Sir Halford hung the greater part of his address on the text provided by the late Lord Milner's "Credo." The basis of this "credo" was a belief in the British race. "He believed in a certain blood," as Sir Halford puts it, "the carrier of a certain character, which it has taken tens of generations to evolve. He believed in the results of slow physical growth, and that paper conventions must supplement and not seek to supplant such growth." This conception of race as the basis of the Empire, as Sir Halford frankly realises, contains a dual challenge. Where, for instance, as the Aga Khan recently asked, do the Indians, the French Canadians, and the South African Dutch, find a place in such a conception of Empire? Sir Halford finds an answer to this criticism in the theory of the transference, albeit gradual, of the British tradition to other races. "Now, in my belief this slow transference of the English tradition to other races offers a reconciliation of Lord Milner's racial basis with such criticisms as that of the Aga Khan." Criticism, we are afraid, will be unassuaged by Sir Halford's explanation, which in Indian eyes will, rightly or wrongly, appear only one degree less racially arrogant than the "credo" of Lord Milner. But he treads on ground less assailable by critics when he lays stress on the opportunities given under British rule to native races to make their early experiments with Western institutions without risking the penalty of failure. Generally speaking, too, Sir Halford's whole defence of the Empire is mellowed by a breadth of view which was not associated with the propaganda of British Imperialists of the past. Of this fact one instance will suffice. In the course of his long argument for the maintenance of Imperial unity, and against the absorption of its units into their respective Continental groups, he yet gives full recognition to Canada's special problems arising from her position in North America, and of the peculiar local problems of Australia and New Zealand. Gone, we repeat, and we hope gone for ever, is the old crude idea of British Britain, British Canada, British Australasia, to be bound together just because they are all British, by material bonds which assume an absurdly exaggerated degree of community of material interest.

British public opinion, we believe, is sufficiently enlightened to be as near to the position of the critics of this tenet of Lord Milner's "credo" as to that of its author. The Imperial policy of successive Governments has shown this in varying degrees, and it is good to find so ardent an Imperialist as Sir Halford Mackinder rubbing off the angles of Lord Milner's statement. But there is another challenge that the "credo" throws down. As Sir Halford puts it, "This conception of race plainly—to those who regard the British Commonwealth as destined to be incorporated piecemeal into a world-crucial questions of the day. Are the League of Nations and a united British Empire compatible? Can we combine a League policy and an Imperial policy? Can we

maintain indefinitely a system under which Britain, representing the Empire, signs a European Treaty and leaves the Dominions free to adhere or stand aside, while Canada signs a treaty with America concerning a domestic matter between the two nations? Most serious students of world affairs will join with Sir Halford in returning a tentatively affirmative answer to all these questions. But it is beyond doubt that the gradual evolution and adaptation of the system of inter-Imperial consultation to meet developing and varying needs will tax to the full the statesmanship of the political leaders both of Britain and the Dominions. The practical problem, as Sir Halford puts it, is how to balance the dispersion of strength and interest in local spheres, with some adequate generation of strength and unity within the British Commonwealth as a whole. "Our greatest function is to balance functions that are only compatible by a continuous process of readjusting compromise." But a continuous process of readjusting compromise demands the development of the machinery for constant consultation and intimacy of touch. Sir Halford sees in such bodies as the Imperial Defence Committee, the Imperial Shipping Committee, and the Imperial Economic Committee possible embryos of the machinery desired. We do not dissent, but we cannot dismiss serious doubts as to whether, even in the economic sphere, such bodies will find themselves able to attack such big problems as, for instance, those of emigration and of tariffs. And as to the crucial field of foreign policy, successive Cabinets have learnt very clearly the extreme difficulty of establishing any system of quick consultation. So sensitive is Dominion opinion in the matter that the mere hint of a proposal for a liaison system between the British Foreign Office and Dominion representatives arouses a storm of criticism and suspicion. Unless and until the proposal for some such machinery comes wholeheartedly from the Dominions themselves, the subject must remain in abeyance. If, then, in spite of the recognised anomalies of the present position and the difficulties of combining Imperialism and Cosmopolitanism we are hopeful that adaptation of method will develop to meet proved needs, it is mainly because we believe that public opinion in the Dominions is awakening to the implications of the new position, and that in the Mother Country the old, narrow, and crudely material views of Imperial problems are rapidly disappearing everywhere except among those hide-bound High Priests of protection and preference, who are impervious to the lessons of history and blind to the significance of contemporary movements. Sir Halford Mackinder's address suggests that even in recognised Imperialist circles the prestige of that school is on the wane.

PROCEEDINGS OF THE COAL COMMISSION.—THE OWNERS' CASE.

A summary of the main points of the evidence given so far will be found in our issues of October 31, November 7, and November 14, 1925.

THE Coal Commission has come to grips this week with some of its most formidable difficulties, the owners having presented the first part of their evidence and the issue between the two contending parties is definitely joined. The first instalment of the owners' evidence, which may be termed the owners' *apologia* with "hands off the industry" as its main text, falls into two parts—an illuminating analysis of the industry's difficulties, and a much more controversial diagnosis of the causes. The case, up to a certain point, is a strong one. At the outbreak of the war the owners handed over to Government control a healthy and profitable industry which had increased its output in the preceding forty years by 115 per cent., its exports by 425 per cent., and its labour force by 120 per cent. They took over in 1921 an industry whose annual output had fallen from 287 million tons to 216 million tons, whose costs of production had risen from 9s 5½d to 40s 3d per ton, and whose 1913 profits of 1s 6½d per ton had been transformed into a loss of 7s per ton. The industry was heading straight for bankruptcy, and

was embarrassed by serious labour discontent. The following table gives production figures for pre- and post-war years:—

COAL MINING INDUSTRY of the UNITED KINGDOM.

Year.	Coal Output.		Coal Exports.	Numbers Employed.
	Tons.	Tons Per Head of Population.	Tons.	
1875	133,306,485	4.06	13,979,000	510,523
1885	159,351,418	4.42	22,710,000	500,369
1895	189,652,562	4.84	31,715,000	693,935
1905	236,111,150	5.46	47,476,707	850,390
1913	287,411,869	6.29	73,400,118	1,118,453
1921†	163,216,505	3.45	24,660,552	1,144,311
1922	249,584,085	5.25	64,198,384	1,162,754
1923	275,965,702	5.78	79,449,678	1,200,431
1924	267,061,027	5.56	61,651,273	1,230,248
1925*	244,623,000	5.07	49,950,000	1,092,600

* Basis of first nine months. † Three months' coal stoppage. ‡ Including exports to Irish Free State.

Of the factors which have prevented the industry's return to its pre-war standard of prosperity, the Mining Association attaches considerable importance in its evidence to the amended wages agreement which came into force on May 1, 1924, and resulted in an increase in general minimum percentages on basis rates at a time when trade was on the down grade. The association produces figures showing that if comparison is made, not with the boom year 1913, but with the quinquennium 1909-1913, the present average weekly earnings of all persons employed in the coal industry, have risen, not by 50 per cent., as is generally stated, but by 75½ per cent., or in roughly the same proportion as the Ministry of Labour's Cost of Living Index (which, however, is on a July, 1914, basis). The part played by increased wages in the matter of total cost is shown in the next table:—

COSTS OF PRODUCTION in GREAT BRITAIN.

Item of Cost.	Cost per Ton Commercially Disposable.		Percentage Increase as Compared with 1913.
	1913.	May-July, 1925.	
	s d	s d	%
Wages	6 10.50	12 8.88	85.31
Timber and stores	1 1.00	1 10.26	71.83
Royalties	0 5.35	0 6.33	18.82
Health insurance	0 0.93	0 1.19	27.96
Workmen's compensation ..	0 1.25	0 3.54	183.20
Local rates	0 1.86	0 4.63	148.92
Administrative expenses	0 2.62	0 7.43	183.59
Other costs	0 5.99	1 5.96	200.00
Total costs	9 5.50	18 0.22	90.50
Total proceeds	11 0.00	17 1.21	55.10
Balance	Profit 1 6.50	Loss 0 9.89	...

These figures suggest certain pertinent criticisms. Wages have risen rather less sharply than total costs, and the proportion they bear to the total has fallen from 73 per cent. to 70½ per cent. The burdens imposed by the State in the shape of the Workmen's Compensation Acts, and by the local authorities in the shape of rates, have increased to a disproportionate extent, and the miners' representatives will doubtless have something to say regarding the large increase in administrative and other costs. The last two lines of the table reveal the dimen-

sions of the gap which must be bridged before the industry can again be placed on a profit-earning basis.

The owners' evidence includes an approximate estimate of world production and consumption of coal. In the pre-war year the total output is placed at 1,258.5 million metric tons, and in 1924 at 1,238.2 millions, the production of countries other than Great Britain being 966.5 million and 963.3 million metric tons respectively. The consumption of countries outside Great Britain declined from 1,041.1 million metric tons in 1913 to 1,025.9 millions, and our part in supplying this consumption by means of our exports fell from 7.2 per cent. to 6.1 per cent., while in the first six months of 1925 our contribution is estimated to have been no more than 5 per cent. Some light on the reasons for this loss of ground on the part of British exporters is thrown by other tables in the Mining Association's evidence, which compare production costs, hours of labour, and output per man shift in Great Britain and foreign countries. We have endeavoured to summarise the most striking figures in the table which follows, but it should be understood that the data for different countries are only very approximately comparable, owing to differences in methods of compilation:—

COMPARISON between COSTS of PRODUCTION, HOURS of LABOUR, and OUTPUT in GREAT BRITAIN and OTHER COUNTRIES.

Country.	Wages Cost per Ton.		Total Cost per Ton.		Hours of Working per Day Underground.		Output per Man-shift.	
	1913.	1925.	1913.	1925.	1913.	1925.	1913.	1925.
Great Britain ..	8 s 10 50	12 s 8 88	9 s 5 50	13 s 0 22	8	7	20.32	100
Germany (Ruhr) ..	15 s 11 50	17 s 9 60	11 s 5 45	14 s 10 62	8	8	18.38	100
France (Pas de Calais) ..	6 s 3 12	9 s 7 23	11 s 8 98	16 s 8 85	10	8	13.68	100

U.S. States (bituminous mines) ..	3 s 10 90	8 s 9 1	10 s 3 20	12 s 8 40	8-10	8	57.5	100

* Wages and costs per ton raised. † Wages and costs per ton disposable.
a 1924. b 1923. c 1922. d Total f.o.b. mine cost.

On the evidence of this table, the Mining Association would be on strong ground in basing its case on the claim that both wages costs and total costs are on a higher scale and have increased more rapidly since 1913 in this country than abroad, and that our hours of labour are so short as to impose a serious handicap on our ability to compete effectively in the world's market. The association's evidence, however, as so far presented, gives what may seem a somewhat disproportionate amount of attention to an alleged conspiracy on the part of organised labour in the industry to make impossible its profitable operation, for quasi-political ends. The association has, of course, every right to put on record its belief that "the history of the last few years is a story of persistent efforts to.....achieve the political objective of nationalisation, or, more correctly, syndicalisation of the mines," but wide charges of this sort are notoriously difficult to substantiate by concrete examples. Thus Mr W. A. Lee, the association's spokesman, was compelled to admit under cross-examination that he could not name any particular mines outside the anthracite group where deliberate "ca'canny" was practised, while figures quoted by Sir William Beveridge showed that since 1905 the output of miners working at the coal face had declined to an extent materially less than the reduction of the working time at the coal face. Again, the statements on which the association bases its charges are, in some cases, open to more than one interpretation, and the association would appear to take the utterances of certain miners' representatives much more seriously than the general public.

The remainder of the week's evidence may be briefly summarised. On Friday, November 13th, Sir William McLintock and Mr J. Alison Gordon, independent accountants to the National Board for the Coal Industry, gave evidence as to the principles followed in ascertaining wages under the agreements of 1921 and 1924. On Wednesday, November 18th, evidence was submitted on behalf of the Coal Merchants' Federation of Great Britain, denying the existence of any "ring," whilst admitting that representatives of certain firms frequently met to agree

on selling prices. On Thursday Mr George Rose, chairman of the National Council of Coal Traders, submitted evidence on behalf of the coal factors. The Commission will continue its investigations on Tuesday next, November 24th, when the evidence of the Miners' Federation will be taken.

MR LLOYD GEORGE'S LAND POLICY.

[Last week we published an article setting forth the case for the new Land Policy. The following article from another correspondent puts the case against it.]

NATIONALISATION of an industry, according to its present protagonists, means the acquisition by the State of essential elements of that industry, and the creation of a vast State monopoly which will tend to impose either fixed arbitrary, in place of competitive, values, or a combination of the two, according to the particular section of the industry which is being treated. Perhaps this latter condition is best illustrated by the concrete proposals put forward by the Liberal Land Committee with regard to the acquisition of the agricultural land of this country. Whilst the landowners are to be compensated at a fixed rate, the farmers are to pay a fixed rent; workers for the various districts are to receive a definitely defined wage; the State is to be free to deal with all land which, for various reasons, falls into its hands on competitive conditions in the open market.

Agricultural land is to be relet at apparently the best market price, whilst that with a site value is to be sold at prices which, it is optimistically predicted, would show the State a good profit. In fact, it is confidently asserted that the assets thus accruing would practically cover the cost of administration. But this is another question that will be dealt with later. This forecast of the operations of State land tenure also to some extent answers the contention of some of the supporters of land nationalisation that the acquisition of agricultural land would not constitute the State becoming an actual trader.

It seems to be generally assumed by the advocates of such a policy that, in the matter of the State taking over agricultural land, the only persons involved would be the nominal owners of the land and the cultivators. The present tenure of land is complicated by mortgages, settlements, leases, and other considerations, which have become part of the system, in the course of a gradual evolution during a thousand years or so. Banks, insurance companies, trustees, and numerous private individuals quite outside agricultural circles, are financially involved in the present system of land tenure, so that any drastic measures taken with regard to the land could not but affect the financial security and confidence of the country generally. One can even go further than that and assert that, on account of the interlocked conditions of national commercial finance, the natural sequence of State control of one great industry would mean, in lieu of throwing over the idea, at a certain stage of its consummation, the consideration of "adjustment" in the hands of the State of other units which to-day constitute our trade and commerce. The State ownership of land would, in fact, be but the thin edge of the wedge.

The levity with which some advocates of State ownership of land anticipate the handing over of a security estimated at a thousand million pounds from one set of owners to another is almost incredible. "On and from an appointed date," says the Liberal Land Committee, portentously, "the State shall be deemed to have resumed possession of all land in the United Kingdom which at that date is used for, or capable of use for, the production of foodstuffs, timber, or other natural products." Messrs. Orwin and Peel, in their book, "The Tenure of Agricultural Land," with a similar lack of a "relatively small transaction," or a "mere matter of arithmetic." Whilst these learned authors attempt to evade all haggling by airily suggesting that the land should pass from its owner to the State on the basis of a capitalisation of the Schedule A. assessment of the

income-tax, the Liberal Land Committee, owing to the peculiar nature of their proposals, cannot dismiss the matter quite so easily. There are to be set up "temporary" Commissioners and Land Courts, the latter as an appeal body, before which the net rental is to be fixed, as on this would largely depend the permanent income of the landowner on the one hand, and the permanent rent of the State tenant on the other. Experience of the workings of such tribunals, particularly the ill-fated attempts to administer the land values taxation of the Finance (1909-1910) Act, 1910, give reason to suspect that it would not be a question of months or years, but even generations before the work of these "temporary" bodies was fully accomplished. In the meantime, through death and other causes, fresh sets of circumstances might arise which would seriously retard the hearing of certain cases, and the result would be that cultivators would be required to carry on entirely in the dark as to what their rent eventually might be. The practical difficulties of transferring the land to the State, apart from absolute confiscation, are very real, and, on close examination, appear insurmountable. Any attempt to bring about a revolutionary change in an industry so financially involved and so immured in tradition as agriculture can only end in chaos and disaster.

The cost of State management and administration of land is not exactly a popular subject on which its advocates seem desirous of spreading themselves. Messrs Orwin and Peel devote a radiantly enthusiastic chapter in their book to the opportunities that would be opened up in this new branch of the Civil Service, and one instinctively feels that they are happier in discoursing upon this aspect of land nationalisation than upon any other, but not a word is said about the cost. The Liberal Committee, however, are a little more venturesome. They optimistically predict that the cost of administration and management would be covered from profits made by State dealings in land, and by a contribution of 3 per cent. of his old gross rent, which the farmer is to be called upon to pay over and above his net rent. This 3 per cent. is evidently intended to produce something like the amount required under the heading "management," since it is stated that as 5 per cent. of the gross rent was a generally accepted figure for the management of large estates under the present régime, it was thought that this might be considerably reduced under "unified management." As against this assertion, it was stated in the House of Commons on February 27, 1923, in reply to a question addressed to the Minister of Agriculture, that the expenses incurred by county councils on small holdings administration during the financial year 1922-23 amounted to about 20 per cent. Again, in the report of the Ministry of Agriculture of proceedings under the Small Holdings Colonies Acts for the period ending March, 1920, the following illuminating passage occurs:—"The fact remains that the whole staff, both technical and administrative, has been required, and necessarily required, to work under a system of Governmental sanctions which is unavoidable if the expenditure of public money is to be fitly controlled; but these sanctions are a drag upon the free and wise management of farming operations."

The proposals of would-be land nationalists are full of untenable and uncertain arguments, which lack of space precludes meeting in detail. A word must, however, be said regarding efficient husbandry, which is to be a *sine qua non* for the proposed State agricultural tenants. At present, a landowner can get rid of a farm tenant without paying compensation for disturbance if he can obtain a certificate from the County Committee to the effect that the farmer in question is an inefficient cultivator. In these cases, however, the standard is quite an elastic one, and various circumstances are taken into consideration. In the case of State ownership, however, it is fair to surmise that some kind of fixed standard emanating from Whitehall would be insisted upon, with the expressed and in many ways laudable object of subscribing in a measure to national needs, and making the fullest use of the land as regards the employment of workers. The farmer's primary ideas concerning his holding would be towards getting from it a living for himself and his family, and generally he might not see eye

to eye with the Government officials in the methods of working his farm from an economic standpoint. If this clash of interests should be in any way widespread, it would soon spell disaster to the system of State land ownership. An analogous position of affairs exists to-day. Many farmers cannot conduct their farming operations in accordance with national interests simply because they would lose money by so doing. What the farmer requires is not so much security of tenure (which to a large extent he already has) as a prospect of a fair return for time and money expended, just as security for the investment of capital by the landlord on the farms he lets is equally important for the maintenance and improvement of the permanent equipment of the land.

OUR OVERSEAS MARKETS.

WITH the October returns of overseas trade are given the customary statistics for the September quarter and the first nine months of the year relating to the direction of our trade, analysed according to the countries of origin of imports and of destination of exports and re-exports. In the tables which follow we show separately the imports and British exports for Europe, other foreign countries, and the Dominions. The first table shows our trade with Continental countries in the first nine months of this year, together with the figures for the corresponding periods of previous years:—

Czechoslovakia ..	..	4,238	4,651	4,179	..	990	1,510	980
Latvia	..	..	..	..	..	..	..	..
Total	209,833	270,581	303,647	320,772	122,078	202,531	198,382	186,987

The first thing to be noticed in these figures is the further increase in total imports from the Continent and a further decrease in our exports to Europe. The latter is accounted for entirely by the decline in exports to France, Belgium, and Switzerland. There was also a drop in exports to Scandinavia, but this was largely offset by a large increase in exports to Russia. We also sent more to Holland, Germany, and Italy. On the import side important decreases are shown only by Sweden, Poland, and Czechoslovakia. More than half the increase in imports is accounted for by Germany. As will be seen, however, from the table below, in which we give quarterly figures for Germany and Russia since the beginning of 1923, the imports from Germany in the last quarter were the lowest since the second quarter of last year:—

April-June	13,293	10,602	7,632	18,234	5,902	1,376	3,415	4,791
July-Sept.	10,116	10,536	5,265	15,801	7,025	1,163	3,089	4,252

The quarterly totals of imports both from Germany and Russia are still far below the quarterly average for 1913, but in the case of Germany exports are now on a higher level than in 1913. With Russia, however, British exports are making very slow progress, but re-exports have expanded considerably, and so far as can be gathered from the monthly returns, this increase is due to tea, cotton, and rubber. It will be seen that in our trade with Germany there is still a very substantial excess of exports, but imports continue to predominate in trade with Russia, as they did before the war.

In the next table we give the figures for other foreign countries, including the United States:—

OTHER FOREIGN COUNTRIES, JANUARY TO SEPTEMBER
(000's omitted.)

	IMPORTS FROM.				EXPORTS TO.			
	1914.	1923.	1924.	1925.	1914.	1923.	1924.	1925.

Other countries.....	7,389	12,314	17,892	18,221	10,473	11,345	12,403	14,743
Total.....	171,875	276,890	325,915	326,601	91,008	144,868	144,357	140,752

In spite of an increase of nearly £11 millions in imports from America, total imports from the countries enumerated are only very slightly higher in value. Indeed, with the exception of Chile and China, all other countries show a decline, the most prominent being a drop of over £8 millions in the case of Argentina. The decline in exports is more than accounted for by decreases of £8 millions and £5½ millions in exports to Japan and China respectively, and apart from small declines for Cuba and Peru, all other countries have taken more from us than in the corresponding period of last year, the outstanding cases being Brazil and Argentina. In trade with the United States there is an excess of imports over total exports for the nine months of £110½ millions, as against £104½ millions for the same period of 1924 and £44 millions in the first nine months of 1914.

We next come to the figures for the Dominions:—

TRADE WITH DOMINIONS, JANUARY TO SEPTEMBER
(000's omitted.)

	IMPORTS FROM.				EXPORTS TO.			
	1914.	1923.	1924.	1925.	1914.	1923.	1924.	1925.
Irish Free State.....	19,061	37,397	30,773	30,773	13,981	14,782	32,026	30,902
Canada.....	20,844	37,057	43,694	48,859	20,487	20,690	20,690	20,955
Australia.....	28,945	40,966	41,662	57,886	26,252	42,596	44,789	45,425
New Zealand.....	20,252	36,641	40,446	46,299	7,332	11,059	14,888	17,155
India & Ceylon.....	36,715	56,690	61,926	68,642	52,933	67,302	71,172	69,332
South Africa.....	8,889	10,265	12,411	16,535	19,920	22,880	22,398	22,398
West Africa.....	4,811	8,954	10,255	10,680	4,458	8,527	7,015	9,767
Mauritius.....	376	3,092	2,895	339	2,953	855	982	698
Straits Settlements.....	10,029	7,191	8,473	11,733	3,691	5,723	6,394	7,999
Malay States.....	1,833	1,698	1,214	2,462	619	834	1,321	1,321
West Indies.....	1,880	4,788	3,941	4,894	1,765	2,581	2,638	2,789
Other Possessions.....	6,106	13,590	15,479	19,003	10,477	23,871	22,342	22,778
Total.....	140,810	239,993	279,793	318,105	137,663	218,323	246,580	251,519

Although trade with the Irish Free State has diminished in value, total imports and British exports have expanded. The most prominent increase in imports is that of £16 millions recorded for Australia, but all the other large Dominions show a substantial expansion. A sudden drop in imports from Mauritius is accounted for by sugar, our imports of sugar from that quarter in the nine months having dropped from £3,022,800 to £482,600 in value, and from 2,024,800 cwts to 551,800 cwts in quantity. India and Ceylon have taken less from us than in the same period of last year, and there is a slight decline in exports to South Africa, but exports to New Zealand show a further increase. Imports from the Dominions represent 33 per cent. of total imports, as against 30.7 per cent. a year ago and 30.4 per cent. two years ago, while exports to the Dominions are 43.4 per cent. of the total, against 41.8 per cent. and 38.5 per cent. We had occasion, however, to point out last week that trade which the Dominions do with Great Britain is a diminishing proportion of the trade of the Dominions.

In the final table we give re-exports to the principal countries:—

RE-EXPORTS—NINE MONTHS.
(000's omitted.)

British Possessions.....	9,700	20,192	9,598	11,538	14,262	19,409	19,995
Total.....	76,796	180,459	77,640	77,874	86,858	102,907	112,851

Russia and the United States account for the increase in re-exports to foreign countries, and in these two cases the increase in the price of rubber is largely responsible. Re-exports to the Irish Free State are practically unchanged at £8½ millions, and a decline in the figure for Australia is offset by an increase in the case of Canada.

RUBBER RESTRICTION—AN AMERICAN VIEW.

(BY A NEW YORK CORRESPONDENT.)

An article in the *Economist* of September 26th (p. 487) dealing with some of the results of the Stevenson Scheme has attracted attention here. From Mr Churchill's account of the manner in which Cabinet approval was secured, it seems that restriction was adopted in a spirit of levity, quite appropriately prophetic of some of its incidents and the farcical claims which have been made on its behalf.

The most striking fact brought out in the article is that, while during the three years 1922 to 1924 consumption exceeded production by more than 110,000 tons, the British proportion of the production fell from 75 per cent. of the whole to 52 per cent; if the figures were brought up to date the disparity would be even more remarkable. Restriction, therefore, appears to have been a costly matter for British producers, and even the questionable advantages of the present boom may prove sorry compensation for the eventual results of an experiment which, though perhaps at one time an excusable expedient, could have been abandoned over a year ago with great benefit to the whole industry; it is almost certain that a free market would on the whole have provided better earnings for the estates, and without the future reactions which are now inevitable. It is regrettable that the repeated demand for an impartial review of the results of restriction has been consistently refused by the Colonial Office; such an inquiry might have provided material to enable the industry to be placed on a less unstable basis, and it would almost certainly have removed the feeling of rancour against those responsible for restriction, which exists in a marked degree.

To understand the depth of the resentment against restriction one must go back to its inception. Shortly after the Scheme was made public, the Rubber Association of London invited a delegation from the Growers' Association of America to a visit here for a frank discussion of the whole subject. With one prominent exception, consuming interests showed a remarkably broad-minded willingness to give the experiment a fair trial, as the only available suggestion for saving the plantations from what then looked like disaster. The American Association, however, expressed the view that consumption was improving so rapidly that restriction was, in fact, unnecessary, and that in any event its provisions were too rigid for changing circumstances; moreover, its complete control of speculation, while at some period or other we should experience a shortage of supplies with prohibitive prices. Time has abundantly proved the truth of all these points, and the inevitable mischiefs resulting have yet to be realised. However, the Growers'

delegation, at that time desirous to placate any possible American doubts or opposition, gave assurances that the Scheme contained discretionary powers, which would undoubtedly be exercised to prevent any such dangers arising, and the American Association accepted the assurances in the spirit in which they were doubtless given; opposition by individuals was actively frowned upon, and the manufacturer mentioned above (who has always maintained active opposition to the whole idea of the Scheme) was forced to resign from his association as a protest against what is now generally recognised as an unfortunately supine attitude.

It is understood here that in reply to similar fears and doubts expressed by British manufacturers, Lord Stevenson, at an early meeting at the Colonial Office, was encouraged to give assurances of the same nature, and these have ever since been regarded as official confirmation on the part of the British Government of the pledges given by the Growers' delegates.

The American Association's doubts were quickly justified. Restriction contemplated a minimum price of 1s 3d and a hopeful expectation of 1s 6d per lb, not an unprofitable basis as compared with a cost of production of about 8d to 10d per lb. Consumption buying here quickly raised the price to 1s 6d, when, however, it was discovered that instead of Malayan exports being reduced under restriction, they had increased. Speculators quickly took advantage of the fact, and prices dropped at once.

Then it became apparent to everyone that, until visible stocks in London were materially reduced, the minimum 1s 3d must necessarily be regarded as the maximum price. Meantime the Dutch Estates, taking advantage of what they regarded as the perfectly satisfactory price of 1s 3d, increased their output materially, and loud complaints were heard against those who had promised, in restriction, higher prices and a panacea for all the ills of rubber. Other patent medicines were then suggested, and the idea of a central selling agency was gravely adopted as the one remaining thing necessary for rubber's salvation.

About the middle of 1924 general conditions and trade factors showed many and unmistakable signs of definite improvement, and it was quite apparent that consumption was improving at a rate which the industry had not experienced for years. If we had then had a market free from restriction influences we should almost certainly have seen a 1s 9d to 2s level quickly established and maintained. But because restriction had, in fact, done precisely what had been foreseen, in placing the market completely under the control of any bold, speculative movement, prices were depressed and kept depressed at levels quite unjustified by the demand.

This operation was undertaken by a combination of some of the large manufacturers, and was carried out with such remarkable success that it was not until they had acquired the bulk of the London stocks, as well as many thousands of tons for future delivery, that bear manipulation was allowed to cease and market prices began gradually to reflect the true conditions. Even then it was not until May last that we saw the 2s level, and London stocks reduced to less than 13,000 tons—a dangerously small quantity even if restriction had not been in operation.

Then prices began to mount rapidly, accompanied by an orgy of speculative activity reminiscent of the notorious boom of 1910, and a further shrinkage in London stocks to 4,500 tons. Some manufacturers were compelled to close their plants temporarily for want of supplies, and the situation became even more critical by accidental delays to several ships.

In short, the very situation foreseen by the American Association—short supplies and runaway prices—had arisen, and the Growers' Association, and later Lord Stevenson, were asked to carry out the assurances which had been given for remedial measures. No satisfactory reply was received from either, nor has there been any attempt to fulfil the promises, which now appear to be completely ignored. No candid person would think of accusing those involved of deliberate breach of good faith, but it is apparent that a method of control, designed for one quite laudable purpose, has had results not con-

templated by them at the time, and now speculative interests have the market in such tight grips that those responsible for restriction seem afraid, or powerless, to attempt a remedy for a state of affairs which is full of danger to the future of the industry.

The situation here is thoroughly uncomfortable from almost every point of view, and steps are being taken in various directions, the ultimate consequences of which are likely to be deplored by all legitimate trade interests. It is a highly sinister fact that a large part of the present price (probably to the extent of 1s 3d to 1s 6d) has been brought about by manipulation of the same combination as held the market down a year ago. We may well ask ourselves for what object such a course has been adopted, when natural interests would appear to point clearly in the opposite direction. Remembering, too, that major movements in rubber are invariably forced to over-exaggerated extremes, and are then followed by equally violent swings the other way, we should be prepared for drastic changes in the market and continued unsettlement before we are finished with the effects of restriction.

THE QUESTION OF THE SUBMARINE.

THE deplorable loss of the British submarine M1 with all its officers and crew has vigorously revived public discussion of the possibility of international agreement to discontinue the use of underwater craft. The discussion was given an effective send-off by a letter written to the *Times* by the chairman of Lloyd's. "It is not usual," he writes, "for business men to obtrude their advice in matters of high policy, but it is felt that this is an occasion when an institution whose work for centuries has related to the sea might now make its voice heard in an appeal to stop the use of a war machine which brings about the disasters of war in a time of profound peace." The weight attaching to the source of this appeal and the atmosphere of emotion in which it was launched assured for it a large measure of public attention. Moreover, even apart from the M1 disaster, the moment for it was propitious. The achievement of Locarno is on everyone's lips. If the current optimistic estimates of that achievement are well-founded, the Locarno Pact will create a degree of security that will make possible an important measure of international disarmament. If we are to have disarmament, what better starting-point could there be than the barbarous submarine?

Now, everyone will agree that the under-water ship, while having no contribution whatever to make to the world's peaceful or commercial development, is a barbarous instrument of battle, which aggravates the horror of warfare. But it is precisely for that reason that a certain school of thought would oppose its abolition. Let us, argue the members of that school, make war as horrible as possible. The more horrible it is made, the greater will be the reluctance of nations to engage in it. This argument, in our view, is overstressed. There is, of course, substance in the view that all endeavours to make war a gentlemanly pastime are sheer waste of good time and effort, which would be better expended upon the search for means to make war less likely. Nevertheless, in spite of all arguments that may be adduced in this strain, we should regard the abolition of submarines as a very welcome step.

At the same time, there are several considerations that should be clearly realised before we throw all our enthusiasm into the campaign which the chairman of Lloyd's has opened. The abolition of the submarine, for instance, would not ease national budgets and relieve taxpayers to an extent comparable to that which would be provided by a further international restriction on costly capital ships. Secondly, the proposal for abolition is not a new one. It was put forward and supported by Great Britain at the Washington Conference, and we still have to face the facts that led to its rejection, notably by France, on that occasion. To put the matter briefly and crudely, the submarine is felt by weaker naval nations to be their only effective weapon against stronger naval Powers; while Britain's position as the biggest possessor of mercantile

tonnage, as an island dependent for its life upon sea-borne supplies, renders her the greatest target in the world for the activities of the submarine. This fact, in the minds of other nations, adds a suspicion of hypocrisy to the advocacy by Britain of the submarine.

These points illustrate some of the main difficulties that may still be expected, in greater or less degree, to hamper and obstruct an international agreement. Nevertheless, it does not automatically follow that because the attempt made at Washington three years ago failed, a renewed effort now is foredoomed to frustration. The naval authorities of the nations have had a few years to ruminate upon the future of the submarine, and to digest the lessons of the Great War. One cannot attempt any sweeping estimate of what the results of such study may be. But it can, at least, be said that a school of naval thought has arisen which believes that there is no future for the submarine even in war-time. This belief is based on a study of the devices invented for crippling the submarine, and the extraordinary degree to which they were perfected by the end of the war. How far such devices may have been further developed since the war in the naval research departments of the world can only be a matter of conjecture. But there is the bare possibility that scientific research has, in the last few years, tilted expert opinion abroad, as well as in Britain, towards acquiescence in the submarine's extinction.

On the other hand, there is, so far as the public is aware, no present indication of a change of attitude in France on the submarine question, and we must be prepared to find that progress in the matter is still effectively barred. We should, therefore, guard against the mistake of concentrating public opinion exclusively on one minor, though important, brand of disarmament, which may prove impossible of achievement, instead of working to create an atmosphere favourable to progress on the broader issues of international restriction of fighting weapons and services.

Notes of the Week.

The Australian Elections.—Although the final figures of the Australian general election are not yet available, it appears that the earlier cables under-estimated the extent of Mr Bruce's triumph. Latest cables suggest that he will have no fewer than 53 seats in a House of 75 members, while, at the same time, the majorities of Government candidates for the vacant seats in the Senate is steadily growing. This sweeping victory is the more striking because during Mr Bruce's three-year tenure of office Labour has been marching from strength to strength in the State elections. The complete reversal of this tendency by the Commonwealth electorate is very remarkable. It would not be surprising to learn that the result is due to very much the same influence that brought Mr Baldwin his huge majority here last year, namely, the public fear of the growth of Communist penetration in the Labour Party. It appears that about 90 per cent. of the electorate went to the poll, a figure which shows that the new compulsory voting system has worked fairly effectively. The verdict of the Australian electorate has had a good reception in this country. For our part, we have had occasion to criticise Mr Bruce, and to differ categorically from some of his views. None the less we venture to offer to him our sincere congratulations on his victory. He is a convinced believer in the utility of preserving the unity of the British Empire. He knows Great Britain, and he knows post-war Europe. By experience and by mental equipment he is, we believe, well fitted to assist in the solution of those Imperial problems which are discussed in a previous column of this issue.

Irish Free State Politics.—The news of the week, writes our Dublin correspondent, portends novel developments in the political sphere. The immediate cause of trouble is the wages rates for unskilled labour on the

Shannon Scheme. An attendant source of political inflammation is the pending issue of the Report and Award of the Boundary Commission, which most forecasts—all unauthorised and probably baseless—agree in describing as unfavourable to the Free State contentions. The circumstances which make the movements of public opinion somewhat difficult to foretell derive their character from economic causes, and comprise deep discouragement and discontent, which adversely overlong sustained always brings in its train. Rates and taxes are heavy—and are being firmly exacted. A good harvest has been followed by low prices, and there is an extraordinary scarcity of money in circulation in the country districts. It is only now being realised how much capital was expatriated when many ex-landlords in 1921-2-3 fled the country. These, with their whilom estates represented by investments in British and American securities, had lived in their demesne houses, paid rates and taxes, and spent their income locally. Now of the large numbers who went away many are lost for ever both as taxpayers and resident spenders of income. The Siemens-Schuckert firm offer on the Shannon Scheme wages of 32s per 50-hour week, free hutment, and messing facilities at cost—a wage rate which compares favourably with the prevailing rates in the three adjoining counties for unskilled labour, either on farms or on County Council road schemes. They need 3,000 men in all, and some 10,000 have applied for work on their terms. Organised Labour professes to detect a sinister Government plot to lower the standard of living of the working classes, and has formally demanded in Dail Eireann that the 32s shall be increased to 50s. The Government declines to interfere—having, indeed, indicated to the contractors in advance what the prevailing wage rates were. Thereupon, without more ado, the Labour party has excommunicated the whole scheme, and has called upon all the unions to impede and thwart it by every means in their power. It contemplates withdrawing from the Dail, and it is stated to have entered into some species of alliance with the Republicans. On the merits and regarded merely as a labour dispute, the Labour party will gain no converts. If their demand was conceded, the wage and standard of living of the unskilled labourer would far exceed those of the smaller farmers and of the lower grades of non-manual workers amongst the urban populations. And they will be reproached for their attempt to diminish the already scanty amount of employment during a winter of great hardship. They may not improbably find themselves definitely at odds with the unemployed, whom already they are clearly seen to be unable to control. On the other hand, the Government has not handled Labour with tact. It had its opportunity when, at the end of the summer session, both employers and Labour desired a national conference on outstanding issues, and the Government failed to convene one. This was a blunder of great magnitude. The Labour party had deserved well of the State, to which it had stood loyal through very trying times against de Valera and Larkin. It is wrong on the present issue, no doubt; but it would have been better if it had not had its susceptibilities ruffled. The Government here is about to set up a Commission to consider Irish problems of banking, finance, and credit, but neither the terms of reference nor the personnel are as yet forthcoming.

Employment in October.—There was a decided improvement in employment during October. According to the *Ministry of Labour Gazette*, among the 11.9 million work-people insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed at October 26th was 11.4, as compared with 12.0† at September 21st and 11.0† at October 27, 1924. The total number of registered unemployed at the end of October was approximately 1,295,000, showing a decrease of 106,000 on the total number registered at the end of September. Among the members of trade unions, the percentage unemployed fell from 11.4 at the end of September to 11.3 at the end of October. The following

† Revised figure.

table gives the monthly trade union figures for several years past:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

* Excluding coal miners.

The industries which showed an improvement during October were coal mining, iron and steel manufacture, the tinplate trade, the cotton, wool hemp, hosiery, and carpet trades, and textile bleaching and dyeing. Employment was fairly well maintained in the building and brick trades, although some seasonal decline was reported. It was also good in the printing, furnishing, and silk trades, and with coach-builders, mill sawyers and coopers. Employment, however, was still bad in the coal and iron mining, iron and steel, shipbuilding, and marine engineering industries. The fact that the trade union percentage has remained comparatively steady while the total percentage unemployed has fallen will doubtless be looked upon by Labour protagonists as an argument in favour of their theory that the improvement is due to a general tightening up of administration.

Cost of Living.—According to the index number of the *Ministry of Labour Gazette*, there was no change in the cost of living during October as compared with the previous month, the figure remaining at 76 per cent. above the level of July, 1914. Monthly movements and comparisons with previous years are given in the following table:—

AVERAGE PERCENTAGE INCREASE over JULY, 1914.—All items.
(Food, Rent, Clothing, Fuel, and Light, &c.)

1st Day of	1918.	1919.	1920.	1921.	1922.	1923.	1924.	1925.

Dec.	120	125	169	99	80	77	81	..

For food alone the figure was also stationary, remaining at 72 per cent. The chief changes that occurred during October were decreases in the prices of bread, flour, sugar, and potatoes, and increases in those of eggs and milk.

Cotton Trade and Short Time.—There was some surprise in Lancashire trade circles at the end of last week, writes our Manchester correspondent, when it was announced that the Short Time Committee of the Master Cotton Spinners' Federation had decided to recommend a further curtailment of production in the mills using American cotton. The proposal is that from the end of this month and during December and January the working week shall be 35 hours instead of 39½ at present. This means that the factories shall stop for a period equal to one and a-half days per week instead of one day. A ballot on this proposal is now being taken, and the voting papers have to be returned not later than the 26th inst. In a circular issued to the members the Federation says that the principal reason why the committee consider a further reduction of working hours essential is that from actual experience of the yarn situation, strengthened by the information contained in weekly returns from members, the offtake of

yarns is not holding its own with production based on 39½ hours per week. In the Manchester market the policy of the Federation has been criticised. Increased short time means higher production costs, and is certainly unsound economically. The Federation, however, is at its wits' end to know what to do to meet the depression. On behalf of the Federation it is pointed out that over 95 per cent. of the members are now observing the 39½-hour working week, and owing to the importance of the proposed alteration the committee is of opinion that the usual majority, viz., 80 per cent., required to carry a ballot decision cannot be regarded as adequate on this occasion. It is evident from this statement that the Federation is asking for a unanimous vote. There is some doubt in trade circles as to whether the necessary support will be obtained, but it is rumoured that a leading section which in the past has not always been ready to fall into line is likely to vote for the larger curtailment of production. The spinning mills engaged on American cotton in Lancashire contain about 38,000,000 spindles, out of a total of 56,000,000, and if the scheme is adopted the operatives affected will be chiefly in the Oldham district.

Wool Textile Wages Settlement.—The report of the Court of Investigation in the wool textile industry, which, in accordance with arrangements made when the Court was set up, is to be accepted as the basis of an agreement between the employers and workpeople, contains several features of interest. In the first place it recommends the stabilisation of wages till January, 1927, by which time the existing level of wages will have been maintained for four years. It is noteworthy that this industry, which was one of the first to adopt the principle of a cost of living sliding scale for the purpose of wage adjustments, was also one of the first to abandon the method when the cost of living index number showed signs of becoming more or less stationary. This policy has received endorsement by the Court. The wages which are stabilised consist of basis rates, which were originally adopted as being equivalent to pre-war rates, plus an augmentation of 10 per cent., the whole being subject to a "cost of living" wage of 72½ per cent. in the case of time-workers and 63½ per cent. in the case of piece-workers. The addition to pre-war rates thus amounts to about 80 to 90 per cent. The Court also recommends the extension of the system of piece-work, with an understanding that persons engaged on such work shall receive 25 per cent. more than their basis time rates, plus the appropriate percentage addition. The fact that operatives on piece-work normally earn more than when on time-work has, of course, long been recognised, but the fixing, by agreement, of a definite relationship between time-rates and piece-work earnings for the same kind of work is largely a post-war feature. This relationship is now definitely specified in several industries, including engineering and many of the trades covered by the Trade Boards Acts. A third feature of interest in the report is the decision that the provisions contained in the last agreement in regard to the bonus of higher-paid time-workers should be continued. This agreement provided that the full percentage should only be paid to those workers whose basis rates were below a certain limit, beyond which a reduced percentage applied. In this respect the woollen trade conforms to the principle prevailing in many other industries, but not all, in which the percentage increase over pre-war rates is greater for the lower-paid workers than for those receiving higher rates.

Reparation Receipts.—The Agent-General for Reparation payments has issued a statement of receipts and payments for the first two months, September and October, of the second annuity year under the Dawes plan. Total receipts were 154.6 million gold marks, including 50 millions as budgetary contribution, 53.9 millions from transport tax, and 50 millions of interest on Reparation Bonds. Total payments to the Powers in the same period were 153 millions, while the service of the German external loan claimed 19.2 millions. Of the total sum paid to the Powers, 16.4 millions were in respect of occupation costs, 99.9 millions were deliveries in kind, and 36.6 millions the yield of the Reparation Recovery Acts. Of

the total disbursed in various forms, France received 81.1 million gold marks, the British Empire 34.5 millions, Belgium 15.7 millions, and Italy 11.9 millions.

America and the British Motor Trade.—We have not been among those who bewailed the introduction of American capital into a British industry when the General Motors Corporation acquired control of Vauxhall Motors, Limited, last month. Pessimists who jumped to the conclusion that the latter company would thereby become completely Americanised may be able to derive some comfort from a speech delivered on Tuesday to the American Chamber of Commerce in London by Mr J. D. Mooney, vice-president of General Motors Corporation. He refused to discuss the detailed plans of Vauxhall Motors, Limited, but remarked that "the British public have continued for many years to display their confidence in the managing directors who created the Vauxhall company. As these men will continue to operate the company, it is to be expected that Vauxhall will continue to command the respect and confidence of the British public." Among the reasons that have led the General Motors Corporation to believe that a partnership with an English motor-car manufacturing company would be of mutual advantage, Mr Mooney told his audience of his belief that "during the next ten years we shall witness a remarkable increase in the use of motor vehicles in the British Empire," and that an investment in the manufacturing business in England is safe. "England is faced with the economic necessity of capitalising to better advantage, a thing that she can do exceedingly well, i.e., manufacture high-grade, complex, fine quality products. It seems to me that the manufacturing of motor-cars fits in, at the present time, with one of England's fundamental economic necessities." Further, "England provides the entire economic background that is needed to support the manufacture of motor-cars that can compete successfully in the world's markets." Summarising the position of the General Motors Corporation, Mr Mooney said that "we find here the general elements that provide a sound basis for investment in the motor industry; high character values, the amount and character of labour needed, the fundamental production facilities, and an expanding market." For our part, we attach more importance to the other side of the question. In our view it is highly desirable that American capital and American enterprise should be introduced into this country. In the American business world is to be found an openness of mind, new standards in industrial and commercial relations, and a ready, almost over-eager, welcome to improvements in technique, accountancy, and administration, which would be a very welcome antidote to Britain's traditional conservatism. We do not assume that the ultimate ideals of business are necessarily those of present-day America. But that country obviously has much to teach us, and we should welcome the introduction of a little American yeast into all branches of British commerce. Nor have we any objection to American capital in British industries. It does not come here to close our works, but, on the contrary, because it is already evident that when it comes to selling in world markets, America is handicapped by the high costs fostered by her tariff. We agree with Mr Mooney that arrangements of this kind are a mutual advantage.

Italian Loan in New York.—Cables from New York state that an Italian Government loan for \$100 millions was offered in New York yesterday by a banking syndicate, including J. P. Morgan and Co., the First National Bank, the Guaranty Trust Company, the National City Company, and the Bankers' Trust Company. The loan was offered at 94½, the bonds bearing interest at the rate of 7 per cent. A sinking fund will be created by annual payments of \$1½ millions beginning on September 15, 1926, which, together with the interest on bonds previously acquired for the fund will be used for annual redemption at par on December 1st of bonds drawn by lot. The bonds will nominally mature on December 1, 1951, and

except for the sinking fund are not subject to redemption until June, 1941, after which they may be redeemed, as a whole, at the option of the Italian Government, at par.

Statutory Small Holdings.—That a multiplication of small holdings is desirable, especially from a sociological point of view, has long been more or less generally agreed. With the object of overcoming the obstacles which, in many districts, prevented the acquisition of land for this purpose, an Act was passed in 1908 placing the responsibility of providing small holdings on county councils, and giving them compulsory powers to acquire land. The chief condition imposed on them was that no charge should fall upon public funds. Up to the outbreak of war, 12,868 small holdings had been provided under this Act. After the war an almost universal feeling in favour of giving the men who had fought the opportunity of getting a bit of the land they had fought for, led to the passing of the Land Settlement Facilities Act, 1919, which, *inter alia*, authorised the Treasury to provide £20,000,000 (later reduced to £17,000,000) to meet capital expenditure. Under this Act, 22,000 small holders have been settled at a capital expenditure of about £16,000,000, of which it is reckoned by the Ministry of Agriculture that probably one-half will have to be written off as lost. For this sum county councils have become the owners of about 217,000 acres, and the lessees of about 25,000 acres more. Including their pre-war possessions, they now hold about 440,000 acres. The recently issued report on Land Settlement from which these particulars are extracted states: "County councils have now become by far the largest agricultural landowners in England and Wales. The rent roll of statutory small holdings is approximately £1,000,000 per year." It may be added that the total area of land now owned by public bodies—including the Crown, the Ecclesiastical Commissioners, the universities, &c.—is nearly 1½ million acres. The striking financial difference between the pre-war provision of nearly 13,000 small holdings and the post-war provision of 22,000 is in a large measure explained by the universal desire to assist ex-service men as generously as possible. The sanguine expectations that the liberal assistance given would result in the settlement of large numbers on the land have not been fulfilled. About 49,000 applications were received, and of these 27,000 were rejected or withdrawn. At the end of last year 15,461 ex-service men had been supplied with holdings, and were still in occupation, 3,243 had been approved, but not yet supplied, and 1,048 applications were, for one reason or another, standing over. It appears that the proportion of failures on the post-war holdings was about 10 or 12 per cent. Both the high cost of the scheme and the large number of failures are mainly attributable to exceptional circumstances. The greater part of the land had to be acquired during the furious boom in agricultural land which followed the Armistice. The average cost per acre of land acquired before the war for small holdings was £32 17s 6d, while after the war it was £42 10s. The cost of loans was also much higher, the rate at which £11,000,000 was borrowed being 6½ per cent., gradually falling to 4½ per cent. in 1923, the average rate for the whole amount being 6½ per cent. The small holders were at the outset confronted with a drought, and also with an unparalleled slump in prices. The situation was met by considerable remissions of rent, followed in most cases by permanent reductions. One of the morals to be drawn from the experience of a scheme which was admittedly uneconomic from the start is that only in exceptional cases have men succeeded who had no previous agricultural experience. Those who have weathered the storm are now, as a rule, firmly established, and face the future with optimism.

The York-Antwerp Rules.—An official reply has now been sent by the International Law Association to American criticisms of the York-Antwerp Rules, 1924. Though the revised Rules have been generally adopted in shipping and marine insurance documents on this side of the Atlantic, serious objection was, it will be recalled,

taken in the United States. As mentioned in the *Economist* of June 27th, an intended resolution supporting the Rules was withdrawn at the Brussels Congress of the International Chamber of Commerce because of American opposition. Since then, informal conversations have taken place, and the various suggestions for changes in the Rules, as revised at Stockholm last year, which were received from the United States, have been dealt with fully in the formal reply. The reply notes with satisfaction that, despite their criticism, American interests express sympathy with the plan of declaring the principles of general average, and bringing about greater uniformity in all maritime countries. Only one of the new rules of principle—that defining general average—was the subject of American comment. After dealing with this point, the reply, a lengthy document, enters into the other questions at issue, which are matters of detail. Should there be no reiteration of the American request for a further international conference, some objections taken in Germany would also, it is understood, be withdrawn.

Agricultural Education and Research.—The development of facilities for agricultural education and of equipment for agricultural research has been very great since the war. There are now 15 universities, university colleges, and agricultural colleges at which higher education in agriculture is provided with the assistance of grants from the Exchequer amounting to £48,000. Capital grants have also been made to these institutions, usually on a "£ to £" basis, amounting to about £100,000. There are also 14 farm institutes in England and Wales, at each of which courses, in some cases extending over one or two years, but usually of shorter duration, in general agriculture, horticulture, dairying, and poultry-keeping are given. Under the Corn Production Acts (Repeal) Act, 1921, one of the purposes to which the funds thereby authorised were to be applied was "the establishment of scholarships and maintenance grants for sons and daughters of agricultural workmen and others." During the past three years 350 scholarships have been awarded under this scheme. The parents of the students were in 80 cases agricultural workers, and in 81 other cases small holders. Altogether, it appears from the report recently issued by the Minister of Agriculture that over 10,000 students are now receiving agricultural education at the charge, either wholly or partly, of public funds. The recognition of the obligation of the State in regard to the endowment of agricultural research is of comparatively recent origin. The work carried on for so many years at Rothamsted and Woburn by private resources has been in a large measure taken over, and greatly developed, by the expenditure of public funds. Research in various branches of science relating to agriculture is conducted at 23 institutions in various parts of the country. It may, perhaps, be regarded as significant of the trend of British agriculture in these times that eight of these institutions are engaged in horticultural research—mainly relating to fruit—and seven to research in animal pathology and husbandry. Two stations are specifically devoted to plant-breeding, a line of research in which private enterprise still co-operates helpfully.

Tin in Cornwall.—In a lecture before the London Cornish Association on Wednesday last, Mr Hamilton Jenkin gave an interesting survey of the tin-mining industry in Cornwall from ancient times down to the present day. In regard to the present position Mr Jenkin is optimistic. A considerable change has taken place since the slump of 1920 to 1923. Almost before the price of tin had begun to improve in 1923 development work in the Camborne-Redruth area alone costing more than £150,000 was begun, and three new shafts were sunk to depths varying from 1,000 to 1,800 feet. The lecturer, however, asked investors not to be impatient. "Sound modern mining principles demand that a preliminary stage of cross-cutting and driving on the lodes at higher and lower levels must take place first in order to block out the ground and test the reserves of ore body. That is the ground and test the reserves of ore body. That is what is meant by development. Though a good many

mines are still only in the development or chrysalis stage after the slump, it would be a mistake to think that this is all. The greater proportion of the mines are already working once more at full bore, and are large tin producers. It is not generally realised even to-day, when only just emerging from the shadow of the dark years, that six large mines are actually in the producing stage, and well over 2,000 men have been reinstated in employment. One mine alone is producing between 80 and 90 tons of black tin a month, which, with the metal in the neighbourhood of £280 a ton, represents a gross income of £13,000 a month, irrespective of by-products. Month by month the output of tin from Cornwall is creeping up, and more and more men are being taken on in their old occupation." Mr Jenkin asserted that, in spite of its age-long working, much tin remains in Cornwall at shallow depths and in positions requiring very moderate capital, and in support of this he stated that he had in mind places where he had seen good lodes both of tin and silver lead extending almost from surface, and inviting the time when Cornwall will once more be able to claim its fair share of capital for the development of mineral resources within the Empire.

Lead Prices and Supplies.—It was expected that with the freer supplies of pig-lead, combined with some falling off in the European trade demand, the recent setback in the value of the metal would become accentuated. "Prompt delivery" dropped a few days ago to £36 10s, and then steadied a little, but the outlook continues in consumers' favour, while there is the usual slowing down of operations by manufacturers towards the end of the year. The figure mentioned indicates a setback of exactly £4 a ton from the high record of September last, when the general demand was particularly brisk, and needy buyers had to pay a heavy premium ranging up to over £3 a ton in order to fill early requirements. There has been evidence of easier conditions in the course of this month, and the premium on prompt delivery has been reduced to about 12s 6d a ton. In view of the somewhat poor Continental demand, which particularly refers to Germany, where rather poor trade conditions exist, consumers are decidedly more circumspect in the filling of their requirements. The price is still very high, and affords every inducement to producers to push their operations, inasmuch as the outlook as regards consumption is eminently satisfactory, especially in the United States, where the market continues to show considerable resistance to the reactionary conditions on this side. Yet the American and Mexican production last month increased by 5,653 short tons on the previous month, the total amounting to 64,940 short tons; and the stocks at the end of October denoted an increase on the month of 3,196 tons to 16,069 tons. These stocks indicate an excess of about 6,000 tons from the lowest level recorded earlier in the year. There was also a considerable increase in the course of this year in the Canadian output. Lead in Canada is being produced more cheaply than in any other part of the world, and very big profits are thus being secured by smelters there for their high-grade refined lead. Our total imports for the year to the end of October have been 225,419 tons, or an increase of about 26,600 tons as compared with the same period last year. As there is every indication of very liberal supplies in the remainder of this year, including about 10,000 tons from Australia alone in the course of next month, the aspect of the market is viewed in a conservative light, although it remains to be seen to what extent the Continental demand may revive and absorb some of the apparent surplus facing the London market. Cable makers are still very busy, but not such eager buyers as they were up to a month or so ago, and the call for supplies on the part of sheet and pipe manufacturers has been for the time being rather curtailed, while the outlet for the various descriptions of pigments has become of a more hand-to-mouth character, partly as a precautionary measure in view of the possibility of another downward revision in prices.

Depression in Upper Silesia.—The depression in the industries of the part of Upper Silesia which was allocated to Poland after the plebiscite continues. Not only

has the production of coal declined by over 30 per cent., but the iron and steel works, engineering, and other chief industries have also had a serious setback. The depreciation of the zloty is having serious consequences in this sensitive industrial area. Iron foundries are closing down and salaries are in arrear. Unless a foreign loan is obtained soon the economic fabric of the country will receive a rude shock. The situation with regard to coal would have been difficult in any case, owing to the world over-production. It has been accentuated in the case of Polish Upper Silesia by less efficient management of the mines and the closing of the German market. There will be much distress among the working people during the winter. Thousands of miners have been dismissed. The German workers were, naturally, the first to go, but unemployment has now overtaken the Poles as well, and many of them are leaving the country. Although Germany was deprived of most of the coal, zinc, lead, and the large iron and steel works, production in the German portion of Upper Silesia will this year equal that of 1913. The following percentages illustrate the relative position of industry in the two sections of the former province:—

PRODUCTION OF WORKS SITUATED IN THE PRESENT AREA.

	Polish Upper Silesia.			German Upper Silesia.		
	1913.	1924.	% over 1913.	1913.	1924.	% over 1913.
Coal	51,997,906	23,701,873	74.1	11,172,350	10,900,222	97.6
Pig-iron	612,283	263,115	42.9	318,318	262,264	82.4
Ingots iron and steel	1,116,663	526,931	47.2	358,521	269,365	75.1
Half-finished iron products for sale	165,929	53,800	32.4	52,466	5,164	9.8
Finished iron products	1,058,287	467,759	44.2	310,267	245,250	79.0
Crude zinc	169,439	77,669	45.8	—	—	—
Zinc sheets	42,493	25,449	59.9	3,935	4,410	112.1
Sulphuric acid	255,589	150,699	59.0	—	—	—
Lead	41,560	16,143	38.8	—	—	—

It should be explained that the disruption of the industrial area has seriously interfered with production. In the case of half-finished iron products, for instance, the separation of works under the same direction has been got over by associating works in German Upper Silesia with undertakings in Germany outside that area, consequently the half-finished products produced in Upper Silesia and sent to other parts of Germany are not considered as sales. There are no zinc smelting or sulphuric acid factories in German Upper Silesia, these undertakings having all been allotted to Poland.

Money and Trade Balance in Sweden.—The present position of the Swedish money market, writes a Stockholm correspondent, is attracting attention. A tendency to easier credit conditions has been developing since the spring. As there is no open market for bills of exchange in Sweden, and thus no regular market quotations for short-term credit exist, the monthly consolidated balance-sheet for all Swedish commercial banks is, apart from the weekly State Bank return, the only source of information as to the situation on the money market. The following table gives the figures for deposits, loans, and rediscounts (on the last day of each month, expressed in millions of kroner):—

1925.	Deposits.	Loans and Discounts.	Bills Rediscounted.	Excess of Loans and Discounts over Deposits.	Rond Yields.
February ..	3,742	4,373	275	906	4.99
April	3,674	4,361	294	981	4.97
June	3,617	4,357	275	1,015	4.80
July	3,667	4,420	187	941	4.74
August	3,677	4,435	156	914	4.73
September ..	3,657	4,403	140	885	4.73

The figures for the excess of loans and discounts over deposits and for rediscounts clearly show that since June a marked improvement has been under way. This resulted in a lowering of the Bank rate on July 24th from 5½ per cent. to 5 per cent., and on October 8th from 5 to 4½ per cent., the last reduction immediately following the example of the Bank of England. The reason for the ease in the money market is seen from the above table. The supply of credit has been steady, while the demand has decreased considerably. A decrease in the demand for credit usually means a contraction of production and a slackening of business. However, the present Swedish situation seems more likely to have been caused to a con-

siderable extent by a remarkable change of the balance of payment to foreign countries. The net foreign balance has increased this year by 68 million kr from January 1st to September 30th, as compared with a decline of 63 million kr during the nine first months of 1924, and an improvement of 7 millions in 1913. Exports during the first nine months of 1925 were 967 million kroner, in comparison with 882 millions for the same period of 1924. Imports were 1,037 millions and 1,024 millions respectively. The excess of imports has thus decreased from 142 million kr in 1924 to 70 million kr this year. The recent weekly returns from the State Bank still indicate an easy money market. The level of stock prices reached its highest point in the beginning of September, after heavy advances during July and August, and has since that time as an average been more or less steady after the reaction in the middle of September.

Bank Laws in Peru.—A correspondent writes:—A situation, somewhat strained, has arisen between the Peruvian Government and the Bancos Hipotecarios, or Land Mortgage Banks, owing to the interference by Congress in the affairs of the monetary institutions of the Republic. A recent law modifies in a menacing manner legislation which dates back as far as January, 1889. At this period a number of financial institutions were brought into existence under charter for the carrying-on of land loan operations by means of advances on crops, &c. No one denies that the working of these finance institutions has hitherto been satisfactory, nor that the agricultural and farming interests of the country have benefited largely by the opportunities and assistance thus afforded, but it is now sought to introduce sweeping changes in regard to interest and amortisation payment and charges for administrative expenses. Hitherto the custom has been to discount loans in advance; the system seems to have worked well enough, since few complaints have been made. But, hereafter, the banks will be debarred from collecting the interest until the expiration of each quarterly period. With regard to the administrative services which they may render, the customary charge of 1 per cent. per annum, which appears reasonable enough, cannot in future exceed ½ of 1 per cent. per annum. In the opinion of leading bankers this modification is wholly uncalled for, and therefore impossible of acceptance. Owing to the great risks in making advances upon landed properties, no cautious banking-house could agree to accept them. Nor could there have been a more unfavourable period than the present for introducing such revolutionary restrictions, since Peruvian agricultural interests are suffering from an unusually severe depression as a result of the damage caused by the rains early in the present year. From the effects of this visitation even partial recovery cannot be expected for some time to come. The opposition of the Bancos Hipotecarios to the new legislation has taken the form of complete suspension of further transactions in land and mortgages, a policy which, if persisted in, will further affect detrimentally the over-charged agricultural interests of the country. It is believed that the Government, in face of this attitude, will appreciate the necessity of suspending the new Land Loan Law unless it decides that it shall be rescinded altogether. This would seemingly be the wisest step to take. The new legislation would affect certain foreign interests, especially institutions like the Banco Italiano, the Banco Popular, and, to a lesser extent perhaps, the Banco Internacional. The first-named institution has been working in Peru since 1889, being among the first to receive a State charter. Although some other foreign capital went into it at the start, the Banco Italiano represents to-day interests largely Italian. The management is, likewise, chiefly in the hands of Italians by birth or descent. The Banco Popular is, on the other hand, strictly Peruvian. Ranking as an institution of some importance, it was founded ten years later than the Banco Italiano. In its time it has proved a highly successful, profitable, and well-conducted concern, with considerably more than 1,000 current accounts. Extremely conservative in its operations, and seldom making loans for more than 90 days, the bank is equally cautious in its dealings with mining concerns and advances against growing crops. The Banco Popular would no doubt be seriously affected

by the operations of the new law, and it is not difficult, therefore, to understand its strong opposition to the enactment. Mortgage banks are the only monetary institutions in Peru which are subject to any special act of regulation. As in the majority of other South American Republics, foreign and domestic banks are organised under and are governed by the laws relating to corporations, such laws differing essentially from those of either English or American corporations.

British Dyestuffs.—The accounts of the British Dyestuffs Corporation, issued this week, cover a period of 17 months to March 31st last. For the year ended October 31, 1923, there was a profit of £251,400, which was used in reducing the debit balance at profit and loss account to £449,300. For the 17 months to March 31st there is a profit, after providing £437,800 for depreciation on property and plant, of £88,700, which reduces the debit balance to £360,600. Trading results, says the report, were "adversely affected by the fall in prices of dyestuffs and the increased competition in the home market." The balance-sheet dated March 31st last shows a far from satisfactory position, goodwill, &c., standing at £750,000, cash and investments (not shown separately) at £3,247,300, property and plant at £2,958,500, and stock-in-trade at £1,320,300. The paid-up capital is £9,197,100. The report mentions that the subsidiary companies in which the company was interested having been liquidated, their assets have been transferred to the parent concern and the necessary changes made in the form of the balance-sheet. In view of the state of the corporation's finances, it is not surprising that the directors have formulated a scheme for reconstructing the capital and removing certain restrictions under which the company now operates. This involves the surrender of £1,700,000 preference and preferred ordinary shares held by the Government in exchange for a payment of £600,000 in cash, the Government, at the same time, agreeing to terminate its existing rights of veto and control and to forgo its right to nominate two directors, and the company giving an assurance that in all matters of technical information and research it will keep in touch with the Government. The directors point out that the works were erected and equipped when costs of construction were abnormal, "and when it was anticipated that the output of dyestuffs would reach a much higher level than has actually been attained." It is, therefore, proposed to write down the book value of property and plant from £2,958,500 to £1,760,200. It is also proposed to write down stocks by £281,000 and to write off entirely preliminary expenses, £251,600, goodwill, &c., £750,000, and the adverse balance on profit and loss account, £360,600. To provide for all this it is necessary to reduce the remaining preference shares by 6s per share, the remaining preferred ordinary shares by one-third, and the deferred ordinary shares by two-thirds. The three classes will then be consolidated into £1 ordinary shares. The preference shareholders will thus receive 6s in cash and 14s in £1 ordinary shares for each preference share held, and the preferred and deferred shareholders will receive respectively two-thirds and one-third of their present holding in £1 ordinary shares. This will reduce the paid-up capital to £4,775,600, against which there will be assets of £1,760,200 for property, £1,039,300 for stocks, £1,667,200 for cash and investments, and £308,800 for debtors less creditors. The authorised capital will remain at £10 millions, but the articles will provide that the amount actually issued shall not exceed £6 millions unless authorised by the shareholders. With regard to future earnings the directors only say that if their proposals are approved "there will be no obstacles to the wider and more efficient use of the company's resources, although some time must necessarily elapse before definite results can be obtained." Profits for the 17 months to March last amounted to £526,500 before providing £437,800 for depreciation. With assets drastically written down, so large a sum should not be required in future for depreciation, and available profits should make a more satisfactory showing. If the scheme is approved, as seems likely, the company will be entirely free from Government control, and will

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised £2,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits ... 1,458,221

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

become an ordinary commercial undertaking. The directors make no mention of possible co-operation with the company's German competitors, but Lord Ashfield will doubtless refer to the matter at the meetings to be held on Wednesday next.

Three Iron and Steel Companies.—The reports for the year ended September 30th of three companies concerned in the coal and iron and steel industries of the North-East Coast have appeared this week. The first, the Cargo Fleet Iron Company, shows a decline in profits from £100,900 to £73,000. Depreciation absorbs £30,000, as against £50,000 a year ago, and debenture interest £40,000, against £40,700, the balance forward being increased by £2,900 to £215,800. The ordinary shares, of which there are £1,000,000, have received no dividend since 1920-21, when 5 per cent. was paid. There are debentures outstanding of £718,000. The general reserve fund stands at £150,000. Capital expenditure, including the amount invested in connected companies, is £1,931,700. The South Durham Steel and Iron Company also shows a decline in profits—namely, from £106,600 to £93,900, but here again depreciation requires only £25,000, against £40,000 last year, and the directors are able to maintain the 10 per cent. dividend which has been paid on the ordinary shares since 1920-21, and also to increase the carry forward by £2,400 to £206,200. The balance-sheet is considerably stronger than that of the Cargo Fleet Iron Company. The total capital is £650,000, and there is £300,000 of debenture stock outstanding, but reserves figure at £1,445,800. Investments include £501,000 in Government securities, and total capital expenditure stands at £1,788,200. A still larger decline in profits is shown by the Weardale Steel, Coal and Coke Company, last year's figures being £106,200, as against £166,200 for 1923-24. The allocation to reserve, including depreciation, however, is reduced from £100,000 to £25,000, the preferred ordinary shares receive a distribution of £40,000, or 8 per cent., and the deferred ordinary shares £23,500, or just under 10½ per cent., which compares with 7½ per cent. for 1923-24. The balance forward is increased by £6,200. The paid-up capital is £725,000, and debenture stock outstanding amounts to £287,300. The reserve fund is £710,000. The property item stands at £884,300, but there is also an item of £747,300 for investments, of which we are told nothing. The auditors' statement that those "for which there are quotations" are entered at less than market value suggests that some, at least, may be in subsidiary concerns. The results disclosed by these three companies are not so depressing as might have been expected from the state of the industries with which they are concerned during the past few years.

Mersey Docks and Harbour Board.—At the annual meeting of the Mersey Docks and Harbour Board, the chairman, Mr Thomas Rome, drew attention to the maintenance of the improvement recorded in revenue last year. Rates and dues brought in £2,493,161, an increase of £32,482. On the other hand, rents and receipts from dock traffic and warehouses accounted for less, owing to rent reductions and bad trade. Yet the net result was an increase in total receipts of £5,901 over 1923-24. This increase is on the small side, but some compensation is provided by the fact that the tonnage leaving and enter-

ing the port increased by 2,121,962 tons during the year, and, as the chairman pointed out, "the tonnage of vessels paying rates and dues is the greatest we have ever had." The usual amount of £100,000 has been transferred to the sinking fund, which leaves a surplus of £15,321, against £15,800. Mr Rome stated that the year opened with very poor prospects, and it was not until September, 1924, that the improvement over the previous year became noticeable. "We then had a steady increase of trade and revenue until the middle of March, when our revenue was considerably higher than in the previous year. From that point, however, the great depression began, and revenue began to fall. This was only to be expected from the state of trade, not only in this country, but pretty well all over the world." It is to be hoped that next year Mr Rome will have a less unfavourable story to chronicle.

Snia Viscosa.—This week there have been introduced to the Industrial market of the Stock Exchange, shares of the Snia Viscosa company, an Italian undertaking which deals with artificial silk and similar manufactures. The authorised share capital is 1,000 million lira, divided into 200,000 privilege voting shares, and 4,800,000 ordinary shares of 200 lira each. The capital in 1917 was 50 million lira, so that in eight years it has been multiplied by 20, the last increase from 600 million lira to the present amount of 1,000 million lira having taken place at the beginning of this year. The profits have gone ahead in very substantial fashion. According to the statements advertised in order to comply with the regulations of the Committee of the Stock Exchange, and for information only, the 1923 dividend was 8 per cent., that for 1924 being 10 per cent. The production has risen from 1,186,853 lbs in 1920 to over 11½ million lbs for 1924, and the chairman estimates that the production for the current year is likely to approximate 19,841,400 lbs. The Stock Exchange started dealing in the shares on the basis of 64s to 65s for the 200 lira shares, and a good deal of business has taken place in Snias during the past few days. This is one of those cases in which criticism may justly be directed to the manner in which a company is introduced to the public. Owing to the form adopted for publishing information, namely, the letter from the chairman, accompanied by the balance-sheet, &c., there is no necessity for the vendors to disclose the price at which they have sold to the financial houses the shares in which a market has now been made. It may be that the original sellers parted with their shares for 10s below the current price; possibly there are intermediaries who are handling the business at a substantial profit in between these figures. This, of course, is simply supposition. It is impossible, owing to the manner in which the shares are introduced, that is, through the medium of a statement only, to ascertain at what price the shares were sold in the first place. But this latter factor has a decided bearing upon the figure which the public might have been expected to pay had they known the details. It is, of course, perfectly legitimate for the buyers of a large block of shares to expect, and to take steps for the acquisition of, a substantial profit upon their purchase, having regard to the risks which they run, and of the possibility that some proportion of the issue might be left on their hands. Beforehand, however, it was generally understood that the opening price would be about 61s 6d. To quote the double price, as it has been done, was a little superfluous in view of the fact that nobody except the insiders had any shares for sale. Therefore, the starting price was simply that at which purchasers were allowed to come in. The reason for raising the first price from the originally intended 61s 9d, to 64s 6d, was that so great a demand developed in advance that the sellers were able to command a higher figure than they were at first willing to accept. It can be said quite justly that there is no necessity for people to buy the shares at all, and that, if they choose to put money into Snias at some price of which they were ignorant when they gave the order, they do so at their own risk. It may be surmised, indeed, that those who were given to understand in the first place that the opening price would be 61s 9d would have been equally content to pay 65s. If, however, the company does less well than is anticipated, if Italy should be distraught by some

fresh revolutionary outbreak, or if the artificial silk market were to become less popular, the price of Snias might easily slip well below the 65s or 66s which some people paid. The same argument would apply with equal force if the starting price had been 61s 9d. The speculator cares little about a difference of 3s 3d in shares of which he has but scanty knowledge. To the investor, however, the matter is of consequence, seeing that 61s 9d looks tolerably high, in view of the chairman's expectation that the dividend for the current year will be 12½ per cent.; even if that rate were to be raised by half as much again, the yield on the money from shares in an industrial undertaking of this nature, susceptible as it is to fashion and to competition, would not look unduly extravagant. The system of introducing shares into the Stock Exchange market is one which arose primarily through war conditions. It is doubtful, however, whether the method is one that redounds to the benefit of the public, and, therefore, to the credit of the Stock Exchange. Many protests are raised from time to time against a practice which it seems to the austere mind would be better relegated to the back-ground in favour of the more prosaic but more illuminating plan of presenting a prospectus in the ordinary way.

Wall Paper Manufacturers.—The improved results achieved in 1923-24 were not maintained during the twelve months ended August 31st last, although it must be admitted that the decline in earnings, as disclosed in the report just issued, is not of serious extent. Net profits for 1924-25 amounted to £743,400, in contrast with £751,852 a year ago. Owing, however, to the fact that the sum brought in amounted to £267,040, against £223,089, the available balance is £852,799, compared with £839,200. This figure is struck after payment of debenture interest, interim dividends, and income-tax. The ordinary dividend is, therefore, maintained at 10 per cent. for the year, while the deferred shareholders again receive a dividend of 10 per cent., plus a bonus of 2½ per cent., making 12½ per cent. for the twelve months, the same as in the previous period. Last time £25,000 was set aside for the special reserve for income-tax. This appropriation is not repeated, and while the reserve allocation is unchanged at £200,000, the sum carried forward has been raised from £267,040 to £306,638. The directors report that the balance of the company's claim in respect of the German business has been received through the clearing office and included in the profit and loss account. This amounts to £9,024. The deferred shares, which stand at 1½, give a yield of £8 14s per cent. They have been as low as 1 5-32 this year and as high as 1½.

India Rubber, Gutta Percha.—An improvement again fails to be recorded in the accounts of the India Rubber, Gutta Percha, and Telegraph Works Company, Limited, for the year ended August 31, 1925. Gross profits are higher at £330,695, comparing with £320,407 a year ago. And although net profits advanced from £101,317 to £108,482, the directors wisely refrain from increasing the dividend, which remains at 5 per cent. The reserve, however, has been apportioned £60,000, as against £40,000, and £20,457 is carried forward, as against £21,975 brought in from last year. The following table shows results over a number of years:—

* To August 31.

The directors in their report take a bright view of the year, and express the opinion that the French factory will continue to show an improvement. The auditors' certificate is noticeable for drawing attention to the value placed upon French assets and the item "shares in other companies." It concludes: "These are, however, provided for by reserves." The reserve fund now stands at £280,000, but these items should be remembered when taking the position of the company into consideration. The current quotation for the £1 ordinary shares is approximately 22s 6d. The low yield at this price suggests that the shares continue to be held by the conservative type of investor.

Consolidated Gold Fields.—A further improvement is shown in the accounts for the year ended June 30th last of the Consolidated Gold Fields of South Africa, Limited. The realised profit on the year's operations is £316,800, as compared with £271,800 for the preceding year, and the dividend is raised from 10 to 12½ per cent., the balance carried forward being £46,600, against £42,300 brought in. Profits are derived almost entirely from dividends on the shares in New Consolidated Gold Fields, Limited, on which a dividend of 7 per cent., free of tax, was paid, as against 6 per cent., free of tax, for 1923-24. The accounts of the latter, which are incorporated in the report, show a credit balance of £376,100, against £466,800 a year ago. On the latter occasion, however, £88,700 was charged for investment depreciation and £100,000 was transferred to reserve. This year investment depreciation requires only £35,900, and no allocation is made to reserve. The report states that investments, on current market prices, show a further unrealised profit. In a detailed report of the company's various interests it is pointed out in regard to the Transvaal that reduced working costs and greater efficiency have largely offset the gradual disappearance of the gold premium, but that progress would have been more marked but for the shortage of native labour. A reference is made to the Devonshire House site, the company having joined its associates in the erection of a block of flats and shops, the success of the enterprise being regarded as "practically assured." Operations in the Cumberland factory of the American Cellulose and Chemical Manufacturing Company began in January, and it is stated that the plant is now capable of turning out two tons of silk yarn per day, and will shortly reach its full daily capacity of three tons.

Oberseer Correspondence.

**UNITED STATES.—BOSTON BANK RATE RISE—
STOCK EXCHANGE BOOM BREAKS—MONETARY
POSITION—STEEL INDUSTRY IMPROVEMENT—
COMMODITY PRICES—COTTON.**

(FROM OUR CORRESPONDENT.)

NEW YORK, November 10.

ADVANCE in the rediscount rate of the Boston Federal Reserve Bank precipitated a wild outburst of selling on the Stock Exchange to-day that carried the turnover up to a new high record of about 3,400,000 shares. The break in prices was an extremely sharp one. Motor shares, which had advanced in such spectacular fashion recently, were the most susceptible. Losses in this department included one of 12½ points in General Motors, one of 15½ points in Hudson, and one of 24½ points in Chrysler. Steel common lost 4½ points on the day, and American Can, another leader, lost 7½. Over a third of a million shares of steel were traded in. The brunt of the selling fell on industrial shares, particularly those that had been most active on the advance. Rails were relatively little affected.

While the pronounced strength of the past week or so had rendered the market vulnerable, and while a reaction was undoubtedly due, the change in the Boston discount rate furnished the main motive for selling. Rightly or wrongly, the action at Boston was interpreted as indicating a change in policy on the part of the Reserve authori-

ties in general. It was assumed that the advance there would be followed by advances by certain of the other regional banks. Having reached the conclusion that the Reserve Bank authorities were about to place the money market on a higher basis, and that they intended to administer a check to speculation, the speculative public was quick to remember the market effects of last spring's rise in the discount rate of the Federal Reserve Bank of New York.

That the initiative should have been taken by the Boston bank instead of by the New York bank, as generally has been the case, is not so surprising as might seem. It must be remembered that most of the money that has been placed out on call in New York—and it is this money that has helped to sustain the level of speculative activity—has belonged to country banks. The New York City banks have had relatively little of their own money on call; they have placed large amounts, however, for their country correspondents. Member bank dependence on the Reserve institutions, furthermore, has been more pronounced in the other districts. At the New York Reserve Bank there has been a material reduction in member bank borrowings; the reserve ratio rose recently by about 6 per cent., and stands well above the level of a year ago. In Boston, and several of the other Reserve Bank cities, the picture has been quite otherwise, the total amount of credit being extended by the central institutions having risen persistently of late. Under these circumstances the rise at Boston is seen as entirely natural. Its effect will be to induce a contraction of member bank loans, and so draw home some of the money that has been loaned on call at New York. In addition to the New York bank, those at Philadelphia, Cleveland, and San Francisco still have 3½ per cent. discount rates. If certain of the latter institutions should follow Boston's lead, no close observer of the workings of our banking system would be surprised. Again the effect would be to draw home call money and harden the rate for that form of accommodation at New York. With the supply of out-of-town funds diminishing, and with the rate rising, the New York banks would probably be induced to enter the call money market on an increasing scale. Such a tendency would probably be reflected in increased discounting at the Federal Reserve Bank. If things develop in this fashion the way obviously would be prepared for an increase in the New York bank's rate. It seems likely, in short, that matters are shaping up for a general readjustment of the Federal Reserve system's relation to the open market. Whether and when the local rate will go up is, of course, a matter of conjecture. But that machinery is being set in motion that is likely to produce the result is fairly clear.

The background for the whole movement may be seen in the gradual hardening in money rates that has been going on for over a year, and in the increasing dependence of the market upon the central banks. The rate on bankers' acceptances, for example, has risen from 2 per cent. in the summer of 1924 to 3½ per cent. at present. The existing rate is on a parity with the Reserve Bank's discount rate; and this relationship has usually been followed in the past by an advance in the official charge for money. In addition, it may be noted that the total volume of credit that the Reserve Banks are extending to the country, which fell as low as \$800,000,000 during the summer of 1924, and which was as low as \$1,000,000,000 last May, has lately risen to \$1,250,000,000. Probably our rates might have gone up sooner had it not been for a desire to co-operate in the effort to restore the gold standard throughout Europe. However, the recent hardening in your money market, the removal of the ban on foreign capital issues at London and the possibility of a higher discount rate on your side of the water, have tended to remove the objection that a higher rate here would injure sterling, and defeat its purpose by attracting more funds from abroad. Another influence that may have led to the change in policy is the feeling that speculation in securities was beginning to assume formidable proportions.

What the broad effects of the new order of things will be is not entirely clear. Some hard-headed bankers say that a higher official rate cannot have a great effect because money is so plentiful throughout the country.

They admit the psychological effects of the news, but maintain that the market situation will soon adjust itself. Others believe that the processes of liquidation, once set in motion, will run a considerable course, that a reaction comparable to that of last March will develop, and that the latter will prepare the way for a return of easy money by the turn of the year. Holders of this view maintain that by that time stocks again will be due for recovery. Few persons believe that general business will experience any serious check. It is still doubtful whether the buying movements in the heavy industries, which set in this fall, will be continued without interruption through the winter, or whether a lull will intervene before spring. Most observers are confident, however, that general business will be good through the spring; the more optimistic see good business well through next year, with something like boom conditions and a certain amount of inflation in commodity prices. In any event, reasonably cheap money is expected to prevail during the winter.

Evidence of sustained improvement in the steel industry is furnished by the report on the United States Steel Corporation's unfilled orders. These increased by 391,886 tons during October. The gain is somewhat larger than had been expected, and follows one of 205,000 tons during September. The September gain terminated a decline that began last March, and that carried the corporation's unfilled orders down from 5,284,000 tons to 3,512,000 tons. Meanwhile, it is apparent that the pig-iron situation is much stronger. One leading maker has advanced prices from \$17 to \$22 a ton, and is sold up well into the second quarter of next year. A corresponding improvement has not yet been felt in the steel industry, but prices are firm, and buyers are coming to believe in their continued firmness, a circumstance that is likely to bring about a further increase in bookings.

Commodity prices in general remain firm. *Bradstreet's* index advanced 1.2 per cent. during October, standing on November 1st at 155.6 per cent. of the 1913 average. Breadstuffs, metals and fuels contributed the chief gains. *Dun's* index also increased 1.2 per cent. during October to 163.1 of the 1913 average. Both indices reveal a fairly consistent advance reaching back to last June.

Another sharp break in cotton was precipitated by the latest Government report on the cotton crop, that is, of November 1st. The Department of Agriculture, in this report, raised its estimate of a fortnight earlier by 160,000 bales to 15,386,000 bales. It explained the increase by saying that the hardness of the plant had permitted a remarkable recovery from the effects of the early autumn drought, while recent rains had injured quality more than yield. Ginnings to November 1st amounted to 11,198,660 bales. Making allowances for the limitations of conclusions that may be drawn from ginning figures, it may be said that the latest figures suggest that the yield that is now prophesied will be realised.

FRANCE.—GOVERNMENT'S FINANCIAL PROPOSALS —NEW TAXATION—REVENUE—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, November 18.

THE long struggle between the Painlevé Government and the Finance Commission of the Chamber, during which the Premier and Finance Minister's original proposals have been very roughly handled, is now over, and to-day M. Lamoureux, the Rapporteur-Général of the Budget, laid his report before the House. The Government's proposals in their final form cannot be said to have met with approval by any section of the Chamber, so thoroughly have they been modified to meet all kinds of political differences of opinion between the various sections of the Cartel des Gauches. To the hated "capitalist class," of course, they are *anathema maranatha*, and with very few exceptions newspaper opinion universally condemns them.

The disguised capital tax, which is given the title of the "contribution nationale exceptionnelle," has assumed the form, owing to the sweeping manner in which exemption has been granted to the vast majority of taxpayers, of a special political tax on quite a small section of the nation. M. Bokanowski, one of the acknowledged experts in the Chamber, points out that already, out of over

12 million taxpayers, only 1,140,000 pay income-tax. Out of the total yield of 2,250 millions from this source, 2,000 millions are paid by 88,000 persons, while the remaining 1,050,000 income-taxpayers contribute only 250 millions between them. Under the new proposals the duties on bearer bonds are increased to between 44 per cent. and 45 per cent., and the land tax to 38 per cent. A manufacturer who makes an annual profit of 1,000,000f will now be required to surrender 650,000f of it in direct taxation. The *Temps* stigmatises the Government's latest proposals as "the most redoubtable attack on property since the French Revolution, and the first and most serious manifestation of the 'division of classes.'"

No previous proposals emanating from a French Finance Minister have ever excited such bitter and universal opposition from the investing, industrial, and possessing class. By insisting on extending taxation to the Rente, M. Painlevé is accused of having broken the word given by the State to the hundreds of thousands of people who lent money to it during the war, and with having ruined the credit of the State for the future. By raising the authorised maximum of the advances to be made to the State by the Bank by a further 1,500 million—the third since the beginning of the present year—it is insisted that the Government has opened the floodgates to still further inflation in the near future. The danger of stagnation in business and widespread unemployment resulting from the double operation of excessive taxation of capital and what may very soon prove to be reckless inflation, is emphasised on every side. It is evident, however, that the crack of the Socialist whip will have to be obeyed (unless a sufficient number of Radical Socialists break away from the Cartel des Gauches during the seven or eight days' debate which opened in the Lower House to-day), and that M. Painlevé's proposals, if eventually they reach the Senate, will in all probability lead to a very grave constitutional crisis.

Whether M. Painlevé is deliberately riding for a fall is not clear. That section of the public which is most threatened by the new taxation is placing all its confidence at present in the belief that the whole Bill will be thrown out by the Senate. The Socialist retort to this is that if the Senate rejects the Bill the Cartel des Gauches will provoke a dissolution of the Chamber, and will go to the country with a programme for constitutional reform which would involve proposals to prohibit the Senate from interfering with money bills of any description in the future, thus placing the Chamber in the same supreme position, as regards financial measures, as is the British House of Commons. An important factor in the present situation is the fear that prevails that such a threat the Socialists may find themselves able to carry out.

One of the most favoured arguments of the Opposition is that the Government might get out of practically the whole of its financial difficulties if it would consent to the transfer of some, at least, of the State monopolies to private industry for a term of, say, 30 years. Although there is not much likelihood of its approval by the present Chamber, particularly at the present juncture, a private member on the Opposition side has put forward a proposal for the tobacco monopoly to be handed over to a private company for exploitation for a period of 30 years, on terms to be discussed later. The author of the proposal points out that, according to the present Government's Budget estimates, the new revenue from the monopoly at present exceeds 1,900,000,000f per annum, and he argues that under ordinary commercial management this might easily be increased to 2,000,000,000f. It should not be difficult, therefore, to find a concessionaire who would be prepared to pay 30,000,000,000f, practically on a cash basis, for the sole rights in the monopoly for 30 years. The State would lose the present revenue of 1,900,000,000f a year from tobacco, but this would be only in appearance, as it would be able, with a very limited period from the new concessionaire, to buy in on the open market, at present prices, sufficient Rentes to enable the annual debt charges to be reduced by a good deal more than 2,000,000,000f a year.

The revenue returns for October show that the total yield from all sources amounted to 2,973,845,800f, as

compared with 1,867,500,000f in September. The month's revenue was the highest that has been recorded since October, 1924 (in which latter month the total amounted to 3,047,000,000f, or some 74,000,000f more than last month). In view of the fact that the Budget Act for 1925 estimated a total revenue of 33,138,000,000f, including 1,275,000,000f from the operation of the Dawes Plan, the figures show that, unless the amount recovered during November and December is considerably higher than the yield during previous months of 1925 and during the last two months of last year, the Finance Minister at the end of the year will have to report a deficit of at least 3,500,000,000f to 4,000,000,000f.

The total revenue during October from "normal and permanent" resources was 2,885,306,200f, which again was the highest total since the year began, but still slightly below the yield in October, 1924. Indirect taxation and State monopolies yielded 2,262,000,000f during the month, or 132,928,000f more than in October, 1924. A notable feature of the return is that the yield from the turnover tax, which is usually a fairly reliable barometer of the economic situation, was 52,314,000f less than in October, 1924. The yield from income-tax in October was 461,000,000f, or 220,972,300f less than in October, 1924.

Foreign trade returns for October show an appreciable increase in both exports and imports, but the figures disclose that the excess of imports over exports, which began in August, still continues. The total value of the imports during October is returned as 4,476,245,000f (as compared with 4,317,029,000f in September), and of the exports as 4,374,751,000f (as against 3,849,879,000f in the previous month). The net result on the month is that, whereas the surplus of imports in September was 467,000,000f, the unfavourable balance in October was only 101,500,000f, as compared with a favourable balance in October, 1924, of 169,000,000f. The greater part of the increase of 159,000,000f in imports consisted in raw materials, while 397,000,000f out of the total increase of 525,000,000f in exports during the month was represented by manufactured goods. The general situation may be gathered from the fact that during the first ten months of the year exports exceeded imports by 2,631,037,000f, as compared with a favourable balance during the corresponding period of 1924 of only 1,351,953,000f. The detailed comparative figures in regard to the value of the imports and exports are as follows:—

	First Ten Months of		Differences in 1925.
	1924.	1925.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	7,369,079,000	7,366,658,000	— 2,421,000
Industrial materials ..	21,096,287,000	22,251,872,000	+ 1,155,585,000
Manufactured goods ..	4,096,678,000	4,342,132,000	+ 245,454,000
Totals	32,562,044,000	33,960,662,000	+ 1,398,618,000
Exports—			
Foodstuffs	3,190,342,000	2,826,262,000	— 364,080,000
Industrial materials ..	8,484,370,000	9,997,883,000	+ 1,513,513,000
Manufactured goods ..	20,645,208,000	22,055,038,000	+ 1,409,830,000
Postal parcels	1,594,077,000	1,712,516,000	+ 118,439,000
Totals	33,913,997,000	36,591,699,000	+ 2,677,702,000

The increased favourable balance is accounted for entirely by the general rise in commodity prices. This is strikingly shown by the fact that the total tonnage of the imports during the past ten months has been 7,850,581 tons less than during the corresponding period of 1924, while the weight of exports was 1,153,895 tons less.

GERMANY. — POLITICS — FINANCES — FOREIGN BORROWING—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 17.

THE political situation here has not yet been cleared up. The German-National Party Congress passed a unanimous resolution against the Locarno agreements, but many of the declarations sent in by the provinces, upon which the resolution was largely based, were qualified,

and the strongest opposition to the agreements seems to come from those members of the party who are satisfied that the ratification will be put through. The party continues to hunt for prestige as being vehemently patriotic, but it does not like the prospect—which was never very big—of being later accused of wrecking a necessary policy. To most Germans (though they are not fully satisfied) the best justification of the Locarno settlement is the new Ally policy on the points of evacuation of the Cologne district, reduction of the occupying armies, restoration of German civil authority, and the other measures of relief promised in M. Briand's Note of November 14th. A week ago a number of leading German-National politicians, largely representing the aristocratic element, issued a protest against the anti-Locarno policy so far pursued by their party; and the new Ally measures will strengthen this placable element. The Cabinet is preparing the necessary Bill for the Reichstag, and it expects to be fully supported in its policy by the heads of the States who will meet here on the 19th. The hesitation in business circles will not be allayed until the Locarno issue is settled.

The federal finances, as shown by the last monthly Treasury report, continue to develop satisfactorily:—

	October.	April-October.
Receipts—	Marks.	Marks.
From taxation (nett)	731,393,141	4,279,946,944
From other sources	18,519,908	104,533,336
Total	749,913,049	4,384,480,280
Expenditure—		
General administration	465,490,946	2,826,657,021
Subventions to states & municipalities ..	197,459,765	1,528,074,226
Reparations payments	45,642,160	103,456,840
Total	708,592,871	4,458,188,087

In the seven months payments-out exceeded receipts by 73,707,807 marks. Receipts in October were 210 million marks larger than in September, the reason being that the September-pledged revenues, which appear in the October return, were particularly large; and that income-tax quarterly prepayments were made where monthly prepayment was formerly the rule. The next months should therefore see a decline, which will be increased by the reduction of the sales tax from 1½ to 1 per cent. This reduction came into force on October 1st, and the effect will first be shown in November, when the monthly payment for October is made. Gross revenue in the seven months was 4,258,777,825 marks, out of 6,343,750,000 marks estimated for the whole fiscal year. Direct taxes yielded 3,143½ millions out of an estimated 4,729 millions. Customs and Excise (including spirits monopoly) 1,114½ millions, out of 1,514½ millions. In the estimated 6,343 millions revenue appeared 100,000,000 (added later) for expected increase in the yield of taxes, Customs, and Excise; this sum has been largely exceeded already in seven months. Customs yielded 320½ millions, out of 356 millions estimated for the whole year. The five pledged sources, Customs, tobacco, sugar, beer, and spirits monopoly, yielded 1,050.7 millions, out of 1,425.2 millions estimated for the whole year.

The conclusion of loans in the United States continues; and apparently, as much money will be borrowed in London as London is willing to lend, the only limitation from this side being upon borrowing by municipalities. Whether British foreign trade will gain from this is doubtful. The more money German business can get from abroad, the easier it will find it (until now it has found it difficult) to grant export credits to those countries whose imports are measured by the amount of credit they can get from foreign deliverers. Almost daily the trade Press reports further small contracts for the supply of goods on credit to East Europe. It is stated unofficially that the Government is itself considering the granting of export credits. The fact that some time back American export manufacturers objected to Wall Street's loans to Germany suggests that more of the free British capital might be applied in direct export credits to the countries referred to. By the present system Germany is helped to regain her old intermediary rôle, and British export trade may suffer. In Germany objections to heavy borrowing abroad are made on the ground not only of the effect upon the foreign payment-balance, but also that foreign capital may get too large a hold upon native industry. A recent deal, by which the American Harriman and Anaconda

Copper interests restored the finances of a Silesian company, and therewith got control of the chief German zinc-producing concern, has evoked some panicky comment, and has led to an interpellation in the Prussian Diet.

The Reichsbank's status improved, as usual, during the first week of the month. Discounts declined by 155.7 million marks, advances by 12.4 million marks, and circulation by 125 million marks, of which 51.4 million marks was due to rediscounting. While the Reichsbank still severely rations discounting, the use of commercial bills for payment purposes, and also, it seems, of accommodation bills, is increasing. Attempts to stave off payment difficulties by use of bills which there was very small prospect of meeting have preceded many of the recent bankruptcies; and that seems to have been a feature of the greatly increased bankruptcies of October. In the textiles, metal, motor-car, and leather branches bills have to a large extent become the only currency. Short-term money was very plentiful last week, day money occasionally dropping to the new low level of 6½ per cent. The Prussian State Bank and the Reichskredit A.G. have more public money than they can put out at interest. The Prussian Savings Banks show for the first three quarters of 1925 an increase by 542½ million marks in deposits, bringing the total to 948 million marks, an increase of over 133 per cent. The deposits are now 50-fold greater than at the end of 1923, but the absolute total is small. At the end of 1913 Savings Bank deposits in Prussia totalled 12½ milliard marks.

Prices are still falling. The wholesale official index number for November 11th was 119.9, against a high point this year (July 8th) of 135.8. The cost-of-living index has fallen slowly to 143.5, against a high point of 145 in August. Unemployed on October 31st numbered 364,000, against 299,000 on the 15th. Part of this relatively large increase is probably seasonal. The number of unemployed is now nearly double the year's lowest number, reached in the summer. The coal market is practically unchanged. The pits'-mouth stocks on the Ruhr have slightly declined as a result of the winter domestic demand, but they are still little under 9 million tons. The October Ruhr output increased. In Prussian Eastern Silesia, as a result of the trade war with Poland, coal production has increased, being in October about half a million tons more than in May, while stocks have fallen to one-half. The heavy iron and steel industry shows no material change. The demand for semi-finished steel is satisfactory, but the Raw Steel Syndicate has to cut prices in order to meet French competition; and export prices are reported to be considerably below production-cost. Home prices (in marks per metric ton) are, ex works:—Ingots, 104.26; blooms, 111.75; billets, 199.25; sheet-bars, 124.25; structural forms, 131.25; bars, 134.30; wire-rods, 140; thick sheets (over 5 mill.), 149.25. The domestic building industry, which recovered to some extent before the stabilisation, is again, owing to lack of capital, depressed. The Republic is still short of 600,000 dwellings. New dwellings built in 1919 numbered 57,000; in 1922, 146,000; 1923, 118,000; 1924, (estimated), 100,000. To cure the housing shortage within six years, 250,000 new dwellings per year would have to be provided. Several new industrial fusions of some magnitude are reported. An association called "Ausfuhrverein deutscher Rubenzuckerfabriken" has been formed to encourage and regulate export of sugar. At a Congress of the Electrotechnical Industry the former Minister of Industry, Herr V. Raumer, Herr Deutsch, of the General Electricity Company, and other speakers advocated a horizontal trust in this branch.

Stocks last week were slightly reactionary, and averages reached a new low level for the year. The *Frankfurter Zeitung's* index for the 14th is 62.88, against 63.11 one week earlier (100 on January 2nd). Last week began with an all-round rise, but ended weakly, and after moderate strength on the first day of this week there were new falls to-day, due, firstly, to selling by the outside public, and then by speculators. An index for stocks, according to branches for October 7th (100 on January 2nd) shows railway car companies stocks at 24.75; leather, 46.24; sugar, 46.02; steel and coal, 57.89; potash, 60.31; chemicals, 51.53; machinery, 34.30; textiles, 82.85; breweries, 89.04; shipping, 65.90; banks, 81.59; paper, 68.62. Paper-mark loans further dropped

last week, and ended at 18.49 of their average prices of the beginning of the year. Trustees for municipal paper-mark loans, under the Valorisation Law of July 17th, have now been appointed on behalf of the bondholders; after separate examination of each city's finances they may apply for an increase of the standard 12½ per cent. valorisation to 25 per cent., and for a reduction of the amortisation term. The Trustee for Berlin (and Brandenburg) has recommended a reduction of the amortisation term from 30 to 20 years, but has refused to recommend an increase in the valorisation percentage.

HOLLAND.—GOLD POLICY—NETHERLANDS BANK POSITION—FOREIGN ISSUES—NATIONAL WEALTH.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, November 17.

ON the subject of finance no question has created more interest of late than the effects of the restoration of the gold standard on the different countries which have adopted it. This country has given evidence of its interest, especially now that in the last few weeks large quantities of gold have flowed to the Netherlands Bank. The Netherlands Bank has remained entirely passive in this—that is, it did not try in any way to interfere with the free course of the yellow metal. This has brought out clearly that the reduction of the purchase price of gold in the latter part of September from 1,648fl per kg to 1,647.50fl per kg has not had for its purpose the restriction of gold imports, but that the reduction has been solely the consequence of a new calculation of the costs of minting. The price of 1,648fl resulted in a small loss in minting.

The costs of minting will probably, in practice, soon begin to play a rôle. It is already rumoured that it is the intention of the Netherlands Bank shortly to put gold coins in circulation. If it is taken into consideration that the supply of gold coins in the possession of the Netherlands Bank has now been increased, for the first time in many years, by 3 million to 59 million florins, and that the Mint at Utrecht has already minted new gold pieces stamped with the year 1925, the rumours do not seem to be unjustified. In addition, there would be no difficulty connected with it. The position of the Netherlands Bank since the restoration of the gold standard has become exceptionally strong, as appears from the table given below:

(In Million Guilders.)

	Gold Coinage and Bullion.	Foreign Bills.	Miscellaneous Accounts.	Total.
May 4th	479	152	70	701
June 2nd	479	168	41	688
July 6th	444	195	54	693
August 3rd	419	232	41	692
September 1st	414	243	39	696
November 2nd	436	244	39	719
November 9th	452	244	40	736

Since the restoration of the gold standard on April 29 last, the total amount of gold in foreign drafts and foreign balances has increased by 35 million florins, while the total amount of banknotes in circulation has decreased from 946 millions on May 4th to 912 millions on November 9th. A distribution of gold in internal circulation may, under these circumstances, be considered as desirable, as the strong gold position in any case increases the danger of too great extension of credit facilities.

The increase in gold stock is entirely due to the condition of sterling exchange, which at the present time still continues to move near the point at which importation of gold may be done at a profit. Should the increase take on such proportions as to threaten inflation, then the Netherlands Bank could prevent this by reducing the Bank rate. However, it seems clearly to be the intention for the present to permit the gold standard to continue its unrestricted course, and only to bring about changes in the

Bank rate if the leading banks of issue abroad also adopt that course, or in case the flow of gold should increase too strongly.

The condition of the money market here does not afford any reason for any change in the official Bank rate; money continues to be easy, notwithstanding large foreign issues—almost 50 per cent. of the total of private issues during 1925 was for foreign account. As to these issues, the Stock Exchange Committee declared itself opposed to giving them an official quotation in the case of countries that have not fully met their obligations. For instance, not a single one of the newest German issues has been given an official quotation, with the exception of the Dawes Loan. In order to be able to establish a fixed policy in this, a committee of investigation has been appointed by the Government, which will make a report as soon as possible.

Some information bearing on the national wealth has been given in official statistics. An exact representation can hardly be obtained, but some light is thrown on the matter by the amounts paid in unearned income-tax. In this connection, it should be borne in mind that amounts under 16,000fl are free from taxation. In the table given below a comparison is made between the years 1920-21 and 1924-25, in connection with the fact that in the former year the highest amount of capital was registered. A comparison of the totals for the years 1915 to 1925 is also added:—

Amount of the Capital (in Guilders).	Number of Assessed Persons.		Amount of Capital. (in Millions of Florins.)		Total Tax. (in Thousands of Florins.)	
	1920-21.	1924-25.	1920-21.	1924-25.	1920-21.	1924-25.
16,000-50,000	102,441	111,176	2,817	3,010	2,257	2,376
50,000-100,000	37,795	30,098	2,117	2,967	2,113	2,053
100,000-500,000	22,707	20,684	4,401	3,942	4,382	3,933
500,000-1,000,000	2,267	1,798	1,550	1,215	1,546	1,212
1,000,000-and higher	1,239	942	2,704	1,979	2,703	1,978

	Number of Assessed Persons.	Amount of Capital. (in Millions of Florins.)	Total Tax. (in Thousands of Florins.)
Total—			
1915-1916	89,209	7,311	3,482
1916-1917	95,374	7,841	3,737
1917-1918	102,166	8,884	4,258
1918-1919	135,375	11,379	5,460
1919-1920	146,475	12,468	11,955
1920-1921	159,449	13,589	13,007
1921-1922	166,362	13,284	12,665
1922-1923	161,498	12,324	11,690
1923-1924	162,188	12,183	11,534
1924-1925	164,698	12,214	11,563

(In Percentage of Total.)

Amount of Capital in Guilders.	Number of Assessed Persons.		Amount of Capital.		Total Tax.	
	1920-21.	1924-25.	1920-21.	1924-25.	1920-21.	1924-25.
16,000-50,000	64.25	67.50	20.73	24.65	17.35	20.55
50,000-100,000	19.31	18.28	15.58	16.92	16.24	17.44
100,000-500,000	14.24	12.56	32.39	32.22	33.74	34.02
500,000-1,000,000	1.41	1.09	11.40	9.95	11.89	10.48
1,000,000-and higher	0.78	0.57	19.90	16.20	20.78	17.11

The amount of taxed capital from 1915-16 to 1920-21 continually increased; then, under the influence of the crisis, a decrease took place until 1923-24, since when a comparatively small increase has taken place in 1924-25. The figures were influenced by the war crisis changing prices and stock values and by war profits. The large increase from 1918-19 to 1919-20 especially attracts attention. This is caused by the doubling of the taxation rates on May 1, 1919.

In comparing the separate figures for the year 1920-21 and for 1924-25, total figures for the latter year are shown to be lower than those of 1920-21, except for the group capital from 16,000fl to 50,000fl. Large capital holdings have decreased considerably; small capital holdings have increased. During 1920-21 the owners of 1,000,000fl provided 20 per cent. of the total tax yield; for 1924-25 this percentage decreased to slightly less than 16 per cent. For the group of persons with a more than 16 per cent. For the group of persons with a capital of from 500,000fl and more, these comparative figures are respectively more than 31 and 26 per cent. On the other hand, for persons with a capital under 100,000fl the percentage rose from 36 per cent. of the total in 1920-21 to 41.57 per cent. in 1924-25.

DENMARK.—THE FALL IN PRICES—VALUE OF THE KRONE—TRADE AND CREDIT.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, November 7.

PRICES in Denmark are still on the down grade, and the basis for the krone rise is thereby gradually strengthened. From September to October the wholesale price index of the Statistical Department has declined from 186 to 179 points, while that of the *Finanstidende*, which is computed on a somewhat different basis, has dropped from 163 to 158 points during October.

About the middle of October the Statistical Department and the Nationalbank estimated the value of the krone at that time—based on the wholesale price level at home and abroad—at 88 to 89 ore, a figure which likewise appeared in a report to the Government by the Nationalbank and the "Valutacentral" about the same time. Since prices at home have subsequently declined still further, the theoretical value of the krone might be put somewhat higher, the world level of prices not having declined as much during October as has the Danish level of prices. Based on the wholesale price level, the difference between the theoretical and the actual value of the krone—which, on the average for October, was 91.5 per cent.—can in any case not be very great. However, it may be considered certain that retail prices have not declined in proportion to the drop of the wholesale prices.

Negotiations concerning the new Exchange Act have not yet been completed, but are expected to be ended in the course of the next few days. The Act will presumably provide for a minimum rate for the krone of 90 per cent., without deciding anything with regard to the continuation of developments. At the same time, it is expected that endeavours will be made to have the exchange equalising fund of £5,000,000 renewed—this fund having been replenished during the favourable exchange conditions—while the credit of \$40,000,000 granted to the Nationalbank will still be at the disposal of the bank for maintaining the increased minimum rate. Finally, it may be stated that at the end of October the Nationalbank itself commanded Kr. 134,000,000 of foreign exchange, the amount being increased by Kr. 10,000,000 during last month. Accordingly, the Danish Note Bank has at disposal substantial exchange reserves, even considering that increased import engagements may arise, and that it may be expected that a certain amount of Danish bonds may return from abroad, while, in addition, foreign credit balances in this country may be withdrawn.

At the recent shareholders' meeting of the Nationalbank the chairman declared that it was the intention of the bank to re-establish the krone at par, but that nothing could be said as to when this should take place. The general opinion at present is that this last question should, as far as possible, be kept open; and—as suggested above—this will presumably be the case at the revision of the Exchange Act. However, there is no doubt that a big majority of the business men and the population as a whole desire the re-establishment of the full par value. This was stated yesterday at the session of the Council of the International Chamber of Commerce in Paris, the chairman, Mr Walter Leaf, expressing the following views:—"It seems that the business opinion of Denmark is entirely in favour of the return to parity, and the country is prepared to face with courage the crisis through which it must pass before the goal is reached."

As regards the difficulties of trade during the krone rise, it may be stated that last week the number of unemployed was 35,142, against 33,807 in the previous week, and that the corresponding figure last year was about 18,000 only. Depression is worst in manufacturing industries, but is severe in other branches as well. On September 18th the total number of ships laid up was 25, with a gross register tonnage of 45,339, while towards the end of October this tonnage was somewhat less owing to some of the ships having recommenced sailings in the course of the month. The Danish freight rate figure for September was 95.5 per cent., against 94.5 for August and 102.1 for January.

Trade is, of course, affected by the decline of prices, which causes the public to delay purchases in the expectation of further declines. This likewise affects the foreign trade, which has declined in volume during the last few months. The foreign trade figures for the third quarter of 1925 and 1924 were the following (in thousands of krone):—

	1924		1925	
	Imports. Kr.	Exports. Kr.	Imports. Kr.	Exports. Kr.
July	177,000	177,000	190,000	180,000
August	198,000	189,000	163,000	162,000
September	200,000	206,000	146,000	148,000

During the first nine months of the year the result has been an excess of imports of Kr. 81,000,000 only, while the corresponding figure for January-September, 1924, was Kr. 152,000,000. That this development has supplanted the advance of the krone rate is quite obvious.

The September figures for the total balance-sheet of the Danish private banks have just been published, and show a decline of Kr. 42,000,000. Loans have been reduced by Kr. 31,000,000, while deposits have declined by Kr. 21,000,000, and it is pointed out in the commentary to the statistical review that in the course of the month further settlements of documentary credit engagements have taken place. From the balance-sheet of the Nationalbank as at October 31st it appears that the item "home bills" has been reduced from Kr. 71,200,000 to Kr. 68,500,000 during the month, while a year ago this item amounted to Kr. 249,700,000. The reduction in the course of a year has thus been about Kr. 181,000,000, which is significant proof of the relaxation of the money market. At the same time, the note circulation of the Nationalbank has been reduced from Kr. 495,100,000 to Kr. 453,600,000.

CZECHOSLOVAKIA.—GENERAL ELECTIONS—NEW NATIONAL BANK—NEW LOAN—COMMERCIAL TREATIES.

(FROM OUR CORRESPONDENT.)

PRAGUE, November 17.

THE second General Election in the new Republic for the Senate and Parliament passed off very quietly on Sunday last. Despite the snow and the rain, it is estimated that 80 per cent. of the electorate of seven millions went to the poll. There is compulsory voting in Czechoslovakia, and the sale of alcohol is prohibited both during the day of the elections and for twenty-four hours previously. To the unbiased observer, it seemed a great pity that the election campaign should have been so full of the personal element—on both the Czech and German sides—especially when there are so many and such important issues awaiting consideration. As the elections are fought under the principles of Proportional Representation, the complete results will not be known for some time; but the first scrutiny reveals the fact that the new Parliament will again be ruled by a Pěka. Of the twenty-nine parties which went to the poll, nearly half will have no representative in the new House. The leading parties up to the present, both in the Senate and Parliament, are the Agrarians, the Popular Party (i.e., the Clericals), the Communists, the Socialists, and the Social Democrats. The most significant result is the increased vote of the Clericals and the Communists. The recovery of the former will certainly not help a speedy settlement of the present unsatisfactory relations between the Pope and Prague. Of the probability of real co-operation between the various parties of almost equal strength there seems some doubt, and already there is talk of another election early in March. M. Svehla will probably be the new Prime Minister (Agrarian), with Dr Benes (Czech Socialist) as Foreign Minister.

The success of the establishment of the new National Bank is striking. The 80,000 shares of 100 dollars per share offered to the general public were oversubscribed two and a-half times, and together with the participation of most of the leading banks, make the future of the new bank assured. The Czechoslovak Loan of 50 million dollars in U.S.A. has also been a great success. Issued at 96 at 7½ per cent., it is guaranteed upon the revenues from sugar and alcohol. (Three and a-half million dollars of the above were put upon the Amsterdam market.)

The above-mentioned facts, together with the settlement of the war debt to England, has had a good effect upon markets. Government stock stands very high at the present time, and public interest seems directed mainly in that direction.

During the next few weeks it is probable that the new commercial treaty with Belgium, and a supplementary treaty with Austria, will come into force, while the negotiations going on between this country and Switzerland should be terminated in December. The Polish Consul-General has also been conferring in Prague, and a Polish delegation is expected here to complete arrangements for a real commercial understanding with Poland.

LATIN-AMERICA.—BRITISH AND U.S. TRADE—RESPECTIVE SHARES—THE INFLUENCE OF FINANCE.

(FROM A CORRESPONDENT.)

THE extraordinarily successful penetration by the United States among the Latin Republics, which may be regarded as the direct outcome of the tremendous changes wrought by the European war, is further exemplified by the figures showing the imports and exports during the fiscal year 1924-1925. While the percentage increase of the total American trade during this period is 9.8, the full 10-year period (1913-1914/1923-1924) shows an advance of no less than 117 per cent. in imports and 189 per cent. in exports. No doubt, geographical propinquity and climate are responsible for a great part of the improvement noted; but something—in fact, a good deal—should be allowed for the intelligent methods by means of which American manufacturers cultivate relations with the 20 States of Latin-America. Those who imagined that the new United States tariff would adversely affect the trade with the Latin-American Republics and the West Indies have been disillusioned; an analysis of the trade carried on in these regions shows that the countries have been but little affected by the incidence of rates. Even the Latin-American Customs regulations, which continue to be interminable, vexatious, and irritating, notwithstanding the efforts at a common arrangement made by the Pan-American Union, have merely checked without destroying the progress of trade.

While the abnormal conditions which prevailed during and soon after the war have not as yet completely disappeared, trade has readjusted itself by degrees. Without some counteracting efforts upon the part of British exporters, it would appear not improbable that this flow may move definitely in the direction of our greatest rivals, the United States. Their trade carried on with the 20 Latin-American Republics for the fiscal year 1924-1925 reached the substantial total of \$1,824,680,443, compared with \$1,661,508,598 for the previous year, thus showing an increase of \$163,171,845, or 9.8 per cent. In this connection, however, a notable difference exists between the values of the imports from the Latin-American countries into the United States and the exports from the United States to Latin-America. According to the information supplied by the Bureau of Foreign and Domestic Commerce (United States Department of Commerce), imported into the United States from the Latin-Republics totalled \$1,015,557,618 (of which \$522,617,985 came from the 10 Southern Republics), and \$492,939,633 America reached a total of \$809,122,825 (\$451,707,828 to the Northern and Central Republics, and \$357,414,997 to the Southern Republics). In view of their geographical positions, it is but natural that such countries as Mexico, Republics of Cuba, Haiti, and San Domingo should carry on the greater part of their trade with North America; their interests are obviously to buy in the nearest markets. On the other hand, Great Britain should rightly show a higher percentage of trade with the South American countries, since it not only absorbs a very considerable proportion of their products, but is enabled to offer freight (shipping) rates more favourable than its competitor. What British trade has most to fear, however, is the gradual extension of the American sphere of banking and investment influence which has steadily expanded since

the Spanish war. Loans made by United States bankers, formerly confined to the more needy of the Latin States ready to pay a high rate of interest and to grant monopolies to United States capitalists, has now extended to those fields which were formerly considered almost exclusively within the British sphere, or, at least, that of Europe. The first half of the current year showed a great extension of United States advances, loans, or Government guarantees to foreign countries. Eliminating funding arrangements, more than \$437,000,000 has been thus advanced, and, of the total, the countries of Latin-America received \$151,000,000. During the same period little or nothing in the form of British advances was asked for or granted. This cannot be wholly attributed, as some may argue, to a new era of financial economy enjoyed by the Latin-American States, for a large—although somewhat lessened—stream of foreign capital is still pouring steadily into their coffers. These ambitious young countries have not materially changed their methods, but merely their bankers.

The result of this liberal—yet shrewdly discriminating—American financing has shown itself in the enormously-increased total trade carried on between North America and the Latin countries, with a corresponding decline in certain directions of commerce with Great Britain. Some of the large banking institutions, besides having made less profits, have witnessed the depreciation of their capital engaged in South America. An instance is afforded by the return for the current year of the Anglo-South American Bank (which, by acquiring the share capital of the British Bank of South America and the Commercial Bank of Spanish America, has attained a position of commanding importance). The bank chronicles a falling-off in its net profits of no less than £213,116 between 1922 and 1925, when the figures stood at £644,138 and £431,022 respectively. This decline in net revenue has meant a reduction of the dividend to 10 per cent. for the current year (which is the same rate of distribution as for 1923 and 1924) from 12 per cent. in 1922. It is probable that the second half of the current year may show a reverse swing of the pendulum; but it cannot be too emphatically impressed upon the minds of exporters that, while our trade with Latin-America is either becoming retrogressive or remains almost stagnant, the interchanges of merchandise between our North American rivals and the Spanish-American Republics are rapidly approaching the £400,000,000 (\$2,000,000,000) mark.

Books and Publications.

TOWARDS A NEW SOCIETY.*

MR LASKI has produced a book for which a very real need exists. The study of political science in the past has tended to be concentrated too exclusively on the legal and institutional aspects of the subject. In consequence, the interplay of political and economic forces, and the relation between the political and the economic institutions of Society, have been insufficiently studied in orthodox academic circles. At the other end of the scale Marx and his followers, concentrating on the economic and material aspects of organised human life, have developed a theory which allows to politics as hitherto understood scarcely any reality at all. Mr Laski has attempted a synthesis of the two lines of thought.

The fundamental social problem of our time arises from the incompatibility of the assumptions which underlie, on the one hand, our political, and, on the other, our economic life. Our political system is based on the democratic theory that all normal and adult human beings are free and equal; our economic system proceeds on a very different assumption. Political sovereignty is distributed among the mass of citizens, most of whom are poor; economic power is concentrated in the hands of a comparatively small section of people. Such a situation is dangerously unstable. "Political equality," Mr Laski argues, "is never real unless it is accompanied by virtual economic equality; political power, otherwise, is bound to

* "A Grammar of Politics." By Harold J. Laski. Geo. Allen and Unwin. 18s net.

be the handmaid of economic power." Those who wield the latter, being unable directly to control the political machine, will contrive to manipulate it in indirect ways—by the exercise of social and financial influence, by working upon opinion through the Press, and by interfering, as they have done in America, with freedom of thought in educational institutions. On the other hand, we find, on the part of the wage-earning majority, an increasing sense that political power is within their reach; and instruments, such as the Labour party, are being forged by means of which they may ultimately come to wield it. Society, in short, is drifting towards a moment when the inconsistencies of our political and economic systems may be very bleakly exposed.

Mr Laski, holding as he does that "democratic government is doubtless a final form of political organisation in the sense that men who have once tasted power will not without conflict surrender it," suggests drastic changes in the economic system. In the political sphere the modifications he would introduce are not so far-reaching. He is opposed to a Second Chamber, and he would give far greater powers to local authorities than they have at present. But he would retain the British system of government by a Cabinet responsible to a Chamber elected on a territorial basis. He rejects proportional representation on the grounds that it tends to weak and unstable government, and that minorities with special interests can exercise a great deal of influence within the structure of the two-party system. In order to ensure that single-Chamber government may not result in the pursuit of policies to which the electorate is opposed, he suggests a complicated system by which constituencies would be able to "recall" their representatives; but he hedges this right about with so many difficulties that it is impossible to envisage its practical utility. The author's detailed survey of existing political institutions is thoughtful and thorough, and although it may be overshadowed by his much more controversial industrial proposals, it deserves careful reading.

In his chapters on Property and on Economic Institutions, the Socialist solution of modern industrial problems is advanced. Mr Laski's Socialism, however, is of the gradual and empirical kind. He urges the need for the maximum equality of opportunity, which he would achieve by a wide extension of educational facilities, by a drastic limitation of the right of inheritance, and by a careful and equitable selection of the people charged with responsible work in the community. He does not suggest the socialisation of industry on a cast-iron universal plan. Big industries and distributive functions which are vital to the life of Society he would bring under national co-operative control, with a considerable measure of decentralisation, and with elaborate checks and balances to secure due regard for the workers, manual and managerial, of the community, and of any bodies of consumers who have a special interest in the commodity produced. A considerable margin of economic effort, however, he would leave to a modified form of private enterprise operating under effective control.

A point on which Mr Laski lays stress is the need to cultivate in industry something of the spirit which animates the great professions. He admits that the "line between the worst aspects of a profession and the best aspects of an industry cannot be clearly drawn"; but he maintains that there is a very real distinction between the codes which now regulate the two kinds of endeavour. The motive of pecuniary gain may operate, and may indefinitely continue to operate, in the professions as well as in commerce; but in the one case it is far more effectively controlled than it is in the other by the ideal of public service. The medical scientist, for instance, will immediately publish to the world at large any valuable discovery he has made; the business man will try to retain for as long as possible the exclusive right to exploit any new invention.

It is impossible in a short space to refer to more than a few of the points raised in a long book compact with suggestive ideas and comment; but enough has been said to indicate its nature, and also its importance. It deserves the attention even of those who emphatically reject the Socialist doctrine; for it states clearly and vigorously the problems which confront the great modern democracies—problems which cannot safely be left unsolved.

CONSUMERS' DEMAND.*

UNDER a very misleading title, "Profits," Messrs Foster and Catchings, already distinguished as the authors of "Money" in the series of Pollak publications, try to answer the question why glut and want should exist together. Or as they put the problem, why must industry as a whole slow down because of overproduction when millions are suffering from under consumption? This question they think anybody can answer—because people who want the goods have not the money to pay for them. But this answer merely brings us to another question which appears to baffle the entire financial and industrial world—Why is it impossible for the people, as consumers, to acquire and enjoy all the commodities which, as producers, they are perfectly able and willing to make?

The answer which they propound follows the prevalent fashion of attributing all industrial ills to faults in the credit and currency arrangements. Let us put their conclusions in their own words. "The greatest economic need," they say "is a flow of money to consumers which, after providing for savings, would always be approximately equal to the flow of finished goods. The certainty that people would have enough money to buy total output, no matter how large it might be, would be sufficient to induce both employers and employees to increase the output year after year, for the very good reason that higher real wages and higher real profits would depend mainly on increased output. If, to the highly efficient system which now provides money for production, we could add an equally efficient system of providing money for consumption, we could make rapid and sustained progress toward realising the potential output of industry, rapid progress therefore toward higher standards of living."

Certain doubtful assumptions have to be noted in the authors' argument. One is that the periodical checks to industrial progress, now experienced, must be due to the money factor, because there were no such checks, under the barter system, among primitive communities. "They raised corn and made wheelbarrows solely with the idea of having them used up. They not only produced what they consumed, but consumed what they produced..... If by any chance they produced more of any particular commodity than they wanted to consume at the time, this was an occasion for rejoicing rather than for concern." Is this so certain? If an exceptionally fortunate hunter or fisherman brought in a supply of bearskins or of fish that met all the needs of the community for the time being, he and the community would have cause for nothing but joy; but the rival hunter or fisherman who came to market next day would cry out against a system which left him with a stock of perfectly good bearskins or fish on his hands which he could not exchange into wheat or wives or anything else that he wanted, because nobody else wanted them. In other words, is it not possible that in order to be unchecked industrial progress must be even, whether under a system of barter or of money?

Another assumption is that the world's capacity for output is already sufficient to secure a much higher standard, if only there were enough money in consumers' hands to absorb it. This may be true of present industrial capacity, and of potential agricultural and mining capacity, if the necessary equipment and transport facilities were provided. But are the actual agricultural capacities sufficient to supply all the meat and food and cotton and wool that would be needed if everybody were able to have as much as is necessary to a decent standard of life? In other words, may not industrial checks be sometimes caused because industry has gone ahead of agriculture? The example of war-time productivity, quoted by our authors, is rendered less convincing to some of us on this side of the water by recollections of war bread and the scarcity of coal, meat, and butter, to mention only a few items in a list that might be extended.

Yet another, is the assumption that lack of consumers' money could not be met by lowering prices without necessarily checking production. This is a thesis that is highly popular, for obvious reasons, with producers. But is it true? According to the argument, "reduced prices

mean reduced production, reduced production means reduced wages, reduced wages mean reduced consumer income, reduced income means reduced demand, reduced demand means still lower prices, leading to further curtailment of output, and so on. Thus, in a period of falling prices, society finds itself receding farther and farther from its economic goal." It is a very pretty theoretical House-that-Jack-built, but did it happen in the period of falling prices from 1866 to 1896? If prices fell evenly, so that lessened money profits were compensated by higher buying power all round, it seems to be possible that an economic system employing money might make progress at least as comfortably as one working by barter.

THE ARMAMENTS PROBLEM.*

MR WHEELER-BENNETT has produced a handbook which is adequately described by its title. It includes a useful record of the efforts which have been made to reduce armaments from the first Hague Conference of 1899 to the Geneva Protocol of 1924, and also deals with the general question of substituting arbitration for force. With the entry of Germany into the League in the near future the discussions on disarmament will enter on a new and more important phase. Mr Wheeler-Bennett's handbook is therefore very opportune, and should be studied by all who can influence in any way this great step towards permanent peace. In conjunction with such books as "The Geneva Protocol," by Professor Philip Baker, which describes with freshness, imagination, and sympathy the underlying influences which have moulded European opinion in the direction of the Protocol, the reader should be in a position to form for himself a considered and independent opinion as to the policy this country should follow. Perhaps the most original contribution in the book is the last chapter, which shows in detail what a large number of demilitarised zones already exist in the world to-day.

STATISTICAL METHOD.*

PROFESSOR SECRIST, of the North-Western University, was one of the first writers of books on statistical methods, his first edition of this book having appeared eight years ago. Since that time there have been many such books produced, year by year, in increasing numbers, but his first edition retained its popularity, and this new book, should again hold the attention of persons interested in this subject. The reason for this is not far to seek. The author has a double claim to be heard on this subject, because he has had experience both as a teacher and as the Director of the Bureau of Business Research, a department of the North-Western University which is located in Chicago. This bureau acts in a consultative capacity to business organisations with mutual satisfaction to both parties. For instance, his department undertook some years ago, as a piece of work at the instance of the Association of Retail Clothiers, to look into the various factors which affect the life and prosperity of the retail clothing stores. Many of the examples illustrating the methods of statistical analysis developed in the book under review are taken from the report made by the Bureau on completion of the work.

This experience over many years of the organisation of statistical inquiry has taught Dr. Secrist the important fact that a book of this kind is not complete without a preliminary discussion at great length of the method of collecting the facts which form the gist to be ground through the mill of statistical method. Normally a book on this subject starts out immediately with discussion as to the methods of analysis; perhaps the best part of this book consists of the first few chapters, where the collection and editing of data, the classification and tabulation of data, and the definition of the units

* "Profits." By W. T. Foster and W. Catchings. Published by Houghton Mifflin for the Pollak Foundation for Economic Research, Newton, Massachusetts. 4s.

* "An Introduction to Statistical Methods." By Horace Secrist. Ph.D. xxxiii. + 584 pp. The Macmillan Company, New York, 1925. Price 16s.

involved are dealt with at great length, before the author enlarges on the methods of dealing with the data for purposes of analysis.

Of special interest perhaps in the latter part of the book are the chapters on the various methods of graphic and diagrammatic representation of facts; on the treatment of figures of production and prices with time; and on the methods of calculating index numbers, and the various indices of prices, quantity, and business conditions which are calculated in the United States. The reader, if he has never realised before, should realise now that an index number is an attempt to give an indication of the alteration of some elusive, hardly measurable quantity, over a period of time. Thus if the cost of living index is 200, it indicates that "living" is about double what it was at some base period, and whereas different authorities might differ as to how "living" should be measured, and one authority might produce a figure of 208, another 196, and so on, yet the general indication is that "living" has roughly doubled.

THE HANDY INSURANCE CHART, 1925-26.*

It is not difficult to analyse the figures of insurance companies, but it is much less easy so to arrange the results that they can be readily consulted and apprehended by non-technical people. The Handy Insurance Chart, which is now in its fifth year, is prepared and published by the "Post Magazine," and has been designed to meet the needs for exact information of investors, bankers, merchants, brokers, shipowners, and all others interested in insurance, and fulfils its purpose more than adequately. Life and annuity business is generally excluded—these branches are fully dealt with in other publications, and the funds relating to them are earmarked for life policyholders or annuitants, and are not available to shareholders or creditors in a winding-up. The Chart deals with more than 100 British insurance companies, arranged in alphabetical order, and covers fire, marine, personal accident, employers' liability, and miscellaneous insurance business. In the 1925-26 edition an explanatory chapter takes the accounts for 1924 of a typical composite insurance office—in this instance the Phoenix—and shows exactly how the calculations are made from the official figures, and how the results, as published by this and other companies, appear in the Chart. A study of the preliminary chapter will enable any business man quickly to grasp the principles upon which the Chart has been compiled and arranged.

MORE TRADE TERMS DEFINED.

MR CUTHBERT MAUGHAN has prepared a second volume, in which he discusses a further series of trade terms. The first (noticed in the *Economist* of August 2, 1924) related to merchanting, shipping, and marine insurance. In the book now published* commodity market terms are dealt with. The main headings are grain and other foodstuffs, metals and minerals, textiles and fibres, hides, skins, and furs, and miscellaneous industries. Each of these is subdivided into a number of chapters devoted to particular commodities, there being 76 chapters in all, so that a wide field is covered. There has been condensed into these pages a great deal of valuable information connected with the trade terms in common use in market reports and by those engaged in the numerous industries referred to. The information is better presented than in the earlier volume, having evidently undergone careful revision since its serial appearance in the *Times Trade Supplement*.

The value of the book, the author modestly suggests in his preface, is due to the fact that the information is the outcome of the knowledge and experience of those who are experts in the various businesses. The collection of the materials for the volume involved many interviews in London, but only in the case of the Lancashire cotton industry did the author find it necessary to go outside the metropolis in search of the facts. Perhaps this limita-

tion on inquiry affected the statements made in the book. Should not, for instance, the indication of the places from which anthracite mined in this country is principally shipped include Port Talbot as well as Swansea and Llanelly? Tinsplates (not dealt in on the London Metal Exchange) are dismissed in a few lines, while the terms used in some of the other metal industries are discussed at length. The treatment seems somewhat uneven. In some instances reference is made to the development of the industry, or to the course of business, but in other cases is lacking. The chapters on the wool trade, though containing much of interest, stop short of mentioning changes in the course of business which have, of late, much affected dealings in London. The chapter on tea misses out the clue that the terms in use developed from days when China tea was almost exclusively dealt in. The explanations given here are far from clear, and there is a bad misprint on page 46, "flavouring" being substituted for "flavoury." But to have avoided defects in treating such a wide series of subjects would have been difficult, and the book should be of great service for reference purposes.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, December 2. ACCOUNT, December 3.

The pre-Christmas rush of new issues has started early, and the amount of new money required for fresh loans is on so large a scale that no particular surprise is felt at the failure of some of the issues to secure public support. The Gold Coast offer of 4½ per cent. at 94 resulted in a fiasco, the underwriters being left with 97½ per cent. The Brighton and Bristol Corporation loans met with a tolerable response, but Tasmania and Western Australia fared better, both of these, offering 5 per cent. stock at 98, securing the money from the public.

Rubber and industrial offers have been, as a rule, snapped up readily. It is known in the Stock Exchange that a number of new loans, rubber companies' shares, and other miscellaneous borrowings, are due to appear in the near future. The introduction to the Stock Exchange market this week of one million Snia Viscosa shares, on the basis of 65s per share, is the principal entry made under this particular method during the past week.

All this outpouring of new stock tends to hold back what vitality might otherwise develop in British Government and other gilt-edged stocks. The War Loan is firm, because of the knowledge that there will be purchases made of the stock with the dividend-money released on December 1st. The new Gold Coast scrip has fallen to 1½ discount.

In the foreign market Peruvian preference have been an active market, on anticipations of the dividend statement, and the price, after being rushed up, went back almost as abruptly. Chilean bonds have been better, and a mild recovery occurred in half-a-score of the Chinese Government descriptions. Mexicans are a little harder, on a vague report to the effect that it is intended to put into operation the scheme for dealing with interest arrears. French bonds have remained fairly constant. There is a good deal of business doing in one way and another amongst Foreigners.

Home Railway stocks stagnate, on account of the uncertainty connected with the issue of the dispute over wages. Argentine Railway stocks keep steady. United of Havana have gone back on profit-taking, and Brazilians reacted to some extent, in company with the Government bonds, by reason of a slight decline in the value of the milreis. Nitrate shares are weaker, the Lautaro dividend disappointment being still a factor in this market.

Rubber shares are buoyant. The market seethes with daily excitement, and the strength of the raw material is reflected in a persistent pressure on the part of the public to buy shares, not only in the good companies, but in the second-class concerns

as well. Tea shares, after a bout of weakness, recovered slightly, those in the companies which deal with rubber as well as tea being excepted from the dullness that prevailed in tea shares proper. The oil share market is giving a much better account of itself, Anglo-Persians being a feature of strength, and the list as a whole attracting greater public attention than it has done for some time past.

In the textile market Courtaulds dropped abruptly on the introduction of the new Snia Viscosa shares, some people exchanging into the latter from Courtaulds, others fearing lest Courtaulds may suffer from competition. As soon as the weaker holders were out, the price of Courtaulds rallied to some extent. Textiles on the whole are firm. A rise in gas stocks is noticeable on dividend anticipations. The shipping market is quiescent. London banking shares are better; the insurance group has moved but little. Iron and steel shares of the better-class companies continue to be in quiet demand, but those of the weaker brethren show a disposition to dullness. Brewery stocks are not so good as they were. In the hotel list Holborn and Frascatis stand out by reason of the expectation that the dividend may be raised before long. Amongst electricity shares the distribution by the Bournemouth and Poole company of Richmond Electric new shares had the effect of starting a lively market in the latter, the price of which is about 7s. 6d. premium on the 24s at which the shares are offered. British American tobacco shares are strong. The wireless group, after being in the doldrums, enjoyed a mild rally, and cable stocks are good all round. Shares in the equipment companies, cable and electrical, are a little irregular, but on the whole maintain their recent substantial advance.

South Africans receive spasmodic attention from the Cape and from Paris, but the home market is lackadaisical. Chartered tend to sag. Malayan tin shares retain a good deal of activity, though the tendency is somewhat irregular. Burma Corporation, Zinc Corporation, and other base-metal issues have strengthened. Russians are neglected, and other sections of the mining markets are uninteresting.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

Western Australian Government.—Issue of £2,500,000 5 per cent. inscribed stock, 1945-75 at £98 per cent. Principal will be repayable at par on August 1, 1975, the Government of Western Australia having the option to redeem the stock, in whole or in part, at par, on or after August 1, 1945, on giving three calendar months' notice. The proceeds of the issue will, it is stated, be used for railways, harbours, water supply, advances to settlers, &c. It is a trustee security of the first class.

Tasmania Government.—Issue of £600,000 of 5 per cent. registered stock, 1945-75 at £98 per cent. Principal is repayable in London at par on August 1, 1975, the Government of Tasmania having the option of redemption at par, in whole or in part, on or after August 1, 1945, on giving three months' notice. It is a trustee security. The loan, which is issued to provide funds for hydro-electric and other public works, is an excellent investment.

Brighton Corporation.—This is an issue of £700,000 4½ per cent. redeemable stock, 1945-75, at £97 per cent. Principal will be repayable at par on October 1, 1975, unless previously cancelled by purchase in the open market or by agreement with the holders, the corporation having the option of redemption, in whole or in part, at par, on or after October 1, 1945, on giving three months' notice. The stock is secured upon all the property, rates, and revenues of the corporation. The rateable value is £990,292, and a rate of 1d in the pound will produce £3,900; the total average rates for 1925-1926 were 11s 4½d in the pound. The estimated population of the borough is 138,000. The total outstanding debt at November 1, 1925, was £2,908,066, of which £2,318,346 was in respect of reproductive undertakings. This is a good trustee investment.

Lancashire Electric Light and Power Company Limited.—Authorised capital £2,321,415, of which £2,261,440, including the present offer, has been issued. This is an offer for subscription of 187,500 7 per cent. cumulative participating preference shares of £1 each at 23s 6d per share, and 371,440 ordinary shares of £1 each at 22s 6d per share. The cumulative participating preference shares carry the right, after payment of the dividend on the cumulative first preference shares, to a fixed cumulative preferential dividend at the rate of 7 per cent. per annum on the amounts for the time being paid up thereon, and in any year in which the ordinary shares of the company receive a dividend at a higher rate than 7 per cent., then the cumulative participating preference shares are entitled to a dividend at a rate equal to that paid on the ordinary shares up to a maximum of 10 per cent. The company was formed in 1903 as the Lancashire Power Construction Company, Limited, and controls the Lancashire Electric Power Company, incorporated in 1900. Capital expenditure to date amounts to £1,938,318. Receipts have risen continuously from £249,904 in 1920 to £304,746 in 1924, and net earnings over the same period from £47,356 to £168,507. These figures are after allowing for income-tax, but before charging interest, depreciation, &c. The company has paid dividends of 7½ per cent. upon the 7 per cent. cumulative participating preference and ordinary shares for the three years to March 31, 1925. The money is required to repay loans used for extensions. Both classes of shares are a fair industrial investment, though it is to be regretted that no details of assets are given.

Elstree and Boreham Wood Gas Company, Limited.—Authorised share capital £50,000, of which £33,855 has been issued, including £1,065 in respect of premiums. Of the authorised loan capital of £25,000 there has been borrowed £8,850. Tenders are invited for 800 6 per cent. £10 preference shares, the minimum price of issue being £9 10s per share, at which the yield is £6 6s 4d per cent. The net revenue of the company, which was established in 1872, amounted in 1924-25 to £1,145. Loan interest requires £515, leaving £2,630, of which the preference dividend, including this issue, requires £1,181, leaving a distributable surplus of £1,448. Sales of gas have risen from 19 million cubic feet in 1913-14 to 43 millions in 1924-25. Fresh capital is required for extensions.

Charterhouse Investment Trust, Limited.—Capital, £300,000, in £1 ordinary shares. This is an issue at par of the whole of the capital, of which the directors and their friends will be allowed £100,000. The company has been formed to carry on the business of an investment trust and finance undertaking. The issue has not been underwritten. It is provided that there shall be carried to reserve each year a sum at least equal to 10 per cent. of the profits until such reserve fund equal to 50 per cent. of the ordinary capital. It should be realised that in a venture of this description shareholders are presenting directors with a blank cheque for investment purposes.

Cauldon Potteries, Limited.—Authorised capital, £500,000, of which £485,122 has been issued. The whole of the ordinary share capital of £350,000 is held by the directors

and employees. This is an issue at £96 per cent. of £250,000 6 per cent. first mortgage debenture stock. It is redeemable by means of a cumulative sinking fund of 2 per cent., commencing in 1928, or by drawings, at £102 per cent., the company reserving the right of redemption at any time at £103½ per cent. after September 30, 1928, on six months' notice. The stock will be a first specific mortgage on freehold and leasehold lands, buildings, fixed plant and machinery, and the shares in and debentures of the Coalport China Company, and a first floating charge upon remaining assets. The company was founded in 1920, and manufactures pottery and general earthenware. Profits are certified since 1921. In that year they were £34,873, and have since shown some fluctuation, the 1924 total being £49,885. These figures are given before allowing for directors' remuneration, mortgage, bank and loan interest, and income-tax. Net assets amount to £422,159. Debenture interest requires £15,000 per annum. It is stated that the proceeds of the present issue are required to discharge an existing bank loan of £150,000, to discharge liabilities of the Coalport China Company, which business was acquired in September last, &c. It is not stated whether dividends have been paid on the ordinary shares. The company's record is not very inspiring, and apparently the future depends to a large extent upon the success of the newly-acquired interests which have been reorganised.

