Of some of these blunders and weaknesses Mr Baldwin's speech forcibly reminds us; others are discreetly ignored. It is a sign of grace, perhaps, that the speech contains no boasting of the merits of the Government's futile flirting with Protection. Perhaps the Party managers, remembering 1923, recommended him to resist the temptation. The nearest approach to tariff talk in the speech was a benediction of the campaign for buying British goods, which incidentally is the only idea in the whole statement of a cure for unemployment. But the blunder of the coal subsidy, hailed by his supporters as a surrender to industrial threats, and recognised by all as a death-blow to Budget equilibrium, Mr Baldwin could not avoid. His defence is a very thin one:—

Now I dislike a subsidy as much as anybody in this room. But if I might sum up in two or three words what made the Government take the line it did—it was not cowardice, it was not want of preparation—it was because they knew that an industrial struggle on a large scale, leaving out every other issue, would cost the country what the country to-day could but ill afford, and would set back the trade of the country, bad as it is in many places, by months and perhaps years.

The final choice, it is true, was between a subsidy and a great and costly strike. But that terrible dilemma might never have arisen had the Government been alive at an earlier date to the approach of the crisis. Pace Mr. Baldwin, as clear a case of unpreparedness as could be imagined. But that is past history. The important fact at the moment is that Mr Churchill risked a Budget with a precarious balance, and that the coal subsidy has upset it. What is the Government going to do? The answer is "economy." Mr Baldwin, having analysed the Budget, and narrowed the target for the axe, spoke of the work of the Cabinet Retrenchment Committee, and concluded:—"The Chancellor of the Exchequer is determined to make substantial reductions in the estimates next year." We welcome the words, and look to Mr Baldwin and Mr Churchill to fulfil them, even in the face of the unpopularity which the former correctly anticipates.

In one other direction Mr Baldwin's complacency seems to us to be dangerous. Following for once the lead of Mr Ramsay MacDonald, he assumed that Mr Lloyd

George's land campaign has been stillborn. Indeed, in one of those picturesque, but mixed metaphors that seem naturally to spring to the minds of politicians when they think of Mr Lloyd George, he described the policy as having "fallen as flat as a cold linseed poultice." It may be so; but we are by no means certain. Mr Baldwin had probably not had time to read the report of the Liberal Land Committee, which has been issued this week. If he had done so he would, we think, have realised that the report is a very forceful and serious political document, written with full knowledge of the arguments in favour of the present system which it meets temperately and with careful analysis; and that while it contains some traces of a propaganda document, it makes a very strong case for a drastic agricultural policy. On the detailed schemes which the report itself suggests, we shall have something to say later. The Committee do not themselves put their plan forward as final or "as though it were not capable of amendment and improvement." Indeed, on the very first page of the report "constructive criticism and practical alternatives are invited." But Mr Lloyd George's proposals cannot be ignored or brushed aside—least of all by the party which has always prided itself on being the friend of agriculture. They may be met with an alternative policy; the Conservative party will make a profound mistake if they think they will be safe in doing nothing.

Possibly, however, of all the subjects touched upon by the Prime Minister, the one in which his particular audience was most interested was Communism. On this point we find Mr Baldwin's statement correctly balanced. Freedom of speech is a prized possession. But seditious utterances, where dangerous to the community, will be dealt with. It is the Government's duty to maintain law and order and to protect the interests of the community in times of industrial trouble. But, just as the country will not be "Russianised," so it will not allow itself to be "Prussianised." Indeed, Mr Baldwin's position might be described as "maintenance of law and order, but no Mussolini tactics for Britain." This statement does something to remove the bad impression created by the Home Secretary's flirtations with Fascists. It is the common-sense view; and commonsense, provided it is not too much diluted by complacency, is perhaps the first quality the country looks for in a Conservative Prime Minister. When far-reaching reform or hustle are in demand it usually looks elsewhere.

THE WEEK AT LOCARNO.

THE ban of silence has been rigidly imposed at Locarno, and the cohort of special correspondents assembled there is reduced to mere columns of speculative comment on the fact that M. Briand visited Dr Luther at Ancona, or that Dr Stresemann called on Mr Chamberlain at his hotel and talked with him for two hours. The official communiqués are equally barren, though one of the latest, by recording that at the fourth meeting of the conference there were discussed "questions raised by the participation in the League of Nations of the eventual signatories of the Security Pact," indicates that one of the turning-points of the whole negotiation has been reached. A certain confidence, for which there is no very visible ground, has appeared to exist in official circles here that Germany had no real intention of insisting on her objections to Article XVI. of the Covenant. Articles in the German Press lend no colour to that theory, and the early reports from Locarno, so far as they suggest anything at all, suggest that there is still a serious obstacle to be surmounted in the "right of passage" question.

If German exigencies were pressed beyond a certain point there would be nothing but deadlock pure and simple in prospect, for the three or four Allied Powers gathered at Locarno have no power, even if they had the will, to give any reliable assurances as to an amendment of the Covenant. One obvious way round the difficulty would be to undertake to co-operate with Germany, once the latter is a member of the League, in remodelling Article XVI.—no very difficult task—and another still

simpler, would be to acquiesce in a declaration by Germany that under certain circumstances she might feel it necessary to use her right of veto as a council member against any proposal involving the passage of foreign troops across her territory. Since the danger she fears is hypothetical, for no Power would ever dream of trying to cross Germany without Germany's full concurrence, such a general declaration would be open to no real objection.

The second obstacle, the relation between the Eastern and Western treaties, has also apparently been reached. It has certainly been raised in the personal conversations, if not in the formal sessions of the conference. Here real difficulties emerge which may need more hard thinking yet. It is reported, on no particular authority, that the French thesis that the Eastern treaties must be concluded at the same time as the Western has been accepted by the German delegation. That is probable enough, for there has never been the smallest prospect that France would consent to bind herself in the West till a settlement had been arrived at in the East, and, if there really existed on the German side, as the original Note of February indicated there did, a willingness to conclude treaties in the East there can be no reason why they should not be concluded forthwith.

With Dr Benes and Count Skrzynski both at Locarno, the character of the Eastern treaties and the question of their guarantee by France must come under immediate discussion, if, indeed, that has not happened already. The situation has its interest from more than one aspect. What, for example, will be the attitude of Mr Chamberlain regarding these Eastern treaties? They cannot fit adequately into the Locarno scheme of things at all unless they are of the comprehensive type, providing, that is to say, for the peaceful settlement of any kind of difficulty that may arise. Binding arbitration on justiciable questions only would go a very short way towards ensuring peace, for it is precisely those broader questions which the Germans propose to submit to a conciliation process without binding effects that threaten peace in Eastern Europe. The British Foreign Minister can hardly fail to share the view of his French and Polish and Czechoslovakian colleagues on that point, and it may be hoped that no considerations of mere consistency will prevent him from pressing on others arbitration obligations which he declared at Geneva he would never permit his own country to incur.

There remains the question of guaranteeing the Western Treaties. All things considered, it will be a misfortune if France insists on pressing her demands in regard to this. Germany may well object to an arrangement which gives her traditional enemy the unfettered right to decide whether or not a *casus foederis* under a treaty to which France herself is not a party has arisen. On the other hand, there is something to be said for the contention of France and her Eastern allies that the ordinary operation of the League Covenant is not enough, in that decisions by the Council might not be sufficiently rapid, and in any case a single adverse vote could invalidate them. The best course for the Locarno negotiations would be to try and find some basis for a temporary compromise. More and more all such questions as this must be brought directly under the League, and, despite the fate of last year's discussions at Geneva it is becoming increasingly evident—that some agreement going a little beyond the Covenant, if not so far as the Protocol, must be worked out. With Germany as a member of the League, there will be a better prospect of progress in that direction than there ever was before. In the meantime, some individual guarantee, limited both in scope and in duration, of the Eastern Treaties might be possible.

On the whole, the omens at the end of the first week's discussions at Locarno look reasonably favourable. No one could have expected rapid progress, in spite of the useful preparatory work done by the jurists in London. Two elements of uncertainty still remain, the extent of the influence of German public opinion on Drs Luther and Stresemann and the effect of M. Tchitcherin's rather mysterious interventions. As to the latter point, there may not be so much mystery after all. There is no reason to accept the unlikely story that the Soviet Commission

had captured Count Skrzynski, who agreed to propose at Locarno that Russia be forthwith brought into the discussions. What is manifest is that M. Tchitcherin has done everything possible to make trouble at Berlin, but the signs are that he has achieved only very limited success in that endeavour. Germany is certainly violating neither the spirit nor the letter of the Treaty of Rapallo in any agreements she contemplates with the Allies, and though the German Nationalists seem ready to welcome any ally, there is too violent a contrast between their tenets and M. Tchitcherin's to make them permanent or congenial bedfellows.

The chief ground for misgivings about Locarno is the fact, if it be a fact, that the German Ministers, unlike most negotiators who go into conference, can quite well afford to go home without any agreement at all. Such an outcome of the discussions would be hailed with satisfaction by the Nationalists, and there is no decisive evidence so far that it would provoke an outcry in other quarters. On the other hand, the Chancellor and Foreign Minister are not Nationalists themselves, and nothing would suit their general policy less than to go home and have to cast themselves on the support of the Right. Germany, moreover, there seems reason to believe, is at heart more anxious for the success of the Locarno negotiations than the Press as a whole would indicate. For the industrialists in particular an agreement at Locarno means credits, and credits mean employment. While, therefore, none of the Locarno reports give much solid ground for optimism, the balance-sheet of the first week comes out on the whole on the right side, and the imponderables are telling in the main in favour of agreement.

THE FOREIGN LOAN EMBARGO AND THE NATION'S SAVINGS.

THE question whether the so-called "embargo" on foreign loans should be modified or removed has become an absorbing topic of discussion in City circles. The light which this unofficial censorship throws on the "balance of power" in Lombard street makes it one of the most interesting episodes of post-war history. Neither the Government nor the Bank have a shred of authority to prevent the issue of any loan whatever; yet the issuing houses—appreciating in the main the reasons for the policy of restriction—have followed so completely the wishes of the Bank, in spite of the loss to themselves, that our record of new issues shows not a single foreign issue this quarter, and for a long time past has only included those loans approved by the Bank. The embargo is, however, by no means a purely City affair. If the general opinion in favour of its removal prevails, on the one hand, a stimulus will undoubtedly be given to our export industries; but, on the other, there may be a shortage of capital, and interest rates rise to the prejudice of home industrial borrowers. The public is much interested in the balance of these advantages and disadvantages, while the City has the added interest of wishing to see financial business returning to London. It is, therefore, very pertinent to inquire to what extent the nation's savings are sufficient to enable us to resume the lending of money abroad.

It is not easy to make an estimate of post-war savings. Before the war, estimates were based upon information obtained in the Census of Production of 1907. Until we have a new census we cannot make a direct calculation with the same degree of assurance. A comparative estimate may, however, be attempted. The Census of Production estimated the total national income at about £2,040 millions, and savings at £335 millions, i.e., about 16½ per cent. saved and 83½ per cent. consumed. Assuming these percentages still applied in 1913, the figures for the year were about £2,300 millions, of which £380 millions were saved. We have from time to time given reasons in the *Economist* for thinking that last year the production of goods and services in the country was about equal in real values to the production of 1913; it was, of course, deficient in not having increased in pro-

portion to the increase of population. Consumption, on the other hand, certainly rose with the growth of numbers. If consumption *per head* was as great as before the war, the 83½ of 1913 would have become nearly 90 in 1924. In view of the large amount of unemployment, it is possible that consumption *per head* was not quite up to the pre-war figure (statistics of consumption of tea and sugar *per head* have risen, beer is down, meat, according to the Food Commission, slightly down); it cannot be far below it. If production is still only 100 compared with 1913, the margin of saving cannot be more than, say, 11 per cent. We may estimate the national income in money in 1924 as slightly over £4,000 millions. Savings last year must, therefore, have been in the neighbourhood of £450 millions. They ought to have been £650 millions if they had kept pace with the higher level of prices and the increase in population. This method of calculation is, of course, very rough. The pre-war estimate had wide margins of error—the Census of Production figures, for example, being quoted as between £320 and £350 millions—and the margin of error of the above figure is naturally much wider. But the general result is confirmed from other sources.

(a) The premium income figures of the life insurance offices, a very important form of saving, have risen from £48½ millions in 1913 to £82½ millions in 1923, and are probably £85 millions in 1924, an increase of over 75 per cent.—i.e., they have risen a little more than in proportion to the fall in the value of money.

(b) New capital issues, excluding Government issues (which in recent years have usually been conversions, and not new borrowing), have for the last two years been at the 1913 level—viz., £194 and £196 millions respectively in 1923 and 1924, against £196 millions in 1913. Out of this total, however, the percentage issued in respect of the Dominions, Colonies, and foreign countries has fallen, the actual analysis of the figures (excluding British Government borrowing) being as follows:—

	(Million £.)			
	1913.	1923.	1924.	1925 (9 months).
Home issues (other than British Government) ..	36	56	71	81
Dominion and Colonial ..	76	93	72	35
Foreign	84	45	53	6
Total	196	194	196	122

(c) Resources placed to reserve by public companies in the quinquennium since the war have increased in money; but the ratio of these reserve allocations to total capital remains nearly the same as in the quinquennium before the war. They have, of course, varied considerably from year to year, as the following figures show. The figures are from our quarterly figures of company profits, and the figures for each year (which refer to reports issued in the year in question and not on the profits made in that year) are based on the total of the companies' reports available to us:—

Year.	Proportion of Profits Added to Reserves.	Ratio of Reserve Allocations to Total Capital.
Annual Average, 1909-13.....	24½	2.3
Whole year 1919.....	33½	4.3
" " 1920.....	34½	6.0
" " 1921.....	19	2.0
" " 1922*.....	— 9½	— 3
" " 1923.....	20	2.0
" " 1924.....	21	2.3
1925 (6 months).....	21½	2.3

* The withdrawals from reserve in this year exceeded the additions.

It is not possible to generalise as to how far the nominal capital of the joint-stock companies of the country has been written up in proportion to the fall in the value of money; it seems likely that it has risen, but not quite as fast as average prices. The increase has occurred through the issue of bonus shares; through the fact that when amalgamations take place the companies which are absorbed are bought at their current market value, which takes into account the appreciation of property, &c., and not on the basis of their nominal capital; and as a result of the fact that large numbers of private concerns have formed themselves into joint-stock companies, and have, therefore, been capitalised on a post-war, and not on a pre-war,

valuation of their assets. In all these and other ways there has doubtless been some writing up of nominal capital in relation to real assets in joint-stock companies as a whole. When, therefore, we find that the amount placed to reserve remains a constant proportion of nominal capital, it follows that the total placed to reserve has also increased in total amount, but not as fast as the fall in the value of money. It is to be observed that the total savings made by companies and firms, which are, of course, much more than those shown in the published balance-sheets as having been added to reserves, are undoubtedly the largest item of saving in the country. Judging from these three items, it seems reasonable to assume some increase in the money value of the total savings of the country.

Subject to all necessary qualifications as to the method of calculation, we may take the figure of £450 millions as the basis of discussion. Before the war home investment took rather more than half of our savings—probably £200 millions out of £375 millions. If home industry requires capital on the same scale as before the war, it should get at least half of £650 millions, i.e., £325 millions a year. This would mean we should only have £125 millions to lend abroad—a figure which would seem to justify a stringent refusal of applications by foreign and colonial borrowers.

This argument, however, overlooks certain facts. National production is not expanding as fast as before the war. Even the rate of increase of population is reduced. Again, our plant and machinery is more adequate for present production than in 1913. Indeed, many trades have excessive equipment. The reduction of costs which is needed to enable us to regain our export trade will not come mainly from new capital investments but from increased output per worker, improved administration in the factories, the prevention of unnecessary overlapping between firms, and arrangements which would enable firms to specialise and get maximum outputs from the best factories. This does not mean that electrical development and the use of power, &c., is not urgently needed; but it is a mistake to suppose that our first necessity is to rebuild or expand all our equipment. The conclusion from this is that we can make a great industrial recovery with a much smaller investment than the £325 millions a year just mentioned, and that our total available for foreign investment is substantially larger than the £125 millions referred to.

But there are certain other important considerations regarding the embargo. In the first place, it is not necessary to put on an embargo to ensure that capital flows into industry at home. Industry in the main feeds itself. The enormous sums placed to reserve by businesses which build up capital out of profits are in no danger of going abroad. Foreign competition for capital only comes in to the extent that our industries are compelled to go on the market to make public new issues of capital. It is not likely that our industrial development will be checked by lack of capital. The danger of a great increase of foreign borrowing is of a different kind, namely, its upset to the money market if it came too suddenly. Again, our most depressed trades are the export industries. Foreign investments would give them a direct stimulus and produce a better balance in the economic activity of the country. There is much to be said for giving them this fillip even if it limits the expenditure of new capital for internal purposes such as road building, the erection of distributing emporiums, &c.

The strongest argument against an embargo is, however, its inefficiency, for as at present administered there is no means of preventing our capital going abroad by the purchase of existing foreign securities. The flotation of loans in New York and their subsequent sale in England gets round the intentions of the embargo and merely denies to English issuing houses their profit on the issues. For these various reasons there is general expectation that before long the embargo will be relaxed, or lifted altogether. There is something to be said for the argument that this should be done by degrees. But this would put the Bank of England in the invidious position of having to decide between conflicting borrowers and to allocate the opportunity of profit to various issuing houses. On the whole, therefore, the probabilities are that it will soon be lifted altogether.

THE COMMERCIAL WAR IN UPPER SILESIA—I.

(BY A SPECIAL CORRESPONDENT.)

KATTOVICE.

THE commercial war which has been raging in this industrial area of Poland for several months is increasing in severity. It threatens to cause much distress during the coming winter, and set up forces which will produce reactions beyond the borders of Upper Silesia. In the extent of its mineral resources and industrial wealth, Upper Silesia, when intact, was comparable to Alsace-Lorraine and the Ruhr. Its population, before partition, was over 2,000,000.

To appreciate the present complications it is necessary to give some explanation of the contributory causes, which also serve to illustrate some of the economic drawbacks brought about by the Peace Treaty. Germany was absolutely convinced that Upper Silesia was necessary for her economic existence. She could not pay Reparations if deprived of her cherished province. Poland was equally certain that without Upper Silesia she could never hope to attain an independent industrial existence. These material claims were backed up in each case by the assertion that the majority of the inhabitants would prefer in the one case to remain with Germany, and in the other to join Poland.

Although President Wilson and M. Clemenceau were against submitting the future of the province to self-determination by the people, Mr Lloyd George succeeded in getting provision introduced in the Treaty for a plebiscite, although resistance to this course was kept up by the representatives of France and Poland, who stoutly maintained that the decision of the people was a foregone conclusion and the plebiscite a waste of time.

After much delay over preliminaries, followed by intrigue, local disturbances and insurrections, the plebiscite took place a year after it had been decided upon. The result was that 60 per cent. of the population voted in favour of remaining with Germany and 40 per cent. in favour of joining Poland. As the races were inextricably mixed, and the voting was by communes, new disputes and difficulties arose, and another struggle began in regard to fixing the dividing line, with more riots, more insurrections and general ferment. It is not necessary here to go into the means by which the partition was ultimately arrived at, but only to point out that in the end Poland was allotted 80 per cent. of the coal, all the zinc, representing one-sixth of the world's output, all the lead mines, 90 per cent. of the iron ore mines, and the chief industrial centres, although these had given a majority in the plebiscite in favour of Germany. In the largest and richest industrial centre of the province, containing the towns of Königshutte and Kattowitz, there was a German vote of 129,000, and a Polish vote of 99,000, but the whole area was assigned to Poland. The future interests of Poland were also well looked after, as 90 per cent. of the coal reserves fell to the new State.

Referring to the allocation of the preponderating share of mineral wealth which was allocated to Poland against the popular vote, Mr H. J. Paton, the Oxford professor, who was on the British staff in Upper Silesia during the plebiscitary period, in a paper read before the British Institute of International Affairs, says that "no German can ever believe that this decision is in accordance with justice or with the provisions of the Treaty of Versailles." This feeling rankles in the minds of the Germans to-day.

The new redistribution of mines and industrial establishments need not necessarily have been fatal to the continued prosperity of the area, but accompanying conditions have to be reckoned with. The new frontier line, besides dividing a district which had always been an economic unit, did something more. It cut particular establishments in two, with the result that you find the shaft of a coal mine in one country while the pits are in another; smelting works on one side of the border and refining works on the other; steel works and engineering works cut away from their source of electric power and separated from their administrative offices and residences of managers,

&c. The area was served by a network of narrow-gauge railways; they were cut in 17 places. Lines had to be diverted and new roads constructed. A town was cut off from its source of water, and had to find a new supply, and so on.

An elaborate Convention, almost as long as the Peace Treaty itself, was entered into in the hope of overcoming the difficulties produced by partition, so as to maintain the means of communication and inter-exchange of goods with as little interruption as possible. There were optional clauses which, in every case, have been taken advantage of to enable one or other of the countries to escape from the conditions in the Convention. One most important optional condition was that Germany would be able to draw coal supplies from Polish Upper Silesia; but in the middle of June last, when the optional period expired, Germany declined to accept any more Polish coal.

With a large amount of goodwill on both sides, the necessary expense involved by these changes might have been met and the inconveniences caused overcome, but, as has happened all over the new Europe, tariff barriers have been raised in order to make the interchange of commodities as difficult as possible. In the frontier of about 200 miles there are, I believe, 50 Custom Houses. You cannot drive any distance without being held up by Custom officers. Passengers in the tramcars which run between Beuthen, just over the border, and this town are held up at the frontier, and must submit to a strict examination, and sometimes a search.

Another factor bearing on the commercial war should not be overlooked. The economic conditions in Europe have completely changed in perspective since the plebiscite took place. Germany is no longer so dependent on Upper Silesia. She has a stable currency and a rapidly reviving industry. She is able to penalise Poland without injuring, to any great extent, her own interests. We have, therefore, this contrast—that, whereas before the war there was an easy and profitable interchange of products between Upper Silesia and the rest of Germany, that commerce, so far as the Polish section of the territory is concerned, has to a large extent been cut off, and Poland is unable to find new markets capable of absorbing her surplus coal and manufactured articles. Formerly the commercial intercourse was chiefly with the West. Germany took the bulk of the Upper Silesian coal and coke, all its zinc and lead. As the local iron mines were becoming exhausted, Upper Silesia drew supplies from other parts of the Empire, including large quantities of scrap, which Germany, under the Treaty, is obliged to supply for two more years. Machinery came from other parts of Germany. It was expected that until such time as Poland was able to establish her own industries and develop her territory the dependency of Germany on Upper Silesia would continue.

I have indicated briefly the circumstances which led to the disruption of Upper Silesia and the dislocation of some of its industries. Besides these political and economic sources of friction and loss, there are racial and psychological elements to be taken into account. Political differences between the two races—German and Poles—before the war did not interfere with efficiency of production. Now they are divided into four hostile camps—two on each side of the new frontier, and the Mixed Commission set up by the League of Nations under the chairmanship of an exceptionally able Swiss, M. Colander, whose impartiality every one recognises, is occupied in protecting the interests of the minorities. In many localities on the Polish side the Germans are frequently in a majority, but they are governed by Poles as towns are still denied self-government. Everywhere there is an atmosphere of suspicion; there are plots and counterplots, and frequent disturbances.

The big estates, the mines, and the industrial undertakings in Polish Upper Silesia remain in German hands. The landowners and the directors of companies have become Polish citizens. They have changed their nationality without changing their sympathies. They remain Germans, and are far from being reconciled to the new régime. The miners and other workers, while maintaining their separate political and trade organisations, are not such violent racial partisans as are the officials and politicians. The Polish Government, while it recognises that it has an

insuperable task to turn the present generation of Germans into loyal Poles, carries on a Polonising campaign with great vigour. It is extending the Polish language in all official matters, and insists on Poles being introduced in all German-owned undertakings as directors, managers, engineers, foremen, &c. The Poles tell me that it is necessary in the interests of the State to have loyal Polish citizens inside all private enterprises. The Germans dislike having Poles foisted upon them as directors or in responsible positions. They have no alternative but to give way to official pressure, otherwise their interests would be prejudiced as the Government has various ways of making things uncomfortable for them. They declare, however, that the Poles whom they are obliged to introduce into the management of their works are not efficient, and that production suffers. Although there has been a little introduction of Polish and French capital in Upper Silesian undertakings, 80 per cent. of the total capital in registered enterprises is German.

In another article I will describe the unfortunate results which have overtaken Upper Silesian industries from the accumulation of causes which I have outlined.

LONDON PROPERTY COMPANIES.

THE war produced sad havoc with our ideas of values. And nowhere could more chaotic conditions be found than in the land and property market. Grievous restrictions were laid upon those who possessed real estate. It is no place of ours, in this article, to discuss the rights or wrongs of these restrictions. It is sufficient to say that probably these restrictions put the housing problem in this country back many years. The reflex action of these restrictions was to discourage people generally from investing in anything appertaining to bricks and mortar. It is generally considered that it was in the nature of a liability to be compelled to buy a house to live in, and it was usually looked upon as a bad investment. Naturally, in these circumstances there have been few companies formed since the war with the object of building and letting.

Those London companies, however, which carried on through the period of high building costs and other adverse circumstances are now beginning to show a steady improvement. Repairing costs are lower, and if in some cases there is not a continuity of the heavy demand for housing and office accommodation, and people are no longer paying heavy premiums, conditions have become sufficiently good to enable us to look back with satisfaction over the past twelve months. In the group of representative London property companies which we examine in the following tables, it will be seen that the steady progress which has been going on since 1921 is, on the whole, well maintained.

Our first table shows gross receipts and net profits, after payment of debenture interest, in the past four years:—

Name of Company.	Gross Receipts.				Net Profit After Payment of Debenture Interest.			
	1921.	1922.	1923.	1924.	1921.	1922.	1923.	1924.

In the majority of cases gross receipts are higher than in 1923, notably as regards the City of London, the Consolidated London, and the Wembley Park companies. The principal decline took place in the figures of the Artisans, Labourers', and General. In only three instances—the Metropolitan Industrial, the Metropolitan Association, and the Artisans', Labourers', and General, were the 1924 receipts less than those of 1921. As regards net profits, however, they are better in every case,

compared with 1923. Here again the City of London has done very well, its net profit having advanced from £484,792 in 1923 to £544,429 last year. The Consolidated, too, had a good experience, while, in spite of the reduction in its gross receipts, the Artisans' net figure rose from £145,870 to £146,148. The Law Land's profits show a satisfactory increase of from £47,899 to £52,436, while City Offices continues to progress well, and the Wembley Park Estate appears to be developing satisfactorily. The gross receipts of the last-named concern amounted in 1924 to £8,644, compared with £6,562 twelve months previously, and the net profit increased from £4,718 to £6,522.

Our next table shows the total available balance after payment of debenture interest, and how it was utilised:—

† Also 3 ordinary shares for every 100 held. (d) Also 4 ordinary shares for every 100 held.

There is little need for comment on the foregoing figures. The Consolidated London has increased its reserve appropriation from £12,969 to £20,253. On the other hand, the Artisan's reduced its allocation to reserve from £31,000 to £20,000, while the Metropolitan Industrial, which in 1923 reserved £2,849, on the present occasion makes no provision. The Law Land's reserve was augmented by £19,934, against £14,000. In 1923 the Wembley Park drew upon its realisations suspense account to the extent of £6,000, but the better results achieved last year enabled the withdrawal to be lowered to £2,500, leaving the total of the fund at £14,058. In the report of the Pinner's Hall it is stated that "The Inland Revenue authorities have served upon the company a further notice of assessment to income-tax under Schedule D, since the issue of the last report, and the total claims now amount to £17,310. There is no change in the attitude of the directors towards these assessments, which is that they dispute any liability." It is obviously impossible to say whether, in the interval, any agreement has been reached, but shareholders will probably be acquainted with the full facts of the case when the next report is issued at the end of the year.

The following table shows balance-sheet totals for the past two years, together with an analysis of principal liabilities and assets of a number of property companies:—

1924.....	110,768	89,679	..	12,917	45,827	638	63,762

During the year the City Offices increased its obligations under the heading of loans by means of a bank loan of £12,000, but the City of London reduced deposits and loans from £241,794 to £156,327. The Law Land capitalised a portion of its reserves, and distributed four new ordinary £1 shares to holders of every hundred ordinary shares. This entailed the issue of 8,340 ordinary shares. Mortgages have been reduced from £501,848 to £481,047, although an increase occurred in temporary loans from £17,150 to £20,705. The Warner Estate reduced mortgages from £236,882 to £211,059, and wiped off £8,006 on account of temporary loans.

Changes in the value of properties have been of only small amount, though the Warner Estates' figure has declined from £913,063 to £880,638, the result, presumably, of the sale of some of the company's properties which, we are told, were of a type entirely different from its standard, and which have always been considered as outside its general scheme. The report (dated May last) also states that "it is intended to take power to subdivide the preference shares, which will enable the company to convert its preference capital into shares of the nominal value of £1 each, a form of share now generally accepted as being more convenient than any other, also to increase the company's capital to £600,000 by the creation of 75,000 ordinary shares of £1 each, and 25,000 preference shares of £1 each." It is further proposed to capitalise a portion of the accumulated reserve, and to distribute the new ordinary shares to the present ordinary shareholders in proportion to their respective holdings. Movements under the heading of creditors are by no means uniform, but the majority of movements in debtors is downward, although there was an advance from £947 to £5,259 in the case of the Artisans.

Our concluding table shows the dividends for the past three years, also comparative prices of ordinary shares and stocks and present yields:—

Name.	Dividends Last Four Complete Years.				Prices of Shares or Stock End of September.				Present Yield.

* Mean price between high and low. † Free of income-tax.

The only instance in which shareholders have had to suffer a reduction is the Wembley Park, on whose £1 shares the dividend was 10 per cent., against 12 1/2 per cent. for 1923, and at which the yield is £8 per cent. Judging by the balance-sheet figures, the dividend cut was more a matter of precaution than of necessity. The Artisans paid an additional 1 per cent. at 6 per cent.; City Offices declared 21s per share, compared with 18s per share; while both Consolidated London and Metropolitan Industrial distributed 1 per cent. more at 11 and 6 per cent. respectively. Pinner's Hall paid 8 per cent., against 7 per cent. for 1923. During the 12 months share values have risen all round, but some of the yields, it will be seen, are still very generous.

London property companies form an excellent sphere for consideration by careful and conservative investors. There are certainly no big plums ripe enough to fall into investors' mouths. But against this has to be placed the steady and practically assured income which property produces. Indeed, for many years to come fresh companies will not be able to compete with the existing ones owing to building costs. It may be possible that some enterprising speculators will purchase a few of the more modern blocks of buildings and float public companies. Indeed, it is perhaps surprising that London property trusts in the form of public companies are not on a much larger scale. We, of course, have the recent strange combination of pills and property, but a financial Napoleon of London property has yet to arise.

THE CO-OPERATIVE POSITION.

(BY A CORRESPONDENT.)

FOLLOWING the estimates as to co-operative trade for 1924 given in our issue for June 6th, we are now able to give the exact returns, which closely confirm the earlier figures. There are now 1,314 retail co-operative societies of all types in Great Britain, the membership of which was increased by 133,817 to 4,752,636 at the end of last year, this being the largest increase since 1920. The share capital is £91,926,203, and the trade stocks totalled £34,267,027, while the retail trade of the movement rose by nine and a-half millions to £175,077,825.

Of the 1,314 retail distributive societies, two have memberships of over 100,000, and the average number of members per society is 3,579. 872, or 66 per cent. of the total have less than 2,000 members each, and 643 have less than 1,000 members. 36 per cent. of the total membership is in the 45 societies, with more than 20,000 members each. The largest societies—our figures are for the end of 1924—are London (117,266 members); Woolwich, 109,535; Leeds, 94,299; Barnsley, 70,636; Edinburgh, 66,765; Liverpool, 63,874; Plymouth, 62,266; Birmingham, 55,247; and Newcastle-on-Tyne, 55,096.

The whole co-operative movement now has 111,820 workers engaged in distributive departments and 95,391 in its productive departments and works, the salaries and wages for the twelve months being £14,650,696 and £10,946,291 respectively. The percentage of total employees to the membership of the retail distributive societies is now 4.16 per cent., as compared with 4.13 per cent. at the end of 1921 and 4.08 per cent. in 1923. So that, roughly, the co-operators are employing rather less than 5 per cent. of their own members. The retail societies, as distinct from the wholesale and the productive societies, had 134,419 workers, whose aggregate wages bill was £17,534,892. Of these, 34,658 were engaged in production—bread making, boot repairing, &c.—and their wages were £4,772,260, or an average of £137.7. There were 99,761 engaged in distribution, and their wages were £12,762,632, an average of £127.93. The average sales per distributive employee were £1,755, as compared with £1,690 in 1923 and £1,741 in 1922, while the distributive wages cost per £ of sales has decreased from 19.14d in 1922 to 18.47d in 1923 and 17.5d in 1924.

Looking at the trading results, the total retail sales in Scotland were £34,428,938, the average purchases per member being £52. In Lancashire and Yorkshire the sales were £36,289,651, or £35 7s 6d per member. In the counties of Durham and Northumberland for the month the purchases rose to £43 10s per member, while in the Western counties of Wiltshire, Dorset, Devon, and Cornwall they fell to £26 11s, and in London and the Home Counties to £28 11s. Taking the country through, the average purchases per member were £37 5s, this being £1 higher all round than in 1923, but slightly below the average for 1922.

There are 105 co-operative productive societies (exclusive of the wholesale societies). They have a share capital of £1,590,089 and loan capital of £1,481,784. The wages bill of their 11,368 workers was £1,338,353, and the trade for the year £5,425,660, upon which a surplus of £363,734 was made. The average wages of their workers was £117.73 last year, as compared with £140.95 in 1920 and £125.25 in 1922. Similarly the value of the output per worker has fallen from £777 in 1920 to £493 in 1922 and £477 in 1924, while the wages cost of production per £ of sales rose from 3s 7.5d in 1920 to 5s 0.9d in 1922, and dropped to 4s 11.2d in 1924.

In the English and Scottish Co-operative Wholesale Societies the output per productive worker fell from £1,057 in 1920—the year of high values—to £790 last year, this being £323 in excess of the average output of the people engaged in the productive societies, and affords an illustration of the difference between small and large institutions, while the wages cost of production per £ of production was 3s 2.81d in 1924, as compared with

2s 9.52d in 1920 and 3s 5.74d in 1922—an equally significant illustration of the lessened cost of production on a large scale.

On its aggregate trade—retail, wholesale, productive societies, distributive federations, and supply associations—amounting to £281,950,901, there was a net profit of £21,396,596, £3,959,674 was paid as interest on capital, £150,250 devoted to educational purposes, and £119,596 donated to hospitals, charitable institutions, and the like. There have been steady increases in the output of the productive works and a more sustained loyalty on the part of the bulk of members. Share capital has increased, and the debts owing to societies by members for goods supplied have declined from £2,828,034 in 1923 to £2,800,110 at the end of 1924, an average of 12s per member. In this connection the South of England has the clearest record, with an average of 3s 4d per member, while in South Wales it has risen to £3 1s 6d—mainly owing to the last miners' dispute and the present industrial depression. This prospering review of distributive and manufacturing operations is in striking contrast to the results of the farming by co-operative societies. There are 157 societies carrying on farming and supplying milk, meat, and vegetables to their members, as well as doing general farming work. They own 64,206 acres and rent 8,590 acres. £2,130,610 is the amount of the capital invested in land; another £931,880 is invested in implements, stock, &c., and £19,193 is paid in rent. After paying £124,520 as interest on the capital involved, there was a surplus of £14,305 on some of the farms and a deficiency of £86,236, leaving a net loss on the year's transactions of £65,931. Now, for the first time, the Co-operative Union is seriously examining the position, and has set up an agricultural department to advise societies as to the practical work of organising the market, as well as securing the harvest.

THE OLD LADY OF THREADNEEDLE STREET.

(FROM A CORRESPONDENT.)

OF the many curious nicknames current in the City of London by far the most famous is the title of "The Old Lady of Threadneedle Street," by which the Bank of England is familiarly described. To most of those who pass their daily lives close to its walls, it has perhaps never occurred to investigate the origin of the nickname. To some again it may appear easy of explanation. For those who from time to time find themselves in sharp disagreement with the policy of the Governor and the Court of Directors, may incline to see in it nothing more than a natural expression evolved from a supposed record of weakness or incapacity. The majority, however, who regard the history and administration of our central bank with the respect which it deserves, will look farther than this for the true derivation of the nickname which has become a household word.

How it originated, it must be confessed, has not yet been determined with finality. Various ingenious explanations have been offered. One of these is given by Brewer. "The directors of the Bank of England," he says, "were so called by Wm. Cobbett because, like Mrs Partington, they tried with their broom to sweep back the Atlantic waves of national progress." Who Mrs Partington was, or where the incident occurred, are still matters of dispute. The lady was, however, immortalised by Sydney Smith in his brilliant attack upon the House of Lords in 1834 for their refusal to accept the Reform Bill. It is at least possible that Cobbett, who had no love for bankers and their works, may have borrowed the phrase for a last jibe at the Bank of England.

Another writer lends plausibility to the case for Cobbett's authorship by suggesting that he owed it to an actual incident which occurred during his life-time. In 1809 a bank clerk was hanged for forging the signature to a transfer warrant. His sister, with whom he had lived, was so deeply affected by his dishonourable end that her mind became unhinged. For long she paid daily visits

to the bank's pay counter, always inquiring: "Is my brother, Mr Frederick, here to-day?" The clerk invariably replied: "No, miss, not to-day." At this she departed, always adding: "Oh, well, give him my love when he returns. I will call again to-morrow." She was known, from the style of her dress, as "The White Lady of Threadneedle Street." "I am inclined to think," says this writer, "that it was from her accepted nomenclature that Cobbett improvised his now well-known reference to the bank itself as 'The Old Lady of Threadneedle Street.'"

But, still assuming that Cobbett first gave currency to the phrase, there is indisputable evidence that it was in use at least twelve years before this clerk was hanged. At the beginning of 1797 Parliament, at the instance of Pitt, passed a Bill suspending cash payments at the bank. This moved Gilray to draw his famous cartoon, which shows an old lady, seated on a chest labelled "Bank of England," being savagely attacked by Pitt. It was published on May 22, 1797, and is entitled: "Political Ravishment, or The Old Lady of Threadneedle Street in danger!"

At this point the more recent authorities ignore the case for Cobbett's authorship of the phrase; nor do they inquire into the immediate circumstances in which it came to be used in Gilray's cartoon; for they put forward evidence which, they declare, suggests that it was current notably before Cobbett's and Gilray's time. As early as 1695 a medallion appeared, and still appears, on the Bank's notes. It consists of a seated, draped figure, with the head uncovered, holding a sprig in one hand and a spear in the other; and throughout more than 200 years it has remained substantially the same. "In this medallion," says a writer in a recent number of the Bank's staff magazine, "if only by reason of the extraordinary persistence of the essential details, we have a perfectly reasonable explanation of the origin of the phrase, 'The Old Lady of Threadneedle Street.'" Moreover, he adds that it is not unlikely that the medallion was the Bank's sign when signs were universally used, and that in the archives there are old letters addressed to the Bank "at ye sign of the (Old) Lady in Threadneedle (or Threadneedle) Street." On the whole, the medallion provides the most acceptable explanation of the origin of the familiar phrase so often attributed to Cobbett. So prolific in new departments has the "Old Lady" become under the stress of new functions forced upon her by war and post-war financial developments, that her children became too numerous to be housed under the roof of the old name. Now the famous premises are being rebuilt in magnificent fashion to provide all necessary accommodation. When the new imposing structure has arisen may we not expect the old nickname to give way to a new one—perhaps "The Belle of Threadneedle Street"?

Notes of the Week.

The Morocco Operations.—The point of importance that emerges from the welter of details into which despatches from Morocco enter is the fact that a definite junction has been established between the French left wing and the Spanish right, and the two forces are preparing to move southward in unison. Some progress has already been made, though rains have impeded the operations, and there is little prospect of any definite result being achieved before the campaigning season ends. That makes it the more desirable that peace negotiations should be resumed. To speak of resumption, indeed is perhaps hardly accurate, for there have so far been no real negotiations worthy of the name. M. Painlevé, however, in his speech of last Sunday gave a *résumé* of the terms Abdul Krim refused. Whether they be considered reasonable or not—and in all the circumstances there is little to criticise in them—they are as favourable as the Riff leader is ever likely to get. The military operations may be prolonged over the winter, but there can only be one end to them, and Abdul Krim is little likely to serve his own cause by pursuing a resistance which must in the end be hopeless, for the sake of

the narrow difference between the limited independence he claims and the large autonomy France has offered. Meanwhile M. Steeg, Minister of Justice in the present Cabinet, has been appointed to the post of Resident vacated through General Lyautey's more or less enforced resignation. The personal significance of the appointment remains to be demonstrated, for there is not much in the new Resident's past career to form a criterion of his fitness for the difficult task now entrusted to him. The real interest of the change is that it means the substitution of a civilian for a soldier in Morocco.

The Fascist Record.—Having regard to the risk of transmitting anti-Fascist news from Italy, it may safely be assumed that most messages of that character which do get through are substantially accurate. In any case, there is sufficient objectivity about the narrative in Thursday's *Times* of the outrages at Florence during last week-end to carry its own conviction. Fascism is at present in full campaign against Freemasonry, and last Saturday a local Fascist leader at Florence, named Luppadorini, called on a prominent Freemason, Cavaliere Bandinelli, to demand a list of the Freemasons in the city. Being refused the list, he struck Bandinelli violently in the face, whereon one of the latter's companions shot him with a revolver. The inevitable reprisals followed. Luppadorini's assailant was dragged out and killed and Bandinelli's house was set on fire. Shops and houses were then sacked all over the city, the police being ordered not to interfere. According to a Paris telegram, 18 persons had lost their lives "already," and a reign of terror prevailed in Florence. Meanwhile, constitutional reform is proceeding apace at Rome. The decree abolishing the mayor and municipal council of the capital, and substituting a nominated Governor, has been issued, while the Bill substituting nominated "Podestas" for elected mayors in more than half the municipalities in the country has also been approved. Minority rule based on force is still firmly riveted in Italy, and little evidence of any effective revolt against it is visible yet. The Aventine Opposition is breaking up, and, in any case, its ranks contain no one who has so far revealed himself of the calibre of a national leader. But Fascism is too blatant an anachronism to make belief in its permanence possible.

West Ham and the Government.—It was expected that the dispute between the West Ham Guardians and the Minister of Health would have been ended early this week. But the former have not climbed down from their position, and with the lapse of time the position becomes more serious. The point at issue is a fairly simple one. There are in various parts of the country a number of particularly necessitous areas, and the Ministry of Health has a scheme under which it comes to the aid of Guardians where the burden of poor law relief is beyond the local capacity to meet. West Ham is a necessitous area, and the Guardians, having come to the end of their available funds, applied to the Ministry of Health for a loan. Mr Neville Chamberlain replied expressing willingness on certain conditions, of which the principal were that the rates of relief which the Guardians had been paying should be reduced, and that in granting relief to the head of a family the Guardians should in future take into consideration earnings of other members of a family. The maximum scale which the Guardians have been paying is 59s per week, and Mr Chamberlain insists on 55s. The Minister's position is surely beyond criticism. He displays readiness to help West Ham in the same way that other distressed areas are helped, but he makes it a condition that West Ham should conform to the scale of relief prescribed for other similar unions—a scale devised, for one thing, to secure that poor law grants should not exceed the level of unskilled wages in a particular area. The whole country will approve these conditions, including, as is obvious from a meeting held this week, the principal ratepayers of West Ham. The prolongation of opposition by the Guardians is both foolish and useless, for it is to which they object. The destitute cannot be left indefinitely without relief, and the Ministry of Health, which has prepared a temporary system of vouchers cashable

at shops, may have to take over completely the functions of the Guardians. We anticipate, however, that the comparatively small majority on the Board of Guardians against Mr Chamberlain's conditions will be turned into a minority before much more time has been wasted. The recalcitrant majority appear to base their persistence on the fact that they have taken steps to ascertain the views of those in receipt of relief. This, surely, is the strangest form of restricted referendum. Anyone could foresee the answer to be obtained by asking those who were in receipt of 59s a week whether they would like to have 55s instead, plus a scrutiny of other earnings in the family. If they really wished to justify themselves with the views of those whom they represent, the Guardians would surely consult the whole body of electors concerned.

Home Crops.—The monthly report of the Ministry of Agriculture and Fisheries states that the forecasts given last month of the production of this year's crops have been revised in accordance with the later information, and the revised figures are set out in the table below. It is to be borne in mind, however, that these forecasts are based on estimates made at the beginning of October, and are consequently subject to modification:—

	1924.	1925.	Production, 1924.	Forecast, 1925.
	Acres.	Acres.	Cwts.	Cwts.
Wheat	1,545,000	1,499,000	27,262,000	26,432,000
Barley	1,314,000	1,318,000	20,278,000	18,875,000
Oats	2,037,000	1,868,000	29,974,000	25,379,000
			Tons.	Tons.
Potatoes	452,000	493,000	2,696,000	2,963,000
Turnips and swedes ..	831,000	806,000	11,538,000	9,028,000
Mangolds	388,000	359,000	7,823,000	6,966,000

Wheat is generally a good sample as regards quality, and winter barley and oats are usually good, plump grain. Spring barleys are variable, being often of inferior quality and discoloured. Samples of really good malting barley are scarce. Spring oats are also variable, but are mostly of very fair quality. Wheat is threshing out better than anticipated, and the yield is now estimated at 17.6 cwts per acre, or $\frac{1}{2}$ cwt above the 10 years' average. The barley and oats estimates are little altered on the month, barley at 14.3 cwts per acre being $\frac{1}{2}$ cwt below average, and oats at 13.6 cwts per acre being about $\frac{1}{2}$ cwt above average. The estimates of beans and peas are slightly above those of last month, beans being estimated at 17 cwts per acre, or $1\frac{1}{2}$ cwts above average, and peas at $13\frac{1}{2}$ cwts, or slightly above average. The potato crops have improved considerably during the growing weather of the past two months, and the yield per acre over the whole country is now forecast at 6 tons, or practically the 10 years' average.

American Cotton Crop.—Mr Arno S. Pearce, the General Secretary of the International Federation of Cotton Spinners' and Manufacturers' Associations, who has just returned from a tour of the American cotton belt, has issued a statement in which he condemns very strongly the methods of the United States Government in compiling returns on the cotton crop. He alleges that in connection with the report of August 24th the officials expected the returns to show an indicated yield of about 13,800,000 bales. When the calculators announced 13,990,000 bales as the final figure there were several attempts to reduce it, but the officials could not very well do so in the presence of Mr Pearce. In his opinion the whole result was "dressed" according to the average of guesses, influenced, of course, by the opinions, written or verbal, of the fieldmen of the Department, but the huge mass of farmers' reports was of secondary importance. He adds further: "The list of guesses certainly formed a matter of primary importance to the board, whilst the pile of statistical information supplied by the 20,000 or 30,000 correspondents was considered of lesser value.....Whilst I have been an ardent supporter of last year's system, I cannot help but express my disappointment that the previous methods seem to have been abandoned, and that the officials seem more guided by the average guesses of merchants, who are

BANK ESTABLISHED IN 1864.

often interested parties, than by their accumulated statistical evidence." Our Manchester correspondent writes:—On Thursday the Bureau published further statistics on the cotton crop. Owing to Mr Pearce's recent disclosures as to the methods adopted by the Bureau, there was much interest in trade circles in the figures. The reports were of a sensational character, as the indicated yield was given as 14,759,000 bales, against 13,931,000 bales a fortnight earlier, and 12,499,000 bales same time last year. Operators expected a slight increase on the previous report, but scarcely anyone anticipated an advance of 800,000 bales. The ginning figures were also very big, the amount up to the end of September being given as 7,102,000 bales, against 4,276,000 bales a fortnight earlier, and 4,526,000 bales at the same time last year. Naturally these very bearish statistics brought about a distinct fall in prices, there being an immediate drop in Liverpool of 40 points. It is generally believed that in earlier reports the Agricultural Bureau has been influenced by the vested interests of farmers and merchants, and has not indicated the excellent conditions. The truth, however, is now being revealed, as it is impossible to ignore the heavy ginning returns. As things stand at present, there is a possibility of an American cotton crop this season, including linters, of about 16,000,000 bales, which, if realised, will be a record. Needless to say, supplies this season will be more than sufficient to meet the needs of users, and there is bound to be a big carry-over to the following season.

Trade in Northern Ireland.—Our Belfast correspondent writes:—Trading conditions in Northern Ireland show little signs of improvement. At the end of last month the number of unemployed in the two principal industries was as follows:—Shipbuilding, engineering, &c., 10,025; linen industry, 19,667, the total unemployed being 35,017 men and 20,399 women, whilst no fewer than over 7,000 were employed on systematic short time. These latter are employed mainly in the linen industry, where short-time working in many mills and factories is prevalent. The vessels launched by the Belfast shipbuilding yards during the current year total 10, with a tonnage of 57,240 tons, as compared with 92,028 tons during the same period last year. Included in these launchings is that of the 22,000-ton motor ship, the "Asturias." Seven ships are on the stocks, one of them a 22,000-ton motor ship, similar to the "Asturias," for the Union-Castle Line, and two 9,000-ton motor vessels. In addition to the new vessels that have been launched, a large amount of repair work has been carried on, and, taken all round, conditions here are not so bad as in other shipbuilding centres. The linen industry shows no real improvement. Production is at a low level, both in spinning mills and weaving factories. Many of the spinning mills are still closed, whilst linen cloth production is heavily curtailed, either by stopped machinery or short-time working. Irish new crop flax is now being placed on the market, and is averaging about 12s 6d to 14s a stone, which is about 5s to 6s a stone less than prices ruling at this time last year. Growers, however, believe that higher prices will obtain in the near future. As matters are at present, the selling price of linen yarns and cloth is not in harmony with the price of raw material, and this is the most disturbing factor in the linen trade situation. Linen goods are said to be too expensive to allow of any expansion of trade, yet both

yarns and cloth are being sold at a basis below that warranted by the cost of raw material, and the margin for both spinners and manufacturers has been cut to the limit.

Shipping Freight Index Number.—The upward movement in freights, as measured by our index number of whole cargo charter rates, continued during September, the figure for the month being 114.24, a net rise of 2.42 per cent. compared with August. The figure, however, represents an average level of freights 11 per cent. below that registered for September, 1924, and over 4 per cent. lower than that for the same month of 1923. The movements of the various groups in the index are summarised as under:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920.....	814.31	529.89	757.52	744.81	587.02	712.16	690.95
December.....	268.90	277.17	244.10	256.79	286.72	347.18	280.14
December, 1921.....	160.06	164.07	163.72	144.43	141.25	166.47	156.67
December, 1922.....	137.09	135.15	129.19	122.61	136.08	159.34	136.57
December, 1923.....	134.04	132.72	120.09	124.35	125.07	144.21	130.08
December, 1924.....	117.44	129.18	119.45	119.76	129.29	161.13	129.38
January, 1925.....	115.26	134.60	120.38	123.83	132.44	172.70	133.20
February.....	114.92	146.54	118.04	121.95	129.99	178.04	134.91
March.....	116.34	130.81	110.41	116.99	118.42	151.33	124.05
April.....	114.18	133.39	110.62	115.95	114.60	138.87	121.27
May.....	109.86	124.85	110.97	108.43	105.16	126.41	114.28
June.....	109.25	104.78	108.24	105.53	100.43	112.17	106.73
July.....	119.02	111.96	113.42	106.15	94.43	117.51	110.41
August.....	107.22	113.46	110.79	112.24	99.14	126.41	111.54
September.....	103.22	117.25	109.09	113.38	101.83	140.65	114.24

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	90.65	- 1.35	S. America—outwards.....	125.51	+ 11.36
Bay—outwards.....	111.93	- 7.34	" homewards.....	92.67	- 4.75
" homewards.....	111.29	- 4.84	India—outwards.....	105.27	- 9.82
Mediterranean—outwards.....	105.66	- 7.71	" homewards.....	121.50	+ 12.21
" homewards.....	109.13	- 1.42	Far East, &c.....	101.83	+ 2.19
North America.....	117.25	+ 3.79	Australia.....	140.65	+ 14.24

There was no outstanding feature in chartering developments during September. The seasonal movement of Northern Hemisphere crops, which last year at this time occasioned a temporary burst of activity for "tramp" shipping, and which, it had been hoped, would again revive the market after an extremely depressed summer, has so far had only a restricted effect on autumn freights. So far as North America is concerned, some expansion in the demand for grain-carriers was recorded during the month, but pressure to charter was insufficient to produce any marked rise in rates. A fair inquiry for winter loading from Australia took place at the beginning of the month, but the condition of the Plate market proved most disappointing to owners, shippers' requirements being small, and rates throughout the month registering a substantial fall compared with August. As regards other homeward markets, business was no more than moderate. Outward coal freights continued dull, with the exception that for South American destinations owners held for higher figures in view of poor homeward prospects. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	(1913 = 100.)	1922.	1923.	1924.	1925.
January.....	131.60	..	114.05	..	114.49
February.....	135.76	..	112.73	..	115.96
March.....	135.63	..	115.23	..	106.63
April.....	129.46	..	115.45	..	104.24
May.....	125.12	..	114.55	..	98.23
June.....	117.45	..	106.82	..	91.74
July.....	114.52	..	103.39	..	94.90
August.....	113.16	..	100.16	..	95.87
September.....	110.37	..	103.04	..	98.19
October.....	114.42	..	107.86	..	..
November.....	119.43	..	111.21	..	..
December.....	117.39	..	111.81	..	..
Mean for year.....	122.02	..	109.69	..	113.44

The material improvement this year in European harvests would appear to be restricting the demand for overseas grain, and while sufficient tonnage should be taken up by North and South America during the winter to ensure a continuance of moderate business for "tramp" shipping, it is difficult to foresee any signs of a marked revival in rates of freight for grain. Coupled with the present paucity of coal cargoes, this circumstance renders prospects for the remainder of the year not over-encouraging for owners, and it is to be feared that a considerable quantity of tonnage must continue to fail to find remunerative employment.

The Coal Subvention.—The details published by the Mines Department, showing the amount of subvention paid to the various coalfields in respect of the month of August, furnish material for some interesting calculations. The total amount paid was £1,517,678, of which £321,915 was allocated to South Wales, £293,541 to Scotland, £271,889 to the Eastern Division, £268,404 to Durham, £168,630 to Lancs, North Staffs and Cheshire, and £111,907 to Northumberland. The district figures have little significance unless they are brought into relationship with some factor such as output, which measures the relative importance of each coalfield. The actual output for the calendar month of August is not available, but figures have been published for the four weeks ended August 29th. From these it is possible to compute the approximate amount of the subvention per ton of coal raised in the various districts. The details are as follows:—

Northumberland.....	s d
Durham.....	2 9
Eastern Division.....	2 7
South Wales.....	1 0
Scotland.....	2 7
Lancs, Cheshire, N. Wales, and N. Staffs.....	2 5
Other districts.....	2 3
	1 6

For the country as a whole the average works out at a little over 1s 11d per ton. The subvention was paid in all districts owing to the fact that the minimum percentage addition to basis rates guaranteed to the miners was appreciably in excess of the additions warranted by the proceeds of the industry calculated in accordance with the terms of the 1924 agreement. In three districts, however, the Eastern Area, Lancashire, Cheshire and North Staffs, and South Wales the amount payable was modified by the provision that profits in excess of 1s 3d per ton should be transferred to wages in relief of the subvention. The percentage additions to basis rates warranted by the proceeds, and including the effects of the transfer of excess profits, and the minimum percentages payable in August, were as follows:—

	Minimum Percentage.	Percentage Warranted by Proceeds.
Northumberland.....	100.00	50.63
Durham.....	110.00	62.84
Eastern Area.....	46.57	35.34
Lancs, Cheshire, and N. Staffs.....	46.57	25.94
South Wales and Monmouthshire.....	42.22	17.96
Scotland.....	133.33	84.11

The range of these figures is remarkably wide.

The Popularity of Rubber.—The rubber boom, like all other movements of this kind, will tend to degenerate into a wild gamble unless there should be something in the nature of a sharp shake-out to demonstrate the fact that prices may fall as easily as they can rise. The fortnightly account which has just been settled in the Stock Exchange turned out to be the heaviest on record so far as rubber shares are concerned, and there are indications, writes a Stock Exchange correspondent, that the next settlement will prove of still greater dimensions. Even in the midst of the excitement, however, people are still exercising a certain measure of discretion, asking for shares in companies that are of good standing, and in whose cases the capitalisation per planted acre is not excessive. Six months ago rubber shares, priced on the basis of £100 per planted acre, were looked on as being expensive. The recent rush has raised quotations to a level at which the capitalisation works out to something between £150 to £180 per acre. Those who are watching the industry

with the eyes of experience are impressed with the conviction that, when the fever of speculation has abated, and the rubber share market settles down to more normal business, the public will be willing to support shares in good companies on the basis of £150 per acre. It is hardly necessary to say that various other considerations should enter into the calculations of those who are putting money into rubber shares, and that the capitalisation per planted acre is only one of quite a number of factors which must be taken into account in making intelligent purchases. Some of the Stock Exchange brokers are advising their clients to sell part of the rubber shares upon which proprietors can take big profits, and to utilise the money thus obtained in the purchase of first-class securities, though up to the present the public tendency has swung in the other direction. According to Stock Exchange convention, the checking of any upward movement produces a condition that, nine times out of ten, leads to the market relapsing into a quiet condition. Everyone thought that when the rubber excitement of July was suddenly chilled by an unexpected arrival of rubber, and the outlet of several thousand tons of uncoupled produce, this would finish the rise. In point of fact, all that happened was a temporary lull. The activity became resumed with greater intensity than ever. The flame of buying has been fed, of course, by the rise in price of the raw stuff. If rubber went back to 3s per lb, there would be a general scramble to get out. But so far as the industry is concerned, it is manifest that for this year and next the rubber-producing companies are likely to do extraordinarily well, as the recent dividends suggest. Eighteen months is considered long enough for anyone to look ahead when he is engaged in speculation in a tropical industry. One word of caution which may prove of practical service is that the prospective buyer of rubber shares, or the present holder, should pay particular attention to the forward contracts which have been made by various companies, the prices of which are likely to have a very marked effect upon the profits of this year and of 1926.

Cotton Manufacture in India.—A Calcutta correspondent writes:—According to a list compiled by the Bombay Millowners' Association there are 48 new cotton mills in course of erection in India. Concurrently a crisis has arisen, of which various aspects are wage-cuts, strikes, large accumulation of stocks, agitation for removal or suspension of the Excise duty—which it is sought to ascribe wholly to Japanese competition. It is not advisable to underrate the growing importance of the latter factor, and it is evident that labour conditions in the Japanese mills, which work 22 hours daily and employ women and children on night shifts, constitute a serious handicap to competing countries which, unlike Japan, not only signed the Washington labour agreements, but honoured their signatures by putting the necessary legislation into practical operation without resorting to shifty and evasive delays. Despite the report of the Snowden Committee, however, an effective method of achieving international conformity to common labour standards has yet to be evolved. But, apart from that point, Japanese competition in the Indian market is less responsible for the current difficulties of Indian cotton mills than their own lack of efficient management and provident finance, notably the excessive expansion of cloth production in a period of high prices, with its inevitable corollary in India, namely, a sharp and persistent contraction in demand. The following figures (in millions of yards) are instructive:—

	Indian Mills.	Net Imports.	Japanese Imports.
Average, 1911-14.....	1,064	2,819	5.2
1921-24.....	1,719	1,319	107.0
1924-25.....	1,970	1,771	145.0

	Exports of Indian Cloth.	Handloom Production.	Total Indian Production.
Average, 1911-14.....	85	1,284	2,348
1921-24.....	164	933	2,658
1924-25.....	181	1,402	3,372

There may be a case for abolishing the Excise duty when more urgent financial demands (including complete remission of provincial contributions to central revenues in

India) have been met, but to contend, in face of the above figures, that this impost has exerted a crippling effect upon the development or profitable working of Indian cotton mills is hardly justifiable. Taxation, however, or Japanese competition, has exerted less influence in producing the present *impasse* than a too rapid increase in output. Taking 1924-25, while Indian mill production increased 250 million yards, and hand-loom production 470 million, a total of 720 million yards, imports increased only 450 million yards, including an additional 38 million yards from Japan, so that, while Indian production increased 50 per cent. more than all foreign imports, Indian mill production increased approximately seven times as much as Japanese imports. The relative importance of the Japanese imports (145 million yards) in relation to a total consumption in India of 6,000 million yards is fairly evident. The latter total is based upon the following estimates:—Indian mills, 1,970; net imports, 1,771; hand-loom production, 1,402; handspun, 900; minus 181 exports of Indian cloth. If, therefore, Indian mill stocks have increased in the past two years by 360 million yards, the increased production in India, plus the larger foreign imports, without stressing Japanese goods in particular, amply account for the larger holdings, which Indian mills are now finding it so extremely difficult to finance. It is a fact worth emphasising that, while European looms have not increased in number at all recently, and American looms have increased but slightly, Indian looms have increased since the Armistice approximately 40 per cent. The increase in the Indian looms exceeds, indeed, the expansion in Japanese and Chinese mills combined. It will also be noted that the exports of Indian cloth exceed the imports of Japanese cloth. In the immediate post-war period Indian mills distributed dividends ranging as high as 200 per cent. In addition, they embarked upon extensions now proved premature. (That, perhaps, in those buoyant days was an easy miscalculation to fall into.) Obesity is not an uncommon industrial complaint in India to-day, and it is an ill for which neither tariffs nor subsidies provide an effective remedy. In view of the large accumulation of mill-made goods, it may be inferred that, to some millowners, the strike now in progress, provoked by a 1½ per cent. cut in wages, is not wholly unwelcome. The real solution, as in Lancashire, is lower prices, a benefit in the gift of Nature, but not of Governments; in a word, Bombay, like Manchester, needs, above all else, cheaper cotton.

Australian Tariff Changes.—Our Melbourne correspondent writes:—In introducing the proposed tariff alterations in the Commonwealth Parliament on September 2, the Minister for Trade and Customs, Mr Pratten, stated that wherever possible, without injuring industries, reductions have been made consistent with revenue needs, but wherever it has been demonstrated that it is necessary to protect local industries action has been taken, and wherever it has been deemed advisable the Ministry has not hesitated to make drastic changes "in order to put some of our valuable basic industries in no uncertain position." He foreshadowed future tariff revisions on urgent items "from year to year, or, at least, more frequently than is done now." The ratio of British preference has been maintained or increased, but the duties actually chargeable under the British preferential scale are frequently higher than those hitherto in force. Thus the British preferential rate on woollen yarns is raised from 10 to 20 per cent., the rate under the general tariff being raised from 20 to 35 per cent. Woollen piece-goods (not elsewhere included) are raised from 30 per cent. to 35 per cent. British, and from 45 per cent. to 50 per cent. general tariff. Machines and machinery are raised from 27½ per cent. to 45 per cent. British, and from 40 per cent. to 60 per cent. general tariff. Iron and steel plate and sheet, galvanised, is altered under the general tariff from 30s to 60s per ton, but the British preferential rate in this instance is unchanged at 20s per ton. A considerable increase is proposed in maize, which will mean additional protection against the South African article. Where duties are reduced, the effect is estimated to relieve the taxpayer to the extent of £750,000 per annum, but the effect of increases is not shown. The value of imports last

financial year affected by the proposed increases was over £30,000,000, and the value of imports affected by the proposed reductions was over £10,000,000.

The Distribution of Capital in U.S.—Figures published by the Bureau of the Census at Washington show that an economic revolution by the redistribution of capital in the United States is taking place silently and swiftly, without violence or political disorganisation, though with momentous consequences. Industrial ownership is passing from the few to a large section of the population. Between 1902 and 1924 the number of stockholders trebled, and the number of employee stockholders doubled. The largest increase was in that section of the population whose individual incomes do not exceed 5,000 dollars. Since 1916 there have been substantial decreases in the totals of stock dividends paid to persons having incomes of 20,000 dollars a year, moderate increases in those of 5,000 to 20,000 dollars, the largest increase being to persons receiving less than 5,000 dollars, a group including the wage-earners. Stock dividends received by persons in this income class in 1917 were 9.5 per cent. of the total for all persons filing returns under the Federal income-tax law. Since then the proportion has risen to 22.7 per cent. We can rely upon the statistics of railroad stockholders, since complete reports are filed with the Inter-State Commerce Commission. Class I. railroads in 1915 had only 511,000 stockholders, with an average holding of 13,361 dollars. At the beginning of this year there were 807,000, the average holding being 9,110 dollars. Standard Oils are representative securities. In 1911 the Standard Oil Company of New Jersey, with its 33 subsidiary companies, was owned by 6,078 persons, half of the stock being in the hands of eight of these. To-day these same corporations have over 300,000 stockholders. In the oil industry as a whole the total of stockholders has been multiplied by six within the last eight years. Taking a number of large industrial corporations, we find that between 1917 and 1925 the number of stockholders grew from 2,537,100 to 5,951,500, and of the new stockholders, 1,310,880 were members of the general public, 864,750 were customers of the enterprises concerned, and 338,760 employees of them. Only a part, moreover, of the capital involved in these corporations is represented by stock. There are bonds, mortgages, liens of various kinds, and if the ownership of these were also taken into account, the increase in the number of owners would be still more striking. Nor are all these the only form of invested capital. The savings deposits in five classes of banks were 98 dollars per capita in 1914, 186 dollars in 1924. The members of the large agricultural co-operative societies, contributors of capital, have increased from 650,000 in 1916 to 2,490,000 early this year. Those of building and loan associations increased in the decade 1914-1924 from 3,103,935 to 7,202,880, while the assets were trebled. Adding premiums paid to life insurance companies during the last five years to deposits in savings banks and assets of building and loan associations, one gets an aggregate of nearly 35,000 million dollars. As Professor Carver, of Harvard, puts it, the process of the blending of the working and the owning classes is proceeding rapidly. The combined resources of the more than 30 trade union banks approach 150 million dollars. It is estimated that each year 25,000 million dollars are paid to industrial workers, 6,000 to 7,000 millions of which are saved and invested.

Conditions in the Cameroons.—It is explained in the introductory paragraph of the Report for 1924*, issued by the Colonial Office, on the administration, under Mandate, of the British Cameroons (Colonial 16, price 2s 9d), that a wrong impression had been given by an error in drafting, in the previous Report, where it was stated that the area had "become an integral part of Nigeria." As a matter of fact, the mandated area is administered, in accordance with Article 9 of the Mandate, "as though it formed an integral part of Nigeria, but this administrative arrangement implies neither fusion nor incorporation." The present Report might well be read by any of those numerous sceptics who doubt whether the British Empire performs any useful service; for it gives, in its quiet way,

* H.M. Stationery Office.

a very striking picture of the sort of lonely, difficult, patient, and far from showy work that is being done by British Civil Servants in many of the most unilluminated regions of the globe. The Cameroons cover a vast area, inhabited by natives of very varying degrees of civilisation, including tribes of none; primitive pagans, who practise witchcraft and employ slaves, would resort to cannibalism if they were allowed to, and have hardly emerged from the "family" stage of tribal life. About many of them little or nothing was previously known. The method being employed by our officers can best be set out in the words of the Report itself, where it is stated that:—"The main political work of a constructive nature during the past two years has been to take each ethnic group separately, inquire into its past organisation and institutions, and accept them as far as possible as the basis of future administration, without too sudden or violent a break with the past. No stereotyped system of government has been laid down to which each native administrative district must conform. Such a method would not be suitable for so wide a field or conditions so various. For, on the one hand, there is the autocratic, semi-monarchical system found in the districts of the bigger chiefs, and, on the other hand, democratic, almost Socialistic, groups of families with little or no cohesion. Whereas in the former the government is now through a single salaried chief, assisted by a Council of elders, holding ancient offices, in the latter there was less to build upon, so that the native Court has become the executive as well as the judicial authority, and is composed of heads of family groups, of whom all are more or less on an equal footing. Progress on these lines must necessarily be slow, as exhaustive research into the history and customs of each tribal district takes place before proposals for future administration are formulated. So far five districts have been treated in this way, with results which entirely justify the policy pursued." To summarise, in any detail, a report which covers so large and varied a sphere of administrative, judicial, and practical activity is impossible; one can only note that the spirit expressed in it, so far as it is permissible to judge from that, suggests that the Mandate idea is here being carried out with the utmost faithfulness. One or two small points may be mentioned. The notion that anything of the nature of forced labour prevails is rebutted with emphasis. Employment in the plantations, for example, is purely voluntary. The rate of pay—4½d per diem, plus 1½d per diem for rations—"may seem low, but as the estates have to be worked with very little supervision it has not been possible to obtain anything like full tasks." Arms traffic, it is stated, is "practically non-existent." In the Cameroons Province there are some 3,000 old guns, licensed under German rule. "They are used for protecting crops from damage by wild animals, and also for making a noise at funerals, weddings, and other feasts." In their use of lethal weapons it would seem that these natives have something to teach us. On alcohol the remarks in the Report are rather curious. Thus, it is stated that "the importation of trade spirits is forbidden by the regulations under the Customs ordinance. For the purpose of these regulations, all spirits are regarded as trade spirits except the following"—then follows a formidable list, including whisky, rum, brandy, gin (each being defined); spirits for scientific purposes, drugs, alcoholic bitters, liqueurs, cordials, and mixtures; spirits in miniature bottles; methylated and similar spirits "totally unfit for use as potable spirits." What, one asks, is excluded?

Bradford Dyers' Capital.—At an extraordinary general meeting of the Bradford Dyers' Association, Limited, to be held on October 19th, the directors will recommend that the sum of £813,886 out of the amount standing to the credit of the reserve fund be capitalised by the application of the same in paying up in full ordinary shares of the company (part of its unissued capital); and that such fully-paid ordinary shares be distributed among the holders of the existing ordinary shares of the company whose names are registered in the books of the company on that date at every five fully-paid ordinary shares in respect of held by such shareholders respectively. If this recommendation is agreed to, the shares to be issued will carry

dividend for the year to December 31, 1925, but without any right to participate in the interim dividend of 1s per share paid in September, 1925. Shareholders will also be recommended to agree to an increase in the authorised capital of the company to £6,000,000 by the creation of 500,000 preference shares of £1 each and 500,000 ordinary shares of £1 each, although it is not intended that any of these shares should be issued at present.

Harrisons and Crosfield.—To the accounts of Harrisons and Crosfield many investors are inclined to turn for an indication of conditions in the rubber industry. This year their hopes are likely to be satisfied, since the improved results shown in the report to June 30th last may be taken, to some extent, as an indication of the better position of rubber plantation concerns. A comparison of results for the last pre-war year and for a number of years past reads as follows:—

	1913-14.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
Net profit.....	£134,269	249,204	164,466	149,138	192,711	242,475	276,902
Brought forward.....	23,879	36,147	37,873	44,525	45,114	66,526	70,707
Preference dividend ..	158,148	285,351	202,339	193,663	237,825	309,001	347,609
Prof. ord. div. (10%) ..	27,500	37,230	37,800	37,800	37,800	37,800	37,800
Management shares ..	30,000	80,000	100,000	100,000	100,000	100,000	100,000
Reserves, &c.	35,118	45,344	5,941	1,250	2,500	22,000	30,000
Deferred ord. shares ..	59,922	14,073	9,499	18,999	47,497	60,944	75,736
Carried forward.....	35,530	37,873	44,525	45,114	66,526	70,706	75,736

The net profit has advanced from £242,475 to £276,902, so that, with a balance of £70,707 brought forward from the previous year—which compares with £66,526 twelve months before—there is an available surplus of £347,609, in contrast with £309,001. Dividends on the preference and preferred ordinary shares absorb the same as a year ago, but the distribution on the management shares requires on this occasion £43,129, against £30,998, while the deferred ordinary dividend, being raised from 25 to 30 per cent. for the year, absorbs £60,944, in comparison with £47,497. The general reserve again receives an appropriation of £10,000, making the total of the fund £463,000, while the allocation to income-tax reserve is increased from £12,000 to £20,000. It is stated that the sum of £13,000, which has appeared in previous balance-sheets under the heading of "Property Reserve," is now included in the general reserve, as the directors consider that the provision otherwise made for depreciation is ample. The report, it is true, does not contain any reference to operations, but this omission will, there is every reason to believe, be remedied at the forthcoming meeting by the chairman, Mr Eric H. Miller, whose comprehensive annual survey of conditions in the plantation industries is looked forward to by most people interested in rubber.

Clerical, Medical, and General Life Office.—This life assurance society makes up its accounts to June 30th in each year, and the year which ended on June 30th last is the fourth of the current quinquennium. Although the detailed valuation will not be made until next year, there are sufficient indications that the prospects for bonuses continue to be highly favourable. The society's funds have been earning an average rate of £4 12s 8d per cent. per annum net, as compared with a rate assumed for valuation purposes of 2½ per cent., a profit margin of more than 2 per cent. per annum. The mortality rate experienced has been very low; the claims by death were 61 per cent. last year of the amount expected by the tables, and the average for the past four years has been 60 per cent. The annual investigation of the assets showed a profit on securities realised of £25,287, and on June 30th last the value of the Stock Exchange securities then held showed an excess over the book values of £142,023. In view of these circumstances the avowed confidence with which the directors look forward to the next bonus distribution is well justified. New business kept up well last year. The net amount of new policies issued was £1,389,369, as compared with £1,324,691 in 1923-24. The popularity of life assurance by single premiums continued, the amounts of new premiums being £76,466 single and £42,791 renewable. The total premium income was £672,332, an increase of £62,840, and the net rate of interest yielded by the funds was £4 15s 4d

per cent., as compared with £4 13s 2d in the previous year. The life assurance fund increased by £503,646 to £8,464,681. This is the largest increase in the funds and the largest net yield from interest in any year in the society's history.

Tin and Tin Shares.—Our mining correspondent writes: An outstanding feature of Stock Exchange business during the past week has consisted in the strength and activity in the shares of tin-producing companies. For this physical factors are responsible, as well as the advance in the price of the metal. The Malay States, although contributing a smaller proportion of the world's total than in years gone by, still supply something like one-third. Here several schemes for water supply or the provision of hydro-electric power have been carried through, and others are approaching completion. Both the Malayan Tin Dredging and the Sungei Besi companies are executing important hydro-electric power installations which will increase their outputs and reduce expenses. A big scheme on the part of the Armstrong-Whitworth people for a station on the Perak river is in prospect, and if it goes through will give a fillip to tin production in the entire district. Then as regards Nigerians, also; one concern has lately started up a hydro-electric plant, which, besides reducing working costs, will enable the company to treat ground of a grade otherwise not profitable. Towards compensating for the shortage of labour which has so long hindered operations in this field, many of the companies are installing machinery of various kinds. The overdue rains have fallen. As a result of these factors in combination, the outputs of the past two months show a marked expansion. Finally, we have the general influence of an advance in the price of tin to over £270 per ton—the highest of the present year. From the standpoint of recent dividends the Nigerians do not make a particularly good showing, but some very encouraging distributions have been made by Eastern companies. Thus the Kamunting last interim distribution was at the rate of 1s 6d per quarter, instead of 1s, while the Renong has just declared a balance dividend of 20 per cent., making 30 per cent. for the past year, as against 10 per cent. in respect of 1923-24. This from the operation of two dredgers; a third should be running early next year.

Obersea Correspondence.

UNITED STATES.—FRENCH DEBT NEGOTIATIONS—STOCK MARKET REACTION—CREDIT POSITION—INDUSTRIAL MOVEMENTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 29.

WHILE the wave of optimism that attended the opening of the negotiations for the funding of the French debt has given way to something that resembles pessimism, well-posted bankers still believe that Caillaux will not go home empty-handed. The French Finance Minister's first offer, which apparently contemplated payments starting at about \$25,000,000 a year, and rising to a standard payment of about \$80,000,000 in the course of 20 years, and continuing at that rate for 42 years more, was followed by intimations from American quarters that such a proposal was quite unacceptable. The Washington correspondents represented that this offer would mean practically no payments on account of interest; that the payments would serve merely to extinguish the principal of the debt. While the actuaries do not agree with this view, the fact remains that the American commission did nothing to dissuade the public from the idea that the French proposals were a distinct disappointment. In any event, the putting aside of the French offer was quickly followed by reports that the American Commissioners proposed to the French that the payments should be quite on the same scale with those Great Britain has agreed to make. With this proposal, which would, of course, make the payments very much higher than in the French proposal, the French delegates were reported to be shocked. Any such sums would be, they were represented as maintaining, quite beyond them.

There followed conferences on French capacity for payment, and, it seems, a new American proposal of a less severe character. To-day, Tuesday, the spokesmen of the two Commissions are hopeful, although the public assumes that the differences in point of view are quite serious. Meanwhile, it is noted that M. Caillaux is preparing to leave Washington on Thursday evening in order to sail at the week-end.

While the circumstances as set forth above do not seem too encouraging, experienced observers point out that, in the nature of the case, a good deal of scenery, for inspection on both sides of the ocean, has to be set. M. Caillaux needed to make a substantial offer upon his arrival; it would not have done, however, for him to have made an offer that would have been accepted forthwith. Critics in France easily could say that he had offered more than he needed to. The American demand for payments on the full Anglo-American basis would obviate that possibility. Similarly, it might be argued that our negotiators need to be able to show the American public that they have sought to obtain the maximum from the debtor. It is recalled that the successful Belgian negotiations passed through similar stages. At one juncture it was intimated that the Belgians might have to go home with nothing accomplished. Meanwhile, our experienced observers maintain that the competent experts on both sides should be able to agree fairly closely on what French capacity for payment is, and that they should be willing to make allowance for the limitations that must apply to estimates of this kind.

Assuming that the Commissions are able to agree, and that the President approves of the settlement, the sole responsibility for the final adjustment rests with Congress. Will it ratify the conclusions of the President and of the Debt Funding Commission? Good judges believe that it cannot do otherwise. They say that Congress cannot reject a payment of, say, \$80,000,000 or \$90,000,000 a year into the coffers of the United States Treasury, and say that it prefers to receive nothing. Congress, according to this view, may think that a better settlement should have been made, but it will accept a half or a three-quarters loaf rather than nothing. After all, the settlement must be negotiated; there is no method by which Congress could collect a greater amount, even if it were convinced that it were entitled to it.

The possibility of a settlement with France has started much talk of the great volume of foreign financing in this market that might be released by the event. Sums running from several hundred millions to a billion dollars have been mentioned. This talk probably embodies a large measure of exaggeration, both as to the volume of borrowers that would like to avail themselves of the resources of this market, and as to the volume of applications that would be favourably acted on by our investment bankers. As for French financing, it is thought that an experienced financier like M. Caillaux would be sure to appreciate the necessity for an orderly market and for the restriction of borrowing to real necessities.

A severe reaction on the Stock Exchange during the latter half of last week caused a material unsettlement in speculative sentiment. Its cause could be found in the rapidity with which motor shares and certain specialties had been advanced, and in fears lest the Federal Reserve Bank might raise its discount rate. Perhaps the market had a little something on its conscience. In any event, the reaction has been followed by a sharp recovery this week. In this rally the motors again resumed the lead, advancing to new high levels. The conservative critics continue to have much to say about the "extravagant marking up of values," and declare that the end of the bull market is clearly foreshadowed. The bulls reply that the good motor shares are earning from 15 to 20 per cent. on their market valuations, and have been selling to yield from 7 to 9 per cent. on the market valuations. They declare that the good motors, which are without funded debt, and which are very strong in cash, are simply being brought in line with the reasonable levels at which common stocks should sell.

It is fairly clear, however, that the stock market has reached a stage at which public speculation is a much greater factor. Perhaps this statement should be modified so as to read public speculation in certain groups of stocks. Nevertheless, market observers realise that the

season of year is approaching at which the commercial demands for credit increase, and that this increase could result in a withdrawal of funds from stock market operations. As for the Federal Reserve position, it is realised that the member banks are increasing their dependence on the system, and that certain factors, such as the volume of securities speculation and the level of rates in the open market, suggest an advance in the discount rate. On the other hand, it is felt that the Federal Reserve authorities are likely to give appropriate attention to the requirements of the international situation.

In an excellent analysis of the credit position on this side of the water, the National City Bank's monthly bulletin will say on October 1st that "Money rates have been firmer in the past under increasing demands, and some shifting of funds. 'Other loans and discounts' in reporting member banks increased from \$8,022,000,000 on July 29th to \$8,296,000,000 on September 16th, the latest date for which a statement has been made. This is the classification in which commercial loans are included, and the increase is normal for the season of the year. Moreover, it is notable that it compares with \$8,222,000,000 on January 7th last, which is proof that there has been no speculative increase of borrowing for ordinary business purposes. It is to be considered also that all unsecured loans, for whatever purposes, are in this classification. When it comes to loans secured by stocks and bonds, however, there is proof to the contrary, as they have increased from \$4,698,000,000 on January 7th to \$5,124,000,000 on September 16th, and it is interesting to find that this increase was entirely among banks outside of New York City. The loans of New York City banks on stocks and bonds aggregated \$2,002,000,000 on January 7th and \$1,985,000,000 on September 16th. This indicates that country banks have supplied the funds for the activity on the Stock Exchange in recent months. Apparently they have had an increasing supply of credit as the result of better prices for farm products and the clearing up of old debts, and in the absence of home demand to absorb it have sent more or less of it to this market. However, stock speculation in Wall Street cannot be charged with absorbing all of this increase of \$426,000,000 borrowed on stocks and bonds since January 7th, for money is borrowed on this kind of security for use in business, for real estate investment and other purposes. Total investments of all reporting member banks on January 7th were \$5,555,000,000, and on September 16th \$5,464,000,000. They were \$5,506,000,000 on July 29th. Total loans and investments of these banks were \$18,661,000,000 on January 7th, and \$19,061,000,000 on September 16th."

As for the discount rate, the bulletin will say:—"The money market is not 'tight,' or likely to be, and there is nothing in the commercial situation to call for an increase of the reserve discount rate. However, the increase of \$468,000,000 in member bank loans on stocks and bonds since January, and of \$768,000,000 since September, 1924, represents a tie-up of funds that is not viewed with favour. The increase since July 29th has been \$88,000,000, which is fully proportionate for the time. The situation as a whole indicates that the member banks have been financing this increase by resorting to the reserve banks, and, of course, there is inducement to do this when the reserve rate is below the rate on Stock Exchange loans. This is the situation which has led to the surmise that the discount rate may be raised. The one very close to the point where there would be a profit in gold exports, and the Reserve Bank of New York is holding such exports in check. It is not certain, however, how far the Bank of England would object to a moderate outflow of hand. Its reserves are about \$20,000,000 larger than when gold payments were resumed."

Industrial news continues favourable. There is noticeable in business a tendency to contract for somewhat longer distances ahead. There is not, however, any distaste to bid up prices or speculate in commodities. The steel industry is operating at slightly better than 75 per cent. of capacity, and seems to be booking new business somewhat faster than it is shipping out its products. Car

loadings on the railroads are running excellently high, and the August returns show that the Class I. roads earned close to \$122,000,000, which is slightly more than 5½ per cent. on the Interstate Commerce Commission's valuations.

GERMANY.—LOCARNO—CURRENCY AND CREDITS —PRICE REDUCTION—TRUSTS—INDUSTRY— BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 7.

THE opening of the Locarno Conference had no visible effect upon the securities market or upon business. It is expected that an agreement will be come to, but doubt is felt whether the agreement will fully realise the original aims of the Conference, whether it will not rather be attained by a compromise which will partly sacrifice the aim. The visits of M. Tchitcherin to Warsaw and Berlin are regarded as a Russian counter-move. They came simultaneously with the conclusion of the Russo-German Commercial Treaty, which has been under negotiation since last year. This, with its supplements, constitutes the most complete treaty that Soviet Russia has so far contracted, covering navigation, rights of settlement, railways, taxation, industrial protection, commercial arbitration courts, and property of deceased persons. At the same time, the Berlin "D" banks have agreed to grant a credit of 75 million marks to finance machinery and other exports to Russia of a total value of 100 million marks; and a despatch from Moscow speaks of a second German credit of 62 million marks. As a borrower country, with a heavy import surplus, Germany could not from her own resources finance export on credit; but the foreign loans granted to her enable her to do this; so that countries which themselves shrink from granting direct credits to Russia grant them indirectly, with the difference that Germany takes the risk and reaps the profits. M. Tchitcherin's visit to Warsaw is represented as aiming at detaching Poland from the vaguely constituted Baltic group, and also as being directed against Great Britain, the financial support of which Poland, with her newly shaken currency, badly needs. The visit to Berlin is supposed to have brought Russian assurances to Germany that she has no interest in any anti-Russian policies of the Western Governments.

German commercial relation with Russia are becoming more important. It is reported that a five years' agreement has been come to between the General Electricity Company and the Russian Electro-Trust, putting the former's technical experience and patents at the disposal of the latter, in exchange for which the Electricity Company will be granted better selling conditions for its wares in Russia. Co-operation, also, with the American General Electrical Company is spoken of. Germany's exports to Russia in the first half of this year were nearly three times as large as in the corresponding half of 1924. The absolute total—under 100 million marks—is small; but the total exports to Russia and to the new national States which were formerly Russian provinces (including all of Poland) is at the rate of about 900 million marks a year, and exceeds German exports to any other single country. The German commercial Press emphasises this fact. As Russia's programme of imports in the new business year 1925-26 is double that of 1924-25, being in all 972 million roubles, German sales to all the former Russian territories will probably far exceed her sales to the Netherlands or Great Britain, which come next. In trade with the Baltic States, Germany has for years had very large export surpluses; and since the currency stabilisation she has also become an important buyer, though still falling far behind Great Britain.

The foreign loans which have so considerably helped Germany in this export trade are still being frowned upon by authority. Several new American loans to German municipalities are reported. Dr Schacht has again emphasised the danger of this to the foreign payment balance. Further measures are being taken to control municipal borrowing abroad. All local loans, home or foreign, other than those required for meeting current expenditure, need the sanction of the State Governments. The president of the Gutehoffnungshütte heavy industry concern, condemns

ALL BRANCHES OF INTERNATIONAL BANKING **BANKERS TRUST COMPANY** HEAD OFFICE, NEW YORK 16 WALL STREET

LONDON 26 Old Broad Street PARIS 3 & 5 Place Vendome

the system of increasing production and trade by means of running into debt. He prefers "lower production and a smaller turnover without debts." The Berlin money market during the month-end settlement days was severely strained, day money rising to 12 per cent., the highest rate this year, and after the settlement the strain relaxed more slowly than usual. Day rates rose temporarily over month rates. The Reichsbank's return for September 30th also shows a heavy strain, discounts increasing by 189 million marks to 1,717 million marks, advanced by 48 million marks to 56½ million marks, and circulation by 337½ million marks to 2,649 million marks. The circulation increase in the last week of August was 302½ million marks. About 30,000,000 marks of gold came from abroad, but the whole gold reserve for the first time since the spring of 1924 dropped, though only by 57,000 marks. The gold cover percentage dropped sharply from 50.8 to 44.3; combined gold and exchange cover from 63.1 to 56.4. The exchange cover increased by 34½ million marks.

Official figures are issued of the foreign payment-balance during the first "Dawes Year," ending August 31st. These figures show that incomings of exchange from private business practically balanced outgoing, so that the exchange supply from the Reparations Loan was not trenching upon. This is not the result of an active payment-balance by German business, but is the result of borrowing; there was what Germans call a "borrower's activity" (*geborgt-aktive Zahlungsbilanz*). The official account of the monthly movement of exchange to the note banks is:—

	From.				From.		
	Dawes Loan.	Busi- ness.	Total.		Dawes Loan.	Busi- ness.	Total.
1924-25.				1925.

				Totals..	800.0	21.2	778.8

The Cabinet has received a new demand from industry for a reduction of taxation, as part of the official move to reduce the price-level. The cotton manufacturing industry has decided to calculate prices in future in reichsmarks instead of gold marks. The Government has taken measures under the Marx Cartels Law against the brick cartel, by authorising members to secede from it without giving notice, as is required by their agreements. In this case the abuse was compelling buyers to agree to pay any price, that is the *freibleibend* system which was universal and necessary in the paper-mark time. The cost of living index number (month's average) for September was 144.9, against 145.0 in August. The official wholesale number for September 30th was 124.1, against 124.9 one week earlier. The *Frankfurter Zeitung's* wholesale number for September 30th is 144.47, against 144.25 on August 31st, and 146.94 on December 31, 1924. Wages in August rose further, the average weekly skilled rate in eleven industries (including railways) being 44.13 marks against 43.61 marks in July. The Federal Debt (old paper

mark loans omitted) on August 31st was 2,582.1 million marks, against 2,632.6 million marks one month earlier. The decline is mainly due to the repayment of maturing "F" Treasury bills.

There is renewed talk of a great foreign loan with the aim of financing the Trust—from which will be seen that the official and other warnings against borrowing have little effect. Borrowing abroad by private concerns cannot be officially prevented or controlled. The fusion agreement in the Aniline concern has been finally come to. The existing *Interessengemeinschaft* consists of:—

	Present Quotas in Profits of Intern. Gemeinschaft.	Share Capitals.	
		Ordinary.	Preference.
Badische Aniline	24,820	Miln. Mks. 176	1-2
Leverkusen	24,820	176	1-2
Höchst	24,820	176	1-2
A.G. fuer Anilin	8,082	57-6	0-4
Griesheim-Elektron	6,000	44	0-32
Weiler ter Meer	1,645	12	0-08
Cassella	9,813	..	..
Kalle und Co.	..	6	..
Totals	..	647-6	4-40

The six fusing companies have reserves totalling 105 million marks. As the companies have a common dividend policy, their shares are quoted at almost the same rates on the Bourse, at present around 116. The aim of the fusion is rationalisation and economy. The Cassella and Kalle companies will not form part of the trust, but their shares are largely held by the other members. Formally, the five companies will be absorbed in the Badische Aniline Company, which will increase its capital sufficiently to enable it to exchange shares. The new company will bear the title *Interessengemeinschaft Farbenindustrie A.G.*, though it will not any longer be an *Interessengemeinschaft* but a single company. Headquarters will be at Frankfurt-on-Main. The factories will necessarily remain scattered, but they will be reorganised in four regional groups, and the numerous selling organisations will be reorganised in five groups for dyes, nitrates, pharmaceutical products, photographic materials and artificial silk, and inorganic products and intermediates.

The industrial situation has not materially changed. Unemployed on September 15th increased further to 251,271, against 230,727 half a month earlier. The Prussian Trade Ministry's monthly report describes the situation as "not unfavourable." The Frankfurter Fair opened dull.

The Bourse has been very weak, but it recovered slightly yesterday. The chief depressing influence was the financial difficulties of the Stumm heavy industry concern. The Stumm concern, like the Stinnes, consists of family interests, not of a single company. The difficulties have been overcome by assistance from the banks for a term of two years. The Prussian State is expected to buy two of the Stumm coal mines. The *Frankfurter Zeitung's* stocks index (100 on January 2nd) for October 3rd shows 67.45, against a former low point in August of 67.29, but the heavy drop in quotation which took place on October 5th probably brought the average below the August figure. As the index figure for January 31st was 111.37, stocks are within sight of a 50 per cent. drop. Yesterday's revival was largely caused by foreign buying. Paper mark loans have further receded.

ITALY.—THE CAMPAIGN OF THE LIRA—FUTURE POLICY—SLUMP IN STOCK EXCHANGES—PRICES—WAGES AND COST OF LIVING.

(FROM OUR CORRESPONDENT.)

TURIN, September 26.

THE months of August and September have seen in full swing the so-called "campaign of the lira," with which Signor Volpi successfully lowered the exchange to 115 lire to the £, and maintained it between 115 and 120 lire. The phases of the campaign seem to have been as follows:—(1) Italian Treasury agents buying up all disposable accumulation of lire existing in foreign centres, especially at New York, and utilising to this end a part of the

American credits; (2) foreign speculative sellers of lire scared out of their bearer position and forced to cover, when it appeared that the usual accommodation of lire for prolonging the selling operation were not forthcoming; (3) after the rate of discount was raised to 7 per cent., money went every day more dear, banks were instructed to restrict credits to those customers who were known to have deposits in pounds sterling or dollars in foreign places. With a minimum of effort, speculative sellers of lire were thus obliged to cover, and prospective Italian holders of foreign money obliged to sell in order to finance their new acquisition of raw materials, coal, &c. Both these movements operated in favour of the lira. (4) In the days of the flight from the lira, Italian industry and trade had bought enormous quantities of raw materials and half-finished goods, well in anticipation of current needs. Prices mattered not, in face of the feared collapse of the lira. When exchanges bettered, industry found herself loaded with immense stocks, partly paid for, and it seems that at present we are consuming these same rate. This produces an easing of the market situation, very much in favour of the lira.

If the betterment of the foreign exchanges is a first step toward stabilisation, what will be the rate of stabilisation has never been officially stated. It is doubtful if a definite policy has been settled. Until negotiations about inter-parity of the lira will be fixed.

Signor Zuccoli, director of the Banque Franco-Italienne pour l'Amerique du Sud, advocates a sort of gold exchange system, with the present paper-lira remaining for internal use and a Caisse de Conversion on the Argentine model, which should be obliged to give one pound sterling for every 100 or 120 lire and, respectively, to give 100 or 120 for every pound sterling offered to it.

Whichever we prefer, stabilisation at a new parity, or return to the old parity, one common effect of both is already making itself felt—namely, scarcity of money. We are at present in much the same plight as Great Britain after the adoption of the Cunliffe Report, as Germany after the collapse of the paper-mark and the adoption of the Renten-mark, as Czechoslovakia when Raisin attempted the valorisation of the crown. We have little unemployment, industry is busy, but the stock markets are going from bad to worse. It is clear to-day that the Stefani decrees of which I wrote you were but the forerunners of a period of dear money, which is playing havoc among operators. A few figures may suffice to give an idea of the slump after the maximum prices reached in February, 1925:—

Denomination of Share.	Maximum Prices, February, 1925.	Settlement Prices, July, 1925.	Current Prices, September, 1924-25.
Bank of Italy	2110	1690	1600
Banca Commerciale	1770	1438	1380
Credito Italiano	1185	870	840
Navigazione Generale Italiana (shipping)	890	741	650
Cosulich (shipping)	530	315	270
Otonificio Turati (cotton)	1235	780	800
Snia (artificial silk)	530	265	270
Cascami seta (silk waste)	2400	1800	1690
Sugar refining Ligure-lombard Co.	918	600	640
Beni stabili (House property, Rome) ..	1285	803	675
Fiat (motor)	617	497	475
Edison (electricity)	910	780	680

The truth is that industrial development has been more rapid than the increase of national savings; the new or increased capital, net, of the joint stock companies was: In 1922, 1,045 million lire; in 1923, 2,128 million lire; in 1924, 4,839 million lire; and in the first six months of 1925, 5,152 million lire. In all these years the lira was not depreciating, the average exchange rate being between 20 and 25 gold centimes to the lira. If we add to the enormous demands by private companies and individual firms, building and agricultural requirements, it was calculated that the total savings required amounted to about 21,000 million lire annually, against an offer of new savings of about 15,000 million lire. We are bound, therefore, to reduce the rate of progress, and an outward sign

of the situation is the lowered quotations of shares in the stock exchanges. It is commonly felt that at present many Italian shares are truly tempting, and that foreign capital could, in due time, reap good profits if it came to Italy. Reports of interest taken by foreign capital in the Snia (artificial silk) and Sip (electricity) companies are current.

The lowering of exchanges should have had a favourable influence on the level of prices. Instead of that, indexes of wholesale prices mark continuous increases: Bachi's number index (basis 1913) was 562 for the average of the year 1922, 575 for 1923, 584 for 1924. In December, 1924, it was 640; in January, 1925, 657; in February, 660; in March, 659; in April, 658; in May, 660; in June, 692; in July, 707; in August, 731. Perhaps there is operating an increasing equalisation of internal and external prices. The average index number of 584 for 1924 corresponded, when the paper lira was valued at 23 gold centimes, to a gold number index of 134; whereas in Great Britain and the United States the index numbers were respectively 159 and 149. The August index number of 731, converted, at the exchange of 21 per cent., into a gold index number of 153, is much more similar to the current indexes in the gold countries. Retail prices are slower to move. The usual figures for a working-class family of five of Turin are as follows (basis first six months of 1914):—

	Food.	Clothing	Housing	Light & Heat.	Miscel- laneous.	Total.
July, 1920	409	479	100	415	456	384
December, 1920	510	547	110	529	514	466
" 1921	537	447	120	433	578	471
" 1922	517	437	120	416	576	467
" 1923	505	470	200	460	577	467
" 1924	577	503	250	449	577	518
June, 1925	602	532	250	384	644	541
July, 1925	610	544	312	384	642	555
August, 1925	618	554	312	389	654	562

There has been much talk of raising wages in relation to the increase in the cost of living, and various arrangements are being made. Opinions are at variance as to whether wages are below the pre-war standard, taking into account the intermediate variations in the value of money.

HOLLAND.—THE BUDGET.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, September 25.

ON September 15, the opening day of the Netherlands Parliament, the Government was still deeply engaged in the difficult work of trying to make the Budget balance. This effort has been crowned with success.

The following statement gives the credit and debit balances for the last 20 years:—

Service Years.	Credit or Debit Balance of the Regular Service.		Credit and Debit Balance of the Extra- ordinary Service.		Credit and Debit Balance of the Entire Service. (— = Deficit, + = Surplus)	
	Fl	Fl	Fl	Fl	Fl	Fl
1905 to and including 1914 ..	+ 61	— 74-0	—	—	—	67-8
1915	+ 15-5	— 12-5	—	—	—	28-1
1916	+ 20-2	— 20-1	—	—	—	0-1
1917	+ 36-3	— 30-0	—	—	—	6-3
1918	+ 4-3	— 67-9	—	—	—	72-2
1919	+ 22-2	— 107-7	—	—	—	85-4
1920	+ 0-6	— 175-8	—	—	—	175-2
1921	— 12-8	— 284-0	—	—	—	296-9
1922	— 33-3	— 173-5	—	—	—	206-9
1923	— 14-1	— 78-1	—	—	—	92-3
1924	— 28-6	— 67-5	—	—	—	96-1
1905-1924	— 23-1	— 1,091-7	—	—	—	1,114-8

The figures for the year 1925 are, of course, not yet known. Originally a deficit was assumed of 19½ million florins. In the meantime, however, the Excise tax on tobacco has been increased, and the new tariff law has become effective, from which, together, receipts are expected for 1925 of 12½ million florins. The remaining

deficit of 7 million florins is, however, entirely covered by the considerable increase in receipts from taxes, which have in the first seven months of 1925 already brought in 18 million florins more than estimated. A deficit for 1925 is, therefore, improbable.

Expenditure for 1926 is estimated at 644,411,264.81 florins, a decrease of 15,662,281.77 florins. Some noticeable differences require further explanation. A decrease of over 41 millions under the head of Public Works is accounted for by the fact that the State mining industry is no longer included in the Budget. This has been the case so far, for the estimates of all receipts and expenditure items of this industry. In view of the fact that by such an estimate, which does not tally with the requirements of the industry, no proper insight is obtained of the business results, there has only been included in the Budget the estimate of the receipts for interest due. By this means, in comparison with 1925, expenditure has been reduced by 44.8 million florins, and the receipts by 46.9 million florins. An increase of 30½ million florins under Labour, Commerce, and Industry, is a result of the intended payments in the matter of disablement (pensions) and old age insurance, which were left out the previous year for reasons of economy.

The regular receipts for 1926 are estimated at 592.2 million florins. If the estimates of receipts and expenditure are placed in comparison, the result is found to be as follows:—

	Regular Service. Fl.	Extraordinary Service. Fl.	Total. Fl.
Expenditure	583,025,924-81	61,385,340	644,411,264-81
Receipts	592,200,745-30	3,368,200	595,568,945-30
Surplus	9,174,820-49	58,017,140	48,842,319-51
Deficit	..	..	..

There should, therefore, be a surplus from the regular service of 9 million florins. This, however, is to be applied:—

(a) To an increase in salary for some officials (among others, those of the legal authority), estimate 3 million florins.

(b) To a more rapid execution of draining the Zuider-Zee (Southern Sea), estimate 4 million florins.

(c) To improvements in the large highways, estimate 2 million florins.

Calculated in this manner, the Budget for 1926 will just balance. This is satisfactory, but, as will be seen from the table below, the level of the Budget has been forced up much too high:—

Year.	REGULAR SERVICE. (In Million Guilders).		Expen- ditures.	Balance.
	Receipts.	Expen- ditures.		
1913	205-6	197-5	..	+ 8-1
1918	329-1	333-4	..	- 4-3
1919	466-4	444-1	..	+ 22-3
1920	613-7	613-0	..	+ 0-7
1921	608-3	621-2	..	- 12-9
1922	599-0	632-4	..	- 33-4
1923	597-5	611-7	..	- 14-2
1924	580-3	609-0	..	- 28-7
1925 (estimate)	611-4	611-4	..	..
1926 (estimate)	637-0	637-0	..	(see note)

NOTE.—To the figures for 1926 we have added, in order to make the comparison correct, the amount of 45 million florins for the government mines, which amount has now, as already mentioned above, been deducted from the Budget, but for the previous year was included.

With an index figure of 150 (1913 = 100) the Government expenditure amounts to more than three times the figure reached in 1913. The figure for expenditure for 1926 exceeds by about 4 millions that of 1922, which was the highest record reached before or since. A normal and sound financial condition will only be reached, when the regular expenditures have been brought back to such a level that the taxes no longer prevent capital accumulating. For the present, any appreciable reduction of taxes cannot be thought of. A beginning, however, has been made by discontinuing the so-called "defence tax" as from May 1, 1926. An amount of 26½ million florins in receipts will be lost in this way, which, however, will be found from the surplus of the amounts that are available for payment of the loans made during the crisis period. For the present, no further reduction may be expected.

At the end of the Budget speech the Minister has given

a statement of the condition of the Treasury, and of the expenditures during the so-called "crisis period," which is considered as officially closed as at the end of the year 1924. From this statement it appears that the floating debt, not covered by assets, amounted to 43.6 million florins on September 7th last. As to the "Crisis Expenditures," these have from 1914, to and including 1924, amounted to 1,281.8 million florins. To cover the deficits from the "crisis period," 1,350.2 million florins have been obtained from loans, so that there is still available 68.3 million florins, which amount must be reduced by the amounts loaned to Austria as relief credits, amounting to 16.7 million florins, for which postponement of payment of capital and interest has been granted for the period of 20 years.

The total impression of the Budget is that a point has been arrived at where there is no longer any danger of a dislocation of the balance, or of injury to the currency, but that concentrated efforts must be made to strive for a gradual but decisive reduction of expenditure.

AUSTRIA.—POLITICAL POSITION—BUDGET AND STATE WAGES—LABOUR CONDITIONS—MONEY AND EXCHANGE—NATIONAL BANK.

(FROM OUR CORRESPONDENT.)

VIENNA, October 1.

Now that Parliament is reopened it is probable that the peaceful relations which have existed between the parties during recent months will be disturbed, as some questions have arisen the settlement of which may lead to serious differences. The greatest conflict will occur over the debate on the result of the last League of Nations' conference; but the general feeling is that Parliament will eventually agree, against the votes of the Social Democrats, to the resolution of the League of Nations' finance committee regarding the extension of amended control and the retention of the Adviser at the National Bank. Another difficulty is created by the pressing claims of the State employees for increased salaries, a very serious problem, the solution of which rests on the ability of the Government to find additional sources of revenue. Further, owing to the failure of the Government's plan regarding preferential tariffs with Italy and Czechoslovakia it will become necessary to alter the Austrian commercial policy. Also, the Christian Socialist party is alarmed by the fact that the Social Democrat party has compiled a big agricultural programme, which includes the nationalisation of the large estates, and aims at capturing new votes for the party amongst the peasants, who up till now have always been ardent supporters of the Christian Socialist party.

The most insistent question at the moment is the finding of a way to meet the claims of the State employees for higher salaries. The number of these employees is 95,030, whose total salaries and wages amount to about 600 million Austrian schillings. A 20 per cent. increase, as asked for by the employees, would, of course, mean an unendurable burden for the country in its present financial situation. The Budget for 1926 shows a deficit of 85 million schillings, and although it is true that this is the result of the inclusion in the Budget of an extraordinary expenditure of 120 millions for investments (without which there would be a favourable balance of 35 millions), it is obvious that such a Budget could not stand the burden of any big extra expenditure. In some quarters the question has been raised as to whether the moment is ripe for the floating of an internal loan. It must, however, be borne in mind that the classes which previously formed the investing public are now impoverished, and have not forgotten their losses sustained through the holding of State securities during the inflation period. Besides this, such a loan would not be feasible unless money conditions become much easier, as otherwise the rate of interest would have to be very high in order to attract subscribers.

Unemployment has practically not changed, as the number in receipt of the dole amounted in September to 116,439 as against 117,187 in August. At the moment a delegate of the Austrian Government is negotiating in New York to obtain an increase in the quota for Austrian emigrants; some Austrian workmen have emigrated to

France as well as to Germany, and some hundreds recently even to Russia. The Government had mooted a plan to subsidise with part of the money now paid out in doles firms which would absorb unemployed workmen, but the majority of manufacturers have energetically protested against such a scheme because they cannot see any outlet for increased production. During the last month there have been several strikes, and that in the Alpine Montan-Gesellschaft, the largest engineering concern, is still unsettled. In general, however, workmen realise the difficulties with which industries have to contend at the present time, and, as a matter of fact, the strike in the Alpine was the outcome, against trade union's instructions, of extreme radical elements.

The National Bank reduced the bank rate on September 2nd from 10 to 9 per cent., and in consequence the banks reduced their deposit rates from 7 to 6 per cent. Towards the end of the month the margin between unofficial discount rate and bank rate became much smaller than usual, which shows that money is tightening. The National Bank does not seem inclined further to reduce the bank rate for the time being, as it fears the withdrawal of foreign credits. Although there are still sufficient offers of short-term credits, especially from the United States, it is very difficult to obtain credits for long periods. This is evidenced by the failure of the negotiations of the Municipal Councils of Salzburg and Linz to obtain loans from American firms. Business on the Stock Exchange is completely stagnant, there is practically no speculation, and in consequence the fluctuations of prices are very limited.

The latest returns of the National Bank do not show a very remarkable change as compared with August. The following table shows the way in which the bank has succeeded in steadily improving its position during the course of about a year:—

(In Million Austrian Schillings.)

	1924.		1925.				
	Aug. 7.	Oct. 31.	Jan. 7.	April 15.	July 15.	Sept. 23.	
Cash reserve	335	414	352	343	432	502	
Banknote circulation	772	821	791	741	770	755	
Bills discovered	333	238	182	101	84	69	
Security of banknotes	37%	48%	47%	52%	60%	65%	

Business on the foreign exchange market was much more lively during last month than usual owing to the great fluctuations of the Polish currency, which led to considerable transactions on the Vienna market for the account of speculators of all the Succession States. During some days there was such a demand for dollar notes on the part of Polish speculators that not a single note was to be had in Vienna.

AUSTRALIA.—OVERSEAS TRADE—BANK RETURNS—BUDGET FOR 1925-26.

(FROM OUR CORRESPONDENT.)

MELBOURNE, August 21.*

THE Commonwealth trade statistics for the financial year ended June 30, 1925, show an increase of £16,479,172 in gross imports as compared with the preceding year, and an increase of £41,618,947 in gross exports. Of this increase in imports nearly 6 millions is in merchandise, and nearly 10½ millions is due to the gold brought by the banks from America and South Africa early this year. The increase in exports is the net result of an increase of £43,474,814 in merchandise and a decrease of £1,855,867 in gold. A comparison for the last three financial years is as follows:—

	1923-24.	1924-25.	1925-26.
Imports—			
Merchandise	131,733,323	140,593,551	146,586,586
Gold	24,512	24,742	10,510,879
Total imports	131,757,835	140,618,293	157,097,465
Exports—			
Merchandise	115,642,121	116,674,894	160,149,708
Gold (inc. prem.)	2,228,026	2,812,270	956,403
Total exports	117,870,147	119,487,164	161,106,111

* Delayed by shipping strike.

Exports for 1924-25 were the largest on record, and would have been still greater if the whole of the wool clip had been sold and shipped within the financial year, instead of half-a-million bales being carried over. Imports are second only to the total of £163,801,826 in 1920-21. After allowing, on the one hand, for interest and other payments to be remitted abroad to an amount now approaching 30 millions per annum, and, on the other hand, for fresh public borrowings, the scale of imports has been fully equal to Australian purchasing power for the time being. A comparison of some principal exports is as follows:—

	1922-23.	1923-24.	1924-25.
Wool and tops	57,138,764	56,197,158	63,196,388
Wheat and flour	12,991,550	19,297,139	40,599,661
Butter	6,133,864	4,919,664	10,006,081
Frozen beef, mutton, and lamb	6,116,652	2,472,729	5,627,677
Lead	2,561,616	3,323,463	4,154,448
Zinc	846,054	1,057,895	1,135,787
Zinc concentrates	1,461,016	1,166,424	1,055,632
Silver	1,117,145	1,080,872	1,123,865
Dried fruits	1,232,124	1,242,272	1,939,826

The Commonwealth Budget speech, delivered by the Treasurer, Dr Earle Page, on August 13th, shows that the net revenue available for Commonwealth purposes for the 1925-26 financial year, after deducting payments to the States (but including the gross receipts, as in former years, from such sources as the Post Office, railways, and Northern Territory revenue), is estimated at £61,075,050, against which is expenditure, £60,959,336, leaving an estimated surplus of £115,714. The revenue includes £51,310,000 to be collected by the Commonwealth in taxation, after allowing for reductions of £2,510,000 represented by a reduction of 12½ per cent. in individual income-tax rates and certain minor alterations in entertainment and other taxes. The Commonwealth income-tax will then stand at 20 per cent. above the scale introduced in 1915. The Customs revenue is estimated at £26,500,000, against £26,405,161 collected in 1924-25; and a continuance of imports on a heavy scale is thus relied upon as the means for enabling the income-tax to be reduced. The expenditure includes interest on Commonwealth debt, £20,526,035, and sinking fund, £3,032,000. The gross Commonwealth debt at June 30, 1925, was £430,947,591, against £415,600,098 at June 30, 1924, but the increase of £15,347,493 during the year is nearly all due to loans issued by the Commonwealth on behalf of the States.

JAPAN.—A BUDGET SURPLUS—NEXT YEAR'S ESTIMATES—AUGUST TRADE—A TRADE UNION BILL.

(FROM OUR CORRESPONDENT.)

TOKIO, September 7.

THE national accounts for the fiscal year closed March 31st, which were published last week, disclosed a surplus of 502,367,000 yen, the revenue amounting to 2,127,391,000 yen, and the expenditure to 1,625,024,000 yen. The yen, and the expenditure to 1,625,024,000 yen. The revenue shows an increase of 467,314,000 yen, in comparison with the estimate for that year, and of 82,338,000 yen with the previous year. This has been mainly due to an all-round increase in tax revenue and larger profits of State monopolies. Income-tax, sugar duty, and Customs produced 43, 11.7, and 36.9 million yen respectively more than was anticipated, while the profits of State monopolies exceeded the estimate by over 39 million yen. On the expenditure side there is a decrease of 197,411,000 yen, as compared with the estimate for the 1924-25 year, and of 103,974,000 yen with the previous year. This is accounted for largely by economy in Civil Services, reduction of the sinking fund allowances, and postponement of reconstruction works in the quake-damaged districts. Despite, however, a huge surplus (which in our practice does not automatically go to the reduction of debt), there is a rather thin margin which will be available for the next year's expenditure. Of the surplus of over 500 million yen, half the amount has already gone for the current year, and the remaining half can only be used for the next year.

By the latter part of last month all the spending departments had prepared and submitted their estimates of ex-

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.

Capital Authorised £3,000,000

Paid-Up Capital 1,050,000

Reserve Fund and Undivided Profits 1,458,221

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1. JAMES STEUART, Chief Manager.

penditure for 1926-27 to the Treasury, which has now begun to scrutinise them. These departmental estimates bring up the total national expenditure to 1,740,144,000 yen, including new items of expenditure of 230,000,000 yen. The sums claimed by each department are set out below:—

Departments.	Estimates for 1925-26.	Estimates for 1926-27.
Imperial Household....	4,500,000	4,500,000
Army	192,191,000	215,000,000
Navy	224,875,000	270,000,000
Foreign Office	16,819,000	16,600,000
Home Office	247,156,000	241,200,000
Treasury	317,605,000	351,341,000
Justice	30,536,000	35,000,000
Education	98,750,000	133,341,000
Agriculture	41,460,000	51,900,000
Commerce and Industry	10,789,000	32,785,000
Communications	339,705,000	388,000,000
Total	1,524,396,000	1,735,644,000

This shows an increase of 215,748,000 yen upon the current year, mainly due to larger outlay on Navy, Education, Communications, and Debt Service. Besides the above, there are other new charges totalling some 68,000,000 yen, which will be submitted afterwards as supplementary estimates. Against the excess, amounting to 300 million yen for new items, the funds to be drawn upon to meet these expenses are estimated at 70 or 80 million yen out of the remaining half of the surplus of the year 1924-25. The departmental estimates, therefore, should be axed accordingly by the Finance Minister, if the Budget is to be balanced, and it seems that in particular the programme for cruiser construction must suffer.

The trade returns for August show a favourable balance of 37,279,000 yen, imports amounting to 191,109,000 yen, exports to 228,388,000 yen. As compared with the corresponding month of last year, both imports and exports disclose a comfortably large expansion, imports increasing by 48,893,000 yen, and exports by 515,000,000 yen. The expansion is largely due to imports of raw cotton and export of raw silk, which have increased in value by 53 and 26.5 millions respectively. And the huge adverse balance since the opening of the year has now diminished to 442 million yen. Despite the encouraging returns of the trade, however, foreign exchanges have developed a weak tendency during recent weeks. The Treasury officials are studying assiduously "how to minimise our international payments and to improve the exchanges." They have lately laid down the general principle of taking all the conceivable remedial measures into consideration. But they seem to have no good effective plan to suggest.

A draft Trade Union Bill has been published recently by the Home Office, and is being submitted to the discussion of the Administrative Committee. Besides providing for legislation of labour organisation and conferring upon it several advantages of incorporation, which incorporation carries with it, the Bill gives an explicit guarantee of the worker's right to join a union and the union's right of collective bargaining. The employer, on his part, does not like to be statutorily enjoined not to discharge his employee because of a member of a union, and to come into contact directly with union officials in negotiation of the conditions of employment. The Japan Industrialists' Club and other similar bodies are strongly opposed to the provisions of the Bill which embodied the above two rights, denouncing them as an unwarrantable interference with freedom of contract and the indi-

vidual worker's liberty to dispose of his labour at his will. Meanwhile, not a few trade disputes now in progress centre round the question of the establishment of those rights.

Books and Publications.

INDIAN ECONOMIC PROBLEMS.*

MR BHATNAGAR'S little book is rather of the nature of a plea for the better teaching of what is usually called "Indian Economics," and is, therefore, largely intended for Indian readers and especially those who teach economics. He rightly objects to the term "Indian Economics," which implies "that the books written by Western economists are not applicable to India at all," and would substitute the new title "Indian Economy" on the grounds that "Indian Economics is not a separate science." He then proceeds to develop his ideas as to the method of teaching, and strongly condemns the old methods which are still largely employed. The author's procedure is to base the teaching on a geographical foundation and to then show how social, religious and legal institutions affect the general problem. His method commends itself as quite sound provided we can find the right teachers—and, after all, the teacher is more important than the method—and provided also that one wishes to lecture on "Indian Economy" at all. The great fault of the subject, as understood at present, is that it is too encyclopædic, being supposed to treat of all economic activities affecting Indian life. It is high time that writers devoted themselves to specific subjects, and that students should not be expected to read so widely. Much of the so-called Indian economics is merely general information, much geography, and both should be taught in the schools. This would allow of more time for real economics.

From this we pass to "Economic Conditions in India" and "Indian Currency and Exchange." The only criticism of the former is that it attempts what has been premised as impossible. But if we do admit of such works, it must be acknowledged to be a scholarly production which shows promise of even better things. Parts I. and II. are much better than Part III., which is necessarily sketchy. The author begins with a short survey of conditions prior to the coming of the British, and disposes of the common error that India was once rich and prosperous. This leads up to a study of the agriculture of the country. Here again the author uses old facts to emphasise certain very important facts—that agriculture must always remain the staple industry of the country and must, therefore, be developed in every way; also that any industrial development must depend ultimately upon a prosperous agriculture. The last part contains a number of chapters dealing with industry. These, although inferior to the previous chapters, are still interesting. Throughout the author shows an admirable judgment. Mr Chabliani's book is also to be commended for the restraint with which a very difficult and controversial problem is handled. Indian currency is not to be mastered easily, and is always difficult. This little book is admirably clear. It is based on lectures delivered to Indian students, and is intended "primarily for candidates for a degree in economics." But one hopes it will be more widely read. English readers might find very much that is really useful. Even when in disagreement one has to admit that the author has stated his case with great impartiality. It is a book that can be commended to both Indian and English readers.

MUNICIPAL FINANCE.*

THE financial statement of the City of Birmingham for the year ended March 31, 1925, shows that the total outstanding debt of the city at that date was £33,526,894, to which must be added a sum of £5,611,532 standing to the credit of depositors at the Municipal Bank, making in all £39,138,426. The population was 952,766, and thus the loans and deposits outstanding amount to upwards of £41 per head against £33 15s 3d per head at March 31, 1923. At March 31, 1919, the net outstanding debt of the city was £20 millions (apart from Municipal Bank depositors). In six years, therefore, the city's debt has increased by £13½ millions, or 67.5 per cent. In addition to this, there is the large amount standing to the credit of depositors at the Municipal Bank, which is now about double what it was at March 31, 1923. The accounts show that 45 per cent. of the city's outstanding debt is funded debt—i.e., with a minimum life of fifteen years; 20 per cent. is partly funded debt—i.e., with a life of five to fifteen years; and 35 per cent. is floating debt—i.e., with a maximum life of five years. It is difficult, of course, to lay down any hard and fast rule as to the relationship which should be maintained between these three classes of debt, but as a general practice of local finance a floating debt should no doubt be kept within the narrowest limits possible. It is claimed that experience has proved that the proportions of two-thirds funded or partly funded debt and of one-third floating or short-dated debt are such as to be both reasonable and prudent, and that such proportions might advantageously be adopted in the case of other municipal authorities. That the credit of the City of Birmingham stands high in public estimation is evidenced by the recent issue of stock when the city was able to obtain a large block of three millions 4½ per cent. stock at the price of 99. There is issued with this volume a pamphlet containing general statistics and an epitome of the city's accounts. The treasurer, Mr J. R. Johnson, F.S.A.A., is to be congratulated on the completion and publication of this great volume of accounts, which necessarily involves a vast amount of detail relating to the operations of the year as well as to statistics of past years.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, October 21. | ACCOUNT, October 22.

No reduction in the Bank rate came on Thursday to stimulate the markets in gilt-edged stocks, nor to infuse a throb of cheery bullishness into the speculator's veins. The fortnightly settlement which was finished, nominally, on Thursday night proved a heavy and cumbersome affair, owing to the colossal amount of detail work demanded by the rubber market's share of the account. A small failure on Thursday had no material influence upon markets.

War Fives, Conversion, and other British Government securities are disposed to droop a little. The appearance of a triple municipal loan led to a surmise as to whether the new-issue truce is going to be broken in earnest. The effect of the easy 4 per cent. Bank rate is seen in a quiet strengthening amongst Colonial and Home Railway prior-charge stocks.

Brazilian, Chinese, and the mid-European bonds are noticeably higher. New York continues to be a persistent buyer of Brazils. The French issues have hardened in two or three cases. Argentines improved; Japanese remain in the back-ground. Only Mexicans are weak.

Home Railway stocks are swayed by political tendencies on the one hand and a cautious speculative demand on the other. The market retains a fair proportion of the rise achieved last week. Argentine rails are firm, with Cordoba Centrals again a good feature. United of Havana is nearly up to par. The dividend declaration, making 8 per cent. for the year, fulfilled anticipation, but the deferred stock fell heavily, as the company is paying nothing on this issue.

Rubber shares continue to monopolise much public interest. The volume of trade is huge, and the remarkable dividends, in numerous daily announcements, act as a continual stimulus to the buoyancy. The tea market is a little more hopeful. Oil shares have lost attraction for the time being. Courtaulds are once more animated and strong. Some of the other textiles, spurred, on hopes of bonus distributions. Sudan Plantations, in one section, and Maynards in another, have benefited by the new capital proposals. Nitrate shares are very quiet. The insurance group is steady, with the exception of Consolidated shares, whose weakness increased. Banks are better, reflecting the influence of the 4 per cent. rate. Several iron and steel shares have hardened, and Dunlops, with motor shares, received favour and advertisement from the opening of the Olympia Show. Piccardos have been flat in the tobacco market, where otherwise the tendency is hard. Benzol and By-Products preference fell away, as a result of the dividend being passed. Watney deferred led a few other brewery issues to better prices. Spiers and Ponds have been a good spot in the catering and hotel list. Canadian Marconis show further recovery.

Kaffir gold-producers are stronger in tendency, with business in them limited. Professional dealing, French and Belgian notably, kept on the bull tack in diamond, copper, and Rhodesian land shares.

Tin shares are enjoying a very unusual sparkle of activity. The Middle East group has sprung into popularity, and there is a good deal of trade afoot in the principal shares. West Africans participated, though in much milder manner, and Mexican business in the Cornish descriptions is scrappy. Mexican mining shares have had something of a flip, but Canadians, Indians, and Russians failed to arouse any public interest.

We are officially informed that Mr Charles Arthur Rolfe (trading as H. A. Redford and Co.) was declared a defaulter upon the Stock Exchange on Thursday.

Birkenhead Corporation.—Issue of £1,000,000 of 4½ per cent. redeemable stock, 1940-1960, at 97 per cent. The stock is a trustee security, and will, it is stated, be redeemed at par on July 1, 1960, unless previously purchased in the open market or by agreement with holders, but the corporation has the option of redemption at par on or after July 1, 1940, on three months' notice. The stock is secured upon the funds and revenues of the corporation, and will rank *pari passu* with all other outstanding issues, except in respect of securities amounting to £2,400. The rateable value is £894,919, and a rate of one penny in the pound will produce £3,248. The total outstanding debt is £4,450,398, of which £3,538,220 is in respect of reproductive undertakings. The proceeds of the issue will be applied to the extent of £502,346 in repayment of existing loans, and the balance for ferries, water, and other purposes.

Bradford Corporation.—Issue of £1,000,000 of 4½ per cent. redeemable stock, 1940-1960, at 97 per cent. The stock, which is a trustee security, is secured upon all the property, rates, and revenues of the corporation. The rateable value of the city is £2,414,710, and a rate of one penny in the pound produces £9,360; the amount which may be levied in rates is unlimited. The estimated population of Bradford is 290,000. The borrowing powers of the corporation total £25,328,915, of which £21,998,833 has been exercised; the total outstanding debt is £15,071,548, of which £7,776,452 is stated to be in respect of reproductive undertakings. The gross profit upon the trading undertakings of the corporation for the year ended

March 31st last was £723,930, which, after providing for interest and sinking fund charges, left a net surplus of £106,700. The proceeds of the present issue will be applied for waterworks, electricity works, tramways, street improvement and other purposes. At the price of issue the flat yield is approximately £4 18s. If redemption is effected in 1940, the average yield, including profit on redemption, works out at about £5 1s, and if at the later date—1960—the yield is £4 18s 6d per cent. As the terms and yields of this and the two simultaneous issues are similar, apparently the credit of our home corporations is to be rated by a rule-of-thumb rather than on merit or individual development.

Walsall Corporation.—This is an issue of £600,000 of 4½ per cent. redeemable stock, 1940-1960, at £97 per cent. This is a trustee stock. It will be redeemed at par on July 1, 1960, unless previously cancelled by purchase in the market or by agreement with holders. The corporation retains the option of redemption at par on or after July 1, 1940, on three months' notice. The stock will be charged on the rates and revenues of the corporation, and will rank *pari passu* with all other issues. The total assets of the corporation as at March 31st last were £2,938,024, and liabilities £1,683,655, leaving a surplus of £1,254,369. The rateable value is £369,709, the total outstanding net debt £1,346,400, of which £910,500 is in respect of reproductive undertakings, and a rate of one penny in the pound produces £1,360. The proceeds of the issue are required for housing, street improvements, electric supply, gas works, and general sanitary works.

The Brisbane Tramway Trust.—Incorporated in Queensland. This is an issue of £500,000 5½ per cent. Brisbane Tramway stock, 1944-1954, at 98½ per cent. Interest is payable on April 1st and October 1st in each year, and a coupon for £1 12s 6d per cent. payable April 1st next, representing interest on instalments, will be attached to the scrip. The principal is repayable at par on October 1, 1954, the option of redemption in whole or in part on or after October, 1944, being retained. Principal and interest are unconditionally guaranteed by the Government of Queensland. In addition, they constitute a first charge, and are secured upon the revenues of the trust, and any deficiency in such revenues may be made good, after recourse to available reserves, by a proportional charge on the rates of each local authority within the district of the trust—namely, the city of Brisbane. The trust consists of eight members, of whom two, including the chairman, are appointed by the Queensland Government and six are elected by the aldermen and councillors of the several cities, towns, and shires. The proceeds are required for the erection of new tramway sheds and for the necessary extensions to the system. Earnings in 1923 showed an increase of £32,000 over 1922, and those in 1924 an increase of £34,000 over the 1923 figures. After paying interest on capital and charging a further £221,000 for depreciation, renewals, reserve, sinking fund, &c., there was a surplus of £11,499 during 1923 and 1924, the figures for which were combined on account of difficulties in allocating values, in view of the lump sum paid over as compensation for the system. Owing to the lease of the property upon which the power house, workshops, and stores are situated expiring next year, these assets demanded special provision being made from revenue, while the condition of the tracks necessitated expenditure from the revenue of £120,000 in 1924, as against £46,000 in 1922. The expenditure per car mile was lower in 1924 than in 1922. A well-secured issue.

Rainham Waterworks Company, Limited.—Tenders are invited for £6,000 of 6 per cent. new irredeemable preference shares of £1 each, the minimum price of issue being par. The authorised share capital is £48,000, of which £36,000 has been issued, while of the authorised loan capital of £24,000, £6,275 has been raised. The company was established in 1881, and supplies water in Rainham and district. The net revenue for the year ended September 30, 1924, was £2,010. The interest on the debenture stock requires £251 per annum, leaving a balance of £1,759 available for the dividends on the preference and ordinary shares. The shares will rank *pari passu* with the existing 12,000 6 per cent. preference shares as regards dividend, and next after the existing 4 per cent. preference shares, of which £6,000 have been issued. Subject to the drawback of the small size of the issue, the investment is well secured.

Simpson and Godlee, Limited.—Authorised share capital £550,000, of which £299,500 has been issued. There is also 4½ per cent. debenture stock of £55,650 outstanding. The company is interested in the cotton industry at Manchester, and this is an issue at par of 200,500 7 per cent. cumulative preference shares of £1 each. There are ordinary shares issued amounting to £250,000. The latter are held by directors and others associated with the company. The new capital is required for extensions to meet the company's increasing business. It is provided that a preference dividend reserve fund equal to twice the sum required to pay one year's preference dividend shall forthwith be created and maintained. Figures are supplied from the last balance-sheet (at September 10, 1924)

showing that the net assets at that date amounted to £413,885. To this may be added the share capital of the Know Mill Printing Company, £200,000, which is "held by or on behalf of the company," and the proceeds of the present issue, £194,000. The assets of the Know Mill Printing Company at the date of the last balance-sheet (September 13, 1924) exceeded liabilities by £308,188. Profits are shown from 1915, and the prospectus appears to be a reasonably favourable statement of affairs.

Malayan Tinfields, Limited.—Capital £100,000, in shares of £1 each, all of which have been issued, 5,000 being fully paid and 95,000 being 10s paid. The company was incorporated in June last to prospect and develop tin properties in the Federated Malay States, Siam, &c., and has purchased one property in Perak, F.M.S. In the advertisement, which is published in order to comply with Stock Exchange regulations, it is stated that "here a tin mine has for some years given very profitable returns to its Chinese owner, who has been working only a small part of the property in a primitive manner. An option has also been acquired over a dredging proposition in the neighbourhood of Ipoh. Certain property, acquired from the Renong Tin Dredging Company, Limited, is to be transferred to a subsidiary company.

Ledang Rubber Plantations, Limited.—Authorised capital £400,000 in £1 shares, of which 310,000 shares have been issued. The company, particulars of which are advertised "for information only," has been incorporated to work and develop certain rubber estates in Johore, Malay. The estates comprise 8,640 acres, of which 5,517 acres are planted, but it is not stated what acreage is in bearing. The purchase price is £174,839, and although it is not stated, this is, presumably, payable in cash. In addition, the company has agreed to repay to the vendor concern all payments made by the latter in connection with the acquisition, upkeep, management, and financing of the estates, &c., together with all preliminary expenses and underwriting commission, and grants to the vendor company an option to subscribe at par for 50,000 unissued shares for a period of five years from October 1st last. The capitalisation per planted acre is £56 3s 9d, which is a fair average.

Banir Rubber Estates, Limited.—The authorised share capital is £150,000, in ordinary shares of £1 each. This is an issue of 125,000 ordinary shares at par. The company has been formed to acquire and develop certain plantations in Perak, Federated Malay States. The total planted area is 1,200 acres, out of a total of 1,620 acres, but it is not stated what acreage is in bearing, nor are details given of past output. The purchase price is equal to £105,000, payable, presumably, in cash, although this is not specifically stated.

ACTIVE SECURITIES.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

COMPANY MEETINGS, &c.

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE SOCIETY.

SUCCESSFUL RESULTS OF THE YEAR.

The 101st annual meeting of the Clerical, Medical, and General Life Assurance Society was held, on the 9th instant, at the chief office, 15 St. James's square, London, Mr Francis E. J. Smith, chairman, presiding.

The general manager and actuary (Mr Arthur Digby Besant), having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report, said the net new life business of £1,389,369 was some £65,000 larger than that of the previous year, which, in its turn, was about £100,000 ahead of 1923. The amount of new business last year had, in fact, been only once exceeded in their history, and that was in 1920, when our armies had just returned from the war, and there was a belated crop of life assurance to be garnered, of which they naturally obtained their full share.

POPULARITY OF LIFE ASSURANCE.

Of the new business this year, no less than 62 per cent. was effected under the whole-life tables, while endowment assurances represented only about 32 per cent. These were somewhat surprising figures in these days when endowment assurance was so popular, and it had given him great pleasure to find how substantial a proportion of their policyholders still preferred the old-fashioned whole-life assurance. For the purpose of family provision there was no better or cheaper mode of assurance than their whole life with profits policy. In common with most other life assurance offices, they had received an unusually large amount of new single premiums. The sum received from this source was £76,466, whereas the average amount of single premiums during the previous 10 years was only about £6,000 per annum. The large increase in their premium income had been mainly brought about by the demand for a special type of life assurance policy under which the assured paid only 10 per cent. of the single premium in cash, and borrowed the remaining 90 per cent. from the society as a loan secured upon the policy.

The death claims continued to be very moderate in amount. As the volume of the society's business grew there must naturally be a normal expansion in the amount paid as death claims, and they must expect this item to increase steadily as the years went on.

The interest income, and more especially the net interest income, showed an unusually large expansion. The net rates earned, namely, £4 15s 4d per cent., after deduction of income-tax, was higher than anything that they had achieved during the first 100 years of their history.

GENERAL REVERSIONARY AND INVESTMENT COMPANY.

There was one other item in the balance-sheet to which he especially wished to direct attention. They purchased the shares of the General Reversionary and Investment Company in 1912 in the expectation that the transaction would be an advantageous investment and bring them new legal and other connections. They purchased these shares for the sum of about £770,000, and on this basis it was estimated that the investment would yield about 4½ per cent. As the result of depreciation due to the war, they found it necessary to write off about £45,000 from the value of this security—a very small percentage of loss relatively to that incurred upon their holdings of Stock Exchange securities. During the past five years the business of the General Reversionary Company had not only greatly expanded, but had proved extremely profitable. They had contented themselves with a very moderate scale of dividend each year, and had retained much of the profits for the purpose of strengthening the valuation bases of the company. Their actuary made a revaluation as at June 30th last, and the result of his calculations showed that despite the severity of the valuation standard adopted, the value of this security to-day exceeded £300,000 as compared with the £726,000 at which it still stood in the books. It was to his predecessor, Mr John Coles, that they owed the purchase of these shares. In addition to the excess of £75,000 in the value of these shares, the value of the Stock Exchange securities showed an excess of £142,000 over the book value. That was the position on June 30th; to-day the excess value had risen to £190,000. They were now considering the extension of their mortgage policy on the lines which had proved so successful in their reversionary policy, and were contemplating the possibility of forming a small company managed by local experts

ARCOS LTD.

Sole Purchasing and Selling Agency in Great Britain for the Government of the U.S.S.R.

TURNOVER TO
MARCH 31, 1925, £56,000,000.

Exports from Russia to Great Britain include timber, flax, furs, ores, metals, crude drugs, petroleum products, etc., to a total value of £18,000,000.

The more important items of import to Russia are agricultural machinery, locomotives, tools, motors, scientific apparatus, drugs, clothes, boots, etc., to a total value of £38,000,000.

49, Moorgate, London, E.C.2

Telegrams: "Arcosarcos, Ave. London."
Cables: Arcosarcos.
Telephone: A.B.C., 8th & 9th edition.
London Wall 6626. Marconi, Bantley & Zebra.

to advise them with regard to mortgages secured upon suitable town properties in Canada.

With regard to their bonus prospects, to-day there was a great change as compared with the previous valuation. Interest ran high, mortality was favourable, appreciation had replaced depreciation, taxation was reduced, surplus was accruing at a rate unsurpassed in all their long history; no shadow of doubt existed as to their capacity not only to maintain but to strengthen their valuation reserves, and, need he add, as to their capacity and intention to pay in October, 1926, a scale of bonus larger than anything that they achieved in the first 100 years of their history.

The report and accounts were unanimously adopted.

GOODE, DURRANT, AND COMPANY, LIMITED.

SATISFACTORY RESULT—DIFFICULT TRADING CONDITIONS.

The twenty-seventh ordinary general meeting of Goode, Durrant and Co., Limited, was held, on the 8th instant, at the registered office of the company, 27 Milton street, London.

Mr J. Albion Williams (chairman of the company) presided.

The secretary (Mr D. M. Jackson, F.C.I.S.) having read the notice convening the meeting and the auditors' report, the Chairman suggested that the directors' report and the audited balance-sheet, which had been in the hands of the shareholders for several days, should be taken as read.

This was agreed to.

The Chairman said:—The directors' report and balance-sheet presented to you do not call for very much comment from me, although it is with very natural regret that we have to show a profit which is £10,000 less than that recorded last year, being £51,377 17s 4d, as against £61,403 8s 4d a year ago. In view of all the circumstances that existed in Australia during the period under review, your directors feel that the result of the year's trading is one for which we can be thankful.

FALL IN PRICE OF WOOL.

Although Australia enjoyed considerable prosperity during the period, the heavy fall in the price of wool which came about at the end of last year and the beginning of this, together with the labour disputes, has tended to make the conditions of trading anything but easy, and, according to reports received, we believe this has been the general experience of the wholesale textile trade throughout Australia.

The extension of the company's factories, which we mentioned at the annual meeting last year, is nearing completion, and we hope to reap the benefit of the additional output at an early date.

You will notice a slight increase in the fixed assets of the company by the addition of £9,300 to freeholds, which represents part of the extension of the factories, but I would like to mention that all the company's assets have been adequately depreciated, following on the custom which we have adopted for many years past.

I now beg to move:—"That the directors' report and the audited balance-sheet for the financial year ended July 20, 1925, be received and adopted."

Mr W. Lowe seconded the resolution, which was carried unanimously.

ALLOCATION OF THE PROFIT.

On the motion of the Chairman, seconded by Mr Stuart G. Durrant, it was unanimously agreed that the profit available for distribution, amounting to £59,039 10s 2d, including the sum of £7,661 12s 10d brought forward from last year, should be dealt with as under:—

	£	s.	d.
To pay a dividend at the rate of 7 per cent. per annum on the preference shares, including interim dividend paid in April last	11,550	0	0
To pay a dividend at the rate of 10 per cent. per annum on the ordinary shares, including interim dividend paid in April last	25,125	0	0
To place to the general reserve fund, making the total reserves £270,000	10,000	0	0
To carry forward to next year the sum of	12,364	10	2

The Chairman proposed that Mr William Lowe and Mr A. T. Wreford be re-elected directors of the company. This was seconded by Mr W. E. Pennick and unanimously agreed to.

Mr George P. Schooler, who has been a local director in Perth, Western Australia, since September, 1915, was unanimously elected a director of the company, on the proposition of Mr W. Lowe, seconded by Mr J. Albion Williams.

On the proposition of Mr Gait, seconded by Mr Rose, Messrs Newman Ogle, Ashworth and Co. were elected auditors to the company for the ensuing year.

Hearty votes of thanks were accorded to the chairman and the staffs of the company in London and the various branches.

SUNGKAI-CHUMOR ESTATES, LIMITED.

GREATLY IMPROVED RESULTS.

The nineteenth ordinary general meeting of the Sungkai-Chumor Estates, Limited, was held, on the 5th inst., at the registered office, 1-4 Great Tower street, London, Mr Thomas Ritchie (the chairman) presiding.

Mr E. Martin, F.C.I.S., the representative of the secretaries (Messrs Harrisons and Crosfield, Limited), read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: Last year I commenced by saying that the results then under review compared somewhat unfavourably with those of the preceding year. To-day the position is entirely reversed, and we are able to submit accounts which show a profit more than three times that earned in the previous year.

The total book cost of our property, &c., stands at £101,244, against an issued capital and reserve of only £100,330. Reserve account it is proposed to make up to £5,000 by transferring £4,524 from profit and loss account. This, and perhaps more, will be needed for the development of the immature areas, and the gradual planting up of the remaining 200 acres of reserve land on Sungkai Estate. The crop harvested was 423,015 lbs, of which 388,295 lbs only were exportable, and it is on this amount that the profits for the year are based. The f.o.b. cost of production of the rubber exportable was 9.72d, against 10.22d last year. The average net sale price, including the estimated value of the unsold exportable portion, was 1s 7.33d per lb, against 1s 1.13d, the net result being a profit of 8.77d per lb, against 2.03d.

The profit was £17,217, against £5,059 a year ago. We propose a final dividend of 12½ per cent., less tax, making 17½ per cent. for the year. There will remain £24,732 to be carried forward.

With regard to the present year under the recent alteration in the maximum allowed per acre for standard production from 400 lbs to 500 lbs, we were able to obtain an increase in our standard of 36,322 lbs as from August 1st. The new figure is 736,984 lbs, and appears in the directors' report.

We have sold forward a proportion of our outputs as follows:—Out of the 1925-26 crop we have sold forward 300,160 lbs at an average net price of approximately 1s 9d per lb, and out of the 1926-27 crop 76,160 lbs at an average of 1s 8.18d.

A great change has developed in the outlook for the rubber producing industry since our last meeting, mainly owing to two causes. First the restriction scheme, in which our worthy colleague, Mr H. E. Miller, took, as we all know, such a prominent part, the wisdom of which has been more than justified by results, and more recently by the enormous increase in consumption, which, to judge by statistics available for the present and future years, must continue to increase. An eminent authority, Mr A. W. Still, of the *Straits Times*, in a paper read recently at a meeting of the Incorporated Society of Planters at Kuala Lumpur, expressed his view, in support of which he gave carefully worked-out statistics, "that though shortage of supply may not come before 1928, it will most certainly come before 1932." We can look to the future of the industry with equanimity and many prosperous years in store.

The report and accounts were unanimously adopted.

The totals include almost the whole of the Northern Hemisphere. In the case of Russia the 1925 figures are preliminary. The European harvest is the best of recent years, but the North American crops are below the total of recent years, an increase in Canadian wheat having failed to counterbalance a decline in the United States. In the aggregate the wheat crop of the Northern Hemisphere may be classed as a plentiful one, even with the exclusion of the Russian estimates.

COAL.

Our Cardiff correspondent writes:—The position on the Cardiff coal market is unaltered. The proposal to introduce a scheme for the stabilisation of prices is hanging fire, and current business is still under the depressing influence of a tonnage shortage and a great scarcity of inquiry. Quotations have been weak for practically all classes of coal, and the output for the week is estimated at only about two-thirds the normal weekly average in 1923. The most notable event of the week has been a visit from a representative body of French importers, who have been in conference with local exporters and shipowners in regard to the conditions governing the sale and shipment of coals to France. As a means of improving trade with France, it is suggested that longer credits may be given and stricter regulations enforced in regard to the condition in which the coal is shipped and the certified weights of cargoes. The Cardiff Chamber of Commerce has promised to give the representations of the French importers their consideration. In view, however, of the fact that the collieries are refusing more than seven days' credit to the shippers, the latter will find it extremely difficult to grant extended credits to French buyers, but it is a fact that one or two of the leading exporting firms have recently been accepting contracts on the basis of a 30 days' credit. The following are the current approximate quotations:—Best Admiralties, 23s 6d to 24s 6d; seconds, 22s to 23s; best dries, 23s 6d to 24s; black veins, 21s to 22s; Western Valleys, 20s 6d to 21s; Eastern Valleys, 20s to 20s 6d; best bunker smalls, 19s 3d to 19s 9d; ordinary cargo smalls, 9s 6d to 10s; coking smalls, 10s 6d to 11s; anthracite best large, 45s to 47s 6d; red vein large, 30s to 35s; machine-made cobbles, 52s 6d to 55s; French nuts, 55s to 57s 6d; stove nuts, 55s to 57s 6d; rubbly culm, 12s 6d to 13s; coke (special qualities), 35s to 40s; patent fuel, 20s 6d to 24s; pitwood, ex ship, 26s to 26s 6d.

Our Sheffield correspondent writes:—Conditions in the coal trade are a shade more active, demand from the public and the manufacturers of certain of the export markets being brisker. South Yorkshire steams are quoted at 18s 6d to 19s 6d per ton f.o.b.

IRON AND STEEL.

We have extracted the following from the weekly report of the London Iron and Steel Exchange:—Although business in the iron and steel trades is still rather quiet, there is a steady flow of orders, which in the aggregate must amount to a considerable tonnage. The improvement in market conditions, although slight, has created a better feeling. Probably the pig-iron department is the most depressed section of the British market. The gradual decline in the price of pig-iron which has extended over several months has shaken the confidence of buyers in the stability of the market, so that even the branches of the consuming trades which are fairly well off for work continue their policy of covering only their immediate needs. Business in semi-finished materials has been dull for the past week or two, largely because consumers bought considerable quantities of foreign material recently, and have since shown little interest in the market. Some activity has developed in the finished steel branches; but this is principally confined to the manufacturers of structural steel, who are reaping the benefit of the extensive constructional building which is now going on in this country.

Our Middlesbrough correspondent's report, dated October 8th, is as follows:—Pig-iron: Since our last week's report there has been a further decline in values, and No. 3 Cleveland pig-iron is now no more than 66s 6d per ton. Even this price can be shaded for a good order. There has been a better enquiry for hematite, and good sales are reported both on home and export account. Prices are consequently firmer, and nothing less than 74s per ton is named for East Coast mixed numbers. Manufactured iron and steel: The local works are only kept going on a "hand to mouth" basis, and the following quotations show very little change. Steel ship plates, £8; steel ship angles, £7 15s; iron bars, £11 12s 6d; steel rails, £8 10s. Iron ore: There is no new feature to report. Best Bilbao Rubio is nominally at 20s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—From various parts of the country one hears of bookings of valuable engineering contracts, and the report that the Argentine and Chilean Governments have decided upon a larger programme of naval construction has the effect of raising the spirits of people in Sheffield, which is certain to secure a good share of such work when it is given out. Conditions in the pig-iron, bar iron, steel billets, and wire rod departments, however, are no better. The business passing consists of small lots, which cannot be executed at a profit. Prices keep on the easy side. Makers of wrought iron can scarcely keep their works going in the face of the heavy shipments of Belgian bars,

rods, and sections, purchasable at several pounds per ton less than British. The steel foundries speak of a falling off of new business, but are fairly well supplied at present with work of a special character. The light foundries are kept busy by the brisk demand for builders' ironwork, but there is a large importation of structural steel for large buildings. The motor and general engineering shops are buying freely of high-speed steel cutters of every kind. The demand for twist drills is, however, greatly below capacity, although rather better than it has been. The activity of the file branch is being fairly well maintained. Taking the local industries as a whole, however, a lethargic condition has developed at a period of the year which is generally associated with expansion, but severe economies are being carried out in the administrative departments of most of the factories and works, which in some cases have converted loss into a small profit. In other cases losses, too, have been reduced appreciably during the present year. An action in the County Court to enforce the payment of heavy rate arrears owing by Cumberland ore concerns owned by United Steel Companies, Limited, has excited interest in the iron and steel world. The Court ordered these arrears to be paid within 21 days, and it will be interesting to see what happens at the expiration of that period. Work in the cutlery and electro-plate branches has increased somewhat this week, owing to buying in connection with the Christmas season trade, but the volume of orders is greatly below normal. There is keen competition between Birmingham and Sheffield for electro-plate orders, and an undue share of the work coming to the cutlers is for cheap and unprofitable lines.

Our Glasgow correspondent writes:—The pig-iron position here is less hopeful. Notwithstanding low values, buyers are still holding off. Shipments this week show a considerable drop, the total from Glasgow Harbour being only 252 tons. For the corresponding week of last year the shipments were 1,249 tons. In the iron and steel trade there is little change. Structural material is in steady demand, but this accounts for only a small section of the output capacity of the works. A few orders for export are to hand for plates. Re-rolled steel is in fairly steady request, chiefly for export. Malleable iron makers are finding increasing difficulty in keeping works going. The official price was reduced this week by 7s 6d per ton, the price now being £11 5s per ton. Orders for black sheets are coming in fairly steadily. Galvanised and corrugated sheets have been booked very heavily this week, and makers are now comfortably placed for work for the remainder of the year.

OTHER METALS.

TIN.—The market for tin displayed firmer features, in view of liberal buying orders, combined with higher Eastern advices, though dealings were attended by a good deal of irregularity, especially regarding forward positions. Standard cash sold £268 10s, £271 15s, and £274 5s, and three months £268 15s, £272 2s 6d, and £275 2s 6d. Sales in the East were reported on the basis of £275 10s to £279 per ton, c.i.f. terms. COPPER commenced with an easier tone, but values subsequently improved, with buyers more prominent. Standard cash sold at £61 17s 6d, £61 5s, and £62; three months £62 12s 6d, £63 7s 6d, and £63. LEAD easier, but irregular forward, with sales on a fairly liberal scale. Good soft foreign pig, October, sold £39 15s to £38 15s and £39 10s, November £37 15s to £38, £37 17s 6d, £38 8s 9d, December £37 10s, £36 17s 6d, £37 10s, January £37 5s to £36 10s, £36 10s 3d. SELLER firmer, and a good business transpired. October sold £39 5s to £39 15s and £39 10s, November £38 10s, £38 17s 6d, and £38 12s 6d, December £38 2s 6d to £38 6s 3d, £38 7s 6d, January £37 16s 3d to £38 5s ton. ANTIMONY firm. English specials quoted £75 to £80 as to make and quantity, foreign refined £66 10s-£67, ex warehouse. ALUMINIUM quiet. Home trade nominally quoted £120, export £125 ton. QUICKSILVER quiet. Spot quoted £13 per bottle. WOLFRAM firm, and forward quoted 20s 3d to 20s 6d per unit, c.i.f.

In the Cardiff tinplate market the position is slightly improved. Business is a little more active, and recent prices have been firmly maintained.

THE COTTON TRADE.

MANCHESTER, October 8.

Business in the market this week has been irregular. The turnover in some sections has been rather larger, but it is not possible to record any general improvement. There is still nervousness as to future values, and restriction of credit continues to check important developments. For India, piece-goods have been in increased request, and more contracts have been arranged for Calcutta, with a tendency for inquiry to broaden for Bombay, Madras, and Karachi. According to cables just to hand, dealers are in more urgent need of quick shipments. The China news has been rather disappointing, as the auction sales in Shanghai have not been restarted. For Egypt and the Near East trade continues to drag, but moderate lines have been booked for South America and West African outlets. Steady buying continues to support has been given by home trade buyers. American yarns in the trade passing in quotation, with some improvement not attracted much attention. Export numbers have been reported in Egyptian spinnings.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The strong demand for wool in London during the fourth and last week of the series has occasioned considerable surprise. Many members of the trade expected values to ease after the first two weeks, but the keen French demand has been maintained throughout, and the shipping strike has also contributed in no small measure to the firmness of values for wool on the spot. Business in tops has certainly been better during the past week, for although individual orders have not been large, there has been a good turnover in most descriptions, and prices have been advanced all round. Fine merinos are especially scarce. Of course, the "fly in the ointment" is that prices here are still well below the London level. For instance, it will cost something like 4s 7d to make a good warp 64's out of wool bought in Coleman street, but it is difficult to make more than 4s 3d for the tops on this market. Topmakers' quotations have been advanced to-day in sympathy with the continued strength of the raw material markets, and a market price for a super 60's is now about 46d. 56's average are firm at 30d to 31d, 46's average 22½d, and in prepared 46's are quoted at 22½d and 40's at 21d. The lower qualities in prepareds are moving freely. Spinners are in a somewhat better position, especially those engaged on botanics. Particulars

are coming to hand on a larger scale, and inquiry is expanding. Most spinners are quoting higher prices for botanics, but crossbred yarns do not show much change. The demand for piece goods is well maintained, and manufacturers are very firm in their quotations.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The heaviest September series of London wool sales for many years closed on Thursday, with values at a higher level than anybody expected. The chief factors were the French and German demand for merinos to replace those bought in Australia, and some American demand for medium greasy crossbreds. The home trade has bought scoured and slip crossbreds freely, and has taken nearly all the scoured New Zealand merinos and Australian lambs. A few lots of merinos have gone to home spinners, but in these and in every class of wool other than those above mentioned, the home trade has been mostly a spectator. Without the shipping strike there is very good reason to think that no real difficulty would have arisen over the 64's tops sold a month or six weeks ago at 3s 9d for November delivery.

Specialities like New Zealand scoured merinos at up to 58½d are about 1d to 2d above July rates. Superior scoured N.Z. crossbreds are about firm. Australian skin crossbreds have been rather bigger wools this series than last. They are mostly now of Continental combing length, but too short for Bradford. France has taken most of them at July rates to 5 per cent. more, on account of the extra length. New Zealand greasy crossbred lambs in the first and second weeks of the sales were frequently 5 to 7½ per cent. above July, but at the close are all steady. Coarse and medium merinos are 5 per cent. dearer, fine merinos firm, coarse and medium crossbreds often 7½ per cent. dearer, and fine crossbreds 5 per cent. cheaper. All good merinos from 60's to 70's are a good 5 per cent. above July rates.

Amongst users and sellers in general—even the users who have been buying most heavily—there is a feeling that lower wool values in a month or two are probable. The New Zealand sales will open shortly, and the new B.A. and Cape clips will be coming on to the market. Bradford so far this season has been extremely cautious. Many firms suffered so severely in the recent slump that they feel compelled to wait until they can buy with a minimum of risk. A market such as London has been for the last few weeks scarcely fulfils that condition. London and Bradford have been quite out of agreement with each other over the last four weeks in any quality of combing wool. London has helped topmakers to obtain about 1d rise on medium crossbred tops over the pre-sales level, but it has put average wool so that costs are 3d above the recent selling price. More than ever it seems that a genuine topmaking business is impossible.

An International Service

THE Central Union Trust Company of New York is equipped with every facility for the prompt and efficient handling of financial transactions throughout the world. Foreign banks and business houses with banking interests in the United States are invited to avail themselves of this service, which includes the purchase and sale of foreign exchange, collections, and the issuance of commercial and travelers letters of credit. In addition, the Company conducts a general banking business and acts as Executor, Trustee, Transfer Agent, Registrar of Stocks and in every other Fiduciary capacity.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market remained steady to firm at the Bermondsey auctions on Thursday. Best ox hides sold from 7d to 9d per lb, and seconds from 6½d to 8½d, a few advances of ½d being noted. Best cows sold from 6½d to 7d, and seconds at 6½d. Best calf sold from 7½d to 13½d, showing no alteration in last week's prices. Wools sold from 7s 3d to 12s, and hogs from 3s 3d to 12s each. Imported hides remain steady, and trading has been done in S.A. frigorifics on a basis of 8½d. Dry hides are firm in price. Dry B.A. Americanos have been selling to the Continent as high as 12d, and there is a brisk demand for dry Capes of light weights. The Chicago market is steady, with best heavy packers still selling at 17½ cents. The leather business of the week has been transferred to the Shoe and Leather Fair. There was no weakening in the price of either hides or leather. Light bends were very scarce, and brought higher prices. Little imported sole leather was on sale. British tanners seem to have matters much their own way. Quite a large turnover has been done in upper leathers, large contracts for patent, coloured, and glacé kid, box and willow calf having been made at prices firm to an advance. A feature has been the demand for leather suitable for high-leg Wellington boots for ladies. The collection of footwear at the Fair attracted much attention, and although some exhibits were of the "fancy" variety, British manufacturers appear to have little to learn from overseas competitors. Orders for spring shoes in light shades were freely given in some cases, and report has it that several large orders for ladies' Wellingtons were turned down, owing to the inability of firms to take more orders.

VEGETABLE OILS AND OILSEEDS.

Markets have been fairly active. Linseed oil has continued easy, and values have further declined in sympathy with lower seed prices and owing to the competition of Dutch linseed oil. Consumers have made fairly considerable purchases at the lower level of value, which is now around £39 for spot and for delivery to April next (naked per ton ex Hull mill). Very little has been passing in cotton oils. Most of the old oil has been cleared, and crude Egyptian crushed from the new season's seed is now offering at £42 ex Hull mill prompt, with ordinary refined (old) at the same figure. Palm kernel oil, which of late has been in good request for export, is not so firm, and offers at £43. In the oilseed section Plate linseed has been affected by favourable reports of the growing crop. Seed for October-November loading has declined to £18 15s, while a fair trade has been done in new crop, January-February, at £18 5s to £18 7s 6d. Egyptian cottonseed is firmer, current value for shipment being £11 10s (sellers).

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market for actual sugar presented a dull tone, the demand both on grocery and manufacturing account being strictly confined to immediate wants. Prices of British standards were reduced 6d per cwt, while imported tended in buyer's favour, both spot and forward. Czecho granulated, November-December, sellers, 13s 10½d, f.o.b. Hamburg. Dutch "J" granulated ditto, 14s 1½d; January-March, 14s 4½d, f.o.b., Rotterdam. American granulated, spot, 26s 10½d; forward, 14s 6d, c.f. and i., London. White Java, spot, 26s 9½d. Crystallised West Indies, 22s to 27s 6d, as to sample. Raw refining kinds dull. Cuban basis, 96 per cent., October-November, 10s 3d, c.f. and i. terms. Indian market quiet, with sellers of Java, January-March, 14s 1½d, c. and f., Calcutta. White terminal market flat, October, sold, 13s 6d; December, 13s 8½d to 13s 4½d; March, 14s 2½d to 13s 9d; May, 14s 4½d to 13s 10½d; August, 14s 8½d to 14s 3½d per cwt.

COFFEE.—Spot market generally quiet, but late rates were maintained for all the more attractive qualities. Kenya, fair to good bold, sold, 12s 5d to 12s 6d; peaberry, 14s to 15s. Matagalpa, fine bold, 15s 6d. Colombian, good to fine bold color, 14s 6d to 15s; peaberry, 14s to 15s per cwt. Futures quiet, and tendency easier.

COCOA.—Spot parcels in quiet request, and limited sales include fine Grenada at 70s; New Britain, good, 63s; Ceylon plantation, 98s; and Samoa, good to fine, 65s to 67s 6d. West Coast, African, 47s to 48s. Accra quiet for shipment, and F.F. quality, November-January shipment, sold, 42s 6d; Lagos, October-December, 41s, f.o.b.; Trinidad, December-February, 68s; Bahia, September-October, 52s; Guayaquil, Epoca, 76s; Caraquez, 74s per cwt, c. and f. Cocoa butter steady. C.F.R., spot, also prime English, quoted 1s 3½d per lb.

