goods, rail transit is equally out of the question. Hostility towards British institutions extends, even to advertisement posters. Al-

though no boards were pulled down in Shanghai during the riots of June, in some cases sheets were torn off, while in other districts one single British concern had 104 of its boards destroyed. On the whole, however, the writer is convinced that matters are now less serious than might have been expected, and conditions would rapidly approach normality were the shipping dispute settled.

Empire Cotton Marketing.—Our Manchester correspondent writes:—A development of considerable importance to all interested in the growth and marketing of cotton grown in the British Empire, was the commencement of trading in the new form of futures contract known as "The Empire and Miscellaneous Delivery Contract." Trading under this contract was inaugurated on the Liverpool Cotton Exchange, on Tuesday of this week, in the presence of a large gathering of members, and the brisk business which followed promised well for the success of the innovation. The new contract is confidently expected to be of great assistance in encouraging cotton growing in the colonies and dominions. Owing to the large number of growths of cotton which can be delivered against sales of this contract, there was much difference of opinion amongst members as to its value in relation to American cotton, and the quoted price ranged at about $\frac{1}{2}$ a pound under American. Time alone can show its true relative value, but it is of immense protective importance to bankers, who finance shipments, and to all those who grow and deal in Empire cotton.

Cotton Manufacturers and Selling at a Loss.—For some time past, writes our Manchester correspondent, many manufacturers of Lancashire cotton cloths have been unable to sell their production on a profitable basis, owing to the slackness in trade. The falling off in business has been felt most keenly by makers of shirtings, which are largely exported to India and China. Ground has undoubtedly been lost, and some makers have been compelled to sell grey shirtings at what can only be described as ridiculously low prices. Other concerns have closed down. This policy has been going on for some time, but during the past week the members of the Blackburn Manufacturers' Association held a meeting, and the members present pledged themselves to refuse to sell at a loss in the future. Similar meetings to the one held in Blackburn have already been held, or are being held, in other districts, so that the movement to insist on better prices being paid is not confined to Blackburn. Of course, it is not considered possible for any organised scheme of curtailment of production to be put into force, for the conditions prevailing in the different weaving sheds vary a great deal. It is understood that a meeting of the Cotton Spinners and Manufacturers' Association, which includes all the district associations, will be held in Manchester within the next day or two for the purpose of considering the state of trade in the manufacturing branch of the industry.

The Ministry of Labour's First Report.—Although the office of Ministry of Labour, and the transference to this new State department of the powers and duties of the Board of Trade, under the Conciliation Act of 1896, the Labour Exchanges Act of 1909, the Trade Boards Act of the same year, the National Insurance Acts (Unemployment) of 1911 and 1916, took place at the end of 1916, and the very beginning of 1917, no report covering its activities has been issued, previous to the one published the other day. With all the advantages of a first survey, this Report (Cmd. 2481, price 4s 6d) is a very interesting document. It covers the years 1923 and 1924, and is to be followed, in future years, by annual surveys, similar to those issued by the Ministry of Health, and other great departments. The Report itself is interesting; the appendices contain a mass of statistics of great value, which it is exceedingly convenient to have thus collected in orderly shape. They cover the administration of Unemployment Insurance, and of Trade Boards; changes of rates of wages and cost of living; the material concerning industrial disputes and membership of Trade Unions, it is true, is mostly available in the columns of the Ministry's monthly *Labour Gazette*, but it is more compactly pre-

sented here. This advantage of compactness and lucidity of presentation is a special and general merit of the Report as a whole. It is a quite unusually readable document. The matter in it is, of course, largely familiar, but the exceedingly informative surveys of industrial disputes, and of the courts of inquiry held, notably in 1924, under the Labour Government, whose year is comprised within the Report, deserve a word of particular notice. Among points of minor interest that are dealt with, a word of mention is deserved by the practical failure of the effort to find employment for British workmen in France. Early in 1923 an agreement was reached with the French Government, under which the French Ministry of Labour undertook to obtain particulars of vacancies in France for British workmen. Up to the end of 1924, however, only 144 men had obtained employment in this way, in addition to 132 gardeners and 4 stenographers placed during 1923-4 with the Imperial War Graves Commission. Another point is the non-payment by employers of contributions under the Unemployment Insurance Acts. "Continued trade depression resulted in a large number of cases, in which small employers failed to stamp the books promptly, with the result that arrears of contributions rapidly accumulated beyond the capacity of the employer to pay. These cases range from the type where there has been serious and inexcusable negligence on the part of the employer to the type which may be regarded merely as late stamping." In 1924 criminal convictions were secured in 939 cases. "One particularly regrettable but persistent source of non-compliance is found to be due to the embezzlement of insurance stamps money by cashiers and clerks. Non-stamping, due to this cause, has been discovered in firms of the highest standing, and has amounted to sums exceeding £1,000."

The Stock Exchange Saturday.—With the end of the holiday season, writes a Stock Exchange correspondent, the Stock Exchange settles down to work for seven or eight months, calculating, as it always does, to earn the greater part of its income between September and the succeeding April. There is a good deal of business doing in most of the markets. So long as trade throughout the country continues to be languid, so long will the Stock Exchange markets enjoy the position of being attractions for capital. The question is already raised as to whether it would not be a good thing for the community at large if the Stock Exchange were to be re-opened on Saturdays. The House, it will be remembered, was closed completely for five months after the outbreak of war, from August, 1914, to January, 1915. When business was resumed within the walls of the House, Saturday remained for a year or two as one of the working days of the week. As the necessity for national service became intensified, it was thought that, business being quiet, it would be wise policy to close the Stock Exchange altogether on Saturdays, in order to give members an opportunity for doing more national work, and, also, of obtaining a chance of getting a little rest at a time when few people were able to afford either the time or the money for holidays. When the banks decided to close on Saturdays at twelve o'clock instead of remaining open until one, it grew evident that this would in itself place a heavy bar against the door of mechanical details connected with Stock Exchange work. At the end of the war the younger men returned to the markets, found in many cases that there was not enough business for everybody, and began to agitate for re-opening of the House on Saturdays as a possible means for increasing the volume of trade. The question has again, as just mentioned, come to the fore in connection with the latter seven months of the Stock Exchange year that have now started. The Stock Exchange is as willing as any of its critics can be, to consider the question from the standpoint of national aspects. Members undoubtedly find it pleasant to be able to count upon having every Saturday off. The sentimental view need not, however, be taken into account. The point is whether re-opening of the House on Saturdays would be to the general advantage, in facilitating the public's dealing in stocks and shares. There is a good deal to be urged in favour of the proposal. Mechanically speaking, so long as the banks close

at noon, would be so considerable as in itself to render an extension of banking hours almost inevitable if the House were to begin business again on Saturdays. It is understood, however, that the Guild of Bank Clerks opposes the extension of hours for its members, and, if the banks are to give an additional hour on Saturdays, it would be needful to enlist the support of the fairly powerful body which the Guild now is. There might be difficulty, too, with the Printers' Union in obtaining consent for the Stock Exchange Official Lists to be printed on Saturday mornings under such rush conditions as would certainly prevail if the Lists were to be of any value as a record of prices on the half-day. In one sense, the public start more fairly, so far as price variations go, on Monday morning than they would do if the House were to be opened on Saturday. The week-end gives time for consideration, for digestion of expert as well as personal opinions, and so lessens the likelihood of there being hasty and ill-considered action as the immediate result of any startling piece of news. If the New York Stock Exchange were to become once more an active factor in London business, this might force the hands of those who maintain that the public and the Stock Exchange are well served by the present condition of affairs, but until something of this kind does arise to point a real need for opening on Saturdays, it is not surprising that the Stock Exchange Committee should adhere to the present practice of closing the House from Friday night until the following Monday morning.

Tanganyikas.—A correspondent writes: These shares, with those of the junior ally, Zambesia Exploring, have figure prominently amongst market movements during the past few months, Tanganyikas rising from 22s 6d to double that price, though they are now slightly easier. Many thousands of shares have changed hands each account, and this activity has made them one of the bellwethers of the Rhodesian market, rendering the company's progress a subject of more than usual interest, while a first dividend declared in July, after many years of travail, has further whetted expectancy regarding the future. The following examination of the position is based on official data. The company's main holdings at present number four, namely, £200,000 Treasury bonds; the Union Minière shares, comprising 182,441 shares, entitled to ordinary dividends; 30,175 privileged shares of 500f, and 60,000 obligations of 100f; £3,862,400 in shares and securities of the Benguela Railway; and £500,000 in the Rhodesia Katanga Junction Railway. The Union Minière holding is, of course, much the most important, and from it the Tanganyika Company received £138,000 for 1923, and about £250,000 for 1924. Last year the Union Minière produced 85,500 tons of copper, and will probably produce 100,000 tons this year, the output rising gradually until in 1931 it is anticipated that a total of 200,000 tons will be reached, that being the goal aimed at by a programme of works extension requiring some £6,000,000 of money, and six years to complete. The current cost of production is round £54 per ton—a figure which will not be materially reduced until the new plant and the Benguela railway are operating, the former in full development by 1931, and the latter in 1928. Assuming a gradual increase of output each year at the rate of about 20,000 tons, an approximate estimate of profits may be arrived at. Thus for the current year on unchanged costs and the present price of copper, 100,000 tons would yield a return of £1 15s a share, less Belgian tax, to the Minière shareholders, and in progression for 1926 and 1927 the figures would be £2 4s and £2 12s 6d per share. A larger rate of profit ought then to accrue because of reduced costs, and in 1931 on 200,000 tons production, and a possible decrease in costs of, say, £7 per ton, the profit would equal £3,800,000 gross. From this interest and general charges of £300,000 have to be deducted, and one-fourth of profit, in addition, which belongs after 1927 to the privileged shares. This would give a balance of £2,600,000, equivalent to £5 a share, less Belgian taxes, or £4 10s net. Additional incomes from other sources, such as radium and cobalt, will be obtained, and are difficult to assess at present, but it seems reasonable to assume they will not be great enough very materially to increase

the dividend on a capital so large as that of the Minière company. On the above figures the Tanganyika Company's various Minière holdings would bring in a revenue of £850,000. The Rhodesia Katanga Junction railway may have succeeded in wiping out its debit balance by then, and bring in a small return, but the Benguela Railway has so large a deficit to make good that any income from this quarter appears improbable for a long time. Calculating, therefore, on a revenue in 1931 of £850,000, the Tanganyika Company could pay a dividend of 15 per cent. on its present capital. The price being now over 100 per cent. premium, this prospect seems fully discounted well in advance. The supply of labour in the Congo is an urgent problem, but we have preferred to leave this outside present consideration.

Colonial Mutual Life Assurance Society.—The full report and accounts of this society have reached this country from Melbourne. They include a valuation statement for 1924, which shows that, taking the liabilities of the ordinary department on a $3\frac{1}{2}$ per cent. basis with the British offices tables, there was a net surplus for the year of £252,759 on funds of £6,653,975. The total surplus, including the amount brought forward, was £305,511. The reversionary bonus allowed to participating policy-holders in the ordinary department ranged from £2 to £6 per £100 assured, and the balance carried forward was £23,720. In the industrial department, the total surplus was £55,498 on funds of £1,003,139, and the reversionary bonuses allotted ranged from £1 to £2 per cent. on sums assured according to duration of policies. The new policies issued during last year in the ordinary department numbered 10,008, assuring £3,443,336, and the funds increased by £403,984. The net rate of interest yielded by these funds was £5 4s 1d per cent. The claims by death amounted to about 63 per cent. of the amount expected by the tables used. In connection with its industrial branch the society maintains a nursing and welfare service with a staff of 17 trained nurses. More than 9,000 sick policy-holders were visited last year. At the annual meeting held in Melbourne it was stated that this service had been the means of saving the lives of many children. The application of welfare work to industrial life assurance has the double merit of being of value to policy-holders and of benefit to the society.

Obersee Correspondence.

UNITED STATES.—MARKET BUOYANCY—INVESTMENT VALUES AND OUTLOOK—RAILWAY POSITION—STEEL—OIL—COTTON CROP.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 25.

BUOYANCY in the markets continues during what is normally a quiet season of the year, and causes no little discussion as to the real basis of present values. Many conservative critics do not hesitate to take the position that stock prices are extravagantly high, and that excessive speculative manipulation is responsible for the present condition. The critics point to the sharp advances in high-priced issues, and assume that they are the result of pool operations and reckless public participation. Even the critics admit that business prospects are good, and that money is likely to remain reasonably cheap. Their complaint is that present security prices discount all the improvement that is in sight, and more. According to this view, our stock market is working into a precarious position.

While financiers and business men are somewhat impressed with these arguments, and generally declare that prices are "high," the critical thesis is by no means accepted at its face value. While somewhat sceptical over present values, most financiers are not in any particular hurry to liquidate their holdings. The rub comes when individual issues are considered. This stock is retained because it has achieved an investment position. Another is kept because of excellent prospects in the

particular business. Yields on many good issues still are fairly liberal, and a great deal of investment buying is being deferred in the hopes of a sizable reaction. The bulls explain the sharp advances in high-priced issues on the basis of extraordinarily strong cash positions and the prospects of "split-ups" or increased cash distributions. They claim that the critics fail to take account of the fact that we, as a creditor instead of a debtor nation, must be prepared to accept lower yields than before the war. They say that much is blamed on pool operations that really is due to small floating supplies of stocks. They maintain that higher prices will prevail after the whole of Europe has been put back on a gold basis.

Whichever party is right, and the argument is a very pretty one, the much-discussed hardening of money rates has amounted to very little so far. The acceptance rate moved up an eighth to-day to $3\frac{1}{8}$ bid for 30 days, and $3\frac{1}{4}$ bid for 60 days, and call money on the Stock-Exchange now is fluctuating between $\frac{1}{4}$ and $\frac{1}{2}$ per cent. Time money, however, remains conspicuously steady, with 60 and 90-day accommodation commanding $\frac{1}{4}$ and $\frac{3}{8}$. As to the immediate future, banking opinion is somewhat divided. In some quarters it is maintained that the normal autumn pick-up in business will have the normal tightening effect. In others it is held that the firming will amount to very little. Advocates of the latter view point to the extreme liquidity of the positions of the large industrial companies, and to the absence of inflationary tendencies. They say that the revival in business will be moderate, and that the buying will continue to be for short periods in advance. While mere precedent may not be a very valuable guide in the present situation, it is worth noting that the tabulations of the Federal Reserve Bank show that the maximum of summer ease in the money market comes at just about this time, and is followed by a hardening tendency that sets in during the last week of August and runs through the first half of September. After then rates usually hold fairly steady until the latter part of October, when a seasonal rise running through early November sets in.

One of the points that the critics are willing to concede is that strength in railroad shares is justified. Incidentally, the recent movement in these shares, while moderate, has been upward. The fact of the matter is that the railroads are moving a very large traffic, and are earning well. Loadings have run above a million cars in each of the last four weeks. The volume of traffic is running nearly as high as during the record-breaking months of 1923, and is exceeding that at this season in any other year. Meanwhile, it may be noted that the June earnings turned out even better than had been anticipated. The Class I. roads were able to show net earnings of \$91,716,862, as against \$65,806,740 in June, 1924. The percentage earned during last June on the Inter-State Commerce Commission's valuations was 5.45 per cent. This obviously comes very close to the "fair return" of $5\frac{1}{2}$ per cent. set up as a standard by the Commission. That the good earnings will continue is suggested by the first few of the July reports. These exceed the corresponding showings in July a year ago, when the Class I. roads earned \$74,027,600. Meanwhile, it may be noted that the railroads are in excellent condition both physically and financially. They should be able to handle a huge autumn traffic with dispatch. The condition of the railroads' equipment is so satisfactory that new buying in this direction continues to be scanty, and the equipment companies are running at a low rate. Part of the indisposition to buy may be accounted for, however, by hopes of still lower prices for cars and locomotives. As steel prices are displaying a firmer tone, the railroads may abandon their present attitude. They are in a position to buy freely if such should be their wish.

As for the steel industry, the betterment that was expected has set in. It is, however, a mild one. Buying is somewhat better, and operations at the mills are slightly higher. The industry as a whole is now working at about 72 per cent. of capacity, as compared with a low record of about 65 per cent. touched in July. Shrewd observers expect the improvement to be continued through the rest of the year, and believe that the decline in unfilled orders has about ended. These observers are not convinced, however, that

the improvement will be sharp enough to result in ordering for extended periods ahead. Consequently they expect prices to be firm, but not to advance materially. This branch of industry probably will experience, therefore, good business, but moderate profits and no boom.

Further cuts have been made in oil and automobile prices. The cuts in motor vehicles have become general, and in some instances have been accompanied by the offering of new and improved models. Here again the strong and the efficient are making excellent profits, despite the more intensive competition. The lower prices have stimulated sales, and those of the General Motors Corporation were, during August, greatly in excess of those for August of last year. The greater popularity of the closed models has been a very helpful influence, increasing the sales and helping to reduce production costs on these types. As for oil, the production of gasoline has proved too high even for the extraordinarily good consumption. "Bootlegging" of gasoline reappeared, and the larger companies reduced their prices to correspond to those quoted by the bootleggers. Friends of the industry find the silver lining in the prospect that lower prices will curb gasoline production. While the lower prices are reducing profits, the latter are by no means extinguished.

Forecasting of a 13,990,000 bale cotton crop by the Department of Agriculture brought a small reaction in cotton prices. The official estimate was not greatly different from the anticipations of the trade and private investigators, and the heavier tone in the market following the report is ascribed largely to hedge selling in connection with actual marketing of the crop in the South. While weather conditions have been more favourable during the past week, the boll weevil pest, also, has become more active. As a rule crop estimates made in August must undergo substantial revision in the light of autumn ginning reports. Last year this revision was sharply upward. In the trade the belief is widespread that, with the large carry-over from the previous crop year, a sufficient quantity of the staple will be available this year to satisfy the demand of the mills at reasonable prices.

FRANCE.—THE DEBT PROBLEM—GOVERNMENT'S POSITION IN THE CHAMBER—1926 BUDGET PROSPECT.

(FROM OUR CORRESPONDENT.)

PARIS, September 2.

M. CAILLAUX, in spite of the Geneva meeting of the League of Nations, still occupies the centre of the stage, and is likely to do so for some time to come. His negotiations in London are still regarded as having resulted in a personal triumph, particularly when judged by the effect they have had on American opinion, as shown by the irritable criticism of a substantial section of the United States Press. It is universally recognised here that America now more than ever holds the key to whatever settlement of the Inter-Allied Debt question can be arranged, and that the French and British Finance Ministers have placed the United States in a delicate ethical position. Whether this implied compliment to them is deserved, or whether the present position has been arrived at merely by the force of circumstances, remains to be proved; but, in any case, M. Caillaux's personal standing as a financier has undoubtedly been substantially improved since he left on his London visit.

The French delegation to the United States, the names of whose proposed members have already been published, is a strong one, but there is still a significant hesitation in official quarters to state definitely whether M. Caillaux will accompany it as its leader. This hesitation, in view of the present curious attacks on him in the United States, is easily explained; but it is generally regarded as unthinkable that the Minister who has so ably handled his country's financial fortunes since his return to office should not act as the nation's spokesman in the coming critical negotiations in Washington. On the result of these negotiations will depend the burden of taxation in Great Britain and France, and also to a great extent the economic situation of both countries, for the next 60 years. It is a remarkable tribute to M. Caillaux's personal genius that his fellow-countrymen of all parties freely

recognise that he is by far the most suitable of contemporary French statesmen to be selected to head the Washington deputation. It is also significant that, in all the confusing and obscure intrigues that are now in progress here between the various political parties as the result of the collapse of the Cartel des Gauches, not a single voice has been raised—except, of course, among the Socialist party—to the effect that M. Caillaux should be eliminated in the event of any reshuffling of Ministerial portfolios.

This question of the composition of the future majority in the Chamber is now becoming acute, and will become still more so between now and the reassembly of Parliament in the second half of October. M. Léon Bérard, who was a member of M. Poincaré's Cabinet, has given notice of an interpellation of the Government, which will be nothing less than a demand that M. Painlevé shall state plainly on what groups of the Chamber he intends to rely for his majority in the future. The present Chamber, it is recognised, was elected by a majority of the electorate, who wished to bring to an end the deadlock in international relations which was brought about by the occupation of the Ruhr. That having been accomplished by the combined efforts of the Herriot Government here and the Macdonald Government in England, and these having been replaced by the present Baldwin and Painlevé Cabinets, an entirely different situation has been brought about in both countries, and particularly here, where the great national questions of financial reform and Morocco, which are obviously of much greater importance than mere party questions, have now assumed pressing urgency.

The Socialists having made the best of a bad job by repudiating an alliance in which their assistance is no longer required, the Nationalists, by the voice of M. Bérard, have intimated—in a manner that is perfectly natural in French political life, although such a situation would be impossible in England—their willingness to take their place. "Is there a majority in the present Chamber," M. Bérard asked a day or two ago,

"suitable to deal with current events, and with the difficulties arising from them?" M. Bérard and a large number of his fellow Nationalists believe there is, and they are prepared to assist in furnishing M. Painlevé's Government with it. "All we ask of the Government," M. Bérard says, "is to work with it on a programme of national interest, in a declared, regular, and legitimate union, in accordance with strict Parliamentary tradition." Nothing could be plainer than M. Bérard's statement, and nothing augurs more clearly for a return to the pre-war practice of a Government, however much the individual members of the Cabinet might be changed, solidly based on a broad majority formed by the whole of the Centre parties.

The forthcoming Radical party congress at Nice will probably settle, for all practical purposes, the problem of the future majority. Much undoubtedly depends on the decision which must be taken in the near future as to whether the present bastard form of the proportional electoral system shall not be abolished, and a speedy return made to the old system of *scrutin d'arrondissement*, which would bring about the disappearance, with the *scrutin de liste*, of the system of party political fighting alliances which at the last General Elections directly gave birth to the now defunct Cartel des Gauches. The so-called proportional system once out of the way—and its speedy disappearance may be regarded as certain—the Radical party will return to its old and true rôle as a centraliser of the other Republican parties, and would be able to group around it once more the votes of the moderate groups headed by MM. Georges Leygues, Maginot and Darine, linked up with the Loucheur, Herriot, and Painlevé groups. French policy would be once more stabilised, as before the war, and French relations with Great Britain would be definitely placed on an even keel.

Whether M. Painlevé would remain at the head of the Government in such circumstances is an open question. The Premier's personal authority has undoubtedly been substantially strengthened since he changed places with M. Herriot six months ago, and his expectation of life as head of the Government has probably correspondingly increased. The continuance of M. Briand and M. Caillaux at their present posts may be considered as most probable, but changes in regard to other portfolios would be certain. The probable departure of M. Steeg, who is expected to replace Marshal Lyautey as Resident-General in Morocco in the near future, would cause an important vacancy, which would undoubtedly be filled from one of the groups which is now expected to help form the new majority. All this would be in favour of a continuance of the present international policy of France, and could only be welcomed from the British side of the Channel.

M. Caillaux is expected to hand to the Finance Commission of the Chamber the draft of his Budget for 1926 on Thursday next. On the revenue side, the estimates will be those which the Finance Minister laid before the Commission last June. The estimated expenditure then provided for will now include, it is announced, an additional 3,000 million francs, as compared with those of 1925, owing to the incorporation in the forthcoming Budget of the hitherto (for some years past) autonomous budget of the Post Office, telegraph, and telephone department, of the Caisse des Pensions (almost the last surviving factor of the now abolished "Budget of Recoverable Expenditure"), and the interest charges of the new conversion loan now being issued. The Budget Bill for 1926, it is reported, will consist of only 80 articles, as compared with about 400 in its predecessor, so that its consideration by the Commission should not occupy more than a month at the outside. By the beginning of November, therefore, the Bill should be ready for discussion by the House, in which case M. Caillaux may be depended on to secure its passage before the beginning of the coming financial year, on January 1st. We have it on the authority of M. Lamoureux, the Rapporteur-Général of the Finance Commission, that that body expects also to have to consider the agreements "which it is hoped will by that time have been arrived at" with Great Britain and the United States in regard to the inter-allied debts.

This view will naturally be regarded as unduly optimistic by the large section of opinion here, which insists that M.

Caillaux's recent visit to London can only be looked upon as merely a preliminary sounding of the British Government, and that anything like a definite agreement is still far from being in sight. Obviously, until there is some modification of the Dawes Plan, which calls upon this country to accept such an extraordinarily large proportion of its share of German reparation payments in kind, the present desire to fix in definite figures France's annual instalments to her creditors can only be regarded as more or less academical. A solution would appear to lie in the suggestion that has been made that French industrial interests should be brought to see that it would be beneficial to both countries if a substantial proportion of German payments in kind could be made in plant, equipment and labour on French public works, of a class that would not be undertaken unless paid for out of Reparation payments.

HOLLAND.—MEASURES AGAINST UNEMPLOYMENT —METAL INDUSTRY—FOREIGN INTERESTS AND FOREIGN TRADE IN THE DUTCH INDIES.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, August 21.

For the time when Parliament will open again preparations are being made on all sides to bring certain conditions of importance into the centre of interest. Especially is this the case as regards to unemployment. The Netherlands Federation of Trade Unions—the largest organisation of workmen in this country, which maintains a close contact with the political Social Democratic party—presented a petition to the Government, in which the condition of unemployment at the present moment was gone into in elaborate detail, as well as the means to bring about an improvement. According to data supplied by the Department of Unemployment Insurance, the number of unemployed registered at the labour exchanges at various periods of late years were as follows:—

	1922.	1923.	1924.	1925.
January	76,123	107,417	108,056	79,300
April	74,326	91,975	70,824	62,730
July	62,581	77,691	53,024	50,740
October	70,514	80,593	56,450	..
December	90,701	93,625	71,500	..

It is expected that industry, although now in a better condition, will not be able to absorb the surplus labour within a reasonable time. It is therefore recommended that the Government should undertake public works, but only of that sort which would ensure an extension of opportunities of employment for the future. Thus attention is directed not only to building roads, &c.—in which the extra employment is ended as soon as the work itself is finished—but building canals, canalising rivers, speeding up the reclamation work of the Zuiderzee (Southern Sea), opening up new mines and waste land, &c. In addition, it is proposed to establish an independent bureau under the direction of a manager, to work in close contact with the Government. This bureau should then take in hand principally the organisation of transferring labour from one section of the country to the other, where needed, and take charge of the work to be executed. It is to be expected that these plans will be submitted for the consideration of the next Parliament.

The association of employers in the metal industry have sent a letter to the trade unions in this craft, in which they claim that the workmen should not object to overtime, permission for which has been legally obtained. The purpose of this is to provide that the permission obtained from the Government should not be made abortive by the opposition of the workmen, as has previously happened. No unanimous reply was obtained from the various trade unions. Some division is noticeable. The majority claim the right to object to any overtime, even when the Government grants permission therefor; still many acknowledge, at the same time, that take place in consultation with the trade unions concerned. It is not yet known whether the differences of opinion will lead to a conflict on fundamental principles.

As to other matters, there is still an attitude of waiting. Parliament will reopen on the third Tuesday in September, and then the various financial and economic questions will again be brought forward. In the meantime, the annual

report for 1924 of the Javasche Bank—the bank of issue for the Dutch East Indies—has furnished some interesting information. It appears therefrom that of late years the new investments of capital in the Netherlands Indies have moved in the direction of an increase of foreign, not Dutch, capital. This is the case principally along the east coast of Sumatra. If we leave out of consideration tobacco-planting in this area—which is largely in the hands of Dutch enterprises—the conclusion is arrived at that production is in Dutch hands to the extent of 38.1 per cent., and as to 61.9 per cent. in the hands of foreigners, of which latter the majority are English.

In the foreign trade of the Dutch East Indies very important changes have taken place in the last few years. If the figures for the imports into the Netherlands Indies for the years 1913 and 1923 are compared, it is seen that the share of the Netherlands in the total imports has been reduced from 33.3 per cent. to 20.9 per cent., which, however, still gives her first place; England has dropped back from 17.5 per cent. to 15 per cent., being forced back from second to third place. On the other hand, the imports from Germany have increased from 6.6 per cent. to 7.9 per cent. The United States has increased from 2.1 per cent. to 6.3 per cent. The greatest increase was recorded by Japan. In 1913 this country took in the eleventh place by an import value of F.6.8 millions, or 1.6 per cent. of the total; in 1923 it imported into the Dutch East Indies F.49.7 millions, or 8 per cent. of the total, and thereby reached fourth place. The exact figures for 1924 are not yet known, but as far as can be judged at present, an increase in Japanese influence in the foreign trade of the Dutch East Indies will be noticeable for that year also.

In connection with exports great differences are also to be noticed. If the years 1913 and 1923 are again taken as a basis of comparison, it is seen that exports to Holland have decreased from 28.1 per cent. to 14.9 per cent., those to Germany from 2.3 per cent. to 1.6 per cent. Against this the exports to Great Britain have increased from 3.9 per cent. to 8.4 per cent., to the United States from 2.1 per cent. to 9.8 per cent., to Japan from 5.8 per cent. to 8 per cent. The Indies Government has no intention to interfere in any way with the natural course of events, so that the Mother Country, as well as foreign countries, can compete on exactly the same conditions for a place in the foreign trade, as well as for establishing their interests in the Dutch East Indies.

AUSTRALIA.—CONVERSION LOAN — COMMON- WEALTH AND STATE BORROWING — PUBLIC REVENUE—PAPEE AND PROTECTION.

(FROM OUR CORRESPONDENT.)

MELBOURNE, July 23.

The Commonwealth Government is now offering a 5½ per cent. Conversion Loan of £67,000,000, at par, to provide for 4½ per cent. War Loans maturing on December 15th next. The first four War Loans issued in Australia amounted to £80,216,790, all repayable on December 15, 1925; but in the Conversion Loan subscribers may obtain 1931, 1936, or 1941 maturity, and assuming that the subscriptions are well distributed, the amount falling due at one time will be less onerous than on the present occasion. The original total of the four issues has been reduced to between 65 and 66 millions by sinking fund and other repurchases; but while the new loan offers a better return to investors than other existing Commonwealth securities, the present state of the market is largely artificial, owing to the active application of sinking fund and other official moneys since last January in preparation for the conversion. The terms of issue leave no accrued interest to be deducted from the issue price of par, while the interest will be subject to Federal income-tax, in contrast with the original 4½ per cents., issued free of income tax. This change leaves much uncertainty as to the probable amount of conversions by large individual holders, subject to high rates of tax. Out of the total of

JAMES FORREST, Manager. W. F. BLACK, Deputy Manager.

Every Description of Home and Foreign Banking Business transacted

67 millions, the banks have agreed to underwrite 60 millions.

In addition to the local Conversion Loan of 67 millions, the Commonwealth Government has just raised 5 millions in London and 15 millions sterling in New York. Of the 20 millions thus obtained, the Treasurer states that 6½ millions will be paid to the States immediately for their developmental programmes, and he further states that the successful flotation of these loans will give such command over funds as to inspire the utmost confidence in the success of the local Conversion Loan. As to the reason for going to America at all, the Treasurer states that the market in London was not capable immediately of absorbing all the flotations offered, and the inevitable result was that borrowing by other bodies had to be delayed.

Although little definite information as to the requirements of the Australian States has been published, money has been wanted somewhat urgently to enable them to maintain expenditure on public works, which in recent years has been on a large scale, with a rapid growth of public debts and in the annual interest bill. This has been accompanied by a rapid growth in town population, out of proportion to the development of the country, and these tendencies are beginning to be viewed with some disquietude. Government expenditure of loan money is a little less heavy than a year or two ago, but no substantial change would be possible without considerable effects being felt in employment and in those branches of trade which are stimulated by active Government spending. But although the 1924-25 season was an excellent one for the country, with large production and high prices for wool and wheat, the state of employment in the towns is worse than a year ago, and in some cases the Governments are making it plain that immigration is not wanted except for the country, where new population would not come into competition with town dwellers.

The revenue returns of the Commonwealth and six States for the year ended June 30th show a total (after allowing for duplications) of a little over 158 millions sterling, or an increase of about 8 millions as compared with the previous year. Of this increase railway receipts (gross) account for about 3½ millions, and taxation for over 4 millions. The total taxation collected by the Commonwealth and States was £74,909,000. The Customs revenue alone was about £26½ millions, against £25,177,882 for 1923-24, and £22,597,306 for 1922-23, these figures being much in excess of earlier records. The high Customs revenue is partly due to the stimulus given to imports by external borrowings, and but for this reason the total revenue would be insufficient for expenditure. Actually the Commonwealth accounts alone show a surplus of revenue over expenditure for the year of £1,984,325, which with the balance brought forward makes an accumulated credit balance of £4,575,458. Hopes are entertained of a reduction in taxation, but this can only be effected by relying upon Customs revenue being maintained at a high level.

A request has been made to the Commonwealth Government for an adequate protective duty to enable the manufacture of paper to be started on a large scale. The application has been opposed by all the leading newspapers, including those which advocate high protection.

UNION OF SOUTH AFRICA.—AN AMBITIOUS RAILWAY PROGRAMME — INDUSTRIALISM AND OVER-TAXATION — HALF-YEAR'S MINERAL PRODUCTION.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, August 5.

THE Railways and Harbours Board has promulgated a distinctly ambitious programme of railway construction, totalling 961 miles, at an estimated cost (excluding rolling stock) of rather over four and a-half millions, which, if the experiences of the grain elevators and the Natal Railway electrification are repeated, is likely to be substantially exceeded in practice. It is claimed that in most cases revenue is more than sufficient to cover ordinary working expenditure, but not the whole of the interest charges on the capital cost of construction.

Few of the lines open up any new mining districts, and the majority are in most sparsely populated localities. For instance, on two projected lines nearly 200 miles in length, there are only 11,300 white people. It is contended that their needs would be far more cheaply met by the construction of decent roads and motor transport, once or twice a week, at a fraction of the capital and operating cost. On railways which are to a great extent unnecessary luxuries, it is proposed to spend £800,000 more than the initial capital estimate of the Roads and Bridges Committee for the improvement of the 5,200 miles of proposed national main roads, and the maintenance thereof at £29,600 in the second year to £296,000 in the eleventh. This capital estimate is "£3,700,000 during a period of ten years," with redemption spread over 20 years. Besides this, there would be £8,550,000 in respect of the scheme of provincial roads. To institute another comparison, the projected cost of the railways is more than double the amount spent ex loan funds by the three northern provinces of the Union on roads and bridges. It has been demonstrated in America that the establishment of truck services on public highways is cheaper and superior to branch railways. But whichever way we look at the matter, South Africa must have roads; the necessity of having both roads and branch railways is by no means clear.

Two of the most important papers read at the recent Economic Conference held in Johannesburg were those of Mr S. W. Jagger, M.L.A. (Minister of Railways in the Smuts Administration) on taxation, and of Prof. H. E. S. Freemantle, who has just resigned from the Board of Trade and Industries, on the "Effects of Tariffs on the Cost of Living." Mr Jagger's thesis was thus expressed: "Taking into account the stage at which the development of the country has arrived, its annual income, and the distribution of this income among the various grades of society, the burden of taxation is too heavy, and does, in fact, constitute a real check to our economic advancement." Taxable capacity, he declared, depended upon the capital wealth of a country of whatever kind, created or existing, in a form to produce more wealth.

Assuming for a moment that the surplus of aggregate incomes over aggregate subsistence provided the taxable fund of a country, it was evident that a country young in development, as yet poor in capital resources, would require to be guided by a national policy which tended to promote the reinvestment of as much of that surplus as possible into capital forms capable of augmenting the flow of economic goods, and of increasing the available surplus for future years.

Taxation up to a certain point was an incentive, tending to increase zeal and energy. Beyond that point, when taxation encroached to an ever-increasing extent on savings for future development, there came a stage when the effect involved in those responsible for making the effort was disproportionately large, as compared with the reward and prospects afforded, and from that stage the effort would tend to slacken, the surplus to diminish, and ultimately to disappear.

It would be better to leave the calculation of total national income to trained economists, who could devote their whole time to the subject. Later, periodical determination could be left to the Census Department. In England, Sir Josiah Stamp had arrived at results which were substantially the same.

Assuming that ten per cent. represents the proportion of the national dividend absorbed by taxation, then, in order to pay that amount in 1924, our total income would have to amount to £220,000,000, in order to provide £22,000,000 in taxation.

The boom years gave a fictitious impression of rapid progress, just as the depressed period that followed gave the reverse. These are peaks on the irregular chart of economic life which must be ignored in taking the long view. Progress is slow in agriculture and industry, in merchandising and in mining. The conclusion that these considerations force into prominence is that at the present time over one-tenth of our national income is being withdrawn from those channels in which it could be put to productive use. The amount thus withdrawn is far too high. It shows in recent years a constant tendency to increase and to encroach to an increasing extent upon the fund from which progress must be financed. It constitutes a real check to economic advancement. There exists no encouragement to the people to produce more, when they are not assured of the full fruits of their labour.

The people should be encouraged to produce more, to keep down cost of production, to live economically so as to save as much as possible in order to re-invest savings in productive uses, laying foundations for future cumulative progress. Taxation must be restricted in amount, and money left in the pockets of the people. The tendency to increase the functions and cost of governing so marked in recent years must be strenuously combated, and increasing vigilance exercised in the objects of Government expenditure. From these necessarily brief extracts it will be seen that Mr Jagger, the effective if not the titular leader of the opposition, for General Smuts has taken a less prominent part, is in agreement with such authorities as Mr Alex. Aiken and Prof. R. A. Lehfeldt, who also have examined this and cognate questions.

Prof. Freemantle claimed that protection in relation to explosives and beef had had no effect upon costs, and the same might be said of anti-dumping legislation.

The ultimate effect of the new tariffs on South Africa would depend on their careful administration. The Government lacked a sense of human ideal behind its finance, and did not give the impression of determination, direction, grip and conviction. Careful and well-informed administration was of the utmost importance. It was proposed to have a new Minister. If they could have a Minister who would devote himself to industries, one who had mastered the industrial situation, and one who recognised the importance of careful administration, it would be all right. If, on the other hand, they were going to have interference on the part of Parliament and the Government with the course of economic events—and it constituted grave interference—he thought that the hopeful possibilities contained in the policy agreed to by Parliament might result in grave disappointment.

Prof. Clay, of Manchester University, said that while it would be extremely interesting to have comparative figures for the cost of living in different countries, insisted that they must refer to some definite class of each community. Prof. Plant pointed out the inconsistency of preventing the native from competing with the white man by colour bar regulations and the Minimum Wage Bill, and making him earn more to pay for certain articles, e.g., the specific duty on blankets. Prof. McMillan said the plunge into protection was due to one overwhelming motive—the alarm of the white population over the poor white problem.

Taking a desperate leap, without going deep into the causes of that problem, those in authority decided to have industries. But unless industries were going to stop the manufacture of poor whites, they would not get much further. Half of the native population had to be provided for, and here they had the tariff which was heaping a disability on the natives. The result would be still further to reduce their power to buy.

Prof. Freemantle did not think the S.A. tariff would have any appreciable effect on the cost of living, and none on the cost of producing gold. Let them compare this country's tariff with that of the United States of America, and it would be seen how grotesque was the remark that they had plunged into protection. It was eventually agreed to form an Economic Society of South Africa, Prof. Freemantle, who presided, urging that all schools of thought should be represented. A committee was appointed to consider the draft constitution.

Books and Publications.

WORKERS' EDUCATION.

BOTH in this country and in the United States an active controversy goes on, within the Labour movement, as to the character of the education that it may provide, or assist to provide, for its members. The essence of this controversy is the question whether education should be as nearly as possible a pure, uncoloured thing, an effort to do no more than free or discipline the mind; or whether it should aim at forming and moulding the mind, so that it is equipped for political and industrial struggle. It must always be remembered that the discussion refers, in general, mainly to adult or after-school education; concerns itself, therefore, with a limited opportunity. Granted that you can only give people very little, what is the most useful thing you can give? It is so the question must be stated if it is to be looked at fairly. Miss Margaret Hodgen, in her interesting survey*, undoubtedly inclines to what is here called the "Plebs" or "C.L.C." (Central Labour College) type, as against the W.E.A. (Workers' Educational Association), type—perhaps mainly because, not quite accurately, she sees the one as a purely proletarian effort, the other as "a modern expression of the humanitarian tradition of England," an "effort of the governing classes through the Universities to raise the intellectual level of labour." While she is undoubtedly right in seeing the W.E.A. and its kindred as accepting a fundamentally spiritual and evolutionary view of social forces and social development, and the C.L.C. and its kindred as taking a Marxian, materialistic standpoint, the actual antagonism between them is, perhaps, a little over-stressed; at the moment, active steps are being taken to secure a programme of common, or, at worst, joint action, by the Unions. She does remark, quite correctly, that "whatever may be said in favour of one side of the controversy or the other is not of great importance. The future of workers' education belongs to the unions, and the unions are beginning to realise it."

In the United States, although the essential lines of controversy are similar, the course of actual development has been different, mainly because of the peculiar attitude, in this as in other matters, of the American Federation of Labour, which, until 1918, took only a half-hearted interest in the topic. In 1922 it accepted representation on the executive committee of the Workers' Educational Bureau, and, as a result, "all Socialist, Secessionist, and University enterprises over which the Federation could not exercise financial control were excluded from active membership and participation in management." These secessionist groups have, until lately, been ephemeral in character; on the other hand, the Rand School of Social Science, the analogue of Ruskin College, is solidly founded. Up to the present, indeed, so Miss Hodgen records, "only one Trade Unionist of national prominence has seemed to realise the importance of a definite social goal as a basis for workers' education, i.e., J. H. Maurer, President of the Pennsylvania State Federation of Labour, who said, in 1921: "In my mind, it would be most unfortunate if the workers were suddenly to find themselves in possession of industry and government.....Understanding the limitations of the workers as I do, I do not feel satisfied that unless a certain number of us.....are properly prepared, we.....will make just as big a mess out of things as the present managers are guilty of doing."

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET,
September 9.ACCOUNT,
September 10.

Stock Exchange markets during the past week have adopted a waiting attitude. There are a good many elements of uncertainty in the financial situation; the possibility of a fall in the Bank rate, for instance, the apprehension of fresh labour troubles illustrated by the seamen's strike, the platinum chances that have brightened during the past few days in the Transvaal, the temperate hopefulness engendered by the announcement that Great Britain has decided at last to record recognition to Mexico. Capital continues to flow freely into the Stock Exchange markets; in the gilt-edged department, the principal feature of strength this week is shown by Victory Bonds, where the price advanced sharply upon a sudden demand for the stock. The War Loan has been good, upon re-investment in the stock of some of the money released by re-payment of National War Bonds on Tuesday.

The foreign market remains tolerably active. Mexican Government bonds, City of Mexico, Mexican Utility and Railway stocks rose from 1 to 6 points, upon the announcement of recognition, and though the full extent of the rise was not held, the various issues are substantially better on balance. New York is still a buyer of Brazilians, speculation is taking Chinese bonds. Prices of both are distinctly higher on the week. More favour is accorded to French Government descriptions, and the Mid-European loans attract a good deal of speculative investment. Two or three new loans are rumoured as likely to make their appearance in this section before long.

The home railway market rises an eighth and falls three-eighths. Holders are becoming very tired of the incessant shrinkage in values of their stocks. When prices rally, they fail to hold the recovery, and the effect of an improvement seems to be to encourage selling of more stock. The trouble in the shipping trade, which led to slight dullness amongst shipping shares, brought to bear a greater influence upon Home railway prices.

American rails are better, and Grand Trunk Pacifics, after a fall, regained the loss. Mexican Rails, both sterling and dollar stocks, shared in the revival already noted. Argentine Railways have dwindled, because of disappointment in connection with the movements in exchange. Brazilians and other foreign railway issues are inclined to give way, though the prior-charge stocks of these companies are strong in sympathy with the firmness shown by the gilt-edged market.

Rubber shares developed a fresh outburst of activity. It is evident that next week's settlement will be once more an exceedingly heavy one. Prices are better, and the demand has run indiscriminately upon shares of the best £1 denomination. Tea shares, on the other hand, after a fairly general rally, turned sellers towards the end of the week. Mexican Eagles provided a bright spot in the oil market, which otherwise has been undistinguished by any particular movement. Courtaulds, weighed down by the heavy bull account which exists, have moved within narrow limits, Bradford Dyers advanced briskly, and the rest of the textile list remained fairly firm. Associated Portland Cements, Dunlops, and Tobacco shares fell back after their recent bouts of energy. Grouts, amongst the artificial silk shares, stand out with a sharp rise. Other industrial shares that have appreciated are Melso, Hinde and Hardy, and some of the motor companies' issues. The electric supply list maintains its ground, and gas stocks are scarcely mentioned. The nitrate market is neglected. Iron, coal and steel shares are dull, on the Government decision to close some of the naval yards. In the brewery market, the strength of Watney deferred and of Huggins shares stands out prominently. Hudson's Bays have provided a good spot in the land section, while Sudan Plantations, after their jump, reacted upon a few profit-taking sales.

The Kaffir market has been largely at the mercy of the temper of Paris, and this, on the whole, remained good during the greater part of the week. Diamond shares in particular were favoured by the French, De Beers and others being readily taken. Some of the gold-producing shares are better, on Paris support assisted by a little Cape demand for Johannesburg favourites, of which West Rand Consols are for the moment the principal. The Transvaal Government has thrown open the platinum area to prospecting, and this imposed a check upon the strength which had developed earlier in some of the platinum companies' shares. Chartered, Tanganyikas and Zambesias, after a general fall on sales by people who were able to take quite good profits at the prices which had been reached, found little difficulty in recovering. The Colombian Mining excitement has fizzled out. Malavan and other tin shares are disposed to be dull by reason of the drop in the price of the metal. A little buying of Canadian silver shares came into evidence. The Barrier group is suffering from neglect, and other mining sections present no features of particular interest.

NEW ISSUES.

Borneo Rubber Estates, Limited.—Authorized capital £1,000,000 in 2s shares. Issue of 800,000 shares at par. The company has been formed to acquire rubber estates in Dutch West Borneo, having a total area of 4,514 acres, of which 800 acres are in bearing and 206 acres should, it is reported, "reach the tapping stage in another two to three years." The output for the year ended June 30th last was 255,038 lbs, and the profit is given at £10,560. The purchase price is £60,000, payable in cash, and the call at par, until June 30, 1927, of 200,000 2s shares. The issue has been underwritten for a commission of 4 per cent. and an overriding commission of 1 per cent.

COMPANY MEETINGS, &c.

THE MID-EUROPEAN CORPORATION,
LIMITED.POSITION AND PROSPECTS ON THE CONTINENT.
INITIAL RESULTS—TRADE OUTLOOK.

The first annual general meeting of the Mid-European Corporation, Limited, was held, on the 2nd inst., at Winchester House, Old Broad street, London, E.C.

Mr Harold Bendixson presided.

The secretary (Mr Reginald J. Godfrey, A.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I have to begin by apologising, on behalf of Mr Hambro (chairman of the corporation), for his unavoidable absence from our meeting to-day. In consequence thereof he has requested me to take the chair, and I will read the speech which he had intended to address to you. It is as follows:—

MR H. C. HAMBRØ'S SPEECH.

Gentlemen,—The report and accounts have doubtless already received your consideration and, with your permission, I will take them as read.

Your corporation was formed in June, 1924, to take advantage of the very favourable opportunities for investment arising out of the process of reconstruction on the Continent. We have, in consequence, become interested in the principal Mid-European countries, and I propose to refer briefly to the present-day conditions and prospects of each.

SITUATION IN GERMANY.

Germany, at the present time, is suffering from a reaction following a period of excessive optimism. Once the recommendations of the Dawes Commission had been adopted and the German Loan had been successfully floated, it was assumed too readily in Germany that the troubles of the country were at an end. This opinion was reflected in the rapid advance of the prices of securities on the Berlin Bourse, which for many months had been standing at a lower level than the prospects of the undertakings warranted. Prices appreciated in some cases by as much as 50 per cent. The rise, however, was too rapid, and later it became recognised that Germany, in common with the rest of the world, had still many difficulties to contend with before anything approaching normal conditions could be restored.

Public opinion also received a shock when the developments in connection with the affairs of the Stinnes Combine became known, and the rather exaggerated optimism gave place to a more exaggerated pessimism, which ignored the power of the German banks to protect the nation's important industries. The present position is that the prices on the Berlin Bourse of the more important German industrial shares have fallen once again to the level at which they stood about a year ago, and very recently some have fallen even below that level. This state of affairs could not exist but for the acute shortage of capital and dear money rates, which constitute Germany's principal problem. I am glad to say that there are now some signs of improvement. America has invested considerable sums in Germany during the past 12 months, and the purchase of large blocks of German shares by foreign groups has tended to ease the situation. We believe that Germany has now passed through her worst period of crisis, and that there is ground for hope that her position, from now on, will steadily improve.

PROSPECTS IN AUSTRIA.

Conditions in Austria are in many respects similar to those I have referred to in Germany. The country has now, with the assistance of the League of Nations, rectified her Budget, and thus accomplished the first step in her reconstruction. The trade balance remains unfavourable, but so soon as Austria is able to negotiate reciprocal agreements with her neighbours on the question of tariffs the adverse balance should tend to diminish or disappear entirely. Austria has some important industries which hold a secure position in the export markets. They, too, are hampered by shortage of working capital. During the inflation period the very natural tendency was for cash, as soon as it was received, to be turned into buildings and plant or assets of that nature, having a definite gold value, and which would not become valueless with the process of inflation. The result is that most of these industries have the most up-to-date factories and equipment, but have not sufficient working capital for their profitable operation.

The improvement shown by certain important undertakings

which have been provided (through us or others) with outside financial support has been notable. The position on the Vienna Bourse corresponds closely with that in Berlin, and industrial securities in particular are greatly under-valued. Improvement may be expected when the gold balance-sheets, which by law must be established this year, have been published. On the whole, we look forward to the future in Austria with hopefulness, and feel that the prospects of those industries which have an established export trade are good.

POSITION IN HUNGARY.

I will refer very briefly to the position of Hungary. The chief industry of this country, as you are aware, is agriculture, and in years of good harvest there is always a considerable surplus for export. For the year 1925 the harvest indications are exceptionally good. Hungary also has been assisted to straighten her finances by means of a foreign loan, and is now considered to be progressing favourably.

THE ACCOUNTS.

Turning to our accounts, you will see that at July 31, 1925, our paid-up capital amounted to £750,025, though, as stated in the directors' report, the average paid-up capital for the period, taking into consideration the dates of calls, was only £512,500. The authorised capital of £1,000,000 is now fully paid up, a final call of £2 10s per share having been payable on August 5th. The bank overdrafts, amounting to £127,519 15s, have, of course, been paid off out of the proceeds of this call. The investments, loans participations, and options, taken at cost, amounted to £923,272 11s, and the preponderating proportion of this item consisted of secured loans to important industrial undertakings, the value of which, of course, is not affected by market fluctuations. The profit and loss account, showing a balance of £47,623 18s 1d, is self-explanatory. The other items in the accounts call for no comment, but an opportunity will presently be given for questions relating to them.

PARTICIPATION IN EUROPEAN FINANCE.

Apart from the small number of foreign Government loans which have been publicly offered in London on short-term credits of a banking character, English participation in European finance has up to the present time been confined to the operations of the few companies specially formed for this purpose. There has been no general participation of the British public, nor can there be so long as the present restrictions are maintained. When the situation here is such that there is no longer any need for this policy, your corporation should be able, with the aid of its valuable connections in London and on the Continent, to be the means of distributing sound European investment securities, thereby developing its functions and benefiting from sources of revenue which are not at present available.

For the present, all we can do is to invest our funds, and in doing so care has been taken by your directors that the secured loans shall be the means of participating in any improvement of the general situation which should come with more normal conditions on the Continent.

I now have pleasure in formally moving "That the directors' report and accounts for the period from June 3, 1924, to July 31, 1925, submitted to this meeting, be and they are hereby adopted."

Major Julian Day, M.C., seconded the resolution, which, after the Chairman had replied to a few questions, was unanimously adopted.

THE DIVIDEND.

Mr Percy C. Crump, O.B.E., moved "That the dividend of 6s per share, less income-tax, recommended by the directors be and is hereby declared."

Mr Edward De Stein seconded the motion, which was carried unanimously.

Major Norman Holden moved "That Messrs H. Bendixson and P. C. Crump, the directors retiring under the provisions of Clause 87 of the corporation's Articles of Association, and Messrs H. C. Hambro and Julian Day, the directors retiring by rotation, be and they are hereby re-elected directors of the corporation."

The resolution was seconded by Mr Edward De Stein and unanimously adopted.

The auditors, Messrs George A. Touche and Co., having been reappointed, the proceedings terminated.

THE AUSTRALIAN BANK OF COMMERCE, LIMITED.

GENERAL AND SATISFACTORY PROGRESS.

RESERVE FUND DOUBLED.

OFFER TO INSCRIBED DEPOSITORS.

The annual general meeting of the shareholders of the Australian Bank of Commerce, Limited, was held, on Tuesday, July 28, 1925, at the Banking House, King and George streets, Sydney, Mr H. R. Lysaght, O.B.E. (acting chairman of directors), presiding.

In moving the adoption of the report and balance-sheet, the Chairman said:—

Gentlemen,—It is owing to the absence of our chairman (Sir Mark Sheldon) in London that I am taking the chair to-day.

IMPORTANT FEATURES.

The balance-sheet this year discloses several features of special importance.

Inscribed deposits are reduced from £1,245,000 to £244,000—a decrease of just over £1,000,000—while capital account is increased from £1,200,000 to £1,840,000, and the reserve fund from £370,000 to £740,000, this fund having thus been exactly doubled since last year.

The increase in the reserve fund is made up of the following transfers:—

	£	s	d
Out of the profits of the year	50,123	17	0
From surplus on inscribed deposits converted into shares	319,434	15	0
From surplus realised on 1,128 shares issued	441	8	0
Total	£370,000	0	0

GENEROUS OFFER TO INSCRIBED DEPOSITORS.

I do not think it necessary, at this stage, to refer at length to the offer made to the inscribed depositors to convert their deposits into shares on the basis of two shares, fully paid up, for each £3 of inscribed deposit. It was availed of, as has been announced in the Press, by more than 3,000 individual holders, representing over £958,000. The offer has been favourably commented on by both the Press and the public in this country and in Great Britain, and one of the results has been the increase in the reserve fund, as stated, by £319,000.

The fact that the bank has done more than it was obliged to do in improving the position of the inscribed depositors has no doubt added to its standing generally, and your directors are satisfied that their action has been as much to the benefit of shareholders as of inscribed depositors. This is shown by the enhanced price of the shares in the market.

Sir Mark Sheldon's presence in London was of material assistance in carrying the scheme through there, as he was able to attend all the meetings of depositors.

BALANCE-SHEET FIGURES.

Referring to the balance-sheet generally, it will be noted that liabilities to the public, consisting of customers' deposits, bills in circulation, &c., which on June 30, 1924, were £11,592,000, are now £12,443,000—an increase of over £850,000. This increase indicates a general and very satisfactory growth and development during the year.

On the assets side, cash and other items of a specially liquid character now total £5,823,000, as compared with £4,694,000 a year ago, and are equal to 9s 4d in the £ on our outside liabilities—a position indicating the strength of the bank's finances.

Advances at £9,138,000 and bank premises £434,000 show moderate reductions of £228,000 and £4,000 respectively.

The totals of the balance-sheet now for the first time exceed £15,000,000, the figure being £15,395,000—an increase of £896,000.

PROFITS AND DIVIDEND.

After provision of an increased amount for taxation, the profits amount to £180,000, as compared with £143,000 last year, and, after transfer of £50,123 to reserve fund, and £10,000 in reduction of bank premises account, permit a final half-yearly dividend at the rate of 8 per cent. per annum.

The dividend mentioned leaves £5,041 18s 7d out of the year's profits to increase the amount to be carried forward, raising the latter to £54,559 17s 10d. Thus the year has been one of satisfactory progress generally.

It is a matter of interest to the shareholders to note that, during the past seven years the rate of dividend has been gradually and steadily increased from 3 to 8 per cent.

GOOD SEASON AND FAVOURABLE PROSPECTS.

The season generally has been good, and prospects are favourable in most parts of Australia.

After a period of extremely high prices, the market for wool has

shown a halting tendency, and a considerable reduction in values has followed. The price now being obtained for fine wools, however, is still favourable as compared with many past years, and it is hoped that the present range of values will at any rate be maintained.

A good market has ruled during the season for wheat, and this, with the large crop secured, has benefited growers very considerably.

There has been a slight improvement in the cattle market, but there is still much to be desired in this direction.

An abundant sugar crop has been harvested, both in the northern districts of New South Wales and in Queensland, the quantity of sugar produced being not only sufficient for local requirements, but leaving a large surplus for export. The "preference" arrangements which have recently been reintroduced in England have been of material benefit to Australia in enabling this surplus to be disposed of at a considerably higher price than would otherwise have been the case.

DIFFICULT EXCHANGE POSITION.

Since we last met the exchange position became most difficult, and special measures were needed to ensure the marketing overseas of our primary products. The reintroduction of the gold exchange standard, however, has now brought about normal rates, and the difficulties that have been experienced since the war are at an end for the time being.

A NOTE OF WARNING.

We would like again to raise a note of warning in connection with the borrowing of both Federal and State authorities. These debts to-day are in the vicinity of £1,000,000,000 (one thousand million pounds), and to this must be added the very large borrowings of other public bodies. The interest on these debts is becoming a burden which the community can, with difficulty, bear. If the population were increasing in the same ratio the position would not be so serious, but this is not so, the debt per head every year being higher than in the previous year.

In conclusion, I may say that your directors look forward with every confidence to the future of the bank.

The motion was seconded by Dr Geo. J. Sly, and carried unanimously.

Mr H. R. Lysaght, O.B.E., and Sir Mark Sheldon, K.B.E.,

were re-elected directors, and Messrs William H. Perry, F.C.P.A., and William Craig, F.C.P.A., were appointed auditors.

A hearty vote of thanks to the directors, general manager, and staff was moved by Mr H. A. Brigg, and carried with acclamation.

The chairman declared the dividend is now payable.

KLABANG RUBBER COMPANY, LIMITED.
ACQUISITION OF NEW PROPERTIES.

At an extraordinary general meeting of the Klabang Rubber Company, Limited, held, on the 3rd instant, at the registered office of the company, 49-51 Eastcheap, London, E.C., the following resolution was unanimously passed:—"That the capital of the company be increased from £100,000 to £200,000 by the creation of 100,000 shares of £1 each."

In reply to a vote of thanks for presiding over the meeting, the chairman, Sir John Barlow, Bart., made the following statement:—

I am very pleased to be able to tell you, now that the capital of the company has been increased, that the board will acquire the Sweet Kamiri and Cheng Phye Pin Estates. We shall take them over on October 1st. A letter will be posted to all shareholders this evening giving details of these properties, but I should like to take this opportunity of saying that, in addition to Mr Dakeyne's, we have seen another and, in some ways, a more favourable report on these properties. Our reasons for acquiring them are briefly as follows:—

1. The capital value per acre of the company's property will be reduced.
2. The new areas are similar to Klabang, which we know to be very high-yielding rubber land.
3. They are already substantial revenue producers.
4. They contain a large proportion of young rubber which Klabang needs, because it has no further land for extension.

The purchase price is \$805,650, or £92,992 10s, and £1,200 paid to Mr Macrory, who was the option holder.

The company is to pay to Messrs Thomas Barlow and Brother £200 and out-of-pocket expenses, and to allot to them 5,000 shares at 30s per share, the price at which the remaining 60,000 shares which we now propose to issue are being offered to the shareholders.

In conclusion, I would like to add that your board are well satisfied with the present outlook of the industry, and have pleasure in recommending this investment.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.
THIRTY-SEVENTH ANNUAL GENERAL MEETING.
IMPROVED RESULTS.

The annual ordinary general meeting of the African and Eastern Trade Corporation, Limited, was held, in the Banqueting Hall of the Exchange Station Hotel, Liverpool, on Friday, the 28th ultimo, Mr J. H. Batty (the chairman of directors) presiding.

The Chairman referred to the great loss the nation, and West Africa in particular, had sustained by the death of Lord Leverhulme. He also referred to the recent death of Sir George Goldie. The past year, Mr Batty said, had been one of unprecedented events in West Africa, notably the visit of H.R.H. the Prince of Wales, which had done an enormous amount of good in cementing the goodwill and confidence of West Africans in the Mother Country. The good result of the visit will remain throughout this generation. During the year West Africa had suffered many losses in personnel—the transference of Sir Hugh Clifford from Nigeria to Ceylon, Sir Donald Cameron to the Governorship of Tanganyika, Mr W. F. Gowers to the Governorship of Uganda, and the retirement, through ill-health, of Sir Harry Moorhouse.

WEST AFRICAN TRADE.

Referring to the general trade of West Africa, Mr Batty said: The revenue of Nigeria for 1924 exceeded £6,700,000, being

£12,000 above the previous record in the boom year of 1920. The total value of trade amounted to £27,640,740, an increase of over £4,000,000 on the previous year. The exports from that colony also show a marked improvement, and easily exceed previous figures. There were 78,000 tons of ground nuts shipped last year, being 21,000 tons above the previous record year of 1918, and 56,000 tons higher than in 1923; 16,000 bales of cotton, as against 11,000 bales in 1923; 37,000 tons of cocoa, as against 32,000 tons in 1923; 127,000 tons of palm oil, as against 99,000 tons in 1923; and 262,000 tons of palm kernels, as against 223,000 tons in 1923.

There have been indications lately that the market for Shea nuts has been broadening, and if this should prove to be the case it will doubtless encourage the natives to give further attention to this produce, of which there are almost unlimited quantities available throughout Northern Nigeria and the Northern territories of the Gold Coast.

FAVOURABLE MARKET PRICES.

During the past year the market prices of West African produce have remained steady and at a comparatively high level. The increased quantity produced and the prices ruling have put larger sums of money into circulation, which has had a beneficial effect on trade. Provided we have no industrial strikes and conditions in England gradually improve, with affairs on the Continent steadily returning to normal, prices should remain somewhere near the present level, and so encourage the natives to increase production and further stimulate trade.

As regards oil concessions, the boring operations have been stopped, as there have been no indications encouraging enough to continue drilling.

They would be interested to hear that the company was now running a monthly steamship service to and from West Africa. A new steamer, the "Nigerian," had just been launched on the Clyde this month, and was expected to commence her maiden voyage in October. This vessel had been specially built for the trade and fitted with the latest appliances.

THE YEAR'S RESULTS.

The trading results for the year, after making provision for all bad and doubtful debts, depreciation on stocks, and maintenance of all plant and properties at home and abroad, amounted to £471,048 11s 4d, an increase of £28,695 14s 3d on last year. When addressing them a year ago he mentioned that the improvement indicated in 1923 had been maintained in 1924, and to some extent this is reflected in the account before them. The increase shown was really larger than appeared on the surface, as in both 1922 and 1923 accounts the results included substantial amounts from E.P.D. adjustment, whereas this year there had been no contribution from this source. The indications up to the present foreshadowed that the profits for the ensuing year should show a further improvement, provided conditions—industrial and political—remain normal for the remainder of the year.

In conclusion, the Chairman moved the adoption of the accounts and report. This was seconded by the vice-chairman, Mr R. B. Miller, and unanimously adopted.

THE DIVIDEND.

A final dividend on the ordinary shares of 4 per cent., less tax, was declared, making, with 4 per cent. interim already paid, a total dividend for the year of 8 per cent.

The retiring directors, Messrs T. Rowland Hughes, H. C. Hutchinson, J. Pickering Jones, and M. H. McNeill, were unanimously re-elected, and the appointment of Mr Oliver V. G. Hoare

STAEVA ROMANA (BRITISH), LIMITED.—Production for the month of August amounted to 26,380 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, August 26, 1925, amounted to 901 tons.

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended August 29, 1925: La Rosa, 9,300 metric tons (previous week ended August 22nd, 10,578 metric tons); Maracaibo district, 2,907 metric tons (previous week ended August 22nd, 2,970 metric tons).

Reports and Notices.

Mr T. D. Cooper has, owing to ill-health, resigned his position as managing director of Val de Travers Asphalt Paving Co., Limited, but retains his seat on the board. Mr Arthur Findlay has been appointed general manager and Mr C. M. Robertson assistant manager.

Baring Bros. and Co., Limited, notify that the transfer books of the Commercial Cable Company sterling 4 per cent. 500-year debenture stock will be closed from the 21st to the 30th inst., both days inclusive, for the preparation of the warrants for interest due October 1, 1925.

Sir Frederick Williams-Taylor, general manager of the Bank of Montreal, is returning to Canada in the "Empress of France," sailing to-day.

Commander Oliver Locker-Lampson, D.S.O., C.M.G., M.P., has been elected to a seat on the board of E. W. Tarry and Co., Limited, in the room of the late Viscount Knollys.

Mr Louis Oppenheimer has joined the board of the Consolidated African Selection Trust, Limited.

It is announced that Captain James Gillies, C.B.E., has been appointed general manager of the Canadian Pacific Steamships, with office in London, in succession to the late Sir Thomas Fisher.

GOVERNMENT STOCKS, &c.

GERMAN GOVERNMENT 47 PER CENT. GUARANTEED STERLING BONDS.—The Bank of England give notice that Bonds will be ready for delivery in exchange for fully-paid scrip certificates on and after Friday, September 11, 1925. The scrip certificates should be lodged at the Loans Office, 5 and 6 Lombard street, E.C., and must be left at least three clear days for examination prior to the issue of the bonds.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds, the Council of Foreign Bondholders have received advices from the bankers in New York notifying the payment of the August, 1925, instalment of the debt service in accordance with the arrangement of May 25, 1912.

BANKS.

AUSTRALIAN BANK OF COMMERCE.—At the meeting of the Australian Bank of Commerce, held on July 28th last, the chairman, Mr H. R. Lysaght, O.B.E., referred to the offer made to the inscribed depositors to convert their deposits into shares on the basis of two shares, fully paid up, for each £3 of "inscribed deposit." He said that it was availed of by more than 3,000 individual holders, representing over £958,000. The offer had been favourably received, and one of the results had been the increase of the reserve fund by £319,000. The fact that the bank had gone beyond its obligations had, no doubt, added to its standing generally, and the directors were satisfied that their action had been as much to the benefit of shareholders as to inscribed depositors. This is shown by the enhanced price of the shares in the market. Sir Mark Sheldon's presence in London was of material assistance in carrying the scheme through.

BANK OF NEW ZEALAND.—The report for year ended June 30, 1925 shows a net profit of £819,286 after payment of interest on guaranteed stock. This compares with a net profit of £735,832 in preceding year. The ordinary dividend amounted to 13½ per cent., absorbing £400,000. The sum of £250,000 is transferred to reserve fund, making total reserve fund of £2,575,000. The sum of £513,299 is carried forward, against £506,514 brought in. Total assets amount to £47,557,730. With regard to liabilities, deposits amount to £30,079,283. Notes in circulation stand at £4,168,844.

BANK OF VICTORIA.—The report for year ended June 30, 1925, reveals a net profit of £189,797, against £193,739 in preceding year. The ordinary dividend is maintained at 9 per cent. for the year. The sum of £50,000 is put to reserve, making reserve fund £800,000. The sum of £38,934 is carried forward, against £35,157 brought in. The total assets of the bank amount to £15,351,786.

COMMERCIAL BANKING COMPANY OF SYDNEY.—The report for year ended June 30, 1925, reveals a net profit of £480,261, against £451,567 for preceding year. The ordinary dividend is maintained at 10 per cent., absorbing £349,920. The sum of £130,000 is put to reserve fund and £90,227 is carried forward. Total assets of the bank amount to £45,217,645.

COMMERCIAL BANK OF THE NEAR EAST, LIMITED.—The directors have declared an interim dividend at the rate of 6 per cent. per annum, less income-tax in respect of the half-year ended June 20th last on all shares issued on or before that date. Dividend warrants will be posted on September 10, 1925, to shareholders on the register. Coupon No. 4 of the share warrants to bearer should be presented at the bank for payment of the dividends on them. The directors have decided not to issue half-yearly balance-sheets, but to only issue an annual balance-sheet in accordance with the Companies Acts each year as soon as possible after the ending of the financial year. The directors are satisfied with the progress the bank is making, and are shortly opening a new branch in Alexandria, Egypt.

MISCELLANEOUS.

AUSTIN MOTOR COMPANY.—We have received the following statement:—At a meeting of the board of directors of the Austin Motor Company, Limited, held in London on Wednesday, September 2nd, a resolution was passed approving a provisional agreement to be entered into by Sir Herbert Austin, the chairman of the Austin Motor Company, Limited, with Messrs Morgan, Grenfell, and Co., acting on behalf of the General Motors Corporation. At the same time, the scheme of arrangement for giving effect to the agreement and reorganising the present capital board, and will be forwarded to the shareholders as soon as the mission of the court has been obtained to call the necessary meetings of the shareholders to obtain their approval. Steps are being taken to place the proposals before the shareholders in the course of the next few days. They are, therefore, asked to reserve their judgment until they receive the same from the directors. Shareholders are reminded that nothing definite can be done without their and the court's approval.

BRITISH GLUES AND CHEMICALS.—The directors' report and balance-sheet for the year ending May 31, 1925, shows an improvement in the net profit from £6,203 last year to £42,540 (subject only to taxation) for the year just ended. Adding to this the balance brought in last year of £8,762 and deducting provision for taxation for the past year, amounting to £2,532, there is a sum available of £48,770. Out of this it is proposed to pay the dividend on the 8 per cent. cumulative preference shares for the half-year ending April 1, 1922, which will absorb £15,312, leaving £33,457 to be carried forward. On the balance-sheet stock-in-trade amounts to £212,863, last year £222,474; debtors and debit balances £124,273, last year £137,125; cash at bankers and in hand £20,906, last year £1,842; while on the debit side sundry creditors, including taxation, figure at £61,512, and an addition to depreciation reserve of £30,436 brings this item up to £160,643. A bank loan of £26,975 has been eliminated.

CANADIAN COLLIERIES (DUNSMUIR), LIMITED.—Production and sales of coal for the quarter ended June 30, 1925:—Production, 123,631; decrease over corresponding period last year, 24,959 tons. Commercial tons, 106,037; decrease, 17,941 tons. Sales, 103,661 tons; decrease, 18,559. Aggregate from July 1, 1924, to June 30, 1925: production, 377,771; commercial tons, 389,919; decrease, 45,173.

PALMERS SHIPBUILDING AND IRON.—The debit balance on the accounts for the period from July 1, 1923, to December 31, 1924, amounts to £38,716, to which must be added interest on contributions for the period (1½ years), £110,063; the annual may be regarded in the nature of a provision for depreciation balance on the properties and plant, £31,842; leaving a debit of £180,621. To this there must be added the debit balance brought forward from June 30, 1923, viz., £75,218; which makes the total debit balance shown on the balance-sheet at December 31, 1924, £255,839 to be carried forward. The report adds that the shipbuilding, engineering, and iron and steel trades, and the from the effects of these conditions. Orders have recently been obtained which will keep the shipyards and engine works partially employed, and negotiations for further work are proceeding. The iron and steel works are being kept in as efficient a condition as possible with a view to recommencing operations as soon as a revival in trade warrants this being done. In view of the curtailment of operations, as a result of the serious trade depression,

the directors have with regret been compelled to reduce the staff in all departments.

SINGEN AND CO.—The net profit for year ended July 31, 1925, is £91,021. This compares with £70,445 for preceding year, and £37,269 for year ended July 31, 1923. Ordinary shareholders received 12½ per cent. for year ended July 31, 1923, which was increased to 20 per cent. for year ended July 31, 1924, and further increased to 22½ per cent. for the year just terminated. Apart from this distribution, the company is setting aside £13,000 to reserve for income-tax, also £2,000 as an amortisation fund for leasehold properties. The sum of £5,000 is set aside as an employees' old age fund, while £55,000 is put to general reserve fund, making reserve fund £85,000. It is, however, recommended that £66,676 of the general reserve be capitalised and distributed among the members as bonus shares, which will permit each member who holds three shares being entitled to one bonus share. The sum of £30,441 is carried forward. Total assets are £690,281, of which £122,049 is in cash.

THE CORN TRADE.

Mark Lane, Friday Evening.

The harvest in the United Kingdom is finishing up fairly well, despite the many checks encountered by adverse weather conditions, and yields generally are favourable. The general course of trade proved very dull. Buyers generally refrain from operating with any degree of confidence owing to declining forward values. In the floating and forward cargo market business was more or less at a standstill owing to liberal offerings of Russian wheat and other European varieties at competitive prices, which imparted a weaker tone to the market, consequently offerings of North American and Plate descriptions were pressed for sale at lower rates. Shipments continue light, also quantities on passage, but with domestic crops now available, there is little or no inquiry by Continental consumers for imported grain. A steamer of Baril 62½ lbs. shortly due sold at 58s 6d to Antwerp. Of maize, Plate cargoes, August-September changed hands at 37s 9d, ditto due 38s 9d, and No. 6 yellow African afloat 37s 6d bulk and 38s bags, all per 480 lbs c.i.f. terms. Wheat remains quiet. No. 1 Northern Manitoba ex-ship quoted 67s 6d, No. 2 ditto 66s 6d, No. 3 65s 6d, Australian 62s 6d, Rosaf 63½ lbs ex-ship to arrive 61s 6d, all per 496 lbs. English new quoted 11s 4d-11s 8d per 112 lbs free on rail. Flour quiet at late rates, London standard grade quoted 49s, patents 51s-52s, town whites 49s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in London districts. Imported reservedly offered. Manitoba patents range from 48s 6d-51s 6d, Minneapolis 48s 6d-50s 6d, Kansas patents 48s-48s 6d, Australian 44s-44s 6d per 280 lbs ex-store. Maize again easier. Plate ex-ship to arrive quoted 41s, ditto landed 43s 6d, white flat African ex-ship 40s per 480 lbs. Barley dull and weaker. Californian new ex-ship quoted 41s-50s, Chilean Chevalier landed 58s-70s, brewing 52s-54s according to quality, Australian 57s-61s ex-store per 448 lbs. American malting ex-ship September 31s 3d, No. 3 Canadian: Western ex-ship September 32s 9d, No. 4 ditto 31s 9d, Morocco 36s 6d landed, Russian ex-ship 36s per 400 lbs. English new quoted 11s 10d-18s 9d, the latter for making quality per 112 lbs. Oats quietly steady. Plate landed 27s 6d, No. 2 Canadian Western ex-ship to arrive 29s 6d, landed 32s 6d, No. 2 Canadian feed ex-ship 25s 3d, landed 26s 6d, Chilean Tawny landed 27s 6d, No. 2 white clipped American ex-ship to arrive 23s 6d, landed 25s, all per 320 lbs. English: new quoted 9s-10s per 112 lbs free on rail. Millers' offers maintained. London-make flaked 18s 6d, rolled oats 17s 6d, medium also fine cut 17s 6d, coarse also medium pinhead 17s 6d ex-ship, ordinary Scottish oatmeal 19s, American ditto 17s 6d-18s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1924-25, 1923-24, 1922-23, 1921-22.

	1924-1925.	1923-1924.	1922-1923.	1921-1922.
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to Aug. 29	249,432	53,769	269,899	163,228

1924	53,769	103,947	48,506	12 2	14 8	9 1

AMERICAN WHEAT MARKETS.

Winnipeg has been weaker in the last few days, very little opposition being put up against organised selling pressure. With favourable weather for the harvest a satisfactory, though not a "bumper," Canadian crop is assured. The United States contribution to world's wheat exports will, however, be much less this year than last, and Chicago prices are much steadier than those of Winnipeg. Recent quotations:—

	Sept. 5, 1925.	Jan. 2, 1925.	Aug. 20, 1925.	Aug. 27, 1925.	Sept. 3, 1925.

(a) October delivery.

(b) September delivery.

INTERNATIONAL INSTITUTE OF AGRICULTURE REPORT.

The August "Bulletin" of the International Institute of Agriculture, Rome, states that on the basis of data already available the total wheat production of countries north of the equator, so far as ascertained, comes out at 3.4 per cent. more than in 1924, but is 10.9 per cent. below the exceptionally heavy yield of 1923. The following table represents a group of countries which last year produced over 70 per cent. of the world's wheat, though Russia, France, Germany, Yugoslavia, and Czechoslovakia are notable absentees:—

	1922.	1923.	1924.	1925.
Europe (17 countries).....	363.5	441.6	334.4	428.6
Canada and United States..	760.4	763.0	680.8	632.3
Asia (4 countries).....	243.2	244.1	238.3	223.8
North Africa (4 countries)..	41.7	64.2	51.1	63.9
Total (27 countries)....	1,408.8	1,512.9	1,304.6	1,348.6

IRON, STEEL, AND COAL.

We extract the following from the weekly report issued by the London Iron and Steel Exchange:—With the close of August the market anticipates a gradual improvement in trade. At the moment conditions are poor, and, although the demand is slightly better than for some time past, the competition for any orders passing is exceptionally keen. French, German, and Belgian steel makers fight amongst each other for any orders that come into the market, and prices are severely cut to secure attractive business. The pig-iron market remains quiet, and there has been an increase in the offerings of Continental iron in the home markets. Rather more interest is being shown in semi-finished material, and in this department Continental competition is particularly active. The demand for finished steel continues poor, but the recent increase in inquiry is regarded as promising an expansion of trade in the autumn.

Our Middlesbrough correspondent's report, dated September 3rd, is as follows:—Pig-iron: The market this week did not show the animation looked for after the holidays. Autumn requirements have still to be covered, but buyers are working only on a "hand-to-mouth" basis. The price of Cleveland No. 3 G.M.B. has dropped 6d since Tuesday, and is now no more than 68s 6d per ton. Business is very quiet also in hematite, and prices are easy. Mixed numbers East Coast hematite is still quoted at 75s 6d per ton, but 75s would be accepted. Manufactured iron and steel: Works are still badly off for orders. The following remain approximate quotations:—Steel ship plates, £8; steel ship angles, £7 15s; iron bars, £11 12s; steel rails, £8 10s. Iron ore: There is no marked change in the situation. Consumers are holding off, except as regards odd cargoes for special requirements. Best Bilbao Rubio is still quoted 20s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—There is less work in hand, and fewer inquiries for pig-iron billets and steel and iron bars and sections. Hopes of a substantial improvement before the end of the year are, however, entertained. About one-fourth of the capacity of the open-hearth steel plants is occupied. In the manufactured sections work from the British railways for axles, tyres, and springs for rolling stock and general stores has been cut down lately. The building of private owners' wagons is almost at a standstill. Foundry pig-iron can be bought at 68s at furnaces, and even less would be accepted for a firm order for basic pig. Locally made basic soft billets have come down to £7 5s. In the manufactured steel branches the work on hand is substantial, and probably exceeds the pre-war level. Sales of the best tool steels, however, are almost confined to the home market. The export demand is brisk for a variety of hand tools. The position of cutlery and plate is slightly better, and there are some signs of buying for the Christmas season trade. The coal trade is no better on the whole, but a fair tonnage is going to the iron and steel works and factories. The Continental demand is stagnant. Best South Yorkshire hards are quoted at 18s 6d f.o.b.

Our Glasgow correspondent writes:—The position is practically unchanged. Demand for pig-iron is of small extent, and prices are quoted at former low levels, No. 3 G.M.B. being 79s per ton.

A considerable quantity of French and Belgian pig is being imported by Falkirk foundries at prices which are unacceptable to local firms. The shipments of Scotch pig-iron from the Clyde last week totalled 462 tons, of which 422 tons were for foreign destination. For the corresponding week of last year the figures were 461 and 370 tons respectively. There is nothing fresh to report in regard to finished material. Some fair specifications are expected as a result of two or three recent contracts for ships secured by Clyde yards and the locomotives placed with the North British Loco. Co., Limited. The contract for the new Kelvin Hall, Glasgow, which is to be a steel-framed structure costing £162,000, has been secured by Sir William Arrol and Co., Dalmarnock Iron Works, Glasgow. Malleable iron-makers are only partially employed, orders being very difficult to procure. Re-rollers are better placed for light sections. Sheet-makers continue well booked, with inquiry brisk and prices keeping firm. Galvanised corrugated sheets are in steady demand for home consumption, and several very large inquiries are on the market for export. Prices are steady at £16 5s to £16 10s for 24-gauge.

Our Cardiff correspondent writes:—Conditions on the Cardiff coal market continue very depressed. Prices have shown further weakness, but at their lower range they are not stimulating demand, and work at the collieries has again been irregular. The American anthracite coal strike may, if prolonged, react on South Wales anthracite coal, which is already being shipped in small quantities to Canada and the States, but so far the dispute in Pennsylvania has had no effect either on demand or on prices. The South Wales audit for the three months ending July increases slightly the percentage on the general wage rate payable by the coalowners under the subsidy scheme. In August the general wage-rate for which the owners were responsible was 17.96, but in September it will be 19.01 per cent. The difference between the latter percentage and the minimum rate of 42.22 per cent. on the standard rates which the miners are paid will be met by the Government, and it is estimated that the total subsidy for the two months will amount to about £800,000. The following are the current approximate quotations:—Best Admiralties, 24s to 25s; seconds, 23s to 24s; best dries, 23s 6d to 24s; black veins, 22s 3d to 22s 9d; Western Valleys, 22s to 22s 3d; Eastern Valleys, 21s 6d to 22s; best bunker smalls, 11s 9d to 12s 3d; ordinary cargo smalls, 10s to 11s; coking smalls, 12s to 12s 3d; anthracite best large, 45s to 47s 6d; red vein large, 30s to 32s 6d; machine-made cobbles, 52s 6d to 55s; French nuts, 55s to 57s 6d; stove nuts, 52s 6d to 55s; rubble culm, 14s to 14s 6d; coke (special qualities), 40s to 42s 6d; patent fuel, 22s 6d to 24s 6d; pitwood, ex ship, 25s 6d to 26s. The situation in the iron and steel trade is unchanged. Tinplate prices are being maintained, and the volume of the export trade continues better than in July.

CUMBERLAND IRON.

(BY OUR CORRESPONDENT.)

While business is as quiet as ever, there has been heavier delivery of stocks bought in the early summer. The position is unchanged, however, with five furnaces of the United Steel Company in blast at Workington, one at Cleator Moor, one shortly at Millom, and indications of a revival of buying in one of the best months of the year are lacking. Much depends upon what takes place in the autumn in the steel trade. There are, it is known, orders that must be executed before the end of the year. Prices are unchanged, ton at Sheffield, £4 12s 6d at Glasgow, and £4 10s per Low phosphorus iron is £4 16s at Glasgow, and ferro-manganese, which is a dull market, is £15 10s per ton. In the steel trade the only department working is the fish-plate mill at Workington. Business is slight, but prices are maintained, with rails £8 10s, and ordinary kinds 15s to 16s per ton. The coal trade is still in a poor way. There is a shrinkage in local requirements, and the Irish market can absorb little more than 9,000 tons per week. Best round for shipment is 22s per ton, gas coal 22s per ton, house nuts 21s per ton, all f.o.b. Best house is 34s 10d at pit. Best steam is 27s 6d and washed steam 26s 6d. Coke is in firm demand by local smelters of ordinary iron at 19s to 20s per ton according to carbon content.

ZADRUŽNA GOSPODARSKA BANKA D.D.

METALS.

Tin values pursued a downward course until the middle of the week on liberal selling orders combined with lower Eastern advices, but later reacted on buyers showing more desire to operate, though movements were attended by considerable irregularity. Standard cash sold £252-£250 and £255 15s, three months £256 10s-£253 and £258 10s. Sales in the East were reported at £261 5s-£261 15s and £260. Copper.—Similar conditions prevailed in this market, while liberal offerings were fairly well absorbed at irregular prices. Standard cash sold £61 17s 6d-£61 11s 3d and £62 11s 3d, three months £62 17s 6d, £62 10s, and £63 10s. Lead market very irregular, but a good turnover resulted. Good soft foreign pig, September, sold £38 2s 6d-£38 15s and £37 10s-£38 5s, October £37 5s-£37 17s 6d and £36 15s-£37 5s, November £36 15s-£37 10s and £36 12s 6d, December at £36 10s and £36 5s. Spelter generally firmer, with dealings on fair scale. September sold £36 10s-£36 15s, October £36 5s-£36 13s 9d, November £36-£36 8s 9d, December £35 17s 6d, £36, £35 18s 9d, and £36 3s 9d ton. Antimony quiet. English special brands quoted £75 to £80 as to make and quantity, foreign refined £64 10s-£65 10s per ton ex warehouse. Aluminium quiet. English quoted £118 to £120, home and export, per ton. Tin plates steady. I.C. coke quoted 19s 3d to 19s 6d per box forward, f.o.b. Swansea. Quicksilver quiet. Spot quoted £13 15s per bottle. Wolfram firm. Spot 18s 6d to 19s per unit.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market this week has shown no important change, but a better feeling obtains, largely due to firm overseas cables and the measure of business done in wool and matchings on export account. The most surprising feature is the weight of wool France is buying, and although heavy losses are having to be faced on direct import wools, Bradford firms are meeting the market and selling freely. Further important transactions have been put through during the week, chiefly in merinos, also medium and fine crossbred matchings. Merino topmakers are taking firmer line, declaring that notwithstanding prices are still reasonable, they can purchase wool in no market to bring in tops at to-day's selling price, and cheap lots are no longer obtainable. South African cables indicate a very strong call for 70's combing. The list of wools to be catalogued at the forthcoming London sales has surprised a good many, but we think merchants and selling brokers are acting wisely to try and get rid of existing stocks. Reports from America are not so good as recently, and, apparently, some "bearing" tactics are being attempted in the hope of influencing Colonial selling centres.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

It is understood that a meeting of wool importers and selling brokers took place last Tuesday, when the programme was arranged for the London sales, which begin on the 15th instant. As we write, no official announcement has been made regarding the actual quantity of wool to be catalogued, but it is generally understood that a four weeks' programme has been arranged, and most owners see the wisdom of selling their stocks if they possibly can. There is not the slightest reason for withholding wool in the hope of higher values, because there will have to be a radical change in the climatic conditions of Australia and in manufacturing conditions throughout Europe if there is to be any improvement on to-day's values. The repetition of prices current in Australia from last September to December could only result in the postponement of the much longed-for recovery in manufacturing conditions. The continued use of substitutes would be encouraged, and sooner or later wool would again slump. It has been clear for months that not until wool values come down to a basis sufficiently low to inspire the confidence of all buyers will the industry get going again. The miscalculation of the situation cost importers very dearly, and the sooner losses are written off and a fresh start made the better.

The approximate quantity available for sale in London at the forthcoming series is slightly over 220,000 bales. Over one-half is crossbreds, and there will be no shortage of that description. France is expected to be by far the best buyer. So far as the home trade is concerned, there will be more sellers than buyers. There are firms in the West Riding who will gladly sell at the best price they can to release capital for the forthcoming Australasian season. The Sydney market for good average top-making classes is a little weaker this week, but the demand for wool remains satisfactory. Trade in the West Riding shows signs of a little improvement. Consumption is better, and given a further improvement in this direction, raw material values may yet come out better than the present position indicates.

THE COTTON TRADE.

MANCHESTER, September 3.

Owing to the steady decline in American cotton prices buyers of yarn and cloth have continued to adopt a policy of caution. Some buying, however, has been forced out owing to customers

not being able to prolong their "short" policy. The general position in the market, however, is fairly healthy, and the opinion is held that a period of steady raw cotton prices would soon cause buyers to operate on a much freer scale. Cloth demand has been backing up for some weeks past, and during the last day or two there has been a larger inquiry in the market, especially for India and China, and some fair sales have taken place in a wide range of fabrics. As a result of the extended stoppages in Oldham under the short-time scheme many spinners of American yarns have improved their position, but it is yet very difficult to sell at prices which do not show a loss. Sales, however, during the last two or three weeks have been larger than the production, and consequently stocks in first hands are decreasing. With regard to Egyptian yarns, some firms have booked fairly large orders in medium to coarse counts, but the demand is still far from satisfactory in the finer varieties.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

According to the leading organ of the Swedish timber trade the total sales of deals, battens, and boards to the end of August from Sweden and Finland amounted to about 725,000 Petrograd standards each. In previous years such large sales would have been considered good trading, but it seems that this year attention has been centred more on the making of sales rather than of profits. This largely accounts for the weak state of the market, both for spot and f.o.b. business, and the heavy financial losses occasioned in North European shipping centres.

One cannot expect very large trade in August, and with unemployment on the increase, and depression reigning in the main industries, the position of the heavily laden wood market is not rosy. If it were not for the building trade, general repair work, and the steady consumption by the railway companies, the position would be almost intolerable. It is surprising, however, that large quantities of timber of one kind and another should be going into consumption week by week, and any improvement in general trade would immediately tend to strengthen the market.

The largest consumers of timber to-day are the builders of houses and larger erections. For this work battens and scantlings are being continually called for, and, although deal sizes are not so much in demand as in previous years, stocks of these are moving slowly for use as wood paving blocks or for railway requirements. The European export market can be summed up in the phrase "beggar my neighbour," in which the shippers of Finland, Sweden, and Russia have been very active participants. Fortunately the Continental consuming countries are coming more freely into the buying market. Imports of sawn and planed wood have been larger this year, but the returns for July were lighter. Canadian spruce has been arriving more freely, and seems to be competing more successfully on the Lancashire coast with the European whitewood productions, which is commendable considering the poor prices obtained for the latter.

Although the call for American pitch-pine timber is not good in London stocks are lighter, but the demand is better in the North. Forward business, however, is difficult at shippers' quotations, especially as the shipbuilding industry is so quiet. Teak logs, planks, and conversions are very firm in value.

In the furniture wood section of the trade the position of United States lumber has for long been aggravated by the dull demand from the furniture and cabinet trades, and the excessive imports. The imports of pitwood have shown decided decreases this season, especially from France. Timber for the Welsh collieries rose on account of lack of available supplies, but the market is now getting back to average values.

CHEMICALS AND FERTILISERS.

The chemical market, on the whole, shows further weakness. Lump alum cheaper at £9 to £9 5s in casks, and in small call. Cornish white powdered arsenic reduced to £18 f.o.r. mines, but no business offering. Barium chloride, 98-100 per cent., lower at £9s 5s on spot, and cheaper forward. An easier and quiet market for citric acid at 1s 3½d to 1s 3½d, less 5 per cent. Carbolic acid crystals much dearer and active at 4½d in bulk. Epsom salts steady, but lower at £4 5s to £4 10s in bags on spot. Formaldehyde stronger at £39 for 40 per cent., with better business. Glauber salts dearer at £3 10s to £3 15s in single bags. Lead acetate, white, well maintained at £43 10s. Chlorate of potash easier at 3½d; yellow prussiate firmer, with more activity at 7½d on spot. Red lead still dearer at £42 10s c.i.f. London. Sal ammoniac again cheaper at £34 for dog-tooth crystals. Acetate of soda easier at £18 5s. Sodium sulphide, 60-62 per cent., solid, lower at £11 15s, with little business. Tartaric acid unsteady at 1½d. Zinc oxide rather cheaper at £44 f.o.r. for white seal. Fertilisers show more movement, and ammonium sulphate is firmer at £12 7s delivered; export, £11 15s f.o.b., single bags. Nitrate of soda unaltered at £12 7s 6d. Superphosphate, 30 per cent., featureless at £3. Basic slag active and firm at £2 15s for 30 per cent. Potash salts dearer on the month.

VEGETABLE OILS AND OILSEEDS.

Markets generally continue quiet, with only a moderate amount of business passing. Linseed oil has further declined in value in sympathy with seed. Raw oil is, however, steady around £39 15s per ton, naked ex Hull mill, spot and delivery to December. Cotton oils continue dull and depressed, crude Egyptian having fallen to £42, while ordinary refined is steady at £43 per ton. Crude soya oil is rather better at £42 10s. Palm kernel oil is quiet at the same figure. English castor oil (first pressure) has been reduced to £55 10s (barrels included). In the oilseed section linseed has been irregular, Plate afloat and to October having been dealt in at £19 5s to £19 7s 6d, which is current value. As low as £18 15s has been accepted for new crop, January-February loading. Egyptian cottonseed is easier, black offering freely at £12 10s for October or November-January loading.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market remains steady. Best ox hides sold at Thursday's sales in Bermondsey at 6½d to 8½d per lb, and seconds from 6d to 8½d, alterations being unimportant. Best cows made from 6½d to 8½d, seconds 5½d to 5½d. Calf were steady at 7d for heavies, to 15½d for light in best selections. Lambs sold from 3s 3d to 10s, and pelts from 6s 8d to 9s each. Business in South American fregorifics remains quiet, with buyers holding off for reductions. The United States are reported to be buyers of Argentine ox at about 8½d, and 8½d has been paid by the Continent for Uruguay Sansinena. The Chicago position is still cabled as steady, with best heavy packers selling at 17½ cents. The trade in sole leather shows some improvement, although reports vary. Prices are fairly firm, but tanners in some cases seem disposed to shade them to effect clearances of heavy bends. Shoe manufacturers still follow the policy of hand-to-mouth buying, their orders being for small and immediate deliveries of light-weight dry hide bends from 14d to 20d per lb. Repairers are, however, accounting for a good business in heavier weights, and will pay from 2s 6d to 3s for suitable stuff. In uppers leathers the chief sales are for patent and willow calf. Snake and lizard skins are also being freely worked up into women's fancy shoes. The boot trade remains slow, many buyers holding over orders for the forthcoming Shoe and Leather Fair in October.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 4.

SUGAR.—The market for actual sugar remained dull, and with adequate supplies available, prices ruled easier for most descriptions. British cubes, crushed and yellow crystals, were reduced by 6d, and other descriptions 3d per cwt, at which a fair business transpired. Messrs Tate and Lyle's cubes quoted 34s 6d to 35s 6d; crushed, 32s 6d; coffee crystals, 35s 3d; nibs, 35s 3d; granulated stove, 33s 1½d; fine, also coarse grain, 30s 10½d; No. 1, 30s 7½d; No. 2, also London and T.L., 30s 4½d; month forward, 30s 3d; mineral water white, spot, 30s 9d; icing bags, 37s 3d; drums, 36s; pulverised, 33s 3d. Castor, finest, 34s 7½d; A, 34s 1½d; B, 32s 6d; and yellow crystals, 27s 7½d. Imported quiet and easier, both spot and forward. American granulated, spot, quoted 29s; white Java, 28s 6d; white Mauritius, 27s 3d to 27s 9d; Dutch "J" granulated, 29s 7½d; Czecho granulated, November-December, 15s 9d; Dutch "J" ditto, 15s 10½d; American granulated, August-September, London, 16s 6d; ditto exports, 16s 8½d, c.f. and i. White Java, afloat, London, 15s 9d, c.f. and i. Raw refining kinds quiet, and Cuban, basis 96 per cent., September, quoted 11s 10½d, c.f. and i., U.K. India remains quiet and featureless, with sellers of Java, October-December, at 15s 4½d; January-March, 15s 9d. Hungarian crystals, double bags, November-December, 15s 9d, c. and f., Calcutta. White terminal easier but active, at lower levels. October sold, 15s 4½d to 15s 3d; November, 15s 3d; December, 15s 4½d to 15s 3½d and 15s 4½d; October-December, 15s 3d; March, 15s 6d to 15s 8½d; and May, 15s 8½d to 15s 9½d.

COFFEE.—Spot market generally steady, and there is a fair inquiry, while the finer liquoring sorts are reservedly offered. East Indian, low middling, sold, 118s 6d; Kenya, bold common to good, 128s to 139s; bold Cherry, 108s 6d; Uganda, fair bold, 120s; Colombian, fine colony, 153s; Costa Rica, ditto, 173s 6d; Vera Paz, mid greyish, 140s to 142s; and Maragogite ditto, 188s per cwt. Brazilian varieties for shipment firm, but quiet.

COCOA.—There was a limited business passing in spot parcels, and the general position remained unaltered. For shipment, Trinidad, September-October, sellers, 74s; Bahia, 47s 6d; St. Thome, 52s; Guayaquil Epoca, 72s; and Caraquez, 69s, c.f. and i. Accra, for shipment, rather irregular, with business in F.F. quality, October-December, also December-February, at 42s to 41s 6d and 42s, f.o.b. English, 15s 3½d per lb.

TEA.—The market for common descriptions has gone from bad to worse owing to excessive supplies, Indian being 1d to 1½d, and Ceylon 1d to 2d per lb lower on the week. Well-made leaf grades of both varieties sold freely while assisted by export inquiries, and prices obtained amply repay care in manufacture in this class of tea. There is a good demand for Ceylon kinds possessing quality and flavour, and

THE BANK OF TAIWAN, LIMITED.

(Registered in Japan, 1899.)

Capital Subscribed ¥60,000,000
Capital Paid Up ¥52,500,000
Reserve ¥14,180,000

Deposits are received for fixed periods on terms which may be ascertained on application.

full rates were paid for finest orange broken pekoes. Of Indian, Darjeelings this season have been somewhat disappointing, but the finest Assam invoices realised satisfactory prices, finest broken orange pekoes realising up to 4s 6½d per lb. Imports of tea into London during August amounted to 37,951,741 lbs, against 40,096,626 lbs at corresponding period last year; deliveries, 37,249,562 lbs, against 35,941,057 lbs; and stock, 150,784,657 lbs, against 111,172,217 lbs at same time last year. Of China, common descriptions continue more or less neglected, but there is a fair business passing in finest new season's kinckuts and souchongs at from 3s per lb in bond. Public sales during the week were made up of 44,872 packages Indian, 2,382 Ceylon, and 5,536 Java and Sumatra. Java sales were accorded better support, even common grades selling more freely, while prices displayed a firmer tendency.

RICE.—Market quiet and rather featureless, though Eastern shippers required steady rates. Rangoon, two stars, spot, London, quoted 16s 3d to 16s 6d; afloat, steamer, 15s 9d; August-September, 16s, c.f. and i. Broken kinds quiet. Pests dull. Japanese, spot, quoted 25s 3d; September-October, 23s 9d; October-November, 23s 9d, c.f. Rangoon beans, hand picked, for shipment, September-October, sellers, 15s. Madagascari butter beans, spot, 35s 6d to 37s 6d, as to quality; September shipment, 34s 9d per cwt, c.f.

SPICE.—Pepper firmer, and forward positions in better demand. Black Singapore, L.S., October-December, quoted 9d; Lampung, August-October, sold 8½d; white Muntok, August-October, done

1s 1½d; October-December, 1s 1½d to 1s 1½d. Cloves firm. Zanzibar, spot, quoted 11d; October-December, buyers, 1s 2d per lb. Tapioca dull, and tendency weaker. Singapore flake, to Havre, September-October, sellers, 18s 6d; Penang seed, ditto, to London, 17s. Sago flour dull, and August-September, to U.K., quoted 16s 7½d; October-November, 16s 4½d. Pimento slow. September-October, quoted 38s 6d; October-November, 37s 6d. Desiccated cocoanut firmer. Halves, spot, quoted 14s 6d; September-October, 40s 6d per cwt, c.i.f. Ginger quietly steady.

JUTE firm, and sellers reserved, with fair inquiries. Firsts to Continent, August, sold, £45 10s; September, £43 15s; October quoted, £43 15s; October-November, also November-December, £42 per ton. Hessians and twills quiet, but steady, for near positions.

HEMP.—Manila remained quiet. J grade, October-December, sold, £43 15s; K, buyers, £39 10s; L, sellers, £40; and M, £34 10s per ton. New Zealand quiet, unaltered, also African sisal.

SHELLAC remains quiet. Fair T.N., spot, quoted 220s; October, 207s 6d; December, 202s 6d cwt.