Durian Sebatang Rubber Estates, Limited.—Share capital £75,000, in 2s shares. This is an issue of the whole 750,000 shares at par. The company has been formed to acquire certain rubber plantations in Johore, having a total area of 1,168 acres, of which 750 acres are planted. The purchase price is £54,674, payable in cash. A good proportion of the estate consists of reclaimed land, and it is reported that one section of 450 acres was neglected for several years, and was overgrown with secondary jungle mixed with lalang, "but this has not damaged the trees to any extent." Nevertheless, despite this statement, it would have been interesting to have had a few details as to past production and yields from the various areas.

Sungei Siput Rubber Plantations, Limited.—Capital £275,000 in 2s shares, of which 697,935 shares have been subscribed. This is an issue of 1,600,000 shares at 2s 6d per share, ranking *pari passu* with all other issues. The company was incorporated on November 8, 1911, and holds rubber estates in Perak of 3,837 acres, of which approximately 2,897 are planted. Of this 2,110 acres are planted and mature. The new capital is required for the purchase and working of additional estates. Although the company has now been established for some years, no production figures are given in the prospectus. Against this it must be noted that the board consists of practical and experienced men, and the company is under excellent management. The cost of the new areas is £165,000, payable in cash. The total underwriting commission is 2½ per cent., plus an option on 100,000 shares at 2s 6d each, exercisable at any time before December 31, 1928. It is stated that preferential allotment will be given to existing shareholders. This is a good issue of its class.

Investors' Rubber Trust, Limited.—Share capital £100,000 in shares of £1 each. This is an issue of 50,000 shares at par. The company has been formed to carry on the business of an investment trust and finance undertaking, and it is intended to confine attention principally to shares, debentures, and other securities in rubber companies. It is intended to invest in trustee securities monies which may not, for the time being, be required in the business. The total underwriting commission is 5 per cent. The success of the undertaking will depend upon the knowledge and efficiency of the directors.

Batavia (Kerkoven) Rubber and Tea Estates, Limited.—Capital £100,000, in shares of 2s each. This is an issue at par of 90,000 shares. The company has been formed to acquire rubber estates in Java having a total area of 2,187 acres, of which 644 acres are planted with rubber and 551 acres with tea. The factory is stated to be capable of working 300,000 lbs of tea per annum. There are two rubber-rolling machines, and the estate has its own electric installation. The purchase price is £60,000, payable in cash, equal to about £50 4s 2d per acre. The company comes out under good auspices.

Eastern Siam Tin Dredging, Limited.—Share capital £170,000, in £1 shares, of which 125,000 are offered for subscription at par. The company has been formed to acquire and work for tin certain properties in Siam, covering approximately 1,177 acres. Of this 764 acres have been proved. The purchase price is £75,000, payable as to £30,000 in cash and £45,000 in fully-paid shares. The underwriting commission is 5 per cent., with an overriding commission of 1 per cent. The board is an experienced one.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

BENEFICIAL RESULTS TO INDUSTRY.

On the Chancellor of the Exchequer announcing in April the decision of the Imperial Government forthwith to return to a gold standard, and to allow the regulations placing an embargo on the export of gold to lapse at the end of the present year, the Commonwealth Government simultaneously announced the return of Australia also to the gold standard. How sound was the argument of those who contended that the high rates of overseas exchange were primarily due to the embargo on the free movement of gold was strikingly evidenced by the rapidity and extent of the reduction in the exchange rates on the return to the gold standard. The return to the gold standard was announced in April. In the beginning of May the banks intimated a very substantial reduction in the exchange rates. In my judgment the reduction was somewhat too abrupt, having regard to all the interests affected, but I have no doubt that the prompt action of the banks in effecting this highly beneficial change to the industry and commerce of Australia has been duly appreciated. Other countries are following the example of Great Britain in the return to the gold standard, and this should gradually make for greater stability and confidence and purchasing power.

TREATY OF LOCARNO.

Perhaps the most important event in its ultimate bearings that has occurred since we last met is the passage of the Treaty of Locarno, in which our Government, and Mr Austen Chamberlain as its leading representative, have taken so leading and distinguished a part. If nothing occurs to prevent the ratification of the Treaty by the Governments of the various signatories, a great step will have been taken towards the removal of that distrust and suspicion and apprehension of war that has brooded like a nightmare over a great part of Europe for years, and more than anything else hindered the revival of international trade and commerce.

I will now refer to the report and accounts which, having been in your hands for some days, you will no doubt, in accordance with our usual custom, take as read.

BALANCE-SHEET ITEMS.

I think you have all a copy of the report and accounts. I will ask you to turn to the liabilities side of the balance-sheet. You will see that the authorised capital has been increased from £3,000,000, at which it stood last year, to £3,750,000 in 750,000 shares at £5 each, the whole of which has been issued. All the shares are paid up to £3 per share, with £2 uncalled, making the paid-up capital £2,250,000, an increase of £750,000. I have already dealt fully with this when referring to the recent issue of new shares.

The reserve fund stands at £1,837,331 1s, against £1,635,000 last year, having been increased by the allocation made at the last annual meeting of £185,000, and by the addition of £15,000 out of the profits of the past year as required by our articles of association, and by the transfer of £2,331 1s, the profit on the sale of new shares. Out of last year's profits we now recommend that a further sum of £112,668 19s be added, bringing the fund up to £1,950,000. While this is a substantial allocation, I am satisfied that it will be regarded by you all with hearty approval. Prior to the new issue of shares our reserve fund exceeded our paid-up capital by no less than £320,000, but now even with the additions already made and now proposed our enlarged reserve fund will still be £300,000 less than our increased paid-up capital.

Our deferred inscribed deposit stock at £335,000 is less by £65,000 by the application of the sum set aside out of profits last year in the purchase of stock to that amount. I look forward to this deferred inscribed deposit stock being entirely redeemed out of profit in a few years' time. The perpetual stocks are unchanged.

Deposits at interest are well maintained at £14,065,483, showing a decrease of only £185,736. This I regard as extremely satisfactory, especially at a time when Government stocks and other investments are available yielding excellent returns; while our current accounts at £11,663,827 show an increase of £218,292. Our deposit and current accounts together stand at £25,729,310, showing an increase of £32,556.

Notes in circulation stand at £1,148, or a reduction of £37 from the figure in the last balance-sheet. This item will gradually disappear, the issuing of notes being now confined to the Commonwealth Bank.

Bills payable, rebate on bills, and other liabilities, at £1,967,092, show a small decrease of £46,000, which calls for no comment.

ASSETS.

If you will now turn to the assets side of the balance-sheet you will see that cash and bullion and cash at bankers, together £6,998,035, show an increase of £488,000, and disclose a strong cash position, being 11s 11½d in the pound of our current accounts.

Our investments, consisting of British and Colonial Government securities, taken at or below market values at June 30, 1925, stand at £1,252,760, an increase of £88,000. Our cash and investments together amount to £8,250,795, being 14s 11½d in the pound of our current accounts, a very satisfactory position.

Bills receivable and remittances in transit, at £4,876,355, show the gratifying increase of £434,000.

Advances and other assets (after making provision for bad and doubtful debts and contingencies), at £20,635,697, show a decrease of £85,000, our policy being one for the present rather of restriction than of expansion in this direction. In view of the heavy demands made upon us to assist in financing the export of the primary products, which we always do our utmost to meet so far as the maintaining of an adequate cash position will allow.

The last item, bank premises and furniture, stands at £782,457, or a reduction from last year of £22,523.

PROFIT AND LOSS ACCOUNT.

Now, turning to the profit and loss account, I would ask you to take the first page of the report, where you will find the figures of this account grouped in a convenient form.

The profits for the year, after making full provision for bad and doubtful debts and contingencies, amount, you will observe, to £1,355,328, against £1,304,455 in the previous year, or an increase of £50,873, and this, you will remember, is an increase on substantial increases in each of the two preceding years.

Expenses of management in London and Australia, including directors' and auditors' fees, &c., amount to £663,387, and show an increase on the previous year of £47,108. Of this increase £29,000 is owing to increase in salaries and wages, the remaining £18,108 is accounted for by increased necessary outlays in connection with the equipment of our many offices and branches. On the other hand, there is a reduction under the head of income and other taxes, which at £175,960 is less by £9,713 than last year.

Expenses of management and income and other taxes, together amount to £839,347; deducting this from the profits, we have net profits of £515,980, or £13,478 more than in the previous year. Although taxation pressed a little less heavily on us than in the previous year, it is still a very heavy burden.

APPROPRIATIONS.

Coming to the appropriation of the net profits of £515,980, an interim dividend of 5 per cent., free of income-tax, was paid in May last, absorbing £75,000, and there has been transferred to reserve, as already explained, £15,000, leaving for further appropriation £425,980.

Of this we now propose to carry to reserve fund, as already indicated, £112,668 19s, making, with the £15,000 just referred to and with the £2,331 1s profit on the sale of new shares, £130,000 for the year, and bringing this fund up to £1,950,000.

To the English, Scottish, and Australian Bank Officers' Provident Fund, £10,000. In this I am quite sure that we carry you heartily with us.

To the payment of a final dividend of 7½ per cent., making 12½ per cent. for the year, free of British income-tax, £168,750.

To the purchase and cancellation of deferred inscribed deposit stock, in accordance with the requirements of our articles of association, £81,250.

After these appropriations an accumulated balance is left of £183,413 19s 10d to be carried forward.

This short analysis of the accounts shows that the results of the working of the bank during the past year have been very gratifying. The business is being well maintained, and continues to progress in a satisfactory manner.

WOOL INDUSTRY.

Following my usual course at these annual meetings, I will now say a few words by way of a brief and rapid review of the most important industries and overseas trade of Australia during the past year.

Taking first the premier industry, that of the growing and marketing of wool, the exports for the last four years, according to official statistics, are:—

For the year ending June 30th—

	Bales	Value.
1922	2,557,442	47,977,243
1923	2,315,599	57,138,766
1924	1,705,081	56,197,158
1925	1,700,519	63,136,388

The increase in the value of the exports of wool last year over those of the preceding year of some £7,000,000 is substantially less than had been generally estimated that the value of the 1924-25 clip would be between £75,000,000 and £85,000,000. The exports actually amounted to just over £63,000,000. There was an amount unsold at the end of the year, and carried over into the next of

about 500,000 bales, and then there is the proportion of the clip sold in Australia, but retained in the Commonwealth to be worked up into yarn and cloth by the local mills, so that the ultimate value of the clip must be well over £70,000,000, which demonstrates the immense value to Australia of its pastoral industry.

MARKET POSITION.

At the time of our last meeting the market for wool was exceedingly firm, with prices on a very high level. The statistical position was exceptionally strong, world wool production on the basis of the three previous years being below world consumption by at least a million bales. Buyers' stocks were light, and on the basis that consumption would continue to be maintained, and probably expanded, it began to look as if some one would be left short of raw material. Apprehension of this, and anxiety to cover requirements, caused such keen competition at the December sales that prices were forced up to so high a point that a reaction was inevitable. In the beginning of this year the reaction came swiftly and intensely. At the cloth end of the trade orders were withheld, consumption was arrested, and the opening wool sales of the year were characterised by a falling off in demand and steadily and seriously falling prices. Both here and in Australia withdrawals of wool by growers dissatisfied with prices offered were frequent. As sale succeeded sale prices continued to sag, and confidence on the part of buyers to evaporate. The Australian auctions were first reduced by 50 per cent., then suspended altogether till July. The July sales both in London and Australia were better in tone. Since then the various public sales in Australia and the London sales in September-October disclosed a steadily improving market with rising prices for nearly all classes of wool, and especially for fine wools. For some months Yorkshire was not much in evidence as a buyer, the main strength of the rising market coming from the continued Continental demand, especially from France. During the last few weeks the market has broadened remarkably, America, France, Germany, Japan and Bradford all now being in evidence, Yorkshire apparently being the main strength. There have also been increasing purchases by Russia. It is computed that the sharp fall which followed the high values of December last carried prices down from 35 per cent. to 45 per cent., according to the different wools, and that the recovery from the lowest point at the latest sales in Australia is from 15 per cent. to 20 per cent., with the tendency still upward. The next series of London wool sales begins on Tuesday, the 24th inst., and it is generally expected that the recovery will be fully maintained, possibly even carried further.

SOLID FOUNDATIONS FOR IMPROVEMENT.

The improvement in price so far seems to rest on solid foundations. Business has been steadily growing in piece goods; the cloth end of the trade and the hosiery section have been week by week showing increased vitality, and there has been a steadily growing demand for yarns. Notwithstanding the heavy Continental buying of recent months, stocks of wool on the Continent appear to be light, and in Yorkshire they are said to be bare. An active demand, with good prices ruling, is therefore probable at the coming sales. I trust that competition will not again force prices so high as to damp down the cloth end of the industry. Stability of prices on a reasonably remunerative level is best for all concerned. The current year's Australian clip, which at one time was estimated at approximately 2,300,000 bales, is not now expected to much exceed 2,000,000 bales. The outlook, therefore, for Australian wool is much brighter than it was six months ago, and indeed to-day is distinctly encouraging. The importance of this will be obvious when I remind you that last year wool represented nearly 50 per cent. of the value of Australia's total exports.

NEW AUSTRALIAN TARIFF.

The new Australian tariff, which has further raised the tariff wall against both cotton and woollen textiles, has called forth strong protest from manufacturers and shippers in this country. To these protests I hope that the Commonwealth Government will give serious consideration. As a leading Australian paper has well observed, in 1923-24, of the Australian exports to all countries, valued at £119,487,164, Great Britain took no less than £45,508,323, adding the pertinent inquiry as to how can Australia expect Great Britain to buy her foodstuffs and raw material if Australia refuses to accept her manufactured goods?

With every sympathy with the desire of the Government of the Commonwealth to foster the budding manufacturing industries of Australia, it is yet right to point out that too drastic steps in that direction by unduly shutting out British manufactured goods may in the long run recoil with injurious effect on the primary producers in Australia, as well as in injuring Great Britain.

WHEAT.

The exports of wheat and flour for the last four years, in quantity and value, were, in round figures:—

Year to June 30th:—

	Bushels.	Value.
1922	122,000,000	34,164,000
1923	44,700,000	12,991,000
1924	77,000,000	19,297,000
1925	177,900,000	40,600,000

and for these years the average prices for wheat were respectively 5s 8½d, 5s 4½d, 4s 8d, and 6s 8½d. The last year, you will observe, showed a marked increase in the exports of wheat and flour both in quantity and value over any of the preceding three years; indeed, it exceeds any year since the outbreak of the war, the year that most nearly approximates it being 1920-21, when the amounts were, in round figures, 84,500,000 bushels, value £39,400,000, and the average price 8s 11½d. At one time the indication pointed to a bountiful crop and large exports in the current year; the insufficiency of rain, however, in many districts during the last few months makes it certain that the earlier expectations will not be fully realised.

From the foregoing figures of wheat and wool it is seen that apart from Australia's home consumption the money value of the actual exports, in round figures, was:—Wool, £63,200,000; and wheat, £40,600,000, or together £103,800,000 for these two commodities alone.

BUTTER.

The export of butter from Australia for the last four years was:—

	Lbs.	Value.
1922	127,579,800	7,987,500
1923	79,571,100	6,133,800
1924	65,984,000	4,919,600
1925	145,281,300	10,006,100

And the average prices realised for the respective years were about 1s 3d, 1s 6½d, 1s 5½d, and 1s 4½d. Last year the quantity was easily a "record"; though the value was less by over a million than in 1920-21, when the quantity was only 92,421,000 lb, but in that early post-war year the butter exported was sold to the British Government, who paid 2s 4½d per lb for it.

FROZEN MEAT.

The exports of frozen meat for the last four years were:—

	Lbs.	Value.
1922	91,715,000	2,139,600
1923	167,612,600	4,321,900
1924	39,805,300	1,170,800
1925	49,290,900	1,474,000

BEEF.

	Lbs.	Value.
1922	124,167,300	1,867,900
1923	152,950,600	1,794,700
1924	105,163,900	1,301,800
1925	283,620,700	4,153,000

or, taking mutton and lamb and beef together, the combined quantities and values are:—

	Lbs.	Value.
1922	215,882,400	4,007,500
1923	320,563,300	6,116,600
1924	144,969,200	2,472,700
1925	332,910,000	5,627,000

When addressing you last year I said that it was expected that the export of frozen meat of all kinds would, during the then current year, show an improvement. From the foregoing you will see it has more than doubled, being in value £5,627,036, against £2,472,729 in the previous year. The outlook for the current year has been obscured by the hold up of shipping through the seamen's strike, to which I will shortly refer.

METALS.

The copper mining industry of Australia has suffered seriously during the past year from the continued low price ruling for copper of all kinds in the world's markets. Further, in consequence of fire breaking out in the mine, the Mount Morgan Company have had to flood their mine and close down operations for a time. The output of copper for the 12 months to June 30, 1925, was 13,127 tons, against 45,000 in 1913. On the other hand, the mines producing lead, silver and zinc are having an exceptionally prosperous time owing to the high prices ruling for these

metals. The production of lead for the year to June 30, 1925, was approximately 120,735 tons. The Electrolytic Zinc Company of Australia from its works at Risdon, in Tasmania, reached an output for the year to June 30th last of 46,929 tons of electrolytic zinc.

The output of gold for the year was 625,000 fine ounces, value £2,656,000, and of silver 11,200,000 fine ounces, value £1,634,000.

The value of all metals and minerals exported, including coal, but excluding gold, was, for the last three years:—

Year to June 30, 1923	8,578,134
Year to June 30, 1924	9,678,862
Year to June 30, 1925	9,824,581

The total exports for last year of wool, wheat, butter, frozen meat, and metals, together amounted to over £129,000,000; the financial accommodation necessary to effect the shipment and marketing overseas of such a volume and value of commodities lays no considerable burden on those banks who accept this class of business, and I may mention that year in and year out we take our full share in financing these transactions, which are so essential to the well-being of Australia.

SEAMEN'S STRIKE.

The seamen's strike in Australia, which has been going on for some months, has been the cause of serious losses to the shipping companies and to many others, and has dislocated the overseas trade of the Commonwealth. As a bank we stand clear of party politics, but I may express the hope that at least one outcome of the General Election which has resulted therefrom may be the re-establishment of harmonious relations between Labour and Capital, so vital to the best interests of both and the general well-being of the community, and that we shall henceforth see a whole-hearted repudiation of revolutionary extremists, alike by all parties in the Commonwealth and in all the States.

In pursuance of the policy which we have followed for some time of arranging at convenient intervals visits to this side of our principal Australian executive officers, I am pleased to inform you that the board have arranged for a visit here next year of our greatly-valued general manager in Australia, Mr Wren. Mr Wren hopes to arrive early next spring, and we look forward with much satisfaction to this opportunity of personal intercourse with him.

TRIBUTE TO THE STAFF.

I cannot draw my remarks to a close without expressing my admiration for the loyal and efficient manner in which the staff, from the highest to the lowest, here and in Australia have carried out the duties of their various offices during the past year. Before we separate, no doubt a vote of thanks to the staff will be passed by the shareholders, but I want at this point to say how much the board appreciate the spirit of goodwill and devotion which animates the service as a whole, the great ability of the management, and the efficiency of the entire staff.

I now beg to move: "That the report and statement of accounts now submitted be and are hereby adopted, and that the amount available for distribution be applied as therein recommended."

Mr John Paterson (deputy chairman) seconded the resolution.

Mr Frederick Tomkinson congratulated the chairman upon his speech, which, he said, had been of very great interest. The annual addresses of the chairman at the meetings of the bank were always anticipated with keen interest by people engaged in the different branches of the Australian trade, giving, as they did, an able survey of the whole of the trade between Australasia and this country.

The resolution was carried unanimously.

TRIBUTE TO THE CHAIRMAN.

The Hon. Sir Arthur Lawley, G.C.S.I.: Ladies and gentlemen, —I have a very pleasing duty to perform, and that is to move: "That Mr Andrew Williamson be re-elected a director of the bank." It is hardly necessary for me to remind you that it is now some time since Mr Williamson assumed the chairmanship of the bank, and I am sure it is not necessary for me to emphasise the invaluable services which he has rendered in that capacity to the shareholders and to the bank. You know as well as I do how very great are the responsibilities which appertain to the office of the chairmanship of a great enterprise like this, and if you have any doubt as to the manner of the fulfilment of those responsibilities in the present instance, I would only ask you to turn your attention to the balance-sheet. There, as I think you will all allow, is an exposition of the operations of the bank which is highly satisfactory, and you will believe me when I say that not a little of the success of the working of the bank has been due to the manner in which Mr Williamson has rendered service to the bank. I know you will carry this resolution with the utmost cordiality, and that you will echo the wish that his profound knowledge of all Australian banking matters and his great sagacity in dealing

with commercial affairs of every kind will be at the disposal of the board for many and many a year to come. I have great pleasure in moving that resolution.

Mr George Slade seconded the resolution, which was carried unanimously.

The Chairman expressed his appreciation of, he said, the far too kind and appreciative references to him by Sir Arthur Lawley, which credited him with far more than he deserved. But he could only assure the shareholders that in the future, as in the past, he would render what service he could to further the interests of the bank.

On the motion of the Chairman, seconded by Mr S. M. Ward, the Hon. Sir John A. Cockburn, K.C.M.G., was also proposed a director of the bank.

The Chairman, in moving the resolution, said that good wine needed no bush, and Sir John, as they all knew, had been a director of the bank for some 25 years, and had always taken a keen interest in its affairs.

The resolution was unanimously adopted.

Sir John Cockburn referred with gratification to the compliment paid him by his re-election, and expressed the pleasure of his colleagues and himself at seeing with them on that occasion Mr Charles Hegan, the late chairman of the bank for so many years.

Major J. Russell King then moved that Messrs Turquand, Youngs and Co., and Messrs Price, Waterhouse and Co. be re-elected auditors of the bank. He remarked that he had visited during the past three months all the States of the Commonwealth, and he had seen nothing but signs of the greatest prosperity. In his view Australia had a great future.

The motion was seconded by Mr E. Ambrose and unanimously approved.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

Mr T. B. Connell proposed: "That a hearty vote of thanks be accorded to the chairman, the deputy chairman, and the directors for their conduct of the affairs of the bank, and that they all be congratulated on the result of the year's working." He said the steady growth of exports from Australia and the equally steady expansion of the bank and of the bank's affairs had of necessity added to the responsibilities of the board. He thought they owed the directors a great measure of appreciative thanks for their efforts, and they all congratulated the board that, as a result of those efforts, they had been able to place before the shareholders such eminently satisfactory figures.

Mr Wm. A. Welch, in seconding the motion, said he arrived from Australia only a few weeks ago, and he could assure the meeting that the country was prosperous, and that their bank obtained a very good share of the banking business carried on in the Commonwealth. In his opinion the directors had correctly interpreted the commercial situation in Australia by extending a few years ago the operations of the bank by taking over other banks.

The resolution was carried unanimously.

VOTE OF THANKS TO MANAGERS AND STAFF.

The Chairman having briefly responded, Mr Frederick Tomkinson moved: "That the thanks of the shareholders be heartily accorded to Mr Wren, the general manager in Australia, Mr Janion, the manager in London, Mr O'Sullivan, the assistant general manager in Australia, Mr Shipston, the assistant manager in London, and to the executive officers and the staff at home and in Australia for the valuable services they have rendered to the bank during the past year." He said, no matter how able a board of directors might be, that without the executive officers they could not show results such as had been submitted on that occasion.

Mr Justice Schutt seconded the motion, and paid a warm tribute to the courtesy and the ability of the staff of the bank, both in personal experience.

The motion was unanimously approved.

Mr E. M. Janion thanked Mr Tomkinson and Mr Justice Schutt for their very kind words with regard to the staff here and in Australia. At the same time he would express appreciation of the would all continue to do their best for the bank, and that their work was always a pleasure to them.

Mr F. W. Turner proposed a cordial vote of thanks to the chairman for presiding. He agreed entirely with what had been said as to the value of the staff and their work, but that work, he thought, culminated in the chairman. He did not think they could have received from any chairman a better, a more complete, or a more masterly survey of the work of the bank than they had had from Mr Williamson at that meeting.

Mr A. E. Jolly seconded the resolution, which was unanimously approved.

The Chairman briefly acknowledged the compliment, and the proceedings terminated.

AUSTRALIAN, MERCANTILE, LAND AND FINANCE COMPANY, LIMITED.

YEAR'S RECORD PROFITS.

The sixty-first annual ordinary general meeting of the Australian, Mercantile, Land and Finance Company, Limited, was held, on the 19th instant, at the head office, 20-22 Coleman street, London, Mr Robert Henryson Caird (chairman and managing director) presiding.

The notice convening the meeting and the auditors' report having been read by the secretary (Mr J. L. Simpson).

The Chairman, in moving the adoption of the report and accounts, said that the profit earned in the year under review was by far the largest in the history of the company. While they might congratulate themselves on the magnificent results, it was only right that he should warn the shareholders that it had been an exceptional year, and that a large part of the profit was due to the extraordinary prices that were secured this time last year for their wool—the produce of their own properties. The price of wool then had been forced up to such a very high level that consumption was checked, the inevitable revulsion took place in the spring of the present year, and the demand for the commodity fell off to such an extent that it became necessary to suspend the sales in Australia. This had resulted in a very large carry-over of wool at July 1st, amounting in Australia to 505,964 bales.

CURRENT SALES.

The future was regarded with some trepidation, but the whole of that carry-over had since been sold, and the sales of the new clip in Australia are progressing favourably at prices remunerative to the growers. For the series of sales which opened in London on the 24th inst. there was no excessive quantity to be offered, and he quite expected satisfactory prices for all the new clip wools which were in time, and they had practically no stock of last year's clip in hand. The company's new clip of wool for 1924-5 had amounted to 7,645 bales, and had realised £299,909, against £240,623 for the previous year. 6,631 bales which had realised £240,623 for the previous year. He did not yet know what their clip for 1925-6 would be, but they had had quite a good season on the whole, and they should have a well-grown clip and every prospect of a satisfactory sale, though not on the extravagant level that prices had reached at the end of 1924.

GOLD STANDARD.

The return to the gold standard, both here and in Australia, had resulted in the removal of the difficulty of passing funds out to Australia, and it was very satisfactory to be able to say that the resources of the company were very fully and safely employed. The year under review had been eventful. They had opened a new branch in Townsville which was already bringing in a good profit, and they had been instrumental in putting through a large sale of pastoral property to a new company—Australian Sheep Farms, Limited—the flotation of which had been a great success, and which showed every prospect of a satisfactory result for its first year. They had also seen a great improvement in Argentina. Both the profits and the magnitude of the figures of their balance-sheet were records in the history of the company, and it was interesting to note that if they compared the present figures with the year 1876, when first he entered the service of the company, the capital, which was then £250,000, had increased nearly fivefold, and their profit—then £70,838—more than sevenfold.

PROFIT AND LOSS FIGURES.

Dealing with the accounts, it would be noted that in the profit and loss figures there was £205,067, against £176,384 last year, but the interim dividend and bonus paid in May cost £22,500 more than in 1924, so that the real comparison showed an excess of £51,183, plus an extra £25,000 to reserve, or £76,183 more than in 1924.

An event of general interest to wool growers was the latest attempt to start some sort of gigantic corporation to manage and control the sale of wool. He was glad to say that the scheme had been so emphatically voted down by the pastoral associations that it had not been considered necessary to hold a formal meeting to hear the result of the voting. He trusted they had heard the last of such schemes, which, if successful in forcing up prices, would certainly lead to diminished consumption and substitution, and so in a catastrophe for producers, and if unsuccessful simply proved a catastrophe for a horde of superfluous officials, and in either case would probably excite opposition and retaliation in consuming countries.

Mr F. A. White seconded the resolution, which was carried unanimously. The retiring director, Mr H. R. B. Lilley, was unanimously re-elected, and a cordial vote of thanks to the chairman, directors, and staff terminated the proceedings.

CASTLEFIELD (KLANG) RUBBER ESTATE, LIMITED. SUCCESSFUL RESULTS—GOOD PROSPECTS. LARGE CROP INCREASE FOR CURRENT YEAR.

The annual general meeting of the shareholders of the Castlefield (Klang) Rubber Estate, Limited, was held, on the 18th instant, at the registered offices, 7 Martin's lane, Cannon street, London, Mr W. Arthur Addinsell (chairman of the company) presiding.

Mr C. H. Smallwood, on behalf of the secretaries (Messrs Bright and Galbraith, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I move: "That the directors' report and statement of accounts for the year ended June 30, 1925, as presented to this meeting be, and they are hereby, received and adopted, and that a final dividend of 25 per cent., making a total dividend of 35 per cent. for the year, be declared and paid."

The crop for the year was 668,095 lbs, which is slightly in excess of that obtained for the previous year.

INCREASE IN PRICE REALISED.

Owing to the improved conditions of the market, we were able to secure an increase of 9½d per pound on the average net price realised, and the cost of production was slightly lower.

The average net price realised for all grades (including the un-exportable surplus at the close of the financial year, which was taken in the accounts at a conservative valuation) was approximately 1s 10d per pound; the surplus has since been sold at more than double the price at which it was valued, the benefit of which will be received in the accounts for the current financial year.

It is satisfactory that the company's standard production figure has been increased to 1,219,989 lbs, and it is reasonable to assume that the rate of export under the restriction enactment will be increased by 10 per cent. on February 1st next, and a further 10 per cent. on May 1, 1926, which will give an average of 86.6 per cent. for the current year. The company will therefore be allowed to ship well over 1,000,000 lbs of rubber during that period.

This potential production, compared with last year's crop, is an increase of 58 per cent., and although labour is sufficient for present requirements, an increase is necessary, and will be secured.

No portion of the crop has been sold under forward contract.

REASON OF COMPANY'S PROSPERITY.

The net profit for the year was £40,048, which is equal to approximately 40 per cent. of the issued capital.

The reason for this company's prosperity stands revealed in the balance-sheet, which shows a share capital of £100,000, supported by a reserve of £35,000 (which will be increased to £40,000 if you adopt this report to-day), against an asset of 3,057 acres under rubber. The capitalisation per acre is therefore under £33, and half of this represents capitalised reserves. Another contributory factor is the high productivity of the trees, which enables us to secure an allotment for standard production of an average of 420 lbs per acre.

During the past few days a further substantial rise has been seen in the price of spot rubber and forward positions. If there were any likelihood or justification for any material fall in the price of the raw commodity, it is certain that forward quotations would reflect such an anticipation.

GOOD PROSPECTS FOR CURRENT YEAR.

Therefore there is every reason to expect that the results of the current financial year will be in excess of the past year, and shareholders will be able to calculate according to their views of the market the profit likely to be earned by this company.

The accounts are set out in the usual clear and concise manner and need little comment.

During the past year Mr Harold Rendle paid a visit to the estate, and the board have had the advantage of his views on matters concerning the property.

Our thanks are due to him, and also to Mr James Murray, our visiting agent, who states in his last report: "Comparing Castlefield with other properties in the country, it ranks among the best in the Peninsula—in fact, I know no better."

The board also wish to place on record their appreciation of the excellent work of the manager, Mr D. S. Gardner, and his assistants, and to Messrs Cumberbatch and Co., Limited, the local agents, who have served the company so well.

Gentlemen, that is a short and clear summary of the position of your property. I have not attempted to say one word to embroider it in any shape or way. It stands for itself and it speaks for itself. But I should like you at this time to listen to Mr Rendle, who, you will remember, opened the estate just about 20 years ago.

Mr Harold Rendle, a director, who seconded the motion, referred to his recent visit to the estate and his satisfaction with what he saw. He emphasised particularly the useful effort of systematic thinning out as a part of rubber estate policy.

The resolution was unanimously adopted.

The retiring director and the auditors were re-elected, and the proceedings concluded with a cordial vote of thanks to the chairman and directors and to the staff in the East and in London.

DJASINGA RUBBER AND PRODUCE COMPANY, LIMITED. **IMPROVED POSITION AND PROSPECTS.**

The fifteenth ordinary general meeting of the Djasinga Rubber and Produce Company, Limited, was held, on the 16th inst., at the Rubber Growers' Association, 2 Idol Lane, London, Mr H. Eric Miller presiding.

The Chairman, in moving the adoption of the report, in the absence of Mr Macfadyen, who is on a visit to the East, in the course of his remarks, said:

Our reserve account, as you will see in the balance-sheet, has been brought up to £20,000, an increase of £10,000 on the figure in the previous balance-sheet. This increase is made up of £5,000 appropriated from profit and loss account a year ago, and by a further £5,000 which your directors have transferred from taxation reserve account and from forfeited shares account. This is in pursuance of the policy of progressive improvement of the company's financial position, which our chairman indicated to you a year ago. Out of the profits for the year under review your directors propose to appropriate another £5,000, which will bring the reserve account up to £25,000.

The capital cost per cultivated acre is £60 8s 7d. In arriving at this figure I leave out of account the value of the rice fields and the large area of freehold reserve land.

RUBBER CROP.

The rubber crop harvested in the year under review was 955,325 lbs, which realised an average net price of 1s 8.77d per pound, as compared with 1s 1.15d per pound in the previous year.

The cost of production f.o.b. worked out at 1s 0.13d per pound, compared with 9.75d per pound in the previous year. With the advance in the price of rubber your directors felt that they should allow more funds for pushing on the improvement work more rapidly.

We have estimated the rubber crop for the current year at 1,000,000 lbs, which is under what we would be allowed to export under the scheme of voluntary regulation of exports to which we have adhered. It is possible that our actual crop will exceed that figure, but we are more anxious to improve our trees for the future than to exact the utmost from them at present. So far as we can judge at this early stage, the cost price, including provision for Java taxation, will work out at about the same figure as last year.

Our sales of rubber for the current year to the end of last month, including forward sales that remain to be delivered out of the crop to be harvested up to June 30, 1926, together approximately 497,280 lbs, work out at 1s 8.52d per lb net. Out of the 1926-27 crop we have forward contracts for 82 tons (183,680 lbs) at an average net price of 1s 10.55d per lb, and out of the 1927-28 crop 8 tons (17,920 lbs) at an average net price of 2s 1d per lb. The sale of the free balance of the crop will bring our average price up to a satisfactory figure.

TEA PRODUCTION.

The crop of tea harvested in the year under review amounted to 389,428 lbs, as compared with 374,177 lbs in the previous year. It realised an average net price of 1s 0.70d per lb, as compared with 1s 0.89d per lb in the previous year. This is a rather lower price than the chairman indicated in his speech a year ago, but the reason is that, on account of weather conditions, there was a larger proportion of coarse leaf which could not be delivered under the contracts, and was only saleable at a lower though still profitable price.

The cost of production f.o.b. worked out at 11.83d per lb, as compared with 10.28d per lb in the previous year. The special cultivation and manuring programme added 1½d per lb to the cost, and depreciation is ½d per lb heavier than last year. These two items alone more than account for the increase.

The dry season this year in West Java has been severe and protracted. The estimate of the tea crop for the current year was 400,000 lbs, which should, with normal weather conditions, have been easily obtainable. It is impossible to say what the effect of the recent drought will be. In the four months to the end of October we had harvested 95,371 lbs, as compared with 119,435 lbs in the previous year. The above estimate is accordingly given with reserve.

We have a contract running for the crop from July to December at 1s 4½d per lb London landed terms, which is equivalent to approximately 1s 2.16d per lb net.

The organisation for dealing with the rice fields, which are cultivated by the natives and with other matters of administration which devolve on us as owners of the freehold continues to operate satisfactorily, and supplies a small cash profit, which is included in the sundry receipts of the Java company.

The prospects for both the rubber and tea industries are encouraging, and I can assure you that your board are doing all

that lies in their power to ensure satisfactory results to the shareholders.

The net profit for the year amounted to £34,626, to which has to be added the amount brought forward from the previous year, £14,137, making available £48,763. Your directors recommend that this should be dealt with by writing to reserve £5,000, by paying a dividend of 7 per cent., and carrying forward a balance of £13,235.

Mr J. Lyndon Burt seconded the motion, and it was carried unanimously.

SUMATRA PARA RUBBER PLANTATIONS LIMITED. **GOOD RESULTS—ENCOURAGING OUTLOOK.**

The annual general meeting of the Sumatra Para Rubber Plantations, Limited, was held, on the 16th instant, at 2-4 Idol Lane, London, Mr H. A. Barrett (the chairman) presiding.

The Chairman said that he did not think there was need to apologise for their net average price of 1s 9½d per pound, which was equivalent to an average selling price of 1s 11d per pound. It was pleasurable to the directors to submit accounts showing such a satisfactory state of affairs, both in regard to earnings and to the general position of the company. In respect of the year 1915-16 the board recommended the payment of a higher rate of dividend than that proposed on this occasion, but a comparison was incomplete without taking into account the fact that in 1920 an allotment of fully-paid shares to the extent of £62,500 was made to members in part capitalisation of the reserve fund. Allowing for this, the present dividend of 25 per cent. (6d per share), which was four times more than that paid last year, closely approximated to the company's record distribution of 40½ per cent. (10d per share) in 1916.

Considering that since the inception of the company the area under cultivation had been increased from the original 880 acres to the present total of 4,067 acres, it was pleasantly surprising to find that the estimated and actual acreages differed in so slight a degree as 38 acres. Planting had been continued with the object of replacing wastages in the 4,067 acres, and of 200 acres taken in hand 50 acres had been already completed. There were still some 1,500 acres of old land available for planting, and as it was their intention to pursue a more active extension policy in the near future they were now acquiring 2,000 acres of land adjoining the estate

especially selected by the manager. Anything they proposed doing in the way of planting could easily be financed out of the company's cash resources.

With regard to the current season, they were working to a crop of 1,310,000 lbs, of which quantity they had, at the date of issue of the report, sold rather less than one-third at an average price equivalent to 2s 5½d per pound London landed terms. No forward contracts had been made up to the present for any period later than June, 1926. Given anything like a continuance of the present market conditions, they could not fail to do well in the year now current, but an increased selling price always carried with it an increased cost of working.

The report and accounts were unanimously adopted.

BUKIT TAMBUN ESTATES, LIMITED. **EXTENSION OF RUBBER AREA.**

The tenth annual general meeting of the Bukit Tambun Estates, Limited, was held, on the 18th instant, at the registered offices, 65 Bishopsgate, London, Mr T. M. C. Steuart, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the net profit was £3,569, and they were paying 3 per cent., free of income-tax.

The copra produced amounted to 433 tons, which was sold for £23 17s per ton. The f.o.b. cost worked out at £14 7s per ton. The copra was of excellent quality, and as regarded costs, he felt confident that as a result of the elimination of the poor yielding areas from the estates the costs would be lower in future.

A small area of 17 acres was planted on Bukit Tambun estates, bringing the total area under coconuts to 1,078 acres on this division. The palms throughout were in good condition, and the immature area of about 135 acres had moved particularly well.

The Sungei Kechil division had given considerable anxiety for some time past in view of the disappointing results from coconut areas. On the other hand, their small area of 97 acres of rubber had thrived, and they had planted up a further 100 acres during the year. On the recommendation of Mr W. Dunbar Fraser, who had reported upon the property, it had been decided to increase the rubber area and cut out the non-yielding coconuts. The estate manager had since been engaged actively upon the new planting programme, and they hoped that the rubber area would soon total 623 acres. They were leaving on this division a selected area of 280 acres of good yielding coconuts.

With regard to the rubber the figures were small, but it was only a beginning. They commenced tapping on 32 acres in April, and the yield for three months to June 30th amounted to 1,963 lbs, which realised an average price of over 2s 7d per lb, London landed terms. Only the larger trees were tapped, and their yield was well up to the average for young trees. As far as the present year was concerned a further 45 acres would be tappable, and it was anticipated that the crop to June 30th next would be 12,500 lbs. Allowing for an f.o.b. cost of 8d per lb, their production should yield a welcome addition to the revenue.

As regarded the future of rubber, he did not wish to prophesy beyond saying that in his view well-managed rubber plantations would be able to yield a good return on the capital expended. The planting of rubber on Sungei Kechil at a very moderate cost, bringing up the total to 623 acres, would substantially increase the capital value of the properties, and in due course should give the shareholders a satisfactory return on their holding. They were endeavouring to secure additional areas of planted land which could be worked economically with their own.

The report and accounts were unanimously adopted.

NORTH ANANTAPUR GOLD MINES, LIMITED. **INDIAN, SUMATRA, AND CANADIAN INTERESTS.**

The eighteenth ordinary general meeting of the North Anantapur Gold Mines, Limited, was held, on the 17th instant, at 6 Queen street place, London, E.C., Mr V. Herbert Smith (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that at the North Anantapur mine gold to the value of £484 was obtained from milled tailings and the burning and scaling of the amalgamating plates. The total revenue was £2,265, and the expenditure £4,527. The Gooty area, which the company was exploring, was in the Madras Presidency, some distance north of the Anantapur goldfield, on the same run of auriferous rocks. They had already opened up at least 6,000 tons of ore, considered payable, trial crushing without preliminary sorting having yielded an average of 10 dwts per ton. The average width of reef was about 3½ feet. Wherever they had sunk on old workings short shoots of payable ore had been found, separated by unproductive ground.

They were bringing 10 heads of stamps from North Anantapur to mill the ore already opened up, while exploratory work continued.

OTHER INTERESTS.

The Sumatra Mining Exploration, Limited, in which they were interested, was vigorously prosecuting its programme of work with promising results. Good lengths and widths of ore had been exposed, and over 56,000 tons of ore opened up during exploitation. At the Mosaboni mine of the Indian Copper Corporation, Limited, 416,963 tons of reserves were standing, and the subject of erecting a smelting plant was engaging attention. Anglo-Canadian Explorers, Limited, has acquired an important interest in Central Manitoba Mines, Limited, owning the Kitchener group of claims, regarded as one of the most promising gold discoveries in Canada of recent years. The existence was proved of a strong lode of excellent width and value over 900 feet; surface work had proved the lateral extension of the ore body; and diamond drilling had proved a payable lode to a depth of 260 feet. These properties were held to have great potential value. Anglo-Canadian Explorers were interested in adjoining properties, believed to possess considerable value, and they looked with confidence to their Anglo-Canadian Explorers holding becoming valuable.

The report and accounts were unanimously adopted, and the usual formal business terminated the proceedings.

NOTICES.

Mr Edmund H. Parker, L.L.D., has retired from the office of vice-chairman of Barclays Bank Limited but retains his seat on the board, and will continue to act as a local director at Cambridge. Mr W. Favill Tuke, a director and a general manager of the bank, has retired from the latter position, and has been elected vice-chairman of the board in succession to Mr Parker. Mr F. W. Griggs and Mr H. T. Mitchell, assistant general managers, have been appointed additional general managers, and Mr H. R. Bradfield has been appointed an assistant general manager of the bank.

Mr Nicasio E. Jauralde, manager of the London agency of the Bank of Spain, has retired from active service owing to ill-health and his advanced age. Owing to Mr Jauralde's retirement and to the recent death of Mr Santiago Laborda, lately cashier, who was also a well-known Spanish lawyer and writer on financial and other matters, the Bank of Spain has appointed as manager Mr Aurelio Valls, who was lately comptroller, and who is a nephew of Señor Belda, sub-governor of the Bank of Spain, and, as cashier, Mr Carlos Jauralde, son of Mr Nicasio E. Jauralde. Both these gentlemen have been in the London office since it was opened in 1903.

Branches of the Commercial Bank of Australia, Limited, have been opened at the undernoted places:—Koorlinga, South Australia; 121 William street, Perth, West Australia; Oamaru, New Zealand.

Lloyds Bank, Limited, announce that a sub-branch of the bank is now open at Kenton (corner of Kenton road and Draycott avenue) under the management of Mr H. S. Gill, M.C., of the Harrow branch.

Major-General Sir John H. Davidson, K.C.M.G., C.B., D.S.O., M.P., has been elected a director and a member of the London committee of the National Bank of Egypt.

The Midland Bank announces the opening of new offices in Main street, Alrewas, near Burton-on-Trent, Staffs, and The Platt, Port Isaac, Cornwall, under the supervision of the managers of the Lichfield and Wadebridge branches respectively.

Barclays Bank, Limited, announce that they have opened new branches at 67 High street, Whitstable, under the management of Mr F. R. Jackson, and at High street, Leatherhead, under the management of Mr G. E. Cox.

The Standard Bank of South Africa, Limited, announce that agencies have been opened at Grabouw, Greyton, and River Zonder End, near Caledon, Cape Province, and Koringberg, near Moorreesburg, Cape Province.

The Bank of Australasia has opened a branch at Blenheim, New Zealand.

Messrs Neidecker and Co., Limited, investment bankers, 9-13 King William street, London, E.C.4, announce that their house is opening a branch office in Zurich, Switzerland, under the charge of Mr S. Pantli-Meyer, for the purpose mainly of dealing in and distributing securities quoted on the London and New York Stock Exchanges for the benefit of the Swiss market.

OIL OUTPUTS.

ALGERIAN OILFIELDS, LIMITED.—Reports from the Algerian property, in which the Algerian Oilfields, Limited, is so largely interested, state that the production for the months of September and October was as follows:—September, 153 tons; October, 162 tons.

BRITISH CONTROLLED OILFIELDS, LIMITED.—By cable for the week ending November 11, 1925—Production, 47,080 barrels; shipments, 4,473 tons.

CALTEX OIL.—This company reports having received cables from two of its subsidiary companies notifying the following production for October:—Cia de Petroleo Caltex, S.A., 5,107 barrels, or 810 tons. Anglo-Texas Oil Company, 8,265 barrels, or 1,181 tons. The September production for the Anglo-Texas Oil Company was 3,784 barrels, or 541 tons.

LAGO PETROLEUM CORPORATION.—Production for week ended October 17, 1925, 203,586 barrels; for week ended October 24, 1925, 216,020 barrels.

MEXICAN EAGLE OIL COMPANY, LIMITED.—The production for the week ended November 7, 1925, was 119,000 barrels.

Reports and Notices.

The Hudson's Bay Company announce with great regret the resignation, owing to continued ill-health, of Mr. Frederick Scott Oliver, who has been a member of the committee since 1917.

The Viscount Willingdon, G.C.S.I., G.C.I.E., G.B.E., has joined the board of the General and Commercial Investment Trust. Sir Charles J. Stewart and Mr. H. Morgan have resigned from the board of Marconi's Wireless Telegraph Company, Limited, and the directors have appointed Sir Frederick J. Barthorpe, D.L., and Sir William Slingo to fill the two vacancies.

Mr. Edward Hungerford has been appointed centenary director of the Baltimore and Ohio Railroad Company.

Messrs Spillers' Milling and Associated Industries, Limited, exercising their option to apply the annual sinking fund payments for the repayment of their 5½ per cent. 10-year sinking fund notes in the purchase of notes for cancellation, have invited noteholders to submit offers of sale through their stockbrokers, the price tendered to be exclusive of the interest payment due December 1st.

Mr. Henry Clark (London) of the Union Corporation, Limited, has been elected president of the Chartered Institute of secretaries. Mr. Richard B. Pilcher, O.B.E. (London), of the Institute of Chemistry, and Brigadier-General A. Maxwell, C.B., C.M.G., D.S.O. (London), of Glyn, Mills, and Co., have been elected vice-presidents, and Mr. W. G. Verdon Smith, C.B.E. (Bristol), Bristol Tramways and Carriage Company, Limited, has been elected treasurer for the ensuing year. Mr. J. J. Bisgood, J.P., has been appointed the Institute representative on the Council of the London Chamber of Commerce for the ensuing year.

Mr. J. J. Runge, a director of Tate and Lyle, has accepted a seat on the board of the London Produce Clearing House.

With regard to Commissioners of Inland Revenue v. Aboukir Co. The Aboukir Co. announce that they have received notice from the Solicitor of the Inland Revenue that the Commissioners do not propose to continue further with this appeal.

Bills receivable	170,109,014	153,304,792	171,965,565
Total of balance-sheet	810,894,670	813,949,553	990,575,219

GUARANTY TRUST COMPANY OF NEW YORK.—The following extracts are from the bank's statement of November 14, 1925:—Deposits, \$505,103,912; total resources, \$604,539,443; surplus and undivided profits, \$21,538,678, the last item showing an increase of \$309,387 over the previous statement of September 30, 1925, and an increase of \$2,357,769 over the statement of November 15th, last year.

MITSUBISHI BANK.—The balance-sheet, dated June 30, 1925, shows total assets 404,400,241 yen. Cash is at 30,983,472 yen. Government bonds stand at 48,392,876 yen. Other bonds and securities stand at 64,398,043 yen. Loans and bills discounted stand at 208,449,710 yen. With regard to liabilities, deposits stand at 307,547,420 yen. Capital subscribed amounts to 50,000,000 yen. Capital paid up amounts to 30,000,000 yen. Reserve funds stand at 25,501,920 yen. The net profit for the half-year ended June 30, 1925, amounted to 4,092,263 yen. The ordinary dividend is 10 per cent. per annum.

ROYAL BANK OF SCOTLAND.—The accounts for the year ended October 10th last show net profits of £472,600, an increase of £20,300 as compared with 1923-24, a fact which accounts for the increase in the dividend, already announced, from 14½ to 15½ per cent. The dividend absorbs £305,312, £20,000 is written off premises and property, and £30,000 is carried to pension reserve fund, leaving £117,310 to be added to the rest, which now amounts to £2,464,704, against a paid-up capital of £2,500,000. Deposits at £40,790,200 show an increase of over a million, and loans and advances at £18,626,200 are £2½ millions higher. Bills discounted, including £1,835,000 in Treasury bills, are £347,000 lower at £4,202,400, and British Government securities have been reduced by £1½ millions to £13,422,700. Cash and money at call are slightly higher at £10,454,200. Freehold properties in London stand at the low figure of £475,000, this item including the premises in Bishopsgate and Drummond's branch.

UNION BANK OF SCOTLAND, LIMITED.—We are informed that this bank, which has had in view for some considerable time the opening of an office in the West-End of London for the convenience of its clients there and for the public generally, has

now secured excellent premises in a very suitable and prominent position in British Columbia House, situated at 1 Regent street (corner of Charles street and Regent street), S.W. 1. A branch of the bank will be opened there on Monday, November 23rd, under the charge of Mr Robert Dick, at present one of the joint accountants at the City offices in Cornhill.

INSURANCE.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY.—The board of the National Mutual Life Assurance Society have unanimously appointed their chief executive officer, Mr Geoffrey Marks, C.B.E., F.I.A., to be a director of the society. Mr Marks will remain actuary and manager, positions which he has held since 1893 with respect to the Mutual, and since 1896 of the amalgamated National and Mutual life offices.

RUBBER, &c.

KRUBONG (MALACCA) RUBBER.—The net profit for year ended September 30, 1925, amounted to £11,808, as compared with £1,074 in preceding year. The ordinary dividend is raised from 5 per cent. to 25 per cent. The sum of £3,000 is put to reserve, and £1,719 carried forward, against £276 brought in. Total assets are £44,002. Cash is at £5,322. There are no investments.

LENGGENG RUBBER.—Report for year ended July 31, 1925, reveals a net profit of £8,591, against £356. The ordinary dividend is 15 per cent., against nothing in preceding year. The carry forward is £3,354, against £3,135 brought in. Balance-sheet shows total assets £73,151. Cash is at £7,443. There are no investments. The report states that the restricted export allowance for the past year amounted to 188,230 lbs, the bulk of which has been sold in London. The new assessment of standard production from November 1, 1925, has not yet been fixed, but it is expected to be in the neighbourhood of 472,000, and 85 per cent. of this will permit of an export of about 33,000 lbs per month. The forward sales now current are 5 tons monthly at 15 6½d to end of 1925, and 5 tons monthly at 15 9d and 2 tons monthly at 15 11½d over 1926.

SEKONG RUBBER.—Net profit for year ended July 31, 1925, is £16,057, against £3,088. The ordinary shareholders receive 10 per cent., less tax, 4s 4d in £. No dividend was paid in preceding year. The sum of £2,000 is put to reserve, and £1,000 to income-tax reserve. The carry forward is a credit balance of £2,490, against a debit balance of £567 brought in. Crop of 257,982 lbs was harvested. Average net sale price was 2s 0.77d per lb. Cost of production was 9.71d per lb.

SUNGEI KARI (SUMATRA) RUBBER ESTATE.—The net profit for year ended June 30, 1925, amounted to £11,925, against £2,088 in preceding year. The ordinary dividend is raised from 5 per cent. to 20 per cent. The sum of £584 is carried forward subject to directors' extra remuneration. Total assets amount to £95,900. Cash is at £8,567. Investment, at cost, stands at £6,000.

TEBRAU RUBBER ESTATES.—The net profit for year ended June 30, 1925, amounted to £20,251, against £13,294. The ordinary dividend has been raised from 10 per cent. to 17½ per cent. The sum of £3,000 has been transferred to Imperial taxes reserve, and £2,153 carried forward. The crop of dry rubber harvested during the year 1924-25, as restricted, was 650,059 lbs, as against 754,329 lbs harvested in the previous year. The average gross price realised was 19.47d per lb, compared with 12.84d per lb in the previous year. The f.o.b. cost (Singapore) works out at 9.08d per lb, against 8.21d per lb. The "all in" cost, including directors' fees, staff bonus and capital expenditure, amounts to 11.18d per lb, against 9.39d per lb. Balance-sheet shows total assets £221,031. Cash is at £19,415. Investments in Government stocks, &c., at cost, stand at £46,630 in the balance-sheet.

MISCELLANEOUS.

BROOMHILL COLLIERIES.—The report for year ended June 30, 1925, shows a net profit, after payment of debenture interest, of £29,655, against £53,919 in preceding year. The ordinary dividend is maintained at 7½ per cent. The sum of £20,000 is put to forward, against £46,405 brought in. The report adds that the state of the coal export trade during the year was unsatisfactory.

CARRONGROVE PAPER COMPANY.—This company has just issued its balance-sheet dated October 31, 1925. It has total assets £804,501. Cash is at £51,287. Stocks are at £57,744. Debtors amount to £69,132. The net profit, after providing for depreciation, debenture interest and directors' fees, is £42,342, against £48,793. The dividend on the ordinary shares has been raised from 5 per cent. to 6 per cent. The reserve fund has been increased to £60,000. The sum of £43,600 is carried forward, subject to income-tax. A further £15,000 of the debentures have been redeemed and cancelled, and the amount redeemed to date is now more than sufficient to meet the sinking fund requirement for the next five years.

GEO. H. HIRST AND CO.—The works and machinery have been maintained in an efficient condition, and after providing amply for depreciation there remains a net loss for the year ended August 31, 1925, of £20,510. The balance brought forward from last year was £16,607, from which must be deducted:—The fixed dividend on the preference shares for the 12 months to August 31, 1925, £7,586; the fixed dividend on the preferred ordinary shares for the six months to February 28, 1925, £6,400, £13,986, £2,621, leaving to be carried forward an adverse balance of £17,880. The report points out that the disappointing results of the year's trading are due to increased depression in the wool textile trade, to more acute foreign competition, to the further fall in values, and to the loss entailed by the recent textile strike.

ILFORD, LIMITED.—After making allowance for depreciation and provision for doubtful debts, &c., the net profit for the year ended October 31, 1925, is £57,219, against £56,746. This amount, with £8,148 brought forward from last year, gives £65,368 for appropriation. The dividend on the 6 per cent. preference shares, amounting to £11,400, has been paid, and the directors have written £5,000 off goodwill and transferred £10,000 to reserve fund. A dividend of 10 per cent., amounting to £31,000, is being paid on the ordinary share capital as before, leaving £7,968 to go forward.

INVERESK PAPER COMPANY.—The net profit for the year ended October 31, 1925, amounted to £47,992 against £41,318 for the 13 months to October 31, 1924. Dividend on the ordinary shares is 15 per cent. for the year (against 12½ per cent.), and, deducting the preference dividend to June 30th last also, there remains £55,672 to be carried forward, subject to income-tax, 1925-26. During the year the claims for recovery of overpaid taxation have been settled, and the net sum received, less bad debt allowances and sundry adjustments, has been placed to reserve, increasing that fund from £10,000 to £37,137. A further addition of £12,863 is to be made from the profit and loss balance, thereby bringing the reserve fund up to £50,000. Total assets are £757,015. Cash is at £72,927. Investments at cost stand in balance-sheet at £214,969.

LILLEY AND SKINNER.—The balance-sheet dated July 25, 1925, just issued shows total assets £882,509. Cash is at £83,634. Investments stand at £4,202. Stocks are at £310,950. The net profit amounted to £43,852, against £34,646. The ordinary dividend is again 10 per cent. Goodwill amounting to £30,000 has been entirely written off. The carry forward is £19,461.

PERUVIAN CORPORATION, LIMITED.—After payment of debenture interest and making special provision of £36,000 for loss on the Chira Canal by flood damage, and charging against the working expenses of the railways the actual expenditure to June 30th and the estimated further expenditure for flood reparations, the net revenue account shows a balance at June 30th last, subject to audit, of £154,757. To this there has to be added the "additional" 2 per cent. debenture interest which, having been set aside out of the previous year's revenue, has not under the new debenture arrangement to be provided this year, less difference in accrued interest to June 30th, £81,000—£235,757; out of which the directors propose to declare a dividend of £1 10s per cent. on the preference stock, amounting to £111,895; leaving a balance of £123,862 to be carried forward to the next financial year, against £116,701 brought into account from the preceding year.

SANTA CATALINA NITRATE.—The net profit for year ended June 30, 1925, is £16,169, against £21,099 in preceding year. The ordinary dividend is 20 per cent., against 22½ per cent. The carry forward is £2,121, against £1,752 brought in. Profit has been taken on 97,259 metric quintals, as compared with 93,136.20 metric quintals dealt with in the previous year. With the accumulation of stocks of nitrate, production at a reduced rate has been in operation since August, 1924, but manufacture has proceeded steadily throughout the year. Total assets are £143,948. Cash is at £15,801. The only investment is 3½ per cent. Conversion Loan at market price, £29,543.

WESTERN TELEGRAPH COMPANY.—The revenue for year ended June 30, 1925, amounted to £1,472,373, and the working expenses to £804,780. After providing £32,747 for debenture stock interest, and £99,834 for income-tax, there remains a balance of £535,012; to this is added the sum of £327,323, brought forward from June 30, 1924, making a total of £862,335. The directors have transferred £250,000 to the general reserve fund. Four dividends of 2½ per cent. each have been paid, amounting to £311,895, making a dividend of 10 per cent., free of income-tax, for the year ended June 30, 1925, thus leaving a balance of £300,440 to go forward.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Winter sown cereals have made good progress, and a fairly large area is under cultivation. Threshings of native wheat were somewhat restricted, and moderate quantities offered at the principal markets realised full rates. A fairly good movement occurred in floating and forward wheat cargoes, North American grades in particular being in request and rates moved in sellers' favour, while stimulated by higher cables from North America and the Argentine. Steamers of No. 1 Northern Manitoba November sold 55s, December 54s 9d, No. 2 and No. 3 ditto November 54s 3d 55s, December 54s 9d, No. 2 and No. 3 ditto November 54s 3d 55s, West Australian mid-December 56s, and ditto to India and 53s 3d, West Australian with fair inquiries, adverse weather con-54s. Maize also firmer with fair inquiries, adverse weather conditions in the Danube delaying arrivals of grain at the loading ports. Steamers of No. 6 yellow African afloat sold 35s 4½d, No. 2 white flat ditto December-January 10th 43s, La Plata afloat 36s, white flat 36s 4½d net, December 20th-January 36s 3d, Dan-Gal-loading 36s 3d to 34s 6d per 480 lbs. Black Sea Foxanian December 34s 3d to 34s 6d per 400 lbs, all c.i.f. terms. Barley on passage sold at 26s 3d per 400 lbs, all c.i.f. terms. Wheat afloat firmer. No. 1 Northern Manitoba ex-ship to arrive quoted 60s, No. 2 ditto 59s, No. 3 57s 6d, No. 2 mixed Durum 55s 6d per 496 lbs. English 11s 4d-11s 8d per 112 lbs. free on rail. London standard grade quoted 47s, patents 49s-Flour dearer. 50s, town writes 47s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Imported in small supply on spot. Manitoba patents range from 44s-47s, Minneapolis 45s-46s 6d, Australian nominally 45s-46s per

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government. Issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

Zealand and High Point fair, November-January, £39 ros; fair ditto, £35 ros; sisal, No. 1 Tanganyika, November-January, £45 10; No. 1, Kenya ditto, £45 per ton.

TALLOW.—Messrs Colchesters and Woolner write on November 18th as follows:—The tallow market was steady during the week, and prices were fully maintained to-day for inferior kinds. For the better sorts there was not a corresponding demand at the auctions, but a fair business has taken place privately. Shipments of tallow from Australasia during October amounted to 3,400 tons, against 4,400 tons during the corresponding month of last year. At auction to-day 1,960 casks tallow were offered, and 945 were sold. Quotations are:—Australian mutton: Fine, 48s 6d; good to fair, 47s 6d to 44s; dull to fair, 41s to 39s 3d; hard, 48s. Australian beef: Fine, 44s 6d; good to fair, 43s 6d to 41s 6d; dull to dark, 40s to 39s 3d; sweet, 46s 6d. Present shipment from Australasia: Good mixed, 45s 3d, nominally. Present shipment from South America, 44s 3d. The market letter is unchanged. Town tallow, 39s 6d per cwt. Rough fat, per 8 lbs, 3d; melted stuff, 30s per cwt. Quotations are:—Town, 39s 6d, net cash, naked, ex works. Country: Frail casks, 39s 6d; home melted, shipping casks, net, f.o.b., good coloured, 43s; fair to dull, 40s to 39s. Bone fat: white, none; pale, none; benzene, 36s; melted stuff, 35s 6d, f.o.b.

SHELLAC steady, quiet. Fair, T.N. spot, 250s; December, 225s; March, 210s per cwt.

COPRA quiet, and rather featureless. F.M.S. Straits, to Rotterdam, October-November, sellers, £30; October-December, £29 17s 6d; Dutch East Indies, October-December, £29 12s 6d. Ceylon, October-November, sellers, £30 17s 6d. Palm kernels, to Liverpool, January-March, sellers, £21 7s 6d per ton.

MISCELLANEOUS.—Cocoanuts quoted 25s per roo. Coir yarn, Ceylon, £25 to £40; Cochiti, £31 to £55. Ceylon bristle, £15 to £22; cinnamon leaf oil, 44d; citronella, Ceylon, 1s 10d; Java, 3s 6d.

as indicated by the Bank return and the prospect of a large creation of credit for the War Loan interest payment, and of heavy cash demands for Christmas and the turn of the year, combine to produce a situation which demands caution in the purchase of bills. Fine three months' paper was taken at $3\frac{1}{8}$.

	Nov. 27 1925.	Nov. 21 1925.	Nov. 13 1925.	Nov. 6, 1925.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	$4\frac{1}{2}$ (Oct. 1, '25)
Banks' Deposit Rate	2	2	2	2	$2\frac{1}{2}$ (Oct. 1, '25)

Houses' Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$ (Oct. 1, '25)
Market rate (3 months' bills) ..	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	..

The Bank return showed a decline of £946,000 in the stock of gold, £957,000 having been announced as withdrawn for export; the note circulation expanded, owing to end of the month demands, by £751,000, and so the Reserve was £1,697,000 lower, with its proportion to liabilities 2 per cent. lower at 19.5 per cent. Government and other securities rose by £1,350,000 and £4,286,000, and public deposits declined by £874,000. Other deposits were thus £4,809,000 higher on balance. Currency notes outstanding were reduced by £1,612,300 to £290,051,600, which includes £1,320,700 for notes called in but not yet cancelled. The Fiduciary issue is £232,480,900, or £15,664,500 below the maximum for the year.

NEW YORK MARKETS.

Our New York correspondent cables:—The markets have been severely shaken out since the raising of Federal Reserve Rates started. Leading motor shares have lost 30 to 70 points, and the average decline in industrials is 10 to 15 points. Speculative activity has developed on the short side, but the market at the moment has a steadier tone, and the force of the reaction seems to be diminishing. Pending an increase in discounts by member banks, the New York Federal Reserve discount rate may remain stationary, particularly as bullish enthusiasm has been pretty well killed. Reports of a Belgian loan here are proving premature, and considerable delay is now expected.

THE STOCK MARKETS.

Rubber shares continue to be the main centre of activity in the stock markets, but the boom has waned a little, and profits are being taken. The gilt-edged market keeps fairly steady, but in the foreign section French bonds have been at on the slump in the franc, which has also had a slightly depressing influence upon some of the European Reconstruction Loans. Home Rails remain neglected, and foreign rails have provided no movements of interest. Oil shares have been fairly steady, but industrials generally have been mostly irregular, though gas stocks are better, and the insurance market has strengthened. In the mining market Consolidated Gold Mines improved on the meeting, but Kaffirs, as a whole, and tin shares are dull.

New issue results of the week show that the investor is not attracted by offers yielding less than 5 per cent. The Union of South Africa issue of £4 millions in 5 per cents. at 99½ was fully subscribed, but of the Newfoundland issue of £513,800 in 5 per cents at 100, only 27 per cent. was publicly subscribed. Underwriting was arranged on Thursday of a new German Potash Syndicate loan, the British portion being, it is understood, £2 millions in 7 per cents at a price of 95; \$26 millions are to be offered in New York.

THE COMMODITY MARKETS.

The improvement in trade generally is maintained. Coal exports continue in greater volume, and colliery working is less irregular. Pig-iron remains firm, more especially in view of rising coke prices, but buying of semi-finished material is restricted. Cotton has advanced on a reduction in the American crop estimates, but trading conditions at Manchester have been quiet. Buyers in the wool textile trades maintain a cautious attitude, in view of uncertainty as to future wool prices. The wheat markets have again had a stronger tone. Demand for sugar remains strong, coffee is steadier, but cocoa the subject of limited enquiry.

Competition for tea offerings is brisk. Rubber has fallen back slightly, but remains in moderate demand. In the metal markets tin has been irregular from time to time, copper firm on the whole, and lead easier.

FOREIGN EXCHANGES.

The foreign exchange market has been comparatively active during the week, with interest concentrated mainly on Paris. The resignation of the Painlevé Government on Sunday accentuated the upward movement of the rate, which rose from 122.20 on the 20th to 124.80 on Monday. The failure of the President's negotiations with various leaders of the Left Centre and Left led to a further rise to 126.55 on Tuesday, and 130 at one time on Wednesday. On Thursday the rate opened at 129½, but in spite of an increase in the note issue of 142 millions and in the advances to the State of 350 millions, as shown by the Bank of France return, the news that M. Briand was once more attempting to form a Cabinet resulted in a closing rate of 127.20. Yesterday morning the rate opened at 124 on the report that M. Briand's efforts were likely to be successful on the basis of a Centre Government, which would look more to the moderate Right than to the extreme Left for its support. No details of his financial intentions are yet known, but the policy of the Right is likely to incline to inflation rather than to a moratorium or default. If this is so, its effects must ultimately be apparent on the rate. Moreover, the official assertion that the Morgan credits are still intact is sceptically received by the market. Brussels rose in sympathy over the week-end from 106.90 to 107.35, but had recovered again to 106.95 by yesterday morning. Forward rates on Paris at 40 centimes per month above spot show little change, but on Brussels have widened from 30 to 60 centimes per month above spot. The Italian rate is now reacting to the news of the debt agreement with America and of the voluntary subscriptions now being raised in Italy towards the first instalment, and has fallen during the week from 120½ to 119½. New York fell on Saturday from 4.84½ to 4.84½, and on further rumours of a projected rise in the Bank rate in New York fell further to 4.84½ on Monday. It was steady at this level until Thursday, when, no change having been made in either discount rate, it rose again to 4.84½. Yesterday it opened at 4.84½. Forward rates are steady at ½ cent. per month above spot. Amsterdam has moved in our favour from 12.04½ to 12.05½, Switzerland from 25.13½ to 25.15½, and Stockholm from 18.10½ to 18.11. Berlin has fallen from 20.35 to 20.34½, but Vienna, Prague, and Budapest are unchanged. Copenhagen has risen from 19.44½ to 19.46½ and Oslo from 23.72½ to 23.79½. Helsingfors is unchanged at 192½. Madrid, on the other hand, has risen from 34.00 to 34.17. Warsaw rose slightly from 31½ to 32 owing to the political crisis, but fell again to 31½ on the formation of Count Skrzynski's Coalition Cabinet. In the other Baltic States there is no change. In the Near East, Athens is slightly better at 362½ and Belgrade at 273, while Bucarest, after rising to 10.85, is once more quoted at 10.60. In the East the rupee is steady at 1s 6½d, but the yen has appreciated from 1s 9½d to 1s 9½d. The silver market has been quiet, though there has been a small demand from India which resulted in a slight rise in prices. Hong Kong, after being steady at 2s 4½d during the week, fell yesterday morning to 2s 4½d, while Shanghai, after rising from 3s 1½d to 3s 1½d, is once more quoted at the former figure. In South America, Rio has continued to depreciate from 7½d to 7d, but Buenos Aires is steady at 46½, and Monte Video at 50½. Valparaiso, after rising from 39.10 to 39.30, has fallen again to 39.00 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 21st:—

(000's omitted.)			
EXPENDITURE.	£	REVENUE.	£
Supply Services	10,710	From Revenue	15,208
Interest, &c. on Debt	4,114	Increase in Debt	1,862
Min. Exp. Fund	760		
Sundries	1,368		
Increase in Exchequer Balances ..	118		
	17,070		17,070

Revenue amounted to £15,207,500, against £15,901,000. Customs yielded £1,704,000, against £1,795,000. Excise produced £7,839,000, as compared with £7,637,000. Property and Income-tax yielded £1,296,000, against £1,182,000. Nothing came in from Special receipts, against £1,059,500 a year ago. The week's operations increased the National Debt by £1,862,000, and caused the following changes:—

(000's omitted.)		
	£	100
National Savings Certificates ..	+	4,311
Treasury Bills	+	2,200
3½ % Conversion Loan	+	100
Sundries	+	6,711
	+	6,711
Public Department Advances ..	—	4,849
		— 4,849

The floating debt was reduced by £544,000 to £769,466,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Nov. 21st).

ESTIMATES FOR FINANCIAL YEAR 1925-1926.

	£		£
Expenditure	799,400,000	Revenue.....	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Royal Bank of Scotland, British Dyestuffs Corporation, Johannesburg Consolidated Investment, Western Telegraph Company, Cargo Fleet Iron, South Durham Iron and Steel, Consolidated Gold Fields of South Africa, Nigerian Base Metals Corporation, Piccadilly Hotel, Wall Paper Manufacturers, Ansell's Brewery. Various aspects of the trade outlook were dealt with at the meetings of the Royal Bank of Scotland, Cargo Fleet Iron, South Durham Iron and Steel, and Wall Paper Manufacturers. We refer to Lord Ashfield's remarks at the British Dyestuffs meeting in a later column.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a review of the brown coal and electrical industries of Germany.

THE FRENCH FRANC AND THE POLITICAL CRISIS.

It is not surprising that the French franc has reached new low records this week. The wonder is rather that it has held up so well against the depressing influence of what appears to be a complete political deadlock. M. Painlevé, M. Briand, M. Doumer, and M. Herriot have all tried their hand and failed, and at the moment of writing M. Briand is trying his hand once again. The Socialists are not willing to enter any Government which will not accept their plan of a capital levy; but they are, of course, too weak to govern by themselves. The Radicals realise that the Socialist plan will not pass the Senate, and though a national effort is needed to meet the crisis, will not accept the Socialist terms. In their turn, however, their party definitely refuses to form a Government by combination with the Right. With no section strong enough to govern by itself, and all possible combinations ruled out, the foreign observer can do nothing but wait and see how

QUEEN ALEXANDRA.

To-day in spirit the whole nation joins with His Majesty the King in mourning at the graveside of his mother, Queen Alexandra. We believe that even the Royal Family themselves must have been surprised by the depth and spontaneity of feeling which her death has aroused among all sections of the community. Public memories are notoriously short, and for the 15 years of her widowhood the late Queen had been so largely withdrawn from the public gaze that to the younger section of the population she could have been little more than a legendary figure. Yet it is abundantly clear to-day that when Alexandra stepped down from the throne she retained the firm hold upon the affections of the British people that she had so fully and deservedly won by her half-century of devoted and unremitting service as Princess and Queen. The public remembered; and to-day there is an unfeigned sense of loss over the land from palace to cottage. The explanation is not far to seek. Queen Alexandra combined in a rare measure Royal dignity, devotion to duty, and deep sympathy for human suffering. The mass of the people saw in her something far more than a conscientious and successful tenant of high representative office. They saw, too, a shining example of womanhood, a true wife, a loving mother, and a real friend, untiring always in her lavish support of every agency devoted to the alleviation of suffering and the creation of happiness. There are not so many such characters that the nation can afford to lose one without regret, and there is a genuine feeling of companionship in loss in the sympathy which all citizens, high and low, tender to King George in his hour of bereavement.

French politicians solve the old problem of an irresistible force meeting an immovable body. The deadlock has not unnaturally given a handle to those—of whom there are many in every community—who think that parliamentary government is bound to fail when it comes to difficult crises, and it is therefore not surprising that in a continent whose Mediterranean seaboard is lined with a row of military or civil dictatorships, gossip is current of private requests to Marshal Foch to assume the reins, of meetings of the French Fascisti, &c. The real danger of this sort of talk is that it will make the situation more difficult if and when the Socialist Party are called upon to accept office.

In the face of these difficulties it might have been expected that the franc would show something of a landslide, but it is not difficult to see why the movement has been kept within comparatively modest bounds in comparison with the spectacular movements we used to see in the mark or Austrian crown. In the first place the French Budget is within measurable distance of balancing and great efforts have been made to this end already. This never was in sight in Germany before the Dawes plan. Again, France is a nation of rentiers who have everything to lose by drastic depreciation of their currency. They have before their eyes examples of the result of unlimited depreciation, and the country is likely to resist to the utmost any such disaster if only its leaders can combine to fight the threatened danger. Thirdly, the trade balance of France, unlike that of Germany, is favourable, and were it not for the flight from the franc there is nothing in the exchange market to cause the external value of French currency to fall unduly. Again, the speculator learned to his cost nearly two years ago that France has a large gold hoard with which she can, if need be, punish those who gamble on a French financial disaster.

Finally, those who follow the situation closely realise that if France can get past the turn of the year the problem of the floating debt will for the moment be less pressing, and she will have a breathing space in which to mature her financial plans. Such considerations as these are likely to keep the present movement within bounds, though we cannot close our eyes to the fact that every day the political crisis remains unsolved the confidence of the world in

important or urgent work, loans may, if necessary, be made by the Reich and the Federal States.

The decrees also contain provisions for the increased use of unemployment relief funds for improving the earning capacity of the unemployed, such as apprenticeships, equipment, free transport to other places of work, advanced training and the learning of new trades.

The features of this statement are that benefit without work is not continued for indefinite periods, but if no ordinary work is available the claimants are put on to emergency work; secondly, that what we call the insurance fund is used for assisting to finance emergency work; and thirdly, that the fund is also used for training purposes. This thorough report on German experience is worthy of study in connection with our own problems.

PROCEEDINGS OF THE COAL COMMISSION.—THE MINERS' EVIDENCE.

A summary of the main points of previous evidence will be found in our issues of October 31st, November 7th, November 14th, and November 21, 1925.

A WEEK ago we commented on the evidence submitted to the Coal Commission by the Mining Association of Great Britain; this week the case of the men was put forward. The Miners' Federation has prepared two memoranda, relating respectively to wages and working conditions in the coal industry. The miners, like the owners, have reserved their suggestions for the betterment of the industry for a future occasion—in other words, the real battle between the two sides has been postponed, and the public has yet to discover whether either has a practicable alternative to propound to the present unsatisfactory state of affairs.

The miners' memorandum on wages is a statistical analysis with various lengthy appendices. They point out that difficulties in the way of obtaining any reliable wage figures for the whole country are almost insurmountable. Wages are made up of fixed basis rates, plus a variable percentage. The former include, in the case of piece-workers, a series of prices for the actual getting of coal and for various subsidiary operations, the prices varying with different districts, different collieries, or even different seams in the same colliery. Day-wage rates vary according to district and grade of labour. The basis rates are subject to change only at long intervals (in many coalfields 1879 remains the standard year, but here again the practice of different districts is not uniform), and wage alterations are usually effected by varying the percentage additions. Under the 1921 agreement the percentages of July, 1914, were added to the existing basis rates to form a standard, to which a uniform national minimum increment of 20 per cent. was added—subsequently increased to 33½ per cent. under the 1924 agreement. The Commission will doubtless consider the possibility of simplifying this complicated system, which always mystifies the public—however well it may be understood by the industry.

Actual earnings are, however, higher than 133½ per cent. of the 1914 level for the majority of workers, owing to such factors as the grant of subsistence allowances to low-paid workers, &c. The following table is given by the Miners' Federation as showing "average maximum" earnings—i.e., the amounts receivable by the "average" miner able to work whenever the pits were working. We have added columns showing the average cost of living figure of the Ministry of Labour, and the resulting level of "real" earnings:—

AVERAGE MAXIMUM EARNINGS OF MINERS IN GREAT BRITAIN.

	Earnings Per Shift.	Working Days Per Week.	Maximum Weekly Earnings.	Earnings as Percentage of June, 1914, Figure.	Cost of Living.	"Real" Earnings as Percentage of June, 1914.

* July, 1914.

These figures, which are theoretical computations, are at considerable variance with the actual average earnings figures put forward by the Mining Association; the reader will remember also that the latter were related to a five-year period before the war on the ground that immediate pre-war conditions were exceptional; they purported to show that the pre-war standard has been maintained. It is important that the Commission should establish a clear series of figures to show what truth there may be in the miners' contention as to the standard of living.

The figures in the above table allow of certain significant inferences. They indicate that the miners have contributed substantially to the fall in working costs since the decontrolling of industry, on which the owners laid emphasis in their evidence last week. Only in one quarter since 1921 have the maximum real earnings reached the 1914 level. The miners automatically obtained their proportion of the benefits accruing to the industry from the Ruhr occupation, the index of real earnings moving fairly steadily from a low figure of 77 in the third quarter of 1922 to a high level of 101 in the second quarter of 1924. Later, the operation of the new agreement clearly prevented earnings falling as rapidly as they would otherwise have done during the subsequent depression, but in the April-June quarter of 1925 the miners were back at the standard of living of late 1922. Real earnings still appear, however, to be above the level April-December, 1922. Deductions must be made on account of explosives and other materials which the miner has to purchase, but, unfortunately, these cannot be statistically assessed, or their relative importance in *post* as compared with *pre-war* times estimated. On the other hand, the figures leave out such items as free coal and cheap houses.

The *crux* of the miners' case is a table showing the level to which earnings would have fallen had the national minimum percentage been abolished, as the owners proposed in July. For this purpose the earnings paid by the industry last month (as distinct from those assumed by the Government) are shown side by side with those payable at the minimum percentage provided by the 1921 and 1924 agreements respectively:—

AVERAGE EARNINGS PER DAY WORKED

* Based on number of shifts worked in August and the basis wages of August plus the percentage borne by the industry in October.

The federation claims that some of the worst-paid workers would actually have received lower amounts than in 1914 had the proposals of July been carried into effect. The figures in column 5, however, assume that no minimum would have existed; but, in fact, the owners had conceded the principle of a district minimum. The miners' efforts to avert a depressed standard of living will command public sympathy, but both sides have yet to show how the gap is to be filled when the tax-payer has ceased his present contribution.

The remainder of the evidence put before the Commission during the week may be briefly summarised. On Wednesday Sir Daniel Macaulay Stevenson, on behalf of the British Coal Exporters' Federation, emphasised the unfortunate effect of industrial unrest on the export trade, but expressed, on the whole, a hopeful view of the future. On Thursday Professor A. S. Sargent also gave evidence on the export side of the industry, and Mr Charles H. Merz expressed the view that greater electrical development would favourably affect the demand for coal in the long run, but would not have an immediate stimulating effect. The public sittings of the Commission will be continued on Tuesday next.

ARGENTINE LAND COMPANIES.

LAND companies domiciled in this country and operating in Argentina form an interesting little group of speculative undertakings. The methods vary widely, ranging from the many-sided activities of the Forestal Land to the modest concern speculating in building plots or the more adventurous Silver West ranching propositions. Usually, they are well managed, and although occasionally subject to irritating interference from local authorities and provincial bodies, in the main they follow a prosperous track. Indeed, it might be thought by some that the comparatively modest yields obtainable are not commensurate with the risks involved. This point we return to in the concluding paragraph of the article.

From the accounts of eight of the most important companies which we have selected as representative of these activities, we make the following comparative statement of gross and net revenue:—

	Year	1923-24.		1924-25.		1925-26.	
	Ende	Trading Rev'ue.	Net Profits.	Trading Rev'ue.	Net Profits.	Trading Rev'ue.	Net Profits.

Tecka	June 30	71,289	22,073	91,634	43,337	79,358	30,510

+ Represents debit balance. £ 15 months.

† Represents debit balance. ‡ 15 months.

It will be observed that in the majority of cases trading revenue is lower, notably in the figures of the Rio Negro and Tecka companies. This, apparently, was due to the fact that weather conditions were unfavourable, the directors of the Tecka company stating that "the rainfall for the twelve months to June 30, 1925, was one of the lightest recorded since the company's formation, with the result that the condition of the pastures was not as good as usual." Moreover, it is reported that the wool clip as whole was not equal in quality to that of the preceding year, owing to unfavourable weather conditions during the six months to December 31, 1924. The Forestal Land, however, in spite of these handicaps, shows a bigger trading revenue. The net profit figure, however, registers a decline. Indeed, the only undertakings whose net profits advanced during the period were the Argentine Land and Investment and Leach's Argentine Estates. In the former case the improvement was from £100,300 to £114,967, and in the latter from £117,267 to £118,083. Leach's directors state that "climatic conditions were again generally favourable during the year." Ap-

parently, what constitutes "favourable climatic conditions" is a varying factor. The better results shown by the Argentine Land and Investment were due to no one reason, although the net credit to rents, after deduction of expenses, was £59,009, an increase of £12,561 over the previous period. The Cordova Company's accounts cover 15 months to December 31, 1924, and although strict comparison with previous results is thereby rendered impossible, it will be seen from the figures given in the first table that net profits were well maintained. All the factories of the Forestal Land were operated to their fullest capacity, but owing to keen competition the prices realised for Quebracho extract were appreciably lower than in the year 1923. Sales of town lots by the Port Madryn during the year "were negligible," but the loss of revenue under this head was made up very largely by an increase under the heading of rents and sundry earnings, the company's Estancia having been leased for a period of three years.

Our next table shows the balance-sheet total, and an analysis of principal assets and liabilities during the past two years:—

June 30, 1925 ..	331,504	283,645	..	7,631	202,922	27,842	92,244	8,496

As was intimated in the 1923 report, the Argentine Land and Investment has increased its authorised capital from £650,000 to £850,000 by the creation of 200,000 ordinary £1 shares. The issued capital still remains the same. The report states that, "in view of the restricted powers of investment under the existing memorandum of association of the company, and owing to the increasing sums available for investment, combined with the growing difficulty of finding suitable outlets for same in Argentina, the directors consider that wider powers should now be taken, enabling the company in the future to invest in all classes of securities, and generally to undertake the business of an investment trust company." The company placed the usual £1,500 to staff pensions account, and while the

allocation to reserve for exchange was reduced from £20,000 to £10,000, the general reserve was strengthened by £35,000, against £15,000. The Port Madryn again place nothing to reserve. It was the intention of the board, says the report, had the sale of the Chubut Railway Company (in which the Port Madryn has a considerable interest) been carried through, to recommend a reduction in capital, to enable a return of capital to be made. The purchase of the line by the Government, however, has been postponed, so that "under existing circumstances it has been decided to defer any question of a distribution on capital account until the Central Railway of Chubut has been sold." Leach's balance-sheet shows that the amount of 5½ per cent. first mortgage debentures has been further reduced during the year, those withdrawn for redemption amounting to £47,400, against £44,900. The bank overdraft is practically unchanged at £111,630, but the reserve is augmented by £73,083 in comparison with £57,267. The company was approached during the year by the Government of Jujuy (the seat of its operations), "with the object of obtaining a loan for the re-organisation of the finances of that province. In default of such assistance, the Government foreshadowed a considerable increase in the provincial tax on sugar. After lengthy negotiations, the company, in conjunction with other sugar manufacturers in the province, agreed to make an advance up to \$2,500,000 paper, of which this company's share is 46 per cent., or \$1,150,000 paper. The loan bears interest at the rate of 6½ per cent., and is repayable over ten years by means of retention out of sugar taxes in excess of a fixed yearly amount. In consideration thereof the Government has undertaken that no increase shall be made in the provincial taxes on sugar for a period of at least six years, and thereafter only in the event of certain contingencies. At the date of the balance-sheet the company had advanced \$460,000 paper in respect of the loan, which sum, plus interest, is shown as a separate item in the balance-sheet. A further instalment of \$230,000 paper has since been advanced."

By appropriating £100,000 to general reserve, the Forestal Land took the total of the fund up to £1,274,163, while £162,492 was written off for depreciation, so that the amount to the credit of the depreciation account is £1,252,745. With the provision of £225,000 as reserve for fluctuation in exchanges, and for taxation, there are thus total reserves of £2,751,908, against an issued capital of £52 millions, while there also probably exists a hidden reserve under the item of holdings in associated undertakings, which figure for £1,841,984, and are taken "at or below cost." The directors of the Cordova Company, after transferring £5,000 to general contingencies and renewals reserve, recommended that the balance, after payment of the debenture interest, should be carried forward. This is because "the revenue from sales of live-stock has been abnormally swollen by the inclusion of £44,565, representing the proceeds of 4,859 head of cattle, the disposal of which became imperative owing to five months' exceedingly dry weather.....These 4,859 cattle under ordinary circumstances would have been held until the financial year commencing January, 1925. As a result of these forced sales, the number of cattle to be disposed of during 1925 will be correspondingly reduced, and the directors consequently are of the opinion that it is in the interests of the shareholders that the balance to be carried forward should include the full amount received during the period to December 31, 1924, from sales which are properly applicable to 1925. On July 1st last a further 6,500 ordinary shares were allotted by the Argentine Southern Land, being the third instalment of the purchase price of £90,000 for certain properties. The total number of shares issued to date under this head amounts to 38,000 ex 45,000 shares. The second moiety of the purchase-price, amounting to £45,000, can be paid in cash by annual instalments of £6,500 at the option of the Argentine Southern Land Company, Limited." It will be seen from the foregoing table that both debtors and creditors are higher, as also are cash and investments and stocks.

In the table given below we show dividends over a period of five years, together with prices at the end of November, 1924 and 1925. Present yields, based on recent dividends, are added:—

Name and Amount of Share.	Dividends.					Prices.		Pre-ent Yield.

† Paid on old capital.

Some of the yields are by no means generous. A comparison of present returns with those obtainable in 1914 will not throw much light on the matter. Share capitals have been changed, while the very low yields shown in some cases in 1914 indicate the fact that shares were being held on future prospects. It is, of course, quite possible that many of the companies have now substantial hidden reserves on account of the increased value of their land holdings. So far as the Forestal Land is concerned, the disclosed reserves are quite substantial in relation to the issued share capital. Beyond this, however, there is not much to be learned from an examination of the records of the various undertakings.

PERUVIAN CORPORATION.

BAD weather appears to have seriously influenced the fortunes of the Peruvian Corporation, Limited, during the past year, heavy rains, with which the country is not usually afflicted, having caused serious floods, and a whole or partial interruption of traffic on the company's various lines, which produce more than half the company's income, from the beginning of February until the end of April. Revenue contributed by the principal railway—the Central—was £176,200 less than in the previous year, and most of the other lines show diminished returns. Further, as a result of the floods, which occurred in the early part of 1925, the River Chira, from which the Chira Canal drew its water, altered its course, and damaged the upper reaches so severely that the directors "have reluctantly been compelled to abandon any attempt at repair. The profits from the undertaking were never large, and, in the opinion of the board, not sufficient to justify the heavy expenditure that would be necessary to reconstruct the canal." Of the capital cost £36,000 has been written off against the current year's revenue.

Total gross receipts from the working of the railways and steamers were 16,490,100 Peruvian soles, against 17,287,800 soles in 1923-24, and working expenses were 13,114,800 soles, against 11,506,100 soles, giving net receipts of 3,375,300 soles, against 5,781,800 soles. At an exchange of 21½d for the Peruvian sol, net receipts in sterling were £302,400, against £530,000 for the previous year, when the rate was 22d. The amounts accruing to the corporation out of the net income of the railways, and from the navigation of Lake Titicaca for the year ended June 30th last, totalled £262,200, as compared with £470,300 for the preceding year, a decrease of £208,100. In the case of the Central Railway, gross receipts declined by 11.9 per cent., and working expenses increased by 15 per cent. The Government annuity of £80,000, which, under the agreement of 1907, is secured primarily on the sugar tax, has been paid in full for the past year; guano shipments have produced £110,200, against £121,300 a year ago, and other miscellaneous receipts, including a debit balance of £11,100 on exchange account, amounted to £38,800, against £30,700 a year ago. This gives a total income of £491,200, as compared with £702,300, against which administration expenses of £33,300, or £2,800 more, are charged, giving

net revenue of £457,900, against £671,800. The table below compares results for the past five years:—

	Year to June 30.

Under a scheme of arrangement adopted in December last, debenture-holders agreed that the rate of interest be permanently fixed at 6 per cent., and that the final date of redemption be extended from 1926 to 1945. Of the 7 per cent. required for debenture interest and amortisation, 2 per cent. had already been reserved out of the revenue for 1923-4, whilst under the new conditions it is unnecessary to make any such reservation. Only 5 per cent., therefore, is chargeable during the past year for interest and sinking fund, together with £27,000 for additional interest accrued to June 30, 1925. The preference stockholders get 1½ per cent., against 3 per cent. a year ago, and after the payment of this there remains £7,200 to be added to the balance forward. The arrears of dividend accrued on the 4 per cent. preference stock amounted at June 30th last to 106½ per cent. The main items of the balance-sheet are summarised below:—

June 30.	Debt-entures.	Cred-itors and Bills.	Sinking Fund, Reserve, Insur-ance and Net Revenue.	Conces-sions, &c.	Rail-ways.	Invest-ments, Bills, and Cash.
1913	5,176,000	71,769	1,253,291	12,772,305	9,700,667	253,741
1914	5,111,750	130,829	1,370,807	12,772,305	9,741,496	322,001
1919	4,739,700	120,001	1,770,044	12,772,305	9,506,566	566,685
1920	4,650,550	137,436	1,899,811	12,772,305	9,506,566	383,273
1921	4,556,300	306,257	1,929,906	12,772,305	9,509,988	289,157
1922	4,456,650	302,463	2,022,666	12,772,305	9,509,988	295,213
1923	4,351,300	232,289	2,325,579	14,389,704	7,477,035	498,699
1924	4,293,950	270,237	2,535,404	14,389,704	7,477,035	744,242
1925	4,122,250	248,929	2,387,540	14,353,704	7,477,075	711,116

Under the debenture scheme already referred to, the corporation was empowered to accelerate redemption of the debentures at 105 per cent., and the redemption of the whole of the debentures will be thereby finally completed by annual drawings by April, 1945. The amount issued was £5,400,000. The sinking fund stands in the balance-sheet at £1,290,300, and there is a reserve account of £700,000. Cash has increased by £130,600 to £337,600, but bills receivable have fallen from £202,900 to £89,100. The 4 per cent. preference stock, which has this year been as high as 4½, is now quoted at 36½, giving a yield on the basis of the reduced dividend of £4 1s 11d per cent. Traffic returns for the current year show a substantial improvement, and have encouraged purchases of the preference stock in the hope of better results at this time next year.

LORD D'ABERNON.

In view of the part played by Lord D'Abernon in the re-establishment of international relations, which has culminated in the Pact of Locarno, the news of his retirement from the post of British Ambassador at Berlin on the signing of the Pact will be received with universal regret. We take this opportunity of publishing the following appreci-

THE FIRST NATIONAL BANK OF BOSTON

ation by a German correspondent of Lord D'Abernon's ambassadorship:—

"The development of communications has put an end to the days of great ambassadors. The possibility of being in daily contact with their Foreign Office has reduced them to hard-working, conscientious civil servants, who have to carry messages from their masters, and explain them in polite language and report on the impressions they have made and on the things they happen to see. Only when there is an international upheaval, when owing to war and revolution international relations are cut and governments and people lose touch with each other, do opportunities for a revival of the great ambassadorial tradition arise.

"Such has been the case with Lord D'Abernon's ambassadorship in Berlin. When he came to Berlin Germany had, owing to the good work done by General Sir Neil Malcolm and his staff, ceased to be quite the unknown country which it had become during the war and the revolution. But nothing was settled yet. The powers of old had gone. Society, with a capital 'S,' the happy haunt of diplomats in former days, had, so to speak, dissolved. There were new men everywhere, who knew little of international affairs and about whom the international world of trained diplomats knew next to nothing. Not being a mere diplomatist, Lord D'Abernon succeeded in getting in touch with all sorts of people; he probably gained a wider knowledge of real Germany than his predecessors had possessed in easier days, when the life of an ambassador flowed through well-regulated channels. He arrived in Berlin a few hours before the German delegation started for Spa. He lost no time in getting in touch. Having been trained in international business affairs on a big scale he was a broad-minded business man. But he was more than that. He was an orthodox economist, who thoroughly mastered the theory of currency and exchange, in the days when all the world talked exchange, and when the balance of trade was discussed in drawing-rooms with the same dilettante fervour which in other times turned towards the discussion of fashions in art, music, literature, and tailoring. His was a proud intellectual position indeed, for he was one of the few men who really knew what he was talking about when the subject of discussion was 'Valuta,' which, as a German financier wittily put it, seemed to be for most people the name of a somewhat extravagant lady.

"In those days there were two Powers in Germany—the organised working-class whose intellectual leaders knew a great deal about economic theory, and nothing whatsoever about business, and the leaders of German industry, who knew extremely well how to run their business, but who had no inkling whatsoever of economic theories. Germany was heading towards inflation. There was only a small band of people who tried to stem the current. They were answered everywhere by the slogan, first reform economic affairs, and currency will follow. Lord D'Abernon naturally upheld the orthodox theory that the reform of currency is the best and the only way to economic stability. His well-known attitude was of enormous moral support to the reformers, who were defeated at a time when reform could have easily been carried out, but were fully justified later on when, after the complete breakdown, monetary reform was tardily approached and achieved. Lord D'Abernon clearly saw the close connection between reparation and currency reform. The re-

formers wanted a provisional stabilisation from Germany's own resources, thus trying to induce the Reparation Commission to grant them reasonable terms, so as not to wreck their good work. Their foresight was rewarded two years later, when the Dawes plan matured as an after-effect of currency reform.

"The first few months of Lord D'Abernon's ambassadorship saw signs of a policy of international rapprochement. For notwithstanding the ultimatum, Spa was the beginning of financial co-operation. It looked for a time as if it could be successfully amplified at the Brussels Conference, in December, 1920, where Lord D'Abernon was the chief figure. Success seemed to be in sight when the obstruction of the German industrialists and the political crisis in France smashed all chances for the time being.

"After the London Conference, after Wirth and Rathenau had tried to carry out the policy of fulfilment, which had been forced upon them by the mistakes of their predecessors, another spell of co-operation seemed possible. It was made very difficult by the rapid decline of the German currency. It received a severe blow by the decision on Upper Silesia. It seems to be near its goal at the Conference of Cannes, and notwithstanding Briand's overthrow it did not appear beyond reach at the Conference of Genoa, and the negotiations which followed after. In all these difficult times, when the chance of failure and success changed almost daily, Lord D'Abernon was one of the leaders. He was not merely a diplomatic spokesman, he understood the technical financial problems sometimes better than the Government departments concerned in these details. His wonderful optimism sometimes grated on the German mind, which naturally saw little reason for cheerfulness, when things seemed to go from bad to worse. And the confidence which the German statesmen and the German people had originally put in him suffered some rather severe shocks. His Government occasionally seemed to let him down. And though there may be excellent reasons for a central government to curb the exuberant, optimistic energy of its chief representative, it takes a strong character to remain confident, and to survive suspicion engendered by the ever-recurring dashing of hopes.

"Lord D'Abernon survived those squalls, and survived them successfully. He even survived the ordeal of the occupation of the Ruhr when the power of the British Government seemed wholly negligible to German eyes; when Poincaré ruled the world by trying to smash it; and when, owing to the increase of inflation, the great process of social dissolution began, which very nearly ruined Germany. Lord D'Abernon did not lose hope. He had always impressed upon the responsible men of Germany the necessity of taking a bold step: to begin with currency reform in order to get a basis for the settlement of the Reparation problem, and to make an honest, courageous proposal to France. At last, in the late autumn of 1923, the mark was stabilised. The agony ceased. International negotiations began. The Dawes plan was produced, and, later on, accepted. Lord D'Abernon's share in this constructive work can probably not be accurately measured. It is known, however, that he was an adherent of the main features of the plan long before the negotiations began in Berlin, and he certainly was one of the warmest advocates of the Pact, and of the entrance of Germany into the League of Nations, an event the near consummation of which has made it possible for him to retire from the international stage with the claims of a great ambassador. It has even been suggested that the idea of the Pact originated with him, though it cropped up as early as December, 1922, when the Cuno Government made an effort to cut the Reparation knot by the offer of a pact. Lord D'Abernon has certainly had the great luck of seeing the policy carried out in which he believed, a fact far more pleasant to the heart of a man of his type than would be the uncontested claim of having originated a policy which, however brilliant, failed to materialise. His certainly has been a very powerful influence in the period which laid the foundations for the reconstruction of Europe. Let us hope that the era of master-wreckers, which started in August, 1914, is over, and that an age of master-builders has begun. Of that band, Lord D'Abernon has certainly been one of the first and not the least."

Notes of the Week.

The Communist Trial.—On Wednesday at the Old Bailey five Communist leaders were sentenced to a year's imprisonment in the second division, and seven others, refusing to be bound over to keep the peace, to six months terms. The indictment on which they were convicted had three counts, as follows:—

(1) Conspiring on certain days between January 1, 1924, and October 21, 1925, to publish and utter seditious libels and words; (2) conspiracy to incite persons to commit breaches of the Incitement to Mutiny Act, 1797; and (3) conspiracy to endeavour to seduce from their duty persons serving in His Majesty's Forces to whom might come certain publications, books, and pamphlets, to wit, the *Workers' Weekly* and certain other publications, and to incite them to mutiny.

So far as the legal aspect of the trial is concerned little comment is necessary. It is possible, of course, to complain that the Act offended against is as old as the hills, and to argue that no Communist could expect justice from a bourgeois judge and jury. We are satisfied, however, that the accused received at least as fair a trial as they could have had in any country, and probably fairer—though, human nature being what it is, that may not be saying as much as it might appear to say. The defence was allowed considerable latitude. The offences were clearly committed, and the sentences, seeing that seven offenders only go to gaol because they refuse to be bound over, are not severe from the legal point of view. But from the political aspect the whole affair is regrettable, largely because of the atmosphere created by the inept remarks of the most indiscreet Home Secretary within memory. Whether intentionally or not, Sir William Joynson Hicks has cast a deep political hue over the whole affair, and in a series of speeches has conveyed the idea to the public of a party prosecution, the success of which would be a party triumph and a feather in his own cap, and this unfortunate impression is deepened by what almost amounts to platform flirtations with Fascism. If he looks at the results through political spectacles and is pleased with it, then he is even more short-sighted than we had supposed. He may have satisfied a clamouring Press; but he has driven underground a noxious propaganda, which was much safer in the fresh air; has presented the potent asset of martyrdom to twelve otherwise insignificant men; and by his handling of the subject of Communism and Fascism has done much towards changing the sane trade union view of the former from abhorrence to condolence. Furthermore, he has contrived to portray himself and the Government he represents as hardly up to the standard in regard to their attitude towards freedom of speech. None of these impressions need have been conveyed at all. The affair is to be debated in the House of Commons on Tuesday, when the Home Secretary may perhaps be taught an elementary lesson in the dangers of indiscretion.

The Irish Boundary.—The resignation of Professor John MacNeill, the Free State nominee on the Boundary Commission, from the Commission on the ground that he as being inconsistent with the terms of their reference, has precipitated a grave crisis, referring to which our Dublin correspondent writes as follows:—"Mr Justice Feetham and Mr Fisher, his remaining colleagues, have countered by stating that they had all three long since agreed to make a unanimous report, and that Professor MacNeill had apparently assented to the draft award until quite recently, and then had resigned suddenly on the grounds stated. Professor MacNeill has also resigned from the Free State Government, and his explanation of his action as Boundary Commissioner is—baldly summarised—a confession of inefficiency as a politician. The implied proviso that it should be in accord with the terms of their reference; and he had assented provisionally to the draft award until he became alive to the fact that it was inconsistent with the terms of their reference, and, in addition, certain to cause trouble. He awoke, admittedly, to the latter facts on seeing a forecast of the

award, which reached the public through the indiscretion of the *Morning Post*. It is an unfortunate episode, which creates a bad atmosphere for the award when it arrives, because passions quite irrelevantly have begun to stir. Nothing final has been done to commit either parties to the investigation. And it is quite clear that if the Commissioners have, in fact, gone outside the terms of their reference it is not too late to raise the point and to procure an adjudication on the juridical issues which are involved. Britain will hardly attempt to enforce an award if the Free State alleges that it is bad on the face of it, and seeks to have the matter tried out. But prompt action will be necessary, since the award, when published, will be a definitive delimitation of a boundary, with a date fixed for its coming into operation automatically in accordance with the provisions of Article XII. of the Treaty, which have been given the force of law by statute in both countries. The most serious aspect of the case is that news is already to hand of movements of armed bodies of the Northern Special Constabulary in military array into the border districts likely to be affected by the disputable award. Nothing short of the actual physical interposition of British troops between the armed agents of the Irish Free State and of the local authorities could provide a truly effective guarantee against possible local clashes precipitated by mischief-makers on either side, which might lead to extensive turmoil and bitterness and bloodshed. And, technically, as the boundary and its adjustment arises out of the contractual relationship created between the Imperial authorities and the Irish Free State by the Anglo-Irish Treaty, the effective and formal steps of cession or taking over, and the accompanying measures for the preservation of the peace along the whole border should properly be taken by the Imperial authorities and by the Irish Free State authorities respectively on either side. It may be remembered that there are other issues outstanding besides the boundary issue which it might quite conceivably be possible to dispose of in one comprehensive settlement supplementary to the treaty. A delay while the juridical issues as to Article XII. are being disposed of might provide a convenient interval for its negotiation. The view is expressed in many quarters that the Anglo-Irish Treaty having been registered at Geneva, the aid of the League of Nations might well be invoked to provide an impartial tribunal of complete detachment from British and Irish party controversies for the decision as to the true construction of the much-discussed Article XII." Meanwhile, Mr Cosgrave and Sir James Craig have been conferring with Mr Baldwin in Downing Street, and although the position is complicated and difficult there may be ways out of the deadlock. Northern Ireland, in view of its efforts to prevent the Boundary Commission, from functioning, has no moral standing entitling it to claim the enforcement of the award, while the Irish Free State obviously opposes its enforcement. It would seem possible, therefore, that, with the good offices of the British Cabinet, the two Irish sections should attempt some agreement for a temporary observance of the *status quo*, during which other outstanding questions might be examined with a view to a more comprehensive settlement, with or without the assistance of the machinery of the League of Nations.

The Mosul Decision.—The Permanent Court of International Justice, by its ruling on the legal points submitted to it by the League of Nations Council, has removed what should be the last obstacle to the Council's final decision on the main question. The ruling of the Court was commendably clear and decisive. The Council, it is declared, is required under the Treaty of Lausanne to give a decision that shall be final and binding on both parties. It must be given unanimously, but in determining unanimity the votes of the interested parties shall not be counted. It follows, therefore, that the way is now clear for the Council to dispose of the matter finally at its December sitting, provided its members are unanimous on the line of frontier to be laid down. As to that it will be difficult to depart far from the suggestions of the League's Commission of Inquiry, whose members held that Mosul should be attributed to Iraq if Great Britain was prepared to continue its association with the latter State for a period

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

of anything up to 25 years, but that failing that undertaking the province should, with the exception of a small region, revert to Turkish rule. If that is so, the matter may lie very largely with the British Government. Mr Amery did in September give what was understood to be a specific undertaking to stand by Iraq so long as might be held necessary, up to a maximum period of 25 years, but the Prime Minister's references to the subject in his Brighton speech were far more equivocal. So was an answer given to Captain Wedgwood Benn in the House of Commons on Wednesday. A more definite statement will no doubt be invited when the Council deals with the matter finally in 10 days' time.

M. Tchitcherin's Travels.—The health of the Soviet Commissar for Foreign Affairs appears to affect his movements in a way by no means advantageous to his diplomatic duties. Having visited Warsaw and Berlin on his way to a cure, he has now visited Paris on his way back from one or on the way to another. The visit would have been the more interesting had the visitor found M. Herriot in power, for M. Herriot is more disposed towards a *rapprochement* with Russia than most French politicians. What the aims of the Soviet Government are, apart from debt settlement on a basis satisfactory to itself, is not yet quite clear. The conclusion of the Locarno treaties and the entry of Germany into the League of Nations obviously creates a new situation for Russia, and there are some signs that, in spite of continued vilification of the League, Moscow is beginning to see the advantages of co-operation through it with the rest of Europe in technical if not in political matters. But the effect on Paris of a visit from M. Tchitcherin might be of some interest, too. The trend of politics in France is taking the form of a widening of the gap between the two extremes, and any idea that the leader of the Cartel des Gauches was temporising with Bolshevism would provoke, at any rate, an attempt at reaction among the Right. Exactly how much truth there was at the back of last week's rumours of definite Royalist activities it is hard to determine, but the incipient Fascist movement in Paris may be capable of being a nuisance, though hardly a danger. As it happens, however, M. Tchitcherin did not find M. Herriot in power, and M. Briand has not found it possible or prudent to give the Soviet Commissar more than a few minutes' formal conversation.

Oil and War.—In an address before the Royal United Service Institution on Wednesday, Admiral Sir E. J. W. Slade argued that, in order to be safe in the event of future wars, Great Britain must develop her control of oil supplies. At present, he said, we draw 38 per cent. of our oil supplies from the United States, 21 per cent. from South America, and 24 per cent. from Persia; and in the event of war the last-named would be our only certain source of supply. The argument is familiar, and the answer twofold. In the first place, if we are at war and have got command of the seas our oil supply is assured, provided the United States is not our opponent; and if we have not got command of the seas, we shall not find it any easier to get oil from our own wells than from wells under other ownership. Secondly—and as a corollary—Admiral Slade's argument only holds good on the assumption that we are going to war with the United States. If we are really contemplating a war with

America, let us not merely strive for the control of all oil resources outside America, but give up all thoughts of debt repayment or sinking funds or reduced taxation, and build an unconquerable Navy. But really such an assumption cannot be taken as the basis for policy by any sane person—nor will it, we trust, for centuries.

Trade Union Membership.—The Report of the Chief Registrar of Friendly Societies for 1924 (H.M. Stationery Office, Price 4s) sets out the statistics of trade union membership in 1924 compared with previous years. The latest year's figures show that the continuous drop in membership which had been in progress since 1920 has now been checked. The course of the figures over recent years is traced below:—

Year.	Number of Trade Unions at End of Year.	Membership at End of Year—(000's omitted).		
		Males.	Females.	Total.
1900.....	1,323	1,868	154	2,022
1910.....	1,269	2,287	278	2,565
1915.....	1,229	3,868	491	4,359
1920.....	1,364	6,994	1,340	8,334
1921.....	1,251	5,618	1,004	6,622
1922.....	1,203	4,744	870	5,614
1923.....	1,161	4,597	813	5,410
1924.....	1,155	4,720	811	5,531

The very substantial fall in the total membership from 8,334,000 at the end of 1920 to 5,410,000 at the end of 1923 may be attributed in the main to trade depression; while the check and slight recovery of 1924 (confined, it will be noticed, to the male membership) reflects in part the result of the very vigorous "back to the unions" campaign, which was no doubt assisted to some extent by the advent of a Labour Government to office. The total membership is now about 1,400,000 larger than at the close of the last pre-war year. The decrease in the number of separate unions reveals the effect of the steady progress of the policy of amalgamation.

Changes in Unemployment Insurance Figures.—The November issue of the *Ministry of Labour Gazette* gives figures showing that the estimated working population insured under the Unemployment Acts in Great Britain and Northern Ireland, at the beginning of July last, was 11,892,000, an increase of 252,000, as compared with July, 1924. Over and above the normal increase in the insurable population, a larger number of persons appear to have been brought into employment in 1924, as a result of the general improvement in the volume of trade since 1921-23, and such persons still figure in the July, 1925, totals, despite diminished activity in certain industries this year. The practice of making sweeping generalisations on the monthly figures, without sufficient knowledge as to the base on which those figures rest, is thus seen to be highly dangerous. The number of persons registered as unemployed at the end of June, 1924, was 1,049,000, and at the corresponding date in June, 1925, 1,368,000—an apparent increase of 319,000. In the meantime, however, the number of insured persons had been significantly enhanced, and if allowance is made for certain other factors, it would seem that the numbers *actually in employment* did not differ greatly at the two dates. The Ministry of Labour assumes that the increase in the insurable numbers was spread evenly over the 12 months, so that the average monthly increment was approximately 20,000. Of individual industries, the largest increases fell to the lot of the distributive trades (106,090), building (12,560), local government (14,660), public works contracting (14,300), and the motor trade (11,500): the largest decreases to coal mining (19,900), shipbuilding (12,200), and the iron and steel groups (pig-iron 4,410, steel melting, rolling, &c., 7,140). Present trade tendencies are reflected in an increase of 12.4 per cent. in the numbers insured under the heading "silk," and a decline of 14.6 per cent. under "pig-iron."

An Index of Electrical Production.—The possibility of preparing an index of the physical volume of production in industry has been widely discussed during the last few years, and considerable progress has been realised in this matter by statisticians in the United States, France,

Belgium, and Britain. In certain industries—coal-mining, iron and steel, for example—the problem to be solved is comparatively simple, since the unit of weight has a genuinely representative value. In engineering, however, which is steadily modifying and improving design with a view to obtaining the maximum of power with the minimum of materials, the unit of weight is not representative. To take a concrete example, the weight of a turbo-alternator capable of yielding 3,000 kilowatts in 1912 is now almost exactly the same as that of a turbo-alternator yielding 6,000 kilowatts. From the power point of view, the ton in 1925 is twice as valuable as the ton in 1912. In preparing an index of activity in electrical engineering, it was decided to abandon weight and price, and concentrate on horse-power as the only true indication of output even under varying conditions of design and materials. The index so prepared covers the heavy plant engineering side of the industry, which is fully 60 per cent. of the total production even if lamps, accessories, small control and recording apparatus, domestic heating and cooking appliances are included in the latter. To avoid seasonal fluctuations and neutralise to some extent the effect of abnormally large orders, an annual total ending with the month in question was taken and continued on this basis from January, 1924, onwards. The year 1920 was taken as a basis of 100. To read the index correctly, it should be noted that it takes three months on an average for orders to pass into production in the shops, so that the index of 61 given for home trade in August, 1925, applies to November:—

INDEX OF ACTIVITY IN THE ELECTRICAL INDUSTRY.
(1920 = 100.)

Year ending—	Home. Export. Total.		
	100	100	100

Examination of the index will show how unreal the legends of remarkable prosperity in the electrical industry this year have been, and it will also show that the competitive ability of the industry, judging from the export figures, was never higher than at the present time. The continued success of the industry in the foreign market has been a notable feature of the last two years at least, and would indicate that the electrical plant manufactured by British firms is steadily creating a tradition of excellence in the world. The reasons for depression in the home market are not to be found in the inefficiency of the industry, but in the uncertainty regarding Government action in the standardisation and inter-connection of electricity supply. No undertaking could launch out on any important supply scheme involving the expenditure of capital if it were certain that legislation might, through frequency adopted in its area, make this expenditure inoperative at the outset. There has been almost complete cessation in the construction of new power stations, and the orders received have been for extensions which were unavoidable. The consumption of electricity, owing to like Glasgow, Sheffield and South Wales, and this has had immediate effect on the demand for electrical plant. The index affords a reliable clue to the present state of the industry, and will be published monthly in the special supplement on the state of trade issued by the *Economist*. The copyright is reserved by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association.

The Rating of Machinery.—An important debate took place in the House of Commons, on Wednesday, on a clause of the Rating Bill, designed to relieve industrial machinery of the burden of local rates. Mr Barker and Mr Mardy Jones, on behalf of the Labour party, moved and seconded the rejection of the clause mainly on the ground that it might mean a transference of rates, to the tune of some £10,000,000 per annum on to rate-payers less able to bear the burden than industrial concerns. Mr Runciman was the chief exponent of the opposite view. He explained that there was at present no uniformity of practice in regard to the rating of machinery. For instance, of 55 million spindles in Lancashire, only 9 million were at present rated. In Scotland the cotton industry was free from rates on machinery, whereas in the North-East of England this burden was becoming a very serious one for major industries. He claimed, too, that in that and other areas the "unrating" clause would bring important assistance to industries in the task of meeting international competition. Mr Neville Chamberlain, replying on the debate, emphasised the line of argument introduced by Mr Runciman, and at the same time combated the suggestion from the Labour benches that the relief to machinery would add seriously to the burden of rates on humbler folk. The change in rating would not take place until after the next revaluation, and he staked his reputation as an authority on municipal affairs on the statement that "they would be able to count on the fingers of two hands the number of places where there would be increases of rates due to the change." The new clause should certainly do something, as Mr Chamberlain claimed, not merely to assist certain industries in competition by reducing a burden, which does not come out of profits like income-tax, but which is a production cost, but also to encourage the keeping of machinery up-to-date.

Japan's Financial Policy.—A the general meeting of the Japanese Clearing Banks, last week, Mr Hamaguchi, the Minister of Finance, outlined the financial policy of the Government. According to cable advices, he stated that the same policy of strict economy had been followed in framing the Budget for the year 1926-7 as in the previous year. The estimates of expenditure were about 1,598 million yen, of which 1,079 million were to meet ordinary expenditure, and 519 million extraordinary. The figures included 220 million yen for various expenses directly arising out of the great earthquake in 1923, that is, expenses for the reconstruction of the metropolis, and the replacement of damaged Government buildings and plant, as well as interest on the reconstruction loans. The estimates of expenditure for 1926-27 showed an increase of about 48 million yen, as compared with those of the previous year. The principal items of the fresh expenditure proposed are as follows:—

	Yen.
Increase in the grant to local authorities for salaries of primary school teachers.....	20,000,000
Construction of auxiliary vessels for the Navy.....	8,000,000
Relief to the Industrial Bank of Japan, the Bank of Taiwan, and the Bank of Chosen in connection with their loans to China.....	7,000,000

In the coming session of the Imperial Diet the Government, the Minister went on to say, intended to introduce a Bill to amend the present system of taxation, so as to obtain a better distribution of the burden, to simplify and improve administration and collection of inland revenue, and to adapt the system of taxation to the present economic conditions of the country, while maintaining the present amount of the total revenue. The main features of the plan were the reduction of income-tax, land tax, and business tax, the abolition of excise duty on cotton textiles, and travelling tax, as well as lesser taxes, the establishment of a new tax on interest arising out of capital, an increase in the duties on spirits and higher death duties. As regards the Government borrowing, he said that the amounts to be raised during the year 1926-27 would be about 150 million yen, for the purpose of reconstruction work, the development of the colonies, and the State railway enterprises. Those loans were intended to be issued through post offices, or by way of advances from the various public departments, so as to avoid a recourse to the public market. This policy, which had been followed by the

present Government since last year, had relieved the money market from the demand of public finance, and had been very successful in mitigating stringency of the money market, and in reducing the general rate of discount, and in enabling capital issue at lower rate and longer term.

Scottish Shale and Ammonium Sulphate.—A correspondent writes:—One aspect of the present stoppage of work in the Scottish shale-refining industry does not loom large at the present time, but it may eventually prove to be of considerable economic importance. It is not generally known that this industry is the largest individual producer of sulphate of ammonia in the United Kingdom (over 50,000 tons per annum, or one-eighth of the total), though the output of the recently introduced synthetic product manufactured at Billingham by the Synthetic Ammonia and Nitrates, Limited, may perhaps soon take the foremost place. Ammonium sulphate prices during the past two or three seasons have been appreciably higher in the controlled home market than in the world markets, and this has caused great discontent among users in this country. In deference to the growing importance of the home market, British manufacturers, 90 per cent. of whom are members of the Sulphate of Ammonia Federation, have reduced quotations to a level more in accordance with world prices, which have gradually been forced down by the weight of German competition. Complaints have just been voiced by the Federation that high production costs and dear sulphuric acid are forcing makers to sell at almost unremunerative prices, and there is a danger that the present cessation of operations in the shale fields—which may last longer than is anticipated—will be used as a lever to raise prices of ammonium sulphate. Should this happen we may expect to see cheap foreign material entering this country, and since the German synthetic product is, on the whole, far superior to the by-product sulphate mainly manufactured here, such competition would undoubtedly be felt, as is the case with the United States, where German material is successfully competing with the home product, despite the protective duty, equal to about 23s per ton. Already, small quantities have been imported into the United Kingdom, and we may yet be faced with an application to the Government under the Safeguarding proposals for a protective duty to be placed upon imports of a chemical product, the world market for which, before the war, was dominated by British producers.

British Dyestuffs.—As anticipated, the shareholders of the British Dyestuffs Corporation, at extraordinary meetings held on Wednesday, approved the scheme of reconstruction outlined in last week's *Economist*. In his speech, in which he elaborated the information already before the shareholders, Lord Ashfield stressed the difficulties which had beset the company as a result of the Government restrictions under which it had had to operate. "These restrictions," he said, "have been repressive of the corporation's activities, and have hindered its expansion; they made it impossible for its business to be conducted with secrecy or rapidity—two essential elements in obtaining commercial success; and they invited political interference with a commercial undertaking. They were safeguards against contingencies which no longer had to be feared; shackles whose utility had gone, but whose weight remained." With regard to the payment of £600,000 in cash to the Government in return for its surrender of £1,700,000 preference and preferred ordinary shares, Lord Ashfield stated that the figure had been arrived at after considerable negotiation and inquiry, and pointed out that it approximated to the market value of the shares at the time. The company is to be congratulated upon securing freedom from Government control, even at this late hour, on terms which appear reasonable on both sides. But it is a pity that the negotiations proved so difficult, and that the Government could not be induced to surrender its holding at a much earlier date. On the subject of the proposed agreement with German manufacturers of dyestuffs, Lord Ashfield said that the negotiations which began about four years ago finally resulted in an agreement, which, however, was not sanctioned by the Government. He added that "Whether an agreement

between the I.G. interests and ourselves is now possible I am quite unable to say, but I should like to give this assurance, that whatever may happen in the future, the present board are prepared to give a definite pledge that while the management of the Corporation is entrusted to their care it will not, as was alleged, be allowed to sink or to drift into the position of a mere distributing agency for dyestuffs, and that whatever agreement may be made, it will not be inimical to the interests of our customers, the colour users, but will be made with the object of securing for them the widest measure of freedom in the conduct of their business, and the opportunity, as far as lies in our power, to purchase their colours at the world's prices." When one recalls the flourish of trumpets with which the corporation was formed, with the avowed object of developing a dye industry in this country which should be entirely independent of foreign manufactures, the resort to an agreement with the German dye makers really amounts to an admission of failure. Had the various Governments of the past three years not vetoed an agreement, it would undoubtedly have been consummated long ago. When it does come it will certainly be of great advantage to British users of dyestuffs.

British Overseas Bank.—Some reflection of the success which has attended the efforts to restore economic equilibrium in Europe is to be found in the report of the British Overseas Bank for the year ended October 31st last. The bank has extensive foreign connections, but is particularly concerned with the Continent, so that any improvement in financial conditions there should have a beneficial influence upon its business. The net profit for the year as disclosed by the report just issued amounted to £126,015, against £105,548 in respect of the previous 12 months. With the sum of £54,330 brought in, there is a total surplus of £180,346, in comparison with £174,330. This enables a distribution to be made to holders of the "B" ordinary shares, which is the first payment made on this class of capital since the commencement of operations six years ago. The dividend is at the rate of 3 per cent. per annum. The distribution on the "A" ordinary shares is again 6 per cent. The dividend on this issue has been regularly paid, which is of primary importance to investors, as the "B" shares are not available to the public, being only for issue to banks and other financial institutions. The declaration now made on the latter class, however, though not of direct public importance, is of indirect concern, as it illustrates the progress being made. The usual appropriation of £5,000 is made towards reduction of premises account, although the general reserve this time receives only £25,000, compared with £55,000 a year ago. This leaves a sum of £60,346 to be carried forward, in contrast with £54,330 brought in. Acceptances have advanced from £3,331,917 to £3,913,516, while deposits, on the other hand, have contracted from £2,294,569 to £2,138,867. Bills discounted have fallen from £464,106 to £307,581, but advances figure at £805,788, against £703,934. The holding of Government securities remains the same, but other investments have gone up from £31,984 to £306,449. Money at call stands at £1,345,000, compared with £1,610,000. The price of the "A" ordinary £5 shares, fully paid, is 5½, making the yield, on the basis of the 6 per cent. dividend, £5 4s 3d per cent.

Bolckow, Vaughan, and Co.—The only encouraging feature in the report of Bolckow, Vaughan, and Co. for the year ended June 30th last is in connection with the subsidiary and connected companies. The directors state that the accounts of these concerns, though not yet completed, "indicate an early return to a dividend-paying basis." The company itself still seems far away from this fortunate position, the accounts now presented showing an even more unsatisfactory state of affairs than was the case twelve months ago. The accounts for 1923-24 showed a profit, before allowing for depreciation and interest, of £84,700, but depreciation of ore stocks required £53,300; loss on demolitions, £18,700; interest on loans and overdrafts, £109,000; and half-year's preference dividend, £11,800. This left a debit balance of £173,300, including a credit of £24,800 brought forward, which was met by transferring £150,000 from

income-tax reserve and writing off the balance of £23,300 from general reserve. The past year's accounts show still more unfavourable results. There is a loss of £37,900, to which has to be added a charge of £33,400 for depreciation of stocks. Interest on loans and overdrafts requires £38,000, and debenture interest £140,000, leaving a deficit of £249,300. To meet this a sum of £100,000 is transferred from income-tax reserve, and the balance is written off general reserve. The table below compares results for the past 13 years:—

	Gross Profit.	Depreciation and Extensions, &c.	Deb. Int. and Pref. Div.	Balance.	Written Off Cap. Expenditure.	Ordinary Div.	Rate.
1912-13	£ 642,235	£ 161,850	£ 54,168	£ 436,017	£ 160,000	£ 274,630	% 10

* After allowing for War taxation.

During the past year the directors called up an uncalled balance of 8s per share on 1,860,900 ordinary shares of £1 each. This produced £741,300, and the overdraft owing to bankers has been reduced by £726,900 to £347,000. A series of debit balances has reduced the general reserve fund from £1,000,000 at June 30, 1921, to £279,900 at the date of the last balance-sheet. There is also an accident and fire insurance reserve of £164,200, and this is now to be made available for meeting any further losses in case of need, the directors having recently effected, "upon advantageous terms," an insurance against fire and explosion risks "whereby practically the whole of the existing fire insurance reserve will become available for the general purposes of the company." No depreciation has been charged in the accounts for the year, a fact to which the auditors draw attention, without comment. Investments, which are mainly in subsidiary and connected companies, show an increase of £68,600 at £1,822,400. They are taken at or below cost, the total, in the opinion of the auditors, being in excess of to-day's values. Stock-in-trade has been reduced by £267,200 to £893,000. The company's position is still far from encouraging. In explanation of the poor results the directors remark that "the year has been marked by severe depression in the coal trade, and the improvement in the company's iron and steel works has been offset by the adverse results at the collieries, for which the burdensome Wages Agreement is in great part accountable." An analysis of the balance-sheet will be found in a later column.

Dorman, Long and Co.—The accounts for the year ended September 30th last of Dorman, Long and Co., in common with those of many other North-East coast undertakings of a similar nature, show a substantial decrease in profits. There is, in fact, a decline of over 50 per cent., but although the preferred ordinary shares receive no dividend, there is nearly sufficient to cover debenture interest and preference dividend. By reducing the carry-forward by £88,000, provision of the £28,700 required for debenture redemption and an allocation of £50,000 for depreciation is possible. The following table shows results for the past five years:—

	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
Profit	397,711	157,369	272,454	501,984	228,170
Brought forward	248,540	239,488	201,173	202,667	210,151
Debit interest	646,251	396,887	473,627	714,651	438,321
Redemption of deba.	36,286	35,684	88,189	208,500	206,444
Balance of amalgamation expenses	10,477	..	..	27,872	28,710
Reserve, &c.	..	..	..	7,044	..
Preference dividend	..	40,000	50,000	100,000	50,000
Preference ord. dividend	120,000	120,000	120,000	120,000	31,083
Ordinary dividend	240,000	(nil)	(nil)	(nil)	(nil)
Carried forward	239,488	201,173	202,667	210,151	122,065

The accounts for 1922-23 included for the first time the figures of Bell Brothers, Limited, Sir B. Samuelson and Co., Limited, Carlton Iron Company, Limited, and North-

Eastern Steel Company, Limited, which went into voluntary liquidation for the purpose of amalgamation with Dorman Long. The directors mention that expenditure on bridge contracts and the development of the coal undertaking in Kent have made heavy demands on the company's resources, and account for the bank overdraft, which stands in the balance-sheet at £992,100, in addition to other liabilities of £1,132,300, including an unsettled amount due for taxation. Stocks and work in progress stand at £3,281,900, an increase of nearly £400,000, which would indicate that the company is well employed.

Slaters.—Although the trading profits of Slaters in respect of the year ended September 30th last declined from £80,409 to £71,241, the net profits rose from £37,876 to £42,941. This was due to the fact that £20,673 was realised as profit on sale of investments. Were this not included in the item, therefore, net profits would have shown a fall from £37,876 to £26,269. Whether the apparent increase in prosperity presented by the comparative figures given below is likely to become an accomplished fact remains to be seen. Perhaps the chairman will enlighten shareholders at the annual meeting:—

Sept. 30.	Trading Profit.	Interest and Divs.	Exp'ses and Inter'st Ch'rges.	Net Profit.	Pref. Div.	Ord. Div.	Rate.	Balance.
1906	£ 52,021	£ 4,513	£ 19,508	£ 37,023	£ 5,650	£ 30,281	% 12½	£ 1,222
1907	52,660	4,680	20,443	37,046	5,650	30,281	12½	1,066
1908	48,302	4,718	20,756	32,386	5,650	30,281	12½	2,460

1919	68,612	3,193	29,858	41,947	..	..	..	Dr. 17,315
1920	81,306	4,435	31,260	54,481	22,050	7,140	..	7,976
1921	60,871	4,993	40,107	17,758	4,200	8,526	4	8,508
1922	47,026	12,412	50,531	8,976	5,250	9,244	5	3,791
1923	61,854	8,800	51,991	22,263	4,575	11,858	6	6,830
1924	89,409	4,943	47,471	37,876	4,650	15,810	8	17,416
1925	71,241	72,113	50,433	42,941	4,725	18,073	9	24,144

* Including £20,673 profit on sale of investments.

The saving effected in expenses in 1923-24 was not maintained during the last financial period. The difference, however, is not of great importance, and the figure of expenditure is still below that of 1923. The ordinary dividend was raised from 8 to 9 per cent., absorbing £18,073, in comparison with £15,810, leaving a balance of £24,144 against £17,416. The directors state that the smaller amount of profit shown in the trading figures this year, as compared with those of 1923-24, "was entirely due to the fact that in the former year special profits, apart from the ordinary trade, were due to excursion parties from the provinces, organised on a very large scale to visit London and the Wembley Exhibition. These organised parties of many thousands of people were not repeated this year, owing to adverse industrial conditions in the textile, iron and steel, and mining industries in the north. Accompanying the report is a notice drawing attention to the fact that a number of shareholders have recently received a circular, bearing the names of some shareholders, nominating another director. "This circular," says the board, "is so misleading and so full of inaccuracies that your directors strongly advise you not to sign any proxies in favour.....of the candidature....." It is stated, moreover, that "the board, as at present constituted, is working in absolute and complete harmony for the continued progress and development of the business and in the interests of the shareholders." If that is so, and judging by recent results, the newly nominated director appears to have little justification for his claim to membership of the directorate. The price of the ordinary £1 shares is 1½, making the yield, on the basis of the 9 per cent. dividend, £7 2s 3d per cent.

Peter Walker and Robert Cain.—A further improvement occurred in the position of the brewery undertaking of Peter Walker (Warrington) and Robert Cain and Sons, Limited, during the year ended September 30th last. The accounts covering that period disclose that the net profit went up from £576,310 to £608,541. With the sum of £34,470 brought in, which compares with £25,470 twelve months before, the available balance is brought up to £643,010, in comparison with £601,770 in 1923-24. The debenture interest again absorbs £150,000, while the amount required to pay the preference dividend—£160,000—is also unchanged. There then remains a distributable balance of £333,010, compared with £291,770. The ordinary dividend of 9 per cent. for the year is the same as in the preceding period, while the appropriation to the staff benefit fund remains unaltered at £3,000. The allocation to reserve, however, has been raised from £50,000 to £80,000, leaving £45,710 to be carried forward in contrast with £3,470 brought in. In commenting upon the 1923-24 accounts we observed that "obviously a reserve of £70,000 (which was the figure at that time), against assets of approximately £6,900,000, is absurd." On turning to the consolidated accounts, we find that reserves are nearly £617,000. The consolidated balance-sheet this time shows reserves of £747,000. The directors report that during the year a scheme to alter the terms of the debentures was submitted by persons largely interested in the company, but not receiving the requisite support from the debenture-holders, was abandoned. Freehold and leasehold properties, goodwill, loans and advances, and sundry investments, &c., are lumped together under one heading. They stand at much the same figure as a year ago. Sundry debtors, however, have declined from £49,812 to £4,009, though creditors show little change. The holding of cash has risen from £192,768 to £244,710. The concern, as noted previously, is partly a holding company, and the directors are to be congratulated upon presenting a consolidated balance-sheet. In another direction commendation is less deserving. We refer to the cumbersome and unwieldy title of the undertaking. Several of the big joint stock banks have realised that no useful purpose is served by continuing under a lengthy nomenclature, and we think the directors of Peter Walker should give the matter consideration.

Turkish Petroleum Company.—Much comment has been aroused by a statement made casually by Sir Charles Greenway, at the recent shareholders' meeting of the Anglo-Persian Oil Company. He gave the division of interests in the Turkish Petroleum Company as 47½ per cent. Anglo-Persian, 22½ per cent. Royal Dutch-Shell, 25 per cent. French consortium, and 5 per cent. Mr Gulbenkian. It was then discovered—apparently to the surprise of many—first, that the Standard Oil and the other oil companies comprising the American group, had not actually taken up the shares in the Turkish Petroleum Company which had been placed at their disposal; secondly, that Mr Gulbenkian, a director of the Mexican Eagle Oil Company, and a prominent figure in Royal Dutch finance, was somehow in possession of 5 per cent. When it was further discovered that a dispute was raging between Mr Gulbenkian and the American group over the cash valuation of Mr Gulbenkian's holding, a first-class international oil dispute was quickly "written-up." But in reality nothing unusual has happened. It is usual for Mr Gulbenkian to have 5 per cent., and his 5 per cent. in the Turkish Petroleum Company was clearly laid down in a document signed at the Foreign Office in March, 1914, by the respective commercial oil interests and the German and British Governments. Mr Gulbenkian had been instrumental in bringing the Royal Dutch-Shell group and the Turkish Government together on the terms or idea of a concession, and presumably in consideration of his services he was assigned under this agreement a "beneficiary 5 per cent. interest, without voting rights, this 5 per cent. being contributed equally by the D'Arcy group (Anglo-Persian Oil) and the Anglo-Saxon (Royal Dutch-Shell) out of their respective holdings (50 per cent. and 25 per cent.)." Whether this remuneration for Mr Gulbenkian's services was too high can hardly be considered now when our ideas

of oil and duty in the Middle East have so completely changed. It was then (in 1914) provided that if Mr Gulbenkian should desire to dispose of his interest in the Turkish Petroleum Company, the Anglo-Persian and the Royal Dutch-Shell should have the option of purchasing it, which in the present circumstances would amount to almost an obligation. What could be more natural than for Mr Gulbenkian to desire to cash this 5 per cent. interest? Every other shareholder, certainly the French, would like to do the same. Profits are very far removed from the Turkish Petroleum Company, and a prudent financier prefers his bird in the hand. As the American group were offered half the interest of the Anglo-Persian, it took over also half its obligations towards Mr Gulbenkian. It is not unnatural that Standard Oil should fail to see eye to eye with Mr. Gulbenkian on the present cash value of Turkish Petroleum shares. It is probable that if Mr Gulbenkian does not accept the Standard Oil views, the American group will decline to proceed further, and refuse the offer of participation in the shares of the company. The company would no doubt work more harmoniously if the number of its powerful interests were reduced. At present parties of geologists are examining the parts of the concession outside the disputed area of Mosul on behalf of each of the four interests—an incident which seems to present possibilities of war among geologists if not war in Mosul. No wells have been sunk, and no oil in commercial quantities has ever been discovered. It is rare to find a company, that has accomplished nothing in the course of a life of 14 years, excite so much lively interest over the value of its shares.

De Beers Diamond.—Our mining correspondent writes:—It will be recollected that this important undertaking paid for the past financial year on its deferred shares dividends totalling 20s, against 10s in respect of the preceding period. The accounts now to hand indicate that the great bulk of the additional revenue was provided by realisation of investments, "other income" figuring at £948,400, as against £326,300 a year ago. In point of fact, "diamond account," at £3,348,200, shows a slight reduction, although higher prices were received for the stones sold. Some economy was effected in costs, but taxation further expanded to £258,500. After providing for the dividends on both classes of shares, the somewhat larger balance of £451,700 goes forward. A point on the technical side is a reduction in the stock of blue ground on the floors owing to the new and more economical method of treating this material direct from the mine. The directors emphasise the benefit which will accrue from the agreement made this year, under which practically all the African output of the precious stones will be handled by a single organisation. On the basis of last year's dividends, the deferred £2 10s shares, at a current market price of about £13 15s, give a yield of just over 7 per cent., which may be regarded as making some allowance for still better results in the future. The preferred shares, which are also of the denomination of £2 10s, show a return of about 7½ per cent. at the current market price of £13.

"Johannes."—At the annual meeting of the Johannesburg Consolidated Investment Company—a fairly full report of which has been cabled—the chairman, Prof. J. G. Lawn, announced that in future the dividends will be declared half-yearly. This departure is in accordance with the expectations for some time past entertained in usually well-informed quarters; it is also in accordance with the practice of other leading Kaffir finance institutions. Some people are hoping that the first interim distribution will be at a higher rate than that paid for the past two years—namely, 3s per share, tax free. This view may prove optimistic, but it is highly probable that the total for 1925-26 will represent an increase. For the rest, interest centres chiefly around such of the Professor's remarks as were of a general rather than a particular character. Considerable attention was naturally devoted to the new diamond selling agreement, which takes effect from January 1st next, and continues for a period of five years. The "Johannes" company stands to benefit in a sub-

stantial degree, both directly and indirectly, from the new scheme, in the arrangement of which it took a prominent part. Dealing with the Union Government's attitude towards the mines, and with the position as regards the supply of native labour, the professor was on less happy ground. Little change can perhaps be hoped for in taxation, but it would seem reasonable to look for some relaxation of the regulations as to the recruitment of native workers. Despite the introduction of greatly improved mechanical appliances, the operations at various mines are seriously handicapped by lack of "boys."

Pahang Consolidated.—Some disappointment was occasioned at the absence of any increase in the dividends, the final of 15 per cent. making 20 per cent. on the ordinary as before, the preference also again receiving a total of 15 per cent. The enhanced price received for the tin sold failed to offset a decline in the output, last year's total of 2,600 tons showing a decrease of about 100 tons. Thus the profit of £124,300 fell somewhat short of the 1923-24 results. On the present occasion, in addition to an allowance of £20,000 for depreciation, £10,000 is set aside for special development. The Pahang, of course, is the only lode tin-mining proposition in Malaya. In 1923-24, as we pointed out when commenting on the report for that year, developments in the principal mine took an adverse turn. Last year these disappointing results continued, although satisfactory values were found in another property. No new alluvial ground of importance was discovered. On the dividends of the past two years the ordinary shares yield no more than 8 per cent. The only "bull point" in the position appears to consist in the company's holdings of seven-eighths of the capital of its subsidiary, the Kuala Reman Rubber Estate.

Life Policies in Reichsmarks.—A case of very considerable interest, though *sui generis*, and not of general application—was decided by Mr Justice Acton, in the King's Bench this week. It concerned a life assurance policy issued in reichsmarks to one Anderson by the Equitable Life Assurance Society of the United States in 1887. At that date the American life office was doing business in Germany, though it withdrew in 1901. The life policy was with participation in profits, and the premiums were payable for 20 years only. Premiums were paid regularly between 1887 and 1907, when the policy became paid up, and it would be noted that all through these 20 years the reichsmarks were at their full gold value in relation to sterling or American dollars. The policyholder, Mr Anderson, had fulfilled his part of the contract, and paid in good currency, and yet when he died in March, 1922, it was contended by the defendant company that the policy money became payable in paper marks at their enormously depreciated value in 1922. This meant that the policy had been practically waste paper. It appears from the judgment of Mr Justice Acton that, taken by itself without reference to other circumstances, the contention of the defendant company would have been sustained, inequitable though it must appear. But it happened that the company, in allotting profits on his paid-up policy to Mr Anderson in terms of marks between 1907 and 1922 had always taken the mark at 20.43 to the £ sterling, or the equivalent in dollars. The judge held that they could not treat the mark at its gold value for the purpose of allocating profits, and at its depreciated paper value, when it came to paying the policy money at the death of the assured. He therefore gave judgment for Mr Anderson's widow, and declared the sum insured payable to her, with profits, at 20.43 reichsmarks to the pound sterling. That this judgment is in accordance with equity and common sense would appear incontestable. The whole of the premiums were paid in reichsmarks at gold value, and the company (which had withdrawn from Germany in 1901) had not—like the German companies—been landed with enormous depreciated mark investments of its life funds. Any other decision would have left the defendant company in possession of the premiums paid in gold currency, and given the plaintiff widow a sum insured paid in marks at fantastic millions to the £ sterling. And yet the decision

must, it would appear, have legalised this gross injustice had not the defendant company tried to adopt two mutually exclusive valuations of the reichsmark—one when allotting profits, and the other when seeking to evade full payment of the sum insured.