TEA.—Indian offerings at public sales this week amounted 66,790 packages, which encountered a generally good demand. A feature was provided by the keen competition for common descriptions, which frequently marked an advance of ½d to 3d per lb. Other grades also sold well, though amongst plain liquoring and medium kinds late rates were not always maintained. Finest teas, however, continued to meet with strong support at full rates. Pekoe, however, continued to be choice, 2s 7½d to 4s, with outstanding lots up to 4s 9½d. Ceylon sales comprised 16,532 packages. With smaller supplies available and generally attractive quality, the demand proved very brisk for all descriptions, and prices showed a rise of ½d to 1d per lb. Pekoe, sold, 1s 1d to 2s 2½d; broken orange pekoe, good to fine, 1s 7½d to 2s 9½d per lb, in bond. China kinds were in rather better request, and new season's

Kintucks sold up to 2s 9d per lb, with old season's Keemuns realising 1s 2d to 1s 4d lb. Common kinds, however, lacked support, with a small business in Monings at about 6½d per lb. In auction 3,000 packages of Java and Sumatra were offered, and met a good demand at firmer rates. Common and medium sorts ruled ½d to ¾d dearer, while finest realised extreme rates. Pekoe, sold, 10½d to 1s 2½d; broken pekoe, 10½d to 1s 2½d; orange pekoe, 1s 3½d to 1s 8d; broken orange pekoe, 10½d to 1s 9½d; pekoe souchong, 11½d to 1s 10½d per lb, in bond.

RICE dull and rather featureless. Rangoon, two stars, spot, quoted 15s 9d; forward, 15s 6d, c.f. and i., London. Spanish, also Italian, quiet, unaltered. Japanese peas quiet. Spot, quoted 26s 6d; afloat, 25s 9d; September-October, 25s 1½d; October-November, 25s; November-December, also December-January, 24s 10½d per cwt, c.f. Beans slow, unaltered.

SPICE.—Pepper fully steady forward, with a fair demand. Black Lampong L.S., October-December, sold, 9½d; January-March, 10½d to 10½d; white Muntok, October-December, sellers, 1s 1½d; January-March, buyers, 1s 2½d. Zanzibar cloves, October-December, buyers, 10½d per lb. Tapioca quiet. Singapore flake, December-January, to Havre, quoted 18s 6d. Sago flour steadier, and October-November sold at 15s 6d cwt, c.f. and i. terms.

FRUIT (Dried).—Currants: New crop in quiet demand, but values steady. Amalia, quoted 35s to 36s; Gulph, 38s to 42s; Pyrgos, 34s; Patras, 37s to 38s; Australian, 33s to 40s. Sultanias firm. Australian, 68s to 90s; South African, 65s to 80s. Figs quiet. Naturals, in bags, quoted 28s to 30s; September shipment, 29s; October, 26s 6d to 27s. Dates, spot trade quiet, but forward positions firmer. First tide Hallowee, 35s; second, 23s 6d; Siar, first, 15s; second, 14s 6d, landed terms. Raisins: South African, 28s to 36s; Lexias, 30s to 42s. Evaporated fruits firm, with a fair demand for best apricots and peaches. Californian apricots, standard new extra choice, 120s; fancy, 130s; Australian, 117s 6d to 130s; Californian peaches, choice, 67s 6d; extra choice, 72s 6d; fancy, 78s. Plums in better support. Oregon, size 30/40, quoted 72s; 40/50, 52s 6d; Californian, 40/50, 59s; 50/60, 52s 6d; 70/80, 46s. Pears, choice Californian, 80s; extra choice, 95s. Apple rings, Californian, extra choice, 67s 5d to 75s; Canadian, 62s 6d per cwt.

CANNED GOODS.

CANNED FRUITS.—Demand continues quiet, both spot and forward Singapore pines, 48-1½s quoted 86s 6d to 87s 6d; cubes, 2½s, 13s to 13s 6d; slices, 24-2½s, 12s 6d to 13s 6d. South African are moving off quietly on former terms. Californian pears, 15s to 17s; peaches, 12s to 14s; cherries, 13s to 14s; apricots, 10s to 13s 3d; loganberries, 13s 9d to 16s. Fruit salad, 1½s, 12s 3d to 14s; 2½s, 21s to 22s; Australian pears, 24-2½s, 16s to 16s 6d; Canadian, 14s to 14s 6d. Italian tomatoes are held for full to dearer rates. Supplies of small fish remain short, and a steady tone prevails. Portuguese,

The Ore Reserves at 30th June, 1925, were estimated as follows:—1,104,200 tons, having an average value of 7.6 dwts. over a stopping width of 49 inches.

The Full Report and Accounts (with Plan of Workings) may be obtained from the London Secretaries, A. MOIR AND CO., No. 1, London Wall Buildings, London, E.C.2.

½ flats quoted 4s 3d; clubs, 5s; 12 ozs, 7s 6d; 18 ozs, 12s per dozen tins. Salmon strong on light supplies. Red tail, 1 lb, 6s to 6s 5s; ½ lb pink, 3s to 40s; tall pink, 27s to 28s. Lobsters in good demand, at full rates. Halves quoted 16s, and quarters 9s to 10s.

TEXTILES.

JUTE.—Market strong at an advance of 30s per ton, sellers being reserved on stimulating advices from Calcutta, combined with sustained buying orders. Firsts to Continent, August-September, sellers, £54 10s; September-October, £54 10s; October-November, £54 10s; November-December, sold, £53 10s to £54 10s; December-January, £54 10s. Lightnings, September-October, £52 per ton. Hessians firmly held. 10 oz, spot, quoted 45s; October-December, 43s; 8 oz, spot, 35s 6d; January-March, 35s 3d per 100 yards. Twills, A, spot, 145s; October-December, 134s; B, spot, 120s; October-December, 119s 6d per 100 bags.

HEMP.—Manila ruled firmer, owing to higher rates for freightage. J grade, October-December, buyers, £43; K, ditto, £37; L, ditto, £38; and M, £32 ton. New Zealand largely nominal. African sisal steady. No. 1, Tanganyika, October-December, quoted £45; and Kenya, ditto, £44 10s ton.

RUBBER.

RUBBER.—Market active and dearer, though slightly irregular at times. Plantation, standard sheet, spot, sold, 3s 11½d to 4s 1d; October, 3s 11d to 4s 1d; November, 3s 9½d, 3s 10½d, 3s 10d, and 3s 11½d; December, 3s 9½d to 3s 10½d; January-March, 3s 4½d to 3s 7d, 3s 6d; April-June, 3s 4½d to 3s 1½d and 3s 2d; January-December, 2s 11½d to 3s per lb.

OILS, FATS, &c.

OILSEEDS.—Linseed quiet and tendency easier. Calcutta to London, October-November, quoted £21 2s 6d; bold Bombay, ditto, £22 2s 6d. Plate to Hull, October-November, sold, £18 17s 6d; November-December, £18 18s 9d; January-February, £18 7s 6d. Rapeseed easier. Toria to Continent, September-October, £20 15s. Cottonseed irregular. Egyptian black, to Hull, new October, sold, £11 7s 6d to £11 10s; November-January, £11 10s; white, new October, £10 17s 6d; November-January, sold, £10 15s to £10 16s 3d; Bombay, October-November, £9; and new, December-January, £9 5s. Castorseed easier. Bombay, September-October, £20 2s 6d. Gingly seed dull. Chinese to Continent, September-October, £27 15s; large Bombay ditto, £25 17s 6d. Ground-nuts easier. Coromandel machined, September-October, £23 10s; Nigerian, September-October, £24 5s per ton.

OLDS.—Linseed quiet. Spot, net, naked, 40s 3d; September-December, 39s 3d; January-April, 39s 3d. Rape quiet. Crude, spot, 48s 6d; refined, 51s 6d. Castor-oil easier. First pressure, spot, quoted 53s 6d; second pressure, 51s 6d; and pharmaceutical, 58s 6d per cwt. Hull with London, 2s per cwt extra. Cotton quiet. Crude Egyptian, spot, 41s; Bombay, 39s; common edible, 47s; deodorised, 40s. Chinawood inactive. Hankow, spot (barrels), 65s; September-October, 66s 6d. Coconut quiet. Ceylon, spot, 47s 6d; September-October, 45s 9d; Cochin, ditto, ordinary packages, 59s 6d. Soya quiet. Oriental, barrels, October-November, 45s 3d; bulk, 40s. Cod quiet. English, spot, 35s to 36s. Ground nuts dull. English, crushed, naked, spot, 48s 6d; deodorised, barrels, 56s. Turpentine irregular. American, spot, 78s; October-December, 78s; January-April, 80s 9d per cwt. Rosin firmer. American grade B.D., 33s; E., 33s 3d; F.G., 39s 3d; N., 34s; W.G., 34s 3d; W.W., 34s 9d; French F.G., nominal; W.W. 31s 6d.

TALLOW.—Messrs Colchesters and Woolner write on October 7th as follows: The tallow market was quiet during the week, and prices were unchanged to 6d lower to-day. The activity usually expected at this time of year shows no sign of coming. The stock in London on September 30th, as returned by the wharves, amounted to 19,230 packages, showing an increase during the month of 7,030 packages. At auction to-day 940 casks tallow were offered, and 124 were sold. Quotations are:—Australian mutton: Fine, 51s 6d; good to fair, 50s 6d to 47s; dull to dark, 43s to 40s; hard, 50s 6d. Australian beef: Fine, 48s 6d; good to fair, 46s 6d to 44s; dull to dark, 42s to 38s 6d; sweet, 50s. Present shipment from Australasia: Good mixed, 46s, nominally. Present shipment from South America, 46s. The market letter is lower. Tallow, 1s; stuff, 1s. Town tallow, 42s 6d per cwt. Rough fat, per 8 lbs, 4½d; melted stuff, 32s 6d per cwt. Quotations are:—Town, 42s 6d, net cash, naked, ex works. Country: Frail casks, 42s 6d; home melted, shipping casks, net, f.o.b., good coloured, 46s; fair to dull, 43s to 42s. Bone fat: white, none; pale, none; benzine, 39s; melted stuff, 38s 6d, f.o.b.

GENERAL.

SHELLAC maintained. T.N., fair, spot, quoted 215s; October, 202s 6d; December, 195s; March, 190s per cwt.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £32 to £40; Cochin, £30 to £54. Ceylon bristle £17 10s, to £22 10s; cinnamon leaf oil, 4½d; citronella, Ceylon, 1s 11½d; Java, 3s 4d.

No. 4.

COAL and the TAXPAYER

Lost Markets

Nationalisation would not cure this.

THE following diagram shows the tonnage of coal (excluding bunkers) exported from Great Britain during the eight months ended August 31st in the years 1913, 1920, and 1925, together with the average price, free on board. The figures are taken from the Trade and Navigation returns issued by the Board of Trade.

About 400,000 mineworkers depend upon our coal export trade for their livelihood.

Our export trade has fallen because our prices have been too high for our foreign customers.

Prices depend upon cost of production per ton, which depends upon output.

Socialist speeches will not compel foreign customers to pay more for our coal.

Nationalisation would not restore our lost exports of coal.

And in 1920, under Government Control, those exports were not much more than one-third of what they were in 1913 and the price was more than five times as high.

FACE THE FACTS

Issued on behalf of the Colliery Owners of Great Britain by Philip Gee, 40, King Street, Covent Garden, London, W.C.2, from whom further information about the Coal Mining Industry can be obtained.

COPRA firmer, and sellers more reserved in face of improved inquiries. F.M.S. Straits to Rotterdam, August-September, quoted £30 5s; September-November, sold, £30 2s 6d; October-December, £30 1s 3d to £30 2s 6d. Dutch E.I., October-December, sellers, £30 1s 3d to £30 2s 6d.

Ceylon, October-November, £31 10s; F.M.S., South Sea, ditto, £29 15s; ditto, smoked, to Marseilles, £29 10s, and F.M. Straits, afloat, £29 17s 6d. Palm kernels to Liverpool, October-December, quoted, £21 12s 6d per ton.

COMMERCIAL TIMES—WEEKLY PRICE CURRENT.

TERMS OF SUBSCRIPTION.

Quarterly, 14s 6d; Half-yearly, £1 9s 6d; Yearly, £2 18s 6d.
Colonies and Abroad, £3 15s 6d per Annum.
Single copies, post free, 1s 1d.

Copies of the *Economist* may always be obtained in the City at W. Abbott, Limited, 32 Eastcheap.
Barker and Howard, Sugar Loaf court, Leadenhall street.
P. W. Cooper and Co., 11 King street, Cheapside.
Davies and Co., 95 Bishopsgate.
Leathwait and Simmons, 34 Throgmorton street.
Pottle and Son, 15 Cullum street.
Willing and Co., Limited, 50 Cophall avenue, and 123 Moorgate.
Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de l'Opera.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."
Office: Granville House, Arundel street, Strand, London, W.C.2.

THE MONEY MARKET.

MONEY has been decidedly scarce and recourse has been necessary to the assistance of the Bank of England, while rates ranging up to 4½ per cent. have been paid for overnight loans in order to avoid this necessity; discount rates, under the influence of dear money, gold announced and expected, and the continued dullness of

THE ROBERT SIMPSON COMPANY, LIMITED.

PREFERENCE SHARES DIVIDEND NOTICE.
Notice is hereby given that a DIVIDEND has been DECLARED upon that portion of the Capital Stock of the Company consisting of the Preference Shares, being a half-yearly dividend at the rate of 6 per cent. per annum upon the said Preference Shares, and that the same will be payable at the Midland Bank, Limited, 5 Princes Street, London, E.C.2, England, or at the option of the holder, at the office of the Union Trust Company, Limited, Toronto, Canada, on and after the 2nd day of November, 1925, to shareholders who appear on the register on the 16th day of October, 1925.

The transfer books will be closed from October 16th to October 31st, both days inclusive.
FRANK HAY, Secretary.
Toronto, September 21st, 1925.

ALEXANDRIA WATER COMPANY, LIMITED, ALEXANDRIA, EGYPT.

PAYMENT OF DIVIDEND.

Notice is hereby given that a DIVIDEND of Four Shillings per 25 Share on Coupon No. 74 is PAYABLE on and after the 15th October, 1925, instead of on 15th December, 1925, as printed on the Coupon, at the Anglo-Egyptian Bank Limited in Alexandria, or at their Agents, Messrs. Barclay's Bank Limited, 1 Pall Mall East, London, S.W.1, and 54 Lombard Street, London, E.C.3, from whom listing forms may be obtained on application.

Coupons will not be received or paid through the post.
Dated, Alexandria, Egypt, the 6th October, 1925.—By Order of the Board.
K. B. WOOD SMITH, Manager.

Third Impression with additional Chapter and Statistics.

AN INTRODUCTION TO THE STUDY OF PRICES

with special reference to the History of the Nineteenth Century.

By WALTER T. LAYTON, M.A. 7/6 net.

The *Economic Review*—"His excellent and clear little book ought to be in the hands of every student of social conditions."
The *Practical Engineer*—"This book should be valuable to the student of monetary values and prices, especially of the nineteenth century."

MACMILLAN & Co., Ltd., London, W.C.2

the New York exchange, in spite of the very large amount of gold on the way thither, moved up appreciably, and 3½ per cent. was the usual quotation for three months' bank bills, the market being in a very unreceptive mood.

	Oct. 16, 1925.	Oct. 9, 1925.	Oct. 2, 1925.	Sept. 25, 1925.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4½	(Oct. 1, '25)
Banks' Deposit Rate	2	2	2	2½	(Oct. 1, '25)
Discount Call	2	2	2	2½	(Oct. 1, '25)
Houses' Notice	2½	2½	2½	2½	(Oct. 1, '25)
Market rate (3 months' bills)	3½	3½	3½	3½	..

The Bank return showed a decrease of £2,073,000 in the stock of coin and bullion, £2,163,000 having been announced as withdrawn for export; the Note circulation had declined by £827,000, and so the decrease in the Reserves was reduced to £1,246,000, and its proportion to liabilities had risen by .7 per cent. to 29 per cent. Government and Other securities had declined by five millions and one million respectively, and Public and Other deposits by one million and six millions respectively. Currency notes were reduced by £743,700 to £293,734,700, which includes £1,324,600 for notes called in but not yet cancelled. The fiduciary issue is £236,160,200, or £11,985,200 below the maximum for the year.

NEW YORK MARKETS.

Our New York correspondent cables:—Pronounced buoyancy in share prices gives the appearance of a broad and active bull market. Buying is encouraged by excellent business news, and the feeling that money will remain fairly easy and by the success of bull operations. The idea that an advance in the Federal Reserve rate is likely has been abandoned in view of the cut in the Bank of England rate and gold arrivals. The steel industry is operating at 80 per cent. of capacity, with prices firm and buying increasing. The building industry continues active. The Federal Reserve statements show only slight changes, with reserves up \$7 millions, discounts unchanged, Government securities up \$12 millions, and circulation up \$14 millions. The reserve ratio is 71.7.

THE STOCK MARKETS.

The Stock Exchange has shown a more thoughtful mood in the past week. Rubber, platinum, and leading industrial shares have dropped back from the heights to which they had soared, while more attention has been given to tea, brewery, insurance, and cable stocks that have been neglected of late. British Government stocks are feeling the effect of firmer monetary conditions. Home Rail prior charge stocks have regained a little ground. Doubts as to the future price of raw rubber has prompted many holders to realise their rubber shares. Textiles have improved, and rumours of Protection have strengthened iron and steel shares. Tin shares have been in good demand, otherwise the mining market has been quiet.

THE COMMODITY MARKETS.

The general tone of the markets continues slightly more hopeful. Though no material expansion is recorded in the coal trade, inquiries are a shade more active, and the low range of prices now prevailing is expected to stimulate demand. The pig-iron market is firmer, but competition remains keen among iron and steel manufacturers generally. The downward trend of raw cotton prices following a large increase in the last official estimate of the American crop has had a disturbing influence in Lancashire, but buyers are already tending to place orders on a freer scale. Bradford markets have been active throughout the week, with an all-round advance in prices. Wheat has been slightly firmer after the recent weakness. Sugar is in better demand, though imported descriptions are quiet, coffee finds a moderate sale, and tea is a stronger market. Rubber has been slightly easier, with sales, however, of fair extent. In the metal markets, tin and copper have shown increased firmness, and a fair business has been done in lead.

FOREIGN EXCHANGES.

Apart from activity in French francs and in the Scandinavian exchanges the week on the Foreign Exchange market has been a quiet one. From a closing quotation of 105.05 on the 9th, the Paris rate began to move upward in the early part of the week, and on Wednesday rose sharply to about 108, on Thursday to 108.45, and was quoted yesterday morning at 108.65. The main cause of this movement is increasing apprehension as to Government finance, following on the recent *exposé* of the position by M. Caillaux, and an increasing fear that trouble over the proposed compromise with the American Government may prevent the hoped-for issue of new French loans on the New York market. This week's Bank statement also, although better than last, did not show sufficient recovery to justify any optimistic feeling, and there is surprise that the publicly announced policy of utilising the Morgan credit has apparently not yet been resorted to. The Belgian franc, on the other hand, shows a slow but steady improvement on the further progress of loan negotiations, and stood yesterday morning, in spite of rumours that the loan in London was to be postponed, at a premium of 2f 30c over Paris at 106.35, as compared with 106.95 a week ago. Forward francs in Paris stand as before at a discount of 45 to 50 centimes per month; in Brussels the rate has narrowed from 17-20 centimes to 3-8 centimes over spot. After their recent relative steadiness both the Copenhagen and Oslo rates show a renewed improvement, moving down on the week from 19.98½ to 19.29½, and from 24.05 to 23.77½ respectively. It is understood that this movement is due to further bull operations in New York. Sterling during the greater part of the week has been unmoved at \$4.84½, but on Thursday moved down to \$4.84½, at which figure it was also quoted yesterday morning. For the time being there would seem to be no reason to expect any recovery above the present gold export point. Forward quotations at 1½ cent per month over spot are 1-32 cent narrower than a week ago. Among other stable currencies Amsterdam has moved from 12.04½ to 12.04½, Berlin from 20.33 to 20.32½, but Switzerland has gone in our favour from 25.10 to 15.10½, and Stockholm from 18.04½ to 18.09½. The lira, after depreciating in the middle of the week in sympathy with the franc, has recovered again, and at 120½ shows the same quotation as on the 9th. Among the Central European currencies there are no changes of any importance, except a slight improvement in the zloty to 29. Athens has again depreciated from 346 to 369½. In the East the rupee is practically unchanged at 1s 6½d, while the yen is also the same at 1s 8 9-32d. The silver market was at first firm, with Indian and Chinese buying on a restricted market, but prices have later weakened again. Hong Kong has moved up from 2s 5½d to 2s 5½d, but reacted again to 2s 5½d, Shanghai from 3s 2½d to 3s 3d, and later back to 3s 2½d. In South America the improvement in Rio has received a slight check, the quotation moving down from 7½d to 7½d. Buenos Aires has also reacted slightly from 46 17-32d to 46 17-32d, while Monte Video is unchanged at 50½d, and Valparaiso at 39.70 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 10th:—

EXPENDITURE.		REVENUE.	
(000's omitted.)		(000's omitted.)	
Supply Services	9,934	From Revenue	11,226
Interest, &c., on Debt	3,792	Increase in Debt	3,533
Sinking Fund	551		
Sundries	475		
Increase in Exchequer Balances	7		
	14,759		14,759

The Revenue for the week amounted to £11,226,100, as compared with £10,151,600 in the corresponding week last year. Customs and Excise were both slightly higher at £2,219,000 and £1,744,000, against £2,076,000 and £1,377,000 respectively. Property and Income-tax brought in £2,919,000, as compared with £3,359,000, while Super-tax amounted to £550,000, against £460,000. Ordinary receipts were higher at £333,500, against £641,000, while Special receipts were £819,200 higher at

£830,000. The week's operations increased the National Debt by £3,532,900, and caused the following changes:—

(000's omitted.)	
Public Department Advances	£ 150
Treasury Bills	944
National Savings Certificates	5,225
4% Treasury Bonds	100
3½% Conversion Loan	2,900
	+ 9,319
	— 5,786

The floating debt was reduced by £125,000 to £786,141,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Oct. 10th).

£		£	
Total Expenditure ..	419,977,945	Raised by Revenue ..	363,096,491
		Decrease in Balances ..	3,729,079
		Amount borrowed ..	53,152,375
Total	419,977,945	Total	419,977,945

ESTIMATES for FINANCIAL YEAR 1925-1926.

£		£	
Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Buenos Ayres and Pacific Railway, Central Argentine Railway, Stock Conversion and Investment Trust, City of San Paulo Improvements and Freehold Land Company, Harrisons and Crosfield, and Insulind (Sumatra) Rubber Estates. At the meeting of Harrisons and Crosfield Mr Eric Miller gave an interesting review of the tea and rubber plantation industries. He suggested that price movements of rubber during the past two years indicate that manufacturers have not, in the main, accurately gauged their future requirements.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

GERMANY AND THE LEAGUE.

LOCARNO has apparently achieved complete success. Mr Chamberlain's early warning against too great expectations, wise and salutary though it was at the moment, is, after all, superfluous, for the Conference ends with achievements representing everything that any reasonable politician could have hoped for, and Mr Chamberlain merits the thanks of the nation for the leading part that he has played in bringing to pass the most important international agreement since the Treaty of Versailles, and one that repairs many of the shortcomings of that document. The Western Pact is signed; the difficulties in the path of its Eastern counterpart are rapidly disappearing; there appears to be an understanding regarding the evacuation of Cologne; and, finally, Germany's objections regarding her entry to the League of Nations have been dispelled. In the long run the last of these developments may well be discovered to be the most important, for Germany's entry into the League, unlike her acceptance, however sincere, of any mere paper obligations, opens at last a chapter of continuous month-to-month, and almost week-to-week, co-operation with those other nations of Europe who have increasingly in the last two years demonstrated their resolve to pivot their foreign policy on Geneva. If, as seems likely, a special Assembly is held in December for Germany's formal admission, the year 1925 will have seen the last of that division of Europe into the categories, which have far too long persisted, of the Allied, the enemy, and the neutral States.

The appearance of German delegates at Geneva may, no doubt, be hailed a little too light-heartedly as the dawn of a new era. The attitude of Germany towards the League of Nations in the past is worth a little study in its bearing on the probable attitude of Germany to the League of Nations in the future. Down to comparatively recent

months the hostility of almost the whole of Germany to the League as an institution has been very real. Germany, of course, has seen the League only from the outside, and that, as those who have seen it from the inside know, is not very many degrees better than not seeing it at all. The League was brought into being by an instrument which Germany has signed, but an ingenious clause was inserted to prevent her signature from making her a member of the League itself at the outset. When she might have been glad to join, that is to say, she was excluded as a penalty. Later, when her application in the ordinary way might have been practical from the domestic point of view, she was given clearly to understand that certain nations which possessed the right of veto would not have her in the League. It is only in the last eighteen months that the parts have been reversed, and it has become an integral part of the policy of France, as well as Britain, to bring a palpably reluctant Germany into the League by any means that offer.

That there were some grounds for Berlin's mistrust of Geneva is not to be denied. Germany looked on the League as largely an Allied instrument, and any other nation in her position would have done the same. It so happened, moreover, that it fell to the League early in its history to give two or three decisions naturally unwelcome to the German Government and people. One was in regard to the transfer to Belgium of the districts of Eupen and Malmédy, events which stirred feeling in Germany to a quite unintelligible degree. Here, as in other cases, no distinction was drawn in the popular mind between the defects of the Treaty of Versailles and the League's discharge of its rigidly prescribed task under the Treaty. As a matter of fact, the League acted in regard to Eupen and Malmédy with strict propriety and in the only way in which it had a right to act, the Treaty being what it was. To say the same about the Upper Silesian decision thrown on the League by the Supreme Council of the Allies appears inevitably dogmatic in view of the controversies that decision has raised. However that may be, Germany's feelings on the subject are not surprising. Probably nothing, in point of fact, has done more to alienate her from the League than the partition decided on by the Council as an interpretation of Article 88 of the Treaty of Versailles. One more count against Geneva was the veto conferred by the Treaty, not merely on the League Council, but on any single member of it, on any project of union between Germany and Austria. Then, of course, there are always the Saar and Danzig and the complaints of German minorities, particularly in Czechoslovakia. In all those cases there have been rights and wrongs on either side, but it is obvious enough that if anyone in Germany wanted to make capital against the League of Nations, as many people in Germany did, there was material enough lying ready to his hand. There might have been more still if certain proposals made in connection with the League's assumption of responsibility for supervising German armaments had materialised. As it is, that question will now be discussed by a Council at whose table Germany occupies a permanent seat.

With that rather unfortunate history to efface, Germany may be expected at first to assume at Geneva an attitude, at the best, of suspended judgment. The opinion has gradually been growing among all responsible Germans in the last twelve months that their country could no longer afford to be outside the League. The change of opinion that has made entry possible is therefore more negative than positive in character, though the obvious fact has at last been slowly grasped that if Germany had good causes of complaint against the League for its handling of questions affecting Germans, the chances of effecting an improvement are about ten times as great if the voice of Germany is raised at Geneva than if it merely thunders from Berlin. A year or more ago one of the wisest of European statesmen gave it as his view that the attitude of Germany's representative on the Council, so far from being obstructionist, would be correct in the last degree. In the matter of disarmament, for example, there would be no greater evangelist of progress, for the thoroughly sound reason that Germany, disarmed herself, has a manifest interest in seeing that nations fulfil their pledge to follow a course which her disarmament has at last made possible. As regards the technical work of the League, German co-operation will no doubt be of the

greatest value. Germany already sits on the health, the transit, and other organisations, but now her representation will, of course, be equal to that of any other State. On the Secretariat, moreover, she will gradually acquire her full quota of officials. How far the demand for the assignation to her of a colonial mandate will be pressed can hardly be foreseen till it is known whether any expectations regarding this have been held out to her at Locarno; but the difficulties of transferring mandates at this stage are great, and things seem likely to remain substantially as they are, though Germany will no doubt ask for, and be accorded, a place on the Permanent Mandates Commission.

It is in regard to the more specifically German questions arising in the Saar, at Danzig, and in respect to minorities, that German representations may be expected to be most zealous, and so long as they are kept within reasonable bounds, they are likely to cause little embarrassment, at any rate, to Great Britain, who has for the most part been fighting Germany's battles in such matters in the past. In respect both to the Saar and Danzig, Germany's advent will obviously make for justice, for hitherto while France and Poland have always had the ear of the Council, the inhabitants of the Saar have never appeared before it, and although representatives of Danzig have and do, they will no doubt gain by the championship of a permanent member such as Germany will henceforward be. More important, however, than Germany's appearance in that capacity should be the opportunity given to her herself to see two sides of questions of which she has been accustomed rather frequently in the past to see only one. Rather fortunately the purge of the Saar Commission, which is understood to be contemplated for next March, will come just at the moment when Germany will have begun to assert herself in the Council, a fact that should be very useful to the German Government for domestic purposes.

It need not be expected that Germany's admission to the League is going to remove all difficulties. On the contrary, it will undoubtedly create a good many, and both Council meetings and Assemblies may for a while run with something less than their accustomed smoothness. But manifestly Germany's presence at Geneva will far outweigh such drawbacks. The effect of her presence there on America will, so far as it goes, be beneficial, though American psychology in regard to the League is too uncertain, and is subject to such unexpected influences that it is idle to attempt to forecast it. As to Russia, the ultimate result should be equally good, despite M. Tchicherin's undisguised endeavours to prevent an agreement on this subject from being reached. Even Russia herself is co-operating in one or two of the less important of the League's technical committees, and unless she means to break her associations with Europe altogether, that kind of co-operation must develop. On the day when Germany is definitely admitted, there will be some ground for speaking, still hesitantly, for the first time since the war, of a consolidated Europe.

FINANCE OR INDUSTRY?

MR KEYNES'S speech before the Manchester section of the Federation of British Industries last Tuesday proved that he is not merely a great economist, but also that he has little to learn of the arts of the politician. The subtle skill with which he shepherded his audience into the pen bearing the flattering label, "the sensible school" (shortly defined as those who think as he does), in contrast with the "pious" or "strait-laced" pundits who happen to have controlled our financial policy, could not have been excelled by Mr Lloyd George himself. The members must have been even more gratified at Mr Keynes's certificate that British industry is not inefficient. Seriously, however, we doubt whether Mr Keynes is doing a public service in fostering the widely prevalent idea that there are real divergences of interest between "finance" and "industry," and that our monetary policy has been carried out in the interests of the latter alone. Where there are so many issues at

stake, different people will inevitably give different weight to various considerations. But the policy of a return to the gold standard would not have received general support if it had not been realised that it was in the interests of our own industries that the world's international trade should be resumed on a common monetary basis, that the disturbing effects of exchange fluctuations should as far as possible be eliminated, and that the nations of Europe and of the world beyond should be restored to health by re-establishing their finances on a firm basis. As the world's chief trading nation, it was a matter of self-interest no less than an international responsibility for us to take the lead in this matter.

It is unfortunate that Mr. Keynes should constantly give the lead to those critics in the Press and elsewhere who keep on harping on the theme that the return to the gold standard last spring was premature. This attitude does no good, but merely serves to make harder the task of those responsible for our monetary policy. The fact of the matter is that the action of last April was the inevitable result of the trend of our monetary policy for the last five years, a policy endorsed by Governments of all views. The Federation of British Industries itself in the spring sent memorials to the Government urging that the uncertainties of the situation, which were bound to arise so long as we were not on a specific and permanent policy, should be ended, and Mr. Keynes is well aware of the extreme difficulties that would have arisen and the damage that would have been done to British credit if Mr Churchill had attempted to resist the pressure from the Dominions or to disappoint the expectations of Europe and America, or to delay his action.

We have said that this country has a great interest in and has earnestly striven to get the world's international trade back on to a common monetary basis. In doing this it has thrown into relief the disparity in various rates of wages and in the profits of this or that industry. The economic life of the country will not be healthy until these are eliminated. The action of last April needs to be followed, not by bickering and controversy, but by a combined effort to hasten all the necessary internal adjustments in prices and wages with the least possible effort. In this connection the recent action of the Food Council is a step in the right direction.

If Mr Keynes's speech was fairly reported, his diagnosis of the general trade situation was not as complete and as balanced as we should expect from him. He contrived to give the impression that in his view England alone of the countries of the world, with the possible exception of China (can it be that for the moment Mr Keynes forgot Russia?) was suffering from unusual depression. This is not the case. The volume of production in Germany and Central Europe is very considerably below pre-war level, and in terms of foreign trade is even worse. The figures for France are good, but France now includes Alsace-Lorraine. A study of the figures given from time to time of exports of France and Germany are taken together they are to-day very substantially below the pre-war level. Moreover, in spite of the recovery of the economic situation in Australia, India, and to a less extent in South America, the volume of the world's seaborne commerce—still below pre-war level, and until the general exchange of goods between nations has revived, no policy on our part will lift the depression from all that group of trades which centre round the shipping industry. Nor do the figures indicate that in the export of general merchandise other European countries have been gaining ground at our expense during the last eighteen months.

The coal trade is in a different position. Its exports are chiefly responsible for the sickly look of our foreign trade returns. The country will have occasion to examine this problem in detail in the next few months. But with all respect to Sir Josiah Stamp we do not think that the Thursday, will find that its problems could be solved by a different monetary policy. Its troubles, unfortunately, are of a more intractable nature. On Wednesday, in a discussion held under the auspices of the National Move-

ment towards a Christian Order in Industry and Commerce, Sir Adam Nimmo and Mr Frank Hodges made a preliminary canter over the field of inquiry. It cannot be said that either of them contributed anything to a possible solution of the problem, but Mr Frank Hodges very clearly brought out the fundamental point that the situation of Britain's coal export industry had been definitely changed for the worse by the use of oil in ships, the increased generation of electricity by water power, particularly in Europe, and the development of new coal fields in distant countries. Unless there is a very phenomenal increase in the volume of the world's shipping these facts mean that our export coal fields may have to curtail their activities and reorganise on a lower level of production. This is the first and biggest feature of the problem. The second was not really faced by Mr Hodges, but was promptly brought out in the first day's evidence before the Commission by Sir William Beveridge. It arises out of the miners' claim that whatever may be the commercial conditions their real wages should be the same as in 1913. The difficulty is that, whatever the cause, they are not producing the same real output per head. If in other coal-producing countries labour conditions are such as to produce an equivalence between coal and other prices we must do the same or close down. All the evidence points to the fact that we cannot produce coal at prices properly related to the general price level and keep the mines in a solvent condition with the present level of output. The miners will have much to say on the question of organisation in this connection. But fundamentally it is a production problem rather than a monetary one.

NINE MONTHS' OVERSEAS TRADE.

THE Board of Trade returns of overseas trade in September do not suggest any important change either in the volume or trend of our international commerce. As compared with August the import excess is larger by some £9 millions, imports being nearly £6 millions higher, British exports a trifle more than stationary and re-exports nearly £3 millions lower. The value figures for September compare as follows with those for September a year ago:—

	MONTH OF SEPTEMBER.			
	1924.	1925.	Increase (+) or Decrease (—) in September, 1925.	
Imports	£ 100,854,706	£ 97,925,034	— 2,929,672	— 2.9
British exports	63,282,376	60,734,868	— 2,548,008	— 4.0
Re-exports	9,565,535	10,525,830	+ 960,295	+ 10.1
Total exports	72,848,411	71,260,698	— 1,587,713	— 2.2
Excess of imports over total exports	28,005,295	26,664,336	— 1,341,959	— 4.8

For the decline in British exports as compared with a year ago, coal is almost entirely responsible, as the following figures show:—Coal exports, September, 1923, £7.8 millions; 1924, £5.7 millions; 1925, £3.6 millions; British exports, excluding coal, September, 1923, £56 millions; 1924, £57.5 millions; 1925, £57.1 millions. The manufactured class of British exports last month were within £100,000 of the value recorded a year ago. A detailed summary of September import and export figures for this year and last will be found in the commercial section of this issue.

The publication in the same volume of the nine months' figures affords an opportunity of examining the general trend of the year's foreign trade, so far as it has gone, in comparison with previous periods. A comparison of the value figures of imports and exports for the first nine months of this year and last reads as follows:—

	FIRST NINE MONTHS.			
	1924.	1925.	Increase (+) or Decrease (—) in 1925.	
Imports	£ 909,272,228	£ 965,477,025	+ 56,204,797	+ 6.2
British exports	589,319,261	579,258,406	— 10,060,855	— 1.7
Re-exports	102,838,324	112,850,815	+ 10,012,491	+ 9.7
Total exports	692,157,589	692,109,221	— 48,368	— .
Excess of imports over total exports	217,114,639	273,367,804	+ 56,253,165	+ 25.9

As regards the balance, the position is briefly that a £10 millions fall in British exports is balanced by a £10 millions rise in re-exports (mainly due to rubber), and the visible import excess is increased by just the £56 millions by which imports have expanded. If the balance for the full year is to be proportionate to that recorded for nine months, last year's figure of £346 millions will be largely exceeded. Fortunately, however, the outlook in this respect is not quite so bad as it seems. In 1924 the second half of the year showed a big increase in the import excess. This year it has fallen so substantially in the September quarter that, if the same tendency continues, the 1925 merchandise balance may, after all, be little worse than that for 1924. How this balance has moved quarter by quarter since 1919 is shown in the following table:—

(In Millions of £.)					
Quarters.	Imports.	British Exports.	Re-exports.	Total Exports.	Excess of Merchandise Imports.
1919—1st	347	147	18	165	— 182
2nd	370	187	37	224	— 146
3rd	450	207	43	250	— 200
4th	467	257	66	323	— 144
1920—1st	530	294	75	369	— 161
2nd	504	342	61	403	— 101
3rd	469	370	44	414	— 55
4th	436	328	42	370	— 66
1921—1st	308	228	27	255	— 53
2nd	264	141	23	164	— 100
3rd	256	150	28	178	— 78
4th	259	184	29	213	— 46
1922—1st	234	186	29	215	— 19
2nd	254	166	27	193	— 61
3rd	241	183	22	205	— 38
4th	276	185	26	211	— 65
1923—1st	273	185	29	214	— 57
2nd	266	197	35	232	— 34
3rd	248	184	23	207	— 41
4th	311	201	32	233	— 78
1924—1st	301	193	39	232	— 69
2nd	297	195	35	230	— 67
3rd	311	201	28	229	— 82
4th	371	206	37	243	— 128
1925—1st	352	209	40	249	— 103
2nd	325	183	37	220	— 105
3rd	288	187	35	222	— 66

* For nine months.

From these figures it will be seen that the figure of £66 millions for July to September is the lowest quarterly figure for the past two years.

The decline for the nine months as compared with 1924 of £16 millions in British exports will give a wrong impression unless the part played by the coal figures is clearly understood. Separating off coal exports we get the following result:—

January to September.	Coal.	All Other British Exports.
	Million £.	Million £.
1923	75.4	490.7
1924	55.8	533.5
1925	38.2	541.1

The severe slump in the coal figures obscures the fact of some slight progress in exports as a whole. A corrective to excessive pessimism may be derived from an examination of the exports of leading industries in the past few years. The following table contrasts the experience of coal and iron and steel with two other leading industries which show a very different record:—

	Exports of			
	Coal.*	Iron and Steel.	Machinery	Cotton Piece G'ds.
January to September—	Mln. Tons.	Mln. Tons.	Th's. Tons.	MLsq. Yds.
1920	30.6	2.55	316.1	3,540
1921	20.3	1.15	386.9	1,866
1922	59.6†	2.34	282.5	3,068
1923	72.9	3.18	321.0	3,097
1924	60.0	2.93	337.9	3,341
1925	49.7	2.70	381.2	3,359

* Including bunkers.

† Decline caused by strike.

Iron and steel and cotton both reached the bottom of the depression in 1921. In 1923 iron and steel, like coal, enjoyed a temporary fillip from the Ruhr occupation. Machinery reached its zenith after the slump had set in elsewhere, and has now again recovered to the neighbourhood of its 1921 total. Cotton piece goods exports recovered strongly in 1922, and remained steady in 1923, then recorded in 1924 a gain that has just been held in 1925. The iron and steel figures deserve closer examination, and the facts brought out by the following table are instructive:—

IRON and STEEL EXPORTS.				
Nine Months, Jan. to Sept.	Tons.	Value. £	Value per Ton. £	
1923	3,181,175	54,946,605	17.2	
1924	2,929,162	56,842,609	19.6	
1925	2,699,187	50,342,361	18.6	
Full year 1913....	4,933,704	54,291,768	11.0	

IRON and STEEL IMPORTS.				
Nine Months, Jan. to Sept.	Tons.	Value. £	Value per Ton. £	
1923	1,010,833	10,297,072	10.2	
1924	1,753,659	16,476,897	9.4	
1925	2,041,078	18,129,112	8.9	
Full year 1913....	2,220,366	15,231,633	6.8	

The average export price is considerably more and the average import price considerably less than 50 per cent. above the pre-war level. A higher average of export than of import prices is natural, because, roughly speaking, we import more of the unfinished material or cheap goods and export more of the expensive or highly finished goods. Moreover, a relatively greater advance in export prices is explicable by the fact that we are, in comparison with pre-war days, exporting less pig-iron and a larger proportion of highly finished manufactures. Nevertheless, it is not altogether satisfactory to find that, whereas the average import price has fallen substantially in the past two years, the average export price has risen by about the same amount.

It is impossible in the space available to examine all the leading export industries. But the following figures are worthy of attention:—

EXPORTS of MOTOR CARS.				
Nine Months, Jan. to Sept.	Number.	Value. £	Value per Car Exported. £	
1920	3,135	2,340,729	746	
1921	2,148	1,822,585	849	
1922	1,391	933,301	671	
1923	2,421	1,148,310	474	
1924	8,846	2,546,957	286	
1925	13,646	3,681,556	270	

A long-needed wave of enterprise in the motor industry, involving economical production and rapidly falling prices, which was fostered in 1924 by the removal of the protective duty, and happily not killed as yet by its wanton restoration by Mr Churchill, has produced amazing results. Concentration upon efficient production of the cheap car has led to so large an increase in the number of cars exported that the total export value is far larger than when our exports consisted mainly in high-price units. If we may again point a contrast the experience of the ship-building industry is less encouraging:—

EXPORT of NEW SHIPS.				
Nine Months, Jan. to Sept.	Number.	Gross Tonnage.	Value. £	Value Per Ton. £
1920	679	292,245	16,123,040	51
1921	874	402,383	20,433,640	50
1922	476	390,660	24,994,426	61
1923	575	157,838	9,000,136	59
1924	514	100,736	3,841,230	38
1925	708	81,570	2,756,835	34

Here the reduction in average export prices has, unfortunately, not led to increased export totals. That the reverse has taken place may be attributed in the first place to the general slackness of world demand; but it is worth pointing out that, substantial though the decline in tonnage export values has been, it still has a long way to go. In 1913 the average value per ton of new iron and steel ships exported was no higher than £13 per ton, against £34 per ton in the present year.

Just two millions are added to the merchandise import excess by the bullion and specie figures, whereas the first nine months of 1924 saw an export excess of nearly £14

millions under this head. The figures for the past three years are as follows:—

BULLION and SPECIE.			
Nine Months, Jan. to Sept.	Imports.	Exports.	
1923	42,543,488	48,682,379	
1924	36,762,075	50,421,119	
1925	38,818,343	36,814,716	

The figures of shipping engaged in foreign trade reveal a decline due mainly to the fall in coal exports. The total of tonnage cleared with cargoes from British ports was 5,234,074 for September, as compared with 5,708,576 and 6,079,300 for the corresponding months of 1924 and 1923 respectively. The nine months' figures for the three years have been (in the same order) 46,383,884, 48,724,964, and 52,582,726. One word in conclusion about the re-exports. The results are dominated by rubber. In the past nine months we have re-exported 1,592,098 centals of rubber to the value of £14,187,488, the comparable figures for the first nine months of 1924 being 774,690 centals and £6,208,612. Rubber has, indeed, made good nearly half the fall in coal exports.

THE COMMERCIAL WAR IN UPPER SILESIA.—II.

(BY A SPECIAL CORRESPONDENT.)

KATTOVICE.

It is difficult to fix the precise date when the commercial war between Poland and Germany began, and also to allocate the responsibility. The origin of the trouble arose out of other than economic causes, and was due to the clash of interests and racial enmity provoked by the plebiscite, which left a sense of injustice on the side of Germany and of disappointed hopes on the part of the Poles. The crisis would have occurred before this year had not the French occupation of the Ruhr given a temporary stimulus to the coal and iron industries of Upper Silesia, affecting particularly 1923 and 1924. There had, however, been a steady decline of production in the Polish part of Upper Silesia from the time it became a Polish possession. The following are a few comparisons between production in 1913 and 1924 in the Polish section of the country:—

	1913. Tons.	1924. Tons.
Coal	31,997,906	23,701,873
Pig iron	613,283	263,115
Ingot iron and steel	1,116,663	526,931
Rolled iron and steel and other finished products	1,053,287	467,759
Crude zinc	169,439	77,669
Rolled zinc sheets	42,453	25,449
Sulphuric acid	255,589	150,698

Making allowances for the fact that 1913 was a prosperous year, this decline of an average of 50 per cent. is due to other than normal causes.

Since June 15th, when Germany exercised her option and declined to admit more Polish coal, there has been a rapid fall in production, and thousands of miners are out of work. The daily average output of coal in July tons, compared with 71,561 tons in June, during the latter two weeks of which the embargo was in force. The miners employed averaged during the year 1913, 89,581; in 1920, 125,538; in 1923, 150,850; and in 1924, 124,450. The working hours were longer in 1913, and the production per man was greater. By the end of June last the conditions 45,900 men would only have been required for the production. Social legislation compels the State to employ a larger number than would otherwise be necessary.

Before the war, and up to 1923, Germany took more than one-third of the total production of Upper Silesian coal, and nearly two-thirds of the exports from the Silesian coalfields now included in Polish territory. Various reasons operated to hamper the industry when it passed under the Polish Government. There was greater difficulty in controlling labour, there was less expert management, as, in the three Prussian State mines

BANKING FACILITIES

100 Broadway

New York City

taken over, the chief German managers were displaced, and collieries under private ownership were forced to admit the participation of Poles to the directorate for no other reason than that they were Poles. The mines were dependent on Germany for machinery and supplies, which had to be imported at increased cost owing to the new tariff. There was the general inconvenience and delay caused by the existence of a new frontier cutting through a highly industrialised area. On the German side the miners worked eight hours a day instead of seven and a-half on the Polish side. There was every inducement for the German mine owners to develop their properties in German Upper Silesia, about 20 per cent. of the total, while it is probable that the German owners in the area now in Poland are curtailing development and limiting capital expenditure. There are other adverse comparisons: taxation is higher in Poland, while the wages of the miners are less, and the output per man is less. Bearing all these factors in mind, it is not surprising that Polish production should decline, and that the output of the mines on the German side should increase. The following is the production of German mines during the last three years:—

	Tons.
1922	8,834,868
1923	8,744,679
1924	10,900,259

This output was higher than in any year since 1913. During the first six months of the present year the production reached 5,916,412 tons, and will greatly exceed that amount in the second half of the year.

The effect of the price of coal and managerial capacity is reflected on other industries. Take the comparative figures for raw iron, as follows:—

	Production in Polish Upper Silesia.		Production in German Upper Silesia.		Total.	
	Tons.	%	Tons.	%	Tons.	%
1921	383,100	64.0	215,870	36.0	598,970	100
1922	401,071	58.0	290,512	42.0	691,583	100
1923	408,601	52.6	368,182	47.4	776,783	100
1924	263,038	50.1	262,264	49.9	525,302	100

The same downward tendency is apparent in all metallurgical and other leading industries in Polish Upper Silesia. So many companies and firms are drifting towards insolvency that the Polish Government is reported to have issued instructions that bankruptcy proceedings should be delayed as long as possible.

A tragic phase of the commercial war is the distress which it is causing among the unemployed. Every day one reads in the local Press that the unemployed are increasing, and that relief is altogether inadequate. In this town, which has a population of about 45,000, the average weekly increase of unemployed is from 800 to 1,000 per week, including chiefly foundry and metal workers and unskilled men.

No tariff war is one sided, and certain German industries are also sufferers. The glut of coal is making Germany

independent of Polish coal just now, but certain local industries are hard hit. I read in a local paper, for instance, that the wire industry situated chiefly in Gleiwitz and Hindenburg, in German Upper Silesia, is depressed, and that workmen are being dismissed.

The first step in the tariff war was begun by Poland in May last, when there was a general revision of duties. Generally speaking, there were three categories. The duties fell lightly on imports from France, on luxuries such as wine, silk, motor cars, perfumes, and liquors. As one writer puts it, "Rouge and face powder, whose introduction into the country is not necessary, as it really does not matter much to one's welfare whether ladies make up their faces or powder their noses daily; but these things have been put in the category of articles in daily use, while food products, including herrings and dried fruit, are heavily taxed." Duties on goods coming from Czechoslovakia were increased from 10 to 15 per cent., but many articles from Germany were faced with practically prohibitive duties, although Poland is not in a position itself to produce substitutes or get equal value from other countries.

The German retaliatory tariffs hit Poland harder. Besides coal, of which Germany took one-third of the production, almost the whole of the naphtha produced in Upper Silesia went to Germany, and is now excluded. It was also the market for refined zinc. The importation of zinc manufactured articles is now stopped, although raw zinc is admitted. Ninety per cent. of sulphuric acid, which formerly went to Germany, is now barred. The mischief now done by the new duties showed itself with telling effect in the July trade returns. The imports exceeded the value of exports by 90 per cent., and showed an increase of 86 million zlotys over June. There was a large increase in the importation of flour and cereals at increased prices. The export of coal was 200,000 tons less than in June, so that Poland did something to meet the loss of the German purchases.

There was also an increase in coal exports during August. Coal sent to Austria, above the average, was 12,000 tons, to Czechoslovakia under the new treaty 19,000 tons, Hungary 21,000 tons, Rumania 1,000 tons, and Latvia 5,000 tons. There was a drop of 4,000 in the exports to Yugoslavia. These quantities are a long way off from making up the monthly supply formerly taken by Germany. The curtailment of production, including closing of some pits, means permanent and overhead charges, and adds to the cost of production per ton.

New business was opened up with Italy. The high cost of transport will check expansion in distant markets. Under the heading of "The search for new markets," a recent issue of a local journal contains the following:—

"The representative of the Polish Upper Silesian mining industry has recently been in negotiations with the Austrian and Italian Governments with regard to the purchase and transport of Upper Silesian coal. The negotiations, however, have been broken off because the Austrian Government could not see its way to make any further transport reductions for Polish coal. The existing tariff for Polish coal is already very low, and any further diminution in the rates would result in a loss to the Austrian

Exchequer and railways. It was at one time thought it would be possible to send coal to Italy via Danzig, but it has been found that the transport this way would be even higher than by land, and, in any case, there is no immediate prospect of Italy taking any considerable quantity of Polish coal."

The Poles, while doing their best to open up new markets abroad, are also encouraging the consumption of coal at home. The Government have been advocating the use of coal instead of wood in East Poland, and the introduction of central heating in public buildings. It is hoped to develop the export through Danzig to Sweden and the Baltic States, but the country is faced with the problem of prices in a world overstocked with coal. There is reason to believe that a good deal of the new business is now being carried on at a loss.

Hitherto the marketing of Upper Silesian coal outside the territory has been in the hands of two German wholesale firms, whose organisation is not now being utilised to the same extent. The Poles are hopeful that the conditions will improve in the near future, because of this year's bounteous harvest—25 per cent. above the normal—but the key to the whole problem is the production and marketing of coal, and I fear that the autumn returns will mark a further decline.

INDUSTRIAL PROFITS.

OUR quarterly analysis of the results disclosed by industrial undertakings reveals an increase in net profits, a decrease in the percentage of profits set aside to reserve, and an increase in the average rate of ordinary dividend in comparison with those of a year ago. During the past three months the profit and loss accounts of 233 industrial companies have been analysed in a weekly table, and these show aggregate net profits, after payment of debenture interest, &c., of £18,626,800, representing an increase of £854,300, or 4.8 per cent. over the profits disclosed by the same companies in their preceding financial year. This increase is substantially smaller than the average for the four preceding quarters, but is an improvement on that shown at this time last year, as may be seen from the following table:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in		Increase.	
		1923-24.	1924-25.	£	%
		£	£		
Third quarter	214	17,667,060	18,069,800	402,740	2.3
Fourth quarter	312	26,142,899	29,616,628	3,473,729	13.3
First quarter	425	41,542,740	45,306,319	3,763,579	9.1
Second quarter	492	51,283,944	56,985,863	5,701,919	11.1
	1,443	136,636,643	149,978,660	13,342,017	9.7
Third quarter	233	17,772,534	18,626,799	854,265	4.8

The bulk of the reports examined in the last quarter cover the financial year ended March 31st last. A fair proportion of those appearing in September cover the year to June 30th, but, on the other hand, many refer to the calendar year 1924, or to an even earlier period. Moreover, company reports do not all appear with equal regularity from year to year, and this explains the disparity between the number analysed in the third quarters of 1924 and 1925, and also the discrepancy between the net profits figure shown at the top of the third column and that shown at the bottom of the second. While the increase in the past four quarters may appear to be rather large in view of the persistence of trade depression, it has to be remembered that declines shown in the two years following the post-war boom have by no means yet been made good. This is shown in the following list of quarterly increases or decreases in net profits since the beginning of 1919:—

	1919.	1920.	1921.	1922.	1923.	1924.	1925.
First quarter	+10.4	+26.9	+3.5	-43.4	+41.4	+8.7	+9.1
Second quarter	-5.1	+37.8	-8.4	-33.7	+22.1	+3.0	+11.1
Third quarter	-3.4	+41.9	-42.4	-23.5	+65.2	+7.3	+4.8
Fourth quarter	+10.5	+27.1	-52.9	+3.9	+11.4	+13.3	..

The changes in profits shown by several different classes of undertaking in the past quarter are set out in the next table:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

		Number of Companies	Reports Published in Quarter Ended September 30.		Increase.		Decrease.	
			1924.	1925.				
			£	%	£	%	£	%
Breweries	15	5,064,389	6,402,189	1,337,800	26.4	..	..	
Gas	12	203,888	215,861	11,973	5.8	..	..	
Hotels, restaurants	3	140,337	136,034	..	..	4,303	3.1	
Iron, coal, and steel	19	1,601,172	854,942	..	..	746,230	46.7	
Land, mortgage, &c.	16	594,004	755,908	161,904	27.2	..	..	
Rubber, &c.	52	911,369	1,289,801	378,432	41.5	..	..	
Shipping	6	559,535	315,615	..	..	243,920	43.5	
Shops and stores	3	600,778	461,462	..	..	139,316	23.2	
Tea	15	541,264	553,945	12,681	2.3	..	..	
Telegraphs	2	2,857,858	309,176	51,318	19.9	..	..	
Textiles	10	2,122,942	1,554,623	..	..	572,319	27.0	
T. ut. ut. Companies	6	315,429	324,984	9,555	3.0	..	..	
Waterworks	9	31,248	30,857	..	..	391	1.3	
Miscellaneous	65	4,828,321	5,425,402	597,081	12.4	..	..	
	233	17,772,534	18,626,799	854,265	4.8	..	..	

Conspicuous features of this table are the substantial decreases recorded by the iron, coal and steel, shipping and textile groups, and the large increases in the rubber and brewery sections. The latter more than accounts for the aggregate increase for the quarter. Good increases are shown by the land and telegraph groups, but shops and hotel companies show declines. The two companies in the telegraph group are Marconi's Wireless Telegraph and Marconi International Marine. Only three of the 19 iron, coal and steel companies can show higher profits than they did a year ago, and some of the declines recorded are very heavy, but in the shipping group the bulk of the decline is accounted for by one concern, two companies showing a slight improvement.

In the next table we show how profits were distributed in each of the past five quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1924.	£	£	£	£
Third quarter	18,626,800	10,737,274	3,295,099	4,037,427
Fourth quarter	29,616,628	17,201,568	5,096,814	7,318,146
1925.	£	£	£	£
First quarter	45,306,319	26,590,348	7,859,682	10,856,359
Second quarter	56,985,863	32,673,351	12,997,105	11,315,407
	149,978,660	87,202,641	29,248,680	33,527,339
Third quarter	18,626,799	11,930,751	3,435,529	3,260,519

The last column includes the amount by which the aggregate balance carried forward to next year exceeds the sum brought into the accounts in addition to specific allocations to reserve funds of various kinds. In the last quarter a larger proportion of profits has been paid to ordinary shareholders, and this has been done at the expense of allocations to reserve or of the balances carried forward. From the table below, which gives the figures for the individual groups, it will be seen that entrenchments upon reserves were made by three groups:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1924.	£	£	£	£
Breweries	6,402,189	4,247,922	459,065	1,695,202
Gas	215,861	185,352	19,189	11,320
Hotels & restaurants	136,034	110,849	6,125	19,060
Iron, coal, and steel	854,942	723,918	84.7	19,060
Land, mortgage, &c.	755,908	411,192	221,575	122,121
Rubber, &c.	1,289,801	1,080,013	83.8	166,090
Shipping	315,615	315.8	0.0	18.5
Shops and stores	461,462	170,000	36.9	137,680
Tea	553,945	394,241	71.2	97,764
Textiles	309,176	389,460	126.0	31.7
Trust companies	1,554,623	1,053,375	69.9	408,266
Waterworks	30,857	206,248	63.5	24,428
Miscellaneous	5,425,402	2,582,749	47.5	1,063,215
	18,626,799	11,930,751	3,435,529	3,260,519

In the matter of reserve allocations most of the ratios are below the average of previous quarters. In the shipping and telegraph groups the amounts paid in ordinary dividends actually exceed net profits, while in the iron and steel group the payment of ordinary and preference dividends necessitates a withdrawal from reserves or balances in hand equivalent to over 10 per cent. of net profits. These figures afford some excuse for Sir George Hunter's statements in his recent letter to the Prime Minister, but our other figures show the danger of drawing general conclusions from special cases. The largest percentage allocation to reserve is shown by shops and stores, but this

figure of 29 per cent. is, as a rule, exceeded by several groups.

Turning to earnings on capital we show below the ratio to total ordinary and preference capital of net profits and of amounts reserved in each of the past five quarters:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1924.	£	£	£
Third quarter	186,170,600	18,069,800	4,037,427
Fourth quarter	260,143,703	29,616,628	7,318,146
1925.	£	£	£
First quarter	404,283,51	45,306,369	10,856,359
Second quarter	554,033,191	56,985,863	11,315,407
	1,404,615,845	149,978,660	33,527,339
Third quarter	189,651,020	18,626,799	3,260,519

The ratio of profits to capital, though well below the average shown in the reports published in the four preceding quarters, is slightly better than it was in the accounts analysed twelve months ago, but the ratio of amounts placed to reserve shows a sharp fall in both cases.

The average rates paid on debenture, preference, and ordinary capital in each quarter since the beginning of 1921 have been as follows:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1921.	1922.	1923.	1924.	1921.	1922.	1923.	1924.	1921.	1922.	1923.	1924.
	%	%	%	%	%	%	%	%	%	%	%	%
1st quarter	4.70	4.61	4.67	4.43	5.3	5.7	5.3	5.3	8.8	9.9	10.1	9.9
2nd "	5.00	5.08	5.17	5.40	5.3	5.4	5.5	5.8	8.8	9.9	10.1	9.9
3rd "	5.21	4.90	4.77	4.96	4.5	4.3	4.9	5.0	7.6	8.9	9.0	9.9
4th "	4.83	5.03	4.94	..	5.6	5.4	5.8	..	8.6	9.6	10.0	..
Year	4.91	4.99	4.92	..	5.2	5.3	5.4	..	8.4	9.3	9.8	..

The average rate of ordinary dividend for the past quarter is substantially higher than in the corresponding quarters of the three preceding years, and is slightly higher than the average for the year 1924.

The final table gives the average rates paid by each of the groups, together with the average rate on ordinary capital shown in our analysis a year ago:—

	Debenture Capital.	Preference Capital.	Ordinary Capital.	Rate of Dividend.	Rate of Div. a Year Ago.
1924.	£	£	£	%	%
Breweries	11,460,116	8,680,186	23,415,462	18.1	4.9
Gas	871,254	3.1	3,302,041	5.6	6.1
Hotels and restaurants	456,109	125,000	1,032,829	10.7	9.8
Iron, coal, and steel	4,570,229	4,730,205	12,586,161	5.8	7.5
Land, mortgage, &c.	4,389,167	2,926,776	4,646,792	8.9	6.8
Rubber, &c.	955,008	371.1	9,740,053	11.4	7.3
Shipping	..	2,147,945	6,394,563	4.9	5.3
Shops and Stores	1,100,000	2,450,000	2,250,250	7.6	12.7
Tea	121,597	355,670	3,942,791	29.0	22.3
Textiles	1,485,505	250,000	3,942,791	9.9	10.0
Trust Companies	6,151,514	4.7	9,682,935	11.2	11.0
Waterworks	550,000	1,672,000	3,640,000	5.7	5.4
Miscellaneous	105,580	80,114	398,779	6.4	6.5
	11,148,674	36,929,169	38,683,301	6.7	6.8
	43,378,753	5.0	68,954,911	5.0	6.96

The high rate of preference dividend shown in the rubber group is entirely due to payment of arrears by one company. A large increase in the average ordinary dividend in this group will be noted. Seven of the groups show decreases in the average rate of ordinary dividend, and seven show increases, the most prominent of the latter being the brewery and tea sections.

THE MOTOR INDUSTRY.

(BY A CORRESPONDENT.)

EVEN to the close student of the motor industry and trade, the present situation has its puzzling features. The motor show has been a phenomenal success, and, putting aside all extravagant claims and estimates, it is certain that the volume of assured business has exceeded all previous records. So suddenly has the rush of new orders come that many manufacturers have been taken by surprise.

When we consider that this prosperity occurs in a year of general trade depression, and at a time when we are burdened with a large army of unemployed, and with

THE FIRST NATIONAL BANK OF BOSTON

Special Representative:
24, OLD BROAD STREET, LONDON.

a big excess of import trade against our export trade, one may well wonder where all the money for motoring is found.

Nor is this a momentary development. Here are figures which show the remarkable progress made in the last five years. It is not possible to go further back with any fair degree of accuracy, as no effective system of registration was in force:—

MOTOR VEHICLES LICENSED IN GREAT BRITAIN.

Year.	Private Cars.	Increase Over Previous Year.	Motor Cycles.	Increase.	Commercial Motors.	Increase.	Hackney Motors.	Increase.
		%		%		%		%
1921	250,000	17	355,000	..	135,000	17	76,000	..
1922	293,000	17	352,000	..	138,000	17	72,000	..
1923	324,000	10	391,000	11	181,000	15	77,000	8
1924	474,000	24	410,000	12	209,000	15	83,000	6
1925	580,000	23	571,000	30	224,000	7	99,000	19
5 years' increase	330,000	132	216,000	60	89,000	65	23,000	30

We see from these figures that a very rapid growth has taken place, and the cumulative effect in the short period of five years has been astounding. Judging by the results of the orders taken at Olympia this year, we shall see more than the normal number of new vehicles placed on the roads in 1926. This year, with figures only up to August 31st, it is shown that over 277,000 additional vehicles were brought into use, as compared with 1924. The vast majority of these were new vehicles, although we must make allowance for the big array of second-hand motors which are licensed occasionally.

If next year we allow that at least 300,000 more vehicles come into use, and if the increase from 1921 to 1925 be taken at 650,000 vehicles, we have the remarkable circumstance that in six years about 1,000,000 extra motors will have come on our roads.

Well may people ask how long this state of things will last, and whether we are being led. The whole situation must be reviewed with the utmost caution, for the motor industry has a long history of disastrous expansions and "slumps" behind it.

We may disregard the view that the motor is merely a luxury, and that in the national or economic interest a check should be placed on this luxury by prohibitive taxation. As a matter of fact, the British motor-user is very highly taxed, the rate on a 20 h.p. car being about four times as high with us as in America. But no Government would dare apply a prohibitive tax or repressive measures to this industry, even if it could be proved that the motor were a useless luxury.

In one form or another motors are used by most of the community. The matter must be accepted that the motor to-day is in great and ever-growing public demand. The view that it is a luxury, or that it is merely a pleasure vehicle, will no longer explain the situation. Those who hold up their hands in horror at the growth of motoring can do no good by their lamentations. We must admit the fact that under modern conditions of life there is an ever increasing demand for transport facilities.

It may seem utter futility that a youth should tear along on his motor-cycle at 50 miles an hour, or that week-end motor cars should fill our roads. These are but surface manifestations of the vast change which is taking place in our habits, our outlook, our health, our towns, and our mode of life. The motor is tending to break up the

huddling habit of the community, and but for mechanical road transport to-day our towns would be in a very bad way. We are only at the commencement of a new era in town planning, and in distribution of population based on the facilities afforded by motor transport. This will be as much the facility afforded by the private car or cycle as that provided by developments of public service vehicles. Indeed, the private vehicle is a marked reversion to individualism.

If we look at the table of increases in motor licences, we see that the most notable advance has taken place in the private cars. In five years they have increased by over 130 per cent., and during the last few years they have gone ahead of motor-cycles. The car is thus the main line of progress, and this year's Olympia show has given certain proof of another great car increase.

This wider interest in motoring is not a passing fad or craze. It is the practical demonstration that the people of to-day want more and more travel facilities, and the motor, by its wide range of action, its speed, and its handiness, is superior to every other vehicle or method of transport.

But a word of caution is necessary here. Unthinking people seem to believe that we can draw level with America in our density of cars per 1,000 people. This is a dangerous fallacy. We are a poor country now, whilst America is very rich. Cars in America are far cheaper than with us. Fuel costs the American less than half our price, and American motor taxation is only a trifle compared with our scale. Wages and money-earning powers are far lower with us, and, furthermore, America is a big continent, with a widely-spread population, whilst we are a little island with a crowded population.

Thus it would be great folly for the British motor industry to expand recklessly on account of the increased trade of 1925 and 1926. We shall reach the saturation point far more quickly than America, but we have a good way to go yet, and the rate of expansion will be determined by the general progress of the country. Until our trade as a whole is good, we must go warily with motor developments.

We must not overlook the replacement trade, however, as this is really the backbone of the home business. A car has a theoretical life of ten years, and inside that period its capital value is well-nigh extinguished. Thus, a car costing £100 will within 10 years have a market value of less than £10. To-day we have nearly 600,000 cars in existence. Their capital value is at least £120,000,000. It is a staggering fact that within ten years that immense capital sum will have wasted away almost to nothing. But assuredly every old car will be replaced, and thus the motor industry has a secure business in supplying new cars for old.

Moreover, the motor industry has set a splendid example by its policy of ceaseless progress in design, and by its enterprise in selling cars to-day which are virtually cheaper and are incomparably better than the cars of 1914.

But as a nation we cannot live by selling cars to each other, and we do not want to encourage impecunious people to rush into owning cars which they cannot afford. Our main reliance for trade expansion must be on the improved condition of the country as a whole and on the increase in motor exports.

In this latter respect the British motor industry is showing a good lead, for we are now within sight of British motor exports exceeding imports in money value. There was a time when all the cars on our roads were foreign made. For many years more than 50 per cent. of our cars were foreign, but that proportion is rapidly declining, and now the British car is finding new markets abroad.

We have boldly followed the line of developing the small-engined high-efficiency light car, and this is ousting the big-engined American car on our home market. It is also challenging the American in other markets, and as roads improve we shall see a vastly increased demand for the British type of light car. If we were courageous enough we might even invade the American market, just as the Rolls-Royce firm has done with the big British car. There is a market for large and medium-sized cars

as well as for the small car, but the great market is with the last-named type.

Many dangers and pitfalls may await the British motor industry, and its past history has been one of ups and downs. But with wise administration and judicious enterprise it should attain to great and lasting prosperity in the coming years. It has been brought up in a hard school, open to competition from all parts of the world.

ARGENTINE RAILWAYS.

THE Argentine railways are striking tribute to English effort overseas. They are British exports in the best sense of the term. It would be difficult to measure in exact terms the beneficial influence which they have had on our present cordial relations with the great South American Republic. But that they have acted as missionaries of British trade and prestige few, we think, will deny.

At this week's meeting of the Buenos Ayres and Pacific Railway, the chairman, Viscount St. Davids, had some interesting information to give regarding his recent visit to the Argentine. In the past year, he said, the cereal crop was less favourable. Weather conditions were not good, locusts did a good deal of damage, and altogether the crop came out much below a normal one. A gratifying feature in the Cuyo Provinces is that irrigation is being extended, though, unfortunately, only slowly.

"Another feature which struck me on my visit," he continued—"and I may remind you that my previous visit was paid only a year before—was the difference in those twelve months in the amount of building that was going on all over the country. There was hardly a town or village one passed through where one did not see new houses going up—good-class houses. In some cases it simply means that people who have lived in very poor shanties and have got better off are building themselves good houses; in others it means that new population is coming in. At any rate, it is a very gratifying sign, and it is going on generally."

The directors of the Buenos Ayres Western state that encouraging results for the first half of the financial year were neutralised during the second six months by the failure of the wheat, oats, linseed and barley crops in the Pampa districts owing to drought and by the holding back of wheat for higher prices. Nevertheless, they consider that conditions in the Republic are favourable; there is still a large quantity of grain awaiting transport, and the exchange position is more stable. As regards fuel supplies, the report of the Great Southern records that the supply of fuel oil from the property of the Cia Ferrocarrilera de Petroleo at Comodoro Rivadavia, in which the company holds a one-third interest, has greatly increased, the net production for the year amounting to 70,435 tons, as compared with 36,187 tons for the previous year. "The development of this enterprise," it is observed, "continues to be satisfactory." The report of this company intimates that in order to meet current outlay in connection with extensions and enlargements, and other to the ordinary and preference shareholders 291,000 of vertible, when fully paid, into 6 per cent. preference stock. This is the first time any capital has been issued by the company since 1913.

First of all we submit for notice a record of dividend distributions over recent years:—

Company.	1913-14.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
B.A. and Pacific, ord. ...	nil	5	nil	nil	7	7	7
Do 5% 2nd non-cum. pref.	5	5	nil	5	5	5	5
B.A. Great Southern ...	5	7	4	4	7	7	7
B.A. Western ...	5	7	4	4	7	6	6
Central Argentine, ord. ...	5	6	4	4	6	6	6
Do deferred	5	6	nil	nil	6	6	6

Distributions are kept at the previous year's level in each case, so that little comment is needed.

In the next table the results for 1924-25 are set out:—

	Pacific.	Southern.	Western.	Central.
	£	£	£	£
Gross receipts	7,876,140	11,577,596	4,753,600	11,567,907
[Ditto for 1923-24] ..	9,130,939	10,859,175	4,935,470	11,360,047

[Ditto for 1920-21] ..	(981,397)	(1,368,254)	(377,884)	(1,966,865)
[Ditto for 1919-20] ..	(2,487,990)	(2,938,813)	(1,603,196)	(3,164,809)
Other income (less charges)	Dr 79,529	Dr 179,694	123,843	Dr 250,307
Net income	2,430,458	3,645,607	1,786,287	3,254,087
Fixed charges	1,546,246	1,145,106	524,785	908,908
Balances	884,212	2,500,501	1,261,502	2,345,179
Preference dividends ...	110,000	400,000	129,855	436,306
Ordinary dividends	700,000	2,036,300	1,040,860	1,739,926
Reserves	7	(7 %)	(6 %)	(6% ord&df)
Inc. (+) or dec. (—) in carry-forward	+ 69,482	+ 64,201	— 9,212	— 31,053

With regard to the figures of the Buenos Ayres and Pacific it is pointed out in the report that in October last the law approving the transfer of the lease of the Bahia Blanca and North-Western line from this company to the Buenos Ayres Great Southern Railway was duly promulgated, and the working of that line was accordingly transferred to the Southern Railway on November 1, 1924, so that only four months' results of the Bahia Blanca line are included in this year's figures. The remaining eight months' figures of the Bahia Blanca line are included in the accounts of the Buenos Ayres Great Southern. The gross receipts of both the Pacific and the Western are lower than twelve months ago, but those of the Southern and Central companies are higher. Working expenses are higher, though the figure of the Western under this heading shows only a very small advance, being £3,091,156, against £3,090,156. Thus in every case net receipts are below those of 1923-24, and net income shows a similar movement.

The next table distinguishes the receipts from passenger train traffic and goods traffic, giving a comparison with the figures for 1923-24:—

	Passenger Train Traffic.			Goods, Merchandise, and Live Stock.			Total (Including Miscellaneous).		
	1924-25.	Inc. or Dec.	%	1924-25.	Inc. or Dec.	%	1924-25.	Inc. or Dec.	%
B.A. Pacific	1,809,742	— 42,686	2·3	5,340,605	— 962,036	14·1	7,150,347	— 1,254,799	13·7
B.A. Gt. Sthn.	3,953,421	+ 259,828	7·0	6,869,576	+ 460,166	7·2	10,822,997	+ 718,422	6·6
B.A. Western	1,434,320	+ 9,645	0·7	3,164,507	+ 184,700	5·9	4,598,827	+ 181,870	3·7
Central	3,465,190	+ 159,410	4·6	7,635,742	+ 8,017	0·1	11,100,932	+ 207,859	1·8

Apparently passenger traffic has been the most remunerative during the year, although the B.A. Pacific shows a decline of £42,686. In contrast the Gt. Southern's passenger traffic increased by as much as £259,828, or 7 per cent., which, added to the gain of £460,166, or 7·2 per cent. in goods traffic, gives a total advance of £718,422, or 6·6 per cent. The Central also increased both its goods and passenger traffic, the increase representing 1·8 per cent. of the total, but although the Western's passenger figures were 0·7 per cent. better, there was a drop of 5·5 per cent. in passenger traffic, so that the net result was a falling off of total traffic receipts of £181,870, or 3·7 per cent. The only concern which has to record declines in traffic receipts in both instances is the B.A. Pacific, those in the passenger department having fallen away by 2·3 per cent., and those in the goods section by 14·1 per cent., so that the total is 13·7 per cent. below that of a year previously. The ratio of expenses to receipts has gone up in each case.

The changes in total receipts are compared in the table below with those of recent years:—

	1913-14.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
	%	%	%	%	%	%	%	%
B.A. Pacific	— 12·7	+ 19·0	+ 30·8	— 16·4	+ 8·9	+ 15·1	+ 15·9	— 13·7
B.A. Great Sthn.	— 16·8	+ 25·6	+ 30·1	— 8·4	+ 3·6	+ 13·3	+ 13·3	+ 3·6
B.A. Western	— 13·0	+ 30·3	+ 41·0	— 21·1	+ 1·1	+ 13·3	+ 6·3	+ 3·7
Central Arg.	— 6·6	+ 12·0	+ 41·1	— 0·2	+ 3·1	+ 12·8	+ 6·6	+ 1·8

RATIO OF EXPENSES TO RECEIPTS.

	1913-14.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
	%	%	%	%	%	%	%	%
B.A. and Pacific	67·63	71·51	69·69	85·68	71·24	63·26	64·28	68·13
B.A. Great Sthn.	58·56	77·96	69·19	81·33	74·34	61·99	62·06	66·96
B.A. Western	58·82	75·08	69·48	80·88	78·72	66·18	62·62	65·24
Central Arg.	58·54	84·60	67·66	79·82	78·26	67·66	66·20	69·71

The smallest advance is shown by the Western, and the largest by the Gt. Southern. Although the year's figures are better than those both of 1921-22 and 1918-19, they are still not so satisfactory as in 1913-14.

The next table shows a classification of expenditure:—

(00's omitted.)

	Running Expenses.		Maintenance.		General and Miscellaneous.	
	1923-24.	% of Revenue.	1924-25.	% of Revenue.	1923-24.	% of Revenue.
	£	%	£	%	£	%
Pacific	3,100,8	33·9	2,890,3	36·7	2,109,5	23·1
Great Southern	3,320,9	30·5	3,744,5	32·3	2,295,8	21·1
Western	1,671,4	33·9	1,636,9	34·4	1,033,2	20·9
Central	3,940,6	34·4	4,003,2	34·6	2,676,4	23·5

The Western, in commenting upon the percentage of working expenses to gross receipts, points out that the difference "is negligible, bearing in mind that they are always very closely watched, and that at all times it is almost an impossible feat suddenly to reduce expenses proportionately to the falling off in earnings, and nowadays, betwixt service regulations, higher wages, and higher cost of materials necessary for the working of the railway, it is all the more difficult."

Our final table shows the gross receipts for the first 15 weeks of the year 1925-26, together with prices of ordinary stocks compared with a year ago and the present yield:—

	Gross Receipts, 15 Weeks to Oct. 10, 1925.	Increase or Decrease.	Prices of Ord. Stks. End of Oct., 1924.	Oct. 15, 1925.	Present Yield.
	£	£	£	£	%
Buenos Ayres and Pacific	1,912,000	— 145,000	82½d	87	8 1 0
Buenos Ayres Great Southern	2,782,000	— 770,000	88½d	92	7 12 3
Buenos Ayres Western	1,171,000	— 266,000	82½d	78½	7 12 9
Central Argentine	3,109,000	— 197,000	76½d	76	7 18 0

These yields appear to be exceptionally generous when compared with those recorded in the early part of 1914. In February of that year Buenos Ayres and Pacific ordinary stock stood at 69, giving a yield of £4 7s, the dividend distribution being a modest 3 per cent. Buenos Ayres Great Southern was quoted at 116, returning just over 6 per cent. Buenos Ayres Western is recorded as 117, with a yield of £5 19s 9d, while the respective figures for Central Argentine ordinary were 105 and £5 14s 3d. Fortunately, this does not denote any sensational departure from the present faith in the future of the Argentine. There are, of course, the economic changes common to most of the prosperous younger States which may have caused conservatively-minded people to pause before taking the plunge in foreign investment. But probably the real cause is the expectation of higher yields when money is sent overseas.

LORD GREY AND THE WAR.

Books on the war litter the world "thick as autumnal leaves in Vallambrosa." The bulk of them will perish more or less speedily. Here and there one will survive, and among these we may confidently predict will be Lord Grey's "Twenty-five Years, 1892-1916." It will survive not merely in virtue of the authority with which the author speaks upon the vast complex of events in which he played so conspicuous a part, but in virtue also of its intrinsic merits. It reveals, as we might expect it to reveal, a character of rare beauty and nobility, and an outlook as disinterested as it is spacious. But it does more than this. It discovers a literary gift of a quite unusual order. The narrative moves from beginning to end with a simple dignity and lucidity that holds the mind with epic power, while convincing the judgment by its trans-

* "Twenty-five Years—1892-1916." By Viscount Grey of Fallodon, K.G. 2 vols. 42s net. Messrs Hodder and Stoughton, London.

parent fairness. Much of this effect is achieved by the severe limitations that Lord Grey has imposed upon himself. He never strays beyond his own personal knowledge of events. He tells the story from his own angle of vision, and does not pretend that it is the whole story. He tells it in the terms of his contemporary view of events, and not in the light of subsequent impressions. If those subsequent impressions have modified his contemporary view, he says so, and the book is entirely free from any suggestion of special pleading and from any desire to win a verdict other than that which is implicit in the facts.

What will that verdict be? So far as the character and intentions of Lord Grey are concerned, it cannot fail to acquit him of any share of responsibility for the war. Among the principals of the European drama it may safely be said that no one struggled with such single-minded devotion to save Europe as he did. He came on to the stage in 1892, when the loom of fate had already begun to weave its pattern. The Triple Alliance had called into being the counter alliance of France and Russia. England stood aloof. It was the period of "splendid isolation," with its complementary idea of the concert of Europe. In so far as England had sympathies they were German sympathies, inspired in part by an unbroken historical amity, in part by the sentiment of the Victorian Court. If there was fear—and there was fear—it was fear of France and Russia. Twice during the nineties we were on the brink of war with France. We were only less uncomfortable with Russia. If "splendid isolation" was to be sacrificed and we were to come down definitely into the European theatre, it seemed inevitable that we should come down on the side of Germany. There was no party dissension on this point, and it was Chamberlain who in 1899 made the famous overture to Germany suggesting an Anglo-Teutonic understanding which would cover not only England and Germany, but, if she were so disposed, also America.

We do not think it can be doubted that the diversion of that current into a contrary direction was due to German policy. While the hostility of France was open and flagrant, there was no compensating spirit of friendship from Germany. Bismarck had fallen, the young Kaiser was in the saddle, and the Bismarckian tradition of Continental dominance had given place to the dream of world power. That dream had changed the orientation of Germany. "Our future is on the sea," said the Kaiser in 1897; and then began that development of sea power in which the challenge to British security was implicit. Almost at the time that Chamberlain was making his overture, Bülow, the German Chancellor, was writing a private memorandum, quoted by Grey, in which he said that "opinion in England is far less anti-German than opinion in Germany is anti-English," and was warning his colleagues against the presence in Berlin of those English observers who knew "the depth and bitterness of German antipathy against England." Even so late as 1902, in spite of the significant cold-shouldering of the Chamberlain proposal, British opinion was still unsuspicious, and we were involved by the Kaiser in the mischievous debt-collecting expedition to Venezuela which was intended to test the Monroe doctrine, and which brought us to the brink of a grave rupture with the United States.

From that false step, and the startled reaction from it, may be dated the definite turn of the tide and the birth of the Entente with France. When Lord Grey became Foreign Secretary in 1906 the Entente was in being, had been ratified by the Moroccan understanding, had led to the first Moroccan episode, the Kaiser's visit to Tangiers, and the fall of Delcassé. "I re-entered office," says Lord Grey, "with the fixed resolve not to lose the one friendship we had made, not to slip back again into the friction of 1892-95. With Germany I wanted to be as friendly as I could be without sacrificing friendships already made." It is clear that henceforth the dominating emotion was fear—fear of the great storm that he saw gathering over the sky of Europe, and fear of our being isolated if and when that storm burst. It is difficult to avoid the suspicion that this haunting fear hampered his thought and action. He was not the author of the Entente, but he profoundly approved of it, not because he had Francophil sympathies, but because

his experience in the 'nineties of the open hostility of France and the unfriendliness of Germany had convinced him that isolation was no longer a safe policy. That he hoped to reconcile the two armed camps and to restore something like the concert of Europe is clear. He was conscious that Germany had grievances, and confesses to the discomfort in his mind "of finding us somehow engaged in blocking Germany's projects in other parts of the world. We were bound to oppose her plans when they were inimical and dangerous to British interests, but was it necessary to assume that everything everywhere that Germany wanted was dangerous to us?" He ingenuously admits that in 1906, when he came into office, he was anxious to concede a coaling station to Germany in West Africa, but discovered that in the previous year his predecessor, Lord Lansdowne, had encouraged France to resist pressure from Germany for the concession of a coaling station in Morocco.

The impartial historian will find it difficult to deny, on the large survey of events from 1906 to 1914, that British policy consistently aimed at making an accommodation with Germany possible. We stopped building capital ships; Germany went on building more. We offered a ten years' naval holiday: Tirpitz produced a more formidable naval programme. We sent Haldane to negotiate privately with the Kaiser: he returned with the confession of failure. Incident after incident increased the tension. With the Balkan war in 1912, and the success of the London Conference, there came a momentary lift of the cloud. It was Grey's hour of triumph. He seemed to have restored the concert of Europe, and for a few brief months the sky was clearer than it had been for seven years. Then, almost out of the blue, came the catastrophe. Grey fairly emphasises the refusal by Germany to accept a conference as the crucial test of the responsibility for the war. Only a little more than a year before the London Conference of Ambassadors had saved Europe. All the members of that conference were still in London. Their intervention would have checked the mad torrent of events—perhaps changed the atmosphere, perhaps even averted the disaster. But Germany said "No," and, in saying "No," precipitated war.

If criticism is directed against Lord Grey it will not be in respect of his intentions, but on the ground that his fear made him unduly subservient to France. His mind moved with a certain official rigidity, and it is difficult to resist the conclusion that the initiative throughout was surrendered to the more subtle diplomacy of our ally. The extent of Lord Grey's fear of hurting the susceptibilities of France is illustrated by his handling of President Wilson's peace overture in February, 1916. Colonel House told Grey that the President, on hearing from France and England that the moment was opportune, would propose a conference to put an end to the war. Should the Allies accept this proposal, and should Germany refuse it, the United States would probably enter into the war against Germany. As to the conditions of peace, House, speaking for Wilson, expressed an opinion favourable to the restoration of Belgium, the transference of Alsace-Lorraine to France, and the acquisition of an outlet to the sea by Russia, with certain compensations to Germany outside Europe. This overture was disregarded—it was forwarded through the French Ambassador to M. Briand, but without comment or a request for comment. Grey, fearing to give France the impression that we were weakening by mentioning the word "peace," left the initiative, if initiative there was to be, to Briand. Briand remained silent, and it was not until nine months later, on the eve of the fall of the Asquith Coalition, when the collapse of Russia seemed imminent, that Grey contemplated the communication of the House memorandum to the Cabinet, with the cautious suggestion that in certain circumstances the Wilson overture should be considered. This revelation—perhaps the most striking in the book—can hardly fail to leave behind grave doubt as to whether, in the diplomacy of Lord Grey, "I dare not" was not too often allowed undue precedence of "I would."

But in the large view of events the impression left is that the war came inevitably from the conditions of Europe. This view runs like a dominant motive through

the story, giving it coherence, unity, and something of the quality of cosmic tragedy. Given the same conditions, the same result must follow. Lord Grey does not seek to justify himself or to secure a verdict. He tells the story in order to utter a warning to the world out of the agony of his own terrific experience. "Learn or perish" is the alternative before human society. Not in better preparation for a state of things similar to that of 1914, but in a world reconciliation that shall prevent that state of things recurring, is the only hope of mankind. The talk about new and old diplomacy is useless chatter. A new diplomacy will not save us. Only a new world relationship and a new world vision can save us. Science has changed the whole basis of civilisation, and that civilisation cannot co-exist with war. If the competition in armaments is not destroyed, civilisation itself is doomed. It is with that sombre challenge to the wisdom of mankind that the book closes.

Notes of the Week.

The Price of Bread.—The Food Council is justifying its existence. As our readers are aware the harvest situation is bringing down the price of wheat, and flour, after a little hesitation, is following with it. In such circumstances bread must also come down, but there is a tendency for the baker to postpone the fall until he has got rid of the stocks bought at high prices. The action of the Food Council in making a public declaration of what they consider that bread prices ought to be, in appealing to public opinion, and in particular, to house-wives to support their view, and in taking steps to draw up a list of bakers who undertake to sell bread at what they consider the reasonable price, has undoubtedly hastened the fall in bread prices. They are, however, not satisfied that prices have gone low enough, for in their view, as in that of the Food Commission, the margin between flour and retail bread prices has been too wide. It still remains to be seen whether the Council will succeed in narrowing it. The bakers' organisations have taken this unwelcome but very welcome display of energy by an official body with a bad grace. One of them even committed the mistake of issuing a bad-tempered manifesto in which it called upon the trade to present a united front to "the undercutter, the Press, the Food Council, and the carping housewives alike." But Lord Bradbury is not the sort of man to be diverted from his course by noisy opposition. There is no doubt that since the war conditions have enabled the distributing trades of the country to retain for themselves a very comfortable margin, and that the numbers engaged in them are unnecessarily large. If the Food Council is able to show that distribution on a large scale and with economical management can cheapen the cost of living, it is in the public interest that the distributing trades should be compelled to adjust themselves to these narrower margins. This is part of the process by which the sheltered industries must come into line with those subject to foreign competition, and by so doing help to restore our international competitive power. To Messrs Catchpole and Noyes these efforts appear to be nothing but unjustified baker-baiting; in our view they are an example of the proper use of publicity and public opinion. The trade has fortunately for itself realised the effectiveness of these weapons, and has agreed to submit its costs to the examination of the Food Council's experts.

"Safeguarding" the Worst Industry.—Fortified by the strongly Protectionist atmosphere of the party conference at Brighton, the Government have ventured to set up a Committee to inquire into and report upon Bradford's demands for import duties on foreign worsted tissues or fabrics. The Committee consists of Sir Arthur Whinney (chairman), Dame Helen Gwynne-Vaughan, and Mr Ernest Bevin. This is the first Committee set up under the famous White Paper to examine the demand for protection from a considerable industry—the iron and steel application has been conveniently shelved—and it is the fruit of a long agitation. Bradford's chief grievance is

against the competition of French makers of ladies' dress goods. In 1923 a claim was made for a Committee of inquiry under Part II. of the Safeguarding of Industries Act, but came to nothing because the Baldwin Government of that day made its hurried leap into general protection, suffered defeat at the General Election, and the clauses of the Safeguarding Act under which the claim was made were permitted to lapse by the Labour Government in 1924. But with the return of Mr Baldwin to power, and the issue of the White Paper, Bradford came forward again, and the result of its persistence is now seen in this Whinney Committee. In the official notice sent out by the Board of Trade, the scope of the inquiry is confined to tissues or fabrics "of any weight from two ounces per square yard up to and including seven ounces per square yard made wholly or partly from wool or hair." These limits are rather wider than appear necessary to cover the worsted range while excluding the woollen range. They have no doubt been arranged so as fully to include within the Committee's terms of reference all those French dress materials from which come the alleged "abnormal competition" with Bradford's industry. The Committee will, of course, sit in public.

Progress in Labour Disputes.—The week has been fruitful in developments concerning labour disputes and wage negotiations. The shipping strike is, to all intents and purposes, over. In this country it had become so great a farce that Mr Shinwell and its other promoters have "called it off." In South Africa, too, it has been declared at an end. In Australia certain difficulties persist, but even there an end of the trouble is said to be close at hand. Thus ends a strike which should never have taken place; one which, had it been successful, would have struck a serious blow at the roots of the system of collective bargaining; one which, though ending in failure, has been serious enough to cause some degree of trade losses and delay, and to lessen in some slight degree the contribution made by the mercantile marine to the nation's invisible exports. Secondly, an agreement has been reached in the building trade, following the refusal of the building trade employers to ratify an agreement of which the National Federation of Building Trade Operatives had notified acceptance, on the ground that the Federation is no longer able to represent the bricklayers and plasterers, a further agreement has been considered and has received approval, after a protracted discussion on Wednesday. The main features of this agreement are that wages are to be stabilised till August 1, 1926, and that steps are to be taken to formulate a settlement of the various outstanding questions by February next. The agreement thus removes the prospect of any immediate disturbance, but it makes very little contribution towards a final settlement, apart from a suggestion that it may be necessary to abandon the principle of a national agreement in favour of area agreements, a step which is a reversion to the practice observed in 1920. It is to be noted that the bricklayers' and plasterers' unions are not a party to the settlement. These unions are at present faced by the contention of the employers that as their secession from the operatives' federation was subsequent to the date of the last settlement they are bound by the stabilisation provisions till February, but there are indications that they may endeavour to obtain increases in wage rates in the early part of next year. The outstanding difficulty which confronts the industry is not that of wages, however, but the question of hours of labour. The hours at present are 46½ in the statutory summer period and 44 in the remainder of the year, except in any area or district in which the employers and operatives agree locally to work 44 hours all the year round. In a number of districts, including Scotland, the 44-hour week has been agreed upon, but in other districts the workers generally were very restive when the longer week came into force in the spring of this year. More than one attempt has been made to settle the hours question on a national basis in the last two or three years, but the trouble remains. It is probable, however, that area negotiations may be more successful, and for this reason the most satisfactory feature of the latest settlement is the opening of the door to the resumption of district agreements. Finally the dispute over

railway wages is proceeding along normal lines. The Central Wages Board for the railways—on which the unions and the companies are equally represented—met in London on Wednesday. The companies seek an all-round reduction, while the unions put forward an "all-grade" programme. The gulf between the two positions was so wide as to make this meeting merely formal, and after several hours of discussion the expected disagreement was recorded. This does not, however, mean that a crisis has arrived. The next stage is the submission of the issues to the National Wages Board, on which the users of railways as well as the unions and the companies are represented under the chairmanship of a neutral. There is an impression that the atmosphere in regard to this dispute has undergone some slight improvement, though the gulf to be bridged remains as wide as ever.

Russo-German Trade Treaty.—On Monday at Moscow a treaty was signed between Germany and Soviet Russia. It is subject to ratification by the respective legislatures, and its text has not been published. It is said to consist of a number of special agreements and one covering document. According to the Berlin correspondent of the *Times* the special agreements deal with the right of establishment and legal protection, railways, shipping, taxation, trade marks protection, commercial arbitration courts, and consular privileges. The guiding principle of the covering agreement is the "most favoured nation" treatment, but, apparently, the Soviet State monopoly of foreign trade is not touched by the treaty. Pending the publication of its text, it must be assumed that the effect of the treaty is more political than economic. It is a gesture, and the fact that Germany has turned her eyes to the East at the very moment that she is signing the Pact at Locarno cannot be without significance. But on the practical side there is no reason to believe that Germany will find it easier than other countries to bridge the wide gulf between conflicting economic systems, or that, with the sole exception of the geographical factor, German business men will find the obstacles in the way of satisfactory trade with Russia any less formidable than they have been found by the business men of other Western nations. The news of the agreement does not seem to have created any enthusiasm in Berlin.

Oom Paul Kruger.—The outstanding personalities of Generals Botha and Smuts, and their signal contributions towards the conduct of the affairs of the British Empire, have accustomed the people of this country to accept the South African miracle as a commonplace fact. So much so that when we read the speech of a South African statesman our minds are no longer actively conscious of the fact that less than a quarter of a century ago the speaker was in arms fighting in the bitterest of struggles against British, Canadian, and Australian troops. But an event took place a week ago to-day which is calculated to remind us vividly of the ripe harvest which has sprung from the seed of faith sown by Sir Henry Campbell-Bannerman in 1909. Saturday, October 10th, was the centenary of the birth of the late President Kruger. The day was celebrated at Pretoria by the unveiling of a memorial, and a feature of the ceremony was the laying at the foot of the statue of a wreath from the King of England. If there was any one influence, beyond that of religion, which guided the policy of Kruger, it was hatred of the British. If there is any name that has ever rivalled those of Napoleon or the ex-Kaiser Wilhelm in the execrations that it aroused among the British public, it is Oom Paul Kruger. Yet within a quarter of a century we find the head of the British people paying tribute to his "sacred memory," while among those who actually suffered at his hands the grievances which led up to the Boer war, are good men who acclaim Kruger as a "great South African." Controversy as to his share of responsibility for a terrible war is stilled, and we are content to salute him as one of the great leaders of a brother nation. This surely is an example of the healing of international wounds

of which history holds few examples. Can one picture in 1941 a tribute from the French people being laid upon a memorial at Potsdam to William Hohenzollern?

The Chinese Tariff Conference.—The Tariff Conference in China, which opens in ten days' time, is being heralded by various rumours of the intention of the United States to force the pace in case European countries or, what is perhaps more probable, Japan, should show undue reluctance to recognise the Chinese claim to theoretic, if not immediate, tariff autonomy. That claim has, of course, in effect, been recognised in the Washington Agreements of 1922, but in such case there are infinite possibilities of delay in adjectives like "ultimate" and "eventual," and a danger, no doubt, exists that the Conference may end by emphasising more what is being denied to China than what is being conceded. On sentimental grounds, apart from any others, America is disposed to take a lead in China, and on more solid grounds than those of sentiment it will be a bad thing for Great Britain if our representative adopts an attitude visibly less friendly to the Chinese. The prospects, unfortunately, do not in any case look very hopeful. The increase in the Customs duties is conditional on the abolition by China of "likin," or the duties levied on no very regular or settled principle on goods in internal transit in China. Whether that abolition is possible under existing conditions may well be doubted. The likin duties levied by a province in Central China, for example, go to the province itself, and not to Peking, and there is little to justify the supposition that in the present state of relationships between the provinces and the capital, the former will be prepared to give up the bird in the hand on the chance of obtaining a bird in the bush, in the shape of a proportion of the new Customs duties handed on to them by the Central Government. But a rupture, as all the negotiators are well aware, would play straight into the hands of Russia. There should, therefore, be every disposition to attempt a compromise based on a substantial immediate increase of the tariff, coupled with definite assurances as to its subsequent abolition.

Amalgamation of the Note Issues.—The current number of the Midland Bank's monthly review brings forward the subject of the amalgamation of the Bank of England and currency note issues. The Cunliffe Committee, in its interim report in 1918, recommended that the note issue in England and Wales should be entirely in the hands of the Bank of England, but that the two existing issues, currency notes and Bank notes, should not be combined until the benefit of at least a year's experience of satisfactory working of the exchanges, with a normal minimum of gold reserve of £150 millions had been obtained. The Committee on the Currency and Bank of England Note Issues, which reported in February of this year, upheld the recommendations on this point of the Cunliffe Committee, and they have since been adopted by the Government. The Bank of England now holds gold to the extent of £160 millions, and there has been no continued large-scale movement of gold, either inwards or outwards. Provided this situation persists, it is suggested, the amalgamation of note issues might take place some time next year, if it has been found possible to set up the necessary organisation and provide the required machinery. Various changes in existing legislation will have to be made. Under the terms of the Bank Charter Act of 1844, the fiduciary issue is at its maximum at the present figure of £19,750,000. This will require material alteration. The Act of 1826 prohibited the issue of Bank notes below £5, and if the Bank of England is to take over the issue of £1 and 10s notes hitherto circulated under the authority of the Treasury, the denomination of its notes. Again, most of the Currency and Bank Notes Act of 1914 will have to be repealed. It is to be assumed, in view of the careful consideration given to the matter by the two committees, that the principle of the fixed fiduciary issue will be maintained. What the figure will be has yet to be decided, but the Midland Bank tentatively suggests a figure "somewhere above £150 millions." If, with the consolida-

tion of the note issue, the fiduciary circulation is fixed, subject only to special safeguards for special emergencies, the issue of notes and volume of credit will be dependent, as before the war, upon gold movements. If and when the note issue becomes convertible into gold coin, as distinct from bars, which is all that can be obtained under the Gold Standard Act of 1925, gold coin will again become available for public use in this country. The Midland Bank suggests that even then it is doubtful whether any large amounts would be drawn for circulation. "The note, by reason of its convenience, has become firmly entrenched in the habits of the people, and it would probably be found that individual preferences for gold coin would show themselves in the circulation of only very limited sums."

The Quarter's Shipbuilding.—Lloyd's Register Shipbuilding returns for the quarter ended September 30th show that the tonnage under construction in Great Britain and Ireland—1,009,155 tons—is over 84,000 tons less than at the end of June, 1925, and about 459,000 tons less than the tonnage building twelve months ago. The tonnage on which work was suspended at the end of September, 1925, amounts to 81,000 tons, as compared with only 37,000 tons at the end of September, 1924. The present totals are the lowest recorded since December, 1909, and are 881,000 tons below the average tonnage building during the twelve months immediately preceding the war, i.e., 1,890,000 tons. An increase is shown in the tonnage commenced during the quarter, namely, 260,551 tons, as compared with 189,805 tons during the second quarter of 1925, but the tonnage launched during the present quarter—225,236 tons—is 72,925 tons lower than that for the previous three months. The total merchant tonnage building in other countries—1,197,750 tons—is about 78,000 tons less than at the end of June, 1925. The figures for the leading countries abroad are:—Germany, 306,626 tons; Italy, 269,802 tons; France, 150,220 tons; and Holland, 127,775 tons. The tonnage commenced abroad was 244,002 tons, and 250,378 tons were launched, an increase, as compared with the previous quarter, of 11,693 tons in the tonnage commenced, and a decrease of 44,748 tons in the tonnage launched. The total world tonnage under construction—2,206,905 tons—shows a decrease of 162,926 tons as compared with the previous quarter, and is 1,239,653 tons below the highest pre-war record reached on June 30, 1913, viz., 3,446,558 tons. There are at the present time under construction in the world 21 vessels of between 10,000 and 20,000 tons each and 10 of 20,000 tons and upwards. Twelve out of the 21, and five of the larger vessels, are building in Great Britain and Ireland. The returns show that there are at the present time 48 steamers and motorships, each of over 1,000 tons, with a total tonnage of 344,136 tons, under construction in the world for the carriage of oil in bulk. Of these tankers, 19 of 135,224 tons are under construction in Great Britain and Ireland, 10 of 89,600 tons in Germany, and 11 of 65,900 tons in Holland. The tonnage of vessels now building in the world, which are to be fitted with internal combustion engines, amounts to 1,088,888 tons, while the tonnage of steam vessels under construction is 1,090,456 tons. The motor tonnage thus practically equals the steam tonnage, showing the remarkable development which is taking place in the adoption of this system of propulsion. The tonnage of motorships building at the end of September in Great Britain and Ireland—356,480 tons—amounts to 55 per cent. of the steam tonnage under construction. In Denmark, Germany, Holland, Italy, and Sweden the motor tonnage under construction greatly exceeds the steam tonnage; the combined totals for these five countries being 207,955 tons of steamers and 636,542 tons of motorships. The world figures include 103 motorships each of between 5,000 and 10,000 tons; five of between 10,000 and 15,000 tons; six of between 15,000 and 25,000 tons; and one of about 33,000 tons. The interim report on the subject of foreign competition by the Federation of Engineering and Shipbuilding Trades to the executives of the trade unions concerned comes to the conclusion, with reference to the contract for five large motor-ships placed in Germany by Furness, Withy and Co. last March, that there was no substance

in the claim made that the difference between the British price and the German price was due to the German system of inter-association of firms controlling all the processes from the raw material to the finished article, since the lowest British tender was submitted by a firm who had interests in iron and steel and coal in much the same manner as the German firm. The report gives a table of wage rates, which seems to afford a good explanation for the loss of the contract. Weekly time rates for skilled men at Hamburg are given as 35s 8d to 37s 10d, against 44s 6d at Rotterdam and 55s 6d on the Tyne; for unskilled men, 28s 1d to 30s 3d at Hamburg, against 33s at Rotterdam and 38s 6d on the Tyne.

Iron, Steel, and Coal Production.—From the September production figures just issued by the National Federation of Iron and Steel Manufacturers the decline in production of iron and steel appears to have been checked, though whether permanently or not remains to be seen. The production of pig-iron in the 30 days of September amounted to 448,700 tons, or 4,200 tons more than in the 31 days of August, in spite of the fact that there was a net loss of seven furnaces in operation during the month—the three furnaces which were blown in being of much greater average capacity than the ten which were blown out or damped down. Steel production showed a marked rise over the holiday month of August, and registered 638,900 tons, the highest output since May, and within 6,000 tons of the output in September, 1924. Imports and exports were in each case lower than any previous month this year, imports possibly on account of the Belgian strike; imports amounted to 199,000 tons and exports to 273,200 tons. A further fall took place in prices, and the Board of Trade's index number for September stood at 21 per cent. above 1913, compared with 23 per cent. in August and 40 per cent. in September, 1924. The unemployment percentage in August was 20.7 in pig-iron manufacture and 25.9 in steel rolling mills and puddling furnaces. Now that German figures of production are once more available, it is interesting to compare the production in the U.K. with France, Germany, Belgium, and Luxembourg:—

(In Thousands of Gross Tons.)

Average Monthly.	U.K.		Germany.		France.		Belgium.		Luxembourg.	
	Pig-iron.	Steel.	Pig-iron.	Steel.	Pig-iron.	Steel.	Pig-iron.	Steel.	Pig-iron.	Steel.

The effect of the metallurgical strike in Belgium will be noticed, but apart from that all countries show steady progress, and Great Britain will be the only country in which production for 1925 will be less than for 1924. Small wonder that the condition of the industry is causing concern to the Government, and that the Prime Minister was himself present at a meeting of the Civil Research Committee on Monday last at which the position was considered. The output of coal in the four weeks ending September 26th averaged 4,301,800 tons per week, compared with an average of 3,899,000 tons per week in August, when output was affected by the holidays. Exports of coal increased and amounted to 3,902,000 tons, compared with 3,272,100 tons in August and 5,098,400 tons in September, 1924. Of the total exports 725,600 tons went to France, 567,400 tons to Italy, 377,900 to Germany, and 278,300 tons to Sweden.

Iron and Steel Production in Germany.—The issue of *Stahl und Eisen* for October 8th contains the welcome announcement that in future production statistics of iron and steel will be published regularly—the production of pig-iron and crude steel monthly, and of rolled products at longer intervals. The results for the years 1910 to 1924 were published in *Stahl und Eisen* of February 12th and 26th last, and summarised in our issue of March 28th. The current issue gives the monthly production of pig-

iron and of steel from January, 1924, to August, 1925; pig-iron is analysed according to the kinds of pig-iron produced, and also according to the producing districts, while steel is also divided as between the bessemer and open-hearth processes, and as between acid and basic. Since the figures have not yet appeared in any English journal, we give in the table below the number of furnaces in blast and the production of pig-iron and steel monthly from January, 1924:—

GERMANY—FURNACES IN BLAST AND PRODUCTION OF PIG IRON AND STEEL MONTHLY, JANUARY, 1924, TO AUGUST, 1925.

1924—	Furnaces in Blast.	Production—	
		Pig Iron.	Steel Ingots & Castings.
		(In Metric Tons.)	
January	80	377,800	486,900
February	86	492,000	622,900
March	98	649,100	843,700
April	107	698,400	943,000
May	94	520,000	670,400
June	103	559,500	723,000
July	99	719,300	912,600
August	90	681,200	808,900
September	90	696,700	866,400
October	96	759,200	939,600
November	101	786,000	968,600
December	106	873,000	1,049,200
		7,812,200	9,835,200
1925—			
January	113	909,800	1,180,900
February	120	873,300	1,155,400
March	122	990,600	1,209,300
April	119	896,400	1,064,400
May	120	960,500	1,114,700
June	119	941,200	1,108,800
July	108	885,900	1,031,000
August	101	765,900	899,400

It will be seen that the production rose fairly steadily from the beginning of 1924 until March of this year, when a maximum was reached, both in the case of pig-iron and of steel. Since that date there has been a decline of practically 25 per cent. in each case. Of the total production of pig-iron in the first half of this year (5,571,900 tons), 79 per cent. was produced in the Rhenish-Westphalian district, and of the output of steel (6,833,500 tons) approximately 81 per cent. also was produced in the Rhenish-Westphalian district.

After the Rubber Boom.—A Stock Exchange correspondent writes:—The flame of excitement which has been burning so brightly during the past few weeks in the rubber market suffered an extinguisher a few days ago when it was reported that negotiations were on foot which, if completed, might result in a considerable addition being made to the exportable allowance of rubber permitted under the Stevenson Restriction Scheme. As everyone is aware, the companies will be allowed automatically to increase their exportable allowance by 10 per cent. on November 1st next, and for this the market was quite prepared. According to cables received from unofficial sources, there is a possibility of the allowance being raised by another 10 per cent., making it 95 per cent. of the standard production total. Without stopping to inquire into the likelihood of this report being true, or to discuss the effect which, if correct, it might have upon the rubber industry, speculators rushed helter-skelter to sell their rubber in Mincing lane and their shares in Throgmorton street, with the result that there has been a very noticeable setback in the prices of the raw stuff and of shares. The loss was partially regained, but the boom, as such, has suffered a check. There has been a good deal of scattered selling, people coming in from all parts of the provinces as well as London with a view to lightening their commitments and taking the remarkably fine profits which, in the majority of cases, they are still able to secure. By unanimous consent, the position and outlook for the industry are as promising as ever. It is not thought likely that raw rubber will fall back to any material extent. Only the hyper-cautious take into consideration the fact that the Americans have recently started to plant rubber, and that, in five or six years' time, they may be able to supply from their own fields a good proportion of the rubber that they will require. But what may be called the technical position in the Stock

Exchange is the reverse from what it was a week ago. Experience shows that every boom is succeeded by reaction, and, what is less well recognised, that once a check has been administered to a furiously rising market, it takes a good deal to relight the fires of enthusiasm whose flames sent prices soaring. In spite of the fact that contango facilities have been neither extensively granted nor demanded, the fact remains that people are left bulls of rubber shares which they bought more or less as a speculation. Behind these, however, there stands a solid phalanx of speculative investors who have been attracted by the extraordinary change in the position of the rubber industry, and who are impressed by the bumper dividends being declared every day. They know that the results for the periods just finished are likely to be greatly exceeded by those to come in a year's time, and that the dividends for 1926 can be trusted to outstrip those of 1924-5.

Bunker Oil.—The fall in the prices of bunker coal has been followed by a reduction of 5s per ton in the price of fuel oil and of 10s per ton in that of Diesel oil. This brings back fuel oil and Diesel oil nearly to the price-level ruling at the beginning of 1924. It is somewhat remarkable that bunker oil prices up to this point should have remained stable for a little more than a year, seeing that the balance between supply and demand in the fuel oil business is almost impossible to maintain. The fluctuations in prices since "bottom" prices were reached in July, 1922, have been as follows:—

U.K. PRICES PER TON, EX TANK.					
	Fuel Oil.			Diesel Oil.	
	s	d		s	d
July 15, 1922	60	0		80	0
February 12, 1923	65	0		80	0
March 9, 1923	70	0		85	0
January 4, 1924	72	6		87	6
February 2, 1924	77	6		92	6
March 4, 1924	82	6		102	6
April 7, 1924	87	6		107	6
July 4, 1924	82	6		102	6
September 22, 1924	77	6		97	6
October 3, 1925	72	6		87	6

These prices are "ex tank" at the bunkering depôts. For inland consumers there is an extra charge of 5s per ton, except in the case of Diesel oil, which is explained, no doubt, by the fact that Diesel oil for ships' bunkers has to be of a specially high grade. This reduction in bunker oil prices can hardly be taken as another attack on the coal bunkering trade. The price of fuel oil, having regard only to calorific values, is still above its parity with that of coal. Shipowners who use fuel oil are using it for the indirect savings it brings and the increased efficiency that is gained. Industrial plants are converted from coal to fuel oil burning for the same and other advantages, such as cleanliness in the case of bakeries, food factories, hotels, and stores. In all cases it is not merely the question of comparative prices that decides the type of fuel consumed. It should, of course, be appreciated that the volume of fuel oil consumed in place of coal in industrial plants is a negligible, and in the case of ships' bunkers still a very small, percentage of the total volume of coal consumed. For example, for the eight months ending last August only 670,000 tons of fuel oil were shipped as bunkers for vessels engaged in foreign trade as compared with nearly 11 million tons of coal. The recent reduction in oil bunker prices can, therefore, be regarded not as an attack on coal, but as an indication that fuel oil supplies are on the increase, and that the stocks of the large oil companies are becoming swollen. The rapid development of the Venezuelan oilfields this year, which are big exporters of fuel oil, and the exceptional increase in the heavy oil production of the American fields are the chief causes of the over-supply of fuel oil prevailing in the world's markets.

Conditions in Cuba.—Late advices received from Cuba writes a correspondent, give the estimated yield of sugar, from the 170 mills that have been grinding this season, at 5,100,000 tons (a not inconsiderable contribution to

the world's entire consumption of between 18,000,000 and 21,000,000 tons), and forming a production well in advance of 1924. The size of the output has occasioned some surprise, in view of the unsettled labour situation and the several mill strikes that characterised the beginning of the season. The trouble was only temporarily quelled by the offer of higher wages. It is recognised that before the next sugar season comes round a considerable change in the labour position will have to be met and surmounted. This must have no small bearing upon the expense-ratio of the principal sugar-carrying railway, the United Railways of the Havana, with its highly-organised system of 1,250 miles of track, mainly dependent upon the fortunes of the sugar industry. It is not thought possible that the present moderate ratio of 62.58 per cent. working expenses can be for long maintained. The margin of profit realised upon sugar sales is regarded at present as no more than ample to finance operations, and but little surplus remains available to liquidate old balances. The low selling prices of the cane product—falling in December last to \$0.03 per lb—greatly disheartened planters, who have received little encouragement since the news of large crops swamping the market from Hawaii, British India, and Java, which has suddenly become an important factor in the market. In Europe, also, heavier beet supplies are now forthcoming, Bulgaria, France, and Hungary being contributors to the estimated production of over 8,000,000 tons, this year, or about 25 per cent. above that of last season. While the Cuban Budget for the fiscal year 1925-1926 exhibits an increase in expenditures and revenues—\$83,787,590 and \$84,791,649 respectively—these advances are likely to prove more apparent than real. The 1924-1925 Budget (expenditure \$65,138,643, and revenue \$71,048,200) was merely a continuation of the Budget of 1923-1924, and showed little vraisemblance to the actual revenue and expenditure, both of which were swollen by unexpected and unanticipated amounts. The floating debt is being satisfactorily settled, however, in accordance with the law specially passed providing for the same in the form of instalments over a period of four years. The close of the year threatens trying times for many Cuban industries, which, kept in a state of continual unrest by the labour and political situation, find it difficult to shake off the partial paralysis that has befallen them. The building trades would appear to be an exception, but even here financing new projects has become exceptionally difficult. In Eastern Cuba, which is always affected by conditions on the sugar plantations, several proposed undertakings have been temporarily abandoned, and a close time in such luxuries as motor-cars and pianos, costly garments, &c., has been declared. There has been a heavy increase in unemployment, while one report has it that some food-importing firms, hard pressed, and in order to secure funds to meet maturing bills, have been compelled to dispose of their stock at prices much below cost.

Uruguayan Railways.—The report for the year ended June 30, 1925, of the Central Uruguayan Railway and its extensions shows that, in spite of a fall of 9.78 per cent. in net receipts, it has been found possible to pay increased dividends. The much smaller loss on exchange, £84,476, as against £167,392, has prevented any fall in the balance available for distribution. In Uruguay railway receipts depend closely upon the prosperity of the meat trade. This industry has in the past year suffered severely from a dry spring, followed in May and June by torrential rains, from a plague of locusts, and from the diminishing demand for animals of the Continental type owing to a new French and Belgian liking for prime meat. Trade with Brazil has been curtailed by the unsettled condition of the State of Rio Grande (Brazil). It is interesting to hear the complaint of the general manager that "the short distance traffic of the Central Railway proper was prejudiced by the competition of road transport." Results for the combined system for the past 12 years are summarised in the following table:—

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

Established 1836.

LEASEHOLD REDEMPTION POLICIES

Head Office: 10, FLEET STREET, LONDON, E.C.4.
near Temple Bar.

Assets Exceed - - £16,750,000

General Manager: W. A. WORKMAN, F.I.A.

Year.	Gross Receipts.	Expenses.	Profit.	Percentage of Expenses to Receipts.
	£	£	£	%
1913-14	1,103,229	622,727	480,502	56.44
1914-15	946,767	562,684	384,083	59.43
1915-16	1,088,956	669,208	419,748	61.45
1916-17	1,178,602	771,433	407,169	65.45
1917-18	1,542,320	1,010,288	532,041	65.50
1918-19	1,792,804	1,219,680	573,113	68.03
1919-20	1,892,902	1,245,944	646,958	65.82
1920-21	1,879,630	1,504,995	374,635	80.07
1921-22	1,891,302	1,207,917	683,385	63.87
1922-23	1,989,203	1,172,769	816,434	58.96
1923-24	2,102,656	1,252,765	849,891	59.58
1924-25	2,074,710	1,307,709	766,803	63.04

The decline of 1.3 per cent. in gross receipts is due to smaller receipts from livestock. Cattle traffic yielded a total of £385,528 (fall of 8 per cent.), and sheep traffic yielded £34,869 (fall of 42 per cent.). Goods traffic, on the other hand, produced £46,024 (5 per cent.), and passenger traffic £2,712 (1 per cent.) more than in the previous year. Total working expenses were 4 per cent. higher than last year. Analysis of this increase shows that salaries and wages were responsible for £45,579, fuel for £3,456, general material and sundries for £998, and "other expenses" for £6,975. More men have been employed on stations and trains in order that working hours might be reduced to the legal eight hours' day. Expenditure on fuel oil has risen by £27,171, and expenditure on coal has fallen by £23,669. Exceptional expenditure for the repair of damage by floods in the northern extension totalled £11,822, and was debited to the renewal fund. Separate figures for the main line and the extensions are given below:—

	Gross Receipts.	Working Expenses.	Profit.	Percentage of Expenses to Receipts.
	£	£	£	%
Central Uruguay	1,448,169	1,003,348	444,821	69.28
Eastern Extension ..	315,628	145,423	170,205	46.07
Northern Extension ..	158,212	75,150	83,061	47.5
Western Extension ..	152,700	83,985	68,715	55.0

The decrease in net profits on the Eastern Extension was £1,022 and on the Northern £3,274. On the Western Extension there was an increase of £270. After paying fixed charges and interim dividends on preference ordinary shares the main line accounts shows a balance of £146,123. Payment of a final 2½ per cent. on the 5½ per cent. preference shares and of 3½ per cent. on the ordinary shares (making 6 per cent. in all, as against 5 per cent. last year) absorbs £92,000, and a balance of £54,123 is carried forward. The Northern Extension paid 6 per cent., as against 5½ per cent. last year, and the eastern 9 per cent., as against 8½ per cent.

The Scarcity of Zinc Supplies.—There has been an intense run of demand on G.O.B. zinc, just lately, on clear indications of a serious shortage of supplies on a rather deficient world's output, combined with a steady increase in consumption. The price for near delivery this week has risen to about £40 15s a ton in the open market—the two extreme points reached last year were £39 and £29 15s—but it is to be feared that consumers will be faced with a serious state of scarcity over the end of the

year, which will render the establishment of still higher prices almost inevitable. In fact, the position threatens to become acute and almost similar to that experienced about five years ago, when the scarcity which followed the war period enabled the American producers practically to dictate their own terms for European purchases. From the lowest point seen this year, current values indicate an appreciation of, roughly, £9 10s a ton, but the world's stocks have dwindled fast within the last two months, being estimated at well under 20,000 tons, or only about one-half the estimates current about six months ago, when consumption was on a more restricted scale owing to decreased activity in the galvanised sheet industry. This industry across the Atlantic has been very active lately, and the mills in this country are doing much better. In addition to this, there has been a large expansion in the outlet for zinc sheets, an order coming to hand this week from the River Plate for 1,000 tons. There has been a shortage of zinc ores for some time past, which partly accounts for the backward state of the metal output. The latter has been practically stationary in America for months past, and at a diminished rate in Belgium. The American statistics cabled this week for September are certainly very striking. Smelter's production was 47,384 short tons, against total deliveries of 52,620 tons (including shipments to Europe of about 4,000 tons), so that stocks were reduced by 5,236 tons to 11,796 tons, this being the lowest record for years. Stocks in Belgium are said to be small, and there is no large surplus in Germany. An increased output is badly needed if current needs are to be adequately met; this country's consumption now calls for imports at the rate of about 12,000 tons a month. It may be recalled that the top price touched in 1920 was about £64 a ton.

Band Reports.—Our Mining correspondent writes:—The annual statements are now available of the four "Corner House" companies whose accounts are made up to June 30th. Of these, by far the most important, of course, is the New Modderfontein. This company continues its record-breaking career. Although the gold premium during the period covered brought in only £68,100, as against £229,500 in 1923-24, the working profit came out more than £100,000 up at £1,939,000. An increased tonnage was crushed for a yield of 9.9 dwts, or about $\frac{1}{2}$ dwt more than previously. The working expenses were inflated by outlay in connection with the equipment of the mine with improved appliances, and also by the performance of a substantially increased development footage. Nevertheless, the ratio remained at the former level of 17s 1d per ton. The final dividend of 60 per cent. raised last year's total to 110 per cent., as against the round 100 per cent. paid in respect of the two preceding periods, and still left the increased balance of £263,200 to be carried forward after providing nearly £300,000 for taxation, as well as a net outlay of £121,700 upon capital account. On the whole, the development work was not quite so productive as before, the ore reserves at 9,090,000 tons, value 8.5 dwts, showing little change. It is interesting to note that in addition to the work on the main reef leader, a considerable amount of prospecting was done on upper leaders in the north-west section of the mine. It is not yet possible to gauge the extent of these ore bodies, but results so far are encouraging; of the distance sampled, 60 per cent. exposed payable reef. The greater part of last year's capital expenditure was incurred in the sinking of the No. 2 circular shaft and incidental work. The consulting engineer intimates that further heavy outlay will be necessary during the current year in the same connection. Nevertheless, there appears every prospect that the company will be able to maintain its improved results. The full statement of the Modderfontein East adds little to the summary of salient particulars cabled some weeks ago, and commented upon in our columns. The report of the Consolidated Mine Reef confirms the impression based upon the quarterly reports that developments during the year had taken a turn for the better from the standpoint of values. At 1,104,200 tons the ore reserves show only a small expansion over those at the end of June, 1924; but the value, 7.6 dwts, is $\frac{1}{2}$ dwt up. Even now, however,

the company is not in a position to keep its mill going with ore from the estimated reserves; hence it will be necessary to continue the policy of obtaining as much material as possible from reclamation and other sources. From the financial standpoint last year's results display a considerable falling off, the effect of a fair increase in the quantity of ore milled, and of a reduction of 1s per ton in costs, being more than offset by the great decline in the revenue from gold premium. Hence the working profit figures at no more than £126,000, as compared with £189,400; and after providing for capital expenditure and taxation only 8 $\frac{1}{2}$ per cent. could be paid, as against 12 $\frac{1}{2}$ per cent. in respect of 1923-24. Even now the credit balance has had to be drawn upon to some extent. The shares have lately been in demand for Johannesburg account, from which the inference may be drawn that developments have at any rate not shown any falling off since the close of the financial year. The report of the Nourse Mines, one of the older main reef propositions, does not make at all a good showing. An increased quantity of ore was milled at a smaller lower cost ratio than before, but the grade of the ore fell away somewhat, and the revenue from gold premium amounted to only £15,500, or about a quarter of the amount for the preceding year. Hence the total working profit figures at no more than £29,700, in place of £98,000, the average per ton being 1s, as against 3s 5d. Accordingly, the dividend had to be cut down from 8 $\frac{1}{2}$ per cent. to 2 $\frac{1}{2}$ per cent., leaving the slightly increased balance of £80,400 to go forward. The development footage totalled 27,700, in place of 21,400; nevertheless, the ore reserve tonnage of 1,001,200 tons shows a small decline, and enhances the necessity of conserving the reserves. Operations were to some extent hindered by shortage of native labour during the latter half of the period. Altogether, unless some drastic change has taken place in the meantime, it is difficult to understand the recent improvement in the price of the shares.

Transvaal Output in September.—The output of gold from the mines of the Transvaal amounted to 797,247 ounces of fine gold during the month of September, which compares with 808,218 ounces produced in August and 799,422 ounces in the month of September last year. The following table shows the monthly output for the past six years:—

	1919.	1920.	1921.	1922.	1923.	1924.	1925.
January..	676,069	670,503	651,593	639,728	764,469	796,768	823,692

The following table shows the number of natives employed at the end of the last few months by members of the Witwatersrand Native Labour Association and Contractors:—

	Feb., 1925.	Mar., 1925.	Apr., 1925.	May, 1925.	June, 1925.	July, 1925.	Aug., 1925.	Sept., 1925.
Gold mines	182,099	179,061	176,198	172,982	169,810	169,433	168,900	169,365
Coal mines	15,530	15,634	15,823	16,180	16,474	16,582	16,420	16,874
Diamond	3,187	2,969	3,071	3,72	2,989	3,166	3,068	3,224
Total	200,816	197,664	195,092	192,334	189,273	189,181	188,388	189,463

The number of natives employed in all sections of mining shows an improvement during this month.

International Statistical Institute.—The sixteenth session of the International Statistical Institute was held at Rome from September 27th to October 2nd. But for the war—when its operations were necessarily suspended—this would have been the twentieth session, as the Institute was founded in London in 1885, and, under its rules, meets biennially. This was the second meeting

of the Institute at Rome, the first having been held in 1887. The local arrangements were made by an Organising Committee, of which Professor Panteolone was chairman up to the time of his death. He was succeeded by Professor Benini. Up to a few days before the meeting, the secretaryship of the local committee was held by Signor Aschieri, Director-General of Italian Statistics, who was succeeded on his death by Signor Antonucci. The work of the session was divided between three sections, dealing respectively with (1) Demography and Method, (2) Commercial Statistics, and (3) Social Statistics. Reports were presented to the Second Section from the Joint Committee of the Economic Section of the League of Nations and the Institute on the Classification of Industries, Censuses of Production, Statistics of Production of Excisable or Dutiable Commodities, and Statistics of Stocks; and to the Third Section from the Joint Committee of the International Labour Office and the Institute on Statistics of Cost of Living, Industrial Accidents, Unemployment, and Wages. Those reports aroused animated discussions, not only in the sections, but again when submitted with amendments to the General Assembly. Arising out of the report on wages, a committee of the Institute was appointed to study the question of the relationship of wages to cost, quantity, and value of production. The question of statistics of stocks of commodities was referred back to the Joint Committee for further examination. The membership of the Institute, which is limited to 200, was much depleted by death during the war period, but elections held since then have resulted in raising the present number to 169, in addition to eight honorary members. About one-third of these have been elected since the war, and they include many of the younger generation of official and unofficial statisticians of all countries. In view of the large influx of new members, and of the establishment of various international organisations in recent years, it was decided to consider a revision of the rules for submission to the next session of the Institute, which will be held in 1927 in Egypt.

SIR JOHN FERGUSON, President of the Institute of Bankers, will deliver his presidential address in London on Wednesday, October 28, at the Skinners' Hall, Dowgate hill, near Cannon street Station, at 5.30 o'clock. He will also address the local centres at Newton Abbot and Plymouth on October 21st, and the Institute of Bankers in Ireland at Belfast on Tuesday, November 3rd.

Oversea Correspondence.

UNITED STATES.—FRENCH DEBT NEGOTIATIONS—EFFECT OF BRITISH BANK RATE CUT—COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 6.

THE rather sudden collapse in the French debt negotiations, which came just after hopefulness had turned to optimism, caused a wave of disappointment that has been followed by a feeling that the outcome, perhaps, was not so bad after all. Just what the cause of the collapse was is not entirely clear. Some went so far as to say, and with a certain air of what is, perhaps, misleading plausibility, that indiscreet publicity killed the settlement. According to this view, the French delegation gained the idea that a section of the American commission favoured the acceptance of M. Caillaux's offer; but premature publicity from French sources not only upset the American commission, but allowed the irreconcilables to rush to the President with strenuous protests before the American commissioners were able to reach the executive. However, it probably is nearer the truth to say that a difference in opinion over French capacity for payment, and hence in opinion over French capacity for payment, and fear, on both sides, of troubles with the legislative branches of the two Governments, were the real obstacles. One may assume that the readers of this letter are

familiar with M. Caillaux's first and second offers, and with the counter proposals of the American commission. The difference in the two theories of French payment capacity that were embodied in these different positions may be explained, perhaps, by, on the one hand, the French conception of their country as an old one with a stationary population, and, on the other, the American idea of natural French recovery and natural French growth. The contrast in these conceptions is not unnatural when the experiences and psychologies of the two peoples are taken into account. In any event, it led to a somewhat paradoxical situation in that the Americans were inclined to argue what they would have considered to be the French position—that is, small early payments and comparatively large ones later on, while the French were placed in the position of arguing what might have been regarded as what the Americans would want, that is, relatively large payments at once.

The final proposition, with France paying M. Caillaux's offered \$40,000,000 for five years, does not, of course, provide the final settlement that had been hoped for. It thus fails to provide that element of stability in international finance that had been considered as one of the chief benefits that would accrue from the negotiations. It makes more difficult the settlements with other debtors, and it leaves French credit still somewhat in the air. It also leaves the question of the French debt to plague the politicians and their publics afresh. These are fairly clear disadvantages. On the other hand, the final arrangement does have this considerable merit. Neither side really has a very clear idea of what France will be able to pay five or ten years from now. Such being the case, the temporary settlement, which constitutes a partial moratorium, will provide a period during which evidence on the point of capacity will accumulate. At the end of five years, so many of our bankers reason, we shall have a great deal better idea of what France can pay than at present. Some of our bankers and economists point out, in fact, that it would have been unfortunate for M. Caillaux to have signed up for amounts that France could not pay, perhaps amounts as large as he offered. The French Finance Minister's reply probably would be that his offers were contingent on the much-discussed safeguard clause.

The next steps in the matter are, of course, with the two legislatures. If the French legislature accepts the arrangement, it is assumed that the American prohibition on French loans will be removed. Meanwhile it is taken for granted that our bankers would, in any event, wish to watch the trend of developments before pushing ahead with any important loan negotiations. Before leaving the subject, it may not be amiss to emphasise one useful purpose that the negotiations have served. The French have acknowledged their debt in unequivocal terms, and have made a serious and sincere effort to fund it. That certainly is an important gain. So is the fact that the negotiations were conducted with frankness and good feeling. Nothing happened to shake the negotiators' confidence in each other; on the contrary, it is altogether probable that both sides had a much fairer appreciation of each other's position when the negotiations were over.

The surprise over the collapse at Washington was equalled by that occasioned by the reduction in your Bank rate. For some weeks our market had been giving a great deal of attention to the possibility of a rise in the Federal Reserve Bank's discount rate. The advance in open market rates and the speculation in securities that had been going on on this side of the water had made many of our observers feel that a higher Bank rate here was more or less inevitable. Preoccupation with this line of thought led our people to overlook what was going on in the London money market. The idea of a cut in your Bank rate never occurred to them. When the cables did bring the news from London there was a sharp revulsion in feeling with regard to our own Bank rate. Market followers quickly assumed that with sterling close to the gold point and with the exchange under pressure on account of autumn needs, our central banking authorities hardly would take a step that would add to the difficulty of your position. In addition, it was pointed out that a higher Bank rate here would simply serve to attract more gold and balances from your side, and so furnish the basis

for a further expansion of credit here. An advance of the discount rate would also, it was argued, provoke liquidation in securities and, perhaps, check the not too insistent industrial revival. In both cases the effect would be to restore cheap money, just as your higher Bank rate of the early spring attracted the funds that finally lowered rates in your open market. The conclusion of this line of argument was that an advance in the discount rate now would check the present speculation and prepare the way for a new one. As a matter of fact, the market now thinks much less of the possibility of an advance in the Federal Reserve rate.

Following the cut in your Bank rate, activity in the share market increased sensibly. In the ensuing week the turnover has been very heavy, sales passing the two million share a day mark. Prices have not, however, advanced sharply except in relatively few instances. The new buying that was released by the change in ideas on the money market has been met by rather heavy profit taking from more conservative holders. It remains to be seen whether a new set of buyers will succeed in adding to the profits of the old. That sort of thing has been going on for some time, many "insiders" having been bearish on their shares from much lower levels. Market loans undoubtedly are very high; but this situation finds an offset in the fact that the banks hold an unusually large volume of high-class collateral against these loans, and that brokers' customers seem to be maintaining unusually large margins.

Current indices of commodity prices give no clear line on the question of whether an inflation is likely to develop. At present the movement of prices is irregular, with agricultural commodities reacting and industrial commodities firming up slightly in sympathy with the recent recovery in industrial activity. During September, Dun's index fell half of 1 per cent., this decline following one of 1.2 per cent. during August. On the other hand, Bradstreet's index rose 0.4 of 1 per cent. during September after having fallen 1.1 per cent. in August. There have been sharp declines in the prices of breadstuffs. Textiles and metals rose slightly. As yet there is little tangible evidence of an inflationary tendency in commodities. Perhaps our securities market is absorbing the money that might have been expected to set commodity inflation in motion.

FRANCE.—M. CAILLAUX'S RETURN—THE DEFT QUESTION—THE ECONOMIC POSITION—POLITICS AND FINANCE.

(FROM OUR CORRESPONDENT.)

PARIS, October 14.

M. CAILLAUX has returned from Washington ostensibly unsuccessful, but it would not be going too far to say that his non-success has been received by French opinion with a deep sigh of relief. France has made an offer to pay her debts both to Great Britain and to the United States, and has thereby shown her goodwill. Her offer to Great Britain ended in a tentative agreement being come to, but it cannot be said that the outcome of the London negotiations was greeted with any enthusiasm. The nation, as a whole, is convinced that it is not in a position to liquidate its debts to its two great war allies, and its attitude to the Caillaux missions to London and to Washington was certainly nothing more than one of benevolent neutrality, coupled with a barely concealed apprehension that the Finance Minister might really come to an agreement that would involve the country henceforward in substantial additional annual burdens. The feeling experienced when the failure of the two Governments to come to an agreement in Washington became known was exactly expressed by one of the newspapers, which remarked that, as the acceptance of any of M. Caillaux's offers would have been disastrous for France, his failure can only be regarded as a distinct diplomatic victory. Satisfaction is therefore felt at the fact that, now a much better offer than would be likely to be ratified by the Chambers has been rejected, the settlement of the whole inter-Allied debt question may be regarded as having been postponed for at least a few months.

We may now expect to witness a vigorous campaign, with the object of demonstrating to the world the inability of France to carry out even the tentative offers made to London and Washington. This campaign, indeed, has already begun, and will undoubtedly grow increasingly insistent in the near future. Behind it, as was suggested here a fortnight ago, is the doctrine that the only practical solution of the inter-Allied debt question is mutual annulment; and it must be admitted (ignoring for the sake of argument, the fact that annulment, in the end, would mean direct cash sacrifice by the Americans, with only indirect benefit to the United States in the shape of the restoration of the world as a whole to economic health) that a very strong case is presented by the French thesis. At present, however, the annulment idea is not being given marked prominence. What is being emphasised is the actual situation of France, for the purpose of manifesting her impotence to satisfy her British and American creditors. In this connection a striking article is published this morning from the pen of M. Henry Bérenger, the president of the Senate Finance Commission, who was one of M. Caillaux's principal lieutenants at Washington.

M. Bérenger points out that the Budget for 1926 calls for the payment by the French people of 37,000,000,000 of taxation, which for a total population of 39,200,000 works out at an average of 940f per head. The average income per head being 3,830f in 1925, this is equivalent to saying that the average Frenchman pays 25 per cent. of his total income in taxation, compared with 23 per cent. by the Englishman, 19 per cent. by the Italian, 17 per cent. by the Belgian, and 11½ per cent. by the American, "while the German statistics are so well camouflaged that it is impossible to get at the facts in regard to that country." M. Bérenger quotes Mr Winston, the Under-Secretary of the United States Treasury, as having told him in Washington that he was convinced the limit of taxation had been reached in this country. (M. Caillaux insisted on the truth of this view in his statement to the Finance Commission of the Chamber yesterday.) Dealing with the charge brought by Senator Borah and his friends in the United States, that France is wasting her resources on militarism, M. Bérenger asserts that whereas in 1913 this country's expenditure on her army and navy was equivalent to \$87 per head of the population, it is now only \$68.

To the accusation that France is flourishing economically, and has enriched herself since the war, M. Bérenger states the total nominal value of the whole of the French Rentes, and the Credit National, State Railway, Treasury, and National Defence bonds is 173,000,000,000f, and had a real value at issue prices of 158,000,000,000f. Their present cash value on the Bourse is only 110,000,000,000f. Calculated in gold francs, the real value of these securities at the time of issue was 90,000,000,000f, while their present value is only 28,000,000,000f, equivalent to a loss by French investors of 62,000,000,000f. M. Bérenger asserts that if to the issues quoted above be added the floating debt, which is not included in the foregoing figures, the total lost by French investors in these descriptions alone since 1913 may be placed at 70,000,000,000f, or \$13,000,000,000. To this must, of course, be added an equally heavy loss on the capital value of all kinds of banking, shipping, mining, railway, and other industrial securities. The favourable balance on French foreign trade (which, by deducting the amount due to exchanges with the colonies, M. Bérenger brings down from 3,238 millions to 2,273 millions) he dismisses as precarious, while he insists that the revenue derived from "invisible exports," in the form of the large amount spent by foreign visitors to France, is counterbalanced by the exodus of capital represented by the sums sent out of the country by the 2,000,000 foreign workers who have replaced the 1,300,000 Frenchmen killed and the 700,000 disabled during the war. Certain of M. Bérenger's assertions are agreed that the widespread view that France has substantially improved her situation since the war is so completely an "absurd and dangerous legend" as he asserts it to be. The ill-considered boast of the American states-

man who recently proclaimed that the workmen in the Western Republic carry more gold in their teeth than that represented by the whole of the French savings, however, finds a good deal of indirect confirmation in some of M. Bérenger's statements.

Attention here is now focussed on two quite different problems, each of which has become of prime importance. The one concerns the situation of the Treasury and the other the repercussion that recent domestic and foreign events may have on the position of the Painlevé Government. So far as the life of the Ministry is concerned, much depends upon what happens at the forthcoming Congress of the Radical and Socialistic Radical Party at Nice. The importance of this fixture may be gauged by the fact that M. Painlevé, although not a member of the party himself, intends to speak in the Congress by reason of the fact that the group to which he belongs is one of the elements of the Cartel des Gauches, whose revival or definite dissolution will be the crucial subject of discussion. In many quarters it is believed that the fate of the present Ministry is already sealed, and that the Nice Congress will bring matters to a climax. It is a matter of common knowledge that M. Caillaux's Budget proposals have proved distasteful to a substantial proportion of the Chamber—to the Left because they do not go far enough in the direction of increased taxation of wealth, and to the Right because they err in the contrary sense—and his disappearance is anticipated. Should the new Conversion Loan, the lists for which will close next Tuesday, prove more successful than is at present expected, M. Caillaux's position will be to some extent strengthened, but even then a change of Ministry is regarded as inevitable, and for many reasons. Prognostications are widespread to-day that the present Cabinet will be replaced in the near future—either just before or just after the reassembly of the Chambers in two or three weeks' time—by a Government headed by M. Briand, or perhaps by M. René Renoult, with M. Briand as Foreign Minister.

The financial situation, now that the Locarno conference appears to have resulted in a satisfactory solution of the problem of war or peace, more than ever dominates the whole situation, and must do so for some time to come. Both the negative outcome of the Washington Conference and the threat issued by the White House yesterday not to consent to any future loans to countries which, like France, are not liquidating their foreign debts, have left opinion in this country quite cold. French opinion generally is distinctly averse to any proposal for further loans from America, through what is believed to be a more or less well-grounded belief that the American objective is to secure economic domination here. The problem of the moment is that of furnishing the Treasury with funds to meet the heavy calls that are imminent, without involving recourse to further inflation. Requirements to meet the maturity on July 1st of the second issue of 1922 Crédit National Bonds, amounting to 3,290,000,000f, were assured, it will be recalled, by increasing the authorised limits of the advances that can be made to the Treasury by the Bank of France and of the note issue. On September 25th 8,236,934,000f of 1922 Crédit National three or five-year bonds became due for repayment or renewal. M. Caillaux stated that 2,250,000,000f of these have been presented for repayment. The operation, by arrangement with the banks, has not yet been actually completed, but this is only a matter of a few days, and the necessary funds are known to be available. This, however, will leave the Treasury with an available margin of only 1,200 millions before the limit of the amount it is authorised to borrow from the Bank will be reached, as shown by last week's Bank statement. Sales of Treasury Bonds, M. Caillaux stated last night, continue satisfactory, and he was justified in pointing to the comparatively small percentage of bonds for which repayment has been asked as evidence that the revival of confidence which marked his return to office still continues. Taxation is coming in satisfactorily, and the new loan, whatever its ultimate result may prove, can only result in an appreciable relief to the Treasury.

The principal obstacle lies in the fact that on December 31st the first series of 1922 three, six, and nine-year Credit

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up	\$25,000,000
Surplus	\$25,000,000
Undivided Profits	\$15,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 and 3, Crosby Square
Bishopsgate, E.C. 3

National Bonds come to maturity, representing a total of 10,090,088,000f, by far the heaviest amount this year (the grand total for which is 21,617,022,000f). The proposal has been mooted that steps shall be taken to provide for this heavy call by authorising a further, but temporary, substantial increase in the note issue. The limit was raised last spring from 41 to 45 milliards, as a sequel to the Herriot Government's troubles, and further raised at the end of June to 51 milliards. According to the last statement there were 47,000,000,000f in circulation, so that there is still a margin of 4,000,000,000f. It has to be remembered that, in addition to the forthcoming Crédit National repayments, money will have to be found shortly to cover requirements connected with the Riff and Syrian operations, which were not provided for in the current year's Budget. On the other hand, important results may be expected from the closing subscriptions to the loan, which cannot but have a happy effect on the Treasury. In view of the whole situation, however, it is difficult to see how a further increase in the note issue can be avoided.

DENMARK.—PRICES AND EXCHANGE—BALANCE OF TRADE—MONETARY CONDITIONS.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, October 3.

THE economic situation in Denmark is still dominated by the problems arising out of the krone rate. However, generally speaking, developments have taken the right direction. First and foremost prices are continually declining in accordance with the rise of the krone. In August the index of the *Finanstidende* dropped from 189 to 168, and during September the figure has dropped still farther to 163. The index of the Statistical Department, which is to a greater extent based upon articles of consumption, and consequently is slower to be affected by the decline of prices, has at the same time declined from 212

to 197 in August, and subsequently to 186 in September. It is believed here that the wholesale price level ought to be 178 if the present value of the krone is maintained. The index of the *Finanstidende*, as per October 1st, showed a level even 15 per cent. below this figure, while that of the Statistical Department is 8 per cent. higher. It should be remembered that such computations are always subject to sources of error, and therefore cannot give absolute and completely certain results.

After the decline during September it may be assumed—states the *Berlingske Tidende*—that the retail price level has been reduced still further in the course of the month, and will progressively decline. The Danish retail price level is ascertained semi-annually only, in order to compute the official price-figure on which is based the wages and salaries of labourers and officials, but just now the quarterly collection of material for use in this connection is in progress.

In the balance of trade is likewise found an indication of the present economic conditions. In June the deficit of the balance was Kr.13,000,000, in July the figure was Kr.10,000,000, but in August the deficit was Kr.1,000,000 only, the imports amounting to Kr.163,000,000, against exports of Kr.162,000,000, which represents a considerably reduced turnover as compared with July. Clearly this movement is connected with the decline of prices, which tends both to limit the transactions of the merchants and also reduces value figures. The trade statistics, therefore, further indicate the present difficulties of industry, which are responsible for an unemployment figure of about 28,000 men, or 12,500 more than at the same time last year.

That a certain abundance in money supplies is apparent under these conditions is not surprising. Accordingly the Nationalbank reduced its rate of discount for the second time on September 8th, and the Bank rate is now 5½ per cent., against 6 per cent. since August 24th, before which date the rate was 7 per cent. The balance-sheets of the private banks at the end of August showed that loans had been reduced during the month by Kr.21,000,000, while deposits were increased by Kr.13,000,000. The reduction of the total loans is due to the items, "Cash-credits" and "Current accounts," and must no doubt be ascribed to reduced drawings by import merchants against cash-credits and documentary credits, owing to the strong rise of the krone during July and August. As far as the Nationalbank is concerned, the loan items have once more been somewhat reduced in the course of September, while the note circulation, which at the end of September last year was Kr.473,000,000, has now declined further from Kr.442,000,000 to Kr.430,000,000. During September the average note circulation was Kr.415,000,000, as against Kr.424,000,000 in August this year and Kr.455,000,000 in September, 1924.

During September the sterling quotation has fluctuated between Kr.19.30 and Kr.20.08 as highest and lowest figure, while the dollar rate has moved between the limits of Kr.3.99½ and Kr.4.15½. There appears to be a certain tendency for quotations to remain at the present level for the time being, corresponding to a gold value of the krone of about 90 per cent., but nothing definite can yet be said with regard to the policy of the Government and the Nationalbank, as these two parties are at present negotiating with regard to an amendment of the Exchange Act in force, including presumably the establishment of new minimum rates for the krone, the rates previously agreed upon being long ago passed by actual developments. The comparative stagnation of the exchange market lately is no doubt due to temporary inactivity of speculative investors abroad—and possibly even in some cases to profit-taking. In Denmark it is fully realised that it will be important to retain part of the floating capital placed in this country, and if possible to endeavour to lead it into the bond market. It is not considered unlikely that a result of this kind may be attained if in future the krone rate is raised in a steady manner towards the final goal, which all quarters now agree should be the old parity.

IRISH FREE STATE.—PUBLIC WORKS AND STRIKES —WAGE RATES—SHANNON ENTERPRISE

(BY OUR CORRESPONDENT.)

DUBLIN, October 15.

THERE are certain signs of a reviving activity which will relieve the depression from which the Free State has been suffering since internal peace was restored. But in common with its neighbours, the Free State has labour difficulties to cope with. Last week Dublin was faced with an imminent strike of all its municipal employees, involving a possible suspension of important services, including water supply, lighting, and cleansing. A year and a-half ago the Local Government Department summarily suspended the Dublin Corporation—under statutory powers—and appointed three Borough Commissioners to administer the business of the city in its stead. The experiment has given general satisfaction, except to some of the dispossessed and certain of the employees. The rates were reduced by 2s in the £1 last January, and a further reduction of the like amount is probable next January. Housing schemes have been successfully pushed forward, as well as other schemes of work in relief of unemployment. Much of the road surfacing has been remodelled, macadam and granite square sets giving way to asphalt. The latter work, done by contract, was performed by labourers at 50s per week where the Corporation had been paying unskilled labour 63s per week, with allowances, privileges, &c., which were estimated as an equivalent to 9s or 10s per week extra. The Commissioners, turning their attention to street cleaning, eschewing direct labour, entered into a contract with an expert from Paris, a M. Bondeville, at a price said to represent a saving to the ratepayers of £15,000 per annum. This renders redundant some 208 temporary labourers, who were, however, guaranteed other work for a year. Thereupon the regular municipal employees, who have pension rights forfeitable on any discontinuance of service, announced an immediate strike as from the ensuing week-end, unless the Commissioners agreed forthwith to cancel the contract. Fortunately, the Commissioners, with the Local Government Department behind them, refused to be intimidated and their firmness prevailed. Now Dublin will have its streets properly and methodically cleaned for the first time in a generation, and, saving money in the process, will enjoy improved amenities and a really valuable boon from the public health standpoint. Another strike or quasi-strike is embarrassing the opening work of Messrs Siemens-Schuckert on the great Shannon scheme. These contractors offer for unskilled work in rural areas rates substantially better than those willingly accepted by unskilled labourers employed by County Councils on road works, which in turn are better than the rates paid to farm labourers. There is a good deal of effervescence and turmoil, though practically no violence, in Limerick, where the claim appears to be that the urban wage rates should be paid by the contractors on all the work in the rural area. The contractors profess to be able to get as much labour as they need at the rates offered, and the Government is prepared to prevent interference with the labour so engaged. As the German contractors almost certainly protected themselves in respect of such matters in their contract, the issue arises whether the taxpayers' money is to be used to push wages up above normal levels and to positively uneconomic levels, subversive of all further enterprise.

Belgian contractors, under M. Lippens, are starting operations for the erection of a sugar-beet factory in Carsooner or later. Attempts to raise an anti-foreigner cry over these enterprises make little headway, as it is realised that if there is to be a substantial and prompt increase of industry, Ireland must necessarily get a good deal of the earlier stages. There is an increasing tendency in this view to send large deputations of farmers to Denmark to study modernised agricultural methods. Proposals are being mooted for limited tariffs on imports into Ireland of agricultural products, such as barley,

wheat, oats, meal, flour, and bacon, and to apply the produce in subsidising tillage. They are being received with hesitation, as it is seen that there might be difficulties in converting the produce of the tillage into money, and that cost of living would also be sensibly affected. If agriculture is to be helped, it would probably be well to subsidise the struggling railways to provide a much improved service for produce for export—particularly for livestock, which suffers huge losses through delays and rough handling at present. But the problem of the relations between the Government and the railways involves other matters which must soon come up for consideration or reconsideration.

CANADA.—CROP CONDITIONS AND ESTIMATES— THE CO-OPERATIVE POOLS—RAILWAY RATE PROBLEM—GENERAL BUSINESS CONDITIONS— TRADE FIGURES—FEDERAL GOVERNMENT FINANCE—NEW IMMIGRATION POLICY.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 21.

THE grain harvest is practically completed except in a few more northerly, and therefore backward, districts of the West, but threshing operations have been hampered by heavy rains and indifferent weather conditions. There are substantial differences between the various estimates of the Western wheat crop, but the threshing process is revealing it as substantially better than was expected. President Beatty, of the C.P.R., places the figure at 391 million bushels, but the Bureau of Statistics and the *Manitoba Free Press* are practically in agreement with 363 and 368 million respectively, although they attain it by different computations, the latter giving 21 million bushels more to Saskatchewan and 19 less to Alberta than the Bureau. The detailed figures of the Bureau's last survey, together with the comparative figures for 1924, are appended:—

ESTIMATED YIELD OF GRAIN.			
Field Crops.	1924.	1925.	
Canada.	Bush.	Bush.	
Fall wheat	22,294,000	23,697,000	
Spring wheat	239,803,000	368,122,000	
All wheat	262,097,000	391,819,000	
Oats	405,976,000	514,827,000	
Barley	88,807,080	111,709,000	
Fall rye	12,330,000	12,967,000	
Spring rye	1,420,900	2,560,000	
All rye	13,750,900	15,527,000	
Flax	9,694,700	9,453,000	

In some areas rust and drought have seriously lowered the grade, but most of the grain crop will be garnered in good condition, and a large proportion of it will be out of the farmers' hands before winter comes. Already the shipments to seaboard have been abnormally large, and the Canadian National officials state that whereas in the first half of September, 1924, they only shipped about two million bushels of wheat to the Lake ports, in the parallel period of this year they have shipped 15 million. As the result of the better crop reports all over the world prices have been falling on the Winnipeg Grain Exchange, but despite this, the prairie provinces ought to secure for their wheat crop at least half a billion dollars, and be able not merely to advance the process of debt liquidation, but to show much greater purchasing power than in recent years.

The co-operative wheat pools found themselves able to declare a final dividend to their members of 11 cents, and the total payment on the basis of No. 1 Northern at Fort William for wheat has been \$1.66. The farmers are evidently well satisfied with the result of the experiment, for there has been a large recruitment of fresh members for the pools, and their officials claim that they will this year control the export of half of the Western wheat crop. The *Manitoba Free Press* gives the wheat pool managers the credit for foiling a desperate effort to break the market on the part of a clique of rich American speculators, who had sold short 35 million bushels of December wheat. Their main strategy was to flood the country with propaganda to the effect that Russia would have an enormous

ASSOCIATED COMPANIES THROUGHOUT THE FAR EAST
AND IN NORTH AMERICA, AUSTRALIA AND NEW ZEALAND.

quantity of wheat available for export this year; the wheat pool officials, however, commanding as they did a large proportion of North America's exportable surplus, kept firm control of it, and the result has been an easy decline in prices, and not the swift slump which was planned.

There is great disappointment in Alberta and British Columbia at the result of the recent abolition of the special mountain railway rate. The Canadian Pacific Railway have appealed against the order, and meanwhile they have interpreted it in a manner which makes the reduction per bushel from Calgary to Vancouver only 1½ cents instead of the 5 cents anticipated. Simultaneously, the shipping companies, trading out of the Pacific ports of Canada, have raised their rates on grain to Europe just enough to absorb whatever gain might have accrued to the grain grower, and the latter finds himself in exactly the same position as before.

The atmosphere of a general election in Canada is rarely conducive to brisk business, but the absence of any clear-cut issues is responsible for a marked popular indifference about the contest, and accordingly there are hopes that the decided revival of trade, which has been visible during the last two months, will not be halted. Eastern Canada has rarely known a better average crop, and as both the mines and forestry industries are very busy, there should be during the autumn months a steady demand for commodities of all kinds. Country storekeepers are buying much more freely than a year ago, and retail trade is picking up in the cities as the result of the return of people from holiday resorts. The number of American tourists who spend holidays in Canada has exceeded all previous records, and it is estimated that they have spent at least 75 million dollars in Ontario alone, while Quebec must have benefited to an equal extent.

The foreign trade figures for August, which are given below, are very encouraging, and bring the total for the first five months of the present year up to a very creditable figure:—

	August, 1924.	August, 1925.
Imports	61,969,577	81,947,474
Exports	73,821,631	111,409,525
	Five Months Ending August 31, 1924.	Five Months Ending August 31, 1925.
Imports	333,223,163	374,057,565
Exports	401,131,225	462,817,429

In August there was a remarkable gain in the exports of agricultural and vegetable products, which jumped from roughly 20 to 38 million dollars in value.

The Federal Government's financing operations for 1925 have now been successfully completed. The domestic issue of \$75,000,000 of 4½ per cent. bonds maturing 1940 was exceedingly well received, although it transpires that American investors took a substantial amount of the issue. But the demand in Canada was also good, and it was found necessary to scale down the subscriptions of corporations in order that there might be sufficient bonds for allocation to private investors. The fact that out of \$90,000,000 worth of bonds which matured in New York on September 15th only \$70,000,000 worth were renewed, and these only for a year, indicates that the policy of the King Government is to obtain short-term money in the United States, and gradually concentrate its debt under long-term bonds held at home. The result of recent financial operations is that an indebtedness of 25 million dollars formerly held by British investors, which was paid off in cash, has been transformed into a debt held at home, and that some 20 million dollars owed in the United States has been paid off out of savings.

Announcement has just been made of a new immigration policy, under which the Dominion Government and the Canadian Pacific and Canadian National Railways will pool their activities in a common campaign for the attraction of immigrants to Canada. The immigration figures for the present year are so unsatisfactory that the Government have been withholding them, and without a large

annual influx of population Canada's chances of solving her railway problem are poor. However, complaint is made about the terms of the new policy that it indicates an intention to draw heavily upon the sources of population in Continental Europe, and a fear is expressed that the doors may be opened for a dangerously large flood of the same sort of non-British elements as the United States has failed to assimilate after 50 years. On the other hand, it is contended that if the agricultural lands of the West are ever to be thickly settled, recourse must be had to the peasantry of Europe, because Britain has few agricultural workers to spare, and her industrialists are not easily transformed into efficient cultivators of the soil.

UNION OF SOUTH AFRICA.—HEAVY MAIZE MOVEMENT—PASSENGER SERVICES CURTAILED—ECONOMIC COMMISSION—MINING INDUSTRY'S CAPITAL.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, September 2.

THE Railway Administration has suddenly become perturbed by the deficiency of rolling stock, both wagon and locomotives, revealed by the freight demands owing to the simultaneous movement of the citrus and maize crops. To provide haulage power for the latter traffic, two trains between Cape Town and Pretoria and three between Durban and Johannesburg weekly have been cancelled until further notice, while curtailment already announced of mid-day suburban services in the Durban district will probably be followed by similar "cuts" in other suburban districts. The Durban Elevator is not yet ready to receive maize, consequent upon the serious delays accompanied by heavy excess cost, in building the foundations in an area reclaimed from the sea, but that at Cape Town is said to be working double shift. The bringing into complete operation of the electrification of the Natal section of the S.A. Railways between Glencoe and Maritzburg only slowly, and much behind the programme, has precluded the anticipated release of locomotives for freight work on other sections of the system. Lt.-Col. Carr, one of the assistant general managers, who is about to retire, is staying on to co-ordinate rolling-stock matters, and to devote himself to the movement of the citrus and maize crops. A special service of maize trains has been inaugurated between De Aar, half-way between the maize-growing districts of the Free State and Cape Town, on which port the outpourings of 25 inland elevators are being concentrated. Bagged maize is being diverted to East London and Port Elizabeth. The "caboose" system of drivers and firemen is being introduced, as has been in vogue for many years between Vryburg and Bulawayo, mostly Rhodesian railways, but worked by the S.A.R., administering to save delays at depots. Extra hands are being employed to expedite matters. A generally accepted estimate places the season's maize yield at 20,000,000 bags, about 2,000,000 tons, but more cautious men in the grain business place the figure somewhat lower.

As part of the scheme to deal with movement of traffic, the railways have ordered ten locomotives of the Mountain type and five of the Pacific type from the Baldwin Locomotive Company, of Philadelphia. Delivery was specified for 90 days, which is presumably much less than British builders would have guaranteed. It is said, indeed, that the President has given his personal assurance that shipment will commence within two months, and be completed in two and a-half.

The Economic and Wages Commission, of which Mr. Stephen Mills is chairman, and Professor Clay, of Manchester, one of the prominent members, has commenced its sittings. It is fortunate that these are being held with open doors, as evidence given by authoritative bodies has much public educational value. The Transvaal Chamber of Mines has been giving evidence, through its general manager, Mr. W. Gemmill, F.S.A., and Mr. P. M. Anderson, president. The evidence is very lengthy, and an interesting argument put forward was that even the workmen had expressed their dislike of compulsory arbitration; and in the opinion of the latter witness the proposed Wages Board would be, in effect, compulsory

arbitration, with the additional disadvantage of a political rather than an impartial composition of its members.