COPRA quietly steady. F.M.S. Straits, to Rotterdam, August-October, sellers, £30 8s 9d; October-December, £30 5s. Dutch E.I., August-October, £30 5s; October-December, £30. Ceylon, August-September, £31 12s 6d. South Sea F.M.S., £29 17s 6d; Marches, mixed, excluding Padang, August-September, £29 15s; F.M.S. Straits, ditto, £30 2s 6d. Palm kernels, to Liverpool, July-September, sellers, £21 15s; October-December, £21 15s ton.

ESSENTIALS.—Citronelle oil, Ceylon, spot, 2s 1d; shipment, 1s 11d; Java, spot, 3s 7d; Star aniseed, spot, 3s 3d; Cinnamon leaf oil, spot, 4d; shipment, 3d; Cassia, spot, 8s 6d per lb.

RUBBER irregular, while rather easier, though a fair business transpired. Plantation standard sheet, spot, sold, 3s 5d to 3s 4d; September, 3s 4d to 3s 4d; October, 3s 2d to 3s 1d; January-March, 2s 9d to 2s 9d, and 2s 8d; January-December, 2s 5d per lb. Wild sorts dull. To New York, ribbed smoked sheet, afloat, sold, 3s 3d; September, 3s 2d; October-December, 3s; January-June, 2s 7d; January-December, 2s 5d to 2s 5d, and July-December, 2s 3d, c.i.f. terms.

FRUIT (Dried).—Currants steady, with a moderate demand. Pyrgos quoted 30s to 31s; Amalia, 32s to 33s; Patras, 36s to 38s; Gulph, 36s to 38s; Vostizza, 44s to 50s. Sultanias steady. Australian, 68s to 86s; South African, 70s to 80s. Figs quiet. Naturals, in bags, quoted 27s to 29s. Dates spot demand quiet, but forward positions steady. First tide Hallowee, 19s 6d; second, 19s; Siam first, 14s; second, 13s 3d, landed terms. Raisins: South African, 40s to 42s; Lexias, 40s to 45s. Evaporated fruits in moderate request. Californian apricots, standard new extra choice, 120s; fancy, 130s; Australian, 120s to 130s; Californian peaches, choice, 62s to 63s; extra choice, 65s to 68s; fancy, 70s. Plums: Oregon, new, size 30/40, quoted 71s to 72s; 40/50, at 52s to 53s; Californian, new, 40/50, 58s to 60s; 50/60, 51s to 52s; 70/80, 45s 6d to 46s 6d. Pears, choice Californian, 90s; extra choice, 102s to 103s. Apple rings, Californian, extra choice, 67s 6d to 75s; Canadian, 62s 6d per cwt.

CANNED GOODS.—Sardines generally quiet. Portuguese, 1/2 flats quoted 4s 3d; clubs, 5s; 12 ozs, 7s 6d; 18 ozs, 12s per dozen tins. Salmon tends firmer on limited offerings. 1/2 lb, flat reds, labelled, 77s to 78s; tall, 1 lb, 54s 6d to 56s; 1/2 lb, tall, pink, 27s to 28s. Lobsters meet with good support at firm rates. Halves quoted 16s, and quarters up to 100s.

CANNED FRUITS in steady demand and market firm, especially for apricots. Singapore pines quiet. 48-1 1/2's quoted 86s 6d to 87s 6d; cubes, 2 1/2's, 13s to 13s 6d; slices, 24-2 1/2's, 12s 6d to 13s 6d. South African are moving off quietly on former terms. Californian pears, 13s 6d to 17s; peaches, 12s 3d to 14s; cherries, 13s 6d to 14s; apricots, 10s to 13s 6d; loganberries, 14s to 16s 6d fruit salad, 1 1/2's, 12s 6d to 14s; 2 1/2's, 21s 6d to 22s 6d; Australian pears, 24-2 1/2's, 16s to 16s 6d; Canadian, 14s to 14s 6d.

CANNED MEATS.—Corned beef in demand at previous rates, but a good demand continues for Danish lunch tongues.

CONDENSED MILK.—Prices remain firm, both for full-cream sweetened and machine-skimmed, with a hardening tendency.

HONEY.—New season's New Zealand continues in demand, but other descriptions move off quietly.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn: Ceylon, £25 to £39; Cochin, £30 to £50. Ceylon bristle £17 to £23; cinnamon leaf oil, 4d; citronella, Ceylon, 2s 1d; Java, 3s 7d.

OILSEEDS.—Linseed opened easier, but steadier since, on a revival of buying interest. Calcutta to London, September-October, quoted £21 10s; bold Bombay, ditto, £22 15s. Plate to Hull, August-September, sold, £19 7s 6d; September-October, £19 10s; January-February, £18 7s 6d to £19. Rapeseed quiet. Toria to Continent, September-October, £22 2s 6d. Cotton-seed in steady demand. Egyptian black, to Hull, new October, sold, £12 12s 6d; November-January, £12 10s; white, new October, £12 2s 6d; November-

January, sold, £11 17s 6d to £11 15s; Bombay, September-October, £9 6s 3d; and new, December-January, £9 10s. Castorseed quiet. Bombay, September-October, £22 12s 6d. Gingly seed quiet. Chinese to Continent, August-September, £28 2s 6d; large Bombay ditto, £26 10s. Ground-nuts dull. Coromandel machined, September-October, £25 10s; Nigerian, August-September, £25 5s per ton.

OILS.—Linseed irregular. Spot, net, naked, 40s 6d; September-December, 39s 9d; January-April, 39s 7 1/2d. Rape dull. Crude, spot, 49s 6d; refined, 52s 6d. Castor-oil quiet. First pressure, spot, quoted 55s 6d; second pressure, 53s 6d; and pharmaceutical, 60s 6d per cwt. Hull, with London, 2s per cwt extra. Cotton easier. Crude Egyptian, spot, 43s 6d; Bombay, 40s; common edible, 49s; deodorised, 51s. China-wood dull. Hankow, spot (barr ls), 65s; August-September, 65s. Ccoconut steady. Ceylon, spot, 47s 6d; September-October, 45s 9d; Cochin, ditto, ordinary packages, 99s 9d. Soya quiet. Oriental, barrels, August-September, 44s 6d; bulk, 41s 3d. Cod steady. English, spot, 34s to 35s. Ground-nuts quiet. English, crushed, naked, spot, 50s; deodorised, barrels, 57s 6d. Turpentine active and firmer. American, spot, 74s 6d; October-December, 75s 6d; January-April, 78s. Rosin firmer, and pale grades sparingly offered. American, grade B/D, 26. 6d; E, 27s; F/G, 27s 6d; WG, 30s; WW, 32s 6d per cwt. French FG, nominal; WW, 28s 6d per cwt. Petroleum quiet. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on September 2nd as follows: The tallow market was steady during the week, and prices showed an average advance of 6d to-day. The most noticeable improvement was in the demand for inferior kinds. The stock in London on August 31st, as returned by the wharves, amounted to 12,200 packages, showing an increase during the month of 892 packages. At auction to-day 965 casks tallow were offered, and 699 were sold. Quotations are:—Australian mutton: Fine, 51s; good to fair, 50s 6d to 48s; dull to dark, 44s 3d to 41s 9d; hard, 51s. Australian beef: Fine, 50s 6d; good to fair, 47s 6d to 45s 6d; dull to dark, 43s to 39s 6d; sweet, 50s 6d. Present shipment from Australasia: Good to mixed, 46s 6d. Present shipment from South America: Good to mixed, 46s 6d. The market letter is dearer. Tallow, 1s; stuff, 6d. Town tallow, 43s 6d per cwt. Rough fat, per 8 lbs, 5d; melted stuff, 33s 6d per cwt. Quotations are:—Town, 43s, net cash, naked, ex works. Country: Frail casks, 43s; home melted, shipping casks, net, f.o.b., good coloured, 46s 6d; fair to dull, 43s 6d to 42s 6d. Bone fat: white, none; pale, none; benzine, 40s; melted stuff, 39s, f.o.b.

THE MONEY MARKET.

Money was wanted in the early part of the week, owing to withdrawals for balance-sheet purposes, and then became much more plentiful. Discount rates followed the course of money, being stiffer and then slipping back, in spite of the lower New York exchange and the continued withdrawals of gold. The three months' rate was up to 3 1/2 per cent. at one time, but was back to 3 1/8 per cent. yesterday.

	Sept. 11, 1925.	Sept. 4, 1925.	Aug. 28, 1925.	Aug. 21, 1925.	Previous Rate and Date Changed.
Bank Rate	4½	4½	4½	4½	5 (Aug. 6, '25)
Banks' Deposit Rate	2½	2½	2½	2½	3 (Aug. 6, '25)
Discount (Call)	2½	2½	2½	2½	3 (Aug. 6, '25)
Houses' Notice	2½	2½	2½	2½	3½ (Aug. 6, '25)
Market rate (3 months' bills) ..	3½	3½	3½	3½	..

The Bank return showed a decrease of £1,154,000 in the coin and bullion, £1,159,000 having been announced as withdrawn for export. Notes had been returned from circulation to the extent of £783,000, and the Reserve was £371,000 lower, with its proportion to liabilities .2 lower at 28.6 per cent. A decrease of £1,736,000 in Government securities was almost balanced by an increase of £1,664,000 in Other. Public deposits expanded by £568,000, and Other deposits were a million lower. Currency notes for the week were reduced by £393,600 to £295,402,100, which includes £1,328,000 for notes called in but not yet cancelled. The fiduciary issue is £237,824,000, or £10,321,400 below the maximum for the year.

The monthly return of average weekly balances of the London Clearing banks for August shows a decline in deposits of £21½ millions, and a slight increase in acceptances and capital and reserves. The following table compares the aggregate figures of the nine English banks:—

	June, 1924.	Dec., 1924.	Mar., 1925.	June, 1925.	July, 1925.	Aug., 1925.
Capital and reserves	119.2	119.4	119.6	119.6	120.1	120.7
Acceptances	85.3	109.9	113.9	113.9	92.9	85.0
Deposits (incl. undiv. profits, &c.) ..	1,651.9	1,656.1	1,605.0	1,624.5	1,633.2	1,611.5
Total liabilities	1,856.4	1,885.4	1,838.5	1,834.3	1,837.8	1,817.2
Coin, notes, balance at bank, and cheques in course of collection ..	249.1	259.7	237.1	253.9	244.0	240.1
Money at call	108.1	112.8	108.0	113.0	114.6	117.4
Investments	349.3	338.8	329.2	329.2	286.3	282.6
Discounts	245.0	234.4	202.3	205.6	228.5	213.6
Loans and advances	791.7	811.2	840.8	850.5	851.0	839.9
Cover for accept., premises, &c.	113.2	138.5	142.1	118.8	113.4	114.5
Total assets	1,856.4	1,885.4	1,838.5	1,834.3	1,837.8	1,817.2

Loans and advances declined by £12 millions, and discounts by about £5 millions. In August of last year discounts were lower by £25 millions, and deposits declined by £26 millions.

NEW YORK MARKETS.

Our New York correspondent cables:—Securities are again buoyant, with motor shares leading the way, partly because of excellent sales and reports of earnings, and partly on account of covering purchases by "bears." Record railway car loadings are evidence of active trade and of a recovery in production from the summer setback. A slightly firmer tone in money rates persists, but the best authorities expect credit to remain plentiful. The Federal Reserve system reports an increase on the week of \$62,000,000 in discounts, the major part of the increase being in New York. The reserve ratio for the whole system is down to 73.4 per cent., while the New York reserve ratio is 75.1 per cent. Funds are passing into the interior to finance crop movements, and preparations are already being made for the next income-tax payment date. Latest Government estimates indicate a gain of 21 million bushels over the previous estimate of the wheat crop, but a decrease of 65 million bushels in the maize crop estimate. The wheat crop is now placed at 700 million bushels, and the maize crop at 2,885 millions.

THE STOCK MARKETS.

In response to a hardening in the tone of the money market and the waning of hopes of a Bank rate reduction, the gilt-edged market has been easier this week, a general decline of small dimensions taking place among British Government stocks and newly-issued scrip. The foreign bond market continued to attract attention. Speculators are buying Brazilians, and mid-European stocks are receiving attention reflected from the discussions at Geneva. Home Rails relapsed again as a result of speeches at the Trade Union Congress. Among foreign rails the dwindling of Argentines and a jump in Leopoldinas have been the features. Rubber shares remained firm; tea shares were weak, and the oil share

market provided no excitement. Courtaulds and other artificial silk shares still attract great attention. Tobacco and wireless shares made a recovery. Insurance shares fell back in sympathy with the gilt-edged decline. In the mining sections the land group has been the most lively, while West Africans made a better showing.

THE COMMODITY MARKETS.

Markets as a whole have been rather more active this week. Pig-iron makers report a slight improvement in sales, but manufacturers of iron and steel are experiencing keen foreign competition, with resulting price instability. Weather conditions have provoked greater demand for coal for domestic purposes, but the export market remains quiet, except in the anthracite section. A fair business has been done in cotton textiles, and merchants appear to be in greater need of fresh supplies.

Although the woollen markets have been less active in anticipation of the coming London auctions, the textile trade in the West Riding retains the more favourable features which have been in evidence since the termination of the wages dispute. The wheat market is quiet, with English wheat in fair supply. Sugar is in moderate demand, coffee steady, and tea has been bought more freely. Rubber is firm after an easy opening. In the metal markets, tin opened strongly but developed weakness later; copper followed a similar course, and lead remains irregular.

FOREIGN EXCHANGES.

In the foreign exchange market there has been considerable activity in dollar dealings, the rate showing a further tendency to weaken on dearer money in New York. From \$4.84½ on the 4th the quotation has moved down to \$4.84 21-32 yesterday morning, which is uncomfortably near the present gold point, while forward dollars stand at about 1½ cent per month above spot. The Paris rate has been fairly steady, moving between the limits of 103.55 and 102.85, standing yesterday morning at 103.47½, as compared with 103.42½ a week ago. Brussels, which for the greater part of the week was steady at about 108.85, took a sudden leap up yesterday morning on sales from Brussels to 110.52½, but later reacted to about 109. In Paris, forward rates have narrowed again to 50-53 centimes per month above spot; in Brussels they stand 2 centimes either side of spot. The lira, which in the first part of the week continued its recent rapid improvement from 121½ down to as low as one time on the 8th as 112½, has reacted again to 118½. Forward rates, however, continue to suggest some suspicion at the rapidity of this rise in value. On the news of Spanish success in Morocco, considerable demand was shown for pesetas, especially from New York, and they moved down on Thursday to as low as 33.57, and at yesterday's figure of 33.73½ compare favourably with last week's quotation of 34.03½. For the first part of the week the improvement in Norwegian and Danish currency continued down to 21.50 and 19.15 respectively, but on official warnings against speculation there has been some reaction to 22.58 and 19.75, as compared with 22.72½ and 19.20 a week ago. Among the stable exchanges, Stockholm has moved ½ point in our favour to 18.09, and Amsterdam has also risen from 12.04½ to 12.05½, and Switzerland from 25.09 to 25.10½. Berlin, however, at 20.36 has gone one point against us. In the other minor currencies no movement of importance is to be noted beyond a further depreciation in Athens and a steady official recommendation has been made for the stabilisation of the Finnish mark at the present dollar rate of 39.70, which would mean a gold parity for sterling of rather under 193½, the present quotation being 192½. In the East the rupee is slightly dearer at 1s 6 13-64d, as compared with 1s 6 11-64d, and the yen, after a short reaction, stands at 1s 8 1-8d, as compared with 1s 8 7-64d. Under the pressure of continued Chinese and Indian demand silver prices continued to rise in the early part of the week, until profit-taking brought a slight reaction, but the general outlook remains firm. Hong Kong is 2s 5d, as compared with 2s 6d, Shanghai 3s 2½d, as compared with 3s 3½d. In South America, Rio has continued to improve quietly from 6½d to 6 23-32d, and Buenos Aires

is also slightly dearer at 45½d, as compared with 45 7-32d. Monte Video, however, has moved from 49½d to 49½d, and Valparaiso has remained steady at 39.70 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 5th:—

(000's omitted.)		RECEIPTS.	
EXPENDITURE.	£	From Revenue	£
Supply Services	7,076	Increase in Debt	12,928
Interest, &c., on Debt	15,103		9,073
Sinking Fund	1,463		
Sundries	300		
Increase in Exchequer Balances ..	59		
	22,001		22,001

The Revenue for the week amounted to £12,927,900, as compared with £10,875,200 in the corresponding week last year. Customs were lower at £1,798,000, against £2,234,000, but Excise was slightly higher at £949,000, against £938,000. Property and Income-tax brought in £3,785,000, as compared with £4,558,000, and Super-tax amounted to £740,000, against £320,000. Ordinary Receipts stood at £113,800, as compared with nil last year, while Special Receipts, at £2,900,000, showed an increase of £2,400,000. The week's operations increased the National Debt by £9,073,000, and caused the following changes:—

(000's omitted.)		RECEIPTS.	
National Saving Certificates ..	£ 50	Treasury Bills	£ 314
Public Department Advances ..	+ 13,800	National War Bonds	4,155
		Sundries	408
	+ 13,850		— 4,877

The floating debt was increased by £13,625,000 to £783,316,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Sept. 5th).

£		£	
Total Expenditure ..	342,353,212	Raised by Revenue ..	306,072,480
		Decrease in Balances ..	3,664,849
		Amount borrowed ..	32,615,883
Total	342,353,212	Total	342,353,212

ESTIMATES FOR FINANCIAL YEAR 1925-1926.

£		£	
Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of New Zealand and the Anglo-Ecuadorian Oilfields. At the Bank of New Zealand meeting both the chairman, Sir George Elliot, and Mr William Watson dealt with the general outlook in New Zealand, laying particular stress on the unsatisfactory nature of the trade balance and the urgent need for economy.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE ROLE OF GENEVA.

DULL though the League of Nations Assembly was expected to be, it looks like having its hands full enough with what may be described as matters of good secondary importance. Mosul, of course, falls strictly within the purview of the Council, but whatever the Council is handling in September interests Assembly delegates unofficially almost as much as it concerns Council members formally. And since the Mosul decision is at present being considered by three out of the ten members of the Council, the other seven may be said to stand for the moment in regard to it in very much the same position as the mass of Assembly delegates.

But, apart from Mosul, there are such questions as Austria—which the Assembly will certainly discuss, though it may be for the Council actually to decide—Slavery, and Armenia. The Slavery Protocol unexpectedly laid before the Sixth Commission of the

Assembly at the very outset of its work is an event of real moment in its own particular sphere. Slavery, which most benevolent citizens of this country suppose to have been stamped out altogether throughout the world; needs, in point of fact, a great deal of stern suppression still. The British Government's attitude on the subject has given ground for some criticism in the past owing to the reluctance of the Foreign Office to disclose damning reports it was known to have in its possession on the record of certain sovereign States in the matter of slave raiding. Whether Lord Cecil was sent to Geneva with a new convention in his pocket as a kind of *amende honorable* for past omissions, or whether this is felt to be a new and hopeful method of tightening up loose screws, does not matter very much. If the Protocol the British Delegation is sponsoring goes through, a considerable step towards the more effective suppression of all traffic in human beings will have been taken, though rather more could be done towards the regulation of forced labour than the Protocol in its present form attempts.

As for the Nansen proposals for the settlement of Armenian refugees in Erivan, and on a smaller scale in Syria, they provoke a variety of reflections, humanitarian, political, and financial. The humanitarian aspect of the project is a good deal the simplest. If the Armenians can be effectively helped, all the Allies, at any rate, are under a moral obligation to help them. Politically, too, the obstacles seem to be inconsiderable, for the existing Erivan Republic is quite ready to accommodate 15,000 immigrants, who would, no doubt, greatly add to the productive capacity of the territory. But whether £900,000 is a reasonable expenditure for the settlement of the 15,000; whether there is a fair chance of getting such a loan raised; and whether if it were raised the Armenians could support the annual interest and redemption charges, are questions to which the League's financial advisers will need to give some thought.

But such undertakings as these fall under the head of the League's marginal activities. What the world is asking, and what the discussions at Geneva have so far not disclosed, is whether the Assembly this year is to avoid discreetly or to face frankly the still dominant problem of European security. There are many reasons why it should take the former course. The Protocol, to which so much thought and endeavour was directed a year ago is, to put it in the most optimistic form, laid by in cold storage. The conversations between the Allies and Germany cover too nearly the same ground for the Allies to welcome, or the Assembly be tempted to offer, any intervention from Geneva. If, moreover, Germany is really on the point of entering the League, there is obviously much to be said for adjourning discussions in which she will, no doubt, desire, as she is clearly entitled, to make her voice heard. On the other hand, time is passing. Statesmen who come to the Assembly year by year are not happy to think that nothing concrete is emerging from Geneva. Dangers remain present which constructive effort by the League of Nations might conjure.

All those diverse considerations were no doubt present to M. Painlevé's mind when he delivered his opening speech in the Assembly Hall on Monday. The French Prime Minister's path was beset with not inconsiderable difficulties, and he avoided them with a good deal of skill. Owing his position as temporary President of the Assembly to the chance of its being France's turn to take the chair at the Council, he could not use the opportunity to push any national views. On the other hand, the Geneva Protocol was on the Assembly agenda, and he could not let it pass without reference. Nor did he. "Il a trop protocolisé," a Frenchman who had seen the speech in advance is said to have remarked. But, on the whole, no harm was done by any excessive emphasising of the merits of a document to which the French were known to attach much importance. On the contrary, a close reading of M. Painlevé's speech shows it to have been in reality a recognition of the fact that the aims of the Protocol must be achieved for the moment, if they are to be achieved at all, by some other method. It was very nearly an admission that the British way of seizing on the

immediate danger and finding means of averting it was, at any rate, good enough to be tried. That, at least, would seem to be what was meant by the declaration that, "on the other hand, you may follow the analytical method, which is slower and much less ambitious, but can be more readily adapted to the present situation. That is to say, you may only consider the application of the principles of the Protocol to partial agreements.....The provisions and procedure I have in mind would only apply to States desirous of finally settling the problem of security among themselves. As regards the general obligations of members of the League there would be no change. Nothing would be added or removed."

That hint as to the direction of further advance corresponds with the needs of the situation. The need for security is still acute. Individually, nations are seeking to protect themselves by direct agreements of different types. There are, as M. Painlevé pointed out, treaties like those on which the Little Entente is based, linking States which, as beneficiaries by the war, have common interests. There is the very different, and in some ways more hopeful, type projected between Britain, France, Germany, and other Powers for the security of States ranking among the vanquished as well as among the victors. Simultaneously, there are being negotiated numerous treaties of arbitration between States which apprehend no immediate danger, but desire to banish the prospect of war from their horizon. Here, again, there are two fairly definite classes of arbitration treaty, one of which, like the Geneva Protocol, purports to provide for the peaceful settlement of all disputes arising; the other, like the Covenant, leaving the door still half-open for war in non-legal cases. Some countries—Sweden, for example—have contracted treaties of both types.

What that means is that there is going forward in Europe a process highly beneficial, with which the League can never lightly interfere, but from whose results, on the other hand, the League should not be divorced. The partial agreements of which M. Painlevé spoke with approval are well enough as stepping-stones. They may be all that is possible at the present moment. But sooner or later they must be co-ordinated and universalised, and linked permanently up with Geneva. Just how that is to happen no one yet quite sees. How one single outstanding agreement—that contemplated between British, Germany, and France—is to be linked up with Geneva is as yet undecided. But the sixth Assembly is at least conscious already of the problem. Countries like Sweden and Japan have clear-cut ideas regarding certain aspects of it. Merely to discuss arbitration in all its bearings might seem inconclusive and disappointing, but there is a good deal to be said for the view that that is the best course the Assembly could take this September. If one concrete step is needed, the case for the general ratification of the Optional Clause of the Statutes of the Permanent Court of International Justice is stronger than ever.

LABOUR'S TWO VOICES.

THE big issues, to which we referred last week, have not been substantially affected by the proceedings of the Trade Union Congress at Scarborough. Ineffective skirmishes have taken place, but the battle royal is postponed. The Conference showed itself clearly against the grand cleavage between trade unionism and political Labour. Even the President, who in other matters veered towards the left, advocated the "full co-operation of the industrial movement with the political party," but, on the other hand, the margin by which the proposal to establish one comprehensive union—a move which would have been a giant-stride along the road to separation—was defeated was not impressively large. It is perhaps a fair summary of the week's proceedings to say that while the leaders of the left wing can point to no practical achievement, they have succeeded in directing the tone of the proceedings to a degree which may give them some satisfaction. But, on the whole, it is hardly easier to-day than it was a week ago to gauge the strength of the forces of division, or to

prophecy how speedily the fissure between the advocates of political and of industrial action respectively may develop into an unbridgeable gulf.

It was perhaps due to the personality of the President of the Congress, Mr Swale, that the proceedings were so freely bespattered with fiery sentiment. For in his Presidential address he struck the note of uncompromising battle with capitalism. With that general attitude no complaint can be made, for the Labour movement is essentially and avowedly Socialist and anti-capitalist. But his method of handling his theme stamped him as definitely of the intransigent type. Employers generally he styles as "our opponents," and in a comprehensive phrase announces in the name of all trade unions under all conditions, and in all circumstances, that "no more concessions can be made." Were we to take seriously that statement, and the cheers with which it was greeted, it would mean that all industrial negotiation is for the future useless; that wherever unions made a demand, it must be granted in full, or a strike would be proclaimed; that trade unionism will take no hand in the work of promoting industrial efficiency, and will make no contribution towards providing the conditions under which trade and industry may recover; and finally, that trade unionism repudiates all concern for the national, as distinct from its own, interests. Fortunately, however, we need not take such words too literally. One must allow first of all for the mental effect on a somewhat obscure person of a brief appearance in the fierce light that beats upon the chair. In his brief strut upon the stage he must use brave words, and raise his cheer from the firebrand element. When we remember all this we may be grateful that the phraseology of Mr Swales was not more flamboyant, and we may read an even greater importance into his emphatic repudiation of a split between trade unionism and political labour.

Nor, in judging the Scarborough debates, must four other facts be forgotten. First, that the flush of victory for trade unionism in the recent coal crisis has not yet died away, and was bound to colour the proceedings. Secondly, that it was the first congress since the fall of the Labour Government, and, therefore, the first full-dress opportunity for the ventilation of left-wing discontent with the attitude of Labour Ministers when in office. Thirdly, that times are bad, and unemployment and discontent deplorably widespread. Finally, and most important, perhaps, of all, that the passing somewhat revolutionary resolutions of an academic nature has been a regular annual amusement indulged in by successive congresses. These facts serve to assuage the alarm that might otherwise be felt at the passage, by a substantial majority, after several indiscreet speeches, of a resolution calling upon the unions to "struggle for the overthrow of capitalism," and to "force the capitalists to relinquish their grip on industry." There can be no doubt that many sane and responsible delegates, whose views are poles apart from those, let us say, of Mr Cook or Mr Shinwell, supported this resolution merely as a pious and a pity that this innocuous reason for support was not more vigorously explained, as a counterblast to the values were adopted as a criterion, serious anxiety might long arise from the instruction given to the Council, after a in their power towards securing world-wide unity of the national federation of trade unions." But the manner in which this resolution was passed was farcical. No discussion was permitted. In spite of Mr Thomas's attempt to speak, the chairman put the resolution the moment the seconder had sat down. There was no voting, and the resolution was declared to be carried by acclamation. This is an amazing instance of the rushing of a democratic assembly to recording an opinion for which no chance of done, we see no new cause for alarm in the Scarborough papers, find this view difficult to accept, we would remind of the reporter, and are apt to obtain a larger share of

the printed column than they are really entitled to occupy.

Although Scarborough has not visibly changed the position, the Congress provided continual reminders of dissension and division within the Trade Union ranks. Mr Shinwell was there inveighing against his rival seamen's leader, Mr Havelock Wilson, who, by the way, has been proclaiming this week in a speech in Canada the essential identity of interest between employers and employed. Then we had the less conspicuous, but more amusing instance, put before the Congress by a delegate, of the two plumbers' unions, one of which claimed the hot-water taps and the other the cold-water taps as their province, with the result that a dispute costing a local authority £400 a week broke out. These are but straws which show how the wind of dissension blows between competing unions in the same industry. Far deeper and more fundamental are the differences—the old, old differences—of view between the unskilled and the skilled and craft unions. Jealousy and rivalry re-inforce sound judgment in placing obstacles in the way not only of the formation of one big union, but of the lesser but still very formidable plan of a combine of five or six.

To a foreigner in our midst the present position must be perplexing in the extreme. How can the ranks of leadership contain at one and the same time men who revile everything about the present social system from the throne down to the small capitalist and an ex-Premier who divides his holiday between Scarborough and Royal Balmoral; men who belaud Moscow methods as the pattern for England, and those who preach almost unimpeachable economic orthodoxy? The foreigner will give it up in bewilderment. To the indigenous student of English life it is a familiar anomaly. But the discord between the two voices of Labour is becoming harsher, for the voice that proceeds from the smaller body is at the moment disproportionately loud. But we see no reason to change our conviction that, should a serious national crisis arise, it would be drowned by the voice that expresses the real views of the vast majority of the workers of this country, trade unionists and non-unionists alike. The underlying commonsense of the nation is not, we firmly believe, sensibly affected by the intensive outpouring of peppery nonsense from a small minority.

THE AUSTRIAN SITUATION.

THE report of the Commission of Inquiry into economic conditions in Austria was presented to the Council of the League and issued in Geneva at the end of last week. The account which the authors of the report give of this remnant of the Austro-Hungarian monarchy leaves a more favourable impression than the view which until recently has been current not only in Austria itself but in England and America. In spite of the financial crisis of 1924, and of the fact that unemployment last winter was higher than at any time since the war, the evidence in the report shows that the volume of production is definitely greater than in 1924, which in turn was better than 1923. This improvement in output since the reconstruction scheme came into force is reflected in the growing volume of goods carried on the Austrian railways, and in increased coal consumption, as well as by the evidence directly obtained from the industries themselves. It has been accompanied by a steady increase in the export of manufactured goods. A similar improvement is also shown in the cultivated area and in the agricultural output of the country. Thus since stabilisation Austria has shared in the general recovery of Europe and does not appear to have been given a fatal setback by the financial collapse of last summer.

This record, however, only affords ground for a qualified satisfaction. The volume of national production is still very low—the report quotes a figure of about 80 per cent. of the pre-war level—while exports are even more diminished—the report estimates the level at not much more than 60 per cent. As there are even more persons seeking employment than before the war, these figures

are naturally reflected in a high level of unemployment. It has, however, particularly to be noted that the writers of the report do not regard the increased unemployment of the present year, as compared with 1924, as a sign of deterioration but as one of improvement, for they explain that it is largely the result of the elimination of superfluous workers and of economies introduced into the factories after the wasteful extravagances of the inflation period. In other words, Austria is now beginning to see what the true dimensions of her unemployment problem really are. In this connection an analysis of the statistics shows that a considerable proportion of the unemployed are in commercial occupations, the free professions and other callings which are over-stocked. If other nations have to carry heavy war debts or find it necessary to maintain large armies, Austria's war legacy is a surplus population who are no longer needed for the tasks to which they have been trained, namely, as part of the machinery of a great empire. The report does not see any means by which these may be wholly absorbed; they must be a burden upon Austria for some time to come, no matter whether Austria remains economically independent, enters into closer relations with the Succession States, or joins Germany. If production could, however, be raised even to the pre-war level, this burden would be by no means an impossible one for the country to carry.

The low level of Austrian foreign trade is, however, a serious feature in the situation. In 1919 the Allies decided to make of Austria a small State in the centre of Europe, which could not possibly be self-supporting as to either its food, its raw materials, or its fuel, but must obtain them by foreign trade. Indeed, in 1924 her imports per head were only exceeded in Europe by Switzerland, the United Kingdom, and Belgium. But, surrounded as she is by high tariff barriers and by countries whose purchasing power is greatly reduced, her exports in 1924 amounted to less than 60 per cent. of her imports. In these circumstances three courses only are open if she is to pay her way. Namely, to diminish her population, to increase her agricultural output, or to find a larger market for her industrial products. Her population, the emigration of which is blocked in almost all directions, is actually increasing; her agricultural output can only slowly be increased; the improvement in her economic situation must therefore be mainly looked for in the direction of larger foreign trade. On this topic the report shows that though the higher forms of protection prevalent immediately after the war have been modified, the tariffs of Central Europe are much more extreme than those of Western Europe, and have only to a small extent been modified up to the present by commercial treaties. This policy of high protection has had the effect of wasting capital by duplicating factories and the means of production far beyond the capacity of the market, and tends to reduce the national production of the countries which indulge in it. Austria has endeavoured with some success to find alternative markets overseas, but this can only be a very inadequate compensation in the case of a country so far removed from the seaboard. In short, the recovery of the industries of Austria to normal can only be anticipated if they are able to find a freer market nearer home.

A second great handicap of Austria is its lack of capital. The poverty of the country means that its own savings have been, since the war, and continue to be, extremely small, so that the present Austria is even more dependent than the Austria-Hungary of the past on foreign capital. This has been attracted in recent years by the very high rates of interest prevalent in Austria. But it will only be retained and invested on a long-term basis if the financial world has confidence not merely in the monetary system and in the Centralbank of Austria, but in the solvency of its financial institutions. The report gives some account of the situation of the big banks and of the extent of the losses they have incurred as a result of the war, the period of inflation, and the crisis of 1924. That they have survived at all is evidence of considerable strength. The capital and reserves which remain to the big five are estimated at 40 per cent. of their pre-war value—a figure appreciably higher than the lowest touched at the bottom of the depression. The position of the Centralbank is a strong one, and comments in the report on such other factors as the internal political situation are reassuring.

The authors do not think that the burden of taxation or the charges for social insurance borne by Austrian industry, though high, are unendurable or a vital factor in the situation. Austria is heavily taxed for a poor country, but the burden of taxation in proportion to wealth is less than in Germany, France, or Italy.

The situation described in this report raises two immediate problems for the League of Nations. The first is whether the financial control exercised through the Commissioner-General is to continue, and, if so, in what form; and the second is whether the League can do anything to help Austria to secure wider markets, or can exercise any influence to secure a lowering of the excessive tariffs of her neighbours. On the first point it has to be remembered that the control, which was originally intended to last until the end of 1924, was continued during the present year, its removal being dependent upon the passing by Austria of certain laws essential for Austria's credit (such as that giving the central Government some control over provincial finances) upon her conforming to certain Budget limits, &c. When these laws were passed early in August, Dr Zimmerman gave notice to the Austrian Government that the control would be "attenuated." Broadly, this meant that instead of the Commissioner-General intervening in regard to the details of the Budget, he would only criticise the total figures; and, secondly, that his monthly reports will no longer be an external commentary, but would be issued in collaboration with the Government. In view of the economic progress recorded in the present report, on the one hand, and the favourable Budget position on the other, it seems probable that further diminution of the control will take place after Christmas, and that Budget control may cease altogether when the closed accounts are presented in the summer of 1926. For the sake of her own credit, however, and in order that the League may keep faith with the Governments and individuals who lent money to Austria on its invitation, Austria will be asked to accord to the League the right to reinstitute control in the event of the financial situation deteriorating and the stability of the crown being endangered. It is thought that this provision, which is borrowed from the Hungarian scheme, will help to strengthen confidence in Austria's financial stability. The precise form of these arrangements will probably be settled in Geneva at an early date.

The second and much more difficult problem, that of tariffs, is likely to be the subject of further discussion by the League, and we shall have other opportunities of referring to it. We will only observe here that unless this problem is solved, it is only to be expected that Austria will found her hopes more and more upon the alternative of a union with Germany. Quite apart from the objections of France, Italy, and Czecho-Slovakia, this solution has many drawbacks, both economic and political; but it is not unnatural that Austria should consider that on balance the economic advantages of taking shelter in a large protected market, or, to put the matter in another way, of securing free trade with 60 million Germans, outweigh the drawbacks.

But though the report notes progress, on the one hand, and brings out the difficulties with which the trade of Austria is faced, on the other, Austrians would misread the report if they took it to mean that they have nothing to do but to look to outside help. The Commercial Treaty with Hungary has hung fire for many months. It cannot be said that the fault is entirely on one side only. The mobility of labour in Austria is still severely handicapped by her obsolete trade regulations. Her banking system is on too extravagant a scale, and in business generally there are too many middlemen's profits. For a country situated like Austria, unceasing vigilance and economy are of paramount importance. If her credit was under a cloud during last winter, the distrust of Austria abroad was greatly fostered by the exaggerated pessimism of Vienna itself. The problem is, indeed, largely one of psychology. Austrians are well aware that God—and mammon—helps those that help themselves. But the lack of a keen national spirit or a strong sense of patriotism make it difficult to apply the moral in Vienna. The most hopeful feature of the situation is the evidence that Austria is now making efforts in the financial, industrial, and other spheres to put her own house in order.

WIRELESS AIDS TO NAVIGATION.

ALL those whose daily work, business, or pleasure causes them to travel upon the seas owe an incalculable debt to that inspired "amateur" (as he calls himself) Senatore Marconi. Thirty years ago he began his adventures in unexplored electrical jungles, and he has been going on with them ever since. The professional electrical engineers and the manufacturers of apparatus have followed where Marconi blazed a trail, and to that one inspiring genius and his associates we owe commercial wireless telegraphy, broadcast wireless telephony, and ship wireless—above all, ship wireless. The world could have got on without commercial wireless telegraphy, and wireless broadcasting is, after all, chiefly a fireside entertainment. But without ship wireless—that wonderful means of communication which has changed the whole face of the seas—the world would have been very sensibly the poorer. Wireless has destroyed for ever the solitude of the seas and the blindness of navigators. Wireless waves not only summon assistance to vessels in distress and warn them of perils from ice and storms and fog, but they serve also as eyes, and tell a navigator with very great precision where he is and whither he may be going. They penetrate fog more easily than they do the bright sunshine, and are often at their best when all other means of ascertaining a ship's position are at their worst.

A few days ago Senatore Marconi gave demonstrations of the working of a new "wireless lighthouse" which has been experimentally fitted up at the South Foreland. By means of a rotating aerial he showed how vessels, equipped with suitable receivers, could learn automatically their bearings upon the "lighthouse." This new system is of the future; it works on a very short wave length, and is not, we believe, applicable to the apparatus carried at present in wireless houses on board ship. What we propose to do in this article is to deal with the present, and to indicate how great has been the progress achieved already in direction finding, sending and receiving alarms and warnings, and equipping ships' motor launches with efficient wireless aids to navigation. Progress has been made very rapidly, and the owners of large British passenger ships have already gone far beyond the minimum requirements laid down by the Board of Trade.

Let us begin with direction finding. There are two systems in operation by means of which ships, cut off by fog from visual land bearings and sun and star sights, may learn where they are, and so avoid the worst perils of navigation in narrow and crowded waters. There are shore stations, maintained by the Post Office and the Admiralty, which give to ships, upon request, their wireless bearings relatively to the stations, and there are direction finders fitted in steamers which can themselves take wireless bearings upon any station whose call sign they pick up. The British shore stations, fitted for direction finding, are fairly numerous already, and may possibly be increased in number as the result of an inquiry by a Departmental Committee at present sitting. The fitting of ships in this special way depends upon their owners, but the advantages of the equipment are so obvious that its employment is rapidly extending among passenger steamers. The direction-finding aerial on board ship is quite distinct from the ordinary sending and receiving aerial slung high up between the masts. It consists of two loops of wire at right angles to one another, one on the centre line of the ship and the other athwartships. The direction-finding receiver is also a special piece of apparatus, highly sensitive and delicate. It happens that a correspondent of this journal recently spent some time at sea, in the course of which he enjoyed free access to the work of more than one wireless house, and saw direction-finding in operation both actively and experimentally. The results were of great interest. When conditions were favourable—that is, when the waves whose direction was being ascertained passed chiefly over the sea—a bearing could be taken on a station two degrees of arc (an error in distance of about one mile). The greatest error in a whole series of bearings was six degrees (about five miles). The accuracy of even

the worst reading was more than sufficient to enable the navigating officers to clear a distant point of danger with an ample margin. Some of the bearings were taken after 48 hours of fog, and proved, when tested later by visual bearings, to have been far more trustworthy than any results derived from dead reckoning and soundings. Direction finding is not, we are informed, by any means perfect—there is a good deal of land-screening and even deflection—but the errors are being ascertained and allowed for—just as compass errors are ascertained and allowed for. The system is in its infancy, but enough is known of it to establish its great practical value. If and when direction-finding apparatus comes to be carried in all ships, which at present are compulsorily equipped with wireless senders and receivers, the greatest of all sea dangers, collision or stranding in fog, should almost disappear.

Since July 1st last, British passenger steamers with fifteen boats and upwards have been required to carry one or more motor launches fitted with wireless apparatus. Their purpose is to keep in touch with boats filled with shipwrecked mariners and passengers and to direct vessels which are proceeding to their assistance. No great range is needed for apparatus such as this, but it must be simple and trustworthy. Our correspondent, who went for a trial trip of one of these new launches in the Mediterranean, describes it as being well up to its work. Under a half-deck in the bows was a small motor (independent of the launch's engines), which drove a generator supplying current both to a quenched spark transmitter and a Morse searchlight. The transmitter had a range of at least 50 miles, and with the two-valve receiver signals 200 miles away were easily heard. It is not at all easy in thick or rough weather to find boats in the open sea after a ship has gone down, but there should in future be no difficulty at all when boats are accompanied by one or more of these highly efficient motor launches.

So far our correspondent's reports were favourable. But he was most unfavourably impressed by the lack of observance, especially by foreign ships and stations, of what is called the Silence Period for distress and alarm signals. It is laid down under the International Convention for saving life at sea that there shall in all wireless houses on board ship be two Silence Periods every hour—from 15 to 18 minutes and from 45 to 48 minutes past every hour by Greenwich mean time. During those periods all wireless work is ordered to be suspended so that distress (S.O.S.) and alarm signals may be listened for on the standard 600-metre wave-length. But International Conventions propose and commercial exigencies dispose. Our correspondent listened more than a score of times on different days during Silence Periods, and found very little silence. Foreign ships and stations were the worst offenders. Generally speaking, British ships and stations observe the periods—if they do not their operators quickly find themselves reported by other ships, and hauled over the coals by superior authority. But it is alleged by British operators that it is of no use for them to report offending foreigners. It is by no means an uncommon experience to find International Conventions slow in receiving general observance. Here is an instance, and a very important instance, of the lack of strict observance. The only remedy is publicity, which, though working slowly, in the end achieves its purpose. In the meantime, the lives of all who travel by sea are imperilled by neglect to observe regulations on the part of those whose duty it is to observe them.

THE OILSEED CRUSHING INDUSTRY.

(BY A CORRESPONDENT.)

THE experience of the oilseed crushing and vegetable oil industry of the United Kingdom during the first half of the year can be regarded only with qualified satisfaction. Although rather more raw material was received than in the corresponding six months of last year, and thus enabled the mills and refineries to work at a fair level of capacity, trade generally was dull, and in one section at least there was more than the usual amount of competition from abroad. Home demand was on a moderate

scale, but showed no noticeable expansion, and in the export trade there was a distinct falling off in several directions, owing, no doubt, to the difficult trading conditions still existing throughout Europe. In the half-year ended June 30th our exports of vegetable oils (produce or manufacture of the United Kingdom) amounted to 13,472 tons of refined and 51,077 tons unrefined, as against 14,250 tons and 59,291 tons respectively at the same date last year. Of the former, refined cotton oil at 10,539 tons (573 tons better than a year ago) was the principal item, thus showing the ability of the English product to compete with American cotton oil. The balance is made up largely of coconut and palm kernel oils. Under the head of unrefined, in which soft oils also made a good showing, a striking feature was the increased exports of palm kernel oil—viz., 17,199 tons, against 16,743 tons. A very considerable proportion of this was exported to the United States, no less than 12,240 tons being shipped in bulk from Hull alone to New York.

The expansion of the exports of this commodity is evidence of the progress made in recent years by this country in handling the nuts and kernels branch of the industry, which formerly belonged almost exclusively to Germany. Soya oil at 8,840 tons was also an increased export, and compared with 7,009 tons. There was, however, a big falling off in the exports of rape oil, the total being only 2,657 tons (of which more than half was sent to the United States), as against 7,047 tons. Linseed oil at 13,204 tons compared with 15,211 tons, and was thus over 2,000 tons down and considerably below some recent years. The worst feature of the linseed oil trade from the point of view of the seed crushers has been the abnormally heavy imports from abroad, principally from the Netherlands and Belgium—a total of 10,758 tons, or only 2,446 tons less than the quantity of British-made oil exported. It is almost unprecedented that in normal times foreign linseed oil should be able to compete so substantially with the home product on its own ground, and that after paying 20s per ton sea freight, yet such was the condition of things brought about early in the year by over-production on the Continent, and possibly to some extent under-production here. That phase appears to have passed, imports having markedly declined of late.

The keenness of foreign competition is exhibited in other directions, more particularly in the case of soya oil, of which 18,229 tons were imported in the six months, as against 9,775 tons a year ago, illustrating once more the tendency of recent years whereby crude oil crushed in the mills of Manchuria is exported instead of beans. Rape and castor oils were also increased imports. The arrivals of palm oil, after deducting re-exports, were 27,454 tons, against 28,241 tons net; but this does not so closely affect the oilseed crushing industry as such, except that it provides work for the refineries and comes into competition with other oils usually absorbed by the soap factories. The same may be said of coconut oil, of which we imported 12,447 tons net, against 10,541 tons (refined and

unrefined), although more copra than formerly is being crushed in English mills. Our total net imports of vegetable oils from abroad in the six months consisted of 8,251 tons refined and 76,597 tons unrefined. Comparing with 10,097 tons and 56,438 tons respectively, the former showing a decline of 1,846 tons, and the latter an increase of 20,157 tons—attributable to the heavier imports of linseed, soya, castor, and rape oils referred to.

In the half-year the net imports of oilseeds, nuts and kernels into Great Britain amounted to over a million tons (1,010,077 tons), against 914,103 tons, an increase of nearly 96,000 tons. A feature was the sharp decline of 63,263 tons in linseed. Both Great Britain and the Continent have taken much less linseed this year. Fair quantities brought forward from last year, and this and the poor trade in the oil product, added to the high prices demanded by shippers of seed caused crushers to be less eager buyers of the Plate and Indian crops. At the end of June less than half of the exportable surplus had been shipped, viz., 667,200 tons, leaving an estimated balance for shipment over the remainder of the year of 744,000 tons, the latter comparing with 681,000 tons actually shipped July to December last year. Ample supplies of linseed would, therefore, appear to be assured until the arrival of the new crop. It is hoped that the lower prices of seed and oil now ruling will stimulate demand. The new Egyptian crop of cottonseed is expected to commence shipment early in September.

BUILDING SOCIETIES.—II.

THE Halifax Permanent Building Society claims to be "the largest lender of money for house purchase in the Kingdom." At the present time the number of borrowers exceeds 45,000, while the amount owing upon mortgage is stated to be over £16,000,000. Ordinarily this society advances about 75 per cent. of its surveyor's valuation. Its balance-sheet is a concise affair. On the side of liabilities we find investing shareholders £15,889,497, depositors £3,678,058, with a reserve and surplus of £501,832. It is interesting to compare this ratio of reserves to assets with the figures given below of a few London societies. Against these items are amounts due secured by mortgages, £15,960,625; properties, £206,816; loans to corporations, £2,352,975; investments in British Government securities, £1,047,798; and cash, £501,172. These total £20,069,387. It is evident that, as far as the story of the institution is told in its seventy-second annual balance, a position of safety is indicated. Exceptional growth has been made by the Halifax Equitable. The assets of this undertaking in 1918 were £2,021,044; at June 30th last they totalled £9,190,097.

But we must confess that from the printed literature through which we have waded to pen this article, much remains to be done by the directors of these institutions to present a picture which will bring the public's savings in similar volume to the support which has been given to National Savings Associations. The absence of necessary information in these reports and accounts of societies must strike any cautious observer. The patient inquirer is at a loss in the majority of cases to find what interest he will pay, and what a loan will cost him. We have extracted, however, from a few of the chief undertakings the terms of repayment. Various units are used, and any comparison is practically impossible. It cannot be said that the Halifax Permanent, the leading society, gives in its prospectus much information as to what intending borrowers have to pay. The Burnley Society shows principal and interest payments due for the first twelve months on a mortgage loan of £500 at 5½ per cent. for 20 years, while the National Freehold bases its table on an advance of £100 with interest at 6½ per cent. over periods varying from eight to 16 years, and the Leeds Permanent on a mortgage of £480 at 5 per cent. during 19-23 years, while the Huddersfield gives the amount of monthly repayment on an advance of

£240. The National Freehold claims that it differs from all others in that it charges the borrowers interest only on the balance owing from day to day, and not on the balance owing on the first day of the year, as is the case with nearly every other society.

We should like to suggest to the Building Societies' Association that a standardised form of advance table should be given in the various pamphlets issued showing exactly what £100 will cost the borrower. The table could embrace the total money repayments for 5, 10, 15, and 20 years. From this the intending borrower could quickly realise his liabilities. If it is complained that, owing to a variable Bank rate, this is not possible, then tables could be shown giving repayments of capital and interest worked out on the basis of 5, 6 and 7 per cent. And the society could definitely announce the fact that the borrowing figure is 1 or 2 per cent. over Bank rate, as the case might be. Another feature which, possibly, progressive societies will offer us as competition becomes more marked is the ratio of expenses to business undertaken. Thus it would be an excellent guide to the financial condition of the concern if we were able to compare working costs per £100 advanced, of various representative societies. It should, perhaps, here be mentioned that although not so large, many of the London societies are in as strong a financial position as most of the huge societies in the North of England. The Temperance Building Society, for instance, has assets of £2,300,000 and a reserve fund of £245,000, whilst the Woolwich Equitable has assets of £2,850,000 and reserves of £210,000. These are excellent figures, especially when compared with those of the Halifax Permanent Society.

It is possible that an impression prevailed that a building society operating locally could not possibly be as financially sound as, say, an insurance office or bank with connections and investments throughout the world. That is one of the disadvantages of localisation. But there are advantages. One of these, insofar as building societies are concerned, is that it is possible to arrive at a more accurate valuation of property, for in their respective districts property market conditions are better known. Recently, however, there has been an inclination to extend the sphere of operations, and some of the more enterprising societies have opened branches and agencies in various parts of the country.

The present position of building societies is illustrated in figures of the operations of building societies in England and Wales in 1924, which were given by the chairman at the recent annual meeting of the Building Societies Association. It was shown that the movement in 1924 was at a more rapid rate than at any preceding period. The assets of all societies, including reserves, have increased from £121 millions in 1923 to £142 millions last year—a gain of 18 per cent. The amount received during the year advanced from £69 millions to £71 millions, an increase of 3.9 per cent.; mortgage advances accounted for £40 millions, against £31 millions, an increase of 29 per cent., while the number of members, excluding depositors, went up from 877,000 to 966,000. In addition, reserve funds grew from £6½ to £7½ millions, and the amount invested in mortgage assets from £96 millions to £118 millions, or 23 per cent. As regards the amounts received during the year, the value of the comparison is questionable, unless receipts from repayments of mortgages are left out. As the secretary of one of the largest North of England societies reminds us, by including such receipts a false comparison is made, because the more money is paid off these mortgages the greater the receipts, but the less would be the amount outstanding on mortgage. Therefore, increased receipts might mean either that mortgagors have more spare capital, and therefore pay off their mortgages quicker, or that properties are changing hands more frequently and are consequently being paid off in shorter periods, but are probably being taken up again by other mortgagors.

The following table * indicates the growth of the move-

* "Registry of Friendly Societies—Statistical Summary of Building Societies, 1914-1923."

ment in Great Britain since 1914 (the 1924 summary is not yet available):—

	No. of Members.	Total Receipts. £	Amount Advanced on Mortgage. £
1914	627,240	22,891,773	8,761,950
1915	626,174	21,812,002	6,530,986
1916	620,335	20,924,344	4,924,842
1917	612,753	21,936,831	4,484,794
1918	625,013	25,974,246	6,970,986
1919	672,369	35,445,504	15,840,961
1920	747,589	48,072,341	25,094,961
1921	789,052	47,146,765	19,673,408
1922	826,032	52,628,709	22,707,799
1923	895,512	61,616,621	32,082,694

These figures display in no uncertain manner the growth in popularity of these undertakings. From the slight setback recorded for 1915, 1916, and 1917 the turn of the tide was noticeable in 1918. To sum up briefly, this is accounted for in two ways. Firstly, the growth of income-tax and the search for any security bearing interest free of tax, and, secondly, the demand for housing and the facilities which the societies give to purchasing, borrowing, and repayment. The societies pressed home to the public both points. "Tax-free investments" was an excellent slogan, while, as the public began to understand the simple routine involved in borrowing, many prejudices were cast aside. Before the war many would-be borrowers were deterred by reason of uncertain employment and from the fear that repayments could not be maintained. The apparently higher wages and salaries of the boom period, however, gave a fresh confidence, while stabilisation of prices brought in 1922 and onwards those borrowers who had remained outside, fearing substantially lower building values.

The future for building societies is distinctly bright. Formerly societies of local interest only, they have now become part and parcel of our economic structure. That this has been appreciated by the societies themselves can be seen by the process of co-opting some of the best brains of the country for their control. Sir Josiah Stamp is already associated with one society, and no doubt many undertakings will fill vacancies by inviting prominent financial men to share the heavy task of direction which is involved by rapid growth and added responsibilities.

Notes of the Week.

The Seamen's Strike.—The unofficial strike of British seamen in certain British and Dominion ports has this week shown unmistakable signs of collapse. In Great Britain, indeed, the movement has from the start held every promise of failure. Some 1,400 men have thrown themselves out of work at Southampton without holding up a single vessel more than a few hours. The apparent readiness of unemployed seamen to fill the places of their discontented colleagues has induced the crews of other ships, on second thoughts, to accept the situation as it stands, and more vessels have lately left these shores carrying their regular hands. In South Africa and Australia conditions are less satisfactory. The mail service from South Africa has been delayed, and though negotiations now in progress are expected to have a good effect, the situation remains somewhat obscure. In Australia a firm line is being taken by the authorities. Warrants have been issued in numerous cases, and while the serving of these on individual strikers has not proved an easy matter, a number of convictions have been obtained and sentences of imprisonment and loss of pay inflicted. The chief sufferers in this dispute would appear to be the unfortunate seamen who have succumbed to the specious arguments of certain people less interested in obtaining better conditions in the merchant marine than in promoting obscure political ends.

The War in Morocco.—Expectations have been growing for some time that France and Spain were preparing to make a very strenuous effort to bring the Moroccan campaign to as speedy a conclusion as possible. These expectations were fulfilled this week, when the news arrived of a dual offensive effort. After intensive artillery pre-

paration a French offensive against the whole southern front of the Rifis has been launched under the direction of General Petain, while the Spaniards succeeded earlier in the week in effecting a landing at Cebadilla Bay and establishing a new base within six miles of Ajdir, which was Abdel Krim's capital and headquarters. It is too early as yet to gauge the extent of possible success. But it is obvious that upon the progress of the next few days depends whether or not France and Spain will have to face a long and exhausting campaign. The Rifis are proving themselves to be formidable foes. With a great natural aptitude for mountain warfare and a fanatical courage, they have shown themselves able to combine a high degree of discipline and a practical efficiency in the conduct of modern military operations. But they are now grappling with forces greatly superior in numbers, in training, and in armament, under a High Command determined, if possible, to deal a decisive blow. A week hence the prospects should be very much clearer.

Death of Two War Leaders.—Death has removed this week two men, each of whom played, in very different spheres, an important rôle in the war. M. Viviani was the Prime Minister to whose lot it fell to be in charge of France's destinies in August, 1914. Starting his political career as a Socialist, he gradually moved from the extreme left, and after being several times Minister, he became head of the Government in 1914, with the prime object of carrying out the three-years' service law as a reply to Germany's military preparations. He ceased to be Prime Minister in 1915, but remained in office for two more years, and was sent as France's representative to Washington when America entered the war. Since the war M. Viviani had the opportunity of showing at the League of Nations and at the Washington disarmament conference his deep devotion to the cause of peace. In M. Viviani France loses the greatest of her orators, whose art was known and admired on two continents. Mr E. R. Stettinius played a very different rôle. A partner of Messrs Morgan and Co., of New York, he organised in that famous house the purchasing department of the Allies in America, and became, in effect, an unofficial Minister of Munitions in the years when America was still endeavouring to remain neutral. Those who realise the importance of the part played by American supplies to the Allies in 1915 and 1916 will appreciate the extent of his responsibilities. Those who had the privilege to come into personal contact with him, either in the early days or in the later days, when he came to Europe to represent his country on the Inter-Allied Munitions Council, will realise that in Mr. Stettinius Europe as a whole, and Great Britain in particular, has lost a most loyal and devoted friend.

Foreign Trade in August.—The trade returns for August issued yesterday show a decline of £10 millions in imports compared with last year, and of £5 millions in exports. As re-exports are up by £4½ millions, the adverse balance of trade has substantially improved. The figures for August and for the eight months of the year to date are as follows:—

MONTH of AUGUST.				
	1924.	1925.	Increase (+) or Decrease (—) in August, 1925.	
	£	£	£	%
Imports	102,167,932	91,732,604	— 10,435,328	— 10.2
British exports	66,288,294	61,037,999	— 5,250,295	— 7.9
Re-exports	8,970,029	13,499,668	+ 4,529,639	+ 50.5
Total exports	75,258,323	74,537,667	— 720,656	— 1.0
Excess of imports over total exports	26,909,609	17,194,937	— 9,714,672	— 36.1

EIGHT MONTHS ENDED AUGUST 31.				
	1924.	1925.	Increase (+) or Decrease (—) in 1925.	
	£	£	£	%
Imports	808,481,047	867,758,788	+ 59,277,741	+ 7.3
British exports	526,036,385	518,523,538	— 7,512,847	— 1.4
Re-exports	93,272,789	102,324,985	+ 9,052,196	+ 9.7
Total exports	619,309,174	620,848,523	+ 1,539,349	+ 0.2
Excess of imports over total exports	189,171,873	246,910,265	+ 57,738,392	+ 30.5

The fall in imports is due to many causes, of which the three chief are the fall, both in quantity and value, of cereal imports; substantial reductions in the price paid for, accompanied by small reductions in the quantity of, raw material imports (with the exception of rubber); reduced imports of the new dutiable goods, silks, cars, &c., which were rushed into the country in large volume during June. The fall in exports is half due to coal, the other chief items to show a fall being ships, cotton and wool, and iron and steel. The value of British exports of manufactures in August was midway between the figures for August, 1923, and August, 1924. Taking the year to date, however, the figures clearly show what is wrong with our exports:—

VALUE OF EXPORTS during EIGHT MONTHS (in £ millions).				
	Coal.	Iron and Steel.	Other Manufactures.	
1923	67.6	48.8	331.0	
1924	50.1	51.5	360.1	
1925	34.5	45.3	368.6	

A similar story is told by the detailed quantity figures, of which we have picked out some of the most important items:—

	1923.	1924.	1925.
Coal.....mln. tons	53.2	41.7	33.6
Iron and steel.....thous. tons	2,847	2,665	2,426
Cotton piece goods.....mln. sq. yds.	2,753	2,981	2,999
" yarn.....mln. lbs	92.5	112.0	125.9
Woolen and worsted tissues.....mln. sq. yds	141	152	127
" yarns.....mln. lbs	23.4	30.2	25.4
Jute goods.....mln. sq. yds	102	112	125
Machinery.....thous. tons	286.3	299.0	337.8
Motors.....numbers	1,956	7,833	12,212
New ships.....thous. tons	157	96	66
Paper.....thous. cwt.	2,597	3,095	3,228

The uninterrupted progress of the exports of machinery is one of the most satisfactory features of a rather sombre picture. The improvement is fairly general throughout the group—even agricultural machinery showing some improvement. In the vehicle group, railway locomotives, cycles, and motor-cycles are all higher, as well as the motor-cars shown above. August was, however, a particularly bad month in respect of ships. The increase in re-exports is due to the rise of rubber prices and increased sales of cotton (to Russia and the United States) and of wool (to France and Germany). The adverse trade balance is the lowest of any month this year.

The Reichsbank in 1924.—Thanks are due to the Reichsbank for its decision to issue an English translation (apart from certain appendices) of its Report for the year 1924. The period covered was one of the most difficult in Germany's recent financial history. The wild rush of inflation had been stopped, and the experiment of the Rentenmark had been inaugurated. But the strain of maintaining stability until the recommendations of the Dawes Committee had been made and approved was a very serious one, and those responsible for Germany's financial policy at that time to be congratulated on the firmness which enabled them to carry through. The same year saw the closing of the Darlehenskassen, the establishment of the Rentenbanktreuhandstelle, and, with the co-operation of the Bank of England, of that short-lived, but essential factor in financial recovery, the Gold Discount Bank, which was absorbed by the Reichsbank at the beginning of the present year. It is particularly useful for all interested in recent financial history to have in this concise and authentic form details of the above transactions, together with an authoritative survey of credit policy and exchange control during the same period.

Home Railway Stocks.—Conditions in the home railway market, writes a Stock Exchange correspondent, have approached a state of affairs difficult to explain to anyone who has not some knowledge of the Stock Exchange, but which, nevertheless, deserves to be comprehended by many hundreds of proprietors who are seriously disturbed at the shrinkage in the value of their stocks. The following table gives some idea of the way in which prices have fallen:—

Stock.	January 2.	September 9.	Fall.
Great Western	109	86½	22½
London, Mid., and Scottish..	101½	75½	26
North-Eastern, pref.....	83	55½	27½
Do Defd.....	31	19½	11½
Metropolitan	82½	67	15½
Do District.....	56½	43½	13
Southern, pref.....	84½	73½	11
Do Defd.....	44½	40½	4
Do "A"	42½	37½	5

Southern railway stocks have suffered least, because the company's traffics inspire a less dolorous dividend sentiment than do those of the other steam railways. The reduction in the dividend on London Midland and Scottish last month had the effect of underlining the nervousness that had already gained ground, from one end of the country to the other, at the position of the Home Railway industry, beset as it has been by threats of strikes in the iron and steel trades, the shipping industry, and in some of its own branches. Concurrently with the decline in Home Rails, there has been steady appreciation of prices in other Stock Exchange markets to which public attention is popularly directed. The holder of London Midland and Scottish stock, observing the manner in which Courtaulds, for instance, have gone ahead by leaps and bounds, while the value of his own stock has steadily depreciated, arrives at that point of mentality where he decides desperately to cut his loss on the railway stock, and to utilise the money in the purchase of stock in which there is at all events a lively market. He covets shares that are being bought eagerly by the public, and which offer the prospect of appreciation instead of the continual decline which his Home Railway stocks have suffered. The consequence is that, for weeks past, holders of the Home Railway ordinary, deferred, and preferred issues have been trying to turn out their stock. The Stock Exchange market, in spite of the scarcity of floating supply, which is said to exist, has been buying stock for so long a time that the jobbers, not unnaturally, decline to take more on to their books unless they can see their way to placing it into the hands of buyers. But buyers are few and far between. Stock openly offered in the market at ½ below the nominal price has to be sacrificed for what it will fetch by sellers "at best." Automatic selling goes on, year in and year out, for deceased accounts, and by people who, wanting money for other purposes, have to realise their investments. Every now and then a feeble flicker of rally occurs, but it is usually so modest and so temporary as to emphasise the next bout of depression that falls upon the market. How best to advise their clients in regard to Home Railway stocks, Stock Exchange brokers frankly confess their difficulty in deciding. It is useless to work out the yields on capital, taking, as the basis, the last-paid dividends which the companies distributed, for these are likely to be reduced, and what next January and February declarations will hold, it is impossible to forecast. That the Home Railway industry is going to the dogs altogether would appear to be an impossibility. Doubtless the day will come when the bottom of the prices will have been reached. But how soon this will be, or how much lower prices are likely to drop, nobody dares so offer to shareholders is the negative one that the fall, having been so protracted and so substantial, has thereby lessened the scope for further shrinkage. The disunion led to a little stiffening of prices in the Home Railway and permanent buyers, such as trust and insurance companies, the hope of any material recovery in prices is not particularly rosy.

Railway Statistics.—It is noteworthy that two important industries, coal mining and the railway service, in regard to which wage statistics were very scanty until recent years, are now covered by elaborate official statistics. The railway figures are published annually, and those for March, 1925, have just appeared. The details as to wages follow the lines of previous returns, and show the standard rates for the principal traffic grades, together with the average wages and average earnings for these and certain of the workshop employees. One feature, which is introduced for the first

time, has considerable value. The average earnings of all the adult wage-earning staff combined, excluding those in ancillary businesses, are shown to be 67s 4d for the conciliation staff and 69s 11d for the shop and artisan staff. From these figures it is possible to derive an all-round average of about 68s a week. The average earnings of railway employees in 1912 were 27s 4½d. This figure, however, is somewhat too low for comparison with the present average, as it includes the earnings of juniors, and in order to deduce the increase over the pre-war level it requires a further augmentation to include certain advances given in 1913 and 1914. Allowing for these modifications, it seems probable that the increase is in the neighbourhood of 140 per cent. This increase, of course, takes into account not only advances in rates of wages, but also the effects of improvements in the rates for overtime and Sunday duty. In the case of the conciliation grades the average earnings in March, 1925, were almost identical with those of the previous year, although rates of wages were in many cases a week higher. This is partly accounted for by a fall in the earnings of drivers and firemen as a result of modifications of the mileage allowances. The earnings of shopmen showed a rise in the year of 1s 4d a week, though rates of wages remained unaltered. The return also gives details of the number of employees of the railway companies. The total number in March, 1925, was 702,062. This represents an increase of 25,000 in the last three years, whereas the contrary might have been expected as the result of the grouping arrangements; this latest figure is about 60,000 higher than that of 1913. It will be seen that the combination of the rise in earnings with the increase in the number employed since 1914 yields an estimate of the increase in the total wages bill which corresponds closely with that of 155 per cent. recently computed by the companies on a different basis, before the figures under consideration were available.

Licences and Drunkenness.—The Licensing Statistics, 1924, just issued in Blue Book form,* show that there was a slight increase over 1923 in the total of convictions for drunkenness in England and Wales, the figure being 79,082, as compared with 77,094 in the previous year. This small increase was entirely due to the last seven months of the year, for in the first five months a decline took place. The total, though the highest of the past few years, compares very favourably with the figure of 188,877 for the last full pre-war year 1913. The statistics also bring out the fact that while the population has been growing "on-licences" have steadily declined in number. In 1908 there were 95,517 on-licences, or 27.24 per 10,000 of population, while in 1924 the number of on-licences was 80,987, representing 18.68 per 10,000 of population. On the other hand, the steady decline in off-licences which had been in progress since 1905 was checked in 1923. Nevertheless, off-licences, like on-licences, are still falling in proportion to the population. In 1913 there were 6.40 off-licences per 10,000 of population; in 1923 there were 5.75, and last year 5.11.

American Cotton Crop.—Our Manchester correspondent writes:—On Tuesday last the Department of Agriculture of the United States Government published further important statistics relating to the cotton crop for the current season. The average condition of the plants on September 1st was given as 56.2 per cent., against 62.0 per cent. on August 15th, and 59.3 per cent. on September 1, 1924. The report stated that the yield per acre was estimated at 141.5 lbs, against 151.5 lbs on September 1st last year. On the basis of these figures the crop was indicated, exclusive of linters, at 13,740,000 bales, against 13,990,000 bales a fortnight earlier, and 12,787,000 bales at the same time last year. These figures were not equal to expectations, and below the forecasts of private firms. A rise in prices showed itself, but the upward movement was not maintained as at the higher figures selling pressure was experienced. The Department of Agriculture, on the same day, stated that up to the close of business, on August 31, 1,893,000 bales of the current crop had been

* Cmd., 2,496. Prices 3s 6d, net.

HEAD OFFICE, NEW YORK
16 WALL STREET

LONDON PARIS
26 Old Broad Street 3 & 5 Place Vendome

ginned, against 958,000 bales to the corresponding date last year. This big increase is due to the crop being early, but the figures had an influence upon operators. In a supplementary report on crop prospects, published by the Department of Agriculture, it is stated that the drought and extreme heat have caused increased damage throughout a large part of the belt. Boll weevils are multiplying rapidly in most localities, though the crop in most sections is past the damage stage, except as regards the top crop. In view of the large unpicked and open cotton in the fields, severe tropical storms and excessive rains within the next few weeks might work great havoc. In Lancashire trading circles sentiment with regard to raw cotton prices is still rather bearish, but as consumption of American qualities at the moment is equal to over 14,000,000 bales per annum prices in Liverpool at around 1s per pound cannot be considered dear.

Egyptian Cotton.—More satisfactory news has been received, writes our Manchester correspondent, with regard to the progress of the growing cotton crop in Egypt, and it was good news for Lancashire to receive this week by cable the official Government estimate for the crop for this season, which is put at 7,300,000 cantars. The yield for last season was around 7,130,000 cantars, and consequently the more satisfactory outlook for supplies has been welcome, as over half the quantity of cotton grown in Egypt in each year is exported to and used in this country. It might be pointed out that the Government estimate is invariably extremely conservative, and in the circumstances a larger yield than that at present indicated is not an improbability.

Shipping Freights Index Number.—The rise in freights recorded for July continued, though to a less marked extent, during August, our Index Number of whole cargo charter rates for the month being 111.54, equal to an increase of only 1.02 per cent. This figure, which is the lowest reached for August since the war, compares with 121.49 in 1924, 116.53 in 1923, and 131.65 in 1922. The movement of the various groups in the index are summarised as under:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	118.34
February, 1920.....	814.31	529.89	757.52	744.81	587.02	712.16	690.95
December.....	268.90	277.17	244.10	256.79	286.72	347.18	280.14
December, 1921.....	160.06	164.07	163.72	144.43	141.25	166.47	156.67
December, 1922.....	137.09	135.15	129.19	122.61	136.08	159.34	136.67
December, 1923.....	134.04	132.72	120.08	124.35	125.07	144.21	130.08
December, 1924.....	117.44	129.18	119.45	119.76	129.29	161.13	129.38
January, 1925.....	115.26	134.60	120.38	123.83	132.44	172.70	133.20
February.....	114.92	146.54	118.04	121.95	129.99	178.04	134.91
March.....	116.34	130.81	110.41	116.99	118.42	161.33	124.05
April.....	114.18	133.39	110.67	115.95	114.60	138.87	121.27
May.....	109.86	124.85	110.97	108.43	105.16	126.41	114.28
June.....	109.25	104.78	108.24	105.63	100.43	112.17	106.73
July.....	119.02	111.96	113.42	106.15	94.43	117.51	110.41
August.....	107.22	113.46	110.79	112.24	99.14	126.41	111.54

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	9200	-15.88	S. America—outwards	11415	-20.12
Bay—outwards.....	11927	-13.35	India—homewards.....	10742	+4.86
homewards.....	11613	-3.22	India—outwards.....	11509	-7.02
Mediterranean—outwards	11337	-17.90	homewards.....	10939	+19.20
homewards.....	11055	+0.47	Far East, &c.....	9914	+4.71
North America.....	11346	+1.50	Australia.....	12641	+8.90

Reacting sharply after the British mines settlement, outward coal freights continued in an extremely depressed state during August, a partial recovery, however, being shown in rates to South America late in the month, consequent upon a slackening in the demand for grain-carriers from the Argentine. The most remarkable feature in August was an exceptional outburst of grain-chartering activity from South Russia, and fixtures were also numerous in relation to the movement of maize from South Africa. The Far East was represented by a fair amount of business, and Australia's new season crop also began to command attention. So far as North American grain was concerned, however, matters lacked animation, and the demand for mineral ore carriers from Mediterranean and Bay ports was more or less restricted. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	(1913 = 100.)	1922.	1923.	1924.	1925.
January.....	131.60	..	114.05	..	117.11
February.....	135.76	..	112.73	..	123.78
March.....	135.53	..	115.23	..	122.09
April.....	129.46	..	115.45	..	117.22
May.....	125.12	..	114.55	..	114.27
June.....	117.45	..	106.82	..	108.62
July.....	114.52	..	103.39	..	103.75
August.....	113.16	..	100.16	..	104.43
September.....	110.37	..	103.04	..	110.50
October.....	114.42	..	107.86	..	115.55
November.....	119.43	..	111.21	..	112.76
December.....	117.39	..	111.81	..	111.21
Mean for year.....	122.02	..	109.69	..	113.44

While the future course of freights is no doubt largely a matter of speculative interest, increased activity due to seasonal causes may be looked for with some amount of confidence. There is much lost ground to be recovered, but the position is by no means hopeless. It is not improbable that sooner or later the coal export trade will derive benefit from the Government subsidy, and should this stimulus coincide with brisker business in regard to crop movements during the autumn, a good deal of the gloom at present surrounding "tramp" shipping will likely be dispelled.

Agricultural Conditions in England and Wales.—The Ministry of Agriculture's report on conditions in England and Wales on September 1, 1925, states that unsettled and showery weather has been experienced throughout the country during August, although in some districts there have been fine, sunny periods. On the whole, the harm has not been extensive, the chief effect of the wet weather having been to hinder harvest operations. Reaping had already started in many places before the end of July, and became general in most districts during the first week in August. A good deal of wheat has now been gathered, mostly in good condition, especially where harvested early. The grain is generally of good quality, although much of it is rather soft, and there are some reports of discoloration. Yields are good, on the whole, forecasts being for an average crop of about 17.4 cwts per acre, as compared with last month's forecast of 17.1 cwts and a ten-year average of 17.1 cwts. Early sown barley is, as a rule, of good quality, but the later sown has in many cases suffered considerably from the wet weather, the grain being discoloured and of indifferent quality, while straw is short. To a certain extent the oat crop has suffered owing to the protracted harvest, spring oats especially being of only moderate quality and short in the straw. Harvesting of beans and peas is practically completed in some districts. Beans have suffered from blight in some instances, but generally the crop is fairly satisfactory as regards both quality and

yield. Only in a few cases are peas a good crop, many yields being light, while the corn is frequently of poor quality. Early potatoes have yielded rather below average crops, but main crop varieties have made good progress during the month, and promise yields little, if at all, below average. The plants are healthy and vigorous, and although disease is reported in a few districts, only small areas appear to be affected. The August rains have been of great benefit to root crops, which have continued the favourable progress made during the latter part of July. Sugar beet, where grown, is in very healthy condition, and although from one or two districts it is reported that the crop is running to seed, the yield is expected to be rather over than under average. Pastures have grown well during August, and are now in good condition, although grass is still deficient in parts of the north-eastern counties. Cattle and sheep are doing well, with few exceptions. In places additional seasonal labour has been difficult to obtain for harvesting and other farm operations, and the usual scarcity of skilled stockmen is reported.

Economic Conditions in Cuba.—A correspondent writes:—Advices from Cuba tend to prove that the scheme of taxation put forward by the Government (which came into power on May 20th last), to cover the contemplated expenditure of £6,000,000 (\$30,000,000) annually for ten years upon public improvements, is meeting with severe criticism and no small opposition. The burden of taxation is already high for the majority of the people, who, according to a recent census, now number 3,368,923, of whom 2,294,115 (or 68.10 per cent.) are whites, 830,791 (24.66 per cent.) are coloured, and 244,017 (7.24 per cent.) are unclassified. The Cubans enjoy a relatively high purchasing power; a large part of their requirements must be met by imports, *per capita* imports amounting, in 1923, to \$86. The cost of living has made unprecedented advances, foodstuffs—largely obtained from the United States—constituting 35 per cent. of the total imports. The new taxes, although designed to tap as far as possible the wealthier classes, contain clauses that will press sorely upon the working section of the population. Only recently a 50 per cent. bonus was granted to Government employees to date from 1921, while few concessions of any kind have been made to the lower ranks of labour. The workers are said to be in an unsettled state at the present time, and likely to fall ready victims to Red agitators, who swarm in Cuba as elsewhere. The serious unrest referred to by Lord Ashfield at the last meeting of the United Railways of Havana has undergone no amelioration. An item in the new taxation scheme that has attracted the disapproval of the mercantile classes is an excise of $\frac{1}{2}$ of 1 per cent. established on all payments, placements of funds, transfer of credits, of securities or products, or other similar operations, which, directly or indirectly, imply the export of money or its equivalent from the national territory to foreign countries. Due to the menacing conditions, large sums of money and securities are undoubtedly being taken out of the country to be spent or invested abroad, but the Governmental financial financiers have warned the administration that the terms of this tax are dangerous, and that their full implication and effect upon international trade have yet to be realised. While the new law, if put into full effect, will mean that a tax will have to be paid on all drafts collected in Cuba for United States and other foreign goods sold to the island, the method of making such payment, and the parties responsible therefor, remain unsettled. No regulations have been issued by the taxing authorities, and confusion is said to exist. Economic conditions in Cuba had been showing a steady improvement during the past two years, and it was believed that another such year would mark the elimination of the old indebtedness of many firms arising out of the "slump" of 1920, and basis. The general financial position was also fairly satisfactory, but notwithstanding the considerable reduction last year in the public debt, this still stands at \$88,328,500 (£17,665,700) foreign indebtedness and \$12,478,200 (£2,495,640) internal debt. British interests

—mainly railways, electric light, docks, tobacco, sugar, &c.—represent not less than £45,000,000, of which railways account for £28,250,000. England is Cuba's largest customer for tobacco, while her imports from England exceed a value of £3,000,000 annually.

Calico Printers.—A slight decline is recorded in the accounts of the Calico Printers' Association, Limited, for the year ending June 30, 1925. In our table shown below results are swollen by the inclusion of profits arising out of the sale of the French works, together with the reserve accumulated against loss by the depreciation of the franc. This operation provided shareholders with an additional £167,708. Without taking this sum into consideration, profits are £532,597, as against £540,786 a year ago. The ordinary dividend is again 10 per cent., which absorbs £351,878. In addition to this, a bonus of 5 per cent.—representing a sum of £100,537—is to be paid out of the proceeds of the sale of the French works. Results since 1906 are shown in the following table:—

Year Ended June 30.	Gross Profit.	Maintenance and Depreciation.	Net Profit, Less Debenture Interest.	To Reserve, &c.	Dividends.	Ord. Rate.
	£	£	£	£	£	%
1906.....	682,160	200,120	354,040	150,000	201,074	4

1915.....	210,818	261,994	Dr 179,176	Dr 200,000	nil	nil
1916.....	1,104,732	312,345	664,387	300,000	351,878	2 $\frac{1}{2}$
1917.....	1,268,058	562,340	577,719	300,000	251,342	5
1918.....	1,271,559	573,606	569,953	310,000	251,342	5
1919 and 1920 3,040,392	1,567,432	1,216,961	350,000	603,221	10	
1921 and 1922 2,418,777	1,653,200	503,542	50,000	552,952	7 $\frac{1}{2}$	
1923.....	1,525,514	597,306	800,208	400,000	402,147	12 $\frac{1}{2}$
1924.....	1,191,524	522,739	540,786	205,724	351,879	10
1925.....	1,331,554	503,249	700,304	250,000	452,415	15

Maintenance and depreciation continue to absorb a heavy portion of profits, especially when compared with the pre-war rate. The company has substantial liquid assets. Out of total assets amounting to £7,947,931, cash and bills represent £772,902. Of the £250,000 allocated to reserves, £150,000 goes to the general reserve and £100,000 to the Employees' Benefit Fund. In the balance-sheet in front of us the depreciation account amounts to £1,093,244, as compared with £1,257,319 a year ago, and reserve £750,000, as against £594,275. We would like to suggest to the directors that the item "Sundry Debtors, Investments, and Other Debit Balances" should be divided, and investments shown separately. At present this one item at £4,444,896 represents more than half the assets.

British-Mexican Petroleum Company.—The statement issued by the Pan-American Petroleum and Transport Company in New York, that it had sold to the Anglo-American Oil Company the entire outstanding capital stock of the British-Mexican Petroleum Company, closes an interesting episode in the oil trade in this country. The British-Mexican had an issued capital of nearly £3,000,000. It was formed in 1919 as a partnership between British shipping interests and American oil interests. The shipping group was headed by the late Lord Pirrie and by Lord Inverforth, and the White Star, Cunard, P. and O., Royal Mail, and other important lines were interested either as shareholders or as customers. This was the time when all the big liners were being converted from coal to oil burning. The British shipping group wanted fuel oil, and Mr Doheny, for his company, the Pan-American, got the business. The British-Mexican constructed large oil fuel bunkering depôts at all the principal ports of Great Britain, and supplied the leviathans of the steamship passenger services with Mexican fuel oil. The British-Mexican, however, suffered from an unhappy supply contract with Mr Doheny's Mexican company, and also lost heavily on the

fleet of tankers which it constructed during the period of inflation. Its shareholders never had a dividend, and over a year ago Lord Inverforth's group bought out Mr Doheny's group, which held 1,500,000 shares at a price believed to be no more than 10s per £1 share. The British-Mexican then turned to other sources of oil supply, and took an interest in the Lago Oil Corporation in Venezuela, and in the Southern Crude Oil Purchasing Company, and the Southern Pipeline Company operating in the Smackover field in Arkansas. It also entered into a contract with the Soviet authorities for the supply of fuel oil f.o.b. its tankers at Batum. With these arrangements for supply, it was therefore surprising to find that the syndicate, which this year bought control of the Pan-American from Mr Doheny, also bought control of the British-Mexican from Lord Inverforth's group. The shareholders of the British-Mexican were invited to exchange their shares for 6 per cent. preference stock in the new Pan-American Eastern Petroleum Corporation, which is controlled by the Standard Oil Company of Indiana. Another branch of the Standard Oil family thus entered the British market, and began to operate not only the oil fuel bunkering business, but the petrol business in Great Britain, which the British-Mexican held through a subsidiary, the Redline Motor Spirit Company. There was thus a complete departure from the original idea behind the British-Mexican formation. The question now raised was whether the branch of the Standard Oil family represented by the Indiana company would compete in the British market with the other branch represented by the Anglo-American Oil Company, the subsidiary in this country of the Standard Oil Company of New Jersey? The negative answer is supplied by this announcement that the Anglo-American Oil Company has purchased the entire stock of the British-Mexican from the Pan-American (at a price believed to be in the neighbourhood of £1,600,000), but excluding the interests held by the British-Mexican in Venezuela and America. The Anglo-American is certainly best able to operate the petrol business of the British-Mexican—one less competitor (it will be observed) for the "big three" in the British petrol market—and it will no doubt satisfy the shipping companies, provided its contract prices are right, but what will it do with the Agwi group of companies which it takes over at the same time?

Nobel Industries.—A year ago the directors of Nobel's Industries, Limited, were able to declare a dividend of 8 per cent. for the year ended December 31, 1923, on 8,008,354 of ordinary capital. Now they are able to announce a dividend of 9 per cent. on the slightly increased ordinary capital of £8,030,229. Although, of course, as is evidenced by the comment about the South African results the accounts do not necessarily show the whole results of the combine, profits actually brought into the account are slightly lower, being £927,710, as against £1,032,489; but by reducing the allocation to special investment reserve by £50,000—making it £50,000, as against £100,000—the amount carried forward is increased by £16,000. Figures shown are net after deduction of tax. The following table shows how the undertaking has fared in the past five years:—

	1920.	1921.	1922.	1923.	1924.
	£	£	£	£	£
Gross profit	827,073	809,242	1,157,137	1,178,443	1,003,420

As time goes on the balance-sheets promise to become more informative. This is something to the good in days when the movement is only too often in the opposite direction—i.e., fewer items and less detail. As it is a holding company, assets are mostly investments. These amount

to £21,932,445 out of a total of £24,239,827. The comparative figures a year ago were £21,494,443 and £23,731,436. The following table shows how investments have been analysed:—

	1923.	1924.
1. Cost of shares in constituent companies ..	17,452,015	17,364,505
2. Other industrial investments at cost	5,026,299	4,981,474
3. British, Colonial, Government, municipal, railway, &c.....	..	647,878
	22,478,314	22,993,857

It will be observed that these investments are taken at cost, the report pointing out the market value as a whole "not being obtainable." Succinctly we are informed that the market value of "other industrial investments was below cost," while the market value of British and Colonial Government, &c., stocks was above cost. We have before called attention to the investment reserve account; this totals £550,000. When the usual consolidated statement given by the chairman at the general meeting is available no doubt these figures will convey more to us.

Agwi Petroleum Corporation—The Agwi group of companies—Agwi Petroleum Corporation and Agwi Marketing Company—provides, like the British-Mexican Petroleum Company, a warning that it is impossible to stay in the oil marketing business without ownership of a source of crude oil production. The Agwi Petroleum Corporation has a refinery at Fawley, on Southampton Water, which can treat 5,000 barrels of crude oil daily, facilities for bunkering ships with oil fuel, and a market for its petrol by way of a contract with the National Benzol Company. Largely because it had no crude oil production of its own, having had to buy from hand to mouth, the company has never been a financial success. At the end of 1923 it had to raise further capital and, apparently, the best terms on which this could be obtained was by the issue at par of £300,000 5 per cent. debenture stock repayable at 135 at the option of the company or on the demand of the debenture-holders after five years from the date of issue. The British-Mexican Petroleum Company and Lord Inverforth's group jointly subscribed the £300,000 debenture stock for a cash commission of 10 per cent., and an option to subscribe at par for 450,000 shares, and obtained voting rights on the basis of one vote for every £1 of debenture stock. To provide for this option the capital was increased from £1,000,000 to £1,500,000 by the creation of 500,000 new ordinary shares. Lord Inverforth's group, having further purchased from the directors a block of ordinary shares, obtained virtual control of the Agwi companies. This control now passes to the Anglo-American Oil Company. Presumably, the shareholders will receive in due course from the Anglo-American Oil Company a statement of its policy, if it intends to keep the Agwi companies alive, or an offer, if it intends to wind the companies up. It will be appreciated that the Anglo-American, as a subsidiary of the Standard Oil Company of New Jersey, is an importer only of refined oil products. If it decides to import crude oil and operate the Agwi refinery, it will enter upon a new field of activity. Undoubtedly it strengthens its position by this acquisition, for it obtains the finest shipping site on Southampton Water; complete facilities for oil fuel bunkering, which it at present lacks in that district; and it has now access to inland markets through the branch of the Southern Railway which has been constructed to the refinery at Fawley. The shares of the Agwi Petroleum Corporation are nominally quoted at $\frac{3}{4}$. The basis on which the debenture issue was made to the British-Mexican in December, 1923, proved to be the equivalent of a valuation of the ordinary shares at 12s 6d.

British Insurance in Portugal—A *Reuter* telegram announces the refusal of the Portuguese Minister of Public Works to permit of the addition to insurance policies, taken out in Portugal, a clause laying down that British agencies "are not to be held responsible for loss and damage after a lapse of 12 months." Some surprise, writes a correspondent, has been expressed in certain quarters that British agencies, in whose hands repose practically the whole of the foreign insurance business

done in Portugal, should have asked for the insertion of this provision. It is understood, however, that the reason is the unusual number of claims put forward after long periods, when it has been difficult for the companies against which claims have been made to obtain the necessary evidence. No complaint has been made regarding the methods adopted by British insurance agencies established in Portugal, many of which are of long standing. Regarded as a whole, they have proved both popular and prosperous. The largest amount of business being done is in regard to fire, but, on the other hand, life insurance, notwithstanding the great difficulty met with, has yielded satisfactory results. The French AF and RF mortality tables are in use generally. Compared with French rates, those quoted by British agencies are 50 per cent. lower; a large proportion of the fire policies issued have been taken out with British companies. The average of claims has been good in proportion to the premium income. Transport insurance has also largely passed into the hands of Foreign companies, principally British, the premium rates being more or less those of Lloyd's. Employers' liability figures largely in Portuguese insurance business. According to the Act, dating from May, 1919, and still in force, amplifying and completing the Act of 1913, every employer of labour is responsible for professional accidents caused to workmen. Many of the victims have been treated in times past with exceptional generosity. Portuguese legislation has tended, perhaps, to favour the insurers more than the companies, but these have shown great promptitude in settling claims in comparison with some native insurance companies, whose methods of settlement have been somewhat slower. There had been a loss of public confidence in some of the native insurance companies since 1918, when the consequences of the Armistice, no less than those of the war itself, caused the collapse and disappearance of a number of mushroom institutions which had been established. At the time of the Armistice there were over 130 insurance concerns carrying on a cut-throat business, principally marine risks; this marked an increase from about 40 in existence before the war. The number is now reduced to fewer than 60, British offices or agencies included. The existing native institutions are of sound repute, well conducted, and quote premium rates as cheap as—if not cheaper than—those of their competitors. The objection to recognising the new precautionary clause inserted in British insurance policies is based upon the plea that its acceptance would be "contrary to public interest." In any case, its exclusion is not thought likely seriously to affect the business of British insurance agencies carried on in Portugal.

Nigerian Tin—Our mining correspondent writes:—Water supply being so important a factor in the operations of companies working for tin in Northern Nigeria, the delay in the arrival of the rainy season was reflected in poor returns for several months. About a month ago, however, the rains came, and for August many of the companies are able to report outputs appreciably exceeding those of the earlier part of the year. The most notable example is a jump from an average of about 40 tons to no less than 110 tons of tin concentrates on the part of the Northern Nigeria (Bauchi) Company. Here undoubtedly the principal factor has been the starting up of the Kwall hydro-electric power plant. This scheme was initiated many years ago, but for a time work had to be suspended owing to lack of funds. Additional resources were raised—first by an issue of preference shares, then by debentures; the money thus provided proving insufficient, the profits had to be drawn upon for the completion of the plant. Hence no dividend has been paid since 5 per cent. on the preference in 1919. The prices of the shares have lately risen to 16s 6d for the preference and 11s 6d for the ordinary, both of the denomination of 10s. The pre-to share *pari passu* in surplus profits with the ordinary, and the respective quotations constitute an anomaly. It was estimated that with cheap power available, the company would be able to work at a profit ground carrying 1½ lbs, or even less, per cubic yard.

A Jungle "Deal."—Over last week-end the announcement was made, writes our mining correspondent, that the Gold Coast Explorers had arranged to purchase for a nominal sum the assets in West Africa of the Prestea Block "A." The latter, although the biggest mine of the colony, has achieved so little success that the unfortunate shareholders have never received a penny by way of dividend, and now they have lost their property altogether. After more than one reorganisation of capital, and the issue of a series of prior charges, the concern in July last went into the hands of a receiver for the debenture-holders. This gentleman obviously found it necessary to take the best offer he could get; it amounted to £20,000. For insurance purposes the value of the surface plant alone had been placed at £300,000! The last report issued by the former management indicated the crushing of 85,400 tons of ore for a value of £177,500, equal to 41s 7d per ton. Expenses averaged no less than 49s 2d, including, it should be mentioned, a heavy allowance for development redemption. On a neighbouring mine—the Taquah and Abosso—the recovery in 1923 averaged 46s 10d, and costs 37s 4d. Hence there seems ample ground for the belief of the new sponsors of the undertaking that expenses can be cut down, and profits earned. The existing ore reserves are reported to be 75,000 tons, averaging fully 45s per ton, plus 400,000 tons of slimes, having an estimated profit value of over 3s per ton. To provide the necessary funds, the Gold Coast Explorers, whose capital is only £50,000 in 1s shares, is offering a like number at par to its shareholders.

Transvaal Gold Output in August.—The output of gold of the mines of the Transvaal amounted to 808,218 ounces of fine gold during August, 1925, which compares with 809,571 ounces during August, 1924, and 769,371 ounces during August, 1923. In July, 1925, the output was 818,202 ounces of fine gold. The following table shows the monthly output for the past six years:—

	1919.	1920.	1921.	1922.	1923.	1924.	1925.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

Oversea Correspondence.

UNITED STATES.—OUTLOOK FOR MONEY AND STOCKS—GENERAL CONDITIONS—DEBT SETTLEMENT.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 1.

QUIETNESS continues to prevail in the financial district, with activity in the line of new capital issues at a low ebb. Whether the passing of Labour Day and the end of the vacation period will bring a change in this condition remains to be seen. Just now some bankers characterise their business as about as quiet as they remember. Interest, meanwhile, continues to centre in the many evidences of active trade, and in the behaviour of the security markets. During the last few days the tone of the stock market has been irregular, with a touch of weakness. This state of affairs is reviving the question, so often asked during previous periods of irregularity, of whether the market has finished its major upward swing. Opinions on that point are divided. The bears maintain that prices are high, that speculation has been very active, and that the market will lose money as autumn develops. On the other hand, it is apparent that buying in many high-priced issues has been "strong," that many standard stocks are not extravagantly priced, and that some of the sharpest advances in individual issues have been due to previous injudicious short selling. Commission brokers declare that their customers' accounts are unusually well margined. Bankers state that their market loans are unusually well secured, both as to quality and quantity of collateral. Certainly, it is a situation that cannot be characterised simply in the one way or the other. Perhaps as revealing an observation as any is that to the effect that our securities market is growing more and more like that of London. It is moving less as a unit; various departments are acquiring more independence.

At the moment the money market has taken on a moderately firmer tone. Certain maturities of bankers' acceptances have been advanced one quarter of one per cent. during the past two days. The rates on this form of paper now vary from 3½ to 3¾ for thirty days to 3½ and 3¾ for 180 days. Three months' bills are selling on a 3½ and 3¾ per cent. basis. Obviously, the rate has been creeping up on the Federal Reserve Bank's rediscount rate, a phenomenon which in some past instances has been followed by an increase in the official figure. Against the likelihood of such an advance at this time is set the fact that your own money market has weakened, and that American balances that have been placed in London would be brought home if the domestic money market firmed up materially. In addition, it is thought that the Federal Reserve authorities would hesitate to take an action that might place an extra burden on sterling exchange at the time of year when sterling must carry its heaviest load. On the other hand, it is realised that the Federal Reserve authorities are not likely to refrain from taking any action that the condition of our own markets really indicates. As for the current advance in acceptance rates, dealers say that it has been made in anticipation of the arrival of heavy supplies of cotton bills. The attitude of the dealers seems to be that it is better to mark up their rates beforehand than to

take a large volume of bills and then have rates advance, leaving the dealers with a loss on their bills. In any event, the present tightening seems to be regarded as a rather convincing one. This is the season at which a large supply of bills usually begins to develop, and at which the season swing of rates is upward from the summer's low level. The behaviour of rates during August was something of a surprise. Several banks had heralded the approach of dearer money. The tightening proved materially less than had been anticipated. Opinion swung to the idea that perhaps money was not going to harden much this fall after all. It may be that the present change indicates a normal and moderate seasonal advance in rates.

The explanation of the situation offered by bill dealers dovetails with what is known of the cotton situation. The crop, which seems pretty certain to be a large one, is being marketed unusually rapidly. The weather has been favourable to early picking. Ginnings have been running very much ahead of those of last year. Growers have been selling freely, apparently on the theory that recent prices have been about as good as would be realised. Middlemen who have bought spot cotton at diminishing prices have been hedging their purchases in the future market. This selling has had its effect on the futures, carrying them below the 22 cents level. Mill demand is reported to be rather slow. Meanwhile, economists and other observers find the offset for lower prices in the indications of a liberal yield. The improved crop prospects in general have caused an increase in confidence in the character of business during the rest of the year. Just now railroad car loadings are breaking all records for the season of the year, and are coinciding with other indications of active trade. The railroads themselves are earning in excellent fashion. The consensus of informed opinion is that this autumn's trade will set new high records, but that it will not be accompanied by inflationary tendencies. The policy of buying only to cover immediate necessities is expected to continue in force.

The Belgian debt agreement has been well received in all well-informed and in most influential quarters. With regard to the French and Italian settlements, it is apparent that the Administration is determined that its bargaining position shall not be weakened by preliminary manoeuvres on the parts of the debtors. It is, perhaps, a little inclined to be sensitive on this point. At the same time, due weight probably will be given, in the coming negotiations, to the debtors' capacity to pay.

FRANCE.—THE 1926 BUDGET—M. CAILLAUX'S PROPOSALS—A NEW FUND AND FRESH TAXATION.

(FROM OUR CORRESPONDENT.)

PARIS, September 9.

M. CAILLAUX's Budget proposals for 1926 have now been disclosed, so far as their broad outlines are concerned, and they suggest that the coming Bill will go far to place the French national finances on a sound footing. Whether it will prove acceptable to the wealthier classes in France is more than doubtful, but it is unlikely that any of the proposals will be seriously combatted in either of the two Chambers. None of the proposals now formally put forward by M. Caillaux are actually new, as they were foreshadowed some months ago. It is to be noted, however, that although they do not go as far as the Socialist party recently urged, the proposals as a whole constitute a further attack on accumulated wealth, while at the same time the Minister makes a strong appeal to the less fortunate of the electorate by proposing, in order to emphasise the "democratic" character of his Budget, that humbler taxpayers, whom age or infirmity have placed beyond the power to work, shall be exempt from taxation so far as one-half of their modest incomes are concerned.

M. Caillaux bases his new Budget on the one for the current year, subject to certain modifications on both the revenue and the expenditure sides, in order to bring his accounts for the year into "irreproachable equilibrium." He claims that the coming Budget will be an absolutely truthful one, comprising the whole of the year's expenditure, placing a just estimate on the expected revenue, and

ensuring that this shall come solely from taxation. He has renewed, therefore, his proposal (which he was prevented from carrying out last June), to withdraw entirely from the revenue side of his 1926 and future Budgets anything France may receive from the Dawes Plan. The revenue from this source will in future, he proposes, be paid into a special amortisation fund, which will be used for the double purpose of meeting the charges arising from the devastated regions, and the service of the inter-allied debt. This, for the coming Budget, will mean a reduction of estimated revenue by 1,100 million francs, the amount taken from this year's estimated receipts from Dawes Plan payments which was used to help balance the 1925 Budget. If, as the Minister proposes, the 1,600 million francs required for war pensions is added to the estimated expenditure for the year, and a further 360 millions which is now included in the independent Budget for the Department of Posts, Telegraphs and Telephones, be incorporated in the Budget proper, another 3,060 millions will have to be found from taxation. Estimating that, on the one hand, there will be an inevitable falling off during the next 12 months in the revenue from exceptional resources (arrears of the special tax on war profits, &c.), and that on the other there will be a certain amount of increase in the yield from the existing taxation, M. Caillaux calculates that he has to face, on the present estimates, a total deficit of 3,460 million francs.

It is impossible, he insists, to cut down departmental estimates any further. All increased expenditure applied for by the various departments, he states, has been cut by two-thirds, and for the moment it is impossible to realise further economies. Further substantial reductions in departmental expenditure will come later, but these will require further serious consideration.

M. Caillaux proposes to find the money to get rid of this deficit of 3,460 millions by (1) a uniform and notable increase of the income-tax schedules except in the cases of small incomes; (2) the institution of a schedule in respect of *biens oisifs*, or unproductive capital values (such as jewels, art collections, libraries of rare books, &c.); (3) a progressive tax on wealth, in the form of an increase in the rate of the general income-tax to an average of 40 per cent. in the case of large incomes (which will, of course, have also to pay the present schedule rates). As a complimentary measure, the Minister proposes to stipulate for "an exceptional revision of awards of war indemnities which, in consequence of cession to third parties or of displacement of damages, are of the nature of excessive profits." The yield from this source will not go into the Budget, however, but will be paid into an entirely new kind of amortisation fund, which will be used to expend the sums necessary to complete the reconstitution of the devastated regions, to handle the annuities to be paid in respect of interallied debts, and to receive amounts recovered from profiteers and from the operation of the Dawes Plan. "If the Dawes Plan receives, as we should not doubt, its complete application," M. Caillaux states, "the annuities wards will exceed 1,500 millions of gold francs, will enable France to meet her engagements."