THE first ordinary meeting of the present session of the Institute of Actuaries will take place on Monday next, 30th instant, at 5 p.m., at the Hall of the Institute, Staple Inn. Subject: "Some Notes on the Changes Made by the New Law of Property Acts, with special reference to Life Assurance Practice." By Mr D. Houseman, A.I.A.

Oversea Correspondence.

UNITED STATES.—STOCK MOVEMENTS AND MONEY PROSPECTS — INDUSTRIAL POSITION — COMMODITY PRICES—ITALIAN DEBT SETTLEMENT
(FROM OUR CORRESPONDENT.)

NEW YORK, November 17.

ALTHOUGH the stock market rallied strongly after the severe shake-out precipitated by the news of the advance in the discount rate of the Boston Federal Reserve Bank, speculative enthusiasm seems to have received a pretty definite check. The sweeping losses of the day after the news came from Boston were followed by two or three days of steadily advancing prices. The railroad averages pressed forward into new high ground; the industrial averages made up most of their loss. The bull party made a determined effort to demonstrate to the public that the bull movement was not ended. The public seemed disposed not to give up the game on the basis of one day's showing. Nevertheless, reactionary tendencies made their appearance by the end of last week. Yesterday (Monday) another sharp reaction, with no more adverse news than a tightening of call money, that would have been disregarded a short time ago, was followed by the news that the Cleveland Federal Reserve Bank had accepted the example of Boston and increased its rate from 3½ to 4 per cent. To-day a lower opening on the Cleveland news brought out a fair rally. But keenness to buy, plainly, is falling off; and the shadow of Federal Reserve action hovers over the market.

The boom in the motor share seems pretty definitely broken. Chrysler, after soaring to 253, broke to 200; Hudson, after touching 139½, sold off to 100; General Motors, whose top was 149½, came back to a fraction above 127; many of the minor shares that were taken in hand late have fallen back to the prices that prevailed before their moves started. As far as the motors are concerned, the speculative community feels that all the good news is out. Production still is running at a high rate; but the Studebaker dividend has been raised, and General Motors has declared a long-anticipated dividend in an extra of \$5 for the common shares. Talk has shifted from brilliant earnings to the possibility of over-production next year. Big operators feel that the motors are "through"; they have been turning their attention to oils and rails. Railroad earnings have been most satisfactory; oil news is improving. Neither class of shares has had much of an advance this year. The question is, whether public interest can be held while attention is shifted from motors to oils and rails, and whether the market as a whole is to feel the effects of the change in Federal Reserve policy too strongly to maintain its upward movement. The bull party has talked very confidently; it has declared that an increase in official discount rates would have little effect; it has fought recent reactionary tendencies energetically. Many good judges feel, on the other hand, that the new Reserve policy will take a certain amount of money away from the market, while the psychological results of official intervention are considerable.

As for the Federal Reserve system itself, matters are developing along the lines suggested in this letter a week ago. The Reserve authorities have plainly been disturbed over the extent of speculative activity. Realising, however, that most of the call money that is at the disposal

of the New York Stock Exchange has been coming from out-of-town, they have seen that the contraction should be started at the out-of-town centres. An advance in the discount rate at New York would have accentuated the existing situation; more outside balances would have been attracted. In addition, it was the resources of the outside Reserve banks that had been drawn on in increasing measure during recent months; discounts at New York are well below the peak, and have been diminishing rather than increasing. If, as seems likely, a contraction is had out-of-town, some of the outside call money pretty certainly will be drawn home. The effect of this would be to stiffen call rates at New York, and so bring the New York banks into the call market on an increasing scale. If this were followed by increased discounting at New York, the way would be prepared for an advance in the discount rate of the local Reserve institution. However, the developments on which this action would be based still lie in the future; their actual occurrence is something that cannot be forecasted accurately. For the moment it seems that the New York rate will be left alone, and that further moves on the Federal Reserve checkboard will be made at places like Philadelphia and San Francisco, where 3½ per cent. discount rates still exist. Much will depend on the effects of these moves, and upon the course of events in the stock market. It is possible that no change at all will be made in the New York rate; if discounting does not increase, and if speculation proves to be checked, the directors may feel that none is necessary. On the other hand, if market activity keeps up, higher call money probably will call out additional discounting at the central institution.

Industrial news continues favourable. Iron and steel prices are firm, and belief in the firmness of the latter will, according to some good observers, encourage forward buying and bring a considerable increase in unfilled orders. Production in the steel industry keeps up at something better than 80 per cent. of capacity, and consumption, especially in the important automobile and construction industries, is maintained well. An improvement, also, is noted in the textile trades, where decreases in the costs of raw materials and the high level of public purchasing power are helping to restore profit margins. The country's cotton mills consumed 543,000 bales of lint during October, as compared with 483,000 in September, 448,000 in August, and 532,000 in October of last year. Exports of cotton during October were exceptionally large, reaching 1,421,000 bales of lint and linters. This figure is nearly half-a-million ahead of that of October of last year, and tops the high record shipments of last November, which amounted to 1,306,000 bales. The consumption and export figures furnish some offset for the increase in the official crop estimates, which point to a yield in the neighbourhood of 15,500,000 bales.

Somewhat contradictory indications are furnished by the several indices of commodity prices. Those of Bradstreet and Dun, which are computed as of the first of each month, have risen mildly of late. That of the Bureau of Labour Statistics, which is our best weighted index, and which represents prices prevailing during each month, has been receding slightly. This index was 1.3 per cent. lower during October than during September; the decline followed a previous decline of 0.4 of 1 per cent. In October the index stood at 158 per cent. of the average during 1913. The high record for the year is 161, which prevailed during February and March; the low is 155, touched in May. The recent decline may be charged principally to lower prices for farm products. The prices of industrial products are holding well.

Much satisfaction is felt over the Italian debt settlement. The financial district regards the agreement as fair to the United States and generous to Italy. The early burden is light enough to permit Italy's industrial development. Settlement of the debt on these terms will enable Italy to secure the credits that really are needed in this market. In general, it would seem that the Italian agreement should improve the chances of one with France, although the cynics point out that the presence in this country of some five millions of voters of Italian extraction, who are well organised, may have been a factor influencing judgments of Italian capacity to pay. Then, too, the troublesome Mr Borah seems not to find in

the case of Italy those militaristic inclinations that trouble him in the case of France. In any event, it is thought that the latest settlement will prepare the way for Italian Government borrowing to the extent of as much as \$100,000,000. Reports on this matter have been, it may be noted, exaggerated and premature. Our market, also, is interested in the possibility of Belgian borrowing. It is felt that the Belgians are wisely preparing to make their franc independent of the fluctuations in the French franc, and that a Belgian franc stabilised in relation to gold is a fairly early possibility.

FRANCE.—MINISTERIAL CRISIS—BANK OF FRANCE ADVANCES—TREASURY POSITION—SPEEDING UP TAX COLLECTION.

(FROM OUR CORRESPONDENT.)

PARIS, November 25.

THE second Painlevé Ministry fell on Sunday, when its head made the adoption of one of his proposals—that for the consolidation of the short-term Treasury bonds, and of the Crédit National bonds—a question of confidence. The circumstances of the Ministry's fall were unprecedented. A fortnight previously M. Painlevé, in defiance of Socialist pressure, flatly refused to embody the consolidation of these securities in his proposals, and the *Temps* went so far as to congratulate him on his opposition to "this form of bankruptcy," and insisted that it would be an insult to suppose him to be capable of any compromise on this point. On Sunday, however, it was made clear that not only had the Government completely changed its mind on the subject, but that it proposed that consolidation should take the form of spreading reimbursement of the securities in question over a period of 25 years, *dating from January 1, 1928*. In other words, the Government proposed what was virtually a three years' moratorium in regard to short-term Treasury bonds and Crédit National bonds. When the Speaker came to read over the text of the clause it was found, to the stupefaction of the Chamber, that an explanatory paragraph had been added to it which had never been placed before the Finance Commission. Protests rose immediately from all parts of the Chamber.

These were all the more emphatic because the House had already been disturbed by unfounded suspicions that the Government had allowed its plans to be manipulated by interested persons for their personal profit. On November 10th, it was pointed out, a decree was promulgated authorising holders of Treasury bonds to exchange them for National Defence bonds. Six days later another decree cancelled the first. The accusation was made that in the interval large blocks of these bonds, bought at 360f, had been discounted by the Bank of France at their face value of 500f. M. Painlevé insisted that the second decree had been promulgated on the formal demand of the Finance Commission of the Chamber, therefore he claimed that the Government could not be held responsible for the fact that holders of bonds who had not presented theirs for repayment before that decree was issued had been prevented from securing the suggested profit of 140f per bond. It has since been shown that the accusation was without foundation, but the effect of the charge was to incite the Communist group, when the division on the vote of confidence was taken, to abandon their policy of abstention, and to cast the whole of their 26 votes against the Government, which was consequently defeated by 278 votes against 275, in practically a full House. The Ministry immediately resigned, and the whole of its financial proposals have been thrown back into the melting pot.

The whole situation is still one of Nero fiddling while Rome is burning. The politicians are still indulging in vain improvisations that offer no prospect of furnishing the Treasury with the immediate relief which is so vitally required, and public confidence is rapidly dropping back to the deplorable level at which it stood early in the year, when the revelations as to the real situation between the Treasury and the Bank of France brought about the swift fall of the Herriot Cabinet. The Government, since its resignation, has hastily rushed through both Chambers a measure sanctioning the raising by another 1,500 million

francs of the authorised limit of the advances that may be made by the Bank to the Treasury. The limit of these advances, which was reduced to 22,000 millions at the end of 1924, was raised to 26 milliards in April (for the purpose of legalising undisclosed borrowings by the Herriot Government), and then to 32 milliards at the end of June last. Last Thursday's Bank statement showed that the Treasury had only a margin of 400,000,000f before the authorised limit would be reached. The margin on the authorised note circulation (the limit of which was raised in April last from 41 to 45 milliards last April, and then to 51 milliards in June) still amounted to slightly over 3,000 millions last Thursday; therefore, it has not been modified.

It is seriously questioned, however, whether the additional 1,500 millions which the Treasury can now obtain from the Bank will be sufficient to meet more than the immediate needs of the moment. M. Painlevé's original proposition was for 2,500 millions, but under pressure of the Socialists, who urged, for tactical party reasons, that he should reduce this to 1,000 millions, the Premier-Finance Minister compromised by reducing his demand to the figure agreed to. M. Henry Bérenger and other Parliamentary experts are convinced that the additional sum which has been borrowed will be barely sufficient to meet the requirements of the public services, pensions, railways, posts, telegraphs, &c., at the end of the current month, and the question is being asked: "How long will it be before a substantial rise in the note circulation will become necessary?"

M. Malvy, who is President of the Finance Commission of the Chamber, insisted that before the end of the year the Treasury will need something like 6,000 millions. M. Caillaux, shortly before he left office, estimated that, in view of the 2,000 millions which the Treasury still possessed at the Bank, the speedy putting into operation of his Debt Redemption Fund machinery would render unnecessary any further borrowing from the Bank. A week later, M. Painlevé informed the Finance Commission that he estimated the Treasury would require 4,000 millions between then and December 31st. To-day it is calculated that the real amount necessary will be 6,000 millions. The most deplorable fact in the situation, perhaps, is that the mere announcement of M. Painlevé's proposal for a three years' moratorium in connection with the short-term debt alarmed many holders of these descriptions into demanding repayment of their bonds. It is estimated by one authority that this alone has increased by 1,500 millions the sum the Treasury will require before December 31st.

All this is causing undoubted uneasiness, and from more than one direction there are demands for a frank statement as to what the real situation of the Treasury is. The present policy of drift, it is urged, cannot continue, and the exact position must be made known. After the revelations of last spring, and the futile bickerings of doctrinaire politicians that have occupied the past six weeks, public opinion is distinctly alarmed, and the swift fall of the franc from 102 to 130 during the last six or seven weeks has only intensified this feeling.

The outlook at the moment of writing is obviously sombre. The proposed Caisse d'Amortissement, the idea of which is excellent in itself, will doubtless be adopted by M. Painlevé's successor, as it was adopted by him from M. Caillaux; but it is obvious that its mechanism is too cumbersome to yield immediate results other than those of a moral character, while the vital requirement is for some means by which immediate relief on a substantial scale can be given to the Treasury. The only proposal put forward by M. Painlevé by which this end might to some extent be attained was that which stipulated for the complete clearing off of all arrears of overdue taxation, including the payment of the present year's assessments by January 31st next, with severe cash penalties in the case of default. Here M. Painlevé placed his finger on what is nothing short of a scandal. British taxpayers will be inclined to regard with incredulity the statement that, in spite of all that has been done in the way of "speeding up," summonses are only now being issued for income-tax and other imposts for which the demand notes were issued well over a year ago; and this is merely one typical factor in the situation.

GERMANY.—POLITICS—BUDGET FOR 1926-27—CREDIT—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 25.

THE Locarno Bill has been read in the Reichstag once. The second and third readings will take place on November 26th and 27th. The Bill authorises the signature on December 1st of the Treaty between Germany, Belgium, France, Great Britain, and Italy, and of the four arbitration agreements between Germany and her neighbours, and authorises the Government to take the necessary steps for joining the League of Nations. The attempts of opposition parties to associate the legislative sanction of the Bill with pledges in regard to the Cabinet's future policy, or with the condition of a prior Reichstag dissolution, have not succeeded. The Socialists, who count most, justify their acquiescence on the ground of the urgent necessity for joining the League. There is a good deal more opposition to the Bill than at first appeared. The Economic Party, while not opposing the Locarno policy as a whole, demands the postponement of Germany's entry into the League, on the ground that the Ally concessions are inadequate. The Bavarian Minister-President was very critical. The German Nationals will probably, and as usual, succeed in their policy of ultra-patriotic abstention, with the safe assurance, however, that the Bill will go through without them, so that they will escape the reproach of wreckage and at the same time the reproach of showing weakness against foreign enemies.

The Budget for the fiscal year 1926-27 is prepared, and though it has not yet been published, the figures are available:—

GENERAL ADMINISTRATION BUDGET.		
	1925-26.	1926-27.
Revenue.....	6,689,156,232	7,412,786,883
Whereof from taxation	6,569,255,784	7,255,060,000
Recurring Expenditure	6,258,933,998	7,164,191,433
Whereof—		
Foreign Office	44,553,300	55,046,200
Interior	212,611,249	21,308,392
Labour	428,297,053	381,722,573
Defence	467,313,600	559,756,240
Communications	78,898,776	93,283,025
Pension Fund	1,357,084,776	1,555,485,000
Debt Service	182,338,535	295,165,523
Finance Ministry	380,835,960	431,510,563
General Finance Administration	3,062,303,879	3,725,175,126
Non-Recurring Expenditure	413,170,050	248,595,450
Total Ordinary Expenditure	6,672,104,048	7,412,786,883
Extraordinary	603,259,243	301,096,957
Revenue		
Whereof General Finance Admini- stration	315,327,194	294,239,650
Expenditure	435,802,494	301,096,957
Total Ordinary and Extraordinary Revenue	7,292,415,475	7,713,883,840
Total Ordinary and Extraordinary Expenditure	7,107,906,542	7,713,883,840

WAR BURDEN'S BUDGET.

Ordinary.		
Revenue.....	200,791,190	242,649,780
Whereof from Ordinary Budget	200,391,190	238,777,110
Recurring Expenditure	183,981,740	218,756,500
Non-recurring	16,809,450	23,893,280
Total Ordinary Expenditure.....	200,791,190	242,649,780
Extraordinary.		
Revenue.....	1,238,134,666	1,285,859,000
Expenditure	1,238,134,666	1,285,859,000
Total Ordinary and Extraordinary Revenue.....	1,438,925,856	1,528,508,780
Total Ordinary and Extraordinary Expenditure	1,438,925,856	1,528,508,780

The decline in the interior expenditure is due to omission of 190,000,000 marks booked in 1925-26 for special police protection. The increase in pensions is due as regards about 18 millions to civil and as regards about 180 millions to military pensions. The expenditure items totalling 3,725 millions for "General finance administration," including 2,337 millions subventions to states and municipalities, as against 2,210 millions in 1925-26. The extraordinaries, as general administration revenue, it will be seen, is aryl general administration revenue, it will be seen, is aryl practically all yielded by the surplus on the ordinary budget. Of the Extraordinary expenditure in the War Burdens Budget, 1,201.6 millions are for execution of the London Agreement of 1924.

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits \$15,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 and 3, Crosby Square
Bishopsgate, E. C. 3

The credit situation remains in general unchanged. On the one hand borrowing from abroad increases, and New York, in particular, seems to be ever more inclined to lend; on the other hand, the number of bankruptcies and cases of "operation supervision" or suspended bankruptcy, due largely to the credit stringency, is increasing. The slackening in industrial and commercial activity shown by the unemployment figures reported last week does not seem to have set any money free; and this indicates that the slackening is itself partly a result of the credit stringency. Short-term money is again very plentiful, and indications are that the coming month-end will see less pressure than usual. The Bourse November mid-month settlement had no visible influence upon the money market. The Rentenbank Credit Institution law is being amended to please foreign lenders, in the sense that a separate and independent reserve will be created for each issue of its bonds instead of, as at present, a common reserve for all issues. Foreign investors are showing considerable interest in mortgage bonds. In view of the uncertainty as to the effect of the Valorisation Law of July 17th, in view, also, of the possibility of a new Valorisation Law, and of the fact that such laws annul valid contracts and destroy or impair the security of lenders, foreigners ought to be careful. The real value of the security behind a large volume of mortgage bonds is at present not known, and will, probably not be known for months or years, that is, until after the estate valorisation authorities have pronounced on many thousands of individual claims. The Reichbank's return for November 14th shows a decline of 31,334,000 marks in discounts of 118,815,000 marks in circulation. Rediscounts increased by 40,000,000 marks. Circulation is now 2,558,829,000 marks, against 1,941,440,000 marks at the close of 1924.

Bankruptcies in the first half of November further increased, being 468, against 1,139 in all October, 914 in September, and 751 in August. The greater number of bankruptcies in recent months have been in trade, and not in industry. Conditions in shipbuilding are very

depressed; but a meeting of the Shipbuilders' Association has passed a resolution condemning the plan to create a horizontal Trust, and also condemning the demand for State financial support; the yards, it is added, must re-establish their positions from within, and the inferior yards must disappear. It is reported that the Reierstieg Yard, which has been in difficulties, is to be taken over jointly by four or five Hamburg shipping companies. The steel industry reports no improvement. The Steel Syndicate's price rebates on material bought by it for conversion into export wares will be extended to thin sheets, on which so far no rebate has been granted, the rebate being provisionally fixed at 15 marks per metric ton. The Government has been considering a plan to revive in a new form the Federal Breadstuffs Board, a war creation which is now being wound up. The new Board would buy up and store grain. The reason given is that, owing to the shortage of capital, private grain dealers are unable to handle the trade satisfactorily, and that agriculture suffers. The grain dealers oppose the plan, and there is opposition from consumer quarters, it being suspected that the measure is intended to maintain prices, which have already risen considerably in the last weeks.

The Bourse last week was again depressed. On November 19th almost panic conditions prevailed. The first sign of recovery came yesterday. The decline of last week, which brought averages to a new low level, was due immediately to certain failures and to the placing of the Richard Kahn concern, which controls numerous industrial companies, mostly in Berlin, under "operation supervision." Since then the Aktiengesellschaft für Automobilebau, a Stinnes company, of late managed by Dr Edmund Stinnes, against which the Berlin banks recently proclaimed a credit boycott, has formally gone into bankruptcy. The stock market is now being closely watched by foreigners, and at each recession there is some foreign buying, often American; but the volume of this buying has been insufficient to prevent further falls. The market is so inactive that many stocks, including relatively important ones, find no quotation at all. The *Frankfurter Zeitung's* stocks index for November 21st shows 58.19, against 62.88 one week earlier, a high point of 111.37 on January 31st, and 100 on January 2nd. The average Bourse value of those stocks which have continuous quotations on the Berlin Bourse is now less than 50 per cent. of the share capital shown in the companies' first gold mark balance-sheets. Paper mark loans had a further sharp fall last week, and they now average about 15½ per cent. of their prices of January 2nd.

SWITZERLAND.—FOREIGN TRADE—CUSTOMS NEGOTIATIONS WITH GERMANY—INDUSTRIAL TROUBLES—RAILWAYS.

(FROM OUR CORRESPONDENT.)

GENEVA, November 23.

THE Swiss foreign trade returns for October are rather unsatisfactory, as imports totalled £11,794,000, as against £9,180,054 in September last, and £9,320,000 in October, 1924, while exports reached a value of £6,824,000, compared with £7,239,982 in September last and £7,320,000 in October, 1924. Apart from that drop of £415,982 in exports over September, there is a heavy adverse balance of £4,970,000, which greatly exceeds the adverse balances recorded during the preceding months. This decrease in exports is chiefly attributed to the enforcing of the high Customs duties in Germany. During October Swiss exports to Germany totalled £1,193,605, as against £2,032,918 in September and £1,394,479 in August last. On the other hand, exports to Great Britain have slightly recovered, as they reached £1,004,170 in October, compared with £764,165 in September and £705,152 in August last. Imports from Great Britain are also progressing, as they rose from £1,124,555 in August to £1,580,167 in September and to £2,687,240 in October.

The negotiations which were taking place between Switzerland and Germany with regard to Customs duties came to an end on November 5, and a provisional agreement has been reached pending the conclusion of a new Treaty of Commerce to replace the treaty renounced in

1921, and for which negotiations will begin next month. The provisional agreement provides for a certain number of reductions in the Customs duties of both countries. Germany provisionally agreed to reduce the duties on Swiss cheese, chocolate, fruit, cattle, cotton thread, silk ribbons and watches, while Switzerland reduced her duties on German foodstuffs, leather goods, paper, machines, and chemicals. It is probable that the application of these reductions will result in a rise in Swiss exports to Germany during the coming months.

The general economic situation is, nevertheless, far from being encouraging. Crops failed in many cantons; the Federal Government has been compelled to grant a subsidy to the vinegrowers of Canton Vaud, where the 1925 vintage was very bad, as its value was nearly 1 million pounds inferior to the previous year's; the watch-making industry of Canton Neuchâtel—one of the most important watchmaking centres of Switzerland—has asked for the help of the Federal Government; the embroidery and silk industry in Eastern Switzerland is at a standstill, trade is very slack in the machinery, wood, and building industries, and the number of unemployed has risen in one month from 10,356 to 12,291. Orders in other industries are not plentiful at present; the home market is flooded with foreign goods, which, owing to the low exchange, are cheaper than the home-produced goods, so that the prospects for trade and industry, at the beginning of the winter, are somewhat gloomy.

The Swiss railways, particularly the mountain railways, had a good season this year, as the number of passengers transported was very much higher than last year. From January 1st to October 31st the Swiss Federal Railways transported 84,923,905 passengers, as against 80,943,628 last year, and 13,467,200 tons of goods, compared with 13,923,905 tons during the corresponding period of 1924. The receipts total £12,812,598, compared with £13,641,088 in 1924, and the surplus is £4,192,161, as against £4,889,294 during the corresponding period of 1924. The drop in receipts results from the decline in the transport of goods, and also from a reduction in passengers' fares. Electrification has made good progress, as out of a total network of 2,882 kilometres (nearly 1,800 miles) 840 (525 miles) will be electrified by the end of this year, and a further 172 kilometres will be ready by the end of 1926, when the Federal Railways will possess a total of 1,012 kilometres (632 miles) completely electrified lines. Electrification will result in a quicker train service, and the cost of electrification, according to the plan which is to be completed by the end of 1928, will be less by £3,200,000 than the estimated total of £30,400,000. From 70,000 to 80,000 workmen are now getting their living from the electrification of the railways, an undertaking which has during the past four years greatly eased the unemployment question.

NORWAY.—TIMBER PRICES AND WOOD PULP INDUSTRY—THE NORSK HYDRO—EXCHANGE AND STOCK MARKETS—A NEW INDUSTRY.

(FROM OUR CORRESPONDENT.)

OSLO, November 17.

A QUESTION claiming the attention of business circles in this country is that of the prices at which forest owners were able this autumn to sell their products to the wood-working industry, and more particularly to the wood pulp and cellulose makers. The forest owners for several years have got very satisfactory prices for their timber, which was indeed necessary to them on account of the greatly enhanced cost of production. The sudden and great rise in the external value of the Norwegian krone, and the consequent difficulties of exporters of wood products, made it absolutely necessary for the manufacturers to buy much cheaper wood if they were to carry on at all. Forest proprietors were loth to agree to this, and for weeks and weeks fruitless negotiations took place. Finally, agreement was arrived at, and the price of wood was established at a figure from 10 to 20 per cent. below that of last year. The pulp and paper industries, now the most important in the country, are well occupied, but hampered to some extent by scarcity of water, and still more, of course, by the exchange. Something unique has happened in that

Swedish paper mills have had to import wood pulp from Norway, because in some districts of Sweden there is a more serious lack of water even than in Norway. The prices for pulp and paper, however, leave much to be desired.

The greatest industrial concern but one in this country (and until recently the greatest), viz., Norsk Hydro, has just published its accounts for the year ending June 30th. These show a net profit of over 10 million kroner. After liberal allocations, 17 per cent. will be paid as dividend. As may be remembered, this concern is manufacturing nitrate from the air, and other chemical products. The company has always been prosperous.

Unfortunately, this country is an exception, especially at present. Trade generally is slack, and unemployment on the increase. At Oslo, for instance, last week there were nearly 600 more persons seeking employment than the preceding week, and no doubt a proportional growth in unemployment exists over the whole country. The exchanges have moved within narrow limits during the last month or so, and kr 24 for the pound sterling (or a trifle over or under) has been the rate. It is generally thought that this steadiness is the result of efforts made by the Bank of Norway, aided by the private banks. The stock market is quiet. Several not unimportant loans have been launched in the home market, not all of them meeting with a complete success. The Norwegian Hypotekbank is applying to the market for 20 million kroner 5½ per cent. at par, and as this is the best security that can be offered, there can be little doubt of the success. (Only 8 millions are offered for public subscription, the rest is kept by the underwriting banks.)

A new and interesting industry has just been started at the large Borregaard factories, namely, the refining of common salt for household and table purposes. The quantity needed in this country has been about 15,000 to 20,000 tons annually, which will be fully covered by the new industry, at lower prices than for the imported commodity. The raw material comes to a great extent from England.

CANADA.—THE POLITICAL SITUATION—CROP ESTIMATE INCREASED—BUSINESS IMPROVEMENT—STOCK MARKETS—MANITOBA LIQUOR COMMISSION—FEDERAL FINANCES—C.N.R.'S EXPERIMENTS WITH ELECTRIC OIL CAR—LUMBER PROSPECTS IN QUEBEC—EMBARGO ON DOMINION LOANS.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 16.

THE composition of the fifteenth Federal Parliament of Canada is now definitely ascertained, and it will consist of 117 Conservatives, 101 Liberals, 24 Progressives, 2 Labourites, and 1 Independent. After considerable hesitation, Mr Mackenzie King has decided to exercise his undoubted constitutional right of retaining office and awaiting the verdict of Parliament, whose meeting has been provisionally fixed for December 10th. But the impracticability of securing by that date the return of writs from far distant constituencies like the Yukon may force a postponement until after the Christmas holidays. Meanwhile four of the defeated Ministers have resigned their portfolios, and if Parliament meets on December 10th the leadership of the Government will be in the hands of Mr Lapointe, the Minister of Justice, until Mr King finds a seat. The fate of the Government, which will be challenged by a want of confidence amendment to the Address, will rest in the hand of the Progressives, and while some of them will desire to keep the Government in power, the attitude of others is doubtful.

Meanwhile the public finds consolation for its political troubles in the latest crop survey of the Bureau of Statistics, which raises its previous estimate of the 1925 wheat crop by 30 million bushels. The total yield of wheat, now placed at 422,327,000 bushels, is the second largest for Canada, having only been exceeded by the 474 million bushels of the year 1923. The Bureau's estimate of the yield (in bushels) of Canada's principal grain crops (the final figures for 1924 being given in brackets) is as follows:—Fall wheat, 22,921,000 (22,294,000); spring wheat, 399,406,000 (239,803,000); all wheat, 422,327,000

(262,097,000); oats, 521,922,000 (405,976,000); barley, 113,118,000 (88,807,000); rye, 14,434,000 (13,750,900).

The average yields per acre for the whole of Canada in 1925, with last year's final averages in brackets, work out as follows:—Fall wheat, 28.9 (28.8); spring wheat, 18.9 (11.3); all wheat, 19.2 (11.9); oats, 35.6 (28); barley, 27.8 (26.1); rye, 16.9 (15.4). The estimated total yield of 521,922,000 bushels for oats has only twice been repeated, viz., in 1923, 563,997,500 bushels, and in 1920, 530,709,700 bushels. The yield of barley, 113,118,000 bushels, constitutes a record, and compares with 88,807,000 bushels, the previous record of 1924. Threshing returns have greatly exceeded expectations, but unfortunately Saskatchewan and Alberta have not been accorded the spell of fine weather which they need so badly, and there is now little prospect of some 60 million bushels of wheat and large quantities of coarser grain, still unthreshed in these provinces, escaping the serious diminution of grade which exposure throughout the winter will entail. The generally favourable character of crop reports has caused a steady sagging of grain prices, and the enemies of the co-operative wheat pools are gleefully predicting that the initial payment on the basis of \$1 per bushel for No. 1 Northern at Fort William will prove too high and involve the pools in disastrous losses. At present, however, they have some leeway before the danger-point is reached. But after making allowance for the disappointments brought to certain areas by bad weather, the fact remains that the 1925 crop has given the farming community greater purchasing power than at any time during the last five years, and as a result of the improvement in prices of farm produce, the readjustment of the balanced relations between agriculture and manufacturing industry, which are so vital to Canada's economic health, seems well on the way to completion. The figures for bank loans and clearings and railway car loadings indicate a steady expansion of business, and the fundamental conditions are now rated very favourable for its continuance. Wholesale merchants almost everywhere report a substantially larger flow of orders than at the same period of 1924, and retailers record a brisk demand for seasonal winter goods. The West is beginning to recover its old optimistic temper, and the only note of disappointment is that the wintry weather has seriously curtailed the autumn ploughing and the crop acreage for 1926 may be considerably reduced.

The sharp reaction which last week followed the orgy of speculative buying in Wall Street only affected the Canadian stock markets in a limited degree. A few Canadian stocks, like Consolidated Smelters, had enjoyed spectacular rises, but the banks had wisely prevented any dangerous exuberance in the local stock markets, and as a result the recessions which took place were not serious. The boom in mining stocks which threatened to develop has also been kept well in hand, and such advances as have taken place have usually been justified by the technical position of the mines.

The Federal revenues continue to be reasonably satisfactory. During October they amounted to \$30,410,185, which represents an increase of roughly \$3,000,000 over the \$27,328,469 of October, 1924. The chief source of increase was in Customs, which have risen a little more than \$2,000,000; Excise of the ordinary type gained \$500,000, and special Excise war taxes produced \$1,391,639 more. The returns for income-tax are remarkably steady, but the business profits tax is now negligible as a source of revenue. During October the expenditures leapt up to \$29,535,758, as compared with the \$16,000,081 of October, 1924, but most of the increase is accounted for by a readjustment in interest dates, which makes an additional \$10,000,000 of interest on bonds payable during the month. For the seven-month period from April 1st to October 31st the Federal revenues, placed at \$230,209,345, show a gain of roughly \$16,000,000, of

which about \$10½ millions accrues from Customs. Expenditures during the same period show an increase of \$7,000,000. There was an increase of \$421,000 in the net national debt during October, but on October 31st its official figure was given as \$2,360,022,809, as compared with \$2,376,349,075 a year ago.

The Department of Lands and Forests for Quebec estimates the probable cut of lumber for the winter season of 1925-26 at 1,500 million feet, which is a figure one-third larger than the average cut in this province for the last 10 years, and is 250 million feet above the expected figure for the period 1920-30. Government officials, however, contend that the rate of depletion of the country's timber resources will not be accelerated, because the lumber companies are now living up to the strict Government regulations about the diameter of trees which can be cut, and also because many million feet of burnt timber will be taken out this winter. It is claimed that a new process has been discovered by which very good wood-pulp can be secured from burnt timber.

The removal of the embargo upon Dominion loans in London is welcomed in Canada, but excites much less interest than it would have done in the pre-war years. The atmosphere of hostility to Canadian investments which was generated in London by the Grand Trunk affair and the oft-repeated threat of a boycott of Canadian issues have made both Canadian Governments and corporations very chary of taking the risk of an unfavourable reception in the London market, when such a plethora of money was available near at hand in the United States.

Books and Publications.

BLACK AND WHITE.*

At a time when large grants of money, whether in the form of loan or otherwise, from the taxpayer of this country, to enable larger cultivation of cotton in, or extend the railway system of, Kenya, are under discussion, it is of more than ordinary importance that the said taxpayer, and those who speak and rule in his name, should know, not some, but all the facts. As Professor Murray says in his preface, Dr Leys would not claim, for himself, to be right in every one of his opinions, but he has the right to speak of what he knows through 16 years' continuous experience of actual conditions in Kenya. And, on most readers, the way in which he speaks will make its impression. For he is concerned, throughout, to be fair; to allow for inextinguishable facts, and things that, having happened, cannot, whether right or wrong, be merely lamented. Read his chapter on missions, and the conspicuous fairness of his point of view will strike you; as it will, again, when he talks of the impossibility of restoring the tribal system, and the need to face, for good or evil, the fact that the black man has been brought into the white man's civilisation, and, even if, at first, it expresses itself as a taste for drink, the "movies," and so on, that is a stage in his education which has to be gone through.

Kenya, as he shows it to us, gives small scope for "white" complacency. The bare facts are that, having established ourselves there, as protectors, we—i.e., a handful of Europeans—have, by means of more than doubtful legality, asserted an effective ownership of all the land. That is not all. There is enough land in Kenya for black and white, though some of it is much better than other, and the Europeans have taken the best—the story of the moving of the Masai, as set out mainly from the pages of Blue books, is grim reading, hard to forget. But—and here is the crux—there is not enough "labour" to work both. After 20 years the 7,487 square miles of alienated land are occupied by, and 335 of them are cultivated by, no more than 193 Europeans. The real cultivators are the "50 or 60 thousand African employees who work for wages, employed, most of them, in growing crops which they could, and often do, grow just as well at home." And the trouble is that it is at home that they want to grow them. They do not want to work for wages; they desire to cultivate their own flocks and fields—and

* "Kenya." By Dr Norman Leys. Hogarth Press. 15s. With an introduction by Gilbert Murray.

there they work, when they get the chance, exceedingly hard. But what has happened is that since the European owners desire to make money out of their large holdings of cheaply acquired land—that being why they are there—they must have wage labourers, and can only get them by removing Africans from their own lands to work on the European.

To effect that removal, to make wage-earners of the Africans, a policy of heavy taxation, and of all kinds of penalties and punishments, has been devised, and is in force. Because they must pay a poll or hut tax which has been as high as 16s a head, they work for wages which average 25s a month. As Sir Percy Girouard put it, in 1913, in a speech quoted by Dr Leys, "we consider that taxation is the only possible method of compelling the native to leave his reserve for the purpose of seeking work. Only in this way can the cost of living be increased for the native. . . . To raise the rate of wages would not increase, but diminish the supply of labour. A rise in the rate of wages would enable the hut or poll tax of a family, sub-tribe, or tribe to be earned by fewer external workers, and as the payment of this tax is avowedly the reason for what labour we have seeking employment, it follows that if we increase the rate of remuneration to the individual we decrease the number of individuals necessary to earn a given sum."

Dr Leys's chapters on the social and economic results of this policy, which is the policy, broadly, now in operation, ought to be carefully studied. Economic servitude has been forced on the people of Kenya. So far, it has been accompanied by complete political servitude. Dr Leys is no romantic; he does not expect or desire to have the clock put back. He declares that, provided two conditions are fulfilled, "the existence of farms and plantations owned and managed by Europeans in the various divisions of British East Africa, will prove beneficial to the people of these countries." These conditions, not hitherto fulfilled, are "first, the prevention of political control by the concessionaires over the countries in which their estates lie; and, second, the pursuit of such a policy in the land outside the alienated areas as would give to every native of the soil the opportunity of supporting himself by his own exertions." Reform in Kenya must, he argues, also include a redistribution of taxation, putting some part of the burden of direct taxation on European and Indian merchants and shopkeepers, and European landowners and farmers. When wealth is equitably taxed, the crushing hut tax can be reduced. Preliminary to action, in his view, is a thorough and impartial enquiry—a Royal Commission, with power to take evidence on oath. To that the recent parliamentary visit was a useful preliminary. Everyone who reads Dr Leys will feel further enquiry to be essential.

PRINTING IN CHINA.*

THIS book ably presents the results of a remarkable piece of research. The author has pieced his evidence together from scattered sources in the diverse fields of Far Eastern, Islamic, and Western history and archaeology, and has thus produced a fuller and clearer picture of his subject than any of his predecessors. At the same time, he has not been carried away by the temptation to arrive at definite conclusions; and, after surveying all the data at present available, he is content to deliver tentative or throw further light on his problem. "To state categorically that there was no direct connection between the typography of China and Korea and that of Europe would be premature. On the other hand, no clear evidence of such connection has been found, and until such evidence—or the contrary—is at hand it is necessary to keep an open mind."

Professor Carter—a young scholar, full of promise, who had recently returned from China to the United States in order to take up the study of Chinese history at Columbia—seemed marked out to find the essential solution of the problem which he has discussed with such good

* "The Invention of Printing in China and Its Spread Westward." By Thomas Francis Carter, Ph.D., Assistant Professor of Chinese in Columbia University. (New York, 1925.) Columbia University Press. 7s. 50.

judgment in this volume. Though the writer of this review only met him once, and that only for a few hours, he received a lasting impression of his enthusiasm, the range and alertness of his mind, and the charm of his character. It is grievous that Professor Carter's life and work should have been cut short. A few days before his premature death he had the happiness of holding in his hands a completed copy of this present work. Not only his personal friends, but readers of this book who never knew him personally, will mourn his loss.

Professor Carter displays a faculty not only for discovering and criticising individual pieces of evidence, but for asking the interesting questions of general import. Why, for instance, did the manufacture of paper (invented in China in A.D. 105) spread rapidly from end to end of the Islamic world when once the secret of the process had been learnt at Samarkand in A.D. 757, whereas the invention of printing, which was applied in China to books in the ninth century after Christ, found no response among the Islamic peoples, though half the principal centres of Islamic culture came, during the thirteenth and fourteenth centuries, under the rule of Mongol governments, which brought the practice of printing with them from the Far East? Professor Carter takes account of the traditional repugnance of Muslims for reproducing the Qur'an in other than manuscript form—a repugnance which still extends to printing from movable type, though not to lithography. But this repugnance itself needs explanation. Why, a century earlier, did Muslims not shrink from committing their sacred book to a new-fangled writing material like paper? Perhaps the answer is to be found in the respective dates at which the two inventions reached the Eastern borders of the Islamic world. The eighth and ninth Christian centuries were the age of Islamic society's intellectual prime, when the Muslim mind was wide open to new ideas. But in the tenth century, when book printing in China reached its zenith with the printing of the Confucian Classics (A.D. 932-953), the intellectual life of Islam had already begun to petrify; free speculation had been brought to an end by force; and doubtless this paralysis of abstract thought affected the whole mental outlook of Islam, including its attitude towards practical inventions.

A point on which the author rightly lays great stress is the vigorous intellectual progress of China under the Sung Dynasty (A.D. 960-1280)—a progress marked by constant creative achievement as well as by a high degree of energy—in spite of the fact that, politically, militarily and financially, China was all the time on the decline. The new Chinese civilisation which arose, under the fertilising influence of Buddhism, after the interregnum and the barbarian invasions of the third, fourth, and fifth Christian centuries, reached its political zenith under the T'ang Dynasty (A.D. 618-907), and even this Dynasty lost its glory after the disastrous foreign wars and domestic disorders which filled the decade following A.D. 750. Yet the following five centuries of political decline were centuries of unbroken intellectual and æsthetic progress. The printing of the classics—an immense material achievement—actually took place during the two generations of anarchy between the extinction of the T'ang and the accession of the Sung; and even the crowning political disaster—the conquest of China by the Mongols in the thirteenth century—gave a new stimulus to Chinese intellectual and æsthetic life by temporarily overthrowing the classical tradition, and so enabling popular literature and art to raise their heads.

The Mongols carried certain elements of Chinese culture, including the governmental use of printing, into their Western conquests in Persia and on the Volga. Professor Carter describes the unsuccessful issue of printed paper money by the Mongol administration at Tebriz in A.D. 1294, and draws attention to the fact that at that date there were considerable colonies of Venetian and Genoese merchants in the city. Did the conception of block printing filter through from some such source as this to Western Europe? As yet there is no certain answer either to this question or to the still more interesting question whether there was any direct connection between the outburst of printing with movable metal type in Korea in the early part of the fifteenth Christian century and the emergence of printing by the same method towards the close of the same century, in Germany.

Professor Carter notes, in passing, the "strange fact that the nations the symbols of whose languages present more difficulties to the typographic printer than those of any other languages in the world should have been the first nations to invent and develop the art of typography"—though naturally, in countries using the Chinese script with its infinity of characters, block printing has prevailed. He also makes the illuminating suggestion that the first stimulus to printing, both in the Far East and the West, has been religious and popular. Churches, eager to disseminate their literature wholesale among the poor, have been the first to divine the possibilities of the invention. A curiosity of history, to which he gives due weight, is the part played in the westward transmission of printing by the Nigur Turks, who inherited the cosmopolitan culture of the oasis of Turfan, and who afterwards spread far and wide as the secretaries and accountants of Mongol conquerors.

Altogether, the layman as well as the specialist will find this book of the deepest interest, and will feel as deep a regret that it should be the last work of its author.

COST OF RAIL TRANSPORT.*

MR ROGERSON sets out in this pamphlet to develop a system of cost accounting applicable to the conveyance of freight traffic by railway. Any contribution to this thorny subject is welcome, for it is only through such a system of costing that a goods manager can tell theoretically whether, if he quotes a given rate, he will be able to convey the traffic offered at a profit. For practical purposes he has other means at hand, but they are admittedly imperfect where narrow margins are concerned.

Mr Rogerson does not make his processes any too clear. The division of expenditure between coaching and freight services is disposed of in a page, and when he comes to expenditure on freight traffic the costs per ton-mile for use of railway, haulage, and use of wagons are based on calculations sometimes debatable in themselves, and elsewhere not described in detail sufficient to admit of full appreciation. He does not give any of the basic figures on which he has worked, or state the year or railway selected. His final assumed figures of cost of conveyance only of merchandise, coal, and other minerals, respectively, appear on the face of them to be impossibly high, but that may be due to the selection of a period when expenditure was higher than at present. Similarly, in the case of terminal expenses, he formulates certain average costs per ton of traffic, but the same difficulties arise as in the case of cost of conveyance.

No reasoned estimate of the value of the method is possible without a test by a railway company, and it may be doubted whether the cost of compiling the manifold data which would be needed would at the end of the day be recouped by the value of the resultant figures, especially as there would be one general average only for all merchandise traffic, unless further refinements were introduced. Mr Rogerson is a brave man, but it seems likely that for the moment practical politics limit the issue to a well-considered division of expenditure between coaching and freight services. That achieved, his subsequent proceedings would stand on firmer ground.

* "Cost of Freight Transport by Railway." By F. W. Rogerson. Published from 27, Pembroke place, Liverpool. Price 4s 4d, post free.

PRACTICAL INCOME-TAX.*

THIS book presents a good birds-eye view of the subject of Income-tax, and contains separate chapters on Dominion Income-tax and Super-tax. It is intended particularly to meet the practical requirements of final examination students of the various professional bodies, and also to provide the practising accountant and the business man with a clear explanation of the general provisions and principles of the Income-tax Acts and Regulations. A large part of the book is usefully devoted to practical examples and explanations, all being stated as simply as possible. Unfortunately, this work was printed

POSITION AND PROSPECTS OF THE CORPORATION.

LORD ASHFIELD ON BOARD'S FUTURE POLICY.

The adjourned sixth ordinary general meeting of British Dyestuffs Corporation, Limited, was held in Manchester on the 25th inst. It was followed by an extraordinary general meeting of the company and by separate class meetings of shareholders to approve the scheme of reconstruction submitted by the directors.

Lord Ashfield (the chairman of the company) presided, and there was a large attendance of shareholders.

THE ORDINARY GENERAL MEETING

In moving the adoption of the report and accounts for the 17 months to March 31, 1925, Lord Ashfield said: This is the first general meeting of the corporation at which I have presided. It is also one of the most important, if not the most important, in the corporation's history; and it is a matter of extreme regret to me, and I am sure this feeling is shared by my colleagues, that it is necessary to follow this meeting by a series of extraordinary general and class meetings at which the preference shareholders will be asked to forgo their preferential rights, and both classes of ordinary shareholders will be asked to submit to a reduction of the nominal amount of their shareholding in the corporation. In the subsequent meetings, I will endeavour to show why this sacrifice is necessary. That it should be required cannot come upon you as a surprise, for it is the realisation of a policy which has been long anticipated and advocated by some among you who have given public expression to their opinions; it is indeed the inevitable consequence of the conditions under which the corporation has been trading during the past few years. The delay in giving effect to this policy has been caused by the desirability of making certain other alterations in the corporation's constitution at the same time.

In view of the large amount of business which has to be got through this morning, I do not propose, at this ordinary general meeting, to make any detailed statement in regard to the corporation's activities during the period of 17 months covered by the accounts which are in your hands. The report, which accompanies the accounts, refers briefly to the salient features of the trading, and any questions can probably be more appropriately dealt with at the extraordinary general meeting, which will immediately follow this one.

In addition to dealing with the report and accounts, which are certified in the usual form by the auditors, it is necessary for you to deal with the appointment of directors, but I think that I shall be meeting your wishes if I ask you to adopt only the resolution dealing with the report and accounts and then to adjourn this meeting until immediately after the extraordinary general and class meetings which follow, when the re-election of directors can be dealt with. I will therefore move:—

"That the report of the directors and the statement of accounts for the 17 months to March 31, 1925, be received and approved." The resolution was carried.

EXTRAORDINARY GENERAL MEETING.

At the extraordinary general meeting which followed Lord Ashfield said: This extraordinary general meeting of the shareholders of the corporation has been called to discuss a scheme for the reorganisation of the corporation's business. Particulars of the scheme and a memorandum explaining its main features have been circulated to you. It is proposed not only to write down the assets and correspondingly reduce the capital, a sacrifice to which all classes of shareholders contribute, but also to adopt new articles of association. I have asked all classes of shareholders to be present at one time, although there will be separate votes of the various classes at appropriate meetings, because I wish to avoid inflicting the same or a similar speech upon shareholders who hold shares in two or three classes, and to save their time.

May I first of all repeat my expression of regret that circumstances have made it impossible to submit the board's proposals at an earlier date, but I think it will be agreed that any scheme which did not deal with the question of the Government shareholding and veto must, as the circular which you have received states, have been partial and ineffective, and, until the negotiations with the Government had been brought to a successful issue, your board were not in a position to submit a scheme to the shareholders. It will probably be convenient if, in my remarks, I

follow the same general order as that in the circular, but in so doing I shall endeavour to avoid repeating what you have already read in that memorandum.

REVIEW OF THE PAST.

It is, therefore, unnecessary for me to refer to the corporation's history in any great detail, a story with which you are only too well acquainted, but it is, I think, important to remind you that the association of the Government with dye-making was primarily for the benefit of the colour-using industries. The inauguration and success, or otherwise, of British Dyes, Limited, the parent of your corporation, was an affair of the Government's and of the colour users, who, in the first instance, provided all the money required by that company. They were primarily concerned in ensuring that colour sufficient in quality and quantity was produced to meet the country's needs in industries which annually manufactured goods estimated at pre-war values to be worth 200 millions, and involved the employment of 1,000,000 people. The corporation's parent, therefore, could not be regarded as an ordinary commercial trading company, since if the proprietors did not receive dividends, they aided in the supply of, or were themselves supplied with, goods which were essential for their own and other businesses, and this supply was of paramount importance.

The character of the whole scheme was, however, entirely changed when your present corporation was formed and an invitation extended to the general public to subscribe for the additional capital which was necessary to discharge the commitments, past and future, of British Dyes, Limited, and Levinstein, Limited, and to extend and expedite the manufacture of dyestuffs in this country; for, as soon as the ordinary public held the majority of shares in the corporation, it was no longer a matter of indifference whether the benefit from the undertaking accrued in the form of profits or the supply of goods. Unfortunately, however, although the character of the ownership was changed, the restrictions which in other circumstances had been imposed were, in turn, imposed upon the corporation.

GOVERNMENT RESTRICTIONS.

It is difficult for anyone not intimately connected with the management of the undertaking to realise, although it may not be difficult to conjecture, the handicap that is imposed upon a trading concern by such conditions as are contained in the corporation's articles of association. They purport to control its prices, and they give power to the Government, acting through their appointed representatives, to veto agreements which the corporation might deem it expedient to make. These restrictions have been repressive of the corporation's activities, and have hindered its expansion; they made it impossible for its business to be conducted with secrecy or rapidity, two essential elements in obtaining commercial success; and they invited political interference with a commercial undertaking. They were safeguards against contingencies which no longer had to be feared; shackles whose utility had gone, but whose weight remained.

I am not insensible to the benefit conferred by the financial support of the Government at the time that the corporation was formed, and I am bound to say that the two departments principally concerned, the Treasury and the Board of Trade, have acted throughout in a considerate and conciliatory manner, not only in regard to the Government restrictions, but during the negotiations for their removal. This did not, however, prevent the restrictions themselves from militating very strongly against the successful management of the corporation.

I am addressing a meeting which is attended very largely, if not entirely, by men who are equipped with a very wide experience of business, and if I ask you to visualise a situation in your own businesses in which the Government had the power to interfere with and, at their discretion, prevent any arrangement which you or your board might unanimously agree was in the best interest of your undertaking and, that, as a result, exhaustive and endless discussions, not only with Government Departments, but with Cabinet Committees, were necessary, you will perhaps better realise the difficulties which have confronted the board of the corporation and how impossible our task has been. And I might emphasise that statement by pointing out that this form of Govern-

ment interference does not apply to the dye industry as a whole, but only to one particular member of the industry. In other words, it has been possible for any other dye-making concern to do that which is denied to us.

NEGOTIATIONS WITH THE GOVERNMENT.

I think from what I have said it will be agreed that although a scheme of reorganisation of the corporation's capital is long overdue, it was vitally necessary that before putting any scheme before you your directors were right in deciding that a definite attempt must be made to place the corporation upon an ordinary commercial footing. I will not say much about the Government negotiations, with which I have been closely associated, except that they were both intricate and protracted, and, in spite of the help afforded by the departments concerned and the Government directors, they imposed a considerable strain upon one's patience as well as upon one's powers of negotiation. Fortunately, they were successful.

Now let me refer to the conditions which the Government imposed in return for relinquishing the powers they possessed over the corporation's business. The first is the payment of the sum of £600,000, an amount arrived at after considerable inquiry and negotiation, and, in fact, approximately the market price of the shares at the time. I find it impossible to concur in a suggestion which has been put forward from time to time by shareholders that the Government should have surrendered their shares without payment, for the benefit of the other shareholders. Possibly one of the grounds for this suggestion is the mistaken assumption that the Government in some way guaranteed the undertaking. Let me say emphatically that, whatever the Government may have done, they certainly did not guarantee either the stability, or the earning capacity, of the corporation. In the exceptional circumstances arising out of the war, they ventured a portion of the general taxpayers' money in a business in which the ordinary investor was also invited to embark. The Government are, therefore, primarily responsible to the general body of taxpayers and only responsible to the shareholders as co-adventurers with them. The offer which is now before the shareholders to sell the Government shares for £600,000, was not made in a niggardly or bargaining spirit. In order to be fair to those persons who subscribed to the undertakings and to free the corporation from the shackles which now confine it, I think the Government have made some sacrifice on behalf of a national industry, thus serving the true interests of those who use the corporation's products, but this has been done with due regard to the interest of the general taxpayers.

BRITISH CONTROL TO BE MAINTAINED.

Apart from the payment referred to, the offer of the Government, which the directors have provisionally accepted, and which they ask this meeting to confirm, contains two conditions: The first that the British character of the concern be conserved by the provision that not more than 25 per cent. of its voting power may be foreign or foreign controlled. The carrying out of this condition is left to the corporation itself, and it will no longer be necessary, as previously, to have the consent of the Board of Trade to each individual transfer of shares. The second condition requires that the corporation should keep in touch with the Government in regard to all matters of technical information and research in such manner as the President of the Board of Trade may direct. The object of this condition is to ensure that our activities in research, in those directions which may prove of utility for the defence of the Realm, may be brought to the knowledge of the Government. Should the corporation make discoveries or possess technical information which may be of use for national defence, the Government will have first hand information and be in a position to negotiate for their use, but these negotiations would be with a company possessing entire commercial freedom and, therefore, at liberty to make an ordinary commercial bargain.

The very fact that these conditions have been imposed seems to me to negative the suggestion that the Government has ceased to be interested in the corporation, and merely sought to escape from an unsuccessful undertaking; although it has sold its shares, it wishes to retain an interest, at least in regard to certain aspects of the corporation's activities. I hope that we shall, out of our experience and discoveries, prove to be of real use to the nation, and perience and discoveries, prove to be of real use to the nation, and that the Government will not be unmindful of the importance of giving assistance and encouragement to us in those matters which are of national peril, such as that from which we have recently emerged, will be of incalculable value to the Empire. Having entered into a provisional agreement with the Government, your board took steps with all possible expedition to place the whole organisation before you, combining in one suggested scheme of re-situation a writing down of assets, a reduction of capital, an amendment of the articles of association, and a consideration of the future policy of the corporation.

SCHEME OF RECONSTRUCTION.

Now let me deal with the general scheme of reconstruction itself, and I will preface my remarks by saying that the circumstances in which this corporation's capital is being reconstructed are very exceptional indeed. It is most unusual for a company to reconstruct when it has more than a third of its assets (in this case nearly 3½ millions of money) in investments and cash, and with debts due to it nearly twice what it owes; and at least the corporation is fortunate in this, that its cash resources are ample.

The corporation has four main classes of assets: (1) Fixed assets, (2) stocks of raw material, intermediates and colour, (3) investments and cash, and (4) intangible assets. It is proposed to write down or write off considerable sums from the values placed upon three of these classes of assets. The reasons which determined your board to suggest to you the adoption of this course in regard to each class are stated in the memorandum, but I will slightly enlarge upon them. The first and most considerable writing off is from the valuation on the corporation's works which were erected six years ago on far too large a scale and at far too great a cost. The error in judgment as to the scale of the works necessary is not peculiar to this corporation, it is an error into which other dye manufacturers fell; for to-day throughout the world dyemaking works, partly, no doubt, because their plant and machinery have been found useful for war purposes, exist on a scale greatly in excess of the requirements of the industries using colour. It can be confidently estimated that to-day the dyemaking capacity of the world is nearly three times the world's present requirements.

HIGH CONSTRUCTION COSTS.

The exceptional cost of construction, as distinct from the excessive scale of the construction, was a handicap which your corporation suffered from in common with all traders who had to undertake capital expenditure on works, plant, and machinery during or immediately after the war. In the case of this undertaking and its parent, such an expenditure was considered justified, not only because of the great national emergency existing during and immediately following the war, but because of the persistent pressure of dye users for the supply of particular dyestuffs. But its disastrous effect upon your corporation's capital position can be judged from the fact that, though appropriations amounting to £2,366,000 have been set aside to meet depreciation on plant and machinery which has cost your corporation £5,325,000 during the past six years, your board considers it prudent that on reconstruction a further sum amounting to nearly £1,200,000 be written off. The new reduced value is, in the opinion of our officers and of the valuers who have been consulted, not in excess of the utility value of the plant at the present day after making all necessary allowances for redundancy and obsolescence.

The writing off of the sum of £280,000 from the valuation of the stocks is a measure of prudence dictated by the further fall in prices. It is always difficult to make a true estimate of the value of a large stock of commodities whose prices are subject to considerable fluctuation, and of which the amount by relation to the turnover is necessarily large, owing to its variety, and the time it takes to manufacture, and that is the case with the stocks of your corporation, of which the selling prices are dependent not only upon the competition of other manufacturers in this country, but upon the decision of the Licensing Committee, as to the price at which such commodities can be imported from abroad. After the proposed writing down it is believed that the stocks will stand in the new balance-sheet at a reasonable value, even making allowances for a possible further fall in prices.

PRELIMINARY EXPENSES AND GOODWILL.

In regard to the proposed writing off of the preliminary expenses, I need only say that the entry as it stands in the balance-sheet is not a true asset, and that such expenditure is invariably written off out of profits as speedily as practicable. If the corporation had made profits, undoubtedly that policy would have been adopted, but its financial results did not permit of this being done; and having regard to the time which has elapsed since the corporation was formed it is only prudent on reconstruction to relieve the profit and loss account from a debit in the future in respect of this item.

Goodwill might have been retained at a nominal value, but it would be anomalous for a corporation not at the moment able to pay dividends, and having an adverse balance of £360,000 to allow its goodwill to stand at any considerable sum in the balance-sheet, and the board suggest that the whole of this item should be written off. Some portion of the £750,000 might have been retained with some justice as representing an estimated value of the corporation's patents and trade marks, but here again the board thought it prudent to strengthen the capital position by entirely eliminating this item. There is no need for me to explain the suggested writing off of the loss, which, like the preliminary expenses, is not a true asset. Fortunately, it is unnecessary to write down the value of the investments or the debtors, which, with the cash, amount to

£3,894,207, because the investments are practically all in Government securities and the debts are good—i.e., the amount brought into the balance-sheet is arrived at after making all necessary allowances for possible bad debts.

DEDUCTION FROM CASH AND INVESTMENTS.

From the cash and investments there is deducted, as distinguished from being written off, the sum of £1,580,000, of which £600,000 is used to cancel £1,700,000 shares held by the Government, and of which £980,000 is used to pay the preference shareholders a part of their shareholding. The total of these amounts is £4,421,000, but I must emphasise that of this only £1,741,000 represents capital lost to the public, for the writing off of the Government shares of £1,700,000 in exchange for £600,000 provides a sum available for the purpose of writing down the assets of £1,100,000, and the cash (£980,000) returned to the preference shareholders releases an equivalent liability. It is not the fact, as has been stated, that the shareholders have lost £4,421,000; excluding the Government holding they have lost £1,741,000 out of a shareholding capital of £7,497,000; that is bad enough, but it is under 24 per cent. of the whole.

This loss has to be fairly apportioned between the various classes of shareholders, and it may be well here to remind you of their respective rights. The preference shareholders have prior rights in regard to capital, as well as in regard to profits, although the latter are non-cumulative; the preferred ordinary share has preference over the deferred in regard to the distribution of profits, but none in regard to the distribution of assets, if the corporation were wound up.

EFFECT ON SHAREHOLDING.

Each shareholder naturally judges any scheme of reconstruction by the way in which it affects his own particular interests, and, in deciding whether he will give or withhold his sanction, asks himself whether the sacrifice demanded of him is in fair relation to that of other classes of shareholders. It is an accepted axiom that no man is a good judge in his own cause, but the board, who are not interested in any particular class of share to the exclusion of others, have endeavoured in formulating their scheme of reconstruction equitably to distribute the sacrifice which the various classes of shareholders must make towards the rehabilitation of the corporation's capital. Their judgment in this respect is supported by the judgment of the investing public, who for some considerable time past have priced the preference shares at a value of about 6s in excess of the preferred ordinary shares. So far as I have been able to judge from consultation with several of the largest holders of shares, many of them holders of all three classes of shares, they are satisfied that the sacrifice required has been fairly apportioned.

To deal with the actual figures, the first main relief to the capital account is effected by the payment of £600,000 in cash to the Government for a shareholding of £1,700,000, already referred to as deducted from the assets. The second is that the preference shareholding is reduced by the sum of £980,000, equivalent to the cash repaid. The balance of the reduction in capital (£1,741,000) is effected by writing down the nominal value of the preferred and deferred ordinary shares, other than the Government holding, the former by one-third and the latter by two-thirds of their nominal value. The proposal that the deferred ordinary should suffer a double share of the loss is again confirmed by the market price of the relative shares. All the new shares rank equally. There is only one class of shares, and the sacrifice which the preference shareholder is asked to make to the common good is his consent to this equal ranking of shares.

CAPITAL POSITION.

In paragraph 9 of the scheme, it is pointed out that there is at the present moment £802,888 unissued out of the total authorised capital of £10,000,000, and this would remain, and the total capital of the corporation would, therefore, be £5,578,468, if the changes in the issued capital which I have indicated were made and no other action was taken; but it is possible that the future expansion of the corporation's activities may demand a larger capital than this sum; moreover, stamp duty has already been paid to the Government on a capital of £10,000,000. If the capital on reconstruction were confined to 5½ millions, then in the possible contingency of expansion of the corporation's activities a further expense for stamp duty would again have to be met; accordingly the board propose that the authorised capital of the corporation shall remain as at present at £10,000,000 (of which £4,775,580 is issued), but they do not propose that they should be at liberty to issue an amount which would bring the issued capital in excess of £6,000,000 without the specific sanction of the shareholders.

I will not refer at any length to the amendments to the Articles of Association. These have been made in order to carry out the release of the corporation from the restrictions which now hamper

it, and in so far as they are material they are referred to in paragraph 14 of the scheme; they also carry into effect the proposed changes in the corporation's capital.

FUTURE PROSPECTS.

The memorandum which has been circulated by the board is very brief in regard to the future prospects of the corporation, and I think that you may perhaps expect me to enlarge upon it. In the first place, you will be aware that your management were given the task of setting up and making successful a most complicated industry, of which a practical monopoly had been established, prior to the war, by manufacturers producing outside this country. There has not been too much time, and the conditions have not been favourable for trying out a new industry, even if the corporation had not been hampered by its association with the Government, and by the initial costs which it had to incur, and the constant fall in prices.

The final record of success or failure of any concern is, of course, found in its balance-sheet, and for the last three and a-half years the corporation's balance-sheet has been unsatisfactory, while a struggle has been waged against the loss made in the year 1921—a loss of over £1,000,000—which would have been more than doubled if in that particular year over £1,000,000 had not been repaid in respect of excess profits duty. The adverse balance thus created has been gradually reduced to the sum of £360,000, at which it now stands in the balance-sheet, and this has been effected concurrently with a fall of more than 50 per cent. in prices.

If the scheme which is now before you be accepted, the corporation will be in the position of having dissolved an association with the Government which did not conduce to the corporation's prosperity, and the writing down of the assets will render it unnecessary for us to devote such a considerable annual sum in the future towards the depreciation of our plant and machinery. We shall be, indeed, in an exceptionally strong financial position, for there are very few companies which can show 35 per cent. of their assets in realisable investments and cash, with no loans or debentures, with debtors exceeding creditors by over £300,000, and with fixed assets and stock written down to realisable present values.

ECONOMIES AND IMPROVEMENTS.

We have effected, and are continuing to effect, improvements and economies in management, and the complaints as to the quality of our productions are now very much rarer and, we think, much less justified, but we hope to eliminate entirely these complaints, and, in addition, to provide better and more efficient technical service. Our works costs have fallen very considerably during the past few months. We have, in fact, done our best to cut out the dead wood; but I do not pretend, nor do the board believe, that merely by the means already adopted can the corporation achieve success in the future. We have appointed Dr E. F. Armstrong as managing director; he came to us from Joseph Crosfield and Sons' works at Warrington with very high credentials and equipped with a knowledge and experience of especial value to our undertaking, and I am sure that every shareholder will desire to be associated with the board in their expression of goodwill and encouragement which has been extended to him. We are also fortunate in having officers of exceptional skill, who are working valiantly and without any thought for themselves in their efforts to bring success to our undertaking. In addition, the board will avail themselves of every opportunity to strengthen the organisation and encourage a spirit of greater enterprise in the whole of our undertaking; but even so, all that we can do will not necessarily mean that we can make a profit out of the manufacture of dyestuffs. I doubt whether any large concern is making a profit out of the manufacture of colours to-day.

WIDENED SCOPE OF ACTIVITIES.

We recognise that in the business of making dyes we have to face a world competition, and that in order to succeed we must be able, ultimately, to sell at a world price. In such circumstances your board are of opinion that the scope of the corporation's activities should be widened in order fully to make use of its assets. Although the shareholders can be assured that this board will not embark on any rash or hazardous enterprise, they hope to utilise the resources, the equipment, and the personnel of your undertaking in that wider range of activities which is now open under its proposed amended articles. I am not able to indicate in what direction our pursuit for this wider use of our resources will take us, but I think it well to mention the matter so that you might know that the board are not unmindful of the need for engaging in the manufacture of other products which will, without prejudice to our main business, bring increased income to our corporation.

THE PROPOSED AGREEMENT WITH GERMAN MANUFACTURERS.

I must not close without saying a word upon a matter which has

been the subject of considerable controversy, not only in the Press and other places, but particularly among the colour users. I refer to the proposed agreement between the manufacturers of dyestuffs in Germany and your corporation. I took an active part in all the negotiations which began about four years ago, and which finally resulted in an agreement between the I.G. and your corporation, but unfortunately (and I use that word advisedly) it was subject to the approval of the Government. I will not occupy your time by a recital of the reasons which prompted the Government to exercise their power of veto, but content myself by saying that the fears of what would happen to our industry and to the interests of the colour users in this country if that agreement had been sanctioned were not well founded, and nothing has transpired during the years which have elapsed to alter my views and those of my colleagues on the board.

Whether an agreement between the I.G. interests and ourselves is now possible I am quite unable to say, but I should like to give this assurance, that whatever may happen in the future, the present board are prepared to give a definite pledge that while the management of the corporation is entrusted to their care it will not, as was alleged, be allowed to sink or to drift into the position of a mere distributing agency for dyestuffs, and that whatever agreement may be made, it will not be inimical to the interests of our customers, the colour users, but will be made with the object of securing for them the widest measure of freedom in the conduct of their business, and the opportunity, as far as lies in our power, to purchase their colours at the world's prices.

AIM OF THE CORPORATION.

The corporation will continue to be in the future what it has been in the past, a large manufacturing company whose aim will be to meet so far as its resources will allow and upon an ever-widening scale the needs of the colour users of this country and employing a large staff of skilled chemists that will continue to be an undoubted asset to our country in times of peace as well as war.

I have tried without trespassing too far upon your time and patience to place before you the important points which I have thought you may wish to know about, but there may be other matters which shareholders might wish to mention, and I shall be glad, before formally moving the necessary resolutions, to answer questions which anybody may wish to ask. Finally, allow me to say that the scheme of reconstruction, the agreement with the Government, and the new articles of association are submitted to you with the complete support of the whole board, who ask you to give them your approval.

The Chairman then moved: "That the scheme dated November 11, 1925, as printed and circulated to each shareholder, be and the same is hereby approved and adopted."

Sir William Robertson seconded the motion.

THE DISCUSSION.

Mr H. Sutcliffe Smith supported the motion. He was glad that the company was proposing this very necessary financial reconstruction, which he, as chairman of the Colour Users' Association, had advocated persistently for the past four years. As representing a large firm with considerable holdings in the corporation, he was authorised by his colleagues to say that the scheme had their approval. He was glad to have Lord Ashfield's assurance that, so far as the present board were concerned, nothing would be done that in any way would debar the corporation from remaining a manufacturing entity, and he welcomed the chairman's promise that it would not be allowed to drift into a mere distribution agency.

Mr H. P. Greg moved a number of amendments to the new articles of association, some of which had reference to the directorate of the corporation. He continued, amid interruption, to read lists of other companies on the boards of which the directors served; he referred also to the fact that several of them lived in the South of England, and were not in as close touch with the business of the corporation as was desirable.

All the amendments he submitted were defeated.

Mr Lindsay moved, as an amendment: "That the scheme put forward by the directors be modified to the extent that the preference shares shall retain their existing preferential rights."

Sir Bernard Greenwell and Major Gillan supported the directors' proposals.

Mr Lindsay's amendment was defeated on a show of hands, as was also a similar proposal by Mr T. J. Mackay.

The resolution approving the reconstruction scheme was carried by an overwhelming majority.

Separate meetings of the preference, preferred ordinary, and deferred ordinary shareholders were then held, at each of which a resolution approving the reconstruction scheme already passed by the extraordinary meeting was approved.

RE-ELECTION OF DIRECTORS.

The ordinary meeting was then resumed, and Sir Henry Birchenough moved and Sir William Robertson seconded: "That the Right Hon. Lord Ashfield, the Right Hon. Lord Colwyn, the Right Hon. Sir Alfred Mond, Mr G. P. Norton, and Mr E. F. Armstrong be and they are hereby re-elected directors of the company."

Mr Greg moved as an amendment that, in addition to the gentlemen proposed, four other directors should be elected who were intimately connected with the concern. He was prepared, he said, to leave the election of those men to the existing board.

The Chairman said there could be no disagreement in principle with what was suggested, but he would ask, in view of the difficulties of finding the ideal director, that the matter should be left with the board. He was compelled to rule the amendment out of order on the ground that the necessary 14 days' notice had not been given.

The resolution re-electing the directors was then carried.

Major Gillan moved, and Mr Harris seconded, the reappointment of Messrs Thomson, McLintock and Co. as auditors, at a remuneration to be decided by the board.

This was carried, and a vote of thanks to the chairman was passed, on the motion of Mr H. Sutcliffe Smith.

WESTERN TELEGRAPH COMPANY, LIMITED.

IMPROVED RECEIPTS.

The 92nd ordinary general meeting of the Western Telegraph Company, Limited, was held, on the 26th instant, at Electra House, Moorgate, E.C.

Sir John Denison-Pender, G.B.E., K.C.M.G. (the chairman), in moving the adoption of the report and accounts, said it was gratifying to record that their receipts, which had had a downward tendency since 1920, now showed an improvement, the actual net increase from all sources being £41,576, in spite of the low value of the milreis in Brazil. Exchange was now very much better, and the message receipts since June 30th up to the present continued satisfactory. The working expenses, on the other hand, were increased by £22,035, but £9,703 of this was for maintenance of cables. Against the increase of expenses there had been a decrease in income-tax and corporation profits tax of £55,993, making a net gain of £75,534 over last year's account. After paying the four quarterly dividends of, in all, 10 per cent. for the year, free of income-tax, the directors had transferred to the general reserve fund £250,000, and were carrying forward £300,440. The general reserve fund had been debited with the cost of a very important renewal of cable, some 550 miles, at a cost of £131,278, replacing the last remaining portion of the original cable laid in 1874 between St. Vincent and Pernambuco. The final instalment of the cost of their new cable repairing steamers appeared in the balance-sheet under review. The entire cost of new vessels had been charged against the maintenance ships' funds, also the loss sustained on the sale of their old store ship Norna. This fund still remained a substantial figure—namely, £166,708.

The negotiations for a wire between Paris and London, referred to last year, still continued, but so far they had made little headway. Sooner or later they could not help thinking the justice of the application would be admitted by their French friends. At previous meetings he had mentioned the approaching Italian competition for South American traffic. This was now an accomplished fact, the Italian cable to South America having been opened for business on the 12th of last month. It was early yet for him to be able to judge what the ultimate effect of the competition would be. South America was a vast continent with undoubtedly a great field for developments, and the company had a well-equipped system, working expeditiously and accurately, which the directors had reason to believe gave satisfaction to the telegraphing public. As regarded wireless telegraphy, he had told the shareholders last year of the opening of the Argentine radio station. The position in South America was much the same to-day; so far it had not proved a serious competitor, being chiefly engaged in the cheaper class of traffics. Among other items of interest to the telegraph service in general was the recent meeting of the International Telegraph Conference in Paris. The conference lasted eight weeks, during which certain alterations were made in the regulations under which telegrams were exchanged, and which, as far as the directors could see, would not materially affect the revenue of the company.

In conclusion, the chairman referred to the recent tour made by the Prince of Wales.

The report and accounts were unanimously adopted.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED.

YEAR OF STEADY PROSPERITY.

FIFTEEN PER CENT. DIVIDEND, FREE OF INCOME-TAX.

The Johannesburg Consolidated Investment Company, Limited, announces the receipt of the following cabled report from Johannesburg of the proceedings at the annual meeting held on November 24, 1925:—

At the annual meeting of shareholders, Professor J. G. Lawn presided in the unavoidable absence of the Permanent chairman, Mr S. B. Joel, and there was a good attendance.

The report and accounts for the year ended June 30, 1925, were unanimously adopted.

DIVIDEND AND ALLOCATIONS.

The Chairman said that the year under review had been one of steady prosperity, and the company had been able to again pay a 15 per cent. dividend, free of income-tax, absorbing £592,500, and to increase the reserve by a further £150,000, making the reserve fund £550,000, and to carry forward £178,161.

The financial position was sound and very strong. The book value of the assets was £6,020,698, leaving £4,481,951 in excess of liabilities to the public, after providing for dividend, £592,500, and taking into account contingent liabilities, £196,210. The liquid assets were £1,159,878, and the net profit for the year £744,671.

GOVERNMENT EXTRAVAGANCE.

In dealing with the general conditions affecting the gold mining industry, the Chairman stated that responsible employers regarded the Wages Bill as unnecessary and an unwise measure, and likely to give rise to trouble in the future. He considered the Government had shown a tendency towards extravagance in expenditure which, with the so-called policy of civilised labour upon the railways, must result in putting up costs against the two primary producers, the farmer and the miner, and as mining has a limited life, the whole burden of public expenditure and cost of running the railways would eventually fall on the farming interest if the manufactures in the country were not reduced in cost sufficiently to allow of their exportation in competition with older countries.

RETROSPECTIVE MINERS' PHTHISIS COMPENSATION.

While fully sympathetic with sufferers from miners' phthisis, and agreeing that something had to be done, the Chairman referred to the unfairness of the incidence of retrospective Miners' Phthisis Compensation notwithstanding that the Government was equally responsible with mine-owners for conditions in the mines, and that the country participated largely in the revenue from gold won, and, further, that many of the older mines were now closed down, yet existing mining companies were compelled to pay the whole of the compensation, the total present value of which now amounted to no less a sum than £5,808,130. The Chairman contrasted the attitude of the Western Australian Government with that of the Union Government, where the Government make substantial payments towards compensation. The action of the Union Government is dictated by political considerations, and is likely to do irreparable harm to the mines and indirectly to the country at large.

NATIVE LABOUR.

Touching on native labour, the Chairman stated the position was serious, and that it was hoped the Government would soon sanction recruiting from outside territories, as already the poorer mines, as well as some of the richer ones, were feeling the shortage of labour acutely.

The ore crushed by mines of the group during the year totalled 7,690,000 tons, and the gold produced amounted to 2,563,728 ozs, yielding a revenue of £11,318,375, a small reduction on last year due to the fall in the price of gold, which had become normal in May. The working profit amounted to £4,166,215, and the dividends declared totalled £2,338,566, as compared with £1,937,344 for the previous year. Direct Government taxation amounted to £277,396, and there was paid to the Government on account of leased areas £1,433,493. The working costs of the group show a slight reduction on the previous year.

GOVERNMENT GOLD MINING AREAS.

The ore crushed was 96,500 tons in excess of 1923, and the profit was considerably in excess of that year. Dividends for the year amounted to 65 per cent. The Government's share of profits was £1,311,289. The total amount paid to the Government to the end of 1924 was £6,143,412, and the total dividends paid to the shareholders to the same date was £5,005,000.

The installation of the ventilation fan was completed in August last, and the extension of the reduction plant is in progress. It is anticipated the plant will be running in April next. Although this expenditure is being provided out of profits, no reduction in the present rate of dividends is considered likely, and increased dividends are expected to result from the additional output. The ore reserves were 11,000,000 tons. The position of the company is excellent from every aspect.

NEW STATE AREAS, LIMITED.

During 1924 this company crushed 754,000 tons, and earned a profit of £428,587, enabling the company to write off the previous year's loss and to pay the Government £117,689 as its share of profits, and carry forward £85,983. The first dividend at the rate of 7½ per cent. was declared last June.

Development was satisfactory, and the ore reserves at the end of December last totalled 2,582,400 tons, of an average value of 8.8 dwts.

The company has every prospect of a long and successful life.

VAN RYN DEEP, LIMITED.

The ore crushed during 1924 amounted to 790,000 tons, which constitutes a record in the history of the company. The working profit was £887,998, including £152,851 from gold premium. Dividends distributed during the year totalled £748,057. Although the working profit for the current year was not so high as in 1924, owing to the disappearance of the gold premium and a lower grade of ore won, the company was able to declare a dividend of 27½ per cent. in June last.

The reef in the western section of the mine is wider than in the eastern section, but neither so rich nor so uniformly payable. The inclusion of ore from the western section reduces the average value of the ore reserves, but adds considerably to the tonnage of payable ore, and materially lengthens the life of the mine. The total ore reserves at December last were estimated at over 3½ million tons, of an average value of 7½ dwts. Although the future revenue per ton will be lower owing to the increased proportion of ore from the western section, the future of the company is sound and the condition of the mine satisfactory.

LANGLAAGTE ESTATE AND GOLD MINING CO., LIMITED.

During 1924 the ore treated totalled 1,147,900 tons, yielding a working profit of £310,378. Dividends declared totalled 12½ per cent., amounting to £189,979. A comprehensive programme of development is in hand, costing over 3s per ton crushed. Recent results show a decided improvement, as compared with the past year or two, so that the prospects are very hopeful.

RANDFONTEIN ESTATES GOLD MINING COMPANY.

A record tonnage was crushed in 1924, and the profit earned was £701,077. Dividends totalling 15 per cent. were paid for 1924, and 5 per cent. for the first half of the current financial year. Working costs were reduced from 18s 11d in 1924 to 17s 6d in the third quarter of the current year. An extensive development programme is in hand. The footage accomplished during the past ten months amounted to 69,200 feet, of which 33,400 feet was on reef. The footage sampled during last quarter was 16,015 feet, giving 64 per cent. payability, 10,215 feet having an average value of 16.2 dwts over 19 inches of reef. The recent good development in the West Rand Consolidated Mines gives ground for the hope of better values in the northern section of Randfontein, and a shaft in this section which had been closed for several years is being reopened. A ventilation shaft is being sunk which will put ventilation of the mine on a sound and adequate basis.

DIAMONDS.

The position of the diamond industry is very much improved owing to the formation of a strong new marketing syndicate, which has contracted to handle the output of the four large producers in South Africa for five years. The syndicate also has a lengthy agreement with the Angola Diamond Mining Company for handling its diamonds, buys the West African diamonds, and has friendly relations with the Congo producers, with the object of limiting the quantity of diamonds put on the market and maintaining prices. The new syndicate is in a very strong position to secure that stability which is so essential. Trade has already improved considerably, and the outlook is exceedingly promising. Through the good offices of the permanent chairman the company has secured an important interest in the new syndicate which will

result in substantial additions to its revenue. The company will also benefit by its large holdings in diamond companies.

COAL

The colliery companies are making steady progress, although handicapped through the inability of the railways to supply adequate facilities for transport of output owing to shortage of rolling stock.

The New Springs Colliery has paid dividends totalling 12½ per cent. Since last year the Consolidated Collieries' debt to our company has been practically liquidated, and is approaching the dividend stage.

DIVIDENDS.

The directors have decided to pay interim dividends, so that in future an interim dividend will be declared in December and a final in June.

THE WALL PAPER MANUFACTURERS, LIMITED.

SATISFACTORY YEAR'S RESULTS.

SOUND FINANCIAL POSITION—GOOD PROSPECTS.

CHAIRMAN'S SPEECH.

The annual general meeting of the Wall Paper Manufacturers, Limited, was held at the Caledonian Room, Holborn Restaurant, High Holborn, London, W.C., on November 26th, Mr Edgar Smith (the chairman) presiding.

The secretary (Mr John T. Chasney) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—

As you have each received a copy of the directors' report and the balance-sheet, may I assume that it is your pleasure that we take them as read?

The profit for the year, as shown in the profit and loss account, is £733,348. It includes the profits for the manufacture of wall-paper, and also the profits—which are very considerable, and steadily increasing—from our various enterprises other than wall-paper manufacture, together with dividends and interest on our investments.

YEAR'S PROFIT.

It is slightly better than that of the previous year. The previous year's profits were £725,730, to which were added £25,353, which we had received on account of our German claim, and £768 in transfer fees, or a total of £751,852. We have in the present account £733,348 profit, £9,023 (final settlement) of the German claim, and transfer fees £1,027, making together £743,399. The amount brought forward from last year's account is £267,040, against £223,088 brought forward the previous year. The amount now available for further appropriation is £852,798, against £838,200 last year.

Your directors recommend that the same dividends be paid as last year, that a sum of £200,000 be added to the reserve fund, and that £306,638 be carried forward.

BALANCE-SHEET ITEMS.

In the balance-sheet, shown as liabilities, you will notice that the issued capital and debenture stock are the same as last year. The creditors are £748,081, against £590,062; this increase is largely due to income-tax which awaits settlement by the surveyor. The reserve fund is £400,000, against £200,000 last year, and the balance of the profit and loss account £852,798. On the other side of the balance-sheet, shown as assets, we have the land, buildings, plant, machinery, and goodwill, £3,578,319, an increase of £113,380. This increase is accounted for by new buildings and plant at various branches, together with the cost of our new office buildings known as King's House in Manchester, which in last year's balance-sheet was shown separately, less, of course, depreciation for the year. The next item, investments, including shares in subsidiary companies, £1,916,471, shows an increase of £291,628. This is mainly due to further investments in Government securities.

The stock-in-trade, £819,119, is rather less than last year, and has been taken on our usual basis. There is no old or obsolete stock. The debtors are £606,754, against £526,059 last year. Ample reserves are made against doubtful debts. The other items on the assets side of the balance-sheet are about the same as last year.

BOARD'S SOUND FINANCIAL POLICY.

I feel sure that you will agree with me that it is a substantial balance-sheet, and I am sure also that you will confirm the recommendations of the directors, and approve their conservative action with regard to dividends, reserve, and carry forward. Your directors are unanimous in their conviction that the first consideration of our company must be to build up a strong financial position. Ours is a large business, with subsidiary companies manufacturing besides wallpaper, distempers, paints, colours, varnishes, enamels, paper, raised materials, and other things; and although these are all in a state of prosperity at the moment, the times we live in are extremely unsettled and difficult to forecast with accuracy. It is only three years since I had to address you

under circumstances much less happy than those of to-day, and I know that those shareholders whose interest in the company is a permanent one, will agree that the first duty of an industrial concern like ours is to consolidate its position by reserving a reasonable amount of the profits in the business. This will do more to guarantee the prospects of all classes of shareholders for the future than any other course which could be taken. A letter from a deferred shareholder has appeared in two financial papers, suggesting that we ought to distribute more of our profits and issue the balance of our authorised capital as bonus shares. Such a course could not possibly commend itself to anyone who is interested in the permanent welfare of the company.

ARTISTIC VALUE OF COMPANY'S PRODUCTIONS.

During the past year your directors and staff of artists have made a great effort to improve the artistic value of our productions, and I think that the merchants' new pattern books which will appear early in the New Year will reflect this. We are keenly interested in any attempt to lift wallpaper art on to a higher plane of excellence. A very valuable book on the History of English Wallpaper is to be published in January by the well-known house of Batsford. It has been written by the chairman of our executive committee, Mr Alan Victor Sugden, in collaboration with Mr J. L. Edmondson, a well-known writer and expert. I look forward to its being a standard work on English wallpaper. It will contain hundreds of illustrations of English wallpapers from the early part of the sixteenth century onwards.

Last May a lecture was delivered in the Stationers' Hall, London, by Mr Hilary Jenkinson, M.A., F.S.A., of the Record Office, on Historic Wallpapers; also during the winter a lecture was given at the Royal Society of Arts by Mr Henry G. Dowling, F.R.S.A., on "Wallpapers." The popular interest in wallpaper was shown by the very large and appreciative audiences in both cases. The wonderful collections of wallpaper designs of the past, which were exhibited by the lecturers, made one think that we should soon have collectors acquiring and preserving examples of wallpaper, just as they do other works of art. Your company began some time ago to form a collection of wallpapers, which will grow year by year, so that examples of the best designs of the past will be kept as a permanent collection for future generations.

JEFFREY AND CO.

We recently acquired a controlling interest in Jeffrey and Co., Limited, a very old-established wallpaper factory in Islington. This firm has had a world-wide reputation for high-class goods for nearly a century, and its contribution to the art of paper staining is a unique one, both as to the quality and beauty of the product, and also as to the long sustained effort over such a period of years.

Our works have been kept fully employed during the year, and there have been very few, if any, of our workpeople on the unemployment list. The shortage of houses has the effect of restricting the demand for the cheaper classes of wallpaper. In the days when houses were plentiful, and many houses to let, people removed more frequently, and each removal meant that two houses would probably be papered throughout. In those days the landlord often re-papered his empty houses to entice prospective tenants. At the present time, the tenant needs no enticement, and usually has to pay for the wallpaper himself. If the time comes again when there are more houses than tenants, we may expect to sell a greater quantity of wallpaper, and we shall be fully equipped to do it. We are able to hold and to increase our trade overseas in the face of world competition, and this proves to us that our prices are right and our methods of manufacture and of distribution are efficient.

GENERAL TRADE CONDITIONS.

Probably we shall soon see a big revival in trade. Our country has passed through a period of deflation of currency, leading up

The productive capacity of the plate mills in this country was such that even if the shipbuilders and other constructional engineers were fully employed, and allowance was made for exports, there was no reasonable prospect of all the mills being supplied with sufficient orders to enable them to produce at full capacity.

In the past they had relied upon ship plates as their principal manufacture, but, as already indicated in previous years, the directors were now following a policy of diversifying their products, so that they would not be so dependent upon one class of business, as increased competition might compel them to enter other branches of special steels of higher value.

The report and accounts were unanimously adopted.

CARGO FLEET IRON COMPANY, LIMITED.

IRON AND STEEL INDUSTRY AND FOREIGN COMPETITION.

The annual general meeting of the Cargo Fleet Iron Co., Limited, was held, on the 26th instant, at Middlesbrough.

The Right Hon. Viscount Furness, the chairman, after referring with regret to the sad and premature death of Captain John E. Rogerson, and after dealing with the figures in the accounts, said that the year under review had been one of very great difficulty so far as the iron and steel trade was concerned. Prices of the commodities which they manufactured had continued to fall steadily throughout the year. The Board of Trade index of prices showed that in October, 1924, the price of steel was 137.8, as compared with the pre-war parity of 100, whereas in October, 1925, it had fallen to 119.9. The prices of general commodities during the same period had fallen from 170 in October, 1924, to 154.8 in October, 1925, so that the price of steel was out of proportion to that of other commodities.

It was common knowledge that an application had been made to the Government under the Safeguarding of Industries Act. In view of the competition to which the iron and steel industry was subjected from abroad, and its anomalous position in relation to other home industries, it was difficult to see how it could survive unless some relief was given against unrestricted imports. Notwithstanding any such relief, their cost of production must be reduced by revision of working conditions in the trade itself, as well as the other industries upon which it was dependent. The following figures indicated clearly that the volume of their net export trade was rapidly disappearing:—

Year.	Imports. Tons.	Exports. Tons.	Excess of Exports over Imports.
1907	935,472	5,152,227	4,216,755 tons
1913	2,230,955	4,969,225	2,738,270 "
1924	2,430,000	3,853,000	1,423,000 "
* 1925	2,551,000	3,374,000	823,000 "

* The 1925 figures are based on the returns for the nine months ended September 30, 1925.

In view of the importance of Tees-side as an iron and steel-producing centre, it was significant that, during the 12 months ended October, 1925, imports of iron and steel to the Tees totalled 180,470 tons, compared with 54,564 tons in 1913-14. It seemed futile to endeavour to get their works into full operation and to find employment for the large number of men who were unemployed, while they were content for the workmen in other countries to do the work which ought to be done here. It was his considered opinion that no solution of their difficulties was possible while they were subject to unequal foreign competition.

The report and accounts were unanimously adopted.

PICCADILLY HOTEL, LIMITED.

The sixteenth annual ordinary general meeting of the Piccadilly Hotel, Limited, was held on the 19th instant.

Sir Charles T. Ruthen, the Chairman, in presenting the accounts for the year ending July 31, 1925, said:

I would first call the attention of the shareholders to the volume of business for the period under review.

INCREASED TURNOVER.

It is with real pleasure that I am able to report that in this year we have achieved a greater turnover than ever before in the history of this company, excepting for the year 1920, when conditions were abnormal and the after-war boom was at its height. It has not been an easy period in many respects. Trade throughout the country has been depressed, and a business such as ours, obviously is affected by national trade depression. With a decreased spending public to draw upon competition becomes increasingly keen among the hotels and restaurants of our standing, and it is more than ever necessary to keep up a high standard of service and to offer a variety of attractions if we are to retain our full share of the general patronage that is available for high-class establishments such as the Piccadilly Hotel.

We, who know the hotel intimately, feel that in one respect our task is not difficult. It is our belief that there are no finer and comfortable apartments to be found in any hotel in the world, and the continual patronage which is extended to us by our regular visitors, and the constant demand throughout successive years, lead us to believe that we do not over-estimate our good name in this respect. In one other department of our business which has sprung up within the last year or two, that of entertainment, we are, we believe, without equal. We have given our untiring efforts to obtain the best bands and the best artistes for the entertainment of our customers. It is, then, to these factors that we owe our success in maintaining and increasing the volume of business. Heavy expenditure, however, is entailed; but it has been the definite and determined policy of your directors to maintain this high standard, even though such a policy may not in a year of comparative depression permit of such a high percentage of profit upon the total takings as in more favourable years.

PROFIT AND DIVIDEND.

I will state shortly the prominent features of the year's trading. We have earned a net profit of £66,000, and after placing a substantial sum to general reserve we are able, with your approval, to distribute a dividend at the rate of 250 per cent. per annum, free of tax. We have spent what has been necessary to keep the hotel in that condition of which we are justly proud, and beyond those we have expended a considerable sum upon work which without doubt adds to the earning capacity of the hotel, and which will be of mutual benefit to our shareholders and visitors in the coming year.

Since our last annual meeting we have decided to distribute to our shareholders in the form of a bonus dividend £150,000, which sum has been put to reserve in previous years. We have started the new year with every facility for making the best of trade conditions, whatever they may be, and although it is apparent that business is restricted in many directions and for many causes, yet we feel confident that not only can we hold our own in competition, but that our popularity will increase amongst that large section of the public for whom we cater.

PICCADILLY FACADE.

There is one word which I should like to say in regard to the exterior of the hotel in Piccadilly. The rebuilding operations now have the effect of opening up our Piccadilly circus will shortly which perhaps is not generally appreciated. This very fine and hidden from view; but within a few months it will come into its own, and I believe that not only will this new view of the hotel public, but will excite general admiration. I personally am pre-finest pieces of street architecture in London cannot fail to be of the greatest value to the business of the company.

The proceedings concluded with a hearty vote of thanks to the chairman and directors and to the staff.

ANSALLS BREWERY, LIMITED.

RECORD YEAR'S RESULTS.

The 24th annual meeting of the shareholders of Ansells Brewery, Limited, was held at the Queen's Hotel, Birmingham, on Thursday, November 19th, under the presidency of Mr J. A. Fairhurst, chairman of the directors.

The Secretary read the notice convening the meeting and the auditors their certificate.

The Chairman said before saying anything with regard to the report and balance-sheet he must with great regret apologise for the absence of their late chairman, Mr Edward Ansell, whose health did not permit of him being present.

It was his (the chairman's) privilege to propose the following resolution in support of the report and balance-sheet:—

"That the report and accounts be received and adopted, and that the following dividends be paid, viz., at the rate of 5 per cent. per annum (less income-tax) on the preference shares, and at the rate of 15 per cent. per annum, making 12½ per cent. for the year, together with a bonus of 2½ per cent. on the ordinary shares (both free of income-tax) for the half-year ended September 30, 1925.

RECORD ACCOUNTS.

"I consider myself extremely fortunate," continued the chairman, "to preside on this occasion, which marks a record in our trading accounts, which is accounted for by the fact that the article we manufacture is popular with the public, and has resulted in increased output this year at our own houses as well as Rushtons, which business we recently acquired. As we are all aware, increased output is the aim of all commercial undertakings. I should like, and I am sure my co-directors would wish me, to pay some tribute to the excellent work of our managing director, Mr Thomas Ansell, whose business capabilities and sound judgment have done much to achieve the result we have arrived at.

With regard to the balance-sheet, the Chairman said his remarks must of necessity refer more particularly to the interests of the debenture holders and preference shareholders, as this is more or less a private company in view of the fact that the whole of the ordinary shares are privately held.

Last year he was able to say that the profits were sufficient to pay the debenture interest ten times over, and after paying that interest there was sufficient to pay preference dividends eight times. "This year I am pleased to say we can pay each of them ten times over, and in addition to that we are carrying forward £27,000 more than we did last year."

LIQUID ASSETS.

Turning to the liquid assets, the Chairman said there was an important and very satisfactory item of £335,000 cash in hand and at the bank, and in addition investments amounting to £52,000, of which £50,000 was Birmingham Corporation stock.

Taking the whole of the liquid assets together, cash in hand, stocks, debtors, and loans on security and investments, they

arrived at a total of £808,000, which left a good balance over the item of £737,000 creditors and credit balances on the debit side.

Mr Thomas Ansell formally seconded the resolution, which was carried unanimously.

RE-ELECTION OF MR H. P. RUSHTON.

Mr J. Timings proposed the re-election of Mr H. P. Rushton as a director, and said he supposed the absence of shareholders—there were only four present—indicated that there was nothing to complain about. All the directors had done their work exceedingly well, and the balance-sheet was a very good one.

Mr C. Bemand seconded, and the resolution was carried unanimously.

Mr Rushton thanked the shareholders for his re-election, and said it had given him very great pleasure to be still connected with the trade, especially through Messrs Ansells. He was glad to know that the transaction had turned out so satisfactorily.

Messrs Fisher, Randle and Fisher were re-elected auditors of the company.

Mr James Evans, J.P., proposed, and Mr Timings seconded, a vote of thanks to the chairman and directors.

Mr Fairhurst, in reply, said they were doing their best to grapple with the difficulties which arose, and he would like to take that opportunity of thanking the staff and the employees for the loyal support which had been given during the past year, and was always given.

Reports and Notices.

Major Reginald Bonsor has been appointed a director of the London Assurance, to fill the vacancy caused by the death of the late Mr R. E. Henderson.

The Hon. Richard Martin Preston, D.S.O., has been elected a director of the Rio Tinto Co., Limited.

On and after December 14, 1925, the address of the Mitsui Bank, Limited, will be Winchester House, Old Broad street, E.C. 2.

GOVERNMENT STOCKS, &c.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1 to September 30, 1925, compared with those for the same period in 1924:—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
Gross receipts, September, 1925 ..	Drachmæ. 10,958,020.60	Drachmæ. 48,341,020.20
Do do do 1924.....	10,187,550.95	41,658,500.00
Estimated receipts for nine months (Law of Control)	21,675,000.00	8,025,000.00
Actual receipts for 1925 (nine months)	91,285,831.75	383,243,410.90
Actual receipts for 1924 (nine months)	80,125,795.55	(e) 305,759,394.05

NOTE.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893. As regards receipts subject to the system of plus-values, increases in duties and prices are excluded therefrom in the above table. (e) In addition to these amounts import duties equivalent to £6,211 5s in the case of (e) were paid in gold at the Piræus Customs.

GREEK GOVERNMENT 7 PER CENT. REFUGEE LOAN, 1924.—Hambros Bank state that the revenues for the nine months ending September 30th, assigned to the service of the Greek Government 7 per Cent. Refugee Loan, 1924, are as follows:—

	1924.* For Whole Year. Drachmæ.	1925. January to September Drachmæ.
New revenues †	541,397,112 ..	530,360,573
Old revenues	1,428,681,881 & £14,982	1,196,787,798
Old revenues surplus †	735,819,000 ..	\$
Average approximate exchange (Drachmæ per £1)	248.17 ..	296.18
Nine months service of loan at above exchange requires		204,910,538

* Adjusted definite figures. † The loan has a first charge on † these revenues and surplus. ‡ No actual figures can be given until after the end of the year.

BANKS.

BANK OF MONTREAL.—The total assets at October 31, 1925, are \$755,000,000, as compared with \$718,000,000 at the end of the half-year, viz., April 30th. Current loans and discounts in Canada stand at \$225,000,000, as against \$211,000,000, which indicates a greater demand on the part of commercial borrowers during the last six months. The liquid assets total \$450,000,000, being equal to 66.37 per cent. of liabilities to the public. Cash stands at \$103,000,000, or 15.30 per cent. of liabilities to the public. The past half-year reveals a growth of deposits from \$604,000,000 to \$631,000,000. The profits for the year are \$4,604,962, from which the usual dividend and bonus have been paid. \$316,700 has been transferred to rest account, which with surplus assets acquired in respect of the Molsons Bank's absorption, as shown in the April statement, makes the rest equal to the paid-up capital. Profit and loss carried forward is \$596,788. A further sum of \$250,000 has been written off bank premises from sale of premises of acquired institutions.

YOKOHAMA SPECIE BANK.—The net profit of the bank for the half-year ended June 30, 1925, after providing for all bad and doubtful debts, rebate on bills, &c., shows yen 14,568,628, in-

clusive of yen 5,417,952 brought forward from last account. The directors propose that yen 3,000,000 be added to the reserve fund, and recommend a dividend at the rate of 12 per cent. per annum, which will absorb yen 6,000,000. The balance, yen 5,568,628, will be carried forward to the credit of next account. Balance-sheet shows total assets yen 1,339,872,546. The capital of the bank is yen 100,000,000. Reserve fund stands at yen 80,500,000. Reserve for doubtful debts is at yen 5,319,000.

RUBBER, &c.

BANTAM (JAVA) RUBBER ESTATES.—Output of rubber for year ended June 30, 1925, was 726,832 lbs. The "all-in" cost, including depreciation, was 9.06d per lb. The average gross selling price was 1s 8.73d per lb. The net profit on operations amounted to £26,983. The ordinary shareholders receive 20 per cent. dividend, and a credit balance of £512 goes forward, against a debit balance of £3,033 brought in. A settlement of British taxes has not yet been definitely concluded, but the directors believe that sufficient provision has been made for all tax liabilities.

RAJAWELLA PRODUCE.—The report for year ended June 30, 1925, states that the policy of fine plucking, which resulted in the production of higher grade teas, has been continued. The total crop amounted to 1,987,379 lbs, against 1,916,373 lbs in the previous year. The average net price realised was 17.46d per lb, compared with 15.46d per lb last year. The rubber crop sold, which was restricted, amounted to 495,827 lbs, compared with 502,450 lbs in the previous year, the average net price realised being 18.67d per lb, against 11.23d per lb last year. In addition, 23,396 lbs were harvested and brought into stock at cost. The cocoa crop amounted to 10,313 cwts, compared with 9,654 cwts in the previous year, of which 7,462 cwts have been sold at satisfactory prices, and the balance of 2,851 cwts has been taken into the accounts at valuation. Net profit amounts to £57,709. The ordinary dividend is raised from 20 per cent. to 22½ per cent.

UNITED TEMIANG (F.M.S.) RUBBER ESTATES.—The net profit is £26,372 for year ended July 31, 1925, against £7,128 in preceding year. The ordinary dividend has been raised from 5 per cent. to 15 per cent. The carry forward is £15,002, against £12,630 brought in. Total assets are £267,746. Cash is at £11,570. Government securities at cost stand in balance-sheet at £29,032. Investments under cost amount to £2,828. Reserve stands at £56,000.

MISCELLANEOUS.

BRITISH COTTON AND WOOL DYERS.—The profits (audited) for the half-year ended September 30, 1925, including income from investments, &c., after charging administration expenses, £3,119 for specific depreciation, and £28,082 for repairs and renewals, and providing an estimated amount in respect of income-tax, and other contingencies, amount to £67,463. From which have to be deducted audit fee and other professional charges, £1,219; interest on first mortgage debenture stock to September 30, 1925, £12,400; debenture holders' trustees, £100; amount transferred to depreciation fund, £12,500 (which now stands at £252,500), showing a profit for the period of £41,244; amount brought forward at March 31st last (after deducting £5,250 voted at shareholders' meeting), £38,037, leaving a credit balance on profit and loss account of £79,281.

CALLARD, STEWART, AND WATT, LIMITED.—The net profit for year ended October 3, 1925, amounted to £24,557, against £25,922. The ordinary dividend is maintained at 12½ per cent. The sum of £10,000 is put to reserve, and £500 to employees' benefit fund. The carry forward is £30,359, against £32,476 brought in. Total assets are £740,958. Cash is at £16,272. Investments stand at £113,075.

CALDWELL'S PAPER MILL.—Gross profit for year ended October 31, 1925, amounted to £46,361, which with £11,670 brought in makes £58,031. After providing for depreciation, bank interest, directors' fees, &c., the balance subject to income-tax is £36,631. Preference dividend absorbed £5,499, leaving £31,131 to go forward, subject to income-tax. Early in 1925 the control of the company was acquired by the Inveresk Paper Company, through the purchase of a majority of the ordinary share capital.

CHINESE ENGINEERING AND MINING.—The report for year ended June 30, 1925, shows the amount brought to the credit of profit and loss, including interest in China, less certain small expenses, is £256,034. Interest, exchange, and other items bring up the total credit to £286,546. After deducting administration and other expenses in Europe, £19,826, there remains a net profit of £266,720. Adding the amount brought forward from the last account £185,406, and the amount recovered in respect of excess profits duty less expenses, £22,479, there is a total credit of £474,605. Income-tax amounts to £90,485, and the available balance of the year is therefore £384,120. The ordinary dividend

is 10 per cent., against 20 per cent. last year. The carry forward is £241,234. The sales of coal by the Kailan Mining Administration for the year amounted to 2,861,708 tons.

DENNIS BROTHERS, LIMITED.—This concern has increased its net profit from £122,552 to £202,533 for year ended September 30, 1925. The ordinary dividend has been increased from 18 per cent. to 25 per cent. The sum of £50,000 has been put to reserve and £44,046 carried forward, against £16,719 brought in. The general reserve is now £155,000. Total assets are £917,212. Cash is at £110,431. Investment in White and Poppe, Limited, at cost is at £100,748. Investments in British Government securities at or under market value amount to £250,000.

E. W. TARKY AND CO.—The profit for 10 months to June 30, 1925, is £12,820, to which is added £1,755 brought in, making £14,575. Preference dividend absorbed £7,500. The ordinary dividend of 2½ per cent. absorbed £3,750. The carry forward is £3,325. Balance-sheet shows total assets £372,349. Cash is at £22,523. Investments total £20,278, of which £20,205 is in 5 per cent. War Loan.

HUMBER, LIMITED.—The net profit for year ended August 31, 1925, is £28,157, to which has to be added the net amount brought forward from 1924, £86,755, giving a total available balance of £214,912. The directors recommend to add to buildings reserve account £20,000. To general reserve account £68,901. This raises the general reserve account to £328,901, from which it is proposed to deduct the book value of the goodwill, trade marks, patents, &c., viz., £248,901, leaving the account standing at £80,000. Preference dividend £19,889. Dividend of 10 per cent. (free of income-tax) on the ordinary shares £29,288, also a bonus of 1s 6d (less income-tax) per share on the ordinary shares £21,966. To carry forward £54,868. For preceding year ordinary dividend was 10 per cent., free of tax.

LONDON NITRATE CO., LIMITED.—The net profit for year ended June 30, 1925, amounted to £99,895, against £85,573 in preceding year. The ordinary dividend has been raised from 20 per cent., free of income-tax, to 25 per cent., free of income-tax. The sum of £50,000 has been put to reserve for redemption of debenture stock. The carry forward is £11,887, against £11,992 brought in. Balance-sheet shows total assets £745,292. Cash is at £4,237. Loan against securities stands at £25,000. Stocks of nitrate stand at £92,169. Stores, &c., stand at £54,074.

NEW ZEALAND LOAN AND MERCANTILE AGENCY.—The net profit for year ended June 30, 1925, after payment of debenture interest, amounts to £141,890, against £131,725. The ordinary dividend is 7 per cent., less tax at 2s 3d in the £. The carry forward is £39,646, against £27,756 brought in. The total assets amount to £5,595,882. Cash is at £288,409. Money at short notice stands at £105,000. Investments in British Government securities total £410,310. Shares in Colonial Government securities and Corporation of London 3½ per cent. loan total £114,773. Shares in other companies amount to £206,638. The general reserve account stands at £500,000.

PATERSON, LAING, AND BRUCE.—The net profit for year ended July 21, 1925, after payment of debenture interest, is £61,377, against £72,014 in preceding year. The ordinary dividend has been reduced from 10 per cent., free of income-tax, to 7½ per cent., free of income-tax. The carry forward is £26,209, against £19,582 brought in. General reserve fund is £125,000. External reserve fund is £100,000. Creditors and bills payable stand at £469,170. Total assets amount to £1,831,395. Cash is at £18,914. Sundry debtors and bills receivable stand at £391,715.

SCOTTISH AUSTRALIAN INVESTMENT.—The net profit after payment of debenture interest is £219,466 for year ended June 30, 1925. This compares with £164,156 in preceding year. The ordinary dividend is 20 per cent., against 17½ per cent. The sum of £80,000 is put to reserve, making total reserve £580,000. The carry forward is £116,817, subject to settlement of income and corporation profits taxes.

SENA SUGAR ESTATES.—Net profit, after payment of debenture interest, amounted to £207,336 for 1924, which compares with £258,886 for 1923. No dividend is being paid on the ordinary shares, against 15 per cent. for 1923. The sum of £50,000 goes to general reserve and £30,000 to depreciation reserve. The carry forward is £157,384, against £30,049 brought in. During the period January to April, 1925, a most disastrous flood visited the Zambesi Valley, resulting in the loss of more than half the crop of growing cane.

STRAND HOTEL, LIMITED.—The report for year ended September 30, 1925, shows a net profit of £99,989, against £99,088. Preference dividends absorbed £37,000. The preferred ordinary dividend is 11 per cent., absorbing £25,300, and the deferred dividend is 506 per cent. as before, absorbing £25,300. The sum of £10,000 is put to reserve, and £10,392 carried forward,

against £8,003 brought in. Balance-sheet reveals total assets £1,396,483. Cash is at £93,089. Investments are at £183,716.

TUBE INVESTMENTS.—Net profit for year ended October 31, 1925 is £100,604, against £95,681. Ordinary dividend is 10 per cent., against 7½ per cent. Carry forward is £79,574, against £48,336 brought in. Balance-sheet shows total assets £1,352,311. Cost of shares in constituent companies, less capital reserve £168,970, amount to £1,204,338. Cash stands at £137,973.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Cold and frosty weather has prevailed during the week, consequently field work was rendered difficult. The general situation, however, is quite satisfactory, progress being more forward than usual at this time of year. Threshings of native wheat were of moderate extent, and with a better demand prices continue to harden. A further upward movement was recorded in both bread and feeding stuffs owing to higher forward values, and demand being stimulated by cold weather sellers showed more reserve. In the floating and forward wheat cargo section a much firmer tone prevailed, while reflected by the strength of American and Argentine markets. Latest reports estimate the damage to the Argentine crop at 500,000 tons, but prospects appear more favourable, and the surplus available for export points to a total of 4,500,000 tons. A good demand was in evidence, chiefly from home millers, as stocks were apparently running low. Sales include No. 1 Northern Manitoba afloat sold up to 60s, ditto loading 58s to 58s 6d, December 57s 9d to 59s 6d, with proportionate prices for lower grades. Australian December 59s 9d to 60s 6d, ditto December-January 58s 9d to 59s 9d, and Rosafe 62½ lbs early December loading at 59s 4½d. Of maize, Plate steamers December-January sold 36s 4½d, Dan-Gal-Foxanian loading, also early December, 36s, Bessarabian early December 37s 6d, No. 2 white flat African afloat 35s, bags 34s 6d bulk, and No. 6 yellow ditto December-January at 36s per 480 lbs c.i.f. terms. Wheat again firmer. No. 1 Northern Manitoba ex-ship to arrive quoted 64s, No. 2 ditto 63s, No. 3 61s 9d, No. 2 mixed Durum 58s 9d, and Barusse 62½ lbs ex-ship 62s 3d per 496 lbs. English quoted 11s 10d-12s 3d per 112 lbs free on rail. Flour firmer. London standard grade quoted 49s, patents 51s-52s, town whites 49s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Imported in limited supply. Manitoba patents range from 45s 6d-48s 6d, Minneapolis 46s-48s 6d, Australian nominally 45s-46s per 280 lbs ex-store. Maize occasionally dearer. Plate ex-ship to arrive quoted 38s 6d, landed ditto 40s, white flat African ex-ship 35s 6d, landed 37s 9d per 480 lbs. Yellow African maize meal ex-ship to arrive £9, white ditto £8 5s per ton. Barley firm. Californian ex-store 37s-50s, Chilian Chevalier 56s-68s, brewing 50s-53s, according to quality, Australian Chevalier 59s-60s ex-store, Polish and Danish ex-ship 45s-60s per 448 lbs, American malting ex-ship 28s 6d, landed 30s, landed 29s 6d per 400 lbs. English quoted 9s 3d-21s 3d, the latter for finest malting quality per 112 lbs. Oats tend firmer, with sellers reserved. Plate ex-ship near quoted 25s 6d, further distant 24s 6d, No. 2 Canadian Western ex-ship to arrive 29s 9d, landed 31s, No. 2 Canadian feed ex-ship 24s 9d, landed 27s, No. 2 white clipped American 38 lbs ex-ship to arrive 24s 9d, landed 26s 3d, all per 320 lbs, Danzig ex-ship 28s 9d per 336 lbs. English quoted 9s-9s 10d per 112 lbs free on rail. Millers' offals maintained. Broad bran quoted 8s 3d-8s 6d, middlings 8s 3d-8s 6d, fine ditto 10s 3d bags included, powdered oat husks 6s 3d, feed oatmeal 8s 9d, ground oats 11s 9d per cwt free on rail. Oatmeal in fair demand and tendency firmer. London made flaked 17s 6d, rolled oats 16s 6d, medium, also fine cut, 16s 6d, coarse, also medium pinhead, 16s 6d ex-mill, ordinary Scottish oatmeal 17s 6d-18s, American ditto 16s-16s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1925-26, 1924-25, 1923-24, 1922-23.

AMERICAN WHEAT MARKETS.

Prices continue to advance in the American wheat markets, a new high level of prices for the season having been created. Export business is good, but Argentine crop news is still disquieting:

	Nov. 28, 1924.	Jan. 2, 1925.	Nov. 12, 1925.	Nov. 19, 1925.	Nov. 26, 1925.

(a) October delivery. (b) December delivery. (c) November delivery.

In Canada the visible supply of wheat now stands at 42,083,000 bushels, as against 33,215,000 bushels this time last year. The High Commissioner for Australia has been advised that the Australian wheat yield is estimated at 115,310,000 bushels, made up as follows:—New South Wales, 35,000,000; Victoria, 25,973,000; South Australia, 32,064,000; Western Australia, 20,022,000; Queensland, 2,000,000; Tasmania, 251,000. The exportable surplus is estimated at from 65,000,000 to 70,000,000 bushels. The estimated yield is almost 50,000,000 bushels less than last season.

COAL.

Our Cardiff correspondent writes:—The improvement in the position on the Cardiff coal market has been maintained. Exports have been greater in volume during the past two or three weeks than at any other period since last July, and there is a reasonable prospect that the present level will be maintained until the end of the year. One or two contracts have been arranged for supplies up to the end of next May, when the period fixed for the subvention expires, and the Egyptian Railways and the British Admiralty are also in the market for an aggregate quantity of about 500,000 tons. There has been no material change in prices. The following are the current approximate quotations:—Best Admiralties 22s 6d to 23s 6d, seconds 21s 6d to 22s, best drys 22s 6d to 24s, Black Veins 19s to 20s, Western Valleys 19s 3d to 19s 6d, Eastern Valleys 18s 9d to 19s, best steam smalls 11s 9d to 12s 3d, ordinary cargo smalls 10s to 10s 6d, coking smalls 11s 6d to 12s, anthracite best large 39s to 42s 6d, Red Vein large 28s to 32s, machine-made cobbles 56s 6d to 58s 6d, French nuts 57s 6d to 59s, stove nuts 57s 6d to 58s 6d, rubbly culm 11s 6d to 12s, coke, special qualities, 35s to 40s, patent fuel 20s to 23s, pitwood ex ship 31s to 32s.

Our Glasgow correspondent writes:—Although mineral traffic on the railways was resumed nearly a week ago following the stoppage brought about by fog, general conditions in the Scottish coal market are not yet normal. The collieries are still considerably in arrears with their engagements. In all districts, however, the majority of operative collieries are quite comfortably placed for the remainder of the year, so that prices, for prompt shipment, at any rate, are easily maintained. For some qualities, indeed, the tendency is distinctly upward. The smaller sizes of nuts, which are in good demand on Scandinavian account, are rising in price in all districts, and Lanarkshire large fuels have spurted within the past few days. In Fifeshire third steams are practically unobtainable for this year's shipment. The price is nominally 12s. 6d.

Our Sheffield correspondent writes:—The coal trade fails to improve in the export section, but there is more doing in house coal. There is a fair demand for boiler fuel. South Yorkshire steams are quoted at 16s 6d upwards, and best Durhams at 17s to 18s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Rather quieter conditions have developed in the iron and steel trades, but there is still a fairly good volume of business passing. The most notable feature of the market of late has been the falling off in business in Continental iron and steel materials. Purchases of pig-iron continue on a fairly good scale, not only on the part of home users, but also from abroad. The buying of semi-finished material, on the other hand, has been somewhat restricted, and the demand for finished steel also.

Our Middlesbrough correspondent's report, dated November 26th, is as follows:—Pig-iron: Although the market for foundry iron is a trifle quieter, prices are very firm. No. 3 Cleveland G.M.B. remains at 66s per ton. The hematite position is strong, and three additional furnaces are to be lighted. Prompt iron is scarce, and even for forward the price is very firm at 75s per ton for East Coast mixed numbers. The rise in coke prices is causing iron-masters a little anxiety, sales of good Durham brands having been made at up to 20s 6d per ton. Manufactured iron and steel: The healthier tone is still maintained, but shipbuilding remains depressed. The following remain the approximate home quotations: Steel ship plates, £7 5s; steel ship angles, £7; iron bars, £11 5s; steel rails, £8. Iron ore: The foreign ore position, on the whole, is still quiet, and best rubio is quoted at 20s 6d per ton c.i.f. Tees.

Our Sheffield correspondent writes:—The sentiment in local trade circles continues optimistic, but without any expectations of substantial revival before the new year. The departments most depressed of all are bar iron, wire rods, and shipbuilding steel. Pig-iron has been fairly active for some time past, but production is not yet on a remunerative basis. Local production of open-hearth steel remains at recent levels. Acid steel is suffering to an increasing degree from the competition of the high-carbon varieties of basic, which is cheaper. The scrap market is rather weaker, and 62s 6d is the utmost which users are willing to pay for heavy basic steel. The guaranteed qualities used for making acid steel are not much inquired for. Special steels are selling freely, and there is a good deal of special work on hand in the steel foundries for engineering schemes. Railway work is tapering off. Trade is brisk in agricultural tools and implement spares, especially on export account, and there is no abnormal unemployment in the tool branches. Plate and cutlery are severely depressed, activity being at an end for the term of the present year. The making of the blades of safety razors is becoming an industry of some importance, several additional firms having lately taken up the trade.

Our Glasgow correspondent writes:—The low levels to which prices have dropped in the iron and steel trade seem to have brought more buyers into the market, as inquiries and orders are more numerous this week. In pig-iron the undertone is distinctly better, but actual business is still slow. Steel plates are quoted at £7 10s to £7 15s per ton f.o.b. Glasgow, but orders are still somewhat scarce. Sectional material is in strong demand for structural engineers, several of whom have good contracts on hand. The shipbuilding position is slightly improved. Orders have been secured by Port Glasgow yards for a 7,800-ton vessel for the Calcutta trade of the Anchor-Brocklebank Line and a 12,300 tons carrying capacity oil tank steamer for the Vacuum Oil Co. Malleable iron makers are doing better with wagon and carriage builders, but works are only partially employed. Steel sheets continue to be in strong demand, and makers are well placed, especially for light gauges for export, while the home market is taking increasing supplies for motor-car work and other industrial purposes. Galvanised sheet makers are fully booked for the next three months, and are quoting £16 15s per ton for 24-gauge for March delivery.

Our Cardiff correspondent writes:—In the iron and steel industry the general conditions are improving, and it is now estimated that approximately between 85 per cent. and 90 per cent. of the tinplate mills are in operation. The tinplate manufacturers have reaffirmed their decision to inaugurate a pooling scheme, which will be brought into operation as from January 4th next.

OTHER METALS.

The market for tin proved very irregular owing to fluctuating Eastern cables and realisations at times, while a fairly good business transpired. Standard, cash, sold £287 5s-£283 5s. In £286 5s, with three months at £282 10s-£278 10s and £281 5s. In the East sales were reported at £292 5s-£290 15s and £288 5s. COPPER in good demand, but with sellers to the fore rates exhibited irregularity, closing firm. Standard, cash, sold £60 8s 9d to £60 and £60 10s, three months £61 10s-£61 and £61 10s. LEAD easier on selling pressure, though business was on a fair scale and closed steadier. Good soft foreign pig November sold £36 12s 6d-£35 18s 9d and £36 5s, December sold £36 7s 6d to £35 15s and £36, January £36 2s 6d to £35 10s and £35 7s 6d, February £36 to £35 7s 6d and £35 10s. SPLITTER firmer, with active dealings. November sold £39 2s 6d-£39 12s 6d, December £38 17s 6d to £39 5s, January £38 10s-£39 12s 6d, February £38 2s 6d to £38 7s 6d. ANTIMONY firm. English specials quoted £90 ex warehouse. China grade December-January sold £61, Regulus ditto £80 c.i.f., white oxide January sold £61, Regulus ditto £80 c.i.f. ALUMINIUM. Home trade nominally £120, export £125 ton. WOLFRAM firm. Forward quoted 21s to 21s 3d per unit c.i.f. QUICKSILVER firm. Spot quoted £14 15s to £15 per bottle.

THE COTTON TRADE.

LIVERPOOL, November 26, 1925.

American cotton has again been in fair demand, but Egyptian has been quiet. For Peruvian and Brazilian the demand has been quieter, but prices have advanced slightly. The estimated spot sales from the 20th to to-day (inclusive), are 40,000 bales, including 2,300 for export. Of these 23,900 are American, 2,850 Brazilian, &c., 4,250 Peruvian, 1,900 Egyptian, 4,800 African, 1,300 East Indian, and 1,000 sundries. The imports for the week are 156,356 bales, these including, 116,781 American, 16,912 Brazilian, &c., 1,893 Peruvian, 18,450 Egyptian, 739 African, 1,554 East Indian, with 27 sundries. To-day middling American is quoted at 10.79; Egyptian, fully good fair Sakel 19.85, F.G.F. Upper 15.95; fair Brazilian, 11.24; good fair mod-rough Peruvian 16.00, smooth 12.99; fully good fair Tinnivelly, 9.95; good fair East African, 13.45; and middling West African, 10.49. The markets have been dull all week, and the parity between this market and New York is the lowest for a very long time. Very little trading has been done in Egyptian futures, but a small demand caused an improvement, and the difference to-day between January American and January Egyptian is about 770 points.

MANCHESTER, November 26, 1925.

Trading in the market during the past week has been very quiet, and producers have tended to lose ground. Cloth manufacturers have complained of the very limited quantities purchased even by large merchant houses. Dealers in India on the other side are handicapped by having to clear relatively dear goods, and some cases of failures are mentioned. Some orders have been put through in bleached shirtings for China. The undercurrent of demand for the Continent and the United States keeps up fairly well, but business remains dull for the Near East. Irregular reports have been received from the home trade. American yarns for home use have been sluggish. It is not believed, however, that the proposal to increase short time has been carried.

Monthly Trade Review and Status Reports sent on Application.

BANK OF LONDON

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—A little uncertainty has been caused by the cable reports of a weaker tendency in the overseas markets, but at present the London market is of more direct interest. It is known that several firms are in urgent need of wool, and it is manifest that wool on the spot in London is worth more than wool in the Colonies. It remains to be seen whether the demand for urgent delivery will be sufficient to maintain values throughout the series, but in the meantime demand in Coleman street Wool Exchange is fairly general, and prices are steady at about opening rates. Users in the West Riding, however, are not at all disposed to force the pace. They cannot lose sight of the fact that raw material values are still well above the Bradford parity, and there is nothing in the general situation to warrant anything in the nature of speculative buying in the hope that tops and yarns will be forced into line. For this reason spinners and manufacturers continue to operate on hand-to-mouth lines, and orders are mainly for prompt delivery. Practically all qualities of tops are quoted at slightly lower figures to-day, and the future course of prices will depend entirely on how things go in London. The real test will come when buyers have satisfied their urgent and immediate requirements, and the influence of the depreciated franc on French activities cannot be ignored.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The basis of values at the opening of the London sales last Tuesday was very much in line with our forecast. A good three weeks ago everybody was talking about a 10 per cent. advance in all descriptions, but such a rise would not have contributed anything to the further stabilisation of the industry. We have no reason to withdraw our previous contentions in favour of reasonable values, for we are still convinced that this way lies the reconstruction of the textile industry of all Europe.

There is every prospect of some good wools being brought to the hammer this series, both in merinos and crossbreds, but particularly the former. On the opening night some good lots of new Queensland clip were offered, chief among them being Wellshot, one of the largest Australian clips grown. This sold up to 30d for the grease combing, even the broken touching 28½d, and pieces 25½d. Nive Downs was also in good order, nice fine quality, and this clip also touched 30d, while Corinda sold up to 26d. Burra Burra from New South Wales is a very familiar brand to London sales frequenters, and touched up to 25d. This clip is always burry, but usually of acceptable quality. All these wools called forth very strong competition from Alsace-Lorraine spinners. Apparently most users are wanting good 70's fleece wool and upwards, and are prepared to pay very good figures indeed. Crossbreds will figure prominently all through the series, and we expect the home trade, along with Germany, to offer steady, persistent competition. Values will in all probability not be very much different at the finish. The competition of the biggest home trade topmakers may be somewhat limited before the end of the series with a view to affecting New Zealand sales, for so far they have not gone too well, largely through the absence of the competition of the big importing topmakers, who any time can either make or mar a market. It cannot be said that New Zealand has opened too auspiciously, but prices are being paid fully in line with what can be made in Bradford.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market position is steadier this week, and prices show little alteration. At the sales held in Bermondsey on Thursday best ox sold from 6½d to 9½d per lb, and seconds from 6½d to 6½d, a slight decline of an ½d to ½d on the two heavy classes. Best cows made from 6½d to 6½d, and seconds 6d to 6½d. Best calf were steady at 7d to 11½d, two light classes showing 4d advance. Wools sold from 7s 3d to 13s and hoggs 3s 3d to 13s each. Imported hides are still slow, with a weak tendency. In Argentine fregorifics, 8½d has been paid for Argentine ox, and 9½d for Montevideo. Dries are not much in demand, and dry Americanos have sold at 11½d to 11½d. The American market is cabled as steady, with best native packers selling at 16 cents. The demand for sole leather shows a falling off this week owing to impending stock takings; the exception is, however, the insistent inquiry for light bends for the Cossack boot, and in this direction there is a decided scarcity, with prices advancing. Box and willow calf are wanted in small lots, but patent is slow. The centres making the high-leg boot are flooded with orders, but there is again a lull in the demand for stout boots for men's wear.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

The very cold weather prevailing in the upper centres of the North of Europe has stopped shipments of timber, and it is now evident that the season will end very early this year. Imports have been very large, and stocks have been always on the heavy side. A falling off in imports in October, however, assisted in levelling off the heavy stocks in docks and private yards. These are still large, especially in batten sizes. In our reports during the summer we commented on the poor state of the spot timber trade. This has since changed very much for the better; the market now shows more confidence, and prices on the spot have shown a

decided improvement, which is likely to increase still further before first open water next April.

In the free-on-board market the position has also shown great improvement, but too late to be of great assistance to the Finnish and Swedish markets. Last summer a large percentage of the Finnish and Swedish manufacturers decided on a minimum basis price policy. The British market was not greatly disturbed at the artificial rates; but the Continental consumers bought more largely, thus assisting the shippers to clear their stocks and relieve this market of unwanted timber. Both Swedish and Finnish shippers have had a good year as regards sales, but not prices. Russian shipments to date have not been so heavy as last year. Canadian spruce has not arrived in such large quantities as last year; evidently the competition of European varieties has been too keen. In shipbuilding woods teak timber still holds a commanding position, values being very firm, and stocks here and at shipping ports light. Pitch pine timber is a good market, States shippers assisting in keeping prices very firm, although the demand here gives room for improvement. Mahogany logs are also a strong feature, provided that the timber is of good grade and dimensions, squared, round wood being little in request. Inferior grades of mahogany, however, are hard to sell. In sawn hardwoods the market keeps steady, and was assisted a little by the lessened supplies from the United States last month. Shipments from the Southern States, which have this year been so large, are likely to be restricted on account of the excessively heavy rains experienced, which has stopped transport of logs to the mills. In all sections of the market the tendency is for continued firmness, and appreciation of present values is likely.

VEGETABLE OILS AND OILSEEDS.

Only a moderate amount of business has been done. Linseed oil has been scarce on spot and for near delivery, but the position has been relieved by offers of Dutch linseed oil. Value advanced to £38 per ton naked for prompt oil, but has since declined to £37 5s, while for November-December delivery £37 represents current value. Cotton oils are in poor demand and easier, crude Egyptian offering at £36 3s ex Hull mill, and ordinary refined at £38 15s, without attracting much demand. Palm kernel oil has advanced sharply to £45 on a good export trade. Soya, and most other vegetable oils, are quiet and unchanged. Though linseed is somewhat firmer in sympathy with wheat, values are little different on balance. Plate seed on passage is fully steady at about 20s per ton premium over new seed, in which a fair trade has been done at £17 7s 6d and £17 10s for January-February shipment. For Calcutta to London, November-December shipment, £20 7s 6d has been paid. Egyptian cotton seed is easier, black having been done at £9 17s 6d November, and £10 December loading.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—A firm tone governed the market for actual parcels, and prices of British makes were advanced by 6d per cwt, while steady business resulted. Messrs Tate and Lyle's cubes quoted 32s 3d to 33s 3d; crushed, 30s 3d; coffee crystals, 33s; nibs, ordinary and No. 1, 33s; granulated, stove, 31s 1½d; fine, also coarse grain, 29s 4½d; No. 1, 29s 1½d; No. 2, also London and T.L., 28s 10½d; January delivery, 29s; February-March, 29s 3d; mi eral water white, spot, 29s 3d; icing bags, 33s 9d; drums, 34s 6d; pulverised, 31s 9½; castor, finest, 33s 1½d; ditto, A, 32s 7½d; B, 31s; and yellow crystals, 25s 10½d. English-grown granulated, 28s, ex London for Cantley, and 28s, ex works, Ely, with 3d per cwt more required for one cwt bags. Foreign descriptions also dearer, with sellers more reserved. American granulated, spot, 27s 7½d; Dutch "J" ditto, 27s 9d; Nove-ber-December, 14s 9d; January-March, 15s 6d; April-August, 15s 10½d; f.o.b. Rotterdam. Czecho granulated, November-December, 14s 9d; January-March, 15s 3d; April-August, 15s 10½d, f.o.b. Hamburg. White Java, May-June, London, 15s 9½ per cent. November-December, firm but quiet. Cuban, basis 95 per cent. November-December, sellers, 11s 9d, c.f. and i., U.K. White terminal firmer, and a good business resulted. December sold, 14s 4½d to 14s 6d; March, 15s 0½d to 15s 1½d, 15s 0½d, and 15s 2½d; May, 15s 4½d to 15s 5½d; August, 15s 9½d to 15s 10½d per cwt.

COFFEE.—Market generally steady for spot parcels, with a moderate business in force. Kenya, common to fair bold, sold, 110s to 120s; peaberry, 125s to 130s; Uganda, bold common to 110s, 110s to 115s; peaberry, 112s 6d. Arusha, good bold, 124s; good, 110s to 115s; peaberry, 112s 6d. Futures steady, and March, sold, 90s Kilimanjaro, fair colory, 94s.

COCOA.—Spot lots met with only limited inquiries at about late rates. Fine Grenada, sold, 66s; good Samoa, 76s; New Hebrides, good, 63s. Accra, for shipment, F.F. grade, December-February, also January-March, sold, 36s 6d to 37-; Lagos, ditto, 34s 6d, f.o.b. terms; Trinidad, December-February, sellers, 60s; Bahia, November-December, 45s; Guayaquil, Epoca, November, 65s 6d; Caraquez, ditto, 66s 6d, c. and f. terms, cwt. Cocoa butter, C.F.R., spot, sellers, 1s 4d per lb.

TEA.—Indian offerings for the week totalled 55,394 packages. Competition proved very brisk, especially for grades up to 1s 8d per lb, with prices marking an advance of ½d to 1d per lb. The better medium and fine descriptions were fairly well supported at generally steady rates. Later s me irregularity was noticeable amongst common and low medium kinds, and top points were not maintained. Pekoe, sold, 1s 4½d to 1s 11½d; broken orange pekoe, 1s 6½d to 2s 4d; finest to choice, 2s 7d to 3s 4½d. Ceylon sales of 17,654 packages encountered an active demand at full to dearer prices, medium to better liquoring broken, also all leaf grades suitable for export being the strongest feature, and values showed a rise of ½d to 1½d per lb. Fine kinds maintained generally late rates. Pekoe sold, 1s 4½d to 2s 2½d; broken orange pekoe, 1s 10d to 2s 5½d per lb, in bond. A fair business transpired in China descriptions, and Kintucks sold up to 2s 2d, and old Keemuns, 1s 1d to 1s 4d, while moderate sales in common kinds at steady rates. In auction, 4,777 pack gss Java and Sumatra were offered and experienced a brisk demand. Common grades ruled firm to slightly dearer, while fine sorts realised full rates. Pekoe sold, 1s 3½d to 1s 6d; broken ditto, 7½d to 2s 0½d; orange pekoe, 1s 6d to 1s 8d; broken ditto, 1s 3½d to 1s 9d; pekoe souchong, 1s 2½d to 1s 4½d per lb, in bond.

RICE.—Market steady, but European demand fails to expand. Rangoon, two stars, spot, London, 16s; November-December, also January-February, 15s 0d, c.f. Spanish, November shipment, 23s to 23s 6d, with spot lots at 24s 6d, and oil dressed 25. Italian, spot, 22s to 22s 6d cwt. Rice bran: Burma, December-February, quoted £6 10s; February-March, £6 12s 6d per ton, ex ship, London/Liverpool. Japanese p-ras firm. Sp't, quoted 32½; November-December, 30s; December-January, also January-February, 30s 4½d. B-rans: Rangoon, hand-picked, October-November, 13s, f.a. i.; ditto, 11s 6d. Madagascari butter beans, spot, 32s to 33s; November-December, 28s per cwt, c.f.i.

SPICE.—Pepper quiet, and rates tend in buyers' favour. Bl ck Singapore, f.a.g., January-March, sellers, 1s 0½d; Lampong, October-December, 11½d; January-March, 1s 0½d; white Muntok, October-December, 1s 3½d; January-March, 1s 4½d. Cloves main ained. Zanzibar, October-December, quoted 10½d. Pimento, spot, 5½d per lb; ditto, October-November, 48s per cwt. Tapioca quiet. Singapore flake, to Havre, December-January, quoted 16s 6d; Penang seed, to London, ditto, 16s 6d. Sago flour quiet Sarawak, to U.K., November-December, sellers, 15s. Desiccated coconut, spot, halves, 40s 6d; December-January, 39s. Ginger steady. Japan, spot, 90s; Octo er-November, 85s; West African, spot, 59s; forward, 57s cwt, c.f.i.

FRUIT (Dried).—Currants quietly steady. Amalia, quoted 32s to 33s; Gulph, 35s to 40s; Pyrgos, 30s to 31s; Patras, 34s to 36s; Vostiza, 42s to 52s. Sultanias steady. Smyrna, new crop, 7s to 9s; 90s; Australian, 66s to 80s; Cretan, 75s to 90s. Figs in steady demand. Layers, new crop, boxes, 70s to 105s; Locoums, 110. Dates in fair request. Halloween, spot, 26s 6d; Siar, 14s 6d; Khadrowie, 18s 6d. In auction 270 tons Valencia raisins were offered, and met a poor demand, at 2s to 3s per cwt decline. Common, sold, 30s to 34s; medium, 36s to 42s; good, 45s to 55s; fine, 57s to 61s. Muscatels sold readily, at steady rates. Clusters, common, sold, 68s to 78s; medium to good, 90s to 97s; fine to choice, 100s to 112s 6d per cwt. Evaporated fruits quiet. Californian, apricots, standard new extra choice, 120s; fancy, 130s; Australian, 117s 6d to 130s. Plums, Oregon, size 30/40, quoted 72s; 40/50, 52s. Californian, 40/50, 58s; 50/60, 54s; 70/80, 45s. Bosnian new crop, 60/70, 45s. Pears, Californian, extra choice, 90s; fancy, 105s. Lake County, extra choice, 105s; fancy, 117s 6d. Apple rings, Californian, extra choice, 55s to 70s; Canadian, 63s 6d per cwt.

CANNED GOODS.

CANNED FISH.—Trade quiet, and prices without material change. Sardines firm. Portuguese ½'s quoted 4s 9d to 5s per dozen tins. Salmon firm, but trade slow. Red, tall, 1 lb, 63s to 64s; ½ lb, pink, 38s 6d to 39s; tall pink, 25s to 26s. Lobsters firm. Halves quoted 160s to 165s; and ½'s, 95s to 100s.

CANNED FRUITS.—Qu et, and stocks of new season's arriving are not up to the same quality of old crop, while many shippers fail to send full contracts. Prices generally maintain a steady 1 vel. Californian Bartlett pears, standard, 13s 3d to 13s 6d; seconds, 12s to 12s 6d; Oregon, choice, 15s; standard, 13s 3d; seconds, 12s to 12s 3d; Canadian, standard, 11s 6d. Californian peaches, choice, 11s; stand rd, 9s 6d; seconds, 8s 9d. Californian apricots, standard, 9s 3d; seconds, 8s. Log-berries, fancy, 11s to 12s, choice, 10s 3d per dozen tins. P nes steady, with improved inquiries for shipment parcels. Italian tomatoes in good request at full rates.

CANNED MEATS.—Corned beef unaltered, with a steady demand for Australian and New Zealand produce, while Dani-h lunch tongues sell well, 6-lb tins being in rather short supply. Corned beef, South American, 6 lb tins, quoted 34s; and New Zealand, 34s. Lu ch tongues, Danish sixes, quoted 116s; and 1 lb, 18s; New Zealand ox, 6 lb, 125s per doz n tins.

CONDENSED MILK. very firm for machine-skimmed a' hardening rates, but full cream in moderate request. Machine-skimmed quoted 15s 9d; full-cream Danish, 26s to 26s 6d; Dutch, 23s 6d to 24s per case.

HONEY.—New Zealand continues in good demand, especially on continental account, and despite increased production supplies are well sold up, but other descriptions move off quietly.

RUBBER.

In moderate demand, and prices somewhat irregular. Plantation standard sheet, spot, sold, 4s 1½d to 4s 5½; December, 4s 3d to 4s 4½d; January-March, 4s 2½d to 4s 2d, and 4s 4½d; April-June, 3s 11½d to 3s 11d and 4s 1½d; January-December, 3s 10d to 3s 11d. Fine hard Para, spot, 4s 2d; soft fine, ditto, 3s 6½d; caucho ball, 2s 9d per lb. To New York, ribbed smoked sheet, November, sold 4s 4d to 4s 3½d; January-December (1926), 3s 9½d; January-December (1927), 2s 10½d; first crepe, November, 4s 3½d per lb, c.i.f. terms.

GUMMERS.

HEMP.—Manila remains firm. J grade, December-February, also January-March, quoted, £45; K, ditto, £39 10s; L, ditto, £40; and M, £34 10s. New Zealand and High Point, November-January, £39 10s; fair, £35 10s. African sisal, No. 1 Tanganyika, November-January, £5 10s; No. 1, Kenya ditto, £45 per ton.

TALLOW.—Messrs Colchesters and Woolner write on November 25th as follows:—The tallow market was steady during the week, and prices were fully maintained to-day for inferior kinds. Prices required for shipment from Australasia and from South America are not readily obtainable here. At auction to-day 1,585 casks talow were offered, and 661 were sold. Quotations are:—Australian mutton: Fine, 48s 6d; good to fair, 47s 6d to 44s; dull to dark, 41s to 39s 6d. hard, 48s. Australian beef: Fine, 44s 6d; good to fair, 43s 6d to 41s 6d; dull to dark, 40s to 39s 3d; sweet, 46s 6d. Present shipment from Australasia: Good mixed, 45s 3d, nominally. Present shipment from South America, 44s 3d. The market letter is unchanged. Town talow, 39s 6d per cwt. Rough fat, per 8 lbs, 3d; m-lled stuff, 30s per cwt. Quotations are:—Town, 39s 6d, net cash, naked, ex works. Country: Frail casks, 39s 6d; home melted, shipping casks, net, f.o.b., wood coloured, 43s; fair to dull, 40s to 39s. Bone fat: white, none; pale, none; benzine, 36s; melted stuff, 35s 6d, f.o.b.