An elaborate annexure to the usual monthly statistics of the Department of Mines and Industries for the month of July deals with capital statistics as at December 31, 1924. The total net issued capital in respect of gold, diamonds, coal, and miscellaneous mines of the Union is £73,258,823, of which the gold mines account for £51,603,094, the Rand's share being £46,673,097. Of the latter, however, only £31,083,711 applies to dividend-paying mines, there being £8,722,497 embarked on mines, which, though producing, are not profitable—at least, to the extent of being dividend-paying; the figure for non-working gold mines is almost as great—namely, £6,379,895—while developing mines represent just under half-a-million. Rand properties, equipment, shafts development and other assets account for £28,130,408, and cash for £18,542,689. The actual amount of cash paid in respect of issued capital of the Rand gold mines was the surprisingly small figure of £18,542,689, explained by the fact that much of the capital was actually issued at a substantial premium, both in the earliest and middle periods of the Rand's history. In the cases of the companies working solely leased areas—e.g., Government Areas, New State Areas, and West Springs—the issue was at par, 20s, with a commission to the guarantors of 10 per cent. On the other hand, companies which increased their areas by leasing ground issued shares in respect of the additional working capital, issued their shares at a premium, of £4 in the case of Brakpan Mines, and of £2 in that of Springs Mines. The total premiums received throughout the Rand's history were £18,839,711, of which £17,629,308 were in respect of producing mines of the Rand. Mines of the Witwatersrand have written off £11,942,034 from these premiums.

Debentures issued in respect of Rand gold mines have totalled £9,900,415, but the amount now subject to redemption has been reduced to £4,021,240. Inclusive of £1,840,390 in respect of temporary advances, the total amount of cash invested in the gold-mining industry of the Rand would appear to be £31,302,000. The net value of gold-mining property is set down at £27,990,827, of shafts and mine development £20,611,357 (net), and of equipment at £30,562,591, these figures including mines in the outside districts.

Transvaal coal mines have an issued capital of £4,687,368, diamond mines of £200,960, and miscellaneous mines of £2,204,018. All but a million of the issued capital of mining concerns in the Cape Province is in respect of diamond mines. The Free State total is £3,419,172, and for mines of Natal £4,218,806. Taking the totals for the whole Union, outstanding debentures are given at £6,929,406, with a similarly described amount of premiums on shares of £7,602,255. Temporary advances figure at £4,214,054. Net present book value of property is just over 40 millions sterling, of shafts and development nearly 22 millions, and of equipment 36½ millions. Of the 10½ millions of investments, those of the Kimberley diamond mines account for over six. The aggregate of the balance sheet is 142 millions, and there is a deficiency of assets amounting to 3½ millions. Dividends declared were 12½ millions.

Letters to the Editor.

MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Most people, I venture to state, approved of the Government's decision to restore the gold standard in this country, but a considerable difference of opinion prevails as to the manner and to the various steps taken by the Government to give effect to their policy. At the time when the Gold Standard Bill was before the House of Commons the executive committee of this association, of which I have the honour to be chairman, condemned some of the provisions contained in that Bill, now an Act of Parliament, as likely to defeat the object of the restoration and to retard the revival of trade and commerce in this country. The Act provides power for the Treasury to borrow for exchange operations. According to an Exchange telegram, this is now being done, and "the weekly report of the (New York Federal) Bank

indicates that England drew \$639,000 for this purpose." The effect of this pegging the exchange is to withdraw a legitimate advantage, which would accrue to our coal, steel and iron, and other export traders through a fall in the exchange. No one wishes to see the exchanges permanently depreciated, but to support them artificially is bad and unsound finance. If gold is withdrawn as a result of an unfavourable exchange, we have a reserve of over £150,000,000, and can afford to part with some of it. The stimulus given to our export trades will do good, and will help to correct the exchange, and should credit become dearer as a result of a considerable efflux of the precious metal, that in itself may prove beneficial eventually by bringing about lower values and a reduction in the cost of living. We suffer and continue to suffer from these interferences with the freedom of exchange, witness the embargo on the issue of foreign loans, and it is due to these artificial movements and restrictions rather than to the restoration of the gold standard that the long-hoped-for revival of our foreign trade is being delayed.—I am, Sir, your obedient servant,

D. M. MASON,

Chairman Executive Committee, Sound Currency Association. October 13, 1925.

Books and Publications.

FRANCE IN 1924.

IF we had held a competition among our readers and asked them to place in order the countries which had received the largest influx of migrants in the last few years, we do not suppose that one in a hundred would have put France at the top of the list. Yet such is the case. It is true that M. Bourdon, who writes in "La France Economique" for 1924 on the subject of population, modestly puts France second on the ground that the numbers that slip across the Mexican and Canadian borders and escape registration are enormous. But on the official returns France comes first with a net influx in three years of three-quarters of a million persons. This is but one of many striking facts brought out in a symposium which is now published for the third year in succession by leading French authorities on various aspects of the economic life of France. The 28 chapters cover the topics of population, wages and prices, finance, commerce, production, transport, labour, co-operation. This survey, organised by the Revue d'Economie Politique, is peculiarly worthy of study at a time when there is special need to understand the situation across the Channel. The 15 pages by Professor Rist on Reparations cover the epoch-making Dawes Plan, and the important negotiations that followed in the summer of 1924. To cover so large a field in so short a space is a masterpiece of compression which leaves the author practically no space for comment. But he briefly concludes his discussion on the London Conference with a reference to those who complain that the French Government lost an opportunity on the one hand of driving a bargain with the Germans for future commercial concessions, and, on the other, of linking the question of security and inter-Ally debts with a reparations settlement. But if the London Agreement was not a triumph from the French standpoint the fault lay with those who embarked her upon a policy which they should have seen could not be sustained in the long run. It fell to M. Herriot to terminate an epoch and start France along new lines. But the new agreements "can never save France from the consequences of holding up during four long years the solution of a problem which required for its successful handling two qualities not often found in statesmen, namely, promptitude and moderation."

COLLECTIVIST ECONOMICS.*

MR HALDANE SMITH has evolved a provocative and original programme for the complete reorganisation of our economic structure on collectivist lines. It is original, because, unlike many contemporary architects of the socialist commonwealth, its author shares with the *Morning Post* a hearty hatred of Communism in the sense of distribution "unto each according as he has

* "Collectivist Economics." By J. H. Smith. Routledge, pp. xiv + 216. 8s 6d.

need." Effective output of exchangeable wealth is to him the determining factor in the division of the product of nationalised and democratically operated industry. And his elaborately devised mechanism of taxation, currency control, international exchange, and wage-determination is cunningly adjusted to the stimulation of an economic incentive whose effectiveness has been regarded as unimpeachable since the days of Adam Smith. Thus (metaphorically speaking, since our author has no place in his scheme for bloodshed or violent upheaval), the freely-educated school-fed child marches to the scaffold side by side with the royalty owner, the rent receiver, and the profit-maker. In this manner does he spike, at the outset, the hardest-worked gun in the anti-socialist battery—distrust of the continuous operation of any economic incentive other than that of enlightened self-interest. Nor does he, like many of his fellow collectivists, understress the complications connected with the socialisation of a highly industrialised State existing in commercial rivalry with capitalistic neighbours. Upon these matters he does, indeed, bestow much ingenious consideration. One anti-socialist gun he does not, however, in our opinion, so effectively spike. He presumes very greatly upon the vigorous moral response which human nature will make to the new arrangements; he counts the eliminated wastage of capitalism as so much net gain, optimistically assuming that no alternative sources of wastage will evolve in the new organism; in fine, he assumes the probability of a very great expansion in the volume of the national income. And, indeed, without such an expansion, what is to become of the rising generation, seeing that he foreshadows no source of academic or physical sustenance for the family other than the just price of the individual wage-earner's labour power?

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, October 21. | ACCOUNT, October 22.

STOCK EXCHANGE markets have fallen into a quieter trend. Instead of there being a wild rush on the part of everybody to buy rubber shares, Dunlops, Courtaulds, and some of the other popular industrials, there has come a more chastened feeling. Some of the bulls are shortening their commitments and taking profits, as they are able to do in most cases. The industrial section of the Stock Exchange continues to attract the principal amount of interest throughout the House, and the investor, as shown by the recent issues made by Bradford, Birkenhead and Walsall, requires to be tempted for him to subscribe with alacrity to gilt-edged stocks. The Brisbane Trams issue, guaranteed by the Queensland Government, proved a substantial success, but the opening price of $\frac{1}{4}$ discount showed the trail of the stag, and it was not until the profit-snatchers got out that the quotation rose to a small premium. The new Victoria and South Australia issues act as conversion loans.

War Fives and other British Government stocks are somewhat heavy, owing to the slightly firmer conditions that have ruled in regard to money. Noticeable point has not been borne by the advice, tendered by many Stock Exchange brokers, that clients who had made substantial profits from the purchase of rubber and other industrial shares should purchase first-class investments with the money realised. A few Colonials are better, and there is a firmer tendency about the market for home railway prior-charge stocks.

French Government bonds have given way in consequence of the disappointing movements of the exchange. Brazilians have halted in their upward march. Portuguese bonds show strength, and in the mid-European issues a few small reactions have occurred. Mexicans are weak, because of the uncertainty which still continues to surround the financial position of the country, notwithstanding the British Government recognition of Mexico.

The home railway market moves within narrow limits. Undergrounds are moderately firm. The Heavy stocks have once more fallen into neglect. Cordoba Centrals are the principal object of interest in the foreign railway list, and have

further improved. Madeira Mamoré bonds, a very outside stock, gained several points. Nitrates are a little dull.

The boom in rubber received an abrupt check, on the idea that there may be an early release of a further 20 per cent. of raw rubber. Pourparlers have been taking place between the Colonial Office and the authorities in the rubber-producing countries, and these negotiations led to a shiver of apprehension lest such a step, if taken, might lead to a fall in the price of the commodity, and, therefore, of share values. A good deal of realisation has been in progress, and the effervescence is out of the market. Tea shares reflected the better prices now being obtained for the companies' outputs, and the oil market came into a little favour, on professional buying based upon the presumption that the public may take a hand in oil shares if rubber should lose its attraction. Iron, coal and steel shares have been prominently strong, because of the expectation that the Safeguarding of Industries Act will be applied more closely than it is at present to the heavy industries of the country. There is a better tendency amongst insurance shares, Consolidated Assurance being the only exception to general strength in this list. The banking market is quiet. Courtaulds have been a very volatile and excited market throughout the week. The price touched $\frac{7}{8}$, on heavy American purchases, to revert below 7 on fairly heavy profit-taking by British speculators. Several of the other artificial silk shares are better, and textiles as a whole enjoy favour, on the hope that there will be melon-cutting proposals from two or three of the leading companies. Dunlops were rushed up to 27s 6d, on excited and rather ragged buying. A sharp reaction followed a warning from Sir Eric Geddes against undue optimism in respect of estimates of the company's profits.

The brewery market is good as a whole, and tobacco shares, after a brisk rise, lost part of their resiliency. Cable stocks are better, the Eastern group more especially showing improvements, while wireless attracted a little notice this week. The volume of business in industrial shares is still on a liberal scale, and next week's Stock Exchange settlement is bound to be a heavy one.

Platinum shares underwent a violent reaction from the best. Some of the shares in which gambling has been most pronounced at the Cape, and in a lesser degree over here, became difficult to negotiate. Prices of the Kaffir-producing shares are steady. Rhodesians have been quiet. The main interest in mining shares focussed upon the tin share markets, where the Malayan group stood out with especial buoyancy. West Africans also are beginning to wake up, and a trifling amount of attention is being paid to Cornish tin. Mexican mining shares, after a little spurt, relapsed into quietude. Rio Tintos had a brisk rise on Paris support, and although the fall in the franc served to bring down Tintos in company with French Government bonds, the corporation shares contrived to give their holders cause for satisfaction with the week's work.

Government of Victoria.—This is an offer of conversion to holders of £4,904,721 of 3 1/2 per cent. stock, maturing in January next into 5 per cent. inscribed stock, 1945-75, at £98 3/4 per cent. Those who convert will receive a cash payment of £1 10s per cent. on January 1, 1926, being the difference between the nominal amount of the stock maturing and the issue price of the 5 per cent. stock. A full six months' interest will be due on January 1st. In addition, cash subscriptions are invited for an amount of the stock sufficient to make up with the stock converted the total of £4,904,721. The price of issue in this case also is £98 3/4 per cent. It is pointed out in the prospectus that "the revenues of the State of Victoria alone are liable in respect of this stock and the dividends thereon and the Consolidated Fund of the United Kingdom and the Commissioners of the Treasury are not directly or indirectly liable or responsible for the payment of the stock or of the dividends thereon, or for any matter relating thereto. Principal is repayable in London at par on July 1, 1975, the Government of Victoria having the option to redeem the stock, in whole or in part, at par, on or after July 1, 1945, on giving three calendar months' notice."

Government of Southern Australia.—This is an offer of 5 per cent. Conversion Loan, 1945-75, at £98 3/4 per cent., to holders of £839,000 of 3 per cent. stock, maturing in January next. It is stated that principal is repayable at par on July 1, 1975, the right of redemption being reserved at par at any time on or after July 1, 1945, on three months' notice. This is a trustee security. A cash payment of £1 10s per cent. will be made to those who convert, being the difference between the par value of the maturing stock and the issue price of the new stock. Cash subscriptions are also invited for the issue to an amount sufficient to make up, with the stock converted, a total of £839,000. The prospectus states that under the Sinking Fund Act, 1924, of the State of South Australia, it is provided that the Treasurer shall pay to the Commission for the Public Debt Sinking Fund: (1) In each financial year, commencing with the financial year 1924-25, the sum of £183,000, being at the rate of 5s per cent. of the Debt, which is deemed to be, as on June 30, 1925, £73,200,000. (2) In each financial year, commencing with the financial year 1925-26, a sum equal to 10s per cent. of such portion of the Debt as is in excess of the said sum of £73,200,000. The revenues of the State of South Australia alone are liable in respect of this stock and the dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of the Treasury are not directly or indirectly liable or responsible for the payment of the stock or of the dividends thereon, or for any matter relating thereto.

City of Pretoria.—Issue of £350,000 of 5 per cent. inscribed stock, 1957, at £99 per cent. A cumulative sinking fund, it is stated, will be provided sufficient to redeem the stock at maturity, and will be applied to the purchase of the stock when obtainable at or under par. Any stock not so purchased will be repayable on January 1, 1957. The assets of the council amount to £4,017,901, and, it is said, exceed the liabilities by £1,400,000. The valuation of rateable property is £9,509,814, and other property exempt from rates is valued at £4,942,814, making a total of £14,451,920. The stock will rank *pari passu* with all existing loans, and is secured on the rates, revenues, rents and assets of the Council.

British Celanese, Limited.—Share capital £6,000,000, of which £5,400,000 has been issued. There is outstanding £700,000 of 7 per cent. first mortgage debenture stock and £286,000 6 1/2 per cent. income bonds. In order to comply with Stock Exchange regulations, particulars are advertised of an issue of £300,000 7 per cent. first mortgage debenture stock at £93 1/4 per cent. The stock is redeemable at £110 by means of a cumulative sinking fund commencing in October, 1927. The company has covenanted in each year after 1927 to pay to the trustees for the debenture-holders as a sinking fund for the redemption of stock the sum of £46,000 and a further sum equal to the interest which would have been payable during the then current year on all stock redeemed out of the sinking fund previous to the commencement of such year if such stock had remained outstanding. This sum will be utilised in each year, commencing in October, 1927, in redemption of stock. It is stated that any stock not previously redeemed by drawings will be repaid on December 31, 1942, at a premium of 10 per cent.

Vauxhall Motors, Limited.—Authorised and issued share capital £300,000, in shares of 10s each. In addition there is outstanding £350,000 of 7 per cent. mortgage debenture stock, of which, it is stated, £104,010 has been reserved and will be applied in exchange for £104,010 of 10 per cent. short-term notes. This is an issue of £155,990 of 7 per cent. mortgage debenture stock at £95 per cent., repayable at £103 per cent. by means of a cumulative sinking fund, commencing

in 1927, to be applied at any time in purchasing the stock at or under £103 per cent., plus accrued interest, or in drawings commencing in November, 1928, and ending in 1952. The proceeds of the issue will, it is said, be applied towards repayment of loans from the company's bankers. It is certified that, according to the balance-sheet as at December 31st last, the assets upon which the debenture stock is secured total £829,757, nothing being included for goodwill. Profits are given for the past eleven years, before allowing for taxation and interest on the notes and bank loans. In 1914, on an issued capital of £200,000, they were £21,173. In 1921 there was a loss, on a capital of £600,000, of £189,725, but a recovery ensued, and the figure last year was £77,652, on an issued capital of £300,000. Total liabilities other than bank loans and the notes about to be funded are £87,578.

Pinner Gas Company, Limited.—Authorised share capital £162,800, of which, including £17,840 of premiums, £92,800 has been issued. Of the authorised loan capital of £81,400, £32,850 has been borrowed. This is an issue by tender of £25,000 of 6 per cent. irredeemable preference shares of £5 each the minimum price being par. The net revenue of the company, which was established in 1881, for 1924-25 was £9,322, so that after loan interests requiring £1,989 had been satisfied, there remained a balance of £7,333. The preference dividend, including the present issue, requires £3,107. After the payment of ordinary dividends of £14 5s per cent. and £9 19s 6d per cent. on the "A" and "B" issues respectively, there remained a surplus of £2,829 to be carried forward. If tendered for at par, the shares yield, of course, 6 per cent.; if at £5 10s the return is £5 9s 1d, and if at £6 £5 per cent.

International Tea Company's Stores, Limited.—Authorised and issued capital £1,950,000. This is an issue of £250,000 of 7 per cent. cumulative "A" preference shares of £1 each at 22s 6d per share. The company was formed in 1895 to acquire and develop the business of tea importers and general produce distributors formerly carried on by Kearley and Tonge. It is stated that since the formation of the company business has steadily increased, and trading profits have risen from £62,607 for 1895-96 to £439,121 for 1924-25. Assets are certified to amount to £2,359,989, including freehold property of £848,845, which is taken at cost, nothing being allowed for goodwill. Liabilities are put at £702,490, making an excess of assets of £1,657,499. Both gross and net profits are given for the past five years. It is shown that the latter, before charging income-tax, have advanced from £186,323 in 1920-21 to £349,721 in 1924-25. It is also stated that during the three years ended April 25, 1925, additions have been made to the reserve account out of current profits totalling £300,000. The issue has been underwritten for a commission of 6d per share and an overriding commission of 1 1/2d per share.

Harbens (Viscose Silk Manufacturers), Limited.—Authorised share capital £371,300, in shares of £1 each, of which 250,000 are 8 per cent. first cumulative participating preference, 10,000 are second cumulative preference, and 111,300 are ordinary shares. The whole of the share capital has been issued, together with £60,000 of debentures, of which details are not given. Particulars of the undertaking are advertised in compliance with Stock Exchange regulations. It was incorporated in 1920 as a private concern under the title of Harbens, Limited, but in August last was converted into a public company. The original issued capital was £221,300. No particulars of past results are included in the advertisement.

Kaleri Tin Mines, Limited.—Authorised capital £50,000 in shares of 2s each, of which 44,007 have been issued. The company has acquired "the benefit of certain applications for exclusive prospecting licences and mining leases in respect of tin areas approximating to 15 square miles and 74 acres respectively." The purchase price of £40,000 was payable in cash. These particulars are advertised in accordance with Stock Exchange regulations.

Kulim Rubber Estates, Limited.—Capital £250,000, in shares of £1 each, all of which are now offered for subscription at par. The company has been formed to acquire rubber estates in Kedah, Malay Peninsula, having a total area of 3,016 acres, of which 2,563 acres are planted with rubber. It is not stated what acreage is in bearing. The purchase price of £153,306 is payable in cash, and is equal to £59 16s 3d per planted acre. In addition, the vendors have been allotted the option until June 30, 1928, of subscribing at par for 50,000 £1 shares.

Jabi Rubber Plantations, Limited.—Share capital £65,000 in shares of 2s each, all of which have been issued, 1s per share having been paid up and the balance being payable on 20th inst. The company has been incorporated to acquire rubber properties in Kedah, Malaya, having a total area of 1,280 acres, practically all of which is planted with rubber. The purchase price is £53,550, "or such less sum as shall be equivalent to £42 10s per acre of the total area transferred." The foregoing particulars are advertised in compliance with Stock Exchange regulations.

Glen Muar Rubber Estates, Limited.—Capital £120,000 in shares of 2s each. This is an issue at par of 1,192,493 shares, the balance having already been subscribed for at par. The company has been formed to acquire and develop a rubber estate in Johore of 1,530 acres, of which 1,443 acres are planted. The purchase price is £60 per planted acre, equal to a total of £86,580. The issue has been underwritten for a commission of 4 per cent.

Tonghurst Rubber Estates, Limited.—Authorised capital £55,000, in shares of 2s each, all of which have been issued. The company has been incorporated to acquire a rubber estate in Kedah, Malaya. The total area is about 803 acres, of which 709 are planted. The purchase price is £52 10s per acre, equivalent to about £42,577, or approximately £60 per planted acre, and is payable in cash. Particulars are advertised in compliance with Stock Exchange regulations.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED. YEAR'S RESULTS—SOME GRATIFYING FEATURES.

The ordinary general meeting of the Buenos Ayres and Pacific Railway Company, Limited, was held, on the 13th instant, at Winchester House, London, Viscount St Davids (the chairman) presiding.

The secretary (Mr C. E. Rich) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said that he was out in Argentina the other day on the occasion of the visit of the Prince of Wales. They had expected very great things of the Prince, and he did as brilliantly as he always did. The great British colony in Argentina was intensely proud of him.

The year under review compared with a record year, and in the past year the cereal crop was less favourable, weather conditions were not good, locusts did a great deal of damage, and altogether the crop came out much below a normal one, and because the grain crop was not as good as usual, the wine sales were also affected. When there was a poor grain crop the farmers were not so well off, and could not buy so much wine. Also there were not so many harvesters employed. With regard to what their revenue came from, to begin with they got 25½ per cent. from wine and empty casks, passengers gave 17½ per cent., cereals and empty boxes 12½ per cent., general merchandise 9½ per cent., livestock 7 per cent., parcels and excess luggage 6½ per cent., foodstuffs 4 per cent., fresh fruits 2½ per cent., firewood 1½ per cent., timber 1½ per cent., hay 1½ per cent., potatoes 1½ per cent., flour and mill by-products 1½ per cent., charcoal 1 per cent., hides and hair 1 per cent., machinery ½ per cent., and lime ½ per cent.; that made up 95½ per cent., and the rest was in small miscellaneous items. They were coming very near to that desirable day when they would not be a crop line only, and that was what they wanted to get to. Their passenger traffic was increasing on the local section because Buenos Ayres was growing out their way rapidly. There was also an increase in international passengers. Last year they carried through to Chile 14,000 people, against 12,500 in the year before.

A gratifying feature was that immigration was going on, though not very rapidly. Another gratifying feature was that in the Cuyo province the irrigated zone was extending. During the 12 months since he was there before the amount of building that had been going on was very striking. There had been a great increase in the export and also of stone, while a new product was the carriage of 1,000 tons of lead, from a lead mine which had been found about 45 miles from San Rafael. Oil shale had also been discovered about three miles from Mendoza.

With regard to the future there was a slightly increased area under cultivation, crop prospects were satisfactory, though rain would soon be needed, and the immediate prospects were good. If there was anything like an average crop they should have as good a result as in the present year. They had a very great property, and one that was capable of immense development.

Mr Percy Cross seconded the motion, and, after some congratulatory remarks by Sir William Fry, Mr Reginald Woodward, and Mr John Hedges, it was carried unanimously.

CENTRAL ARGENTINE RAILWAY, LIMITED.

INSURANCE AND IMMEASURABLE POTENTIALITIES.

The ordinary general meeting of the Central Argentine Railway, Limited, was held, on the 15th instant, at River Plate House, London.

The Chairman (Sir Joseph White Todd, Bart.) said that in the year under review exchange had cost the company £322,255, against £817,575 in the preceding year—an improvement of no less than £495,320. Last year they had an unexpended balance on capital account of £417,600, while this year they had overspent that account by £241,700. There was no present intention of making any issue, but they were bound to go ahead with the railway. They had many works in hand which could not be longer postponed, except to the serious detriment of the concern as

a whole. On the occasion of his visit to the Argentine in February last he was most kindly received once again by H.E. the President of the Republic, Dr Marcelo Alvear. The conversations which he had with the President had been mutually helpful, and he was persuaded that Dr Alvear was impressed with the continued efforts of the company to aid the development of his country. In whatever direction they looked, the future of the country and the potentialities of this railway were as immense as they were immeasurable.

THE FUTURE.

The growth of railway communications would foster immigration, and the colonist would continue to migrate to those hospitable shores, because he had there none of the drawbacks to contend with which detracted from some of the other cereal-producing and cattle-rearing countries. If they, as a railway company, but continued doing their part steadfastly they must reap the reward of their labours and of their faith. One year might prove less remunerative than another, but, as a whole and on the average, their future was certain and secure. The Chairman concluded by reading the following telegram:—"Area sown with cereals slightly greater than last year, and due to favourable weather conditions the outlook as regards the growing crops is satisfactory in all zones served by the company. Yield from sugar harvest highest ever obtained. Cereals on hand at farms and stations estimated at 1,000,000 tons, chiefly maize, against 800,000 tons last year. Movement of cereals since commencement of present financial year has been slow, due to reduced demand for export, with consequent temporary check to earnings of the company, but with the prospect of bountiful harvests and large tonnage of grain still to be raised augmented receipts are to be anticipated."

The report was unanimously adopted.

STOCK CONVERSION AND INVESTMENT TRUST, LIMITED.

"A PERFECTLY SOUND AND HEALTHY POSITION."

L.M. AND S. INTERESTS.

THE L.M. AND S. TRUST.

Well, gentlemen, I thank those gentlemen for their unanimous support. It was only because I had got such unanimous support that I could ever have attempted to get the Act which was finally passed. That Act has been carried out. It has constituted the London Midland and Scottish Stock Conversion Trust—a trust in which we are greatly interested, and, I hope, will for long continue to be greatly interested. It has given the shareholders of the London Midland and Scottish Railway an organisation whereby such of them, including trustees, as may desire to join that trust, if we can agree upon terms, will be enabled to come into it. We do not think it would be proper to allow any very large inrush of holders of London Midland and Scottish ordinary stock into our new trust if it was to have the effect of damaging the value and the price of the preference stock and preferred stock which have been issued to our former holders. So far as that is concerned it will not have support from us. We recognise that London Midland and Scottish ordinary stock and our stocks can, by the public, be said to be one and the same thing. I venture to say that the new trust stocks are the better thing. I am perfectly certain—and I pay no attention to the quotations of some foolish people—that the 4 per cent. preference stock and the 5 per cent. preferred stock which are being issued by the new trust, authorised, as I have said, for investment by trustees who are authorised to invest in the parent company, are each well worth the £70 at which we state that we hold them in our books.

RESULT OF THE YEAR'S OPERATIONS.

We have parted with regret from those interested in our own issues in respect of railway stock, but, after all, we have done this on terms which, I hope, will benefit them. We have, as a whole, on the year's working, come out quite satisfactorily, and we are able, therefore, to distribute the amount of dividend which we recommend you to take to-day—in fact, which we are bound to pay if we have these results. We have also been able to add a considerable sum to our general reserve, taking off £2,000 of losses—some £9,000, a substantial amount when you remember that our open ordinary capital is only £56,000 in all—not that it represents £56,000, because it is an eighth part of what it used to be. But the results, on the whole, are satisfactory.

I think the fact that we have paid our £35,000 a year for three years—and I hope we will continue to pay it—indicates that our capitalisation, which was written down to £253,000, is not now

the real value of our securities. If I had to put an assessed value upon our securities I would say that our preference stock ought to be worth—mind you, I am not optimistic, though people will say I am—I think that our preference stock, judging by the preference stocks of other trust companies, ought on its dividend rights to be worth about £120, our annuity shares about 75, and our ordinary stock certainly much more than the price at which it is standing in the books now. That is my idea of the company.

PAST STATEMENTS BORNE OUT.

I always like to tell shareholders what my ideas are, and I do not mind being judged by them, because I think that if you look back on what I have said to you during the terrible times that we have had to pass through I may congratulate myself upon having said many things which have been proved true to the letter. Whether it was to warn you against trusting German marks or not to worry too much about exalted dollars, or whether it was to look with hope to things getting brighter, I have proved true on every occasion. I am getting old now. I am thankful to have the company in what I think to be a sound position. I hope I may be spared to look after its fortunes for some time longer, but were I not I feel that I have done the work which five years ago I laid myself out to do, namely, to restore the Stock Conversion and Investment Trust to a perfectly sound and healthy position. With these remarks I beg to move the resolution which I have already read to the meeting.

The motion was seconded by Captain Bowyer, put to the meeting and passed unanimously.

Mr R. W. Shire, the retiring director, was re-elected, as were also the auditors. The proceedings terminated with votes of thanks to the chairman and to the staff.

N.B.—A FULLER STATEMENT OF THE POSITION OF THE TRUST WILL BE FOUND IN THE REPORT OF THE MEETING PUBLISHED IN "THE TIMES" AND "THE FINANCIAL TIMES" OF OCTOBER 12, 1925.

HARRISONS AND CROSFIELD, LIMITED.
A SUCCESSFUL YEAR.

MR H. ERIC MILLER'S REVIEW OF THE TEA AND RUBBER POSITION.

Presiding at the seventeenth ordinary general meeting of Harrissons and Crosfield, Limited, held on the 15th instant, in London, the Chairman, Mr H. Eric Miller, reviewed the balance-sheet, referring to the record profit shown and to the spirit of goodwill which had been developed during the 80 years of Harrissons and Crosfield's existence; he stated that the intrinsic position of the company's business had never been better.

TEA DUTY—SHIPMENTS TO RUSSIA.

As regards the present position of the tea industry, he said: "One of the most encouraging features of the market has been the progressive increase shown in shipments to Russia. During the nine months January to September re-exports from this country totalled 8½ million lbs, in comparison with 2 million lbs in the corresponding period last year. Russia has also been buying in China, Ceylon, India, and the Dutch East Indies. This revived outlet should be a sufficient guarantee of a remunerative level of prices for many years, if only producers will realise that their interests will be best served by confining their attention to the manufacture of a crop of sound, useful, and good tea, and avoiding the temptation to snatch an additional but temporary benefit by indulging in coarse plucking and the manufacture of inferior and undesirable tea."

RUBBER.

Reviewing the rubber industry, Mr Miller said: "Without being hypercritical, the price movements of rubber during the past two years indicate very clearly that the manufacturers themselves have not, in the main, accurately gauged their future requirements."

"The strength of the position at the present time prompts one of my somewhat conservative temperament to search for causes which may bring about a reaction, but I candidly confess that it is not easy to conjure them up. On dead reckoning, however, it is well to be prepared for some natural reaction in the course of next year, but, when supplies become available in excess of immediate needs, the wise manufacturer will increase his holding of crude rubber."

"The well-organised and proven plantations in the East are quietly but definitely adding extensions to their present planted areas, using first-class planting material, and I am sure that these extensions will prove to be a very sound investment. British predominance has not diminished in any sense as a result of the legislation regulating exports from Malaya and Ceylon, and all my inquiries convince me, as I have repeatedly stated during

recent years, that the estates which have been restricting exports, under legislation or voluntarily, are in excellent condition to derive the maximum benefit from the period of prosperity which may be looked for during the next few years.

PRESENT WORLD STOCKS.

"Present world stocks represent less than 3½ months' current absorption. Under normal conditions comfortable working stocks should be the equivalent of about six months' absorption. It is only a matter of time until we reach the point when the annual increase in production will be less than the annual increase in absorption, and, provided a steady and far-sighted view of the position is maintained, any excess of production over absorption in the meantime could be and should be carried without difficulty."

"Now that so much public attention is being attracted to the shares in rubber-producing companies, I would give a word of advice to intending investors. Reliable information may easily be obtained, and proper regard should be paid to the relative intrinsic merits of the companies whose shares are being dealt in. The plantation rubber industry is not a gambling industry; it is one of the great primary industries of the world to-day, and, as long as it is conducted on that footing, and not with an eye to share speculation, it well merits the confidence of the investor."

The report was unanimously adopted, and a final dividend of 20 per cent. was declared on the deferred ordinary shares, making 30 per cent. for the year.

CITY OF SAN PAULO IMPROVEMENTS AND FREEHOLD LAND COMPANY, LIMITED.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The thirteenth ordinary general meeting of the City of San Paulo Improvements and Freehold Land Company, Limited, was held, on the 15th instant, at Winchester House, Old Broad Street, London, Mr Herbert Guedalla, F.C.A. (chairman of the company), presiding.

The secretary (Mr F. S. Tomkins) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that when they last met at the end of October, 1924, he referred to their balance-sheet as a clean balance-sheet, and it certainly had been greatly simplified. This year, however, they had been able to go still further, and present the accounts in a form which he trusted every shareholder would understand. In the accounts presented all the assets and liabilities in Brazil, which practically represented the whole of the company's undertaking, had been taken at the exchange of 6d per milreis for the purpose of conversion into sterling. The directors would adopt the system in future, so that it would not be difficult to estimate the effect of the rise or fall in exchange as against this value of 6d per milreis. Formerly they had always taken the liquid assets and liabilities in Brazil at the rate ruling at the date of the balance-sheet, and the fixed assets, such as land, at 1s per milreis, and it so happened that by force of circumstances the date of the meeting was always about six months after the date on which the accounts were closed, so that the exchange was often materially different when the accounts came to be presented. It was not an easy matter, therefore, to form any estimate as to the intrinsic position of the company in sterling values.

FREEHOLD LAND.

The main asset of the company, the Chairman continued, was their freehold land. This stood in their books at the end of the previous year at £1,473,539, and during the year under review previous sales to the amount of £9,892 had been cancelled—he might add incidentally that these properties had been resold at a good profit—whilst the cost price of the land sold during the year was £75,062, so that in the ordinary way, taking the milreis at 1s exchange, they were left on February 28th last with a net cost of £1,408,368 in their books for their freehold land. The sales during the year were entirely satisfactory. The selling values of their main estates had been continuously increasing, with the result that at the end of the year they were getting about double the price obtained in the previous year. In all, about 91½ acres were sold, so that they were left at the date of their balance-sheet with 1,158½ acres of what they termed "saleable land."

The difference in milreis between the book value of the land and the prices being realised was becoming so large that the directors felt that they must get a correct up-to-date view of the situation. In that connection they were fortunate in securing the services of Sir Arthur Du Cros, who was one of the largest shareholders, and who consented to go out to San Paulo at the beginning of this year, and to make a report with the assistance of independent experts. One of the main features of this report was the valuation introduced into the balance-sheet. In the

opinion of the board there was no other sound method of accomplishing their decision to place before the shareholders a balance-sheet with all their assets and liabilities in Brazil taken at an exchange of 6d to the milreis. Further, it formed an absolute basis upon which they could formulate the future policy of the company with regard to their respective estates. They considered they were quite safe in adopting the valuation of £2,750,000, and the result was that they had an increment in value over the book figure of £1,341,631, which they had transferred to valuation reserve account. Since the date of the balance-sheet it had been the policy of the board to concentrate on the development of the Pacaembu estate, and the first sales, held about two months ago, resulted in an amount of about £70,000, the land realising almost twice the figure at which this estate was taken in the balance-sheet now submitted.

RETURN TO SHAREHOLDERS.

As to the question of making some return to the shareholders, on the basis of their present development policy they would have nothing to spare for the current year ending February next, but after due consideration of the financial estimates carefully prepared by their management in Brazil, the directors considered they should be in a position to make some return from sales in the ensuing year. The amount of the return was naturally dependent on realisation of the anticipated sales, which, as far as he could see, had been estimated on a conservative basis. In these days it was dangerous, perhaps, to look a year ahead, but the figures showed that they should be able to make a return of, say, 5 per cent., for their financial year 1927, and he trusted thereafter that this amount could be increased from year to year if nothing abnormal occurred.

The report was unanimously adopted.

INSULINDE (SUMATRA) RUBBER ESTATES, LIMITED.

QUESTION OF PUBLICITY.

The fifteenth annual general meeting of this company was held, on the 15th instant, at Winchester House, London, Sir Ivor Philipps, K.C.B. (the chairman), presiding.

The secretary (Mr A. H. Doherty) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the company's financial position showed a still further improvement, the liquid assets amounting to £22,606. The net profit was £13,037, against £6,327 in the previous year. The dividend warrants for the 12½ per cent. dividend would include an interim dividend of 5 per cent. on account of the current year. The estimated output for the current year was 430,000 lbs. The company possessed valuable reserve land to the extent of about 10,000 acres, and the visiting agent recommended that extensions should be made as soon as possible. The margin between the company's nominal and issued capital was now but £13,818, and as £20,000 should be earmarked for new extensions, proposals would shortly be submitted to increase the company's nominal capital to £200,000.

Mr E. H. Parry seconded the motion.

In reply to a shareholder, the Chairman said that the company had sold forward for 1926 21 tons of rubber at an average price of about 2s 4½d per lb. Speaking personally, he never thought it was to the advantage of the planter to have all the details of his business given to the public, and he was not alone in taking that view. In this respect directors were in a very difficult position.

If they could get reciprocation that would be a different matter. If the large buyers would tell them how much rubber they used, how much they had bought, and how much they had still to buy, and if the financial Press would help them with that information, then he thought it would be a fair "give and take." This was the only trade of which he was aware that gave everything away, and where directors were made by the shareholders to give it away. No board wanted to give the information away; but shareholders demanded it, and as long as they demanded it he thought the boards could not refuse.

The motion was carried unanimously.

The retiring director (Mr H. L. Coghlan) was re-elected, and Messrs Wyatt Williams and Co. were re-appointed auditors.

A cordial vote of thanks to the chairman and directors, as well as to the staff, both in the East and in London, concluded the proceedings.

Messrs Samuel Montagu and Co. write on October 14th as follows:—

GOLD.

There have been large shipments of gold to New York, and withdrawals from the Bank of England have been made for this purpose. A large proportion of the gold offered in the open market was also taken for the United States, and some purchases were made on behalf of India and the Continent. The following movements of gold to and from the Bank of England have taken place since those reported in our last issue:—

	Received.	Withdrawn.
Oct. 8.....	£	£
8.....	nil	38,000
9.....	500,000	1,037,000
10.....	nil	nil
11.....	nil	784,000
12.....	nil	749,000
13.....	nil	55,000
14.....	nil	55,000

£10,000 sovereigns were withdrawn for India. During the week under review £2,163,000 on balance has been withdrawn. From May 20th last, when the total amount of gold received by the Bank of England since the resumption of an effective gold standard first exceeded the total withdrawals, movements of gold showed a net influx until yesterday. The withdrawal of £749,000 on that day made a net efflux of £68,000, increased to-day to £123,000 by the further withdrawal of £55,000.

SILVER.

Silver has been a steady market during the week, purchases having been made both for account of China and the Indian bazaars. Inquiry for silver for cash delivery has been well maintained, as the Indian demand has been mostly for silver for shipment by this week's steamer, which is due to arrive in Bombay in time for the November settlement. America has not been inclined to sell, but the Continent has disposed of a little silver in this market. The following table shows the imports and exports of silver to and from the United Kingdom during the week ending the 7th instant:—

	Imports.	Exports.
£	£	£
Norway.....	72,000	Germany..... 22,130
Mexico.....	50,000	Spain..... 9,539
Other countries.....	4,945	Austria..... 27,880
		China..... 20,700
		British India..... 92,426
		Other countries..... 2,144
Total.....	126,945	Total..... 174,819

£28,049,200. The profits for the half-year amount to £200,943, an increase of £67,330 as compared with last half-year. One-half of these profits is applied to the Australian national debt sinking fund, the other half going to the reserve fund, which now amounts to £606,608. The profits of the note issue department, amounting to £578,578, have been paid over direct to the Commonwealth Treasury. The bank's capital in hand is £4,000,000, with an authorised Commonwealth Government subscription of £6,000,000, and an authorised debenture issue of £10,000,000, so that the total is £20,000,000.

RAILWAYS.

ARGENTINE GREAT WESTERN.—Report for year ended June 30, 1925, shows that 3,105,537 passengers were carried, as against 3,049,871. Total goods and livestock traffic was 1,878,220 tons, against 1,826,760 tons in preceding year. In January last an issue of £1,000,000 5 per cent. debenture stock was made, and the proceeds applied towards repayment of this company's indebtedness for capital expenditure to the Buenos Aires and Pacific Railway. The preferred and ordinary stockholders received a dividend of 6 per cent. for the year.

RUBBER, &c.

AMALGAMATED (RUBBER) FINANCE COMPANY, LIMITED.—This finance company was only formed towards the end of last year, with a cash subscribed capital of £100,000. Its first profit and loss account for the period ended September 30, 1925, shows a net profit of £33,978. The directors propose to appropriate £12,500 of this by the payment of a dividend of 12½ per cent., less tax, starting a reserve account with £10,000, and carrying to reserve for taxation, directors' additional remuneration, and other contingencies £8,000, the carry forward being £3,478. An issue of a further £100,000 by way of "rights" to the present shareholders is proposed, these working out at share for share. The total assets are £134,086. Cash is at £48,969. Investments at cost amount to £19,642.

CENTRAL SUMATRA ESTATES.—The net profit for year ended June 30, 1925, is £11,619, as against £4,014 in preceding year. A dividend of 10 per cent. is paid on the ordinary shares, against nothing in preceding year. Income-tax will be deducted at rate of 4½d in £. The carry forward is £6,349, against £5,239 brought in. Crop of rubber amounted to 252,894 lbs. Average net sale price, including estimated value of unsold portion, was 1s 10.94d per lb, as compared with 1s 3.56d per lb for previous year. Cost of production was 11.94d per lb, as against 9.91d per lb. Total area of estates is 3,927 acres. Balance-sheet shows total assets £121,888. Cash is at £7,406. The company's investments are in British Government securities at cost, i.e., £28,559.

CEYLON AND INDIAN PLANTERS' ASSOCIATION.—The tea crop for year ended June 30, 1925, was 907,475 lbs, an increase of 123,177 lbs. In addition, 117,793 lbs of tea have been dealt with in the Kandaloya Factory. Gross profit is £37,566. The ordinary dividend is 40 per cent. for the year, against 30 per cent. for preceding year. The sum of £2,500 has been placed to income-tax account, and £8,000 to general reserve. The carry-forward is £6,852, against £3,768 brought in. Total assets are £153,866. Cash is at £14,849. Investments are all in British Government securities at cost, totalling £28,176.

KINTYRE TEA ESTATES.—This company has secured a net profit of £17,401 for year ended June 30, 1925, and is paying a dividend of 27½ per cent. on its ordinary shares. The profit in the preceding year was £10,212, and the ordinary dividend 15 per cent. The tea crop was 331,860 lbs for season 1924-25 at a cost of 10.74d per lb, compared with 9.94d per lb for previous season. Average yield per acre was 625 lbs. Net average price realised was 18.86d, against 17.82d for 1923-24. Rubber crop was 161,936 lbs at cost of 12.18d per lb, against 12.335d for 1923-24. Net average price realised was 22.57d, as compared with 14d per lb for 1923-24.

PATANI PARA PLANTATIONS.—This company has increased its net profit from £2,744 to £15,302 for year ended June 30, 1925. The ordinary shareholders are to receive a 10 per cent. dividend against nothing for preceding year. The company propose to write off underwriting commission £3,500 and £1,500 preliminary expenses, and to carry forward £2,051, subject to extra remuneration to directors. Crop was 345,516 lbs. Average gross price was 1s 9.190d per lb. London and cost of production was 8.371d. Total assets are £112,640. Cash is at £5,705. Investments are all in British Government stock at cost £4,996.

MISCELLANEOUS.

AMALGAMATED ANTHRACITE COLLIERIES.—The net profit for year ended September 30, 1925, amounted to £151,831, as compared with £255,988 in preceding year. The ordinary shareholders receive 7½ per cent., against 11½ per cent. The carry-forward is £45,104, against £11,952 brought in. It is stated in the report that the demand for the company's anthracite was well maintained throughout the year, and the collieries were generally fully employed, but, owing to the advance in wages under the wages agreement of May, 1924, working costs were considerably higher than in previous year, while selling prices were somewhat lower. Consequently trading results of the subsidiary companies show a decrease when compared with those for the comparative period. The issued capital is £2,010,507, in £1 ordinary shares, fully paid. There are no preference shares or debentures.

ANGLO-CHILEAN CONSOLIDATED NITRATE.—We are informed that a syndicate headed by Lehman Brothers, Goldman, Sachs and Co., and Blair and Co. Inc., have purchased \$16,500,000 7 per cent. debenture 20-year sinking fund bonds from the Anglo-Chilean Consolidated Nitrate Company, together with some of the stock of that company. The company was formed by Guggenheim Brothers interests to consolidate various purchases of nitrate-pro-

ducing properties in Chile. The engineering organisation of Guggenheim Brothers that brought their Chilean copper properties to such a highly successful position will be in charge of construction and operation of the nitrate plants. A public offering will be made in the near future.

FREDERICK HOTELS.—Net profit for year to June 30, 1925, after payment of debenture interest is £67,472, against £64,369 in previous year. The ordinary dividend is raised from 10 per cent. to 15 per cent. The sum of £9,000 is put to reserve fund, and £45,179 carried forward. The mortgage of £30,000 on the freehold of the Hotel Russell has been paid off. £150,000 debenture stock purchased by the company has been cancelled. The sale of the shares in the Hotel Bristol, Beaulieu, Limited, realised a profit of £18,010, and this sum has been transferred to reserve, together with an amount of £47,990, being the difference between the price paid for the £150,000 debenture stock bought and cancelled by the company and its nominal value. Total assets are £1,751,353. Cash is at £57,245.

IMPERIAL AND FOREIGN CORPORATION.—A profit of £4,729 was made on operations for year ended June 30, 1924, and a further profit of £16,344 on operations for the eleven months to May 31, 1925, making a total profit of £21,072 for 23 months. The making of this profit has enabled them to reduce their debit balance from £43,783 to £22,711.

LAMBERT BROTHERS, LIMITED.—This concern made a net profit of £124,359 on operations for year to June 30, 1925, against £142,809 in preceding year. The ordinary shareholders receive a dividend of 5 per cent., against 17½ per cent., but the carry forward has been increased from £92,500 to £165,609. A circular issued with the report states that the directors, feeling satisfied that the financial resources of the company will be amply sufficient with the addition of the trading profits for the year to June 30, 1925—which they propose to carry forward—for the requirements of its business, have decided to make a further distribution amongst the holders registered on October 13, 1925, of the 750,000 ordinary shares of the company of the sum of £75,000, being realised proceeds of capital accretions, to which (as stated in the board's circular of May 23, 1923, on the occasion of a similar distribution) counsel advised no liability for income-tax or super-tax attaches. The balance-sheet shows total assets £2,224,836. Cash is at £77,041. Investments in British Government securities at cost amount to £1,044,709 of the total assets.

MONTEVIDEO TELEPHONE.—The net profit for year ended July 31, 1925, amounted to £32,831, against £22,700 in preceding year. The ordinary dividend is raised from 5 per cent. to 7 per cent. The sum of £15,000 has been put to reserve, and the carry-forward has been increased from £11,951 to £14,583. The number of stations was increased by 839 during the year, making a total of 13,462 stations as at July 31, 1925.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A spell of colder but dry weather has facilitated field work, and good progress was made in preparing the land for sowing operations. With threshings on a lighter scale supplies of native wheat were somewhat restricted, but with no appreciable improvement in demand prices for the most part remained unaltered. In the floating and forward wheat cargo section buyers showed rather more disposition to operate, and the general tone was steady apart from Plate descriptions, which were more freely offered. Steamers of No. 1 Northern Manitoba December sold 49s 6d, ditto November 1st-15th 49s 3d, and part cargoes of white Pacific afloat at 51s. Maize cargoes depressed, while influenced by liberal shipments from South Africa and a lack of Continental demand, together with cheap offers of South Russian barley. Steamers of No. 2 480 lbs, while cargoes of South Russian barley afloat sold to Bristol Channel at 26s 3d per 400 lbs, c.i.f. terms. Wheat steadier. No. 1 Northern Manitoba ex-ship arrived quoted 52s 9d, No. 2 ditto 51s 9d, No. 3 50s 9d, No. 2 mixed Durum ex-ship to arrive free on rail. Flour quietly steady. London standard grade in the home counties, with 6d to 1s per sack less for deliveries in the London districts. Imported easier. Manitoba patents range from 43s to 45s 6d, Minneapolis 44s to 45s 6d, Australian 44s per tons. Plate ex-ship to arrive quoted 35s 6d, landed ditto 37s, African maize meal ex-ship to arrive £8 10s, white ditto ex-ship quoted 38s to 49s, Chilean Chevalier 57s to 70s, brewing 52s and Danish ex-ship 44s to 54s per 448 lbs. American malting ex-ship 28s, landed 29s 3d, No. 3 Canadian Western ex-ship 31s 6d, No. 4 ditto 30s 3d, Russian ex-ship 27s to 28s per 400 lbs. English 112 lbs. Oats firmly held, especially for Canadian, which are reservedly offered. Plate ex-ship near quoted 24s, further distant 23s 6d, landed 26s 6d, No. 2 Canadian Western ex-ship near 28s 6d, October shipment 27s 3d, landed 30s 9d, No. 2 Canadian

AMERICAN WHEAT MARKETS.

The markets have been firmer this week on the whole. Active bear covering and reports of inclement weather caused an initial rise, which brought out larger offerings than the market could digest. A renewal of speculative buying followed, but matters were kept well hand by such factors as the dullness of export demand, reports of auspicious crop conditions in Australia, and liberal Canadian crop movements. Recent quotations:—

COAL.

Our Cardiff correspondent writes:—There has been a slightly improved undertone on the Cardiff market this week, but there has been no material expansion, and the volume of trade has been much below that required to maintain regular working at the collieries. More men have received notices terminating their contracts, but inquiries have been a little more active, and prices generally steadier. The current market quotations are, on an average, only about 10 per cent. above the pre-war level; those of small coals are actually about 15 per cent. below the pre-war level. There is an impression that these prices will stimulate demand, and the slight improvement in the tone of the market this week is interpreted as a symptom of increasing business both for the inland and export trade. The following are the current approximate quotations:—Best Admiralties, 23s 6d to 24s; seconds, 22s to 23s; best drys, 23s 6d to 24s; black veins, 21s to 22s; Western Valleys, 20s 6d to 21s; Eastern Valleys, 20s to 20s 6d; best bunker smalls, 10s 3d to 10s 6d; ordinary cargo smalls, 9s to 9s 6d; coking smalls, 10s 3d to 10s 9d; anthracite best large, 45s to 46s; red vein large, 28s to 34s; machine-made cobbles, 52s 6d to 55s; French nuts, 55s to 57s 6d; stove nuts, 55s to 57s 6d; rubbly culm, 12s to 12s 9d; coke, special qualities, 35s to 40s; patent fuel, 20s 6d to 23s 6d; pitwood, ex ship, 28s to 28s 6d. In the tinplate trade the general position has again improved. Prices are firmly maintained, and foreign inquiries more active.

Our Sheffield correspondent writes:—The coal trade is a shade better, and there is less underquoting. South Yorkshire hards command round about 19s per ton.

IRON AND STEEL.

We have extracted the following from the weekly report of the London Iron and Steel Exchange:—The recent slight improvement in business has been maintained. There is a general tendency to expect a continuation of the present activity, although it is realised that there is little likelihood of values reaching a more profitable level. The persistence with which buyers for a long period have purchased only enough to meet their current needs has resulted in manufacturers having only a few weeks' work in sight. On the Continent the situation is difficult. Those Belgian works which are not affected by the strike, and the Lorraine and Luxemburg works are reported to have a large tonnage of orders on their books, of which a fair proportion is for forward delivery. At the same time, Continental prices are weak, and a considerable section of the market anticipates a further fall, particularly when the Belgian strike is settled and the works now idle come into the market to secure business. Perhaps one of the best features from the British point of view is that it is reported that Continental pig-iron is not in large supply, and merchants, who in the past have bought from the Continent, are not finding it easy to replace their contracts at low figures. In the semi-finished department

conditions remain weak, but the more active demand recently reported for finished steel has been maintained.

Our Middlesbrough correspondent's report, dated October 15th, is as follows:—Pig-iron: The recent report of large sales of pig-iron to America has tended to stiffen the market. Whilst there is a certain amount of speculative selling by merchants, prices have suffered no change since last week, and No. 3 Cleveland G.M.B. is generally quoted 66s 6d per ton. The hematite market is very firm. With the restricted output, makers are well sold, and are now holding out for 74s 6d per ton for mixed numbers East Coast. Manufactured iron and steel: There has been a slight improvement. With the further concessions in prices which have been made there may be a better prospect of business. Quotations are now as follows:—Steel ship plates, £7 10s to £7 15s; steel ship angles, £7 5s to £7 10s; iron bars, £11 5s; steel rails, £8. Iron ore: There is a report of an odd cargo of best Rubio having been sold at 20s per ton, and this remains the nominal quotation for this quality, c.i.f. Tees.

Our Sheffield correspondent writes:—Rather more orders were received in the steel trade last week. Some authorities profess to detect signs of early improvement. The aggregate volume of work on hand, however, does not increase, and there is much idle plant in this city. As a whole, business in the heavy branches remains unremunerative. There is rather more activity in tools made of steel, although some of these branches report decreased booking of orders, and there is an absence of that expansion usually experienced in the winter months. Christmas season orders are being booked for plate and cutlery, but they are much below normal in bulk and value, and the demand is mainly for the cheaper classes of goods. Knives and cutters used in industry are in brisk demand. The appeal of the cutlery trade for protection against foreign competition under the safeguarding scheme will come before a Board of Trade Committee next week. The competition, which is chiefly from Germany, relates, for the most part, to scissors and pen and pocket knives, as the quantity of foreign table knives coming into this country is negligible.

Our Glasgow correspondent writes:—Demand for pig-iron is on a slightly improved scale, but prices are low, No. 3 being quoted and are buying more pig, a good proportion of which is, however, coming in from the Cleveland district. There are more inquiries from the Continent, but shipments are not above normal so far, having been for last week 951 tons, of which 876 was on overseas account. Last year for the corresponding week the shipments were respectively 519 and 479 tons. The finished steel trade is in no better position. Home orders are scarce, and although export inquiry is of fair dimensions, competition is keen. Orders are generally secured only on concessions being given in price. The other branches of the iron and steel trade are dull, with the exception of galvanised sheets, which, in spite of the higher prices quoted by works which are booked up, continue to show considerable activity, the demand from South America and India being steady. In black sheets there is a good market for the thinner gauges, but the demand for the heavier sheets is small. Re-rollers are not fully employed. The Armstrong Construction Company have received an order for an airship hangar for Karachi, and it is estimated that in its construction approximately 4,000 tons of steel will be used. It is also announced that large orders for tubes for export have been placed with local works this week. The Admiralty is inquiring for 8,000 tons of steel-plate sections.

OTHER METALS.

TIN.—The market for tin displayed firmer features, values responding to higher Eastern advices and liberal buying orders, while holders adopted a reserved attitude. Standard cash sold £274 15s-£280 10s and £277 15s, three months' £275-£281 10s and £278 10s. Sales in the East were reported at £281 up to £287 5s. COPPER also moved in an upward direction, and dealings were on a large scale. Slight irregularity was noticeable at times, and later an easier tone prevailed. Standard cash sold at £62 10s-

been done in whites and fancies. Occasional lines have been put through for Egypt. Printing and finishing styles have been sold in fair quantities for South America, and plenty of business has been about for the Continent. Many makers of cloth have extended their engagements, and are now firmer in quotation. Irregularity has prevailed in American and Egyptian yarn quotations, but rather more business has been done.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There has been an active demand for wool and tops throughout the week, and with a much improved turnover in practically all qualities prices have advanced all round. Russia is still buying some fair quantities of scoured and greasy wool, noils, and tops, and there is also some inquiry on American account for crossbred matchings, both New Zealand and Australian. The sudden spurt of activity in the top trade has found most firms short of stock, the policy in recent months having been to sell wool either in the bale or in the form of matchings, for which relatively better prices could be obtained than for the corresponding qualities of tops. In not a few cases topmakers are now unable to guarantee delivery before the end of the year, and this is especially noticeable in the case of 70's and finer tops. Most tops are up 2d in the finer sorts, and from 1d to 1d in the lower qualities. A good warp 64's is now quoted at about 4s 4d, a rise of 2d since the beginning of the month. Super 60's at about 4s show an advance of 3d in the same period. In carded tops 58's average are 1d dearer on the week at 37d; 56's show about the same rise at 32d, and 46's are 1d up at 23d. In prepareds 46's are 1d up at 23d, and 40's are 1d dearer at 21d. More confidence is generally expressed in the immediate future, though many users still cling to the belief that wool values will ease with the turn of the year, basing this opinion on the big weights of raw material to come forward from the overseas markets. There is a better tone in the yarn trade, and spinners are asking more money for most descriptions, though it is difficult to persuade users to follow the market. Improvement in the piece goods trade is well maintained.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

The trade has now digested the final results of the recent London sales, and all are agreed that they exceeded expectations. Competition was good, and prices ruled in sellers' favour. The

£62 5s-£62 12s 6d and £62, three months' £63 5s-£63 12s 6d and £63. LEAD irregular, while a good business transpired. Good soft foreign pig October sold £39 10s-£39 17s 6d and £38 10s, November £38 10s-£37 17s 6d, December £37 10s-£36 17s 6d and £37 5s, January £36 17s 6d-£36 10s and £36 13s 9d. SPelter active and firmer. October sold at £39 15s to £40 7s 6d and £40, November £39 3s 9d to £40 and £39 3s 9d, December £38 15s to £38 17s 6d, January £38 7s 6d to £39 2s 6d ton. ALUMINIUM nominal. ANTIMONY irregular. English specials quoted £75 to £80 as to make and quantity, foreign refined £66 10s-£66 15s ton, ex warehouse. QUICKSILVER firm. Spot quoted £13 12s 6d to £13 15s per bottle. WOLFRAm firm, and forward quoted 20s 3d to 20s 6d per unit, c.i.f.

Continent taking 109,500 bales, the home trade 64,500 bales, and America 7,000 bales, the total quantity absorbed was larger than at any other two series this year. America purchased more than at all the previous four series. The big weight of wool purchased for Roubaix-Tourcoing is ample evidence of the healthy state of the manufacturing industry in Northern France. The carry-over is stated to be about 62,000 bales, and it is expected that the quantity available for the next series, which will begin on November 24th, will be around 120,000 bales. It can now be said that the trade is beginning to pull round. Whatever happens during the forthcoming importing season, the results cannot be as tragic as those experienced in the 1924-1925 season, and, judging by the free buying in Australia and South Africa, buyers must have great faith in the future. Less than three months ago we did not hesitate to express the opinion that wool ought to fall still further to be on a safe buying basis, and lead to renewed interest on the part of wholesale fabric buyers. Apparently the needs of the Continent in particular are so pronounced that they must have big weights of wool, though it is safe to say that if the market had had to be made in Australia and South Africa by the West Riding, prices would have fallen a further 15 per cent. However, all cables report a keen demand for wool, and whilst this is encouraging, steady markets are to be preferred before high values at any selling centre.

So long as the raw material can be handed forward in the shape of yarns and pieces to the ultimate consumer, there is not much fear of any fall, but the state of the world's consuming markets does not warrant higher prices. Though there has been a distinct improvement in the prices obtainable for fine tops in Bradford and a hardening tendency in crossbreds, the last London sales closed with most descriptions of the raw material on a comparatively higher level. The only means by which this disparity can be reduced is a further increase on consumptive account. Recent developments in this direction are gratifying. Considerable business has been done in fine tops, and it seems likely that the scarcity which is now being experienced will continue to the end of the year. The activity seen in crossbreds is also a favourable portent, and it now seems likely that the selling season in New Zealand will begin without prices being as low as was at one time probable. As France has taken a big proportion of the medium crossbred wool out of the London sales against its own requirements, it may now be expected that the home trade will step into the breach, for the confidence of that section in these crossbred wools has been largely restored.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market remains firm in spite of tanners' efforts to reduce input, as best ox hides sold from 7d to 9d, and seconds from 6d to 8d at the Bermondsey auctions on Thursday. Advances of 1d to 2d were made in several cases, thus showing that the upward tendency has not been checked. Best cows were unchanged at 6d to 7d, with seconds at 5d. Best calf sold from 7d to 14d. Woolskins made from 7s 3d to 12s, and hogs from 3s 3d to 12s each. The foreign hide market also shows signs of hardening, and 8d has been paid for fregoric Argentine ox, and 9d for Uruguayans. In dry hides a good business is passing, with prices firm to an advance. Latest cables from New York report the American market as steady, with best heavy packers still selling at 17½ cents. Business in sole leather has been a shade quieter, following the activity at last week's Shoe and Leather Fair. Light dry hide bends are still sought, whilst medium wet salted are finding a ready outlet with repairers. Pinned offal is very scarce, prices remaining firm. A better demand is anticipated as orders for winter boots begin to come in. The demand for upper leather is moderate; box and willow calf are selling fairly well, and orders for light leather suitable for the ladies' Wellington boot are frequent. The shoe section remains rather dull. Orders are for small quantities from distributors. The export trade is also dull.

VEGETABLE OILS AND OLSEEDS.

Market conditions have been barely steady during the week, and only a comparatively small amount of business has been done. Linseed oil has fluctuated slightly, and value is about unchanged on the week at £39 5s per ton, naked ex Hull mill, prompt. Forward positions are at a discount and easier, the situation being influenced by the prospects of cheaper seed. Cotton oils are dull and demand poor, crude Egyptian having receded to £40 and ordinary refined to £41 15s per ton, ex Hull mill. Soy oil is steady around £42, but palm kernel oil is in need of buyers and lower at £42 10s.

In the linned section linseed has further declined in value, old crop Plate, after having been done at £18 15s for October-November shipment to Hull, being obtainable below that figure. New crop has been done at £18 5s for January-February and February-March. Excellent reports of the progress of the growing crop in Argentina have had a depressing effect on prices. Moreover, Argentina has still a balance of 212,000 tons, and India 105,000 tons of the old crop for shipment between now and December, the combined total of 317,000 tons comparing with 333,000 tons actually shipped in the corresponding period last year. Supplies are, therefore, considered more than ample in view of the present state of trade for oil and for cake. New Egyptian cottonseed is easier, and offers at £11 for October-January, loading.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The tendency for actual sugar is a shade better, and a fair business transpired, chiefly in British standards at recent level or prices. Imported descriptions, however, remain quiet of sale, especially forward parcels. Messrs Tate and Lyle's cubes quoted 32s to 33s; crushed, 30s; granulated, 28s 1½d to 28s 7½d; forward, 28s; yellow crystals, spot, 25s 1½d, Czechoslovakian, October, 13s 9d; November-December, 13s 6d, f.o.b., Hamburg. Dutch granulated "J," spot, 27s; October, 13s 9d; November-December, 13s 7½d, f.o.b., Rotterdam. American granulated, spot, 26s 6d; ditto afloat, London, 14s; outports, 14s 3d to 14s 4½d, c.i.f. White Java, spot, 26s; Polish crystals, November-December, 12s 10½d, f.o.b., Danzig. Czechoslovakian cubes, November-December, 16s, f.o.b., Hamburg. Raw refining kinds remain dull of sale. Cuban basis, 96 per cent. November, sellers, 10s 3d, c.f. and l., U.K. English grown granulated sold, 27s 3d, ex works, Cantley. Indian market remains quiet, and white Java, October-November, quoted 13s 9d; and January-March, 14s 1½d to 14s, c. and f., Calcutta. White terminal market irregular and easier, with a fair business done. October, sold, 12s 11½d; December, 13s 0½d to 13s 2½d and 13s 1½d; March, 13s 6d to 13s 6½d and 13s 6d; May, 13s 9½d to 13s 11½d and 13s 10½d; August, 14s 3d to 14s 4½d and 14s 3½d per cwt.

COFFEE.—Spot parcels in moderate request, the better liquoring grades being mostly favoured, while prices generally maintain a steady level. Costa Rica, fine bold, sold, 184s; Matagalpa, good colony peaberry, 150s; Colombian, good to fine bold, 144s to 159s; Maragogipe, 191s; Brazilian kinds quiet for shipment, and superior Santos, prompt, quoted 102s; No. 7, Rio, 90s cwt, c. and f.

COCOA.—Spot parcels move off quietly on former terms. Accra for shipment, F.F. quality, December-February, sold, 42s to 41s; Lagos, November-January, sellers, 38s, f.o.b. terms; Trinidad, December-February, sellers, 67s; Bahia, September-October, 50s; Guayaquil, Epoca, 75s; Machala, 72s; and Caraquez, 72s, c. and f. per cwt. Cocoa butter. C.R.F., also prime English, spot, 1s 5d per lb.

TEA.—The smaller supply of 54,353 packages of Indian were brought forward at public sales during the week, and all descriptions encountered brisk competition at 1d to 2d per lb advance, while good medium descriptions also ruled in sellers' favour. All fine liquoring sorts cleared readily at full to occasionally dearer rates. Pekoe sold at 1s 0½d to 2s 2½d; broken orange pekoe, 1s 2d to 2s 8½d, with choice up to 4s 4d. Ceylon offerings amounted to 18,750 packages, which were accorded active support from all sections of the trade, and prices marked a sharp advance. Plain liquoring to medium kinds ruled from 0½d to 1½d per lb dearer, while finest descriptions elicited keen competition, and values were frequently 1½d to 2d per lb over rates obtaining at the previous auction. General run of quality continued attractive. Pekoe, sold, 1s 2½d to 2s 3½d; broken orange pekoe, 1s 7½d to 2s 11d per lb, in bond. There was very little alteration in the position of China teas, general trade being quiet, while imports this season will be on a limited scale. New season's Keemun sold up to 2s 4d, and old from 1s 1½d to 1s 4d per lb. Common kinds moved off slowly. 5,575 packages of Java and Sumatra were brought forward, and experienced brisk competition at 0½d to 0¾d per lb advance. Pekoe, sold, 1s to 1s 3d; broken ditto, 8½d to 1s 6½d; orange pekoe, 1s 2½d to 1s 5½d; broken ditto, 10½d to 1s 8½d; pekoe souchong, 1½d to 1s 1½d per lb, in bond.

RICE.—Market quiet and without new feature. Rangoon, two stars-spot, sellers, 15s 9d; forward, 15s 4½d, c.i.f. Spanish, October, November, 22s 6d to 23s; Italian, spot, 22s to 23s cwt, as to quality. Rice b. an, Burma, October, sellers, £6; November-December, sellers, 26s; September-October, 25s 6d; October-November, 25s 3d; November-December, 25s. Madagascar butter beans, spot, quoted 35s to 37s 9d, as to quality. Rangoon, hand-picked, October-November, 14s 6d cwt, c.i.f.

SPICE.—Pepper quiet and tendency easier. Black Singapore L.S., January-March, sellers, 10½d; black Lampung, October-December, sold, 10½d to 10¾d; January-March, 11½d to 11¾d; white Muntok, October-December, 1s 1½d; January-March, sold, 1s 2½d. Cloves remain dull. Singapore flake, to Havre, September-October, quoted 18s 6d; Penang seed, ditto, to London, 16s. Sago flour weak.

THE BANK OF TAIWAN, LIMITED.

(Registered in Japan, 1899.)

Deposits are received for fixed periods on terms which may be ascertained on application.

October-December, to U.K., 15s 6d; Desiccated coconut quiet Spot, halves, 42s; forward, 40s. Ginger steady. Japan, spot, 90s; September-October, 85s; African, spot, 61s; September-October, 58s 6d cwt, c.i.f.

FRUIT (Dried).—Currants continue in quiet demand. Amalia, quoted 34s to 35s; Gulph, 37s to 40s; Pyrgos, 33s; Patras, 36s to 37s; Vostiza, 46s to 58s. Sultanas slow. Smyrna, new crop, 75s to 90s; Australian, 68s to 90s; Cretan, 85s to 100s; South African, 65s to 80s. Figs quiet. Layers, new crop, boxes, 80s to 110s; Locoums, 115s to 150s. Dates, spot trade quiet, but forward positions firmer. First tide Hallowee, 27s; second, 26s; Siar, first, 15s; second, 14s 6d, landed terms. Raisins in good request. Valencia, quarter boxes, 48s to 70s; halves, 42s to 45s. Evaporated fruits firm for best apricots and peaches, but trade generally quiet. Californian apricots, standard, new extra choice, 120s; fancy, 130s; Australian, 117s 6d to 130s; Californian peaches, choice, 67s 6d; extra choice, 72s 6d; fancy, 78s. Plums quiet. Oregon, size 30/40, quoted 72s; 40/50, 52s; Californian, 40/50, 58s to 59s; 50/60, 51s 6d to 52s 6d; 70/80, 44s to 46s. Pears, Californian, extra choice, 90s; fancy, 105s. Apple rings, Californian, extra choice, 65s to 70s; Canadian, 62s 6d per cwt.

CANNED GOODS.

CANNED FRUITS.—Spot trade remains quiet, as liberal supplies of new season's are now coming forward. Prices, however, remain steady, especially for apricots. Californian Bartlett pears, standard,

13s 9d to 14s; seconds, 12s 6d to 13s; Oregon, choice, 14s 9d; standard, 13s 3d to 13s 9d; seconds, 12s 3d to 12s 6d; Canadian, standard, 11s 9d; Californian peaches, choice, 11s 6d; standard, 9s 9d to 10s 6d; seconds, 9s; Californian apricots, standard, 9s; seconds, 8s; loganberries, fancy, 11s to 11s 3d; choice, 10s 3d to 10s 6d per dozen tins. Italian tomatoes firm, with a hardening tendency.

CANNED MEATS.—Corned beef experienced a better demand, and first grade quoted 42s 6d, while Danish lunch tongues sold freely, especially sizes at 11s.

CONDENSED MILK firm, with machine-skimmed tending dearer at 14s 9d to 15s per case.

NEW ZEALAND HONEY firm, with a good demand both for the home trade and continent. Despite the increase in output of 75 per cent., supplies are well sold up.

SARDINES ruled steady, with light supplies of small fish. Portuguese ½ flats quoted 4s 3d; clubs, 5s; 12 ozs, 7s 6d; 18 ozs, 12s per doz. tins. Salmon remains firm for all descriptions. Red tail, 1 lb, 64s; ½ lb pink, 36s to 37s; tall pink, 26s 6d to 27s 6d. Lobsters in good demand, at firm rates. Halves quoted 165s, and quarters 95s to 100s.

TEXTILES.

JUTE.—Firm, and sellers more reserved with improved inquiries. Firsts to Continent, September-October, quoted £55; October-November, £55; November-December, sold, £53 5s to £55

December-January, £54 to £55 15s. Lightnings, November-December quoted £52 15s per ton. Hessians and twills quiet, unaltered.

HEMP.—Manila dull, and values weak. J grade, October-December, sellers, £41 15s; K, ditto, £37 10s; and M, £32. New Zealand nominally unchanged. African sisal, No. 1, Tanganyika, August-September, £45 10s; No. 1 Kenya, ditto, £45 per ton.

RUBBER.

RUBBER.—Irregular and easier, but sales were of fair extent. Plantation, standard sheet, spot, sold, 4s. 3s 11d and 4s 1d; October, 3s 11d to 4s; November, 3s 8d, 3s 8½d, and 3s 10½d; December, 3s 7½d, 3s 7½d, and 3s 9½d; January-March, 3s 2½d, 3s 3d, and 3s 4½d; April-June, 2s 11½d, 2s 11½d, and 3s 1d; January-December, 2s 11d per lb.

GENERAL.

TALLOW.—Messrs Colchesters and Woolner write on October 14th: The tallow market was quiet during the week, and prices were 6d to 1s lower to-day. So little business has taken place that quotations must be regarded as somewhat nominal. At auction to-day 969 casks tallow were offered, and 79 were sold. Quotations are:—Australian mutton: Fine, 51s 6d; good to fair, 50s 6d to 46s; dull to dark, 42s 6d to 39s 6d; hard, 50s 6d. Australian beef: Fine, 48s 6d; good to fair, 46s to 43s; dull to dark, 42s to 38s 6d; sweet, 49s. Present shipment from Australasia: Good mixed, 46s, nominally. Present shipment from South America, 44s 6d. The market letter is lower. Tallow, 1s; stuff, 1s. Town tallow, 41s 6d per cwt. Rough fat, per 8 lbs, 4d; melted stuff, 31s 6d per cwt. Quotations are:—Town, 41s 6d, net cash, naked, ex works. Country: Frail casks, 41s 6d; home melted, shipping casks, net, f.o.b., good coloured, 45s; fair to dull, 42s to 41s. Bone fat: white, none; pale, none; benzine, 38s; melted stuff, 37s 6d, f.o.b.

SHELLAC fully steady. Fair, T.N., spot, sellers, 217s 6d to 222s 6d; October, buyers, 212s 6d; December, 1925; March, quoted 192s 6d per cwt.

GAMBIER easier. First marks, October-December, sellers, 47s per cwt, c.i.f.

COPRA firm, with a better inquiry. F.M.S. Straits to Rotterdam, August-September, quoted £29 17s 6d; October-December, sellers, £29 12s 6d. Dutch E.I., October-November, sold, £29 12s 6d; Ceylon, September-October, sellers, £30 17s 6d; South Sea, F.M.S., October-November, to Rotterdam, £29 2s 6d; F.M. Straits, to Marseilles, September-October, £29 12s 6d. Palm kernels firm, and October-December, to Liverpool, sold, £20 18s 9d per ton.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £32 to £40; Cochin, £30 to £34. Ceylon bristle £17 10s, to £22 10s; cinnamon leaf oil, 44d; citronella, Ceylon, 1s 11½d; Java, 3s 4d.

R. J. HOSE,
ROBERT HARVEY,
J. A. GOUDGE,

Directors.

W. E. WELLS, General Manager.

A. G. BARTHOLOMEW, F.C.A., Chief Accountant.

We report to the Shareholders that we have audited the above Balance Sheet, dated 30th June, 1925, with the Books at the Head Office (London), and have obtained all the information and explanations we have required. We have examined the Returns from the Branches certified by the respective Managers, and have satisfied ourselves that they are properly incorporated in the above account. We further report that, in our opinion, the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Head Office and the above-mentioned Returns. British and Foreign Government, Railway and other Securities are taken at market prices, where available, or at estimated values at 30th June, 1925.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's,
37 Avenue de l'Opera.
Cheques and Post-office Orders to be made payable to the
Proprietors of the "*Economist*."
Office: Granville House, Arundel street, Strand, London, W.C.2.

THE MONEY MARKET.

MONEY has been more plentiful, and its abundance in spite of gold exports was explained on Thursday when the Bank return showed an increase of over nine millions in the total securities held. Small amounts due in loans have been repaid by the market to the Bank, but, on the other hand,

bills to a moderate extent have been discounted. The discount market was very hard in the early part of the week, when fine three months' bank bills were difficult to place at 3½ per cent., but a recovery in the New York exchange sufficient to lead to the cancellation of part of the very heavy gold shipments ordered, combined with the greater ease in money, made the market more receptive, though still very cautious.

	Oct. 23, 1925.	Oct. 16, 1925.	Oct. 9, 1925.	Oct. 2, 1925.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	4½ (Oct. 1, '25)
Banks' Deposit Rate	2	2	2	2	2½ (Oct. 1, '25)
Discount/Call	2	2	2	2	2½ (Oct. 1, '25)
Houses/Notice	2½	2½	2½	2½	2½ (Oct. 1, '25)
Market rate (3 months' bills)	3½	3½	3½	3½	..

The Bank return showed a decrease of £3,102,000 in the stock of coin and bullion, this being £2,000 more than the amount of gold withdrawals announced; the note circulation had declined by £593,000, and the reserve was thus £2,509,000 lower, with its proportion to liabilities 3.8 lower at 25.2 per cent. Government and Other securities expanded by £3,557,000 and £5,883,000, and there was thus an increase of nearly seven millions in the deposits, Other rising by 5½ millions and Public by over a million. Currency notes outstanding were increased by £1,834,200 to £291,900,500, which includes £1,323,900 for notes called in but not yet cancelled. The fiduciary issue is £234,326,600, or £13,818,000 below the maximum for 1925.

NEW YORK MARKETS.

Our New York correspondent cables:—After a severe shake-out in motor shares, which was partly due to inadequate stock exchange facilities, the share market is again buoyant and the volume of business very large. Railway, copper, and oil descriptions are receiving more attention. Meanwhile the Federal Reserve statement reveals for the whole system a drop of \$41 millions in discounts and of \$5 millions in other bills, while reserves are \$20 millions higher and circulation \$20 millions lower. The reserve ratio is 72.6. The New York Reserve Bank has gained \$74 millions in gold, while holdings of bills and securities have fallen by \$75 millions, the reserve ratio rising by 6.5 per cent. There is a disposition to believe that seasonal demands for credit have about reached their peak, and no material hardening of money rates is expected. Commodity prices are steady, the Labour Bureau index number showing a fall of 0.4.

THE STOCK MARKETS.

The rubber market no longer monopolises attention, and brisker business in many departments has led to a heavy settlement. British Government Funds and other gilt-edged stocks are firm, in spite of the efflux of gold, and Central European bonds improved when the results of the Locarno Conference were known. Home rails have recovered; foreign rails, as a whole, remain steady, Cordoba Centrals rising as a result of the reorganisation scheme. There is still a flood of business in the rubber market. More interest has been taken in oil, tea, shipping, and tobacco shares, but bank and insurance shares have again been neglected. Certain popular industrials have risen sharply, notably Courtaulds and Dunlops. The iron and steel market has been more cheerful. Interest in the mining market has been fixed on tin shares, other varieties show little change on the week.

THE COMMODITY MARKETS.

The commodity markets continue slightly more active than of late. An improvement is recorded in the demand for certain descriptions of coal, but few contracts for future delivery are being placed, in view of the uncertainty of the outlook. The market for iron and steel products is stronger, with prices steady. A fair business has been done in the cotton textile markets, though buyers are still exercising caution. The West Riding wool textile industry reports a further increase in demand, many

topmakers being unable to accept orders for delivery this year, but advancing prices are checking business in yarns and piece-goods. The wheat trade is generally quiet, without any marked tendency. Sugar has been weak, and coffee quiet, while demand at the tea sales has been less active than usual. Rubber has been unsettled on increased selling pressure, but most offers have been well absorbed. In the metal markets tin has recorded a further advance on higher Eastern advices, copper remains active, and lead is firm.

FOREIGN EXCHANGES.

In the foreign exchange market the chief feature of the week has again been the French franc. From a closing rate of 108.85 on the 16th there was a slight recovery on Saturday, but on Monday the figure of 110.40 was reached. Tuesday showed a distinct improvement down to 108.75, but after that, depreciation set in rapidly, and at the time of writing on Friday morning the rate has already reached 114.65. The causes of this new break are not far to seek. On the one hand, it is stated that the provisional agreement reached by M. Caillaux in America will not be confirmed, so for the time being, at least, until fresh proposals can be made and agreed, the American market will be closed for new French loans. On the other hand, the internal gold loan has at last been closed with most disappointing results, and no statement has yet been made as to how the heavy floating debt maturities are to be met. The Socialists continue to press their own remedy of a capital levy, and there is little doubt that some part of the present depreciation is due to fears of such a measure. In the meantime, discreet but active propaganda is going on for the plan of relieving the exchequer by a drastic reduction in interest on the National Debt. It is unlikely that the issue between these conflicting proposals can be long delayed. Unless relief is obtained by one or other means, further inflation is inevitable at an early date. Under these circumstances the present feeling of uncertainty can be easily understood, but the very urgency of the problem makes it probable that a solution will soon be found, and although no violent recovery may be expected it is, perhaps, not too much to expect that the present depreciation will not be allowed to go much further. The Brussels rate has throughout the week maintained its recent steadiness, and was quoted yesterday morning at 106.25, as compared with 106.20 a week ago. The loan negotiations continue satisfactorily, and there is much speculation as to the rate at which stabilisation will be attempted. At present, however, nothing definite is known. The forward rate for Paris has widened to 50 centimes above spot, and over per month; the Brussels rate has also widened considerably to about 20 centimes above. In spite of support, the lira has also shown a depreciating tendency, having moved from 120½ to 123½ on the week. In the dollar market the main interest has been the large amount of gold taken this week for export to New York. In the meantime the rate has moved up steadily from \$4.84 1-32 on the 17th to \$4.84 15-32 yesterday morning. Forward dollars at 1½ cent per month are slightly narrower than a week ago. Copenhagen and Oslo have both been somewhat erratic during the week. Copenhagen, after rising slightly to 19.35 on Saturday, had a reaction to 19.28 on Tuesday, but touched 19.80 on Wednesday. By Friday, however, it was down to 19.50. Oslo fluctuated similarly between 23.80 and 23.45, standing yesterday morning at 23.75, compared with 23.80 a week ago. Madrid has risen during the week from 33.72 to 33.85, probably in view of the close of the campaigning season in Morocco without the achievement of any definite result. Of the countries with stabilised currencies, Amsterdam has not varied from 12.04½, nor Stockholm from 18.09½, but Berlin has moved from 20.32½ to 20.33½, and Switzerland from 25.11 to 25.14. Helsingfors is steady at 192½. In Central Europe,

Vienna has depreciated from 34.35 to 34.38, and Prague from 163½ to 163¾. Warsaw has recovered slightly from 29½ to 28¾, while Budapest shows no change. Athens is steady around 368, and Bucharest around 1020. In the East the rupee is steady at 1s 3¾d, while the yen is a shade weaker at 1s 8¼d. The silver market has fluctuated somewhat during the week, with China and India as the main centres of interest. Hong Kong, after rising to 2s 5¼d, fell again yesterday to 2s 5¼d, and Shanghai similarly touched 3s 3d, but reacted to 3s 2¼d, but Singapore is steady around 2s 4¾d. In South America, Rio has once more risen from 71½d to 71¾d. Buenos Aires is steady at 46½d, but Monte Video has risen fractionally to 50½d, and Valparaiso from 39.70 to 39.50 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 17th:—

(000's omitted.)		Receipts.	
EXPENDITURE.	£	From Revenue	£
Supply Services	8,140		17,469
Interest, &c., on Debt	5,280		
Sinking Fund	380		
Sundries	334		
Increase in Exchequer Balances	161		
Decrease in Debt	2,575		
	17,469		17,469

The revenue for the week amounted to £17,469,400, as compared with £17,446,000 in the corresponding week last year. Customs were higher at £1,441,000, against £1,189,000, but Excise was lower at £6,935,000, against £8,971,000. Property and Income-tax brought in £2,454,000, as compared with £3,676,000, while Super-tax at £310,000 was £30,000 lower. Ordinary receipts amounted to £205,400, against £210,000, and Special receipts to £3,000,000, against nil last year. The week's operations reduced the National Debt by £2,574,500, and caused the following changes:—

(000's omitted.)		£
Treasury Bills	+ 639	
National Savings Certificates	+ 150	
4% Treasury Bonds	+ 2,668	
3½% Conversion Loan	+ 2,775	
	+ 6,232	
Bank of England Advances	— 4,500	
Public Department Advances	— 4,300	
Sundries	— 7	
	— 8,807	

The floating debt was reduced by £8,175,000 to £777,966,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Oct. 17th).

£		£	
Total Expenditure ..	434,711,957	Raised by Revenue ..	380,565,906
		Decrease in Balances ..	3,568,179
		Amount borrowed ..	50,577,872
Total	434,711,957	Total	434,711,957

ESTIMATES for FINANCIAL YEAR 1925-1926.

£		£	
Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Argentine Great Western Railway, Buenos Ayres Great Southern Railway, Central Uruguay Railway Company of Montevideo, Buenos Ayres Western Railway, Anglo-South American Bank, Clayton Wagons, Frederick Hotels, and Monerakelle Rubber Estates. We refer to the speech of Mr R. J. Hose at the Anglo-South American Bank meeting in a "Note of the Week."

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a review of the present trade position of Czechoslovakia.

THE TRIUMPH OF PEACE.

FRANCE has found herself. That is one of the meanings of the Locarno Treaties. Two years ago certain popular but purblind organs of public opinion in this country did their best to force us into support of France's adventure in the Ruhr. But looking over the last few years in retrospect, all now see that 1923 was the year when the last flicker of war fever burnt itself out in France. On Friday of last week the representatives of France forswore on her behalf all future resort to war with her Eastern neighbour. It is only to be expected that some murmurings of distrust may be heard for some time to come, for when bad habits are abandoned one cannot expect to be entirely free from after effects; but those in this country who doubted whether the dismissal of the Poincaré Government last year really represented the true mind of France have had their answer in the events of the last few days. The fruits of victory have been reaped by France not at Essen, but at Locarno. Peace has triumphed at last.

But there is another even more deserving of congratulation. We do not forget that the initiative which led to the recent Conference came from Germany, and that in abandoning in the most solemn way before civilisation any hopes of revenge or of amending by force what she regards as harsh and unfair clauses in the Treaty of Versailles Germany has made a notable sacrifice. When the news of the Agreement reached Berlin opinion was naturally suspicious that it must have involved too great a surrender on Germany's part; but a few days' study of the terms revealed that her difficulties had been fully and frankly met. To take one example, Germany was afraid that if she entered the League without special conditions in her disarmed condition, she was not equipped, or that, being involved on the side of the League, she might be defenceless and at the mercy of Russia. The Allied statesmen at Locarno have replied that, in putting into force Article XVI. of the Covenant, the League, which faced this difficulty during the Protocol discussions of 1924, would not call upon its members without having regard to their geographical position or their military strength. In other words, if the League were called upon to apply either economic or military sanctions, Germany or any other of its members which might be left in an exposed position would, in certain circumstances, be allowed to remain neutral. In matters such as this the statesmen at Locarno have given Germany proof that they understand her problems and desire to help her to solve them. Whatever may be the ultimate judgment of history on the question of war guilt or on methods of warfare, it cannot be denied that to many minds there is still a heavy balance outstanding against Germany. But the events of last week have done much to obliterate this memory. Germany has made her renunciation of Alsace-Lorraine with no mock heroics nor with surly ill-temper, but with a quiet dignity which has greatly impressed Europe. When the time comes in January for her to take her seat at the Council of the League of Nations she will do so with her prestige restored.

In England the news has caused little or no excitement. It would not be surprising, after so many disappointments, if there remained a lurking feeling that it is too good to be true, and that time will reveal some fly in the ointment. A more specific ground for hesitation is our traditional dislike of any obligations in advance to take military action for any purpose on the Continent of Europe. In this connection there at first seemed to be some obscurity in the terms themselves; but it has been explained that in the event of a sudden crisis arising which may involve our guarantee, each signatory is the judge as to whether aggression has been committed until such time as the League of Nations gives a decision on the point. In other words, France cannot call upon us to go to her aid if we do not agree with her reading of the situation. Again, the guarantee which we give in the Security Pact does not altogether solve the problem of how we are to pledge ourselves without involving the Empire. Formally, the Dominions are not bound by the

Pact, but we have yet to learn how Britain can be at war and the Dominions at peace. But in spite of all specific objections, or general distrust of agreements of this kind, the Locarno Treaties so completely respond to the desires of the people of Europe, that no Parliament could take the responsibility of rejecting them. But if Great Britain enters upon her new obligations without enthusiasm, there is no dissentient voice in offering Mr Chamberlain personally congratulation and thanks for a very notable achievement, which will give him an honourable place in Europe's post-war history. Those, however, in Great Britain who realise that our first interest is peace will meditate with mixed feelings on the fact that the nations of Europe have left us far behind in their undertakings to abandon war and to submit their differences to arbitration or conciliation. In the light of the Locarno Agreement we think that the refusal of our Government to sign the undertaking to accept arbitration before the International Court in justiciable disputes is more than ever to be regretted.

The Locarno Treaties will not bring an economic millennium to Europe. They have hardly even checked the downward movement of the franc, which has been in progress ever since it was realised that M. Caillaux's gold loan was proving a failure, and that entirely new plans would have to be thought out for restoring the balance in the French Budget, and for dealing with her floating debt. The favourable results of the Conference are long-distance ones. France's Budget will ultimately benefit from the disarmament which is the logical consequence of the Agreement; Poland's still more so. But these results are in the future. A more important consideration is that the new spirit created by this Agreement may make it possible for the nations to put their economic relations on a more friendly footing. Here is urgent work for the British Government to do. The League of Nations is proposing to call a conference on the subject of tariffs and economic relations generally. The public should insist that our Government gives this project full-blooded support, and that it refrains in the meantime from making matters worse by inventing new barriers to trade. The Government has made such a promising beginning in the political field that we confidently appeal to it to throw its weight in favour of economic peace.

THE LOCARNO AGREEMENTS.

THE documents of the Locarno Conference, the full text of which is now available, are nine in number, consisting of the Security Pact, four Arbitration Treaties between Germany and other States, a final Protocol, a Note containing an interpretation of Article xvi. of the Covenant, and two Treaties between France and Poland and Czechoslovakia respectively. The latter are not exactly the work of the Conference, but they arise out of it. Documents of this importance must be examined in detail. That, fortunately, is not as formidable as it sounds, for Germany's four Arbitration Treaties are virtually identical, and so are France's treaties with Poland and Czechoslovakia. What matters primarily is the Security Pact and the arbitration system created by the four German treaties. The two are mutually interdependent, for if Germany, France and Belgium are to agree, as they have done, that they will in no case resort to war against each other, there must clearly be created some alternative to war as a method of settling disputes that may arise between them. It may be said that the Covenant of the League of Nations already provides such a system; that is substantially true, nor does it appear that the new Arbitration Treaties vary the provisions of the Covenant in any important particular. Since, however, Germany is not yet a member of the League, though she must become so before the Locarno Agreements can enter into effect, there was an advantage in making the machinery of arbitration clear beyond all doubt.

The Security Pact fulfils anticipations. Germany, Bel-

gium and France undertake in no case to resort to war against each other, and to maintain the *status quo* as regards both Germany's Western frontiers and the demilitarised zone created by the Treaty of Versailles. In the case of an alleged violation of this undertaking, the matter will come at once before the Council of the League, and if the Council declares that a violation has taken place, the guaranteeing Powers—i.e., Great Britain and Italy—will immediately come to the assistance of the Power that has suffered through the violation. That is going beyond the obligations imposed in any case by Article XVI. of the Covenant, in that it pledges in advance that military help will be given. In the case of what is termed "a flagrant violation," consisting of invasion or aggression, or even of the assembly of armed forces in the demilitarised zone, the guaranteeing Powers undertake to take immediate action without waiting for a decision by the League Council. Each guarantor decides for himself whether a *casus foederis* has arisen, but he must fall into line with the decision of the League Council as soon as that decision has been taken.

This agreement involves, as has been said, the creation of machinery for the peaceful settlement of all disputes. That is furnished by the arbitration treaties to be concluded by Germany with France and Belgium on the West and with Poland and Czechoslovakia on the East. Under those treaties disputes are divided as usual into the two categories of justiciable and non-justiciable. The former are to be settled finally either by the Permanent Court of International Justice or by an Arbitral Tribunal constituted under the Hague Agreements of 1907, though if the two parties prefer, they may have recourse first to the good offices of a Permanent Conciliation Commission. The important point, in any case, is that the decision in justiciable disputes, whether it be accepted voluntarily as the result of the Conciliation Commission's recommendations or imposed by the Permanent Court or an Arbitral Tribunal, is final and binding. Non-justiciable disputes go in all cases before the Permanent Conciliation Commission, and if its findings are not accepted the matter is handed on to the League of Nations Council to be dealt with under Article XV. of the Covenant.

Here a certain slight obscurity arises. Under Article XV. a settlement is only binding if it is supported by the unanimous vote of all Council members other than the parties to the dispute. If there is a division of opinion in the Council, the disputants are at liberty to go to war after waiting for a further interval of three months. Germany, France, and Belgium, however, are in no case free to go to war, for under the Security Pact they have bound themselves to settle every dispute by peaceful means, and in no case to resort to war with one another. The procedure specified in Article XV. must, therefore, somehow provide a final settlement—presumably, in case of need, on the basis of a majority vote of the Council. It is to be noted that in the case of the disputes between Germany and her Eastern neighbours the loophole for war remains definitely open, for if the Council fails to achieve unanimity, there is no Security Pact in the East which pledges the parties not to resort to war. This loophole, indeed, is to a large extent the basis of the separate Treaties concluded by France with Poland and Czechoslovakia, for the essence of that agreement is that the parties concerned undertake to support one another to the fullest extent under Article XVI. of the Covenant in cases where the League Council has declared a violation of undertakings at their expense, and also to give one another the fullest support in the event of freedom of action being established by the failure of the Council to reach a unanimous decision on a dispute. Students of these documents will recognise that in many ways they have borrowed from the ideas of the Geneva Protocol, and that the discussions of last autumn have played a large part in the evolution of the Pact.

Moreover, so far as the League of Nations is concerned, its most ardent supporters cannot claim that due respect has not been paid it in the Locarno Agreement. Reference to the League is introduced at every conceivable point, all

non-justiciable disputes come ultimately to it, failing an earlier settlement elsewhere, and it is on the decision of the Council that the operation of the guarantees in the Security Pact depends. More important than that is the provision embodied first in the Security Pact and repeated in the Arbitration Treaties, that these several agreements enter into force "as soon as all the ratifications have been deposited and Germany has become a member of the League of Nations." Germany's application for membership has not yet been made, nor is she even formally committed to it. Various difficulties in this regard were discussed at Locarno, and one of them, that regarding Article XVI., was to all appearance disposed of by an unexpectedly simple formula lifted bodily out of the text of the Geneva Protocol of 1924. The Allied Powers have, of course, no authority to give undertakings regarding any amendment of the Covenant. What they have done, therefore, is to express their view that the obligations under Article XVI. "must be understood to mean that each State member of the League is bound to co-operate loyally and effectively in support of the Covenant, and in response to any act of aggression, to an extent which is compatible with its military situation and takes its geographical position into account." That Germany's scruples regarding Article XVI. should be so easily laid to rest appears at first sight surprising. The explanation, no doubt, is that the formula adopted would give her moral justification for exercising the technical right, which as a permanent member of the Council she would in any case possess, to veto proposals for any scheme of military operations in exercise of the sanctions of the League which would in her view imperil her national security. It is to be observed, finally, that, following the precedent of the abortive Guarantee Treaty of 1919 between Great Britain, the United States, and France, the Locarno Agreements are to remain in operation until the League Council (in the present instance by a two-thirds majority) shall decide that the League itself provides sufficient security to make the Agreements superfluous.

Broadly speaking, therefore, the Locarno conversations have achieved all the objects the principal negotiators originally set before them. They have, so far as any paper agreements can secure this, banished all danger of war between Germany and her western neighbours. They have reduced to a minimum the danger of war between Germany on the one hand and Poland and Czechoslovakia on the other, and they have done this without restricting any of the rights, or imperilling any of the frontiers, conferred on the new States by the Treaty of Versailles. They have, finally, and most important of all, provided for Germany's entry into the League of Nations. These, assuming that no internal difficulties in Germany prevent the signature and ratification of the agreements in due course, are definite and immediate achievements.

But the Locarno negotiators have looked a little further into the future than has yet been generally realised. The so-called Final Protocol, which has been definitely signed (whereas the other documents are so far only initialled), associates all the signatories in the conviction that the entry into force of the agreements will not only assist in the solution of many political and economic problems, "but also will hasten the disarmament provided for in Article VIII. of the Covenant of the League of Nations." It is added specifically that the signatories "undertake to give their sincere co-operation to the work relating to disarmament already undertaken by the League of Nations, and to seek the realisation thereof in a general agreement." These phrases underline, by what must have been a perfectly conscious intention, the importance of the decisions taken at the recent Assembly of the League regarding the beginning of preliminary studies into disarmament and the summoning of an International Economic Conference. They can hardly fail at the same time to have their bearing on intentions of doubtful wisdom attributed to President Coolidge to call a further Disarmament Conference in America. So far as land armaments, at any rate, are concerned, this is primarily a European problem, and the *Baltimore Sun* would appear to be well advised in its comment that as a result of the Locarno discussions "the initiative has passed from Washington to Geneva."

EUPHEMIA AND CHLOE.

WHEN Mr Joseph Chamberlain launched his Tariff Reform campaign in the early years of the century he attributed his change of opinion to the tonic air of the illimitable veldt, which had freed his mind from parochial thoughts and filled him with a great enthusiasm for a unified self-supporting Empire. In a much-advertised phrase he implored his fellow-countrymen to think Imperially, to discard their old economic beliefs and submit to sacrifices in the great cause of Imperial Preference. In the fervour of this new gospel he started out on his tour of Great Britain, determined, wherever he went and to whomsoever he spoke, to know nothing save the British Empire. But as he progressed in his journeyings and spoke first in this town and then in that his orator's sense soon told him that the Imperial vision was not what his audience wanted. The policy of preference, no doubt, was all very well, very suitable for a glowing peroration and an occasional purple passage, but the food that his supporters wanted was something far more solid—a good, strong tariff to keep the foreigner out of the home market. The manufacturers of the Medway, for politeness' sake, were ready to applaud ten minutes' rhetoric on preference, but their real, undisguised love was for a tax on Belgian cement; the steel manufacturers of the North wanted to hear about the coming duty on German steel; the men of South Wales about what was proposed for tinplate bars; the weavers of Yorkshire about woollen piece-goods. And so the Imperial banner which had been held so high when the campaign started quickly found its way to the rear of the procession, and its place was taken by a new banner inscribed with a shifting but always direct appeal to the pockets of the locality. For respectability's sake the Imperial idea was never dropped, but there was no doubt where the driving power and the passion came from. To quote the old poem:—

Euphemia served to grace his measure,
But Chloe was his real flame.

Twenty years afterwards Euphemia and Chloe are still at their appointed tasks, and the protectionist still makes his respectful bow to Imperial Euphemia, but reserves the hard work of serious but less ostentatious courtship for his Chloe.

If, for example, some innocent observer, not knowing the ways of the protectionist, had been present at a recent meeting in the City, and had listened to Mr Amery debating Imperial Preference, he would have heard of the imperative duty of fostering by preference those unlimited resources of the British Empire which must in future stand to us in the stead of our old European markets; he would have been stirred by appeals to British sentiment and the British flag, and by references to the "declared and consistent fiscal policy" of the Dominions as contrasted with the selfish fiscal policy of other countries determined to keep their markets to themselves.

A very different vision would have been opened up to this innocent observer if, after listening to Mr Amery's high-flown but inaccurate rhetoric, he had been taken to one of those quiet rooms in a Government building where the solid work of the Imperial protectionist is carried on in the Safeguarding of Industries Committees. He would find there nothing said of the Imperial idea, nothing of the great Dominions bound by preference to their Mother Country, nothing but an occasional perfunctory reference to the general good of the community. But he would hear a great deal of hard business argument put forward by paid advocates on behalf of manufacturers or merchants whose pockets stand to grow heavier or lighter according to the size of the Protection granted. If he had drifted, for instance, into the Conference Room at the Board of Education, he would have found, probably, no other member of the general public, but a collection of brush manufacturers represented by counsel pleading for a 75 per cent. import duty on all foreign tooth brushes, and a 45 per cent. duty on all other foreign brushes. He would have found another set of brush merchants, also represented by counsel, pleading against the duty—the manufacturers' counsel arguing one way

because that way suited the pockets of his clients, the merchants' counsel arguing the other way because that suited the pockets of his clients. The great Imperial idea was not represented by counsel; nor was the general community or the consumer who will have to pay from 45 to 75 per cent. more for his hair brushes and his tooth brushes. It was a tug-of-war between two interests in the same trade, each pulling for its own pocket, with Lord Birkenhead shouting encouragement to the Tariff team.

In the daily Press little or nothing is said of these Safeguarding Committees, with their paid counsel and their squabbling interests, and, indeed, the proceedings are not always open to the public, for some of the evidence is taken *in camera*. But in those committee-rooms to which the public never penetrates, and in which the consumer's case is never put unless it happens to coincide with the interests of some section of the trade, the future of our foreign commerce is being determined. Any economic argument touching the general interests of the country or the nature of exchange is ruled out as irrelevant, and trade by trade, on the demand of interested manufacturers pleading through briefed counsel, Great Britain is being turned into a protectionist country.

From the nature of the proceedings in these committees, from the scandal of Nottingham lace, from the speeches of Lord Birkenhead, and from the peculiar replies given in cross-examination by some of the manufacturer witnesses, we may fairly suspect that some of the committees themselves are only camouflage, and that the duty has been decided on before the case is opened. The country may wake up to find that, having restricted itself by the most definite pledges, and having ruled out Protection and Free Trade as an irrelevant issue at the election, the Government is introducing a general tariff piecemeal, and going through the farce of these committees for appearance' sake after its decision has been taken. Starting with the great idea of Empire, the movement has descended, as Free Traders have always predicted that it would, into a sordid scramble of one trade after another to exact higher prices from the consumer and raise the cost of living to the community. Speaking of the Dominion side of preference, the *Melbourne Argus* (quoted by Mr Harold Cox) said recently:—

The thing is a mockery. It is worse; for we have used the cry of preference in order to injure the country we pretend to help. We hail the concessions made to us with enthusiastic professions of gratitude, and proceed immediately to remodel our tariff with sole regard to the supposed interests of the Australian manufacturer.

In England, as in Australia, once the door is opened to protection, the manufacturers, with their trade associations, their paid counsel and their political field, can be relied on to make short work of such abstractions as the Imperial idea and the good of the community.

THE CANADIAN ELECTIONS.

(BY AN OTTAWA CORRESPONDENT).

THE election battle is now fairly joined in Canada, and with polling day less than a month distant, a flood of platform oratory and Press propaganda has been let loose over the land. Time was when a General Election excited intense popular interest and partisan enthusiasm; but to-day even in the remoter settlements politics are faced with keen competition from the "movie" and the "radio," and veteran campaigners bewail what they regard as the dangerous apathy of the electorate. Probably if there were more serious issues at stake, and more spectacular figures leading the three parties, this indifference would be banished. Now that the Progressives have abandoned their original ambitions, and are restricting their activities to the prairie provinces and a few rural districts of Ontario, the main contest will be between the Liberals and Conservatives, who provide about four-fifths of the 460 odd candidates now in the field for the 245 Federal seats.

Mr Mackenzie King, the Liberal Premier, makes the chief ground of his appeal the need for a clear Liberal majority, which will enable him to deal with a series of paramount national problems now confronting the country; in this category he places transportation, immigration, the fiscal issue, and the reform of the Senate. For the railway problem, which is by far the most important, Mr King would find a panacea in restricted competition between the Canadian Pacific and Canadian National systems, and would promote by legislation, if necessary, regulated co-operation between them which would reduce the present wasteful duplication of services; moreover, he has pronounced himself definitely against any plan of amalgamation, either under private or public ownership. In regard to the kindred problem of marine transportation, Mr King inveighs at intervals against the North Atlantic Steamship Combine, and vows to persevere with his crusade against its practices, but the fiasco of his first adventure in this direction with the late Sir William Petersen is fresh in the minds of the electorate. On the fiscal issue, Mr King defends what he calls the "common sense tariff" established by his Ministry, and promises to maintain it.

Concerning immigration, he proposes closer co-operation between the Government and the railways, but there is a prevalent impression that such co-operation has been quite close in the past, and has been directed to the enhancement of the revenues of shipping and railway interests to a degree that was quite unnecessary. In his campaign against the Senate, Mr King is faced with formidable obstacles, for Liberal opinion in the Province of Quebec, whose support is indispensable to his fortunes, is resolute against the changes in the British North America Act, which must be accomplished for any effective reform. He makes a plea that the voters should keep him in power long enough to nominate, as Conservative Senators die off, Liberal successors who will be firmly pledged to reform, and thereby secure in time a reformative majority. On all the major issues, therefore, the Liberal programme is rather unsatisfying, and Ministers are trying to buttress their fortunes by the usual crop of pledges to construct fresh public works. New and expensive harbour works are being commenced in St. John, and the Prime Minister has pledged himself that if the West will elect sufficient Liberals to keep him in office he will complete the unfinished Hudson's Bay railway. This pledge may cost him votes in the East, for public opinion in Montreal and Toronto is solidly against the development of this route, and even in the West, where the farmers of Alberta and Eastern Saskatchewan are now more interested in the Vancouver-Panama outlet, opinion is sharply divided. Mr Meighen also promises its completion, provided it will not cost more than three million dollars.

The Conservative leader has been strenuously endeavouring to make the election turn upon the fiscal issue, and to secure converts for his view that a higher tariff will create a larger volume of domestic employment, check the southward exodus to the United States, and provide scope for the satisfactory settlement of more immigrants. He does not go so far as his chief ally in Quebec, Mr Patenaude, who is openly advocating the abolition of the British Preference, but he pronounces himself in favour of a fresh preferential bargain which would bring some reciprocal concessions from Britain. The attacks upon the British Preference are not confined to any one party, for a leading Protectionist-Liberal, Mr W. B. Euler, who sat in the last House, is openly urging its elimination, and some Quebec Liberals are taking the same line. Undoubtedly, the recent fiscal policy of the United States has generated a strong feeling of resentment in Canada, and creates an atmosphere favourable to Mr Meighen's policy of tariff reprisals. But on the other hand the steady penetration of American capital into the industrial life of Canada tends to destroy the old association of local protectionism with patriotism, and to-day anti-protectionist sentiment is almost as strong in the Maritime Provinces as on the prairies. Even if Mr. Meighen were returned to power with a large majority, he would discover that any attempt at a serious increase in the tariff

would be met by a swift counter stroke from the West in the shape of a movement for the formation of a separate Dominion endowed with control of its own fiscal policy, and the repeal of the British Preference would certainly alienate the British-born vote, which, since 1917, has been largely on the Conservative side. Mr Meighen has also committed himself to an aggressive immigration policy, and promises to enforce drastic economies which will make possible a balanced budget and a reduction of taxation. On the railway issue Mr Meighen is no more definite than Mr King; he is opposed to any merger plan, and promises to stop all further capital expenditures on the national system. He also proposes to carry protectionism to its logical conclusion by establishing embargoes on the export of such commodities as pulpwood, asbestos, and hydro-electric power, subject to fair treatment for foreign interests until they adjust themselves to the new conditions.

The Progressives' campaign, which made a very feeble beginning, is now gathering more strength. Their first solution for the railway problem is an immediate revaluation of the properties embraced on the Canadian National system, and the reduction of its capital to a manageable basis; if an amalgamation of the two systems becomes inevitable, they insist that the principle of public ownership must be applied. In regard to the tariff, the Progressives assert that as both the old parties are completely under the dominance of the Protectionist interests of the East, they are the only honest exponents of fiscal reform, and they demand as close an approximation to free trade as the revenues of the country will permit. They also favour a policy of selective immigration, and a rigid curtailment of public expenditures. Their leader, Mr Forke, scoffs at Mr King's proposals for the reform of the Senate, and advocates a purely elective Upper Chamber. The Labour Party, always weak in Canada, will only nominate candidates in about a dozen urban seats.

Clearly, the great French-Canadian province of Quebec is the decisive arena in the present struggle. At present the Liberals hold every one of its 65 seats, and unless the Conservatives can make very substantial gains among them, their hopes of a clear majority at Ottawa are negligible. When it was announced that Mr E. L. Patenaude, K.C., of Montreal, an able French-Canadian politician who had quarrelled with his party on the conscription issue in 1917, and resigned his seat in the Borden Government, would accept a Federal nomination, it was thought that the adhesion of such a formidable lieutenant had materially improved the Conservative prospects in Quebec, the weakest point in their lines. In his opening speech, Mr Patenaude declared that he was as independent of Mr Meighen as of Mr King. At present in Quebec most of the anti-Government candidates are being designated as "Patenaude" candidates. Meanwhile, the situation in Quebec has been suddenly complicated by the dramatic return of Henri Bourassa. Nearly 30 years ago Bourassa, at the age of 29, was elected to the Federal Parliament as a Liberal, and his youth did not prevent him from being one of its brightest ornaments, but a quarrel with Laurier over Canada's participation in the Boer War, which he opposed, led to his retirement from Federal politics. Subsequently he established a Nationalist Party to oppose Laurier's plans for a Canadian navy, and as its leader, his voice and pen took a large part in the downfall of the Liberals in 1911. He held for a time his seat in the Quebec Legislature, but in recent years he has devoted all his energies to his paper, *Le Devoir*, which he has made an influential organ of opinion. In point of sheer intellectual equipment he has no equal in the world of North American politics, for not only is he a first-rate speaker in both the French and English tongues, but he is a very brilliant and effective journalist. Although he has always been a frank advocate of Canadian independence, his views have always commanded respectful attention in the English-speaking provinces of Canada, and a few years ago, when the present politicians of Quebec were viciously abusing Britain for her post-war policy towards France, he warmly defended it. He now announces his intention of contesting his old constituency of Labelle as an Independent, and it is reasonably certain that he will be elected.

While he has no word of praise for Mr Mackenzie King, he is very definitely opposed to Mr Meighen on account of his Imperial proclivities, and intimates that if his vote were able to settle the choice of Prime Minister, he would give it to Mr King rather than Mr Meighen. So far, all the leaders, for different reasons, have sedulously avoided any discussion of Imperial relations and international problems, but Mr Bourassa, who knows more about them than anybody else in Canada, will certainly force them to the front.

Political prophecy is a dangerous art, and, with polling-day still, at the time of writing, a month distant, its value is highly dubious. It will, therefore, suffice to quote a forecast of the result, compiled by competent experts for the directors of one of the largest business organisations in Canada, and now published by the *Financial Post* of Toronto. This allows the Conservatives heavy gains in the Maritime Provinces, Ontario and Manitoba, and gives them 16 out of the 65 Quebec seats; it estimates a loss of roughly 35 seats each for the Liberals and Progressives, leaving their respective totals at 88 and 33. The outcome would be a bare Conservative majority of 3 over a combination of their opponents, and this, while it would provide a basis for taking office, could not guarantee any security of tenure. A fortnight ago it would have been possible to express agreement with this estimate, but the intervention of Mr Bourassa and the dissensions in the Conservative party in Quebec make it improbable that it will gain more than 10 seats in that province, and will react against their fortunes elsewhere. The political pundits at Ottawa are, therefore, not now disposed to give the Conservatives more than between 100 and 110 seats, and as the Government strength would in that event probably be reduced to about 95, or not much more than one-third of the Federal House, a situation of extreme delicacy and interest would emerge.

THE CHINESE TARIFF CONFERENCE.—I.

(BY A SHANGHAI CORRESPONDENT.)

By the time this appears in print the Tariff Conference in Peking, provided there is no outbreak of civil war in the meanwhile, will have begun, or be on the eve of beginning, its sessions. The British Commission—which consists of H.M. Minister, Sir Ronald Macleay, Lt.-Col. Peel, and Mr K. D. Stewart, of the Far Eastern Section of the Manchester Chamber of Commerce—left England on September 19, and the representatives of the other Treaty Powers are, at the time of writing, also on the way. The Conference is one involving political, commercial, and financial issues of considerable magnitude, and the aim of this and a succeeding article is to make them clear.

Politically—and the importance of the occasion cannot be properly appreciated without its political background—the Conference represents a postponed chapter of the Washington Conference, one of the objects of which was to remove causes of friction and unrest in the Pacific. The huge coastal line and territory of China, the peaceful development of its immense resources, the content and quiescence of its enormous population, together form one of the chief factors in the future of the Pacific, which, when the Washington Conference met, looked ominous. For during the European war Japan had obtained control of one of the most important parts of the coast of China, the Shantung promontory, and had sought to obtain semi-political and economic control in other parts of the country. Moreover, for some years past China's internal affairs had been very disturbed and unsatisfactory from the point of view both of the nations desirous of extending their commercial relations with her and of the Chinese people themselves.

The Washington Conference set itself to deal with these facts. It helped to settle the Shantung question, evolved a four-power Treaty in place of the Anglo-Japanese alliance, reaffirmed the principle of the "open door" in China, and effected an agreement between nine

Powers having treaty relations with China in respect of its maritime Customs revenue, the most promising avenue of approach to the problems of Chinese finance. The agreement should have been given effect to within three months from its ratification, which was expected to follow as a matter of course. In fact, its ratification was delayed by France, who developed a long controversy with China regarding payment in gold of the Boxer indemnity. Thus the tariff conference, for which the agreement provided, and in the terms of which it is now meeting, was postponed.

Quotation of part of these terms will help to explain how China's internal affairs are related through her tariff to the future of the Pacific, and to clarify the commercial and financial issues with which our representatives are about to deal. The Nine-Power Customs Treaty opens with the words: "With a view to increasing the revenues of the Chinese Government," and goes on in Article 2 to say:—

Steps shall be taken through a special conference to prepare the way for the speedy abolition of *likin* and for the fulfilment of the other conditions laid down in Article VIII. of the Treaty of September 5, 1902 (*i.e.*, the Mackay Treaty). The special conference shall consider the interim provisions to be applied prior to the abolition of *likin*, and it shall authorise the levying of a surtax on dutiable imports as from such date and for such purposes and subject to such conditions as it may determine.

Critics of the Washington Conference frequently declare that in so far as it attributed the unsatisfactory internal state of China to lack of revenue, it misunderstood the situation. They forget, or are unaware of, the fact that, as far as the British delegation was concerned, the Conference had at its disposal the advice and expert knowledge of the late Sir John Jordan, who had been for 14 years H.M. Minister in Peking, and was intimately acquainted with every aspect of the question. He certainly never subscribed to the view that insufficient financial resources were responsible for China's ills; he did, however, realise that one of their chief causes lay in the steadily diminishing proportion of the revenues which Peking was receiving, and he saw that, if the diminution continued, both the central administration of the country and its ability to meet its foreign financial obligations must grow steadily weaker. The promoters of the Washington Conference were not slow to appreciate that the ultimate result of such weakening might be an international *saue qui peut* likely to defeat their whole object, and accordingly it was agreed, in a treaty which certainly might have been better worded, to try through the Customs revenue to stop administrative disintegration. That and not a misinformed belief in the efficacy of revenue as such (as the critics so freely assert) is the real meaning of the treaty, and the purpose for which the tariff conference in Peking was arranged.

Considered from a commercial standpoint, the business of the Conference (assuming that it sticks to the agenda and does not allow itself to be diverted from it by recent developments, which have reinforced China's declared intention of renewing the claims made at Washington for tariff autonomy) will be to deal with the effects of disintegration on trade, which is suffering from a rapidly increasing number of taxes levied by provincial authorities in defiance of Central Government undertakings. Nearly 25 years ago the Chinese Government recognised in the Mackay Treaty (which was never given effect) "that the system of levying *likin* and other dues on goods at the place of production, in transit, and at destination impedes the free circulation of commodities and injures the interests of trade." It agreed "to discard completely those means of raising revenue," and the British Government, in return, consented to a surtax on imports of 7½ per cent. in excess of the tariff rate (5 per cent.), and a surtax of 2½ per cent., in addition to the export duty on Chinese produce (also 5 per cent.). The treaty stated:—

It is clearly understood that after *likin* barriers and other stations for taxing goods in transit have been removed, no attempt shall be made to revive them in any form or under any pretext whatever.....that payment of the import duty and surtax shall secure for foreign imports, whether in the hands of Chinese or non-Chinese subjects, in original packages or otherwise, complete immunity from all other taxation, examination or delay.

Even in 1902 the value of such an assurance by the Central Government in respect of what was primarily a pro-

vincial government matter was doubtful; to-day, it would literally be nil. Accordingly, the Conference is confronted with the task either of making arrangements for the reduction of inland taxation of trade with the provinces direct, or of coming to such an arrangement with Peking as will be assured of provincial consent, or of abolishing certain taxes levied by the Maritime Customs which are not maritime at all, but inland, and indistinguishable from *likin*, namely, the 5 per cent. so-called export duty on native produce shipped from one native port to another, and the 2½ per cent. duty, known as coast trade duty, which is levied additionally on such produce at the port of destination.

To examine the respective merits of these different courses would require a special article. Suffice it for the time being to say that the British Chamber of Commerce in China, which is to be represented at the Tariff Conference, considers that the third course offers the best approach to the problem, partly because, where possible, trade would abandon tax-ridden in favour of tax-free routes; partly because, having given up taxing internal trade itself, the Central Government would be in a better position to adjure the provinces to do the same; and partly because initiation of fiscal reform by this method would obviate the chief difficulty presented under present conditions by the other two—namely, that of providing provincial exchequers with some substitute for the revenue with which they would be parting.

This consideration brings us to the financial issues with which the Conference will have to deal. And as a further article will be devoted to a full examination of them, it is here only necessary to say that China's unsecured debts total not less than 745 million dollars, of which about 495 millions (including those of the Ministry of Communications) represent foreign, and about 250 millions domestic debt; that the revenues in which Peking is in receipt are insufficient to enable her to meet these obligations; that it has become necessary, accordingly, to find fresh revenue; that the only one in sight is the Customs surtax agreed upon at Washington, which, it is calculated, will bring in about \$30,000,000 a year; and that if this money is used for debt it will not be available for any large reduction of internal taxation, a single item of which, *likin*, produced in 1922 (the last year for which figures are available) a provincial revenue of about \$47,000,000.

THE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

DURING the past quarter cotton spinners and manufacturers in Lancashire have experienced a considerable inquiry, and now and again business has shown some expansion. Buying movements, however, have not been maintained for any lengthy period, and it has been extremely difficult for producers to improve their position. A real revival of demand has been held back by the tendency of prices to ease, and merchants have been afraid to commit themselves far ahead owing to the probability of further depreciation in values. The restriction of credit has also been responsible for the absence of enterprise. As is usual during this period of the year, production has been irregular as a result of the holiday stoppages in industrial centres. Speaking generally, the position of spinners and manufacturers is not any better than three months ago, and certain firms are worse off. Quite a number of cases of financial difficulties have been reported, and there are numerous complaints of accounts not being paid promptly.

Important developments have taken place relating to future supplies of raw cotton. With regard to the American staple, there has been considerable discussion in London, and the fortnightly statistics from Washington, and the fortnightly statistics have led to much confusion. According to the latest information, however, there is every probability of a big growth, which, with not much likelihood even at the cheaper prices of cotton in the United States have bought fairly well, but most Lancashire spinners have purchased with caution, and their policy

has been justified by recent developments. On June 30th the quotation for middling American cotton on the spot in Liverpool was 13.93d. Wide fluctuations occurred during July with a slightly easier tendency in values, the figure on the 31st being 13.53d. The downward movement continued during August, the quotation on the 31st being 12.25d. Early in September there was an advance to 13.63d on the 17th, but since then there has been a substantial decline to 12.72d on September 30th, and 11.43d on Wednesday last (October 21st). Many irregular changes have occurred in the price of Egyptian cotton, but values have favoured buyers. The quotation for fully good fair Sakellaridis on the spot in Liverpool on June 30th was 32.30d, the figure on July 31st being 32.45d. There was a fair drop in August to 28.15d on the 31st, while the price on September 30th was 28.00d. On Wednesday last (October 21st) the quotation was 23.60d. There is every promise of a substantial output of Egyptian cotton this season. The growth last year was the biggest for ten years back, and it is likely that in this season the production will show a further increase, most of the estimates centring round 7,500,000 cantars.

Throughout the past quarter manufacturers of piece-goods have not been short of inquiry, and there has been plenty of evidence for the belief that dealers in many distributing centres abroad are in greater need of larger supplies. The bulk of the trade, however, has been in limited quantities, and, speaking relatively, some of the smaller foreign markets have done better than the big outlets. Operations for India have been very irregular. Now and again fairly substantial contracts have been put through in light bleaching descriptions, but demand of importance in grey staples has failed to mature, with the result that makers have been hungry sellers, and prepared to accept very poor prices. The monsoon season has been generally successful, and a favourable feature is that most of the demand is for quick shipment, which confirms the opinion held in Manchester, that stocks, especially in the up-country districts, are comparatively low. Considering the disturbed state of affairs in China, more business has been done than might have been expected. Quite an encouraging turnover has taken place in bleached shirtings, and some producers of fancies have done fairly well. On the other hand, grey shirtings have attracted very little attention. The auction sales in Shanghai have now been suspended for four months, but it is likely that they will be restarted within the next week or two. Some of the minor outlets of the Far East, such as Singapore and Java, have given fairly healthy support from time to time. It has been a discouraging period for merchants with connections in the Near East. Owing to financial stringency exports have had to be postponed, and there are large quantities of goods waiting in Manchester for improved conditions on the other side. It is expected that Egypt will be better before very long, but some of the other outlets in that part of the world are not at all satisfactory. An event of importance has been the extensive buying, especially in finishing and printing qualities, for the Continent, and a rather striking trade has been done for Germany, Switzerland, and Russia. Now and again useful support has been given by shippers to the outlets of Central and South America, but business has been patchy. The home trade has done fairly well. Steady clearances have taken place in the retail and wholesale establishments, and most departments are looking forward to a fairly good trade this winter, despite the depression in many of our leading industries. Unemployment in Lancashire weaving towns is still a serious factor, and probably cloth production is not more than 80 per cent. of the full capacity of the machinery. If there should be a sudden trade revival, numerous employers will be handicapped by a shortage of workpeople.

The following is a comparative table of exports of cotton piece goods from the United Kingdom, the figures being given for the nine months, September 30th, in each year:—

	Yards.	£
1913	5,350,278,900	73,659,119
	Square Yards.	
1923	3,097,216,600	104,072,046
1924	3,341,388,800	114,899,318
1925	3,359,041,900	115,915,823

Although many spinning companies during the past quarter have published better trading results than at the same time last year, the general situation leaves much to be desired, and it is still a struggle for most yarn producers to obtain remunerative rates for their products. The mills using American cotton have continued to curtail output by stopping the machinery for 8½ hours per week, which is equal to one day. In addition to this organised short time, the Masters' Federation has recommended an extra stoppage of a full week. This reduced production has been quite sufficient to meet the needs of customers, but, on the whole, stocks have not increased. Purchases of twist and weft have mostly been of a hand-to-mouth character, and now and again there have been indications of some cloth manufacturers adopting a policy of going short. It may be said that throughout the whole of the industry bearish sentiment has prevailed during the past three months. In the Egyptian yarn section there has been an improvement during the last few weeks. Users have bought on a freer scale, and producers have experienced relief. On the whole, the conditions in this branch are rather more favourable than three months ago, and there is comparatively little curtailment of production in Bolton and district. Much uncertainty exists, however, as to the future level of values. In shipping yarns the feature of interest has been the big contracts for Russia. Some firms have not liked the financial arrangements in connection with this business, but others have taken the risk, the orders secured being very welcome. More trade has also been done for Germany. Operations for India have not been important, and spinners are feeling to a greater extent than ever the competition of Japan.

The following is a comparative table of exports of yarn from the United Kingdom, the figures being given for the nine months ended September in each year:—

	Lbs.	£
1913	154,761,700	11,022,055
1923	104,530,000	15,263,209
1924	123,319,700	20,836,107
1925	139,821,500	23,193,162

With regard to prospects, the point of interest is that prices for American cotton are cheaper than for three and a-half years back. This development should have a good effect upon the future of the industry. It cannot be said too often that Lancashire's customers for the most part are the poorest people in the world, and there is always more probability of an extensive turnover at low rates than when values are on a comparatively high level. In the circumstances, spinners and manufacturers are more hopeful than for a long time back. It remains to be seen whether sufficient trade will come along within the next month or two to provide work for all the spindles and looms, but freer buying in yarn and cloth when rates are stabilised seems to be assured. Fortunately, stocks of manufactured goods are not heavy,

and it is well known that the up-country districts in India and China are in need of larger supplies. From the point of view of merchants, it is important that they should start buying at the bottom of the market, and there is bound to be a certain amount of hesitation in placing orders until there is ground for believing that prices are safe. Spinners are now assured of plentiful supplies of raw material during the next twelve months, and prices are more reasonable than for several years past. The financing of trade on a large scale is still a serious problem, and this factor may prevent a big forward movement. It can be said, however, that the general outlook is healthier, and Lancashire traders will be very disappointed if industrial conditions are not distinctly more favourable early next year.

THE WORLD'S WHEAT POSITION.

(BY A CORRESPONDENT.)

[Our correspondent has omitted Russia from his survey, on the ground that wheat exports from the Soviet Union in the autumn are usually followed by repurchases in the spring, the two movements tending to cancel each other. This view finds numerous supporters in the market, but another section of opinion holds that, despite the imperfections of the distributive system, the railways and the waterways of Russia, the size of this year's harvest suggests the possibility of an excess of exports during 1925-26. The Food Research Institute of Stanford University, California, for instance, states in its September number of "Wheat Studies" that although final conclusions cannot be reached at this stage, a substantial export appears to be indicated. "The Russian surplus promises to be relatively more important as a factor in the international wheat market than in any year since the war, and the uncertainty concerning its size will probably be an unsettling factor for several months."]]

THE areas devoted to the growth of wheat may be put for the two hemispheres at 200 million acres, which with reasonably good cultivation should give us abundance even in a poor year, and superabundance in an average season. Owing, moreover, to the vast extent of continents over which the crop is grown, the world culture of the cereal erects itself into a species of assurance, and the vast majority of years are in effect average years. In the present season the deficiency in the United States virtually balances the over-acreage yield in Canada, and reference to bygone years shows analogous offsets and compensations; 1919, which afflicted both Europe and Asia with a disastrous deficiency, presented fine surpluses to Argentina and to the United States; in this year France had her smallest pasture crop and the States their largest.

The Great Powers, so far as wheat areas go, are those devoting over 10 million acres to wheat, and are France, Italy, Canada, the United States, India, China, Australia, and Argentina; in millions of acres, 14, 11, 22, 54, 32, 20, 11, and 18. The Chinese estimate is, of course, empirical, but it cannot be safely omitted, because the tendency of China to devote wheat areas to other presumably more profitable crops is manifest, and Chinese imports are likely to become a trade incident materially affecting the Canadian and Australian export trade.

Lands which cultivate between 2 and 10 million acres of wheat are Spain, nearly 10 millions; Roumania, 8 millions; French North African Possessions and Protectorates, 7 millions; the old Austro-Hungarian Empire, 6 millions; South-Eastern Europe, 5 millions; Germany, 4 millions; and Poland, 3 millions. The regions of Asia Minor, Iraq, and Persia constitute, naturally, a favourable wheat area, but it is doubtful if they at present devote more than 3 million acres to its culture. Countries which devote small areas to wheat, but raise a large yield to the acre, are Great Britain, 1½ million acres; Belgium, 376,000; Holland, 130,000; Denmark, 150,000; Sweden, 363,000; and New Zealand, 167,000. The Japanese devote 1,155,000 acres, the Egyptians 1,379,000, and the Chileans 1,400,000 acres to wheat; all may be called low medium producers.

The roughest of working equations of the world's wheat markets is that which assumes 200 million acres to be cultivated, and 500 million quarters to be grown. This would be 1,200 lbs to the acre, against 1,960 lbs for Great Britain and a ton in Denmark. Moderate as such an estimate may appear, it is almost certainly an exaggeration, and complaints of poor years are unduly frequent because expectation is built too high. The United States are

nothing if not progressive, and their farmers are always opening up virgin soil, yet it is doubtful if the mean production has risen beyond the 800 lbs per acre at which it stood 50 years ago. Canada shows a better agriculture, but cannot safely boast of more than 2 qrs, or 960 lbs, to the acre. A conservative estimate of world wheat production will not exceed 1,000 lbs to the acre, or 416,700,000 qrs (480 lbs). Adding in 20 million qrs for Chinese production, the world estimates of the famous London "Grain Shipping List" for the years since the war have been: 1919, 363 million qrs; 1920, 380 millions; 1921, 406 millions; 1922, 410 millions; 1923, 456 millions; and 1924, 415 millions. If we add to these figures the International Institute of Agriculture's preliminary 1925 estimate that this year's production exceeds that of 1924 by 20 million qrs, and reckon 1925 at 435 millions, we shall have a mean of not quite 410 millions for the seven post-war years.

The eight great wheat producers may be credited in millions of quarters with seven years' production as follows, unofficial estimates being marked with a star:—

	1919.	1920.	1921.	1922.	1923.	1924.	1925.
France	22	29	40	30	35	32	42
Italy	21	18	24	20	28	22	29
Canada	24	33	38	50	59	37	49
The U.S.A.	121	104	100	107	98	105	86
India	35	47	31	46	47	46	40
China	20*	20*	20*	20*	20*	20*	20*
Australia	10	18	16	13	16	19	21*
Argentina	20	24	25	26	25	23	25*
Total	273	293	294	309	327	304	312

The Australian and Argentine crops will not be reaped until Christmas, but their destinies are largely settled by Michaelmas, and the last fortnight's cables have been most encouraging. The Antipodean early summers are very settled weather periods in contrast with the Northern Hemisphere, wherein vicissitudes of early summer weather are frequent and important.

France is gradually winning her way back to her position in 1902 and 1903, in both of which years she produced 43 to 44 million qrs, and was more than self-supporting. The Italian progress is more decisive; in 1902 and 1903 Italy produced of wheat almost 16 million qrs. The King of Italy, who founded the International Institute of Agriculture at Rome just 20 years ago, has led his people in a policy of agricultural reconstruction, and, seeing that the crop yields of 1901-5 were miserably below the potentialities of Italy's soil and climate, one may rejoice without surprise at the progress made. Canada has not fully sustained the standard of 1922-3, but the area of virgin soil opened up every year materially tends to diminish, and Canadian farmers have not yet learnt either to practise rotations or to use fertilisers. The U.S.A. have the smallest crop for some years, but part of the decline is due to agricultural attention being called to crops deemed, at least for the time being, more profitable than wheat. American wheat areas fluctuate between 40 and 60 million acres in a manner which ministers greatly to speculation on the markets. For 1925 the area is 53,995,000 acres, a decline of two and a-half millions from 1924. China, as already remarked, is growing less wheat, though in the absence of returns we must keep to a nominal acreage. But in 1918 she was an exporter, and in 1924 imported over two million qrs, a movement clearly calling for observation. Australia gains ground as a wheat producer, despite dear labour and a long voyage, which means a high freight. Argentina likewise is a really progressive cultivator, keeping up large exports despite increasing home population. India makes no material progress, but does not lose ground. Second-space forbidding the citing of figures for other than the present year. Estimates are marked with a star, other returns are official. (1) Great Britain, 6,200,000 qrs; (2) Germany, 13,000,000 qrs; (3) Spain, 15,750,000 qrs; (4) Poland, 7,200,000 qrs; (5) Roumania, 9,000,000 qrs; (6) Japan, 3,450,000 qrs; and (7) Chile, 3,100,000 qrs. The very good yields per acre in Denmark, Holland, Belgium, and Sweden do not make those lands self-supporting, neither do the farmers of these countries make

any effort to feed the chief cities. Copenhagen, Amsterdam, Rotterdam, Antwerp, Brussels, and Stockholm are all as dependent on grain ships as are London and Liverpool. The national economy of the four countries in reality expresses itself in the saving of transport in the rural parishes, where the countryside feeds itself and grows wheat more or less as a garden crop, and a ton per acre is readily realised.

The question of productiveness is felt to be that to which economists are bound unceasingly to turn. Sir William Crookes and the Fellows of the Royal Society who advised the State in 1917 agreed in assuming that world wheat production was 13 bushels, or 780 lbs, per acre only. This was, of course, a "Safety First" calculation, the acceptance of a datum line which nobody could call too advanced. That that could be raised to 20 bushels or 1,360 lbs they showed to be undoubted. Assuming a world production in millions of lbs of 4,000, and its being raised to 6,150, they put the manure needed at 12 million tons, costing £144,000,000, and the value of the wheat gained (at only 4s per bushel) at £430,000,000. Thus potentialities on the present area and without infringement, therefore, on any other crop areas, amounted to a net gain of £286,000,000 yearly. The high estimate of the cost of fertilisers is of special value to-day, as nitrogen can be won from the air, an inexhaustible source of supply, at £12 per ton. The investment of money in raising the wheat yield of ill-cultivated lands would seem on these figures to be among the soundest of propositions.

In Great Britain, France, and Central Europe the raising of present comparative fertility into a still greater productiveness is a matter of fertilisers being cheap or dear. To-day they are remarkably cheap. With cereals showing an index number of 140 on pre-war figures, and living generally one of 157, the seven leading fertilisers showed an index number of 125 only, and contracts at this level can be made for an entire season's supply.

The fall in freights makes transport easy this season, and proves especially advantageous to the remoter consignors. Business in wheat before 1921 was so largely controlled for political purposes as to have little value as a trade record, but since then the returns have been as follow, the shipping years running from August 1st:—

	(Million Cwts.)			
	Aug. 1— July 31, 1921-2.	Aug. 1— July 31, 1922-3.	Aug. 1— July 31, 1923-4.	Aug. 1— July 31, 1924-5.
Exports	343	345	383	370
Imports	298	303	307	318

These are for all countries subscribing to the International Institute of Agriculture. The growth in the total turnover appeared till this time last season to be steady, but since then less grain has been exchanged between importing and exporting countries. Imports, it will be seen, are uniformly smaller than exports, a "mystery" of which the very prosaic explanation seems to be that some leading importers do not supply returns. China certainly does not, while Brazil, Central America, the West Indies, the tropical regions of Africa, and all Melanesia, are wheat and flour buyers very little interested in statistics of the trade. The exports of five leading wheat shippers have been as follows, figures representing breadstuffs (flour included), as hereafter mentioned:—

	(Million Cwts.)			
	1921-2.	1922-3.	1923-4.	1924-5.
Canada	90.56	138.00	176.00	88.17
The U.S.A.	119.06	89.38	44.42	118.07
Argentina	68.22	81.24	98.38	69.29
India	Forbidden.	15.80	10.41	20.41
Australia	58.46	18.74	36.76	61.18
Total	227.30	343.16	365.97	357.12

Freights were against Australian exports in 1922-23, an immense export trade in wool partly accounting for this. India has recovered very slowly from the extended control.

The importing countries form three Continental groups, with the British Isles as the standing "predominant partner" in the trade. The determined efforts of the Latin countries to become self-supporting are likely to increase the preponderance of Britain as a buyer. Returns of breadstuffs imported are:—

	(Million Cwts.)			
	1921-2.	1922-3.	1923-4.	1924-5.
British Isles	104.31	108.03	124.63	122.40
Belgium and Holland..	38.11	37.28	38.33	35.97
France and Italy	72.30	99.51	79.65	76.49
Central Europe	56.05	32.97	20.74	46.91
Total	270.77	277.79	263.35	281.77

The figures of the Institute in centals (100 lbs) are for wheat only. Assuming these as hundredweights (112 lbs), but reckoning the latter to include breadstuffs—that is to say, to take in flour, fairly trustworthy totals are arrived at. Flour imports and exports average about 10 per cent. of the traffic in wheat.

The British crop, just reaped, being five million cwts smaller than that of 1924, while the stocks are reduced by three millions on the year, it is probable that the new season upon which we are now entered will require fully 130 million cwt imports of breadstuffs. But France and Italy will be much smaller buyers than in the season just concluded.

TRADE OPENINGS IN FINLAND AND ESTHONIA.

(BY A CORRESPONDENT.)

A COUNTRY, not so well known as it should be, eager to import from Great Britain, and only 24 hours by aeroplane, is Finland. At a time when the British trader is looking for fresh markets and outlets for his goods, he might well turn his attention to this historic land, whose gallant efforts for independence and freedom, covering several centuries, were crowned with success in July, 1919, when the nationhood of Finland, or Suomi as it is called in the Finnish language, was recognised. Swedish for many centuries, and under Russian domination from 1808 until the Kerensky régime, the Finns have retained national consciousness and characteristics, which in a less virile and courageous people would have been submerged. The solidity and hardness of the Scottish character are to be found in the Finnish, due, doubtless, to the thousands of Scotsmen who from 1562 onwards went to Finland to help her people in their efforts to liberate themselves from foreign aggression, and whose names, in most cases, are still borne by their Finnish descendants.

Six years ago Finland became a free nation, and at once started to build for the future on a sound economic foundation, and the progress made during this period is creditable to an industrious and hard-working people. Her national finances at the close of 1924 were satisfactory, revenue having so far exceeded expenditure that supplementary estimates were met and the national debt reduced by FM. 135,800,000. It is believed that in November next the Finnish mark will be established on a gold basis, probably at somewhere about FM. 192.50 to the £ sterling. Finland has been provided by Nature with immense resources in her illimitable forests of spruce, fir, and silver birch—73.53 per cent. of the land area of the country. Wood products of various kinds, therefore, play a predominating part in her export trade. Timber, sawn or unsawn, plywood, paper, chemical pulp, cardboard, spools (bobbins), and also butter form the bulk of her exports, and Great Britain is her largest customer. In 1924, 40.4 per cent. of Finnish exports were to this country. It is perhaps not generally known that Finnish bobbins form 90 per cent. of the world's bobbin exports.

In 1924 Finland's export trade was divided as follows:—

Agricultural Products.	Wood Goods.	Paper Industry Products.	Other Exports.
%	%	%	%
11.3	61.5	27.8	2.5

Of unsawn timber, pit-props form about 55 per cent., and paper-wood a little less than 25 per cent.; but these latter show signs of increasing. The export of sawn timber is also on the up-grade. The plywood industry is still in its infancy, but exports in 1924 amounted to 40,000 tons, and in 1925 it is believed will exceed 50,000. The export of butter is steadily increasing, and at the end of June totalled 7,142 tons, against 4,313 tons for the similar six months a year ago. It is reported that Finnish butter cannot be obtained as such in this country, but is labelled "Danish," because a better wholesale price can be

obtained; but Finnish butter is of such excellent quality that it should stand on its own merits.

A comparison between the Finnish export and import trade with this country for the six months ended June, 1925 and 1924, are of interest (the figures are millions of Finnish marks):—

Imports.		Exports.	
1924.	1925.	1924.	1925.
434.8	379.3	653.5	727.2

It will be observed that whilst exports increased by FM. 73,700,000, imports decreased by FM. 55,500,000. It is to be regretted that British firms do not take a greater interest in the possibility of developing their business with Finland. The writer has just returned from that country, and had the opportunity of discussing the position with a number of representative business men, who each referred to the openings for British goods, provided production costs can be reduced. They stated that it is not the exchange, but the high cost of manufacture in Britain that is deterring Finland from purchasing more in this country; and, further, that lack of enterprise and initiative is handicapping British trade, which has the keen competition of Sweden, Denmark, and Germany to face. The chairman of one of the leading companies, who is keenly interested in the development of Anglo-Finnish trade, and who knows this country well, remarked: "English firms do not bestir themselves enough, but the Germans are very keen. You do not send sufficient commercial travellers, and few of those who come can speak either Swedish or Finnish. For every English traveller there are a dozen Germans, who can speak at least Swedish." In Finland, the Swedish and Finnish tongues have equal rights, and all notices, names of streets, &c., are in both languages.

Two instances of British ignorance or apathy may be quoted. An English firm wrote to a leading firm of shipbrokers in Helsingfors, and concluded their letter by saying: "In case you do not understand English, we enclose a Russian translation of our letter." Nothing better calculated to lose the business can be imagined. A Finnish firm sent an order for some British goods, and enclosed a remittance to cover the cost, &c. After waiting six weeks for a reply, they cabled asking if their letter and remittance had been received, and only then received a letter acknowledging their communication. It may be that our exporters consider Finland unworthy of attention, but if this is their attitude, it is a mistaken one. Our Continental competitors are courting her assiduously, and the same story of apathy comes from China, whence a British firm were written to and asked to supply a simple plough to meet the requirements of thousands of farmers in Northern China. The firm could not be bothered to provide something out of the usual, and so the Germans stepped in and reaped a profitable harvest. France is cutting into our export of textiles and metallurgy, but this is thought to be only a temporary dislocation; it is, however, evidence of the competition to be faced.

Finland is willing to increase her imports from this country of machinery, textiles, cutlery, linens, cottons, &c., but expects the market requirements to be studied, and there is no doubt at all that if the right type of British traveller were to be sent, and in sufficient numbers, a steadily increasing proportion of orders could be obtained. Finland imports over 4,000 automobiles a year; of these over two-thirds are from the United States, and the balance from the Continent. Several wealthy residents stated they would much rather purchase British cars because of their superior workmanship, were the prices more competitive.

Finland is in the fortunate position of having practically no unemployment—the number in July being 1,103, out of a population of 3,110,000, and it was anticipated that this number would be reduced with the approach of the harvest. Although the Port of Helsingfors is closed to traffic during the winter months, the ports of Hangö and Abö are kept open by the Government icebreakers, so that trade is not seriously interrupted.

Helsingfors, the capital, is easily reached by sea from Hull on one of the comfortable steamers of the Finland Steamship Company, which sail every Wednesday evening, arriving at Helsingfors the following Monday morning; and next spring a regular service of aeroplanes will

enable the visitor to leave London after breakfast and be in Helsingfors for lunch the next day, flying by way of Amsterdam, Hamburg, Copenhagen, Malmö. Railway travel in Finland is comfortable both by day and night.

Within easy reach of Helsingfors is Reval, the Esthonian capital. A daily service of fast aeroplanes enables the traveller to be in Reval 45 minutes after leaving Helsingfors. He can transact his business, and return to Helsingfors for dinner. Esthonia is also worth the more earnest attention of British merchants, and almost a similar story is told there—although the exchange factor is a complication. But Esthonia desires British goods. In both countries it is the British "quality" that excites admiration. Esthonia finds English prices too high in comparison with those quoted by Continental competitors, but is anxious to import machinery, sugar, foodstuffs, sewing silks, cotton goods, motors, bacon, cutlery, and writing paper. But one of the leading shipbrokers stated that nearly everything was too expensive. Sweden is supplying the cutlery. Esthonians greatly deplore the control which Germans have obtained over the Esthonian banks, a control they are using—only naturally—to assist their country's trade. It is worth the immediate attention of one of our banks—a population of 1,200,000 can become profitable customers. Esthonia exports timber, plywood, paper, hides, butter, and eggs.

Hard work, honesty, and courtesy distinguish both the Finns and the Esthonians; there are openings for trade in both countries, provided British traders will show themselves at least as enterprising as their Continental competitors.

THE TRANS-SIBERIAN RAILWAY.

MR W. W. GRANTHAM, K.C., Recorder of Deal, has just returned to London from the Far East, after travelling over the once-famous Trans-Siberian Railway. In view of the well-known political and economic conditions in Russia and China, there is no one who would expect to hear of far-reaching developments, or even improvements, on this great highway; and, indeed, it appears from the descriptive details given by Mr Grantham to a correspondent of the *Economist* that the worst expectations will be realised by anyone who has the temerity to make a trip over the line.

In the small hours of Sunday, September 27th, in veritable celestial obscurity, Mr Grantham took the weekly Trans-Siberian express for the ten-day run from Vladivostok to Moscow. The first lap of the journey, to Harbin, was accomplished without incident, the going was smooth, and passengers were beginning to reconcile themselves to the enterprise. Harbin duly reached, the problem was to get out of the town; here a succession of changes and delays kept the train back, and it was not until the 29th that the convoy left for Moscow. The second stage of the journey brought the train to Manchuli, and here in the dead of a Manchurian midnight changes had to be made and fresh tickets bought. Thence on to Chita for another midnight change, and it was after leaving this capital of the Far Eastern Republic that a small chapter of misadventures commenced. On three occasions the overheating of the axle of a first-class sleeping car caused commotion and delay, but by making up speed in the intervals the arrival at the shores of Lake Baikal was only three hours behind time. At Baikal a freight train, which had apparently been following the express, was sent on ahead. About half-way between Baikal and Irkutsk, the next large town, some bandits or counter-revolutionaries had torn up the track for a considerable distance; the freight train became the victim, and when the express arrived on the scene some 10 hours afterwards eight of the beyond recognition. That this fate was reserved for the passenger train, too, is pretty certain; one of the wreckers had tried to ascertain from a railway-track guard the being given, the guard was "summarily despatched." The run on to Moscow was continued with no more incident than would chance to a passenger on the Southern

Railway; the train made rather good time on an uneven road, reaching Moscow after a 5,000-mile journey only eight hours late.

To those who are interested in more than the picturesque side of the excursion, the following conclusions may be drawn from the observations made by Mr Grantham *en route*. The first 1,000 miles of the road, between Vladivostok and Chita, were relatively good, but from Chita onwards it could only be described as bad. Various accidents have occurred in the past six months owing to the poor state of the track; rocks fall at weak sections of the cuttings, and the removal of bolts and pins by "interested parties" does not add to safety and smooth working. The rolling-stock is on a par with the condition of the line; with the exception of the sleeping and restaurant cars belonging to the International Sleeping Car Company, the stock is poor; windows will not easily open, and this, coupled with the practice of locking carriage doors at night, would make a hasty exit in case of accident impossible. It seems clear that nothing has been done to line or stock to repair the ravages of time since 1914. Half the number of engines employed still use wood as fuel, and while the trains may run on scheduled time, the speed is less than half that of European railways. Not much seems to have been done in the replacement of old stock, and without efficient outside aid, the re-equipment of the railway will be a long and difficult task. While there are certain signs of Russia's increasing productivity and consequent purchasing power, unless this is used in the development of its engineering industry, and above all on railway transport—which is, after all, the foundation of modern society—little progress can be made by the country as a whole. The significant feature in regard to the mail traffic across Siberia, but not a new one, is that the international inviolability of the mails receives scant respect. Letters are opened indiscriminately before being released, many are lost entirely, and there is thus no guarantee for the safety and secrecy of correspondence. To this must be added the constant risk of attentions from robber bands.

If it is not the overwhelming importance of the rôle this line must play in the opening up of the natural treasures of Siberia and the East, it is its significance as an international link which in normal circumstances, would mark it out for the attentions of financiers in Europe and America. The maintenance of a rapid route to the East for mails and other classes of traffic is part of the post-war rehabilitation problem, and there is little doubt that the crying need of the Trans-Siberian Railway is capital, with a capital C.

Notes of the Week.

Civil War in China.—On the eve of the tariff conference in China what looks like a new civil war on a comprehensive scale is breaking out. It began with the capture of Shanghai and Nanking by Sun Chuan-fang, the Tsuchun of Chekiang, who, if he is not acting definitely on behalf of Wu Pei-fu, is certainly acting definitely against Chang Tso-lin, Wu's old adversary. Chang is at present the main supporter of the semi-impotent Pekin Government, and if the rumours of a general coalition of Central China against him under Wu Pei-fu are true, Pekin is likely to mean even less than the little it means now. Wu is definitely on the move, with a view to taking up his headquarters at Hankow, where he is likely to have the support of three or four provinces in Central China, and perhaps more, while a junction with the victorious Chekiang troops seems probable enough. But there is always in China some doubtful factor, and in this case it is the Christian General Feng Yu-hsiang, who though he is himself at Kalgan on the northern frontier, has a number of his personal troops stationed at Pekin. The first reports that Feng, who has a habit of throwing his support in different directions at different moments, was joining hands with Wu Pei-fu, seem to have been premature, for the Christian general is now said to have placed his Pekin troops at Chang Tso-lin's disposal. In that case the capital is likely

enough to be held and Tuan Chi-jui's Government bolstered up a little longer. But the creation of a rival government at Hankow under Wu Pei-fu is a very real possibility. That will make a third administration, for Canton still has its own government, though Cheng Chiung-ming, at one time lieutenant and subsequently opponent of Sun Yat-sen, is standing by in the neighbourhood waiting an opportunity to strike. Under all these circumstances it is manifestly difficult for the Powers to decide whether to proceed with the tariff conference, which was fixed to open on Monday, or not. Already the Chekiang operations and the closing of the Shanghai-Pekin railway have made it necessary for the American delegates to the conference to travel to the capital by sea to Tientsin, and negotiations with a Pekin Government, which may cease to exist at any moment, do not promise very hopeful results. On the other hand, the tariff delegates have no right to assume Pekin to be impotent so long as it is to the Government there that all their diplomatic representatives are accredited. The conference will, therefore, in all likelihood go forward. If it should reach definite conclusions, which has at the best been extremely problematic, the risk of having them dishonoured by some subsequent administration will have to be faced. The danger is not so serious as it seems, for the administration actually negotiating is likely to be so anxious to avoid giving its enemies a handle for attacking it for its weakness that it will agree to nothing that any rival Chinese Government would not eagerly accept. That in itself bodes ill for the conference, which can hardly hope now to do more than explore the ground fully with a view to final agreements when happier conditions have been established in China.

France's Little Wars.—France still has her hands full with the campaigns in Morocco and Syria. There is clearly a great deal of resilience in Abdul Krim yet, and his tribesmen have recaptured most or all of the important massif of Bibane, taken from them some five weeks ago. At another point a slight French retirement is reported. These are not operations of any very serious consequence from the military point of view, but they go to indicate that any hope of clearing up the Morocco trouble before the winter must be dismissed. That is a fact that will have political reactions in France, but it is likely to cause M. Painlevé a good deal less anxiety than what has been happening in the past week in Syria. The situation there shows no real sign of improvement, and reports of a serious riot in Damascus itself have caused alarm and indignation at Paris, where misgivings are accentuated by the suspicion—no doubt well-founded enough—that the full facts are being suppressed by the censorship. It is hard to see how the Government can long resist the demand for General Sarrail's recall, the contrast between his record and that of his predecessor, General Weygand, being so pronounced as to impress even the radical soldier's own friends. An independent investigator, General Duport, has, however, been despatched to Syria, and it is unlikely that any drastic step will be taken pending the arrival of his report. Meanwhile, the situation creates certain difficulties for the League of Nations Permanent Mandates Commission, which happens to be at present in session in Geneva. The Syrian mandate, among others, will be under discussion, and though there will no doubt be a general desire to say nothing calculated to increase the embarrassments of France as the Mandatory Power, the Commission, which is known to feel anxiety about the situation, can hardly ignore the responsibilities resting on the League in the matter of Syria.

Another Balkan Incident.—Hardly had the dove of peace flown into the council chamber at Locarno when the rumbling of guns was heard on the frontier between Bulgaria and Greece. The origin of the trouble is obscure. The official Greek statement claims that during the night of October 19-20 Bulgarian outposts, having concentrated disproportionate forces, opened fire without the slightest provocation, and proceeded to occupy positions in Greek territory. The Greek Government promptly sent a note to Sofia demanding satisfaction with the briefest possible

delay. The reply from Sofia suggested the appointment of a joint Greco-Bulgarian Commission to investigate the incident and establish responsibility. While Sofia presses for an inquiry it appears that Athens is determined to hold certain points or Bulgarian blockhouses, which have been occupied in retaliation, pending the receipt of a money indemnity for the men killed. In 1913 or 1914 an incident of this kind might have kindled a train that would have ended in an European conflagration. But to-day the gunpowder is damp, and the fire brigade of the League of Nations, of which both disputants are members, should find it an easy task to localise and extinguish the sparks. A special meeting of the League Council has been called for Monday in Paris, to which Bulgaria and Greece have been summoned to send representatives.

Cost of Living.—According to the index number of the Ministry of Labour, there was another rise in the cost of living during September, the figure rising from 74 to 76 per cent. above the level of July, 1914. Monthly movements and comparisons with previous years are given in the following table:—

AVERAGE PERCENTAGE INCREASE over JULY, 1914.—All items.
(Food, Rent, Clothing, Fuel, and Light, &c.)

For food alone the increase over the figure for July, 1914, was 72 per cent., as compared with 70 per cent. a month ago. This rise was mainly due to seasonal increases in the price of dairy produce, which was partly off-set by reductions in the prices of bread, flour, and potatoes.

Employment in September.—There was a slight improvement in employment during the month. According to the *Ministry of Labour Gazette*, among the 11½ million workers insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed at September 21st was 12.4, as compared with 12.5 at August 24th and 10.8 on September 22, 1924. The total number of registered unemployed fell from 1,418,000 at the end of August to 1,401,000 on September 28th. Among the members of trade unions, the percentage unemployed at the end of last month remained at 11.4, which was the figure given at the end of August. The following table gives the monthly trade union figures for several years past:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1919.	1920.	1921.	1922.	1923.	1924.	1925.

* Excluding coal miners.

As compared with August, employment in September showed an improvement in the wool textile, cotton, pottery, tinplate, and iron-mining industries, but there was a further slight decline in the pig-iron industry. The increase in unemployment as compared with a year ago was mainly due to the continued depression in the coal-mining industry. If October finishes as it has begun, the

next issue of monthly figures should present a brighter picture. Official statements show that in the fortnight ending October 12th there was a reduction of 77,300 in the total number of registered unemployed. This reduces to 49,000 the excess over the total recorded at the corresponding date last year.

Irish Free State Affairs.—Our Dublin correspondent writes:—A "Housing Week" is in progress. The problem is urgent throughout Ireland, especially in Dublin, where out of every 1,000 persons 229 are living in one-roomed tenements. The figures for Glasgow, where housing is a burning question, are 132 out of every 1,000. It is also stated on responsible authority that 6,830 families are living in city houses unfit for human habitation, and that from 1,700 to 1,800 houses are inhabited by from six to ten families apiece. Building in Dublin has long been expensive, and since the war it has been well-nigh prohibitive for private enterprise. Municipal effort in Dublin produced 2,280 new houses in the period 1898-1922. The Provisional Government, established in 1922, offered to bear two-thirds of the cost of houses erected by municipal authorities, and the Free State Government has followed up and supplemented the financial aid then provided. Houses built or building on these conditions in Dublin number 2,350, and a further 1,000 are being provided for. For the whole Free State something like 10,000 will have been finished by the end of the current year as the result of Government housing schemes and subventions. The announcement has been made that in April next, 1926, a Census will be taken of the people of the Irish Free State. A subsequent announcement of a Census in Northern Ireland to be taken simultaneously shows a welcome accord from motives of obvious public convenience. Owing to insurrectionary troubles the decennial Census was not taken in 1921, and statisticians have to rely consequently on the 1911 Census figures, subject to such corrective factors as they can discover or devise. If an accompanying census of production could be taken it would be a real boon, but of this there is no news at present.

Great Britain's Sea Fisheries.—The yield of the sea fisheries of Great Britain in the third quarter of the year was slightly higher than in the corresponding quarter of 1924, both in regard to bulk and aggregate value. The landings of wet fish of British taking at ports in England and Wales amounted to 3,203,119 cwts, having a first-hand value of £3,549,811, as against 2,995,811 cwts and £3,538,216; and those at Scottish ports 2,677,012 cwts, valued at £1,833,982, against 2,736,783 cwts and £1,766,713. The totals for the whole of Great Britain were thus 5,880,131 cwts, valued at £5,383,793, as against 5,732,594 cwts and £5,304,929. The landings of wet fish by foreign-owned vessels showed a decrease, the total for Great Britain being 145,512 cwts, having a value of £220,599, as against 174,363 cwts and £210,657 a year ago. The percentage is less than 3 per cent. of the aggregate landings. Further experiments have been made by Hull trawlers fishing off the coast of Greenland, which holds out prospects of prolific new fishing grounds. A number of additional trawlers, sufficiently large to undertake long voyages, are now being built or projected in the Humber shipbuilding yards. The herring fisheries off the English coast this season are being attended with only moderate success. The landings at Yarmouth and Lowestoft from September 1st to October 16th are returned at only 164,120 crans, as against 369,344 crans in the corresponding period of last year, and the quantities cured for export 66,064 barrels, as against 144,478 barrels. The imports of wet fish from abroad in the July-September quarter were 201,145 cwts, having a c.i.f. value of £618,868, as against 200,682 cwts and £657,498 value in the third quarter of last year.

A Banker on South America.—Mr R. J. Hose, the chairman of the Anglo-South American Bank, delivered on Tuesday one of the careful reviews of the situation in South America with which he annually regales the shareholders of his bank. He devoted his opening para-

graphs to Britain and the Contract, rejoiced in the Locarno Pact, welcomed the Labour Party's banishment of Communists, applauded the gold standard description, and hoped for a removal of the foreign loan embargo. But it is his references to conditions in South America that attract special attention. That part of the world, Mr Hose hinted, is likely to come to the London market when present restrictions are removed. "From the point of view of South America alone, there is undoubtedly much development work awaiting long-term capitalisation, and it must be borne in mind that there is always a tendency for general trade to develop between the borrowing country and that which renders it financial assistance." The general trend of Mr. Hose's review of South American economic conditions is encouraging, and his information supports and supplements recent reports of improvement in many directions. Of special interest was his reference to the stabilisation of Chilean currency. "The proposal to form a Central Bank of Issue, to be known as the Banco Central de Chile, with the sole right to emit currency notes, has," he said, "already been adopted, the effect of which will be to fix the gold parity of currency at 6d per peso." He also stated that a General Banking Law was signed on September 26th, which, pending receipt of the full text, he assumed to bear a resemblance to that which established the United States Federal Reserve system. Mexico has travelled on the same lines as Chile, so far as to establish, and open on September 1st, a new Bank of Issue, entitled the Banco de Mexico.

Port of London Authority.—The accounts of the Port of London Authority issued 12 months ago showed a deficit of £257,400, partly in consequence of the strikes of dockers in the summer of 1923 and in February, 1924, and partly as a result of a reduction in charges to a level which proved uneconomic. These were revised, and the accounts for the year ended March 31st last, issued this week, show a surplus, after payment of fixed charges, of £208,000. The table below compares the latest figures with those of previous years:—

FOR YEAR ENDING MARCH 31.