This brief statement embodies a striking outline of the "policy of audacity and considered prudence," as M. Caillaux himself terms his proposals, which he believes the country is prepared to accept, and which Parliament will approve. The most interesting feature of the new proposals, from the British point of view, is that which involves the establishment and functioning of the new diplomatic astuteness that he should have thus established, nite liaison between the payment of the yield from the Dawes Plan and the paying off of interallied debt. The fund from which the instalments of debt payments will be made to Great Britain and the United States is made dependent to a very great extent, it will be noted, on the success in convincing the Washington Government that France should not be called on to pay to her creditors more than she receives from her own debtor, the future darkest cloud. Even then, if M. Caillaux's proposals are carried out in their entirety, the burden of the French tax-

payers will be increased from 1926 onwards to the extent, in round figures, of nearly 1,000f per head per annum. As the bulk of the increase will be borne by the comparatively small well-to-do class alone, the additional individual burden on these will be substantial.

M. Caillaux has made no public statement as yet as to the incidence of the new taxes, but it is understood that he will entirely avoid the imposition of further indirect taxes, and will secure the necessary revenue from direct taxation alone. The schedule rates for income-tax will in all probability be divided into three categories—10 per cent. on incomes derived from labour (wages and salaries), after a certain somewhat high point of exemption has been passed; 15 per cent. on incomes drawn partly from labour and partly from invested capital; 20 per cent. on incomes from capital alone. Dividends from French securities and from foreign stocks, shares, and bonds which are *abonnées* here will be subject to a tax of 20 per cent., instead of the 12 per cent. rate now prevailing, while the tax on the revenue from *non-abonnées* foreign securities is to be increased from 18 per cent. to 25 per cent. The duty payable to the State on "winning" premium bonds will be raised from the present rate of 20 per cent. to 30 per cent. The "very large" incomes on which the rate of imposition in respect to the general income-tax is to be increased to 40 per cent. is believed to mean those in the neighbourhood of 20,000,000f a year.

The proposal which is exciting the most interest among the general public is, naturally, that for the taxation of *biens oisifs*, or unproductive possessions. Some alarm was at first felt that this tax might apply to money lying on deposit in banks, but this was entirely without foundation. Such property, moreover, is already subject to taxation. The object of the Minister, it is stated, is chiefly to reach wealthy persons who dissipate a portion of their real capital by investing it in diamonds, costly works of art, rare books, &c., which, although yielding nothing in the form of revenue, constitute vendable property, which has a fairly constant value. The ordinary amateur collector of postage stamps and other objects, valuable as such property often is intrinsically, will not be touched by the proposal. It is recognised by the revenue officials that the valuation of such special kinds of property for the purposes of the new tax will be an extremely difficult matter, and the suggestion is made that the tax should be made equivalent to the amount paid as insurance premiums by the owners of property of the class in question. This solution was suggested by M. Loucheur when a similar proposal came before the Budget Commission of the Chamber last May. On this basis the *biens oisifs* would be called on to contribute several hundred millions in this form of taxation. In any case, however, it is understood that a very substantial rate of abatement would be allowed on valuations before the new tax would be applicable.

GERMANY.—BOURSE—FINANCES—CREDIT—COAL AND IRON—INDUSTRY—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, September 8.

THE past fortnight has witnessed a marked improvement of sentiment, for which there is a cause, though not exactly a reason. After stocks had fallen since the end of January almost uninterruptedly, reaching their lowest point at about August 17th, came a sudden revival which sent up average quotations materially, and sent up the most depressed papers, that is, "heavy industry" and shipping, enormously. As the exaggerated business pessimism prevailing in the first half of the year, in spite of improving employment and increasing exports, was of improving employment and increasing exports, was associated with the Bourse depression, the new Bourse boom created a wave of optimism. The news that unemployment is now increasing, though slowly, the number of publicly supported unemployed having risen from a low point of 193,000 to (on August 15th) 208,000, had no effect. The last monthly report of the Prussian Ministry of Industry was not favourable.

The Bourse boom has had several causes, none of which was connected with any actual improvement of industry. The Stinnes liquidation, it was announced by the intervening banks, will be achieved without loss; and the banks'

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1. JAMES STEUART, Chief Manager.

calculation indicates a surplus of 20,000,000 marks, which is all that remains of the large family fortune. To achieve this result, the banks have had to abandon their claim to remuneration, and to sell the concern's securities without charging brokerage commission. Secondly, negotiations for fusion in the depressed Prussian Silesian, and in the Western steel industries, were announced. Thirdly, the Cabinet took measures to cheapen credit, and the latest reduction of stamp duties on capital transactions tended to revive stock activity. The technical condition of the Bourse involved a bull reaction; stocks were heavily over-sold, bears having shown the usual misplaced temerity at a moment when quotations could hardly have sunk further, and a good many of these speculators and some brokers got into serious difficulties. The main cause of the new boom was the usual inevitable reaction from a prolonged slump; the time for recovery had come, and minor items of good news, which would have been ignored when quotations stood 20 per cent. higher, were given exaggerated significance.

On August 14th stock prices (*Frankfurter Zeitung's* index) averaged 67.9 per cent. of prices at the beginning of the year, and were still lower as compared with January 31st, when they averaged 11.37 per cent. higher than at the beginning of the year. Steel and coal, engineering, railway rolling stock, and shipping stocks were about, in numerous cases below, half of highest prices of the year. Even stocks of a particularly prosperous industry, the motor-car, averaged about 35 per cent. below the year's highest prices. The measure of recovery in the different branches has been very different, but individual stocks have risen over 50 per cent. For September 5th the index quoted above shows only 75.08, a rise of 11 per cent., but this includes bank and other securities, which moved relatively little. The recoveries of some individual stocks are shown below:—

	August 17. Marks per 100	September 8. Marks Nominal.
Deutsche Bank	113	113
Disconto	103	105.63
Darmstaedter	109.75	112.75
Hamburg-America	46.60	66.50
North German Lloyd	46.60	69.50
General Electricity	92.50	97.10
Badische Aniline	121.50	129.25
Bochum Cast Steel	56	71.75
Harpener Bergbau	85.50	112.50
Phoenix	58.75	77.37
Daimler Motors	38.75	49
Nobel Dynamite	66.25	78
Hirsch Copper	87	91
Aschersleben Potash	119	128.50
Mannesmann	56.75	74.50
Siemens und Halske	70	84.60

A good deal of foreign buying, which began from Switzerland and Holland, has taken place. More optimistic expectations are now held concerning profits by the "heavy industry" companies in the business year ending June 30th, and the shipping outlook has improved; but doubt is felt whether the Bourse boom can go much further without a reaction. The stock market history of 1925 has so far closely copied that of 1924. In 1924 stocks reached their highest point at the end of January; and until the late summer, when there was a sharp recovery. This recovery was followed by a new severe reaction, but the bull market was resumed towards the end of the year. The price of money still far exceeds the average yield on such stocks as pay dividends at all. The last few days have seen signs of uncertainty and weakness.

Federal revenue receipts in July totalled 713,601,794 marks gross; in April-July 2,538,673,166 marks, or in four months much more than the proportionate share in the financial year's estimated receipts of 6,343,750,000 marks. Income-tax in the four months yielded more than half the estimate for the whole year:—

	April-July.	Estimated for Financial Year.
Income-tax	886,278,543	1,700,000,000
Sales tax	516,410,527	1,380,000,000
Luxury Sales tax	36,384,725	120,000,000
Traffic tax	112,217,326	282,000,000
Customs	169,528,322	356,050,000
Tobacco	207,525,342	560,200,000
Beer	88,666,530	174,000,000
Sugar	89,084,665	185,000,000
Spirits monopoly	39,751,644	150,000,000
Wine	30,825,285	59,500,000

Depression in the coal and steel branches continues. The Federal Coal Council's inquiry has confirmed the claim of the Western mining companies that they are selling at a loss. Figures of one of the largest companies, as tested by the Council, show for July, 1924, wages per ton (without salaries), 7.89 marks; total production cost, including certain taxes, 14.79 marks; receipts, 14.35 marks; loss, 0.44 marks; for January, 1925, wages, 7.97 marks; total production cost, 15.02 marks; receipts, 13.88 marks; loss, 1.14 marks. The accounts of another large company show a loss of 1.14 marks per ton in July, 1924, and of 0.44 marks in January, 1925. The Raw Steel Syndicate retained for September the 35 per cent. reduction of output which was fixed for August, but a further reduction in the course of the month is possible. The chief Upper Silesian steel companies have fused. The fusion negotiations in the West involve Krupp, Thyssen, Phoenix, Rhenish Steel Company, and the three Rhine-Elbe Union (formerly Stinnes) companies, the Deutsch-Luxemburg, Gelsenkirchen, and Bochum Cast Steel. These have steel production quotas totalling 7,717,000 tons out of the total quotas of 14,700,000 tons in the Syndicate, and they, therefore, command a majority. Outside remain the Klöckner, Gute-Hoffnung (Haniel), Hoesch, Mannesman, and Stumm companies. A certain aim of the combine is to standardise and specialise. A firm which produces a particular product expensively or inefficiently will concede its production quota to a firm better qualified for the branch in question, and would take in exchange a quota of production for which it is better equipped. The probable result will, however, be semi-fusion on the lines of the Aniline concern, with a measure of financial union, and, perhaps, with a single management. It is possible, then, formal fusion in a single company may be the result. This trust would have a capital of about £40,000,000. The companies mentioned are large coal producers, Gelsenkirchen being the greatest coal-mining concern in Germany; but it is not clear how far the agreement now being negotiated will affect their coal interests. In spite of the depression, exports of coal, iron, and steel are increasing. Coal exports in the first half of 1925 were 6,524,226 metric tons, against 2,795,090 tons in all 1924. Exports of iron, steel, and wares thereout (excluding machinery) in the six months were 1,639,246 tons, against 1,955,110 tons in all 1924. Corresponding figures for machinery were 175,400 tons and 271,484 tons.

In general, industry is quiet. At the Leipzig autumn Fair only moderate business was done. Home buying was checked by shortage of money, and foreign visitors were more inclined to study than to buy. The estimated crop (Prussia only) is (in metric tons):—

	1924.	1925.
Winter wheat	1,282,621	1,566,889
Spring wheat	224,881	173,848
Winter rye	4,255,633	5,726,167
Spring rye	99,431	90,920
Winter barley	146,433	177,591
Spring barley	1,297,300	1,183,056
Oats	4,026,841	3,952,278

The total crop of bread grain is estimated at 7,576,953 tons, against 5,874,120 tons in 1924, an increase of 29 per cent.; total crop of all grain, 13,284,381 tons, against 11,735,403 tons, an increase of 13.2 per cent. The ex-Minister of Industry, Prof. Julius Hirsch (in an article which gives a very favourable account of the general

economical situation), considers that crop returns understate the truth; agricultural production, he holds, has reached the pre-war figure, and in the most important branches even exceeds it (naturally on the same area).

The cost of living index for August shows 145, against 143.3 in July. The wholesale index number for September 2nd was 127.5, against 127.3 one week earlier.

AUSTRIA.—STATE FINANCES—ECONOMIC SITUATION—MONEY AND STOCKS—NATIONAL BANK—EXCHANGES.

(FROM OUR CORRESPONDENT.)

VIENNA, September 1.

PUBLIC revenue, which in May and June had fallen off, shows a considerable increase for the month of July. This is mainly due to the increase of tax revenue; the revenue amounted in May to 100.1 million Austrian schillings, in June to 89.7 millions, in July to 110.8 millions. The Government will submit to the League of Nations' Committee the estimate for the new 1926 Budget, which, in general, keeps within the limits prescribed by this Committee last year, and shows a deficit of 85 million Austrian schillings.

Unemployment shows a slight reduction (111,886, as against 113,379 in July), which is due to building activity and the harvest operations. Whilst in several industries some improvement can be noticed, the situation in trade is still very unsatisfactory. Business during the summer was in all lines very slack; the textile trade particularly is practically stagnant, and provision trade suffered considerable losses through the fall of sugar and grocery prices. For both industries and trade the development of the economic crisis in Poland is of the greatest importance, as Austrian exports to that country, especially of shoes, leather goods, fancy articles, and chemicals, are very large. The restrictions on foreign exchange dealings issued by the Polish Government in consequence of the depreciation of the zloty now make it practically impossible for the Polish buyers to meet their obligations, and unless conditions in this respect change, trade with Poland will be completely stopped. Negotiations for a provisional commercial treaty with Hungary were broken off, as the Hungarians refused to grant concessions regarding the import of Austrian industrial goods; but it is hoped that before long negotiations will be resumed to an understanding with Austria.

Since the month of May a slight decrease in the cost of living can be noted, which, although it amounts only to 5 per cent., has brought the index figure down to the level of last autumn. This was possible through the fall of prices of flour, bread, potatoes, coal, and some sorts of textiles. It is, however, to be feared that this decrease will soon be counterbalanced by the increase of rents, as the house-owners are entitled under the Tenants Protection Bill to charge the tenants the cost of house repairs.

Owing to the stagnation, money conditions have become much easier. Saving deposits in the banks have been augmented by 7 per cent. during last month, and amount to 456 million Austrian schillings, and considerable foreign short-term credits have been placed at the disposal of firms. The National Bank, however, still sticks to the Bank rate of 10 per cent., although private banks discount first-class bills at 9 per cent. and even less, so that the National Bank is gradually losing the control of the money market. On the market month-to-month money is plentiful, however, are still very high—first-class firms have even more.

On the Stock Exchange the short revival which set in during July spent itself very soon, and there was practically no business last month. In spite of the easy money conditions, it is not likely that there will be any activity on the Stock Exchange until companies put their capitals on a gold basis, and thus make it possible for investors to form an idea of the real value of their shares.

The National Bank is continuing its policy of improving the security for banknotes by increasing the cash reserve. The following table shows the main features of the bank's returns on August 23rd as compared with July 23rd:—

	(Austrian schillings.)	July 23.	Aug. 23.
	Million.	Million.	
Cash reserve	431	501	
Banknote circulation	746	761	
Bills discounted	82	73	

The security of the banknotes was increased in the same period from 60.1 to 64.8 per cent.

The comparatively small amount of bills discounted is mainly due to the high Bank rate, and it is to be expected that this rate will be reduced from 10 to 9 per cent. in the near future. About 66 per cent. of the banknotes issued are already schilling notes; the remaining kronen notes will disappear before the end of this year.

The most important feature on the foreign exchange market during last month was the decision of the National Bank to give up the system adopted hitherto of keeping the dollar exchange on an artificially fixed rate, and to leave the fixing of the rate to the open market. This measure was taken in order to prevent too many short-termed dollar loans being contracted, and shows that the bank is not afraid that fluctuations of the dollar exchange will endanger the new schilling currency. The speculative activity on the market was confined to the zloty, whilst the other currencies remained practically stable. Sterling moved between S. 34.46 and 34.51.

DENMARK.—THE RISE OF THE KRONE—NATIONAL BANK'S CURRENCY HOLDINGS—DEFLATION AND UNEMPLOYMENT—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, August 29.

WITH irresistible force the Danish Krone has continued its progress towards par value, which point it has never reached since January 2, 1919, when dollars were for the last time quoted Kr.3.73. Now the rate for Dollars is about Kr.4—the Krone having reached 93 per cent. of its gold value, and the general opinion is that the remaining 7 per cent. will quickly be gained. At an earlier stage of the development there has been some doubt as to how much importance should be attached to foreign speculation as a contributory cause to the rise of the Krone. All experts agree, however, that in the course of the last month this element has increased in importance. While during the first half of the year the Danish banks received only about Kr. 20,000,000 in deposits from abroad, such deposits increased in the course of July by not less than Kr.50,000,000, and this increase has continued during August. The banks do not look upon these deposits with much favour, as it is to be feared that they will be withdrawn as soon as a suitable exchange profit can be realised, and with the great credit restriction there is no special employment for them in this country, and for that reason the banks must deposit the greater part of them in the National Bank. It was decided by the banks to reduce as from August 15th the rate of interest allowed for foreign deposits from 3½ per cent. to 3 per cent.

On August 24th the National Bank reduced its rate of discount from 7 per cent. to 6 per cent., as a consequence of the greatly improved exchange situation. In the course of June the National Bank had increased its holdings of foreign exchange from Kr.65,000,000 to Kr.109,000,000, corresponding to just over £5,000,000, the rate at that time being Kr.21. Since then the holdings have further increased very much, as in order to check developments the bank has been obliged from day to day to take up the big parcels of foreign exchange offered. It is a matter of course that if the Krone is to be fixed at par—as is expected shortly—the National Bank will suffer heavy loss on these exchange holdings, while, on the other hand, these mean a strong support during the pressure on the money market, which will come when the rise has been completed. The last report of the National Bank other-wise showed a gold reserve of Kr.209,000,000, against a note circulation of Kr.402,000,000, the percentage of cover

being thus far better than the 33½ per cent. prescribed by law.

That the strong deflation, which must accompany the rise of the value of the Krone, will cause great difficulties for Danish trade, is clear to everybody. Wholesale prices have dropped fairly automatically in proportion. The index of the *Finanstidende*, which is almost entirely based on the prices of raw materials, showed a figure of 189 on August 1st, as against 234 on February 1st. The official retail price index, which further includes taxes, rent, &c., was 219, as per July 1st, against 221 as per January 1st. Consequently there is a very great disproportion between the present gold value of the Krone and the actual cost of living, and the difficulty in attaining an adaptation is the fact that the wages of labour and salaries of officials are automatically adjusted according to the official retail price index, which is calculated semi-annually only. When a reduction of wages thus comes along a very long time after developments, and the cost of production therefore cannot be reduced sufficiently to place Danish manufacturers on an even footing with manufacturers abroad, a great increase of foreign competition must be expected in the interval. Already a substantial increase of unemployment has taken place, the number of unemployed being about 24,000, or 108,000 more than last year at the same time.

The foreign trade statistics for June show imports to the value of Kr.190,000,000, and exports aggregating Kr.178,000,000, the excess of imports being thus Kr.12,000,000, while May showed an excess of exports amounting to Kr.14,000,000. During the first half of the year the total imports were Kr.1,113,000,000, against total exports to the value of Kr.1,042,000,000, the excess of imports being thus Kr.71,000,000, as against Kr.147,000,000 during the same period last year. Statistics are now to hand concerning the distribution of the Danish foreign trade between the various countries, and this shows interesting changes. While before the war Denmark obtained 38 per cent. of its imports from Germany, the share of this country was only 32 per cent. in 1923, and 27 per cent. in 1924. From the U.K. emanated 16 per cent. of the imports in 1913, against 22 per cent. in 1922; in the following year the percentage was again reduced to 20 per cent., and in 1924 to 19 per cent. Of the exports, 17 per cent. went to Germany in 1924, against 6 per cent. only in 1923, while the share of the U.K. was reduced from 69 per cent. to 60 per cent.

BULGARIA.—BUDGET SURPLUS—AGRICULTURAL PROGRESS—PEASANTS AND POLITICS—GENERAL ECONOMIC CONDITIONS.

(FROM OUR CORRESPONDENT.)

SOPHIA, August 29.

BULGARIA's political mishaps of late do not seem seriously to have impaired the steady progress of the country's financial and economic recovery. For the first time for many years, the Budget for 1924-25 closes with a surplus, and there is much probability that the results of the budgetary period 1925-26 will be at least equally satisfactory. Agricultural production has increased, both in extent and in yield. Taking as the basis of comparison the year 1912—one of the best in Bulgarian agriculture during the last 20 years—the development may be outlined as follows:—

Years.	Area Under Cereals in Hectares.	Output in 100 Kgrs. Quintals.
1912	1,899,301	18,041,510
1920	1,531,115	13,702,783
1924	1,614,588	12,390,559
1925	1,769,409	24,174,414

Apart from weather conditions, which have been uncommonly fair in 1925, undeniable progress in cultivating methods and extensive use of better implements have certainly contributed to the results obtained. Hard work and all-round cutting down of the peasant's domestic expenses during the last two years have been observed throughout the whole country, and the economic strength of the peasant population has been practically maintained, in spite of the very hard times in 1924, when many peasant families had to buy cereals for food, a circumstance almost

equal to a national calamity in this country. If the results of crops other than cereals be also taken into account, the effort furnished by the productive class of the Bulgarian people is really to be considered as an important achievement, the more so as the general atmosphere has by no means been bright during the same period of two years.

There has been through these times, and still is, much talk of revolution, of imminent mass upheaval, and of grave social disturbances in preparation. In point of fact, it would be hardly an over-statement to assert that, in matters of internal politics, the majority of the peasant population is favourable to that peculiar form of class government a specimen of which the late agrarian régime has furnished. Having procured for the peasants tangible advantages, often without regard to the elementary requirements of a good and equitable administration, the experience of the agrarian rule created a particular kind of political ideal well suited to the materialistic trend of the peasant's mentality. No political platform based upon abstract principles could stand against the charm of the happy times when the peasant had an easy access to almost every administrative office, feeling himself at home therein, having the real power to get rid at any moment of unpleasant tax collectors or other bothersome officials, and to settle questions of railway traffic and tariff in perfect accordance with the petty local interests of his village. No wonder if this political "ideal" has become the *credo* of great numbers of peasant voters. But these rough aspirations to material power did not induce the hard worker that the Bulgarian peasant has always been to leave his fields for the sake of political activity and social mass organisation. His sturdy sense of realities, his shrewd suspicion towards the practical results of every change in present conditions, make of him a poor revolutionary conspirator. The real danger in this connection would be a successful *fait accompli*, brought about by elements outside the landowning peasantry, which probably would back the movement as soon as its success was sufficiently established. The chief effort of the Government's struggle with subversive propaganda is therefore directed against the activities of Communist groups, consisting almost exclusively of intellectuals and dismissed officials.

The crop results have usually a major influence upon trade conditions in Bulgaria. During 1924, and the first half of 1925, the large mass of country consumers reduced their purchases to the strict minimum of their most urgent needs. Trade has had bitter experiences since 1923; business has almost completely ceased for a period of at least 14 months. Industry has been by no means better off; for months the manufacturers have been obliged to put up with insignificant instalments against their sales on credit to the retail traders who could not find buyers for their goods. The money market reflects the general state of business; money has been, and still is, scarce and dear. Discount rates are oscillating between 16 and 20 per cent. Most of the banks, seeing their deposits decreasing by nearly 15 per cent. for the last six months, have abstained from extending new facilities, and reduced their old credits. Only bills of the first trade houses have been taken in for discount. Trade advances and financing of import business have diminished. The National Bank, availing itself of the general lack of commercial activity, reduced the note circulation to Leva 4,100 millions, or 1,000 millions below the authorised minimum. Among many unpleasant effects, this situation contributed efficiently to the elimination of unhealthy elements in post-war trade and industry; most of them are gradually disappearing by way of liquidation. Altogether the period of stagnation seems to have reached its limits; there are symptoms of an approaching revival of demand for goods on the part of the country consumers, and it is generally estimated that in the near future active business in cotton yarn, cloth, leather products, and hardware will develop on an extensive scale.

The relative calm after last April's events appears to have enabled the Government to devote more attention to economic and financial matters. Important changes have been introduced into the fiscal legislation, especially in the heavy tax burden on the joint stock companies, which have suffered severely during the last four years. Duties on raw tobacco have also been reduced, with the intention of enabling Bulgarian exports to compete with Turkish and

Greek tobacco offered on the European markets at considerably lower prices. Pending questions with foreign holders of Bulgarian State bonds are on the way to settlement. The Government has had to examine several propositions for foreign loans for reconstruction purposes. No arrangement has yet been arrived at, owing to the unattractive conditions quoted by the foreign financial groups.

JAPAN.—REORGANISED CABINET—TAX REFORM—BANK READJUSTMENT—ARTIFICIAL SILK—JULY TRADE.

(FROM OUR CORRESPONDENT.)

TOKIO, August 10.

THE Coalition Government split over the Finance Minister's taxation plan, and three Seiyukai Ministers resigned on July 31st. Viscount Kato has reorganised his Cabinet by appointing his own followers to the vacant posts. With the secession of the Seiyukai party, which is by nature and tradition inflationist, the reorganised Government will be able to pursue a little more freely its avowed policy of economy and financial retrenchment, though within the strait limitations of a minority Government, and probably with a short tenure of office. Despite its negative policy, the new Government has been well received by financial circles, a final return to healthy finance being expected under its administration.

The tax reform plan over which the Coalition Government split was framed on the general line of the recommendation of the Taxation Commission of 1920-22, and is by no means an unacceptable one. What are known as "bad taxes"—that is, the transit duty and the duty on cotton fabrics and patent medicines—are to go; rates, assessment, exemption limit, and other minor points in income, land, and business taxes and estate duty are to be "more equitably" revised; and a 2 per cent. tax on interest and a duty on aerated waters are to be introduced. The proposed tax on interest is to be levied on interest on bonds and securities, bank deposits, and non-business loans. Company's dividends being exempt, the City has not been so much worried over the proposal. The new Cabinet Council approved the plan without a dissentient voice on Tuesday of last week. A Bill embodying the taxation plan will be presented to the winter session of the Diet.

The scheme for business readjustment of the two semi-official banking institutions—the Bank of Chosen and the Bank of Taiwan—has just taken a definite shape under the guidance of the Treasury. The Postal Savings Department of the Treasury and the Bank of Japan agreed to cut down the interest rate on the loans advanced to those banks, amounting in the aggregate to 75,000,000 yen. The management of those banks, on their part, have decided to reduce their authorised capital (the Bank of Chosen by half, and the Bank of Taiwan by one-fourth), and to allocate for bad debts all the reserve funds and the profits of the last business term, while paying no dividends for the term just closed. The readjustment plan to be held respectively to the general meetings of shareholders. The change of the management of the Bank of Chosen was announced on July 17th. The managerial change of the Bank of Taiwan also will follow before very long. Under the new board of directors a substantial improvement of those banks' position will be reached by practising rigid economies in the cost of management and maintaining for some time a decidedly low rate of dividends.

Amid the general industrial depression, the artificial silk industry alone has shown remarkable results in recent years. The Japanese artificial silk industry is now practically in the hands of two companies—Teikoku Jinzoh and Kenshi Kaisha and Asahi Kenshoku Kaisha—and they of profits shows:—

	Teikoku. Yen.	Asahi. Yen.
1922	36,852	..
1923	451,534	..
1924	534,047	115,805
1925*	423,215	300,714

* The first six months.

The output of Teikoku is 5,500 lbs, and of Asahi 3,000 lbs per day, and the quality will bear comparison with imported yarn, except in the case of fine counts. With the completion of the new mills which are in course of building, their output will be greatly increased. The output of those companies will soon be able not only to meet ever-increasing home demand, but to exclude the importation of foreign yarn. The best indication of the industry of Japan is accorded by the following figures of output and import for the past six and a-half years:—

	Output. Lbs.	Import. Lbs.	Total. Lbs.
1921	150,000	139,139	289,139
1922	250,000	226,406	476,406
1923	780,000	1,016,778	1,796,778
1924	1,368,000	1,025,172	2,393,172
1925*	1,200,000	37,071	1,237,071

* The first six months.

In view of the prospect of further prosperity of the industry, a few big business interests are said to be contemplating to embark on a new venture in the realm of artificial silk. The natural silk-reeling interests also are paying a very keen attention to the rise of the "artificial" competitor.

The trade returns for July is quite encouraging. Imports amounted to 168,981,000 yen, and exports to 210,911,000 yen recording thus for the first time in the year an excess of exports over imports, which was 47,929,000 yen. As compared with the previous month, imports decreased by 32,739,000 yen in value, while exports increased by 29,280,000 yen.

Letters to the Editor.

WORKING OF THE COAL SUBSIDY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your article, "Working of the Coal Subsidy" (Notes of the Week, *Economist*, August 29th), you write as follows:—".....on current market rates, the whole of the benefit of the subsidy has been remitted to the consumer, principally foreign."

This conclusion appears to me only partly right, on account of the first date of comparison (July 28th) being not quite well chosen. Indeed, at that time, prices had risen through the fear of a general strike, so that, in comparing prices, we should rather refer to early July when the anticipation of the strike had not yet affected the market.

This gives us the following figures:—

	July 3rd.	August 28th.
Best Admiralty large	25/6 to 26/-	24/6 to 25/-
Second large	24/6 to 25/-	23/- to 23/6
Best dry large	24/6 to 25/6	23/6 to 24/-
Black vein large (best)	24/6 to 24/9	23/- to 23/6
Western valley large (ordinary)	23/- to 23/6	22/- to 22/6
Eastern valley large (best)	23/- to 23/6	21/6 to 22/-
Best small steams	12/- to 13/-	13/- to 13/6

It would appear from these figures that the subsidy has about been shared by halves between the consumers and the collieries. —Yours truly, G. VAN DRIESCHKE.

Lokeren, Belgium, September 4th, 1925.

[Mr Van Driessche has not quite grasped the limited sense of the words used. They related exclusively to current prices on the two dates, and between those two dates the f.o.b. price—that is, the price to the foreign consumer—had fallen by an amount equal to, if not slightly greater than, the then estimated cost per ton of the State subsidy. It will be very interesting cost per ton to trace the incidence of the subsidy as between producer and consumer, but the necessary data will not be available for two or three months.—Ed. Econ.]

POPULATION OF AUSTRALIA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your special correspondent, while admitting that his assertion that "there is hardly any natural increase in the Australian population" was a misstatement, continues to express astonishment at a birth rate "scarcely higher than that of England," and to anticipate a "period of more or less stationary population even in Australia," or, at least, a "decline in the growth of the Australian population." And you, Sir, go one worse in your leading article of June 6, page 1120, column 1, when, on top of an admission that Britain is "within sight of a stationary population," you couple Australia with France, as countries "where the restriction of population has been much more marked than it is here."

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
67 Milk Street.

BUENOS AYRES:
99 Florida.

HAVANA:
Pedro Gomez Mena Bldg.

One of the largest and strongest Banks in America. Resources of \$300,000,000.

Special Representative:
24, OLD BROAD STREET, LONDON.

I have no quarrel with your correspondent's argument that the demand for loan money for the development of new countries may be weaker in the future as far as provision of fixed capital for their growing populations creates it. I share his hope that Australia will, by a process of debt repayment, hasten the formation of a supply of savings adequate to her own development. When, however, he falls back on a hypothetical "mortality index," showing what our death rate would have been if the age-distribution of our population had been similar to that of 1890 Sweden, and on a hypothetical decline in natural increase, as the composition of our population grows into increasing similarity with that of old countries, may I remind him (1) that the Commonwealth Statistician (whom he took as authority for these hypotheses), after reviewing the recent changes in age-distribution, comes to the conclusion that the differences from older countries "have been modified so that they are no longer important"; (2) that in assessing the demand for capital in new countries, he should confine attention to actual growth of population, and leave "mortality indices" for use where they are relevant.

To write of our birth-rate of 23.8 (1923) as "scarcely higher than that of England," which was 19.7 for 1923, suggests that the impression in your correspondent's brain that Australia is remiss in this matter of natural increase lies too deep for evidence. I am in public duty bound, too, to meet your coupling of Australia with France as a country "where the restriction of population has been much more marked than here," by reiterating that our Australian natural increase for 1919 to 1923 was 14.07, that of England and Wales was 11.0 for the same period, while France, for 1918 to 1922 (the latest figure available here), showed a natural decrease of 3.36. We are a long way still from a stationary population in the Dominion which outstripped even Canada in percentage rate of growth during the last intercensal period (vide "The Round Table," March, 1925, page 365), and 78.96 of whose total increase in that period (986,214 persons) came from excess of births over deaths.

Given a decade of peace, we shall further reduce an already low infantile mortality (61 per thousand in 1923), and show still better figures in 1931.—I am, yours faithfully, EDWARD SHANN.

University of Western Australia, Perth,

TAXATION AND WELFARE.*

PROFESSOR PECK, of Vermont University, has embarked upon his study of taxation and welfare* with the laudable ambition of opposing "an impartial and scientific survey of the problem of taxation" to the political propagandist controversies of a Presidential campaign in which taxation is a major issue. And, indeed, so admirably does he fulfil his task that there are moments when the most experienced political stump-orator might well fail to recognise some of his own cherished and accepted truisms—so weighty and so expansive is the array of scientific terminology in which our author re-clothes them. One can imagine, for instance, the crude and tendentious manner in which the unlettered politician might enunciate the profound truth, whose origin Professor Peck modestly ascribes to Dr Hugh Dalton ("Principles of Public Finance," Part III, Ch. xix), that "the maximum reduction in inequality or the maximum progression is attained when taxes are levied according to the principle of minimum sacrifice and public expenditures are made according to the principle of maximum benefit; that is, revenue is secured by taxing the

* "Taxation and Welfare." By Harvey Whitefield Peck. The Macmillan Company of New York, 269 pp. 10s 6d net.

super-rich, and is spent largely for the benefit of the sub-poor."

In the first half of his book Professor Peck deals with the problem of the desirable amount of taxation. This section contains some interesting statistics illustrating recent fiscal tendencies in the U.S.A., but adds, so far as its theoretical reasoning is concerned, nothing whatever to our knowledge of the subject. In the second half, he considers the distribution of the tax burden and the application to its incidence of notions of abstract justice. It is here, in his last chapter, entitled "A Theory of Taxable Faculty," that Professor Peck gives us a constructive and interesting theory of taxation. Having examined and rejected the "Socialistic, confiscatory, and minimum sacrifice theories" (in a passing reference he excepts the very important category of "inheritance and possibly unearned increments, where the tax rate may reach 100 per cent."), he evolves an alternative theory of "net utility or consumers' surplus." Its elaboration involves a double examination into the diminishing utility of income, the curve of which he finds it impossible to draw with any approach to exactitude, and the cost of income per unit, whose curve, moving in inverse ratio to the income's total magnitude, is, in his opinion, capable of more accurate determination. The limits of taxable faculty are, he suggests, set by the amount of surplus "net free individual income" over and above that which no more than compensates for its cost of acquisition—a surplus whose area is enlarged by the extent to which civilisation, with its multitudinous wants, checks the decline of the utility curve and renders its slope more nearly horizontal. Thus he is led to the conclusion that any form of public expenditure which promotes economic and cultural progress may, by diminishing the elasticity of the individual taxpayer's demand for income, and so widening the surplus area, actually increase taxable capacity. It is obvious, of course, that a theory of this kind will not bear universal application. It has, for instance, recently been brought to the notice of the British public that there are certain quarters of our Empire in which the taxes themselves enter into the taxpayer's demand curve of income, and determine its slope. We refer, of course, to the Kenya hut tax, and to the admitted purpose of its imposition.

We hazard the guess that the politicians of Professor Peck's generation may remain deaf to the highly ingenious theory which he has spun for their guidance, preferring the more concrete kind of treatment which has been accorded to the subject by Sir J. C. Stamp in his "Wealth and Taxable Capacity."

AN ENCYCLOPÆDIA OF INSURANCE.*

THE German Association for the Study of Insurance has celebrated its twenty-fifth anniversary by publishing the second edition of Manes' "Versicherungs-Lexicon." This encyclopædia of insurance, which contains over 500 articles on every branch of the subject, and covers some 1,500 quarto pages, is a solid, painstaking work, prepared by the best-known authorities of Germany. Professor Alfred Manes, the editor, has rightly included articles not only on life insurance, accident, transport, fire, theft, hail, and cattle insurance, on reinsurance and the various branches of social insurance, but he has also provided a series of articles on the kindred subjects of the science of the actuary, of national and international law as they affect insurance, and the relation of medicine to insurance. Perhaps, indeed, he has cast his net a little too wide, since it might be doubted whether it was necessary to drag in an article on the Taylor system.

The insurance company official and the student of the subject will find it extremely convenient to have available in handy form a publication which gives detailed and authoritative information on the development of insurance from its earliest days until to-day; which summarises the influence of Bismarck and other noted people on its growth; which points out the significant clauses of the Versailles Peace Treaty and of the League of Nations in relation to insurance; and to which he can refer with confidence of finding some help, whatever his problem. But the politician, too, will find a considerable number of articles on subjects which are of growing importance.

* "Versicherungs-Lexicon." Alfred Maes. Published by E. S. Mittler and Sohn, Berlin.

Thus, Mr Baldwin has recently appointed a Committee on Credit Insurance. In this lexicon its members will find a long article on the subject. The public man may learn what other countries have done to provide insurance or pensions for widows and orphans. Advocates of family endowment will be interested in the literature quoted on the subject of familiennachwuchsversicherung.

Two suggestions might be considered by the editor when he comes to publish the next edition. Has he devoted quite sufficient space to social insurance, and has he treated the development in countries other than Germany at all adequately? With regard to the first of these, it is only necessary to point out that in one year Great Britain spends some £160 millions on the various branches of social insurance, excluding Army pensions, and Germany about half that sum. Even though very considerable attention is given to it in this lexicon, the space occupied by its discussion is not commensurate with its importance. There are doubtless good reasons for this comparative inadequacy of treatment. Private insurance is much older, and has long been studied. Social insurance is new, and its piecemeal growth has led to a lack of realisation of its comprehensive quality, and its study is still unduly neglected. It is, however, only fair to add that Professor Manes' sense of proportion in this matter is much sounder than that of most English text-book writers on insurance. Regarding the second point, some of the articles, like those of Dr Stein, of Prague and Geneva, pay very considerable attention to developments in other countries, whilst others neglect the experience of any but German institutions. Clearly, it is desirable in such an authoritative work as this to have as much international comparison as possible. But, after all, these are not fundamental matters, and, in any case, opinions on them may differ. The fact of primary importance is that Germany has produced a publication which is thoroughly up-to-date, sound, and comprehensive. Until we can produce an encyclopædia on insurance on similar lines in this country this volume ought to be on the shelf of every library which is at all interested in insurance.

STOCK EXCHANGE NEWS.

SETTLING DAYS,

TICKET, September 23. ACCOUNT, September 24.

What hopes the Stock Exchange had entertained a fortnight ago of a possible reduction in the Bank rate have vanished into thin air—at least for the time being. Money having shown a tendency to stiffen, prices in the gilt-edged market are easier on the week, and there has been a general decline, small in extent, amongst the British Government and newly-issued scrip stocks. Home Railway prior-charge securities are not affected by the *malaise* which overtook the ordinary, preferred, and deferred stocks.

The Foreign Government market continues to attract attention and a good deal of money. The speculative investor and New York buyers are keen upon Brazilian bonds. The Middle European stocks are in favour. French Government bonds, while experiencing fairly sharp fluctuations, are being regarded favourably, on the whole, as speculations that it may pay to lock up, but there is not much doing in Germans. Mexicans maintain most of the rises that they enjoyed upon the news that Mexico is to be recognised by this country. Chinese Eighties gained several points.

Home railway stocks experienced another heavy fall upon the inflammatory speeches made at the Trades Union Congress. Upon the Congress rejecting the proposal to establish one comprehensive union that should include all the others, there was a recovery from the lowest prices touched. Movements, however, are being swayed as much by sentiment as they are by actual business in the stocks, and the market, now narrower than ever, is in a very sensitive state.

Argentine railways have dwindled. Leopoldinas experienced a smart recovery. Grand Trunk Pacific debentures remain in the neighbourhood of 42. American Rails have been auto-

matically marked up and down, according to the movements in the Wall Street Stock Exchange, which, however, failed to arouse any noticeable increase of interest on the part of British investors.

The rubber market is firm, and the fortnightly settlement which finished on Thursday proved to be a heavy one for most of the firms who are particularly associated with the industry. Many staffs had to work well into the small hours of Thursday morning in order to cope with the details of the settlement. The feature is the very large take-up of shares on behalf of real buyers. The tea share market is weak, by reason of the poor prices which so many of the parcels are realising at the auction sales.

The oil market is still mainly in the hands of the professional brigade, and nothing exciting has occurred during the week. Courtaulds attract more attention than any other individual industrial shares in the House, and the price, in spite of the bull account being a heavy one, made headway. Artificial silk shares are strong in sympathy, Grouts, Melsos, Hinde and Hardy, and others, being popular. In the tobacco group Imperials have recovered some of their recent depression, and Albert Bakers spurred, expectation looking for an increased dividend. A revival occurred in wireless shares, Marconis and Canadian Marconis going ahead actively. The cable group is practically unchanged. Iron, coal, steel, and allied shares are dull. The passing of the Powell Duffryn dividend emphasised this tendency. A long string of falls amongst insurance shares is attributed to the weaker tendency shown by the gilt-edged stocks, and banking shares have scarcely moved. The shipping market is equally tranquil. Dunlops came back on profit-taking. Motor shares are inclined to harden, as they usually do when the Motor Show begins to get talked about. Lighting shares are steady, with no outstanding feature. There has been a little more demand for nitrate shares.

Amongst mining shares the land group is the most animated. Chartered, after their reaction, again touched 30s. Mozambique, South-West Africa, and Tanganyika remain an active market, but the platinum excitement has died down, taking the prices of shares with it. West Rand Consols happen to be the popular speculative medium of the moment in the Kaffir Circus, other gold-producers being somewhat neglected. The tin share market is in a quiet condition, and Paris has been turning out copper shares, together with those of the diamond companies. West Africans make a better showing, and Colombian mining shares have sunk back into the customary state of quietude from which they were aroused when the price was recently multiplied by six in the course of a fortnight, only to lose half the gain as the wildness of the speculation died away. Montreal inquiries led to a harder tone in the market for Canadian mining shares. Barrier and other base metal descriptions are disposed to be dull. There is nothing doing in Russian and Indian mines.

Government of Dominion of Canada.—\$70,000,000 one year 4 per cent. gold notes, dated September 1, 1925, due September 1, 1926. The notes are redeemable at the option of the Government on March 1, 1926, and thereafter at par and accrued interest on 30 days' published notice. Principal and interest are payable in United States gold in New York City, free from deduction of all Dominion Government taxes, present or future. But this does not exempt the bonds from such taxes when beneficially owned by persons residing in Canada. These notes are the direct obligation of the Government of the Dominion of Canada. The proceeds of these notes

are to be applied towards the payment of the \$90,000,000 one-year notes of the Government maturing September 15, 1925, the balance of which will be paid by the Government from cash on hand. These details are taken from an advertisement which appears in the Press, and is headed "New Issue." After stating that the price is 99½ per cent. "New York terms," the announcement concludes:—"All of the above notes having been subscribed for, this advertisement appears as a matter of record only." Probably investors will not overlook the fact that Canadian Government 4 per cent. stock can be bought on the London market to yield over 4½ per cent.

Manchester Corporation Bills.—The Corporation of Manchester give notice that tenders will be received at the Bank of England on September 15, 1925, for Corporation bills to be issued under the Manchester Corporation Acts, 1901, 1903, 1908 and 1920, to the amount of £500,000, in replacement of bills falling due on the 19th idem. The bills will be in amounts of £1,000, £5,000, or £10,000. They will be dated September 19, 1925, and will be payable at 12 months after date. The tenders must specify the net amount per cent. which will be given for the amounts applied for; and the tenders of private individuals must be made through a London banker. The bills will be issued and paid at the Bank of England, London. Bills falling due were placed at an average of £4 0s 7.35d per cent., but present market conditions are easier.

Charles Semon and Company, Limited.—Authorized share capital £500,000, divided into shares of £1 each, of which 295,500 have been issued and are fully paid. This is an issue of £406,520 6 per cent. notes. These notes are repayable at par on August 6, 1930, but the company may at any time give notice of six months' repayment at par. Holders of these notes may at any time before the date of expiry exchange into ordinary shares of the company on a par basis. In an advertisement in the Press the balance-sheet of the company as at March 31, 1925, is shown. This reveals a substantial debit. This issue of notes is the result of a reorganisation scheme, and the notes are issued to creditors in respect of their claims. It is stated that approximately 95 per cent. of the creditors have agreed to accept them at par in satisfaction of claims. It is stated that in connection with this issue creditors were offered cash on the basis of £68 15s per £100 of notes. These details are given in the Press in compliance with the regulations of the London Stock Exchange, and it hoped to obtain permission for dealings in both the shares and notes of the company. This is a case where the absence of a prospectus may be reasonably excused. It will be interesting to watch the movements in Stock Exchange quotations, and it is reasonable to assume that the notes will be quoted at substantially under par for some time to come.

Northern Platinum Exploration, Limited.—Capital £560,000, divided into 2,240,000 shares of 5s each. Of these there have been (a) 1,080,000 shares allotted for cash at the price of 5s each; (b) 300,000 shares allotted to the Anglo-American Corporation of South Africa, Limited, in consideration of their having agreed to subscribe for 1,080,000 shares; (c) 860,000 shares allotted to the vendors, being the purchase consideration payable by them. On the one million and eighty thousand shares which have at present been allotted payable in cash, the sum of 5s per share has been called up, and all shares carry the same rights as to voting, unrestricted transfer, dividends, &c. The vendors' shares, however, are subject to restriction as to transfer for a period of six months from the date of registration of the company. The objects of the company are indicated by the title. It is proposed to purchase the Lydenburg Consolidated Platinum Mines, Limited, 132 Stock Exchange buildings, Johannesburg, 860,000 shares for £215,000, and to pay £10,000 to a certain specified gentleman. Many other details are included in an announcement in the Press, which, we are informed, is inserted in order to comply with the requirements of the Committee of the Stock Exchange. This is a typical example of the practice only too common to-day of introducing new companies to the public. It is reasonable to assume that shares of small denominations such as the shares of this company are intended for issue to the public at large. It should be observed that this company is incorporated under the Limited Liability Laws of the Transvaal Province.

Mount Isa Mines, Limited.—Capital £800,000, divided into 40,000 shares of £20 each. This company is incorporated in Sydney, New South Wales, and the objects of the company are indicated by the title. The following information is issued to the Press in order to comply with the regulations of the Committee of the London Stock Exchange. At April 30th last 4,020 shares of £20 each were issued for cash, and are fully paid, and 17,489 shares of £20 each were issued fully paid to the vendors. Subsequently, 2,500 shares were issued, and £7 per share called up. Certificates have been issued in respect of all fully paid-up shares. The amount of brokerage paid on the subscription of the shares issued for cash was £1,250. All the shares carry the same rights as to dividends, unrestricted transfer, and attendance and voting at meetings. By special resolution the capital of the company was increased from £450,000 to £800,000 on July 21, 1924. An agreement has

been entered into with a firm of English financiers to advance £500,000 as and when required, against a debenture bearing interest at 7 per cent., reducible by annual instalments spread over 10 years after the completion of the first unit of plant, if, in the opinion of an expert who is to be appointed, the mine developments justify the installation of a treatment plant and water conservation after the mine has expended £100,000 as from January 1, 1924. The amount of the purchase consideration was £360,805, which was satisfied by the issue of 17,489 fully-paid shares of £20 each, and £11,025 in cash. A prospectus is being prepared as far as this country is concerned.

Newcastle and Gateshead Water Company.—Notice is given in the Press that it is the intention of the directors of this company to sell by tender £100,000 of the Newcastle and Gateshead water works Perpetual debenture stock, bearing interest at the rate of 5 per cent. per annum. It is to be issued subject to the provisions of the Newcastle and Gateshead Water Works Act, 1922, at the minimum price of £103 per cent. This is described as a trustee investment.

Gold Fields Hydraulic Mining and Exploration Company, Limited.—Authorized capital £80,000, divided into 320,000 shares of 5s each, all of which have been issued and are fully paid. The company was incorporated in the Transvaal in March last in accordance with the provisions of the Union of South Africa Companies Act, and its objective is indicated by its title. Certain mining claims have been obtained for £28,600, of which £13,000 was payable in cash, and the remainder in shares. 110,000 shares were issued to New Consolidated Gold Fields, Limited, as fully paid, being a commission of 100 per cent. payable in fully-paid shares on 110,000 shares underwritten by them. These particulars are taken from an advertisement in the Press made to comply with Stock Exchange regulations. The underwriting terms set out above are some measure as to the speculation involved.

The Savoy Hydro, Limited.—Capital £60,000, divided into 30,000 7 per cent. cumulative preference shares of £1 each, and 30,000 ordinary shares of £1 each. The company will have an issue of first mortgage debentures of £30,000, bearing interest at the rate of 5½ per cent. per annum, secured upon all the property and assets of the company, which will be issued to the vendor, together with 3,500 preference shares and 3,500 ordinary shares, in part payment of the purchase money. This is an issue of 26,500 7 per cent. preference and 26,500 ordinary shares at par. The company has been formed to acquire the Savoy Hydro, Blackpool. Surplus assets are valued at £97,119. The price to the company of these is £87,000, payable in cash, shares, and debentures. From this it is to be assumed that a substantial portion of the purchase price is being paid in cash. Profits are given for four years. It should be observed that these have been struck before making allowance for depreciation and loan interest. We fail to see much that is attractive in this proposition.

ACTIVE SECURITIES.

your behalf, tendered to Mrs Massey and to the members of her family a very deep sympathy in her and their bereavement.

I now propose the adoption of the report and balance-sheet.

Mr William Watson said:—I have pleasure in seconding the motion for the adoption of the report and balance-sheet.

In his excellent speech, the Chairman has touched upon—some-what lightly, I think—the financial resources of the Dominion in connection with its expenditure. When, as pointed out by him, the value of the exports only exceeds that of the imports by a much less amount than that required to meet the interest payable outside the Dominion, it is surely time for sensible and honest persons to pause and consider. Much has been said about the cost of living, and some people will glibly remark that it is the same all over the world, but I am not so sure about that, and, in any case, I am dealing with New Zealand only. In addition to the materials produced, manufactured and used in this Dominion, it must be acknowledged that £49,800,000 is much too high an amount to pay for imports during one year, and there can be no doubt that a very large portion of these imports consists of luxuries, and this, to a considerable extent, from foreign countries, which in the circumstances, are not only unnecessary but positively harmful to the future welfare of the country. Possibly bankers, as well as merchants and others, reap temporary benefits from the present swollen trade, but it is surely at the expense of the community if its income does not meet its expenditure. Further, if the high rate of living be allowed to progress, and wages be raised in accordance with it, the production of our exports will become so expensive as to prevent our competing with other countries.

VISIT TO SOUTH ISLAND.

In March of this year, the chairman and I paid a visit to most of the branches of the bank in South Island, where we found affairs generally in an excellent condition. We found that the past bountiful season had had a most beneficial effect, and, speaking generally, our advances give little anxiety, while money on deposit has increased materially. We were also much impressed with the manner in which farming operations were being carried on. Land values were warranted by average returns and speculation seemed to be rare.

The chairman did not mention our new note issue. I am glad to say that we have now received a considerable supply of the forms, and will be able to provide the public more liberally with new notes than heretofore.

The report and balance-sheet were adopted without further discussion.

The Chairman announced that the balance of the year's dividend would be paid the following day in Wellington, and at branches on receipt of advice.

VOTE OF THANKS.

Mr T. Shailer Weston moved a very hearty vote of thanks to the chairman, the chief board of directors, the London board, and to the general management and staff, for their services during the past year. It was pleasant he said, to see Sir James Mills present, as probably no one in New Zealand had done more to develop the country's industry and commerce. With regard to the speech of the chairman, he desired to congratulate Sir George Elliot on the reference he had made to the necessity of supporting trade with Great Britain to a greater extent, and also for the very timely word of caution he had uttered with regard to the operation of combines dealing with the marketing of the country's primary products. The shareholders had to thank the board, general manager, and staff on the way in which they had continued to face the difficulties which had not yet ended, and which were the result of the war. They had been singularly successful in facing those difficulties so far, and he thought the shareholders could have every confidence that they would continue to do so in the future.

The vote of thanks was carried with acclamation.

The Chairman returned thanks for the very kindly references which had been made to the board of directors. Mr T. E. Corkill, acting general manager, returned thanks on behalf of the staff, and the proceedings then terminated.

ANGLO-EQUADORIAN OILFIELDS, LIMITED.

INCREASE OF CAPITAL SANCTIONED.

An extraordinary general meeting of the Anglo-Ecuadorian Oilfields, Limited, was held, on the 8th instant, at Winchester House, Old Broad street, London, for the purpose of considering a resolution providing for an increase of the company's capital to £1,000,000. The Right Hon. Lord Forbes (the chairman) presided.

The Chairman said: I, personally, had hoped that the condition of the enterprise would have been such as to enable us to bring it to fruition without raising further capital, but delays of an unusual nature have thwarted that expectation. The progress made has

been substantial and satisfactory in its thoroughness. A small town has been constructed in the desert. Water supply, workshops, stores, warehouses, a railway line, stations, roads, tanks, a pier, undersea pipeline, refinery, tin and case-making factories, overland pipelines, and pumping installations, are all complete, and we are now simply faced with the operation of drilling wells, which, incidentally, I may say, we were unable to do, except in tentative fashion, until we had the above facilities.

We have just sold our first cargo of crude oil at a satisfactory price, and you will be interested to hear that it is coming to England to be refined. The accounts for the year ended June 30th last have not yet reached us. It was a year during which the energies of the management were directed almost entirely towards completing equipment. At the end of the year now entered upon, I hope we shall be able to submit to you a profit and loss account. If nothing unexpected occurs in connection with the geological conditions—and there appears no reason to anticipate this—a remunerative production seems assured. I am not myself disconcerted by temporary fluctuations in the oil market, having in view our enormous property and the constant increase of consumption of oil products in the world.

You may be interested to hear the following cable which was received yesterday morning from the company's agents:—"Referring to your telegram No. 509, well No. 9, well No. 10, well No. 11 expected to be on production within three months; all are in oil-sands. Well No. 4 production improving. Well No. 14 drilling. Well No. 15 will commence September 14th. Well No. 16 derrick under construction. 1,500 tons material landed during past three months; five houses and new Galician drillers' quarters and seven native houses added to camp. New refinery well under construction. Local sales crude oil and refined products appreciably increasing. Labour situation improving considerably. First shipment, 5,000 tons, completed."

The resolution was unanimously agreed to.

* Loss.

BROKEN HILL SOUTH, LIMITED.—For the four weeks ended September 5, 1925, 24,110 tons of crude ore and 13,473 tons of de-leached slime residues were treated and produced 4,625 tons of lead concentrates assaying 65 per cent. lead and 26 ozs silver per ton; also 7,790 tons of zinc concentrates, assaying 46 per cent. zinc.

BURMA CORPORATION.—During August, 27,526 tons of ore were mined, including 1,425 tons of high-grade ore; 20,800 tons of ore were milled in the treatment plant, producing 7,521 tons of lead concentrates; 9,678 tons of lead bearing material, including 1,793 tons of high-grade ore, were smelted in the blast furnaces, producing 3,845 tons of hard lead for treatment in the refinery. Refinery products were 3,804 tons lead and 390 011 ozs silver. Of silver production, 31,897 ozs were recovered from the treatment of copper matte. Experimental zinc plant produced 1,450 tons zinc concentrates, assaying 15 ozs silver, 68 per cent. lead, and 43 per cent. zinc. In addition to the above, 750 tons copper matte were produced from the treatment of accumulated smelter by-products and 2,358 tons copper ore. Included in the tonnage of refined lead is 217 tons recovered from the smelting of copper ore.

MOUNT MORGAN GOLD MINING COMPANY, LIMITED.—For the month of August treated 2,007 tons Mount Morgan ore, 5,077 tons concentrates, and 111 tons of purchased ore and secondary products. Produced 245 tons blister copper, containing 243 tons copper, and 2,639 ozs gold; including 13 tons copper from purchased ore and secondary products. Concentrator treated 16,283 tons ore for a production of 6,753 tons of concentrates, containing 352 tons copper, and 3,515 ozs gold. In addition to above production have matte on hand containing 127 tons copper and 1,268 ozs gold.

NORTH BROKEN HILL, LIMITED.—For the month of August the production was as follows:—38,480 tons of crude ore were treated, producing 6,830 tons lead concentrates, averaging 63.2 per cent. lead, 29.6 ozs silver per ton, and 7.2 per cent. zinc; also 6,190 tons zinc concentrates, averaging 47.3 per cent. zinc, 7.2 per cent. lead, and 7.9 ozs silver per ton.

SAN FRANCISCO MINES OF MEXICO, LIMITED.—For August:—Ore treated 11,900 tons; lead concentrates produced 1,300 tons; zinc concentrates produced 2,308 tons. Estimated net smelter return on lead concentrates, \$130,058 (U.S. Currency), and on zinc concentrates, \$76,345; total, \$206,403. Operating expenses, \$77,517. Estimated operating profit, \$128,886. Capital expenditure, \$25,810.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LIMITED.—By Cable for the week ending September 2, 1925. Production, 54,567 barrels; shipments, 4,444 tons. Total production for calendar month of August, 263,300 barrels; total shipments for calendar month of August, 35,742 tons.

CALTEX OIL.—Production for August 5th, 288 barrels, or 839 tons.

HAMILTON'S OIL CONCESSIONS (ROUMANIA), LIMITED.—Production for August, 1,050 tons (July, 3,360 tons).

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during August amounted to 144,463 barrels, or approximately 20,638 tons, as follows:—Kern River Oilfields of California, Inc., 47,193 barrels, or 6,742 approx. tons; St. Helens Petroleum Company, Limited, 51,464 barrels, or 7,352 approx. tons; Kern Trinidad Oilfields, Limited, 18,554 barrels, or 2,651 approx. tons; Kern Romana, Limited, 483 barrels, or 69 approx. tons; Kern Mex Oilfields, S.A., 26,769 barrels, or 3,824 approx. tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, September 2, 1925, amounted to 764 tons.

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended September 5, 1925, was as follows:—La Rosa, 9,150 metric tons (previous week ended August 29th, 9,300 metric tons); Maracaibo District, 3,026 metric tons (previous week ended August 29th, 2,907 metric tons).

Reports and Notices.

At a meeting of the directors of Messrs Illingworth, Morris, and Co., Limited, spinners, of Bradford, Sir J. Donald Horsfall, Bart., of Messrs John Horsfall and Sons, spinners, of Glusburn, was elected a member of the board. Sir Donald is well known in the wool textile industry and is closely in touch with the wool trade generally.

Helbert, Wagg and Co., Limited, announce that they are moving from 37 Threadneedle street, and their new address from the 14th instant will be 41 Threadneedle street, London, E.C. 2. Telephone number: London Wall 9521 (6 lines).

The registered offices of the Railway Investment Company, Limited, are, as and from 7th instant, 7 Union court, Old Broad street, London, E.C. 2.

Mr F. W. Bishop has been elected a director of the Rosario Nitrate Company, Limited, and the Salar Del Carmen Nitrate Syndicate, Limited.

Mr F. Akeroyd, F.C.I., has been appointed accident manager of the British Oak Insurance Company, Limited. Mr Akeroyd has been assistant accident manager of the company since 1921.

AMERICAN WHEAT MARKETS.

Markets showed considerable firmness at the beginning of the week, as a result of lighter offerings, bullish cables from Liverpool, and active professional buying. Later a phase of equanimity was experienced, in expectation of a favourable Canadian Government crop report, and prices eventually show a net decline over the week. Recent quotations:—

	Sen. 12, 1924.	Jan. 2, 1925.	Aug. 27, 1925.	Sep. 3, 1925.	Sep. 10, 1925.

IRON, STEEL, AND COAL.

We have extracted the following from the weekly report of the London Iron and Steel Exchange:—The iron and steel market at the moment is featureless, and anticipations are concentrated upon a revival of business in the early autumn. In the pig-iron market the slack demand has resulted in the prices of British iron becoming easier. The volume of business passing in all descriptions of iron, however, has been small, and many of the more important consumers appear to have covered their requirements for some weeks to come. Similar conditions rule in the semi-finished department, but here the competition from Continental sources is more intense. The demand for finished steel has shown signs of improving lately. The inquiry from abroad has been more active, and has developed into a fair amount of buying. In the home market also trading has been rather more brisk, but conditions in this department still leave much to be desired.

Our Middlesbrough correspondent's report, dated September 10th, is as follows:—Market: Makers report a slight improvement in the total volume of sales of Cleveland iron during the last few days. Consumption, however, is very restricted owing to the prevailing slackness, and with prices trending downwards, buyers are covering only from week to week. The general quotation for No. 3 Cleveland C.M.B. pig-iron is now 68s per ton, but less would be taken for a good order. The hematite trade is developing signs of weakness, and although makers still ask 75s per ton for mixed numbers of East Coast hematite, orders can be placed at fully 6d per ton below this figure. Manufactured iron and steel: Local manufacturers are having great difficulty in securing orders, owing to keen foreign competition, despite recent reductions in prices. The following are approximate quotations: Steel ship plates, £8; steel ship angles, £7 15s; iron bars, £11 12s 6d; steel rails, £8 10s. Iron ore: There are still no buyers, and best Bilbao Rubio is nominally quoted at 20s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—Conditions in the crude iron and steel branches continue stagnant. Business is confined to

small transactions, forward buying being rare. Prices have still a downward tendency. For a substantial order Derbyshire foundry iron can be bought at 67s or 67s 6d f.o.t., and basic at much the same prices. Hematite iron is also lower. The slump in steel scrap grows more acute. Buyers refuse to pay more than 60s for material which towards the end of last year was worth 85s. A limited amount of work is on hand in the armament department, but very little work is coming in from the shipbuilding industry. There are fewer railway orders on hand than at any previous time this year, although the work is substantial in volume. Motor-trade requirements have fallen off somewhat lately. Steel castings, forgings, and tools for engineering are in fair request, and file makers are working well. The building trade is providing a large amount of work to the light castings foundries and to the toolmakers. In view of the approaching winter, fewer orders are being received for excavating tools, and the agricultural tool department is experiencing the usual seasonal quietude. Very little that is satisfactory can be reported of the cutlery and plate branches. Fortunately large bulk orders continue to arrive which provide considerable employment. The colder weather is inducing some proportion of householders to get in winter supplies of fuel. The coal trade as a whole, however, continues quiet. Manufacturing sorts are in fair demand. Quotations for best steams are 18s to 18s 6d f.o.b. Those for other classes of fuel are normal.

Our Glasgow correspondent writes as follows:—Some slight signs of improvement were in evidence in iron and steel trades over the week, though they were not reflected in prices. Some fairly good export lines have been secured by steel makers, but competition has been severe. Another 10,000 ton motor passenger and cargo vessel has been placed with the Fairfield Shipbuilding and Engineering Company, Govan, by Messrs Bibby Brothers and Co., Liverpool. Structural steel is in steady demand, but the position is made difficult for makers here by the large quantities of Continental material coming in. The price of steel plates ex local works is £8 5s for home consumption, with bars at £8 or under for basis sizes. Business is still difficult to obtain in malleable iron, and works are barely able to keep going. Re-rollers are somewhat better placed for work, mostly on export account. Black sheets are in steady request, with makers for the most part fully employed. Galvanised sheet mills are working full time, and have sufficient orders to make this position secure for this month and October. Pig-iron shipments from Glasgow harbour last week totalled 1,174 tons, of which 1,004 tons were on overseas account. For the corresponding week of last year the figures were 1,017 and 611 tons respectively. Coal exports from Scotch ports maintain a steady improvement on the low levels reached a few months ago.

Our Cardiff correspondent writes:—The position on the Cardiff market has shown no improvement this week. Demand has been extremely quiet and prices weak. Anthracite is the only fuel showing strength, and quotations this week have further hardened under the pressure of small inquiries from the United States and Canada. The depression in shipping is also reacting on the arrival of tonnage; there have been tides when not a single vessel has been docked at Cardiff, and at every dock many of the coaling applications are idle. The following are the current approximate quotations:—Best Admiralties, 24s to 25s; seconds 23s to 23s 9d; best dries, 23s 3d to 24s; Black Veins, 22s to 22s 6d; Western Valleys, 21s 9d to 22s; Eastern Valleys, 21s 3d to 21s 9d; best bunker smalls, 11s 6d to 11s 9d; ordinary cargo smalls, 8s 6d to 10s; coking smalls, 11s 6d to 11s 9d; anthracite best large, 45s to 47s 6d; Red Vein, large, 30s to 32s 6d; machine-made cobbles, 52s 6d to 55s; French nuts, 55s to 57s 6d; stove nuts, 52s 6d to 55s; rubbly culm, 14s to 24s 6d; coke (special qualities), 37s 6d to 42s 6d; patent fuel, 22s to 24s 6d; pitwood, ex ship, 20s to 26s 6d. In the tinplate trade the recent improvement has been firmly maintained. Prices are steady and production shows a slight increase.

METALS.

The market for tin commenced the week with a very firm tone, prices being advanced on higher Eastern cable advices combined with a steady demand. Later, however, sellers were more prominent, and a quieter tone set in, with values showing irregularity and weakness. Standard cash sold at £257 down to £254 10s and £255 10s, three months £259 15s to £257 15s and £258 15s. Sales in the East were reported at £263 15s to £264 15s, and since at £263 10s. Copper also opened firmer, with dealings on a liberal scale, but later prices pursued a downward course, while slightly irregular at times. Standard cash changed hands at £62 12s 6d to £61 17s 6d, £36 17s 6d, November £37 to £36 2s 6d, December £36 7s 6d to £35 15s 6d, January £35 10s to £35 7s 6d. Spelter in good request, and with sellers reserved prices moved in an upward direction. September sold £36 16s 3d to £37, October £36 12s 6d to £36 15s, November £36 8s 9d to £36 11s 3d, December £36 3s 9d to £36 7s 6d ton. Aluminium steady. Home trade quoted £120, and £36 7s 6d ton. Antimony quiet. English specials quoted exports £115 per ton. And quantity, foreign refined £64 to £75 to £80, as to make and quantity, foreign refined £64 to £65 10s ton, ex warehouse. Quicksilver quiet. Spot quoted £13 12s 6d per bottle. Wolfram firm. Spot 18s 6d to 18s per unit.

THE WOOL TRADE.

Next Tuesday will see the opening of the fifth series of London sales. One important fact is that everywhere the trade is very low in stock, particularly of merino wool, the long vacation giving every section of the industry the opportunity to get rid of its dear stocks. Even in the West Riding merino wool is wanted, and now the question of price will probably determine the extent of the operations on home trade account. It has been patent for a month back that there was nothing to indicate any lower prices for

taken this week by one of Bradford's biggest topmakers, though a more general quotation is 49d for November-December delivery. Cape tops are distinctly higher than Australian, and everything indicates a keen demand for South African wools. Crossbreds are barely steady in the higher counts, but 50's and below are firm, with a fair demand. Generally speaking, the market is cheerful, and spinners have certainly done better, as also have manufacturers. Taking things altogether, the market is in a fairly good mood, although there still remains a fair amount of standing machinery, particularly among commission combers.

The general inquiry throughout the market has continued more encouraging. It has been difficult for spinners and manufacturers to get buyers up in price, but in one way and another a very fair amount of business has been done. The undercurrent of demand indicates very clearly that merchants are in greater need of fresh supplies of manufactured goods. Operations in cloth for China continue healthier, there being a substantial turnover in white shirtings. For India buying has been irregular, but printing and bleaching styles have moved off fairly well. Very little has been done for Egypt and the Near East, but a useful trade has been reported for South America and the Continent. A little more business has been offering in home trade fabrics. American yarns

have been firmer in quotation, and some users have purchased more freely. Rather restricted operations have occurred in Egyptian spinnings.

VEGETABLE OILS AND OILSEEDS.

Markets have not been very active. Linseed oil has been erratic, and at one time fell to about £39 per ton naked ex Hull mill, since when there has been a steady appreciation to £40 per ton on spot and for September delivery, later positions being at a slight discount. Cotton oils have been easy, and crude Egyptian has further declined to £41 per ton, while ordinary refined is lower at £42 1/2. Trade in soya oil is quiet, current value of crude being £42 ex Hull mill. Palm kernel oil is held for £42 1/2. Rape oil is a shade easier.

In the oilseed section very little demand has been experienced, crushers not buying beyond current needs to any extent. For Plate to Hull, September-October shipment, down to £19 3/4 has been accepted, while new crop, January-February, £18 1/8 9d has been paid, and £19 is now wanted. Calcutta to London has been done at £21 7/8 6d for seed on passage. Soya beans are firm, but the main demand is from Continental buyers.

HIDE, LEATHER, AND ALLIED TRADES.

The market hide position remains steady, with few important alterations. Tanners are still reducing input. Best ox hides made from 6 1/2 to 8 1/2 d per lb at Thursday's Bermondsey sales, seconds selling at 6d to 8 1/2 d. Best cows sold from 6 1/2 to 6 3/4 d, and calfskins from 7d to 15 1/2 d. Lambs made 3s 3d to 10s, and pelts from 6s 8d to 15s each. The position of imported hides has slightly improved, tanners appearing short of supplies. Best Argentine ox are selling at 8 1/2 d, and Montevideo at 8 1/2 d. All classes of dry hides remain firm in price. The Chicago packer hide position remains steady, with best heavies offering at 17 1/2 cents. Demand for sole leather has slightly improved, but orders are for small parcels at frequent intervals. Light dry hide bends are still the best sellers, owing to the relatively low price, but repairers account for large quantities of wet salted and market hide bends. Upper leathers remain rather slow, with prices firm to an advance. Continental leather is still coming in, but tanners are all advancing quotations for willow, box, and patent leathers. Black and coloured glacé are being sampled freely, but suede remains a dead letter. The boot and shoe section is not too well employed, and few factories are working full time. Much is expected from the Shoe and Leather Fair during the week October 5th to 9th next.

ARCOS LTD.

Sole Purchasing and Selling Agency in Great Britain for the Government of the U.S.S.R.

TURNOVER TO
MARCH 31, 1925, £56,000,000.

Exports from Russia to Great Britain include timber, flax, furs, ores, metals, crude drugs, petroleum products, etc., to a total value of £18,000,000.

The more important items of import to Russia are agricultural machinery, locomotives, tools, motors, scientific apparatus, drugs, clothes, boots, etc., to a total value of £38,000,000.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 11.

SUGAR.—The market for refined goods displayed a generally steady tone, but business proceeded on moderate lines, while largely confined to British standards at recent level of prices. Messrs Tate and Lyle's cubes quoted 34s 6d to 35s 6d; crushed, 32s 6d; granulated, 30s 4 1/2 to 30s 10 1/2; month forward, 30s 3d; and yellow crystals, spot, 27s 7 1/2 d. Imported generally quiet, spot and forward. American granulated, spot, quoted 28s 20 1/2 d; afloat parcels, 16s 6d, London, and 16s 8 1/2 d outports, c.i.f. terms. White Java, spot, 28s 9d; afloat to London, 15s 9d, c.f. and i. Dutch granulated, "J" quality, spot, 29s 7 1/2 d; November-December, 15s 10 1/2 d, Rotterdam. Czecho granulated, November-December, 15s 9 1/2 d, f.o.b., Hamburg. Raw kinds steady, and Cuban, basis 96 per cent., September-October, 12s, c.f. and i., U.K. Indian market remains quiet and rather featureless. White terminal firmer, with improved inquiries. September sellers, 15s 4 1/2 d; October, 15s 6d; December, sold, 15s 6d to 15s 6 1/2 d; March, 15s 9d to 15s 9 1/2 d; May, 15s 10 1/2 d to 15s 11 1/2 d per cwt.

COFFEE.—The market maintained a steady tone for all the better grades, which continue to be sparingly offered, but common and unattractive qualities proved difficult to vend. East Indian (Coorg) peaberry realised 152s 6d; Kenya, good bold greyish, 142s 6d; Uganda, fair to good bold, 124s 6d to 130s 6d; Costa Rica, good bold colory, 172s to 173s; and Matagalpa, fair bold, 138s per cwt. Brazilian remains quiet for shipment.

COCOA.—Spot parcels in limited request, but late rates were generally maintained. Forward positions quiet. Trinidad for shipment, September-October, sellers, 74s; Bahia, 51s 6d; Guayaquil Epoca, 73s; Machala, 70s; Caraquez, 70s, c. and f.; St Thome, September-October, 52s, c.f. and i. Accra firmer, with sales of F.F. quality, October-December, also December-February, at 43s 6d to 44s, f.o.b. terms. Cocoa butter steady. C.F.R., spot, quoted 1s 5 1/2 d, and prime English, 1s 5 1/2 d per lb.

TEA.—Larger supplies of Indian, totalling 48,260 packages, were brought forward at public sales this week. A better demand prevailed generally, there being rather more inquiry for common and low medium descriptions than of late, and prices frequently showed a fractional advance. All the better liquoring kinds were keenly competed for, and realised very full rates. Pekoe, sold, 10d to 15d; broken orange pekoe, 10 1/2 d up to 4s 6d, the latter for choice lots. Ceylon sales of 21,318 packages also met an improved demand, good to fine descriptions realising firm to de-rer prices, while lower grades ruled steady. Leaf kinds were well supported by orders on export account. Pekoe, sold, 10d to 2s; broken orange pekoe, 1s 3d to 2s 8 1/2 d per lb, in bond. China descriptions continue in quiet request. Fine new seasons souchoong sell at 3s to 3s 6d per lb. Only small quantities of new tea are available for delivery, and shipments will be on a small scale. 3,824 packages Java were submitted and met a generally good demand at an irregular advance of from 1/2 d to 1 1/2 d per lb, the latter for finest quality. Pekoe, sold, 11 1/2 d to 1s 2 1/2 d; broken ditto, 5 1/2 d to 1s 3 1/2 d; orange pekoe, 1s 8 1/2 d to 1s 8 1/2 d; broken orange pekoe, 8d to 1s 4 1/2 d; pekoe souchoong, 11d to 11 1/2 d per lb, in bond.

RICE moved off slowly at about late rates. Rangoon two stars, spot, quoted 16s; afloat, also September-October, 15s 6d, c.i.f., London. Spanish, spot, quoted 24s 3d to 24s 9d, as to quality; September-October, 22s 6d. Italian, spot, 22s 6d to 23s 6d, as to quality, per cwt. Japanese peas, spot, quoted 25s 6d; September-October, 23s 9d. Rangoon beans, hand picked, September-October, 15s. Madagascar butter beans, spot, 36s to 38s, as to quality; September, 35s, c.i.f., per cwt.

SPICE.—Pepper remains firm, with a good demand for forward positions. Black Singapore L.S., October-December, sellers, 10d; Lampong, spot, 9 1/2 d; October-December, sold, 9 1/2 d to 10d; Muntok, August-October, sold, 1s 2 1/2 d; October-December, 1s 2 1/2 d to 1s 3d. Zanzibar cloves, October-December, sellers, 10 1/2 d per lb. Tapioca Zanzibar, spot, 10 1/2 d; Havre, September-October, quietly steady. Singapore flake, to Havre, September-October, buyers, 19s 3d; and October-December, quoted 19s 3d. Sago flour, quiet, and Sarawak to U.K., September-October, also October-December, quoted 16s 9d, c.i.f. Desiccated cocoanut quiet. Spot, December, quoted 16s 9d, c.i.f. 40s 3d per cwt. Ginger quiet, halves, 41s 3d; September-October, 40s 3d per cwt. Ginger quiet, Japan, spot, 90s; August-September, 85s; West African, spot, 63s; shipment, 60s, c.i.f.

JUTE dull and easier on realisations. Firsts, to Continent, August, sold, £46 10s; August-September, £45 to £45 15s; October-November, sold, £45 10s to £44 10s. Lightnings, August, also November-December, £44 5s to £44 10s. The Indian sellers, £45 per ton. Hessians and twills firmly held. The Government estimates the coming jute crop at 7,851,328 bales, against 8,044,892 bales, the final estimate last year, and an outturn of 9,390,000 bales.

HEMP inactive and largely nominal. Manila, J grade, October-December, quoted £43 10s; K, also L, ditto, £39 10s; and M, £34 per ton. New Zealand and African sisal unaltered.

SHELLAC dull. Spot, T.N., fair quality, quoted 215s; October, 202s 6d; December, 197s 6d cwt.

COPRA dearer, with fair inquiries, and sellers more reserved. F.M.S., Straits, to Rotterdam, August-September, sellers, £30 10s; F.M.S., Straits, to Rotterdam, August-September, buyers, £30 3s 9d. Dutch, E.I., August-October-December, buyers, £30 2s 6d. Ceylon, September, £30 7s 6d, sellers; October-December, £30. Palm September-October, £31 12s 6d; South Sea, ditto, £30. Palm kernels, to Liverpool, October-December, buyers, at £21 16s 3d per ton.

RUBBER firmer, on a better general demand, following a quiet and easier opening. Plantation, standard sheet, spot, sold, 3s 3d to 3s 3 1/2 d; September, 3s 2 1/2 d to 3s 3 1/2 d and 3s 2 1/2 d; October, 3s 3 1/2 d to 3s 3 1/2 d and 3s; October-December, 2s 10d to 2s 11 1/2 d and 2s 10d; March, 2s 8d to 2s 9d and 2s 8d; and January-December, 2s 10d.

2s 4 1/2 d. Fine hard Para, spot, sellers, 2s 11 1/2 d; soft fine, 2s 10d; and Caucho ball, 1s 11d per lb.

FRUIT (Dried).—Currants in quiet demand, but fairly steady. Pyrgos quoted 30s; Amalia, 31s to 32s; Patras, 35s to 36s; Gulph, 36s to 38s; Vostizza, 44s to 46s. Sultanias steady. Australian, 68s to 80s; South African, 70s to 80s. Figs quiet. Natural, in bags, quoted 27s to 29s. Dates spot demand quiet, but forward positions firm. First tide Hallowses, 21s; second, 20s 3d; Siar first, 16s 6d; second, 14s 3d, landed terms. Raisins: South African, 40s to 42s; Lexias, 40s to 45s. Evaporated fruits steady. Californian apricots, standard new extra choice, 120s; fancy, 130s; Australian 120s to 130s; Californian peaches, choice, 62s to 63s; extra choice, 65s to 66s; fancy, 70s. Plums: Oregon, new, size 30/40, quoted 71s to 72s; 40/50, at 52s to 53s; Californian, new, 40/50, 58s to 60s; 50/60, 51s to 52s; 70/80, 45s 6d to 46s 6d. Pears, choice Californian, 90s; extra choice, 102s to 103s. Apple rings, Californian, extra choice, 67s 6d to 75s; Canadian, 62s 6d per cwt.

CANNED GOODS.—Sardines firm, with rather more inquiry, while best quality continues in short supply. Portuguese, 1/2 flats quoted 48s 3d; clubs, 5s; 12 ozs, 7s 6d; 18 ozs, 12s per dozen tins. Salmon firm, and talls scarce. 1/2 lb, flat reds, labelled, 78s to 80s; tall, 1 lb, 58s to 60s; 1/2 lb, tall, pink, 27s to 28s. Lobsters meet with good support, and rates display a hardening tendency. Halves quoted 16s, and quarters up to 100s.

CANNED FRUITS in quieter demand, and prices barely steady. Singapore pines, spot, quiet, but forward quotations firm. 48-1 1/2's quoted 86s 6d to 87s 6d; cubes, 2 1/2's, 13s to 13s 6d; slices, 24-2 1/2's, 12s 6d to 13s 6d. South African are moving off quietly on former terms. Californian pears, 15s to 17s; peaches, 12s to 14s; cherries, 13s to 14s; apricots, 10s to 13s 3d; loganberries, 13s 9d to 16s. Fruit salad, 1 1/2's, 12s 3d to 14s; 2 1/2's, 21s to 22s; Australian pears, 24-2 1/2's, 16s to 16s 6d; Canadian, 14s to 14s 6d.

CANNED MEATS.—Corned beef in quiet demand at late rates, but a steady demand continues for Danish lunch tongues.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn: Ceylon, £25 to £30; Cochins, £30 to £50. Ceylon bristle £17 to £23; cinnamon leaf oil, 4 1/2 d; citronella, Ceylon, 2s; Java, 3s 5d.

OILSEEDS.—Linseed irregular but fairly steady, with a fair demand. Calcutta to London, September-October, quoted £21 2s 6d; bold Bombay, ditto, £22. Plate to Hull, August-September, sold, £19 5s; September-October, £19 3s 9d to £19 7s 6d; January-February, £18 12s 6d to £18 18s 9d. Rapeseed dull. Toria to Continent, September-October, £21 15s. Cotton-seed quiet and tendency easier. Egyptian black, to Hull, new October, sold, £12 7s 6d; November-January, £12 7s 6d; white, new October, £11 15s; November-January, sold, £11 13s 9d; Bombay, October-November, sold, £9; and new, December-January, £9 7s 6d. Castorseed dull. Bombay, September-October, £22 2s 6d. Gingly seed quiet. Chinese to Continent, August-September, £28; large Bombay ditto, £26 5s. Groundnuts quiet. Coromandel machined, September-October, £25 2s 6d; Nigerian, August-September, £25 5s per ton.

An International Service

THE Central Union Trust Company of New York is equipped with every facility for the prompt and efficient handling of financial transactions throughout the world. Foreign banks and business houses with banking interests in the United States are invited to avail themselves of this service, which includes the purchase and sale of foreign exchange, collections, and the issuance of commercial and travelers letters of credit. In addition, the Company conducts a general banking business and acts as Executor, Trustee, Transfer Agent, Registrar of Stocks and in every other Fiduciary capacity.

OILS.—Linseed irregular. Spot, net, naked, 40s 3d; September-December, 39s 9d; January-April, 39s 6d. Rape quiet. Crude, spot, 45s 6d; refined, 52s 6d. Castor-oil slow. First pressure, spot, quoted 55s 6d; second pressure, 52s 6d to 53s 6d; and pharmaceutical, 60s 6d per cwt. Hull, with London, 2s per cwt extra. Cotton quiet. Crude Egyptian, spot, 43s 6d; Bombay, 40s; common edible, 49s; deodorised, 51s. China-wood dull. Hankow, spot (barrels), 65s; September-October, 65s. Coconut steady. Ceylon, spot, 47s 6d; September-October, 45s 9d; Cochin, ditto, ordinary packages, 59s 9d. Soya quiet. Oriental, barrels, September-October, 45s 3d; bulk, 40s 6d. Cod steady. English, spot, 34s to 35s. Ground-nuts easier. English, crushed, naked, spot, 49s 6d; deodorised, barrels, 57s. Turpentine active and firmer. American, spot, 77s 6d; October-December, 78s 6d; January-April, 80s 6d. Rosin firmer, and pale grades sparingly offered. American, grade B/D, 27s; E, 27s 9d; F/G, 28s 3d; W/G, 30s; W/V, 33s per cwt. French FG, nominal; W/V, 28s 6d per cwt. Petroleum quiet. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

TALLOW.—Messrs Colchester and Woolner write on September 9th as follows: The tallow market was quieter during the week, and prices showed no change to-day. While shipments from Australia are delayed, South America is offering more freely. At auction to-day 668 casks tallow were offered, and 165 were sold. Quotations are:—Australian mutton: Fine, 51s; good to fair, 50s 6d to 48s; dull to dark, 44s 3d to 41s 9d; hard, 51s. Australian beef: Fine, 50s 6d;

good to fair, 47s 6d to 45s 6d; dull to dark, 43s to 39s 6d; sweet, 50s 6d. Present shipment from Australasia: Good mixed, 46s, nominally. Present shipment from South America, 45s 9d. The market letter is unchanged. Town tallow, 43s 6d per cwt. Rough fat, per 8 lbs, 5d; melted stuff, 33s 6d per cwt. Quotations are:—Town, 43s, net cash, naked, ex works. Country: Frail casks, 43s; home melted, shipping casks, net, f.o.b., good coloured, 45s 6d; fair to dull, 43s 6d to 42s 6d. Bone fat: white, none; pale, none; benzine, 40s; melted stuff, 39s, f.o.b.

Corporation placed £500,000 six months' bills below 4 per cent., and fine three months' bank bills were taken at 3½ per cent.

	Sept. 18, 1925.	Sept. 11, 1925.	Sept. 4, 1925.	Aug. 28, 1925.	Previous Rate and Date Changed.
Bank Rate	4½	4½	4½	4½	5 (Aug. 6, '25)
Banks' Deposit Rate	2½	2½	2½	2½	3 (Aug. 6, '25)
Discount Call	2½	2½	2½	2½	3 (Aug. 6, '25)
Houses (Notice)	2½	2½	2½	2½	3½ (Aug. 6, '25)
Market rate (3 months' bills) ..	3½	3½	3½	3½	..

The Bank return showed a decrease of £314,000 in the stock of coin and bullion; £306,000 having been announced as withdrawn for export; notes returned from circulation to the extent of £669,000, and so there was, on balance, an increase of £355,000 in the Reserve, and of .4, to 29 per cent., in its proportion to liabilities. Government securities rose by £103,000, and Other fell by £986,000. Public deposits expanded by 4½ millions, and so Other deposits were 4½ millions lower. Currency notes this week were reduced by £1,629,300 to £293,772,800, which includes £1,327,300 for notes called in but not yet cancelled. The fiduciary issue is £236,195,500, or £11,949,900 below the maximum for the year.

NEW YORK MARKETS.

Our New York correspondent cables:—The share market has continued to be active and buoyant, with motor shares still leading the way. The bond market is also better, and new issues of German bonds and telephone bonds have been well taken up. The rate for call money is down to 3½ per cent., but the movement is probably temporary. A sharp contraction has taken place in Federal Reserve discounts, while the return shows a large increase in purchases of Government securities, to which, probably, no great significance attaches. The reserve ratio is 73.7 per cent. The commodity price index number of the Bureau of Labour is up by 0.3 per cent. to 160.4. Six groups show a rise and two a fall, while one is unchanged. The chief advances are recorded by farm products, food, and building materials. Metals and clothing have also risen slightly.

THE STOCK MARKETS.

The Stock Exchange permitted itself a slight hope of a reduction in Bank rate, but the "no change" decision did not cause any set-back in Government stocks, while Conversion Loan and National War Bonds continued to rise. War Loan went to 102. Compared with recent weeks the activity in the foreign market was slight, but mid-European bonds were still favoured by speculators. Home rails remain depressed, holders selling for re-investment in industrials, rubbers, and Kaffirs. The rubber share market is strong on the firmness of the raw material and the series of excellent dividend declarations. Tea shares are better, owing to good prices at the tea auctions. Favourite industrials, as a rule, are quieter. The oil market is uninteresting. In the mining markets the chief feature is the strong interest being taken in Rhodesians.

THE COMMODITY MARKETS.

The situation in most markets shows slight change this week. Coal quotations have been easier, and current output in some cases is as much as 25 per cent. below normal. Pig-iron remains depressed, and prices are somewhat unstable, although sales of Continental iron have slackened. Buying of steel products is of a hand-to-mouth character. In the textile markets a further advance in raw cotton prices has stimulated demand to some extent, although actual business has been irregular. Wool has shown considerable firmness at this week's auctions, owing chiefly to demand from the Continent. The piece goods trade has maintained its recent improvement. Wheat has been slightly firmer on the whole. In the produce markets, the sugar market has been quieter, but tea and coffee prices are firm. Rubber is easier, with only a moderate demand. Among metals, tin and copper have been irregular after a firm opening, but lead has generally been well supported.

FOREIGN EXCHANGES.

The foreign exchange market has been quiet, with little interest beyond the sharp rise in Belgian francs in the middle of the week and the improvement in the yen on rumours that the Japanese Government contemplate an early return to gold. In the dollar market there has been very little business, with no movement from last week's quotation of \$4.84½. Forward rates at ½ to 1 cent per month above spot are getting a little wider, partly as the result of interest differences, partly, also, in anticipation of some improvement in sterling after the autumn pressure is over. The Paris rate has fluctuated slightly, with a tendency towards appreciation, yesterday morning's quotation being 102.62½, as compared with 103.37½ a week ago. Brussels, which stood at 110.37½ on the 11th and began the week by sharing the recovery in Paris, showed a sharp upward movement on Tuesday, and at one time on Wednesday reached as high as 112.55. Although the protracted strikes in Belgium and an increasing note issue may account for the general position, this particular sharp movement seems to have been due to a strong and sudden demand for foreign bonds. The rise received an equally sharp check on Thursday on rumours of intervention by the central bank, and by yesterday morning the rate was back at 110.70. Forward rates in Paris have narrowed from 50-53 to 35-40 centimes per month above spot. In Brussels they are unchanged at 2 centimes either side of parity. Madrid, after depreciating on reports of Spanish difficulties in Morocco, showed some recovery, but is still higher than last week at 33.70, as compared with 33.47½. The lira, after rising a little in the middle of the week, has recovered to 118, as compared with 118½ a week ago. Reports of intending stabilisation are still current, suggestions varying at a rate between 110 and 120, or a rate of 100. In view of the present severe restrictions on credit, it is doubtful whether the present quotation could be maintained for long unless, in the meantime, there is a further improvement both in the general economic position and in political confidence. Amsterdam, at 12.05½, shows little change, and Switzerland, at 25.11, is also the same as a week ago. Stockholm has moved against us from 18.08½ to 18.06, but both Oslo and Copenhagen have depreciated a little on balance from 22.77½ to 23.07 and from 19.77½ to 19.85 respectively. For the moment, at least, it would seem that the speculative movement in these currencies has been checked. Berlin has moved from 20.37 to 20.36, but Vienna and Prague are unchanged. Warsaw, at 28½, is a little higher again, after being dealt in at 29. The movement, however, would seem to be now well in hand. Athens, in spite of rumours of a loan, has again risen to 335, as compared with 332½, and Bucharest is also higher at 1,010. In the East the rupee, at 1s 6 11-64d, is 1-32d cheaper. The yen, however, on the reports already referred to, and on the shipment of gold to New York on Japanese account, has appreciated sharply from 1s 8½d to 1s 8 13-32d. On the falling away of support from China, silver prices have relapsed, and the market is very quiet. Hong Kong stands at 2s 4½d, as compared with 2s 5½d; Shanghai at 3s 2½d, as compared with 3s 3½d. In South America, Rio has relapsed a little from 6 41-64d to 6 19-32d. Buenos Aires, however, on reports of a new loan to be issued in America, is dearer at 45½d, as compared with 45¼d. Monte Video, at 49½d, is unchanged. Valparaiso has appreciated from 39.70 to 39.60 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 12th:—

EXPENDITURE.	(000's omitted.)	REVENUE.	(000's omitted.)
Supply Services	7,471	From Revenue	10,889
Interest, &c., on Debt	1,274		
Sinking Fund	270		
Sundries	56		
Increase in Exchange Balances ..	120		
Decrease in Debt	1,698		
	10,889		10,889

The revenue for the week amounted to £10,889,100, as compared with £9,659,800 in the corresponding week last year. Customs were higher at £2,444,000, against £1,825,000, but Excise was lower at £1,113,000, against £1,171,000. Property and Income-tax brought in £3,560,000, as compared with £3,442,000, and Super-tax

£390,000, against £430,000. Ordinary receipts were £282,900 higher at £424,700, while special receipts amounted to £200,000, as compared with £500,000. The week's operations reduced the National Debt by £1,698,200, and caused the following changes:—

(000's omitted.)	
Treasury Bills	+ 3,599
National Saving Certificates ..	+ 50
	+ 3,649
Public Department Advances ..	— 4,600
National War Bonds	— 400
Sundries	— 347
	— 5,347

The floating debt was reduced by £1,000,000 to £782,316,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Sept. 12th).

£		£	
Total Expenditure ..	351,424,440	Raised by Revenue ..	316,961,569
		Decrease in Balances ..	3,545,140
		Amount borrowed ..	30,917,731
Total	351,424,440	Total	351,424,440

ESTIMATES for FINANCIAL YEAR 1925-1926.

£		£	
Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—John Hetherington and Sons, Nobel Industries, Anglo-Scottish Trust, and Singapore Para Rubber Estates. At the meeting of Nobel Industries, Limited, Sir Harry McGowan reviewed conditions in the home and export markets. Mr M. C. Harman, at the meeting of John Hetherington and Sons, spoke of Russia's pressing need for working capital and the attitude of banking institutions towards Russian credits. At the meeting of the Anglo-Scottish Trust, the amalgamation proposals were sanctioned, as also was the increase of capital proposal at the Singapore Para Rubber Estates meeting.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE END OF THE HOLIDAYS.

Few people enter upon a new term's work without some misgivings. The office desk seems so formidably loaded with arrears of "matters needing immediate attention"; and anyone who has the least idea of how best to use a holiday cannot fail to return with some suspicion of awe and reluctance about the attitude in which he approaches accumulated tasks. Mr Baldwin, we feel sure, is one of those who knows how to use his holiday. Has he not proved it by telling a reporter in a phrase reminiscent of Earl Balfour that he "has not read an English newspaper for a month"? But all the more is he to be pitied as he faces anew the problems of his autumn task.

It is true, perhaps, that no vital change in the general situation has occurred during the month of blissful furlough. But there are no improvements to record. Mr Baldwin has to face, first and foremost, the fifth, and the most difficult, winter of unemployment. Moreover, hanging over him all the winter is the problem of the coal trade, which has merely been postponed, not solved, by the makeshift device of a subsidy and a Royal Commission. The latter cannot be expected to perform a miracle. The former brings with it the menace of an unbalanced Budget and an unpopular tax programme next year. Sterner than ever is the call for economy, and the first essay in economy—the closing of the Rosyth and Pembroke dockyards—has shown how painful is the passage along the meritorious path of retrenchment. In some directions the immediate outlook may appear more hopeful. Of the Pact negotiations and the French debt settlement, the Premier may have heard encouraging news from his Foreign Secretary around the lunch table at Aix-les-Bains. But, on the other hand, he will find that the Trade Union Congress, in whose proceedings the voice of the Left was so prominent, utterly failed to re-

spond to his oft-repeated appeal for mutual forbearance and co-operation between capital and labour. The loss of Stockport and the fall in the Conservative poll will claim attention. The Iraq position calls for anxious study.

As he works through his accumulated dossier of urgent matters, he will come across a letter, already reproduced in the Press, from a leading shipowner, telling him politely, but brusquely, that under his guidance the country is going to the dogs, and asking him point blank what he is going to do about it. The picture of the present state of the country, as painted by Sir George Hunter in his letter to the Prime Minister, is sensational. This is how the letter opens:—

SIR,—Does the Government—do you, Sir—fully and deeply realise the desperate condition of our British industries; and the fact that our industrial conditions are not improving, but gradually growing worse? The number of our unemployed, or partially unemployed, is not less than 12½ per cent. of the working population of men and boys; and the number of the unemployed is increasing. A large percentage of our people are becoming unaccustomed to work, and are partially losing their skill. Tens of thousands of our boys and young men are growing up without having learned to work. The dole (and but for the dole there would be starvation) is demoralising hundreds of thousands of our people, and weakening, if not destroying, their sense of manly independence. The great majority still want work, and cannot get work.

The "Trade Balance" of imports and exports is now quite definitely against us. Dividends on our railways and in most of our industries are being paid out of reserves, or have ceased. Capital which is needed to maintain our industries and provide wages is dwindling. These conditions, if they continue, can only mean bankruptcy and ruin. That stage is still perhaps far off, but we are on the road to it. There is no improvement in sight.

It is enough to make Mr Baldwin crave ten times more strongly than ever for the blessed quietude of rustic retirement. The letter poses questions that neither he nor any other Prime Minister could answer, and it focuses all the most anxious of to-day's domestic troubles. Fortunately, however, for Mr Baldwin, Sir George has left himself very much open to retort. He has drawn upon his imagination to paint things blacker than they really are. One instance will suffice. Dividends in most of our industries, says Sir George, are being paid out of reserves or have ceased. That is the sort of over-statement that pathetically ruins a case. If Sir George will examine the *Economist* for July 18th, he will find the following statement of fact:—"During the past three months the reports of 492 industrial undertakings have been analysed in our weekly summary of profit and loss accounts, and the aggregate net profits for their past financial year, after payment of debenture interest, &c., amounted to £56,985,900, as compared with £51,283,900 earned by the same companies in their preceding financial year, an increase of £5,701,900, or 11.1 per cent. The majority of the profit and loss accounts analysed refer to the years ended December 31, 1924, or March 31, 1925, but some are for earlier or intervening periods. During the past twelve months the reports of 1,443 companies have been analysed, and these show an increase of 9.7 per cent. in net profits." If he will study the figures he will find that the ratio of profits to capital has shown a steady improvement in the past three years. Industrial problems are serious enough, but it does not help matters to throw out pessimistic generalisations which grossly exaggerate the facts.

But when all is said and done the winter which Mr Baldwin faces may well damp his spirits. He is like a man walking a narrow and treacherous path, where one false step will have incalculable consequences. Nor can he count on the ability of his friends and supporters to help him to keep his foothold. Political observers tell us daily that the feature of the autumn platform campaign of the Conservative party will be a programme of greater Imperial Preference. Already Mr Baldwin has been dragged beyond the limits both of pledges and of sanity by the tariff fakirs of his party. They will try to pull him farther, and to commit him, at this moment when our export trade cries out bitterly for encouragement, to measures that can only work in restraint of trade. This pressure to tread the despairing path of fiscal folly will be

strong, and it will be the more lamentable because we have just reached the stage when the eyes of the world are slowly but surely opening to the fact that the rising wall of tariffs is the greatest of all obstacles to the recovery of the world trade, and consequently to the recovery of Britain the exporter. A more hopeful line of country is indicated by the resolution which M. Loucheur moved this week in the Assembly of the League of Nations calling for a Conference "to examine the economic difficulties which stand in the way of a restoration of general prosperity." The world is a little sceptical of the results of Conferences, and this particular proposal is beset with special difficulties, for it has to reconcile conflicting national interests, and before anything effective can be done it has to create the consciousness of common interest between the nations. But that the suggestion has been made is of great significance, for it is symptomatic of a considerable movement of opinion in France and Germany, and perhaps also in other European countries, towards the view that narrow nationalist policies in economic matters are suicidal for the country that indulges in them, and are, perhaps, the chief influence holding back the recovery of Europe to-day. For Great Britain, one-third of whose trade is with Europe, one-third with the Empire, and one-third with the rest of the world, it is mere common sense that we should actively co-operate in any effort to improve matters in the Continent to which geographically we belong.

AUSTRIA AND LEAGUE CONTROL.

WHEN the history of the war and its aftermath comes to be written, the intervention of the League of Nations in Austria will be given a prominent place in the story of Europe's slow and painful recovery. The Austrian reconstruction plan, launched in the autumn of 1922, was the first serious and co-operative effort to stop the rot of collapsing exchanges; it pointed out the road of salvation to Hungary, Poland, and Germany, and last, but not least, it proved that the new Austria, which at one time seemed quite incapable either politically or economically of separate existence, might become an independent nation. As a result of the reports laid before the Council of the League at a meeting last week, in the course of which Dr Zimmerman reported that the financial legislation which Austria was requested to pass a year ago had been put on the statute book, and the Finance Committee expressed its satisfaction with the Budget position and the stability of the crown, the Council accepted the proposal of its Finance Committee for terminating the League's control in the near future. Thus will come to an end the phase of reconstruction during which the League has been largely responsible for the internal finances of a sovereign State—a phase in which Austria has been variously described, according to the point of view, as the spoiled child of Europe and the slave of international finance. From next year onwards Austria will shoulder her own responsibilities.

The steps by which the control is to be removed closely follow the plan we anticipated last week. Austria is to be asked to pass the necessary legislation to provide (a) that an adviser to the National Bank shall remain in office for three years after the termination of control, and (b), that the League Council shall be entitled to re-establish control again by a three-quarters majority within a period of ten years if the assigned revenues should prove insufficient to cover the service of the reconstruction loan or if the equilibrium of the Budget should again be seriously in danger. If these two provisions are passed in Parliament before the end of the year, the function of the Commissioner-General, which has already been reduced, will be further limited as from January 1st to control over the assigned revenues and over the expenditure of what remains of the reconstruction loan. The two provisos, which have been inserted by the League on account of its moral obligations to the Governments and to the individuals whom it persuaded to participate in the Austrian

reconstruction loan, have given rise to some adverse criticisms in the Austrian Press. But, as the British delegate pointed out at the Geneva meeting, it is imperative for Austria that she should retain that large volume of short-term credits which at the present moment furnishes a very substantial part of her floating capital, and that such a sense of security in the future of Austria should be created in foreign countries that these credits may gradually be converted into long-term loans. It would be a poor service to Austria to restore her complete financial independence at the risk of another financial crisis.