SHELLAC. steady. Fair, T.N. spot, 245s to 250s; December, 225s; March, 212s 6d per cwt.

GOPHA quiet, and bar-ly steady. F.M.S. Straits, to Rotterdam, October-November, quoted £30 3s 9½; October-December, £30 3s 9d; November-January, £30 2s 6d; December-February, £30 2s 6d. Dutch E.I., October-December, sellers, £29 17s 6d. Ceylon, November-December, £31 5s; South Sea Islands, F.M.S. quality, November-December, £29 7s 6d. Palm kernels, to Liverpool, November-January, £22 7s 6d per ton.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £24 10s to £40; Cochin, £30 to £54. Ceylon bristle, £16 to £22 10s; cinnamon leaf oil, 4½d; citronella, Ceylon, 1s 10d; Java, 3s 6d.

DE BEERS CONSOLIDATED MINES, LIMITED.

REPORT OF DIRECTORS

For the Twelve Months ended the 30th June, 1925.

To be submitted to Shareholders at the Thirty-Seventh Ordinary General Meeting to be held on the 11th December, 1925.

TO THE SHAREHOLDERS—
GENTLEMEN,—Your Directors beg to submit their thirty-seventh Annual Report, Balance-Sheet at 30th June, 1925, Profit and Loss Account for the year ended 30th June, 1925, and Appropriation Account, 30th June, 1925. The undistributed balance at 30th June, 1924, was represented by:—

Suspense Profit Account—Diamonds unsold at that date £333,365 3 9
Balance unappropriated 73,859 18 8

During the year the Diamond Account amounted to 407,218 2 5

Add to this the following:—
Interest and Dividends on Investments ... £380,732 0 9
Profits realised on sales of Investments 554,072 6 3
Income from other sources 12,996 18 11

948,401 5 11

Less Expenditure as follows:—

Mining Expenditure £1,588,162 19 6
Farms and Landed Property Expenditure ... 15,196 2 11
Donations and Relief 10,951 8 2
Allowances to Employees, including Provident Fund 87,652 13 9
Directors' Fees 22,100 6 8
Exchange on Remittances 21,981 19 0
Salaries—Head Office 29,777 16 8
General Charges—Kimberley and London... 70,226 6 6
Interest on Debentures and on Capital of Leased Companies 162,630 1 0
Sinking Fund for repayment of Debentures 95,114 3 3

2,103,193 17 5

Leaving a balance of £4,703,842 8 9

Which has been dealt with as follows:—

Union of South Africa Income Tax £258,465 16 4
Preference Shareholders' Dividend 800,000 0 0
Deferred Shareholders' Dividend 1,090,514 0 0

2,148,979 16 4

Balance undistributed carried to next year:—

Suspense Profit Account—Diamonds unsold 30th June, 1925 £64,439 2 3
Balance unappropriated 387,229 12 9

£451,668 15 0

The stock of blue ground and lumps on the floors at 30th June, 1925, was as follows:—

De Beers Mine 48,396
Wessington Mine 338,141
Bultfontein Mine 223,129
Dutoitspan Mine 1,051,719

Total 2,261,385

BALANCE-SHEET, JUNE 30th, 1925.

Capital Authorised:—
800,000 Preference Shares at £2 10s 0d each 2,000,000 0 0
1,100,000 Deferred Shares at £2 10s 0d each 2,750,000 0 0

£4,750,000 0 0

Capital Issued:—

800,000 Preference Shares at £2 10s 0d each 2,000,000 0 0
1,090,514 Deferred Shares at £2 10s 0d each 2,726,285 0 0

4,726,285 0 0

De Beers 4 per cent. South African Exploration Debentures, secured by Mortgage of Assets purchased from the London and South African Exploration Company, Limited, redeemable by 1st January, 1930

1,635,495 0 0

Appropriation for Stabilisation of the Diamond Trade, invested in other Diamond Mining Companies and Kindred Interests

2,573,841 16 0

Reserves (per contra):—

General Fund £1,500,417 15 7

Premium on Deferred Shares, less Expenses 287,726 6 4

Redemption Fund: South African Exploration Debentures 1,112,582 17 5

2,900,726 19 4

Blue Ground Stocks, 30th June, 1925, at cost 392,728 12 5

3,293,447 11 9

Current Liabilities:—

Kofffontein Mines Loan and Interest Account 295,261 16 10

Preference Shareholders 430,000 0 0

Deferred Shareholders 545,957 0 0

1,825,995 5 10

Suspense Profit:—Diamonds unsold at date (per contra) 64,439 2 3

Balance transferred from Appropriation Account Contingent Liability—The Company has guaranteed the repayment of, and interest on, £1,250,000 5 per cent. 1st Mortgage Debenture Stock issued by the Cape Explosives Works, Limited, Somerset West, Cape Province. 387,229 12 9

£14,506,663 8 7

During the year the usual Preference Dividend of 20s per share, less 1s 6d in the £ Dividend Tax, was paid.

Owing to the abolition of the Dividend Tax with effect from 1st July, 1924, the Preference Dividend will in future be paid without deduction. The amount deducted in respect to the year under review has since been refunded to Preference Shareholders.

A Dividend of 20s per share was also paid to Deferred Shareholders.

During the year under review the diamond market remained steady, and slightly higher prices were realised by the company for its diamonds.

It is with deep regret that your Directors have to record the death on the 15th November, 1924, of the Right Honourable Edwin S. Montagu, Deputy Chairman of the Company.

The vacancy on the Directorate has been filled by the appointment of the Right Honourable the Earl of Bessborough, C.M.G., who was afterwards elected Deputy Chairman.

The Conference of the four large Diamond Producers, which, as mentioned in last year's report, was held in April, 1924, and adjourned *sine die*, was resumed towards the end of that year, with the result that the Inter-Produrers Agreement was renewed, with slight modifications, for one year from 1st January to 31st December, 1925.

In January, 1925, negotiations took place between representatives of the Conference Producers and the Diamond Syndicate with the object of arranging contracts for the sale of the Producers' diamonds, but these negotiations bore no result. Subsequently, however, the three Union Producers entered into contracts for the sale of their diamonds for the period 1st January to 31st December, 1925, to a reconstituted Syndicate composed of the majority of the members of the Syndicate which had purchased this Company's diamonds for many years. The South-West Africa Producers made other arrangements for the disposal of their diamonds.

Since the close of the year under review agreements have been concluded by the four Conference Producers for the sale of their diamonds for a period of five years from 1st January, 1926, to a new Syndicate, which includes some of the members of the previous Syndicate, with whom the Company had these agreements subject to the approval of the Honourable the Minister of Mines and Industries.

The fact that all the Conference Producers' diamonds are once more handled by a single organisation should ensure stability to the diamond trade.

A report by the General Manager will be submitted at the Meeting.

In terms of Clause 84 (c) of the Company's Articles of Association, three Directors retire, namely, Friedrich Hirschhorn, Robert Philipson-Stow, William Pickering, but, being eligible, offer themselves for re-election.

P. ROSS FRAMES, Chairman,
A. G. W. COMPTON,
F. HIRSCHHORN,
R. PHILIPSON-STOW,
W. PICKERING,
Directors.

Kimberley, 27th October, 1925.

By Order of the Board,
E. F. RAYNHAM, Secretary.
JNO. A. NEVILLE, Chief Accountant.

HOWARD PIM & HARDY,
SALISBURY, BEATON, & RAYNHAM,
Auditors.

We certify that all our requirements as Auditors have been complied with, and that we have examined the above Balance Sheet with the Accounts and Vouchers relating thereto, including the Audited Returns of the London Transfer Office, and find the same to be correct.

THE MONEY MARKET.

FIVE PER CENT.

BANK rate was raised on Thursday to 5 per cent. For the past fortnight the City had been watching the policy of the New York Reserve Bank for indications of an approaching rise in the Bank of England rate. This week, however, domestic developments in the shape of continued heavy gold withdrawals forced themselves upon the attention of the money market, and by Wednes-

day evening there was a general expectation that the Bank of England would take the course which it actually adopted, though in some quarters it was thought that the Bank might compromise with a move to $4\frac{1}{2}$ per cent. The banks and discount houses raised their deposit rates by 1 per cent., and the clearing banks also put up their rate for advances, by 1 per cent., to 4 per cent. Money was surprisingly comfortable on Monday, the last day of November, and became very easy after the War Loan interest payment. Repayments to the Bank and a Conversion Loan instalment that fell due yesterday had no apparent effect on the supply of credit. In view of monetary conditions here, it seems probable that before long the margin between Bank rate and the market rate of discount, which in the past few months has been reasonably narrow, will become much wider, and thus reduce the effectiveness of the official minimum. The discount market has hardly yet found its feet on the new level, but fine three months' bank bills were quoted at $4\frac{1}{2}$ per cent. and taken in some quarters at $4\frac{3}{8}$, $\frac{7}{16}$ per cent.

	Dec. 4, 1925.	Nov. 27, 1925.	Nov. 20, 1925.	Nov. 13, 1925.	Previous Rate and Date Changed.
Bank Rate	5%	4%	4%	4%	4 (Dec. 3, '25)
Banks' Deposit Rate	3	2	2	2	2 (Dec. 3, '25)
Discount (Call)	3	2	2	2	2 (Dec. 3, '25)
Houses' Notice	$3\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills) ..	$4\frac{1}{2}$	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	..

The Bank return shows a decrease of £1,074,000 in the stock of coin and bullion, £1,060,000 in gold having been announced as exported. The note circulation increased by £1,330,000, and the Reserve was thus £2,404,000 lower with its proportion to liabilities 3.6 per cent. lower at 15.9 per cent. Government securities rose by £20,840,000 owing to borrowing by the Treasury for War Loan interest, while repayments by the market were shown in a decline of £5,652,000 in Other securities. Public deposits declined by $5\frac{1}{2}$ millions, and the Other deposits were thus $18\frac{1}{2}$ millions higher. Currency notes were reduced by £633,100 to £289,418,500, which includes £1,318,900 for notes called in but not yet cancelled. The fiduciary issue is £231,849,500, or £16,295,900 below the maximum for the year.

NEW YORK MARKETS.

Our New York correspondent cables:—The share market, after the severe shake-out which followed the increases in Federal Reserve discount rates, seems to have recovered equilibrium, with oils and rails firm on a resumption of bullish activity. *Bradstreet's* commodity price index number has risen by 0.6 per cent., and is now 56.3 per cent. above the pre-war level. The Federal Reserve system statement shows a rise in discounts of \$19 millions, with reserves and open market purchases little changed, the ratio being 70.5. The discounts of the New York bank have declined by \$5 millions and the ratio by 0.6 per cent. to 79. Circumstances will probably control future policy. An advance in the New York rate would be not unnatural, but there is no pressing reason for a change. The Belgian financial representatives have sailed without securing the desired loan, but have probably obtained assurances of sufficient short credits to maintain the exchange position.

THE STOCK MARKETS.

Thursday's rise in Bank rate to 5 per cent. was not altogether unexpected by the Stock Exchange, and prices in the gilt-edged market, which were marked down slightly when the change was announced, were unchanged on balance at the end of the day. The markets generally, indeed, reflect relief at the removal of monetary uncertainty. French bonds have recovered a little, and European bonds are better on the signing of the Locarno Pact. Home Rails have remained quiet, but there was a slight improvement towards the end of the week. Argentine rails slumped on rumours of damage to crops by rust,

but recovered on reassuring news. The boom in rubber shares continues and overshadows the industrial section. Chartered recovered on dividend expectations, but mines are mostly neglected.

THE COMMODITY MARKETS.

The approach of the annual stocktaking period has induced the usual slackening in the iron and steel trades, but the general tone remains cheerful. There is no change in the coal markets, steam coals remaining a fair demand. In the cotton textile markets inquiry has been on slightly broader lines, but wool textile buyers in the West Riding are unwilling to commit themselves very far until prices are more certain. The jute trade is quieter, with prices steady in the absence of marked buying activity. The wheat market continues very firm, sugar is in moderate demand at recently established price-levels, coffee steady, and tea is an active market. Rubber is firmer, though showing irregularity from time to time. In the metal markets tin has lost ground after an advance, copper has been liberally offered, while lead is firmer after early weakness.

FOREIGN EXCHANGES.

There has been considerable activity in the foreign exchange market during the week. In view of the continued drain of gold from the Bank for export, and the increase in credit caused by Government borrowing, the rise in the Bank rate to 5 per cent. on Thursday was not unexpected, but in the absence of any certainty in the matter, the New York rate weakened steadily during the preceding days. Thus it fell from 4.84 $\frac{1}{2}$ on November 27th to 4.84 $\frac{1}{4}$ on Saturday, and 4.84 $\frac{1}{2}$ on Monday. On Tuesday it closed at 4.84 $\frac{1}{4}$, and on Wednesday actually touched gold point. As it did not, however, fall sufficiently far below gold point to make the export of gold to America a profitable transaction, there is no record of any despatch. On the announcement of the rise in the Bank rate on Thursday it recovered to 4.84 $\frac{3}{4}$, and opened yesterday morning at 4.84 29-32. Forward rates are narrower at $\frac{1}{2}$ cent per month above spot. Paris has fluctuated sharply in accordance with the various incidents in the political crisis. From 124.70 on November 27th it rose to 125 on Saturday, but on Monday recovered to 121.45 on the news of the formation of M. Briand's Cabinet. The effect of this, however, soon wore off, and from 123.90 on Tuesday the rate rose to 126.55 on Wednesday, when it became clear that further inflation was inevitable. This view proved on Thursday to be correct when M. Loucheur made his proposals in the Chamber to increase the legal limit of the Bank of France's advances to the State by 6 milliards and of the note issue by 7 $\frac{1}{2}$ milliards, as well as a heavy increase in taxation. The Bank return issued on that day already showed an increase of 1 milliard in the note issue, and $1\frac{1}{2}$ milliards in the advances. On this news the rate rose to 127.50, but yesterday morning was slightly better at 126.50 on the news that the Finance Bill had passed the Chamber. Brussels has been steady between 106.95 and 107.05 during the week. It would seem that the Belgian Government have decided upon devaluation in principle, but that the actual rate at which this is to be carried out has not yet been determined. Forward rates on Paris have narrowed slightly from 40 to 30 centimes per month above spot, but on Brussels are steady at 60 centimes per month above spot. Italy has fallen slightly from 119 $\frac{1}{2}$ to 120 $\frac{1}{2}$. Amsterdam moved against us early in the week from 12.05 on 27th to 12.04 $\frac{1}{2}$ on Wednesday, partly in sympathy with New York and partly owing to heavy purchases of rubber from the Dutch East Indies. With the change in the Bank of England rate, however, it recovered to 12.06. Switzerland has moved from 25.13 to 25.15 $\frac{1}{2}$, and Stockholm from 18.10 $\frac{1}{2}$ to 18.11 $\frac{1}{2}$. Berlin has risen from 20.34 to 20.35 $\frac{1}{2}$, but Vienna, Prague, and Budapest are unchanged. Copenhagen, after rising from 19.45 to 19.50, fell again to 19.37, while Oslo is steady round 23.82, and Helsingfors round 192 $\frac{1}{2}$. Madrid continued at first to rise from 34.16 to 34.22, but reacted to the news of the formation of a constitutional Government, and opened yesterday at 34.16 again. Warsaw had a further decline to 38 as a result, probably, of the uncertainty prevailing while the new Ministry is establishing itself. In the Near East, Athens rose from 362 to 364, but Bucharest is slightly easier at 1070. In the East the rupee is steady

at 1s 6 13-64d, while the yen is $\frac{1}{2}$ d better at 1s 9 $\frac{1}{2}$ d. The silver market has been quiet during the week, with little movement in price. Hong Kong is $\frac{1}{2}$ d weaker at 2s 4 $\frac{1}{2}$ d, and Shanghai has fallen from 3s 1 $\frac{1}{2}$ d to 3s 1 $\frac{1}{4}$ d. Rio is steady around 6 31-32d, but Buenos Aires is $\frac{1}{2}$ d better at 46 $\frac{1}{2}$ d. Monte Video has fallen from 50 $\frac{1}{2}$ d to 50 $\frac{1}{4}$ d, and Valparaiso has risen from 39.00 to 39.30 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 28th:—

(000's omitted.)			
EXPENDITURE.		RECEIPTS.	
Supply Services	7,392	From Revenue	8,971
Interest, &c., on Debt	1,030	Increase in Debt	979
Sinking Fund	590	Decrease in Exchequer Balances ..	114
Sundries	1,052		
	10,064		10,064

The Revenue for the week amounted to £8,971,200, as compared with £9,893,700 in the corresponding week last year. Customs were higher at £2,338,000, against £1,992,000, but Excise was lower at £1,485,000, against £1,626,000. Property and Income-tax brought in £1,258,000, as compared with £1,502,000, while Super-tax, at £360,000, was £30,000 higher. Ordinary receipts were higher at £618,200, against £74,600, but Special receipts were lower at £82,500 as compared with £1,011,100. The week's operations increased the National Debt by £979,200, and caused the following changes:—

(000's omitted.)			
Treasury Bills	+ 585	Public Department Advances ..	1,200
3 $\frac{1}{2}$ % Conversion Loan	+ 2,017	Sundries	423
	+ 2,602		1,623

The floating debt was reduced by £645,000 to £768,821,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Nov. 28th).

£		£	
Total Expenditure ..	507,046,924	Raised by Revenue ..	446,354,936
		Decrease in Balances ..	3,358,557
		Amount borrowed ..	57,333,431
Total	507,046,924	Total	507,046,924

ESTIMATES for FINANCIAL YEAR 1925-1926.

£		£	
Expenditure	799,400,000	Revenue	801,060,000
Surplus			£1,660,000.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British Overseas Bank, British and Chinese Corporation, Inveresk Paper Company, Chinese Engineering and Mining, Strand Hotel, E. W. Tarry and Co., and Malaya General Company. At the meeting of the Inveresk Paper Company the chairman dilated at length on the woes of the paper trade, and competition from countries using "sweated labour," but was able to announce a dividend of 15 per cent., against 12 $\frac{1}{2}$ per cent. for the preceding year.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

AFTER LOCARNO.

LOCARNO is almost in danger of undergoing the fate of Aristides, whose undoing was the excess of eulogy his virtues provoked. It was inevitable that this should be what the papers have called Locarno week, but now that it is over and the treaties are duly signed, there will be general agreement that it is the future that must henceforth claim attention and not the past. Locarno was a milestone. The conference itself made a substantial contribution to the cause of peace and reconciliation in Europe, and the actual ceremony of signature, together with the diplomatic conversations for which it gave opportunity,

have made another. The speeches at the Foreign Office on Tuesday, commendably brief as they were, were worthy of the occasion. That is particularly true of the declarations of Dr Luther and Dr Stresemann, who alone of the delegates present had the record of a hard domestic fight over the treaties behind them, but there was, in fact, little to choose between the spirit in which M. Briand held out the hand of friendship and the spirit in which the German delegates grasped it.

But tempting though it may be to dwell on an episode so hopeful, the one thing that matters now is the effect of Locarno on the future of Europe. Already the treaties have had various secondary consequences. The evacuation of the Cologne zone has been begun, and its completion is to be accelerated so as to remove the last excuse any recalcitrants in Germany may have for urging postponement of the country's application for membership of the League of Nations. Belgium has announced her formal abandonment of the idea of carrying further the futile war criminal accusations, and France appears to be intending to follow suit. In the same order of things, though on a manifestly lower level of importance, is Sir Austen Chamberlain's decisive denunciation of the revived "Kadaver" legend.

All this has its value so far as it goes. Dr Luther and Dr Stresemann will at least avoid the reproach of returning home empty-handed. But it is by developments of much greater moment than these slight though welcome gestures that the value of Locarno must be gauged. The agreements have, of course, to be ratified by the countries that signed them. There is no good reason for much delay about that. The Reichstag and Reichsrath votes give the necessary authorisation in Germany, and in the other countries concerned there is nothing to justify delay in carrying the necessary formalities through. Apart from that, the centre of attention will now be Geneva. Germany is, of course, pledged to enter the League, and the Reichstag resolution has given Ministers full authority to make application for membership at any moment—for though the operation of the Locarno agreements must wait on Germany's admission to the League, her application for membership need not wait on ratification of the agreements. Unfortunately, the existing Cabinet appears to regard its mandate as discharged, and its members propose to resign office forthwith, thus leaving it to their successors to take the necessary steps at Geneva. That disposes of any prospect there may have been of an immediate application which would have admitted of the summoning of a special Assembly to admit Germany some time in January. Nothing worse than delay is threatened, and it is likely enough that Dr Stresemann will be Foreign Minister in the new administration as in the old, but, in view of the importance attaching to Germany's co-operation at Geneva, the sooner it becomes a practical reality the better.

Meanwhile there are certain indications, almost impalpable but unquestionably with some reality behind them, that the actual signature of the Locarno treaties is recognised at Moscow as a new and vital factor in the political life of Europe. The old cry that the accords mean an aggressive move against Russia is still being sustained, but it cannot be supposed that any responsible person in Russia believes it. Sir Austen Chamberlain has made declarations on that point sufficient to dispel the most insistent suspicions, and so long as the door of the League of Nations (the ordinary door, not a special entrance) stands open for Russia it is futile to affect to discover in a series of agreements which happened to be concerned with areas of Europe outside Russia, and which are manifestly defensive, and only defensive, in character, some sinister marshalling of the armies of Europe for aggression in the East. M. Tchitcherin is sagacious enough to grasp the real situation, and to recognise that the Locarno agreements do affect Russia's position to this extent, that if at any moment she herself contemplated aggressive action, or were still cherishing the idea of a Russo-German bloc with interests and intentions opposed to those of Western Europe, the day for the realisation of any such hopes has passed. Germany, as signatory of

the Locarno agreements, and as prospective member of the League of Nations, has thrown in her lot definitely with the Allied States (as it is still convenient to call them) in their resolve to keep peace unbroken.

That the policy of the Soviet Government has completely adjusted itself to this new situation is unlikely, particularly as the Commissar for Foreign Affairs has been away from Moscow for more than two months. But the successive visits of M. Tchitcherin to Warsaw, Berlin, and Paris, coupled with rumours, for which there may or may not be solid foundation, of his desire to meet Sir Austen Chamberlain, are indications of a sudden interest in European diplomacy which nothing but Locarno can explain. Russia, there is some reason for assuming, recognises that with Germany in the League of Nations she can no longer maintain her attitude of contemptuous indifference towards Geneva. That does not mean, of course, that anything like an early Russian application for membership of the League is to be contemplated. Nor, it may be added, is that entirely to be desired. It will take some little time for Germany and the League to adjust themselves satisfactorily to one another, and it is as well that that process should be completed before the rather more formidable task of assimilating Russia is entered on. But a gradually increasing willingness on the part of the Soviet Government to associate itself with the technical activities of the League may be anticipated. The fact that a Soviet representative has been taking part in the last fortnight in the discussions of a League sub-committee on the measurement of tonnage in inland navigation is in itself a matter of almost negligible consequence. It has its significant side none the less, and the participation of the Soviet Government in the ill-fated naval disarmament committee convened by the League at Rome last year, and in certain of the standing activities of the Health Organisation, show that chronic denunciation of the League on its political side is not felt at Moscow to be any fatal obstacle to a certain amount of co-operation in some of its non-political enterprises. That tendency will almost certainly be found to have been stimulated by Locarno.

These, however, represent some of the ultimate consequences of the treaties just signed. The immediate questions concern Germany and not Russia. The time is at hand to put Locarno to its real test. That can be done better at Geneva than anywhere else. It is indeed at Geneva, by the nature of things, that that must be done. But concurrently there are direct negotiations between Germany and certain of her neighbours, notably the discussions now in progress with Poland over a commercial treaty, that will provide just as good a touchstone. It is hardly likely that the formal resignation of the present German Cabinet will mean the succession of an administration more Nationalist in colour. If, as seems probable, the Government is reconstructed on no very different basis from the present, a Cabinet not unlike the one which took responsibility for Locarno will have an early opportunity of proving to the world what Locarno really means to Germany.

THROUGH SAFEGUARDING TO PROTECTION.

IN the first public speech which he delivered after his return to power last autumn Mr Baldwin emphasised his recognition of the truth that the votes by which the Conservative Party was returned included very many cast by those who did not hold Conservative views. He had in mind, presumably, mainly those who would normally vote on the Liberal or Labour ticket, but who were scared into his camp by the bogey of Bolshevism. He must have reflected, too, that these very people, to whom he owes the commanding nature of his Parliamentary majority, would, even in those special circumstances, never have voted for him if they had not been lulled by his definite pledges into the belief that the Free Trade system was reasonably safe in his hands. That he had swum into power on a wave of votes of which many would normally have been used against him, Mr Baldwin professed himself determined to remember in his conduct of government. Either his memory must be atrocious or his conscience extremely uneasy. Within six months his Government

had put protectionist duties on motor cars, clocks, watches, cinematograph films, hops, and lace, had taxed silk, and had put into operation the machinery of "safeguarding" which is already yielding a new crop of tariffs, for cutlery, packing paper, gloves, and gas mantles, and promises to produce a bumper harvest of other duties. "I will not introduce a general tariff," said Mr Baldwin a year ago, and (even more recently) "I will not make the safeguarding scheme the thin end of the wedge of Protection." The hundreds of thousands of Free-traders who were lulled into a sense of security because they thought that he honestly meant what he said, are having a bitter lesson in the value of political promises.

We do Mr Baldwin the credit of believing that when he made his pledges he intended to carry them out. But he has been too weak to withstand the pressure from his own party, and has lacked the support in withstanding it, which he might have expected from his alleged free-trade Chancellor. We are prepared to believe, further, that when the Safeguarding scheme was set up Mr Baldwin did not contemplate the ease with which industrial applicants would surmount the barricade of conditions. He meant, probably, to drive the tariff car cautiously and within the speed limit. But he misjudged the power of the engine, and finding that his brakes will not work, has now lost control and is rushing with increasing velocity down a steep place into the sea of Protection.

Let us see how this has happened. The conditions to be satisfied by a tariff applicant looked, when they were issued, capable of keeping at bay any but the most exceptionally needy and deserving case. But they were loosely enough drawn to admit of varying interpretation; and the machinery, which looked as if it might be harmless, when it was new, has developed amazing propensities in the hands of a protectionist administration. An industry, thinking it would like a bite at the new tariff cherry dangled over it, submits its case to the President of the Board of Trade. To him it has to make out a *prima facie* claim. But the President happens to be a protectionist, so the first step is easy, and a Committee of Inquiry is granted. Next the protectionist President of the Board of Trade himself appoints the Committee, and in almost every case the persons appointed are so little known that the public cannot even judge the accusation that it is packed with Protectionists. The Committee sits and hears the application, but does not hear the case for the consumer or for any other interests involved. The broader ramifications of effect of a duty are not even considered. It reports. But the President of the Board of Trade not only delays the issue of the report till a few days before Parliamentary action, but entirely suppresses the evidence on which the Committee's recommendations are based. We need say no more to show that the whole procedure is suspect, inadequate, of a hole and corner variety, an insult to the intelligence of Parliament and the country, and a haphazard toying with the foundations of our fiscal system.

The reports recommending the four duties now being rushed through the House of Commons appeared as we were going to press last week, and we were only able to say of them, after a cursory glance, that they revealed that the interpretation of the White Paper conditions was purely a matter of chance. Further study shows these reports to be the most amazingly unsatisfactory documents. One of the truest remarks made in the House of Commons this week was that of Mr Philip Snowden when he said that every recommendation of the Committee's was a *non-sequitur*. Take the cutlery report as a test of this statement. First, is the industry of substantial importance? Yes, say the Committee. Why? Because it employs 8,000 workers—truly a surprising interpretation of the word substantial—and because it made knives in the days of Julius Cæsar! Secondly, are competing goods being imported and retained in abnormal quantities? Here, although no comparable figures for 1913 are available, an affirmative answer is given to all branches coming under the application, even though the figures given show enormously lower than in 1920. Turning next to the question whether similar imported goods are being sold at prices impossible to home manufacturers, the Committee again say "yes" on the flimsiest of evidence. Here is

the relevant passage: "Whatever difference there may be in the qualities of the steel and in general durability, the articles have the same appearance and finish....." If a business man, like the Committee, were satisfied with merely superficial appearances, he would soon be in the bankruptcy court. The next question is whether import competition seriously affects employment in this country. Another affirmative, of course, is given by the easy-going Committee, who give it in spite of their admitted inability "to obtain the actual statistics of unemployment in the cutlery industry." On the next question, whether competition is "unfair," the Committee make the usual reply, but make no better case for it, for the most they can do is to make a very dubious kind of estimate of relative wages in England and Germany. On the next count, whether the industry "is being carried on with reasonable efficiency and economy," the Committee are guilty of downright contradiction. They return the usual "yes," but reach that conclusion by arguing that Sheffield manufacturers "are desirous of bringing their factories up to date," and want a tariff to help them to do so. So admittedly the factories are not up to date. Yet they pass the Committee's efficiency test. Finally, without mentioning export trade, the Committee dismiss the contention that any seriously adverse effect could be produced in other industries by a duty on cutlery. On every count discussed the Committee's treatment of the subject is so insufficient, lax, and even ignorant, that the report is absolutely worthless from start to finish.

The other three reports, if not quite such amazingly bad pieces of work, are heavily tarred with the same brush. Here are a few points illustrating the fact. Gas mantles only employ 1,624 people, but they are said to be "of substantial importance" for some abstruse reason connected with the "key industry" argument. Competing imports are said to be abnormal, although the figures given only take us back to 1920, and show a decline in 1924. Employment "has not varied greatly in recent years"; figures adduced to suggest unfair competition are admitted to be unreliable; as regards the efficiency question "in regard to factory on-costs and in regard to general overhead administration expenses, there is room for considerable improvement." Not one word of justification for a duty on the basis of the White Paper is to be discovered anywhere, yet one is recommended. Take next the Report on gloves. One condition which, according to the White Paper, every applicant has to satisfy is that competing imports are abnormal. In this case the figures are instructive. Of the total British leather glove consumption in 1913, 26 per cent. was home produced and 74 per cent. imported, in 1924, home production had risen to 32.5 per cent., and imports had dropped to 67.5 per cent. Yet leather gloves pass this test for some reason which we utterly fail to fathom. With fabric gloves the story is the same; the British manufacturer has a greater share of the home market than in 1913, but the Committee regard it as a "post-war industry"—there was nothing about that in the White Paper—now capable of supplying the entire home market, and so with absolute disregard for the conditions which they were supposed to apply recommend a duty, even though it is admitted that the evidence regarding the unfair nature of the competition "was very conflicting." Into the Report on wrapping and packing paper we have not here the space to enter in any detail, except to say that a duty is recommended after admission that efficiency of the British mills leaves much to be desired, while most of the other tests are passed in as dubious a method as those which we have enumerated in the case of the other industries.

This rapid survey of some points in the Reports suffices, perhaps, to give an idea of the fantastic grounds on which the Government is forcing through Parliament piece-meal measures of high protection, which threaten, as they multiply, to permeate our fiscal system, which cannot improve, and may even aggravate, the unemployment problem, and which immensely discourage at the very outset the embryo attempts at an international onslaught on tariff walls. Where will the process end? A frontal attack on the Free Trade position by the straightforward proposal of a general tariff would be

easier to meet and resist than this spasmodic and uncorrelated infiltration by back-door methods. How far, we repeat, is the process to be allowed to go? The country is entitled to a clear statement by the Prime Minister. But the amazing thing about the debates in the House of Commons this week is that, while these new tariffs were being forced through by the closure, and while the Prime Minister's political honour was being gravely indicted hour by hour, neither Mr Baldwin nor Mr Churchill spoke a word, or, indeed, listened to more than a small portion of the debate. Pre-occupation with the Irish negotiations may perhaps serve as an excuse; but nothing will excuse much more delay on the part of Mr Baldwin in taking up the challenge.

THE FINANCIAL PROBLEM IN FRANCE.

AT last a step towards the solution of the French crisis has been taken. On Thursday, following a strong appeal by M. Briand, the drastic financial proposals of M. Loucheur (described by our Paris correspondent on a later page) passed the Chamber by a majority of 28, for which Socialist abstentions were largely responsible. The object of the political manœuvres of last week is now clear. It was to explore every possible avenue to satisfy Socialist opinion, this having to be thoroughly attempted before the Radical Socialists could be reconciled to working with groups nearer to the Centre. M. Briand was quick to recognise this vital factor in the situation. On the other hand, in spite of the evidence that the Cartel des Gauches cannot work together as a harmonious force, no one believes that a fresh appeal to the country would substantially alter the composition of the Chamber. The fundamental reason for this is that France is now profoundly persuaded that her interest is to pursue the policy of Locarno, not of the Ruhr. Even if any doubts on this point remained, the present financial crisis compels France to realise that any reversion to the latter policy would be suicidal.

We print below a French view of the financial and political problems with which France is wrestling, which comes to us from an eminent French observer. It was, of course, written before the developments of the present week:—

The problem which M. Painlevé attempted to solve with distinguished courage presents to any Government two inseparably connected aspects—the political and the financial. From the political standpoint, the crisis of the franc demands immediate action, which requires a disciplined Parliamentary majority, prepared to pass the necessary new taxation at once. Had a sufficient group detached itself from the old Bloc National to constitute, with the Radical Socialists, a working majority, M. Painlevé would not have been obliged to turn to the Socialists, and so incur the reproaches of the Conservative parties. As it was, the little group composed of MM. Landry, Le Trocquer, and Colrat—who had all served under M. Poincaré or M. Millerand—only decided a few weeks back to break with the Bloc National and approach the Cartel. Moreover, it was not strong enough to free a Republican Government from dependence on Socialist support in the Chamber. This Socialist support, in its turn, has involved, for every Cartel Government to date, a fatal weakness in the Senate. Those, however, who regard the Senate as simply intransigent make a profound mistake. It is far too well aware of the financial difficulties to fail to see the urgent need of new taxation. It has, moreover, too much political sense to force a violent conflict with the Chamber which must disturb the country, cause a fresh slump in the franc, and benefit exclusively the most reactionary section of the Bloc National. Nevertheless, the Senate would be loth to accept a plan which, even if only in form, looked like a class rather than a broadly national measure. Will the Socialist party display enough political sense to see this? Or is it, also, to be split into two sections, of which the more reasonable will support a "Ministry of Concentration," in line with the unspoken hopes of the Senate? This is the secret of to-morrow.

On finance, the new Ministry will have to take its prescriptions from the same pharmacopœia by M. Painlevé. The gist of his plan, as of that first adopted by M. Cail- laux, was to ask for three and a-half milliards to balance

associations, is making itself felt. It was evidenced at the time of the session of the Royal Commission on Food, and comes to the surface again whenever there is any kind of trade investigation, especially any that concerns the textile trades, who claim that they are penalised by the profitable operations of the "rings" in bleaching, dyeing, and finishing.

Fortunately, the workings of the Federal Trade Commission need not be studied in political and polemical articles in the Press. Two scholarly books are available. One just issued in French,* is the work of an American who, after a period as director of comparative social economics at Lyons, has returned to Illinois as professor of economics there. Moreover, a year ago another American, Mr G. C. Henderson, issued a very impressive, if critical study, published by the Yale University Press†. Mr Henderson's book looks at the work of the Commission mainly from the angle of a lawyer, concerned with an experiment in administrative law; Mr Wassermann takes a more comprehensive view, and gives a fuller description. With these two volumes to guide him, the student can get a clear and complete picture of the origin and work of the Commission, established in 1914 as the result of a widespread demand for a new administrative agency and tribunal to carry out the anti-trust laws. Opponents of the trusts were at one with the big business interests in holding that the courts were not the right authority, since their outlook was purely legal, while the problems to be dealt with required for their solution business and economic judgment. This was more particularly the case since the Supreme Court had in 1911, during the proceedings against the Standard Oil and Tobacco Trusts under the Sherman Act, propounded the so-called "Rule of Reason"—ruling that the Sherman Act prohibited only those contracts, combinations, and conspiracies which *unreasonably* restrained trade. This suggested that the decision of the Court in any particular case was likely to depend largely upon the economic views of the judges.

The Federal Trade Commission Act provided for the appointment of a Commission of five members, with a secretary, administrative, legal, and clerical staff. Its functions were partly investigatory, and partly of an administrative and judicial order, being connected with the suppression of certain acts and practices prohibited by the Act itself or by the Clayton Act, which was passed also in 1914. In connection with its investigatory functions the Commission was to take over the Bureau of Corporations, an organisation established some years earlier. The powers of investigation granted to the Commission were very wide, though not unlimited; much useful work has been done, and a number of valuable reports have been published.

The Commission has power to issue and serve a complaint upon any person or corporation believed to be carrying on any of certain practices, or to have performed any of certain acts prohibited by the Federal Trade Commission Act or the Clayton Act. The complaint calls upon the parties concerned to "show cause why an order should not be entered by the Commission requiring such person.....to cease and desist from the violation of the law so charged in the complaint." The Commission was given no power directly to enforce an order made by it, but if the order were disobeyed it could apply to the circuit court of appeals to have the order enforced. Alternatively, a person against whom an order had been made could apply to the court to have it set aside as invalid. In either case there might be appeal to the Supreme Court on *certiorari*. The courts were instructed in the Acts that "the findings of the Commission as to the facts, if supported by testimony, shall be conclusive," but otherwise they were left to interpret the law.

The prohibited acts and practices with which the Commission is concerned are briefly as follows:—

1. Unfair methods of competition in inter-State commerce.
2. Discrimination in price between different purchasers, except on account of differences of grade, quality, &c., or differences in cost of selling or transportation.

* "L'Oeuvre de la Federal Trade Commission." Par Max J. Wassermann. 1924. (Paris) Giard. 50 frs.
† "The Federal Trade Commission." By G. C. Henderson. Yale University Press. 1924.

3. Sale, leasing, &c., of goods on condition of exclusive dealing, where the effect may be substantially to lessen competition or tend to create a monopoly.
4. Acquisition by one corporation of stock in another, where the effect may be substantially to lessen competition between them, or to restrain commerce, or tend to create a monopoly.
5. Interlocking directorates between competing companies with a capital of more than \$1,000,000.

The importance of the results achieved by the Federal Trade Commission in its judicial capacity has certainly fallen far short of popular expectations at the time when the legislation of 1914 was passed, and also, no doubt, of the expectation of the Commission itself. This is primarily due to the severe limitations which the courts have placed upon the powers of the Commission by the interpretation of the Trade Commission and Clayton Acts. The Commission had supposed that it was endowed with discretion in deciding what were unfair methods of competition, but the courts held that this was a matter for legal interpretation. Mr Henderson observes that "if the Commission is, by these decisions, shorn of all power to exercise administrative discretion in matters of unfair competition or of restraint of trade, and monopoly, it has become little more than a subordinate adjunct of the judicial system." He thinks, however, that the decision of the courts may mean merely that it is for them to decide ultimately the limits within which practices may reasonably be held by the Commission to be unfair.

Another limitation of the Commission's authority, as defined by the Supreme Court, is that the order can prohibit only the method of competition or other practice charged in the complaint. However reasonable this may seem, it leads to great difficulty in drawing orders. If the order is too general it goes beyond the practice complained of, and if it is too narrow it can be evaded by a slight modification of the practice.

Apart from the limitation of authority by the Courts, Mr Henderson considers that many of the Commission's findings are open to serious criticism on the ground of accuracy and fairness. Mr Wassermann, it may be noted, disagrees with him here; and Mr Henderson admits that the later findings show improvement, and he also notes that in the extra-legal proceedings known as "Trade Practices Submittals," the reports "are invariably more illuminating, more judicial in tone, and more imbued with the scientific spirit, than are the findings entered in formal proceedings." The "Trade Practice Submittal," it should be explained, is a voluntary procedure, under which the fairness or unfairness of any trade practices which have grown up or are growing up are discussed by representatives of the industry in the presence of the Commission.

Many of the cases dealt with by the Commission involve deceptive or dishonest practices of a kind which are judged in this country by the ordinary courts, under such legislation as the Merchandise Marks Acts. Others relate to practices in restraint of trade, i.e., to practices which it was more particularly the purpose of the anti-trust acts to suppress. The harvest of practical results achieved in these latter cases is quite meagre.

In other cases involving unfair price tactics, Mr Henderson finds that the records of the Commission indicate no attempt to grapple with the difficult questions of law and accountancy involved, or to analyse the business facts necessary to a decision. The trade boycott cases were as a rule more satisfactory, but the Commission has handled them just as a court would handle them, except that its powers are more restricted, its procedure less flexible, and its remedy less prompt. Much the same holds of cases involving the question of price maintenance schemes. In the cases involving trade discounts the Commission's work proved ineffective, because it was based on a theory of law which the courts rejected. In the cases involving "tying clauses and contracts for exclusive dealing," the record has been one of consistent failure. The Commission waged a special campaign against the system under which the leading oil refiners leased tanks and pumps bearing their name or distinctive mark, to retailers at virtually nominal rentals on the understanding that the retailer would use them only to sell the lessor's brand of gasoline. No less than 35 separate orders were issued condemning the practice, and from the point of view of

time and expense these cases represent, according to Mr Henderson, probably the greatest single effort of the Commission to deal with a trade practice deemed to be injurious. The result, however, was a complete failure, for wherever an order was appealed against it was set aside by the Courts.

Nevertheless, both Mr Henderson and Mr Wassermann take an encouraging view of the future, though in Mr Wassermann's case native optimism, and a Latin predilection for centralising machinery, is clouded by the sense of the assembling forces, marshalled against this comparatively youthful institution.

BRITISH SEWING MACHINES.

CONSIDERING that so many of the improvements effected in sewing machines had their origin in America, it is surprising that British trade in these goods has shown such an uninterrupted advance for the last 35 years or so. It is true that one of the first machines of any promise was invented by an Englishman, but it was a crude production, and it was not till the American improvements were effected that the sewing machine began to take its place as a universal household requisite. America has certainly contributed far more towards the perfecting of the machine than we have done, and yet our trade in it has been continuously progressive.

That trade was badly hit by the war, and by the post-war slump. A considerable recovery has, however, already been made, as the following shows:—

RECENT OVERSEAS TRADE IN SEWING MACHINES AND PARTS.

	Imports.		British Exports.	
	Tons.	Thous. £.	Tons.	Thous. £.
1913	2,790	413	33,259	2,368
1920	1,897	721	23,343	3,937
1921	1,816	295	9,291	1,782
1922	1,198	502	19,823	2,946
1923	1,128	445	19,430	2,568
1924	1,222	563	21,712	2,429

From a third to a half of the imports are re-exported, as will be seen subsequently, so that these need not detain us. British exports are what concern us most, and it will be noticed that these fell from 33,259 tons in 1913 to only 9,291 tons in the great trade slump of 1921. The revival since has been both marked and sustained, and the results of the present year will carry it much further. For the ten months to October last shipments have aggregated 23,778 tons, valued at £2,436,000, and the year will probably end with a total of 29,000 tons, worth about £3,000,000.

This is a remarkable recovery, and next year should see the handsome beating of our pre-war record in quantities shipped.

A noticeable feature of the trade is that the great bulk of the goods are sent out of the country in parts. In 1924, for example, out of the 21,712 tons shipped only 2,760 tons went as complete machines, the remaining 18,952 tons being in parts. The manifest explanation is provided by import duties. These are usually much heavier on completed articles than on parts, which have to be "assembled" into complete machines after arrival in the country of destination. Doubtless this is why our manufacturers find it preferable to export their machines so largely in the form of "parts." However, it matters little to us whether they go in one form or in the other. If they go in sufficient quantity, that is all we need care about.

In considering the distribution of the trade we have to remember that before the war an overwhelming proportion of the business was done with the Continent of Europe. The 1913 exports of £2,368,000 went in the proportions of £1,877,000 to Europe, £218,000 to other foreign countries, and £273,000 to British Possessions. In other words, nearly 80 per cent. of the entire overseas trade was done with the Continent. Surprisingly large though this proportion is, it will be easily understood when we remember that Russia (at that time our best customer by far) took no less than £840,000 worth of these goods in that year. Seeing that over one-third of our entire exports thus went to one European country alone—and that country the one which has suffered

so terribly from the war and its consequences—it is remarkable that the trade has already made so vigorous a recovery. What it may be expected to do when Russian affairs again approach the normal will be seen from the following table:—

DESTINATIONS OF EXPORTS OF SEWING MACHINES AND PARTS. (In Thousand £.)

	Five-year Averages of—					
	1894-98.	1899-03.	1904-08.	1909-13.	1914-18.	1919-23.
Russia	164	517	709	647	228	7
France	178	237	212	214	219	581
Spain	25	97	75	99	81	166
Italy	76	110	113	149	105	173
Turkey	25	46	52	72	20	29
Other foreign countries	434	534	565	611	430	941
Total foreign countries	902	1,541	1,726	1,792	1,083	1,897
British Possessions	57	91	116	224	426	704
	959	1,632	1,842	2,016	1,509	2,601

Russia's average for the five years immediately preceding the war was £647,000, and if she had taken the same quantity of goods during the five years to 1923, their value at the prices then ruling would have been a long way in advance of £1,000,000, instead of the £7,000 worth of goods she actually bought. Clearly, the recovery of Russia is earnestly to be desired by all interested in the sewing-machine industry.

The most pleasing feature of the table is the excellent recovery of trade with France. In 1913 the actual quantity sent to that country was 4,806 tons, worth £218,000; in 1923 it was 4,649 tons, valued at £509,000. This is the degree of revival that we have to look forward to when Europe is herself again; and it will mean the raising of our exports to a value of nearly £4,000,000 per annum. Prices have, of course, fallen considerably since 1923, but they do not seem likely to fall much further. Our principal competitor in this trade has always been the United States, and cheapness is not generally that competitor's strong point.

The secondary competitor is Germany, but she has so many heavy handicaps to work under that we shall probably have little to fear from her for some time to come.

Meantime our own exports are going ahead in a highly satisfactory manner, and it will now be interesting to see how they look when we take a bird's-eye view of the trade over the past 36 years. In doing this we must confine ourselves to values alone, as quantities have only been recorded by the Board of Trade since the year 1908. This, then, is the progress we have made:—

BRITAIN'S OVERSEAS TRADE IN SEWING MACHINES AND PARTS. (In Thousand £.)

Five-Year Averages—	Imports.	Re-Exports.	Net Imports.	British Exports.
1889-93	233	27	206	716
1894-98	271	39	232	959
1899-03	331	62	269	1,632
1904-08	404	165	239	1,842
1909-13	366	126	240	2,016
1914-18	366	108	258	1,509
1919-23	517	295	222	2,601
Single Year—				
1924	563	195	368	2,429

For years previous to those covered by the above table the statistics are not easily available. It may be said, however, that in 1886 net imports were £182,000, and British exports £435,000; while still further back, in 1882, net imports at £202,000 were about 42 per cent. of the British exports at £487,000. The great advance since made will be realised when it is noted that in 1924 net imports were only 15 per cent. of British exports.

It is well to observe, too, that the greatest part of the advance had been made before 1908. The establishing here of an important American enterprise in 1905 can therefore have had nothing to do with it. English initiative and vigour—admittedly making large use of American inventions—was entirely responsible for the progress made.

Moreover, it should be noted that this American firm does the whole of its manufacturing for its British home and British export business at its extensive works in Scotland. Indeed, the organisation may be said to be wholly British, save for the American ownership of the capital. And the goods made at its Scottish factory have not only a large sale in this country, but also a wide and excellent reputation all over the European Continent.

We have said that our principal competitor is the United States. It is, however, very easy to over-rate the strength of that country's competition if only the gross exports of the two competitors are contrasted. Roughly, about a fourth of America's exports goes to nations in North and South America, where the markets for British machines and parts are negligible. Somewhat less than a fourth goes to Europe, which, as above mentioned, took 80 per cent. of our exports in 1913, and even in 1923 (when Russia was eliminated as a customer) still took as much as 60 per cent. of the goods we shipped. It will be realised that the distribution of the two countries' trade is entirely different, and that America's competition with us in our particular markets on the European Continent does not amount to much.

Perhaps a postscript may be added on the lack of clearness in our trade returns. From these it is impossible to discover whether our Board of Trade's classification covers any industrial sewing machines, as well as domestic sewing machines; and, if so, how many varieties of industrial machines are included. Certainly all of them are not grouped under the sewing-machines heading, for some are grouped under other headings in the machinery section—such as stitching machines for use in the bookbinding trade. Then, again, one wonders whether the heading of "Boot and shoe-making machinery" covers the sewing machines used in that trade or not. If not, it is to be presumed that they will be classed with the sewing machines. In short, we are left guessing at every turn on matters that should be made quite clear.

In the American trade returns there is perfect clearness. We have the headings, "Sewing machines for domestic use" and "Sewing machines for factory or industrial use," and then as regards the bootmaking trade there is the heading, "Shoe-making machinery, except sewing."

The imperfection of our own trade returns thus makes it impossible to attempt any exact comparison with the American statistics—a comparison which would have been of great interest and utility. It is to be hoped that something will be done to improve our trade statistics in this and in other respects.

PROCEEDINGS OF THE COAL COMMISSION.

A summary of the main points of the previous evidence will be found in our issues of October 31, and November 7, 14, 21, and 28, 1925.

THE Coal Commission resumed its sittings at Westminster Hall on Tuesday last, when evidence was given by Mr T. H. Bailey on behalf of the pioneer companies, which sink borings in areas believed to be coal-bearing, and make over proved fields to colliery companies, usually in consideration of deferred payments on subsequent output. These arrangements were stated to involve, as a rule, the payment of one penny or more super-royalty per ton raised. The work was described as extremely speculative, and although pioneering companies have been in existence for 25 years, in many cases where deposits have been proved the productive stage has yet to be reached.

Mr Frank Hodges gave evidence on behalf of the Miners' International Federation, whose main purpose he defined as the levelling up of conditions in all producing countries to those of the best-situated States. To that end, he suggested the creation of a representative International Coal Council to regulate the distribution of the available output. Severe competition between the two largest coal-exporting countries—Great Britain and Germany—had, Mr Hodges believed, had an unfortunate effect on the industry of both during the last two years. He suggested that the establishment in this country of syndicates of coalowners analogous to those of Germany, with powers to fix prices and output in each district, and having a central body on the lines of the Reichskohlenverband, would be an important first step. Apart from any question of international control, the central body would be in a position to negotiate with similar bodies abroad for the elimination of waste and overlapping, and its effectiveness would be increased if representatives of

the Government and the miners were included. The witness admitted that in Germany the policy followed by an analogous body had tended to raise domestic prices to compensate for the losses in the export trade, and suggested that public regulation of prices similar to that obtaining on the railways might eventually be called for.

On Wednesday, after the cross-examination of Mr Hodges had been concluded, evidence was given by Mr C. P. Markham, a coalowner controlling one-twenty-fifth of the annual British production. The witness described the methods by which his business had been built up, and strongly criticised any proposals which would tend to lessen competition in the industry. He advocated the working of an extra hour daily at the face, the closing of old pits which were no longer able to compete with the large output of the modern collieries, and a policy of friendly agreement with the workers with the object of adjusting British conditions as regards wages and other costs to a common basis with those of other countries. The witness strongly criticised various aspects of trade union policy.

On Thursday Mr H. F. Smithson submitted evidence on behalf of the National Association of Colliery Managers. Mr Smithson emphasised the fact that the managers bore the sole responsibility for mining operations, and urged the maintenance of this state of affairs. He believed that the managers as a whole were sympathetic towards the workers' suggestions in the matter of health and safety conditions, and that the conciliation machinery in operation at each mine had in practice given good results. He did not believe that there was any objection on the part of the miners to the introduction of machinery, nor was there any deliberate restriction of output, but absenteeism, due to "human" factors, was a definite evil.

Lieut.-Colonel M. G. Thwaites submitted evidence on behalf of Low Temperature Carbonisation, Limited, stating that small coal, the output of which was estimated at some 60 million tons annually, and had a market value of 2s 6d per ton, was capable of conversion into a commodity worth 30s per ton. Other advantages would accrue from a lessening of the risk of mine explosions due to finely divided coal and the production of large quantities of oil at present imported from abroad. A plant of 1,000 tons daily capacity would have an annual output of 1,260 million cubic feet of gas, 235,000 tons of "coalite," smokeless coal, 6,300,000 gallons of fuel oil and lubricating oil, 900,000 gallons of motor spirit, and 2,280 tons of sulphate of ammonia. The witness stated that serious opposition had been met with from certain bodies, but this attitude was now being modified. Evidence was also submitted by Mr Harold Nielson on behalf of Sensible Heat Distillation, Limited, as to the economies which would result from widespread adoption of distillation processes, and the Commission adjourned.

Notes of the Week.

An Irish Agreement.—It was suggested in these columns last week that the deadlock over the Irish boundary problem might become the occasion for a more comprehensive agreement with a temporary agreement on the present boundary as its basis. This hope has been fulfilled. All the week the Premiers of Northern Ireland and Baldwin and his colleagues, and all three parties are to be congratulated on their success in hammering out the agreement which was published late on Friday night. The gist of the agreement is as follows:—The Boundary Commission's powers are revoked; its report is not to be published and the boundary line between Northern Ireland and the Free State is to remain as before. The Free State is relieved of the obligation, placed on it by the Treaty, to contribute towards the service of the British debt and Treaty, but assumes full liability for malicious damage to property in the Free State since January 21, 1919. The Free State further agrees to repay damage compensations paid since that date by the British Government, and to

increase by 10 per cent. the compensation to be paid under the Damage to Property (Compensation) Act, 1923, for malicious damage done between July 11, 1921, and May 12, 1923. Five per cent. stock or bonds are to be issued for this purpose. The powers of the Council of Ireland are transferred to the Government of Northern Ireland, and "The Governments of the Free State and of Northern Ireland shall meet together as and when necessary for the purpose of considering matters of common interest arising out of or connected with the exercise of the said powers." The enforcement of this agreement requires identical legislation by the British and Free State Governments. In the meantime, the profit and loss account of the bargain will be carefully studied, and, since there is already talk of substantial opposition and possibly an appeal to the electorate in the Irish Free State, it is too soon as yet to throw up our caps. We may, however, echo the hopes expressed in harmony by Sir James Craig and Mr Cosgrave that an important step has been taken towards real Irish peace.

Parliament and the Communist Trial.—In the House of Commons on Tuesday the leader of the Opposition moved a vote of censure on the Government in connection with the Communist trial. The result, a rejection of the motion by a large majority, was, of course, a foregone conclusion, and the debate itself, though mainly unexceptionable in tone, suggests little addition to the comments made on the trial in these columns last week. There was no disposition in any quarter of the House to impugn the fairness of the trial or the justice of the verdict, and abhorrence of the Communist doctrine was manifest in all parties except the Communist Party, which consists of one member. Mr MacDonald made debating points by citing revolutionary speeches by present Ministers at the time of the Ulster crisis, and Sir William Joynson-Hicks cried "peccavi" in that connection; and the latter, when faced with quotations from his recent platform references to the trial in question, argued, rather weakly, over the accuracy of newspaper reports. Otherwise the debate turned on the limits of free speech and the expediency of the prosecution. As we have said before, the trial created a bad impression, not because of its method of conduct or its result, but because of the political atmosphere cast around it by the Home Secretary. On the whole, the House of Commons debate may be said to have cleared the air. All sections of the House vied with each other in spoken devotion to the liberty of speech and action within the limits prescribed by the safety of the community, and the Home Secretary, we believe, will have learnt the necessity of importing discretion and unequivocality into his public utterances on delicate matters.

A Cabinet for Spain.—Technically the Dictatorship in Spain is over. After discussions and an interchange of letters with King Alfonso, the Marquis de Estella has formed a Cabinet in which certain civilian elements are incorporated with members of the old junta. It is too early as yet to assess the inward meaning of this outward manifestation of a change in the form of government. But we find it a little difficult to swallow at the first gulp the propaganda by which foreign countries are being taught to believe that a real return towards constitutional government has been taken. The first Spanish Press comments that came through suggest that the change is superficial; and so far we have seen no hint of any intention to consult the wishes of the Spanish people. It appears at first sight, indeed, that all that has been done is to give the old dictatorship a thin veneer of civilian polish. The reasons for the secrecy with which the approach to this change was made are somewhat obscure; but one interesting point about the affair is the emergence of the figure of King Alfonso as something rather more than a cipher in Spanish public life.

Indian Cotton Excise.—The Indian Government's announcement of the suspension of the collection of the Excise Duty on cotton goods and its withdrawal in the next Budget is by no means a bolt from the blue. Indian pressure for its removal has long been irresistible enough

THE FIRST NATIONAL BANK OF BOSTON

to draw from the Viceroy promises of its abandonment as soon as the Budget position warranted such a step; and even those who dislike the measure most find consolation in the evidence which the announcement gives of the improvement in India's public finances and economic position. But even though this lifting of the Excise Duty was known to be only a matter of time, those who remember the storm aroused in 1921 by the increase in the import duty without a simultaneous increase in excise, may be surprised at the quiet, if pained, acquiescence of Lancashire. Explanation is afforded by our Manchester correspondent, who writes as follows:—"On Tuesday afternoon, at short notice, there was a special meeting in Manchester of representatives of the spinning and weaving employers and the Manchester Chamber of Commerce to consider the situation, and after a comparatively short discussion an official statement was issued. The view was expressed that owing to the changed situation in India, and recognising that India's own needs are best determined by the Government of India, the reasons for the action of the Viceroy in suspending the Excise Duties are appreciated. The statement goes on:—"

"If the industrial and general situation in India improves in the way in which it is so much desired, it is clear that the Lancashire industry may hope for better trade as a result. That there is a potential purchasing power in India sufficient to engage the producing power of both Indian and Lancashire industries cannot be doubted. In the interests of the consumers of India, we trust not only that the position of Lancashire may not be further prejudiced, but also that, as and when the finances of India permit, the Import Duty on Lancashire cotton goods may also be reduced. It is to be hoped that in the new situation now created we may find ourselves moving towards a position where the needs of the Indian market will be met to an increasing extent by her own manufacturers in their class of product, and by Lancashire in the types upon which she will naturally concentrate. Such a state of affairs would satisfy the legitimate aspirations of India, whilst not doing injustice to the Lancashire industry. If this situation, frankly recognised by both parties, could lead to the fostering of a better spirit of mutual sympathy, support, and accommodation, we would be prepared to accept any difficulties which may be imposed on Lancashire by the present decision in a generous manner."

The views expressed above read very strangely when the bitter controversies of the past on this burning subject are remembered. The fact of the matter is that times have changed. India has now fiscal autonomy, and it is useless for Lancashire to make protests against reductions in Excise Duties or increases in Import Duties. It must not be forgotten that this action of the Indian Government will probably be a more serious matter for Japan than this country. Lancashire realises more fully than ever that in the future she will have to concentrate her machinery more and more on the finer makes of cloth, and leave the coarser materials to be made by the mills in the East. During the last few years leading authorities have noticed a desire on the part of Indian consumers of cotton cloth to purchase higher quality goods. If this is maintained and extended, as there is reason for thinking that it will be, if the purchasing power of the natives is increased, then cotton manufacturers in this country have nothing to fear. It is primarily desirable that a spirit of friendship and goodwill should exist between the people of this country and of India."

Our Index Number.—Very little change in the general level of wholesale prices is shown in our Index Number as at the end of November. The net change is a decline

of 5 points, but this results from the offsetting of a substantial increase in primary foodstuffs by a similar decline in textiles. There was also a further decline in the minerals group, which was partly counter-balanced by a small increase in secondary food products. The table below shows that the end of November total is 4,322. This compares with 4,550 at the end of April last, and 4,833 at the end of November, 1924 :—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.)	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.)	Total.	%

The increase of 32½ points in primary foodstuffs, which follows a decline of 48 points in October, is almost entirely due to increases in both foreign and home-grown wheat and in flour, the latter having risen by 7s per 280 lbs during the month. These increases are partly offset by a decline in barley. Beef and pork are higher on the month, but mutton is a little lower. In subsidiary foodstuffs changes are small, and are confined to slight rises in tea and sugar. Cotton prices continued to decline in the first part of the month, but the Washington forecast issued on November 21st, showing a slight reduction in the estimated yield from the United States, checked the downward movement. Egyptian cotton, however, shows a substantial decrease for the month, and cotton yarn is a little lower. Wool, both English and Australian, is unchanged, and a rise in hemp was offset by a similar decline in flax. Jute remains at the high figure to which it rose in October. In the minerals group the only movement of note is a decline of 10 points in lead, copper showing a slight drop, and tin being unchanged. In the miscellaneous section a further rise in rubber was counteracted by a decline in timber, and an increase in vegetable oils by a similar decrease in tallow. In the next table we show the changes in each commodity's index number, as compared with the end of October, the figure 50 representing in each case the index for the basic period of 1901-5 :—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For..	102	+ 9	Cotton, A	95	- 2	Copper	50	- 1

Other foods ..	704	+ 5	Tin	112	..			

As a result of these changes in November the total increase over the pre-war level is reduced from 68.7 per cent. at the end of October to 68.5 per cent. at the end of November. In the final table we show how the various

groups contribute to the general increase over the pre-war figure :—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5

Oct.,	153	199	195	161	143	168.7
Nov.,	159	200	191	159	142	168.5

At the end of April last the increase shown by the total was 77.4 per cent., and at the end of November, 1924, 88.4 per cent. At the latter date cereals and meat stood at 174, other food at 228, textiles at 231, minerals at 172, and miscellaneous at 145.

Working of the Coal Subsidy.—A correspondent writes:—Statistics are now available regarding the operations of the coal subvention during the three months ended October 31st last. The total claims paid by the Mines Department amount to £6,037,451, representing on the total quantity of coal raised in the period about 2s 2d per ton. The contribution of the Exchequer to the South Wales coalfield has amounted to £1,435,284, to the Eastern Federated Area £1,127,798, to Scotland £1,046,351, to Durham £1,003,987, to Lancashire, N. Staffs and Cheshire £687,357, and to Northumberland £409,413. At this rate of expenditure the cost of the subsidy to the State would aggregate over £18 millions, and as only £10 millions has been sanctioned by Parliament, a supplementary estimate would have to be introduced later on. Of particular interest is the incidence of the subsidy on the various coalfields, which may be illustrated by the case of South Wales, where the claims paid in the three months ending October have been heavier than those in any other district. The effect on the current market prices of coal has been remarkable. The middle prices ruling on November 30th, as compared with those of July 3rd, show decreases ranging from 1s 9d to 5s 1½d per ton, but the proportion of the output sold at these prices has, however, been comparatively small. The pit-head price realised in the South Wales coalfield, according to the certified joint audit, amounted in October to about 16s per ton, compared with 17s 1.92d in July. The average f.o.b. price shows a corresponding movement, being 22s 3d in October, as compared with about 23s 4d in July. The consumer, therefore, has gained enormously. On the whole of the output of South Wales during the three months, the subvention has amounted to approximately 3s 6d per ton. In August the commercial loss in the coalfield was £622,392, or 4s 9½d per ton; in September £535,274, or 3s 4d per ton; and in October £542,690, or 3s 5d per ton. It will be recalled that under the terms of the Government settlement it was conditionally provided that the owners should receive 13 per cent. of the net proceeds after the deduction from the gross proceeds of costs other than wages. In practice that arrangement has proved, in the main, simply a formula for the determination of the wage rate on the basis rates for which the owners would be liable. The minimum wage rate in the South Wales coalfield, which the miners have been guaranteed, is 42.22 per cent. on the 1915 standard rates. In August the owners were liable for a payment of only 17.95 per cent. on the 1915 standard rates, in September 19.01 per cent., and in October of 4.76 per cent. Even so, they suffered a loss on a district basis of no less than £428,756. October was the first month in which they were able to make a profit, which amounted to £105,943, equivalent to 7d per ton on the coal produced. If the net deficit on the three months' trading of £322,813 be added to the contribution of £1,377,543 which (according to the returns of the Monmouthshire and South Wales Coal-owners' Association) has been made by the State, the total

loss over the three months amounts to £1,700,356. It may be added that in November the liability of the coalowners was limited to 1.64 per cent. of the 1915 standard rates, and that in December it was further reduced to 7.22 per cent. below the standard wages. The wage rate which the South Wales owners will thus be paying during the present month is equivalent to 13.82 per cent. less than that paid by them in 1914, when the general wage rate of 60 per cent. on the 1879 standard rates then in force was equivalent to 6.6 per cent. on the new 1915 standard.

Maintenance of Services.—We have before us a circular issued from the Ministry of Health giving an outline of the methods by which the Government proposes to assure the continuance of essential services in the case of any emergency arising which threatened to stop them. The skeleton of the scheme is the division of England and Wales into ten Divisions, in each of which a Minister will in such an emergency act as Civil Commissioner, and will, with his staff, keep in touch with local authorities, be available for consultation, and give decisions if necessary. He will, also, it appears, co-operate with the local authorities in appealing for and using, if necessary, local volunteers. Responsible Labour leaders have inveighed against this circular, and affect to see in it a threat and an indication that the Government will not act conciliatorily in certain Labour disputes which may be pending. For ourselves we cannot read any such meaning into the document, nor find anything improper in it. Mr Ramsay MacDonald himself, when Prime Minister, publicly recognised in very clear terms the Government's responsibility and duty to maintain essential services in any emergency which might threaten them from whatever quarter the threat might arise. All that the Ministry of Health's circular does is to explain to local authorities the outline of the scheme which the Government has in mind for discharging this responsibility should they unfortunately be called upon to do so. To make plans is obviously correct, and plans would be of no use unless the local authorities were acquainted with them. Should volunteer assistance be necessary, the obvious duty of the Government is to appeal for it, not to any section or any private organisation, but to the whole body of good citizens. This intention is, to our reading, implicit in this circular. We should have thought that, instead of finding the circular sinister, Labour opinion should regard it as putting the feet of the Government back on the path of correctitude in this matter and as providing a timely and much-needed antidote to the Home Secretary's platform hints of the usefulness of Fascism and his overtures to the O.M.S.

The Oil Situation.—It must not be inferred, writes a correspondent, from the recent advances in the prices of refined oil products that economic conditions in the American oil industry have radically altered, but there are some indications that the crude oil commodity is "touching bottom" economically. The strength of the oil share market in London is not due to any intelligent appreciation of this prospect, but partly to a rush of French buying and partly to a blind belief that oil prices are moving upward. What advances have been made have so far been special, seasonal, or local. There is heavy export buying of American gasoline, as European importers are covering their spring requirements in the fear that crude oil prices may advance. There is the seasonal demand for fuel oil for burning, and in some districts this is intensified by the coal strike. The demand for kerosene for heating stoves has received a fillip for the same reason. There is also the seasonal demand for zero cold test lubricating oils, and premiums are being paid by refiners as a result for Pennsylvania crude oil. Hence there have been advances in the price of Pennsylvania crude oil, and in the prices of gasoline, kerosene, and fuel oil. But for the sign of any real change in the basic condition of the oil industry it is necessary to turn to the oil fields. Since the beginning of September there has been a decline in the daily average output of crude

BANK OF ATHENS

16, STATE STREET.

oil from 2,138,850 to 2,039,100 barrels. Up to the last few weeks this decline has not been important, partly because it has centred in the heavy oil districts, partly because there was a prospect of an increase in light oil output, partly because California was still producing a surplus which was being shipped to the Atlantic coast and there depressing the mid-Continent prices. Last month, however, the Californian output began to decline from about 652,000 barrels a day to about 642,000 barrels, and in the light oil field of Garber, Oklahoma, which was the danger zone, salt water suddenly appeared. It has happened before that salt water has changed an oil situation overnight. The Garber field was expected to produce its 100,000 barrels a day, but it is now believed that 60,000 barrels may be its peak. The fact that last month the biggest light oil well ever completed in America was brought in on the Garber field does not remove the possibility that the field will shortly go to salt water. This decline in light oil production makes an advance in mid-Continent crude oil prices possible, but it must be remembered that stocks of oil are still excessive, and that the Prairie Oil and Gas Company, which practically controls the mid-Continent crude oil situation, is still putting oil to storage. At the end of October there was approximately eight months' supply of oil at the current rate of consumption and exports :—

	June.	July.	August.	September.	October.
Crude oil*	420,936,000	421,857,000	419,963,000	422,645,000	420,666,000
Refined oils	125,443,000	126,195,000	126,586,000	124,783,000	124,837,000
	546,379,000	548,052,000	546,549,000	547,428,000	545,503,000

* Includes many grades of oil used as fuel.

If the light oil production continues to fall off, there will almost certainly be an increase in the price level of mid-Continent crude oils, which is the real index of the American oil situation, particularly as this is the season of the year when American oil producers like to raise inventory values to make a better showing in their balance-sheets. In the case of some of the big companies, the balance-sheets of the year are likely to appear very favourable.

Cotton Trade Short-Time.—Our Manchester correspondent writes :—As anticipated by leading authorities in the industry, spinners of American cotton in Lancashire have rejected the proposal that the working hours in the mills should be further reduced. Early in November the Master Spinners' Federation decided to recommend the members engaged on American cotton to reduce the working hours in the factories from 39½ per week to 35 per week. A ballot on this proposal has been taken, and the

result shows that the members were not prepared to give the necessary support. According to the rules of the Federation, no short time recommendation can be put into force without the approval of the owners of 80 per cent. of the spindles, but on this occasion the Federation stated that they would not consider such a vote as adequate, and undoubtedly an appeal was made for unanimous support. The result of the ballot was announced late last week, the figures being, in favour, 73.47 per cent.; against, 20.89 per cent., no replies being received from 5.64 per cent. In view of the result, the Committee did not feel justified in asking the members to reduce the working hours. It was pointed out, however that the fact that the ballot proposal had not met with success did not remove the need of a continuance of a lessening production. The committee, therefore, urged all members concerned to continue the working week of 39½ hours, instead of the full production of 48 hours.

Municipal Wages.—There can be no doubt that economy in local expenditure, which has recently been strongly urged by the Associated Chambers of Commerce, is of vital importance at the present time, but the means of effecting such economy on a wide scale are not obvious, owing to the fact that a large proportion of the expenditure is imposed upon local authorities by demands from bodies over which they have no control. In one direction, however, economy is possible—namely, in the matter of the wages of employees of the authorities. Such employees occupy a favourable position even in comparison with other sheltered industries. The wages of certain typical classes at the present time and in 1914 are as follows:—

	1914.	1925.	Increase
	s d	s d	per Cent.
Gas works labourers	25 8 ..	52 11 ..	107
Electricity "	26 6 ..	54 10 ..	107
Non-trading services labourers..	26 9 ..	53 5 ..	99
Tramway drivers	30 6 ..	59 2 ..	91
" conductors	26 7 ..	54 9 ..	106

These figures represent the average rates in the large towns. When it is considered that the average increase in weekly wages in industry as a whole is only 75 per cent., and that in many industries it is less than 70 per cent., there can be little doubt that the wages in these public utility services are unreasonably inflated. In some industries, in which the percentage increase since 1914 is high, there is some justification in the fact that the pre-war wages were unduly low, and that, in any case, some increase would have been granted in the absence of war conditions. But in the case of the local authority employees the pre-war rates were relatively high. It may be argued that local authorities should set an example to employers generally by paying a decent living wage, but it must be remembered that high wages in the municipal services can only be maintained by contributions in the form of rates from both employers and employees in other trades. At a time when some trades are barely paying their way and large numbers of workers are near the poverty line, the arguments in favour of effecting reductions in the wages of municipal employees are very powerful.

Banking in Chile.—The new Banco Central de Chile, which is organised on lines somewhat similar to the Federal Reserve system of the United States, is expected to begin operations early in January, and will be given the sole right to issue the new national currency. All the banks in Chile are called upon to take up shares to the extent of 10 per cent. of their capital and reserves, and such member banks will have the right of rediscounting with the Central Institution. The foreign banks operating in Chile are: Anglo-South American Bank, Limited, Banco de Chile y Alemania, Banco Mercantil (Oruro), Banco Yugo-Slavo de Chile, Bank of London and South America, Limited, Banque Francaise et Italienne pour l'Amerique du Sud, Banque Italo-Belge, Deutsche Heberseische Bank, Deutsche-Sudamerikanische Bank Akt. Ges., National City Bank of New York. The board of directors will consist of ten members, nominated as follows: Three by the Government, two by the native banks, one by the foreign banks, one by the public shareholders, and the remaining three will represent agricultural, industrial,

and the labour interests. It is announced that Mr Sidney H. Salmon, manager of the Santiago branch of the Anglo-South American Bank, Limited, has been appointed a director representing the foreign banks. News has been received this week that the Banco Espanol de Chile has been placed under official supervision, and we understand that a moratorium of 60 days has been granted. The effect will be purely local, as it has no branches outside Chile, and its business with Europe has been on quite a minor scale of late years.

The Tinplate Pooling Scheme.—The scheme for the pooling of orders, of which the majority of the South Wales tinplate manufacturers have approved, and which is to come into operation on January 4th next, differs, states our Cardiff correspondent, in one or two important respects from the stabilisation scheme which was recently abandoned. The main provision of the stabilisation agreement was the regulation of prices, and it was the alleged disloyalty of certain makers to the minimum prices fixed that led to the discontinuance of that control expedient. The main purpose of the new arrangement is to distribute the current volume of business as equally as is commercially practicable. The invoiced volume of trade in a particular month is taken as the basis of the participations of manufacturers in an ensuing month. A manufacturer exceeding his allotted percentage quota will contribute at the rate of 1s per box of such excess, while firms producing short of their quota will be compensated to the extent of 9d per box. Prices are left uncontrolled, and there is no specific restriction on output. The scheme is criticised by merchants on the ground that it will tend to maintain prices artificially, and by some manufacturers on the ground that it is not sufficiently penal on works of low productive efficiency.

The Course of Tin.—There has been more activity in tin this week, writes a correspondent, and cash delivery rose to £290 just before the November statistics becoming available; these showed an increase of about 2,000 tons in the visible supply, and not only tended to check new buying, but to encourage bear tactics. With America refraining from further buying, and the rise in the Bank rate, reactionary conditions were accentuated on Thursday, when prices closed at a decline of £3 15s for cash and £2 a ton for forward delivery as compared with the figures paid at the week's opening. The visible supply at a little over 17,000 tons is still about 2,300 tons less than it was a year ago. The total quantities which came into sight during November at 10,531 tons were about 2,500 tons greater than for October, owing to the exceptionally large shipments of Straits and Banca tin combined; the total deliveries in the month indicated a shrinkage of roughly 1,400 tons at 8,449 tons. So far as can be gathered, America has yet to cover a good portion of her needs for next month, and the outlook as regards general consumption is quite satisfactory, especially in the United States, where the output of tinplates is expected to be maintained at a high record well into the coming year.

Bankruptcy in 1924.—The 42nd General Annual Report by the Board of Trade on Bankruptcy* shows that the number of receiving orders and administration orders under the Bankruptcy Acts in 1924 was 4,794, a decrease of 254 in comparison with 1923; but the liabilities, as estimated by debtors, showed an increase of £1,863,100 at £12,617,100. The number of deeds under the Deeds of Arrangement Acts was 1901, an increase of 93 on 1923, but liabilities were £921,100 lower at £4,328,300. There were in all 27 cases during the year under the Bankruptcy Act in which the liabilities exceeded £40,000. In 10 of these, with liabilities amounting to £2,875,200, the failures may apparently be classified as "ordinary trade failures"; in 10 cases, with liabilities amounting to £1,307,200, the failures were apparently due to "financial and speculative enterprise apart from ordinary trading."

* H.M. Stationery Office. 3s net.

The aggregate liabilities in these larger cases, viz., £5,227,200, is over one-third of the estimated liabilities under the whole of the receiving orders for the year. The total number of estates finally wound up by the Official Receiver during the year was 3,815, an increase of 123. In 1,586 cases, or 41 per cent., the assets realised under £25, and in 620 cases between £25 and £50. The proportion of total costs to gross assets realised was 39 per cent. Failures in Scotland in 1924 were 247, as against 291 in 1923, liabilities amounting to £1,993,500, against £707,500, and assets to £199,500, against £148,500.

P. and O. Results.—The reduction in the dividend on P. and O. deferred from 12 to 10 per cent. prepared the way for a decrease in profits in the accounts of the Peninsular and Oriental Steam Navigation Company for the year ended September 30th last. The directors say in the report that they are compelled to recommend the reduction in the dividend by the poor state of trade generally, by the unrest in China, and by the unofficial shipping strike "as they consider it prudent in present circumstances to husband the company's resources." How far profits have declined it is impossible to say, as the profit and loss account shows only the "net result" after providing an unstated amount for depreciation. This was probably on a similar scale as in 1923-24, and if so, profits have declined by £73,000, the "net result" being £1,273,500, against £1,346,900 in the previous year. The following table compares results for several years past:—

	YEAR ENDED SEPTEMBER 30TH.					
	1914-15.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.

It may be mentioned that at the annual meetings the chairman for several years past has stressed the fact that the sums available for dividends were derived more from dividends on investments and from other sources than from surplus on the working of the ships. In November, 1923, the company issued £3½ millions of 5 per cent. debenture stock, and as this did not rank for a full year's interest in the 1923-24 accounts, debenture interest for the past year requires £43,700 more. A sum of £261,600 is transferred to debenture stock redemption reserve against £249,150 a year ago, and £40,000 goes to provident good service fund. A year ago £139,700 was debited for discount and cost of debenture issue. The balance-sheet is in the same form as in the previous year, assets of over £32 millions being divided into five items, of which two account for nearly £30½ millions. The first covers the fleet and payments on account of new ships, and stands at £17,850,100, an increase of £3,175,500 as compared with last year. The actual tonnage of the fleet as given in the report shows a reduction of over 11,000 tons at 604,810 tons. Two vessels were sold for breaking up purposes during the financial year, the prices realised being considerably in excess of the book values. The difference goes to the depreciation of the fleet. The second of the two large items covers "sundry investments (less loans), cash at bankers, and in hand, and debts owing to the company." This composite item stands at £12,583,100, and shows a decline of £624,600 as compared with this time last year. Three years ago Lord Inchcape stated that holdings of British Government securities amounted to £7½ millions, but no further light on the matter has since been shed, and it would seem that we must still exercise patience before we see this balance-sheet, which is undoubtedly a strong one, presented in a form which will enable shareholders to prove this for themselves, instead of leaving them to struggle with a set of incomplete and obscure accounts. The report mentions

BANK ESTABLISHED IN 1864.

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

that the mail service has now resumed its full pre-war programme, and that the volume of passenger traffic continues satisfactory. The shipping strike, it is stated, has involved the company in "very serious loss."

J. and P. Coats.—In 1924 the well-known textile undertaking of J. and P. Coats was able to record an improvement in results. Shareholders will have learned with satisfaction, therefore, that the progress then indicated was taken a step further during the twelve months ended June 30th last. The following table shows how profits have been distributed since 1906:—

Year ended June 30.	Net Profit After Depreciation, &c.	Interest.	Dividends and Bonus.	Pension, Insurance Fund, &c.	To Reserve, &c.
	£	£	£	£	£
1906	2,974,088	36,642	1,972,821	294,629	450,000
1907	3,056,125	19,680	2,206,642	175,963	500,000
1908	2,701,697	19,394	2,193,403	6,588	500,000
1909	2,917,667	19,399	2,427,402	32,522	500,000
1910	3,171,464	19,278	2,448,908	25,000	675,000
1911	3,102,952	19,096	2,453,808	42,500	525,000
1912	2,794,072	..	2,449,183	26,440	500,000
1913	2,903,239	..	2,449,183	..	500,000
1914	2,634,388	..	2,225,803	..	..
1915	2,598,966	..	2,208,347	..	30,000
1916	3,387,395	..	2,210,016	..	100,000
1917	3,360,950	..	2,294,131	..	2,000,000
1918	3,171,796	..	2,289,732	100,000	..
1919	3,995,149	..	2,850,638	400,000	750,000
1920	4,164,894	..	3,161,214	150,000	450,000
1921	2,072,449	..	2,911,263	..	Dr 250,000
1922	3,270,913	..	2,911,250	..	250,000
1923	2,889,959	..	2,911,250	..	..
1924	3,107,213	..	2,911,250	..	200,000
1925	3,655,700	..	2,911,250	..	..

The net profit, after making allowance for depreciation, &c., advanced from £3,107,213 to £3,655,700, making, with the sum of £398,580 brought in, a total available balance of £4,054,280, against £3,509,830 in the preceding period, when £402,617 was brought forward. The ordinary dividend is kept at 17½ per cent., including the bonus of 6d per share. This leaves £1,143,030 to be carried into the next accounts. Although the directors make no reference to the matter, the balance-sheet shows that the item representing additional shares in subsidiaries, &c., rose from £71,473 to £446,118. Bills receivable advanced from £24,279 to £176,351, though advances to subsidiaries figure for £6,302,549, compared with £6,733,966. Creditors have gone up from £2,026,279 to £2,302,282, and investments total £802,646 in contrast with £567,946 a year ago. The latest price of the ordinary £1 share is 3¼d, at which they yield about 5½ per cent.

Aerated Bread Company.—In their report for the year ended October 3rd last the directors of the Aerated Bread Company state that a catering contract was entered into with the management of the British Empire Exhibition. As, however, the Exhibition did not close until October 31st, "it was not possible to bring the result of the trading into the company's accounts for this financial year." Apart from this venture, the undertaking continued to

make good progress, as will be seen from the following table:—

September.	Gross Profit.	Expenses.	Net Profit.	Depreciation, &c.	Div.	Rate.	Carried Forward.
£	£	£	£	£	£	%	£
1907-8	276,252	220,366	55,886	5,000	50,409	27½	17,376
1908-9	276,101	224,822	51,279	5,000	50,167	27½	15,458
1909-10	281,852	233,348	48,504	5,000	45,425	25	13,567
1910-11	283,695	236,203	47,492	5,000	40,883	22½	14,176
1911-12	284,319	227,801	56,518	8,239	45,424	25	17,031
1912-13	308,114	234,091	74,023	8,000	54,791	27½	31,263
1913-14	315,476	240,350	75,126	28,000	49,846	27½	28,543
1914-15	286,919	253,146	33,773	8,000	29,948	17½	26,598
1915-16	299,434	282,354	17,080	11,764	7,959	5	23,955
1916-17	289,199	303,882	D-16889	8,000			12,771
1917-18	419,112	322,566	96,546	59,000	28,135	15	10,682
1918-19	587,456	435,506	151,950	62,000	80,500	30	20,132
1919-20	685,831	520,274	165,557	57,882	113,050	25	14,757
1920-21	728,376	582,381	145,995	40,000	102,637	15	14,150
1921-22	637,811	488,936	148,875	48,184	87,975	12½	14,639
1922-23	629,104	497,964	131,150	37,621	79,784	8½	19,499
1923-24	681,578	526,639	154,939	35,250	102,943	10	30,276
1924-25	692,860	535,443	157,417	28,000	100,606	10	46,736

* Includes special bonus to employees.

The gross profit went up from £681,578 to £692,860, so that while expenses also advanced from £526,639 to £535,443, the net profit came out at £157,417, in contrast with £154,939. The provision for depreciation, &c., was reduced from £35,250 to £28,000, and was accounted for by a decline in the amount set aside as provision for income-tax from £18,000 to £11,000. The ordinary dividend was maintained at 10 per cent. During the year a number of further branches have been opened, a policy of expansion which the directors record their intention of following. Shareholders will be greatly interested in knowing the result of the catering at Wembley. Probably the chairman will be able to enlighten them to some extent at the forthcoming annual meeting. The latest price of the £1 ordinary shares is 1½, at which they yield £7 5s 6d per cent.

Tate and Lyle.—The report of Tate and Lyle, sugar refiners, for the year ended September 30th last, shows that the experience was not so satisfactory as in the preceding twelve months. The net profit has declined from £616,784 to £543,138. Owing, however, to the fact that the sum brought in was £69,934, against £38,650, the available balance is £613,072, compared with £655,434. The appropriation to reserve, however, is reduced from £100,000 to £50,000, although the dividend is maintained at 13½ per cent. for the year. The sum carried forward is £52,733, in contrast with £69,934. The balance-sheet, which is analysed in another column, shows that freehold land and buildings figure for £1,505,145, compared with £1,427,209. Leasehold property stands at £11,714, in contrast with £2,840, while a new item is introduced into the present accounts, under the heading of cottage property, which totals £45,357. Plant and machinery have risen from £2,781,394 to £2,833,247, and while investments, which are taken at market value, amount to £2,103,888 against £2,182,402, the latest accounts include an amount of £112,632, representing investments in associated companies. Stocks have gone up from £1,261,701 to £1,940,854. In the previous balance-sheet there was no separate entry of cash in hand. This time the item is inserted, the figure being £49,180. Sundry debtors have risen from £498,268 to £643,150, but creditors have declined from £1,056,440 to £722,826. The bank overdraft has been increased from £621,320 to £2,055,000, and is now secured as to excess over £2,000,000 by deposit of certain investments. The ordinary £1 shares are quoted at 1½, and the yield is 7½ per cent.

Wankie and Bwana.—Our mining correspondent writes:—For those concerned, the Wankie Colliery Company has proved a distinctly profitable enterprise. The report presented at the second annual general meeting held on Tuesday last showed a net surplus of £164,250, as against £138,470 in the twelve months ending August 31, 1924; and the final dividend of 5 per cent. brought the year's total up to 20 per cent., as compared with 10 per cent. previously. It is true that the profits of the past session were divided up to the hilt; on the other hand, £32,000 had to be set aside for taxation. An important and interesting phase in the company's operations con-

sists in the supply of fuel to the Tanganyika group of undertakings in the Belgian Congo and to the Bwana M'Kubwa Copper Company, whose property is situated in Northern Rhodesia. From the particulars given at the meeting, it appears that comprehensive arrangements have been made for the supply of fuel to these concerns for a series of years ahead. In the case of the Bwana the contract covers 60,000 tons per annum—the quantity estimated to be required for the first unit of the treatment plant, due to start up in March; duplication is envisaged as a possibility of the not very distant future. To provide for the equipment of the company's present colliery and of the new one which is being opened up in connection with the requirements of Northern Rhodesia, also for an electrical power installation, the 38,000 shares in reserve are to be offered to the members at par. The market price being about 26s, this represents a small bonus. On the basis of 20 per cent. dividends, Wankie shares give fully 15 per cent.—a yield which, in view of the position and prospects of the company, may be regarded as attractive. An elaborate brochure having been issued earlier this year the annual statement of the Bwana M'Kubwa Company is naturally confined in the main to an exposition of the features as regards finances and ore reserves. The latter are now computed at nearly 7½ million tons, averaging 3.9 per cent. copper; the quantity represents over twenty years' supply at the rate of 1,000 tons per day. It is worth noting that the estimates have been checked by independent engineers. The Bwana Company is expected to be able to place copper on the London market at a cost of under £41 per ton of best select. Results will be awaited with much interest; not only by those immediately concerned, but also by those interested in other properties in Northern Rhodesia.

Obersea Correspondence.

UNITED STATES.—MONETARY POLICY—STOCK MARKET REACTION—BUSINESS OUTLOOK—ITALIAN LOAN—VIEWS ON FRENCH FINANCE.
(FROM OUR CORRESPONDENT.)

NEW YORK, November 24.

INTEREST has been concentrated pretty largely during the past week on the question of Federal Reserve policy and the market's reaction to it. The advance in the discount rate of the Federal Reserve Bank of Boston from 3½ to 4 per cent., which occurred two weeks ago, was followed at intervals by similar action by the Reserve banks at Cleveland, Philadelphia and San Francisco. Their action leaves the Federal Reserve Bank of New York the only one of the twelve regional banks still having a 3½ per cent. discount rate. All the others now have 4 per cent. Naturally there has been the greatest curiosity as to whether the New York bank would bring its rate into line with the others. With the directors meeting tomorrow, unofficial opinion on the matter is divided. There are those who feel that an advance at New York is inevitable; there are others who believe that action here may be delayed for some time.

Taken altogether, the arguments on the side of the local rate remaining where it is, at least for the time being, in which differences in rates as between the several regional banks have existed for considerable periods. While it does not appear that the New York bank alone has remained on a different basis for any material time, it has done so in company with one or two of the other banks. degree of independence, each dealing with its local money market and each being governed primarily by conditions existing in its particular region. In times of extremity, as during 1920, the regional banks have made loans to each other. Open market purchases are made by a committee of the system. The Federal Reserve Board recommends, and gives or withholds its approval; but in the bank is changed by the directors of an individual Reserve there may be certain virtues in a uniform discount rate throughout the system, the record shows that these rates

are fixed with regard to local conditions and suggests that uniformity will not be brought into being now unless there are particular reasons why New York should have a 4 per cent. rate at this juncture.

When the operations of the New York bank throughout this year are reviewed, no very convincing reason for a change emerges. It may be recalled that discounts had been rising at the out-of-town Reserve banks that have raised their rates, and that the large supply of out-of-town call money in the New York market had been helping to maintain the extraordinary activity on the New York Stock Exchange. Discounts at the New York Reserve Bank, however, have not been increasing. During the last two months, in fact, they have decreased materially. In September they rose to a high point of about \$172,000,000; the latest statements shows them to have fallen to about \$95,000,000. During the last week for which reports are available, and this is a week during which the effects of the higher rates out of town had a chance to make themselves felt, discounts at New York fell moderately. The present level approximates to the level that prevailed during the quiet months of last summer; it is some \$80,000,000 below the level that existed when the bank raised its discount rate at the end of last February. It is clear, therefore, that no increasing demands for accommodation are being made on the New York Reserve Bank. Last February, when the rate was raised from 3 to 3½ per cent., the situation was quite different. Discounts had increased during January and February to \$175,000,000. The Federal Reserve Bank had shown an intention to intervene in the market by selling large amounts of short-term Government securities. If the lifting of rates out of town should result in the local banks increasing discounts to make good a loss of out-of-town money a new situation would, of course, be created and the directors of the local Reserve bank would then have one of the standard reasons for raising their discount rate. Until such a thing happens, however, the chances for the rate remaining where it is seem fairly good.

If, as seems probable, the extent of speculative activity in stocks was one of the chief reasons for the change in Federal Reserve policy, the subsequent course of events on the Stock Exchange certainly should make further restrictive measures less imperative. Since the higher rate policy was initiated, the stock market has had a reaction of no mean proportions. As was the case during the later stages of the upswing, the motor shares have furnished most of the fireworks. Chrysler, which had swept up from 108½ to 253, sold to-day as low as 167½. General Motors, which went from 64½ early in the year to a height of 149½, has now touched 106. Du Pont, which owns a large share of General Motors, has swung from 134½ to 27½ and back to 202½. Hudson, after a remarkable rise from 33½ to 139½, has been back to 88. If motor shares were overhauled a few weeks ago they did fair to be under-valued again soon if the present reaction continues. While these sweeping declines have been occurring the rest of the market has held fairly well. The common stock of the United States Steel Corporation, always watched closely as a market index, has been put under severe pressure, and has declined from a peak of 139½ to 126½. The averages for industrial shares, and these include some of the more volatile issues, have fallen 10 to 15 points or thereabouts. Railroad shares have been noticeably firm, a circumstance that is explained by the relatively small speculative interest in this group and by the excellent character of railroad earnings. Oils also have held well, partly because of the fact that no large advance had occurred in this department, and partly because of bullish news with regard to oil production and cause of oil prices. At the time of writing the market still seems to be going backwards; short selling is meeting with success, and activity dies out on rallies. Many shrewd observers believe that after some further reaction the market will recover its equilibrium. They maintain that money still is too plentiful, efficiency in industry too high, and earnings too satisfactory to indicate the approach of a big bear market. They expect oils and rails to lead a recovery. However this may be, the fact stands out that speculative excesses have been killed off, and that whatever desires the Federal Reserve authorities may have had in this direction must be pretty well satisfied.

Every Description of Home and Foreign Banking Business transacted

Whether or not the reaction in the share market will find a reflection in industry remains to be seen. Current reports on industrial activity are good. There is some dropping off in the extraordinary rate of automobile production; but that is natural at this season, and a maintenance of the previous high rate would have been disturbing. Building construction remains remarkably large, and the winter activity along this line promises to be above normal. Operations at the steel mills are in the neighbourhood of 85 per cent. of capacity, and steel and iron prices are firm. Unfilled orders at the steel plants seem to be rising. Most observers expect at least normal industrial activity throughout the winter and a large business in the spring.

Successful flotation of the \$100,000,000 Italian loan has furnished an offset for the news of the French crisis. Our bankers believe that both Italy and Belgium are wise in taking steps to stabilise their currencies and to make them independent of possible fluctuations in French francs. The expectation here is that Italy will come back on to a gold basis in some non-spectacular fashion early next year. Whether Italy or Belgium will be the first to take a step of this kind is a matter on which there is no precise information. As for French finance, the trouble is regarded as primarily political. Our bankers believe that there is nothing in the French financial problem that could not be solved by courageous application of orthodox financial measures. One view held in good quarters is that what France needs is a hard money policy. Such a policy would, it is maintained, produce the deflation that is needed to relieve the demands for currency, and would permit the Treasury to regain control of the money market. This hard money policy, it is emphasised, should be applied by the Treasury as well as the Bank of France. It is recalled that our own Treasury had to pay 6 per cent. for money during the inflationary period that followed the Armistice, but that the cost of Government borrowing fell rapidly after hard money had had a chance to check inflation.

FRANCE.—THE NEW CABINET—M. LOUCHEUR'S PROPOSALS—INCREASED TAXES.

(FROM OUR CORRESPONDENT.)

PARIS, December 2.

M. BRIAND, on his second attempt during the same week, succeeded on Saturday in forming a Ministry; but it cannot be said that the new combination is as satisfactory as might be wished, or that it contains the necessary elements to justify a belief in its chances of long life. The Socialists, finding it would be hopeless to persuade their old leader to comply with their demands for a capital tax, declined his offer to participate in the new Cabinet, except on the condition that they were allotted five of the principal portfolios, including the all-important one of Finance. This M. Briand found it impossible to comply with, and as an alternative he turned, as he was expected to do, towards the Republicains de Gauche, a group of moderates which technically belongs to the Left of the Chamber, but which has never participated in the Cartel des Gauches. In this he had for some time to contend with opposition from the Radical Socialists. At one moment, it is understood, M. Briand was within an ace of again renouncing his task, and only the insistence of the President of the Republic induced him to persevere. In the result he was able on Saturday night to announce his success.

The complexion of the new Ministry may be gauged from the fact that out of its 14 members, ten (including M. Painlevé) held office in the previous Cabinet. The newcomers are M. René Renoult, who was M. Herriot's Minister of Justice, and who again holds this portfolio, which carries with it the Vice-Presidency of the Cabinet; MM. Georges Leygues (Marine) and Jourdain (Pensions), who have been brought in from the more moderate Republicains de Gauche; and M. Loucheur (Finance). This last appointment may be regarded as a mild surprise, and one which has not been welcomed with any marked enthusiasm. It may be attributed largely to tactical reasons. M. Loucheur and M. Daniel Vincent, who retains the post of Minister for Commerce, represent in the new Cabinet the Radical Left group, with its 44 votes, whose defection, in the event of abstention by the Socialists (97 votes), might prove fatal.

M. Loucheur himself is not a popular favourite. He is known to be ambitious, and is alleged to have long coveted the post of Finance Minister. As one of the most successful business men in the country, he was Minister for Armaments in the Ribot, Painlevé, and Clemenceau War Cabinets. He subsequently held the responsible post of Minister for Industrial Reconstitution, and was afterwards M. Briand's Minister for the Liberated Regions and Reparations. During this period M. Loucheur signed the Wiesbaden agreements with Dr Rathenau, from which much was at one time hoped, but which proved disappointing. In the last brief Poincaré Cabinet M. Loucheur was Minister for Commerce and the Post Office Department. On the face of it, therefore, if practical knowledge of business and long experience in posts where this special knowledge was above all else required, M. Loucheur should to a great extent be well fitted for his new post, particularly at the present critical juncture.

It is generally admitted that M. Loucheur has shown no lack of courage in the resolute manner in which he has begun his task. The new Finance Minister fully realises that he is faced with a twofold problem. The first necessity is to provide sufficient ready-money to enable the Treasury to escape from the wretched hand-to-mouth situation, with national bankruptcy always immediately ahead, that has existed for nearly three years past owing to the lack of ability by his predecessors to realise the real situation and let the country face the truth. The second part of the problem is to devise means by which the ever-increasing tide of debt can be stayed and the national finances placed on a permanently sound basis. Within three days of assuming office M. Loucheur has told the country plainly that there will be not only a heavy deficit on the financial year which closes on December 31st, owing to the yield from taxation not having come up to expectation, but that 2,500 million francs are immediately required to enable the Treasury to pay off bonds that will be presented for reimbursement next Tuesday, while another 2,500 millions are required to meet war expenditure in Morocco and Syria, and requirements for pensions, the devastated regions, the payment of civil servants, the deficit on the railways (which must be paid by the State), and payments of foreign debts. Further, the requirements of ordinary commerce are such that, quite apart from the additional 1,500 millions which the State was authorised to borrow from the Bank last week, a further 1,500 millions of currency must be provided.

To meet this situation M. Loucheur boldly proposes that the limit of the amount the State is authorised to borrow from the bank, which now stands at 33,500 millions, shall be increased by 6,000 millions, and that the limit of the note circulation shall be increased from 51,000 millions to 58,500 millions. To the objection that this is unadulterated inflation, and must lead to a continuance of the fatal principle of the vicious circle, "Inflation, high cost of living; high cost of living, more inflation," M. Loucheur retorts that he is above all an anti-inflationist, and that his proposal is strictly one of controlled inflation that will be made automatically to disappear almost immediately, as it will be compensated for forthwith by the yield of an equivalent sum from increased taxation, that will enable the extra amount borrowed from the Bank to be repaid and the increased paper money simultaneously retired.

How M. Loucheur proposes to carry out this plan was

laid before the Chamber this evening, when the new Government came before the House for the first time. It then became known to the startled Deputies that the Government propose to secure the bulk of the money required by passing a Bill forthwith stipulating that all arrears of taxation shall be cleared off, at the risk of heavy penalties for default, before December 31st. Another huge sum of "about 3,000 millions" M. Loucheur proposes to raise by immediately imposing an additional—

	Millions of Frs.
50 per cent. on all existing taxes on land and house property..	300
50 per cent. on industrial and commercial profits	950
100 per cent. on mining royalties	60
20 per cent. on the general income-tax	600
50 per cent. on the schedule rates on incomes from securities and on transfer duties	1,180
	3,090
Less certain abatements on—	
Incomes from commercial and industrial profits	20
Land taxes	80
Total ("about 3,000 millions")	2,990

The new Finance Minister's initial proposals are certain to meet with stubborn opposition from a large section of the Chamber on the grounds that they will constitute merely another form of disguised capital tax, and that they will operate with unjustifiable harshness against a comparatively small section of the community which is already severely penalised. In 1924, out of between 12 and 15 million taxable persons in this country, only 1,140,000 paid general income-tax, while 2,000 of the 2,250 millions which the income-tax yielded was drawn from 88,700 persons only, the remaining 1,050,000 persons contributing only 250 millions, or an average of 250 per head. These figures, when quoted in the Chamber some time ago from an official report, caused a murmur of incredulity, which was intensified when a wealthy deputy from the Nord insisted that "income-tax dodging" is so widespread in France that it would be quite easy to secure an extra 250 millions a year from his department alone if adequate measures such as prevail in England were taken to prevent non- and under-declaration. There is good ground for believing that if fiscal fraud and evasion were better repressed the income-tax in this country would yield an additional total of anything from 5,000 to 10,000 million francs.

Whatever be the fate of M. Loucheur's proposals, and this must be known within the next 48 hours, in view of the urgency of the situation, there is no lack of alternative plans, all of which have been widely discussed during the past few weeks, and all of which are put forward as means of ensuring an immediate yield of large sums. The most conservative of these is based on sweeping further economies in expenditure. The most favoured of the suggestions is that the tobacco monopoly should be handed over to private industry for a term of, say, 30 years, in return for an immediate cash payment of 30,000 millions upwards. Other proposals which are rapidly gaining favour with public opinion are for a huge national lottery; for a poll tax of 20, 50 or 100 francs a head, on much broader lines than that for a tax of 20 francs which was for a brief moment advocated by M. Painlevé; and for the sale of the bulk of the vast unproductive real estate and no longer required military and other establishments belonging to the State.

GERMANY.—POLITICS—FINANCES AND CREDIT— BRITISH IMPORT DUTIES—FUSIONS AND CARTELS—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 2.

THE acceptance of the Locarno agreements by a relatively small Reichstag majority has not disposed of the internal crisis. The Social-Democrats supported Cabinet policy in regard to the agreements, but they show no desire to enter a new administration. Some weeks back the easiest solution of the Cabinet crisis seemed to lie in the revival of the "Great Coalition," including all parties from the German People's Party on the Right to the Socialists on the Left; and the Socialists seemed willing to discuss this,

on condition that they got certain pledges as to the new Cabinet's policy. Later events have tended to modify this viewpoint. The Socialists do not want to be identified with the increasing unemployment; they are strongly opposed to the present Cabinet's plan to retain the "Reichsgetreidestelle" as an organisation for keeping up the prices of breadstuffs; and they imagine that they see in the electorate a new movement towards the Left from which they may gain, if they keep clear of unpopular responsibilities, while if they do not keep clear the gain may fall to Communism. A patchwork Cabinet of the Central parties is most likely, but such a Cabinet would depend in certain questions upon the two chief outside parties on opposite wings, the German-Nationals and the Socialists.

The pressure for a further reduction of taxes continues. The German-Democrats (for somewhat different reasons) here take up almost the same standpoint as the industrial People's Party. They have introduced into the Reichstag a motion against over-taxation of business. They demand a Budget Fundamental Law which will limit expenditure during the next few years to a fixed—unstated—sum; abolition of the Luxury Sales Tax, which has already been reduced from 15 to 7½ per cent.; reduction of the Capital Transactions Taxes (on company capital issues, stock transfers, bills, &c.) also these have already been reduced. The Democrats hold that the financially independent Reichspost ought to be paying 100 to 150 million marks a year towards Budget expenditure.

The Cabinet has prepared a Bill to prolong the law legalising mortgages in foreign currency, which lapses at the end of this year. Cables from New York speak of the United States as being saturated for the present with German issues. In the last two months New York has granted, it is added, 20 German loans of a total exceeding 103 million dollars. The home short-term money market has been very fluid; the month-end settlements were got through with even less tension than at the end of October; and the day money (minimum) rate remained as low as 8 per cent. The bi-monthly reports of the commercial banks for October 31st are satisfactory in that they show a new increase in deposits and other business, after a period of relative stagnation, and also show an increase in liquidity after a continuous decline in the February, April, June, and August balance-sheets. The percentage of liquid assets to liabilities for the great Berlin banks is calculated at 51.9 against 50.9 on August 31st, and 61.6 on December 31, 1924. Liabilities of these banks to all creditors increased from 4,139½ million marks to 4,330 million marks, whereof deposits were 1,760 million marks against 1,705 million marks. The chief items in the balance-sheets (capitals and reserves being unchanged) are:—

	(Marks—000's Omitted.)	
	October 31, 1925.	August 31, 1925.
Bills and Treasury Bills.....	1,141,974	1,113,404
Balances with other banks	634,900	583,079
Advances on wares	392,222	339,090
Advances on Bourse securities ..	101,294	82,051
Own securities	67,049	69,671
Syndicate participations	66,173	71,861
Shares in other banks	138,296	137,297
Current-account debtors.....	2,391,236	2,333,063
Total assets	5,249,920	5,051,344
Creditors	4,330,153	4,139,569
Whereof deposits	1,760,030	1,705,190
Acceptances and cheques	257,797	259,692

Half-yearly reports of the banks indicate that fair profits were reaped in spite of the dullness of the capital-issue and securities markets, so that the dividends of 1924 are likely to be maintained. The leading banks have gained considerably from their intermediate work in the negotiation of foreign loans to business.

The fusion movement continues. The absorption by the Badische Aniline Co. of its former partners in the Aniline Concern "Interest-Community" has been sanctioned by all the companies' shareholders. The Western Steel Trust negotiations proceed slowly, but the trust will apparently be formed. Negotiations are under way for cigarette and cement trusts. Already these industries are fused into regional groups. For an international Tubes Cartel negotiations are under way with France, Belgium, and Czechoslovakia. The biggest new fusion into a

single company is that of the North German Lloyd with the Roland Line, the Hamburg-Bremen-Africa Line, and the Horn Shipping Co., of Lübeck. The North German Lloyd will increase its capital to 52 million marks, thereby remaining slightly behind the Hamburg-America Line with 54 million marks, but in tonnage it will lead with 631,000 gross, against 450,000. The extended North German Lloyd will conduct regular traffic under its own flag with five Continents. Reports that the Hamburg-America Line is planning a similar fusion are denied; the company is negotiating an American loan of, it is believed, \$10,000,000. The North German Lloyd fusion brings it closely into touch with the Hamburg-America, with which it already collaborates through its affiliated smaller companies. The Roland Line has an "interest-community" with the Hamburg-America and with the Deutsch-Austral-Cosmos Line. The Hamburg-Bremen-Africa Line has arrangements with the Hamburg-America, the German East-Africa, and the Woermann Line. The Roland Line also controls the Argo Co., of Bremen, which collaborates with the Deutsch-Levante A.G., and the latter's shares are held by the Hamburg-America. All German shipping companies that count are now bound together by cross arrangements.

The partial failure of the London negotiations over the Anglo-German Trade Treaty is taken in some quarters as text for severe attacks upon British trade policy. It is believed that Germany will suggest that Hague arbitration shall be invoked under Article 30 to interpret Articles 1 and 2 of the Protocol, but it is understood that London holds the Hague Court to be competent to interpret only the Treaty, not the Protocol. Trade journals complain that the new British duties are aimed with special intensity against particular German industries, and claim that British educative duties, as for the chemicals and optical branches, could not be imposed under the clause of the Protocol permitting "preservation" duties. The German-Nationals have submitted an interpellation to the Reichstag concerning the increased imports of British coal, which were 550,630 metric tons in October, against 337,865 tons in September and 282,000 tons in January. British coal, the interpellation proceeds, helped by the State subsidy, has penetrated from the coast, where it was always at home, to Berlin, and even to the south and west. Germany's own coal foreign-trade balance is rapidly improving. In January-September coal imports totalled 5,920,059 tons, and free exports 10,438,032 tons, against 13,202,087 tons and 2,795,090 tons respectively in the whole of 1924. In August, the best month of the year, exports exceeded imports fivefold. October, with 11,950,000 tons, shows the largest coal output of the year, exceeding also the monthly average of 1913 in the same area (11,730,000 tons). The lignite output in October constituted a record, being 12,760,000 tons (average in 1913, 7,270,000 tons).

Bankruptcies are increasing, having numbered 1,320 in November, against 1,139 in October and 887 in September. Cases of "business supervision" (suspended bankruptcy) numbered 838 in November, against 588 in September. The wholesale prices index number for November 25th was 122.7, against 121 on November 17th; the cost of living index number for November 141.4, against 143.5 in October. Wheat prices rose greatly in November, rye prices slightly. The Cabinet's Bill for maintaining grain prices prolongs the "Reichsgetreidestelle," a war-time foundation which was in course of liquidation,

and authorises it, on instructions from the Food Ministry, to buy up and store not more than 200,000 tons of grain. The plan is being strongly opposed. In general, divided opinions prevail as to the wisdom of granting credits to Russia, and as to the propriety of bank guarantees of such credits; the Disconto and Darmstaedter Banks, it now appears, contrary to Press reports, did not join in the 100,000,000 marks bank guarantee already reported from here. Industrial conditions are not improving. Krupp's, however, deny reports of reduction of output by them.

The considerable increases in exports in recent months have induced a more optimistic spirit. The Bourse during part of last week and this week was under the influence of this optimism. While shipping stocks, as all along, were very firm, the general level of quotations rose considerably. The *Frankfurter Zeitung's* stocks index for November 28th shows 61.64, against 58.19 (the lowest of the year) one week earlier, 111.37 (about high point) on January 31st, and 100 on January 2nd. The Locarno settlement, having been discounted in advance, had no visible influence; but expectations in connection with Dr Schacht's return from New York played a rôle. A reduction of the Reichsbank discount rate has been talked of; but there is so far no reason to expect it. Foreigners have bought considerable quantities of stocks at around the lowest levels. Certain financial journals complain that the big industrial companies pursue a policy of strengthening their positions instead of paying dividends. It seems certain that the companies are better off than the numerous o's in the lists of dividends indicate. Stocks, even on the days of recovery, were extremely inactive. Paper mark loans had a considerable rise in the last week of November; but business in them is insignificant.

POLAND.—MR GRABSKI'S RESIGNATION — UNEMPLOYMENT — POLISH BANKS — DANGER OF INFLATION—NEED FOR FOREIGN CAPITAL. (FROM OUR CORRESPONDENT.)

WARSAW, November 24.

MR GRABSKI's resignation came unexpectedly. It was not the result of a vote of censure. On the contrary, the Diet accepted Mr Grabski's plans of financial and monetary reform. Mr Grabski explained his decision by the differences of opinion which existed between himself and the president of the Polish Bank. When the zloty was exposed in the middle of this month to a new shock, Mr Grabski favoured a policy of intervention to prevent a further fall. Mr Karpinski, the president of the Polish Bank, was opposed to such a policy, which would have entailed a weakening of the position of the Bank. The actual reserve is too small for such experiments.

The number of unemployed is steadily increasing. To-day it surpasses 213,000, and the closing of different great undertakings is announced. As much as 30 per cent. of the industrial population is unemployed. The representatives of Poland's industry, agriculture, and finance, in a memorandum presented to the President of the Republic, express themselves in the following manner on this subject:—"Such a percentage of unemployment is to be found nowhere in Western Europe. Even those who work are very often employed only five, four, or three days a week. In a short time the minority will be obliged to feed the majority. We may say that this is a burden which cannot be supported." There is no exaggeration in this dark picture of Poland's present situation. No improvement is to be expected shortly. The troubles from which Poland is suffering are, in the first instance, the natural result of a lack of circulating capital, which has been destroyed during the period of inflation. The creeping crisis which has lasted more than two years became acute when the drain of foreign currencies forced the Bank Polski to apply a restrictive credit policy. The fall of the zloty entailed a run on the banks, which were deprived of an important part of their liquid assets, which from 18 millions in July fell to 12 millions in August. (These figures refer to the 16 largest Polish joint stock banks.) This forced the banks to a further restriction of their credit operations, which even before the acute crisis were quite insufficient for a normal working of the economic system of the country.

A very shrewd observer of Poland's economic affairs has recently declared that it is impossible to call the Bank Polski the bankers' bank, because, apart from the central institution, banks do not exist. This is true in the sense that the rôle of the Polish banks on the credit market, if measured by pre-war standards, has become quite insignificant. It is clear that such a disorganisation of the credit machine must react on the industry and trade of the country in a very detrimental manner. The restrictive policy of the Polish Bank and of the other credit institutions makes it impossible for many firms to liquidate their old engagements. About 40 per cent. of the bills are returning unpaid and protested. The assets of the banks are in consequence to a great extent frozen. There are only two ways out of such a situation—a reconstruction of the whole credit system with the assistance of foreign capital, or the melting of the frozen assets by inflation. There is a great propaganda in this direction, and the pressure is so strong that the Government is unable to resist it. Mr Grabski, before leaving office, asked the Diet to grant him powers for the issue of 100 million zlotys additional Treasury notes, which he intended to distribute in the form of credits to the banks. The Bill was rejected at the second reading by the Socialists, but it seems certain that it will be reintroduced.

Attempts are also being made to obtain the assistance of foreign capital. The reform of the credit system is to-day the most important problem of economic reconstruction. It can be solved only by a combined effort of foreign and Polish finance. Without such action Poland will necessarily fall back into a chaos of inflation.

The situation is the more serious because the economic depression begins to react on the finances of the country. One of the greatest achievements of Mr Grabski's administration was the increase of revenues, which for the first ten months of the year increased from 204.3 millions in 1923 to 894.4 millions in 1924, and to 1,100.6 millions in 1925. During this year of deep commercial depression the Ministry of Finance succeeded in increasing revenue by 200 millions. The statistics for recent months show, however, that the strain is becoming too great for the exhausted country. In September, for instance, the revenues amounted to 129.5 million zlotys, as compared with 136.2 millions in 1924. It seems that in October a similar decline has taken place. Efforts are made to balance the Budget by cutting down expenditure. The Budget for 1926 is to be reduced by 300 to 400 millions. The Ministry of War is to be included in this programme of economy. The proposed reduction of military expenditure is a result of the decreased international tension since Locarno.

I believe, however, that foreign assistance is essential. Mr. Grabski failed because he over-estimated the resources of the country. He tried too much in attempting to realise financial and economic reform without foreign aid. His successors will hardly obtain better results unless they succeed in attracting foreign capital, without which the whole productive machine of the country must be brought to a standstill.

As stated above, the claim for inflation becomes every day louder. Leading landowners, such as Mr Chrzanowski, are propagating the idea of the issue of notes similar to the German Rentenmark. Others are trying to convince the Government that the only salvation can be found in a liberal credit policy of the Polish Bank. The resistance of those who are aware of the dangers of inflation would be much strengthened if signs were forthcoming proving her efforts of maintaining a sound financial and monetary policy.

ARGENTINA.—PUBLIC FINANCE — GOOD CROPS—TRADE AND EXCHANGE PROSPECTS. (FROM OUR CORRESPONDENT.)

BUENOS AIRES, November 9.

LITTLE that is exact, or of immediate aid in judging the present state of Argentina's national finances, can be gleaned from the events of the past month. Congress has not yet been called to extraordinary sessions, which makes it unlikely that any practical legislative measures will be given full discussion and eventually become law.

Yet there are sundry matters that ought to be dealt with out of hand, such as the final despatch of the Senate's recommendation to suspend the General Pension Law No. 11,289; the assistance of the Banco de la Nacion by means of an issue of bonds wherewith to take up the \$350,000,000 paper in rediscounted Treasury bills that at present weigh so heavily on its cash resources; and the regularisation of the financial position of the State Railways. The administrator of this latter department, which is at present but a sub-department to the Department of Public Works, has just launched a strongly-worded appeal for close on \$3,000,000 paper wherewith to meet urgent needs in connection with the replacement of some 40 locomotives, the repair of certain parts of the permanent way on the Central Northern section, and the installation of block and staff signalling parts of the line where, though the track is single, the traffic has of late been much increased. Gross receipts on the State Railways are steadily rising, and it is claimed that by the end of 1925 they will be \$1,750,000 paper above the amount laid down in the department's estimates; but it is hardly necessary to point out that this means nothing when read in relation with the heavy charges of every kind that weigh upon the system, considered as a whole. The report of the officially appointed investigator shows \$184,000,000 paper of outstanding indebtedness, but this is no new revelation; and as the main object of the document seems to be to show that this indebtedness was incurred before 1922, in other words, under the auspices of the previous presidency, it becomes little better than a party pronouncement, akin to the talk of intervention in the province of Buenos Aires and the charges against the financial administration of its private government. Inasmuch as Argentina to-day is privately so flourishing and so progressive, it is a thousand pities that the old party spirit is once more to the fore. It has nullified the whole of the ordinary sessions of Congress, left the country still awaiting a Budget Law to govern the expenditure of the current year, and looks very much like launching Argentina into 1926 with not one single official measure of an administrative nature ready to be incorporated in the law of the land. Meanwhile, the Minister of Finance is doing what he can to wipe out the floating debt by consolidation, even although by so doing he apparently adds to the charge for debt services which will figure in the annual Budget. The remainder of the Government's obligation to the Banco de la Nacion has been wiped out, and on October 31st the total liability in the shape of floating debt stood at \$513,842,000 paper.

The wisdom of this course is justified by the rapid change that has come over the local money market, wherein rates are firm and likely to rise higher in the course of the next month. Banks are doing all they can to strengthen their cash position by normal means, and the latest official figures show that the Banco de la Nacion is likewise trying to make ready for the heavy call that December will surely bring in connection with the lifting of the crops. Discount rates are at 7½ per cent. for lists of trade bills, and 8 per cent. is merely a nominal figure for single name advances, with a strong likelihood that December, if marked by heavy buying of cereals, will see an advance in both rates. Crops are not yet altogether out of danger, but if expectations are realised and Argentina harvests the largest yield of wheat and linseed she has ever known, the call for funds is likely to be acute. It is more than likely that if the Conversion Office had been open, not only would sterling exchange have reached par, but there might also have been evidence of early gold shipment hither, such as characterised the months of November and December in pre-war days, when the Argentine currency system was untrammelled by the so-called emergency legislation of 1914. One may even hazard a guess at the likelihood of such shipments being arranged despite the restriction; since with local exchange rates where they are to-day—only a shade above 1 per cent. below parity—and the wide difference between the money markets of London and Buenos Aires, it will pay private interests to bring out gold, encash it through the Conversion Office, purchase and ship cereals, and complete the cycle by drafts on London or New York against the proceeds. It is reasonable to suppose that when the coming export movement

THE MERCANTILE BANK OF INDIA, LTD.

On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STRAUER, Chief Manager.

of the new season really begins parity will not only be reached but passed, there being no logical cause to prevent the Argentine dollar running up to 52 pence, or even more should the world demand for Argentine produce prove brisk in the beginning of the New Year.

That the state of this year's crops is unusually promising is by this time generally realised abroad, and by the time this letter is in print it ought to be possible to estimate the prospects of Argentina reaping the largest harvests of wheat and linseed that she has ever known. Linseed—a valuable crop—promises to yield an exportable surplus which has been variously estimated at anything between 1,500,000 and 2,000,000 tons, while the wheat which has been sown over 7,700,000 hectares, is in excellent shape over the whole of this vast area, which is half a million hectares more than was cultivated in the record season 1917-18. Barley, oats, rye, and birdseed are also much above the average, both as regards area sown and general crop prospects, while, to complete the optimistic outlook the conditions for maize sowing have been as nearly perfect as they could be. It may be true that the immense yield in sight will depress prices to some extent, but even so the amount of work and the call for transport that these figures imply will revive Argentine commerce during the first half of 1926 to a very great extent. Nor should it be necessary to emphasise what this will mean to the railways and to the shipping interest, while in the case of the former their favourable outlook is enhanced by the prospects of exchange. In the wool trade, too, there has been a sharp and a very welcome reaction. Coarse crossbred wools of the new clip are selling freely at \$12 to \$14 paper the 10 kilos, with \$18 for fine crossbreds and \$21 for fine Rivers wools, though these latter are not so readily merchantable. October shipments were good, 5,831 bales going to France, 2,975 to Germany, 1,249 to U.K., 1,051 to Italy, 660 to U.S.A., 749 to Belgium, and 773 to various destinations. Freights, which were quiet, not to say sluggish, all October, have suddenly moved upwards, a very sharp advance taking place in the quotations for prompt loading.

JAPAN.—FOREIGN TRADE—COTTON IMPORTS—GOOD CROP—TRADE OUTLOOK. (FROM OUR CORRESPONDENT.)

TOKIO, November 6.

FOREIGN trade has continued to show fairly satisfactory returns. The October returns show that imports at 165,645,000 yen were 1,314,000 yen higher than in September, and 6,559,000 yen higher than in October, 1924, and exports at 227,443,000 yen were 5,187,000 yen lower than in the previous month, but 65,137,000 yen higher than a year ago. The excess of exports in October amounted to 61,798,000 yen, as against 68,299,000 yen in September and 3,220,000 yen in October, 1924. The adverse balance of trade for the ten months ended October has thus been reduced to 316 million yen, which is compared with 625 million yen in the corresponding period of last year. These figures are such as to encourage the hope that this year's balance of external payments will be further diminished to a comfortable minimum.

November is the month when, as a rule, the import season sets in with arrivals of new cotton. But cotton imports during the remainder of the year are likely to play a less conspicuous part than usual, partly because

lower prices and the improved exchange will lower import values, and partly because importers are holding off for the downward movement in cotton quotations. The import of rice will also fall off substantially, the home rice crop being sufficiently good. On the export side the present activity in the silk and cotton trade seems likely to continue, if in a lesser degree, in view of situations in the United States and other overseas markets, for which those goods are destined. Such being the outlook, it may not be unreasonable to expect a further fall in the total adverse balance of trade for the current year.

The agricultural situation also is quite encouraging. According to a recent report of the Department of Agriculture and Forestry, the output of spring cocoons amounted to 42,865,000 kan, an increase of 3,387,000 kan against last year, and its value was estimated at 445,143,000 yen, as compared with 268,061,000 yen in 1924. The wheat crop was placed at 22,393,000 koku, valued 458,480,000 yen, as against 19,073,000 koku, valued at 255,499,000 yen in 1924. This is the largest harvest since 1918. Taken together, these results should increase the farmers' income by 382 million yen. Besides this, the output of summer and autumn cocoons having been no less excellent, and the rice crop estimated to be much above the average, farmers' income will be still further increased. Why purchasing power, in spite of the increase of receipts, has not been more notably revived is explained by the fact that previous years had left a volume of unpaid debts, which constituted the first claim on farmers' income, and which greatly reduced the sums that would otherwise have been available for the purchase of goods. Now that, however, the autumn cocoons have been sold, and the rice crop has been garnered, farmers' purchasing power will prove a progressively stimulating factor as time goes on.

Continued improvement in the foreign trade, and the cheerful agricultural situation, are gradually being reflected in more than one way. The output of commodities is on the increase, and warehoused stocks of goods are decreasing. Banking deposits are rapidly swelling. The deposits of the Postal Savings Bank were increased by 35 million yen, and those of the Clearing Banks by 175 million yen on September 30th, as against the same date of last year. Despite these hopeful indications, however, opinion is divided as to the business outlook. A section of observers fear that, in view of improvement in the exchanges and competing power recovered by British and Indian manufacturers, exports of cotton goods will decline in the coming year, and the reaction in the trade, on the continued prosperity of which our hope for an industrial revival rests, will neutralise other factors.

AUSTRALIA.—WHEAT CROP DISAPPOINTMENT—WOOL PRICES—EXPORT OUTLOOK.

(FROM OUR CORRESPONDENT.)

MELBOURNE, October 28.

THE Australian wheat crops have taken an unfavourable turn in a manner hardly expected at the end of September. After making satisfactory progress, though without any margin, through the winter, the crops received a fair amount of rain in September, and if this had been followed by a corresponding amount in October, completing the critical period, a good yield could have been hoped for. But the unusual sequence of September rains and a dry October has taken place, and while estimates of the harvest are still premature, the total will be much below last season, and the value of wheat and flour exports during 1926 will be about 20 millions sterling less than in 1925. The 1924-25 harvest was exceptionally large, the yield being 166 million bushels, of which 115 million bushels have so far been exported. The 1923-24 harvest was 125 million bushels, of which about 58 million bushels were exported from mid-December, 1923, to mid-December, 1924. In September the outlook encouraged chartering for new season's loading, but this and other preparations are now in suspense. A good rainfall within the next week or two would still be in time to affect the result, but at best the Australian harvest can only be moderate. To-day (October 28) is the fifth consecutive day of unseasonably warm weather in Melbourne.

The smaller wheat harvest and the lower prices obtainable for wheat and wool mean that a substantial reaction in Australian export trade is impending after the high value reached in 1924-25, and as imports for some time past have been heavy, a reduction in orders will be required in order to make a corresponding adjustment in the total value of imports in 1926.

Letters to the Editor.

TAXABLE CAPACITY AND A SUBSISTENCE MINIMUM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The principle laid down in the Peace Treaty that Germany should be placed under a burden of taxation at least as heavy as that borne by the peoples of the Allied countries was duly accepted and considered by the Dawes Committee. In their report some interesting pages have been devoted to a discussion of the practical consequences of that principle, and it was found that many thorny problems arose complicating the principle, which is superficially so simple. The committee discusses *inter alia* the necessity of deducting a "minimum of subsistence" from *per capita* income; it finds that the amount of the minimum is not exactly determinable, and it seems to vary as between different countries of different climates, different economic development, and different customs, e.g., as between Spain and the United States. This is, of course, all true, but the Committee then arrives at the astonishing result that, "as a rough working proposition, such a minimum may be regarded as varying in proportion to the *per capita* income of different countries." If it were so, it would not be necessary to take account of the minimum, for in that case it would not change the relative position of the countries. It is, I believe, *commune bonum* in public finance that the principle of a minimum of subsistence is introduced for the very reason that the minimum represents a relatively greater proportion of the smaller income than of the higher.

I thought at first that the words quoted from the Dawes Report were only a *lapsus* due to the hasty composition of the report, but I now find that Sir Josiah Stamp (himself a member of the Dawes Committee), in the discussion on Mr. G. Findlay Shirras' paper on Taxable Capacity, read before the Royal Statistical Society on June 16, 1925, said:—

"I remember the extraordinary experiences we had on the Dawes Committee. Some set out gaily with the notion that all that was necessary was to arrive at the total national income per head, and find out what taxation was being borne, and then to bring the laggards up to the level of those who were doing best. The question was what should be adopted as the minimum of subsistence figure necessary for maintaining the population. A figure that appeared to an American to be an impossible thing on which to sustain life was sufficient to wipe out the whole national income of Italy. The actual solution suggested was that the minimum must vary proportionately to the national income per head; nothing else was possible."

If nothing else is possible (which, personally, I doubt), there is nothing in the whole principle of a minimum of subsistence.—I am yours, &c.,
December 2nd, 1925.

MINIMUM.

Books and Publications.

REVOLUTION THROUGH BANK CREDIT.*

In his "Revolution by Reason" Mr. John Strachey provides an expansion and explanation of the proposals put forward by Mr. Oswald Mosley in a pamphlet with the same title. It is an interesting scheme, lucidly and earnestly submitted, and it would be rather attractive if there were any possibility that it could work in practice. The idea is that, since there are many who are out of work, while there are many others who want, but cannot buy, things that those out of work could make, all that is needed to cure both poverty and unemployment is that the necessary buying power should be put into the hands of those who want the goods. Accordingly, all that we have to do is to make employers pay higher wages and for the authorities to distribute larger unemployment allowances. If the employers plead that they cannot pay the higher

* "Revolution by Reason." By John Strachey. Leonard Parsons, 7s 6d net.

wages, money for this purpose is to be furnished to them by the banks, which will have been nationalised, and the employers will then have to submit to control by an economic council whose business it will be (among other things) to see that the extra buying power will be met by increased production, so that there will be no inflation or rise in prices. The greatly increased demand and the certainty of a market would enable employers to work at so satisfactory a profit that they would shortly be able to pay the higher wages without the grant of any further credits, and the thing is done, and Socialism can go forward to its next conquest. Mr. Strachey answers very effectively the objection that the scheme would not help the export trades, as he shows that extra wages and allowances would be spent partly in foreign goods, and these purchases would transfer buying power to foreign buyers, to whom we should consequently export. But his assumption (1) that the grant of credits would presently cease and (2) that his economic council would efficiently perform the very difficult task assigned to it, is so contrary to all experience that we can only envy, without admiring, the confidence with which he makes it. But he seems to be a mighty swallower of assumptions. He says, for example, that "effective demand is concentrated in the hands of a few property owners." Seeing that there are nearly 50 millions of people in these islands, and that they are all, in varying degrees, fed, clothed, housed, warmed and amused, it would seem that a certain amount of effective demand is exercised by, or on behalf of, all of them. And he does not strengthen his case by rhetorical claptrap, as when he tells us that "100 gardeners toil to rear the orchids which decorate the jacket of the politician as he makes his great speech in defence of cutting off the milk allowance of necessitous children"; or by foolish exaggeration, as when he says that "75 per cent. of our population live in miserable poverty."

LOCAL AUTHORITIES AND LOANS.*

LOCAL Authorities derive their power to raise loans in one of three ways—i.e., from public Acts, such as the Municipal Corporations Act, 1882, and the Local Government Acts, 1888 and 1894, under which no cash limit is placed upon the borrowing, but the sanction of a Government Department for each loan is required; or from a local Act obtained by the Authority, which Act usually stipulates the amount of money to be borrowed; or, lastly, from a Provisional Order issued by a Government Department and confirmed by Parliament, which also generally limits the amount of the loan. The early practice in regard to security for loans was to empower Local Authorities to borrow only on the security of specified undertakings, properties, or revenues; but now it has become the common custom for Local Authorities to give the same security for each loan—i.e., all the rates, funds, and revenues under their control.

Borrowing powers are usually limited by reference to rateable or assessable value. But these limits are by no means uniform, and the position is often obscure and sometimes even ludicrous. For instance, owing no doubt to defective draftsmanship, the Public Libraries Act, 1892, appears to give a borough power to borrow for the purposes of the Act an amount equal to twice its assessable value. Particulars as to restrictions on borrowing will be found in Chapter II. of this work. It is evident that there are many ways of avoiding these restrictions, and getting the limits, at least temporarily, relaxed. A loan sanction is a formal document under the seal of the appropriate central Department (generally the Ministry of Health) granting to the Local Authority the express power to raise a loan subject to prescribed conditions. The Minister of Health has discretionary power to fix such a period for repayment as he considers expedient having regard to the probable life of the assets to be created by the loan, and this power is now strictly exercised. The maximum periods allowed by the various Acts of Parliament are evidently sometimes altogether excessive; thus the loans of Urban District Councils for such things as ambulances, carts and vans, disinfectors, fire-engines,

* "Loans of Local Authorities." By J. R. Johnson F.S.A.A., Treasurer of the City of Birmingham. (London) Charles Knight and Co., Limited. 3s 6d net.

refuse destructors, stone breakers, and other plant may all extend to a maximum of 60 years.

In the course of a review of borrowing methods, the important question of the proportion of a Corporation's debt which may safely be covered by short-term securities is considered, and for this purpose the repayment period of five years is adopted as the minimum below which all debt must be regarded as short-term or floating. Debt repayable at dates over five years is considered as funded debt. From an examination of the experience of the principal Local Authorities during recent times, the conclusion is arrived at that in the majority of towns the floating debt is not allowed to exceed one half of the total debt, and that in many cases the floating debt does not exceed one-third. It is somewhat surprising to learn that the latter figure represents probably the highest standard reached.

An overdraft at the bank seems to be an almost indispensable incident in the financing of a Local Authority. The legality of bank overdrafts was a matter of grave doubt until 1921, when the Local Authorities (Financial Provisions) Act authorised the raising of loans "by bank overdraft or otherwise" for the specific purpose of providing working capital. Nothing is said in this book as to the utilisation by Local Authorities of the large sums standing to the credit of municipal bank depositors. The amount of money available from this source—as cash with Corporation at call—may sometimes amount to between 10 and 20 per cent. of the total outstanding debt of a municipality, and the subject is therefore important. This book, which is a second edition revised and enlarged, can be well recommended to all serious students of municipal finance.

INCOME-TAX CASES.*

THESE two text-books contain summaries of all the taxation cases (income-tax, super-tax, excess profits duty, and corporation profits tax) decided within the respective years, together with short notes on the judgments. It is difficult nowadays even for specialising counsel to keep up with the decisions given each term by the English, Scottish and Irish Courts, and it is even more difficult to bear them in mind. The author hopes that these text-books, which it is proposed to publish at the beginning of each year, will make these feats possible.

So involved is income-tax law that almost every decision raises questions capable of infinite discussion, although all are merely different aspects of the one question, "What is income?" In the notes on the judgments frequent reference is made to the difficulties surrounding the administration of our present tax system. For instance, (a) "This is another example of a case which purports to be stated by General Commissioners for the opinion of the Court, but which does not set out the facts on which alone an opinion could be formed." (b) "It is probably safe to say that there is no section in any Act of Parliament which is drafted more vilely than Section 39 of the Finance (No. 2) Act, 1915." (c) "This case affords an interesting example of the curious problems of construction which are incessantly presented by taxing Acts. Here the High Court judge found that the view of the taxpayer was clearly right: 'The present case is quite clear,' and the Court of Appeal found that it was clearly wrong." These books will be found very useful for reference.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, December 16.	ACCOUNT, December 17.
Thursday's rise to 5 per cent. in the Bank rate came not altogether unexpectedly. The Stock Exchange had been on the look-out for an advance before Christmas in the rate, and gilt-edged prices fell upon dullness in consequence. Now that the change has been made, Stock Exchange men argue that the uncertainty is ended, and that the new minimum will prove a useful working rate. War Fives and other British Government stocks have slightly declined in price. Of the newer stocks, the Tasmania scrip is noticeably strong.	

The German Potash loan should be out, according to report, within the next few days, and a Belgian loan is expected to follow immediately afterwards. French Government bonds went better, but gave way again on the decision to inflate still further the French note issues. European bonds, apart from French descriptions, are better, because of the signature of the new Pact. South Americans and Mexicans are idle. Turkish bonds moved rapidly and capriciously. There is nothing doing in Chinese descriptions.

Home railways have few friends, and prices are easier. The Argentine railway stocks went down with a run upon news of a visitation of rust in the northern part of the Republic. Reassuring cables arrived, and caused a partial recovery in prices. Cordoba Centrals are noticeably lower, however, on the week.

The rubber boom has raged irresistibly. In many Stock Exchange offices nobody went home on Wednesday, the ticket night. Announcement that the standard production in the restricted countries will be raised to 100 per cent. next February caused a slight pause to the exuberance, but the market has been extremely busy throughout the week. Tea shares are quiet; their turn, so men say, will come next. French buying of Shells, Royal Dutch, and Mexican Eagles has been the main motive of oil market movements.

Industrials outside the rubber market have been overshadowed by the rush of business in their predominant partner. Courtaulds spent a week that has been almost tame; Snias were neglected. Bleachers went back, the dividend being a disappointment. Iron and steel shares continue dull and heavy. The shipping market is inclined to droop. Wireless shares are inactive, and dull in parts. The brewery section is slightly better. Eastwoods have been a strong market. The banking group is quiet. Dunlops are said to be contemplating a new issue of debentures.

Chartered recovered briskly on dividend expectations, and Rhodesians exhibited a few sparks of vitality. Kaffirs have been enlivened by a better tone in platinums. Tin shares moved idly and towards rather lower levels. Canadians and Mexicans arouse no fresh public interest. Other mining sections continue to suffer from neglect.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

City of Wellington (N.Z.).—Issue of £330,000 5 per cent. debentures at £98 per cent. The money is required to provide permanent paving for the main streets of the City of Wellington, &c., and the loan is divided up into two parts, one being £200,000 Wellington City street works loan, 1925, redeemable March 31, 1949, and the other £130,000 Wellington City and suburban highways loan, 1924, redeemable March 31, 1950. Both loans are secured on special rates which, the prospectus states, will produce together £28,983 annually. The indebtedness of the city is £4,397,316, less sinking fund of £729,249, leaving £3,668,067. The rateable value of the city is £14,839,400, and of adjacent districts £3,456,390. The estimated value of Corporation assets, exclusive of reserves, is £5½ millions, the total capital value of all rateable property is £30,708,261, and the total revenue £1,353,036. An attractive issue.

Barclay, Perkins, and Co., Limited.—The issued share capital is £730,200, £720,000 being in cumulative preference shares of £4 each and 10,200 ordinary shares of £1 each. There is also outstanding £1,776,239 of loan capital. Particulars of the company are advertised in order to comply with the regulations of the Stock Exchange Committee, whose permission is being sought to deal in £500,000 5 per cent. mortgage debenture stock, 1937-77. The stock constitutes a first specific mortgage upon certain freehold licensed properties in London valued at £755,332, and a floating charge on all other assets, subject as to the properties specifically charged as security for £1,700,000 3½ per cent. debenture stock. It will be repayable by means of a cumulative sinking fund of ½ per cent. per annum to be applied in redemption by drawings at par, commencing in July, 1927. Any stock not previously redeemed will be repayable at par on July 1, 1977. The company reserves the right of redemption at £102 per cent. on or given for the past three years, before allowing for debenture interest. In 1922-23 they were £235,691, in 1923-24 £216,625, and in 1924-25 £252,756. Debenture interest requires £54,562 per annum. The book value of the assets, according to the last balance-sheet (exclusive of goodwill and after deducting all liabilities other than existing debenture stocks and after allowing for the final dividends) was £2,638,058. The stock, which is a sound and well-secured investment, has been issued at £91½ per cent., less a commission of 2 per cent. But we have not seen a prospectus.

Silver Line, Limited.—Share capital £500,000, of which £4,007 has been issued. In addition 384,543 shares of £1 each will be issued in part payment of motor vessels to be acquired by the company. The loan capital consists of £1,107,000 5 per cent. debentures and £456,000 income bonds. This is an issue of £1,107,000 5 per cent. guaranteed debenture stock, 1930-45, at £99½ per cent. Principal and interest are guaranteed by the Government under the Trade Facilities Acts. The stock will be repayable between 1930 and 1945 by means of a cumulative sinking fund to be applied in purchasing stock at or under par or by drawings at par. The first annual payment in respect of the sinking fund will be made on or before May 15, 1930. Stock not previously redeemed will be repayable at par on November 15, 1945. The company has contracted to purchase six Diesel-engined British motor vessels, of a total gross tonnage of 27,831 tons, for £685,918, of which £384,543 will be satisfied by the issue of shares. The company has also ordered the construction of six additional motor ships, with a gross tonnage of about 31,488 tons, at a total price of £1,140,000. These vessels (except the engines) are to cost £624,462, of which 40 per cent. is to be satisfied by the issue of income bonds, ranking behind the debenture stock, and 60 per cent. in cash. The engines are to be supplied for £515,538, of which 60 per cent. is payable in cash and 40 per cent. in income bonds. It is intended to run the vessels between New York and the Far East via the Mediterranean. The debenture stock, by reason of the Government guarantee, is placed in the category of first-class investments, and can confidently be recommended.

Bulmer Rayon Co., Limited.—Share capital £600,000. This is an issue of 500,000 8 per cent. cumulative preference shares of £1 each and 750,000 deferred ordinary shares of 1s each at par. The company has been formed to acquire as a going concern the business of manufacturers of artificial silk yarn carried on as a branch of Smith, Bulmer, and Co. It is stated that production commenced in September last. "The output has continually increased, and costs have decreased as the workpeople have become more efficient." Viscose machines are being installed at the rate of one a week, and the erection of the whole plant will be completed by the end of June, 1926. The purchase price is £265,000, and includes £133,000 for freehold factories and fixed equipment, and £70,000 for manufacturing plant. The balance of £62,000, payable in shares, is allocated for the right to use patents, special processes, &c. It is stated that the £70,000 for the present manufacturing plant is the actual cost of the machinery to Smith, Bulmer, and Co. The underwriting commission is 4 per cent., and a fee of £6,000. A practical industrial proposition.