	1914.	1921.	1922.	1923.	1924.	1925.
Total revenue	£ 3,434,453	£ 10,043,731	£ 7,929,874	£ 6,319,295	£ 5,542,971	£ 6,429,862
Total expenditure ..	2,217,822	7,101,601	5,801,217	4,682,425	4,516,076	4,936,340
Balance of rev.	1,216,631	2,942,130	2,128,657	1,636,870	1,026,895	1,493,522
Fixed charges	932,786	1,944,160	1,575,299	1,400,990	1,294,328	1,285,473
Surplus revenue	283,845	997,970	552,728	235,880	Dr 267,439	208,049
Brought forward	89,637	383,547	896,044	1,448,772	1,573,252	1,315,819
Written off, &c.	373,482	1,381,317	1,448,772	1,684,652	1,315,819	1,523,868
Carried forward	281,578	485,273	..	111,400	..	1,000,000
	91,904	896,044	1,448,772	1,573,252	1,315,819	523,868

The Authority has decided to consolidate into a general fund for the maintenance and renewal of premises and plant, and for dredging, various funds existing at March 31, 1924. These amounted to £2,040,500, and to this is added £1,000,000 out of the balance brought forward. A sum of £154,000 is charged against the fund for actual expenditure during the year, leaving a balance of £2,886,500. The reserve fund remains at the statutory maximum of £1,000,000. Port stock issued and outstanding at March 31st last amounted to £31,590,500, the balance of borrowing powers unissued being £6,065,800. Capital expenditure during the year amounted to £247,200. The amount standing to the credit of the sinking funds for the redemption of Port stock, &c., at March 31st was £1,135,400. The investments held on account of these funds stand in the books at £964,600, leaving a balance of £170,800 to be invested. The net register and deck cargo tonnage of shipping that entered and left the Port of London and paid river tonnage dues during the 12 months ended March 31st was 34,456,400 tons, an increase of 3,707,600 tons, or 12.1 per cent., of which 3,427,000 tons, or 14.8 per cent., was in the foreign trade. From the table below, which gives the values of total imports and exports (excluding coastwise

goods) of the six principal ports, it will be seen that London has increased its lead:—

	1922.	1923.	1924.	Inc. in 1924.
London (including Queenborough)....	£ 564,333,772	£ 579,095,902	£ 677,342,399	+ 16.9
Liverpool	484,200,149	532,990,145	582,463,696	+ 9.3
Hull	101,844,091	102,034,446	121,186,307	+ 18.8
Manchester (including Runcorn)	92,023,169	94,095,116	114,556,561	+ 21.7
Southampton	64,039,112	72,619,877	81,226,133	+ 11.9
Glasgow	81,174,625	80,299,380	84,324,816	+ 5.0

During the year ended March 31st last the authority landed or received 2,354,400 tons of import goods for warehousing or for immediate delivery, an increase of 61,200 tons, or 2.7 per cent., as compared with the previous 12 months. The export traffic handled on the dock quays during the 12 months amounted to 659,900 tons, an increase of 44,600 tons. All these comparisons are, of course, affected by the strikes of dockers already alluded to.

International Cotton Federation.—Next week, writes our Manchester correspondent, there is to be a special meeting at Milan of the Committee of the International Federation of Master Cotton Spinners' and Manufacturers' Associations. Mr Arno S. Pearce, the general secretary, will give a report on his recent journey through the American cotton belt. There will probably be a discussion on Mr Pearce's recent severe criticism of the methods of the officials at Washington in tabulating the reports on the cotton crop. The Federation has recently received invitations from Peru and Colombia to send missions to investigate cotton-growing possibilities in those countries, and it will be decided whether to accept the invitations. According to statistics just published by the federation, spindles in Great Britain have increased since a year ago from 56,750,000 to 57,116,000. During the past 12 months the spindles engaged on Egyptian cotton have been reduced from 20,173,000 to 18,438,000.

Debt Clearing Office.—All legacies are apt to be the subject of troublesome litigation. That "the legacy of the war" is no exception is amply proved by the third annual report of the Controller of the Debt Clearing Office.* To his work as Administrator of German, Austrian, Hungarian, and Bulgarian Property and Director of the Russian Claims Department, this gentleman has added that of Director of the Trading with the Enemy Branch of the Public Trustees Department. The duties and staff of this department have in the past year been absorbed by the Clearing Office. The importance of the work of this office is shown by the total sum—£83 millions—paid to British creditors, and its complexity is fully revealed by the report of the legal adviser. In his report the Controller again draws attention to the slowness with which the Mixed Arbitration Tribunals are working through the mass of disputed claims. The creation of divisions in order to lessen the delays has led, as was predicted, to considerable complications. "Each division has so far adhered to the decisions which it has already given, and as such decisions are final, and cannot

* H.M. Stationery Office. 1s 6d net.

be appealed from, the rights of litigants are largely dominated by the element of speculation, for success or failure may depend solely upon which division of the Tribunal tries the issue." This has caused embarrassment and delay. Discussions are now going on between the British and German Governments, and it is hoped that the difficulty will soon be settled. The German administration branch of the Clearing Office has in the past year disposed of 8,935 British claims, under Article 296 (Enemy Debts), of a declared value of £3,772,209, while 4,132 claims for £8,055,382 are still outstanding. Up to September, 1925, a total of £79,150,074 had been paid to British creditors and £19,741,965 to German creditors in respect of admitted claims. During the past year 5,100 claims were disposed of by agreement as the result of negotiations between the parties conducted by the Clearing Office, and the necessary consent awards by the Arbitration Tribunals amount to £9,176,852. British creditors have begun to benefit by the financial recovery of Austria and Hungary, whose Governments have resumed payments in accordance with their Treaty obligations. The Austrian administration branch of the Clearing Office has in the past year made distributions of 4s 4d and 2s in the £, making a total distribution of 13s in the £ to British creditors. The Director is confident that further payments will be made. Two further dividends of 2s and 1s in the £ bring the total distribution to creditors of Hungary to 4s 6d in the £. The Director of the Clearing Office, in view of the increasing prosperity of Hungary and the prospect of a Budget surplus, has decided to visit Buda-Pesth in the immediate future to negotiate for the payment of the arrears of the instalments. British claims against Bulgaria have now been finally satisfied, a final distribution bringing the total up to 20s in the £. "As a result of the breakdown in the negotiations with Russia, the work of the Department has necessarily been confined to the registration and classification of claims lodged with it."

America and Foreign Monopolies.—American manufacturers and merchants have frequently during recent years expressed dissatisfaction with what they regard as foreign monopolies, resulting in restricted production, and consequent high prices for certain products, such as coffee and rubber. Mr Hoover, the Secretary for Commerce, has taken the matter up with characteristic vigour, and has more than once emphasised the need for some protective action on the part of American buyers. So far as rubber is concerned, it will be recalled that the alleged British or Anglo-Dutch monopoly of this product has often been a source of complaint in the United States; and a year or two ago an American Mission was sent out to South America and other countries with a view to examining the possibilities of America going into the rubber-growing business herself. Various more or less "suitable areas" in South America and elsewhere were investigated, and a series of reports is being issued, but so far little is known of any further practical measures taken by American interests. Mr Hoover has once more returned to the charge, and with the opening of another session of Congress he will undoubtedly renew his plea for some form of counter-action against "foreign monopolies which exact unreasonable profits from American consumers." Some extension of the Webb-Pomerene laws to imports in order to allow American buyers to present a solid front to a foreign combine, by way of Purchasers' Associations, is regarded by Secretary Hoover as the most practical step that can be taken; but he is quite willing to consider favourably any other proposition calculated to get results. As an illustration of the effects of such alleged monopoly, he cites the case of coffee, for which, it is understood, America is forced to pay an additional 82,000,000 dollars in one year, "owing entirely to manipulation." American rubber manufacturers, apparently, find it worth their while to take the bulk of the world's supplies of crude; and there does not appear to be much evidence that their profits or those of the coffee merchants have suffered undue depression owing to the restrictive action of the supposed foreign monopolies. The third report has just been issued of a series on crude rubber under the authority of the sixty-seventh Congress, which appropriated funds for the

investigation of raw materials wholly or largely under foreign control. The first report dealt with the marketing of plantation rubber (January, 1924), and the second with the Plantation Rubber Industry in the Middle East (June, 1925). This third report describes the possibilities of establishing a rubber industry in the Philippines, where conditions are thought to be favourable, sufficiently so for the production of 70,000 tons of rubber per annum. Reports on other regions are being prepared.

A Canadian Aluminium Industry.—Our Ottawa correspondent writes:—In Eastern Quebec there has lately been launched a huge project which may mean the location in Canada of a large part of the aluminium industry of North America. Some time ago a concession was granted by the provincial Government of Quebec of immense water powers on the Saguenay River, which flows southward through deep gorges into the Gulf of St Lawrence, to a corporation styled the Quebec Development Company, in which Mr J. B. Duke, the well-known American tobacco magnate, and the Price firm, of Quebec, pioneers in the pulp and paper industry, were the chief factors. The Quebec Development Company has now transferred part of these water-power rights at Chute à Caron, on the Saguenay, to a subsidiary of the Aluminium Company of North America, in which the Mellon family, of Pittsburgh, are reputed to hold a controlling interest, Mr Andrew Mellon, the present Secretary of the United States Treasury, being one of the largest shareholders. This corporation has already commenced operations for the erection of a mammoth plant, which will be devoted to the manufacture of aluminium; ships which will bring the ore from the company's mines in South America will be able to sail right up to the establishment. An immediate expenditure of at least \$50,000,000 is contemplated; a development of 500,000 h.p. is projected at once, and if the enterprise succeeds it will be extended. Ground is being cleared for a model industrial population, which will accommodate 30,000 people, and it is expected that within a decade a population of 50,000 souls will be established in a place which hitherto has only been frequented by a few hunters and lumbermen. The expenditure of so much money is bound to give a fillip to many industries in Quebec, and create additional employment; but in other quarters it is regarded as increasing the hold which American capital has upon Canadian industry. The Price interests, however, have been allocated a certain interest in the subsidiary corporation which is responsible for the scheme.

The World Potash Trust.—Before the war Germany had almost a monopoly of potash—a large proportion of which came from mines in Alsace-Lorraine. The industry was entirely in German hands, with the exception of a few mines in which there was American capital. The loss of the mines in Alsace-Lorraine led to a recognition of made between Germans and French for the control of the export trade throughout the world. France has one-third of the export trade, and Germany two-thirds—each country retaining its own home supply. Markets are fixed. The agreement has two years to run. The German chemists and experts were sent away from the works in Alsace-Lorraine when France took them over, but some product was suffering through lack of adequate technical skill. The industry in Germany is controlled by a Government organised combination which was set up under a law passed in April, 1919. There is a national Potash Board consisting of thirty members, including representatives of all interests concerned: the State, the producers, syndicates, commercial interests, wholesale merchants, agricultural interests, producers of the refined products, and employees of all grades. This Board regulates all phases of the industry—output, testing, development, marketing and prices. The discussions at Board meetings are chiefly between the representatives of the users and the workmen, i.e., on the selling price and on wages—the one regulating the other. The industry is almost entirely in the hands of two large concerns, the Winter-

shall Company, which is closely allied to the Prussian State, and owns about 44.5 per cent. of the total output, and a syndicate consisting of the Westergeln-Aschersleben-Salzdorfurth Company, the Burbach, the Gumpel, and Solvay companies. There appears to be only one independent producer—the Dr Wilhelm Sauer Company. The companies in which Americans hold interests are absorbed in the combination, and are unable to control production or prices of their supply for America. The German industry is in a stronger position than the French, as, apart from greater experience and higher technical efficiency, the Germans obtain all the bye-products from the raw potash, while in France the bye-products can only be obtained with the help of chemicals supplied by other industries.

Vauxhall Motors and American Control.—Negotiations between Vauxhall Motors, Limited, and the General Motors Corporation (New York) for the acquisition of control by the latter have been completed. A provisional agreement is to be submitted on Friday next to the shareholders of Vauxhall Motors, with the recommendation of the directors, which involves an authorisation to Messrs Morgan, Grenfell, and Co. to pay to the holders of the existing 10s shares the sum of 7s in cash in respect of each such share, conditionally upon their consenting to the conversion of every two of their existing 10s shares into one 6 per cent. cumulative preference share of £1. The arrangement also provides for the subscription at par by the General Motors Corporation of 300,000 ordinary shares of £1 each to provide the additional working capital required. It is intended that the management and general policy of the business shall remain on the same lines as heretofore. It will be recalled that an offer for the provision of additional capital by the General Motors Corporation was recently refused by Austin Motors. Shareholders of Vauxhall Motors will, we think, be well advised to accept a scheme which, by the introduction of fresh capital and perhaps of American business methods, should do much to restore the company's fortunes.

United of Havana.—The accounts for the year ended June 30th last of the United Railways of the Havana and Regla Warehouses, Limited, show a further substantial increase in net revenue, which fully justifies the increase from 7 to 8 per cent. in the ordinary dividend, but the report makes no reference to the question of a distribution on the deferred stock. There was an increase of 15.68 per cent. in gross receipts and of 13.79 per cent. in working expenditure, net receipts per train mile working out at 6s, or 2d more than in 1923-24. Net receipts were 18.84 per cent. higher, the ratio of expenses to receipts being slightly lower at 61.56 per cent. The gain in exchange, however, was only £21,500, as compared with £188,300 in the previous year, and at £1,974,800 net revenue shows an increase of only £149,700, as may be seen from the table below:—

	1921-22.	1922-23.	1923-24.	1924-25.
	£	£	£	£
Railway receipts	3,893,949	3,765,534	4,296,094	4,969,617
Railway expenses	2,729,956	2,463,264	2,688,548	3,059,235
Ratio	(70.11%)	(65.42%)	(62.58%)	(61.56%)
	1,163,993	1,302,270	1,607,546	1,910,382
Other receipts (less charges)	278,442	71,893	217,540	64,386
	1,442,435	1,374,163	1,825,086	1,974,768
Fixed charges, &c. (less sundry inc.)	929,793	793,061	820,928	850,091
To reserve	105,000	..	350,000	425,000
Dividends	439,987	571,123	636,691	702,250
Ordinary rate	4%	6%	7%	8%

British and Cuban taxes require £310,000, as compared with £262,500 a year ago. The general renewals and reserve account is credited with £350,000 as before, and £75,000 is transferred to a special account to provide for deferred maintenance. After payment of dividends, there remains £237,900, or £3,400 more to be carried forward. The increase in total receipts is due almost entirely to the sugar crop in Cuba, which was by far the largest on record, and this naturally brought about an increase in all movement. Passenger receipts increased by £103,600,

or 8.3 per cent., and total goods traffic by £479,400, or 20.1 per cent. The tonnage of sugar cane and products, which supplied over 80 per cent. of the total, increased by 3,718,900 tons, or 32.6 per cent. The general manager's report states that the increase in the sugar crop far exceeded even the most sanguine estimates. A plentiful and well distributed rainfall, together with new plantings, account for the increase. In spite of the increased production, the crop was moved smoothly and without any delay." Of the increase of £370,700 in expenditure, £123,600 occurs under traffic expenses, partly owing to higher wage rates granted in April, 1924, £99,000 in permanent way and works, and £73,100 in locomotive maintenance. There was a saving of £26,700 on locomotive running, which was due entirely to lower fuel costs. The general manager, in discussing future prospects, mentions that there is a general depression in the country owing to the low price obtained for sugar of the last crop, "and this is likely to have an adverse effect upon our general traffic." The coming sugar crop is expected to be a good one, estimates ranging from 5 to 5½ million tons for the whole island, "thus as far as our zone is concerned, I do not expect anything greater than last year."

Cordoba Central Railway.—The 38th report of the directors of the Cordoba Central Railway for the year ended June 30, 1925, gives an encouraging account of the company's affairs. Converting Argentine currency into sterling at par, the results of the year's working, compared with those of previous years, were as follows:—

	1922-23.	1923-24.	1924-25.
Gross traffic receipts	3,071,699 ..	3,168,602 ..	3,363,848
Working expenses	2,274,393 ..	2,317,971 ..	2,335,887
Net receipts	797,306 ..	850,631 ..	1,027,961
Percentage of working expenses	74.04% ..	73.15% ..	69.44%

The loss on exchange this year was £119,010, as against £163,522 in 1923-24. Of the balance available this year, £243,284 has been used to reduce the amount at the debit of net revenue account, which now stands at £632,351, the remaining £50,000 having been set aside in accordance with the provisions of the arrangement of 1919 for debenture redemption. The increase in gross receipts is due to an increase of £107,216 (8.17 per cent.) in goods traffic receipts. Expenditure is £17,916 more than last year, maintenance charges and reserve for renewals having been increased, but a reduction having been achieved in running and traffic expenses. The sum of £44,948 has been charged to capital account, half of this sum being accounted for by buildings and general improvements at stations. The general manager gives an optimistic account of the prosperity of the country served by the railway, and looks forward to a steady increase in earnings. The decision of the directors to allow their offer of sale to the Argentine Government to lapse, and the opportunity offered by this favourable report, have led them to put forward proposals to strengthen the financial position of the company. In brief, the proposals mean that £813,724 (or 20 per cent.) is to be written off the issued capital of the ordinary stock. Of this sum, £632,351 is to be used to extinguish the balance at the debit of net revenue account, and £181,373 to reduce the item "Rebates, &c., on issues of capital," which at present stands at the debit of capital account. Ordinary stock holders will in future have five votes for every £4 of stock—in fact, their voting power will be practically unaffected by the reduction in capital. The necessary meetings of ordinary and preference stockholders are to be held after the general meeting on November 4, and it will be surprising, after this encouraging report as to the company's position, if the proposals are not accepted.

The Central American Railways.—To bondholders in the International Railways of Central America, writes a correspondent, the announcement of the recent further sale of \$1,250,000 5 per cent. bonds at 78½, following so closely upon the issue of \$1,600,000 first mortgage 5 per cent. sinking fund gold bonds made in May last, may have occasioned some surprise, especially as it had

been announced, at the time of the May issue, that the company would not place any further bonds or create any further fixed charges unless the total fixed charges on the bonds outstanding and those proposed to be issued at any given time taken together should be covered at least twice by the net earnings of the railways realised for the preceding 12 months. Apparently these earnings were more than gained, and no doubt the increasing importance of the traffics called for the further financing of the undertaking, which, during the past five or six years, has made remarkable headway. At any rate, the most recent New York issue is said to have been quickly oversubscribed. The International Railways of Central America have been very fortunate in the countries where their scope lies. The earnings for last year (1924) were about four times the requirements upon all mortgage bonds exclusive of the latest issue. From the date that the \$10,000,000 5 per cent. cumulative preference shares were first put on the market (1912), dividends have been substantially earned and paid. For the first seven months of the current year the balance available for this class of security was \$1,196,846, against \$984,097 for the previous year, while over the same period the revenue showed an increase of over 30 per cent. Organised in 1904, the railroads, forming the largest group in the Americas outside the United States, have enjoyed an unbroken record of payment of their various obligations. The length of railways with full equipment has already attained to nearly 500 miles, and it is calculated that the tracks will eventually extend to 792 miles before the end of 1927. Over their lines are carried practically the whole of the valuable produce from the various plantation properties owned by the phenomenally-prosperous United Fruit Company. The fruit-lands are located in the adjoining Republics of Guatemala, El Salvador, and Costa Rica, although the latter State has its own system of railways, which form no part of those belonging to the international system. The operations of the United Fruit Company and its affiliated enterprises, by providing continuous and well-remunerated employment for several thousand natives, who previously had had little to occupy them but political questions, almost invariably resulting in insurrectionary enterprises, have assisted economic regeneration in some of these Central American States. What cotton cultivation has done for the welfare of the natives of the Anglo-Egyptian Sudan, the fruit plantations have done—and are doing—for the natives of Central America.

V.O.C., Limited.—For the first time the Venezuelan Oil Concessions, Limited, which has an issued capital of £943,000 in £1 shares, presents a profit and loss account. This covers the period from the inception of the company (May 22, 1913) up to December 31, 1924, and shows a debit balance of £235,299, after providing for depreciation to the amount of £119,678. The actual operations for the year 1924 showed a profit of nearly £100,000, which is somewhat disappointing. Production for the year amounted to 391,134 tons, and shipments to 378,432 tons. Seeing that the new sale-of-oil agreements between the company and the Caribbean Petroleum Company (Royal Dutch-Shell group) took effect from the beginning of last year, it is surprising that the profit works out at no more than 5s 4d a ton. The balance-sheet puts the cost of concessions, together with plant, at £572,152, whereas the 1923 balance-sheet showed the cost of concession alone as £175,000. The company held, at December 31, 1924, £123,895 Treasury bills and cash £12,911, but creditors were £265,897, against debtors £75,790. The balance-sheet, with such undigested items as preliminary expenses and underwriting commissions (£92,257), is not as strong as was expected. The V.O.C. Holding Company, which increased its capital in 1924 to £3,596,912 by the issue of 600,000 ordinary shares at a premium of 25s a share, holds 942,228 shares in the Venezuelan Oil Concessions, Limited, and an option on the 57,000 unissued shares at par. The 942,228 shares are valued in the balance-sheet of the V.O.C. Holding at £2,939,912. The cash holding of the V.O.C. Holding is shown as £1,164,172, with Treasury bills £109,022. Preliminary expenses and underwriting commissions stand at £127,184. The practical value of these balance-

sheets, coming ten months after the year's end, is little or nothing. Important history has been made during the present year in Venezuela. The Venezuelan Oil Concessions, Limited, has obtained practically a new concession from the Venezuelan Government, under which it receives a two years' extension of the exploration period, that is, to May, 1928, the right of selection of irregular areas adjacent to but outside selected rectangles, the right of renewal of the concession on its expiration in 1958 covering the entire districts of Maracaibo and Bolivar, and a reduction in rentals from 2 to 1 bolivar (20 cents) per acre (the exploitation tax is increased from 1 to 2 bolivars—about 5.7 per barrel). For these valuable concessions the company pays the Venezuelan Government about £400,000. The production of the company this year has very largely increased. The output of its wells in the La Rosa field (on the east side of Lake Maracaibo) up to last month, is already greater than the whole of its output in 1924, and since June it has begun the exploitation of its properties on the west side of the lake—at Concepcion and La Paz—which yield a higher grade of oil. Trading results this year should be greatly improved, but if the whole of the year's field expenditure, which will be heavy, is to be written off at one stroke out of profits, the dividend-paying stage has hardly been reached, though the chairman had been optimistic enough to predict it for 1926.

United Dairies.—Although the net profit of United Dairies for the year ended June 30th last did not show such a marked improvement as in the previous period, the concern continued to make progress. This will be seen from the following table giving figures for the past six years:—

Year Ended June 30.	1920.	1921.	1922.	1923.	1924.	1925.
Prof. capital ..	£1,555,284	£1,652,564	£1,881,674	£1,893,243	£2,059,339	£2,243,272
Ord. do.	1,726,052	1,798,677	2,027,125	2,038,403	2,121,397	2,221,380
Paid share cap.	3,281,336	3,451,241	3,908,799	3,931,646	4,180,736	4,464,652
Calls in advance	..	..	..	..	41,539	..
Net profit	279,668	356,186	452,692	468,623	4,222,275	509,146
Div. on ord shs.	12½%	12½%	12½%	12½%	14%	14%

The net profit advanced from £506,542 to £509,146, making, with the sum of £73,603 brought in, a balance of £582,749, compared with £608,086 in 1923-24, when £101,544 was brought forward. The ordinary dividend is maintained at 14 per cent. The distribution on this occasion requires £199,924, against £186,010, owing to an increase in the issued amount of that class of capital from £2,121,397 to £2,221,380. The issued preference capital, too, has been raised from £2,059,339 to £2,243,272. The allocation to reserve is unchanged at £100,000, making the total of the fund £420,554, which also includes £70,554 on account of premium on shares. In accordance with the scheme propounded last year, the sum of £30,000 is transferred to the scholarship fund. The directors state that during the year considerable progress has been made with the new bottled milk depôts. It is also reported that it has been decided "to issue forth-order to provide for increased business, the erection and redemption on January 1st next of the debentures (£70,000) of Welford and Sons, Limited." The holding of 3½ per cent. War Stock, 1925-28, has gone up from £95,345 to £335,920, but an item of £209,386, representing investments in 5 per cent. War Stock, 1929-47, has been eliminated from the accounts. If and when the new shares are to be offered to the public, it would be of material assistance to the possible investor if the assets of the undertaking were more clearly defined. At present the balance-sheet shows out of total assets £6,565,879 "investments and loans" £4,806,971. When considering this particular item the mind of the reader will probably muse over the additional explanation in brackets, "including amount paid for benefit of contracts." Perhaps at the general annual meeting on November 3rd the directors will shed a little more light on this question.

United Steel Companies.—In their report for the year ended June 30th last the directors of the United Steel Companies state that "the unsatisfactory conditions affecting the iron and steel trade mentioned in last year's report have continued, and were intensified during the last six months. Foreign competition continues unabated. It is also common knowledge," they add, "that the coal trade has been operating under increasing difficulties." This state of affairs is reflected in results of operations, which can be seen at a glance from the following comparative record:—

	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
Gross revenue	£930,521	£711,146	£388,034	£504,633	£530,301	£201,837
Administration expenses and income-tax	38,007	81,485	..	156,601	159,792	160,125
Interest	146,853	146,254	148,026	..	..	..
Net profit	745,661	483,407	240,008	348,032	370,509	141,712
Brought forward	64,674	80,381	308,293	440,743	666,149	903,882
Reserve and written off	810,335	563,788	548,301	788,775	1,036,658	1,014,794
Preference dividend	119,369	32,021	79,890	122,626	133,577	120,881
Ordinary dividend	79,051	55,336	27,668	..	..	..
Carried forward	507,042	168,138	..	..	..	..
	(10%)	(3%)	(nil)	..	..	..
	104,873	308,290	440,473	666,149	903,081	823,912

The gross revenue has declined from £530,301 to £201,837. This falling off would have been even more marked had there not been included in this year's figure the sum of £65,828 brought in from branch reserves, and which the directors consider is "not now required." For 1923-24 £105,696 was allowed for depreciation, but the item is not repeated this time; in its place appears an entry of £93,000, reserved against amount paid under guarantee of preference dividend of United Strip and Bar Mills, Limited. The net profit has fallen from £370,509 to £141,712. In view of the difficulties encountered during the year, the results are considered satisfactory, "but having regard to the outlook," the directors regret that they again cannot recommend any distribution of dividends. The company has been called upon once more to pay the full year's dividend on the preference shares of United Strip and Bar Mills.

North Broken Hill.—Our mining correspondent writes:—The cabled summary of the report to June 30th last of this very important Barrier Range undertaking reflects the enhancement which has taken place in the prices of lead and zinc, as well as the increased scale of operations due to the acquisition of the undertaking of the British Broken Hill, the property of that company having been taken over as from October 31, 1923. The mine profit and loss account shows an income of £1,936,200, as against £1,505,900; and, after providing for expenditure, taxes, and royalty, also £50,000 for depreciation (as before), the surplus figures at practically £889,000, in place of £685,800. The increased sum of £50,000 is appropriated for new plant. The dividends for the period total 80 per cent., as against 50 per cent. The surplus liquid assets now figure at £799,150, a very considerable reduction as compared with the reserve 12 months ago; the difference, however, is fully accounted for by the transfer to general reserve of items previously figuring under several different headings. The company's earnings are now reckoned to be on a considerably enhanced scale, and it is anticipated that before long a scheme will be presented for the subdivision of the shares.

Electrolytic Zinc.—This is another Australasian enterprise which has just issued a cabled summary of its report for the last financial period; and here, again, the record is an exceedingly good one. Last year's average output of zinc was 126½ tons, in place of 123 tons. As a result of this expansion, and of the advance in the price of the metal, the net profit figures at £335,400, in place of £341,300. Last year £100,000 was transferred to amortisation reserve, and £40,000 to an equalisation reserve. On the present occasion £20,000 is written off for investigational reserve and £20,000 set aside towards the cost of new plant for the West Coast mines, the development of which is steadily proceeding. The final dividend of 6 per cent. for the half-year paid on the entire

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,468,221

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STRUART, Chief Manager.

capital made a total of 11½ per cent., as against 9 per cent. in respect of the preceding period. The participating preference shares, which are the ones dealt in on the London market, rank for profits *pro rata* with the ordinary, after the latter have also received 8 per cent. On the basis of last year's dividends they show a return of about 7 per cent., with the prospect of increase in the future. It is interesting to note that the company is developing what might be termed an industrial side to its business, producing acid and superphosphates, more especially to supply requirements of local agricultural and pastoral enterprises.

Transvaal Platinum.—In the early part of the present year this company made an issue of shares at £2 12s 6d, the offer being underwritten at that price by the Transvaal Consolidated Lands and the South African Townships undertakings. The additional funds were provided with a view to the prosecution of increased development and the installation of a trial treatment plant. A further 19,050 shares were allotted in purchase of additional property. While a number of favourable strikes have been reported, the annual report just issued is certainly not calculated to give shareholders very robust confidence in the prospects—at any rate of the immediate future. The system is followed of mining payable ore and placing it on the dumps; but the total thus available only increased during the twelve months from 1,760 tons, valued at 10.7 dwts, to 7,360 tons, valued at 10.3 dwts. Moreover, the consulting engineer states that the erratic nature of the occurrence renders it impossible to give an estimate on which any reliance can be placed as to the tonnage of payable ore in the mine. He thinks the indications warrant the erection of a plant capable of dealing with up to 1,000 tons a month, and expressed the opinion that as a result of experiments at the laboratory of the Rand Mines a satisfactory recovery yield will be secured—apparently on those classes of ore in which the platinum occurs in fairly coarse particles. Prospecting on various areas outside the main property failed to result in discoveries of economic value. From the high level of 87s 6d at one time ruling this year, the shares, just before the issue of the report, dropped to 30s. A recovery to about 45s has since taken place, but the market is a very nominal one; and, obviously, it still remains to be proved whether even the present quotation is justified.

THE Institute of Bankers announce that the inaugural address of the president, Sir John Ferguson, K.B.E., will be delivered in the hall of the Skinners' Company, Dowgate hill, E.C., on Wednesday, October 28th, at 5.30 p.m. A few visitors' tickets are available on application to the Secretary, 5 Bishopsgate, E.C. 2.

A PUBLIC meeting, under the auspices of the League to Enforce Public Economy, will be held in the Essex Hall, Essex street, Strand, on October 28th, at four o'clock. The Right Hon. Sir John Simon, M.P., will speak on public expenditure, the Budget, and the taxpayer. Chairman, Henry Bell, Esq.

Oversea Correspondence.

**UNITED STATES.—STOCK MARKET BUOYANCY—
BANKING POSITION—COMING BELGIAN CREDIT
—FRANCE, BELGIAN, AND GOLD—INDUSTRIAL
NEWS—COTTON FIGURES.**

(FROM OUR CORRESPONDENT.)

NEW YORK, October 13.

BUOYANCY has returned to the share market, thus upsetting afresh the predictions of the more conservative observers. When the more active buying that followed the unexpected reduction in your bank rate was met by heavy profit-taking, many assumed that the long-expected break was about to arrive. Considerable short selling was done on this theory. As things turned out, the selling died out without a break developing. When the shorts went in to cover, they drove prices up rather sharply. The much-discussed motor shares pressed on to fresh high levels. With confidence restored, operations for the rise were resumed. At the moment of writing the market looks as much like a bull affair as ever. No one believes, of course, that prices will continue rising indefinitely. At the same time, it is apparent that many of the influences that usually attend the start of a bear market are lacking. There is, for example, no inflation of commodity prices. Industry and business are still being operated along remarkably efficient lines. The turnover of goods is rapid; there are no congestion, inflated demand, or piled-up inventories. Many bull markets of the past have been terminated when the increased demands for credit of a congested business organisation drew funds away from the Stock Exchange. Nothing like that exists at the present time. Our businesses are extraordinarily liquid, and our business men are not disposed to speculate in goods.

The unusual banking situation that exists in our country districts is illustrated by the remarks of one of the city's leading bankers. This man had occasion recently to discuss conditions with several of the Kansas bankers, who had come on to attend the recent meeting of the American Bankers' Association. These country bankers reported that their local customers were well supplied with funds, and were disinclined to borrow. The balance-sheets of these country banks were notable for the relatively large holdings of Government securities and the large amounts of cash that were out on loan in the call money market. The New York banker expressed the opinion that as long as such a situation prevailed it was difficult to see how the money market could be even moderately firm. Certainly, it is a fact that the country banks have large amounts of money on call in New York. It is the operations of these country banks that are determining, to a large extent, the current movements in the New York call money market.

With this situation existing, and with gold coming in this direction from Europe, it is now taken for granted that the Federal Reserve authorities will not increase official discount rates. An advance would appear to be quite illogical. It would lift the level of rates in the open market, and so raise our bid for your gold. In the end we should attract added funds that would be made available for speculative purposes. Serious students of economic and financial questions are agreed that we have no need for additional gold; they concur in the opinion that the desirable movement would be in the opposite direction—that ways should be sought in which some of our gold could be made available to aid in the restoration of the gold standard throughout Europe. Under these circumstances, it would seem that our central banking authorities should be prepared to endure the advance in security prices—particularly as the advance finds justifications in existing earning positions and existing supplies of capital, and especially as it is doubtful whether official intervention could do more than administer a temporary check to the advance. No doubt the extent of the current speculation has been the subject of much exaggeration. The change in sentiment since

the reduction in your bank rate has reminded many critics that the bull market of the present year cannot be dismissed as merely the result of the operations of bold speculators; it has called attention to the fact that great and unusual forces are at work.

While French credits in this market are improbable until a clearer view is had of the debt funding situation, Belgian borrowing is anticipated. The dispatches that have come from that country are being taken as indications that the Belgians are considering plans for stabilising their currency in relation to gold. Our bankers feel that Belgium, having got its finances in hand and having funded its debt to America, is now in a position to return to gold payments. In their minds the advantages of such a step are quite clear. In addition to securing the usual benefits incidental to sound money the Belgians would find an advantage in disassociating their currency from the fluctuations of the French paper franc. Any uneasiness that the Belgians might have over the immediate future of the French franc would accentuate, of course, the desire to tie their currency to gold. If Belgium has such a plan in mind, it is taken as assured that she would be able to avail herself of any necessary stabilising credits on this side of the water. While nothing definite is known, the feeling here is that one of the next big developments in the international financial situation will be Belgian return to the gold standard.

In this connection developments in France will be watched with interest. From the start our bankers have felt dubious over M. Caillaux's gold loan. It seemed to them a temporary expedient that would have to be followed up promptly by more definite and decisive measures. Events have justified this view of the matter. That the more definite and decisive action should take the form of the restoration of the gold standard is pretty generally agreed. Perhaps the distance that our financiers are removed from France makes them too slenderly informed with regard to local condition to be the best judges of what should be done; on the other hand, it may be that this distance gives a perspective that the French themselves lack. In any event, it is tolerably clear to our people that the sooner France gets back to the gold basis the better it will be for France. As a preliminary, the budget needs, of course, to be balanced beyond a question. But M. Caillaux has assured us that his budget will be irreproachable. For the rest, France might want foreign credits; she certainly would want confidence. Granted a debt settlement with America, the foreign credits would be available. As for the confidence, nothing would restore confidence like the balanced budget and the restoration of gold payments itself. Sooner or later, our people believe, France will return to gold; nothing, they believe, is to be gained by delay. In this matter they see great virtues in the dictum of John Sherman that "the way to resume is to resume."

Industrial news continues favourable. The United States Steel Corporation reported an increase in unfilled orders during September of 204,000 tons. This increase terminated a decline that began in March, and that carried unfilled orders down from 5,284,000 tons to 3,512,000 tons. The September increase is about twice as large as generally had been expected. Meanwhile, the country's steel plants are working at about 80 per cent. of capacity, prices are firm, and railroad buying is increasing. An encouraging factor is a sharp rally in the volume of building contracts that has come just at a time when the pessimists were predicting the collapse of the building boom. The gain has been particularly sharp in the New York district, where it had been assumed that the building shortage had been quite made up.

A great deal of criticism has arisen over the official estimates of the cotton crop. The wide fluctuations in the prophesies of the Department of Agriculture have upset the trade, and called forth demands that the Department limit itself to monthly forecasts, as it formerly did, instead of attempting to make fortnightly estimates. However, there is a disposition to believe that the latest estimate, which calls for a crop of 14,759,000 bales, will be much closer to the truth than its immediate predecessors. Ginnings have been running exceptionally heavy, partly because of the early season, but ginnings are not a reliable index of what the total outturn will be.

Other recent crop estimates indicate that the wheat yield will be substantially as predicted in the later estimates, and that the corn crop will be larger than predicted a month or so ago. Taken altogether, the crop reports show that the agricultural basis for prosperity exists.

**FRANCE.—LOCARNO—CONVERSION LOAN RESULT—
FOREIGN TRADE—REVENUE—PRICES.**

(FROM OUR CORRESPONDENT.)

PARIS, October 21.

WHILE the general prosperity of the country remains practically normal, it may be said without hesitation that the situation of the national finances is worsening every day, and that the whole strength of the country's leaders will be required to enable shipwreck to be avoided. The happy outcome of the Locarno conference has apparently removed all likelihood of any renewal of the European war for the time being. In view of Germany's previous conduct, however, French opinion outside of more or less pacifist circles is by no means enthusiastic over M. Briand's success. In many quarters, indeed, there is a fear that it may be found, when the various treaties undergo analysis, that, on the whole, they will prove much more advantageous to Germany than to this country. This view has been strengthened by the publication here of the text of a confidential official report sent to M. Briand by M. Tirard, the High-Commissioner in the Rhineland, which insists that Germany is at present systematically "faking" her foreign trade and revenue statistics, with the deliberate object of rendering impossible all benefit to the Allies from the Dawes plan. One striking statement made in this report is that the charges imposed on German industry by the Dawes plan are not to come into effect until September, 1926, or two years after the plan went into operation, and that the charge in question even then will amount only to 39-100ths of 1 per cent. (.39 per cent.) of the capital of the undertakings concerned. The accusation is made that Germany is deliberately organising an enormous Budgetary deficit in order to support an appeal to her creditors in the near future for further sweeping revisions downwards of her debt.

It has been announced by M. Caillaux that the subscriptions to the new 4 per cent. conversion loan, which closed yesterday, "will exceed 6,000 million francs." It had been hoped, it is unofficially stated, that the total amount of floating debt that would by this operation be converted into perpetual Rentes would amount to between 15,000 and 20,000 million francs. Considering that the total floating debt amounted at the end of July, 1924 (according to the "Inventaire" drawn up by the then Finance Minister, M. Clementel), to over 91,000 million francs, and that National Defence Bonds alone then amounted to over 56,000 million francs, which total has since been increased, the results of M. Caillaux's appeal to the public cannot be regarded as very successful.

The situation of the Ministry on the eve of the re-assembly of the Chambers is not an enviable one. Credits will have to be asked for two trouble-some wars—the one in Morocco and the other in Syria—and the reports that are current as to the former, although the little public mention has been made of the facts, are distinctly pessimistic. If France alone were concerned, the dissident tribes might be pacified without much the trouble. The difficulties that exist are largely due to the fact that France is not alone in the affair, but has to work in liaison with the Spanish. Her task has been made all the more difficult from the fact that the Riffians are now inclined to vent on the French all the hatred they have for so long felt for their older antagonists. Operations, it is generally recognised, must now be suspended until the spring, which means that very heavy expenditure will be necessitated, which France can certainly not afford in the present financial situation.

The foreign trade returns for September disclose an excess of imports for the second month in succession. Imports are valued at 4,317,029,000f, and exports at 3,849,879,000f, giving an adverse balance of 467,000,000f, as compared with one of only 39,000,000f in August. In September, 1924, there was a surplus of exports amounting to over 50 millions, and down to August there was every month a consistent favourable balance of trade. It should be noted, however, that the September import totals include several million francs' worth of wheat that ought properly to have been included in previous monthly returns. Wheat imported before July 15 was subject to a lower import duty on condition that it was sold immediately. Provision of the necessary proofs naturally took some time, and accounts for the delay in including these imports in their proper months. Both imports and exports show an increase of over 1,000 millions in the first case and of nearly 700 millions in the second, as compared with the corresponding month of last year, but much of this, of course, is to be attributed to the general rise in commodity prices, as measured in francs. Import tonnage, in fact, has been 20 per cent. lower. The figures for the first nine months of the year, which are as follows, show a surplus of exports amounting to 2,732,531,000f, as compared with one of 1,183,644,000f for the corresponding period of 1924:—

	First Nine Months of		Difference in 1925.
	1924.	1925.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	6,565,907,000	6,464,487,000	— 101,420,000
Raw materials	18,905,693,000	19,175,826,000	+ 270,133,000
Manufactured goods ..	3,685,553,000	3,844,104,000	+ 158,551,000
Totals	29,157,153,000	29,484,417,000	+ 327,264,000
Exports—			
Foodstuffs	2,841,246,000	2,463,804,000	— 377,442,000
Raw materials	7,666,737,000	8,847,862,000	+ 1,181,125,000
Manufactured goods ..	18,435,495,000	19,408,369,000	+ 972,874,000
Postal parcels	1,397,319,000	1,496,913,000	+ 99,594,000
Totals	30,340,797,000	32,216,948,000	+ 1,876,151,000

The revenue, according to the return for September, continues to come in satisfactorily. The total yield from all sources during the past month—which, like August, is always one of the least productive of the year—was 1,867,684,400f, as against 1,812,719,700f in August and 2,534,068,100f in July. Nevertheless, the total yield was 148 millions less than in September, 1924, although expenditure has largely increased during the past nine months. The total yield for the first nine months of the year has been 19,882,503,300f. The bulk figure of the Budget for the current year is 33,138 millions, of which 1,275 millions is expected from the Dawes reparations plan, and the balance of 31,863 millions from ordinary sources. The situation is, therefore, proportionately less satisfactory than at the same period last year, when, out of a total revenue of 26,132 millions, 1,789 millions had been recovered by the end of September. The last three months of the year, however, generally record the collection of about one-third of the whole year's revenue, so that it is as yet too soon to anticipate that the Budget estimates will not be realised. It is to be regretted that the Ministry of Finance no longer publishes with these monthly returns a detailed comparison between the Budget estimates and the actual yield. All that is made known is that the yield from

indirect taxation and State monopolies last month was 78,995,000 less than Budget estimates, and in August, 90,839,000 less. These figures are not encouraging, in view of the present almost critical situation of the Treasury.

A significant fact apropos the general economic situation is that the yield from the turnover tax, which may be regarded as a very fair barometer of the general situation of trade and commerce, last month was 44,202,000 less than had been expected. Incidentally, the yield from the turnover tax for the first nine months of the year has been 3,333,943,000, which is equivalent to between 16 per cent. and 17 per cent. of the total revenue for the period, which suggests a total yield for the year of not far short of 4,500,000,000—a figure, by the way, which its introducer, M. Klotz, predicted it would reach when it came fully into operation. As a sop to the smaller traders, M. Caillaux has promised to modify this tax seriously in their favour in the near future, in view of the large amount of book-keeping it entails. A much more serious objection to this tax, however, is that it undoubtedly contributes appreciably to increasing the apparent cost of living. The word "apparent" is used intentionally, because detailed comparison, based on practical experience in both capitals, proves that the cost of living in Paris, calculated in sterling at present exchange rates, is substantially lower than in London.

The index figure of wholesale prices for September is returned by the Statistique Général as 567, as compared with 569 in August and in July. The detailed figures, which embrace 45 categories of merchandise, and are based on 100 as representing wholesale prices in July, 1913, are as follows:—

	Categories.	Sept.	August.	July.
General index figure	45	567	569	569
Foodstuffs	20	482	490	497
Vegetable foods	8	485	491	514
Animal foods	8	467	480	480
Sugar, coffee, cocoa	4	507	513	498
Raw materials	25	642	638	631
Minerals and metals ..	7	581	577	562
Textiles	6	761	762	755
Various	12	608	601	597

It will be noted that, with the exception of minerals and metals, and certain less important raw materials, there was a general although fractional decline from previous levels. The index figure for retail prices in Paris (embracing 13 articles of common necessity, including petroleum) is returned for September at 431, as compared with 423 in August and 421 in July. This rise of 8 points may be attributed to the rise in wholesale prices during the earlier months of the summer.

NORWAY.—GOOD HARVEST—DEFLATION—EXCHANGE AND BUSINESS DIFFICULTIES.

(FROM OUR CORRESPONDENT.)

OSLO, October 17.

THE finest summer, perhaps, in living memory in this country now seems to have come to an end. In the north of Norway, and as far south as Drontheim, snowstorms have prevailed, and in Southern Norway the thermometer has for some days shown several degrees of frost. The harvesting of all sorts of agricultural produce is finished, and the results are excellent. It seems probable that the value of the crop of corn, hay, and potatoes will have a total value of some 550 million kroner.

The bond and stock markets have lately been very quiet, the turnover during the first week amounting to only about 558,000 kroner. The quotations for both banks and industrials remained almost unaltered, and the same may be said regarding bonds as well. This fact shows that the economic situation is strained, which is also shown by the reduced circulation of the bank, which has fallen during the past week by nearly 5 millions, to 365 million kroner. The reduced circulation, no doubt, may to some extent be attributed to the reduced prices of commodities.

The exchanges, though showing frequent variations, have lately been subject to no such violent fluctuations as last month. The lowest for sterling since my last letter

was 23 kroner (on the 16th, and also on the 21st ult.), and the highest 24.75 kroner (on the 29th ult.). On the whole, sterling has centred round 24 kroner. But there is in the trade a feeling of uncertainty, since uncontrollable forces are at work, and this uncertainty tends to disturb economic activities, traders being afraid to commit themselves by larger purchases, and therefore buying only from hand to mouth. A few industrial concerns, also, have found it necessary to shut down; some others have managed to make an arrangement with their workers (though an agreement for higher wages was still in force), for a reduction in wages so as to be able to carry on. A few others have been fortunate enough to sell in advance, at a favourable rate, the sums at their disposal for exports during the current year, and so do not feel the difficulties of the exchange question.

JUGOSLAVIA.—FOREIGN TRADE—FREIGHT RATES—CREDIT, PRICES, AND EXCHANGE.

(FROM OUR CORRESPONDENT.)

BELGRADE, October 11.

ALTHOUGH the season is fairly advanced, Yugoslav export trade is still in the state of relative stagnation which set in during the latter half of the year. Export figures for July and August, as well as market reports for September, show that the amounts going abroad were actually less than those of last year.

(In Millions of Dinars.)

	1924.			1925.		
	Tons.	Paper.	Gold.	Tons.	Paper.	Gold.
July	335,940	686.3	44.4	291,494	566.9	51.4
August ..	389,674	854.7	55.9	371,180	765.0	70.5

This stagnation, however, is not due to any lack of stocks ready for shipment, for harvest figures only confirm the accuracy of the earlier estimates, which placed the value of goods available for export at over 10,000 million dinars. It is rather the result of the position on the money market, the continual fall of internal prices, the expectation of the new railway freights tariff, and the situation of the European corn market.

On the money market, the influx of foreign currencies earlier in the year, and the great increase of private savings deposits caused a relative glut of cash. On August 22nd home banks had no less than 938 million dinars of deposits lying idle at the National Bank, an amount nearly three times as large as at the same time last year. As a consequence, the interest rate on loans, which in July had already fallen from 20 to 18 per cent., continued to weaken in September to between 14 and 16 per cent., while the rate of interest on deposits dropped to 4½-6 per cent., as compared with 6-9 per cent. in the spring. Similarly, the commodity price index, which had fallen from 2,004 in April to 1,785 in August, slackened still further in September to 1,642, the figure for wheat, for instance, dropping from 280 to 240. It is only natural, therefore, that, with gradually easier credit in goods which are falling in price.

Nor was export easy under the old system of freights, which was out of proportion to the improvement of the dinar. It was with relief, therefore, that merchants greeted the new freights tariff which came into force on October 1st, and reduced rates roughly by about 20-25 per cent. This is the first unified freights tariff applying to the whole kingdom, and superseding the old and cumbersome system of separate provincial rates. Its special export articles, and to the five ports of the middle and south Adriatic: Split, Sibenik, Gravosa, Metkovic, and Zelenika. The favoured articles include wood, wood-toes, cement, calcium carbide, and many minerals, while the ports mentioned are granted rates 25-30 per cent. lower than those for Fiume and Susak. By this means it is intended to deflect to the south goods which would

ordinarily seek the Fiume port, and also to encourage home shipping.

Not the least important reason for the lateness of the Yugoslav export season is the generally better harvest throughout Europe and the reluctance shown by foreign buyers with regard to purchases of Yugoslav corn until the capacity of Russian transport to deal with Russian export shipments is finally known. Nevertheless, the withdrawal by banks of deposits of over 200 million dinars from the National Bank within the last fortnight, and the cessation of the downward trend of the interest rate are indications that the export campaign is ready to begin.

Imports during the second quarter were heavier, owing to the desire of merchants to stock themselves well with goods before the introduction of the new protectionist import duties. The value of imports during the quarter amounted to 2,474.5 million paper or 210.6 million gold dinars, making the total imports for the first half-year 4,603 million paper or 388.6 million gold dinars, as compared with exports of 4,506 million paper or 379.7 million gold dinars. The indications, therefore, point to another favourable trade balance, though not so favourable as that of 1924.

The coming Parliamentary Session promises to be one of unusual interest, not only because it will test the working capacity of the Radical-Raditch Cabinet, which now appears for the first time before the Assembly, but also from a legislative point of view. With a two-thirds majority, and faced by only a disunited opposition, the Government should be able at last to pass a number of laws which the rapidly changing economic and social conditions have made overdue. Among fiscal laws the most important should be that of direct taxation, for, with the old provincial system of taxation still existing, it has been possible for one province to charge twice as much taxation as another on the same income. Of no less interest should be the new Budget, which the Minister of Finance promised to reduce in conformity with the deflationist policy of the Government. That such a reduction is possible is evident from the fact that the last budgetary year—April, 1924-May, 1925—finished with a surplus, in spite of the fact that capital expenditure for railway construction was met out of regular budgetary resources. Revenue for that period was 11,190,055,178.45, and expenditure 10,579,388,339.12, leaving a surplus of 610,666,839.33 dinars.

NEW ZEALAND.—IMMIGRATION AND THE ECONOMIC POSITION—POPULATION STATISTICS.

CHRISTCHURCH, September 4.

THE recent visit of the Empire Press Delegation en route to their conference in Australia has done a great deal to focus attention upon the problem of Imperial migration. Fresh from the unemployment and trade depression of Britain, they were not unnaturally emphatic about the necessity of encouraging immigration into New Zealand and the other Dominions by every means within our power. On the face of it their argument carries much weight, for it cannot be said that the limits of population are within sight in New Zealand, where there is still a good deal of land to be opened up and much more could be closely settled if financial conditions were not an immediate hindrance.

The chief argument to be advanced against encouraging immigration at the present time is that in the present state of land values and the uncertain future before the markets for our export produce, it would be extremely difficult to place large numbers of new immigrants on the land. The general argument in favour of immigration may be incontrovertible, but one cannot overlook the fact that the peculiar economic situation at the moment would make any large immigration almost certain to cause both industrial and political difficulties. The experience of the great scheme of assisted immigration launched by Sir Julius Vogel in the somewhat similar situation that existed in the 70's, does not predispose New Zealanders to take a favourable view towards proposals to repeat the experiment.

The immediate effect of heavy immigration would be to aggravate the seasonal unemployment which, though small in extent compared with other countries, is beginning to cause concern each winter. Newcomers, especially those without capital, must inevitably congregate in the towns and so swell the ranks of those looking for the limited jobs which arise mainly from the prosperity of the primary exporting industries. In the long run also the presence of an unemployment problem in the town will cause again a demand for an upward revision of the tariff to create work in secondary industries.

The population of the Dominion grows very slowly. The rate of increase has been constant at 12 per cent. per quinquennium for about 30 years now. At this rate the population will reach 2½ millions in 1950 and 5 millions in 1980. The vital statistics for the year have just been presented to Parliament in a report from the Health Department, which occupies an important place in the public estimation of New Zealand. The birth-rate is very low at 21.7 per thousand, but the new record established for the death-rate, which must be the lowest of any country in the world, is 8.29 per thousand of mean population. The natural increase is, therefore, much higher than the low birth-rate would lead one to expect, and New Zealand is among the leading countries of the world as regards natural increase.

The chief cause of the very low death-rate is the care and attention given to infant welfare and the remarkably low rate of infantile mortality which results therefrom. The statistics show that another low point has been reached in infantile mortality, the rate being now down to 40.2 per mille. The nearest approach to this figure is the 60 per mille of the last available statistics from Norway, 1917-1921.

The rates in question are worth recording over the past few years:—

NEW ZEALAND POPULATION.

Year.	Number 000's.	Birth-rate per Mille.	Death-rate per Mille.	Infantile Mortality per Mille.
1911	1,008	25.97	9.39	56.31
1921	1,219	23.34	8.73	47.82
1924	1,325	21.7	8.29	40.2

The rate of natural increase, despite the falling death rates, is steadily going down and, though it still compares favourably with other countries, is falling more rapidly than it is pleasant to record. From a maximum of 29.41 per mille in the quinquennium 1876-1880 it has reached approximately 13 per mille according to the figures for 1924. Even so the increased population due to the excess of births over deaths within the country is far greater than the increase from immigration.

Letters to the Editor.

MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to my letter which appeared in your issue of the 17th inst., I have been authoritatively informed that there is no truth whatever in the statement contained in an Exchange telegram which appeared in the Press, and to which I referred, that the Government was making use of the power to borrow in New York which is given in the Gold Standard Act.—I am, Sir, your obedient servant,

D. M. MASON.

Chairman Executive Committee, Sound Currency Association. October 21st, 1925.

THE BURDEN OF TAXATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent in Paris can know little about English taxation when he says that it is 23 per cent. of the total income. Super-tax and income-tax alone absorb 50 per cent. of the income; then there are all the enormous rates and indirect taxes. The taxation absorbs about 75 per cent. of one's income.—Yours faithfully,

EDWARD D. STERN, BT.

Fan Court, Chertsey, October 19th, 1925.

[Our Paris correspondent's figure is roughly accurate. Sir Edward has confused the burden imposed upon the individual large taxpayer with the average weight of taxation on the total income of the country.—ED. Econ.]

Books and Publications.

FRENCH FINANCE.*

MR PEEL'S volume has many claims on the public attention. In view of the present gyrations of the franc, it is what Fleet street sub-editors would call "red-hot stuff." It provides abundant material for a study of the progress of French public finance to its present position, and it brings right up to date the story which is of profound international importance to-day. The volume, also, is written in a very pleasing and readable style by one whose study of his subject has obviously been thorough. Last, but not least, Mr Peel strikes a note of confidence, which is arresting.

The argument of the book starts with the statement that "at the date of the opening of the great war the system of French public finance was well-nigh obsolete and needed reconstruction." The earlier part of the volume traces the financial policy which through a century led up to this pre-war position. Then follow chapters on the war period and the efforts of contemporary statesmen to raise "another system amid the horrors of the worst catastrophe that men have inflicted on one another, and amid the unutterable economic welter which ensued. Like the sage Archimedes of old days, they pursued their calculations in thick of warfare, and did their reckoning in the dust." The middle chapters of the book deal clearly and concisely with the successive labours of Finance Ministers in the face of a task growing every day more formidable, in the face of circumstances which built up "a Himalayan range of debt soaring up to 36 milliards of gold francs." The story is profusely illustrated, with statistical information drawn from many sources (not excluding the *Economist*). Lastly, the real facts of the problem, as it faces M. Caillaux to-day, especially the great floating debt, are faithfully presented.

Mr Peel does not minimise the formidable nature of the problem, but he comes to certain hopeful conclusions. He finds, for instance, that, in spite of the overwhelming difficulties under which the French Treasury has been working, the foundations of the necessary reforms in the French financial system, "though marred by many defects, have been well and truly laid." Finally, Mr Peel poses the vital question, "whether we can hope that France, in spite of the extraordinary difficulties of her situation, can attain to a revenue so reorganised and to an expenditure so adjusted as to secure for herself a bearable Budget, a debt within her compass, and a stabilised franc." To this question an affirmative answer is returned. The "five great dangers which threaten the public finance of France" are reviewed in turn, but "our analysis has led to the conclusion that none of these difficulties should prove too much for France, that all are accompanied by mitigating factors, and that, therefore, with time and courage they can all be overcome." This thoughtful, up-to-date, and well-written treatise should be read in France, as well as in this country and the United States.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, November 4. ACCOUNT, November 5.

THE incidence of another heavy fortnightly settlement has had its effect upon this week's Stock Exchange markets. Numbers of Stock Exchange men worked through Wednesday night and Thursday morning without a break. Stock Exchange Nominations have risen within the last few days from £100 to the present price of £300. Earlier this year the quotation stood at £40. As a money-making proposition, a Stock Exchange career advances in popularity. House shares, at 100 not long ago, are to-day 122½ ex the interim dividend of £3 payable on Monday week.

Business in many departments is active. British Government funds and other gilt-edged stocks remain steady. The War Loan will be transferable ex dividend next Tuesday.

Foreign Government bonds are good. Greeks make an exception, owing to the reported trouble with Bulgaria, and French issues went back along with the value of the franc. German, Austrian, and mid-European issues strengthened as a result of the Locarno Conference. Brazilians keep hard. Russians, in most cases, are better.

Home railway stocks show substantial recoveries. The strength spread to all sections of the market, Underground rising with the rest. A very modest investment demand served to catch the market short of floating supplies of stock. Argentine Rails, allowing for Thursday's dividend deductions, are better. A sharp rise in Cordoba Central stocks followed announcement of the company's suggested plan of capital reorganisation. Nitrate Rails have improved, and Lautaro advanced at the same time.

A huge account in rubber shares has had to be settled this week. Settled, that is to say, in part; dozens of names which should have passed on Wednesday night are still outstanding from sheer physical inability of staffs to deal with them. Prices are good, thanks to the strength of the raw article and to the daily dividend declarations. Tea shares are better, and the oil market is receiving a little favourable attention. Thursday's meeting of the V.O.C. was considered colourless.

The shipping group has started to recover, P. and O. deferred being nearly 10 points higher on the week. Bank shares continue firm, and movements amongst the insurance list are uninteresting. Trust companies' stocks stand higher.

Courtaulds went up with a rush on American buying, the price reacting when these purchases were completed. Hundreds of thousands of the shares have changed hands every day. American Cellulose enjoyed a smart rise. Next to Courtaulds, Dunlops have been the most active share in the industrial market. After the abrupt drop on Sir Eric Geddes' warning against undue optimism, the price rallied upon accession of fresh support.

Cable stocks are higher; wireless remain firm and Burndept preferred rose with a jump. Brewing and whisky shares are better. The iron and steel market looks more cheerful than it has done for many months past. Egyptian Land shares are again in favour. Gas stocks improved, while electricity supply has languished in neglect, although the manufacturing descriptions show pronounced strength. The tobacco share market is better, on very vague hopes of bonus distributions. Cement shares, on dividend hopes, returned to favour. Brazilian Tractions lost several dollars after the meeting, but the fall was easily regained.

Transvaal Platins, after their shake-out, attracted mild support, but the market is not a good one. Kaffirs keep very quiescent. Rhodesians are better in places. Tin shares are the main feature of interest. Malayans have been very strong, and a lively market sprang up in the principal shares. The Middle East contributing support. West Africans joined in to a mild degree, and Cornish shares hardened up a little. Russian mining shares are better, and Burma Corporations have been a good market. Coppers and diamonds have taken their cue, as usual, from Paris.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

	Nominal Capital, £	Cash Subscription, £	First Payment, £	Further Liability, £
Amount previously recorded.....	170,378,313*	..	..	..

The Uganda Company, Limited.—Authorised capital £300,000, in shares of £1 each, of which 170,000 are issued. There is also a mortgage debenture issue for £25,000 "upon which is owing" £21,925. Subscriptions are now invited for 100,000 ordinary shares of £1 each, the price being 22s per share. The shares will rank *pari passu* with the existing £170,000 of ordinary shares in respect of the profits since November 1, 1924. The company's chief product is cotton, while it also produces coffee, rubber, hides, ivory, &c., and, in addition, carries on a general stores and agency business. The cotton produced commands a premium of about 25 per cent. over American middling. The profits for the year 1923 amounted to £11,175, and for the ten months to October 31st last to £26,926, while on a maximum share capital of £100,000 profits over the past six years are shown to have averaged £22,926. The capital was increased in April, 1924, by the issue of £50,000 of preference shares, since converted into ordinary shares. Substantial dividends and bonuses have been distributed. The prospectus is an excellent statement of affairs, and a balance-sheet is submitted. At the price offered the shares appear to be attractive, regard being paid to the speculative nature of the undertaking.

British Visada, Limited.—Capital £360,000, divided into 300,000 10 per cent. preferred ordinary shares of £1 each and 600,000 deferred ordinary shares of 2s each. This is an issue of the whole of the capital at par. The directors and their friends, it is stated, have already subscribed for the whole of the deferred ordinary shares. The company has been formed to manufacture artificial silk by means of the Viscose Process, and has acquired a mill in Lancashire for £52,000 in cash, and it is stated that the purchase price of the land and buildings is in accordance with the valuers' figure. The total cost of plant, machinery, and general equipment is estimated at £160,500. The issue has been underwritten for a commission of 3 per cent. and an overriding commission of 1 per cent. It may be contended that to invest in this proposition partakes of the nature of handing a blank cheque to the directors, but in view of the excellent business reputation enjoyed by them and the qualifications of the consulting chemist who will assist, the enterprise begins under favourable conditions.

Bolivian and General Tin Trust, Limited.—Share capital £500,000, in shares of £1 each, all of which are now offered for subscription at par. The company has been formed to acquire interests in tin-mining propositions, and will, in the first place, obtain a controlling interest in the Fabulosa group of producing tin mines, comprising, in all, an area of over 17 square miles in Bolivia. This is to be achieved by the acquisition of 2,000,001 ordinary shares of U.S. \$1 each (part of a total authorised capital of \$4,000,000) of Fabulosa Mines Consolidated, which operates the above-mentioned mines, at the price of 3s 11½d per share. The Fabulosa Company was incorporated in 1921, but no particulars of past profits are given, though the prospectus states that "it has been a profitable undertaking." Nothing is payable for goodwill. The issue has been underwritten for a commission of 4 per cent., and an overriding commission of 1 per cent. Preliminary expenses are estimated at £65,000, and are payable by the vendors.

Central Oil and Chemicals Trust, Limited.—Particulars of this undertaking are published in compliance with Stock Exchange regulations. The authorised and issued share capital is £700,000, in £1 shares. The company was incorporated in 1911, under the name of the Central Oil and Gas Trust, Limited, primarily to acquire certain oil interests in Oklahoma, and was also interested in a proposed coal-washing and briquettes-making plant. Neither of these businesses, however, have been proceeded with. The company has now acquired at £14 per share, 18,000 out of a total of 20,000 "B" shares of 1s each in the Chosen Syndicate, Limited. It is proposed to carry on the business of an investment trust. The board of directors has recently been reconstituted.

Pettigrew and Merriman (1925), Limited.—Authorised capital £250,000, divided into 125,000 7½ per cent. cumulative preference shares of £1 each and 500,000 ordinary shares of 5s each. This is an issue at par of the whole of the preference capital. The company has been formed to acquire the businesses of Pettigrew and Merriman (incorporated in 1919), Pettigrew and Merriman (Continental), and Brunet et Cie., of Paris, manufacturers and distributors of wireless apparatus. The net profits of the two first-named companies have risen from £12,754 in 1922-3, to £20,445 for the six months to April 30th last. The auditors report that, owing to the fact that inventories of stock have not been taken at regular intervals, it is only possible to state the total profit of Brunet et Cie. for the period of three years and five months examined by us, which, converted to sterling at the exchange rate of roof to the £, amounted to £29,130, after charging all expenses, including partners' salaries, taxes, and depreciation. The total assets being acquired are stated to amount to £148,900, of which £44,000 is in respect of goodwill. The combined net profits of the three companies for the six months ended April 30, 1925, were £29,095. The preference interest requires £9,375. The purchase price is £148,900, payable in cash, of which £57,800 is in respect of the business and assets of Brunet et Cie. The issue has been underwritten for a commission of £3,750.

Sumatra Anglo-Dutch Estates, Limited.—Share capital £500,000, in shares of £1 each. There is also £250,000 of 6 per cent. first mortgage convertible debenture stock, which is now being issued at par. The stock is convertible into shares at par at any time between January 1, 1932, and January 1, 1933, and interest is guaranteed by the Anglo-Dutch Plantations of Java for six years. The stock constitutes a specific charge on the issued capital of the Sumatra Land Syndicate and a floating charge on the remainder of the assets and undertaking of the company. It is stated that "any outstanding stock will be redeemed at 105 on November 1, 1945, but the company shall, after January 1, 1933, have the right to redeem the stock at 105 by giving six months' previous notice." The company also reserves the right to purchase the stock in the market or by tender. Of the ordinary shares, 170,000 have been subscribed for at par by the Anglo-Dutch Plantations of Java, the balance being retained to provide for conversion rights. The company has been formed to acquire 102,114 acres of land in Sumatra, and to plant this with rubber, coffee, and tea. The purchase price is £160,000, payable as to £80,000 in shares and £80,000 in cash. The company is under first-class management, and the stock seems an excellent investment of its class, particularly in view of the guarantee of interest by the vendor company.

Associated Hotels, Limited.—Capital £50,000, in 49,000 ordinary and 1,000 management shares of £1 each. Of these, 16,000 of the former and the whole of the latter are already issued and fully paid. After paying 10 per cent. in any year on the ordinary shares, and subject to 10 per cent. on the management shares, any distributable profits are divisible—75 per cent. among the holders of the ordinary and 25 per cent. among the holders of the management shares. Formed two years ago, the company owns the freehold of a London hotel, which was opened in the spring of 1924. The prospectus states that although during the first year of the company's business this hotel was fully available for some six months only, the net profits permitted of the payment of a dividend for that year of 10 per cent. on both classes of shares. Another hotel was opened in August last. The accounts for the year to Septem-

ber 30, 1925, are not yet complete, but the directors state that the result of the year's working will justify the declaration of a dividend not less satisfactory than that for the first year of the company's existence. The proceeds of the present issue will be utilised in repaying temporary bank loans and balances of accounts, all incurred in connection with extensions and developments. The directors are men of considerable experience in the catering world, and should be able to make a success of the enterprise.

Bemfield Rubber Estates, Limited.—Authorised capital £250,000 in shares of £1 each. This is an issue of 200,000 shares at par. The company has been formed to acquire estates in Sumatra, having an area of 10,122½ acres, of which 1,325 acres are planted and 1,109½ acres are said to be planted with mature rubber. The total purchase price is £147,982, equal to about £99 per planted acre, payable, presumably, in cash. The issue has been underwritten for the granting of an option to subscribe for 40,000 shares at par up to December 31, 1930.

Naraguta Korot Areas, Limited.—Share capital £150,000 in shares of 10s each, of which 120,000 shares are now offered for public subscription at par. The company has been formed to acquire certain tin producing properties in Northern Nigeria. It is stated that the company will start to produce tin, which is already producing from 8 to 10 tons per month. The purchase consideration is £65,000, payable as to £25,000 in cash, and the balance in ordinary shares, while the vendors are also granted an option over 100,000 shares until November 1, 1927.

Subur Rubber Estates, Limited.—Authorised share capital £120,000 in shares of 2s each. This is an issue of 1,050,000 shares at par. The company has been formed to acquire certain rubber plantations in Perak of about 1,038 acres, of which, it is stated, 800 acres are planted with mature rubber out of a total planted area of 900 acres. The purchase price of £88,500 is payable in cash, together with an option to the vendors of subscribing for 150,000 shares at par until June 30, 1928. The issue has been underwritten for a commission of 4 per cent., together with an overriding commission of 1 per cent.

Ipo Rubber Estates, Limited.—Authorised share capital £100,000, in shares of £1 each. This is an issue at par of 75,000 shares. The company has been formed to acquire and develop estates in Perak, F.M.S., having a total area of 1,038 acres, of which 770 acres are planted, 594 acres being planted with mature rubber. The purchase price is £62,500, together with an option to subscribe for 5,000 shares at par until December 31, 1926. The issue has been underwritten for a commission of 3 per cent., with an overriding commission of 1 per cent.

Bristol Waterworks Company.—This is an issue of £84,998 of 5 per cent. perpetual preference stock, 1925, the lowest price at which tenders will be received being par. This taking for the year ended December 31st last, the revenue, it is stated in the prospectus, "exceeded £270,000." After providing for working expenses, reserve for renewals, interest and dividends, &c., there was an available balance of £67,790. It is stated that no portion of the issue has been underwritten.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

ANGLO-SOUTH AMERICAN BANK, LIMITED. SATISFACTORY RESULTS OF THE YEAR'S TRADE. CHAIRMAN ON IMPROVED EUROPEAN CONDITIONS.

The thirty-seventh annual general meeting of the Anglo-South American Bank, Limited, was held, on the 20th instant, at Winchester House, Old Broad street, London, Mr R. J. Hose (the chairman) presiding.

The Chairman, in moving the adoption of the report, in the course of his remarks, said: During the first year of the operation of the Dawes Reparation scheme Germany has been able to meet her Reparations obligations with the assistance of the credits placed at her disposal by means of the international loan successfully floated in October last. Further, the League of Nations' reconstruction plans in Austria and Hungary have met with a considerable degree of success, whilst, with the general tendency to revert to the gold standard of currency, the purchasing power of Europe has in some measure been restored. Nevertheless, the aftermath of the war is still only too evident in certain directions, for France, Belgium, and Italy have yet to adjust their national financial position, especially in regard to the definite settlement of war indebtedness, and, meanwhile, their currencies remain depreciated and unstable. In the case of Belgium, however, the international negotiations for the amelioration of her financial position would appear to be progressing in a highly satisfactory manner, latest reports indicating that a comprehensive plan is in view based upon budgetary equilibrium.

As recently as Friday last there occurred an event which will undoubtedly prove to be an outstanding landmark in European history. I refer to the Pact agreed upon at Locarno for the establishment of an enduring peace in Western Europe, than which nothing can be of greater portent for the future prosperity of this continent. With the maintenance of the spirit of international goodwill now so happily in evidence, there should result an incalculable increase in the welfare of the European peoples. From a purely commercial point of view the benefit of the Pact should soon be in evidence, for the restoration of political stability should impart to traders that confidence in entering into future commitments that has been lacking for some years past.

THE GOLD STANDARD.

In our own country the basic industries remain gravely depressed, with the scale of unemployment still abnormal. Our exporters are struggling to compete in neutral markets with foreign industrialists, who have the advantage of lower wage costs and longer working hours. Evidence is accumulating, however, that British trade as a whole has made distinct recovery from the crisis which ensued upon the collapse of the post-war boom. There are also not wanting indications that the attitude of labour on the question of output is undergoing adjustment, and there appears increasing recognition that the present depression is not an opportunity for quarrelling with capital, but rather for joint effort to rehabilitate industry.

As the culmination of the sound and conservative national financial policy followed in this country since the conclusion of the war, the Chancellor of the Exchequer was able to announce, in his Budget speech in April last, the restoration of the gold standard here. It was anticipated in some quarters that this step would result in a depletion of British gold reserves, but, on the contrary, there occurred an influx of the precious metal from abroad, and the value of the pound sterling in New York rose virtually to parity. In view of these considerations, the Bank rate, which had been raised to 5 per cent. on March 5th last, was lowered to 4½ per cent. on August 6th, whilst, notwithstanding the fact that this reduction was followed by a reverse movement of gold from the Bank of England, the official minimum rate of discount was further reduced to 4 per cent. on the 1st inst. Full freedom is due to be restored to the London gold market at the end of the current year, and it would, therefore, appear that the authorities have reason to regard with equanimity the possibility of any further outflow of gold, especially in view of the safeguards mentioned in the Budget speech as having been provided to prevent disturbance to the gold value of sterling.

EMBARGO ON FOREIGN ISSUES.

In these circumstances, one can hope for a further step towards the restoration of normality in the London money market by the removal at an early date of the tacit embargo on foreign capital issues. This would be extremely helpful, because the funds raised

would be expended directly in obtaining goods from this country, principally in the direction of those manufacturing trades here which are experiencing the most serious depression. From the point of view of South America alone, there is undoubtedly much development work awaiting long-term capitalisation, and it must be borne in mind that there is always a tendency for general trade to develop between the borrowing country and that which renders it financial assistance.

ARGENTINA.

With regard to business conditions in South America, the prosperity in the export trade existing in Argentina during 1924 has not been maintained to the same degree since January last, owing to the decline in grain shipments resulting from the contraction in world demand. As a result, it is anticipated that the very large favourable balance established last year will probably disappear in 1925. Exports of meat and hides again reached record figures in 1924, owing to the development of Continental markets, and shipments have been maintained at almost the same level during the current year, which has restored conditions in the important livestock industry to normal. The output of petroleum is increasing, and the future of cotton cultivation is regarded optimistically.

National politics in Argentina have been free from serious disturbance, and the labour situation has been tranquil, whilst unemployment is on a small scale and building operations everywhere, and especially in the City of Buenos Aires, continue to expand. The Republic's finances have undergone considerable adjustment, the unwieldy floating debt having been substantially reduced, whilst the 1924 financial period closed, for the first time for some years, with a realised surplus of revenue over expenditure. The outlook as regards the basic industries of cereals and meat gives every reason for encouragement.

Notwithstanding the diminution in the favourable trade balance during the current year, there has recently occurred a decided recovery in exchange, the sterling rate having touched on the 9th inst. 46½d, thereby reaching the highest quotation since January, 1922. The transport system of the Republic is being increasingly developed, and, generally speaking, the country is prosperous and the position fundamentally sound.

CHILIAN TRADE.

The foreign trade of Chili has extended during the past year, and the nitrate of soda industry is effecting gratifying sales, but general conditions have been somewhat overshadowed by reason of labour disturbances and political uncertainties, including the Arica-Tacna problem. The outlook is now, however, much brighter, as a new form of constitution has, it is officially reported, been approved by national plebiscite and has already been put into force. With regard to the national finances of Chili, great hopes of adjustment are entertained as a result of the proposals of the mission which is now studying national finances with a view to making recommendations.

MEXICO.

A step somewhat similar to that adopted in Chili has been taken in Mexico, a new bank of issue, entitled the Banco de Mexico, having been opened for business on September 1st last, and here also shareholding banks will have the right to effect rediscounting operations. It is hardly likely, however, that further capital will be forthcoming to develop the enormous potential riches of Mexico until it is assured of adequate protection. Latest advices indicate that there is a rather more sustained feeling of optimism in the Republic. In Peru also the national financial position is decidedly better, there having been realised in 1924 a small surplus of revenue over expenditure.

The visit of the Prince of Wales to South America, which has been conducted amid demonstrations of a most felicitous nature, has served to draw increasing attention to the possibility of extending our export trade to that continent. General commercial conditions in the United States continued prosperous in 1924, and there are signs of even greater activity during the present year.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, the Chairman said: Current and deposit accounts have shrunk by £3,000,000, or 6 per cent., a considerable part of which is due to the existence a year ago of certain special balances of a temporary character that have since been withdrawn, but the remainder may be ascribed to a general decrease of the resources of merchants in most of the areas in which we trade, due to increased stocks of goods. The item, acceptances on account of customers, to which we attach equal importance, as it represents principally the finance of movements of produce, is slightly decreased. On the other side of the account, cash and securities are somewhat lower, but still represent 41½ per cent. of our liabilities to the public. Other securities have risen, and advances are £1,000,000 higher. The ratio of expenses or charges, viz., 59½ per cent., is practically the same as a year ago,

while our net profit of £431,022 is about £5,000 more than we earned in the previous year.

The position in respect to the banks in which we have a participation to the extent of nearly the whole of the capital shows, on the whole, further improvement. The net profit of the British Bank of South America, Limited, for the year ended December, 1924, was about £6,000 higher than in the preceding year, and the dividend was maintained at 10 per cent.

The report and accounts were unanimously adopted.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED.

NEW ISSUE OF PREFERENCE SHARES.

The ordinary general meeting of the Buenos Ayres Great Southern Railway Company, Limited, was held, on the 21st instant, at River Plate House, London, Mr H. C. Allen (the chairman) presiding.

In moving the adoption of the report and accounts, the Chairman, after referring to the success of the recent visit of the Prince of Wales to South America, said that the gross receipts again exceeded all previous figures at £11,577,000. That was a record not only for the company, but for any Argentine railway company. Indeed, as regarded gross receipts, as well as mileage, the Great Southern was the largest railway system on the South American continent. Last year's harvest was a disappointing one in the Pampa; indeed, in the zone served by the Bahia Blanca and North-Western Railway and parts of the Western Railway the grain harvest was practically a failure owing to the lack of rain and the prevalence of cold winds. Including the tonnage from the 1924 crop, the Bahia Blanca and North-Western line had carried only 616,000 tons of cereals, compared with 1,318,000 tons during the previous year. That was naturally reflected in the passenger movement and also in the general goods traffic, and resulted in greatly reduced shipping operations at the Port of Galvan. The result had been that for the past eight months the working of the Bahia Blanca and North-Western system had shown a deficiency of some £230,000. The progress made by the Railway Petroleum Company of Comodoro Rivadavia had been, and continued to be, satisfactory. The production of oil had increased from 36,000 tons in the previous year to over 70,000 tons last year, and that figure could be substantially increased as soon as shipping facilities were available. The company's application for concessions for the construction of three extensions had been passed by the Senate and approved by the Transport and Communications Committee of the Chamber of Deputies, but had not come up for discussion by the latter before the closing of the ordinary sessions on September 30th. It was expected that the usual extraordinary session would be convened this month or next, and that the Bill would then come before the Chamber and be passed into law. The company had made no issue of additional capital since 1913, when the gross receipts amounted to £6,569,000, whereas for last year they were £11,577,000. In those years they had not only financed themselves without any issue of capital, but had built up reserve and renewal funds to a total of just over £7,000,000. They had authority to issue the balance of the authorised capital, £2,910,000, which the board had decided to offer to the ordinary and preference stockholders at par in the form of 6 per cent. preference shares, convertible later on in the usual manner into stock.

The report and accounts were unanimously adopted.

BUENOS AYRES WESTERN RAILWAY COMPANY, LIMITED. ENCOURAGEMENT OF AGRICULTURE.

The ordinary general meeting of the Buenos Ayres Western Railway Company, Limited, was held, on the 20th instant, at River Plate House, London.

The Chairman (Sir Henry Bell, Bart.) said that the final results for the year did not come up to earlier expectations, but the showing was not unsatisfactory, inasmuch as, after charging the exchange loss of £171,157 against net revenue, they were able to transfer £100,000 to the general reserve fund, to recommend a dividend of 6 per cent., and to carry forward £57,053, or about £9,000 less than was brought in. Owing to drought, the quantities of wheat, barley, oats, and linseed transported were much lower, and the receipts declined on account of these four traffics by £384,739. Receipts from maize increased by £133,000, but earnings from wheat were only about £377,000, against an average for the previous five years of £690,000.

In previous years he had referred to their dependence upon live stock or animal traffic. Though the cattle industry was of immense importance, the lands in their districts were too valuable to be devoted so much to cattle-breeding. They had been trying to induce large landowners to break up their huge estates and sell

or rent some portion for agriculture. To promote this object they had applied for permission to construct a short extension of 70 kilometres westward from Caleufu station, which afforded a long haul traffic from an excellent grain zone, but before taking any actual steps they secured from the owners of most of the large camps coming within the influence of the projected line an undertaking to sell at moderate prices a certain proportion of their properties to settlers for the purpose of cultivation. If this scheme could be carried through successfully, the company would be assured of traffic which would fully warrant this small addition to their system.

Having referred to valuable propaganda with regard to poultry-farming and the culture of plants and fruit and shelter trees, the chairman said that the increase in receipts from passenger traffic was entirely due to the most satisfactory development of the suburban electric service. The number carried was 15,654,447, as compared with 10,358,452 for 1922-23, the electric service having been opened to the public in May, 1923.

There was at July 1st last 737,000 tons of grain in their districts, of which much had still to come forward. Traffics since the commencement of their new financial year had not been good; but wheat had been held back for better prices, and had only been coming forward slowly. Much of it was still there, and they would benefit by it sooner or later. At present the crop prospects were excellent, and the latest cable advice described the general outlook as quite encouraging.

The report and accounts were unanimously adopted.

CENTRAL URUGUAY RAILWAY COMPANY OF MONTE VIDEO, LIMITED. SATISFACTORY RESULTS.

The annual general meeting of the Central Uruguay Railway Company of Monte Video, Limited, was held, on the 20th instant, at River Plate House, London.

Mr Frank Henderson (the chairman) said that the gross receipts for the year under review were £1,448,169, a decrease of £23,005, which, as they compared with record figures for the previous year, could be considered satisfactory. Working expenditure showed an increase of £56,056 at £1,003,348, attributable to a great extent to the more extensive maintenance and repair work done, involv-

ing extra outlay in labour and materials. Net receipts, at £444,821, compared with £523,882, and showed a decrease of £79,061. It was gratifying, however, to know that that decrease had been more than compensated for by the substantial drop in the loss incurred in transferring funds to London. The result was that the balance of earnings brought into net revenue account was £360,345, as against £356,490, or an increase of £3,855. In a country such as Uruguay, whose industries, being pastoral and agricultural, were dependent on climatic conditions, there was bound to be considerable fluctuations in results.

LIVE STOCK AND PASSENGER TRAFFIC.

The most notable feature, so far as the railway was concerned, was the decrease in their live stock traffic. The number of passengers carried showed an increase of 40 per cent., with a decrease in receipts of £3,499, the increase in numbers being due, however, very largely to a different method of calculating journeys made by season-ticket holders. The revolutionary disturbances in the State of Rio Grande, Brazil, continued, and had interfered considerably with the interchange of traffic with that country. He hoped that in the near future that condition of affairs would improve. The board were proceeding systematically with the renewal works referred to a year ago; they had continued the conversion of their engines to oil fuel, and to-day something like 75 per cent. of the tractive power was using that class of fuel. With regard to the prospects for the current year, he saw, at the moment, nothing to hinder the steady progress of Uruguay; if that progress continued it was bound to be reflected in the earnings of the railway.

The report and accounts were unanimously adopted, and at the meetings of the Central Uruguay Northern Extension Railway Company and the Central Uruguay Eastern Extension Railway the reports and accounts were also adopted unanimously.

ARGENTINE GREAT WESTERN RAILWAY COMPANY, LIMITED.

RECORD TRAFFICS FOR THE PAST YEAR.

The ordinary general meeting of the Argentine Great Western Railway Company, Limited, was held, on the 23rd instant, at Winchester House, Old Broad street, London, the Right Hon. Viscount St. Davids (chairman of the company) presiding.

The Secretary (Mr J. T. Dillon) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen, as the Pacific Company, on whose dividend ours depends, has paid 7 per cent. on its ordinary stock, we are in a position to pay 6 per cent. on both our preferred and our ordinary stocks. You will have been gratified to see that the past year has shown record traffics on our line. The increases arose in the following way: from goods and livestock the increases were nearly 3 per cent.; and from passengers the increases were nearly 2 per cent. A very interesting item showing the nature of our business is that wine accounted for 34 per cent. of our total goods traffic. An interesting feature among the increases comes from stone. A few years ago we carried under 10,000 tons of stone a year, but stone is in constant demand in the Argentine for paving and making roads in Buenos Aires and some of the smaller towns, and last year the carriage of stone by our line rose to 38,000 tons. That is a very large increase in a few years, and it is an item that may increase a great deal in the coming years.

UNLIMITED SCOPE FOR FRESH FRUIT TRAFFIC.

We carried 90,000 tons of fresh fruit; that was an increase on the figure of the year before of 7,000 tons, or 9 per cent. I may say at once that there is almost unlimited scope in the zone of this company for an increase in fresh fruit traffic.

You will have seen allusion in the report to lines under construction. We have nearly finished the building of a line from Goudge to San Rafael—about 35 miles—and a small branch which we call the Espejo Branch, near Mendoza, of about 34 miles. Those lines go through fine irrigated lands and are sure to give us, I think, a reasonable return.

During the year we have been continuing the erection of our new running sheds and workshops at Mendoza. The erection is going on in a satisfactory way.

As regards prospects, the cereal crops are not an important matter on this line at all in itself; they are a very important matter to us indirectly, because our dividend depends, as you know, upon that paid by the Pacific Company, and you will be gratified to know, therefore, that in Argentina as a whole the harvest prospects at the moment are good and that everything promises well.

The Right Hon. Lord Lawrence, of Kingsgate, seconded the resolution, which was carried unanimously.

CLAYTON WAGONS, LIMITED.

CAPITAL REORGANISATION SCHEME APPROVED.

The adjourned third and fourth ordinary general meetings and the fifth ordinary general meeting of the shareholders of Clayton Wagons, Limited, were held, on the 22nd instant, at Winchester House, London, Mr H. Langham Reed presiding.

The Chairman, in moving the adoption of the reports for the years 1923, 1924, and 1925, after referring first to the reduction of the guarantee to the bank from £350,000 to £25,000, said:—The profit for the year to June 30, 1925, though insignificant in itself, does, I think, show that the company has, after a series of adverse years, at last "turned the corner," and in view of this fact the board considered it advisable to put forward a scheme for the reorganisation of the company's capital that would put the undertaking on a sound financial basis. With that end in view discussions took place with an informal committee representing certain of the large preference shareholders and the representatives of the holders of the ordinary shares, in order to arrive at a basis for the new capitalisation that would be acceptable to all parties.

The proposals now put forward for your approval may be summed up as follows:—

- To reduce the capital of the company by £440,000, and to write off this amount by cancelling ordinary share capital.
- To cancel the arrears of preference dividend to June 30, 1925.
- To make the preference dividend in future a 5 per cent. participating dividend dependent upon the profits of each financial year and participating in surplus yearly profits *pari passu* with the ordinary shareholders.

Particulars of the suggested balance-sheet adjustments were detailed in the letter circulated to you on September 21, 1925, and are summarised as follows:—

To be written off—

(1) Land, buildings, and machinery	£ 166,102
(2) Stocks	21,443
(3) Preliminary expenses	34,142
(4) Profit and loss	218,313

440,000

Under the scheme now before you the whole of the amounts to be written off as lost or unrepresented by capital assets are set off entirely against the ordinary share capital, whereas the preference capital remains intact.

DIVISION OF FUTURE PROFITS.

The following table illustrates the division of profits should the proposed reorganisation of the capital be approved as compared with the present position:—

Assumed Divisible Profit.	Dividends under Re-organisation Scheme.		Dividends on Present Basis.	
	Ord.	Pref.	Ord.	Pref.
£ 22,500	£ 22,500	Nil	£ 22,500	Nil
36,000	33,350	2,650	36,000	Nil
50,000	44,600	5,400	50,000	14,000
100,000	84,800	15,200	100,000	54,000

That is to say, when a certain level of prosperity is passed the preference holders will increasingly benefit, while on the lower side of that level a small advantage is given to the ordinary shareholders.

The ordinary shareholders affected have already given their formal consent to the scheme of arrangement, and I am pleased to say proxies favourable to the proposals amounting to 352,796 shares have been received from the preference shareholders, which I hope will be increased by your votes when the time comes for me to put the resolutions to the meeting.

It will further be observed that the board have taken the present opportunity to increase the capital of the company by £440,000 simultaneously with the reduction of £440,000, the object being to save capital duty of £4,400 already paid in respect of the 440,000 shares now proposed to be cancelled, should it at any time be considered desirable in the future to make an issue of any additional capital. The Revenue authorities do not in practice claim capital duty on the amount of new capital created if reduction and re-issue of capital are effected simultaneously. I need hardly say that it is not the intention of the board to consider any new issue of capital at the present time.

IMPROVED OUTLOOK.

With regard to the present position and the future of the company, I am pleased to say that the outlook is altogether more promising. We have secured considerable carriage contracts from the L.N.E.R., the L.M.S.R., the G.W.R., and the Government of the Union of South Africa, whose recent policy in placing large orders with the contract shops has been much appre-

ciated by the trade in this country. So far as work of this class is concerned, we have sufficient to keep our works busy for some time ahead.

In contrast to the carriage trade, the wagon trade has been passing through a period of severe depression, which, so far as the home demand is concerned, may be entirely attributed to the stagnation prevailing in the coal trade.

In our forge departments a distinct improvement is being shown, the company having now more work in hand than at any time in its existence, and this branch of the business is likely to show a further increase in the future. In addition to the ordinary run of forgings and stampings, the company have taken up the manufacture of two specialities for the motor trade—the well-known Rubury, Alford, and Alder front-wheel brake, now adopted as standard by a large number of important motor-car manufacturers in the country, and the "Dewandre" vacuum servo-brake.

The resolutions dealing with the accounts were adopted.

The extraordinary general meeting and the separate general meeting of the preference shareholders were then held, and the formal resolutions embodying the scheme proposed by the board were duly passed.

MONERAKELLE RUBBER ESTATES, LIMITED.

GREATLY IMPROVED RESULTS.

The twentieth ordinary annual general meeting of the Monerakelle Rubber Estates, Limited, was held, on the 23rd instant, at the company's offices, 12 Fenchurch-street, London, Mr C. G. Bois presiding.

The Chairman, in moving the adoption of the report and accounts, said that, although they did not in the period under review benefit very markedly by the recent rapid advance in the price of rubber, the past year's working showed a great advance over the results for the last five years, and it was a great pleasure to the directors to be able to recommend a dividend of 15 per cent. In addition to that, they had placed £1,000 to reserve, and a further £500 to income-tax reserve.

FORWARD CONTRACT.

They had made a further forward contract for January-March, 1926, of 3 tons a month at 3s per lb. There was, of course, still six months of the previous contract to run out, but with the exception of these two they had at present made no further forward sales, and he was glad to say they were now benefiting by the high price for which rubber was selling. Their recent sales since the end of last season had ranged between 3s 6d and 4s per lb.

It was probable that during the current season they would be allowed to export very nearly the whole of their standard production, which was placed at 281,000 lbs. Looking at the future, however, on a conservative basis, he estimated that they would be able almost for a certainty to produce 245,000 lbs of rubber, and, if the market held at anything like current prices, he looked forward to a report next year showing far better results.

INTERIM DIVIDEND PROSPECTS.

He thought that in all probability they would be able to declare an interim dividend this year without any fear of it not being justified by the end of the season.

There had recently been a statement that the Americans proposed to open up a million acres of rubber in Liberia, but he did not think that shareholders in rubber companies need become unduly alarmed at this prospect. Such an acreage could not be brought into bearing for many years, and if it came to competition between the two countries, he thought that this somewhat grandiose scheme would have great difficulty in making good.

The report and accounts were unanimously adopted.

FREDERICK HOTELS, LIMITED.

IMPROVED POSITION—GOOD PROSPECTS.

The twenty-seventh ordinary general meeting of the Frederick Hotels, Limited, was held, on the 20th instant, at the Hotel Great Central, Marylebone road, London. Mr Ronald Peake (the chairman) presided, and, in moving the adoption of the report and accounts, said that the company had had another year's satisfactory trading. The two London hotels were mainly responsible for the increasing prosperity of the company; the seaside hotels had, however, suffered to some extent from the counter-attraction of Wembley. Business at the Lord Warden Hotel, Dover, had come up to expectations and promised to develop satisfactorily. The rebuilding of the Hotel Majestic, Harrogate, was now completed, and they had refurnished and redecored the greater part of it. An important operation during the year was the cancellation of £150,000 first mortgage debenture stock of the company, which

had been purchased from time to time on the market at an average cost of £68 per £100 stock. This transaction had the effect of bringing the debenture debt down to £750,000 and reducing the debenture interest by £6,000 per annum. The board had kept steadily in view the financial position of the company, which was now on a sound basis. The reduction of the debenture debt by £150,000, the repayment of the mortgage debt of £30,000 on the Hotel Russell, and the increase of reserve to £125,000 had entirely altered the face of the balance-sheet. The net profit for the year amounted to £67,473, which with the amount brought forward gave an available balance of £112,616. The board recommended a final dividend of 9½d per share, making 15 per cent. for the year and carrying forward £45,179.

With regard to the business for the current year, their seaside hotels had had a very good season, and the business in London had also been satisfactory. The Hotel Majestic at Harrogate would be thoroughly restored and re-equipped for next season's business, and the board anticipated a very good season there. He appealed to all the shareholders to use the hotels, these having been well maintained and in excellent repair, while their plant and equipment were in a high state of efficiency.

The Right Hon. Lord Bethell (vice-chairman) seconded the motion, which was carried unanimously, and the formal business having been transacted, the proceedings terminated with a vote of thanks to the chairman, directors and staff.

and two months' delivery respectively—a rise of $\frac{1}{4}$ d and $\frac{3}{4}$ d. On the 19th inst., the next working day, China orders were received to carry forward bear contracts; the market being bare of spot supplies, these had the effect of raising the cash quotation and lowering the forward $\frac{1}{4}$ d, thus increasing the difference to $\frac{1}{2}$ d—the widest since June 5, 1924. America was inclined to supply the market at the higher level. Yesterday the market experienced reverse operations to those of the 19th inst., and prices readily reacted, that for cash delivery falling $\frac{1}{4}$ d to $\frac{3}{4}$ d and for forward delivery $\frac{1}{4}$ d to $\frac{3}{4}$ d. The following table shows the imports and exports of silver to and from the United Kingdom during the week ending the 14th inst.:

MOUNT LYELL.—During the four-weekly period ended October 14th the mill treated 9,310 tons of ore, producing 2,759 tons of concentrates.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LIMITED.—By cable for the week ending October 14, 1925: Production, 52,708 barrels; shipments, 8,890 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, October 14, 1925, amounted to 705 tons.

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended October 17, 1925, was as follows:—La Rosa, 5,743 metric tons (previous week ended October 10th, 5,475 metric tons). Maracaibo District, 3,030 metric tons (previous week ended October 10th, 2,944 metric tons). Well P.10 in the La Paz Field, Maracaibo District, came in on October 18th at a depth of 905 feet, and produced 160 tons in the first 24 hours through a 3-inch open line.

Reports and Notices.

GOVERNMENT STOCKS, &c.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1st to August 31, 1925, compared with those for the same period in 1924:—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
Gross receipts, August, 1925	Drachmæ. 8,044,084.10	Drachmæ. 41,336,250.80
Do do do 1924	7,993,327.95	(d) 33,396,537.00
Estimated receipts for eight months (Law of Control)	19,266,666.67	7,133,333.33
Actual receipts for 1925 (eight months)	80,327,811.15	334,902,390.70
Actual receipts for 1924 (eight months)	69,938,244.60	(e) 264,100,894.05

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893. As regards receipts subject to the system of plus-values, increases in duties and prices are excluded therefrom in the above table. (d) (e). In addition to these amounts import duties equivalent to £13 9s 1d in the case of (d) and to £6,211 5s in the case of (e) were paid in gold at the Piræus Customs.

BANKS.

CHASE NATIONAL BANK (NEW YORK).—The statement of condition at close of business on September 28, 1925, reveals total resources \$555,465,870. Cash is at \$173,692,814. Loans and discounts are at \$276,560,796. U.S. Government securities are at \$68,764,223. Other securities amount to \$20,189,865. Acceptances stand at \$15,731,493. With regard to liabilities, deposits amount to \$478,031,888. Capital amounts to \$20,000,000. Surplus and profits amount to \$26,895,768.

EQUITABLE TRUST COMPANY OF NEW YORK.—The statement of condition at close of business on September 30, 1925, shows total assets \$451,601,245. Cash is at \$42,546,082. Exchanges for clearing house amount to \$49,954,255. Due from foreign banks, \$9,741,124. Bills discounted stand at \$94,165,310. Foreign offices, \$72,524,648. With regard to liabilities, the capital of the institution is \$23,000,000. Surplus and undivided profits amount to \$12,031,808. Deposits (including foreign offices) stand at \$387,876,071. Acceptances amount to \$23,687,535.

FARMERS' LOAN AND TRUST COMPANY.—The total resources at September 30, 1925, amounted to \$201,222,854. Cash is at \$45,147,940. Acceptances amount to \$4,630,806. Call loans, collateral, stand at \$47,897,880. With regard to liabilities, capital stock is at \$10,000,000. Surplus and undivided profits stand at \$18,355,427. Deposits stand at \$159,715,469.

WESTERN AUSTRALIAN BANK.—It is announced by cable that the directors' report for the half-year ended September 28th shows a net profit of £62,907, giving, with the amount brought forward, £100,430 for distribution. They recommend payment of a dividend at the rate of 17½ per cent. per annum, and to carry forward £39,180 10s 2d. The paid-up capital is now £700,000, and the reserve fund, including premium on the new issue, £1,260,240. At the half-yearly meeting to be held on November 4th, resolutions will be submitted with reference to electing two directors, auditors, and amendment of bank's deed of settlement consequent on passing of a Bill for the establishment of a London Register, &c.

RAILWAYS.

BENGAL-NAGPUR RAILWAY.—The following statements show the traffic for the year ending March 31, 1925, and also for the five preceding years:—

Year Ending.	Gross Earnings.			Working Expenses.		Net Earnings.
	Total.	Per Mile Per Week.	Per Train Mile.	Rs.	Per Cent. on Gross.	
March 31, 1920	Rs. 6,57,56,972	Rs. 469	Rs. 546	3,84,96,350	58.54	2,72,60,622
March 31, 1921	6,42,68,227	453	539	4,24,08,509	66.00	2,18,57,718
March 31, 1922	6,77,00,233	482	563	4,84,29,146	71.53	1,92,71,087
March 31, 1923	7,80,76,669	539	601	4,88,51,981	64.21	2,92,24,688
March 31, 1924	7,79,00,897	543	637	5,10,08,105	65.48	2,68,92,792
March 31, 1925	8,26,70,742	568	693	5,32,34,801	64.35	2,94,35,941

The ordinary stockholders again receive 5 per cent. for the whole year.

ENTRE RIOS RAILWAYS.—Gross receipts for year ended June 30, 1925, amounted to £1,326,883, an increase of £125,515, or 10.4 per cent. Working expenses amounted to £807,461, an increase of £57,589, or 7.7 per cent. Net receipts amounted to £519,423, an increase of £67,926, or 15 per cent. Full dividend is being paid on increase of £67,926, or 15 per cent. which has had no dividend the 4 per cent. second preference stock, which has had no dividend

paid on it since the

11½ per cent. on its ordinary shares. The net profit for preceding year was £4,854, and no dividend was paid. The sum of £2,000 is put to reserve, and £2,389 carried forward. A restricted crop of 381,400 lbs of rubber was harvested during the twelve months under review, and the exportable allowance was 378,916 lbs. The average price realised was 1s 8.22d per lb. Total costs were 10.46d per lb. The crop for 1925-26, on the basis of 85 per cent. of the standard production, is put at 585,705 lbs. Total acreage is 1,898. Balance-sheet reveals total assets £190,740. Cash is at £14,132. The only investment is 200 preferred ordinary shares in Vultex, Limited, at cost, £200.

SINGAPORE PARA RUBBER ESTATES.—The net profit for year ended June 30, 1925, is £15,318, against £3,147. The ordinary dividend has been raised from 4½ per cent. to 10 per cent. The carry forward is increased from £422 to £4,021, subject to income-tax, directors' extra remuneration, &c. The amount of rubber harvested was 320,524 lbs, against 389,242 lbs. Average price obtained was 20.04d per lb (gross), against 13.09d in previous year. The f.o.b. cost amounted to 9.5d per lb, against 8.5d per lb in previous year.

SINGAPORE UNITED RUBBER PLANTATIONS.—The report for year ended June 30, 1925, shows the restricted output of dry rubber during the year was 644,877 lbs, as against 683,109 lbs in preceding year. Of this output, 640,265 lbs have been sold in London at an average gross price of 1s 8.39d per lb, which compares with 1s 0.67d per lb London last year. Net profit amounted to £31,366, against £11,002, and the dividend is raised from 6 per cent. to 7½ per cent. The company are going to pay an interim dividend of 7½ per cent. in respect of year to June 30, 1926. The sum of £18,454 is carried forward subject to income-tax, manager's commission, and directors' additional remuneration. Balance-sheet shows total assets £271,067. Cash is at £19,881. The only investment is £9,588, being shares in Bukit Pulau Rubber Estate at cost.

TANGOL RUBBER ESTATES.—The net profit for year ended June 30, 1925, amounted to £3,485, against £1,928 in preceding year. The ordinary dividend has been raised from 2½ per cent. to 6 per cent. The sum of £500 has been put to reserve, and £198 carried forward. Balance-sheet reveals total assets £85,530. Cash is at £5,362. Investments are all in British Government securities at cost, £4,122.

MISCELLANEOUS.

CARLTON HOTEL, LIMITED.—The net profit for year ended August 31, 1925, was £62,364, against £59,655. The ordinary dividend and bonus is maintained at 12 per cent. The carry forward is increased from £13,083 to £15,143. The sum of £20,000 has been put to reserve, and £6,204 has been transferred to reserve for amortisation of leases of Carlton Hotel. The company has £75,000 in 4 per cent. National War Bonds, 1927, and £56,726 in its own debentures and in associated and other companies. Cash is at £62,076. Stocks stand at £81,454.

ERINOLD, LIMITED.—The tenth annual report and balance-sheet shows that the trading profit for the year ending August 31, 1925, amounted to £58,745 (last year, £36,811). After allowing for depreciation and company charges, the net profit is £48,747 (last year, £27,171); which, together with the amount brought forward, leaves an available balance of £54,083 (last year, £33,588). The directors recommend payment of final dividend of 7½ per cent., making 12½ per cent. for the year, less tax, against 7 per cent., less tax, last year; transfer to general reserve, £15,000 (last year, £10,000); transfer to taxation reserve, £7,000 (last year, £4,000); writing off patents, process, &c., £4,300 (last year, nil); which leaves a carry forward of £4,041 to next year's accounts. Turning to the balance-sheet, on the debit side, the share capital remains the same; depreciation is increased to £42,000 (last year, £36,000); general reserve, £15,000 (last year, £5,000); sundry creditors, £9,040 (last year, £9,200). On the credit side sundry debtors and payments in advance, £51,194 (last year, £29,522); freehold property, plant, &c. slightly increased, to £145,182 (last year, £139,242); stocks on hand, slightly decreased, £94,721 (last year, £102,258); cash at bankers and in hand, and Treasury notes, £30,803 (last year, £28,602).

LI-BON ELECTRIC TRAMWAYS.—A noteworthy improvement has taken place in the results of this Portuguese tramway undertaking during the year 1924. The net profit, after payment of debenture interest, has risen from £9,748 for 1922 to £63,744 for 1923, and £80,397 for 1924. At the end of 1922 the debit of profit and loss was £38,708. In the balance-sheet dated December 31, 1924, there is £105,463 available for distribution. Of this sum £63,833 is to be paid to preference shareholders. The preference dividend is now paid to end of 1919. The sum of £32,000 has been put to depreciation account, and £9,630 carried forward, against £25,066 brought in. The issued preference capital is £425,553 in £1 shares. The ordinary issued share capital is £634,026 in £1 shares. The ordinary shareholders have received no dividend since the 4½ per cent. paid for the year 1915. Passenger traffic declined from 80,566,215 passengers in 1923 to 83,782,431 passengers for 1924.

UNITED ANTHRACITE COLLIERIES, LIMITED.—The first report covers 18 months from January 1, 1924, to June 30, 1925. The company has secured a net profit of £238,240, after deducting £42,880 for depreciation of plant and wagons. The directors have transferred £88,306 to capital reserve, and have reserved for taxation £17,872. Preference dividend absorbed £14,417. Ordinary interim dividend at 2½ per cent. per annum absorbed £20,307. Final dividend at 5 per cent. per annum absorbed £40,615, and has been taken in the accounts for the period ended June 30, 1925, of the trading results either of the Pentremawr or the Rhos group of collieries, which comprise varying broken periods. Balance-sheet shows total assets £2,647,959. Stocks of coal and stores stand at £149,468. Debtors amount to £135,028. Cash is at £630.

Shares in allied companies stand at £786,900. With regard to liabilities, ordinary issued capital amounts to £1,222,507 in £1 shares. The 7 per cent. cumulative preference capital issued stands at £1,000,000. There are no debentures. Creditors stand at £192,384. Loan from bankers amounts to £135,729.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions were adverse to field work during the week, but good progress has been made in preparing the land for the winter seed bed. Threshings were of moderate extent, consequently supplies of native wheat offering at the principal markets continue in manageable compass. General course of trade displayed more activity, and prices for the most part moved in an upward direction, though towards the close a quieter tone set in and a slight reaction occurred due to weaker forward values. Spot and near at hand parcels of both bread and feeding stuffs, however, were in comparatively small supply, and held for full rates. In the floating and forward wheat cargo market business was on a larger scale than for some time past, millers showing more disposition to operate, and with adverse weather reports from Argentina values were marked up. The improvement, however, was not maintained, and following weaker cable advices from the United States, combined with a falling off in consumptive demand, holders were obliged to reduce their limits. Sales included steamers of Rosafe, 62½ lbs shipping/shipped at 52s 6d, Barusso 62½ lbs afloat 50s 3d, Baril 62 lbs afloat 50s 9d, No. 1 Northern Manitoba December 50s 3d net, No. 2 ditto December 49s 6d, No. 3 48s to 48s 9d, and a sailer of Victorian arrived at 53s 7½d, with white Pacific to Ireland at 52s 6d. Of maize Plate steamers afloat sold 35s 3d to 35s 6d, No. 2 white flat African loading 33s 3d, No. 6 yellow round African afloat 35s, and white Novorossisk November to Antwerp at 31s 9d net per 480 lbs. Part cargoes of South Russian barley arrived sold 26s 3d, afloat 26s 6d per 400 lbs. Wheat quiet and easier. No. 1 Northern Manitoba ex ship to arrive quoted 53s 6d, No. 2 ditto 52s 6d, No. 3 51s 6d, No. 2 mixed Durum ex ship to arrive 50s per 496 lbs. English quoted 10s 8d-11s per 112 lbs free on rail. Flour quiet. London standard grade quoted 43s, patents 45s-46s, town whites 43s per sack delivered in the Home Counties, with 6d-1s per sack less for deliveries in the London districts. Imported in small supply Manitoba patents range from 43s-46s, Minneapolis 45s-46s, Australian 44s per 280 lbs ex store. Maize irregular and Plate rather easier. Plate ex ship to arrive quoted 37s, landed ditto 38s 6d, white flat African ex ship 34s 6d, landed 36s 6d per 480 lbs. Yellow African maize meal ex ship to arrive £9, white ditto ex ship £8 2s 6d per ton. Barley steady. Californian new ex ship quoted 38s-40s, Chilean Chevalier 57s-66s, brewing 50s-53s according to quality, Australian 59s-61s ex store, Polish and Danish ex ship 44s-45s per 448 lbs. American maling ex ship 27s 9d, landed Russian ex ship 26s 6d-27s per 400 lbs, English new quoted 8s 4d-21s, the latter for finest maling quality per 112 lbs. Oats maintained. Plate ex ship 23s 9d, landed 26s 6d, No. 2 Canadian Western ex ship near 28s 6d, October shipment 27s 6d, landed 30s 9d, No. 2 Canadian feed ex ship near 24s 3d, landed 26s 6d, No. 2 white clipped American ex ship to arrive 23s 9d, landed 25s 6d all per 320 lbs. English new quoted 8s 8d-10s per 112 lbs free on rail. Millers' offers steady. Broad bran quoted 8s 3d-8s 6d, middlings 8s 3d-8s 6d, fine ditto 10s 9d, bags included ex mill, powdered oat husked 6s 3d, feed oatmeal 8s 9d, ground demand. London made flaked 18s, rolled oats 17s, medium also fine cut 17s, coarse also medium pinhead 17s ex mill, ordinary Scottish oatmeal 18s 6d, American ditto 16s 6d to 17s per cwt. London arrivals, English oats 500, maize 790 qrs, flour 1,410 sacks, foreign wheat 148,900, barley 24,480, oats 6,630, maize 470, beans 6,040, peas 1,110 qrs, flour 33,650 sacks.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1925-26, 1924-25, 1923-24, 1922-23.

	1925-26.	1924-25.	1923-24.	1922-23.

c Paid on larger capital.

d 18 months.

Newport. Collieries consequently have been working regularly, but prices, although easier, have not been lowered to any material extent. In view of the uncertainty of the outlook for next year hardly any contracts for future deliveries are being placed. The following are the current approximate quotations:—Best admiralities, 23s 3d to 23s 6d; seconds, 21s 6d to 22s 6d; best drys, 23s 6d to 24s; black veins, 20s 3d to 22s; Western Valleys, 19s 6d to 20s 3d; Eastern Valleys, 19s 6d to 20s; best bunker smalls, 19s to 20s 6d; ordinary cargo smalls, 8s 9d to 9s 3d; coking smalls, 10s 3d to 10s 6d; anthracite best large, 45s to 46s; red vein large, 28s to 34s; French nuts, 55s to 60s; stove nuts, 55s to 60s; rubbly culm, 11s 6d to 12s; coge (special qualities), 35s to 40s; patent fuel, 20s 6d to 23s; pitwood, ex shop, 29s to 29s 6d.

In the tinplate trade business continues fairly active, and prices have shown a firmer tendency. Quotations are once again ruling up to 20s per basis box.

IRON AND STEEL.

We have extracted the following from the weekly report of the London Iron and Steel Exchange:—The recent improvement in buying is being maintained. One of the most hopeful features of the situation is that some merchants have begun to "take a view" of the market and buying is reported in one or two departments for delivery in the spring of 1926. This indicates that the opinion is gaining ground that prices have reached a level from which there is not likely to be a serious fall. Unfortunately, a great deal of this forward business has been placed with Continental works. The British manufacturers, although they report some purchasing for delivery ahead, particularly of pig-iron, benefit only to a secondary degree from this movement. The recent sales of pig-iron to the United States, however, have done

much to encourage the industry, and this, combined with the fact that supplies of Continental pig-iron have become somewhat restricted, has imparted a better tone to the British market, although so far it has not been sufficient to advance prices.

Our Middlesbrough correspondent's report, dated October 22nd, is as follows:—Pig-iron: There has been no set-back in the position of the market as reported last week. A number of orders have, in No. 3 Cleveland G.M.B. being still quoted 66s 6d per ton for and forward, and the quotation of East Coast mixed numbers is a rather better market for steel, and galvanised sheets are in strong demand for export. Quotations remain unchanged at last week's levels. Steel ship plates, £7 10s to £7 15s; steel ship ore: There is very little business as yet in foreign ore, most works having large stocks on hand. Best Bilbao Rubio is very firm at 20s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—A wave of optimism has here which justifies the improved tone, although most people appear to be more hopeful. It is true that the pig-iron industry usually large orders from America, but prices have been severely and specifications have fallen off rather than increased. A little more interest is, however, being shown in refractory materials and alloys, which may indicate that iron and steel manufacturers can see increased work ahead. The steel foundries and forges are moderately employed. Business with motor-builders is steady, and

considerable in volume, while railway work, and orders for hand-tools, are distinctly easier. Progress is being made in stainless steel, and its recent commercial adaptation to the manufacture of drawn tubes should result in a great addition to sales. The material is also proving successful for stamping into household hollow-ware. Conditions in plate and cutlery continue unsatisfactory. Shopkeepers as a rule are stocking mostly medium and low-priced goods.

Our Glasgow correspondent writes:—There is a marked improvement in the pig-iron trade, and a more cheerful tone prevails in the market. Prices are firm on the basis of 77s 6d for 40. 3 G.M.B. sales to America on a moderate scale have been made. Scotch foundries have been buying small lots here, but large consignments of Cleveland brands have been coming in from the North-East coast. Shipments from Glasgow harbour last week totalled 413 tons, of which 338 tons were on foreign account. Last year for the corresponding week the shipments were 759 tons, and 593 tons respectively. In the finished steel trade enquiries are improving in quantity, and some fair orders have been placed by Continental shipyards for special lines. Structural steel work is providing a steady flow of orders for sections, but here a good deal of Continental competition is met with. Further extensive contracts have been received for tubes. Plates for shipbuilders are in poor request, the depression in that trade becoming more pronounced as the winter months approach. Any small lot of pronounced on the market are keenly competed for, and prices ship plates on the market are keenly competed for, and prices have been quoted as low as £7 17s 6d per ton delivered Clyde. The demand for malleable iron has not improved since the recent reductions in the basis price was announced, galvanised corrugated sheets are now quoted firm at 16s 10s per ton f.o.b. Glasgow. Makers are fully committed for their output till end of this year, and orders are coming in for delivery, January-February. There is a steady export enquiry for black sheets of the lighter gauges, and most makers have little to offer for delivery this year.

OTHER METALS.

TIN further advanced, with sellers reserved in view of higher Eastern advices combined with liberal buying orders, though movements were attended with some irregularity, especially with regard to forward positions. Sales comprised cash at £282 15s to £285 5s, three months £283, £282 15s, £286, and finally £285 7s 6d. English ingots quoted £286. COPPER active, and prices dearer on balance, both cash and forward. Standard cash sold £61 15s to £62 10s, three months £62 12s 6d-£63 12s 6d. Electrodes quoted £67 10s-£68. Wire bars £68 10s. LEAD firmer, and a good business transpired. Good soft foreign pig, October, sold at £38 15s to £39 5s, November £38 2s 6d-£38 11s 3d, December £37 10s-£37 15s, January £37 2s 6d-£37 7s 6d. February £36 12s 6d to £39 2s 6d. English quoted £40 5s. SELLER in good demand and firmer. October sold £40 8s 9d to £40 12s 6d, November £39 13s 9d-£39 17s 6d, December £39 10s-£39 12s 6d and £39 10s, January £39 5s-£39 7s 6d, February £39 5s-£39 3s 9d per ton. Tin plates unaltered. Quicksilver firmer. Spot quoted £13 17s 6d to £14 per bottle.

GENERAL.

TALLOW.—Messrs Colchesters and Woolner write on October 21st as follows:—The tallow market was quiet during the week, and prices were rather easier to-day. Shipments of tallow from Australasia during September amounted to 2,000 tons, against 2,600 tons during the corresponding month of last year. There were no auctions to-day. Quotations are:—Australian mutton: Fine, 5½s; good to fair, 5s to 4½s; dull to dark, 4½s to 3½s 6d; hard, 5s 6d. Australian beef: Fine, 48s 6d; good to fair, 46s to 43s; dull to dark, 42s to 38s 6d; sweet, 49s. Present shipment from Australasia: Good mixed, 46s, nominally. Present shipment from South America, 43s 3d. The market letter is unchanged. Town tallow, 4½s 6d per cwt. Rough fat, per 8 lbs, 4d; melted stuff, 3½s 6d per cwt. Quotations are:—Town, 4½s 6d, net cash, naked, ex works. Country: Frail casks, 4½s 6d; home melted, shipping casks, net, f.o.b., good coloured, 45s; fair to dull, 42s to 41s. Bone fat: white, none; pale, none; benzine, 38s; melted stuff, 37s 6d, f.o.b.

SHELLAC firm, quiet. Fair, T.N., spot, 230s to 235s; December, 220s; March, 207s 6d cwt.

COPRA.—Market steady, but business moves quietly. F.M.S. Straits, October-November, Rotterdam, sold, £29 15s; October-December, £29 10s. Dutch E.I., October-December, quoted £29 7s 6d; Ceylon, October-November, sold, £30 15s; Cebu, ditto, quoted £29 5s; South Sea, £29. Palm kernels, October-December, Liverpool, quoted £20 15s; January-March, £20 12s 6d ton.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £32 to £40; Cochin, £32 to £55. Ceylon bristle, £15 to £22; cinnamon leaf oil, 4½d; citronella, Ceylon, 1s 11d; Java, 3s.

The Bank return showed a decrease of £2,458,000 in the stock of coin and bullion, £2,466,000 having been announced as withdrawn for export; the note circulation expanded by £438,000, and the total decrease in the reserve was thus £2,896,000, its proportion to liabilities declining 1.5 per cent. to 23.7 per cent. Government securities declined by £2,200,000, and Other securities only showed a minute increase; Public deposits expanded by 1½ millions; there was thus a total decrease of 6½ millions in Other deposits, bringing their amount below £103 millions. Currency notes for the week were reduced by £283,700 to £291,616,800, which includes £1,323,100 for notes called in but not yet cancelled. The fiduciary issue is £234,043,700, or £14,101,700 below the maximum for the year.

NEW YORK MARKETS.

Our New York correspondent cables:—Markets continue buoyant, with industrial news favourable. Money is plentiful and rates are little changed. The statements by industrial companies of earnings for the third quarter show good increases over the previous quarter and the third quarter of last year. The railroads are making a similar showing. There is little change in the Federal Reserve position, discounts being lower and bills purchased in the open market higher. The Reserve ratio is 72.5. The statements reveal a further considerable movement of funds to New York from other centres. The Administration apparently realises the limitations of the Italian debt position, and wishes for a settlement, but optimism is restrained in view of the mishandling of the French negotiations.

THE STOCK MARKETS.

The fall in the franc has caused uneasiness, and the stock markets have been less confident than of late. British Government stocks and Home Rails have been neglected, though prices are steady. French Government and railway bonds followed the plunging franc, and other foreign stocks weakened. Rubber shares hold their ground. Shipping stocks have suffered from the reduction in the P. and O. dividend, and iron and steel shares have lost some of their recent recovery. Electrical manufacturers' stocks have been the most cheerful section of the industrial market. The mining market has been uncertain; Malayan and Mexican mining shares have improved, while Chartered and De Beers have fallen back.

THE COMMODITY MARKETS.

The slight quickening of business reported during recent weeks is, on the whole, maintained. In the coal market, orders placed on American account are beginning to react favourably on dry steam coals, but in ordinary descriptions depression still obtains. A fair business is passing in pig-iron, and the steel outlook is distinctly brighter. A further increase in the American cotton crop is indicated by the latest Bureau estimate, and the lower prices now prevailing have assisted in the booking of numerous orders. A considerable inquiry for piece goods has come through from India. Buying in the woollen trade has been more restricted this week, but quotations have nevertheless tended to harden as stocks are low. Jute prices show a further marked advance, but the Calcutta position is now slightly easier. Wheat is in quieter request. The market for refined sugar has displayed a firm undertone, tea has been well supported, but coffee remains quiet. Rubber is firm, with dealings on a fair scale. Among metals, tin has been irregular, and was less active after a firm opening, and copper has lost ground on the week.

FOREIGN EXCHANGES.

In the foreign exchange market, although interest has again centred mainly on the franc, business especially in the dollar and the more important European currencies, has been more active than of late. Contrary to expectation, the Paris rate was not held at the rate of just under 115, at which it closed on the 23rd. On Saturday it rose further to as high as 117.45, and at one time on Monday reached the record figure of 121.75. At this point, however, a reaction of feeling helped by judicious intervention brought down the quotation to 113, and although on Tuesday and Wednesday it moved up again sometimes to over 117, the rate would seem to be settling down for the moment somewhere between 115 and 116, being quoted yesterday morning at about 115½. Intervention, it may be said, does not appear to have been carried out this week on a large scale. On the other hand, any fall in quotation brought always a strong demand for sterling from Paris. The immediate explanation of these movements is to be found, of course, in the political crisis, but there is little that is reassuring in the outlook, as it is hard to see what satisfactory financial proposals the new Government can make. Forward francs remained as before at a discount of about 50c per month. This week the Brussels rate has been influenced to some extent by the Paris collapse, moving up at one time to 108.50. From that it had recovered again yesterday morning to 106½, as compared with 106½ a week ago. Forward rates have widened further from 20c to 45c per month above spot. The lira in the same way has shown a slight upward tendency, moving from 121½ on the 23rd to 122½ yesterday morning. Sterling, on the other hand, has shown an improving tendency, the rate moving up from \$4.84½ to \$4.84 21-32, after being quoted at times just over \$4.85. Economic factors alone are hardly sufficient to justify this tendency, which to a large extent is due to the recovery of American confidence in Europe as the result of the Locarno Conference. Other stable currencies show little change, Amsterdam being quoted the same as last week at 12.04½, Berlin at 20.35, as compared with 20.33½, Switzerland, at 25.14½, as compared with 25.16, Stockholm at 18.10½, as compared with 18.08½, Vienna 34.38, as compared with 34.37½, Prague 163½, Helsingfors 192½. Oslo has been much quieter than of late, moving only from 23.75 to 23.77. Copenhagen, however, has improved from 19.55 to 19.45½. Warsaw remains practically nominal at about 28½, while Bucharest is also about the same at 1,020. In the East the rupee is unchanged at 1s 6 13-64d, and little movement is expected at present. The yen, however, has appreciated slightly from 1s 8½d to 1s 8½d. Silver has been quiet, with a slightly sagging tendency on offers. Hong Kong has moved from 2s 5½d to 2s 5d. Shanghai from 3s 3d to 3s 2½d. In South America the upward movement in Rio has been checked for the moment, the rate standing at 77½d, as compared with 7 35-64d a week ago. Buenos Aires has moved slightly downwards from 46 25-64d to 46½d, Monte Video upwards from 50½d to 50½d. Valparaiso, at 39.40 pesos, compares with 39.50 pesos a week ago. It might be noted that the Hungarian Government has brought before Parliament the Bill for a new currency unit, the complete introduction of which is to take place by January 1, 1927. The new unit is to be called a pengő, and is fixed at the equivalent of 12,500 paper krone, making a ratio to sterling of about 27.70 pengő to the £. The pengő itself will be divided into 100 garas or groats.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 24th:—

EXPENDITURE.		REVENUE.	
(000's omitted.)		(000's omitted.)	
Supply Services	7,350	From Revenue	12,687
Interest, &c., on Debt	872	Decrease in Exchequer Balances	81
Sinking Fund	274		
Sundries	197		
Decrease in Debt	4,075		
	12,768		12,768

Revenue amounted to £12,686,600, against £10,444,600. Customs yielded £3,168,000, against £2,835,000, and Excise £3,684,000 against £1,596,000. Estate, &c.,

Duties produced £1,600,000 against £1,230,000. Property and Income-tax yielded £1,080,000, against £1,545,000. Super-tax brought in £570,000, against £370,000. Special receipts produced £200,000, against £500,000 in the corresponding period. The week's operations reduced the National Debt by £4,075,000, and caused the following changes:—

(000's omitted.)	
Treasury Bills	£ 331
National Savings Certificates	150
3½ % Conversion Loan	2,635
Sundries	40
	+ 3,156
Public Department Advances	— 7,231
	— 7,231

The floating debt was reduced by £6,876,000 to £771,090,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Oct. 24th).

Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies.—Entre Rios Railways, United Railways of the Havana and Regla Warehouses, United Steel Company, Yorkshire Amalgamated Products, Amalgamated Anthracite Collieries, Sudan Plantations Syndicate, Amalgamated (Rubber) Finance, Singapore Para Rubber Estates, Sengat Rubber Estate, Herrburger Brooks, Raphael Tuck, United Dairies, Kern River Oilfields of California, and Transvaal and Rhodesian Estates.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE SITUATION IN FRANCE.

For the third time in two years the problem of national finance has caused the downfall of a French Government. On the previous occasions, no doubt, other causes contributed; and in the latest instance such questions as Syria and Morocco played their part in the situation. Finance, however, is the dominating factor, and the downfall is not so much of the Cabinet as of the Finance Minister. For within 24 hours of the resignation of M. Painlevé and his administration came the news of the return of M. Painlevé, and his formation of a new Cabinet, whose one striking difference from its predecessor is the absence of M. Caillaux. Only a few months ago, France was acclaiming the sensational return of the exile, and looking to him to prove himself the financial saviour. He returned at the most difficult of times, for the summer of 1925 was the crucial period of pressure from a great volume of maturities of short-term debt. His plan for meeting the crisis was three-fold: a drastic increase of taxation, without adopting a capital levy; a gold loan; and the compounding of foreign debts, in order to pave the way for the fresh external credits which might enable him to make the essential reductions in the floating debt. In the two latter policies he failed, largely because circumstances were too strong for him. The gold loan was too late; the peasants had lost faith in the credit of the State, and had already reached the stage of distrust, in which they preferred to lend their savings to local business concerns rather than to the Government. It might, perhaps, have

succeeded if the operation had been accompanied by a plan for stabilising the franc on a gold basis, and a clear assurance that the Budget was to be really and truly balanced. The second vital section of his policy, namely, the effort to make a settlement of external debts, gained a partial success in London, but when M. Caillaux returned from America to report his failure to drive a bargain his fate was sealed; and the last nail was driven into his coffin when, in spite of his eloquent opposition, the Radical Congress at Nice passed the resolutions (set out in a later column by our Paris correspondent), including a demand for a capital levy.

Upon this question of a capital tax the whole outlook of M. Painlevé's new Government turns. The composition of his Cabinet shows that he is leaning more on the Left and less on the Centre than before. But among the parties of the Left there is disagreement on essential points in a programme of financial reform. The demands of the Socialists and the resolution of the Radical Congress at Nice do not dispose of the fact that there is a body of opposition to a capital levy and M. Caillaux remains in the political arena to crystallise and strengthen a resistance to it which will be fostered and fomented by a raucous outcry in the Press. This being the case, several alternative proposals come up for fresh scrutiny. There is the possibility, often discussed in recent years, of reducing the interest rates on the internal debt; but the element of discrimination which this involves against holders of a particular form of capital is strongly opposed on the grounds of equity. There is another plan for tiding over the immediate crisis, to which M. Caillaux himself gave some consideration, namely, the legislation to enforce compulsory renewal of maturing short-term obligations. But M. Painlevé, who, pending the discovery of a new financial saviour, has become Finance Minister as well as Premier, is hardly likely to succeed, where M. Caillaux failed, in inducing the bankers to qualify their opposition, which they based on the strong argument that such a procedure would freeze up the liquid capital of the country and precipitate a financial crisis of the first order.

It is not uncommon to find among those who are not deeply versed in the story of French finance a belief that the trouble is due to the unwillingness of the French people to submit to adequate taxation and sacrifice. Those who take this view deduce from it that not only are the present generation in France solely to blame for their own troubles, but also that we in Great Britain have a rightful grievance against them for selfishly causing perpetual gyrations of the franc, which produce recurring upsets in certain important British export industries at the most inconvenient moments. This view is not altogether fair. Part of the blame, at least, lies in the past, and part of it outside France. When the war broke out France found herself with an obsolete and ineffective Budget system. To scrap the old and create new fiscal machinery during the war was a task almost beyond hope of fulfilment, and the only alternative was to finance the war almost entirely by borrowing. Thus the foundation of a vast debt was laid. That it has been doubled in the past six years is less defensible; but Allied, including British, statesmen cannot escape a share in the guilt of fostering those huge and illusory expectations of German Reparations, which created an atmosphere prohibitive of real tax reform and led to the lavish financing of the reconstruction of the devastated areas. "Why should we be nigardly? We shall recover the cost." "Why should we be overburdened with taxes? Make the Boche pay." That was the temper of the time. If we cast our mind back to the glass-houses in which a large section of our own people lived in those days, can we throw stones at the French with a perfectly clear conscience? We are not, perhaps, entitled to go further than to point out that in spite of Reparation illusions our own Governments did persuade this country to shoulder great burdens of taxation years earlier than the French; but we cannot weigh up the difference in the difficulty of the tasks the statesmen of the two countries had to perform. Be that as it may, we can at least share in the realisation, to which France has so rudely awakened, of the profound mistake of borrowing too largely on short-dated security, and of the clumsy financing which concentrated an avalanche of maturities into 1925.

In bemoaning the difficulties, great as they are, that face the new French Government, it is too easy to paint the situation blacker than it really is. French Governments, it is true, partly, as we have shown, through circumstances beyond their control, made a late start in imposing adequate taxation. But of late the country has shouldered a steadily increasing burden, which, in proportion to national income, is now as onerous as that borne by Great Britain. France has been brought almost within sight of the promised land of a Budget balance. One more great effort is needed to reach it; and we believe that France is sufficiently alive to the perils of the present position to rally behind the new Government if it will produce a bold and comprehensive programme for reaching the three desired goals of a balanced Budget, the stabilising of the franc on a gold basis, and the reduction of the floating debt problem to manageable dimensions. Whether or not the new Painlevé Administration can procure sufficient harmony of view among its various supporting groups to enable the production of such a programme is the question of the moment. Meanwhile, France's creditors, to whom, amid all the interdependencies of the modern economic world, her recovery is a matter of profound material interest, should not be unmindful of the assistance that it is in their power to give. If the new Government gives evidence of real determination to run straight for the three goals that we have described, it will, we trust, gain the sympathetic assistance of Washington, added to that of London, in removing the vital obstacle of an uncompounded foreign debt.

WORSTED AND PROTECTION.

The application made by the Bradford and District Manufacturers' Federation, the Keighley and District Manufacturers' Federation, and the Textile Commission Manufacturers' Association for the imposition of a duty upon "tissues or fabrics, whether in the piece or in any other form, of any weight from two ounces per square yard up to and including eleven ounces per yard, made wholly of wool, or partly from wool or hair," is an indication of the reviving hopes of protection on the part of harassed industries. The decision to set up a Committee (which appears to have been made by the Cabinet, and not by the President of the Board of Trade) shows the disposition of the Government to embark upon a bolder policy for the "safeguarding of industries."

So far the Government has acted warily. Lace and embroidery, hops and silk were protected under the Finance Act. The effort of the superphosphates industry to obtain protection was rejected by the Committee of Inquiry, though the chairman (who is also the chairman of the new Wool Textile Committee) supported the claim. Committees have been appointed to consider the leather and fabric gloves, gas mantles, brooms and brushes, wrapping and packing paper, aluminium hardware and cutlery trades. When, however, the iron and steel trades approached the Government, the latter took alarm, and the question was remitted to the newly-established Civil Research Committee instead of to a Board of Trade Committee under the Safeguarding of Industries scheme. The reason clearly was that an attempt to use the scheme to inaugurate a protectionist policy in one of the staple industries would be interpreted as a breach of the Government's pledge regarding the fiscal system.

The present inquiry seems to bring us perilously near to a breach of the pledge. The worsted industry is one of our staple trades. Of over a quarter of a million persons engaged in the wool textile industry, almost a-half are engaged in worsted spinning and weaving and the preliminary processes. Moreover, the terms of reference of the Committee cover more than worsted fabrics. It is said that exports of French wool textiles to this country are not accurately classified, and that certain worsted exports from France find their way to this country marked as woollen tissues. The object of those who have promoted the present inquiry is to obtain protection against French competition in dress materials. Should a duty be imposed on the goods defined in the Committee's terms

of reference, it would seem that it would be levied on certain classes of woollen imports, as well as on worsteds. This makes the inquiry all the more important, and it is necessary that the public should know exactly where it is being driven.

The case of the worsted section of the industry appears to be that it is suffering from abnormal competition, but part of its difficulty is that with which the lace industry was faced—a change in fashions and customs, against which no tariff can be of any avail! It may appear to be an exaggeration to put the matter so baldly, but the worsted trade is at present a declining industry, and the beginning of its decline is to be seen in the years before the war. There is considerable difficulty in making any exact trade comparisons with pre-war years, because of changes which have been made by the Board of Trade in methods of measurement and classification. Broadly, in the years before the war exports of British woollen tissues were increasing, whilst the exports of worsted tissues, all wool and mixed, were shrinking, as the following table shows:—

BRITISH EXPORTS (Annual Averages). (Yards. 000's omitted.)			
	Woollen Tissues.	Worsted Tissues.	
Five Years—			
1890-1894	50,224	140,029	
1895-1899	53,057	125,698	
1900-1904	52,075	101,825	
1905-1909	78,290	92,809	
Four Years—			
1910-1913	99,851	77,123	

The details for the four pre-war years are as follows:—

BRITISH EXPORTS. (Yards. 000's omitted.)			
	Woollen Tissues.	Worsted Tissues.	
1910	95,274	95,370	
1911	97,717	78,495	
1912	100,530	72,136	
1913	105,884	62,490	

As regards imports, difficulties of enumeration hamper comparisons, but the tables below show the general position before the war:—

IMPORTS OF WOOLLEN AND WORSTED "CLOTHS"			
	Total Imports. Yards.	French Imports. Yards.	
1909	2,714,260	23,604	
1910	2,549,589	51,162	
1911	2,336,758	20,627	
1912	1,889,606	59,555	
1913	2,777,378	672,856	

IMPORTS OF STUFFS, FLANNELS, AND DELAINES.			
	Printed.* Yards.	Other Sorts. Total. Yards.	French. Yards.
1909	169,764,957	55,204,638	43,981,237
1910	4,826,691	56,780,793	41,986,845
1911	4,610,874	60,323,802	44,799,883
1912	4,874,761	59,086,863	43,037,990
1913	3,318,453		

* No separate figures are given for French imports.
† From 1910 "stuffs" are included in the heads "stuffs, flannels, and delaines: printed," and "stuffs, flannels, and delaines: other sorts."

It will be seen from the above that a substantial proportion of the woollen and worsted fabrics imported from abroad come from France, and that French "competition" is therefore no new thing. The imports of French woollen and worsted tissues retained for home consumption (which are now reckoned in square yards instead of linear yards) have certainly grown since the war. In 1920 they amounted to about 6½ million square yards, in 1921 to 6,890,000 square yards, in 1922 to 9,197,000 square yards, and in 1923 to 14,683,000 square yards. Last year, however, the total amount of fabrics imported from the Continent of Europe was only about 40 per cent. of the pre-war quantity. The increase which has taken place since the end of the war is, therefore, rather a partial recovery of the pre-war position (when no claims were made for protection) than an invasion of the home market by new competitors.

It is probably true that within the limits where French competition in the British market really operates—a comparatively narrow range of dress goods—it is keener than it used to be. On the other hand, a change in fashion might rapidly affect the situation, whilst the steps which

are now being taken by the dress goods trade to show the distributors the range, quality, and taste of Bradford products may do much to restore the Bradford trade.

The textile associations applying for protection will, no doubt, stress the abnormal character of French competition at the present time because of the French exchange. It must, however, be borne in mind that practically the whole of the raw wool used by the French textile industry is imported from abroad at world prices, and so far as French purchasers of raw material are concerned the exchange so far from being a help is on the contrary an embarrassment, and counteracts in some degree the bounty on exports which the depreciated exchange provides. The Bradford trade, however, argues that French textile wages expressed in sterling are much below British wages, and that this gives an enormous advantage to the French exporter. But before the war the fear of French competition barely existed, and if in the interval the movement of real wages in France has corresponded with the movement of real wages in this country, the British manufacturer has no real ground for complaint. As a matter of fact, the hourly wage rates in the French wool textile industry have increased more than the cost of living, without taking into account the family allowances which are added to wages. It is no exaggeration to say that the wage rates per hour are five to six times the pre-war rates, the cost of living being about four and a-half times pre-war. According to the Ministry of Labour, money wages in the British wool textile industry are 86 per cent. above pre-war, and if unemployment be taken into account real wages are 88 per cent. of the pre-war wages. Consequently, it would seem that the French manufacturer has no undue advantage in the matter of wages.

The Bradford section of the woollen and worsted trades will find it difficult, we imagine, to persuade the Committee of Inquiry that it is in as parlous a condition as, say, the silk trade or other more important industries. There is, however, the larger question of national policy. It is a commonplace of fiscal controversy that many individual industries can make a reasonably good case for protection for themselves, and the method of inquiry into single applications on their merits may well result in the imposition of duties which are not in the general national interest. It is difficult for the Board of Trade to draw the line between one industry and another; but in the present case it appears to have come dangerously near, even if it has not overstepped the border line of, the region of the general tariff.

GREAT BRITAIN AND THE WORLD'S COAL TRADE.

In a recent Monthly Supplement we gave certain statistics relating to the world's coal trade. These statistics, which have now been gathered together and issued by the Government as a White Paper,* are at the root of the problem which the Coal Commission is investigating, and are deserving of the closest study. They permit us to get a bird's-eye view so far as the chief coal using and producing countries of the world are concerned. We shall disregard the figures for 1923, these being altogether abnormal as a result of the French occupation of the Ruhr, and the consequent check to German production and artificial stimulus to British exports. The trend of events can best be shown by a comparison of the figures for 1913, 1922, and 1924.

Our first table shows total production in the years mentioned:—

PRODUCTION OF COAL.			
	1913.	1922.	1924.
United Kingdom	287.4	249.6	267.1
United States of America	508.9	425.8	511.9
28 other countries	477.2	500.4	518.2
Total, 30 countries	1,273.5	1,175.8	1,297.2
British share (%)	22.5	21.2	20.9
Total, excluding United States....	764.6	750.0	785.3
British share (%)	37.6	33.2	34.0

* Coal Tables, 1924. White Paper 168 of 1925.

The figures show no very considerable difference between world production in 1913 and 1924. This apparent stability of output, however, implies a substantial increase in the world's power resources. The coal output of the world is supplemented by a much larger supply of oil than in pre-war days. The Continent of Europe and the United States are, again, generating a much larger amount of power from water supply. Owing to technical improvements, yet again, coal combustion is much less wasteful than in 1913, so that a given tonnage produces greater heat and power.

Examination of the figures shows that, although last year's production was higher than in 1922, the proportion of British to world output fell slightly. If the output of the United States be excluded, Great Britain's share in the whole has, on the other hand, increased slightly since 1922. If we take 1913 as a standard, we may briefly sum up the position by saying that this country is producing about 93 per cent. of her pre-war output, America 100 per cent., and the rest of the world 109 per cent.

The main reason for the decline in British production is to be found in the conditions of the export trade. If British exports (including bunkers) be deducted from British production, we find that the quantity of coal retained for home consumption amounted to 189 million tons in 1913 and 185 million tons in 1924. As compared with the situation before the war, the reduced home consumption is entirely due to the depression in the iron and steel industry. It has been estimated by Sir Wm. Larke before the Coal Commission this week, that the iron and steel industry used 31 million tons of coal in 1913, and 24½ million tons in 1924. If we deduct these amounts it appears that home consumption in other industries, and for domestic purposes, was 158 million tons in 1913, and 160½ millions last year. A steady home demand, combined with a falling off in export, is, indeed, one of several factors which has shifted production from our seaboard coal fields to our inland coal fields. In particular the Yorkshire area has been steadily expanding at the expense of South Wales and the North-East coast. But, unfortunately, colliery labour, like other labour, is not, under modern conditions, mobile. The result has been that the Yorkshire coal field has been drawing into the mines labour from all kinds of occupations, and particularly from agriculture, while many miners in South Wales and elsewhere have been on short time, or are out of work. This shifting explains why an industry which at the end of last July employed only 25,000 fewer workers than in 1913 had an "unemployed" list embracing nearly 185,000 people.

The root of the difficulty, then, is to be found in the export districts, and we must next examine the figures of world trade, as apart from production. The returns of those countries which export appreciable quantities of coal show the following state of affairs:—

COAL EXPORTS (including Bunkers). (In Million Tons.)				
	1913.	1922.	1924.	
United Kingdom	98.3	82.5	82.0	
United States of America	29.7	17.6	23.2	
Other countries	63.5	37.5	41.5	
Total	191.5	137.6	146.7	
British share of total (%)	151.2	160.0	156.0	

Comparison between 1913 and the post-war years is affected to some extent by changes in national boundaries. For example, the coal which Austria buys from Czechoslovakia is now classed as an export of the latter country, but was formerly internal trade. Similarly coal sent from the Polish Upper Silesian mines to Germany is regarded as an export. In the above table the United States shows an increase between 1922 and 1924 of 6 million tons. This represents a real development of her trade with South America. The exports of other countries show an increase from 37½ million tons to 41½ millions, which is more than accounted for by increased exports from Poland to neighbouring

† The above figures are inclusive of brown coal exports, and are based on the returns for 30 countries. Sir Richard Redmayne, in his evidence before the Coal Commission this week, gave the British share in the world's total as 49.8 per cent. in 1913 and 51.2 per cent. in 1924, the latter figures taking lignite, &c., at coal equivalent and apparently including a larger number of exporting countries.

countries, and does not represent a gain in international trade. In other words, if we leave the United States out of account, the international coal trade showed a slight increase in 1924, as against 1922, and a quite definite falling off as compared with 1913. While Great Britain maintains her relative share of this reduced trade as a whole, she tends to lose ground to the United States, particularly in South American markets.

The same problem may be examined from a different angle by comparing the imports of the countries under review during the years in question, as is done in the following table:—

	COAL IMPORTS (In Million Tons).		
	1913.	1922.	1924.
British Empire.....	17.4	9.2	2.9
Europe.....	80.3	72.5	82.3
United States.....	1.4	4.7	0.5
Other Countries.....	10.0	5.8	8.1
Total.....	109.1	92.1	93.7

The total imports shown are necessarily less than the total exports of the previous table, since the latter include coal consumed by the world's mercantile marine, in addition to exports to countries which are not included in the import table above. The figures as they stand indicate that European imports fell below the 1913 level in 1922, but more than regained it last year. Frontier readjustments may, of course, have a share in this result, and brown coal imports figure more significantly in the post-war totals. The Empire has taken considerably less coal since the war, and the United States is an importer on a large scale only in exceptional circumstances.

The general conclusion from the figures appears to be that the world is using more rather than less coal than before the war, but that much less is being carried from country to country. The effect of this decline in trade, as distinguished from consumption, has been most prejudicial to Great Britain, the world's largest exporter. Another unfavourable factor has been the lessened demand for coal bunkers, as a result of depression in the shipping industry, and also, to some extent, the replacement of coal by oil fuel. In pre-war days nearly 87 per cent. of the world's merchant marine was entirely dependent on coal. To-day the proportion is less than 65 per cent., while the navies of the world are, almost without exception, oil-burning.

Many of these unfavourable developments spring from world-wide causes which are not susceptible of control by any one country. Any improvement in the internal efficiency of British coal-mining which may be found practicable by the Royal Commission will help the situation, but the figures given above would seem to suggest that external factors have had much to do with the present plight of the industry, and that the coal industry of Great Britain is faced with the need of adaptation to a new and difficult market situation.

GERMAN INDUSTRIAL REORGANISATION.

In connection with the reorganisation of German industry on the basis of post-war competitive world conditions a very interesting development has been taking place during the last few months. In several of the principal industries cartels, which have for decades been the most distinctive feature of German industrial organisation, are becoming secondary in importance to trusts based on American models. In the English-speaking countries, and especially America, the laws against agreements in restraint of trade entirely precluded the formation of cartels, in which monopoly conditions are secured by contracts between financially and technically independent enterprises. Monopolistic tendencies were thus directed into the only channel open to them, that of complete amalgamation. In Germany, however, the few trusts that have existed hitherto have been of the extensive vertical kind. They did not represent organisations directing their energies towards the production of a particular finished article, nor did they as a rule secure any

of the advantages of monopoly. In most cases they were simply financial holding companies owning many enterprises with no connection whatever with one another.

The recent collapse of the Stinnes concern, the best-known example of this type of trust, is of considerable interest in this connection. Hugo Stinnes's two sons having inherited a vast agglomeration of enterprises, whose only connection was their ownership by the Stinnes family, made the attempt to carry out all the trading and financing of these enterprises through a central office, thus bringing these into one organisation. The attempt failed completely, and the failure conclusively showed that the extensive vertical trust is not only useless, but actively harmful. Such trusts were formed during the unhealthy conditions of inflation, when it was necessary at all costs to convert depreciating paper-marks into property of permanent value. With the return to normal conditions they are swiftly disappearing. Inflationary conditions, however, facilitated at the same time concentrations of a more permanent nature. The large concerns in the heavy industry, the electrical and chemical industries, &c., were able to strengthen their position by absorbing their smaller rivals. The concentration of important industries in relatively few hands prepared the ground for the developments which are now taking place. Large horizontal combines are being formed with the object of bringing about a division of production between individual factories, enabling each of these to confine itself exclusively to those categories of goods which it can produce at the lowest cost. Such combines involve a much closer association of individual enterprises than the cartels bring about. The regulation of prices and the maintenance of a steady price-level is only a secondary task of these combines, whereas it was the sole object of the cartels. It is realised in Germany that the old system has great limitations, and is not really suited to form the basis for reorganisation to suit the prevailing conditions on the world markets. It is not only necessary to adapt production to demand, but this process must be carried out in the most economical way possible. Where contraction is necessary, the less efficient works must be closed down and production concentrated in the remainder. Under the cartel system prices tend to be based on the cost of production in the least efficient works. The necessity for a reduction of prices if export is to be increased makes it impossible for Germany to afford the luxury of keeping her marginal enterprises above water. Moreover, the supply of working capital is so limited that it is of the greatest importance to direct this supply to the most efficient and productive channels. It is stated that the formation of the American Whisky Trust enabled 68 factories out of 80 to be closed at once, and this process might profitably be imitated in many German industries.

For the reasons given above several important amalgamations have already taken place, and others are being negotiated. In Upper Silesia all the coal mines and iron works belonging to the Donnersmarck-Hütte, the Oberschlesische Eisenbahnbedarfs-A.G., and the Oberschlesische Eisenindustrie A.G. have been united in one company. The Oberschlesische Eisenbahnbedarfs-A.G. and the Donnersmarck-Hütte each receive 25 per cent. of the capital of the new company, the remaining 50 per cent. is taken over by the Oberschlesische Eisenindustrie A.G. which, however, loses its independent existence, and is absorbed by the Linke-Hofmann-Lauchhammer A.G., the company. Most of the principal heavy industrial concerns in Western Germany, with the important exception of the Krupp concern—i.e., the Thyssen, Rheinstahl, and Phoenix concerns, together with the Rhein-Elbe-Union (Deutsch-Luxemburg, Bochumer Verein, Gelsenkirchener)—are negotiating for complete amalgamation in a single company, and it is probable that the negotiations will be carried to a successful conclusion. Further, under the auspices of the Prussian State, a coal concern twice as large as any existing enterprise is to be created by means of a concentration of State interests. The chemical industry, which is considered to be the most efficient and best-managed in Germany, has determined on a similar amalgamation, which has already been officially announced. The principal object of this action is, it is stated, to enable each component enterprise to concen-

trate exclusively on one or two products. The leading concerns of this industry had formed an "Interessengemeinschaft" (community of interests) in 1916. They found, however, that this arrangement allowed too much freedom for certain works, resulting in some overlapping, and in order to attain a greater measure of efficiency and a more uniform control of the productive and distributing organisation total amalgamation has been decided on. The following firms are henceforth to form one company, entitled the "Interessengemeinschaft der deutschen Farbenindustrie A.G." :—

	SHARE CAPITAL.	
	Ordinary Shares.	Preference Shares.
	Mln. Marks.	Mln. Marks.
Bad. Anilin- und Sodafabr.	176	1.2
Eilberfelder Farbenfabr.	176	1.2
Höchst Farben	176	1.2
A. G. für Anilin.....	57.6	0.4
Chem. Fabr. Griesheim-Elektron	44	0.32
Leop. Cassella and Co., G.m.b.H.	..	..
Chem. Fabr. Weller ter Meer....	12	0.08
Kalle and Co., A. G.	6	..

The Badische Anilin und Sodafabrik of Ludwigshafen is to absorb the other companies. For this purpose it will increase its share capital by an amount equal to the total capital of the remaining companies. The new trust will have a total capital of 647.6 million marks ordinary shares, and 4.40 million marks preference shares. The two firms, Leop. Cassella and Co., G.m.b.H. and Kalle and Co., receive special treatment, but will, in fact, be members of the new trust.

In the potash industry the tendencies described above have been the cause of a very interesting struggle between the Wintershall concern and its satellites, on the one hand, and a "block" headed by the Westeregeln, Salzdetfurth, and Aschersleben interests on the other. The Wintershall concern, under the energetic and able guidance of its managing director, Herr Rosterg, made a bold attempt to control the Potash Syndicate with the object of cutting prices and forcing the less efficient mines to close down. Herr Rosterg maintained that the total potash production necessary for the world market could most economically be produced by a few mines suitably developed for the purpose. Wintershall succeeded in obtaining well over 45 per cent. of the production quotas (on which voting in the syndicate depends), and had it secured a majority it is possible that the enterprise remaining alive after the proposed price-cutting had been carried out would have been forced to sacrifice their independence. The industry might well have become a trust controlled by Wintershall. The opponents of Wintershall succeeded, however, in forming a block controlling some 52 per cent. of the production quotas, and thus the majority of the votes. The contending parties have since come together. In this way the Potash Cartel has been preserved, and the new tendencies have been checked. It is probable that the success of the "Conservative party" has been due to the fact that the industry, being on the up-grade, does not feel the pinch of necessity. Germans do not see the need greatly to reduce the prices to foreign consumers of what is still to a large extent a monopoly product.

From the foregoing it may be deduced that Germany to-day realises the difficulties of her position, and is, moreover, prepared to go to the necessary lengths in order to overcome them. In the iron and steel industry, for instance, it seems probable that the new organisation will be able to reduce production costs to the extent and more that they are increased by an eventual rise in wages. There is no doubt that the industry as a whole will be strengthened. The cartel organisation will, moreover, be retained as far as necessary. If, as is more than ever probable now that Locarno has transformed the European outlook, the French and German heavy industries come to their long-discussed arrangement whereby the Germans will control for sales purposes a large part of the French semi-manufactures, it will surely be advisable for our iron and steel interests to keep a careful watch on the situation. As long as the shortage of capital in Germany continues, there is a possibility of ensuring our non-isolation if our financial and industrial interests will work together. It was significant that Herr Wassermann, director of the Deutsche Bank, should have stated in his speech at the

Bankers' Congress that not only debentures, but stock and participations must be offered abroad. Five years ago no responsible German would have said as much. Everything was then done to keep the foreigner out. Five years hence, if the formation of capital makes progress, Germany will probably no longer be so anxious for foreign help, and the present opportunities for securing international collaboration may well have slipped by unnoticed.

THE CHINESE TARIFF CONFERENCE.—II.

(BY A SHANGHAI CORRESPONDENT.)

It was stated in a previous article that China's unsecured debts total not less than \$745,000,000, of which about \$495,000,000 (if we include the debts of the Ministry of Communications) represent foreign and \$250,000,000 domestic debts. For some of these debts creditors have succeeded in getting irregular payments: in the case of most of them neither interest nor capital has been paid for a considerable time. Accordingly, one of the chief problems of the Tariff Conference is to decide whether to devote the 2½ per cent. surtax which they are empowered to grant to the service of these debts or not.

The first point which the conference will have to consider in reaching a decision has already been touched on, namely, the unlikelihood of the provinces being willing to reduce their taxation of merchandise unless they are compensated by some *quid pro quo*. The surtax, which, it is estimated, will produce additional revenue amounting to about \$30,000,000, obviously cannot provide this compensation and do service for the debts also; nearly half of it would be absorbed even by the modest initiation of fiscal reform suggested by the British Chambers of Commerce in China—the abolition, that is to say, of the duties levied by the Customs on native inter-port trade. On the other hand, the treaty in which the Powers agreed to the surtax definitely refers to "interim provisions to be applied prior to the abolition of likin."

The next point on which decision turns is the composition of the external or foreign debt, part of which consists of a group of Japanese loans, known as the Nishihara loans, which, as listed by the Chinese Government Bureau of Economic Information, total 125,000,000 yen. The political history of these loans is such as to make the idea of repaying them with the proposed surtax extremely repugnant to the opponents of the Anfu party, which contracted them, and is in power at Peking at the present time. In agreeing to include them in any debt consolidation scheme the Powers would, accordingly, be running the risk of antagonising, at a specially inopportune moment, all the Anfu party's enemies, and of giving fresh excuse to the extremists who have lately been conducting propaganda against "imperialist and capitalistic" finance. On the other hand, it is difficult to suppose that Japan would agree to the surtax being used for debt purposes on the understanding that the debts due to her were ruled out, while to exclude them on the ground that they ought not to have been contracted, besides being an argument of more than doubtful validity to apply to any debt, would create an extremely dangerous precedent.

A third point which the Powers will have to consider is the fact that, of the revenues which would have to be relied on in order to consolidate the unsecured debts, and at the same time to enable the Peking Government to pay its way increasingly large portions are being appropriated—or misappropriated—by provincial authorities. Of this fact the following figures, taken from M. Padoux's memorandum, are illustrations. The salt revenue, which is part security for the 1913 Reorganisation Loan, should give the Peking Government a net annual income of not less than \$99,644,000, but of this total \$29,300,000, or

nearly a third, was in 1924 appropriated by provincial authorities and military commanders. Again, the retention of part of the railway revenues by local officials is responsible for the inclusion in the list of unsecured debts of a total of \$175,000,000, while in the case of the wine and tobacco tax, which should give the Pekin Government a net revenue of \$9,351,133, only \$889,265 reaches the capital.

M. Padoux draws special attention to these appropriations by provincial authorities, but does not, oddly, appear to take into consideration the possibility of their continuing to increase and thus destroying the basis on which his scheme for reconstructing China's finances rests. This scheme, it should be explained, embraces more than the consolidation of the unsecured debt: it includes—as would seem to be essential—the provision of sufficient resources to enable the Government to carry on its duties. In working it out, M. Padoux puts the annual expenditure of the Government at \$48,000,000, adds thereto the amount required for debt consolidation, namely, \$54,250,000, between now and 1933, increasing to \$76,400,000 during the period 1933-1950, and thus gets a total requirement of \$102,000,000 for the former period and \$124,000,000 for the latter. Against these sums he sets out what he assumes the available resources, in the shape of receipts from the Customs and salt revenues, the wine and tobacco and stamp duties and Pekin Octroi, will be in 1926 and succeeding years. Even on this basis he shows that there would be annual deficits for the next ten years, and to meet them suggests, amongst other methods of increasing resources, making the Customs surtax $3\frac{1}{2}$ instead of $2\frac{1}{2}$ per cent., taxing imported tobacco more heavily than it will be taxed under the arrangements agreed to at Washington, and extending the stamp tax to foreigners, the result of these suggestions being, at the end of his memorandum, a table showing deficits converted into surpluses.

What guarantee, however, is there that the salt and other revenues mentioned will continue to flow to Pekin in the amounts which he assumes? There is none. We touch here the fundamental difficulty of Chinese finance, which is soluble only on one of three conditions: (a) Complete foreign control of all sources of revenue, (b) the emergence of a central government able to establish control, or (c) a voluntary agreement between Pekin and the provinces, to readjust the whole financial machinery of the country. It cannot be said that any one of these conditions is likely to be fulfilled in the near future. As far as foreign control is concerned, the probabilities lie in the opposite direction: the existing degree of control is likely to meet with increasing objection. It is highly important that this latter fact should be quite clearly realised.

From the foregoing it will be understood that the Tariff Conference is faced with an exceedingly difficult problem, the essential elements of which, at the risk of repetition and for the sake of making them as clear as possible, may be set out as follows:—1. If the $2\frac{1}{2}$ per cent. surtax is used for effective decrease of internal taxation of trade, it cannot be used for debt consolidation. 2. If the debts are not consolidated they must continue to hang like a millstone round the Government's neck, while the outlook of foreign creditors interested in them will be practically hopeless. 3. On the other hand, consolidation involves the risk of considerable political friction, resulting, possibly, in an increase of anti-foreign sentiment threatening to the only reliable security which foreign bondholders possess, i.e., foreign administration of the Customs. Finally, the consent of the Powers to tariff autonomy, while it would make the debts much easier to handle, and diminish the urgency of readjusting the financial relations of the provinces to Pekin, would do nothing to diminish the internal taxation of trade which would almost certainly continue. And in the state of archaical to some other form of Government, the eventual nature of which it is impossible to forecast, it is more than likely that tariff autonomy would make the Customs revenue the keenly contested prize of all the rival factions in the State, to the great injury of trade, both domestic and foreign.

MEXICAN EAGLE.

(BY A CORRESPONDENT.)

ONCE amongst the most prominent shares in the oil market, Mexican Eagles, through a series of unfavourable developments, have fallen from favour both in price and investment esteem; but a close student of the company's position might see in its undeveloped areas and current progress greater promise than is generally appreciated. The balance-sheet shows a surplus of floating assets of more than £6,000,000 over all liabilities, including both preference issues, equivalent to over 10s a share on the ordinary shares, no less than $6\frac{1}{2}$ millions sterling being in British Treasury bonds, cash and stocks of oil, indicating a strong financial position.

These assets apart, an original capital sum of £12,000,000 expended on real estate, refineries, and equipment has been written down by 47 per cent. to a present figure of £6,400,000, and in addition there are reserve funds amounting to £3,300,000. Indeed, the ordinary shareholders may think the thoroughness of writing down almost ruthless in the absence of a dividend since 1922. The decline in the company's production from its own wells since 1921 has been rapid and great. In that year the output was $38\frac{1}{2}$ million barrels, no outside oil being purchased. By contrast, in 1924 the company's wells yielded $5\frac{1}{2}$ million barrels and $13\frac{1}{2}$ millions were bought. As is well known, on the appearance of salt water, a policy was decided on of buying and refining crude oil from outside sources in order to keep the refineries going, and, although the native production was so small, a trading profit of over one million pounds was secured last year, not reckoning any return from interest on investments. More than three-quarters of this was allocated to depreciation; otherwise it would have equalled 5 per cent. profit on the total issued capital.