In some circles in which Austrian affairs have not been very closely followed the removal of budget control by the League was unexpected. But in our view the action taken was both inevitable and desirable. On general grounds the control of the internal affairs of a sovereign State, even by so disinterested a body as the League of Nations, is undesirable, and is liable to give rise to abnormal and even unhealthy conditions in the country's domestic politics. In Austria the reconstruction scheme has been opposed by the Socialists, who have been able to describe the League as bolstering up the capitalist régime. There is no doubt that if Dr Seipel on his return from Geneva in 1922 had been able to persuade his party to form a Coalition Government the Socialist party would have been willing to accept part responsibility for the League scheme. There was never any danger, even if the Socialists had come into power, that they would have repudiated the Geneva agreement; but, as events turned out, the League became a party question. So far as the Government is concerned, it has undoubtedly been a convenience to put the blame upon the League for all unpopular measures of economy and reform. But if the Commissioner-General could be used as a stick to beat the Opposition, he could also be at times a rod for the back of the Government. It was not to be expected that the Austrian Cabinet should enjoy being in tutelage, and in the Austrian political world, at all events, the opinion has been unanimous that, as conditions improved, Austria should at the earliest possible moment regain the dignity of independence. Moreover, an even more fundamental consideration has been that, as the Austrian budget situation has improved on the one hand, and the proceeds of the reconstruction loan in the hands of the Commissioner-General have rapidly diminished by expenditure on capital works on the other, the real power of the latter, arising from the fact that he held the purse-strings, has steadily diminished. His influence has subsequently tended to become that of adviser rather than that of dictator. It would have been very unwise to attempt to retain an unreal control no longer desired by Austria itself.

In view, however, of the responsibilities which the League assumed before the world for the financial reconstruction of Austria, as well as its more particular obligation towards subscribers to the Austrian Loan, these considerations, weighty though they be, would not have justified it in the course it has taken if it had serious misgivings as to the financial situation of Austria. In this connection there are certain leading considerations which influenced the Finance Committee, and will doubtless influence those investors in Austria who have to consider whether under the new conditions she will continue to be credit worthy.

The first is in regard to the equilibrium of the budget. The situation of the public finances is no longer a crucial issue. The Budget of 1923 showed a deficit of 57 million gold crowns on current expenditure, and of 110 millions if capital expenditure is added. That of 1924 showed a surplus of 63 millions on current expenditure, and a deficit of 9 millions if capital is included. The accounts for part of a year only do not indicate the final probabilities. But the provisional accounts for the first half of 1925 show a current surplus of 16½ millions, and a deficit of 10 millions if capital is included. Both revenue and expenditure are above the Budget figures—but as the revenue increased more than expenditure, the margin is substantially better than the estimates. (The capital expenses are mainly in respect of railways which were left in a very bad condition, both as to permanent way, rolling stock, and administration. Under the new régime the working account has improved from a large deficit in 1923 to a balance in 1924, and an estimated surplus for the

present year.) The net result has been that very little of the Reconstruction loan has been used for current expenditure. Of the 611 million crowns which the loan has yielded to August 25, 1925, the allocation has been as follows:—

	Million Gold Crowns.
Reimbursement of loans by various powers, the proceeds of which were spent prior to stabilisation ..	121.9
Guarantee of six months' service of loan	40.3
Payments to meet Budget expenditure	262.0
Balance	186.8

During this period of 2½ years, however, the Budget has carried 151.2 millions of capital expenditure, and, in addition, the Government has repaid its loan of 38 millions to the National Bank and 30 millions of Clearing House and other payments. Thus, 43 millions only represents the extent to which current expenditure, salaries, interest charges, &c., have been paid for out of the loan—a figure less than the annual charge which the loan itself makes on the Budget. Local finance is an important consideration in Austria. In the last few years the town of Vienna, which contrived to balance its Budget right through the inflation period, has refrained from borrowing, and has built up a substantial surplus in the bank. The municipality may be open to criticism for the heaviness of its taxation; its recent history does not suggest any doubt as to its solvency. The other provincial governments have not so clean a record, but the new legislation limits their right to impose taxation without Government authority, and they must now cut their coat according to their cloth. The Government has stated that the expenditure of Austria has reached its maximum. It may or may not be able to live up to this declaration. But it cannot print notes; it cannot raise an internal loan; and it certainly cannot expect to raise money abroad if expenditure rises. It can, therefore, only satisfy demands for increased expenditure by higher taxation. The balance of political forces in the State means that any such projects will be strenuously, and probably effectively, opposed.

The question of the stability of the crown and of the financial and economic position of Austria generally raises more complex issues. Such recovery as has taken place in Austria has been greatly assisted by the grant of foreign credits, mainly through the banks. If confidence were shaken in Austria and these were rapidly withdrawn, the situation of the National Bank might become difficult and the stability of the crown endangered. We shall deal with this question of foreign credits and the general stability of Austria in another article. We would only make three observations here in relation to the question of League control. The first is that a very substantial withdrawal of foreign capital occurred during the crisis of 1924 without endangering the stability of the crown. There is no reason to anticipate that so severe a test will be repeated. In the second place, the Commissioner-General, whose main function is Budget control, cannot regulate or direct the influx of foreign capital. The suggestion has more than once been raised in Vienna that Dr Zimmerman should give his approval to certain long-term loans which Austrian public authorities or large undertakings were endeavouring to raise abroad. But it would clearly be undesirable for the League representative to take the responsibility of adding by his approval what would be a very important market asset to certain loans and not to others. Still less would it be possible for him to exercise any direct discrimination in respect of short-term loans, which must be decided upon by the lenders on ordinary commercial principles. But there is a third consideration. In so far as influence can be exerted by any authority, in this matter it must be through the medium of the central bank. In all the countries where the currency has recently been rehabilitated very important questions of monetary policy will arise during the next few years, and national credit will largely depend upon the action of the central banks. It is for this reason that the League has asked that the external adviser to the bank should be retained. The plan of the Finance Committee is thus designed to assist Austria and to strengthen her credit where such support is most likely to be useful, while relieving her of Government supervision, which was in danger of becoming irritating, and would most certainly have been increasingly ineffective.

THE ILLUSION OF AN OIL SHORTAGE.

(BY A CORRESPONDENT.)

THE report* on oil supply and demand which has been presented to the American Government by the American Petroleum Institute is illuminating not only for the dead-weight of matter it contains, but also for the lively point of view it expresses. About ten months ago, when the American oil industry was being charged with waste and inefficiency, the President set up a Federal Oil Conservation Board. Immediately, the American Petroleum Institute appointed a Committee of Eleven to make an investigation of the oil industry and resources of the United States, ostensibly to help the Oil Conservation Board; really, we suppose, to get home with the "facts" first—in the public eye—and prevent the Oil Conservation Board from doing further damage. The committee was one of experts, and its inquiries were exhaustive and comprehensive; but being representative of all branches of the oil industry, its report was, in effect, a defence of the oil companies against all charges, a thorough-going justification of the existing order of things. It denied that there was waste in the production, transportation, refining, or distribution of petroleum and its products. It pointed out that an enormous measure of conservation had been effected by the development of the "cracking" process in refining, by which a higher yield of petrol was obtained from crude oil. It suggested that still greater conservation would follow upon more efficient utilisation of oil, as, for example, when the motor-car is made to go twice as many miles on the gallon of petrol. It declared that there was no imminent danger of the exhaustion of the oil reserves of the United States, and it assumed that a sufficient supply of oil would be available for national defence and essential commercial uses beyond the time when science will either limit the demand by developing more efficient use of, or substitutes for, oil, or will displace its use as a source of power by harnessing a natural energy. It made a bold estimate of some of the oil reserves in America, and a still bolder estimate of the demand for oil over a period of fifty years. It declared in effect that the oil industry would produce the goods; would satisfy every demand that could be imagined, provided only that it was left alone to its own devices, and was not interfered with by ignorant or malicious Conservation Boards. Conclusion 10 of its report read: "The availability of future petroleum supplies..... depends upon adequate incentives..... There must be (a) security in the ownership of oil lands, and of the right to lease; (b) conditions of exploration and development by owners or lessees permitting exercise of initiative, liberty of action, the play of competition, and the free operation of the law of supply and demand; (c) prices that will provide a return to producers, refiners, and distributors commensurate to the risks involved and the capital invested." In other words, "hands off" the oil industry. Provided it does not signify "hands up" to the public, the request need not be unreasonable.

Let it be admitted first that this Committee of the American Petroleum Institute has done good work in killing the bogey of an oil shortage. That bogey had been trotted out to scare the public whenever it was thought desirable to make the oil prices rise or prevent them from going down, and it was in the public interest that it should be put away. It is a clamant fact that every estimate that has been made of the oil reserves of the United States has been proved misleading. The first was made by Mr David Day in 1908, when Chief Geologist of the U.S. Geological Survey; the second in 1914 by Mr Ralph Arnold; the third in 1915 by the Geological Survey; the fourth in 1918 by Mr David White, then Chief Geologist; and the last by the Geological Survey and the Association of Petroleum Geologists jointly in 1921. Each was soon proved to be ridiculous. The last was shown in twelve months to be a gross under-estimate. The present committee avoided these mistakes. It stated that the major oil reserves of the United States lay in

* "American Petroleum: Supply and Demand."

some 1,100,000,000 acres of lands underlain by sedimentary rocks and not fully explored, in which geology indicated the existence of oil as possible; but it refused to indulge in speculation as to the number of barrels of oil to be recovered from these unknown reserves, or by deeper drilling under existing fields. Such an estimate would involve so many uncertainties as to be grossly misleading and inaccurate. But, taking known reserves, it did not hesitate to make the following estimates:—

	Barrels (of 42 U.S. Gals.)
(a) Oil recoverable in the U.S. by present methods of flowing and pumping from existing wells and proved acreage	5,300,000,000
(b) Oil recoverable after pumping and flowing cease by known processes, such as flooding with water, air and gas pressure, and mining	26,000,000,000
(c) Oil recoverable from oil shale reserves in the U.S.	108,000,000,000
(d) " " coal deposits " "	525,000,000,000
(e) " " lignite deposits " "	70,000,000,000
	734,000,000,000

Estimates (a) and (b) amount, on the basis of last year's world supply of 1 billion barrels, to a 31 years' world reserve, and the total to 734 years' world supply. These estimates, it should be understood, take no account of the probably vast supplies of oil hidden in the unexplored billion acres, or recoverable from deeper drilling in the proved fields of the United States. Nor do they include the enormous reserves of oil in the world's oilfields outside the United States. Of course, none of the oil will be recovered from shale or coal or lignite unless the price justifies that more expensive operation; but in the face of these conservative estimates of oil reserves in the United States alone, the idea of a world oil famine must go. The oil is there, and the American Petroleum Institute claims that the oil industry can be trusted to bring it to the surface and sell it to the public at a reasonable price.

Current supply and demand in the oil industry, according to the members of this Committee, cannot stay in balance, since the amount of each is constantly changing and cannot be foreseen. In other words, there will always be alternating periods of surplus and shortage. Price acts as the corrective. The problem of obtaining a supply of oil to meet the demand, it is argued, has always been one of economics, of price performing its normal function of increasing or decreasing production or consumption. "Through the mere functioning of price," the world has increased its production of oil in 25 years from 150,000,000 barrels a year to approximately 1,000,000,000 barrels. "There has not been a time from 1859 to the present (to quote the report) when the oil industry has had in sight a supply of oil which in and of itself assured the meeting of future demand over a protracted period. The oil industry has ever been, and still is, an industry founded upon 'finding.' The finding of the past has been accomplished by individual initiative, by the free movement of oil prices, and by the influx of new capital." This contention of the Committee is, in the main, perfectly just. It may be regarded as some proof of the free operation of the law of supply and demand in the oil industry that, making allowance for the change in the purchasing power of the dollar, petrol in the United States to-day is below its exchange value in 1913, while mid-Continent crude oil is only \$1.08 per barrel to-day, as compared with \$0.967 in 1913. But the Committee goes too far in seeking to prove that all is well with the existing order of things merely because oil prices are competitive and cannot be manipulated. Is there no waste? Are the methods of the oil-producer really perfect?

Waste in the oil business, says this Committee on page 5, is negligible, but on page 23 it declares that the physical wastage from oil well to consumer has been reduced to a figure slightly over 3 per cent. of the crude produced. Oil is particularly susceptible to natural losses, but we would not regard a loss of 3 per cent. as negligible when a billion barrels of oil are produced in the year. Between the well and the tank of a motor-car, the Committee reports, the oil product is handled probably 25 times; hence the loss. But why is it necessary to handle the oil 25 times? In any large organisation which controls the movement of oil from the well to the consumer and avoids middlemen, the oil is handled much less, and the loss is probably much lower. And surely unregulated,

intensive, competitive drilling in an oilfield makes for waste and puts up the costs of production? The Committee support the surprising view that in most fields intensive development with closely spaced wells will bring forth more oil than slowly developed fields with widely spaced wells. But at what cost? There can be no question but that an oilfield can be more economically developed by a large oil company which has control of all the acreage and can space wells scientifically, than by hundreds of "town-lot" operators, each engaged in off-setting the other in a mad rush to be the first to bring the oil to the surface. The result of wildly competitive drilling has often been that oil has been produced before there were tanks for its reception, that it has been poured into open earthen storage, and left to lose all its petrol or volatile contents. Just as "individual initiative" and "liberty of action" lead to waste in production, so they have led to waste in marketing in the duplication of petrol pumps above the public's requirements. We are told that it is the policy of the large oil groups to keep the price of oil as stable as possible; yet the American Petroleum Institute would have it jump about as widely as possible in order to correct the lack of balance between supply and demand, and the dire results of "individual initiative" and "liberty of action." We doubt whether wild-catting in the field of economics is as beneficial to the public as wild-catting in the fields of oil.

PROTOCOLS AND FACTS.

THE negotiations between the Allies and Germany make unhurried progress. Mr Chamberlain and M. Briand, having had abundant opportunities for intimate conversation at Geneva, have departed to their respective capitals. So, incidentally, has the Polish Minister, Count Skrzynski, a not unimportant figure in one stage of the discussions, to his. The invitation to the Germans to attend a Conference has been duly handed to Dr Stresemann, and all the odds are that the long-projected meeting will take place in the early days of October, either in Switzerland or somewhere not far distant. The conversations must clearly resolve themselves into two phases, the first concerned with the details of the Security and Guarantee Pact in the West, the second to the negotiation of treaties of arbitration between Germany and her Eastern neighbours. Though the two series of discussions are not technically linked together, it is certain that France will sign no Western Pact till arrangements satisfactory to her Polish and Czechoslovakian allies have been concluded. Although, moreover, there is no question of Dr Benes and Count Skrzynski taking part in the Western negotiations, they will be on the spot while the negotiations are going forward, ready to initiate, presumably without the physical presence of France and Britain, the conversations regarding arrangements in the East. The nature of those arrangements will naturally depend on whether the German Government is prepared to make the projected arbitration treaties all-inclusive. If it is not, all the indications are that the negotiations will prove abortive, and by their failure involve in the same disaster the hoped-for Pact in the West.

In so delicate and critical situation do the only actual security negotiations now in progress stand. Meanwhile, the League of Nations Assembly at Geneva has been discussing in the face of manifest difficulties the security problem on a universal scale. The difficulties have been due to the inability of delegates to resist the plea of the British Foreign Secretary that the impending discussions with Germany should not be imperilled by any dogmatism at Geneva as to diplomatic methods or the essentials of an arbitration treaty. The situation in the Assembly has had its delicate aspect, too. No one was quite prepared to find the British delegation so completely isolated as it has been, for no one realised how deep and unshakable is the faith not only of the Continental countries, but equally of

the Latin-American States to the principles, if not the actual details, of the Geneva Protocol. That instrument, instead of being happily chloroformed by the British statement to the League Council last March, has been held up by speaker after speaker in the Assembly in its opening days as the one goal towards which the League must set its face. Mr Chamberlain's endeavour to explain the real attitude of his country was a very qualified success. He was heard with a courtesy which the regard in which he is personally held will always ensure, but his audience was markedly unresponsive, particularly as it listened to a lecture on the psychology and constitution of the British Empire embodying ideas which the logical Latin mind is quite incapable of assimilating.

Where the British Foreign Minister did carry the Assembly with him, though even there with marked reluctance, was in his appeal that no action should be taken at Geneva now that could have even an assumed or indirect bearing on the coming negotiations with the delegates of the German Government. He said much less than he meant, but what was unspoken was quickly and accurately divined. Faced with at least the possibility of the conclusion of both Eastern and Western Security Pacts, involving the entry of Germany into the League of Nations, delegates to the Assembly could not take on themselves the responsibility of endangering by word or deed so hopeful a consummation. But that is as far as the Assembly has shown itself ready to go in the direction of regional pacts. At moments, indeed, it has looked like going a great deal further. M. Paul Boncour in his brilliant speech came near accepting the superficially attractive thesis that since the Protocol was unattainable in its present form the right method to adopt was the negotiation of a web of regional pacts the world over, all of them ultimately to be woven somehow into some universal instrument after all.

The doubts and dangers attending such a policy as that were exposed in able speeches by Dr Benes and Count Apponyi, of whom the Czechoslovak Minister is the prime negotiator of a regional pact and the Hungarian the representative of a country in a sense the victim of it. Their remarks recalled to realities an Assembly all of whose preconceptions run strongly in favour of a universal agreement. The regional method may be defensible, though it is a strange reversal of policy which makes the British Government its chief sponsor. It may prove practicable where no other method would be. But that conclusion is by no means warranted yet. Any series of regional treaties would leave obvious gaps. There might be clashes and overlappings as well calculated to provoke trouble as to avert it. If the universal method of the Covenant was sound, it is at least premature to conclude that there is no practicable method of developing the Covenant except by partial and regional accords.

Such a conclusion the Assembly appears to have avoided drawing. It has taken the view, with manifest wisdom, that the regional accord which certain important Powers are now endeavouring to negotiate is so important that even the League Assembly should stand aside for the moment rather than prejudice the discussions. To go so far as that is clearly right. To go further now is unnecessary and unwise. The Sixth Assembly is leaving the security problem alone. The Seventh Assembly must take it up afresh, and do that unfettered by inherited commitments. It may decide, after full deliberation, to pursue the regional method. It may, on the other hand, be convinced that last year's choice of the universal was the path of wisdom. The discussion of both those alternatives will be a different matter if Germany is at Geneva to take her part in it. Meanwhile, the discussion with Germany impends elsewhere. If that fact seems in a measure to tie the hands of the League of Nations, it can be claimed for the League that both by its restraint and by the methodical, if unspectacular, efforts the Assembly has been exerting to underpin its own expanding edifice, it has made no unworthy contribution to the common endeavour to consolidate the peace of Europe.

INSURANCE OF DOCTORS' BILLS.

IN the autumn of last year a very eminent physician, Lord Dawson of Penn, was invited to deliver an address before the Insurance Institute of London. He chose for his subject the absence of effective sickness insurance for the middle and professional classes, and he appealed to his hearers to devise means whereby that defect might be made good. He received a sympathetic hearing, though no great help. It was pointed out by actuaries and other experts in insurance that the cost of really comprehensive protection would be prohibitive, and even Sir Alfred Watson, with all his experience of National Health Insurance, saw great difficulties in forming any plan and in fixing any rates of premium. We do not suggest that the scheme of the Family Medical Services, Limited, of Manchester, supported on the insurance side by arrangements with underwriters at Lloyd's, is a solution of the very difficult problem described by Lord Dawson. The public-spirited organisers of this scheme—who have, to our knowledge, been engaged upon it for a long time past—would not claim for it more than that it is a pioneer means whereby experience may be gained, and, possibly, the inherent difficulties overcome, of granting to the middle and professional classes insurance against the costs of serious and unexpected illness. It is in that spirit it should be examined.

The insurance which is aimed at in this scheme is that of the family, not of individuals. The father, mother, and children must all come into it under one policy. And though there is no medical examination, there is a fairly close scrutiny, in the questions asked in the proposal form, of the health and medical history of the members of the family. The families for whom the rates to be charged are most favourable are those where the father is under 45, the mother under 40, and the children not under 12 years of age. No insurance is accepted on any age over 50 at entry or under two years. So that, primarily, the families catered for are those of parents in early middle age with children of school age. Nevertheless, children between two and twelve, and parents up to 50 may be accepted at increased rates of premium.

Insurance policies are designed to meet the requirements of those (1) who wish only to insure their general practitioner's fees in each year, and (2) those who, in addition to those medical fees, wish to provide for the costs of surgical operations. The principle adopted in each case is co-insurance—that is, the participation of the insured with the underwriters in the risks. This is a most necessary and reasonable requirement, for if all checks were removed on the running up of medical or surgical bills, the rates of premium charged would rapidly become prohibitive, and the whole project be ruined. In regard to the general practitioner's fees, the underwriters cover the excess over so much incurred in a year, and in regard to surgical costs of all descriptions, the insured must pay one-fifth himself. These stipulations serve two valuable purposes. They greatly reduce the claims upon the underwriters, and they permit of moderate rates of premium for the risks covered.

Let us take general practitioners' fees. The premiums are based on the fees charged per visit (7s 6d, 10s 6d, or 21s). If we assume that the family consists of father, mother, and two children at most favoured ages, and that their doctor's fee is 7s 6d a visit, then the annual premium would be 15s per person (less 5 per cent. for four persons)—that is, £2 17s. But on the principle of co-insurance, the first £4 of the doctor's bill would in this instance have to be borne by the insured, and the excess over £4 paid by the underwriters. The limit of cost for the family of four persons for the year would, therefore, be £6 17s for medical attendance and insurance premiums. For the higher rates of professional fees (10s 6d or 21s) the costs increase in proportion.

So far we have dealt only with medical attendance, not with surgical operations, nursing homes, and all those heavy charges which may with their unexpected severity crush a middle-class or professional family. These charges are provided for by a premium additional to that prescribed

for ordinary medical attendance. The benefits include consulting surgeons' and consulting physicians' fees, operating surgeons' fees, fees for administration of anaesthetics, nursing and nursing home charges, extra charges incidental to any operation covered by this insurance for night visits, mileage, detention, special visits, drugs, and surgical appliances. The underwriters only pay 4/5ths (four-fifths) of the sum stated below under each scheme for the cost of an operation and nursing and other charges, with a limit per annum per person, as it is an essential feature of the scheme that the interests of the underwriters and the insured should be identical in the matter of the cost of operation, so that the cost of insurance may be kept as low as possible:—

	Scheme 1.	Scheme 2.	Scheme 3.	Scheme 4.
	£	£	£	£
For minor operations	15	25	35	50
For major operations	25	50	75	100
For nursing and other charges	25	50	75	100
Limit per annum per person..	50	100	150	200
Additional premium per person 12/6	22/6	32/6	42/6	

The scheme, with its attention to detail, its provision for reductions of premium for families of over three persons, and its exclusion of those over 50 at entry, strikes one as thoroughly practical in design. It seeks to meet the needs of a class which is suffering from very heavy burdens in taxation and cost of living, and it should remove for those who become insured under it some of the financial terrors of daily life in these hard days.

THE DUTIES OF DIRECTORS.

(BY A LEGAL CORRESPONDENT.)

It is not often that a judgment is reported at the great length accorded in a recent issue of the *Law Reports* to Mr Justice Romer's judgment in the misfeasance summons against the directors and auditors of the City Equitable Fire Insurance Company, which came before him earlier in the year. A judgment which, apart from the arguments and the Court of Appeal judgments, runs into 76 pages, and in a publication read only by lawyers, has little chance of perusal by directors of companies; and yet embedded in it are statements regarding the responsibilities of directors which it is worth their while to have in mind.

Here is one, commenting on the assertion, rather loosely made, that directors are trustees. "If," said Mr Justice Romer, "this means no more than that directors, in the performance of their duties, stand in a fiduciary relationship to the company, the statement is true enough." But if used as an analogy to indicate what those duties are, the statement becomes "wholly misleading." For the duties of directors vary widely, according to the character of the company which they direct. For example, "the larger the business carried on by the company, the more numerous and the more important the matters that must of necessity be left to the managers, the accountants, and the rest of the staff." Parliament, as Lord Macnaghten once pointed out, has not formulated precise rules for the guidance or embarrassment of business men in the conduct of business affairs, and courts should do no more than deal with each case on its particular facts. And so we get a summary statement of a director's duties in Mr Justice Romer's dictum that to ascertain those duties "it is necessary to consider not only the nature of the company's business, but also the manner in which the work of the company is, in fact, distributed between the directors and the other officials of the company, provided always that this distribution is a reasonable one in the circumstances, and is not inconsistent with any express provisions of the articles of association."

Nevertheless, there are rules of general application. It goes without saying, for example, that a director must act honestly. Also, he must "exercise some degree of both skill and diligence." But this latter is a rule which may, and does, and, indeed, always will, give rise to difficulties in its application. As to the necessary degree of skill, the reported cases give some help for general guidance; but all that Mr Justice Romer could extract from them was that "a director need not exhibit in the performance of his duties a greater degree of skill than may reasonably be expected from a person of his knowledge and experience. A director of a life insurance company, for instance, does not guarantee that he has the skill of an actuary or of a physician." Again, "directors are not liable for mere errors of judgment." The possession of the necessary skill, however, is not so frequently called in question as in the exercise of the requisite diligence. It is (as was the case with the City Equitable Company) on the point of alleged negligence that litigious controversy is more often expended. And in the last resort that resolves itself into an examination of the circumstances of the particular case in the light of common sense and knowledge and experience. Yet there are some guideposts. Directors discharge their duty of diligence if, in the words of Lord Lindley, "they act with such care as is reasonably to be expected from them, having regard to their knowledge and experience."

Mr Justice Romer is more specific as to the extent of this reasonable care. "A director," he says, "is not bound to give continuous attention to the affairs of his company. His duties are of an intermittent nature, to be performed at periodical board meetings and at meetings of any committee of the board upon which he happens to be placed. He is not, however, bound to attend all such meetings, though he ought to attend whenever in the circumstances he is reasonably able to do so." Further, "in respect of all duties that, having regard to the exigencies of business and the articles of association, may properly be left to some other official, a director is, in the absence of grounds for suspicion, justified in trusting that official to perform such duties honestly." To interpret this in more detail, directors, for example, as Mr Justice Chitty once ruled, are not bound to examine entries in the company's books. In the argument in the City Equitable case an effort was made to establish the proposition that directors are not bound to inquire into matters which are not brought before the board, unless they are put upon inquiry by facts being brought to their attention which call for explanation. Mr Justice Romer, however, refrained from adding this in terms to his list of things which were outside a director's duty of diligence.

With regard to a director's responsibility in that important department of his duties, the signing of cheques, Mr Justice Romer relied on a quotation from a judgment of Vice-Chancellor James:—"A director who signs a cheque that appears to be drawn for a legitimate purpose is not responsible for seeing that the money is in fact required for that purpose, or that it is subsequently applied for that purpose, assuming, of course, that the cheque comes before him for signature in the regular way, having regard to the usual practice of the company." But the director must inform himself of the purpose for which and the authority under which the cheque is signed.

The above are general rules; but their interpretation is sometimes complicated by special provisions in articles of association. There was such a special provision in the decision in the case would doubtless have been different. An article provided that the directors, auditors, and officers should not be held liable for any loss, misfortune, or damage which might happen in the execution of their offices, "unless the same should happen by or through their own wilful neglect or default." A great part of Mr Justice Romer's judgment was occupied by an interpretation of these words "wilful neglect or default." And the main difficulty—though the chief safeguard of the directors in this case—lay in the meaning of the word "wilful." The authorities were overhauled at great length. There was, for instance, Lord Justice Bowen's definition that the word "implies nothing blameable, but merely that the person of whose action or default the ex-

pression is used, is a free agent, and that what has been done arises from the spontaneous action of his will. It amounts to nothing more than this, that he knows what he is doing, and intends to do what he is doing, and is a free agent." In commenting on those words in a later case, Lord Justice Lopes pointed out that they did not contemplate an honest oversight. Mr Justice Romer shows that they need amplification, and he has arrived at the conclusion that the meaning of the adjective is to be ascertained in reference to the noun. To put a long disquisition in a sentence, it comes to this: Wilful negligence does not mean simply doing wilfully—deliberately—an act which happens to be negligent, but doing wilfully, deliberately, an act known by the doer to be negligent. This is not a hair-splitting of words, but a real distinction. A man may act with full intention, and his faculties all about him, and what he does may be negligent, but he does not at the moment realise that it is negligent; that is not wilful negligence. But if what he does is, and must be, known to him at the time as a negligent act, and he does it fully intending it, that is wilful negligence. I ought to refer to a document; it is negligent not to do so; but I don't think it is part of my duty to do so, and I deliberately do not; that is not wilful negligence. I ought to refer to a document; it is negligent not to do so; I know it is my duty to do so, and I deliberately do not; that is wilful negligence.

CANAL COMPANIES' RESULTS.

In giving our annual review of a group of representative canal undertakings, a brief description of the undertakings dealt with may be of interest. The Birmingham Canal Navigations is an amalgamation of four concerns constructed under Acts of Parliament passed between 1768 and 1818. The total mileage is approximately 160 miles. The Grand Junction runs from Braunston, Northamptonshire, where it connects with the Oxford Canal, to Brentford, Middlesex, and the total mileage, including the branches, is 189 miles. The Manchester Ship Canal, whose traffic is far in excess of those of the other four companies, was opened in 1894, and is 35½ miles in length, though the company also owns the Bridgewater Canals, which are 51½ miles long. The Regent's Canal and Docks Company's undertakings consist of the Regent's and Hertford Union Canals, with a mileage of 10½ miles, and the Regent's Canal Dock at Limehouse. The Sharpness New Docks and Gloucester and Birmingham Navigation Company, to give the undertaking its full title, was incorporated in 1793, and owns the Gloucester and Berkeley Canal and the Worcester and Birmingham Canals, 46 miles in all; it leases the Droitwich Canal and the Droitwich Junction Canal, and owns a controlling interest in the Severn and Canal Carrying Company.

In times of industrial depression transport services are among the first to suffer. The railways afford an indication of this, last year having provided for them a not altogether happy experience. Thus, it is the more surprising to find that the accounts of a group of representative canal companies disclose that operations in 1924 were attended with eminently satisfactory results.

Our first table shows the gross receipts of these concerns:—

	1913.	1920.	1921.	1922.	1923.	1924.
	£	£	£	£	£	£
Birmingham..	191,345	306,221	254,792	236,516	233,956	234,539
Grand Junction	101,680	145,619	128,960	144,993	138,735	142,563
Manch. Ship..	1,077,018	2,448,848	1,861,132	1,964,813	1,984,476	2,060,906
Regent's.....	81,275	127,840	111,296	113,086	113,264	127,309
Sharpness	85,308	97,017	71,764	89,575	88,810	90,803

It will be seen that in every case gross receipts increased, and last year's figures were well above those for 1913. They are, however, still lower than those of 1920, and

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
67 Milk Street.

BUENOS AYRES: HAVANA:
99 Florida. Pedro Gomez Mena Bldg.

One of the largest and strongest Banks in America. Resources of \$300,000,000.

Special Representative:
24, OLD BROAD STREET, LONDON.

in the case of the Birmingham they are lower than in both 1921 and 1922. The Grand Junction's 1924 receipts, too, were below those of 1922.

Our next table shows the expenditure on operations:—

	1913.	1920.	1921.	1922.	1923.	1924.
	£	£	£	£	£	£
Birmingham..	88,061	224,579	194,258	149,551	145,929	130,277
Grand Junction	50,275	100,939	76,512	84,598	83,329	85,052
Manch. Ship..	720,941	1,659,006	1,324,514	1,186,326	1,194,103	1,229,329
Regent's.....	38,992	89,899	71,182	73,415	64,106	69,141
Sharpness	33,523	60,656	53,901	49,435	48,218	49,966

The feature here is a saving in expenses by the Birmingham Company, which reduced its expenditure from £145,929 to £130,277. In all other cases the figure increased as compared with 1923. The Birmingham has a particularly good economy record, having continuously reduced its expenditure since 1913.

Our third table gives the net profits realised:—

NET PROFIT after PAYMENT OF DEBENTURE INTEREST, &c.

	1913.	1920.	1921.	1922.	1923.	1924.
	£	£	£	£	£	£
Birmingham..	68,532	33,090	23,646	46,906	56,130	72,366
Grand Junction	45,405	36,509	44,146	51,825	48,818	51,510
Manch. Ship..	34,742	465,425	203,511	398,134	464,766	432,170
Regent's.....	15,495	16,092	15,504	20,848	20,057	27,354
Sharpness	19,573	9,904	8,371	14,067	14,888	15,482

The Manchester Ship Canal is the only undertaking whose net profit for 1924 is lower than in the previous period. This, however, was probably partly due to the national strike of dock workers which occurred in February, 1924, during which the directors state "there was a complete cessation of work at the Manchester Docks. An adverse influence was also exerted by the railway strike in January, 1924, and also by the reductions in railway rates, which resulted in corresponding reductions in the proportions receivable by the Canal Company of such railway rates. In 1923, too, under the heading of miscellaneous receipts, was included £56,400 for arrears of dues and tolls accrued in 1916-1922, payable as the result of a judgment obtained against traders on the Weaver Navigation. Therefore, although net income declined from £869,875 to £857,739, owing to the fact that payments in respect of rentals and other fixed charges and interest on loan capital absorbed £425,569, against £405,109, the net profit has fallen from £464,766 to £432,170. Still, despite the fact that compared with 1923 profits show a decline, they are very considerably above the 1913 level, as, indeed, is the case with all the undertakings, with the exception of the Sharpness. The Birmingham had a particularly good year, its profit being £72,366, compared with £56,130 in 1923, with £23,646 in 1921 and with £68,532 in 1913. The Grand Junction's results, too, were satisfactory, net profits having gone up from £48,818 to £51,510, while the Regent's rose from £20,057 to £27,354, and the Sharpness' from £14,888 to £15,482.

The following are the principal items in the balance-sheets at end of 1923 and end of 1924:—

	Capital.		Balance of Capital Account.	Reserves.	Cash & Investments.	Debtors & Loans, Less Creditors.
	Debtors.	Ord. & Pref.				
Birmingham, 1923	797,400	2,439,575	Dr 265,844	..	36,244	31,695
1924	797,400	2,439,575	Dr 265,788	..	43,856	31,339
Grand Junction, 1923	150,000	1,223,700	..	30,093	40,569	20,017
1924	150,000	1,223,700	..	24,217	30,142	23,668
Manchester Ship, 1923	8,432,300	9,061,230	Dr 496,511	..	44,280	349,965
1924	8,432,300	9,061,230	Dr 496,511	..	75,761	692,866
Regent's, 1923	842,284	1,358,100	..	4,652	28,041	2,555
1924	842,284	1,358,100	..	3,167	29,761	Dr 3,442
Sharpness, 1923	620,658	633,283	..	103,087	30,403	49,774
1924	617,158	633,283	..	97,043	15,524	56,281

In no case has there been any alteration in the amount of ordinary and preference capital. The Manchester, however, increased its loan and debenture capital by £806,085 by borrowing at 5 per cent., and the Sharpness reduced its loan capital to a small extent. The Manchester made during the year a substantial allocation to reserve when compared with the previous year. But apparently the question of reserves of the canal undertakings is one which must be considered in the light of the particular industry. They certainly appear to be rather small. In some cases it may be that improvements have made assets of more value than those shown in some balance-sheets.

The following table shows a record of dividends during the past few years:—

	1913.	1920.	1921.	1922.	1923.	1924.
Birm'ham Canal, cons.	% 4	% 4	% 4	% 4	% 4	% 4
Grand Junction, ord. stk.	3	3½	3½	4	4	4
Manchester Ship, ord. £10	nil	5	1½	4	5	5
Do pref. £10	nil	5	3	5	5	5
Regent's, ord. stk.	1½	1½	1½	1½	1½	2
Sharpness, ord. stk.	nil	nil	nil	nil	nil	nil
Do 5% "A" pref.	5	5	nil	5	5	5
Do 5½% "B" pref.	5½	nil	nil	nil	2½	5½
Do 5% "C" pref.	2½	nil	nil	nil	nil	1½

The improved results are reflected in the distributions to stockholders. The Regent's, for instance, paid 2 per cent., against 1½ per cent. for 1923; while 5½ per cent., compared with 2½ per cent., was distributed on Sharpness "B" preference, and the "C" preference received 1½ per cent., against nothing in the previous year. In spite of the reduction in net profits, the Manchester's dividend was maintained at 5 per cent.

Our final table will enable the investor to see at a glance how these securities have fluctuated in value over a period of years, and the yields obtainable to-day:—

	Amount.	Share or Stock.	Highest Price 1898-1922.	Price July 30, 1914.	Price End Aug., 1924.	Price Sept. 17, 1925.	Yield.
Birm'ham Canal, cons.	2,439,575	Stock	146½	99	81½	77½	5 2 3
Grand Junction, ord.	1,130,000	..	152½	90	24	75	5 6 9
Manchester Ship, ord.	4,000,000	10	7	1½	7½	7½	6 6 0
Do 5% pref.	4,000,000	10	7	1½	8½	8½	6 1 3
Regent's Canal, ord.	1,358,100	Stock	72½	25½	29½	40½	4 18 9
Sharpness New Docks, &c.	303,782½	..	24½	8	17	13	Nil
Do pref. "A," 5% (cum.)	109,500	..	123½	80	72½	71	7 0 9
Do pref. "B," 5½%	103,000	..	110	58½	60	54	10 3 9
Do do "C," 5%	120,000	..	99	37½	29	29	4 6 8

Some of the yields shown above are fairly generous, particularly on Manchester ordinary shares, which return £6 6s per cent., while the 5 per cent. preference yield £6 1s 3d, and Sharpness "A" preference £7 0s 9d per cent. The "B" preference stock of the latter returns as much as £10 3s 9d, whereas the "C" preference gives only £4 6s 3d per cent. It will be observed that the only company whose stocks are valued at a figure in excess of the highest levels recorded from 1898-1922 is the Manchester.

From the investors' standpoint our waterways system presents many interesting features. To what extent its development has been retarded by the iron heel of directors of other methods of transport opens up a field for discus-

sion. But, however we may speculate over these things, it is patent that the canal must still be regarded as an important medium of transport. Indeed, it must be granted that artificial shipways, as is evidenced by the case of the Manchester Ship Canal, can be sound economic propositions. Given enlightened and progressive management, it is difficult to see why our canal system should not once again become popular. When so much is heard on all sides of the necessity for utilising to a greater extent our water resources, canals may possibly one day serve other purposes as well as transport.

Notes of the Week.

Twelve Months of the Dawes Scheme.—The Agent-General for German Reparation payments has published a statement of results during the 12 months ended August 31st last, during which the Dawes scheme has been in operation. These show that the Reparation Commission's recent official statement that "Germany is faithfully fulfilling her Reparation obligations as they are at present fixed" continues accurately to represent the situation. The Dawes Committee envisaged a total payment by Germany of 1,000 million gold marks in the first year, to be obtained from the proceeds of the external loan and part-interest (200 millions) on railway bonds. The actual balance-sheet is as follows:—

RECEIPTS AND PAYMENTS FOR FIRST ANNUITY YEAR
(On cash basis reduced to gold mark equivalents).

Receipts.	Million Gold Marks.	Payments.	Million Gold Marks.
Cash withdrawn from proceeds of German External Loan, 1924	800.00	Payment to various Allied countries	789.0
Interest on railway bonds	200.00	Expenses of: Reparation Commission, 5½% Rhineland High Commission, 9½% Military Commission of Control, 7½% Naval Commission of Control, 0.07% European Commission of the Danube	22.8
Exchange differences and interest received	05	Service of German External Loan	0.2
		On account of administration cost of Office for Reparation Payments, and discount on railway payments in advance	77.5
	1,000.5	Cash in hand, Aug. 31, 1925 ..	3.9
			107.0
			1,000.5

Germany has enjoyed a virtual moratorium during the 12 months, four-fifths of her total payments being provided out of money borrowed from other countries. During the next year she must find 1,220 million gold marks, from interest on railway bonds and industrial debentures, and from the sale of railway shares. Her internal resources will be drawn on to a steadily increasing extent, until the "standard" level of payments of 2,500 million gold marks per annum is reached four years hence. An analysis of the value of Reparations received so far by the chief Allies reveals the following significant facts:—

(Million Gold Marks.)

	To Great Britain.	To France.	To Italy.	To Belgium.	Total, Four Countries.
Arising on account of—					
Reparation Recovery Acts, &c.	155.2	25.1	..	..	180.3
Cost of armies, requisitions, &c.	30.2	144.2	..	..	184.4
Delivery of dyestuffs, &c., and receipts in kind	4.5	227.3	60.4	72.8	365.0
Total	189.9	396.6	60.4	93.6	740.4

The inclusion of miscellaneous deliveries to other Allies, valued at 48.6 million gold marks, and of expenses of various Commissions and the service of the external loan (as shown in the balance-sheet above) brings the total payments to 893.4 million gold marks. Of the amounts credited to individual Allies, France has received 50 per cent., Great Britain 24 per cent., Belgium 12 per cent., Italy 7½ per cent., and the other Allies 6½ per cent. It should be noted that under the Paris Agreement of last January, America is to have 2½ per cent. of Reparation receipts, to be contributed proportionately by other participants out of their own shares. As regards the four largest recipients, 49 per cent. of the total transferred is

accounted for by deliveries in kind, 26½ per cent. has gone in occupation expenses, &c., while 24½ per cent. has been produced by the various Reparation Recovery Acts (in Great Britain's case over four-fifths of the total has been thus derived). Summing up, we may say that in the first year of the Dawes scheme events have moved according to plan, and without apparent friction. Gratifying progress has been made with the task of stabilising the German currency and balancing the Budget. The proceeds of the external loan have been absorbed into the German economy, and subsequently used for financing the year's programme of deliveries without producing currency inflation. The Transfer Committee set up under the scheme has had an opportunity to organise its work and establish certain necessarily tentative precedents based on the year's experience. The future must be left to show whether Germany can, in fact, make continuing payments from her own resources on the scale contemplated, and whether the much larger transfers which are to be made in later years can actually be effected without unduly disturbing trade interests in the recipient countries.

More "Safeguarding" Committees.—Two more Committees of inquiry are announced into "distressed industries" which have made claims for protection in terms of the Government's White Paper. They are to deal with brooms and brushes and aluminium hollow ware. The other day a committee was set up to consider the circumstances of wrapping paper, and it may be convenient to call to mind the whole brood of inquiries which are the progeny of the White Paper. First, there were lace and embroidery, which were made subject to import duty in this year's Finance Act. In March we had a Committee on superphosphates, in April Committees on gloves (leather and fabric) and glove fabric and on gas mantles. In the case of superphosphates, two of the three members of the Committee reported against the imposition of any duty. No reports of the deliberations of the other committees have been published, though the inquiries were completed some time ago. It may, perhaps, be conjectured that no reports of the committees will be published until the Cabinet has decided upon its course of action regarding them, and the House of Commons is sitting and ready to pass a Finance Bill embodying any new duties which may be recommended. This would mean postponement until November, by which time, perhaps, the cases of wrapping paper, brooms and brushes, and aluminium hollow ware may have been reported upon. So far no industry of major importance has become the subject of a committee of inquiry. The troubles of iron and steel, too big and dangerous a basic industry to be dealt with in this hole-and-corner way, were shelved by reference to the Standing Committee on Trade and Industry, presided over by Sir Arthur Balfour. Yorkshire, we understand, anticipates that a Committee on Wool will be set up, though for this there is as yet no official authority. The apparent policy of holding back reports of committees—whatever they may be—until the House reassembles may be designed to prevent importers from anticipating new duties, as was done this year in regard to the re-imposed duties on imported motor-cars.

France and War Debts.—In a speech at Birmingham on Wednesday, the Chancellor of the Exchequer made the important announcement that he had received a letter from M. Caillaux stating that "the French Government accept, in principle, the figure of £12,500,000 as the measure of their obligation to us, subject to the further discussion of various other points, some of which are of considerable importance." The French acceptance "in principle" is as wise as it is welcome. The definite signature of an agreement must await the return of M. Caillaux and his debt-funding mission from Washington. This mission, which consists of M. Caillaux, four senators, and four deputies, left France on Wednesday.

A New Slavery Convention.—The British Government sprang a mild surprise at Geneva when Lord Cecil introduced unexpectedly in the Sixth Commission of the Assembly an international convention on slave traffic.

The existence of the League has made the negotiation of such instruments comparatively simple, for without the necessity of calling a special conference any secondary question can be discussed during the progress of the Assembly, and a convention adopted and signed before the delegates leave Geneva. The British draft is moderate enough to command fairly general approval, and there should be a good prospect of its safe voyage through the Commission and the Assembly itself. The discussions on the League Slavery Commission have shown how fully justified the present Minister for Labour was when, sitting as a delegate for New Zealand at the Third Assembly in 1922, he prevailed on the League to take up the question of slavery seriously. The existing international agreements do not cover the ground, and from parts of them certain powers have dispensed themselves by substituting other accords by no means satisfactory. The case for a new convention is, therefore, strong. The only question is whether the drafters of the new protocol, in their desire to secure for it unanimous approval, have not gone rather to an extreme of moderation. If the International Labour Office does, as Lord Cecil suggested, take up the question of forced labour, there may be some justification for saying so little about it in the convention. But it seems unfortunate that the article providing for the "eventual emancipation" of all slaves could not somehow have been strengthened, and the hint that the provision by which the transport of slaves at sea was to be regarded as piracy might be watered down seems a little uncalled-for.

Iron and Steel Production in August.—As was expected production of pig-iron and steel in the holiday month of August was much less than in July, the actual figures issued by the National Federation of Iron and Steel Manufacturers showing production of pig-iron as 444,500 tons, compared with 492,700 tons in July, and of steel ingots and castings as 477,100 tons, compared with 590,400 tons in July. The corresponding figures for August, 1924, were: Pig-iron 588,900 tons and steel 527,500 tons. In the case of pig-iron, this figure is the lowest since September, 1922, and in the case of steel the lowest since July, 1922. The number of furnaces in blast was 136, the same as at the beginning of the month, five having been relit and five damped down or closed during the month. Imports of iron and steel continue to increase and exports to decline, the imports in August amounting to 232,800 tons, compared with 213,000 tons in July, and exports to 287,800 tons, compared with 306,600 tons. In spite of already low prices, further cuts were made in certain lines during the month, and the Board of Trade's price index number for iron and steel fell from 124.5 to 123.2, while the index number for all commodities fell by only 0.5 from 157.5 to 157. The position of the iron and steel industry in this country is in marked contrast to the position in France, where production continues to rise steadily. August figures are not yet available, but in July record outputs were obtained both for pig-iron and steel. Pig-iron output amounted to 712,800 tons and steel to 615,600 tons. Pig-iron output has consistently exceeded that in this country for over a year, while the steel production has surpassed that in this country since June last. Exports of iron and steel from France are also rising, and in June amounted to 318,800 tons, exceeding those from this country for the first time. The output of coal in the four weeks ending August 29 averaged 3,899,000 tons per week, compared with a weekly average of 4,697,100 in July, the decline being partly due to the holidays. Exports of coal accordingly declined, and amounted to 3,272,100 tons, compared with 4,442,300 tons in July and 5,074,700 tons in August, 1924. Of the total, 585,800 tons went to France, 467,000 tons to Italy, 237,200 tons to Germany, and 220,300 tons to Denmark.

Bank of England.—The half-yearly general Court of the Governor and company of the Bank of England was held on Thursday. The Governor, the Right Hon. Montagu Collett Norman, announced that the profit for the half-year ended August 31st, after providing for all contingencies, was £698,889, making the amount of the "rest"

at that date £3,721,981. A dividend of 6 per cent., less income-tax, will be paid, which will leave the "rest" at £3,023,436. In reply to a vote of thanks, Mr Norman gave some interesting details of the rebuilding operations of the Bank's premises.

Co-operative Trade.—Some inkling of the international and Empire developments now taking place in the co-operative movement is given (writes a correspondent) in the accounts of the Co-operative Wholesale Society for the half-year ended June 27th, now being circulated to the 1,267 society members of the institution. The item of "export £130,139" among sales of £37,160,319 is of small amount, but it marks a beginning which is now being advanced by the sole agency for the supply of British herrings to Russia having been fixed with the C.W.S. by the Soviet trading committee in London, the export of cycles to Scandinavia, and the despatch of English co-operative productions to the co-operative societies of the Continent. The society's investments in Danish State Loan Bonds and the presence of its dairy produce agency in Copenhagen suggests its strong connections with that country. It has investments in the New Zealand Produce Association and nearly £30,000 in the Russo-British Grain Export Company, from which it is now receiving a cargo of Russian wheat at its Avonmouth flour mill. During the six months it exported £11,877 worth of groceries and cloth to Overseas Farmers' Co-operative Federations, and considerable developments are in progress. The supplies from the English productive works of the C.W.S. for the same period were £13,563,668, these being a third of the total sales. The output of the flour and provender mills accounted for £5,767,143 of this; the three soap works for £1,085,735; the margarine works for £1,167,416; the seven boot works and four tanneries for £1,207,809; and the four preserve works for £655,715. The greatest successes have been in the manufacture of foodstuffs, and the total grocery is 28 out of the 37 millions of the turnover. Curiously enough, the textile works in Lancashire and Yorkshire have been the least successful, and although the four woollen mills have lately increased their output by 21 per cent., there was a loss of £32,766, after reckoning interest on capital and depreciation allocations. The three weaving sheds gave a better result on a decreased trade of £12,435. The aggregate turnover of the woollen mills and weaving sheds was £434,300. The seven clothing factories made a surplus of £6,008 on a trade of £222,278. During the six months the C.W.S. sold 1,552,696 pairs of boots from its own factories, and 26,168,838 lbs of tea from the tea department, which it organises jointly with the Scottish C.W.S. The net result of the half-year's operations was a surplus of £487,444—after payment of interest charges and depreciation on property. The societies will receive £281,274 of this in the form of a dividend at the rate of 2d in the £ on purchases. The C.W.S. had deposits and withdrawals totalling £290,827,808, as compared with £263,936,270 in the first half of 1924, and made a surplus—the co-operative term for the ordinary meaning of "profit"—£69,342. This is being transferred to the reserve fund, which is being steadily restored to the 1920 level, from which it was reduced in 1921. The trade union associations with the C.W.S. Bank continue to increase, and there are now 8,617 current accounts open with the head offices and branches of trade unions, these being eight times as many as the accounts of co-operative societies. There are now only 43 distributive societies which do not bank with the C.W.S. Bank, which is developing the number of current individual accounts as an important section of the business. While there are no great signs of a big revival, the progress of the Manchester and London districts suggests a return to the figures of the boom year before long, although the entire recovery is being delayed by the condition of the leading industries of the North-East coast. Although the decrease of the Newcastle branch was only £4,541 on a trade of five and a-half millions, it contrasts keenly with the more than three millions increases recorded at the other centres of the society.

The Wane of Wheat-Growing.—The agricultural returns recently issued, revealed a further reduction of the wheat area of England and Wales by 46,000 acres. The official comment is that that total of 1,499,000 acres is the smallest returned since 1904, a well-intentioned warning against exaggerated alarm. Nevertheless, citation of exceptional seasons does not affect the unmistakable evidence of a steady decline of wheat-growing. The measure of the decline is not to be found in a comparison with the war-years. In 1918 the area put under wheat was 2,557,000 acres. This has commonly been regarded as a great achievement, but it may be—as, indeed, it has been—unduly magnified. It was the result of a combination of inducement with compulsion such as, under normal conditions, is never likely to recur. But it represented, in fact, an addition of less than 400,000 acres to the wheat area of 1915, which was planted without any direct aid from the State. The truer reading of the war record is to regard it as representing the maximum which the most extreme efforts of the State could persuade farmers to grow. To appraise the present tendency a comparison should be made with the return for 1914. In June of that year the acreage of wheat, mainly planted in the autumn of 1913, was 1,807,000 acres. The loss, therefore, is 300,000 acres, or 17 per cent., as compared with the pre-war position. The reduction of the arable area is also about 300,000 acres, so that wheat-growing has declined relatively to a greater extent than the bare figures indicate. In 1914 wheat occupied 16½ per cent. of the arable area, and in the present year it occupies 14 per cent. A discussion on the position and prospects of corn-growing took place in the agricultural section of the British Association at Southampton. It was then pointed out that there is no foundation for the popular belief that arable cultivation depends on wheat-growing. During the past 50 years the acreage of wheat has decreased by 59 per cent., while the arable area has decreased by 28 per cent. It is evident, therefore, that an increased production of wheat does not necessarily involve an increased arable area, and an increase of arable land does not necessarily involve an increased production of wheat. Many of those who claim to speak on behalf of farmers base their case for State assistance for arable farming on the argument that it would make the country less dependent on imported wheat. There is no support for the argument in the recent history of farming. There has been a marked tendency to grow more oats and less wheat. Fifty years ago wheat occupied 23 per cent. of the arable land, and oats 11 per cent. In the present year, while wheat is reduced to 14 per cent. oats have increased to 17½ per cent. The substitution of oats for wheat is not readily explicable. It was suggested at the British Association that on the whole the price of oats has been more stable than that of wheat, and that the produce of an acre of each cereal is worth on an average about the same in the market. On the other hand, wheat is a more marketable commodity than oats. About 75 or 80 per cent. of the wheat crop is sold, whereas of the oat crop the proportion marketed probably does not exceed 30 per cent. It would appear that the dominating factor is value for consumption on the farm rather than value at the market. If this be so it would lead to the conclusion that the maintenance of the wheat acreage depends on the adaptability of the crop for animal rather than for human food. There are those who look forward to a world shortage of wheat to raise the price to a level which would induce farmers to grow it more extensively, and, indeed, this view found expression at the British Association meeting. The particular form of prophecy has not found much favour at the British Association since the famous address of Sir William Crookes from its presidential chair. Never was a prophet more completely confounded by events, and those who assume his mantle might take warning from his experience.

Control Board for the Cotton Trade.—Our Manchester correspondent writes:—During the war the Board of Trade established a Control Board for the cotton industry. The chief work of the Board was to limit production in spinning and weaving when difficulties were experienced in obtaining adequate supplies of raw material. During the last two or three years, while trade has been so

depressed in Lancashire, there has been a suggestion that the industry itself should form a Board to regulate output according to the state of demand. The Provisional Emergency Committee has been particularly active in this agitation. It has been realised, however, that to secure control the help of the trade unions would have to be obtained, and it has been suggested that if particular firms refused to carry out the recommendations of the proposed Board it would be possible to withdraw the labour from such mills. Legal opinion, however, has so far been against a scheme of this kind, but Sir Charles Macara, the chairman of the Provisional Emergency Committee, has now stated that Mr Cyril Atkinson, K.C., M.P., has outlined a scheme, which has also been submitted to Sir John Simon. These two gentlemen have now made a statement to the effect that if a mill failed to comply with the requirements of the Board, the decision of the Board that labour should be withdrawn from such a mill by procuring the workpeople to give the proper notice would not involve any of the parties to the agreement in any liability whatever. It is rather remarkable that a few months ago the Master Spinners' Federation obtained the opinion of Sir John Simon on this point, and on that occasion his view was that such action would be illegal. The Master Spinners' Federation is not satisfied with the new position, and it is understood the president, Mr F. Holroyd, is about to have an interview with Sir John Simon on the matter. It is almost unnecessary to state that a scheme of control on the lines indicated above would have serious consequences, and it may be taken for granted there would be considerable opposition from many people connected with the trade.

Rubber Market Conditions.—A Stock Exchange correspondent writes:—The present buying movement in rubber shares, one of the outstanding features of the Stock Exchange markets, stands upon a firmer basis than any of the similar movements have occupied for the past five years. It may be recalled that in the wild rush of what has come to be remembered as "Mad Monday," early in July, every constituent of a boom was present. The market developed such wildness that brokers found it a matter of physical impossibility to carry out orders which descended like an avalanche, to buy shares at any price which happened to be current. The record of that mad Monday's markings made, afterwards, a lamentable reflection upon the avid appetite that seized the public, and which led to the purchase of shares at what seemed to be fancy figures. There was a sharp reaction upon the notification that an unexpected amount of uncouped rubber had been released early in August. The price of raw rubber reacted as the proportion of exportable allowance became raised by 10 per cent. on August 1st. Since that time the market has been steadily recovering its poise. Prices are now near, or in some cases above, the levels which they reached a couple of months ago. The speculative investor is in control. A certain amount of gambling takes place, but this is confined mainly to the professional operators, who are always hanging on the skirts of any market which happens to be popular. The real strength of rubber shares rests not in the buying for differences, but in the absorption of shares selected with discrimination by people who are paying for them. Nor is the business confined to speculation in 500 "penny bazaar" shares at two or three shillings each. The public have evidently arrived at the conclusion that there is money in rubber shares from the point of view of dividends. Daily dividend announcements which have been made this week, showing, in many instances, substantial improvements over the results of a year ago, have captured the imagination of the real purchaser. He is putting not £50 or £100 into the industry, but is selling Home Railway stocks, to take one example, and reinvesting hundreds in the best-class rubber shares. To such an extent has this been carried that the supply of £1 shares has run short. Previous buyers require to be tempted if they are to part with their shares, and, although the market is not in a runaway condition, people are taking a very optimistic view, and are prepared to pay for it. This double set of conditions enables a certain amount of business to be done in the £1 shares, a good many of which are in the hands, of course, of holding companies and of firms where money is

generally employable in new ventures. This adds a source of supply to the market, though, when all is said and done, the prospective purchaser finds it extremely difficult to spend anything like five thousand pounds in a line or two of particular rubber shares. He may be able to pick up a couple of hundred of this, and 150 of that, with 300 of something else, but to invest five thousand pounds in a single company is no easy matter, though in the 2s shares a greater flexibility of market exists. It has often been urged that the rubber market would be greatly assisted if a number of the companies with comparatively small capitals were to amalgamate into one large concern, so enabling a more liberal supply of shares in the latter than can possibly be the case when there are six or a dozen companies, each with modest capitals, the shares, as a rule, held tightly by their possessors. Rubber directors are not, however, as a rule, inclined to look kindly upon amalgamations. If they were, the difficulty of dealing would be rendered considerably less. So far as the outlook for the raw material is concerned, the prospect is promising enough. What is still more to the point, the dividends in course of declaration are as good as anybody can wish, and, with these two factors to stimulate the public demand, the rubber share market is deemed to justify the expectation that firmness and strength will characterise the coming autumn.

British Trade with Persia.—According to the report compiled by Mr R. H. Hadow, dated April, 1925, and published by the Department of Overseas Trade (Trade and Industry of Persia; published by H.M. Stationery Office, price 1s 6d) two "great stabilising forces are at work for the good of the country and to its infinite benefit." The first is the orderly government secured by the "military organisation and statesmanship of his Highness Serdar Sepah," which has meant security for caravans, free movement of traders, and gradual development of trade throughout the country. The second has been the "thorough reorganisation of the country's finances by the American Financial Mission, ably assisted by a long-established and highly efficient Belgian Customs administration." Since the American Mission took over the direction of the country's finances, revenues have exceeded expenditure, and while revenues increase, actual expenditure appears to be diminishing. There are still plenty of obstacles to trade in Persia, not the least of them being the impossible condition of the roads (despite the efforts made by the American Mission) and the absolute lack of roads in many directions. Transport rates are very high, and excessively so for imports. Parcels sent by post are, owing in part to an extraordinarily cumbrous system, liable to fearful delays; from three to five months is no uncommon period for a parcel to take between Bushire and Teheran. "The parcels post service is, therefore, not to be recommended as a method of sending catalogues, books, or similar articles to Persia." At the end of that long period the consignee has to pay heavy postal charges, which may amount to from 5s to 10s for a catalogue of which he does not know the contents. Of Persia's exports, the most important are oil, forming one-half of the total; carpets, a trade almost entirely in the hands of British and American firms; and opium. Opium goes mostly to Russia, which in 1924 took 65 per cent. of the total supply. On this crop the people of South Persia are largely dependent for existence; it is the only crop known to the native cultivator which is easily transported, easy to produce, and yields a certain and large return in comparison with the area under cultivation. Soaring prices and increasing Russian demand have made it very hard for the Persian Government to carry out a policy of restriction of cultivation and diminishing production. As regards oil, it is the view of Mr Hadow that the products of the Anglo-Persian Oil Company ought not to be excluded from other exports (thus giving an unfavourable trade balance), since, as a matter of fact, the country benefits largely by this trade. Anglo-Persian royalties amount to no less than 10 per cent. of the national revenues. The import position is very interesting. Persia is mainly dependent on imports for manufactured goods; some 36 per cent. of its imports consist of cotton, woollen or mixed tissues, wearing apparel, &c.; these items, together with tea and sugar, form the backbone of its

import trade. Before the war the British Empire, including India, had approximately 21 per cent. of the total trade against Russia's 60 per cent.; in 1923-4 the position was reversed—we had 57 per cent., Russia only 18 per cent. The United States—1 per cent. in 1914—had 4 per cent. in 1923-4. In North Persia, however, Russia is reported to be making considerable strides, and extending its activities to other parts of the country. In the piece-goods market Great Britain had a dominating position a year ago, but, says Mr Hadow, "it is not to be assumed that the competition of other producing countries is not developing rapidly in Persia." Italy and Russia, France and Belgium are entering the market vigorously, while Manchester is increasingly feeling the competition of India, especially in South Persia. "In the case of foreign competition, a good deal of the progress made by these countries is generally ascribed to more plastic financial accommodation and acceptance of comparatively small trial orders for special goods. . . . This enterprising spirit is particularly a feature of the Italian manufacturer, and has good results, especially in Tabriz. As the Persian market for cotton and woollen goods is worth roughly five millions sterling, this accommodating spirit would appear to be worth while, provided that it is consistent with proper business methods."

Shipping Documents and Underwriters.—Although the Carriage of Goods by Sea Act has been operative since the beginning of the year, the circumstance that sea carriers are now compulsorily liable for the safe carriage of goods during the period of the voyage is apparently still not fully appreciated in some quarters. It is no longer open to a ship's agent to repudiate a claim for loss or damage on the ground that the terms of the bill of lading give exemption from liability. Nevertheless, there have been instances where that attitude has still been adopted. Consignees, too, are apt to remove goods into their own custody without inspecting them carefully to ascertain their condition. The Act requires notice in writing before removal, or, if the damage be not apparent, within three days. In the absence of notice, or of a joint survey or inspection, a *prima-facie* presumption of delivery of the goods as described in the bill of lading arises, and the subsequent enforcement of a claim becomes more difficult. The parties who have to bear the loss in many cases are, of course, the underwriters, and their position in obtaining reimbursement may be prejudiced if the shipowner and the merchant, or their representatives, fail to follow the proper procedure in the first instance. So much is this the case that the setting up of an organisation for collecting claims has been proposed in the interest of underwriters. Where goods are first discharged into lighters and subsequently delivered to consignees, an additional element of uncertainty, and consequent difficulty of proof, often comes in. The Sea Carriage Act did not reach the Statute Book until after several years of international discussion, and other countries are not proceeding with similar legislation so fast, perhaps, as anticipated, though some progress is being made. Another movement tending towards standardisation of shipping documents has in the meantime started. The International Law Association is interesting itself in c.i.f. contracts, and the matter is to be discussed at a conference at Marseilles next year. The branches of the Association in various countries are preparing materials for consideration, and the French branch has recently issued a set of proposed rules dealing with c.i.f. contracts. While disclaiming the intention of working out a standard form of c.i.f. contract, these proposals certainly go some way towards that. As a basis for discussion they will be useful, but probably they will require much revision before being at all acceptable. The need for uniform rules and decisions is greater on the Continent than in this country, where judicial rulings have followed a fairly consistent course. One question on which our judges have taken a very definite line is in relation to certificates of insurance. They have held that the seller does not discharge his duty by tendering, under an ordinary c.i.f. contract, a certificate of insurance. He must provide an actual policy covering the goods, unless, of course, the contract expressly provides that a certificate of insurance shall be accepted. The buyer requires the assignment to him of an

actual policy on which he can, if necessary, bring an action, which he could not do on a mere certificate. On this point the French draft rules follow the English law in declaring a certificate of insurance insufficient.

Modderfontein East.—Our mining correspondent writes:—This ambitious Eastern Rand enterprise still appears a long way from justifying the hopes of its sponsors. It will be recalled that in May last year the capital was scaled down and a fresh issue of debentures made, more particularly for the purpose of providing the company with its own treatment work and of paying for the incidental increased development. So far, of course, the ore has been transported from the mine to the Apex mill of the new Kleinfontein, a procedure which has, naturally, increased the working costs, besides limiting the tonnage which could be treated. The new plant on the mine is now approaching completion; in fact, it is expected that a trial run will be made in November. Under the new conditions, working costs should not only be much lower than they were in 1924-25, but lower than previously. This point is emphasised because last year's average was no less than 27s 6d per ton, whereof 3s 3d was due to extended development and the general preparation of the mine required for the larger output which will be required to supply the new reduction plant. The revenue averaged 28s 1d per ton milled, a decrease of 4s 9d, due partly to the lower grade of ore milled and partly to the disappearance of the gold premium. The very small working profit of £10,950 became converted into a loss of £5,100 after allowing for debenture interest, &c. This result, of course, need not alarm the shareholders, being obviously due to the special conditions referred to above. What may give them cause for anxiety, however, is the continued unsatisfactory trend of development. Last year's underground footage totalled 29,400, or more than double the amount performed in 1923-24; yet the quantity of payable ore developed was not more than 367,000 tons, in place of 551,000 tons, while the value averaged only 6.15 dwts, in place of 7.2 dwts. The explanation of the great disparity between the increased amount of work performed and the results arises, of course, from reduction in the percentage of profitable material opened up last year. In the preceding 12 months the pay percentage figures at 60. For the exact proportion in respect of the past season, the full text of the annual report must be awaited, but the quarterly reports for the whole period, which are available, suggest that the payable percentage cannot have exceeded 25. The directors observe that "the disappointing results indicate the necessity for a further increase in development operations." It is obvious, however, that unless better results are shown in the future than in the recent past, the company will be unable to earn profits commensurate with even its reduced capital.

UNITED STATES.—BUSINESS OUTLOOK—ENCOURAGING FACTORS—COTTON CROP—STOCK MARKET POSITION—DEBT FUNDING.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 8.

WITH the Labour Day holidays past, the autumn season, according to popular impression, is about to start. While the division of the year's business into arbitrary periods on the basis of this sort of criterion has its limitations, the fact remains that the next month or so should give a pretty clear indication of business prospects during the rest of the year. Accordingly it is noted with satisfaction that trade is quite active, and that the outlook in this direction is promising. Both railroad car loadings and bank clearings show that the distribution of goods and the volume of general trade have reached unprecedented proportions. Consumption plainly is very high, from which it is inferred that purchasing power is great. Meanwhile, it is apparent that industrial production, which slumped

rather sharply during the second quarter of the year, when the extremely high production of the first quarter was being liquidated, is moving upward moderately. The Federal Reserve Board's index of production, which is compiled from the statistics regarding 22 basic commodities, rose 2 per cent. during July, and probably has continued its advance since then. This index dropped from a height of about 125 per cent. of the 1919 average, which level was attained early in the year, to about 110 per cent. in June. After July's small recovery it was nearly 20 per cent. above the low point reached during the summer season of 1924.

Another encouraging factor is embodied in the condition of the crops. The likelihood of a smaller wheat crop is offset by the larger yields promised in other directions. Taking August 1st crop estimates and August 15th prices, the Federal Reserve Board estimated that the value of the principal crops would be 7 per cent. higher than the value of the corresponding crops last year. This increase represents a continuation of a tendency that has existed for the past several years, and which has brought the value of these crops up from \$4,945,000,000 received in 1921 to an estimate of \$8,732,000,000 for the current year. While the next few weeks may bring some revisions in the latest figures, it is fairly evident that conditions in the agricultural districts are improving consistently, a circumstance that helps to explain the prosperity of the mail order houses, which are doing a record-breaking business, and the better demand for agricultural implements.

To-day's estimate of the cotton crop by the Department of Agriculture furnished the market with something of a surprise. The Department's estimate of condition and prospects as at September 1st was not greatly different from its last preceding estimate, and the more moderate of the private estimates. It came, however, after a week in which some of the private estimators had placed their figures almost as high as 15,000,000 bales. When, therefore, the Department placed its estimate at 13,740,000, as against 13,990,000 in the estimate of the fortnight previous, and as against an average for private estimates of about 14,000,000, short covering developed on the exchange that lifted the price \$5 a bale.

An interesting feature of the cotton statistics made public to-day is embodied in the ginning figures. Some 1,892,000 bales were ginned before September. This compares with 577,000 bales ginned to August 15th and with 947,000 to September 1, 1924. Altogether it is apparent that this year's crop will be one of the largest gathered in the past ten years.

With these evidences of active trade and generous production attended by only a slight firming in the money market, weight is lent to the view that money will not be very dear this autumn. Business is still being conducted on the basis of buying only for immediate requirements, and few judges believe that the fall expansion in activity will be strenuous enough to prompt anything like inflation. Industrial corporations are exceedingly liquid; the private banks are extremely strong, and have large amounts of money out on call; and the existing demands on the Federal Reserve system are moderate indeed. The international situation apparently does not call for a hard money policy on the part of our central banking system, while on this side of the water business is being conducted in a conservative manner, and the much-discussed stock market speculation is probably the subject of much exaggeration. In addition, activity in the way of new issues has fallen off markedly, and new borrowers are not crowding forward with demands. A revival of foreign borrowing will probably wait on debt-funding negotiations and on a clarification of the financial situation in Germany. On this basis it is concluded that while a further mild firming in money would not be surprising, it is likely to remain plentiful and reasonably cheap.

As for the stock market, although reactionary during the past week, it still maintains a firm undertone. Some critics declare that it has anticipated all the good business developments that possibly can occur; they talk of extravagant speculation. On the other hand, careful industrialists and capitalists are unwilling to concede that their own stocks are high. They are unwilling to sell their favourites at present prices, and in some cases have been making further purchases for investment. A conserva-

tive banker who had been away for a month or two observed that while certain "obscure" stocks had risen a hundred points or so during his absence, the standard investment issues with which he is familiar were lower than when he went away. Another banker, in expressing scepticism with regard to the talk of wild speculation, stated that he had made an investigation in five other banking houses and had found that the quantity and quality of collateral held against stock market loans were unusually high. This checks with the declarations of brokers that their customers' accounts are unusually well margined. Plainly, other factors, such as an abundance of bank money and investment capital, are at work as well as the inevitable speculative pressure.

Next steps with regard to debt funding will be awaited with great interest. We gain the impression that Caillaux is anxious and determined to carry through a settlement, and that the Administration will give due weight to capacity to pay. The outlook is regarded rather hopefully. The opinion strengthens that the Belgian debt settlement is a good one. Those who consider the ultimate yearly payments should remember that the burden is much moderated during the first ten years. Our bankers feel that a great deal may happen during that period. The criticism of the Franco-British debt agreement, which was rather bitter at first, has subsided. Most of our newspapers felt that the American Government was "being put in the hole." Perhaps they are growing to believe that the agreement was desired by the French rather than by the British.

FRANCE.—BUDGET PLANS—EIGHT MONTHS REVENUE—CROP ESTIMATES—AUGUST TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, September 16.

M. CAILLAUX, last Saturday, laid before the members of the Finance Commission of the Chamber the draft of his Budget Bill for 1926, with the obvious intention that that important body, by whom the fate of French Ministries has more than once been decided, may have ample time to digest his proposals during his absence in America. The Finance Minister, as was anticipated, claims that his new project constitutes "a truthful Budget, which comprises the whole of the State's expenditure for the coming year, and which is based on the principle that the whole of the money required to meet that expenditure shall come solely from taxation." He also claims that the new Budget is "irreproachably balanced," and that, although the last Budget "appeared" to show a balance, "it is necessary to consider realities and not appearances, and we must take off our hats before this evidence, namely, that there can be no budgetary equilibrium if the elementary principles of all domestic accountability are not observed." M. Caillaux's insinuation, of course, is that past "Special" Budgets, "Extraordinary" Budgets, and "Budgets of Recoverable Expenditure" were in contradiction with "the elementary principles of domestic accountability," and this fault he has carefully avoided in his present measure. The estimated revenue from the Dawes Plan, which last year was applied in relief of ordinary taxation, has now been deliberately taken out of the Budget and passed to the newly-created Caisse d'Amortissement, the special fund from which war pensions and the money required to complete the restoration of the devastated regions, and the instalments to be paid in respect of the debts due to Great Britain and the United States are in future to be drawn.

All projected new expenditure by the various Government departments has been ruthlessly cut down by the Finance Minister, in accordance with the threat he made some months ago, in the form of a peremptory circular letter to those of his colleagues who are at the heads of those departments. Demands for increased expenditure, the Finance Minister states, have been cut down by two-thirds. The net result of the modifications M. Caillaux has made on both sides of the account is that this year he has to find an additional 3,440,000,000 to bring about a balance. To the question, where is this money to be found? M. Caillaux replies: "By the possessing classes, and by all those whose labour provides them with

large incomes—and by these alone.” The manner in which M. Caillaux proposes to secure his additional resources was set forth in detail last week, namely, from income-taxpayers, by increasing the schedule rates all round, and by imposing a super-tax on all large incomes, the latter taking the form of the application of a progressive increase of the general income-tax (a similarly progressive scale having already been applied to the “schedule” portion of the tax). It is now made known that the Minister proposes that the second new tax on the possessing classes—that on “unproductive capital” in the form of art collections, jewels, family plate, tapestries, libraries of rare books, &c.—shall be levied at the rate of one-half of 1 per cent. on the value of the property imposable, an abatement being allowed of 50,000f, plus 30,000f if the assessable person is married, and a further 10,000f in respect of each of any children he may have. From the super-tax M. Caillaux expects a yield during the first year of 100,000,000f, and from the tax on *biens oisifs* of 80,000,000f.

M. Caillaux does not hesitate to state, in the preamble to his Bill, that he projects several other sweeping reforms (in the way of departmental reorganisation, for instance) which will enable further economies to be effected, and also that several “vast projects” are under consideration for the national betterment. Among these, it is understood, will be a scheme for the protection and development of agriculture. For the moment, one cannot but admire the skill with which the Finance Minister has succeeded, while flatly refusing to adopt the Socialist proposals for a direct capital tax, in drafting what cannot be described as anything but a thoroughly democratic Budget.

The yield from taxation during August, according to returns published yesterday, was the lowest recorded during the past 12 months, as might have been expected, in view of the fact that this was the holiday month. The total revenue for the month was 1,812,719,700f, as compared with over 2,500 millions in July, 2,842 millions in April, 2,729½ millions in December, and 2,947 millions in October, and was only 24 millions larger than the total for August, 1924, when the increased taxes imposed by the Budget for the current year had not come into force. The Budget for 1925, it will be recalled, estimated a total revenue for the year from all sources of 33,133,000,000f. If from this be deducted 1,275 millions, which it was found necessary to take from the French share of the yield from the Dawes Reparation scheme, it will be seen that M. Caillaux anticipated that the revenue for the year from all sources would amount to 31,863 millions. The first eight months (or two-thirds) of the year have yielded a total of 17,954,818,000f, or, in round figures, only 18,000 millions, instead of the 21,000 millions which, theoretically speaking, ought to have been received by the Treasury now that two-thirds of the year have gone. This “deficit” is more apparent than real, however, as the last three months of a French financial year invariably result in a much higher yield from taxation, for obvious reasons, than their predecessors; therefore, it is more than probable that M. Caillaux's estimates will be justified by the time the year ends. The yield from the tax on turnover during August, although it amounted to 369,186,000f, and was 35,169,000f more than in August, 1924, was 21,394,000f less than it was estimated to produce for the month when the Budget was drawn up. The total yield from this tax for the first eight months of the year has been 2,984,690,000f. Whatever criticisms may be offered as to its repercussion upon the cost of living, it is evidently likely to demonstrate that its inventor, M. Klotz, was justified when he predicted, at the time he introduced this form of impost, that it would eventually produce between 4,000 and 5,000 millions a year.

The Minister of Agriculture announces that, according to the latest official estimates, the wheat crop will probably amount to 89,561,060 quintals, as compared with 76,839,890 quintals in 1924, while the crop of rye is estimated at 11,371,250 quintals (as against 10,128,600 quintals last year), and that of mixed wheat and rye at 1,311,890 quintals (compared with 1,302,160 quintals in 1924). This year's available quantity of bread-making cereals, therefore, although not representing the magnificent return that had been expected, until the highest hopes were blighted by the bad weather, may be regarded as more satisfactory than the average.

The foreign trade returns for August disclose a continuance in the falling off of exports which has been in progress since last December. For the first time since December, 1924, the month's return shows an adverse balance against this country. The total imports for the month had a value of 3,297,316,000f, while the exports amounted to only 3,258,311,000f, leaving a deficit of 39 millions on the month's exchanges. There was a similar deficit (of about 200 millions) in August, 1924; therefore, it may be concluded that seasonal influences were a factor in the situation. The drop of 226 millions in the exports for August comprised 157 millions of manufactured goods, 59 millions of foodstuffs, and about 21 millions of raw materials. Imports of manufactured goods fell off 13½ millions on the month, while imports of raw materials rose by 157½ millions, and of foodstuffs by 120 millions. The total exchanges for the first eight months of the year, which comprised 25,167,388,000f of imports (or 852,480,000f less than during the corresponding period of last year), and 28,367,069,000f of exports (or 1,213,651,000f more than during the first eight months of 1924), left a surplus of exports amounting to 3,199,681,000f, as compared with a favourable balance of 1,134,550,000f in the period January-June, 1924. In tonnage the imports for the eight months were 7,793,070 tons less than during the corresponding period of last year, while exports were 1,392,317 tons more.

GERMANY.—INDUSTRIAL COMBINES—FINANCES— BONDS VALORISATION—CREDIT—INDUSTRY— FOREIGN TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, SEPTEMBER 16.

FUSIONS of industrial concerns with the aim of promoting economy continue. The negotiations for the combine, referred to last week, between the leading Western coal-metal concerns now, it is reported, have as their object complete fusion into a single company of Trust character, which will unite the coal, as well as the iron, steel and rolling-mill interests of the seven companies. This extended plan creates a great coal power, because six of the seven concerns produce each annually more than 5 million tons of coal, Gelsenkirchen leading with 12 million tons; and all seven together produce 46,962,000 tons, which is nearly one-third of the combined shares of all companies (157,200,000 tons) in the Ruhr Coal Syndicate. The combine will also have about a one-third share in the Pig-Iron Syndicate. One result of the hoped-for economy will be the closing down of certain works and the discharge of workmen, who already in Rhenish-Westphalia number 70,000 men fewer than at the date of the currency reform. The loose “Interessengemeinschaft,” a form of co-operation which was long in favour, because thereby the heavy stamp duties imposed on formal fusions were spared, has lost part of its charm since the recent reduction of these duties. For months past negotiations have been under way for the conversion of the Aniline Concern “Interessengemeinschaft,” which loosely unites seven companies into a formal fusion. An understanding is believed to have been come to. The new agreement between the rival Deutsch Petroleum Company and former company of the latter's oil production works, including native oilfields and refineries, in exchange for shares in the Deutsche Petroleum Company. The Erdoel Petroleum Company will increase its capital by 11 million marks. In the potash branch the Burbach and Gumpel concerns, both of which are themselves combines, will fuse. This means the concentration of nearly the whole potash industry in three concerns, the Wintershall with 379 shares out of the total 1,000 shares in the syndicate, the Salzdetfurth-Aschersleben with 244 shares, and the Burbach-Gumpel with 175 shares.

The Prussian Budget for 1925-26 will show a deficit of 221 million marks. The Federal Treasury return for August shows receipts 557,831,300 marks, against 692,672,100 marks in July; payments out, 603,794,200 marks, against 629,771,700 marks, of which 243,068,900 marks was subsidies to States and municipalities. The August yield of pledged Reparations taxes is not included

in the above receipts; the July yield, as refunded by the Commissioner for Pledged Undertakings, is, according to practice, included instead. The Cabinet has prepared a Bill providing for insurance against unemployment, which in its main lines follows a Bill submitted in 1922 but not passed. Hitherto unemployment insurance, where it has existed at all, has been local, although there has been a federal system of unemployment support. Insurable under the new law are those classes which must insure against sickness. Unemployment allowances will be 40 per cent. of the normal wage, rising to at most 65 per cent. where the beneficiary has a family. Only persons who are both willing and able to work may benefit; and offers of work may not be refused without good reason. Offer of a wage below the locally normal level counts as a good reason. Persons without work as result of a strike or lock-out cannot benefit; and chronically unemployed and youths may be required to work on public undertakings. Premiums are payable equally by employers and employed, and will not exceed 2 per cent. of wages.

The first regulations concerning exchange of paper-mark bonds for “loan redemption bonds” under the law of July 16th, require all claimants to register and send in their bonds between October 5th and February 28th. This should be done through banks or savings banks, which will make no charge. Through the intermediary banks the claims will reach the Federal Debt Administration, the final authority. Persons who as “old” bondholders, having acquired before July 1, 1920, claim the preferential treatment provided for this class by the law, must send in their bonds with a list thereof, and with proof of the date of acquisition. Proof may be of any kind. Banks and other institutions through which a holder may have bought his bonds are obliged to give him assistance in proving. The special “Old Possessions Boards,” which will be created, may accept the claim, or require its confirmation by oath, or reject it. In the last case the bondholder may appeal within a fortnight. Special arrangements will be made for claimants resident abroad. In general, such claims will be made to German consulates or embassies, but to the larger countries will be sent commissioners who will organise the exchange, and fix special terms for sending in, &c. Foreigners in remote countries will be given sufficient time to make their claims, but unless they are either “old” holders, or are very big “new” holders, it will hardly be worth their while to make the exchange.

Short-term money continues plentiful, day money costing 7½ to 8½ per cent. Through the New York National City Bank has been contracted a loan of \$25,000,000 for the new Rentenbank Credit Institution, which finances agriculture. The nominal interest is 7 per cent., effective interest 7.95 per cent., whereto a supplement for amortisations; issue price 93, repayable at 100. The Government is taking measures against certain cartels (mainly textiles) to compel them to abandon price-calculating in dollars, a relic of inflation times. The effect of this practice is to keep prices up. The Reichsbank's return for September 7th shows the usual alleviation after the month-end strain; discounts declined by 64½ million marks to 1,700½ million marks; circulation by 35½ million marks to 2,559½ million marks. The official wholesale index number for September 9th shows 127.6 against 127.5 on September 2nd, and 133.8 on August 5th.

The industrial movement is slightly towards depression. The number of publicly-supported unemployed rose in the second half of August from 308,000 to 328,000. The highest figure this year was 593,000, the lowest 193,000. For August, 33 per cent. of industrial companies reported business as “bad,” as against 31 per cent. in July; 41 per cent. against 41 per cent. reported “middling”; and 26 per cent. against 28 per cent. reported “good.” These figures give no picture of the absolute condition of industry, but they indicate the trend. Coal output is increasing. It is stated that the Government does not propose to reduce the ration of English coal licensed for import. English coal still successfully competes on the coast, and further limitation of its import would compel the coast centres to buy the dearer Ruhr coal. The iron and steel branches show no improvement. Coal exports in the first seven months of 1925 totalled 7,874,932 tons,

as against 2,795,090 tons in all 1924; exports of iron and steel and wares (excluding machinery) thereout totalled in the seven months 1,903,679 tons, against 1,955,110 tons in all 1924. Exports of machinery in the seven months totalled 202,494 tons, against 271,484 tons in all 1924. These figures would be satisfactory were export prices normal; but, in fact, on coal and heavy iron and steel exports, losses are suffered. The textiles industry is fairly prosperous. The wool branch is increasingly active; the velveteen, artificial silk, stockings, and knitted goods branches are very well occupied. Conditions in the linen branch are unsatisfactory, mainly owing to weakened buying-power, and some linen manufacturers have gone over to cotton or half-linen production.

Foreign trade in July in marks (000's omitted) was:—

	Imports.	Exports.
Livestock	14,033	483
Food and drink	449,568	33,773
Raw and half-manufactured materials	533,459	140,442
Manufactured goods	156,977	568,182
Gold and silver	25,885	3,642
	1,179,952	746,522

June imports were 1,069,819,000 marks; exports, 687,712,000 marks. Exports of textiles in July declined; exports of shipping increased by 12 million marks; electrical wares, 10 million marks; iron and steel wares, 8.7 million marks. Trade by continents and countries in the first half of 1925 was (in millions of marks):—

	1924.		1925.	
	Imports.	Exports.	Imports.	Exports.
Total	4,483	2,827	6,830	4,132
Thereof:—				
Great Britain	441	230	571	467
Holland	182	274	355	468
Czechoslovakia	210	167	257	215
Italy	170	104	246	166
Switzerland	148	156	168	211
All Europe	2,416	2,061	3,433	3,085
Africa	211	59	277	91
Asia	428	242	762	309
Argentina	277	85	322	121
U.S.A.	797	202	1,555	259
Australia	207	11	174	18

Stock levels last week had a considerable set-back, for which there was no reason except the rapid rise in the preceding three weeks. On the first two days of this week the tendency was again moderately upward. The *Frankfurter Zeitung's* index shows for September 12th, 71.62, against 75.08 one week earlier; a low point of 67.29 on August 21st; a high point of 111.27 on January 31st; and 100 on January 2nd. Paper mark loans dropped further, and on the 12th averaged a little more than 25 per cent. of their prices of beginning of the year.

HUNGARY.—TRADE BALANCE—CROPS AND YIELDS.

(FROM OUR CORRESPONDENT.)

BUDAPEST, September 12.

For the first seven months of the current year the exports of Hungary are 40 million gold crowns more in value than in the preceding year, and the total volume of trade shows an increase of over 70 million gold crowns. Imports have risen from 358 to 386 millions; exports from 280 to 323. The adverse balance has sunk from over 77 millions to 62. The adverse balance for the last five months amounted to 15.9 millions, against 59.3 for the same period of last year, from which it appears that the improvement has been consistently progressive. Hungary can, therefore, look forward with confidence to the figures for the last three months of the year, which should show a credit balance.

The estimates for the harvest continue to improve, and it seems possible that the total yield of cereals will be not far short of the harvest of 1923. Maize should be much greater, and may be placed at the figure of 24 million quintals, 33 per cent. more than 1924. It is true that huge crops of maize are expected in all the neighbouring countries, and that the price for the exporters is likely to be low; but this crop is so valuable for fodder and other things that the export is not of such importance as that of other cereals. Sugar also promises well, and

it is hoped that the price will improve upon last year. Statistics have been published by a Hungarian expert giving the probable values of the various crops, according to which the total cash yield of the "agricultural cultivation" should amount to 476 millions of gold crowns, not much less than 20 million pounds sterling. This does not include the sale of livestock, dairy farming, and other bye-products.

Before the war the average yield of wheat in old Hungary was some 40.9 millions of quintals. The estimate for the present year is about 18 millions. As Hungary has lost over 70 per cent. of her territory, the amount expected on that basis should be 13 millions only. The average yield per acre for 1925 is 17.5 bushels, as compared with an average of 18.7 for the years 1909-13. Some of the best areas give 25 bushels, and on certain estates 25.37, so that with further drainage and improved methods it is clear that the yield might be increased all round. The danger at present seems to be that a too optimistic view should be taken by those in authority, but as long as the control continues this danger is limited.

CANADA.—GENERAL ELECTION CABINET CHANGES—MR KING'S SPEECH—CROP CONDITIONS—THE FEDERAL REVENUES—PRICES—STOCK MARKETS—GENERAL BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 5.

YIELDING to the pressure of popular sentiment, the King Government has decided not to live out its statutory term of office, and a general election for the Federal Parliament will take place on October 29th. In making this announcement to his constituents this afternoon, Mr King declared that the most compelling motive which prompted him to seek a dissolution was a desire to secure a fresh vote of confidence from the electorate, and thereby terminate a campaign of deliberate misrepresentation of Canadian conditions which opponents of the Government were carrying on, to the grave detriment of the national interest. He made a detailed defence of the policies and actions of his Government, but he disappointed the country by the nebulous character of his pronouncements upon the railway problem; there had been confident forecasts that the Government was ready to sponsor the main recommendations of the committee of the Senate which examined the problem last session, and produce a policy for the amalgamation of the Canadian Pacific and Canadian National systems, and undoubtedly some negotiations with this end in view had been attempted, but Mr King contented himself with vague statements about the desirability of regulated co-ordination of the operations of the two systems, and a rather indefinite promise that if it was not secured by a mutual voluntary arrangement, legislation would be passed to enforce it. On the tariff issue he took the line of careful compromise which has become habitual with the Liberal leaders, and he promised to continue his campaign against the monopolistic exactions of the North Atlantic shipping combine. Indications of the main line of Liberal strategy came in the latter half of his speech, which he devoted to an attack upon the Senate; he claimed that its Conservative majority had grossly abused its powers of veto, and pledged himself to secure their curtailment. The expected reorganisation of the Cabinet has also taken place, but the changes are regarded as of a weakening character. The refusal of Mr Dunning, the Liberal Premier of Saskatchewan, to move to Ottawa ended all hope of the adhesion of a group of new Ministers who might be acceptable to the Progressives, and Mr King has been thrown back for recruits upon the protectionist wing of his party. The veteran Mr Fielding now finally retires from public life, and simultaneously Mr Bureau, Minister of Customs, Mr Beland, Minister of Health, and Mr McGivern, who sat without portfolio, drop out. The vacancies are filled by two French-Canadians, Mr G. H. Boivin and Mr Lucien Cannon, Mr Marler, an English Protestant from Montreal, and Mr Gordon, of Ontario. Save Mr Cannon, the newcomers are all avowed protectionists, and therefore prospects of

any working alliance with the Progressives for the election are now finally ended.

Canada, and especially the Western Provinces, has been favoured with an almost uninterrupted spell of fine weather for harvest operations, and as a result very rapid progress has been made with them. Already wheat cutting is practically completed in Manitoba and Saskatchewan, and is 75 per cent. finished in Alberta; threshing is now general in many districts, and the new grain is moving to the seaboard. The damage from frost has so far been negligible, and cannot now be serious, but in a number of areas rust has reduced both the yield and the grade. In Alberta the earlier estimates have experienced a steep downward revision, but in Manitoba and Saskatchewan the yield should easily exceed the ten-year average, and the prices remain quite satisfactory. The coarse grain crops vary considerably, but only in isolated areas is complete failure recorded. The crop surveys still place the volume of the western wheat crop at something between 325 and 350 million bushels. In Ontario and Quebec the harvesting of a grain crop which is well above the average is practically completed, but rain is badly needed for the pastures and root crops. The fruit crop is satisfactory, and the important tobacco crop of south-western Ontario is exceptionally good. The Maritime provinces have excellent hay and grain crops, but the potato crop of New Brunswick is only half as large as last year's. British Columbia reports a good yield of grain and hay, and the apple crop is up to the average. In the prairie provinces the co-operative wheat pools are again in operation, and they have just been able to declare the final dividend for their operations in connection with the crop of 1924; they have found themselves able to pay their members on a basis of \$1.66 for No. 1 Northern wheat at Fort William, which represents a very satisfactory return to the grower, and has greatly increased the prestige of the pools.

The Federal revenues continue to show a welcome improvement; for August they reached \$27,355,522, which is an improvement of \$3,639,460 over the corresponding figures for the previous year, and for the five-month period of the present fiscal year ending August 31st they amounted to \$169,004,938, as compared with \$162,523,315 for the parallel period of 1924. The greater part of the increase of 6½ million dollars comes from Customs, which showed a gain of more than 5 millions; practically all the rest of the increase accrues from excise duties, and there was a slight falling off in income-tax returns. Ordinary expenditure during the five-month period showed a drop of approximately two million dollars. On August 31st the net debt stood at \$2,366,923,600, which shows a decrease of \$8,325,704 during August and of \$20,594,038 as compared with the figure on August 31, 1924. Rigid economies on the Canadian National system have contrived to offset the loss of revenue, and the Premier recently stated that the net operating surplus would show an improvement on last year's figures. The Government are evidently satisfied with Sir Henry Thornton's work, for he has been re-term at a salary of \$65,000 per annum, which is an increase of \$15,000. Hereafter the railway returns are likely to be more satisfactory, for the volume of wheat available in 1924, and most of it can probably be brought to tide-water before the Great Lakes freeze up.

The index table of the Dominion Bureau of Statistics shows a gain of 1.1 points in August on 236 commodities, the figure rising from 158.4 to 159.5; 49 price quotations moved upward, 30 downward, and 157 were unchanged. Animals and their products rose 3.7 points, and vegetables in textiles and textile products, which owing to declines in cotton and wool fell from 195.1 to 193.

The Canadian stock markets have been abnormally brisk during the summer months, and in certain groups approximating to a boom has been in progress. A group of representative stocks, ten in number and covering a diversified range of activities, show an appreciation since the beginning of the year of roughly 90 million dollars. The greatest gain is shown by Montreal Power Consolidated, which with a rise of 60 points shows an apprecia-

tion of about 38 million dollars; Brazilian Traction, with an advance of 18 points, has appreciated 20 million dollars, and Consolidated Smelters, of which American interests are said to be seeking control, has risen 75 points and got an added value of about 10 million dollars. This activity in the stock markets, combined with a good crop and better bank clearings, is interpreted as indicating that Canada is at last headed for better business conditions. Retail merchants report that the public is still in an economical mood, but they are managing to place with wholesalers and manufacturers a larger volume of orders than at the parallel date in 1924. The settlement of the protracted coal strike in Nova Scotia will improve the situation in the Maritime Provinces, and as the anthracite coal miners in the United States are now on strike there should be a brisk demand for Nova Scotian coal; there will also be a further opportunity for British exporters of Welsh anthracite who have been invading the Canadian market with some success. Industrial conditions are not altogether satisfactory, especially in the steel trades, but the unemployment problem has vanished during the summer months. Undoubtedly this autumn will see a substantial increase in the purchasing power of the rural communities, and further progress should be made with the liquidation of the debts of western farmers.

The Federal Minister of Finance has been engaged lately in a series of financial operations. Last month he paid off in cash \$24,333,000 Treasury notes which matured in London, and he has now floated a short one-year loan for 70 million dollars in New York. He has obtained it at 4 per cent., and it will be used to meet maturing obligations in New York, the balance of which will be paid in cash. To provide part of this cash and to cover a \$42,000,000 issue of War Loan which matures immediately, financial circles expect the early announcement of a domestic Federal issue in Canada of about 50 million dollars; it will be for a 15 or 20 year term bearing interest at 4½ per cent., and it is predicted that the issue price will be in the vicinity of 97.

NEW ZEALAND.—THE BUDGET—THE DEBT PROBLEM—NEW SCHEME OF REPAYMENT.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, August 10.

THE Budget which was delivered to the House of Representatives on July 25th by the Hon. W. Nosworthy did not disclose any alteration in policy or any great change in the fiscal situation. The new Prime Minister, the Right Hon. J. G. Coates, has definitely stated that he regards himself as pledged to carry out Mr. Massey's policy at least until after the elections, which take place at the end of the year. Except for the change of leader, the Cabinet carries on as before with a minimum redistribution of portfolios in the meantime, and the party's programme of legislation remains unchanged. The new Prime Minister started his political life as a Liberal, and high hopes were entertained of the possibility of a fusion between the two parties opposed to Labour; but the negotiations seem definitely to have broken down and no fusion is likely to be attempted until the elections. The Liberal party, which has had a chequered career at recent elections, has now changed its name and adopted the title which was suggested for the new "National Party." The Prime Minister is, however, undisturbed by the announcement.

The financial figures for the year ending March 31, 1925, showed that the Dominion is still running upon an accumulated surplus. The net result of the year's finance is shown as follows:—

	£	£
Balance brought forward April 1st, 1924	28,643,000	4,954,714
Revenue	27,399,200	
Expenditure		1,243,800
Surplus for the year 1924-5		4,422
Net miscellaneous items		6,202,936
Less transfers to Public Works Fund	1,000,000	
Loans Redemption Account	1,052,130	
		2,052,130
Balance at March 31, 1925		4,150,806

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits \$15,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 and 3, Crosby Square
Bishopsgate, E.C. 3

The accounts for the year show that revenue increased from £28 millions in 1923-4 to £28.6 millions, despite decreases in Income and Land Tax due to concessions made in the previous Budget. A large part of the increase is, however, accounted for by the transfer from the Discharged Soldier Settlement Fund of over half a million interest on loans. In the previous year the similar interest was used for the extension of housing schemes.

Expenditure increased fairly heavily from £26.1 millions to £27.4 millions, owing mainly to wages and salary scale increases. This is spread fairly evenly over the departments. Since this is election year, it is perhaps too much to hope, especially when parties are so uncertain, that further economies will be made in public expenditure. Even firmer control of the public purse is, however, the chief essential of sound government in New Zealand. After all, the exceptional prosperity of the Dominion is very largely based upon the prices ruling for exports and the liabilities of the State are heavy.

The National Debt shows a considerable increase in the year just past, from £222 millions to £228 millions. Of the increase (£6.2 millions) about 70 per cent. (£4.3 millions) is on account of State advances, and is fully reproductive, but the remaining increase in the ordinary debt is heavy enough. As conversions go on from year to year the interest bill necessarily increases, and must do so for some years to come. Conversion also has meant that much of the debt was raised originally in New Zealand has to be replaced by borrowings abroad, so that the balance of trade is affected. It is improbable that the Dominion will be able to keep up its present scale of imports or its standard in regard to Government expenditure on such things as housing for many years ahead.

The Budget proposals to deal with the repayment of the debt are of interest. The various sinking funds at

present accrued amount in all to £13.5 millions. Of the gross public debt of £227.8 millions, an amount of £26.6 millions due to the British Government is funded with an amortisation agreement; accounts such as State advances and certain reproductive investments have their own sinking fund or other repayment provisions, so that the net debt for which repayment provisions are to be reviewed is £174 millions.

Of this at present the war debt, which amounts to £76.6 millions, has a statutory sinking fund built up by annual contributions equal to 1 per cent. of the amount outstanding. At 4½ per cent. this will repay the debt in about 32 years from the present date. There are various small sinking funds and a general fund established by the Public Debt Extinction Act of 1910, which aims to pay off existing debt on a 75 years basis. This basis is absurdly long, so that the sinking funds accrued have never shown any signs of overtaking the debt.

The new proposals are to suspend these sinking funds on a long-term basis by a system of repayment of loans from the consolidated fund year by year. From a practical point of view this change has much to recommend it. Instead of paying high rates for new money and setting sinking funds aside at comparatively low rates for repayment, bonds will be actually purchased and discharged as the market offers opportunity. Each year there will be issued from the Consolidated Fund a sum equal to ½ per cent. of the debt affected (£174 millions). As debt is paid off a sum equal to interest at 3½ per cent. on the amount paid off will be added, and it is calculated that the debt will thereby be repaid in 60 years.

Of more immediate practical importance than the basis upon which repayment is calculated, however, is the effect of the new scheme upon immediate repayments out of the Consolidated Fund. There is some doubt as to whether it will be necessary to set aside more for debt repayment than is at present paid to the sinking funds; but ½ per cent. of £174 millions will mean £870,000 in the coming year, which is nearly £100,000 greater than apparently went into the sinking funds for the year just past. This is, after all, the only practical test by which the new scheme may be judged, and if future Ministers of Finance and future Parliaments can be trusted to adhere to the policy of setting aside substantial amounts in every financial year, it does not much matter whether these are for debt repayment or for sinking funds. After all, Parliaments have power at any time to set aside the best-devised sinking fund schemes, and the only thing one can judge such schemes by is their immediate results.