Singapore Traction Company, Limited.—Particulars of this undertaking are published in order to comply with Stock Exchange regulations. The share capital is £400,000, divided into 200,000 £1 preference, 199,999 £1 ordinary shares, and the £1 management share. The management share has been issued to the Shanghai Electric Construction Company, Limited, which has been appointed managers of the company's business in Singapore. The Shanghai company are entitled to receive as remuneration for their services 50 per cent. of the net profits. On a poll the management share is to confer on the holder such number of votes as shall together with any other votes exercisable by the holder of the said share exceed the total number of votes which could be cast by all by one the total number of votes which could be cast by all other shareholders. This is of £200,000 6 per cent. first mortgage guaranteed debenture stock at £94½ per cent. It is gage guaranteed by means of a cumulative sinking fund commencing repayable by drawings at par, the company reserving the right in 1928, by drawings at par after December 31, 1928, on two months' notice. The stock is secured by a specific mortgage and charge on the traction undertakings authorised by ordinances or on the traction undertakings of Singapore (Straits Settlements) cessions of the Settlement of Singapore (Straits Settlements) and on all stations, power-houses, generating stations, sub-stations, carsheds and depots, and all lands, tenements, cessations, and hereditaments, real and immovable property, &c., of the company in Singapore. It will be unconditionally guaranteed by the Shanghai Electric Construction Company on consideration to it of 1 per cent. per annum. The company was formed to acquire and take over the undertaking of the Singapore Electric Tramways. The whole of the preference shares and about 167,000 ordinary shares have been issued as a Stock consideration. Presumably, it is intended to apply for a Stock Exchange quotation for the debenture stock, but no indication of this is given in the advertisement.

Kaminiatiqua Power Company, Limited.—Loan capital authorised \$5,000,000, outstanding \$2,999,833. Authorised share capital \$1,250,000, of which \$1,248,500 has been issued in 7 per cent. cumulative redeemable preference shares of \$100 each. In addition there are authorised and outstanding 40,000 common shares of no nominal par value, coming 30.750 class "A" shares (non-voting) and 9.250 class "B" (voting). Application is being made to the London Stock Exchange for permission to deal in £200,000 (\$973,333) first mortgage 5½ per cent. sinking fund registered debenture

stock of series "A," for which purpose particulars of the undertaking are published. The company has acquired the undertaking and franchise of a company of similar name, owning and operating a hydro-electric development in Ontario. It is provided that the company provides for a sinking fund for the retirement of bonds and "A" registered debenture stock, equal to not less than 1 per cent. of the total outstanding. Sinking fund payments are to commence in November, 1926. The stock is subject to redemption at the option of the company on any interest date at a premium of 4 per cent. on or before November 1, 1935, of 3 per cent. thereafter to November 1, 1940, of 2 per cent. to November 1, 1945, and of 1 per cent. thereafter until maturity. The advertisement states that the physical assets, including power site and station, and transmission and distribution systems, but excluding franchises, contracts, and goodwill, have been valued, as at September 30th last, at a replacement value of \$6,326,565. The property and assets were acquired for a total cash consideration of \$3,762,550, and the allotment of 12,485 7 per cent. cumulative preference shares. Prospectusless.

Associated Lead Manufacturers, Limited.—Particulars of the company are advertised in order to comply with Stock Exchange regulations. The authorised share capital is £2,020,000, of which £2,003,661 has been issued in the form of 799,959 6 per cent. cumulative preference and 1,203,702 ordinary shares of £1 each. Application for permission to deal in both classes is being sought. The company was incorporated in July, 1919, and has recently acquired other lead and antimony manufacturing businesses. It is stated that there are outstanding £184,226 6 per cent. secured notes, £174,226 of which were issued in exchange for gilt-edged securities. The notes constitute a floating charge on the undertaking. No detailed profit figures are presented, it being merely shown that the combined profits of some of the acquired businesses, after charging Excess Profits Duty, directors' and managing directors' remuneration at the rates at present payable and depreciation, but before charging Income-tax, Corporation Profits Tax, excluding paid or received interest, and before crediting interest and dividends on marketable securities, have during the ten completed years to December 31, 1923, shown an average of £150,088. The profits of the company for the year ending December 31, 1924, amounted to £167,066. Prospectusless.

Tolgu Mines, Limited.—Capital £200,000 in shares of 5s each, of which 592,000 shares are issued. This is an issue at par of 208,000 5s shares. The company has been formed to acquire a licence to work the Great South Tolgu and South Tolgu mines at Redruth, Cornwall. It is stated that the mines, which many years ago had been extensively worked for copper, were abandoned when the lodes reached the greenstone, "the fact that these copper lodes turn to tin-bearing lodes in the underlying granite being then unknown." The capital now being raised is required for exploitation and development work. The venture is obviously speculative, and until production is established on a commercial scale we cannot recommend the shares to investors.

Tybar (Java) Plantations, Limited.—Authorised share capital £160,000 in 2s shares. This is an issue of 1,500,000 shares at par. The company has been formed to acquire estates in Java of 4,750 acres, of which 1,705 acres are planted with rubber and tea. The purchase price is £106,000, and is payable in cash. The vendors also have the right to subscribe at par for the 100,000 unissued shares until December 31, 1927. The total underwriting commission is 5 per cent. The company, apparently, has much development work to undertake before it reaps the benefit of the large acreage acquired.

Craigielea Rubber Plantations, Limited.—Capital £400,000 in shares of 2s each. This is an issue of 3,480,000 shares at 2s 6d per share. The company has been formed to acquire a rubber estate in Johore. The area of the estate is 3,506 acres, of which 3,040 acres are planted with rubber. The purchase price is approximately £365,750, the vendors having the right to subscribe for 520,000 shares at 2s 6d per share up to December 31, 1928. The total underwriting commission is 4 per cent. The company is under expert guidance and should do well.

Bajan Rubber and Produce Estates, Limited.—Capital £125,000 in 2s shares. This is an issue at par of 1,100,000 shares. The company has been formed to acquire as a going concern a rubber estate at Singapore. The area is 1,323 acres, of which 1,220 acres are planted, 400 acres being in bearing and 350 acres in part bearing. The cash purchase price has been agreed at the equivalent of five years' estimated profits, £90,253. In addition, the vendors have stipulated for the right to subscribe at par for 100,000 shares and an option upon the unissued capital at par for two years. The issue has been underwritten for a total commission of 5 per cent.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

CHAIRMAN'S REVIEW OF ECONOMIC CONDITIONS IN EUROPE.

In its economic aspects the year has been less satisfactory. The poor harvests of 1924 put a severe strain on many of the younger European States, which have not yet had time to recover from the successive ravages of war and of the inflation period. In the North, Estonia, Latvia, and Lithuania have all suffered severely, and recovery so far has been only partial. In the last two, however, the solid basis of a stable currency has been maintained, and by now also the collapse that was threatened in Estonia appears

I will not detain you by dealing with each country in turn, and will confine my remaining remarks to the outstanding example of France. As to the essential soundness of the economic position of our neighbour, there can be little doubt. At the same time, the crisis through which that country is now passing is only one more example of the results of financial timidity and the refusal to look facts in the face. It has taken a very long time for the French public to free itself from the chimera of being able to escape the financial burden of the war by means of Reparation-payments from Germany, and still longer to realise that international sympathy would not release it from its external obligations. Even now it still does not seem able to realise that, with its existing burden of internal debt, there is no third course between the alternatives of further taxation and further inflation. In the meantime failure to face the situation is being accompanied by the inevitable consequences of further collapse, with the serious danger that the underlying elements of strength and stability in which France is so rich may themselves become affected.

UNITED STATES.

I have left little time to deal with the one quarter of the globe, the United States, where for the past year prosperity would appear to have been unalloyed. I will not dwell on this, but I should add, at least, that to some observers there would seem elements in this upward swing of prosperity which give cause for serious thought, and would suggest more caution than is usually felt. It is to be hoped that these less satisfactory features may be eliminated. For there is nothing that could be less desirable than that the slow and painful progress which Europe is now making towards healthy conditions should be interrupted again by any unexpected reaction in the United States.

BALANCE-SHEET ITEMS.

You will remember that last year the reserve fund against our shareholding interest in foreign banks, amounting to £45,000, was amalgamated with the allocation of profit of £55,000 then made to general reserve. This year we have made an allocation to this account of £25,000, bringing our reserve fund to the substantial figure of £125,000. Acceptances for account of customers show an increase of some £600,000, and this is the result not so much of increases in regard to old clients as from new connections. On the other side of our balance-sheet the figures speak for themselves, and if they occasion any surprise it arises from their consistency, which, having regard to the character of our business, is remarkable. The contingent liability on bills of £2,211,000 is, as in other years, purely a formal entry, as we hold the obligation of first-class London banking houses in connection with every item.

PROFIT AND LOSS ACCOUNT.

The profit and loss account shows a satisfactory increase in profit for the twelve months of fully £20,000. Last year we made a specially large contribution to reserve to inaugurate the fund, and it was felt that the sum of £25,000 would this year be a satisfactory addition. Our usual allocation of £5,000 to reduction of premises account has also been made.

The general position and profit-earning capacity of the bank is such that the board had no hesitation in approving of a dividend of 3 per cent. per annum on the "B" shares, which, up to the present, have not received any return on their capital. I am sure you will agree with me that the £30,000 required for this purpose is not only justified, but that the "A" shareholders have every reason to show their appreciation of the patience shown, which has enabled the bank to produce such a strong balance-sheet before the "B" shareholders received a dividend.

THE RESOLUTION.

I now move the following resolution:—"That the report and accounts for the year ended October 31, 1925, as audited and certified by your auditors, now before the meeting, be approved and adopted; that the dividends recommended of 3 per cent. (final) on the "A" ordinary shares and 3 per cent. for the year on the "B" ordinary shares be approved, such dividends to be paid to shareholders on the register of members at the closing of the books on November 21, 1925."

MR HINDLEY'S SPEECH.

Mr R. T. Hindley (advisory director): Lord Churchill and gentlemen, I am very pleased indeed to be asked to second the motion which Lord Churchill has proposed, and, as representing one-third of the "B" shares, I do so with great pleasure. As this is the first occasion upon which a dividend has been paid on the "B" shares, it makes my mind go back to the meetings which eventually resulted in the formation of the British Overseas Bank. That bank has been an idea and an ideal in the minds of some of my friends, and we had many meetings, and the ideal took shape, but, as you know, it is very easy to have and to promulgate ideals; it is much more difficult, and much more necessary, to work out those ideals in practical daily life. I wish to take this opportunity of congratulating all the shareholders, including the "B" shareholders, upon having such men as they have at the head of affairs in this bank, from the managing director downwards, who have guided it through its first six years, and brought it to this state, an achievement which I can only describe as remarkable when one considers what those six years have been.

The whole of my life has been spent in practical banking, and I know what the last six years have meant, and I give respect and homage to those who have not only guided an existing bank, but have attained a far greater thing, creating a new bank amidst the turmoil of the last six years, and guiding it through with practically no difficulties, and with practically no bad debts except such as come from the devaluation of foreign currencies. I think it is a remarkable achievement.

NECESSITY FOR INDIVIDUAL ECONOMY.

Those six years have meant that the nations, and the bankers in whose hands the finances of the nations have been, had to face situations for which there was no precedent. It has meant elas-

ticity of mind, and of method, in order to guide the ship straight through the turmoil. At the same time, you have had economics and finance very largely subservient to politics for a large portion of the period. Happily, they are coming into their own again now, and I hope we shall have less politics and more sound economics in our finance in the future. After all, a nation is composed of individuals, and the soundness of national finance must be based upon the soundness of individual finance. During the war there was a period when the perspective of the individual was completely out of gear, owing first to inflation, and then to an excess of pessimism which followed the slump, and it is only now that we are getting back towards normal business methods. I sincerely hope that at the same time we are getting back to a sound and reasoned view by individuals of the need for sound finance. It was truly said the other day that we do not want fewer capitalists; we want more capitalists. We want every individual in every nation gradually to become a capitalist by a steady habit of saving, however small his savings may be relatively to the size of his income. On those lines alone shall we get back to sound finance nationally.

Gentlemen, I have made these rather lengthy remarks because it has appealed to me so much as a practical banker that during these times of unsound views and lack of perspective and lack of perception the gentlemen in whose hands the affairs of this bank are resting have come through with a remarkable record. In heartily seconding the resolution which Lord Churchill has put before you, I just wish to say, speaking for my own part, and I am sure I am speaking for you as shareholders in this bank, that we are to be heartily congratulated not only upon the present position of the bank, but upon the gentlemen whom we have to guide our great British Overseas Bank. I very heartily second the resolution.

The Chairman: Gentlemen,—Before putting the resolution, if any gentleman has any questions to ask or remarks to make, I shall be very happy to hear him. (A pause.) Well, if there are no questions, I will put the resolution which has been proposed by myself and seconded by Mr. Hindley. Those in favour will kindly hold up their hands; to the contrary. That is carried unanimously. I now ask Mr. Norman Hird to move a resolution.

RE-ELECTION OF DIRECTORS.

Mr Norman L. Hird (advisory director): Lord Churchill and Gentlemen,—The resolution which I have been asked to move is the re-election of the retiring directors, Sir George E. May, K.B.E., and the Hon. Henry D. McLaren, C.B.E., and it gives me very great pleasure to do so. Sir George May, as you are aware, has been connected with the British Overseas Bank from its earliest days, and the bank has had the advantage of Mr McLaren's services for the last two or three years. We are very much indebted to them both for their help, and I have much pleasure in moving the resolution.

Mr D. W. Berdow-Wilkinson: I have much pleasure in seconding that.

The Chairman: Those in favour will kindly hold up their hands; to the contrary. That is carried unanimously. I now invite a shareholder to move the reappointment of the auditors, Mr A. W. Tait, C.B.E., C.A., and Mr A. S. Macharg, C.A.

Mr Jacinto Magalhaes: I beg to move that the retiring auditors, Mr A. W. Tait, C.B.E., C.A., and Mr A. S. Macharg, C.A., be reappointed as auditors of the company for the current year at the same remuneration, namely, a collective fee of 500 guineas.

Mr A. S. V. Llewellyn: I second that.

The Chairman: Will those in favour kindly hold up their hands; to the contrary. Carried. That concludes our business, gentlemen.

VOTE OF THANKS TO THE BOARD AND STAFF.

Colonel G. R. C. Westropp, C.B.:—Mr. Chairman and Gentlemen,—Before we leave I am sure that it is the wish of every shareholder present to express appreciation of the good work which has been done by the board and all the members of the staff in being able to put before us the good figures which they have to-day. It is very gratifying to see that the bank is making steady progress and expansion. Now that there is a greater likelihood of continued peace in Europe for years to come, let us hope, we have every reason to expect that the bank will achieve still greater expansion and progress. We all realise how much an institution of this sort is dependent on the wisdom and guiding hands of the directors, and I wish to propose a very hearty vote of thanks to the board as well as to the staff for all they have done for us during the past year.

Mr W. J. Slatford: I have much pleasure in seconding that.

Colonel Westropp: All those in favour; that is carried unanimously.

The Chairman: I am going to ask Mr Gairdner to respond to that very gratifying vote, but before asking him to do so I should like, as your chairman, to emphasise what has fallen from Mr Hindley as to the great debt of gratitude which we all owe to Mr

Gairdner personally as our managing director and deputy-chairman, and I am quite sure that all my colleagues on the board will agree with me when I say that. We are indebted to him for his sound judgment, great care, and never-ceasing attention to our affairs which he has devoted so very successfully in the past years.

MR GAIRDNER'S REPLY.

Mr Arthur C. D. Gairdner (deputy-chairman and managing director):—Lord Churchill and Gentlemen,—The motion which Colonel Westropp has so kindly proposed is, I think, almost an original one so far as this bank is concerned. I do not think that we have ever had a formal proposition of that sort before; not that there has not been appreciation, but I think that everyone felt that the expression of this feeling in other speeches was sufficient. I feel that on the present occasion it comes most happily because we have got into the position of paying a dividend upon all our capital. Speaking on behalf of my colleagues and myself, I can say that we most deeply appreciate what has been said not only by Colonel Westropp, but also by Mr Hindley. Perhaps we appreciate Mr Hindley's remarks even more, for he is a banker, and knows all the difficulties we have been through. We appreciate it also because, if I may say so, I think we all feel that we really deserve it. We have had anxieties in the past; we have anxieties now, and we shall have anxieties in the future. We have made mistakes in the past; we are making them now, and we shall make them in the future, but as long as we have your confidence we can look forward to the future with optimism.

We have complete confidence in ourselves; we have complete confidence in one another, and I think I can congratulate you on the fact that in the British Overseas Bank you have got "a team." Banking is team work, and perhaps in no bank is that more essential than in the British Overseas Bank. One man cannot do anything in banking, but a team of men, all pulling together and each pulling his weight, can do anything. On possessing such a team I congratulate you. I thank you on behalf of myself and my colleagues for all the kind words that have been spoken, and for the confidence which you have expressed in us to-day, which is most encouraging in facing the troubles which no doubt lie in front of us.

The Chairman: That concludes the business.
The proceedings then terminated.

BRITISH AND CHINESE CORPORATION, LIMITED.

POSITION AND PROSPECTS IN CHINA.

The 27th annual ordinary general meeting of the British and Chinese Corporation, Limited, was held, at the Cannon Street Hotel, London, on the 3rd inst., Major W. S. Nathan, C.M.G. (chairman of the company), presiding.

The secretary (Mr E. R. Morriss) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—At the last annual general meeting of this corporation I warned you as to the danger of prophesying about future events in China. However, what I told you at that meeting regarding the probable trend of the general political situation has been borne out by facts. To-day the position in China generally, both politically and industrially, is even worse than it was a year ago, and I see no possibility of an early issue out of the difficulties the country is passing through.

The dangers I anticipated Chang Tso Ling would experience in maintaining his power in the face of opposition from the Christian general and the generals of the Chihli party have apparently culminated during the last few days. So far as can be judged from the telegrams which have been received, the power of this Tsuchun inside the Great Wall has been practically annihilated, whether or no for good still remains to be seen.

A spirit of nationalism has been developing among the Chinese during the last few years to a degree which only a short time ago would have seemed impossible. I believe, however, that this spirit will in the end prove the salvation of the country if and when its guidance falls into capable hands. It manifests itself at present in all kinds of foolish and irrational courses, but were it guided into a sane and steady channel of thought and applied to the re-building of the Government and the stabilising of the political situation, it may prove, as I have said, the salvation of China.

I hope the influence of the Central Government will still be sufficient to prevent the worst consequences of Communism and Sovietism. Meanwhile, I regret to say that, as always happens in these crises, the railways are suffering from loss of revenue and deterioration of their properties, and that during the past year there has been no possibility of attempting anything to improve their condition, and at the present time I see no prospect of our being able to attempt any considerable programme of re-habilitation or reconstruction.

CAPITAL POSITION.

You will remember that, at our last meeting, I discussed the probability of the corporation calling up further capital, but so far it has not been necessary to take any action in this matter, nor do I see any immediate necessity for doing so. As you are aware, your directors have each year, since 1919, recommended setting aside a sum for building up the reserve with the result that the sum is now nearly double what it was six years ago. We think events have shown that this was a wise and prudent policy, and whilst the state of affairs in China continues as at present, and in order to bring the corporation in a good and strong position to resume the business for which it was chiefly constituted, the contracting of loans for public services, your directors are of the opinion that this policy should steadfastly be maintained.

Regarding the accounts for the year under review, the decrease in profits is chiefly due to the non-payment of the overdue dividend on the Shanghai Nanking Railway net profit certificates, as compared with two dividends received in the previous year's accounts. The value of our investments is reduced owing to a heavy charge having to be made for depreciation.

DEBTORS AND OPEN ACCOUNTS.

Advances to the Canton Kowloon Railway during the year amounted to £35,000, and in connection with the Peking Mukden Railway double track loan, only four monthly instalments have been received against the principal and interest.

The increase is due to bank overdrafts in China to meet the advances I have mentioned.

In pursuance of the policy I have advocated, it is recommended that a further sum of £10,000 be placed to the reserve, and to enable the usual amount to be carried forward to the next year's account, we propose that the dividend be reduced to 10 per cent.

I beg to move: "That the directors' report and accounts now presented, be and they are hereby received and adopted, and that a dividend of 10s per share be, and the same is hereby declared payable, less income-tax, on the 5th inst."

Sir Charles Addis, K.C.M.G., seconded the resolution, and it was carried unanimously.

The Chairman then moved the re-election of Sir David Barbour, K.C.S.I., as a director of the corporation.

The motion was seconded by Mr David Landale, and unanimously approved.

On the motion of Mr J. R. Michael, seconded by Mr J. G. P. Jepps, the auditors, Messrs Broads, Paterson and Co., were re-appointed.

The proceedings then terminated.

CHINESE ENGINEERING AND MINING COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

EFFECTS OF POLITICAL AND INDUSTRIAL SITUATION.

The thirteenth annual ordinary general meeting of the Chinese Engineering and Mining Company, Limited, was held, on the 2nd inst., at Winchester House, Old Broad street, London, Mr W. F. Turner (the chairman) presiding.

The secretary (Mr Alf. W. Berry) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—The report and accounts for the year ended on June 30th last, which we submit to you to-day, form a striking and unpleasing contrast to those which were presented at the meeting in December of last year, but those of you who have borne in mind the information which we gave you on that occasion as to the working of the first five months of the year will have been prepared for it to a great extent. The final result is that we recommend the payment of a balance dividend of 5 per cent., free of income-tax, which, together with the interim dividend of the same amount paid in May last, makes a total for the year of 10 per cent., free of income-tax, compared with 20 per cent., free of income-tax, for the preceding year.

The report shows that the gross profit of the Kailan Mining Administration for the past year amounted to \$5,640,271. This compares with a gross profit of \$10,830,007 for the preceding year. After providing for interest on the 6 per cent. Kailan bonds, £55,440; redemption of bonds for the year, £24,000; reserve for depreciation, \$846,040; the proportion of profit to which the Chihli Provincial Government is entitled and other items, there is a net profit remaining of \$3,116,238, as compared with \$7,339,371 in the preceding year.

PROFIT AND DIVIDEND.

The proportion of this profit brought to credit of our profit and loss account, together with interest in China, is £256,034. The average rate of exchange for the year was approximately 2s 3d, which is rather lower than that for the preceding year. Interest in Europe, exchange, and minor items bring up the total credit to £286,546. Administration and expenses of all kinds in Europe amount to £19,825, leaving a net profit for the year of £266,720. The corresponding figure last year was £500,225. The balance brought forward from the previous year's account was £185,406, and we have a credit of £22,479, being the balance of our claim for repayment of excess profits duty. These sums make a total credit of £474,605. Income-tax absorbs £90,485, so there remains a balance of £384,120 to be carried to the balance-sheet. The interim dividend of 5 per cent., free of tax, paid on May 7th last, amounted to £70,000, which leaves available the sum of £314,120 shown in the balance-sheet.

Out of this balance we propose that a further dividend of 5 per cent. be declared to-day, free of income-tax (making 10 per cent. for the year, free of tax); that is, £70,000. The directors' further remuneration under article 83 of the articles of association amounts to £2,885, so there will remain a balance of £241,234 to be carried forward to the next account. It is equal to about 17½ per cent. on the share capital. We regret that we do not feel justified in recommending a larger dividend, but in view of the political and industrial situation in China, to which I shall refer presently, and the consequent necessity of our maintaining a strong financial position, we are sure that the shareholders will approve our decision.

The balance-sheet shows liabilities to creditors, £63,456, which is about one-half of the amount in the preceding year, the difference being chiefly in respect of claims of the Inland Revenue. The reserve for corporation profits tax was estimated at £14,425, and the half-year's debenture interest credited to June 30th was £27,360, making the total liabilities £105,241. On the other side, there is a large reduction in the cash, which stands at £367,827, against £696,779 in the preceding balance-sheet. Bills receivable were £8,284, against £20,262 last year. The debtors, £3,693, are about as usual. You will see that the debit balance on the Kailan Mining Administration current account is £298,633, compared with £134,072 in the preceding year. It consists mainly of our share of the profit of the past year.

PURCHASE OF RAILWAY WAGONS.

There is a new item in the balance-sheet this time called "Kailan Mining Administration—Railway Car Loan Account," £77,290. This debit is in respect of the 200 railway wagons bought by the Kailan Mining Administration in Europe, to which I referred in my address a year ago, and sold to the Peking-

Mukden Railway on the hire purchase principle, the exclusive use of the wagons being retained by the Kailan Mining Administration. The loan is being repaid to us by the Administration in agreed monthly instalments. This transaction has been of great value to the business of the Administration, and it illustrates the importance of our maintaining the company in such a financial position that we can render temporary assistance of this kind when the need arises. The engineer-in-chief, in his annual report, says: "One may realise what services our own rolling stock has rendered us, because if we had only had the Peking-Mukden Railway cars for the transportation of our coals we would simply have been compelled to close our mines for some time, or only work two or three days a week, which would have been an impossible régime."

REDUCED SALES OF COAL.

The directors' report states that the sales of coal were 2,861,708 tons, a decrease of no less than 1,422,000 tons compared with the preceding year—almost 33 per cent. At the general meeting a year ago we gave you information as to the sales during the first four or five months of the working year. It was stated that the sales were well maintained for the months of July and August. Then came the hostilities of September and October, which almost paralysed the railway traffic as far as we were concerned, and the sales fell to their lowest point of 16,000 tons in the first week of November, 1924. The recovery from this point was slow, and it was not until the month of May following that normal figures were reached. The recovery was simply a question of the return to normal facilities for the transport of the coal.

The output for the year was 4,033,000 tons, against 4,464,000 tons in the preceding year. Development work has continued as usual, and the coal in sight at June 30th last was estimated at 28,809,000 tons, against 27,658,000 tons at the close of the preceding year.

Before leaving this part of the subject, I should say that Mr Young, the general manager of the Kailan Mining Administration, writes acknowledging the zeal and devotion to duty that every member of the Administration's staff has displayed throughout a most trying time last year. He says that the board may feel that they have a staff proud to belong to the Administration, and ready to do their utmost to preserve its credit and its good name.

CURRENT YEAR.

As regards the business of the current financial year 1925-26, the report tells you that the sales for the four months, July to October, show an increase of 202,000 tons compared with the same months of 1924. The latest figures we have show that to the end of the third week of November the sales were 1,443,000 tons, compared with 1,111,000 tons in the preceding year, an increase of 332,000 tons; but this rate of progress does not seem likely to continue. During the past few weeks there has been a great sequent upon the demands made upon the railway by the movement of troops, and the sales will, of course, be affected sooner or later. Advantage had, however, been taken of the opportunity to accumulate large stocks of coal at Chinwangtao, Tientsin, and the mines so as to be prepared for all emergencies. The latest return shows at Chinwangtao 446,000 tons, at Tientsin and neighbourhood 67,000 tons, and at the mines over 680,000 tons. This preparation will help to minimise the effects of civil war if it should come in the north, where we are chiefly concerned, and to place the Administration in a position to make the most of the situation when the trouble is over.

GENERAL MANAGER'S REPORT.

I will conclude with one or two passages from Mr Young's report commenting on the work of the past year and describing the position in which we now stand. He says:—

"It is not surprising that in such adverse circumstances the profits on the year's working are very much reduced. Rather, I think, it is a matter for congratulation that the powers of resistance of commerce and industry in China to military interference are so great as to have enabled us to realise a gross profit of as much as \$5,640,000. But what strikes me as even more remarkable is that out of a turnover which we estimate as \$22,000,000, we have found it necessary to write off no more than \$24,000 as bad debts, or .11 per cent. of our gross receipts. Anywhere, and in

any circumstances, that figure would be satisfactory. In such circumstances as those of China at the present time, it bears extraordinary evidence of the fact that, in spite of political chaos and rampant militarism, the business community of China—the best element in the country—is sound.

"As to our general situation and the prospects of our business for the future, I can only reiterate what I have said on many previous occasions. The equipment and maintenance of our mines leaves nothing to be desired; the spirit of our staff in all grades is excellent; the potentialities of a large and prosperous business exist. All that is required is freedom from political disturbances and military interference. Whether hopes based on the Tariff Con-ference will be realised, and a period of peace will at last visit China, or whether a further period of chaos lies before us, none can predict. I can only say with confidence that, if our hopes should be realised, we are in a position to take full advantage of the favourable turn of events, and that if the worst should happen, we are better able than any other concern in China to weather the storm."

We are in close touch with all that concerns our affairs in China, our colleague, Major Nathan, having recently returned from a stay of two months in the country.

THE FUTURE.

In regard to the future, I will read you a short passage from the report of the engineer-in-chief as to the richness of the mines. He says:—

"To sum up, we notice that we have as tonnage to work out in the depths limits fixed for each mine a total of 141,000,000 tons in round figures. This does not represent a maximum, as it is more than certain that our mines will be further deepened. Indeed, at Tongshan, we shall soon start work towards the 11th level, which is not indicated in the statements here alluded to. If to the tonnage mentioned we add the 24,000,000 tons that Tongchiachwang mine mentioned we have a grand total of 165,000,000 tons of coal, or, will produce, we have a grand total of 165,000,000 tons of coal, or, at the annual rate of 6,000,000 tons, an output for a minimum duration of about 28 years. In next year's report we shall increase the depth limit fixed for the exploitation which will be logical, being given our equipment."

If we take the annual rate of output to be about 4½ million tons—the highest we have yet reached—the duration would be about 40 years instead of 28 years. It is obvious, then, that the known and the potential resources of the mines are enormous; we have an admirable organisation in all departments; as the industries of China develop they require our coal in increasing quantities; all that is needed is stable government.

I now move: "That the directors' report and accounts to June 30, 1925, be and they are hereby received and adopted, and that a final dividend be declared of 5 per cent., free of income-tax, making 10 per cent. for the year, free of income-tax, payable on December 3, 1925."

Mr Félicien Cattier seconded the resolution, which was carried unanimously.

Mr Edward Davis, Mr Emile Francqui, and the Chevalier E. de Wouters, the retiring directors, were re-elected, and Messrs Annan, Dexter and Co. were reappointed auditors.

A hearty vote of thanks to the chairman, the directors, and the staff concluded the proceedings.

E. W. TARRY AND COMPANY, LIMITED.

IMPROVED RESULTS AND PROSPECTS.

The annual general meeting of E. W. Tarry and Co., Limited, was held, on the 1st instant, at the Cannon-street Hotel.

Sir J. Foresee Flannery, Bt., D.L. (the chairman), in moving the adoption of the report and accounts, said that for two or three years past the trading of the company had been adversely affected by strikes, political disturbances, bad seasons, poor crops, poor trade, and other misfortunes in the Dominion of South Africa, but the directors were now able to point to some signs of improvement, and, indeed, had a better showing to submit than of improvement, and the sales of large stocks which had accumulated in the hands of weak holders among their competitors had to an extent counterbalanced the improvement in South African trade, but when these stocks were liquidated the full revival of trade for which the directors hoped should inure to the advantage of this company.

The general condition of the company throughout the Dominion was sound; from Rhodesia down to the Cape encouraging reports had been received, and the future might be looked forward to with a great deal of confidence.

Pursuing the board's policy of inter-communication between officers here and in the Dominion, Mr Allison, the secretary of the company and manager in London, was now in South Africa, where he would discuss with the local committee the extension of the business in districts where they were not at present repre-

sented, any reorganisation or extension of business in places where they were now working, and various other matters. With the intention of extending the scope of the business, the directors had had under consideration the sale of motor-cars, and had made certain arrangements as a start, and further inquiries were now being made with a view to the extension of the board's policy. The possibilities also of a trade in wireless were now being investigated.

Dealing with the balance-sheet, the Chairman pointed out that the increased business had been done without increasing the stock, but with a still further increase of turnover the figure could not be expected to remain stationary. One of the great attractions of Tarrys in the Dominion was that what a customer wanted they could supply on demand, and this necessarily involved carrying a considerable stock. The gross profit for the ten months to June 30th last amounted to £56,523, being, proportionately, somewhat better than in the previous twelve months, and the directors were able to recommend a dividend of 2½ per cent., or at the rate of 3 per cent. for twelve months, on the ordinary shares.

The report was unanimously adopted.

STRAND HOTEL, LIMITED.

ANOTHER SUCCESSFUL YEAR.

The eighteenth ordinary general meeting of the Strand Hotel, Limited, was held, on the 3rd instant, at the Trocadero Restaurant, London.

Major M. Gluckstein, the chairman, presided, and, in the course of his speech, said: The profit for the year has again increased. This, I am sure, you will consider very satisfactory, because last year was undoubtedly an exceptional one, the number of visitors to London having been largely increased by the additional attraction of the British Empire Exhibition at Wembley. As was to be expected, Wembley did not prove so great an attraction this year, and the number of visitors to London was not so large as in the previous year. That, in spite of this, we should have achieved even better results will, I am sure, be regarded by you as proof that we are not dependent on these abnormal attractions.

The balance from trading account, after deducting all the expenses, provision for depreciation, redemption, income-tax, and contingencies, and crediting dividends received from investments, shows a profit of £111,349. (Cheers.) Although this is only £900 more than last year, we think it is, for the reason already given, and having in mind the present depression in trade, an excellent result. It is proposed to pay final dividends at the same rates as last year—namely, 7 per cent. and 8 per cent. respectively on the cumulative preference shares; on the participating preferred ordinary shares at the rate of 15 per cent. per annum, making a total distribution of 11 per cent. for the year; and on the deferred ordinary shares an amount equal to that proposed on the participating preferred ordinary shares. These final dividends will absorb £53,000, and will leave a sum of £10,392 to carry forward.

I told you last year that we were preparing for an extension of the present Strand Palace Hotel premises, but that we should not be able to commence work for some time. That extension will, in fact, enable us to double the present number of bedrooms. I need not say that this is not the end of the extension schemes, but it is sufficient for the time being.

As regards the future, we are not pessimistic. We have weathered such storms as we think are not likely to occur again in the lifetime of any of those present. There are many alarming rumours about, but I have great faith in the strong common sense of the mass of the population of this country. There are slight indications of improvements on the horizon. If such indications develop, your company will share in the additional prosperity; if they do not, we have in years past sufficiently strengthened the foundations of our business to be able to face a continued period of depression with equanimity.

The report and accounts were unanimously adopted.

MALAYA GENERAL COMPANY, LIMITED.

YEAR'S RECORD PROFIT.

The seventeenth ordinary general meeting of the Malaya General Company, Limited, was held, on the 2nd inst., at Winchester House, London, Mr George M. Weekley (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The year's profit of £55,551 is a record in the company's history, and it has been accomplished with an average selling price of 1s 8.59d, delivered in Singapore. Measured by to-day's quotations, this may appear very low, but you must remember that our financial year began in September, 1924, and that rubber prices did not rise to any appreciable extent until May of this year. Our previous year's average was rather under 1s

per lb, and when I last addressed you we had sold "forward" 12 tons per month of our crop at the ruling rates, with a minimum of 1s 3d and a maximum of 1s 9d per lb. We still have to deliver 12 tons to complete the contract at 1s 9d per lb, but for the bulk of our output we have, of course, been getting current rates.

We have sold the whole of our crop until the end of 1926, delivered in Singapore, on the basis of the London average selling price for the month of delivery, less 4d per lb, so that we are assured of the full market value during the whole of next year. Buyers have the option of taking delivery in the form of latex, and this they will do as soon as their installation is ready early in the new year. The price for the latex will then be 1d per lb under the London average for standard smoked sheet, and, as we shall be saved the cost of manufacture, packing, &c., this will really give us an advantage of 2d to 3d per lb over the price of manufactured rubber on the London market.

Our estate cost of production was 7.44d per lb, as against 7.02d in the previous year. Our general expenses, including agency, directors' remuneration and depreciation, represent only .98d per lb, as against 1.24d in 1924, being a saving of more than 4d per lb over the whole crop.

The reserve account has been brought up to £50,000, all invested in Government securities, of which £10,000 of War Loan has been purchased since the date of the balance-sheet. This is equivalent to more than 25 per cent. of the capital of the company. Our other securities are in process of realisation, and should ultimately realise the amount, nearly £14,000, at which they stood on August 31st last.

After paying 20 per cent. dividend—which will make a total of 25 per cent. for the year—we propose to carry forward the sum of £27,953.

Within the last few days we are informed, by cable from Singapore, that our standard production has been increased to 1,871,425 lbs, being nearly 75,000 lbs more than was stated in the directors' report.

The report and accounts were unanimously agreed to.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER

Tenders for £45,000,000 in Treasury Bonds and Treasury Bills were opened on Dec. 4, 1925, and the total amount applied for was £56,295,000. For bills at three months dated Monday, £98 17s 10d, and above in full; Tuesday to Saturday bills at £98 17s 7d, above in full—in bills at 3 months, £44,145,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
1925.				
Oct. 2.....	45,000,000	65,940,000	£ s d	£ s d
Oct. 9.....	40,000,000	66,420,000	3 7 3/39	94 8 1/48

	Java
	British India
	Straits Settlements
	Canada
	Other Countries
Total declared value of imports	Total declared value of exports
92,650	691,600

Messrs Samuel Montagu and Co. write on December 2nd as follows:—

GOLD.

There was again very little gold available in the open market this week, and withdrawals were made from the Bank of England to meet requirements. The following movements of gold to and from the Bank of England have been announced since our last letter:—

	Received.	Withdrawn.
Nov. 26	£ nil	£ 106,000
" 27	nil	27,000
" 28	nil	nil
" 30	nil	39,000
Dec. 1	nil	179,000
" 2	nil	709,000

The destinations of the £89,000 sovereigns withdrawn were announced as follow:—£22,000 to Singapore, £23,000 to Straits Settlements, £19,000 to Holland, £15,000 to India, to £10,311,000.

ARCOS LTD.

Sole Purchasing and Selling Agency in Great Britain for the Government of the U.S.S.R.

Turnover from June, 1920, to September 30, 1925, £65,797,891

Exports from Russia to Great Britain include timber, flax, furs, ores, metals, crude drugs, petroleum products, etc., to a total value of £21,565,018.

The more important items of import to Russia are agricultural machinery, locomotives, tools, motors, scientific apparatus, drugs, clothes, boots, etc., to a total value of £44,232,873.

49, Moorgate, London, E.C.2

Telegrams: "Arcosarcos, Arcs, London." Cables: Arcosarcos. Telephone: London Wall 6626. Codes: A.B.C., 8th & 9th editions. Marconi, Bantley & Zetser.

and £10,000 to the Argentine. During the week under review £1,060,000 has been withdrawn from the Bank, increasing the net efflux since the resumption of an effective gold standard

SILVER.

The market has remained rather inactive during the week, and this condition has been reflected by the narrow movements in the quotations. Silver has been offered on China account, and in the absence of support prices sagged gradually until the 28th ultimo. Buyers were more in evidence on the next working day, November 30th, and quotations were fixed 1/4d higher at 32 1/2d and 32d, for cash and forward deliveries respectively. The demand did not continue, however, and prices again lapsed, being quoted to-day at 32d and 31 1/2d. Very little demand has been made by the Indian bazaars, but America has contributed some sales to this market. United Kingdom imports and exports of silver during the week ending the 25th ult. were as follows:—

Imports.	Exports.
£	£
Poland (including Dant-	Germany
zig)	France
U.S.A.	Austria
Mexico	Egypt
Peru	Tanganyika Territory ..
British West Africa	Other countries
Other countries	
Total	431,072
	85,389

NOTICES.

Mr Thomas Woodsend, who has been a director of the Anglo-South American Bank, Limited, since July, 1910, has resigned from the board of that bank owing to advancing years. Señor Don Agustin Edwards has been elected to the seat on the board of the bank rendered vacant by the retirement of Mr Woodsend. Señor Edwards was Chilean Minister at the Court of St. James for many years prior to his return to Chile in November, 1924.

The Midland Bank Limited announces the opening of a new branch at 579 Wilbraham road, Chorlton-cum-Hardy, Manchester, under the management of Mr Arthur Evans. It is also announced that the business of the bank's Liverpool foreign branch has been transferred from 8 Dale street to 36 Castle street and 4 Brunswick street.

Barclays Bank Limited announce that they have opened a new sub-branch at 45 Church street, Shildon, under the management of Mr G. L. Bainbridge, also manager of Bishop Auckland branch.

Lieut.-Colonel E. H. W. Bolitho, D.S.O., a local director of Barclays Bank Limited at Penzance, has been elected to a seat on the board of the bank.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LIMITED.—By cable for the week ending November 25, 1925:—Production, 44,269 barrels; shipments, 4,503 tons.

LOBITOS OILFIELDS, LIMITED.—The production for November is cabled as 19,707 tons.

OROPUCHE (TRINIDAD) OILFIELDS, LIMITED.—The estimated gross production of crude oil for the month of November was approximately 1,898 tons, and the oil delivered to the United British Refineries, Limited, amounted to about 1,328 tons.

STEAUA ROMANA (BRITISH), LIMITED.—The production for November was 30,240 tons. Production curtailed owing to lack of transport facilities.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during November, 33,950 tons. Oil purchased during November from other companies, 10,500 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—The combined production for the week ending Wednesday, November 25, 1925, amounted to 1,103 tons.

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended November 28, 1925, was as follows:—La Rosa, 16,178 m. tons (previous week ended November 21st, 12,585 m. tons). Maracaibo District, 3,225 m. tons (previous week ended November 21st, 3,109 m. tons).

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Field work has practically come to a standstill owing to severe frosts, but sowings or winter cereals were completed under favourable circumstances. The international positions has been mainly under the influence of adverse crop news, and prices have advanced sharply both in Argentina and the United States. Latest sales include White Pacific, expected to load January 1st-16th at 6s 6d, and since resold at 6s 6d, Australian January 1st 6s 9d, ditto December 15th-31st, 6s 3d, No. 1 Northern Manitoba January 6s 7½d, ditto October-November 6s, and Baril 6½ lbs expected to load 13th inst. 6s. Maize also firmer, and sellers reserved, with sales of No. 6 yellow African loading at 36s 3d, and Plate January at 37s, all per 480 lbs c.i.f. terms. Wheat dearer. No. 1 Northern Manitoba, ex ship, to arrive quoted 67s 6d, No. 2 ditto 66s 6d, No. 3 65s 3d, No. 2 mixed Durum 62s, Barusso 62½ lbs, ex ship, 66s per 406 lbs. English quoted 12s 2d-12s 8d per 112 lbs free on rail. Flour firmer and sellers reserved. London standard grade quoted 50s, patents 52s-53s, town whites 50s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 50s-52s, Minneapolis 50s 6d-52s, Australian 46s 6d per 280 lbs ex store. Maize firmer. Plate, ex ship, to arrive quoted 38s 9d, landed ditto 40s 6d, white flat African, ex ship, 35s 6d per 480 lbs. Yellow African maize meal, ex ship, to arrive £9 2s 6d, white ditto £8 7s 6d per ton. Barley firm. Californian, ex store, 37s-50s, Chilian Chevalier 56s-66s, brewing 50s-53s, according to quality, Australian Chevalier 59s-60s, ex store, Polish and Danish, ex ship, 45s-61s per 448 lbs. American malting, ex ship, 28s 6d, landed 30s, No. 3 Canadian Western, ex ship, 32s, Russian, ex ship, 29s 3d, landed 30s 3d per 400 lbs. English quoted 9s 3d-21s 3d, the latter for finest malting quality per 112 lbs. Oats firm to dearer. Plate, ex ship, quoted 25s-25s 6d as to position, landed 27s, No. 2 Canadian Western, ex ship, to arrive 30s 6d, landed 31s 6d, No. 2 Canadian feed, ex ship, 25s 3d, landed 26s 9d, No. 2 white clipped American 38 lbs, ex ship, to arrive 24s 9d, landed 26s 3d, all per 320 lbs. Danzig, ex ship, 28s 9d per 336 lbs. English quoted 8s 10d-9s 8d per 112 lbs free on rail. Millers' offals firm. Broad bran quoted 8s 6d-8s 9d, middlings 8s 3d-8s 6d, fine ditto 10s 3d, bags included, ex mill, powdered oat husks 6s 3d, feed oatmeal 8s 3d, ground oats 11s 9d per cwt free on rail. Oatmeal firm, with a hardening tendency. London-made flaked 18s, rolled oats 17s, medium also fine cut 17s, coarse also medium pinhead 17s, ex mill, ordinary Scottish oatmeal 17s 6d. American ditto 16s-16s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1925-26, 1924-25, 1923-24, 1922-23.

	1925-1926.	1924-1925.	1923-1924.	1922-1923.

AMERICAN WHEAT MARKETS.

A slight set-back occurred at the beginning of the week in the American markets, but prices soon rallied under the influence of stronger export inquiry and bullish Argentine and Australian advices, particularly as regards deterioration of crops owing to widespread rust in the northern States of Argentina. Rumours to the effect that Russian exports of wheat had been prohibited until March next caused prices to rise still further. Recent quotations:—

	Dec. 5, 1924.	Jan. 2, 1925.	Nov. 19, 1925.	Nov. 26, 1925.	Dec. 3, 1925.

(b) December delivery. (c) November delivery.

COAL.

Our Cardiff correspondent writes:—There has been no material change in the state of business. Prices of small, also of Cardiff large, steam coals have been well maintained, while anthracite-qualities have displayed a further hardening tendency. The chief weak spot has been in Monmouthshire coal. The Egyptian State Railways, however, have just placed a contract for 200,000 tons at a c.i.f. price of 28s 9d per metric ton, delivered at Alexandria, and it is understood that the coals shipped under this contract will be largely, if not entirely, Monmouthshire qualities. The supply of tonnage has eased off during the past few days, but chartering has been fairly active, and the dock position is likely to improve over the week-end. The joint audit for the three months ending October shows that the coalowners made a district.

† Tax free. a Including arrears. t A bonus dividend taken from reserve.

profit of over £100,000 in October, and certifies that the wages payable by the coalowners during the month of September will be 7.22 per cent. below the 1915 standard wages. The Government, therefore, will have to subsidise wages to the extent of 49.44 per cent. on the standard wages, compared with 40.58 per cent. in November.

The following are the current approximate quotations:—Best Admiralties, 23s to 23s 6d; seconds, 21s to 22s 6d; best drys, 22s 6d to 24s; black veins, 19s to 20s; Western Valleys, 19s to 19s 6d; Eastern Valleys, 19s to 19s 6d; best bunker smalls, 12s 6d to 13s; ordinary cargo smalls 10s 6d to 11s; coking smalls, 12s 6d to 13s; anthracite, best large, 38s to 42s; red vein, large, 28s to 32s; machine-made cobbles, 56s 6d to 57s 6d; French nuts, 57s 6d to 58s 6d; stove nuts, 57s to 58s; rubbly culm, 11s 6d to 12s; coke (special qualities), 35s to 40s; pitwood, ex ship, 31s to 31s 6d; patent fuel, 19s 6d to 22s 6d.

Our Glasgow correspondent writes:—The export branch of the Scottish coal trade is still concerned mainly with the fulfilment of orders held up as a result of the recent spell of inclement weather. On this account the collieries find a ready market for available supplies, and, having as a rule fairly satisfactory order-books, are assured of a steady offtake until at least the turn of the year. Prompt business, however, has fallen off somewhat during the past few days, and those collieries with surplus stocks have for some varieties lowered prices slightly to induce orders. The more

pressing demands for the larger sizes of nuts appear now to have been satisfied, and in all districts the tendency of values has been rather easier. Doubles in the Lothians have moved down to 16s. 3d., being now in more plentiful supply, owing to the stoppage at the shale oil works. First-class steam in Fife, and both prime and secondary in the Lothians are all also a shade lower; but for best Lanarkshire splint a fairly strong demand on Italian account has again been encountered, and the price is firmer at 18s 3d. First navigations in this area have advanced to 17s 3d. Deliveries for home purposes show a seasonal expansion.

Our Sheffield correspondent writes:—The demand for coke is greater than for a long time past, and boiler fuel is in request. A considerable tonnage of house coal has been delivered this week. The demand for steam coal, both on home and export account, is very depressed. South Yorkshire steams are quoted from 16s 6d, and Blyths from 17s 6d.

IRON AND STEEL.

We have extracted the following from the weekly report of the London Iron and Steel Exchange:—As is frequently the case in December business in the iron and steel trades has slackened somewhat, but the tone of the weekly meeting of the Exchange was cheerful. The demand for Continental material has declined over the week.

Reports are also current that the Belgian steel strike will be settled shortly, and buyers are disposed to wait until it can be seen what effect the return to the market of works which have been idle for several months will have upon prices. In the pig-iron department the demand has been well maintained, and prices are firm. Quiet conditions rule in the market for semi-finished material, as most of the consumers seem to have covered their requirements. A moderate business, however, is passing in finished steel, but at unsatisfactory prices.

Our Middlesbro' correspondent's report, dated December 3rd, is as follows:—Pig-iron: The demand for iron is still active, but with the minimum price of No. 3 Cleveland G.M.B. fixed at 66s 6d per ton for home consumption, and 67s for export (amounts mutually agreed upon amongst the makers), it is feared demand will be restricted. These fixed prices do not affect the hematite trade, but makers are heavily sold, and are firmly adhering to the quotation of 75s per ton for East Coast mixed numbers. Manufactured iron and steel: The recent big rail orders secured by a local firm have given a further fillip to the steel trade. All the works are more actively employed, but prices remain very depressed, the following being approximate current quotations:—Steel ship plates, £7 5s; steel ship angles, £7; iron bars, £11 5s; steel rails, £8. Iron ore: With freights continuing to rise, best Rubio is now quoted 21s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—The steel trade is better. The smaller firms are busier than at any time this year, and many are now working on a remunerative basis. The demand for special qualities of steel required in engineering and for alloy steels keeps good, but conditions are quiet at the heavy works, and the depression in wrought iron and wire rods continues. The electrical branches are exceptionally busy. The crucible and tool steel departments appear to have lost the ground which they gained about a month ago. The output of what is known as compound iron and steel, chiefly used for making large machine knives, has been well maintained. Pig-iron is selling a little more freely, and prices are steady, but Continental competition is causing some shading of the prices of British steel bars, plates, and sections. The railway steel shops are quieter, and do not expect to receive much more work until after the end of the year. There is an improved demand for engineers' small tools and files. Many kinds of tools, however, are quiet.

Our Glasgow correspondent writes:—The amount of shipyard work placed during November—viz., 40,000 tons—is better than was anticipated a few weeks ago, and as steel plates are now down to £7 5s per ton—the lowest figure since the war—it is hoped that owners will seriously consider the question of new or replace tonnage. The inquiry for pig-iron is improving, prices being firmer. Steel works have reduced boiler plates by 10s per ton, the current price delivered Clyde being £11 per ton. Good business has been secured by railway wagon builders and engineers. Steel sheets are in steady demand and works are all busy. Makers of galvanised corrugated sheets are sold well into the New Year, and are experiencing difficulty in satisfying the wants of buyers who require early delivery.

The position in the South Wales tinplate trade remains fairly satisfactory, with prices steady at over 20s per basis box, and exports well up to the recent figures. More mills have recently been restarted.

OTHER METALS.

The market for tin opened with a firmer tone, while influenced by higher Eastern cables and a steady demand. Later, however, sellers were more prominent, and the advance was mostly lost, while dealings were attended by some irregularity, especially with regard to forward positions. Standard cash sold £288 10s. £290 and £281 5s, three months £282 10s, £283 10s, and £281 15s. Sales in the East were reported at £290 5s, £289, and £290. COPPER in fairly good request, but with liberal selling offers prices marked a steady decline, though somewhat irregular at times. Standard cash sold £60 8s 9d to £59 15s, three months £61 8s 9d to £60 7s 6d. LEAD: Liberal offerings resulted in a generally weak market, though fair absorption took place at the lower levels established, and a firmer tone prevailed later. Good soft foreign pig, December, sold £35 16s 3d to £34 15s-£35 5s; January £35 12s 6d to £34 15s, £35; February, £35 6s 3d to £34 8s 9d, £34 12s 6d; March, £35 5s to £34 12s 6d. Spelter: Values marked an irregular course, with dealings on a fair scale. December sold £39 3s 9d to £38 6s 3d, and £38 13s 9d; January, £39 1s 3d to £38,

£38 7s 6d; February, £38, £37 2s 6d, and £37 17s 6d; March, £37 12s 6d, £37, and £37 12s 6d. ANTIMONY steady. English specials spot quoted £90, China crude December-January, £60; ditto regulus, £82 per ton c.i.f. terms. ALUMINIUM: Home trade nominally £120, export £125 ton. WOLFRAM firm. Forward quoted 21s to 21s 3d per unit c.i.f. QUICKSILVER firm. Spot quoted £15 per bottle.

THE COTTON TRADE.

LIVERPOOL, December 4, 1925.

American cotton has continued in fair demand, but quotations for middling are 32 points lower. Egyptian has been very quiet, and quotations for fully good fair saket are 65 points lower. The demand for Brazilian and Peruvian continues quiet, and quotations for these are about 30 points lower in sympathy with American. The estimated spot sales from the 27th ultimo to 3rd instant (inclusive) are 39,000 bales, including 1,500 for export. Of these 26,100 are American, 2,500 Brazilian, 4,600 Peruvian, 700 Egyptian, 4,300 African, 300 East Indian, with 500 sundries. The imports for the week are 137,523 bales. These include 93,096 American, 2,792 Brazilian, 8,042 Peruvian, 21,685 Egyptian, 7,156 African, and 4,752 East Indian. Middling American is quoted at 10.47d, Egyptian fully good fair saket at 19.20d, fully good fair upper at 15.75d, fair Brazilian 10.92d, good fair mod. rough Peruvian 16.00d, smooth 12.67d, fully good fair Tinnivelly 9.60d, good fair East African 13.10d, and middling West African 10.17d. During the week prices have declined, mainly on the poor off-take and hedge selling. Operators are not at present taking any definite view pending the issue of the bureau report due on the 5th instant.

MANCHESTER, December 3, 1925.

Although in some quarters of the market during the past week inquiry has been on broader lines than recently, the general experience of spinners and manufacturers has not been at all encouraging, and it has been exceedingly difficult for producers to secure contracts of importance. A feature of interest has been the increased demand in cloth for India, freer buying having taken place in dhooties and other light fabrics. Rather more operations have also been reported in grey shirtings. News from

China at the moment is not of a character to stimulate trade, but some necessary purchasing has taken place, chiefly in white goods and fancies. A few more tentative offers have been about for Egypt. Finishing cloths continue in steady request for the Continent and the United States. Rather more activity has shown itself in home-trade circles. American yarns for home consumption have been irregular in price when tested, and business has been of limited dimensions.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—A readjustment of values is going on in the wool markets of the world. Spinners bought fairly heavily a few weeks ago, and the majority are now in a position to wait for things to settle down. They contend that London will have to come down to the overseas parity, and they expect this result to be achieved, if not at the current series of auctions, then early in the New Year when supplies become available in larger quantities. Present-day conditions, therefore, are all against anything in the nature of speculative buying, and there is hardly enough business passing in tops and by-products to test values. Topmakers are meeting the market to some extent with a further all-round reduction in quotations. Good warp 64's are quoted at about 52d, and can be bought in some cases at less. This compares with 55-56d quoted at the beginning of November. In crossbreds, 46's carded are at about 24d, showing a decline of 1 1/2d during the last four weeks, while 40's prepared at 23 1/2d are about 1d down in the same period. Business can be done in semi- and fully-manufactured goods at a price, but the advance of a few weeks ago, caused by the scarcity of spot lots, checked demand in every department of the industry.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

On the whole some fair catalogues have been put before the trade during the past week, though on one or two days the selection has been somewhat miscellaneous. The offerings have comprised some good new clip wools, chiefly from Queensland, New South Wales, and West Australia. For the best wools prices do not show much change compared with the first week, and this can be said of practically all descriptions of wool. On the other hand, a big proportion of the wools show a slightly easier tendency. There is no comparison between the values ruling in Coleman street and those cabled to the same firms who are buying in Australia, but the wool in London is available almost immediately it is knocked down—in the moment a very important consideration. The Continental section continues to give a reasonable amount of support, and the home trade is also an active buyer, America taking small quantities of some miscellaneous wools. There is a marked scarcity of good South African combing wools, and these are fetching exceedingly high values, far more than other wools of similar style and quality.

Cables from overseas indicate an easier market, and prices are lower than public messages indicate. Adelaide last week was very reasonable, and one Bradford firm representing a leading Sydney firm of buying brokers is seeking buying orders on a basis of

4s 3d for warp 64's tops. No such price exists in London, and even from the Cape there are reports of distinctly easier markets. Unless the Continent reasserts itself, and becomes the dominant factor, we see nothing to prevent merino wool going back to a basis of 4s for good 64's tops, at which price it will be worth buying. We regard that figure as being one at which the textile industry of Europe and America should obtain substantial orders for piece goods and hosiery fabrics.

Carbonising charges have been reduced in the West Riding, following on the lower combing charges which came into force last week.

THE JUTE TRADE.

DUNDEE, December 3.

Business continues to rule on slow lines. The price of the raw material has remained remarkably steady in the absence of buyers, and for a week the value of Daisee assortment has been stationary at £60 for December-January shipment. The quietness in the cloth end of the trade has the effect of restricting business in other branches. Strong advices from Calcutta, where prices have been raised 15s to 20s per ton, have had no stimulating effect in Dundee. Imports into Calcutta from up-country markets are now extremely small, and balers are finding the greatest difficulty in obtaining material suitable for baling purposes. It would appear that any little jute still to come in will be held for high prices. Buyers of yarns have only been taking small quantities, but spinners will not accept less than 5s for common 8 lb cops and 5s 1d for medium spools. Many orders being placed for cloth are extremely small, 10 1/2 ounce 40 inch hessians are quoted 5 1/2d and 8 ounce 4 1/2d per yard. Little business has taken place in Calcutta gunnies. Sellers now require 44s for 10 ounce 40 inch for January-March shipment, and 43s 6d for April-June, with 8 ounce at 36s 6d in both positions.

HIDE, LEATHER, AND ALLIED TRADES.

The domestic hide market remains firm, but tanners are making little or no money on sole leather. At the auctions in Bermondsey, on Thursday, best ox hides sold from 6 1/2d to 9 1/2d, and seconds from 6 1/2d to 8 1/2d per lb, showing practically no alteration on last prices. Best cows made from 6 1/2d to 6 1/2d, and best calfskins from 7d to 11 1/2d. Wools sold from 7s 6d to 13s, and hogs from 3s 3d to 13s 6d each. The frigorific market is slightly better, as business has been done with the Continent and the United States. Argentine ox have sold at 8 1/2d to 8 1/2d, and Montevideo at 9 1/2d. The Chicago market is cabled as steady, with best heavy packers still selling at 16 cents. Business in sole leather is quiet, in view of coming stocktakings. The only important feature is the continued demand for light bends for the women's Cossack boot, supplies of which are short. Offal strong, rough leather is selling better, and parcels of shoulders have been dispatched to the United States in fair quantities. Upper leathers are quieter, but the market is being scoured for coloured glacé kid, and light willow calf for the high boot. Patent for the same purpose sells slowly. There is a good deal of unemployment in the heavy boot centres, but makers of the Cossack boot have in many cases sufficient orders to carry well over Christmas.

CHEMICALS AND FERTILISERS.

The chemical market is again firmer. Arsenic has a better tone, with Cornish white powdered at £15 5s f.o.r. mines. Ammonium chloride steady, but easier at £25 5s in casks. White lead acetate dearer, but quiet at £44 7s 6d. Carbonate of potash, 90-92 per cent., steady at £24 5s. Caustic potash dearer on spot at £30 for

ZADRUŽNA GOSPODARSKA BANKA D.D.

BRANCHES: Bled, Celje, Djakovo, Maribor, Novisad, Sarajevo, Sombor, Split, Sibenik. Foreign Correspondents for Yugoslavia of The American Express Company, New York, and agencies; National Bank of South Africa, Pretoria; Commercial Bank of Australia, Melbourne, and branches.

Remittances to and from Yugoslavia. Bills collected. Banking and Exchange Business of every description transacted.

88-92 per cent.; forward cheaper. Potassium prussiate firm at 7½d for yellow. Red lead cheaper and quiet at 42s 12s 6d, c.i.f. London; white lead also lower at 41s 2s, with business small. Sodium sulphide, broken, 12s 10s; dull and cheaper. Sodium hyposulphite, commercial, easier at 9s in casks, ex wharf. Cream of tartar again reduced, 99-100 per cent. costing 13s 16s to 13s 17s 6d per cwt, less 2½ per cent. Anhydrous ammonia slightly easier at 1s 3d to 1s 3½d, with business slow. Carbolic acid, crystals, dull, but dearer at 48d, f.o.b. Barium chloride higher at 9s 10s, in casks. Citric acid rather flat at 1s 3½d, less 5 per cent. Fertiliser materials quieter, with nitrate of soda about 12s 5s. Sulphate of ammonia again dearer at 12s 13s; export, 12s 7s 6d. Basic slag well called for at 12s 15s for 30 per cent. Superphosphate in little request at 12s 18s for 30 per cent. Kainit, 14 per cent., fairly active at 12s 15s.

VEGETABLE OILS AND OILSEEDS.

Markets generally have been quiet. Linseed oil is easier, the recent scarcity having been met by supplies of Dutch oil at competitive prices. Spot oil is no longer at a premium over forward, and has dropped to 136 per ton naked ex Hull mill for prompt, with December-April at only a slight discount. Cotton oils have continued a poor market, though a better demand appears to be developing. Crude Egyptian is easier at 135s, and ordinary refined at 138 prompt. Soy oil is a shade firmer, and palm kernel oil is not quite so firm. In the oilseed section demand for linseed has been intermittent, and with some pressure to sell old Plate crop values gave way to 17s 15s for shipment, while new crop was done at 17s 5s for January-February loading. Cotton seed, after a period of easiness on pressure by re-sellers, is firmer. For Egyptian (black) on passage as low as 9s 11s 3d, and for December loading 9s 15s, were accepted, but 10s is now required for "afloat," a small premium being asked for later positions.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market for actual sugar ruled fairly steady, with moderate inquiries for British makes at recent level of prices, but forward positions of foreign engaged quiet support, and tendency in buyers' favour. Messrs Tate and Lyle's cubes quoted 32s 3d to 33s 3d; crushed, 30s 3d; nibs, ordinary, also No. 1, 33s; granulated, 31s 14d; fine, also coarse grain, 29s 4½d; No. 1, 29s 14d; No. 2, also London and T.L., 28s 10s; month forward, 28s 9d; January, 29s; February-March, 29s 3d; mineral water white, spot, 29s 3d; icing, in drums, 35s; bags, 35s 9d; pulverised, 31s 9d; caster, finest, 33s 14d; ditto A, 32s 7½d; ditto B, 31s; yellow crystals, 25s 10½d. English grown granulated, Cantley, 27s 9d, ex wharf, London; Ely, 27s 9d; and Anglo-Scottish, 28s 3d, ex works. American granulated, spot, quoted 27s 7½d; Dutch "J" ditto, 27s 7½d; December, 14s 7½d; January-March, 15s; April-August, 15s 6d, f.o.b., Rotterdam. Czech granulated, December, 14s 6d; January-March, 14s 10½d; April-August, 15s 6d, f.o.b., Hamburg. Cuban, basis 96 per cent. December-January, quoted 11s 9d, c.f. and i., U.K. White terminal opened easier, but steadier since, and a fair business effected. December sold, 13s 9½d to 13s 9d and 14s 3½d; January, 13s 11½d to 14s 6d; March, 14s 6d to 15s; May, 14s 10½d to 15s 3d; August, 15s 4½d to 15s 3d and 15s 6½d; and September, 15s 6½d per cwt.

COFFEE.—Spot market ruled firm with a good demand for all the finer liquoring grades. Kenya, bold common to good, sold, 11s to 12s 7½d; peaberry, 10s to 13s 6d; Uganda, fair greenish, 11s; Kilimanjaro, common to good bold, 11s to 12s; Costa Rica, fine ordinary, 13s; Columbian, fine blue, 17s 6d; peaberry, 13s to 16s per cwt.

COCOA.—The market for spot parcels remains without new feature, the general tone being steady, but business was on a limited scale. For shipment, Accra, F.F. quality, December-February, also January-March, sold, 37s to 37s 6d; Lagos, December-February, 35s, f.o.b. terms; Trinidad, December-February, sellers, 60s; Bahia, ditto, 44s 6d; Guayaquil, Epoca, 69s 6d; Caraquez, 66s 6d per cwt, c. and f. Cocoa butter, C.F.R., spot, sellers, 1s 4d per lb.

TEA.—Indian auctions this week totalled 57,657 packages, which encountered an active market, with brisk bidding for all descriptions. Common and plain liquoring descriptions moved in sellers' favour, while all good liquoring and better medium qualities realised full rates. Pekoe, sold, 1s 5d to 1s 10½d; broken orange pekoe, low medium to fine, 1s 6d to 2s 2d; finest to choice, 2s 11d to 3s 3d. Ceylon offerings of 12,874 packages experienced a rather quieter demand, and prices showed some irregularity, with quality in many instances below recent standard. All grades up to 1s 8d per lb proved a steady market, but above this price, especially amongst finest sorts, the inquiry was more restricted and quotations were frequently 1d to 2d per lb under those ruling last week. Pekoe, sold, 1s 5½d to 2s 3d; broken orange pekoe, 1s 10d to 2s 6d per lb, in bond. Business in China descriptions was also on a reduced scale, though Kintucks experienced a fair inquiry, with sales of new season's up to 3s 3d for 1st quality, while old Keemuns sold at 1s 2d to 1s 4d. Common grades in slow request, with Monings quoted 7½d to 8½d per lb, in bond. 4,400 packages of Java and Sumatra met a good demand at

full to dearer prices. Pekoe, sold, 1s 3½d to 1s 5½d; broken pekoe, 9½d to 1s 6d; orange pekoe, 1s 4½d to 1s 7½d; broken orange pekoe, 1s 2½d to 1s 10d; pekoe souchong, 1s 3½d to 1s 4½d per lb, in bond.

RICE.—Market remained quiet, but Eastern shippers required fully steady prices. Rangoon, two stars, spot, quoted 16s; November-December, also January-February, 15s 6d, c.i.f., London. Broken slow. Burma bran, afloat, quoted 15s 17s 6d; January-February, 16s 5s per ton, ex ship, London or Liverpool. Japanese peas firm. November-December, sellers, 33s 6d; January-February, 35s 6d. Beans: Rangoon, hand-picked, December, 12s 10½d, f.a.q.; ditto, 11s 4½d. Madagascar butter beans, spot, 33s to 34s, as to quality; November-December, 28s 9d; December-January, 28s 3d per cwt, c.i.f.

SPICE.—Pepper again firmer, and sellers reserved. Bl ck Singapore, f.a.q., January-March, sold 1s 2½d to 1s 3½d; Lampong, ditto, October-December, 1s 3d; January-March, 1s 3½d to 1s 4½d; white Muntok, spot, quoted 1s 5d; October-December, 1s 6d; January-March, sold 1s 6½d to 1s 7½d. Tellicherry, spot, quoted 1s 2½d; Aleppy, ditto, 1s 2½d per lb. Tellicherry, January-March, 140s; Aleppy, 135s per cwt, c.f. and i., London. Pimento, spot, 7½d per lb; December-January, steamer, 65s per cwt, c.f. and i. Cloves steady. Zanzibar, spot, quoted 11½d to 11½d; January-March, buyers, 10½d per lb. Tapioca dearer. Singapore flake, to Havre, December-January, 18s; Sago flour steady. Sarawak, to U.K., January-March, quoted 14s 6d. Desiccated coconut, spot, halves, 40s 6d; November-December, also December-January, 30s. Ginger steady. Japan, spot, quoted 87s 6d; West African, 59s; for shipment, 57s cwt, c.i.f.

FRUIT (Dried).—Currants moved off quietly at about late rates. Amalia, quoted 32s to 33s; Gulph, 35s to 38s; Pyrgos, 30s to 31s; Patras, 34s to 36s; Vostizza, 42s to 45s. Sultanas barely steady. Smyrna, new crop, 65s to 90s; Australian, 66s to 75s; Cretan, 70s to 85s. Figs in fair demand. Layers, new crop, boxes, 80s to 105s; Locoums, 100s to 110s. Dates in fair request, and market steady. Hallowee, spot, 26s 6d; Siar, 14s 6d; Khadrowie, 18s 6d. Raisins quiet, and tendency easier. Valencia, quarter boxes, 44s; half boxes, 28s; seedless, 32s. Evaporated fruits steady, with apricots in small supply. Californian apricots, standard new extra choice, 125s; fancy, 135s; Australian, 120s to 130s. Plums, Oregon, size 30/40, quoted 72s; 40/50, 52s. Californian, 40/50, 57s 6d; 60/70, 47s 6d; 80/90, 42s. Bosnian new crop, 60/70, 45s. Pears, Californian, extra choice, 90s; fancy, 105s. Lake County, extra choice, 105s; fancy, 117s 6d. Apple rings, Californian, extra choice, 55s to 70s; Canadian, 63s 6d per cwt.

CANNED FISH.—Trade quiet, but prices firm on limited offerings. Sardines realise full rates. Portuguese ½s quoted 4s 9d to 5s per dozen tins. Salmon firm, but trade restricted, while forward offers are sparingly made. Red, tall, 1 lb, 63s to 64s; ½ lb, pink, 38s to 39s; tall pink, 25s to 26s. Lobsters firm and supplies scarce. Halves quoted 160s to 165s; and ½s, 95s to 100s.

CANNED FRUITS.—There is no material change in the general situation, trade being quiet owing to large arrivals and deliveries against contracts. Californian Bartlett pears, standard, 13s 3d to 13s 6d; seconds, 12s to 12s 6d; Oregon, choice, 15s; standard, 13s 3d; seconds, 12s to 12s 3d; Canadian, standard, 11s 6d. Californian peaches, choice, 11s; standard, 9s 6d; seconds, 8s 9d. Californian apricots, standard, 9s 3d; seconds, 8s 9d. Logberries, with fair inquiries. Italian tomatoes in steady request at full rates.

CANNED MEATS.—Danish lunch tongues are in good demand, despite the season of the year, and stocks are being readily absorbed. Corned beef, South American, 6 lb tins, quoted 34s; and New Zealand, 34s. Lu ch tongues, Danish sixes, quoted 116s; and New Zealand, 116s. New Zealand ox, 6 lb, 12s per dozen tins.

CONDENSED MILK.—The market for machine-skimmed is much firmer, and higher prices are anticipated owing to the raw material being eagerly sought after in Holland by German buyers. Machine-skimmed quoted 16s 3d to 16s 6d; full-cream Danish, 26s 6d; Dutch, 24s per case.

HONEY.—There is a good demand for New Zealand, and prices are maintained. California is coming into the country freely, and values the turn easier.

RUBBER.

Irregular, but firmer, and a good business transpired. Plantation standard sheet, spot, sold, 4s 6½d to 4s 6d, 4s 7d, and 4s 6½d; December, 4s 6½d, 4s 6d, and 4s 5½d; January, 4s 6d to 4s 4d; January-March, 4s 5½d to 4s 3½d; April-June, 4s 2½d and 4s 0½d; July-September, 3s 11d to 3s 1½d; January-December, 4s 0½d to 4s 0½d; per lb. To New York, ribbed smoked sheet, July-December (1926), at 3s 7½d to 3s 7½d.

GENERAL.

HEMP.—Manila quiet. J grade, January-March, quoted, 44s; K, ditto, 43s; L, ditto, 43s; and M, 43s. New Zealand High Point, fair, November-January, 44s 10s; fair, ditto, 43s 10s. African sisal, No. 1 Tanganyika, January-March, 45s 10s; Kenya, ditto, 45s per ton.

TALLOW.—Messrs Colchesters and Woolner write on December 2nd as follows:—The tallow market was quiet during the week, and prices were unchanged to-day. Inferior kinds continue to sell more readily than fine or medium sorts. The stock in London on November 30th, as returned by the wharves, amounted to 18,167 packages, showing a decrease during the month of 4,061 packages. At auction to-day 1,249 casks tallow were offered, and 493 were sold. Quotations are:—Australian mutton: Fine, 48s 6d; good to fair, 47s 6d to 44s; dull to dark, 41s to 39s 6d; hard, 48s. Australian beef: Fine, 44s 6d; good to fair, 43s 6d to 41s 6d; dull to dark, 40s to 39s 3d; sweet, 46s. Present shipment from Australasia: Good mixed, 43s 6d. Present shipment from South America, 43s 9d. The market letter is unchanged. Town tallow, 39s 6d per cwt. Rough fat, per 8 lbs, 3d; melted stuff, 30s per cwt. CITY OF REGINA

FOUR-AND-A-HALF PER CENT. DEBENTURES.

The City of Regina announces that the INTEREST COUPONS of the above-mentioned debentures maturing 1st January, 1926, may be PRESENTED on and after the 14th December, 1925, between the hours of 10 and 2 o'clock (Saturdays excepted) at the Bank of Montreal, 47 Threadneedle street, E.C.2. Three clear days required for examination. Lists may be obtained on application at the Bank.

CITY OF SASKATOON

FIVE PER CENT. DEBENTURES.

The City of Saskatoon announces that the COUPONS maturing 1st January, 1926, on the above-mentioned debentures, may be PRESENTED on and after the 14th December, 1925, between the hours of 10 and 2 o'clock (Saturdays excepted) at the Bank of Montreal, 47 Threadneedle street, E.C.2. Three clear days required for examination. Lists may be obtained on application at the Bank.

UNIVERSITY OF LONDON.

The Senate invite applications for the University Chair of Political Science, tenable at the London School of Economics. Salary £1,000 a year. Applications (12 copies) must be received not later than first post on 22nd January, 1926, by the Academic Registrar, University of London, South Kensington, London, S.W.7, from whom further particulars may be obtained.

UNIVERSITY OF LONDON.

The Senate invite applications for the Sir Ernest Cassel Chair of Accountancy and Business Methods, tenable at the London School of Economics. Salary £1,000 a year. Applications (12 copies) must be received not later than first post on 21st January, 1926, by the Academic Registrar, University of London, South Kensington, London, S.W.7, from whom further particulars may be obtained.

THIRD IMPRESSION WITH ADDITIONAL CHAPTER AND STATISTICS.

AN INTRODUCTION TO THE STUDY OF PRICES

with special reference to the History of the Nineteenth Century.
By WALTER T. LAYTON, M.A. 7s. 6d. net.

The *Economic Journal*:—"The high qualities he possesses and exhibits will, we are sure, recommend his 'Introduction' to all who would make at once the easiest and the safest approach available to the economic questions, and it must always occupy a prominent place in the scientific discussions of professional economists."

MACMILLAN & CO., LTD., LONDON, W.C.2

TERMS OF SUBSCRIPTION.

Quarterly, 14s 6d; Half-yearly, £1 9s 6d; Yearly, £3 18s 6d. Colonies and Abroad, £3 15s 6d per Annum. Single copies, post free, 1s 1d.

Copies of the *Economist* may always be obtained in the City at W. Abbott, Limited, 32 Eastcheap.
Barker and Howard, Sugar Loaf court, Leadenhall street.
P. W. Cooper and Co., 11 King street, Cheapside.
Davies and Co., 95 Bishopsgate.
Leathwait and Simmons, 34 Throgmorton street.
Pottle and Son, 15 Cullum street.
Willing and Co., Limited, 50 Copthall avenue, and 123 Moorgate.
Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de l'Opera.
Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."
Office: Granville House, Arundel street, Strand, London; W.C.2.

THE MONEY MARKET.

THE extreme abundance of money produced by the payment, partly out of freshly created credit, of the War Loan interest, has shown some sign of wearing off, and the discount market has been inclined to look forward to a keen demand at the turn of the year. It was also influenced by a relapse in the early part of the week in the chief exchanges, especially Amsterdam and Batavia, and

by continued exports of gold. Discount rates accordingly hardened materially, and $4\frac{1}{4}$ per cent. became the lowest rate for fine three months' bills.

	Dec. 11, 1925.	Dec. 4, 1925.	Nov. 27, 1925.	Nov. 20, 1925.	Previous Rate and Date Changed.
Bank Rate	5%	5%	4%	4%	4 (Dec. 3, '25)
Banks' Deposit Rate	3	3	2	2	2 (Dec. 3, '25)
Discount Call	3	3	2	2	2 (Dec. 3, '25)
Houses' Notice	$3\frac{1}{4}$	$3\frac{1}{4}$	$2\frac{1}{4}$	$2\frac{1}{4}$	$2\frac{1}{4}$ (Dec. 3, '25)
Market rate (3 months' bills) ..	$4\frac{1}{8}$	$4\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	..

The Bank return showed a decrease of £652,000 in the stock of coin and bullion, £680,000 having been reported as withdrawn for export on balance. The note circulation expanded by £36,000, so that the Reserve was £688,000 lower, though its proportion to liabilities had risen .7 per cent. to 16.6 per cent. Government and Other securities declined by £8,070,000 and £614,000, and the Public deposits were £255,000 higher. Other deposits were thus over £9½ millions lower. Currency notes outstanding were increased by £1,182,600 to £290,601,100, which includes £1,318,400 for notes called in but not yet cancelled. The fiduciary issue is £233,032,700, or £15,112,700 below the maximum for 1925.

The monthly statement of average weekly balances of the London clearing banks for November, which is printed in detail on a later page, shows a decline of £9 millions in deposits, and an increase of £10½ millions in acceptances. The table below compares the aggregate figures of the nine English banks for the past few months:—

	June, 1924.	Dec., 1924.	June, 1925.	Sept., 1925.	Oct., 1925.	Nov., 1925.
Capital and reserves	119.2	119.4	119.6	120.7	120.8	120.9
Acceptances	85.3	109.9	90.2	85.7	92.6	103.1
Deposits (incl. undiv. profits, &c.) ..	1,651.9	1,656.1	1,624.5	1,613.7	1,627.6	1,618.8
Total liabilities	1,856.4	1,885.4	1,834.3	1,820.1	1,841.0	1,842.8
Coin, notes, balance at bank, and cheques in course of collection ..	249.1	259.7	253.9	237.2	238.2	238.8
Money at call	108.1	112.8	113.0	111.5	111.9	111.3
Investments	349.3	328.8	294.6	281.5	285.9	287.2
Discounts	245.0	234.4	205.5	240.2	214.7	235.2
Loans and advances	791.7	811.2	850.5	834.5	837.8	837.1
Cover for accept., premises, &c.	113.2	138.5	118.8	115.2	122.5	135.2
Total assets	1,856.4	1,885.4	1,834.3	1,820.1	1,841.0	1,842.8

The decline in deposits has been balanced by a similar reduction in bills discounted. A slight decline in loans and advances is more than offset by an increase in investments.

NEW YORK MARKETS.

Our New York correspondent cables:—Markets have regained equilibrium, but speculative activity has been reduced, despite satisfactory Presidential messages and a flood of extra dividends, the latter factors having evidently been discounted. Bullish activity is also restrained by apprehensions that the money market will be subject to disturbance until after the end of the year, when a relaxation in rates is expected. Steel Corporation unfilled orders rose by 472,000 tons in November, and the mills are now operating at 87 per cent. of capacity. Cotton is weakish, as the ginning report supports the latest Government crop estimate of 15,603,000 bales. The Federal Reserve System's ratio is 69.4 with note circulation, discounts and open market purchases of bills moderately higher and reserves materially lower. The New York ratio is 2.4 per cent. lower on similar changes.

THE STOCK MARKETS.

The Stock Exchange still remains under the influence of the rubber boom. Business in rubber shares remains exceedingly active, but in the last few days there has been a good deal of profit-taking in advance of next week's settlement, the last of the present year. Gift-edged stocks have been dull, and have mostly declined, although vague talk of a higher Bank rate on Thursday proved groundless. Home rails improved on the national arbitration award, but later lost some of the rise. Argentine rails have been irregular. Oil shares fail to attract public attention, but tea shares have been noticeably

harder. Movements have been irregular in the industrial section, and mines have been quiet. The issue of £5 millions in 7 per cent. bonds at 94½ by the Potash Syndicate of Germany was rapidly over-subscribed on Tuesday, applications amounting, it is understood, to over £70 millions.

THE COMMODITY MARKETS.

The approach of Christmas and the stocktaking period has further affected certain markets, but conditions generally show slight basic variations. Coal prices are well maintained, on the whole; the same applies to pig-iron, while steel prices are inclined to harden as a result of recent orders. The Liverpool cotton market has been quiet this week, but inquiry for yarn and cloth tends to broaden. Wool values have declined further, but trade stocks are not large, and a return to stability would probably evoke considerable activity. The wheat market has been weaker in sympathy with American conditions. Sugar has been less steady, with ample supplies available; coffee steady, and tea in good demand. Rubber remains irregular, with dealings on a fair scale. Tin prices are lower on balance, offerings of copper have been on a liberal scale, and lead has declined on selling pressure.

FOREIGN EXCHANGES.

It has been a quiet week in the foreign exchange market. The New York rate continued strong over the week-end on the impetus given by the rise in the Bank rate here last week. From 4.85½ on the 4th it rose to 4.85½ on Saturday, and on Monday stood at 4.85½. On Tuesday, however, there was some nervousness as to a possible change in the New York Bank rate, and the quotation fell to 4.84 31-32 that day and to 4.84 27-32 on Wednesday, but when no change occurred on Thursday, a recovery to 4.85½ took place, and yesterday's opening rate was steady at that figure. Forward rates are unchanged at ½ cent per month above spot. Paris, on the other hand, has definitely lost the improvement consequent upon the passing of M. Loucheur's first proposals by the French Parliament. From 125.80 on the 4th it improved to 125.50 on Saturday, but was back at 126 on Monday. As the heavy nature of the taxation involved by his later plan (for the permanent rehabilitation of French Government finances) was realised, public confidence diminished, and the rate rose to 128.30 on Tuesday, and 128.65 on Wednesday. After a recovery to 128.40 on Thursday it opened yesterday morning at 128.50. The situation is full of uncertainty, and M. Loucheur's resignation would not be altogether unexpected. In fact, with the removal of the immediate danger of default, a return to the former unwillingness on the part of the Chamber to take definite action appears probable. Brussels remains steady between 107 and 107.05. Forward rates on Paris are narrower at 15 centimes for one month, and 80 centimes for three months, and in Brussels at 40 centimes per month above spot. Italy has risen slightly from 120½ to 120¾, and Madrid, after its recovery to 33.95 last week, rose again to 34.06½. Amsterdam has followed the dollar, moving from 12.07 on the 4th to 12.07½ on Monday, and after falling by Wednesday to 12.06½, had recovered by yesterday morning to 12.07½. Stockholm also fell from 18.14½ to 18.11½ by Tuesday, but opened yesterday at 18.12½; Switzerland, however, has shown little variation from 25.15. Berlin is slightly higher on balance at 20.39, but Vienna has fallen from 34.42½ to 34.41, while Warsaw was again slightly weaker at 42. Copenhagen has depreciated from 19.38 to 19.45, while Oslo, after rising from 23.80 to 23.95, recovered again to 23.81. Helsingfors is steady around 192½. Athens rose from 362 to 376, but Bucharest has fallen from 1,070 to 1,055. In the East, the rupee is unchanged at 15 6½d, but the yen has improved from 15 9½d to 15 9½d. The silver market is very dull, with but little variation in prices. The India market is quiet and such business as there is takes place in China and America. Hong Kong has depreciated from 2s 4½d to 2s 4½d, and Shanghai from 3s 1½d to 3s 1½d. In South America, Rio has improved from 6½d to 7½d, and Monte Video from 49½d to 50½d. While Buenos Aires is steady at 46½d, Valparaiso has fallen from 39.30 to 38.80 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 5th:—

EXPENDITURE.	£	RECEIPTS.	£
Supply Services	7,350	From Revenue	13,544
Interest, &c., on Debt	46,214	Increase in Debt	40,237
Sinking Fund	390	Decrease in Exchequer Balances ..	175
Sundries	100		
	53,954		53,954

The Revenue for the week amounted to £13,543,600, as compared with £10,995,700 in the corresponding week last year. Customs were lower at £2,060,000, against £2,509,000, but Excise was higher at £1,846,000, against £1,686,000. Property and Income-tax brought in £3,688,000, as compared with £1,952,000, and Super Tax at £490,000 was £40,000 higher. Ordinary and Special Receipts were higher at £311,200 and £1,232,300, against £3,900 and £737,400 respectively. The week's operations increased the National Debt by £40,237,200, and caused the following changes:—

	£		£
3½ % Conversion Loan	7,525	Treasury Bills	1,727
Bank of England Advances	15,500	Sundries	96
Public Department Advances	18,385		
National Savings Certificates	50		
	42,060		1,823

The floating debt was increased by £32,785,000 to £801,606,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Dec. 5th).

	£		£
Total Expenditure	561,000,589	Raised by Revenue ..	459,898,583
		Decrease in Balances ..	3,531,344
		Amount borrowed ..	97,570,662
Total	561,000,589	Total	561,000,589

ESTIMATES for FINANCIAL YEAR 1925-1926.

	£		£
Expenditure	799,400,000	Revenue	801,060,000
Surplus			£1,660,000.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Royal Bank of Australia, State of Bahia South-Western Railway, British North Borneo (Chartered) Company, P. and O. Steam Navigation Company, British Insulated and Helsby Cables, Nelson Brothers, Tate and Lyle, Steaua Romana (British), John I. Thornycroft and Co., Gan Kee Rubber Estate, New Modderfontein Gold Mining, Bwana M'Kubwa Copper Mining, Aerated Bread Company, and Peter Walker (Warrington), and Robert Cain. At the meeting of Tate and Lyle the chairman pointed out that, but for the fall in the price of raw sugar of £10 per ton, and the writing off of a large amount from stocks, the profit would have been one of the largest in recent years. At the meeting of the Royal Bank of Australia the chairman reviewed conditions in Australia and the outlook for the current season.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

IRELAND.

A FEW short weeks ago we were talking once more of "deadlock" and "crisis" in Ireland, and it seemed that the affairs of that distressful country were going yet again to present a problem too tough to be solved by statesmen. But, just as the cloud grew black and menacing, it was suddenly dispersed by exactly those qualities that have on one side or another been so lacking in the handling of Irish affairs—goodwill and give and take. It has often been said that Irishmen could only combine in one thing—namely, hatred of England. On this occasion Irishmen of North and South have combined and co-operated with the British Government in a

negotiated settlement not merely of the critical boundary question, but also of a number of outstanding financial matters which might have embittered future relations. This mere fact, as the Premiers both of Northern Ireland and of the Free State have claimed, is pregnant with hope. For his part, Mr Baldwin, in introducing in the House of Commons on Monday the Bill to enforce the settlement, proclaimed that this new agreement stands to the Irish Treaty of 1921 in the same relation as Locarno stands to the Treaty of Versailles. In both cases it is, perhaps, the spirit that counts most. The greatest importance of both lies not in the actual achievement, but in the fact that both have set the feet of nations on the straight and narrow road that leads to real peace.

The debate in the House of Commons on the Irish Agreement Bill reached a high level, and one or two attempts to import the old bitterness into the discussion merely served, by their very failure, to emphasise the complete change in the atmosphere surrounding the Irish question. It also provided information as to the financial side of the settlement. The chief heads of the settlement which the Bill embraces are (1) suspension of the Boundary Commission's powers and maintenance of the *status quo*. (2) Settlement of the outstanding financial questions between Britain and the Free State, especially those covered by Article 5 of the Irish Treaty. (3) Financial adjustments between Britain and Northern Ireland. The financial side of the agreement is of minor importance compared with the elimination of the boundary dispute, but the figures are substantial in themselves. On paper, it appears, Britain had a claim of about £155 millions on the Free State under Article 5 of the Treaty, in respect of Ireland's share of the National Debt of the United Kingdom, while the Free State had a much smaller undetermined claim against the British Treasury. At the same time, the British Government had paid, and was still liable to pay to individuals, considerable sums in respect of damage done in the Free State since 1919. Without going into elaborate detail it may be said that the effect of the agreement is as follows:—The Free State liability under Article 5 and the counter-claim against Great Britain are wiped out, but Ireland is to pay £150,000 now, and an annuity of £250,000 a year for 60 years, and she shoulders the liability for post-1919 damage compensation, and promises to increase by 10 per cent. the compensation awarded to individuals by Irish Courts under the Act of 1923. There is no room for doubt that in this settlement a very generous recognition is accorded of the Free State's present economic and financial difficulties, and of her "capacity to pay." Recently Mr De Valera and other opponents of the Free State Government have been mentioning sums as large as £19 millions as the annual "tribute" which would have to be paid to the British Treasury, if Article 5 of the Treaty were rigidly enforced. To suppose that any British Government would dream of claiming payment on that scale from any country, least of all a Dominion, whose total revenue is under £30 millions, is, of course, ridiculous. But mention of the figure gives some measure of the reasonableness with which the Treasury have dealt with their side of the problem. To Northern Ireland Parliament is asked to make a grant-in-aid of £1,200,000, as a final payment towards the upkeep of the special constabulary, whose maintenance on a large scale was necessitated by the boundary dispute. Now that this dispute is out of the way, Sir James Craig has indicated that the force can be disbanded in the near future. We do not believe that there will be any more disposition in this country than there was in the House of Commons on Monday to boggle at the financial readjustments which form part and parcel of a bargain which brings Ireland nearer to peace than she has been for many a decade. The new agreement has no more settled the Irish question than Locarno has settled the European question. But a glance back at the past twelve years of Irish history will show that some elation is justified in what has taken place. In 1914, on the eve of the great war, the Home Rule Bill had passed through Parliament. Ulster opposition, fomented and encouraged by Conservative politicians in this country, was on the eve of blazing into armed rebellion. An emergency Conference called by

the King broke down. Civil war was imminent. Then, under the shock of the great war, came a gleam of Irish hope. The bitter strife was sunk in common support of the British cause. But soon this streak of sunlight faded. Discontent and finally rebellion raised their heads in Southern Ireland. Leniency and severity were tried in succession by the British Government without success. The Nationalist party was extinguished, Sinn Féin took up the reins. Strife and bloodshed continued even after the great war ended, the legislative efforts of 1920 proving abortive. Not until 1921 did there arise out of the chaos of bloodshed and bitterness a constructive statesmanship which, in the persons of Mr Griffiths and Mr Collins, proved big enough to grasp the hand of reconciliation tardily and after ugly episodes held out by Mr Lloyd George and his Coalition Government. A treaty was signed giving the Irish Free State a dominion status, and leaving Northern Ireland separate, and a part of Britain. By the irony of fate neither of these Irish statesmen were spared long to guide the new Dominion through its critical days of infancy. But into their shoes stepped Mr Cosgrave, under whose leadership the Free State Government established law and order against immense difficulties, and at great cost in life and in money. Even then the outlook was precarious. The flaw in the Treaty of 1921 was that it left the old dispute as to the boundary between Ulster and the South unsolved. Its solution, under Article 12 of the Treaty, was left to a Boundary Commission, whose report, when published, Britain bound herself to carry into law. Ulster would have no truck with the Commission, and refused to appoint a representative; Britain appointed one on her behalf. The Commission sat, investigated, laboured. When the report reached the draft stage the Free State representative resigned. Once more deadlock seemed complete. But just as the storm clouds grew most menacing, the sunshine of this new agreement came as an almost miraculous relief.

To-day, for the first time since the Act of Union, we have Ireland, North and South, and Britain in harmony and agreement. We do not in any way belittle the troubles that still lie ahead of Mr Cosgrave, nor the forbidding obstacles still to be removed before the great goal of Irish unity can be reached. Indeed, on paper, the new agreement may be interpreted as stereotyping partition and making it permanent. Moreover, as Mr Churchill said in the House of Commons, "bitter feelings endure, and intolerance born of centuries will not be dismissed in the course of a generation." But in spite of all this, we see no reason for eschewing a reasoned and tempered optimism. In Europe we have passed in twelve years from the tragedy of 1914, through four years of hatred and war, to Versailles, and thence through the disheartening failure of a score of conferences to the new spirit and achievement of Locarno. By comparison Ireland's journey through the stations of the cross has been more dramatic. If we are justified in the European hopes which we base on Locarno, are we not more justified in re-echoing Mr Churchill's hope for Ireland: "There very probably are members here in this Chamber now who will live in a new Parliament to see the harvest gathered in, and who will find at the side of Britain a free and united Ireland, proud of her undoubted share in founding the British Empire, and actively contributing to its strength and progress."

SYRIA AND MOSUL.

LATTERLY, both France and Great Britain have been made to feel the burden of the mandates which they have undertaken severally in the Middle East. This week there are indications that the French in Syria are just surmounting the crisis of the rebellion there, while the controversy between Turkey and Iraq over their boundaries in the Mosul district, in which Great Britain is concerned, entered its critical stage last Tuesday, when this question was taken up at Geneva by the Council of the League of Nations.

In Syria, M. de Jouvenel, the new French Civil High Commissioner, who has replaced General Sarrail, deserves our sympathy and respect for the broad view which he

has taken of his task, and for the statesmanship which he has so far shown in grappling with it. Realising the essential unity of the problem with which the two Allied Mandatory Powers are faced in the ex-Arab provinces of the Ottoman Empire, he did not go to Beirut until he had visited London, Cairo, and Jerusalem; and since arriving in Syria he has lost no time in opening a door for reconciliation. It must be noted that his work has been made as difficult as could be by the policy of previous French High Commissioners at Beirut, instructed or indulged by previous Governments in Paris. Hitherto, the record of France as mandatory for Syria has not been good. Her policy has been "divide and rule." She began by dividing the country into three or four States roughly corresponding to the religious divisions of the Syrian people. The former autonomous Ottoman vilayet of the Lebanon was enlarged—by the addition of Beirut and other ports, as well as considerable inland districts towards the east and south-east—into the State of Greater Lebanon; but while this was calculated to win the Lebanese Catholics or Uniates (together constituting a majority of the local population) to the French cause, and to drive in a wedge between them and their Druse and Muslim fellow-countrymen, there was a serious curtailment of the self-government which the smaller Lebanon had enjoyed under the previous dispensation, when Turkish suzerainty was nominal, while the constitution was guaranteed by the Great Powers of Europe. Thus, even for the Lebanese Christians, the establishment of the French mandate was a mixed blessing, while for the Muslims and the Druses it was decidedly less desirable than the Ottoman régime. Under that régime the Druses of the Jabal Hauran, in the extreme south-east of Syria, towards the desert, had maintained, by their own military prowess, a *de facto* autonomy as complete as that which had been secured to the Lebanon by international treaties, and it was here that the present trouble began—owing, it seems, to the shortcomings of a French officer who was deputed to control the Hauran, and to the roughness of General Sarrail when the Druses complained. Throughout the ensuing rebellion the Druses, not the Muslims, have taken the lead, and their attacks have been directed towards the new territories, containing a considerable Druse and Muslim population, which the French have incorporated in the Lebanon. Unable to protect these territories with their own regular troops, the French authorities, before M. de Jouvenel's arrival, had taken the disastrous step of serving out arms to the local Christians, thus virtually abandoning control of the situation and allowing it to drift, at best, towards unrestrained brigandage, and, at worst, into a religious war.

M. de Jouvenel has begun by meeting the Elective Council of the Greater Lebanon (on December 3rd), and empowering it to act virtually as a constituent assembly—with the intention of awaiting its recommendations before formulating any detailed programme of his own. The Lebanon, apparently, is now to receive back at least as full an autonomy as it enjoyed before the war; and while France will still control its foreign relations, the French officials who are to assist in its internal administration are to have only advisory and not executive powers. In other words, the Lebanon is to obtain a status not unlike that which Iraq has enjoyed under the British mandate, since the bureaucratic government on the Anglo-Indian model, introduced during the war, was replaced by the present treaty between the Governments of London and Baghdad. Having rapidly opened this prospect to the Lebanon, which has not revolted, M. de Jouvenel has intimated that terms no less favourable will be accorded to the Syrian patriots (as distinct from brigands) now in revolt, if and when they stop fighting, and consent to parley. This is good policy, but further steps will be needed to crown it when the rebellion is over, and other genuinely autonomous Syrian States have been allowed to constitute themselves. The several Syrian States should then be left free to form a federation; and France should agree to support an application by Federated Syria to become a member of the League of Nations, not later than a similar application on the part of Iraq is supported by Great Britain.

Meanwhile, the date of this latter event, for which provision is made in the Anglo-Iraq Treaty, has become involved in the Mosul boundary controversy, in consequence of the recommendations made by the special Commission which examined the question on the spot on behalf of the League of Nations. It is not yet known which, if any, of the Commission's three recommendations the Council of the League will eventually adopt. The question has not reached this stage, for the Turkish Government is still disputing the right of the Council to give any binding decision at all, and this is the critical issue of the present session at Geneva. The point turns on the legal interpretation of a passage in Article Three of the Lausanne Treaty, to which both Turkey and Great Britain are admittedly bound by their signatures. The passage runs: "A défaut d'accord entre les deux gouvernements dans le délai prévu, le litige sera porté devant le Conseil de la Société des Nations"; and when the Turks contested the Council's jurisdiction under this clause, the Council's first step was to ask for an advisory opinion from the Permanent International Court. As is well known, the Court has advised that the Council does possess power, under the treaty, to give a decision which will be binding on the parties to the dispute, and which will determine the frontier between Turkey and Iraq; and, further, that such decision must be taken by a unanimous vote, the votes of the two parties not being counted. Fortified with this legal opinion, the Council are now in conference with the representatives of Great Britain, who never contested the Council's authority, and those of Turkey, who are still continuing to do so.

Evidently Munir Bey has received strict instructions from his principals, and anyone who knows him personally will sympathise with his situation. His courteously conducted but strenuous opposition to the ruling of the International Court has naturally proved of no avail. At last Tuesday's meeting the only concession which he could obtain from the chairman, Signor Scialoja, was that the vote on the question whether the Council should adopt the opinion of the Court should not be taken by a mere majority, as regarding a point of procedure, but should have to be unanimous. The requirement of unanimity was conceded, only immediately to be fulfilled by a unanimous vote in favour of adopting the Court's opinion. Thus the Council has declared itself—Munir Bey still protesting—to be competent to give a binding arbitral decision in the last resort; but this does not exclude attempts on the Council's part to settle the matter by conciliation, and their past tradition makes it likely that they will explore every possible avenue in this field before resorting to extreme measures. Meanwhile, the Turkish delegate has suspended his participation in the proceedings, and the Council have been considering General Laidoner's report on the alleged deportations and other ill-treatment of Christians, to the north of the provisional "Brussels Line" of demarcation, by the Turks. The General's report appears to bear out these allegations very fully, and to be most damaging to the Turks—a fact which is likely to influence the Council in Great Britain's favour.

THE FRENCH CRISIS.

A FORTNIGHT ago we ventured to suggest that the tangle of French finance could not be unravelled without a general reconstruction plan covering both currency and finance. Our view has not been weakened by the events of the last two weeks. M. Briand's Ministry, formed a fortnight ago, was welcomed with acclamation, and a sigh of relief, by Frenchmen of all shades of opinion, but few expect that it can last very long, or that it will attract enough support to enable it to act as a National Ministry, and to put forward a permanent instead of a merely stop-gap programme. The weakness of the Briand Ministry is its Finance Minister. M. Loucheur is a politician of great ability; he was one of the first to understand the truth about reparations, and as a critic has been of great service in guiding French opinion on many vital issues. But it cannot be said that he commands confidence. His

views on financial policy have changed too rapidly and too recently for conservative-minded business men. He was accepted on the understanding that, in forming his plans, he would have the benefit of a Committee of non-political experts. This device has, however, gone by the board, for M. Loucheur has since stated that the experts will be consulted individually and privately by him. This means they cannot share his responsibility; nor will their views be known. Last week M. Loucheur's proposals for meeting the immediate needs of the Treasury were passed by the narrow margin of six votes, and the bills would not have passed at all without the personal appeal of the Prime Minister.

This week M. Loucheur has formulated complete proposals for 1926, which are dealt with by our Paris correspondent in a later column. It is so important for Europe that France should join the ranks of the countries with stable finances that we desire to refrain from any but constructive criticism, in order that the proposals may have the best possible chance. But we are bound to point out that neither the bills already issued, nor those still to come, deal with more than part of the problem. In particular, unless and until France faces the problem of stabilising the franc, she cannot expect confidence to be restored either at home or abroad—and until confidence returns the floating debt problem will remain almost insoluble.

The interconnection of the Budget, the floating debt, the currency, and the position of the Bank of France is now generally recognised; it is universally said that Frenchmen are prepared for the sacrifices needed to allay the crisis, provided they are satisfied that it really is the end; that the balance of opinion is firmly against inflation, and is at last ready to accept the principle of stabilisation at or about the present level of the franc. But opinion is only now reaching the point of agreement on these general ideas; there is far from being unanimity as to how to carry them out, and there seems to be no political combination in sight which can command the force and the ability needed for so large a task. Nor is it clear that political forces are sufficiently stable to ensure that the right policy will be adhered to even if it is initiated. In these circumstances, people are again discussing the possibility of a body outside politics which would command the necessary confidence and ensure continuity. If the plan could be found, a formal resolution of all parties in the Senate not to agree to depart from the programme might meet the case, particularly if supported by the Council of Regents of the Bank of France. But to secure such backing the plan must first secure the general agreement of the business world, and of experts, and must be beyond all doubt one which will meet France's final liabilities.

In the meantime, the process of clarifying the situation is going on. M. Loucheur has thrown a bombshell by indicating that in 1926 he needs 8½ milliards more from the taxpayer than was envisaged in 1925. But even that is not enough. Before the final post-war Budget is produced, something must be added for war debts and the final expenditure on the devastated areas. The British instinct is that these heavy additional needs should be covered by direct taxes. But it may lead us astray to argue too closely from the analogy of British conditions. There is much to be said for the view that France must meet her present deficit mainly by indirect taxes. It is argued that her peasants (like those of most other countries in the world) will not pay income-taxes. Her rentier class cannot do more than at present. Moreover, there is some force in the current idea that indirect taxes have the advantage of promptly rising with prices. If the franc is stabilised, there may still be a rise of prices to come. If so, it will benefit the Exchequer automatically. Direct taxes would also rise, but, of course, more slowly. This view is gaining ground in Radical circles, as against the view of the Socialists, who hanker after a capital tax, and are against taxing the consumer. This attitude is thoroughly sound in economic theory; but the indirect taxes may prove necessary on grounds of practicability. It will be seen from our Paris letter that M. Loucheur proposes to rely for the most part on direct

taxes, but it is already suggested that he may have to revise his plan on this point. The question shows the difficulty of agreeing on essential details—even when all are satisfied that the taxes must be raised.

Similarly, on the question of currency and the proposal to fill the Treasury by an increased issue of paper money, the Socialists have taken up a strong anti-inflationist line for reasons with which we have strong sympathy. Inflation may be needed, as in Austria and Hungary, after the exchanges are stabilised and plans made for meeting Budget deficits—in order to balance internal and external prices, and to meet internal demands for currency. But to inflate before the Budget is balanced is to make it practically certain that the fall will continue indefinitely. Nevertheless, the argument for the recent emergency measures was unanswerable. It was the only alternative to the Treasury refusing to meet its obligations.

At the same time, opinion is undoubtedly ripe for stabilisation. Of the political parties, the Right and the Left are against inflation—the former, because the bourgeoisie risk losing their savings, which are in francs—the latter because the representatives of labour realise that the workers will lose if prices and the cost of living constantly rise, and, in any case, such a possibility involves long-continued internal friction. In the centre, inflationist influences from industrial and some financial quarters have apparently played a greater part, the view of some metallurgists, for example, having been that an export premium resulting from inflation was necessary if France was to establish her position in the world's trade. Recent events have, however, reduced these influences to very small dimensions. On the other hand, it is only recently that certain circles have abandoned the hope of gradual appreciation of the franc. The opinion strongly held at the Bank of France has hitherto been an obstacle to a definite plan of devaluing the franc. This difficulty could probably now be overcome. But, again, it is one thing to agree on the principle of stabilisation. It is quite another to agree on the means and the rate.

France has the economic strength for financial reconstruction; she has the will to do it, and the agreement on essential principles. All that is needed is to find a way and securing agreement on concrete proposals, and of solving what has become a political rather than a financial riddle.

BRITISH TRADE UNIONS AND RUSSIA.

(BY A LABOUR CORRESPONDENT.)

THE discussions which have been proceeding at the meeting of the Council of the International Federation of Trade Unions, to which considerable attention has been given in the British Press, cannot be appreciated without a picture of the background of controversy which preceded the present discussions. The war suspended the activities of both the political (or second) International, and the Industrial International, known as the International Federation of Trade Unions (I.F.T.U.). But when the war was over the threads of the two movements could not be gathered up. There was a strong desire to re-establish both internationals, but the Soviet Resolution of eight years ago created a new situation. Communism, on the direct initiative of the Soviet Government, commenced to organise internationally. The Third (or Communist) International was inaugurated, and this brought into existence the Red International of Labour Unions (R.I.L.U.). Early efforts were made to bring about an understanding between the two political Internationals through the International Working Union of Socialist parties, known as the "Vienna Union." These efforts failed, and the old Second International was reorganised in 1923 as the Labour and Socialist International, representing all the Labour and Socialist parties in Europe, and on a definitely non-Communist basis.

The International Federation of Trade Unions, known usually as the Amsterdam International, was reconstituted after the war. From the first the Red International

of Labour Unions carried on a bitter warfare against Amsterdam. The boast of the former was that "the International of Moscow will destroy the Yellow Amsterdam International"—"that pestilent yellow lair," as it has been called. The Amsterdam International was driven to declare (1921) that "it shall not be permissible for the trade union organisations to be affiliated to two Trade Union Internationals at the same time," and that "every organisation which affiliates to the political Trade Union International of Moscow places itself automatically outside the International Federation of Trade Unions." There is no doubt about the attitude of the R.I.L.U. of Moscow towards the I.F.T.U. of Amsterdam. Indeed, the Rules of the Red International specifically assert that one of its objects is "the waging of a definite war with the International Labour Office of the League of Nations", and with the I.F.T.U. of Amsterdam." The I.F.T.U., on the other hand, has definitely refused to accept the leadership of the political Communist International, the dictation of the proletariat, and the Communist idea of a world revolution, and has declined to negotiate with the R.I.L.U. At the same time, it was willing to consider the affiliation of the Russian Trade Unions if the rules and general policy of the I.F.T.U. were accepted, and in November, 1923, the Amsterdam Bureau was authorised "to participate in negotiations with the National Russian Trade Union Executive to the exclusion of the Red International of Labour Unions on the sole basis of the rules and general policy of the I.F.T.U., in order to attempt to establish international working class unity."

The reply of the All-Russian Council of Trade Unions took the form of a proposal for unconditional negotiations, and a joint Congress, with the object of securing unity. In November, 1924, a delegation from the British Trades Union Congress General Council visited Russia, and whilst in Moscow the delegates were asked by the Russian Trade Unionists to discuss informally suggestions for attaining international unity. The British delegation agreed to recommend that the British General Council and the Presidium of the Russian Trade Union movement should be empowered to act jointly for the purpose of promoting unity, and that the General Council should request the Amsterdam International to agree to a free and unconditional immediate conference with representatives of the Russian movement. The General Council accepted these suggestions, but the Council of the International Federation of Trade Unions, which met at Amsterdam in February, by thirteen to six votes defeated the British resolution proposing an "unconditional conference for informal discussion purposes." A resolution was adopted agreeing to a conference "as soon as possible after the All-Russian Council of Trade Unions intimates its desire to be admitted to the I.F.T.U." The British General Council met Russian representatives in London in April to discuss the situation. It was ultimately agreed to promote co-operation between the British and Russian Trade Union movements, and to set up a joint advisory council representative of the two movements.

Since this time there has been no change in the situation. The British Trades Union Congress in September endorsed the action taken by its General Council. As a preliminary to the formal meeting of the Council of the I.F.T.U. this month, members of the I.F.T.U. Council met the General Council of the Trades Union Congress in London. The view was held on the Continent that the British movement was supporting the policy of a conference between the I.F.T.U. and R.I.L.U., with the object of forming a new International. It became clear, however, that the suggestion was an "unconditional and informal" conference, not with the Red International, but with the All-Russian Council of Trade Unions.

At the I.F.T.U. Council meeting at Amsterdam on December 5th, a British resolution was moved declaring that the I.F.T.U. was prepared to meet representatives of the All-Russian Council "to discuss the possibilities of affiliation of the Russian Trade Union Movement"—a proposal which, it will be noted, was not concerned with the R.I.L.U., but only with the possibility of securing the adhesion of the Russian Trade Unions to the Amster-

* The I.F.T.U. has supported, and still supports, the I.L.O.

dam International. The resolution which was carried, however, declared that "the General Council of the I.F.T.U., having taken note of the correspondence which has been exchanged with the Russians since the meeting in February last, and having taken note of the discussions which have taken place at the present meeting, reaffirms its decision of February, 1925, and considers any new decision unnecessary." This motion was carried by fourteen votes to seven, the latter comprising the British and Scandinavian representatives and the representatives of the miners', transport workers', and clerical workers' internationals. This rebuff to the movement for trade union unity leaves the situation as regards the relations between Amsterdam and Moscow precisely where they were.

The Anglo-Russian Advisory Committee (set up in April) met in Berlin on December 8th to review the position. Two days' discussion, however, yielded no agreed conclusions, and the results of the third day's meeting are not to hand at the moment. The fact that so far no proposals have been published indicates that the British policy of mediation between the I.F.T.U. and the Russian Trade Unions has not as yet been successful in producing a formula to which the latter will adhere, and which might be acceptable to the Amsterdam International. But this is not the only problem confronting the British Trade Union leaders. In April last, at the London Conference, the British General Council undertook, should the I.F.T.U. refuse to convene a conference with Russian representatives for the purpose of considering the position arising from the decision of the I.F.T.U. Council in February, "to convene a conference and endeavour to promote international unity by using its mediatory influence as between the Russia Trade Union movement and the Amsterdam Bureau." It has been made clear, however, that the British Trades Union Congress will not summon a conference to be attended only by the Russians and the various minority movements in Continental Trade Unionism. The difficulty appears to be that the members of the I.F.T.U. would probably refuse to attend a conference which was not convened by Amsterdam, in which case the proposal for a conference would fall to the ground. For the time being the efforts to reconcile Amsterdam and Moscow have failed as completely as the efforts made by the Vienna Union to reconcile the Socialist and Communist Internationals. The long drawn-out struggle between the I.F.T.U. and the R.I.L.U., notwithstanding the British attempt to secure a termination of hostilities, remains with us, though it will only come into public view on the occasion of public conferences.

It has been suggested that the British attitude has been inspired by the Communist element, and there is no doubt that this has had its influence in shaping British policy. At the same time, there are two factors which have operation on the minds of those in are in no sense tinged with Communist sympathies. The first is the desire to achieve working-class unity in the industrial field. This may not seem a potent motive to those unfamiliar with the active part which the British Labour Movement has always played in the international sphere, but it is strong enough to prompt even moderate Trade Union leaders to support a policy of finding means for the association in the industrial field of Communist Trade Unions with the other Trade Union Movements. The second factor is the belief that Russian Trade Unionism is seeking to escape from the tutelage of the Russian Communist Party, and to secure industrial independence. It is held that such a movement would be greatly strengthened if the Russian Central Council of Trade Unions were associated with the great national Trade Union Centres in an International Federation. These two factors imply no sympathy with Communist doctrines, for the British Trades Union Congress has persistently refused to recognise the National Minority Movement, which is the British organisation of Trade Union bodies under the influence of Communism. The efforts, therefore, which the British Trade Union Movement is making to end the deadlock between Amsterdam and the Russian Central Council of Trade Unions, are not to be taken as meaning that the British have capitulated to Communism.

VICKERS' RECONSTRUCTION.

THE drastic writing down of the capital of one of the largest concerns in the country, accompanied by a reorganisation of the management, is a very important event. The problem of converting a great armament firm to peace purposes is, in any case, a difficult undertaking. In the present instance it has been complicated by the expansion of capital, in which Vickers—in company with large numbers of the leading British firms—indulged during and after the war. The Vickers reconstruction is one which may well have to be followed by a number of firms in the iron and steel trade. The suggestions of the special committee appointed by the directors to investigate the financial position of the company and its management were published on Thursday, the board recommending their adoption. The committee consisted of Mr F. Dudley Docker, the Rt. Hon. Reginald McKenna, and Sir William Plender. After a detailed investigation on their behalf into the finances of the concern and its associates by a chartered accountant, Mr Webster Jenkinson, these gentlemen recommend drastic financial and administrative reconstruction. Their report is of sufficient interest and importance to warrant quotation of the most salient paragraphs:—

We find that the earning capacity of the company and its allied undertakings has greatly decreased in recent years, and it appears to us unlikely that the position will improve sufficiently in the future to enable dividends to be paid on the present ordinary share capital of the company. We also find that the estimated value of many of the company's assets is greatly below the figure at which they are included in your company's accounts, and, indeed, in many instances no value can be attached thereto. The company is also under heavy contingent liabilities for which no specific provision has been made, and which may be expected to result in actual liabilities upon the company.

The sum needed to write down the assets of the company to the figure which we consider can reasonably be regarded as their approximate present value, and to provide for contingent and other capital liabilities of the company, is £12,442,366. Our calculations have been based mainly on earning capacity under conditions that take into consideration some amelioration of the present depressed state of affairs. The amount we suggest should be written off will be provided as follows:—

(a) By reducing the nominal value of the ordinary share capital to 6s 8d per share, thus reducing the issued ordinary share capital from £12,315,483 to £4,105,161, or a total reduction in the nominal value of.....	8,210,322
(b) By appropriating out of the sum standing to the credit of reserve fund an amount of	3,600,000
(c) By appropriating out of the balance standing to the credit of profit and loss account a sum of	632,044
	12,442,366

This sum would be utilised:—

In writing down the land, buildings, machinery, tools, &c., by	4,254,994
In writing down the book value of the company's interest in subsidiary companies by	5,488,316
In writing down the book value of the marketable securities, stocks, book debts, and bills in hand by	427,150
In creating a reserve to meet contingent and other liabilities expected to accrue, not provided for, of.....	2,271,906
	12,442,366

In our judgment, the main causes for the loss of such a considerable portion of your company's capital are:—

- (a) General depression in trade.
- (b) Depreciation in foreign exchanges.
- (c) Reduced earning capacity in the company's own works, attributable to:—
 - (i.) The world reduction in armament expenditure.
 - (ii.) The home production of armaments by foreign countries which have put down their own plants.
 - (iii.) The decline in shipbuilding.
 - (iv.) Foreign competition in world markets.
 - (v.) Financial stringency and political unrest in Europe which has restricted the giving of credit and retarded schemes of development.

A cause of great importance but of a different kind arises out of the history of the company. Before the war the company was primarily engaged upon steel production and armaments, and its success bore testimony to the competence and energy of the management. It was rightly expected that peace would bring greatly changed conditions, and, in order to meet the anticipated demand for peace products, very important par-

ticipations were taken in various industrial enterprises. It would appear, however, that the management had not the special experience required to direct and control so large and varied a body of industrial undertakings, particularly during a period of protracted and severe depression.

Further, your company made investments which have not only proved unremunerative, but are now the subject of considerable liability. We are therefore of opinion that in order to meet the present-day character and organisation of the company a far-reaching change in the method of control is desirable.

We recommend that some of the present directors should retire in order that vacancies may be provided for the appointment of new members.

We recommend that, in addition to a reconstituted board of directors, there should be three management boards, viz.:

- (a) Industrial board.
- (b) Armaments and shipbuilding board.
- (c) Finance board.

In accordance with the request of the board the undersigned have agreed to continue to act in a consultative capacity until the three management boards whose formation is recommended are duly functioning, and some new directors are appointed.

We recommend that the policy of the company in future should be to concentrate on using to the best advantage its present facilities, which are great, and, under good management, should be profitable; to dispense with all officials who have not justified their engagements; to cut down all salaries which are not fully merited; to eliminate waste in works management and production; to shut down plant and wind up all subsidiary or affiliated enterprises which do not, or are not likely to, contribute to the earnings of the company, but act, or may act, as a dead weight on the undertaking.

The directors of the company endorse these proposals, and have called an extraordinary general meeting for December 17th, at which the necessary resolutions will be submitted. They point out that while the proposed reduction of capital is purposely drastic, it is in effect only a book entry. "The intrinsic value of the assets is not thereby altered, and each ordinary shareholder will continue to hold exactly the same *pro rata* interest in the company." Preference shareholders, who frequently in cases of reconstruction are asked to surrender something, also retain their rights intact. The balance-sheet, when the scheme has been carried out, will show the following changes in comparison with that dated December 31, 1924:—

(000's omitted.)			
LIABILITIES.		ASSETS.	
Ord. shares of 8s 8d, £	£ 4,105	Land, buildings, plant, &c.	£ 4,255
fully-paid	— 8,210	Subsidiary companies	— 4,255
5% cum. pref. shrs., £1	6,864	Marketable securities,	— 5,488
5% cum. pref. shrs., all paid	750	stocks, debtors, and	
Preferred 5% stock ..	750	cash and bills	7,346
5 and 5½% deb. stock ..	3,284		— 427
Creditors	2,272		
Contingent reserve ..	— 3,600		
Reserves	59		
Insurance fund	172		
Profit and loss	22,245		— 10,170
	— 10,170		

According to *Burdett*, the company holds a controlling interest in Electric and Ordnance Accessories Company, Limited; Wolseley Motors, Limited; Metropolitan Carriage, Wagon, and Finance Company, Limited; W. T. Glover and Co., Limited; V.L. Oil Processes, Limited; an indirect controlling interest in Metropolitan Vickers Electric Company, Limited; practically all the shares of Canadian Vickers, Limited; nearly half the ordinary shares of Wm. Beardmore and Co., Limited; and (jointly with Petters, Limited) all the shares of Vickers-Petters, Limited. It may be noticed that the scheme does not impinge upon the liquidity of the balance-sheet, liquid assets being reduced by only £427,200. The last balance-sheet showed British Government securities at £2,413,200, other securities at £208,500, cash and bills at £724,900, stocks at £1,511,500, and debtors at £2,915,600. It is also recommended that, if the law will allow, not less than £818,300 of the total amount by which the capital is to be reduced should be carried to a special capital reserve account. The company has, of course, been very severely handicapped since the war by the possession of an enormously expanded war-time equipment, costly to maintain and producing but little or a hopelessly inadequate financial return. This was recognised by the Government allowance in the E.P.D. negotiations of £3,200,000 for depreciation on fixed assets. This sum is now considered inadequate, and a further £1,055,000 is to be

written off. As regards the company's efforts to find lucrative employment for its resources, there is little to add to the explanation of failure put forward by the committee. The proposals for reconstruction will doubtless be supported by shareholders. The Stock Exchange has already expressed its approval by marking up the prices of both ordinary and preference shares. We venture to think that this optimism is a little premature until it is known more definitely what will be the changes in the management.

THE OUTLOOK FOR EGYPTIAN SECURITIES.

(BY A CAIRO CORRESPONDENT.)

EGYPTIAN securities are enjoying something of a boom at the moment, as the appended table shows. For comparison the quotations of Consols and 5 per cent. War Loan have been added. British credit has remained steady at about 5 per cent., or has fallen slightly over the past fifteen months, but Egyptian, if measured by the price of the two leading stocks, would appear to have appreciated by about 9 per cent., and this in spite of the mistrust aroused in the market by the action of the (late) Government in withholding the payment of the coupons of the Tribute bonds, and latterly in appealing against the decision of the Lower Court of the Mixed Tribunals. The principal industrial and commercial securities have participated in the rise, which in some cases has been sensational:—

PRICES OF REPRESENTATIVE EGYPTIAN SECURITIES.

Security.	Price.		Rise.
	Aug. 1, 1924.	Nov. 19, 1925.	
Egyptian Unified 4 %	75	81½	6½
Egyptian Privileged 3½ %	64½	71½	7
Egyptian Tribute 3½ %	50½	66	15½
Agricultural Bank	7½	8½	1
National Bank	25½	33½	8
Egyptian Delta Light Rlys., Pref. ..	4½	5	½
Egyptian Markets	25/6	27/6	2/6
Egyptian Salt and Soda	18/6	19/	1/6
Egyptian Delta Land	10/	15/	5/
New Egyptian Company	27/	39/3	12/3
British Consols	56½	55½	1½*
British War Loan 5 %	101½	100½xd	2½

* Fall.

Is this boom likely to continue, and will prices remain at their present levels, or even rise? The answer can be obtained only by probing the causes of the rise, which, it will be seen, have little to do with national credit, at least in the world market, but much with our old friends, supply and demand.

During the 1924-5 cotton season Egypt marketed a very big cotton crop, of just over 7½ million cantars of 99 lbs, at an average price of £7.94, and a total value of £57.8 millions. To this must be added £3.6 millions for seed exported, £800,000 for cotton cake, nearly a quarter of a million for oil, and another quarter for waste, a grand total of £62.5 millions (allowing for stock in Alexandria). To this sum must be added a further £5.5 for cigarettes, onions, eggs, &c., exported and for re-exports, giving an export total of £68 millions. During the same period imports came to £56½ millions, leaving a balance of £11½ in Egypt's favour.

The invisible balance of trade can only be estimated. In 1914 it was considered that payments abroad on account of dividends amounted to some £8½ millions, but this sum has been diminished considerably since then, owing to the heavy profits, estimated at £100 millions, made during the war, and invested in foreign securities. The payment of coupons probably does not now require more than £2½ millions, and of the balance of trade some £8 millions have remained unspent. It has been in hoarder, but even in this case it should not be overlooked that the hoarded bank-note represents an equivalent sum invested by the National Bank as cover for the issue, &c. do also profits held in the form of deposits.

To the above sum must be added a further considerable amount on account of the profits recently made by speculators, who are always well to the fore in Egypt.

through their purchases of such securities as Egyptian Tribute Bonds, Suez Canal debentures, Heliopolis Oasis and similar shares, the dividends on which, the courts have decided, fall to be paid in gold francs in place of French or other paper francs. This gain has been reasonably estimated at £2 to 3 millions. In all, then, Egypt has had some £10 millions available for foreign investment during the twelve months ending with August last.

Some of this total has gone to repay mortgages, but in this case it has been re-invested by the mortgage companies, since it does not appear in the trade balance. The same applies to payments made to contractors on account of the new buildings that are springing up all over the country, and some has been invested in foreign securities by financial houses.

The local investor, however, will have nothing to do with such paper. He mistrusts most European securities, and little wonder, seeing the losses he has sustained in the past few years over French, Italian, Turkish, and other once favoured stock; and he shuns British stock like the fiend, on account of income-tax complications. He is thus driven back on his own markets, and on the securities that pass current there, which are almost exclusively Egyptian. It is this demand, operating in a comparatively narrow market on stocks mostly strongly held, that has produced the present high prices.

A continuation of the rise must depend on the prospects of a continuation of the causes that have led up to it, an abundance of investable cash, which again will depend mainly on the sale of the present cotton crop. The latest official estimate is for a total outturn of 7½ million cantars, a record crop, divided about half and half between the high-grade Sakellarides and the other cheaper qualities. The increase in amount is, however, more than counterbalanced by a serious fall in price, and it is doubtful whether the present crop will fetch more than an average of £6.6 per cantar. Further, local opinion inclines to the belief that the last official estimate will prove to have been too optimistic. Certainly the crop is coming forward at a much slower rate than last year's, though some of the difference may be due to withholding up-country in hopes of a better market later on. It will, in the writer's opinion, be unsafe to reckon on an outturn exceeding 7½ million cantars. At £6.6 average this would give a total of £49.5 millions, or allowing for commissions and handling profits, say, £51 millions. Add a further £10 millions for other cotton products and other exports, and a grand total of £61 millions is reached. If imports remained at £56 millions, there would remain a balance of £5 millions, little more than sufficient to pay the outgoings on account of dividends. It is certain from this analysis that we shall not see so great an abundance of cash for investment, though there may be some £2 millions. A reduced but not negligible demand is not unlikely. On the other hand, there is always the possibility that some holders may be forced to realise, though there is no actual evidence of this as yet. Indications, therefore, point to a maintenance of prices at or about their present level, but not to any marked enhancement in the near future. As to the more distant view, it is impossible to think that yield will not have its say in the long run. If one can get £5 on British War Loan, £7 16s on Czecho-Slovakian Sterling Loan, £6 7s on Austrian Loan, with the guarantees of the Powers, and £7 1s 6d on German Reparations Loan, it is hardly likely that the investor will continue to be satisfied with £4 17s 6d on Egyptian Unified.

PROCEEDINGS OF THE COAL COMMISSION.

A summary of the main points of the previous evidence will be found in our issues of October 31; November 7, 14, 21, and 28; and December 5, 1925.

THE Coal Commission has held further public sittings at Westminster Hall this week. On Friday, December 4th, Mr C. P. Markham (whose earlier evidence was alluded to on page 938 of the *Economist* for December 5th) described the system of profit-sharing established at Staveley, where 1,100 miners had been encouraged to purchase shares, at par, of the mine in which they were employed. Mr Markham declared that by co-ordinating the working

of certain of his pits in the South Yorkshire area he had been able to effect important economies in costs.

On Tuesday, December 8th, Mr W. Tetley Stephenson gave evidence regarding the employment of wagons in transporting coal supplies. The average wagon capacity in Great Britain was, he stated, in the neighbourhood of nine tons, but the railways had for some years endeavoured to introduce a larger type and to induce private owners to do the same. The London and North-Eastern Railway had eventually concentrated on the 20-ton wagon, which offered certain definite advantages. Although its capacity was 100 per cent. greater than that of the 10-ton wagon, its tare weight was only from 33 to 50 per cent., and its length from 16 to 30 per cent. greater. It had a smaller resistance per ton, and its capital cost was only 50 per cent. higher than that of the 10-ton wagon. At present, however, its use was confined almost entirely to the North-Eastern area, though the Great Western Railway had tried to introduce it in South Wales. The system of private ownership of wagons was general in the coal trade, except in Durham, Northumberland, and Scotland. Some 600,000 privately-owned wagons were in existence, and as each had to be returned to some particular place after use, a large amount of unnecessary "empty" running was inevitable.

Mr W. Frowen submitted evidence on behalf of the Deputies' Federation of Great Britain, laying emphasis on the necessity for developing more cordial personal relations between capital and labour in the mining industry. The Institute of Mining Engineers submitted evidence, through Dr J. S. Haldane, Mr E. O. Forster Brown, and Mr E. Hann, denying that the industry was carried on with insufficient technical skill in comparison with other industries, or insufficient care for the welfare of the workers. In spite of its relatively high accident rate, the industry had been, in fact, for about 40 years, one of the relatively safe occupations. Although the Institute believed that a policy of nationalisation would be disastrous, they agreed that certain mines were inefficient from the engineering point of view, and would probably fail to provide a sufficient return on the capital expended in bringing them up to date. So far as the grouping of collieries was technically desirable, much had been done voluntarily, or was likely to be done in the near future, and any attempt to accelerate the process by pressure from outside would be dangerous. The Institute's evidence was continued on Wednesday, when Mr Brown referred to the possibilities of facilitating voluntary grouping by using the provisions of the Trade Facilities Act for financing approved schemes.

On Thursday the Miners' Federation of Great Britain submitted evidence supplementary to that given a fortnight ago. They urged that the system of private ownership and operation of the mines had broken down since the war, that the industry had suffered as a result of failure to carry out the recommendations of the Majority Report of the Sankey Commission, and that reductions

in costs since the abandonment of Government control in 1921 had been effected almost entirely at the expense of the miners. The federation alleged that as the exigencies of private ownership demanded the earliest possible return on invested capital, the maximum output was demanded immediately a shaft was sunk, and an unscientific and progressively costly system of operation resulted. The economies obtainable from the postponement of large-scale production until the main roadways had been driven to the extreme boundaries of the "taking" were thus sacrificed. The federation had received complaints from every coalfield regarding such matters as the shortage of rails, timber, tubs and trams, inadequate mechanical facilities, &c. The 3,150 separate collieries of the country were worked by about half that number of private concerns, the industry being, consequently, overloaded with boards of directors, many of whom had no special qualification for colliery business, and whose activities were largely interwoven with other interests. As a result of the lack of co-operation between separate collieries, economic working was constantly retarded by boundary questions and the pooling of knowledge, profits, and capital resources essential to the welfare of the industry could not be effected. As a result, collieries with up-to-date plant and methods were operating side by side with less efficient units, and average profits and wages were proportionately depressed. So far as any effective unification of the supply of wagons had been attempted, it had been by way of developing privately-owned wagon companies of which particular collieries had control—a method which had failed to obviate overlapping and frequent stoppage owing to lack of wagons to clear pit-head stocks of coal. The tendency towards the grouping of coal and other industrial concerns under joint proprietorship was unfavourably regarded by the miners, since, in their opinion, it enabled losses in the coal industry to be set against profits in other directions, and encouraged the sacrifice of colliery interests to those of other trades. In support of this statement the evidence of the National Federation of Iron and Steel Manufacturers was quoted, to the effect that while the latter paid in 1913 1s 5d above the pit-head price for their coal, in March, 1925, they were paying from 3s 9d to 2s 3d less than the pit-head price. The profits of gas and electric supply companies, again, reflected conditions of prosperity which, in the miners' opinion, were due to the unreasonably low figures at which they obtained their coal supplies.

After discussion, it was agreed that the federation should submit to the chairman of the Commission certain evidence regarding individual collieries against which charges of inefficiency were made, and that the chairman should intimate the procedure for investigating these charges. The Commission then adjourned.

Notes of the Week.

The Safeguarding Bill.—We described last week the tortuous and haphazard ways by which an industry's claim for protection passes from the application stage to the point of legislative proposal. This week, protective duties on cutlery, gas mantles, and gloves have been brought within sight of the Statute Book. But even in this penultimate stage of progress there have been two surprises. In the first place, the duty on wrapping paper has been dropped. We wonder why. It was recommended by a Committee on grounds just as illogical and unconvincing, but no more illogical or unconvincing, as those which sufficed to carry the claims of the other three industries to victory. That the Parliamentary time-table did not permit wrapping paper to have its turn is an explanation that no one will take seriously. Can it be that a Cabinet which is notoriously susceptible to Press influence regarded this duty as leading them on to the fringes of a field of action which would offend the great and powerful consumers of paper? The second surprise was the abandonment of the intention, expressed in the House of Commons last week, to incorporate the tariff proposals in a Finance (No. 2) Bill. Such a Bill, as in duty bound, would have had to be introduced by the Chancellor of the Exchequer. To introduce such a Bill in person was perhaps too great a strain for a delicate con-

science, and for the Finance Bill was substituted a Safeguarding of Industries (Customs Duties) Bill, which was introduced by the President of the Board of Trade, and passed its second reading on Wednesday. The jibes levelled at Mr Churchill's anomalous position were perhaps responsible for causing him at last to take part in a tariff debate, although not as the official parent of the Bill; and if we cannot congratulate him on his speech of defence, which was as weak a discourse as one could hope to hear on the subject of "when is a tariff not a tariff," we at least prefer his courage in speaking to Mr Baldwin's continued silence, which carries to its limit a cynical disregard both for the House of Commons and for the electorate. Wednesday's debate, apart from Lord Hugh Cecil's sound economic discourse from the Government benches, was not more satisfying than those of last week. Indeed, Sir Philip Cunliffe-Lister, on whom the burden of the debate on the Government side has fallen, has never attempted a thorough defence of the duties on economic grounds, nor of the general procedure, which has been riddled through and through by a host of critics, led by Mr Runciman and Mr Philip Snowden. So, haphazard, without attempt at logic or science, without consideration of vital interests involved, the work of building the British tariff wall goes on. In eight months we have had high protection imposed on motor-cars, clocks, watches, cinematograph films, hops, lace, cutlery, mantles, gloves. What crop will the next eight months bring forth? At the meeting of the P. and O. Company, on Wednesday, Lord Inchcape expressed the fear that, "unless the progress of the Safeguarding of Industries Act were checked, we should soon become a Protectionist country." Echoing a recent speech by Sir Hugh Bell, he continued:—"If an industry cannot carry on without aid from the taxpayer, it is better to let the industry go. Subsidy by the Government can be only a temporary palliative." Having pointed out the obstacles to expansion of trade with the Empire raised by the tariff policy of the Dominions themselves, Lord Inchcape emphasised our inability to escape from dependence on foreign markets. "To bolster up industries by import duties," he said, "would put up prices, and the duties would, in fact, be paid by the consumers among our own people." Every successive restraint on trade imposed by the Government renders one degree more difficult the expansion of our export trade, on which the cure of unemployment and the return of prosperity to these islands mainly depends.

Overseas Trade in November.—The Board of Trade returns of overseas trade in November, which were published yesterday, are not encouraging at first sight, for British exports are £6 millions lower than in October and £7 millions less than in November, 1924:—

MONTH OF NOVEMBER.				
	1924.	1925.	Increase (+) or Decrease (—) in November, 1925.	
	£	£	£	%
Imports	118,721,072	114,692,884	4,028,188	3.4
British exports	68,150,916	60,977,357	7,173,459	10.5
Re-exports	12,326,985	13,538,265	1,211,280	9.8
Total exports	80,477,801	74,515,622	5,962,179	7.4
Excess of imports over total exports	38,243,271	40,177,262	1,933,991	5.1

FIRST ELEVEN MONTHS.				
	1924.	1925.	Increase (+) or Decrease (—) in 1925.	
	£	£	£	%
Imports	1,148,244,130	1,188,683,445	40,439,315	3.5
British exports	726,056,715	707,317,749	18,738,966	2.6
Re-exports	128,096,798	139,766,500	11,669,702	9.1
Total exports	854,153,513	847,084,249	7,069,264	0.8
Excess of imports over total exports	294,090,617	341,599,196	47,508,579	16.2

Coal still contributes to the November export decline to the extent of £1,191,400, but British-manufactured exports are nearly £4 millions lower than in last November. Re-exports at £13.5 millions last month are more than £1 million better than a year ago, thanks largely to on the published figures for the full year 1925 will be in the neighbourhood of £370 millions or £375 millions—a

figure that would compare with £344 millions in 1924. Those who are puzzled and disappointed by the apparent conflict between the poor export figures in these returns and the reports of industrial improvement which have been coming through for the last month or two should remember two things—first, that last month included five Sundays in a month of 30 days; secondly, that there is a time lag between a revival in orders from abroad and the reflection of that revival in the trade returns. It was not until September was well under way that any improvement in unemployment was reported. The increase in orders which began about then, and has since progressed, should begin to take visible effect in the published export figures of the early months of 1926.

The Coal Subvention—Supplementary Estimate.—The Government has tabled a Supplementary Estimate of £9,000,000 in respect of the Coal Subvention, which, with the £10,000,000 voted last August, is expected to cover the cost for the present financial year. An accompanying memorandum explains the method by which the Government's contribution is assessed. The coal-owners in each of the 13 districts are responsible for the amounts which would have been payable, month by month, had their proposals of July last been carried into effect, and the Government for the difference between these figures and the amounts actually paid out, except that the owners' potential profits are limited to 1s 3d per ton. The owners' liability in any given month is based on the trading results in each district for three preceding months, with an interval of one month (e.g., the results of April, May, and June governed the rates of wages payable in August, &c.). The Government's subvention is thus affected by (1) trading results in a preceding period, which determine the gap to be filled on each manshift worked, and (2) the activity of the industry during the month in question, which determines the number of manshifts actually worked. Neither factor can be accurately estimated in advance. The maximum estimate of the Government's liability for the whole period of the subvention, put in the earlier memorandum at £24,000,000, was based on conditions in June. Fears of a stoppage provided a temporary stimulus to trade in July, but August witnessed a collapse, followed by a slight recovery in September, which has since made headway. The gap to be filled by subvention having thus been calculated on past periods of steadily worsening trade, and paid in periods of steadily improving trade, has increased month by month (except in November, which included fewer working days than October). In December a sharp rise is expected, owing to the dropping from the average of the comparatively favourable results of July. Altogether the cost to December 31st next is expected to total approximately £11,900,000, made up as follows:—

ESTIMATED COST OF COAL SUBVENTION, AUGUST-DECEMBER, 1925. (Thousand £.)						
Area.	August.	Sept.	Oct.	Nov.	Dec.	
Scotland	301	336	413	428	485	
Northumberland	116	123	173	179	221	
Durham	277	312	416	418	511	
South Wales	350	411	680	684	864	
Eastern Division	297	315	528	502	625	
Lancs., N. Staffs, &c..	181	203	305	297	335	
Other areas	91	100	135	142	159	
Total for Great Britain	1,613	1,800	2,650	2,650	3,200	

In the New Year the August results will drop out of the average, and the subsequent trade improvement should favourably affect the figures. Estimates must necessarily be conjectural, but the cost of the subvention may not exceed £2,600,000 in January, or, if the present improvement is maintained, £4,500,000 in February and March together. The total of £19,000,000 for the financial year would thus be covered by the two Supplementary Estimates so far introduced. The Government's earlier memorandum, it may be recalled, contemplated the issue of the Coal Commission's report, and, consequently, the termination of the subvention "in good time before May of next year." The debate on the subvention in the House of Commons this week was distinguished by a general recognition of the grave implications of the present situation and the necessity for subjugating partisan to national interests. Mr Churchill very rightly laid stress

on the danger of over-estimating the importance of such recovery as has so far taken place. He pointed out that whilst Great Britain was already re-establishing her position in certain overseas markets, she was doing so only "by the futile and contradictory method of selling at a loss." The Coal Commission's report, however admirable, could not be expected in itself to overcome this difficulty, but it would certainly make clear the really economic price basis of the industry. The proceedings of the Commission during the present week are referred to in a leading article.

Irish Settlement: A Dublin View.—With regard to the Irish settlement discussed in a leading article, our Dublin correspondent writes:—"The mutual cancellation was the obvious destiny of claim and counter-claim. But the elimination of the contingent liability will have some appreciable effect on Irish credit. It has occasioned some relief amongst the business community in Dublin, who wonder what might have happened if the discussions, negotiations, and arbitration under Article V. had been handled by the Free State authorities like those under Article XII. It is a distinct gain that this is no longer possible." Our correspondent, however, regrets the repeal of the provision of the Treaty retaining the Council of Ireland. "With it," he writes, "goes the last constitutional nexus designed to operate for the re-union of Ireland. It is true that it was in abeyance, as its operation had been postponed until 1927 by the Consequential Provisions Act of 1922. But it was a symbol, and it stood for a policy, and its disappearance will be regretted by those who cherished aspirations for the re-union of Ireland. It would be idle to suggest that this Agreement is popular, as, apart from the settlement of the claim and counter-claim under Article V., it represents disappointments and concessions all round by the Free State. It is certain to be ratified by the Oireachtas. And the general public is anxious for peace at almost any cost. But it is generally realised that Partition is now on a permanent footing, and that there is quite as much likelihood of the two communities developing away from each other as of growing towards each other."