This result was attained in face of three serious disadvantages, as during the first six months of the year production had to be partially closed owing to a strike at the Tampico refinery; the Minatitlan establishment was also affected, and in the latter months operations at Tampico were again disturbed through heavy floods silting up the Panuco river. While some recrudescence of unrest has appeared at Minatitlan, it is understood the Tampico refinery has been fully engaged in the current year.

For several years the company has, in common with other corporations trading abroad, been subject to heavy fluctuations of profit through variations in the value of sterling. Now, with stabilisation effected, the advantage to the company should be marked, as may be realised from reference to the last report, which states that, owing to the rise in sterling exchange "principally towards the end of the year," an exchange profit of about £440,000 was shown.

The company possesses 400 miles of pipe-line and refineries—the principal being Tampico, capable of dealing with 120,000 barrels of oil daily, and regarded only as a refining and trading proposition situated in a most favourable geographical position for supplying South America, Europe, and the East with its commodities. The ordinary shares have attractions, which are increased in recalling that one of the principal investments is the ownership of all the ordinary shares of the Eagle Oil Transport Company. This company has a fleet of 37 ships of 436,000 tons dead weight, and for some time has been putting large sums back to write down the book value, £750,000 being so applied last year. Should a similar sum, as is most likely, be available for the current year, and another £650,000 next year, the book cost will have been brought down to £11 per ton, a figure at which the fleet could not now be replaced. When this is completed, the subsequent profits, if on a corresponding scale, would equal over 6 per cent. on Mexican Eagles. Some day these very large appropriations which are being placed to various depreciation accounts must cease to be necessary. Concrete conditions thus suggest that the price now ruling is not over high, if the company is treated as a trading con-

cern alone. It, therefore, becomes the more interesting to consider how far new discoveries will affect prospects. The company is operating in two distinct and separated fields, and during its early history more hope attached to the southern area. Later developments brought the northern district into prominence, and it is from these that most of the past production has been secured, and incidentally where salt water has played much havoc. A prospect of better things appears to have opened up in the latest cable reporting a new well, Cerro Viego No. 24, in which the Eagle Company is half partner. Reference to a map shows this well to lie north-west of the older areas, outside the probable salt-water limit, and flowing at 21,000 barrels per diem. The Eagle interest represents more than 50 per cent. increase on its recent production, and if, as seems possible, it is a new deposit, developments may prove of greater importance than the Stock Exchange at present realises.

In the southern district, it is understood, progress is favourable, and oil of high quality has been found which, owing to the fineness of the sands, has proved difficult to bring to the surface. This technical trouble, if not already defeated, can be overcome, and both the 7 per cent. preference, which are amply secured, and the junior shares, look in view of the strong financial position and drastic writing down of assets rather under than over-valued.

BREWERY PROFITS.

THE following figures showing the trend of beer production in this country are supplied to us by a well-known expert on the subject. The figures are for Great Britain and Northern Ireland for the financial years 1923-24, 1924-25. It will be noticed that the bulk barrels in 1925 are estimated, but they are thought to be based on reliable figures:—

	1924.	1925.
Production (standard barrels)	19,890,000	20,954,000
" (bulk barrels)	25,425,000	*26,800,000
Exports (standard)	263,000	*267,000
Retained for consumption (stand. barrels) ..	19,606,000	*20,654,000
Imported (Guinness) (standard barrels) ..	1,464,000	1,621,000
Standard consumption	21,070,000	22,275,000
Bulk barrels retained for consumption, including Guinness at 1,050° gravity	26,772,000	28,316,000
	* Estimated.	

From an informative article which recently appeared in the *Observer*, we are reminded that the raw materials used in the production of beer and spirits consist in the main of barley, rice, maize, hops, and sugar and its equivalents. "In 1923 over 900,000 tons of cereals and about 80,000 tons of sugar were thus used. About a third of the cereals and practically the whole of the sweetening materials were imported. It has been estimated that some $5\frac{1}{2}$ per cent. of the arable land in Great Britain is devoted to the growing of malting barley. The hop-growing industry is also of considerable importance to the agriculturists of Kent. It must, therefore, be admitted that any sudden decline in brewing might be the cause of some economic hardship to the farming community. The value, however, of the cereals grown for brewing and distilling was under £10,000,000, or less than 9d in the £ of the selling price of the beer and spirits produced."

A number of important brewery undertakings have recently issued their accounts, and we have selected ten undertakings, for the purpose of a review of results achieved, whose year in most instances ends on June 30, 1925. Our first table shows the net profits during the past four years, and the amount carried forward of these leading brewery undertakings:—

Name of Company.	Net Profits, after Payment of Debenture Interest.				Carried Forward.

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
67 Milk Street.

BUENOS AYRES: 99 Florida. HAVANA: Pedro Gomez Mena Bldg.

Foreign exchange orders executed in the New York market for banking correspondents abroad. Commercial banking business of all descriptions transacted.

Special Representative:
24, OLD BROAD STREET, LONDON.

This table discloses a wonderful record of prosperity, net profits showing a good increase in every instance. Carry-forwards are higher in most cases.

Arthur Guinness had a particularly favourable experience, its net profits rising from £2,389,625 in 1923-24 to £3,039,096 in 1924-25. The sum carried forward from £713,822 to £832,918. Both Watney, Combe and Mitchells and Butlers were able to record considerably higher net earnings, those of the former advancing from £702,627 to £1,013,286, and those of the latter from £414,433 to £501,221. In both cases larger sums were carried forward. Bass, Ratcliffe's net profits amounted to £536,668, against £463,058. The feature of the foregoing table, of course, is the remarkable progress made in recent years by Watney, Combe, to which reference is made below.

Our next table shows the available balance after payment of debenture interest, and how it was utilised during the past two years:—

	Available Balance, after Payment of Deb. Int.	Preference Dividend.	Ordinary Dividend.	To Reserve, &c.	Carried Forward.
Arthur Guinness, (June 30, '24)	£2,983,822	£120,000	£1,950,000	£200,000	£713,822
Son, and Co. (June 30, '25)	3,752,918	120,000	2,400,000	400,000	832,918
Barclay, Perkins, (Mar. 31, '24)	198,556	72,000	81,600	—	44,956
and Co. (June 30, '24)	234,990	72,000	81,600	25,000	56,390
Bass, Ratcliffe, & Gretton (June 30, '24)	536,668	68,000	265,200	100,000	93,429
Chester's Brewery (Mar. 31, '24)	549,297	68,000	265,200	150,000	66,097
Hoare and Co. (Mar. 31, '25)	170,945	8,492	64,165	30,000	68,894
Mitchells and Butlers (Apr. 18, '25)	194,094	8,492	66,708	50,000	68,894
Threlfall's Brewery (Apr. 18, '25)	212,802	—	148,994	56,268	7,541
Watney, Combe, (Apr. 18, '25)	287,473	46,500	244,797	157,434	4,859
Whitbread & Co. (June 30, '24)	635,105	46,875	346,253	100,000	248,301
Wm. Hancock (June 30, '24)	539,833	26,518	250,000	—	263,314
Barclay, Perkins, (June 30, '24)	565,130	26,518	250,000	—	268,613
Watney, Combe, (June 30, '24)	918,000	86,839	445,958	200,000	185,203
Reid, and Co. (June 30, '25)	1,383,692	86,528	533,566	550,000	213,608
Whitbread & Co. (June 30, '24)	488,343	46,561	93,293	—	342,489
William Hancock (June 30, '25)	840,523	46,257	95,500	—	394,676
Arthur Guinness (May 31, '24)	53,410	20,700	24,000	5,000	12,510
and Co. (May 31, '25)	74,994	20,700	24,000	—	25,224

It will be observed that the available balance after payment of debenture interest is higher in each case than in the preceding twelve months. The amounts required to pay the preference dividend are virtually the same. Ordinary dividend disbursements, however, in a good many cases require more. In the case of Arthur Guinness the company was able to increase its payment to ordinary proprietors from 26 to 32 per cent. Dividends paid by Barclay Perkins, Bass, Ratcliffe and Gretton, Threlfall's and Whitbread's were at previous rates, and on the same capital as a year previously. Chester's dividend was maintained at 20 per cent., but the bonus to ordinary shareholders was increased by $2\frac{1}{2}$ per cent., making a total of $27\frac{1}{2}$ per cent. for the year. Hoare's paid to ordinary shareholders this time £125,180, against £148,994, although the rate is kept at the 1923-24 level of 10 per cent. This, however, is because in the earlier year £23,815 was distributed to shareholders of the Lion Brewery under the terms of the purchase of that concern. Mitchells and Butlers' dividend was raised from 10 to 13 per cent., absorbing £349,853, against £244,797, and although the Watney, Combe deferred dividend was reduced from 20 to 17 per cent., it required £533,556 in contrast with £445,958, owing to its being paid on an increased capital. Wm. Hancock's rate went up from 10 to 12 per cent., and the total payment from £20,000 to £24,000. Some substantial appropriations were made to reserve. Guinness's allo-

cation rose from £200,000 to £400,000, Watney Combe's from £200,000 to £550,000, Hoare's from £56,268 to £157,434, and Bass, Ratcliff's from £100,000 to £150,000, while both Barclay Perkins and Wm. Hancock, who last year reserved nothing, this time make allocations of £25,000 and £5,000 respectively.

The following table shows the balance-sheet total and an analysis of principal liabilities and assets during the past two years:—

Balance-sheet totals are all higher. Changes under the heading of share capital and reserves require no comment. As regards debentures and loans, Barclay Perkins have increased their bank loan from £20,000 to £75,000, while mortgage liabilities have gone up from £42,503 to £55,890. Chesters reduced the amount of its debenture stock outstanding by £6,400, a policy which was followed by Hoare and Co., and Watney, Combe. Wm. Hancock, on the other hand, increased its obligations to the bank and under the heading of mortgages. Neither creditors nor debtors show any pronounced general movement, while properties stand at about the same levels as twelve months ago. In most cases stocks are lower, although Watney's figure has gone up from £442,986 to £528,214. Cash and investments generally figure for more.

Our final table shows the ordinary dividends during the past four years, also comparative prices and present yields:—

Name and Amount.	Ordinary Dividends.			Prices.			Present Yield.
	1922-23.	1923-24.	1924-25.	Oct. 31, 1923.	Oct. 31, 1924.	Oct. 29, 1925.

The brewery share market has displayed a considerable activity recently. This activity has been particularly noticeable in the case of Watney, Combe, Reid deferred stock, which now stands at 379 1/2, as compared with 251 1/2 at end of September, 1924. This company, after allowance has been made for the wave of prosperity which has overtaken the industry, provides an example of how financial stability can be achieved by capital reorganisation. Twenty years ago it was found necessary to reduce the nominal amount of deferred ordinary stock by 75 per cent. Since then, however, there has been a turn for the better in the company's fortunes, and stockholders have already received bonuses of 100 per cent. and 50 per cent. This has been taken as an indication of the desire

of the directors to compensate deferred stockholders for the loss suffered on the reconstruction. The stockholders are now to receive another capitalised bonus, this time of 33 1/2 per cent. Therefore, when these proposals are carried out, the capital will be restored to its original amount. The position and future of the brewery industry is difficult to follow. Most holders of brewery securities must ask themselves what the future has in store for the industry. Are we to assume that the demand for "prohibition" is outside the world of practical politics? Will the State seek to divert a further portion of the profits of these undertakings? Are we to treat plant and stock of these concerns as wasting assets? There is this much to be said in favour of retaining holdings. A more tolerant view is abroad than in pre-war days. The demand for State interference is less insistent. It may be that in view of the striking decrease in drunkenness we are not much concerned with the profits made out of selling an anæmic potion formerly known as strong drink. At least, this is how it appears to many. It has, however, been pointed out to the writer by a prominent authority that this opinion is not in fact correct. The difference in alcoholic strength of beer between 1913 and 1924 (March) is in gravity as 1,051.69 is to 1,043.18 (taking England). That figure represents approximately a reduction in strength from 5 per cent. absolute alcohol to about 4 1/2 per cent.—as the alcoholic strength "roughly" follows the gravity—though not universally.

The foregoing figures of profits, which show that the brewing industry in this country is enjoying exceptional prosperity during a period of general trade depression and large scale unemployment, indicate clearly that when the last reduction in the duty on beer was made the brewers to earn a larger profit. In other words, the same reductions in prices could have been made with a smaller sight in the duty. No doubt Mr Churchill will not lose sight of this fact.

PROCEEDINGS OF THE COAL COMMISSION.

THE Royal Commission on the Coal Industry, after conducting a series of local investigations in certain areas, has held daily meetings this week at the Houses of Parliament. Some interesting evidence has been forthcoming. The Commission, it may be recalled, was appointed under the terms of Mr Baldwin's settlement with the mineowners and workers after the threatened stoppage at the end of July last. Its members are Sir Herbert Samuel, Sir William Beveridge, General Sir Herbert Lawrence, and Mr Kenneth Lee.

On Tuesday last, Sir Archibald Denny, chairman of the British Engineering Standards Association, stated that a committee had been endeavouring since January, 1924, on the initiative of the Mining Association, to standardise colliery requirements as far as possible, and substantial economies were already in view. Sir William Larke, speaking on behalf of the National Federation of Iron and Steel Manufacturers, revealed that the iron and steel industry consumed 24 1/2 million tons of coal last year, and would probably take 22 million tons this year, as against 31 million tons in 1913. Working at full capacity, the iron and steel trades were, Sir William stated, capable of consuming 37 million tons per annum. Some economy had been effected by improved practice in fuel consumption—an extremely important factor, since coal represented some 40 per cent. of the selling price of iron and steel products.

Sir Horace J. Wilson, Secretary of the Ministry of Labour, gave evidence on the vexed question of "sheltered" and "unsheltered" wages, showing that in the coal-mining industry the average earnings per man-shift were at present 63 per cent. above the pre-war figure, as compared with 35 to 45 per cent. for skilled labour in shipbuilding, and 40 to 50 per cent. in engineering. In building, on the other hand, wages ranged from 80 to

over 100 per cent. above the pre-war level, and on the railways from 80 to 150 per cent., while the average for British industry as a whole was about 75 per cent. The miners' wages thus compared unfavourably with those of industry as a whole, and the "sheltered" trades in particular, but less unfavourably with those of the more depressed "unsheltered" industries. On the following day, Sir Horace described the make-up of the Ministry of Labour's cost of living index, which was criticised by the Commission as being based on the assumption that the same standard of living applied in a working-class household to-day and that the same articles were bought in the same proportions as was the case twenty years ago. Further difficulties arose when the figure was applied to the coal industry on account of such factors as the provision to mine-workers of houses and coal free, or at reduced charges.

Sir W. J. Clark, Comptroller-General of the Department of Overseas Trade, referred to industrial developments in France and Italy, stating that a questionnaire issued last year to the Department's representatives in foreign markets revealed that, while complaints were occasionally made as to the methods of British coal exporters, price was the factor usually stressed.

The evidence of Mr F. W. Leith-Ross, Deputy Controller of Finance in the Treasury, as to the effect on British trade of German deliveries under the Reparations scheme, aroused keen interest as coming from one intimately associated with the practical working of Reparation machinery. Mr Leith-Ross pointed out that while the provisions of the Dawes Plan undoubtedly afforded an inducement to Allied Governments to take German coal and thus provide the German exporter with a regular market, the greater part of the deliveries merely replaced the normal commercial export which Germany would have made in any case, and did not compete with British coal. This applied specially to metallurgical coke taken by France and Belgium. That part of the Reparation deliveries which had been diverted from its normal outlet had undoubtedly affected the direction of British trade, but as the total exportable surplus of Germany was limited, the British exporter had been called on to supply the deficiency in markets from which German supplies had been diverted. The quantity of British coal exported to Germany, Belgium, Holland, France and Italy had, it was true, fallen from 36 million tons in 1913, and 35 million tons in 1924, to 27 1/2 million tons in 1925 (on the basis of the first six months), but this decline had been concurrent with a drop in Reparation coal deliveries from 11 1/2 million tons (1924) to the equivalent of 7 1/2 million tons per annum. In 1913 exports of British coal to markets other than those mentioned above amounted to 41 million tons. In 1924, the figure had fallen to 29 million tons, and in 1925 to the equivalent of 25 million tons, the recent reduction of Reparation deliveries, accompanied by a reduction in German internal consumption, having intensified the competition of Germany against Britain in these markets. The witness stated in conclusion that the key to the position, in his opinion, was the relative cost of production in the two countries, plus the cost of transport.

On Thursday, the Commission passed to the consideration of constructive proposals for reviving the prosperity of the industry. Sir Richard Redmayne, formerly Chief Inspector of Mines, expressed his opinion that a reduction from 3s 6d to 3s per ton in the export price of South Wales coal would be sufficient to restore normal conditions. Sir Richard strongly criticised the present domestic marketing system, and advocated co-ordinated action by colliery owners for the supply of coal direct to the public. As a temporary working arrangement he suggested that, on an undertaking by the owners to make no further move to reduce wages, the workmen should voluntarily return to the eight-hour day for a limited period, while more permanent ameliorative measures would be the general adoption of the double shift system and a more economic grouping of collieries. Such developments would involve the transfer of men from inferior pits, which, owing to unfavourable natural conditions or lack of capital, acted at present as a drag on wages in their district, to the more advantageously situated collieries, but this would in the long run strengthen the position alike of employers and employed.

Notes of the Week.

The German Cabinet Crisis.—Political developments in Germany, while they hardly seem likely to imperil the ultimate signature of the Locarno agreements, may very well make it impossible for the meeting projected for that purpose on December 1st to take place till a later date. It was expected that the Nationalists, who are past masters at the art of making a show of wounding without going so far as actually to strike, would decide to adopt an attitude of unqualified condemnation of the Locarno negotiations. The first effect was to threaten a Cabinet crisis, for there were, of course, three Nationalist Ministers in Dr Luther's administration. These have now resigned as a natural consequence of the decision of their party, and no steps to fill the vacancies thus created have yet been taken, the portfolios of the resigning Ministers being assumed, for the moment, by various of their colleagues. The position created is curious and unsatisfactory. It is clear that the Locarno Agreements have the approval, not only of a majority of the country, but of a majority of the Reichstag. Yet it is extremely doubtful whether a vote approving them could be carried in the Reichstag at all, or, if carried, could command more than a narrow and unsatisfactory majority. That is a matter of German internal politics. The Socialists, whose support would enable the Government to defeat the Nationalists with ease, are determined not to allow the parties of the Right to evade their responsibility in that way. It is manifestly desirable, though to an outsider it would seem hardly essential, that the Locarno accords should receive at least the acquiescence, if not the active approval, of the whole of Germany. A difficult situation might easily be created if there succeeded to power in the near future a party which could declare it had been hostile to the Agreement from the first. That being so, the Socialist view apparently is that it would be much better for Nationalist opposition to force a crisis, resulting in a General Election that would unquestionably mean a heavy Nationalist defeat, than for the treaties to be got through the Reichstag by a vote representing a combination of Left and Centre against the Right. There is still a possibility that the Nationalists may back down, or, rather, that a split may develop in the Party which would give the Government a sufficient vote in the Reichstag, even though the Socialists for tactical reasons abstained. The industrialist element of the Right is pretty definitely in favour of ratifying the Locarno accords, and its chief representatives are beginning to say so. German industry needs credits, and knows it has no chance of getting them if the work accomplished at Locarno is undone or its consummation seriously impeded. What, therefore, is in prospect is, at the worst, delay, not disaster. The situation is still fluid, but a speech made by the Chancellor at Essen on Wednesday seems to suggest that he regarded a General Election as inevitable.

The Balkan Outbreak.—Though spasmodic sniping has continued much longer than it should on the Greek-Bulgar frontier, the action of the League of Nations Council appears to have finally removed all danger of a serious conflict developing. The promptitude with which the Council was summoned (it had actually been convened within six hours of the receipt of the Bulgarian request at Geneva), and the readiness of its members to leave their capitals to attend a Paris meeting at extremely short notice, are factors which in themselves increase the Council's prestige, and invest it with an enlarged authority when faced with such disputes as this. Knowledge that the League had the whole matter in hand, combined with the Council's immediate decision to despatch impartial investigators to the scene of the fighting, was sufficient to impel both parties to give unqualified undertakings that they would submit absolutely to the Council's decision. The League's task in this, as in similar cases, is twofold. The first essential is to stop the fighting, the second to fix responsibility for the events that have taken place. The latter task can only be discharged after full investigation on the spot, and it

will, undoubtedly, be necessary to despatch a special mission of inquiry, which should be able to report at the normal December meeting of the Council. So far as all the evidence at present available goes, the Greeks are very much more to blame than the Bulgars, and if there is any question of indemnity or reparations, it is more likely that Athens will have to pay it than Sofia. That, however, is a matter which is essentially *sub judice* at present, and the only further observation that need be made is that such events as have taken place at Demir-kapu very substantially strengthen the claim advanced by Bulgaria and her friends that she has been placed in an impossible position by being condemned to live unarmed in the midst of armed and aggressive neighbours. That, manifestly, is an argument not for arming Bulgaria, but for finding some means to reduce the armaments of adjacent States.

Bombarding Damascus.—A vivid and profoundly disturbing dispatch from Damascus in the *Times* of last Tuesday drew an arresting picture of the developments into which the revolt of the Druses has grown. How far, indeed, what took place in Damascus a week or more ago is directly linked with the operations in the Druse country can hardly yet be determined, but everything goes to show that the handling of the whole situation by the French authorities has throughout been deplorable. Nothing has made a deeper or more disquieting impression than the statement by the *Times* correspondent that the real beginning of the Damascus trouble was the action of the French in parading on camel-back through the city, and finally exposing in a public square, the corpses of 20 or more brigands, killed when the French burned several villages to the south-east of the city. This savage demonstration, so far from fulfilling its intention of intimidating the populace, not unnaturally stimulated reprisals, and as a result of attacks on French soldiers in the lower parts of the city, General Sarrail—for he can clearly not escape personal responsibility—ordered a large-scale bombardment of a considerable section of the city. This was subsequent to a demonstration of tanks, which fired right and left through the bazaars. The artillery bombardment, said to have lasted 24 hours, was reinforced by bombs and machine-gun fire from aeroplanes. As a result, large quarters of the city, including the famous Street Called Straight, have been laid in ruins and considerable damage done to European property, while the casualties among natives are estimated at 1,200 at the lowest. In addition, heavy fines are being laid on Damascus in default of the delivery of 3,000 rifles, whose surrender is demanded by the French. These disclosures have, not unnaturally, created something of a sensation in France, where keen indignation is felt that such news should be obtainable only through the British Press, for the closest censorship is maintained by the French authorities in Syria, and it appears that even the French Government itself has received only the scantiest information from its representatives on the spot. It is, however, far from certain that the French even yet have the situation in hand, and though there are experienced British authorities who hold that the methods of repression practised by General Weygand were bound sooner or later to produce a reaction, it is not surprising that sharp contrasts are being drawn in France between the peace under Weygand and the outbreaks under Sarrail. The appointment of the present High Commissioner was frankly a political job, but though the Radicals to whom he owes his advance are in the ascendant, M. Briand appears to have taken a firm stand and insisted on his recall as a condition of his remaining in the Government. Apart from other consequences, the position in Syria must create serious perplexities at Geneva, for the League can clearly not ignore events like the Damascus episode in a Mandate area. Even before news of the latest development was received the Permanent Mandates Commission had called for a special report from the French authorities on conditions in Syria, and has arranged to consider the whole question at its next session in February. It is likely to find more material to deal with than it expected.

The New Viceroy.—The appointment of Mr E. F. L. Wood to succeed Lord Reading as Viceroy of India, on his retirement last April, has caused surprise, because he is far less known to the public than were others who were supposed to be candidates for the post. In fact, the public knows little more of him than that he is now Minister of Agriculture, and was Minister of Education in Mr Baldwin's first administration. It by no means follows that the choice is not a wise one. In political circles Mr Wood enjoys a reputation for high character, courage, and common sense. To follow so outstanding a figure as Lord Reading is no easy task. To its accomplishment Mr Wood will bring a record free from all entanglement in the bitter Indian controversies of recent years, and this he may well find to be an invaluable asset.

China's Vicissitudes.—While the tariff conference at Peking is actually in progress the civil war is to all appearance hanging fire. Chang Tso-lin is slowly massing troops in the north-east, but Wu Pei-fu, at Hankow, or somewhere near it, is still motionless, and the enigmatic Feng Yu-hsiang has given no sign of his intentions, if he has any. The general expectation is that a clash between the Fengtien troops (Chang Tso-lin's) and Wu's must come almost immediately, and the issue may depend on which way the Christian general decides in the end to throw his weight. These alarms have not after all resulted in a postponement of the tariff conference, which duly opened on Monday, the appointed day. The chief feature of the initial speeches was the not unexpected demand of China for full tariff autonomy, followed by a less generally anticipated statement by Sir Ronald Macleay that he was authorised by the British Government to discuss such a development. That conciliatory move, however, was a little discounted by the reminder linked to it that China was under the necessity, as a condition of tariff revision, of abolishing *likin*. The difficulties in the way of that are as great as they ever were, and the incapacity of the Central Government to carry through such a reform in the teeth of the provinces still promises to bring the present negotiations to nothing. That no doubt explains the British delegate's significant observation that he was in a position to discuss full autonomy "at the present or a later conference." The discussion may come now, but it is difficult to believe that the decision will not have to wait for happier days. It will, however, take some time for the conference to reach the point of definite failure, and that interval may still conceivably be employed in the elaboration of some form of compromise that will permit of the negotiations being temporarily adjourned without an actual rupture. The whole prospect is, of course, inextricably bound up with the political complications, for Wu Pei-fu can be counted on to veto anything Peking accepts. Peking, knowing that well, is likely to accept nothing at all—short of full autonomy, which it will not at present get.

Conditions in Ireland.—Our Dublin correspondent writes:—Though progress is very slow, there are signs of the beginning of some improvement through the country. Thanks to a good season, there is an abundant stock of fuel and of food-stuffs, such as potatoes and oats. But there is still very little money in circulation, and there is disappointment at the low prices on offer for generally. Cost of living maintains a level about 15 points over the British figure, and wages—so far as employment on a restricted scale extends—are high. Employers maintain that the high wages create the high cost of living—Labour advocates invert the proposition. There is something to be said on both sides, but there are other factors to be taken into account. There has been an increase of employment in certain businesses due to the experimental to no increase of price. That result would not be remarkable where the tariff affects a manufactured article but not the raw material, and where, as in the case of tobacco, British manufacturers have started factories in Dublin. But in the case of boots, it is established that there has been a substantially increased activity in the Irish boot manufacturing business since the imposition last year of

the 15 per cent. import duty. But the price to the consumer has not increased. Trade statistics show boot imports for January-July, 1925 (the latest available figures) at 267,937 dozen pairs, value £1,109,375, or £4.16 per dozen pairs; and for the corresponding period in 1924 at 226,515 dozen pairs, value £1,229,847, or £5.4 per dozen pairs. It may be observed that three out of the seven months in the latter period preceded the imposition of the tariff. However, it is clear from the figures for the month of July that boot prices, for whatever reason—whether of a change in quality or otherwise—are tending downwards. Thus July, 1925, gives 35,052 dozen pairs, value £135,847, or £3.87 per dozen pairs, while July, 1924, gave 22,618 dozen pairs, value £110,830—or £4.9 per dozen pairs. No explanation of these figures is so far forthcoming. Messrs Siemens-Schuckerte have definitely begun work on the Shannon Scheme, undeterred by the rather foolish strike in Limerick City, where Labour sought to impose urban wage rates on the contractors in respect of their payments to unskilled labour in rural areas. As the contractors were paying their urban workers the full urban rates, and were paying something over the prevailing and accepted rural rates to their rural workers, it is not altogether astonishing that the strike of the Limerick urban workers has had something of a boomerang effect on the strikers and their leaders. The contractors, who are having no difficulty in getting all the labour they require, will soon be employing 3,000 men. They are already bringing in machinery and material. A great stimulus will thus be given to the whole area abutting on the river-line from Killaloe to Limerick City.

A Banker on the Gold Standard.—In his inaugural address on Wednesday as President of the Institute of Bankers, Sir John Ferguson claimed that banking opinion generally had been practically unanimous in thinking that the long run advantages of the return to the gold standard outweighed any temporary difficulties, and added that "we have to acknowledge the great service rendered to the cause of sound finance by that patient individual the taxpayer, in submitting to an appallingly high level of taxation. Without this sacrifice the country would be as far off from the old gold parity as the French and Italian taxpayers." As to the future value of gold—that is to say, the course of prices in gold standard countries—he suggested that the long-distance course of prices was likely to be downwards for two reasons—first, because of the ultimately increasing demand for gold, and secondly because of the continuous introduction of mechanical aids to production and the introduction also of new methods that tended to increase the productive efficiency of labour and capital. On the question of the loan embargo, Sir John was emphatically in favour of its removal. "It seems a short-sighted policy to make the London money market give up its position as an international money market, even for a short time, merely to satisfy misapprehension and ill foreboding as to the results of a return to the gold standard. There would be no great point in returning to this standard if we were an insular economic mint. We are not, and it is because of our position as the principal money market of the world that it was imperative to return to gold." He added that there was everything to be said for a completely free gold market, but nothing for a gold standard in a glass case. Towards the end of his address Sir John Ferguson touched upon the questions of further bank amalgamation and of the extension of the part played by banking in the financing of our Empire resources.

The Problem of Wage Levels.—According to the *Ministry of Labour Gazette*, the level of wages is at present slightly higher than it was at the end of 1924, having risen from between 70 and 75 per cent. above the pre-war figure to 75 per cent. The rise took place in the first quarter of this year, and since the end of March there has been no appreciable change. The industries which have contributed to the increase include agriculture, the railway service, and the gas and electricity supply services. In the coal mining and iron and steel industries wages have fallen during the nine months. The other important industries show little or no change. No pro-

gress has, therefore, been made in the direction of reducing the gap between the level of wages in the sheltered and unsheltered trades respectively, and, if anything, it has become a little wider. In the sheltered group the increase over pre-war rates ranges from 80 to over 150 per cent., there being numerous instances of a rise of over 100 per cent. In the unsheltered group, on the other hand, the rise is generally below 70 per cent., and in one instance it is as low as 20 per cent. There can be little doubt that some adjustment is urgently needed. The low level of wages in the less fortunate industries is, of course, largely the result of circumstances over which employers and workers in this country have no control, but it is obvious that such industries are seriously affected by transport charges, local taxation, and other factors which are partially inflated by the high wages prevailing in the sheltered trades. This aspect of the situation is to receive careful examination by the joint committee which is reviewing the position of the shipbuilding industry. The point is one which should, and no doubt will, receive adequate consideration by the Coal Commission, the Committee on Industry and Trade, and the Cabinet Civil Research Committee, and some good purpose may be achieved if these bodies succeed in demonstrating to the various wages boards, conciliation boards, industrial councils, trade boards, arbitrators, &c., which determine wages in the sheltered trades, that some sacrifice at the present juncture may be of ultimate advantage to industry as a whole.

Stock Exchange Commission Concessions.—A Stock Exchange correspondent writes:—Activity in rubber shares and the animation that characterises various sections of the industrial market have brought into the field of speculative investment a number of people, men and women, who have never had much to do with Stock Exchange operations before, and whose transactions were concerned, in the main, with subscription to the Government War Loans and National Savings Certificates. Many of these, finding themselves in a strange land, stumble across unexpected factors, which not infrequently cause them to suspect that they are being treated with less fairness than they expect. One of these minor details is concerned with the matter of commission. The Stock Exchange rules lay down a minimum scale. A broker may charge as much more than the rates in this scale as he likes, but he is not permitted to charge less. Various concessions are allowed to be made to clients who, for instance, buy and sell shares in the same account or in two consecutive accounts. Amongst these is the right which the Stock Exchange rules give the broker of giving his client a return of half-commission, on one side, in the case of orders to exchange from one investment into another. The man who sells, for example, £1,000 London Midland and Scottish at 76 and puts the money into the War Loan will be charged commission on both transactions, but his broker has the right to return him half the commission on the side which produces the smaller amount. In this case, it will mean that the broker, if he thinks well to do so, can return half the commission on the purchase of the War stock. The man who sells 50 Liptons and puts the money into 500 rubber shares at 2s may feel aggrieved if his broker does not credit him, without being asked, the half-commission on the smaller side of this account, though if he, the client, were to see for himself the actual labour involved in the mechanical part of carrying out the transactions, he would admit without hesitation that the broker received no more than a fair remuneration in charging full commission on both sides. Stock Exchange competition has the effect, of course, of enabling clients virtually to claim this concession, and it is commonly allowed as a matter of course. So far as the scale itself is concerned, by far the great majority of brokers adhere to the minimum commission, finding it convenient to work by, and a standard to which reference can be made should any question arise in regard to the charges that are made. In speculative transactions where a man buys shares and sells the same shares during the same account, this is regarded almost universally as a closing transaction, and no second commission is charged, although, once more, it must be emphasised that this also is at the broker's option. In the latter case, stamps and

fees are not payable, inasmuch as the stocks or shares do not go into the name of the purchaser; therefore, he has nothing to pay in respect of the onerous 1 per cent. stamp duty.

The Mexican Debt.—The Mexican Minister of Finance, Mr Pani, has come to an agreement with the International Committee sitting in New York regarding the resumption of the service of Mexico's external debt. According to an announcement made to the New York Press, important modifications have been made in the 1922 Agreement, and, subject to these, the "Mexican Government will resume its remittances to the Committee for the service upon its foreign debt, beginning in January, 1926." Other important points of the announcement are as follows:—

An important provision now agreed upon is that the National Railways shall be returned to private management not later than January 1, 1926, and the Government agrees to put into effect, prior to that time, such measures as to operation, &c., as will render the National Railways in condition, beginning January 1, 1926, to pay their own way and to meet their own interest charges. The interest payments (provided for in the Agreement of 1922) for 1924 and 1925, now in arrears, will be postponed and paid over an eight-year period, beginning in 1928. Provision is also made by which the outstanding Caja de Prestamos bonds are to be exchanged for direct Government obligations.

The modified agreement is, of course, subject to acceptance by the bondholders, and also to ratification by the Mexican Congress and President. We assume that Mexico really means business this time. But, as Mexican bondholders have so often learnt, there is many a slip 'twixt the cup and the lip. In view of recent history in this respect, and of the present financial difficulties of the Mexican Government, premature jubilation should be discouraged.

Credit and Speculation.—As a practical banker of many years' experience, Mr J. F. Darling commands the attention of the banking world when he puts forward suggestions for the improvement of our banking system, but we fancy that he will find more opponents than adherents to the scheme which he puts forward in an article in the *National Review* for November. Briefly, Mr Darling proposes that a new Banking Act should be passed to enable a strict line to be drawn between credit for the non-speculative wealth producer and credit for the speculator. The suggested legislation would provide for the division of advances and discounts of the joint-stock banks into two classes—"eligible" and "non-eligible"—that is, eligible or non-eligible for currency or advances at the Bank of England. It would provide for a Credit Board to define and make rulings as to "eligible" paper, to determine the maximum credit that the banks could use for "non-eligible" purposes, and to approve the public issues of loans. Whether this body could more effectively discriminate than could the banks themselves under the present system is very much open to question. Mr Darling admits that a dividing line between the speculator and the wealth producer is sometimes difficult to define, for speculation and production of wealth may be carried on by the same person in connection with the goods he produces. Nor will everybody admit that "the speculator occupies no useful place in our body politic." Mr Darling's article, however, is a timely reminder of some of the disadvantages of our present system, under which, on occasion, the legitimate trader has to suffer high money rates for the offences of the speculator.

American Cotton Crop.—At the beginning of this week, writes our Manchester correspondent, the Agricultural Bureau of the United States Government sprang another surprise upon traders in cotton when they published an unexpectedly favourable report on the crop for this season. The indicated yield is now given as 15,226,000 bales, against 14,759,000 bales a fortnight earlier. The estimate was much larger than anticipated, and resulted in a fall in prices of about $\frac{1}{2}$ d a lb. The ginning returns are also big, being 9,520,000 bales, against 7,616,000 bales a year ago. Authorities in this country find it hard to believe that the outlook for the growth has improved

by 1,500,000 bales during the last six weeks, and it is evident that the officials of the Bureau are now adjusting matters to cover up mistakes made earlier in the season. There is now a probability of the output for 1925-26 being the third largest ever known, the previous records being 15,693,000 bales in 1911 and 16,135,000 bales in 1914. There is some difference of opinion as to the carry-over at the end of last season, but the amount may be put down at 3,000,000 bales. The aggregate supplies, therefore, are likely to be 18,250,000 bales. Owing to increased trade activity, and the lower prices, consumption will probably exceed recent previous years, and is estimated at about 14,250,000 bales. The carry-over, therefore, at the end of next July should be 4,000,000 bales. From the point of view of manufacturers, it is also fortunate that big growths are likely in Egypt and India, whilst production is increasing from year to year in many parts of the British Dominions. The price of American cotton, which is now about 10 $\frac{1}{2}$ d a lb in Liverpool, is the cheapest since May, 1922—three and a half years ago. Lancashire spinners and manufacturers are convinced that when values are stabilised a much bigger trade will be done in manufactured goods. For several years the chief reason for the limited business in cotton goods has been dear prices. It is recognised that if the volume of trade does not broaden now that values are so much lower, then the future of the Lancashire industry will have to be considered as very serious.

Finnish Timber in the United States.—A correspondent writes:—Negotiations are now in progress between interested parties in Finland and the United States, which, if proved successful, in time might have considerable influence on our prolific annual supplies and costs of European timber for building and other requirements. It appears that about 16,500 cubic feet of Finnish sawn wood are being shipped in three parcels to New York "as an experiment," the main object being to find a new market for Europe's surplus wood production. There undoubtedly has been a surplus this year, but it appears to have been gradually absorbed, although at prices certainly unremunerative to the shippers, and especially the Finnish shippers. When the United Kingdom and more, the demand will be quite sufficient to meet European shippers' output and prices, provided the latter are reasonable. Any large shipments to the New World would, therefore, tend to harden the price against us. One, however, cannot blame the Finns for attempting to extend their markets, but we hope by some means or other they will be able to increase their production in proportion. The consumption of sawn timber in the United States is enormous—according to good authorities, it is at least 15,000,000 standards. Finland, with her whole export production, can supply roughly a million standards per year (one standard = 165 cubic feet), a wonderful achievement for that young republic. It is chiefly the area in and around New York on which the Finnish saw mill owners have their eye, a district which is reported to consume about 3,000,000 standards annually, and which the Finns hope to conquer. Though the scheme is in the experimental stage, it has already created no little concern in the spruce trade in Canada, in the Douglas fir region of the Pacific Coast, and the pitch pine and other lumber centres in the Southern States of the United States. Strange to say, but little notice has been taken of the matter in England, which, perhaps, will be more adversely affected than any other country—that is, if the scheme proves a good business proposition.

International Chamber of Commerce.—At the meeting of the Council of the International Chamber of Commerce, to be held in Paris on November 6th, Mr Walter Leaf, who will preside, will address the Council on the economic situation. It is expected that Sir Alan Garrett Anderson, K.B.E., chairman of the British committee, Sir Algernon F. Firth, Bart., Sir Felix Schuster, Bart., Mr Stanley Machin, and Mr Arthur Colegate will be present as representatives of Great Britain. Mr Owen D. Young, former member of the Dawes Committee, has been elected chairman of the American National Committee in the place of

the late Mr A. C. Bedford, and Herr Franz von Mendelssohn, president of the Association of German Chambers of Commerce and Industry, has been elected chairman of the German National Committee. The Council will consider setting up special committees to continue the study of various aspects of the problem of economic restoration, including the difficult question of transfers under the Dawes Plan, already discussed at Brussels in June last.

The Fluctuation in Tin.—At the close of last week the price of cash standard tin stood at over £286, thus indicating an appreciation of about £20 against the end of September, and £57 a ton from the lowest point seen this year, while the average for last year was £248 14s 7d. In the course of this week, violent fluctuations have taken place in a sensitive market chiefly under the influence of the French political and financial crisis. This precipitated considerable speculative re-sales and a certain amount of short selling for a turn, which brought down the price to about £281. This was followed by a recovery of well over £3 a ton, but the market relapsed again substantially at mid-week to nearly £279 for forward delivery, only to rise again on Thursday to £285 6s 3d for cash and £284 7s 6d for three months'. Amidst the recent unsettlement the trade demand, which had been previously very active, with America buying freely, has been temporarily interfered with, but underlying conditions have been steadily gathering strength for some time owing to clear indications that, at the increased rate of consumption, considerably more tin is being required than actually produced. The statistics for October will probably fully confirm this, a further decrease being looked for in the visible supply of between 1,500 and 2,000 tons. This would, therefore, make a total shrinkage of at least 4,000 tons in two months, and reduce the visible supply to about 15,500 tons, which would compare with about 19,000 tons at the end of October last year—a decrease of 3,500 tons. This month's total deliveries are expected to be very heavy, while the American figures are placed at upward of 6,500 tons. American consumption so far this year has been at the rate of about 6,500 tons a month, as against a monthly average for last year of 5,330 tons. Assuming this rate to be about maintained for the balance of the year, this would point to an increase in American consumption for the year of roughly 14,000 tons as compared with 1924. It is well to bear in mind that the whole of this year's consumption has been met from current production, which should yield an excess of about 5,000 tons against 1924, which excess is chiefly contributed by Malaya. Furthermore, last year considerable quantities accrued from the liquidation of the Eastern Pool which were added to the visible supply. With American consumption eclipsing all previous high records, and European consumption improving, it is obvious that the merits of tin are viewed in a sanguine light. According to present indications, current resources are short of requirements, and the visible supply threatens to be reduced to a point which may mean an actual scarcity in the long run.

British and North European Bank.—An official statement was made early this week to the effect that the directors of the British and North European Bank, Limited, had decided to discontinue the business of the bank, owing to difficulties of certain concerns in Central Europe with which it is associated. The bank was established in June, 1920, the authorised capital being £1,000,000, in shares of £1 each, of which £500,300 has been paid up. The balance-sheet, dated September 30, 1924, showed deposits at £748,800, acceptances at £336,300, and bills rediscounted at £442,200. Cash stood at £278,200, advances at £711,000, and investments at £139,500, the last relating mainly to holdings in affiliated banks in France, Austria, and Poland. The report for 1923-24 stated that business "continues to show satisfactory progress, the turnover for the year being considerably increased as compared with previous twelve months." An extraordinary meeting of shareholders is convened for next week to pass a resolution to

wind up the company voluntarily and to appoint Sir Gilbert Garnsey, of Messrs Price, Waterhouse, and Co., as liquidator. Sir Gilbert Garnsey is meanwhile taking charge of the bank's affairs at the request of the directors. It is stated that the business of the bank has for some time been considerably restricted, with the result that the unsecured commitments are now about £150,000, while the "acceptance" position has been reduced to about £260,000, "for which other parties are responsible, and any loss under this head is, therefore, expected to be small. There are also outstanding guarantees of about £125,000, the greater part of which is purely nominal." It is added that the bank has considerable advances to collect and other assets to realise, and it is hoped "that creditors will be paid in full."

Santa Gertrudis.—Our mining correspondent writes: Within the past few months a remarkable change has come over the prospects, from the dividend standpoint, of this Mexican undertaking. It was only in July last that the holders of the existing notes agreed to an extension of the date of repayment in consideration of the rate of interest being increased from 8 per cent. to 8 $\frac{1}{2}$ per cent., payable both on the principal sum and on the bonus of 15 per cent. due upon repayment. In the meantime no dividends were to be paid on the ordinary shares. During the past week or so rumours have been current as to a fresh issue which would pay off the existing notes with their somewhat onerous conditions and thereby clear the way for the resumption of dividends. A circular issued this week announces that the profits from both the Santa Gertrudis group of mines and those of the Mexican Corporation have been so satisfactory as to enable the general manager to anticipate that from the beginning of 1926 remittances at the rate of £30,000 per month may be expected. To permit the shareholders to get the benefit of these profits the directors have effected provisional arrangements for the sale of a new note issue of £200,000, redeemable in five years; interest to be at the reduced rate of 7 per cent., but the issue to carry the right of conversion into shares. The proceeds, together with the funds in hand, will enable the existing notes to be paid off in the early part of 1926, from which date the profits will become available for dividend. The directors suggest that an interim payment of 10 per cent. per annum may be looked for in the near future. In connection with this scheme it will be necessary to increase the capital of the company by 300,000 shares. There can be no doubt that the consent of the shareholders will be readily given.

Kamunting Tin Dredging.—The report to June 30th of this Malayan enterprise indicates that although the dividends for last year totalled 20 per cent., tax free, as against 15 per cent. for the preceding period, the directors adopted a very conservative policy, the balance now carried forward being £36,200, against only £11,800 brought in. On the present occasion £20,000 is set aside to income-tax reserve, as compared with £4,900 for 1923-24. Last year's output totalled 1,355 tons of tin ore, against 951 tons, the average price secured being £143 13s in place of £132 2s. The expansion is due to the operation of the No. 4 dredge, which started up in October, 1924. Costs on the basis of the three original dredges show a slight reduction, but on the whole four the average is higher than last year—due largely to the expansion under the heading of labour. On the basis of 20 per cent. dividends, the shares at current price show a yield of no more than 6 $\frac{1}{2}$ per cent.; hence allowance is made for the increased distributions which may reasonably be expected in the future. A substantial addition has been made to the property with the result, the manager remarks, that "the acquisition of further areas is not now of vital importance."

Colombian Corporation.—This is an enterprise in which the Nechi Mines and the Oroville Dredging Company are largely interested through the provision of funds to bring the concern to the producing stage. An up-to-date statement shows a net indebtedness of £162,800. The mill started in April, and has been continuously operating

since; but no information has hitherto been published as to the nature of the results. The directors now state that to the end of August 26,240 tons yielded an average of 3.44 dollars per ton at an operating cost of 3.75 dollars. The latter may reasonably be expected to come down, and the former should go up, as the ore reserves are estimated to contain a considerably higher average value. A favourable point in the position is the encouraging character of the results that have been secured at depth by actual developments, while diamond drilling has indicated the persistence of the known ore bodies still deeper. In view, however, of the financial position, dividends even on the preference shares appear somewhat distant.

A COURSE of three lectures on "Social Problems created by the Industrial Revolution" will be given at the London School of Economics (Houghton street, Aldwych, W.C. 2) by Mr J. L. Hammond, at 5 p.m. on Tuesdays, November 10, 17, and 24, 1925. At the first lecture the chair will be taken by R. H. Tawney, Esq., B.A. (Reader in Economic History in the University). Admission free, without ticket.

Oversea Correspondence.

UNITED STATES.—THE STOCK MARKET BOOM—MONEY PROSPECTS—COMMODITY PRICES AND CREDIT.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 20.
SENSATIONAL activity on the Stock Exchange has been the centre of interest in the financial district. With total sales during full days reaching up past the 2,500,000 share mark, last Saturday's two-hour session furnished one of the wildest markets of recent years. Approximately 1,700,000 shares were turned over in the two hours, the first hour witnessing pronounced strength with continued sharp advances in motor shares, and the second hour a terrific shake-out, in which motors suffered heavily. After the market closed the tickers ran for an additional twenty-nine minutes before the reports of the day's transactions were finished. During the break some of the active motors dropped by as much as ten points; other speculative favourites sold off severely, and the whole market closed distinctly lower. The Stock Exchange facilities were strained to the limit, and the floor of the Exchange was the scene of most unusual excitement.

So sharp a break naturally set everyone discussing its significance. The conservative critics said that the collapse was the perfectly natural result of preceding extravagant speculation. Many heralded the end of the bull market. The bulls, on their part, could not but be taken aback. The following Monday's market was awaited with keenest interest. Actually the new week started with a show of strength. The leading motors opened a point or two higher; the bull party plainly was not willing to give up the struggle. The strength was soon followed, however, by a fresh wave of selling. A number of prominent shares sagged off to fresh low levels; the markets for two of the leading motors again became demoralised as the specialists were swamped. However, strong support was apparent in standard rails, and in such stocks as United States Steel common. Aided by a relaxation in the call money rate, the market steadied and closed firm. On Tuesday, when this letter is written, the market again closed strong. Equilibrium has apparently been recovered. As for the significance of these events, well-posted observers agree that something like a breakdown in the Stock Exchange machinery for handling trading in very active issues was largely responsible for the extreme weakness of Saturday. It should be added, however, that something like a bear panic in motor shares prepared the way for the events of Saturday. On the days immediately preceding, General Motors common swept up approximately fifteen points. This jump came on top of a less spectacular advance, which, spread over some six months, had carried the stock up from the 60's to 120. So rapid an advance was not desired even by the bulls, and inevitably had to be

followed by a readjustment of the speculative position. The readjustment was particularly violent because of the huge scale in which motors have come to be traded, and because of the strain on trading facilities.

After all, the body of the stock market was relatively little affected, and now acts much as it did before this spectacular episode. Perhaps this is a point in favour of those who claim that the American market is becoming more like that at London—that it is becoming departmentalised and no longer acts as a unit. On general principles many observers hold that the bull market has about reached its culmination. On the other hand, the bulls point out that the money situation is totally different from that which attends the close of the "typical" bull market. Call money on the exchange loaned as low as 4 per cent. to-day, and nobody contends that the general level of money rates is likely to advance sharply. Nor is there a growing congestion in industry that betokens inflation and a sudden expansion of the amount of credit required to finance a given volume of business. Both manufacturing and transportation retain their remarkable efficiency; short-term buying and rapid turnover still characterise business operations. Business, in short, does not seem to be about to draw large amounts of money away from the stock market. Meanwhile notice has to be taken of the substantial gold arrivals.

Some shrewd judges of the money market feel that money already is about as dear as it is likely to be this year. The National Bank of Commerce, for example, declares that "It is probable that the peak of money requirements has now nearly been reached. The prospect of continued active business in coming months should tend to sustain credit demands so that the outlook is for stability of money rates without much change for the present."

Further indication of the relative stability of commodity prices is furnished by the latest Bureau of Labour statistics figures. Average wholesale prices during September, as measured by this index, declined 0.4 of 1 per cent. This decline followed an advance of 0.3 per cent. shown by August as compared with July. Expressed in round numbers, the index stood, in each of the three months, at 60 per cent. above the average level during 1913. This is precisely the level of last January, and only 1 per cent. below the levels that prevailed during February and March. In the intervening period the wider fluctuations have been remarkably stable. Plainly the figures give little support for the claims of the inflationists. Nevertheless, the issue is still debated in certain circles, the inflationists contending that the present upswing in industry will continue into 1926 and furnish the basis for inflation next year. In discussing the question the National Bank of Commerce points out that "the aggregate volume of banking accommodation has now reached levels not heretofore approached." General recognition of the fact, the Bank adds, has been obscured by the very limited use of the Reserve banks and by the lack of strain on money rates. Nevertheless, the fact is that the aggregate loans and investments of the "reporting member banks" amount to 19½ billion dollars, which compares with about 17½ billions at the peak of the 1920 inflation, and with about 16½ billions in 1923, a year of active business. The loans and investments of these banks have increased approximately 2½ billions since late in the spring of 1924. Most of the expansion has taken place in the investments and in the loans on stocks and bonds; commercial loans have increased but little.

"It appears," continues the Bank, "that, excepting a renewed heavy inflow of gold, the expansion of banking accommodation based on the 1924 plethora of funds has run its course. In 1924 the margin between total loans and investments and total deposits was narrowing. At this time last year the spread between them was a half billion dollars. But during 1925 loans and investments and the spread between deposits and loans and investments has increased to a billion dollars. This does not indicate stringency in credit, but it does show that further substantial expansion could only be effected by recourse to the reserve banks or by new importations of gold, which have been resumed so far only to a moderate extent."

FRANCE.—M. CAILLAUX'S FALL—NEW FINANCIAL POLICY—CAPITAL TAX—INCIDENCE OF TAXATION.

(FROM OUR CORRESPONDENT.)

PARIS, October 28.

M. CAILLAUX has fallen, and in his fall he has brought down the whole of his ministerial colleagues with him. It may be taken as established that the Finance Minister, as the result of his strenuous fight for sane methods in national finance, has fallen a victim of doctrinaire Socialism, because of his unshakable refusal to consent to introduce a direct capital tax as a means of placing the finances of his country on a permanently stable basis. By refusing to include a tax of this kind either in his 1925 or his 1926 Budget, M. Caillaux incurred the bitter hostility of the Parliamentary Socialist Party, and he was undoubtedly largely the cause of the declaration of war which that party made against the Painlevé Government a few weeks ago. The Nice Congress of the Radical-Socialist Party, although at the end a more or less anodyne resolution was adopted, left no doubt in most people's minds that M. Caillaux's doom was certain. His flat refusal last week not to allow himself to be muzzled, and his fulfilment of his declared intention to denounce by bell, book and candle the application of all financial remedies except his own, in his speech in his own department of the Sarthe on Sunday, confirmed his fate. M. Caillaux, as was to be expected, has gone down fighting, and it is his firm intention to continue in the ring, whatever may result. That the Painlevé Ministry will return to office, at least for the time being, appears to-night to be practically certain. That it will not include M. Caillaux is even more assured.

Ostensibly, the whole political situation to-night turns on the question of the capital tax. As a matter of fact there are several much more serious factors in the general situation, of which the war against the Riffs and the very serious condition of things in Syria, to say nothing of the financial position, are the real outstanding factors. The present majority in the Chamber, however, has placed party political interests above all else, with the result that a very dangerous atmosphere is rapidly developing. The attitude assumed by the Radical Congress at Nice may be taken as the key to the whole situation. That Congress was composed principally of local political leaders from all parts of the provinces, who claim the right to dictate the line that shall be followed by their Parliamentary representatives. Although M. Caillaux addressed the gathering, and there was no open sign of an actual rupture, the crucial resolution passed by the Congress was eloquent, and throws much light on the attitude of the Party of which M. Caillaux was formerly the unquestioned dictator. This resolution, which was admittedly deliberately phrased in the mildest possible terms, in order to secure general acceptance, contained the following essential declaration:—

The fiscal doctrine of the Radical and Radical-Socialist Party is based on three essential principles:

1. The predominance of direct taxation over indirect taxation, which is a heavy burden on consumers.
2. Progressivity of taxation.
3. The necessity, for the purpose of bringing about the financial restoration of the country, for an extraordinary levy on all forms of fortune and of capital.

After being modified by the substitution of the word "special" for "extraordinary" in the last clause, this resolution was carried by a large majority.

Meanwhile, as the coming struggle will apparently turn on the question of direct versus indirect taxation, it may be useful to analyse, according to the dissected returns issued every month by the Treasury itself, the manner in which the revenue is at present made up. The return of the yield from "normal and permanent sources of revenue" during the first nine months of the present year sets forth the following items as representing revenue from "taxes on consumption, properly so-called":—

	Francs.
Tax on turnover (exclusive of 10% luxury tax)	2,842,022,500
Customs	1,069,646,000
"Contributions indirectes"	1,162,742,000
Colonial foodstuffs	160,483,000
Salt	27,200,000
Sugar	297,740,000
Motor spirit and petroleum	296,476,000
Benzol	12,645,000
Mechanical lighters and matches	97,389,000
	5,966,334,500

Taxes on "products not indispensable to existence" are returned as follows:—

	Francs.
Alcohols (exclusive of excise on wines and beers, which are not classed as alcohol, and the taxation on which is included above)	1,217,783,000
Tobacco, cigars, and cigarettes	1,639,355,000
Gunpowder	80,115,000
	2,937,253,000

"Direct taxes on the income," including income-tax and the various imposts on stocks, shares and bonds of all descriptions, amounted during the first nine months of 1925 to 4,636,618,400f. "Taxes on fortunes and stamp duties" (including registrations of all kinds, among which are successions, legacies, &c., and the tax on Stock Exchange transactions) totalled 4,512,156,000f. "Sumptuary taxes" (comprising the luxury tax, and the taxes on amusements and motor-cars) yielded 795,333,000f. To sum up, "taxes on consumption, properly so-called," amounted during the nine months to slightly over 5,966 million francs, out of a total revenue from normal and permanent taxation of rather over 18,994 million francs, or a trifle over 32 per cent.

French banking experts are apparently sharply divided on the capital tax question. M. Caillaux's most strenuous opponent on this point is stated by his friends to be M. Finaly, of the Banque de Paris et des Pays Bas, who is asserted to have been anxious to bring about the Finance Minister's fall. M. Caillaux, in his speech last Sunday, asserted that "some of the great dealers in money, powerful financiers, and large industrialists are partisans of this impost, because business specialists know that the disorders created by laws involving the transfer of individual riches to the State furnish a means to acquire great wealth." The creation of mortgage banks to deal with land on which the capital tax would be levied in the event of the proposal becoming operative, and banks to handle bonds which would have to be sold at bargain prices is stated to be already being planned in certain circles. It was to M. Finaly, in particular, that M. Caillaux alluded when he complained of the "passionate attacks" that are being made upon him, and when he appealed to his audience to "bar the route to the feudal lords who aspire to dominate democracy." The Finance Minister is stated to have made a more direct reference to the same banking expert at the remarkable private meeting between MM. Painlevé, Briand, Laval, and himself before the Cabinet sitting on Monday morning, when the question of his immediate resignation was considered. "If I have to resign," M. Caillaux is asserted to have retorted, "I will do my best, when you meet the Chamber, to overthrow you to the cry of 'Finaly! Finaly!'"

M. François Marsal, M. Caillaux's predecessor in the Milleran Cabinet, who is another of the leaders of the French banking world, is even more strongly opposed to all idea of a capital tax than M. Caillaux himself. "This measure," he stated in a speech a day or two ago, "has been attempted in several countries, and always by men of similar opinions, and it has in each case brought about the same three results—bankruptcy, dupe, and ruin. Who would benefit from such bankruptcy, dupe, and ruin? France? No! The Republic? Still less! The revolutionary party? Undoubtedly!" M. François Marsal, in the same speech, by the way, insisted that, as the result of legislation passed during his tenure of the Ministry of Finance, a bachelor in France, with an income of 20,000f a year, paid 24.92 per cent. of his annual revenue in income-tax, while his English protagonist paid only 3.25 per cent. He also stated that great fortunes in this country paid 51.69 per cent. in income-tax, and in England only 47.20 per cent.

Nothing is more difficult perhaps, than to make exact comparisons between the incidence of taxation in the various countries. Here is an actual instance, however, which should make clear to all, except, possibly, to the American Senator, Borah, that taxation in France is even now not so negligible as has been stated. The following figures reveal how incomes derived from investments in purely French concerns are taxed at the source :—

One half-yearly interest coupon in Compagnie Electrique du Nord, 100 frs. bond.....	Frs.	3.00
Less Government taxes.....		1.90
Actually received by investor		1.10
Two half-yearly interest coupons in Campagnie Française Continentale d'Eclairage, 6 per cent. 500 frs. bonds		30.00
Less Government taxes.....		14.98
Actually received by investor		15.02
Half-yearly interest coupons in Omnium Algerie-Tunisien		125.00
Less Government taxes.....		72.84
Actually received by investor		52.16

**GERMANY. — POLITICS — FINANCES — CREDIT AND
CURRENCY — INDUSTRY — FOREIGN TRADE —
BOURSE.**

(FROM OUR CORRESPONDENT.)

BERLIN, October 28.

BERLIN, October 28.

THE Pact ratification question has produced a domestic political situation, which recalls the crisis of August, 1924, when the sanction of the Dawes Reparations scheme by the Reichstag was in doubt. To-day, as then, the German-Nationals, having committed themselves to opposition in advance, condemn the agreements come to and they have compelled the retirement from the Cabinet of their three representatives, the Finance Minister, Dr von Schlieben, the Minister for the Interior, Dr Thiele, and the Minister for Industry, Dr Neuhaus. Dr Luther has decided, nevertheless, not to resign, but to persist in putting the ratification through. He lacks henceforth a Reichstag majority, and has been compelled to negotiate with the outside parties, the German-Democrats and the Social Democrats, who could put him out of office on the first vote after the Reichstag reassembles on November 20th. These parties, of course, stand for ratification, but they are not inclined to support the Government except on conditions. They believe that the German-Nationals do not really desire the Pact to be rejected; that would bring upon them the odium of placing the Republic in a difficult situation internationally. But the Nationals will not weaken their patriotic prestige by openly accepting the Pact. They believe that the Pact will go through without them, so that they will escape both evils, the odium of being responsible for its rejection and the loss of prestige. When they were in the same situation in August, 1924, they solved the dilemma by giving individual members liberty to vote on the Dawes scheme, in the knowledge that enough members would vote to ensure acceptance; and a similar solution has this time been discussed. The Democrats and Socialists, however, declare that they are not willing again to draw Nationalist chestnuts out of the fire, and they want a guarantee that the Nationals will not return to office, practically as masters of the Cabinet, when the Pact is safely through.

The returns for the finances of the first half, April-September, of the current financial year are on the whole satisfactory. Most of the chief taxes, as in 1924-25, yielded much more than was estimated. The Treasury return for the six months shows:—

Receipts—		
From taxation		Reichsmarks.
Other sources.....		3,548,553,803
		86,013,428
Total.....		3,634,567,231
Payments Out—		
General administration		2,361,166,075
Subventions to States and Municipalities ..		1,330,614,461
Reparations		57,814,680
Total.....		3,749,595,216

The revenue from taxes is net, after deduction of certain expenditure made locally by the Finance Bureaux; and it includes the March, 1925, receipts from pledged revenues (which belong to the preceding financial year), but not the September receipts, which will appear in the October return. The gross receipts from taxation in the financial half-year, as compared with the estimated receipts for the whole financial year, are:—

	April- September.	Estimated 12 Months.
Reichsmarks	3,584,086,648	6,343,750,000

Receipts in the six months were 56.5 per cent. of the expected year's receipts. This is satisfactory if certain facts are taken into account; no collection of property tax, the third biggest yielder among direct taxes, took place (and none will take place in the third quarter). The reason is that the debts valorisation has completely upset the assessments of December 31, 1923. The conversion of certain income-tax monthly prepayments into quarterly prepayments caused a temporary loss, which will be made good in the new quarter. As a result of these and of certain other changes, the tax receipts in the third quarter of the calendar year were 66 millions less than in the second quarter, and 234 millions less than in the first. Owing to the above-mentioned changes in direct taxation, direct taxes as a whole developed less satisfactorily than indirect. Whereas direct taxes (including taxes on business transactions) yielded 2,597 millions in the financial half-year out of 4,729 millions estimated for the whole year, indirect taxes yielded 986½ millions out of 1,514½ millions expected; and of these the five most important, all of which are pledged for Reparations, yielded 932½ millions out of 1,425½ millions. The yields of the chief taxes, and the estimated yields for the whole year are:—

	Reichsmarks (000's omitted).	
	April-September.	Estimated 12 Months.
Income tax	1,185,629	1,700,000
Corporation tax	93,769	300,000
Property tax	83,724	500,000
Sales	749,531	1,380,000
Luxury sales	49,767	120,000
Capital transactions	64,267	130,000
Traffic	174,106	282,000
Customs	259,632	356,050
Tobacco	324,478	560,200
Sugar	145,022	185,000
Beer	144,078	174,000
Spirits monopoly	59,172	150,000

The latest reductions in income-tax rates and the reduction in the Sales Tax rate from $\frac{1}{2}$ to 1 per cent, came into force only on October 1st. The unsatisfactory Corporation Tax return reflects the small profits reported by the industry for the last business year.

The money market has of late been very easy. Day money was last week offered in abundance, and the rate fell to 7 per cent., the lowest point so far reached, and though there has been a slight stiffening in view of the approaching month-end settlement, the position is much easier than at the end of September. One reason for the abundance of money is the large cash balances available for lending from tax receipts in the third quarter. In connection with the successful negotiations at Locarno, foreign purchases of marks and mark fixed-interest securities took place, so that dollars were temporarily offered at below parity. The Gold Discount Bank has reduced its rate from 7 to 6 per cent. The rate was 10 per cent. between April, 1924, when the bank was founded, and September, 1924, when it was reduced to 8 per cent., and on May 20th last further to 7 per cent. The Reichsbank's last return for October 15th shows a new increase in the gold reserve by 29,853,000 marks to change fell by 14,972,000 marks to 306,414,000 marks. Discounts fell by 153 million marks to 1,483 million marks; advances increased by 15 million marks to 29 million marks; and circulation fell by 114 million marks to 2,494 million marks. Total circulation of all currencies on October 15th was 4,716 million marks, against 4,671 million marks one month earlier. Negotiations are under way for many more foreign loans, mostly municipal.

pal. The new Advisory Board for Foreign Credits, which is attached to the Finance Ministry, comments unfavourably upon this municipal borrowing.

The industrial situation has not materially changed. The wholesale price index number for October 21st was 123.3, against 125.1 on the 14th, and an average of 125.9 for all September. The Western Steel Trust has not yet been negotiated, but provisionally there has been founded a "study company," which is to do the preparatory work. The foundation has proved more difficult than was expected. The quotas of the participating concerns seem to have been agreed upon, it being stated that Thyssen and Phoenix will each get 27 per cent., Deutsch-Luxemburg and Gelsenkirchen together 36 per cent., and Rhenish Steel 10 per cent. Nothing more is heard of participation by Krupps. Difficulties are caused by the fact that some of the companies have associations outside of the steel industry, e.g., Rhenish Steel is associated with the Aniline Concern, and Deutsch-Luxemburg and Gelsenkirchen with the Siemens electrical interests, to which they were tied when under control of the late Herr Stinnes. The coal and iron foreign trade balance remains active. Coal imports in the first eight months of the year were 5,361,375 metric tons, exports, 9,194,364 tons. Exports of iron and steel and all wares thereout, except machinery, were 2,194,502 tons, against 1,065,786 tons imports, this although imports exceeded exports in pig-iron, scrap, steel ingots, and bars. Exports of machinery were 232,551 tons, against 24,948 tons imports. At this rate, machinery exports for the whole year would be nearly 350,000 tons, against 271,500 tons in 1924. Iron and steel prices are unchanged. The scrap market is very weak. Solingen reports an increase in exports of its higher-quality and high-priced products, especially to the United States. Money is so short in this branch that prices are reduced 30 per cent. and more for cash.

The foreign trade balance in September shows a very distinct improvement. The import surplus, as compared with August, fell (precious metals excluded) from 454 to 292 million marks, and, with exception of May, is the smallest of the year :—

	August.	September.	Jan.-Sept.
Imports—	Marks.	Marks.	Marks.
Livestock	12,891	12,181	99,436
Food and drinks			
Raw and half-manufactured	453,570	413,330	3,205,255
materials	552,372	458,090	4,913,516
Manufactured wares	159,678	185,486	1,567,462

The Bourse, after a considerable recovery during and at the close of the Locarno negotiations had a setback, owing mainly to the Cabinet crisis, but yesterday stocks somewhat recovered. The *Frankfurter Zeitung's* index (100 on January 2nd) shows for home stocks a rise from 67.45 on October 3rd to 72.17 on the 19th, and a reaction to 68.61 on the 24th. Individual groups of stocks, in particular those of the "heavy industry," moved within much bigger limits. From November 1st the list of stocks which may be dealt in for future settlement will be increased by 22. The number of firms belonging to the Liquidation Association, with its Guarantee Fund, is increasing, and as the free monies of the fund are lent to members, the new institution has begun to play a certain rôle in the money market. Stock quotations at the end of last week averaged about 61.6 per cent. of those of the end of January, when about the highest level was reached.

National Bank of Commerce
in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up	\$25,000,000
Surplus	\$25,000,000
Undivided Profits	\$15,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE

**2 and 3, Crosby Square
Bishopsgate, E. C. 3**

**CANADA.—THE ELECTION AND BUSINESS—THE
CROP MOVEMENT — NEW CHAIRMAN FOR
ONTARIO HYDRO-ELECTRIC COMMISSION —
RAILWAY RATES ISSUE—FOREIGN TRADE.**

(FROM OUR CORRESPONDENT.)

OTTAWA, October 17.

THE general election campaign has reached its penultimate stage. Public enthusiasm has not been greatly stirred by the election, and the mass of the voters are quietly going about their everyday work, and hoping that from the contest there will emerge a Government whose policies will be able to maintain the moderate but quite definite improvement visible this autumn in the business situation. The good buying power available to communities engaged in farming, mining, and forestry operations is making itself felt in a freer movement of commodities, and as stocks in the hands of retailers and wholesalers are being rapidly reduced, the manufacturers should soon experience a good revival of demand. There is, however, room for great improvement in many branches of trade and industry, for the latest Government return on the banking situation indicates that commercial loans made by the chartered banks are about \$75 millions less than at the corresponding date in 1924. It also shows that at present commercial credits are smaller by about \$375 millions than the total bank deposits, and it is claimed that at no time in the history of Canada has such a wide margin on this particular side existed; in the boom days before the war the commercial credits of the banks were at one time about \$280 millions greater than the total deposits. A partial explanation of the change may be found in the huge increase of deposits and in the general process of business consolidation which has been going on steadily, and makes capital go further; but it must also be admitted that the prosperity of the great basic natural industries has not so far been extended to cover the secondary industries. Apart from the railway imbroglio, there is no fundamental difficulty facing the Dominion, but there will not be contented satisfaction

until the passion for expansion and development which is latent in every North American bosom is gratified.

The prairie provinces have already been visited by inclement weather, which has hindered threshing operations; but practically all the crop is now safe beyond any risk of serious damage, and a substantial proportion of it has already passed out of the farmers' hands. The volume of wheat already moved to the seaboard is far ahead of the figure on the parallel date of 1924, the respective total of grain receipts at Winnipeg on September 18, 1924, and 1925, being 6,107,181 and 23,138,811 bushels respectively. On the whole, the wheat crop is grading very well, and the percentage appraised at No. 2 Northern and better will be heavier than last year. The Canadian stock markets have been experiencing ups and downs in sympathy with New York, but the traction issues are still very popular, and Consolidated Smelters, which is largely owned by the C.P.R., has had a spectacular rise.

Last month Canada sustained a great loss in the death of Sir Adam Beck, of London, Ontario, a strange sort of Conservative, who was the father of the great Socialist experiment involved in the huge enterprises of the Ontario Hydro-Electric Commission. A man of wealth, Beck had for years devoted all his great energy and organising talents to the work of the Commission of which he was the chairman, and had waged relentless and unceasing warfare against powerful corporation interests until he had won a complete victory for his cause and established under public ownership a system of hydro-electric development and distribution which reached every corner of the province. His methods were dictatorial and provoked a great deal of enmity, but his monument stands in a remarkably cheap and efficient service of electric power. His demise was greeted with a sigh of relief by the private power interests all over North America, and the fear was expressed that his work might collapse; but the Government of Ontario have insured against this by selecting as his successor Mr C. A. Magrath, the present chairman of the International Joint Commission. There could be no happier choice, for Mr Magrath, who has long been one of the leading champions of the St Lawrence deep waterway scheme; and as the Hydro-Electric Commission urgently need the use of the water powers which it would make available, he can be relied upon to push the project to the limit.

Before the Railway Commission, the Canadian Pacific Railway, backed up by the Governments of Nova Scotia and New Brunswick and the Boards of Trade of Montreal, Winnipeg and Regina, have launched an attack upon the order abolishing the special mountain rate through the Rockies; but it is being defended by the Governments of Saskatchewan, Alberta, and British Columbia. The assailants demand that the obnoxious order be suspended until the problem of the whole rate structure of the Dominion can be exhaustively examined in accordance with the instructions of Parliament.

Foreign trade returns continue to be very satisfactory, and below are given the figures for September, and for the fiscal half-year ending September 30th, with the comparative data for the parallel periods of the previous year:—

	September.	1924.	1925.	Increase.
Exports.....	80,960,729	108,497,911	27,537,182	
Imports.....	63,901,289	78,662,591	14,761,302	
Favourable balance ..	17,059,440	29,835,320	12,775,880	
Total trade	146,356,916	188,236,176	41,879,260	
Six months:				
Exports.....	482,091,954	571,315,340	89,223,386	
Imports.....	397,129,452	452,820,166	55,690,704	
Favourable balance ..	84,962,502	118,495,184	33,532,682	
Total trade	885,784,833	1,030,589,762	144,804,929	

These tables show that there was a total trade gain of 42 million dollars in September, and that the favourable balance of 17 million dollars in September, 1924, had risen to 30 million dollars. Data recently published by the Dominion Bureau of Statistics show that during the 12-month period ending July 31st last British countries took 44 per cent. of Canada's exports and furnished 24 per cent. of her imports. In the same period, 64 per cent. of the imports came from the U.S., but their aggregate value was 40 million dollars more than in the previous 12-month period. Exports to the United States, which were 40

per cent. of the total, were 8 million dollars greater in value. The Department of Trade and Commerce reports that practical success attended Canada's participation in the Wembley Exhibition, and that large orders as a result were placed for Canadian furniture, rubber boots, manufactured furs, farm implements, and canned salmon. A few years ago no furniture was exported from Canada, and the Dominion was an importer of rubber goods.

There is clear evidence that Canada is gradually broadening the basis of her export trade. Her exports to countries like the British East Indies, New Zealand, Belgium, Argentina, and Brazil all show moderate gains, and there have been remarkable rises in the exports to Russia and the Netherlands. There has, however, been a steep fall in the exports to Italy. Prices tend to be stationary. The monthly index number of the Canadian Bank of Commerce between mid-August and mid-September, the combined figure for exports and imports rose by a fraction from 157.88 to 157.90; the export figure fell from 156.10 to 155.52, and the import figure rose from 159.69 to 160.25.

INDIA.—COTTON MILL SITUATION—COAL GRADING—IRON AND STEEL—EXTERNAL CAPITAL.

(FROM OUR CORRESPONDENT.)

CALCUTTA, October 8.

As the millowners desired and intended, the employees in the Bombay cotton mills have dispersed to their villages, whence it is hoped to collect them three months hence at their former rate of wages, mill stocks valued at 10 to 12 crores being meanwhile disposed of at firm prices, while concurrently a monthly wage-bill approximating to 50 lakhs is entirely suspended. An inquiry into methods of mill management, offered by Lord Reading and strongly pressed for by the workers' representatives, has been curtly refused on the specious plea that, as recommended by the Fiscal Commission, an essential preliminary is abolition of the excise duty, a measure of financial relief that may now be regarded as indefinitely postponed. Indeed, an industry seeking State aid, which refuses expert scrutiny of its plea, quite clearly stands self-condemned. Half the mills were working at a profit when the concealed lock-out was engineered; the remainder at a loss calculated at 24 lakhs a month. Japanese competition, though deriving adventitious advantages from sweated labour and depreciated exchanges, obtains its real potency from a higher standard of efficiency alike among the employees and their masters. The consequence has been that the Japanese mills, relying upon imported raw material, and dependent largely upon foreign markets for absorption of their manufactured product, have driven the less enterprising, hard-working, or efficient Indian producers entirely out of Far Eastern markets, and are now attacking them in their own stronghold. Quantitatively, Japanese imports are small, but their low value has scared Indian producers without as yet having forced the only reforms that will really save the industry from gradual destruction. We have the authority of a director of the Tata cotton mills for the assertion that "there is no trade in the world so overpaid, or with so little to do as managing agencies in India." While the British managing agencies make some effort to justify their remuneration by conforming to reasonable standards of commercial and technical efficiency, the corresponding Indian agencies, in too many instances, have subordinated technical considerations to the exigencies of a too rapid process of Indianisation, whereof the present parlous condition of the Bombay cotton mills affords the most conspicuous and poignant example.

As judged by the present tone of official as well as public opinion, the original enthusiasm for extending almost unlimited support to the Tata steel enterprise is beginning to wear rather thin, in explanation whereof it may be noted that, despite repeated appeals, the shareholders have hitherto declined to sanction the capital reconstruction which the directorate admit to be necessary, but have not yet been able to force through. The companies relying on pig-iron production have been hard hit, and a prolonged suspension of production at Kulti seems unavoidable. A steep rise in the internal market price of

Indian pig-iron is foreshadowed within the next six months.

Legislation adopted with the cordial assent of Indian coal producers provides, as from early in the new year, for the setting up of a Coal Grading Board equipped to standardise the quality of coal reserved for export. Over 200 second-class mines have been closed within the last six months, and this drastic step, while diminishing the previous excess of production, will also assist in raising the average standard of value. Improvements in commercial and technical methods are simultaneous. It is argued, with solid justification, that the salvation of the coal industry lies in eliminating the miner as a coal cutter and applying machines to do his work. "The Indian miner," asserts a competent authority, "is both mentally and physically unable to meet the competition of his brother workers in other countries. He is not cheap, because of his great inefficiency, and when foreign markets are to be considered this is the governing factor. His incompetence is only surpassed by his indifference to work. Attention should now be directed to instructing a better type of labour to operate machines. A more intelligent and a higher physical type should be engaged, and they can be better remunerated." Abolition of female labour in coal mines is recognised to be inevitable sooner or later, and the disposition to resort to the maximum extent to mechanical appliances is thereby greatly encouraged.

Concerning the exact amount of good quality coal in the Indian coalfields, the latest estimate of the official Geological Survey is 2,000 million tons as the total quantity of coking coal of all grades; 2,000 million tons of good quality coking coal; and, roughly, 54,000 million tons of all kinds of coal in the Indian coalfields. The available quantities, if the mode of extraction involves a loss of 30 per cent., are approximately, two-thirds of these figures. It is, therefore, calculated that there will be sufficient coking coal for a very considerable expansion of the Indian steel industry for a period probably equal to that for which the iron ore leases have been computed—approximately 100 years. In these circumstances, the Geological Survey considers, there appears to be no immediate cause for a coking-coal alarm unless the export trade assumes serious proportions, and then it would seem that industrial development in India must, so far as the iron and steel industry is concerned, expand greatly. Concerning low-temperature carbonisation, it is pointed out that the Indian lignites certainly offer an attractive field for experiment, the report remarking: "Perhaps investigation by far-seeing capitalists may be undertaken at no distant date, and any such individuals or companies need the greatest encouragement."

The External Capital Committee, while deprecating restrictions on external capital as undesirable and impracticable, urges various positive measures for encouraging the wider investment of Indian capital which should go far to attain the real aim in view. In many enterprises under British management, such as jute manufacture, Indian shareholders are in a majority, and this process of silent penetration may, for various reasons, be expected to continue. New industrial enterprises relying exclusively upon external capital and/or management are now the exception, a modification of previous practice traceable, *inter alia*, to the increased availability of indigenous capital, the lower rate of taxation operative in India, the reactions of the Protectionist movement, &c. According to the Blackett Committee: "That internal capital is available is shown by the increase in Government rupee loans from 145 to 358 crores, and in the paid-up capital of joint-stock companies from 80 to 254 crores, between 1913-14 and 1923-24, an increase of 387 crores. The fact, however, that the net imports of gold and silver since 1913 amount to 482 crores is evidence that large resources are still being hoarded which might be invested." It would be interesting to know the exact significance of the word "hoarding" in this quotation. Of capital for industrial development there has been no lack; indeed, the trouble with many urban industries is large surpluses of output. Banking deposits are adequate for commercial finance; whereas, for financing agriculture, the resources of the co-operative banks, aggregating about 30 crores, are patently inadequate, and though the Blackett Com-

mittee lays no special stress upon this point, it is really in the direction of strengthening agricultural banks that development is most urgent and important. The figure of 482 crores of bullion mentioned above may be compared with the 800 crores roughly estimated as representing the aggregate rural indebtedness in India. Until this load is lightened, the prospects of agricultural improvement are not bright; the moneylending incubus taking away both the material resources and the moral incentive essential to any advance whatsoever. In that connection, I place on record Lord Reading's remarkable confession, recalling a not dissimilar declaration by Lord Curzon: "But I will say a word about agriculture; for as I grow older in my service to India, as I learn to understand her problems, as I perceive more keenly the anxieties of India, I come more and more to the conclusion, aided and assisted by those who have the knowledge and experience, that the great industry to which India must look for her regeneration and her prosperity is her agriculture; and we must do all we can to further it." It is a belated discovery, and it may be permissible to express the hope that in this direction the new Viceroy will recognise the importance of agricultural development in his first declarations of policy, rather than in his final catalogue of "might have beens."

ARGENTINA.—CURRENCY PROBLEMS—NEW LOANS—CROP PROSPECTS—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, October 4.

No constructive legislation whatsoever has been passed during the session of Congress that closed on September 30th, and although extraordinary sessions will be held during November, there is little hope of any measures of practical utility being fully sanctioned, though efforts will be made to vote the annual Budget. Thanks to the generally flourishing state of the country, and to the favourable revenue returns, Congressional inertia in legislative affairs affecting the financial organisation of the Republic is not immediately harmful. It is, however, undeniable that opportunities for dealing with the floating liabilities of the nation, for reforming or restoring the currency system, and for a detailed and dispassionate examination of the fiscal returns in their relation to the production of a balanced Budget, have been missed times without number: opportunities that might never recur if the actual long spell of favourable circumstances were broken.

Once more the question of reopening the Conversion Office has been raised, this time in the Senate, where the proposal was vetoed by 16 votes to 4. The debate raised several interesting points: Dr Molina, Minister of Finance, hoped to see the Conversion Office reopened in his lifetime, always provided that the country had first arranged for balanced Budgets, had consolidated its floating debt, and put its financial matters generally in good order. Another speaker in support of the veto even went so far as to say that it would be inadvisable to reopen until such time as the country had a new system of emission designed to regulate the currency in accord with the necessities of trade. All of which leaves the impression that not only is there no early likelihood of the Conversion Office being restored to its full functions, but that there is a strong probability of its never being opened again under the terms of the Law No. 3,871, which established it. The real significance of that law is probably better grasped outside Argentina than it is by the general public here. Not the slightest objection would be raised locally to any currency changes that apparently left the purchasing power of the present paper dollar unaltered, even were such changes to involve direct withdrawal of part of the gold now held against the notes in circulation. Few save those whose business it is to follow the subject realise that under Argentina's monetary system the gold in the Conversion Office is not an affair of percentages. Apart from the old fiduciary issue, some 293 million paper, every paper dollar was to be but the representative token of 44 cents gold, these 44 cents gold being the property of the note-holder, not of the State, the Conversion Office being created to act as bailee on behalf of the former. And while there is

deep conviction that transportation, from the canal through the steam locomotive down to the electric train, was developed by a capitalistic urge towards the control of circulation, that at an early stage in the development clear traces are to be found of the power wielded by banking and industrial groups, and that this influence has ever more and more been extended and consolidated until the real control of railways rests to-day in the hands of great financial combines.

The book is in the main historical, and as a documented study of financial history forms a record by which Mr Walton Newbold seeks to illuminate some of the political phases of Western Europe, particularly from 1833 to 1873. In his own words, it is "history harnessed to, but not dominated by, politics," and he is concerned in the earlier chapters more to marshal facts and to warn his readers of the dangers which, in his view, are implicit in them, than to suggest what ought to have been done years ago or what remedies are now available. This part of the book, however, is essentially a preparation for the last chapter, where he gives a looser rein to theory. He propounds an International Railway Power, a world-monopoly which, originating in the United States, spread over Canada and Germany, and will presently engulf France and Great Britain. The idea is elaborated ingeniously, but the author wastes some of its potential force by stating as authoritative things which will appear to many controversial in a high degree, and by drawing conclusions which do not derive inevitably from the premises. Granted that banks, insurance companies, and investment trusts have large holdings in the stocks of British railways, it is a long step to say that they are their controlling owners. Let it be assumed that a capitalistic world-monopoly of railways is achieved; it is yet not certain that it would throttle capitalistic production. If it be conceded that what took place in Germany was done with a view to economic sabotage, it remains not proven that it will be repeated in France and in Great Britain. And the estimate which is offered of the causes and effects of the Railways Act of 1921 is hotly debatable both in principle and in detail.

The book is original in conception, and should prove interesting to readers of all schools, but there are many who will hardly share Mr Walton Newbold's convictions, or think that he has proved his thesis. Beyond a certain point, indeed, it is probably not demonstrable at present, and individual verdicts will be based largely on a personal bias towards this political theory or that. The author himself recognises and confesses the presence of much that is controversial, and will not look for any universal acceptance. The reader, on his side, be he for Mr Walton Newbold or against him, cannot fail to see and to appreciate a real gift of terse expression and suggestive interpretation.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET,
November 4.

ACCOUNT,
November 5.

The main factor affecting Stock Exchange markets during the week just ended has been the fall in the value of the franc. As happened when the German mark first began to drop heavily, the Stock Exchange became greatly upset by the descent of the franc to 120, and the resignation of the Ministry added one more element to the causes which contributed to be a somewhat feeble affair, and the bull account in several directions—e.g., Courtaulds, Dunlops, rubber shares—has been brought up with something of a round turn.

The War Loan has been keeping steadily in the neighbourhood of 100 since the price was quoted ex dividend last Tuesday. Dealings started in the new Victoria and South Australia conversion loans, the prices of both advancing to a very fair premium. British Government stocks as a whole are steady, without there being much interest taken in them.

In the Foreign Government market French bonds, Government and railway, gave way sharply as the franc descended below 120, to harden up again with the recovery which ensued in the exchange. Brazilians are dullish, the tendency through the foreign market has been overcast by the gyrations of the franc. Chinese bonds have gone back.

Home Railway stocks continue to be somewhat neglected, there being little business doing in them, and prices reflect the absence of public interest. Argentines have tended to droop, more from want of trade than from any other reason. Cordoba Centrals and Entre Rios remain in speculative favour. Nitrate Rails keep good, on the recent report, and Brazilians have followed the course set by the prices of the country's bonds. Brazilian Tractions lost part of an earlier rally.

The rubber market maintained its prices with a tolerable show of strength. A feature of the week was the remarkably prompt way in which subscription lists for the big issue of Allied Sumatra Plantations were closed, very shortly after they opened, on Thursday morning. Other new issues achieved success. Prices, however, are inclined to be a little heavy, business having fallen away to a great extent. The tea share market is idle. Oil shares are a little better, in spite of Paris selling of Shells. British Controlled have started to rally.

Shipping stocks were upset by a not altogether unexpected reduction in the P. and O. deferred dividend, though the price shed thirty points when the announcement was made. This caused weakness amongst most of the other shipping issues. Dunlops went back with a run, on talk of a strike at the company's works, but motor shares retain a good deal of firmness. Tobacco shares have moved within narrow limits; British-Americans enjoyed a brisk spurt. Brewery stocks are irregular, Benskins being noticeable for a sharp rise. Sudan Plantations have been marked ex rights. The banking market is steady, and insurances have changed comparatively little. The iron and steel market went back after its recent recovery, the passing of the Pease and Partners' dividend being followed by a cautious speech from the chairman of the United Steel Company. In the wireless group, Burndept have been a good spot, and amongst other industrials, the shares of the cable manufacturing and electrical equipment companies stand out with material improvements, though the best prices were barely maintained. Courtaulds have been subject to cross-currents of American support, against profit-taking by bulls on this side. Joshua Hoyle shares improved, thanks to a good dividend. Gas stocks are rather better.

The Kaffir Circus witnessed a drop and subsequent rally in platinum shares. Cape orders inspired both these movements. Chartered are dullish, and the Tanganyika division drooped on Brussels and Paris sales. De Beers fell back a trifle. Malayan tin shares have been very active, and, on the whole, prices moved in favour of shareholders. Cornish and West African tin shares went slightly better, but the public have displayed no great interest in them. The Mexican mining group is noticeably stronger; Canadians stagnated; Russians attracted a certain amount of professional support.

As November 1st falls on a Sunday this year, the usual Stock Exchange holiday will be on Monday. This necessitated the mining markets doing their preliminary contangoes on Thursday, while those in the general markets were arranged, in advance, yesterday, Friday.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further bill.
Amount previously recorded ..	£ ..	£179,469,718 ..	£ ..	£ ..
£850,000 Treasury Bonds sold, Oct. 23, at £94 8s per cent.	£ ..	£802,400 ..	£ ..	£ ..

ISSUES OF THE WEEK—

Holborough Cement Company, Limited.—Share capital, £500,000, divided into shares of £1 each. This is an issue of 400,250 shares at par. It is stated that 100,000 shares have been applied for by the directors and friends. The company has been formed to acquire, "as a going concern," a cement works in Kent. Contracts have already been accepted to supply many tons of the product "at satisfactory prices," of which "over 15,000 tons have been delivered." The purchase consideration is fixed at £281,250, payable as to £156,250 in shares. We take the following from the consulting engineers' report which appears in the prospectus:—"We are of opinion that the present value of the above property, freehold and leasehold, as outlined, with the works complete..... is the sum of three hundred and seventy-three thousand six hundred pounds (£373,600), and that figure would be a proper figure to insert in your balance-sheet as representing the value of these assets." The italics are ours. This appears to be something more than the usual valuer's certificate. The undertaking has been acquired as a going concern, but the prospectus is not very informative as to past financial and industrial history. The board of directors obviously consists of men who understand the business, and Sir Percy Girouard's reputation as an organiser is well known.

Grays and Tilbury Gas Company.—Tenders are invited for 2,000 of £10 6 per cent. preference shares (irredeemable), the minimum price of issue being par. The authorised share capital is £270,000, of which £162,576 has been issued, including £3,596 in respect of premiums. The authorised loan capital is £135,000, of which £78,105 has been borrowed. The company was established in 1856, and supplies gas over a district of 160 square miles, including Grays and Tilbury, Purfleet, Pitsea, Billericay, &c. The sales of gas last year were 1,006,102 therms and the output for the first half of the current year was 545,766 therms. The net revenue for 1924 was £17,144, and after deduction of £3,931 for debenture interest, there remained £13,213. The interest on the present issue requires £1,200. The reserve fund totals £6,336. The new capital is required to repay part of a banker's overdraft, and for extensions.

United Dairies, Limited.—Capital £5,000,000, of which £4,464,739 has been issued. This is an issue of 500,000 6 per cent. non-cumulative preference shares of £1 each at par. The company was registered in 1915 with a capital of £1,000,000, and now controls a large number of retail dairy companies, wholesale butter and cream merchants, &c. Net profits are given in the prospectus since the year to June 30, 1919. Then they were £233,444, since when there has been a continuous advance, until for the 12 months to June 30th last the figure was £509,145. The reserve totals £500,000. The new capital is stated to be required for the erection and equipment of milk bottling depôts, and for the redemption of £70,000 of the maturing debentures of a subsidiary. The issue has been underwritten for 2 per cent., with an over-riding commission of 1 per cent.

Santa Cruz Coffee Company, Limited.—Authorised capital £300,000, in £1 shares, of which 123,000 have already been issued. Subscriptions are invited for 177,000 shares at par. The company was incorporated in July, 1911, and owns a freehold estate in Sao Paulo, Brazil. The present issue is stated to be to provide funds for the acquisition of an additional estate, full particulars of which are given in the prospectus. When acquired the total acreage will be 1,332,446, practically all of which is producing. The properties are valued at £267,928, the new estate being put at £139,950. It is being acquired for £130,000, plus the cost of transferring the property. Shrewd investors should note that although the company has been in existence since 1911, no particulars are given as to past financial results.

Usumbura Rubber Estates, Limited.—Share capital £120,000, divided into shares of 2s each. This is an issue at par of 600,000 shares. The company has been formed to acquire certain rubber estates in Tanganyika territory, comprising 13,293 acres, of which 5,617 acres are planted with mature rubber. It is stated that in the period 1910-13 a total of 769,835 lbs of rubber was harvested, but later results are not given, nor can we find mention of past costs of production or of financial results. The purchase price of £50,000 is payable in cash, and the underwriting commission is 5 per cent. The prospects of the company could have been more accurately

Johore River Rubber Plantations, Limited.—Capital £200,000 in 2s shares, of which £175,000 has been issued. The company, particulars of which are advertised in accordance with Stock Exchange regulations, has acquired a rubber estate of 2,473 acres in Johore, of which 2,149 acres are stated to be planted with mature rubber. The crop in 1923 and 1924 was 597,310 lbs. and that for the first eight months of the current year 199,105 lbs. These crops were produced under restriction. The purchase price is about £163,333, payable, presumably, in cash.

October 17, 1925, 6,005 tons of ore (including 2,992 tons of Central Mine ore), together with 3,617 tons of slimes, were milled at the Central Mine, producing 2,017 tons of lead concentrates (including 154 tons from the deleading plant), 130 tons of zinc concentrates, assaying 8 oz silver, 55 per cent. lead, together with 2,378 tons of zinc concentrates, assaying 9 oz silver, 7 per cent. lead, 49 per cent. zinc per ton, and 421 tons of special slimes, assaying 13 oz silver, 17 per cent. lead, and 9 per cent. zinc per ton.

October 21, 1925:—Production, 49,116 barrels; shipments, 6,650 tons.

LAGO PETROLEUM CORPORATION.—Production for week ended September 26, 1925, 82,216 barrels; oil shipments, 76,487 barrels; storage on hand, 55,990 barrels.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

The ordinary general meeting of the Entre Rios Railways Company, Limited, was held, on the 29th instant, at River Plate House, Finsbury circus, London, Mr Follett Holt, M.Inst.C.E. (the chairman of the company), presiding.

The secretary (Mr W. J. George) read the notice convening the meeting and the auditors' report.

The Chairman, having first referred to the visit of the Prince of Wales, in moving the adoption of the report and accounts, said: The result for the past year has been a record, and is, in its way, quite remarkable. Favoured by good wheat and linseed crops, the business of the railway showed further very satisfactory expansion, which had such an effect upon our finances that, without straining our resources, it has been possible to pay off the last £120,000 of the arrears due on the first preference stock, to provide full dividends on the first and second preference stocks, to replace to reserve the £40,000 withdrawn last year, and to carry forward a surplus of £24,590.

We cannot always expect to have good crops, but year by year a larger area of land is placed under cultivation; agricultural knowledge is growing with experience, and crops, with better ploughing and better seed, tend to improve in weight and security. Moreover, we consider that there is great room for further expansion in agriculture not only in Entre Rios, but in Corrientes, Misiones, and Paraguay, with which we are linked up. An observant friend, Mr P. A. Cooper, who recently visited Argentina for the first time, tells me that what struck him most was the amazing emptiness of the land. And it is true that although the cereal exports from that country bulk large at present, they are very far from reaching finality. Mr Cooper suggests, and I am in agreement, that the railways, if given the opportunity, should now co-operate with the Argentine Government in wide measures to attract and settle on these lands the best class of European immigrants, and I commend the suggestion in its widest bearings to our friends in Argentina, a country which could offer from its bounty a home of sunshine and hope to thousands, if not millions, of impoverished and harassed Europeans.

Interchange traffic with our ally, the Argentine North-Eastern Railway, and with the very friendly Paraguay Central Railway, is growing apace. Both of these companies serve zones which are only now in the very early stage of development. They give us even now a heavy cattle and sheep traffic, and last year we received from them no less than 40,000 tons of oranges for transport to Buenos Aires, whilst the timber traffic is assuming large proportions. Misiones, served by the North-Eastern, in particular is showing great signs of life; its wonderful soil and climatic conditions have been found to favour yerba, tobacco, citrus, and maize plantations, and the scope for the development of sub-tropical products is very large. Paraguay appears to have definitely set its face against further revolutions, and is now enjoying the fruits of peace and, incidentally, the payment of its foreign obligations, upon which that country is to be sincerely congratulated. So you will see that we have no regrets on the score of having looked a little into the future by securing in pre-war times our position with neighbouring railways.

The ferries, which carry our trains the 50 miles across the Paraná en route to Buenos Aires, were very busily employed last year. In round figures, our trains on the ferries carried 50,000 passengers and 640,000 head of livestock, the total paying public traffic conveyed by them weighing over half a million tons. The fleet of three steamers having reached the safe carrying limit, we have placed an order for a new ship which will have four tracks instead of three, and, owing to its additional length, will carry in wagons on deck 1,000 tons of paying cargo, or 50 per cent. more in capacity than the units of the existing fleet.

As to the current year's prospects, I speak dimly. The gross receipts for the first three months show an improvement of £31,000, and the net, as far as can be estimated, an improvement of £15,000. The condition of the new crops is reported to be at present quite satisfactory, but harvesting does not commence until the end of next month, and we cannot be sure of crop results until January. If, however, it should happen that the crops turn out well, and there is no unforeseen change in the present position, as our prior charges will be £120,000 less this year than last, it is reasonable to anticipate a dividend for the current year on the ordinary stock.

HEAD OFFICES: LIVERPOOL AND LONDON

Whether an interim dividend can be paid on this stock, say, in April next, must, of course, depend upon circumstances as they develop.

Before sitting down I will read to you the latest cablegram received from the general manager. It is dated October 27th, and is as follows:—Shearing of sheep giving satisfactory results. Owing to copious early spring rains pasture camps and cattle in excellent condition. Locusts have appeared in some districts, but on account of late arrival do not anticipate they will do any material damage. Latest reports favourable in all areas. Tonnage should exceed last year's figure unless something unforeseen occurs.

The Right Hon. Lord Farrer seconded the resolution, which was carried unanimously.

The twenty-eighth ordinary general meeting of the United Railways of the Havana and Regla Warehouses, Limited, was held on the 29th inst., at Winchester House, Old Broad street, E.C.

The Right Hon. Lord Ashfield, P.C., chairman of the company, presided.

The London manager and secretary (Mr W. J. Maslen) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report, said:—Ladies and gentlemen,—I am again fortunate in being able to ask you to consider a report and accounts which I am confident you must regard as satisfactory. Our total receipts from the railways exceed those of the previous year by roundly £673,500. On the other hand, our working expenses for the railways are higher—necessarily so, for it is axiomatic that substantially increased receipts from railway traffic can only be earned by the expenditure of increased sums for wages and materials. Nevertheless, it is a matter for congratulation that the general ratio of expenses to receipts has fallen. For this year it is 61.56 per cent., as against 62.58 per cent. for the previous year.

Nearly every branch of the company's activities has contributed to the increased earnings. From passenger fares we received £1,357,000, an increase of £104,000, or 8 per cent.; our general goods traffic was even more satisfactory, yielding an increase of £172,000, or over 13½ per cent., while from carrying sugar we derived an additional revenue of £315,000, an increase of 29 per cent. The one further considerable source of our revenue, our sundry receipts, showed an increase of £81,000, mainly attributable to the heavier sugar traffic.

There is a gross balance of £1,910,000 on our railway working, and, after making the necessary adjustments in respect of our subsidiary activities, and paying the interest on our debentures and the dividend on our preference stock, and after providing for taxation and sinking funds, there remains a balance of £1,187,491. An interim dividend of 3½ per cent. already paid on the ordinary stock absorbs £229,489, and there, therefore, remains a sum of £958,002, out of which we propose to set aside £75,000 for deferred maintenance, to transfer to general renewals reserve £350,000 (the same sum as last year), and to pay a further dividend of 4½ per cent., making 8 per cent. for the year (as compared with 7 per cent. paid last year), carrying forward £237,944, or £3,417 in excess of the amount brought in from the previous year.

We have carried by rail 362,000, and by electric service 335,000, more passengers than last year, and by ferry-boat 58,000 more; and this in spite of continued and increasing competition. Practically the whole of our goods and livestock traffic shows an increase, the only considerable exception being in the number of tons of chemical manure carried. The handling of sugar-cane and its products represents in tonnage the main bulk of our goods traffic; in round figures this commodity accounts for 13,000,000 tons out of a total traffic of 16,000,000, an increase over last year of 34 per cent.

Not only have we increased actually, but we have increased proportionately, for we handled 36.11 per cent. of the total sugar crop of the island this year, as compared with 34.75 per cent. in 1923-24. The crop itself was an exceptional one, totalling well over

5,000,000 tons, which is, approximately, 1,000,000 tons more than that of the year 1923-24. This increase in the sugar productivity of the island was very largely in the provinces served by our lines.

FUTURE PROSPECTS.

Let me turn for a moment to our future prospects. I hesitate to speak with any certainty. At the present time the general trade in the island is not in a very flourishing condition, due to the fact that low prices were obtained for the last crop of sugar, and it may be accepted that this decrease in general prosperity has caused our earnings, since July 1st last, to diminish substantially. The decrease amounts to, roundly, £138,000. It has to be borne in mind, however, that the receipts for the early months of last year were exceptional, because of the traffic which was temporarily held back during the strike which occurred in May and June of 1924. But the fall in earnings is not fully accounted for in that way. It is estimated that notwithstanding the increased production, the value of the sugar crop just harvested was 25 per cent. less than that of the smaller crop of 1923-24, and, with this diminution in the purchasing power of the country it is not surprising that there should be less activity in general business.

It is believed that the total sugar crop for the coming year will be as large as that of the past year. In a cable recently received our acting manager states that the coming crop is estimated to be about the same as last year, but he goes on to say that he estimates the crop in our zone at 10 per cent. less than last year.

In spite of the present temporary depression in trade in the island, there is no real feeling of pessimism, and efforts are being made to foster subsidiary industries.

We have not been unmindful of the necessity for maintaining our properties in a proper state of efficiency, and these additions and improvements, and others which have been authorised during the year, represent an expenditure of, roundly, £497,000.

Sir Henry Mather Jackson, Bart., C.B.E., deputy-chairman, seconded the motion, and it was carried unanimously.

UNITED STEEL COMPANIES, LIMITED.

MR A. O. PEECH ON THE POSITION AND PROSPECTS OF THE INDUSTRY.

The eighth ordinary general meeting of shareholders of the United Steel Companies, Limited, was held, on the 26th instant, at the Royal Victoria Hotel, Sheffield. Mr A. O. Peech (chairman of directors) presided.

The notice convening the meeting and the auditors' report were read by Mr A. Blackmore (routine director and secretary).

The Chairman, in moving the adoption of the report and balance-sheet, said: Since last year the accounts show comparatively little alteration.

With regard to our investments in and advances to associated companies, the formal balance-sheet of the company, which has been submitted to you each year, has not included any details in regard to these items, and, while I have dealt at length in previous years with the various interests which we control and the manner in which they interlock, I have not so far discussed them from the financial standpoint. It will be within the knowledge of the shareholders generally that on the formation of this company the main object in view was the acquisition of controlling interests in various companies in the iron, steel, coal and allied trades, and the directors then contemplated at some future date the merging of the assets and liabilities of these allied companies into the United Steel companies, by which one company would possess the whole of the assets and be responsible for the whole of the liabilities of the parent and allied companies. Various circumstances—some of them matters of legal difficulty, some concerned with the settling of outstanding taxation matters—have superseded and delayed the carrying out of this programme of consolidation.

We are still aiming at this policy of consolidation, and we hope that before long our objects may be attained. In the meantime, however, I think it would prove of general interest if I were to dwell now at greater length than heretofore on certain features of our allied companies.

INVESTMENTS.

I begin with investments. The largest individual item included under this heading in our balance-sheet is our holding in Steel, Peech, and Tozer, Limited, which stands in our books at £3,400,000. This represents the entire share capital, both preference and ordinary, of that company, which, as you know, owns the Ickles and Templeboro' Steel Works. Prior to the war the works consisted of the Ickles works only, and Steel, Peech, and Tozer carried on a large and successful business in the manufacture of alloy and ordinary steel, sold in the form of billets, blooms, slabs, forgings, &c., their trade in finished materials being mainly in railway and tramway rails, springs, tyres, and axles. During

the war the construction of the large and modern Templeboro' plant was begun under agreements with the Government, which provided for substantial writing off of the capital cost, so that it might not stand, at the termination of the war, at an inflated value. This new plant at Templeboro', together with some small additions to the original plant at Ickles, has entailed a capital expenditure of approximately £2,500,000.

This large expenditure has been financed partly by an amount of £1,250,000, which Steel, Peech, and Tozer have borrowed on overdraft from their bankers, and partly by advances from United Steel, who have advanced altogether about £2,000,000 to Steel, Peech, and Tozer, this amount being included under the heading "advances to associated companies" in our balance-sheet. These advances by United Steel, except in so far as they were necessary for capital expenditure, were largely occasioned by the sudden and rapid fall, during the years 1920-21, in the values of raw materials, which were held in stock, or for which commitments had been entered into at figures of cost which showed in the course of these two years a heavy depreciation. As I have said in previous years, Steel, Peech, and Tozer did not escape heavy losses in consequence of this fall in values.

The purchase by United Steel of the share capital of Steel, Peech and Tozer brought with it the Frodingham Iron and Steel Company, Limited, three-quarters of the capital of which company is owned by Steel, Peech and Tozer, the remaining quarter belonging to Samuel Fox and Co., Limited. The Frodingham Company has a record of continued success, and from the point of view of both natural resources and manufacturing capacity is one of the most important units in the combine, and in the iron and steel trade of this country. Its product consists of joists, angles, and sections generally, and owing to its natural advantages it has been able to maintain its output at full capacity during the past very difficult years. The Frodingham Company has debentures outstanding to the amount of £789,900—a figure considerably lower than the amount outstanding at the time when the company came into our possession, as substantial repayments have been made during the past seven years.

The Frodingham Company in its turn brought to the combine a one-half share of the entire preference and ordinary capital of the Appleby Iron Company, Limited, whose plant, as I think you know, is adjacent to that of Frodingham. On the formation of the combine it was thought desirable to obtain complete control of the Appleby Company, and United Steel purchased for cash the remaining half-share of the preference and ordinary capital of that company.

In addressing you last year, I mentioned that it had been thought advisable, in order to consolidate holdings, to transfer to Frodingham this second one-half share of the Appleby capital, and the total book figure in respect of Appleby in the Frodingham books is £881,820.

EXTENSIONS AT APPLEBY.

In past years I have mentioned the steel works extensions at Appleby, but I am not sure that you are all aware of the nature and extent of these new works. The original Appleby plant consisted of blast furnaces only, and in connection with these the Appleby Company controlled large and valuable ironstone properties. During the war the Appleby Company, at the request of the Government, undertook the construction of blast and steel furnaces and modern mills for the rolling of plates, the whole scheme of this new work being laid out on a comprehensive scale covering the latest type of plant, both in regard to the furnaces and the rolling mills. The total capital cost of these extensions to June 30th has been about £3,600,000, of which £1,050,000 has been obtained on the security of a mortgage debenture, and the balance has been provided partly by grant from the Government and partly by the Frodingham Company. The early completion of these works has been regarded by your board as one of the most urgent steps to be taken in the interests of our company, and I am glad to be able to inform you that within the last few days the board has practically completed an arrangement for funds to bring these works to a productive stage. Having regard to the situation of the works, the adequate natural resources already in the hands of the Appleby Company and the coke supply available from our Rothervale branch there is every prospect of the Appleby Company becoming as successful as the Frodingham Company. The effect of proceeding with the completion of these works will be the immediate employment of a considerable amount of additional labour.

The next item in our investments consists of our holding in Samuel Fox and Co., Limited, Stocksbridge, another old-established Sheffield steel-making concern with a successful history. In this case United Steel owns the whole of the ordinary capital and practically the whole of the preference shares. A few of the latter are still held outside the combine, but they do not affect in any way our control of the company. The value of this investment in our books stands at £1,330,731, and, as I mentioned above, this figure covers one-quarter of the share capital of the Frodingham Com-

pany, which is held as an investment by Samuel Fox and Co., Limited. In this case, again, extensions of buildings, plant, and machinery were made during and after the war to an amount of about £900,000, against which the company obtained substantial writing off. There is included in our advances to associated companies a sum of about £550,000, which was provided by us towards the capital cost of these extensions.

Our holdings in Daniel Doncaster and Sons, Limited, of Sheffield, and the Martino Steel and Metal Company, Limited, of Birmingham, stand in our books at £158,000 and £108,000 respectively, and in each case these figures represent the purchase price to United Steel of the entire ordinary capital of these companies, which were acquired mainly because they were competitors in the alloy steel trade, and were able to bring into the combine a valuable connection and goodwill. In each case the purchase price paid by us was fixed by reference to the earning capacity of the companies in previous years, and both these acquisitions have provided to Steel Peech and Tozer and Samuel Fox and Co., Limited, a useful outlet for their production of special quality steel.

A further investment is the holding in Thomas Smith's Stamping Works, Limited, of Coventry, who have an established position in the motor trade in that district. In respect of this holding, the transaction was carried through by an exchange of shares, and the investment stands in our books at £150,000.

INTERESTS IN CUMBERLAND.

With our interest in United Strip and Bar Mills, Limited, which we control and whose preference capital we guarantee, I have dealt with the principal items of those investments, which may be grouped together as representing our interests in Sheffield, Lincolnshire, and the Midlands, and I now turn to the Cumberland area. In that district, in order to safeguard our acid steel production, we set out, as you know, to obtain the control of adequate supplies of hematite ore, limestone and coal, and with this in view it became necessary to supplement the properties which had already been acquired by the Workington Iron and Steel Company, Limited, which we now refer to as our Workington branch. The old Workington Company owned the whole of the share capital of the Bigrigg Mining Company, Limited, and, directly and through Bigrigg, about one-third of the share capital of the Beckermert Mining Company, Limited. Both Bigrigg and Beckermert properties contain large reserves of hematite ore, the Beckermert Company in particular being a very valuable property. In order to secure the complete control of these supplies to our Workington blast furnaces, United Steel purchased the whole of the remaining Beckermert capital with the exception of 8,000 shares, but these also were acquired when we purchased the Distington Hematite Iron Company, Limited. The Beckermert and Bigrigg properties together stand in our books at a total value of £814,734.

The Distington Company is a comparatively small concern in Cumberland, with an excellent reputation for the manufacture of a special quality of iron, and with a valuable connection. The entire share capital was purchased by United Steel at a cost of £88,441.

Some 18 months ago we acquired the ordinary share capital of the Moresby Coal Company, Limited, and at the same time took a financial interest in the Risehow Colliery and By-Product Company, Limited. These acquisitions strengthened the coal reserves immediately available to us without further capital expenditure on development, and they attached to us an additional supply of coke for our blast furnaces. We have established, in conjunction with our coal interests in Cumberland, a large tar distillation plant. This and other additions to our coal, coke and by-product properties in Cumberland have so far been financed wholly from our own resources, and are represented in our balance-sheet partly by advances to associated companies and partly by investments, the total book figure being £370,000.

With regard to depreciation, we have followed the practice of the last few years in writing off a reasonable amount of depreciation from the values of those properties which are carried in the United Steel Companies' balance-sheet. In the case of the subsidiary companies, no depreciation has been charged during the year, but as usual the various works have been fully maintained out of revenue.

The many complications of war-time taxation and agreements for capital expenditure in respect of our companies have not yet been finally straightened out. The net liability due by the combine is of substantial amount, but against this we are carrying in our accounts reserves which are believed to be adequate.

POSITION IN THE CUMBERLAND AREA.

With regard to the position at the various works of the combine, in the Cumberland area the past year has been much worse than the previous year, and has resulted in heavy loss. Orders have again been very scarce, and the works have therefore been obliged to operate at a low proportion of their capacity. There has been a limited demand for pig-iron, which has enabled us to

operate the furnaces on a reduced scale, also correspondingly the ore mines, quarries, collieries, and coking plants which supply the raw material of the blast furnaces.

To our great disappointment, the completion of the dock, which last year I intimated might be in May of this year, has been delayed, and it will probably be another year before the work is completed. In Lincolnshire our Frodingham works have again been able to operate at full capacity throughout the year with satisfactory results. The plant is one of the most economical in the country, and although the market price of its product has fallen steadily during the last 12 months, substantial profits have been made.

At Appleby the original blast furnace plant has worked continuously throughout the year on a basis of two furnaces out of four, which has been sufficient to meet the demand for basic pig-iron from our Sheffield works and outside customers. The works have been operated without loss, except for interest on the mortgage previously referred to. Our Yorkshire collieries and coking plants have worked during the year under increasing difficulties, as mentioned in the directors' report, and with much less satisfactory results than the previous year.

THE COAL SITUATION.

At this point I might just say one word about what is commonly referred to as the crisis in the coal industry. It is a fallacy to regard the position in the coal industry as arising from differences of opinion between employers and employees which must inevitably culminate in a grave crisis in the spring of next year. Such a view not only obscures the real problems which require solution, but is destroying the confidence of foreign buyers in our ability to meet the trade commitments which it is our everyday business to undertake, and on which the continuance of employment of our works and workmen so largely depends. I see no problems peculiar to the coal industry. The problem of that industry is the same problem as that which faces all the exporting industries of the country—namely, how to recover the foreign markets which we have lost owing to our inability to meet the prices of our competitors. This is an economic problem common to all these industries, and is vital alike to the employers and employees engaged in them. The first step towards its solution is the ascertainment of the causes and agreement as to the causes between these two parties, and the second step is willing and united effort to remove them.

Speaking generally, the past year, which I suppose may be truthfully described as the worst known in recent years in the heavy industries, has been one of very great and constant anxiety to every section of the management at all our works, and, having regard to the fact that our total output of steel during the 12 months was only about three-quarters of a million tons, I think that we may reasonably claim to have done as well as was possible in the circumstances.

CAUSE FOR ANXIETY.

I think it proper definitely to remind you that the condition of the coal, iron and steel trades in this country to-day cannot be regarded with other than feelings of grave anxiety. These three industries, all of them essential to the well-being of the nation, all of them long established, highly organised, representing many millions of pounds of invested capital, are to-day bearing far more than their due share of the burden of those economic ills which are the aftermath of the war, and until the burden is lightened there seems little prospect of return to a normal measure of prosperity. The burden which we carry owing to our position as "unsheltered trades" is immense. We are subjected to competition from countries whose labour conditions are more favourable to cheap production than our own, whose Governments have deliberately undertaken to assist their nationals in this competition, whose railway systems adapt themselves to that end, and who are for these reasons, and in some cases aided by depreciated currency, able to dump material into this country and in our established markets abroad.

The question of local taxation has given us great concern. The total amount paid in local taxation is a terrible burden, and the assessing and spending departments of the local authorities must be made to realise that this burden is a weight that industry cannot carry. Our board deliberately decided to bring this out in open court, and they therefore recently allowed a summons to be issued against them in respect of a portion of the Cumberland local rates so as to provide an opportunity for counsel to make a public statement on the matter.

Now the period of readjustment from abnormal conditions has already proved longer than was generally anticipated, and its continuance adds to the anxiety and the labour of those who are in daily contact with these conditions, and who have the difficult task of steering through them an industrial undertaking of the magnitude and importance of our own.

The policy which your directors are bound to adopt is one of increased enterprise and initiative, and the closest regard to cost

of production in our various works. In both respects our organisation has done much, and is constantly working in that direction. The position must obviously also call for a policy of the strictest conservation of our financial resources until such time as there is clear evidence of a reasonable stability in our trade. The present is a very difficult and trying time for everybody, but in face of conditions so largely beyond our control your board feel that they can count upon the support of the shareholders in the financial policy they are pursuing.

I should like to try to sum up the position as we see it. I have given you this morning figures which have enabled you to appreciate the heavy financial stake of our company in the steel, iron, and coal trades, and my review of the general conditions obtaining during the past twelve months in our various works has brought out, I think quite clearly, the fact—for it is a fact—that a large proportion of our investments has had no opportunity during this period of producing the profit which they would have done had we been able to operate at anything like full capacity. The results for the year are regarded by the directors as satisfactory in the face of these conditions, and the effect of a further year's working of the combine as a whole has been to prove once again the immense value of having under one control the large resources in raw materials and manufacturing power which were the reasons for the formation of the company. The immediate future in regard to trade is uncertain—many adverse factors are with us to-day. On the other hand, it is not generally recognised that had the world's effective demand for iron and steel increased during and since the war in the same ratio as it had increased decade by decade up to 1914, to-day's world capacity would have been insufficient to meet the demand.

The resumption of this normal rate of increase in demand is wholly dependent upon the restoration of purchasing power in this country and throughout Europe. The financial condition of the world to-day is more stable than it has been at any time during the last ten years, and there is everywhere a keener desire for peace and progress, and consequently we may indulge in a stronger hope of reaching early that point when industry can expect trade conditions of a stable and progressive character. When that point has been reached there is no reason to doubt that we shall reap in full measure the advantages which must arise from the strong position occupied by our company in the coal, iron, and steel trades of this country.

The report and accounts were adopted, and a vote of thanks to the chairman, directors, and staff terminated the proceedings.

SUDAN PLANTATIONS SYNDICATE, LIMITED.

LARGE INCREASE IN COTTON AREA.

A REMARKABLE ACHIEVEMENT.

The 18th ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held, on the 28th instant, at Winchester House, Old Broad Street, London, Mr F. Eckstein (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, and after having referred to the loss the British Empire, and the Sudan particularly, had sustained by the death of Sir Lee Stack, said:—Our syndicate was originally formed in 1904 as a private concern, with a capital of £80,000. We have consequently reached our majority, which coincides happily with the completion of that great engineering work—the Makwar Dam. The syndicate has at this moment an issued capital of £600,000, valued by the Stock Exchange at roughly £5,000,000. It has paid about 250 per cent. in dividends, which I admit at once is nothing to boast about, considering that we have been at work for 21 years, and have raised all our working capital at a considerable premium. Our shareholders now number something like 2,500. In 1904 we started at Zeidab cultivating a few hundred acres of cotton. To-day, including the Kassala Cotton Company, in which you are largely interested, we have nearly 100,000 acres under cotton. This is not our limit, as we hope to add next year a further 20,000 acres in the Gezira alone. In all, we have to-day about 10,000 tenants, and if you take each tenant with a family, say, averaging five heads, we have working as our partners 50,000 people, earning a very substantial livelihood.

PAST SEASON'S OPERATIONS.

Turning now to the 1924-25 season, my comments must be almost exactly the same as those which I made last year. Zeidab again produced a good paying crop of American cotton, while the Gezira crop was unsatisfactory. Notwithstanding all precautions and special seed treatment, the cotton plants were again attacked by blackarm and thrips. Good luck, however, favoured us, as high cotton prices more than made up for low yields. In consequence of this unfortunate experience, our managing director decided to take drastic measures, and ordered the whole new area to be planted with entirely new seed, which we bought elsewhere.

An interesting example of the influence of local conditions on disease is furnished by the Kassala Cotton Company, which bought Sakellaridis seed from us which we knew to be infected with blackarm. Notwithstanding this fact, the seed proved to be entirely satisfactory and eminently suitable for the climate and soil conditions of Kassala. The young cotton plants, it is true, developed blackarm in the early stages, but soon outgrew this disease, and eventually produced strong and healthy cotton. I paid a visit to Kassala in January last and saw with my own eyes the best and strongest cotton I could wish for. While dealing with this important question of pests, I would mention that, following on the report of Sir John Russell and Dr Martin Leake, to which I referred last year, there has been a reorganisation of agricultural research work in the Sudan. The Sudan Government, the Empire Cotton Growing Corporation, and our syndicate all contribute to this work, and are all represented on the small Supervisory Committee which has been established in London to deal with the subject. It is to be hoped that the work undertaken in this all-important field may in time result in great practical benefit to all concerned. Before passing from the subject, I must refer to the indebtedness of our company to Major Archibald, of the Welcome Research Laboratories in Khartoum, for the progress which he has made in the scientific study of blackarm, and to study of insect pests in the Gezira. We have acquired the services of Mr Jefferys, whose success while under the State Domains in maintaining the supply of pure Sakellaridis cotton seed in Egypt is well known. Mr Jefferys has joined us for a time, and after our present crop, is now helping us to establish in the Gezira a selected seed of best strain for sowing throughout our irrigated area.

NEW ISSUE OF CAPITAL.

Before analysing our balance-sheet, I venture to plunge at once into a subject which I know you are all anxious to hear about—namely, our capital account and its proposed increase. Your board recommends an increase of capital from £750,000—our present nominal capital—to £2,500,000. From the circular sent to you, you have also seen that we are to issue at once the remaining 150,000 shares of our old capital at £3—namely, £2 premium—payable in three instalments. At current quotations this issue involves a modest bonus to shareholders, which I hope they may find satisfactory. When these shares are all taken up and fully paid up we shall close our books for a short time. Then we shall capitalise £750,000 of the share premium account and issue to every shareholder then on the register one new fully-paid share—I prefer not to call this a bonus share, as it is created out of moneys subscribed by the shareholders—in respect of every old share which he holds. When this is done we shall have a paid-up capital of £1,500,000. As, however, we are extending our operations, it appears advisable to be prepared for contingencies, and when occasion arises, a further 750,000 shares—namely, one new share for every two old shares.

This would give us ample working capital, and at the same time put us into a position to undertake any new great business that is offered to us. I can assure you that the greatest possible care will be taken in its selection. You would be surprised to hear how our experience in cotton growing, capital, and staff are sought after, and how many really good offers are made to us to acquire interests in other countries. The Sudan, however, still long as there are opportunities there on satisfactory terms—we prefer to save our main efforts for the development of that country.

To be quite frank, I think I must tell you that during the present month negotiations have begun having for their object a considerable further extension of our operations in the Sudan. These negotiations are bound to be protracted for reasons which I need not go into at this moment. They may lead to nothing; they may come to a satisfactory conclusion. Should the latter be the case, it would probably end in my proposing to you and recommending to you a further increase of our capital.

Let me say at once that I hope it would be the last time I should have to come to you for money. You, ladies and gentlemen, have been so extraordinarily good and loyal to us in accepting to you for, and for our part we have the satisfaction of knowing that we have not misled you, and that all the money you have been a profitable investment to you.

KASSALA COTTON COMPANY.

Having dealt with the items in the balance-sheet, the Chairman said: Now I come to our holdings in other companies. First and most important is our holding in the Kassala Cotton Company.

You will notice that we have the same number of shares as last year, but to provide this company with further working capital we paid up 4s on the preference shares, making them 5s paid up. At the annual meeting held in June, the chairman gave full information about the first year's work done by that company. At that time the crop had not been entirely picked, so I can somewhat supplement the information then given by telling you that the crop yielded in all 27,259 kantars. The gross proceeds, out of which the tenants and the Sudan Government will have to receive their shares, will amount to roughly £300,000. To-day the entire crop has been disposed of. During my visit to Kassala I was struck by the amount of work done by our very competent staff under at times most difficult circumstances, and it is with the utmost regret that I have to inform you of the great loss the Kassala Cotton Company sustained about two months ago by the death of their manager, Mr Gray. Mr Gray was a man of great ability, who never spared himself to make his company a real success. As already mentioned, I was more than pleased with the healthy appearance of the cotton plants, and I am more than ever convinced of the suitability of the Province of Kassala for growing the best kind of Sakellaridis cotton. Last year we had about 15,000 acres under cotton, and for this season we had prepared an area of 30,000 acres, but, alas, the Gash has left us in the lurch by an unusually poor flood. In the past, from such records as are available, it appears that a bad flood of this sort has occurred about once in every five years. Anyhow, I do not expect to have more than 10,000 acres under cotton, which is less than last year.

BRAZILIAN INTERESTS.

Turning now to Brazil, I told you last year that I felt convinced that this enormous country would in time become one of the big cotton-growing centres of the world. I based this statement on what I had read in text-books dealing with that subject, and also on information I gathered from men who knew the country and knew what they were talking about. I had the privilege of accompanying my colleague Lord Lovat on a visit to that country this year, and from what we saw and from what we learned on that trip I can truly say that the statement I made to you last year is correct in every way. I feel sure from personal observation that Brazil possesses more wonderful natural conditions for cotton growing than any other country I know. What is wanted in Brazil is a good strong stable Government, a sound financial policy and a systematic and continued influx of emigrants. If I may venture to give an opinion, it is that Brazil offers to educated young men great chances, provided they are willing to work hard, learn the language and accommodate themselves to the customs and manners prevailing in that rich and great country. Our holding in the Brazil Plantations Syndicate is now fully paid up, and we have acquired a further 10,000 shares at par, likewise fully paid up. This syndicate possesses three seed farms, two ginneries, and about 77,000 acres of first-rate land. I was much impressed by the cotton grown on these three stations, and the syndicate is to be congratulated on having a good and competent staff there. I am not exaggerating when I say that the cotton grown by the Brazil Plantations Syndicate looked better than any other I had seen in Brazil. During the last few days we have decided to take a considerable interest in a new Brazilian undertaking to be formed and to be called the Parana Plantations, Limited. This company has a capital of £750,000, of which £700,000 has been subscribed and £50,000 is held in reserve. It is essentially a land company, which owns something like 3,000,000 acres of first-class land and has an option on a further 1,000,000 acres at a low figure. Both Lord Lovat and I visited these areas, and we were struck with their potential value. It is more than likely that it will take some time to develop these areas and before we attempt to effect sales to any extent. We have also taken a small interest in the Cambuhy Coffee and Cotton Company. It is essentially a coffee proposition, and as such does not interest us, but it has also great possibilities for cotton growing, which interests us greatly. This is not the place nor the time to discuss in detail the prospects of this company, but, having spent two days on the property, and having had the advantage of being shown over it by their managing director, Mr Davy, I would just like to say that this concern, with its 140,000 acres and 3,000,000 coffee trees, has impressed me much, and the more so as they also had some 2,500 acres under cotton, which looked quite good. Much more in this respect can be done, and we should not be averse to take a hand in this should the board of the Cambuhy Coffee and Cotton Company desire us to do so.

THE YEAR'S PROFIT.

To return to the balance-sheet, our financial position continues to be good, as the figures before you show. Our total gross profits amount to £304,000, against £250,000 last year, while our expenses are about the same. As usual, we have again provided for a bonus to our very numerous staff, which I know you will approve of. The net profit, therefore, for the year, after the

customary writing off, is £163,000, against £113,000 last year. Against this we paid you in June an interim dividend of £60,000, and now propose to pay you a final dividend of £90,000; in all £150,000. The amount carried forward is £189,450, representing a very comfortable and useful reserve.

CURRENT SEASON'S PROSPECTS.

Having dealt with the financial side of our syndicate, you will wish to hear something of the work done in the past year and of our prospects in the future. As already said, our Zeidab station has done well. We shipped in all from there 2,814 bales, which were sold at satisfactory prices.

For the coming year we have practically the same area under cotton—namely, 5,000 feddans—and the prospects are about the same as last year. We have already picked about 8,500 kantars of the new crop and shipped 500 bales. In the Gezira the crop, as already mentioned, was the poorest we have ever had, but luckily compensated by high cotton prices. We had about 20,000 feddans under cotton and shipped 10,870 bales, against 14,591 bales the previous year. In July the Makwar Dam was completed, and began to furnish us with gravitation water. As in every big undertaking, little mishaps occurred, and canals had to be repaired, &c., but as far as I can see we have accomplished what we set out to do—namely, to increase our cotton area this season from 20,000 feddans to 80,000 feddans, which will be further increased in the 1926-27 season. I think you will agree that this large step forward from 20,000 to 80,000 acres in a single season is no small achievement, and one of which we may be proud. We had no difficulty in finding tenants for this area, which is a healthy sign. There was one thing which struck me much during my last visit to the Gezira, and that was that I found the native population taking a keener and, if I may say so, a more intelligent interest in the cultivation of cotton and all the work connected with it. All this augurs well, and our prospects for a prosperous future look bright.

Our reports concerning the present growing crop are so far quite satisfactory, the young cotton plants looking well, but it is too early to form a definite opinion as to yield, &c. In addition to the cotton, we have also planted 33,900 acres of Dhura and 8,690 acres of Lubia, which crops we hand over entirely to our tenants.

Lord Lovat, K.T., in seconding the motion, said that the shareholders were not only owners of a great agricultural enterprise, but were also associated with probably one of the greatest Colonial

development schemes in progress at the present time. This was not only a scheme, or series of schemes, which would be materially advantageous to Great Britain and the cotton industry, but one also which was adding very largely to the welfare of the natives in the areas with which it dealt. Lord Lovat also referred to the Brazilian enterprise, and said that, with the Chairman, he had great confidence in the future possibilities of cotton cultivation in that country.

The resolution was carried unanimously, and a final dividend of 15 per cent., less income-tax, for the year ended June 30th last was declared.

AMALGAMATED (RUBBER) FINANCE COMPANY, LIMITED. FURTHER ISSUE OF 1,000,000 SHARES.

The annual meeting was held on October 26th at Winchester House, London, E.C., Mr James Fairbairn, chairman of the company, presiding.

The Chairman said: It is proposed to pay a first dividend of 12½ per cent. for the period ended September 30, 1925, £12,500, to place to reserve account £10,000, to reserve for taxation, directors' additional remuneration, and other contingencies £8,000, and to carry forward a balance of £3,478. This is the result of our trading for the period ended September 30th—less than a year from the time we started business—and we think you will agree with us that it is an entirely satisfactory statement.

FUNCTIONS OF A FINANCE COMPANY.

A great deal of confusion of thought appears to me to exist in the minds of many people as to the difference between the functions of an investment trust company and those of a finance company. An investment trust company, in my view, is one that, by spreading its capital over a series of more or less permanent investments, distributes its risks, and is thus able to obtain a higher return on the capital employed than is open with equal safety to the individual investor. A trust company of this character may either confine its investments to those of a particular class, such as rubber, tea, or shipping, or it may spread its investments over a number of different industries or a number of different countries. The main object is to secure safety by distributing risks, and such companies rarely invest more than 5 per cent. of their total capital in any one undertaking. Shareholders in a trust company depend—and rightly so—on the shrewdness and capacity of their directors to invest money in various undertakings to better advantage than they themselves could do. The management expenses of a purely investment trust are small in comparison with its income, and the directors are thus able to pay shareholders a larger dividend than they themselves could earn on their individual investments. On the other hand, the functions of a finance company such as ours are entirely different. We are out to take larger risks when, in our judgment, such risks are justified, and we expect larger profits. We must also be prepared occasionally for losses. From what I have said above as to the correct functions of an investment trust it follows that while, for instance, it would be quite legitimate and proper for a finance company such as ours to enter on a planting proposition, in my view this is outside the purview of a trust company.

TERMS OF THE ISSUE.

The success of our operations and the opportunities we are likely to have of profitably employing a larger capital have induced us to make a further issue of 1,000,000 shares of 2s each (£100,000). The necessary forms will be posted this evening, along with the dividend of 12½ per cent., and copy of the speech which I am now making. The price at which this issue is being made is 2s 6d, and is payable 1s on application and 1s 6d on allotment.

The Amalgamated (Rubber) Finance Company, as it was originally constituted, is, of course, and will, I hope, always remain, principally associated with rubber, but it has participated, and will participate in the future, in transactions outside rubber and general produce, where a reasonably quick return appears to your directors to be possible.

Europe is now beginning to revive after the world-wide depression caused by the Great War, and is consuming very large quantities of rubber, and the demand should increase in all the leading countries of the world. What the rubber industry, however, requires—and that quickly—is a central selling organisation, an organisation which will be able to control the product as received from the estates, and to turn it over to the manufacturers at a price fixed by that central selling association. We should thus be saved from wild fluctuations, and, at the same time, fair and reasonable treatment would be meted out to all producers alike and to the manufacturing industry as well.

Throughout the coming year your directors will use their best endeavours to earn substantial profits on the capital of £200,000,

which we now propose should be available, and it will be their policy to interest themselves in rubber and in other tropical products, as well as in transactions outside the rubber industry, so as to eliminate the risk of the company being too much involved in any one transaction or any one particular industry. The report was unanimously adopted.

SINGAPORE PARA RUBBER ESTATES, LIMITED. INCREASED PROFITS—GOOD PROSPECTS.

The sixteenth annual ordinary general meeting of the Singapore Para Rubber Estates, Limited, was held, on the 28th instant, in the council room of the Rubber Growers' Association, 2, 3 and 4, Idol Lane, London.

Mr H. de C. Hamilton, chairman of the company, who presided, said that there was a profit of £15,317 for the year, against £3,417 last year, and the directors were able to recommend the payment of a 10 per cent. dividend, as compared with a dividend of 4½ per cent., and to carry forward £4,021, as against £422 last year. The results were satisfactory having regard to the fact that it was only during the last few months of the year under review that the price of rubber revived. The crop of rubber that the company were allowed to harvest under the restriction scheme was only a small one—namely, 320,524 lbs—which accounted for the increase of 1d per lb in the f.o.b. costs. The price realised, 20.04d per lb, compared favourably with the 13.09d realised in 1923-24. Late last year, mainly owing to the efforts of Mr Hadow, who was visiting the estates at the time, their standard production was raised from 563,400 lbs to 611,000 lbs, and their standard production for the restriction year, November 1st next to October 31, 1926, was now being re-assessed and under appeal. The general condition of the estates continued exceptionally good. The planted acreage had been slightly increased. In November the company would get a further release under the restriction scheme allowing for an 85 per cent. output of standard production, and in February it would be increased to 95 per cent., which would be as much as they could produce for some time to come, taking into consideration a possible shortage of skilled tappers and the modern system of tapping now generally adopted, and which it was proposed to continue. The estimate of crop for this financial year was 525,000 lbs, which could easily be produced. All the titles to the new properties lately acquired were in order. A shortage of rubber in the not far distant future was predicted, and he very much doubted whether sufficient rubber would be produced even with estates at full production to meet all requirements with consumption yearly increasing. Any new plantings now being put in would not relieve the situation much in the future, as any rubber they produced in six and seven years' time would be to a great extent counterbalanced by falling off in production from the older plantings, together with a general annual wastage going on from disease and other causes.

Mr A. P. Hadow seconded the resolution, which was unanimously adopted.

SENGAT RUBBER ESTATE, LIMITED. IMPROVED RESULTS.

The fifteenth annual general meeting of the Sengat Rubber Estate, Limited, was held on the 27th instant, at the offices of the company, 24 Rood Lane, London, Mr Eric Maxwell (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: I was able to place before you a more satisfactory report last year than we had had in the previous year, but we did not then feel ourselves justified in recommending the payment of a dividend. I am glad to say that I now have to place before you a still more satisfactory report, recommending the payment of a dividend for the year of 11½ per cent.

The crop for the year under review was more restricted than in the previous year, as we were only allowed to export 378,916 lbs, against 406,078 lbs. The expenditure was necessarily somewhat of 1s 8.22d, against 1s 0.79d the previous year.

Our standard of production has been slightly increased, and we expect that, with the relaxation of restriction which will certainly ensue, we shall be allowed to market 585,000 lbs during the year ending June 30th next.

The question of forward sales is always debatable, and our principle in this company has been to insure the expenditure which will be required for the property by selling a part of the crop in advance. We have sold 13 tons per month, deliverable in 1926, at an average price of 1s 8½d, leaving us the balance to place on the market as it arrives. The price of rubber at the moment is about 4s a pound in London, and we feel that the future is bright before us.

Rubber is a very speculative market, and easily upset. There are rumours that the increased quantity coming forward under the milder restriction will over-supply the market, and bring down the price to a non-productive level. On the other hand there is a largely increasing consumption, and as not much new land has been planted with rubber during the last few years, we may, at all events, look forward to prices being maintained at a profitable level for some years to come.

Your directors have, for some time past, been endeavouring to acquire further rubber properties adjacent to your present estate, and are now negotiating for the purchase of what they consider a very suitable property.

These negotiations have not proceeded far yet, so I can give you no details at present, but should they come to a successful issue, it will be necessary to ask you to sanction the issue of further capital, the particulars of which will be communicated to you in due course.

Mr G. Gordon Brown seconded the motion, which was carried unanimously.

AMALGAMATED ANTHRACITE COLLIERIES, LIMITED. RESULTS OF A DIFFICULT YEAR.

The second annual general meeting of this company was held, on the 28th instant, in London, the Rt. Hon. Sir Alfred Mond, Bt., M.P. (the chairman), presiding.

The secretary (Sir Alfred Cope, K.C.B.), having read the notice convening the meeting and the report of the auditors,

The Chairman said that it was difficult to compare the accounts of the year under review with those of the previous year, last year's accounts being for a period of 15 months, whereas those now under consideration covered 12 months. An analysis of the figures, however, showed a diminution in the profit of about £80,000. A year ago he pointed out that the new Wages Agreement of 1924 would cost the company approximately £80,000 in increased cost of labour. They then hoped to be able to recover the bulk of that by better prices for their products, but unfortunately that had not been the case. Last year we had a mild winter, not only here, but on the Continent, and the result was that, although anthracite prices had maintained themselves somewhat, they were weaker than they had been. In addition to their own large output of about 900,000 tons a year, the company did a large merchandising business, their total combined selling business being something like 2,000,000 tons a year. The great depression in the coal industry and the collapse of prices had naturally affected the merchandising business, and they had therefore not had the benefit of profits made from that source to the same extent as in the previous year. He was glad to say that conditions were getting a little more stable and that a recovery was taking place. The directors recommended the payment of a dividend of 1s 6d per share, less income-tax, carrying forward £45,000—an increase of £34,000 as compared with the previous year. In view of the position of the coal industry, the board had considered it conservative and prudent to keep this money in a liquid state.

CANADIAN MARKET.

Last year he told the shareholders that, in conjunction with an important firm of coal merchants in Canada, they had started a subsidiary company to introduce their anthracite into that large and growing market. During the first year of that company's trading, when, of course, the overhead and development charges were naturally heavy, this company's share of the deficit was something like £3,000. That deficit had already been more than recovered, and this year's result would show a very different figure. In fact, they had increased by 75 per cent. in one year their delivery for that market, and the directors were very well satisfied with the way in which their trade was developing in that country, and the very high appreciation of the superior quality of Welsh anthracite over the American product, which they were buying in such large quantities. If it had not been for the board's foresight in providing for this expansion there would have been a great fall in prices and a very considerable amount of unemployment in the anthracite trade, whereas, in spite of all the difficulties, they had been able to keep their workmen at work and the pits going full time practically throughout the whole of the year. Their directors were continually endeavouring to extend the marketing part of the business.

STOPPAGE IN ANTHRACITE FIELDS.

Since the close of the financial year there had been a very unfortunate stoppage in the anthracite fields, which embraced the whole of the company's collieries. That was not due to any dispute between the company and the workmen who left their employment in connection with a strike in the pit of another company. The directors were powerless to settle the dispute of somebody else, and it seemed difficult to understand why the workmen, who had no dispute with the company, should inflict upon it, and still more upon themselves, a considerable loss in money. The loss of wages

General Manager and Secretary—HUGH LEWIS.

amounted to practically 12 times the loss of profit. It was interesting that the wages bill of the company, including wages of management, amounted to about £900,000, contrasted with profits amounting to £150,000, so that it would be seen how infinitely greater was the share of management and labour in the proceeds of the industry than the amount received by the capitalist, and how illusory was the idea that the distribution of the whole of the remuneration of capital would have a large effect on the wages bill. It was not commonly understood by the men that they were really on a profit-sharing basis, and that a reduction in costs and an improvement in profits automatically carried with them an improved wage for the worker.

There had been a great deal of discussion recently regarding the burdens on industry for what he might call certain of the social services. He had had the figures in respect of them for this company taken out, and as regarded national and unemployment insurance the contribution of the men was £13,250 per annum, and of the company £14,250—a total of £27,500, which was equivalent to 7d per ton on their output. It was estimated that the new pension scheme would cost the men and the company a further £8,000 a year, or about 2d per ton on the output, so that these two services accounted between them for a charge of 9d per ton on the output of the collieries. With regard to the outlook, all he could say was that at present the directors were satisfied with the position, and are looking forward with confidence to the future, if no further disturbances of the industry occurred.

The report and accounts were unanimously adopted.

YORKSHIRE AMALGAMATED PRODUCTS, LIMITED.

POLICY OF CONSERVATION AND DEVELOPMENT.

The fifth annual general meeting of the Yorkshire Amalgamated Products, Limited, was held, on the 26th instant, at Doncaster.

Mr J. H. Holroyd (chairman of the company) presided, and in moving the adoption of the report and accounts said that a perusal of the former would no doubt have convinced shareholders that the policy of conservation and development which the directors had pursued during past years had been wise, and that it was this policy which had made it possible to lay before them the very satisfactory statement now presented. The accounts showed that their turnover had greatly increased, and the percentage of gross profits to turnover had increased also. The increased ratio was not due to any increase in the selling prices of goods, but to reduction of overhead charges and increased production, improved processes, and internal economies. The net profit was £25,089 as compared with £6,520, and a dividend of 5 per cent. on the ordinary shares was recommended. Their company was one of the largest producers of building materials in the North of England, including bricks, building lime, sand, gravel, and concrete aggregate. They had other interests in the production of roadstone, raw materials for glass making, foundry sands, and refractory bricks for furnaces. He was happy to say that building enterprise was good, and that the building trade was one of the bright spots in the country's present industrial situation. The board looked with confidence to a continuance of the same conditions. In no district was building activity greater than in the new South Yorkshire coalfield, in the centre of which was the company's headquarters. The demand upon the company's works had been, and now was, very heavy, and in some cases double shifts had been worked.

THE WORKS AND PROPERTIES.

Continuing, the Chairman gave detailed particulars of the company's works and properties. One of their largest lines, he said, was sand and gravel for the building and allied trades. Their production of those materials was very great—approximating 1,000 tons per day. They had quarries producing moulding sands for foundry work, and were the largest producers in Yorkshire of sands for casting iron, steel, and nonferrous metals. That business was of great national importance, being a key industry. Their "Conisbro" Brick Works were exceptionally fine, and their clay pits were the deepest in Yorkshire. In view of the great demand for building bricks they had taken the opportunity of promoting a subsidiary company—Coalfield Brickyards, Limited—which had acquired on very favourable terms a valuable brick works property at Mexborough. The quality of the shale at Mexborough was turning out even better than anticipated. At the quarries at Wormsworth Cliffs, owned by Lockwood, Blagden, and Crawshaw, Limited, the entire share capital of which company they held, there were ample reserves for several hundred years of magnesium limestone or "Dolomite." Recently they had located there a bed of "Dolomite" in which the iron content was much less than in any other known British dolomite, which had enabled their glass-making customers to use a much larger proportion of the company's Dolomite in their mixtures.

A UNIQUE POSITION.

As indicating the progress of the business generally, in 1920 the number of customers on their books was about 1,000, while to-day it was about 2,000, and in spite of a fall of nearly 50 per cent. from the inflated prices of 1920 in most of their products their turnover had increased. He was not there to make prophecies or promises, but he would say that so widespread were their interests, and so essential were their various enterprises to such a variety of different and important national industries, that they could work without fearing a temporary depression in this trade or that, knowing that their business as a whole was secured by its own indispensability. This, shareholders would agree, placed their company in a unique and fortunate position among industrial concerns.

SHAREHOLDER'S CONGRATULATIONS.

A shareholder remarked that he had read the report and balance-sheet with considerable satisfaction and pleasure. The chairman that day had emphasised one very great factor in their affairs—namely, that their interests were very widespread but yet homogeneous. They were to be congratulated on having a board whose policy had been so thoroughly vindicated.

The Chairman, in reply, thanked the shareholder for the laudatory remarks that had been made. He felt justified in striking a note of optimism and saying that, given normal trading times, the directors confidently anticipated placing before the shareholders a still better balance-sheet at the next annual meeting. The report and accounts were unanimously adopted.

RAPHAEL TUCK AND SONS, LIMITED.
SUCCESSFUL YEAR—GOOD PROSPECTS.

The annual general meeting of Raphael Tuck and Sons, Limited, was held, on the 27th instant, at Winchester House, Old Broad street, London.

Sir Adolph Tuck, Bart. (the chairman), in moving the adoption of the report and accounts, said that the fifty-ninth year since the establishment of the business and the twenty-fourth of its existence as a public company found them in a well-entrenched position, from which they were able to survey the past and approach the future with a feeling of confidence and satisfaction. The tide of prosperity, however, which the world had been looking for ever since the peace had yet to come, and in the meantime they must content themselves with the knowledge that the position of the company with both the trade and the public had never stood higher.

The volume of the company's business during the year under review exhibited an appreciable increase, the percentage of that increase over that of the preceding year being the largest of any of the past five years.

Proceeding to deal in detail with the various departments of the company's business, he said that the output of the Christmas, New Year, birthday, and greeting card department continued to exhibit, but in increased measure, those artistic qualities and originality of design, added to beautiful finish of production, which had ever stamped the Tuck card, and had gained for it its high reputation with every section of the public, including the most exalted quarters.

REVIVAL OF THE VALENTINE.

That recognition was crystallised in many hundreds of the most recent reviews in the leading journals of the English-

speaking world, and they had every reason to be proud of the far-reaching effect which their work might have had in influencing and perpetuating a graceful and charming custom of annual friendly salutation. There was another custom which had lain dormant for some 25 to 30 years, but which had shown significant signs of rejuvenation during the past two or three years—the valentine, the cult of which was assuredly on the eve of a great revival. The notable collection of valentine cards which they had prepared, by special request, for the coming season formed a collection calculated to appeal to both sexes.

The sale of picture postcards had shown its proportionate increase during the year. It was truly amazing, in face of our annual expenditure of some 900 millions against about 200 millions in Mr Gladstone's time, that the comparatively small amount of £5,000,000, which the return to the penny letter and the halfpenny postcard postage was officially calculated to cost the Exchequer, should be allowed to stand in the way of the expansion of the country's trade, which, as experience had proved, followed in the wake of cheap postage.

With regard to the company's prospects, shareholders would be pleased to know, within rather less than a week of the completion of the first half of their new financial year, commencing May 1st, that the invoice value of the goods sent out for that period gave every promise of exceeding the high figure of the corresponding period of last year. The directors approached the future with a feeling of confidence and satisfaction.

Sir Arthur Conan Doyle seconded the motion, and it was unanimously adopted, and a final dividend, making 8 per cent. for the year, was declared.

MR GUSTAVE TUCK'S SPEECH.

Mr Gustave Tuck, in proposing the re-election of the retiring directors, Sir Arthur Conan Doyle and Captain Desmond Tuck, said: Considering present-day conditions, I feel that we have presented a good balance-sheet, and I am content in my own mind that the business of the company is sound.

I am glad to be able to tell you that both the book and the calendar departments, which have been under my care for many years, are in a sound and healthy condition. In the great workshop at Raphael House we have created a range of 400 to 500 gift books, toy books, and painting books, and are continually thinking out others. The latest addition to the "Raphael House" Library, which comprises thirty-two volumes, is of vivid interest—"Brave Deeds by Brave Men." It is written by C. Sheridan Jones, and beautifully illustrated throughout in colour and black and white by Mr Howard Davie and Mr Harry Payne.

The "Raphael House" Library, with its beautiful illustrations, is becoming the National Library for the young throughout the Empire. "Father Tuck's Annual" and "Little People's Annual" surpass their predecessors. The books are rich with good illustrations, new ideas, and interesting stories.

Our calendars have attained phenomenal popularity, and even with the largely-increased staff our great difficulty has been to satisfy the demand. I claim that each of our calendars is a little work of art, and they vie with one another in charming the eye and the mind.

The resolution was carried unanimously.

HERRBURGER, BROOKS, LIMITED.

CONTINUED PROGRESS DURING PAST YEAR.

The fifth annual ordinary general meeting of Herrburger, Brooks, Limited, was held, on the 28th instant, at the offices of the Federation of British Music Industries, 117-23, Great Portland street, London, Mr Cuthbert E. Heath, O.B.E., chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that he thought shareholders would agree with the directors that the company had made progress during the year. Last year he was able to say that the goodwill was practically wiped out. This year he was able to say it was absolutely wiped proper reserve. During the year the directors had again reduced the price of their actions, and they had looked forward with a certain amount of apprehension to the effect it would have on their illusory. Indeed, he understood that their fears had proved just about the same as before the reduction in price, owing to as was given by the McKenna duties must necessarily result in duties were not in operation during the period of this balance-sheet, its prices, and as the result no doubt of the imposition of the McKenna duties, the company had increased its sales, and so they had been able to reduce proportionately their overhead charges.

If the McKenna duties had not come into force, it was possible that the company might have been forced to reduce its prices, but he was not sure they could have afforded to have done so. Anyhow, the result had been that they had been able to keep work in this country, and he believed quality for quality they now produced the actions just as cheaply as the Germans did. As to the dividend, the board considered that as the goodwill item had been satisfactorily disposed of, they could go a little further, but he wished the shareholders to appreciate this fact, that the amount of capital now invested in the business was £330,000, but if they deducted the £70,000 the company owed to other people from the amount of their assets, they would find that the dividend for the year was roughly just about 10 per cent. on that capital, and he did not think that 10 per cent. on an industrial venture such as their company was very excessive.

The report and accounts were unanimously adopted.

As an expression of their appreciation of the directors' services, the shareholders voted them £100 each in addition to their fees for the past year, and the proceedings terminated with a vote of thanks to the chairman.

UNITED DAIRIES, LIMITED.

GOOD YEAR—INCREASED NET PROFIT.

INCREASE OF CAPITAL APPROVED.

The tenth ordinary general meeting of United Dairies, Limited, was held, on the 30th instant, at the Connaught Rooms, Great Queen street, London.

Mr J. H. Maggs (chairman and managing director), who presided, said that the net profit amounted to £509,145, and they were proposing to pay a final dividend at the rate of 9 per cent., making 14 per cent. for the year. That profit showed an increase of £2,600 as compared with that of the previous year, but it must be remembered that they had then brought into account the settlement of the Food Controller's action. In one respect that result was disappointing, but as most of the shareholders knew, their milk supplies had to be contracted for 12 months in advance. On the outlook, when their contracts were entered into last autumn, they expected to reap a modest profit on their winter's milk trading.

WINTER MILK TRADING.

Those expectations, unfortunately, were not realised, and in their winter's six months' milk trading actually involved them in a net loss both to their wholesale and to their retail trade. Shareholders might ask the reason for selling at a loss. Several different factors came into play. Whilst in his opinion, on the cost of production, the farmer was entitled to every penny he received for his milk, the cost was so high that milk could not be manufactured into any class of dairy produce except at a heavy loss, and with the experience of the previous winter fresh in their memories, practically all milk-manufacturing creameries and condenseries suspended or limited their production, and dumped their winter milk on the fluid market at the best price they could obtain regardless of profit. With supplies daily increasing through the autumn and winter, mild weather, bad trade, and consequent poor public demand for liquid milk, it was not considered advisable to advance the retail price in mid-winter. It was to the strength of their business in other departments that they owed some mitigation of those losses on their winter milk trading.

SALES.

Their total sterling sales, in spite of reduced prices for milk, had increased by over £1,250,000. They again recorded satisfactory increases in the staple articles of the dairyman's trade. Butter sales were up by 5½ million lbs, and eggs by over 13 millions. Last year they had provided £30,000 to establish scholarships at agricultural colleges. With the assistance of a committee, a scheme had been drawn up and approved, and the funds invested by the trustees. Their provision business continued to do well, and the new product, "Crustless Cheese," had met with a splendid reception from the trade and the public.

LABORATORY AND FARM INSPECTION SERVICE.

With their increased business, their laboratory and farm inspection service had again expanded. In the main, their suppliers welcomed the visits of the inspectors, and co-operated with the company in their endeavours to encourage the production of clean milk. Numerous tests as to the efficiency of their pasteurisation methods had been conducted by Professor Hewlett, and in no single case of samples taken from their pasteurised milk had tubercle been found. On the scientific side, following on suggestions made at the Guildhall Conference on Milk Pasteurisation,

1923, they had provided facilities for a thorough and independent investigation of the effects of pasteurisation of milk by the low-temperature system. All the experiments had been carried out at two of the leading centres of research, which were quite independent of the milk trade. The results proved without question that pasteurisation for cities and large towns was the only practical solution of the problem of a safe milk supply, and probably in time public opinion would demand its being made compulsory.

DELIVERIES IN SEALED BOTTLES.

The important step of delivering all milk in sealed sterile bottles came as a sort of final coping-stone to the fine structure of improvements in milk distribution which United Dairies had been steadily building up ever since its incorporation. The delivery of milk in sealed bottles was in their view inevitable, firstly because it was clean delivery, secondly because it assured full measure, uniform quality and richness to every customer, and thirdly because it protected milk from the final hazards of domestic contamination which were even greater than the hazards of dusty streets.

ISSUE OF FURTHER CAPITAL.

The change over was a gigantic task, and all the work had to be done so economically that the milk might be delivered to the consumer's house for less money than the same consumer often paid for aerated water. The capital cost for changing a business of their size from a can to a bottle delivery was very considerable. It was in order to finance the necessary extensions to meet the requirements of an increased trade generally that they were now proposing to issue further capital. Following their invariable practice, preferential allotment would be given to shareholders, employees, farmers, and customers, and special facilities would be given to those of their employees who might wish to invest, to spread their payments over a larger period than the ordinary public.

The report and accounts were unanimously adopted, and a resolution approved increasing the capital by the creation of 500,000 shares of £1 each.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.
INCREASED PRODUCTION.

The sixteenth ordinary general meeting of the Kern River Oilfields of California, Limited, was held, on the 28th instant, at Kingsway Hall, London, W.C., Mr William Ivey (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the combined total production of the whole of their interests during the year had increased by no less than 265,035 barrels, which was roughly equal to 20 per cent. on the previous year's production. In that way they were succeeding in replacing the loss of the McLeod production as well as the natural decline of their older wells. They had been able to influence the output and production therefore from their properties, but unfortunately there was one thing they had not been able to control, and that was the price of the commodity. If they had been able to influence or control that price and to bring it back to that ruling during 1921-22 there was no doubt but that the profits and dividends would have been very much larger.

In Kern section 33 the decline had only amounted to 11,733 barrels, or equal to just over 2 per cent. There were 242 wells now producing on that property, and when he informed them that the average per well to-day was only 6½ barrels—almost a trickle from

each well—they would see how careful and watchful the management had to be to maintain such a production from year to year. During the year they had drilled two new wells, one of which had come in with twenty barrels per day. They would undoubtedly drill more wells on the corner of the property where there was room for them, for a production of twenty barrels per day from shallow wells made it a very good proposition provided they worked economically. Section 19 showed a slight increase of 2.083 barrels, or 13.38 per cent. This splendid record from both of these old properties was the result of careful nursing from year to year, and the results obtained were only obtained by constant care and watchfulness.

From the St. Helens property they had a total combined production which, unfortunately, showed a natural decline equal to 23.6 per cent.

In conclusion, the Chairman said that the new fields were now giving evidence of a valuable future, and production should increase. He was disappointed that the dividend was not more, but much relieved that it was not less, having regard to the conditions generally.

The report was unanimously adopted, and a final dividend of 7½ per cent., making 12½ per cent. for the year, was declared.

TRANSVAAL AND RHODESIAN ESTATES, LIMITED. COMPANY'S CHROME INTERESTS.

The ordinary general meeting of the Transvaal and Rhodesian Estates, Limited, was held, on the 27th instant, at River Plate House, London.

Mr H. G. Latilla (the chairman) said that the accounts presented showed the figures after a revaluation of assets had been made. Taking the assets on the most conservative basis, and making no allowance for appreciation of any one asset, the shares were worth intrinsically 12s each. There was to-day a large accretion to this value by reason of the improvement in their Nigerian assets.

Dealing with the most important of the company's assets, he said that at the deep levels in the Fred Mine ore of great value had been exposed, and as from now there should be handsome monthly profits accruing to the Gem Rhodesia Company. With regard to the company's chrome interests, after many months of negotiation he had been able to arrange on behalf of this company and its associates the terms of an agreement with the largest users of chrome. This arrangement provided for a considerable cash payment; it would enable the company to proceed at once both with the development of their properties and the construction of a branch railway from the mines to the Rhodesian Company's main line, and would ensure an outlet for their production over a period of years at the full market price. At to-day's price for chrome they should earn large profits. They had an unknown number of hundreds of thousands of tons of alluvial chrome ore, which recent assays had proved to be of great value, and, as it could be easily handled once the branch line was in operation, there was from that source alone an assured profit running into very big figures. At the northern end of the chrome property there was an asbestos mine of considerable value. It produced the best brand of asbestos in Rhodesia, and to-day there was a very free market in the product.

The company's considerable interests in Nigeria occupied an important place among their assets, and in due course would provide large profits. Recently he had been able to consummate the work of many months by concluding a very satisfactory deal on behalf of the Nigerian Base Metals Corporation with the Niger Company. The immediate benefits accruing to the Transvaal and Rhodesian Estates were very material.

In conclusion, the Chairman said that the company was in a position to declare an interim dividend of 6d per share, less tax, the payment of which would be in the early days of January next. Should all go as might be expected, they should be able to pay a further dividend for the current year.

The report and accounts were adopted.

RHODESIA EXPLORATION COMPANY, LIMITED. POSITION AND PROSPECTS.

The seventh ordinary general meeting of the Rhodesia Exploration Co., Limited, was held, on the 30th instant, at River Plate House, London, Mr H. G. Latilla (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the accounts showed a loss of £13,221 for the eighteen months under review. It was disheartening to any board to have to come before shareholders year after year and plead for patience, but there had been no alternative. The company's assets were valuable, and must be nursed. He had thought an amalgamation with other similar interests would be the best course, and there had been discussions. An opportunity was soon likely to occur for a satisfactory scheme—one which they could, at least, put forward for consideration. He was not going to prejudice their

affairs by stating what he thought was their minimum price, but it would have to represent something considerably in excess of to-day's quotation for the shares. With their huge land holding as the company's principal asset, they could not look for much revenue until this had been successfully dealt with.

With regard to their interest in chrome, he had been able to agree on behalf of this company and its associates the terms of an agreement with the largest users of chrome. This arrangement would enable them to proceed at once both with the development of their properties and the construction of a branch railway from the mines to the Rhodesia Company's main line, and would assure an outlet for their production over a period of years at the full market price. At to-day's price for chrome they should earn large profits. Experts had advised them that the mines contained an unlimited supply of high-grade ore.