Part of the payments necessary under the new scheme will be provided by the earnings of a capital fund made up from two sources, the sinking funds which were suspended by the Act of 1910 (interest on which has since been paid into revenue), and by the amount advanced for soldier settlement (less amounts written off as a result of revaluation). These two funds amounting to approximately £25 millions, should yield most of the funds required, and it should be easier to earmark receipts from a fund of this nature than to get sufficient sums for repayment granted directly out of revenue.

At the same time, it is hardly possible to accept without considerable caution the optimistic statement of the Budget, that "the Bill will provide for an annual reduction in the amount of the public debt, the amount of the reduction increasing from year to year." This would be true if it could be guaranteed that new borrowings would not altogether dwarf the small repayments as they have done in all sinking fund schemes hitherto, and if it could be secured also that future Parliaments would not relieve themselves from a growing volume of payments as the scheme matures.

Not even New Zealand, where public finance is so easy, can accomplish the miracle of reducing the public debt without either economising in expenditure or submitting to heavier taxation. The actual form in which debt repayment takes place is of less importance than a steady determination on the part of those who control the national finances so to order the relationship between revenue and expenditure that there is each year a substantial sum available for the reduction of overhead liabilities against a possible rainy day.

Books and Publications.

INTERNATIONAL AFFAIRS.

THE British Year Book of International Law is now in its sixth year of issue. The volume for 1925* in general make-up resembles its predecessors—that is, the bulk of the book consists of a series of papers by contributors who write as specialists—but the contributions are, for the most part, no longer the output of the war mind as were a number of those in some of the earlier issues. Thus the longest and one of the most important of the items included in the Year Book is a discussion by Professor P. J. Baker of the obligatory jurisdiction of the Permanent Court of International Justice. This article examines some aspects of the proposal that Great Britain should accept the obligatory jurisdiction of the Court in international disputes of a legal nature. The step would be taken by making the declaration for which Article 36 of the Statute of the Court provides. This question of the obligatory jurisdiction of the Permanent Court, it is pointed out, is one which has no necessary connection with the general policy of the British Government in respect of the Geneva Protocol. The constitution of the Court, it will be recalled, was drafted by an international Committee of Jurists, which proposed that the Court should have obligatory jurisdiction in international disputes of a legal nature. Lord Balfour, as the representative of Great Britain, took the lead in securing the rejection by the League of this proposal. Professor Baker's article is devoted to an examination of the reasons put forward for the British attitude. The conclusion he reaches—and perhaps it is one likely to command an increasing measure of acceptance among thoughtful people—is that "the British Government could rightly co-operate with other Governments in giving obligatory jurisdiction to the Permanent Court under Article 36 of its Statute without fear that by so doing it would bring injustice either upon itself or upon the other members of the community of States."

Though the history of the Court is brief, it has begun, by its judgments and advisory opinions, to make its place in the world, and, provided its judicial strength is kept at a high level it may well become a substantial factor in international affairs. Before long the question of obligatory jurisdiction may call for serious reconsideration.

Sir Cecil Hurst's contribution to the Year Book is a plea for a speedier procedure to deal with pecuniary claims of the kind which come before international claims commissions. In these cases the claimants, as he points out, are often men of humble position and small means, and for them international justice should be speedy, effective, and cheap. Delays running into many years work great hardships on individuals.

The doctrine of State servitudes is examined by Dr Arnold D. McNair, in an interesting paper in which he presents a consideration of the position of this doctrine in the light of various recent events. Adherence to the terminology and conceptions of Roman Law is, Dr McNair considers, likely to do more harm than good. Restrictions upon territory of a wider and more permanent nature than those normally created by a treaty are recognised in international law, but (as the paper suggests) the main guide in the matter must be the intention of the parties to the instrument creating the obligation. If a treaty creating a restriction is in the nature of an international settlement or of a dedication *urbi et orbi* of some natural advantage or facility, the presumption is that the territorial restrictions are intended to form part of the body of public international law. Whether, however, they transcend the sphere of ordinary personal obligations should be determined by ascertaining the intention of the parties.

These references indicate the character of the dozen or more principal papers, which are followed by shorter notes, reviews of books, and summaries of judicial decisions and events of international interest, making up a volume which is both readable and valuable for reference.

* "The British Year Book of International Law, 1925." Sixth year of issue. Humphrey Milford, Oxford University Press, 1925.

AGRICULTURAL CO-OPERATION IN AMERICA.*

AGRICULTURAL co-operation in this country has encountered many differences, and not the least of them is created by its advocates. The subject is one about which there seems an irresistible temptation to write with a very small equipment of accurate information. An instance occurs in the current issue of one of the most widely-read Reviews. Thus the general public are led to unfounded conclusions, the most common of which is that only the stupidity or obstinacy of British farmers prevents the complete organisation of British agriculture on co-operative lines. In fact, the causes of the comparatively small growth of agricultural co-operation are much more complex.

For practically the first time the subject is treated in a scientific spirit as a branch of agricultural economics in the series of reports now being issued by the Ministry of Agriculture. The first dealt with "Co-operative marketing in England and Wales," and the report under review (fourth of the "Economic Series") deals with the same subject in the United States. The title is less comprehensive than the contents, which give a fairly complete survey of the rise and progress of the agricultural co-operative movement in America from its tentative beginning fifty years ago to the present time. The developments since the war are described in full detail, and Mr Forrester emphasises the fact that they have been very largely along the line of large-scale marketing. "Large-scale co-operative marketing," he says, "as a movement has gathered momentum chiefly since 1919, and while the exact proportion of total sale of co-operative marketing associations which is to be attributed to this type is not easy calculable, it appears that at least 50 per cent. of the 2,200 million dollars turnover of 1923-24 is to be ascribed to their operation."

In many respects, notably the fact that the American farmers' chief market is at home, the experience of the United States is helpful. Little is generally known, except in a vague way, about it on this side of the Atlantic. It deserves to be closely studied, and this report is of great value to all who desire to be well-informed on the subject. It is admirably arranged, and the facts and factors are closely and clearly analysed. It avoids the common error of hasty generalisation, and it frankly describes failures as well as successes. As Americans themselves say, "co-operatives have a high rate of mortality." This undeniable fact is partly due to the experimental temperament characteristic of the nation. They attack problems on the "trial and error" system, and are not disturbed by a high percentage of failures. This makes their experience the more illuminating, and this report summarises the results very lucidly.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, September 23.	ACCOUNT, September 24.
It takes but little to arouse a lively Stock Exchange interest over the matter of the Bank rate, and expectations, rather than hopes, were entertained this week that the minimum might fall to 4 per cent. Therefore, the War Loan rose to 102, and British Government stocks advanced in most cases. The possibility of cheaper money had no particular effect upon other gilt-edged securities, those in the Home Railway list being heavy, if anything, in sympathy with the weakness shown by the companies' ordinary stocks. Colonials are quiescent. The Bank rate's retention at 4½ per cent. was followed by further advances in Conversions and National War Bonds.	
The recent activity in the Foreign Market has been hardly maintained, though a fair number of changes occurred on the week. French bonds have been a quieter market, with minor fluctuations. Speculative investment continues to buy the Mid-European bonds, and New York is a consistent supporter of Brazilians. Chinese issues have gained further improvements. Roumanian 4 per cent Consolidated, 1922, received fresh favour from the speculative division, and Peruvians were also taken in hand by the bulls. In both cases, however, the improvements served to bring in a supply of stock which tempered the advances.	
Home railway stocks are depressed. It would appear as though the nerves of stockholders are barely proof against the strain imposed upon them by the incessant decline in prices, coupled with the strength and activity shown by industrials and other such descriptions. People are selling Home Railways and using the money in various directions, some of it going even into rubber shares and Kaffirs, so pronounced is the disgust of stockholders with the way in which their prices have moved, and still move.	
Some of the Canadian railway bonds are better, and Argentines rallied to some extent, while San Paulos strengthened on the dividend announcement. Brazilian Tractions added fresh dollars to their quotation; the hint goes round that part of the recent buying was, possibly, for purposes of control.	

The rubber share market is strong, each day adding fresh fuel to the optimism of the buyers in the shape of excellent dividend announcements. Companies which paid nothing at all last year are declaring substantial interim dividends, while others which paid a year ago, are adding very considerably to their previous rates. The raw material keeps strong, and no particular heed is attached to the vague possibility of a labour scarcity in the Middle East. Tea shares are better, thanks to the higher prices which have ruled at the tea auctions.

The oil list is quiet, and dealings are still professional. In the popular industrials, Courtaulds, Imperial Tobacco, Associated Portland Cements, &c., interest has rather died down for the present, being diverted into other directions. The brewery list keeps fairly good, though Watney Deferred reacted from the recent best. The changes in banking, shipping, and lighting shares are of trifling consequence. The insurance market is again dull. Liveliness sprang up in Austin Motor shares upon various rumours surrounding the reported offer to the company by General Motors, Limited. Dunlops have reacted on profit-taking. British Aluminium have been a good market, the interim dividend being increased, but shares in the cable manufacturing companies gave way a trifle, owing to the latest advance in the price of rubber. The iron, steel, and coal group remains heavy. Various land shares are better, British New Guinea in particular showing up well.

In the mining markets, the chief feature is again the interest that is being taken in Rhodesians. Tanganyikas have gone ahead; the 1s dividend is payable next Friday. Chartered dropped to 29s. West Rand Consols, the popular gambling medium at the moment of the Kaffir Circus, fell back abruptly upon selling from the Cape, though the shares received support on this side. The platinum group has moved erratically. Randfontein gave way on fears of a cut in the December dividend. Shares in the other gold-producing companies budge barely a thirty-second from day to day. Diamonds came under the influence of Paris selling. Tintos kept up tolerably well, on dividend anticipations—the market looks for £1 per share. The Malayan tin market is better, by reason of support from Singapore and Kuala Lumpur. Some of the West Africans are strong, Bauchis continuing to lead the market, their notable rises being due to the company's good returns now that the new plant has been successfully installed. Indian mines are inclined to be dull. In Colombian minings there is nothing of fresh interest to report, and Canadian mining shares make a somewhat mixed showing, there being but little market in them. In consequence, prices are subject to variations upon a comparatively meagre amount of supply and demand. Stock Exchange shares have risen to 116, and Nominations, quoted about £40 five months ago, are now double that price.

NEW ISSUES.

Great Yarmouth Corporation.—Issue of £450,000 5 per cent. redeemable stock, 1945-1955, at 101 per cent. Interest is payable April 1 and October 1, and a full six months' interest is payable on the former date. The principal is repayable at par on October 1, 1955, unless previously cancelled by purchase in the market, or by agreement with the holders, the Corporation having the option of redemption, in whole or in part, at par, on or before October 1, 1945. The stock now offered is secured upon the assets and revenues of the Corporation. The rateable value of the borough is £284,485, and a rate of 1d in the pound produces £1,050. The amount which may be levied by rates is unlimited. The total assets of the Corporation amount to £1,656,218, and the total liabilities, including the debt of the borough according to the last pub-

lished accounts, are £780,922. The total outstanding debt at March last, less sinking funds in hand, was £569,837, of which £322,555 is in respect of reproductive undertakings. Of the present issue, £100,000 is for the repayment of mortgages falling due in October next; £257,153 will be used in respect of electricity, tramway, housing, and other undertakings, the balance being available for other capital purposes. This is a trustee security, but it should be observed that it is issued at a premium and repayable at par. A sound investment, notwithstanding.

Segari Rubber, Limited.—Share capital, £20,000, in shares of 2s each, of which 175,400 shares have been issued. In addition, there is £2,000 of 10 per cent. debentures out of an authorised amount of £2,500. The debentures, it is stated, are repayable or convertible into 20,000 shares at par on May 31, 1926. The company was incorporated on April 2, 1910, to take over a rubber estate of 343 acres in the Straits Settlements. The whole area, it is stated, is planted with mature rubber trees. For the year ended March 31 last the net profit is returned at £1,782. The purchase price in 1910, when 100 acres were planted, was £2,000 in shares and £700 in cash. The foregoing particulars are advertised in accordance with Stock Exchange regulations. It is to be regretted that the details given in the advertisement are somewhat meagre, especially as regards past results.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

heavy sacrifices. But if you want to play in first-class football you have also got to go into pretty strict training, and business is at least as interesting a game as football, and both are good.

I hope everyone in our employ, no matter how young he may be or however humble his present position in the business may be, will bear these points in mind.

We have in John Hetherington and Sons, Limited, a splendid business, with great potentialities. We have an excellent staff.

PROPERTY FREE FROM CHARGES.

On January 1st this year we paid off the whole of our debenture stock. Our property is now entirely free from charge of any sort. We own, on the other hand, land, buildings, plant, &c., which stand on the books at nearly £250,000 less than the very reasonable value placed upon them at a recent date by expert valuers. Our liquid assets position is a strong one. Our investments include £100,000 5 per cent. War Loan. We are at present working much below capacity but the immediate tendency is towards improvements, a good American cotton crop is in prospect, and in view of the world-wide reputation of Hetherington's machinery we look forward with confidence to the future.

It is possible that we may alter the end of our year to March 31st to avoid stocktaking during the holiday season.

Whereas the company has, after many years, lost the benefit of the great experience and capacity of Mr Whitby and Mr Snape, we have been very fortunate in securing the whole-time services of Mr E. V. Haigh as managing director, and your directors are completely satisfied that under Mr Haigh's capable, energetic, and prudent management the business will give as time goes on an increasingly good account of itself. As you probably know, Mr Haigh, besides having a wide experience of general business, brings with him an intimate knowledge of the requirements of the cotton-spinning industry, both in this country and abroad, which particularly fits him for the position which he occupies.

You will, I am sure, be glad to welcome Mr Dalglish as a director, filling the vacancy on the board created by the retirement of Mr Snape. Mr Dalglish has worked for Hetherington's for 34 years. His whole-hearted devotion to the interests of the business in the past is the best augury that we can possibly wish for his future activities on behalf of the company in which we all take such an interest. His invitation to join the board inaugurates the policy to which I referred earlier in my speech.

You will notice that it is proposed to nominate new auditors, and you may wonder what this portends. It is merely that the new directors, representing a considerable share interest in this business, have expressed the desire that Messrs James Meston and Co., of Aberdeen and London, whose reputation for thorough-going work and whose professional standing generally is second to none, may serve this company, as they serve others with which the same interests are associated. Messrs Edwin Guthrie and Co., who have safeguarded the shareholders' interests for so many years, fully understand the position, and have kindly offered to assist in any way they can, notwithstanding the change. For this, as well as for the very efficient service that Messrs Guthrie and Co. have given to the shareholders in the past, they are entitled to the thanks of this meeting.

The resolution adopting the report and accounts was carried unanimously.

MANAGING DIRECTOR'S STATEMENT.

Mr E. V. Haigh: Mr Chairman, Ladies and Gentlemen—You will not expect from me, at the commencement of my managing directorship, any lengthy remarks on the business. My presence here is evidence of the belief which I hold that with anything approaching normal conditions our prospects are good. Our business has occupied a leading place in the development of the process of cotton spinning during the last 50 years, as many of you know, and I hope we shall see this developed in a manner advantageous to the industry and entirely satisfactory to the shareholders. That, I can assure you, will be the object of a staff which is wholeheartedly eager to promote the company's welfare.

The directors retiring by rotation were re-elected, and Messrs James Meston and Co. were appointed auditors for the ensuing year.

Colonel Abercrombie: Ladies and Gentlemen—I thank you for my re-election as a director. The experience I have had as a member of the board is a proof that we are able to carry on and bring this concern to further success. Looking back over the last quarter of a century, we can see that this concern has gone on steadily. I do not think that there is anybody to-day who will dispute the view that Hetherington's machinery is as good as any machinery made by any other firm. To give you one little example—perhaps it is not a little example, but it is a good one—we have made 12,000 Nasmith Combers which have been set to work in all parts of the world, and in practically every case they have been unpacked, erected, and set to work without any trouble. That shows that the management of the works has been good.

SECURITY FIRST ROYAL INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON

We have much to thank Mr Snape and Mr Whitby for, but I do feel that we owe the continued prosperity of the concern to the goodness of the machinery which we produce.

VOTE OF THANKS.

Mr Wilde: I should like to propose a vote of thanks to you, Sir, for your conduct in the chair. I am a very old shareholder. I was one all through the time that Colonel Abercrombie has spoken about, and I think that while we have reason to thank the old members of the board for their services in the past, we know now that there are young men who will do equally well. I am very glad to see a man of your age, Sir, and also Mr Haigh's, in the positions you are occupying to carry forward the business of the company.

The vote was unanimously accorded.

The Chairman: I am sure I thank you very much indeed for your kind remarks, and I am sure, too, that my colleague, Mr Haigh, who is the same age as myself, fully appreciates them. The proceedings then terminated.

NOBEL INDUSTRIES, LIMITED.

DEVELOPMENTS ON INTERNATIONAL LINES.

The 6th ordinary general meeting of Nobel Industries, Limited, was held on the 18th inst., at Winchester House, Old Broad Street, London, Sir Harry McGowan, K.B.E. (chairman and managing director), presiding.

The secretary (Sir Josiah Stamp, G.B.E.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: In my speech at last year's meeting I gave you a survey of our business interests throughout the world, and perhaps it is unnecessary to go so much into detail on this occasion. I will, therefore, confine myself in the main to dealing with special features or material changes in the situation of which you were then advised. There are, however, certain matters connected with our industries to which I would direct your attention.

HOME TRADE.

Our home trade in explosives and accessories during the year 1924 kept up surprisingly well considering that general conditions of trade throughout the country were none too good. Notwithstanding the unsatisfactory conditions of trade, through economies effected at our various plants, we were able to reduce our selling prices towards the end of last year. Like all suppliers of colliery furnishings, the condition of the coal trade, who are our largest consumers in the United Kingdom, gives us a good deal of concern, and I am sure that all our shareholders will identify themselves with the policy of doing everything possible, while providing a reasonable return on their capital, to contribute their share in resuscitating what is, after all, the basic industry in this country, and our consumers will need little assurance from us that that policy will be maintained. Our trade in the export markets of the world continues on a satisfactory basis, and a reference to our activities in some of our subsidiary companies abroad will not be amiss.

CANADIAN COMPANY.

Canadian Explosives, Limited, in which, as you know, we have practically a half interest, had a good year in 1924, and the satisfactory results of the present year as compared with the corresponding period of last year reflect the mining and other developments involving the use of explosives in the Dominion of Canada. Not only is progress being shown in the explosives part of our business in Canada, but, like ourselves, Canadian Explosives, Limited, have branched out in other directions. Their side lines, as I call them, are doing well, particularly "Duco," which, as you doubtless know, is the name given to a varnish used for motor-cars and other purposes. We see an ever-expanding use for "Duco," and incidentally I may say we have made arrangements to manufacture that article in this country.

The consumption of explosives in the South American continent is considerable, and as the result of a visit paid by one of my colleagues, Mr H. J. Mitchell, to that continent, satisfactory arrangements have been perfected, which in our opinion will make for the maintenance and extension of a profitable business in that country. He was able to study on the spot the experience of the new factory worked by the Chilean Explosives Company at Calama. The big mining companies in Chili and Bolivia, whose interests the factory was recently established to serve, are now appreciating the quality of the output and the facility with which explosives supplies can be obtained. We may congratulate ourselves on the rapidity with which initial difficulties have been overcome, and the company has secured a recognised position.

AFRICAN EXPLOSIVES AND INDUSTRIES.

You will be pleased to hear that African Explosives and Industries, Limited, to which company I made full reference in my speech a year ago, has had an excellent year. We felt all along that an amalgamation of the explosives industry in South Africa would be to the advantage of the consumers, and the general results of the first year's operations have exceeded our expectations. The anticipation of reduced costs of working flowing from the amalgamation has been amply realised, and I have the assurance of several of the leaders of the Rand mining industry, who are our most important customers in South Africa, that they are satisfied with the benefits accruing to them from the operations of the new company. Considerable strides have also been made on the chemical side, that is, in fertilisers, sheep dips, &c., and we can visualise a continually expanding business in these directions.

You may have noticed in the Press recently that a new company—Nobel Australasia—has been incorporated. This is a purely domestic arrangement, and results from our decision to place our various assets in Australia under our own name. The several constituent companies which owned those assets have now taken equivalent shareholdings in the new company, which will be better able to co-ordinate and consolidate our interests there. Business in that country from our point of view was good during 1924, and I see no reason why it should not continue to be satisfactory in that important market. Our Continental investments are still continuing to do well, and we are doing increasingly important business with several of the Balkan States.

METAL INDUSTRY.

Our metal industry—that is the Birmingham end of our business—did well during the year under review. The improved quality in our products there, such as sheet and rolled metal, to which I referred last year, is being maintained, and is reflected in an increased volume of business in a highly competitive market. On the military ammunition side we command a substantial share of the British Government orders, and the quality of our output gives every satisfaction. We have just completed a large order in ammunition for a foreign Government, and have complied with a specification, the exacting character of which a few years ago would have put it beyond the range of our technical equipment or indeed that of any other British manufacturer.

I would refer now to another section of our activities, one which must interest quite a number of our shareholders. I refer to our sporting ammunition business. No section of our huge undertaking presents more difficulties at home and abroad, and no branch is receiving more careful attention.

As a result of much study we have succeeded in determining the types of cartridges calculated to satisfy the requirements of every class of sportsman. These are now being produced under conditions of testing and research which will ensure a standard of performance far beyond all previous attainments. Our aim has been to put quality before everything, and I have no hesitation in saying that shooting men will agree that the ammunition we supply to-day is better and more uniform than anything that can be offered you from any other source. At the same time, we have endeavoured, and I think with success, to provide our customers with the best service possible.

Now and then one hears criticisms regarding our prices, but let me remind you that even to-day, when materials and wages have increased, the user of cartridges is only asked to pay some thing like twopence for an article which, after all, forms quite an insignificant part of a shooting man's expenses. If it is realised

OF DEVELOPING BUSINESS IN THE FAR
EAST.

that the manufacture of a sporting cartridge involves more than 120 separate operations, it must be apparent to you all that present prices cannot be considered unreasonable. In fact, the contribution which sporting ammunition makes to our revenue to-day represents but a small return on the capital involved in its manufacture. Your directors feel, however, that, even at some financial sacrifice, it is better to give the consumer first of all quality and service, and to look forward to the time when the effect of a policy of concentration recently determined upon will enable them to reduce costs of manufacture, so that they will be able not only to offer advantages to the consumer, but also to say that your sporting ammunition business is giving you a proper return on your investment.

GENERAL MOTORS CORPORATION.

The results of the trading of the General Motors Corporation for 1924, while quite satisfactory, were not as good as might have been expected and for this reason—that about the middle of last year they decided on a new policy as regards the stock in the hands of distributors which will in future, while adequate to give good service and meet the demands of customers, lock up far less capital. This involved curtailing factory production while the stocks actually in the hands of distributors throughout the country were being reduced. Towards the end of last year the transition to the new policy was fully effective, and so far as the present year has gone the corporation has beaten all its previous records. The quality of its various cars is excellent, and nothing is left undone to ensure a still higher standard of excellence for its various products.

The demand in the United States for closed bodies is increasing all the time, and in addition to this resulting in a steadier manufacture throughout the year, it means larger profits for the Fisher Body Corporation, in which the General Motors Corporation has a controlling interest.

So far as our revenue from this investment is concerned, in addition to the regular dividend of \$1.50 per quarter, a bonus of \$1 per share has just been declared.

In my speech to the shareholders in September, 1922, I told them the reason for our having increased our holding in the General Motors Corporation. In relieving Canadian Explosives, Limited, of a certain part of their holding in that company we decided then that in due course, when the selling price reached our cost, we would dispose of that additional block of 50,000 shares and revert to a holding of a size more in accordance with our earlier ideas. The additional holding carried by us in the interval has now been sold, and has resulted in a profit to our company. This necessarily places us in a strong financial position, and will enable us to meet without difficulty any requirements for additional capital in the expansion of certain lines of our business.

It must be a source of gratification to our shareholders to see the distinctly improved prospects of the Dunlop Company. Here again we have realised part of our holding at a substantial profit.

We retain our holding of preference shares in the British Celanese Company, and you will be acquainted from other sources with the progress made by them. For some time past the conviction was growing upon me that the business required the services of an all-time chairman, and as soon as the condition of affairs enabled such a change to be made about the end of that company's last financial year—during which a substantial profit was made on trading account—I vacated the chair in favour of Major-General Guy Dawnay, who comes to the company with an excellent reputation.

RELATIONS WITH LABOUR.

After dealing with the accounts, the Chairman continued: Our relations with labour still continue to be satisfactory, and I cannot speak too highly of the work of those connected with the administration of our company. No task is too great, no travelling too onerous, and no board of directors could have round them a more competent and loyal staff. It gives me great pleasure to express our thanks to them in public, as I now do.

For some time past your board have been considering a scheme for assisting our workers and staff to become shareholders, realising all that is involved in making our interests identical. As far as possible we want all our people to feel that they are partners with us in all we are doing. They will be enabled to buy preferred

or ordinary shares by being financed on easy instalment terms which, while attractive to them, will, having regard to its best interests as a whole, be a relatively light burden on the company.

Now as to the future. You will appreciate my difficulty in expressing an opinion as to our prospects, when the outlook for industries on which we depend to a considerable extent, changes from month to month. The unrest and anxiety caused by the coal dispute must remain with us until we see a settlement, and have a clearer knowledge of the future financial state of that industry. This uncertainty makes prophecy on one important side of our business almost impossible. All I can say is that I am hopeful that trade abroad will be well maintained, and that the increased revenue from our investments and allied undertakings will compensate to a large extent for decreased volume of business with the coal mining industry in this country during the current year, and I close my speech by expressing the hope that the present year's results, when ascertained, will not be unsatisfactory. To-day we are an organised industry, and, during the past two years, have been working for and have accomplished developments on international lines which put your company in an excellent position throughout the world.

Before sitting down I should like to make reference to certain changes on our administrative staff. At our board meeting yesterday your directors conferred on Mr H. J. Mitchell, one of my working colleagues, the title of general manager of the company. Mr Mitchell, who has been functioning in that capacity for some time past, has been with Nobel's company for 30 years. His services have been invaluable, and he has thoroughly earned this recognition of his great abilities.

You are doubtless aware that Sir Josiah Stamp leaves us in the active sense to become president of the executive of the London, Midland and Scottish Railway. This gives us great regret, but I am glad to be able to tell you that he will remain as a director of our company, and that we shall, therefore, continue to have the benefit of his expert knowledge. We all hope and feel that he will be a great success in his new post, and he leaves us with our heartfelt good wishes.

Sir Ralph W. Anstruther, Bt. (deputy-chairman) seconded the resolution, and it was carried unanimously.

ANGLO-SCOTTISH TRUST, LIMITED.

AMALGAMATION PROPOSALS SANCTIONED.

ADVANTAGES OF THE SCHEME.

An extraordinary general meeting of the Anglo-Scottish Trust, Limited, was held, on the 17th instant, at River Plate House, London, Sir Charles John Stewart, G.B.E., the chairman, presiding.

The Chairman, in moving the adoption of the resolutions effecting an amalgamation of the company with the Atlantic Trust, Limited, The Status Investment Trust, Limited, and the Egyptian and Foreign Trust, Limited, stated that although their company was called a trust company, its operations were rather those of a financial corporation. A trust company distributed dividends out of the income from its investments, without regard to depreciation, while a financial corporation had to make due provision for depreciation on its investments before paying dividends. It would, therefore, be appreciated that companies such as theirs laboured under material disadvantages in the conduct of their operations when their investments showed a depreciation, and, as a consequence, their capital was not fully represented by their assets. This question of bringing the capital of the trust into line with its assets had for some time seriously occupied the attention of the directors, and after full consideration of the facts a scheme of amalgamation with the other three trust companies referred to above was decided on. These trust companies had often co-operated in the past with the Anglo-Scottish Trust in its operations, and as those companies, while possessing valuable assets, were face to face with similar disabilities as themselves, it was felt that a combination of the resources of the four companies would make for the greater advantage of all.

BASIS OF THE SCHEME.

With a view to getting at an equitable basis of such an arrangement, it was decided to invite that well-known firm of accountants, Messrs Kemp, Chatteris, Nichols, Sendell, and Co., to make an exhaustive examination of the assets of each of the four companies and to report thereon to the directors. As a result of that report and the recommendations of that eminent firm of accountants, the present proposals were, after considerable discussion between the various boards, finally agreed on. The main features of the arrangement were the formation of a new company, entitled the Anglo-Scottish Amalgamated Corporation, Limited, with a capital of £1,000,000, divided into 900,000 ordinary shares of £1 each, and £2,000,000 deferred shares of 1s each, in which each of the four trust companies would receive fully-paid shares equivalent to the

value of their assets, less liabilities, and the deduction of a sum to provide against contingencies in each case. As would be seen by the proposals circulated to the shareholders, the ordinary shares and deferred shares would be allotted on the basis of the value of their respective assets, and in that connection he wished to say it was found necessary, in order to satisfy the various conflicting claims arising out of the amalgamation to create those deferred shares, and the directors felt it was a matter for congratulation that the various interests had thereby been brought into complete accord.

ASSETS OVER £700,000.

It would also be seen that the value of the combined assets to be acquired by the new company amounted to over £700,000, that valuation having been made on a most conservative basis, and he was pleased to say on general lines the scheme had met with the cordial approval of the shareholders.

Having dealt with a few points of criticism as to detail, he stated that it would be readily appreciated that the new company, having assets of over £700,000, which could be realised at the discretion of the board, possessed immense potentialities, especially as the company would commence its operations unencumbered by any promotion, formation or other preliminary expenses, and with a reserve provided for any contingency that could subsequently arise. The new company would, therefore, be in a position to reap full advantages of the profits which might accrue either through income or through the operations which it would undertake. In the latter connection, he stated that already provisional arrangements had been entered into, the benefits of which would accrue to the new company, for the proposed purchase of the new preference capital to be issued by the Crittall Manufacturing Company.

ADVANTAGES OF AMALGAMATION.

The following were a few of the advantages which he thought would immediately result from the carrying out of the proposed amalgamation. In the first place, the capital of the new company would be fully represented by the value of its assets. It would thus be free to declare from profits dividends which, under existing circumstances, were not possible. The new company being in a strong financial position, and already possessing important connections all over the country, would be in a position to command business which was not available for the present companies.

The resolutions sanctioning the amalgamation were adopted after some discussion, in the course of which certain options proposed to be granted on the deferred shares in the new company were relinquished by those interested, and the board stated that they would arrange that the unissued deferred shares, if issued, would only be issued by offering them *pro rata* to the ordinary shareholders.

The amalgamation scheme was also approved at meetings of the Atlantic Trust, Limited, the Status Investment Trust, Limited, and the Egyptian and Foreign Trust, Limited.

SINGAPORE PARA RUBBER ESTATES, LIMITED.

INCREASE OF CAPITAL APPROVED.

An extra-ordinary general meeting of the Singapore Para Rubber Estates, Limited, was held, on the 17th instant, in the Council Room of the Rubber Growers' Association, 2, 3, and 4 Idol Lane, London, to consider a resolution increasing the capital of the company. Mr Patrick Hadow presided.

The secretary (Mr Donald Laing) read the notice convening the meeting.

The Chairman, after apologising for the absence of the chairman of the company, who had broken a bone in his foot as the result

of an accident, said: Gentlemen,—You will have seen from the circular accompanying the notice convening this meeting that it has been called to deal only with the question of the increase of the company's capital from £150,000 to £300,000.

The board have for some time past been considering various offers of other properties which could profitably be worked in conjunction with the company's existing estates, but the terms were not such as the board could recommend, particularly because they did not conform with the requirements which the board consider most essential—namely, the reduction of the company's capital cost per planted acre.

Recently, however, the board have been negotiating for another property near the company's existing estates, which they anticipate they may be able to acquire at a price which is not only, in their opinion, reasonable in itself, but which will, if the negotiations are carried to a successful issue, result in the company being able to reduce the capital cost per planted acre, which stands now at £75, to £65 in respect of the company's present estate and the new estate combined. The acquisition of the new estate will also add to the company's earning powers, which would, of course, be reflected in the return to the shareholders.

The present state of the negotiations is such that it would obviously not be to the interest of the shareholders that I should be asked to give further details or particulars, and I am sure I can rely on the shareholders not to press me on this point, but I would like to add that, in the event of the negotiations proving successful, as I have every reason to hope they may, an issue of part of the new capital would be made without delay, and that so much as it is at present proposed to issue would be offered in the first instance to the shareholders at a figure which we hope would prove attractive to them.

Mr C. E. Craig seconded the resolution.

Replying to a shareholder, the Chairman said that there was no intention on the part of the board to issue at present more than 600,000 of the new 2s shares, and that no further issue would be made without consulting the shareholders.

The resolution was carried.

SIDNEY TURNER, Accountant-General.

India Office, September 11, 1925.

Messrs Samuel Montagu and Co. write, on September 16, as follows:—

GOLD.

The following movements of gold to and from the Bank of England have been reported since our last issue:—

	Received.	Withdrawn.
Sept. 10.....	nil	32,000
" 11.....	nil	10,000
" 12.....	nil	14,000
" 14.....	nil	95,000
" 15.....	nil	59,000
" 16.....	nil	96,000

The destinations of the £128,000 sovereigns withdrawn were given as follows:—India £65,000, Singapore £48,000, Argentina £10,000, and Holland £5,000. During the week under review £306,000 on balance has been withdrawn from the Bank, reducing the net influx since the resumption of an effective gold standard to £5,230,000. The Netherlands bank has reduced its price for the purchase of gold from 1,648 fl to 1,047.50 fl per fine kilogramme. We understand that the reduction has been made in order to cover certain expenses incurred by that institution when purchasing imported gold.

SILVER.

Failing support from China, silver prices have fallen sharply, and the market has a quieter tone. Demand from India for spot supplies again carried the quotation for prompt delivery to a premium, the difference widening to 18d on the 12th inst. The inquiry, however, was not sufficient to maintain prices, and although lower quotations induced some buying to cover bear commitments, this was more than offset by offerings from China. We are advised from New York that the United States Government purchased on the 3rd inst. 500,000 ozs for subsidiary coinage, to be delivered to the Philadelphia Mint within two weeks. It is understood that the price paid was about 72½ cents. The imports and exports of silver to and from the United Kingdom during the week ending 9th inst. were as follows:—

	Imports.	Exports.
France.....	10,454	China..... 220,520
United States.....	104,494	British India..... 36,697
Other countries.....	4,905	Other countries..... 6,573
	119,853	263,790

INDIAN CURRENCY RETURNS.

Gold coin and bullion in India.....	5,711	5,711	5,711
Securities (Indian Government).....	2,000	2,000	2,000
Securities (British Government).....	2,000	2,000	2,000

No silver coinage was reported during the week ending 7th inst. The stock in Shanghai on the 12th inst. consisted of about 52,865,000 ozs. in sycee, 55,000,000 ozs in sycee, and 2,490 silver bars, as compared with about 54,400,000 ozs in sycee, 52,000,000 dollars, and 2,260 silver bars on the 5th inst.

The Government of India have announced that £13,871,000 has been remitted to the Secretary of State for India during the five months ending August 31, 1925, by means of purchases of sterling in India.

SULPHIDE CORPORATION, LIMITED.—During the four weeks ended on August 22 1925, 5,366 tons of ore (including 2,364 tons of Central Mine ore), together with 3,590 tons of slimes, were milled at the Central Mine, producing 1,764 tons of lead concentrates (including 152 tons from the desanding plant), which assayed 42 ozs silver, 58 per cent. lead, together with 2,321 tons of zinc concentrates, assaying 10 ozs silver, 8 per cent. lead, 49 per cent. zinc per ton, and 617 tons of special slimes, assaying 12 ozs silver, 17 per cent. lead, and 9 per cent. zinc per ton.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LIMITED.—By cable for the week ending September 9, 1925: Production, 56,910 barrels; shipments, 6,430 tons.

COASTAL OILFIELDS OF COLOMBIA, LIMITED. report that cable from field states Sinu River Oilfields well had reached a depth of 1,710 feet on September 8th.

LAGO PETROLEUM CORPORATION.—The following information has been received by cable:—For week ended September 12, 1925: Production, 82,000 barrels; oil shipments, 68,000 barrels; storage on hand, 54,000 barrels. On September 13th the well being drilled by the company at Ambrosio, situated seven miles north of La Rosa, and which is over one kilometre in the lake from the shore, encountered strong gas and oil pressure at 1,327 metres.

TAMPICO OIL, LIMITED.—Total production during August, 50,547 barrels, in respect of which the royalty due to Tampico Oil, Limited, amounted to 3,791 barrels.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined productions for the week ending Wednesday, September 9th, amounted to 776 tons.

Reports and Notices.

Mr Harold A. Sanderson, chairman of the White Star Line, has joined the board of directors of Dalgety and Co., Limited.

The London Committee of the Companhia de Mocambique state that the Customs receipts for the Port of Beira during July amounted to £14,950, as compared with £18,769 for the corresponding period of 1924.

Messrs. Coates, Son and Co. announce that they are removing from their temporary premises, 61, Moorgate, E.C. 2, and returning to 97, Gresham street, London, E.C. 2, which will be their permanent address on and after the 10th inst. Their present telephone numbers will be retained, and their telegraphic address will be "Coates, Cent, London."

Cable advices from Toronto state that at a meeting of shareholders in Noranda Mines Messrs Percy Rockefeller, W. D. Baldwin, and Irving W. Bonwright were elected to the board as representatives of the New York interests, and that as the Quebec Government has decided to undertake the construction of the railway to the Rouyn Goldfields, active steps will be taken to develop the company's properties.

Messrs. Coutts and Co. will pay on and after October 1st the coupons of the Peruvian Corporation 6 per cent. bonds at the rate of £3 per cent. per annum.

The transfer books of the Eastern Bank, Limited, will be closed from September 28th to 30th, both days inclusive.

GOVERNMENT STOCKS, &c.

GERMAN LOAN IN AMERICA.—We are informed that the National City Company, Harris, Forbes and Co. and Lee, Higginson and Co. are offering for public subscription \$25,000,000 Central Bank for Agriculture of Germany, first lien 7 per cent. Gold Farm Loan Sinking Fund bonds due 1950 at the price of 93 and interest to yield 7.63 per cent. The loan is the first of its kind ever floated on the American market for German account, and is, we understand, expected to facilitate the working of the Dawes plan. It is stated that \$6,000,000 of the loan has been applied for, and will be offered for public and private subscription in Holland, Sweden and Switzerland.

3 PER CENT DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft

for £4,390 15s 4d, being the moiety of the third fortnightly instalment of the debt service payable to the Council in respect of the half-year ending December 31, 1925.

RAILWAYS.

OTTOMAN RAILWAY FROM SMYRNA TO AIDIN.—The report for half-year ended June 30, 1925, shows that gross receipts amounted to £192,802, an increase of 37 per cent. Working expenses at £130,326, compared with £124,629, an increase of 4.57 per cent. Coal consumption was 5,000 tons, against 4,003 tons in 1924. Only English coal was used during this half-year, the cost amounting to £10,359, or an average of £2 1s 3d per ton.

BANKS.

AUSTRALIAN BANK OF COMMERCE.—The report for the year ended June 30, 1925, reveals a net profit of £170,766, excluding £29,358 interest paid on inscribed deposits. The dividend on the ordinary shares has been raised from 7 per cent. to 7½ per cent. The sum of £50,124 has been transferred to reserve fund, and £10,000 has been put to reduction of bank premises account. The sum of £54,560 is carried forward. As a result of an offer made in February last to the inscribed depositors of the bank to exchange their inscribed deposits for shares, 638,872 fully-paid-up shares have been issued, and £319,435 has been placed to reserve fund. In order to make up the issued capital of the bank to the even total of £1,840,000, 1,128 fully-paid shares were issued, and sold on the market, realising a surplus of £441, which has also been placed to reserve fund. The reserve fund, which on June 30, 1924, stood at £370,000, has been increased to £740,000.

BANCO ESPANOL DEL RIO DE LA PLATA.—The profits for year ended June 30, 1925, after having covered general charges and the different taxes which have weighed on the institution, amount to the sum of \$2,307,238 legal currency. It is proposed to destine from the said profits the sum of \$1,800,000 legal currency, to reduce the balance of the account of "Accounts overdue and in process of liquidation," and also \$150,000 legal currency for the account "Furniture and fittings." If approved, there will remain a balance of net profit of \$357,238 legal currency, and a balance of \$56,269 legal currency will be carried forward to the next account, after making the following distribution:—90 per cent. to the preferred shareholders—on 16,424 preferred shares at the rate of 7 per cent. proportionally as to the time of being paid-up, and on 233,576 certificates of preferred shares with 10 per cent. paid, \$266,838 legal currency; 4 per cent. to reserve fund, \$13,653 legal currency; 4 per cent. to contingency fund, \$13,652 legal currency; 2 per cent. to directors and auditors, \$6,826 legal currency; amount to be carried forward to next account, \$56,269—\$357,238 legal currency.

COMMERCIAL BANK OF AUSTRALIA.—The net profit for year ended June 30, 1925, amounted to £305,536, as against £264,542 in preceding year. To this is added £64,954 brought in, making £370,490 available. The sum of £101,124 is put to reserve. This, together with £233,876, being premium received on the new issue of shares, has been credited to that account, increasing reserve fund to £685,000. The sum of £10,000 is put to reduction of bank premises, and £5,000 is put to officers' guarantee and provident fund. Preference dividend absorbed £84,604. The ordinary dividend, 15 per cent., takes £87,102, and £82,570 is carried forward.

ROYAL BANK OF IRELAND.—The net profits of the bank for year ended August 31, 1925, after making provision for all bad, doubtful debts, amounted to £73,842, which, with the amount brought forward from last year of £9,068, make together £82,910. The dividend of 10 per cent for year absorbed £23,612, leaving a balance of £59,298, out of which the board have appropriated to reserve fund, bank premises, officers' superannuation, and other contingencies, £50,000. The balance to be carried forward to the credit of next year's account, £9,298. A new branch has been opened during the year at Annesley Bridge, North Strand, Dublin.

YOKOHAMA SPECIE BANK.—At the meeting of the shareholders of this bank, held in Japan on September 10th, the statement and accounts for the half-year ended June 30th last were submitted. The statement was approved, the net profit of the bank for the past half-year being 14,568,628.43 yen, including 5,417,952.77 yen brought forward from the preceding half-year. The amount was distributed as follows:—To reserve fund, 3,000,000 yen; to dividend, 6,000,000 yen; to balance carried forward to next account, 5,568,628.43 yen. Dividend declared, 12 per cent. per annum.

INSURANCE.

LONDON AND LANCASHIRE INSURANCE.—The following official changes are announced:—The retirement, on pension, after 45 years' service, is announced, as from September 30th, of Mr. Thos. Brown, local manager at Manchester. To succeed Mr. Thos. Brown, the directors have appointed Mr. A. Russell as local manager at Manchester. In succession to Mr. A. Russell, the directors of "The London and Lancashire" have appointed Mr. Charles A. Smith to be local manager at Leeds. The directors have appointed Mr. Alexander Barbour to be assistant local manager at Leeds.

RUBBER, &c.

TELOGOREDO UNITED PLANTATIONS, LIMITED.—The estimated rubber crop for 1925, was given in the directors' report dated May 11th last as 1,870,049 lbs. Rights of production over 145,000 lbs have been purchased, and therefore the total estimated crop for the year ending December 31, 1925, is now 2,015,049 lbs. Of this estimate, for the eight months to August 31st last 1,327,500 lbs have been harvested, of which 841,530 lbs have been sold at an average price of as 6.52d. With regard to coffee, ended August 31st last, 11,972 cwts have been harvested. Of this

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

With a spell of fine weather, farmers were able to cart late cereals while preparing the land for autumn sowings. Preliminary forecasts of the yield show a slight reduction in wheat and oats, but barley fully up to last year. Offerings of native wheat at the principal statute markets continue on a moderate scale, threshings being hampered by recent rains, but quality is variable and quotations generally the turn in buyers' favour, except for seeding samples, which command full rates. Trade generally remains in a dull state, buyers showing little disposition to operate apart from pressing needs, while prices are the turn easier in most instances in sympathy with weak forward values and liberal offers of Continental grain. In the floating and forward wheat cargo section there was almost an absence of demand, though sellers were not pressing near positions. Forward quotations, however, were generally easier, and the only feature was the sale of some 30,000 tons Australian new crop December-January shipment at 50s 6d. Maize cargoes dull and easier in view of a poor consumptive demand and pressure to sell Russian barley. Steamers of Plate loading sold at 38s, and ditto just sailed 38s 3d per 480 lbs, while Russian barley September-October shipment changed hands at 28s 6d per 400 lbs. Wheat in slow demand and tendency easier. No 1 Northern Manitoba ex-ship quoted 65s 6d, No 2 ditto 64s 3d, No 3 62s 3d, Australian 62s per 496 lbs. English new quoted 11s, 11s 3d, per 112 lbs free on rail. Flour dull. London standard grade quoted 48s, patents 50s, 51s, town whites 48s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in London districts. Imported quiet, but in limited supply. Manitoba patents range from 48s-51s, Minneapolis 48s 6d-50s, Kansas patents 48s, Australian 44s-44s 6d per 280 lbs ex-store, Maize again easier. Plate ex-ship to arrive quoted 39s 6d, ditto landed 41s 6d, white flat African ex-ship 40s per 480 lbs. Yellow African maize meal ex-ship to arrive £9 5s, white ditto ex-ship, £8 15s per ton. Barley weak. Californian new ex-ship quoted 40s-50s, Chilian Chevalier landed 58s-70s, Brewing 52s-54s, according to quality, Australian 57s-61s ex-store, Danish and Swedish ex-ship 50s-58s per 448 lbs. American malting ex-ship September 30s, No 3 Canadian Western ex-ship October 31s 6d, No 4 ditto October 30s, Russian ex-ship 29s-31s, as to sample per 400 lbs. English, new quoted 10s-20s, the latter for malting quality, per 112 lbs. Oats steady. Plate landed 27s, No 2 Canadian Western ex-ship to arrive 29s 3d, landed 31s 3d, No 2 Canadian feed ex-ship 25s 3d, landed 26s 3d, Chilian Tawny landed 27s 6d, No 2 white clipped American ex-ship to arrive 23s 9d, landed 25s, all per 320 lbs. English new quoted 9s-10s per 112 lbs free on rail. Millers' offals maintained. Broad bran quoted 8s 3d, middlings 8s 9d, fine ditto 10s 3d, bags included ex-mill, powdered oat husks 6s 3d, feed oatmeal 8s 9d, ground oats 12s 9d per cwt free on rail. Oatmeal.—Steady, with a fair demand. London made, flaked 18s, rolled oats 17s, medium also fine cut 17s, coarse also medium pinhead 17s ex-mill, ordinary Scottish oatmeal 18s 6d, American ditto 17s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1924-25, 1923-24, 1922-23, 1921-22.

AMERICAN WHEAT MARKETS.

Fluctuations this week have been confined within fairly narrow limits. Good Canadian harvesting conditions have been a bearish factor, but export buying improved in the later part of the week. In America more favourable reports from the North-West influenced prices to a large extent in the earlier days of the week, but im-

MISCELLANEOUS.

BRITISH ELECTRIC TRANSFORMER.—We are informed that the profit for the half-year ended June 30, 1925, amounted to £25,826, as compared with £11,235 for the same period of 1924, and a loss of £19,959 for the first half of 1923.

BURT, BOULTON, AND HAYWOOD.—The net profit for year ended June 30th, 1925, after writing off £15,000 to depreciation and £5,120 off the expenses of the debenture stock issue, amount to £61,012. The net profit in preceding year was £72,928, after writing off £20,000 for depreciation. The ordinary shareholders receive 10 per cent., less tax, against 8 per cent., free of income-tax on preceding year. The sum of £15,000 has been carried to reserve and £14,420 carried forward. Balance-sheet reveals total assets £1,650,399, against £1,478,279. Cash stands at £29,167, against £11,635. Investments stand at £410,610.

CRITTALL MANUFACTURING COMPANY.—The report for the year ended May 31, 1925, shows a profit of £70,162, and after deducting interest on loans, governing director's salary, and directors' fees, there remains available for appropriation the sum of £58,076. After the payment of the interim participating preference share dividend for the half-year ended November 30th last, amounting to £3,193, there remains £54,882. The directors now propose to transfer to general reserve £3,563, bringing that total to £5,000; to transfer to depreciation reserve £9,650; to transfer to taxation reserve, £2,500; and to the payment of the participating preference share dividend for the half-year ended May 31st last, £10,000, making a total of £25,714. Out of the available balance it is proposed to pay an ordinary share dividend for the year at the rate of 10 per cent. per annum, and a final participating preference share dividend for the period under review at the rate of 2 per cent., making a total of 10 per cent. per annum on the participating preference shares, and carry forward the balance, £6,381. It is proposed to increase the company's capital by the creation of a further 250,000 cumulative participating 8 per cent. preference shares to rank *pari passu* with the existing issue, and a further 200,000 ordinary shares, the issue of the latter not being at present contemplated. The 250,000 cumulative participating 8 per cent. preference shares have been purchased at a premium of 2s per share, the purchasers paying all the expenses in connection with the issue with the exception of the capital duty, these shares having to be offered to the existing preference shareholders at the price of 25s per share, and such as remain over have to be offered to the ordinary shareholders.

EVANS BONS, LESCHER, AND WEBB.—The scheme of arrangement provides that the capital of the new company shall be:—750,000 6 per cent. participating cumulative preference shares of 6s 8d each; 600,000 ordinary shares of 6s 8d each. It is proposed to allocate these shares as follows:—For each cumulative 5 per cent. preference share in the old company the holder will be entitled to receive: (a) allotment of two cumulative preference shares of the nominal value of 6s 8d each, credited with 5s paid per share, the unpaid balance in respect of the two new shares being payable 1s 8d on application and 1s 8d on allotment. These shares will carry interest at the rate of 6 per cent., and in addition will entitle the holder to one-third of the profits of the company distributed as dividend in any year after 6 per cent. has been paid on the preference and ordinary shares. (b) The holder is also entitled to receive allotment of new ordinary shares of the nominal value of 6s 8d each, issued at par, is payable on application and 5s 8d on allotment. For each ordinary share held in the old company, the holder will be entitled to receive: (a) allotment of one ordinary share of the nominal value of 6s 8d, credited with 4s paid per share, the unpaid balance being payable 1s 4d on application and 1s 4d on allotment. (b) The holder is also entitled to receive *pro rata* with the preference shareholders allotment of new ordinary shares of the nominal value of 6s 8d each, issued at par, is payable on application and 5s 8d on allotment.

HAVANA ELECTRIC RAILWAY, LIGHT, AND POWER.—The plan for the readjustment of the share capitalisation through the exchange of existing stock for stock of the Havana Electric and Utilities Company, has, we are informed, been formulated by Messrs. Speyer Company, and Co., of New York, in conjunction with Mr. Frank Steinhart, and the president of the Havana Electric Railway, Light, and Power Company. Stockholders of the Havana Electric Railway, Light, and Power Company are offered the right of exchanging their stock for stock of the Havana Electric and Utilities Company and cash. Speyer and Co. will act as readjustment managers and depository, and have underwritten the cash requirements of the plan. Holders of substantial amounts of stock have agreed to deposit their stock under the plan.

KAMINISTIQUE POWER.—We understand that the Kaministiquia Power Company has received an offer for the sale of its assets to the Fort William Power Company (subject to the redemption of the Kaministiquia Power Company's first mortgage bonds at of the Kaministiquia Power Company are to receive \$145 per share, payable in cash and \$50 per share value of 7 per cent. cumulative preferred stock of a new power company to be formed.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The Colonial wool sales in London this week have emphasised the fact, already demonstrated in Australia, that the Continent is still in need of raw material. Despite adverse exchanges and depreciated currencies, Continental users appear to be able to pay current rates with freedom, although prices are well above the ideas of Yorkshire mill owners. Tops and yarns continue to be sold here at prices greatly below replacement costs, and it is difficult to see where wool is to be bought to bring in tops at the prices recently accepted for forward delivery. Good 64's tops will cost about 4s 5d out of wool bought in London this week, but 4s 2d is about the general selling price in Bradford, spinners being unwilling to pay anything more. Topmakers here are adopting a slightly firmer attitude, but, generally speaking, it is difficult to make more money for any quality. There is just a steady turnover and a marked absence of anything like speculative buying. Spinners are better employed, chiefly owing to particulars being received on a larger scale than for some months past. Botany spinners in particular are in a more comfortable position as regards work. The most encouraging feature is that the recent improvement in the piece-goods trade is well maintained, and the firmness of values in the wool markets is influencing wholesale fabric buyers who have been waiting to see if prices would fall.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The result of the opening of the fifth series of London sales is in accordance with our forecast. Merinos showed practically no change, nor did crossbreds. In fine qualities a decline of something like 5 per cent. was recorded, while coarse crossbreds, as a result of keen French buying, were anything up to 5 per cent. dearer. The course of the market during the past month has clearly shown a developing consumption, but without any speculative buying in any section. The most active buyers so far have been France and Belgium, where labour is cheap and conversion costs distinctly below the West Riding. France has undoubtedly benefited considerably on account of war orders, but "civilian" demands, which are far more desirable, are far less in evidence.

We were particularly pleased with the reception of greasy merinos, France being a very keen buyer. The Aramac clip, which appeared in Coleman street for the first time in many years, met with a hearty reception. It was in fair good order, well grown, the top line of grease combing touching 28d, followed by other lots of combing, which sold from 27d to 25d, fleece 26d, necks 25d, broken same price, pieces 21d, and bellies 19d. Some of the New England merinos have sold exceptionally well, and touched 32d. France was the leading buyer of all these fine-haired wools. Scoured merinos from Melbourne were highly limited, and were mostly withdrawn. On the whole the reception of most descriptions must be regarded as creditable.

The "Outlook," published by Messrs H. Dawson and Co., fully confirms our repeated contention that recovery to healthier conditions can only be slow. A level of wool values, which would generate confidence and lead to buying on a large scale, cannot be accomplished until prices are still lower. We have still serious doubts whether a permanent recovery can be expected on a 4s basis for 64's tops. The purchasing power of all countries except America is exceedingly limited. Millions of people are wanting clothing, but cannot afford to pay current values. Nothing would do the trade more good than a season of cheap wool, and it will have to come before the textile machinery throughout Europe can all be fully employed.

HIDE, LEATHER, AND ALLIED TRADES.

Tanners received something in the nature of a shock at the Bermondsey auctions on Thursday, as advances were scored all along the line for hides and skins. Best ox were fairly steady at 6½d to 8½d, two classes only in light weights making ½d to ¾d advance. In seconds, however, at 6½d to 8½d the firmness was manifest, as advances of ½d to ¾d on all classes were obtained. Best cows made 6½d to 6¾d—advancing ½d and second 6½d to 6¾d, showing advances of ½d to ¾d. Calfskins were firm to an advance, best making from 7½d to 13½d, the secondary selections showing advances all round of ½d to ¾d per lb. Lambskins made from 3s 3d to 10s, and shorn pelts from 6s 6d to 10s each. The imported hide market has improved, and Argentine ox are now quoted at 8½d, the United States and Germany being lately in the market for this class of raw stock. The Chicago position remains steady, with best heavy packers selling still at 17½ cents. The demand for sole leather has been quiet this week, owing to the approach of the Shoe and Leather Fair. There is a good demand from the repairing section. Prices all round are firm. Trade in upper stock is moderate. The bulk of the trade is for patent, glacé, and fancy shoe leathers. The boot trade is slightly improving, but orders are small, demand for stout men's boots, in particular, being affected by the unemployment in the industrial districts.

VEGETABLE OILS AND OLSEEDS.

Market conditions generally have been steady. Linseed oil advanced sharply in sympathy with seed, and on unconfirmed rumours of American demand for oil, £41 per ton naked ex Hull mill being reached on Wednesday, a net gain of about 20s on the

week, since when there has been a slight easing of value to £40 15s spot and £40 10s for later positions to April. Cotton oils have continued inactive, crude Egyptian especially being weak, and 50s per ton down at £39 prompt. Refined has been much less affected. Palm kernel and soya oils are unchanged. In the oilseed section Plate linseed has improved 10s to 12s 6d per ton on bullish reports from Argentina, up to £19 15s having been paid for September-October to Hull. Black Egyptian cottonseed is in only moderate demand, current value being £12 7s 6d September loading. Soya beans to the Continent have been done at £13 6s 3d October-November, but nothing is passing so far as this country is concerned.

OVERSEAS PRODUCE.

FOODS, BEVERAGES, &c.

SUGAR.—The market for refined parcels proved quiet, as consumers refrain from operating beyond immediate needs. Prices displayed a drooping tendency, and British makes were reduced both spot and forward, at which a fair business resulted. Meanwhile offers of American are made with fair freedom, and continued fine weather on the Continent for growing crops has had a sentimental influence. Messrs Tate and Lyle's cubes quoted 33s 9d to 34s 9d; granulated, stoved, 32s 7½d; fine, also coarse grain, 30s 4½d; No. 1, 30s 1½d; No. 2, also London and T.L., 29s 10½d; month forward, 29s 9½d; and yellow crystals, spot, 27s 1½d. Czecho granulated, November-December, sellers, 15s 3d, f.o.b. Hamburg. Dutch granulated, quality, spot, 29s; November-December, sold, 15s 3d, f.o.b. Rotterdam. American granulated, spot, sold, 28s 1½d; ditto September-October, London, quoted 16s; outports, 16s 3d, c.f. and i. terms. Mauritius crystals, spot, 26s 6d to 27s 6d as to quality. Polish crystals, f.o.b., Fiume. White Java, spot, London, 27s 10½d; ditto 6½d, c.f. and i., while little or no demand arises for near parcels to the Continent. Raw refining kinds quiet and easier. Cuban basis, Indian market dull, and white Java, October-December, quoted 15s; January-March, 15s 3d, c. and f., Calcutta. White terminal market opened quiet and easier, but improved later on buyers showing more disposition to operate. October sold, 14s 7½d to 14s 8½d and 14s 9d; December, 14s 9d to 14s 8½d and 14s 9½d; March, 15s 5½d per cwt. May, 15s 1½d to 15s 3d; August, 15s 2½d to 15s 3d.

COFFEE.—Market remained firm, especially for the finest liquoring sorts, which displayed a hardening tendency, with supplies on a limited scale. Lower qualities in moderate support, and values steady. Mountain grown Jamaica, middling colory, sold, 147s; Kenya, fair to good bold, 131s to 136s 6d; good colory, 174s 6d. Colombian, good brownish colory, 149s per cwt. Brazilian quietly steady for shipment.

COCOA.—The market remains steady for spot parcels, with limited sales, including Trinidad at 70s. For shipment, Trinidad, September-October, sellers, 74s; Bahia, ditto, 51s 6d; Guayaquil Epoca, 73s; Caraquez, 71s, c. and f.; St Thome, September-October, 55s, c.f. Accra steady, and F.F. grade, October-December to December, February, sold, 44s per cwt., f.o.b. terms. Cocoa butter steady. C.F.R., spot, also English prime, spot, quoted 1s 5½d per lb.

TEA.—Indian sales for the week comprised the larger quantity of 50,456 packages, which encountered brisk competition at generally firmer rates. The strongest feature was for common and low medium descriptions, and keen competition was for common and low medium an advance of from ½d to 1d per lb. Included in the offerings were some choice invoices from Assam and Darjeeling, and these realised extreme figures. Pekoe sold from 10d to 2s 7d; broken orange pekoe, 1s 1½d to 2s 1½d; with fine to choice at 3s 4d up to 4s 6d. Ceylon catalogues were made up of 23,438 packages, especially amongst high-grown teas frequently showing an improvement which resulted in firmer prices being obtained, a were well competed for, and values generally ½d to 1½d per lb dearer. Pekoe, sold, 1s 0½d to 2s 3½d; broken orange pekoe, medium to finest, 1s 6½d to 2s 8½d per lb, in bond. Business in China descriptions Keemun's, to arrive, sold, up to 3s for finest, with old at 1s 3d to 1s 5d per lb, in bond. Common kinds steady, while in moderate request. At public sales 2,777 packages Java and Sumatra experienced an active

demand, especially on export account, and prices marked a rise of ½d to 1d per lb. Pekoe, sold, 11½d to 1s 2½d; broken pekoe, 5½d to 1s 9½d; orange pekoe, 1s 0½d to 1s 5½d; broken orange pekoe, 11½d to 1s 6½d; and pekoe souchong, 9½d to 1s 0½d per lb, in bond.

RICE.—Rangoon two stars, spot, London, quoted 15s 9d; also September-October, 15s 6d, c.f., London. Broken slow. Beans quiet. Rangoon hand-picked, September-October, quoted 15s. Madagascar butter-beans, spot, 35s to 37s 9d, as to quality. Japanese peas, spot, quoted 25s 3d; September-October, 23s 6d; October-November, 23s 3d per cwt, c.f. terms.

SPICE.—Pepper quiet and easier. Black Lampung L.S., October-December, sold, 9½d to 9½d; January-March, sellers, 9½d; white Muntok, October-December, sold, 1s 2½d to 1s 2½d and 1s 2d. Zanzibar cloves, October-December, sellers, 10½d. Pimento, spot, 5½d per lb. Tapioca dull. Singapore flake, to Havre, September-October, sellers, 19s 3d; Penang seed, to London, August-September, 17s. Sago flour dull, and September-October to London sellers, 16s 3d; October-December, 16s. Desiccated coconut spot, halves, 42s 3d; October-November, 40s 3d per cwt. Ginger steady. Japan, spot, 90s; September shipment, 85s; West African, spot, 62s; September, 60s, c.f., per cwt.

FRUIT (Dried).—Currants quiet, but fairly steady. Amalia quoted 31s to 32s; Gulph, 35s to 37s; Vostizza, 44s to 47s; Australian, 34s to 40s. Sultanas steady. Australian, 68s to 80s; South African, 65s to 75s. Figs quiet. Naturals, in bags, quoted 27s to 29s. Dates, spot demand quiet, but forward positions firm. First tide Hallowee, 21s 6d; second, 20s 3d; Siar, first, 16s 6d; second, 13s 6d, landed terms. Raisins: South African, 36s to 38s; Lexias, 38s to 42s. Evaporated fruits in better demand, and fully steady. Californian apricots, standard new extra choice, 120s; fancy, 130s; Australian, 120s to 130s; Californian peaches, choice, 62s to 63s; extra choice, 66s to 67s 6d; fancy, 75s. Plums: Oregon, new, size 30/40, quoted 71s to 72s; 40/50, 52s to 53s; Californian, new, 40/50, 58s to 60s; 50/60, 52s to 53s; 70/80, 45s 6d to 46s 6d. Pears, choice Californian, 90s; extra choice, 102s to 103s. Apple rings, Californian, extra choice, 67s 6d to 75s; Canadian, 62s 6d per cwt.

CANNED GOODS.

CANNED FRUITS.—Trade quiet, but no material change occurred in prices. Singapore pines, spot, quiet, but forward quotations firm. 48-1½'s quoted 86s 6d to 87s 6d; cubes, 2½'s, 13s to 13s 6d; slices, 24-2's, 12s 6d to 13s 6d. South African are moving off quietly on former terms. Californian pears, 15s to 17s; peaches, 12s to 14s; cherries, 13s to 14s; apricots, 10s to 13s 3d; loganberries, 13s 9d to 16s; fruit salad, 1½'s, 12s 3d to 14s; 2½'s, 21s to 22s; Australian pears, 24-2½'s, 16s to 16s 6d; Canadian, 14s to 14s 6d.

CANNED MEATS.—Corned beef moved off slowly at late rates, but Danish lunch tongues continue in fair request.

GENERAL.—Sardines steady, with improved inquiries. Portuguese, ½ flats quoted 4s 3d; clubs, 5s; 12 ozs, 7s 6d; 18 ozs, 12s per dozen tins. Salmon firm, and reservedly offered. Red tall, 1 lb, 58s to 60s; ½ lb, tall, pink, 27s to 28s. Lobsters met with fair support at full rates. Halves quoted 165s, and quarters 95s to 100s. Condensed Milk.—Prices remain steady, both for full-cream sweetened and machine-skimmed. Honey.—New season's New Zealand continues to attract attention, but other kinds quiet of sale.

TEXTILES.

JUTE ruled easier, with sellers less reserved and demand generally quiet. Firsts, to Continent, in all positions up to November-December, sellers, £47 per ton. Hessians and twills steady, but quiet.

HEMP.—Manila inactive and easier. J grade, October-December, sellers, £41 10s; K, also L, £37 10s; and M, £32 10s. New Zealand, H.P.F., August-September, £38 10s; fair, ditto, £35 10s per ton. African sisal, quiet, unaltered.

RUBBER.

RUBBER irregular but easier, with a moderate demand. Plantation, standard sheet, spot, sold, 3s 6d; September, 3s 5½d; October, 3s 2½d to 3s 2d; October-December, 3s to 3s 0½d; January-March, 2s 9½d to 2s 8½d and 2s 9d; and January-December, 2s 5½d to 2s 5d. To New York: Smoked ribbed sheet, September, sold, 3s 2d, c.f. terms.

OILS, FATS, &c.

OLSEEDS.—Linseed irregular but firm on balance, with a fair demand. Calcutta to London, September-October, quoted £21 15s; bold Bombay, ditto, £22 7s 6d. Plate to Hull, August-September, sold, £19 15s; September-October, £19 15s; January-February, £19 2s 6d. Rapeseed easier. Toria to Continent, September-October, £21 12s 6d. Cotton-seed steady. Egyptian black, to Hull, new October, sold, £12 10s; November-January, £12 10s; white, new October, £12; November-January, sold, £11 15s; Bombay, October-November, sold, £9 5s; and new, December-January, £9 5s. Castorseed easier. Bombay, September-October, £21. Gingelly seed quiet. Chinese to Continent, September-October, £28 2s 6d; large Bombay ditto, £26. Ground-nuts inactive. Coromandel machined, September-October, £25; Nigerian, August-September, £25 per ton.

OILS.—Linseed firmer. Spot, net, naked, 41s 3d; September-December, 40s 3d; January-April, 40s 3d. Rape quiet. Crude, spot, 49s; refined, 52s. Castor-oil slow. First pressure, spot, quoted 55s; second pressure, 53s; and pharmaceutical, 60s per cwt. Hull, with London, 2s per cwt extra. Cotton quiet. Crude Egyptian, spot, 43s 3½; Bombay, 40s; common edible, 49s; deodorised, 51s. China-wood dull. Hankow, spot (barrels), 65s; September-October, 67s 6d. Coconut steady. Ceylon, spot, 47s 6d; September-October, 45s 6d; Cochin, ditto, ordinary packages, 59s 9d. Soya quiet. Oriental, barrels, September-October, 45s 3d; bulk, 40s 3d. Cod firm. English, spot, 35s to 36s. Ground-nuts easier. English, crushed, naked, spot, 49s 6d; deodorised, barrels, 57s. Turpentine active and firmer. American, spot, 80s; October-December, 80s 6d; January-April, 83s; Rosin firmer, and sparingly offered. American, grade B/D,

No. 2.

COAL and the TAXPAYER

The whole problem of the coal industry can be summed up in the word **Output**.

Why can the U.S.A. produce coal at far less than the cost of ours and pay wages twice as high?

The answer is **Output**.

The output of the American mine worker goes on increasing from year to year, while the output of our workers steadily drops.

Although millions of pounds have been spent by us on better machines and improved equipment, the following figures tell their own story:

	PER ANNUM
In 1883	332 tons
„ 1903 (with better appliances)	275 „
„ 1913 (with still better appliances)	260 „
„ 1924 (with still more improved appliances)	220 „

The above figures are taken from the evidence before the Sankey Commission and the statements of the Secretary for Mines.

Why this steady Fall?

Because Governments are continually cutting down the time during which wages can be earned.

Because the mine workers are continually told that they are engaged in a class-war against capitalism.

We must stop prosecuting grown men who want to earn more money by working more than seven hours a day.

We must get rid of the idea that the object of a Trade Union should be "the complete abolition of capitalism" (Rule 3 of South Wales Miners' Federation).

The colliery owners want to see high wages, but high wages cannot come out of low output.

High output means low costs.

Low costs mean more business.

More business means better wages.

Face the Facts

Issued on behalf of the Colliery Owners of Great Britain by Philip Gee, 40, King Street, Covent Garden, London, W.C.2, from whom further information about the Coal Mining Industry can be obtained.

assistance of the Conversion Loan issue. Bills were still very scarce, and fine three months' bank paper was placed in some quarters at a shade below $3\frac{1}{2}$ per cent.

	Sept. 25, 1925.	Sept. 18, 1925.	Sept. 11, 1925.	Sept. 4, 1925.	Previous Rate and Date Changed.
Bank Rate	4 $\frac{1}{2}$	4 $\frac{1}{2}$	4 $\frac{1}{2}$	4 $\frac{1}{2}$	5 (Aug. 6, '25)
Banks' Deposit Rate	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	3 (Aug. 6, '25)
Discount/Call	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	3 (Aug. 6, '25)
Houses' Notices	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	3 $\frac{1}{2}$ (Aug. 6, '25)
Market rate (3 months' bills)	3 $\frac{1}{2}$	3 $\frac{1}{2}$	3 $\frac{1}{2}$	3 $\frac{1}{2}$	..

The Bank return showed a decrease of £404,000 in coin and bullion, £10,000 more than the amount announced as having been withdrawn for export, but as the note circulation had declined by £616,000, the Reserve was £212,000 higher on balance, with its proportion to liabilities .5 lower at 28.5 per cent. Government securities declined by a million, but Other expanded by nearly four; Other deposits were thus nearly $3\frac{1}{2}$ millions higher, with a small decrease in Public. Currency notes outstanding show a reduction of £2,041,700 to £291,731,200, which includes £1,326,500 for notes called in but not yet cancelled. The fiduciary issue is £234,154,700, or £13,990,700 below the maximum.

NEW YORK MARKETS.

Our New York correspondent cables:—A sharp reaction in share prices, partly due to uneasiness over Bank rate and partly a result of the recent sharp advances, has sobered market sentiment. The Federal Reserve statements meanwhile show an expected recovery from tax date influences, with discounts up sharply and a large drop in holdings of Government securities. The Reserve ratio is 72.9. The money market, which tightened after the abnormal ease which followed tax payments, has recovered equilibrium, with the call money rate at 4 per cent. There is much optimism over the Caillaux mission. Bankers are expecting that agreement will be reached, and that Congress will ratify any arrangement which may not invalidate the basis of the Anglo-French settlement.

THE STOCK MARKETS.

Government securities were firm in the early part of the week owing to anticipations of a Bank rate reduction, but the latter were weakened by the announcement of an issue next week of £40 millions of $3\frac{1}{2}$ per cent. Conversion Loan by tender at a minimum price of 76 $\frac{1}{2}$. This produced a sharp fall in the price of existing Conversion Loan, and produced some dulness in other Government stocks. The Foreign market has been fairly active, but Home rails are still neglected. The rubber share market remains the most active section of the Stock Exchange, and prices have risen each day. Tea shares are a little better, but oils have remained out of favour. Dunlops have hardened a little, Bradford Dyers have been prominently strong, and the rise in Watney deferred has continued, but elsewhere in the miscellaneous section there have been no other features. Tanganyikas and Zambesias have risen on buying from Brussels and Paris, but Kaffirs were inclined to droop.

THE COMMODITY MARKETS.

A slight quickening of business has been recorded this week, though the movement is by no means general. Current market quotations for coal at Cardiff remain unsatisfactory, and collective action by sellers is under discussion. Pig-iron purchases are restricted to immediate needs, and demand for manufactured iron and steel is no better. Raw cotton rates have slumped in view of better crop expectations, but the turnover in cloth has tended to expand during the last few days. The tone of the wool market is good, though cautious tendencies still prevail. Wheat shows a quieter tendency. In the produce markets sugar is steady, tea in strong demand, and coffee quiet. Jute maintains a firm tone. Rubber is generally firm, despite temporary irregularity. Among metals, tin has advanced, lead has tended downwards after an active opening, and offerings of copper have been on a liberal scale.

FOREIGN EXCHANGES.

Quietness once more ruled in the foreign exchange market during the week, the only features being the continued rise in Oslo and Copenhagen and the recovery in Rio. In New York there was a weaker tendency early in the week, which was principally due to seasonal influences, but was also affected by rumours of a reduction in the Bank rate here. From 4.84 $\frac{1}{2}$ on the 18th, the rate fell to 4.84 $\frac{1}{8}$ by Monday, and to 4.84 $\frac{1}{2}$ on Tuesday. On Wednesday it touched at one time 4.84 $\frac{1}{8}$, which is but little removed from the gold export point. Later in the day, however, a reaction set in, and on Thursday, when it was known that there was no alteration in the Bank rate, it rose as high as 4.84 $\frac{1}{2}$, though yesterday morning it opened at the slightly lower level of 4.84 $\frac{1}{8}$. Forward rates show little change at $\frac{1}{2}$ cent. per month above spot. There has been very little business in the French exchange, which has only fluctuated between 102.45 and 102.25, at which rate it opened yesterday morning. The market is content to wait for the outcome of the present negotiations regarding the funding of the French debt to the United States, while any tendency towards speculation has been promptly checked. In Brussels the rate has been maintained between 110 and 111, and opened yesterday at the latter figure. Forward rates in Paris are unchanged at 40 centimes per month above spot, but in Brussels stand at 1 to 4 centimes per month above spot, as compared with 2 centimes either side of parity a week ago. Italy has been somewhat weak, and has risen from 118 to 119 $\frac{1}{2}$; Madrid has also moved in the same direction from 33.59 to 33.62. Amsterdam, after rising from 12.05 $\frac{1}{2}$ to 12.06 during the week-end, had fallen away again to 12.05 $\frac{1}{2}$ by yesterday, but Switzerland is steady at 25.11. Of the Scandinavian countries, Stockholm has varied little from 18.05, but Oslo has risen from 23.00 to 23.82, and Copenhagen from 19.90 to 20.00. In both cases the movement is believed to be due to considerable selling in New York, and it would seem as if the two Governments concerned had succeeded, for the time being, at any rate, in checking the appreciation in the currencies which in each case was creating serious internal difficulties by its rapidity. Berlin is unchanged at 20.35, Prague at 163 $\frac{1}{2}$, and Helsingfors at 192 $\frac{1}{2}$. Vienna, however, has moved slightly from 34.47 to 34.42. Warsaw, having risen from 28.50 to 30.00 on the reports of banking trouble, was easier yesterday morning at 29.00, on the news that the Bank of Poland had set aside a substantial amount for the support, if necessary, of banks which found themselves in difficulties. Athens has recovered from 339 to 331, and Bucharest from 1,010 to 997. In the East, the rupee is 1-64d higher at 1s 6 $\frac{3}{4}$ d, and seems to be but little affected by the increase in the Bank rate from 4 to 5 per cent. The yen is slightly weaker at 1s 8 $\frac{1}{2}$ d. In the silver market there was a firmer tendency early in the week on buying from China and America, but this was not maintained, and prices sagged again later. Hong Kong has recovered from 2s 5d to 2s 5 $\frac{1}{2}$ d, and Shanghai from 3s 2 $\frac{1}{2}$ d to 3s 3d. In South America, Rio has risen from 61 $\frac{1}{2}$ d to 61 $\frac{1}{4}$ d. Buenos Aires is steady at 45d. Monte Video has improved from 49 $\frac{1}{2}$ d to 49 $\frac{1}{4}$ d. Valparaiso has moved from 39.60 to 39.50 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 19th:—

EXPENDITURE.	(000's omitted.)	REVENUE.	(000's omitted.)
Supply Services	8,200	From Revenue	13,825
Interest, &c., on Debt	450		
Sinking Fund	370		
Sundries	300		
Increase in Exchequer Balances	118		
Decrease in Debt	4,387		
	13,825		13,825

Revenue amounted to £13,825,100, against £15,305,200 in the corresponding period. Customs yielded £1,455,000, against £1,585,000, and Excise £7,636,000, against £7,138,000. Property and Income-tax yielded £2,271,000, against £2,309,000. Super-tax produced £340,000, against £380,000. Nothing came in from Special receipts, against £500,300 in the corresponding period. The week's operations reduced the National

Debt by £4,387,000, and caused the following changes:—

	(000's omitted.)		(000's omitted.)
Sundries	+ 9,787	Treasury Bills	£ 5,074
National Saving Certificates	+ 100	Public Department Advances	— 11,200
	+ 9,887		— 14,274

The floating debt was reduced by £14,305,000 to £768,011,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Sept. 19th).

	£		£
Total Expenditure ..	360,744,595	Raised by Revenue ..	330,786,660
		Decrease in Balances ..	3,427,223
		Amount borrowed ..	26,530,712
Total	360,744,595	Total	360,744,595

ESTIMATES FOR FINANCIAL YEAR 1925-1926.

	£		£
Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Pena Copper Mines and Crittall Manufacturing Company. At the meeting of the Pena Copper Mines the chairman reported improved prospects, and the resolution for the reduction of the nominal capital was agreed to. At the meeting of the Crittall Manufacturing Company the capital scheme submitted to the shareholders was approved.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an analysis of the Russian industrial programme for 1925-26.

THE NEW LAND CAMPAIGN.

MR. LLOYD GEORGE launched his long-awaited land campaign in the West country at the close of last week. In political circles there are many who will be chiefly interested in this event from the point of view of whether it will revive the diminished fortunes of the Liberal Party or not. Mr Lloyd George himself, no doubt, has taken into consideration the striking fact that since the war the strength of the Liberal Party, such as it is, has chiefly lain in the county constituencies, and it may be regarded as sound strategy for the party to consolidate itself there. Signs are not wanting, however, that this particular programme may prove to be a stumbling-block to many old Liberals, and result in yet another break. Moreover, it is quite obvious that neither the Liberal nor any other party can hope to come back to power in Great Britain on an agricultural policy alone, and Mr Lloyd George, like every other reformer, has to face the task of formulating a land policy which will not impose added burdens on the larger urban population or upon the tax revenue of the country as a whole. If the new policy were to develop into a question of town v. country, or of subsidies for agriculture, it would be doomed to failure. Time alone will show, however, what the political effects of this new agitation are likely to be.

But Mr Lloyd George very wisely did not develop his oration on narrow party lines. Indeed, nothing could be more significant than to compare the Lloyd George of 1925 with the Lloyd George of 1908 on the subject of landlordism. This change is not purely a personal one,

rather it reflects a difference in the public attitude towards such questions, a recognition of their real difficulty, and a desire to approach them from a national and unprejudiced point of view. Partly because of the nature and tone of the speech itself, and partly because of the new open-mindedness on such subjects, the public as a whole are disposed to accept Mr Lloyd George's invitation to suspend judgment until his report is issued. In the meantime, it is useful to consider some of the more fundamental of the problems involved; for whatever the decision may be, Mr Lloyd George's action will certainly raise the land problem to that of a first-class public issue.

For our part, we do not attach very great importance to agricultural reform as a means of avoiding dependence upon foreign food supplies. Short of an economic revolution which would involve a drastic reduction of the standard of living and ultimately of the population of Great Britain, it does not seem practicable to modify, except in a minor way, the system under which we exchange our manufactures and services for food. Nor do we believe that urban life is incompatible with health and physical efficiency, and that it is necessary to increase the number of people doing manual labour in the fields for the sake of preserving the British stock. But this does not mean that the question is unimportant. Agriculture remains, and probably will remain, our biggest single industry. If it is efficient, progressive, and expanding, it will unquestionably advance the well-being of the country as a whole. If it is stagnant or decadent, the whole nation will suffer.

Mr Lloyd George appears to have started from the proposition that British agriculture was far behind that of its Continental rivals. In some respects this is evident, but in regard to the yield of crops as a whole the case is certainly non-proven. It is true that Great Britain fifty years ago had reached a far higher standard of production than that on the Continent; since then the Continental countries have been overtaking us, as their standard has risen nearer to ours. Moreover, Mr Lloyd George suggests that if we carried on our agriculture as in Belgium it would give employment to two million more persons. But he ought in fairness to have added that this could only be done if the people of this country were ready to work longer hours and for a much lower standard of remuneration than they are at present willing to do. It is obvious that we can support a large number of persons on the land—in poverty. The problem is how many can we employ there under conditions which would enable them to earn wages comparable to those which have become standard in Great Britain as a result of our industrial development? Nor is it the case that the farming community is in poverty or in danger of bankruptcy. In some parts of the country, particularly in cereal-growing districts, the cultivators are undoubtedly faced with difficulties. But in the country as a whole it is a fairly general experience that farms are paying their way, that requests for remission of rent are less frequent than before the war, and that there is a keen demand for vacant farms. But these considerations do not alter the fact that the productivity of British agriculture has not made very much headway of recent decades, that the wages of agricultural labour and the standard of living in the country lag a long way behind that of the urban population, and that there is room for vast improvement in both respects if more enterprise, combined with greater capital, were available for British farming. In other words, the case against the present system is that it has been standing still instead of keeping abreast of scientific progress, and that it does not secure the best exploitation of our natural resources.

According to Mr Lloyd George's diagnosis, the chief reason for this is that the landlord system has broken

down, and his criticism has been supported by a striking letter by Mr Acland to the *Times*. If the system of landlord and tenant is to work well, it means that the two parties must be in a sort of partnership, the landlord assisting the tenant with permanent capital investments and in development. In former times, and in many parts of the country to-day, this rôle has been played effectively; but its possibilities have been greatly diminished by the break-up of large estates, by the substitution of people merely drawing income from the land for those who formerly took part in rural life, by heavy taxation, &c. Indeed, there seems to be a considerable measure of agreement that the landlord class as a whole no longer has the resources to enable it to perform the function of bringing capital to the land. On the other hand, it is claimed that the tenant has not the incentive to improve his property, because he has no security of tenure. Much legislation has, of course, been passed to secure to an outgoing tenant the benefit of improvements he may have made, and Mr Lloyd George's report will doubtless give his reasons for thinking that these provisions are inadequate. But whatever the evidence on this point, it would doubtless be argued, and with much reason, that the pride of ownership gives a greater stimulus to an occupier to make improvements and to show enterprise than any system of tenancy.

Mr Lloyd George's solution is that the State is to assist a tenant to buy out the landlord, not by a capital sum, but by an annuity either in perpetuity or for a number of years. The case for some such plan is twofold. On the one hand it is intended to give the cultivator an incentive to improve his property, and on the other it will put the State in a position to organise radical developments in agricultural practice. With regard to the first point, everything turns on the details of the plan. Both in theory and practice, the rent of agricultural land depends upon its productivity. One of the arguments in favour of the landlord system is that when economic conditions are bad the rent can be, and frequently is, reduced. If we substitute for a rent, which is liable to periodical revision, a fixed charge, the occupier may feel he is protected from being rack-rented, but he may find himself quite unable to meet this charge when prices fall or harvests fail. Moreover, any plan of this kind must avoid committing injustice between one landlord and another. There is a real danger of this, for it is evident that the good landlord, who has spent a lot on his land, will have for years been getting a very small net return. It would be unreasonable that his compensation should be smaller than that of the bad landlord, who has been drawing from the land the utmost farthing.

Whether the State will make a better co-partner with the farmer than the individual landlord does at present is also a question which cannot be answered without fuller knowledge of the scheme. Various organs of the State are, of course, already landlords on a large scale; but the administration of Crown lands, &c., does not answer the question, for such lands are not administered from the point of view of any agricultural development in accordance with a comprehensive programme of national development. Mr Lloyd George, of course, recognises the economic weakness of the constant plea for security of tenure, which may easily degenerate into a demand for the right to stagnate. Indeed, it might be said that progress under a competitive system of production is dependent upon the maximum insecurity of tenure, and only works well when inefficient producers are promptly replaced by those who can produce more economically. Security is a deliberate legislative barrier to the working of competition. Mr Lloyd George therefore proposes that the State should assume the responsibility of seeing that the farmer who does not keep his land up to a progressive standard of cultivation shall be replaced. We shall await with much interest to see what machinery he proposes for doing this.

The new campaign is also to deal with the subject of small-holdings and of providing a ladder of advancement for the agricultural labourer. We have not space to comment upon these aspects of the rural question. But we have said enough to show that Mr Lloyd George's speech raises fundamental questions of agricultural organisation, and that his report will be deserving of the closest study.

AUSTRIA AND GERMANY.

No examination of Austrian affairs can proceed far without coming up against the demand for union with Germany. There is little doubt that if a plebiscite had been taken in recent months the vote would have shown a large majority for this policy. In 1919 Austria formally asked for permission to unite with Germany. Since then two of the western provinces have taken plebiscites, which resulted in favour of the *anschluss*. The strength of the demand diminished in the first flush of the reconstruction scheme which occurred at a time when Germany was in serious difficulties. But in the last two years opinion has definitely swung back in this direction, and during last winter the demand for union once more became extremely vocal. In some quarters there is a disposition to take a cynical view of this demand. There are many political reasons why the nations of Europe will oppose the *anschluss*, and Austrians themselves know that it is not now practicable politics. If, however, they play with the idea and talk about it, the nations most interested in preventing it may be disposed to help Austria to re-establish her economic position by other means. In other words, it may be used as a lever for securing assistance for Austria. It would, however, be a mistake to regard this movement merely as bluff. On the contrary, the demand is deep-seated, and can be supported from Austria's point of view by many cogent arguments. This state of opinion must, therefore, be accepted as one of the facts of the European situation and its causes and implications carefully examined by those who would understand contemporary politics.

It is not necessary here to refer to the pan-German minority party, whose attitude towards union is traditional and is not in any sense influenced by current events. It is more pertinent to inquire why it is that the mass of opinion has recently drifted over towards this policy. The trade unions and the Socialist party are for union, partly for political and partly for economic reasons. As regards economic grounds, it is pointed out that the percentage of unemployment in Germany is at present low compared with that of Austria. If restrictions on mobility of labour were removed the Viennese worker might hope to get employment in the larger German market. This also applies to the professional classes of Vienna (university and other teachers, lawyers, doctors, artists, &c.) who are much worse off than the corresponding classes in Germany; they would benefit from openings in Germany or by attracting clients to Vienna from South Germany. It is also argued that as wages are higher in Germany than in Austria, union with Germany might raise the Austrian standard. (This argument is perhaps sound in the long run, but the adjustment would be very much slower than is often assumed). On political grounds the Socialists of Vienna realise that there is very little likelihood of their coming into power in the Austrian Parliament except as members of a coalition. But they would bring a great addition of strength, not merely in votes, but in personnel, to the German Socialist Party, and might play a leading rôle if and when that party comes into power in Germany.

The view of industrialists is more divided. Two years ago there seemed to be much better prospects of a substantial and rapid development of Austrian industries than there are to-day. It seemed probable that if the industries of Vienna were subjected to German competition without any protection from a tariff, they would be crushed by superior efficiency. But experience has weakened this fear, and shown that in many directions Austrian industries can hold their own. Already Germany whose market is mainly in Germany. The Report of the cotton-spinning mills of Austria are fully occupied in until January of this year, supplied itself by the tax-free yarns of Alsace-Lorraine. But now that Austrian yarns compete on equal terms, they are able to undersell Alsace-Lorraine in South Germany, and would have an assured market if they were within the tariff. Austrian motor works are supplying Germany's rapidly-growing need for

cars, but fear lest they may lose their market if Germany takes steps to build up her own industry. Similarly, the paper-making industry of Austria would probably undergo rapid development if it were incorporated with Germany. On the other hand, there are undoubtedly a number of industries which produce less efficiently than in Germany, and there are many manufacturers who are afraid that their business would either dwindle, disappear, or would fall into German hands. Union with Germany would mean further readjustment. It would not mean the industrial suppression of Austria. Again, as regards foreign trade, which is so vital a necessity for the industries of a country with a comparatively small home market, the present position of Austria is that she must lower her costs to the world's level, and compete against world competition. This is a situation to which Austrian business men and manufacturers are unaccustomed, for until the war they were trained to the conditions of a protected market. Within a tariff wall they would feel at home in the German cartel system, which aims at exploiting as far as possible the resources of a protected home market and selling its surplus at low prices over the tariff.

Finally, the merchant class and financiers of Vienna conceive that they would have a big future as the Eastern outposts of German trading influence, and as the commercial gateway between Germany and Central and South-Eastern Europe. In this development their old associations with these countries would be an asset and a source of profit both to Germany and to themselves. On the whole, therefore, though there are many economic arguments on both sides, there are strong grounds for the opinion that Austria, after a short period of readjustment, would be better off, and would have a more assured future by union with Germany than by remaining independent.

On the other side, there has to be taken into account the very real difference in temperament and in outlook of the Austrian and the Prussian. The prospect of the domination of Vienna by Berlin is a very distasteful one. The plan would undoubtedly involve a loss of prestige for Vienna, and there are many, not merely among those interested parties whose place is in the machinery of Government, who would prefer Vienna to be the capital even of the small country, than to be a provincial town of Germany. Such considerations would probably be sufficiently strong to keep the two countries apart in the absence of acute pressure. We are, therefore, led to the conclusion that the attitude of Austria in the next few years will, to a considerable extent, be governed by her success or failure in maintaining and improving her economic position.

The question is less vital for Germany. Indeed, there are many reasons why she is not anxious for the *anschluss* now. Prussia fears that the addition of six and a-half million Austrians might shift the balance of power from Berlin to South Germany. Protestant Germany is very much afraid of a substantial addition to the strength of the Catholic Party—a fear which has recently been revived by the revelation of the importance of the catholic vote in the Hindenburg election. Em-

ployers would not welcome the addition of a thoroughly organised socialist group, while the trade unions have a natural fear of being undercut by the much cheaper Austrian labour. Finally, the man in the street may well be disposed to think that he has enough troubles of his own—both financial and political—without adding those of Austria. As against these considerations, however, there are some even more potent arguments. In population Vienna is the third city of the Continent; it is on the frontier of western and eastern Europe, and its inclusion in Germany, which would be followed by a much closer association of the commercial and banking communities of Vienna with those of Berlin, would provide a splendid outpost for German trade and commerce in Central Europe and the Balkans. Vienna would become for Germany the Hamburg of the East. The intangible influence of national sentiment is an even stronger influence in the same direction. Germany would undoubtedly regard the union with Austria as compensation for the loss of Alsace-Lorraine. Such an event would be the sign and token of Germany's emergence from the depths into which she was plunged politically and psychologically by the defeat of 1918. If Germany were a free agent, we have no doubt that the reasons for hesitation to which we have referred would be swept aside by such considerations. Germany, however, knows that for the time being this policy is a castle in the air. The diplomacy of Berlin is centred on the fundamental issue of coming to such an understanding with France and her other neighbours as will permit the rebuilding of German economic life. It is not worth while to risk a fresh upset in Europe, even for the sake of so glittering a prize as Austria. For Germany, therefore, it is unwise even to talk of the *anschluss*, and it may even be worth while for Berlin to co-operate with other Powers to keep Austria in a state of contentment. It is not in Germany's interest that a noisy agitation for an impracticable ideal should prejudice these greater issues.

But why is re-union politically impossible? It is usually assumed that France is the stumbling-block. The first and natural thought of France is that the addition of the 6½ millions of Austria would be a substantial addition to the man-power of Germany, which would leave her own deficiency in this respect even more pronounced. On the other hand, there is reason for thinking that the new Austria would strengthen the pacific elements in Germany. There is certainly very little militarism left in Austria, and by securing a more equal balance between South Germanism and Prussianism, it is not unreasonable to conclude that it would weaken the predominance of Berlin, which France so much fears. It is, therefore, not impossible that in time France might come to regard the union as being in her interests. A much more fundamental difficulty, however, is the position of the other neighbouring States, and in particular Czechoslovakia and Jugoslavia. A glance at the map will show that the advancing of the German frontier to the Danube and beyond, where it would march with the Hungarian frontier, would drive a wedge of ex-enemy territory between the Northern and Southern

Slav States of Central Europe. Czechoslovakia in particular would find herself peculiarly isolated, and surrounded on three sides by Germany. The strength of this feeling is illustrated by the opinion sometimes expressed in irresponsible circles that if the union became practicable politics Yugoslavia and Czechoslovakia would have to insist on the partition of Austria and the formation of a corridor uniting the two countries. Italy, again, would not welcome Germany as a neighbour. She would feel herself much less secure in the possession of the Southern Tyrol, and with Germany at Vienna her ambition to be the leading political influence among the Succession States would be short-lived. These are the real obstacles to the *anschluss*, and there is no likelihood of their being overcome in the near future. This is well understood in Austria, and explains why, for the present, the matter is regarded as an academic question. Indeed, the majority opinion may be expressed in the phrase, "Reunion is bound to come in the end, but not yet." Even these obstacles, however, may be overcome if and when Czechoslovakia ceases to fear Germany. A first step in this direction has been taken by the approaches of M. Benes to Berlin for the conclusion of an arbitration treaty between these countries.

Developments of this kind will, however, take time, and in the meanwhile Austria must live. Germany is not anxious to see Austria definitely committed to a policy which turns her eyes economically towards the East, though some of the Succession States are undoubtedly more willing than they were to give Austria outlets in this direction. On the other hand, the political situation would not admit of a customs union between Austria and Germany. At the same time, the trend of Austrian development will be largely influenced, as the above illustrations clearly show, by the new tariff policy of Germany, and the extent of the trade which she permits in Austrian goods. Germany could also do much to relieve Austria's immediate economic difficulties by permitting freer entry of Austrians, both of the middle and of the working-classes, into Germany. While, therefore, no radical change in Austria's economic status is to be expected, her prosperity in the near future is, in fact, dependent upon the liberality of the commercial policy of all of her neighbours. It is in the interests of all of them to secure a general easement of current trade restrictions, for none of them can hope to absorb Austria in an exclusive trade agreement.

It may, indeed, prove in the end that the balance of forces among the interested parties, each of them anxious to prevent too close an association of Austria with her other neighbours—whether to the north, the south, or the east—may result in giving her the commercial freedom she requires. If this happens, the country, small though it is, may perceive the possibility of a brilliant future as a European centre of commerce, of trade, and of marketing, and thus justify the faith of the small band of Austrian patriots—followers of Monsignor Seipel—who see the Vienna of the future not as a subordinate town of Germany, or even as its southern capital, but as an independent unit, with a rôle of its own to play, a culture to preserve and develop, and a tolerance of outlook in both personal and public life to teach to Europe. If this is to be the mission of the new Austria, if her independence will enable her to become a centre of appeasement and goodwill, she should be preserved not for Germany only, but for Europe as a whole.

THE GENERAL ELECTION IN CANADA.

(FROM A CORRESPONDENT.)

THE strange complexities of the politics of the Dominion of Canada, where a Federal election has now been fixed for October 29, are very baffling, even to observers who are studying them at close range. The Great War exercised a devastating influence upon the political life of Canada; its first result was to shatter the historic Liberal Party over the conscription issue, and its second and quite unexpected consequence was to reduce to temporary impotence the Conservative Party. Stimulated partly by agrarian discontent in the West, and partly by the example of the British Labour Party, the Progressive

Party came into existence at the general election of 1921, which accomplished the creditable feat of capturing more than one-fourth of the Federal seats at its first venture. The war controversies, however, had solidified the whole French-Canadian vote on the Liberal side, and as it controlled almost one-third of the seats in the Federal House of Commons, the Liberal leaders contrived to build skilfully round this formidable nucleus, and to secure in 1921 almost a moiety of the 235 seats, the Conservatives being reduced to 50 members. Mr King was refused the formal alliance which he sought from the Progressives, but he was promised a benevolent neutrality, and this guarantee enabled him to form a Government. For the last four years, therefore, he has been sustained in office by the grace of the Progressive Party, and whenever he quarrelled with them, he could rely on Conservative support, and only on rare occasions was he unable to muster a comfortable majority.

But the situation has remained completely artificial, and a process of liquidation has always been regarded as inevitable. The Solidarity of French Canada on the Liberal side offered temporary advantages from a party standpoint. But intelligent Liberals have never concealed from themselves the perils which were involved. The people of French Canada have abundant and varied virtues, but they form the most conservative community in a continent whose political conservatism is notorious, and the adhesion of this solid mass of conservatism to the Liberal Party has effectually sterilised it as an instrument of reform. French Canada, in consonance with its passion for political nationalism, is now strongly Protectionist in temper, and has vetoed all but the feeblest attempts to implement the very radical pledges of the Liberal fiscal platform of 1919. It dislikes collectivist action in any shape or form as smacking of Socialism, and has refused countenance to a vigorous railway policy which might have remedied the appalling annual deficits of the State-owned system.

In fact, the Liberal Party of Canada has come to exactly the same *impasse* as the Democratic Party in the United States through parallel causes. Through the support of a solid territorial bloc, which votes not according to principles, but in terms of prejudice, it remains, and may remain for years, a powerful factor in politics. But it is difficult to visualise its resurgence as a dominant party, commanding enthusiastic support in every quarter of the Dominion. If the Progressive Party had enjoyed able and resolute leadership, it would, when it obtained the second largest number of seats in 1921, have followed the example of the British Labour Party, and boldly constituted itself the official opposition. From this strategic position it could have forced to the front the issues raised by its decidedly Radical programme known as the New National Policy; both the old parties would have gradually found themselves yoked in an uneasy alliance to resist its proposals, and a substantial element of the Liberals and some Conservatives would have supported them. The liquidation of the artificialities of the political situation would have been accelerated, and there would have come a restoration of the bi-party system, which has many advantages for a country rent by geographical, racial, and religious cleavages. But the Progressives let the opportunity pass, and contented themselves with levying judicious blackmail at intervals upon the King Government.

The latter enjoyed further good luck in the fact that special circumstances prevented Mr Meighen, the Conservative leader, from organising a speedy revival of his party's power. His part in the war controversies had earned for him the bitter antagonism of the French Canadian race, and the prejudice against him has been sedulously fanned and kept alive by the Liberal politicians of Quebec. Moreover, his share in evolving out of a mess of bankrupt railways the Canadian National system earned for him the unqualified hostility of a powerful group of industrial and financial magnates in Montreal, who, distrusting him as a dangerous Radical, threw their influence at the 1921 election to the Liberals. Through their mouthpieces in the Press they have continued to insist that only

a leader who was acceptable to French Canada, and was less suspect of Radical proclivities, could hope to revive the fortunes of Conservatism in sufficient strength to promise a clear majority in the House of Commons. A Conservative leader, divorced from the most conservative community in the country, and subjected to intermittent attacks by two of the most influential Conservative papers, naturally labours under grave handicaps, and by-elections indicated that Mr Meighen, although he managed to dominate Parliament, was making little headway in the country.

The Government should have been quick to profit by this situation, and establish itself in an almost impregnable position; but the King Ministry was sadly deficient in real political strategy, and devoted its chief energies to maintaining itself in office by the avoidance of all vital issues, and by offering policies of carefully calculated compromise. Lacking a definite majority in the Commons, it was subjected to great pressure from its more venal elements. The recent abuse of the powers of the Federal Railway Commission for the purpose of gaining votes for Liberal candidates in British Columbia is only one of numerous episodes wherein the Government has made unwise use of its powers and influence in order to buttress its delicate position. More disastrous than the absence of skilful and energetic policies has been the serious sapping of the country's political *moral*, which has been visible especially during the last two years, and the Government seems now destined to pay the penalty for its sins.