The Railway Wage Settlement.—The decision of the National Wages Board may be summed up as a compromise with a slight concession to the companies. The Board has decided, though not unanimously, against the main claims of both sides and leaves the wages of the present employees unaltered. The concession to the companies takes the form of a proposal that, as from February next, the wages of new entrants to certain grades, usually the lower paid, shall be lower than those prevailing for men in the same grade already in the service. In order to explain the effect of the award in some detail it is necessary to review briefly the history of the wages movements since 1914. From 1914 to the beginning of 1920 flat-rate increases were granted to all grades of traffic workers, which at the latter date totalled to 38s a week. Early in 1920 rates of wages were standardised. Two sets of rates were agreed upon. One set, the "A" rates, represented the pre-war rates, plus 38s, the total being subject to variation under the cost of living sliding scale. The other set, the "B" rates, were roughly double the pre-war rates, and represented the amounts below which there was to be no reduction, however great the fall in the cost of living. These "B" rates gave the same percentage increase over pre-war rates to all the workers, and, therefore, a greater money increase to the higher-paid than to the lower-paid grades. Consequently, the balance between the "A" and the "B" rates available for reduction under the sliding scale was comparatively small for the better paid men. These were, therefore, the first to reach the "B" rates as wages fell from 1921 onwards. At the present time 45 per cent. of the higher-paid workers are in receipt of the "B" rates. The remaining 55 per cent. are receiving a bonus ranging from 1s to 8s a week. Under the existing arrangements this bonus will not be entirely eliminated unless the cost of living index number falls to about 35 per cent. above the pre-war level, but, as from February, no bonus will be paid to new entrants in any grade. The following are

examples of the "A" and "B" rates for a few grades in which a bonus is still payable:—

Porters: Grade 2—	"A" Rate.	"B" Rate.
London.....	48s ..	42s
Other districts.....	46s ..	40s
Goods porters—		
London.....	51s ..	47s
Industrial.....	50s ..	44s
Rural.....	47s ..	40s
Permanent way men—		
London.....	52s and 53s ..	48s and 50s
Industrial.....	50s ..	44s
Rural.....	48s ..	40s

The principal grades who are now in receipt of the "B" rates include guards, ticket collectors, engine drivers and firemen. The Wages Board has not suggested any steps towards the removal of the anomaly of the small difference in wages for certain grades between industrial and rural areas, to which attention was drawn in the companies' claim, while the claims of the shopmen are left for future consideration. In commenting on the "B" rates the Board expresses the opinion that they do not find that these are an irreducible minimum. This may be regarded as the first crack in the structure of the 1920 agreement, and the unions may be expected to exert all their strength to prevent its extension. The negotiations of the past four years have been mainly concerned with the "A" rates, but the point has now been reached at which attention must be diverted to the more permanent rates of wages. A general minimum level which is at least 100 per cent. higher than the level of 1914, is, at first sight, a subject for severe criticism, but it must not be overlooked that at the outbreak of the war the railwaymen were in a favourable position in regard to an improvement in their standard of wages, which was admittedly low. Negotiations were suspended, as a result of the national emergency, and some consideration is, therefore, due to the men in their opposition to a reduction. If a concession of 2s a week had been made 10 years ago the "B" rates would represent something like 80 per cent. increase. On the other hand, unless there is a substantial improvement in trade in certain of the unsheltered industries, a sacrifice on the part of the railwaymen which would render possible a reduction in railway charges may become an urgent necessity. The Board have found it necessary to comment on the fact that the railway companies are required to contribute in the form of local rates, towards the maintenance of roadways, and thus to subsidise a rival industry.

The Cost of Wembley.—The guarantors of the Wembley Exhibition have already been called upon to pay 15s in the pound, and Mr A. M. Samuel, Parliamentary Secretary to the Overseas Trade Department, told the House of Commons on Thursday that this was only an interim call. On the same day the House of Commons passed a supplementary vote of £1,100,000, which disposes finally of the Government's liability in the matter. Mr Samuel gave some interesting figures. Total receipts in the two years were £2,814,000. The running costs of the Exhibition were £1,657,000, leaving a running profit of £1,157,000. "But it had to be remembered that, unlike an ordinary business concern, they had to pay off the whole capital cost in two years. The whole of the profit, therefore, went towards paying off the capital outlay of £2,739,000, leaving a loss of £1,581,905. That loss would not be so great as it was but for two handicaps. During 156 days that the Exhibition was open 90 were rainy days, and this had led to an enormous amount of damage. In addition, there were labour troubles which added to the expense and delay." The House passed the estimate complacently. It is inevitable that waste, extravagance, and even scandals should occur in connection with a venture of this size and nature, and in the interests of the self-sacrificing guarantors an inquiry may be desirable, and the proposal of such an investigation was welcomed by Mr Thomas. The country, as a whole, may feel difficulty in assessing the value of Wembley, but it will certainly not agree to apply the mere test of pounds, shillings, and pence.

Shipping Freight Index Number.—Our Index Number of Shipping Freights calculated on open market quotations for whole cargoes registered during November a rise of 2.75 per cent., the resulting figure for the month being 118.93, as compared with 131.18 a year ago, and 129.38 in November, 1923. Since the upward turning point recorded between June and July of this year the average level of "tramp" freights, as reflected in our Index Number, has now risen by approximately 11½ per cent., i.e., by about the normal seasonal increase to be expected on the analogy of recent years.

The movement of the various groups in the index are summarised as under:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920.....	814.31	529.89	757.52	744.81	587.02	712.16	690.95
December ".....	268.90	277.17	244.10	256.79	286.72	347.18	280.14
December, 1921.....	160.06	164.07	163.72	144.43	141.25	165.47	156.67
December, 1922.....	137.09	135.15	129.19	122.61	136.08	159.34	136.57
December, 1923.....	134.04	132.72	120.09	124.35	125.07	144.21	130.08
December, 1924.....	117.44	129.18	119.45	119.76	129.29	161.13	129.38
July, 1925.....	119.02	111.96	113.42	106.15	94.43	117.51	110.41
August ".....	107.22	113.46	110.79	112.24	99.14	126.41	111.54
September ".....	103.22	117.25	109.09	113.38	101.83	140.65	114.24
October ".....	109.56	121.03	110.52	106.49	104.46	142.43	115.75
November ".....	115.30	119.13	110.70	109.85	109.07	149.55	118.93

The month's changes in the index of each group and subgroup are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Ino. or Dec. Points.		Index No.	Ino. or Dec. Points.
Home trade.....	97.39	+ 3.34	S. America—outwards	106.62	- 15.95
Bay—outwards.....	124.04	- 1.83	" homewards.....	114.78	+ 16.31
" homewards.....	132.26	+ 16.13	India—outwards.....	109.48	+ 4.21
Mediterranean—outwards	135.76	+ 12.96	" homewards.....	110.23	+ 2.51
" homewards.....	106.08	+ 0.50	Far East, &c.....	109.07	+ 4.61
North America.....	119.13	- 1.90	Australia.....	149.55	+ 7.12

Outward coal freights, particularly to destinations in the Mediterranean, showed improvement so far as traffic in European waters is concerned. For South American discharge, on the other hand, outward rates fell as an offset to better prospects for the return trip. Quotations for shipment of grain tended upwards until the latter part of the month, when shippers evidenced a general inclination to suspend operations until more accurate estimates of Southern Hemisphere yield became available. General business in ore, timber, and miscellaneous cargoes was slow. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	(1913 = 100.)	1922.	1923.	1924.	1925.
January.....	131.60	114.05	117.11	114.49	114.49
February.....	135.76	112.73	123.78	115.96	115.96

For the first time since last April the level of our Index Number now exceeds that of 1913, but it is to be observed that were it not for the disproportionately high figure recorded in the case of Australia, the average would still fall considerably short of the mean for the last pre-war year. It is fortunate for the industry that the great bulk of vessels operated are not wholly dependent on the cargoes represented in our Index Number for their revenue.

American Cotton Crop.—Our Manchester correspondent writes:—The Department of Agriculture of the United States Government has this week published what is known as the preliminary final estimate of the cotton crop for the season 1925-26. The indicated yield is given as

15,603,000 bales, exclusive of linters, against a crop for last season of 13,628,000 bales, 10,140,000 bales for 1923-24, and 9,762,000 bales for 1922-23. The average yield per acre is returned at 162.3 lbs, against 156.8 lbs last year. So far this season, up to November 30th, the amount ginned is 13,858,000 bales, as compared with 12,236,000 bales at the same time last year. In a supplementary report the Agricultural Bureau of the Government states that the extent to which final ginning returns will be above or below the crop estimate of 15,603,000 bales depends on the weather. The current estimate is based on average weather conditions for the remainder of the picking season. The weather in the last half of November was unusually favourable for picking in most States. It is now possible with some degree of accuracy to forecast the probable supplies of American cotton for the next 12 months. With a crop of 15,600,000 bales, linters at 1,000,000 bales, and a carry over from last season of 3,400,000 bales, the total supplies should be in the region of 20,000,000 bales. There is some difference of opinion as to the probable consumption, but the requirements of users throughout the world may be put down at 15,300,000 bales, including linters. Whatever happens henceforward, the world is assured of plentiful supplies of raw cotton for some time to come. It may be pointed out that, now rates in Liverpool are round about 10d a lb, the price is on parity with values for other commodities. Yarn and cloth in Lancashire is being sold at cost or below, and in the circumstances it is reasonable to anticipate a bigger volume of trade in the near future.

The Trade of Finland.—In the columns of *Kauppalehti*, the principal commercial newspaper of Helsingfors, the leaders of Finnish industry are at present discussing ways and means for promoting closer commercial relations with Great Britain. We are Finland's best customers, but, on our part, in the opinion of our Finnish friends, the value of the Finnish market as an outlet for our manufactures is not adequately appreciated. There are wide divergencies of view as to how it should be brought about. It was originally suggested in *Kauppalehti* that a British Chamber of Commerce should be established at Helsingfors with the object of fostering British trade in Finland. To this proposal the objection is made that there is not a sufficient number of representatives of British industry in Finland to support a Chamber of Commerce. As a workable alternative, it has been proposed that British and Finnish men of business should meet from time to time at Helsingfors to confer upon the commercial relations of the two countries. To any considerable expansion in the volume of British trade with Finland it is felt, however, by many Finnish importers that the proximity of Germany to Finland, and the relatively lower cost of German goods, present a serious obstacle. With reference to the trial shipments of Finnish timber to U.S.A. last summer, it is stated that the prices obtained by the selling organisation, the Finnish Lumber Manufacturers' American Export Association, were equal to those obtaining in the European market, and in every case exceeded the minimum price fixed by the Finnish and Swedish timber exporters. Statistics of Finnish exports for the first ten months of the present year show that exports of timber and wooden goods were estimated at 2,595.2 million marks, against 2,300.3 millions for the same period in 1924. The corresponding figures are for wood pulp respectively 620.7 and 584.3 million marks, for cardboard 88.3 and 50.8 millions, for paper 572.1 millions and 467.5 millions, and for matches 29.8 millions and 35.1 millions. The total value represented by these groups for the present year thus amounts to 3,906.1 millions, against 3,438.0 last year, an increase of 468.1 million marks. Exports of chemical wood pulp amounted at the end of October to 219,793 tons, an increase of 9,840 tons over the figure for the first ten months of 1924; the increase in exports of chemical wood pulp has been purchased at the expense of mechanical wood pulp. The growth of Finnish exports during 1925 is reflected in shipping statistics, which exhibit an increase in the tonnage engaged in Finnish foreign trade of 15 per cent. for January-October; Finland's share in the tonnage employed in the export of timber and paper was 9.5 per cent. A

preliminary report issued by the Board of Agriculture shows that the crops, with the single exception of hay, have been above the average, and better than in 1924. The favourable effects of the good harvest are already being felt by the industries that supply the home market.

The Position in Haiti.—The benefit attaching to some sort of unselfish and strict foreign supervision of a young country's financial affairs is proved by the condition of the Black Republic of Haiti. The result of the past fiscal year's economic situation is remarkable. A substantial improvement appears to have taken place not only in the aggregate value of the country's trade, which shows a favourable comparison with that of previous years, but in the financial condition, which has become very sound. Before the arrival upon the island of a United States Senatorial Commission (which landed November-December, 1921) and the subsequent appointment of an American High Commissioner and Financial Advisor-General-Receiver, the finances of the State were in a condition of chaos. The expansion of commerce shows this remarkable acceleration, notwithstanding the limited population of the island and the characteristics of the inhabitants and the restricted trading facilities which they enjoy. Moreover, the advance made indicates a genuine development of the economic life of the country, and is not merely a spasmodic effort at effect. The improvement, likewise, seems to have been disseminated fairly evenly throughout the various provinces of the Republic, for all sections and ports appear to have been busy. The total of exports and imports increased from \$811,312,405 for 1921-22 to \$1,437,744,675 for 1922-23, and to \$1,444,362,250 for 1923-24. For the first eight months of the current year imports equalled \$670,981,425, and exports \$683,343,255, making a total foreign trade of \$1,354,324,680 for this part of the financial period, thus establishing an increase of exports over imports as against a reverse condition in the previous year. Generally speaking, the commerce of the country, largely, if not entirely agricultural, is flourishing, and such public funds as there are to spare are being devoted to constructive purposes, while waste has been reduced to a minimum. While the principal foreign trade of the island is carried on with the United States, owing to the geographical factor and to the American financial control, commerce with Great Britain is not altogether unimportant. The United Kingdom sells to Haiti an average of £1,200,000 worth of goods in the course of the year, and purchases produce to the extent of about £700,000 to £800,000. At the end of the current financial year the total indebtedness of Haiti will amount to about \$1,150,000,000, of which the foreign debt represents \$675,200,000, and the internal debt \$474,800,000. The national railroad debt, including arrears of interest and fiduciary currency, account for the balance. The Receiver-General of the Island points to the relative burden of the public debt, which, as measured by interest and amortisation charges, cannot be considered oppressive, although the people, as a whole, are poor. As the revenue of the Republic has expanded, the percentage of income devoted to public debt has correspondingly declined, and at present the debt service absorbs no more than 24.87 per cent. of the total revenue.

The United States and European Timber.—It was stated in *The Economist* on October 31st last that negotiations were in progress with a view to placing, on a small scale as an experiment, Finnish timber on the United States market, and especially in the New York area, a district reported to consume some 3,000,000 standards of wood annually, or about three times the total annual timber export of Finland, the largest European producer of wood. It now transpires that a very large Central European concern, equipped with the most modern wood-working machinery, and possessing prime quality whitewood, &c., is cultivating the American consuming markets, being represented by a company in New York City. Undoubtedly the greater use of Central

* The gold gourde (\$G), 100 centavos, has a nominal value of 3s 11½d.

European timber on the American markets will help in restoring trade in the first-mentioned area, and will assist also in the increased exploitation of forest and other resources. The fact remains, however, that the United Kingdom, which spends some £50 millions annually on its timber requirements, and Continental timber consuming countries, such as Holland, Denmark, France, Belgium, Italy, and Spain, regard the timber production of Europe as theirs by right of purchase, and look with jealous eyes at newcomers into the buying market. On the other hand, European timber shippers have found this year that production has exceeded demand, and they therefore welcome fresh avenues of consumption, particularly from a country so well supplied with ready cash as the U.S.A. We shall have to wait and see whether this new trade between Central Europe and the U.S.A. will have the effect of increasing production as a set-off to the new customers' demands, or whether States buyers will absorb the present excess of supply which has so upset the European f.o.b. market for timber this year. It would seem, now that Europe is getting on its feet again, that the timber-consuming countries of Europe will be increasing their consumption of timber for general building work, and therefore that a newcomer of any large buying extent will have the effect of stiffening prices generally for European timber.

Sugar Prices and Prospects.—At the opening of the present season sugar prices in the terminal market at Mincing Lane fell heavily, and even went below pre-war low records. The value for prompt delivery, indeed, touched about 12s 6d per cwt, this being based on the "white sugar contract," which was introduced after the war as the speculative medium. The equivalent of this basis as compared with the pre-war terminal contract, which was based on 88 per cent. raw beet sugar, f.o.b. Hamburg, represents a margin of about 4s per cwt over the latter basis, so that allowance has to be made for this in comparisons with pre-war records in London terminal sugar, or so-called "futures." The lowest pre-war level was rather under 9s per cwt. Consumption in the past season was stimulated to some extent by low prices, but not so much as had been generally anticipated; and a fairly heavy surplus of cane sugar, chiefly Cuban, was carried into the current season. The Cuban Government crop forecast was placed at 4,800,000 tons. This is a very large crop, but would be 325,000 tons less than that of the previous year, when a record crop of 5,125,970 tons was produced. The revised estimates of the European beet crops give a total of 7,532,000 tons, an increase of 455,000 tons on the previous year. There is reason for believing that the coming Java crop will show a setback as compared with the previous season, owing to drought. Nevertheless, abundant supplies can be reckoned upon, as the total world's crops may be put at roughly 23½ million tons; this will tend to keep prices at a low level, even allowing for a further expansion in consumption. It may be mentioned that Russia has doubled her crop this season to about 1 million tons, and may be able to dispense with further imports. Last season her heavy purchases helped Continental countries, especially Czechoslovakia, Poland, and Germany, to dispose of their surplus sugar. Obviously, competition from these countries on this business may be expected to develop more freely as time goes on. Prices this week reacted to some extent after a went towards paying course of last month, leaving a loss of £

great as it was by **Amalgamated Cotton Mills Trust.**—We gave in the *Economist* that the Exhibitors, 1925, some account of the dispute raging had led to groups comprising the Turkish Petroleum there were 125 per cent. beneficiary interest held in delay. Many by Mr C. S. Gulbenkian. Information we It is ce received throws more light upon this almost scandalous affair. Mr Gulbenkian is apparently willing to dispose of his shares, not for immediate cash, but for a consideration dependent on the company's future prosperity. The heads of an agreement for the transfer of Mr Gulbenkian's shares on that basis were actually agreed in March, 1925, but this agreement has never been completed by the other shareholders, nor has Mr Gulbenkian's pro-

posal of arbitration been accepted. We may sympathise with Mr Gulbenkian without passing judgment on his claims. It is quite clear, first, that the British Government is so interfering with the Turkish Petroleum Company that politics is put before business. Secondly, that the Standard Oil and other interests comprising the American group are "sitting on the fence"; that is, postponing any decision to take up their promised shares (and, incidentally, to settle Mr Gulbenkian's claim) until the League of Nations has settled the Mosul question, if it can. Thirdly, that the oil groups concerned—Anglo-Persian, Royal Dutch-Shell, French Consortium, and Standard Oil—propose to make such arrangements as will make it impossible for a private shareholder to retain a minority interest with any hope of remuneration. Originally Mr Gulbenkian, with Sir H. Babington Smith and Sir Ernest Cassel, was chiefly responsible for the formation of the Turkish Petroleum Company, and was induced to give up the bulk of his shareholding at cost when the Government reconstituted the company in 1914. His unhappy experience should be a lesson to commercial oil magnates that governments will insist on mixing up politics with business.

Baldwins Report.—The accounts of Baldwins, Limited, for the year ended June 30th last show an unsatisfactory state of affairs, trading profit having dropped from £493,500 to £214,100. After allowing for debenture interest, sinking funds, &c., there is a net loss of £44,000, as against a net profit a year ago of £193,400. The substantial balance of £526,600 was, however, brought forward from the previous account, which gives an available balance of £482,700. Out of this a half-year's dividend on the 5½ per cent. preference shares and the 5 per cent. "B" preference shares is paid, and £200,000 applied in reduction of investments in subsidiary companies, leaving the much-reduced balance of £237,200 to be carried forward. Results for the past seven years are compared below:—

	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
Trading profit	£554,997	£683,405	£410,758	£306,132	£484,760	£493,500	£214,078
Net profit	£471,139	£567,023	£325,167	£86,993	£200,902	£193,412	£74,956
Brought forward	£256,159	£285,799	£291,325	£303,479	£309,178	£424,140	£526,618
Reserve	£726,270	£852,822	£616,492	£390,472	£510,080	£617,552	£482,663
Preference dividend ..	£75,000	£75,000	£25,000	£25,000	£25,000	£25,000	£200,000
Ordinary dividend	£13,750	£45,667	£80,476	£81,294	£85,940	£90,935	£45,467
Carried forward	£285,799	£201,325	£303,479	£309,178	£424,140	£526,617	£237,196

The balance-sheet shows that, in addition to the £200,000 from profit and loss, a further £350,000 has been transferred from general reserve to write down investments in subsidiaries, reducing their book value from £4,418,800 to £3,868,800. The final dividends on the preference shares which were passed in August "in view of the depression in trade during the financial year, and the necessity of conserving the cash resources of the company and the uncertain outlook," are now to be paid, the directors being of opinion that this should be done "on consideration of the position as shown by the balance-sheet." An analysis of the latter will be found in a later column. This shows that the bank overdraft has been reduced by £322,500 to £249,300, the holding of National War Bonds having fallen from £675,000 to £210,000. Cash and bills figure at £40,200, while debtors have been reduced by £42,100 to £931,100, and loans to subsidiary companies by £285,900 to £153,100.

Amalgamated Cotton Mills Trust.—A year ago the directors of the Amalgamated Cotton Mills Trust stated that towards the end of the period covered by the 1923-4 accounts there was "a substantial improvement in trading conditions. More machinery has been started up, longer hours are being worked, and if the price of raw material remains around the present figure, your board is of the opinion that the prospects for the current year's trading are much more hopeful than they have been since 1920. Apparently, however, the hopes of good things to come have not been realised, and, indeed, judging by the figures presented in the accounts for the year ended October 31st, conditions, so far from improving, actually

became less favourable. The result is that the revenue received in respect of dividends, interest, and other receipts declined from £210,288 to £88,269, so that with the sum of £15,292 brought in, the available balance works out at £103,561, compared with £227,008 in 1923-4, when £16,720 was brought forward. The concern is a holding company, and in commenting upon the previous accounts we drew attention to the vague information presented as to the result of operations by the various subsidiaries. We are pleased to note that the directors have realised that shareholders are entitled to have fuller particulars as to the actual outcome of operations by the companies controlled. In the current report there is given a summary of the combined results of the subsidiary companies, in which the company is practically the sole ordinary shareholder. This change of policy is welcome, but even now the balance-sheet leaves much to be desired. As we have pointed out before, investments in cotton mill companies, figuring for £7,954,571, "are taken at cost, and no provision has been made in respect of losses incurred by these companies since the shares were acquired." It is obvious, therefore, that the value placed upon this item may not be in accordance with actual facts, and we hope that now the directors have apparently decided to grant shareholders a little more information they will also throw some light upon this matter. The report states that "the results of the trading of the subsidiary companies for the six months ended February 28th last were such as to warrant the declaration of the dividends on the preference and 'B' preference shares of the company for the half-year ended April 30th last. As already noted to the shareholders, the directors have decided to conserve for the present the financial resources of the companies, and to postpone the consideration of the payment of the dividends on both classes of preference shares, due October 31st last, until the accounts of the subsidiary companies are available for the six months ending February 28th next." It is also reported that, taken as a whole, the plants of the various companies are now working at nearer to full capacity than they have done for some years past. "Your directors are hopeful that, with the much-increased supply of cotton, which appears to be assured, the improved conditions existing at present will be maintained." Let us hope that the optimism now expressed will prove to be better founded than was the case last year. The balance-sheet is fully analysed in another column. The ordinary £1 shares are quoted at £3½, and the yield is nil.

Orient Line.—A further increase in profits is recorded in the report of the Orient Steam Navigation Company for the year ended June 30th last. After providing an unstated amount for depreciation and contingencies, there was a profit on the year's working of £320,800, as against £296,600 for the previous year. The following table summarises results for the past five years and for 1913-14:—

	June 30.	1913-14.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
Profit	£227,454	£164,656	£282,578	£280,093	£296,607	£320,806	£320,806
Brought forward	£56,717	£118,678	£50,167	£72,909	£72,821	£64,929	£64,929
Deb. int. and fees	£284,171	£283,334	£332,745	£353,002	£369,428	£385,735	£385,735
Reserve	£23,383	£18,014	£15,123	£10,468	£9,785	£8,827	£8,827
Repairs and renewals ..	£75,000	£70,440	£100,000	£125,000	£150,000	£200,000	£200,000
Repairs	£25,000	£25,000	£25,000	£25,000	£25,000	£25,000	£25,000
Prof. div.	£10,176	£14,603	£14,603	£14,603	£14,603	£14,603	£14,603
Def. div.	£63,701	£130,110	£130,110	£130,110	£130,110	£130,110	£130,110
Carried forward	£86,911	£50,167	£72,909	£72,821	£64,929	£32,195	£32,195

* Includes £50,000 transferred from Underwriting Account.

The dividend on the deferred shares is maintained at 12½ per cent., free of income-tax, after transferring £200,000 to general reserve, against £150,000 a year ago. The balance-sheet shows the bulk of the assets in one item, which includes the fleet and investments. This has increased by £758,300 to £4,592,800, the report mentioning that two new steamers took their place in the Mail Line during the year, while two were sold. The service under the mail contract with the Government of the Commonwealth of Australia, it is stated, has been regularly

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
67 Milk Street.

BUENOS AYRES: 99 Florida. HAVANA: Pedro Gomez Mena Bldg.

One of the largest and strongest Banks in America. Resources of \$300,000,000.

maintained throughout the year, but in recent months was seriously interrupted by the unofficial seamen's strike. Sundry debtors have declined by £141,200, and creditors, which include contingency accounts, have increased by £320,800. An analysis of the balance-sheet will be found in a later column. The deferred shares give a return, at the present price, of 6½ per cent. free of tax.

Ind, Coope, and Co.—The excellent results announced by those brewery companies which have issued their annual reports during the past few weeks may have led shareholders in Ind, Coope to anticipate an even higher rate of earnings than was reached twelve months ago. If so, their hopes are doomed to disappointment, since profits, as disclosed in the report for the year to September 30th last, have declined. There will, however, be but little fault found with the net result, as the dividend is maintained at 15 per cent., and the bonus of 10 per cent. is repeated. The position, as compared with that ruling in previous years, can be seen at a glance from the following table:—

Year Ended Sept. 30th.	Gross Profits.	Interest on Debenture Stocks and Mortgage.	Depreciation.	Ordinary Dividend.	To Reserve, &c.	Carried Forward.
1914..	£110,821	£58,332	£28,516	£..	£..	£14,290
1915..	146,238	54,300	34,375	..	40,000	680
1916..	152,906	53,625	36,084	14,026	50,000	2,484
1917..	204,717	58,186	34,186	29,991	50,000	23,277
1918..	392,575	55,686	39,373	20,671	185,000	57,281
1919..	474,202	55,722	45,863	49,594	285,000	103,872
1920..	415,249	53,814	45,863	91,341	85,000	139,613
1921..	375,657	53,504	49,783	168,000	10,000	106,345
1922..	349,982	55,986	48,879	137,000	60,000	104,482
1923..	347,880	60,482	48,534	90,375	50,000	109,226
1924..	378,302	61,792	45,416	116,250	50,000	153,490
1925..	334,777	63,810	46,589	136,308	..	161,779

Gross profits declined from £378,302 to £334,777. Interest required a little more at £63,810, while depreciation absorbed £46,589, against £45,416. The ordinary distribution of 25 per cent. requires approximately £20,000 more than in the previous period, owing to an increase in the issued ordinary capital from £600,000 to £698,946. No appropriation is made to reserve, which, on the last occasion, received £50,000, but the directors have adopted the wise policy of writing £75,000 off goodwill, in which item we suggested, last year, that some reduction might be made. Properties have gone up from £1,720,784 to £1,849,415, but elsewhere changes are unimportant. The balance-sheet is fully analysed in another column. The yield on the £1 shares, which are quoted at £3½, is £7 14s per cent.

First Garden City Finance.—In some ways the report of First Garden City, Limited, may be thought disappointing, since the profit shows an increase of only £426,127 the £12,027 announced a year ago. Perhaps the result is better than these figures indicate, since ground rents, which are the stand-by of an estate company, are £1,073 higher, and there are other increases which have, however, been over-balanced by an increased payment of nearly £3,000 owing to revised assessments on the gas, water, and electricity undertakings owned by the company. On the other side a special profit of £1,796 was obtained from the sale of property. Unfortunately rates on the higher

assessments must be paid every year, and the profit from the sale of property may not recur. Building continues steadily, the bare spaces in the centre of the town plan are being taken for larger houses, and the Urban Council has begun to build 186 cottages on 17½ acres of ground. Electricity, water, and gas show increases of 12 per cent., 7 per cent., and 2½ per cent. respectively; the supply of electricity to Biggleswade should begin next month. Some shareholders have objected to the capital expenditure involved in the extension, but we understand that the directors were faced with the alternative of making the extension or of seeing their own undertaking reduced by the Electricity Commissioners to a mere distributing sub-station. In order to pay for this and other expansions the directors announce an issue of £200,000 in 6 per cent. first mortgage debentures secured on the three undertakings. No offer will be made to the public, since friends of the garden city movement have agreed to subscribe the whole sum. Shareholders may have expected a start in the payment of arrears of dividend, amounting to £133,200, but the directors only propose to transfer the year's surplus of £2,718 to a special fund, and promise a scheme next year.

Eastern Tin Dredging.—Our mining correspondent writes:—In several respects the two concerns whose annual reports have been issued this week, occupy a similar position. Each has acquired additional ground, and each has arranged finances for the necessary equipment. In the case of the Malayan company, a separate area totalling over 1,000 acres has been secured, and is to be equipped with two large bucket dredges. The funds required are being provided partly by a further loan of £150,000 under the Trade Facilities Act, and partly by an issue of 10,000 shares at £5 3s 9d. Some small additions have also been made to the company's existing area. Last year's results were adversely affected by the sinking (in March, 1924) of one of the dredges; still, thanks to the enhanced price received for the tin recovered, the profit—£51,400—fell but little short of the 1923-24 total. The dividends totalled 5s per share, as against 4s in respect of the preceding year, from which an increased balance was carried forward. The refloated No. 5 dredge, also the big new No. 6 dredge, are being finished, and should be ready to start as soon as electrical power is available. This, apparently, will be a matter of the not very distant future. With two more dredges coming into operation shortly, and an additional couple later on, the possibilities of the future are obviously very considerable. The results of the Southern Perak Company fully justify the forecast of the general managers. A somewhat increased yardage was treated for a yield averaging .68 kati per cubic yard, in place of .55 kati, while the price averaged £149 7s, as compared with £134. Hence the profit expanded practically 100 per cent. to £51,000. Five dividends totalling 6s per share were paid, as against 4s, still leaving £20,600 to be carried forward, in place of the £8,000 brought in. In this case a second dredge is to be erected upon the property, which has been increased to 911 acres, the loan arranged amounts to £75,000. The share market was upset by the poor November profit, and the announcement that the dredge has entered an area of old workings, which will take three or four months to exhaust. This should not disturb genuine holders.

Van Ryn Gold.—In last year's experience of this old-established Witwatersrand producer, the disappearance of the gold premium was partly counteracted by increase in the tonnage of ore crushed, supplemented by a slight reduction in costs and improvement in the percentage of extraction. Still, at £116,500 the working profit showed a decline of some £10,000. Rents, &c., brought in more than before; on the other hand, the company was under the necessity of setting aside £16,300 to meet the requirements of the Miners' Phthisis Amendment Act of 1924. Thus the maintenance of the dividend at the 1923-24 enhanced rate of 3s 6d per share entailed a slight draft upon the carry forward. A feature of last year's operations was an increase to the record percentage of 35 in the ore derived from reclamation work; the directors intimate, "it is likely that the supply of tonnage from this source

will be maintained for some time to come." The disappearance of the gold premium has resulted in the exclusion from the reserves of certain blocks of ore; but a further reduction in working costs would render these again available. The fresh investigations in the upper levels of the old mine do not appear to have borne out the optimistic anticipations at one time entertained in Stock Exchange circles, but the managing director states that at the present time this section is supplying a considerable quantity of ore to the mill. The ground acquired from the Modder West gives promise of providing a large tonnage.

Consolidated African Selection.—This trust holds a controlling interest in two concerns owning diamond concessions in West Africa. One of them—the African Selection Trust—for last year paid a dividend of 15 per cent., which absorbed little more than a third of the profit earned. Although only plants of a preliminary nature were in operation, the production substantially increased. Two permanent units are now in operation, and a further two are on order—this increase, the directors observe, being fully justified by the diamond reserves. These—fully and partially developed—are now estimated at 6,000,000 carats, and fully half the area remains to be explored. The other company—the Anglo-African Exploration—confined its activities to investigations of fresh areas; no acquisitions resulted. The dividend received by the Consolidated Company on its holding of African Selection Trust shares rather more than covered debenture interest and other expenses. Current quotation of 24s for the 5s shares seems to discount the future somewhat heavily.

Transvaal Output in November.—The output of gold from the mines of the Transvaal amounted to 787,633 ounces of fine gold during the month of November, which compares with 812,832 ounces produced in October, and 802,313 ounces in the month of November last year. The following table shows the monthly output for the past seven years:—

	1919.	1920.	1921.	1922.	1923.	1924.	1925.

The number of natives employed shows a further decline during this month.

Wankie—A Correction.—In last week's "Note" the yield on these shares was by an error given as 15 per cent., the par value being taken at £1 instead of 10s. The correct figure is, of course, about 7½ per cent.

With great regret we record the death, at the age of 80, of Mr George Dick, of Rutherglen, formerly for many years a regular correspondent of the *Economist* on subjects connected with the iron and steel industry.

Oversea Correspondence.

UNITED STATES.—MONETARY POLICY—BUSINESS OUTLOOK—SHARE PRICE READJUSTMENT—PROJECTED BELGIAN LOAN.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 11.

GREAT interest continues to prevail in Federal Reserve policy, even though the matter is, perhaps, becoming less of a factor in market calculations. Uncertainty still exists as to whether the Federal Reserve Bank of New York will follow the lead of certain of the other regional banks, and advance its rate to 4 per cent. Those who expect the rate to go up look for an increase in the Bank of England rate, and maintain that this will remove one obstacle to an advance here. They also point out that discounts have started to rise at the New York bank, and that this contingency is likely to influence the directors. It is a fact that the statement published last Saturday showed that discounts at the local institution increased \$45,000,000 on the week, and stood at \$192,000,000. Reserves fell off \$41,000,000, and with circulation increased by \$6,000,000, the reserve ratio dropped 3.2 per cent. to 79.6 per cent. This certainly is a decided change in condition, and one of a character that would tend to bring a higher discount rate. Some observers even go so far as to say that after a rise in the New York rate certain of the other regional banks will go in for 4½ per cent. rates. However, it may turn out that the expansion at the New York bank is temporary. The Thanksgiving holiday always brings an increased demand for currency, which normally would be reflected in lowered reserves and increased discounts. This Thanksgiving demand, furthermore, coincides with the ordinary end-of-the-month requirements. Under the circumstances it would not be surprising if the next Federal Reserve statements revealed a compensatory contraction. Most observers agree that the seasonal demands for credit have reached and passed their peak. The crest of the crop moving needs has been surmounted. Large amounts of currency will be required for the year-end holiday trade, but merchants' preparations for this trade probably are pretty well completed. The common expectation is that early in January, when the stocks of merchandise have been liquidated and the extra currency has been returned to the banks, money will be easier.

Much depends, both with regard to credit conditions and Federal Reserve policy, on the course of industrial developments. If the normal seasonal influences are to prevail, midwinter should see an easing up in the credit and money position. If, however, the cyclical increase in industrial and business activity should hold strong and overpower seasonal influences, the hardening in money might continue, and market activity might revive to an extent to precipitate further intervention by the Federal Reserve authorities. Just now it is not clear whether our situation is working up to the beginnings of an inflation in business, or whether a midwinter recession in industrial activity will be followed by a culminating burst of activity in the spring. There are some shrewd judges who expect inflation, and point to the continued pronounced strength in the iron market as an indication of how things are going. Most observers incline, however, to the other view; that is, that things will be quieter in the winter, but that business will be good in the spring. Beyond that point most prophets are cautious. Assurances of good business next spring are found in the present high level of employment and purchasing power, and in the continued efficiency in industry. Misgivings as to how strongly business will hold up through next year are based on the belief that the building shortage has about been made up, and apprehensions lest the automobile manufacturers again over-produce. In this connection it may be noted that 406,000 passenger cars and nearly 46,000 trucks were produced during October, the output of cars setting a new, high record for any month. This big production was due partly to the smaller output of the two preceding months, when the new models were being brought out, and partly to the success of the new models themselves. At the present writing the automobile business is showing a seasonal

slackening, but several manufacturers are increasing their capacity, more new models are in prospect, and competition in the New Year threatens to be intensive.

As for the share market, the tone now is steadier. A reaction has occurred comparable in extent to that of last March, which, it will be remembered, followed an advance in Federal Reserve discount rates. The average for industrial stocks has declined about 15 points from the recent peak, and now has recovered moderately. The extreme force of the liquidation in motor shares seems to have spent itself, after wiping out about half of the year's gains. A fair rally in these descriptions took place on the basis of short covering, after which a moderate renewal of weakness was followed by a diminution in activity and a damping down of the range of fluctuation. The market as a whole also has grown less active, and shows signs of recovering its equilibrium. There has even been some resumption of bullish activity, with rails and oils particularly favoured. Oils have been helped by diminishing production, the playing out of a new pool at Garber, firmer prices, expectations of year-end mark-ups in prices, and by realisations that oil company profits are generous. The rails, meanwhile, have the support of excellent earning statements, that show that the companies have obtained an even stronger control of expenses, and by a belief that important merger developments are impending. The Interstate Commerce Commission has now heard the case for and against the Van Sweringen greater nickel-plate system, and there have been rumours that some agreement may be reached between the proponents of the plant and the opposition. A certain amount of encouragement also has been obtained from statements that action will be taken in the forthcoming session of Congress to free the Interstate Commerce Commission from the provision of the Transportation Act that requires the Commission to prepare a completely comprehensive plan of consolidations, to which each individual proposal will conform. It should be understood, however, that this section applies to outright consolidations. The Commission already has demonstrated its willingness to permit leasing arrange-

ments, such as that which now holds the New York Central system together, and such as the Van Sweringen brothers wish to create in the case of their nickel-plate system.

It is apparent that the negotiations for a Belgian stabilisation loan are going more slowly than the Belgians had hoped. It is possible that some further delay will occur. The difficulty lies in the necessity for demonstrating conclusively that the Belgian Budget has been balanced. On the occasion of the last Belgian loan it was stated that no further borrowing would be done until the Budget had been balanced. In addition, our bankers realise that our investors have been educated up to insisting upon balanced Budgets, particularly for stabilising loans. In fact, it has been pointed out in our Press that a stabilisation loan to Belgium would be a mistaken piece of assistance were it not certain that the substance of the loan would not be consumed on account of any shortcomings in the budgetary position. Under these circumstances, the cabled reports of criticism of "interference by foreign bankers in domestic affairs of Belgium" are hard to understand. Belgium comes here for a loan, and our bankers state the conditions under which they will be able to float it. This hardly is interference with Belgium's internal affairs. If the loan is delayed until the Belgian Chamber has actually ratified the proposed reductions in expenditure, the present programme of stabilising Belgian exchange need not be jeopardised. Seasonal factors will probably begin to work in Belgium's favour soon, while that country probably has, or can obtain, short-term credits sufficient to protect the position.

FRANCE.—THE FINANCIAL SITUATION—M. LOUCHEUR'S PROPOSALS—TAXES AND DEBT REDEMPTION.

(FROM OUR CORRESPONDENT.)

PARIS, December 8.

THANKS largely to the revelation, which was confirmed by last Thursday's Bank of France statement, that the Treasury was again absolutely empty, in spite of the additional 1,500 million francs of authorised advances made to it by the Bank a few days before, M. Loucheur has succeeded in forcing through both Chambers his proposals imposing "about 3,000 millions" of immediately-payable extra taxation for the financial year, which will end on December 31st, and stipulating for the immediate payment of outstanding taxes. The new Finance Minister's proposals, which became known on Wednesday night, may be said to have almost taken the breath away from the assembled deputies, particularly when it was found that they included further inflation to the extent of 7,500 million francs of additional notes. By sitting continuously for something like 20 hours, however, until after 11 on the following morning, the Government secured approval for the Bill. Both M. Loucheur and his chief, M. Briand, made it clear that the only alternative to the immediate passage of the Bill was national bankruptcy. Even then it was only by a majority of six votes that the additional inflation asked for was accorded. Rather more than half of the Socialists voted for the motion, and the remainder abstained. The Bill, as a whole, was carried by 28 votes, and on this vote the Socialists adopted similar tactics.

Like public opinion in general, the Upper House, as was expected, showed unmistakable distaste for the hasty and undigested proposals put before it. The new taxes, it was obvious, will weigh excessively on the middle-classes, and particularly on industry and commerce. Already glaring inequalities, under instantly mobilised electoral pressure, have been accentuated by the new Bill. A striking instance of this was the fact that the all-powerful agricultural interests in the Chamber succeeded in getting the already very

favourably-taxed agricultural classes exempted from the proposed uniform 20 per cent. increase in the general income-tax. This led to incomes derived from salaries being also exempted from the additional burden. The Senate inclined strongly towards several important modifications in the Bill. Eventually, however, in view of the urgency of the matter, these were dropped, and the Finance Commission, on the ground that the proposals, "imperfect and fragmentary as they are, have at least the incontestable merit of saving the financial future of the country," recommended that the Bill, as sent up from the Chamber, be passed without the change of a comma.

This much may be said of both Houses: that in face of the menacing realities of the situation the worship of Socialist doctrines was instantly dropped, and all party political combinations, by which the Cartellists have so long intrigued for the purpose of securing control of the national finances, collapsed like a house of cards. M. Loucheur's remarkably bold tactics visibly overcame all obstacles, and to this extent he has secured a distinct triumph. This, however, he owed almost entirely to the desperate nature of the situation with which he was faced, which rendered a desperate remedy imperative. He has still to deal with the real problem before the country, and by wisely-balanced measures, not only guarantee the gradual automatic extinction of the floating debt, but also, while imposing heavy additional new taxation, ensure that the badly-shaken confidence of the French investor shall be restored. It is to be feared, judging from what is now known of the Finance Minister's proposals for the Budget of 1926, that his policy may have an exactly contrary effect.

France, in many ways, is now dangerously near the abyss into which Germany fell shortly after the war. The immediate effect of the recent increased inflation and the imposition of increased taxation must be an all-round increase in commodity prices, which must be followed by increased wages and almost inevitably by further inflation. What renders the outlook all the more sombre is that, with the best of intentions in the world, the effect of the only possible measures that can bring about a real improvement in the general situation will be only gradually felt. The effects, on the other hand, of the increased taxation, which strikes directly at the return derived from every form of investment, will be felt immediately, and must very seriously check all industrial and commercial enterprise; while investors in practically all kinds of securities, who foresee that the greater part of their return will be absorbed by taxation, will find themselves strongly tempted to resort to hoarding their money, in the vain hope of keeping their savings intact. That this is already occurring, and to an appreciable extent, is confirmed by M. Loucheur himself, who points out that between January 1, 1924, and December 1st last 11,500 million francs of new banknotes were put into circulation, of which about 8,500 millions were used to pay off National Defence bonds and about 3,000 millions to meet extra-budgetary expenditure. In the ordinary way these 11,500 millions should have returned to the Treasury in the form of Defence bonds or Treasury deposits, or should have been paid into current accounts at the bank, but none of them have been so used. Increased prices and the fall in the franc, no doubt, account for a proportion of this sum having remained in current circulation, but there is no doubt that another proportion of the notes are being simply hoarded by their holders, who lack sufficient confidence to reinvest them.

M. Loucheur's complete proposals for the restoration of the national finances were laid before the Cabinet on Monday, and proved to consist of seven distinct projects, namely:—

1. A Bill to furnish the necessary additional money from taxation to balance the Budget for 1926, and to provide the Treasury with sufficient funds to meet current requirements.
2. A Bill authorising the creation of an amortisation fund, independent of all Budgetary fluctuations or control, for the purpose of gradually paying off the funded, floating, and inter-allied debts.
3. A Bill to enable much tighter fiscal control to be exercised in the collection of revenue and for the vigorous repression of fraud and the evasion of capital.

4. A Bill authorising preferential treatment as regards taxation to be applied to registered securities as compared with bearer bonds (which is practically allied with the previously-mentioned measure).

5. A Bill of a permissive character to enable holders of Rentes to convert their stock into another form of security.

6. A Bill to authorise increased railway fares and goods tariffs, for the purpose of wiping out the present deficit (which amounts for the present year to 700,000,000f.).

7. A Bill to simplify the application of the income-tax and to extend its application to a greater number of persons, "without, however, abolishing the present abatements."

The text of the first two of these measures were made public yesterday, and were referred to the Finance Commission of the Chamber for consideration.

In the preamble to the Bill M. Loucheur insists that there must be no more loans, even if further appeals of this kind were possible, which the Finance Minister admits they are not. He estimates that M. Caillaux's Budget proposals for 1926 left a deficit of 3,400 millions, to which must be added further expenditure, for which provision must be made, as follows:—Expenditure in Morocco and Syria, 500 millions; deficit on the railways (guaranteed by the Government), 700 millions; increased pay for the public servants, 200 millions; required for purchases of tobacco abroad, 65,000,000f.; increased cost of the floating debt service and in interest charges on the advances made by the Bank of France, 1,335 millions; to meet the needs of the Treasury (paying off of bonds placed abroad; repayment of at least a proportion of 6,189 millions of 6 per cent. 1923 Treasury bonds, which will fall due next May), about 1,500 millions. In round figures, M. Loucheur estimates that between 8,000 and 8,500 millions of additional new taxation will yet be required to ensure for 1926 a really balanced Budget and provide the Treasury with money to meet all probable emergencies. (The new taxation just applied is, of course, merely for immediate purposes, and M. Loucheur's calculations are based on the taxation as it stood in the Budget Bill for 1925 prior to the recent emergency increases.)

The sum of 5,500 millions required to balance the Budget M. Loucheur proposes to obtain to the extent of 3,000 millions by substantial increases in the taxes and duties on real estate and securities (which he proposes to raise from 12 per cent. to 20 per cent.), foreign securities (from 18 per cent. to 28 per cent.), and on industrial, commercial and agricultural profits and incomes from fees and salaries. A further 1,000 millions he expects to get from increased stamp duties on securities, business transfers, insurance policies and stock exchange operations, and by an increase in the tax on turnover. Increased duties on motor spirit, alcohol and motor cars are to furnish a further 400 millions; tobacco, cigars, and cigarettes, 500 millions; postages (the inland letter rate to be raised from 30c to 50c), 600 millions. The 2,250 millions required for the Treasury itself he calculates to receive from a 10 per cent. tax on the first sale of new buildings and business undertakings, and from a new, special and progressive tax on successions.

The Finance Minister's second project deals with the creation of a Special Fund for the redemption of the public debt, which is the Caisse d'Amortissement projected by M. Caillaux. This is to be a perfectly independent autonomous body, which will be managed by representatives of the producing, working and consuming classes. The new organisation will be furnished with resources quite independent of the Treasury, and will have its own independent account at the Bank of France. Its resources will be drawn in part from the yield from the new tax on successions, and on the first sale of buildings and commercial undertakings, and it will also receive the yield from all economies in debt charges which will result from its own operation, with the proviso that the yield from this latter source shall not exceed 5,000 millions a year up till 1936, or 4,000 millions afterwards. The money necessary to enable the fund to begin operations is to be furnished by means of a lottery. The *raison d'être* of the fund is to extinguish the public debt, which it is calculated it will be able to accomplish by 1956, when it will cease to exist. A provision is inserted in the Bill to enable the fund to be brought to an end before the date mentioned "in the event of the amount of the debt being reduced sufficiently no longer to be too heavy a charge on the Budget."

GERMANY.—POLITICS—BRITISH IMPORT DUTIES—FINANCES—CURRENCY AND CREDIT—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 9.

THE Luther Cabinet, as was expected, resigned immediately after the completion of the Locarno agreements. A new Cabinet with the same Chancellor is at present being negotiated for, on the basis of the "Great Coalition"—from People's Party to Social Democrats. The Social Democratic Party has not yet decided in principle for or against this proposal; should it decide for, it will probably impose its conditions, which may be rejected by Dr Luther or by the middle parties. The provincial Socialist groups appear to be less inclined than the Berlin leaders to support a Coalition Cabinet. Should the negotiations fail, a temporary Cabinet consisting partly of experts may be formed.

Meantime the Cabinet is proceeding with its plans. It announces new price-reduction measures. The compulsory syndicates, also the guilds, will be brought under administrative influence or under the Cartels Law of November, 1923. The sale of bread by fixed weight will be required. Most of the States and the inter-municipal organisations have agreed to reduce the interest rates on money lent by them temporarily to Business out of balances on hand. A Cabinet Bill abolishing "business supervision" for insolvent persons, and substituting compulsory compositions will be submitted. "Business supervision" (*Geschäftsaufsicht*) was originally a war expedient. Insolvent concerns could be kept going under supervision as long as there was hope of their regaining solvency. This system, continued after the war, led to many abuses, and the terms of "supervision" often stretched to undesirable lengths. Under the compulsory compositions Bill, when creditors representing at least three-fourths of the debt favour a composition proposal, the remaining creditors may be forced to accept it.

The new English import duties continue to attract unfriendly attention. Trade journals demand retaliatory duties against British products, which, it is pointed out, may be imposed, as are the British duties, without mentioning any particular country, and therefore without formally violating the Anglo-German Commercial Treaty. Little doubt is felt that most, if not all, of manufactured imports will sooner or later have duties imposed upon them by Great Britain, and that foodstuffs will follow. Continental experience shows that not only does the protection of certain manufactured articles lead to protection of others, but that also protection of manufactures as a whole leads to protection of agriculture as a whole. The farmers demand that the prices which they receive as producers shall be raised in order to compensate them for the higher prices which they must pay as consumers of manufactured goods, and of instruments of production. It was this argument which led to the restoration this year of the German pre-war food import duties. The anti-Protectionist Economical Council, the anti-Protectionist German-Democrats and other groups, declared that inasmuch as the duties upon manufactured goods were to be retained, and in many cases increased, it was impossible to reject the farmers' demand.

The prospects of export trade are favourable, if recent developments continue:—

AVERAGE MONTHLY EXPORTS (in Millions of Marks).

1913	914.3
1923	506.6
1924	547.2

Textiles	1,008	907

The Finance Ministry's return on the realised Budget for the fiscal year April, 1924, to March, 1925, shows:—

I. General Administration Budget—	Millions of Marks
Ordinary—	
Revenue	7,559.5
Whereof—	
Direct Taxes	5,764.6
Indirect	1,550.3
Expenditure	6,800.9
Whereof—	
Subventions to States and Municipalities	2,767.2
Surplus	758.7
Extraordinary—	
Revenue	838.2
Expenditure	704.9
Surplus	133.3
Total Surplus on General Administration Budget	892.0
Operation Fund of Treasury	281.9
II. Execution of Peace Treaty Budget—	
Ordinary—	
Revenue	1,001.6
Whereof—	
From General Administration Budget	998.7
Expenditure	1,001.6
Extraordinary—	
Revenue	782.8
Whereof—	
From General Administration Budget	188.7
Yield of Foreign Loan	473.3
Interest on Railway Bonds	100.3
Expenditure	782.8

The sums of 473.3 million marks and 100.3 million marks are booked as a formality, having been directly credited to the Agent for reparations. They therefore appear also in the 782.8 million marks expenditure. The (independent) Federal Posts' report for the first business year, ending March 31, 1925, shows a surplus of 68.8 million marks. Receipts totalled 1,654 million marks, expenditure 1,585.2 million marks, whereof 1,128 million marks operating expenses, 108 million marks writings-off, 83 million marks added to legal reserve, 40 million marks added to operating fund, and 50 million marks compensation paid to Bavaria and Württemberg.

The short-term money market continues liquid; the supply of day money exceeds the demand, and the interest rate sometimes falls to 7 per cent. The Reichsbank President has refused to reduce the discount rate, and has promised instead to relax the discount-rationing system. The total of allowable discounts was originally limited to the sum outstanding in April, 1924, but in September, 1924, the ratio was increased by 10 per cent. Dr Schacht declared that the quantity of credit demanded must be determined by relaxing the rationing system before the question whether the Bank rate is too high can be answered. At present the bank's 4 per cent. is the lowest rate in Germany. The Reichsbank's position, Dr Schacht added, has been strengthened since the summer, when there was a heavy drain upon the exchange reserve. The last weekly return, for November 30th, shows the legal-cover exchange reserve at 402½ million marks, as against 284½ million marks on September 23rd. The Reichsbank's holding of discounts at the end of November was 1,650, and rediscounts 584 million marks, as against 2,064 and 493 million marks respectively at the end of December, 1924, so that there can be no question of credit inflation. Dr Schacht criticised, it seems with ground, the granting of State credit to industry. At present most industrial concerns which get into difficulties take it for granted that they should get State help. Dr Schacht protested against nationalistic Protectionism, and even expressed the view that Europe's recovery requires the abolition of all Customs frontiers.

The industrial situation is less satisfactory. The Prussian Ministry of Trade's monthly report is very unfavourable. Unemployed on November 15th totalled 471,333, against 363,919 on November 1st. In the Rhineland are

over 100,000 unemployed; in Berlin 37,000. The cotton-spinning branch, which was long well employed, reports a sudden decline in business. The leather industry has been injured by numerous recent bankruptcies. Conditions in the machinery branch are worse. Employed in the Ruhr coal industry in October averaged 401,815, which is 162,000 fewer than at the beginning of 1923. Potash sales fell further off in November, but the total sales for the first eleven months of 1925 exceeds by 400,000 tons sales in the same months of 1924. The negotiations for the Western Steel Trust are almost at a standstill. New difficulties have arisen, and it is possible that the fusion may be abandoned or replaced by a loose "Interessengemeinschaft." The Pig-Iron Syndicate is to grant a price-rebate of 6 marks per ton upon pig purchased by native manufacturers for conversion into export goods. The annual report of the Phoenix Company, showing gross profits of 23,000,000 marks, was unexpectedly favourable, and it induced a more optimistic sentiment in the steel industry, and considerably influenced the Bourse. The official wages report for October shows in 12 industries (including transport) an average weekly wage for skilled employees of 45.04 marks, unskilled 33.24 marks. The Bourse tendency has been again weakish, with a slight drop in average quotations; but early this week sentiment improved. Shipping stocks, and stocks of other companies which stand to benefit from the return of property seized by the United States, rose, against the general tendency. Quotations of the shares (Kuxen) in the western potash and coal concerns are particularly low, sometimes one-third or less than the best quotations of 1924. Since early September, when there was a brief recovery, engineering stocks on the Berlin Bourse have fallen some 38 per cent., real estate stocks 33 per cent., metal 32 per cent., brewery 13½ per cent. Bank stocks have declined only imperceptibly.

BELGIUM.—BUDGET FOR 1926—MONETARY STABILISATION—NATIONAL BANK—FINANCIAL PROSPECTS.

(FROM A BELGIAN CORRESPONDENT.)

Ghent, December 1.

THE estimates of the ordinary Budget for 1926 amount to 5,322 million francs, an increase of 402 millions over last year's figure. This increase is chiefly due to the heavier charge of the public debt service (which exceeds by 438 millions that of the previous year), and, in a lesser degree, to the cost of the old age and premature death insurance law (32 millions), and the subsidies for the construction of cheap houses (22 millions). Out of 15 departmental estimates, eleven show reductions, or are stationary, this notwithstanding the rise of cost of living; the index number for retail prices on November 15th last was 534, against 520 a year ago. The increase in the public debt service is due to the heavier charge on the foreign debt, resulting from the lower external value of the franc (for the 1925 Budget, sterling is reckoned at 90f, as against 106f for 1926), from the consolidation of the Belgian war and post-war debt to the United States, and from the interest upon the foreign loans raised to enable the State to repay its debt to the National Bank, and so stabilise the franc exchange. The ordinary and extraordinary budgets together amount to 6,759 millions, a reduction of 285 millions upon last year's figure.

The total debt on September 30th last was 45,780 millions, against 40,680 millions the year before, which latter figure, however, did not include the war debts to the United States, estimated at about 6,000 millions present value. It is significant that out of a total amount of 5,322 millions of expenditure for the ordinary budget, 2,734 millions are accounted for by the service of the public debt, so that out of every roof paid in taxes, 50f go to the debt service. A somewhat delayed reduction of 150 millions upon the credits made upon the advice, it is said, of the foreign financiers who are to grant the necessary loans for the stabilisation of the franc exchange.

In order to make the equilibrium of the budget possible, it is imperative that the franc exchange should be

stabilised, the more so because foreign debt, which represented last year only 20 per cent. of the total debt, now amounts to 30 per cent., which percentage will increase to about 40 per cent. after the State has paid off its debt to the National Bank by means of foreign loans.

Stabilisation of the currency can only be made possible, provided the value of the franc is dissociated from the influence of the credit of the State. The first condition of the above is, of course, that the State should on no account have recourse to further loans from the National Bank. This objective the Minister of Finance proposes to attain by balancing the Budget. No further loans will be made to cover expenditure; expenses will be strictly limited to existing revenue and receipts from new taxes. The existence of a large floating debt is a further danger which might draw the State into forced loans from the National Bank, as a sudden crisis of confidence or other causes might render impossible the renewal of the Treasury bonds when they fall due. Therefore, the Minister intends to make an internal loan for the consolidation of the Treasury bonds, when confidence has returned in the stability of the franc, and conditions are favourable.

Prompt steps will further be taken to repay the existing debt of the State to the Bank as far as possible, in order to stabilise the value of the franc. At the present moment the liabilities at sight or short notice of the Bank represented by bank-notes and deposits amount to 8,000 millions, which are covered up to 5,680 millions, say nearly three-quarters, by the debt of the State to the Bank. This situation, of course, tends to make the value of the Belgian currency subject to any political influence which affects the credit of the State. The heavy debt of the State to the Bank which was incurred for the withdrawal at the rate of 1.25f of the mark circulation introduced by the Germans during the war, is the chief cause of the present inconvertibility and depreciation of the Belgian franc. This debt will be reduced shortly to 1,710 millions through the payment by the State to the Bank of 3,000 millions, value of the proposed monetary loan of 150 million dollars, and 969 millions resulting from the re-valuation at its present franc value of the Bank's metallic reserve (which up till now had been reckoned in pre-war francs), which increase will be abandoned to the State and come into deduction of its debt to the Bank. The floating debt, which constituted 55 per cent. of the total debt on September 30, 1924, and which had been reduced to 35 per cent. on September 30, 1925, will be further reduced by the above arrangement to a proportion of 27 per cent. of the total debt. The repayment of the State debt to the Bank by means of the product of foreign loans will enable the Bank to introduce a gold exchange standard, the franc notes being convertible into currencies based on a gold standard at a rate to be determined.

The prerogative of the Bank's privilege to issue bank-notes (which ends on December 31, 1928) until December 31, 1952, will be accompanied by several important modifications in the present regulations. It is intended to increase the share capital from 50 millions to 200 millions. Fifty millions will be procured by the re-valuation of the real estate of the Bank. A further 50 millions will be given by the incorporation into the capital of part of the reserve of the Bank. The balance of 50 millions will be obtained by the issue of 50,000 shares of 1,000f face value. These shares will be issued at 1,500f each, the profit of this emission being paid into the reserve, and will be offered by preference to institutions of public utility (such as the National Savings Bank, the Society of Credit to Municipalities, &c.). They will be registered shares, and will only be transferable with the agreement of the board of directors of the Bank. The division of profits will be altered in some particulars. The fixed remuneration of shareholders, which was 4 per cent., will be increased to 6 per cent. Of the remainder, 10 per cent. will be allocated to the reserve, as formerly. A further 10 per cent. will be divided between the board of directors, the censors, and the staff.

It is hoped that the above measures will enable the franc to be stabilised at last, and it is noted with relief in Belgian business circles that since October the fluctuations of the Belgian franc have been very slight, notwithstanding the violent depreciation of the French franc,

of which the Belgian currency formerly used to share the ups and downs. A further encouraging feature is the improvement in the balance of trade. Whereas for 1913 exports were 74 per cent. of imports, the ratio between exports and imports has risen to 81 per cent. for the eight months of 1925. In connection with the present policy of exchange support, the National Bank has to-day further increased its discount rate from 6½ to 7 per cent., and its interest upon loans from 7 to 7½ per cent.

AUSTRIA.—POLITICAL DIFFICULTIES—ECONOMIC SITUATION—GOLD BALANCE-SHEETS—FOREIGN CREDITS—STOCKS AND EXCHANGE.

(FROM OUR CORRESPONDENT.)

VIENNA, December 1.

THE political situation in Austria has become hopelessly intricate. Through its weak attitude in the conflict with the State officials the Government has lost authority. Instead of risking the strike threatened by the officials, which was bound to end with a decisive failure for them, the Government gave in to this threat, and agreed to pay the officials this year one and next year three bonuses, each amounting to one-quarter of a month's salary; it is quite impossible to say from what sources this extra expenditure will be met. The negotiations with the rebellious officials, especially the impudent way in which the latter treated the Prime Minister, were a shocking scandal, and their effect was that as soon as the State officials were calmed, the post, telegraph, and telephone officials who form a separate group of public employees approached the Government claiming an increase of their salaries, failing the granting of which they threatened to come out on strike on December 3rd. Again the Government gave in, and guaranteed them a share in the profit derived from the postal and telegraph services. As these services have never brought in any profit this concession is, of course, nothing else but a disguised form of a bonus.

In Parliament also the situation was very confused until to-day, when an unexpected turn took place. Under the pressure of the Social Democrat opposition, the Government brought in an Amendment Bill to the National Insurance Act, which is unacceptable to the majority parties; it provides for an increase of the annual contributions to be paid by the employees from 103 to 107 million shillings, whilst the employers' contributions are to be raised from 96 to 122 million shillings. Although the Social Democrats were given to understand that such an enormous increase would, under the prevailing economic depression, mean an unbearable burden on the shoulders of the employers, and would simply lead to a reduction of their staffs and workmen, and thus increase unemployment, the Social Democrats insisted on the necessity of passing this Bill, and checked all other Parliamentary work by "obstruction," so that it has not been possible so far to pass the Budget. This put the Government into a very difficult position, as it had pledged itself to the League of Nations' Committee to submit the Budget at this Committee's December sitting, which now seemed to be impossible. At the last moment the Majority parties had the lucky idea of inducing the Government to bring in a Bill for the suppression of the Tenants' Protection Act, and a partial re-assessment of rents. The unexpected broaching of this difficult problem, which they so fiercely contest, has brought the Social Democrats to their senses. They stopped the obstruction at once, and agreed to postpone the debate on the National Insurance Act, and to pass the Budget this week, so that the Government will be able to submit it to the League of Nations. One must, of course, be prepared for a serious conflict between the parties over the Tenants' Protection and Rents problem, but, at any rate, there remains a hope that it will be possible finally to come to a compromise.

In some industries, such as the brewing, electric, and rubber industries and some branches of textiles, a certain improvement can be noted. All the others, however, suffer from stagnation and growing foreign competition; export to the neighbouring Succession States is hindered by high custom duties, which, moreover, are very often altered at very short notice, so that it is very difficult to

effect contracts for future delivery. In addition to this, export to Poland now suffers from the fluctuations of the Polish currency and from the great difficulty of collecting outstanding money in that country. Unemployment is again growing: the number of unemployed in receipt of the dole amounts to about 140,000, against 119,000 in October and 90,000 in November, 1924. The attempt to induce unemployed to emigrate has so far had no practical result.

The problem of the re-capitalisation of companies, which is of the greatest importance for the return to normal business conditions, has been seriously delayed through the narrow-mindedness of the Tax Authorities. The first companies which submitted their new gold balance-sheets to the income-tax boards had to endure such a vexatious investigation, and were threatened with such heavy fines, that the other companies were discouraged to issue their new gold balance-sheets. In order to remove these difficulties negotiations will take place with the Treasury next month, and it is hoped that it will be possible to convince the Finance Minister of the necessity of a broader view on the side of the Tax Authorities.

The negotiations with the American firm, Messrs Morgan, Livermore and Co., for a loan of 15 to 20 million dollars for several Austrian provinces, have definitely failed because it was not possible to come to an agreement regarding the issue price and the security. The province of Lower Austria, however, succeeded in getting a loan of \$2,000,000 from Messrs. Lissman; the loan will be raised by the issue of 7½ per cent. gold bonds, which will be redeemed within 25 years by operation of a sinking fund. Short-term foreign credits are plentifully offered, but are not encouraged by the National Bank, which strives to limit them in order to increase its own discount business.

The danger always hovering over the market that the Supporting Committee could liquidate and throw on the market all or part of the securities taken up during the slump has been definitely averted by converting this committee into a trust company, which will hold these securities, the present value of which amounts to about 14 million schillings, during a minimum period of three years. Although it was hoped that the relief caused by this measure would give the market a new impulse, its effect was insignificant. The public has lost all confidence in the market, and prefers investing its money in deposits with banks or saving banks, where it bears 6 to 8 per cent. per annum without any risk. Only for some gilt-edged securities and gold mortgage bonds some demand could be noted.

Business on the foreign exchange market was pretty lively during last month owing to the great fluctuations of the French franc and the zloty, which led to considerable transactions. A representative of the Russian National Bank is negotiating with the Austrian National Bank with a view to having dealings in Russian currency (Tcherwonetz) officially approved on the Vienna market, a measure which will be heartily welcomed by all merchants trading with Russia.

UNION OF SOUTH AFRICA.—RETURN ON RAND INVESTMENT—A 5 OR 6 PER CENT. YIELD ON CAPITAL—INDIVIDUAL VARIATIONS—THE PLATINUM SLUMP.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, November 4.

THE Gold Producers' Committee of the Transvaal Chamber of Mines has submitted to the Economic and Wage Commission, of which Professor Chapman, of Manchester University, is a member, a statement dealing with the actual return on capital invested in the Rand gold-mining industry viewed as a whole. It is a preconception in the minds of the majority of the South African public, and an obsession of politicians, that the industry is a most highly profitable one. But the dividends paid by the Modders, Government Areas, Crown Mines, and others tend to obscure the very indifferent results of some of the medium and lower-grade properties. This has been accentuated by the disappearance of the gold premium. In 1914

the mines outside the Far East Rand section made a profit of £9,150,000 (or 8s 3d per ton), and paid 80 per cent. of the dividends. To-day their yearly rate of profit is £3,500,000 (or 4s per ton), while they contribute only a quarter of the dividends. In September nine low-profit mines made a combined profit of less than £10,000, and not even a super-optimist would contemplate any dividend payment from any one of them.

But what is "poison" to the shareholder is "meat" to the Rand community, among which they spent £468,750, or one-fifth the entire expenditure of the producing mines. To the community they are as valuable as the "big four," which spent approximately the same amount, but, for the benefit of shareholders (and the Government as participant in the Government Areas lease), earned £481,000. To illustrate the parlous condition of some of the low-grade mines, three mines occupying four and a half miles of reef between the Goch and Germiston in the September quarter crushed 550,500 tons, and made the poor profit of £29,250, an average of 1s a ton, and only one is likely to pay a dividend.

It may be recalled that Professor Lehfeldt, of the Chair of Economics of the University of the Witwatersrand, made a calculation some time ago that 6.2 per cent. was the yield on the capital sunk in the Rand industry over a long period of years. But this was criticised before the Commission, on the ground that it was to some extent based on market valuation of shares, and not on a comparison between actual capital invested and dividends paid. The present calculation takes the capital expended in opening and equipping the mines as assessed by the Inland Revenue for purposes of amortisation of wasting capital for income-tax purposes. This was about £70½ millions in 1913, £80½ millions in 1919, and representing its maximum amount, and is now just under £80 millions. In addition there is the question of vendor shares. In 1913, in evidence given to the Economic Commission, on the basis of British Income-tax practice, it was stated that in respect of thirteen typical companies the vendor consideration was rather less than the working capital expenditure. Under the Government Areas and New States leases, the Government receives 55 to 57 per cent. of their profits as vendor. At what price should vendor shares be valued? While it would appear reasonable to assume the vendor consideration as being equal to the total spent on opening up and equipment, "in order to prevent any possible suggestion that the amounts paid to vendors have been over-estimated, the price paid for the ground has been taken at only half of the capital in development and equipment.

This addition makes the total capital in the years previously stated rather under £120 millions to-day. Six per cent. on the capital called for about £6,500,000 in the earlier periods and for nearly £7,250,000 to-day. Dividends have varied, more than, perhaps, one would have thought, from a minimum of £5½ millions in 1918, when there was no currency premium in relief of excessive costs, to a maximum of £9½ millions in 1924 (estimated to fall to £8½ millions this year). In the years 1917, 1918, 1919, and 1922 the dividends fell below the amount called for on the basis of 6 per cent. by a margin ranging from half to nearly two millions. These were the only four occasions over a fifteen-year period, and there was very generally a surplus of one and a half to one and three-quarter millions. In 1924 it was £2,367,000, this year it is put at slightly over a million.

But on no occasion has it been sufficient to meet the amortisation charge calculated over 25 years, estimated between £2,430,000 and £2,900,000, the latter applying to the last three years. Last year, the best since 1913, the deficiency was only half a million, in 1919 it was over four, and in 1918 it approached five millions. This year it is expected to be about one and three-quarter millions. In fifteen years dividends paid have been insufficient to provide 6 per cent. on the capital and amortisation by a margin of £31½ millions.

If one deducts the amount of £2,877,690 required to

amortise the annual capital from the dividends of £9,557,657 paid in 1924 and £8,274,796 as estimated for 1925, the net amounts work out at 5.6 per cent. and 4.5 per cent. on the total capital of £120 millions respectively. This mean of a trifle over 5 per cent. is obviously a poor net return for a mining investment.

The individual aspect is not without interest, probably it is of most importance to the investor who usually confines attention to a few shares. Two companies have paid over ten millions to shareholders, the Crown Mines, which commenced crushing in 1897, £14½ millions, New Modderfontein (1892) £12½ millions. The former is in relation to an admitted amortisable capital of just over six millions, the latter in relation to one of less than two and three-quarter millions. Strange as it will seem to those with knowledge of only highly disappointing recent results, the third largest dividend aggregate is the £7½ millions of the East Rand Proprietary Mines, which is only half a million more than its admitted capital. On the other hand, Modder B. (whose dividends have been falling off latterly) has paid almost as great a sum, £7,332,500 *vis-à-vis* a capital of the modest dimensions of £1,597,000. Its dividends have thus been four and a half times the capital.

The record of dividends in relation to capital is shown by the Meyer and Charlton, whose capital is the smallest in the list at £450,000, whereas it has paid £3,685,300 in dividends, or eight times as much. Ferreira Deep has paid over £6,589,000 in dividends or over seven and a half times its amortisable capital. Modder Deep has already paid six times its capital, and having still several years of prosperous life, will eventually surpass the two other mines. On the contrary, its associated mine of the Union Corporation, Geduld, the pioneer deep level of the Far Eastern Rand, has not, even if the June dividend be added, yet paid in dividends a sum equal to its capital. Both Randfontein and West Rand Consolidated have given a miserable return. Even a cursory examination of the schedule reveals how greatly the results have varied; it is fortunate, indeed, that the Rand has the far Eastern tract now to rely upon.

South Africans generally, and the Rand public in particular, have suffered very heavily in the recent decline in the price of platinum shares, and many have lost, and more than lost, the gains they made on the rise last year and early this year. Lydenburg Platins, the pioneer company of the district, were 65s in May, they were quoted a day or so ago at 15s. The company sold the bulk of their property to Lydenburg Platinum Areas (of London registration), which were underwritten at 16s., i.e., 20s, with a bonus allotment of 20 per cent. These shares are now no better than 9s 6d. Transvaal Platinum, the pioneer platinum company whose area is in the Waterberg, quite distinct from the newer discoveries in the Lydenburg and Potgietersrust localities, a year ago were over 70s. They have since been down to 35s, and are now no better than 41s. Platinum Proprietaries, which reached a "peak" of 67s 6d little more than six months ago, and of which the Central Mining bought 10,000 shares, coupled with options on large parcels, at 50s, have been dealt in lately, in a sporadic sort of way, at about a guinea. Some of the smaller syndicates and companies are not even quoted. The shares dealt in principally in London, like Transvaal Consolidated Lands and Transvaal Estates and Development, though experiencing fluctuations, have suffered far less severely, the former standing at 78s and the latter at 22s 6d. We want more frequent progress reports to keep the interest alive; quarterly announcements by gold mining companies may be well enough, but this is too long an interval in connection with a nascent industry like platinum mining. Particulars of the impending flotation of Onverwacht, if, indeed, it has been definitely decided to place the property on a company basis, are being eagerly awaited. Keen observers on the Johannesburg Stock Exchange think it will require to be highly favourable to the company to justify the present price of nearly 80s for "T.C.L.s."

The municipal elections in Johannesburg have resulted in the substitution of a majority of the Ratepayers' party for the Labour Party, which should make for greater stability.

Letters to the Editor.

THE ROAD FUND.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Can you explain to me this outcry at the suggestion that the Chancellor of the Exchequer should treat the money derived from motor licences as part of the ordinary revenue? I can understand the illustrated papers, with their motor advertisements, speaking on behalf of the motor owners; I can even pardon their insolent reference to "our money," but I cannot understand how Liberal and Labour organs can echo the parrot cry of "Raiding the Road Fund."

If the licence fee paid by a motor-owner is a tax like the fee one pays for a dog or a gun, the Chancellor of the Exchequer has just the same right of dealing with the revenue from it as he has with the yield of the beer duty. No one suggests that the proceeds of the beer duty should be spent in improving public-houses, or even in providing the counter-attractions desired by Mr Sherwell. Is there any kind of expenditure which gives a better indication of ability to pay taxation than the ownership of a motor vehicle?

While the taxation of private motor-cars approaches equity, though the horse-power formula is obsolete and luxury cars ought to pay a higher rate, the scale applied to commercial motor vehicles runs contrary to all principles of taxation, since it makes the poor man and the small vehicle pay at a higher rate than the wealthy firm and the big vehicle. The following table speaks for itself.

15 one-ton vans pay	£ 240
5 three-ton vans pay	125
3 five-ton vans pay	90

Now that the Railways Act of 1921 has made the travelling and trading public the senior partner of the railway companies by saying that 80 per cent. of any extra profits or savings shall be used to lower fares and rates, the community loses twice over when traffic is diverted from rails to roads.—Yours, &c., J. E. ALLEN.

Books and Publications.

THE INDUSTRIAL REVOLUTION.*

MR and Mrs Hammond have given in their new book a vivid sketch of the English industrial revolution regarded as an episode in world history. They have written, the preface explains, for the general reader and not for the specialist, but both these should enjoy the book. "Specialist or not, the reader can scarcely fail to appreciate the literary skill with which the drama is staged or to note that, impartial as is the presentation of events, there is yet a personal note which heightens the attractiveness of the style.

The character of the industrial revolution is brought out by contrast with the developments which preceded it. Commerce, before the discovery of the Atlantic routes, was confined to luxuries. Self-supporting peasant communities lived lives of limited outlook under the spell of custom. With the discovery of the Atlantic routes commerce changed in scope and character, and came to be concerned with the daily wants of the peoples. This commercial revolution was a necessary prelude to the later industrial revolution. There was a movement from a feudal to an acquisitive society. Individual liberty succeeded mutual obligation. The attraction of adventure became stronger than the spell of custom. A new development was the organisation of credit. A combination of circumstances hastened the transformation of England from a peasant into an industrial country, and, with the age of mechanical invention, came the industrial revolution, but "the most significant thing about that revolution was that it gave to capital a much wider control of the life of men and of States."

"The most important force in making the English an industrial people was the destruction of the village." In the eighteenth century "neither Church nor Guild survived to offer any obstacle to the view that headlong wealth was the sovereign good for society and for the individual,

* "The Rise of Modern Industry." By J. L. and Barbara Hammond. (London) Methuen and Co., Limited. 1925. 10s 6d net.

for cities, and for men." And the moral atmosphere of the slave trade—the influence of which is strongly dwelt upon—prevailed in the early days of the factory system. "The age had turned aside from making a society in order to make a system of production."

The evils and problems that flowed from prizing wealth as an end in itself are shown, and then the final chapter deals with the beginnings of a new society, but beyond the middle of the nineteenth century the story does not go. The book is a piece of history well told. As such it is necessarily incomplete. The end is not yet, and though to continue the tale into more recent years would be a task of difficulty, it is one which the authors might well be induced to essay.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, December 16. ACCOUNT, December 17.

The whole of the Stock Exchange markets remains under the influence of the rubber boom, which has been tearing along in its reckless fashion at a rate almost as swift as it has hitherto attained in any previous week since last May. The settlement of rubber shares, to be dealt with next week, is of enormous proportions, and its financing demands such amounts of money as rendered it necessary for stocks and shares in other parts of the House to be sold in order to provide the necessary capital. The new issues which follow one another with such rapidity are absorbing a good deal of floating cash, though to-day's methods of allotment are very different from those that prevailed in the pre-war times, when a company would sometimes take three or four weeks before it returned to disappointed applicants the money sent in the first place for subscription to the shares. To-day, it seldom takes more, and frequently less, than a week, to get through this part of the business.

The 5 per cent. Bank rate is disappointing some of the people closely connected with money stocks, in that it has not checked the outflow of gold. On this account, Stock Exchange authorities begin to talk vaguely of the possibility of a further advance, and, although this did not materialise on Thursday, the purely investment securities became dull. Most of the British Government stocks have declined a little, though curiously enough, certain Home Railway debenture and prior-charge stocks are in such short supply that they are more readily sold than bought at good prices.

The issue of the German Potash Loan achieved a striking success, the subscription lists closing rapidly after they opened. The main object of interest in Foreigners at the moment is the Peruvian Corporation group, where prices have fluctuated according to the views taken as to what next week's meeting may disclose in the way of dealing with dividend arrears on the preference. The European loans are steady. Chinese have given way in most cases. South Americans have come upon quiet times, and French bonds are singularly featureless.

The Home Railway market cheered up on the news published in connection with the national arbitration award, and the various rumours that arose thereafter in connection with this. Fears of dearer money stepped in, and the market became flat again. Argentine rails continue to be affected by the uncertainty regarding the outbreak of rust, though the visitation is not thought likely to affect the bigger companies to any material extent. United of Havana turned harder after its sharp fall: it is said that the Americans are again on the look-out for cheap stock.

The rubber boom is the outstanding feature of the Stock Exchange. How to cope with the rush of business is a matter that makes the utmost demands upon the energies of those connected with it. The pace has been tremendously hot, and the area of interest appears to widen with every day. Monday, however, was the most strenuous. Towards the week-end hesitation occurred; activity subsided to some extent, and a note of uncertainty supervened. There was a good deal of profit taking in advance of next week's settlement—the last Stock Exchange account in the present year.

The tea market is quiescent, but shows signs of reviving strength. The oil market has lost a good many of its jobbers, who have migrated into the adjacent and more popular rubber section, on account of the indifference with which oil shares are now regarded by the public. Artificial silk shares have been weak, with the exception of Courtaulds, where dividend expectations sufficed to hold the price fairly steady. The reorganisation of Vickers came as no surprise to many people, who had been expecting that some such step would have to be undertaken within the next few months. The shares hardened on the news, although the iron and steel market is dull on the whole. Shipping shares are also easier. The Cunard's new debenture issue came as a surprise. There have been a few falls amongst insurance shares; fluctuations in the

banking department are irregular as they are insignificant. The brewery market has gone back, and tobacco shares, after a show of animation, were disposed to droop for want of interest. Crosse and Blackwells have been flat, on the forthcoming new issue. A general rise occurred in London electricity supply shares to the accompaniment of favourable rumours connected with the County of London company. A number of prices in the motor share market eased off. Wireless and cable stocks have been uninteresting.

Kaffirs present no outstanding feature. The platinum improvement was maintained, but gold producers' shares lack lustre in spite of impending dividend announcements. Rhodians and Diamonds are equally quiet to dull. Tin-mining descriptions have gone back in many cases; the Middle East group is providing, however, some excellent dividend announcements. West Africans remain dormant, and base metal shares of all kinds are inclined to droop. The mining markets wind up the year in a manner characteristically quiet.

NEW ISSUES.

City of Launceston (Tasmania).—This is an issue of £150,000 5 per cent. debentures, 1946, at £98 per cent. Principal is repayable at par on July 1, 1946, and interest is guaranteed by the Tasmanian Government. The total debt of the Council on February 28th last was £599,400, the annual contribution to sinking fund is about £7,000, and accumulated sinking fund at June 30, 1924, was £123,137. The unimproved value of lands is £6,800,000, and the annual value £240,000. The revenue for the year ended June 30, 1924, was £208,697, and expenditure, including interest and sinking fund, amounted to £195,534. The yield on the debentures at fund, amounted to £5 2s per cent., which does not sound attractive.

The Potash Syndicate of Germany.—This is an offer for sale at £94½ per cent. of £5,000,000 7 per cent. bonds (Series A). The bonds form part of an authorised total of £15,000,000, and

are being issued simultaneously as to £1,000,000 in Holland, £300,000 in Sweden, and £1,700,000 in Switzerland. They are redeemable at £102½ on or before November 1, 1950, by the half-yearly operation of an accumulative sinking fund, commencing in August next. The Syndicate reserves the right of redemption at £105 per cent. on and after November 1, 1935, and before November 1, 1940, and at £102½ on and after November 1, 1940. The bonds are a direct obligation of the Syndicate (which includes every owner of a potash mine or factory in Germany), in which is vested for a period extending beyond the maturity of the bonds, the sole right in Germany to deal in and export potash and potash compounds. It is stated that the average proceeds from the sales of the Syndicate (on which the bonds are a first charge) for the past three years amount to over four times the service of Series A. The Syndicate was formed in 1919 to control the German potash industry. In 1913 the value of Germany's sales of potash was £5,640,000, in 1923 £2,860,000, in 1924 £2,820,000, and for the current year the figure is estimated at £3,600,000. The sum required for the annual service of the bonds is approximately £700,000. The proceeds of the issue will be used to develop the industry, and will enable the members of the Syndicate to pay off their funded debts, which amount to about £2,350,000. The capital of the Syndicate is 1,500,000 gold marks, with a liability on its members of 30 times the original nominal capital subscribed by them. The bonds are well secured, and should constitute an attractive holding.

Great Western Slate Quarries, Limited.—Authorised share capital £40,000 in £1 shares, of which £10,007 has been issued. This is an issue at par of £29,500 8 per cent. participating convertible first mortgage debentures of £10 each. The debentures are a first charge upon the freehold and leasehold properties, and a floating charge upon the remaining assets. Holders are entitled to participate up to 20 per cent. in surplus profits, and have the option of conversion into ordinary shares at par until August 31, 1928, on one month's notice. Any debentures not converted are to be redeemed on September 1, 1940, at a premium of £1 5s per debenture. The company was incorporated in June last to acquire freehold and leasehold properties known as the Great Western Slate Quarries, Somerset, covering 52,722 acres. Of this, some 52 acres are held under lease, expiring in March, 1975. The quarries have been valued at £55,000. The purchase price is £21,755, payable as to £10,000 in cash, and the balance in cash or debentures. The prospectus states that "the company also grants to the vendors (a) the right to subscribe at par until August 16, 1925, for 5,000 ordinary shares of £1 each, and (b) the further right until November 30, 1928, to subscribe at par for any ordinary shares not called for by the debenture holders under their rights of conversion." It is not stated, however, whether the first-mentioned option has been exercised. No particulars are given of past production, costs, or profits, and the issue is described as a pure speculation.

Cunard Steamship Company, Limited.—Capital, £6,950,209, of which £1,000,000 has been issued. There is also outstanding £260,000 of 6 per cent. first mortgage debenture stock and £4,000,000 of 7 per cent. mortgage debenture stock. This is an issue of £1,000,000 of 5 per cent. mortgage debenture stock, 1941-46, the proceeds of which will be utilised for the redemption of the 7 per cent. stock. The price of issue is £98 per cent., and the stock is redeemable at par on February 1, 1946, the company reserving the right of redemption at par any time prior to or after February 1, 1941, on six months' notice. The prospectus states that "the repayment of the 7 per cent. stock, the present issue, will be specifically secured by first mortgage debentures on the vessels, and by transfers of the ship mortgages at present forming the specific security for the 7 per cent. stock. It will also constitute a floating charge on the whole of the assets. Upon the final redemption in 1927 of the 2½ per cent. 'Government' stock, the issue will become a first mortgage charge on the specifically mortgaged assets. It is provided in the trust deed that the amount of outstanding debenture stock shall be limited to a sum not exceeding 40 per cent. of the value of the vessels and ship mortgages and 60 per cent. of the value of any further vessels and ship mortgages which may become part of the security. The company was established in 1840, and, according to the last balance-sheet tangible assets totalled £24,772,947, while net assets were £16,000,000. Profits, before allowing for taxation and interest, have risen from £734,384 in 1915 to £1,621,045 in 1924. Debenture interest, including that on the present issue, but without allowing for that on the 7 per cent. stock, now being redeemed, requires £220,706 per annum. The issue is well secured, and can be recommended to investors.

Textile Trades Corporation.—Capital, £1,112,500. This is an issue of £1,000,000 7 per cent. 20-year trust certificates to bearer. The loan will be secured (a) by a deposit of a bond of indebtedness of the Textile Trade Corporation for £1,000,000 sterling, (b) by the unconditional guarantees of 11 subsidiary companies, and (c) specific first closed mortgages on the fixed

assets valued at £3,345,000, subject to the Dawes Public Liens and existing mortgages amounting to £11,000. The latter are now to be paid off. Redemption will be effected by means of half-yearly drawings at £102½, commencing in October, 1926. The corporation reserves the right of redemption, on three months' notice from April 1, 1933, to October 1, 1935, at £105 per cent.; on April 1 or October 1, 1936, at £104½ per cent.; and on April 1 or October 1, 1937, at £104 per cent., and so on, with annual reductions of one quarter per cent. until April 1, 1944, and thereafter at £102½ per cent. The net assets as at December 31st last amounted to £4,250,000, and net profits in 1924 totalled £222,600. It is stated that "it would be misleading to give figures of profits made during the inflation period in Germany, but it may be stated that the 11 companies have been consistently prosperous over a long period of years. The distribution last year was 6 per cent." It is also reported that the Textile Trades Corporation has undertaken that in every half-year the proceeds of exports to an amount sufficient to cover six months' interest and sinking fund shall accumulate in a special account with the British Overseas Bank, a speculative issue not without attraction.

Western Viscose Silk Mills, Limited.—Capital £400,000 divided into 300,000 10 per cent. preference £1 and 1,000,000 deferred 2s shares. This is an issue of the whole of the capital. The company has been formed to manufacture artificial silk yarns by the Viscose Process. It has entered into a contract for the purchase of the Great Western Cotton Mills, Bristol, subject to a mortgage of £960, at a price of £100,000, payable as to £30,000 in cash, £58,334 in preference shares, and £11,666 in deferred shares. The mills have been valued at £102,945. The total cost of the initial unit of plant and machinery, and of the general equipment of the factory for the production of 27,500 lbs per week, is £148,119. The total underwriting commission is 4 per cent. The company is under responsible management, and has secured the services and assistance of two experienced chemists.

Bursledon Brick Company, Limited.—Particulars of the company are advertised in compliance with Stock Exchange regulations. The authorised and issued capital is £72,000, divided into 22,194 5 per cent. cum. preference £1 and 100,000 ordinary 10s. shares. The company was originally incorporated with a capital of £50,000, and acquired a brick manufacturing business, the consideration for which was the allotment of £30,817 in shares and the discharge of certain liabilities, which have now been cleared off. In 1921 the company capitalised £12,000, and in 1925 £20,000 of its reserve funds. The works and some 72 acres of clay land are situated at Lower Swanwick. Application is being sought for permission to deal in the issued capital. Investors should note that no particulars are given in the advertisement regarding past results.

Kirkless Artificial Silk Manufacturing Company, Limited.—Capital £100,000, in 80,000 10 per cent. preferred ordinary £1 and 200,000 deferred ordinary 2s shares. This is an issue at par of 67,500 preferred ordinary and 135,000 deferred ordinary shares. The company has been formed to manufacture artificial silk by means of the viscose process, and has entered into a contract for the purchase of freehold land, buildings, machinery, &c., at Gloucester (where artificial silk has been produced for three years), and at Bury, for a total sum of £40,000, payable £30,000 in cash and £10,000 in shares. The company has acquired the services as general manager of a gentleman formerly employed by Messrs. Courtaulds, Limited. The properties being acquired are valued, as a going concern, at £42,922. The underwriting commission is 3½ per cent.

Wuara Art Silk Company, Limited.—Capital £420,000 divided into 300,000 ordinary shares of £1 each and 600,000 deferred shares of 4s each. This is an issue of all the ordinary and 120,000 deferred shares at par. The company, as its title implies, has been formed to carry on the business of manufacturers of artificial silk and staple fibre, and has acquired, for that purpose, patents, processes, &c., from a German concern, whose Breslau factory it is intended to reproduce here. The sole purchase consideration is the allotment of 480,000 deferred shares.

West African Development Trust, Limited.—Authorised share capital £25,000, in shares of 5s each. This is an issue of 80,000 shares at par. The company has been formed to acquire certain assets from the West African Selection Trust, Limited, to secure properties and concessions in West Africa, &c. The Trust holds a large interest in Kayiakour, Limited, which owns mining and agricultural rights over approximately 11 square miles in the Gold Coast Colony. The assets have been acquired for £5,000, payable in shares. It is stated that the capital will be used chiefly in preliminary testing of and reporting on different properties, &c., so that the future largely depends on how these tests turn out. The shares can only be regarded, therefore, as a speculation.

Townhead Mill Company, Limited.—Share capital £120,000 in £1 shares, all of which are now offered for subscription at par. The company has been formed to acquire a cotton-spinning business in Rochdale, which was established in 1850, and in 1899 was formed into a private limited company. The undertaking is being taken over as a "going concern." The assets comprise land, buildings, machinery, plant, &c., which, lumped under one heading, figure for £95,000, and stock-in-trade and stores which amount to £22,000, making a total of £117,000. It is not stated how these figures are arrived at, or whether they have been independently valued. The purchase price is £117,000, payable in cash. The prospectus is not a clear document, and no particulars of past profits are given.

Kuala Krau Rubber Company, Limited.—Share capital £75,000 in 2s shares, of which £14,600 has been issued. This is an issue of 400,000 shares at par. The company was incorporated in 1917 as a private undertaking, and was converted into a public company in November last. It owns an estate of 2,997 acres in Pahang, F.M.S., of which 473 acres are planted with rubber. It is stated that until the beginning of 1924 the company was short of funds, and upkeep suffered accordingly, but further financial arrangements were then made, and a cleaning-up programme was instituted. The proceeds of the present issue are to discharge the loan of £19,500 (borrowed for the purpose of paying off the debenture stock), and to provide capital for extensions to the planted area. The issue has been underwritten for a commission of 3½ per cent. The company is under excellent management, and should do well when additional acreage is producing.

Merah Rubber Estates, Limited.—Share capital £85,000 in 2s. shares, all of which have been issued. Particulars are advertised in compliance with Stock Exchange regulations. The company has been incorporated to acquire rubber estates in Kedah, Malay Peninsula, of 1,448 acres, most of which is planted. The purchase price is £70,000, payable in cash.

Central Perak Rubber Company, Limited.—Capital £500,000 in £1 shares, of which 400,000 are now offered for subscription at 21s per share. The company has been formed to acquire and develop rubber estates in Malay of 9,771 acres, of which 3,134 acres are planted with rubber. The purchase price is £332,311 in cash, plus an option until December 31, 1928, to subscribe for 50,000 shares at 21s per share. The directorate is an experienced one.

Sungei Tiram Rubber Estate, Limited (Malaya).—Capital £300,000, in shares of 2s each. This is an issue of 2,850,000 shares at par. The company has been formed to acquire an estate of 2,804 acres in Johore. The planted area is about 2,775 acres, of which 550 acres are classified as "good," 1,465 as "fair," and 650 as "poor." The prospectus also frankly admits that "the property is similar to other estates in South Johore, in that the growth of the trees is impaired." The purchase price is approximately £223,000 in cash, and a further sum of £11,500, together with the right to subscribe at par for 150,000 2s shares on or before December 31, 1929. The underwriting commission is 4 per cent. The property is obviously only second-class, and the future is problematical.

Peureula (Sumatra) Rubber Estates, Limited.—Authorised share capital £60,000, in shares of 2s each. This is an issue of 500,000 shares at par. The company has been formed to acquire, work, and develop certain rubber plantations in Sumatra. The total area is 5,500 acres, of which 370 acres are planted. The purchase price is £29,000, but it is not stated how this is payable. In view of the small planted acreage, the company will not, of course, be able to share to any extent in the present prosperity of the industry. A considerable amount of development work must be undertaken before the company commands a good output commensurate with the large acreage acquired.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

THE ROYAL BANK OF AUSTRALIA, LIMITED.

BUSINESS WELL MAINTAINED.

STRONG FINANCIAL POSITION.

DIVIDEND OF 10 PER CENT.

The half-yearly meeting of the Royal Bank of Australia, Limited, was held at Melbourne on October 29th.

Mr Randal J. Alcock, J.P. (chairman of directors), presided.

The balance-sheet and statement of accounts for the half-year ending September 30 was taken as read. It showed that the net profit amounted to £48,170, out of which £37,500 was absorbed in paying a 10 per cent. dividend, and £10,000 was transferred to the reserve fund. The balance of £670 was added to the amount carried forward from the previous half-year, making it £32,567.

THE CHAIRMAN'S SPEECH.

In moving the adoption of the report and balance-sheet, the Chairman gave a general review of the proceedings of the bank. He said: In addressing you on this occasion I wish briefly to refer to the report and balance-sheet, which you have had in your hands for some time. The business of the bank has been well maintained during the half-year, and I am sure that you will be pleased as usual to find that your directors' policy of keeping strong cash and other available assets always in hand has been continued—the present position being equal to almost 42 per cent. against total liabilities to the public.

As was to be expected, profits are less than usual, due mainly to the very narrow margin at present existing between current buying and selling exchange quotations—profits on the exchange side of all banks' business, in our opinion, are now being cut too fine, and sooner or later will call for adjustment, and we look for an improvement in this direction. Your directors recommend payment of the usual dividend at the rate of 10 per cent. per annum, and an additional £10,000 to the reserve fund, making it £630,000, and to carry forward the sum of £32,567—a position, I am sure, you will consider very satisfactory.

WOOL TRADE.

When I last addressed you there was a lack of confidence in the wool trade, prices had slumped, and it had been considered advisable to suspend sales. Fortunately, when the auctions were resumed in July, under careful regulation of the offerings, good competition was met with, and the demand has steadily widened since, thus dissipating the fear that much lower prices than ruled in April would have to be taken for this season's clip. Full catalogues have recently been offered and sold in all centres. Prices are most satisfactory, and there is every reason to believe that confidence has now been restored, and that the trade is anxious and willing to buy our wool. All sections are operating, but the strong buying on French account is the outstanding feature of the market. At July 1st there remained on hand unsold in Australia approximately 500,000 bales of the 1924 clip. That has since been practically all sold, and, in addition, over 200,000 bales of the new clip have been disposed of. There should be no financial difficulty in lifting the wool as bought, and so far ample tonnage has been available to take the wool to its overseas destination. Unfortunately, a large quantity of wool, which under normal conditions would have been carried in British ships, has, owing to the strike, been shipped in foreign vessels.

THE 1925-26 CLIP.

It is too early to say definitely what the outturn of the 1925-26 clip will be. Last year the sheep cut an exceptionally high average weight of wool per head. Reports received to date show that this season's average cut will not be so heavy, but as it is estimated that from 7,000,000 to 8,000,000 more sheep will be shorn, there should not be much difference in the total quantity of the two clips. On the whole, the wool this year is finer in quality than last, particularly soft handling, and consequently well suited to Continental requirements. But for the uncertainty of the shipping position, the outlook for the remainder of the season is most promising.

Although in the wide area over which the pastoral industry extends there are considerable districts where the supplies of feed and water are satisfactory, the outlook as a whole is causing some anxiety. Generally, the rainfall has been light, giving insufficient moisture to the subsoil to draw upon when the hot weather sets in. It is not yet too late for a good downpour, if followed by mild temperatures, to assure the outlook for summer, and in this respect it is important that the stock are in excellent condition.

DAIRY INDUSTRY.

At our last meeting I dealt fully with the dairy industry, and am pleased to say that a total of 58,794 tons of butter was exported from the Commonwealth for the year ending June 30th. During June and July of this year Great Britain and Europe were very droughty, and high values ruled for all imported butters. This had the effect of raising values here, and available stocks in Australia were cleared at satisfactory prices. Since July 7th high values have ruled right up to the present moment.

The shipping strike now existing caused an absolute cessation of shipments from New Zealand, where, up to last week, over 5,000 tons of butter were waiting to be exported to Great Britain. This fact has contributed largely to the high values which have been ruling in Australia for the last six weeks. The Commonwealth has been fortunate enough to date to clear her surplus with the limited freight available. To-day, easier conditions prevail, owing to the fact that the strike in New Zealand has collapsed, and the surplus butter is being cleared. One steamer alone which left Auckland the other week lifted 3,400 tons. This may have a bad effect in the London market later, on the realisations of Australian and New Zealand consignments, owing to heavy shipments from both countries landing in Great Britain at practically one period.

SMALLER EXPORTABLE SURPLUS.

The dairying areas throughout Australia are at the moment very dry, and for the next few months the exportable surplus will not approximate anything like last year's quantities by possibly 3,000 to 4,000 tons up to the end of the year. Some compensation to the dairy farmer on these lower quantities is that much higher values than last year are prevailing, both for Australian markets and export buying. The prices ruling during this month constitute a record for any previous seasons other than the war period when purchased by the British Government. Prices of cheese are in sympathy with the butter market. Victoria and New South Wales are absorbing all their production locally. Queensland has a fair surplus, and may be termed the cheese-importing State of the Commonwealth.

OTHER PRIMARY PRODUCTS.

Continuing the list of our primary products, metals are meeting with a good demand and a high market. Mount Morgan is not working, as a result of conditions well known to you, and Australia's export of copper is, on account of local demand, negligible. Lead, spelter, and tin prices are high. While indications are favourable, metal prices are, as you know, subject to violent fluctuations, and we can but hope that current quotations will continue. Meat is a difficult subject; here in Victoria we are chiefly concerned, as far as export goes, with prices and prospects of mutton and lamb. There appears to be a good and settled demand. Rain is wanted, but the position has been gravely affected by the shipping outlook, which has hampered operations. Taken as a whole, primary productions are thus seen to be in a satisfactory state, but, as regards imports and local and inter-State trade, conditions generally during the half-year have continued difficult.

THE SEAMEN'S STRIKE.

My speech would not be complete without a reference to what is called the British seamen's strike. It is not a strike in the ordinary sense of the word. As in the past, the wages of firemen and seamen were raised during a current voyage by a competent British authority; so, later on, they were lowered during a current voyage by the same authority representing all parties. Ostensibly on that account not only did a minority resort to strike tactics in British ports, but in places so far removed from Britain and one another as South Africa, Australia, and New Zealand similar cessation of work on the part of seamen, firemen, and stewards took place. Action of this kind which disturbs imports and exports is very far-reaching in its effects. At the moment, importers are feeling its immediate result more than exporters, as goods which in most cases have been paid for are not getting into their hands. As regards export, the net actual result to date is that the British owner who has been manning his ships with British seamen is suffering with his ships in Australian ports idle. This state of affairs, however, cannot continue, as meat, butter, and cheese re-

quiring refrigerated tonnage must shortly be shipped or lose their market. With British-manned ships cut out when the weight of wool and wheat seasons are on us, it is questionable what percentages can be lifted, and at what rate of freight. It is not possible to believe that these happenings are in the nature of an ordinary strike or the effects of constitutional unionism, but however that may be, everybody must know that paralysis of imports and exports, whether complete or partial, means bad times all round. If new doctrines be permitted to prevail new conditions must also arise, and it is extremely doubtful whether these new conditions would make for the prosperity or happiness of the individual, whatever may be his political creed, or of the community at large.

FEDERAL FINANCE AND SEASON'S PROSPECTS.

The outstanding feature of importance in the financial world has been the Federal conversion loan of £67,000,000, and it must be very gratifying to the Treasurer (Dr Earle Page) that it has so far met with such a large measure of success, over £55,000,000 out of the total being already subscribed. As regards the season in Victoria, the agricultural and dairying areas are suffering for want of rain, which is badly needed, but the position at this moment has not got beyond the anxious stage, and a timely precipitation may yet retrieve the situation.

Mr A. B. Cassidy, who seconded the motion, said that he noticed a difference in the expenditure in respect of salaries, rents, income-tax, &c. What particular items were responsible for the increase?

Mr Alcock said that the expansion consisted mainly of the increases which the bank was bound to make to the staff in accordance with the log. Of course, heavy taxes had to be paid, and this year the amount had been more than in previous years.

The motion was agreed to.

THE LONDON BRANCH.

Mr C. W. Gray said that he had just returned from a visit to England, and he wished to commend the directors for having inaugurated a branch in London. There was every reason to be proud of the institution and of the staff. He had noticed that the status of the bank had so increased that it would have to enlarge its premises. The directors were to be congratulated upon their foresight in establishing the London office. They were also to be praised for the balance-sheet and report.

VOTE OF THANKS TO THE CHAIRMAN AND DIRECTORS.

Having expressed pleasure at Mr Alcock's lucid explanation, Mr Gray moved that a very hearty vote of thanks should be passed to the chairman and directors for their services to the shareholders throughout the year.

The motion was unanimously agreed to.

In reply, the Chairman said that the directors appreciated all that Mr Gray had said regarding the London office. They knew that the staff there was capable, and that the position of the bank was the good. It was pleasing to hear an expression of confidence in the directors, who were all large shareholders in the bank, and who looked after the affairs of the bank as closely as those of their own businesses.

The General Manager (Mr Alexander A. Laing) said that he also greatly appreciated the fact that the directors had the confidence of the shareholders.

TATE AND LYLE, LIMITED.

DIFFICULT TRADING CONDITIONS.

The twenty-third annual ordinary general meeting of the shareholders of Tate and Lyle, Limited, was held, on the 10th instant, at the Cannon street Hotel, Cannon street, London, E.C., Sir Ernest W. Tate, Bart. (the president), in the chair.

Mr A. W. Young (joint secretary) having read the notice convening the meeting and the report of the auditors,

The President said: Gentlemen,—I presume it will be your pleasure that the annual report and balance-sheet, which has been in your hands for some days, shall be taken as read.

When I had the pleasure of addressing you last year I described to you the severe market conditions which had been experienced by the sugar trade all over the world.

SEVERE FALL IN PRICES.

Contrary to general expectation, this year has also been an exceedingly difficult year for all concerned. Over-extension of the world's sugar area some three years ago, when the price was abnormally lucrative, provided a potential supply far exceeding the world's immediate demands. This season's crops aggregating 23,500,000 tons—being 3,500,000 increase on last season—was chiefly due to Europe and Cuba, and the downward trend of the world's market, to which I made reference last year, has continued during the period covered by this present report.

Estimates of the world's crops were constantly increased as the

year progressed, and the estimate of the Cuba crop was amended no fewer than seven times, the final outturn being 500,000 tons more than the first estimate. The unexpected volume of production resulted in a continuous and severe fall in value, the price of raw sugar in the United Kingdom during our financial year falling nearly £10 per ton.

We have accordingly had to write off a large sum of money from our stocks and have brought them down to market value on September 30, 1925; but for this, our profit would have been one of the most satisfactory of recent years, as trading results for the year have been exceptionally good.

GOVERNMENT ATTITUDE TO SUGAR INDUSTRY.

I desire to make a digression at this point and refer to home-grown sugar. It will no doubt be within your knowledge that, since our last report was issued, we have identified ourselves with the home-grown sugar beet industry of this country. We have formed a subsidiary company under the title of "The United Sugar Company, of which we hold 50 per cent. of the shares, and the factory built at Bury St. Edmunds has now commenced work. We are negotiating for another factory at Selby, in Yorkshire, which we hope to have fully completed in time to deal with the crop next autumn.

We have been compelled to enter into this business because the Government insisted upon granting a subsidy on refined sugar—that is, the completely manufactured article—instead of on the basis of the raw article, which would have equally served the purpose of assisting agriculture while not injuring the existing refining trade. The Ministry of Agriculture brushed aside all our arguments as to the injustice of subsidising a new industry with doubtful prospects against an old-established British industry which by its position have proved its efficiency against the most formidable foreign competition.

I want to make it very clear that we still hold the unshaken belief that the sugar beet industry cannot survive in this country without a large subsidy or protection.

We would not have entered this business had it not been for the exceptionally high subsidy granted during the first few years and the unfair competition it sets up to our own industry.

RESERVES AND INVESTMENTS.

From the balance-sheet before you you will see that out of our profits for the year we have placed a further sum of £50,000 to reserve, making our total reserve funds over £1,150,000. Some newspapers, in dealing with our accounts, have remarked that we have put to reserve this year £50,000, against £100,000 last year. It is the opinion of the board that, having built up a total reserve of £1,100,000 since the amalgamation, a further sum of £50,000 is an ample addition.

Notice has also been taken of the large increase of our indebtedness to the banks. This is explained by our increased holdings of stocks, our decreased indebtedness to creditors, and our increases to property.

Our policy of maintaining the plant and machinery at our three refineries in the most efficient and up-to-date conditions has been strictly adhered to, and, although it does not appear in the accounts, a sum of over £300,000 has been expended for renewals and repairs.

Our "investments at market value," amounting to £2,103,877 18s 4d, consist entirely of gilt-edged securities, principally conversion loan; and "investments in associated companies" is paid-up capital in United Sugar Co., Limited.

DIVIDEND RECOMMENDATIONS.

I now propose: "That the directors' report and statement of accounts be adopted, and that the following dividends upon the company's issued capital be declared payable, namely:—

"(1) To the holders of preference shares: Interim dividend to March 31, 1925, at 6½ per cent. per annum paid June 15, 1925, subject to tax. Final dividend to September 30, 1925, at 6½ per cent. per annum, subject to tax.

"(2) To the ordinary shareholders: Final dividend of 9½ per cent., subject to deduction of income-tax, making, with the interim dividend of 4 per cent. paid on June 15, 1925, a total dividend of 13½ per cent. for the year, subject to deduction of income-tax."

Sir Leonard Lyle (the chairman) seconded the resolution, which was carried unanimously.

Mr J. J. Runge proposed the re-election of the retiring directors, namely, Sir Ernest W. Tate, Bt., Sir Leonard Lyle, Mr J. W. Macdonald, Mr Charles Lyle, and Mr G. Vernon Tate.

The motion was seconded by Mr J. B. Crispin, and unanimously approved.

On the proposition of Mr W. Boyd, seconded by Mr Warren, Messrs Edmund D. White and Sons were reappointed auditors.

A hearty vote of thanks to the president and the directors concluded the proceedings.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY, LIMITED.

LORD INCHCAPE'S REVIEW OF CONDITIONS IN SHIPPING INDUSTRY.

HIGH RUNNING COSTS AND CARGO SHORTAGE.

LABOUR TROUBLES.

PROFIT SHARING SCHEME FOR EMPLOYEES.

The eighty-fifth ordinary general meeting of the Peninsular and Oriental Steam Navigation Company was held, on the 9th instant, at the offices, 122 Leadenhall street, London.

The Right Hon. Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E., the chairman, presided.

The secretary (Mr F. J. Abbott) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—I propose, with your approval, that we take the directors' report and accounts as read. They have been in your hands for about a fortnight, and I think it is the usual procedure to take them as read. If that is your wish we will do so. ("Agreed.")

The past year has been the worst which shipping has ever experienced.

THE YEAR'S RESULTS.

The results of most voyages had, owing to high running costs, heavy dock and labour charges, shortage of cargo, and low rates of freights, been disastrous, while the troubles in China and the unauthorised strike of seamen and firemen in Australia and South Africa had inflicted on the P. and O., as on many other ship-owners, gigantic losses.

THE ACCOUNTS.

Passing to the accounts, his lordship said that the insurance account, with an increase for the year of £60,197 19s 10d, stood at £3,278,279 9s 7d, after payment of claims to September 30th. The provident good service fund had been increased by £40,000 to £350,000, a sum in excess of their actuarial liability for pensions. He was sure they, the stockholders, would agree that the pension fund should be treated as a first charge on the company's revenue.

THE FLEET.

The fleet now numbered 57 vessels, totalling 588,461 tons, of an average age of seven years.

They had been obliged to spend an enormous amount on replacing ships sunk by enemy action and vessels which had become obsolete, builders' prices having been far above the pre-war level; but they had to put the fleet in a condition to fulfil their mail contracts, to maintain their passenger and cargo services, and to hold the trades they had served for so many years.

Their post-war building programme had been accomplished, but under most discouraging conditions; but, despite the need to replace older ships, they had called a halt as they could not face present prices.

All the new vessels except the "Rajputana" were now in commission. The "Mooltan," "Maloja," "Moldavia," "Mongolia," "Ranpur," "Ranchi," "Rawalpindi," "Chitral," "Comorin," and "Cathay" had completed one or more voyages, and were proving favourites with the travelling public.

From passengers in the "Rawalpindi" at the conclusion of her maiden voyage he had, received a Radio message—"Passengers 'Rawalpindi' desire to express to you and the directors their appreciation of fine ship and untiring efforts of Captain Redhead and ship's company to ensure comfort." Another telegram from Bombay said that the "Ranchi's" maiden passage to the East had been most successful.

The "Caledonia," "Soudan," "Sardinia," "Sicilia," and "Nore" had been sold to be broken up, at prices in excess of their book value.

The new vessels were all oil burners and their machinery, sea-going qualities and speed were proving satisfactory. With lower working costs and a revival of trade they should be profitable, but meantime he was afraid many of their voyages would result in debit balances.

THE DIVIDEND.

He had indicated a year ago that unless things improved they might be obliged to reduce the dividend, and, greatly to his regret, this had proved to be the case. In paying the interim dividend of 6 per cent. they had fully expected to give a final dividend at the same rate, but despite the efforts of their economy committee and the loyal help of their staff, the year's results, coupled with the losses of the first three months of the new financial year, had compelled the reduction of the final dividend to 4 per cent., making 10 per cent. for the year. This they had been enabled to do only

through their investments and their reserves, built up in better times. He could, he continued, hold out but little hope of a higher dividend for the current financial year.

He felt perfectly certain they would agree with the board that, in view of the state of trade and the gloomy prospects for shipping, it was prudent to conserve the company's resources rather than to distribute up to the hilt.

Continuing, he said that their stock exchange securities were not over-valued; their investments in allied companies, while they had as a whole appreciated in value, stood at the purchase price; they had not been written up. To write up investments was, he considered, a mistake, as the day might come when they would have to be written down. The P. and O. Company was sound, and he thought, despite passing adversities, it would remain so.

After deducting depreciation at 5 per cent., their steamers stood in the books at less than their original cost. Taking from their book value some as yet unappropriated balances of about £1,000,000, their reserve and contingency funds £2,607,950, and, say, £2,000,000 from the insurance fund (leaving it at £1,278,000, more than sufficient to cover claims and to re-insure current risks), they had £5,607,950 in hand against the book value of the fleet as a provision for the uncertain future. But, he said, he had no need to point out that vessels valued at even nominal figures were, if unprofitable, no good to their owners. That, he said, was a condition which they had to combat to-day.

SAFEGUARDING OF INDUSTRIES ACT CONDEMNED.

Without wishing to be dogmatic, he feared, unless the progress of the Safeguarding of Industries Act were checked, we should soon become a protectionist country. He agreed with Sir Hugh Bell: if an industry could not carry on without aid from the taxpayer it was better to let the industry go. Subsidy by the Government could be only a temporary palliative.

These small islands, unlike America, were not economically independent, and it was preferable to leave industry to work out its own salvation, the Government taking a share of the profits by means of taxes, with no responsibility for losses.

DOMINION TARIFFS.

It was, he continued, a common cry that we ought to develop trade with the Dominions, but India, an agricultural country with huge potentialities, seemed disposed to shut out our manufacturers by a wall of tariffs or subsidies, the latest proposal being an import duty on British coal.

Again, Australia whose population had increased from 3,773,000 to 5,435,000 in the twenty years ending 1921, showed in the same period a decrease in her percentage of primary workers from 32 to 25, while the percentage of industrial workers had risen from 26 to 31.

It was a safe assumption that in the new census period the process had continued, and the figures went to show that an increasing proportion of immigrants into Australia were being attracted to town industries rather than to country occupations, while such industries were being more and more protected against imports.

It appeared to be the aim of both India and the Dominions to manufacture all they required and to import nothing. For this reason Great Britain could not rely on Empire trade, for the Dominions, as they developed their industries, would, he feared, offer smaller markets for British manufactures.

We could not escape our dependence on foreign markets. To bolster up industries by import duties would put up prices, and the duties would, in fact, be paid by the consumers among our own people. Our population could not consume all the products of our factories; if they could, where, he asked, would they get the money to pay for them? Not from the land or from our climate, and, as to coal, our only exportable mineral, our competitors at present costs were able to undersell us.

The land policy, of which we had lately heard so much, seemed only to resemble the idea started a few years ago to plough up the hillsides, the moors, and the forests of Scotland.

THE GOLD STANDARD.

The nation, he continued, did not want the printing press turned on to meet its obligations, and he was convinced it had been right

to restore the gold standard. Although the freeing of gold had threatened a drain on our stocks, the raising of the Bank rate had steadied the position. A revival of foreign borrowing in our market should help our export trade, for what we lent abroad would, for the most part, be taken, not in bullion or transferred credits, but in goods, manufactures, or, possibly, coal.

With the gold standard restored, London should continue to be the world's financial centre.

Whether or not they agreed with him in the views he had expressed, the board was one in its determination to reduce the expenditure and improve the revenue of the P. and O. Company consistently with the maintenance of efficiency and public goodwill.

SURPLUS SHIPPING.

He associated himself with the remarks which recently fell from Sir Frederick Lewis on the subject of surplus shipping. Millions of tons were laid up, and few ships in commission were earning sufficient to cover working expenses.

For the Government under the Trades Facilities Act to advance money to build more ships would aggravate the disastrous condition of the industry, in which millions of the people's savings were invested. All interested in shipping must applaud the Prime Minister's refusal of the proposal. As he, if he might venture to say so, very wisely said, "Such a grant would prove not more than a temporary relief, and it is generally believed that there is already a large amount of surplus cargo tonnage in the world."

To substitute, at the expense of the taxpayer, as had been suggested, new ships for old, while it might be an excellent idea for some shipowners, was not likely to commend itself to the Chancellor of the Exchequer.

TRADE ADVERSITIES AND THE REMEDIES.

Heavy production costs were placing this country at a great disadvantage in the world's markets; and while present conditions continued there would be but little hope of regaining trade outlets which we had lost or of finding new ones. The excess over imports of our visible exports, and the shrinkage of our invisible exports, were a grave menace to the country's solvency. Adverse trade balances would, if continued, damage our national credit, and, by raising prices, reduce the value of wages. The Peace Pact so ably negotiated by Sir Austen Chamberlain would in time assuredly help the position; but meanwhile, increased output, economy in production costs, and reduced taxation seemed to him to be the only remedies.

TAXATION AND TRADE DISPUTES.

Although the Chancellor was making every effort to reduce public expenditure, large sums which would ordinarily remain with industry as reproductive capital were being taken from the taxpayer, often for unproductive purposes. There was a general cry for economy; but, as Mr Churchill had said, when it came to touching the pockets of the individual voters the members of the threatened constituency were up in arms. The Government had stuck to their guns in the case of Rosyth and Pembroke Docks, and a considerable saving would consequently result.

The abolition of submarines, if it could be brought about by international agreement, would effect a material saving in the country's expenditure. Since the war we had spent 47 millions in building submarines. He would remind them, too, that out of a total loss by the P. and O. and associated lines of 504,316 tons of shipping in the war, 400,000 tons were destroyed by enemy submarines.

Continuing, he said there was no end to the extravagance of some of the municipal authorities, while Labour leaders, with one or two exceptions, were pursuing courses which tended to paralyse trade and throw their fellow-countrymen on to the demoralising dole.

In the recent attempt to band the trade unions together—an attempt which, thanks to the good sense of a number of the union chiefs, had not, so far, materialised—there was a latent threat to hold the public to ransom at any cost in order to obtain a decision against employers. One leader had said the slogan of his disciples must be—

"Not a cent off the pay,
Not a minute more a day."

Some of the union leaders, he said, appreciated the economic situation as to wages, working hours, and output; others did not. The latter refused to recognise that industry could not indefinitely be carried on at a loss, and that without a margin sufficient to cover working expenses industries must close down, unemployment be increased, and further burdens thrown on the national and municipal exchequers.

One extremist had publicly said, "To hell with the Empire." They could afford to regard such an outburst as a characteristic expression of Communist mentality, but when Communists further proceeded to advocate sedition it was satisfactory to learn that they had been punished for the offence against the law.

Revolution in these islands was, he said, inconceivable. For here the law was administered equally for the rich as for the poor, and the overwhelming majority of the population realised that under a Communist régime all private property and savings would be confiscated, liberty destroyed, and grinding poverty become universal. The freedom of the people would be preserved, providing legislation was framed so as to ensure individual liberty; and the Government would have the country behind them in any legal action to get rid of a conspiracy engineered by a handful of anarchists with their headquarters in Moscow.

THE TRADE DISPUTES ACT.

He believed that not 10 per cent. of the seamen and firemen who recently refused duty and broke their agreement in Australia, New Zealand, and South Africa had their hearts in the strike, into which they were intimidated by avowed Communists. It was significant that only vessels under the British flag were involved, while foreign vessels were left alone. The extremists had been defeated at the polls by the Prime Minister, Mr Bruce, a statesman of courage and determination, and they might reasonably now expect a more settled state of affairs. Here, the leader of a miniature opposition union had sought to force seamen into a strike by what is known as peaceful picketing, in which there was little in the nature of peace but a vast amount of terrorism and sometimes brutal assault. It seemed to him to be essential for the law to be altered so that people might be free to go about their legitimate occupations in peace.

SOCIALISM AND COMMUNISM.

Mr Ramsay MacDonald in recent speeches had said he was against revolution in this democratic country; so was he, the speaker. Mr MacDonald had said that the present system of industry worked by private capital had broken down, that it had produced unemployment and an unjust distribution of the amenities of life. Here, Lord Inchcape remarked, he joined issue. Eighty or 90 per cent. of the capital employed in industry was held, not by wealthy men, but by small, thrifty investors. If all commercial and industrial undertakings were to be worked by Government officials, individual initiative would be strangled and the country would rapidly become bankrupt. He was, he said, convinced that Mr MacDonald would never embark on any such device. Mr MacDonald had stated that 95 per cent. of people in this country did not understand what was meant by Socialism. Lord Inchcape said he was one of the 95 per cent. They had, however, got from Mr MacDonald an assurance that Socialism did not mean Communism, and that "to establish Communism would take generations of starvation, industrial ruin, and national chaos." To quote the late Lord Fisher, the nation might, as a practical people, "sleep quietly in their beds." They would still be able to say "God save the King."

The people of these islands would never succumb to seditious doctrine; and so long as their sons and daughters, especially those from Scotland—were ready to go to the Dominions to test their fortunes, he, and he was sure they, his hearers, need have no fear for the solidarity of the British Empire.

STATISTICS.

Regarding the work done by their combined services during the year under review, there had, he continued, been 434 ships in commission; cargo carried, 14,894,344 tons; the distance traversed, 16,454,430 sea miles; the port entries had numbered 28,556. The number of passengers carried had been 2,006,806; the number of animals, 294,918. The expenditure on wages and victualling of crews had been £4,878,590.

PROFIT-SHARING FOR EMPLOYEES.

He had, he continued, for some time sought to discover a scheme by which employees might, without risk, participate in the company's profits, and had hit on a plan which he thought was both simple and practical. The board had therefore announced that employees of the P. and O. and British India Companies might make deposits which would bear interest at 5 per cent. per annum, with, in any year when the deferred dividend was 5 per cent. or over, an additional 2 per cent., or when the dividend was 10 per cent. or over an additional 2½ per cent. The directors felt that this would be an added incentive to employees, who had so much in their hands, to care for the company's interests, and, while ensuring them a reasonable return on their deposits, would enable them to share with the stockholders the fruits of anything they, the employees, might do to improve the company's returns. The scheme would be open to all the employees of the allied companies.

THANKS TO THE OFFICERS AND STAFF.

He would like, before concluding his remarks, to pay a tribute to the continued devotion of the staff of the P. and O. and Allied Companies, ashore and afloat, at home and abroad, with whom their relations were of the most friendly character. In the now nearly ninety years of the P. and O. Company's existence there had always prevailed a spirit of kinship, a sense of loyalty, a

pride in the company; sentiments which he was glad to believe were to-day stronger than ever. Interviewing, recently, members of the "Chitral's" crew, who had resisted the efforts in Australia to induce them to join the strikers, he had asked one man how long he had been in the company. The man replied that he had served for thirty years, and would remain until he was turned out. He had replied, "We never turn out good men." Speaking of this reminded him that the newspapers had, to his surprise, recently announced that he was seventy-three. Perhaps they would think it about time for him to go. He would, he said, relinquish his burden as soon as he felt unable to bear it, or before then if it was their, the stockholders, pleasure.

APPRECIATION AND CRITICISM.

The board desired to give the best service possible, but they could not rule the ocean flat; the largest ships must occasionally roll, which sometimes begat a growl. He saw every complaint that reached the company. Some were justified; some were not. All were dealt with courteously and fairly, but letters of appreciation far outnumbered the other kind. One man recently complained that he felt no exhilaration after a whisky and soda on board the steamers; they were representing the matter to the distillers, some of whose proclamations announced that they were "still going strong." He appealed to those who wrote to the company to do so in type or legible handwriting, and to append readable signatures; much time was sometimes occupied in deciphering such communications.

A VISIT TO INDIA.

Continuing, his lordship said he and Lady Inchcape were going in January to Bombay by the "Ranpura" to spend a fortnight in India. They were looking forward to seeing Calcutta and Bombay again, where they had passed many happy years. It was not a bad thing for the chairman of the P. and O. Company to travel in the ships; he saw how things were done, got a useful education, and kept in friendly touch with the staff, and it was uncommonly pleasant to spend a few weeks in a P. and O. steamer. But, as Lord Grey of Fallodon had said, the head of a great business never had a real rest, for his work followed him wherever he went like a perennial stream. So far as he, the speaker, was concerned, there was no sweeter water.

THE BRITISH INDIA COMPANY.

Continuing, his lordship said that all through the Ghandi and Swaraj troubles the business of the British India Company—95 per cent. of which was done with Indian merchants—had not in the slightest degree been affected, their relations with their Indian clients having remained as cordial as they had always been since the company's inauguration 70 years ago. This was demonstrated by a letter he had recently received signed by the company's principal Indian clients expressing regret at the contemplated departure from India of Sir William Currie, the head of the firm of Mackinnon, Mackenzie, and Co., the British India Company's managing agents. He had assured his correspondents that happy relations with the firm's Indian clients would be maintained whoever might be its head, for all the partners were brought up from boyhood, as he, the speaker, had been, in its traditions. His own inspirations had come from the precepts, the advice, and the example of one who was for 20 years his chief, his counsellor, and his friend, the late Sir William Mackinnon.

A TRIBUTE TO LORD READING.

Looking back, his lordship continued, over more than 50 years of intimate association with India, during which 10 Viceroys had held office, he felt that none of them had a more trying term of office than had fallen to the lot of Lord Reading, who went to India when the country was seething with opposition to the British Raj, and who had, with indomitable courage, won over the politicians and brought about calm and good feeling throughout the land. He had vindicated the rights of the great Indian Civil Service, which, for more than a century, had borne a proud and unblemished record; and he would, moreover, leave India financially sound, with its credit untarnished. Lord Reading's name would go down to history as one of the wisest Viceroys the country had ever had; and he would leave it more welded to the Crown than it had been for many a day. They would, he was sure, join with him in wishing Mr Wood, Lord Reading's designated successor in the most responsible office under the British Crown outside this country, every success and all good fortune.

I now beg to propose: "That the report and statement of accounts, now read, which have been circulated among the proprietors, be adopted."

Sir Walter R. Lawrence, Bart, G.C.I.E., G.C.V.O., C.B., seconded the motion, and it was carried unanimously.

THE DIVIDEND.

The Chairman next moved: "That a dividend for the half-year ended September 30 last of 2½ per cent. on the preferred stock, less income-tax, and a dividend of 4 per cent. on the deferred stock, free of income-tax, as recommended in the report, be now declared,

SECURITY FIRST ROYAL INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON

and that payment for the same be made on and after the 11th instant."

This resolution was seconded by Mr H. N. Gladstone, and unanimously approved.

On the motion of the Chairman, seconded by Sir Montagu Cornish Turner, Sir Walter R. Lawrence was unanimously re-elected a director, as was also the Hon. Alexander Shaw, on the proposition of the Chairman, seconded by Mr. A. M. Monteath.

VOTE OF THANKS.

Colonel A. G. Hipwell, C.B., proposed: "That the cordial thanks of the proprietors are due to the chairman, directors, and staff for their continued successful management of the company's business." In doing so, he said that they were indebted to all concerned for bringing the company through a period of stress and strain, and achieving the best results possible in the circumstances.

Mr A. Pitt said that, as one of the oldest stockholders, he had great pleasure in seconding the motion. It was always an intellectual treat to come to these meetings and listen to the chairman's address. With their present chairman, aided by his efficient board of directors and backed up by their loyal staff, they could all rest peacefully out of their beds as well as in them.

The vote was unanimously accorded, and the Chairman, in acknowledging it, said that it was a great relief to him to be received in the way he had been by the meeting, notwithstanding the reduction in the dividend by 2 per cent., and he was very grateful for the way in which his speech had been accepted.

The proceedings then terminated.

STEUA ROMANA (BRITISH), LIMITED. INCREASED TRADING PROFIT.

The fifth ordinary general meeting of Steua Romana (British), Limited, was held, on the 9th instant, at Winchester House, London, Sir Charles Greenway, Bart. (chairman), presiding.

The Chairman said that the Steua Romana Company, of Bucharest, were carrying out an active drilling programme on the areas of proved State lands allotted to them by the Roumanian Government, and were drilling seven wells at Moreni (two of which, he anticipated, would come into production before the end of the year), and one at Ochiuri. Five further wells were being put down on these lands immediately, and 20 during 1926. On the very large continuous area at Ceptura belonging to the Steua Romana Company they had brought into production on August 31, 1925, an exploration well which yielded about 190 tons a day. Three more wells were well advanced on this field; two further wells would be commenced towards the end of December, and five during 1926.

The Steua Romana Company's production for the year to June 30, 1925, was 290,387 tons (exclusive of 11,600 tons, royalties) as compared with 237,546 tons (and 6,000 tons, royalties) for the previous year. Production in September last was 31,750 tons, a record figure since the war, and in October 37,200. November production was 30,240, the reduction being due to temporary curtailment of production owing to lack of transport facilities.

The company's tank vessels were fully employed during the whole of the year, and the company's depots in Bulgaria, Turkey, Greece, Hungary, and Italy were working satisfactorily.

The Chairman said that he understood that a provisional agreement had been concluded between the British and Roumanian Governments under which the latter assumes responsibility for compensating the companies for the oil properties destroyed by the Allies in 1916.

Turning to the accounts of Steua Romana (British), Limited, the Chairman said that the dividend paid by the Steua Romana Company for the year to December 31, 1924, was 100 lei per share. The British company's shareholding in the Roumanian company had been increased at a cost which very substantially reduced the average cost of the shares held. Trading profits for the year had been increased by over £3,000, and the increasing improvements in this direction. The value of the dividends received upon the company's holding of Steua Romana shares had slightly reduced. Gross managerial charges for the year had been

The report and accounts were adopted.

BRITISH NORTH BORNEO (CHARTERED) COMPANY.

MEETING ADJOURNED—MR MALCOLM'S STATEMENT.

The eighty-fifth half-yearly meeting of shareholders of the British North Borneo (Chartered) Company was held, on the 8th instant, at River Plate House, Finsbury circus, London. The Right Hon. Sir West Ridgeway, G.C.B., G.C.M.G., K.C.S.I. (president and joint managing director), was in the chair.

The acting-secretary (Mr Cecil F. Collins) having read the notice convening the meeting,

The Chairman said: Ladies and gentlemen,—The duty of dealing with the finances of the year under report and of the current year is a duty which I will try to perform, avoiding, as far as possible, any controversial matter which can best be debated in the discussion which will follow, but before I do so allow me, on behalf of the court—on this matter a very united court—to express our sorrow at the sad loss which we have sustained by the death of our governor, Major-General Sir William Rycroft. We were fortunate in securing the services of so distinguished a soldier and so able an administrator as he proved himself to be in different parts of the world, and his appointment was a success.

Sir Wm. Rycroft went to Borneo full of zeal and energy. He was sadly disappointed when he found that an era was ushered in of very stern economy, which precluded his obtaining the money necessary for the many schemes generated in his admirable brain, but that did not embitter him. He was disappointed, but he threw himself with characteristic energy into his work. He travelled all over the country, making the acquaintance of men and things, and projecting schemes of development, which he hoped in more favourable times might be adopted. He loved Borneo and Borneo loved him. The service learned to give him their trust and confidence, and I would point out that unless our officers in Borneo have complete trust and confidence in their governor and also in the court the rot of inefficiency will soon set in; your administration and revenues will suffer, and your too small dividends will dwindle away.

As regards the finances of the year under review, there has been a satisfactory increase in your revenue, and, as regards the current year, that satisfactory increase has been maintained. However, this subject will be thoroughly threshed out in the course of debate, and I need not trouble you with the details. I am sure you are waiting to get at the kernel of the matter, and you will soon have that opportunity.

SIR WEST RIDGEWAY'S ATTITUDE

Let me explain to you, however, that I have little or no personal interest in this question. I resigned the office of president of this company a year ago, and I only remained to discharge the duties at the unanimous request of my colleagues until my successor was selected—a very distinguished man, one of the most able administrators in the East, a man in the prime of life, as young almost as the youngest of my colleagues, and with every qualification for the post. He could not give us his reply at once, and, in the meantime, this unfortunate difference of opinion broke out, and we none of us thought it was fair that he should commit himself until he knew the result of this meeting, and until he knew whether he was to preside over a united or a divided court, and, above all, whether the policy of the future was to be one of development or one of stagnation. That, then, is my position. I have very little personal interest in the matter. It is merely a question whether I should remain in office for a few weeks or a few days. Therefore, I hope that you will understand the position which I have taken up, and will understand that everything I say is absolutely in the interests of the company.

In ordinary circumstances I ought to move the adoption of the report, but I cannot do so to-day. You know my reasons. You have read the dissent which we have circulated with the report. It contains the reasons why I and my colleagues differ from the four—let me call them "The Big Four" for the sake of brevity. The situation has exercised me much. My first instinctive desire was to retire and to get free from this worry, but, after consideration and consultation with my friends, I came to the conclusion that it would not be desirable for me to do so in the interests of the company, and that it would be better for me to wait and abide by the result of this meeting. If you reject the amendment which it is the intention to propose, I shall take it as an indication that you wish to dispense with my services. In these circumstances I shall call upon the promoters of this policy, Mr Malcolm and his friends, to propose and second the adoption of the report.

MR. MALCOLM'S STATEMENT.

Mr Dougal O. Malcolm said that in the circumstances which

had been explained by the president it fell to him to endeavour to explain to the meeting the report and accounts which were before them. In doing so he asked for a very special indulgence, because it was incumbent upon him to criticise adversely the management of their president, Sir West Ridgeway.

Turning to the credit side of the balance-sheet, they would see that they had capitalised, charged to capital, only £5,900, being a proportion of salaries of the Public Works Department, Survey Department, and Forestry Department—the recurrent expenditure of those departments—for the reason given in the body of the report. That was as against £25,600 in the previous year. That made a very important difference, and it was one of the matters which were the subject of acute controversy between his friends and himself on the one side, and the gentlemen who formed the minority on the other. The other items in the balance-sheet were not materially different. The result of it all was a profit for the year of £17,000 odd, and that they regarded as wholly insufficient to justify them in recommending a dividend to the shareholders in respect of the year 1924, especially in view of other features in the financial situation. That was a principal feature of the regrettable difference between themselves and the minority. He was not empowered to speak for them, but, as he understood it, they would like to pay a dividend absorbing about £50,000. The difference between that and the majority's figure of £17,000 was arrived at, he understood, in the following manner. The minority would not make so large a provision for depreciation. That represented £6,000. They would not make the provision for railway renewals—another £6,000—and they would capitalise about £20,000. That added up to £32,000, and by adding the £17,000 profit, they would get £49,000.

CAPITALISATION OF REVENUE EXPENDITURE.

Passing to the question of capitalisation of revenue expenditure, to some extent it was true that the company was still in the development stage, and that was the ground on which it could be said that capitalisation was justified, although prima facie it was revenue expenditure. The whole matter must be a question for the judgment and business sense of the directors, having regard to what they knew of the general state of the company's finances. The company's issued capital was £1,852,000, and the debenture debt was £1,650,000, making a total of some £3,500,000. The illiquid assets stood at some £1,818,000, railway and rolling stock at £735,000, telegraphs at £43,000, and other assets brought the total up to within £96,000 of the share and debenture capital.

The more or less liquid assets amounted to £922,000, after proper provision had been made for depreciation and bad debts. Advances to rubber companies in guarantee of dividends during the unproductive period of six years, repayable after that period without interest out of the profits of those companies, amounted to £62,660, and formed part of the £922,000. They were advised that they might fairly hope, especially having regard to the improved position of rubber, that those advances would be repaid, though they could not exactly say when, for there was no precise date fixed for repayment. It was obvious that they were perfectly accurately described in the balance-sheet. That was why he called those more or less liquid assets.

From that they deducted debenture indebtedness, creditors in London and Borneo and Hongkong and Shanghai Banking Corporation, amounting in all to £761,000, which fell short of the more or less liquid assets by £160,000. It would be remembered that the illiquid assets fell short of the share and debenture capital by £96,000. Therefore, another £100,000 of expenditure on capital account would make the illiquid assets equal to the whole of the share and debenture capital, and, as a matter of fact, they were advised that they would have to incur at least £60,000 net capital expenditure over the next two years. Obviously, that could only come from the balance of £160,000, reducing it to £100,000.

If simultaneously they did during the next two years do what he understood the minority would like them to do, distribute sums in dividends amounting to £50,000, two years of that and the £100,000 would be gone. That was where they were, except that at the rate of profit properly calculated for the past year of £17,000, and putting it up a little and reckoning on £20,000 a year, they would get £40,000, and no more. Could any argument be more conclusive against a lighthearted policy of going on capitalising great chunks of revenue expenditure on the one hand and distributing cash dividends with the other? He concluded by moving a resolution for the adjournment of the meeting and the appointment of a committee of three, one to be appointed by the majority of the board, one by the minority, and the third by those two in consultation, or, failing agreement, by the Secretary of State for the Colonies.

This resolution was seconded by Mr Bromley Martin.

After a long discussion the resolution for the adjournment of the meeting was carried.

GAN KEE RUBBER ESTATE, LIMITED.

GOOD RESULTS—NO FORWARD SALES.

The 15th annual general meeting of the Gan Kee Rubber Estate, Limited, was held, on the 9th instant, at the offices, 7 Martin's lane, Cannon street, London, Mr W. Arthur Addinsell, chairman of the company, presiding.

Mr C. H. Smallwood, on behalf of the secretaries, Messrs Bright and Galbraith, Limited, having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I move: "That the directors' report and statement of accounts for the year ended June 30, 1925, as submitted to this meeting, be, and they are hereby, received and adopted, and that a dividend at the rate of 7 per cent. per annum be paid in respect of the arrears on the preference shares, together with a further dividend of 3 per cent. for the year—making a total of 34½ per cent.—and that a dividend of 10 per cent. be paid on the ordinary shares."

The net profit for the year, after providing for depreciation on buildings and machinery, shows an increase of £6,958 over the preceding year.

The factors which brought about this satisfactory result were an increase of over 30,000 pounds in the crop, as compared with last year, and an increase of more than 8d a pound in the average net selling price.

The substantial improvement in the company's financial position has enabled your directors to recommend the payment of the arrears of interest due on the preference shares and a dividend of 10 per cent. on the ordinary shares.

The proposed transfer of a further £2,000 to reserve, together with the carry forward to next year of £2,338, will leave an amount which will be ample for the company's requirements.

NEW PLANTING.

The balance of this company's original concession of 958 acres was fully planted up in the year 1921. The board has always been anxious to increase the planted area, and an opportunity recently occurred to purchase a block of 100 acres of jungle land, which adjoins the property. Felling and clearing have already commenced, and the manager has been instructed to plant this up as soon as possible. The land is described by the visiting agent as "undulating," and in his opinion should grow good rubber.

You will be pleased to hear that, since the report was issued, the standard production figure has been substantially increased, and the quantity of rubber the estate will be allowed to ship during the current year is now estimated at 302,138 lbs.—an increase over the previous estimate of more than 53,000 lbs.

Up to the present no difficulties have been encountered in securing the necessary labour on this estate, but whether the manager will be able to obtain this increased quantity of rubber depends upon the labour position and climatic conditions.

No portion of the crop has been sold under forward contract, and the sale of the current season's output is therefore showing a handsome profit on cost.

100 PER CENT. PRODUCTION.

An outstanding feature of the rubber market is the recent announcement by the Colonial Office that for the quarter beginning next February rubber plantations in Ceylon and Malaya will be allowed to export 100 per cent. of their standard production. The rate of export for the present quarter is 85 per cent., and in the ordinary way 95 per cent. would have been allowed from February, as under the provisions of the Stevenson scheme the maximum extra release for any quarterly period is 10 per cent. only.