As to new business, he had recently had put before him the particulars of two gold-mining ventures in Rhodesia, both of which would appear to offer chances of being something very big. He had been able to arrange for other parties to take the initial risks, and, if all went well, they would offer to the board a material interest in both of the ventures at cost price.

In conclusion, the Chairman said that the company had cash or its equivalent equal to £50,000. In addition, they had shares and debentures in other companies standing at £46,153, some portion of which could be realised at any time, so that they could well afford to "sit tight."

The report and accounts were unanimously adopted.

Messrs Samuel Montagu and Co. write on October 28th as follows:—

GOLD.

A substantial amount of gold came into the open market and was mostly taken by the Continent, inquiry for India not being on a large scale, and the rise in the value of the pound preventing shipments from being made to the United States. From the 26th inst. the price has ruled at 84s 10 1/2 per fine ounce—a figure not touched since September 2nd last. Recent gold shipments to New York during the period such operations were practicable approximated £8,500,000. The following movements of gold to and from the Bank of England have taken place since those reported in our last issue:—

Oct.	22	23	24	25	26	27	28
Received.	nil	165,000	1,976,000	nil	10,000	200,000	515,000
Withdrawn.	165,000	1,976,000	10,000	200,000	515,000	nil	nil

The destinations of the £615,000 sovereigns withdrawn were announced as follows:—£100,000 to Canada, £10,000 to the Argentine, £5,000 to India, and £500,000 set aside for account of the South African Reserve Bank. At the end of last week withdrawals of gold were made from the Bank for shipment to New York, and large consignments were effected. During the week under review £2,466,000 on balance has been withdrawn, increasing the net efflux to £5,690,000 since the resumption of an effective gold standard. The withdrawal on the 23rd inst.—namely, £1,976,000—is a fresh high record for a daily movement during this period. The details relating to India's foreign trade during the month of September last are as follows:—

Imports of merchandise on private account	Exports, including re-exports, of merchandise on private account
Net imports of gold on private account	Net imports of silver on private account
Net imports of currency notes	Net imports of remittances of funds
Total visible balance of trade	
Net balance of remittances of funds	

SILVER.

Business in silver during the week under review has been mainly confined to the carrying forward of contracts by bears. Hence the position with regard to silver for cash delivery has become more acute, and the difference between the spot and forward quotations widened yesterday to 3d. The cash price remained unchanged at 33d for three days from the 22nd to the 24th inst., and at this level, owing to the firmness of the New York exchange, America was disposed to feed the market. Very little demand was manifest, however, and prices sagged until 33d and 32d were touched yesterday, recovering, however, 1d for both positions to-day. United Kingdom imports and exports of silver during the week ending the 21st inst. were as follows:—

Imports.	Exports.
Belgium	China
U.S.A.	British India
Other countries	Other countries
Total	Total

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

Notes in circulation	Oct. 7.	Oct. 15.	Oct. 22.
Silver coin and bullion in India	18,961	19,052	19,027
Silver coin and bullion out of India	9,018	9,009	8,984
Gold coin and bullion in India	2,232	2,232	2,232
Gold coin and bullion out of India	2,232	2,232	2,232
Securities (Indian Government)	5,711	5,711	5,711
Securities (British Government)	2,000	2,100	2,100

No silver coinage was reported during the week ending 22nd inst. The stock in Shanghai on the 24th inst. consisted of about 54,500,000 ounces in sycee, 68,000,000 dollars, and 6,480 68,500,000 dollars, and 4,450 silver bars on the 17th inst.

NOTICES.

A branch of the Bank of Athens bank has now been opened in Albania, at Korytsa.

A branch of the Commercial Bank of Australia, Limited, has been opened at Hastings (New Zealand).

The Midland Bank announces the opening of a new branch in High street, Tonbridge, Kent, under the management of Mr Donald Thomson.

Barclays Bank, Limited, announce that they have opened new branches at High road, Loughton, Essex, under the management of Mr W. Woodard, who is also manager of the Woodford branch; and at 2, St. Mary street, Weymouth, under the management of Mr W. Porteous. They also announce that they have transferred their business at Bowness, on Windermere, to new premises at Central Buildings, Queen's square, under the management of Mr L. A. Fogg.

The Standard Bank of South Africa, Limited, announce the opening of an agency at Vermaas, near Lichtenburg, in the Transvaal.

Reports and Notices.

Mr Lewis Huth Walters has joined the board of the Indemnity Mutual Marine Assurance Company, Limited.

The Royal Exchange Assurance announces that Mr Arthur Ralph Cook, of Messrs Cook, Son, and Co. (St Paul's), Limited, has been elected to a seat on the court of directors at the head office of the corporation.

Messrs N. M. Rothschild and Sons have received information from Alexandria that owing to the illness of Judge Vaux, the President of the Mixed Court of Appeal, and to the crowded state of the list, the hearing of the appeal in the case of Ottoman loans secured on the Egyptian tribute has been adjourned to December 31st next.

The Western Electric Company, Limited, of London, will from October 31, 1925, be known as "Standard Telephones and Cables, Limited." The registered and executive office will remain at Connaught House, Aldwych, W.C. 2.

We are informed that Mr Charles John Shea, formerly chief of the statistical department of the Anglo-South American Bank, Limited, has been appointed secretary of that institution, *vice* Mr Ernest E. Hayes, recently deceased.

GOVERNMENT STOCKS, &c.

LIBERIAN LOAN OF 1912.—The Council of Foreign Bondholders have received advices from the National City Bank of New York, the fiscal agents for the Liberian loan, that they are in possession of the necessary funds for the encashment of the January, 1926, coupons on the bonds outstanding. There is also a small balance available for sinking fund, which will probably be increased by further remittances. The fiscal agents will be glad to receive tenders, which must be in their hands at their offices, 55 Wall street, New York, not later than December 14, 1925. Accepted bonds will be for delivery on or before January 1, 1926, for payment on that date, and must bear the coupons due July 1, 1926.

RAILWAYS.

BENGAL DOOARS RAILWAY.—The following statement, extracted from the report, shows the working results for the past five years:—

	Year to March 31, 1921.	Year to March 31, 1922.	Year to March 31, 1923.	Year to March 31, 1924.	Year to March 31, 1925.
Gross earnings	Rs. 15,36,184	Rs. 14,27,068	Rs. 18,13,192	Rs. 20,53,379	Rs. 22,63,894
Working expenses	9,36,749	8,68,479	8,45,497	10,91,748	11,52,882

Difference in exchange, &c.,	9,843	— 754	— 306	3,258	7,373

The ordinary stockholders again receive a 10 per cent. dividend for the year.

BANKS.

GUARANTY TRUST COMPANY OF NEW YORK.—The total assets of this institution at September 30, 1925, were \$649,815,086. Cash amounted to \$141,427,448. U.S. Government bonds and certificates amounted to \$38,130,278. Public securities stood at \$26,500,240. Other securities amount to \$22,832,297. Loans amount to \$355,639,756. With regard to liabilities, capital stands at \$25,000,000. Surplus fund is \$15,000,000. Undivided profits amount to \$6,229,296. Deposits amount to \$528,971,656.

RUBBER, &c.

ASAHAN RUBBER ESTATES.—The report of this company for year ended July 31, 1925, reveals a net profit of £33,491, against £11,340. The ordinary shareholders receive 20 per cent., against 10 per cent. Income-tax will be deducted at rate of 4s 4d in £. The sum of £5,924 is put to reserve and £13,598 carried forward, against £12,030 brought in. Crop yielded 605,877 lbs. Average net sale price was 2s 0.65d per lb, against 1s 3.07d per lb in preceding year. Cost of production was 11.44d per lb, as against 9.84d per lb. Total planted area is 2,893 acres. Balance-sheet reveals total assets £215,324. Cash is at £19,045. The company has £34,515 in balance-sheet, being cost of investment in British Government securities.

BAKAP RUBBER PLANTATIONS.—The report for year ended June 30, 1925, shows a profit of £6,116. This amount has been transferred to profit and loss account, and after payment of debenture interest, £2,100, there is a balance at debit of £1,933, which Estate has, as usual, been charged against profits. Tapping, as estate has been working at a profit. Under the export restriction which realised 1s 8 1/2d per lb.

CEYLON LAND AND PRODUCE.—This company has secured a net profit of £46,340 for year ended June 30, 1925, against £39,880 for preceding year. The ordinary dividend is raised from 25 per cent. to 30 per cent. for the year. The sum of £7,000 is put to reserve and £10,873 carried forward, against £10,833 brought in. The report contains a valuable statistical table showing results achieved by the company from 1890 to 1925. The balance-sheet shows total assets £320,190. Cash is at £45,248. The only investment is British Government 3 1/2 per cent. Conversion Loan at cost, £30,827.

CHIMPUL (F.M.S.) RUBBER ESTATES.—The report for year ended June 30, 1925, shows a net profit of £8,043, against £1,600. The ordinary dividend is 10 per cent., against 3 per cent. for pre-

ceding year. The carry forward is £4,365, against £5,917 brought in. Balance-sheet reveals total assets £118,012. Cash is at £6,161. The only investment is British 3 1/2 per cent. Conversion Loan at cost, £6,234.

DJASINGA RUBBER AND PRODUCE.—The rubber crop harvested during year ended June 30, 1925, totalled 955,325 lbs. Cost of production was 1s 0.13d per lb, as against 9.75d per lb. Average net sale price was 1s 8.77d per lb, as against 1s 1.15d per lb. Tea crop amounted to 389,428 lbs. Cost of tea production was 11.83d per lb, as against 10.28d per lb. Average net sale price for tea was 1s 0.70d per lb, as compared with 1s 0.89d per lb. The general reserve amounts to £20,000. Net profit has jumped from £16,237 to £34,626. The ordinary dividend has been raised from 4 per cent. to 7 per cent. The carry forward is £13,235, against £14,138 brought in. Total assets are £513,030. Cash is at £2,135. The company has British Government 5 per cent. War Loan at cost, £10,105.

HEVEA (JOHORE) RUBBER PLANTATIONS.—The trading profit for year ended June 30, 1925, amounted to £4,728, and, after charging debenture interest, there is a final profit of £3,681, compared with the loss of £959 shown last year. The debit balance forward is now £5,508. The 10 per cent. debenture stock falls due for redemption on December 31st next. With the continuance of the present favourable prices, the directors hope to deal with the arrears of dividend on the preference shares within the next 12 months.

MAMBAU (F.M.S.) RUBBER.—The report for year ended June 30, 1925, shows that net profit amounted to £12,447, against £2,429. The ordinary shareholders receive 15 per cent., against nothing for preceding year. The company are writing £500 off estates account, and are carrying forward £1,602, subject to additional remuneration to directors. The average gross price realised, including stock on hand at valuation, was 1s 10.62d per lb. The cost of production, including staff commission and bonus, was 10.888d per lb. The total cost, including loss in weight, landing charges, insurance, administration expenses, and all other charges, was 1s 0.79d per lb. Balance-sheet shows total assets £97,653. Cash is at £7,418. There are no investments.

PULLANGODE RUBBER ESTATE.—The report for year ended June 30, 1925, shows a net profit of £18,436, against £2,746 in preceding year. The ordinary dividend is 30 per cent., against 6 per cent. The sum of £4,000 is put to reserve, and £1,000 is placed to income-tax reserve account. The sum of £1,887 is carried forward, against £1,952 brought in. The rubber harvested during the year under review amounted to 256,950 lbs, as compared with an estimate of 200,000 lbs and a crop of 208,473 lbs for the previous season. Of this quantity 233,008 lbs have realised an average net price of 2s 0.08d per lb, while 23,942 lbs, sold since the books were closed, have been brought in at the average of 3s net per lb. Crop outlay amounted to £8,568 19s 3d, equal to 8d per lb, f.o.b. Calicut. The balance-sheet at June 30, 1925, reveals total assets £80,407. Cash is at £11,878. There are no investments.

SELTAR PLANTATIONS, LIMITED.—The report and accounts for year ended June 30th last show net profits of £5,529. After writing off the whole of the preliminary expenses, amounting to £5,322, there is a balance to the credit of profit and loss account of £172. Under the restriction regulations the standard production has been fixed at 268,800 lbs, which allowed an export for the year to June 30, 1925, of 150,050 lbs, the all-in costs being 11.31d per lb. The sales for the period amounted to £12,598, equal to 1s 8.14d per lb. The whole of the company's property, namely, 840 acres, is under production. The directors have declared an interim dividend in respect of the year ended June 30, 1926, of 1 1/2d (approximately 7 1/2 per cent.) per share, less tax. The balance-sheet shows that stocks of rubber amount to £3,789, investments at cost £4,469, and cash in hand and at bank £4,249.

STRATHGILL (PERAK) RUBBER.—Net profit for year ended June 30, 1925, amounted to £12,062, against £2,565. The ordinary dividend is raised from 2 1/2 per cent. to 15 per cent. Tax will be deducted at 4s 4 1/2d in £. The sum of £1,041 is put to reserve, and £400 to furlough expenses reserve. The sum of £9,030 goes forward, against £8,881 brought in. The directors consider that it is desirable to bring the issued capital of the company nearer to the value of the property as shown in the balance-sheet, and they therefore recommend that £6,981 standing to the credit of reserve account should be capitalised and distributed among the members, free of income-tax, by issuing to them one fully-paid new share for every ten held. Total assets are £102,215. Cash is at £6,370. The only investment is £5,000 in British Treasury bills at cost, £4,948.

TANDJONG RUBBER.—Report for year ended June 30, 1925, shows a net profit of £684,459, against £26,091. The ordinary dividend is 2 1/2 per cent., from which tax will be deducted at 4s 4 1/2d in £. The ordinary dividend for preceding year was 10 per cent. The sum of £11,316 is put to reserve and £27,354 carried forward, against £26,461 brought in. Crop for year amounted to 1,482,207 lbs. Average net sale price was 1s 8.69d per lb, as compared with 1s 2.31d per lb. Cost of production was 9.64d per lb, against 8.69d per lb. Balance-sheet shows total assets £382,889. Cash is at £14,644. British Government securities are in the balance-sheet at cost, £53,074.

MISCELLANEOUS.

A. J. STEVENS AND CO.—The net profit of this concern has risen from £40,733 for 1923-24 to £42,117 for year ended August 31, 1925. The ordinary dividend is again 1 1/2 per cent., less income-tax. The sum of £15,000 is put to reserve and £26,523 carried forward, against £26,092 brought in. Balance-sheet shows total assets £573,457. Nothing stands against goodwill in balance-sheet. Cash is at £38,401.

INTERNATIONAL FINANCIAL SOCIETY.—Capital subscribed and paid up £187,500, in 187,500 shares of £1 each. The income for the year ended September 30, 1925, amounted to £35,642, which, added to the £13,800 brought forward from the previous year, makes £49,442. Deducting debenture interest and current expenses, there remains £34,745 to be dealt with. The directors recommend a dividend of 8 per cent. (less tax). This will leave a balance of £22,932 to be carried forward. The investments are taken into the balance-sheet at the amount at which they stand in the books of the society, less sums from time to time transferred from profit and loss account. According to a valuation prepared by the directors as on September 30, 1925, their value exceeds the sum at which they are stated in the balance-sheet.

KERN RIVER OILFIELDS OF CALIFORNIA.—The balance-sheet, dated May 31, 1925, reveals total assets £2,008,211. Cash is at £29,953. Investments stand at cost in the balance-sheet. They are shown separately and are as follows:—5 per cent. War Loan, £348,354; 3 1/2 per cent. Conversion Loan, £3,047; London Electric Railway 4 1/2 per cent. Red. 2nd Debenture Stock (guaranteed under Trade Facilities Act), £47,884. Tampico Oil Prior Lien Registered Debenture Stock, £11,500, making total investments, £410,785. Shareholdings in subsidiaries at cost are also shown separately, and stand at £725,909. The net amount of oil produced amounted to 1,6

COAL.

Our Sheffield correspondent writes:—The coal trade is rather better, at any rate in parts, and some foreign countries are buying on an increased scale. The outlook for coke is believed to be improving. South Yorkshire best steams are quoted at from 18s 6d to 19s, f.o.b.

Our Workington correspondent writes:—The coal trade is picking up a little, but business has not expanded sufficiently to enable owners to keep their pits working full time, and from one to three days a week are being lost. The Irish market is rather livelier, though the Lancashire and Scottish competition has diminished only slightly. Best round is 20s to 21s 6d; gas coal, 20s to 21s; house nuts, 20s to 21s 6d; and steam nuts, 20s. per ton, all f.o.b. Best house locally is 34s 10d per ton at pit, and the demand is somewhat brisker. Industrial fuel is also in stronger request, with best steams 25s and washed steam 24s. Gas coal is 26s to 27s per ton at local works. The local furnaces on ordinary iron are taking more coke at 18s to 19s, according to carbon content.

Our Cardiff correspondent writes:—There has been practically no expansion this week in the volume of business on the Cardiff coal market. The orders placed on American account are beginning to react favourably on the prices of the best dry steam coal qualities for ordinary steam coal descriptions, large and small, the market has been depressed, and the fall in the value of the franc has introduced a new disturbing and weakening factor. France is the principal export market for South Wales coals, and during the week led to the postponement of French orders, and to a contraction of credit facilities. Shipments are heavier than they were a few months ago, but they are still below normal, and the collieries approximate quotations:—Best Admiralties, 23s to 23s 9d; seconds, 21s 6d to 22s; best dries, 23s to 24s; Western Valleys, 19s 6d to 20s; Eastern Valleys, 19s 3d to 19s 9d; best bunker smalls, 9s 9d to 10s 6d; ordinary cargo smalls, 8s 6d to 9s; coking smalls, 10s 3d to 10s 6d; Anthracite best large, 45s to 46s; Red Vein, large, 30s 6d; stove nuts, 57s 6d to 60s; rubbishy culm, 11s 6d to 12s; coke ex ship, 29s 6d to 30s. The improvement in the iron and steel trade has been maintained during the week, and latterly the imports of iron ore have been exceptionally heavy.

IRON AND STEEL.

Our Middlesbrough correspondent's report, dated October 29th, is as follows:—Pig-iron: There are hopes of further orders with the United States, and in the meantime a fair amount of business is passing at 66s 6d per ton f.o.b. for No. 3 Cleveland G.M.B. There is a strong steady demand for hematite, while East Coast mixed numbers are fully 74s 6d per ton. Manufactured iron and steel: The steel trade outlook is distinctly brighter, and producers are more hopeful. Average market quotations are as follows:—steel ship plates, £7 15s; steel ship angles, £7 5s to £7 10s; iron bars, £11 5s; steel rails, £8. Iron ore: There are a few odd cargoes changing hands on the basis of best Bilbao Rubio at 20s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—The spirit of optimism is spreading in the iron and steel trades, but the more cautious makers do not look for any substantial betterment during the present year. Unemployment has been shrinking continuously for several weeks past. The United Steel Companies, Limited, have decided to proceed with their important extensions in Lincolnshire, which were suspended two years ago owing to unsatisfactory trade and financial conditions. The extensions include melting plant with a capacity of 6,000 tons per week, and one of the largest plate mills in England if not in Europe. When completed these works will represent more than four millions of capital. Business generally is still depressed, especially on the heavy side, as the railways are ordering but little and shipbuilding requirements have never been less. Orders from the motor industry are steady, and includes large quantities of sheets, springs, axles, various forgings and castings, and tools. Tramway track work is in request from the home and South American markets, but little is coming in from the Continent. Makers of tools report conditions are still quiet, but tending to improve. The wire trade is a little better. The output of hand tools is large on both home and overseas account. In the plate and cutlery branches business is unevenly shared, and there are instances of quietude and activity side by side. Competition is keen in all branches, and the result of cutting of prices has brought prices down almost to the vanishing point.

Our Glasgow correspondent writes:—Inquiries are keeping up to last week's standard, and some good lines in structural steel and plates are reported, and a more confident tone generally is observable. For actual business, however, prices have to be cut to very low levels, steel plates being done at £7 15s to £7 17s 6d, f.o.b., and £8 for local delivery; and angles at £7 5s, f.o.b. Scotch No. 3 pig-iron is firm at 77s 6d per ton at works, but this business does not show any increase in volume. Shipments last week of all grades amounted to 512 tons, of which 432 tons were on foreign account. Last year in the corresponding week the shipments were 1,243 tons and 1,096 tons respectively. Malleable iron makers are busy with special lines of tube strip, but, generally, the reduction in price has not resulted in marked improvement. Re-rolled steel is in demand, but export orders are difficult to secure in the face of Continental competition. Black sheet makers are working full time, and are quoting January-February delivery for export specifications, which are numerous—prices are steady. Galvanised corrugated sheets are in steady demand.

CUMBERLAND IRON.

Our Workington correspondent writes:—There has been a healthier tone in the Cumberland and North Lancashire hematite pig-iron trade this month, and though there is still no business of other than a hand-to-mouth character at command there has been an increase in users' immediate needs, and the position at the moment is that the whole of the make of the ten furnaces in blast in the district is being absorbed, and that the stocks lying in the works yards are being reduced. Circumstances are held to be more favourable to a further improvement during the next few weeks, and in that case another furnace would probably be lighted. The local consumption will almost certainly remain heavy. Both at Workington and Barrow orders represent a tonnage ensuring employment for rolling mills until the close of the year. There is no demand from the Continent or from America, but the requirements of South Wales, the Midlands, and Scotland are more substantial. It is mostly low-phosphorus iron that is going outside the district, and this special quality is quoted at £4 15s per ton, delivered at Glasgow. Semi-special iron is in much weaker demand at Glasgow. Bessemer mixed numbers are request at 84s to 87s 6d per ton. Bessemer mixed numbers are steady at £4 1s 6d, c.i.f. Welsh ports; £4 6s 6d at Glasgow; £4 8s 6d at Sheffield; and £4 12s 6d at Birmingham. Malleable iron being smelted in the Furness district is £6 per ton, and iron being smelted in the New business is hard to come ferro-manganese £15 10s per ton. New business is hard to come by in the steel trade. Rails are £8 10s; sleepers, £10 10s; and fish plates, £12 10s per ton. The consumption of native ore is chiefly local, the sales to the East Coast and Scotland being meagre, with the result that few of the mines are raising their normal production, and that some of them are still idle. Superior sorts are 18s to 19s, and ordinary kinds from 14s to 15s.

OTHER METALS.

TIN.—The market for tin displayed considerable irregularity in sympathy with fluctuating Eastern advices, combined with liberal selling orders. A good business, however, was effected. Standard cash sold at £282-£284 10s, £281 5s-£286 5s, with three months at £281-£284 5s, £279 5s, and £285. In the East sales were reported at £294 5s, £289 15s, and £292 10s.

COPPER.—Values generally marked a downward tendency with slight irregularity at times, sellers being well to the fore, though offerings were readily absorbed. Standard cash sold £62 12s 6d to £62, three months £63 15s to £62 12s 6d, and £63 15s 3d LEAD opened firmer, but subsequently became irregular, with dealings on a liberal scale. Good soft foreign pig, October, sold £39 8s 9d-£37 17s 6d-£38 12s 6d, November £38 17s 6d to £38-£36 12s 6d, December £38 2s 6d-£37, £37 17s 6d, January £37 10s-£36 12s 6d, and £37 7s 6d. SPelter slightly irregular while easier on balance, and a fairly good business transpired. October sold £40 12s 6d-£39 17s 6d, November £39 17s 6d-£40, and £39 12s 6d, December £39 15s to £39 2s 6d, January £39 10s, £38 15s, and £38 18s 9d. ANTIMONY firmer. English specials quoted £80 to £85 as to make and quantity, foreign refined £69 to £70 ton, ex warehouse. ALUMINIUM quiet. Home delivery £120, export £125 ton. QUICKSILVER firmer. Spot quoted £14 5s to £14 10s per bottle. WOLFRAM firm. Forward quoted 20s 3d to 20s 6d per unit, c.i.f. terms.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Buying has been done on more restricted lines this week, but the slight slackening has brought no relief in the matter of prices; indeed, there is again an all-round advance in all qualities of tops and in most descriptions of yarns, and in all sections of the industry it is more difficult to buy than it was a week ago. The real fact is that stocks are very much reduced. They were not large in wool and tops to begin with, and the heavy transactions of the last few weeks have practically cleared the market. Tops for spot delivery are at a premium, and most topmakers can only accept new business for delivery from January onward. In many cases purely protective rates are now being quoted, and judging from the way in which wool is selling in the primary markets it is not going to be possible to get cheaper raw material in the near future. The general opinion seems to be that values will hold till at least the beginning of next year, many traders believing that the real battle will have to be fought when the first auctions of 1926 are held in London. The following tables show the course of values during the last seven months:—

	TOPS IN OIL.			
	Mar. 26.	June 25.	Sept. 24.	Oct. 29.
1925.	d	d	d	d
64's warp	62	51½	50	56
60's super	57	46	45	51
56's average	42	31½	30	35
46's carded	30	21½	22	25
40's prepared	29	20	20½	24

	WORSTED YARNS.			
	March 26.	June 25.	Sept. 24.	Oct. 29.
1925.	s d	s d	s d	s d
2-48's, 64's	6 8	5 8	5 6	5 11
2-32's, 60's	5 10	4 10	4 7	5 0
2-20's, 56's	4 8	3 8	3 6	3 8
2-16's, 46's	3 2½	2 7	2 6	2 7
1-16's, 40's	3 1	2 5	2 3½	2 5½

Some good business has been booked in both merino and cross-bred yarns during the last few weeks, and spinners are now fairly well employed, especially as particulars against old contracts have been coming to hand in good volume. It is becoming increasingly difficult, however, to sell on to-day's rates, and the view is generally expressed that values have gone high enough. Manufacturers have also done very well recently, and looms are better employed than for a long time past. Here, again, sellers are finding it difficult to pass on the recent advances, but the majority are standing firm. The outlook generally is satisfactory, though traders realise that the financial crisis in France may have a very direct bearing upon the wool market.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Cables from Australia have been less frequent this week than last. The trade in Yorkshire is waiting anxiously the arrivals from the first sale. Accounts are better than usual, and in view of the great let-up that has taken place during the past fortnight, Adelaide should be 5 to 10 per cent. dearer. Selling brokers are

wisely meeting the market, and it will be to their interests to continue this policy. The same applies to growers, for to-day's prices are higher than the most sanguine expected. It has been a case of values apparently shrinking below an economic level, followed by buyers from Northern France to some extent running away with things. However, all private cables clearly indicate a strong market, and even South Africa, which seemed to be hesitating last week-end, has proved this week to be firm and strong, with vigorous buying. Some really exquisite quality wools have been offered during the past month at Port Elizabeth, the northern Karroo wools this season being exceedingly well grown, and of good super 70's to 80's quality. In a private letter received this week from East London, we are informed that the clip is in excellent condition, and the inauguration at that centre of public sales should make that market as popular as Durban. Everywhere markets are very strong, with wool selling exceedingly well.

The event of the week is undoubtedly the crisis through which France is passing, and everybody is wanting to know what effect the depreciation of the franc is going to have upon French buyers. So far it has made no difference. It is understood that French wool textile firms have put the bulk of their capital into sterling, and many are of the opinion that the activity of French buyers since August has been due to a desire to avoid losing their capital consequent upon the depreciation of the franc. There is no doubt that activity continues in Northern France, and so long as manufacturers can pass forward their products to the ultimate consumer they will continue to buy wool.

THE COTTON TRADE.

LIVERPOOL, October 29, 1925.

The United States Agricultural Bureau issued another of their crop estimates on Tuesday last. The figures were again larger than anticipated, and, coming on a surprised market, caused a smart fall in values. The indicated crop of 15,226,000 bales, with 9,520,000 bales ginned, shows an increase of some 1½ million bales since the report of September 23rd. This increase of 10 per cent. on the month may be regarded as very remarkable. The estimated spot sales from the 23rd to to-day (inclusive) amount to 34,000 bales, including 800 bales for export. Of these 19,350 are American, 2,200 Brazilian, &c., 2,750 Peruvian, &c., 2,550 Egyptian, 4,980 African, 1,250 East Indian, and 920 sundries. The imports for the week are 70,894 bales American, 17,563 Brazilian, &c., 7,128 Peruvian, &c., 5,857 Egyptian, 8,284 African, 3,574 East Indian, making a total of 113,300 bales. To-day middling American is quoted at 10.68 per lb., fully good fair Sakel Egyptian 22.85, fair Brazilian 11.28, good fair mod. rough Peruvian 16.00, smooth Peruvian 12.78, fully good fair Tinnivelly 9.90, good fair East African 13.45, middling West African 10.53. There has been steady trade calling all week, and the low prices have enabled many orders to be booked. The supplies of good grade cotton coming to hand are very small, and are quickly snapped up. The basis for these is still tending to harden, while for the lower grades the basis is much easier. Speculation is conspicuous by its absence. More has been done in Egyptian cotton this week, and rumours of the Egyptian Government intending to buy spot cotton caused a relative advance over American of almost ¾d per lb., but the price at which the Government intend to come in and buy has not been mentioned. At noon to-day the difference between January Egypt and January American futures is 8.45d per lb. Trading in Empire and miscellaneous contracts has been very small.

MANCHESTER, October 29.

Business in the market this week has been disorganised by the further decline in raw material rates, and most buyers have been cautious in operating. Sentiment, for the most part, is still bearish. The prices now ruling for piece goods are certainly more attractive than for a long time back, and, given stability in values, there is every probability of an increased turnover. India has provided a considerable inquiry, and very fair sales have been put through in light fabrics and grey staples, chiefly for Calcutta. There is little hope of any big improvement in trade for China just at present, although fancies have been sold in moderate lots this week. For the several minor outlets East and West a scattered business has been done in limited quantities, and some necessary buying has taken place in home trade goods. A very fair inquiry has been met with in American and Egyptian yarns for home use, but transactions have not been important. Shippers of yarn have hesitated to place orders of any weight with producers.

THE JUTE TRADE.

DUNDEE, October 29.

The rapidity with which prices of raw jute have gone up during the past fortnight has staggered the trade. All the time the advance was going on spinners here purchased large quantities of the fibre, and are now fairly well bought to the end of June next year. In the past day or two, however, the position in Calcutta has developed a quieter tone, with a slightly easier tendency, which has had the effect of keeping spinners out of the market, the latter even purchasing the secured parcels that are being offered at considerably less than the limits ruling from Calcutta. Offers of jute have been very sparingly made to this market, especially of first marks and lightnings, which are presently nominal at £66 for the former and £64 for the latter for actual marks. Daisee quality, of which there is a more plentiful supply than that of white jute, is in most demand. Calcutta is offering Daisee assortment at £62 10s, but secured lots here can be had at £61 10s for October-November shipment. A good business has been transacted in all kinds of yarns, and common 8 lb cops have advanced to 5s, which is being freely paid, but many sellers are refusing to do further business, preferring to await the outcome of the situation in raw material. Cloth buyers have remained indifferent during the advance, and though manufacturers have raised all their rates, buyers are still only purchasing in small quantities. 10½ ounce 40 inch is now lowest at 6d, with 8 ounce at from 4½d to 4¾d. Calcutta goods were very strong, but they have eased off a little in sympathy with the general quietness.

DOCUMENTARY CREDITS ARRANGED. ENQUIRIES INVITED.

The quotations to-day are 44s 6d for 10 ounce 40 inch, January-March, and 37s 6d for 8 ounce. April-June shipment rules at 43s 6d and 36s 6d respectively. The spot price of 10 ounce is 46s 3d, and the quantity available is small.

HIDE, LEATHER, AND ALLIED TRADES.

All classes of market hides maintain their firmness in spite of the reduced demand from tanners. At the auctions held in Bermondsey on Thursday, best ox hides sold from 7½d to 9½d, seconds from 6½d to 8½d. In calfskins, however, there was a decided weakness, declines of ¼d to 1d being registered in all classes. Best skins made 7d to 13d, and seconds 6½d to 8½d per lb. Woolskins sold from 7s 3d to 13s, and hogs from 3s 3d to 13s each. The skin wool market is rather stronger, but felled-mongered pelts are a shade weaker. The frigorific hide market is steady, and business has been done on a basis of 8½d for Argentine ox. Dry hides remain firm, and all suitable classes for light bends are bringing high prices. Cables from New York report the Chicago position as weaker, with best heavy packers selling at 17 cents—a drop of ½ cent on prices which have ruled for some time. Reports from the shoe centres are cast in a more optimistic vein, and the demand for sole leather has improved. Shoe manufacturers are still asking for very light bends, as most of them are now putting on a much lighter sole than was formerly the case. On the other hand, repairers are steadily taking wet salted bends from 12 to 16 lbs average. Curriers are moderately well employed on wax and russet kip butlinings, and semi-chrome, but the high price of rough kips continues a severe handicap. There is a good trade passing in coloured and black glacé kid. Patent has fallen off a little, but light willow calf is still selling freely. The boot and shoe trade is improving. Leicester seems to be receiving quite substantial orders for the Wellington boot, and a better demand has arisen for stout men's boots.

VEGETABLE OILS AND OILSEEDS.

The weakness of linseed oil reached its worst in the middle of the week, when it had declined to £36 per ton naked ex Hull mill, having lost £4 per ton in the course of a month. The depression has been accentuated by cheap offers of Dutch linseed oil, and a poor demand from consumers. A rally in the seed market, however, brought an improvement to £36 10s, which was Thursday's value for prompt mill delivery to April. Linseed oil has not been so low since April in last year, when £36 was recorded. The present figure compares with over £51 paid at Hull in February last. Cotton oils have continued to decline, crude Egyptian now offering freely at £36 10s, and ordinary refined at £38 5s per ton naked ex Hull mill. Soya palm kernel and other oils are in poor request, and generally easier.

In the oilseed section Plate linseed continued to fall until £17 10s was accepted for old seed, October-November, and £17 for new seed, January-February. Better Argentine advices stimulated buying, and there has been an improvement of 5s per ton upon these figures. London has been a buyer of Calcutta at £19 15s for old, and £19 for new. Cottonseed is in slightly better demand, business having been done in black Egyptian at £10 10s on passage, and £10 7s 6d for November-January loading.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market for refined goods displayed a firm undertone and a good business resulted in British makes at 3d per cwt advance and a good business resulted in British makes at 3d per cwt advance. Messrs Tate and Lyle's cubes quoted 30s 5d to 31s 9d; crushed, 28s 9d; granulated, 27s 4½d to 27s 10½d; forward to March, 27s 3d; yellow crystals, spot, 24s 4½d. Forward positions of imported steadier, and sellers more reserved. Czecho granulated, November-December, quoted 12s 10½d; January-March, 13s 4½d; April-August, 14s 1½d, quoted 12s 10½d; Hamburg, Dutch "J" granulated, ready, 13s; November-f.o.b., Hamburg, Dutch "J" granulated, f.o.b., Rotterdam, American granulated, spot, 26s; afloat, 13s 9d, c.i.f., London. Polish can granulated, spot, 26s; afloat, 13s 9d, c.i.f., Danzig. White crystals, November-December, 12s 4½d, f.o.b., Danzig. July-Java, spot, 25s 3d; ditto, to India, January-March, 13s 4½d; July-September, 13s 6d, c. and f., Calcutta. Cuban basis, 96 per cent., November-December, 10s; and Peruvian ditto, afloat, 9s 9d, c.i.f., U.K. White terminal opened firmer on higher American advices, but tone quieter since. December, sold, 12s 8½d to 13s; March, 13s 3½d to 13s 6d; May, 13s 9½d to 13s 10½d; August, 14s 3d to 14s 2½d per cwt.

COFFEE.—Spot market remained quiet, but late rates were generally maintained. Costa Rica, fine ordinary, sold, 126s; mid greenish, 156s; Matagalpa Maragogipe, good greenish, 210s 6d; Kilimanjaro, 200s 10½d; May, 89s 9d to 89s 10½d per cwt.

COCOA.—The spot market remained quiet and without new feature. For shipment, Accra F/F grade, December-February, sold, 39s to 38s 6d, and Lagos, November-January, sellers, 36s 6d, f.o.b. Trinidad, December-February, 65s; Bahia, October-November, 47s 6d, c. and f. terms, per cwt. Cocoa butter, C.F.R., spot, sellers, 1s 5½d; and prime English, 1s 5d per lb.

TEA.—Indian sales this week amounted to 56,676 packages, which met with good competition at prices ranging from ¾d to 1d per lb advance. Common and useful medium kinds formed the strongest market, while leaf grades suitable for export were

also well supported. Some attractive invoices from Southern India also moved off freely at full rates. Pekoe, sold, 1s 2d to 1s 9½d; broken orange pekoe, 1s 4d to 2s 7½d, with choice lots up to 3s 10½d. Ceylon offerings totalling 21,313 packages also experienced active support, though competition was rather less distributed than of late. Medium and fine grades often tended dearer, but values of finest broken orange pekoes were barely maintained, due chiefly to a slight falling off in quality. Pekoe sold, 1s 3d to 2s 4d; broken orange pekoe, 1s 8d to 2s 11d per lb, in bond. A fair business transpired in China descriptions, Keemuns selling from 1s 6d to 2s 3d; and old season's ditto, 1s 3d to 1s 4d; while common monings realised about 6d to 6½d. Finest souchongs quoted up to 3s 2½d per lb. 4,443 packages Java and Sumatra were offered, and met a good demand for all fine qualities at full to dearer prices, but lower grades displayed slight irregularity. Pekoe sold, 1s to 1s 3½d; broken ditto, ¾d to 1s 10½d; orange pekoe, 1s 4d to 1s 7½d; broken orange pekoe, ¾d to 9½d; and pekoe souchong, 1s to 1s 2½d per lb, in bond.

RICE remains quiet, but sellers required generally steady rates. Rangoon, two stars, spot, London, quoted 15s 9d; forward, 15s 4½d, c.i.f. Japanese peas steady. Spot, quoted 29s; September-October, 28s 6d; October-November, 28s; December-January, 27s 9d. Beans: Rangoon hand picked, October-November, 14s; Madagascar butter beans, spot, 35s to 37s 9d, as to quality, per cwt.

SPICE.—Pepper in quiet support, and trend of values easier. Black Singapore, f.a.q., January-March, sellers, 10½d; Lampong, October-December, 10½d; January-March, 11d; white Muntok, October-December, 1s 1½d; January-March, sold, 1s 2½d. Zanzibar cloves dull, and October-December, sellers, 10½d per lb. Pimento, spot, October-November, sellers, 42s 6d. Tapioca dull. Singapore flake, to Havre, December-January, sellers, 18s. Sago flour, to U.K., October-December, 15s 3d. Desiccated coconut quiet. Halves, spot, quoted 41s 6d; October-November, 39s cwt. Ginger steady. Japan, spot, 90s; October-November, 85s; West African, spot, 61s; October-November, 58s 6d cwt., c.i.f.

FRUIT (Dried).—Currants in rather better demand, but prices barely steady. Amalia, quoted 31s to 33s; Gulph, 36s to 40s; Pyrgos, 31s; Patras, 36s to 37s; Vostizza, 44s to 54s. Sultanas: Fine quality meets with fair attention. Smyrna, new crop, 68s to 70s; Australian, 68s to 90s; Cretan, 83s to 100s; South African, 65s to 80s. Figs quiet. Layers, new crop, boxes, 80s to 100s; Locoums, 115s to 150s. Dates in fair demand at steady rates. Second tide Hallowee, 27s; Siar, 14s 6d, landed terms. Raisins firm and in good request. Valencia, quarter boxes, 50s to 72s; halves, 43s to 45s. Evaporated fruits firm, especially for best apricots, while peaches continue in small supply. Californian apricots, standard new extra choice, 120s; fancy, 130s; Australian, 117s 6d to 130s; Californian peaches, choice, 67s 6d; extra choice, 72s 8d; fancy, 78s. Plums dull. Oregon, size 30/40, quoted 72s; 40/50, 52s; Californian, 40/50, 58s; 50/60, 51s 6d to 52s; 70/80, 44s to 45s. Pears, Californian, extra choice, 90s; fancy, 105s. Apple rings, Californian, extra choice, 65s to 70s; Canadian, 62s 6d per cwt.

CANNED GOODS.

CANNED GOODS.—Trade moved on quiet lines, and buyers show little disposition to cover future requirements. Sardines firm. Portuguese ½'s quoted 4s 6d to 5s per dozen tins. Salmon remains firm, with limited supplies available. Red, tall, 1 lb, 64s; ½ lb, pink, 35s 6d to 36s 6d; tall pink, 25s to 26s. Lobsters firm on scarcity. Halves quoted 165s; and ½'s, 95s to 100s.

CANNED FRUITS.—Liberal supplies are now available, and market slightly irregular. Californian Bartlett pears, standard, 13s 3d to 13s 6d; seconds, 12s to 12s 3d; Oregon, choice, 14s 9d; standard, 13s 3d; seconds, 12s to 12s 3d; Canadian, standard, 11s 6d. Californian peaches, choice, 11s; standard, 9s 6d; seconds, 8s 9d. Californian apricots, standard, 9s 3d; seconds, 8s. Loganberries fancy, 11s; choice, 10s 3d per dozen tins. Italian tomatoes realise full rates. Pines firm, with a hardening tendency.

not appear to be entertained seriously in well-informed quarters. Fine three months' bank bills were quoted at $3\frac{1}{8}$ - $1\frac{1}{8}$ per cent.

	Nov. 6, 1925.	Oct. 30, 1925.	Oct. 23, 1925.	Oct. 16, 1925.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	$4\frac{1}{2}$ (Oct. 1, '25)
Banks' Deposit Rate	2	2	2	2	$2\frac{1}{2}$ (Oct. 1, '25)
Discount Call	2	2	2	2	$2\frac{1}{2}$ (Oct. 1, '25)
Houses' Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$ (Oct. 1, '25)
Market rate (3 months' bills)	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	..

The Bank return showed a decrease of £1,236,000 in the stock of coin and bullion, £1,228,000 on balance having been announced as withdrawn in gold for export; the note circulation contracted by £1,536,000, and there was thus an increase of £300,000 in the Reserve, though its proportion to liabilities is 1 per cent. lower at 22.7 per cent. Government and Other securities expanded by five millions and one respectively, and Public and Other deposits were both rather more than three millions higher. Currency notes outstanding increased by £1,863,000, to £293,480,300, which includes £1,322,500 for notes called in but not yet cancelled. The fiduciary issue is £235,907,800, or £12,237,600 below the maximum for the year.

NEW YORK MARKETS.

Our New York correspondent cables:—Stock markets continue buoyant, with a huge turnover of business. Thoughts are again directed to the possibility of a rise in the Federal Reserve rate in conjunction with a possible hardening of the money market in London. The Federal Reserve statements reveal a flow of funds from New York to the interior, and a reaction from the contraction shown in the two previous weeks. Reserves show a moderate decline, discounts are \$47 millions higher, and bills purchased in the open market slightly increased. The circulation shows a rise of \$19 millions, and the reserve ratio is 71.5. *Dun's* index number of commodity prices is 1.2 per cent higher at 163.1, the chief advances coming under the head of breadstuffs and dairy produce. Bankers are still hopeful with regard to the Italian debt negotiations, but not optimistic.

THE STOCK MARKETS.

The week in the Stock Exchange has been one of mixed influences. Mr Churchill's announcement of the removal of the embargo on external financing tended to depress the gilt-edged market, where War Loan went below 100, the dual fear of higher Bank rate possibilities and the competition of attractive new loans operating in restraint of purchasing. The recent bout of speculative investment in mid-European bonds eased off, but Chinese bonds strengthened. Home rails made a slight recovery which they failed to hold, while Argentine rails remained firm on good traffic returns. In the rubber share market conditions were still active, but business was rather lighter than of late. Among industrials, shares of the "heavy" industries improved slightly on hopes of the effect of the embargo's removal, while tobacco and cable equipment shares showed prominent strength. Dunlops advanced sharply on the settlement of the strike, while Aluminium shares fell because of the Conway Valley disaster. In the Kaffir market a few "deep level" shares have been well supported, but business is patchy. Of the markets as a whole it may be said that the feature is the continued good appetite of the speculator.

THE COMMODITY MARKETS.

A better feeling continues in most markets, though slight irregularity has developed during the week in some cases. Demand in the coal trade shows a further slight improvement, and quotations are steady. A certain amount of forward buying has been evident in the pig-iron market, and although semi-finished business has been disappointing, the finished steel branches are active. Cotton has been in fair demand, with slight change in price. Cloth inquiry for India has been of fair dimensions. Although the turnover in wool has fallen away slightly there is no sign of weakness, and continued firmness in values is ex-

pected to bring out more demand for cloth. Jute prices have declined after a rise early in the week. The wheat markets remain irregular, with a slight upward tendency. Sugar has been firm, coffee without feature, and tea in less demand. Rubber prices have fallen owing to lack of support. In the metal markets, tin has declined on lower Eastern cables, copper is somewhat irregular, and lead easier, though dealings have been on a liberal scale throughout the week.

FOREIGN EXCHANGES.

In the foreign exchange market interest has again been concentrated on the movements of the Paris rate. After a relatively steady quotation on Friday and Saturday last, the rate began to move up again at the beginning of the week, and by Tuesday fears occasioned by the political difficulties of the new Cabinet, and by the delay in the announcement of a definite financial policy, brought up the quotation to over 120, while at one time on the 5th a figure of 123 $\frac{1}{2}$, a new high record, was reached. Yesterday morning there was some recovery to 122 $\frac{1}{2}$, as compared with 115.45 a week ago, but there are at present no indications of steadiness, and the large increase in advances to the State and in note circulation shown in the last Bank return only increase the general feeling of apprehension. Forward rates have again widened sharply, moving up to just under 90 centimes per month above spot. The lira also has been unsteady, moving up on the week from 121 $\frac{1}{2}$ to 123. At one time, however, on Thursday it was quoted actually below the French franc. Brussels has moved relatively little, in spite of considerable pressure, being quoted at 106.95 yesterday morning, as compared with 106.85 a week ago. Forward rates, however, at 60 centimes above spot for one month ahead, show a widening tendency. The dollar rate, which closed at \$4.84 $\frac{1}{2}$ on the 30th, has been firmer than was at first expected, in view of the removal of the embargo on foreign loans, in expectation, perhaps, of a rise in the Bank rate in the not distant future. During the week it has moved between $4\frac{1}{8}$ and $4\frac{1}{2}$, and was quoted yesterday morning at \$4.84 $\frac{1}{2}$. Forward dollars are at a discount of $\frac{1}{8}$ cent per month. Among the more stable European currencies Amsterdam, perhaps as the result of gold shipments, has moved slightly in our favour from 12.04 $\frac{1}{2}$ to 12.04 $\frac{3}{4}$. Switzerland also is more favourable at 25.15 $\frac{1}{2}$, as compared with 25.14, Stockholm at 18.13 $\frac{1}{2}$, as compared with 18.10 $\frac{1}{2}$, and Berlin at 20.36, as compared with 20.25. Oslo has shown a sharper reaction, moving from 23.72 $\frac{1}{2}$ to 23.80 $\frac{1}{2}$, and Copenhagen from 19.37 $\frac{1}{2}$ to 19.44 $\frac{1}{2}$. Madrid also has depreciated further, being quoted yesterday at 33.92 $\frac{1}{2}$, as against 33.81 a week ago. Prague at 162 $\frac{1}{2}$ is unchanged, Helsingfors at 192 $\frac{1}{2}$ has appreciated $\frac{1}{8}$. Warsaw remains more or less nominal at 29, while Athens shows some recovery from 370 $\frac{1}{2}$ to 359 $\frac{1}{2}$. In the East the rupee has moved down slightly from 1s 6d 13-32d to 1s 6 $\frac{1}{2}$ d. The yen, however, as the result of recent gold shipments by the Government, has appreciated further from 1s 8 $\frac{1}{2}$ d to 1s 8 27-32d. The silver market has been weak on continued selling from China, with very little support elsewhere, and Hong Kong is cheaper at 2s 4 $\frac{1}{2}$ d, as compared with 2s 5 $\frac{1}{2}$ d, Shanghai America Rio shows little movement standing at 7 $\frac{1}{2}$ d, the same as a week ago. Buenos Aires, however, has appreciated from 46 13-32d to 46 $\frac{1}{2}$ d on good export prospects, and Monte Video from 50 $\frac{1}{2}$ d to 51d. Valparaiso is also slightly dearer at 39.30 pesos, as compared with 39.40 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 31st:—

EXPENDITURE.		REVENUE.	
	(000's omitted.)		
Supply Services	7,735	Income Tax	9,008
Interest, &c., on Debt	1,170	Income Tax	2,547
Sinking Fund	1,760		
Sundries	809		
Increase in Exchequer Balances	127		
	11,533		

The Revenue for the week amounted to £9,006,000, as compared with £10,082,000 in the corresponding week last year. Customs were higher at £2,036,000, against

£1,810,000, but Excise was slightly lower at £1,426,000, against £1,491,000. Property and Income-tax brought in £1,682,000, as compared with £3,147,000, while Super-tax, at £400,000, was £50,000 higher. The week's operations increased the National Debt by £2,547,400, and caused the following changes:—

(000's omitted.)	
Treasury Bills	+ 745
3 $\frac{1}{2}$ % Conversion Loan	+ 1,580
4% Treasury Bonds	+ 802
	+ 3,127
Sundries	— 580

The floating debt was increased by £730,000 to £771,820,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Oct. 31st).

£		£	
Total Expenditure..	454,831,684	Raised by Revenue..	402,258,594

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE END OF THE EMBARGO.

WITH the autumn session of Parliament closely approaching, more public attention is being given to the volume of speeches which politicians of all parties are pouring out in the country. On the whole, this autumn oratorical campaign has been less interesting than usual. Tariff discussions are wisely avoided by Ministers, and no new first-class issue has been raised, unless it be the new Land Policy launched by Mr Lloyd George. The speeches have shown, it is true, that the new session will have moments of excitement over such domestic subjects as the Communist prosecutions and the political levy. Mr Baldwin and Mr Churchill, who have been the most active among Government speakers, have harped legitimately on the achievement at Locarno, and concentrated the rest of their attention upon a defence of monetary policy and a restrained optimism as regards the improvement in trade. During the present week, however, one speech has been made which stands out in importance because of a specific statement of financial policy which it contained.

On Tuesday of this week Mr Churchill made the important announcement at Sheffield that a change of policy in regard to new Dominion, Colonial, and foreign loans, which has been expected for some time past, will take place forthwith. "The time has now come," said Mr Churchill, "when we can take a further step towards the establishment of complete freedom and normal conditions in the money market. From this time forward no objection will be raised on general grounds by the responsible financial authorities to the issue of Dominion, Colonial, and foreign loans on the London market."

Our readers are well aware that the embargo which is thus brought to an end has never had any legal sanction, but has been imposed through the unofficial influence of the Bank of England, with the co-operation of the big banks and issuing houses of the City. The fact, however, that an announcement of change in policy was

actually made by the Chancellor of the Exchequer, and not by the Governor of the Bank of England, emphasises what was, indeed, already well known, namely, that the policy of restriction has been carried out in collaboration with the Government, and that the time and date of its removal have been a matter of official consultation. It would be difficult to give a precise account of its history or its purpose. In the early years after the war, when very large profits were being made in home industries, and the return on gilt-edged securities was high, there was little inducement for the investor to lend his money abroad either to individuals or to governments whose credit was a matter of great uncertainty. But as things became more normal and the credit of possible borrowers more clearly established, it became evident that the supply of capital was not sufficient for the many demands for it, and in the years following the slump there gradually developed in the City a disposition to discourage lending abroad on too free a scale, and a sort of unofficial censorship grew up. In December of 1923 and early in 1924 the sterling-dollar exchange fell sharply, and there was for a time a rush to transfer capital to America, and it became clear that the policy of returning to a gold standard on the pre-war parity might be frustrated, or at all events rendered very much more difficult by large movements of capital. New loans are not, of course, the only form in which our capital is invested abroad; but early in 1924 it was clear that there were many borrowers in the field, and that if enormous loans were raised in London it would be hard to regain the ground lost in the exchange slump of the winter of 1923-24. The censorship of new issues was therefore tightened up, and during the last eighteen months practically no foreign Government or corporation loans have been issued here except such privileged issues as the reconstruction loans of the League of Nations. In a later column we give some comparative figures of new issues in London, which show how the embargo has reduced the amount going to foreign countries in the current year to negligible proportions.

It has been suggested that the step now taken is the necessary sequel to the return to the gold standard. This, however, is not strictly true. It would be quite practicable to maintain the gold standard and at the same time to place restriction or conditions upon the raising of new issues in the London market. The raising of such loans might be made the subject of taxation, and before the war various suggestions had been made for discriminating in regard to foreign borrowers. On the whole, however, the reasons against any such policy are powerful. In the first place, to discriminate between new issues does not in fact ensure any conscious control over the out-flow of British capital. A considerable amount of our savings is invested abroad by private concerns, but a still greater difficulty is that even if new loans are not issued here, but in New York or Amsterdam, there is no practical means of preventing English investors buying these securities. Indeed, the decisive argument against control of the foreign capital market is its ineffectiveness. On the other hand, the resumption of foreign lending is clearly in the interests of British industry. The development of our export trade has historically been associated with the export of British capital. This association may, perhaps, not always exist; indeed, before the war it was frequently the case that our new foreign investments were merely the equivalent of the interest we earned abroad, and to-day our interest from foreign securities is much larger than our new investments. Germany, moreover, built up a large export industry with comparatively small exports of capital. We must therefore not assume too readily that in the long run these two phenomena bear any permanent relation to one another. At the moment, however, as we have emphasised with almost wearisome reiteration, encouragement to our export industries is what is most needed to restore the balance in our economic life. Foreign loans are undoubtedly calculated to have some effect in this connection, and are therefore to be welcomed.

In this connection the Federation of British Industries, in a recent letter to the Governor of the Bank of England, suggested that if only a partial remission of the embargo was decided upon, priority should be given to loans which would involve large orders to English industries. In his statement on the question Mr Churchill indicates that no

rules of discrimination should be laid down. He does say, however, that the City of London must be responsible for using its freedom wisely and soberly. "I trust," he says, "with confidence to the corporate good sense of the City to manage its affairs with discretion, to pay regard, not only to the capacities of the market, but to the position towards this country of would-be borrowers, and I hope so far as possible without impairing the freedom of the market that preference will be given in the matter of credit to those issues which bring a high proportion of orders for goods immediately to the trade of this country." In this passage Mr Churchill only refers to discrimination in favour of buyers in the British market. He might have added with equal force that Great Britain is particularly interested in lending to countries who will permit the entry of British goods as against those who try to shut themselves up behind a ring fence. There is a contradiction in the attitude of a protectionist country which tries to borrow abroad. Our own Dominions are very much open to criticism in this direction. Australia, for example, has, with other Dominions, had a privileged position in the English market, and is likely to continue to be a very large borrower since she has need of great development, and is perhaps living on too high a standard of living to provide much of her capital resources herself. Nevertheless, she is subjecting to high tariff duties the products needed for development. If there is to be discrimination in foreign loans, we should like to see that power exercised in favour of countries whose commercial policy permits a reasonable exchange of goods. Great Britain's chief industries, and, indeed, her existence on present standards, depend upon free interchange, and it may well prove to be that our ability to furnish capital is our strongest weapon to influence other nations in this direction. Such discrimination was not altogether unknown before the war, and it is not unlikely that in post-war conditions there may be something like a common opinion on the part of those who exercise most influence in the London capital market in favour of those countries which pay their debts and treat British commerce favourably.

It is not anticipated that there will be any startling effect as a result of lifting the embargo, the only issue to appear since freedom was restored being the Gold Coast Loan of £4½ millions, arrangements for which, it is understood, have been in progress for some little time. Time will be required for new issues to be arranged, and borrowers are likely to divide their attention between London and New York. Moreover, issuing houses will, in their own interests, only proceed with caution. Our expectation, therefore, is that the effect of the new policy, though it will to some extent influence the new capital issue figures for the current quarter, will not show its full effect until the first quarter of 1926.

GERMANY'S ECONOMIC POSITION.

THE current view of Germany's economic position is, to judge by the public utterances of her leaders in politics and industry as well as the statements of external observers, decidedly pessimistic. The Central Association of the General Employers' Organisations, for instance, a few months ago, presented an address stating that the national economic capacity of the country had fallen off by 30 per cent. as compared with the pre-war level. Only by running into debt had industry found it possible to keep down the numbers of the unemployed. The level of wages had risen consistently so that the difference between the effective wages in Germany and foreign countries (with the one exception of the United States) was insignificant, and the rise had not been accompanied by a similar rise in the economic curve. Other critics have pointed to the large deficit in the German trade balance. As such views are not likely to encourage foreign lenders to invest their resources in either short or long-term credits which, it is commonly agreed, are an essential condition to the country's economic recovery, the more interest attaches to a recent article in the *Magazin der Wirtschaft*, by

Professor Julius Hirsch, a former Secretary of State. The latter declares quite frankly that the current view is not in accordance with the true facts, that production has regained its pre-war level, and that the origins of the present crisis are to be sought not in unduly high wage levels, but in the faulty distribution of the country's productive capital. As this view is, to say the least, unfamiliar to many British observers, we give below a summary of the main facts on which Professor Hirsch's conclusions are based.

In the first place, although Germany lost 18 per cent. of her pre-war territory under the Versailles Treaty, her losses in population were not more than 10 per cent. The population of her present territory (including the Saar) actually increased between 1910 and 1919 from 58.45 millions to 59.85 millions, and in spite of subsequent difficulties, the total in June, 1925, had reached 63.25 millions. The number of persons pursuing an occupation has also increased. In 1907, in round figures, 30½ million persons were engaged in one occupation or another. The cession of territory should have reduced this figure to 27½ millions in 1919. To-day, however, the total is estimated at not less than 33 millions. This estimate doubtless includes a certain number of persons formerly of no occupation who are now obliged by impoverishment to earn their own living, while shorter hours in certain trades has necessitated the employment of more hands. The less favourable geographic situation of Germany's industrial areas and the absence of foreign investments, on which interest was formerly received in the form of raw material and food stuffs have also tended to the same end. On the other hand, the number of unemployed has at no time been substantially in excess of the pre-war figure, while a standing army of over 700,000 men has been reduced to 100,000. To sum up, the German population has steadily increased, and about 4 million more persons are engaged in work than before the war.

Pessimistic critics usually make great play with the alleged "symptoms of decay" in the transport system. In point of fact, despite the wastage of war-time and deliveries to the Allies under the terms of peace, in 1922 Germany possessed, for every 100 kilometres of railway in operation, 56 locomotives, as against 48 in 1913, 129 passenger cars against 111, and 1,283 freight cars against 1,121. The pre-war mercantile marine amounted to 5½ million tons, of which only 350,000 tons remained under the Peace Treaty. By 1925 no less than 3 million tons had been rebuilt. The railway traffic figures, it is true, appear to show that in the early months of this year the quantity of goods dispatched had fallen off by about 25 per cent., the average monthly figures for February, March, and April, 1925, being 30.3 million tons, as against 40.0 million tons in 1913. This comparison, however, is very misleading, since in pre-war days consignments forwarded by more than one of the then separate State railways were entered at least twice over, and the whole Reich is covered by one railway, no consignments are entered more than once. The 1913 figure, again, Lorraine is not included, the cession of that area has involved a permanent loss of huge consignments of ore and coal in the present area. Motor transport has increased, and the development of electrical power implies reduced coal consumption for the same unit of output. Taking these very important sources of error into account, it is at least questionable whether any reduction in the quantity of goods carried by rail has, in fact, taken place since the war. The figures for ton-kilometres are less open to objection. On the basis of the returns for February to April last, the total for the present year comes out at 57,100 million ton kilometres, as against 58,900 million in 1913. It should be remembered that the present geographical configuration of the Reich is less favourable for figures, on which the 1925 estimate is based, do not afford a true picture, since the transport of the harvest and of coal for household use swells traffics in the second half of the year. Passenger traffic, on the other hand, shows a marked increase. The total number of passengers carried in 1913 was 1,789 millions. On the basis of the January

The New York Trust Company

Capital, Surplus & Undivided Profits - \$29,000,000

COMPLETE INTERNATIONAL BANKING FACILITIES

100 Broadway

New York City

to March returns, the total for the present year will be 2,074 millions, and the total passenger-kilometres 42,844 millions, as against 39,024 millions in 1913. These returns are especially encouraging, in view of the serious disorganisation resulting from the Ruhr occupation, which has not yet been entirely overcome.

What is the position with regard to production? The average monthly output of coal has been as follows:—

(In Thousands of Tons.)

	Black Coal (exclusive of Saar).	Brown Coal (Lignite).	Coke.
1913 (present territory of the Reich)	11,729	7,269	2,639
1925 (the year's return calculated on the figures for the first half-year)	10,914	11,351	2,342

On this evidence present supplies of fuel are equivalent to about 90 per cent. of the fuel value of black coal in 1913. The improved study of thermics has led to an economy of something between 10 and 15 per cent. in consumption, the result being that, despite the loss of much of Upper Silesia, Germany has great difficulty in finding markets for the whole of her production. Comparison with 1913 is dangerous, since 1913 was in the nature of a "boom" year. If a few indices of production in 1924, a year of depression, are compared with the average of the five years 1909 to 1913, we obtain the following percentages:—Production of black coal, about 98 per cent.; of brown coal, 166 per cent.; coke, 91 per cent.; pig-iron, 86 per cent.; steel, 99 per cent.; rolled products, 106 per cent. Other satisfactory comparisons might be made of the pre- and post-war output figures in the paper trade, the motor building industry, and the potash mines.

The returns of agricultural produce present a curious riddle to the statistician. According to the official returns, harvest yields have been as follows:—

	(Quintals per Hectare.)			
	Rye.	Wheat.	Oats.	Potatoes.
1912	18.7	23.2	19.5	151.8
1913	19.3	24.1	22.0	157.1
1922	12.6	14.2	12.5	149.4
1923	15.3	19.6	18.3	119.5
1924	13.5	16.6	16.0	131.9

This striking falling off, together with a decline in foreign imports, has, however, been accompanied by an improved standard of living and a rapid increase since the war in the total of German livestock. Dr Hirsch draws the conclusion that "the only place where permanent and lamentable under-nutrition continued to exist was the harvest statistics," as a result largely of the obligation of the farmers to deliver grain at fixed low prices, which has led to persistent under-estimation. On the whole, the agricultural output may have regained, and in some cases surpassed, the pre-war level, with a possibility of further improvement in years to come.

The writer devotes considerable attention to German wage levels, and makes the point that it is unfair, in view

of the reduced wages of the inflation period, to take the first moment following stabilisation as a starting-point in order to demonstrate "the rise in the curve." Taking German wage rates of April last as 100, it is discovered that money wages converted into dollars in foreign countries come out approximately as follows:—United States, 330-400 (and substantially higher); Great Britain, 158-211; Holland, 120-158; Sweden, 142-190; France, 72-140; Belgium, 60-101; Austria, 63-87.

Real wages (i.e., wages in terms of purchasing power) in the United States were in April last 100 per cent. higher than those of Germany; in England, from 25 to 75 per cent. above; in Denmark, between 25 per cent. and approximately 60 per cent.; and in France, between 7 to 8 per cent. less, to 80 per cent. more than in Germany. Whilst German wages were thus lower than those of many other countries, German prices for many important categories of goods exceeded world prices. The reason is to be found not in the adverse trade balance of Germany, which is far less "appalling" than it appears in view of the large foreign credits recently placed in Germany and the under-statement, for various reasons, of the export figures, but in the great shortage of business capital, a factor which may ere long become even more serious. If national production is nearly equivalent to, and the consumption of the masses certainly not in excess of, pre-war levels, the net difference—i.e., the accumulation of capital, ought to approximate to the pre-war volume. That it does not is due to a number of factors. A portion of the national production is eaten up by unproductive outlay and an excessive number of business concerns. Germany has far too many trading businesses and far too many banks. The surplus of outlay over and above requirements for home consumption is wrongly distributed between investments and business capital. The latter can ultimately come only out of savings, which require the encouragement of high rates of interest, whereas the banking system offers low rates for deposits and high rates for overdrafts. Capital is withdrawn by over-heavy taxation. The policy of credit contraction after the inflation period was correct, but it should have been brought about by high discount rates, which would have encouraged and stimulated the formation of new liquid capital and not by artificial depression with two prices, one for the credit ratings of the Reichsbank and the States bank and another for credit on the open market. The effect of the methods employed has been to throttle the accumulation of savings instead of encouraging it by all possible means.

The salvation of Germany, according to Dr Hirsch, must eventually come about on some such lines as these. The exaggerated tendency to invest in plant, &c., must be exchanged for the creation of business capital, the economic structure must be purified by the weeding out of superfluous firms and radical standardisation of plant on American lines must be effected. The process will probably be attended by the collapse of many individual concerns, but the economic organisation is sound enough at bottom, and courageous reconstruction should not prove too heavy a task for the nation.

THE FUNCTION OF THE SPECULATOR.

ILL-CONSIDERED denunciation of the speculator, as of one who seeks only his own gain at the expense of everybody else, and performs no useful function in the economic machine, is a well-worn commonplace in the mouth of a certain class of "reformer." But it is somewhat surprising to find an experienced banker, Mr J. F. Darling, stating in the article to which we referred in a Business Note last week, that "the speculator occupies no useful place in our body politic. His manipulations do not increase wealth. He is out for gain at the expense of the community." In fact, it is easy to show that even in his crudest form the speculator renders an important service by reducing fluctuations and flattening out curves in prices of commodities and securities, and in providing both producers and consumers with the great economic benefit of a free market; and if we examine his position a little more closely, we find him embodied in the forms of so many highly respectable workers in the economic field that we come almost to the conclusion that without his "manipulations" no increase in wealth is possible.

As he is best known in the City, or in any other financial centre, the speculator is most often to be found buying and selling securities with a view to selling them higher up or buying them back lower down, and any experienced broker or jobber on the Stock Exchange will be ready at once to sign a handsome testimonial to the immense utility of the services that he renders. If it were not for his existence, there could not be anything like a free market, except in a few securities, the issued amount of which is so great that there are always enough real buyers and sellers to create a constant demand and supply; and even in them, owing to the habit of popular sentiment with regard to financial prospects to be influenced by waves of fashionable impulse, it is probable that such market as existed would have a dangerous tendency to be, as the Stock Exchange expresses it, "all one way." In the case of the great majority of securities which are outstanding in moderate amounts, the service of the public, if it had to wait every time that it wanted to sell or buy until a genuine buyer or seller appeared whose requirements exactly fitted, would inevitably be both slower and more costly, because of the exertion necessary for the discovery of the exact match required. Thanks to the speculator, who is always going in and out of stocks and shares in search of that unearned profit which is thought to be so reprehensible, the real buyer and seller can deal in a few seconds in an enormous variety of securities, and on much finer terms than would be possible if the flow of securities were not broadened by speculative manipulation. A very concrete example of the truth of these facts is presented every day by the contrast between the market in bank shares and in securities in which speculation is permitted and popular. In the days when the reputation of the English banks was a tender flower, which had to be protected from the breath of suspicion, it was thought necessary by Parliament to enact that every seller of bank shares should at the time of making the bargain state the number of the shares to be delivered. The possibility of bear sales of bank shares, by which movements in their prices might have been caused that might have started dangerous gossip, was thus made impossible. And the market in them has suffered ever since by being made narrow and difficult to deal in, and expensive to the investor owing to the extent of the turn that is demanded.

Another very practical demonstration of the utility of the speculator in the stock markets was given during the war, when, with a view to preventing wild fluctuations owing to rumours of what was happening at the front, our rulers provided that all transactions should be for cash. The consequence was that most of the markets became not only difficult to deal in, but extremely sensitive and jumpy, because the dealers knew that if bad news came there would be no cushion for prices to fall on such as is usually provided by the beneficent bear, who on the day of disaster comes in to cover his short

sales. And apart from these merely technical benefits that the speculator provides for the stock markets, by diminishing their fluctuations and making them freer and cheaper, there is good ground for arguing that in some cases he quickens and stimulates the actual production of commodities by making it easier to secure the necessary capital. The rubber industry is a case in point. From its earliest beginnings it somehow hit the fancy of the speculator, and the consequent activity and mercurial temperament of the market in the shares of the companies concerned in it must certainly have facilitated the development of the plantations from which a highly useful article is now produced. All these services the Stock Exchange speculator renders to the community for less than nothing, because he is, on balance and in the aggregate, out of pocket; what one makes he makes out of the pocket of another, and among them they pay a handsome revenue to the Stock Exchanges, most of the members of which would find it difficult to earn a living for themselves and their employees if their business were confined to genuine investment.

When he turns his attention to commodities, the speculator is often accused of being not only useless but a serious economic evil, because it is alleged (though Mr Darling is innocent of this fallacy) that he somehow succeeds in taking money out of the pocket of the producer by making goods too cheap and of the consumer by making them too dear. It seems to be forgotten that whatever effect a speculative purchase of an article has on its price can only be temporary because it must be balanced ultimately by the effect of the sale which closes the transaction. In fact, it is in commodities that the speculator does his most useful work. He not only, as in the case of securities, makes the market wider and freer and irons out the peaks and depressions by buying and selling when the "real" operators are on the opposite side of the market, and so helps to mitigate fluctuations in prices, but he also helps to provide that forward market which is so invaluable to all who produce raw materials and handle them in the process of turning them into finished articles. The cotton spinner is thus enabled to hedge against a fall in his product by a forward sale in his commodity, and so the speculator helps to make the business of real production less hazardous to those who are engaged in it. Similar work for the good of real trade is done by those who speculate in exchange. In the old days, when the exchanges were swayed by the movements of commodities and capital uninfluenced by the complications of inter-Governmental indebtedness and the well-meant manipulations of central banks, the normal movement of the New York exchange was adverse to London in the autumn when the wheat and cotton bills came forward, and favourable in the early part of the year when New York had to pay interest on British capitalable claims. It was then a regular practice for American houses to draw finance bills on their London connections in the early part of the year and sell the exchange so created at a time when bills on London were wanted, and then close the transaction in the autumn by buying bills on London when they were plentiful. Sometimes, when some unusual event thwarted the normal movement of the exchange, those who carried out these transactions burnt regular that their foresight was rewarded; but whether they made a profit or a loss they helped to steady the course of exchange and to keep it within the gold points, so saving the business community from the anxieties which in those times were often associated with shipments of gold in either direction, and especially when they were from America to Europe before the American monetary system had been reformed by the establishment of the Federal Reserve Banks. So much can be said for the speculator, even when he is evidently doing nothing else but speculate. But we may go further and inquire from those who condemn him as a useless parasite, where they are going to draw the line of demarcation. For from the farmer who sows a field to the shipwright who lays down a vessel, everyone who makes or grows anything is almost certainly involved in speculative risk somewhere in the process. It might perhaps be suggested to Mr Darling that

even that most highly respected figure in the economic world, the banker, has to take speculative risks sometimes when he is engaged in his most useful and legitimate business of financing industry and enterprise. Sometimes they do so unwittingly, as in the old days when they bought Consols in the belief that they could never fall far below par.

THE ASSURANCE COMPANIES ACT.

THE amendment of the Assurance Companies Act of 1909 is in prospect, and for some time past a Board of Trade Committee has been sitting and giving patient hearing to various people representative of the many different aspects of assurance business. The stimulus to which, perhaps, the contemplated tightening-up of the Act is due is the recent notorious failure of such companies as the City Equitable and the City Life; but, apart altogether from those events, there has long been a growing feeling that the existing Act is imperfect, and a consciousness that the developments and extensions of insurance business during the last 16 years have inevitably rendered the Act, framed under conditions very different from those of to-day, insufficiently effective, even if not to be called obsolescent.

The insurance offices themselves, indeed, would have pressed before this for some revision and bringing up to date of the legislation, were it not that there is always a fear that if things be once thrown into the melting-pot the issue may be an undesirable strengthening of the powers of interference by the Board of Trade, with the consequent loss by the offices of that liberty which is so essential to the free development of an ever-growing business. And the fears of the offices in this direction should be the fears of the general public, for the free development of British insurance is not by any means only the concern of the shareholders or the policyholders.

Insurance is one of our most valuable exports; it must one supposes, be called an invisible export, because it does not leave the country in bales and crates, but it is sent abroad in the form of quite visible policies, indemnities, and contracts of all kinds, and, as surely as any other export, secures for us in return the wheat and beef from across the seas, upon which a non-self-supporting community so vitally depends.

It is the unanimous opinion of all the insurance experts that while legislation is required to protect the public against fraud and incompetence, to detect the approach of insolvency, and to prevent the failing company from continuing to attract business, it is essential that interference by the Board of Trade with legitimate enterprise should be kept well within bounds, and that the rigidity of a business literally controlled by a Government Department, with all that that implies, should be avoided at almost any cost.

Under the existing Act, as is fairly well known, the Board of Trade have the power of barking, but cannot bite. They have the accounts sent to them within a certain prescribed time and in a certain prescribed form; if those accounts are considered to be unsatisfactory or insufficient, they have the right to ask questions, and eventually the accounts, with that subsequent correspondence, if any, are embodied in a rather expensive Blue Book, which can be, but seldom is, seen by the general public; there the matter ends, so far as the Board of Trade is concerned, however unsatisfactory or incomplete the accounts and explanations given may be.

No doubt the Blue Book, when it is ultimately available, affords matter for those who make up books of reference and for those who write Press criticisms, and it also furnishes the advocates of rival companies with material for attack. But, for one thing, the interval which elapses between the period over which the unsatisfactory accounting ran and the issue of the Blue Book is often a long one, and during that interval, as we have recently seen in one notorious instance, a company which ought not to be allowed to take another new premium may continue to

trade actively in the desperate effort to retrieve a desperate position; and, for another thing, even when the books of reference put down the facts, and even when the rival advocates attack the company in competition, these are neither of them completely effectual preventives; the average assurer does not read the books of reference, and the average man discounts very greatly the adverse comments of rival advocates. On the other hand, the company, by means of attractive publications and paid agents, carries on its campaign with all its existing impetus. It does seem, therefore, to be an ideal if a way can be found to strengthen the hands of the Board of Trade, and to give it some power of biting as well as barking; to speed up the issue of the Board of Trade publication, and, incidentally, to cheapen it; the task, therefore, of the Committee is to find some method of accomplishing all this without clogging and hindering the enterprise of sound companies, and without imposing on all a rigidity and inflexibility which would hamper development and so impair one of our most valuable exports.

There are many details involved; at present the general certificate as to the value of the assets need only be given by life offices on occasions when a valuation statement is made. There is much division of opinion as to whether this should be given at more frequent intervals, triennially or yearly. The views of the composite office and the purely life office are, on this and on other points, necessarily often divergent. A very general opinion seems to be that so long as the certificate is a strong one, a searching one, it might well be given annually; but one must emphasise the proviso that a weak certificate, even if given annually, would be worse than useless, as giving a false sense of security.

Then, too, the position of the various possible claimants on the funds of a composite office undoubtedly wants clearing up. In the Assurance Companies Act, 1909, section 3, sub-section (2), it is laid down that "a fund of any particular class shall be as absolutely the security of the policyholders of that class as though it belonged to a company carrying on no other business than assurance business of that class, and shall not be liable for any contracts of the company for which it would not have been liable had the business of the company been only that of assurance of that class, and shall not be applied, directly or indirectly, for any purposes other than those of the class of business to which the fund is applicable." To the ordinary lay mind such words have long seemed to mean only one thing, that the life assurance fund was quite inviolable whatever might happen to the fire fund or the accident fund, and have long been supposed to justify the statements, prominently made in the life prospectuses of so many composite offices, that the life and annuity funds are not only kept entirely distinct from all other funds, but are available only for the life assurance and annuity liabilities of the company. It has come as quite a shock to many in insurance circles to find that some do not take this view of the meaning of this sub-section, and that there are many lawyers, well versed in such things, who hold that on the liquidation of a company which had suffered heavy fire losses, but whose life fund would show a surplus on a solvency valuation, such a solvency valuation would in fact be made, and the surplus be available to meet other liabilities of the company; that, in a word, the sub-section refers to the security of the policyholders and not literally to the whole substance of the fund.

A startling proposition for such policyholders, however academic it may be for those in a strong company; it would seem bad enough for such policyholders if on liquidation they lost, as they would do, the benefit of a part of the capital which had been hitherto their security, and, under such circumstances, it would seem more equitable to allow them to mutualise themselves into a separate company. Then again there is the question of the proprietors' proportion of the surplus shown on such a solvency valuation. The point needs settlement, for if this view is right, then the statements of nearly all the composite offices are wrong! Let us put the matter in plain terms as a concrete instance, and for a moment picture an office carrying on fire and life business, and suppose that in the life department, by means of a stringent valuation basis and other devices, large sums are, as is frequently the case, being kept in reserve over and above

what would be necessary if a mere solvency valuation were made; that, in a word, the bonuses being divided from time to time among the policyholders are by no means the bonuses which could be divided if profits were distributed up to the hilt, over and above such reserves as a just sufficiently strong valuation basis necessitated; such a position, indeed, is that of most of the really first-class offices, where, to use a commercial phrase, a sort of equalisation of dividends policy is followed in relation to policyholders' bonuses, and as much attention is paid to the continued maintenance of a scale of bonus as to the magnitude of that scale itself. Then imagine that there is one of the great occasional conflagrations, such as that of San Francisco; imagine the not impossible contingency that two such catastrophes might happen in one financial year—the nightmare possibility though it may be, just as the simultaneous occurrence of two great London fires may be the nightmare of our fire brigade; assume that the disaster is such that all the fire reserves are swallowed up, and then conceive the feelings of the life policyholders if they saw their accumulated surplus, their "suspended bonus," or whatever you like to call it, taken to help to liquidate the fire claims. That such a thing is possible under the law as it stands is held by many to be the case; whether, if so, that must always be the case, and whether legislation should deal with such a position, is a question of enormous importance for the committee's consideration.

Very closely allied to this question, of course, is that of the separation of the assets in a composite company, and the advisability or inadvisability of compelling such companies to earmark the investments belonging to the various funds, whether fire, life, accident, or what not; here it is easy enough, when speaking without much consideration, to say that such separation is obviously the right course; but there are, in fact, immense practical difficulties, and many questions of expediency to be considered; there are times when, quite legitimately, the fire department, for instance, may need ready money; the carrying on of foreign business—our invisible exports again—involves nowadays the deposit locally of innumerable pockets of money; the assets of a great fire department inevitably get tied up here, there, and everywhere all over the world, and the more prosperously the business is developing the less liquid money there is; consequently there is often need for temporary loans; to the general manager and directors it does not seem to be so obviously the proper economic course to go outside to borrow money when, just across the passage, in their life department sits an actuary who continually has money awaiting investment and who is often glad to put money out on temporary loan pending the arrangement of some permanent investment.

Here is a nice question for the Committee, in the first place of principle, and, if the principle be granted, then one of degree, for probably all will feel that there should be some limit to the proportion of the funds so employed, and some regularisation of the amount of definite security, if any, to be given for such loans.

DISTILLERY COMPANIES' PROFITS.

AN authority has deplored the fact that the home consumption of whisky has fallen from 32,050,000 gallons in 1908-9 to 13,039,000 gallons for the year ended March 31, 1925. From figures which we give below, however, it is evident that, from the point of view of the distillery companies, the decrease has been offset either by greater foreign consumption, bigger profits, or better organisation. Perhaps contributions may have been received under all three headings. In any case, the consumption figures stand out in striking contrast to the progress made by the leading distillery undertaking, for 20 per cent. on an ordinary capital of over ten millions is the sign of anything but a decaying industry.

In our issue of October 31, 1925, page 697, we dealt with the profits of a number of brewery undertakings. We propose in this article to deal with the profits of representative distillery concerns. Our first table shows the net profits over the last two financial years, after payment of debenture interest, together with the

amount brought in, and the manner in which available balances were utilised:—

Name and Year Ends.	Amount Brought In.	Net Profit, After Payment of Debenture Interest.	Preference Dividend.	Ordinary Dividend.	To Reserve, &c.	Carried Forward.
Booth's Distilleries 1923-24	£ 8,125	£ 48,893	£ 7,505	£ 18,858	£ 24,377	£ 6,278

The Distillers' Company has now the leading position in the industry. Profits as shown in our table require some explanation. As compared with a year ago net profits amount to £1,014,617, as against £677,914. The former figure was increased, however, by the inclusion of £593,610, being dividends received from Buchanan-Dewar, Limited, and John Walker and Sons, Limited. These fusions, which are referred to in detail later on, called for a capital reorganisation not shown in the balance-sheet figures. Thus the interim dividend was 6½ per cent. on 3,800,000 £1 ordinary shares, while the final dividend was 13½ on 10,295,963 £1 ordinary shares, making 20 per cent. for the year, the final distribution absorbing £1,104,920. The Highland Distilleries had a good year, the net profit amounting to £96,273, in comparison with £69,326. The distribution to the ordinary shareholders was thus raised to a total of 46 per cent., against 35 per cent., including on the present occasion a bonus of 16½ per cent., against 15 per cent. in the preceding year. The accounts of John Walker and Sons were closed at March 31st, and therefore cover a period of only ten months. Moreover, the previous accounts were for the period from the end of 1922 to May 31, 1924, so that, although direct comparison cannot be made, the net profit shown in the present accounts of £435,999 compares favourably with a total of £797,245 for the last year. The directors state that the alteration in the date of the accounts has been made to meet the convenience of the Distillers' Company (whose financial year ends on May 15th in each year), which has acquired the greater part of the ordinary shares of the company. The ordinary dividend is 20 per cent. against 21½ per cent., but whereas in the earlier period it was paid free of tax, it is now distributed less tax. The general reserve is strengthened by £100,000, against nothing in the previous accounts, while property reserve account rose from £48,893 to £62,566, and the ordinary dividend was maintained at 10 per cent. on an increased capital. The sum of £26,751 is this time reserved, against £24,377 for 1923. Scottish Malt Distillers earned net profits of £68,886, in contrast with £49,972, the dividend was increased from 10 to 12½ per cent., and £55,000, against £40,000, was placed to reserve. The directors of trading "has not been more favourable. The depression so keenly felt in trade generally has reflected with exception to this adverse condition the continued excessive taxation must be added." Net profits declined from time, received £13,990, and ordinary shareholders who, last in spite of the fact that the reserve fund was drawn upon

to the extent of £15,000. Seager Evans, in presenting the accounts, also draw attention to "the continuance of high taxation, coupled with increasing unemployment and general trade depression," which have resulted in a loss of £1,246 compared with a profit of £117. The ordinary dividend for 1923-24 of 5 per cent. was paid with the aid of £8,372 taken from reserve. The operation has not been repeated, and ordinary proprietors in this case also receive no return. The Dublin Distillers has had a particularly unsatisfactory experience, a profit of £28,244 being converted into a loss of £21,880. For 1923-24 the preference shareholders received an extra 3s 6d per share. This is not repeated, while the ordinary shareholders receive no payment, compared with 1 per cent. Buchanan-Dewar suffered only a slight reduction in profits, and while the reserve appropriation of £150,000 has not been repeated, the ordinary dividend is 25 per cent., against 17½ per cent. A comparison of the results of MacDonald, Greenlees and Williams, in the absence of earlier accounts, is not possible, the secretary declining to furnish us with the report for the year ended September 30, 1923, "as this company had not at that time made any public issue of capital, all the shares being then held privately."

The following table is an analysis of the balance-sheets:—

PRINCIPAL LIABILITIES AND ASSETS.

Name.	Share Capital Paid Up.	Debs. and Loans.	Cre- ditors.	Prop- erties, Plant, &c.	Stocks.	Cash and Invest- ments.	Debtors.

The Distillers Company announces that, as explained to shareholders at the last meeting, there have been acquired "the two old-established gin businesses in London, carried on by Boord and Son, Limited, and Sir Robert Burnett and Co., Limited, respectively, and has issued, as part payment of the purchase price thereof, 115,000 new ordinary shares of £1 each, and 50,000 new preference shares of £1 each." This had the effect of bringing up the issued capital to the then authorised total of £6,000,000. Effect has also been given to the resolution confirmed in May last, to increase the authorised capital to £15,000,000 by the creation of 9,000,000 new shares of £1 each. "They have also exercised the powers conferred upon them to acquire the ordinary shares in Buchanan-Dewar, Limited, and John Walker and Sons, Limited, so far as the company's offer has been accepted by the respective shareholders of these companies, and have allotted up to this date 6,460,859 new ordinary shares of £1 each, fully paid, in respect of such acceptances, including the 50,000 shares agreed to be allotted as capital compensation for loss of office to certain directors of John Walker and Sons, Limited." It is further stated that, "while the increase in the company's authorised capital was carried through before the end of the financial year under review, it was not possible to complete the transfers from, or allot the new shares to, the shareholders in the other two companies referred to before that date. By the terms of the offer this company is to receive the final dividends payable on the shares purchased in the other two companies for the financial year of these companies current at date of offer, and is to pay to the sellers a sum of net interest equal to the final dividend payable on this company's previously existing ordinary shares for

JAMES FORREST, Manager. W. F. BLACK, Deputy Manager.

Every Description of Home and Foreign Banking Business transacted

the financial year to May 15th last as the equivalent of said dividend." In the carrying out of this important amalgamation the company has increased the ordinary share capital by over 170 per cent., bringing the total issue of ordinary shares up to 10,289,812 shares, which, added to the preference capital, makes a total issued capital of nearly 12½ millions, against an authorised issue of £15,000,000. The alteration in Booth's capital account was made by the issue to shareholders of 123,034 ordinary shares of 13s each at 14s per share. It is stated in the report that the premium on the issue practically suffices to defray the underwriting and issue expenses. The present accounts of Highland Distilleries show the elimination of an item of £1,800 in respect of "Debenture Bonds." These, presumably, have been paid off. There has been no pronounced general movement in either creditors or debtors, but the total of cash and investments is, in the majority of cases, higher than a year ago. Properties and plant figure for practically the same as in 1923-24.

Our concluding table shows dividends on ordinary shares during past two years, also present prices and yields, compared with a year ago:—

Name.	Dividends on Ord. Shares.	Prices of Shares as Shown Against Name.	End of Present Year.
	1923-4.	1924-5.	Oct. 24, Oct. 25, Yield.
Booth's Distilleries, ord. (13s)	10	10	No quotation

(a) For 1922-23. (b) For 1923-24. (c) Free of income-tax. (d) Ten months. (e) Lowest price 1924.

It should be noted that dividends as given above refer only to those paid on the ordinary shares of the various companies. Two outstanding movements in share values are presented in the table. First has to be noted a rise in Highland Distilleries ordinary from 4½ to 7½, and, second, a similar movement in Scottish Malt Distilleries from 1 27-32 to 3½. The fusions and amalgamations which have taken place, and which may take place, do not in the long run induce the conservative investor to lend support. Movements are sudden, and future yields are difficult to follow.

The chairman of the Distillers Company made some interesting comments at the annual general meeting. He said "I noticed recently that the Scottish Conference on Agricultural Policy in their report favour the imposition of a duty on imported foreign barley as a remedy for agricultural distress. It never seems to occur to them that a duty on malting barley, if it is to have the effect desired, must lead to an increased cost of whisky and beer, which if passed on to the consumer will inevitably lead to a further shrinkage in the consumption and to a diminished use of barley, the sale of which the farmers desire to stimulate."

The future of the distilling industry is one which needs careful consideration by investors. The problem of prohibition comes up for consideration. If consumption is falling in this country, the question of prohibition may be perhaps less insistent. But that is only as far as this country is concerned. Other countries may possibly follow the example of the United States. And among

these countries may perchance be those which take our exports of whisky. Against this, however, has to be weighed the point that no immediate danger seems to threaten from this source, and the stronger companies are enjoying a very prosperous time.

SYNTHETIC NITRATE.

(BY A CORRESPONDENT.)

THE fixation of atmospheric nitrogen, and the manufacture therefrom of various synthetic products, including ammonia, nitric acid, sulphate or chloride of ammonia, and other nitrogenous compounds of the greatest economic importance, is one of the epoch-making developments of recent times. Such products are vitally essential both for the manufacture of fertiliser and food production, and also for the supply of munitions. In 25 years the world's consumption of nitrogen compounds has doubled, and has this year nearly reached its pre-war figure of 4,000,000 tons. Of this huge total some 2,500,000 tons consisted of Chilean nitrate, just before the war, and about 1,500,000 tons of ammonium sulphate from gas works and coke ovens. There should be almost unlimited demand if prices were appreciably lower—as contemplated by the synthetic groups—and if soil fertility throughout the world is to be adequately conserved.

Germany, whose imports of Chilean nitrate were 800,000 tons per annum before the war, dropping to zero during the war, had to depend entirely on her own comparatively new synthetic processes, together with ammonium sulphate from gas works and coke ovens, to enable her to continue the war; and on the synthetic side she made such progress that she is now able to do without Chilean nitrate altogether. Most of the leading nations of the world have now realised the supreme importance of the various synthetic processes, of which at least four different types are in successful operation.

Since the war France has been getting large supplies of the synthetic product from Germany—first, under the terms of the Treaty of Versailles, then under the Dawes Plan, and a more or less private agreement between the Comptoir français de l'Azote and the German Stickstoff-syndikat (Nitrogen Syndicate). Under this latter agreement she should obtain from Germany about 200,000 tons of nitrogenous fertiliser for the two years ending May 31, 1927. It is officially estimated that French consumption in 1930 will have increased to 150,000 tons in terms of nitrogen, or 900,000 tons of nitrogen compounds. (There is one ton of nitrogen in five tons of ammonium sulphate or calcium cyanamide, or in 6½ tons of sodium nitrate.) Of the total just named at least 650,000 tons will probably, by that time, be supplied by the French synthetic industry. The German Haber (or Haber-Bosch) process is now being worked on a large scale at Toulouse, under the auspices of the French Government. The French process—that of the eminent engineer, Georges Claude—is being successfully worked on a moderately large scale at several places in France, and in numerous localities outside France—e.g., in Spain, U.S.A., Japan, Italy, Belgium, and Poland. A popular form of the synthetic product is that of calcium cyanamide made on a large scale in the U.S.A., and now being produced in France at the rate of about 50,000 tons per annum. The output from this source is steadily increasing. France, however, still imports large quantities of Chilean nitrate (264,000 tons in 1924), for, as is also the case with Germany, her farmers fully appreciate the value of nitrogenous fertiliser, and the demand not only maintains the Chilean, but also stimulates the synthetic business. It is expected, however, that imports of the Chilean product will gradually decline.

In Italy the synthetic processes, Claude, Casale, Fauser, are making remarkable progress, perhaps more so than in any other country. Italian consumption in 1924 amounted to about 153,700 tons of nitrogen products, including 60,000 tons calcium cyanamide, 40,000 tons ammonium sulphate, and 50,000 tons sodium nitrate. It seems probable that one of the most popular and successful types of plant will be the Italian Casale, which is not only established in Italy, but is also well represented in

France—e.g., at St Auban—and is under construction at Toulouse, Roche-la-Molière, and elsewhere. Casale plants are also contemplated in this country and in other parts of the world. In Italy they are working for the S.I.A.S. at Terni and Nera Montoro; Claude plants are working at Bussi for the Società Azogeno, a company with a capital of 30,000,000 lire and headquarters at Milan; Fauser plants are worked by the Soc. Piemontese Ammonia at Novara, and by the Soc. Montecatini Ammonia at Agordino. Other plants of this last-named company or its subsidiaries are working at Coghinis in Sardinia, and at Sinigo, near Merano. Another Claude plant is contemplated at Vado, probably by the Azogeno people, and a Fauser plant at Cotrone. There is a considerable amount of syndicalism, or associated working, among the Italian companies. The largest appears to be the Montecatini group, which is also associated with another large concern, the S.I.A.S. (Soc. Italiana Ammonia Sintetica); and international agreements for concerted operations are spreading over the world. The present position is of great interest and some complexity, and well worth watching. Synthetic production in Italy in 1924 amounted to about 105,000 tons. For 1926 an output of 252,000 tons is predicted, and for 1927, 300,000 tons. These figures, however, are dependent on prices and on fluctuating water-power supplies. The price position is referred to later, and the risk of over-production is by no means remote.

Norway, next to Germany, or perhaps before Germany, was among the early pioneers of the new industry. Here the arc process is chiefly used, largely owing to the existence of cheap water-power. The arc process, by the way, was also tried in Germany, and was to some extent of German origin—i.e., the Birkeland-Eyde furnace—but had to be abandoned for various obscure reasons, including risk of explosion; but this latter reason in itself is not of much moment, for all the various processes are attended with some risk of explosion. This was particularly the case in the early days, but the risk has now been much reduced, and safe working practically guaranteed. The Norwegian product consists mainly of nitrite (not nitrate) and cyanamide. Germany is interested in the Norwegian industry, and an agreement has recently been concluded between the B.A.S.F. (Badische Anilin-u. Soda-fabrik) and Norwegian interests.

Great advances are being made in the U.S.A., where the arc process is also much in favour, especially in the North-West—that is to say, in Washington and neighbouring States, where there is abundance of water-power. The American Nitrogen Products Company has had a plant working at La Grand, Washington, for the manufacture of sodium nitrite almost continuously since 1916, and has lately enlarged its plant. The more extensive application of the arc method in the North-Western States was discussed in some detail a short while ago by H. K. Benson in a paper read before the American Chemical Society. Another important American concern engaged in the business is Azote Incorporated, associated with the Claude process at Clinchfield, and contemplating big extensions. Two plants (one of them Casale) have been erected by the Hooker Chemical Company at Syracuse and Niagara Falls; and the Mathieson Alkali Company also has a small plant. The great works at Muscle Shoals, manufacture, but the future of these works is still unsettled. The matter. The du Pont plant at Clinchfield is said to be a much more efficient modification of the Claude process, and 25 per cent. better than the British plant at Billingham. The claim comes from American sources, as ment and other research institutions now actively engaged in nitrogen fixation study have succeeded in perfecting a highly efficient catalyst, forming the basis of a special New York Chemical Exhibition, held week ending October 3rd, in the Grand Central Palace. In America, of synthetic origin is being placed on the market, containing not only nitrogen, but also the equally essential phosphorus. One of these new compounds, phosphazote, containing the most valuable form of nitrogen—namely,

urea—and also acid phosphate, is now being made in Switzerland; and large works for its manufacture have just been completed in Norway. A similar product, obtained through cyanamide as intermediate, and known as ammo-phos, is made in the U.S.A. The activities of the American Cyanamid Company are also fairly well known in this direction.

In Great Britain some attempt was made to develop the Claude process on a large scale by the Cumberland Coal and Power Company, which, however, unfortunately came to grief. We in this country are now mainly dependent on one solitary firm, Synthetic Ammonia and Nitrates, Limited, a subsidiary of Brunner, Mond, and Co. Why Great Britain should be content to depend solely on one firm and one process in this important industry is hard to understand in view of the progress made in other countries. Synthetic Ammonia and Nitrates, Limited, recently increased their capital by £2,000,000 under the Trade Facilities Act. The Italian inventor, Professor Casale, was over here some months ago, and it is understood that his process may soon be working in England.

Other countries taking up the new industry with considerable vigour and enthusiasm are Belgium, Japan, Spain, Switzerland, and Czechoslovakia. This world-wide activity, taken in conjunction with a re-awakening of Chilean nitrate interests to the seriousness of this new competition, might easily result in over-production unless there is a stimulation of demand through substantially lower prices. It is understood that the synthetic groups not only hope to reduce prices from the present average of about £14 per ton to the low level of £8 per ton, but also to place on the market much more efficient fertilisers, especially of the double-type noted above. This ought, furthermore, to have a revolutionary effect on world food production and on food prices. Since there are about 20,000,000 tons of nitrogen in the atmosphere over each square mile of the earth's surface, there seems to be an adequate source of supply. On the other hand, the demand could be hugely augmented at the right price if the world's soil fertility is to be properly maintained; and with increasing population it must be so maintained. Dr Jacob Lipman, of the New Jersey Agricultural Experimental Station, has estimated that the annual loss of nitrogen from all land under cultivation in the U.S.A. by removal of crops, and not replaced by fertiliser or ploughing-in of leguminous crops—i.e., nitrogen-fixation crops—is about 3,500,000 tons of nitrogen, equivalent to 20,000,000 tons of ammonium sulphate. The wider question as to whether the application of artificial—e.g., synthetic—fertiliser is the best way to restore soil fertility, or whether Nature herself, through the intermediary of suitable crops and rotations, should not do it, cannot be discussed here.

PROCEEDINGS OF THE COAL COMMISSION.

THE Royal Commission on the Coal Industry continued its public sittings at the Houses of Parliament this week. The salient points of last week's evidence were reviewed in an article on page 698 of *The Economist* of October 31st. The members of the Commission, it may be recalled, are Sir Herbert Samuel, chairman, Sir William Beveridge, General Sir Herbert Lawrence, and Mr Kenneth Lee.

On Tuesday last Dr Rudolf Lessing, member of the Institute of Mining Engineers, put forward certain views on the essential conditions of revival in the coal industry, declaring that coal must not only be produced more cheaply, but its value be enhanced by the extended use of refining processes. More attention must be paid to the preparation of coal for the market and its conversion, whenever possible, into more highly-priced products. The witness criticised the present arrangements for washing coal at the mines, and declared that the proportion of ash in coal put on the market was not less than 10 per cent., which, on an annual output of 250 million tons, produced no less than 25 million tons of incombustible material. Although the consequential loss from lowered combustion and carbonising efficiency could not be accurately estimated, it would be safe to put the total non-productive expenditure of the country, as a direct result of insufficient coal pre-

paration, at something between £10 millions and £20 millions per annum.

Evidence was given on the following day by Mr David Milne Watson, on behalf of the National Gas Council of Great Britain and Ireland. The latter body represents local authorities and company undertakings accounting for about 90 per cent. of the total make of gas in the country. Mr Watson gave figures showing that the gas industry in Great Britain used last year 18,104,000 tons of coal, and made about 285,000 million cubic feet of gas. It had an invested capital of over £160 millions, and employed 100,000 men, with a wage-roll of £15 millions. The number of gas-users was estimated at 36 millions. The witness claimed that the industry was the chief conservator of British coal, since it applied the latent heat in the coal to practical purposes with the highest degree of efficiency, while its bye-products were the basis of numerous other industries. It produced annually some 10 million tons of smokeless fuel, 172 million gallons of tar, and 167,000 tons of sulphate of ammonia. Its coal carbonisation had risen from 13.9 million tons in 1903 to 16.6 million tons in 1913, and 17.3 million tons in 1924, but owing to advancing efficiency the gas made, in thousands of cubic feet, had risen from 159.9 millions to 259.8 millions and 275.2 millions in the same years respectively. The witness stated his belief that low temperature carbonisation had not so far been a commercial success. It was essential for the needs of the gas industry that coal should be as cheap as possible, and that the utmost freedom of choice should be allowed in the selection of the most suitable coal. Although there was no competition between the various gas companies—no company being allowed to enter the settled area of another—the companies had, in fact, owing to statutory regulations, a financial interest in maintaining the price of gas at as low a figure as possible.

Dr C. S. Myers, speaking on behalf of the National Institute of Industrial Psychology, stated that the Institute carried out investigations between 1922 and 1924 in collieries situated in four northern areas. They formed unfavourable opinions regarding certain colliery arrangements, particularly as regards transport facilities in the mines, congestion at the washery and the pithead, and the imposition of a common penalty for "dirt" without reference to varying conditions in the seams. In one colliery as much as 80 to 83 per cent. of working time at the coal face was lost owing to defective mine transport. Under cross-examination, the witness stated that these figures referred to actual time at the coal face, the percentage of loss to total time underground being 45, while in other mines the figures were much lower. After further discussion, the chairman decided that this evidence must be taken as representing a very special case, where conditions were at their worst.

On Thursday, November 5th, Sir Richard Redmayne, formerly Chief Inspector of Mines, gave further evidence, stating his conclusion, from available statistics, that the present depression in the British coal export trade was part of a world depression, from which Great Britain had, in fact, suffered slightly less than the world at large. Although considerable advantage would result from amalgamation of different mines, he considered that very careful preliminary consideration would be necessary. He believed that coal would remain the most important of all sources of power for many years to come, and that an increase in the world's coal requirements would go on concurrently with the development of

other power resources. Although Germany would probably become increasingly formidable as a competitor, the present management of British coal mines was not inferior to that of any country in the world. The output per man per shift, according to recent official figures, was 18 cwt in Great Britain, as against 11 cwt in France, 9½ cwt in Belgium, and 16½ cwt and 17½ cwt in two German areas. He reiterated his opinion that a return to the eight-hour day would result in a 10 per cent. increase of output, with enhanced earnings for the miners. The Commission then adjourned until Wednesday, November 11th.

Notes of the Week.

The Lesson of the Municipal Elections.—The chief feature of this week's municipal elections, both in London and in the country, may be broadly described as a grand assault by the Socialist Party which achieved a partial success. In the great boroughs of the Midlands and the North the only really sweeping Labour success was the obtaining of complete control at Wigan. In London Labour won a majority on the councils of two fresh boroughs, Stepney and Shoreditch, and is now in the position of controlling the proceedings of eight London councils. In London, as a whole, Labour won 47 seats, while the Municipal Reformers lost 21 and the Progressives 21, the latter now remaining on the councils in very attenuated numbers. Tabulated figures for the whole country are not available at the moment of writing, but the London figures disclose several important facts. After their 47 fresh victories, the Socialists occupy just under 27 per cent. of the seats on the London borough councils, that is 364 out of a total of 1,366. The percentage of voters going to the poll was about 45 per cent., a figure which, though still eloquent testimony to the public apathy in municipal affairs, shows a welcome advance on the figure of 36 per cent. in 1922 and 28 per cent. in 1919. But by far the most important lesson to be learnt from the London figures is the absolute failure of the present voting system to reflect in the membership of the councils a true picture of the opinions of the electors. The application of the system of the straight vote in contests where a number of candidates come forward has produced even more glaring anomalies than the last Parliamentary elections. Some striking instances are given by Mr J. H. Humphrey in Thursday's *Westminster Gazette*. There are, he points out, seven boroughs where minorities have been left without any representative at all. The Hackney statistics alone are sufficient to demolish the present system's claim to a place in the machinery of representative government. Here the anti-Labour parties polled 184,702 votes and obtained 60 seats, while Labour, which polled 93,325 (or more than half the anti-Labour total) fails to elect a single member. In the Church Ward of Shoreditch the result was equally absurd, and this time, from the Party point of view, the boot was on the other foot. There Labour, with a poll of 7,512, gains all nine seats, none going to the Municipal Reformers, who polled 5,092, or Progressives, whose figure was 3,792. Labour, in fact, is in a substantial minority, but none the less sweeps the whole of the representation. Such inequities and absurdities as these should serve to concentrate public attention on the extreme urgency of a reform in our electoral system.

Dominion General Elections.—While Great Britain has been occupied with the mild amusement of electing borough councils, several of the Dominions have been performing the more serious task of choosing federal Parliaments. In Australia polling day is a week ahead. New Zealand has polled this week, while the results of the Canadian general election are now practically complete. In New Zealand the retiring Government has achieved a signal victory, and Mr Coates, who recently succeeded to the Premiership on the death of Mr Massey, has received a striking vote of confidence for himself and the Reform party. In the last House the Reform party had 38 mem-

bers, the Nationalists 21, Labour 17, and Independents 4. The latest available figures show that in the new House Mr Coates may count on 55 seats, whereas Labour has 13 and the Nationalists, Liberals, and Independents cannot be certain of more than 12. Mr Coates returns to power with a very strong majority. In Canada the experience of Mr Mackenzie King, the Prime Minister, and the Liberal party has been less happy. Subject to one doubtful result, the position seems to be as follows:—Conservatives, 116; Liberals, 102; Progressives, 23; Labour, 2; Independents, 1. Both the Liberals and the Conservatives have done rather better, and the Progressives worse than was suggested in the forecast which we published a fortnight ago from an Ottawa correspondent. The result is, on the surface, a deadlock. But since the election was fought by the Conservatives largely on the Tariff issue, and on that subject the Liberals are assured of the support of the Progressives, Mr Mackenzie King has decided to remain in office and meet Parliament. Even with Progressive support, however, Mr King's margin will be a slender one, and he will be facing a delicate essay in minority Government. Although it seems likely that a quick second election, undesired in any quarter, will be avoided, the precarious party balance will mean a period of political indecision. The seriousness of this fact is, however, lessened by the absence of any really fundamental cleavage between the two big parties, except on the tariff issue. And on that point the verdict of the Canadian electorate is clear. There is a majority against higher tariffs.

Our Index Number.—A substantial decline in commodity prices in October is largely due to good crop news. Our index number as at the end of the month shows a decline of 100 points, and this is more than accounted for by lower prices for cereals and for cotton. Apart from these movements and a sharp rise in jute, changes were comparatively small. The following table gives the latest figures for each of the five groups:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, Iron, &c.).	Total.	%
Basic (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	379	352	518	464	553	2266	116.6
" Nov., 1918	1289	782	1848	908	1389	6212	282.6
" Mar., 1920	1508	914	2974	1246	1709	8352	379.6
" Dec., 1920	1344	805	1284	1216	1275	5924	269.3
" Dec., 1921	921	636	1106	762	931	4357	198.0
" Dec., 1922	861	706	1184	705	807	4264	193.8
" Dec., 1923	853	815	1382	774	755	4580	208.2

" Aug.,	952	718	1274	756	809	4446	202.1
" Sept.,	934	702	1235	748	796	4450	202.3
" Oct.,	886	699	1203	749	788	4327	196.7

The decline of 48 points in the first group is almost entirely due to cereals, which are all substantially lower. Flour was unchanged on balance after having been lower, and there was a decline in potatoes, and meat was slightly lower. In subsidiary foodstuffs a small increase in tea was offset by declines in sugar and butter. In the textiles section cotton prices show a sharp decline, thanks to the surprising expansion in the two official estimates of the American crop published during the month. The fall in the American cotton was accompanied by a pronounced decline in Egyptian cotton, and both cotton yarn and cloth have also fallen. These declines, however, were partly offset by a sharp rise in jute, which advanced rapidly in the second part of the month. There was a slight increase in Australian wool, but British wool was unchanged on balance. In the minerals group pig-iron was again a shade lower, and there was also a reduction in iron bars and steel rails for the first time for two or three months. Steam coal was lower, but there was a slight increase in household coal. Tin fluctuated violently during the

month, and accounts for an increase of nine points. In the miscellaneous group a further rise in rubber was offset by declines in oils, oilseeds, and tallow. In the table below we show the changes in the index number for each commodity in comparison with that for the end of September, the figure 50 representing in each case the average level during the basic period of 1901-5:

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	924	-13	Cotton, A	97	-20	Copper	52	+1
English	81	-54	Cotton, B	157	-35	Minerals	749	-24
Flour	84	-	Yarn	109	-15			
Barley	93	-11	Cloth	111	-10			
Oats	72	-49	Wool, Eng.	128	-	Baltic timber	96	-
Potatoes	119	-63	Do Aust.	123	+24	Amer. timber	80	-
Rice	73	-5	Silk	108	-4	Leather	51	-
Beef	93	-1	Flax	108	-6	Petroleum	100	-
Mutton	103	-1	Hemp	58	-3	Oils	72	-34
Pork	103	-1	Jute	202	+45	Oilseed	81	-4
Cereals & meat	886	-48	Textiles	1,203	-47	Tallow	74	-2
Tea	164	+4	Pig-iron	71	-1	Indigo	90	-
Coffee	138	-2	Steel rails	62	-4	Crystals	85	-
Sugar, cane	85	-3	Iron bars	86	-3	Rubber	47	+10
Sugar, beet	101	-2	Coal, steam	116	-24			
Butter	101	-2	House coal	85	+4	Miscellaneous	788	+3
Tobacco	116	-	Lead	160	-9	Total	4,327	-100
Other foods	699	-3	Tin	112	+9			

These changes reduce the increase in the total over the figure for the end of July, 1914, to 68.3 per cent., as compared with 72.6 per cent. at the end of September. In a final table we show how the various groups contribute to the general increase over the pre-war figure:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Mar., 1920	261	260	484	269	309	325.6
Dec., 1920	233	229	309	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6
Dec., 1922	151	194	181	150	148	163.3
Dec., 1923	149	200	193	152	146	166.2
Dec., 1924	148	231	225	167	136	178.6
Dec., 1925	171	224	235	175	146	189.3
June, 1925	153	200	200	159	143	169.6
July,	157	198	207	163	146	173.3
Aug.,	164	204	200	161	144	173.5
Sept.,	161	199	203	162	143	172.6
Oct.,	153	199	195	161	143	168.8

At the end of April, when the gold standard was restored, the increase shown by the total was 77.4 per cent. At that date cereals and meat stood at 163, other food at 206, textiles at 221, minerals at 160, and miscellaneous at 140.

M. Painlevé's Problems.—The French Prime Minister, reconstructing his Cabinet in order to exclude M. Caillaux to propitiate the Socialists, can hardly claim complete success for his move, for the vote of confidence the new Ministry sought in the Chamber was accorded it by a majority of no more than 32 votes, and the Government's total was only 221 out of a House comprising in all 584 members. The Socialists, with a few notable exceptions, abstained in a body, and there is no guarantee that at any moment they will not cast their votes against the Government, for they are definitely opposed to the Morocco policy, which the Cabinet is bound to defend, and on the dominating issue of finance it is clear that they are not going to be satisfied with the half-measures M. Painlevé may propose in the direction of a capital levy. The Right, on the other hand, finds in events in Syria an effective weapon against the Government, and the recall of General Sarrail, so far from disarming criticism, is being hailed with some reason as complete justification of the attacks on the Radical General's administration. It looks, in any case, as though the Government would be allowed to stand till the new financial proposals are laid fully before the country. The forecast of their character embodied in the Prime Minister's general statement to the Chamber is well enough so far as it goes. All expenditure, of whatever kind, must be covered by revenue. It must, indeed, be more than covered, for the reduction of debt must be taken in hand forthwith. To that end a sinking fund, "not only autonomous and independent of the State, but in full

control of its own resources," must be created, such a step being made possible by an exceptional national sacrifice in which all forms of wealth must share. That means whatever it may be seen to mean when these laudable generalities are translated into detailed proposals. The fundamental fact remains that without an unprecedented effort involving tax increases all along the line no hope can be entertained of staving off serious disaster. The franc has gone this week to 120, and refuses to improve substantially on that figure. M. Painlevé's financial proposals, when they are disclosed, may be found to be intrinsically bad, but the process of defeating Government after Government because bourgeois France and Socialist France have different ideas as to how the burden of increased revenue should be shouldered must be brought to an end somehow.

A Chinese Tariff Scheme.—Rumours about America's intentions regarding the Chinese tariff revision scheme gave place on Tuesday to something much more decisive when the chief delegate of the United States brought forward a definite set of proposals, the main feature of which was the provision that, subject to the fulfilment by China of certain definite preliminary conditions, all restrictions on her full fiscal independence should cease on January 1, 1929. That means that China's own demand is substantially met, and a further conciliatory step is the proposal that an increase of the present duty by a 2½ per cent. surtax, and an additional 5 per cent. on luxuries, may be levied three months after the signature of the agreement now under negotiation. These provisions appear to have the general support of the Powers, with the doubtful exception of Japan. The vital point, however, is not the concession to China, but the conditions on which the concession depends. Tariffs on every frontier are to be uniform, whereas at present those on land frontiers are only two-thirds of the maritime. Soviet Russia will clearly have something to say about the proposed change. Likin, moreover, is, of course, to be abolished, and as compensation the American scheme includes provisions for the distribution of part of the increased customs duties among the provinces. The existing customs administration, the principal feature of which is the appointment of foreigners to the chief positions, is to be maintained. If, as seems probable, most or all the conference Powers identify themselves in the main with these proposals, the effect is likely to be an intensification of party strife in China, for if increased revenues are in prospect the incentive to rival claimants for the dictatorship is so much the greater. For that reason it would be a mistake to take too optimistic a view of the result of proposals which, on their face, are manifestly conciliatory.

The Last of the Shahs.—The deposition of Ahmed Shah, Sultan of Persia, is an event calculated to inspire neither surprise or regret. Even the late ruler himself is likely to feel little concern at the loss of a throne he cared for so little that the one place where he was fairly certain not to be found was in Persia. What form of government is to follow in Persia appears still to be uncertain. When the monarchy all but toppled over a year ago it was saved by the priests, who held that the divinity that doth hedge a king does in no wise hedge a republic. Persia is, of course, the main stronghold of the Shiah school of Islam, and the religious authorities carry considerable weight there. In spite of that the probability is that some form of republic will be created, with the one strong man of Persia, Riza Khan, the Sirdar Sipah, as the chief figure in it. The change comes at a moment when the American financial mission under Dr. Millspaugh has succeeded in putting Persian public finance on a reasonably firm foundation, and a disposition to seek sound advice and co-operation where it may be found has been demonstrated by Persia's appeal to the League of Nations first of all to lend a member of the League Health Organisation's staff to advise on public health administration, and then to send out a commission to consider what crops it would be practicable to substitute for the excessive poppy growth which the League's Opium Commission is constantly urging Persia to reduce. But republic or no republic it is clear that Riza Khan will be the determining factor in Persian politics in the immediate future. That is on the whole reassuring, for the Sirdar Sipah's past record inspires confidence in his sagacity and ability.

New Issues and the Embargo.—The raising this week of the embargo on foreign loans prompts us to set out some of our statistics relating to new capital issues in the London market, comparing various categories in the past five years with the pre-war average:—
(000's omitted.)

	Annual Average, 1911, 1912, and 1913.	1921.	1922.	1923.	1924.	1925 (Nine Months).
Foreign Government ..	19,396	5,905	14,254	24,462	40,620	1,350
Corporations ..	7,650	630	7,088	5,483	2,413	875
Railways ..	33,454		14,722		955	
Total for Foreign Countries.....	92,647	22,224	55,233	44,755	52,437	5,611
Dominion Government ..	17,247	73,650	58,582	69,409	50,081	18,815
Corporations ..	10,887	4,882	7,024	4,741	6,136	685
Railways.....	21,832			1,200		1,681
Total for Dominions.....	71,258	90,578	74,924	92,723	72,277	35,529
Total issues	199,715	388,978	573,676	271,393	209,326	160,393

The 1923 and 1924 totals for foreign Governments were swollen by some of the large European Reconstruction loans, but no foreign Government issues have been made in the current year. In the first nine months of 1925 foreign Governments raised \$341 millions in the United States against \$421 millions and \$202 millions in the corresponding period of 1924 and 1923 respectively. The post-war totals of money raised for use in foreign countries in London are substantially below the pre-war average, though the latter owes its size partly to extensive issues in this country by American railroads. The bulk of the Dominion Government issues this year were made in May, and it is probable that this year's total will be well below the average for the three preceding years. The amount raised for use overseas in the full year 1925 is likely to be swollen by the large number of rubber and other issues which are now enjoying such popularity. A feature of the past few weeks has been the rapidity with which offers of new capital have been oversubscribed, and although "stags" are known to have been active, there appears to have been a genuine demand by investors for any reasonably sound offer.

A Shipowner and a Shipbuilding Subsidy.—At the annual meeting of Prince Line, Limited, Sir Frederick Lewis, the chairman, made some very sound comments on the present industrial position, and put forward the shipowners' view of the recent proposal to subsidise shipbuilding by a grant from the Unemployment Fund. This proposal, he said, presupposes that a large number of additional ships are required, when in fact there is a

large surplus already in existence, so that, "except as regards vessels required for special purposes, the building of a mass of additional tonnage would mean that the shipping industry would suffer in almost direct ratio to the immediate benefit that would accrue to the shipbuilding industry." Sir Frederick admitted that there are several ways in which improvement in the shipping and shipbuilding industries can be brought about by artificial means, such, for instance, as the contributory laying-up of tonnage, taxation by means of flag discrimination, subsidies, &c., but he added that "each step in the direction of artificial bolstering is taking us further away from the real improvement, which can only be brought about by meeting economic conditions by natural means." He pointed out that high costs in the sheltered occupations have their direct effect upon our export trade, such as rail charges, dock dues, and the cost of handling cargoes in the docks, and suggested that the remedy lies in finding an economic level by reducing the cost of the sheltered occupations, which would permit of some increase in the level of the exporting industries. As to the present outlook for shipping, Sir Frederick would say no more than that the shipping industry had passed successfully through a very severe crisis and is ready for an improvement when it comes.

The Cost of Defence.—In a speech at Oxford on Tuesday Sir Laming Worthington-Evans, Secretary of State for War, did a little special pleading on the question of economy in national expenditure. Before the war, he said, expenditure on the fighting services was equal to 8s in the pound of the whole national expenditure. To-day it is 3s. The Army expenditure is about 5 per cent. of the total expenditure compared with 14 per cent. before the war. We need hardly point out that no value attaches to these comparisons. In the first place, while it is true that expenditure on the fighting services shows an increase of 50 per cent. over the 1914 total, that year was one of exceptional naval competition, and was abnormally high. Secondly, the Secretary for War cannot take any credit for the large reduction in the percentage to total expenditure on which he lays stress, since it is more than accounted for by the increase in total expenditure. The only reasonable comparison of this nature to be made is the ratio to total national income. Here there is a reduction from 3.5 per cent. before the war to 3.04 per cent. this year, which is a very much less imposing reduction than that quoted by the War Minister.

Local Taxation Returns.—Nowadays the character, invented by Charles Dickens, who worried the Circumlocution Office by "wanting to know, you know," would be met, not with refusal, but with more information than he could digest. The Annual Local Taxation Returns for 1922-1923 must have meant a vast amount of work in tabulating the statistics supplied to the Ministry of Health by our local authorities. But the ratepayer will not learn half as much about the expenditure of his money as he would if these pages and pages of figures were accompanied by some comment or explanation. Of the three volumes, the first* gives the expenditure of London and the county boroughs, the second† deals with the individual county councils, and while the third,‡ which is priced at 2s 6d, although it is, in fact, longer than the second volume, deals with the accounts of boards of guardians and other bodies engaged in administering the Poor Law. Notes are constantly needed to explain something that is not self-evident, e.g., why Somerset spends £1,506 per mile on its roads while only £301 per mile, the mileage being almost the same in each county. Then when we look at the "trading services" of the smaller boroughs, there appears to be a surplus or profit of £122,000 on gas, but only £20,609

is put down for "surplus profits carried in aid of rate funds," while £5,183 had to be drawn from the rates to meet deficiencies. It is not easy to understand why cemeteries are included under the head of "trading." A mayor might point proudly to the profits earned by municipal gas, electric, or tramway undertakings; he would hardly congratulate the chairman of the cemeteries committee on the splendid sale of burial plots following an epidemic of smallpox or influenza. The trading accounts of the county boroughs are so complicated as to be unintelligible; they appear to give a surplus of more than £3½ millions, but the total surplus carried to the relief of rates was only £667,000, while water supplies alone showed a deficiency exceeding this sum; altogether the ratepayer was called upon to meet a deficiency of £1,281,000. Turning to the Poor Law we notice that the total expenditure grew very slowly from 1901 to 1917, indeed for the 14 years ending March, 1915, the average rate did not fall below thirteen pence or rise to fourteen pence in the pound. In 1920 a jump was made to 1s 9½d, rising the next two years to 2s 5½d and 3s 2½d, falling one penny in the year under review. All this time Exchequer grants, which provided nearly a fifth of the total expenditure on poor relief in 1901, hardly increased at all during the next 22 years, for, in 1923, when the total cost was just under £42 millions, grants covered just one-sixteenth of the expenditure.

Indian Cotton Mills and Protection.—Our Manchester correspondent writes:—A few months ago the Bombay Mill Owners' Association approached the Indian Government and made certain suggestions for granting assistance to the industry. It was proposed that there should be a duty on raw cotton exported from India and the imposition of higher import duties on yarn below 30's counts and cloth made from such counts. The representatives of the Government promised that there should be an examination of the proposals, and the results have now been communicated to the Mill Owners' Association. In the reply it is pointed out that the total export of raw cotton from India in 1924-25 exceeded 600,000 tons. The suggestion, therefore, that an export duty of a protective character should be imposed on raw cotton amounted to a proposal to levy an export duty on a trade of 600,000 tons for the purpose of increasing prices of goods made from much less than 40,000 tons of that cotton. The export duty would have to be at a high rate in order to raise appreciably the price of imported Japanese manufactured goods. Such a duty would operate on the whole of 600,000 tons of cotton exported from India, and could not be but detrimental in the long run to cotton-producing interests in India. The Government of India, therefore, considered that the imposition of a protective duty on raw cotton was peculiarly open to objections and dangers, and in the circumstances the suggestion must be definitely abandoned.

The Debt of Honduras.—The Council of Foreign Bondholders have received telegraphic advices that the arrangement for the settlement of the debt was signed at Washington on the 29th ultimo by the delegates of the Honduras Government and Mr A. H. King, representing the Council of Foreign Bondholders, payments by Honduras commencing as from July next. According to the last annual report of the Council of Foreign Bondholders the external debt of Honduras amounts to over £29½ millions, made up as follows:—

	Present Amount.	Total.
	£	£
Five per Cent. Loan of 1867	78,800	
Coupons in arrear (April, 1873, to Oct., 1924) ..	204,880	283,680
Ten per Cent. Loan of 1867	900,700	
Coupons in arrear (Jan., 1873, to Jan., 1923) ..	4,728,675	5,629,375
Six and Two-thirds per Cent. Loan of 1869 ..	2,176,570	
Coupons in arrear (Sept., 1873, to Sept., 1924) ..	7,472,889	9,649,459

The amount of bonds in circulation of the 5 per cent. loan of 1867 is understood to be £60,900, the balance of £17,900 being in the hands of the Honduras Government. All four loans went into default in 1873, the interest having been paid out of the money borrowed. In March, 1909, an arrangement for the settlement of the external debt was entered into between the President of Honduras and the British Minister in Central America, acting on behalf of the bondholders; but before the proposals could be submitted to the bondholders, the United States Government intervened, and insisted on the substitution of their own scheme of settlement. Under this scheme, Messrs J. P. Morgan and Co. agreed to purchase the bonds of the external debt, on or before August 4, 1910, at the rate of £15 cash per £100 of bonds, with all arrears of interest, provided that an arrangement of the debt, satisfactory to themselves, was in the meantime entered into between the United States and Honduras. The Council, at Messrs Morgan's request, invited the holders to deposit their bonds, in assent to the agreement, against the issue of negotiable deposit receipts, and a large majority of the bonds was promptly deposited. In July, 1910, however, Messrs Morgan and Co. notified the Council that they were not prepared to pay the £15 cash, and in February, 1912, withdrew from the agreement. In May, 1923, an arrangement of the debt was approved at a meeting of bondholders, but its ratification by Congress remained in abeyance owing to internal troubles and revolutionary outbreaks. In January of this year a new Constitutional Government came into office, and *de jure* recognition was extended to it by the British Government. The United States Government also resumed full diplomatic relations. The arrangement for the settlement of the debt which has now been signed is subject to ratification by the Congress of Honduras, which meets on January 1st, until when bondholders will be well advised to restrain any optimistic feelings which the announcement may have aroused.

The Position in Nicaragua.—The intelligence from Nicaragua of a revolution having broken out in that country, which, politically speaking, had for long been peaceful, need occasion little concern. The trouble has not alone been completely overcome, but, for probably the first time in Central American history, two political opponents have come together, and, taking a practical lesson from the League of Nations, have settled their differences without the loss of a single life or the occasion of very much material damage. This must appear all the more satisfactory in view of the fact that Nicaragua has of late years greatly advanced from an economic point of view. In fact, for the past twelve months the value of the export trade has been the largest in the history of the Republic, while the total value of the foreign commerce during 1924 had only been once exceeded—namely, in the phenomenally prosperous year of 1920. The current year, according to present appearances, is likely to prove another successful period in the history of Nicaragua. This is due to the exceptionally large coffee crop, which, at the same time, is proving of first-class quality. The balance of trade in favour of Nicaragua exceeded \$4,000,000 last year, and the figures for 1925 are expected to show an advance even greater, and may even establish a record. The value of the last coffee crop, realising over \$7,321,000—the highest price ever reached—can be the

better appreciated when it is remembered that in 1921 the crop was worth only \$2,352,487. While the prices obtained were satisfactory, the crop was sold too soon in the season to enable the planters to derive the fullest benefit from the high quotations which ruled at the close of the picking. No such mistake is likely to be made this year, as the planters are well provided with ready cash and are in no need to accept the first offers. The total exports from the State during the last financial year increased to \$12,990,026 from \$8,070,949 in 1921. Strangely enough, although most of this prosperity is primarily due to the loans granted and to the general supervision given to the country's economic affairs by representatives of the United States, the actual trade carried on with that nearby Continent shows a decline, falling from 72 per cent. of the total in 1923 to 57 per cent. last year. On the other hand, France increased its percentage from 14 to 16 per cent.; the Netherlands from 1 to 6; Spain from 4 to 5; and Germany from practically nothing to 3 per cent. of the total trade. Unfortunately, the United Kingdom shows a decrease, the sum of our foreign trade amounting to less than \$1,500,000 (£300,000), of which \$1,042,858 represented exports from the United Kingdom to Nicaragua, and \$31,159 exports from Nicaragua to the United Kingdom. The service of the Nicaraguan debt continues to be discharged regularly, the last remittance on the Gold Bonds of 1909, due last month (October), being received in New York a day or so before the close. Previous instalments had been a little delayed. The February, 1925, payment was received in London in March, while the May instalment came to hand early in June. Since 1920, and in accordance with the terms of the 1917 agreement, the full service on the 1909 bonds has been met. Moreover, during the past five years the arrears of sinking fund have been paid off, and the whole of the funding certificates discharged at par. As a result of the good work done by the American controllers (it was only in July last that the United States withdrew from Nicaragua the company of 100 marines which for 12 years at the capital had acted as Legation guard), the Customs receipts have risen during the past nine years by nearly 90 per cent., that is to say, they increased from 1,037,073 córdobas in 1916 to 1,950,000 córdobas in 1924. The financial condition of the country remains quite satisfactory. The total foreign debt has been reduced, by redemption, from £1,250,000 in 1909 to £818,800 at the end of 1924.

Co-operation in Japan.—The co-operative movement in Japan dates from 1892 and its progress has been remarkable. In 1900 a co-operative society law was passed which has greatly stimulated the movement. The law provides for four distinct kinds of co-operative societies, viz.: (1) for supply of credit, (2) for sale of produce, (3) for purchase of supplies, and (4) for the common use of land, buildings, machinery, &c. There are now 14,259 societies with a total membership of about 2½ millions, and an aggregate capital of about £40,000,000. The average number of members per society is 210, but there is evidently a wide range, for one society has a membership of 19,782. The co-operative movement in Japan is a rural development. Over 77 per cent. of the members are agriculturists, 8 per cent. fishermen, and 4 per cent. shopkeepers. The law lays down with particularity the general lines on which a co-operative society must be formed. Each member can have only one vote though he may hold up to 50 shares. One-fourth of the profits must be placed to reserve, and the remainder may be divided among the members, paid to employees as bonuses, or placed in special funds. Profits paid to members may be paid either as dividends on share capital up to 10 per cent., or bonuses on sales or purchases, or in both ways. While the societies are thus under regulation and supervision they also receive substantial help from the Government. They are exempt from many taxes, money is lent at low rates of interest, and the Mortgage Bank of Japan and other land credit banks are empowered to lend money to co-operative societies without security. Most of the local societies are federated in organisations. There are 191

such federations with an average of 56 societies in each, but seven or more societies are permitted to form a federation. The Central Union of Co-operative Societies, which is under the direct supervision of the Ministry of Agriculture and Commerce, is formed to encourage the establishment of co-operative societies and of federations of societies. Amongst its activities are the giving of lectures, conducting research studies, publishing reports and books on co-operation and building exhibition rooms for societies and federations.

Iron and Steel Shares.—Quick in the endeavour to discount future events, the investor and the speculator have been buying iron and steel shares. The Home Railway market felt the cheerful influence, and the shipping department, after recovery from an unexpected P. and O. dividend disappointment, did not lag behind. Scores of inquiries reach the Stock Exchange as to what iron, coal, and steel shares are worth buying, writes a Stock Exchange correspondent. Prices advanced, hesitated, and are now a little uncertain. People outside the Stock Exchange denounce the methods of the House, and inveigh against the jobbers who "put up prices"—that is the current phrase—against buyers who want to pick up shares which have cost the same jobbers very much more money than the current quotations command. The Stock Exchange jobbers, glad enough to see a rally in prices which have been so flat for so long a time, are apt to read to-day's inquirers as being probable purchasers. They "put up prices" accordingly. What started the rise was the hope that the Government would tighten up the Safeguarding of Industries Act, but the Stock Exchange market, it is fair to remark, betrayed scepticism in regard to the anticipated trade revival. Some of the companies are in a sound position. The South Durham Steel and Iron Company, for example, is paying 10 per cent. for the year ended September 30th last, and has paid this or a higher rate annually since 1913. The ordinary capital has remained at £350,000, while reserves have been built up to the extent of nearly £1½ millions. But this is rather exceptional. Many of the iron and steel companies, labouring under the heavy handicap of increased capital raised, during the war, on the strength of war-prices, cannot make headway until the capital accounts are reduced. Several old-established concerns, such as Bolckow, Vaughans, Pease and Partners, and the like, have fallen upon evil days in the same manner as United Steel and similar undertakings. The last dividend paid on Baldwins ordinary was in October, 1921; Cammell Laird ordinary have received nothing since April, 1923; and Vickers ordinary have gone dividendless for almost as long. Ebbw Vale ordinary shares' last dividend came in October four years ago, and Thornycroft ordinary have been without a return since December, 1921, the same date as witnessed the last shares. Yet the public have been buying such issues on the expectation of a trade revival, and prices advanced noticeably from the recent lowest. It may be premature. During the years of lean trade the balance-sheet cumbers with increasing debits. Principles of sound tributions can be justifiably made upon ordinary share arise in connection with industries concerned with the false hopes upon a foundation that is still insecure. The best of the iron, coal, and steel companies future. But the buyer of "cheap" shares in the latter group should recognise that, in purchasing, he gives hostages to the future, and that shares in any company are not necessarily cheap because they happen to be low in price.

Anglo-Persian Oil Results.—The net profits of the Anglo-Persian Oil Company for the year ending March, 1925, show the gratifying increase of 42 per cent. over those of the previous year. The amount available for distribution is higher by more than £1,000,000, at £5,318,610. Appropriations to reserve are largely increased—debenture redemption reserve by £100,000, preference share reserve by £350,000, while £100,000 is put to amortisation reserve. The dividend on the ordinary shares is increased from 10 per cent. to 12½ per cent., less tax, and the carry-forward is larger by £326,146 at £2,072,789. The Stock Exchange was disappointed at the moderate increase in the dividend, but it is obvious that the company is wise in first strengthening its balance-sheet position. The trading results and distributions over the last seven years are shown in the following statement:—

March 31.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.

‡ Corporation Profits Tax, 1924.

The directors of the Anglo-Persian still see fit, in spite of the addition of Lord Bradbury to their ranks as one of the Government directors, of presenting accounts which are uninformative, if not unintelligible. The balance-sheet—which will be found analysed on another page—certainly presents a more liquid appearance, with a surplus of liquid assets over current liabilities (including employees' pension fund) of £1,636,823, and with reserves standing £800,000 higher at £6,083,128, but it still conceals more than it discloses. The first item on the assets side—namely, £26,445,958 for "purchase price of concession, shares in, and advances to associated companies," such as National Oil Refineries, British Tanker Company, Limited, and Scottish Oils, still hides the more important operations of the company. It can only be noted with satisfaction that this item is lower by £1,713,741 as compared with the previous year's accounts. How is the large increase in net profits to be explained? In the meagre report accompanying the accounts the chairman states that the output of the Persian oilfields was over half a million tons in excess of that of the preceding year, say 4,250,000 tons, that the small new field in the Argentine is now being worked at a profit, that the throughputs of the refineries at Abadan and Llandarcy showed a large increase (that of Abadan in the previous year having been affected by cholera and plague among the workers), and that the sales of all products had increased. Whether these facts account for the whole of the increase in net profits is doubtful, seeing that oil prices in this period of trading had not been upward. It seems more likely that the net profits are higher because administration expenses have been drastically cut down, and because it has not been necessary to write off such large sums for depreciation of new plant. As regards the future, it is disappointing to learn that drilling operations at Kishm, where very light oil had been discovered, have been given up on the view that the volume of oil was insufficient to justify commercial exploitation, but the main Persian fields have been greatly extended by further drilling, and a large additional area of productive territory has been proved. In the marketing sphere it is understood that the company has recently strengthened its European organisation by an association with the new German oil group formed by the amalgamation of Deutsche Petroleum and Deutsche Erdoel. Perhaps Sir Charles Greenway will disclose at the general meeting next Tuesday whether the company, through the German group, will now be buying Russian oil, which it has hitherto regarded with such suspicion.

Dalgety and Co.—The wonderful record of prosperity shown by the Australian merchant firm of Dalgety and Co., Limited, was continued during the year ended June 30th last. Net profits, as will be seen from the following table, continued their upward course, while shareholders once more are to receive a dividend of 10 per cent., plus a bonus of 7s per share, making a total distribution of 17 per cent., as in the preceding twelve months:—

Year Ended June 30.	Profits.	Expenses and Taxes.	Debt Interest.	Pref. Div.	Ord. Div.	Rate.	Reserve, &c.	Carried Forward.
1906 ..	£ 371,591	£ 148,171	£ 114,439	£ 25,000	£ 70,000	7%	£ 40,000	£ 55,381
1910 ..	542,534	198,362	122,364	25,000	80,000	8	110,000	77,759
1914 ..	570,510	245,434	105,593	25,000	80,000	8	10,000	197,015
1915 ..	582,097	258,048	107,377	25,000	80,000	8	100,000	208,687
1916 ..	643,931	322,210	107,864	25,000	100,000	10	100,000	197,544
1917 ..	861,793	484,448	107,119	25,000	130,000	13	210,000	102,771
1918 ..	875,369	510,304	104,065	25,000	140,000	14	85,000	113,770
1919 ..	857,773	494,475	101,141	25,000	140,000	14	90,000	120,928
1920 ..	957,298	566,470	98,251	25,000	150,000	15	110,000	128,506
1921 ..	689,168	445,176	103,386	25,000	100,000	10	60,000	84,112
1922 ..	775,660	408,280	114,591	25,000	150,000	15	60,000	101,901
1923 ..	920,977	552,587	114,228	25,000	150,000	15	65,000	116,063
1924 ..	986,979	551,039	111,952	25,000	170,000	17	75,000	170,052
1925 ..	1,039,221	568,698	109,210	25,000	170,000	17	100,000	236,365

The net profit figure, it will be seen, has gone up from £986,979 to £1,039,221, whereas the increase in expenses was very moderate, this item accounting for £568,698, in contrast with £551,039. On the present occasion £75,000 is allocated to the writing down of premises account, compared with £50,000, and £25,000 is again transferred to the staff provident fund. This leaves £236,365 to be carried forward, compared with £170,052 brought in. The directors report that wool prices during the year soared to an almost unprecedented level, but owing to various causes a decline set in which, by April, developed into a slump. This led to a cessation of auctions in Australia for some time, and a consequent financial stringency. On the resumption of auctions in July, however, good clearances were effected at remunerative prices. "The demand," it is stated, "continues, and the position is certainly more hopeful." The directors also refer to the fact that "simultaneously with the return of this country to the gold standard, the Commonwealth and Dominion Governments acted in like manner. As a result, exchange rates, which had been on an abnormal level for some time, were drastically reduced, and, as a consequence, trading between this country and the Dominions concerned was improved." The holding of cash has declined from £812,470 to £133,227, and bills payable have gone up from £101,210 to £1,039,403. Investments also have declined from £650,862 to £286,847, though bills receivable are £428,378 against £332,473. Moreover, advances on land, stations, stock, &c., have risen from £3,668,168 to no less than £5,241,627. Sundry debtors account for £1,275,286, compared with £735,214.

Joshua Hoyle and Sons.—The directors of Joshua Hoyle and Sons again state that trading conditions have been difficult "and the result is considered by the board to be very satisfactory." The progress made during the year ended September 30 last is shown in the following table:—

Year Ended Sept. 30.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
Profit	£ 108,837	£ 110,697	£ 193,167	£ 194,118	£ 274,609
Brought forward	88,476	48,486	15,652	18,183	22,355
Debtenture interest	197,313	159,183	208,819	212,301	296,964
Preference dividend	52,315	52,500	53,375	54,250	54,250
Ordinary dividend	96,512	18,499	30,500	31,000	62,000
Renewals & reserves, &c.	(12½ %)	(24 %)*	(5 %)	(5 %)	(10 %)
Carried forward	48,486	15,653	18,183	22,355	23,710

* Free of tax.

Net profits have gone up from £194,118 to £274,609, so that with the sum of £22,355 brought in there is an avail-

able balance of £296,964, in contrast with £212,301 twelve months ago. The ordinary shareholders have had their rate of dividend raised from 5 to 10 per cent., £75,000 against £25,000 is placed to renewals and reserve, and £23,710 is carried forward, in contrast with £22,355. The report states that during the year a final settlement of the company's taxation liabilities has been effected. "The provision in the accounts," it is added, "is estimated to cover fully any further liability which may have accrued."

Three Tin Reports.—Our mining correspondent writes:—The annual statements of a trio of tin companies which have made their appearance this week display somewhat varied results. That of the Northern Nigeria (Bauchi)—which company operates in the district indicated by its title—shows a slightly reduced profit. The output, of course, realised a higher average price than before, but this was more than offset by reduction in tonnage due to the unfavourable weather and other conditions. Hence the net profit figures at no more than £34,200 as against £42,700. The earnings were required for completion of the outlay upon the power installation; hence no dividend can be paid in respect of the past year. Since then, however, the hydro-electric scheme has come into operation, and the output has more than doubled, so the directors declare an interim dividend of 10 per cent. upon the preference shares for the current financial period. Future divisions of profits for 1925-26 will be participated in equally by both classes of shares. The reserves of concentrates at the end of June last are estimated by the manager at the somewhat increased quantity of 6,980 tons, sufficient to supply the plant for over five years at the current rate of output. The second concern—the Jantar, also a Nigerian—records the appreciably increased output of 360 tons, with satisfactory developments. The profit is £20,300, against £16,300, permitting the dividend to be raised from 10 per cent. to 15 per cent. The other company, the Tekka, is one of the Cornish-located group of Malayan tin dredging enterprises. The accounts show a profit of £39,750, as compared with £30,600 previously, but no increase is made in the rate of dividend, the surplus being carried forward. Following the example of various other companies, the Tekka has acquired additional property, which should add considerably to the life of the undertaking.

Broken Hill South.—The full text of the report of this important Barrier Range undertaking is now available, and contains some salient information supplementary to that given in the cabled summary. The principal point has reference to developments in the mine. The manager computes the fully developed ore reserves at 4,000,000 tons, an increase of 350,000 tons compared with the computation of a year ago, and representing between 14 and 15 years' supply for the plant. An interesting item is the significance for the company of the very satisfactory developments at the northern end of the No. 9 level of the adjoining Zinc Corporation property. Last year's receipts were swollen by 10 per cent. on the company's holding of 150,000 shares in the Electrolytic Zinc undertaking, whose rate of distribution has since been increased to 12 per cent. per annum. Expenses were raised by the additional royalty payable in connection with the renewal of leases as from January 1st last, as well as by the concessions made to labour. There appears, however, good reason to suppose that the company will be able to maintain its dividends at the enhanced rate of 17½ per cent. paid for the past quarter, upon which basis the shares give a yield of slightly less than that amount.

El Oro.—Having regard to the satisfactory monthly returns made by the El Oro Mining and Railway Company, the shareholders naturally expected a repetition of the previous year's dividend of 6d per share, tax free. Accordingly, not a few of them threw their holdings on the market upon discovering that the accounts to June 30th last showed a loss of £10,200 instead of a profit of £37,600. Actually the position is not what it appears at first sight. The receipts were lower than before owing to the delay in the receipt of the dividend from the company's subsidiary, the Suchi Timber; while the expenses were

burdened with a heavy charge for loss on exchange. The report of the manager clearly indicates that the remaining life of the old property is now short. The future, however, depends upon the Noria silver property, at which crushing is expected to be commenced early next year. Five years' supply of ore having already been opened up, further work underground has lately been limited to the preparation of the mine for the supply of 200 tons of ore daily. With regard to treatment, it is stated that the results obtained from the trial plant "justify complete confidence in the process adopted." The balance-sheet shows a debit of £269,000, principally consisting of advances to the subsidiary in question.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, Northumberland avenue, W.C. 2, on Tuesday, November 10, 1925, at 8.30 p.m., at which a paper on "The English Tradition and the Empire: Some Thoughts on Lord Milner's Credo and the Imperial Committees" will be read by Sir Halford Mackinder. Sir Arthur Balfour, K.B.E., will preside.

Oversea Correspondence.

UNITED STATES.—STOCK MARKET POSITION—MOTOR EARNINGS—STEEL CORPORATION—CROP ESTIMATES—ITALIAN DEBT MISSION—HERR SCHACHT'S VISIT.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 27.

SUBSEQUENT events have confirmed the view that the sharp break in shares on the Stock Exchange, which occurred some ten days ago, was due largely to the strain imposed on the Stock Exchange facilities by the extraordinarily large volume of trading. The inability of "specialists" to handle the flood of orders in certain active motor shares is now seen as the outstanding feature of the episode. With this difficulty mitigated, the market recovered its buoyant tone. Activity has continued to run at the rate of about 2,500,000 shares a day, and the "tickets" have continued to be from a few to as much as 20 minutes behind the market. Critical views of the market continue to be heard in conservative quarters, but, it must be admitted, the market itself has yet to act badly. Group movements rather than a concerted general movement still characterise its behaviour. There is the same debate as to the significance of the great rise in the motor shares, the critics maintaining that the movement represents little but an extravagant speculation, while the bulls declare that it is merely an inevitable readjustment of values to correspond to the greatly improved condition of the motor companies.

Some light on this particular question is shed by the earning statement of the General Motors Corporation for the third quarter of the year. In the three months ended September 30th, the Corporation earned, after depreciation and all charges, \$28,161,730. After deducting dividends on the preferred and debenture stocks, the amount available for the common shares was \$26,251,707, or \$5.09 a share. If the Corporation's equity in the un-earns for the quarter would amount to \$5.55 a share. For the nine months, exclusive of its equity in the un-earned \$74,243,966, which is equivalent to \$13.27 a share. For the entire year the Corporation is expected to earn not far from \$20 a share. Meanwhile the balance-sheet as of September 30th shows that the Corporation, which has no funded debt, had cash in banks, Government securities, and temporary loans and marketable securities to the value of \$143,308,120. In commenting on the state-divisions are operating at capacity and our dealers are sold stock in the territory is very materially below the normal." General Motors is now paying a regular dividend of \$6 a share on its common shares; it paid one

dollar extra out of the first six months' earnings, and is expected to pay three dollars extra out of the second six months. It is these considerations that have played the chief part in lifting the price of the common shares from a low level of 64½ to a high mark of 138 this year. Possibly the present price may discount fully the condition of the Corporation. It is fairly clear, however, that the price that prevailed earlier in the year was materially too low.

Another important earning statement is that for the third quarter that has just been made public by the United States Steel Corporation. The net earnings for this period reported by our premier industrial corporation amounted, before depreciation and charges, to \$42,400,412. This compares with \$40,624,221 for the quarter immediately preceding and with \$30,718,415 in the corresponding quarter of last year. After deducting all charges for depreciation, sinking funds and interest, the balance available for dividends amounted to \$23,804,823, as against \$21,889,004 in the preceding quarter, and \$15,078,110 in the third quarter of last year. The latest earnings amount to \$3.44 a share on the common stock and bring the total for the nine months up to \$9.44 a share. The directors declared common stock dividends at the same rate as during the past two years, that is, 1½ per cent. regular and ½ per cent. extra for the quarter. Plainly the Corporation is earning its present dividends with a generous margin. The earnings are the more impressive in that the Corporation's plants ran during the quarter at not far from 75 per cent. of capacity, and prices obtaining on the delivered products were not particularly favourable. At present the steel industry as a whole is operating at about 80 per cent. of capacity, orders are gaining moderately and prices are firm. Earnings of the steel companies during the last quarter of the year should be quite satisfactory, even though there is nothing like a boom in sight.

The latest surprise furnished by the Department of Agriculture in the matter of crop estimates has stirred up a great deal of adverse comment. In raising its estimate of the cotton crop as of October 18th to 15,226,000 bales, the Department added nearly half a million bales to its estimate of two weeks earlier. It added over a million and a half bales to its low estimate of August 8th. The price of the commodity naturally has declined with the lifting of the estimates, and this decline, characteristically, has drawn forth protests from the south. One southern Senator has even accused the Department of playing into the hands of the bear speculators at every turn, and demands the prohibition of "gambling" in futures. The actual fact is, of course, that the errors have occurred in a way that has helped to sustain the price of cotton and to enable the growers to receive better prices than they otherwise would have obtained. The losers have been the consumers of cotton, both foreign and domestic. As for the cause of the errors, despite suspicions, they seem to be due to the shortcomings of the method rather than to an intention to deceive. The fundamental reports on which statistics are predicated are based to a large degree on subjective impressions rather than objective measurements; the final result cannot, of course, rise in accuracy above the level of the original data. In addition, however, it is pointed out that the private estimators, with less data, have been able to produce a better record, a circumstance that points to inadequacies in the Government method. One result of the trouble over the reports is a rather insistent demand that the fortnightly reports be discontinued and that the Department revert to its practice of issuing only monthly reports. As for the crop itself, the big yield is regarded as removing the threat of inadequate supplies from the textile industry and guaranteeing an adequate supply for the crop year. The effect on the condition of the country's general business should be favourable.

The arrival of the Italian debt funding mission is awaited with much interest. The impression prevails that the Administration wishes to make a settlement with the Italians, and is familiar with the limitations of the Italian position. However, after the manner in which the French negotiations and the incidental publicity were handled, the financial district is disinclined to be really

optimistic. Some writers now maintain that in retrospect the French failure and the subsequent fall of Caillaux are regarded in Washington with a certain wistfulness. There is nothing official, however, to confirm this view. So far the Administration seems to be sitting tight. Current reports of Italian financing in this market are without foundation. No negotiations, or even preliminary discussions, have been started. Anything of that kind naturally will wait until after the debt funding negotiations have been concluded.

Much misinformation has been distributed with regard to Herr Schacht's visit to this country. Stories that he came to discuss modifications of the Dawes Plan or to arrange German loans may be dismissed. As a matter of fact, it appears that the German financial authorities are more interested in restricting German municipal borrowing abroad than in arranging fresh credits. The official explanations of the significance of the visit of the Reichsbank's head may be taken at their face value; he has come to confer with his banking friends in this country and to acquaint himself at first hand with the American situation.

FRANCE.—THE NEW GOVERNMENT—SOCIALIST POSITION—M. CAILLAUX'S AND M. BLUM'S PROPOSALS—FRANC SPECULATION.

(FROM OUR CORRESPONDENT.)

PARIS, November 4.

THE new Painlevé Cabinet has assumed office and had its baptism of fire in the Chamber, but it cannot be said that its advent has in any way improved the situation. Whatever claim M. Painlevé's previous Cabinet had to public confidence was due almost entirely to the presence therein of M. Briand and M. Caillaux. M. Briand remains at his old post, and for this there is much to be thankful, but it cannot be claimed that M. Caillaux's place has been adequately filled by M. Painlevé's assumption of the post of Finance Minister himself, with the assistance of M. Georges Bonnet, who has been appointed to the entirely new post of Budget Minister. Financial circles were badly impressed with the composition of the new Ministry, and this impression has been emphasised by all that has occurred since the names were announced. The outlook to-day is admittedly unsatisfactory. The Socialists, who hold the balance of power in the Chamber, provided the Ministry in being is convinced that its duty is to look to the Left for its majority, have refused to share the responsibilities of office with the rest of the groups of the Cartel des Gauches, and have also definitely voted that they refuse to pledge themselves to support the present Ministry. This can only be interpreted as meaning that they will decline to support M. Painlevé's Budget unless it includes a capital tax, which it is very doubtful that the new Premier and Finance Minister will venture to introduce, seeing that it would certainly be thrown out by the Senate.

Interesting new light has been thrown during the past week on certain episodes in the recent crisis. M. Caillaux, urged by his leader, laid before his colleagues a statement of his financial proposals. He showed in this that the situation of the Treasury is at present much more satisfactory than it was six months ago, when he assumed office. In December only 25 per cent. of the matured bonds will be presented for repayment, whereas on previous occasions the proportion to be paid off was from 48 per cent. to 52 per cent. He refused to tolerate any proposal for a forcible consolidation of the debt, on the ground that the State cannot break its contract with investors. At the same time, contradictorily enough, M. Caillaux proposed to extend liability for income-tax to holders of Rentes, which many people undoubtedly invested in because one of the conditions of issue has always been that this form of security shall not be liable to taxation of any kind, either "past, present, or future." He proposed, further, to raise the scale of income-tax on all forms of capital from 8 per cent. to 10 per cent., this also to apply to incomes derived from Rentes. Dealing with the question of inflation, M. Caillaux quoted Mr McKenna's definition of this as "an increase of purchasing power without a corresponding increase in the mass of merchandise," and insisted that although there would

be inflation properly so called if the State created banknotes or bonds for the purpose of meeting public expenditure, there would be no inflation of any kind if the State substituted banknotes for money kept in reserve (such as National Defence and other floating debt bonds). M. Caillaux proposed to apply this by reimbursing all holders of floating debt securities with banknotes, and thus assimilating the note issue and the floating debt in one form—the *plafond unique*—and thus getting rid of the interest burden accruing from the floating debt at the cost of an apparent but unreal inflation. Simultaneously, he proposed the creation of the sinking fund already spoken of, for the gradual redemption of the debt. The credit of the State being thus improved, M. Caillaux held that nothing would then be easier than to issue further Crédit National bonds for the completion of the restoration of the devastated regions.

Immediately after M. Caillaux had disclosed his plans to the Cabinet, M. Painlevé announced the collective resignation of the Ministry, and M. Caillaux took the opportunity on Friday to cause a very full summary of his statement to his colleagues to appear in some of the Paris newspapers. This had a very favourable reception in financial circles, and by the investing public generally, and it is commonly understood that, but for Socialist objections to M. Caillaux, the latter's proposals would have been accepted by his Ministerial colleagues.

M. Painlevé, before drafting the text of the Declaration of Policy, which it is the practice of new Ministries to present at their first contact with the Chamber, had a long interview with a deputation from the National Socialist party, which was holding another of its frequent national congresses at the moment. His forecast of the new Ministry's financial policy proved unacceptable to the deputation, who returned to the Congress to report its tenour. Eventually a resolution was adopted by which the party—although only by 1,431 votes against 1,228—refused to express its confidence in the new Government. As a result, M. Painlevé's declaration of policy, which was read to both Chambers yesterday, proved a distinctly vague affair. He announced the creation of the proposed sinking fund, warned the country that it will be required to show resolution and courage, announced that the Government will demand indispensable sacrifices, even at the risk of its own popularity, insisted that all expenditure must be met from revenue, and not with the aid of either loans or inflation, and declared that the necessary resources to right the financial situation will take the form "notably of a special contribution levied on all forms of acquired wealth." The declaration proved so little satisfactory that the Chamber accorded its confidence in the new Government by a majority of only 32, the most significant factor being that 200 deputies, or about two-fifths of their total strength (including 99 Socialists) abstained from voting.

In the circumstances it is obvious the life of the new Ministry cannot be a long one. Political gossip forecasts that, in the event of its early defeat, the President of the Republic will first call upon M. Herriot to form a Herriot-Blum Cabinet, in which it is believed the Socialists will be willing to accept office. Should M. Herriot, as would probably be the case, decline to make this effort, then the honour would be offered to M. Blum, the Socialist leader. This would not advance matters in the slightest degree, as the Senate would undoubtedly immediately overturn any Government which attempted to force through a Socialist financial programme. M. Blum's proposals for the relief of the Treasury have already been stated. All banknotes, he proposes, shall be stamped for the purpose of reducing their value by 10 per cent., and a levy of from 3 per cent. to 10 per cent. should be made on the value of all bonds presented for reimbursement. His proposals for getting rid of the debt are that a sinking fund should be created, into which should be paid the yield from "an exceptional and unique tax on capital" ranging from 10 per cent. to 15 per cent. on all kinds of property, with the forced conversion of all State funds, Treasury and National Defence bonds. M. Blum's dismissal from office, it is further forecast, would be followed either by an attempt to carry on by a Ministry under M. René Renoult and/or M. Briand, with the support of the Right. What is still more probable is that the Senate will find a way out of the deadlock that

has undoubtedly arisen by exercising its right to request the President of the Republic to decree fresh general elections.

The continued fall in the franc, which on Tuesday, after official hours, again dropped below 120, has been due very largely, if not entirely, to speculative dealings based on the lack of confidence felt in the new Government's financial ability. The resignation of the Painlevé Cabinet had already been discounted by speculators, who had bought large amounts of foreign exchange. The Treasury did not bring the Morgan credit into play, and there is every reason to believe this amount is still intact. One of the private banks, however, which is apparently anxious to stand well with the new Government, is stated to have intervened, and the Bourse has since merely followed the variations in exchange which were inevitable in the circumstances.

GERMANY.—POLITICS—ECONOMICAL COUNCIL—CURRENCY AND CREDIT—PRICES—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 4.

THE crisis over Locarno is likely to last some time. The obvious solution, short of a General Election, is to reconstruct the Cabinet by taking in, instead of the German-Nationals, the two Left parties, the German-Democrats and Social-Democrats, thus reviving the "Great Coalition." It is not clear whether the German People's party, which would constitute the Right wing of such a Cabinet, will consent, but it seems inclined to. It has joined the other two Cabinet parties, the Centre and the Bavarian People's party, in passing a resolution which condemned the policy of the Nationals, declared that the Pact ratification is the most urgent question, approved of Dr Luther for carrying-on, and expressed the view that the Nationals cannot be taken back. Negotiations with the Left parties will now be held. The German-Democrats, as a condition for their support, have demanded (in addition to ratification and "honest execution" of the Locarno policy) "guarantees for a domestic policy which will strengthen the Republic," and that the new Cabinet shall be based on parties that will resolutely "collaborate in this foreign and domestic policy." The ratification of the Pact is hardly in doubt, only the particular way in which it will be achieved.

A Bill constituting a definitive Federal Economic Council (*Reichswirtschaftsrat*) has been submitted. This constitutional experiment, which was first made (for Prussia) by Bismarck, and which has since been copied by France, has been on trial since May, 1920. An Economic Council is required by the Weimar Constitution; it was originally designed as top story for a class-economic structure, based on "Councils of Deputies." The present on the whole justified itself, though it has been hampered by the jealousy of the Reichstag, and by its undue size. The 326 members would have been reasonable for an economic Parliament with deciding powers, but they were unnecessary for, and retarded the progress of, a merely advisory council, which was supposed to express expert views. As a result, nearly all the Council's work has been done by committees. The Bill reduces the number of members to 126, of whom 41 are representatives of public corporations, 28 nominees of the Cabinet and the Reichstag, and two representatives of the Press. The Council is to have the right of legislative initiative. The Cabinet is compelled to submit to the Reichstag all bills which the Council may draft. The rights of the Council by the Council are increased. The new Council, like the old, will be organised in Committees, which will report only in exceptional cases, on the demand either of 75 members or of the Cabinet. The Council is empowered to conduct direct inquiries into facts, to call for information, and to examine witnesses under oath.

Money has been very plentiful, and the monthly settlements caused no strain. The day rate rose temporarily to 10-11 per cent., but present indications point to exceptional fluidity in the first half of November. Month money has been practically stable for weeks past at 10-11 per cent. The private discount rate (short-term) has dropped to 6½ per cent., the lowest since quotation was reintroduced. The valorisation of Savings Banks deposits (Prussia only) has been fixed at 12½ per cent. of the original gold value. It is estimated that of 20 milliards deposits in 1914, 6 milliards were withdrawn, leaving 14 milliards, at cost of 1,750 millions, to be valorised. Money for the deposits valorisation will come from the valorisation of the Savings Banks' mark investments, bonds, mortgages, &c., and it is estimated that this will yield about 800 millions, leaving a considerable deficit, which presumably the public corporations guaranteeing the Savings Banks will have to find. A compensation fund will be created, to enable Savings Banks with assets exceeding the 12½ per cent. to assist those whose assets are insufficient. Foreign holders of paper-mark federal loans, who desire to exchange them for new "loan redemption bonds," are required to register between October 30th and March 1st next, and "old" holders are given the same term for putting in claims to preferential treatment under the law of July 17th. For Great Britain and Ireland registration is to be made at the Bank of England; and the special commissioner is Oberregierungsrat von Friedberg, Bank of England. The commissioner is the first authority who will decide on claims. The visit of the Reichsbank's President, Dr Schacht, to the United States has brought out rumours of grandiose plans for international control of money and trade, and for an agreement by which German competition would be diverted to East Europe. The former plan is vague and unlikely, and the latter impracticable. All that is known here is that the Government and the Reichsbank desire to restrict American lending to German municipalities, whither nearly all the loans now being negotiated are directed, and to encourage moderate lending to German industry and trade. A Deutsche Bank report for the first half-year states that profits were satisfactory, though they declined in the second quarter, and that deposits have continued to increase. The Reichsbank's return for October 23rd shows a decline in discounts of 71,688,000 marks, which is mainly the result of increased rediscounting. The rediscount total is now 746 million marks, against 448 million marks on September 7th.