Mr. Mackenzie King had always cherished the dream of a consolidation of the Liberal and Progressive forces against what he was wont to describe as "the common enemy." But he could never capture the confidence of the Progressives, nor was he willing to accept the risks involved in the terms demanded by them as the price of a definite alliance. Faced with the necessity of filling Cabinet vacancies caused by the retirement of a quartette of veteran Ministers, he made during the summer months a last desperate effort to recover his ground by a reorganisation of his Cabinet on lines which would win for it the cordial co-operation of the Progressives. He tried to secure the services of Mr Charles Dunning, a native of Leicestershire, who has given the province of Saskatchewan very efficient and enlightened government, and by maintaining his position while his Liberal colleagues in the West were everywhere being submerged by the Progressive flood has firmly established his claim to be regarded as the *de facto* leader of Western Liberalism. Mr Dunning, who would have brought with him into the Cabinet a group of influential Western Radicals, is said to have demanded pledges which Mr King could not give without risking a general revolt among his protectionist followers in the East. So Mr Dunning broke off the negotiations, and decided to remain in provincial politics; it then became impossible to secure other competent recruits from the West, and Mr King has been thrown back upon the resources of the protectionist wing of his party. Of the four new Ministers who have joined the Cabinet, only one, Mr Lucien Cannon, is not an avowed high protectionist, and the inevitable result has been to strengthen the Progressives in their determination to preserve their separate identity and press their claims before the electorate as the only reliable instrument of tariff and other reforms. The Liberals are therefore compelled to stand on the defensive on a double front, and they must be seriously weakened in the contest by the defection of the Toronto *Globe*, traditionally the chief organ of Canadian Liberalism. It is possible to have some sympathy with the difficulties of the Liberals assailed by the Conservatives in Eastern Canada for making reductions in the tariff which have been ruinous to Canadian industries, and by the Progressives in the West for accepting the protectionist system and shamelessly betraying the fiscal pledges of their official platform. Mr Mackenzie King and his colleagues are trying to meet this situation by the plea that they were following a middle path between two parties of extremists, and that only the Liberal policy of balanced adjustment and compromise will permit the experiment of Confederation to survive. They have, however, a less satisfactory defence to the charges of extravagance, on which all their enemies unite, and as a result they are facing very rough political weather.

RUBBER PRODUCTION AND THE STEVENSON SCHEME.

THE rubber plantation industry has lately achieved the distinction of a "boom," with its usual accompaniments of Press headlines, Stock Exchange activity, and Parliamentary questions, in a period of marked depression in the industrial field as a whole. On May 19, 1924, the London price of standard "spot" rubber (ribbed smoked sheet) was as low as 9½d per lb. On July 17, 1925, the corresponding quotation was 4s 6d, and although prices have since fallen to approximately 3s 6d, the prospect of a return to the levels of even six months ago is exceedingly remote.

A rise of 430 to 550 per cent. in the market price of any commodity is, indeed, a sufficiently rare phenomenon to suggest the existence of altogether abnormal causes, which, in this case, one need not go far to find. For the last three years the major part of the world's crude rubber supplies has been subject to legislative control, designed, not, indeed, to raise prices, but to "stabilise" them. As far back as 1918, and from late 1920 onwards, output restriction was voluntarily practised by members of the Rubber Growers' Association; but it failed to prevent a rapid fall in prices owing to demoralisation on the manufacturing side, and the coming into bearing of extensive areas under native ownership, chiefly in the Dutch East Indies. In 1921, when rubber was selling at no more than 35 per cent. of its pre-war price, and large unsold stocks were rapidly accumulating, the Colonial Office appointed a Committee, under Sir James (now Lord) Stevenson, to inquire into the matter.

The Stevenson Committee at first inclined to the view that the co-operation of the Dutch East Indian authorities was essential in any organised restriction scheme. This not being forthcoming, however, they produced a second Report recommending legislation to prevent planters in the British Empire from exporting more than a stated percentage of their "standard" production, the percentage to be increased or decreased at quarterly intervals, according as the average price was above or below certain pivotal figures. The object of the scheme was to stabilise prices somewhere between 1s and 1s 6d per lb, by ensuring automatic readjustment of supply to all conceivable variations in demand. The idea found favour at the Colonial Office, Mr Churchill, the responsible Minister, secured its approval in the last 15 minutes of a Cabinet meeting ("evidently the Cabinet either felt that the scheme was so excellent that it required no discussion; or that it was so complicated that discussion was impossible," was Mr Churchill's subsequent comment), the necessary legislation was carried through in Malaya and Ceylon, and on November 1, 1922, restriction came into force throughout the Empire.

The following table shows the subsequent course of rubber prices and consequent variations in the export quota:—

AVERAGE LONDON "SPOT" PRICE OF RUBBER (RIBBED SMOKED SHEET) during each RESTRICTION QUARTER.

Three Months Ended.	Price per Lb.	Maximum Exportable Allowance.*	Three Months Ended.	Price per Lb.	Maximum Exportable Allowance.*
1923.			1924.		
January 1	1 2-285	60	July 31	0 10-974	50
April 30	1 4-856	60	October 31....	1 2-632	55
July 31	1 2-242	65	1925.		
October 31....	1 2-944	60	January 31 ..	1 5-998	50
1924.			April 30	1 7-356	55
January 31 ..	1 2-175	60	July 31	3 2-469	75
April 30	1 0-917	60	October 31....	—	—

* Percentage of "standard" production exportable from Malaya, Ceylon, &c., at minimum rate of duty.

After eighteen months, during which prices were, in fact, maintained within the upper and lower limits fixed by the scheme, but no substantial lifting of the "embargo" was found possible, a collapse occurred half-way through 1924,

followed by a steady recovery, culminating in the hectic "boom" of last summer. The present price being more than twice the maximum contemplated under the Stevenson Scheme, restriction must be written down as a failure so far as *stability* is concerned.

Whether credit for the undoubted change for the better in the industry's fortunes may be ascribed to the scheme may be seen from the table which follows:—

RUBBER PRODUCTION AND CONSUMPTION, 1920-24.
(Thousand Tons.)

Year.	Production.				Total Consumption.	Excess of Pro- duction (+) or Consumpt'n (-)
	British Empire.		Other Countries			
	Amount.	% of Whole	Amount.	% of Whole		
1920 ..	275	75	93	25	368	290
1921 ..	220	75	73	25	293	292
1922 ..	271	67	134	33	405	408
1923 ..	214	56	168	44	382	434
1924 ..	218	52	202	48	420	475

The figures, which are compiled from the annual reports of Messrs Symington and Sinclair, show that the British Empire's rubber output has fallen by about 20 per cent. since 1922, the last post-restriction year, (though the decrease is negligible as compared with 1921, a year of voluntary restriction), while that of non-restricted countries has risen by 50 per cent. Last year's total output was actually higher than during the pre-restriction period, but the British share had fallen from 75 per cent. in 1920-21 to 52 per cent. The self-denial of British producers would have been unavailing but for an unexpectedly rapid increase of consumption, which in the last two years has exceeded production by over 50,000 tons per annum. For this development the growth of motor transport throughout the world is chiefly responsible, since from two-thirds to three-fourths of the world's rubber is consumed by the tyre industry.

The truth seems to be that production and consumption were approximately in equilibrium in 1922, before restriction came into being. The subsequent growth of demand has reduced the world's stocks to a dangerously low point and given us the events of 1925. It is noteworthy that the real "boom" was confined to rubber for more or less immediate consumption, the more "distant" market quotations moving up much more sedately, though they are now, of course, much above last year's levels.

The attitude of the manufacturer towards restriction merits brief notice. From scepticism he rapidly passed to hostility, and his policy of "hand-to-mouth" buying did much to force down the price of rubber last year. Exactly how far he has suffered in the recent movement is uncertain. When Sir George Beharrell, of the Dunlop Rubber Company, attacked the Stevenson scheme early this year, on the ground that "with stock short and supplies artificially controlled the position is dangerous to any manufacturer who would attempt to visualise a programme of manufacture some time ahead," he was met by the assertion that many manufacturers had, in point of fact, bought rubber heavily for delivery throughout 1925 and 1926, at prices under 1s 6d per lb. Many plantation companies are known to have accepted considerable business on similar terms, a point worth bearing in mind by investors in rubber shares.

The average price actually paid by the manufacturer during the next twelve months may thus prove appreciably below present market levels. How much he will be called on to pay in the future is another matter. Many authorities believe that labour and other conditions in British plantation areas preclude the obtaining of more than 85 per cent. of "standard" production, under the Stevenson Scheme, for some time to come. Permissible exports will reach that level in November, and if prices remain higher than 1s 6d, as they are almost certain to do, restriction will automatically work itself out next April. Unfortunately the consequences of recent interference with the free play of supply and demand will be of longer duration. The rubber tree requires five or six years' growth before tapping, and does not give a full yield until about the eighth year. In 1930, or thereabouts, the consequences of the almost complete cessation of new planting in British areas during the last three years will be apparent. Recent

estimates envisage a world production of 621,000 tons of crude rubber in 1930, against a potential consumption of 703,000 tons—a state of affairs offering little prospect of lower prices. To rubber users such a situation would be definitely inimical; to producers it could scarcely fail to be harmful in the long run.

THE WORLD'S TIMBER POSITION.

(BY A CORRESPONDENT.)

At the meeting of the British Association at Southampton a few weeks ago, Mr Alexander Howard, perhaps the greatest practical authority on timbers and their uses, read a paper on "Present and Future Timber Supplies." This paper, no doubt, impressed his audience. It was briefly, but widely, referred to in the Press, and it will, we hope, have some effect in awakening Governments and peoples, and particularly European Governments and peoples, to the fact that whilst there is still a plenitude of wood available to order, the day is not far distant when there will be a general shortage of this indispensable commodity. Needless to say, there will be very few who will disagree with him, and we can endorse his statements by the following observations, some of which have already been touched upon in previous articles in the *Economist*.

Of the timber resources of the five continents of the world—Europe, Asia, Africa, America, and Australasia—only two affect us as regard present supplies of building woods—Europe and America. To show how ruthlessly the forests of Europe are being cut to-day, it may be stated that on the British timber market we are obtaining, at a price at perhaps not quite 50 per cent. above pre-war level, not only all the building woods we require in sawn deal, batten, scantling, and board sizes, and planed boards, but also we are so surfeited with stocks that a slump in values has resulted, occasioning heavy losses to importers here, and still heavier ones to shippers, who have been compelled to sell their wood at less than cost.

Unfortunately, owing to dull trade, heavy taxation, and the recent higher values of wood, the consuming markets on the Continent have this year not imported so heavily as was anticipated. Possibly they have been using more of their native wood to tide them over until trade was better at home.

As an illustration of the volume of imported sawn building woods received by the United Kingdom of recent years, the following will be interesting:—

	Loads of 50 Cubic Feet.
January to August, 1925	2,833,973
For the year 1923	4,678,596
" 1924	5,119,080

The January to August figures this year do not appear large in comparison with the 1924 totals, but the next four months will be a very busy time for receiving cargoes, and will bring the imports well up to the 1924 volume, which was a very heavy one. They are, moreover, 26,457 loads and 381,741 loads in excess of the January-August, 1924 and 1923, imports respectively. Sweden and Finland are cutting wood to their full capacity, their export production being about one million Petrograd standards each (or, as the American lumbermen would put it, 2,000,000,000 ft board measure, each), to say nothing of their domestic demand. The Russian timber trade is increasing rapidly; in 1923 shipments to the United Kingdom amounted to 600,000 loads of 50 cubic feet; in 1924 to 938,800 loads, and from January to August this year, 371,000 loads, and they will continue to increase with the extended trade relations with Great Britain and other European consuming countries.

In brief, Europe, except Russia—who has not yet expanded to her full powers as a wood exporter—is cutting her timber to almost the peak of her capacity (although the poor results of trade this year will tend to a curtailment for a time), but we have no assurance that natural growth and planting are being made to level the enormous annual harvest.

In the United States not merely districts, but States, have within living memory been swept clean of their forests—in some cases deliberately destroyed by fire to make room for agriculture. At a recent meeting of the directorate of the National Lumber Manufacturers' Association of the United States, held at Portland, Oregon, on July 30th last, it was stated that: "We are now reaching a period in the history of the lumber business of the United States when the remaining raw material in its mature and virgin state is largely confined to a comparatively small area on the Pacific Coast, and the business of the future will be conducted by much larger units, calling for greater aggregations of capital. This will permit of a closer affiliation than heretofore was even conceived to be possible, and out of it should arise more modern methods of merchandising."

There are still virgin stands of Southern pine (pitch pine) and hardwoods in the U.S. Southern States, but they also are being worked to death. They have supplied more hardwoods than can be disposed of, and lumbermen and millowners are restricting output until the home and United Kingdom markets improve in demand.

In Canada, including British Columbia, the cutting is colossal, not only for their own markets, but for the enormous and ever-increasing demand from the United States, the East, and also fair exports to this country. The "cut" will expand year by year.

Fires are the greatest enemies of the forest, even worse than vermin. In a short article such as this it is impossible to go extensively into the damage caused by fire, but as an example we quote from a letter recently to hand from Mr Edgar P. Allen, of the National Lumber Manufacturers' Association of Chicago. Mr Allen says of the McNary Bill, passed in Congress last year, that it lays the foundation of a sound forest policy throughout the nation, and then adds: "I may say that forest fires are at least 75 per cent. of the forest problems of America. There is more forest land burned over every year by fires, that are almost wholly preventable, than are logged off for lumber. It has been estimated by a competent authority that our annual loss from forest fires amounts to \$500,000,000."

A loss of, say, a million sterling from that one source alone is alarming, but it also proves that there are still large forest areas in the United States. President Coolidge, in a recent "warning" of the approaching exhaustion of America's forests, pointed out that there were approximately 745,000,000 cubic feet of timber left in the States, and against the supply there was an annual drain of 25,000,000,000 cubic feet, whilst the annual timber growth was only 6,000,000,000 cubic feet.

According to an American author, the total area of South America is estimated at about 7,700,000 square miles, out of which at least 6,000,000 square miles are entirely wood. But even allowing for improved facilities for transport and a consequent lessening of freight rates, the woods of South America are not an economic proposition for building trade work in the Old World. The United States will in time absorb all that she can get of softwoods from the north, Canada, and hardwoods from the south of her possessions. The vast resources of India are a great asset to the Empire, but while there are soft woods in Europe, Indian woods such as those put on the British market of late years will be employed for furniture and decorative work. Of the five continents there is only Europe at present, and Northern Asia in the distant future, which can supply the British market with building timbers on a very large scale.

The time may come, as it came in the early days of the Great War, when we shall find that we have placed too much reliance on securing our wood supplies from overseas. In an international conflict, even though we may not be participants, our foreign and Colonial supplies of timber may suddenly be cut off. To guard ourselves against the possibility of such a contingency, it is the imperative duty of this country to plant widely and at once. To the practical "timber man" it may not be a business proposition as giving certain financial profits—neither is a fire insurance policy. The Government and the railway companies, by concessions, should encourage landowners, large and small, to plant as extensively as possible.

The many substitutes now on the markets of the world are no doubt helping to allay a timber famine, but very close attention should be given to methods for the prevention of forest fires, as is being done in the United States and, we believe, in Canada.

✓ SWISS WATER-POWER.

(BY OUR GENEVA CORRESPONDENT.)

THE Swiss Federal Railways, on September 13th, inaugurated the huge Barberine hydraulic installation which is to supply electrical power to the lines of Western Switzerland. The pasture of Barberine lies at a height of 5,550 feet, in the Alps, above Salvan, near the French frontier. It has been turned into a lake containing 40 million cubic meters of water, and it is harnessed by a concrete dam 866 feet long, 285 feet high, with a width of 210 feet at the bottom and 14 at the top; the dam took several years to build as, owing to the great quantity of snow, it was impossible to work at it more than five months every year. This lake is to drive the turbines of two electrical plants, the one at Châtillard, which is to produce 46,800 h.p., the other at Vernayaz, which is to yield 108,000 h.p. The completion of that important work will help towards the speedy electrification of several big lines. Apart from the Barberine plant, the Federal railways own many others—Ritom (48,000 h.p.), Amsteg (68,000 h.p.) on the Gothard line, Massaboden (10,500 h.p.) on the Simplon line—but they are still dependent on private installations for the supply of electrical power to many of their lines.

The use of water-power for the production of electricity has made good progress during the last 10 years. Switzerland has no coal of her own, and she imports it mostly from Germany, France, Belgium, and Great Britain. Imported coal is generally transported by rail, so that it is rather expensive, particularly on account of the high tariffs of the Swiss railways. Switzerland found herself in a difficult position during the war, when coal imports were practically stopped; she had to accept the drastic conditions of the coal-producing countries in order to keep her railways and manufactures running, and, at one time, the price of a ton rose to over £8. The consequence of this was a rapid development of the Swiss water-power resources, which are estimated at 4,000,000 h.p., and of the electrification of the railways.

In 1914 the existing plants produced 500,000 h.p. of electrical power, and by the end of 1924 that amount had been raised to 1,570,000 h.p.; a further 407,000 h.p. will be added before the end of the present year, and several thousands more will be available in the course of the next two years. The number of hydraulic stations, which was 6,860 on January 1, 1924, is now nearing 7,000, and of the total production of 1,570,000 h.p., 225,000 kw are exported to France, Germany, and Italy. Among the most powerful Swiss electrical plants are Augst-Laufenburg (yielding a maximum of 50,000 h.p.), Augst-

Wyle (62,400 h.p.), Rheinfelden (24,000 h.p.) on the Rhine; Olten-Gösgen (80,000 h.p.) on the River Aar; Campocologno (45,000 h.p.) in Canton Grisons; Biaschina (55,000 h.p.) in Canton Ticino; Chippis (52,200 h.p.); Martigny-Bourg (20,000 h.p.) in Canton Valais; Löntsch (31,000 h.p.) in Canton Glaris. Some of these plants are driven by the stream of the river properly harnessed (this is the case at Laufenburg, Olten-Gösgen, &c.), while some others, like Löntsch, get their power from a lake high up in the mountain. Some of these Alpine reservoirs are so placed that they can drive successively the turbines of two or three power plants, situated at different levels; this is the case for Barberine, which drives two plants—Turtmann-Ilsee, now under construction, where three plants are to be driven by a lake and several torrents, of the Grimsel, which will be begun next year, and will supply three big plants with the necessary water-power.

The creation of artificial lakes in the Alps is now developing, as this system offers many advantages. It makes it possible to obtain a high fall, and thus to drive several sets of turbines placed at different heights, and to assure an important and regular supply of water when, in winter, the production of the hydraulic installations in the plains and lower valleys is reduced owing to the low level of the rivers.

Ten big power stations are now under construction, and their aggregate production will reach 407,000 h.p. Some are already working. For instance, Chancy-Pougny (646,800 h.p.) on the Rhone, near Geneva; others, like Davos-Klosters (30,000 h.p.) and Tremorgio (12,000 h.p.), will be ready in a few months. The construction of 14 other big plants has been authorised, and when they are ready—in a year or two—another one million h.p. will be added to the electrical production of Switzerland, so that nearly three million h.p. will be used out of an available total of four million h.p.

The increasing use of water-power is causing a progressive decrease in the consumption of coal, and the consequence is an important reduction in coal imports. In 1913 Switzerland imported 3,387,213 tons of coal of all kinds, 2,141,000 in 1918, 2,783,000 in 1923, and 2,612,000 in 1924. From the quantities imported during the first eight months of 1925 the imports for the present year may be estimated at 2,475,000 tons. Swiss consumption of coal has, therefore, decreased by over 900,000 tons in 12 years, and this decrease will be accentuated during the coming years as new electrical power plants become completed.

The development of water-power has become a national question for Switzerland since the difficult days of the war, when industry, commerce, transport, and private consumption of Switzerland depended on the goodwill of foreign countries. In that respect the development of water-power for the production of electricity will contribute to make Switzerland independent of her neighbours. Moreover, the supply of cheap and abundant power will greatly help Swiss industry, as it will enable industrialists to reduce the now very high costs of production, and therefore to compete with greater success with the industries of other countries possessing coal in abundance and at low prices.

GREAT BRITAIN AT GENEVA.

(BY A CORRESPONDENT.)

THE past week has seen a remarkable outburst of criticism of the British delegation at Geneva in the foreign and some sections of the British Press. The gist of the comment is uniform. Great Britain, once the leader of every progressive movement at Geneva, has now adopted a rôle of pure obstruction. That is perhaps putting the matter a little high. The *Journal de Genève*, habitually moderate in its language, speaks of "sterile opposition," but it appears to be the case that what is being said in tones more or less restrained in the Press is being said with still more emphasis in the lobbies at Geneva. So general has been the charge, that Great Britain is definitely trying to hold the League back, that Lord Cecil, as head of the delegation at Geneva, has thought it necessary to summon representatives of the Press to assure them

that the one aim the British Government set before it was to strengthen the League and make use of it in all conceivable circumstances.

Whatever is to be said of these criticisms, they are too general and spontaneous to be attributed to any concerted malice on the part of the enemies of this country. There is no reason, indeed, to attribute them to anything but the actual facts of the case, though it is possible enough that the facts have been misunderstood and unjustifiable inferences drawn. At the same time there has clearly been room for some misunderstanding. Since Mr Chamberlain's departure the British delegation at Geneva has been an unimpressive body. Lord Cecil is, of course, Lord Cecil, but he is the Lord Cecil who holds the office of Chancellor of the Duchy in a Cabinet in which not even the Prime Minister interferes with the conduct of foreign affairs by the Foreign Secretary. That means that he is a manifestly different person from the Lord Robert Cecil for whom the first three Assemblies of the League conceived an almost unique attachment.

As for the other members, Sir Cecil Hurst, in many ways ideally equipped for his rôle, is, of course, a civil servant. Not only, therefore, can he take no very prominent part in the shaping of policies, but he is liable even to find himself, as happened in the course of last week, in the position of having to prove to a slightly ironical Commission the impossibility of British ratification of the optional clause of the Permanent Court of International Justice statutes, after having last year exposed to the same Commission with equal force the desirability of such ratification, subject only to certain agreed reservations. Of the other members, Sir George Grahame is a diplomatist with no previous experience of the Assembly; the Duchess of Atholl, a minor Minister, who has done her work, mostly confined to the handling of humanitarian questions, very ably; and Mr A. M. Samuel, another minor Minister, who by all accounts has not settled too happily into the atmosphere of Geneva.

It is only necessary to compare that delegation with the French to realise how strong *a priori* grounds have those critics who proclaim that France is taking the League Assembly seriously and Great Britain is not. What truth there is in such a charge is matter for argument. Great as is the service Mr Chamberlain has done to the League by coming regularly to Council meetings and attending at least the first week of the Assembly, it is still difficult to be quite certain that his real policy is not rather to keep his hand on the League's collar than to give it its head. There are, moreover, special reasons why his attitude should be a little suspect at Geneva, in spite of the good impression his personality has obviously made there. His denunciation of the Geneva Protocol—his by adoption, even though the paternity was Lord Balfour's—was extremely unhappily conceived, and his speech in the Assembly on the same subject followed similar lines. With the main body of delegates still as convinced as ever of the value of the Protocol, it is not surprising that the Foreign Secretary's speech should have lowered the temperature as Geneva correspondents say it did. Mr Chamberlain's just contention that the Pact negotiations then in progress must be given every chance of success, and not imperilled by premature or imprudent action at Geneva, could well seem like an argument for side-tracking the League, even to those who in their hearts fully recognised its cogency.

It so happens, moreover, that all along the line the British delegates have been opposing some proposals which other delegates brought forward and set store by. It may be the Duchess of Atholl, arguing for limitation of the women and children work, or announcing that the British Government could not look at any guarantee for an Armenian loan, in spite of the declaration of Mr Baldwin (when leader of the Opposition) that, in his view, the British Government should make an immediate grant. It may be Mr Samuel directing criticisms, which most of his listeners regarded rightly or wrongly as carping, against the Health Organisation. It may be Sir Cecil Hurst, resisting the proposal that preparation for some ultimate disarmament conference should be entered on forthwith, or dashing the hopes of the smaller nations—and some large ones, for that matter—who hoped that Great Britain might have stood by her last year's intention to accept the universal jurisdiction of the Permanent Court

of International Justice. It may, finally, be Lord Cecil rising to point out with his mingled suavity and skill the objections to an international economic conference project which, advanced in a notable speech by M. Loucheur, had taken strong hold of the imagination of the Assembly.

That by no means exhaustive list forms rather a striking record of pertinacity in opposition, and, unfortunately, there is nothing positive to show on the other side, with the exception, in a secondary sphere, of the slavery convention moved by Lord Cecil. The upshot would appear to be, if the Press reports, substantially discounted, may be assumed to rest on some bases of fact, that a mediocre British delegation has acquired an unfortunate reputation for instinctively applying the brake whenever it is proposed that the League should take some forward move. The obvious comment on such a criticism is that in certain circumstances the application of brakes is eminently desirable in the interests of safety. That is, in fact, the official contention of the British delegation. No one, indeed, could well accuse the League of Nations of generating a pace so precipitate as to make a safety first campaign essential. But it was open to Lord Cecil to contend that so important a step as the convocation of an economic conference ought not to be taken without further consideration, and to Sir Cecil Hurst to argue that to take even preliminary steps towards preparing for a disarmament conference would be to raise hopes which might well be once more disappointed. The trouble has been that these and several other brakes have all been applied simultaneously, with the not unnatural result that the British delegates at the Sixth Assembly have gained for themselves the reputation of being before everything else good brakesmen.

That is unfortunate, particularly as there is at least an element of truth in the allegation. A Conservative Government has replaced a Labour Government since the Assembly last met, and, however the British delegation may protest that circumstances which other people controlled forced them in a number of different cases to oppose measures they regarded as premature or ill-considered, the fact remains that the characteristic caution of the Conservative has shown itself in a rather accentuated form at Geneva. The result is not good for the League of Nations, and it is not good for the League of Nations. The only people it is good for is, by contrast, the French. There is no particular reason to suppose that the French delegation came to Geneva bent on securing the moral leadership of the Assembly. But it clearly has secured it, and that without any great effort of its own. M. Painlevé went out of his way to be at Geneva for the opening days of the Assembly. Mr Baldwin, though spending his holiday close at hand, thought it better to stay away. Those two decisions typify a good deal that has happened since. To some of the smaller States which have deliberately chosen the British orbit rather than the French in the past the new turn of affairs has caused both perplexity and dismay. To-day the Sixth Assembly is on the point of passing into history. Before the Seventh Assembly falls due it may be hoped the British Government will realise what ground it has lost at Geneva and take all the necessary steps to regain it.

Notes of the Week.

German Government Funds and the Reichsbank.

An incident has occurred this month which appears to raise an important matter of principle in connection with the working of the Dawes plan. In recent months it has been the declared policy of the Government to do everything that it possibly can to lower prices and reduce costs in Germany. One of the ways in which it desires to achieve this is by influencing the high rates which industries have to pay for credit. In pursuance of this policy it announced early in September that the rate at which it would lend its "free" moneys to institutions other than the Reichsbank would be reduced from 9 per cent. to 7½ per cent. (or 8 per cent. for long loans), on condition that these "intermediary" banks pass on the reduction to their customers. The funds in question are the cash in hand of the Government departments, the working capital or the accumulating profits of the railways, Post

Office, and other undertakings, the uninvested funds of the social insurance department, &c. The amount of these funds naturally varies with seasons and circumstances, the recent average being estimated at 1,250 million marks, of which 750 millions (including loans—400 millions—private discounts, and commercial bills) are with the "intermediary" banks, and are affected by the rate reductions, and 500 millions are on deposit in the Reichsbank or in Reichsbank bills, and are thus unaffected by the reduction. This state of affairs gives rise to several important considerations. If large sums of money are to be disposed of by the Government outside of the Reichsbank, the elaborate machinery of a governing body with foreign representation, and the careful precautions taken to make the central institution independent of political pressure may be rendered abortive, since the hand of the latter is liable to be forced and its control of the money market undermined at any time. But the ability of Germany to make "transfers" to her foreign creditors, while maintaining the stability of the exchange, largely depends upon discount policy and the ability of the Bank to retain its control of the money market. Finally, the action of the Government raises a doubt as to whether it is really in sympathy with the firm policy by which up to the present Dr Schacht has maintained the parity of the exchange. These are far-reaching questions. In support of the Government's action it is argued by industrialists that the Government itself is to blame for the current high interest rates because it has collected excessive sums in taxation and in charges, and has built up unnecessary surpluses since stabilisation out of sums which should have been left to industry. Again, Government deposits with the Reichsbank earn no interest. It is claimed that it is unreasonable and uneconomic that the Government should not be allowed to earn interest on its surplus cash. Moreover, the lending of these sums, which is not in any way a new practice, does not give real control of the market—particularly at the present time, when the rationing of credit by the Reichsbank is the real safeguard against inflation. This last point is probably sound, and there is no reason to fear that in existing circumstances the action of the Government will materially alter the credit situation. But credit rationing is an emergency measure, which may soon be no longer necessary. It will then be essential that the Reichsbank should remain in control by ordinary methods. If the misgivings to which the recent episode has given rise are to be dispelled, it is very desirable that all ambiguity as to the respective rôles of the Reichsbank and the Government in the money market should be removed. In the last resort the Government of any country has the power of deciding its monetary policy. But Germany has deliberately accepted a limitation on her freedom of action—she has handed over the right of note issue to the Bank; she has agreed to and has set up a general board of control over the Bank, containing representatives of her creditors, &c. These devices, with all their implications, must be accepted in the spirit as well as in the letter if the Dawes plan is to work. It must be conceded as reasonable that certain Government funds should earn interest, and it should be easy to arrange for this through the Reichsbank. But it is even more essential that the position of the Central Bank should be assured by providing either that all Government funds must pass through the Reichsbank, or that the question of the rate at which these funds are lent through other channels should conform to the policy of the "general board" as though they were Reichsbank funds.

More Coal Trouble.—After a two months' truce in the coal dispute another deadlock has been reached this week, following the reply of the Premier to an appeal by the Executive Committee of the Miners' Federation for an interpretation of the terms of agreement reached in July. The miners contended that under that settlement owners of individual collieries were precluded from seeking an alteration of the basic rates of particular pits on which actual wages are calculated according to the percentages determined in national agreements. Such readjustments would have been permissible under the agreement of July, 1924. Mr Baldwin definitely accepts the owners' view,

and maintains that the wages to be paid are those which would have been in operation if notice to terminate the agreement of June of last year had not been given. These may, of course, be either above or below those actually current in July, 1925. According to the terms of the settlement of last July, the Premier's position seems to be unanswerable in holding that it does nothing more than continue the agreement come to between the mineowners and the miners in June, 1924. His view is, moreover, strengthened by a letter of the Trade Union Congress, which states that the Prime Minister proposed that work should be carried on just as though the existing agreement was still in operation for a period of nine months. But that some uncertainty did exist as to the exact basis of the settlement—and that not only on the part of the miners themselves—is indicated by the wording of the Supplementary Estimate of August 3rd, passed by the House of Commons, which Mr Cook quoted; this was "to provide for a temporary subvention to enable the coal-mining industry to continue the payment of wages at rates not less than those obtaining in July, 1925." This certainly implies, not that the agreement of June, 1924, was to function as an instrument for the continued and constant readjustment of wages on certain principles, but that they were to be temporarily stabilised at the level that had been reached under the agreement at the end of July. It is unfortunate that this discrepancy between the terms of the settlement and the wording of the subvention vote was allowed to arise. Technically, it appears to open the way for further argument, and the miners have taken the opportunity to announce a boycott of the Royal Commission pending a special delegate conference which has been called for October 9th.

Employment in August.—Unemployment increased last month, there being a marked decline in employment in the coal industry. According to the *Ministry of Labour Gazette*, among the 11½ million workers insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed on August 24th was 12.5, as compared with 11.5 on July 27th and 10.6 a year ago. The total of registered unemployed increased from 1,262,000 on July 27th to 1,418,000 on August 31st. The percentage of trade union members unemployed at the end of August was 11.4, as against 11.2 at the end of July and 7.9 a year ago. The following table gives the monthly trade union figures for several years past:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1919.	1920.	1921.	1922.	1923.	1924.	1925.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	2.4	2.9	6.9	16.8	13.7	8.9	9.0
February ..	2.0	2.8	1.6	8.5	16.3	13.1	8.1	9.4
March	1.9	2.9	1.1	10.0	16.3	12.3	7.8	9.0
April	1.7	2.8	0.9	17.6*	17.0	11.3	7.5	9.4
May	1.9	2.1	1.1	22.2*	16.4	11.3	7.0	10.1
June	1.9	1.7	1.2	23.1*	15.7	11.1	7.2	12.3
July	1.9	2.0	1.4	16.7	14.6	11.1	7.4	11.2
August	2.0	2.2	1.6	16.3	14.4	11.4	7.9	11.4
September ..	2.3	1.6	2.2	14.8	14.6	11.3	8.6	..
October	2.2	2.6	5.3*	15.6	14.0	10.9	8.7	..
November ..	2.0	2.9	3.7	15.9	14.2	10.5	8.6	..
December ..	2.6	3.2	6.0	16.5	14.0	9.7	9.2	..

* Excluding coal miners.

In addition to the decline in employment in the coal trade, increased unemployment was reported in iron mining, in carpet manufacture, in the tailoring and dress trades, and in the glass bottle making industry. There was some improvement in the wool textile and in the linen and jute industries. As compared with August, 1924, employment on the whole showed a decline, which was most marked in the coal and iron mining, tinplate, and linen and wool textile industries; on the other hand, a few industries, including the building trades and some sections of the cotton trade and of the engineering trades, showed an improvement.

Cost of Living.—According to the index number compiled by the Ministry of Labour, there was a further rise in the cost of living in August, the figure rising

from 73 to 74 per cent. above the level of July, 1914. Monthly movements and comparisons with previous years are given in the following table:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)

1st Day of	1918.	1919.	1920.	1921.	1922.	1923.	1924.	1925.
Jan.	85.90	120	125	165	92	78	77	80
Feb.	90	120	130	151	88	77	79	79
March ..	90	115	130	141	86	76	78	79
April ..	90.95	110	132	133	82	74	73	75
May ..	95.100	105	141	128	81	70	71	73
June ..	100	105	150	119	80	69	69	72
July ..	100.105	105.110	152	119	84	69	70	73
Aug.	110	115	155	122	81	71	71	73
Sept.	110	115	161	120	79	73	72	74
Oct.	115.120	120	164	110	78	75	76	..
Nov.	120.125	125	176	103	80	75	80	..
Dec.	120	125	169	99	80	77	81	..

For food alone the average increase over July, 1914, was 70 per cent., as compared with 68 per cent. a month earlier, the rise being mainly due to increases in the prices of bacon, eggs, and butter, which were partly offset by a decrease in the price of potatoes.

Another Conversion Loan Issue.—It was announced on Tuesday that tenders would be received at the Bank of England on Tuesday next, the 29th inst., for £40 millions of 3½ per cent. Conversion Loan at a minimum price of 76½ per cent. Five per cent. is payable at the time of delivery of the tender, and the balance will be due for payment on October 9th. Payment, however, may be postponed (without notice to the Bank) until any subsequent Friday up to and including Friday, December 4th, on payment, in addition, of interest at the rate of 3½ per cent. per annum as from October 9th. This means that full payment need not be made until after the disbursement of £50 millions of War Loan interest on December 1st. The operation, therefore, is unlikely to cause undue disturbance in the money market. Twice already during the current year two successful issues of this type have been made, in each case with the object of meeting maturities of bonds, but on this occasion there are no maturities approaching, a few millions of National War Bonds which fell due on the first of this month having already been repaid. Such of the 30 odd millions of cash now being raised as is not required in connection with this repayment will possibly be used for the funding of Treasury bills.

American Cotton Crop.—Our Manchester correspondent writes:—Late on Wednesday evening the Department of Agriculture of the United States Government sprang a surprise upon the cotton trade of the world by the statistic relating to the current crop. The condition was given as 53.8 per cent., against 56.2 per cent. a fortnight earlier. With a higher estimated yield per acre, however, the indicated crop was 13,931,000 bales, against 13,740,000 bales in the previous estimate, and 12,596,000 bales at the corresponding time last year. Traders fully expected a decline in the indicated yield during the fortnight of about 300,000 bales, as the weather reports from the belt during that period were unfavourable. Immediately the figures were published there was a decline in New York and Liverpool of about ½d per lb. The downward movement was carried further a little later, but a reaction took place as a result of buying at the lower figures. Traders throughout the world are very confused, and some private authorities express the belief that the Government in previous reports under-estimated the condition, and that on this occasion an attempt has been made to adjust matters. Owing to the growth this season being very early, the ginnings up to September 15th are given as 4,276,000 bales, against 2,666,000 bales at the same time last year. As things stand at present there is every probability of a crop of American cotton this season, including linters, of about 15,000,000 bales. As the consumption during the twelve months is not likely to be more than 14,250,000 bales, there should be a substantial carry-over at the end of next July. There is much difference of opinion as to what is a reasonable price for the commodity in view of the facts available. Many people consider that to be able to purchase American cotton in

Liverpool at under 12½d per lb, is a safe proposition. Should, however, the weather in the cotton belt be favourable during the next few weeks, the Government may still further increase its estimate of the yield.

Egyptian Cotton Crop.—Details are now to hand relating to the cotton crop in Egypt for the season 1924-25, the growth being given as 7,270,797 cantars, against 6,417,083 cantars in the previous year. It is of interest to point out that the output last season was larger than for ten years back. During the past 12 months the exports to Great Britain, out of a total of 937,946 bales, were 428,965 bales, against 445,255 bales in the previous season. The takings of the United States are given as 133,888 bales, as compared with 108,726 bales in the previous year. The exports to Germany were 27,945 bales, against 45,332 bales in 1923-24. There was a rather remarkable increase in the takings of Czecho-Slovakia, the amount being 40,822 bales, against 24,756 bales in the previous year. The stock at Alexandria at the beginning of last season was 188,000 cantars, whilst supplies at the close were 327,000 cantars. A favourable development in connection with the growth of Egyptian cotton is that the yield in cantars per feddan has steadily increased during the last few years. In 1913-14 it was 4.46, but the war brought a decline to 3.10 in 1916-17. Since then a recovery has been made, the amount last season being 4.06. According to present advices there is every likelihood of the output this season being even larger than in 1924-25.

Brazilian Cotton.—A correspondent writes: According to information recently to hand from Brazil, the 1924-5 cotton crop for the whole country is estimated at a little over 131,000 tons, or about 582,000 bales (of 500 lbs). If this estimate be realised, the yield would show a slight increase over the previous year, when the crop was described as the "largest ever registered in Brazil." The production was obtained in spite of unfavourable climatic conditions prevailing in various States, with droughts in some and floods in others. But for these drawbacks the results would have been very much higher. The growing crop is said to be not altogether free from the cotton-worm, a pest which, upon previous occasions, has effected a considerable amount of damage. It is added that the injury caused might have been mitigated had it been possible to withdraw from the Santos customs house large consignments of Paris green, a preparation used to exterminate the pest, but which the Customs held up, and only released when too late for use. In view of the large local demand by Brazilian mills, principally located in the States of Sao Paulo and Rio de Janeiro, the amount of cotton for export is not expected to be very large. Prices have been steadily falling since the beginning of the year, and the amount of all produce on hand remains substantially reduced. Among foreign purchasers of Brazilian cotton are Great Britain, Portugal, and France. They receive their consignments from the Brazilian ports of Santos, Fortaleza, Pernambuco, and Cabadello. The Government remains indefatigable in its efforts to maintain not only the quality of cotton grown, but the extension of cultivation wherever it is possible to carry it on profitably. The Brazilian farmers, on the other hand, have shown themselves slow to grasp the opportunities offered by this class of cultivation, notwithstanding that a large area of the country is well adapted to the growing of the cotton plant. With the increase of cotton production, the local textile manufacturing industry has made rapid development. It is estimated that there are in the country 250 textile mills, with 65,000 looms, and more than 1,800,000 spindles. Labour remains abundant and cheap, unskilled workers receiving as little as 2s a day. Hitherto the mills have manufactured coarse and second-grade textiles, but the market is now asking for yarns of 60 counts and upwards. To supply these requirements, a new mill with 1,000 looms and 80,000 spindles, known as the Fabrica Nova America, has recently been erected in Rio de Janeiro. Satisfactory results should ensue from the enterprise promised by Lord Lovat, a member of the Financial Mission which visited the South American Republic last year, and who intends to carry on the cultivation, treatment, and exportation of

BANK ESTABLISHED IN 1864.

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

cotton upon an extensive scale. Brazilian cotton yields per acre 121 kilogs, compared with 89 in Egypt, 66 in the United States, and 36 in British India.

The German Oil Trust.—Shortage of working capital and the pressure of competition have brought together the two most important German oil groups, Deutsche Petroleum and Deutsche Erdoel. Perhaps foreign influences had something to do with this fusion of rival interests, for the Anglo-Persian Oil Company is suspected of desiring to cement an anti-Shell and anti-Standard Oil bloc. Up to the present there have been five competing groups in the German oil markets: first, Standard Oil, operating through the Deutsche-Amerikanische; second, Royal Dutch-Shell, working through the Rhenania-Düsseldorf and also through Sonnenborn of Hamburg; third, Deutsche Petroleum, allied with Rütgers Werke; fourth, Deutsche Erdoel; and fifth, Stinnes Riebeck Oel. It may be recalled that Hugo Stinnes tried to create something of an oil trust, but failed to bring Deutsche Petroleum and Deutsche Erdoel together in association with his group. Stinnes Riebeck, with the break-up of the Stinnes group, has since been taken over by the Dye Cartel. Three powerful groups are, therefore, left, ostensibly in competition, by the fusion of Deutsche Petroleum and Deutsche Erdoel. The new German group will be well organised. The Deutsche Erdoel hands over to the Deutsche Petroleum the distribution side of its business and will receive in exchange shares in the new Deutsche Petroleum, which will increase its capital from 24 million marks to 35 million marks. The oil marketing alliance between Deutsche Petroleum and Rütgers Werke will cease; the latter surrendering its shares in the Deutsche Petroleum in exchange for all the subsidiary undertakings of Deutsche Petroleum which are not essential for the oil distribution business. Whether the Deutsche Erdoel keeps its identity in the production end of the business is not yet clear. Deutsche Erdoel owns the Wietzer wells in Hanover (Deutsche Petroleum owns only one oil shaft at Heide, in Holstein), and has important interests in coal and lignite—for instance, the Graf Bismarck mine and the Magdeburger Bergwerke A.G.—together with oil refineries and coal distillation plant. Supply of the raw material is, however, the weakest side of the new amalgamation. The loss of the pre-war interests in the Roumanian and Galician fields left the German group dependent upon the small output from the wells in Hanover and elsewhere (about 60,000 to 80,000 tons a year), partly upon the liquid products obtainable from the distillation of coal or lignite, but more especially upon imports of crude oil, mostly from America. From the point of view of crude oil supply the association of the Anglo-Persian Oil Company with the new group is not at all unlikely. The distribution is the strongest side of the amalgamation. The duplicating of distributing organisations will be eliminated, staffs will be reduced, and the existing marketing plant will be more economically employed. The fusion does not necessarily mean a war against the two foreign interests, Standard Oil and Shell. The foreign oil trusts may have some respect for the new German oil trusts, seeing that the Deutsche Bank is closely associated with the Deutsche Petroleum and the Diskontogesellschaft with the Deutsche Erdoel. It has already been suggested that, now the competitors are reduced to three, marketing under standings will be more easily reached. No doubt before very long there will be an oil price ring in Germany.

Oil Production in Mexico.—To consider the record of oil wells drilled in Mexico, writes a correspondent, is to marvel at the enterprise or folly of the oil companies. In the first half of this year out of 440 wells completed in Mexico 69 per cent. were dry. In the corresponding half of 1924 out of 379 wells completed 62 per cent. were dry. These figures even overstate the blessings of the oil companies. It is true that 31 per cent. of the wells completed were producers, as compared with 38 per cent. last year, but the majority of them were affected by salt water soon after completion. Of the 440 wells completed 396, or 90 per cent., were drilled in the northern fields lying north of the Panuco River, and of these the majority were drilled in the Cacalilao sector, which is badly invaded with salt water. The wells drilled in the Corcovado sector north-east of Cacalilao also showed a disposition to turn rapidly to salt water. In the southern fields a large number of the 44 wells drilled were so-called "strippers" in the old fields that had gone to salt water some years ago. The reason why oil companies continue to operate in Mexico with these dark prospects is that the initial production with Mexican wells is generally large. A prolific gusher quickly repays the cost of dry holes, and a gusher is the goal of every oil-driller. The production of crude oil in Mexico for the first half of 1925 is estimated at 65,797,583 barrels, as compared with 74,061,793 barrels in the first half of 1924, a decline of 8,264,210 barrels, or 11 per cent. Of this quantity roughly two-thirds were produced in the northern (heavy oil) fields, and one-third in the southern (light oil) fields. Shipments amounted to 60,947,190 barrels, against 70,862,743 barrels in the first half of 1924. So marked is the drop in the shipments of some companies that Mexico now provides the oil equivalent of bringing coals to Newcastle by importing some crude oil from the United States. As regards the future outlook for production, there is little encouragement to be gained from the "wild-cat," or exploratory, wells drilled this year. Failures were conspicuous, and no absolutely new territory was developed. In the northern districts there were only extensions of existing fields. In the southern the Mexican Petroleum Company (Doheny interests) have not yet developed any commercial production in the Tres Hermanos field, which last year seemed so promising. The same company drilled the deepest test for oil yet made in Mexico, but the hole—5,338 feet deep—was perfectly dry. The Mexican Eagle Oil Company is still trying to develop commercial production in the Filisola district, Isthmus of Tehuantepec, and is testing once again the old Furbero field. No successful results of its drilling have yet been reported, but it is always possible that with the employment of geophysical methods of oil-finding, such as the torsion balance, in areas like the Isthmus of Tehuantepec, where there are hidden salt dome structures, oil may be found. The following table, compiled by an American oil journal, gives a *résumé* of the operations in Mexico in these six months:—

JANUARY-JUNE, 1925.		Barrels.
Production of heavy oil (northern fields).....	44,421,499	
" " light " (southern " ".....	21,376,084	
Total production of crude oil.....	65,797,583	
Imports of " ".....	947,403	
Withdrawn from storage (estimated).....	2,087,245	
Total distribution.....	68,832,231	
Shipments.....	60,947,190	
Available for domestic consumption.....	7,885,041	

It is still noticeable that "wild-cattling" on a big scale has not yet been attempted in Mexico, and will probably await the advent of more stable political conditions and higher prices for crude oil, particularly the latter. The former condition, stability, is, one hopes, brought a stage nearer by the British recognition of the Mexican Government recently announced.

A Canadian Government Bond Issue.—Our Ottawa correspondent writes:—The Federal Government has just floated, through a powerful syndicate of Canadian financial houses, a domestic issue of \$75,000,000 4½ per cent. non-callable bonds; they are dated September 1st, and will mature on September 1, 1949. The price to the public

is 97½, and the yield offered is therefore 4.75 per cent. More than half the sum secured will be required to redeem an issue of War Loan 5 per cent. bonds, which mature on December 1, 1925, and the latter bonds will be accepted at par and accrued interest in payment of the new bonds. These are being issued in denominations of \$100, \$500, \$1,000, \$5,000, \$10,000 and \$100,000. The local market is showing a good capacity to digest this issue, and the syndicate reports that excellent progress has been made with the disposal of the bonds to the public.

Rubber Market Animation.—A Stock Exchange correspondent writes:—The rubber share market in the Stock Exchange has been compelled to expand its borders day by day. The amount of business which is doing in that department may be gauged by the fact that in many Stock Exchange offices it proved necessary for the settlement work to be continued all through the night of Wednesday. The carry-over was on heavier lines than usual, but, compared with the volume of trade that is passing in rubber shares, the amount of contango work is relatively slight. People are taking up what they buy, delivering of bargains are done every day in one or two hundred shares of the florin variety, the prices of which stand anything between, say, 2s and 5s, some little idea can be gathered of the colossal piles of mechanical labour that the settlement of a fortnightly account entails. Readers of this journal have been kept thoroughly conversant with rubber market conditions from week to week. They cannot fail to have observed the character of the buying which is reflected in the willingness of purchasers to put down hard cash in payment for shares. The market has emerged from the confines of a merely speculative area into one that is deemed suitable for the employment of large sums of money on the part of those who look to the future for substantial dividends, and, a necessary corollary, increase in capital value. We have shown how trust companies are amongst those which have taken a hand in the rubber industry; and when a trust company buys shares it is not in fifties and hundreds at a time. The result of all this change of proprietorship is that the latest buyers are averse from selling except at prices which offer irresistible temptation. The area of choice is greatly restricted by the fact of so many good rubber companies having small capitals, the shares of which are now in the hands of the permanent speculative investor. Some people object to the word speculative being mentioned in connection with rubber, but he need be no austere observer who regards shares in any tropical industry as being susceptible to many factors which do not operate in the case of sound investment securities. The outlook for the industry continues to be promising. The dividends which are now being declared every day point to the willingness of directors to allow their fellow-proprietors an immediate share in the remarkable prosperity which the companies enjoy. The usual niggers in the pile are scarcely visible. The word "synthetic" is never heard. The prospect of labour shortage in the Middle East is regarded as being slender enough to justify its being ignored. Consumption of the produce fully keeps pace with production so far as can be judged by the statistics that are published, and by the steadiness shown by the quotation for rubber itself. Companies are able to make favourable contracts for a long way ahead, and in such manner as to ensure their obtaining the advantage of further price-improvements should these occur. It is not surprising, therefore, that the attention of the man in the street, in the country, and on the Continent should be attracted to a market which commands such prospects, and which at the same time is sufficiently active, in the Stock Exchange sense, to enable profitable dealing. Up to the present the movement has been confined to shares in companies that, even the worst of them, possess a fair sporting chance, but it stands to reason that the swindling promoter and the bucket-shop keeper are not likely to permit such an opportunity to escape their activities. It may be well, therefore, to conclude this paragraph with the suggestion that, before taking a hand in the shares of any unknown company, the prospective purchaser should seek the advice of someone qualified to give it.

Trade Facilities Act Guarantees.—The amount of loans which may be guaranteed under the Trade Facilities Acts has by the Act, 1925, been increased to £70,000,000. According to the last Treasury statement issued, the total loans so guaranteed as to principal and interest amount to £54,452,936. The outstanding liability of the Exchequer has, however, been reduced by the repayment of certain loans totalling £1,129,324. The balance available for further loans is £15,547,064. A rough analysis of the loans already guaranteed may be of interest. Grouped under broad headings these would be:—Shipping and Docks and Harbours, £16,930,511 (31 per cent. of total loans); Railways, £12,583,000 (23 per cent.); Public Utilities, £3,912,100 (7 per cent.); Miscellaneous Industries, £8,187,325 (15 per cent.); and Foreign and Colonial, £12,840,000 (24 per cent.). The major portion of the loans have, therefore, been devoted to the shipping companies and docks and harbours. The railway companies come next, these loans being all for electric railway schemes. In this connection it may be noted that one important application has been withdrawn, namely, that of the S.E. and Chatham Railway in 1922, for £5,500,000. As regards the loans to Public Utilities, these are mainly for extensions of electric supply. These applications (14 in all) are not as numerous as might have been expected, seeing that there are over 220 electric supply companies altogether, the big majority of which are small companies which usually have to depend on local capital. The most important of the electricity loans is the one to the North Wales Power Company (£1,700,000), for the purpose of carrying out the North Wales Joint Authority scheme. No gas companies appear in these lists of loans. Of the total loans granted for works in England, £41,612,936, this has all been apportioned to companies, except certain loans to Harbour and Other Boards and Corporations, totalling £1,357,500. As regards the industries which stand to benefit directly by the orders (all of which must be placed in Great Britain), a rough estimate would be as follows:—Engineering industries, £35,500,000 (of which the electrical manufacturing section would take about two-thirds); shipbuilding, £12,500,000; civil engineering, £3,000,000; and building and miscellaneous, £3,500,000.

Austin Affairs.—Following rapidly upon the first reconstruction scheme of the Austin Motor Company, which was abandoned owing to the attitude of dissenting shareholders, comes a second proposal for the reorganisation of the capital. The terms of the abandoned scheme were that all the four classes of shares were to become one big 6½ per cent. (tax free) cumulative preference issue, but the existing nominal value of £1 was to be written down—the 7 per cent. preference to 19s, the 6 per cent. preference to 15s, and the preferred ordinary and ordinary shares each to 6s 8d. All arrears of dividend were to be cancelled. The General Motors Corporation agreed to subscribe for £1,500,000 of ordinary shares, out of the proceeds of which all the debentures were to be paid off. The scheme provided for writing off a deficiency of £1,662,500, after writing up the goodwill to £396,373 and including £415,143 estimated profits for the nine months to June 30th, before providing depreciation. The dissenting directors opposed the scheme for a number of reasons. Firstly, because of a desire to protect certain classes of shareholders' interests, it being contended that neither the "A" nor the "B" preference shares should be asked to make a sacrifice of their capital; and, secondly, an objection to placing control of the company in American hands. And, lastly, and perhaps most important of all, the offer was considered inadequate. The company now intimates that at the conclusion of the annual meeting on September 29th, after formal business has been disposed of, the directors "propose to refer to the matter of the reorganisation of the capital of the company." This is accompanied by preliminary particulars of a scheme which the directors unanimously recommend. It is not proposed to submit any resolution at the annual meeting, but to discuss the scheme informally with the shareholders. The new suggestions for putting the undertaking on a sound financial basis provide

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised £8,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,458,221

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES SREUBAT, Chief Manager.

for the writing down of the share capital from £3,347,909 to £1,950,000, thus leaving a balance of £1,397,909 available for writing off lost capital, which is the estimated total deficiency to be provided for. None of the capital loss is to be borne by the preference shareholders. The rate of interest on the 7 per cent. preference is to be increased to 8 per cent., and holders are asked to waive any claim to arrears of dividend accrued to September 30, 1925. The holders of the 6 per cent. "B" preference shares are also asked to forgo dividend arrears in consideration of the interest rate being fixed at 8 per cent. The preferred ordinary and the ordinary shares are to be reduced to a nominal value of 6s. 8d. each. The preferred ordinary and ordinary shares are compensated to a small extent by sharing in the equity of the profits to the extent of five-sevenths of such equity. The existing debenture of £250,000 will be paid off out of cash at bank, and a prior lien debenture for the nominal amount of £300,000 issued to the bank as cover for working capital if required. This debenture constitutes a first charge upon the assets and undertaking other than the Longbridge Estate, which, together with the interest in the French and Belgian companies, it is intended shall be realised and the proceeds applied as working capital or in the reduction of the amount owing to the bank. The £90,000 due to the Treasury will be secured by a mortgage debenture ranking as a second charge upon the undertaking, and will be repaid by annual instalments of £10,000. Holders of the 6 per cent. fourth mortgage debenture stock are asked to allow the modification of the clauses of the trust deed, relating to the company paying out of its excess assets and current trading profits such sums as may be available in repayment of amounts due to the debenture stockholders and substituting a redemption fund of £52,094. This will be applied to the redemption of the debentures in 20 years by drawings at £102 10s, or by purchase in the market, commencing on October 1, 1926. In consideration of the granting of this permission, the rate of interest is to be raised to 6½ per cent. It is suggested that the post of managing director of the company shall be abolished. In its place should be constituted a committee of three, comprising a chairman, a director of finance, and a director of works. The main fact which both shareholders and debenture holders should bear in mind in considering the scheme is that the board of the company, after much disagreement, has apparently come into line. There will undoubtedly be a certain amount of criticism from some shareholders—especially those interested in the junior capital. The outlook for this class, if the scheme goes through, does not seem particularly bright, and it is possible that they will have to await the repayment of the debentures before they see any return on their money.

Dear Lead.—The need for an enlargement of the world's piglead production has been once again emphasised by recent developments in this metal, the value of which was early this week forced up to £40 10s a ton for prompt delivery, which compares with £44 and £27 15s, the two extreme points reached last year. After standing at the opening of this year at £43, the price moved downward sharply, eventually dropping towards mid-May to the neighbourhood of £32, which thus still indicated fully £5 over last year's lowest record. There was a considerable increase in production in the early months of this year, particularly in North America,

but since then, in view of the substantial setback in value, the returns of output on the whole have not varied a great deal from month to month, so that in consequence of the renewed vast expansion of the outlet for electrical use in connection with the greatly increased needs of the building trades, current supplies have been easily taken care of. Surplus stocks in the United States were this year reduced by well over 50 per cent. down to about 9,000 tons. Whereas a year or so ago, imports into this country were at the rate of about 18,000 to 19,000 tons a month, and still sufficient to cope with home consumption, needs are estimated to have been increased this year by another 4,000 to 5,000 tons a month. Home manufacturers of lead sheets and pipes have, so far as can be gathered, enlarged their takings of the metal to as much as 9,000 tons a month, which is roughly 2,300 tons more than at the beginning of this year. Besides this, a good deal more metal is wanted for the making of pigments, chiefly white lead. Adding to this the considerably larger quantities absorbed by the electrical industry, chiefly cable-makers, it can only be concluded that the excess of about 25,000 tons in the receipts from abroad for the eight months to the end of August, which totalled 180,500 tons as against 155,600 tons in the same period last year, has been needed to keep pace with demand, while allowing for a certain amount of metal re-exported. At anything near £40 a ton the price to consumers is preposterously high, while huge profits are accruing to producers even on a selling price at around £35 a ton. The fact may be mentioned that the leading Canadian producers, the Canadian Smelting and Refining Company of Canada, whose expansion of operations in the past year was so remarkable, are able to turn out their piglead at about 4 cents per lb. This cost, however, is exceptionally low as compared with that of most producers in other parts of the world. The recent strike troubles in Australia seriously hindered shipping, and this was productive of much uneasiness in the piglead market in conjunction with this month's reduced arrivals. According to the latest news from Australia, however, strike disturbances have been checked under drastic Government action, and this has had a sobering effect on the market in the last few days. Liquidation of paper-lead and freer forward offers, indeed, resulted in the price reacting about £1 a ton from the highest figure touched.

Johannesburg Consolidated.—Our mining correspondent writes:—From the circumstance that the directors of this company—popularly known as the "Johnnies"—declared the same dividend for the year ended June 30th as in respect of the preceding period, the inference might have been drawn that the accounts would show a somewhat similar profit. Any such inference has in fact proved extremely well founded. In point of fact, the net earnings for 1924-25—£744,700—are within about £2,000 of those for 1923-24, and the small difference is on the wrong side. From some of the company's gold mining interests, of course, reduced dividends have been received during the period, while from the diamond interests an increased revenue has come. It will be recollected that De Beers deferred, which had been out of the dividend list for the three years 1921-1923, re-entered it with a distribution of 10s in June, 1924, and has maintained that rate since. Evidently, the one factor has just about counterbalanced the other. We append our usual three-year analysis:—

	1923.	June 30, 1924.	1925.
Stocks and shares.....	3,666,030	4,036,270	4,185,970
Mining properties and advances ..	393,110	272,660	145,600
Real estate and buildings	388,590	357,410	297,100
Loans on mortgage	141,230	197,050	226,060
" " to S.A. companies	284,340	390,280	194,600
" " at short call	390,280	358,440	416,640
Sundry debtors and dividends	305,880	608,970	548,600
Cash	369,560	869,630	1,342,500
Sundry creditors	1,079,580		
Net profit	503,840	746,250	744,670
Dividend	493,750	592,500	592,500
Rate per cent., tax free	12½%	15%	15%
To reserve		150,000	150,000
Carried forward.....	172,240	175,990	178,160

The reduction in "mining properties and advances" may have a close connection with the increase in the "stocks and shares." A moderate expansion is shown in "loans on short call." The surplus cash assets work out at £4,478,000, as against an issued capital of £395,000. The report contains a summary of the position of the principal subsidiaries, and mentions that the company has secured a participation in the new Diamond Syndicate. It is intimated that the company's holding in the leading diamond mines remains unchanged, and that there is a "steady demand" for the stones. In effect, the only new point is the announcement that improving profits are being earned by the coal companies in which the "Johnnies" is interested; and the hint is thrown out that still greater progress would be made were the Railway Administration more lenient in the matter of rates. Apparently, the directors have resisted the seductions of platinum. On the basis of 15 per cent. dividends, the shares at 44s xd yield about 6½ per cent.

A COURSE of six lectures on "Freedom and Authority in the Socialist Commonwealth" will be given at the Kingsway Hall on Thursdays at 8.30 p.m., beginning October 22nd, by the Hon. Bertrand Russell, F.R.S., Mr Harold J. Laski, the Right Honourable Sidney Webb, M.P., the Master of Balliol, Mr E. Rosslyn Mitchell, M.P., and Mr. Bernard Shaw. Application for tickets should be sent to the Fabian Society, 25, Tothill street, S.W. 1.

Oversea Correspondence.

THE LEAGUE OF NATIONS.—THE MOSUL QUESTION —PROPOSED ECONOMIC CONFERENCE.

(FROM OUR CORRESPONDENT.)

GENEVA, Tuesday, September 22.

THE turn which the Mosul question has taken before the League of Nations Council is serious, and swamps for the moment the general work of the Assembly. It has become one of the "really first tests" of the League, such as several previous disputes have been successively described, but the matter has undoubtedly reached a stage which, without undue loss of mental balance, may certainly be considered delicate.

Turkey, anxious though she seems to be to figure as a modern State, finds it difficult to change her old methods of diplomacy. Realising, if rumour is right, that the Council Committee was working towards a solution rather in favour of the British thesis, the Turkish delegation suddenly raised the whole question of the powers of the Council. Though the Turkish delegation last September unequivocally recognised the full powers of the Council under Article 15 of the Covenant (which provides for a unanimous decision excluding the votes of the parties), and a little less categorically accepted in advance, together with the British Government, the Council's decision, it now protests that no decision can be taken without its consent, and without the approval of the Angora Assembly. The British view is that the matter is before the League in the form of an arbitration, and that, if necessary, the Council may take a decision by majority vote. In face of this sudden disregard by Turkey of her previous pledges, the Council, at the request of its Committee, has decided to ask the Court to say in what form the matter is before the Council. If it is an arbitration the vote can be taken by majority, and is binding. If it is taken under Article 11 of the Covenant, there can only be a recommendation which may be by majority, but cannot be binding without the consent of the parties. A decision, under Article 15, in order to be binding, requires unanimity, excluding the votes of the two parties.

If the parties to the dispute are able to vary their undertakings as it suits them according to changing cir-

cumstances, it makes a farce of international relations, and it is playing the fool with the British Government and the Council of the League for the Turks to create arguments contrary to those they had previously accepted because they feared the prospect of an unfavourable decision.

The present attitude of the Turks is that they will not accept even the views of the Court unless they are favourable to them, and, so far as it is possible to divine any meaning in their declaration, it is that the question was referred to the Council simply to endorse Turkey's claims. Mr Amery bluntly declared that unless the Turks withdrew from this position between now and the next meeting of the Council, when the advisory opinion of the Court is before it, the British Government would retain full liberty of action, and would not remain bound by its previous undertakings, which were made on the understanding that the Turks took the same stand. The Court will have to go back to the Treaty of Lausanne as a starting-point, and the Treaty of Lausanne is not as explicit as it might be. But if it considers the question as a whole, bearing in mind not only the somewhat vague terms of the Treaty of Lausanne in relation to the point of reference, but also the proceedings before the Council last year and this, there should be no doubt of what the Court's opinion will be, though legal decisions on law are not always necessarily decisions of good sense. If the Court decides against Turkey, and the Turkish refusal to accept its view is maintained, Great Britain and the Council will be faced with a nice problem. The Council will be driven either to take a decision risking Turkish refusal to accept, to try to reach a decision (which now seems impossible) that both parties would accept, or to declare that in the circumstances there is nothing further to be done, thus leaving Great Britain in possession, but in most unsatisfactory conditions. If the Court says Turkey's vote must be reckoned in a decision, then the wrangle may continue indefinitely. Meanwhile, opinions here differ on the wisdom of the reference to the Court, but surely, if there is any hope of avoiding deadlock by the assistance of an impartial opinion from the Court, or even by mere delay, it is worth while trying. To be decisive now against the Turks would settle nothing satisfactorily. To settle decisively now in their favour would be uncommonly like a surrender to chicanery. And, after all, neither the prestige of Great Britain nor of the League is altogether negligible. Turkey has undoubtedly made great use of the serious division of opinion in England on the subject, and by the impression given by some of the more blatant organs that in no circumstances whatsoever would Great Britain attempt to defend Mosul by force. It is seriously to be doubted whether there is any real risk of Turkish aggression, and there are indications that Turkey is most anxious to reach a solution which will save her face and yet give Great Britain a considerable share of her claim. There will probably be efforts made to achieve something in this direction between now and December, and ultimate events may not be so tragic as the prospect may now appear. Meanwhile Great Britain has sent a note to the Council asking it to consider the British protest against Turkey's expulsion of Christians, and suggesting that the Council should send a representative, or representatives, on the spot to see that the *status quo* conditions are maintained by both sides pending final decision.

It will be more profitable to discuss the other events which have been going on during the Assembly in next week's letter, but there is one particular matter of importance—namely, the provisional decision not at once to go ahead with the economic conference suggested, but to ask the Council, at its December meeting, to appoint a committee of experts which may lead to a conference either at the end of 1926 or the beginning of 1927. This is due to some hesitation on the part of the British delegation, which seems to complain a little of being taken by surprise, and it is clear that there will be a great deal of discussion before the lines of such a conference are agreed upon. The exclusion of vital points has already been discussed, and if it is allowed to go far enough, it may make the whole undertaking of considerably less importance than was first intended or first seemed likely. It is, however, early yet to enter into these details.

UNITED STATES.—MARKETS AND SPECULATION— MONEY RATES — STEEL POSITION — FRENCH DEBT.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 15.

ALTHOUGH the profit-taking reaction of a week or so ago seemed to confirm the claims of the critics, and although it started a wave of pessimism among market followers, the stock market is again active and buoyant. Indeed, it has recovered its losses and pushed on to new high levels. Under these circumstances bullishness again prevails. The present rally has been led by motor shares, a fact that is not without significance. Some time ago, when the series of considerable cuts in automobile prices was initiated, superficial observers assumed that the lower prices represented nothing but severe competition and that the profits of the motor manufacturers would be drastically reduced during the second half of the year. This assumption, combined with the recent burst of pessimism, led to no small volume of short selling. Readers of these letters will recall that the true significance of the cuts in automobile prices was the passing on of large economies in the cost of producing closed bodies. As a result of the much greater values offered consumers, the demand for the new models has been extraordinarily keen. Several of the larger companies are now working at capacity at a time of year when operations normally slacken. Instead of facing small profits these manufacturers are earning at a very satisfactory rate. The General Motors Corporation, for example, is doing better than optimistic expectations, entertained earlier in the year, indicated. After earning \$8.19 a share in the first six months, the corporation now seems likely to add about \$7.75 a share in the second six months. This performance is being achieved despite the fact that the first six months generally brings the larger portion of the year's business, and despite the slowing down in operations that accompanied recent changes in models.

This being the background, the short sellers of motor shares have been severely punished during the past week. The rises that have occurred among the motors have bordered on the spectacular. The situation has furnished pools with an excellent opportunity for their operations, and these operations have, in some instances, been large. Still, with strong positions as to earnings and cash among the more successful motor companies, it is a fair question whether the pools may not be performing the accepted function of speculation in adjusting prices to inherent values. In any event, the behaviour of the motor shares illustrates the difficulties and dangers of simple characterisations of our markets, or, for that matter, of our industrial situation. It will not do to blame the present level of security prices on speculation. Speculation undoubtedly has been playing its part, as it always does, but such factors as an extremely large supply of bank credit and an unprecedented supply of investment funds also are playing theirs. This country is now a creditor nation that is producing a surplus of capital; its industries are extremely efficient and are prosperous; its trade is intensely active, but with no signs of inflationary tendencies; its agricultural districts have been recovering consistently. Who can say just what its securities are worth in terms of its capital supplies?

Meanwhile it is noteworthy that the latest rally in stocks has coincided with a recovery in the bond market, which has been digesting rather enthusiastic advances made in anticipation of the mid-year reinvestment demand. It also has been attended by further comment on the relatively easy character of the money market. It is not that the money market has not grown firmer during the last few months, but rather that it has firmed up less than had been anticipated. Flurries in call money have occurred, but they have been followed by readjustment that has left the average level little above what it had been before. Just now the call rate on the Stock Exchange is holding around 4½ per cent. When the rate goes much below that figure interior bankers tend to withdraw their balances; when the rate rises toward 5 per cent. a large supply of money returns from the interior. As for the Federal Reserve statements, they show many minor

fluctuations in reflection of the member banks' adjustments of their reserve positions, and in response to the swings of money back and forth between the great and smaller centres. They also indicate that the Federal Reserve authorities are continuing to maintain a neutral attitude. The intention of the Reserve banks must be judged chiefly by their operations in the market for short-dated Government paper; it is by these operations that the Reserve banks take the initiative in affecting open market conditions. To date, the purchase and sales of "Governments" seem to reflect a desire to stabilise rather than to lead the open market. A certain amount of attention is being given to the fact that the rate on bankers' bills now approximates the official discount rate here. In the past the Reserve bank has maintained a spread between these rates, raising its discount rate when the bill rate has risen to the same level. Whether such action will be taken now is another matter. We have in mind the fact that our banking authorities wish to hasten the return of the gold standard abroad, and do not wish to add to sterling's burdens. The official interpretation of the situation is eagerly awaited.

Most of the available evidence suggests that the equilibrium between demand and production in the steel industry has been restored. The unfilled orders of the United States Steel Corporation declined only 26,664 tons during August. It is thought that the September figures will show an increase in unfilled bookings. If they do, the increase will terminate a decline that began in March, which has carried the Corporation's backlog of orders down from 5,284,000 tons to 3,512,000 tons. Meanwhile current reports indicate that the industry as a whole is operating at about 75 per cent. of capacity. Prices are firm, but show no marked rising tendency. The best opinion is that the steel industry will continue active during the rest of the year, gaining somewhat, perhaps, from the present level; but that no boom or sharp advance in prices is in sight. Along with the steel industry the other metals have been showing an improved tone. A moderate upswing in production seems to be under way.

With M. Caillaux's departure for this country drawing near, more interest is being displayed in the question of the French debt. At the present moment a brief memorandum written by M. Jusserand as a result of conversations with Secretary Hughes shortly before the latter's retirement is being discussed. In this memorandum M. Jusserand reported that the American Government would be prepared to make a settlement similar to the British settlement, in that payments on account of the principal of the debt would begin at one-half of one per cent. yearly, and be extended over a period of 62 years. If this provision were part of the settlement, the American debt funding commission was reported as willing to consider the question of interest in the most liberal spirit. That this memorandum represents the situation fairly is quite probable. The payment of principal probably would be required according to a schedule similar to that agreed to by Great Britain. With regard to payments on account of interest, the French capacity to pay probably will be the governing factor. The chief work of the negotiators will be to reconcile French and American conceptions of French capacity to pay.

FRANCE.—NEW RENTES—TELEPHONE STRIKE—PRICES—HARVEST.

(FROM OUR CORRESPONDENT.)

PARIS, September 23.

THE reports that have been current for some time to the effect that the new loan for the conversion of as much as possible of the existing floating debt, represented chiefly by 5 per cent. National Defence Bonds, into 4 per cent. Perpetual Rentes, is not being very eagerly subscribed, have been confirmed by the special efforts that are now being made to convince the public of the necessity for supporting the new issue.

The new Rentes, it will be recalled, can only be obtained in exchange for old Defence Bonds, of which there were over 56½ milliard francs' worth in existence at the end of July last year. The rest of the floating debt, apart from that due to the Bank of France, then totalled as nearly as

possible 12,000 million francs. M. Caillaux's ideal, of course, would be that the public should exchange the whole of this huge amount of short-term bonds for the new Rente, and the degree of success the new issue attains will be measured by the extent to which it approaches this ideal. The banks, it is understood, have been induced to take up a substantial amount of the new stock—the figure mentioned in unofficial quarters is ten milliards—but the response from the public as a whole is reported to have been far from encouraging. The bank clerks' strike, which extended over several weeks since the lists were opened, has naturally contributed largely to cause the public to postpone their subscriptions until they could be sure they would not have to wait long hours at the banks before their wants could be supplied. This was one reason why the lists, which it was originally intended should close on September 5th, are being kept open until the end of the month. It is now realised that unless a very substantial proportion of the existing floating debt bonds are got rid of by conversion, the object of the issue will not have been attained.

As the outcome of an important conference of leaders of the great French commercial and agricultural organisations, which took place at the Quai d'Orsay last night, under the presidency of the Prime Minister, an eloquent appeal has been issued to the nation to-day, urging support for the loan. The terms of this appeal suggest why it has been found necessary to issue it. "It is not a question of increasing the amount of the public debt," the statement explains, "but of consolidating as much as possible of the floating debt, which now places the Treasury at the mercy of popular feeling." In other words, the French peasant has been found not to possess as large an amount of knowledge of the technical side of finance as he was thought to have, and has not grasped the rather complicated nature of M. Caillaux's proposal. It is to be feared also that he cannot understand why the fact that his dividend would always remain constant, no matter what happens to the franc, should be a reason for him to exchange his 5 per cent. Defence Bonds into 4 per cent. Rentes.

The two hours' strike indulged in by the French telephone girls on Monday, in which they were joined by a large proportion of the telegraph clerks and a certain number of postal employees (both in Paris and the provinces), is really a much more serious affair than the mere inconvenience to the public which it involved would imply. For some months past, since the Herriot Government accorded to the whole of the French civil servants the right to form themselves into trade unions, there has been a growing tendency among the public employees to enforce a claim for the equalisation of pay throughout all branches of the public service. The agitation began in 1919, when three separate and independent Civil Service Commissions were charged with the duty of revising the scales of pay in regard to as many categories of employees of the State. The outcome of the work of these commissions was that it was found that, while the pay of male postal clerks was raised from 4,000f a year (in 1914) to 9,000f, and that of female clerks from 2,700f to 7,200f, the pay of school teachers was simultaneously increased from 2,500f to 9,000f, plus housing accommodation. The minimum pay of Customs employees was raised from 4,000f to 10,000f, and of clerks in the indirect taxation department from 4,000f to 11,000f. These discrepancies led to an insistent agitation for all civil servants, of whatever character, to be placed on the same minimum wage level. The female telephone clerks, for example, demand to be given the same minimum pay as the school teachers, while the latter, through their national union, have recently affiliated with the C.G.T., with the express object of securing still higher rates of pay. All categories appear to be firmly resolved, by means of "direct action," to enforce their claims, and, if need be, to constitute a State within the State for the purpose of enforcing their claims.

The difficulty in which the Government finds itself is that not only is it short of money to meet this and other pressing claims, but that the amount allotted to improving the situation of the civil servants' position is totally insufficient. M. Painlevé and M. Caillaux undertook a few weeks ago to ask for a supplementary credit of 120,000,000f, when the Chambers reassemble next month, to meet the wants of the Government employees, but this

amount has already been appropriated in anticipation, leaving the bulk of the civil servants still unsatisfied. It is estimated that a total of at least 2,000,000,000f would be required to meet the claims of the public servants for increased pay. The fear that failure to meet these claims may lead to a general strike of Government employees is not the least of the problems now facing the Government.

The official index figures for the month of August, which have been issued by the Statistique Générale, give a general figure for wholesale prices of 570, as compared with 569 in July, and 554 for June (based on 100 as representing prices in 1914). The detailed figures are as follows:—

Nature of Categories.	Number of Categories.	Figures for End of		
		August.	July.	June.
General index figure.....	45	570	569	554
Foodstuffs—				
General index figure.....	20	490	497	486
Vegetables.....	8	491	514	529
Meats.....	8	480	480	448
Sugar, coffee, cocoa.....	4	513	498	477
Raw materials—				
General index figure.....	25	639	631	614
Minerals and metals.....	7	577	562	550
Textiles.....	6	766	755	739
Various commodities.....	12	601	597	577

Foodstuffs, as a whole, dropped 7 points on the month, this being entirely due to the season, which resulted in a drop of 23 points on vegetables. Meat remained at the same level, while coffee and sugar showed a rise of 15 points. While the general rise in raw materials was only 8 points, it will be noted that minerals went up 15 points, and textiles (which now stand at over 7½ times their pre-war figure) another 11 points. Retail prices in Paris rose a further two points on the month, the general figure based on the prices of 13 articles of common necessity (of which only petroleum is of foreign origin) being returned as 423, compared with 421 for July, 422 for June, 418 for May, and 409 for April, and with 366 for August, 1924, and 360 for July, 1924.

It is now officially announced that the 1925 wheat harvest will amount to 89,561,060 quintals, and this, with between 5,000,000 and 6,000,000 quintals furnished by the North African area, is expected to prove sufficient to enable the country to meet all requirements, without having to purchase grain of foreign origin.

GERMANY.—CREDIT QUESTION—FINANCES—INDUSTRY—CROPS—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 22.

THE question of credit, foreign and home, has been brought once more into the foreground by the conclusion of American loans for the new Rentenbank Credit Institution, and for Bremen State, and by a discussion at the Bankers' Annual Congress. The view most expressed is, that foreign loans should be avoided as far as possible, and should be contracted only when they will speedily and directly increase national production, and, in particular, increase the production of goods that are sure of an export market, so enabling interest and principal to be paid. At the congress it was estimated that long-term foreign loans since the Reparations settlement, including the Rentenbank Institution Loan, but not including the Reparations Loan, total 660 million marks. This sum represents only the smaller part of the burden imposed upon the foreign payment-balance, the greater part being in the shape of short-term debts and foreign investments in German home loans, stocks, and other securities. Officially, the total of short-term debts outstanding on June 30th has been put at 1,600 million marks, and though this estimate was criticised at the congress as higher than the truth, it was declared that the short-term debt total is nevertheless too high, and that it ought to be reduced. Concerning home credit, it was stated that money on mortgage is now lent to only about one-fifth of the value of the securing real estate, whereas the pre-war limit was 60, in case of agricultural land, 65 per cent. Before the

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
67 Milk Street.

BUENOS AYRES:
99 Florida.

HAVANA:
Pedro Gomez Mena Bldg.

Collections effected and documentary credits established in all parts of the United States for banking correspondents abroad.

Special Representative:
24, OLD BROAD STREET, LONDON.

war 11½ milliard marks were invested in mortgage bonds; to-day, in spite of a considerable recovery since the currency reform, the total is only 620 million marks. Attempts to secure foreign capital upon this class of security have failed owing to the foreign demand that the bonds should be drawn in a foreign currency, which is illegal, that a particular pledge should be given instead of the general security of borrowing the corporation's fund of mortgages, and that the 10 per cent. capital-yield tax should be remitted. The congress passed a resolution advising against the contracting of foreign loans that are not intended to be used for increasing production.

Money is somewhat tighter. The month-end demand set in earlier than usual. The interest rate for day money has risen to 8-9 per cent. The October quarterly tax liabilities will probably keep money relatively tight during the next weeks. The Reichsbank's return for September 15th shows a decline of 99 million marks in discounts, 2.8 million marks in advances, and 146 million marks in circulation. Since December 31, 1924, circulation has risen from 1,941.4 millions to 2,413.3 millions. In the week ending September 15th the reserve of legal cover exchange fell by 19,198,000 marks, while the gold reserve rose by only 477,000 marks. This item has now been falling for three weeks, and is now only 332,605,000 marks, against a high point on July 31st of 368,045,000 on July 31st. The gold reserve in the same time has risen from 1,104,136,000 marks to 1,144,523,000 marks. The week ending September 15th is the first in which the combined total of gold and exchange cover has declined, and this is much commented on. It is an expression of the recent unduly big demand for exchange, which has to be made good by foreign loans. For the present the inflow of exchange from the Rentenbank Institute Loan will much more than make good the deficit.

Receipts from taxation in the first five months of the financial year were 3,062,061,101 marks, of which 2,258,630,590 marks were from direct taxes and taxes on business, 803,002,137 marks from Customs and Excise, and 428,374 marks from the old bread supply tax. Yields of the chief individual taxes in the five months, as compared with the estimated yields for the whole year, were:—

(000's omitted.)

	April-August.	Year's Estimate.
	Marks.	Marks.
Income-tax.....	1,040,971	1,700,000
Corporation tax.....	89,852	300,000
Property tax.....	79,663	500,000
Sales and Luxury Sales tax..	677,586	1,500,000
Motor cars.....	33,053	60,000
Traffic tax.....	143,097	282,000
Customs.....	209,509	356,050
Tobacco.....	261,510	560,000
Sugar.....	118,196	185,000
Beer.....	119,938	174,000
Spirits monopoly.....	42,208	150,000
Wine.....	33,642	59,500

The taxes pledged for Reparations yielded in the five months 757,374,859 marks, against 1,425,250,000 marks estimated for the whole year. The small yield of the property tax is due to postponement of payment of the April-June quarter's instalment.

The official wholesale price-index number for September 18 was 125.3. The average for January was 138.2. Grain prices have dropped heavily. Native wheat per metric ton fell, between August 15 and September 22, from 246-250 marks to 204-210 marks; native rye from

179-185 marks to 158-160 marks; spring barley from 240-269 marks to 206-230 marks; oats from 198 marks to 172-180 marks. Bankruptcies in August numbered 751, against 797 in July; "business supervisions" (suspended bankruptcies), 379 against 375. Negotiations for a termination of the trade war with Poland have been resumed, under not very favourable prospects. The trade balance with Poland, which in 1924 was 61 million marks passive, in the first half of 1925 was, despite the trade war, 23 million marks active. The boycott of Polish coal has increased the output of the Prussian Eastern Silesian mines by about 400,000 tons per month. It is expected that the import (and export) prohibitions on all textiles will be removed on October 1, after which British textiles in Germany will have to face only the increased duties. A new trust in the potash industry has been formed by an agreement between the Burbach and Gumpel concerns. The potash industry is now mainly in the hands of three trusts, the Wintershall, which has 379 out of 1,000 shares in the Syndicate, the Salzdetfurth-Aschersleben, which has 244 shares, and the new concern, which will have 175 shares. The Pig-iron Syndicate is negotiating with consuming manufacturers as to the terms upon which the latter will be granted price-rebates on pig-iron bought by them for production of manufactured goods for export. This follows the example of the Raw Steel Syndicate. The rebates on certain sorts granted by the Raw Steel Syndicate to exporting manufacturers have been altered for October. October rebates are, in marks per metric ton: ingots 10, blooms 15, bars 20, structural forms 20, medium sheets (3 to 5 mill.) 10, dynamo and transformer sheets 40, wire rods 17½. No rebate is granted on sheets of over 5 mill, or between 1 and 3 mill. It is reported that the new western steel trust, formed by Krupps, Thyssen, and five other companies, aims at borrowing 150 million gulden from an Anglo-American-Dutch group, but this seems premature, as the intended formal fusion of the seven companies has not yet taken place. The iron and steel branch is still dull.

The actual prices of rolled material, especially bars, are below the above list prices, being depressed by sales of superfluous stocks by engineering firms which are in need of cash. The Kloeckner Corporation, the first of the great Western steel and coal concerns to issue its report for the business year ending June 30th, has passed its dividend. Of 19,570,000 marks gross profits, 7,520,000 marks went on taxes and 5,250,000 marks on social insurance and other social purposes. If this seems to confirm the complaint of industry that taxes and social burdens are unbearably heavy, it must be noted that the steel and coal branch suffers, in contrast to most other branches, from unduly low prices, and from exporting at considerably below production cost. It is not clear that public burdens would absorb all profits if prices were normal. A second important steel concern, the Van der Zypen Company (a member of the Cologne Wolff concern), has declared a 10 per cent. dividend. The annual reports of the other great Heavy Industry companies will soon appear.

The provisional crop figures for all Germany (figures for 1913 being for the present area) are as follows:—

	1913.	1924.	1925.
Winter wheat	3,525,800	2,091,000	2,646,800
Spring wheat	510,500	366,600	256,300
Winter spelt	437,800	116,500	162,200
Winter rye	9,985,300	5,583,900	7,536,900
Spring rye	144,700	145,900	131,500
Winter barley	...	212,500	270,700
Spring barley	3,035,500	2,187,400	2,160,500
Oats	8,615,500	5,654,000	5,489,300

The discussion concerning the accuracy of crop reports has been renewed. An official of the Statistical Bureau estimates that post-war crops have been returned at about 10 per cent. below the correct figures. The former Ministry of Industry, Prof. Hirsch, considers that cattle and meat production is not behind the pre-war figure. The winter rye and winter wheat crops, the most important from the food viewpoint, are both this year very good.

Stock averages slightly rose last week; but yesterday the Bourse was dull and weak, and to-day undecided. The *Frankfurter Zeitung's* stocks index (100 on January 2nd) on September 19th was 72.17, against 71.62 one week earlier, and 111.37 on January 31st. Paper

mark loan quotations rose about 4 per cent. during the past fortnight; and there has been renewed speculative buying of Colonial Fours, which maintain the high price of 6.25 marks per 100 marks nominal, being slightly higher than on the last day of 1924, whereas War Loan has fallen about 70 per cent. The general public is not buying stocks, and speculative dealings have fallen off. Dealings for future settlement will be permitted from October 1st. The unit of purchase and sale is in general fixed at 6,000 marks.

POLAND.—THE ZLOTY—PRICES—TRADE BALANCE —INCREASE OF IMPORT DUTIES—POLISH BANK—TRADE RELATIONS WITH SOVIET RUSSIA.

(FROM OUR CORRESPONDENT.)

WARSAW, September 15.

AFTER the fall of the zloty on the foreign exchanges at the end of July, the Polish Bank maintained for several weeks an unchanged official quotation. It was believed that the collapse of the zloty was due only to momentary causes, and that the exchange would shortly return to the par level. These hopes, however, proved to be vain, so that the Polish Bank was obliged to modify its policy. The fall of the zloty on the exchange market may be considered as a result of its decreased purchasing power at home. The price level in Poland is very high, so that most articles are dearer than abroad. According to data published by the Bureau of Statistics, the retail prices of articles of food, expressed in zlotys, were in May and June as follows:—

	Warsaw.	Berlin.	London.	Prague.	Vienna.
Rye bread 1 kg.	0.56	0.49	...	0.45	...
Wheat flour .. "	0.69	0.64	0.66	0.64	0.66
Beef	2.06	2.96	3.19	2.29	2.41
Sugar	1.00	0.81	0.83	0.79	0.64
Eggs 1 piece	0.13	0.15	0.18	0.11	0.12
Milk 1 litre	0.37	0.36	0.55	0.33	0.38

The most important articles of food—rye bread and wheat flour—were dearer in Warsaw than in other European capitals; also sugar. The price of eggs was higher in Warsaw than in Prague and Vienna, and of milk higher than in Berlin and Prague. Meat alone was relatively cheap.

The index of retail food prices has been maintained since the second half-year of 1924 on a higher level than in other countries, as may be seen from the figures below:—

	Poland.	United States.	United Kingdom.	Germany.
July, 1924	139.1	140	162	126
October, "	181.3	146	172	134
December, "	186.9	149	180	135
January, 1925	175.4	151	178	137
February, "	177.4	148	176	145
March, "	179.1	148	176	146
April, "	171.9	148	170	144
May, "	168.0	149	167	...

In July of last year the Polish index number was lower than those of America and England. In October it was already above the other levels, and this situation has not been modified. The disproportion between Polish and foreign prices is even greater if we pass from food products to manufactured articles. The index of retail prices of clothing and shoes is in Poland 150 per cent. higher than before the war.

The unfavourable trade balance is a necessary result of the decreased purchasing power of the zloty on the home market. Hitherto, no improvement in this respect can be noticed. The figures for July reveal a surplus zlotys) of 86 million zlotys) over exports (87 million millions in April, 79.7 millions in May, 65.8 million in June. The policy of correcting the trade balance by import prohibitions and the increase of import duties did not produce the expected improvement. This is very natural. The unfavourable trade balance is the conse-

quence of a high price level. A high protection tariff must accentuate the difference between Polish and foreign prices, and this can hardly exercise a beneficial influence on the trade balance.

According to the return of the Polish Bank for the end of August, the reserve of gold and foreign currencies amounted to 194.8 millions, as compared with 213.2 millions at the end of July and 372.4 millions at the end of last year (December 31). This return introduces a new item, "gold held abroad." This gold reserve amounts to 10,088,171 zlotys. The transfer of gold abroad is probably connected with the loan which has been granted to the Polish Bank in New York.

It seems that the obstacles which hitherto stood in the way of normal trade relations between Poland and Soviet Russia have finally been overcome. In Moscow the representative of the Central Union of Polish manufacturers has signed an agreement with the Soviet Government, according to which the Polish Company of Russian Trade " (Pol-Ros), with a capital of one million roubles, has been founded. Half of the capital will be subscribed by a Polish concern, the other half by the Soviet Government. The board of the company, which will be equally mixed, will fix every half-year the quantity of goods which may be exchanged between the two countries. Another important event in the trade relations between the two countries is the fact that for the first time the Soviet Government officially took part in the Eastern fairs in Livoir (Lemberg).

NORWAY.—PRICES—EXCHANGE—LABOUR DISPUTES.

(FROM OUR CORRESPONDENT.)

OSLO, September 18.

THE *Farmand* index number shows that during the fortnight since August 31st, wholesale prices of commodities have dropped no less than 14.6 points—viz., from 231.8 to 217.2. Raw materials have fallen least, whereas all other commodities show a substantial decrease. Both as to meat, potatoes and other vegetables, this is a natural consequence of the season, but, of course, the rise in the value of the krone plays an important part in relation to all imported articles.

The announcement on the 14th inst. of a reduction in the bank rate from 5½ to 5 per cent. came rather as a surprise to the general public. It may be explained by the desire of the bank to help trade by cheaper money; but one is no doubt justified in presuming that the principal reason was to help in the struggle against the far-too-quick rise in the value of the Norwegian krone. For a few days the official exchange of the £ was as low as 22.50 kr, and it was handled down to 21.80 kr. During the last few days it has been as high as 23.75 kr, but has chiefly been officially quoted at 23.25 kr to 23.35 kr, which latter is to-day's rate. A very strong committee has been appointed by the Government to discuss and report on the exchange question, and strenuous efforts will be made to prevent the oscillation which may be caused by an unchecked speculation.

The Statistical Central Bureau has just published a report on the strike and lock-out situation in 1924. That year ranks as the worst in that respect which this country ever had; 5,152,386 working days were lost, and the workmen involved numbered 63,117. The year 1921 showed a still greater number of men involved—namely, 154,421—but the disputes being of much shorter duration, the number of lost days amounted to only 3,583,742. As for the present year, there have been several stoppages of work on account of disputes, but on the whole the year will rank among the most peaceful periods.

The harvest, except as to the potatoes, is now over. The weather continues remarkably mild, but so dry that several mills using large water-power have had to shut down.

INDIA.—FOUR MONTHS' TRADE—THE CURRENCY COMMISSION—EXTENSIONS—IRRIGA- TION DEVELOPMENTS—HYDRO-ELECTRIC PROJECTS.

(FROM OUR CORRESPONDENT.)

CALCUTTA, September 13.

WHILE official confidence in exchange stability remains undiminished, exchange bankers, with a side-glance at the foreign trade returns for the first four months of the current official year, confess to doubts. Between April and July, they point out, while imports, compared with the corresponding period last year, showed a decline of Rs. 8 crores, or 10 per cent.; exports, including re-exports, increased concurrently by Rs. 14 crores, or 2 per cent.; merchandise imports therefore totalling Rs. 71 crores, against exports aggregating Rs. 129 crores. The balance of trade in merchandise, which two years ago was Rs. 46.16 crores, and last year Rs. 37.05 crores, is therefore this year already Rs. 58.01 crores. Allowing for imports of gold and silver totalling (in crores) 16.17, against 17.85 last year and 20.16 in the previous year, we still confront a total visible balance of trade in the new official year amounting to 41.84, against 19.20 and 26.0 in 1924 and 1923 respectively. Government remittances, totalling 13.19 (against 17.65 and 6.40), have assisted to bridge the gap, but it is evident that a very heavy strain will be imposed on official resources unless either bullion and merchandise imports show a substantial improvement in the remaining eight months.

There has been severe criticism of the personnel of the new Currency Commission in the Legislative Assembly, but this need not be taken at its face value. Bombay representatives led the attack, partly in revenge for the unsympathetic reception accorded by the Government of India, a few days before, to urgent requests from the western capital for immediate suspension of the cotton excise duty. The Swarajist party is manifestly and rapidly abandoning its former policy of indiscriminate obstruction, but it is still deemed necessary, or rather expedient, to indulge in an occasional bombardment of the official fortress, and the composition of the Currency Commission formed an admirable opportunity for target practice, without the slightest possibility of inflicting real damage on any interest affected. The absence of Sir Dadiba Dalal is unfortunate, but is due, I understand, to ill-health, not to deliberate exclusion of one of the very few Indians able to claim expert knowledge of exchange problems. The Commission will not be able to complete its report before May, 1926, and, even assuming that its recommendations are unanimous, the Government of India are not likely to act so precipitately on the advice tendered as in the case of the previous inquiry on the same vexed problem. It is confidently forecast that one result of the inquiry will be a great extension of the functions and responsibilities of the Imperial Bank of India, in which connection I may note that the term of office of Sir Norcot Warren as managing-governor has been extended up to September 25, 1927.

An incidental illustration of the complete confidence with which the general commercial outlook is regarded is supplied by the considerable expansion now in progress in port equipment. A supplementary grant of Rs. 90.47 lakhs for the new Vizagapatam harbour indicates the progress now being made with this important project, the 900 miles of coast between Calcutta and Madras at present

possessing no satisfactory harbour. In addition to filling this gap, the new port, with its attendant railway facilities, now also in course of construction, will assist the development of the largest—and potentially one of the richest—areas of India at present devoid of railway communication. On the north of Calcutta, after discussions prolonged over nearly two decades, a grant of Rs. 50 lakhs has, almost concurrently, been made to modernise the port of Chittagong, the natural port of Assam, fed by the Assam-Bengal Railway, and already possessing a yearly trade just under Rs. 15 crores. Meanwhile, vast extensions and improvements are also proceeding in the major ports typified by Calcutta, where "works in progress" involve expenditure exceeding Rs. 8½ crores, an outlay amply justified by the rapid expansion of its trade. At Bombay, Karachi, and Madras, equally important extensions are in hand.

Although the Government of India has summarily rejected the tortuous recommendations of the Tariff Board for State subsidies intended to rehabilitate the temporarily overdeveloped cement industry, a permanent setback in manufacture is improbable for two main reasons. Firstly, raw materials are abundant and easily accessible, while the manufacturing processes are relatively simple, and well within the scope of Indian resources and talents; and, secondly, the consumption of cement shows fairly rapid expansion, and even assuming continuance of present imports, will undoubtedly within a relatively short period overtake the productive capacity of Indian factories, estimated at 600,000 tons, not a very large figure for so vast a country. Official tests demonstrate that the quality of Indian cement does not as a rule fall below the British standard specification, though the better established reputation of the imported product secures the latter temporarily a higher price in the market. Indeed, the Tariff Board declare, if the consumer were prepared to pay the same price for Indian cement as for British, there would be no need for protection, because a price of Rs. 57 a ton would be profitable to any factory producing to capacity. The solution appears to be the formation of a cement combine, equipped to carry the industry through the transitional period delimited by the higher reputation of British cement, and the expansion of domestic consumption to the larger figure it is certain shortly to attain. This expedient is under consideration.

In regard to paper manufacture, the Tariff Board asserts that the real hope lies in full exploitation of bamboo pulp; pioneer work in this line, under commercial as well as under official auspices, demonstrating conclusively the wide possibilities of this product, not only for local mills, but for export to be utilised as and when the world-supplies of wood pulp fall short of requirements. State loans are suggested as a means of bringing the pioneer enterprises to full maturity. For paper mills the scope in India is narrow. Taking consumption of paper at 50,000 tons yearly, Indian mills already supply 30,000 tons, leaving very little room for further development, a conclusion emphasised by the consideration that the 20,000 tons purchased abroad consist of special qualities, which it would not pay to manufacture in the small quantities imported.

The Punjab loan now on offer to finance the Sutlej Valley project serves as a reminder of the large new areas this scheme will bring under cultivation in Northern India. It is less widely realised what a vast scope still offers for irrigation works in South India, where the Mettur project recently initiated will irrigate crops covering 400,000 acres of an annual value possibly of 3½ crores, the estimated cost of construction, however, being 6½ crores only. Other projects as large and productive are deferred for lack of funds; for in Madras alone at least 30 crores could be spent immediately in this direction, the delay involved in such productive undertakings illustrating anew the handicaps this country is subject to through lack of capital. The engineer is ready, but the financial limitation seems insuperable. Nevertheless, as the Chief Irrigation Engineer, Madras, observes in his yearly report: "All the circumstances in this Presidency seem to point to the urgent need for a forward irrigation policy, and for the vigorous prosecution of all possible means to increase the productivity of the land, to extend cultivation, and to increase to the utmost the output of

the staple food supplies as well as of industrial crops." The Viceroy speaks of a more vigorous programme for developing agriculture; and one of the quickest and most fruitful methods would undoubtedly be to allot larger capital grants for irrigation.

Hitherto industrial development in India has tended to concentrate in the coal areas. Recent hydro-electric surveys, conducted by various Provincial Governments, foreshadow a time when factory industries will be more evenly distributed. In the Punjab two million effective horse-power, and in Madras 600,000 horse-power, taking into account only the larger sources, have been located, and in the latter province exploitation of such power is under active consideration, in negotiation with the British Power Securities Corporation.

Letters to the Editor.

BUILDING SOCIETIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read your articles on building societies in your issues of the 5th and 12th inst.

I suggest that they are open to correction on one or two points. For instance, in your first article your reference to the special income-tax arrangement under which building societies are taxed (known as arrangement "B") seems likely to mislead. You have it that in consideration of direct assessment upon share and deposit interest, all borrowers are exempt from income-tax on their mortgage interest. There surely can be no exemption where there is no liability. The arrangement with the Inland Revenue is a working convenience only, and does not supersede a borrower's statutory right to deduct tax from interest payable to a mortgagee, whether building society or other—apart, of course, from any exceptional agreement with the mortgagee for a net rate. In practice, however, tax applicable to mortgage interest paid to a building society is deducted from the borrower's Schedule A demand note, while other mortgagors are called upon to pay on the full schedule. A assessment, recouping themselves by deduction from the interest paid to their mortgagee. The building society borrower has no tax preference over the borrower on private mortgage, except, perhaps, a small and not very material benefit of an immediate net payment as against a gross payment and subsequent reimbursement. In other respects I agree with your statement on the income-tax position.

The object of Section 5 (1) (b) of the Housing, &c., Act, 1923, was to enable building societies safely to make advances on new houses in excess of their normal proportion of valuation, such excesses being covered by a guarantee by a local authority. It seems to me quite wrong to say that the purpose of the section was to enable local authorities to give assistance to building societies.

Your second article calls for rather more comment. Before any institution inviting savings can attain any substantial success it must win the confidence of the public, and the class to which a building society largely makes its appeal cannot be expected to estimate from published accounts, or other accessible information, the trustworthiness of any particular institution. The writer of your article suggests that much must be done before the public will support building societies as they do the National Savings Associations. My reply is that there is no fair comparison between business credit and State credit.

Your writer proceeds to recommend a standardised form of advance table for all building societies. Many societies do not use tables at all, but work in open account, charging interest on monthly rests, and providing the borrower with a dissected passbook from which he can check the interest charges made against him.

I do not see any value in the suggestion that building societies should show working costs per £100 advanced on mortgage. Many societies hold a large proportion of funds in War stock and loans to corporations as special cover for quick liabilities, and to propose that expenses should be shown against mortgage assets is just about as reasonable as to suggest that the overhead expenses of the Midland Bank should be shown in percentage against its advances to customers. Insurance companies disclose ratio of working expenses to premium income, but there is only remote similarity between an insurance company and a building society. A comparison of earnings over all assets, with actual working expenses, would be interesting, but is it just to ask from building societies particulars which no other business is required to supply?

I know that some of the London societies are in as strong a financial position as some of the large societies in the North,

and I am glad to acknowledge that the "Temperance Building Society" stands highest in the kingdom as regards its proportion of reserves to assets.