This position, in my opinion, is all for the good of the industry, and, provided that the necessary labour can be obtained, will have a twofold advantage. The increased output will help to supply the increasing demand, and at the same time be helpful to the producing companies, enabling them to reduce their working costs per pound.

Your property is being maintained in good order, and during the current financial year will give an excellent account of itself, and in view of the strong statistical position of rubber, I consider shareholders can safely anticipate satisfactory results for some time to come.

Before concluding, I wish to tender our thanks to the agents in the East—Messrs Cumberbatch and Co., Limited, to our manager, Mr Parsons, and the estate staff, also to Mr James Murray, our visiting agent, for the efficient manner in which they have carried out their duties.

Mr Edward F. Slade seconded the motion, which was adopted.

The retiring director and the auditors were re-elected, and the proceedings concluded with a vote of thanks to the chairman and directors and to the staff in the East and in London.

AERATED BREAD COMPANY, LIMITED.

CONTINUED EXPANSION.

STRONG FINANCIAL POSITION.

The seventy-second ordinary general meeting of the Aerated Bread Company, Limited, was held, on the 7th instant, at the Cannon street Hotel, London, Sir Charles Cottier (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: The company's trading maintains its steady record of progress, the year under review showing an increase over the previous year, and becoming in its turn a record year.

The previous year was the first year of the British Empire Exhibition at Wembley, when the influx into London was much above the normal, so that the further increase this year, with this advantage much reduced, may be considered highly satisfactory.

LOW PROFIT MARGINS.

In recent years profit margins have become smaller, and the earnings of the company must be, and are, maintained by securing increased turnover. The company serves many millions of customers in the course of a year—many more than the population of Great Britain—and the average profit upon each transaction is only a fraction of a penny. This indicates the careful and close organisation and management necessary to maintain profits; but, as the accounts before you to-day demonstrate, that position is being maintained, and I am able to say that for several years there were never fewer complaints nor more commendations from customers than at present.

The company, with its subsidiary companies, Buszards, Limited, and Bertram and Co., Limited, was entrusted with a large share of the catering contract at this year's Exhibition at Wembley. Catering of this kind is difficult as daily attendances are affected by conditions and circumstances which cannot be foreseen, in spite of which preparations have to be made on the basis of a high percentage of demand. The board felt that, notwithstanding these factors, the general body of shareholders would favour the association of this thoroughly British company with the Exhibition and the important Empire development movement it represented. The arrangements made by the company and its subsidiaries were carefully planned and carried out, and that they were completely successful is evidenced by the thousands of favourable comments received from visitors. The total attendance was disappointing. As the Exhibition did not close until October 31st it was not possible to bring the results into the company's accounts for this financial year, but the board anticipate that a moderate profit has nevertheless been made.

YEAR'S OPERATIONS.

Before passing on to the board's proposals for dealing with this available profit, I wish to say a few words generally upon the company's operations during the year. The board have continued to extend the company's business, and further premises, freehold or long leaseholds, have been secured. The board have continued their policy of improving and modernising the older branches of the company. During the last few years almost half of the company's old depôts have been brought up to date. This was a large undertaking, and it has been responsible for a considerable but very necessary expenditure, and, as I have previously stated, the outlay has been justified by increased business and improved tone and standing of the company. The new A.B.C. depôt is, we consider, a model of what a popular teashop should be.

PROFIT AND APPROPRIATIONS.

I have given you a rather lengthy account of the company's operations during the year, and I now come to the appropriation of the available profit, amounting to £177,342. The directors propose to allocate this as follows:—Final dividend at 1s 3d per share, less tax, £48,875; interim dividend paid in June last at 9d per share, less tax, £28,408 (this makes for the year a dividend of 2s, which it should be remembered is equal to 20 per cent. on the capital as it was before 1920 when it was doubled by the capitalisation of accumulated balances and handed out in the form of bonus shares); preference dividend to June last, £25,322; provision for income-tax, £11,000; reserve for depreciation of property, £15,000; addition to staff pensions fund, £1,500; grant to staff sports club, £500; this disposes of £130,606, leaving to carry forward to next year £46,736, which is £16,460 more than was brought forward from last year.

I hope these recommendations meet with your approval as it is the board's earnest desire that the strong financial position of the company should be fully maintained. The amount reserved for income-tax is less than last year, but it covers the whole of the company's liability under this heading up to the close of the financial year. The board again recommend that the substantial sum of £15,000 be added to property depreciation reserve account.

Mr. Frederick Hutter (a managing director) seconded the motion, which was carried.

NEW MODDERFONTEIN GOLD MINING COM. ANY. LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

PREVIOUS YEARS RECORDS ECLIPSED.

The twenty-eighth ordinary general meeting of the New Modderfontein Gold Mining Company, Limited, was held in Johannesburg, on November 5th, Mr. A. W. Rogers presiding.

The Chairman, in moving the adoption of the report and accounts, said:—I am sure you will have been gratified to observe that the very satisfactory results achieved during the year ended June 30th not merely equalled but eclipsed the records established in previous years.

I will first refer briefly to the accounts. The net profit for the year reached the record figure of £1,997,970 8s 11d, which, with the balance of £133,813 4s 2d brought forward at the beginning of the year, and £898 19s 1d in respect of forfeited dividends, gave a total of £2,312,682 12s 2d to be dealt with. The allocation of this amount is detailed in the directors' report before you, the principal items being two dividends of 50 per cent. and 60 per cent. respectively, absorbing £1,540,000, a net expenditure of £112,162 3s 8d on shafts and equipment, chiefly in connection with No. 2 circular shaft, and no less than £287,763 14s 3d in respect of Government and provincial taxation, apart from £17,310 paid as an annuity on account of undermining rights leased from the Government. I may remark here that the recent repeal of the dividend tax and its replacement by an increase in the rate of normal tax from 1s 6d to 3s in the £ has, in effect, imposed additional taxation on your company. The balance unappropriated at the end of the year was £363,236 4s 3d, represented by cash and cash assets, after allowing for liabilities.

You will have observed the references made in the directors' report and in the balance-sheet to a contingent liability of £192,654, this being your company's proportion of the estimated outstanding liabilities of the Miners' Phthisis Compensation Fund as at July 31, 1924. A portion of the present quarterly levies on the scheduled mines is utilised to reduce this fund's liabilities, but the Consolidating and Amending Phthisis Act passed during the last session of Parliament has further increased the mining industry's already heavy burden in connection with phthisis compensation, and we have now been notified that this company's share of the outstanding liability at July 31, 1925, was £263,568.

As regards mining operations during the period under review, the ore milled was increased to an average of 123,000 tons per month, and a record working profit of £1,938,962 was earned for the year. As you are aware, gold has returned to its standard value, with the result that the average net price realised for your company's gold during the year was only 86s 7d per fine ounce, as compared with 92s 7d during the previous twelve months. In these circumstances it is highly satisfactory to note that the total working revenue averaged 43s 4d per ton milled, only 2d less than the figure for the preceding year, when, as I have just stated, the gold price was considerably higher.

HIGHER YIELD PER TON.

The foregoing working revenue is a reflection of the higher yield of 9.936 dwts per ton, as compared with 9.394 dwts for the previous year. As stated in the consulting engineer's report, this increase was not due to any over-mining of the richer portions of the ore reserve, but to a general all-round advance in mining methods. The introduction of jackhammer machines for stoping has facilitated cleaner mining, while the closer sorting of waste rock, both on the surface and underground, has had a marked beneficial effect on the grade of ore sent to the mill. A further factor was the increased work done on the reclamation of pillars in the upper portions of the mine and in connection with the general cleaning-up of stopes prior to sand-filling, which added an appreciable quantity of high grade ore to the tonnage milled.

The average working costs were unaltered at 17s 1d per ton milled, a satisfactory performance in view of the fact that the year's costs included considerable expenditure on the further equipment of the mine with jackhammer machines and improved plant for the treatment of drill steel, and that the development footage accomplished was increased to 41,412 feet, as compared with 29,044 feet for the previous year.

SHAFT SINKING.

Shaft sinking was a prominent feature of the year's development programme. No. 2 Circular Shaft was sunk a further 1,707 feet, and at the end of the year had attained its final depth of 2,862 feet. The completion of this shaft in a period of eighteen months, without any serious accident to life or plant, is an achievement of which our manager and all concerned are to be heartily congratulated. The equipment of the shaft is now in hand. The old No. 1 Vertical Shaft, from which the South Reef was opened up, has been reconditioned and was sunk 395 feet during the year. The Sub-incline Shaft from the bottom of No. 1 Circular Shaft was advanced 630 feet, and its hoisting equipment completed; this will enable development below the 16th level in the surrounding

portion of your company's property to be accelerated during the current year.

As mentioned by the chairman at our last annual meeting, the development of the high-grade eastern section of your property has been practically completed. The past year's exploratory work was accordingly confined in the main to the centre and west of the mine, the results obtained being quite up to our expectations.

Out of the distance of 20,805 feet sampled as the result of development on the main reef leader, 76 per cent. proved payable with an average value equivalent to 566 inch-dwts. The payability and average value were practically the same as for the previous year, but the distance over which payable values were proved was increased from 10,215 feet to 15,925 feet. In addition, a considerable amount of prospecting work has been done on the upper leaders in the north-western area of the mine. These leaders lie above the main reef leader proper, and, from exposures in numerous cross-cuts, it has been found that there are about six well-defined bands of reef in this section of your property, although only the two next above the leader have been proved to carry payable values. As the result of development on these latter reefs during the year, 2,630 feet were sampled, of which distance 60 per cent. exposed payable reef of an average value of 298 inch-dwts. You will, however, observe from the consulting engineer's report that it is not yet possible to gauge the extent of these upper leaders, although their development will be pushed ahead vigorously during the current year.

The payable ore developed during the year totalled 2,038,100 tons, of an average value of 8.7 dwts per ton. This does not include any of the ore opened up on the upper leaders, as further development is required before any accurate estimate of the tonnage and value of this ore can be obtained.

ORE RESERVES.

The ore in reserve as at June 30, 1925, was estimated at 9,090,100 tons, of an average value of 8.5 dwts per ton over a stoping width of 61.5 inches. As compared with the position 12 months earlier, there is a small increase of 25,700 tons in quantity, but the average value is unaltered.

I am glad to report that the results for the first quarter of the current financial year show no falling off from the high level achieved during the year ended June 30th last. The ore milled has averaged 128,300 tons per month, and the working profit

£164,215 per month. Fortunately, this mine is not suffering from the shortage of native labour, which is adversely affecting so many mines, and the development footage accomplished has been increased to an average of 4,000 feet per month. The old No. 1 vertical shaft has been sunk to its final depth, the horizon of the eighth level. Work will now be started on the cross-cuts to the south reef, through which the old workings will be reopened, and further development initiated on the dip of the reef. Some definite information as to the prospects of this ore-body may thus be made available by the end of June, 1926. Work at No. 2 circular shaft is now concentrated on the hoisting equipment and the excavations for the main pumping station at the eighteenth level. When the former is completed, it will be possible to accelerate development in the south-western corner of your property.

Development results during the first quarter of the current financial year were very satisfactory.

The report and accounts were unanimously adopted.

BWANA M'KUBWA COPPER MINING COMPANY, LIMITED. APPROACH OF PRODUCTION STAGE—SPLENDID PROSPECTS.

The ordinary general meeting of the Bwana M'Kubwa Copper Mining Company, Limited, was held, on the 8th inst., at the Cannon Street Hotel, London, Mr Edmund Davis (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said: As far as the production of additional tonnage is concerned, we have equipped the property with a treatment plant which should be able to deal with a minimum of 1,250 tons of ore per day. Part of the equipment we have put in should be sufficient to handle up to 2,000 tons, and the whole of the layout when the plant is extended will allow of the treatment of 3,000 tons per day. All this has necessitated additional expenditure not originally contemplated.

DATE OF STARTING THE PLANT.

The starting of the plant should take place on March 1st, a date about two months later than we originally estimated. The delay has been principally caused by our patriotism in placing orders in this country with manufacturers who have not kept to their dates of delivery.

At our last meeting reference was made to the N'Kana Mine, which then had a little over 950,000 tons of 3.48 per cent. copper ore proved. I said that we preferred to give attention to the prospecting of the large area covered by the special grant, which has a very considerable speculative value. The result of this policy has been the discovery of what quite probably are extensions of the N'Kana deposit. One discovery is about half a mile north-west of N'Kana and the other about half a mile farther on. On the first we have driven for about 300 feet on the 100 feet level on what appears to be an important high-grade ore body, about 30 feet wide, carrying from 7 per cent. to 9 per cent. copper. Adjoining this ore body we have an additional 15 feet in width assaying from 2 per cent. to 3 per cent. copper. About 150 feet along the strike in the direction of the No. 2 extension we are sinking a shaft to connect up with the present drive, this being already in ore, making the already proved length about 450 feet.

On the second extension drives and crosscuts totalling 550 feet have been made in high-grade ore. One hundred and fifty feet beyond the present face we have sunk a shaft, and a crosscut from this shaft is now in high-grade ore, and according to a cablegram dated the 4th inst. is 18 feet wide, assaying 9.2 per cent., but further work is necessary to prove full width.

VALUE OF N'KANA EXTENSIONS.

Should these two extensions prove to connect and form a continuous ore body we should have in the N'Kana the richest Rhodesian copper deposit so far found south of the Congo State.

You will better realise the possibility of such a proposition when it is pointed out to you that should these extensions be a portion of the N'Kana the total mineralised zone would be proved by the work now being carried on for about 3½ miles.

In view of this very satisfactory development and of a promising discovery in the southern portion of the area over which we have an exclusive prospecting right until December 31, 1929, we considered it advisable to raise additional funds so that the N'Kana and its extensions might be developed as rapidly as possible. For this purpose we have authorised an expenditure of £5,000 per month. The additional capital required not only for the N'Kana developments, but also for the general purposes of the company, comes to about £300,000. To provide this we have placed £300,000 of 7 per cent. notes, repayable at par on or before December 31, 1928, we retaining the right to make previous repayments at small premiums. We should be in a position to redeem part of these notes in February next, but this will depend upon developments, as, should any new important discoveries be made, we may con-

sider it expedient and in the interests of the company to defer such repayment. The really important thing is to take steps to increase our production of copper at as rapid a rate as possible, as the larger the output the more satisfactory would be the profits and the larger would be the distributions to the shareholders.

For you to realise how profitable our enterprise should be, I need only point out that in 1924 ten of the well-known American copper-producing companies made very large profits out of treating 44,428,508 tons of ore assaying from 0.825 to 1.98 per cent. copper, the average being 1.181 per cent. copper, the dividends paid being \$32,751,528.

I invite you to compare these figures with those relating to our Bwana M'Kubwa mine alone, where we have present an average copper value of close upon 4 per cent. Everything points to the satisfactory development of our N'Kana mine and its extensions. This will probably warrant this group of mines being connected by rail with the Bwana M'Kubwa, and thereafter the Bwana plant will probably have to be duplicated, or even triplicated, for the purpose of treating the ore both from the Bwana mine and from the N'Kana. Then the grade of ore being put through the plant should be increased to about 5 per cent. copper, which would naturally mean a very large increase in the profit per ton.

Mr A. Chester Beatty seconded the motion, which was carried unanimously.

STATE OF BAHIA SOUTH-WESTERN RAILWAY COMPANY, LIMITED. SATISFACTORY RESULTS.

The sixteenth annual general meeting of the State of Bahia South-Western Railway Company, Limited, was held, on the 8th instant, at 8 Arthur street, London, E.C.

Sir F. M. Crisp (the chairman), in the course of moving the report and accounts, said: The results for the year under review may, I think, be considered satisfactory. Gross earnings again showed a small increase of £644, in consequence of the improvement in the exchange value of the milreis, although, in currency, the earnings were slightly lower as a result of the reduction in tariffs due to a higher exchange and a somewhat smaller cocoa crop. At the same time, working expenses have, unfortunately, been heavier by some £3,874, owing, principally, to the increased cost of labour; thus net revenue at £23,415, against £26,645, showed a small reduction.

THE COCOA CROP.

With regard to the cocoa crop, the total number of bags exported from Ilheos was 595,123, while that handled by the company was 502,221. This was not so large as that of the previous year, when the crop was an exceptionally heavy one, and constituted a record. The return under review, however, was above the average, and may therefore be considered a good one. Goods traffic, apart from cocoa, which showed a reduction of about 3,500 tons, was satisfactory, the tonnage of general merchandise carried showing a small increase as compared with previous years. Passenger traffic was again good, the number of passengers carried being 6,793 more than in 1923-24, and constitutes a record. The exchange value of the milreis fluctuated considerably; the average rate, however, was slightly higher at 5.7d per milreis, against 5.41d per milreis in 1923-24.

THE CURRENT YEAR.

Since the close of the year under review the milreis has appreciated in value considerably; the rate has fluctuated between about 5½d and 7½d, and at the present time is about 7d. The work of

improving the port of Ilheos is being continued by the local company. In the current year the cocoa crop is expected to be a normal one. The number of bags transported by the company during the first six months shows an increase of 92,000 bags over the corresponding period of last year, while gross earnings for the same period are £9,692 higher.

The report was unanimously adopted.

NELSON BROTHERS, LIMITED.

INCREASED PROFITS—A UNIQUE POSITION.

The forty-second ordinary general meeting of this company was held, on the 8th instant, at the Cannon street Hotel, London.

Mr Harold Nelson (chairman and managing director), in moving the adoption of the report and accounts, said that the total investments of the company now stood at £1,302,022, being an increase of £66,258. The net profit for the twelve months was £96,407, being £2,814 better than the last account, which was for a period of thirteen months, so that the increase was more substantial than at first sight appeared. The directors proposed a final dividend of 5 per cent. and a bonus of 5 per cent., both free of income-tax, making 15 per cent., free of tax, for the year (which was equal to a gross dividend of 19 per cent.), and a transfer of £25,000 to revenue reserve account, carrying forward the slightly increased sum of £46,579.

He desired to call special attention to the fact that as a financial, as well as an investment, company they were in a somewhat unique position. If it had been decided to continue their business as an investment company only, the directors' task would have been much simpler, but the shareholders could not, under those circumstances, have expected bonuses. Ten per cent., free of tax, would have been a very good return, considering the fact that they had not a large bulk of cheap money in the form of debentures, which was common to most investment companies, but four-fifths of their capital was in ordinary shares. The profits they had been able to distribute in bonuses must not, therefore, be considered as dependent on their standard investment revenue, but the major part of those profits had to be earned by their financial operations, based on their endeavours to forecast the future position in various markets, and undertaken without undue risk. However tempting the outlook might be, the directors tried to avoid being carried too far in any particular current, as their experience was that the unexpected happened, no matter how strong the statistical position might appear to be in respect of any commodity or industrial group. They were strengthening their revenue reserve with a further £25,000 this year, and, in conclusion, he thought he might say that the policy of the board would be to pass on to the shareholders, in the form of bonuses, any surplus profits they might make, after providing for contingencies, but at the present time, at any rate, they did not think it would be in their interest to make a distribution in any other form.

The report and accounts were unanimously adopted.

JOHN I. THORNYCROFT AND CO., LIMITED. IMPROVED OUTLOOK.

The twenty-fourth annual general meeting of this company was held, on the 9th instant, at Winchester House, London.

Sir John E. Thornycroft, K.B.E., M.I.N.A. (managing director), said that the accounts for the past year indicated that the position was somewhat more satisfactory than that of the previous year. After deduction of all charges and providing for ample depreciation, the profit amounted to £37,861. After payment of the dividends proposed on the preference and participating preferred ordinary shares, there remained £49,245 to be carried forward. The shipbuilding and marine engineering side of the business had again been adversely affected by the depressed conditions in the industry generally. A year ago he mentioned that it had only been possible to secure orders without a proper margin of profit, and that delay in delivery had occurred through labour disputes. While there had been better labour conditions in their own trade, the uncertainty had, necessarily, militated against a revival of the shipbuilding industry. The work at Southampton at the present time consisted of the destroyer "Amazon," which they were building for the Admiralty, and the boilers for one of the new cruisers. The "Amazon" was well advanced, and would be ready for trial early next year. In addition, they had under construction a river vessel for the King of Egypt. The repairs department had been fairly well occupied, and the directors had every reason to believe that the work done had given satisfaction to the shipowners. During the year the company had delivered two coastal motor torpedo boats to the Swedish Navy and had completed various other craft, including a shallow draft river steamer for service in China.

The motor vehicle side of the business had been good, and sales had increased by over 50 per cent., a progressive increase on last

year, when the sales were 40 per cent. better than those of the previous year. At the last meeting he mentioned that the company had just put on the market a 30-cwt vehicle known as the A1 type, which complied with the War Office specification for subsidy. He could now say that, after a year's experience at home and in most parts of the world, the design had proved most satisfactory, and there was a general demand for it. Last year he concluded his remarks by saying that the outlook was more promising, and, while they had not been able to recommend the payment of an ordinary dividend, he thought he was justified in what he then said. The general opinion seemed to be that there were some signs of a revival in trade, and, provided the threatened trouble in connection with the coal industry was avoided, he thought there was every prospect of their position continuing to improve.

The report and accounts were unanimously adopted.

PETER WALKER (WARRINGTON) AND ROBERT CAIN AND SONS, LIMITED.

REPAYMENT OF DEBENTURES FORESHADOWED.

The fourth annual general meeting of this company was held, on the 11th instant, in London, Sir Charles A. Nall-Cain, Bart. (deputy-chairman and managing director), presiding.

The Chairman, after expressing regret at the absence of Sir Harwood Banner, through illness, said that the output of the Warrington brewery had again shown an increase, and the directors looked for a further improvement as fresh outlets for the company's product were secured. The business of Wm. Tong and Sons, Bolton, continued satisfactory. Shortly before the close of the financial year they acquired through the Peter Walker Co. the business of the Worsley Brewery, Limited, of Pendlebury, and they had no doubt that this would prove an additional source of profit.

Dealing with the accounts, the Chairman said that the combined profits amounted to £903,664, which compared with £835,730 last year. The directors claimed that the policy they were following of building up a reserve in keeping with the magnitude of the business was a sound one. The allocation of this year's profits was the transfer of £80,000 to reserve, the usual grant of £3,000 to the staff benefit fund, the payment of a final dividend of 5 per cent., making 9 per cent. for the third successive year, and the carrying forward of £45,710. The shareholders would expect to hear something regarding the debenture holders' scheme which was abandoned in the early part of the year. In April last a scheme was submitted under which the terms of the debentures would have been altered. It was put forward through the medium of the trustees for the debenture holders at the request of persons and Trust companies largely interested in the debentures. The requisite support was not forthcoming, and the scheme was abandoned. The rights both of the company and the debenture holders remained, therefore, in accordance with the terms of the debenture trust deed.

There had never been any secret of the intentions of the board to bring about a complete amalgamation of the companies involved in the Walker Cain combine. When they had one party with two millions of cheap money and the other with a like amount of dear money, and with credit in the state it was to-day, it must be obvious that the dear money had to go. He told the shareholders frankly that no other scheme hitherto considered contemplated the Walker Cain debentures repayable at anything above par, which was 7½ per cent. above the issue price, and it should be evident that the plain course for the company to adopt was to pay off the debentures, as no concern could be expected to wear unnecessarily heavy chains longer than could be avoided.

Mr James Davenport expressed the hope that the directors would press forward their amalgamation scheme.

The report and accounts were unanimously adopted.

BRITISH INSULATED AND HELSBY CABLES, LIMITED. ISSUE OF BONUS SHARES.

COMPANY'S NAME TO BE SHORTENED.

An extraordinary general meeting of British Insulated and Helsby Cables, Limited, was held at Liverpool, on the 4th instant, Mr James Taylor, chairman, presiding.

A resolution capitalising a portion of the reserved fund of the company and authorising the issue to each ordinary shareholder of one new fully-paid ordinary share for every three shares held by him was unanimously passed.

SHARE FRACTIONS.

The Chairman explained to the meeting that in cases where a strict computation would result in members becoming entitled to fractions of shares the shares representing the aggregate of such

fractions would be allotted to a trustee, and sold in the market for the benefit of the persons respectively entitled thereto.

Allotment letters will be sent out as soon as possible, and notice will be given to allottees as soon as the new certificates are ready to be exchanged therefor.

CHANGE OF NAME.

A further extraordinary meeting followed, at which a resolution was unanimously adopted for the abbreviation of the company's name to that of "British Insulated Cables, Limited." This will be submitted for confirmation to another meeting to be held on the 21st instant.

MISCELLANEOUS.

ANGLO-EQUADORIAN OILFIELDS, LIMITED.—The total production of crude for year ended June 30, 1925, was 12,230 tons. During the year the energies of the management were mainly directed towards completing equipment. Work was greatly delayed by the abnormal rains which commenced in January and continued until the end of April. Considerable damage was done to the railway, buildings, &c., but the work of repair was vigorously taken in hand, and had largely been completed by June 30th. The balance-sheet shows total assets £824,063, against £821,309. Cash has been reduced from £95,874 to £11,799. Investment in British Government securities at cost stood in previous balance-sheet at £152,534, but the latest balance-sheet shows British Government and other securities at cost £53,058. Property account stands at £97,775, against £93,411. Equipment account is at £242,359, against £189,402. Development account is at £296,265, against £225,370. The issued capital remains at £750,000. Share premium account also remains at £40,954.

BRISTOL INDUSTRIES, LIMITED.—The accounts for the year ended October 31, 1925, show a trading profit of £20,692, being an increase over the preceding year of £5,898. After placing £1,000 to reserve and £1,000 to the credit of goodwill account, deducting depreciation and interim dividend already paid on the preference shares, adding transfer fees and the balance from last year, there remains to the credit of profit and loss account the sum of £14,547. It is proposed to pay dividends as follows, viz.:—4 per cent., less tax, on the cumulative preference shares, making 8 per cent. for the year, and 5 per cent., less tax, on the ordinary shares, against 3½ per cent. These payments will absorb £9,481, and will allow the sum of £5,066 to be carried forward, subject only to directors' fees for the past year. The directors report that all questions outstanding relative to corporation profits tax and income-tax have now been settled, and all amounts due to the Inland Revenue have been paid. The corporation profits tax paid out of the sum carried forward last year was £3,056.

BRITISH INDIA STEAM NAVIGATION COMPANY, LIMITED.—The balance-sheet and profit and loss account for the year which ended September 30, 1925, show balance available for distribution, after providing for depreciation, of £139,216, which the directors recommend should be distributed as follows:—Dividend of 5 per cent. on preference stock, £35,000; dividend of 8 per cent. (free of income-tax) on ordinary shares, £76,576; leaving a balance to be carried forward of £27,640. Trade has continued dull all over the company's sphere of operations. The balance-sheet will be found fully analysed in another column. The total assets are shown in one item at £14,215,660.

CARRERAS, LIMITED.—The profit and loss account reveals a profit for the year ended October 31, 1925, of £777,683, against £480,583 for preceding year. The sum of £111,764 was brought in, making £889,447 available. The dividend is 50 per cent., free of income-tax, which absorbs £240,000 on a capital of £480,000. The dividend in preceding year was 50 per cent., free of income-tax, but it absorbed only £120,000 as the ordinary capital at that time was only £240,000. The sum of £60,000 is put to reserve, making total reserve £300,000. To income-tax schedule "D" including reserve, £70,000. To staff superannuation fund £12,473. To carry forward £482,443, subject to the amount which it is proposed to capitalise and to provide for accrued dividend on preference shares. Balance-sheet shows total assets £2,070,703, against £1,484,544. Cash has risen from £149,299 to £224,788. Stocks are at £872,470, against £584,208. Goodwill, trade marks, and patents are at £203,800, against £203,787.

EDISON SWAN ELECTRIC COMPANY, LIMITED.—The profit for the year has risen from £74,914 to £88,344 for year ended June 30, 1925. Preference dividend absorbed £7,500. The ordinary dividend is again 10 per cent., absorbing £19,143. The sum of £50,000, as last year, goes to reserve. The carry forward is increased from £17,575 to £29,276. Total assets are £1,124,151. Cash has risen from £55,826 to £75,436.

FREDERICK SAGE AND CO., LIMITED.—After making provision for depreciation, the net profit for year ended September 30, 1925, is £39,181, against £37,241. Adding to this the sum of £23,460 brought forward from last year, a total of £62,641 is available, against £56,438. The ordinary dividend is again 8 per cent. The carry forward, subject to directors' fees, is £31,273, against £25,070. Total assets are £567,709, against £567,709. Investments at or under market values are in the balance-sheet at £60,384, against £41,002. Including £40,000 5 per cent. War Stock, £10,000 3 per cent. Exchequer bonds, 1930, £6,724 16s 2d. Metropolitan Water Board "B" 3 per cent. stock, £2,828 11s 11d New South Wales 3 per cent. stock, £2,715 10s 4d London County Consolidated 3 per cent. stock, £2,935, against £3,284.

GOVERNMENT AND GENERAL INVESTMENT COMPANY, LIMITED.—The amount to the credit of profit and loss account is £26,326. Deducting interest paid on debenture stock, together with all expenses of administration, there remains a balance of £19,044, which, in accordance with the scheme of arrangement, is applicable as follows:—A dividend of 4 per cent. on the preferred stock, of which £2 per cent. has been paid, £3,942; a dividend of 15 per cent. on the deferred stock, of which £5 per cent. has been paid, £8,042; participating certificates service fund, £2,520; undivided profits account, £3,640. The deferred stock dividend is 18 per cent. for year, against 14 per cent. for previous year. The amount to be added to undivided profits account is £3,639.

making that account £17,345. The directors further propose that the sum of £7,530 be taken from "undivided profits account" and capitalised and converted into shares of £2 each, which will then be divided rateably among the holders of the deferred stock.

GREENWICH INLAID LINOLEUM.—The net profit has fallen from £70,399 to £44,392 for year ended September 30, 1925. The sum of £10,000 is put to reserve, making total reserve £130,000. In previous year £23,690 was put to reserve. The sum of £2,500, against £5,000, goes to benevolent funds. The ordinary dividend is again 7½ per cent. The carry forward is £13,088, against £18,158 brought in. Balance-sheet shows total assets £933,648, against £917,346. Investments have risen from £65,093 to £99,914, but cash has fallen from £65,744 to £13,510. Stocks have risen from £395,676 to £430,683.

HARRODS (BUENOS AIRES), LIMITED.—The gross profit for year ended August 31, 1925, is £457,844, against £451,157. Income from investments and balance of interest account amounted to £15,641, against £9,661. Transfer fees produced £903, against £634. Gross dividends receivable from South American Stores amounted to £176,765, against £137,643. Expenses totalled £405,087, against £394,595. The dividend is the same as last year, i.e., 8 per cent. on the preference shares. The balance-sheet is fully analysed in another column.

IDRIS AND CO., LIMITED.—After charging all depreciations, the profit for year ended October 31, 1925, is £18,286, as against £14,616. The "A" ordinary shares again receive 10 per cent. and the "B" ordinary shares receive 10 per cent., against 5 per cent. in preceding year. The carry forward is increased from £3,091 to £3,977. Total assets are £332,497. Balances at bank have risen from £7,188 to £12,856. Government investments at cost or under stand in balance-sheet £43,849, against £48,849.

JOHN MACKINTOSH AND SONS, LIMITED.—The net profit has declined from £111,795 to £60,127 for year ended September 30, 1925. No dividend is paid on the deferred ordinary shares, against 20 per cent. in preceding year. The carry forward has been reduced from £107,065 to £80,691. The directors report a considerable improvement in the company's trade during the latter part of the year under review, which improvement is being maintained. Turning to the balance-sheet, we find total assets £939,548, against £1,005,991. Cash at bankers has been reduced from £129,584 to £13,797. Cash on deposit with the Halifax Equitable Benefit Building Society has been reduced from £112,814 to £66,833. Investments at cost are higher in balance-sheet at £92,213, against £18,059. A new item appears in balance-sheet—i.e., investment in and advance to subsidiary company and trade investments at cost, £66,690.

PINNER'S HALL (AUSTIN FRIARS).—The surplus for year ended September 30, 1925, is £16,204, against £14,104. A transfer of £3,000 is made to reserve as last year, making total reserve £21,000. The sum of £1,500 is written off leasehold building account. The ordinary dividend is increased from 8 per cent. to 9 per cent. The carry forward is £7,544. Since the issue of the last report the Inland Revenue authorities have served upon the company a further notice of assessment to income-tax under Schedule D, and the total claims now amount to £19,510. The company is still waiting for its appeals to be heard.

ROYER COMPANY, LIMITED.—The report for year ended August 31, 1925, shows a loss on the year's working of £127,543, against a profit in preceding year of £15,395. The deficiency was reduced to £88,461 by deducting £39,082 brought in from preceding year. The directors have withdrawn £100,000 from general reserve fund, reducing it to £50,000. The sum of £11,539 is carried forward. The report points out that the loss which occurred is mainly due to special circumstances and expenses incidental to the production of new models. Total assets are at £1,456,854. Stocks have increased from £284,064 to £522,636. Debtors are at £63,344, against cash £160,326 in preceding balance-sheet, as stand at £83,110, against £76,050. The issued capital is £1,050,000, all in ordinary shares.

SHOWELL'S BREWERY.—The balance of the revenue account at October 31, 1925, after adding the amount (£7,502) brought forward from the previous year, and after deducting the interest on the 4½ per cent. debentures (£19,345) is £38,825. From this amount tax has been paid on the preference stock of the company, leaving an amount of £31,925 available, which is utilised as follows:—(less income-tax) amounting, with tax, to £6,900; dividend of 15 per cent. on the ordinary shares (less income-tax), amounting, with tax, to £12,000; to carry to reserve account £5,000; to carry forward to next year £8,025. Total assets amount to £1,113,729, stand at £1,347,738, of which £103,188 are in British Government securities at cost.

SOUTH AMERICAN STORES (GATH AND CHAVES).—Profit on trading for year ended July 31, 1925, amounted to £411,833, against £358,420 in preceding year. The ordinary shareholders receive 9 per cent., against 7 per cent. in preceding year, and the deferred dividend is 8½ per cent., against 10½ per cent. The preference dividend is 8½ per cent., against 7 per cent. The sum of £20,000 is put to general reserve, against no allocation in previous year. The Chilean Stores (Gath and Chaves), the company's subsidiary, showed a profit of £10,604, against a loss in preceding year of £33,495. This result was achieved despite the difficult internal conditions in Chile and the political troubles. Balance-sheet shows total assets £5,065,250, against £4,956,541. Cash is lower at £163,496, against £218,620, but investments in British Government securities are higher at £347,284, against £100,076. Stocks have been reduced from £1,677,256 to £1,524,233.

BROKEN HILL SOUTH, LIMITED.—For the four weeks ended November 28, 1925, 24,470 tons of crude ore and 14,780 tons of de-leaded siliceous residues were treated and produced 4,478 tons of lead concentrates, assaying 67 per cent. lead and 25 ozs silver per ton; also 7,547 tons of zinc concentrates, assaying 45 per cent. zinc.

BURMA CORPORATION, LIMITED.—During the month of November 28, 204 tons of ore were mined, including 1,952 tons of high-grade ore. 22,800 tons of ore were milled in the treatment plant, producing 8,228 tons of lead concentrates. 9,654 tons of lead-bearing material, including 1,504 tons of high-grade ore, were smelted in the blast furnaces, producing 3,855 tons hard lead for treatment in the refinery. Of refinery products were 4,000 tons refined from the treatment of copper matte, silver production, 72,792 ozs were recovered from the treatment of copper matte. Experimental fine plant produced 2,070 tons zinc concentrates, assaying 45 per cent. zinc, 9.3 per cent. lead, and 44½ per cent. zinc. In addition to the above, 800 tons silver, 9.3 per cent. lead, and 44½ per cent. zinc. In addition to the above, 800 tons silver, 9.3 per cent. lead, and 44½ per cent. zinc. In addition to the above, 800 tons silver, 9.3 per cent. lead, and 44½ per cent. zinc.

NORTH BROKEN HILL, LIMITED.—For the month of November production was as follows:—36,600 tons of crude ore were treated, producing 6,470 tons lead concentrates, averaging 64.3 per cent. lead, 307 ozs silver per ton, and 7.4 per cent. zinc; also 5,730 tons zinc concentrates, averaging 47.7 per cent. zinc, 6.8 per cent. lead, and 7.7 ozs silver per ton.

RUDEKIAN AND GENERAL AMBROSIO CORPORATION, LIMITED.—For the month of November output from various mines amounted to 2,537 tons, and their sales to the gross value of £81,005.

SAN FRANCISCO MINES OF MEXICO, LIMITED.—For November—Ore treated, 12,510 tons; lead concentrates produced, 1,556 tons; zinc concentrates produced, 2,605 tons. Estimated net smelter return on lead concentrates, \$112,374 (U.S. currency); and on zinc concentrates, \$86,350; total, \$200,724. Operating expenses, \$79,328. Estimated operating profit, \$121,396. Capital expenditure, \$53,516. Other Note.—The above return includes \$5,328 being excess of realisations of products over valuations in respect of previous months.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Field work has been difficult this week owing to the wet state of the ground, and farmers have turned their attention more to threshing. Imported wheat prices were weaker, but a fairly good business again transpired in floating and forward cargoes. Larger offerings of Australian and Pacific kinds have helped to retard the upward movement. Steamers of No. 1 Northern Manitoba, December shipment, sold 64s 6d to 64s 9d, No. 3 ditto, loading, 62s 9d, white Pacific, January, 63s, Australian, and December, 63s 9d, early January 63s 6d. Maize cargoes also in better demand, and a firmer tone ensued. Steamers of Plate afloat sold 27s 10½d to 39s 3d, December-January 39s to

39s 6d, January 39s 1½d, No. 2 white flat African, December 15th-January, 36s 6d per 480 lbs. American malting barley, January, 29s 9d net, and South Russian ditto 30s 6d to Bristol Channel per ex ship, to arrive, quoted 66s 6d, No. 1 Northern Manitoba, No. 2 mixed Durum 61s 6d, Barusso, 62½ lbs, ex ship, 65s 6d per 496 lbs. English quoted 12s 2d-12s 6d per 112 lbs, free on rail. Flour quiet. London standard grade quoted 52s, patents 54s-55s, to 1s per sack less for deliveries in the Home counties, with 6d imported Manitoba patents range from 49s 6d-52s, Minneapolis Plate descriptions. Plate, ex ship to arrive, quoted 38s 9d, ditto to be landed 40s 6d, white flat African, ex ship, 39s 6d, landed 39s 6d, yellow African maize meal, ex ship, 39s 6d, landed 39s 6d, ex store, 37s-50s, Chilian Chevalier 56s-65s, brewing 50s-53s, ac-ex ship, 45s-60s per 448 lbs. American malting, ex ship, 30s, No. 3 landed 30s 3d per 400 lbs. English quoted 9s 3d-20s, the latter ex ship, quoted 25s-25s 6d as to position, landed 27s, No. 2 Canadian Western, ex ship to arrive, 29s 9d, No. 2 Canadian feed,

ex ship, 25s 6d, landed 26s 9d, No. 2 white clipped American 38 lbs, ex ship to arrive, 25s 6d, landed 26s 6d, all per 320 lbs. Danzig, ex ship, 28s 9d per 336 lbs. English quoted 8s 10d-9s 8d per 112 lbs, free on rail. Millers' offals maintained. Broad bran quoted 8s 9d-9s, middlings 8s 3d-8s 6d, fine ditto 10s 3d-10s 6d, bags included, ex mill, powdered oat husks 6s 3d, feed oatmeal 8s 9d, ground oats 12s 3d per cwt free on rail. Oatmeal steady. London made flaked 18s, rolled oats 17s, medium, also fine cut, 17s, coarse, also medium pinhead, 17s ex mill, ordinary Scottish oatmeal 17s 6d, American ditto 16s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1925-26, 1924-25, 1923-24, 1922-23.

	1925-26.	1924-25.	1923-24.	1922-23.

AMERICAN WHEAT MARKETS.

The markets opened strongly this week on a large volume of mill buying, reports of adverse weather in Argentina, and strong Liverpool cables. President Coolidge's speech to the Chicago Farm Bureau Federation was also regarded as a "bull point" in the Chicago market. Later on, however, heavy selling pressure developed, and, after a slight check on Wednesday, forced down prices from 8 to 10 cents below the highest point reached.

The visible supply in Canada is given as 29,222,000 bushels, a decline of 6,704,000 as compared with the previous week, and 1,371,000 bushels as compared with this time last year.

(b) December delivery. (c) November delivery.

COAL.

Our Cardiff correspondent writes:—The pressure of shipment arrangements over the next fortnight has hardened the tone of the market for practically all qualities of coal. The strongest feature has been small coal, and for some qualities the spot prices have ranged up to 13s 6d and even 14s. Large coals generally have been firmly maintained. In the aggregate, contracts placed during the past few weeks total nearly 2 million tons, for which the average f.o.b. price is from 4s to 5s per ton less than that at which contracts were arranged for 1925 supplies. The British price successfully tendered for an Egyptian railway contract was 1s 1d per ton less than that of a German firm for Westphalian coal. The following are the current approximate quotations:—Best Admiralties, 22s to 23s 6d; seconds, 21s 6d to 22s 6d; best drys, 22s 6d to 24s; black veins, 19s to 20s; Western Valleys, 19s to 19s 6d; Eastern Valleys, 19s to 19s 6d; best bunker smalls, 13s to 13s 6d; ordinary cargo smalls, 11s to 12s; coking smalls, 13s to 13s 6d; anthracite, best large, 38s to 42s 6d; red vein, large, 28s to 32s; machine-made cobbles, 57s to 58s; French nuts, 57s 6d to 58s 6d; stove nuts, 57s to 58s; rubbly culm, 11s 9d to 12s 3d; coke (special qualities), 35s to 40s; patent fuel, 19s 6d to 22s 6d; pitwood, ex ship, 31s to 31s 6d.

Our Glasgow correspondent writes:—New business in the export branch of the Scottish coal trade is somewhat slow and not very easily negotiated, but for the moment the collieries find a fairly ready outlet on contract work, which is still partly in arrears. Round coal in Lanarkshire shows the greatest advance, prime splint having gone up to 18s 9d, and secondary to about 2s less, as a result principally of an increased demand on Italian account; but single and pearl nuts are relatively the firmest spots in all districts. Shipping orders are absorbing the bulk of the output, while the gas and electricity works are fairly large consumers. For doubles and trebles the demand is not now so strong as in recent weeks. Fife and Lothian steam varieties move steadily. Dysart main in the former field being still very scarce. Shipments from Scottish ports last week, for the first time this year, exceeded those in the corresponding week in 1913.

Our Sheffield correspondent writes:—There has lately been some revival in exports of steam coal and coke, and a scarcity of wagons has arisen, but the home trade in steam coal remains poor. Boiler slacks are in fair demand. South Yorkshire steams are quoted at 15s 6d to 16s at pits, and Blyths at 17s to 17s 6d.

IRON AND STEEL.

The following is extracted from the weekly report of the London Iron and Steel Exchange:—Although there is a fair volume of business passing, there is less activity in the market than a week or two ago. This falling-off is a seasonal movement usually noticeable before Christmas, and at the weekly meeting of the Exchange anticipations were expressed of a revival in business at the end of the year. The most disturbing factor at the moment is the confused position on the Continent due to the depreciation in the exchange value of the franc, and the prospect of fresh works coming into the market when the Belgian strike is settled. Conditions, so far as the British works are concerned, have altered little, but the pig-iron producers on the North-East Coast have improved their position by recent sales to an extent that has encouraged them to again establish minimum prices. In the semi-finished steel department there are still considerable quantities coming to hand from the Continent, but recent buying has been only moderate. A fair amount of activity is noticeable in the finished-steel department, principally in the heavy trades, but it is unlikely that the home demand will improve until after the Christmas holidays.

Our Middlesbrough correspondent's report, dated December 10th, is as follows:—Pig-iron: Although there has been a falling off of actual business, probably due to the recent rise in prices and the approach of the holidays, there is no weakening in the position. Makers adhere to the agreed minimum of 66s 6d per ton for No. 3 Cleveland G.M.B. for home consumption. Hematite supplies are still short, and consumers are complaining of delayed deliveries. This week makers have advanced the price 6d per ton, and at the revised quotation for mixed numbers of 75s 6d per ton there have been fair Continental sales. Manufactured iron and steel: There is quite an active flow of orders to the steelworks. Steel prices are inclined to harden as a result of dearer fuel, but nominal rates are unchanged as follows:—Steel ship plates, £7 5s; steel ship angles, £7; iron bars, £11 5s; steel rails, £8. Iron ore: There is a better inquiry for foreign ore, but buyers are not prepared to pay advanced prices, 21s per ton is a sellers' quotation for best Bilbao Rubio, c.i.f. Tees.

Our Sheffield correspondent writes:—A condition of quietude has developed in most branches of local industry this week, and no revival of activity is anticipated until the New Year. Competition continues to be keen. The improved position of pig-iron is largely due to exports to the United States, taken at extremely low prices; but the home consumption of foundry and hematite pig is a little larger than three months ago. A number of local steel firms have placed substantial forward contracts for materials, and confidence in a New Year revival is fairly widespread. Special alloy steels are selling moderately. The market for heavy steel scrap is no better, and 6s 6d continues to be the recognised figure for basic quality. Railway work is quiet, and there is little or no inquiry for shipbuilding castings and forgings. Local builders of railway carriages are on full time, and have several months of work on hand. Rather more orders are coming into the cutlery trade, but the silver and electro-plate branches are moribund.

Our Glasgow correspondent writes:—Practically no change has taken place in the position of the iron and steel trade. Business coming forward is of the most scrappy description, and unless a definite improvement takes place soon, it is probable most of the works will extend the New Year holidays to enable orders to accumulate. The situation as regards pig-iron is no worse, but there is no indication of any desire to re-light further furnaces. Prices remain unchanged. Further tonnage of galvanized corrugated sheets has been placed locally for February-March delivery, and it is with difficulty that small lots can be procured within a reasonable time. Prices for export remain about £16 10s per ton for 24 G. Among contracts secured recently is one for 2,000 tons of steel transmission towers for New Zealand, which has been contracted for by a local structural firm.

In the tinplate market business this week has been quieter, with prices per basis box a shade lower at from 19s 9d to 20s 3d. The tinplate application for a revision of the sliding scale basis of wage regulation is to be considered early in the New Year.

OTHER METALS.

TIN values marked a good deal of irregularity, while weaker on balance, owing to fluctuating Eastern advices, with sales on a moderate scale. Standard cash sold £288 10s to £283 10s, three months £282 15s to £278 15s. Sales in the East were reported at £289 15s, £287 15s, and £288 5s to £287 10s.

COPPER was accorded active support, but with offerings on a liberal scale movements were somewhat irregular at times. Standard cash changed hands at £59 10s to £59 5s, three months £60 15s to £60 7s 6d.

LEAD values declined steadily during the greater part of the week on selling pressure, but offerings were well absorbed. Good soft foreign pig December sold £35 to £34 2s 6d, January £35 5s to £34 5s 6d, February £34 12s 6d to £34 3s 9d, March £34 12s 6d to £33 17s 6d and £34.

SPelter opened firmer, but subsequently eased on increased selling orders, while business proceeded on active lines. December February £38 2s 6d to £37 6s 3d, March £38 15s to £37 15s, £37 7s 6d to £36 15s.

ANTIMONY firm, but quiet. English specials quoted £90, China crude December-January sellers £61, and regulus ditto £81 per ton, c.i.f. terms.

ALUMINIUM: Home trade nominally £120, export £125 ton. WOLFRAm firm. Forward quoted 21s to 21s 3d per unit. QUICKSILVER dearer. Spot quoted £15 to £15 10s per bottle.

THE COTTON TRADE.

LIVERPOOL, December 10, 1925.

The final estimate of the U.S.A. Bureau Report was issued on Tuesday last, and an increase of 305,000 bales gave the estimated crop as 15,603,000, with 13,858,000 bales ginned. The market can now settle down, and conduct business without so much anxiety. Demand will be carefully watched, and the scarcity of good-grade cotton is sure to affect prices later on. Business has been very quiet all week, with the trade steady buyers. The estimated spot sales from the 4th to 10th instant (inclusive) are 42,000 bales,

including 1,100 for export. Of these 21,600 are American, 7,100 Brazilian, 6,000 Peruvian, 1,700 Egyptian, 4,850 African, 500 East Indian, and 250 sundries. The imports for the week are 94,343 bales; of these 81,020 are American, 838 Brazilian, 2,493 Peruvian, 7,745 Egyptian, 1,317 African, and 930 East Indian. Middling American is quoted at 10.13, Egyptian F.G.F. Sakel 8.20, G.G.F. Upper 15.25, fair Brazilian 10.58, G.F. mod.-rough Peruvian 16.00, smooth 12.33, F.G.F. Tinnivelly 9.25, G.F. East African 12.85, and West African middling 9.83.

MANCHESTER, December 10, 1925.

A rather healthier feeling continues to prevail. Inquiry has tended to broaden, and in certain sections trade has been on a more encouraging scale. The improvement in the cloth demand for India has been well maintained, a substantial turnover having taken place in light fabrics and fancies, with rather more activity in sized goods. Auction sales have been resumed in Shanghai as a test of the situation. Some fair contracts have been arranged in white goods for the Straits Settlements. Slightly more inquiry has been about for Egypt and the Near East, without much being done. Home trade fabrics are moving off steadily. American yarn quotations have again been irregular, with an increased business in the finer counts. Some useful lines have been secured in export yarns for India.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The outstanding feature of the week has been the further decline in wool values. Reports from the primary markets indicate a fairly good general demand at the lower level now ruling, and it is thought that the bottom is well within sight. Prices in London this week have steadily declined, and most descriptions of wool are now back to the October level; in other words, the premium on spot wool has practically disappeared, though Coleman street is still above the parity of the overseas markets. This decline in the raw material values is generally regarded as a good augury for the future of trade, and both spinners and manufacturers are keeping in close touch with quotations. So far as merinos are concerned, the opinion is freely expressed that users would have some inducement to operate on the basis of 4s for 64's tops, and already a little has been done around that figure. On that basis growers would still obtain a very remunerative price for their wool, and it ought to be possible to handle the products at a small profit. Compared with the pre-war price of about 2s 8d for good 64's tops, 4s to-day is certainly quite high enough. In the meantime, however, users are adopting a very cautious attitude. Crossbreds, especially B.A. wools, are attractive at current quotations, and it would not take much to induce users to buy freely, especially as stocks in the hands of the trade are by no means large. All indications point to resumed activity as soon as wool prices become stabilised.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

The London sales this week have been continued under favourable conditions, but there is less competition and a distinctly easier tendency in values. Very fine qualities are firm, and still show a slight advance compared with the previous series, but anything below 70's is on the easy side. Continental buyers are competing steadily for superfine wools, including a few lots from the Cape of this type, West Victorian offerings, and

is firm in sympathy with wheat, and on Continental buying of old Plate crop for early shipment. Further business in new crop for January-February loading has been done at £17 12s 6d and £17 15s, and new Calcutta to London has been done at £19 10s, April-May. Latvian linseed at Hull has changed hands at £17, and North Russian is offering at £17 10s spot. Black Egyptian cottonseed is lower at £9 15s for afloat, a slight premium being asked for shipment.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market for actual sugar developed a weaker tone owing to ample supplies available and a generally slow trade demand. British makes being reduced by 6d to 9d per cwt, both spot and forward, at which a better trade resulted. Messrs Tate and Lyle's cubes quoted 31s 6d to 32s 6d; crushed, 29s 6d; coffee crystals, 32s 3d; nibs, 32s 3d; granulated, stoved, 30s 4d; fine, also coarse grain 28s 10d; No. 1, 28s 7d; No. 2, also London and T.L., 28s 4d; month forward, 28s 3d; January delivery, 28s 3d; February-March, 28s 6d; mineral water sugar, spot, 28s 9d; icing, 1 cwt cases and drums, 34s 6d; ditto bags, 35s; pulverised, 31s 3d; caster, finest, 32s 7d; ditto A, 32s 1d; B, 30s 6d; yellow crystals, 25s 4d. English-grown granulated, Cantley, 27s 9d, ex wharf, London; Ely, 27s 6d ex works; Anglo-Scottish, 28s, ex Kidderminster; and 27s 9d, ex Colwick. Mr Guma estimates the next Cuban crop at 5,373,714 tons, against the last crop of 5,125,070 tons. Foreign kinds dull, and tendency of prices in buyers' favour. American granulated, spot, quoted 27s; December shipment, 14s 9d, c.i.f., London. Mauritius crystals, spot, 25s 9d to 26s 3d; Dutch "J" ditto, 27s; January-March, 14s 9d; April-August, 15s, f.o.b., Amsterdam. Czech granulated, December, 14s 3d; January-March, 14s 9d; April-August, 15s, f.o.b., Hamburg. White Java, May-June, London, 15s, c.i.f. and i. Of raw refining sorts, Cuban, basis 96 per cent. December-January, 11s, c.f. and i., U.K. White terminal market fairly active, but irregular and easier on larger estimate of the Cuban crop. December sol, 13s 6d to 13s 8d and 13s 7d; March, 13s 10d to 14s 3d; May, 14s 3d to 14s 6d; August, 14s 9d to 15s 1d and 15s per cwt.

COFFEE.—Market remained fully steady on the spot for all the better home trade qualities, but common kinds moved off rather quietly. Kenya, common to good bold, sold, 107s 6d to 131s 6d; peaberry, 106s to 141s 6d; Kilimanjaro, fine colour, 131s 6d to 137s 6d; peaberry, 116s to 132s; Arusha, good to fine colour, 123s to 133s; Tanganyika, fair bold, 119s; Nyassaland, fine colour, 126s to 131s 6d; peaberry, 136s; Costa Rica, fair greenish, 148s 6d to 149s 6d; old crop, fair bold, 138s 6d per cwt.

COCOA.—Spot parcels in limited request, but previous rates were generally maintained. Accra, for shipment, December-February, also January-March, sold, 36s 6d; Lagos, December-February, sellers, 34s, f.o.b. terms; Trinidad, December-February, 58s; Bahia, ditto, 44s; Guayaquil, Epoca, 68; Caraquez, 65s per cwt, c. and f. terms. Cocoa butter, C.F.R., spot, is 33d; prime English, is 33d per lb.

TEA.—Indian auctions this week comprised 53,827 packages, which encountered a good demand, and all descriptions up to 1s 9d per lb realised firm rates, while commonest kinds were occasionally the turn dearest. Fine to finest sorts, however, displayed some irregularity, due to indifferent quality. Pekoe, sold, is 53d to 1s 11d; broken orange pekoe, is 74d to 2s 8d; finest to choice, 3s 0d to 3s 7d. Ceylon offerings totalled 15,200 packages. Demand proved fairly active, and where quality was maintained previous rates were upheld. Pekoe, sold, is 6d to 2s 2d; broken orange pekoe, is 9d to 2s 5d per lb, in bond. China descriptions experienced a moderate sale, though prices were generally steady. Keemun sold up to 2s 9d per lb for finest quality, with old seasons ditto ruling from 1s 3d to 1s 4d, while in limited supply. Finest Souchongs realised up to 3s 3d, while common Monins rule at 7d to 8d per lb. 5,500 packages of Java and Sumatra met a strong demand at 3d to 3d per lb advance. Pekoe, sold, is 43d to 1s 8d; broken pekoe, 93d to 2s 2d; orange pekoe, is 6d to 1s 8d; broken orange pekoe, is 43d to 1s 10d; pekoe souchong, is 4d to 1s 6d per lb, in bond.

RICE in quiet request, but held for fully steady prices. Rangoon, two stars, spot, 16s; forward to March, 15s 6d, c.i.f., London. Broken quiet. Spanish, spot, 24s 6d; oil dressed, 25s; December shipment, 22s 6d to 23s; Italian, spot, 22s to 22s 6d per cwt, as to quality. Rice bran: Burma, for shipment, January-March, £6 7s 6d, ex ship, London or Liverpool, per ton. Japanese peas steady. November-January, also January-February and February-March, 33s 6d. Rangon beans, hand-picked, for shipment, December, 12s 6d, f.a.q.; December-January, 10s 9d. Madagascari butter beans steady. Spot, 34s to 35s, as to quality; October-December, 35s; November-January, sellers, 34s 9d, per cwt, c.i.f. terms.

SPICE.—Pepper quiet and easier. Black Singapore, spot, is 5d, f.a.q.; January-March, sold, is 5d and 1s 3d. Lampong, spot, is 4d, f.a.q.; January-March, is 5d to 1s 4d; white Muntok, L.S., spot, is 8d; January-March, is 8d and 1s 7d. Tellicherry, spot, is 6d; Aleppy, ditto, is 5d per lb. Tellicherry, January-March, 155s; Aleppy, ditto, 150s per cwt. Pimento, spot, 8d per lb; ditto, December-January, 72s 6d per cwt, c.i.f., London. Cloves quiet. Zanzibar, January-March, quoted 11d per lb. Tapioca quietly steady. Fair Singapore flake, to Havre, quoted 20s 6d. Sago flour quiet. Sarawak, to U.K., January-March, sellers, 15s 3d. Desiccated cocoanut quiet. Spot, halves, 40s 6d; November-December, also December-January, 39s. Ginger steady. Japan, spot, 87s 6d; West African, spot, 59s; shipment, 57s cwt, c.i.f.

FRUIT (Dried).—Currants quiet, but generally firm. Amalia, quoted 32s to 33s; Gulph, 35s to 40s; Pyrgos, 30s to 31s; Patras, 34s to 36s; Vostizza, 42s to 52s. Sultanias barely steady. Smyrna, new crop, 65s to 90s; Australian, 68s; Cretan, 66s. Figs continue in fair request. Layers, new crop, boxes, 80s to 92s 6d; Locomus, 90s to 150s; genuine, 45s to 48s. Dates

steady. Hallowee, spot, 26s 6d; Siar, 14s 6d; Khadrowie, 18s 6d. Raisins quiet. Valencia, quarter boxes, 28s to 50s; half boxes, 28s to 30s; seedless, 31s to 36s. Evaporated fruits steady, and fine apricots very scarce. Californian apricots, standard new extra choice, 125s; fancy, 135s; Australian, 120s to 130s. Plums in steady demand. Oregon, size 30/40, quoted 72s; 40/50, 52s. Californian, 40/50, 57s 6d; 60/70, 47s 6d; 80/90, 42s. Bosnian new crop, 60/70, 45s. Pears, Californian, extra choice, 90s; fancy, 105s. Lake County, extra-choice, 105s; fancy, 117s 6d. Apple rings, Californian, extra choice, 55s to 70s; Canadian, 63s 6d per cwt.

CANNED GOODS.

CANNED FISH.—Market without new feature, with a quiet trade in force. Sardines firm. Portuguese 1/2s quoted 4s 9d to 5s per dozen tins. Salmon slow, but late rates were fully maintained. Red, tall, 1 lb, 63s to 64s; 1/2 lb, pink, 38s to 39s; tall pink, 25s to 26s. Lobsters firm and supplies scarce. Halves quoted 160s to 165s, and 1/2s, 95s to 100s.

CANNED FRUIT move off quietly, with ample supplies available. Californian Bartlett pears, standard, 13s 3d to 13s 6d; seconds, 12s to 12s 6d; Oregon, choice, 15s; standard, 13s 3d; seconds, choice, 11s; standard, 9s 6d; seconds, 8s 9d. Californian peaches, standard, 9s 3d; seconds, 8s. Loganberries, fancy, 11s to 12s; shipment, with offers reservedly made. Italian tomatoes in good request at full rates.

CANNED MEATS.—Without material alteration, and trade quiet apart from Danish lunch tongues, which sell steadily. Corned beef, South American, 6 lb tins, quoted 34s; and New Zealand, 34s land ox, 6 lb, 125s per dozen tins.

CONDENSED MILK.—The market for machine-skimmed remains very firm owing to sustained inquiries from Germany on Dutch markets. Machine-skimmed quoted 16s 3d to 16s 6d; full-cream Danish, 26s 6d; Dutch, 24s per case.

HONEY.—New Zealand moves off readily, being supported by Continental demand, but other descriptions remain quiet.

RUBBER.

Irregular, with dealings on a fair scale. Plantation standard sheet, spot, sold, 4s 7d to 4s 7d, and 4s 6d; December, 4s 7d to 4s 7d; January, 4s 6d to 4s 4d; January-March, 4s 5d to 4s 3d; December, 3s 9d; July-September, 3s 11d to 3s 10d; July-September, 3s 11d; January-December, 4s 1d to 3s 11d; ditto (1927), 3s 9d, 3s 9d, c.i.f. terms.

GENERAL.

HEMP.—Manila dull and easier. J grade, January-March, sellers, £43; K, ditto, £37; L, £37 10s; M, ditto, £33 10s. New Zealand H.P.F., November-January, £40 10s; fair, ditto, £36 10s. Sisal

quiet. No. 1 Tanganyika, November-January, sellers, £45 10s; No. 1 Kenya, ditto, £45 per ton.
SHELLAC dull. Fair, T.N. spot, quoted 295s to 230s; December, 205s; March, 195s cwt.
GAMBIE dull. October-November shipment, sellers, 41s per cwt. c.i.f.

COPRA quietly steady. F.M.S. Straits, to Rotterdam, October-December, sellers, £30 10s; December-January, £30 7s 6d; December-February, £30 7s 6d; January-March, sold, £30 3s 9d. Dutch E.I., October-December, sellers, £30 5s; January-March, £29 17s 6d. Ceylon, December-January, £31 10s. Palm kernels dull, and January-March, to Liverpool, sellers, £21 10s per ton.
MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £24 10s to £40; Cochin, £30 to £54. Ceylon bristle, £16 to £22 10s; cinnamon leaf oil, 44d; citronella, Ceylon, 1s 10d; Java, 3s 5d.

TALLOW.—Messrs Colchesters and Woolner write on December 9th as follows:—The tallow market was easier during the week, and prices were unchanged to-day for inferior kinds, but good sorts declined 6d. Prices are falling in Australia, while freight from South America is difficult to obtain. At auction to-day 1,406 casks tallow were offered, and 302 were sold. Quotations are:—Australian mutton: Fine, 48s 6d; good to fair, 47s 6d to 44s; dull to dark, 41s to 39s 6d; hard, 48s. Australian beef: Fine, 44s 6d; good to fair

43s to 41s; dull to dark, 40s to 39s 6d; sweet, 45s 6d. Present shipment from Australasia: Good mixed, 43s 6d. Present shipment from South America, 43s. The market letter is unchanged. Town tallow, 39s 6d per cwt. Rough fat, per 8 lbs, 3d; melted stuff, 30s per cwt. Quotations are:—Town, 39s 6d, net cash, naked, ex works. Country: Frail casks, 39s 6d; home melted, shipping casks, net, f.o.b., good coloured, 43s; fair to dull, 40s to 39s. Bone fat: white, none; pale, none; benzine, 36s; melted stuff, 35s 6d, f.o.b.

foreign demand for gold, but the market was not at all hungry for bills; three months' bills, after being shied at earlier in the week at $4\frac{1}{8}$ per cent., were not much wanted at $4\frac{1}{8}$ per cent.

	Dec. 18, 1925.	Dec. 11, 1925.	Dec. 4, 1925.	Nov. 27, 1925.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	4%	(Dec. 3, '25)
Banks' Deposit Rate	3	3	3	2	(Dec. 3, '25)
Discount/Call	3	3	3	2	(Dec. 3, '25)
Houses/Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$	(Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	$3\frac{1}{8}$	4

The Bank return showed a decrease of £206,000 in the stock of coin and bullion, £205,000 on balance having been reported as withdrawn for export, and the note circulation expanded by £834,000, so that the Reserve was thus £1,040,000 lower, with its proportion to liabilities .8 lower at 15.8 per cent. Government securities declined by six millions, presumably owing to repayments of Ways and Means advances, while discounting for the market was reflected in an increase of seven millions in Other securities. Public deposits rose, and Other deposits fell by just under two millions. Currency notes outstanding were increased by £4,855,300 to £295,456,400, which includes £1,317,700 for notes called in but not yet cancelled. The fiduciary issue is £237,888,700, or £10,256,700 below the maximum for the year.

NEW YORK MARKETS.

Our New York correspondent cables:—Markets are irregular, with pronounced strength in railroad stocks and firmness in oils, profits having been taken in various industrials. Rails are supported by excellent earnings, conservative political sentiment, and possibilities of consolidation. Business prospects continue good. The index number of the Bureau of Labour has increased by 0.6 per cent., with industrial groups firm. The Federal Reserve statements reveal movements normal after the tax date, discounts having fallen off sharply at New York, while there is a large increase in purchases of Government securities, owing to the Treasury overdraft. The circulation is rising on holiday needs, and with reserves lower the ratio for the reserve system is 68.7. No change in the discount rate is expected pending a clarification of the situation after the turn of the year.

THE STOCK MARKETS.

The approach of Christmas has had its customary effect of checking business in the stock markets, and selling has predominated. The account, which opened on Thursday, runs for three weeks. The Consol market has moved irregularly, but became a little firmer when no change was made in the Bank Rate on Thursday. Yesterday a better tone developed, and gilt-edged stocks and home rails improved appreciably. Argentine rails were better on the latest crop estimates. A sharp setback in the price of raw rubber caused a substantial reaction in share prices, but a recovery in the commodity towards the end of the week checked the selling movement. Thursday's settlement in rubber shares was the heaviest on record. Tea shares have been in demand, but there have been no prominent features in industrials. Oils have fluctuated, but dealing has been mainly professional. The dividend declarations, which were much as anticipated, have not helped prices of South African mines.

New issues of capital continue to be well received. The Cunard Steamship Company's 5 per cent. debenture issue of £4 millions and the Dunlop Rubber Company's 6 per cent. debentures for £2 millions were oversubscribed, applications for the latter having amounted, it is stated, to over £20 millions. The underwriters of the Apex (British) Artificial Silk issue of £300,000 in 8 per cent. preference shares were left with 47.6 per cent.

THE COMMODITY MARKETS.

The influence of the approaching holiday has been more marked this week. Iron and steel orders are chiefly for prompt delivery, though the New Year is being awaited with a certain quiet confidence. Coal prices are generally firm. A number of contracts for 1926 are reported, at prices considerably less than those of a year ago. In the textile trades raw cotton has been dull all the week, and buyers of yarn and cloth have consequently been reluctant to give out orders of any importance. The December wool sales have closed on a lower level of values, but manufacturers have more confidence in the possibility of profitable working next year. The jute trade is quiet. Wheat prices have again shown signs of reaction after their recent rise. In the produce markets, the sugar market is steady, coffee in steady demand, and tea active, especially as regards plain and medium sorts. Rubber is unsettled, and easier on balance. Among metals, tin has declined sharply, but copper is firmer, despite large offerings, while lead has improved after an irregular opening.

FOREIGN EXCHANGES.

The feature of the Foreign Exchange markets during the week has been the marked depreciation and the wide daily fluctuations of the Paris exchange, the record low level of 136 being touched at one time on Tuesday. Apart from the obvious politico-economic causes, this weakness may be attributed to the general lack of confidence in M. Loucheur's ability to cope with the present financial emergency; and this appears to be borne out by the fact that his resignation had no ill effect, and, if anything, rather the reverse, on the rate. The comparative steadiness of the past three days may be taken as the measure of the confidence aroused in France by the appointment of M. Doumer, but the position is still serious, and may at any time become critical if the flight from the franc continues in any serious degree. The general uncertainty is reflected by the fact that forward francs are at the lowest discount levels touched for a very long time, viz., 10-15 for one month, 40-45 for two months, and 70-75 for three months. Opening at 131.75 on the 11th, which was then a record, Paris fell away still further on 12th to 133.25 at the close. On Monday 135.5 was touched, but the rate closed at 134. As stated, M. Loucheur's resignation had no bad effect, francs opening at 134 on Wednesday, improving sharply to 130.5 during the day and closing at 132. On Thursday Paris was dull at 133.4, and was better yesterday at 131. Brussels was very firm throughout at 106.95-107; and the lira maintained last week's steadiness, and was even slightly better at 120.75, at which level it stood yesterday. The dollar rate in the early part of the week was rather unexpectedly unfavourable to sterling, this being due to the unexpected hardness of money rates in New York when easier money had been looked for. Later the firmness in our money rates redressed the balance, and the immediate future strength of the sterling exchange seems now to be likely to be assured, as cheaper money rates in the States cannot probably be much longer delayed. Dollars opened at 4.847-85 on the 11th, fell off on Monday, and remained weak until Wednesday at a little below these levels. Then, however, the rate reacted to 4.851-2, and remains at this quotation. Forward rates are now at 1/4 premium all round. For the first time for a long period Canada has moved to a discount as compared with New York. Of the Continental exchanges, Amsterdam chiefly calls for comment, having maintained its strength against sterling in spite of the hardness of money rates over here. It may be that this firmness is not unconnected with the recent expansion in the rubber market, which has no doubt led to the transfer of considerable funds through Amsterdam to the Dutch plantations in the Far East. At 12.071-2 the tendency is still against this country. Madrid, after opening at 34.05, is rather weaker at 34.20, continuing a weakish tendency which set in a little while ago, on the change over from the dictatorship to a semi-constitutional régime. Stockholm moved with the dollar as usual; but Warsaw showed renewed weakness throughout the period under review, and stood yesterday at 45 sellers (nominal), 50 having been reached at one time. The drachma suffered from a sudden depreciation on

rumours of the resignation of the Governor of the Bank of Greece, but recovered again on the publication of an official denial. The South American exchanges showed no great variations other than those which are to be accounted for by the usual laws of supply and demand and ordinary trading transactions. The milreis was very firm throughout, and rather better on balance at 7 1/8, against the opening rate of 7; Buenos Aires a little weaker at 46 15-32, against 46 1/2 at the beginning of the week, and Valparaiso steady at 39.30. In the far East the yen continued to improve steadily throughout the week to 15 9/16 on the 16th, in spite of the cancellation of the proposed Japanese loan in the United States; but it is understood that various shipments of gold have been made lately from Japan to America, and this would account for the phenomenon. The decline to 15 9/16 yesterday follows the news of the Japanese occupation of Mukden. The rupee is rather weaker at 15 6 3/4 to-day. Under the pressure of steady selling by China, silver prices gave way, spot and forward declining to 31 1/2 on the 12th. On Wednesday there was a further decline to 31 1/4 for both spot and two months' delivery, the lowest for spot since early in June, and for forward since the 13th of that month. On Thursday there was a slight recovery to 31 1/2, on Indian buying, but the market closed quiet and rather uncertain. Shanghai at 3s 1d is rather weaker on balance, as is Hong Kong at 2s 4 1/2, following the fall in silver.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 12th:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	7,683	From Revenue	10,103
Interest, &c., on Debt	3,441	Increase in Debt	1,687
Sinking Fund	275		
Sundries	285		
Increase in Exchequer Balances	106		
	11,790		11,790

The Revenue for the week amounted to £10,102,900, as compared with £8,669,000 in the corresponding week last year. Customs and Excise were higher at £2,714,000 and £1,886,000, against £2,258,000 and £1,819,000 respectively. Stamps brought in £1,290,000, as compared with £230,000. Property and Income-tax was slightly lower at £1,278,000, against £1,383,000, while Super-tax at £550,000 was £110,000 higher. Ordinary receipts amounted to £33,100, against £131,700, and Special receipts to £1,600, against £17,300. The week's operations increased the National Debt by £1,687,000, and caused the following changes:—

(000's omitted.)			
	£		£
3 1/2 % Conversion Loan	48	Bank of England Advances	6,000
Public Department Advances	6,801	Sundries	450
National Savings Certificates	50		
Treasury Bills	1,239		
	8,137		6,450

The floating debt was increased by £2,050,000 to £803,656,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Dec. 12th).

£		£

Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of London and South America, National Bank of Scotland, Orient Steam Navigation Company, Dorman, Long and Co., Harrods (Buenos Aires), Vickers, Anglo-Ecuadorian Oilfields, Edison Swan Electric, Carreras, Showells Brewery, and Van Ryn Gold Mines Estate. At the meeting of Dorman, Long and Co., Sir Arthur Dorman said that it was expected to put coal on the market from one of the Kent collieries early next year, the quality being similar to South Wales

coal. At the meeting of Vickers, Limited, the proposed scheme of reconstruction was passed by a large majority.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE PLIGHT OF THE IRON AND STEEL INDUSTRY.

THE iron and steel industry will have to get on as best it can for the present without protection. It is true that the rejection by the Government of the appeal of the industry to be "safeguarded" is not yet officially announced; but the chairman of Dorman, Long and Co. let the cat out of the bag in his speech to his shareholders last Wednesday. His comment was that this might mean that the industry would still have some hard times before it, but he was confident that in the end it would win through. The Government may attempt to soften their refusal by various suggestions, or even by some plans for indirect assistance, but their decision on the main issue could hardly have been otherwise than it is. The iron and steel industry could not be protected without offering similar terms to the engineering industry, and ultimately to machine-using industries, and this clearly would lead to a general tariff. Whether the Government are really convinced or not of the undesirability of a general tariff for Great Britain would require a very expert analysis of a very complicated psychology. But the whole Government recognises that it is still bound by Mr Baldwin's pledge not to introduce a general tariff, and a substantial proportion of the Cabinet undoubtedly realises that even if they were not so bound a general tariff would be electorally disastrous. The decision of the Government has, however, no doubt been greatly influenced by other considerations, and, in particular, by the view that has been put before it that the iron and steel industry is not at present adequately organised or as efficient as some of its chief competitors.

Sir Arthur Dorman, in his remarkably courageous and broad-minded review, referred to some of these criticisms:—

Criticism of the iron and steel trade is growing. We are accused of bad management, of inefficiency, and of all-round inability to control our own industry. We are advised to group ourselves or to enter into wholesale amalgamation. While I believe that by amalgamation and grouping we could to some extent reduce the cost of production and increase efficiency, I do not think this is going to prove the final solution of our troubles. The real evils we are suffering from are lack of demand and the disparity between conditions here and conditions on the Continent, and the real remedy for these evils is an understanding with Continental makers which would be to their advantage as well as to ours. Such an understanding would be greatly more far-reaching in its effect than any internal arrangements amongst ourselves which leave us still open to attack in an unprotected market.

The speaker proceeded to point out that the price of iron and steel products is less than 20 per cent. above pre-war prices, and that few British industries would have much to show if they were in such an unsatisfactory condition. He gave reasons, however, for thinking that we were not far from the turning. "Continental makers are feeling the pinch, and will be glad to put an end to cut-throat competition. The slump in shipbuilding cannot go on indefinitely, because ships must wear out or become obsolete. Development has been at a standstill, and cannot rest there much longer if the world's population is to be supported." From this review Sir Arthur Dorman drew the conclusion that so far as his company, at all events, was concerned, when things were normal once more it would be possible to earn a return on their present capital. His argument was calculated to allay the fairly general fear that our leading iron and steel companies may have to follow the example of Vickers, and make a drastic reduction of their capital.

But although Dorman, Long have not paid a dividend on their ordinary shares for four years, they are unquestionably among the stronger of the big British iron and steel companies, and it would not be safe to assume that the reassuring account given by Sir Arthur Dorman is representative of the trade as a whole. In spite of Sir Arthur Dorman's restrained optimism, we are inclined to agree with the critics that, taking the iron and steel industry as a whole, it is in serious need of internal re-organisation.

It is true that an international understanding would be the best way to achieve greater stability, and the desire for some relief of this kind is ardently shared in France and Germany. The Federation of German Industries has recently appointed a committee to consider the prospects of such understandings, and it is notorious that a similar desire was an important consideration in the minds of the French in proposing that the League of Nations should summon an International Economic Conference. In this respect the case of iron and steel is one of the most pressing, for the lack of capital and the restriction of development all over the world (except in America) has naturally restrained the demand for the products of an industry which is primarily concerned with producing "capital goods"; on the other hand, the output capacity of the trade was in all countries greatly inflated by war demands. The world has, therefore, a great excess capacity of production.

But charity begins at home. These same considerations call for some degree of organisation and co-operation between the various firms and various districts in Great Britain. Naturally, the great extensions carried out during the war were not carried out on a balanced programme adapted for peace requirements. But in the years since the war very little has been done to remedy this defect or to consider the technical equipment of the British iron and steel industry as a whole. Indeed, in certain cases the lack of balance has been further increased. Quite recently, for example, the Consett Company has opened a new plate mill in Durham, regardless of the fact that, in consequence of the submarine menace, British plate-rolling capacity was expanded—largely out of public money—to a figure far in excess of anything that the shipbuilding industry can possibly require. The new mill may possibly get the orders, though that is doubtful; but it is certain that in the absence of a common understanding, none of our plate mills can be fully employed, and only the best of them can hope to get even a small margin of profit. The same difficulty applies right through the industry. Many efforts have been made since the war to meet the situation by organising an export sales association, which, by deliberate allocation of orders to the most appropriate works, would reduce costs. Multitudinous proposals have also been made on more or less ambitious lines for the fusion of the larger firms. But they have all come to grief, largely on account of personal difficulties in an industry where the traditions of British individualism are at their strongest. It is only fair to add that the French and Belgian ironmasters have found it equally difficult to create internal solidarity. It is, in the first instance, the lack of unity within each national industry, that has hitherto rendered abortive the many efforts that have been made since 1918 to bring about an international understanding in this industry. It is, therefore, idle to hope great things from international agreement until some degree of unity is reached in British industry itself.

It is true that the iron and steel industry is not commonly supposed to be lacking in organisation, and many readers may recall that the report of the Reconstruction Committee on Trusts, issued at the close of the war, contained a long list of organisations which existed in this industry for every possible purpose, including many price associations. Since that time, moreover, a National Federation of the industry has been organised. The latter, however, is concerned primarily with the politics of the industry—its relations to the Government, &c.—and not with commercial matters or with internal administration. The weakness of the industry from the point of view of organising to meet competition is two-fold. In the first place it has far too many associations whose activities are unrelated to one another, and which experience shows are

liable to fall to pieces in times of acute economic difficulty. In the second place these associations are almost entirely confined to the purpose of fixing prices, with the result that, in so far as their decisions are effective at all, they tend to keep in being the weaker firms and do nothing whatever to promote efficiency in the industry. During a considerable part of the present long drawn-out depression many of the associations, including some of the most important of them have, in fact, been in abeyance.

The fact that the existing organisations do nothing to promote efficiency is responsible for the attention which has been given to the possibility of amalgamation. Sometimes the suggestions have related to the half-dozen or so largest firms in the country; at other times district grouping has been discussed. Looking merely at the map, for example, the four big firms on the Tees seem to form a natural economic unit. The same may be said of the three big concerns in South Wales. Hitherto, however, such fusion of interests as has taken place since the war has been, as in Germany, rather in the direction of vertical combination in which the chief firms have endeavoured to secure for themselves a definite market by associating with big users of steel products. In Germany, however, this tendency has changed, and it may well be that in England also the industry will find that economic pressure may compel a greater or less degree of co-operation right through the iron and steel industry.

We propose in subsequent articles to analyse the reports of the leading firms in the trade and to consider the financial standing of the industry regarded as a whole before examining the factors in the international situation.

THE FIRST YEAR OF THE DAWES PLAN.*

THE first annual report of the Agent-General is a masterly document, clear and all-embracing, and, quite apart from its direct purpose of serving as an account of Mr Parker Gilbert's stewardship, is a most important contribution to an understanding of the current German economic situation and of the forces which are moulding it. Indeed, the greater part is devoted to an examination of German budgetary and economic conditions, the relation of which to the future of Reparations is sufficiently obvious.

It is pleasant to be able to state that the Agent-General is evidently satisfied with the spirit which all those interested in the proper working of the Dawes Plan are showing. "The Plan generally is functioning smoothly, and all those concerned in its execution have worked together loyally and in a spirit of friendly accommodation." Though "it is still too soon to draw conclusions about the ultimate results of the Plan," says the Report, "the fact is.....that it has reduced the problem of Reparations to a rational basis and provided for the determination of its possibilities by the test of actual experience."

The first year's annuity has not raised any problems, largely, of course, because the International Loan provided the bulk of the money, viz., 800 million gold marks out of a total of 1 milliard, and the bulk of the payments "except those for the service of the German External Loan, have been made in reichsmarks within Germany, chiefly for deliveries in kind.....and for the costs of the armies of occupation." Some interesting figures are given illustrating these points. Deliveries in kind amounted to 454.5 million gold marks, coal, coke, and lignite accounting for 52 per cent. of this total; if costs of transport are included, to nearly 70 per cent. But "miscellaneous deliveries" amounted to nearly 18 per cent., and as the Report points out, "their number and extent are recently showing a tendency to grow." The result is that the "Regulations for Deliveries in Kind," drafted by the Wallenberg Committee early in the year, will acquire an increasing importance, the ideal aimed at being to assimilate the procedure as closely as possible to ordinary commercial procedure. An interesting section of the Report deals with the net yield to the creditor Governments of the deliveries. In practice, the net yield is less than the amount for which the creditor Government is debited by the Agent-General,

who debits the amount which he has paid to the German producers. The net yield varies, "and whilst there is practically no loss on certain commodities, such as dye-stuffs, the general loss is variously estimated as averaging from 8 to 15 per cent." In the case of private contracts, financed through Reparations account, the creditor Governments also appear to lose money, either through credit being extended to the purchaser (who pays his own Government) or through the fact that the draft, representing the claim on Reparations money, is discounted "below the nominal value of the draft."

It appears also that the military costs of occupation are still absorbing an unduly high proportion of the proceeds. Whilst the Administrative and Control Commissions for the year absorbed only 26 million marks out of the total annuity of 1 milliard, France spent 136½ millions out of her share of 454½ millions on military costs, Great Britain spent 30 millions out of a total of 190 millions, and Belgium 20½ millions out of a total of 115 millions. It may be argued that the net military expenditure of these countries would not in any case have been lower; the fact remains that under the new scheme of "all-in expenditure" the relationship between yield from Reparations and costs of occupation shows that the latter are absorbing between 20 and 30 per cent. of the total, though as the Annuity rises in successive years the proportion will become less unfavourable.

Arrangements have already been made to secure the "orderly execution" of the Plan in the second year of its working. The most urgent problem was that of spreading the payments to be made by Germany more evenly over the Annuity year than the original plan provided. To this end a system of monthly payments has been worked out with the consent of the Allied Ministers. "The German Government and the German Railway Company have most helpfully given their co-operation to the same end, and as a result the payments on account of the second Annuity are now arranged on substantially a monthly basis, in such a way as to permit the financing of a normal programme each month." In addition, "the Agent-General has arranged to present every three months to the Reparation Commission and the Transfer Committee the draft programmes for the ensuing three months, with a view to assuring advance consideration of the various items of expenditure." It is thus hoped to avoid undue pressure, either on the German Government or the foreign exchanges. The fact that all claims on Germany have now to be satisfied out of one single fund of course eases the administration of the Plan greatly. Even the difficulties of the pre-settlement period are rapidly being solved "in harmony with the general spirit of the Expert's Plan," and the "Reparation Commission, in co-operation with the German Government, has since made important progress in the settlement of the outstanding accounts, including those for the Ruhr occupation."

The first year's working of the Plan has, therefore, proceeded surprisingly smoothly. In turning to consider the second Annuity, and its relation to the German Budget,

it is necessary to remember that the German financial year and the Annuity year do not coincide, so that each German Budget year covers only seven-twelfths of the corresponding annuity year. Last year's Budget closed with a surplus on March 31, 1925, of about 890 million gold marks. The German Government in the budgetary period 1925-6 has to provide seven-twelfths of 250 million marks towards the second Annuity, and the same amount out of the yield of the transport tax. Against this it is entitled to the yield from the sale of 500 millions of railway preference shares, which it proposes to take over and has included among the receipts, though it has not been found possible to make arrangements for the sale of these shares to the public. On the basis of the available figures, there appears a deficit on the 1925-6 Budget of 326 million marks; the German Government proposes to utilise 216 millions out of the 1924-5 surplus towards meeting the deficit, but, as the Report points out, the revenue returns for the first half-year have been in excess of estimates by 200 millions, and thus, though the returns for the second half-year may be less favourable, "it seems reasonable.....to expect the final accounts to show the Budget for the current year balanced by a safe margin."

The Report sums up the general tendency of public finance in Germany in language which is gravely reminiscent of that employed by the League of Nations Commissioner in Austria. "Public expenditures generally are showing a dangerous tendency to increase, and this at the very time when the greatest need of the German economy is to have the largest possible share of the national income left in productive channels, instead of being withdrawn into increasing fields of Government expenditure." The Experts' Report itself draws attention to the necessity of clearing up the financial relations between the Reich and the States and Communes, but the problem still remains for solution. Apart from the effects on the Money Market.....the present situation has led to great inequalities in the financial position of the local authorities themselves; the fortunate authorities "have taken advantage of their unexpected affluence in many cases, to carry out public works of an unproductive nature, such as parks, swimming pools, athletic grounds, &c., or to make investments in private undertakings."

The large balances at the disposal of the Empire and the subsidiary Governments, as well as such enterprises as the Railways and the Post Office, have given rise to a problem which we have already had occasion to discuss in our issue of September 26th last. It is clearly desirable that such balances should not be taken out of the money market for longer than is absolutely necessary. Nevertheless, grave difficulties remain. The very size of these balances is one of the causes of the shortage of long-period capital from which German industry is suffering. It is clear, as the Report points out, that short-period funds cannot be used for long-period purposes without danger; still more urgent is the question of the channel through which the funds are to be put at the dis-

posal of the market. The fact is that the tendency, to which we draw attention, to replace *centralised* control over the money market by a kind of federal, devolutionised banking structure has resulted not only in weakening the power of the Reichsbank, but also in making it very difficult, as the Report points out, to find out precisely what the volume of "public deposits" really is. The Reichsbank, it is satisfactory to learn, has "recently obtained, with the co-operation of the Finance Ministry, an increased measure of control over the public funds, which arises in part from the fact that the lower rates now prescribed for their use eliminate some of the incentive to individual lending." But the fundamental solution "must contemplate a closer adaptation of the sources of public revenue with essential expenditures."

No doubt the fact that the pre-stabilisation public debts of Germany have been practically wiped out is one element blinding public authorities to the full facts of the situation. The nominal value of the "revalorised" debt of the Empire is only 1,820 millions of marks. The main burden of indebtedness for the Empire, States, and municipalities is thus external, and is still small, though it has played an important part in the provision of foreign currency for the reserves of the Reichsbank and in financing the unfavourable balance of trade. An important section of the Report discusses German foreign trade during the period covered by it, and attributes the excess of imports partly to the influence of foreign loans, but places stress also on the influence of new tariff legislation in August, 1925, and the resumption of German tariff independence in January of 1925. The Report, however, draws pointed attention to two factors—first, that the problem of German exports is in part a function of European tariff policy generally, and "under the conditions now confronting most European trade it is a question whether those obstacles to trade may not also prove uneconomic, even from the point of view of the countries which erected them"; second, "underlying the whole situation, and frequently with a controlling influence on the course of trade and the movements of prices, will be the general conditions of currency and credit, which depend largely upon the credit policy of the Reichsbank and the policy of the German public authorities in the administration of funds at their disposal."

EDUCATION POLICY AND FINANCE.

THE Board of Education Circular No. 1371 has already given rise to much anxiety and irritation, and has called forth an almost unanimous voice of protest and opposition from all those who are in any way concerned in education. If our system of education is to develop in such a way that it may become worthy of the nation, it is of the first importance that it should not be made, as in recent years, the subject of frequent changes of policy. The hopes of educationists were raised to great heights by the passage of the Fisher Act in 1918, only to be dashed to the ground again by the reaction caused by the ruthless operations of the Geddes axe. The recovery from the Geddes régime has been slow, but it appeared to be sure, for Mr E. F. L. Wood, introducing the Education Estimates for 1923-4, stated that he no longer found it necessary to amputate the estimates, and his successor, Mr Trevelyan, in 1924, announced that the Board had reverted to their previous custom of considering all proposals on their merits. Thus a hopeful atmosphere was created, the machinery was set in motion, and local authorities prepared to consider necessary and overdue developments which had been suspended or abandoned under the Geddes reaction.

Now the engine has been reversed again by Circular 1371, progressive authorities are dismayed and disappointed, and reactionary authorities encouraged in their attitude. This famous circular proposes to reject the prospective estimates of Local Education Authorities for 1926-7, and to substitute therefor a minimum system of block grants, based on the actual grants payable for

1924-5, subject to a deduction of 1 per cent. in the case of the grants for elementary education, and certain other deductions, of which the most notable is the sum of 30s for any child in school under the age of five years. The most serious, although not the most obvious, feature of the circular is that if the percentage grant system is abolished, the foundation on which we have been trying to build an elastic but coherent national system of education, is destroyed. Circular 1371 is highly objectionable, because it announces without previous discussion with those most concerned, and before discussion in Parliament, a complete change in the financial basis on which our educational system is carried on. Even if the policy of this circular can be proved to be right, it has been brought forward in the clumsiest possible way, and has produced a feeling of apprehension in all those actually engaged in educational administration, a feeling which has not been allayed by the debates in the House of Lords on Tuesday and the House of Commons on Thursday.

In the opinion of many a block grant, provided it is adequate, is better than a percentage grant, because it allows greater freedom of action to local authorities, but the statement that the percentage grant system does not allow the Board sufficient control over expenditure, is not one which would be upheld by anyone who has had experience of local administration from 1920 to the present time. To resolve these doubts as to whether the percentage grant system is the best on which to carry on the financial partnership in education between the central and local authorities, a Committee was set up some years ago, with Lord Meston in the chair, to examine and report on the whole question. This Committee has not yet reported, and it is very unfortunate that the question should be pre-judged by the issue of this circular, particularly as it is known that much of the evidence tendered to Lord Meston's Committee is in opposition to the policy which it is now proposed to introduce. In fact, Lord Eustace Percy, in a recent reply to a question in Parliament, stated that the view of the Board of Education (of which Mr H. A. L. Fisher was at the time President) expressed to the Committee was, "The Board, as at present advised, do not favour the abandonment of the present basis of their grant system in favour of any other which has yet been suggested. They look forward to the further development of the system of applying standards of cost as limits to the expenditure which the Board should recognise for grant purposes." In view of the present controversy, it is to be hoped that Parliament will insist on the publication of the evidence given to the Meston Committee, and, if necessary, on a fresh investigation of the whole subject of educational finance.

The Conservative party in October, 1924, issued an election manifesto, in which education was mentioned in the following terms:—"We are in favour," so it appeared on the eve of the General Election, "of the carrying out of agreed schemes as between local education authorities and the Board of Education which shall ensure, among other matters, (1) a progressive reduction in the size of classes; (2) the improvement, and when necessary the replacement, of insanitary schools; (3) the development of central schools and other forms of education above the elementary school age, with an adequate supply in the number of secondary school places, and a corresponding increase in the number of schools and free places applicable to all advanced courses." All educationists would subscribe to this programme, but, if Circular 1371 means anything, none of these urgent developments can be attempted in the near future. If this circular does not mean this, then what does it mean? It should at least be withdrawn, and reissued in a form in which its meaning is unmistakably clear. Unfortunately, there is some evidence that the Board does not intend these developments to proceed, for in a memorandum issued to explain the circular it is stated that, apart from the deductions mentioned above, "it is believed that, in general, authorities should be able to meet their obligations without increasing rates."

Fortunately, the policy of Circular 1371 cannot be put into operation without legislation, and unless the questions raised by the circular are answered more satisfactorily than they were answered in Parliament this week it

is certain that such legislation ought to receive, and will receive, the uncompromising opposition of all who believe that the future well-being of our country depends upon the continuous development of an educational system.

THE WHEAT SITUATION.

THE rise in wheat prices has attracted a good deal of attention during the last few weeks. The movement appears, indeed, to have come as a surprise to most people in the market, if one may judge by the extremely low level to which available stocks in this country had been allowed to fall, and the views expressed by various experts before the Food Council this week. Some idea of the extent of recent price changes may be obtained from the following table of Liverpool quotations:—

WHEAT PRICES, LIVERPOOL, 1923-25.
(Per Quarter.)

	Early November.			Dec. 8, 1925.		
	1923.	1924.	1925.	1923.	1924.	1925.
No. 1 Northern Manitoba—early shipment	43 10	66 6	52 3	64 9		
Rosafé or Baruso—Jan.-Feb.	42 6	63 9	50 9	63 9		
Australian cargoes—Dec.-Jan.	46 3	63 9	52 6	63 9		

Prices in the early days of November were, roughly, midway between the "low" level of November, 1923, and the much higher quotations of November, 1924. By the beginning of December they had begun to invite comparison with those of the latter season, though a certain amount of reaction has since taken place. A year ago markets were dominated by the comparative failure of the Canadian harvest, and No. 1 Manitoba eventually topped 80s at the beginning of last February. This year Canada has obtained the second largest wheat crop in her history, and the yield in most European countries has exceeded even that of 1923. A few weeks ago experts were prophesying a comfortable carry-over at the end of the season. What has since occurred to upset these favourable calculations?

The answer involves a preliminary appreciation of the situation which existed a few weeks ago. The International Institute of Agriculture, in its October *Bulletin*, went into the question from both the supply and demand side. The probable contribution of certain wheat-exporting areas North of the Equator was assessed as follows:—

SITUATION IN CHIEF "EXPORTING" AREAS NORTH OF EQUATOR, August, 1925.
(In Million Quarters.)

	Carry-over from Previous Year.	Harvest Yield, 1925.	Estimate of Home Requirements.	Available for Export, Beginning of Season.	Exports Up to Aug. 1, 1925.	Available for Export, Aug. 1, 1925.
Canada (1)	(2)	(3)	(4)	(5)	(6)	(7)
Canada	21	490	146	345	10	335
U.S. of America	50	874	826	98	10	88
India	19	406	414	11	08	03
Total	90	1770	1386	474	18	456
Other exporting areas—						
Russia, say						69
Balkan and Danubian and North African countries						92
Total, Northern Hemisphere						617

To facilitate comparison with succeeding statistics, we have converted the institute's figures, originally expressed in centals, into quarters of 480 lbs. The wheat "season," it may be observed, begins in the case of Canada in August, of the United States in July, of India in April. The Russian and Danubian figures are tentative, the institute having reduced the original Soviet estimate of 15 million quarters to something between 4 and 9 millions. To complete the picture, some estimate was required of the probable surplus from the growing crops of Argentina and Australia. Influenced by reports of a larger sown area and favourable prospects in Argentina, and "fair" conditions in Australia (though September rainfall was below normal) the institute decided to put the contribution of the two countries at the same figure as last year, viz., 29 million quarters. The total available supplies for the 1925-26 season were thus computed at approximately 98 million quarters.

THE FIRST NATIONAL BANK OF BOSTON

As regards the probable demand from importing countries, the institute took occasion to point out that in years of plenty most States desire to replenish depleted stocks, and the falling-off in demand is thus not proportionate to the increase in home production. The relevant data for earlier years was as shown:—

SITUATION IN CHIEF "IMPORTING" AREAS.
(Million Bushels.)

Country.	Production.*				Net Imports.†			Apparent Consumption.†		
	1922.	1923.	1924.	1925.	1922-23.	1923-24.	1924-25.	1922-23.	1923-24.	1924-25.
United Kingdom	83	76	67	65	263	298	283	346	374	350

* Calendar years.

† 12 months beginning August 1st.

Allowing for a moderate amount of stock replenishment and increased consumption, the institute finally assessed the import requirements of these 19 countries at about 64½ million quarters, and, allowing for other areas not specified above, the total world demand at 81 million quarters. A comfortable surplus of some 17 million quarters was thus indicated at the end of July, 1926.

When we find an authority such as Sir Herbert Robson declaring before the Food Council, on December 14th, that "unless the world economises in the use of wheat there will be barely sufficient to go round," it is evident that the situation must have deteriorated fairly considerably since the Institute published its October forecast. The experts are unanimous that such deterioration has taken place; as regards its extent and influence they are by no means agreed. Sir James Wilson and Mr G. J. S. Broomhall, for instance, still hold to the possibility of an appreciable surplus. The facts are that Canada has raised her estimate from 49 to 52½ million quarters, but adverse weather immediately after harvest caused a slight deterioration in quality without seriously reducing the quantity available. Reports from the Argentine have been disappointing. A large part of the Northern crop has been attacked by black rust, and though the Centre and South are not seriously affected, a significant reduction in the total yield is inevitable. In Australia, rainfall was deficient in the critical month of October. The extent of the net loss under these headings may be gathered from the estimates of the authorities mentioned:—

ESTIMATED EXPORTABLE SURPLUS FROM COUNTRIES NAMED.
(Million Quarters.)

	October Forecast (International Institute).	December Forecast.		
		Sir James Wilson.	Mr G. J. S. Broomhall.	Sir Herbert T. Robson.
Canada	36½	41	35	37½
Argentina	29	24	21	15
Australia		10	11	8
Total	65½	75	67	60½

The three December estimates differ widely, but if the middle figure, Broomhall's, be compared with that published by the International Institute in October, the

latter's calculations would seem to have been made on conservative lines, and not to have been seriously upset by subsequent events. The official Argentine estimate issued this week, for example, forecasts a crop of the approximate dimensions allowed for by the institute.

The effect of unfavourable Argentine and Australian reports would probably have been less striking had they not coincided with a "hold-up" of Russian exports. The trade had apparently put a favourable construction on Russian estimates of a 10-15 million quarters export surplus, and Russian wheat had been selling freely. So far, however, shipments do not appear to have exceeded 1½ million quarters, and the prospect of further arrivals before next spring is not bright.

The Russian failure came at a most inopportune time. Wheat stocks in Europe had fallen to a dangerously low level, owing partly to the "holding-off" policy of buyers in a falling market, and partly, it is asserted, to concerted action by Canadian producing interests. Stocks of grain and flour at the ports of Great Britain and Ireland at the beginning of October were little more than 40 per cent. of those of October, 1924, and only 27 per cent. of those of October, 1913. One may reasonably assume that a halt would have been called in the rise of prices much earlier than proved to be the case, had merchants and millers on this side been able to draw on normal reserves.

The above survey suggests that consumers may have to reconcile themselves to rather higher prices during the next few months than at one time seemed likely. The indications are, however, that the movement will have only a temporary character. The latest Argentine estimate still forecasts a somewhat larger crop than last year. More important, however, will be the question of North American supplies. The policy followed by selling interests and the early advent of winter have jointly resulted in the holding up of large quantities of wheat, which will come into the market in the spring and early summer. In these circumstances we believe that the prospects of a surplus at the end of this season are still reasonably good.

THE POLISH CRISIS.

(BY A WARSAW CORRESPONDENT.)

THE Polish zloty has suffered another great depreciation. The dollar exchange quotation, which in the first half of November did not exceed 6 zlotys, rose at the beginning of December to 12 zlotys. After wild fluctuations it is now being maintained at the level of 10. What are the reasons of such a depreciation, which, compared with the par of exchange, amounts to 50 per cent.? The immediate cause may be sought in the state of the Polish Bank, which does not possess a sufficient amount of foreign currencies to enable it to checkmate the speculative movements of the market. On November 30th the reserve of foreign currencies held by the Bank Polski amounted to 59.6 million zlotys, as compared with liabilities of over 76 millions. The excess of foreign liabilities over assets amounts to 16 million zlotys, so that the Polish Bank is on a purely gold basis, possessing a reserve of 132.7 millions in gold, of which 51.5 millions are deposited abroad. At the beginning of the year the net reserve of foreign currencies amounted to 750 million zlotys, so that during the eleven months a decrease of 266 millions has taken place. As the reserve of gold has increased during the same period by 16 millions, the net loss of the total reserve may be put at 250 millions. To this 125 millions, which were obtained during the year from an American loan, must be added. The explanation of how the Polish Bank has lost such an important part of its reserve is very simple. From January to October the excess of imports (1,497 million zlotys) over exports (1,054 millions) exceeded 440 millions. As the invisible exports of Poland are relatively small the unfavourable trade balance necessarily entailed a drain of foreign currencies. The excess of imports over exports is the natural result of a high-price level. With rising prices at home,

and with an artificially stabilised dollar exchange, it was advantageous for Poland to buy cheaper foreign goods, while the selling of her own products was rendered difficult. The fall of the zloty in July was the necessary adjustment of the exchange to the depreciation at home.

This brings us to face a new problem. Why is the price level in Poland so high? Accustomed to seek the cause of rising prices in an inflated currency, we are tempted to seek the answer in an over-liberal credit policy of the bank of issue. However, a comparison of the returns of the Bank Polski shows how wrong such an explanation would be.

The circulation, which amounted to 563 millions at the beginning of April, fell to 361 millions on November 30th. There has been during this period an inflation of currency, but the source of this over-issue was not the Polish Bank, but the Treasury. The amount of small coins and Treasury notes exceeds 400 millions. The subsidiary circulation is greater than the total issue of bank notes. This is a manifest proof of the fact that the Government has used its monetary functions too freely. These great issues of small notes and coins have undoubtedly contributed to the rise in prices, creating an inflationary tendency.

It would be wrong, however, to consider this as a sufficient explanation of the adverse trade balance. The imprudent policy of the Government, which covered the budgetary deficits by resorting to the printing press, has only accentuated a tendency the causes of which lie much deeper. If we compare the trade statistics of countries which, under similar conditions as Poland, tried the experiment of stabilisation, we observe everywhere an increased excess of imports over exports. For instance, in Austria this surplus amounted in 1922 to 652 gold kronen, in 1923 to 798, and in 1924 to 1,026 millions. Not until 1925 did the situation begin to improve. The first two years of stabilisation were characterised by a growing deficit of the trade balance. Conditions in Austria are exceptional, but a study of Hungarian and German trade statistics teaches us that after the monetary reforms the tendency of foreign trade was similar. This is shown for Hungary by the figures below (million gold kronen):—

	Imports.	Exports.	Excess of Imports.
1923	423	338	85
1924	703	575	128

During the present year an improvement has taken place in Hungary also. In Germany imports exceeded exports in 1923 by 2.3 millions gold marks, in 1924 by 2,584 millions, and in the first eight months of this year by 3,184 millions. On the basis of the figures quoted above, we may arrive at the general conclusion that in countries where the paper money has been depreciated to such an extent as in Austria, Germany, Hungary, and Poland, a return to a stabilised currency causes a deep perturbation and the trade balance moves in an adverse direction.

This general tendency can easily be explained. The prosperity during the period of inflation is artificial. Industry does not compete on foreign markets successfully because of its technical superiority. Exports are mainly stimulated by the declining exchange, which acts at the same time as a barrier against imports. The stabilisation of the currency deprives the production of the country of these artificial advantages. All the evils of inflation are only now becoming manifest (the destruction of circulating capital in the first instance), and the country is obliged to enter on the very painful path of economic re-adjustment. The adverse trade balance is only one of the symptoms of this process. The growing adversity of the Polish trade balance, which took place after the stabilisation of the mark, and the introduction of the zloty in 1924 was a necessary result of the long years of inflation. It was impossible to avoid it. In Germany, Austria, and Hungary the unfavourable trade balance did not produce those disastrous effects as in Poland, only because those countries were provided with foreign capital, which enabled them to stop the gaps created by the excess of last year investigated the economic conditions of Germany it characterised the situation as an unstable equilibrium. The influx of foreign capital gave to the

German mark a more solid foundation. Without it the mark would have shared the fate of the zloty.

In studying Poland's present economic and financial difficulties it is necessary to keep in mind the fact that the present crisis is not purely monetary. The situation is complicated by a deep commercial crisis. The drain of foreign currencies has forced the Polish Bank to restrict its credits. The withdrawal of deposits from the other banks has destroyed the whole credit machine. Is it not natural that under such conditions even the most solid industrial and commercial undertakings are menaced by ruin?

What are the rules of a sound banking policy which should be applied in such a moment? Is credit restriction or a liberal granting of advances the appropriate remedy? To this I should like to give an answer by quoting a passage written nearly 70 years ago, when the discussion on the wording of Peel's Act enriched political economy by an analysis of the guiding principles of credit policy which even to-day have not lost their value. "In the first place," says Mill in his "Principles" (Book III., chapter XXIV., s. 4), "a large extension of credits by bankers, though most hurtful when credit is already in an inflated state.....is most salutary when the collapse has come, and when credit, instead of being in excess, is in distressing deficiency, and increased advances by bankers, instead of being an addition to the ordinary amount of floating credit, serve to replace a mass of other credit which has been suddenly destroyed." What must happen if in such a moment of panic the bank of issue restricts its credit operations? To this, again, the best answer is given by one of the classical expounders of banking theory. In 1873 Bagehot, in his "Lombard Street," wrote (reprint 1924, page 181), "The notion that the Bank of England can stop discounting in a panic, and so obtain fresh money, is a delusion. It can stop discounting, of course, at pleasure. But if it does it will get in no new money; its bill case will daily be more and more packed with bills, 'returned unpaid.'" The truth of Bagehot's prophecy can be tested in Poland. What has happened is precisely what the author of "Lombard Street" considered as a logical consequence of a restriction of credits by the central bank in a moment of panic.

The difficulty of the present situation lies in the inability of the Polish Bank to adapt a credit policy which alone would put the wheels of economic life in motion. With the present small reserve the bank cannot increase its discounts, because of the danger that the new notes might be thrown on the exchange market, and cause a further decline of the zloty. So the bank is in a dilemma. By refusing credits it renders the solution of the crisis impossible; by extending advances it risks deepening the troubles in the exchange market. It would be wrong to suppose that improvement in the trade balance will enable the bank to overcome its difficulties. Under present conditions the foreign currencies obtained from exports are hoarded, and do not increase the reserve. There is little hope in consequence that Poland will regain her financial health by a normal process of evolution.

The present Government is in this respect more optimistic. "We must put our house in order," says Mr Shrzynski, the new Premier. "Having achieved this task in six months Poland will easily obtain a foreign loan. In the first instance, the decrease of the Budget from 1,800 to 1,400 millions is a necessary step towards gaining the confidence of Europe." I fear that this policy will not give the expected results. Certainly all efforts must be made to reduce expenditure to the level of reduced revenues. But it would be wrong to forget in this laudable endeavour that the Dawes Committee characterised as interdependent the two processes of stabilisation of currency and the balancing of budgets. With a zloty depreciated by 50 per cent., and without guarantee that a further decline may take place, the attempt of reducing and balancing the Budget has only small chances of success.

Poland during the last two years has been struggling for sound foundations for its currency without resorting to foreign aid. Though the attempt has ended with failure the greatness of the national effort should not be forgotten. Mr Grabski's reform may be classed with Mr Hegedüs' financial reform in Hungary in the category of heroic measures. Unfortunately, economic evils cannot be cured

by heroism alone. Heroism must be based on sound principles. There is only one remedy at the present moment which has a chance of success—an international plan similar to that which was put into operation in Germany, Austria, and Hungary. The sooner those responsible for the fate of Poland and of Europe realise that concerted action alone can save the country from the dangers of a second inflation, the less painful and protracted the return to normal conditions will be.

INDIA'S ECONOMIC IMPROVEMENT.

THE removal of the Indian cotton excise duty is a measure which has long been clamoured for in India, and one which the Indian Government had promised to adopt as soon as ever the Budget position warranted such a step. The recent announcement of the immediate suspension of the duty and its withdrawal in the next Budget (discussed in the *Economist* of December 5th) may, therefore, be taken as an official recognition of an improved financial position. This financial improvement is due to the recovery of more healthy trade conditions, and that recovery in its turn may be attributed in no small measure to a definite clearing in the political situation. It can, indeed, be claimed that from every point of view the outlook in British India is decidedly brighter than for some time past.

This generalisation may be illustrated by reference to two sources of official information which have just become available. One is Lord Reading's address, delivered on Monday at Calcutta to the Indian Associated Chambers of Commerce; the other a "Report on the conditions and prospects of British trade in India in 1924-25," written by Mr T. M. Ainscough, H.M. Senior Trade Commissioner in India and Ceylon, and issued last week by the Department of Overseas Trade. Cabled reports of Lord Reading's address show it to have been in the main a review of the economic achievements of the years of his memorable Viceroyalty. When he took office in 1921 there was just closing, to quote his own words, "a most abnormal and disastrous year in Indian trade." Recovery from the bedrock level of 1921 had to be slowly created, but, looking over the five years' span, Lord Reading is able to say:—"A comparison between the present state of trade and that prevailing in 1921 appears to me to show that India has come through this trial more successfully than many other countries, and I am full of hope for the future. There have been satisfactory monsoons, and the general prospects are far brighter." The balance of trade turned two years ago in India's favour. Judged by values, the year 1924-25 was the best period of trade India has ever had. But India's trade prosperity, as Lord Reading pointed out, in view of her large population and low average of individual buying power, "depends on large quantities of goods circulating at low prices rather than on small movements at high prices." By this test also the trade of last year comes out very favourably. "Taking exports and imports of the same class together," said the Viceroy, "the volume of goods which left and entered India last year was 65 per cent. greater than the export and import totals of 1921." Lord Reading further claimed, and with justification, that the improvement in the general revenue position of the country has been no less striking."

The address to which we refer was non-political. But when we turn to Mr Ainscough's Report we find no less striking a tribute paid to the improvement in the political position. "The generally favourable economic position of India during the past year," he writes, "has been very greatly contributed to by the improvement in the political situation, and the subsidence of agitation.....On the whole, the political horizon appears to be clearer than it has been for some years, and, so far as one can foresee, there is little likelihood of any serious outburst of agitation on such a scale as would adversely affect the recovery in trade." Dwelling on the improvement in the position of the public finances, Mr Ainscough predicts that no fresh public borrowing will be necessary during the present financial year. "It is not anticipated," he says, "that any fresh loans will be issued on either the London or Indian markets during the present financial year, as Government are obtaining their relatively small requirements by means of the sale of Post Office cash certificates, which have become exceedingly popular, and give a return of nearly 6 per cent."

Mr Ainscough's Report is packed with information, statistics, and comment, which should be studied by all who have business connections with India. Principal attention will naturally be given to the chapter on the outlook for India's import trade, which deals especially with Britain's share in that trade of which cotton piece goods form so important a proportion. The share of the United Kingdom in India's imports fell from 57.8 per cent. in 1923-24 to 54.1 per cent. in 1924-25, and is now a full 10 per cent. below the pre-war percentage. On this the report comments as follows:—"This decline in our position in the Indian market is not so much due to foreign competition.....as to reduced shipments in British specialities, such as cotton piece goods, textile machinery, railway plant, boilers, &c., which normally form such a large proportion of the total British shipments; that any material decrease in the offtake, affects the British proportion of the total trade." Indeed, the percentages first quoted do not really give a fair picture. If we eliminate from the calculation all those goods which British manufacturers do not produce, we find that British manufacturers still supply about 75 per cent. of the imports into India of the manufactured goods of classes in which they compete. This figure of 75 per cent. is only a fraction lower than the comparable figure for 1913-14, and shows improvement on that for 1923-24. The real position, therefore, from the point of view of the British exporter is better than is suggested by calculations based upon the aggregate of India's import trade. The report will, of course, be read with special interest in Lancashire, and Lancashire will find that Mr Ainscough (on page 17) suggests that British cotton exporters missed a good opportunity in the Indian market at the end of 1924. Mr Ainscough wrote before the announcement of the suspension of the cotton excise duty, but the text of the report contains a report of the speeches on the duty in the Legislative Assembly last spring.

PROFITS OF THE BRITISH PRESS.

It is sad to have to confess that the Press, whose function it is to turn the searchlight of publicity on matters of public interest, is somewhat diffident in divulging to the public its own commercial activities and progress. It must, however, be remembered that in dealing with newspaper finance we are in a department of commerce which calls for specialised methods. Most of those who have studied the business side of publications realise the elusive value on the one hand the decline, and finally the demise, of journals which were once household institutions, and on the other the rise to fame of papers which at the beginning had a troubled birth. If we eliminate premises, printing machinery, stocks of paper, and debtors, the sole remaining item for consideration on the asset side of a newspaper balance-sheet is goodwill. It is a difficult problem for financiers and newspaper owners to know on what basis to estimate the value of their principal asset.

As will be seen from the following table, the results achieved by our great organs of public opinion during the past year do not, on the whole, compare unfavourably with the results obtained in the previous 12 months:—

* The dividend on the deferred shares absorbed £250,000. A further £250,000 was utilised for the allotment of 250,000 fully-paid deferred £1 shares to holders of deferred shares. b Includes amount brought in from preceding year's accounts.

The Times Publishing Company seems to have done particularly well, the net profit having advanced during the year to June 30th last from £123,153 to £176,271. With the sum of £30,135 brought in, there was an available balance of £206,406, against £132,171 in 1923-24, when only £9,018 was brought forward. The reserve fund, in the earlier year, received no appropriation, but for the last financial period £50,000 was set aside as a reserve against contingencies, making the total of the fund £100,000, against a paid-up capital of £965,000. There may be in existence a substantial hidden reserve in the item of copyright and goodwill, which is taken at cost, at £648,214. It must, however, be admitted that it is almost akin to *lese majesté* to attempt to place a cash value on the goodwill of *The Times*. The preference dividend absorbed £24,014, against £21,411, and the ordinary dividend £80,625, the same as in the preceding 12 months, leaving £51,767 to be carried to the next accounts. Next for consideration comes Associated Newspapers, Limited, which owns, among other investments, a controlling interest in the *Daily Mail*, the *Weekly Dispatch*, the *Evening News*, and the *Overseas Daily Mail*. In turn, Associated Newspapers is controlled by the *Daily Mail* Trust. The former company also had a satisfactory experience, its net profits being £917,046, in contrast with £910,408. Seeing that the dividend on the deferred shares in 1923-24 absorbed £550,000, and that a further £250,000 was utilised for the allotment of 250,000 fully-paid deferred £1 shares to holders of deferred shares, the assumption is that a capitalised bonus was distributed, especially as £38,000 was withdrawn from reserves. The dividend this time requires £642,000, and the reserve receives £210,000, leaving £215,947, against £175,901, to be carried forward. From the accounts of this concern the skilled accountant might be able to follow the profits with a fair amount of ease, but to the busy man who conducts a breakfast-table audit of his investments it is a much more difficult task.

On the other hand, the accounts of the *Sunday Pictorial*, like those of *The Times*, are clear. This journal increased its net profit from £259,264 to £269,442 during the year, and again placed £40,000 to reserve. This brought the fund up to £120,000, but here again goodwill and copyright are taken at cost, namely, £749,991. There is an item of £288,946, representing creditors, credit item which could well be separated. The excellence of the results enabled the raising of the dividend from 23½ per cent. to 25 per cent.

The *Daily Mirror* Newspapers shows its profits including the amount brought in. The figure for 1924-25 recorded, in this case also, a gain over the previous period at £288,894, against £276,049. The reserve fund was increased to £60,000 by a

transfer of £20,000, or the same as in 1923-24. This seems to be a somewhat meagre provision, although it is true that an amount of £867,809 appears in the balance-sheet in respect of creditors and reserve for contingencies. This item might be divided. No separate profit and loss account is submitted with the report. The Amalgamated Press registered a decline in profits from £505,403 to £481,543, and once again makes no allocation to reserve. The *London Express* Newspapers also had a less satisfactory year. In 1923-24 the net profit of £30,551 enabled the debit balance of £30,168 to be cleared off, leaving £383 to be carried forward. For 1924-25, however, profits declined to £10,266, so that, with the sum of £383 brought in, there remained a balance of £10,649, which was sufficient to cover the preference dividend, and to enable £1,774 to be carried forward. The *Daily Mail* Trust report for the year to September 30th last shows an increase in net profits from £104,889 to £158,232. This, added to the sum of £1,484 brought in, leaves a total of £159,716. Out of this it is proposed to write off the balance of the premium on redemption of first debenture stock, amounting to £110,000, and to carry forward the sum of £49,716. Further comment on the position of this holding company will be made at a later date. The *Daily Sketch* and *Sunday Herald* earned a net profit of £126,270, of which £57,190 was reserved, and £69,080 carried forward, the ordinary dividend being passed. Allied Newspapers—proprietors, amongst other properties, of the *Sunday Times*—had a good first year, with net profits of £830,202. The preference dividend was duly met, absorbing £154,249, and £481,074 was put to reserve, £194,879 being carried forward. The first reports of Allied Northern Newspapers—an offshoot of Allied Newspapers—and United Newspapers, have not yet been made public. Turning to the daily financial Press, the secretary of the Financial Times informs us that, "as for some time past over 90 per cent. of the shares of this company have been in private hands, no report and accounts have been sent to the Press, and at the present time over 99 per cent. of the share capital is privately held, and the status of the company has been changed to that of a private one." The report of the Financial News is available, as usual, and shows that net profit for the last financial period declined from £14,215 to £11,828. A larger sum, however, was brought in, and the reserve received £17,058, against nothing for 1923. The preference dividend absorbed £10,538, against £7,968, and although it is not definitely stated the difference is probably accounted for by the fact that it was paid free of tax in respect of 1924, whereas on the preceding occasion it was distributed less tax.

Over the border George Outram and Co., Limited, controlling the influential Scottish paper, the *Glasgow Herald*, brought its net profits up from £190,963 to £196,642, and the dividend was raised from 20 to 25 per cent., absorbing £113,178, against £89,749, while £80,500 compared with £80,858 was reserved. The balance of £30,755 was carried forward, in contrast with £36,986 brought in. A total net profit of £17,011, against £16,462, was made by the *Irish Times*. In this case, also, the dividend was increased, shareholders receiving 25, against 20, per cent. This distribution absorbed £17,500, in contrast with £14,000, and while the reserve allocation was reduced from £3,000 to £2,000, the amount carried forward rose from £9,213 to £10,699.

PROCEEDINGS OF THE COAL COMMISSION.

A summary of the main points of the previous evidence will be found in our issues of October 31st, November 7th, 14th, 21st, 28th, December 5th and 12th, 1925.

The Coal Commission has continued its public sittings at Westminster Hall during the week. On Friday, December 11th, joint evidence was given on behalf of the Chamber of Shipping of the United Kingdom and the Liverpool Steamship Owners' Association, which together represent some 19 million gross tons of shipping, as to the effect of coal prices on the export trade. The evidence stated that every reduction of 5s per ton in coal costs was equivalent

to a reduction of £2,400 in the cost of building a cargo boat of 7,500 tons. Fuel costs averaged about 25 per cent. of the total voyage expenses of "tramp" ships, and as much as 28 per cent. of those of liners. Of running expenses at sea, excluding port disbursements, fuel costs averaged about 50 per cent. Coal exports in 1924 were only 8.4 per cent. in value of total exports, but nearly 82 per cent. in weight. The shipowner was therefore vitally interested in the maintenance of the trade, particularly in view of the growth of competitive supplies such as those of Germany (in German and Baltic ports), South Africa, Australia, Japan (in the Near East), and even Turkey (at Constantinople and the Black Sea ports). Criticism was expressed of the present arrangements for coal shipment at British ports, especially those of South Wales. High charges for the trimming of coal in holds or bunkers, and rigidity in the number of hours during which loading took place were mentioned as typical examples. It was stated, further, that while the average time required to load a steamer of 8,000 tons deadweight in Cardiff, the Tyne, or the Humber was something like 8 to 10 days, a similar vessel could be loaded at certain Continental ports in three days. As regards the competition of oil, the Associations believed that large oil-burning passenger liners were not likely to revert to coal, but that a large number of vessels might be expected to alternate between oil and coal according to the relative cost of each.

On Tuesday, December 15th, the Duke of Northumberland gave evidence on behalf of the Royalty Owners of England and Wales, showing that the annual amount of royalties and wayleaves was about £6 millions gross, of which £200,000 was for wayleaves. The average royalty was about 5d or 6d per ton, although the figure varied between 2d and 2½d and the exceptional amount of 9d per ton. The net income of mineral owners was considerably reduced by the incidence of income-tax, super-tax, mineral rights, and, in Scotland, local rates. The evidence dealt at length with the question of nationalisation which, it was held, would be prejudicial to the development, elasticity and general public policy of the industry.

On Wednesday, Sir R. Lewis Wedgwood, chief general manager of the London and North-Eastern Railway, stated that the railways in Great Britain carried in 1924 225 million tons of coal, coke, and patent fuel—about 84 per cent. of the total output. In 1911 the railways consumed 13,692,000 tons at an average cost of 8s 10½d; in 1913, 14,529,000 tons at an average cost of 11s 4½d; in 1923, 14,301,000 tons at 20s 5½d; and in 1924, 14,670,000 tons at 21s 6½d. Out of the total coal tonnage of 1924 (excluding free-hauled traffic) approximately 69 per cent. was carried in privately owned and 31 per cent. in railway-owned wagons. In 1923 the average railway rate was 18.18 per cent. of the average pit-head price of coal; in 1924, 15.35 per cent.; and in 1925, 17.45 per cent., the rate being identical in 1924 and 1925, while the pit-head price declined from 19s 8d to 17s 7d. With the present volume of traffic, railway rates were too low to bring an adequate return to the principal companies. If all wagons were railway-owned, considerable economies might be effected in sorting and making up trains, exchange operations at junctions, sorting and classification at distributing yards; while further savings would accrue through better use of stock and reduction in empty haulage, the total saving being put at £600,000 to £1,000,000 per annum. Railway electrification was at present confined to suburban lines. Its application to main lines would involve a reduction of coal consumption, but the cost of power and plant erection would need to be greatly reduced before such electrification could be considered a commercial proposition for the companies.

On Thursday, evidence was given by Lord Gainford on behalf of the National Association of Coke and By-Product Plant Owners, representing 80 per cent. of the metallurgical coke and by-product production in Great Britain. Lord Gainford stated that whereas in the early days of the industry plants were erected near collieries, since 1900 the tendency had been towards their working in connection with iron and steel plants. Figures were put forward (representing 87 per cent. of the total production) showing that the total coal carbonised by by-

product plants in 1924 was 18,862,492 tons. Of the 11,093,094 tons of metallurgical coke made in 1924 4,590,834 tons came from ovens owned by colliery companies, 778,444 from ovens owned by iron and steel firms, 4,222,941 from ovens owned by the two industries jointly, and 1,500,875 tons from independent plants. The quantity of coal required to produce one ton of coke and its by-products averaged 30 cwts. The following yields of by-products could be described as a conservative average:—Tar, 3 per cent. of coal carbonised; sulphate of ammonia, 1 per cent.; crude benzol, 2 gallons. At these rates the total capacity of present plant was:—Tar, 630,000 tons; sulphate of ammonia, 210,000 tons; crude benzol, 42 million gallons. The industry had found that high-temperature carbonisation was the only commercially successful method in the present state of technical knowledge. Considerable research work was, however, being conducted by the various works laboratories. The National Association was strongly of the opinion that amalgamation of the coke and by-product industries with the mining industry would be prejudicial to both. The coke industry at present was depressed as a result of conditions in the iron and steel trades, but those concerned would not welcome any suggestion that their books should be examined by an independent accountant, since they contended that the fortunes of their industry were entirely separate from those of the coal industry. After hearing evidence from Miss Eleanor Rathbone, accompanied by Lord Balfour of Burleigh, on behalf of the Family Endowment Society, the Commission adjourned.

Notes of the Week.

The Mosul Decision.—In a later column a correspondent at Geneva discusses the proceedings of the League Council on the Mosul question, and forecasts the decision, which has been promulgated since he wrote, and has caused rejoicing in Iraq, dismay in Turkey, and plentiful misgivings in this country. If there is ground for the belief held in some quarters that Great Britain is being committed for a quarter of a century to a troublesome and costly tutelage, we should share these misgivings to the full. But the preliminary statement made by the Prime Minister in the House of Commons on Thursday suggests that such a conclusion is not necessarily warranted. From this statement several points emerge. (1) The boundary decision depends on the assumption within six months of British responsibility for Iraq "for such further period as may be necessary to qualify Iraq for membership of the League, but not to exceed a maximum of twenty-five years in any case." (2) The Government believes the actual period will be much shorter. (3) "The assumption of this responsibility does not involve an undertaking to spend money, or to keep troops in Iraq, either for maintenance of internal order or for its defence against external aggression, but merely to continue our co-operation and advice in maintaining a stable system of Government." (4) There can be no definite commitment without Parliamentary sanction. The whole question is to be debated in the House of Commons on Monday when both the House and the country will expect a very much fuller and clearer explanation of the exact meaning of the obligation which the Colonial Secretary has, subject to Parliament's approval, promised that Britain will undertake.

The French Crisis.—To keep in the saddle as French Minister of Finance evidently requires horsemanship of no mean order. M. Loucheur only managed to retain his seat for 18 days, and the sixth Finance Minister of the year is now in office in the person of M. Doumer. The appointment of M. Caillaux was a courageous attempt to utilise France's best technician, in spite of the political challenge which it implied. M. de Monzie never functioned. M. Painlevé merely attempted to carry the remnants of M. Caillaux's programme. M. Loucheur was an effort to see what could be done by versatility and political adroitness. M. Doumer, who was Finance Minister in the nineties and again in 1921, is a "sound," unexciting appointment, but one which inspires very little confidence

that the situation will be dealt with in a big way. It almost seems as though France were endeavouring by the method of trial and error to find the obscure but predestined financial Messiah, who will deliver her from her afflictions. Difficulties have already begun to gather round the head of the comparatively harmless M. Doumer almost before the ink is dry on his appointment. A month ago he was proposing, as one of the chief means of balancing the Budget, that the turnover tax should be doubled—a device which has little to be said for it in economic theory, but one which might be a very valuable resource in the present emergency. But he has already agreed to drop so unpopular a remedy on pressure from other members of the Cabinet. This is not a promising beginning; but it is possible that a minister who is open to persuasion, and approaches his task in the light of the growing opinion in favour of a really national effort may have the courage to call together a truly representative body, and make it responsible for formulating a long-term programme which would rally general opinion behind it. M. Loucheur's fall is not a good sign. In his brief term of office he at least went some way towards showing France the size of the problem she has to face, and it seems that France did not like the look of the picture. But when it came to remedies he completely failed to carry any strong body of opinion in the Finance Commission of the Chamber which turned his proposals down inconspicuously. We know once more what France will not do. The world is still waiting to see what she will do.

Safeguarding.—The Safeguarding of Industries (Customs Duties) Bill has passed into law, and three small industries, selected by the most haphazard methods, have received a high measure of protection. We have filled so many columns of the *Economist* with our views on this miserable affair that we do not propose to weary our readers by reviewing the third reading debate in the House of Commons, in the course of which the Free Trade case was well sustained by Mr Runciman and Sir Alfred Mond, while in the most notable speech on the Government side Mr MacNeill, with his argument that trade unionism had knocked the bottom out of the Free Trade case, presented Free Traders with a new and promising target on which to train their guns. The change in procedure, by which a Safeguarding Bill was substituted for a Finance Bill, had the merit of giving the House of Lords an opportunity of debating the proposals. This was taken full advantage of by Lord Oxford, who described the Bill as "a pinch of incense thrown upon the altar at which the Government were debarred from worshipping for the moment," and by Lord Haldane, who saw in the Bill "a pill to cure a hypothetical earthquake." Let us hope that the public ventilation during the last few weeks of the imbecilities of the safeguarding procedure will have done something towards stemming the tide of piecemeal protection. It has evoked, we are glad to see, a protest in the form of a petition to the House of Commons, supported by an imposing list of manufacturers and traders in Lancashire and Yorkshire. In demanding that further applications for protection should be rejected, this document says:—

Your petitioners wish to point out that the effect of duties must be to raise prices, and that this will not only raise the cost of living at a time when it is already too high, but will also add to the cost of articles which it is essential for us to sell abroad in competition with world prices. Further, as has already been the imposition of similar duties will destroy our re-export trade, which gives employment to shipping and transport workers, and our position as the financial centre of the world is also increasingly jeopardised by every successive new restraint on the free course of the exchange of commodities.

Meanwhile, a Safeguarding Committee has refused to recommend the protective duty applied for by the makers of brooms and brushes. We cannot help feeling a little sorry for them, for, weak though their case was, it was little weaker than that of other industries whose appeals have succeeded. The Report of this Committee (Cmd. 2549, price 3d) presents points of interest. The Committee finds that on the questions 2 and 3 as posed by the famous White Paper, the case of the applicants is not made out. But the point that seems to have weighed most with the Committee is that the application included

tooth-brushes, and that national interests demanded that the use of tooth-brushes should not be discouraged. The competition of cheap Japanese tooth-brushes is substantial. "We are unable, however," say the Committee, "to recommend the imposition of a duty even on tooth-brushes, both because witnesses have represented to us that a raising of the price"—so duties do raise prices—"would result in diminished use among the poorest classes of the population, who purchase the cheap Japanese brush; and because no practicable rate of duty (even the 75 per cent. asked for by the applicants) would bridge the gap between this brush and the lowest-priced (but superior) British brush." This passage suggests new subjects for fiscal treatises—Tariffs and Teeth, or Pyorrhœa and Protection.

Mr Feetham's Service to Ireland.—It would be unfair and regrettable if the general relief over the Irish settlement were to be allowed to obscure the signal service rendered by the Boundary Commission, and in particular by Mr Justice Feetham, who with great public spirit came from South Africa to undertake a most arduous and intricate task. Events have so turned out that the world is not to see the report which embodies the fruits of his labour. His acquiescence in the decision to withhold the report was obviously called for by the public interest, but it entailed self-sacrifice, and we trust that full attention will be given to the long statement which, with the approval of the Governments concerned, he has issued to the Press this week. From it some idea will be gained of the thoroughness, impartiality, and sound judgment which he brought to bear upon the thorny problems with which he was faced. Mr Justice Feetham will, we hope, be content to leave judgment on his work to the historian of the future, and meanwhile feel that his labours, so far from being wasted, have contributed in a major degree to a settlement more comprehensive and pregnant with hope for Ireland as a whole than any Boundary decision could have been.

Employment in November.—There was another tangible improvement in employment during November. According to the *Ministry of Labour Gazette*, among the 11.9 million workpeople insured under the Unemployment Insurance Acts of Great Britain and Northern Ireland, the percentage unemployed at November 23, 1925, was 11.0, as compared with 11.4 at October 26, 1925, and 10.8 at the end of November, 1924. The total number of registered unemployed at the end of November was approximately 1,227,000, which shows a decrease of 68,000 on the total number registered at the end of the previous month. Amongst members of trade unions the percentage unemployed was 11.0 at the end of November, 1925, as compared with 11.3 at the end of October, 1925. The following table gives the monthly trade union figures for several years past:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1919.	1920.	1921.	1922.	1923.	1924.	1925.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	2.4	2.9	6.9	16.8	13.7	8.9	9.0

December ..	2.6	3.2	6.0	16.5	14.0	9.7	9.2	..

* Excluding coal miners.

The fall in unemployment in November was chiefly due to a further slight improvement in the coal mining industry. On the whole, employment was good with bricklayers and skilled operatives in the building trades. It was also fairly well maintained in the furnishing and printing trades, in certain branches of metal trades, and with coach builders and mill sawyers. It was, however, still slack in the coal mining industry, and remained bad in the iron mining, iron and steel, shipbuilding, and marine engineering industries.

Cost of Living.—According to the index number of the *Ministry of Labour Gazette*, there was a slight rise in the cost of living during November, the percentage above the level of July, 1914, being 77, as compared with 76 during October last. Monthly movements and comparisons with previous years are given in the following table:—

AVERAGE PERCENTAGE INCREASE over JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)

1st Day of	1918.	1919.	1920.	1921.	1922.	1923.	1924.	1925.
Jan.	85.90	120	125	165	92	78	77	80
Feb.	90	120	130	151	88	77	79	79
March ..	90	115	130	141	86	76	78	79
April	90.95	110	132	133	82	74	73	75
May ..	95.100	105	141	128	81	70	71	73
June ..	100	105	150	119	80	69	69	72
July ..	100.105	105.110	152	119	84	69	70	73
Aug.	110	115	155	122	81	71	71	73
Sept.	110	115	161	120	79	73	72	74
Oct.	115.120	120	164	110	78	75	76	76
Nov.	120.125	125	176	103	80	75	80	76
Dec.	120	125	169	99	80	77	81	77

For food alone there was also a slight increase, the figure for November being 74 per cent., as compared with 72 per cent. for the previous month. The rise is mainly due to increases in the prices of eggs, bread and flour.

Iron, Steel, and Coal Output.—According to the figures just issued by the National Federation of Iron and Steel Manufacturers, production of pig-iron in November amounted to 494,100 tons and of steel ingots and castings to 653,800 tons. These figures reveal in each case a slight improvement over October, and show that the improvement which started in September continues. The number of furnaces active increased by five during the month. Exports of iron and steel, which had averaged 300,000 tons per month in the first nine months of the year, and had risen to 368,800 tons in October, fell to 322,200 tons in November, the increase in the exports of pig-iron from 54,000 tons in October to 60,000 tons in November being more than counterbalanced by the decline in the exports of galvanised sheets, tinplates, and rails. Imports at 212,200 tons showed little deviation from the imports of previous months. Imports on the average are being received at over 20 per cent. above the pre-war rate, and although the increase is greatest in semi-finished products, there is also an increase in most of the finished products. Nearly half of the imports continue to come from Belgium, but it is hoped that competition from this quarter will be mitigated now that Belgium has met with a measure of success in stabilising her exchange, but French competition will continue to be severe while the franc continues to depreciate. Competition from Germany no longer takes place on the depreciated mark, but is mainly the result of Germany's advantages in longer hours and lower wages, combined with the scheme of bounties, met by the trade itself, on exports. The output of coal in the four weeks ending November 28th averaged 4,929,400 tons per week, compared with an average of 4,735,800 tons in October. The output for the last week in November of 5,174,700 tons is the highest recorded since April. Exports amounted to 4,337,800 tons, compared with 4,382,500 tons in October and 4,758,800 tons in November, 1924. Of the total, 769,100 tons, went to France, 570,400 tons to Italy, 487,000 tons to Germany, 302,500 tons to Sweden, and 269,300 tons to Denmark.

Cotton Trade Depression.—The depression in the cotton industry, especially in the section devoted to the production of American yarns, is becoming more serious, writes our Manchester correspondent. All kinds of suggestions are being made for the alleviation of the unfortunate state of affairs. On Tuesday of this week the short-time committee of the Master Spinners' Federation held a meeting, which lasted two hours, and it is understood that various proposals were considered. At the close it was officially announced that there was only one thing possible for spinners to do, and that was to give rigid adherence to the short-time scheme, which is to run the mills only 39½ hours per week, instead of the full hours of 48. On comparing the price of raw cotton and yarn quotations six months ago with those of to-day the important loss of

ground experienced by spinners is revealed. At the moment the utmost difficulty is being experienced in clearing week by week the restricted output. Owing to finance, numerous mills cannot afford to make to stock, and are compelled to sell at the best prices possible. The disclosures relating to the failure of the Belgrave group of mills have caused increased nervousness, with fears of other companies being compelled to go into liquidation. The mill share market is being affected, and now and again brokers report considerable selling pressure. Leading authorities are unable to suggest any solution, and the only hope, now that prices are lower than for four years back, is that the volume of trade in the near future will show some expansion.

How Tariffs Defeat Themselves.—A correspondent writes:—An illustration of how tariffs defeat themselves is found in the last report of the Saar Governing Commission presented to the League of Nations. The Saar Territory is a highly industrialised area which formerly exchanged products with Lorraine, which it adjoins, and the rest of Germany. This interchange was not seriously interfered with until France, in January last, extended her tariff wall to the frontier with Germany, as provided for in the Peace treaty, thereby including the Saar in the French customs régime. The result was detrimental to the trade of the Saar and Germany and to Lorraine. The Saar was cut off from its markets, and France did not welcome the competition of Saar goods. Disastrous consequences threatened, and the French and German Governments entered into a treaty to undo the mischief which was signed on July 11th, and afterwards ratified by the Governments of the two countries. The preamble of the agreement says that the Government "recognising the advisability of mitigating and adapting the Customs Union which the Treaty of Versailles has established between France and the Territory of the Saar Basin, in order to allow the industry of the Saar to obtain the necessary supplies of raw material and the plant which it has hitherto received from Germany, and, as a counterpart, to retain certain markets which it has hitherto enjoyed in that country," have agreed to the following provisions:—The provision permits the importation into the respective countries of certain specified articles duty free or at a reduced minimum rate of 50 per cent. The application of the Agreement, however, is subject to an arrangement between the metallurgical industries of France and the Saar Territory under certain conditions to which both Governments can give their approval. As such an arrangement has not been reached customs duties are not being paid in the meantime, as the application of the existing tariffs "would seriously hamper the economic life of the territory." The industries of the Saar and of Lorraine, formerly worked in combination, are now in direct competition. French capitalists, encouraged by the French President of the Governing Commission, acquired a 60 per cent. interest in the majority of the Saar metallurgical works. The investment has not turned out well and several large works remain in German control. The French policy has defeated itself in two respects.

Turkey and Her Debt Obligation.—Sir Adam Block, under date of October 19, 1925, issues the report of the Council of Administration of the Ottoman Public Debt for the year ended March, 1925. On the first page Sir Adam describes the situation as "frankly most unsatisfactory." He proceeds:—"The Council has been deprived of all its revenues, and neither Turkey nor the Detached States, with the exception of Palestine, have paid the annuities which they are called upon to pay by the Treaty from the date of its ratification, August 6, 1924. Nor have any of the States as yet furnished the guarantees required by the Treaty, although the French Government on behalf of Syria and the Lebanon has notified to the Debt Council that it is proposed to give as guarantee the receipts of the Customs." Sir Adam adds, however, that "negotiations are proceeding with Italy regarding the guarantees for the contributive part of the Aegean Islands (Dodecanese), and with Greece and Palestine regarding the guarantees for their shares." He observes that "the other States

have made no proposals, whilst Turkey has made no payment, and has, as stated above, deprived the bondholders of the revenues already ceded by the Decree of Moharrem, without making any proposal to replace them by others." Negotiations have from time to time taken place with Turkey with a view to the resumption of loan services, and Sir Adam reports: "I have delayed the issue of these Reports in the hope that it would be possible to announce the conclusion of some satisfactory temporary arrangement with Turkey. I regret to have to state that little progress has been made." It is pointed out that "now that the repartition of the capital of the debt has been fixed by the commission constituted under Article 49 of the Treaty of Lausanne, fresh steps will be taken to induce Turkey and the Detached States to carry out their obligations, (1) by providing acceptable guarantees, and (2) by the regular payment of their contributive parts." Hope may be a poor consolation, but we refuse to believe that a way will not be found to persuade our friend the Turk that an honourable and timely settlement will not in the long run prove a good business proposition. It may be of only academic interest, but we would remind our readers that the 4 per cent. Turkish Unified Debt during the whole of the year 1913 only fluctuated between 88½ and 81½, and the 4 per cent. of 1902 between 88½ and 84½. British Consols in the same year fluctuated between 75½ and 71.