Prices are falling, but so far not sufficiently to show any influence by the Cabinet's price-reduction policy announced in August. The cost-of-living index for October was 143.5, against 144.9 for September, which was the highest point since the currency stabilisation. The official wholesale index for October 28th shows 122.5, against 125.9 at the end of September, and 131.7 in August (average for month). The *Frankfurter Zeitung's* index shows (since the highest point, January 29th):—

	Food and Drinks.	Textiles & Leather.	Minerals.	Miscellaneous.	Manufactures.	All 100 Commods.
Jan. 29 ..	148.04	187.12	141.26	130.21	141.87	147.14
Aug. 31 ..	140.36	185.00	138.09	129.60	142.25	144.25
Oct. 31 ..	137.91	183.73	138.50	131.32	143.10	143.98

Berlin municipality's report shows an increase in the cost of living of 45 per cent. since July, 1924.

The condition of industry has changed little. The Prussian Trade Ministry's report for October admits only that the crisis in mining has passed its worst point. There is a new demand for anthracite, with an order from America. Signs of improvement in the iron and steel industry are clear, and the textiles, paper, and electro-technical branches are very prosperous. Bankruptcies increased in October, being 1,139, against 897 in September; but the causes are mostly financial, connected with credit, and not with inability to sell—this is shown by the fact that they occur seldom in the less prosperous manufacturing and trading branches. Sales of potash in October were only 73,537 metr. t, against 101,196 t in September, the reason being that agriculture was occupied with the crops. The estimated raw sugar production in the current business year 1925-26 is 1,532,250 metr. t, the current business year 1924-25 is 1,578,559 t last year. The consumption of beet has increased, but the sugar content is smaller. It is

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,458,221

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

believed that the Western Steel Trust is on the eve of completion. Krupps have formed a new company, "Krupp Eisenhandel G.m.b.H.," with headquarters Düsseldorf, for home and foreign trade. The Railways Corporation has given an order for 480,000 t of track materials to the Stahlwerksverband. The rolling-stock branch is very dull. The Railways Corporation, it is stated, has 5,000 locomotives and 14,000 freight cars (some probably in bad condition) more than it can use. The scrap-iron market is more active. An agreement has been come to with Belgian wire manufacturers to check competition. The Pig-Iron Syndicate announces unchanged prices for November, and the Raw Steel Syndicate has retained unchanged for November its 35 per cent. reduction of output. Increasing French competition in iron is reported in consequence of the new fall in the franc's exchange. The motor car manufacturing branch is again dull, and the output of standardised light cars, from which much was expected, is declining. The average price of machine tools is officially put at 52.1 per cent. above that of 1914, of machines 47.9 per cent., as against a rise of 23.7 per cent. in the price of pig-iron (Foundry No. III.) and of 126.2 per cent. in bars. Trade Press complaints of the lamentable state of the iron and steel industries are not confirmed by output statistics. It is true that business is dull and that prices are unprofitably low; but even if it is noted that smelters and steel manufacturers have considerable unsold stocks, the recovery of production shown by the latest statistics indicates that business is by no means desperate. Output this year will almost certainly be the biggest since the war. The year 1922 has been so far the best post-war year—

	In Metric Tons.	
	Pig-iron.	Steel.
1919.....	6,283,873 ..	7,874,356
1922.....	9,395,670 ..	11,714,302
1925 (January-September)	7,958,594 ..	9,643,442
1925 (whole year, at rate of Jan.-Sept.) about	10,600,000 ..	12,800,000

Since the new Bourse decline of late October, the Press has been full of laments as to industrial conditions—the Bourse now plays the unreliable indicator rôle formerly played by the paper mark's exchange. These laments are always exaggerated, often contrary to facts. The latest Commerz- und Privat-Bank report says with reason: "It would be entirely unreasonable, allowing for all doubtful symptoms, to judge German business with uncritical pessimism.....If, with case by case and branch by branch, present conditions and future prospects are examined, the conclusion will undoubtedly be that great parts of German business, as before, are on a thoroughly sound foundation and promise favourable developments.

The securities market has again been weakish, but the latest declines are mostly small, with recoveries in certain branches. The *Frankfurter Zeitung's* home stocks index shows for October 31st 66.16 (100 on January 2nd), against a former low point for the year of 67.29 on August 21st. The leading heavy industry stocks, which were depressed more than other securities during the Stinnes crisis, are materially higher than in August; and shipping stocks are also higher, and in the last few days have risen, against the general tendency, as result of—somewhat vague—optimistic reports concerning the treatment of shipping property seized by the United States. Yesterday, after Bourse hours, some shipping stocks, on supposed foreign buying, rose considerably.

ITALY.—DEBT MISSION TO AMERICA—HOPES OF FINANCIAL CIRCLES—THE ITALIAN LIRA AND FRENCH FRANC.

(FROM OUR CORRESPONDENT.)

TURIN, October 29.

ON October 22nd the Italian Mission for the settlement of the debt with the United States sailed from Naples. Among the members of the Mission are some of the very best names in the financial world, Signor Volpi, the Finance Minister, and the able organiser of great electrical enterprises and director of banks; Signor Pirelli, the son and partner of the founder of a world-renowned rubber manufacturing firm; Signor Alberti, a student of economic questions and a responsible banker; and as technical experts Professors Gini and Cantelli, both distinguished University professors. A well-digested mass of statistical evidence on the economic and financial situation of Italy has been prepared, so that the case for Italy will be fully laid before the American Commission.

Financial circles and stock exchanges (which, by the way, have recovered from the extreme depression of the end of September and the first days of October) are welcoming the attempt at a settlement, and set on it great hopes. They see that the payment of big sums on the score of interallied debts will be a source of recurrent difficulties; but, in the characteristic mental attitude of men of affairs, they say, better a bad certain bargain than a perpetual uncertainty hanging over us. Until uncertainty is dispelled, no real progress can be made. Financial circles, moreover, hope that the settlement will mean the lifting of the embargo on issues by Italian public corporations and joint-stock companies in the United States. As one of the greatest obstacles to payments is difficulty of remittance, it is hoped that Americans will re-invest the sums received from the Italian Treasury in Italian industrial concerns, becoming interested as shareholders, partners, or creditors in the property of Italian agriculture and industry.

That is one side of the problem; on the other hand it is observed that there is not the slightest probability that Italy can export anything for the sake of debt payment. Even supposing that taxpayers can be taxed up to a certain sum, say 20 million dollars eventually for payment to the U.S. and 20 millions for payment to Great Britain, how could such a sum, corresponding, at the present rate of exchange, to 1,000 million lire yearly, be transmitted? The balance of exports and imports worked out as follows in the first eight months of the present year (in millions of lire):—

	1924.	1925.
Imports	12,392.7	18,099.7
Exports	8,548.0	11,383.2
Excess of imports over exports	3,844.7	6,716.5

It seems that in 1925 the excess of imports over exports, which in 1924 totalled 5,070.1 million lire, will be over 8,000 million lire. No one thinks that the invisible net credits can offset more than a part of the unfavourable commercial balance; so that in the present year Italy will be obliged to resort to foreign credits under various forms.

How that situation could be so thoroughly reversed as to create an excess of credits and the possibility of remittances to foreign countries is very difficult to say. Moreover, it will not be easy to extract from the over-taxed Italian the sums which presumably are claimed by foreign creditors. How a hard-living people can pay huge sums to rich, well-fed and well-housed Americans strikes Italians as a problem somewhat difficult of a common-sense solution. However, on these problems differences of opinion do not coincide with political parties. All parties support the Government in the attempt to reach a solution which Italy can fulfil without too crushing a burden on her future development.

An interesting feature of the end of October has been the rupture of the chain which seemed to bind together the Italian lira and the French franc. Until recently whenever the French franc sank, the Italian lira followed it. Our experts attributed the synchronism of the two movements to arbitrage operations of French banks, and to the opinion, widely held in foreign circles, that

Italian and French finances were involved in the same good or bad plight. Last summer, for the first time, the synchronism was not operative, and the last slump of the franc did not extend to the lira, which remains today at about 25 lire per dollar, or 122 per pound sterling. There is, indeed, a fundamental difference between France and Italy. We have balanced the budget, so that the Treasury is not bound to come to the market continually in search of money. We have indeed 17,954 millions lire of 3 to 12 months Exchequer bills, but they are easily renewed when they come to maturity, and cannot, therefore, be considered as a latent paper circulation. We have, not as France has, a Treasury problem. The only visible element of disquiet in our financial situation is to-day the interallied debt problem. Public opinion is growing persuaded that Great Britain and United States will not willingly take upon themselves the responsibility of upsetting an equilibrium which cost us so great a sacrifice to reach.

SWITZERLAND.—FOREIGN TRADE—EFFECT OF McKENNA DUTIES—GERMAN TARIFF—MONEY AND BANKING.

(FROM OUR CORRESPONDENT.)

GENEVA, October 24.

IT was easy to foretell that the boom in Swiss exports recorded during the months which preceded the enforcing of the McKenna Duties would be followed by an important drop. While exports totalled a value of £8,365,281 in June, they came down to £6,124,947 in July, to £6,132,321 in August, and reached £7,239,982 in September. The recovery in September is, nevertheless, gratifying. Swiss foreign trade returns during the third quarter were on the whole not unsatisfactory; imports reached a value of £25,895,316, compared with £24,761,560 during the corresponding period of 1924, and exports totalled £19,497,250, against £19,908,360 in 1924. From January 1 to September 30, 1925, Switzerland imported goods to a value of £74,966,178, or £2,944,018 more than in 1924, and exported products for a total value of £62,271,209, or £1,235,209 more than in 1924. This leaves a heavy adverse balance of £12,694,969, which is partly made good by the earnings of the hotel industry, which may be estimated at nearly £9,000,000 for the present year.

The increase of exports to Germany is a consequence of the Agreement concluded in November, 1924, between Germany and Switzerland for the mutual suppression of import restrictions and prohibitions which were hampering trade relations between the two countries. The Agreement covered a period of eleven months up to September 30, 1925, but it was, on September 8th last, prolonged up to the end of the present year. In the meantime, the German Reichstag decided on some important increases of Customs Duties, which measure Switzerland considers to be prohibitive, and, as the Agreement entitles one country to have recourse to negotiations when the other has arranged to discuss the question with Germany. A conference of economic experts is now taking place with a view to coming to some understanding on that point, but if the conference fails to reach an accord, Switzerland will be entitled to denounce the Agreement at a month's notice; this would mean the reintroduction of import restrictions, a measure which would certainly aggravate anxiety is felt in Swiss commercial quarters, as Germany is now the most important market for Swiss goods, and if to trade and industry already hard hit by the McKenna Duties. During the first quarter of 1925 the monthly average value of Swiss exports to Great Britain was £1,140,000, it came down to £826,186 in July, to £705,172 in August, but it slightly rose to £746,165 in September. The extent to which the McKenna Duties clearly shown by statistics. From March to August, the sale of Swiss watches dropped from £200,000 to £17,800, of silk tissues from £406,400 to £121,680, of silk ribbons from £85,400 to £15,000; during the same time the num-

ber of unemployed has risen from 7,000 to over 10,000, as several embroidery manufacturers have been compelled to close down. It is almost likely that, in a few months' time, when the stocks bought by England have been considerably reduced, Swiss exports to Britain will again show an increase, but, in the meantime, Swiss exporters will pass through a difficult period, the more difficult if the present obstacles raised by Germany cannot be removed.

Money is now abundant in Switzerland. Owing to the rather unsettled condition, there is no great demand for capital by trade and industry, and, on the other hand, it seems that French capitalists have recently placed important funds in the Swiss banks to forestall the carrying out of the taxation plans of M. Caillaux. The abundance of money, and the fact that several countries have already reduced their discount rate, led the Swiss National Bank to reduce its discount rate from 4 to 3½ per cent. Switzerland has again become an important centre for the investing of foreign funds. It is impossible to estimate the amount of money which French, German, Austrian, Roumanian, and even British capitalists have placed in the Swiss banks during recent years, but it certainly reaches several milliards of francs. Foreign capitalists are of opinion that the country is safe, that Socialism and Communism have no prospects of coming into power, and they also know that taxes are generally low. This accounts for the extraordinary development of all Swiss banking concerns since the beginning of the war. There was an important withdrawal of foreign funds in 1922, when the Swiss Socialist Party proposed a Capital Levy, but that proposal was rejected by the electorate by such a crushing majority that all the funds withdrawn were sent back to Switzerland, and the movement continued during the succeeding years. If Swiss trade and industry are labouring under difficult circumstances, the Swiss banking industry is at least prosperous and developing year by year.

ROUMANIA.—POLITICAL SITUATION—CURRENCY CIRCULATION—FOREIGN TRADE FIGURES—OIL.

(FROM OUR CORRESPONDENT.)

BUCHAREST, October 26.

PARLIAMENT opened on the 15th with political enthusiasm at a low ebb. Four years of so-called "Liberal" government have been a severe strain even on such a patient and long-suffering people as the Roumanians. According to the provisions of the Constitution, however, this session will terminate the mandate of the present Government, and a general election should be held not later than next February.

What the Messrs Bratianu intend to do is still highly uncertain. They probably realise that the country is tired of their administration, and that their four years' performance has been anything but a sparkling success. While opposition against them is undoubtedly strong throughout the country, the political parties in opposition, as they are at present constituted, inspire even less confidence than do the Liberals themselves. The Opposition forces, in fact, are all at sixes and sevens, lacking not only leadership of the forceful and intelligent character required, but unable even to present a common programme for legislative action.

The past three months have witnessed a rapid increase in the bank-note circulation. One year ago the outstanding volume was 18,846 million lei. On July 1st last it was 19,536 millions, and by October 1st it had increased to 20,682 millions. During the three months ended October 1st the rediscounts of the National Bank rose from 7,627 million lei to 8,465 millions. Issuing new currency against commercial paper does not seem to be regarded locally as inflation, the idea apparently being that industry and commerce are being assisted by relieving the credit and currency crisis through the medium of a "temporary" increase in the bank-note circulation. The convention concluded several months ago between the Treasury and the National Bank, and subsequently ratified by Parliament, fixes the legal limit of currency circulation at slightly over 21,000 million lei.

Although the official rediscount rate continues at 7 per cent., open market rates have firmed up again quite considerably during recent weeks, and some of the leading

Bucharest banks are now offering from 18 to 24 per cent. for time deposits, with interest payable in advance. Financial circles are far from optimistic over the winter outlook.

Preliminary official figures on the foreign trade balance for the first half of 1925 show a deficit of Lei 1,736,221,591—imports being valued at Lei 14,543,035,256 and exports at Lei 12,806,813,665. For the corresponding period of 1924 imports were valued at Lei 13,730,893,622, and exports at Lei 12,171,213,120, the adverse balance of Lei 1,559,680,502, however, having been more than regained in the second half of the year.

Grain exports in the autumn usually lay the foundation for Roumania's favourable foreign trade balance. The present autumn, however, has so far been a very poor one from the grain export viewpoint, but it is hoped that the reduction a few days ago of the export tax on barley and maize (from Lei 20,000 to 12,000 per carload) will stimulate the outward movement before the winter closing of the Danube, especially as the competition of Russian and Yugoslav grain—which has been exceptionally keen this autumn—is now reported to be slackening. The failure to reduce the prohibitive export tax of Lei 30,000 per carload on wheat is taken to mean—despite official estimates of a substantial crop surplus—that the actual yield will be only about sufficient to satisfy internal requirements.

Business interests are now agitating strongly for a further upward revision of the import tariff—particularly on metallurgical products—claiming that imports should be restricted to the barest necessities in order to help in restoring a favourable trade balance.

Crude oil production in the first nine months of the present year totalled 1,615,842 metric tons, exceeding by 312,229 tons the production for the corresponding period of 1924. The September production of 215,000 tons established a new monthly record. It is expected, however, that the October figures will exceed 225,000 tons. The discovery of a new oil sand at 3,000 feet in the Moreni field seems likely to increase very considerably the oil production of Roumania. Only three wells have so far reached this deep strata, and each of them has given strong indications that an extensive and prolific "pay" has been uncovered. "Romano-Americana" (Standard of New Jersey) No. 1, which came into production from this deep formation on July 24th, is still flowing in excess of 1,000 tons per day. Unfortunately, however, the first fifty days' flow from this well was lost by fire.

In view of the enormous (for Roumania) quantities of fuel oil that are piling up in storage, the Government have now decided to abolish all restrictions on its export, except the payment of the export tax. This, it is announced, will be reduced in the very near future from Lei 2,000 to Lei 300 per carload of ten metric tons in order to facilitate export. Although prices are low, the oil companies are in a much healthier condition than other industrial enterprises in this country.

SWEDEN.—GOOD HARVESTS—BUSINESS IMPROVEMENT—MONEY AND STOCKS—A BANK AMALGAMATION.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, October 19.

THE slight improvement in business conditions which has been prevailing here for the last month has been stimulated by the harvest reports. It is estimated that this year's crop is larger than any crop ever reaped in this country. As the quality is good, too, and the harvest weather in general has been favourable, the result seems to be altogether satisfactory. This promising fact is expected to give strong support to trade and industry in general, owing to the increase in the buying power of the countryside. In some branches signs of this have already appeared. The labour is also satisfactory. At the beginning of October the labour question often causes uneasiness, as this is the time at which decisions are taken as to the prolongation or otherwise of the labour agreements expiring on January 1st, and affecting a large percentage of Swedish workers. This year, however, this business has passed off smoothly, few notices of termination being given either by the workers or the employers.

To advise recourse to the haulage contractor's motor lorry (itself economically inapplicable to large-volume freight of low payable content such as sugar beet), or purchase for his own use of the more appropriate transport instruments that have been developed, is, to the bankrupt farmer, to add insult to the injury already done him!—I am, Sir, yours faithfully,
EMRYS J. WHELDON.

Books and Publications.

ESSAYS IN CONTEMPORARY HISTORY.*

In these two volumes, which are issued under the auspices of the British Institute of International Affairs, Mr Arnold J. Toynbee boldly attacks a most difficult and intricate task. To write contemporary history, even in calm times, is formidable; in the seething turmoil of the post-war years it is overwhelming. Nor can the contemporary reviewer presume to assess the degree of success which the author has achieved. The verdict must lie with the students of future generations. But certain things even the contemporary reviewer may venture to say. He may, for instance, state without fear of future contradiction that Mr Toynbee has skilfully pieced together a truly tremendous mosaic of essential facts upon which he throws the searchlight of a brilliant intelligence. It is, in fact, difficult to know which to admire the more—the boundless industry which must have gone to the compilation of the record of facts and events, or the continuous effort of the imaginative faculty which preserves a perspective throughout the treatment of a welter of material, in which a less experienced author would have foundered as in a morass.

Originally these two volumes were to have been one. But the single volume outgrew its appointed limits, and rather than suppress or curtail the Institute decided to publish two volumes simultaneously. The first, "The World After the Peace Conference," is essentially the introduction to the second, the "Survey of International Affairs, 1920-23." It is an exegesis of the canvas on which were painted in the events of the four years covered in the later volume. It consists of a thoughtful examination of the political map as it was in 1914, and as it was left by the Peace Treaties of 1919-20, and of the two following chapters, entitled "The Horizon" and "The Fore-ground" in which the author traces the ramifying influences in international relations which were to lead to that series of failures which met the international efforts of European statesmen in the three years covered by the second volume. Of that volume, indeed, such failure is the keynote. To quote a phrase of Mr Toynbee's, "The portentous forces set in motion by the War of 1914 could no more be arrested by the summary method of drafting a treaty than the Hydra could be killed by a stroke of the sword, and the weary statesmen of Europe saw two heads spring up for every head which they cut off." We are told, indeed, the story of the eighteen international conferences (ending with Genoa) at which the Hydra was attacked with large hope and small success. The rest of the volume is divided into five parts dealing with Western Europe, Eastern Europe, the Islamic World, Tropical Africa, and the Far East and the Pacific. Maps, appendices, and bibliographies, footnotes and references are abundantly supplied, and, indeed, Mr Toynbee adds to his achievement of clear narration and excellent marshalling of facts the merit of providing all possible assistance to the student. Whatever verdict the historian of the future may pass on Mr Toynbee's *magnum opus*, he will in any case find in it not only an indispensable work of reference, but also a guide to the understanding of how the events of the period looked to a very conscientious and intelligent observer.

* "The World After the Peace Conference." By Arnold J. Toynbee. 5s net. "Survey of International Affairs, 1920-23." 25s net. Both volumes published by Humphrey Milford, Oxford University Press.

THE RAILWAYS ACT.*

THIS volume is another in the series of handbooks from the same publishers intended for the use of students of transportation. It deals exclusively with Part III. of the Railways Act, which is concerned with the constitution and procedure of the Railway Rates Tribunal, the determination of standard revenue, the fixation of rates and fares, the classification of merchandise, and kindred subjects.

After a recital of the essential features of the Act in these respects, Mr Griffiths describes briefly the work accomplished by the Tribunal, down to the fixation of standard revenue, and outlines what remains to be done before the "appointed day" can be determined.

The book does rather scanty justice to the immensity of these proceedings, and gives only the barest outline of what took place; but it does not purport to be more than a concise *précis*, and within these narrow limits it fulfils a useful end.

Tables are appended showing an analysis of the schedules of Standard Charges submitted by the four amalgamated companies in pursuance of Section 30 of the Act, and the book is completed by a digest of the test cases on various issues which have been heard by the Tribunal.

TAXATION IN AUSTRALIA.*

THIS work gives an outline of the development of taxation—indirect and direct—in the Colonies (now States) of the Australian group, with an interesting account of the origins of taxation. The power of taxation is one which is peculiarly liable to abuse either in the hands of an individual autocrat or by a sectional oligarchy such as may wield the sceptre of authority even under the forms of a modern Parliamentary system. There are in existence two schools of opinion differing from one another as to whether taxing statutes should be used primarily as the means of affecting specific social or political purposes, or should be designed with the sole intention of producing necessary revenue. The adherents of one school regard the present individual, or mainly individual, industrial régime as one to be displaced as soon and as completely as possible, and they view taxation as a system of morally persuasive penalties whereby the community can be induced to turn from its present courses and follow the path which leads to the imagined Elysium of Socialism.

The concluding chapter discusses the Burden of Taxation, 1923-24, and deals in an interesting way with the often assumed that direct taxation cannot be passed on to the consumers, but the experience in Australia is that and other classes of business and professional men frequently have, and cheerfully avail themselves of, the opportunity of passing on income-tax. Evidence of public opinion in the 1923 Commission on Taxation was to one of the overhead expenses of a business, which means that it is merely a factor in the cost of goods or services indeed, received judicial recognition. This practice has, Court of New South Wales, which, in estimates of personal taxation to the working expenses of their business (see N.S.W. Parl. Debs., 1920, Vol. L3XII., p. 3,306). It is believed the same practice passes unchallenged in other Australian Arbitration Courts. The amount of the Commonwealth and States Income Taxes is interesting comment on direct taxation in Britain.

BOURNE'S HANDY ASSESSMENT MANUAL, 1925.*

THE edition for 1925 of this most useful manual contains the figures from the life assurance reports and valuations issued in the first half of this year. The arrangement, a convenient one, adopted in previous issues has been continued. The summary of British accounts deposited with the Board of Trade shows ordinary life funds of £506,280,738, and industrial life funds of £123,200,043. The total ordinary income was £79,364,736, and the increase in the funds £25,656,126. For industrial business the income was £39,423,824, and the increase in the funds £12,698,383. Of the ordinary life business in force 41.06 per cent. consisted of whole-life assurance and 51.15 per cent. of endowment assurance.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET,
November 18.

ACCOUNT,
November 19.

Stock Exchange markets have been affected by Mr Winston Churchill's announcement that the embargo upon Colonial and foreign issues has been removed. This served to depress gilt-edged stocks, the War Loan going to a trifle below 100, while Conversion 3½ per cents. dropped at one time to 75½. It led to the possibility being canvassed of a rise in the Bank rate. Gilt-edged and purely investment stocks have been dull all round; and, in the foreign market, the speculative investment bonds of the Mid-European class were also easier, on the assumption that Belgium, Brazil, and several other big foreign borrowers might shortly put in an appearance with new loans. The Gold Coast issue of 4½ per cents. at 94 received no enthusiastic welcome, the price being considered expensive.

Slight reactions have occurred in Austrian, Greek, German, Czech, and other Reconstruction bonds, but the speculative counters of the foreign market—e.g., Turkish Unified, Peruvian Corporations, and other such have been advanced. Chinese bonds strengthened, and Brazilians have been marking time.

The home railway group showed a firmer disposition at first on the attitude of some of the railwaymen in refusing to be dominated by Socialist extremists. Prices, however, failed to hold a mild recovery, and the market became dull and stagnant. In foreign rails, the feature is a relapse in Cordoba Centrals, which followed the meeting on Wednesday; speculators sold after the chairman's speech. Argentine rails, however, as a whole, keep hard, sustained by good traffics. The nitrate market is quiet, with a harder tendency.

The rubber market maintains a good deal of activity, but the settlement which concluded on Thursday turned out to be a lighter affair than several of its predecessors have been. Not many firms had to work all through the night on ticket-day. Some of the newly-issued shares command a wide circle of following. It is pleasant to be able to state that the public are showing a marked discrimination in the matter of applying for new rubber companies' shares. In the tea market, there is not much going on. In the oil list, a rise in Shells and a violent jump in Mexican Eagles (brought about by Paris purchases) galvanised the market into animation. Prices are decidedly better on balance.

Several of the tobacco shares came into renewed demand, and the boomlet in cable equipment shares received a further fillip on the declaration of a 7½ per cent. interim dividend by Johnson and Phillips. Prices in this section are strong; electrical manufacturing shares followed the same upward road. Gas stocks are better. There has been a little rally in the shipping leaders, P. and O. deferred recovering from 250 to 262. The insurance market is neglected; banking shares keep their prices, and trust companies' stocks remain difficult to buy. The iron, coal and steel group has improved. Some people ask whether the recent revival, based on the hopes of early trade recovery, may not be premature. Others think that removal of the embargo on foreign issues will stimulate the "heavy" trades. In artificial silks, Grouts have secured the principal rise of the week, Courtaulds being quieter than usual, while other textiles have maintained a firm front, with Coats a feature of particular strength on the fine figures published with the dividend declaration. Newspaper shares are disposed to strengthen, and amongst breweries, Benskins spurred on the expectation of what the forthcoming report is likely to show. There has been a sharp recovery in Dunlops now that the strike is settled. Motor shares generally are quiet. Aluminium shares fell sharply on the news of the Welsh disaster. Several fresh introductions have been made to the industrial market during the past few days, and the appetite of the public for speculative investment is such that almost anything which offers a prospect of improvement in price, and which gives reasonable value for money, has no difficulty in securing support.

A Kaffir market feature has been the strength of Langlaagtes, East Rands, and a few of the deep-level shares, but business is very patchy in South Africans as a whole. Johannesburg Consolidated Investments have enjoyed a spurt, and Goldfields went better on the increased dividend. Chartered and other Rhodesians attract no special attention. Tin shares in the Malayan group are strong on the dividend announcements, while West Africans, in spite of disappointing Bauchi dividends, manage to arouse a certain amount of interest. Mexican mining shares have moved in somewhat jerky manner, and the Broken Hill division displayed a disposition to dwindle, despite a better dividend declared by the Zinc Corporation. Other mining sections are quiet.

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended October 24, 1925, was as follows:—La Rosa, 7,680 metric tons (previous week ended October 17, 5,743 metric tons). Maracaibo district, 3,530 metric tons (previous week ended October 17, 3,030 metric tons). For week ending October 31st:—La Rosa, 12,568 metric tons; Maracaibo District, 3,401 metric tons.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel Street, Strand, London, W.C. 2.

COMPANY MEETINGS, &c.

CORDOBA CENTRAL RAILWAY COMPANY, LIMITED.

RECORD RESULTS—SCHEME OF ARRANGEMENT.

The 39th ordinary general meeting of the Cordoba Central Railway Company, Limited, was held at River Plate House, Finsbury Circus, London, on the 4th instant, the Right Hon. Lord Farrer (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, having referred to the visit of H.R.H. the Prince of Wales to the Argentine Republic, said: The report which we now submit is so encouraging that it really speaks for itself. The principal business which we have to-day to consider is the question of the proposed method of dealing with the debit balance in net revenue account, and you will no doubt wish me to devote my remarks principally to that subject. I will therefore merely recapitulate the salient features of the year's working.

INCREASED RECEIPTS.

Our gross receipts—which again constitute a record in the history of the company—show an increase of £195,000, or 6 per cent., and this, I would remind you, follows on an increase of £97,000 which last year's gross receipts showed over those of the previous year. The working expenses—which include nearly £6,000 more than last year in respect of the reserve for renewals—show a small increase of £18,000, or less than 1 per cent. over the figure of last year. The net receipts are greater than those of the previous year by £177,000, or just on 21 per cent., and here again this increase is on top of an increase of £53,000 which the net receipts of last year showed over those of the previous year. These increases in receipts are sufficiently striking in themselves to call for no comment from me.

The loss on exchange was £119,000, compared with £163,500 in the previous year. I would, however, point out that this year the equivalent of the amount remitted in sterling was some £355,000 more than the realised sterling remitted last year. After making the usual provision of £50,000 under the scheme of 1919, the balance at the credit of the net revenue account for the year is £248,284, which, of course, goes in reduction of the previously existing debit balance. This debit balance now stands at £632,351.

SCHEME EXPLAINED.

Having dealt briefly with the year's results, and matters incidental thereto, I will now direct your attention to what no doubt you will consider to be the most important feature in our report. At the general meeting of the company held last October, I intimated that, provided the results of the financial year then ensuing and the company's cash position were satisfactory, we would consider how best to deal with the balance at the debit of net revenue account, which then amounted to £880,000. Well, as I have just told you, the past year's results have proved quite satisfactory, as the net revenue exceeded that of the previous year by £223,000. Moreover, as since June 30, 1925, our estimated receipts, both gross and net, showed improvement over those of last year, we felt justified, in view of these encouraging results, in formulating proposals for adjusting the accounts and eliminating the debit balance. It is true that were we to wait this debit balance of £632,000 might probably in a few years' time be liquidated out of net profits, but meanwhile the whole status of the company would suffer, as it would remain on the list of non-dividend payers.

THE PROPOSALS.

We did not think the proprietors generally would favour the adoption of such a course, and we therefore considered it advisable in the best interests of the company to deal with the matter now, our proposals for doing so being:—(1) That 20 per cent., equivalent to £126,400, be written off the issued amount of the ordinary income stock; (2) that this £126,400 be applied as to £632,351 5s 10d in extinguishing the balance at the debit of net revenue account at June 30, 1925, and as to £181,372 14s 2d in reducing the amount of £767,876 standing at the debit of capital account in respect of "rebates, &c., on issues of capital." The effect of these proposals will be to put the company in a position to resume the payment of interest on its preference and ordinary income stocks much earlier than would otherwise be the case, and we believe that all the income stocks will thereby enjoy a better standing, as the delay which would otherwise necessarily ensue in working off the debit balance out of future revenue will be avoided. The approximate gross receipts for the first three months of the current financial year—which were exceptionally good—exceed those of the corresponding period of last year

by £77,000, and I may add that the increase in our net receipts for the same period represents a substantial proportion of that sum.

Mr W. Sandford Poole seconded the resolution, which was carried nem. con.

The formal business having been transacted, separate meetings of the various stockholders and an extraordinary general meeting of the company were held, when the scheme of arrangement was approved.

COLOMBIAN CORPORATION, LIMITED.

POSITION OF CONSTANCIA MINE.

The fifth ordinary general meeting of the Colombian Corporation, Limited, was held, on the 5th instant, at River Plate House, Finsbury Circus, London, Mr F. W. Baker (the chairman) presiding.

The secretary (Mr G. E. Hounsom) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, after dealing with the balance-sheet, said: Turning to the position at the Constancia mine, I am glad to be able to report that plant construction was completed in April of this year, and from that date the mill has been operating continuously. For the period ended August 31, 1925, 24,640 tons have been milled, yielding \$84,632, averaging \$3.44 per ton, the operating costs amounting to \$92,415, averaging \$3.75 per ton. This cannot be considered as anything but a very disappointing result, but you must bear in mind that a certain percentage of values is always absorbed in the starting up of any new mill, and the results obtained are not really a true index of future results. One feature is satisfactory—namely, operating costs. These have been brought down to a lower figure than Mr Hoffmann estimated, and only very slightly over Mr Prichard's original estimates, and this under very adverse conditions, because, owing to shortage of labour, we are only able to put through the mill less than one-half of the tonnage upon which our estimates of earnings have been based, and for which treatment our mill is designed. It now appears pretty clear that if we could secure labour so as to increase our tonnage, we could get operating costs even lower than the average just given, and as the developments carried out during the year point to the probability of a general higher average in grade, a small increase in this direction and a further decrease in operating

costs on a larger tonnage treatment will materially change the picture. We are operating a mine splendidly equipped, and all that we now require is an increased labour supply to produce the tonnage requirements for mill capacity and some appreciable increase in the average grade of the ore to be treated.

Gentlemen, I feel that the position at the Constancia mine is certainly more encouraging than it was when I addressed you last year, but we cannot get away from the fact that the future of this property is going to turn on what development will show in the future, particularly below the 5th level. We are certainly operating, even under the adverse conditions, at a very low cost, which should be further reduced as larger tonnages are treated and further labour is secured. Personally, I believe as the camp gets known as a settled camp miners will gradually come back to us attracted by the conditions of living.

Mr John A. Agnew seconded the resolution, which, after the chairman had replied to a few questions, was adopted.

KAMUNTING TIN DREDGING, LIMITED.

RECORD YEAR—INCREASED OUTPUT AND DIVIDEND.

The twelfth annual general meeting of the shareholders of Kamunting Tin Dredging, Limited, was held, on the 4th instant, at the registered offices, 7 Martin's Lane, Cannon Street, London, Mr John I. Philips (chairman of the company) presiding.

Mr J. Hope-Bowden, A.C.A., on behalf of the secretaries (Messrs Bright and Galbraith, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—Although we are met to consider the most successful year's working in the history of the company, I have no doubt that, as usual, it will be your pleasure to take the report and accounts now before you as read.

The running time of our No. 1 dredge has again been remarkable. In spite of 10 years' continuous wear, it has actually worked 7,135 hours—practically 20 hours per day—recovering 46½ tons of tin ore, which is the best recovery of any of our dredges.

Nos. 2 and 3 dredges have also worked an average of over 20 hours per day for the whole year, and have recovered 375 tons and 418 tons of tin ore respectively.

The year's output from all sources is 1,345½ tons—an increase of 50 per cent. over last year—which has realised £194,556, as compared with £118,303 realised in 1923-24.

The working costs of Nos. 1, 2, and 3 dredges, which were 4.99d per cubic yard in the year 1922-23 and 4.12d per cubic yard last year, have now been further reduced to 4.01d per cubic yard, which compares very favourably with the working costs of other tin companies operating in Malaya.

The net result of the year's working, after providing £22,207 for depreciation, is a profit of £106,709 8s 5d, which has enabled your directors to declare and pay four interim dividends of 1s each, free of tax, which is equal to practically 26 per cent. per annum, and leaves £36,172 17s 1d, or over 10 per cent. on our capital, to be carried forward to the current financial year.

Your directors at one time considered the advisability of making a further distribution on account of 1924-25 in the form of a bonus dividend. In face, however, of the fact that it will be some little time before No. 4 is again in commission, the board, in accordance with their desire to maintain their usual conservative policy, decided to increase the first distribution on account of the year 1925-26 from 1s to 1s 6d per share, free of tax, which, with the current rate of income-tax, is at the rate of 37½ per cent. per annum, and which, I think, will meet with the approval of everyone.

May I also call your attention to the value at which our four dredges now stand in our balance-sheet? On reference to this item, you will see that, in addition to the customary adequate depreciation, your directors have transferred £61,252 from reserve and premium on shares account, so that the four dredges now stand in the books of the company at £87,602, or less than £22,000 each.

You will see from the report that the area owned by the company has been increased by about 540 acres at a cost of £9,668, or less than £20 per acre, so that we now have a total area of some 2,187 acres, which, in the opinion of the general manager, makes the company's reserves in keeping with its dredging equipment.

After ten years' continuous working, the general manager desires to dock No. 1 dredge for repairs and the installation of new machinery to bring her more up to date, which is approved by the board, but, as we desire to maintain a normal output, naturally this work will not be undertaken until No. 4 is again in commission.

I do not propose dealing at length with the future position, but I notice from statistics appearing in the Press on the question of supply and demand that they indicate that the market price of tin

will not only be maintained, but there appear to be good grounds for anticipating a further rise.

Sir Ernest W. Birch, K.C.M.G., seconded the resolution, which was unanimously adopted.

SUNGEI-TIMAH ESTATE (PERAK), LIMITED.

INCREASE OF CAPITAL SANCTIONED.

An extraordinary general meeting of the shareholders of the Sungei-Timah Estate (Perak), Limited, was held, on the 4th instant, at the registered office of the company, 4, Lloyds Avenue, London, for the purpose of considering, and, if thought fit, passing resolutions approving the acquisition of new estates and the increase of the capital of the company, Mr E. J. Koch (the chairman) presiding.

The Chairman said: This meeting has been convened to consider resolutions approving the issue of further shares for the purpose of acquiring two small properties near our estate in Teluk Anson, and raising funds for the development of our reserve land. From personal experience and knowledge of the soil, growth and yielding capacities of estates in that locality, I can thoroughly recommend the purchase. There will be nothing in the way of capital expenditure required, as buildings, factory, and smokehouse are ample for requirements. The additional crop which we shall harvest and sell on arrival at spot prices will very considerably enhance the average sales during the current financial year, and, in view of the fact that our forward sales during this period are made below present prices, you will realise how important and advantageous this additional crop will prove to be. Further, to this, after paying off the purchase price and underwriting commission, an estimated amount of something like £10,000 will be available. We shall now be in a position to open up our reserve land without encroaching on our earnings, which would not have been the case had we not made this issue.

Taking all things into consideration, I feel sure, gentlemen, that you will agree with me that the acquisition of the new estates and the prospects of being able to open up our land with the cash available will make Sungei-Timah Estate a very much more attractive proposition.

I now beg to move the following resolutions:—

(1) "That the directors be, and they are hereby, authorised to conclude arrangements for and carry out and complete the purchase by the company of rubber estates, known as the Hockseng and Sinniar Estates, situate near Teluk Anson, in the Federated Malay States, as a going concern as from such date as may be arranged at an approximate price of £26,500, and that the directors be, and they are hereby, authorised to make or assent to any modifications of any provisional arrangements made by them, and settle all incidental terms which they may think expedient in the interest of the company, and to execute and do all acts, deeds, and things as may seem desirable to them for effectuating the above purposes."

(2) "That the capital of the company be increased to £100,000 by the creation of 650,000 additional ordinary shares of 2s each carrying the same rights as and ranking in all respects *pari passu* with the existing ordinary shares in the capital of the company."

Mr M. Maude seconded the resolutions, which were carried unanimously.

Reports and Notices.

Owing to his recent illness and severe operation, Mr. Basil May, F.I.A., has resigned his position of actuary and manager to the British Equitable Assurance Company, Limited, but retains his position as director. The directors have appointed Mr. D. A. Coleman, at present assistant manager, to be manager; and Mr. A. H. Shrewsbury, F.I.A., at present assistant actuary, has been appointed actuary to the company.

GOVERNMENT STOCKS, &c.

PARAGUAY EXTERNAL DEBT.—Tenders of bonds of the above debt for amortisation were opened to-day at the offices of the Council of Foreign Bondholders. In the case of the bonds of 1886 and 1896, tenders under £33 19s 9d per cent. were accepted in full, and those at that price to the extent of 75 per cent. In the case of the bonds of 1915, tenders under £35 7s 6d per cent. were accepted in full, and those at that price to the extent of about 13 per cent.

RAILWAYS.

BUENOS AIRES CENTRAL RAILWAY.—At £223,985, the net profits for the year ending June 30, 1925, after meeting debenture charges, show an increase of £92,241 over the previous year. The dividend on the ordinary shares is increased to 6 per cent., against 5 per cent., and the allocation to the special reserve fund is £34,918, against £20,000. The board have further strengthened the company's position by the establishment of a special renovation fund, to which is placed the substantial sum of £43,651. The gross receipts of the company during the past five years are as follows:—1920-21, £149,731; 1921-22, £196,419; 1922-23, £214,628; 1923-24, £277,284; 1924-25, £318,504.

BANKS.

COMMERCIAL BANK OF SPANISH AMERICA.—The twenty-first annual report to June 30, 1925, shows a net profit of £54,858, against £38,432 in preceding year. The sum of £4,000 has been put to staff pension fund, and £51,000 to contingency account. The sum of £135 is carried forward, against £278 brought in.

MITSUI BANK, LIMITED.—The report of this bank for half-year ended June 30, 1925, reveals a net profit of 4,934,779 yen, to which is added 3,510,870 yen brought in, making 8,445,649 yen available. This is utilised as follows:—To special reserve fund, 800,000 yen; pension and provident funds, 199,000 yen; bonus, 320,700 yen; dividend to shareholders, 3,600,000 yen; balance forward to next half-year, 3,525,949 yen. Total assets are 669,940,778 yen. Cash is at 48,861,008 yen. Loans and discounts amount to 375,745,572 yen. Capital subscribed is 100,000,000 yen. Capital paid up is 60,000,000 yen. Reserve fund is at 25,000,000 yen. Special reserve fund is at 20,400,000 yen. Reserve fund for dividend, 6,000,000 yen. Deposits are at 443,188,201 yen.

RUBBER, &c.

GLEN RUBBER AND TEA.—Net profit for year ended June 30, 1925, amounted to £1,534, which compares with a debit balance of £177 in preceding year. The ordinary shareholders are to receive 4 per cent. dividend, against nothing in previous year. A credit balance of £38 is carried forward, against a debit balance of £403 brought in. Total assets are £37,128. Cash is at £3,363. There are no investments.

MATURATA TEA AND RUBBER.—The net profit for the year ended June 30, 1925, amounted to £8,784, against £7,807 for previous year. The ordinary dividend and bonus is 35 per cent., against 30 per cent. The carry-forward is £1,064. The balance-sheet reveals £53,756. Cash is at £3,032. Investments are shown separately as follows:—3½ per cent. Conversion Loan, at cost, £9,015; Kerala Tea shares, 7s 6d paid, £2,437; secured loan at call, £2,000; making total investments, £13,452.

SUMATRA PARA RUBBER.—This company has total assets £327,063, cash stands at £28,930. Investments at cost are shown separately, as follows:—4½ per cent. British Treasury bonds, £23,425; 5 per cent. War Loan, 1920-47, £8,113; 7 per cent. debentures Sumatra Proprietary Rubber Plantations, £6,949; 100 shares of £1 each in Valtex, £100—making total investments £38,587. The ordinary issued capital is £199,934. Reserve is at £36,961. With regard to results achieved during year ended June 30, 1925, the net profit is £52,380, which compares with £13,250 in preceding year. The ordinary dividend has been raised from 6½ per cent. to 25 per cent., from which tax will be deducted at the rate of 4s 4½d in £. From a valuable table published with the report, we learn that the crop for 1924-25 amounted to £1,136,595 lbs, as against 1,000,009 lbs in preceding year. Crops are shown year by year from 1906-7, when the yield of rubber was 21,000 lbs. Out of the 19 years shown in the table, ordinary shareholders have only had to go without a dividend on three occasions. The highest dividend is 41½ per cent., and the lowest 6½ per cent.

MISCELLANEOUS.

AUSTRALIAN MERCANTILE, LAND AND FINANCE.—Net profit for the year ended June 30, 1925, £328,766; the sum of £50,000 has been transferred to equalisation reserve, and £25,000 to super-annuation fund reserve, leaving £253,766. Out of this sum an interim dividend of 5 per cent., together with a bonus of 2½ per cent., was paid on May 4th last, £67,500, leaving £186,266; and the directors now recommend a final dividend of 5 per cent., together with a bonus of 2½ per cent. (making 15 per cent. for the year on £900,000, and 7½ per cent. actual on £300,000, all free of income-tax), £90,000, leaving a balance of undivided profit of

£96,266, to which must be added the balance from previous year, £18,802. Balance to be carried forward, subject to provision for income-tax (estimated to cost £73,000), £115,067. Following the announcement made by the chairman at the last annual general meeting, the issue of 60,000 new shares of £5 each was made in May last. All these shares have been taken up and paid for in full, and participate in the distribution now recommended by the directors.

ASSAM RAILWAYS AND TRADING.—The following table is extracted from the report for the year ended March 31, 1925:—

	General Earnings.	Coal Earnings.	Total Earnings.	Total Expenditure.
In 1921-22 ..	10,19,084	6,97,253	17,16,337	12,38,692
In 1922-23 ..	11,79,717	7,58,158	19,37,875	13,40,935
In 1923-24 ..	13,50,342	6,85,928	20,36,270	15,14,523
In 1924-25 ..	16,18,952	8,28,411	24,47,363	15,74,374

The dividend on the "B" stock is 9 per cent. for the year, against 8 per cent. for the preceding year.

BURBERRYS, LIMITED.—The balance brought forward after providing for dividends brought into the accounts amounts to £44,945, from which must be deducted the net dividend on the preference shares for the six months to January 31, 1924, paid August 1, 1925, £28,828, leaving £15,217. Add profit for the year to March 31, 1925, £171,689, against £98,823 for preceding year, making a total of £186,906, which the directors have dealt with as follows:—By transferring to contingencies and general reserve account, £100,000; by declaring a dividend, payable on December 1, 1925, to the preference shareholders on the register at November 12, 1925, for the 12 months to January 31, 1925, which will absorb £58,125; and by carrying forward £28,781. The directors are pleased to be able to report a more satisfactory result of the company's operations as compared with the previous year, and this has enabled them to carry out their intention of making substantial payments on account of the arrears of the fixed dividend values of the freehold and leasehold premises and fixed plant, the depreciation in arriving at the profits for the year.

LONDON MARITIME INVESTMENTS.—This company has an issued capital of £1,000,000, in ordinary stock £500,000 and 5 per cent. cumulative preference stock £500,000. It has a reserve fund of £210,000, which is all invested in British Government securities. This is shown fully on the assets side of the balance-sheet under the heading reserve fund investments. Total assets are £1,241,337. Cash is at £22,368. Investments at cost amount to £1,009,169. They are shown under nine headings. Shares in shipping companies amount to £456,994 of the total investments. The net profit for year ended September 30, 1925, is £59,206, against £57,678. The ordinary shareholders again receive a dividend of 8 per cent.

ARCOS LTD.

Sole Purchasing and Selling Agency in Great Britain for the Government of the U.S.S.R.

Turnover from June, 1920, to September 30, 1925, £65,797,891

Exports from Russia to Great Britain include timber, flax, furs, ores, metals, crude drugs, petroleum products, etc., to a total value of £21,565,018.

The more important items of import to Russia are agricultural machinery, locomotives, tools, motors, scientific apparatus, drugs, clothes, boots, etc., to a total value of £44,232,873.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions remain generally favourable to agricultural pursuits, and farmers were able to push ahead with sowings. Threshings are on a moderate scale, consequently supplies of native wheat at the principal statute markets continue in manageable compass. In the floating and forward cargo section buyers were more disposed to operate, and with offers somewhat reservedly made in view of improved foreign advices, prices in most cases tended against buyers. Steamers of No. 1 Northern Manitoba afloat sold 53s 1½d to 53s 7½d as to position, No. 2 ditto 51s 6d to 51s 7½d, Baril 62 lbs afloat 52s 3d, Australian new crop December-January 52s 3d to 52s 6d. Of maize, Dan-Gal-Foxanian loading 34s 6d, Plate afloat 35s 3d, November-December 35s, 480 lbs, and Dan-Bess-Kustendji barley November-December 15th 28s 3d per 400 lbs, all c.i.f. terms. Wheat firm. No. 1 Northern Manitoba ex ship to arrive quoted 57s 3d, No. 2 ditto 56s 3d, No. 3 55s, No. 2 mixed Durum 52s 6d per 490 lbs. English 11s 2d to 11s 4d per 112 lbs free on rail. Flour firm. London standard grade quoted 45s, patents 47s to 48s, town whites 45s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Imported firm, but quiet. Manitoba patents range from 43s to 46s 6d, Minneapolis 44s to 45s 6d, Australian 44s to 45s per 280 lbs ex store. Maize quiet. Plate ex ship to arrive quoted 36s 9d, landed ditto 37s 9d, white flat African ex ship 34s 6d, landed 36s 9d per 480 lbs. Yellow African maize meal ex ship to arrive 17s 6d, white ditto 18s per ton. Barley quiet and occasionally easier. Californian new ex ship quoted 36s to 50s, Chilean Chevalier 57s to 66s, brewing 50s to 53s, according to quality, Australian Chevalier 59s to 61s ex store, Polish and Danish ex ship 44s to 55s per 448 lbs. American malting ex ship 28s 3d, landed 30s, No. 3 Canadian Western ex ship November 30s 9d, No. 4 ditto 29s, Russian ex ship 27s, landed 28s 9d per 400 lbs. English quoted 9s to 21s 3d, the latter for finest malting quality per 112 lbs. Oats maintained. Plate ex ship quoted 24s, landed 26s 9d, No. 2 Canadian Western ex ship to arrive 28s 9d, landed 30s 9d. No. 2 Canadian feed ex ship near 24s 3d, landed 26s 3d, No. 2 white clipped American 38 lbs ex ship to arrive 23s 9d, landed 25s 6d, all per 320 lbs. Danzig ex ship 28s 9d per 336 lbs. English quoted 9s to 10s per 112 lbs free on rail. Millers' offers quieter. Broad bran quoted 8s, middlings 8s, fine ditto 10s 3d, bags included ex mill, powdered oat husks 6s 3d, feed oatmeal 8s 9d, ground oats 12s 3d per cwt free on rail. Oatmeal in fair demand at easier rates. London made flaked 17s 6d, rolled oats 16s 6d, medium also fine cut 16s 6d, coarse also medium pinhead 16s 6d ex mill, ordinary Scottish oatmeal 17s 6d to 18s, American ditto 16s to 16s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1925-26, 1924-25, 1923-24, 1922-23.

	1925-1926.	1924-1925.	1923-1924.	1922-1923.

1924	290,357	590,543	125,893	13 0	17 0	10 6

AMERICAN WHEAT MARKETS.

Prices show a slight increase on the week, though irregularity has at times developed. The wheat pool has been selling rather less freely, unfavourable weather is reported from some areas, and overseas markets have given more support. Recent quotations:—

	Nov. 7, 1924.	Jan. 2, 1925.	Oct. 22, 1925.	Oct. 23, 1925.	Nov. 5, 1925.
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs	166½	183	(a) 127	(a) 139	(a) 135½
Chicago (No. 2 Winter)—Cents per 60 lbs	147½	177	(b) 141½	(b) 147½	(b) 160½
(a) October delivery. (b) December delivery. (c) November delivery.					

THE WORLD'S WHEAT HARVEST.

Information communicated by the various countries interested to the International Institute of Agriculture shows that the 1925 output of wheat was (in million centals; 1 cental = 100 lbs):—1,727.6 excluding Russia, and 2,124.4 if Russia be included. These figures compare with those of earlier years as follows:—

1925 CROPS EXPRESSED AS PERCENTAGE OF 1909-13, 1923, and 1924

	Average, 1909-13.	1923.	1924.
Wheat { without the Soviet Union	107.0	95.6	108.7
{ including the Soviet Union	104.9	..	116.8

These figures demonstrate the plentiful outturns of 1925. As regards Russia, brought into the table somewhat incompletely owing to the absence of any aggregate data for the whole territory in 1923, it should be noted that the estimates of 1925 are those of August, since when, unfortunately, somewhat serious injury has occurred to all crops owing to bad weather.

COAL.

Our Sheffield correspondent writes:—The coal market continues sluggish, and owing to the continued mild weather the quantity of house coal going out is exceptionally small for the time of year. Export trade remains much the same as heretofore, and very little South Yorkshire coal is being shipped to the Continent. Best steam hards are quoted 18s to 19s per ton, f.o.b.

Our Cardiff correspondent writes:—During the present week there has been an appreciable improvement in the undertone, with a crop of orders coming from the United States and Canada, principally for anthracite and dry steam coals. The influence of this new business has been felt in the market for the other qualities, and the week closed with a better feeling than at any time since July. A South American order for second-class Admiralty has been placed for about 75,000 tons, to be delivered in the proportion of two-thirds large and one-third small at a c.i.f. price of about 31s 6d. The supply of tonnage has also increased, and the working of the collieries has been a little less irregular. Quotations have been steadier all round. The audited figures of the coalfield for September show a further loss, and the liability of the owners to pay wages during November will be limited to 1.46 per cent. above the standard rates, as compared with 4.76 per cent. in October. The difference between 1.46 per cent. and the minimum wage of 42.22 per cent. on the standard rates will be met out of the Government subsidy. The following are the current approximate quotations:—Best Admiralties, 22s 6d to 23s 9d; seconds, 21s to 21s 6d; best dries, 22s to 24s; black veins, 20s to 22s; Western Valleys, 19s 6d to 20s; Eastern Valleys, 19s 3d to 19s 9d; best bunker smalls, 10s to 10s 6d; ordinary cargo smalls, 8s 6d to 9s; coking smalls, 10s 3d to 10s 6d; anthracite best large, 42s to 44s; red vein large, 28s to 32s 6d; machine-made cobbles, 57s 6d to 60s; French nuts, 57s 6d to 60s; stove nuts, 57s 6d to 60s; rubbly culm, 11s 6d to 12s; coke (special qualities), 35s to 40s; patent fuel, 20s 6d to 23s; pitwood, ex ship, 28s to 29s. The improvement in the tinplate trade is maintained. Prices continue steady.

An International Service

THE Central Union Trust Company of New York is equipped with every facility for the prompt and efficient handling of financial transactions throughout the world. Foreign banks and business houses with banking interests in the United States are invited to avail themselves of this service, which includes the purchase and sale of foreign exchange, collections, and the issuance of commercial and travelers letters of credit. In addition, the Company conducts a general banking business and acts as Executor, Trustee, Transfer Agent, Registrar of Stocks and in every other Fiduciary capacity.

IRON AND STEEL.

We have extracted the following from the weekly report of the London Iron and Steel Exchange:—Business has proceeded on steady lines. There has been some forward buying of late, and, if the quantities involved have not been large, the aggregate tonnage must have been considerable. The recent foreign buying of pig-iron, which did much to lift the depression which had lasted so long, has not been continued; but there has been a certain amount of export business, which has helped to maintain the tone of the market. The stocks also have been practically cleared in many producing districts, and in others they have been very much reduced. In the semi-finished department there has been some improvement in inquiry; but, as this branch of the trade has not experienced its full share of the recent improvement in business, the position is still somewhat disappointing. In the finished steel department the recent activity continues, particularly in the sheet and tinplate trades.

Our Middlesbrough correspondent's report, dated November 5th, is as follows:—Pig-iron: Although 66s per ton is now the generally quoted price for No. 3 Cleveland G.M.B., there has been no weakening in the position. A large business is being done both for home and export. The hematite position is strong, and makers are sold well ahead. The quotation for East Coast mixed numbers is firm at 74s 6d per ton. Manufactured iron and steel: There is more activity in this branch, but business is possible only at very keen prices. The following are the average quotations:—Steel ship plates, £7 5s; steel ship angles, £7; iron bars, £11 5s; steel rails, £8. Iron ore: A few transactions have taken place recently, but with freights inclined to stiffen, sellers are not disposed to cut prices. Best Bilbao Rubio is firmer at 20s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—The increased activity of the iron and steel branches during the last few weeks seems to have disappeared. The call for ordinary steel, either raw or made up, continues to dwindle. The pig-iron market is no stronger or more active in this district. Orders for billets, too, only cover work booked by the consumers. The most promising of the large industries requiring much steel is engineering, in which there has lately been a succession of important contracts given out. Export trade is far from brisk. The volume of local output, however, keeps large. The only progressive branch is that of stainless steel, this year's output of which is probably three times as great as last, and continued expansion is a certainty. The trade in finished iron continues on a poor scale. Less railway steel is being turned out. Builders of railway carriages are booking valuable contracts from the home and various foreign railways. Engineers' small tools are quiet, and the demand for general hand tools, while large in the aggregate, falls considerably short of output capacity. A large aggregate of seasonal orders for cutlery and plate has been booked during the last week or two.

Our Glasgow correspondent writes:—Conditions in the iron and steel trade are better, but definite indications of improvement are somewhat hard to find. One important factor is shipbuilding, which, unfortunately, is in a worse position than for nearly two years. Steel works are, however, doing fairly well on a restricted output for structural steel, and some plate orders have been placed by exporters. Pig-iron prices have been inclined to drop, and by exporters. A decline of about 6d on the week, but a better tone prevails, and the four furnaces that are being put into blast at Glengarnock are a hopeful sign. For last week the shipments of pig-iron from the Clyde totalled 1,027 tons, of which 962 tons were on foreign account. For the corresponding week of last year the shipments were 1,187 and 912 tons respectively. Makers of re-rolled steel are exporting largely, and are securing more business against foreign competition on account of the low prices at which semi-raw steel is now being imported. Malleable iron makers are no better placed, small quantities being the rule at present among orders coming in. The demand for black and galvanized sheets continues on a large scale, and makers are holding out for increased prices.

OTHER METALS.

TIN values declined sharply on lower Eastern cables, combined with selling pressure, though offers were fairly well absorbed. Towards the close of the week a better tone prevailed, and initial declines were mostly recovered. Standard cash sold at £284 10s-£279 10s and £284, three months £284 10s to £279 10s and £282. Sales in the East were reported at £292 5s to £287 15s and £289 10s c.i.f. terms. COPPER continued in good support, but with liberal offerings rates disclosed slight irregularity. Standard cash changed hands at £62 7s 6d-£62 12s 6d and £62 5s, three months £63 5s-£63 12s 6d and £63 3s 9d ton. LEAD generally easier, though dealings were on a liberal scale. Good soft foreign pig, November, sold £38 7s 6d to £37 2s 6d, December £37 10s to £36 17s 6d, January £37 10s to £36 13s 9d, and February £37 2s 6d to £36 10s ton. SPLITTER maintained a firm tone, and a fairly good business was effected. November sold £39 17s 6d to £39 10s, December £39 2s 6d, January £39 5s to £39 10s and £39, February £39 1s 3d to £38 17s 6d ton. ANTIMONY quiet. English specials quoted £75 to £80 as to make and quantity, foreign refined £75 per ton, ex warehouse. ALUMINUM: Home trade nominally £120, ton, ex warehouse. SPOT export £125 per ton, f.o.b. terms. QUICKSILVER firmer. Spot quoted £14 7s 6d to £14 10s per bottle. WOLFRAM firm. Forward quoted 20s 3d to 20s 6d per unit, c.i.f. terms.

THE COTTON TRADE.

LIVERPOOL, November 5, 1925.

American cotton has been in fair demand all the week, and prices show very little change. Egyptian has been quiet. Other sorts have been in fair request, with little change in values. The estimates spot sales from October 30th to November 5th (inclusive) amount to 36,000 bales, including 1,000 bales for export. Of these, 21,280 are American, 4,150 Brazilian, &c., 3,550 Peruvian, &c., 1,550 Egyptian, 4,400 African, 850 East Indian, and 920 sundries. The imports for the week are 82,994 American, 1,247 Brazilian, 4,098 Peruvian, &c., 10,168 Egyptian, 982 African, and 1,946 East Indian, making a total of 101,435 bales. Middling American is quoted at 10.44d, fully good fair Sakel Egyptian 21.90d, fair Brazilian 10.99d, good fair mod. rough Peruvian 16.00d, smooth Peruvian 12.59d, fully good fair Tinnivelly 9.80d, good fair East African 13.20d, and middling West African 10.24d. In the early part of the week speculative hedge selling caused a fall of some 60 points in January futures, but values have since recovered, and are now only some 10 points below those of noon, October 29th. The recovery has been brought about by less pressure of hedge selling, some "shorts" covering and trade buying, also a few "bulls" again venturing to operate on the theory that the selling had been overdone and a reaction due. More business has been done in Egyptian futures, and to-day's noon difference in price between January Egyptian and January American is 840 points. On the 9th inst. the U.S.A. Agricultural Bureau will issue another report on the crop, and the Department of Commerce a report on the number of bales ginned to the 31st ult. It is thought by many that the Bureau will slightly reduce their figures owing to excessive rains in many parts and killing frosts in other sections.

The market has been unsettled, but stiffer prices stimulated demand towards the close of the week, and rather more business has been done. Buyers, however, are still nervous and operations irregular. Inquiry in cloth for India has been of considerable extent, and although many offers have been altogether too low, a fair amount of trade has been done in light bleaching descriptions.

and grey shirtings. Slightly more inquiry has been met with for China, chiefly in whites. Comparatively little has been put through for the Near East, but a steady demand continues to be met with for South America and the Continent. Increased activity has been experienced in the yarn section. Some "short" users have secured cover, and a better turnover has taken place in American qualities. Restricted operations have been reported in Egyptian counts, with special sales for sewing cotton purposes.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Although the turnover this week has not been so large, there is no sign of any weakness. The active buying movement of the last few weeks has practically cleared the market of several qualities, and this is evidenced by the fact that topmakers are unable to accept new orders for delivery this year. On the other hand, it is possible to pick up a second-hand parcel here and there, some holders being willing to take a profit on to-day's rates rather than hold for a further advance. Quotations for merino tops do not show much change. In crossbreds, fine sorts are firm at late rates, and medium and low qualities show a rise of about 1d per lb. Spinners have bought fairly heavily in recent weeks. They have booked some substantial orders, and can still do good business if they are in a position to give their customers the benefit of cheap tops, but it is difficult to sell yarn on to-day's basis for tops. The same thing applies in the selling of pieces; where spinners can take less than current rates they can secure orders, but manufacturers are unwilling to operate largely on to-day's yarn prices. Spinners, however, are much better employed, especially in the botany section, and in numerous cases overtime is being worked. New business in piece-goods is rather scarce, but manufacturers are well employed on old contracts, and it is probable that continued firmness in wool values will help to bring out more demand for cloth.

COLONIAL WOOL.

FROM A CORRESPONDENT.

There is no cessation in the buying of wool. Prices are exceedingly firm, and private cables indicate that the selection is particularly good, both at Melbourne and Sydney. Some splendid clips are being offered, rather finer than expected. France and Germany continue to operate on an extensive scale, and the home trade is also compelled to cover forward sales of tops. West Riding users have been caught short, and trade having made a good recovery it is essential that 250,000 bales arrive home with all possible speed. It is apparent from what topmakers say that their position is a very anomalous one, for trade revival has come at a time when their stocks of wool had dwindled almost to the vanishing point.

News this week from South Africa is to the effect that a little irregularity has developed. This is not to be construed as any real sign of weakness. South African values have been pence per clean lb above an Australian parity. Values for Cape wools could decline 10 per cent. and still be on a level with Sydney and Melbourne prices. Auction sales have now commenced at all the selling centres in South Africa. We understand that some of the buyers at East London are opposed to the opening of auctions there, but the public auctioning of wool is undoubtedly the best method of disposal, and we think that auctions should take place three days per week during the season at Durban, East London, and Port Elizabeth, with, say, one day per week at Cape Town. Taken on the whole the outlook for wool is good. The essential thing is that wool be put on to the market without any stint. Among users in the West Riding there is a consensus of opinion that values should not be pushed above the present level. The improvement in manufacturing conditions is something to be thankful for, and though no doubt some misgivings have been created recently by the advancing tendency of prices, it cannot be said that they have yet got beyond the capacity of the ultimate consuming end of the trade to pay.

THE JUTE TRADE.

DUNDEE, November 5.

The easier tendency in the price of jute continued till Tuesday, when the Calcutta Mills entered the market and purchased fair quantities of material, while Calcutta speculators were also operating in London, the price of first marks in that market rising to the extent of 1/4 per ton. Easier symptoms followed, and values declined. In Dundee "bears" were anxious to rid themselves of their holdings, and on Monday the value had dropped to 59 for Daisee 25 3d actuals. With stronger advices from Calcutta, on Tuesday, however, the value rose to 60 paid for assortment. A slightly easier tone developed on Wednesday, and to-day the value of Daisee 25 3d is again standing at 59. There were very few offers of jute made to this market from Calcutta, and there is only an occasional seller of white jute, which is now reported to be nearly exhausted. Little alteration took place in the price of best first marks, which were very steady at 67 for a group of four actuals, though 66 10s might now be accepted. Yarns are firm, and a fair business has taken place. Spinners are holding for 55 1d for common 8 lb cops, and 55 2d for medium spools, though holders are to be found willing to accept 1/4 to 1d less in each case. Cloth orders continue on a small scale, though manufacturers are busy, and firm in their rates of 6d for 10 1/2 oz., 40 in Hessians, and 4 1/2 for 8 ozs. Calcutta goods have been quiet, and values are easier in sympathy with raw jute.

HIDE, LEATHER, AND ALLIED TRADES.

The home position remains as firm as ever. Best ox hides sold from 7 1/2d to 9 1/2d, and seconds from 6 1/2d to 9 1/2d at the auctions held in Bermondsey on Thursday last—the two heavy classes advancing 1/4d and 1/2d per lb respectively. Best cows were firm at 6 1/2d to 6 3/4d, seconds 6 1/4d. Calfskins were again easier, and best selections made 7d to 12d, most classes showing a reduction of 1d per lb on last prices. Woolskins sold from 7s 3d to 13s, and hogs from 3s 3d to 13s each. The demand for imported hides is limited, and tanners show no eagerness to buy fregorifics, which are offering at 8 1/2d to 8 3/4d. Dry hides are firm, and dry B.A. Americanos have sold on a basis of 12d c.i.f. to the United States. The Chicago position is cabled as weaker, as best heavy packers are now selling at 16 1/2 cents, after remaining stationary for some weeks at 17 1/2 cents. The demand for sole leather is improving. A fair trade has been done in bends. Dry hide bends of light weights are scarce, and makers of the ladies' high boot are scouring the market. Makers of men's footwear also seem better off for orders. Repairers are busy, and fair deliveries of medium weights have gone out. Offal remains scarce and dear, and some tanners have again advanced the prices of shoulders. In upper leathers the chief demand has been for coloured and black glacé. The boot and shoe trade is improving, and even Leeds and Northampton manufacturers are finding a better demand for men's boots.

CHEMICALS AND FERTILISERS.

Business in the chemical market is better than for several months. Acetone in good demand and dearer at 80 in drums. Cornish white arsenic very flat and lower at 15 10s, f.o.r. mines. Formaldehyde, 40 per cent., again advanced, and shows good business at 40 15s to 44 10s. Citric acid easy, but dearer on ammonia at 1s 3 1/2d to 1s 4d, less 5 per cent. on spot. Anhydrous Potassium prussiate firmer on spot at 1s 4d, with fair business. Decker and brisk at 4 1/2d. Trading in zinc oxide not too good, but white seal dearer at 45 delivered. White acetate of lead quiet slower at lower prices: 44 10s and 44, c.i.f. London respectively. Cream of tartar easier at 13 10s to 13 19s per cwt, less cheaper at 11 10s to 11 15s. Acetate of soda declined to 18. Barium chloride cheaper at 19. Sal ammoniac, dog-tooth crystals, sulphate advanced to 12 11s delivered. Nitrate of soda unaltered at 12 7s 6d. Superphosphate cheaper, with 30 per cent. at 12 17s 6d. Basic slag in good demand at 12 15s for 30 per cent. at Kainit, 14 per cent., in fair request at 12 15s.

VEGETABLE OILS AND OILSEEDS.

A rather better tone has been felt this week. Linseed oil at the opening showed further improvement and advanced to 38 per ton, naked ex Hull mill, but a later reaction carried values to 37 5s prompt and 37 2s 6d forward to April. A report that America had bought a fair quantity of Dutch linseed oil had a reassuring effect. Cotton oils have been in better demand and prices have advanced, crude Egyptian now being held for 37 10s 4d, and palm kernel oil fully steady at 41 10s. In the oilseed section demand for linseed has been on very the lowest, and 18 7s 6d is now the figure for this month's shipment. New crop, January-February, has been done at 17 7s 6d and 17 10s, while for Calcutta to London 20 3s 9d has been paid, November-December loading. Interest in Egyptian cotton-the market now is firmer, and shippers are holding out for higher figures.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market for refined parcels remained firm with a fair spot demand, and British makes were further advanced 6d per cwt. Foreign sorts, however, ruled quiet, and forward quotations barely

ZADRUŽNA GOSPODARSKA BANKA D.D.

(The Co-operative Economic Bank & Savings Co., Ltd.),
at LJUBLJANA (Jugoslavia).

Head Office - - - - - LJUBLJANA.

BRANCHES: Bled, Celje, Diakovo, Maribor, Novisad, Sarajevo, Sombor, Split, Sibenik. Foreign Correspondents for Yugoslavia of The American Express Company New York and agencies; National Bank of South Africa, Pretoria; Commercial Bank of Australia, Melbourne, and branches.

Remittances to and from Yugoslavia. Bills collected. Banking and Exchange Business of every description transacted.

maintained. Messrs Tate and Lyle's cubes quoted 31s 6d to 32s 6d; crushed, 29s 6d; granulated, stove, 30s 4 1/2d; fine, also coarse grain, 28s 7 1/2d; No. 1, 28s 4 1/2d; No. 2, also London and T.L., 28s 1 1/2d; December delivery, 28s 3d; and yellow crystals, spot, 25s 1 1/2d. Czecho granulated, November-December, sellers, 14s; January-March, 14s 6d; April-August, 15s. f.o.b., Hamburg. Dutch "J" quality, spot, 27s 3d; ditto, November-December, 14s 1 1/2d, f.o.b., Rotterdam. American granulated, spot, sold 27s 1 1/2d; Canadian, ditto, 27s 3d. Polish cr. stals, ready, 13s 3d; N. vember-December, 13s 3d, f.o.b., Danzig. White Java, spot, 26s 6d; ditto, January-March, shipment to Calcutta, 14s 6d; July September, 14s 1 1/2d, c. and f. terms. Cuban basis, 96 per cent., November-December, quoted, 10s 10 1/2d, c.i.f., U.K. White terminal market easier, but a good business transpired at lower levels. December, sold, 13s 8 1/2d to 13s 6 1/2d, 13s 7 1/2d, and 13s 6d; January, 13s 9d; March, 14s 0 1/2d to 14s, 14s 2 1/2d, and 14s 0 1/2d; May, 14s 7 1/2d to 14s 5 1/2d; August, 14s 1 1/2d to 15s and 14s 3 1/2d per cwt.

COFFEE.—The spot market generally remained without new feature, general course of trade being confined to moderate limits, but prices were kept at a fairly steady level, especially for the better liquoring grades, as no undue pressure arises to sell. Kenya, good bold, realised 127s 1/2d; peaberry up to 154s; Usambara, fine colony, 143s 6d; Kilimanjaro, fair bold, 122s 6d; Colombian ditto, 137s; Brazilian, for shipment, ruled steady, and superior Santos, prompt, quoted 108s; No. 7, Rio, 90s per cwt, c. and f. terms.

COCOA.—The market remained quietly steady with regard to spot parcels, while forward positions were only moderately dealt in, with trend of prices in buyers' favour. Accra F/F grade, November-January, also December-February, sold, 36s 6d; Lagos, November-January, 34s 6d, f.o.b. terms. Trinidad, December-February shipment, sellers, 62s; Bahia, November, 45s; Guayaquil Epoca, 74s; Caraquez, 68s, c. and f., per cwt. Cocoa butter, C.F.R., on spot, quoted, 1s 5 1/2d; and prime English, 1s 5d per lb.

TEA.—In auction 26,364 packages Indian were offered, and a generally quieter tone prevailed, withdrawals being frequent, particularly amongst common and low medium descriptions, which marked a decline of 1/4d per lb. The better medium kinds also displayed at irregularity and weakness, but all the finer grades sold steadily at about late rates. Pekoe sold, 1s 1 1/2d to 1s 1 1/4d; broken orange pekoe, 1s 5d to 2s 9 1/2d; while a parcel of choice Assam realised 5s 5d. Smaller offerings of Ceylon, totalling 11,901 packages, also met with less attention. A further falling off in quality amongst some of the invoices accounted for slightly lower prices, but fine kinds maintained a generally steady level. Pekoe sold, 1s 3 1/2d to 2s 4 1/2d; broken orange pekoe, 1s 8 1/2d to 2s 8 1/2d per lb. A moderate business transpired in China descriptions, Keemun selling up to 2s 6d, with old season's ditto in request at 1s 2d to 1s 4d, the latter showing good value; while finest new season's souchongs sold up to 3s 4d per lb, in bond. Common sorts moved off quietly on about former terms. 3,300 packages Java and Sumatra were offered. All the finer liquoring grades experienced a good demand at steady rates, but common descriptions moved in buyers' favour. Pekoe sold, 1s 2d to 1s 3 1/2d; broken pekoe, 7d to 1s 4 1/2d; orange pekoe, 1s 1d to 1s 5 1/2d; broken orange pekoe 1 1/4d to 1s 8d; and pekoe souchong, 11d to 1s 3 1/2d per lb, in bond.

RICE.—Eastern shippers adhere to steady asking prices in view of sustained inquiries on local Burmese markets, but there is still an absence of buying interest on European account. Rangoon, two stars, spot, London, sellers, 15s 9d; forward, 15s 4 1/2d, c.i.f. Broken kinds slow of sale. Spanish, October-November, quoted 23s 6d to 24s; oil, dressed, spot, 25s. Italian, spot, 22s to 23s, as to quality, per cwt. Rice bran quiet. Burma, December-February, 6s 2s 6d; February-March, 6s 5s per ton, ex ship, London or Liverpool. Japanese peas, spot, 30s; October-November, 28s 9d; November-December, also December-January, 28s 3d, c.i.f. Beans: Rangoon hand picked, October-November, 13s 9d, f.a.q.; October-November, 12s. Madagascar butter beans, spot, 35s to 37s 9d, as to quality, per cwt.

SPICE.—Pepper in generally good demand, and market firmer. Black Lampung, spot, 10 1/2d; October-December, buyers, 10 1/2d; January-March, 11 1/2d; white Muntok, October-December, sold, 1s 2d to 1s 2 1/2d; January-March, 1s 2 1/2d to 1s 2 3/4d. Pimento, spot, 5 1/2d. Cloves dull. Zanzibar, spot, quoted 11d to 11 1/2d, October-December, 9 1/2d; January-March, 10 1/2d per lb. Tapioca dull. Singapore flake, to Havre, October-November, sellers, 16s 9d; December-January, 16s 6d. Penang seed, to London, December-January, 15s 6d. Sago flour quiet. Sarawak, October-December, sellers, 15s 1 1/2d, c.i.f. and i., U.K. Desiccated coconut, spot, halves, sellers, 41s; October-November, also December-January, 38s, c.i.f. Ginger steady. Japan, spot, 90s; forward, 85s; West African, spot, 61s; October-November, 58s 6d cwt, c.i.f.

FRUIT (Dried).—Currants steady, with a fair trade in force. Amalia, quoted 31s to 33s; Gulph, 36s to 40s; Pyrgos, 31s; Patras, 36s to 37s; Vost 22a, 44s to 54s. Sultanias move off quietly, and rates barely steady. Smyrna, new crop, 65s to 90s; Australian, 68s to 90s; Cretan, 77s to 90s. Figs in better request. Layers, new crop, in boxes, 75s to 105s; Locoums, 115s to 145s. Dates firm and in demand. Second tide Hallowee, 27s; Siar, 14s 6d, landed terms. Raisins in fair request. Valencia, quarter boxes, 42s to 80s; halves, 42s to 43s. Evaporated fruits continue firm, with moderate supplies available. Californian apricots, standard new extra choice, 120s; fancy, 130s; Australian, 117s 6d to 130s. Californian peaches sparingly offered. Plums firm, but quiet. Oregon, size 30/40, quoted 72s; 40/50, 52s; Californian, 40/50, 58s; 50/60, 52s; 70/80, 45s 72s; 40/50, 52s; Californian, extra choice, 90s; fancy, 105s. Apple rings, Californian, extra choice, 60s to 70s; Canadian, 62s 6d per cwt.

CANNED GOODS.

CANNED FISH.—Sardines firm, with a hardening tendency, especially for best quality. Portuguese 1/2s quoted 4s 9d to 5s per dozen tins. Salmon firm, with moderate arrivals. Red, tall, 1 lb, 64s; 1 lb, pink, 35s 6d to 36s 6d; tall pink, 25s to 25s 6d. Lobsters firm but quiet. Halves quoted 160s to 165s; and 1/2s, 95s to 100s.

CANNED FRUITS.—Market firmer, and packers are delivering full contracts. Californian Bartlett pears, standard, 13s 3d to 13s 6d; seconds, 12s to 12s 6d; Oregon, choice, 15s; standard, 13s 3d; seconds, 12s to 12s 3d; Canadian, standard, 11s 6d. Californian peaches, choice, 11s; standard, 9s 6d; seconds, 8s 9d. Californian apricots, standard, 9s 3d; seconds, 8s. Loganberries, fancy, 11s to 12s choice, 10s 3d per dozen tins. Italian tomatoes realised full rates. Pines show a hardening tendency.

CANNED MEATS.—Corned beef: Market firmer, with higher prices obtaining for 6 lb tins. South American 6 lb tins quoted 34s; and New Zealand, 34s. Ox and lunch tongues, 6 lb tins, are selling well for time of year, and prices maintain a steady level. Danish sixes quoted at 116s; and 1 lb, 18s; New Zealand ox, 6 lb, 125s per dozen tins.

CONDENSED MILK.—Prices of skimmed sweetened ruled higher owing to the winter trade developing, also reports of foot-and-mouth disease in Denmark and Holland. Machine-skimmed quoted at 15s; full-cream Danish, 26s; Dutch, 23s 6d per case.

HONEY.—A good demand continues for New Zealand at home and in Central Europe, and the market is very firm.

RUBBER.

A generally dull market, and prices sagged under lack of support; since dearer. Plantation standard sheet, spot, sold, 3s 11d to 3s 11 1/2d; November, 3s 10 1/2d to 3s 11 1/2d; December, 3s 9 1/2d to 3s 10 1/2d; January-March, 3s 6d to 3s 5 1/2d, 3s 6 1/2d; April-June, 3s 2 1/2d to 3s 4d; January-December, 3s 1 1/2d per lb.

GENERAL.

HEMP.—Manila dull and featureless. J grade, November-January, sellers, 440; K, ditto, 435 10s; L, 436; M, 431 per ton. New Zealand nominal. African sisal quiet. No. 1, Tanganyika, October-November, sellers, 44 10s; Kenya, ditto, 44 10s.

TALLOW.—Messrs Colchesters and Woolner write on November 4th as follows:—The tallow market was quiet during the week, and prices were mostly 6d lower to-day, while good sorts have continued to fall, inferior kinds have maintained their values. The stock in London on October 31st as returned by the wharves amounted to 22,228 packages, showing an increase during the month of 2,998 packages. At auction to-day 1,227 casks tallow were offered, and 484 were sold. Quotations are:—Australian mutton: Fine, 48s 9d; good to fair, 48s to 44s; dull to dark, 40s to 38s 6d; hard, 48s. Australian beef: Fine, 46s 6d; good to fair, 43s 6d to 41s 6d; dull to dark, 39s 3d to 38s 6d; sweet, 46s 6d. Present shipment from Australasia: Good mixed, 46s 6d, nominally. Present shipment from South America, 42s. The market letter is unchanged. Town tallow, 39s 6d per cwt. Rough fat, per 8 lbs, 3d; melted stuff, 30s per cwt. Quotations are:—Town, 38s 6d, net cash, naked, ex works. Country: Frail casks, 38s 6d; home melted, shipping casks, net, f.o.b., good coloured, 42s; fair to dull, 39s to 38s. Bone fat: white, none; pale, none; benzine, 36s; melted stuff, 35s 6d, f.o.b.

SHELLAC remained steady. Fair, T.N., spot, quoted 240s; December, 222s 6d; March, 212s 6d per cwt.

COPRA quiet, and trend of values weaker. F.M.S. Straits, to Rotterdam, October-November, sellers, 29 15s; October-December, 29 13s 9d; November-January, 29 10s. Dutch E.I., October-November, 29 10s. Ceylon, October-November, sellers, 30 15s. South Sea, F.M.S., October-November, 28 12s 6d. Palm kernels, to Liverpool, November-January, 21 per ton.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, 42s to 440; Cochiti, 431 to 455. Ceylon bristle, 15 to 17; cinnamon leaf oil, 4 1/2d; citronella, Ceylon, 1s 10 1/2d; Java, 3s 2d.

THE BANK OF TAIWAN, LIMITED.

(Registered in Japan, 1899.)

Capital Subscribed - - - - - Y60,000,000
Capital Paid Up - - - - - Y52,500,000
Reserve - - - - - Y14,180,000

Head Office - - - - - TAIPEH, FORMOSA.
London Office - - - - - 25 OLD BROAD STREET, E.C.2

BRANCHES:

Amoy, Batavia, Bombay, Calcutta, Canton, Foochow, Hankow, Hongkong, Keelung, Kobe, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

The prices in the following list are revised with the assistance of an eminent firm in each department.

MACMILLAN & Co., Ltd., London, W.C.2

a little more plentiful, and there was a slightly better demand for bills, fine three months' bank bills being taken at $3\frac{1}{2}$ per cent.

	Nov. 13, 1925.	Nov. 6, 1925.	Oct. 30, 1925.	Oct. 23, 1925.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	4% (Oct. 1, '25)
Banks' Deposit Rate	2	2	2	2	2% (Oct. 1, '25)

Market rate (3 months' bills)	3 $\frac{1}{2}$	3 $\frac{1}{2}$	3 $\frac{1}{2}$	3 $\frac{1}{2}$	..

The Bank return showed a decrease of £98,900 in the coin and bullion, £998,000 having been announced as withdrawn in gold for export; the note circulation expanded by £76,000, and so the Reserve was £1,065,000 lower, with a decline of 1.3 per cent. in the proportion to liabilities, to 21.4 per cent. Government securities rose by £4,193,000, while Other securities were £726,000 lower. Public deposits were £1,044,000 lower, so Other expanded by £3,399,000. Currency notes outstanding were reduced by £662,000 to £292,818,300, which includes £1,322,100 for notes called in but not cancelled. The fiduciary issue is £235,246,200, or £12,899,200 below the maximum for 1925.

The statement of average weekly balances of the London Clearing Banks for October, which is given in detail in a later column, is principally noteworthy for an increase of £14 millions in deposits in comparison with September. The table below summarises the figures for the nine English banks:—

	June, 1924.	Dec., 1924.	June, 1925.	Aug., 1925.	Sept., 1925.	Oct., 1925.
Capital and reserves	1192	1194	1196	1207	1207	1208
Acceptances	853	1059	902	850	857	926
Deposits (incl. undiv. profits, &c.)	1,661	1,666	1,624	1,615	1,617	1,627
Total liabilities	1,856	1,885	1,824	1,817	1,820	1,841
Coin, notes, balance at bank, and cheques in course of collection	2491	2597	2539	2401	2372	2382
Money at call	1081	1128	1130	1174	1115	1119
Investments	3493	3288	3226	2826	2815	2859
Discounts	2450	2344	2055	2836	2402	2447
Loans and advances	7917	8112	8505	8390	8345	8374
Cover for accept., premises, &c.	1132	1385	1188	1145	1152	1225
Total assets	1,856	1,885	1,824	1,817	1,820	1,841

There was an increase of £7 millions in acceptances, which are now at the highest point since May. The expansion in deposits has been balanced by increases in loans, discounts, and investments. In October, 1924, deposits increased by £22 millions.

At their meeting on Thursday the directors of the Bank of England agreed to recommend to the proprietors in April next that the Rt. Hon. Montagu C. Norman be re-elected Governor, and that Mr Henry A. Trotter, a director of the Bank, be elected Deputy-Governor for the ensuing year 1926-27, in succession to Sir Alan Garrett Anderson. General regret will be felt that the latter is unable to continue the post of Deputy-Governor, presumably owing to exceptional pressure of his business responsibilities, but the decision to prolong Mr Norman's term as Governor for a further 12 months, making seven years in succession, will be welcomed. Developments since the war have fully justified a policy of continuity of management, which is still eminently desirable. Mr Trotter returns to the position of the Deputy-Governor after an absence of a few years, necessitated by the pressure of private business engagements.

NEW YORK MARKETS.

Our New York correspondent cables:—After the severe shake-out in stocks on the advance in the Boston Federal Reserve Bank rate, the stock market has recovered buoyancy. Bull interests are not disposed to give up easily. It is expected that other outside Reserve banks may follow the Boston lead, as call money in the local market comes chiefly from other centres. Any action by the New York Bank is likely to come last, as local member banks are not discounting freely. The Federal Reserve statements reveal a large drop in discounts, with open-

market purchases of bills and reserves little changed. The reserve ratio for the system is 72.3, that for New York being 82.4. There is much satisfaction over the Italian debt settlement, which shows that the authorities are willing to face facts in this connection.

THE STOCK MARKETS.

Stock Exchange business has been on quieter lines this week than for some time past. Developments in New York have had little effect here beyond strengthening the assumption that the next change in Bank rate here will be upward. This and the prospect of more Dominion and foreign loans has depressed the gilt-edged market. The French financial crisis has produced flatness in French railway stocks, but the national bonds keep fairly steady. Home rails are dull, but not heavy. A feature in the foreign railway market has been a substantial advance in United of Havana ordinary stock. Rubber shares are mostly easier, and tea shares have declined, but the oil market is firmer. Industrials have mostly been quiet, and apart from a revival of interest in platinum shares the mining markets have lacked interest.

THE COMMODITY MARKETS.

The tone of the commodity markets as a whole continues more hopeful. Demand for coal is rather better, and the collieries are working more regularly. Pig-iron makers are better situated, and a slow, but steady improvement characterises the steel trades. Cotton prices declined on the issue of an official estimate showing a larger increase than was expected in the American crop figures, but have since advanced on trade buying. Cloth inquiry remains extensive, but buyers hesitate to place orders of weight. Wool prices are firm, but West Riding buyers are not inclined to add largely to their present commitments. The wheat markets are steady at recent price levels. A firm tone characterises most of the produce markets, sugar being in demand, coffees steady, and tea firm, with lighter offerings. Rubber is strong, with a better Continental and American inquiry. Among metals, tin has been irregular, with some improvement later, offerings of copper are on a liberal scale, and lead shows no marked change.

FOREIGN EXCHANGES.

In the foreign exchange market the French franc has again been the centre of interest. From a closing rate of 122.45 on the 6th the quotation was brought down for a short time on Saturday to as low as 119.12 $\frac{1}{2}$ on rumours that the political crisis had been postponed, but closed again at 120.35. During the current week up to Thursday evening the rate fluctuated between the limits of 119.90 and 123.30, according to market reactions to the political crisis and to the intensity of official intervention. On Friday morning, however, the news of M. Painlevé's compromise was taken as a bull point, and at the time of writing the quotation is down at 118 $\frac{1}{2}$. That this should happen in view of the virtual acceptance of the capital levy, of definite further inflation, and of what would amount to a moratorium on short-term Government obligations would suggest that recent rates were the reflection of even more pessimistic views as to the outcome of the crisis. Forward rates at 45-50 centimes per month above spot show a sharp contraction as compared with the 90 centimes quoted a week ago. Brussels has remained very steady throughout the period, being quoted yesterday at 106.85 as compared with 106.90 on the 6th. After some uncertainty in the earlier part of the week, the lira yesterday showed a sharp improvement on the news of the settlement in America, the rate standing at 119 $\frac{1}{2}$, an improvement of $\frac{1}{2}$ lire on the week. Sterling this week has been weaker, being quoted as low as \$4.84 $\frac{1}{2}$, and yesterday morning at \$4.84 23-32, comparing unfavourably with last week's (6th) closing rate of \$4.84 $\frac{1}{2}$. Forward rates have widened from last week's $\frac{1}{2}$ cent. to $\frac{1}{2}$ cent. per month above spot. Other stable currencies show little change, the Amsterdam rate at 12.04 $\frac{1}{2}$, the Swiss rate at 25.14 $\frac{1}{2}$, and Berlin at 20.36 being the same as a week ago, while Stockholm is $\frac{1}{2}$ higher at 18.13 $\frac{1}{2}$. Madrid, in spite of the attempted *coup d'état*, also shows little change, moving only from 33.93 $\frac{1}{2}$ to 33.93 $\frac{1}{2}$. In the

middle of the week both Oslo and Copenhagen showed a sharp temporary reaction, but both rates are now down again at 23.90 and 18.13 $\frac{1}{2}$ respectively, as compared with 23.82 $\frac{1}{2}$ and 18.13 a week ago. Among the minor currencies, Vienna is unchanged, Prague has moved slightly against us, Bucharest shows a slight depreciation, Warsaw is quoted nominally at 30-31 zloty. In the East, the rupee is unchanged at 1s 6 $\frac{1}{2}$ d, while the yen has reacted slightly, after the recent rise, from 1s 8 31-32d to 1s 8 $\frac{1}{2}$ d. The silver market has been extremely quiet, with considerable depression on Chinese selling. Hongkong stands at 2s 4 $\frac{1}{2}$ d, as compared with 2s 4 $\frac{1}{2}$ d, Shanghai at 3s 1 $\frac{1}{2}$ d, as compared with 3s 1 $\frac{1}{2}$ d a week ago. In South American, Rio, after moving up slightly, is back at 7 $\frac{1}{2}$ d. the same as a week ago, while Buenos Aires is dearer at 46 27-32d, as compared with 46 $\frac{1}{2}$ d. Monte Video, however, has depreciated from 51d to 50 $\frac{1}{2}$ d. Valparaiso on the week shows a relatively sharp appreciation from 39.20 to 38.80 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 7:—

EXPENDITURE.	£	Receipts.	£
Supply Services	8,558	From Revenue	11,876
Interest, &c., on Debt	8,118	Increase in Debt	5,274
Sinking Fund	379		
Sundries	75		
Increase in Exchequer Balances	20		
	17,150		17,150

The revenue for the week ended November 7th amounted to £11,876,600, as compared with £10,715,400 in the corresponding week last year. Customs were slightly lower at £2,298,000, against £2,324,000, but Excise was higher at £1,477,000, against £1,389,000. Property and Income-tax brought in £3,758,000, as compared with £1,195,000, and Super-tax at £350,000 was £220,000 lower. Ordinary and Special receipts were £54,700 and £700,000, against £238,300 and £1,230,100 respectively. The week's operations increased the National Debt by £5,273,960, and caused the following changes:—

(000's omitted.)	£	(000's omitted.)	£
National Savings Certificates	+ 100	Public Advances	- 2,700
Treasury Bills	+ 3,813		
5 $\frac{1}{2}$ % Conversion Loan	+ 3,518		
4 % Treasury Bonds	+ 359		
Sundries	+ 84		
	+ 7,974		- 2,700

The floating debt was increased by £1,155,000 to £772,975,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Nov. 7th).

Revenue	801,060,000
Surplus	£1,660,000.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Anglo-Persian Oil, Assam Railways and Trading, Dalgety and Co., London Maritime Investment, and Joshua Hoyle and Son. At the London Maritime Investment meeting Lord Kylsant welcomed the restoration of the gold standard and the removal of the foreign loan embargo, and reviewed the shipping position. Sir Charles Greenway, at the Anglo-Persian meeting, spoke of relations with the Persian Government, and discussed the shale industry. At Dalgety's meeting the Hon. E. W. Parker surveyed the conditions in the wool industry; while at Joshua Hoyle's meeting Lieutenant S. C. Hoyle spoke of Locarno and reviewed the cotton outlook.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

LOCARNO AND TARIFFS.

WHEN year by year his Majesty's Ministers attend the Lord Mayor's Banquet they appear as the representatives, for the time being, of the whole nation, and the occasion is not one for the delivery of party speeches. Nevertheless, the incidence of the date of the gathering at the end of a long Parliamentary recess and on the eve of a new session makes the occasion suited both to retrospect and forecast, and the experienced politician looks between the lines of the Ministerial utterances for subtle indications of a change in the political weather or the approach of Parliamentary crises. This year the main Guildhall speeches—those of the Prime Minister and the Foreign Secretary—will be scanned in vain by those who look for light upon domestic controversies. The one outstanding event since Parliament rose in August has been the Locarno Pact. Mr Chamberlain practically confined himself to that theme, and the Prime Minister, when he could escape from it, devoted his main attention not to any political theme, but to a review of the accumulating evidence of trade improvement at home and abroad. Of Locarno Mr Chamberlain had nothing new in the way of facts to disclose. It was, indeed, the tone of his speech more than the substance which attracted attention, particularly his unshakeable confidence not merely that the Pact would be ratified, but that it was merely a beginning from which greater things would develop. "Whatever difficulties," said the Foreign Secretary, "—and there will be difficulties—still lie in our path, I am confident that the accords of Locarno will be ratified by every country there represented, for no statesman dare take the responsibility before history of dashing from our lips the cup of hope that Locarno has presented, and no nation dare face the load of obloquy that would rest on any nation which denied to the world its greatest need and its greatest and profoundest hope." All available indications support Mr Chamberlain's confidence. Ratification by the British Parliament is, of course, not in doubt; no changes at the Quai D'Orsay will affect the acceptance by France. In Germany, it is true, the opposition of the Nationalists renders the situation less clear; but their attitude can hardly fail to be affected by the memorial in favour of the Pact issued this week by a body of leading German industrialists, many of whom are also prominent Nationalists. It seems unlikely that the Nationalists could enforce the rejection of the Pact even if they would; and it is to be hoped that, in view of recent indications of German public opinion, they will go no further than to dissociate themselves from the responsibility for the act of formal acceptance. Nor, we hope, will Mr Chamberlain's elation of spirit over the fruits that will grow from the Locarno plant be altogether confounded. "I have drunk to-night," said Mr Chamberlain, "of the loving cup with the German Ambassador. What I have done this evening may our nations do to-morrow." When we cast our thoughts back over the seven years of international embitterment which separate us from the first Armistice Day, we may surely hear in these words, and even more in the cheers which greeted them, the ring of a new spirit, which promises real and sustained achievement in the foundation of international peace and security. This belief in the creation of a European atmosphere conducive to confidence must take its part in framing a view of the trade outlook. Mr Baldwin, however, dwelt rather upon those tangible evidences, which the regular readers of the *Economist* are familiar—for instance, the decline in unemployment, good European and world harvests, an abundant cotton crop, the reduction in world stocks of many commodities, the betterment in India. "The waters are falling," he declared, "and our spirits are rising." We agree with this diagnosis soberly and restrainedly presented; and if we dwell no longer upon this part of the Prime Minister's speech it is because, on the eve of a new session, we wish to call attention to a vital question of domestic controversy, to which Mr Baldwin, very rightly and properly in view of the occasion on which he was speaking, made no reference. Apart from the debates on Locarno and the discussion of supple-

mentary estimates, the most important question before the House of Commons in the brief session which opens next week will be that of the extension of tariff duties under the Safeguarding of Industry machinery. Many claimants for protection have besieged the Board of Trade, and others, including the worsted industry, are on the doorstep. Committees have reported, or are about to report, on gas mantles, gloves, hollow-ware, brushes, and cutlery. Unless the Government take the unlikely step of postponing action until the next Budget, Parliament will shortly be called upon to decide whether it will sanction a series of further steps—individually minor, but cumulatively of profound importance—towards the substitution of a network of tariffs for the fiscal system under which this country has reached and sustained its great position in world trade. Mr Baldwin, at the Guildhall on Monday, re-iterated his recognition of the fact that he was placed in power a year ago, under peculiar circumstances, partly by the votes of those who were not Conservatives. Among them, we would remind him, were many Free Traders who trusted in his pledge not to introduce anything in the nature of a general tariff. Their faith has already been tried and shaken by such episodes as the silk tax and the restoration of the McKenna duties, but they still cling, as indeed we endeavour to cling, to the belief that Mr Baldwin's reputation for political honesty will vindicate itself when the great testing-time comes. That testing-time is rapidly approaching. A steady and swelling stream of industries are, one by one, swinging the starting-handle of the "safeguarding" machine. If Mr Baldwin uses his Parliamentary majority, given him by the peculiar influences which he has explicitly recognised, for the purpose of granting protection to a long series of individual claimants, he will, in effect, be breaking his pledge as completely as if he were to introduce in one single measure a comprehensive protectionist measure. Mr Baldwin promised the electorate that no fundamental change in our fiscal system would be introduced without another appeal to the country. The danger confronting us to-day is that a series of minor breaches in the Free Trade system will slowly and surely grow into one great irreparable break.

Thus the political honour of the Prime Minister, and one of the most vital interests of the nation are at stake, and the crucial moment may arrive any day. It will come, too, at a moment when a further step by Britain towards protection would be internationally disastrous. European opinion is awakening to the fact that the tariff walls that have risen since the war present the greatest of obstacles to economic recovery. The recent Assembly of the League of Nations instructed the League Council to prepare the ground for calling an Economic Conference to attempt an all-round lowering of the barriers which so effectively restrain the international interchange of commodities. The position was dwelt on at length by Dr Walter Leaf, chairman of the Westminster Bank, this week in his Presidential address to the International Chamber of Commerce. "The politicians of every country of Europe," said Dr Leaf, "have been busily engaged in hampering international trade by every means in their power. We have passed beyond the question of mere tariffs, and in various cases we have found that recourse has been had to actual prohibition of imports. Each country—and I regret to think that even Great Britain must now be included—has set itself to exclude trade with its neighbour, to a greater or less extent; the policy has had a great success, with one considerable drawback, that each country, in hurting its neighbours, has, of course, hurt itself still more; the policy leads to a vicious circle, where every step leads on to another, and, to put the matter plainly, it seems to me that Europe has deliberately set itself towards economic suicide." The efforts of the International Chamber of Commerce, Dr Leaf claimed, have always been directed to "smoothing down the barriers which less farsighted interests have been so busy in erecting." Its Council is now preparing a proposal for the establishment of a Committee on trade obstacles, and, as Dr Leaf remarked, it is in its power "to take the first steps toward such a change of public sentiment as shall render hopeful the work of that larger Conference which the League of Nations proposes to call." For the first

time since the war European opinion is beginning to stir in an effort to throw off the shackles of Protection. Is it possible that at such a moment this country, to whom, in spite of recent backslidings, the world looks for a lead in fiscal commonsense, will deliberately forge another link in the shackles? The choice lies before the British Government and the House of Commons of performing either a signal service or an irreparable disservice to the cause of that world economic recovery, to which we must in the main look for our own return to prosperity. We acclaim the political Locarno. Will Mr Baldwin stultify in advance what might be an economic Locarno?

To turn to a more domestic aspect of the problem, we commend to those whose minds are clogged with the sordid rivalries of the Safeguarding Committees the words which the veteran ironmaster Sir Hugh Bell used in a speech at Manchester last week-end. For his own industry, depressed if any industry is, he spurns protection on broad and reasoned grounds. "No safeguarding of industries," said Sir Hugh, "is worth a rap. The industry you seek to safeguard ought not to be guarded. The foreign product of that industry will continue to be made and will meet you in other markets instead of your getting it here, using it in your market, and making a profit out of it. The sum of it all is one word—Free Trade. Unless you buy, neither shall you sell, and whenever you buy you have sold. You have no alternative." On the narrowest of selfish grounds, as well as on the ground of broad international policy, even the slightest further step by Britain towards Protection would, at this juncture, be disastrous. If Mr Baldwin allows his followers to drag him further along the tariff path, Britain will rue it, the world will rue it, and we are convinced that he and his Ministers will rue it when next they face an electorate which has spoken on the subject with no uncertain voice on every occasion on which it has been directly consulted.

MR LLOYD GEORGE'S LAND POLICY.

[In the following article a correspondent puts the case for the new Land Policy based on the proposals of Mr Lloyd George's Land Enquiry Committee. In a future issue we propose to publish the case against it by another expert correspondent.]

In the rural life of Great Britain to-day there is just that mingling of human grievance with economic disorder which has bred sometimes reforms and sometimes revolutions. Farmers who in the past few years have been strenuous in keeping down wages and have proclaimed that, apart from subsidies, they can live only on grass, have woefully misunderstood their place in national polity. They have roused all the fears, prejudices, and jealousies of a countryside already sensitive to the evil of low wages, and quick to regard prairie farming as an earnest of worse things to come. Both economically and psychologically, farmers are affected by the accelerating collapse of the landlord-tenant system of land tenure. The misunderstanding has almost been forced upon them. But they have forgotten three things—first, that they are the employers of a wage-earning peasantry, the only peasantry in Europe which is generally and permanently landless; second, that the only effective anodyne for landlessness is a good wage; and, third, that the right to use large units of land extensively, rather than smaller units intensively, can be conceded only by a nation on whose soil there is neither food-pressure nor population-pressure.

The danger of forgetting these three things was apparent even before the war, when rural conditions were comparatively static. The danger is tenfold greater now, when the basis of rural society is in movement, and dynamic forces of tremendous power have been released. It may be that younger men are being retained in the villages who, but for the unemployment in the towns, would have migrated ere now, and that this has imparted energy to rural thought. If that be so, then it is certain that the knowledge that some of these younger men gained during the war of agriculture abroad makes their discontent more potent. Whatever the cause may be, the

first result of any survey of rural life to-day is to find that there is a change not only in the facts, but in the feeling about the facts. It is that feeling which makes agriculture now in the real sense of the word a political issue. For the first time in modern memory, the agricultural worker connects his landlessness and his low wages with the way in which English land is owned, held, and used.

So, too, in the towns there is a new feeling about rural life. That we import 340 million pounds' worth of the kind of food which could be grown at home, and that our difficulty in selling manufactures to pay for these imports has grave consequences in unemployment, are facts which are beginning to affect urban imagination. Significance is attached to such statements as that in Great Britain land similar in quality to that productively used abroad is put to no economic use; that fewer persons are occupied in agriculture on 100 acres of British land than on 100 acres of Danish or Dutch; that despite the advantages of the best market in the world at their doors and the potentialities created by scientific advance, British farmers have been caught up and surpassed in production by other countries; and that the country population is no longer able to maintain the health and vigour of the towns.

The virtue of "The Land and the Nation" is that it sets out these and other facts and seeks for the connection between them and their underlying cause. If the cause could be indicated briefly, the book would not be so bulky. But the gist of the matter is that until very recently nine-tenths of the agricultural land of the country has been held under a system which presupposed the use of land in large highly capitalised units, and that this system is breaking down chaotically. The argument for action is the very simple one that the nation as a whole is intimately concerned with the way in which land is both held and used, and that—and this elsewhere is also Mr Orwin's argument—an alternative must be found to drifting to disaster. What, then, is the case for the particular remedy proposed under the name of Cultivating Tenure?

The first element is that the disease which has been diagnosed by every skilled investigation of modern times should be treated. That disease is under-capitalisation. Ours is the only country with an elaborate civilisation in which there is nothing in the nature of an Agricultural Bank or an Agricultural Credit System. The deficiency is due to reliance on landlordism to supply agriculture with credit. Defenders of landlordism maintain that landlords have always provided agriculture with credit at an uneconomic rate of interest. But this defence provokes the reply: first, that agricultural success in other countries is not dependent on credit supplied on uneconomic terms; and, secondly, that whatever landlordism may have done in the past, it is not now an efficient instrument of credit supply. In face of the unanimous verdict that agriculture is suffering from a serious degree of under-capitalisation, it is remarkable only that the usual defence for landlordism is put forward. The increase of occupier-owned land in the last seven years from 10 per cent. of the whole to 25 per cent. means, in any case, a rapid increase in the number of farmers who cannot resort to their landlords for permanent equipment. If the disintegration of landlordism continues at its present rate, there must be established some system of agricultural credit supply, whether or not any policy for land tenure is deliberately adopted by the country.

The second element in the case is that no effective assistance can be given to agriculture so long as advantages intended for the actual workers on the soil flow into the pockets of the landlord. It is already evident that the relief given by the Agricultural Rates Acts is to the profit not of the farmer, but of the landlord. The Development Act of 1909 prohibits expenditure from public funds on works which would directly raise the value of land in private ownership. Other legislation desirable in itself has been paralysed by general recognition of the consequence that the right to raise rents would have to be restricted. Much more is it necessary to reorganise the system of land tenure if the State is to take upon itself the duty of organising a system of supplying agricultural credit. It has already assumed much of the landlord's function of leadership. By so doing the landlord's position has been weakened in theory, but if it is to take over a supply of capital, it becomes impossible to justify the continuance of landlordism at all. It may be suggested

that the difficulty could be met by Land Courts. But nothing can be more certain than that restriction of agricultural rents means preventing expenditure on maintaining rental value. Rent Courts as a general institution would, in fact, aggravate the very disease of under-capitalisation which must be cured. Whatever be the reasons for abolishing landlordism, those for paralysing it and leaving it to cumber the ground are poor in the extreme.

The third element in the case is that a means must be found of rescuing land workers from their condition of landlessness. That condition has come into existence under landlordism. It is impossible to see how it can be remedied without a change in the whole system. The Small Holdings Acts now on the Statute Book have done invaluable work, especially in certain areas. But they have affected only the fringe of the problem, and they are borne down by unremunerative charges. They are based on the assumption that a County Council may be a landlord among others; that it should acquire land by purchase at its piece-meal market value, and that it should provide the land with buildings worthy of the Council's reputation as a land owner.

The means now proposed are that all land which becomes vacant should be at the disposal of a popular body, and that it should be held by cultivators, who will not expect the County Councils or anyone else to erect their buildings for them, at a rental which represents only its actual agricultural value.

If landlords are to go, what shall be the terms? Here "The Land and the Nation" proposes a mean between two extremes. The landlord is to get the land's net agricultural value at the time of making the change in tenure. No punitive ideas are suggested and no confiscation of justifiable values. On the other hand, there is a reasoned refusal to hand over to landlords the difference between the capitalised value of the annual net rent and the price which might be obtained for each parcel of land if it were sold on the assumption that other agricultural land was not in the market. Here the crux of the matter is reached. The discrepancy between the real value of land for agriculture and its potential sale value is created by allowing ideas of amenity, prestige, and sport to operate on the necessarily monopolistic quality of land. When landlords to-day say that they are getting in rents only 2 per cent. on their money, they mean that in buying land they have bought something which the cultivator of the land cannot be expected to pay for because it is not in the land and cannot be extracted from it. That is a false or luxury value. What is happening now is that this false value is being thrown on to the necks of the actual cultivators of the land in a way which is preventing, and will continue to prevent, the revival of agriculture. Clearly, there can be no solution of the agricultural problem if that process is allowed to continue. The community would have every right, pre-supposing the continuance of the present system, to appropriate that value by means of

taxation. But it is intrinsically an anti-social value. It has grown up in this country in comparatively recent times. The proposal is that under cultivating tenure it should be wholly eliminated, and that men who devote their enterprise and labour should for the first time in many generations have the opportunity of basing their affairs on a business-like foundation.

WORLD TRADE IN 1924.

In the survey of overseas markets which was reviewed in our Monthly Supplement of July 25th, the Committee on Industry and Trade expressed the view that the "net result of the changes (which took place in world trade) in the decade 1913 to 1923 was to leave the relative position of Great Britain as an exporting country unimpaired and perhaps slightly improved." The League of Nations has just issued a study of the commerce of the world in 1924,* which, while confirming this view, suggests that in the latter year the countries of Europe began to recover some of the ground they had lost, and that, as compared with 1923, the trade of the world as a whole increased more rapidly than that of the United Kingdom.

Any attempt to compare the trade of the world before and after the war must necessarily involve a considerable amount of conjecture. Prices and the composition of international trade have undergone great changes, a number of countries have adopted new methods in the compilation of their returns, and the territorial divisions of the world have been modified. (Perhaps the two greatest individual difficulties are those caused by the complete revision of the Dutch statistical system in 1917, and the fact that present-day Russian trade is only shown in terms of 1913 values.) By a somewhat elaborate calculation, and after making various allowances for such difficulties as can be met, the League of Nations reaches two conclusions of considerable importance: first, that the goods entering into international trade in 1924 were valued at prices on the average about 50 per cent. above those ruling in 1913, and, secondly, that the total trade of the world in the latter year was also nearly 50 per cent. greater in terms of monetary values than in the calendar year preceding the war. These conclusions are put tentatively, but seem well supported by the evidence supplied, and suggest that the total quantum of world trade last year, which was appreciably higher than in 1923, was, in fact, not much less (say, 5 per cent.) than in 1913.

All parts of the world, however, have not done equally well. If the published Russian figures be raised by the average increase in world values, the distribution of the world's trade by Continental groups works out as in the following table:—

PROPORTION OF WORLD TRADE done by VARIOUS COUNTRIES and CONTINENTS.

Continental Group.	Imports.		Exports.		Total.	
	1913.	1924.	1913.	1924.	1913.	1924.
United Kingdom	16.42	18.82	14.05	15.97	15.28	16.47
Central and Eastern Europe	21.18	15.26	21.71	13.10	21.44	14.37
Other countries of Europe	31.74	27.77	26.64	24.05	29.27	25.82
1. Total Europe	69.34	61.85	62.40	51.12	65.99	56.66
2. North America*	12.23	16.29	15.83	22.10	13.96	19.10
3. Caribbean†	1.54	2.04	2.10	3.62	1.82	2.79
4. South America	5.59	4.95	6.60	6.78	6.07	5.84
5. Africa	1.70	1.89	2.61	2.65	2.14	2.26
6. Asia	7.14	9.79	7.84	10.33	7.48	10.06
7. Oceania	2.46	3.19	2.62	3.40	2.54	3.29
Total	100	100	100	100	100	100

* I.e., Canada and U.S.A. † I.e., Mexico to Panama inclusive, plus the three West Indian Republics.

The table shows that, although British trade as a whole had increased from 15.3 per cent. to 16.5 per cent. of world trade, British exports had fallen from 14.05 to 13.97 per cent. But these figures are somewhat too favour-

* "Memorandum on Balance of Payments and Foreign Trade Balances, 1910-24." Vol. I., Messrs Constable and Co. Price 4s.

able, as British exports and imports in 1924 were swollen by sales to and purchases from the Irish Free State, which in 1913 formed part of the United Kingdom. If approximate adjustments are made on this account, the 1924 percentages are reduced to about 16 and 13, and as the proportion of world trade covered by the countries considered by the League in 1924 is somewhat smaller than in 1913, a further slight reduction would have to be made in the British percentage if all countries were included. On the other hand, considerable trade which was formerly within the territory of Austria-Hungary or Russia crosses what are now national frontiers, which means that for comparative purposes with 1913 the total volume of trade is put a little too high. This means that the British percentage would be slightly raised if strict comparison could be made.

The group of Central and Eastern European countries consists of Austria, Bulgaria, Czechoslovakia, Estonia, Germany, Hungary, Latvia, Lithuania, Poland, Roumania, Russia, and the Kingdom of the Serbs, Croats, and Slovenes in 1924, and Austro-Hungary, Bulgaria, Germany, Roumania, Russia, and Serbia in 1913. The drop in their share of world trade is very considerable, amounting to about one-third, or, if Russia be excluded, to just over one-fifth. The position of Germany as illustrated by the figures given in the League's memorandum is of particular interest. Her share in world trade in 1924 was still very much smaller than in 1913, viz., 7.2 as compared with 13.2 per cent. With the rise of internal prices towards the world level in 1923 and the stabilisation of her currency in 1923-4, the quantum of her exports fell off by over 10 per cent. On the other hand, the dollar value of her total exports increased appreciably, as a result of the higher prices at which she sold her wares, and she seems to have recovered an important part of her extra-European markets. Further, in spite of the great reduction in her share of world trade, she only dropped in the scale of trading countries from the third to the fourth place.

In view of this falling-off in the trade of Central and Eastern Europe, it is not surprising to find that the position of Europe as a whole should have declined. But the drop, from 66 per cent. to 57 per cent., is greater than what would be accounted for by the diminished activity of the Central European group alone. If this group be deducted it will be found that the share of world trade claimed by the rest of Europe fell from 45 per cent. to 42 per cent. If the trade of the world in 1924 was not quite up to pre-war level, there must have been in 1924 a slight contraction in the trade of even that part of Europe which has been least affected by the upheaval of the war, or has best recovered from it. The exports of certain European countries, however, have grown in importance. Those of France, from 7.3 to 8.6 per cent. of world trade; of Spain, from 1.12 to 1.48; of Sweden, from 1.20 to 1.33; of Denmark, from 0.94 to 1.31; and of Greece, from 0.13 to 0.25 per cent.

In contrast to Europe, every other group of countries shown in the table above increased its share in world exports, and every other group save South America in total trade. The figures for South America, however, are, it is stated, defective, as owing to lack of data it proved necessary to interpolate in certain cases the trade for 1923 or 1922. But as the South American exchanges improved and South American trade increased in 1924, there is reason to believe that the real participation of that Continent in world trade in 1924 was more important than the table indicates.

A number of extra-European countries have more than doubled the value of their exports. Thus, those of Canada rose from \$432 millions in 1913 to \$1,070 millions in 1924; those of Japan from \$315 to \$728 millions, of China from \$294 to \$625 millions, of Cuba from \$164 to \$434 millions, of Mexico from \$154 to \$354 millions, of New Zealand from \$102 to \$227 millions. The exports of the U.S.A., which in 1913 amounted to \$2,448, had risen by 1924 to \$4,498 millions. The growth in the value of the exports since 1913 of the four most important trading countries mentioned above—the U.S.A., Canada, Japan, China—almost equalled the total exports of the United Kingdom in 1924, 3,432 compared with 3,520 million dollars.

Thus, what Europe has lost has been gained largely by the U.S.A. and Japan. Both in 1923 and in 1924 these two countries were able to claim a larger share in nearly every important market of the world than before the war. But if the calculations made be correct, the quantum of Canada's trade had increased more than that of either of these two countries. One of the outstanding features of the survey is that there has been a definite shift of the trade of the world from Europe towards America and Asia, and from the Atlantic to the Pacific Ocean.

This is illustrated very roughly in the following table:—

VALUE of TOTAL TRADE (IMPORTS plus EXPORTS) of COUNTRIES NAMED.

	(Million Dollars.)	
	1913.	1924.
"Atlantic" Group—		
United Kingdom	5,771	8,587
France	2,953	4,267
Germany	4,966	3,729
Netherlands	2,801	1,541
Sweden	446	713

		Per Cent.
Increase { Atlantic Group		18
{ Pacific "		92
Average rise in Gold Prices		50

If the figures for the Atlantic and Pacific coasts of U.S.A. and Canada were divided, the difference would be still more marked. This shift may also be studied from the imports and exports of certain countries by continental groups. The United States and Canada have obtained in recent years a somewhat greater proportion of their imports from Central America, and a much greater proportion from Asia, while China and Japan, on the other hand, have turned their attention to North America and Oceania. The same tendency can be traced if the exports of these countries be analysed. Thus the exports of the United States of America to Asia rose from 5.1 per cent. of her total exports in 1913 to 11.2 per cent. in 1924, and of Canada from 1.2 per cent. to 3.7 per cent., while Japan's exports to North America rose from 30.1 per cent. to 42.1 per cent., and China's from 9.2 per cent. to 13.4 per cent. In 1924 this tendency of the increased wealth of this group of countries to circulate within their own orbit received a certain setback, and the Atlantic Ocean recovered some ground. There has been a slow but steady quantitative increase in trade of many European countries in the last three years. A bald comparison of 1924 with 1913 obscures this hopeful trend. Also the United States, India, Canada, Japan, China and the Argentine, although all sending a lesser share of their exports to Europe than in 1913, sent her an appreciably larger proportion than in 1923. Moreover, although North America sends a lesser fraction of her wealth to Europe, she receives a larger share of Europe's exported produce than she did a decade ago.

While the foregoing analysis affords little grounds for satisfaction so far as the United Kingdom is concerned, it is some consolation to find that India and all the overseas Dominions, with the single exception of South Africa, have grown in importance in the markets of the world. Their exports as percentages of world exports in 1913 and 1924 are shown below:—

	1913.	1924.
Australia	2.06	2.50
Canada	2.37	4.25
South Africa	1.74	1.48
New Zealand	0.56	0.90
India	4.25	4.69

Total Dominions..... 10.98 13.82

This last figure is about equal to that of the United Kingdom—the combined total for the Empire (excluding Crown colonies, &c.) amounting to over 27 per cent. Canada and New Zealand have made the greatest progress—Canada despite the fact that following a reduced harvest the quantum index of her exports fell from 175 in 1923 to 161 in 1924. But even the latter figure was materially higher than that of any other country in the world for which similar indices are available. The exports of New Zealand per head of population are still, as they were before the war, considerably greater than those of any other country (\$168, compared with Cuba, \$139). The relative set-back in South African trade is presumably to be attributed to the lower value of gold.

In conclusion, we may conveniently supplement the figures we have given by a table showing for certain European nations the relative level in the volume of their trade in 1924 in comparison with the situation before the war:—

VOLUME of TRADE in CERTAIN EUROPEAN COUNTRIES.

Country.	1913.	1924.
U. Kingdom.....	100	107
Denmark	100	134
Finland	100	99
Germany	100	63
Hungary b.....	100	59
Italy	100	62
Norway	100	93
Russia	100	90
Sweden	100	105
Switzerland	100	100
	100	16
	100	20
	100	133
	100	93
	100	81
	100	75

* 1923. a If adjustment be made for Irish Free State trade, figures are:—Imports, 104; exports, 78. b Present territory.

This table shows perhaps even more forcefully than previous tables the abnormality in Germany, Russia, and Central Europe. Moreover, the detailed statistics show that, on the whole, even in very depressed conditions we have held our ground better in Europe than in Imperial markets. It is obvious, therefore, that the recovery of the former is the surest way of giving the much-needed lift to our foreign trade.

FRANCE'S WAR DEBT TO AMERICA.

(BY A CORRESPONDENT.)

[Our views on this problem and on the Italian settlement with America will be found in a later column.—ED. Econ.]

To reach an agreement with the United States for the funding of the war debt must rank as one of the foremost problems confronting the new French Cabinet, and it is to be expected that M. Painlevé, as Finance Minister, will endeavour to reopen negotiations with Washington at an early date. In order that the causes of the failure of M. Caillaux's Mission to Washington at the end of September last may be understood, it is proposed in this article to review, as briefly as possible, the various propositions that came up for discussion on that occasion, and in conclusion to submit a scheme which, if not acceptable in all its details, may, it is hoped, be the means of suggesting a method of repayment from which a plan may be evolved agreeable to both countries.

The tables below show the annual payments involved in the four concrete propositions that were considered at Washington—i.e., the two offers submitted by the French Mission, and the two counter-proposals of the United States. It must be noted that the sum originally borrowed by France was \$3,340,000,000, which, with interest at

5 per cent. per annum calculated to June 15th of this year, brings the total to \$4,200,000,000. Now, as a preliminary concession America agreed to reduce this capital sum to \$4,025,000,000—the difference of \$175,000,000 representing the difference in interest calculated to June 15th at 5 per cent. per annum, and the actual rate of interest paid to subscribers of the Liberty loans, who provided the money:—

(000,000's omitted.)

47 remaining annual payments total					5,612				5,612	
Total payment in 62 years						8,274	7,724			

No agreement having been reached on any of the four propositions given above, the Americans at the eleventh hour suggested that negotiations should be deferred for a period of five years, by which time France's capacity to pay should be better known, and that in the interval—that is, until 1930—she should pay \$40,000,000 a year on account without conditions.

To this last proposition France has not yet given a definite reply. But, as any Finance Minister must realise, no satisfactory or permanent solution of the financial crisis can be expected so long as France's future commitments in regard to this debt remain an unknown factor, it is hardly to be expected that this proposed provisional arrangement will be agreed to.

It would seem that M. Caillaux, in submitting his first proposal, was really under the delusion that America was anxious for a settlement of the debt question rather as a matter of principle than as a matter of business. His offer practically amounted to the mere repayment of the capital sum within a period of 62 years, and waiving all question of interest. He had, in effect, to be reminded that even in the United States, prosperous as that country may be, the displacement of a sum of four thousand million dollars cannot be effected without regard to its earning power in interest.

Indeed, the first American counter-proposal must have come as a rude shock to M. Caillaux and his mission, as it requested, in addition to the repayment of the capital in 62 equal annual instalments, interest at the rate of 3 per cent. per annum for the first ten years, and 3½ per cent. thereafter, or repayment on the same terms as in the case of the British war debt. Thus there was a difference between the sum total of the annual payments involved in the two proposals of no less than \$3,620,000,000 (the French offer totalling in 62 years \$4,655,000,000, and the American's counter-proposal \$8,275,000,000).

That M. Caillaux realised his original mistake may be inferred from the fact that in the second proposal submitted by the French Mission, while extending the period of repayment to 68 years, the sum total of the payments to

be made in that period was increased by no less than \$1,565,000,000. Yet in this second offer the Mission's calculations in regard to interest, if they had made any, were not defined. In fact, it needs but a casual perusal of the figures involved in the two French schemes to lead one to presume that the Mission had arrived at Washington without any properly thought out plan, and one wonders whether this same omission may not be one of the causes of the financial situation in which France finds herself to-day. On the surface of things it would appear that on the rejection by America of their first offer, the French Mission, having noted a difference of some 3,000 odd million dollars between the total payments of the two proposals, contented themselves by dividing this difference by two, and extending the period of payment by a few years (in order to make their simple addition sum less obvious), and, flattering themselves that they had met the American's half-way, felt assured that this second offer could not be refused.

The United States replied with their second counter-proposal carefully calculated out in the matter of the repayment of capital and interest. They maintained their demand for the repayment of the capital sum in 62 annual instalments, but lowered considerably the rates of interest for the first twelve years. This reduced the sum total of the payments to \$7,724,000,000 (or \$551,000,000 less than their first counter-proposal). But as will be seen from the figures which appear above, there is still a great divergence between the total payments involved in the second proposals submitted by each party, and a great gulf has yet to be bridged before a settlement is reached.

Now, it will be observed that in each of the American proposals it is stipulated that the capital shall be repaid in 62 equal annual instalments (i.e., \$65,919,355 per annum), plus interest at varying rates. In effect, America has insisted on the recognition of the principle that repayment shall include, and be distinct as regards, capital and interest, which for obvious reasons is a sound one. Moreover, in each American proposal the rate of interest increases until it reaches the maximum rate of 3½ per cent. per annum. The reason for this, probably, is that the United States is anxious that ultimately, at any rate, the rate of interest on the French debt and the British debt should be the same. In this connection it will be noted that by the annual repayment of capital the increased rate of interest becomes less apparent.

But the divergence between the American and French proposals, which was probably the greatest obstacle to a settlement (apart from the differences in the sum total of the payments in liquidation of the debt), was, it can be assumed, in the matter of the annual payments for the first five or ten years—the years of France's financial recuperation. In the proposed funding scheme, which, I venture to submit, the annual payments for the first five years are approximately those contained in the second French offer, the liquidation of the debt is provided for in 62 years, instead of 68 years suggested by the second French proposal, and the sum total of the payments demanded in the second American proposal is reduced by nearly \$300,000,000.

The main features of the suggested plan are, first, in the matter of the repayment of the capital. On the assumption that it is reasonable that a fair portion of the burden of this war debt should be borne by the future generation, the capital sum of \$4,025,000,000 is divided into 62 equal portions of \$64,919,355 each, and it is suggested that for the first five years one-third of one of these portions should be repaid annually, that for the second five years two-thirds of one of the portions be repaid, for the third five years one portion, or \$64,919,355 per annum, and that the unpaid portions which were otherwise due during these first fifteen years be added to the capital this balance of capital be thenceforth paid in equal annual instalments of \$71,825,669. In regard to interest this proposal provides for ½ per cent. per annum for the first five years, 1 per cent. for the second five years, 2 per cent. for the third five years, 3 per cent. for the fourth five years, and 3½ per cent. per annum thereafter, namely, from the 21st year.

To demonstrate how this plan would work out, we append below the figures in regard to the annual payments for the first 22 years, together with the sum total of the

remaining 40 annual payments. The figures are calculated to the nearest million dollars:—

(000,000's omitted.)

Capital Sum Due.	Year.	Interest.		Plus Capital.	Total Annual Payments.
		Per Cent.	Per Annum.		
\$			\$	\$	\$
4,025	1st	½	20	22	42
4,003	2nd	½	20	22	42
3,981	3rd	½	20	22	42
3,959	4th	½	19	22	41
3,937	5th	½	19	22	41
3,915	6th	1	39	43	82
3,873	7th	1	39	43	82
3,830	8th	1	38	43	82
3,787	9th	1	38	43	81
3,744	10th	1	38	43	81
3,701	11th	2	74	65	139
3,636	12th	2	73	65	138
3,571	13th	2	71	65	136
3,506	14th	2	70	65	135
3,441	15th	2	69	65	134
3,376	16th	3	101	72	173
3,304	17th	3	99	72	171
3,232	18th	3	97	72	169
3,160	19th	3	95	72	167
3,088	20th	3	92	72	164
3,016	21st	3½	105	72	177
2,944	22nd	3½	103	72	175
Remaining 40 annual payments total					4,934
Total payment in 62 years					7,428

This total is within \$300 millions of the second American proposal, though the annual payments for the first five years are only slightly in excess of those of the second French proposal.

OVERSEAS TRADE IN OCTOBER.

THE October trade returns are encouraging in some respects, principally, perhaps, from the fact that British exports show a substantial increase as compared with September, and are at the highest total since March. Imports are £11 millions higher than in September, but £11½ millions below the figure for October of last year. It is satisfactory to find that the increase in comparison with September is mostly in food and raw materials in the case of imports, and mostly in manufactures in the case of exports. The tables below compare the figures for October and the 10 months with those of a year ago:—

MONTH OF OCTOBER.

	1924.	1925.	Increase (+) or Decrease (—) in October, 1925.	
	£	£	£	%
Imports	120,472,658	108,838,924	11,633,734	9.7
British exports	68,586,639	67,081,986	1,504,652	2.2
Re-exports	12,931,489	13,377,420	445,931	3.4
Total exports	81,518,127	80,459,406	1,058,721	1.3
Excess of imports over total exports	38,954,531	28,379,518	10,575,013	27.2

TEN MONTHS TO OCTOBER.

	1924.	1925.	Increase (+) or Decrease (—) in 1925.	
	£	£	£	%
Imports	1,029,682,616	1,074,262,947	44,580,331	4.3
British exports	657,905,899	646,340,392	11,565,507	1.8
Re-exports	115,769,813	126,228,235	10,458,422	9.0
Total exports	773,675,712	772,568,627	1,107,085	0.1
Excess of imports over total exports	256,006,904	301,964,320	45,957,416	17.8

Lower prices play a large part in the decline in imports last month as compared with October last year, especially in the case of grain and raw textiles. Imports of silk and silk manufactures show a decrease of over a million. These declines are partly offset, on the other hand, by an increased volume of imports, at higher prices, of non-ferrous metals and manufactures thereof, and a very sharp rise in the value of rubber imports. The latter, indeed, account for no less than £12 millions of the £44½ mil-

lions increase in the 10 months in total imports. The quantity increased from 1,218,200 centals to 1,497,000 centals, while the value rose from £6,725,100 to £18,766,000. Although imports of food, drink, and tobacco show an increase of less than £3 millions in the 10 months, there are some striking changes in the value figures of the individual items, again largely owing to price movements. Grain and flour imports are £3½ millions lower, meat £12 millions higher, and sugar £9½ millions lower. On the export side, the whole of the October decline is practically accounted for by coal, which is down by £1½ millions. Wool exports, partly owing to lower prices, are £409,000 lower, and woollen and worsted manufactures are £618,900 lower, but there is, nevertheless, an increase of nearly a million in total exports of manufactures. To this it is encouraging to find that exports of iron and steel and manufactures thereof contribute £442,400, and machinery £277,100. The principal increase in this section, however, is £915,000 under the heading of vehicles, of which new ships account for £467,000, and motor-cars and parts for £265,600. The decrease in British exports of £11½ millions in the 10 months is entirely due to coal exports, which have declined in value by over £19 millions. Despite declines of £6 millions in exports of iron and steel, and of over £5½ millions in exports of woollen and worsted manufactures, total exports of manufactures for the 10 months are up by over £3 millions, there being increases in exports of machinery of over £4 millions; in electrical apparatus of £1½ millions; in cotton manufactures of £3½ millions. The rise in the price of rubber has largely influenced the re-export figures. In the month of October rubber accounted for an increase of £1,397,200, and in the 10 months for an increase of £9,378,000. The statistics of shipping engaged in foreign trade show a slight decline for October as compared with the same month of last year, both for entrances and clearances. For the 10 months there is an increase of 365,900 tons in ships entered, but a decline of 2,486,300 in ships cleared. Imports of gold coin and bullion in October were £5,412,400, and exports were £10,175,300. For the 10 months, gold imports were £35,824,500, or £6½ millions more than in the corresponding period of last year; while exports were £36,764,700, or £6½ millions less. A reader has pointed out to us a printer's error in our article on October 17 on the September trade returns. In a reference to exports of new ships it was stated that in 1913 the average value was £13 per ton. This figure should have been £18 per ton.

RUBBER PROSPECTS.

Now that the feverish activity in the rubber share market has subsided a breathing space is afforded in which the investor may not only take stock of his position, but may consider in a calmer frame of mind the outlook for the rubber industry. The two booms which have visited the Stock Exchange within the past six months owe their existence to the sudden increase in the price of rubber, which has been due to entirely abnormal causes. During the past four years the remarkable growth in the world-production of motor vehicles, which absorb some 70 per cent. of the total output of rubber, has increased the total consumption of the commodity from 290,000 tons in 1920 to 475,000 tons in 1924 and an estimated 540,000 tons in 1925. During the same period total production is calculated to have increased from 368,000 tons in 1920 to 420,000 tons in 1924 and 574,000 tons in 1925. In the *Economist* of September 26 (p. 488) we gave figures showing that in 1922, before the Stevenson Scheme of Restriction was introduced, world production and consumption were approximately equal at a little over 400,000 tons, but that since then, thanks to the curtailment of output by British producers under the Stevenson Scheme, consumption has outstripped demand, with the result that stocks have been rapidly depleted, prices have soared, and the share market has enjoyed booms comparable only to that of 1910. As recently as May, 1924, the London price of standard "spot" rubber (ribbed smoked sheet) was as

low as 9½d per lb, whereas in July last the corresponding quotation was 4s 6d per lb. This exceptional figure was not maintained, but after a reaction in August and September the quotation recovered, and remained steady at a little over 4s in October, an unfounded report from Colombo of impending changes in the Stevenson Scheme causing only a temporary weakness. At the end of October the exportable quotas of companies in the Scheme were automatically increased by the 10 per cent., which raises the figure to 8s per cent. of standard production. In February next we shall presumably see the end of restriction, for the time being, at any rate, but whether it is to be completely abandoned is not clear. It is believed that a revised form of restriction has been drawn up for use in the event of prices falling to unremunerative levels. An official announcement on the whole question would certainly be to the benefit of all concerned. We do not believe that any further restriction scheme would be of any benefit to the industry. Unless it has the support of the Dutch producers it cannot be expected to produce the abnormal results of the past year, which were due to the exceptional growth in consumption; in any case, it is thoroughly unsound, and in the long run can only be as detrimental to producers as it would be harmful to consumers.

In the meantime, the wise rubber shareholder will do well to examine the prospects for the industry over the next few years. We know of no group of companies concerning which a greater supply of detailed statistical information is available than rubber producing companies. There are many manuals in which this information is collated, and the past histories of practically all the plantation companies may be readily examined and compared. The investor should, therefore, have no great difficulty in choosing sound concerns for his attention, and of judging prospects for, say, twelve months ahead, for prices at which forward contracts have been made—an essential piece of information—are published. But when he comes to consider the prospects for the industry as a whole over the next five years or so there are many factors to be taken into consideration. Many estimates have been made of the world's future rubber production if no restrictions of output are in force. These are mostly in the neighbourhood of 620,000 tons per annum. During the past five years little rubber has been planted, so that after 1926 no new large areas will be brought into bearing, and the total production in 1930 cannot be expected to be greatly in excess of the figure just mentioned. Consumption, on the other hand, has shown a cumulative increase of 10 per cent. per annum since 1920, and were it to continue to do so a shortage in supplies would appear in less than two years, on the assumption that the consumption in 1925 is 540,000 tons. This is the figure estimated by the Rubber Association of America, which apparently takes the view that consumption will not increase so rapidly as it has done in the past five years. Here is the Association's estimate of world production and consumption in the next five years:—

	(000's omitted.)	
	Production.	Consumption.
	Tons.	Tons.
1925.....	574	540
1926.....	606	575
1927.....	623	608
1928.....	633	641
1929.....	637	672
1930.....	641	703

According to this estimate stocks will be replenished during the next three years, but by 1930 such accumulations will again be wiped out. It would be unwise, however, to draw definite conclusions from such figures as these. Anything approaching accuracy in a forecast over so long a period is impossible, and a small error in either direction would entirely alter the aspect of the case. Future world consumption depends to a very great extent upon developments in the American motor industry, concerning which a New York correspondent writes in another column. That, of course, is an uncertain factor, and the possibility of a slump in the sale of cars in the United States cannot be ruled out. We have heard little of late of the possible competition of synthetic rubber. With rubber selling below 2s per lb, the incentive to develop the manufacture of an artificial product disappears; but the possibility of further developments in the matter of substitute materials

must not be ruled out now that prices are at a much higher level. An increase in the manufacture of reclaimed rubber is also a possibility to be reckoned with. But the conclusion may be drawn that a glut of rubber supplies in the next few years is unlikely, and the investor may safely anticipate that the well-established producing concerns will not be faced in the near future with such a period of depression as they have recently passed through.

World rubber stocks have shown a rapid diminution during the past twelve months, Messrs W. J. and H. Thompson's estimate for September, 1925, being 130,000 tons, against 196,000 in September, 1924. Stocks in the United Kingdom have fallen in the same period from 48,000 tons to less than 5,000 tons. The average price for the past quarterly period was 3s 7½d, against 3s 2½d per lb for the preceding three months, and is 2½d for the corresponding period of 1924, and an average of 2s 3½d in 1914. A large number of forward contracts for 1925 have been made at over 3s per lb, and the figure for 1927 delivery has recently risen to the neighbourhood of 2s 4d per lb. Costs of production vary a little with different companies, but they are lower than before the war, and are now mostly less than 10d per lb. Below we give a few typical cases as published in the annual reports:—

COSTS OF PRODUCTION PER LB.					
	1914.			1924.	
	s	d		s	d
Anglo-Malay	0	10-45		0	8-27
Consolidated Malay	0	11-93		0	10-42
G Iden Hope	0	11-23		0	9-38
Linggi	0	9-54		0	9-48
London Asiatic	1	0-83		0	9-58
United Serdang	0	11-84		0	9-25

There is thus an ample margin between costs and forward prices which assures substantial profits for the producers. Recent dividends have reflected the prosperity of the plantation companies, and these dividends have for the most part been paid out of profits earned from the sale of rubber at less than half to-day's market price. Some companies, of course, have forward contracts to work off at comparatively low prices, but unless they have sold their entire output forward, they will be able to sell the balance of their crop at current high prices, and there can be little doubt that shareholders in sound concerns can look forward to good dividends for a little while to come. The feverish activity of this year's two booms pushed prices up to high levels, from which there has been no very marked recession, and as will be seen from the table below present prices are, in most cases, higher than the highest record in the first half of the year, while the rise from the lowest of 1924 is in some cases remarkable:—

	Dividends per Cent. per Annum.			Prices.			
	1923.	1924.	1925.	1924.			
				Lowest	Lowest	Highest	Latest.
Anglo Dutch (£1)	12	13	15*	188	24	288	288
Anglo-Malay (£1)	6	7	15*	188	18	188	188
Chersonese (2s)	10	10	16*	188	18	188	188
Dialing (£1)	4	4	7	188	18	188	188
Grand Central (Ceylon) (£1)	7½	5	15*	188	18	188	188

Sungei Kapar (2s)	10	12	25*	188	18	188	188
T. Indrag (£1)	10	10	22½	188	18	188	188
United Serdang (2s)	10	12½	15*	188	18	188	188

* Interim.

At present prices yields are relatively low, the probability of higher dividends having in many cases been already discounted. The recent boom, in fact, may have been, in the judgment of many, unwarranted or at least overdone. But that the rubber plantation industry has a good 12 months in front of it seems fairly certain, and that may be counted sufficient ground for the popularity of the rubber share market.

The accession of prosperity to the industry, coinciding as it does with the new capital issue season, has brought about the appearance of a large number of rubber plantation company prospectuses. Since April some £8 millions of new capital has gone into the industry through the London market, of which no less than £3 millions was accounted for in October. The majority of the prospectuses have attained a good standard of excellence, both as regards the information disclosed and the personnel of the directorates. But a word of

caution may not be out of place. We must be prepared for the appearance of chaff amongst the grain, and careful discrimination should be exercised by intending investors. It is too much to hope that all new rubber companies have been or will be thoughtfully conceived; it is also too much to expect that all the properties and estates acquired are capable of development upon profitable lines. It is in this latter respect that caution is most needed.

THE AMERICAN MOTOR INDUSTRY.

(BY A CORRESPONDENT.)

NEW YORK, November 3.

In the great buoyancy which continues on the markets (the latest day's trading on the Stock Exchange saw total sales running up to approximately 2,700,000 shares) motor shares continue to lead. They have been further stimulated by the publication of more extraordinarily good earning statements for the third quarter. The Studebaker Corporation, which will earn about \$10 a common share this year, and which, like most of the good motor companies, is without funded debt, and is extremely strong in quick assets, has increased its dividend from \$4 to \$5 a common share per annum. In addition, the directors voted the common stockholders an extra distribution of \$1 a share at this time. The shares of the corporation have risen this year from a low level of 42½ to a high point yesterday, of 68½. Whether the shares are over-valued at present prices is an interesting question, and one that bears on judgments of the character of our present market. It will be observed that at present prices the shares may be bought to yield approximately 7½ per cent., and that the earnings are nearly 15 per cent. on the market valuation. The critics probably would object that the present year's earnings are unusually good and that they make out too good a case for the stock. On the other hand, it must be admitted that the corporation has an excellent earning record over poor years as well as good, and that the new \$5 dividend rate represents conservative judgments as to a rate that can be maintained through poor years. The dividend decision undoubtedly was taken on a theory similar to that which guided the directors of the General Motors Corporation. In the latter case the regular distribution was raised last summer from \$5 to \$6, the directors feeling sure that this rate could be maintained consistently. In addition, \$1 a share extra was declared out of the first six months' earnings, and it is expected that \$3 extra will be declared out of the second six months' earnings. The General Motors' earnings for the whole year are expected to come close to \$20 a share; the stock is now selling for nearly 140, as against a low level of 64½ early in the year.

Much depends, of course, on one's view of the character and prospects of the motor industry. If motor companies are to be placed in the same category with the general run of industrial enterprises, then motor shares have been selling ridiculously cheap, and are now hardly overpriced. If the motor-car is a necessity and not a luxury, if its purchase represents an economically defensible expenditure on capital account, the motor companies deserve to be classified with other industrials. The defenders of the motor shares maintain that the automobile has become a necessity; that it has enabled persons to live further from the cities and further from the railroads, and that it is indispensable to such persons. It has also found an increasing use in business. Particularly in the suburban and rural districts, artisans commonly ride to their work in their own cars. Over against these arguments the critics set the fact that a very large proportion of the cars are bought on the instalment plan, with payments covering a period of one year. They argue that easy credit has stimulated overbuying, and aver that when prosperity lags the buying of motors will fall off

THE FIRST NATIONAL BANK OF BOSTON

sharply. In reply, the optimists say that the American public always has used the instalment plan, whether for farm implements, sewing-machines, pianos, or phonographs. They also point to the fact that the public is buying, in addition to its motor-cars, more securities and life insurance than ever before. The real point is, the optimists declare, that everyone has a wonderful lot of money to spend.

There has been much discussion during the past few years as to the approach to a "saturation point" in the automobile market. So far the optimists have had the better of the argument, the predictions of the pessimists having fallen down repeatedly. Crudely stated, the argument is that when every family in the country has an automobile the rate of increase in the number of automobiles in service must decline. With not far from 20,000,000 automobiles now registered, it would appear that the field for new users is diminishing. However, it must be apparent that by the time the country has twenty-five or thirty million cars in operation the annual requirement of new cars to replace those wearing out will be very large. It might be as large as four or five million cars a year. In addition, the manufacturers have found during the last year or so that sales can be materially stimulated by radical improvements in the quality of their product, as by the introduction of balloon tyres, improved spring suspensions, four-wheel brakes, and economical closed bodies. However, the possibilities in the way of a saturation point undoubtedly are responsible for the enterprise that the manufacturers have been showing in developing an export market.

Just now the automobile market is giving an excellent account of itself. Sales to users are at a high level and stocks of cars are small. It remains to be seen, however, whether the recent stimulation of sales by new and improved models, and the high rate of production that is being maintained in consequence, may not have an effect on the situation by the time next summer arrives. This summer's price reductions have had little effect on profits, particularly on those of the strong companies. They represented principally the passing on of economies in production. There are signs, however, that a more intensive form of competition through price cutting may come later. Certain strong manufacturers whose production has been running behind orders are believed to have plans for cutting prices when orders are caught up. The theory of operations is that the bigger volume obtained through lower prices would provide a further reduction of costs. At the same time it has been apparent that, for the first time, Ford has been feeling competition during the last year or so. Small cars of good quality have been placed in the market at prices not greatly higher than Ford's. Business that otherwise would have gone to Ford has been going to these makers. It is generally considered that the new improved Ford bodies represent an attempt to maintain the Ford proportion of the total business. If these new models should not have the desired result, a policy of energetic price-cutting might follow. While these developments are by no means assured, the possibility of price-cutting in the industry from above and below is present. It is this possibility rather than empirical judgments based on the magnitude of the rise that motor shares have enjoyed that suggests caution in market commitments in this department.

PROCEEDINGS OF THE COAL COMMISSION.

THE Royal Commission on the Coal Industry resumed its public sittings for the hearing of evidence at the Grand Committee Room, Westminster Hall, on Wednesday last. The members of the Commission are Sir Herbert Samuel, chairman, Sir William Beveridge, General Sir Herbert Lawrence, and Mr Kenneth Lee. Earlier sittings are referred to in our issues of October 31 and November 7, 1925.

On behalf of the Electricity Commissioners, Sir John Snell stated that the average consumption of electricity generated by undertakings within the Commissioners' jurisdiction in Great Britain was 117 units per head. If the power generated by public plants were included, the total figure would be approximately 220 units per head. In a modern power station fuel consumption accounted for roughly 50 per cent. of the total cost of generation. The 584 stations operating in Great Britain consumed in 1924-25 7,892,396 tons of coal, 95,436 tons of coke, and 54,410 tons of oil. The average consumption of steam stations, which accounted for 95.6 per cent. of the total output last year, was 2.53 lbs of coal per unit generated, on an average yearly load factor of 30.5 per cent. The most efficient British station, however, that of the Manchester Corporation at Barton, consumed only 1.5 lbs on a load factor of 29.58 per cent. The attainment of similar efficiency by other stations would result in a saving of 2 million tons of coal per annum. At present the predominant unit in the industry was comparatively small, 255 stations out of 584 generating less than 1 million units each and only 150 generating more than 10 million units. Further concentration and improved generating methods might be estimated to raise the total annual output during the next fifteen years from 7,000 million units to 21,000 million units, with an increase of coal consumption from 7.9 million tons to no more than 16.9 million tons. Accelerated railway electrification would tend to raise these figures.

The witness considered that, in view of the comparative lack of water power in this country, the potential output from this source would not cover more than 10 per cent. of British requirements. In European countries, however, greater scope existed. The water power at present utilised on the Continent was equivalent to an annual coal consumption of 28 million tons, and the total available power to an annual consumption of 190 million tons. The present tendency towards concentration of generating plant in Great Britain should be accelerated. The number of small stations were still increasing more rapidly than that of the larger, the Electricity Commission usually preferring to give consent to the creation of fresh small stations rather than deny the inhabitants of isolated areas a supply of electricity.

Dr Charles Carpenter, on behalf of the Gas Companies Protection Association, spoke of the great anxiety which had been caused by increases in coal costs. It would be advantageous if the present regulations with regard to quality, quantity, and purity of gas were extended, with necessary modifications, to the coal industry.

On Thursday, November 12th, Sir Richard Redmayne, formerly Chief Inspector of Mines, again gave evidence, referring to possible economies from the employment of larger trucks for coal transport, and from a more scientific grouping of companies. Compulsory powers would, however, be necessary, in his opinion, to effect the latter reform.

Sir Josiah Stamp put forward the results of certain statistical investigations, showing that the ratio of profits to wages in the coal industry had been rather more than 17 per cent. during the 20 years 1894-1913. An analysis of shorter periods showed considerable fluctuation. Taken over quinquennial periods, for instance, the ratio varied between 10 and 25 per cent., and, during single years, between 6 and 42 per cent.

The witness agreed that the effect of putting the coal industry on a profit-sharing basis while other industries were not on that basis might lead to violent fluctuations, owing to the reaction of financial conditions in those industries. While he agreed that a minimum wage should be a first charge on the industry, he did not think that a guaranteed minimum would be economically advisable.

Notes of the Week.

America and Her Debtors.—On Thursday last the American Debt Funding Commission came to an arrangement with the Italian Commission as to the terms of payment for Italy's debt to the United States. The agreement, which relates to a debt, the principal and accrued interest on which amounts to \$1,648,000,000, provides total payments amounting to \$2,407,000,000 (£481,400,000) spread over a period of 62 years. The basis of settlement is the repayment of the principal in full and interest in accordance with Italian capacity—the interest rate being nil for the first five years, then one-eighth of 1 per cent. for ten years, and so rising fractionally in successive ten-year periods to 1 per cent. in 1970 to 1980, and finally to 2 per cent. in the last seven years. Under this arrangement the total annual payments being at \$5,000,000 (£1,000,000), and are graded upward to \$80,000,000 (£16,000,000) in the last year. This settlement is of the greatest importance as marking the abandonment by America of the absurd pretence of charging all her debtors alike $\frac{3}{4}$ per cent. interest after a short period of delay. We have many times urged that the utmost that the United States could expect would be a settlement based upon interest at $\frac{1}{2}$ of 1 per cent., or 1 per cent. in the case of Italy and 2 per cent. in the case of France. The present settlement substantially embodies this idea, seeing that the final rise to 2 per cent. does not take place until the bulk of the principal will have been paid off, and this rate will therefore be calculated on a very small sum. Moreover, in any case much water will have flowed round the Gulf Stream before the next generation but one are called upon to pay their share of the debts of the Great War. In view of the economic situation of Italy and of the fact that she owes more to England than she owes to the United States, the present settlement is to be welcomed, not so much as a generous and quixotic act on the part of America, but as a business settlement in which Italy has agreed to pay the utmost that she can afford if things go well. Our regret is that the United States could not see its way to similar action in regard to France, but under the influence of political considerations pressed M. Caillaux beyond the limit of reason. In a previous article a Paris correspondent sets out the various proposals and counter-proposals made during the September negotiations, and puts forward a fresh suggestion for a settlement of the French debt, which eases the situation in the early years but pays lip service to the American dogma of $\frac{3}{4}$ per cent. in the later years, and by means of various adjustments builds up a figure which works out at something not far short of the total payments that the American delegates asked for. But such devices are, of course, window dressing—produce figures which have no financial significance at all. If face-saving devices are needed for the American public, there should be no difficulty in any country offering large sums a hundred years hence, which can be added in to swell the total—provided provision is made by which these sums can be discounted on ordinary market principles and paid off in the next 30 or 40 years. The point of real substance is what France has to pay in the next 20 years, and in this respect the United States must make view France would be well advised to accept the temporary five-year agreement to pay 40 million dollars, base her Budget on these figures, and leave the Italian settlement and the growing solidarity of Europe to have their effect on American opinion.

The See-Saw in China.—The long-pending civil war in China seems at last to have broken out in earnest, though in a country in which military operations are capable of working up sensationally to an apparent climax and then petering out into nothing forecasts of even the most immediate developments must be made with a good deal of reserve. And even now the three protagonists on the Chinese stage have not finally taken position. Of the hostility between Wu Pei-fu in the Central Provinces

and Chang Tso-lin in Manchuria there is no question at all, but the vital problem of which side Feng Yu-hsiang is to come down on still remains unanswered. The main feature of the movements of the last few days is a pitched battle between Sun Chuan-fang, one of Wu Pei-fu's adherents, who, as Tuchun of Chekiang, recently captured Nanking, and the Fengtien army representing Chang Tso-lin. The latter forces, which took the offensive and struck southwards at Sun's troops, were in the end heavily defeated, and appear as a result to have mutinied, and allowed their base, Hsuechowfu, to fall into their opponents' hands. That in itself is only an incident in the possible campaign, and its importance is the less in that the victor does not look like following up his success. But other movements are in preparation, and the final issue, if there is one, will be determined in all likelihood by the decision of Feng-Yu-hsiang, the Christian general, as between Wu Pei-fu and Chang Tso-lin. Feng appears to be as much under Bolshevik influence as ever, and with the decisive defeat of the attack of Cheng Chiung-ming on the Soviet-governed Canton, the Russian star in China is well in the ascendant. Meanwhile the tariff conference at Peking goes on. The negotiators have resolved themselves for the moment into committees, and it is perhaps no bad sign that little is being heard of the trend of their discussions. Even in the unlikely event of any positive result being reached, its value must clearly be governed entirely by the military and political position in China, and what that may be in a month's time no man is capable of foreseeing.

Naval Economy.—To describe the bluff First Sea Lord of the Admiralty, as a daily newspaper described him, as the "skeleton" at the Guildhall Banquet is to use, perhaps, an unfortunate simile. Nevertheless, the tone of the speech in which he defended the scale of Admiralty expenditure was distinctly out of tune with Mr Chamberlain's jubulations over the Locarno Pact, which, if it is to bring the boons expected of it by its sponsors, must lead first and foremost to a measure of international disarmament. The crux of Sir David Beatty's speech was his claim that the battleship and cruiser strength was not too large for the purpose of defending our trade routes in the event of war. War with, or between whom? In Europe, at any rate, there is no Power who could threaten our trade routes in the face of half our present protecting force. On the subject of dockyard economy, Sir David's attitude was proper to his office. The Admiralty had told the Cabinet that Rosyth and Pembroke were superfluous for the upkeep of the Fleet on its present basis, and it was for the Cabinet, not the Admiralty, to decide if they were to be kept open for other reasons. Since the Admiralty announcement was made two months ago, that these two yards were to be reduced to a care and maintenance basis, vigorous attempts have been made to persuade the Cabinet to withdraw the proposal. We are glad to see that the effort has failed. The Cabinet has finally upheld the Admiralty decision, but the outcry against it has given the Cabinet a taste of the strength of the interests opposed to economies whenever and wherever attempted. We congratulate the Cabinet on their first victory in the cause of retrenchment.

Colonel Willey on America.—The President of the Federation of British Industries has brought back from America some facts and impressions which will give his constituents food for thought. He records in his report some of the stupendous facts about American resources which we have from time to time quoted in the *Economist*—the fact, for example, that the United States produces over 21 per cent. of the world's wheat, 44 per cent. of its coal, 52 per cent. of its copper and cotton, 60 per cent. of its steel, and 72 per cent. of its oil. He also has much to say on questions of trade organisation, finance, labour, and many other topics which we in this country will have to take to heart. But we particularly welcome his warning that Great Britain is doing herself great harm by her own gloomy forebodings. For generations past the country has been "going to the dogs," and everyone agrees that we are not the men we were. But while this self-depreciation is well understood at home, it is sometimes for-

gotten that it may be taken at its face value abroad. "Even in the most friendly quarters, the general impression seems to be that England is 'down and out.' All our difficulties are exaggerated, and the progress we have made towards reconstruction ignored. We are painted as being at the mercy of Communists. One hears that our plants are out of date, our methods antiquated, we cannot compete, our spirit of initiative has deserted us, and the British workman neither can nor will work." There are elements of truth in some of these points, but the picture is absurdly out of focus. Colonel Willey makes suggestions intended to counteract such exaggerations. If the Federation will take the lead in this it will do a national service. We shall be even more its debtors if it will use its great influence to make such statements ridiculous by stimulating in its members the spirit of emulation, enterprise, and solidarity in the cause of Britain's industrial advancement.

No Subsidy for Shipbuilding.—Whether the Prime Minister's defence of the coal subsidy cloaks any uneasiness of mind we do not know, but, at any rate, he has refused to extend the subsidy system to the shipbuilding industry. This decision is communicated in a letter, published yesterday, from Mr Baldwin's secretary to the secretary of the Boilermakers' Society. In the course of the letter the following sentence occurs:—"There are obviously grave objections to the grant of subsidies to particular industries; and, even if these objections are overruled, such a grant can seldom prove more than a temporary relief, so that the problem is still left to solve." The letter also lays stress on the trouble which would arise from the competition of subsidised with unsubsidised ships, the credits raised by the industry under the Trade Facilities Act, and the outstanding fact, discussed, as we noted last week, by Sir Frederick Lewis at the meeting of the Prince Line, of the present existence of a surplus of tonnage above the quantity required to carry seaborne trade. Mr Baldwin's refusal may, we hope, be taken as an indication to other industries that they need not trouble to apply for a dole from the taxpayer. Thus the procession of hopeful claimants, which the coal subsidy was bound to create, will be halted.

Unemployment Insurance Inquiry.—The Minister of Labour announces the appointment of a Committee to inquire into the workings of Unemployment Insurance, with the following terms of reference:—"To consider, in the light of experience gained in the working of the Unemployment Insurance scheme, what changes in the scheme, if any, ought to be made." The chairman of the Committee is Lord Blanesburgh, better known to the public as Sir George Younger, who until recently was the chief organiser of the Conservative party. Representation is well distributed. Labour will speak through several prominent members, including Mr Frank Hodges and Miss Margaret Bondfield, both members of Mr MacDonald's late Government and leaders of the trade union movement. Among employers' spokesmen are Sir G. H. West, chairman of Sir W. G. Armstrong, Whitworth and Co., Sir Hugo Hirst, chairman of the General Electric Company, Sir James Lithgow, late president of the National Federation of Employers' Organisations, and Mr Laurence Holt, a shipowner and chairman of the Liverpool Employment Committee. The initiation of the inquiry is welcome on two grounds. Sufficient experience must by now have been collected to reveal abuses and shortcomings, and to suggest necessary revisions. Secondly, the Committee will serve to dispel the popular fallacy, particularly persistent abroad, that the so-called "dole" is merely charitable relief by the State. Recent visitors to America, for instance, have found current there the idea that 1,200,000 British workers are merely living on State charity. In view of this, no harm will be done by the authoritative repetition of the fact that the word "dole" is a misnomer, and that the whole scheme of unemployment pay is a properly worked-out insurance scheme, whose actuarial basis, it is true, has been from time to time strained by the incidence of unexpectedly large-scale unemployment.

Iron, Steel, and Coal Production in October.—The figures just issued by the National Federation of Iron and Steel Manufacturers show that the slight improvement noted in September was continued in October, ten furnaces were blown in and three damped down or blown out during the month, leaving a net increase in the number of furnaces blowing of seven, an increase, small though it is, greater than in any previous month for nearly two years. The production of pig-iron amounted to 473,700 tons, compared with 448,700 tons in September and 586,400 tons in October, 1924. The output of steel ingots and castings was 647,100 tons, compared with 640,100 tons in September and 678,500 tons in October, 1924. Imports of iron and steel amounted to 218,300 tons, or approximately the average of recent months, but exports showed a marked rise to 368,800 tons, a figure much in excess of any previous month this year, and, in fact, higher than in any month since May, 1924, when the figure was 406,900 tons. The main items contributing to the increase were pig-iron, which rose from 31,300 tons in September to 53,900 tons; galvanised sheets, which rose from 51,300 to 66,600 tons; tinplates and sheets, 41,100 to 55,800 tons; and tubes, pipes, and fittings, from 20,000 to 28,100 tons. The weekly report of the Iron and Steel Exchange states that there has been fairly good buying for the past week or so, and there seems no likelihood of a decline in the volume of trade in iron and steel, though the report adds that the same cannot be discovered in the price at which business is being done. The Board of Trade's price index number for iron and steel in October was 19.6 per cent. above 1913, compared with 21.1 per cent. in September and 37.8 in October, 1924; the corresponding figures for all commodities being 54.8 per cent., 56 per cent., and 70.2 per cent. That the volume of trade is likely to increase rather than decline is borne out by the trade Press, which last week reported that four furnaces were going to be relit in Scotland, that an additional furnace was to be put into blast in South Yorkshire, and a steel works in Middlesbrough, whose furnaces and mills have been idle for many months, during which period an extensive scheme of remodelling and reconstruction has been carried out, have decided to restart operations during the next three weeks. The coal output in the five weeks ending October 31st averaged 4,735,800 tons per week, compared with an average of 4,301,700 tons per week in September. Exports of coal amounted to 4,382,500 tons, compared with 3,902,000 tons in September and 4,932,000 tons in October, 1924. Of the total 900,400 tons went to France, 555,600 tons to Germany, 486,100 tons to Italy, 287,500 tons to Sweden, and 276,000 tons to Denmark.