Your reference to advantages of localisation will not bear examination. Building societies taking securities at a distance from their base usually do so on the advice of a competent professional surveyor, who has an established practice in the neighbourhood of the security.

It must be admitted that the secretary of a northern society, who questions figures which include mortgage repayments as receipts, is quite right. The word "income" is sometimes misused by building societies in this connection.

Most of us would welcome to responsible positions in the building society world prominent financiers and economists who could and would give time to consideration of very important problems affecting the whole movement. There are great possibilities, but there are difficulties. You refer in your first article to co-operative credit. In a limited degree building societies are co-operative credit institutions, but their powers are exceedingly narrow.

My final word is that in practice building societies have wide differences of method, and sweeping generalisations are bound to be misleading.—I am, Sir, yours, &c.,

WALTER HAROLD.

Burnley, Lancs, September 17th, 1925.

Books and Publications.

TRAINING FOR SOCIAL SERVICE.

MISS MACADAM has written what is, we believe, the first systematic treatise on the training of social workers,* a subject which assumes in her hands very considerable proportions; for it involves cool consideration not merely of the methods by which such persons are, or have been in the past, been trained, but of the multifarious objects for which they may require training. Her book is in part an historical account of the development in this country of a conviction that what we vaguely call "social work" needs some more deliberate equipment than congenial tact and a kindly disposition. And beginning with an admirable chapter contributed by Miss Sewell, describing the beginnings of the settlement movement, in which that lady herself played a pioneer part, she takes up the story, surveying the gradual widening and deepening of the area of social study, and the linking up of the Universities with this newly-defined branch of human endeavour. At this point emerges the second aspect of the book—the text-book aspect, and we are given a very comprehensive and detailed summary of the nature and content of such social training facilities as exist, including, in an appendix, a list of Universities which provide such facilities among which the names of Cambridge and Manchester are conspicuous by their absence.

But Miss Macadam's book is something more than a text-book. It is a very emphatic and persuasively argued plea for certain developments both on the supply and on the demand side of social training. As regards the supply side, she lays great insistence upon the tightening of the link between University standards and University machinery on the one hand, and the principles and practice of social study on the other. As regard the demand side, she is bent upon stimulating the effective supply of systematic social training by creating an intensified demand for it in connection with occupations where its need has hitherto been only partially or tentatively recognised: in industrial welfare and probation work (for both of which she sees an expansive future); in the medical profession and the Church; in central and more especially in local administration.

J. T. Merz, in his "History of European Thought," has occasion to comment on "the beneficent and fructifying influence which practical problems have exerted on scientific thought." In fact, he is "doubtful whether scientific thought has.....as yet balanced the debt which it owes to practical inventors." When we consider the relation of economics to business and administration during the nineteenth century, we are inclined to share his doubt—nor do we assign the blame wholly to economic theorists. In a recent address to a gathering of accountants, Sir J. C. Stamp pointed out that these

* "The Equipment of the Social Worker." By Elizabeth Macadam, M.A. Geo. Allen and Unwin, Limited. Pp. 224. 6s.

gentlemen handle in their daily lives the raw material of economics, and he indicated the immense contribution that might be made to economic thought had they the will and the capacity to handle such material in a scientific spirit. Miss Macadam does but widen this significant plea when she suggests that we are "losing priceless opportunities of accumulating valuable social data by assuming that the only students who need training in research are those who are destined for academic posts."

She suggests that, "given a proper background of wide social training and some instruction in statistical method, even the humblest official in a municipal department, a social agency, a trade union or factory, might become the observer and recorder of significant facts which now pass before him unnoticed in the course of his daily routine."

AUDITING.*

THIS book deals with the general principles underlying an audit. It is intended primarily for the student, but it will be found of interest also to practitioners as showing in a convenient form the views held on the other side of the water as to the scope and character of an audit. This book throws no fresh light upon the difficult problems of the measurement of annual depreciation—or expired capital outlay—on material wasting assets such as buildings, plant, and machinery; or non-material wasting assets which include commercial goodwill, patents, and the like. The author very rightly advocates the keeping of a subsidiary ledger or register of plant and equipment, the figures in which should agree with the plant account in the general ledger, which shows the balance-sheet value of the plant; and he says that for depreciation purposes the plant should be divided into groups, inasmuch as an all-round rate of depreciation cannot reasonably be applied. These are important practical recommendations which are too often neglected in this country. It is pointed out that the value of goodwill is difficult to criticise, and that the auditor must generally accept the basis of valuation which he finds recorded in the books. The balance-sheet value of goodwill is frequently found to be the difference between the actual value of the material assets and the price paid for those assets. It is perhaps comforting to reflect that we in this country are not alone in our inadequate and haphazard methods of treating the cost of purchased goodwill, which is a wasting asset. The author's statement that goodwill has no real value except to the particular undertaking owning it is not quite accurate. Goodwill is generally assumed to possess present exchangeable value, and it often possesses great exchangeable value. An important section of this book is devoted to a well-illustrated study of a first audit in the case of a new undertaking. This is a useful endeavour to reflect some of the atmosphere of an actual audit, and should be of real help to the student.

capitalised, and to place the company in a position of equality with the other mines of its size.

We have written off the overburden account, mine development, and main shaft because, far from being assets, they simply help to put off indefinitely the period when dividends could be resumed.

We have written down the stocks to about the figure at which, with our improved reorganisation, we can to-day replace them on the heaps.

And to complete the business of placing the company on a sound financial basis we have convened the extraordinary general meeting which is to follow on this meeting for the purpose of proposing to you to pass a resolution to reduce the nominal value of the shares from £1 to 6s 8d.

Needless to mention that, from a shareholder's point of view, it matters very little what the nominal value of a share is. The thing that matters to a shareholder is the market value of the share.

CAPITAL AND ASSETS.

But from the company's point of view the position is somewhat different. Here we have a company with a capital altogether out of proportion to its size figuring on the one side of its balance-sheet, and with assets which do not reflect the real position on the other.

Our mine and railway alone stand at about half-a-million pounds, and the plant at £62,000. This means not only that we have to write off thousands of pounds every years in amortisation (this came roughly to £10,000 for the year under review), but that we have to pay thousands more in taxation which would be saved if our capital were more in relation to the size of our undertaking, but this is a matter for the meeting which is to follow.

Mr C. A. Massauti seconded the resolution, and it was carried unanimously.

The retiring directors, Mr R. G. Levy and Mr M. Paisant, and auditor having been re-elected, an extraordinary general meeting of the company was held to consider a resolution to reduce the capital of the company by writing down the nominal value of the shares. In proposing the resolution, the Chairman said the board were very strongly of opinion that this was the right thing to do, now that the reorganisation of the mine was completed, in order to render the company as sound financially as it was industrially, and in order to bring about the fruition of their labours—namely, the resumption of dividends.

The resolution was carried unanimously, and the proceedings terminated.

CRITTALL MANUFACTURING COMPANY, LIMITED.

SATISFACTORY YEAR'S WORKING.

CAPITAL SCHEME APPROVED.

Presiding at the ordinary general meeting of the Crittall Manufacturing Company, Limited, held on the 23rd instant, at Winchester House, Old Broad Street, London, Mr Francis Henry Crittall, J.P., governing director and chairman, in moving the adoption of the report, stated that it was a matter of satisfaction to the board to be able to present, for the first year, such an excellent statement. The profits for the year amounted to over £70,000, out of which, after providing for all operating charges, they were in a position to transfer to depreciation and reserve the sum of £15,714, to pay the 8 per cent. dividend on the participating preference shares, a dividend of 10 per cent. for the year on the ordinary shares, and a further participation of 2 per cent. on the preference shares, making a total of 10 per cent. for the year on both classes of shares.

CONTINUED DEVELOPMENT.

The business of the Crittall Manufacturing Company had been built up from small beginnings until, at the present time, it was one of the largest enterprises of its kind in the country. So successful had been its specialities in metal window frames and windows that it was hard to fix a limit to the expansion of the business. By the standardisation of type and size they were able to supply the trade at less than pre-war prices, a condition of things which, he made bold to say, did not obtain in any other industry to-day. Throughout their business they had set their faces against the allurements of price control, and it was because of this that they were able to extend their business. Whatever might be true of the building material trades at large, there was no ring in the metal window trade, as the company was to-day selling a better article at half the pre-war price. Their business was no mere flash in the pan, dependent upon the temporary prosperity of the building industry, for the world supplies of timber were not increasing; in fact, they showed a marked falling off in quality, and so there was a firmly established basis for their trade. He was pleased to state that the foreign trade was developing on most satisfactory lines. The exacting ventilation requirements of

tropical countries, the definite ban on the use of wood in places where the white ant prevails, and the shortage of home-grown timber in many countries, all combined to provide a wide export market for their goods. No small measure of the company's success was due to the fact that both the managers and technical staff engaged in their foreign business were men trained in their own factories. The company had a controlling interest in the subsidiary companies operating in India, South Africa, Australia, United States, Egypt and Holland. In addition, they had a branch in China and agencies throughout the world.

EXTENSION OF THE WITHAM FACTORY.

Since obtaining their preference capital last October they had completely equipped works at Maldon, and the results amply justified that expenditure. They had also materially added to and improved the Braintree works. The extension of their Witham factory was, however, the main objective. Considerable progress had been made with that, and the directors were convinced that so great was the demand for their standard metal windows that a further extension of the factory was absolutely necessary adequately to cope with that section of the company's business. Increased output meant, of course, increased expenses, and this necessitated their having ample capital. It was difficult, as he had said, to fix a limit to the extension of their business. This would be obvious to the shareholders when he told them that from a rough census they had made not 20 per cent. of the windows in this country were metal, so they had a wide undeveloped field in which to operate.

INCREASE OF CAPITAL.

The board being satisfied that the business justified still further developments, it became an urgent duty to arrange their finance and so be in a position to meet the expenditure which they foresaw was inevitable. He was pleased to tell the shareholders that they were able to meet the situation in advance by making provisional arrangements some months ago by which their requirements were assured, and so they were able to carry out without delay their development programme. They were accordingly taking powers to increase their capital by a further £250,000 preference shares, to rank *pari passu* with the existing issue, and a further £200,000 ordinary shares, the issue of which was not at present contemplated. The directors were unanimously of opinion that these proposals were in the best interests of both classes of shareholders,

and would undoubtedly place the company in a position to earn the extra profits required to meet the increased dividend charges.

In conclusion, he wished to pay a tribute to their workmen and staff for the untiring energy and devotion with which they applied themselves to their duties, and without which it would have been impossible for them to have reached such an increased tonnage as they were able to handle. It was a tradition with the old Crittall Manufacturing Company always to keep on the best possible terms with their men, and this condition obtained wholeheartedly to-day. The directors, on their part, had adopted the policy of studying the men's welfare very closely and keeping in touch with the shop stewards, so that the men had ready access at all times to any member of the board. They had their own welfare department, with its various branches of activity, and from every point of view they tried to do what they could to give every man not only a living wage but something over and above, so that he might reasonably enjoy his life and be in a position to make some provision for old age.

The report and accounts were unanimously adopted, and the resolution sanctioning the capital increase was approved.

on Gula Estate, the drainage of which has been a matter of some difficulty. The purchase price of the property is 15,000 £1 shares of this company, to be issued credited as fully paid, plus £2,625 in cash. The company takes over the Eng Joo Estate as from July 1, 1925, together with forward contracts for 1½ tons monthly to the end of 1925, at the equivalent of 1s 3d per lb. delivery Penang. The fully-paid shares will be issued to the vendors on completion of the transfer of the estate, and will rank for any dividends declared after July 1, 1925.

PERNAMBANG RUBBER ESTATES.—The directors are offering 39,000 shares of £1 each for subscription by existing shareholders (including approved transferees whose transfers were lodged not later than September 16th), in the proportion of one new share for every complete 10 shares now held. The new shares are offered at a premium of 2s 6d per share, and the full sum of 2s 6d per share is payable upon application. The shares of the present issue will rank equally with the existing fully-paid shares for all dividends which may hereafter be declared for the current financial year ending December 31st next, but will not rank for the interim dividend payable on October 5th. Circulars with application forms and letters of renunciation have been issued to shareholders. The list for "home" applications will close October 7th. The permission of the Committee of the Stock Exchange to allow dealings in the new shares will be applied for.

RUBANA RUBBER ESTATES.—The net profit of this concern for year ended April 30, 1925, is £20,587, which compares with £12,310 in preceding year. The ordinary dividend is 7½ per cent., from which income-tax will be deducted at the rate of 4s 5½d in £1. The carry-forward is £3,185, subject to corporation profits tax, against £5,098 brought in. The capital is £300,000 in £1 shares, fully paid. Reserve for development stands at £12,500. Total assets are £342,579. Cash stands at £9,035. Investments stand at £4,801, of which £5,000 is in 5 per cent. War Loan at cost (£4,750) in balance-sheet. The cultivated area has been increased by 62 acres of rubber. Crop harvested was 647,530 lbs., against an export allowance of 628,837 lbs. The standard production allowed to the company for year ending October 31, 1925, is 1,173,714 lbs.

SEAPORT (SELANGOR) RUBBER.—The report for year ended June 30, 1925, shows that net profits have increased from £6,560 to £22,352 and the ordinary dividend has been raised from 4 per cent. to 12½ per cent. The carry forward is £24,781, against £21,560 brought in. The crop accounted for is 399,125 lbs, being approximately the quantity exportable at the minimum rate of duty. The average net sale price, including the estimated value of the unsold exportable portion of the crop, is 1s 8.24d per lb. Cost of production was 7.81d per lb.

SEDGELEY (F.M.S.) RUBBER.—The profit for year ended March 31, 1925, after providing for the whole of the upkeep and management charges on the estate, debenture interest, income-tax, and expenses in Europe, amounts to £2,733, which has been transferred in reduction of the balance of loss brought forward from the previous year. There remains to be carried forward a debit on profit and loss account of £2,245 2s 10d. The net profit for preceding year was £1,405. The yield of rubber during the year, which was disposed of chiefly in the form of liquid latex, was equivalent to 174,046 lbs, and the adjusted excess of production over exportable allowance at March 31, 1924, was 1,903 lbs, together 175,949 lbs. The company's standard production was increased as from November 1, 1924, to 280,300 lbs, and the exportable allowance for the year amounted to 176,768 lbs. There was thus a small balance of 810 lbs still to be exported under the licences of the year. The whole of the crop was sold in the East, and realised the average gross price of 1s 2.62d per lb.

TALI AYER RUBBER ESTATES.—The net profit for year ended April 30, 1925, is £17,231, as against £10,751 in preceding year. The ordinary dividend is 7½ per cent., against 4 per cent. Income-tax will be deducted at the rate of 4s 5½d in £1. The carry-forward is £10,770, subject to corporation profits tax. The amount brought in was £16,039. In April this year the company acquired a property comprising approximately 160 acres of rubber, all of which is mature. The property adjoins Sungei Bogak Estate, and is included in the acreage of that estate. On Tali Ayer Estate a small area of 7 acres, formerly occupied by buildings, was cleared and planted with rubber. The crop harvested for the year amounted to 656,477 lbs, against an export allowance of 629,335 lbs. The standard production allowed to the company for the year ending October 31, 1925, is 1,171,227 lbs. The issued capital is £300,000 in £1 shares. Reserve for development stands at £17,500. Total assets are £361,863. Cash stands at £7,373. Investments are at £29,681. Of this sum £17,000 5 per cent. War stock stands in balance-sheet at £15,369, and £20,000 3½ per cent. Conversion stock stands in balance-sheet at £14,261.

MISCELLANEOUS.

ANGLO-SIAM CORPORATION, LIMITED.—Including £34,392 brought forward from the previous year, the balance at credit of profit and loss account at March 31, 1925, is £122,260. After providing for the preference dividend, placing £5,000 to the staff provident fund, and £17,500 to the reserve for contingencies, the directors recommend a final dividend on the ordinary shares of 12½ per cent. (actual), with a bonus of 10 per cent., making a total distribution for the year of 30 per cent., less tax, and that £35,210 be carried forward. Meeting September 29, 1925.

BRITISH AUTOMOBILE TRACTION.—The figures are as follows:—Week ended August 21st, £76,223; week ended, August 28th, £65,555; week ended September 4th, £65,790; week ended September 11th, £59,097. Total, £266,665. Increase compared with corresponding four weeks of 1924, £55,139. Total to date for 1925 (36 weeks), £1,656,605. Increase compared with corresponding period of 1924, £338,127.

LEACH'S ARGENTINE ESTATES.—The net profit for the year ended March 31, 1925, amounted to £118,083 (against £117,267 for 1923-24). The directors state that in view of the low prices for sugar now ruling in Argentina and the consequent uncertainty as to the results to be anticipated from the crop now being harvested, they have decided to allocate to reserve £73,083 (against £57,267), and propose that the balance be applied to the payment of a dividend of 9 per cent. on the preference shares (of which 3 per cent. has been paid), thus leaving 3 per cent. in arrear as at March 31st last.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions were generally favourable to agricultural operations, and field work is actively proceeding in most parts of the country. The bulk of the grain in the principal districts has been safely secured, though a considerable quantity lacks condition. Some fine samples, however, were offered on most markets at times, and with sellers inclined to press sales prices moved in a downward direction. The demand from millers generally is exceedingly quiet, owing to liberal offerings of Continental descriptions at competitive prices, while the position remains weak in sympathy with declining forward values. Pressing offers of Russian grain also proved a depressing factor, and buyers mostly hold off, while confining their purchases to immediate wants. Floating and forward wheat cargoes were more or less neglected, and prices gave way under pressure to sell North American and Plate descriptions. A steamer of German first half October sold at 48s 6d, ditto, comprising No. 1 and No. 2 Northern Manitoba, October 10th shipment, at 52s and 51s respectively per 480 lbs. Maize cargoes also lacked support, and values moved in buyers' favour, while South Russian barley marked a slight decline, a cargo on passage being sold at 26s 6d per 400 lbs, c.i.f. terms. Wheat dull and easier. No. 1 Northern Manitoba ex ship quoted 63s 6d, No. 2 ditto 62s 6d, No. 3 61s 3d, No. 1 Northern Duluth 58s, No. 2 mixed Durum 50s, all per 496 lbs. English new quoted 10s 8d-11s per 112 lbs, free on rail. Flour quiet, and tendency easier. London standard grade quoted 47s, patents 49s-50s, town whites 47s per sack delivered in the home counties, with 6d to 1s per sack less for deliveries. Imported quiet. Manitoba patents range from 48s-50s 6d, Minneapolis 48s-50s, Kansas patents 48s, Australian 44s-44s 6d per 280 lbs ex store. Maize depressed. Plate ex ship to arrive quoted 38s, ditto landed 40s 3d, white flat African landed 40s 9d per 480 lbs. Yellow African maize meal ex ship to arrive £9, white ditto ex ship £8 12s 6d per ton. Barley easier. Californian new ex ship quoted 40s-50s, Chilian Chevalier landed 58s-70s, brewing 52s-54s according to quality, Australian 57s-61s ex store, Polish and Swedish ex ship 44s-53s per 448 lbs. American malting ex ship September 29s, No. 3 Canadian Western ex ship, October, 30s, No. 4 ditto, October, 28s 6d, Russian ex ship near 28s 6d per 400 lbs. English new quoted 10s-20s, the latter for malting quality, per 112 lbs. Oats weaker. Plate landed 26s 9d, No. 2 Canadian feed ex ship, September, 27s 3d, landed 30s 6d, landed 27s, No. 2 white clipped American ex ship to arrive 23s, landed 24s 6d, all per 320 lbs. English new quoted 9s-10s per 112 lbs, free on rail. Millers' offers quiet. Broad bran quoted 8s 3d, middlings 8s 9d, fine ditto 10s 9d, bags included, ex mill, powdered oat husks 6s 3d, feed oatmeal 8s 9d, ground oats 12s 6d per cwt, free on rail. Oatmeal quiet at the recent decline. London made flaked 17s 6d, rolled oats 16s 6d, medium, also fine cut, 16s 6d, coarse, also medium pinhead, 16s 6d ex mill, ordinary Scottish oatmeal 18s, American ditto 17s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1925-26, 1924-25, 1923-24, 1922-23.

	1925-1926.	1924-1925.	1923-1924.	1922-1923.

AMERICAN WHEAT MARKETS.

Prices have developed marked weakness in the last few days. At Winnipeg threshing returns have suggested that the current crop has been underestimated, and the market has been peculiarly sensitive to rumours of Russian wheat exports. Chicago has moved in sympathy with Winnipeg, and has been affected also by the break in raw cotton prices. Recent quotations:—

	Sept. 26, 1924.	Jan. 2, 1925.	Sept. 10, 1925.	Sept. 17, 1925.	Sept. 24, 1925.
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs	152½	183	(a) 133	(a) 134½	(a) 125½
Chicago (No. 2 Winter)—Cents per 60 lbs	135½	177	(b) 150½	(b) 151½	(b) 144½

(a) October delivery.

(b) September delivery.

The International Institute of Agriculture, Rome, has issued the following table of estimated wheat production in the Northern Hemisphere, the countries shown being responsible for about 90 per cent. of the whole:—

PRODUCTION OF WHEAT IN THOUSAND METRIC TONS.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Any autumn revival in the iron and steel trade seems likely to be delayed this year, as there are few indications at the moment of a buying movement developing. Current business is irregular, and no sustained demand has been in evidence for some time past. Business in pig-iron has been confined mostly to odd lots, principally to satisfy consumers' immediate requirements, whilst the export trade has been particularly dull. Competition in the home market from Continental sources is less noticeable, probably owing to the low figures at which British material can be bought. In the semi-finished department suggested that a considerable tonnage of orders is being held back by merchants, who anticipate a further depreciation in the prices of Continental producers. The conditions in the finished steel department have changed but slightly during the past few weeks. Demand is patchy, and is spread unevenly over the market.

Our Middlesbrough correspondent's report, dated September 24th, is as follows:—Pig-iron: There is no material alteration in the general position. Business is still restricted to purchases for immediate needs. The price of No. 3 Cleveland G.M.B. pig-iron

is further depressed, and the general quotation is now 67s 6d per ton. With regard to hematite, there are no big stocks, and the demand has seldom been so restricted. With the export trade almost cut off, the home market is barely sufficient to absorb the output. The general quotation for East Coast mixed numbers is now 74s 6d per ton. Manufactured iron and steel: There is no change in the position, and the following remain the quotations:—Steel ship plates, £8; steel ship angles, £7 15s; iron bars, £11 12s; steel rails, £8 10s. Iron Ore: There is nothing to report of any consequence, and the foreign ore market is still stagnant. The nominal price of best Rubio is still 20s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—Signs of the winter revival of trade are still absent, and hand-to-mouth conditions of buying continue. No important inquiries are known of. A number of works have gone on short time, and an increase in unemployment was recorded this week. The deadness of trade is reflected in a reduction of 7s 6d and 10s per ton on basic billets by the Associated makers. Several large unassociated works have been cutting prices for some time past. The pig-iron situation is unchanged, and the prices are readily shaded to secure orders. The stagnation of the scrap market continues. Most of the finished branches, although still fairly busy, report a contraction in the volume of orders coming forward. Trade is quiet in wire rods and wire, but makers of wire rope are well employed, especially in the export markets, where they are meeting no serious competition. The home demand for colliery ropes and colliery tools and equipment generally is poor. Many pits are idle, and proprietors find it necessary to reduce their buying to the lowest minimum. Work in railway material and wagons is quiet. Good business is being done in steel for motor and cycle building and tools and accessories for garage use. Cutlery and plate makers report that the volume of orders is much below that of the corresponding period of last year.

Our Glasgow correspondent writes:—The general position in the pig-iron market is not much improved. It is understood that two more furnaces are to be relit, but this is not in consequence of any definite increased demand for the usual qualities, but to provide for certain special requirements. Quotations are unaltered from last week's levels. Shipments from Glasgow Harbour for the week ending 19th inst. totalled 490 tons, of which 373 tons were on overseas account. For the corresponding week of last year the shipments were 764 tons and 535 tons respectively. In the steel trade a few moderate-sized orders for heavy plates for export are to hand, but the home demand from shipbuilders is at a low ebb, and none of the works has anything like sufficient to occupy the full plant. Structural engineers are generally well placed, and steel works are experiencing a steady flow of orders for sectional material. It is reported that Messrs. Harland and Wolff are to build a pontoon 90 feet in length for the floating crane which Messrs. Cowans, Sheldon and Co. are constructing for the Port Authority of Aden. Makers of malleable iron are in no better case than a week ago. The orders come in only in small parcels, buyers apparently being reluctant to book ahead, although at £11 12s 6d, the present price, there is scarcely any margin of profit. The sheet trade is still busy, orders and inquiries for export being plentiful. There is a brisk demand from India for galvanised and corrugated sheets, and works are holding out for higher prices, the minimum now being £16 5s per ton. The continued firmness in the price of

spelter will necessitate further advances in galvanised sheets before long.

CUMBERLAND IRON.

(BY A CORRESPONDENT.)

There is temporarily a considerable amount of activity in the iron and steel industries of that portion of the hematite pig-iron producing district lying north of Millom, due largely to the increase in the local consumption consequent upon the resumption of operations on Monday at the rail, fish-plate, and axle and tyre mills of the United Steel Company at Workington. Five furnaces are in blast at Workington, and one each at Cleator Moor and Millom. Further south there are no furnaces blowing at all, with small likelihood of the re-lighting of a single furnace until the iron trade improves or until the rail mills at Barrow are restarted. Buying is from hand to mouth, and the low prices do not tempt users to place any forward contracts. Bessemer mixed numbers are now quoted at £4 2s 6d c.i.f. Welsh ports, £4 5s per ton delivered at Glasgow, £4 7s 6d per ton delivered at Sheffield, and £4 12s 6d per ton delivered at Birmingham. There is a fairly steady demand for low-phosphorus iron, at £4 15s at Glasgow, and ferro-manganese is maintained at £15 10s per ton. In the steel trade little is doing, and the present rolling is to execute orders which have been on the books for some time past. Rails are £8 10s per ton, sleepers £10 10s per ton, and fish-plates £12 10s per ton. Native ore is only in local request, with superior sorts 18s to 19s per ton, and ordinary kinds 14s to 15s per ton.

OTHER METALS.

TIN: Values of tin marked an irregular advance during the week, with holders adopting reserved measures in face of stimulating advices from the East, while a fair business resulted. Standard cash sold £261-£264 10s to £263 10s, and three months £263-£264 15s and £263 15s. Sales in the East were reported at £268 to £269 5s. COPPER was accorded active support, but offerings were on a liberal scale, which imparted slight irregularity and weakness. Standard cash sold £61 15s-£62 and £61 8s 9d, three months £62 17s 6d-£63 and £62 6s 3d. LEAD opened firmer, and after active dealings values marked a downward tendency. Good soft foreign pig, September, sold £40 10s to £39 7s 6d, October £39 10s to £38, November £38 to £37, December £37 5s to £36 3s 9d, January £36 12s 6d to £36 5s per ton. SVELTER in good demand, and prices firmer. September sold £37 10s to £38 6s 3d, October £37 5s to £37 17s 6d, November £37 1s 3d to £37 10s, December £36 17s 6d to £37 6s 3d, January £37 2s 6d to £37 3s 9d. ALUMINIUM quiet. Home trade quoted £120, export £125 ton. ANTIMONY firm. English specials quoted £75 to £80 as to make and quantity, foreign refined £66 to £66 10s per ton ex warehouse. QUICKSILVER quiet. Spot quoted £13 12s 6d per bottle. WOLFRAM firm, and spot 19s 6d to 20s per unit ex warehouse.

COAL.

Our Cardiff correspondent writes:—There is no improvement to report in the general situation. Foreign demand has continued very inactive, and the only important event of the week has been the renewal of the contract of the Navigazione Generale di Italy for the supply of best Cardiff large steam coals for bunkering purposes. It is stated that the price at which this contract has been placed is 30s c.i.f. Genoa, which leaves approximately, on the basis of current rates of freight, about 23s f.o.b. for the coal. Current market quotations have continued to decline, and the average level is now lower than it has been at any time since the early years of the war. The position is causing a great deal of anxiety, and a proposal has been revived for the regulation of prices. Early in August the Commercial Committee of the Coalowners' Association recommended weekly group meetings of salesmen with a view of minimising competition, but these meetings have not exercised any material influence on the course of prices, and it is now contemplated to stabilise them at fixed figures. A meeting to consider this proposal is to be held next week. The weakest classes of large coal are the ordinary steam descriptions. The following are the current approximate quotations:—Best Admiralties, 24s to 24s 6d; seconds, 22s 9d to 23s 3d; best drys, 23s 6d to 24s; black veins, 21s 6d to 21s 9d; Western Valleys, 21s to 21s 6d; Eastern Valleys, 20s 6d to 21s; best bunker smalls, 19s 9d to 19s 3d; ordinary cargo smalls, 19s 6d to 19s; coking smalls, 11s to 11s 3d; anthracite, best large, 45s to 47s 6d; red vein, large, 30s to 32s 6d; machine-made cobbles, 55s to 57s 6d; French nuts, 55s to 57s 6d; stove nuts, 55s to 57s 6d; ruddy culm, 14s to 14s 6d; coke (special qualities), 37s 6d to 42s 6d; patent fuel, 21s to 24s; pitwood, ex ship, 26s 6d to 27s. At Swansea this week a meeting of the tinplate manufacturers has agreed to the principle of the re-establishment of a pooling scheme for the distribution of orders, but a further meeting is to be held to consider details. The general position of the market is unchanged.

A Workington correspondent writes:—There is no improvement in the coal trade. Few of the collieries are working full time. There is an increase in the local industrial wants, and best steam is 27s 6d per ton, and washed steam 26s 6d per ton. Local landsale is sluggish, with best house 34s 10d per ton at pit. The competition in the Irish market from Scotland and Lancashire remains keen, and Cumberland owners are handicapped by the higher

prices they must charge to avoid incurring even heavier losses than are being suffered. Best round is nominally 22s, gas coal 22s, house nuts 21s, and screened nuts 20s per ton. Coke is a biggyish make in West Cumberland for the furnaces at 18s to 19s per ton, according to carbon content.

Our Sheffield correspondent writes:—All that can be said favourably of the coal trade is that it is no worse. A fairly good tonnage of manufacturing fuel is going out, and household sorts are selling rather more freely. Some of the export markets are buying moderately, but little can be done with Continental countries.

THE WOOL TRADE.

Our Braiford correspondent, writing on Thursday, says:—The tone of this market is good, but there is not that activity which denotes real business. Wool everywhere continues to sell remarkably well, and no doubt the delays caused by the shipping strike will assist holders here. The outstanding feature is the continued strong demand for wool on French account, and so long as this continues it does not look as if there will be much cheaper wool. Supplies in the background, however, are exceptionally heavy, and many traders in this country still hold the opinion that values will ease towards the end of the year. At the same time one finds fewer topmakers willing to sell forward, and certainly not at the prices accepted for such business a few weeks ago. Generally speaking, there is not much change in quotations for tops and yarns. Business is more or less of small dimensions for current requirements only, although sellers are endeavouring to adopt a more independent attitude. There are, however, indications of some improvement in various directions. The present price of merino wool has again made Botany fabrics more attractive from the price standpoint, and wholesale houses are more inclined to place business. This is reflected in increased activity in the Botany section of the yarn trade, spindles being better employed than for many months past.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales have been continued under very encouraging conditions, far better than the majority expected. After two weeks there is no sign of any section of the industry being satisfied. This is certainly encouraging to sellers. It is particularly pleasing to see owners prepared to meet the market, and largely as a result of active Continental competition prices remain generally firm. Towards the end of last week most crossbreds seemed hardly to sell up to the standard seen on the opening night, but this week there has been no further weakening; in fact, all selling brokers report crossbreds as being a little firmer, due to active competition on the part of both the Continent and Yorkshire buyers. At the same time some very good medium and fine crossbreds are being shown by the home trade in fine wools, and, generally speaking, prices are very firm on the opening level. It seems impossible to pick up wool to bring in tops on the level of ruling prices in Bradford, and that is the anomaly of the trade to-day. Home trade buyers are still waiting in the hope of seeing French wants satisfied, and so help prices in a downward direction. However, the series is making excellent progress, values generally are firm, and no fault can be found so far with what has actually transpired.

THE COTTON TRADE.

MANCHESTER, September 24.

The event of importance in the market this week has been the slump in raw cotton rates as a result of the Government statistics. Inquiry in cloth has been of considerable dimensions, and a fairly encouraging turnover has taken place. India has given increased support in light fabrics, and rather more orders have been placed in grey staples. Goods are reported to be moving more freely in Operations for the Continent have again been healthy, but business has shown itself in the home trade section. American yarns have been done in the earlier part of the week. Only scattered sales have been mentioned in Egyptian spinnings.

Colliery Shareholders are invited to protect their own interests by actively participating in the educational publicity work now being carried on, on their behalf. Write for particulars, quoting Company in which Shares are held, to Philip Gee, 40, King Street, Covent Garden, W.C.2.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

The timber market has in small measure regained confidence, but the future trend is still obscure. With large stocks on the market Swedish and Finnish shippers vied with the Russians in sales, and the spot market became very nervous. Later it was announced that the majority of the Swedish and Finnish shippers had pledged themselves not to sell their unsold balances at less than at certain minimum figures, which can be briefly put as on a basis of £12 per standard of 165 cubic feet for 7-inch unsorted redwood battens, free on board. This gave a little confidence to the spot market, but the softwood auction sale held in London on the 2nd and 3rd inst. (the first for five weeks) proved very disappointing to sellers, the weight of over a thousand lots proving too much for the market to digest. The later and smaller sale, however, showed a slightly better tone. Advices from Sweden and Finland go to show that shippers of these countries have some satisfaction in the fact that the Continental consuming countries are responding more effectively to offers of cheap timber for house building and other construction work. In the Canadian spruce

trade the arrivals to this market this year are on a larger scale than those of January to August, 1924. This wood, which found formidable competitors in mid-European and Finnish productions last year on the West Coast of the United Kingdom for building and packing-case work, has improved in demand in those quarters, but for London and the East Coast there is not much call. Shipbuilding timbers, especially teak and including pitch pine, are firm in value. The demand continues good also for mahogany logs of good qualities and attractive sizes, and there is a slight change for the better in the call for the inferior grades. Other "fancy woods" are also firm. In the cheaper classes of hardwoods from the United States the position has improved for spot holders, imports not coming in quite so freely as during the preceding months, while the shipments to come forward are expected to be of a more limited character compared with the heavy deliveries so far this year.

VEGETABLE OILS AND OILSEEDS.

Markets generally have been rather dull, with a downward tendency in values. Linseed oil has eased off to £40 per ton naked ex Hull mill for prompt delivery, and is about 5s per ton discount forward to April. Consumers have not been active, and American inquiries have failed to result in business being done. Little demand has been experienced for cotton oils. Crude Egyptian on spot is not so plentiful, and is held for £40, and ordinary refined for £42 5s. Palm kernel oil and ground-nut oil are dearer, but soya oil and rape oil are unchanged. The feature of the oilseed section has been the renewed weakness of Plate linseed, which has receded to £19 5s for September-October, and now to £18 16s 3d (paid) for January-February. Some business in North Russian linseed to Hull has been done at £18 17s 6d, October shipment. Egyptian cottonseed is easier, and black offers at £12 5s for October loading. Soya beans are featureless.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Market hides and skins showed further advances at the sales held in Bermondsey on Thursday, several weights in ox and heifers making advances of from ½d to ¾d per lb. Best hides now range in price from 7d to 9d per lb, with seconds making from 6½d to 8½d.

An International Service

THE Central Union Trust Company of New York is equipped with every facility for the prompt and efficient handling of financial transactions throughout the world. Foreign banks and business houses with banking interests in the United States are invited to avail themselves of this service, which includes the purchase and sale of foreign exchange, collections, and the issuance of commercial and travelers letters of credit. In addition, the Company conducts a general banking business and acts as Executor, Trustee, Transfer Agent, Registrar of Stocks and in every other Fiduciary capacity.

Copies of the *Economist* may always be obtained in the City at W. Abbott, Limited, 32 Eastcheap.
Barker and Howard, Sugar Loaf court, Leadenhall street.
P. W. Cooper and Co., 11 King street, Cheapside.
Davies and Co., 95 Bishopsgate.
Leathwait and Simmons, 34 Throgmorton street.
Pottle and Son, 15 Cullum street.
Willing and Co., Limited, 50 Copthall avenue, and 123 Moorgate.
Paris: Galigani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de L'Opera.
Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."
Office: Granville House, Arundel street, Strand, London, W.C.2.

QUARTERLY demands for money caused a certain amount of scarcity in the first half of the week, but the Michaelmas requirements were successfully met without applications to the Bank of England. October 1st brought Conversion Loan and National War Bond interest, and the reign of plenty returned. It also brought a reduction in Bank

rate to 4 per cent., which was followed as usual by the deposit rates of the banks and discount houses, and also by the rate charged by the clearing banks to the market, which became 3 per cent. We refer to the Bank rate reduction in a leading article. The market rates of discount weakened, and fine bank bills, which were in demand in special quarters, were taken at $3\frac{1}{2}$ per cent. for December and $3\frac{1}{4}$ per cent. for January maturities.

	Oct. 2, 1925.	Sept. 25, 1925.	Sept. 18, 1925.	Sept. 11, 1925.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	(Oct. 1, '25)
Banks' Deposit Rate	2	2	2	2	(Oct. 1, '25)
Discount (Call)	2	2	2	2	(Oct. 1, '25)
Houses (Notice)	2	2	2	2	(Oct. 1, '25)
Market rate (3 months' bills) ..	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	..

The Bank return showed a decrease of £193,000 in the stock of gold, £249,000 having been announced as withdrawn for export during the week; the note circulation had expanded by £1,864,000, and the Reserve was thus £2,057,000 lower, with a decline of 1.2 per cent., to 27.3 per cent. in its proportion to liabilities. There were very slight movements in the Securities, and the Public deposits expanded by ten millions, presumably owing to Conversion Loan applications, leaving the Other deposits twelve millions lower at a point—£102 millions—which makes the ease with which the demands at the end of the month were met somewhat surprising. Currency notes outstanding were increased by £1,273,000 to £293,004,200, which includes £1,325,800 for notes called in but not yet cancelled. The fiduciary issue is £235,428,300, or £12,717,100 below the maximum for the year.

NEW YORK MARKETS.

Our New York correspondent cables:—Financial circles are greatly disappointed at the failure of the French Debt negotiations to reach a permanent settlement, as it is understood that the final difference between the two sides was not great. Criticism is by no means restricted to the French, and failure is ascribed to fear of political developments. It is considered that time is required to clarify the situation in regard to financial effects. Reduction in your Bank rate has created surprise here, and leads to the view that our rate will not rise. This week's Federal Reserve statements indicate that the System has acted to mitigate end-of-the-month and quarter hardening in the money market, having bought bills and Government securities. Discounts are slightly lower, but an increase in the circulation and a small loss of gold has lowered the reserve ratio to 72.5.

THE STOCK MARKETS.

The fall to 4 per cent. in Bank rate took the Stock Exchange by surprise and produced a series of rises in gilt-edged stocks, emphasised by a substantial rally in the Home Railway market. The new scrip of Tuesday's issue by tender of Conversion Loan rose to $\frac{1}{2}$ premium, and other Government stocks advanced sharply. Yesterday there was a little hesitancy, but prices kept fairly steady. In the foreign section French bonds improved at first, to react later on the American debt developments, and some investment demand helped to raise the prices of European reconstruction loans. Home Rails, including Undergrounds, have recovered sharply from their recent low levels, partly owing to the repudiation of Communism at the Labour Congress. A large business has again been done in rubber shares, which remain buoyant, but oils are quiet though the tone is better. Industrials are not active and mines have mostly been dull.

THE COMMODITY MARKETS.

In certain quarters business has improved. There has been a better demand for pig-iron. The motor trade is still the most active buyer of manufactured iron and steel. Though cheered by a slight quickening in business with China, South America and India, the cotton trade is still disturbed by the recent fall in raw cotton rates. The shipping strike and Continental demand have kept prices for raw wool firm; Bradford users look to lower

rates in the near future, and are buying cautiously. Wheat prices have weakened. In the produce markets sugar and coffee show a quieter tendency, and tea has been in less request. The rubber market was firm, and good business has been effected. Tin prices are still rising. Copper opened firmly, but large offerings have lately led to irregularity in prices.

FOREIGN EXCHANGES.

Although dealings have again been restricted, the week has been an interesting one through speculations as to the outcome of the further decline in sterling. At the closing rate of \$4.84 $\frac{1}{8}$ on the 25th, the quotation was still above gold point, which is calculated now at somewhere between \$4.84.20 and \$4.84.30, but already by the 30th it was down for a time to as low as \$4.84 7-32, and on the 1st, after the announcement of the Bank rate reduction, there was a further fall to \$4.84 5-32, while yesterday morning it was quoted at \$4.84 1-32. Whether the unexpected action of the Bank in reducing its rate at a time when the quotation was already below gold point and at a season when exchange usually moves further against us will result in the loss of gold, or whether our credits in New York will be drawn upon, remains to be seen. In the present topsy turvy position, when rules seem to go by contraries, it is impossible to speak with any certainty. The only thing known is that there is a growing pressure of cotton bills, and that with higher rates in New York, American money was already being withdrawn before the reduction in the Bank rate, so that presumably this movement will now be accentuated. Forward rates stand at about $\frac{3}{8}$ cent per month above spot. The Paris rate, although to some extent following the reports of the debt negotiations, has shown less movement than might have been expected, there being a strong inclination to await more definite results. From a closing rate of 102.32 $\frac{1}{2}$ a week ago, the quotation has varied between 102.20 and 102.55, but reacted yesterday morning on the news of the debt compromise to 102.72 $\frac{1}{2}$. Brussels in the meantime has shown a marked recovery from 111.02 $\frac{1}{2}$ to 108.07 $\frac{1}{2}$. On Paris forward rates have narrowed a little from 40 to 36 centimes per month over spot; on Brussels they have moved from parity to 5 centimes per month above. The lira has been rather steadier, and at 120 $\frac{3}{8}$ compares with 120 $\frac{3}{8}$ a week ago. Oslo and Copenhagen, after some slight reaction, have settled down at 23.80 and 20.05, rates showing little change on those quoted a week ago. Although the immediate outlook remains somewhat uncertain, it would seem that for the time being speculation has been frightened off, and that a period of relative stability may be expected. The weakness of sterling is reflected, of course, in the more stable European exchanges, Amsterdam at 12.04 $\frac{1}{8}$, Stockholm at 18.02 $\frac{1}{2}$, Berlin at 20.33 $\frac{1}{2}$, Switzerland at 25.09, Prague at 163 $\frac{1}{2}$, Vienna at 34.35, having all moved somewhat against us. Madrid, however, in spite of the Moroccan situation, has depreciated further from 33.63 to 33.71 $\frac{1}{2}$. Bucharest has moved up from 1000 1022. Budapest remains steady at 345,000, and it is now announced that a new currency unit is to be introduced at this parity. In the East the rupee is unchanged at 1s 6 $\frac{3}{4}$ d, while the yen has got $\frac{3}{32}$ d dearer at 1s 8 9-32d. Silver has been very quiet, with a general weakening in demand, Shanghai having moved from 3s 3d to 3s 2 $\frac{1}{2}$ d, Hongkong from 2s 5 $\frac{1}{2}$ d to 2s 5d. In South America Rio has continued its improvement from 6 15-16d to 7 $\frac{1}{2}$ d, and Buenos Aires at 45 25-32d is 5-32d dearer. Monte Video is unchanged at 49 $\frac{1}{2}$ d, but Valparaiso has depreciated from 39.50 to 39.70.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the eleven days ended September 30:—

EXPENDITURE.	(000's omitted.)	REVENUE.	(000's omitted.)
Supply Services	14,184	From Revenue	13,148
Interest, &c., on Debt	3,229	Increase in Debt	12,244
Sinking Fund	898		
Sundries	1,150		
Increase in Exchequer Balances ..	6,230		
	25,392		25,392

The revenue for the eleven days ended September 30, 1925, amounted to £13,148,100, as compared with £13,708,000 in the ten days ended September 30, 1924. Customs brought in £3,268,000, against £2,490,000, while Excise yielded £1,440,000, against £1,269,000. Property and Income-tax was lower at £3,743,000, as compared with £4,757,000, and Super-tax brought in £500,000. Ordinary receipts amounted to £228,500, and Special receipts to £174,800. The eleven days' operations increased the National Debt by £12,244,500, and caused the following changes:—

		(000's omitted.)	
Treasury Bills	+	18,283	Public Department Advances.. — 11,170
National Saving Certificates ..	+	350	
Sundries	+	381	
3½ Conversion Loan	+	2,000	
Telegraph Money	+	2,400	
	+	23,414	— 11,170

The floating debt was increased by £7,110,000 to £775,121,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Sept. 30th).

	£		£
Total Expenditure ..	379,906,760	Raised by Revenue ..	343,934,735
Increase in Balances ..	2,803,225	Amount borrowed ..	38,775,250
Total	382,709,985	Total	382,709,985

ESTIMATES for FINANCIAL YEAR 1925-1926.

	£		£
Expenditure	799,400,000	Revenue	801,060,000
Surplus			£1,660,000.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—The Royal Bank of Ireland, Sheepbridge Coal and Iron Company, and Anglo-Siam Corporation. At the meeting of the Royal Bank of Ireland, the chairman said that conditions in the Free State were becoming more settled, and that outside capital was being invested in the country. At the meeting of the Sheepbridge Coal and Iron Company the chairman stated that they proposed to invite subscriptions for a further amount of debentures.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

AN EVENTFUL WEEK.

ALTHOUGH September is not as a rule a season of great events, in the week just concluded there have occurred several of importance. Pride of place must be given to the definite arrangement of a conference between the Allies and Germany on the question of security. At the last moment it seemed possible that these long-drawn-out negotiations might be wrecked by the desire of the German Nationalists to raise once again the question of Germany's responsibility for the war. This last fence has been cleared, or perhaps we should say scrambled over, and the delegates are to meet on Monday at Locarno. The Conference, the prospects of which are discussed in a later article, will not be all plain sailing; but it will be one of the great moments of history when the representatives of France and Germany meet face to face with the deliberate desire and intention of reaching an understanding which will enable them once and for all to sheathe the sword.

Across the Atlantic the most difficult of all the International Debt negotiations has reached an issue which, if it does not mean a permanent settlement, at all events puts the problem into cold storage for some time to come. It appears that after a series of proposals and counter-proposals, the French offered to pay America £8 millions a year for five years, £12 millions a year for the next seven years, and £20 millions a year for 56

years thereafter. M. Caillaux was driven to make this offer from much lower figures. Even this proposal was rejected, and (according to the information available at the time of writing) it has been agreed that the £8 millions for five years, at all events, are to be paid, and during that period the opportunity will be given to France to demonstrate on a more certain basis what her capacity to pay really is. On the whole, we think this is a satisfactory conclusion. In view of the doubt as to what the Dawes annuities will yield, £20 millions was, we think, too high a figure to ask of France, and to push it still higher would have meant that the arrangements would have had to be revised before the maximum figures took effect. Moreover, if France had agreed to pay a higher maximum, Britain would be entitled to ask, and public opinion would probably have insisted that we should ask, that France should pay us more than the figures agreed upon between Mr Churchill and M. Caillaux. If France had promised to pay America £25 millions and England, say, £20 millions, she would be out of pocket unless the Dawes annuities ultimately yield their maximum amount. There are very few who count confidently upon this. In our view America would have been wise to settle on a basis of from £15 to £16 millions sterling, which represents a 2 per cent. interest basis, and to have followed this with an agreement with Italy on a basis of, say, three-quarters of 1 per cent. interest. The attitude she has taken towards France suggests that the Italian negotiations will also have to end in a quite provisional agreement. A funding arrangement with France on a much higher basis would have been not merely a very heavy undertaking for France, but it would have been unsatisfactory from the British standpoint. In the first place, it would have put us in the dilemma of either having to stand by terms which public opinion here would have considered unreasonably low in comparison with the payments to America, or to revise them to a figure which would have broken down the whole proceedings. Moreover, in any case, the promise of high payments by France to America would tend to reduce the security for our £12 $\frac{1}{2}$ millions. But perhaps most important of all, the promise of high figures to her Allied creditors, would inevitably tend to stiffen the attitude of France towards Germany on the Reparations question, and make the task of the administrators of the Dawes plan more difficult. In the circumstances, therefore, a provisional settlement is the best way out.

There remain two domestic events of importance. The first is the emphatic repudiation of the Communists by the Labour Party Conference at Liverpool. This has had an encouraging effect on business psychology. There has been a disposition to mark up industrial securities, and people are less prone to take for granted that we are faced with grave Labour troubles in the near future. As a matter of fact, the decision of the Conference really revealed nothing new, but merely repeated what was already known as to the size of the Communist element among British workpeople. The episode may, however, justify in some small degree the hopeful feelings that it has engendered, for the week's meetings have been a great demonstration, not merely to the general public, but to the members of the Labour Party themselves. The fact that the overwhelming majority of his fellow-workers—under the leadership of those whom he has come to rely upon and to trust, including keen industrial negotiators and strike leaders such as Mr Ben Tillett, Mr Bevin, Mr Cramp, and many others—should have turned down with no uncertain voice the policy of violence and civil war, cannot fail to impress the mind of the wavering trade unionist.

Finally, to the surprise of the City, Bank rate was reduced on Thursday from 4 $\frac{1}{2}$ per cent. to 4 per cent. If this had happened three weeks ago, it would have been regarded as a natural consequence of the fall from 5 per cent. in early August. Since that time, however, the dollar exchange has tended to move slightly against Great Britain, and in the middle of this week actually fell below gold point. The issue of £40 millions of Conversion Loan at the beginning of the week at a price a little below the then market price was also taken as an indication that cheaper money was not to be expected. Moreover, in any case, it is a season of the year when heavy payments

to America become due, and there is a likelihood of gold being exported. Indeed, some £3½ millions have been lost since the previous fall of Bank rate, though we are still £5 millions to the good compared with the situation when the gold standard was restored. The arguments on the other side were, however, weighty. In the first place, money has been very easy, and latterly the Bank of England rate has been ineffective, and has merely had the result of keeping high the rate charged for advances which are governed by Bank rate. A month ago it seemed possible that money rates might rise rapidly in America, in which case London might have been subject to a severe strain. This danger seems to be passed; at all events it is apparently no longer feared in Threadneedle street. Indeed, the indications are that, whether by common understanding or otherwise, money is likely to remain fairly cheap in New York. Again, the autumn drain seems likely to be light. Most European countries have reaped good harvests, the price of wheat and cotton (which has already moved forward unusually early) is much lower than last year, and our trade figures show a smaller adverse balance than we have experienced recently. Moreover, it will be remembered that our American debt payments are already provided for. Money in most European centres has indeed tended to become easier, largely, no doubt, through the sluggishness of trade. In the circumstances, having satisfied themselves that the danger of a serious foreign drain was remote, the action of the Bank court was a natural one, the only alternative being to release the embargo upon foreign loans. There is very much that might be said in favour of this latter course, but it is evident that for the moment it is not the intention to make a change in policy.

As between the two alternatives, an increase in foreign loans would assuredly in the long run be effective in stimulating just those trades that need help, namely, the export industries. But the Bank court no doubt took into consideration that what we are suffering from at present is to a very large extent psychological depression, and that lowering the Bank rate would give a much needed fillip at a moment when it seems uncertain whether trade is going to make a step forward this autumn or is going to continue in the stagnant condition of the last few months. The Stock Exchange took the action expected of it by marking up securities, though this was rather a demonstration than the result of actual investment buying.

BEFORE LOCARNO.

In spite of various rumours of postponement, the conference between the Allies and Germany is apparently to begin on Monday at Locarno. Its purpose is to effect in the political sphere that general liquidation of outstanding controversies which the acceptance of the Dawes Report has already achieved in the financial. The difference between success and failure will mean much for Europe. It may mean, in particular, the difference between a Germany thrown largely into the arms of Russia and a Germany making common cause with Western Europe in the slow task of banishing war from the Continent. That fact invests with special significance the extensive tour which M. Tchitcherin, ostensibly on the direct road to an Austrian health resort, finds himself able to make to Warsaw, Berlin, and other capitals.

It by no means follows that the Soviet Foreign Minister is bent, even at this eleventh hour, on preventing the Locarno conference from coming to fruition. It is more likely that he realises the moment for that has gone. Count Brockdorff-Rantzau has done everything he knows to keep Germany out of the League of Nations, and Germany has made it clear that she is by no means averse to entering the League as the Allies desire. If M. Tchitcherin's habitual shrewdness has not deserted him he will be devoting himself now to seeing that no new orientations, brought about as a result of the Locarno conversations, are of the nature of an offensive move against Russia. In that he would be perfectly justified, though the danger

in reality hardly exists, and he should have no difficulty in securing at Berlin assurances that will enable him to go on and take his cure with a quiet mind.

The chances of success and failure, however, at Locarno remain rather more nicely balanced than is to be desired. The outlook, on the whole, is good, but the internal situation in Germany is such as to lend ground for some apprehension as to the line Dr Stresemann may be compelled to take in order to conciliate his Nationalists. They have begun by forcing him to raise once more, though not, it is true, in a formal note, the question of responsibility for the war. The German Government has old commitments on that subject. The Nationalists more than a year ago exacted, as price for their acceptance of the Dawes Report, a pledge that the question of war-guilt should be raised, and though Dr Marx evaded the obligation through the whole of his Chancellorship, new pressure has clearly been applied, to which Dr Stresemann has found it expedient to yield. The Allies, of course, have declared themselves unequivocally on the matter. Whether it was necessary for them to deal so firmly in a formal note with a question which had been raised by the other side only in oral conversations, is no doubt arguable, but there is a good deal to be said for the view that a topic which would provoke the acutest controversy, if it were introduced at Locarno, had better be ruled out decisively in advance. As the British reply to Germany observes, the question of Germany's responsibility for the war is not raised by the proposed pact, and there is therefore no ground for bringing the matter into discussion at all.

That no doubt is not the last word about Article 231 of the Treaty of Versailles. To most people in this country the war guilt question is something for historians of the next generation but one to argue over. But Germany, rightly or wrongly, takes a very different view. Her psychology may be peculiar, but there it is, and no harm would be done by allowing her to state formally her ideas on the subject in some unilateral communication to which the Allies could listen without response. But whatever be the right moment, if there be one, for such a declaration (which would be open to the grave objection that it would mean repudiating an article of a treaty which Germany has signed and ratified), this is clearly as wrong a moment as could well be found. Fortunately most people in Germany itself appear to realise that, and the chief result of the efforts of the Nationalists is to inspire violent attacks on them for their gaucherie by moderate organs like the *Berliner Tageblatt* and the *Vossische Zeitung*. But there will be other difficulties less easily disposed of than the war-guilt question. Among these happily will not be the entry of Germany into the League of Nations, for Mr Chamberlain is in a position to "note with satisfaction that the German Government raises no objection to this essential condition of any mutual pact." That welcome declaration is at variance with the reports of most Berlin correspondents that Germany still stands resolutely by her objections to Article XVI. of the Covenant. But it has always been obvious that given the most reasonable modicum of elasticity on the part of Berlin that obstacle could be surmounted without any sacrifice of principle on either side. That view must have been accepted by the German Government, for there can be no compromise on this point at Locarno. The Allied Ministers Assembly can determine such a question as the entry of a new member into the League.

The most delicate problem is clearly going to be the relation of the western security pact with the eastern arbitration treaties, and next to that the question of what the character of these treaties shall be. Here there is little sign of any antecedent agreement. The western pact should be relatively plain sailing. There are, by which the operation of the military guarantee shall be determined. But the disposition to make the League the one is thinking of the operation of the military guarantees there will be small temptation to quibble over minor points. It is true that even so major a point as the "test of aggression" has still to be finally faced; but in their

conversations at Geneva Mr Chamberlain and M. Briand are reputed to have got far towards agreement regarding it, and on lines the Germans should be able to follow. As to the arbitration treaties between Germany and her western neighbours, they are a matter with which this country has little concern, for we shall be no party to them, and His Majesty's present advisers appear to make it a cardinal point in their foreign policy that under no circumstances will they conclude a comprehensive arbitration treaty with anyone.

Less still do the Eastern arbitration treaties concern us. But they concern France, as an ally of Poland and Czechoslovakia, very directly, and there is as little reason to believe to-day as there ever was that France would consent to immobilise herself in the West so long as Germany retained the right of war against her neighbours on the East. The corollary is clearly that the Eastern arbitration treaties must be concluded at the same time as the Western, and that they must be such as to provide for the peaceful settlement of all the disputes that can arise between the parties. To both those conditions Germany has so far offered resolute opposition. Her offer to conclude arbitration treaties, she maintains, was general, and there is no reason why Czechoslovakia and Poland should appear at Locarno any more than any other State in the world which favours the idea of an arbitration treaty with Germany. Further than that, the German Government has made it clear that what it contemplates is the type of treaty, of which it has contracted several already, which provides for the compulsory settlement of justiciable disputes, but merely subjects political differences to a process of conciliation.

As to the first of those two points, Czechoslovakia and Poland intend to be present at Locarno in the persons of their Foreign Ministers, though they will take no part in the conversations on the Western pact. As to the second, those two Powers are resolved, and France no less so, that the arbitration treaties shall be on the model of that lately contracted between Poland and Czechoslovakia themselves, which leaves no room for war between the parties under any circumstances. Germany has said long ago that she is ready to renounce the idea of securing any adjustment of her Eastern frontiers by war, but she has never gone so far as to declare herself ready to sign an unlimited arbitration treaty. On the contrary, the German Note of July 20th makes it clear that Dr Stresemann at that time still clung to the limited type of treaty. Various interchanges have taken place since July 20th, and it may be that assurances of which nothing has been publicly disclosed have been received on such points as this. If that is not the case, the question of the character of the treaties is bound to make difficulty at Locarno. But the Conference was called to solve difficulties, not to register agreements already reached in advance, and Dr Stresemann, who is well qualified to estimate his domestic situation accurately, would hardly have gone to Locarno at all unless he had gone there meaning to effect a settlement.

THE LABOUR PARTY AND COMMUNISM.

(FROM OUR LABOUR CORRESPONDENT.)

THE outstanding issue of the Liverpool Conference of the Labour Party has been the party's attitude towards Communism. This problem of political Labour is primarily the creation of the newspaper Press. Numerically the Communist movement in this country has always been insignificant. It is led by men of very considerable ability and tactical skill; but it is neither their ability nor their skill which has forced the Communist Party into the political limelight. The newspapers are to be held responsible for such prominence as Communism may have obtained. The movement has lived upon the stimulus of free publicity, which has created the impression of an influential movement of a subversive kind. Had the Labour Party found itself throttled by the Communist Party and this country driven into attempts at the forcible suppression of Communist teaching, the responsibility would have lain with the Press.

The Labour Party has always taken the Communist Party at its real value. It knew the numerical weakness of the Communists; it was perfectly well aware of their activities; and it was confident in its power to carry the trade unions with it against the policy of the Communists. But the erroneous impression which had been created made it necessary for responsible Labour to declare its attitude. The public memory is short. It was forgotten that last year at the annual conference the motion to refuse the Communist Party's application for affiliation was carried by 3,185,000 to 193,000 votes, and that the resolution that no member of the Communist Party shall be eligible for endorsement as a Labour candidate for Parliament or any local authority was carried by 2,456,000 to 654,000 votes. Last year a third resolution was carried by a narrower majority, that no member of the Communist Party should be eligible for membership of the Labour Party. On this question there were 1,804,000 votes in favour of the motion and 1,540,000 votes against it. The large minority vote was due to a recognition of the practical difficulty of carrying the resolution into effect. It was recognised that if the resolution meant an interference with the right of the affiliated trade unions to appoint such delegates as they chose to attend Labour Party conferences, there would inevitably be difficulty. This question was before the National Executive of the party, and it recommended to the Liverpool Conference that "no member of the Communist Party shall be eligible to become a member of any individual section of any affiliated local Labour Party, or be entitled to remain a member." Further, the executive expressed the view that "affiliated trade unions can only act consistently with the decisions of the annual conference in its relation to the Communists by appealing to their members when electing delegates to national or local Labour Party conferences or meetings, to refrain from nominating or electing known members of non-affiliated political parties, including the Communists."

The first clash between the executive and the Communists at the Liverpool Conference came early on the report presented by the Conference Arrangements Committee, which stated that it had been decided to put into effect the standing order, which lays it down that when a general policy or principle has been decided it shall not again appear on the agenda for a period of three years. This meant that any discussion of the question of Communist Party affiliation or of the endorsement of Communists as candidates was ruled out. As the Communists were pressing again for affiliation, it is clear that the adoption of the Conference Arrangements Committee's report meant a defeat for the Communists. The latter therefore moved the reference back of the report, only to receive a smashing defeat by 2,954,000 to 321,000 votes. This decision meant the rout of the Communists, and the succeeding divisions on resolutions reinforced with unflinching and monotonous regularity the determination of the big battalions of the trade unions to re-assert their loyalty to the declared aims of Labour and their repudiation of Communism. The two recommendations of the executive referred to above were adopted, the motion to refer back being defeated in the first case by 2,870,000 to 321,000 votes, and in the second by 2,692,000 to 480,000 votes.

On the resolutions on general policy, where there were amendments inspired by the Communists, the results were much the same. On no single point were the Communists able to gather a crumb of comfort. At the many public meetings held in Lancashire and Cheshire during the Conference, the leaders hammered at the broken Communist front until there could be no doubt left in the public mind of the Labour Party's attitude towards Communism. It is significant that there were at the conference few speakers in support of the Communists amongst the responsible trade union leaders. Mr Pollitt, though representing the Boilermakers, did not express the mind of his union. Mr Bromley, perhaps, was more certain of the support of his delegates. But the great block of miners, railway workers, and general workers stood solidly behind the Executive Committee on every issue. The chief protagonists of Communism came not from the Unions, but from the local Labour Parties, in a handful of which the Communists have temporarily gained ascendancy. As Mr MacDonald said, "machine-made resolutions and

amendments are scattered broadcast, multiplied and developed so as to enable some of the delegates to come here and point out how widespread were those particular feelings, and that there were actually 30 local Labour Parties out of 600 that said the same thing." The real attitude of the Labour Party was expressed by Mr C. T. Cramp in his chairman's address, when he said: "I believe the position of those who would apply the methods of force to the affairs of this highly developed Capitalist State, with its huge population and its present inability to feed its people, is a position very much the reverse of advanced; is, in fact, about 100 years behind the times, and should be scrapped as antiquated and out of date." The Labour movement has no wish to deny its belief in the necessity for far-reaching changes in the structure of the social fabric. It believes that there must be changes, and that such changes should be wrought by the deliberate action of the community; but it accepts the view that the purpose and character of those changes should be determined by majority opinion. In this sense the difference of method as between the Labour Party and Communism is more important than the difference of purpose. The significance of the Liverpool Conference lies in its clearly expressed intention to abide by reason rather than force.

In a week's conference the range of discussion is wide and varied; but, apart from the decisions on Communism, the chief decision was that relating to minority government. There is undoubtedly a strong feeling in the Labour movement against the acceptance of office by the Labour Party unless it possesses the support of a majority of the House of Commons. The difficulties of the party are obvious. But when Mr Ernest Bevin moved a resolution on the inadvisability of the Labour Party taking office with the support of a minority, he was defeated, not because the Conference did not appreciate the objections to minority government, but because the Conference did not wish to prejudice the future and declare beforehand action to be taken in circumstances which could not be foreseen. It may now be taken that if in the interests of the King's Government the Labour Party should take office, it will do so, even if it be embarrassed by perils which must inevitably assail a minority.

The Liverpool Conference, whilst it may not have convinced one more elector of the wisdom of the Labour policy, has at least shown that the Labour Party is constitutional in its methods. It has also reflected the growing confidence of organised Labour in its own future, and though, as a result of its experience last year it is chary of involving itself in detailed commitments which it might prove difficult to honour, it has not wavered in its belief in far-reaching and fundamental changes in the economic and social order.

THE CREDIT OF AUSTRIA.

THE aspect of the Austrian problem which is of most immediate interest to investors in Austrian Government or private loans is the financial stability of Austria. This means, on the one hand, the extent to which it may be assumed that the crown is now secure against further depreciation, and on the other the soundness or otherwise of the big institutions which are the mainstay of Austria's financial apparatus. The success of various reconstruction schemes in pinning the exchanges during the last three or four years has perhaps tended to produce an unjustified optimism, which took for granted that once the necessary initial steps had been taken exchange stability was assured. But the fact is that the path of financial reform is a long and often tedious one, calling for sustained effort and constant watchfulness. The recent fall in the Polish exchange after the zloty had come to be classed among the stable currencies has given a shock to this easy confidence, and led investors and the financial world generally to examine the situation of apparently stable currencies with a more critical eye. The credit of Austria

under the new régime that will come into being when budgetary control by the League comes to an end next year will, therefore, be subjected to close and careful scrutiny. Holders of the Reconstruction Loan have the comforting assurance of the guarantee of the Powers behind their security; but other creditors must look first and last to the credit worthiness of Austria herself.

So far as economic conditions are concerned, the inquiry by the League Commission has shown that Austria is slowly recovering from an abnormally low level of production, and that this slow rate of advance could only be expedited by her securing freer markets. What does the examination show as regards her financial situation? In a previous article we briefly indicated that there is no reason to fear even in the absence of League control that her budget will again get seriously into deficit and lead to inflation of the currency. Moreover, the present position of the National Bank is a strong one, its reserves in foreign currency being 55 per cent. of the note issue, as compared with a legal minimum of 25 per cent. But though these figures would appear to be very satisfactory and give assurance of the Bank's ability to meet all possible calls, this conclusion is not quite so obvious when account is taken of the special features of the Austrian financial situation. The two outstanding points are (a) that Austria has a very large adverse trade balance, and (b) that she is living to a large extent upon foreign credits, mostly of a short-term character. These two points are, of course, intimately associated, for her adverse balance had obviously to be met either by her selling her own foreign investments or by securing loans abroad.

The trade figures given in the Experts' Report show that in 1924 imports amounted to 2,394 million gold crowns and exports to 1,369 million gold crowns, thus showing an adverse balance of over 1,000 million gold crowns. It is very difficult to make accurate estimates of invisible trade items for a particular year, and the report does not attempt it. It does, however, give some indication of the normal receipts from investments, commercial services, &c. Interest on foreign investments still retained by Austria is put at four to five hundred million gold crowns. To this has to be added an item very difficult to estimate, representing the profits of the *entrepôt* trade of Vienna, and those of banking and financial businesses, as well as receipts from through-railway traffic. Finally there is the expenditure of visitors to Vienna, which is variously estimated at between 100 and 200 million gold crowns. Thus invisible items altogether exceed 600 millions, and may amount to as much as 800 million gold crowns. The difference between these items and a figure of a milliard gold crowns must have been met in 1924 partly by the sale by Austrians of their existing securities in foreign countries—Austrians certainly sold during 1924 some of their holdings in Czechoslovakia—and partly by loans from foreign countries to Austria. What this last item amounted to it is difficult to estimate, but the foreign credits of the big banks were certainly larger at the end of 1924 than at the beginning, in spite of the financial crisis which might have been expected, on balance, to have caused a withdrawal of capital. Part of the Reconstruction Loan became available during 1924, and private concerns undoubtedly succeeded in obtaining some credits, including some on long terms, in addition to those obtained through the banks. But though a substantial margin could be met in a particular year or years, it would be a matter requiring serious examination if so large an adverse balance had to be met every year. Fortunately, there is no reason to expect this, as may be seen by the following table showing the foreign trade of Austria in million gold crowns:—

Year.	Imports.	Exports.	Adverse Balance.
1920	1,701	932	— 769
1921	1,699	904	— 795
1922	1,756	1,104	— 652
1923	1,920	1,122	— 798
1924	2,395	1,369	— 1,026
1925 (first quarter) ..	422	312	— 110

The last figure in the table compares with an adverse balance of 254 million gold crowns for the first quarter of 1924. It is therefore not unreasonable to regard it as

THE QUARTER'S NEW CAPITAL.

RATHER more than the normal summer slump in new capital flotations is indicated in our statistics of new issues in London for the past three months, and for this the continuance of the embargo on foreign loans is mainly responsible. The total new capital raised during the quarter, apart from British Government borrowings, was less than £18 millions, as compared with £30 millions in the corresponding quarter of 1924. Of the quarter's total, £5 millions was accounted for by the London portion of the Commonwealth of Australia 5 per cent. loan, issued simultaneously in New York and London, while the bulk of the remainder was raised mainly for home industry, as may be seen from the following classification of the quarterly figures for a number of years past:—

(In Million £'s.)

	Total.	British Govt. Loans.	Foreign Govt. Loans.	Colonial Govt. Loans.	British and Foreign Corpns.	Foreign Railways.	Mines, & Finance, & Exploration.	Rubber.	Oil.	Balance Home Industry.

The borrowings of the British Government in the past three months, apart from money raised by Treasury Bills and on Ways and Means Advances, which are not included in our statistics, were practically confined to the issue of £40 millions of 3½ per cent. Conversion Loan last Tuesday, tenders for which were accepted at an average rate of £76 6s per cent. There was also an issue of £235,000 of Treasury Bonds, and an excess of sales of Savings Certificates over repayments of £350,000.

In the next table the issues of the quarter and of the past nine months are subdivided under several heads:—

Description.	Total, First Half-year, 1925.	Third Quarter, 1925.	Total Nine Months to September 30,	
			1924.	1925.
British Government Loans	6,950,000	31,105,000	9,671,500	38,055,000
Colonial Government Loans	13,839,500	4,975,000	25,231,000	18,814,500
Foreign Government Loans	nil	nil	22,979,900	nil
British corporations, &c.	16,218,500	4,500,000	3,642,500	16,673,000
Colonial corporations, &c.	685,000	nil	4,650,800	685,000
Foreign corporations, &c.	1,350,000	nil	4,912,500	1,350,000
British railways	17,214,000	nil	nil	17,214,000
Colonial railways	1,681,200	nil	nil	1,681,200
Foreign railways	875,000	nil	955,000	875,000

Motor traction and manufacturing	55,000	nil	1,056,200	55,000
Gas and water	55,000	100,000	nil	664,000
Hotels, theatres, and entertainments	210,600	353,000	431,500	563,600
Patents and proprietary articles	430,000	nil	nil	430,000
Docks, harbours, and shipping	1,149,000	nil	6,025,000	1,149,000
Banks and insurance	1,984,500	1,280,000	2,362,300	3,264,500
Miscellaneous	22,350,500	4,085,300	15,840,500	26,435,800
	112,011,200	48,382,400	134,616,000	160,393,600

Foreign Government loans, it will be seen, are entirely absent from the figures for the current year, and foreign corporations and railways have not appeared during the past quarter. Great Yarmouth Corporation is the only borrower during the quarter in British Corporations,

slightly outweigh those of diminished employment. The following table shows the increases or decreases in unemployment in all the groups into which the Board of Trade figures are analysed:—

MEN.
(Changes in Unemployment Figures in August, 1925, as Compared with August, 1924.)

Trade Groups Showing Increased Unemployment.		Trade Groups Showing Decreased Unemployment.	
Mining	+ 184,004	Building and construction of works	19,418
Metal manufacture (chiefly iron and steel)	+ 12,334	Engineering	12,705
Textile trades	+ 11,254	Miscellaneous trades and services	7,365
Shipbuilding and ship repairing	+ 8,897	Metal trades	3,929
Transport and communication (including docks and shipping)	+ 6,214	Construction and repair of vehicles	2,676
Clothing trades	+ 4,091	Printing and paper trades	1,520
Distributive trades	+ 2,993	Commercial, banking, &c.	1,256
Pottery, earthenware, glass, &c.	+ 1,477	Sawmilling, furniture, &c.	991
Non-metallic mineral products, brick, tile, &c.	+ 1,034	Food, drink, and tobacco	828
Leather and leather goods	+ 966	Other manufacturing industries	779
Fishing	+ 102	Gas, water, and electricity supply	598
		Ammunition, explosives, chemicals, &c.	258
Total	+ 233,366	Total	52,323

The influence of the depression in the coal trade extends, of course, to several groups in the left-hand column; for the trouble in coal is mainly in the export trade which affects dock workers as well as shipping and shipbuilding. The textile group is also seriously affected. On the other side leeway has been made up in the building and engineering trades, and to a less extent in some other groups.

These increases and decreases represent, of course, varying proportions of the total in the occupations in question. In order to bring out the change in the ratio of unemployment in various trades we have compared the percentages for the same groups:—

MEN.

Percentage of Total in Employment.

Trades Showing an Increase of Unemployment.			Trades Showing a Decrease of Unemployment.		
	Percentage of Unemployed.			Percentage of Unemployed.	
	Aug., 1924.	Aug., 1925.		Aug., 1924.	Aug., 1925.
Mining	7.7	21.3	Building and construction of works	12.0	9.6
Metal manufacture	18.8	22.6	Engineering & ironfounding	14.1	13.2
Textile trades	11.6	14.3	Miscellaneous trades and services	11.6	10.5
Shipbuilding and ship repairing	28.4	33.9	Metal trades	11.5	10.5
Transport & communication	14.8	15.7	Construction and repair of vehicles	9.6	8.3
Clothing trades	9.7	11.8	Printing and paper trades	5.6	4.8
Distributive trades	7.4	7.3	Commercial, banking, &c.	5.6	5.9
Pottery, earthenware, glass, &c.	14.5	16.0	Sawmilling, furniture, &c.	9.2	8.5
Non-metallic mineral products, brick, tile, &c.	7.8	8.3	Food, drink, and tobacco	7.2	7.0
Leather and leather goods	10.0	12.2	Other manufacturing industries	8.9	7.6
Fishing	11.1	10.8	Gas, water, and electricity supply industries	6.1	5.9
			Ammunition, explosives, chemicals, &c.	8.5	8.5

It will be noticed that in some cases where there is an increase in the actual number of unemployed the percentage has fallen. This is due to the fact that in certain trades the numbers in the industry have risen appreciably, so that in spite of a slight increase in the numbers unemployed the percentage of unemployment is lower.

A similar table for women shows the following changes:—

WOMEN.
Unemployment Figures for August, 1925, as compared with August, 1924.

Trades Showing an Increase.		Trades Showing a Decrease.	
Textile trades	+ 33,992	Miscellaneous trades and services	3,419
Clothing trades	+ 8,718	Metal trades	3,129
Pottery, earthenware, glass, &c.	+ 4,583	Food, drink, and tobacco	2,095
Distributive trades	+ 1,391	Printing and paper trades	482
Mining	+ 1,775	Construction and repair of vehicles	358
Engineering	+ 148	Gas, water, and electricity supply	330
Metal manufacture	+ 138	Ammunition, explosives, chemicals, &c.	241
Leather and leather goods	+ 112	Commercial, banking, &c.	184
Non-metallic mineral products, brick, tile, &c.	+ 62	Sawmilling, furniture, &c.	170
Leather and leather goods	+ 34	Other manufacturing industries	74
Fishing	+ 34	Transport and communication	16
Building and construction of works	+ 9	Shipbuilding and ship-repairing	15
Total	+ 49,262	Total	10,513

Here, again, the net increase in unemployment is more than accounted for by the figures of one section, namely, the textile and clothing trades.

Notes of the Week.

The Half-Year's Accounts.—In view of the extra burden entailed by the agreement to subsidise the coal industry for a period of nine months, the national accounts for the first half of the current financial year are not encouraging. Revenue for the six months was £344 millions, a decrease of £4½ millions in comparison with the first half of 1924-25, and expenditure £380 millions, an increase of £19½ millions, giving an excess of expenditure over revenue of £36 millions. The latter, however, compares with £51 millions at the end of June. Mr Churchill estimated an increase in revenue in the full year of £1½ millions, after allowing for the reduction of 6d in the income-tax and other remissions, and for the new duties which he imposed. He anticipated a net decline of £9 millions in the year in income-tax yield. This has already been exceeded, the decrease in this item for the first six months being £9½ millions, and the full effect of the reduction in the rate has yet to be felt. Super-tax receipts he expected to increase by half a million, but there is an increase for the half-year of nearly £2½ millions. The Corporation Profits tax, which was abolished in the previous year, was expected to yield £9 millions in the full year. The half-year has produced £6 millions. Other changes in the revenue items include a decline of a million in Excise duties, against a Budget estimate of a £2 million increase in the year and an increase of half a million in Customs, against an estimated increase of £2½ millions. The new duties, however, only took effect on July 1st, and there was an increase in Customs receipts in the second quarter of over a million and a decrease in Excise receipts of only £214,000. Motor vehicle duties have produced £732,000 more than last year toward a total estimated increase of £1,336,000, and stamps £1,350,000 more. This expansion, due no doubt to unusual activity in certain sections of the Stock Exchange, exceeds the estimated increase for the year by £200,000. Death duties show a decline in the half-year of £1½ millions, though they are relied upon to yield £2½ millions more in the full year. Interest on sundry loans shows an increase of £2½ millions, against an estimated increase of half a million in the year, while special miscellaneous receipts have brought in £2½ millions more than in the corresponding period of last year. The receipts for the half-year under this head are £18½ millions, the Chancellor's estimate for the year being £30 millions, or £3 millions more than the actual receipts for 1924-25. The increase of £19½ millions in expenditure is accounted for as to £6½ millions by sinking fund payments, and as to nearly £13 millions by the Supply Services. The automatic increase in the Sinking Fund to a maximum of £50 millions accounts for the bulk of the former. In the Supply Services, the Army, Navy, and Air Force have taken £7½ millions more, the Civil Services £3½ millions more, and the Revenue Departments and Post Office £1½ millions more. Three months ago the Civil Services showed a decline of half a million, so that in the past quarter there has been an insidious payments. The deficit of £36 millions for the half-year has been met mostly by an increase in the floating debt, which is £33 millions higher at £775 millions. Treasury Bills having been increased by £68 millions and Ways and Means Advances reduced by £35 millions. The prospects for a Budget balance at March 31st next do not at the moment appear very bright. Revenue cannot be said to be exceeding expectations, and to the increased expenditure figure has to be added an unknown amount for the coal subsidy.

The Conversion Loan Result.—Applications tendered for the £40 millions of 3½ per cent. Conversion Loan on Tuesday amounted to £51,210,000. Tenders at £76 5s 6d received about 97 per cent., and above that rate in full, the average price being £76 6s 0.402d, or a shade over for £30 millions at a minimum of 76½, and applications amounted to £83½ millions, the average price obtained being nearly 2s above the minimum. In January tenders for an unlimited amount were invited at a minimum of

77½, and were accepted for £59½ millions at an average of 11½d above this figure. The minimum announced for this week's issue appears to have been fixed more closely in consonance with market conditions than was the case in April, assuming no change in the monetary position. But it seems difficult to believe, in view of the liaison known to exist between the Treasury and the Bank, that regard was not had, in fixing the minimum price of issue, to possibilities of a Bank rate reduction this week. The scrip of the new stock is already quoted at 10s above the issue price, which means that the taxpayer might have been saved £200,000 had different arrangements been made.

Free State Senate Elections.—Our Dublin correspondent writes:—The first stage of the triennial elections to the Senate has just been completed. The Senate consists of 60 members, of whom one-fourth must retire (though eligible for re-election) every three years. Interim vacancies are filled by co-option, but all co-opted Senators must retire (though eligible for re-election) at the next ensuing triennial election. Thus on the present occasion the 15 normal vacancies are increased by four additional vacancies representing retirements of co-opted Senators. The constituency is the whole of the Irish Free State, and the electorate consists of virtually the whole adult population over 30 years of age—to the number of some thirteen hundred thousand voters. The method of voting prescribed by the Constitution is the single transferable vote variety of proportional representation. The 19 retiring Senators all seek re-election; and under the provisions of the Constitution, an equal number of candidates has been selected by the Senate voting on the proportional representation system, and a double number (i.e., 38) has been selected by the Dail—also voting on the proportional representation system. Thus there are 76 candidates in all. The first preference votes have now been provisionally counted, and it appears that less than 25 per cent. of the electorate have recorded their votes. To be exact, 305,226—subject to final checking, out of 1,300,000—have voted. The voting-paper was necessarily as large almost as a medium-sized newspaper, and the task of numbering 76 candidates in order of merit or preference was perhaps considered formidable. If the idea of the originators of the system was to secure the return of candidates of national repute and importance in different walks of life, they have failed of their purpose. The higher totals of first preference votes have all gone to two classes of candidate—either to candidates with very strong local influence in particular areas or to candidates backed by widely ramified organisations, such as the Labour Party, the Farmers' Union, the Licensed Trade, the British Legion of Ex-Servicemen, the Medical Party, or the Cattle Traders' Association. For the purely individual candidate, unless he or she be possessed of great wealth, the constituency is unmanageably large, and adequate organisation is impossible. It is not likely that this feature will be much modified by the distribution of second and subsequent preference votes. One practical difficulty in this system of election—it may prove to be a fatal difficulty—relates to the necessary abolition of personation agents. Few, if any, candidates could afford to provide such agents in every booth throughout the whole Free State, and, even if they could, it would be impossible for 76 personation agents to be accommodated in every booth. And if there are no personation agents, and only a small proportion of the electorate is resorting to the booths, there is great scope—and much temptation—for personation.

Our Index Number.—The net movement in wholesale prices in September was again small, our Index Number recording a drop of 23 points to 4427, which compares with 4450 at the end of August and 4446 two months ago. At the end of last year the figure was 4855, so that there has been an appreciable decline in the nine months. At the end of September, 1924, the total was 4729, that month having recorded an increase of 103 points, mainly owing to a rise in the price of foodstuffs. The latter are entirely responsible for the past month's decline, as may be seen

The decline of 18 points in primary foods is largely due to reductions in the price of flour and a decrease in cereals generally. The outlook for wheat crops in the Northern Hemisphere is good, and with only a quiet demand from millers, owing to liberal offerings at competitive rates, prices are inclined to weaken. The declines in this group were partly offset by increases in potatoes, mutton, and pork. Sugar is mainly responsible for the decrease in the second group, there being a small seasonal increase in butter. In the textiles group, silk and jute are the principal contributors to the increase of fifteen points. Flax fell by 10½ points, but cotton quotations show only small changes on balance. In the minerals group the principal movement was an advance of 4 points in tin. Pig-iron was again slightly reduced. In the miscellaneous section the changes were small, and included a trifling decline in raw rubber. The table below shows the changes in each commodity's index number in comparison with that for the end of August, the figure 50 representing in each case the average level during the basic period 1901-5:—

Index Number.	Inc. or Dec.	Index Number.	Inc. or Dec.	Index Number.	Inc. or Dec.
Wheat—For.	105½ - 6	Cotton, A	117 + 14	Copper	51 - 3
English	86½ - 4	Cotton, B	193 - 3		
Flour	84 - 10	Yarn	124½ + 3½	Minerals	752 + 4
Barley	104 - 2	Cloth	122 ..		
Oats	76½ - 3	Wool, Eng.	128 ..	Baltic timber ..	96½ - 3½
Potatoes	119½ + 6½	Do Aust.	120½ + 12	Amer. timber ..	81 - 1
Rice	78 - 5	Silk	114½ + 2	Leather	100 - 1
Beef	94 + 2	Hemp	61½ + 104	Petroleum	76 - 2
Mutton	104½ + 7	Jute	157½ + 13½	Oilseed	85½ - 1
Pork	934 - 18	Textiles	1,250½ + 15	Tallow	76 ..
Cereals & meat ..				Indigo	90 ..
Tea	160½ - 6	Pig-iron	724 - 14	Crystals	85½ - 1
Coffee	138½ + 1½	Steel rails	71 ..		
Sugar, cane	82½ - 8	Iron bars	89½ + 2	Miscellaneous ..	788 - 8
Sugar, beet	95 + 3	Coal, steam	120½ + 1		
Butter	102½ + 4½	House coal	82½ + 1	Total	4,427 - 23
Tobacco	116½ - 1	Lead	162 + 1		
		Tin	103 + 4½		

The changes make the increase in the total over the figure for the end of July, 1914, 72.6 per cent., which compares with 73.5 per cent. a month ago. The movement in the percentage figure of the various groups is set out below:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	188	241	237.5
Mar., 1920	261	260	484	269	309	325.6
Dec., 1920	233	229	209	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6
Sept., 1922	151	194	181	150	148	163.3
Dec., 1922	149	200	193	152	146	166.2
Dec., 1923	148	231	225	167	136	178.6
June, 1924	158	210	219	164	139	176.6
Dec., 1924	171	224	235	175	146	189.3
Mar., 1925	166	212	232	164	141	182.5
June, 1925	153	200	200	159	143	169.6
July, 1925	157	198	207	163	146	173.3
Aug., 1925	164	204	200	161	144	173.5
Sept., 1925	161	199	203	162	143	172.6

A year ago the increase over the pre-war figure in the total was 84.4 per cent., cereals and meat standing at 173, other food at 221, textiles at 226, minerals at 164, and miscellaneous commodities at 143.

Electric Supply Progress.—One of the functions of the Electricity Commissioners is that of compiling statistics relating to the electric supply industry. Although some of these do not deal with financial figures, they give a trustworthy guide as to the progress of the industry. Two of such Reports for the year ending March 31, 1925, are now to hand, one dealing with proceedings under the Electricity Supply Acts, the other giving analyses of the units generated and fuel consumed in the generating stations of authorised undertakers, railway and tramway authorities, and certain non-statutory undertakings. (The latter was referred to in an article in the *Economist* of August 22nd last.) The proceedings under the Electricity Supply Acts are mainly concerned with the granting of Special Orders. During the year 72 Special Orders have been made by the Electricity Commissioners authorising supply to new areas. The total area covered by these Orders is not forthcoming, but a general idea of its magnitude is indicated by the fact that the Orders cover supply to (either wholly or in part) 95 rural districts, 68 urban districts, 22 boroughs, two cities, and 27 parishes. The noteworthy point is that such extensive rural areas are now being developed electrically. This is encouraged by the greater facilities which are being given for overhead transmission, the increasing use of which is shown by the list in the report of 81 consents which have been given for the erection of overhead mains in various parts of the country. Another indication of the progress of the industry is given by the amount of new generating plant authorised during the year—namely, about 479,900 kilowatts. As to capital expenditure, the only figure given in the report is that of the total loans sanctioned to local authority undertakers, £13,364,181. This refers to something over half the industry, no figures being obtainable, of course, for the remaining section, the company undertakings. During the year the Commissioners have approved 26 agreements between undertakers for inter-linking their stations or for taking bulk supply, together with two Orders authorising bulk supply. All this tends towards the much-desired elimination of small, wasteful stations, the great need of which is shown by the second report. This report shows that there are 584 generating stations, although considerably over half the output is generated by only 42 big stations. The total units generated for 1925 was 7,415 millions, as compared with 6,681 of the previous year, an increase of 11 per cent. The fuel consumption, however, shows an increase of only 5.8 per cent., which shows the increasing efficiency of production, mainly due to the policy of concentrating supply in big stations.

Trade Board Wages.—A review of the minimum time rates of wages fixed by the Trade Boards in 38 trades appears in the current issue of the *Ministry of Labour Gazette*. During the past four years the Boards have been

adjusting the minimum rates more or less in conformation with the movement in wages generally, and it is of interest to examine the level which has now been reached under this particular form of wage regulation. Having in mind the fact that the Trade Boards were originally instituted to check the evil of sweating, the minimum rates now in force, especially those for men, appear to be somewhat high. The lowest of the rates for men is equivalent to 40s a week, but only 8 rates are below 46s, and 33 are 48s a week or more. When it is remembered that these rates apply in the great majority of cases to unskilled workers, it will be seen that they are appreciably in excess of the rates paid in many of the unsheltered trades not covered by the Boards, and that they do not compare unfavourably with those in some of the sheltered trades—the rates for railway porters, for example, being 46s and 48s a week. The Boards cover a variety of trades, and the minimum rates range from 10d to 1s 38d per hour. Apart from the fact that in some of the trades the lowest-paid workers have a certain degree of skill, as in boot and shoe repairing, there is little to indicate the basis of the differentiation. In the case of stamped and pressed metal wares, the pin, hook-and-eye trade, and the hollow-ware trade, however, there is evidence of the influence of the low wages prevailing in the other metal trades in the Midlands, while in the case of milk distribution and laundries, the high rates fixed point to the effects of shelter. The lowest rate for women, apart from a special rate applicable to the Shetlands, is 64d per hour (25s a week), and, with seven exceptions, the rates lie between this amount and 30s. There are a few unimportant instances of recognised rates in other industries lower than 25s, but generally the level of women's wages is at least as high as the Trade Board rates, at any rate in the organised industries. One item of unique interest is to be found amongst the rates fixed by the Boards, namely, the minima for the tobacco trade, which still remain at the level at which they were fixed in 1920.

Liverpool Cotton Association Report.—The annual report of the Liverpool Cotton Association for the season ended last July contains a mass of valuable statistics. The figures relating to the proportional distribution of American cotton are striking. During the last five years Great Britain has taken only 14.58 per cent., as compared with 30.46 per cent. in 1895-1900. On the other hand, spinners in the United States during the last five years have taken 51.69 per cent., against 35.29 per cent. in 1895-1900. During the twelve months the average price of middling American cotton was 13.76d per lb, against 17.66d in the previous year. With regard to Egyptian Sakel was 29.82d per lb, against 21.55d in the previous year. The import of American cotton into Great Britain during the season was 2,567,583 bales, against 1,681,577 kinds of cotton into Great Britain during 1924-25 were 3,744,985 bales, as compared with 2,968,220 bales in the previous year. The British Empire cotton crops (excluding India) last season were estimated at 343,142 bales, as compared with 168,943 bales in 1922-23. During the last two years several British Colonies show a substantial increase in their production, Uganda being 170,000 bales, against 88,000 bales; South Africa, 20,000 bales, against 6,500 bales; Tanganyika, 17,000 bales, against 7,000 bales; and Nigeria, 37,000 bales, against 17,000 bales.

Free State Trade and Revenue.—The Irish Trade returns for January-June, 1925, show imports at £21,648,286, as against £23,432,986 last year; exports at £14,821,798, as against £18,002,802 last year; and re-Dublin correspondent suggests that these lowered figures are the visible effects of two indifferent harvests (1922-23), general economic and social depression following on the heels of our recent civil commotions. Lowered purchasing power and contracted enterprise diminished imports. Exports were oversold in 1924, and the natural and usual reaction was accentuated by disease due to weather conditions

during the winter season. Pigs fell off owing to price fluctuations, promising ill, and money shortage deterring small farmers from rearing and feeding pigs in consequence. This feature has been reflected in a pig shortage for the bacon factories and in diminished bacon exports. Sheep, also, fell off owing to the ravages last winter of "flu." The recuperation of the livestock trade may take some time yet, but conditions are everywhere more hopeful owing to the excellence of this year's harvest, which probably marks the turning point from depressing conditions. Of course, imports still largely exceed exports, but though, owing to the special circumstances, this tendency is more marked than usual, it is following its normal course, and the adverse balance of visible trade has begun to shrink as the year proceeds. From January 1st to July 30th it amounted to £11,581,000, or a total trade volume of about £50,000,000. The revenue is coming in satisfactorily, but with some shrinkage of Customs and Excise, which is not wholly due to remission of tea and sugar duties, but must be attributed to some extent to diminished consumption due to hard times.

Compulsory Insurance of Sea Passengers.—At the conference this week at Genoa of the Comité Maritime International, the principal subject discussed was a scheme, put forward by shipowners, under which all rights of action by passengers for death or injury would be abolished by law in every country, and passengers would instead be covered by insurance. As indicated in a note in the *Economist* on March 21st last, the discussion of questions as to the protection of emigrants led to shipowners putting forward this proposal of their own for ridding themselves of claims not only from emigrants, but from all passengers. Shipowners would become compulsorily insurers of passengers, receiving premiums as part of passage money, and reinsuring the liability. The obligatory cover would not extend beyond a minimum, and passengers who desired more protection would have to pay more. At the conference delegates from the principal maritime nations were present. The gathering, unofficial in character, was nevertheless representative of shipowners, underwriters, and financial and commercial interests. From preliminary papers circulated before the gathering it appeared that French objections to the proposed convention had been withdrawn, but American opinion was adverse to the compulsory insurance scheme or any similar plan by which the existing rights of passengers travelling by sea would be surrendered or limited. Any such limitation of the liability of shipowners, it was pointed out, was contrary to the traditional attitude of the American Government. From the discussion it appeared that Italian, Norwegian, Swedish, and German representatives were also opposed to the scheme, but eventually the draft convention was accorded a first reading, and was referred to a sub-committee for further examination and consideration of the criticisms levelled at the proposal. Delegates from Scandinavian countries were in favour of dismissing the project entirely, and the volume of opposition certainly appears to have much increased since it was first mooted, but apparently some further attempt at progress with it may be made. At the same conference it was acknowledged that a draft international convention, whereby it was proposed to unify divergent national laws as to maritime mortgages and liens, had proved unacceptable. This work of earlier gatherings, it was agreed, will have to be reconsidered before it can have any chance of general adoption.

Conditions in Finland.—Preliminary returns issued by the Statistical Office of the Finnish Customs estimate the total value (c.i.f.) of Finnish imports for January-August at 3,209.7 million marks and the total value (f.o.b.) of Finnish exports during the same period at 3,443.7 million marks. Exports thus exceeded imports by 234 million marks. The total value of the exported products of the paper industry amounted at the end of August to 99.4 million marks, against 86.9 million marks at the same date in 1924. During the period January-July, Germany, U.S.A., and Great Britain imported into Finland goods to the value respectively of 881.6 million Finnish marks, 454.2 million Fmk. and 452.3 million Fmk. During

January-July Finland exported to Russia goods to the value (f.o.b.) of 211.4 million Fmk. Finnish exports during July established a record for any single month, amounting to 802.0 million Fmk.; the excess of exports over imports was 342.5 million marks, again a record figure. The revenue of the State Railways during July was 68.5 million marks, compared with 60 million marks during July, 1924. The present year (January-August) has witnessed a considerable expansion in seaborne trade to and from Finnish ports: the share of Finnish-owned tonnage in the export of timber and paper products is given at 9.9 per cent. (January-August). During July there was a marked improvement in the state of the money market, but this favourable tendency was hardly maintained in the following month. As foreshadowed by Mr Risto Rytö some time ago, the Bank of Finland reduced on August 15 the minimum rate of discount from 9 per cent. to 8 per cent. The Budget estimates for 1926 show the following items of expenditure and revenue:—

Ordinary expenditure	Fmk. 2,873,669,680
Extraordinary "	553,059,440
	3,426,729,120
Ordinary revenue	3,324,838,650
Extraordinary "	1,000,000
From State reserves	100,890,470
	3,426,729,120

Sales of timber aggregated at the end of August about 755,000 standards. On the whole Finnish exporters of timber express satisfaction with the results achieved at the meeting in Stockholm of delegates representing respectively the Finnish and Swedish timber industries which concluded on September 8th. On the one hand it was not found practicable to accept a proposal to stabilise the timber market by means of a general limitation of output (though a reduced production is anticipated during the coming winter from the operation of normal economic forces). On the other hand, the negotiators were successful in arriving at an understanding in regard to a proposal to fix minimum prices. The majority of Swedish exporters (75 per cent.) have since signed the agreement proposed. In spite of the continued depression on the timber market, it is predicted that the agreed minimum prices will be an effective means of stabilising the market, to the advantage alike, it is contended, of native producers and foreign buyers. The demand for chemical wood pulp for delivery in the autumn and in 1926 is brisk, the United States being the largest buyer in this market. A special commission has been appointed to consider and report upon proposals for the standardisation of paper sizes by Finnish paper manufacturers.

Brazilian Industries.—A correspondent writes:—The Brazilian Ambassador to the Court of St James's (Senhor Reges de Oliveira) has expressed the wish of his Government to see Brazilian headquarters established in London, with a view to increasing trade and commerce between the two countries. While for this, however, additional financial support is necessary, and at present is not forthcoming, those who have economic relations with the largest of the ten South American States will welcome the intelligence as a sign of progress. The products of Brazil manufactured in the country itself are now so great that it is difficult to see in which direction increased trade with the United Kingdom can be sought. Miscellaneous textiles, which formerly came largely from this country, overcoming all foreign competition, are now produced locally to the value of 1,075,612,278 milreis, forming, indeed, the leading industrial activity of the State. Sao Paulo plays the most important part in textile production, although the State of Rio de Janeiro runs it very close. Some fears are entertained that local textile productions are increasing too rapidly, and that a crisis, in the form of a glut, in the industry must ensue. Similarly, large manufactures are recorded of footwear (valued annually at 113,569,244 milreis). The centre of the industry, as in the case of textiles, is the State of Sao Paulo, where already the surplus output has caused a heavy fall in prices. Beverages (65,632,171), hats (42,372,576), and furniture (33,455,132 milreis) are being produced at the same excessive rates, and the Fathers of the City have expressed some concern at the economic precocity of the town. The increase in the value of textiles, including cotton, wool, silk, and jute manufactures, has been unprecedented—rising from 395,022,000 milreis in 1922 to 1,075,612,000 milreis in 1923. It is expected, however, that last year's figures (when published) will show some decrease in home production consequent upon the glut prevailing in these among other markets.

Conditions in Peru.—Information from Peru points to a less satisfactory economic position, owing largely to the cumulative effects of flood damages and the heavy losses occasioned both to railway property and agricultural products. In the Presidential speech, delivered to Congress three months before the usual date, slight reference only was made to the visitation, which, however, is bound to have a reflex action upon the present year's position. Last year's budget was framed on a probable expenditure of £P7,879,489, while additional credits brought up the total expenditure authorised by Congress to £P8,586,201. Revenue totalled £P9,213,533, thus leaving a surplus of £P631,559. Foreign commerce during the past twelve months reached the sum of £P43,143,795, of which £P18,029,418 were derived from imports, and £P25,114,377 from exports. The net increase over the previous year reached £P5,050,501, while comparing the figures for the last five years with the period 1915-1919, the increase has amounted to £P55,478,000. This year the Government will have to find a considerable sum for repairs to railways, roads, and compensation to agricultural interests. Repairs to the Peruvian Corporation's lines alone have entailed an outlay of about £P220,000, apart from the loss of receipts during the interruption of traffic; in February and March the decrease in gross receipts exceeded 1,077,000 soles, about £100,000, while resumption of normal traffic did not take place until June. Over 35,000 tons of guano along the Peruvian littoral were dissolved, involving about a 75 per cent. decrease in the total guano collection anticipated. This loss has been augmented by a diminution in nitrogen content of the remaining deposits. The disaster has proved the more disappointing since the State Treasury relied upon the profits of the guano industry exceeding during the current year those of the previous twelve months (£P280,584), the highest figures obtained to that date. As a counter-action to an otherwise disappointing position, the country has been considerably aided by the output from the petroleum districts. During the past year this amounted to 1,100,000 tons, an increase of 46 per cent. over the previous financial period. On the other hand, the sugar industry has been adversely affected, prices being low and the exportable supply considerably reduced. Cotton has also

suffered, and those engaged in these two industries have sustained considerable hardships. No increase is reported in the mineral output. The unfavourable agricultural conditions referred to have resulted in several commercial failures, while the banks and large import houses are curtailing the amounts of individual credits to local retailers. Few foreign orders are being placed at the present time owing to the decline in exchange. Under the management of the Marconi Company the postal, telegraph, and wireless services of the republic have greatly improved, and are now being worked more economically than heretofore. More punctual payment of liabilities and pensions to servants of the State has prevailed, while stricter economies have been introduced in the expenditure of each of the seven ministries. Even greater reductions are promised. It is expected that the new import-tax put into force will more than correspond to the calculations upon which it was based, and that Custom receipts will continue to show a healthy advance. Owing to the increase in the price of wild rubber, more attention has been given to this one-time predominant industry of Peru, which had been allowed to fall into an almost moribund condition. Shipments down the Amazon from Iquitos have sensibly improved during the past season, and a new organisation of the industry is imminent. Considerable building activities are now taking place, while it is possible to point to a slight reduction in the cost of living. This has already been aided by the reduction of the duties upon imported rice.

The Rise in Tin.—Experience has shown that market possibilities in tin hinge to a great extent on American absorbing capacity, as in the case of rubber, while in both commodities over two-thirds of the total world's resources are being taken up in order to meet American trade needs. A great deal more interest has been centred on developments in tin within the last few days. The statistics for the past month indicated the substantial shrinkage of over 2,400 tons in the visible supply to nearly 17,000 tons, this comparing with 19,388 tons a month ago. A much larger amount of buying has been effected of Straits tin by home and American importers, and this led to sharply advancing prices, helped by lively dealings in the open market for Standard tin. The strongest feature this week has certainly been the revival of American interest; this had been rather expected, as orders by America had been held back as long as possible in a somewhat doubtful market and in view of the American coal troubles. The price of forward Standard metal on Thursday actually reached £270, which is the highest on that basis a recovery of £17 a ton during the month. Straits tin has become very scarce at this end, a position which does not promise to be remedied for some time. The current price of Standard tin stands at approximately £20 a ton above the average figure recorded for last year of nearly £249; and as we have now started the months of usually heavier American consumption, there is little doubt that future demands from that quarter will play an important part in the future course of the market. Apart from this prospect, there should be a renewed improvement in the Continental and home outlet, while the Welsh orders than for months past. The total deliveries into American consumption for the 12 months to the end of September represent 73,520 tons, and American requirements so far this year have averaged roughly 6,500 tons, and there is good reason for believing that the deliveries of tin over the remainder of this year will continue on a very good scale.

Chenderiang Tin Dredging.—Our mining correspondent writes:—The shareholders in this Malayan enterprise will welcome the company's return to the dividend list, from which it has been absent some five years. In the twelve months ended March 31st last an increased quantity of tin was produced at a slightly lower cost ratio, and, of course, realised a higher average price than before. The two former features would appear to be mainly due to the new water supply, and to the resumption of operation on the part of the company of the hydraulic workings. The

mining profit of \$121,700 is the fourth best since the inception of the concern, and the manager observes that he sees no reason why this figure should not be improved upon for 1925-26. At £6,200, the net profit just about doubles the 1923-24 total; payment of 7½ per cent. will leave the somewhat reduced balance of £4,200 to go forward. Of the area of 1,675 acres, only 1,151 have so far been worked out. Hence the company still has a large extent of virgin ground.

Mining in Rhodesia.—For the greater convenience of stock-taking the new control of the Gaika Gold Company has decided to strike the balance at April 30th instead of June 30th; hence the report just issued covers only ten months. Allowing for this, and for the fact that the gold premium brought in £6,000 less than before, the profit has been well maintained; it figures at £26,500, as against £31,700. Once again a final dividend of 5 per cent. is proposed, making 10 per cent. for the period; but to maintain this rate it has been necessary to draw upon the carry-forward to some extent. Development scarcely maintained the ore reserves, which are now computed at 101,200 tons, value 9.2 dwts; the total, which includes an estimate of excess ore, represents no more than about two years' supply for the mill. An interesting point in the position is that various kinds of surface residues are now being turned to profitable account. Despite the outlay on additional plant, &c., the financial position remains fairly good, the balance-sheet showing a surplus of £38,000. An important development has been reported by that huge, low-grade proposition, the Shamva. From the various cables published, it appears that the incline shaft struck at 1,945 ft, near the tenth level, what is believed to be the main ore body. The first 5 ft gave 5½ dwts; the assay for the next 10 ft brought the average for the whole 15 ft up to 8 dwts; now it is advised that the average for the 30 ft exposed to date is 5 dwts. This means, of course, that the value in the second 15 ft has fallen away sharply. Still, if any considerable quantity even of 5 dwts ore should be opened up at the point in question, it will benefit the profits, as the average grade of the material treated for some time past has been no more than 3½ dwts. Such ore would not be payable but for the very low working cost ratio.

Lago Petroleum Corporation.—In discussing the sale of the British Mexican Petroleum Company by the Pan-American Eastern (controlled by Standard Oil Company of Indiana) to the Anglo-American Oil Company (controlled by Standard Oil Company of New Jersey), it was stated in the *Economist* of September 12th that the sellers reserved the foreign assets of the British Mexican Petroleum Company, including its holding in the Lago Petroleum Corporation and the Lago Oil and Transport Company, which operate in Venezuela. The Pan-American Eastern group has now put forward a plan of reconstruction for the two Lago companies. The British Mexican held, at the time of its sale, about 665,000 shares of no par value in the Lago Petroleum Corporation, and \$2,500,000 preferred stock and 51 per cent. of the 50,000 common shares of no par value in the Lago Oil and Transport. Under the plan of reconstruction, the new Lago Petroleum Corporation is to have a capital of 4,000,000 shares of no par value, and existing shareholders are to be offered one new Lago share for every two now held. The new shares are apparently valued at something over \$10. Messrs Blair and Co., bankers, have underwritten 250,000 new shares at \$10 per share, and have taken an option on 450,000 shares in addition at and have taken an option on 450,000 shares in addition at prices averaging about \$11. Apart from the 332,500 new shares which it obtains in exchange for the old British Mexican holding, the Pan-American is to receive 1,300,000 new shares as consideration for the return to the Lago Petroleum Corporation of 51 per cent. of the ordinary shares and \$2,500,000 preferred stock of the Lago Oil and Transport Company. Presumably the Pan-American Eastern will take up a due proportion of the shares under option to Messrs Blair, so that the Standard Oil

group has voting control of the new Lago Company. The immediate advantage of this reconstruction scheme is that the new company will obtain about \$700,000 working capital. Next, the agreement between the Lago Corporation and the Lago Oil and Transport Company, under which the former had to supply the latter with all its production up to 750,000 barrels a day for ten or possibly twenty-five years at market prices, less a discount of 5 per cent., has been cancelled. This means that the new Lago is put into a much better revenue-earning position. It will be free to dispose of its output on the best terms. Finally, the Lago will have the benefit on the field of Standard Oil personnel and supervision. The company has at present a production of 401,500 barrels a month from its wells in the La Rosa field. These wells are for the most part drilled along the foreshore of the Maracaibo Lake, and either off-set or are off-set by the V.O.C. wells drilled on the mainland. The competition between these two companies in the La Rosa field has been severe. The fire which broke out in the field in June last might have been disastrous on account of the close spacing of the rival wells. Oil from a broken flow line from one of the Lago wells was somehow ignited, and burning oil spread over the lake to an extent of twenty-five or thirty acres. Lago lost five derricks and a quantity of oil, while V.O.C. suffered the complete loss of one well, serious damage to two others, and the burning of about 50,000 barrels of oil. An agreement has now been reached between the two companies regarding the future spacing of wells. The Lago properties cover almost the entire bed of the lake, and it is significant that north of the La Rosa field a new producing area is being developed in the waters of the lake which cannot be off-set from the mainland. The vast area of the bed-of-the-lake concession gives the Lago a potentially strong field position, while the possession of an ocean-loading terminal at Aruba Island, the nearest oil field shipping point to Southampton, gives it unrivalled facilities for export.

Agwi Petroleum.—The announcement made by the Agwi directors with regard to the future of the Agwi companies is unfortunately obscure. An offer may be made to shareholders, it was stated, by one of the large oil companies. As was mentioned in the *Economist* of September 12th, the offer will come from the Anglo-American Oil Company, and it is difficult to understand why the Anglo-American has endeavoured to surround its movements with secrecy when they must be perfectly well known to its competitors, the Press, and the Stock Exchange. We understand that the offer may take the form of two new 5½ per cent. preference shares, guaranteed by the Anglo-American Oil Company, for every three held in the Agwi Petroleum Corporation, and one new 5½ per cent. preference, similarly guaranteed, for every one held in the Agwi Marketing Company. These new preference shares would presumably be issued by the Agwi Petroleum Corporation. It must, however, be realised by shareholders that the offer has not yet been definitely made by the Anglo-American. It is certainly a generous scheme for the Agwi shareholders, for if it went through the Agwi Marketing shares would be worth 20s on a 5½ per cent. basis, and the Agwi Corporation shares 13s 4d. The higher valuation of the Agwi Marketing shares is

due to the stronger cash position of that company. On the Stock Exchange the shares have already risen considerably, but this is mere speculation upon the happy result of negotiations which are now proceeding.

THE new session of lectures under the ægis of the Timber Trade Lectures Committee commences on Tuesday next, October 6th, at 6.30 p.m., at the offices of the Timber Trade Federation of the United Kingdom, Oxford court, Cannon street, E.C. 4. The first lecture of the session will be delivered by Mr A. E. Turner, of Messrs

G. P. Turner and Co., insurance brokers, on the subject of "Insurance of Timber Cargoes."

Mr P. D. Leake, F.C.A., will deliver an address to the London Chartered Accountant Students' Society on "Balance-sheet Values" at the Institute of Chartered Accountants on Wednesday, the 7th instant, at 6 p.m.

CORRECTION.—We regret that the letter in our last week's issue relating to Building Societies was signed Walter Harold instead of Walter Harvey.

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned periods of the Year ending March 31, 1926, as compared with the corresponding period of the preceding Year.

	Quarter from July 1 to Sept. 30, 1925, compared with the corresponding Quarter of the preceding Year.				Period from April 1 to Sept. 30, 1925, compared with the corresponding Period of the preceding Year.			
	Quarter ending Sept. 30, 1925.	Quarter ending Sept. 30, 1924.	Increase.	Decrease.	Period ending Sept. 30, 1925.	Period ending Sept. 30, 1924.	Increase.	Decrease.
Customs	£ 25,896,000	£ 24,733,000	1,163,000		£ 50,077,000	£ 49,593,000	484,000	
Excises	32,378,000	32,592,000		214,000	61,905,000	62,872,000		967,000

LEAGUE OF NATIONS—RESULTS OF THE ASSEMBLY.

(FROM OUR CORRESPONDENT.)

GENEVA, Tuesday, September 29.

THERE is one outstanding fact of the sixth Assembly of the League which has just come to an end, namely, its deliberate and conscious exercise of its proper influence on the trend of international affairs. For those who seek only striking accomplishments, the Assembly's record may appear either disappointing or humdrum; but if one considers the general direction and character of this meeting, it presents a far more reassuring picture of the definite and stable guiding influence of the League than any previous Assembly. There are some far-reaching deductions to be drawn from this notable development in relation, also, to the proceedings of the Council on the Mosul dispute, but these matters enter rather into the philosophical domain of League discussion, and are rather outside the present considerations of this letter.

The two broad problems which face the world to-day, roughly described, are security and the general economic situation. Where does the Assembly stand in relation to these two things? There is no doubt that it has been the regular and continuous exploration of the League which has led up to the negotiations about to be held for a Western Pact, and though for various reasons the League's general draft scheme, as defined in the Protocol, has not come into practice, it is not to be denied that its general outline will be the basis of most of the achievements which may be looked for in the domain of arbitration, security and limitation of armaments. It may be, indeed, that the League's general tasks may more profitably be the production of general principles and ideas, not always generally applied in one convention, but used as a basis for action step by step, as circumstances permit.

It is rather in this respect that the sixth Assembly commands attention. Hitherto it has sometimes been content somewhat gingerly to touch upon reparations or other dangerous subjects and then to leave them aside; but not so now. Its general discussion and its resolution on security has more authority and more vigour than has previously been the case. It says, in effect, that while it is not possible to go ahead with the Protocol, its general principles remain as guiding lines of conduct. It regards favourably the efforts made by certain nations to attain these objects by concluding treaties of mutual security conceived in the spirit of the Covenant and in harmony with the principles of the Protocol. But it goes further still. It says quite definitely, "Go ahead and do your best on these lines, deposit any such conventions, as you must do, with the League, and the League, instead of automatically registering and publishing them, will examine them in order that the Council may report to the 1926 Assembly on the progress in general security brought about by such agreements." The British Government, as well as other Governments, when they speak about security pacts in accordance with the spirit of the Covenant and under the guidance of the League, will therefore have to give account to the League that they have kept their word, and such treaties as are concluded between now and next September will come into the full glare of international discussion. This is a more revolutionary change in international affairs than has been realised.

Meanwhile, the Council is to make preparatory study with a view to a conference for the reduction and limitation of armaments in order that as soon as satisfactory conditions have been assured from the point of view of general security a conference may be convened.

Some tentative efforts were made to push ahead with the development of arbitration as apart from security and limitation of armaments, but this was not found possible because Great Britain hesitated on arbitration, and because other States declined to consider it as a subject apart from security. But two resolutions were passed, one calling for a thorough study of the views expressed in the Assembly and the Council on the subject of pacific settlement of international disputes, and a report to the next Assembly upon the progress which might be made in

the matter; and the other recalling the guarantees provided in the Covenant, and calling the attention of States members of the League to the desirability, from the point of view of their security, of concluding particular conventions for arbitration, or for the judicial settlement of disputes.

Whatever other conclusion may be reached, one thing is clear, namely, that the sixth Assembly has made certain the importance of the seventh, which, to all appearances, will include Germany amongst its members.

The other aspect of importance, linked up as it was with the matter of security, was the decision taken regarding an economic conference. As one of the means of establishing peace, the Council was invited to consider at the earliest possible moment the expediency of constituting on a wide basis a committee to prepare for an international economic conference, the summoning of such a conference to be a matter for subsequent decision by the Council. The French, who initiated the discussion, wished to go straight ahead with a conference, but the more sober and more cautious procedure adopted was due to the British. The French intend to present proposals to the December meeting of the Council, and it may be just as well for the British to give equal consideration to the matter. It is difficult to foresee what may ultimately emerge. But the general intention seems to be that the conference, when summoned, shall comprise representatives on the widest possible basis, not necessarily to pass resolutions, but to provide a clearing house which may lead to the formation of economic public opinion—something like the Brussels Financial Conference of 1920 in the sphere of public finance. Then, as Brussels led to financial stabilisation in Austria, Hungary, and Germany, so the Economic Conference may lead from the general to the particular. There will be a good deal of discussion as to which subjects are or are not to be barred; but as to the general value of a free exchange of views, there should be no difference of opinion. The financial house of the world is now more or less in order, and as the consideration of Austria's economic position followed upon her financial re-establishment, so the consideration of the world's economic difficulties will follow on the settlement, almost completed, of its financial problems.

Apart from these two broad features of the sixth Assembly, a good many lines of progress were traced in financial, economic, transit, health, armaments, and other directions. The reports, under each of these and other heads, presented after detailed discussion by the Assembly Commissions, are valuable records of work accomplished, and of work being done or to be done. What is called with a certain amount of depreciation the routine work of the Assembly is, of course, one of its essential factors. Never, before the existence of the League, was there anything approaching this annual and thorough examination by an international body of Government representatives of so many fields of international activity.

UNITED STATES.—FRENCH DEBT—MOTOR SHARES

ACTIVITY—TRADE CONDITIONS—PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 22.

A MARKED change has occurred in the general attitude toward the French debt question during the past few weeks. A month or so ago well-posted persons were hopeful but not optimistic. They saw the desirability of a settlement, and realised that the present was about as good a time to make one as might be had. But they feared that the margin between what the French would offer and what the Americans might accept would be too large to permit a reconciliation of the two points of view. In addition, what appeared to be inspired reports from Washington were not encouraging. Conclusion of the Belgian settlement was followed by strong intimations that the other debtors could expect no such easy terms. There also were stories that led the public to believe that terms equal to those of the British-American debt agreement would be required of France.

During the last week, however, the tenor of inspired utterances has undergone a distinct change. It has been made apparent that the Administration will insist on the repayment of the entire principal amount of the debt, but that capacity to pay will be taken into account when the matter of interest is taken up. The principle of the British settlement seems likely to be followed with regard to the French debt to this extent; the payments on account of principal may begin at half of one per cent., and increase gradually until the entire debt is extinguished in 62 years. This would involve no crushing burden on France, as the initial payments obviously would not amount to more than about \$20,000,000 a year. In fact, France already is paying that amount on account of the debt incurred for purchases, after the armistice, of surplus American war materials. As for the interest payments, present indications are that the American Debt Funding Commission is prepared to take a lenient attitude in its judgments of capacity to pay. It is no secret that the Debt Funding Commission and the Administration wish to arrive at a settlement that can be submitted to Congress when it reassembles. Well-posted observers believe that the public will endorse a settlement that carries the Administration's approval.

Further pronounced advances in motor shares have stirred the conservative critics of market activity afresh. They have not, however, precipitated a real break in stocks. Profit taking naturally has made its appearance, but the reactions have been comparatively small and brief. The critics maintain that speculation is extravagant. At the same time, they are forced to admit that a great volume of standard stocks, such as the good dividend-paying rails, have not participated in the recent advances. They then fall back on the declaration that it is precisely these sharp advances in specialties that characterise the last phases of a bull market. The bulls, on the other hand, rebut with the declaration that our market is becoming more like that at London in that different groups can move independently in response to factors peculiar to their situation. How difficult it is to arrive at simple characterisations of the position that are accurate may be seen when the case of the General Motors Corporation is cited. This organisation's common stock has had a rise this year from a low point of 64½ to a high record yesterday of 107½. Certainly this is a large advance. On some days the stock has moved up three points or so, thus stimulating talk of speculative manipulation. One must remember, however, that the corporation has no funded debt, has some \$140,000,000 in cash, and is earning about \$17 a share this year. The dividend rate is \$6 a share; one extra of \$1 was paid out of the first six months' earnings, and a similar extra probably will be paid out of the second six months' profits. Is 107 an extravagant price for this stock? An affirmative answer to this question is the more difficult when one learns that the corporation's new models have met with great success, that its August production far exceeded that in August last year, and that most of its plants are operating at capacity.

Not all the motor manufacturers are doing as well as General Motors, although several of the stronger companies are making really exceptionally good showings. One of the surprises of the year is the trouble that the Ford Company has encountered in bringing out its improved models. This organisation, which has stood for the last word in efficient mass-production methods for years, has run into a snag that has reduced production to a very low rate. Ford cars are assembled at assembling plants close to the great centres, the parts being shipped from the central factory at Detroit. It is reported that difficulties were encountered when attempts were made to fit the new parts together at the assembling plants. A stoppage of this kind is, of course, only temporary, but it is sufficient, because of the relative importance of the Ford interest, to have a marked effect on production statistics for the industry as a whole.

Current indications of business conditions reflect a continuance of active trade, and estimates of what the rest of the year will bring are optimistic. The steel industry is maintaining its moderate but consistent improvement, and the production apparatus is operating at slightly better than 75 per cent. of capacity. No signs of indus-

trial or business inflation are yet in sight. There has been a moderate firming in commodity prices, but this has been nothing more than a natural recovery from the slump that occurred in the second quarter of the year. For the month of August the price index of the Bureau of Labour Statistics stood at 160 per cent. of the 1913 average. This is precisely the figure that prevailed during January; it compares with a high point of 161 reached in February and March, and with 155 touched in May. As during this period the sharper fluctuations have occurred among farm products and foodstuffs, it will be seen that industrial prices have been relatively stable.

Cotton prices have maintained their firmer tone, with the trade paying considerable attention to the reports of the effects of the drought in the south-west. Wheat prices continue to fluctuate around the \$1.50 level. Altogether, the farmers are expected to have a satisfactory season. Yields in general are generous, and the prices of farm products are fully up to the average for all commodities.

FRANCE.—PUBLIC OPINION AND THE AMERICAN DEBT—A POOL SUGGESTED—NEW LOAN LISTS STILL OPEN.

(FROM OUR CORRESPONDENT.)

PARIS, September 30.

WHILE M. Caillaux and his colleagues are negotiating at Washington, and the world is reading eagerly the development of the pourparlers, it should not be overlooked that the Sub-commission of the French Chamber on the Financial Clauses of the Peace Treaty is at present engaged in drawing up a judicial and accountancy report on the whole question of inter-allied debts. This report may very possibly form the basis of an extremely important modification of the whole aspect of the question. Whatever formal pronouncements may have been made to the contrary, it may be taken for granted that French opinion, as a whole, has taken with very bad grace the demands of Great Britain and the United States for the settlement of the debts owing to them by this country. The vast majority of people in France, perhaps 99 per cent. of them, are convinced that the demands made upon them in this connection are unfair (1) because the money she is called to repay was spent in the common cause, (2) because France suffered infinitely more loss in men and property than her principal Allies, and (3) because the Allies, after having cut down the amount of reparations to be paid by Germany to a mere fraction of what is due to France, are now insisting that the latter shall pay in full. This state of mind has naturally resulted in the present negotiations in Washington being regarded by Frenchmen in general as having an air of unreality, and in a widespread conviction existing that the only practical solution of the problem will lie in the direction of a general, or at least a proportional, annulment of all existing debts, including that of Germany.

This feeling is strikingly reflected in the report which is now being drafted by the Sub-commission referred to. The report, which is being drafted by M. Louis Marin (whose remarkable Parliamentary speech on the debt question a few months ago was adjudged as so exactly expressing the mind of France as a whole that it was unanimously voted to be posted up in every commune in the country), is based on the following three fundamental principles which have been adopted by the Sub-commission:—

(1) That discrimination should be made between the "commercial" debts and the "political" debts. (M. Caillaux, it will have been noted, has been arguing at Washington that the two categories should be united in one whole.)

(2) That the charges born of the war should be pooled and divided equitably among the Allied and Associated Powers.

(3) That in no case shall France be called on to pay in any one year more than she receives from Germany. M. Marin's report will be completed within the next few days, and will be passed on to the Finance Commission of the Chamber. It is unnecessary to point out that it may possibly play an important rôle, both in crystallising French Parliamentary opinion on the whole interallied

debt question when it comes up for discussion by the full commission, in conjunction with the consideration of the provisional settlement arranged in London and of whatever agreement M. Caillaux may bring back with him from Washington. In any case, it may be taken for granted that, in view of the present state of mind of the French Chamber on the debt question, there is no probability that the solutions arrived at by M. Caillaux in London and Washington will be accepted here without at least a very stiff fight.

M. Marin himself is one of the financial experts of the Chamber, and he has undoubtedly an important following in all parts of the House, while the views he holds are shared by an infinitely larger proportion of the electorate. M. Marin's considered opinion is that the United States has been obsessed for the past six or seven years with the idea of "draining all the gold from Europe, as it drained, 30 years ago, all the gold from Latin-America." He fears that the Americans, in the event of their not being paid, will follow the classic precedent of securing control over the French railways and other national assets by pressing their claims as creditors, but he insists that no terms approaching those now being discussed in Washington will ever be ratified by any French Parliament. The report which he is now engaged upon, M. Marin insists, will bring the whole question to a head.

The closing of the subscription lists for the new 4 per cent. loan by which it is hoped to consolidate a substantial proportion of the floating debt, which was originally fixed for September 15th, and then postponed (in consequence of the bank clerks' strike) to the end of the month, has been again postponed until October 20th. The events of the past week have confirmed the suggestions made last week in this column. An important conference of presidents of Chambers of Commerce and leaders of the great trading, industrial, and agricultural associations was held at the Quai d'Orsay, under the presidency of M. Painlevé, when the whole question of stimulating subscriptions to the loan was discussed. The lists are to be kept open for another three weeks to enable the nation's financial and other leaders to exercise their influence with holders of National Defence Bonds and other floating debt descriptions, by the use of both patriotic and practical arguments.

There are many indications that M. Caillaux's project, excellent as it is in many ways in theory, is not proving as attractive to the generality of holders of Defence Bonds. Business men and the financial world in general are awaiting the result of the loan with a good deal of interest. With a view to assisting the operation, M. George Bonnet, the Under-Secretary of State in charge of the issue, has made the interesting announcement that the new Rentes may be stipulated in loan contracts as valid for the payment of both interest and principal, and may also be utilised in connection with the sale of property, leases, businesses, &c.

The amount of 6 per cent. Treasury Bonds (1922) deposited for reimbursement last Friday is understood to have amounted to 3,800 million francs, which, it was understood, the Treasury would meet by securing the necessary notes from the Bank of France. According to last week's bank statement, the total advances to the State were 28,900,000,000 (including a further 100,000,000 borrowed during the week). As the legal limit now stands at 32,000 millions, the Treasury has a margin of only 3,100 millions to meet the emergency, in the event of the holders of matured bonds all requiring to be paid in cash. As a matter of fact, however, a substantial proportion of the holders agreed to convert their bonds into the new Rentes, while others reinvested in National Defence Bonds the notes received in reimbursement of the securities that had come to maturity. By special arrangement between the Treasury and the banks, moreover, reimbursement payments have been spread over a period which will not expire until after the end of September. The payments that have to be made at the end of this month are always the most important of the year, hence it has been important that arrangements should be made so that the payments due on September 25th and September 30th should not weigh too heavily, not only on the Treasury, but also on to-morrow's Bank of France statement. The available margin in respect of the note

circulation is much larger than that left in regard to advances by the Bank to the State, there being (according to last Thursday's statement) power to issue a further 5,444 million francs of notes before the legal authorised limit of 51,000 millions is reached.

GERMANY.—CREDIT—REICHSBANK—INDUSTRY—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 29.

THE revival of credit-giving by foreign countries, chiefly by the United States, has had no visible effect either upon business or upon the security market. Home business at the autumn fairs was hampered by the inability of manufacturers and merchants to give the long credits which buyers required. In dealing with East Europe, in particular with Russia, the unfavourable credit conditions offered sometimes result in loss of orders when tenders in other respects are satisfactory. The currency and credit questions are being discussed in connection with the Government's so far abortive price-reduction policy, a chief feature of which is cheapening of loans granted out of public moneys, as described editorially in the *Economist* of last week. There is a certain nervousness, which has not been dispelled by the foreign loans, which tend to increase the currency circulation in so far as the yields are spent here, and in general to increase the import surpluses. The Government, after long ignoring the once strictly regulated question of the use of foreign currencies, has been obliged to take measures against pricing in dollars, which is common in the textiles trade. Wool and cotton combines which persist in this practice are being threatened with compulsory dissolution under the Marx Cartels law. The Ministry of Industry holds that cartel rules enforcing reckoning in foreign currency imply a distrust of the native currency which is not justified. The industrials retort that they can only assume obligations in foreign exchange (as raw-textile importers must do, if they can acquire the same exchange; and that they could, therefore, sell for Reichsmarks only if they could buy exchange forward with Reichsmarks, which at present they cannot do. A market for Reichsmarks abroad at present hardly exists. Under present laws and regulations any German can, without official permission, buy as much foreign exchange as he likes. But there is no guarantee that this will always be so; and certain occurrences, such as the decline in the Reichsbank's exchange reserve (which will be more than made good by the new loans), and the sharp rise recently in the exchange of dollar notes as a result of Polish buying, are being exploited by the industrials as a reason for retaining the dollar calculation as a stand-by. The Rentenbank Institute loan, and the Bavarian, Bremen, and other foreign loans will bring in a large quantity of exchange, and will presumably prolong the period of import surpluses, which are officially regarded merely as a result of borrowing from abroad. According to the official theory, the import surpluses will decline if the borrowing declines. But even long-term loans must burden the foreign payment-balance with interest liabilities; and if the interest on the past loans can only be provided for out of the capital of the new (as must be concluded from the present foreign trade balance), it is hard to see whence money for this interest will come once foreign lending ceases. The yield of the Renten Institute loan, it is understood, will be put at the disposal of the agricultural credit and mortgage banks some time in November. According to newspaper statements, these institutions will get it at 87.1, to be repaid after ten years at par.

The Deutsche Verkehrs-Kredit-Bank, which conducts the banking affairs of the Railways Corporation, is increasing its capital from 2 to 4 million marks. A dividend of 12 per cent. is announced for 1924-25. Money is much in demand for the month-end settlements. The day money rate has risen in the last few days to 9½-11 per cent. Money for several days to carry over the month-end, and month money, are not to be had. The yield of the Renten Institute loan, it is understood, will not be put at the disposition of the money market while awaiting distribution to the agricultural banks; and the Rentenbank will probably invest the money tem-

porarily in bills from the Reichsbank's portfolio. The Reichsbank's return for September 23rd shows a decline of 73 million marks in discounts, of 2.8 million marks in advances, and of 101 million marks in circulation. Gold reserve increased by 30.2 million marks to 1,174,766,000 marks, but legal exchange-cover fell by 48 million marks, this being the second occasion on which the latter declined by more than the former increased.

The wholesale index number for September 23rd shows a slight drop. The year's movements of this index and of the cost-of-living index are:—

Average in—	Wholesale.	Cost-of-Living.
January	138.9	(different system)
February	136.5	135.6
March	134.4	136.0
April	131.0	136.7
May	131.9	135.5
June	133.8	138.3
July	134.8	143.3
August	131.7	145.0
September (23rd)	124.9	(not issued)

While the wholesale price level has been reduced by the drop in certain foodstuffs and textile raw materials, the rise in rents has affected the cost of living, and the drop in wholesale prices and raw materials has not yet fully affected retail and manufactured goods. A report by the Prussian Chamber of Agriculture shows that in Berlin the wholesale and retail traders' combined share in retail prices is larger, and the producers' share smaller, than before the war, but an inquiry by the Mayence Chamber of Commerce shows a contrary result. A rise in the price of potash is expected. The prices of iron, coal, and some other materials have been reduced by $\frac{1}{2}$ per cent., to correspond to the latest reduction of the Sales Tax. The Rhenish-Westphalian Coal Syndicate has fixed the standard coal price from October 1 at (Fördergruskohlen) 13.68 marks per metric ton, (Förderkohlen) 14.92 marks. The pig-iron Syndicate has reduced the prices of hematite and foundry pig consigned to West and South Germany by 2 marks per ton, to Central, North and East Germany hematite by 4 marks, foundry iron by 5 marks, Spiegeleisen and Luxemburg foundry iron to all districts by 3 marks.

Industrial activity is slowly declining. Unemployed in the metal workers' trades union on September 1st were 4.34 per cent., against 3.46 per cent. a month earlier; textiles unions, 2.99, against 2.8 per cent.; factory workers' union, 4.81 per cent., against 3.64 per cent.; bootmakers' union, 4.98, against 4.62 per cent. The decline in the coal output has for the moment ceased. Output of fuel in the first months of 1925 was:—

	Coal.	Lignite.	Coke.
	Metric Tons.	Metric Tons.	Metric Tons.
1925 (without Saar)	86,865,735	90,426,777	18,285,795
1924	73,576,392	77,781,152	14,581,793
1913 (present area)	94,580,845	56,658,980	19,629,283
" (then area)	127,318,665	56,658,980	21,418,997

The iron and steel market has not recovered, but the deterioration seems to have ceased. Large stocks of unsold pig-iron are on hand despite much reduced production. A further restriction of output by the Raw Steel Syndicate is expected. The present reduction is to 65 per cent. of the full quotas. Shipping is depressed, and the Federal Government and the State of Bremen have been obliged to give a joint credit to a Bremen yard to prevent the discharge of men.

The abolition of import and export prohibitions, with certain exceptions, from October 1st, is not expected to produce any marked change in foreign trade. Motor-car merchants declare that light, cheap cars, the kind wanted here, will be kept out by the greatly increased duties. It is expected that the maximum duties will be reduced in negotiations with France and Italy, and from this exporters in other countries that enjoy most-favoured-nation treatment would benefit. There is a great shortage of certain kinds of textiles, in particular unbleached cottons, a result of the import prohibitions, now abolished; of the cessation of duty-free Alsace-Lorraine deliveries; and of German sales to abroad; and in turn Germany is obliged to buy English and Czechoslovak goods, and, owing to the relatively high duties, to pay dearly for them. The new 100 per cent. increase in cotton duties is already being exploited. The *Textil-Woche* publishes comparisons

showing that unbleached cotton cloth, calicoes, and cretons cost from 20 to 27 per cent. more than abroad.

Latest foreign trade figures are:—

(000's omitted.)

	Jan.-Aug., 1925.	July, 1925.	August, 1925.
Imports—			
Livestock	87,255	14,063	12,891
Food and drinks	2,791,925	449,568	453,570
Raw and half-manufactured goods	4,456,426	533,459	552,372
Manufactures	1,381,976	156,977	150,608
Wares	8,716,582	1,154,067	1,178,511
Gold and silver	593,925	25,885	124,945
Totals	9,310,507	1,179,952	1,303,456
Exports—			
Livestock	10,310	483	416
Food and drinks	326,132	33,773	28,050
Raw and half-manufactured goods	1,006,732	140,442	143,440
Manufactures	4,241,237	568,162	552,679
Wares	5,584,411	742,860	724,585
Gold and silver	21,461	3,642	2,910
Totals	5,605,872	746,502	727,495

In the first "Dawes Year," ending August 31st, imports were 12,443 million marks, exports 8,138 million marks (precious metals omitted).

CZECHOSLOVAKIA.—ARBITRATION TREATY WITH GERMANY—1926 BUDGET—GENERAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

PRAGUE.

THE recent exchange of Notes between Germany and the Allies has been followed, without any loss of time, by the opening up of negotiations between that country and Czechoslovakia. The instability of post-war conditions drove the latter to seek support in the West—particularly from France. Perhaps there were many who felt that French interests in Czechoslovakia were too great. But whatever may have been the actual state of affairs in 1919-1922, the careful observer must have been conscious of a distinct change in the attitude of the average Czechoslovak during the last three years. There has been a decided inclination towards independent development, together with a realisation of the direction in which his chief economic interest lay.

This is the first time that direct political contact has been established between Prague and Berlin, and the results, if successful, should not only influence the future relations between the Little Entente and Germany, but be productive of a better understanding between the Czechs and the Germans in Czechoslovakia.

That the economic interests of these two countries—Germany and Czechoslovakia—depend upon mutual understanding must be obvious. Germany easily leads the way as the chief importer of Czechoslovak goods, as the latest available statistics prove:—

(In Millions of Czech Kc.)				
Czechoslovakia Exported				
To—	In Aug., 1924.	In Aug., 1925.	Increase.	
Germany	204	315	+ 111	
Austria	260	229	— 31	
Hungary	87	96	+ 9	
Great Britain	85	92	+ 7	

Thus, while the exports to Austria fell by one-seventh, those to Germany rose by one-half.

The conclusion of such an Arbitration Treaty with Germany would also be but the logical sequence to the untiring efforts of Dr Benes during the last six years.

Probably the greatest claim which the Coalition Government will make to the continued support of the Czechoslovak people at the coming elections will be the fact that the 1926 Budget shows the first surplus since the war. Such an early publication of the new Budget is justified on the grounds that it will enable other urgent matters to receive their due attention, and give all parties equal opportunity to prepare for the elections.

The decision of the Government to do away with the old division of the Budget into two parts—a normal Bud-

get, and "a special Budget for expenditure upon extraordinary public works"—and to issue instead a simple all-inclusive statement of public expenditure and revenue, will enable the foreigner to arrive at the real state of financial affairs much more easily than in the past, and receive the approval of all economists.

A comparison between the 1925 and 1926 Budgets show:—

	(000's omitted.)		Surplus.
	Expenditure.	Receipts.	Kc.
1925	9,573,586	9,301,334	— 272,251
1926	10,070,271	10,085,753	+ 15,481

The "special budget expenses" are included in the 1925 figures, but not in those of 1926.

The chief items of expenditure are:—

	1925.	1926.
	Kc.	Kc.
Public Debt	2,096,547	2,050,698
National Defence	1,815,436	1,935,403
Social Welfare	794,142	853,590

While in the revenue we find:—

	1925.	1926.
	Kc.	Kc.
Receipts from Taxation	6,674,145	7,305,144
" State Monopolies	47,367	50,039
" Enterprises:—		
Tobacco	1,013,943	1,016,610
Post Office and Telegraphs	241,611	158,744
Railways	191,531	214,773
Estates	134,740	87,764
Mines	41,942	29,622

The national expenditure has been reduced since 1922, from 22 milliard Czech Kc. to 10 milliard.

Dr. Becka attributed the surplus to the stabilisation of the Czech crown (Kc.), which process was now complete, the commercialisation of the State enterprises, and the consolidation of the short-term debt which has strengthened the money market. (The reduction in the number of State employees will show itself in future budgets.)

Money tightness still continues on the Prague exchange, though the probability of an American loan, and the results of the harvests—especially of the record sugar-beet crop—give hopes of a larger supply of money in the immediate future. In connection with the new American loan, a Czechoslovak delegation will shortly leave for the United States to arrange for the funding of its debt to that country.

The sugar, glass and textile industries continue to show excellent export returns, and despite the statements of many textile manufacturers that this year's profits will be low, it is well known that many of the factories are so busy that they have had to refuse any more foreign orders for the immediate future.

ROUMANIA.—WAR DEBTS—LOAN NEGOTIATIONS—AGRICULTURE—EXPORTS—EXCHANGE.

(FROM OUR CORRESPONDENT.)

BUCHAREST, September 19.

INTER-ALLIED debt discussions are occupying a considerable amount of space in the Roumanian Press, the activities of Finance Minister Vintila Bratianu in Western Europe throughout the past month having raised hopes that a solution of the problem is in sight. Roumania is a war debtor to Great Britain, France, and Italy to the amount of (in round figures) £24,000,000, 1,000,000,000 and 120,000,000 lire respectively. In addition there is the post-war relief debt of some \$42,000,000 owing to the United States.

In respect to the British, French, and Italian debts, it is the general assumption here that Roumania will not be expected by her former Allies to repay more than she actually receives in cash from war reparations. This feeling has been strengthened since Mr Bratianu's return to Bucharest a day or two ago by the Finance Minister's announcement that he found the representatives of the British and French Governments, with whom he discussed the matter of Inter-Allied debts "very sympathetic to Roumania's viewpoint."

The situation in regard to the American debt does not seem so promising, but it is hoped that the commission headed by Mr N. Titulescu, the Roumanian Minister at London, and a former Minister of Finance, which leaves

for the United States in the middle of October, will secure funding terms at least as favourable as those accorded to Belgium.

The attitude of the Washington Administration in respect to loans to European countries that have not arranged the funding of their war debts in the United States seems to be acting as a spur to the Roumanian Government to get the American debt satisfactorily arranged as promptly as possible. Roumania, of course, is in the market for foreign capital, and negotiations with an American group (important representatives of which are at present in Bucharest), which have been proceeding for several months, are now understood almost to have reached the point where the approval of the Washington Administration is all that is necessary before "signing up." The understanding is that substantial credits are to be granted by the American group for the purchase in the United States of equipment and supplies for the State railways, and perhaps also for other public utility enterprises. A hydro-electric plant for the City of Bucharest, to cost \$1,000,000, is one of the projects of this character now under discussion. There is a vast field here in which foreign capital can find employment, and what up to the present has been the principal obstacle in the way of its entry—i.e., inability to obtain acceptable guarantees—seems on the point of being removed by the present willingness, so it is stated, of Mr Vintila Bratianu to give American lenders some measure of control over the gross revenues of the State railways, and of other enterprises for which foreign credits are sought—and badly needed.

The midsummer optimism over the moderately satisfactory harvest prospects—moderately satisfactory meaning slightly better than last year, but still far behind pre-war yields—has now given way to considerable pessimism because of the complete stagnation in the grain export market since the present season's crops began to come in. The competition of Russia, and, in a lesser degree, of Yugoslavia and Bulgaria, is making impossible the export of Roumanian grain—handicapped as the latter is by the prevailing export tax of £3 per ton on wheat and £2 on other grains. The exchange market has sharply reflected this situation, lei having declined from 925 to 1,025 to the £ within the past month. If lei exchange cannot hold its own at what should be the height of the grain export season, the situation is indeed disquieting. Bankers and agricultural interests—in fact, the entire business community—are bringing strong pressure to bear on the Government to abolish, or drastically to reduce, export taxes. The banks presumably are tied up with a considerable amount of agricultural paper that they would like to get out of their portfolios. Any delay in the removal of obstacles standing in the way of grain exports may have serious consequences, since the present cold snap is a sharp reminder that the Danube will be closed to navigation within a few months, and then grain exports on a large scale will be out of the question until next spring. And, in the meantime, the autumn sowings will suffer if farmers cannot market their present crops.

The Government is in an unenviable situation, since the loss of export taxes will mean upsetting the Budget equilibrium which Mr Bratianu has worked so strenuously to attain—and retain—throughout the past three years. Budget equilibrium, however, if that has to be sacrificed, is a minor matter compared with the saving of agriculture, upon which the great mass of the Roumanian people depend for their existence.

Owing to declining grain exports, the foreign trade balance for the first quarter of the present year showed a deficit of approximately 600 million lei. The figures for the second quarter will probably be more adverse than this, since wheat was actually being imported during that period.

cerned might well consider their regular inclusion in future issues.

The Stanford University of California, U.S.A., is another body whose publications are of considerable value to the student and trader. The Food Research Institute of the University publishes a monthly series of wheat studies, giving a critical review of various aspects of the world's wheat situation. The most recent issue, dated August, 1925, deals with the disposition of American wheat supplies. Sources of statistical information are enumerated, and their reliability appraised. These studies would seem to be especially useful to those desiring to keep abreast with the results of modern scientific research in this branch of agriculture.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, October 7. ACCOUNT, October 8.

THE fall to 4 per cent. in the Bank rate is the chief amongst a number of interesting Stock Exchange features this week. No one in the House had looked for any change to be made. Stock Exchange authorities promptly declared that the reason must be political, and that the step had been taken with the intention of stimulating industry. It caused a series of rises amongst gilt-edged stocks, and emphasised a remarkable rally in Home Railway ordinary issues.

The block of new Conversion Loan was placed, as to the greater part, with subscribers who tendered at 6d per cent. above the minimum price of 76½. On the Bank rate announcement, the new scrip rose to 10s premium. The War Loan and other British Government descriptions were sharply advanced, and a few colonials strengthened.

French bonds were good, on the reported debt arrangements with the United States, but reacted sharply yesterday. A good deal of investment buying served to lift the prices of European reconstruction loans, Austrian, German, Greek, and Prague amongst them. Brazilians are rather better. Chinese and Japanese bonds show little change.

Home Railway stocks have experienced substantial rises. The upward movement began as a result of the Communists' defeat at the Labour Congress at Liverpool. The fall in the Bank rate helped to assist the rise, and prices have spurred by points apiece as regards all but the deferred stocks, which followed more calmly. Undergrounds have been prominent in the advance.

Cordoba Centrals exhibit material gains; a private meeting of large stockholders was held on Thursday, and proposals for a capital reorganisation are expected to appear very soon. Other Argentine railways improved. Leopoldinas have gone ahead noticeably.

The rubber market is in a condition of confident buoyancy. Business throughout the week has been on a tremendous scale. Tea shares are inactive, many of their supporters having gone over to the rubber market. Oil shares are being persistently "talked" better, but the public are indifferent to this market's claims upon attention.

Business remains quiet in shipping, banking, insurance, and trust companies' stocks. Tobacco shares have lost their recent power to charm the speculator, and are almost neglected in London. A little improvement occurred in Courtaulds, other textiles being easier on balance. Watney deferred appears to be bound for 400. Sudan Plantations had a further jump on anticipation of the report foreshadowing a rearrangement of capital. Wireless shares, particularly Canadian Marconis, have been better. Cable Construction varieties recovered from their previous dullness. Armstrongs fell back upon the postponement of the interim dividends on the company's junior preferences, and this caused depression in the iron and steel list as a whole. Later, however, the market rallied to a slight extent. Dunlops and other speculative favourites retain their popularity with their own friends, but attract no fresh public attention. Nitrates have hardly altered. Electricity shares and gas stocks failed to derive any benefit from the end of this year's "summer-time."

South African mining shares are dull. West Rand Consols, Langlaagte Estates, and Van Ryn Deeps underwent somewhat capricious changes. The platinum shares have been weak; vague talk of financial difficulties at the Cape is in circulation. Rhodesians are deserted by many speculators attracted by the magnetism of rubber shares. The Near East has been a buyer of various Straits tin companies' shares. Paris moods were reflected, as usual, in diamond and copper shares. West Africans seem to be waking up. The miscellaneous mining sections produced no special feature, and Friday's preliminary arrangement of the carry-over found the open account to be little altered from that of a fortnight ago.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

Galeries Lafayette, Limited.—Share capital £250,000 in shares of £1 each, all of which have been issued. There is also £250,000 of 6 per cent. first mortgage guaranteed registered debentures, and in accordance with Stock Exchange regulations particulars are advertised of an issue of £200,000 of these debentures at £91 per cent. They are guaranteed as to principal and interest by the Société Anonyme des Galeries Lafayette, of Paris. It is stated that the debentures

will be repaid by means of a cumulative sinking fund of 3 per cent. per annum commencing in 1926, which, it is added, "will be sufficient to redeem the whole of the debentures by November 1, 1945. The sinking fund will be applied in the purchase of debentures below par, plus accrued interest, or by drawings at par, but the company reserves the right of repayment at £102½ per cent. on November 1, 1935, or any succeeding interest date on three months' notice. The debentures have been purchased in the first place at £89 per cent., and are being resold at £91 per cent. The company was formed to carry on in London the business of ladies' outfitters, and acquired in 1920 certain premises and assets. The cost price of the company's leasehold buildings, &c., appear in the balance-sheet at cost, namely, £423,285, but no independent valuation is given. The net profits are stated to have risen from £26,855 for the 10 months of 1922 to July 31st, to £59,513 for the 12 months ended July 25th last. The above figures are arrived at before charging interest on the original 6 per cent. debentures, loans, &c., and before allowing for depreciation. They do not, however, include £104,584 representing profit on exchange, which, together with £41,399 taken from net profits, has been used in writing down buildings, plant, goodwill, &c. The amount required to cover the interest and sinking fund on the debentures is £18,000 per annum. The original debentures, it is stated, have been paid off, and the outstanding bankers' loans will be paid off out of the proceeds of the present issue. According to the advertisement the French company (Société Anonyme des Galeries Lafayette), which will guarantee the principal, interest, and sinking fund of the debentures, has been in existence for 26 years. The capital is 100,000,000f. The company has issued long-term bonds amounting to 44,000,000f, and the total liabilities of the company, apart from the share capital and reserves, amount to 255,000,000f against assets amounting to 451,000,000f, of which 345,000,000f is in liquid form. Goodwill and preliminary expenses have been entirely written off. A prospectusless issue.

Lennards Real Property Company, Limited.—Authorised capital £400,000, all of which has been issued. This is an offer for sale of 50,000 ordinary £1 shares at 24s per share. The company was registered in 1920 to purchase 40 freehold shops and properties from Lennards, Limited, boot and shoe retailers, who acquired the whole of the ordinary shares in part payment of the purchase price and unconditionally guaranteed the preference dividend. According to the balance-sheet as at December 31st last, the properties are valued at £445,340. This, it should be noted, is an offer for sale, in which no details as to past profits are given.

Romana Petroleum Company, Limited.—Share capital, £200,000, in shares of 2s each, all of which have been issued. In addition there is outstanding £50,000 of 6 per cent. first mortgage convertible debentures. The debentures are repayable on December 31, 1929, but the company has power to redeem at par at any time on three months' notice, while the holder may exchange at any time before December 1, 1929, into 1,000 fully-paid shares. The debentures have been subscribed for at £80 per cent. The company owns oil properties of about 670 acres in Roumania, 418,600 2s shares, out of a total of 600,816 shares in the Anglo-Roumanian Oil and General Trust, and other oil investments at a total cost of £13,267. The wells on the company's properties were destroyed during the war, and the company's claim for 25,109,428 lei for loss suffered and damage done is still the subject of negotiation. The company has not been able to resume operations since the conclusion of the war. It is stated in the advertisement, from which the foregoing particulars are taken, and which is to comply with Stock Exchange regulations, that "it is intended to recommence as speedily as possible, and debentures have been issued to provide working capital. The company's prospects are difficult to forecast, and the published advertisement does not help us much.

Pita Fibre and Rubber Estates, Limited.—Share capital £60,000 in shares of 2s each, all of which have been issued. In addition £13,500 of 10 per cent. convertible debentures, out of a total authorised of £16,500, have been issued. The debentures are convertible into ordinary shares at par at any time until July 1, 1930, and if not converted the company has the right of redemption at £105 on six months' notice. The debentures constitute a first floating charge upon the undertaking and assets. The company, of which particulars are advertised in accordance with Stock Exchange regulations, was incorporated in January, 1924, to acquire a rubber estate in Sumatra of 9,303 acres, together with nurseries of pita fibre. The total planted area is stated to be 908 acres. The purchase price was £57,000, the whole of which was satisfied by the allotment of ordinary shares. The rubber crop harvested during the period from October 1, 1924, to March 31, 1925, was 116,339 lbs. It is stated that the intention is gradually to increase the area under rubber, but a great deal of additional planting will be necessary before the large capital is justified.

Zenebi Tin Mines, Limited.—Authorised capital, £60,000 in 2s shares, of which 500,007 have been issued. The company, particulars of which are advertised in order to comply with Stock Exchange regulations, was incorporated on July 31, 1925, to acquire and work mining properties in Nigeria and elsewhere. It owns prospecting licences and mining rights in Northern Nigeria over about five square miles. The purchase price of £35,000 was paid in cash.

SECURITY FIRST

ROYAL

INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON

COMPANY MEETINGS, &c.

THE ROYAL BANK OF IRELAND, LIMITED.

SATISFACTORY RESULTS OF PAST YEAR.

The eighty-ninth annual general meeting of the shareholders of the Royal Bank of Ireland, Limited, was held on September 25, 1925, at the Bank House, Foster place, Dublin.

Mr M. Barrington Jellett, J.P. (the chairman), presided.

The Chairman said:—Ladies and Gentlemen,—The accounts having been in the hands of the shareholders for the usual time, I will ask you to take them as "read."

It gives me great pleasure to preside at this meeting to-day, and to be able to put before you a satisfactory statement of accounts. There has been some shrinkage in our profits as compared with last year, which was a record year, but the result of the past year's working, notwithstanding this, has been quite satisfactory.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, it will be seen that, in common with other banks, there has been some decrease under the heading "Current, Deposit, and other Accounts." A large percentage of this is accounted for by some temporary deposits being made, which found their way, during the period under review, into channels for which they were intended, such as rebuilding and construction work.

RESERVE FUND.

I feel sure it is gratifying to you to see that your reserve fund has been further increased, and that it now stands at the figure of £200,000. Your directors a few years ago adopted the policy of strengthening the reserves of the bank by allocating each year a considerable percentage of the profits for this purpose; this policy they consider wise and prudent.

IMPROVED CONDITIONS IN FREE STATE.

At our meeting a year ago I stated that conditions in the Free State were becoming more settled, and that this forecast has been continued during the past 12 months is borne out by the number of cross-Channel firms who have secured and are looking for factory sites and warehousing accommodation. It is a gratifying and reassuring sign to see outside capital being invested in our country. It is a proof that people outside the Free State, in addition to ourselves, look forward with confidence to the ultimate prosperity of this country, which would be further increased should taxation, which we are glad to see has been somewhat lightened, be still further reduced.

NEW BRANCH.

As mentioned in the report, a branch has recently been opened at Annesley Bridge. Premises in every way suitable have been acquired at a very reasonable cost, and little expenditure has been found necessary to make them fit for our purpose. Your directors are fully alive to the rapid development of the Fairview district, and in the interests of the bank they considered the step they have taken a necessary one. A large number of the bank's customers reside in the neighbourhood, and the establishment of a branch there will add greatly to their convenience.

TRIBUTE TO STAFF.

In conclusion, I desire to take this opportunity of thanking the staff of the bank on behalf of myself and my co-directors for the whole-hearted support and interest they have shown in its welfare during the past year. The prosperity of the bank depends, to a very large extent, on the active co-operation and good will of the staff, and this has been cordially given by all.

You will be sorry to hear that our secretary and joint general manager, Mr Stanley, has just undergone a serious operation. I am sure you will join with me in wishing him a speedy recovery and return to duty.

I now beg to move the adoption of the report and statement of accounts, and will call upon Major Cusack, our deputy-chairman, to second the resolution.

Before formally putting the resolution, I shall be pleased to hear any shareholder, and will endeavour to the best of my ability to answer any question.

Major J. W. H. C. Cusack, J.P., D.L., seconded the resolution, which was carried.

THE SHEEPBRIDGE COAL AND IRON COMPANY, LIMITED.

NEW DEBENTURE ISSUE.

The annual meeting of shareholders of the Sheepbridge Coal and Iron Company, Limited, was held on September 28th at Sheffield.

The Right Hon. Lord Aberconway presided, and the other directors present were Mr W. H. McConnel; the Right Hon. Sir Henry Norman, Bart.; Colonel H. K. Stephenson, D.S.O.; and Mr W. B. M. Jackson, managing director.

The Chairman, in moving the adoption of the report, referred to the very serious crisis in all manufactures, and not least in the iron and coal trade.

FOREIGN FINANCE AND OUR COAL EXPORTS.

Looking back on the last four years, he asked himself whether we had sufficiently taken into account the international situation. We had seen other countries—our customers—altering their coinage, inflating their currency, and doing nothing to pay their debts, while this country, on the other hand, had pursued the opposite policy, which was, of course, theoretically sound. These were complicated questions of finance, but they had had a most drastic influence upon the state of trade in this country, and although he was not prepared to say that the financiers were wrong, he was not alone in believing, with a large number of other persons, that in practice we had made a big mistake in pushing things too far. Customers coming to this country to buy found they had to pay three or four times as much in their own money as they paid before the war, and were, perhaps, able to pay now. This was reflected in the figures for the coal exports, which were down this year by no less than 15 million tons.

COMMUNISM AND FOREIGN TRADE.

One thing the foreign customer wanted was certainty of delivery. An Italian or a Frenchman who bought 10,000 tons of coal for delivery next month expected to get it next month; but when he heard talks of strikes, communism, ships unable to leave port, he would not take the risk, and bought his coal elsewhere.

We had the spectre of communism, which was stalking about in this country. All that had its effect upon our foreign trade. He

CURRENT YEAR'S PROSPECTS

But, dealing more particularly with the prospects of the Corporation in the current year, he anticipated a large delivery of timber at Bangkok this season, and mentioned that reports of the rice crop in Siam are not entirely satisfactory at the moment, whilst the serious condition of affairs in China affected business generally at Bangkok.

Owing to the higher prices now ruling for rubber and an increase in the turnover generally, he took a hopeful view of the prospects at Singapore, and, referring to the Indian branches, he reported an improved demand in India for goods generally, but said that the continued high price of cotton goods and yarns manufactured in Lancashire was standing in the way of business and largely responsible for the large imports of gold which takes the place of merchandise. Then in regard to the crops in India, he said that more rain was wanted, particularly for the grain crops, but added that in the meantime the corporation is doing its full share of the business in which it is interested.

RUPEE RATE AND INFLATION.

Mr. Ryrie then referred to the Royal Commission appointed to report on Indian currency and exchange, and expressed the opinion that, as for some time past the rupee had stood at about 1s 6d, a reversion to the old rate of 1s 4d would cause inflation of prices in India and disturb trade generally.

In conclusion, the Chairman paid a tribute to the loyal co-operation of the staff in London and in the East, and said that without hard work and initiative on their part the satisfactory results achieved in the past year could not have been obtained.

The directors' report and statement of accounts for the year ended March 31, 1925, were adopted, and final dividends of 3½ per cent. on the preference shares and 12½ per cent., together with a bonus of 10 per cent., on the ordinary shares were declared, making a total distribution of 30 per cent., less tax on the ordinary shares for the year.

Mr J. M. Ryrie was re-elected a director, and Messrs. Turquand, Youngs and Co., were appointed auditors for the current year.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £45,000,000 in Treasury Bonds and Treasury Bills were opened on Oct. 2, 1925, and the total amount applied for was £65,940,000. For bills at three months dated Monday to Friday, £99 2s 11d, and above in full; Saturday bills at £99 3s 2d, above in full—in bills at 3 months, £44,000,000; in bonds, £1,000,000.

Telegraphic Address: KANSALLISPANKKI.

felt quite certain that unless the working man himself stamped out communism they would find out that they were on the road to ruin. He thought that the people who ought to be foremost in stamping it out were the working men, and above all, the miners of this country, who had everything to gain by pacific methods and by stable industry.

YEAR'S RESULTS.

Considering all these difficulties, he thought the company's collieries had shown very fair results.

The new sinking at Glapwell to the lower measures had been completed, and the screening plant and washery were also completed. At Dinnington, where they held the larger part of the shares, they had had a satisfactory year. At Rossington, where they held the majority of the shares, they had encountered considerable difficulties, and progress had not been up to their expectation. Newstead continued to show satisfactory results. At Blidworth the shafts were down 400 yards. Excellent progress had been made at Firbeck, where they were now turning out about 900 tons per week. The coal was of good quality, and commanded a ready sale. At Maltby the tonnage had increased. The costs showed a great decrease, but they were still suffering from the effects of the explosion.

The building of houses at all the collieries had continued.

With regard to the ironworks, in spite of reduced costs the results were disappointing, as prices had gone down in even greater proportion than the costs.

The Sheepbridge Stokes Centrifugal Castings Company, Limited, had got into fair swing.

NEW DEBENTURES.

When the Sheepbridge Company's new 6 per cent. debentures were issued they offered £250,000, which were subscribed. Having regard to the sinking at Glapwell, and the developments at Firbeck and Rossington, they would require a certain amount of money, and they, therefore, invited subscription for a further amount which would rank *pari passu* with those already existing. The pits in which they were interested were very fine properties, and of greater value than the figure at which they stood in the balance-sheet.

Lord Aberconway referred with regret to the death of Mr Reginald Fowler, a director of the company, and stated that Colonel H. K. Stephenson had joined the board in his place.

A final dividend, making a total of 5 per cent. for the year, less income-tax, on both preference and ordinary shares, was declared.

THE ANGLO-SIAM CORPORATION, LIMITED.

INCREASED PROFITS—DIVIDEND AND BONUS MAINTAINED.

The twenty-eighth annual ordinary general meeting of the Anglo-Siam Corporation, Limited, was held at 5, St. Helen's place, London, E.C., on Tuesday, September 29, 1925.

The Chairman, Mr J. M. Ryrie, presided, and in the course of his speech reviewed the results of the past year, and said the mere fact that the profits show an increase as compared with the previous year, and that the directors see their way to recommend the same dividend and bonus, is a matter for congratulation in these times.

After dealing with the balance-sheet and profit and loss account, he said the profits derived from the timber side of the business had been maintained, whilst, with another good rice crop in Siam, the results of the general trading at Bangkok disclosed a distinct improvement, and in spite of keen competition the turnover all round had increased, though it has been found necessary to work on a reduced margin of profit.

SIAM'S SOUND FINANCIAL POSITION.

Referring to some recent comments on Siamese finance and the strong currency position in Siam, the Chairman remarked that those responsible for Siamese currency and financial policy in the past deserve great credit for having maintained the gold exchange standard throughout a very difficult period when other exchanges were fluctuating wildly, whilst he pointed out that the total Budget deficits for the last three years, taken at the exchange of 1s 10d, the present sterling value of the tical, amount to less than £1,000,000, the public debt outstanding being only a little over £12,000,000.

Continuing his speech, Mr Ryrie said that with so much unrest and commercial depression prevalent it was difficult to be optimistic in regard to the outlook for trade generally, and, referring to the threatening attitude adopted by the extremists at the recent Trade Union Congress, when attacks were made not only against Capitalism but against the Empire, he remarked that it is high time the Government took drastic steps to stamp out the insidious propaganda the enemies of the British Empire are broadcasting.

GOVERNMENT STOCKS, &c.

CZECHOSLOVAKIA 8 PER CENT. LOAN OF 1922.—Customs receipts for the second quarter of the year 1925 amounted to Kc. 168,638,852, against Kc. 211,351,841 for the corresponding period of 1924, and against Kc. 211,351,841 for the corresponding period of 1924, and in the net revenue from the tobacco monopoly was Kc. 346,000,000, in comparison with Kc. 286,621,714, making a total received from both sources for the first half of 1925 Kc. 940,440,516, compared with Kc. 943,591,238 received for the first half of 1924. In this connection attention is drawn to the fact that in the published figures of the return for the first quarter of 1925 the revenue figures of all Customs receipts and of the tobacco monopoly, amounting in all to Kc. 425,801,654, were transposed. They should have read:—Customs receipts, Kc. 194,801,654; tobacco monopoly, Kc. 231,000,000.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1 to July 31, 1925, compared with those for the same period in 1924:—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
Gross receipts, July, 1925.....	Drachmæ. 14,949,200.40	Drachmæ. 38,751,512.20
Do do do 1924.....	10,564,856.95	(d) 32,455,125.20
Estimated receipts for seven months (Law of Control)....	16,858,333.33	6,241,666.67
Actual receipts for 1925 (seven months).....	72,283,727.05	293,566,139.90
Actual receipts for 1924 (seven months).....	61,944,916.65	(e) 230,704,357.05

As regards receipts subject to the system of plus-values, increases in duties and prices are excluded therefrom in the above table. In addition to these amounts, import duties equivalent to (d) (e) In addition to these amounts, import duties equivalent to £99 in the case of (d) and to £6,197 in the case of (e) were paid in gold at the Piræus Customs.

BANKS.

COLONIAL BANK.—This bank is now known as Barclays Bank (Dominion, Colonial, and Overseas), the change of name having received the approval of shareholders and the Royal Assent on August 7, 1925. The former "A" shares become 8 per cent. cum-August 7, 1925. The former "B" ordinary shares become 6 per cent. preference shares, the former "C" shares become 6 per cent. "A" shares, all ranking for dividend from July 1, 1925, and the nominal capital is increased to £10,000,000. The net profit for half-year ended June 30, 1925, is £65,408, to which is added £27,621 brought in, making £93,029 available. This is utilised as follows:—To provision for bad and doubtful debts, £10,000; to write off bank premises, £10,000; to staff bonus fund, £13,000; dividend, 8 per cent. per annum, £28,350; relief to shareholders in respect of repayment of Dominion income-tax for year ended March 31, 1925, £4,350; leaving £27,329 to go forward to next account.

year. Total assets are £154,230. Cash stands at £10,616. The company has £21,053 in 5 per cent. War Loan at cost £20,930. The issued capital is £109,170 in £1 ordinary shares.

STRAITS PLANTATIONS, LIMITED.—The number of nuts harvested during the year ended June 30, 1925, was 6,700,720, which produced 1,604 tons of copra, costing £10 9s 1d per ton f.o.b. port of shipment. The average net price realised for the copra, shipped weight, after deducting freight, insurance, landing, and all scale charges, was £23 6s 2d per ton. Fifty-one acres were planted with coconuts during the year. Net profit was £19,371, against £17,067. The ordinary dividend is 15 per cent., against 12½ per cent. Income-tax will be deducted at rate of 4s 3½d in £. The carry-forward is £10,148, against £9,777 brought in. The sum of £1,000 has been put to reserve. Total assets are £169,442. Cash stands at £4,130. The company has £18,482 for investments, which are all in British Government securities at cost. The issued share capital is £120,000 in £1 shares, fully-paid. Reserve account stands in balance-sheet at £12,000.

SUNGEI DANGAR (MALAY) RUBBER.—The report for year ended June 30, 1925, shows total assets £93,695. Cash stands at £4,561. There are no investments. The issued capital of the company is £65,986 in £1 shares. The company has £20,000 in 7½ per cent. debenture stock, but negotiations are now in progress with debenture-holders for conversion of the debentures into shares at par. The directors do not recommend a dividend on the ordinary shares pending the conclusion of these negotiations. The accounts show a net profit of £7,040, against net profit £335 in preceding year. Deducting £3,427 debit balance brought in, a credit balance of £3,613 is carried forward. Crop was 266,000 lbs. Average net sale price was 1s 6.32d per lb, as against 1s 0.35d per lb.

SUNGKAI-CHUMOR ESTATES.—The rubber crop for year ended June 30, 1925, was 388,295 lbs, which is approximately the quantity exportable at the minimum rate of duty. Average net sale price was 1s 7.33d per lb. Cost of production was 9.72d per lb, against 10.22d per lb in preceding year. A net profit of £16,842 was secured, against a net profit of £5,059 in preceding year. Dividend has been raised from 5 per cent. to 17½ per cent., from which income-tax will be deducted at 4s 3.9d in £. The carry-forward is £24,732, against £29,888 brought in. Total assets are £148,120. Cash stands at £6,181. Investments in British Government securities at cost stand at £26,596. The issued share capital is £99,855 in shares of 2s, each fully paid.

VICTORIA (MALAYA) RUBBER.—The net profit for year ended June 30, 1925, is £12,948, against £5,507 in preceding year. The ordinary dividend has been raised from 10 per cent. to 20 per cent., from which income-tax will be deducted at 4s 4½d in £. The sum of £3,000 has been put to reserve, and £12,997 carried forward, against £13,078 brought in. The crop of rubber was 306,625 lbs. Average net sale price was 1s 8.10d per lb. Cost of production was 9.59d per lb, against 10.19d per lb in previous year. 32,000 coconuts were harvested, and sold locally at a profit. Total assets are £83,781. Cash is at £8,334. Investments in Government securities at cost stand at £7,859. The issued capital is £50,144 in 6d shares, fully paid. Reserve account stands in balance-sheet at £5,000.

MISCELLANEOUS.

BENGAL IRON CO.—The sixth report for year ended March 31 1925, shows a net profit of £156,986, as against £298,915 in previous year. The directors have appropriated the following sums:—Depreciation and colliery sinking fund, £62,125; debenture interest, £43,750; debenture redemption sinking fund, £14,000; amount written off debenture issue expenses, £2,400; transfer to taxation reserve, £35,010; preference share dividend, paid October 1, 1924, £18,750. This leaves £24,810, from which the directors have applied in payment of dividend on the preference shares for the half-year to March 31, 1925 (paid April 1, 1925), the sum of £18,750, and recommend carrying forward £6,060. The directors regret it is not possible to recommend a dividend on the ordinary share capital. In common with many companies in the iron and steel trades, the result of the year's working has been disappointing. Owing to fall in prices it has been necessary to reduce the value of stocks carried forward from last year by about £30,000. The agreement with the Indian Iron and Steel Company, Limited, sanctioned by the shareholders at the meeting held on March 9th last, has been completed, and came into operation on April 1, 1925.

SIR W. G. ARMSTRONG, WHITWORTH AND CO.—The board have had before them the question of paying the usual interim dividends on the various shares of the company, and have considered in the same connection the industrial situation in general and the trading and financial position of this company in particular. As a result more especially of the necessity for financing large current contracts, the cash requirements of the company have been very heavy; and

while the board hope that the profits on the year will not be less than those of the past few years, they are of opinion that in the interests of the company it is essential to conserve its resources. They have, therefore, decided to pay no interim dividends in respect of the current year except on the first (cumulative) preference shares.

STAVELEY TRUST, LIMITED.—The report to July 31, 1925, covering a period during which the capital was increased from £33,000 to £161,660, shows a gross profit of £9,767. After deducting general charges and reserve for income-tax and adding the amount brought forward from last year, there is available a total of £7,415. The directors recommend a dividend of 5½ per cent. on the ordinary shares, and the writing down of the expenses of the recent capital increase by £1,000, leaving £1,288 to be carried forward. The report states that approximately 7 per cent. of the company's capital was invested in ordinary shares and 10 per cent. in preference shares. Of the remainder of the investments, which consisted of gilt-edged and foreign (sterling) Government securities, debentures, and prior charges, approximately 50 per cent. were gilt-edged securities. Meeting, 11.30 a.m., October 7th, Falcon House, Aldersgate street, E.C.1.

SUDAN PLANTATIONS SYNDICATE.—The report for year ended June 30, 1925, reveals a net profit of £162,885, against £112,934 in preceding year. The ordinary dividend is 25 per cent. for the year, which absorbed £150,000. This compares with a dividend of 20 per cent. in preceding year, which absorbed £105,000. The carry-forward is £189,450, against £176,566 brought in to the accounts. The issued capital now stands at £600,000. It has been decided to increase it to £750,000 by the issue of 150,000 shares. These are to be offered to shareholders at £3 per share in proportion of one new share for every four held. Balance-sheet shows total assets £2,929,907. Cash totals £90,425. The company's holding of British Government securities stands in balance-sheet at £613,620. With regard to liabilities, the share premium account stands at £1,013,223 in the balance-sheet.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A spell of fine weather during the past week has enabled farmers to push ahead in preparing the ground for winter sowings, and there is every indication of a larger area being put under the all-favoured cereal than was the case last year. The yield this season was fairly satisfactory from a reduced acreage, but owing to adverse climatic conditions, many samples marketed show inferior quality. Prices, however, have declined in sympathy with the general situation, with trading on a limited scale. In the floating and forward wheat cargo market buyers evinced little disposition to operate, in view of declining values, together with pressure to sell the Russian crop has been greatly over-estimated, but in the absence of definite news it is difficult to determine whether or not this may delay and difficulty is experienced in moving grain down to the Black Sea ports, and it is to be hoped that shipments are not seriously interrupted or curtailed, as the effect of such on future course of prices is obvious. A steamer of No. 1 Northern Manitoba a sailer cargo of Australian arrived 52s. Maize cargoes quiet, but fairly steady, and Plate steamers afloat sold 36s 3d, October-34s 9d, all per 480 lbs. A good business transpired in South Russian c.i.f. terms. Some 10,000 tons of Australian wheat, December-easier. No. 1 Northern Manitoba, ex-ship, quoted 57s 6d, No. 2 ditto 56s 6d, No. 3 55s 6d, No. 2 mixed Durum 47s, all per 496 lbs. London standard grade quoted 43s, patents 45s-46s, town whites 43s per sack delivered in the Home Counties, with 6d to 1s per sack less supply. Manitoba patents range from 45s 6d-48s, Minneapolis 46s-48s, Kansas patents 46s 6d, Australian 44s per 280 lbs ex store. Maize easier. Plate ex ship to arrive quoted 37s 6d, ditto landed 39s, white flat African landed 38s 6d per 480 lbs. Yellow African ton. Barley quiet. Californian new ex ship quoted 40s-50s, Chilean Chevalier 58s-70s, brewing 52s-54s, according to quality. Aus-

AMERICAN WHEAT MARKETS.

In the early part of the week prices declined, owing to liquidation, bearish foreign news, and in particular to an increase in the visible supply of wheat in Canada, which is now estimated at 14,672,000 bushels, against 6,118,000 bushels at this time last year. A slight rally took place when it was rumoured that the Russian crop estimates had been exaggerated, but the inactivity of export business caused a further decline. Recent quotations:—

COAL.

CARDIFF.—The depression in the coal trade continues unrelieved. This week, on the Cardiff market, business has been extremely quiet, and prices have remained saggy. On Tuesday the Commercial Committee of the Monmouthshire and South Wales Coal-owners' Association met to consider the expediency of reintroducing a scheme for the stabilisation of prices. To-day the conditions in the export trade are abnormally difficult in consequence of the increasing competition of Yorkshire, north country, and Scottish and foreign coals. Steam coals are being shipped for bunker purposes at the North-East Coast ports, and particularly on the Tyne, at from 5s to 6s per ton less than current f.o.b. prices for best Cardiff steam coals. Under these circumstances it was decided at the meeting of the Commercial Committee of the Monmouthshire and South Wales Coalowners' Association last Tuesday that extensive enquiries must be made before the members of the association can be asked to commit themselves to any hard-and-fast price system.

AGENTS AND CORRESPONDENTS THROUGHOUT THE WORLD.

respectively. Calfskins were steady to firm, best selling from 7½d for heavy to 13½d for lights. Woolskins made from 7s to 11s 6d, and hoggs 3s 3d to 12s each.

The demand for imported hides remains good, although buyers are reserving business for next week's Shoe and Leather Fair, to be held in London. Argentine ox have sold on a basis of 8½dths, and several thousand afloat at about 8½ c.i.f. Prices for dry hides are well maintained, and Germany has paid 12d for dry Americanos 10-11 kilos.

Latest cables from New York report the Chicago market as steady, with heavy packers still selling at the old rate of 17½ cents.

Business in sole leather shows a decided improvement, a feature of the trade being the demand for both medium and lightweight bends. Though prices all round are very firm, a fair turnover has been done in most directions. Repairers are busy, and are taking 12-14 lb bends so freely that some firms are short of stock.

In upper leather the tone is better, although the trade is still handicapped by low-priced German chrome leather. Patent and coloured glacié kid are best sellers, although the propaganda of the Glacié Kid Association is having a decided effect on the demand for black glacié. Curriers are better employed, as orders for fair-sized deliveries of wax butts, semi-chrome, and lining leather have come in of late.

There is still a good deal of unemployment in the shoe trade, but manufacturers are confidently looking forward to more orders at next week's Fair at the Agricultural Hall.

CHEMICALS AND FERTILISERS.

The chemical market is rather steadier, with some lines at higher levels. Lead salts are better in sympathy with the metal. White acetate of lead dealer at £43 10s to £44, with good business. Red and white lead also higher at £44 to £44 10s, and £44 10s, c.i.f. London, respectively, with a firm market. Formaldehyde, 40 per cent., again dealer at £39 15s to £40 10s, with better trade. Cream of tartar, 99-100 per cent., dealer at £3 16s to £4 per cwt, less 2½ per cent. Citric acid has eased to 1s 3d, less 5 per cent.; dull and unsteady. White powdered Cornish arsenic again reduced, with business non-existent; nominally quoted at £17, f.o.r. mines. Carbolic acid crystals quieter and slightly cheaper at 4½d in bulk. Barium chloride, £9 5s on spot and cheaper to arrive. Epsom salts in little request and easier at £4 5s to £4 7s 6d in bags. Glauber salts a shade cheaper at £3 10s to £3 12s 6d in bags. Sal ammoniac further reduced to £33 in casks for dog-tooth crystals. Fertiliser materials in better demand, with ammonium sulphate dealer at £12 9s delivered home areas, and £11 15s f.o.b. in single bags for export. Nitrate of soda unchanged and quiet at £12 7s 6d. Superphosphate, 30 per cent., in little call at £3. Basic slag, 30 per cent., in good request at £2 15s. Kainit dealer at £2 15s for 14 per cent.

VEGETABLE OILS AND OILSEEDS.

Linseed oil has been a fluctuating market. The tendency has been downward, current value being about £39 10s on spot, and £39 5s for October-December delivery. Consumers are content to fill immediate requirements. Crude Egyptian cotton oil is now being supplemented by oil crushed from the first arrivals of this season's seed, and is held for £41 10s per ton naked ex-Hull mill. Edible refined has been in better demand, and technical is steady around £42 5s. A good trade in palm kernel oil has been done for export to America, and values are firmer at £43. Other vegetable oils are in slow demand. First pressure castor oil has been reduced to £54 per ton (barrels free). In the oilseed section Plate linseed in the absence of demand has further declined to £19 on spot, which figure has also been accepted for October-November shipment. Russian linseed is offering at prices relatively below those for Plate and Indian seed, but crushers are by no means active. A better trade is reported in Egyptian cottonseed, £11 17s 6d being current value of black for October loading.

OVERSEAS PRODUCE.

FOODS, BEVERAGES, &c.

SUGAR.—A steady tone prevailed for refined parcels, and a fair spot business transpired in British makes at the lower prices recently ruling. Imported kinds, however, met with quiet attention, but late rates were generally maintained. Mr Licht's revised estimate for Continental crops totalled 7,605,000 tons, against 7,078,000 tons last year. Germany is placed at 1,680,000 tons, against 1,576,000; Czechoslovakia 1,600,000, against 1,410,000; France 780,000, against 830,000; Belgium 380,000, against 400,000; Holland 300,000, against 330,000; and Russia 950,000, against 480,000 tons. Czechoslovakia, also "J" Dutch, November-December, sellers, 14s 4½d; January-March, 14s 6d, f.o.b. terms. American granulated, spot, 27s 1½d; afloat, 15s; London outports, 15s 2½d, c.i.f. and i. terms. White Java, spot, quoted 26s 3d to 27s. Polish crystals, October-December, 13s 6d, f.o.b. Danzig. Cuban basis, 96 per cent., October-November, 10s 6d, c.i.f., U.K. Indian market remains dull, and quotations unaltered. White terminal market opened firm, but quieter since. October, sold, 13s 6d; November, 13s 8½d; December, 13s 10½d; March, 14s 3½d to 14s 3d; May, 14s 6½d to 14s 6d; August, 14s 10½d per cwt.

COFFEE.—Spot market remained quiet, though late rates were

maintained, especially for the finer qualities, which continue in light supply. Mountain-grown Jamaica good middling at 17s; Kenya fair bold, 130s to 132s 6d; peaberry, 129s 6d to 134s; new crop Kilimanjaro good middling, 120s to 128s 6d; Costa Rica ditto, 171s; Vera Paz good bold, 155s 6d; Colombian greenish maragogipe, 189s 6d. Futures pursued a quiet course, and prices tended easier.

COCOA.—Spot market steady, with moderate sales. Guayaquil summer Arriba sold, 79s to 80s; forward positions steady. Trinidad, December-February shipment, sellers, 68s; Bahia, September-October, 55s; Guayaquil Epoca, September-October, 78s; Machala, 76s; Caraquez, 76s, c. and f. terms; St. Thome, September-October, 55s, c.i.f. and i. Accra F.F. grade, November-January, sold, 43s 6d; and Lagos, October-December, sellers, 41s per cwt., f.o.b. terms. Cocoa butter maintained. C.F.R., spot, also prime English, quoted 1s 5½d per lb.

TEA.—Indian offerings at public sale this week were on a much larger scale, and comprised 66,200 packages, while large quantities will also be available next week. The tone was rather quieter than of late, and common to low medium descriptions often marked a decline of ¼d per lb. Medium and finest sorts were also less in request, general run of quality being less attractive, though recent rates were maintained. Pekoe sold from 11½d to 12½d; broken orange pekoe, common to fine, 1s 0½d to 2s 4d; finest to choice, 2s 8d to 4s 7d. Ceylon offerings amounted to 23,132 packages, which met an active demand for fine to finest descriptions, and some high averages were recorded for the best invoices. Good medium kinds were also accorded steady support, particularly leaf grades, which were in request for export. Common sorts, however, moved with some irregularity and occasional weakness. Pekoe, sold, 1s 0½d to 2s 2d; broken orange pekoe, 1s 7½d to 2s 10d per lb, in bond. There was 2s 8d per lb for finest quality, with old season's Keemuns at 1s 1d to 1s 3d, and which show comparatively good value. Common Monings were taken up at 5½d to 6½d per lb, chiefly on export account. 6,000 packages of Java and Sumatra were offered in auction, and all fine grades were in request at full rates. Leaf kinds, however, ruled quieter, while common sorts marked a decline of ¼d per lb. Pekoe, sold, 1s 1d to 1s 1½d; broken pekoe, 5d to 1s 3½d; orange pekoe, 1s 2½d to 1s 5½d; broken orange pekoe, 9½d to 1s 9½d; pekoe souchong, 11d to 1s 0½d per lb, in bond.

RICE. steady, but trade remains without improvement. Rangoon, two stars, spot, 16s; forward, 15s 6d, c.i.f. and i., London. No. 3, Spanish, for shipment, September-October, 22s 9d to 23s 3d; oil, 25s; Italian, spot, 22s to 23s, as to quality, per cwt. Burma rice, bran, October, £6 5s; November-December, £6 7s 6d, ex ship, per September-October, 14s 9d, f.a.q.; September-October, 13s 3d. Madagascar butter beans, spot, 35s to 37s 9d, as to quality. Japanese peas, spot, sellers, 26s; October-November, 24s 6d per cwt, c.i.f.

SPICES.—Pepper easier forward, with moderate inquiries. Black Lampung, October-December, sold, 10½d; January-March, 10½d per lb. Tellicherry, February-April, 9s 6d; Aleppy, 9s 4s per cwt. White Muntok, October-December, sold, 1s 2½d; January-March, 1s 2½d. Cloves dull. Zanzibar, October-December, sellers, 10½d per lb. Tapioca steadier. Singapore, fair flake, to Havre, buyers, 18s 6d. Sago flour dull. September-October, to U.K., sellers, 15s 9d; October-December, 15s 6d. Desiccated coconut steady. Halves, spot, quoted 42s 3d; October-November, 40s 6d per cwt, c.i.f.

FRUIT (Dried).—Currants: New crop in quiet demand, and values barely steady. Amalia, quoted 36s to 37s; Gulph, 38s to 41s; Pyrgos, Australian, 68s to 70s; South African, 33s to 40s. Sultanias steady. Natural, in bags, quoted 28s to 30s; September shipment, 29s; tions firmer. First tide Hallowee, 23s 6d; second, 22s 6d; Siam, 28s to 36s; Lexias, 30s to 42s. Evaporated fruits steady, with a fair Californian apricots, standard new extra choice, 120s; fancy, 130s; choice, 70s; fancy, 78s. Plums in better support. Oregon, size 30/40, quoted 72s; 40/50, 53s; Californian, 40/50, 59s; 50/60, 52s 6d; 70/80, 46s 6d. Pears, choice Californian, 90s; extra choice, 102s to 103s. Apple rings, Californian, extra choice, 67s 6d to 75s; Canadian, 62s 6d per cwt.

CANNED GOODS.

CANNED FRUITS.—Spot stocks move off slowly, but prices show no material alteration. Singapore pines, 48-1½s quoted 86s 6d to 87s 6d; cubes, 2½s, 13s to 13s 6d; slices, 2-2½s, 12s 6d to 13s 6d.

Head Office - - - - - TAIPEH, FORMOSA.
London Office - - - - - 25 OLD BROAD STREET, E.C.2

BRANCHES:
Amoy, Batavia, Bombay, Calcutta, Canton, Foochow,
Hankow, Hongkong, Keelung, Kobe, New York, Osaka,
Samarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan,
Tokyo, Yokohama, &c., &c., and Correspondents in every
principal town in the World.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

South African are moving off quietly on former terms. Californian pears, 15s to 17s; peaches, 12s to 14s; cherries, 13s to 14s; apricots, 10s 10 to 13s 3d; loganberries, 13s 9d to 16s. Fruit salad, 1½s, 12s 3d to 14s; 2½s, 21s to 22s; Australian pears, 2-2½s, 16s to 16s 6d; Canadian, 14s to 14s 6d. Italian tomatoes firm, as supplies will be smaller than anticipated.

CANNED MEATS.—Corned beef in quiet request, but there is a fair inquiry for Danish lunch tongues, at steady rates.

GENERAL.—Sardines firm for small fish on scanty offerings, but large sizes move off slowly. Portuguese, ½ flats quoted 4s 3d; clubs, 5s; 12 ozs, 7s 6d; 18 ozs, 12s per dozen tins. Salmon firm on light supplies. Red tall, 1 lb, 64s to 65s; ½ lb pink, 38s to 40s; tall pink, 27s to 28s. Lobsters met with good support at firm rates. Halves quoted 16s, and quarters 9s to 10s. Condensed Milk.—Market steady for both full-cream sweetened and machine-skimmed.

TEXTILES.

JUTE.—Market strong under higher Calcutta advices, combined with a good demand and sellers adopted reserved measures. Firsts to Continent all positions up to the end of the year sold at £51 per ton. Hessians and twills quiet, but firmly held.

REMP.—Manila dull and easier. J grade, October-December, sellers, £41; K, ditto, £36 10s; L, £37; and M, £31 15s per ton. New Zealand, also African sisal, slow, unaltered.

COMMERCIAL TIMES—WEEKLY PRICE CURRENT.

The prices in the following list are revised with the assistance of an eminent firm in each department.

Turpentine irregular, and easier. American, spot, 77s 3d; November-December, 77s 9d; January-April, 79s 9d. Rosin firmer. American, grade B/D, 33s; E, 33s 3d; F/G, 33s 9d; W/G, 34s 3d; W/V, 34s 9d per cwt. French F/G, nominal; W/V, 30s 3d per cwt. Petroleum steady. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

GENERAL.

SHELLAC quiet. Fair T.N., spot, quoted 215s; October, 207s 6d; December, 200s per cwt.

COPRA quiet and tendency easy. F.M.S. Straits to Rotterdam, August-October quoted, £30 10s; October-December, £30 7s 6d. Dutch E.L., October-December, £30 5s; Ceylon, September-October, £31 10s; South Sea, F.M.S., ditto, £29 17s 6d; F.M. Straits to Marseilles, September-October, £30; Cebu ditto, £30. Palm kernels to Liverpool, November-January, sold, £21 17s 6d per ton.

EGG PRODUCTS quiet. Liquid hen yolk, spot, sellers, 80s to 82s 6d; forward, 85s per cwt, c.i.f. Albumen, spot, 3s 9d to 3s 10d per lb.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn: Ceylon, £32 to £40; Cochin, £30 to £34. Ceylon bristle £17 10s to £22 10s; cinnamon leaf oil, 44d; citronella, Ceylon, 1s 11d; Java, 3s 4d.

TALLOW.—Messrs Colchesters and Woolner write on September 30th

as follows: The tallow market was quiet during the week, but prices were mostly unchanged to-day. While shipments to the United Kingdom are held up in the Colonies, they are selling their supplies to Japan and the United States. At auction to-day 777 casks tallow were offered, and 250 were sold. Quotations are:—Australian mutton: Fine, 51s 6d; good to fair, 50s 6d to 48s; dull to dark, 43s 9d to 40s 3d; hard, 50s 6d. Australian beef: Fine, 49s; good to fair, 47s to 44s 6d; dull to dark, 42s 6d to 38s 6d; sweet, 50s 6d. Present shipment from Australasia: Good mixed, 46s, nominally. Present shipment from South America, 46s 6d. The market letter is unchanged. Town tallow, 43s 6d per cwt. Rough fat, per 8 lbs, 5d; melted stuff, 33s 6d per cwt. Quotations are:—Town, 42s 6d, net cash, naked, ex works. Country: Frail casks, 42s 6d; home melted, shipping casks, net, f.o.b., good coloured, 46s; fair to dull, 43s to 42s. Bone fat: white, none; pale, none; benzine, 39s; melted stuff, 38s 6d, f.o.b.

TERMS OF SUBSCRIPTION.

Quarterly, 12s 6d; Half-yearly, £1 9s 6d; Yearly, £2 18s 6d.
Colonies and Abroad, £3 10s per Annum.

Copies of the *Economist* may always be obtained in the City at
W. Abbott, Limited, 32 Eastcheap.
Barker and Howard, Sugar Loaf court, Leadenhall street.
P. W. Cooper and Co., 11 King street, Cheapside.
Davies and Co., 95 Bishopsgate.
Leathwait and Simmons, 34 Throgmorton street.
Pottle and Son, 15 Cullum street.
Willing and Co., Limited, 50 Copthall avenue, and 123 Moorgate.
Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's,
37 Avenue de l'Opera.

Cheques and Post-office Orders to be made payable to the
Proprietors of the "Economist."
Office: Granville House, Arundel street, Strand, London, W.C.2.

THE MONEY MARKET.

MONEY has been plentiful throughout the week, and the
discount market had an easy tendency, the influence of
large gold exports being balanced by expectations of still
more extensive arrivals. Fine bank bills were scarce
and in demand, with exceptional inquiries at 3½ per cent.

LLOYDS BANK LIMITED

Head Office:
LONDON, E.C.3.

The Bank has over 1,650
Offices in England and Wales,
and several in
India, Burma and Egypt.

(30th June, 1925.)

AN INTRODUCTION TO THE STUDY OF PRICES

with special reference to the History of the
Nineteenth Century.

By **WALTER T. LAYTON, M.A.** 7/6 net.

The Economic Journal:—"The high qualities he
possesses and exhibits will, we are sure, recom-
mend his 'Introduction' to all who would make
at once the easiest and the safest approach avail-
able to the fascinating but complicated 'study of
prices.' That is, perhaps, the most crucial of
present popular economic questions and it must
always occupy a prominent place in the scientific
discussions of professional economists."

The Economic Review:—"His excellent and clear
little book ought to be in the hands of every
student of social conditions."

MACMILLAN & Co., Ltd., London, W.C.2

	Oct. 9, 1925.	Oct. 2, 1925.	Sept. 25, 1925.	Sept. 18, 1925.	Previous Rate and Date Changed.
Bank Rate	4	4	4½	4½	(Oct. 1, '25)
Banks' Deposit Rate	2	2	2½	2½	(Oct. 1, '25)
Discount (Call)	2	2	2½	2½	(Oct. 1, '25)
Houses (Noties)	2½	2½	2½	2½	(Oct. 1, '25)
Market rate (3 months' bills) ..	3½	3½	3½	3½	..

The Bank return showed a decrease of £2,550,000 in the coin and bullion, nearly all of which had been announced as withdrawn for export, the note circulation had contracted by £814,000, and so the reserve was £1,736,000 lower, though its proportion to liabilities had risen 1 per cent. to 28.3 per cent., owing to reduction in the deposits. Public deposits declined by £17½ millions, and Government and Other securities by £3,030,000 and £6,339,000 respectively. These changes left the Other deposits seven millions higher. Currency notes outstanding were increased by £1,474,200 to £294,478,400, which includes £1,325,100 for notes called in but not yet cancelled. The fiduciary issue is £236,903,300, or £11,242,100 below the maximum for the year.

The monthly statement of the London Clearing Banks of average weekly balances for September, printed in detail on another page, shows a slight increase in deposits, as may be seen in the table below summarising the aggregate figures of the nine English banks:—

	June, 1924.	Dec., 1924.	June, 1925.	July, 1925.	Aug., 1925.	Sept., 1925.
Capital and reserves	119.2	119.4	119.6	120.1	120.7	120.7
Acceptances	85.3	109.9	90.2	84.5	85.0	85.7
Deposits (incl. undiv. profits, &c.) ..	1,651.9	1,656.1	1,624.5	1,633.2	1,611.5	1,613.7
Total liabilities	1,856.4	1,885.4	1,834.3	1,837.8	1,817.2	1,820.1
Coin, notes, balance at bank, and cheques in course of collection ..	249.2	259.7	253.9	244.0	240.1	237.2
Money at call	108.1	112.8	113.0	113.6	117.4	111.5
Investments	349.3	328.8	292.6	282.5	282.6	281.5
Discounts	245.0	234.4	205.5	228.5	223.6	240.2
Loans and advances	791.7	811.2	850.5	851.0	839.0	834.5
Cover for accept., premises, &c.	113.2	138.5	118.8	113.4	114.5	115.2
Total assets	1,856.4	1,885.4	1,834.3	1,837.8	1,817.2	1,820.1

A significant feature of the table is the further decline in the total of loans and advances and the large increase in bills discounted—presumably in Treasury Bills. Cash and money at call also declined, and there was a further small reduction in investments.

NEW YORK MARKETS.

Our New York correspondent cables:—The surprise occasioned by the Government cotton crop estimate of 14,759,000 bales was shown in the break in prices of \$8 per bale. It is believed that the latest estimate will come nearer the actual outturn than its predecessors. Heavy trading in stocks on the cut in your Bank rate was followed by much realisation, but the market is again firm, and an advance in the Federal Reserve Rate is considered unlikely. The country banks are in a very liquid position, and money is expected to remain fairly easy. The Federal Reserve statements reveal a moderate increase in the circulation, but other changes are unimportant, the Reserve ratio being 71.8 per cent. The market is reconciled to the French debt arrangement, its virtue being that it allows evidence to accumulate of capacity to pay.

THE STOCK MARKETS.

Cheaper money, increasing confidence in the situation at home and abroad, and intense activity in the rubber market, have contributed to make a heavy settlement. Gilt-edged stocks have drooped in face of the triple municipal loan, and the prospect of similar issues to come. Mexicans have declined, in marked contrast to other foreign bonds. New York has again been an active buyer of Brazilians. Home rails have lost some of last week's sharp rise, but satisfactory dividends and reports account for the continued firmness in Argentine rails. Little interest has been taken in oil and mining shares, though prices of the chief shares have been steady. Tin shares have risen briskly, and a good deal of trade has been done. The volume of business in rubber shares has been huge, though profit-taking has led to some irregularity in prices. It is probable that the reinvestment of funds from this source has benefited Courtaulds, Dunlops, and other leading industrials.

THE COMMODITY MARKETS.

Business as a whole continues to show slight expansion, which is not, unfortunately, common to all branches of industry. The position on the Cardiff coal market, for instance, remains unsatisfactory, quotations having been weak for all classes. In iron and steel, however, a rather better tone has obtained this week, although business is still quiet, the pig-iron section remaining depressed, while demand for semi-finished materials is dull. In the cotton trade nervousness as to future values and restriction of credit continue to check any general expansion. The strong demand for wool during the last week of the London auctions has occasioned some surprise. Business in tops has been better, and inquiry in the woollen textile trade as a whole is expanding. The wheat markets have been dull, offers on Russian account being a noteworthy feature. Demand for sugar is on a restricted scale. Offerings of tea have been keenly competed for, but the coffee market is quiet generally. Rubber is active, and prices have advanced. Among metals tin is firm, copper irregular, and lead slightly easier.

FOREIGN EXCHANGES.

In the foreign exchange market, although business has not been heavy, there was considerable movement and interest throughout the week. The dollar rate, which weakened to \$4.83½ on the 2nd, and closed on that day at \$4.84, showed a decided improvement on the news of gold being shipped to New York, the rate moving up to \$4.84½, and by yesterday morning reaching \$4.84½. In view, however, of the monetary position in the two centres, it is unlikely that this improvement will go much further for the time being, and further gold movements may be expected. As was natural, forward quotations have again widened a little, from 1½ to 11-32 cent per month above spot. The French franc, as the result of M. Cail- laux's visit to America was gradually digested, showed a strong tendency to depreciate, the rate moving up from 104.25 on the 2nd to as high as 105.50 on the 7th. The further increase in note circulation and the rapid approach to the Bank of France's present maximum gave additional justification to this movement, which, however, was pulled up sharply by an official statement that the Government was determined, when it judged necessary, to use the Morgan credit to prevent any further running away of the rate. On this announcement the quotation receded to 104.45 on Thursday, and yesterday morning stood at 104.50. The most important factor in the immediate future of the franc, the effect of the recent negotiations on the question of the issue of a new French loan in New York, is at present obscure. Brussels, which stood at 108.10 on the 2nd, showed no decided movement until heavy buying in America, on the prospects of a new loan in London and New York, brought down the quotation sharply on Thursday to 106.70, the rate standing yesterday morning at 106.75. Forward rates in Paris have widened again to 47-50 centimes per month over spot. In Brussels they have moved from 5 centimes to 17-20 at 33.61½, as compared with 33.64, a slight reflection of announcements of improvements in Government finances Britain, has moved up from 120½ to 120½, probably as the result of uneasiness at the new outbreak of Fascist fervour. Copenhagen, at 19.97, as compared with 20.03, shows a slight improvement; Oslo at 23.95, as compared with 23.92½, a slight depreciation on the week. Of the more stable currencies, Amsterdam has moved from 12.04½ to 12.05½, Stockholm from 18.03 to 18.05½, Switzerland from 25.09 to 25.11½, Berlin from 20.33 to 20.34, Prague, Vienna, and Budapest remaining unchanged. Warsaw remains at 29, the recent strain being to a large extent removed, as the central bank now sells freely at the same rates as the market. Bucharest, at 1,010, pressed as to the sale of this year's harvest. In the East the rupee is unchanged at 1s 6½d, as is also the yen at 1s 8 9-32d. For the greater part of the week the silver market has been quiet, until a strong Indian demand on Wednesday drove up prices, but this was again followed

by a reaction. Hong Kong stands at 2s 5d, as compared with 2s 5½d, Shanghai at 3s 2½d, as compared with 3s 3d. In the South American market the main feature has been the further rise in Brazilian currency, reflecting the improved financial position of the country, the Rio rate moving up again from 7½d to 7½d. Buenos Aires has also improved from 45½d to 46½d, and Monte Video from 49½d to 50½d, Valparaiso, however, is unchanged at 39.70 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the three days ended October 3rd:—

EXPENDITURE.	(000's omitted.)	RECEIPTS.	£
Supply Services	4,350	From Revenue	7,936
Interest, &c., on Debt	20,737	Increase in Debt	10,844
Sinking Fund	157	Decrease in Balances	6,539
Sundries	75		
	25,319		25,319

Revenue for the three days ended October 3rd totalled £7,935,700, against £12,303,800 for the four days to October 4th last year. Property and income-tax yielded £4,397,000, against £5,050,000. Super-tax produced £270,000, against £310,000. Customs yielded £985,000, against £1,245,000, and Excise £519,000, against £865,000. The three days' operations increased the National Debt by £10,844,200, and caused the following changes:—

	(000's omitted.)	£
Public Department Advances ..	+ 14,500	
Bank of England Advances	+ 10,000	
	+ 24,500	
Treasury Bills	— 13,371	
National Savings Certificates ..	— 250	
Sundries	— 35	
	— 13,656	

The floating debt was increased by £11,145,000 to £786,266,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Oct. 3rd).

	£		£
Total Expenditure ..	405,225,629	Raised by Revenue ..	351,870,418
		Decrease in Balances ..	3,735,761
		Amount borrowed ..	49,619,450
Total	405,225,629	Total	405,225,629

ESTIMATES for FINANCIAL YEAR 1925-1926.

	£		£
Expenditure	799,400,000	Revenue	801,060,000
Surplus			£1,660,000.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies.—Clerical, Medical, and General Life Assurance Society, Goode, Durrant, and Co., and Sungkai Chumor Estates.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE PRIME MINISTER'S COMPLACENCE.

THE task which faced the Prime Minister when he rose to address the annual Conservative Party Conference on Thursday evening was not an easy one, but a careful reading of his speech shows it to be just the kind of situation which Mr Baldwin's particular gifts enable him to meet adroitly. His problem had several facets. He had first of all to soothe the growing uneasiness in his own party over four separate questions—Iraq policy, the Government's attitude towards Communism, the coal subsidy, and the lack of an unemployment policy (in connection with which there was an instinctive and unexpected protest at the opening meeting of the conference). For the benefit of the country at large, he had to put the best face upon a disquieting budget outlook, make the most of Mr Chamberlain's efforts for European peace, and generally to draw up a profit-and-loss account of his Government's operations satisfactory enough to satisfy

the great body of shareholders that their business was in the best possible hands. In the wide field of home and foreign affairs which he had to traverse there are many pieces of treacherous ground. But those who know best the weaknesses of Mr Baldwin's position will be the first to admit that his speech was as good, both in tone and in substance, as could be expected under the circumstances. It has glaring weakness, it is true, for his opponents to enjoy. But his Party, at any rate, even if disappointed, will realise with a sigh of relief that complacency is safer than the tariff panic with which the same speaker hustled them to the country so disastrously just two years ago.

Mr Baldwin struck at the very outset the note of complacency which ran through the whole utterance, for he started with a bold assertion of the Government's achievements:—"We work better than we talk. We are not even first-class window-dressers, but we do deliver the goods." They had appointed a Food Commission, in accordance with which they set up a Food Council which was bringing cheaper food. They had delivered pensions for widows. They were delivering houses. They were pursuing with success the policy of the pacification of Europe. It is easy to retort that the Government inherited the housing problem at a moment when the main difficulties had been solved, that any other Government would have tackled the pensions question, that the work of the Food Council is an almost negligible contribution in comparison with the sum total of national problems, and, finally, that Mr Chamberlain has yet, if we borrow Mr Baldwin's phrase, to "deliver the goods." We would, however, willingly concede this: that if Mr Chamberlain can come home with a really satisfactory agreement in his pocket, or even if he does nothing more than secure the entry of Germany into the League of Nations, then the Government will be able to claim an achievement which will outweigh minor criticisms, dwarf the Mosul issue—over which Mr Baldwin was at great pains to dispel anxiety—and induce the country to look with a lenient eye on the sundry blunders and weaknesses of Mr Baldwin's administration.