American Cotton Crop.—Our Manchester correspondent writes:—On Monday last the Department of Agriculture of the United States Government published a further report on the cotton crop for this season, the figures being compiled up to October 31st. The yield is now estimated at 15,386,000 bales, exclusive of linters, against 15,226,000 bales a fortnight earlier. The growth for last season was 13,639,000 bales. This latest forecast was better than expected, as owing to unfavourable weather in many parts of the belt during the fortnight, it was thought in trading circles that the Government would reduce its estimate. In a special report on the position, the Department of Agriculture say that, with reference to the production estimate, rains and coldness have damaged much cotton in the West Atlantic States, mostly in the shape of lowered grade. Much open cotton in the Central and Western portions of the belt is uncovered, and is subject to damage and loss. Picking is finding more cotton than was supposed to exist in August and September, when the drought sickened plants to such an extent that it was thought impossible that they would mature, but rains which fell later revived the plants and the heat checked boll weevil and other pests. While the crop is larger, it is likely to develop a quantity of grades above middling, which will not exceed last year, resulting in much cotton being untenderable against "future" contracts. The number of bales ginned up to October 31st are given as 11,199,000 bales, against 9,716,000 bales at the same time in 1924. These statistics had the effect of causing a drop in prices in Liverpool and New York of about ½d a lb. Futures in Liverpool are now back at

the 10½d level. Prices continue cheaper than for three and a half years back, and it is believed that a substantial business in manufactured goods is waiting to be done when merchants and dealers are convinced that values have touched the bottom. There is a fear, however, that the further reports of the American Government on the crop may bring about a decline in values. At this time of the year it is usual for great attention to be centred on the question of supplies, but the matter of consumption is not generally considered to the extent which is necessary. So far this season the takings of spinners have been much bigger than a year ago, and unless there is an important falling off in this connection, it is likely that consumption will show a remarkable increase on 1924-25.

Hours of Labour.—An important conclusion of the recent Report of the joint committee of employers and workers in the shipbuilding industry was to the effect that the Government should be pressed to take steps to bring about a reduction in the hours of labour in foreign competitive establishments. The same point has now been put to the Minister of Labour by a deputation representing the engineering industry. The result of the adoption, in 1919 or 1920, of the shorter working week in this country, from the point of view of employers, is illustrated by figures recently published as to the rise in rates of wages since 1914. These figures show that, while the increase in full-time weekly rates of wages has been 75 per cent., that in hourly rates has been about 100 per cent., owing to the fact that the weekly wages remained unaltered when the hours were reduced. In the shipbuilding industry, in which the rise in weekly rates ranges from 35 per cent. for certain skilled workers to 68 per cent. for labourers, the increase in hourly rates ranges from 55 to 90 per cent. In the case of engineering, the figures in regard to weekly rates are 45 to 76 per cent., and those for hourly rates 65 to 100 per cent. The rise in hourly rates, of course, more nearly represents the increased labour cost to the employer than that in weekly wages, but the difference between the two sets of figures by no means represents the total cost of the reduction in hours. In order to maintain the output of years prior to 1919 there are involved increases in the number of employees, in accommodation, and in overhead charges generally. There may be a slight compensation in an increase in the hourly output, but on this point authentic opinion is by no means unanimous. There can be little doubt that appreciable advantages lie with foreign firms, who have continued to work hours in excess of the 47 per week prevailing in the engineering and shipbuilding industries in this country, or who have reverted to a longer week in order to maintain their position as successful competitors.

The P. and O.'s Thrift Scheme.—The directors of the P. and O. have this week sanctioned a scheme which is rather loosely described as "profit-sharing" for employees. What the company is really doing is to open a savings bank for employees with attractive rates of interest. Five per cent. is offered on employees' deposits of £10 or multiples thereof, together with an additional 2 per cent. when the dividend on the deferred stock is 5 per cent., or an additional 2½ per cent. when the dividend rate is 10 per cent. or over. In view of the financial history and position of the company, this is almost equivalent, in the absence of unforeseen contingencies, to an offer of a steady 7½ per cent. on savings deposited. There is nothing particularly new about the scheme, for many industrial companies have long worked similar arrangements. But Lord Inchcape and his co-directors are to be congratulated on a move in the right direction, and their plan is to be commended to the notice of other shipping companies.

Shipping Freight Index Number.—A further modest improvement in the average level of charter rates for whole cargoes was recorded by our Index Number for October. The index figure for the month works out at 115.75, an increase of 1.32 per cent., following on a previous rise of 2.42 per cent. Whereas a month ago our Index Number was 11 per cent. below the level

registered in September, 1924, the current figure is 14 per cent. below that of the corresponding month of last year. The movement of the various groups in the index are summarised as under:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920.....	814.31	529.89	757.52	744.81	587.02	712.16	690.95
December, 1920.....	268.90	277.17	244.10	256.79	286.72	347.18	280.14
December, 1921.....	160.06	164.07	163.72	144.43	141.25	166.47	156.67
December, 1922.....	137.09	135.15	129.19	122.61	136.08	159.34	136.57
December, 1923.....	134.04	132.72	120.09	124.35	125.07	144.21	130.08
December, 1924.....	117.44	129.18	119.45	119.76	129.29	161.13	129.38
January, 1925.....	115.26	134.60	120.38	123.83	132.44	172.70	133.20
February ".....	114.92	146.54	118.04	121.95	129.91	178.04	134.91
March ".....	116.34	130.81	110.41	116.99	118.42	151.33	124.05
April ".....	114.18	133.39	110.22	115.95	114.60	138.87	121.27
May ".....	109.86	124.85	110.97	108.43	105.16	126.41	114.28
June ".....	109.25	104.78	108.24	105.53	100.43	112.17	106.73
July ".....	119.02	111.96	113.42	106.15	94.43	117.51	110.41
August ".....	107.22	113.46	110.79	112.24	99.14	126.41	111.54
September ".....	103.22	117.25	109.09	113.38	101.83	140.65	114.24
October ".....	109.56	121.03	110.52	106.49	104.46	142.43	115.75

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	9.05	+ 3.40	S. America—outwards	127.57	- 2.94
Bay—outwards.....	124.77	+ 12.84	India—outwards.....	98.47	+ 5.40
"homewards.....	116.13	+ 4.84	"homewards.....	108.27	- 13.78
Mediterranean—outwards.....	122.80	+ 17.14	Far East, &c.....	107.72	- 2.33
"homewards.....	105.54	- 3.9	Australia.....	142.43	+ 1.78
North America.....	121.03	+ 3.78			

Grain shipped in whole cargoes continued to move slowly, a fair volume of chartering on North American account being offset by paucity of business from the Plate, while Eastern demand was extremely slack. On the other hand, outward freights showed a distinctly better tendency, coal exporters requiring increased space, for which substantially better prices had to be paid, especially for discharge in the Mediterranean. From shipowners' point of view, however, satisfaction at this development is qualified by recognition of the essentially artificial conditions under which coal exports are being stimulated at prices made possible only by the subsidy. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	1913 = 100.	1922.	1923.	1924.	1925.
January.....	131.60	..	114.05	..	117.11
February.....	135.76	..	112.73	..	115.96
March.....	135.53	..	115.23	..	106.63
April.....	129.46	..	115.45	..	104.24
May.....	125.12	..	114.55	..	98.23
June.....	117.45	..	106.82	..	91.74
July.....	114.52	..	103.39	..	94.90
August.....	113.16	..	100.16	..	95.87
September.....	110.37	..	103.04	..	98.19
October.....	114.42	..	107.86	..	99.49
November.....	119.43	..	111.21	..	..
December.....	117.39	..	111.81	..	..
Mean for year.....	122.02	..	109.69	..	113.44

In spite of the seasonal improvement reflected in the above figures, neither the present position nor the future prospects of the "Tramp" freight market warrant much encouragement being derived by shipbuilders so far as this class of tonnage is concerned.

A Silk Duty Absurdity.—Every now and then the Press brings to light one or more of the absurdities to which recently imposed protective duties so constantly give rise. We have recently heard of the consignment of typewriters held up for months because there was a streak of silk in the "ribbon," and Mr Churchill, in his wisdom, has put a tax on silk. Here is a different type of case, which is none the less ridiculous because it happens to refer to a minor transaction by an individual. A lady visiting Paris purchased a jumper for her daughter—hardly a strange or an outrageous act. The jumper had to be left at the Paris shop for slight alterations, to be for-

warded later. When it arrived it was accompanied by the following "freight account":—

Duty.....	s d
Customs duty and clearance.....	9 11
Opening and examination.....	4 6
Delivery.....	1 0
	1 6
	16 11

The cost of the jumper paid at the shop was 180s, or 30s. A year ago it would have been forwarded by parcels post at trifling cost. Owing to Mr Churchill's protective aberrations, a charge of over 50 per cent. on the cost price is added in one way or another. A small but clear example of the way in which a protective duty acts in restraint of trade far more effectively than Parliament intends.

British Power Alcohol.—The provision of motor fuel in adequate quantities at reasonable prices is one of the economic problems of the immediate future. The consumption in this country is rapidly increasing with the development of motor transport, and it is not surprising that attention should be directed to the possibility of supplying a part, at least, of the demand from home resources. An association has been formed for the purpose of promoting the establishment of distilleries for producing power alcohol from sugar-beet, such as exist in France and Germany. The movement is an offshoot of the beet-sugar enterprise, and it is, perhaps, only to be expected that those who are interested in it should ask for support by way of subsidy similar to that given to the production of sugar. So far, their efforts to interest the Minister of Agriculture in their proposals do not appear to have been very successful. The British Power Alcohol Association, in a recently-issued statement of their case, observe that "it now rests with the Government to take the very modest step demanded which may lead to the establishment of a great industry." The demand appears to be for a subsidy to the production of, say, three million gallons of power alcohol for the first three years of the subsidy period, with indefinite extension at the end of that period. The arguments put forward in support of this proposal include a confident prediction that shortage of supplies and increase of price are imminent, and that the manufacture of power alcohol in this country, not only from beet, but also from potatoes and other material, would be profitable. But the idea that unaided private enterprise might, in these circumstances, take up the project, does not seem to have occurred to the association.

Stock Exchange New Rules.—A Stock Exchange correspondent writes:—The Stock Exchange Committee have provided grounds for surprise amongst members of the House, and a certain amount of confusion in the minds of the public, by a rule which they have passed, subject to confirmation on Monday week, November 23rd, for making the contango day for all stocks to come three days before the Stock Exchange pay-day. This latter always falls on Thursday, and the Committee have ruled that the contango day shall be on the previous Monday. For years past the rule has been to do mining contangoes on the Monday; the carry-over in the rest of the markets is arranged on the following day, Tuesday. In practice, the Stock Exchange has become so accustomed to do everything in advance that, so far as the mining contangoes are concerned, these are effected on the Friday, which is called a preliminary contango day in respect of mines, while contangoes for industrial, oil, home railways, and everything else are arranged not on the Tuesday, the proper day, but on the Monday. The public protest every now and then against the confusion to which the practice of having a preliminary contango day naturally leads. Its influence is felt more particularly in the carrying-out of bargains for money, or the next account. The Stock Exchange rule is that all bargains on contango day, mining or otherwise, shall be for the Stock Exchange settlement succeeding that for which the contangoes are done. That is to say, if the mining contango day is next Monday, November 16th, a purchase or sale of mining shares on that day is made for the Stock Exchange settlement of Decem-

ber 3rd. The same rule applies to stocks and shares in the general markets, and a bargain done next Tuesday, unless specifically notified, will be for settlement on the same December 3rd date. Owing to the activity which developed in rubber shares earlier this year, work in the Settlement Department of the Stock Exchange threatened to become so congested as to bring about a possible breakdown of the department, and so to cause not only inconvenience, but loss to Stock Exchange members, and, possibly, to their clients as well. Last month it became obvious that fresh legislation might become necessary, and various members were summoned before the Committee to give evidence on the point. The result of the Committee's deliberation is seen in the new rule. Unless the deep-rooted habit of the Stock Exchange for doing contangoes on a preliminary day can be abolished, the new rule will infer that preliminary contangoes are likely to be arranged on the Friday that precedes the following Thursday Stock Exchange account day, thus spreading the work of the settlement over six days. It emphasises the client's complaint that the Stock Exchange settlements follow each other so quickly that no sooner is one out of the way than another falls due to be dealt with. The rule is received with mixed feelings—with a good deal of enthusiasm from some, with acrimony from others. In some quarters it is assumed that the new rule forms the prelude to the proposal to reopen the House on Saturdays. The observer outside the Stock Exchange will regard the position from the point of view of the public. The client will claim that extension of the fortnightly Stock Exchange settlement over the best part of a week is not conducive to his operations when he is a speculator, and may tend to confusion where he is an investor, either buyer or seller. His immediate difficulty is concerned with the receiving of transfers of the stocks and shares in which he is dealing. Under the proposed rule, the ticket days are to be left unchanged. Stripped of technicality, this means that transfers for stocks and shares, other than those dealt in by the mining markets, will still have to be prepared on Wednesday, the day preceding the Stock Exchange settlement. When it happens that there are masses of transfers to be made out, the effect is that brokers' staffs are strained to their utmost capacity to prepare and despatch transfers of stock and shares which have been sold. If the ticket day were to be moved back, and made to fall a couple of days before the account day, this would not only relieve a great deal of the pressure which at present prevails, but would speed up the work in such a manner as to ensure, with a reasonable degree of certainty, that clients would receive their transfers on the account day itself. The Stock Exchange Committee evidently consider that this aspect of the matter calls for no fresh legislation, otherwise they would have altered the ticket day as well as the contango day. For the Committee, it is fair to add that the alteration of the contango day may have the effect of helping brokers' staffs to get forward with the preparation of tickets and of transfers, thus assisting towards the desirable end of enabling clients to be paid without delay for stock they have sold.

Customs and Excise Duties.—The annual report of the Commissioners of His Majesty's Customs and Excise for the year ended March 31, 1925,* elaborates the figures given in the Finance Accounts for 1924. From the figures of consumption of Empire and foreign goods we have compiled the following table, which compares the proportion of Empire goods to the total retained for home consumption in each of the past two financial years:—

	1923-24.	1924-25.
Spirits	59.3	66.7
Wine	5.2	4.8
Tea	88.2	84.1
Raw cocoa	92.6	90.8
Coffee	47.9	44.2
Sugar	25.4	10.1
Dried fruits	10.7	18.7
Tobacco	7.3	8.5

The quantity of home-made spirits retained for consumption was nearly 12.3 million proof gallons, against 12.9

million proof gallons in the preceding year. The corresponding quantities of imported spirits were 2.2 million proof gallons and 2.4 millions respectively. The principal imported spirit is rum, the bulk of which comes from the Empire, mainly the British West Indies and Guiana. Home-made spirits contributed 83.88 per cent. of the total revenue from spirits, against 83.54 per cent. in 1923-24. The total quantity of imported beer retained for consumption in 1924-25 was 1,546,000 standard barrels, practically the whole of which came from the Irish Free State. The consumption of wine, states the Report, has been rising continuously since 1921-22. In 1923-24 it was over 13.8 million gallons, and in 1924-25 over 15.6 million gallons. About two-thirds of the total increase took place in wines from Portugal. About 84 per cent. of the tea retained for home consumption (403 million lbs) was of Empire origin and consignment, as compared with 88 per cent. in 1923-24, the fall being "probably accounted for by the high level of (wholesale) prices of Empire teas, leading to an increased use of the cheaper foreign article." The decline in the proportion of Empire sugar from 25 to 10 per cent. of the total is due to the fact that the reduction in the duty meant a fall in the actual amount of the rebate of Empire sugar from 4s 3d to 1s 11d. "This appears to have led to a diversion of Empire sugar to other destinations." Revenue from tobacco duties is almost entirely derived from raw tobacco. Over 8 per cent. of the raw tobacco came from the Empire, mainly Nyasaland and India. The sum collected under the German Reparation (Recovery) Act, 1921, was £6,921,000 in 1924-25, against £8,137,000 in 1923-24. Excise licence duties produced £4,886,000, against £4,550,000 in 1923-24, of which £4,418,000, against £4,082,000, was accounted for by liquor licences. The bulk of the balance represents licences levied in Scotland, the corresponding licences in England and Wales being administered by County Councils. A table in the appendix, compiled from information as regards England supplied by the Post Office, shows that in 1924-25 the number of dog licences issued in England and Scotland was 2,647,300, bringing in £992,700, there having been a steady increase from a total of 1,978,400 producing £741,900 in 1913-14.

Hungarian Trade.—A Budapest correspondent writes:—

The trade returns for the month of September, though not quite as favourable as was hoped for, are still quite satisfactory. With a volume of trade 30 millions over the last year, the active balance is 2.4 million gold crowns, against a passive one of 4.9 in 1924. In the nine months the passive balance is only 51.8 millions, against 102.6 millions in 1924, the exports having gone up from 372 to 474.3 millions, the imports from 474.6 to 526.1 millions. The great increase in imports for September is coal, which has gone up from 3,038 to 5,862 millions. Rice comes next with an increase of 1,529 millions, raw metal third with an increase of 1,484 millions; increases of over a million also appear in iron goods and prepared skins. Raw cotton increased over half-a-million, likewise raw skins, glass and glassware, coffee, paper and paper goods, and wool fabric. Of 20 items only four show a decrease—leather goods, woollen thread, cotton threads, and mineral oils. Exports show an increase in 18 out of 23 items, the most noticeable being flour, wheat, draft and slaughter animals, barley, sugar, fats, oats, maize. Wheat shows an increase of over 5,000,000 gold crowns, barley and sugar both over 2 millions, and the others over 1 million. The commercial agreement reached with France has not yet been ratified, and it appears likely that ratification will not take place. In return for some not very great concessions, Hungary has granted to France the advantage of the most-favoured-nations clause. Now, according to the Treaty of Trianon, it seems that if this advantage is granted to one of the Allied and Associated Powers, it must be granted to all. Czechoslovakia, then, can say that, in return for the same or similar concessions, it must be granted to her by Hungary, which from the Hungarian point of view would be unacceptable. The question then remains whether the Treaty of Trianon meant this, or whether it meant that the advantage must be given only

when equivalent advantages are granted by the contracting party. Before some authoritative answer is given to these obstinate questionings, the ratification of the French Treaty is not likely to come about.

Fluctuations in Tin.—With reference to a note on this subject in the *Economist* of October 31st, a correspondent sends us a full analysis of the course of supply and consumption of tin during 1925. This agrees approximately with our estimate of the increase in the world supply and in American consumption. Our correspondent, however, argues that there is good reason for believing that the whole of this year's consumption has by no means been met from current production. With production showing an increase of only 5,000 tons on 1924, and American consumption an increase of 14,000, a decrease of 9,000 tons in consumption elsewhere than in America is implied. It is suggested, however, that, although our own tinplate trade has been depressed until quite recently, and our consumption may show a decline on the year of some 1,000 tons, consumption in Germany will show an increase of 3,000 tons, in Holland of 2,000 tons, and in France of 500 tons. Our correspondent adds that "the excess of consumption over true production is now reflected more accurately in the reductions in the published figures of the visible supply than at any time since the pool stocks were disposed of, but it is still possible that invisible stocks may accumulate in the East, not only in China, but in the Straits and Batavia. A fall of another 2,000 in the visible supply, bringing it down to 15,000 tons, which generally includes 10,000 tons or more afloat, will reduce the available surplus stocks to somewhere near the absolute minimum for convenience—namely, about a fortnight's consumption." The conclusion is arrived at that, "so long as the present high level of productive activity in the United States is maintained, tin consumers there will probably ignore the coming pressure on supplies, especially since the tin used in manufacture forms a relatively small element of the total costs of the products which contain it. It is, therefore, quite a possibility to be contemplated that the price of tin may rise well above the maxima established in February, 1924, and January, 1925, before consumption is sufficiently checked, and remain there until the Bolivian and Malayan productions (which are alone capable of large physical expansion) have increased sufficiently to meet the demand at such levels."

Transvaal Output in October.—The output of gold from the mines of the Transvaal amounted to 812,832 ounces of fine gold during the month of October, which compares with 797,247 ounces produced in September and 827,583 ounces in the month of October last year. The following table shows the monthly output for the past six years:—

	1919.	1920.	1921.	1922.	1923.	1924.	1925.
January..	766,059	670,503	651,591	639,728	764,469	794,768	823,692
February..	634,728	625,330	588,137	639,728	704,970	760,617	753,925
March ..	713,379	707,036	671,183	611,338	743,651	768,923	787,519
April	691,944	686,979	681,382	629,786	786,564	809,003	813,249
May	724,936	699,041	687,776	675,697	755,309	773,053	780,251
June	702,379	715,957	678,490	730,635	754,306	829,437	818,202
July	725,497	736,099	689,555	754,490	768,371	803,471	797,347
August ..	706,669	702,083	711,526	754,490	768,371	803,471	797,347
September	694,568	682,173	691,026	747,069	739,504	799,429	797,347
October..	723,722	662,472	707,825	776,159	793,943	827,583	812,832
Total 10 months	7,001,930	6,897,673	6,728,433	5,464,922	7,573,572	7,970,048	8,020,614

December	650,791	632,215	681,247	790,712	778,849	825,273	..
Total	8,330,091	8,153,625	8,114,516	7,020,110	9,133,060	9,597,634	..

The following table shows the number of natives employed at the end of the last few months by members of the Witwatersrand Native Labour Association and Contractors:—

	Mar., 1925.	Apr., 1925.	May, 1925.	June, 1925.	July, 1925.	Aug., 1925.	Sept., 1925.	Oct., 1925.
Gold mines	179,061	176,198	172,982	169,810	169,433	168,900	169,355	168,206
Coal mines	15,634	15,283	15,180	15,474	15,582	16,420	16,874	16,804
Diamond	2,969	3,071	3,172	2,969	3,166	3,068	3,284	3,159
Total	197,664	195,052	191,334	189,253	189,181	188,388	189,463	188,169

The number of natives employed in all sections of mining shows a slight decline during this month.

Overseas Correspondence.

UNITED STATES.—INDUSTRIAL POSITION—MONEY OUTLOOK—ITALIAN DEBT NEGOTIATIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 3.

THE tenor of general industrial news is little changed. The steel industry is operating at about 80 per cent. of capacity, and unfilled orders are gaining slightly, more because of a disposition to book further ahead than because of any fresh increase in the consumption of steel. Prices generally are firm, but show no distinct tendency to rise. Existing prices are such as to allow only modest profits; and with winter coming on, and a fair margin of surplus capacity still to draw on, inflation in this important branch of industry seems no nearer than at other times during the past year or so. The trade, meanwhile, is debating whether the late summer buying movement will hold up over the year-end, or whether there will be a lull, with a fresh buying movement early next year.

Aside from a natural tightening in the call money market over the end of the month, monetary conditions appear little changed. The Federal Reserve statements of the past two weeks have disclosed a rather surprising movement of funds into New York from other parts of the country. The gold holdings of the system have increased moderately in response to gold imports, but those of the New York Reserve Bank have expanded rather rapidly, at the expense of the other regional banks. The movement of money to New York has enabled the member banks to reduce their discounts at the Reserve institution materially, with the result that the Reserve Bank's ratio of reserve is about 6 per cent. higher than it was at this time last year. Whether the influx of money has been due to such factors as the early marketing of the large cotton crop, which seems sure to run well over 15,000,000 bales, is a question. In any event, the circumstances confirm the view that money is plentiful throughout the country.

The Italian debt funding negotiations have not gone far enough to give any very clear idea as to the turn the discussions will take. Were it not for the manner in which the French negotiations went awry, Wall Street would feel confident that our Debt Commission appreciates the limitations of the Italian position, and is prepared to make such a settlement as may be possible. The French affair, however, is taken as establishing the fact that more is required for success than sense and courage at the Treasury. Under the circumstances, Wall Street is contenting itself with being hopeful.

FRANCE.—POLITICAL DEVELOPMENTS—M. PAINLEVÉ'S FINANCIAL PROPOSALS—PRICES—COAL PRODUCTION.

(FROM OUR CORRESPONDENT.)

PARIS, November 11.

PERHAPS the most unreal, but by no means the least exciting, internal Parliamentary negotiations in the history of the Third Republic have been proceeding for the past three days between the new Painlevé Government and the Finance Commission of the Chamber, in connection with the Premier and Finance Minister's proposals for the purpose of overcoming the present crisis in the national finances. The long discussion has been unreal because it has largely turned on the Socialist Party's persistent demand that a direct capital tax shall be imposed as the chief means of raising the money which is required to enable the Government to meet its immediate engagements. The "unreality" of this effort lies in the fact that all concerned know perfectly well that the Senate, before whom such a proposal must eventually come for appro-

val, if it is adopted by the Lower House, will reject it without hesitation. The Socialist Party, as the Opposition proper has been insisting all along, has been taking advantage of the 200 or so votes which it can command, in conjunction with part of the Socialist-Radical Party, to play party politics on an unprecedentedly large scale, regardless of the urgent need for the country to put its financial house in order at the earliest possible moment. How far these tactics will be allowed to continue it is impossible to say. Delays through political bickerings have been bad enough in the past, but the present year seems likely to create a new record in this respect. Owing to the delay in passing the 1925 Budget, it has been possible to send out the demand notes to taxpayers only during the past fortnight, although the financial year began on January 1st. This has rendered the recovery of some 5,000 million francs of income-tax even more behindhand than usual, and this at a period when the Government is at its wits' ends for money to carry on.

Yesterday the Socialist members of the Commission took advantage of the fact that some of their Radical-Socialist allies had voted against them, and announced that they would take no further part in the divisions. This apparently marks the definite end of the Cartel des Gauches, which was revived with enormous difficulty by M. Herriot and his friends, with a view to the advent of the new Painlevé Government. What is much more important is that the split rendered all further threshing out of the new finance proposals by the Commission impossible. M. Painlevé therefore took the unusual step of declaring that he will submit his plans directly to the Chamber, without waiting for the Finance Commission's report on them. Belief that it will be impossible for the new Government to continue many more days in office has been largely strengthened by the events of the present week. At the time of writing many people incline to the view that the only way out of the present deadlock will be the constitution of a coalition Cabinet, with the sole object of straightening out the present financial tangle. The suggestion is that M. Painlevé and M. Briand should retain their posts as Premier and Foreign Minister respectively, that a member of the old Bloc National alliance should take the Ministry of Finance, and that a Socialist—preferably M. Paul Boncourt—should be placed at the head of the War Office. M. Boncourt, who was the author of the recent Army Service Bill, has served successfully as one of the French delegates at Geneva, and he is known to have been within an ace of quitting the Socialist Party last week.

M. Painlevé's new proposals are admittedly based to some extent on the plan M. Caillaux drafted before he left office, and are to a great extent a compromise designed to attract the support of all parties. They are based on the necessity of restoring public confidence, which he insists, very rightly, would be very largely further shaken by any sweeping measures of consolidation such as have been proposed by the Socialists. He has adopted the plan proposed by M. Caillaux for the creation of special machinery of an entirely independent and autonomous character, for the purpose of dealing with the whole of the debt, and the new taxation, he proposes, should be devoted entirely to this purpose. The funds necessary to enable this debt redemption organisation to carry out its work he proposes to secure from the following sources:—

	Fr.
1. A Budgetary annuity equal to the cost of the present service of the Treasury floating debt and of the Crédit National	2,630,000,000
2. A poll-tax of 20 frs a head to be imposed on all taxpayers, which is expected to yield	200,000,000
3. A "national contribution" on all property of all kinds, at rates according to category, namely:—	
15% on real estate	1,026,000,000
" stocks, shares, &c.	2,275,000,000
" long term State Funds and	
Crédit National Bonds ..	1,000,000,000
" short term debt and 1-year	
Crédit National Bonds ..	404,000,000
4,705,000,000	
5% on industrial and commercial profits	949,000,000
5% on mining royalties	15,000,000
5% on "unproductive capital" (<i>biens oisifs</i>)	80,000,000
Progressive tax on salaries, and fees superior to	
frs 50,000	6,000,000
Representing an annual total of	8,585,000,000

In addition, M. Painlevé proposes that such of the State domains as can be got rid of—including the sites and buildings of many of the military and other establishments that are no longer required—shall be sold, and the yield from this source also paid into the debt redemption fund. Taxpayers under the obligation of participating in this "national contribution" are to be offered the choice of paying the whole amount immediately (with an appreciable discount), or spread over either three or 14 annual instalments. The figures given above are based on the various contributions being spread over 14 years, which would enable 67,000 millions of debt to be cleared off. At the same time, M. Painlevé proposes that the authorised limit of the advances to be made by the bank to the State should be increased by a further 2,500 millions, but that the maximum authorised note issue should be left at its present figure of 51,000 millions.

M. Painlevé claims that his plan would ensure a rapid and certain yield; that it would give the maximum of flexibility to the taxpayer; that it would provide the State with the maximum of control. He has set his face firmly against both inflation and any wide sweeping scheme of debt consolidation, but there are signs that, under pressure of Parliamentary circumstances, the scheme may be modified in many of its aspects. What its fate will be when it comes to be discussed by the whole Chamber is the universal subject of speculation to-day.

The index figure of wholesale prices for October, which has now been published by the Statistique Générale, is returned as 584 (on the basis of 100, as representing wholesale prices in 1914), or a rise of 17 points on the month. The rise is entirely due to the increase in the quotations for industrial and raw materials, as foodstuffs, taken as a whole, dropped 2 points. The rise was principally in minerals and metals, the figure for which (seven categories) is returned as no fewer than 70 points higher than in September, while textiles show a rise of 21 points. The exchange factor was obviously responsible for much, if not all, of these differences. The detailed figures are as follows:—

Nature of Categories.	Number of Categories.	Figures for End of		
		Oct.	Sept.	August.
General index figure	45	584	567	569
Foodstuffs				
General figure	20	480	482	490
Vegetable foods	8	490	485	491
Animal foods	8	466	467	480
Sugar, coffee, cocoa	4	492	507	513
Industrial materials—				
General	25	674	643	638
Minerals and metals	7	651	581	577
Textiles	6	782	761	762
Various	12	623	609	601

The index figure for retail prices in Paris during October, which comprises 13 articles of common necessity (of which only petroleum is of foreign origin), is returned as 433 (based on 100 as representing the retail prices of the same articles in 1914), as compared with 431 in September, 421 in July, 409 in April this year, 383 in October, 1924, and 370 in January, 1924.

Coal production figures for September show that the entire output amounted to 4,050,667 tons for 26 working days, as compared with 3,864,812 tons in August (25 working days). The total output was 213,289 tons more than in September last year. Daily production figures for September averaged 155,795 tons, with 303,655 men employed, as compared with 160,445 tons in January last, when 311,991 men were working. The average daily output in 1913 was 136,147 tons, with a total of 203,208 men working, but that, of course, was before the Alsace-Lorraine territory was brought within the French frontiers. Production remains satisfactory in the Nord and the Pas de Calais, where the daily output in September was 2,597 tons above the average of 1913. In the Centre and the South the daily output of 44,983 tons was in September 133 tons above the 1913 figures. The output of metallurgical coke in the French coke plants in September was 268,564 tons, as compared with an average monthly output of 245,000 tons in 1913.

GERMANY.—POLITICS—CREDIT—COMMERCIAL TREATIES—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 11.

THE Cabinet crisis has not yet been overcome, but it has subsided without being overcome, and has almost lost its character of a struggle for and against the Locarno Agreements. Doubt still exists as to when the Reichstag will reopen. The first-mentioned date, November 19th, is hardly likely to be kept, because the party conferences of the Centre and German-Nationals, upon which much may depend, will not then have been concluded. The Government desires to postpone the reopening for a few days in order to be in a better position to present the Locarno issue; but the Socialists are pressing for an earlier reopening. Stories from Paris and New York that reconsideration of the Dawes Settlement in connection with Inter-Allied debts is one of the subjects discussed by Dr Schacht in New York are officially denied.

The money market, as was expected, has become exceptionally fluid. More money was held ready for the month-end settlements than was needed. At the temporary disposition of the money market is the 100 million marks raised by agreement between banks for financing export on credit to Russia. Russian orders against this credit are stated to have already reached 60 million marks, but between the date of ordering and the dates of payment the money is free. The day-money rate has fallen as low as 7-8½ per cent. The rate upon Prussian Treasury Bills has been reduced by ¼ per cent. to 7 per cent. The Prussian State Bank has granted a postponement of the dates of repayment of seed credits to farmers. The Reichsbank's return for October 31st shows a circulation increase of 407½ million marks, which is somewhat less than in the last week of September. The whole circulation at the end of September was 5,055.5 million marks, whereof 2,637.1 million marks were Reichsbank notes, 117.3 million marks notes of the private issue banks, 1,713.2 million marks Rentenbank notes, and 528 million marks coins. The financial editor of the *Berliner Tageblatt* publishes the following analysis of the sources of the circulation increase between April, 1924, when credit rationing was adopted by the Reichsbank, and October 1st:—

	Average Circulation Million of Marks.
April-June, 1924	2,957
July-September, 1925	4,976
Increase	2,019
Whereof was caused by—	
State money issues (coins)	392
Increase of Reichsbank credits	515
Reichsmarks as equivalent of Reparations Loan	800
Issued against exchange delivered by private business	312

Herr Hans Fürstenberg, a co-director of the Berliner Handelsgesellschaft Bank, has published a brochure which, after pointing out that with the present trade balance Germany can only meet her current foreign liabilities by borrowing more and more, emphasises the need of capital reaccumulation at home. For this, he declares, taxes must be reduced; this is so urgent that he considers that it might be advisable to cover part of the Federal expenditure next year by contracting a foreign loan. Such borrowing would, of course, not improve the foreign payment balance, but it would partly replace foreign short-term loans given to industry by a long-term State loan. The plan does not seem advisable, but it represents the anti-taxation attitude of business and high finance.

Some progress has been made towards resuming trade relations with Poland. The considerable increases of duties in the Polish tariff decree of October 30th have not made negotiations easier. In December Commercial Treaty negotiations with Czechoslovakia will begin. A provisional trade agreement has been concluded with Switzerland; and in December negotiations for a definitive treaty will be begun. Under the provisional agreement,

most of the mutual import prohibitions will lapse on December 31st. Germany reduces her autonomous rates on fruit, cattle, dairy products, certain silk, cotton, and woollen cloths, fine cotton yarns, watches, and some other articles. Switzerland's concessions concern sugar, leather, certain paper wares and furniture, pottery, glass, machines, clocks, chemicals, and toys. All German duty reductions under these treaties will be enjoyed by British exporters. The London negotiations are followed here with interest, and part of the trade Press constructs a grievance out of the new British imposition of protective duties. The trade war with Spain will seriously damage Germany's export trade. It is a result of the German Right parties' desire to keep out Spanish wines, which became a serious Spanish grievance after the conclusion of the German-Italian Treaty, which relatively favours Italian wines. Only about 2 per cent. of the German finished exports go to Spain, but Spain is a relatively important buyer of mechanical and of some other goods. Spain has imposed on German goods an 80 per cent. supplement to her maximum tariff, and has prohibited their import into the Canary Islands and Spanish Morocco. The 80 per cent. supplement which Spain imposed during the inflation years was upon her minimum tariff, but it operated almost prohibitively. The Spanish Government has proposed negotiations for a provisional agreement; and meantime the threatened German reprisals have not been announced.

Unemployment continues to increase. The number of publicly-supported unemployed on October 15th was 297,628, against 251,530 on September 15th. The average wage per hour for skilled workers has risen since January from 79.2 pf to 91.8 pf, unskilled from 55.7 pf to 64.3 pf. Many foreign orders, mostly of moderate dimensions, are reported. The Russian Foreign Trade Commissariat is stated to have sanctioned the purchase of 25,000,000 marks' worth of German dyes. Helsingfors newspapers report that German paper-makers are settling in Finland, and that they have bought up large quantities of Finnish pulp, and intend to buy paper-wood. This year, for the first time since the war, Russia has bought German finished textiles, but only to about one-twelfth of her total imports of such wares. The clothing industry, one of the most important of those which work mainly for home consumers, complains of the effect of the minor tariff increases of duties on yarn and cloth. German cloth is very dear; and weavers, it is stated, import foreign cloth and sell it as their own. The cessation of the duty-free import of Alsace-Lorraine textiles has caused a shortage of wares; and this has facilitated profiteering on the basis of the increased duties. The toy industry complains of depression.

The Steel Trust has not yet been concluded, but the outlook is favourable. The Bourse is largely under the influence of reports and rumours as to the state of the Trust negotiations. Owing to the depressed condition of shipbuilding, reports of a Trust of the chief companies have revived; but against this plan, which is a year old, operate various conflicting interests. The modern and efficient yards, which build cheaply and can get foreign orders, stand to lose through fusion with the less efficient yards. Negotiations are under way for extension of the system of bounties to manufacturing consumers of native raw materials. The Raw Steel Syndicate, it is understood, will increase the number of products on which it grants bounties, and the Pig-Iron Syndicate proposes to grant bounties on its products and to pay them in cash, whereas the Steel Syndicate grants only certificates which are accepted in payment of new orders. The Steel Syndicate's November bounties are in marks per metric ton:—Ingots 10, blooms, billets, and slabs 15, bar, structural forms, and wire rods 22, tubes 40, thick sheets 20, dynamo sheets 25, transformer sheets 30. In the German-Italian Commercial Treaty German motor-car duties have been reduced for cars weighing 5 to 9 d.c. from the Tariff rate of 250m per d.c. to 175m; cars weighing 9 to 12 d.c. from the Tariff rate of 250m to 180m. British car exporters enjoy the benefit. Considerable Argentine and Japanese orders for rails and tubes are reported. The prices of iron and steel are unchanged except for slight abatements representing the reduction of the sales tax from 1½ to 1 per

cent. The steel trade Press attacks the Sheffield Cutlery Manufacturers' Association for its demand before the Board of Trade inquiry for a duty on imports, and declares that various statements made by the association as regards German duties, import prohibitions, wages, and exports are inaccurate. The Belgian Government has taken measures to reduce imports of German coal. The Belgian State Railways, it is reported, are to replace with native coal about 53,000 tons per month so far taken from the Reparations deliveries, and with certain exceptions the import of German non-Reparations coal is prohibited. Germany is understood to have protested, on the ground that other foreign coal is admitted. Coal imports to Germany are increasing, mostly being British. These imports are still subject to licence. Licences granted for October were for 532,000 metric tons, against 448,000 tons in September and 260,000 tons in July. Of the October licences, 495,000 tons are reported as having been for British coal.

The movement of Bourse securities last week was again downward. The *Frankfurter Zeitung's* home stocks index shows for November 7th 63.11, against 66.16 one week earlier, a high point of 111.37 on January 31st, and 100 on the first Bourse day of the year. The volume of trading last week was small, so that offers of a few hundred marks nominal were sufficient to depress important stocks 2 or 3 per cent. The financial Press complains that large quantities of stocks are passing into foreign hands at very low prices, and that they will later be unloaded on Germans at much higher levels.

POLAND.—DEPRESSION—RESTRICTED CREDIT—CIRCULATION—FOREIGN LOAN NEGOTIATIONS—PRIORS—PROTECTIVE POLICY—TRADE BALANCE—POLISH BANK.

(FROM OUR CORRESPONDENT.)

WARSAW, November 6.

THE crisis from which Poland has been suffering since the beginning of last year has not subsided. The number of unemployed is steadily increasing, having risen from 171,340 at the end of June and 180,050 at the end of August to 196,430 at the end of October. This trade depression is due to the destruction of the circulating capital during the period of inflation, and to the small circulation. The outflow of foreign currencies, which was the result of an unfavourable trade balance, has forced the Polish Bank to adopt a restrictive credit policy. The circulation of bank-notes, which in March surpassed 560 million zlotys, had decreased to 370 millions by October 20th. The total decline of the circulation is not so great, because during the same period the total amount of small coins and notes issued by the Treasury has increased. The total circulation, however, has decreased by 63 million zlotys, but its composition has changed completely. Sound commercial money has been partly replaced by Government notes, which are increasing in consumption but not production. Under these conditions a great dearth of money has arisen, which surpasses in intensity anything that Poland has hitherto experienced. It happens often that even rich people with great estates and industrial undertakings do not possess in cash 1,000 zlotys, and that it is impossible for them to obtain such a sum. Recently a barrister showed me a letter written by one of the greatest Polish magnates, in which he says that it is impossible to pay his fees in money. Instead of it he offers timber, meat, or other agricultural products. Such cases are very frequent.

Clearly the economic system will break down if no remedy is found. Different fantastic projects are put forward—as, for instance, the issue of notes similar to the German Rentenmarks. Others are in favour of abolishing the minimum legal cover of the Polish Bank (30 per cent.).

The Government, however, is opposed to all such experiments, and it is concentrating all efforts in the direction of a foreign loan. It is clear that the influx of foreign capital by increasing the reserve of the Polish Bank would contribute to a more liberal credit policy.

The Government has asked the Diet for power to float a foreign loan to the amount of 1,000 million zlotys, and the Ministry of Finance is negotiating with different groups. It is reported by the Polish Press that the Vienna Bodenkreditanstalt, backed by an American group, has made an offer of an important credit against the lease of the alcohol monopoly. The tobacco monopoly is also the object of negotiations. In this case, however, the situation is more complicated, because this monopoly is partially ceded as guarantee of the Italian loan of 100 million lire granted in 1924. Poland, with a circulation which does not exceed one-third of the pre-war level, has a very high and steadily rising level of retail prices, as is shown by the figures below:—

RETAIL FOOD PRICES (pre-war 100).

	Poland.	United Kingdom.	United States.	Germany.	Switzerland.
June, 1924	138	162	139	120	165
December, 1924	187	178	148	135	169
January, 1925	175	176	151	137	165
March, 1925	179	170	148	146	167
June, 1925	171	167	151	146	166

Under the abnormal conditions which exist to-day in Poland it is not the quantity of money but the rate of interest which exercises a deciding influence on the price level. The Polish manufacturer, who must pay for his circulating capital 40 to 100 per cent. a year, can sell his goods only at a very high price, though the quantity of money circulating in Poland is only very small. In consequence, it may be assumed that an increase of the circulation will not contribute to a higher price level in Poland. On the contrary, by lowering the rate of interest and decreasing the cost of production, it will have the opposite effect.

The high price level at home has stimulated the import of foreign goods, and has been the principal cause of an unfavourable trade balance. The Government, in looking for a remedy, has entered on the path of a protective policy. All Customs duties have been increased and the imports of different articles are prohibited. Such a policy can exist only as an economic organism by exporting industrial and agricultural products. The home market is so exhausted that it is impossible to build upon this basis an industrial life. The whole Polish population of 28 millions does not consume more cotton goods than the former Congress Poland with a pre-war population of 12 millions. The consumption of cotton goods has decreased at home by more than 50 per cent. If we pass from cotton goods to more expensive products, we find an even greater decline. The problem of selling abroad the surplus of her production becomes for Poland every day more burning. It is clear that industry can regain her foreign markets only by decreasing the very high costs of production. This can never be attained if industry is surrounded by a hot-house atmosphere of high protection.

The decline of the zloty, the import prohibitions and the high protective duties have contributed to an improvement of the Polish trade balance. The imports decreased from 173.2 million zlotys in July to 72.8 millions in September. During the same period exports increased from 86.7 to 108.8 millions. Instead of an excess of imports of 86.5 million zlotys in July, we have a surplus of exports of 36 millions in September.

The change in the trade balance is partly reflected by the figures of the Bank Polski. The drain of foreign currencies has become less acute. Since the end of August the reserve of gold and foreign currencies has not declined. The 51 millions of gold held abroad serves as a guarantee of a credit which is devoted to a stabilisation of the zloty exchange. Of this credit only a small part has been used.

AUSTRIA.—POLITICAL SITUATION—STATE FINANCES—ECONOMIC POSITION—RAILWAYS—FOREIGN CREDITS.

(FROM OUR CORRESPONDENT.)

VIENNA, November 1.

THE opposition of the Social Democrats to the condition laid down by the League of Nations has considerably abated, and there is no doubt that Parliament will pass the various points demanded by the League. A new conflict, however, is arising between the two main parties over the question of the suppression of the Tenants' Protection Act and the reassessment of rents. This Act, which has been in force since the war, practically amounts to a complete expropriation of the house-owners. The two League of Nations' experts have also pointed out in their report the impossibility of maintaining as a permanency such an emergency law. The Social Democrats, however, fiercely oppose any concession in favour of the landlords, as "Tenants' Protection" is one of the chief planks of their political platform. Nevertheless, it is to be expected that even this conflict, which at present seems inextricable, will be—as it is usual in this country—after long and bitter discussions settled by a compromise. The Socialists enjoy much too much their part as Opposition to feel any wish to take over the responsibility of Government.

The Prime Minister's statement that the Government had no funds at its disposal to increase the salaries of the State employees created such discontent amongst them that the State Employees' Union decided to come out on strike. Nevertheless, the Union thought it wiser to continue negotiations with the Government (the mere fact that the Government agrees to enter into such negotiations with its employees and allows them to threaten a strike is typical of the curious interpretation of "democracy" in this country which is difficult for the English mind to understand). The difficulty of solving the problem lies in the fact that the pensions paid by the Government are much too high; the annual salaries of the employees in active service amount to about 360,000,000 schillings, and accordingly, the pensions ought not to exceed the sum of 108,000,000 schillings; in fact, however, they amount to 224,000,000 schillings—partly because the majority of pensioned ex-officials of the former Austro-Hungarian Empire were of Austrian nationality, partly because the new Austrian Republic had, under the League of Nations' Reconstruction Programme, to dismiss about 100,000 officials. The Government has now proposed to the State Employees' Union to limit the annuities to be put into the Budget for pensions to 108,000,000 schillings, and to cover the balance of 116,000,000 schillings per annum by a loan. It remains to be seen if it will be possible to place such a loan and to get the League of Nations' consent to it. The employees, however, refused to be put off with this rather vague scheme, and insist in demanding at least a bonus for this year, failing the granting of which they will strike.*

The economic situation does not show any signs of improvement. One again a bank—the "Alpenländische Vereinsbank," in Innsbruck, a rural bank of merely local importance—has crashed, and a Vienna middle bank, the "Esterreichische Zentral-Boden-Credit-Bank (not to be confused with the big "Boden-Credit-Anstalt"), is forced to wind up; it is hoped that in the latter instance the depositors will not be damaged, but the French group which has a large interest in this bank will, of course, suffer a heavy loss. The new law, according to which all private bankers have to make application for a licence, which will only be granted after severe investigation into the affairs of the applicant, has caused a considerable number of post-war banking firms to wind up—a fact which is certainly to be welcomed. Industries and trade are suffering from the difficulties hindering export to the Succession States and from the general stagnation due to the reduced purchasing capacity of the impoverished population. No wonder that under these conditions unemployment is increasing; the number of unemployed in receipt of the dole amounts now to over 119,000, against 116,000 in September last, whilst in October of last year it amounted only to 77,550. The endeavours to induce unemployed to emigrate and to convert unskilled workmen into skilled

* The strike has now been settled.—ED., *Economist*.

President
STEVENSON E. WARD

Capital Paid up	\$25,000,000
Surplus	\$25,000,000
Undivided Profits	\$15,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE

2 and 3, Crosby Square
Bishopsgate, E.C. 3

ones through special training centres are continued, but the effect of these measures is, of course, much too small to bring about a noticeable alleviation.

The various attempts recently made by the Government and the Press to bring down the cost of living had no practical result, and even the slight reduction of the bread price which could be attained is now endangered by the claims of the bakers for higher wages. Also coal and iron will become dearer now, as the Government, in order to settle the strike at the Alpine Company, promised to the Socialists to create by special law a Miners' Welfare Fund by levying amounts varying between 0.10.0.30 schilling per ton of coal and ore produced, to be paid by the mine-owners. This fund will be administered by the Government, and will be used for paying bonuses to the miners.

The travelling public has been disagreeably surprised by the announcement of the Federal Railways to raise the fares by 15 per cent., beginning from January 1, 1926. This measure is substantiated by the necessity for renewing the rolling stock and the rails, and for this reason did not meet much opposition on the part of industries which expect to receive large orders. As a matter of fact, the actual railway fares in Austria are comparatively low: the cost of a third-class through train ticket for 10 km amounts to 0.44 schilling in Austria, against 0.93 schilling in Germany, 0.87 schilling in Switzerland, and 0.49 schilling in Italy.

After long endeavours it has finally been possible to secure long-term foreign credits for Austrian agriculture, though at a very high rate of interest. The Boden-Credit-Anstalt has arranged with the "European Mortgage and Investment Corporation" in New York (a new concern formed by J. Henry Schroeder and Messrs. Lee, Higginson and Co.) for the issue of a loan of the provisional amount of \$2,400,000 for Austrian farmers. The form of the loan is the following:—The Boden-Credit-Anstalt, which will administer the loan and arrange mortgages, has handed over Dollar Mortgage Bonds to the European Mortgage and Investment Corporation, which

has already raised the money by an issue of its own bonds in America. The period of the loan is 25 years, at a rate of 11.48 per cent. per annum, and an issue price of 84 per cent., which means about 13 per cent. for the farmer to pay; a conversion of the loan is possible after three years. The negotiations with the American firm, Messrs Morgan, Livermore and Co., for a loan of 15 to 20 million dollars for the provinces of Lower Austria, Styria, and Carinthia, are still proceeding. This firm has already raised 16 million dollars for Austrian companies and public bodies, viz., for the Lower Austrian and for the Tyrolean Hydroelectric Companies three million each, for the province of Upper Austria and for the Alpine Company five million each.

The stagnation on the Stock Exchange continued also during the month under review. Business was limited to forced sales for the account of small bankers and investors who are no longer able to hold their securities, and are obliged to sell them at a loss in order to meet their current living expenses; these sales naturally caused further falls in the quotations of most securities. In the foreign exchange market business was more lively, owing to the great fluctuation of the French franc. The transactions in this currency were, however, nearly exclusively made for the account of foreigners, as the Austrians, after the terrible lessons of last year, no longer dare to speculate in exchanges. Sterling, which at the beginning of October opened at 34.29 schillings, gradually rose to 34.36 schillings.

CANADA.—ELECTION RESULTS AND INDUSTRY—IMPROVEMENT IN CONDITIONS—EARLY WINTER—RAILWAY EARNINGS—THE MINING BOOM.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 2.

THE completely indecisive result of the general election which has just taken place leaves the manufacturers in a state of great uncertainty about the tariff, for the Conservatives are certainly not in a position to implement their promise of establishing a higher scale of duties, and the Progressives may insist as the price of their co-operation that the Liberals make some further reductions. The prospect of the disturbance of another general election at an early date will also tend to produce a mood of hesitancy in the business world. But despite the political confusion and a general feeling of hopelessness about the prospect of securing better political leadership, there is a growing spirit of confidence that Canada is at last well on the way to emerge from the slough of economic depression in which she has been plunged since 1920. Certainly all the accepted criteria of prosperity, such as car-loadings, bank clearings, &c., demonstrate a marked advance in general business for the first three quarters of 1925 as compared with the parallel period of 1924. Canada is, perhaps, not near the high tide of prosperity which the United States is enjoying, but the divergence between the conditions of the two countries is diminishing, and the motives for southward emigration are being lessened.

Winter has set in at an abnormally early date with great severity in the West, and threatens to be permanently established till spring. Farmers are now beginning to despair of getting much of the 75 million bushels of wheat which is still in stook threshed before next March or April. In most districts of the West heavy rain and snowstorms have succeeded one another in alternation; they have not only tied up farming operations, but have made the roads impassable, and the threshing gangs have been breaking up and drifting off eastward and southward. Even if a spell of good weather now came, there would be in many places a scarcity of labour for threshing purposes. From this condition Alberta, which is responsible for about half of the 75

million bushels of wheat still unthreshed, is the chief sufferer, for its unthreshed quota represents about 40 per cent. of its total wheat crop. Luckily, the intense cold has prevented the wheat from sprouting, and Dr Charles Saunders, the discoverer of Marquis wheat and the leading cerealist of Canada, has repeated in public his contention, founded on many experiments, that while repeated soaking and drying may ruin the appearance of wheat, the baking strength of the flour produced from such soaked wheat is not impaired, and may even be improved by its experiences. Meanwhile, the exportable surplus of such wheat as has been threshed is being rapidly marketed, and a great deal of money is finding its way into the hands of the farmers. Country storekeepers, except in the unthreshed districts, find business satisfactorily brisk, and wholesalers report a steady flow of orders for staple lines like heavy winter clothing, hardware, and groceries. In the last week of October the Eastern provinces were visited by their first snowfall, but a thaw has come, and pleasant open weather, which will be useful to the farmers, is prevailing.

The profitable crop and the general improvement of business are giving a very welcome stimulus to the earnings of the railways. For September the net profits of the Canadian Pacific Railway, placed at \$6,267,619, not only exceed by \$1,719,913 the figures for September, 1924, but are the best for any September in the company's history; the gain recorded wipes out the drop suffered in the first eight months, and brings the total for the first three quarters of the year to more than a million dollars ahead of the net earnings for the parallel period of 1924. The *Financial Post of Toronto* is authority for the statement that the resources of the C.P.R. have been increased by \$26 millions since the beginning of this year as the result of the spectacular rise in the value of the stock of Consolidated Smelters, Limited, in which the railway corporation is said to have a controlling interest. It has been making huge profits from the operations of its plant at Trail, B.C., and its stock of the par value of \$25 is now selling around \$160. But as regards railway earnings, the Canadian National system has been faring as well as the C.P.R. Its net earnings for September, placed at \$3,940,071, show a gain of \$1,792,615, and for the first three-quarters of the year its net revenues, which have jumped from \$6,075,820 to \$12,325,753, have more than doubled. Heavy immigration and increased traffic resulting from it would soon solve the Canadian railway problem.

There has lately been a general burst of fresh interest in the mining areas of Northern Ontario and the adjacent territory of Quebec, which many Canadians regard as the country's greatest potential source of wealth. This region is alive with prospecting parties, who are continually re-being placed upon authoritative announcements from the officials of well-known producing mines that they have either made rich strikes on completely new properties, or have discovered as the result of campaigns of exploration at very low levels seemingly inexhaustible reserves of gold or silver. Last week in Toronto the market for precious metal securities soared to new high levels all aspects of a boom of far-reaching proportions, and the volume of trading for the week ending October 31st came close to the 3,000,000 mark. Since October 1st the market value of the stocks of the eight leading mines of Northern Ontario, Hollinger, Dome, McIntyre, Lake Shore, Mining Corporation, W. Hargreaves, Nipissing, having risen from \$157 to \$170 millions, and the stock of many smaller mines has had a parallel experience. The market is now ready to reflect the remarkable and steady expansion of Canada's mining industry. A good deal of American capital is becoming interested in these mining fields, and British organisations like the Huronian Belt Company and the Mining Corporation are taking a very active hand in development work. The Canadian public is also showing much greater confidence in its own mines than before, and everybody in Eastern Canada who has a little capital to spare is taking a flutter in some mining stock or other.

AUSTRALIA.—DISSOLUTION AND ELECTIONS—STATE LABOUR GOVERNMENTS—CROPS—WOOL PRODUCTION.

(FROM OUR CORRESPONDENT.)

MELBOURNE, October 1.

THE Commonwealth House of Representatives has been dissolved some months before its full term, and the Government is seeking a mandate which will enable it to deal with certain forms of industrial disturbance with full authority from the electors. The dissolution has come after the passing of an Act to enable outsiders, not born in Australia, engaged in subversive industrial agitation to be deported from Australia, the Act being intended to deal with such agitators as Mr T. Walsh, who is leading the strike of British seamen in Australian waters. In a speech on September 9th the Prime Minister, Mr Bruce, stated that troubles in India, Egypt, China, Afghanistan, and elsewhere are traceable to the Russian Bolsheviks, and gave reason for the statement that similar influences are at work inside the trade unions in Australia.

The Labour party is now in power in five out of the six States, the exception being Victoria. It has recently regained office in New South Wales, and in certain Civil Service appointments and dismissals it has followed the principle of spoils to the victors. In this it has developed what was done in Queensland, where some years ago the Labour Government got rid of the then Chief Justice (by passing an Act imposing an age limit on judges) who was not liked by the party, and where the doctrine was promulgated in Labour publications that the leading Civil Servants should be persons in sympathy with Labour politics. In other matters the programme of the Labour Party in New South Wales is such as could hardly be carried out without increasing taxation, and the same result would probably be necessary if the party came into power in the Commonwealth as the result of the impending elections.

The wet weather during the last few weeks has been favourable to the wheat crops at an essential period, and moderate rains in October are now the main requisite for a good harvest. Butter production is now on a fairly good scale, though not quite so heavy as at the corresponding time last year. Recent reports on sheep shearing are somewhat disappointing as to the actual weight of wool obtained, and the hopes of an increase in the total clip have undergone some modification.

The annual wool review issued by Dalgety and Co., Limited, shows a production in Australia for the 1924-25 season of 2,094,880 bales, against 1,779,788 bales for 1923-24; 1,918,002 bales for 1922-23, and 2,041,136 bales for 1921-22. Adding 591,674 bales for New Zealand, the total production in both places for 1924-25 was 2,685,554 bales, against 2,368,461 bales for 1923-24. The average price realised at the Australian wool sales during the twelve months ended June 30, 1925, was £34 19s 8d per bale, against £31 7s 10d per bale for 1923-24; £23 18s 7d for 1922-23, and £16 15s for 1921-22. The New Zealand average for 1924-25 was £29 5s, against £23 1s 4d for 1923-24, £16 12s 7d for 1922-23, and £9 for 1921-22. The Australian average for the last season is subject to the qualification that the 530,942 bales unsold at June 30th have since been sold at lower prices which would reduce the average on the 1924-25 clip as a whole. The total quantity of wool sold in Australia and New Zealand during 1924-25 was 2,050,545 bales, against 2,202,037 bales for 1923-24 and 2,409,281 bales for 1922-23.

UNION OF SOUTH AFRICA.—MINERAL PRODUCTION—PROVINCIAL EXPENDITURE—UNION'S PROTECTIVE POLICY CRITICISED.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, October 11.

THE annual report of the Secretary for Mines and the Government Mining Engineer gives particulars of the output of minerals from the earliest date of existing records to December 31, 1924, the aggregate being shown at £1,171,098,167. By far the largest item is, of course, gold, returned at £835,654,765, which includes currency

premium of £32,740,264 received since July 24, 1919. Only £108,000 worth of gold has been produced outside the Transvaal. Of diamonds, the value is given at £236,238,832, of which the Cape Province accounts for £179,465,747, the Transvaal for £35,324,030, and the Orange Free State for £21,449,055. Coal is valued at £64,877,804, the Transvaal contributing £33 millions and Natal £26 millions. Copper was almost exclusively from the Cape Province, the grand total falling just short of £24 millions. Tin accounts for rather over five, and silver for just over three millions. It is interesting to notice that asbestos just tops the million with £1,066,500, about three-quarters of which was from the Cape Province. Lead is the only remaining mineral to exceed a value of half a million, its total being slightly in excess of that figure, while osmiridium (£166,380), soda, and corundum, each about £100,000, complete the list of minerals exceeding that value. At the small end of the scale may be noticed vanadium, £2,716; bismuth, £300; kaolin, £144; nickel, £38; and mercury, £5. Quarry products are not included in the table.

In the past three years the principal items have been:—

	1922.	1923.	1924.
Gold*	32,343,485	41,574,945	44,739,377
Diamonds	2,266,631	6,038,207	8,033,406
Coal	3,459,672	3,807,404	3,939,290
Other	544,293	1,212,890	1,631,677

* Including premium.

The allocation of the above on the principal items of expenditure has been:—

	£	£	£
Salaries and wages	14,097,828	16,692,388	17,643,993
Stores	12,779,043	15,487,550	16,014,887
Direct taxation	2,794,642	4,578,147	5,174,299
Dividends	6,918,948	11,062,413	12,749,848
Sundry	2,023,620	4,814,948	6,761,623

In 1920 the salaries and wages bill soared to £22,550,978 and the stores bill to £17,545,327; in that year of high gold premium the value of gold produced reached its zenith of £45,605,764, while that of diamonds was also high at £14,762,899, and the total production was valued at about £67 millions. In 1915 direct taxation amounted to only £1,853,552.

Inclusive of currency premium on gold, the value of production last year was £58,343,750, as compared with £52,633,446 in 1923, gold was higher by £3,164,432 and diamonds by nearly two millions. Copper advanced from £404,500 to £530,800, and tin from £170,300 to £305,400. Gold has not yet quite reached the spectacular figure of ten million ounces, but the total last year was 9,575,040, and the indications are that the yield for 1925 will be 100,000 ounces greater. Gold represented 51.5 per cent. of the world's production as compared with 52.3 per cent. for 1923. The large mines of the Rand dealt with 28,527,000 tons, an increase of a million and three-quarter tons on the year. Throughout the Transvaal there were 6,989 stamps and 344 tube mills at work, nearly all on the Rand, as the outside districts could muster only 280 stamps and 13 tube mills among them. Average Rand yield remained slightly over 6.5 dwts per ton, and very little fluctuation is shown over the past 15 years, the extremes being 6.18 dwts in 1915 and 6.93 dwts in 1922. For the past three years the waste discarded by Rand gold mines has averaged 10 per cent.

Substantial improvement was shown in the distance accomplished in development, which totalled 171 miles of sinking and tunnelling.

The following table shows the prices realised per carat for mine and alluvial diamonds sold during the past six years:—

	Mine Stones.	Alluvial Stones.	All Stones.
1919	85 0	254 9	98 5
1920	99 9	213 3	113 11
1921	64 8	117 8	79 5
1922	46 10	133 4	61 2
1923	51 11	135 9	59 10
1924	52 6	149 7	66 2

Except at the Cape, where there is little competition, coal is very cheap in South Africa. Compare, for instance, the 17s 5d per ton for commercial disposals in Britain during the June quarter with the 5s 1d realised for Transvaal, and the 5s 7d realised for O.F.S. coal, or even the 7s 9d

for the Natal product. Of 13 million tons of marketable coal the Transvaal produced over seven and Natal nearly five million tons.

Two rather interesting opinions have been given, the first mentioned before the Economic and Wage Commission, on the subject of the Union's manufacturing policy, which is strongly buttressed by protective tariffs. Mr J. H. Hofmeyer, the Administrator of the Transvaal, said that the Union could not expect to be a manufacturing country for some time to come, and urged concentration on agriculture as the basis of expansion. They should not force any hot-house growth of industries which would inevitably enhance costs and hamper both agriculture and mining. Mr Seeböhm Rowntree, the well-known economist, in a newspaper interview, said that the natural policy for the Union was the production of raw materials. Exports must be paid for by imports, which was difficult to reconcile with existing high tariffs against goods imported into the country. The productive capacity of the Union was immensely greater than the consuming capacity of its small community.

JAPAN.—COTTON AND CHINESE TARIFFS—GOLD EXPORT—FOREIGN TRADE IMPROVEMENT—RICE CROP.

(FROM OUR CORRESPONDENT.)

TOKIO, October 6.

THE forthcoming Chinese Tariff Conference is causing deep apprehension, particularly in industrial circles, in this country. Of all the exporting countries, Japan will be affected most seriously by the revision of Customs tariff to be discussed at the Conference, partly because China is her chief customer absorbing the major part of her exports, and partly because her export industries are generally manufacturing the simpler and coarser classes of goods, which are liable to be replaced by home manufactures. The cotton industry, among others, will have to suffer considerably from the higher tariff walls. The proposed 2.5 per cent *ad valorem* incidence of the tariff on cotton manufactures is estimated at 5 million yen per annum, the value of cotton goods destined for the Chinese market being 200 million yen. Besides, the growth of the native cotton industry will be further stimulated by higher protection, and the competition therefrom will become still more serious. The cotton interests, therefore, are worrying over the matter and are studying how to cope with the situation. The Cotton Spinners' Association insists that, in order to neutralise the competition, Japan shall bargain for a concession from China requesting her to impose a new excise duty on home manufactures, as is stipulated in the Anglo-Chinese Treaty of 1902. Such proposition, however, being obviously impossible, there will be no other way for our manufacturers but to resign themselves to the inevitable, and try their best to adapt the production to special qualities of goods. But they seem to find it rather hard to understand, and to react to the changing conditions.

Since the latter part of last month the Government shipped gold twice to the United States to the amount of 8 million yen. Further shipments will follow to the extent of 12 million yen within the year. According to the statement published by the Treasury the step is meant to lessen the loss arising from the unfavourable exchange in making payments abroad, and to help the stabilisation of exchange by increasing the specie held abroad. The gold shipped was from the reserve of small notes which had been withdrawn from circulation. As it has nothing to do with the reserve of the Bank of Japan for note issue, it is assumed that it cannot affect adversely the money market at home. The shipment of gold by the Government naturally lends itself to the interpretation that it is a partial lifting of the ban on gold export, and in some quarters it is even suspected that the step may prove a prelude to the removal of gold embargo. But it is understood that it is far from the intention of the Government to adopt this course at an early moment.

Further improvement in foreign trade is noticeable. The trade returns for September show that imports totalled 164,332,000 yen, which was 26,777,000 yen lower

than in August, but 23,226,000 yen higher than in September, 1924. Exports increased to 232,630,000 yen, over 4,000,000 yen above August and 74,000,000 yen larger than a year ago. September's favourable balance was well over 68,000,000 yen, against 37,000,000 yen for August and just below 18,000,000 yen for September, 1924. The export trade thus being active, the adverse balance since the opening of the year is 253,754,000 yen lower than in the corresponding period of last year. The figures for the nine months are compared with those for the same periods of 1924 in the table below:—

NINE MONTHS ENDED SEPTEMBER 30TH.
(000's omitted.)

	1924.	1925.	Increase (+) or Decrease (—) in 1925.	
	£	£	£	%
Imports	1,911,677	2,033,376	+ 121,699	+ 6.0
Exports	1,280,748	1,656,201	+ 375,453	+ 22.6
Total	3,192,425	3,689,577	+ 497,152	+ 13.4
Excess of imports over exports ...	630,929	377,175	— 253,754	— 64.6

The report of the Department of Agriculture and Forestry just issued forecasts a good rice crop for this year. The year's total yields are estimated at 61,494,210 koku, or 4,323,000 koku larger than last year, and 3,154,000 koku above the five years' average. Rice naturally reacted on the official estimate of a better crop. The rising tendency in commodity markets has lately been arrested more or less. The money market remains easy, with more talk of hardening as winter approaches.

Letters to the Editor.

THE LESSON OF THE MUNICIPAL ELECTIONS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your "Note of the Week" on "The Lesson of the Municipal Elections" emphasises the necessity of concentrating public opinion on the extreme urgency of a reform in our electoral system. The two instances quoted from recent municipal elections, viz., Hackney, where the 184,702 votes polled by the anti-Labour parties obtained all the 60 seats, although the Labour votes numbered 93,325, and the Church Ward of Shoreditch, where the 7,512 Labour votes won the nine seats, although the combined anti-Labour votes numbered nearly 9,000, are difficult to beat as exposing the absurdity of the present system. But what can be thought of the fact that eighteen counties of England, viz., Kent, Cheshire, Hampshire, Surrey, Sussex, Somerset, Dorset, Suffolk, Cornwall, Hertford, Wiltshire, Berkshire, Shropshire, Bedford, Buckingham, Cambridge, and Oxford have neither a Liberal nor a Labour member in the present House of Commons, although the Labour votes polled last October in these counties numbered 716,482, and the Liberal voters numbered 619,054. The combined total of Opposition numbered 2,017,401, amongst whom were numbered thousands of Liberal voters who trusted in Mr Baldwin's promise not to extend the Protective duties in the present Parliament.—Your obedient servant,

Southall, November 7th, 1925.

H. JAMES ROBINSON.

Books and Publications.

SOME RECENT WORKS ON INDIA.*

ONE of the many signs of the economic transition in India is the ever-increasing number of publications dealing with industrial and financial problems. Quantity is more

* "The Evolution of Provincial Finance in British India." By B. R. Ambedkar, D.Sc. (Econ.). P. S. King and Co. Pp. xxi. + 285.

"India's Exchange Problem." By B. F. Madon. The Commercial Printing Press, Bombay. Pp. ii. + 1-70.

"Exchange Fallacies Exposed." By B. F. Madon. The Commercial Printing Press, Bombay. Pp. ii. + 135.

"J. N. Tata." By F. R. Harris. Humphrey Milford, Oxford University Press. Pp. xv. + 248. Price, 15s net.

"The Remedy for Unemployment." Calcutta University. Price, 9d.

"The Industrial Evolution of India in Recent Times." By D. R. Gadgil. Humphrey Milford, Oxford University Press. Pp. vii. + 242. Price, 7s 6d.

evident than quality, nevertheless there is an increasing amount of good work which deserves attention and study.

Finance and exchange naturally attract considerable attention, as both have a very direct bearing upon problems the solution of which is urgent. Unfortunately, in both cases it is exceedingly difficult to exclude politics, so that most of the literature is of a polemical nature, written more from a political than an economic motive. This is only too apparent in Mr B. F. Madon's two brochures, "India's Exchange Problem" and "Exchange Fallacies Exposed." Written originally as newspaper articles, they betray their origin immediately. The author, however, shows very considerable ability and knowledge, so that we cannot but regret the method of exposition. His thesis is a return to the 1s 4d rupee and an attack upon the Government policy of a 2s rupee. Much of his criticism is well directed, and there is a very considerable body of opinion which would agree with him—except for the constant assertions that the whole of the Government policy is actuated by the basest of motives. That this policy may have been wrong or hasty one is willing to believe—and certainly there is ample room for differences of opinion—but that it is deliberately dishonest and base is not true. Nevertheless, both books can be recommended as they make one think. Mr Ambedkar's "Evolution of Provincial Finance in British India" is a careful study of an equally controversial subject properly handled. The book is interesting throughout, and is an admirable introduction to an almost unexplored subject in Indian finance. It is divided into four parts, and begins with the year 1833. Starting with an account of the "Imperial System," which was a complete failure, the author briefly describes the different attempts which were made to solve an almost insoluble problem. The various methods of "Budgets by Assignments," "Budgets by Assigned Revenue," and "Budgets by Shared Revenues" are described and criticised. Part III. is devoted to a discussion of the limits imposed upon the Provinces by the Central authorities, and their powers of initiative. It contains the answer to the question: Why should the problem of provincial finance have been insoluble? which lies in the realisation that the Provinces were not really independent, but merely exercising strictly delegated powers. The last part deals with finance under the new régime, and the conclusion arrived at is not comforting, for he believes that Dyarchy is incompatible with sound finance. Such books are always welcome. A work of a different kind, but in the same spirit, is Mr Gadgil's "Industrial Evolution of India in Recent Times," which is a piece of research work for which the author obtained the M.Litt. at Cambridge. It is a comparatively small book for such a large subject, so that we cannot expect very much detail nor anything very new. But it is very readable, and is written with admirable balance. The gradual transition from the old and almost self-contained India to the modern India which is part of the greater commercial and industrial world is traced. The negative and positive aspects of such a change are both carefully allowed for, and the author makes it evident that the decline in the standard of production of the native crafts and often the total disappearance of the crafts themselves was an inevitable result of the impact of Western methods combined with an alien rule, which involved the disappearance of many of the native crafts while introducing a new culture and new standards. Emphasis is naturally laid upon the effects of the development of the railway system and all that cheap transport implies. The growth of the modern industries is traced up to 1914, at which point the study ceases.

With the development of industry and the growth of the large towns has appeared the bogey of unemployment, although as yet on a small scale and chiefly among the educated and semi-educated classes. It is beginning to attract attention, and has enlisted the interest of the Calcutta University, which has taken up a number of social problems. Various pamphlets have been issued, including one entitled "Unemployment," which proves to be a reprint of a series of articles chiefly for the advancement of a scheme for educational colonies. It is tedious reading owing to the constant repetitions and the general lack of clarity. The causes of unemployment are not analysed, as the author considers the problem to be fundamentally a simple thing. The cure is a system of educational colonies

for adults and children. One would wish that such a body as the Calcutta University would be more careful in publishing. Treated apart, the proposal for educational colonies is worthy of careful study, and seems to promise a partial solution in the education of the masses, both from a financial and practical point of view. Here, again, one would have wished for some elaboration of the details of such a scheme. That there is scope for investigations into unemployment there is no doubt, especially when it is realised that unemployment and famine are fundamentally the same thing, the former being largely due to a failure in the economic organisation of society, as a result of which there is no demand for the services of numbers of workpeople, while the latter is due to a breakdown in Nature's organisation, whereby owing to lack of rain the cultivators are unemployed. Starvation is inevitable in both cases unless the workers have reserves of purchasing power of their own or are assisted by the State. Lastly we have Mr Harris' chronicle of the life of the late Mr Jamsetji Nusserwanji Tata, the founder of the great Tata firm. Here we have the Indian in another light, as a practical business man engaged in creating new industries. Such a chronicle is doubly welcome as it helps one to visualise the effort and the work by which the new industries are being established, and also forces one to realise the part played in this process by Indians themselves. Jamsetji Tata was a great business man measured even by Western achievement, and would have been accounted great in any Western country. He it was who had the faith and perseverance which resulted in the real establishment of the steel industry in India; he first pioneered the hydro-electrical development there. These two achievements would of themselves have been sufficient to mark him out from his fellows, for it was no mean thing to establish a great steel industry in a jungle and to bring electrical power from the Ghats to Bombay. But his claim rests on other things as well. He was a man of vision and ideals. Sir Stanley Reed writes: "Mr Tata came to three main conclusions (when considering India's industrial position). They were that no country could become industrially great which did not manufacture iron and steel; that no sustained economic growth was possible without the provision within the country itself of the means of winning a first-class scientific education; and that the prosperity of.....Bombay could not be regarded as secure so long as it was entirely dependent on coal brought thirteen hundred miles by rail or sea." From this realisation resulted the enterprises above mentioned, together with the foundation of the Institute of Science in Bangalore. His work and enterprise made him wealthy, but wealth was not the dominating motive. His desire was to help his country to realise its ambitions in other directions by assisting it to acquire the equipment which would create the wealth necessary to finance them. Though a Parsee, he regarded himself also as an Indian, and never allowed the wider outlook to be restricted by sectional interests. The book is interesting, but not nearly so much as one had hoped, and is rightly called a chronicle and not a biography.

THE RIGNANO INHERITANCE SCHEME.*

PROFESSOR RIGNANO'S proposals for the modification of the law of inheritance have been discussed by several economists in this country, but they are now for the first time introduced in their entirety to the British public. They are introduced, moreover, under very favourable auspices, in an edition prepared by Sir Josiah Stamp, and prefaced by him with a short but important survey of the whole problem of death duties and inheritance. Professor Rignano's theory is that death duties should be levied on a steeply ascending scale, but that the principle of discrimination, instead of being, as it is here at the present time, the size of the estate, should be the number of times the same estate has been inherited. Thus if a man amasses a large fortune by his own efforts, he would be allowed to leave practically the whole of it to his heir. The said heir, however, would only be allowed to transmit, say, 50 per cent. of it to his heirs, and on the occasion of their death practically the whole of the remainder would

* "The Social Significance of Death Duties." By E. Rignano and J. C. Stamp. Noel Douglas. 5s net.

pass to the State. Of course, if a man inherits a fortune and adds to it, his estate would pay duty at the higher rates only on the sum he had himself inherited. It would not be necessary, if the Rignano principle were accepted, to apply it on so sharply graduated a scale, and it could easily be associated with other and more familiar principles of graduation, such as the size of the estate and the degree of consanguinity of the heir to the testator.

The advantage of this scheme is that it would leave undiminished the incentive to save for one's descendants, and might actually stimulate to economic endeavour those who themselves inherited money. It undoubtedly deserves serious consideration, and Sir Josiah Stamp draws attention to some of the practical problems which need to be studied and solved before it can be regarded as suitable in British conditions. The possibility of changes in the value of money or of rate of interest, which would affect the capital value of a fortune, and the difficulty of accurately valuing at any given moment an improved or a wasting asset, such as a mining property, are two points among many which will at once strike the critical mind. The scheme would also affect the testamentary habit of tying money up in a trust and leaving a life interest only to the immediate beneficiary, and its economic effects in this respect would require careful consideration.

"THE COTTON MILLENNIUM."

THE English reader who spends 11s 6d on this book* in the hope of getting either a complete account or a general survey of Anglo-American trade in the first half of the XIXth Century will be disappointed. What the Assistant Professor of Political Economy in Yale University has written is a careful monograph on "the agencies engaged in the buying and selling of raw cotton and British manufactured goods." The book is the child of a belief "that one of the needs of the present time is a better understanding of the origin of our business organisation, its forms and its functions," yet "in the discussion of organisation it has been found necessary to ignore such topics as insurance, transportation, communication, and financial policy." But though narrower in scope than its title implies, the book is a valuable addition to the literature of XIXth Century history. Moreover, other business men besides cotton merchants will find much to interest them. It is awe-inspiring to be told that our ancestors, the British manufacturers, "produced as much as possible, sold what they could to the domestic trade, and consigned the rest to the foreign markets to be sold for what it would bring." After an account of credit terms the author comes to the conclusion that "the country which has the greater capital resources will assume the initiative in exporting, and in importing, she will be able to purchase her import on a cash basis, or on very short credit terms, and to sell her own goods on long credit terms." This is not only an account of what is past, but is suggestive of what may happen in the future.

* "Anglo-American Trade, 1800-1850." By Norman Sidney Buch, Ph.D. Published by Mr Humphrey Milford for the Yale University Press. 11s 6d.

DOUBLE INCOME-TAX RELIEF.*

THE subject of Double Income-tax Relief has assumed great importance in recent years, and while the taxation of incomes remains on its present basis it is likely to become still more important year by year. The Governments of not less than 31 British Dominions and colonies and 18 Provinces and States within them—49 authorities in all—now impose annual income taxes for revenue purposes. All the systems under which these taxes are levied bear a general resemblance to our own complex United Kingdom model, but all differ as to basis of assessments, rate of tax for individuals and companies, exemption limits, abatements, and also as to insurance and similar allowances. And every one of these tax details are subject to annual change. These taxes have, in the main, been imposed within the last ten years, and they vary in amount from 2½ per cent. to 25 per cent. of income.

* "Double Income-Tax Relief," by H. F. Seed, Incorporated Accountant, and A. W. Rawlinson, Chartered Accountant. (London) Sir Isaac Pitman and Sons, Limited. 10s 6d net.

Those interested in relief claims include the British concern with branches, agencies, or other connections in the Dominions; the British resident who sends his capital to the Dominions for investment; and the investor in a British company when, as frequently happens, that company earns a part of its profits in a Dominion. The establishment of the Irish Free State as a Dominion has, of course, considerably increased the number of persons entitled to relief from double income-tax. There is in this book an interesting chapter on double income-tax and the Irish Free State. The book also deals with the subject of foreign income-tax relief in the case of shipping concerns.

Many of the numerous text-books on income-tax purport to deal, in a section, with double income-tax relief, but it is a subject of such complexity that it demands a separate volume—if the law and practice is to be treated with sufficient detail to be of real service to those having to formulate any but the simplest claims. The authors have succeeded in producing a work which will prove useful.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, November 18. ACCOUNT, November 19.

The Stock Exchange has found business during the present week to have run on much quieter lines than has been the case for the last few months. There is a fair amount doing in certain of the markets, but the public inclination to deal is blunted for the time being. Some think that the explanation for this is to be found in the French financial crisis; others maintain that, so far as industrials are concerned, the public have been satiated with new rubber issues. The fact remains that the volume of trade has shrunk very noticeably, and next week's settlement is likely to prove a light affair as compared with most of its recent predecessors.

The War Loan dipped below 100, but recovered to a shade above par. Other British Government, Colonial, and gilt-edged securities lean to the lower side, on the assumption that the next change in the Bank rate will be upward, and that in the near future there will be considerable borrowing from the Colonies and foreign countries. Underwriters were not surprised at being left with part of the Gold Coast issue. Nevertheless, a few of the Home Railway prior-charge stocks are in short supply, and can be sold at good prices.

French railway stocks are flat; the national bonds keep tolerably steady. The French investor, faced with the new taxation that is proposed, seems anxious to realise his British-held investments, and there has been a good deal of stock turned out on French account during the past two or three weeks. The reconstruction issues are not quite so good as they were, rumour being busy with the possibility of new loans, while the Argentine and Brazil are both mentioned as likely to be amongst the borrowers in the near future. A general rise in Mexicans, and a gain in Peruvian Corporation preference deserve notice.

The Home Railway market is not encouraged by the attitude adopted by the N.U.R. in regard to the question of wages. Prices of the ordinary and deferred stocks are dull, without being heavy. There is very little doing in the market.

Brazilian Tractions have gone back sharply after their recent jump. The feature amongst foreign rails is a substantial advance in United of Havana ordinary stock. The chairman hinted at the recent meeting that American buyers may be contemplating the purchase of part of the United of Havana undertaking, and some of the buying of the stock in the market is thought to be on account of United States purchasers. Antofagasta deferred spurred upon dividend hopes, and Argentine Railway stocks hold their ground.

Rubber shares are mostly easier. The raw material keeps steady, but the public have been over-dosed with new issues, and it requires something very attractive to induce heavy over-subscription for fresh arrivals. Prices are lower in most sections. The tea market also shows declines, because the recent prices obtained at the tea auctions do not flatter expectations of big dividends. Many of the tea companies are expected to pay less for the current year than they did for the previous twelve months.

The oil market has been harder, mild demonstration of strength on the part of professionals bringing in a few buyers who think that public attention will be turned from rubber to oil. There is not a great deal of outside backing, however, at present to the movement. In the brewery list one or two at present to the movement. In the brewery list one or two at present to the movement. In the brewery list one or two at present to the movement.

In the tobacco market there is not much doing, and amongst nitrates the market gave way upon a decrease in the Lautaro dividend. Sudans, Hudson Bays, and other land shares are dividend. Dunlops have been somewhat neglected, and a brief spurt in newspaper shares brought in sellers. The iron and

steel group derived a little assistance from the speech of the Prime Minister at the Guildhall banquet, and the improved showing made by the Board of Trade figures for October supplemented the more cheerful feeling which now arises in respect of the outlook for national trade. The shipping market has not reflected this at present, and shares in the finance companies, banks, insurance, and trust have spent a placid week both as regards price-movements and business.

There was a revival in South African platinum shares, based on an unexpected burst of support from the Cape. Apart from this the Kaffir Circus has displayed a little of fresh interest. Amongst Rhodesians, Cam and Motors went up sharply on news of a rich strike on the property. Diamonds are quiescent. The tin share markets are a little easier. On the other hand, a few of the Mexicans and Canadians are the turn better. Mining shares as a whole, however, show a disposition to droop, in consequence of the lack of interest shown by the public in their various markets.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

Gold Coast Government.—This is an issue of £4,628,000 4½ per cent. inscribed stock, 1925-55, at £94 per cent. The loan, which is a trustee security, is secured on the general revenues and assets of the Gold Coast Government, and principal will be repayable at par on January 1, 1956, by a sinking fund of not less than £1 per cent. per annum, commencing in 1929. The loan is raised to meet the cost of construction of Takoradi Harbour, the Central Province Railway, and other railway and harbour works. The issue may be sound, but the loan at the price of issue is not very attractive from the investors' standpoint. Incidentally it may be asked why the Gold Coast Government should be able to raise money on such favourable terms.

Bristol Corporation.—This is an issue of £1,500,000 of 4½ per cent. redeemable stock, 1945-55, at £97 per cent. It is a trustee security, and is repayable at par on November 1, 1955, unless previously cancelled by purchase or agreement, the corporation reserving the right of redemption at par at any time on or after November 1, 1945, on three months' notice. It will be secured upon the Borough and General District Funds and Rates, and also upon the revenues of the dock and electrical undertakings and estates. The present issue will rank equally with all other issues. The total outstanding debt is £11,741,713. The city's rateable value is £2,113,585, and a rate of one penny in the £ will produce £8,334. COMPANY MEETINGS, &c.

ANGLO-PERSIAN OIL COMPANY, LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.

INCREASED PROFITS—INTERIM DIVIDENDS.

SIR CHARLES GREENWAY ON POSITION AND PROSPECTS.

The sixteenth ordinary general meeting of the Anglo-Persian Oil Company, Limited, was held, on the 10th inst., at Winchester House, Old Broad street, London, Sir Charles Greenway, Bt. (chairman of the company), presiding.

The secretary (Mr John Clark) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The report and accounts which we submit to you to-day, and which, with your permission, we will take as read, are again, I am pleased to say, of a very satisfactory character, and continue to reflect the successful progress which the company is making. As you are aware, our chief aim and object during the past 12 or 13 years has been to build up an absolutely self-contained organisation—capable not only of producing our crude oil, but also of refining it and of transporting and distributing its products direct to consumers wherever there may be a profitable outlet for them without the intervention of any third parties—and I think that we may now claim that we have successfully achieved that object and have firmly established ourselves as one of the leading oil companies of the world. The advent into the world's markets of a new and powerful competitor has, of course, aroused a good deal of opposition, but I would like to take this opportunity of saying that while we shall always be ready to enter into any arrangements with our competitors that will serve the purpose of reducing costs to the consumer, it is an essential of any such arrangements that we should retain our own individuality.

PROFIT AND LOSS ACCOUNTS.

I will now ask you kindly to turn your attention to the accounts before you. Dealing first with the profit and loss account, you will remember that when I addressed you last year I indicated that, subject to there being no further material decline in prices, I was hopeful that the profits for the year under review would show a substantial increase. You will see that this hope has been realised. The trading profits show an increase of over £1,500,000, and the net profits, after deducting the larger amounts payable in respect of royalty, income-tax, &c., an increase of about £1,120,000. I should explain further that the figure of £4,599,676 8s 8d shown in the profit and loss account as "balance of profit" has been arrived at after providing collectively in our main concerns a sum of over £3,500,000 for depreciation, which result, gentlemen, I am sure you will all regard as eminently satisfactory.

Now, looking at the appropriation account, you will see that out of the £3,571,966 18s 7d brought down from the profit and loss account we have appropriated to extra depreciation and various reserves a total of £1,193,000, as against a total of £665,000 only in the previous year, and that the balance at the credit of the profit and loss account remaining to be dealt with, including £1,746,643 9s 11d carried forward from the previous year, amounts to £4,066,549 2s 6d. Out of this, after allowing for preference share dividends, we recommend payment of a dividend of 12½ per cent. on the ordinary shares, absorbing £1,118,750, and carrying forward a balance of £2,072,799 2s 6d subject to express profits duty, if any, for the year ended March 31, 1921, and corporation profits tax for the year ended March 31, 1925.

CONSERVATIVE FINANCIAL POLICY.

As regards the dividend which we have recommended on the ordinary shares, I would like to say that we might easily have recommended a higher figure, but I think most of you will agree with us that our first consideration should be the building up of a strong financial position, and that it is therefore advisable to continue the policy of conserving our resources as much as possible, at any rate until we have accumulated funds commensurate with the gigantic extent of our business; being content in the meantime with the knowledge that we shall thereby be gaining more by the consequent appreciation in the value of our assets than we are losing for the time being by denying ourselves a little in the form of higher dividends.

In this connection, I may mention that we have received a letter from an ordinary shareholder who at the last meeting raised some objections to our conservative policy, complaining that his criticisms and the discussion which followed were not supplied to the Press and to shareholders in full. I would like to point out to him that it is not usual to supply verbatim reports of the criticisms of shareholders to the Press, and it is certainly not necessary when, as we know, fully 90 per cent. of our ordinary shareholders are in

full accord with our policy. I appreciate his desire for higher dividends, but I would like to say that throughout my business-career it has been my practice to put back each year into my various businesses a considerable portion of my profits, and I am quite sure that every business man present here to-day will agree with me as to the wisdom of this policy, particularly in the case of an industrial concern with such wide ramifications and so many vicissitudes as ours, and that the advantages to be gained from the consequent appreciation in the capital value of our assets far outweigh the satisfaction of a larger immediate return in the form of higher dividends. A simple calculation will show him that if as the result of our conservative policy our shares appreciate in value during the next five years to the extent of 100 per cent.—a not at all improbable assumption—his average return, even on the basis of the present dividend, would be far better than getting an immediate return of, say, 20 per cent. per annum.

INTERIM DIVIDENDS—FUTURE PROSPECTS.

However, I am pleased to be able to announce that we now see our way, unless some unforeseen contingency arises, to falling in with the desire expressed by shareholders for the payment of interim dividends on our ordinary shares, and our first interim dividend will probably be declared in April or May next.

As to the outlook for the current year, all I can say at present is that, subject to there being no serious decline in prices between now and the end of our financial year, we can, I think, look with confidence to results at least as favourable as those for the year under review.

MARKET FOR PETROLEUM PRODUCTS.

As regards the market for petroleum products, it is at the moment more than usually difficult to gauge the future course of prices. The production of crude during the present year will show a substantial increase in every important producing country in the world, excepting Mexico. The total increases for the year will probably amount to about 8,000,000 tons, and the decrease in Mexico to nearly 4,000,000 tons, leaving a net increase in the world's supply of about 4,000,000 tons, or a little under 3 per cent. But, speaking broadly, the consumption of the various products fully keeps pace with the increase in supplies, and there is every possibility of further increases in production, these will, in my opinion, be fully offset by the continuous expansion in the demand for oil products which must result from the improvement in economic conditions which is taking place in practically every country of Europe, and from the extended use which is daily being found for these products in nearly every branch of industry. In any case there will, I am confident, always be a remunerative outlet for all the oil of good quality which can, as in Persia, be produced at a low cost. In this connection, I would again remind you that every drop of crude we produce is obtained from flowing wells of large calibre, which, of course, means that it is raised at the minimum of cost. These wells, I may add, are all connected with a central storage and pumping station at which at any time of the day the flow from the wells can be varied to any degree required.

BALANCE-SHEET ITEMS.

I will now deal with such items of the balance-sheet as I think call for comment or explanation. Taking the debit side of the account first of all, the only changes of importance are (1) a reduction of £125,000 and £63,000 respectively in the amount of debentures and short-term notes outstanding. The repayment of the latter released £70,000 of the debentures deposited as security for these notes, thus making the total debentures redeemed during the year £195,000; (2) an increase of £276,463 2s 4d in the amount at credit of the employees' provident pension and insurance fund bringing the total up to £6,083,127 11s 6d.

On the assets side of the account you will notice that the first item—viz., purchase prices of shares in and advances to associated companies—now stands at £26,445,958 17s 3d, which is a reduction of £1,713,741 1s 9d on the figure shown last year, although in the meantime there has been fresh outlay in respect of this item to the extent of about £785,000. This total reduction of £2,500,000 is almost entirely due to the repayments of some of the advances to our associated companies.

In connection with this item, I would like to point out that about £9,000,000 of the total represents advances to our two principal subsidiary companies—viz., the British Tanker Company and the National Oil Refineries—and that the amount of these advances is far more than covered by the value of their assets. These companies might have raised a portion of the large amounts they have expended in creating these organisations by public issues of capital, but as this could at the time the money was required only have been done at a comparatively high cost to the Anglo-Persian Company, for reasons of economy, financed a portion of this expenditure by means of temporary borrowings in the open market at low rates of interest. These borrowings have

SECURITY FIRST
ROYAL
INSURANCE COMPANY, LIMITED
HEAD OFFICES: LIVERPOOL AND LONDON

all been liquidated, but now that the conditions of the money market are more favourable we may, in the near future, decide to make a debenture issue in respect of the British Tanker Company in order that its capital may be more commensurate with the value of its large fleet, and to provide the Anglo-Persian Company with some of the further funds that will certainly be required in the future to meet further developments. But this will only be made if it can be done on terms that will justify this change in the method of finance. The other assets included in this item are, as I think you are all aware also, of a value far greater than the figure at which they stand in our books.

CAPITAL EXPENDITURE FROM REVENUE.

In this connection I would remind you that we have during the past few years met an enormous amount of new capital expenditure out of revenue. This very sound policy is, as you will have seen from the figures I gave you when dealing with the profits of the past year, still being continued, but it is a policy which should not be carried too far, and once we are satisfied as to the company's ability to meet all possible financial contingencies the shareholders will, I think, be entitled to look for a more liberal participation in the profits of each year.

The next item on the credits side of the account—refineries, tank installations, pipe lines, &c., shows a small increase, being the balance of capital expenditure in excess of the amount written off for depreciation.

The next two items require no explanation. As regards debtors and debit balances, there is an increase of nearly £1,200,000, practically all of which is accounted for by the increased dividends payable to us by our subsidiary companies. Taking the last two items, which collectively represent our liquid cash resources at the end of the year under review, you will notice that they show an improvement of close upon £1,000,000 on the position shown 12 months previously, and you will be gratified to learn that the position to-day shows a still further material increase in our liquid assets.

EXTENSION OF PRODUCTIVE AREA.

The developments in our main fields continue to more than justify all our expectations. Our policy of extending the area of oil-bearing territory has been vigorously and successfully continued since I last addressed you, and it will, I am sure, come as welcome news to you that the productive area has now been extended along a line of strike running continuously five miles north-west and over five miles south-east of the well-known F. 7.

As I have mentioned on previous occasions, this famous well—which for a long time was regarded as our index of production, and whose yield to date is 6,500,000 tons—is now eclipsed by a number of others. The well head fittings with which it was capped in 1909 are, however, in a dangerous condition, and since the well is situated near the most active and populated area of the field, it would be a serious matter were it to get out of control. Therefore, as the oil it produces can equally well be drawn off, and with greater safety, from adjacent new wells equipped with modern high-pressure fittings, it is intended to close it down at an early date for the sake of the greater security that will thus be obtained.

None the less, since we have come to regard F. 7 as an old friend, its deliberate suppression, as a matter of field policy, will cause us all a certain amount of sentimental regret.

RECOVERY OF PETROL FROM GAS.

Following on much investigatory work on the chemical and engineering sides, an important and comprehensive scheme has been adopted for recovery of petrol from the 50,000,000 cubic feet, or more, of gas which come off daily from the oil from all parts of the main fields, only a portion of which has hitherto been utilised. The installation of the necessary plant is now well in hand, and there is every reason to hope that this scheme will considerably augment our production of petrol and thus prove very profitable to the company. All necessary field developments are steadily and punctually following the drill, and I think it may now fairly be claimed that our main fields are not only the largest and the most prolific, but also the best equipped that the world can show.

As I have explained on previous occasions, our policy in regard to our main fields is a conservative one. The wells drilled and coupled to the production lines are capable of yielding far more oil than could be dealt with at present by our existing pipe lines,

refineries, tankers, and marketing organisations. However, we can happily record a steady progress in all these complementary facilities, and in consequence a correspondingly increased production.

To illustrate this, I cannot do better than continue the table of figures recorded at previous meetings, viz. :—

	Tons.
In 1918-19 our production was	1,106,415
„ 1919-20 „ „	1,385,301
„ 1920-21 „ „	1,743,557
„ 1921-22 „ „	2,327,221
„ 1922-23 „ „	2,959,028
„ 1923-24 „ „	3,714,216
„ 1924-25 „ „	4,333,933

against my estimate last year of 4,250,000 to 4,500,000 tons.

DEVELOPMENT PROGRAMME.

The current year is largely one of stabilisation of the position we have already achieved—or in other words, of securing the best possible results in every direction from our present production—prior to embarking on yet larger developments. For this reason production in the year 1925-26 will probably not exceed 4,500,000 tons.

I am not able to record the discovery of any new areas elsewhere in Persia having prospects comparable with those of the present producing areas. The further examination of the strike of oil on Kishm Island, to which I referred last year, was not sufficiently promising in quantity to warrant development under existing conditions, and work in this area has therefore been discontinued.

Similarly, oil has been discovered in yet another area in quantities which, had the field been situated in America or Europe, might have warranted commercial development. But situated as they are in Persia, they could not be worked remuneratively, and therefore operations in this area have also been suspended except in so far as they are necessary to produce oil for field use in some neighbouring areas where we are carrying on test drilling, and in which we hope to find oil in larger volume.

As a result of general geological survey work, followed by an authoritative and comprehensive geological reconnaissance, no less than six new areas have now been indicated as meriting immediate test with the drill, and the necessary work is well in hand.

OIL RIGHTS IN "TRANSFERRED TERRITORIES."

I have on previous occasions referred to a new area where the existence of appreciable supplies of oil had been definitely proved. This area, known as Nait Khana, is on the borders of Persia and Iraq, and is situated in what is known, so far as the Iraq portion is concerned, as "the transferred territories."

This company possesses the oil rights in "the transferred territories" by virtue of an international agreement executed in 1913, following on a rectification of frontiers. The agreement in question has since been ratified by the grant by the Iraq Government of a formal concession of these rights, and a separate company with a capital of £1,000,000 is about to be registered to take over this concession.

Drilling is steadily continuing in this field with the view of proving definitely the existence of oil to such an extent as would justify the cost of laying a pipe-line linking the field with the seaboard. There is reason to hope that this may prove to be the case, but capital expenditure of the magnitude indicated will not be undertaken until its justification is fully established.

ARGENTINE AND ALBANIAN INTERESTS.

Turning to developments outside Persia, I am glad to say that our relatively small holdings in the Argentine continue to be productive. At the time of our last annual meeting we had produced some 28,000 tons of oil. Since then an additional 84,000 tons have been obtained, and the field, which is being very economically run, is now established on a profit-earning basis. The winning of oil in the Argentine is an extremely speculative undertaking, largely owing to the fact that surface indications give practically no clue to underground structure, and drilling is, therefore, exceptionally hazardous. We may therefore count ourselves particularly fortunate, since other companies of the highest standing in financial and technical resources have so far been unsuccessful there.

Having regard to the general position of our affairs in the Argentine, I judged it desirable to visit that country last March. On the personal side I retain nothing but the liveliest feelings of pleasure from my visit. It is a great country, with a wonderful record of progress and achievement to its credit, but its petroleum industry is a relatively new one, and I found it impracticable, at times, to see eye to eye with the Government in its oil policy. I have little doubt, however, that in this direction—as has already happened in others—a sound economic equilibrium will eventually be established, by mutual good will and understanding, between State interest and commercial enterprise. In the meantime, however, and pending some indication of a desire

on the part of the Government to give more encouragement to commercial enterprise, we do not purpose carrying on any further exploratory work in this part of the world.

Since we last met a concession has been obtained from the Albanian Government over areas amounting to approximately 80,000 acres, which were selected by us after careful geological survey, and drilling on these commenced a month ago. The discovery of oil in this country would, of course, be of great importance, but obviously it is too early to indicate the possibilities of success.

REFINERIES.

All our refineries have worked throughout the year in accordance with programme, and the position may be regarded as very satisfactory. Much has been done with a view to the reduction of working costs, and developments now in view promise to result in further substantial economies in the refinery operations. Various schemes are also on foot which will, we hope, materially increase our revenues in the future, apart from anything that may result from actual increased throughput.

As I estimated last year, the throughput at Abadan was over 2,800,000 tons. Heavy capital expenditure has been necessary at this refinery during the last few years, but our energies are now chiefly directed to the consolidation of what we have got and to effecting reduction in operating costs by improvements in refining processes and by the installation of more modern plant in place of older units.

All the new loading jetties, to which I referred in my last year's speech, have now been completed, and the loading facilities generally may now be regarded as established on a satisfactory basis.

I have, on previous occasions, referred to the disastrous effects of plague and cholera at Abadan, due largely to the overcrowding in the native quarters, and to the lamentable absence of sanitary provision. It has been necessary to grapple very vigorously with a series of problems arising out of this condition of affairs, and a comprehensive scheme was devised last year for clearing away the plague centres, eliminating congestion in the native villages, providing new quarters for our employees elsewhere, and introducing an effective system of sanitation throughout the areas in which our employees and their dependents reside. The scheme has progressed steadily during the last 12 months, and is now approaching completion. The effects have already been most apparent, as there has been very little sickness amongst our native employees. It is too much, perhaps, to hope that plague and cholera will be entirely eliminated, but we can at least anticipate that there will be no recurrence of the very serious epidemics which have visited Abadan in the past.

LLANDARCY THROUGHPUT.

The throughput at Llandarcy was well maintained, being some 50,000 tons in excess of the previous year (914,250 tons, against 864,795 tons). A greater variety of products was manufactured, enhancing the value of the "refined ton," and new plant is still being gradually introduced into this refinery in order to enable us to produce a yet more varied series of products. A noticeable feature has been the keenness in the district to obtain employment in the refinery due to the stability of our industry compared with others in the neighbourhood.

At Grangemouth the Persian crude throughput reached the creditable figure of 263,000 tons. Excellent yields and products continue to be obtained.

The refinery of our associated company in Australia—the Commonwealth Oil Refineries, Limited—has operated steadily and satisfactorily.

Operations in the refineries of our other associated companies continue to be satisfactory, but call for no special comment.

TANKER FLEET.

As mentioned in the report, the vessels of the British Tanker Company have been given continual employment throughout the year in carrying the company's products, and there have been no serious accidents. In addition to giving employment to our own fleet, we have recently had to effect several outside charters, but as tonnage can now be hired at advantageous rates there is no inducement at the moment to build further boats, particularly pending the result of the dredging of the bar at the mouth of the Shatt-el-Arab, to which I referred last year. This work was commenced last December, and good progress has been made. It is too early to speak definitely, but we are hopeful of successful results, and in that event the quicker turn round of our tankers which we should obtain would be equivalent to a material augmentation of our fleet.

SHALE INDUSTRY.

With regard to Scottish Oils, Limited, in which, as you know, we hold £1,000,000 in ordinary shares, and the public £3,000,000 in preference shares, I am sorry to say that the decline in market value, to which I referred last year, and the termination since

then of a remunerative long-term contract, have again placed the shale industry in a very adverse position, with the result that this portion of that company's business is now being carried on at a very heavy loss. Various efforts have been made with a view to ascertaining if any possible measures can be found for averting the serious addition to the list of unemployed which would be caused by the closing down of such an old-established industry. The closing down would not only mean loss of employment to the workers in the mines, but also to the men employed in the crude oil works and refineries, collieries, and other industries dependent upon the shale fields in a district where there is but little chance of the workers finding other employment. It, therefore, should be avoided, if at all possible, in view of the appalling amount of distress that would result therefrom. The directors of Scottish Oils, Limited, have, of course, done everything they reasonably can to keep the industry alive, and thus avert the threatened disaster; but, obviously, the shareholders cannot be expected to bear the whole burden of carrying on operations which can only be conducted at a heavy loss. The part of the organisation of Scottish Oils, Limited, which is employed in refining Persian oil and marketing the products therefrom is giving satisfactory results, but, notwithstanding this, the Anglo-Persian Company has so far received no return on the £1,000,000 capital which it invested in the company five years ago.

DISTRIBUTION.

On the distributing side of our business we are, I am pleased to say, continuing to make satisfactory progress. Our now well-known brand of petrol—B.P.—gains daily in appreciation, and our sales of it show steady expansion in every country into which it has been introduced. Our other products also command a high preference owing to the excellence and regularity of their quality. The only petroleum product of importance which we are not yet placing in large quantities on the world's markets is lubricating oil, but in that also we shall before long be in a position to take our share of the available trade. We have now our own or associated distributing organisations in Persia, Iraq, the United Kingdom, the Irish Free State, France, Belgium, Italy, Denmark, Norway, and Australia, and arrangements are in progress for establishing distributing facilities in such other countries as offer remunerative outlets for our products.

"B.P." SPIRIT.

In this connection there is one other point to which I should like to refer, and that is the astonishing lack of knowledge which still appears to prevail as to the fact that "B.P." is the product of the Anglo-Persian Oil Company. Notwithstanding that in advertisements it is always explained that the British Petroleum Company is the distributing organisation in this country for the Anglo-Persian Company, and notwithstanding the appeals to consumers industries, we are every day coming across consumers and garage proprietors who express the utmost surprise at learning that "B.P." is the spirit manufactured by the Anglo-Persian Oil Company in this country, and the only one of purely British manufacture in the market. When one remembers the vast number of people desirous of supporting British industries, and who take a keen interest in the affairs of this great British company, I feel that it is only necessary to bring home to them the origin of this brand of spirit for them to decide immediately to go for they will not only assist the company, but they will thereby be rendering national service by providing additional employment to workers in this country, whilst securing for themselves a petrol of proved excellence of quality.

RELATIONS WITH THE PERSIAN GOVERNMENT.

The past year has been characterised by one important event in connection with our relations with the Persian Government in a visit to our oilfields and to our refineries at Abadan by his Imperial Highness Riza Khan Pahlevi, who has, as you are no doubt all aware, recently been given by vote of the Mejlis full control of the State. This is the first occasion on which our operations in Persia have been inspected by so high a personage, and I am pleased to report that his Highness expressed the utmost gratification in the great work which has been achieved by us in the face of the many difficulties attendant upon carrying on operations in a country devoid of transport and of other commercial facilities. This visit, we are assured by our representatives, cannot but have a favourable effect upon our relations with the Persian Government, inasmuch as it has impressed upon his Highness not only the magnitude and efficiency of the operations we have carried on in the past, but also the great potentialities of the Persian oilfields as a future source of increased revenue to his country. The further developments necessary to produce this increased revenue can only, of course, be carried on under conditions of security, and it is therefore a matter of satisfaction to us that the Persian Government have now for the first time established a military force

in the neighbourhood of the fields to give us the protection guaranteed under the concession.

I would like to take this opportunity of pointing out how greatly the advent of the company has added to the welfare and happiness of the population in the districts in which it is operating, and I am pleased to say that this is fully realised and appreciated in Persia. Apart from the employment we afford to many thousands of Persians, it is our aim to do all we can to promote the well-being and the prosperity of the inhabitants of the country with which we are associated in this extensive enterprise, and in many directions we are rendering most valuable assistance.

The Right Hon. the Lord Bradbury of Winsford, G.C.B., seconded the resolution, which, after some discussion, was carried unanimously.

DALGETY AND COMPANY, LIMITED.

SATISFACTORY RESULTS DESPITE YEAR'S DIFFICULTIES.

POSITION OF THE WOOL INDUSTRY.

The 41st annual general meeting of Dalgety and Co., Limited, was held, on the 12th instant, at 65-68, Leadenhall-street, London, the Hon. Edmund W. Parker (the chairman) presiding.

The Chairman said that last year the directors were able to submit a most satisfactory statement of accounts, and it afforded him great pleasure on this occasion to deal again with an equally gratifying statement. New Zealand had contributed largely to the successful year, and he hoped the Dominion had now entered upon an era of prosperity after the depression of a few years ago. The past year had proved one of the most anxious yet experienced by the directors, so far as finance had been concerned, as, owing to the great slump in wool prices and the consequent hold-up of sales in Australia, the company's resources had been greatly strained. However, the position of the company proved more than adequate to overcome the difficulties, and to-day, save for industrial troubles, they were in much calmer waters. Their extended operations in wheat and the carrying on of their clients through difficult times had absorbed a large amount of capital, and the directors were now considering various means of increasing the company's resources in this direction, because, should the business expand as it had done during the past few years, they could employ a substantial amount advantageously. Among the anxieties which had beset them during the past year, by no means least had been the troublous times of industrial unrest. Strike had followed strike, and the refusal of the seamen manning British overseas ships to abide by the reduced rate of wages agreed upon over here had resulted in a very serious state of affairs at Australian ports. The refusal of the crews to work the ships had caused immense losses to shipowners, while British trade was being grievously hampered.

WOOL INDUSTRY.

Reviewing the conditions which had ruled in the wool industry during the past year, the Chairman said that, owing to an excellent season in Australia, the joint production of Australia and New Zealand had reached 2,686,554 bales—a larger total than ever previously recorded. Had the favourable prices prevailing at the time of the last meeting continued, he would have been able to record a wonderful result, but prices did not hold. Values for all grades continued to rise until December of last year, and reached almost unprecedented figures, but from then onward a decline set in, which rapidly developed into a slump. Not only did merino wools lose most of the improvement which had accrued during the past two or three seasons, but crossbred values also fell heavily, and prices towards the end of April were on an average 40 per cent. to 50 per cent. below the highest point reached in December. Attempts were made to check the downward trend of prices by strictly limiting the offerings, but this was not successful, and by the end of April the demand had fallen off to such an extent that it was found necessary to suspend the auctions in Australia altogether. Fortunately for New Zealand the full severity of the fall was not felt there, as the season had closed before that time and the bulk of the wool had been sold at satisfactory prices. At the time of the suspension of the auctions there remained about 455,000 bales of the current clip to be disposed of, and it was not found desirable to resume the sales until the second week in July. The addition of new clip wools increased the carry-over at June 30th to over 500,000 bales. In spite, however, of the lesser quantity sold and the low values ruling in the latter part of the season, the monetary return was greater, being £69,083,182, as against

£64,929,298 for the 1923-24 season. The average per bale worked out at £33 13s 10d, as against £29 9s 9d in 1923-24. The break in prices, which was inevitable as a result of the slump, was serious and prolonged. The suspension of sales, however, had a good effect, as it allowed the buyers a certain amount of breathing space, which enabled them to recuperate their resources, and, since the auctions had been resumed, selling had continued practically unabated, with a welcome clearance of the offerings and a certain stiffening of values. At the sales in London, which concluded at the beginning of October, this satisfactory state of affairs continued, and he hoped it might exist when the next series of sales opened on the 24th inst. The position, however, was not devoid of anxiety, and while he did not wish to appear unduly pessimistic, he found it difficult to view the immediate future with any great degree of confidence. The heavy fall in values occasioned immense losses to manufacturers, and until the effects of these had been to some extent adjusted it would be foolish to expect any permanent improvement in prices.

DAIRYING AND FROZEN MEAT INTERESTS.

Dealing with the company's dairying and frozen meat interests, the Chairman said that, as a result of Australian being blessed with a good rainfall, a record production of butter ensued, the importations from the Commonwealth showing an increase of 134 per cent. over the preceding year, and the average price realised was higher than in the previous season. The approximate value of New Zealand dairy produce imported into this country for the year under review was about £18,000,000 and the Dominion maintained its position as the largest exporter of dairy produce in the world. The company's business in this commodity had again shown considerable expansion. Prices for mutton and lamb had been on a level during the whole year, which must have been most satisfactory to producers. As regarded frozen beef, Continental demand had continued, and slightly better prices had been realised. The Australian wheat crop for the 1924-25 season reached 160,400,000 bushels, a yield which was the highest but one recorded. About 118,000,000 bushels were available for export, and prices rose to a high level owing to poor crops in other exporting countries. As to the coming crop, prospects were very bright for the first few months after seeding, but lack of rains on the wheat areas, especially in New South Wales, had since caused estimates to be reduced. A repetition of last season's high

prices could not be expected, since this year the world supply of wheat seemed ample for all requirements.

LATEST CABLES.

Referring to the outlook, the Chairman read the following latest cable advices:—

From Australia:—"In Queensland—The southern and far northern pastoral districts are dry, and rain is anxiously awaited. There have been no stock losses to date. The agricultural prospects are only fair.

"In New South Wales.—The pastoral outlook generally is fair, except in the Moree, Mungindi, Liverpool Plains and Hunter River districts, where drought conditions prevail. General rains are required to ensure the season. The agricultural outlook is not satisfactory.

"In Victoria—Owing to light winter rains, the pastoral outlook is generally unsatisfactory, and the season is causing anxiety. In the agricultural districts immediate rain is necessary to ensure a fair harvest.

"In South Australia—In the north-west, north-east, and Barrier districts the season is very fair, but in the far interior it is bad. Agricultural prospects are good.

"In Western Australia—The pastoral areas generally are dry, and a serious position will develop unless early summer rains fall. The Roebourne district is experiencing a severe drought. The agricultural outlook is only fair.

"The Australian wool clip is expected to exceed the last by 5 per cent. The wool will not be of such heavy condition, but thinner; the staple dry and light, yielding less per head.

"Wheat production will probably be 30 to 40 per cent. less than last year, and the butter production 30 per cent. less."

From New Zealand:—"A wet winter and cold spring caused considerable mortality among young stock. The lambing is estimated at 5 per cent. to 10 per cent. below the average, and the wool clip is expected to be from 5 per cent. to 10 per cent. lighter. As a result of a late season, meat and dairy produce exports will be short till the end of the year, but, with weather conditions now favourable, a recovery can be expected later. There will be a reduced area in grain, but a probable increased area in grass and clover seed. Anticipate a payable value for all products, although lower than last season. The outlook generally is satisfactory. The practical termination of the shipping strike and the return of the Reform Party under Coates' leadership with largely increased majority will imbue confidence."

ADVANCE IN PROFITS.

Dealing with the accounts, the Chairman said that last year he stated that the net profits must be regarded as approximating to high-water mark, but, despite the adverse conditions with which they had had to contend, the previous year's figure had been exceeded to the extent of £37,324. The net profit amounted to £361,312, and the directors recommended a final dividend on the ordinary shares of 3s per share, making 10 per cent. for the year, and also a bonus of 7s per share, both free of English income-tax. It was also proposed to appropriate £75,000 to writing down the cost of premises, to transfer £25,000 to the staff provident fund, and to carry forward £236,364. The directors felt that, in view of the troubled state of labour in Australia and the consequent possibility of another hold-up of wool sales in the Commonwealth, it was wise to retain a larger percentage of profits than usual in the carry-over.

The report and accounts were unanimously adopted.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED. COMPANY'S BEST YEAR.

The forty-fifth ordinary general meeting of this company was held, on the 11th inst., at Winchester House, Old Broad street, London. Mr George Turner, M.E. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that when presiding at the meeting a year ago he had ventured to be a little optimistic. His optimism had been justified, since, whilst their accounts for 1924 had shown a considerable improvement on the preceding year, the accounts now under consideration represented the best year the company had ever had. The railway was largely responsible for the increase in profits. That fact was especially gratifying, as the increased earnings not only helped the revenue but protected their capital position. The Government had the right to buy the railway in 1931, and at 10-year intervals thereafter, and the price to be paid was to be measured by the earnings of the railway; the higher the earnings, the larger the sum they would receive in the event of its being taken over. The railway earnings for some years past had shown progressive increases of about 5 to 6 per cent., and for the

year under review the passenger traffic showed an increase of 17 per cent. and the goods traffic of 21 per cent.

Operating expenses showed a decrease of 10.16 per cent. at 64.33 per cent. of the earnings, and they hoped to see lower figures in the near future. As to the general trading account, the mines had had on the whole a fair year. Competition, owing to the slump in Bengal coal, had become considerably keener, and their profits had not been quite so large, but their coal being the best in India they were in a good position to meet competition, while there was a tendency for production costs, which were extremely high, to become lower. In the company's new collieries the work of preparation and development had been continued. The financing of their various ventures—the new mines, new garden, veneer mills, &c., and the large additions to the rolling stock on the railway—had required some arrangement, but the board had preferred, as it was a temporary matter, to finance by arrangement with their bank rather than raise fresh capital. The balance of general net revenue showed a profit of £145,069, as against £137,779 last year, and was the largest profit which the company had ever shown. After writing £10,000 off discount on debentures, the balance enabled the board to recommend a final dividend on the B stock of 6 per cent., making 9 per cent. for the year.

Sir Walter R. Lawrence, Bart., G.C.I.E., G.C.V.O., C.B., seconded the motion, which was carried unanimously.

LONDON MARITIME INVESTMENT COMPANY, LIMITED. LORD KYLSANT ON TRADE PROSPECTS.

HOPEFUL INDICATIONS.

The twenty-eighth annual general meeting of the London Maritime Investment Company, Limited, was held, on the 11th instant, at Winchester House, Old Broad street, London, E.C.

The Right Hon. Lord Kysant, G.C.M.G. (the chairman), presided.

The secretary (Mr O. A. Hall) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—This is the 28th annual meeting of the London Maritime Investment Company, Limited, over accounts for the 12 months ended September 30, 1925, now submitted, show a satisfactory position as a result of the past year's working.

The net profit of the company for the period under review indicates a slight revenue increase over that for the previous year. After paying the dividend on the preference stock and again adding to the reserve fund, the directors recommend the distribution of a final dividend of 4 per cent., less income-tax, on the ordinary stock, making, with the interim dividend paid in April last, 8 per cent., less tax, for the year, and that the slightly increased balance be carried forward.

RESERVE AND INVESTMENTS.

The accounts set out clearly the position of the company, and do not call for special comment. The reserve fund, which now amounts to £210,000, is separately invested in first-class gilt-edged securities, whilst, as stated in the report, a valuation of the company's investments as at September 30, 1925, shows that the capital and reserve fund are more than intact. The total paid-up capital of the company is £1,000,000—viz., £500,000 in there are no debentures.

The shipping industry, in which this company's interests so largely consist, is, as is well known, still passing through difficult times, owing to the long-continued depression of world trade. There are some hopeful signs of a coming upward movement in British industry and commerce, though progress, if it is to be maintained, must necessarily be gradual, and contingent, as the Prime Minister lately reminded the country, upon the non-recurrence of serious industrial disturbances.

Improvement in the shipping industry naturally follows upon trade recovery, but competition is very keen, and nowhere more so than upon the sea, which is open to all nations.

BRITISH FINANCIAL POLICY.

The financial policy of the British Government is one that fundamentally affects the trade of the country, and much depends upon the correct solution of our financial problems whether business recovery will be facilitated or retarded.

I have always been a believer in sound finance, and was one of those who warmly welcomed the re-introduction of the gold standard on April 28th last. In my presidential address to the gold standard Chamber of Commerce a few days later I expressed the opinion that that date would "mark the beginning of a new era in the prosperity of this country."

It is satisfactory that the Chancellor of the Exchequer has now taken a further step in the same direction, and has removed the

embargo on the issue of Dominion, Colonial, and foreign loans. I am convinced that this will have a salutary effect upon our export trade, resulting in a stimulus to industry, with consequent increased employment.

CHEAPER COAL ESSENTIAL.

Another important contributory factor in trade improvement is the price of coal. The market price has fallen somewhat, but I hope we may see a further substantial reduction in the price of coal, which reduction can, in my opinion, be brought about without necessarily reducing miners' wages. Cheaper coal would be an enormous advantage to all branches of industry and commerce.

In the best interests of the country it is to be hoped that the price of Welsh coal will come down to considerably below a pound a ton. This should not be impracticable, seeing that when I was a young man best Welsh large coal was sold freely at under 10s a ton. It is sometimes overlooked that our pre-eminence in shipping was, in the past, largely built up because this country was an exporter of huge quantities of coal at prices which met world competition, in return for which we received more cheaply than would otherwise be possible the food and raw materials which support our national existence.

Any cessation of our ability to maintain this coal export traffic must cause anxiety, in view of the vital importance to our country of the prosperity of British overseas trade.

A SOUND POSITION.

This company is in a sound position and should benefit by any improvement in the maritime trade of Great Britain. I now have pleasure in proposing: "That the report and accounts for the year ended September 30, 1925, as submitted, be received and adopted, and that the dividend as therein recommended be declared and paid."

Mr Arthur A. Baumann seconded the resolution, and it was carried unanimously.

On the motion of Mr Baumann, seconded by Mr George M. Dodd, the retiring director, Lord Kysant, was re-elected; Messrs Fookes, Hickman and Co. were reappointed auditors, and the proceedings then terminated.

JOSHUA HOYLE AND SONS, LIMITED.

INCREASED PROFIT—BETTER OUTLOOK.

The ordinary general meeting of Joshua Hoyle and Sons, Limited, was held, on the 11th instant, at the registered office of the company, India Mill, Bacup, Lieut.-Colonel J. Craven Hoyle, T.D., D.L. (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profit for the year under review showed an increase of 80,492 over the previous year. The directors proposed to pay a dividend of 1s 3d per share, less tax, on the ordinary shares (making 10 per cent. for the year). Last year he expressed the hope that the signs pointed to a turn for the better in their business. Shareholders would see from the accounts that as regards Joshua Hoyle and Sons, Limited, that hope had been fulfilled, and during the earlier period of the last twelve months, for the trade of Lancashire generally. The results of the year's trading again confirmed the soundness of what had been the guiding policy of the firm in varying, as much as possible, the nature of their productions. But there was also another cause which had had its effect, and that was the close attention given by all who held responsible positions in the firm.

Telegraphic Address: KANSALLISPANKKI.

Although the fluctuations in cotton had not been as serious as they had been in the twelve months ending September 30, 1924, he considered that the period under review had been filled with as much anxiety as in the former period. He was glad to say that during the past twelve months the goodwill which had existed for so long between the directors and the workpeople had been continued. With the exception of their Tong Mill, the machinery had been well employed during the year.

Dealing with the question of cotton, he thought he could say something which might go further than a hope, and it was that again there were signs of business of a substantial nature moving. The only thing which was holding that up was the question of the price of cotton. When the price was stabilised he thought they could all hopefully look forward to a period of not only good trade, but profitable trade.

Last month the most momentous conference was held at Locarno. That should be the forerunner of actual peace conditions for the greater part of the Continent of Europe, thus enabling freer conditions of trading to exist between our own country and the Continent. What had been done to bring about peace abroad would, he trusted, be an example to bring about peace at home. As the result of the Locarno Conference goodwill should be established, so he hoped the same commonsense would be brought to bear in this country to establish goodwill between employers and employed, peace in the industrial world and confidence in the commercial.

Sir Wm. L. Berry, Bart., seconded the adoption of the report and accounts, and it was carried unanimously.

SIDNEY TURNER, Accountant-General.

India Office, November 11, 1925.

Messrs Samuel Montagu and Co. write on November 11th as follows:—

GOLD.

There was practically no gold available on the open market this week, and requirements were met by withdrawals from the Bank of England. The following movements of gold, to and from the Bank of England have been announced since our last letter:—

	Received.	Withdrawn.
Nov. 5.....	nil	53,000
" 6.....	nil	535,000
" 7.....	nil	102,000
" 9.....	nil	111,000
" 10.....	nil	70,000
" 11.....	nil	127,000

The destinations of the £510,000 sovereigns withdrawn were announced as follow:—£500,000 set aside for account of the South African Reserve Bank, and £10,000 to the Straits Settlements. During the week under review £998,000 has

been withdrawn, increasing the net efflux to £7,916,000 since the resumption of an effective gold standard. The Transvaal gold output for October, 1925, amounted to 812,832 fine ounces, as compared with 797,247 fine ounces for September, 1925, and 827,583 fine ounces for October, 1924.

SILVER.

The silver market has not been so active, and sales on China account have been a little less pressing. After a fall of 1/4d in both prices on the 5th instant, the quotations fluctuated within narrow limits, business being on rather a small scale and the market therefore easily influenced. In the absence of selling, prices would have quickly responded to any inquiry, but buyers proved reluctant, although a little support has been forthcoming from America. The Indian bazaars have sent orders both to buy and to sell, but on the whole have shown little interest. The difference between the two prices, after having ruled at 1/4d during the week, narrowed yesterday to 1/8d, the demand for prompt delivery being rather less keen. A resumption of China selling to-day further depressed the market, both quotations being fixed 1/4d lower at 32d and 31 1/2d for cash and forward deliveries respectively—the lowest price for spot since August 8, 1925, and for forward since July 6, 1925. United Kingdom imports and exports of silver during the week ending the 4th instant were as follow:—

Imports.		Exports.	
	£		£
Netherlands.....	65,918	Lithuania.....	48,750
U.S.A.....	14,316	France.....	28,729
Other countries.....	5,375	Austria.....	11,080
		Egypt.....	21,350
		British India.....	38,254
		Other countries.....	16,223
Total.....	86,109	Total.....	164,386

INDIAN CURRENCY RETURNS.

RUBBER, &c.

AMALGAMATED (RUBBER) FINANCE COMPANY, LIMITED.—The recent issue of 1,000,000 shares of 2s each at 2s 6d (6d being premium) by way of rights has all been taken by shareholders. Applications for excess shares have been cut down by 87½ per cent.

ANGLO-SUMATRA RUBBER.—The report for year ended May 31, 1925, shows a net profit of £32,805, against £18,628. The ordinary dividend is raised from 20 per cent. to 35 per cent. The sum of £5,000 is put to reserve, and £5,574 carried forward. During the year the crop was voluntarily restricted in accordance with the agreement to adopt the exportable allowances in operation in the Federated Malay States and Ceylon. Crop was 608,015 lbs.

BEKOH CONSOLIDATED RUBBER.—The net profit for year ended June 30, 1925, amounted to £15,335, against £3,343. The ordinary shareholders receive £20,799 in dividend, against no dividend for preceding year. The output of rubber was 407,748 lbs. The standard production for current year is estimated at 776,810 lbs. The following forward sales for forward delivery have been entered into:—Year ending June 30, 1926, 140 tons, i.e., 313,600 lbs at an approximate average price of 2s 2½d per lb London; June 30, 1927, 90 tons, i.e., 201,600 lbs at an approximate average price of 2s 0½d per lb London; June 30, 1928, 30 tons, i.e., 67,200 lbs at an approximate average price of 2s 2½d per lb London. Total assets are £336,358. Cash is at £7,205. There are no investments.

CASTLEFIELD (KLANG) RUBBER ESTATE.—The restricted crop harvested during the year ended June 30, 1925, amounted to 668,095 lbs, as compared with 657,852 lbs obtained for the previous year. The average net price realised for all grades, including the unexportable surplus at the close of the financial year, at a conservative valuation, was 9.9d per lb net. The net profit is £39,085, against £12,223. The dividend is raised from 10 per cent. to 35 per cent. The sum of £5,000 is put to reserve. Balance-sheet shows total assets £180,866. Cash is at £34,393. Investment at cost is in balance-sheet at £1,341.

MORIB PLANTATIONS.—Net profit for year ended June 30, 1925, amounted to £7,451, against £1,573 for preceding year. Ordinary dividend has been raised from 3 per cent. to 10 per cent. Sum of £1,000 has been put to reserve. Carry forward is £1,601. Total assets are £104,949. Cash is at £6,606. With regard to liabilities, reserve stands in balance-sheet at £19,000. The report states that a general improvement in conditions on the plantations is reported, and the palms are now commencing to show the benefit of the special cultivation programme carried out during the last two or three years. The weight of the nuts harvested showed an appreciable increase. The quality of the manufactured rubber has much improved. New coolie lines have been provided during the year. An adequate labour force was maintained. Health was fairly good.

REMBI RUBBER ESTATES.—The net profit for year ended September 30, 1925, amounted to £31,485, against £5,735. Preference shareholders receive 33 per cent., clearing off all arrears. The ordinary shareholders are to have a dividend of 21 per cent. The sum of £2,695 is put to reserve, making total reserve £10,000. The carry forward is £6,227, against £2,038 brought in. During the past season a restricted crop of 312,799 lbs of rubber was secured, the gross average including the portion valued being 2s 10.8½d per lb, as against 30s.43½d per lb at 2s 0.8½d per lb gross for the previous season. The reports received regarding the property are of a satisfactory nature, and they show that the estates are in good order and well maintained. During the year 10 acres were cleared and planted with rubber. Balance-sheet shows total assets £122,900. Cash is at £17,809. The company has £2,000 invested in 5 per cent. National War bonds at cost.

BUMGAT SIPUT RUBBER PLANTATIONS.—The net profit for year ended June 30, 1925, amounted to £4,100, against £386 in preceding year. The ordinary dividend is 6 per cent., against nothing in preceding year. The carry forward is £2,380, against £1,543 brought in. Crop of rubber totalled 138,408 lbs. Of this crop 121,498 lbs have been sold in London at an average gross price of 1s 7.30d per lb. The corresponding figures for 1923-24 were 137,648 lbs at an average gross price of 1s 0.68d per lb.

SONOSERAR PLANTING COMPANY.—The crops harvested during year ended June 30, 1925, were:—Rubber, 282,581 lbs; coffee, 2,020 cwt. The gross average price realised for rubber was 2s 5.55d per lb, and for coffee 8s 6d per cwt. The cost of production of rubber was 7.87d f.o.b., including depreciation. Coffee cost 48s 10d per cwt. Under the restriction of output scheme, which the company voluntarily adheres to, the standard production is agreed at 355,425 lbs. The quantity to be harvested is dependent on the percentage allowed to be exported. The estimated coffee crop for 1925-26 is 1,235 cwt. The estates have been maintained in good condition. Net profit amounted to £16,526. The ordinary dividend is 15 per cent. The sum of £3,220 is carried forward, against a debit of £3,556 brought in.

MISCELLANEOUS.

ANSELL'S BREWERY.—The balance-sheet, dated September 30, 1925, reveals total assets £2,606,100, as compared with £2,461,736 in preceding balance-sheet. Cash is higher at £335,578, as compared with £285,670. Stocks stand at £206,152, as against £266,872. The company has £50,000 invested in Birmingham Corporation Stock. Total investments are £52,680, against £8,819. With regards to results achieved, a net profit, after payment of

debenture interest, of £184,434 has been made, against £146,984. Dividend and bonus amount to 15 per cent., free of income-tax, against 12½ per cent., free of income-tax. Reserve is fortified by the allocation of £50,000, which makes total reserve fund £280,000. Carry forward is £114,519, against £87,585 brought in.

BRITISH AUTOMATIC COMPANY.—The net profit of this concern has risen from £66,184 to £72,719 for year ended September 30, 1925, and the dividend has been raised from 10 per cent. to 11½ per cent. The sum of £5,000 has been put to reserve, making total reserve £140,000. The sum of £15,000 has been written off the cost of new machines and fittings provided during the year. The carry forward is £10,829, against £9,549 brought in. The balance-sheet reveals total assets £686,534. Cash is at £12,089. Government and other securities amount to £113,530. Reserve fund investments stand at £140,073. Stocks are at £49,909. Investments in Reeves, Limited (Glasgow factory), stands at £135,000.

HORDEN COLLIERIES.—The net profit for year ended September 30, 1925, amounted to £115,520, against £250,536. The ordinary dividend is halved, being 6½ per cent., free of income-tax, against 12½ per cent., free of income-tax. The sum of £20,000 is put to reserve, making total reserve £240,000. The sum of £57,152 is carried forward, against £55,382 brought in. Total assets stand at £2,477,055, against £2,582,815. Cash is at £50,835, against £75,919. Investments are at £67,848, against £199,979. The report points out that the continuous expenditure on the collieries and cleaning plants has been well justified, as a considerably larger output has again been raised and marketed during severe depression in trade.

HOTEL CECIL.—The net profit for year ended August 31, 1925, is £51,493, against £71,775 in preceding year. The ordinary dividend is again 6 per cent. The carry-forward is £27,910, against £25,417 brought in. Total assets £1,667,817. Cash is at £34,353. Stocks stand at £42,717. Sundry debtors and investments stand at £19,263.

LAGUNAS SYNDICATE.—Gross profit for year ended June 30, 1925, is £40,243, against £61,982 for preceding year. A dividend of 2 per cent. is being paid on the ordinary shares, against nothing in preceding year. Expenses were reduced from £24,905 to £16,494. The sum of £1,987 has been transferred from reserve.

LIVERPOOL NITRATE.—The net profit for year ended June 30, 1925, is £51,255, against £108,157. The ordinary dividend has been reduced from 2½ per cent. to 15 per cent. The carry forward is £27,272, against £16,704 brought in. Manufacture of nitrate was continued throughout the year at Oficinas Ramirez and San. Oficina Carmen Bajo in February, 1925. The enlargement of Oficina Mapocho was not completed until the end of the year under review, and this delay, together with labour difficulties, has adversely affected the company's output and profits. However, the plant is now working, and the official trial for fixing the productive capacity is proceeding.

PAN DE AZUCAR NITRATE.—Net report for year ended June 30, 1925, is £36,182, against £20,317. The ordinary dividend is raised from 20 per cent. to 25 per cent. for the year. The sum of £15,000 is put to reserve. The carry forward is £8,457, against £8,759 brought in. Profit has been taken in the latest accounts on 248,724 metric quintals of nitrate. The average price realised was about 20s 2d per metric quintal. Total assets are £241,074. Cash is at £44,126. There are no investments.

S. INSTONE AND COMPANY.—The accounts for the year ended June 30th show a net profit of £28,564, against £71,495 for preceding year. The sum of £45,799 is brought in, making £74,363 balances due by associated companies and contingencies, and £23,188 is carried forward. No dividend is paid on preference £12,389. Investments (less depreciation) stand at £30,859. With company has guaranteed the bank loans of £150,021. The amounting to £37,858. There is a contingent liability of £72,396 on bills under discount, bills guaranteed, and investments.

TRINIDAD LEASEHOLDS, LIMITED.—The authorised capital is £1,500,000, in shares of £1 each, of which 1,049,250 have been issued and are fully paid. Total assets are £2,109,383. The company has British Government securities, at cost or under, £527,226, against 17½ per cent. in preceding year. The report for year ended June 30, 1925, states that substantial reductions have been effected in working costs. The production of 242,258 tons is the largest tons over the preceding year, and shows an increase of 38,055 panies amounted to 145,759 tons, compared with 122,911 tons. Of 43,338 tons over last year's figures. Continued attention has been directed towards effecting further economies in refining operations. The revenue received from the sales of products was £254,744 has been written off, £99,324 being in respect of wells.

VENESTA, LIMITED.—The report for year ended June 30, 1925, reveals a net profit of £58,284, against £74,921 in preceding year. The ordinary dividend is again 8 per cent. The carry forward is £69,115, against £56,558 brought in. An issue of 100,000 7 per cent. cumulative preference shares of £1 each at 25s each is made to strengthen the financial position of the company, and provide funds for increasing the output of goods for which there is a profitable demand in excess of the company's present capacity to produce them. The extensions in view are also estimated to reduce the costs of the existing production by improving the factories, and thereby lessening the incidence of fixed charges.

COAL.

Our Cardiff correspondent writes:—Anthracite and dry steam coals have again been a buoyant feature, and the recent increased volume of shipments across the Atlantic has been maintained. Sized coals are also fairly firm, and towards the end of the week some of the ordinary small coals have shown improvement. The position of the large steam and bituminous coals is also better, and with much improved supply of shipping the working of the collieries has been more regular. Shipments are more active, and it is anticipated that the volume of the export trade during the next two months will be greater than it has been at any other period since last July. The following are the current approximate quotations:—Best Admiralties, 22s 6d to 23s 6d seconds, 20s to 21s 9d; best drys, 23s to 24s; Black Veins, 20s to 20s 6d; Western Valleys, 19s 6d to 20s; Eastern Valleys 19s 3d to 19s 9d; best bunker smalls, 10s 6d to 11s; ordinary cargo smalls, 8s 6d to 9s; coking smalls, 10s 3d to 10s 6d; anthracite best large, 42s to 44s; Red Vein large, 28s to 32s 6d; machine-made cobbles, 57s 6d to 60s; French nuts, 57s 6d to 60s; stove nuts, 57s 6d to 60s; rubbly culm, 11s 6d to 12s; coke, special qualities, 35s to 40s; patent fuel, 20s 6d to 23s; pitwood, ex ship, 28s 6d to 29s. In the tinplate industry the threatened crisis over a wages dispute has been averted by a compromise, and the market is in a healthier condition than it has been at any other time this year. Demand is fairly steady, and prices of tinplate per basis box are again at 20s and over.

Our Sheffield correspondent writes:—There is no improvement to record in the coal market except that the cold spell has strengthened the demand for household fuel. The consumption of coke has increased lately, and as arrangements are in hand for lighting additional blast furnaces, the depression of the trade should soon be relieved. The tonnage of South Yorkshire coal going abroad is limited. Best steams are quoted at 18s 6d f.o.b.

IRON AND STEEL.

We have extracted the following from the weekly report of the London Iron and Steel Exchange. A steady business is passing in the iron and steel markets. The same steadiness, however, cannot be discovered in the prices at which business is being done. The

British steel makers, who are securing a fair share of the business, passing, have only done so at the expense of granting price concessions. In the pig-iron department in particular stocks have been largely cleared, a number of blast furnaces have been re-heated, and the decline in prices extending over several months has been apparently definitely checked. In the semi-finished department Continental competition is keenly felt. Moderately active the low prices quoted by Continental makers a fair business has passed. A feature has been some large inquiries for steel rails and railway equipment.

Our Middlesbrough correspondent's report, dated Nov. 12th, is as follows:—Pig-iron: The market has been considerably strengthened and makers, being now well situated with regard to the disposal of their output, are now holding out firmly for 66s per ton for also well maintained. The hematite position is buyers, and 75s per ton is now being asked for East Coast mixed numbers. Manufactured Iron and Steel: There is a slow but steady improvement in the steel trade, and a freer flow of specifications. Meanwhile current quotations are as follows.—Steel ship plates, £7 5s; steel ship angles, £7; iron bars, £11 5s; steel rails, but with the freight market gathering strength best Bilbao rubio is steady at 20s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—The sentiment in iron and steel circles continues optimistic, but the change of tone has brought no increase of work to the Sheffield manufacturers. The of activity. The weak spot is the large scale production of crude and forgings for special engineering work. Not much forward quantities than formerly, and prices are being maintained at last week's figures. Work is only on a moderate scale in the railway department. The tool steel department continues extremely brisker. Motor requirements are easier for the moment. Engineering is good in parts, with numerous instances of acute depression. The scrap market is firmer, with, however, no forward business

CONDENSED MILK.—Machine-skimmed tends firmer, owing to a spell of cold weather. Current prices are 3s to 4s below those ruling at same time last year. Machine-skimmed quoted 15s 6d; full-cream Danish, 26s to 26s 6d; Dutch, 23s 6d to 24s per case.

HONEY.—New Zealand continues in request at full rates, but otherwise market displayed quiet features.

RUBBER.

Market firmer on a better Continental and American inquiry, though slight irregularity was noticeable at times. Plantation standard sheet, spot, also November, sold, 3s 11d to 4s 1d; December, 3s 10d to 3s 11d, 3s 11d and 4s; January-March, 3s 7d to 3s 8d, 3s 8d and 3s 9d; April-June, 3s 4d to 3s 6d; January-December (1927), sold, 2s 4d to 2s 4d, and first crepe ditto, 2s 4d to 2s 4d, c.i.f.

GENERAL.

HEMP.—Manila quiet and featureless. J grade, January-March, quoted 44s 10s; K, ditto, 43s 10s; L, 43s; M, 43s. New Zealand quiet and nominally unaltered. African sisal quiet. No. 1, Tanganyika, October-November, sellers, 44s; Kenya, 44s 10s per ton.

SHELLAC. steady. Fair, T.N. orange, spot, 24s; December, 22s 6d; March, 20s 6d per cwt.

COPRA firm, with fair inquiries. F.M.S. Straits, to Rotterdam,

October-November, buyers, 43s; November-December, 42s 17s 9d; November-January, sold, 42s 17s 6d. Dutch E.I., October-December value, 42s 15s. Ceylon, October-November, 43s 15s. South Sea ditto, 42s. Palm kernels, to Liverpool, January-March, sellers, 42s 2s 6d per ton.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, 42s to 44s; Cochin, 43s to 45s. Ceylon bristle, 41s to 42s; cinnamon leaf oil, 44d; citronella, Ceylon, 1s 10d; Java, 3s 2d.

bank bills was hard at $3\frac{1}{8}$ to $3\frac{1}{4}$ per cent., and the weekly allotment of Treasury bills was another indication of the unresponsive state of the market.

	Nov. 20, 1925.	Nov. 13, 1925.	Nov. 6, 1925.	Oct. 30, 1925.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	$4\frac{1}{2}$ (Oct. 1, '25)
Banks' Deposit Rate	2	2	2	2	$2\frac{1}{2}$ (Oct. 1, '25)
Discount/Call	2	2	2	2	$2\frac{1}{2}$ (Oct. 1, '25)
Houses/Notices	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$ (Oct. 1, '25)
Market rate (3 months' bills)	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	..

The Bank return showed a decrease of £378,000 in the stock of coin and bullion, this amount being in agreement with the figures of withdrawals of gold announced during the week; the note circulation declined by £317,000, and so the decrease in the Reserve was reduced to £61,000. Government securities rose by £845,000, while there was a decrease of £1,360,000 in Other. Public deposits rose by two millions, and so Other deposits were two and a half millions lower. Currency notes outstanding were reduced by £1,154,400 to £291,663,900, which includes £1,321,400 for notes called in but not yet cancelled. The fiduciary issue is £234,092,500, or £14,052,900 below the maximum for the year.

NEW YORK MARKETS.

Our New York correspondent cables:—The advances in discount rates by the Boston, Cleveland, and Philadelphia Reserve banks confirm the view, previously cabled, that the Reserve authorities desire to withdraw from New York excessive supplies of funds, apart from call money, which have been supporting speculative activity in the Stock Exchange. This theory and the moderate level of the New York Reserve Bank's discounts suggest that the local rate will be unchanged until greater demands are made upon the bank. This week's statements reveal a further drop in discounts in New York; this centre gained gold and showed an increase of 0.4 in the reserve ratio to 82.8. Total bills and securities for the whole system show a fractional increase, the reserve ratio being 72.1. Speculative activity has received an unmistakable check, and motor shares are already sharply deflated. Industrial and trade news remains good.

THE STOCK MARKETS.

The flood of new issues tends to check activity in gilt-edged stocks which remain quiet. The terms of the Gold Coast $4\frac{1}{2}$ per cent. loan at 94 were presumably responsible for its almost complete failure, underwriters being left with 97 $\frac{1}{2}$ per cent. The Brighton and Bristol Corporation loans were only partially subscribed, but Tasmania and Western Australia secured their money from the public. There has been a fair amount of business in the foreign bond market, but home rails are stagnant. A sharp rise in the price of raw rubber has caused renewed buoyancy in the share market and the oil share market has improved under the lead of Anglo-Persians. Courtaulds declined on the introduction of the new Snia Viscosa shares. Tobacco shares are strong, and the wireless group has enjoyed a mild rally. Mines have been irregular.

THE COMMODITY MARKETS.

Some improvement has taken place in the commodity markets. The tone of the coal market is better, and prices have hardened a little. Increased activity is evident both in the pig-iron and steel trades. The cotton trade shows little change, though a fair turnover has taken place for several Continental countries and South America. In the wool trade, interest is centred on the London auctions which open next Tuesday. Wheat prices, on the whole, show a slight decline. The market for sugar and coffee remains steady, while tea is strong with advancing prices. Rubber has risen to new high records. Of the metals, tin continues irregular, and copper is active, with slightly lower prices. Lead is being dealt in on a fairly liberal scale.

FOREIGN EXCHANGES.

In the foreign exchange market the week has been quiet, with little business and less violent movements than for some time past. Towards the middle of the week the dollar, which had been steady up till then between \$4.84 $\frac{1}{2}$ and \$4.84 $\frac{3}{4}$ showed some signs of weakening, and on Thursday for a time was again below gold export point. Yesterday morning it was a little firmer again at \$4.84 $\frac{1}{2}$ — $\frac{9}{16}$. The main reason for this movement would appear to be the expectation of a rise in the New York Federal Reserve rate, but it is by no means clear as yet when the policy of damping down the present expansion movement in America will win the day. Forward rates at about $\frac{1}{4}$ cent per month above spot are 1-3 $\frac{1}{2}$ cent wider than a week ago. In Paris there remains complete obscurity as to the outcome of the present crisis, and although the rate has fluctuated rather less wildly, moving during the week between 119.85 and 122.95, this is an indication rather of the temporary success of intervention than of any growth in confidence. At the time of writing the rate stands at 121.80, but there is little belief that this will be maintained. The Brussels quotation has moved between 106.75 and 107, which figure has been reached on one or two occasions. Yesterday morning it was quoted at 106.92 $\frac{1}{2}$, as compared with 106.85 a week ago. In spite of the debt settlement and rumours of pending loans in New York, the lira lost quickly the recovery shown on the 13th, and is now at 120 $\frac{1}{2}$, as compared with 119 $\frac{1}{8}$ a week ago, after being at one time as high as 122 $\frac{1}{2}$, on the whole a satisfactory feature in view of the temptation of seizing the opportunity for pushing down the rate. Amsterdam, after moving further against us in spite of gold shipments, is now back at 12.04 $\frac{1}{8}$, as compared with 12.04 $\frac{1}{2}$ a week ago; Switzerland, however, has fallen from 25.15 to 25.12 $\frac{1}{2}$, and Stockholm from 18.12 $\frac{1}{2}$ to 18.09 $\frac{1}{2}$, other stable currencies, such as Berlin, Vienna, and Prague, also moving slightly against us. Copenhagen and Oslo again show a sharp appreciation from 19.65 $\frac{1}{2}$ to 19.43 $\frac{1}{2}$, and from 24 to 23.73 $\frac{1}{2}$ respectively, the result of further buying in anticipation of a return to parity. Madrid at 34.01 is well above the 33.95 quoted a week ago, owing to increased fears of political difficulties. In the zloty there has been a renewed weakness, the rate having now risen to 31 $\frac{1}{2}$, as compared with 29 $\frac{1}{2}$ a week ago. In Eastern Europe Athens and Belgrade remain steady, but Bucharest has further depreciated from 1,035 to 1,060. In the East the rupee is unchanged on the week at 1s 6 $\frac{1}{2}$ d, but the yen has continued to improve from 1s 8 25-32d to 1s 9 $\frac{1}{2}$ d. The silver market has been very restricted, with one or two sharp movements, but in general the tendency is downward. Hong Kong has moved from 2s 5d to 2s 4 $\frac{1}{2}$ d, Shanghai from 3s 1 $\frac{1}{2}$ d to 3s 1 $\frac{1}{4}$ d. In South America the chief feature has been the further weakness of Rio, which has fallen from 7 13-32d to 7 5-32d. Buenos Aires, however, is slightly dearer at 46 $\frac{1}{2}$ d, as compared with 46 27-32d, and Monte Video at 51d, as compared with 50 $\frac{1}{2}$ d. Valparaiso, on the other hand, has depreciated from 38.80 to 39.10 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 14th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	6,550	From Revenue	8,041
Interest, &c., on Debt	330	Increase in Debt	168
Sinking Fund	278		
Sundries	3		
Increase in Exchequer Balances	141		
	8,209		8,209

Revenue amounted to £8,041,000, against £9,863,800 in the corresponding week last year. Customs produced £1,884,000, against £1,837,000, and Excise £1,696,000, against £1,741,000. Estate, &c., duties yielded £850,000, against £1,140,000. Property and income-tax brought in £1,041,000, against £1,217,000. Special receipts yielded only £11,000, against £1,000,000 a year ago.

The week's operations increased the National Debt by £168,000, and caused the following changes:—

(000's omitted.)	
National Savings Certificates ..	£ 200
Treasury Bills	558
3 $\frac{1}{2}$ % Conversion Loan	3,290
	+ 4,048
Public Department Advances ..	£ 3,500
Sundries	380
	— 3,880

The floating debt was reduced by £2,965,000 to £770,010,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Nov. 14th).

£		£	
Total Expenditure ..	480,030,499	Raised by Revenue ..	422,176,169
		Decrease in Balances ..	3,362,099
		Amount borrowed ..	54,492,231
Total	480,030,499	Total	480,030,499

ESTIMATES for FINANCIAL YEAR 1925-1926.

£		£	
Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—English, Scottish and Australian Bank, Australian Mercantile Land and Finance, North Anantapur Gold Mines, Djasinga Rubber and Produce, Sumatra Para Rubber Plantations, Bukit Tambun Estates, and Castlefield (Klang) Rubber Estate. At the meeting of the first-named company Mr Andrew Williamson welcomed the restoration of the gold standard, and delivered a long and interesting review of economic and trade conditions in Australia. At the Djasinga meeting Mr Eric Miller took an encouraging outlook for tea, as well as for rubber. At the Castlefield (Klang) meeting Mr W. A. Addinsell reviewed the contributory elements in rubber plantation prosperity.

PARLIAMENT AND THE PACT.

THE Locarno debate in the House of Commons on Wednesday was an unqualified and well-deserved triumph for Mr Austen Chamberlain and his policy, marked as such not so much by the force of the Foreign Secretary's exposition, convincing though that was, as by the failure of his critics to make any case worthy of serious consideration. To do Mr Ramsay MacDonald, in particular, due justice, he showed no desire to take the field as critic of the Pact. On the contrary, he gave it his general blessing, and but for pressure from behind even the few reserves to which he did give expression would probably have been left unvoiced. To sum up the opinion of the House of Commons in a sentence, while the Pact does not please Mr Saklatvala and twelve of his colleagues the whole of the rest of the Chamber gives it an overwhelming endorsement.

Apart from the weight attributed by Mr Chamberlain to the now widely-celebrated "spirit of Locarno" (a spirit carried thither in large measure by the British, French, Italian, Belgian, Polish, and Czechoslovakian delegates from Geneva), three features of the debate are of importance—the removal of certain ambiguities as the result of Mr Chamberlain's explanations, the discussion on the relation of the Dominions to the conference and the treaties, and a rather excessive solicitude for Russia on the Labour, and to a lesser extent on the Liberal, benches. The Dominion question falls rather within the field of Empire relationships than that of European pacification. Theoretically, of course, it is eminently to be desired that the Dominions should be associated at every point with

every new development of British foreign policy, and as it is they will receive every encouragement to set their signature beside this country's at the foot of the Locarno agreements. But the whole Locarno meeting was in a sense experimental. There was to be extracted from it what could be extracted from it. In the first instance, there was no justification for taking some half-a-dozen Empire delegates to a conference which it was rightly desired to make as small and informal as possible. Still less would there have been justification, when the need for carrying through the conference to a quick finish by the momentum unexpectedly developed had been demonstrated, for a delay at the last moment in order to consult the Dominions before the agreements were initialled. On that count Mr Chamberlain must be held to have vindicated his action completely.

Still more is that true of the suggestions made by Mr MacDonald that some despite had been done to Russia in the deliberate formation of a European bloc against her, and that new efforts ought to be made now to get Russia into the League of Nations. This is a matter on which clear thinking is rather urgently needed. In regard to Russia, three policies are possible. One is to adopt a definitely aggressive attitude towards her. That idea has fortunately disappeared since the days when the Coalition Government was giving all material and moral encouragement in its power to General Denikin and Admiral Koltchak. The second is to sit down, as some members of the Labour Party would apparently desire, and assent to a Russian ban on the unification of Europe being imposed until such time as the Soviet Government should decide to co-operate with other States. The third is to take cognisance of Russia's repeated and vehement refusals to have anything to do with the League of Nations, and in the light of that self-chosen isolation to weld together the rest of Europe in an association which, while it could in case of need serve as the basis of defensive action against Russian aggression, could be interpreted by no honest man, even though he were a Commissar in the Soviet Government, as an instrument of aggression against Russia. That is the policy of Locarno, and Mr Chamberlain had no difficulty in justifying it absolutely against criticisms from the Labour benches.

The Foreign Secretary's clarification of certain doubtful points in the agreement was of some value, particularly in so far as it disposed of the idea with which Mr Lloyd George seemed still disposed to toy—that treaties, whether contracted at Versailles or elsewhere, could be overridden by a board of arbitrators. Mr Chamberlain made it perfectly clear that under the Locarno treaties, as under any known conception of international law, the function of arbitrators is to determine what a treaty actually means, not what it ought, on ethical or some other grounds, to have meant. A further point on which a categorical assurance was needed, and was given in uncompromising language by the Foreign Secretary, was the unfettered right reserved to this country to decide, pending a ruling by the League Council, whether a "flagrant violation" calling for British intervention has or has not been committed.

All things considered, the debate in the House of Commons should have done what little any external action can do to make smoother the path of the German Chancellor and Foreign Minister. The Nationalist opposition in Germany is no less clamorous than it was, but there are signs that it is in reality becoming steadily less formidable. The rumours of a wild plot for a march on Berlin hatched in Eastern Germany appear to have some foundation, and, exaggerated though they may be, the fact that such a conception is anywhere seriously entertained is enough to alienate the more responsible members of the parties of the Right. The Nationalists, indeed, are slowly becoming disunited, and the decision reached by the Ministries of Justice and of the Interior—that the ratification of the Locarno accords requires merely a simple, and not a two-thirds, majority in the Reichstag—is enough to guarantee the Government against anything like a Parliamentary defeat. But what is needed is something more than a narrow majority, even though it is realised that the smallness of the margin is accounted for by the abstentions of Socialists who are whole-heartedly in favour of the Pact. It is no doubt sound enough tactics for the Socialists to adopt any reasonable means to force the Right to declare

its acquiescence in the Locarno accords, but if that in the end proves impossible it is hard to see what good purpose they could serve by refraining from voting for the Pact. The probabilities seem to be that at the eleventh hour they will decide to support it, thus making ratification by a comfortable majority certain.

Fundamentally Germany must settle her own policy and take her own decisions, but so far as the Allied Powers (if that term may survive a little longer as a mere matter of convenience) have had it in their power, they have removed every obstacle in the way of the party of reconciliation. The evacuation of the Cologne zone is to begin on the day the Locarno agreements are signed in London. The occupation in the other zones is to become steadily more "invisible." The Notes exchanged between the German Government and the Conference of Ambassadors have to all appearance cleared the trouble about armaments out of the way once for all so far as direct negotiations are concerned. The League of Nations must now take up the task of supervision, and the fact that the body with which the ultimate decisions rest will be the Council, with Germany as a permanent member of it, promises to make a vital change psychologically in the whole situation. That it may lead to some unlooked-for difficulties is clearly possible, but that is true of the whole of Germany's prospective activities as a member of the League. If the fear of difficulties had daunted the statesmen of Europe there could have been no Locarno. There having been a Locarno, confidence as to the immediate and ultimate future is justified not by any mere instinctive optimism, but by simple sobriety of judgment and clarity of vision.

IMPERIALISM AND COSMOPOLITANISM.

OUR enemies in the late war counted among the forces which might work in their favour a possible snapping of the apparently weak bonds which bound together the British Empire. The almost sensational completeness with which their hopes were disappointed forms one of the most remarkable chapters in modern history. Yet the hope must have appeared to possess a logical basis to any foreign student of the physical slenderness of the thread upon which our Imperial unity hung in 1914. Equally logical would have been the supposition that the back-wash of the war storm and the close implication of Britain in the post-war European tangle must raise issues of policy involving a variety of differing local interests formidable enough to dispel even the appearance of a united front. Yet, so far, that prophecy, too, has been confounded. In the last few weeks the Treaty of Locarno has shown up in clearer relief than ever one of the deepest of Imperial problems. Britain's European status has driven her to conclude, even to lead the way in framing, a far-reaching Treaty which places upon her (but not upon the Dominions) a burden of responsibility in maintaining peace in Europe. She has even been forced, by the exigencies of the time factor, to do this without any full consultation with the other members of the British Commonwealth of nations. Yet, since Mr Chamberlain affixed his initials to the Locarno Pact, the Prime Minister of Canada, while reserving Canadian judgment on the Treaty, has affirmed his country's determination to maintain the unity of the Empire, while the Prime Minister of Australia, in the electoral campaign which has given him so striking a triumph, played on the same theme with equal strength and clarity.

Welcome though they are, these facts should not be allowed to blind us in any way to the extraordinary difficulties which face the Mother Country in combining what one may describe as a cosmopolitan, or League of Nations, policy with the continuance of the policy of Imperial unity. All who are alive to the urgency of this problem will find much to occupy their thoughts in an address which was delivered last week before the Colonial Institute by Sir Halford Mackinder. If Sir Halford does not attempt definite answers to some of the questions which he poses, he at least presents the broad issues in a thought-provoking manner. Moreover, the address derives peculiar significance from the personality of its author. The public regard Sir

Halford, not without reason, as a representative British Imperialist. He is steeped in knowledge, study, and practical experience of Empire affairs. From the whole range of public men, he has been selected by the British and Dominion Prime Ministers to preside over the Imperial Economic Committee. From twenty to thirty years ago he was a staff officer in Mr Joseph Chamberlain's Imperial campaign. In those days the British Imperialist used to say in effect, "Here is the Mother Country; there are the Dominions. Let us join them together by the application of fiscal putty." The address of Sir Halford Mackinder this week contains no trace of such crude and narrow thinking. If he may be taken as in any degree typical of current Imperialist thought, then it is clear that the Imperialist school has moved, not fast enough perhaps, but still a very long way towards realisation of the enormous change which the past two decades have wrought in the status of the Dominions and the broad aspects of the Imperial problem. If the change, typified by Sir Halford, is general, it not only provides the explanation of our escape up to date from major difficulties in Imperial policy, but also affords the best ground for hope that the problems of the near future will be solved by vision and broad statesmanship.