A New Dynasty in Persia.—The conventional Western view of Oriental politics is that they consist of nothing but the monotonous rise and fall of dynasties—the founder of each new dynasty springing from the loins of the people to replace the degenerate descendant, in the third or fourth generation, of the popular founder of the last dynasty—and so on, *ad infinitum*. On such a view there is nothing new, for the history of Persia or of the Islamic world, in the elevation of Riza Khan Pahlawi to be king of kings, and his heirs after him, by 257 votes to 3 of the Constituent Assembly. It may be noted, however, that election by an elective assembly is a novel method of consecration for an Oriental monarch, and it is more profitable to compare Riza Khan, not with previous founders of Persian dynasties like Nadir Shah or Agha Muhammad Khan Kajar, but with his contemporaries, Mustafa Kemal Pasha, in Turkey, and Amir 'Abdu'l-Karim in the Rif. All three leaders have important features in common. They are Nationalists, standing for national unity and effective national government within, and for the independence of their country in its international relations; and all of them, while setting their faces against the ascendancy of Western Powers, are familiar with, and sympathetic towards, the genius of Western civilisation, and are anxious to bring their own countries into line with Western Society. Riza Shah had his training in the Kajar Dynasty's Cossack brigade, which was organised before the Revolution of 1917 by Russian officers; and thus, albeit at second hand, he mastered something of how near Persia came, between 1907 and 1917, to losing her independence. The self-elimination of the Russians from Persia gave Riza Khan's military ability and experience free play, and he came to the front on February 21, 1921, when, by a *coup d'état*, he overthrew a ministry at Tehran, which was intending to secure ratification of the Anglo-Persian Agreement of August, 1919. The new ministry, which came into power under his *agis*, denounced the Anglo-Persian Agreement, on February 26, 1921, and on the same date, at Moscow, a Russo-Persian treaty was signed, in which the Soviet Government renounced the various liens over Persian independence, however, while friendly to Russia, was not her tool. His he had no quarrel with Great Britain so long as she gave up ambitions with which complete Persian independence would be incompatible. Riza Khan became War Minister and Prime Minister, on October 28, 1923. His two great port of Dr. Millspaugh and the other American experts who are reorganising Persian finances, and his success in

bringing to heel turbulent tribes and disaffected provincial magnates. The restoration of the Central Government's authority was sealed this year by the arrest of the Sheikh of Muhammarrāh—a practically independent potentate, who had had his own treaty relations with the British Empire. In March, 1924, Riza Khan attempted to introduce a Republic, but desisted in face of conservative opposition. His election to the kingship will enable him, under traditional forms, to carry forward the comprehensive reforms out of which a new Persia is taking shape.

Conditions in Hongkong.—The resumption of normal trade in North and Central China, and the proceedings of the Tariff Conference, writes our Hongkong correspondent, appear to have diverted attention from the desperate plight of this British colony. Whatever the outcome of the Conference may be, it is quite evident that the position in South China will be unaffected by any agreement made by the Peking Government in the name of the Republic, and in the meantime British trade in this territory is slowly being strangled. The trade returns for the quarter ending September 30th only partially reflect the effect of the stoppage, but a comparison with the corresponding periods of the two previous years gives some idea of a falling off which is steadily continuing:—

	Quarter Ending September 30th.		
	1923.	1924.	1925.
Imports.....	£ 15,114,449	£ 20,094,135	£ 11,122,880
Exports.....	£ 15,850,342	£ 16,241,848	£ 7,573,826

The situation in Canton is frankly puzzling, and no one can predict what developments are in store. The boycott is still being maintained, and various efforts to end it have so far failed. The arrival of our new Governor, Mr Cecil Clementi, has given a further impetus to the movement towards a settlement, for the Chinese community here has a great regard for Mr Clementi, whose knowledge of the Cantonese people and their language is profound. The obstacle to any immediate resumption of trade appears to be the Canton Strike Committee, which has accumulated funds to the extent of \$15 lacs (about £175,000), and has practically usurped the authority of the Canton Government. The latter is on the horns of a dilemma, for while it is not in a position to suppress the Strike Committee, it is quite well aware that the continuation of the boycott is rapidly sapping its strength. The committee, composed of Communist labour leaders, derives its funds from fees paid by non-British concerns for permission to pass goods through the boycott barrier. Not only does the Committee benefit from this illicit taxation, but hordes of strike pickets also reap a harvest from individual extortions. The Japanese, who were originally included with the British in the embargo decreed by the Canton Government, subsequently bought themselves out on payment of a large indemnity to the strike funds. Whether they have yet recouped themselves is a matter of conjecture, but they are now controlling most of the present trade between Canton and the outside world, and the port of Keelung in Formosa is becoming an important entrepôt for South China. Other non-British nationals are also participating in the trade, and although much "squeeze" has to be paid, the insistent demand for certain commodities enables the levy to be passed on to the ultimate consumer. Manchester piece-goods in limited quantities are finding their way into the interior, but they are first stripped of their "Chop" tickets, and all traces of British origin removed. Such methods of trading are causing great hardship to the consumer, and for this reason are probably not approved by the Russian Soviet officials in Canton. These officials, some 30 or 40 in number, are attached to various departments of the Canton Government, but their relationship with the Strike Committee is by no means clear. They openly boast that their aim is the destruction of Hongkong as a commercial centre, but they can hardly have contemplated the achievement of this end through the instrumentality of a body of men who have enriched themselves at the expense of the proletariat. Commercial opinion here realises that the Home Government is embarrassed by domestic and financial troubles, but the importance of keeping open a valuable field for home manufactures outweighs such con-

siderations. Sir James Jamieson, it is understood, has made strong representations to the Home Government, but as in the case of the appeals from this colony, the only reply vouchsafed is to the effect that no steps can be taken until the Tariff Conference has ended its labours. The provision of a loan of £3,000,000 to assist local trade certainly inspired confidence amongst the Chinese, but it is now realised that only a small proportion of this sum will be required, for with trade rapidly declining, there is no means of employing the money. Thus we are left in a hopeless position, with patience nearing exhaustion, and no relief in sight.

Prosperity in Colombia.—A correspondent writes:—Before the close of the current year it is expected that the small balance of Treasury notes and Treasury bonds still outstanding will have been called in by the Treasury. Inasmuch as the various Colombian bank issues have already been redeemed, while all notes still outstanding will be in by the middle of 1926 (in accordance with the regulations governing the banks of issue, the National Bank and the Banking Commission), the financial condition of Colombia may be regarded as eminently satisfactory. This would appear to be even more strikingly apparent in view of the condition of the Treasury Debt, which, standing at the beginning of the present Administration at 10,400,000 pesos, has now been cancelled entirely. Less than three years ago, that is to say at the period when the Banco de la República was first established, the money in circulation throughout this progressive South American State consisted of approximately 3,000,000 pesos in minted gold; 12,000,000 pesos in silver and nickel, 1,000,000 pesos in paper money, 4,000,000 pesos in Treasury notes, 6,000,000 pesos in Treasury bonds, 1,000,000 pesos in various bank emissions, and 4,500,000 pesos in banking notes. To-day, all these varying types of money have been replaced by national bank bills, exchangeable on presentation for minted gold. Payments are made daily, so that there exists no difference between a bank cheque and an order for payment. At the end of the present year the Treasury will find itself with 12,000,000 pesos in cash; its internal notes, which—at a period not very distant—were discounted at 42 per cent., now stand at a small premium. Much in the same fashion have the modest external debts improved, payments being made with commendable promptitude. Whereas at one time the Consolidated External Debt, of 1896, stood at £2,687,800, it has been reduced by amortisation to little more than £980,000. Within the course of the next five years this portion of the country's foreign indebtedness should be entirely extinguished. At no period in Colombia's history has its economic position been more satisfactory than it is to-day.

The Reaction in Rubber Shares.—Various ingenious theories have been proposed as likely to cause a check to the rubber boom. Some hinted at a probable influx of wild rubber from the Amazonian forests; others made play with the possibility of reclaimed rubber taking the place of the original product; others suggested that rubber trees might prove to be like gold mines—capable of becoming worked out. What happened this week, however, was a fall of twopence per lb in raw rubber. Business in the share market fell away in the dramatic fashion that is common to the aftermath of every Stock Exchange boom. New issues continued to be promptly taken, but it is doubtful whether there will be any violent rush to subscribe for shares in those concerns that have yet to appear, unless the attractions are manifest and clearly defined. The change in conditions was forthwith called a slump by those unacquainted with the meaning of that term. Stock Exchange dealers, glad, no doubt, to fill up the gaps in their books, were not so glad to be called upon to take shares for which they knew of no immediate home. Therefore, some rubber shares, more particularly of the higher-priced varieties, became difficult of negotiation. The florin shares, and those of the £1 denomination, in which a free market prevails—and there are many such—gave way sharply in price. The fervour of the fierce flame of buying has burnt itself out, and directly the fire

died down, a thousand purchasers elected to sell shares upon which they could see, on paper, very handsome profits. It has been a real reaction, but the fall will do as much good as it has aroused regret. So far as the commodity market is concerned, the prospect remains cheerful. Rubber can come down a lot more before this will affect the splendid profits which most of the good companies will show for the current year. Contracts have been made at satisfactory prices for several years ahead. The better-class newcomers are likely to do handsomely for their subscribers. But the speculator's day is, perhaps, over for the time being. The market looks as though it would move softly for a while. What the New Year will bring remains to be seen. The dividend announcements of three months hence are practically certain to disclose remarkable figures. Such considerations bring little consolation, it may be, to the gambler for differences as the "buyer for capital appreciation" dislikes to be called, but they deserve to be weighed by the holder of shares in sound companies.

Tin Fluctuations.—The tin market has fluctuated abnormally this week. At first prices fell to £273 10s for cash and £270 15s for forward delivery of standard tin, on depressing sales and heavy liquidation, as well as "hedging" operations on the part of certain producers. A strong feeling, however, became manifest on Thursday, and prices were run up £6 10s to £7 over the lowest figures touched on the previous day. Cash tin was, indeed, lifted to close on £281 and forward delivery to £277 15s. The market should be all the better for the recent liquidation, although the trade demand is quieter as usual over the end of the year. Technically the position seems stronger, and it looks as though a good deal of tin will eventually have to be repurchased in order to square up contracts on the short side. Home buying has been restricted, and America held back orders on the fall, but latterly bought again moderately, while a better demand from consumers there was reported. Eastern cable advices show that the total Straits shipments for this month are not expected to exceed 6,000 tons, so that, judging by the forecasts of very good American deliveries, the statistical outlook is more promising.

Samuel Allsopp and Sons.—The report of Samuel Allsopp and Sons for the year ended September 30th last shows a further increase in profits. This enabled the ordinary dividend to be kept at 5½ per cent., while the participating preference shareholders once more received 7½ per cent., which is 2½ per cent. more than their fixed rate. The following table shows how the undertaking has fared over a period of years:—

	1914-15.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
Trading profit	180,717	346,918	261,126	238,927	263,774	273,748	281,961
Debit interest, &c.	71,201	102,365	101,160	104,355	91,783	104,838	104,013
Red. of Certs. of Rights	45,917	102,365	114,916	92,140	77,780	71,850	73,468

Preference dividend ..	..	51,871	..	..	53,913	20,000	25,000
Ordinary dividend ..	..	59,413	47,107	47,107	53,913	56,564	56,564
Carried forward	16,647	19,661	20,013	19,979	19,954	19,324	19,324

The trading profit went up from £273,748 to £281,961, while the net profit works out at £75,939, in contrast with £73,468 in the previous year. With the sum of £19,324 brought in, there was a distributable balance of £121,333, compared with £114,767. By an allocation of £25,000, in comparison with £20,000 in 1923-24, the reserve fund was increased to £265,000, and after payment of dividends the balance remaining to be carried forward was £19,324, or the same as a year ago. The balance-sheet shows that trade and other investments have gone up from £318,816 to £609,796, while, on the other hand, the holding of cash is £151,959 against £361,771. Apparently, too, the holding of Government securities has undergone some alteration, since this item has contracted from £133,862 to £29,136, and now consists solely of £47,200 of 3½ per cent. Conversion Loan. Goodwill still

stands at £700,000, and it is a pity that the directors have not yet taken advantage of their prosperity to reduce this item. The present price of the ordinary £1 shares is 1½, and on the basis of the 5½ per cent. dividend they yield £5 17s per cent. The return on the participating preference is £8 2s 3d per cent., the price of the stock being 92½.

Camp Bird.—Our mining correspondent writes:—With the annual report of this undertaking are issued particulars of the capital reorganisation unofficially foreshadowed several weeks ago. The profit and loss account to June 30th shows a small debit. Investments, less share reserve account, figure at £808,500—still considerably in excess of their market valuation; the old property, which has been worked out, stands for £825,400; and the preference dividend is in arrears since June, 1920. To meet this position it is proposed to cut down the issued ordinary capital by nine-tenths, and to subdivide the remaining ordinary shares; to issue about a million of the said 2s shares at 3s premium (roughly the current market price), and out of the proceeds to pay £150,000 of the arrears on the preference shares, the balance of £100,000 to be provided in the shape of 7 per cent. income certificates redeemable by equal annual instalments spread over a period of five years. As consideration for giving up the right to a remote contingent participation in profits, the holders of the preference shares are to receive an extra ½ per cent. interest. With the decks cleared in this manner, the Camp Bird company will be able to make distributions to its shareholders out of the dividends it expects to receive from its interests in the Santa Gertrudis Company and the Mexican Corporation—732,000 and 247,300 shares respectively.

Santa Gertrudis.—During the past year a noteworthy change has come over the position on the mining as well as the financial side. The original mine is now completely worked out. On the whole, developments in the properties since acquired have proved satisfactory. Work in the Malinche failed to give the results which at one time seemed likely; on the other hand, a great ore shoot has been disclosed in the Dos Carlos—an area adjoining the Santa Gertrudis. The ore reserves in the several mines are now computed at over 1½ million tons, containing a recoverable quantity of 86,100 ozs gold and 21½ million ozs silver. The profit derived from the remaining Santa Gertrudis ore did not come to much, but the surplus from the other group totalled \$895,250, as against \$207,400. From the operating concern the Santa Gertrudis Company received £45,000 dividend; all but a few thousands of this were absorbed by interest and other expenses in connection with the 8 per cent. notes. As mentioned in our issue of October 31st, the balance of these is to be retired out of a new emission of £200,000, bearing only 7 per cent. interest, but carrying the right of conversion into shares. Consequent upon these arrangements, and upon the expanding profits, the company is due—according to the official forecast—to enter the dividend list early next year.

Mexican Corporation.—From a financial standpoint last year's results fell below those of 1923-24. An increased tonnage of ore was treated; the yield of silver expanded and fetched a higher average price; but the yield of gold declined. The proportion of profit accruing to the corporation totalled \$601,000, as against \$706,600. The great bulk of this has been applied to reserve for amortisation and capital expenditure—permitting the purchase and cancellation of a portion of the 8 per cent. notes. The balance now outstanding amounts to £190,000. Like the associated Santa Gertrudis undertaking, the Corporation is making a fresh issue of £200,000 7 per cent. notes, convertible into shares, out of the proceeds of which the existing bonds will be repaid. The additional disclosures of low-grade cyaniding ores were satisfactory; the most interesting development feature was the discovery of a lode ore reserves show an increase of fully half a million tons, the average value being maintained at 0.17 ozs gold and 5.72 ozs silver. In addition there are 104,700 tons of the

base metal ore above referred to. This year's receipts should be swollen by some revenue from the Teziutlan copper unit, where a flotation plant has commenced operations. Shareholders will doubtless note with satisfaction the good results which have attended the company's incursion into oil, a profit of £45,000 having been made. The investments are stated to be a greater value than the £76,400 at which they are entered in the balance-sheet.

Sulphide Corporation.—Of last year's greatly expanded revenue of £202,000, a large proportion was required for special appropriations, £60,000 being written off disused plant and £32,500 expenditure in connection with the fire at the Central mine, in addition to the £92,900 charged against reserve for contingencies. Still, a balance remained of £56,700, sufficient to provide 7½ per cent. on the preference shares. In respect of 1922-23, both classes of shares received 15 per cent., there were no distributions for 1923-24 owing to the fire. It would look as though the trouble is now virtually at an end. Except for a small tonnage extracted during re-opening operations, no ore was raised from the Central mine during the past financial session. "A substantial and increasing quantity," say the directors, is now being raised from the Southern Section of that property. The Junction mine has yielded better grade ore than before. Like several other Australasian undertakings, the Sulphide Corporation is extending what might be termed the industrial side of its business. Additional plant is being installed to meet the demand for sulphuric acid and superphosphate, of which an increased quantity was produced last year; while the capacity of the cement plant, which only commenced work in April last, is to be doubled. Altogether there is every indication that the shareholders may expect a return to a reasonable degree of prosperity.

THE London School of Economics announces a course of seven lectures on Tuesdays at 5 p.m., beginning January 12, 1926, on Adam Smith, to commemorate the 150 years that have elapsed since the publication of the "Wealth of Nations." The lectures will be delivered by Mr Edwin Cannan, Mr J. Bonar, Mr Morris Ginsberg, Mr T. E. Gregory, Mr H. J. Laski, Mr Hugh Dalton, and Mr F. W. Hirst.

Oversea Correspondence.

LEAGUE OF NATIONS. — COUNCIL MEETING — LOCARNO—DISARMAMENT—MOSUL—ECONOMIC CONFERENCE.

(FROM OUR CORRESPONDENT.)

GENEVA, Tuesday.

THE meeting of the League of Nations Council, which is concluded except for to-morrow's announcement of the Mosul decision, has covered a full and serious programme, for, in addition to the Mosul question, the Council has dealt finally with the Greco-Bulgarian incident, has set under way a vast armaments inquiry in preparation for an ultimate conference, has taken some preliminary measures for a preparatory committee for an economic conference, and has treated the question of the relaxation of control in Austria, and a variety of other matters.

A Locarno interest was once more introduced into the proceedings on the occasion of the deposit with the Secretariat of the original Locarno Agreements. Sir Austen Chamberlain made a formal pronouncement on the subject, and emphasised the increased authority and strength which they brought to the League. M. Briand, who was unable to attend the Council, sent a telegram in which he stated that France saw in the unceasing progress of the authority of the League and in the enlightened vigilant action of the Council the best guarantee against war. Most of the other members of the Council spoke in the same strain, and perhaps it may now be assumed that the

corporate celebration of Locarno will be allowed to end. It is now time to get on with the business of which Locarno was the starting-point.

The first step will be the admission to the League, probably in March, of Germany, and the promotion of the inquiry into the preliminaries necessary for an armaments conference. But those who imagine an easy armaments sequel to Locarno are certain to be disappointed. If the discussions during the last ten days on this subject have shown anything, it is that the road is going to be long and extremely difficult, for it is a subject which is going to be discussed in an atmosphere of hard reality, and not in a spirit of airy humanitarianism. They are going to take naval, military and air armaments together and not separately—a definite hint to Mr. Coolidge—and it will be difficult to get reasonable equivalents between naval and military forces. The French not only want this consideration to be borne in mind, but also an inquiry into the relative potential strength of States, which seems logical, but a basis upon which it is obviously impossible to make any practical progress. On such a footing it might be held that Germany, even in her present state, is the most powerful military State in Europe; in any event, potential strength is a matter upon which it is almost impossible to find an equivalent for disarmament purposes.

It is also to be recognised that a number of States, certainly including Italy, are not prepared to accept a definitely fixed inferior strength, and there are not a few which, so far from being prepared to reduce, consider that they are not yet strong enough. Amongst these are Spain and some South American States; this is a matter which concerns England, as in general it applies to naval rather than to land armaments. This view will have to be met before any general scheme becomes feasible, and it must not be forgotten that, in addition to this form of national pride, there is not unnaturally a certain reluctance to agree to a relative limitation of armaments by which the strongest remain the strongest and the weakest remain the weakest. However, roughly speaking, that is what limitation means at present, short of complete disarmament, and the present aspects of the problem are rather financial saving and prevention of competition. It seems likely that progress will probably have to be sought more by regional than by general agreement, the factors being so variable in different parts of the world.

However, there is enormous value in keeping the problem alive, for, putting the case at its lowest, the parrot is a useful bird. Meanwhile the essential factor of disarmament—namely, improved political relations, will have an opportunity of producing its natural effect, for reduction of armaments or disarmament will come through no artificial plan. The Council has appointed a well-organised committee with large powers of consultation, whose first meeting is to be held in February, and upon which the United States, Germany, and Russia are to be invited to sit, with a vast programme of study. Amongst the questions submitted are: Whether regional disarmament can be secured on a basis of regional security, or whether any project must be general; whether it is possible to limit the eventual war armaments of a country, or whether limitation must be confined to peace armaments only; to what factors limitation must be applied; what rules should be followed for comparing the armaments of one country with those of another; on what principles should be established the proportions between the armaments attributed to each country, taking account of the number of inhabitants, resources, geographical position, maritime communications,

railway communications, and character of frontiers; and the degree of security which in case of aggression might be provided by the dispositions of the League Covenant or other special engagements, &c. That certainly seems enough to go on with as a preliminary step.

The Greco-Bulgarian affair has been finally liquidated by the adoption of the Report of the Rumbold Commission with one or two very slight modifications. Greece is to pay an indemnity of about £45,000 within two months, and both sides have undertaken to adopt the measures proposed, both for the peaceful settlement of any frontier incident in the future, and for the settlement of any frontier matters which have caused bitterness between the two countries. This Greco-Bulgarian settlement is of significance not only in itself, but in the precedent which it has formed, for Sir Austen Chamberlain and the Council were very careful to give close consideration to this aspect of the matter, which Sir Austen has several times referred to as being part of the building up of the jurisprudence of the League.

As for Mosul, there seems no doubt that to-morrow the Council will give a unanimous decision allotting the vilayet to Iraq, conditionally upon the extension of the British mandate for 25 years, and probably with some recommendations of an economic and commercial kind. The Council has received little help from either side towards an agreed settlement. Great Britain has shown, at any rate, no public sign of any desire to negotiate so long as the matter is before the League, and Turkey has not only employed very unwise tactics from her point of view, but has behaved with such futility before the Council that there has been a remarkable change of attitude amongst those who in the early days had rather natural sympathies for the weaker as against the stronger Power. Her repudiation of her previous undertaking to accept the Council's decision, her silly effort to set up a private French legal opinion against the opinion of the world Court regarding the Council's powers, and the frightful record in the deportation of some thousands of Christians related in the report issued to-day by the League Commission, which went to the area under the Estonian General Laidoner, have lost her all sympathy amongst delegations and amongst the Press from all parts of the world here in Geneva. Their attitude before the Council and their refusal to give any proper collaboration to the Council committee made it difficult for the Council, in view of the report of the Mosul Commission, to come to any other decision than that which is now confidently expected. There have been some fairly authoritative indications that after the decision has been given the British Government will be ready to enter into negotiations with the Turks, but how far this will go it is difficult to say, for it is not to be anticipated that Great Britain will give the minimum satisfaction which Turkey wants, namely, the transfer, at least, of the town of Mosul to Turkish sovereignty. As for the alarms about Turkey resorting to arms, this, rightly or wrongly, is not taken seriously by those who are acquainted with the matter; it is pretty safe to say that if Turkey, contrary to expectation, did resort to war, Great Britain would be wise not to count upon much effective military support from any other Powers. British circles, however, seem to harbour no anxieties on this score.

There is no space to enter into other matters of importance before the Council, except to say that the Council has made arrangements for the formation of a preparatory committee for the general economic conference contemplated by the last Assembly. It is to consist of not more than 35 experts of one kind or another; it is to be organised on a wide basis, and its members are not to be Government representatives. The intention is to secure complete freedom of discussion, and the same principle is to be applied to the ultimate conference itself, which "is intended to organise a general consultation, in the course of which, as at the Financial Conference at Brussels, the various programmes and doctrines may be freely exposed without the freedom of discussion being restricted by any immediate necessity to transform the conclusions of the Conference into international engagements." A sub-committee of the Council has been appointed to ensure liaison between the Council and the Preparatory Committee.

UNITED STATES.—A MARKET RALLY—PRESIDENT'S MESSAGE—NEW REVENUE BILL.

(FROM OUR CORRESPONDENT.)

HAVING recovered their equilibrium, the securities markets staged a very fair rally. Strength in railroad shares has been marked, many of these reaching new high levels for the year. Oils also have behaved well, and in some instances have pushed ahead into new high ground. Even motor shares, which were savagely deflated during the reaction that followed the change in Federal Reserve policy, came back strongly. General Motors, which broke from a high of 149½ to 106, have sold above 121 on the rally. Chrysler, whose top was 253, and which reacted to below 180, sold yesterday for more than 225. The circumstances suggest that short selling during the reaction was larger than had been suspected, and that the magnitude of the preceding speculation for the rise had been exaggerated. If the latter is true, a precedent might be found in the events of last March, when there was much loose talk of tremendous speculative excesses, and when the course of a brief reaction showed that actually the speculative position was moderate.

In some degree, no doubt, the rally of the past week or so has been due to anticipations of the President's Message to Congress. Wall Street, being familiar with Mr Coolidge's character and principles, expected that the Message would be constructive in its bearing on the business situation. Publication of the Message confirmed this expectation. No one was surprised, of course, that Mr Coolidge reiterated his stand for economy in government. He laid down the principle that "the wealth of our country is not public wealth, but private wealth." He declared that "no right exists to levy on a dollar, or to order the expenditure of a dollar, of the money of the people, except for a necessary public purpose duly authorised by the Constitution." In emphasising the continued need for economy, the Message reads, "We still have an enormous debt of over \$20,000,000,000, on which the interest and sinking fund requirements are \$1,320,000,000. Our appropriations for the Pension Office and the Veterans' Bureau are \$600,000,000. The War and Navy Departments call for \$642,000,000. Other requirements, exclusive of the Post Office, which is virtually self-sustaining, brought the appropriations for the current year up to almost \$3,100,000,000. This shows an expenditure of close to \$30 for every inhabitant of our country. For the average family of five it means a tax, directly or indirectly paid, of about \$150 for national purposes alone. The local tax adds much more. These enormous expenditures ought not to be increased, but through every possible effort they ought to be reduced."

The President stands firmly for the early redemption of the war debt. Some \$6,000,000,000 of this debt, he points out, already has been extinguished. However, redemption so far has been hastened by certain extraordinary circumstances which now are ceasing to exist. Thus \$1,000,000,000 of the reduction in the war debt has been due to reduction in the size of the Government's cash balances, and no further progress may be made along this line. Over one and two-thirds billions of dollars of the reduction was made possible by the sale of surplus war materials, and operations of this kind are practically finished. "With these eliminated," the President points out, "the reduction of the debt has been only about \$500,000,000 each year, not an excessive sum on so large a debt." Mr Coolidge emphasises the fact that the sooner the debt is extinguished the less the cost will be to the public.

It might also have been expected that the Executive would support the Revenue Bill that has been prepared by the Ways and Means Committee of the House of Representatives. Such, indeed, is the case. Mr Coolidge comments on the non-partisan character of the assurances of rapid progress through the House, and that the Senate will advance it rapidly enough so that taxes are due. On the latter point there is, however, considerable uncertainty. While speedy passage through the lower branch seems assured, many believe that the Senate will make no little trouble and delay.

Much will depend here on developments with regard to other administration policies and the general attitude that the Senate takes with regard to the Executive.

In any event, the Revenue Bill as prepared seems a good one. Occasion has been taken to bring the tax structure further in line with what may be considered a normal peace-time basis. Provision has been made to improve the administrative machinery for collecting and adjudicating taxes. The present maximum sur-tax of 40 per cent. has been cut to 20 per cent. Two dissenting members of the House Committee, one of whom speaks for the Democratic Party, wish to cut this maximum to no less than 30 and 25 per cent. It is apparent that in any event further progress is to be made toward acceptance of the Mellon programme that occasioned such a bitter fight in connection with the previous Revenue Bill. The Committee estimates that the proposed cuts in sur-taxes will result in a diminution of revenue to the extent of \$98,575,000. Another \$95,000,000 would be cut off on account of increased personal exemptions, reduced normal taxes, and increased credit on account of earned income. The Committee has changed the various sur-tax rates so as to make the taxation on larger incomes increase more uniformly. It believes that the schedule is now well balanced. Among the other important changes in the general scheme of taxation are the elimination of minor "nuisance" taxes, such as those on the sale of cameras, firearms, and pipes; the removal of occupational taxes, as on brokers; and the removal or modification of excise taxes that are difficult to collect or that involve hardship on particular industries. The taxes on sales of works of art and of jewellery are removed, and that on cigars is materially reduced. The tax on the sale of automobiles is reduced from 5 to 3 per cent.

With regard to foreign relations, the President hails the Locarno agreements, which "will provide guarantees of peace that make the present prime reliance upon force in some parts of Europe very much less necessary. The natural corollary to these treaties should be," he adds, "further international contracts for the limitation of armaments." He considers that disarmament on land is of first importance at present, and that this problem is peculiarly European. Following agreements for the reduction of armies, we may more easily consider further reduction and limitation of naval armaments." The President goes to considerable length to explain and emphasise the desirability of our joining in the maintenance of the Permanent Court of International Justice. His careful argument indicates that he considers adherence to the Court as an important part of the Administration's programme, and a part for which the Administration is prepared to fight.

As for ocean shipping, Mr Coolidge declares that a merchant marine is "of the utmost importance for national defence and the service of our commerce." He wants the surplus ships sold and the operation of the Government fleet to be put under a single executive head with the Shipping Board restricted to judicial and regulatory functions. He advocates no ambitious projects, and is silent on the question of a subsidy.

His remarks on railroads are brief, but are interpreted as supporting voluntary rather than compulsory consolidations. Given moderation on the part of the public and business community, Mr Coolidge foresees an almost indefinitely extended period of prosperity.

FRANCE.—M. LOUCHEUR'S RESIGNATION—TOBACCO MONOPOLY—INCOME TAX EVASION—NOVEMBER REVENUE—PRISES.

(FROM OUR CORRESPONDENT.)

PARIS, December 16.

As was expected, in view of the stupor with which the announcement of his financial proposals was universally received exactly a week ago, M. Loucheur, the sixth politician to hold the portfolio of Minister of Finance since last spring, has been forced to resign. The Finance Commission of the Chamber on Monday took up the detailed consideration of M. Loucheur's seven Bills for the restoration of the French finances, and, after four

JAMES STEWART, Chief Manager.

hours' discussion, decided to send six of them back to the Minister as unsatisfactory. The list of the seven projects was set forth here last week. The only one of M. Loucheur's projects that was retained for further consideration was that for the repression of fiscal frauds, and even this, it is understood, the Commission proposes radically to modify. Last night, after making yet another effort to retain his portfolio, which did not meet with the approval of his colleagues, M. Loucheur formally resigned, and at the time of writing France is without a Minister of Finance.

Probably no Minister for a century past has been driven from office amid such a general storm of disapproval. Journals of every shade of opinion have been ruthless in their attacks since the earliest mention of M. Loucheur's detailed proposals, and in most of these the Minister's personal unpopularity has been strongly accentuated. The effect of his 18 days' term of office, however, has been appreciably to clarify the whole political and financial situation. The drastic nature of some of his proposals has at last awakened the country to its financial peril and to the grave risk it is running in continuing to allow its politicians to place party before *la patrie*. Even the doctrinaire Socialists—to whose persistence in taking advantage of the present fortuitous political situation for the purpose of forcing certain of their theories to practical application the present chaotic situation is largely due—are now showing signs of alarm at the devastation they have caused.

An indication of this is to be seen in the fact that more than one of their leaders has gone so far as to admit publicly that, in view of the situation, it may be advisable to lease the tobacco monopoly to private industry for a term of years, as the most practicable way of lifting the country to its financial feet. There is good reason to believe, in view of proposals that have actually been made by American and other groups during the past few years, that cash down could be obtained to the extent of from 20,000 to 30,000 million francs, in return for the granting of a farming agreement covering the monopoly for a term of from 20 to 30 years. The feeling is growing that this method, which would furnish sufficient ready money to enable the Government to remove most if not all of the difficulties that now face it, would be the most practical that can be devised. It would enable the Government to buy in at present quotations sufficient Rentes and other public issues to permit, by reducing the present public debt charge, the loss of the 1,900 millions or so of revenue from the tobacco monopoly to be more than compensated for. The other benefits that would accrue from the stabilising effect of the availability of such a large amount of new money, involving no countervailing disadvantages, are too obvious to need mention.

Another outcome of the universal alarm created by M. Loucheur's proposals has been the widespread appeal that has been heard during the past few days for a cessation of party strife and the formation of a Ministry based on the broad lines of the *union sacrée*. It is no secret here, although the British Press has paid little attention to the matter, that the alarm caused by the recent Socialist menace has given enormous impetus to a French Fascist movement, which has now assumed substantial proportions. As a counter-party to this, there is good reason to believe that the question of a Socialist *coup d'état* last week reached a disquietingly acute stage, and that at one moment a plan actually existed for the seizure of power

by the Extreme Left. Certain generals and other leading Nationalists, at any rate, are known to have been kept under constant observation, and it is stated on good authority that a list of "suspects" whose arrests were contemplated was in existence. Much of the alarm that was undoubtedly felt in responsible circles has now, fortunately, been dispelled, but there is a growing feeling that nothing but a return to the basis of the *union sacrée* which prevailed during the war can really suffice to remedy the existing situation. It is generally recognised that the natural and ablest leader of any Government that may be formed on this basis will be M. Briand, who is now, in spite of the failure of his Finance Minister, being more and more looked to as the safest pilot who can be found to bring the ship of State into port.

The bitterest criticism of M. Loucheur has been directed against his proposal to apply, for the purpose of repressing fiscal frauds, the device of the much-discussed *carte de coupons*. This proposal, which was first developed by M. de Lasteyrie, under the Poincaré régime, aims at bringing under the income-tax provisions persons whose incomes are derived from bearer bonds, the vast majority of whom are widely believed to be able, under the present system of cashing interest coupons, entirely to escape taxation on their incomes. No person, it is suggested, shall be able to cash a single coupon except on presentation of a list, countersigned by the Inland Revenue authorities, setting forth the details of the bonds from which the income is derived. Advocates of the *carte* system assert that if the incomes derived from bearer bonds were brought into account the revenue from income-tax alone might be increased to a total of something like 30,000 millions. Examination of the facts, however, leads to the conclusion that the complaints in regard to evasion of income-tax in this country are greatly exaggerated. Official statistics show that given issues of bearer bonds are so widely distributed among investors that the holders of the enormous majority of them could never be held liable for income-tax. M. Louis Dausset, for instance, showed two years ago that the 12,216,712 obligations issued by the Ville de Paris are held by no fewer than 4,000,000 persons. The late M. Alfred Neymarck, in 1912, showed that the 1,376,760 registered shares of the French railway companies were held by 151,986 persons, giving an average of about nine shares per holder. Figures furnished by the Finance Ministry show that the number of small holders of French Rentes, whose holdings do not represent more than 350f of interest per annum, amounts to over two millions. The foregoing will perhaps suggest that the widespread belief that the Frenchman, as a rule, evades payment of income-tax is not so well founded as it appears to be, and that, like another popular theory as to the excessive proportion of indirect taxation levied in this country, it should be received with a good deal of caution.

The revenue returns for November show a total yield from all sources of 2,939,570,700f (or about 27½ millions less than in October), of which 2,857,511,900f was from "normal and permanent sources." The yield from "direct taxation" alone (which in this case means income-tax) was 1,078,870,100f during the month, or only 316,759,300f more than in November, 1924. "Indirect taxation," which comprises registration, succession, and stamp duties, motor-car duties, and a large number of other imposts, as well as "taxes on consumption," yielded 1,731,443,000f in November, or 172,389,000f more than in the corresponding month of 1924. The increased revenue was general, except in the solitary category of *valeurs mobilières*, or securities, the return from which was over 3½ millions less than in November, 1924, thus bringing the average falling off of revenue from this source to over 1,000,000f a month since January 1st. The fruitful tax on turnover yielded nearly 424½ millions during the month, or over 55½ millions more than in November last year. The Government is now once more issuing comparative figures showing the relation between the yield from the various taxes and Budget estimates. These show that the yield from "indirect taxation and monopolies" during November was 112,333,000f less than was expected when the Budget was framed. At the same time, the total yield from the same sources during the first eleven months of the year, which amounted to 19,711½ millions,

or 1,655 millions more than in 1924, is stated to have been 64,296,000f more than the Finance Minister anticipated would be the case, which testifies to fairly accurate budgeting by M. Caillaux and his predecessor, and their respective experts.

The index figure for wholesale prices during November, which has this week been issued by the *Statistique Generale*, is given as 618, as compared with 584 in October and 567 in September. The detailed figures, which are based on 100 as representing prices in 1914, are as follows:—

Nature and Categories of Goods.	Nov.	Oct.	Sept.
General index figure (45)	618	564	567
Foodstuffs (general figure) (20) ..	500	480	482
Vegetable foods (8)	517	490	485
Animal foods (8)	477	466	467
Sugar, coffee, cocoa (4)	515	492	507
Raw materials (general figure) (25) ..	722	675	643
Minerals and metals (7)	674	651	581
Textiles (6)	875	783	761
Various (12)	658	626	609

The rise of 34 points on the month was general, it will be noticed, but was much more marked in raw materials (where there was a rise of 47 points) than in regard to foodstuffs, where the rise was only 20 points. The effect of the falling franc was marked notably by a rise of no fewer than 92 points in cotton, wool, and other textiles, the wholesale prices of which are now returned as equivalent to 8½ times their pre-war figures. Retail prices in Paris, judging from the index figure allotted to them, show little effect of the recent renewed fall of the franc, but this is largely due to the fact that the figure is based on the sale prices of 13 articles of common necessity (bread, meat, bacon, butter, eggs, milk, cheese, potatoes, beans, sugar, table oil, methylated spirit, and petroleum), only one of which is of foreign origin. The index figure for November is returned as 444 (against 100 in 1914), or 11 points higher than in October. The rise is slightly less, as a matter of fact, than that in November, 1924, the figure for which was 396, as compared with 383 in the previous month. Retail prices in Paris are apparently appreciably lower than in any of the six provincial areas, except in the West, the last figure for which was 431.

GERMANY.—CABINET—CREDIT POLICY—FINANCES—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, December 16.

THE prospect of forming a "Great Coalition" Cabinet, containing representatives of the People's Party, Bavarian People's Party, Centre, Democrats, and Social-Democrats, has somewhat improved. The proposed Chancellor is the German-Democrat Party's leader Dr Koch, and not Herr Luther. The "Economic Party" has not agreed to join, but it would support the Cabinet from outside. The Socialists last week published the conditions upon which they would enter a Cabinet. They demand a Republican policy, ratification of the Washington Eight Hours Day Unemployment Insurance Bill, a commercial policy aimed at fostering export, creation of a definitive Federal Economical Council, with the originally proposed subordinate local organs, retention of the present direct taxes so long as the Sales and Wages (Income) Tax are not reduced, publication of the taxation lists, withdrawal of the pending Education Law (which to some extent re-introduces confessional instruction), legislative regulation of the property claims of the former rulers, and immediate entry into the League of Nations. These points are rather a statement of policy than a categorical demand, and they will not be insisted upon literally. A Cabinet with Dr Koch as Chancellor, and with Socialist members, would almost certainly take up the whole question of the distribution of tax burdens. The Eight Hours Day would be formally restored, probably, however, with important qualifications which would be declared to be justified by exigencies of international competition.

The Report of the Agent-General for Reparation Payments on the first year of working of the Dawes Plan is commented on favourably. The very considerable organisation which it has been necessary to create has got on

well with the numerous German authorities with which it has had to deal, and both from personal and technical standpoints the system has been a success, so that, apart from the cost, the objections expressed in 1924 to creating yet one more official apparatus for regulating German-Ally relations have not proved justified. The more competent German authorities hold the first year to indicate that the internal burden of the Dawes Plan (though it was partly relieved by the international loan) is not unbearable; but, like the Agent-General, they see in transfer and in the foreign trade balance a great unsolved question. A story that the Agent-General considers the negotiation of a second international loan necessary, and that his aim in visiting the United States is to negotiate such a loan, has been spread here. German authorities know nothing of such an intention, which would be contrary to the Dawes Plan, and would be outside the functions of the Agent-General. Whether the Railways Reparations Bonds are to be internationally realised is not known here; the interest rate of 5 per cent. would make their realisation at par impossible.

The Reichsbank President, Dr Schacht, made a long statement concerning his visit to the United States, the chief note of which is that Germans must show discretion in their foreign borrowing, and that the United States will help only when it sees people helping themselves. Dr Schacht laid emphasis upon the inadvisability of contracting very large foreign loans, apart from the problem of paying interest and amortising. The proceeds would be used either for importing half-manufactured or fully-manufactured goods, thereby harming native industries, or would be converted into native currency and used as working capital, thereby having an inflationist effect. Dr Schacht holds that up to now Germany has not borrowed excessively. He estimates at present total foreign indebtedness at between 3 and 3½ milliard marks, and declares that the latest industrial borrowings did not increase the burden, because they were largely used for conversion into long-term debts of existing short-term debts. Germany, he added, must keep in touch with London, upon the attitude of which America largely bases her European loan policy. The Inter-Municipal Council has brought about an agreement by which municipal funds lent to the giro-centrals and savings banks will bear interest not exceeding 7½ per cent., and that not more than 8½ per cent. shall be charged by these intermediaries to private borrowers. The term of the syndicate formed for liquidating the Stinnes concern has been prolonged for another half-year. Shares in the Disconto Bank of an estimated nominal value of three million marks have been sold to America. Short-term credit continues to be very plentiful, at a rate of 7 to 9 per cent. for day money, 9½ to 11 per cent. for month money. The December mid-month Bourse settlements had practically no influence upon the money market. The Reichsbank's return for December 7th shows a small decline of 36½ million marks in note circulation, a decline of 56 million marks in discounts and of 19 million marks in advances.

The Labour Ministry has issued a memorandum on social insurance, which elucidates the complaint of industry that it cannot stand these burdens. The comparison of the total cost now and before the war (including State subsidies) is:—

	(Millions of Marks.)	1913.	1925.
Invalidity Insurance.....	410.5	680.0	
Clerical and Technical Employees.....	134.0	181.5	
Accident	228.0	191.6	
Mining Guilds	58.0	157.0	
Sickness	590.0	1,133.0	
Totals	1,424.5	2,343.1	

The rise in the cost is in part only apparent, because the number of insured persons has greatly increased; sickness insurance, e.g., embraced 19 million persons in 1925, as against 14.4 millions in 1913. The memorandum with reason rejects the employers' claim that the insurance is a "burden." Even were there no State-organised insurance the expenditure would have to be made in one way or another, and social insurance is merely "compulsory saving for the maintenance of health and working

strength." A further report on the unemployment organisation states that receipts in the year ending June 30, 1925, totalled 246 millions, whereof 205 millions from contributions and 33.9 millions from municipal subsidies for the Labour Exchanges and for unemployed support. Expenditure, totalling 249.8 millions, included as chief items 30.12 millions cost of Labour Exchanges and 178 millions unemployment allowances. Unemployment allowances are to be increased, the new rates per week being 9.75 marks for unmarried men, 13.20 marks for married men with one child, and 17.64 marks for married men with two children. A Finance Ministry report shows that considerable sums of taxes are in arrear. On October 1st the total was 301.7 million marks, the largest debts being for sales tax (90 million marks) and income-tax (68 million marks). Two million persons are returned as being in arrear with their taxes; but in this account individual persons in arrear with different taxes are counted several times over.

The industrial situation is getting worse. The textile branch, which during most of the year did very well, complains of declining sales, and of difficulties in obtaining payment. The artificial silk branch reports a serious reaction. Since the conclusion of the German-Italian Commercial Treaty, Italian artificial silk is being offered here. The formerly heavy demand for textile machinery has fallen off; French machines are stated to be offered in Belgium and other countries at below German prices. The demand for "anti-exchange-dumping duties," to be directed mainly against France, is increasing, but it is pointed out that already the "Minor Tariff" of 1925 imposes high maximum duties, leaving, as was officially declared, a large margin for cutting down by negotiation, and, therefore, providing also a possibility of special protection. The toy industry complains of bad business. Nationally the industry is not as important as is believed, providing only about 2 per cent. of total exports, but normally 80 per cent. of its products go abroad.

Toy exports in the first eight months of this year totalled 24,300 metric tons, of value 60,800,000 marks; exports in all 1924, 48,100 tons, of value 110,570,000 marks; in all 1913 56,600 tons, of value 108,300,000 marks. The negotiations for the Western Steel Trust continue. Further considerable concessions are understood to have been made to the three Rhine-Elbe Union (former Stinnes) companies in the matter of participation quotas, and these and the other companies may be allowed to keep part of their properties outside the trust. The inclusion of the Alpine-Montan A.G.—the chief Austrian iron and steel producer—is being considered. There has been no increase of activity in iron and steel. French imports are now coming into all parts of western Germany. In particular French competition is felt in tubes. A wire syndicate has been formed for a term of five years. For December the Raw Steel Syndicate has retained unchanged its 35 per cent. reduction of output. The shortage of working capital among iron-consuming manufacturers causes great difficulties. The manufacturers buy only small quantities of materials, and these at the last moment, so that they have to insist on short-delivery terms, and even iron producers who have not sufficient work cannot always keep the terms. The ore-mining industries of the Siegerland, Dill, and Lahn districts are seriously depressed. Very few mines are being worked.

ITALY.—THE AMERICAN SETTLEMENT—THE DOLLAR SUBSCRIPTION—TOTAL OF THE PUBLIC DEBT—STABILISATION OF THE LIRA POLICY—LOANS ON THE U.S. MARKET—MONEY SCARCITY.

(FROM OUR CORRESPONDENT.)

TURIN, November 30.

ON the news of the American settlement unanimous praises were bestowed in Italy on Signor Volpi and his colleagues, who carried through the negotiations. As your comments on the transaction were considered in Italy a balanced judgment on the great issue, I need not further dwell on it. Public opinion thinks that a settlement will also be reached between Great Britain and Italy on a basis not much different—more favorable, however, to

Italy in view of the Bonar Law offer, of the noble tradition of the British Treasury on these matters, and of the heavy charge that the service of both American and British debts will lay on the Italian taxpayer. I think, also, that the solid determination of the Italian people to honour faithfully the signature of their Government should make our remaining great creditor ready to settle the matter at a bearable basis.

When the settlement terms were published in Italy a subscription was raised in the Genoa Coal Merchants' Association, all members offering a dollar toward the payment of the American annuity. Signor Mussolini took the hint, and called for a million dollars by December 1st. There was at once an outburst of emulation—cities and villages, all sections and classes, with the King at their head, offered the dollar (25 lire); people of small means united themselves in groups so as to reach \$1. Newspapers are full of names of subscribers. At the moment of writing Turin, which comes easily first in the list, has reached the figure of 15½ million lire, so that the called for 1 million dollars (25 million lire) will surely be reached and surpassed by December 1st.

As a consequence of the American settlement, we can for the first time measure the total of our public debt without adding together items not comparable between themselves. The only uncertain item is the British debt, and I will therefore suppose, for the sake of easy calculation, that its present value is not higher than the American debt—viz., 435 million dollars. I hope that in the end it will be a less sum. I will suppose, also—only for the sake of comparison—that the stabilisation of the lira, which Signor Volpi said at New York is the purpose of the 100 million dollars loan issued in the U.S., will be carried through at about the present rate—i.e., 25 lire to the dollar and 120 lire to the pound sterling. On that basis the total of the debt at October 31, 1925, works out as follows:—

	Italian Lire (Millions)	Pounds Sterling (Millions)
Internal Debt—		
Perpetual and long-term—		
Pre-war debts	12,482	
National loans	35,998	
Venetian 3.50 % bonds	964	
25 years 4.75 % bonds	1,443	
Ex-Austrian 4.36 % bonds	10	
	50,897	424.1
Short-term bonds—		
Treasury 3 and 5 years bonds	2,085	
" 7 years bonds	4,000	
" 9 " "	6,101	
	12,186	101.5
Treasury bills (3, 6, 9, and 12 months)	17,939	149.6
Current accounts—		
Deposit and loans State Bank	1,045	
Social Insurance National Fund	67	
	1,112	9.3
Total internal debt	82,134	684.5
External debt—		
Morgan loan	2,500	
American	10,875	
British (?)	10,875	
Total external debt	24,250	202
Total	106,384	886.5
States notes	2,100	17.5
Bank of issue notes for State account	7,067	58.9

At New York Signor Volpi said that only the 100 million dollars loan will be utilised for continuing the present policy of stabilisation. The first step will probably be that the Bank of Italy, by skilful management of the loan fund, will maintain the rate of foreign exchanges at the selected level. The second step will be the adoption of a sort of gold exchange system. Experience will tell at what precise point stable equilibrium can be reached, without laying on the Bank of Italy's shoulders an impossible task. Eventually, gold reserves could be revalued at the new rate, and, after the Belgian fashion, the increase of valuation could be utilised to wipe out from the State debt-book the figures of notes issued by banks of issue for State account.

It may be said, therefore, that the public debt, internal and external, is about £900 millions sterling, a great sum for Italy, but one which the State Budget, at the present

level of foreign exchanges, internal prices, and national income, can bear. The American settlement, and the issue of the State loan of 100 million dollars in New York, has been received in financial circles as a promise of growing financial relations between the American money market and Italian industry. The promise is already being fulfilled, a loan of 30 millions having been raised in New York by the Public Utilities and Works Institute, while several minor loans have been negotiated on behalf of prominent groups, as the Turin Gas and Sip concerns. Shares of the Snia Company, of the Sip, and other great companies have been issued in London and New York markets. It is hoped in industrial quarters that the flow of foreign capital into Italy will have the effect of lowering the cost and scarcity of capital, which is being increasingly felt. The official rate of discount was raised from 5.50 to 6 per cent. in February, to 7 per cent. at June 18th. The average rate of interest paid by banks on saving deposits from 3.50-4 per cent. in January, 1924, was raised to 4-4.50 in July, 1925; the prolongation rates or interest paid on advances guaranteed by State securities increased from 5.75-6 per cent. during 1924 to 6 per cent. in May, 1925, and to 7 per cent. in September last; on advances on industrial securities from 7 per cent. in the first half of 1924 interest charged increased to 7.50-7.75 in the last month of 1924 to 8 per cent. in March, 1925, to 8.75 per cent. in June, and to 9 per cent. in September. It is increasingly difficult to obtain accommodation at a rate less than 9 per cent. Everybody complains of the scarcity of money.

ROUMANIA.—WAR DEBTS—THE BUDGET AND FOREIGN LOANS.

(FROM OUR CORRESPONDENT.)

BUCHAREST, December 5.

THE announcement from Washington a few days ago that an agreement has been reached for the funding of Roumania's war debt to the United States has been received with the utmost satisfaction by the Bucharest Press. Briefly, the debt is stated to have been fixed at \$44,580,000, with its liquidation spread over a period of 62 years by payment of the following annuities—which, of course, cover interest as well as principal:—

In 1926.....	\$	Per Cent. of the Debt.
" 1927.....	280,000	or 0.44
" 1928.....	300,000	" 0.66
" 1929.....	400,000	" 0.90
" 1930.....	500,000	" 1.10
" 1931.....	600,000	" 1.30
" 1932.....	700,000	" 1.50
" 1933.....	800,000	" 1.80
" 1934.....	1,000,000	" 2.20
" 1935.....	1,200,000	" 2.50
" 1936.....	1,400,000	" 3.00

The payments in 1936, 1937, 1938, and 1939 are calculated at \$1,600,000, \$1,800,000, \$2,000,000, and \$2,000,000 respectively, and from 1940 onwards at approximately \$2,300,000 per annum.

This settlement is regarded as a reasonable one, and within Roumania's capacity to meet. It reflects greatly to the credit of Mr. N. Titulescu, the Roumanian Minister to London, who headed the funding mission, and who had been instructed to keep as low as possible the annuities for the first eight or ten years, in view of the fact that the maximum with external obligations is already loaded to Treasury's commitments for the retirement of the State's debt of some 11,500 million lei to the National Bank. It is also the understanding here that a "provisional" agreement has been reached with Great Britain for the liquidation of the war debt of £26 (or £28) millions, and Mr. Titulescu will now tackle the problem of the French and Italian debts—respectively placed at (in round figures) 1,000 million francs and 120 million lire.

Mr. Vintila Bratianu's Budget project for the year beginning January 1, 1926, is now before the legislatures. The total of the new Budget—inclusive of 1,000 million lei surplus anticipated from 1925, but exclusive of the finances of the State railways, which henceforth will have a separate Budget, is 29,250 million lei, or a comparative increase of 5,500 millions over 1925. The Finance

Minister anticipates that the 1926 Budget will yield 4,654,484,808 lei for public debt charges, which he proposes to use for the following services:—

	Credits Asked for the Year 1926.	Credits Accorded for the Year 1925.
	Lei.	Lei.
The consolidated public debt payable in foreign currencies	80,583,196	72,347,116
Consolidated internal and external debt charges payable in lei.....	831,280,996	811,359,546
Internal Floating Debt	657,034,621	52,215,456
(The amortisation of this begins in 1926.)		
Special charges necessitated by the consolidation of foreign obligations	141,978,594	136,462,838
Exchange adjustment on debts payable in foreign currencies	2,942,934,883	2,601,532,431
Miscellaneous "Rentes"	674,518	462,669
	4,654,484,808	3,674,380,456

In view of his heavy, and still growing, commitments in foreign currencies, the success of Mr. Bratianu's 1926 Budget project seems to depend entirely upon his—or, perhaps better, the country's—ability to hold up the lei. If exchange could be maintained at around 1,000 lei to the £, Mr. Bratianu could be reasonably sure of meeting his foreign obligations out of next year's Budget revenue. If, however, the bottom falls out of the market when he begins to buy the dollars and sterling that are not provided by export taxes, a difficult situation will be created—not only for the Treasury, but for every economic activity within the kingdom.

The success of the Budget, in fact, seems increasingly to rest upon Mr. Bratianu's ability to raise a foreign loan of sufficient size to permit a reasonable degree of currency stabilisation being attained. The Finance Minister's recent public utterances have begun to stress the fact—after almost four years of denial—that the Government are now ready to give serious consideration to foreign borrowing. He does not yet admit that negotiations have actually begun, but the willingness during recent weeks to settle American obligations (commercial as well as governmental) is taken here to foreshadow that the Titulescu Mission is now endeavouring to conclude a loan in the United States—or, at the very least, to consummate the negotiations for railway and municipality credits that were under discussion in Bucharest several weeks ago, and which were postponed pending the funding of the war debt.

It perhaps might be proper here to add a word of praise for Mr. Bratianu's handling of the national finances during a very trying period and in the face of so much opposition both at home and abroad. While his economic statesmanship frequently leaves much to be desired, his courage, tenacity and honesty are national assets of very considerable value.

Letters to the Editor.

TAXABLE CAPACITY AND A SUBSISTENCE MINIMUM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Referring to the letter by "Minimum," headed "Taxable Capacity and a Subsistence Minimum," in your issue of December 5th, there is nothing novel in the idea that a subsistence minimum is not identical for different countries. As long ago as thirty years it was urged in evidence before the various Commissions that have dealt with the financial relations between Great Britain and Ireland. Anyone who sets out to establish an actual flat minimum per head, irrespective of national conditions, soon finds himself up against insuperable difficulties. He will find that: (1) differences of climate, &c., bring about a wide difference in actual physical necessities, even ties; (2) the monetary cost of providing those necessities, even if identical in widely different places, also varies; (3) it is impossible to keep out some considerations of conventions and customs, the non-observance of which react upon life itself. Where your correspondent appears to be puzzled, probably owing to my careless use of the word "must," is that it seems to have been laid down as a principle, based upon theoretical analysis, that variations in the minimum will necessarily be in the same ratio as differences of average national income per head. This was never a theoretical conclusion at all, but a record of the facts over the area under consideration so far

as they could be ascertained; that is to say, when the ideas of each country about the minimum had been set down, and made to represent as nearly as possible the same notion qualitatively, it was found that the minimum did actually lie in a rough measure along this ratio. If the area under consideration had extended to the Eastern countries, probably this empirical result would have broken down; as it was, the result just happened. (Whether there is any underlying basis of principle why it should be so has not, so far as I am aware, been explored.)

It is perfectly true that within any one complete economic area or unit, or nation, the minimum is almost constant—a variation between London and Muggleston Parva might be conceded—and therefore the minimum does represent "a relatively greater proportion of the smaller income than of the higher," in that area. It is not intended to suggest that the difference in the minimum as between New York and Naples qualifies this doctrine at all. Neither does it mean that if the income per head in New York should in future be increased the minimum must rise with it, and in this case the ratio, empirically established, would no longer appear.—Yours, &c.

J. C. STAMP.

Shortlands, Kent, December 16th, 1925.

LIFE POLICIES PAYABLE IN REICHSMARKS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The note in your issue of the 28th ultimo with regard to the equity or otherwise of the payment in marks of the old German currency of the sum assured under life assurance policies implies, I think, far more than appears on the surface. If a German life assurance company entered into a contract with a German policyholder in return for certain premiums to pay the sum of so many marks on the happening of a certain event, it must be conceded that when the company has paid the sum assured in marks it has fulfilled its part of the contract, even though the mark then has not the international value that it had whilst the premiums were being paid. Is it seriously contended that if, in place of the German company having made the contract, a British, Swiss, or French company made the contract, it should be open to the policyholder to demand payment in marks or in some other currency, whichever suits him best at the time when the claim is made—for that is what the contention in the note amounts to? It must be remembered that life assurance companies who have issued policies in Germany in marks have also, as a rule, issued policies in other European countries and in other currencies such as Swiss francs, Dutch florins, and, if the company were a British one, when any of these policies became claims during or just subsequent to the war, the rates of exchange were very unfavourable to the company. Would anyone have expected a Swiss policyholder to be satisfied with payment in British pounds calculated at the par rate of exchange of 25.22½ to the pound whilst the market rate of Swiss francs stood at 19? But if the Swiss policyholder must be paid in depreciated francs, and the German policyholder may not be paid in depreciated marks, where is the money to come from? Such operations carried out on any scale must inevitably result in the bankruptcy of the assurance company.

It is sometimes put forward that the case of marks differs from that of other currencies, because the depreciation is so enormous and has passed out of the range of ordinary market operations. This argument, I venture to suggest, is entirely fallacious. It was not the depreciation of the mark from a rate of one thousand to the £ to one billion that mattered, but rather the depreciation from twenty to one thousand. A sum of 20,000 marks was worth £1,000 in pre-war days, but when the exchange had fallen to one thousand it was worth only £20. The later and more spectacular fall only affected the remaining £20 out of the original £1,000.

It seems desirable that this question should be carefully considered at the present time, because many British people have invested in French Government securities in francs. Their investments were made at a time when francs were more than twice as valuable as they are to-day, but one sees occasional suggestions that the French Government should compensate the holders of such securities for the loss arising from exchange. Inasmuch as those who purchased these securities would undoubtedly have accepted any benefit arising from an appreciation in the value of the franc, it is difficult to understand why they should not be expected to put up with the loss arising from depreciation. People who enter into contracts in foreign moneys surely cannot expect the maxim to be "Heads I win, tails you lose" (or at all events "don't win"). There is, perhaps, one difference between this case and that of the life assurance policies. With regard to French francs, the French Government is to some extent responsible for the fall in the value of the franc. In the case of German life policyholders, neither the policyholder nor the assurance company is responsible for the depreciation in the value of the mark, but the German Government, and in a world of justice it would be the German Government that should make good the difference.

Incidentally, with regard to the particular case on which the comments are made, the fact that the company in question ceased to transact new business in Germany in 1901 does not imply that it had during the depreciation period no compulsory investments in marks deposited with the German Government. Such investments were made under legislation prior to 1901, and on the retirement of companies in 1901 the amounts deposited in various State securities such as Prussian Consols were not released, but were retained by the Aufsichtsrat until such time as all liabilities in Germany under the policies already issued had been satisfied.

I must apologise for the length of this letter, and plead that the subject is wide, and that comments in the *Economist* are too important to ignore.—I am, Sir, yours faithfully,
Bickley, Kent, December 7th, 1925. GEO. GREEN.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

STOCK EXCHANGE NEWS.

TICKET, January 6, 1926. ACCOUNT, January 7, 1926.

SEASONAL interruptions to Stock Exchange business are the fears of dearer money and a reluctance on the public's part to embark upon fresh financial adventures until the New Year shall have entered. Both these conditions are now in force, but in spite of them marked activity is shown by various Stock Exchange sections. The roar of the rubber boom gave place to a milder tone, but a sharp break in prices was soon succeeded by recovery as the raw material regained strength after a reaction.

War Fives have come very close to par several times this week. The Consol market hesitated about the Bank rate, fearing 6 per cent. Retention of the 5 per cent. minimum led to a firming-up of the price, and a further improvement occurred yesterday.

The German Potash issue proved popular, and the scrip, allotments of which were on a small scale, rose to 3½ premium. French bonds went better, and Brazilians received a little support from America. Belgians fell back because of the impression that the long-expected new loan is near its issue. Mexicans firmed up. Montenegro bonds gained several points. Peruvian Corporations lost ground after Thursday's meeting, which disappointed bulls found colourless.

Home railway stocks derived encouragement from evidence, given before the Coal Commission, of important reductions having been made by the companies in this year's coal bills. A feature amongst foreign railways was a burst of strength in Entre Rios. Other Argentines were better on the latest official crop estimates from Buenos Aires, which suggested that the previously reported rust might not be so bad as was at first feared.

Raw rubber has been moving up and down in mercurial manner. Share prices followed suit. The biggest settlement on record was dealt with on Thursday in this week. Prices hardened up after being decidedly flat. The tea group attracted favourable attention, and many rises have occurred. Oil shares, still left largely to professionals, have fluctuated rather aimlessly. The shipping market is dull. Iron and steel shares inclined to improve upon a comforting speech by the chairman at Wednesday's meeting of Dorman Long proprietors. Tobacco shares are good, although the absence of a bonus from the British American declaration was a disappointment. The insurance and banking lists aroused no fresh attention. Courtaulds, with other artificial silk and textile shares, have been dull for want of public interest. Dunlops tricity shares are better, people buying them on the idea that forthcoming reorganisations may serve to strengthen the market. Cable, equipment and wireless issues are placid, and the brewery market felt the effect of sales made in order to finance rubber purchasers.

South Africans received little accession of business from the dividends that have been declared during the week. In most Chartered advanced smartly, giving a taste of their old volatile quality upon dividend hopes. Other Rhodesians acquired small gains. The tin list picked up strength upon a rise in the price of the metal. Various Malayan shares went ex-dividend on Thursday, and recovered part of the deductions. Other mining shares are quiet. Burma Corporations were bought on the anticipation of an increase in the dividend now imminently due for declaration.

Stock Exchange shares, credited with £25 paid, have risen to 139. Nominations, however, are lower at 325, the hand of death having fallen heavily of late upon Stock Exchange ranks. It is less melancholy to record that a number of resignations are about to take effect owing to the remarkable activity of business during the last few years in tea, industrial and rubber shares.

NEW ISSUES.

Dunlop Rubber Company, Limited.—Share capital £20,000,000, of which £10,790,048 has been issued. The authorised and issued loan capital is £5,000,000, in 5½ per cent. first mortgage debenture stock, repayable by 1954. In addition there is outstanding £1,483,463 8 per cent. debenture stock, which will be redeemed on January 1st next "out of funds reserved for the purpose." This is an offer for sale of £2,000,000 6 per cent. 15-year second mortgage debentures at £98 per cent., repayable at £102 per cent. by means of a cumulative sinking fund commencing in 1927, to be applied at any time in purchasing the debentures on the market at or under £102 per cent., or in drawings to be made in December of each year, the first in 1929 and the last in 1940. They will be a specific mortgage on land and buildings, fixed machinery and plant, and interests in subsidiary companies and a second floating charge, subject to the 5½ per cent. stock, upon remaining assets. The company reserves the right of redemption at £103 at any time after January 1, 1932. In a letter from the chairman of the company, it is stated that the object of the issue is to provide the major portion of the purchase price of controlling interests in certain companies. The assets of the company as at December 31, 1924, including the present issue, are given at £15,850,931, of which £8,080,375 is represented by investments, at or under cost, and advances to subsidiary companies. It is certified that the net profits (before charging taxation) of the company and its subsidiaries amounted in the ten months to June 30, 1922, to £1,878,253, and in the twelve months to December 31, 1924, to £1,813,842. The combined profits of the companies now being acquired, before allowing for taxation and directors' and managerial remuneration, amounted in 1922-23 to £265,332, in 1923-24 to £268,634, and in 1924-25 to £310,946. The purchase price of the shares being acquired is £2,500,000, payable in cash. A well-secured issue.

Drapery and General Investment Trust, Limited.—Capital £3,600,000. This is an issue at par of £600,000 6 per cent. debenture stock and 600,000 7 per cent. cumulative preference shares of £1 each. The debenture stock will have a first floating charge on assets. During the year ending December 31, 1927, and each succeeding year a cumulative redemption fund calculated to be sufficient to redeem the whole of the outstanding debenture stock on or before December 31, 1961, will be applied in redemption by annual drawings of the debenture stock at the rate of £102 per cent. or in the purchase at a price less than £102 per cent. plus accrued interest thereon, the fund available for drawing being reduced by the nominal value of stock so purchased. The company also reserves power at any time after December 31, 1930, to pay off at £105 per cent. the whole of the debenture stock which may be outstanding on giving six months' notice. Any debenture stock not previously redeemed or paid off either by drawings or otherwise will be paid off at £102 per cent. on December 31, 1961. The company has been formed to acquire shares and securities of companies carrying on the business of drapery and department stores. The company has agreed to purchase interests in several well-known businesses, including Marshalls, Limited, Plummer Roddis, Limited, Pettigrew and Stephens, Limited, and the combined net profits available for dividends and reserve are certified to have risen from £188,474 in 1922-23 to £200,662 in 1924-25, and the net assets being acquired are valued at £1,673,490, without allowing for goodwill. The sum required to meet the interest and redemption of the debenture stock is about £42,000 per annum. The purchase price for the interests to be taken over (except one of the businesses) is £1,851,399. The vendors have subscribed for the whole of the ordinary shares at 23s per share. The directorate is a good one, and the undertaking is an interesting combination of companies which, if efficiently controlled, should prove prosperous.

Foreign, American, and General Investments Trust, Limited.—In order to comply with Stock Exchange regulations, particulars are advertised of an issue of £500,000 of 5 per cent. second debenture stock. The issued capital is £2,000,000. The stock now issued is to be repaid at par on December 1, 1960, and can only be paid off prior thereto in the event of a liquidation. The stock will be secured by a floating charge on the undertaking and all the revenues and property of the company present or after acquired, but not upon its uncalled capital, such charge to be subject to the rights of the holders of the company's 4 per cent. perpetual debenture stock now outstanding or to be hereafter created, ranking *pari passu* therewith up to a total amount not exceeding one-third of the share capital of the company for the time being issued and fully paid up. £250,000 of the stock has been sold at 95, less a commission of ½ per cent. An option has also been given to the purchasers on the remaining £250,000 at 95 plus accrued interest from January 7, 1926, less a commission of ½ per cent. Prospectusless.

Scottish Capital Investment Company, Limited.—Authorised share capital £750,000 in shares of £10 each, all of which have been issued. Particulars of the company are advertised in order to comply with Stock Exchange regulations. Each share, when fully paid, will be converted into £6 of 5 per cent. preference and £4 of ordinary stock as from March 1, 1926. The company has been formed to carry on the usual business of an investment and trust company, and it is provided that no purchase or acquisition of any particular investment, other than Government stocks, public funds, or securities of the United Kingdom shall be made by which at the current market value at the purchase date the holding would exceed 5 per cent. of the issued capital and reserve funds or 10 per cent. of the issued share capital, which ever is greater. The future of all investment trusts depends upon the directorate, which in this case is comprised of capable and experienced men. Prospectusless.

Apex (British) Artificial Silk, Limited.—Capital £400,000 in 300,000 8 per cent. cumulative participating preference and 100,000 ordinary shares of £1 each. This is an issue at par of all the preference shares. In addition to the fixed 8 per cent., the shares can participate in the balance of profits, after providing for directors' remuneration, up to 33½ per cent. The ordinary shares are entitled to the balance distributed in any year. The company has been formed to manufacture cellulose acetate and artificial silk yarns and to enter into an agreement to acquire the world rights of the Apex processes. It is proposed to acquire a freehold factory at Edmonston, London, for £20,000. It is stated that it has been valued at £38,500. The cost of plant is expected to amount to about £75,000. The purchase price is £40,000 in cash and £100,000 in ordinary shares. The articles of association provide that the proceeds arising from the disposal of the various foreign, colonial and other rights shall be placed to a special capital reserve fund until a minimum sum of £150,000 is accumulated. Underwriters were left with over 46 per cent. of the issue.

Trinidad Friendship Petroleum Company, Limited.—Capital £750,000, divided into 600,000 10 per cent. participating preference and 2,400,000 ordinary shares of 5s each, of

which 2,289,910 ordinary shares have been issued. This is an issue of 600,000 10 per cent. participating preference shares of 5s each at par. The preference shares are entitled to a non-cumulative preferential dividend of 10 per cent., and thereafter to 25 per cent. of the balance of any profits which the company may determine to distribute by way of dividend. The company owns four properties in Trinidad, the bulk of which is leasehold, over about 1,591 acres, and on which two wells have been drilled. The company has also acquired properties in Venezuela over 2,145 acres. The present output is insignificant, and the future depends almost entirely upon the success achieved with the drill.

British Tanker Company, Limited.—Authorised and issued share capital £4,000,000 in shares of £1 each. This is an issue of £4,000,000 of 10-year 5½ per cent. first debentures at £97 per cent. The debentures will be a first floating charge over all assets, and it is provided that no prior or equal charges shall be created except mortgages and charges on additional vessels for an amount not exceeding 80 per cent. of the cost thereof. A charter has been entered into with the Anglo-Persian Oil Company for the employment of the company's existing tankers, which charter will provide for the payment of a sum for hire sufficient to cover all charges and to leave a surplus of not less than £1,000,000 per annum. The debentures are repayable at par on January 1, 1936, the company reserving the right to redeem them at £102 per cent. and accrued interest at any time after January 1, 1931. It is also provided that in each year after January 1, 1927, certain fixed sums will be applied to redemption by purchase at or under par or by drawings at par. In the first two years this amount will be £200,000 per annum, rising to £600,000 in 1933-35. The company was incorporated in 1915 to build and operate tank vessels for the conveyance of the production of the Anglo-Persian Oil Company. The book value of the fleet is stated to be £9,077,427, and the net profits, before allowing for taxation, interest on advances, &c., have varied from £1,777,288 for 1920-21 to £674,153 in 1922-23 and £1,290,844 in 1924-25. The net proceeds of the present issue will, it is stated, be used to repay advances made towards the cost of building certain tank vessels. Intending investors must not overlook the fact that the debentures have only a floating charge on assets. Moreover, the future depends almost entirely upon the prosperity of the chartering company, and although the latter is in a strong financial position at the moment, the cautious investor cannot afford to overlook the connection. It is often a matter for passing comment as to why oil-producing undertakings should need separate concerns for the transport of their products.

Sungei Kinta Tin Dredging, Limited.—Capital £200,000 in shares of £1 each, of which 55,000 have been issued as fully paid and 2s 6d per share has been paid on the remaining 145,000. The company has been formed to acquire and develop 610 acres of tin-bearing land in Perak, F.M.S. The total purchase price for properties and options taken over is £102,000, payable as to £47,000 in cash and £55,000 in fully-paid shares. It is stated that "over 540 acres of the land has been thoroughly prospected, and the boring results are very satisfactory." The particulars of the property are decidedly vague, as is so often the case with "advertisements for information only."

Sungei Telor (Malaya) Rubber Estate, Limited.—Share capital £175,000 in shares of 2s each. This is an issue of 1,750,000 shares at par. The company has been formed to acquire and develop an estate in Johore. The approximate area is 1,407 acres and the total planted area is 1,367 acres, most of which should be in bearing. The purchase price is £141,479, and is payable in cash. The total underwriting commission is 5 per cent. The directorate of the concern is an experienced one, but the prospectus would have been improved by fuller details as to condition and growth of the trees and the tapping.

Fortrose Rubber, Limited.—Share capital £180,000, in shares of £1 each, the whole of which are now offered for subscription at 21s per share. The company was incorporated to acquire and develop a rubber estate in North Johore, Malay Peninsula. The total area is 1,797 acres, of which 1,750 acres are planted. The estate is favourably reported upon, and the standard production for 1924-25 was fixed at 143,625 lbs. The purchase price is approximately £156,425, payable, presumably, in cash, though this is not made clear. The prospectus is accompanied by a detailed independent report and valuation of the property, an example which might well be followed by other rubber undertakings.

Parana Plantations, Limited.—Particulars of this company are advertised in order to comply with Stock Exchange regulations. The share capital is £750,000, in shares of £1 each, of which 700,000 have been issued. The company has been formed to acquire the shares of and to finance a company recently formed in Brazil. The Brazilian company has an original capital of 1,000 contos of reis, which will be increased to 15,000 contos, and has been formed to acquire a block of land in Parana, Brazil, together with certain options. It is proposed to develop these properties with a view to their subdivision and resale at a profit. The purchase consideration payable by the Brazilian Company is 18,720 contos of reis. In addition,

one of the vendors is to receive 4,000 contos of reis in shares, subject to their procuring, not later than March 31, 1926, the signature of a contract, satisfactory to the Brazilian company, for the construction of the branch of the Sorocabana Railway. The properties at present consist mainly of undeveloped forest land, and it is not improbable that a considerable amount of capital expenditure will be involved other than that now available before the profit-earning stage is reached. In the circumstances, therefore, the shares can only be regarded as very much of a speculation.

COMPANY MEETINGS, &c.

DORMAN, LONG, AND COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

PROGRESS OF OVERSEAS BRANCHES.

NO QUESTION OF CAPITAL REDUCTION.

SIR ARTHUR DORMAN'S REVIEW OF CONDITIONS.

The 36th ordinary general meeting of the shareholders of Messrs Dorman, Long and Co., Limited, was held at the registered office, Zetland-road, Middlesbrough, on Tuesday, the 15th instant, Sir Arthur Dorman, K.B.E., in the chair.

The Chairman, in moving the adoption of the directors' report and balance-sheet, referred to the items of the balance-sheet, and after mentioning that they had had to write off out of revenue considerable sums on account of the fall in the value of stock—pig-iron alone accounting for over £60,000, he went on to say that during the year has been bad. The market has been irregular, and in the face of foreign competition, and with a lack of sustained demand, our prices have been forced down until to-day they stand at less than 20 per cent. above pre-war level.

It has been a difficult matter to keep any of our mills in regular work, and in the early part of the year we were compelled to close down the Acklam Works rather than keep them running on part time. Advantage was taken of the stoppage to carry out certain alterations in plant, which will tend to cheapen production, particularly in connection with the rolling of sheet bars, which we have lately been buying on the Continent on account of the much lower price.

During the last month or so, we have secured a good tonnage of rail orders, and this, combined with the fact that we now see our way to supply our sheet works with bars from Acklam, has justified us in again putting this plant into operation. This will have a salutary effect on unemployment, and if we do not succeed in making much of a profit, we shall at least save the cost of standing idle. It will enable us also to reduce our stocks of pig-iron, an object which, owing to the unsatisfactory conditions of trade, we have been unable to achieve during the last 12 months.

BRIDGE WORK.

During the year our bridge department, which, when I addressed you last year, was in its infancy, has progressed and gained strength. We have secured contracts for two further bridges, one over the White Nile at Khartoum and another also over the Nile at Dessouk, Northern Egypt. While neither of these is of the importance or magnitude of the Newcastle-on-Tyne bridge, they are, nevertheless, valuable to us because they give us a footing in territory which hitherto we have not explored.

The bridge at Khartoum carries with it a shareholding participation in the Sudan Light and Power Company, Limited, which was formed for the purpose of carrying out on behalf of the Sudan Government the work of equipping and operating for a period of 30 years the tramway, electric light and power and water services of Khartoum and Omdurman, as well as the construction of the bridge.

The revenue which the Sudan Light and Power Company expect to receive from the Sudan Government for operating these services is estimated to be amply sufficient to enable that company to pay their shareholders a satisfactory return on their investment. The Sudan is a new territory with great prospects before it, and we are fortunate in having secured a favourable position thus early in its development.

The bridge at Dessouk was taken in competition with well-known Continental firms, and although our price was some 16 per cent. above the most favourable Continental price, we secured the order because we were able to offer a much earlier delivery than our competitors.

THE SYDNEY BRIDGE.

Work on the Sydney Harbour bridge is proceeding in accordance with programme. In a work of this magnitude a long time must elapse before results become visible, but I may now say that the greater part of the spade work has been accomplished, and that we are shortly about to commence fabrication and erection of the approach spans, which are in themselves a work of no mean importance.

The terms of payment provided for in this contract involve our being heavily out of pocket before we begin to receive any payments of a substantial nature. The plant and buildings required, construction and fabrication have had to be supplied; a quarry

nas had to be developed, and the technical work of preparing the drawings has been costly.

All of this involves the expenditure of large sums, and in this manner some £640,000 of the overdraft shown in the balance-sheet is accounted for. We estimate that this sum will go on increasing for another eighteen months, but after that our progress payments will be on a more substantial basis, and our outstanding balance should steadily be reduced. This heavy outgoing was foreseen when framing our estimate, and due provision was included for interest charges during the time we are out of pocket.

Our bankers have agreed to finance us temporarily on this and similar contracts, but if a bridge and civil engineering department is to be maintained it must sooner or later entail the provision of permanent capital.

Work on the Newcastle bridge has proceeded well during the year and to the satisfaction of the Newcastle and Gateshead Corporations and their engineers. A point of interest in connection with this bridge is that it is designed along similar lines to those of the Sydney bridge, and although it is a very much smaller structure, it will give us a valuable experience in the erection of a bridge of this type.

OVERSEAS BRANCHES.

In the early part of the year Sir Hugh Bell and I went out to Australia to attend the ceremony of laying the foundation stone of the Sydney bridge. We took the opportunity to discuss on the spot many matters of importance with Dr Bradfield and Mr Ennis and with representatives of both the Federal and State Governments. We also visited our Melbourne and Sydney branches, both of which are doing well and contributing materially to the company's revenue.

ARGENTINE.

Our other overseas branches have made satisfactory progress. In the Argentine the British Structural Steel Company, Limited, under Major McCallum, has increased materially the sales of our products in that country, and has also expanded its capacity for local fabrication of steel buildings and similar works in order to cope with the growing needs of that progressive country. Our holding in the company now amounts to nearly 90 per cent. of its issued capital, and has increased during the year by £49,707, being 10s paid per share on our proportion of the £100,000 of new capital created by the company in connection with its expansion.

SOUTH AFRICA.

In South Africa, where we are represented by Messrs Wade and Dorman, Limited, results are also satisfactory. They are increasing their capacity of output and enlarging their stockyards, and during the year they have taken from us an increased tonnage of material. One of their directors, Mr M. C. Wade, proposes to pay a visit to South Africa in the early part of next year.

EGYPT AND SUDAN.

Our interests in Egypt and the Sudan are in the hands of the Associated British Manufacturers (Egypt), Limited, which has been reconstructed during the year, and which is now controlled by Callender's Cable and Construction Company, Limited, the English Electric Company, Limited, Messrs Hughes and Lancaster, Limited, and ourselves. We are satisfied that the step we took in taking part in the reconstruction is going to prove of benefit to us, and the bridge orders we have secured during the year afford ample evidence of the manner in which our interests are being looked after in that territory.

INDIA.

As regards India we do not feel that we are doing ourselves full justice. One of our directors, Colonel Byrne, accompanied by our commercial manager, is accordingly leaving for India with a view to examining local conditions in order to see what steps can be taken to improve our position in that country.

THE KENT ENTERPRISES.

You will naturally be anxious to know how things are progressing in Kent, where our interest is now a very important one. During the year sinking at Betteshanger Colliery has proceeded generally in accordance with programme. Some delay has

occurred in sinking through the water-bearing strata, but this was not unexpected, and, given reasonable conditions, Messrs Pearson and Dorman, Long, Limited, consider that coal should be reached in another twelve months' time.

At Snowdown Colliery the second shaft has now been sunk to the seam, which it is proposed to work at 1,000 yard level. Re-construction of the surface plant and equipment is almost complete, and as stated in the directors' report, Pearson and Dorman, Long, Limited, expect to put coal on the market from this colliery early next year. The seam is a 4 feet 6 inches one, of quality similar to South Wales coal. It is clean, and should be easily workable, and except for unforeseen accidents Pearson and Dorman, Long, Limited, consider that large outputs will soon be attained.

It is too soon yet to discuss the prospects of a return on our investment in Kent, but it is, at all events, satisfactory to know that a stage has now been reached where earnings are in sight which will at least reduce outgoings in other directions.

Very properly, our bankers do not take the same view with regard to the financing of a permanent development of this nature as they do with regard to the temporary financing of our bridge contracts, and your directors have, therefore, decided to sell the 500,000 debentures hitherto unissued, and to devote the proceeds towards repayment of the sums advanced by our bankers on account of expenditure in Kent. Satisfactory arrangements are being made by Pearson and Dorman, Long, Limited, for future expenditure, which will make future calls upon Dorman, Long, and Co., Limited, comparatively speaking, small.

I have now given you a brief summary of our progress during the year, and I think you will agree that, however unsatisfactory may have been the conditions in our iron and steel-making departments, we have neglected no opportunity which has offered itself of improving the position of those other departments which follow after the production of steel.

THE OUTLOOK.

"I BELIEVE WE WILL WIN THE BATTLE UNAIDED."

Turning now to the general position of the iron and steel trade, it is no better to-day than I expected it to be when I addressed you last year. Continental prices have fallen still further, and we have had to follow suit in order to keep going. In spite of the loyal adherence of our unions to the agreements in operation in the iron and steel trade, we have not been able to reduce cost proportionately, and the result is reflected in the reduced profit of this year as compared with last year.

During the year the trade as a whole applied for protection under the Safeguarding of Industries Act. We have not heard the result of the application, but there are rumours that it is not going to meet with success, and it would appear, therefore, that we may have to go on fighting our battle unaided.

We will do it, and I believe we will win through, but the trade may suffer severely before the struggle is over. Short of assistance on the lines we have asked for, the best way the Government can assist us is to devote its attention to those other occupations and industries which to-day keep up the cost of living, and which so largely swell our cost of production. I refer to extravagance of every nature, State, municipal, and private, and to the artificial standard and conditions of life in the non-competitive trades and public services of the country.

Criticism of the iron and steel trade is growing. We are accused of bad management, of inefficiency, and of all-round inability to control our own industry. We are advised to group ourselves or to enter into wholesale amalgamation. While I believe that by amalgamation and grouping we could to some extent reduce the cost of production and increase efficiency, I do not think this is going to prove the final solution of our troubles. The real evils we are suffering from are lack of demand and the disparity between conditions here and conditions on the Continent, and the real remedy for these evils is an understanding with Continental makers which would be to their advantage as well as to ours. Such an understanding would be greatly more far-reaching in its effect than any internal arrangements amongst ourselves which leave us still open to attack in an unprotected market.

QUESTION FOR THE CRITICS.

Before I leave this subject, I would like to ask our critics how many other trades in Great Britain can show prices which are less than 20 per cent. above pre-war prices. This is what the iron and steel trade is doing, and I do not think I am far wrong in saying that a return to a 40 per cent. level would enable most of us to get back once more to a dividend-paying basis. This is a position of affairs of which there is a little reason to be ashamed, when it is remembered that practically every other industry and public service is on a basis of anything between 50 per cent. and 150 per cent. above the pre-war level.

In spite of this somewhat gloomy view of the position, I cannot help thinking that we are not far from the turning. Signs are not wanting that Continental makers are feeling the pinch, and will be glad to put an end to cut-throat competition. The slump in shipbuilding cannot go on indefinitely, because ships must wear out or become obsolete. Development has been at a standstill, and cannot rest there much longer if the world's population is to be supported.

Altogether, I have a feeling that we are nearing the end of the post-war depression, and when the time comes the British iron and steel trade, which has done much to put its house in order, will be as well placed as any other trade in the world to reap the benefit in the turn of the tide.

COAL MINING.

I must confess, however, to a feeling of anxiety about the position in the coal mining industry. You will all remember that in last July the Government agreed to subsidise the industry rather than face the stoppage which then appeared inevitable. We now have it on the authority of the Chancellor of the Exchequer that by May next the subsidy will have amounted to £21,000,000. Clearly this cannot go on.

We also have it from the Chancellor that 90 per cent. of the subsidy has gone towards wages, so that when the subsidy comes to an end, there appears to be no alternative to a stoppage unless the men's leaders agree to alteration in conditions of work which will enable the industry to be carried on on an economic basis. It is earnestly to be hoped that the wisdom of looking at the matter from an economic instead of from a political point of view will appeal to the leaders, and that the country will be spared the upheaval which must inevitably follow upon a prolonged stoppage. The ultimate result of such a stoppage is certain. This country is not going to put up with experiments in the conduct of its industry, and a return to the solid economic foundations on which its prosperity depends is, in my opinion, a foregone conclusion.

I think it is right that I should now refer to a very important step taken by one of the leading iron and steel manufacturers in Great Britain. Acting under the advice of three of the most skilled commercial experts in the kingdom, Messrs Vickers, Limited, have decided on writing down their capital to a very large extent. Their action has met with unqualified approval by those best able to judge. Not unnaturally persons interested in the iron and steel industry are inquiring whether the example thus set may not be followed by others engaged in it.

CAPITAL.

I am thus led to lay before you a statement of our capital account, which will, I hope, serve to allay any anxiety felt by our own shareholders with regard to it.

Let me begin by saying that we have never laid ourselves out for anything but commerce, pure and simple, having never made armaments of any sort. It is true that at a very early stage in the war we began to supply shells and shell steel, and during its continuance we provided a very large tonnage in various forms for the purposes of war.

Thus it happened that, when the demand for war materials of all sorts ended with the war, we were able, without a moment's delay, to return to the trade which we had conducted up to 1914. In this respect we differ greatly from the great armament firm of Messrs Vickers, Limited. But I am able to go further, and to submit to you considerations which will show that there is no ground for asserting that your property is overvalued.

Take the balance-sheet as you please, and you will find that our capital expenditure connected with the materials required in the manufacture of a ton of steel and in the works to produce it stand at a very moderate figure. The total amount under this head in the balance-sheet amounts to-day to £9,684,707, but in this is comprised much more than is needed to produce a ton of steel.

All our constructional works here in the North, in London, in Melbourne, Sydney, and elsewhere are not needed to produce a ton of steel, but they are of immense value in consuming the ton when produced. The sheet and wire works stand in the same relation to us. We have developed the by-product side of our coke ovens at all our works, and, at Clarence, we have a large and profitable establishment for converting the crude by-products of the coke ovens into more advanced articles of commerce.

I am well within the mark when I place the value of all these things which lie outside our steel enterprise at from £1,500,000 to £1,750,000. This leaves a round figure of £8,000,000, and with this we can produce 1,000,000 tons of steel a year. We can provide for this output, and as regards the latter, we have a surplus which has yielded us a very handsome profit. Our output of coal is about 2,000,000 tons per annum, but this does not represent all the coal we use. We look forward to supplying this want as soon as occasion serves.

We can produce all the Cleveland ironstone we can use, and

whenever fuel and railway rates fall to a reasonable figure we believe we shall work our Cleveland mines to a profit.

INVESTMENTS.

With regard to investments, I have already dealt with several of the items. I will only now say that if I take them together I consider them as standing in our balance-sheet at a figure certainly not in excess of their value.

The item of stocks and work in progress is no doubt a very large sum, but it all forms part of the working capital, which, in an undertaking of our size, must necessarily stand at a high figure. Altogether I am satisfied that the value placed upon our assets as a whole is a fair one, and, therefore so far as we are concerned, with a credit balance in our profit and loss account, and with a general reserve sufficient amply to provide for any ordinary depreciation in the value of our property and investments, there appears to me to be no need whatever to think of any writing down in capital value. It is a matter which at no time has been discussed by your directors.

Placed as we are, a writing down would not in any way increase our earning capacity, which I consider to be sufficient to enable us to pay a reasonable dividend on the full amount of our share capital under ordinary conditions. As I have said earlier in my remarks, these conditions seem likely once more to return.

Sir Hugh Bell seconded the resolution, which was carried unanimously.

MANAGING DIRECTOR'S SPEECH.

In reply to the vote of thanks to the chairman, the managing director, and staff, which concluded the proceedings, Mr Arthur Dorman, managing director, said that the past year had certainly been a very trying one for the officials and employees of the company, for orders had been very scarce, and this had made it most difficult to balance satisfactorily the operations at our various works.

Your chairman has remarked that iron and steel makers are accused of inefficiency. We are criticised that we do not make sufficient use of surplus blast-furnace gas. At our works during the past year, although we have only operated at about 60 per cent. capacity, we generated 55 million units of electricity all from our surplus blast-furnace gas.

Our various works have been well maintained during the year, and are now in first-class order, and I feel sure that were trade to pick up but a little, we should soon reap the full benefit of the money we have expended in recent years.

I should like to take this opportunity of expressing my thanks to the officials and staff of the company for the excellent work which they have done during the year, for, personally, my work has been made very much easier by the loyal assistance and co-operation which they have so ungrudgingly given.

BANK OF LONDON AND SOUTH AMERICA, LIMITED.

SUCCESSFUL YEAR—INCREASED DIVIDEND.

The annual general meeting of the Bank of London and South America, Limited, was held, on the 16th instant, in London, Mr J. W. Beaumont Pease presiding.

The Chairman, in the course of his speech, said: "Gentlemen, the report and balance-sheet which I have the pleasure of presenting to the shareholders to-day is the first real complete one for twelve months since the amalgamation of the London and River Plate Bank and the London and Brazilian Bank. I am glad, therefore, that it is as satisfactory as I am sure you will consider it to be. Dealing with the profit and loss account, our gross profit appears to be slightly over £100,000 less than last year. In this connection, however, I may say that our last year's figures included eight extra months' profits of the London and Brazilian Bank branches. The same remark applies to the items on the other side, of charges, &c., standing at the figure of £1,325,462. Next year these discrepancies will cease, and you will have a truly comparative statement. The available balance of profit, after placing substantial sums to our inner reserve, stands at £725,100, and is about £100,000 more than last year.

Well, gentlemen, we have had a good year, and we have reaped the benefit of greater activity of trade in South America, combined with the increased economies and efficiency which we anticipated from the fusion of the two banks.

We propose to distribute our profit by increasing our dividend to 11 per cent. for the year, and I feel sure that our shareholders will approve of our recommendations to share our increased prosperity with our staff by voting them a bonus which will absorb £66,000, leaving to be carried forward the balance of £411,300, which is practically the same figure as that brought in.

ARGENTINA.

Argentine production and export during 1925 did not come up to the 1924 figures either in volume or in value. Nevertheless,

conditions among producers are financially favourable. The export season ends with a surplus of cereals and of wool in hand, but even at current prices the agriculturist is well rewarded, and his prosperity is greater than it has been for many years. This has been reflected in the avidity with which rural property has been bought when large lots have been sub-divided, while the general movement of the railways, as shown by their return traffic returns, also testifies to the satisfactory state of affairs up-country.

Pastoral interests have benefited by a substantial advance in the price of cattle. New freezing works at Rosario and in the southern port area of Buenos Aires indicate the prospect of a period of prosperity for the cattle industry. Wool suffered from the world-wide decline in prices for the staple, some 30,000 bales being estimated as carried over from the last season's clip, and the new season sees no great improvement in price. The clip this year, though expected to be small, is of good quality. In hides and miscellaneous produce values have been well sustained, and cotton exports, though still small, are increasing, and are sufficient to show that this quite new product for Argentina is obtaining a firm footing.

The official returns for the first six months of 1925 showed an increase of \$46,000,000 gold in imports over the corresponding period of 1924. The estimated real value of the total imports is given as \$438,373,857 gold, as against \$412,254,069 gold for the corresponding period of 1924. Competition is keener than ever, especially in textiles, both cotton and woollen; yet there is good reason to think that Manchester and Bradford are steadily improving their position.

The sound position of the banks has been maintained during the past year, both deposits and cash reserves showing an appreciable increase. The proposed special banking legislation introduced as a Government measure has not yet reached the length of congressional discussion, but it may be affirmed that the results of previous years abundantly show that Argentina's banking system may be considered, on the whole, eminently satisfactory and well fitted to the country's needs.

CROP PROSPECTS.

Our latest telegram, despatched from Buenos Aires on December 14th, in regard to crop prospects and climatic conditions, reads as follows:—

"Due principally to violent atmospheric changes in November, brilliant prospects for wheat have not materialised, nevertheless, careful estimates give probable exportable surplus 3,400,000 tons, market firm with advance of 25 per cent. as compared with prices last month. Linseed and oats very promising, exportable surplus estimated will be 1,400,000 and 800,000 tons respectively. Maize in excellent condition, and in view of large area sown yield should be record for the Argentine, providing timely rains forthcoming. Wool clip satisfactory and prices remunerative, but market dull."

URUGUAY.

In Uruguay the weather during the winter and spring has been exceptionally favourable, and both cattle and sheep are reported to be in fine condition. Cattle suitable for frigorifico requirements should be available in adequate numbers early in the approaching season, and a large wool clip is anticipated, of a cleaner fibre than last season.

As the disturbing feature of fluctuating exchange tends to disappear with the approach of the local currency to the gold parity, business in general is acquiring a more solid and less speculative character, and, given a fair market for the country's produce, prospects are encouraging.

A State Pension Law was promulgated in May; the subscriptions imposed on the banks are very onerous, and add materially to working expenses.

A scheme for the establishment of a free port at Colonia, opposite Buenos Aires, has received legislative sanction, and a company with an initial capital of \$2,000,000 has been formed, and has acquired the necessary land. Manufacturers are to be encouraged by the admission free to the port and adjacent zone of raw materials, machinery, &c. Harbour accommodation for ocean steamers is contemplated.

CHILE.

The past year has been rather uneasy for Chile, but happily there are favourable indications that an era of stability, both political and financial, is about to dawn for this progressive country.

The staple industry, nitrate, remains firm and flourishing, and the pessimism expressed in some quarters that natural nitre was to be rapidly ousted by the synthetic article has had little justification. It is true that the manufacture of synthetic nitrate is increasing, but as the great value of nitrate, not only as a fertiliser but as a check on parasitical pests, becomes more widely appreciated, there would seem to be no reason why the world markets

should not be able to absorb the output of both the natural and artificial product.

The total production in Chile during the nitrate year ended May 31st last was 2,410,000 tons, an increase of 190,000 tons over the previous year, while the exports during the same period, 2,566,000 tons, are an improvement of 390,000 tons. Sales for the current nitrate year show no diminution, and to the middle of November 1,400,000 tons had been sold for delivery this season.

Scanty rains during the early months of the winter gave rise to fears of repetition of last year's drought; fortunately such a disaster had been averted by copious later rains, while heavy snowfalls in the Andes have secured a plentiful supply of water for irrigation purposes. Farming prospects are thus favourable, and, although this industry is not so vital to Chile as it is to its neighbour on the other side of the mountains, it is of great importance in supplying the country's own needs. The yield last season permitted also the export of barley and other cereals to the value of 2½ million pounds sterling.

The copper output was somewhat lower in 1924, being valued at £10 millions, against £12 millions in 1923.

The total exports of Chile were valued at £45,110,000 in 1924, and the imports at £27,244,000, the balance in his favour being nearly £18 millions.

A law has been passed to stabilise Chilean currency, which puts their money on a sound gold basis. We may reasonably hope that trade expansion will naturally follow on the security afforded by a stable exchange.

COLOMBIA.

The Republic of Colombia continues to develop rapidly and along sound lines, and we have found it necessary to increase our representation there by an agency near the coast at Barranquilla, which was opened in May last.

PARAGUAY.

Under an efficient Government and with a stabilised exchange there is a marked improvement in the economical and financial conditions of Paraguay. Trade in general has been brisk during the year, and there is every reason to hope that the prevailing prosperity will continue. The natural resources of the country are being steadily developed. Interest on Paraguay's foreign debt is now being remitted regularly to London every month, and arrangements have also been entered into with the Council of Foreign Bondholders under which a sinking fund for £15,176 yearly amortisation has been established.

BRAZIL.

The course of Brazil's finances during the past year has given cause for considerable appreciative reflection. In May last the value of the milreis was quoted at a little under 5d, whereas during October the average rate was in the vicinity of 7½d, thereby showing an advance of 50 per cent. in the sterling value of the currency.

The improvement is due to the fact that the sound policy of retrenchment, reorganisation, and consolidation of the nation's finances, steadily and conscientiously carried out by the present Government for the past three years, is now bearing good fruit.

Despite the oppressive burden which low exchange rates have imposed upon Brazil during the past three years, a very satisfactory feature in the financial administration is that the interest on her foreign and internal loans has been regularly met, and, moreover, no new external loans have been contracted for by the Federal Government.

In recent years the exportation to Great Britain of Brazilian merchandise has shown a steady decrease, the sterling value in 1913 being £8,623,309, compared with only £3,263,213 last year. However, the value of goods purchased by Brazil from Great Britain has consistently increased since the war, and our sales last year almost reached the 1913 figure, actually amounting to £16,347,000. Unfortunately, the present export of British coal to Brazil is only 45 per cent. of what it was in 1913, whereas shipments from the United States of America have increased to nearly three times that of her 1913 sales.

COTTON INDUSTRY.

The actual position of the cotton industry in Brazil is not particularly encouraging, for a serious setback in the price for the raw product has been registered during the past year, currency values having declined about 50 per cent. Naturally, planters are apprehensive, and merchants find themselves in a predicament. However, those who have followed the cotton market will remember the pessimistic reports as to the American crop, and the prospective shortage of supply available for Manchester, the gravity of which subsequent events fortunately discounted; but one effect was to cause exceptionally high local prices for Brazilian cotton, which the low rates in exchange and high Customs tariff rather intensified. The reaction was encouraged by two influential factors—first, the easier position of the Liverpool market, and, second, the

rise in Brazilian exchange, which tended to diminish the currency value of raw cotton.

The undoubted facilities which the country offers for cotton production, and the growing consumption by local factories, in addition to the increasing requirements of British and other mills, all assure a profitable future for the industry as a whole.

In conclusion, I am happy to be able to report that, as in South America generally, so also in the Continent of Europe, our branches in Lisbon, Oporto, Paris, and Antwerp all show further improvement and progress.

The report and accounts were unanimously adopted.

NATIONAL BANK OF SCOTLAND, LIMITED. STRONG POSITION.

The 100th annual general meeting of the proprietors of the National Bank of Scotland, Limited, was held, on the 17th instant, in Edinburgh. The Rt. Hon. Lord Ronaldshay, P.C. (the deputy-governor), presided.

After referring to the loss sustained by the death of the Governor, the Duke of Montrose, the Chairman, moving the adoption of the report and accounts, said:—The profit shows a slight reduction compared with that of a year ago, but your directors consider the result satisfactory, looking to the difficult conditions which have existed; and I trust that in the circumstances it meets with your approval.

After having made a short reference to the present conditions of trade at home and abroad, the deputy-governor said:—Coming to the figures in the report you will see that the year's profit has warranted your directors in again declaring the same dividend of 16 per cent., and that they have been in a position to increase the reserve fund by £50,000, bringing the amount up to £250,000 in excess of the paid-up capital.

Coming to the balance-sheet, you will note that the deposits stand at £31,200,756 and show a slight increase, while the note circulation shows a small decrease.

As in past years, liquid funds show a sound position—cash in hand and short money being over 20 per cent. of the total liabilities to the public. The investments are largely Government securities, readily realisable, and therefore liquid in a large degree, and it is satisfactory to note that the figures at which these securi-

ties stand in the balance-sheet are considerably below their actual market value at the present time.

The advances—bills discounted, loans, and overdrafts—show an increase of £715,315 during the year, and while these fluctuate from week to week the increase is due to further advances made for financing trade throughout the country.

The question of the welfare of the staff has at all times the sympathetic consideration of your directors, and, in addition to the allocations to pension scheme and widows' fund above mentioned, they have seen their way to continue for another year the staff profit-sharing scheme, which they realise is helpful to the bank's prosperity by engendering an extended interest by the staff in promoting the bank's business. They appreciate, and they record with pleasure, the satisfactory work done by all members of the staff, and they recognise the loyal service given and the careful attention to the bank's interest.

The report and accounts were adopted.

ORIENT STEAM NAVIGATION COMPANY, LIMITED.

QUESTION OF RESERVE CAPITALISATION.

The twenty-sixth ordinary general meeting of the Orient Steam Navigation Company, Limited, was held, on the 15th instant, at 3 and 5 Fenchurch Avenue, London, Sir Kenneth S. Anderson, Bt., K.C.M.G., presiding.

The secretary (Mr T. F. Tallents) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that, after providing for depreciation and contingencies, the profit on the past year's working was £320,790, as compared with £295,376 last year. The managers recommended that £200,000 be transferred to general reserve account, and that a dividend on the deferred shares at the rate 12½ per cent., free of income-tax, be paid. The company had carried more passengers, both outwards and homewards, and the earnings under these headings were bigger. There were indications that travel for business reasons was on the increase, but they were still a long way from carrying the number of saloon passengers which they carried in 1912-13. Increased inquiry for round-the-world fares promised a reviving interest in pleasure travel, but here again they had much leeway to make up before they approached their pre-war figures. Migration traffic showed no signs of expansion; indeed, it was difficult to say that any advance whatever had been made, despite all the spade work which, during the last five years, had been done in this country for its promotion. Shippers of outward cargo continued to give the company good support, and they had derived some slight benefit from the aggregate increase in berth cargo shipped from the East Coast ports of the United Kingdom during the year. The volume of berth tonnage offering was still, however, on the average, 100 per cent. in excess of the cargo available.

BOARD'S CONSERVATIVE POLICY.

But for the conservative policy pursued by the managers in the past, it would have been difficult, if not impossible, to build up the fine fleet they now possessed, and for that reason, as well as to meet other contingencies, foreseen or unforeseen, they must continue to add to their reserves. Those reserves had already been translated in part into fixed capital employed in the form of steamships or otherwise in the company's business, and this process would continue. That being so, the managers were considering whether it would not be desirable to make the capital account reflect more accurately than it did the amount of money which the shareholders had at risk in the business, and the rate of return which they received upon that money. Whatever adjustment they might recommend in the capital account, they would not contemplate the capitalisation of more than some portion of the reserves, though they were all represented by net assets which stood in the books at a safe value.

ATTEMPT TO PARALYSE BRITISH SHIPPING.

At the end of August a concerted and simultaneous attempt was made to paralyse British shipping in Australia, New Zealand, South Africa, and the United Kingdom. In South Africa it collapsed at a relatively early date, and in the United Kingdom it was from the start a signal failure, although all the usual methods of violence and intimidation which the present state of the law countenanced were fully employed. In Australia and New Zealand, with some few exceptions, it succeeded in achieving an almost complete hold-up of British ships for three whole months. The men who struck, and in many cases whole crews, broke their articles by desertion or refusal of duty. For that reason the strike was fated to failure from the start. It had inflicted enormous losses on the owners, thus diminishing the fund out of which wages were paid, and in so far as these losses were represented by the freight which the ships should have carried, it had *pro tanto*

gone to strengthen the position of our foreign competitors, who were paying about half the wages current on British ships. It had brought discredit on the good faith of British seamen, it had inflicted a blow at trades unionism and the principle of collective bargaining, and it had also entailed much inconvenience, and loss to producers, importers and exporters. But for this deplorable setback it would, he believed, have been possible to look forward hopefully to the results of the current year. Shipping in general was still a very black spot, if not the blackest spot of all, but ship-owners had never asked for subsidies. What they did ask for was Government economy and lower taxation, a halt in the incessant growth of statutory regulations, and abstention on the part of the Government from ratifying and giving effect to international conventions before they had been ratified and given effect to by other maritime nations.

Mr G. F. Hotblack seconded the resolution, which was carried unanimously, and the formal business having been transacted, a vote of thanks to the managers, Messrs Anderson, Green and Co., Limited, terminated the proceedings.

VICKERS, LIMITED.

PROPOSALS FOR REDUCTION OF CAPITAL.

An extraordinary general meeting of the members of Vickers, Limited, was held, on the 17th instant, in Sheffield, for the purpose of considering resolutions providing for the reduction of the capital and for certain alterations of the articles of association. Mr Douglas Vickers, the chairman of the company, presided.

The Chairman explained why the directors approved of the recommendations for the reconstruction of the company made by Mr Dudley Docker, Mr Reginald McKenna, and Sir William Plender, whom for convenience he would thenceforth describe as "their advisers." Having explained the necessity of bringing the resolutions before the shareholders at such short notice, the chairman came to the circumstances which had led to the calling in of their advisers. In 1913 the company had reached the summit of its prosperity. At that time they had works in Sheffield and Barrow, and a group of works at Erith, Crayford and Dartford, which they had acquired 30 years ago by absorbing the Maxim-Nordenflet Guns and Ammunition Company. It would hardly be exaggerating to say that all these works, except Sheffield, had been engaged exclusively on armaments. Even in Sheffield the proportion of civil work to armament work was very small. They had also the Wolseley Works, for even before the war they had foreseen the danger of depending exclusively on armaments, and had selected motor-car manufacture as a peace trade very suitable for association with the Sheffield works.

The following years the war had come. They had been among the first firms to be controlled. They had been obliged to make extensions to their armament plant at once, and at the end of the war they had still been extending. Unfortunately, some of their extensions had taken the form of subsidising other companies to enable them to manufacture material necessary to complete Vickers' products.

With the end of control after the war they had found themselves with the war plant in Sheffield and Barrow increased by more than half, and in the Erith group of works more than doubled, with the Wolseley works much increased and with a very large factory for fuses and cases on their hands in Birmingham. They had applied themselves to finding civil work for those factories, or rather for such parts of them as could be used. They had tried a good many new manufactures, most of which had been successful. Cement machinery, oilwell material, railway springs, files and magnets, and some interesting engineering work on a small scale at Erith.

Before the war Vickers had an electrical department which it had been the board's intention to extend. However, the opportunity had offered itself to secure control of the British Westinghouse Company in association with the Metropolitan Carriage Wagon and Finance Company. These relations had led to a fusion with the latter company in 1919. It was then hoped that the earnings would help to bridge over the period during which it was obvious that armament orders would be only small. Unfortunately for the company, the Washington Conference had reduced programmes to a minimum, and restrictions in facilities for loans in this country had led to orders being placed in France which might otherwise have been executed here.

PRESENT POSITION AT WORKS.

That brought them to the position at July last, when they had asked their advisers to report, a position which had not changed substantially since. Orders for the gun and armour plant in Sheffield were very small, but the old and new departments for civil work were almost without exception making profits. The gun mounting and engineer departments at Barrow were fairly well employed, but the ships under construction, with the exception of a cruiser for the Government and two submarines for Australia,

were fast approaching completion, and inquiries for new work were so scarce that orders could not be obtained if the tender was based on full charges. It was, therefore, not reasonable to expect substantial profits from Barrow.

Weybridge Works were doing well. Erith Works were making reasonable profits out of war material and civil products, and Crayford and Dartford were about paying their way. The electrical interests were doing reasonably well, but, though steady, the dividends were not as large as anticipated.

A general review showed that the earning capacity of the company's assets had been seriously reduced by shortage of armament work and by general bad trade and intense competition, and that the same had to be said, almost without exception, of the assets of subsidiary companies, that there were certain possible liabilities which might fall on the company, and that there was little or no prospect of the advances made to some of the subsidiaries being repaid.

VALUE OF THE ORDINARY SHARES.

Referring to the advisers' report in some detail, the Chairman pointed out that the reserve fund disappeared. He also explained that by the reduction of the ordinary shares from £1 to 6s 8d the intrinsic value of the assets was not altered, and that each shareholder would continue to hold the same *pro rata* interest in the company as now. The real basis of the alteration recommended was the estimate of future earning capacity. The company had about 12 million ordinary shares, and if the amount available after providing for preference charges was £300,000, each share would be entitled to 6d, irrespective of whether it was reduced from £1 to 6s 8d or not. The advantage accruing to the ordinary shareholders from the alteration lay in the sweeping aside of all the liabilities hanging over them, thus making the profits distributable and not kept back to make up capital losses.

One of the advantages of the present scheme was that the board were now in a position to shut down plant and wind up subsidiary and affiliated enterprises which did not, or were not likely to, contribute to the earnings of the company. The Chairman confirmed the last paragraph of the report—namely, that the company held over £2,000,000 of Government securities apart from the further large liquid resources held through subsidiary companies and not disclosed.

In concluding, he repeated that the alterations proposed had the support of the board, which included the three largest shareholders in the company.

He formally moved the resolutions, which were seconded and carried.

CARRERAS, LIMITED.

ANOTHER SUCCESSFUL YEAR.

The twenty-second annual general meeting of Carreras, Limited, was held yesterday at Arcadia Works, City road, London, E.C., Mr Bernhard Baron, chairman and managing director of the company, presiding.

The secretary (Mr H. W. Danbury) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Last year I was not able to be present at our annual meeting, so I could not personally congratulate you on the good result which was then reported. That, however, gives me the opportunity of offering you a double congratulation on this occasion, because we have followed up a good year in 1924—which was our twenty-first anniversary—with a still better year for 1925.

You will notice from the accounts which have been sent to you that we have an available balance of profit of £889,446, which I believe is a very good showing, and everyone of you should be very proud to be shareholders of Carreras, Limited.

The printed report shows you how we propose to deal with the amount at our disposal, and I need not go into any details regarding the figures.

FURTHER EXTENSIONS POSSIBLE.

Our business has grown into a very big concern, but as I have said before—and I wish to emphasise it to-day—the whole world is our field of action, and, that being so, I am confident that we are far from having reached our limits, and for a long time to come we can hope to see still further extensions of our business, both in this country and other parts of the world.

In the meantime, I may tell you that the increase in our business for the two months of the new financial year is eminently satisfactory.

I need not go into details and tell you what a great amount of work the directors are doing, or give you a detailed account of the financial position of the company.

All that I have to say to you is that at my age, with a life-long experience behind me, I am more than satisfied with the work which is being done by the younger generation. My son, Mr Louis Baron, my grandson, Mr Edward Baron, our factory

manager and director, Mr Loudon, our worthy secretary, and every member of the staff are carrying out the work of this business in such a way that I defy anyone to do it better. For this we all ought to be very thankful.

I do not think that you wish to be detained with a long speech, but I would like to say how very much pleasure it gives me to be with you to-day, to congratulate you on the past, and to tell you that, as far as I can judge, there is an even greater future in front of this business.

THE RESOLUTION.

I now move: "That the directors' report and statement of accounts as at October 31, 1925, now submitted to this meeting be and the same are hereby received and adopted; that a dividend at the rate of 50 per cent. per annum, free of income-tax for the half-year, be and the same is hereby declared, making with the interim dividend paid in June last 40 per cent., free of income-tax, for the year; also that a bonus dividend at the rate of 2s per ordinary and 'A' ordinary share, free of income-tax, be and the same is hereby declared. Such dividends to be payable to all ordinary and 'A' ordinary shareholders appearing on the register as on the 5th day of December, 1925, the date on which the share register was closed."

Mr William J. Yapp seconded the motion, which was carried unanimously.

The retiring director, Mr William H. Loudon, and the auditors, Messrs J. H. Champness, Corderoy and Co., were re-elected.

The Chairman announced that the dividend warrants for all classes of shares would be posted that night.

INCREASE OF CAPITAL.

At an extraordinary general meeting which followed the following resolution was unanimously approved:—"That the capital of the company be increased to £900,000 by the creation of 120,000 new 'A' ordinary shares of £1 each ranking *pari passu* in all respects with the existing 240,000 'A' ordinary shares of £1 each of the company, and that the following provisions with regard to such new 'A' ordinary shares shall have effect, that is to say:—(a) The said shares shall not confer upon the holders thereof the right to receive notice of or to attend or vote at general meetings of the company. (b) The said shares shall not qualify any person to be a director of the company, and shall not be reckoned in the qualification of a director. (c) Subject as aforesaid, the said shares shall rank *pari passu* as to dividends, capital, and in all other respects with the 240,000 existing ordinary shares of the company."

A hearty vote of thanks to the chairman for his services to the company and to the directors and staff concluded the proceedings.

HARRODS (BUENOS AIRES), LIMITED.

IMPROVED POSITION.

The twelfth annual general meeting of Harrods (Buenos Aires) Limited, was held, on the 14th instant, at Harrods, Limited, Brompton road, London, Sir Woodman Burbidge, Bart., C.B.E. (chairman and managing director), presiding.

The assistant secretary (Mr C. Hope Gibson) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—I am sure that you will have been pleased to observe the improvement that is shown for the year, the profit being sufficient to pay the interest upon the funding certificates, and the dividend upon the preference shares, and to provide the full annual amount for the redemption of funding certificates. The profit for the year amounted to £246,066, an increase of £41,000 over that of last year. After providing for depreciation of installations and transferring £1,560 to the reserve for income-tax, the net profits available for distribution amount to £224,624. The total profits of the South American Stores for the year ended July 31, 1925, before deduction of debenture interest and redemption and income-tax, &c., amounted to £426,000, compared with £368,000 last year. These figures show the substantial progress which has been made by that company. Their distributable profit is £204,348, against £142,540. This is a very satisfactory increase of £61,800, of which £10,600 made by their subsidiary, the Chilean Stores, which they have retained in their business. The gross dividends receivable by Harrods (Buenos Aires) from the South American Stores amount to £176,764, being an increase of £39,000 for the year from that source. In conformity with the resolutions passed by you last year, the full annual total of £36,624 has been allocated to the £18,000 and redemption a trifle less than that sum. The redemption partly by way of purchase upon the market and the presence of a notary public. Full instructions have been sent to each holder of the funding certificates so drawn, and if the

drawn certificates are duly lodged, they will be paid off, less income-tax, on Monday, December 21st, together with interest up to the day of drawing.

CHAIRMAN'S VISIT TO ARGENTINA.

Altogether I have been to Argentina six times on the company's business, three times since 1920. My last visit was early this year, when I was accompanied by Mr C. Hope Gibson, the assistant secretary. I closely scrutinised the working of our stores in Buenos Aires, Santiago, and the principal branches. Your directors desired that, including other business, I should review with Mr Foucher, our managing director in South America, the effect of the measures that were introduced during my visit over a year ago, when changes were made and the local management generally strengthened. As usual upon these visits, we submitted the details of our organisation and personnel to a process of analysis and constructive criticism, and I am happy to be able to assure you that all expenses are very carefully controlled, and every effort is being made to advance the interests of the company.

The balance of profit carried down is £246,066, an increase of £41,566. From this sum we must deduct £19,882 for depreciation of installations, an increase of £1,649. Then we transfer £1,560 to reserve for income-tax, leaving a balance of net profit of £224,624 to be carried to the balance-sheet.

Now, with regard to the current year, the returns to date fall short of those of the corresponding three months of last year, the first half of which was very encouraging, but the second half of the year was not so satisfactory. Provided conditions remain stable there should, however, be little difficulty in making up this leeway, and I think that we may count upon a continuance of the steady progress of the company's affairs. I believe that when we meet next December the accounts of the company will show a further improvement in profits. The preference shares should then receive their dividend of 8 per cent. as it is proposed to maintain, for the time being, the December date for the declaration of dividends, and we anticipate that there should be surplus profits to be carried forward or placed to reserve.

The profits earned during last year more than covered the claims of the preference shares and the funding certificates, but before we consider paying any dividend upon the ordinary shares we must strengthen the reserves and the amounts carried forward by the associated companies so as to be able to meet, if necessary, any temporary setback. Much as we should like to be able to hold out the prospect of an ordinary dividend next December, we must again ask you to exercise patience for yet another year, but we feel we shall best serve the interests of the company and of the shareholders by consolidating during the current year the position, which is steadily improving.

Baron F. A. d'Erlanger seconded the resolution, which was carried.

SHOWELLS BREWERY COMPANY, LIMITED.

CAPITAL POSITION SOUND AND STRONG.

The annual meeting of Showells Brewery Company Limited, was held, on the 17th instant, at Winchester House, Old Broad street, London. Mr James Davenport, chairman of the company, presided.

The Chairman, in moving the adoption of the report and accounts, said their freehold and leasehold properties showed an increase, at £795,000, of £25,000, due to acquisition, and to a certain extent to capital outlays on rebuilding of properties, in pursuance of the policy of improvement which they had been following for some time. Then, in regard to investments, they still held £75,000 of 4½ per cent. Treasury bonds, £30,000 Victory bonds, and £5,000 War Loan, which stood in their books at £103,000, while the market value to-day was over £106,000. Trade investments showed an increase, at £31,550, of approximately £1,700. This was due entirely to the purchase of the company's 4½ per cent. debentures which they were able to secure during the year. He was glad to say they now owned nearly £44,000 of their own debentures, and as this holding, together with other valuable securities, was included in the figure of trade investments there was a considerable reserve in the figure.

The reserve account, with the allocation they proposed to-day, would be brought up to the substantial figure of £70,000, sundry creditors and reserves stood at £162,000, and the bulk of this item consisted of internal reserves which they had accumulated during the eleven years or so that he and his colleagues had been responsible for the administration of the company. The capital position might be summed up as sound and strong.

Their turnover for the year had been fully maintained, which was evidence of the uniform excellence of the beers brewed for them by their friends, Messrs Allsopp. The reduction in profits was more than accounted for by the increase of the gravities of

their beers, and the giving to their customers an even better article than they had given them before. This increased gravity had in itself cost the company this year over £14,000. They were continuing the policy of giving good values, and were satisfied that in any general return of prosperity this company would fully participate.

The directors recommended a dividend of 15 per cent. on the ordinary shares, £5,000 to reserve account, raising this to £70,000, and carrying forward to next year £8,025.

Turning to trade problems and politics, Mr Davenport said the deplorable results of prohibition, as shown by increasing crime and drunkenness in the United States, were so well realised in this country now that they need waste no time in further educating their fellow-countrymen against its dangers.

Mr H. W. Walmisley seconded, and the report and accounts were unanimously adopted.

YAN RYN GOLD MINES ESTATE, LIMITED.

RESULTS OF THE NEW CLAIMS.

The 30th ordinary general meeting of the Yan Ryn Gold Mines Estate, Limited, was held, on the 15th instant, at Winchester House, London.

Mr L. B. Burns, who presided, said that the outstanding feature of the operations at the mine during the year under review had been the notable achievement by the management of having practically made good the loss due to the fall in the price of gold during the year by a reduction in working costs, which, with other factors, brought up the gross profit to within £4,900 of that of the previous year. This had been done without encroaching unduly on rich patches, and, above all, without neglecting the maintenance of the ore reserves and development. The gross profit had reached the figure it had notwithstanding the fact that the difference in favour of the year 1923-24 in respect of increased revenue from gold premium was over £20,000. It followed, therefore, that under normal circumstances the directors might have been justified in maintaining the rate of dividend achieved in the first half of the year under review, though he did not think anyone would cavil at the 17½ per cent., free of tax, paid for the whole period.

For the five months of the current year the 37s per ton had been knocked off last year's average of 18.37s; in fact, the average so far was a fraction under the 18s. They all hoped for still further improvement for the remaining period of the current financial year as the result of the electrification of the whole of the treatment plant, which had recently been completed.

Referring to the opening up of the large block of 151 new claims acquired some time ago, comprising the ground originally held by the Modder West Company, and additional claims pegged by the company, all adjoining the Yan Ryn Company's own mining area, the chairman said that the surface prospecting had been accomplished with very encouraging success. The reef had been proved to a vertical depth of 100 ft. by winzes from the surface, which had been connected underground or partially so at the horizon of the first level. For 307 ft. of winze sinking carried out during the year no less than 80 per cent. showed payable values of 5.9 dwts over the satisfactory width of 76 ins. Although the managing director referred to that value as not being high, it was exactly 1 dwt (or 48 per ton) in excess of the average value of their present ore reserves. He was looking forward to being able to give the shareholders at their next meeting more advanced data of what might in time become an entirely new and profitable mine. The directors at their meeting that morning had resolved to declare an interim dividend of 1s per share, free of tax.

The report was unanimously adopted.

EDISON SWAN ELECTRIC COMPANY, LIMITED.

TRADING RESULTS—FOREIGN COMPETITION.

The forty-second ordinary general meeting of the Edison Swan Electric Company, Limited, was held, on the 16th instant, at the Cannon street Hotel, London.

Mr C. F. Spencer (the chairman), dealing with the balance-sheet, said that the company's bankers, the National Provincial Bank, had been a tower of strength to them during the last three years, in which the directors had been reorganising the company. The amount owing to their bankers, after deducting the amount to the credit of deposit account, was £110,000, as compared with £314,150 when the present board took up office in November, 1922. The profit for the past year was £88,344. The directors recommended a dividend of 10 per cent. on the ordinary shares, transferring £50,000 to the reserve account (which would thus be raised to £130,000), and carrying forward £29,275, an increase of £11,700. They had, out of profits, redeemed debentures to the extent of £26,606, and had specially ear-marked this sum to the reduction of patents, goodwill, &c.

As a board, however, they were not unmindful of the goodwill in the name and connections of the company, which, he believed, was the oldest in the trade. It needed no words of his to commend their electric lamps; they were British-made, the quality was excellent, and there were, in fact, no better lamps. As to the company's wireless sets and valves, these were well known to the shareholders. Referring to the trading position during the current year, the Chairman stated that the profits to November, 1925, were quite satisfactory, and that, regard being had to the general trade position of the country, the company was getting a reasonable share of the trade available.

The results achieved indicated that the company was travelling along the road to prosperity, but there was a factor which might re-act unfavourably on its fortunes, in common with those of others engaged in a similar class of business, with little chance at present of their being able to combat it. He referred to unrestricted and relentless foreign competition.

Having emphasised the difficulties of trade with open doors and without retaliatory weapons, the Chairman said that, as industrialists, they could not, however, be otherwise than grateful for the splendid work which had been done by our Government during the last six months. He saw signs of some changes for the better through the partial restoration of confidence as a result of the Treaty of Locarno, and owing to the raising of the ban on foreign issues of capital in this country, but he was apprehensive as to the nullifying effect of relentless foreign competition, which might mar the progress of many industries in this country when the flood-gates of such competition were opened.

The report and accounts were unanimously adopted.

ANGLO-ECUADORIAN OILFIELDS, LIMITED.

SATISFACTORY PROGRESS.

The seventh annual general meeting of the Anglo-Ecuadorian Oilfields, Limited, was held, on the 14th instant, at Winchester House, Old Broad-street, London.

Mr. H. W. Sillem (managing director), in moving the adoption of the report and accounts, said that expenditure on capital account for the past year was again high, but this would not come as a surprise if they recalled the chairman's remarks at the last meeting that the period under review was "a year during which the energies of the management were directed almost entirely towards completing equipment." The receipts from sales of crude oil and refined products were gradually increasing, the total receipts from all sources for the year under review being nearly £60,000, as against £35,000 in the previous year. This the board regarded as satisfactory, and they looked forward hopefully to an increase in the business in refined products for the local market when the enlarged refinery was in operation. It was not proposed to refine for export at present, and their main business must therefore be the production of crude oil for shipment overseas. They shipped their first cargo of 5,000 tons to this country in September last. With regard to future cargoes, satisfactory arrangements had been made for the disposal of their early future probable production by Sir John B. Wimble and the secretary, in the course of a visit to the United States in September. The main efforts of the directors were now being directed to the work of increasing production. It was hoped that the necessary preliminary capital expenditure was finished, and that the way was now clear to push ahead for production. There were now ten drilling rigs at work, and three more had been ordered for shipment early in 1926. Ten wells had been completed with varying production, and only one so far had been abandoned temporarily, and not as a dry hole, but owing to getting into difficulties. The wells were not large producers, but were likely to have long lives, and the oil was of good quality. Drilling continued to be slow on account of the hard formation, but, provided there is no repetition from January onwards of the heavy rains experienced in the early part of this year, progress should be steady. The total production for the year ended June 30, 1925, was 12,230 tons, while the figures for the period from July 1 to November 30, 1925, were 8,549 tons, or an average of 1,709 tons monthly. According to a cablegram just received from the field, provided there was no repetition of the heavy rainy season, wells Nos. 11, 12, 14, and 15 should enter the same oil sand as well as No. 4, and ought to be finished in the early part of next year. He would mention that No. 4 was one of the best wells the company had had, and was flowing in September last at the rate of 313 barrels per day.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3, Arundel street, Strand, London, W.C.2.

Other British and Dominion Government securities—	
Value as on November 30, 1925	31,017,637
	40,000,000

SIDNEY TURNER, Accountant-General.

India Office, December 11, 1925.

Messrs Samuel Montagu and Co. write on December 16th as follows:—

GOLD.

About £800,000 gold was offered in the open market this week, and the Indian demand being on a small scale, was mostly taken by Holland for account of Java. The receipt of £500,000 on the 11th inst. was announced as sovereigns released on account of the South African Reserve Bank. The destinations of the £115,000 sovereigns withdrawn were given as follows:—£60,000 to Straits Settlements, £30,000 to

Argentina, and £25,000 to India. It is understood that the bulk of the bar gold withdrawals was again destined for Holland on account of that country's colonies. During the week under review £205,000 on balance has been withdrawn from the bank. The net efflux since the resumption of an effective gold standard is now £11,196,000.

SILVER.

During the week under review China has been a consistent seller, and prices have given way under pressure from this quarter. Buyers have not been much in evidence, and spot supplies in this market being more than adequate to meet demand, the prices for the two deliveries again became level at 3 1/4d on the 12th inst., when the quotation for cash fell 1/4d and that for forward 3/4d. At the present prices America has shown a disposition to buy rather than sell, but little support has been received from the Indian bazaars. The prices quoted to-day—3 1/4d for both cash and two months' delivery—are the lowest for cash since June 9th last, and for forward since June 13th last. United Kingdom imports and exports of silver during the week ending the 9th inst. were as follows:—

Imports.		Exports.	
	£		£
U.S.A.	47,958	Hong Kong	116,650
Other countries	29,168	British India	10,000
		Other countries	4,284
Total	77,126	Total	130,934

INDIAN CURRENCY RETURNS.
(In Lacs of Rupees.)

	Nov. 22.	Nov. 30.	Dec. 7.
Notes in circulation	19,067	18,968	19,124

Silver coin and bullion out of India			
Gold coin and bullion in India	2,232	2,232	2,232
Gold coin and bullion out of India			
Securities (Indian Government)	5,711	5,711	5,711
Securities (British Government)	2,300	2,300	2,600

No silver coinage was reported during the week ending the 7th inst. The stock in Shanghai on the 12th inst. consisted of about 51,200,000 ounces in sycee, 65,000,000 dollars and 1,540 silver bars, as compared with about 52,800,000 ounces in sycee, 65,000,000 dollars and 2,350 silver bars on the 5th inst.

The Government of India have announced that £29,482,000 has been remitted to the Secretary of State for India from April 1 to November 30, 1925, by means of purchases of sterling in India. Of this amount £3,000,000 has been remitted on account of the Paper Currency Reserve.

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.—The production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of November amounted to 55,023 barrels.

CALEX OIL.—The Calex Oil Company reports having received cables from two of its subsidiary companies notifying the following production for November:—Cia de Petroleo Calex, S.A., 2,929 barrels, or 465 tons; Anglo-Texas Oil Company, 8,358 barrels, or 1,104 tons.

MEXICAN EAGLE OIL CO., LIMITED.—The production for the week ended November 28, 1925, was 145,000 barrels.

TAMPICO OIL, LIMITED.—The total production on the company's properties in Mexico during November was 45,264 barrels, in respect of which the Royalty due to Tampico Oil, Limited, amounted to 3,395 barrels.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Production for the week ending Wednesday, December 9, 1925, amounted to 1,136 tons (previous week ended December 2nd, 1,119 tons).

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended December 12, 1925, was as follows:—La Rosa, 18,125 metric tons (previous week ended December 5th, 14,444 metric tons); Maracaibo district, 3,730 metric tons (previous week ended December 5th, 3,189 metric tons).

Reports and Notices.

Mr F. H. Reeve has been appointed a director of the British Automatic Company, Limited.

Mr John Moody, the well-known American economist, who was recently in London, has established a European branch of Moody's Investors Service, Limited, at 70 Cornhill, E.C. 3.

The secretary to the British South Africa Company announces that Mr Edmund Davis has been elected to a seat on the board of the Rhodesia Railways Trust, Limited.

BANKS.

BANK OF SCOTLAND.—At an extraordinary meeting on December 22nd, resolutions will be submitted for issuing additional stock to the amount of £262,500, of which £175,000 will be paid up. The total paid-up stock will then be £1,500,000. The issue price is to be £20 for every £150 of stock. Stockholders will be offered £198,750 of the additional stock, being 10 per cent. of the amount already issued, and the balance of £63,750 will be offered to the staff on the same terms. The yield on the basis of the 16 per cent. dividend which has been paid for the past ten years is £5 10s 4d per cent.

BRITISH OVERSEAS BANKS ASSOCIATION.—At a general meeting of the members of the association held on December 16, 1925, the following were elected to form the committee for the ensuing

year:—Mr C. Cambie, Canadian Bank of Commerce; Mr J. S. Campbell, Bank of New South Wales; Mr Leslie Couper, C.M.G., Bank of British West Africa; Mr C. H. Hewett, Barclays Bank (Dominion, Colonial and Overseas); Mr E. M. Janion, English, Scottish and Australian Bank; Mr B. Lowndes, Standard Bank of South Africa; Mr E. C. Macleod, Bank of Nova Scotia; Mr C. Nicoll, National Bank of India; Mr H. P. Roberts, British Bank of South America; Mr S. F. Rogers, Imperial Bank of Persia. Mr Francis Shipton was re-elected an honorary member of the committee. Mr Sydney F. Rogers (Imperial Bank of Persia) was elected chairman of the committee, and Mr Bertram Lowndes (Standard Bank of South Africa) was re-elected honorary secretary and treasurer.

ITALO-BELGIAN BANK.—Balance-sheet figures at June 30, 1925, do not present any appreciable difference from those of the preceding year. The investments of the bank are nearly wholly composed of State bonds destined to facilitate the transactions of the bank's branches in London, as well as in South America. The dividend proposed is 10 per cent., against 8 per cent. for preceding year. The amount of premises, 18,746,228f, represents the value of the bank's premises in Sao Paulo, Montevideo, Buenos Aires, Valparaiso, Rio de Janeiro, and Paris. Cash stands at 165,306,809f, against 170,305,173f. Bills amount to 258,811,266f, against 299,723,579f. Government securities and Treasury bonds, shares, and bonds stand at 12,203,849f, against 9,611,396f. The net profits realised during the last business year amount to 6,120,321f, against 4,532,256f, to which is to be added the amount carried forward from the previous year, 1,635,511f, making 7,755,832f. The profit is disposed as follows:—Dividend, 50f per share, 5,000,000f; directors' remuneration, 543,048f; to reserve, 1,000,000f; to go forward, 1,212,784f. Reserve funds amount to 27,000,000f.

ROYAL BANK OF AUSTRALIA.—The net profit for half-year ended September 30, 1925, amounted to £48,170. The dividend is at rate of 10 per cent. per annum. The sum of £10,000 is put to reserve, making total reserve £630,000. The carry forward is £32,568. Total assets are £6,917,367.

RAILWAYS.

BRAZIL RAILWAY COMPANY.—The report for 1924 contains a wealth of interesting material, amounting to 90 pages. The directors point out that throughout 1924 the value of the milreis remained almost stationary in the neighbourhood of 6d. The same figure was maintained during the first half of 1925. Since August 1st of the present year, when it was about 5 1/2d., the rate of exchange has risen rapidly to 7 3/4d on November 10th. This amelioration must, above all, be attributed to the policy of strict economy and withdrawal of paper money pursued by the Brazilian Government. The gross revenue for 1924 amounted to \$1,159,886. Net income amounted to \$767,940. It is pointed out that this amount is subject to subsequent exchange fluctuations.

SANTA MARTA RAILWAY COMPANY, LIMITED.—The board announces that it has received a cable to the effect that the Supreme Court of Colombia has delivered a judgment whereby the company's concession is limited solely to those sections of the line which were constructed and opened to public service on October 31, 1911, and that the company was from October 19, 1920, under obligation to sell the railway to the nation or its nominees at a price to be fixed by mutual agreement or, that failing, by arbitration. Confirmation of the cable received and a full report of the judgment are awaited.

RUBBER, &c.

LANGKAPERA (SUMATRA) RUBBER ESTATE.—The output of rubber for the year ended June 30, 1925, amounted to 490,629 lbs, against an estimate of 440,000 lbs. The cost of production on the estate was 7.53d per lb, and the "all in" cost, including depreciation, was 10.76d per lb. The average gross selling price (not including the stock unsold, valued at cost price on June 30, 1925) was 15.76d per lb. The output of coffee was 1,067 piculs, of which 705 piculs were sold at a profit of £2,103 19s 1d. If the profit on this catch crop is taken to reduce the cost of rubber the "all in" cost of the latter is reduced to 9.73d per lb. The profit and loss account reveals a profit of £9,758, from which is deducted the debit balance of £9,472 brought forward from previous year, leaving a credit of £286. A dividend of 10 per cent. on the pref. shares absorbs £156, leaving credit of £130 to go forward.

PONTIAN (MALAY) RUBBER.—The yield of rubber for year ended September 30, 1925, was 203,378, an increase of 11,706 lbs. Estate September 30, 1925, was 203,378, an increase of 11,706 lbs. The cost of production were 9.74d per lb, the "all-in" cost being costs of production were 9.74d per lb, at an average price in under 11d, and sales amounted to 197,873, at an average price in Singapore of 15 11.41d per lb. The net profit is £10,272, against £2,405. The ordinary dividend is 20 per cent., against nothing in preceding year. The total assets are £65,013, against £54,120. Cash is at £11,064, against £4,142. The company has £2,949 in Government securities at cost, against no investments in preceding balance-sheet.

WATERFALL (SELANGOR) RUBBER ESTATES.—The crop of rubber harvested during year ended September 30, 1925, under the restriction scheme was 1,014,668 lbs, costing all-in 8.06d per lb, exclusive of the amount written off buildings, plant, and machinery. This crop was sold at an average price of 25.46d per lb. The profit for the year amounts to £83,427, making, with the balance of £16,285 brought forward from last year, a credit balance of £99,712. The interim dividend of 5 per cent., less tax, paid to the shareholders on July 2, 1925, amounted to £16,643, leaving £83,069 to be dealt with. The directors recommend the payment of a final dividend of 15 per cent., less tax (making 20 per cent. for the year), absorbing £49,929, leaving a balance of £33,140 to be carried forward, subject to directors' additional remuneration (£2,500) in accordance with the articles of association. The directors have concluded negotiations for the purchase of a rubber estate at a price which they consider favourable. Total assets £427,978. Cash is at £46,957.

MISCELLANEOUS.

BRITISH COLUMBIA ELECTRIC RAILWAY.—The net profit for year ended June 30, 1925, after payment of interest on debenture stocks is £360,792, against £283,283. The dividend on the preferred ordinary stock is £6 6s 9d per cent., free of income-tax, against £4 16s 2d per cent. free of income-tax. The deferred ordinary dividend is £8 per cent., free of income-tax, against £6 9s 8d per cent. free of income-tax. The sum of £40,000 is put to reserve. The carry forward is £60,890.

MILLOM AND ASKAM HEMATITE IRON COMPANY, LIMITED.—The net profit for year ended September 30, 1925, amounted to £42,845, against £40,655. Preference dividend absorbed £24,500. The sum of £25,000 is carried to reserve, and £12,813 carried forward. The report points out that the current improvement in trade has enabled the company to blow two furnaces and get the Florence Mine back to a larger production. The report further adds that the development of the Florence Mine exceeds expectations. The whole of the works and plant continue to be maintained in an efficient condition, and an increased output, both at blast furnaces and mines, can be obtained when trade conditions justify. The balance-sheet reveals total assets £2,206,971. Stocks have dropped from £132,399 to £66,185. Debtors are at £70,847, against £74,237.

AMERICAN WHEAT MARKETS.

Prices show slight change on balance. At the opening, markets were firm generally in anticipation of a decreased Argentine crop estimate, but the figures proved higher than had been expected. A certain amount of liquidation has taken place, stimulated by disappointing Liverpool cables, but purchases by the mills, and continued cold weather in the north-west have prevented any marked falling away in values. (b) December delivery.

COAL.

Our Cardiff correspondent writes:—Business on the Cardiff coal market this week has been largely absorbed by the arrangement of pre-holiday shipments, and with an increasing supply of shipping available the majority of the collieries have been regularly employed. Prices also of most classes of coal have been firm, with the better qualities showing decidedly upward tendencies for prompt positions. The better quality steam smalls have been particularly strong, and the quotations for these have been higher than at any other period since the early months of the year. It is also reported that a fair number of contracts have been arranged for supplies over the whole of next year, but at prices approximating current figures, and, therefore, at from 4s to 5s per ton less than those at which contracts were arranged for supplies over the current year. The Egyptian State Railways have increased their requirements over the first three months of the year from 200,000 to 300,000 tons of Monmouthshire coals, while a large South American contract has also been secured. The following are the current approximate quotations:—Best Admiralties, 22s 6d to 23s 6d; seconds, 22s to 22s 6d; best drys, 22s to 23s 6d; Black Veins, 20s to 20s 6d; Western Valleys, 19s 6d to 20s; Eastern Valleys, 19s 3d to 19s 6d; best bunker smalls, 14s to 14s 6d; ordinary cargo smalls, 12s 6d to 13s; coking smalls, 14s 6d to 15s; anthracite best large, 38s to 42s 6d; Red Vein large, 28s to 32s; machine-made cobbles, 57s to 58s; French nuts, 57s 6d to 58s 6d; stove nuts, 57s to 58s; rubbly culm, 11s 9d to 12s 3d; coke, special qualities, 35s to 40s; patent fuel, 19s 6d to 22s 6d; pitwood, ex ship, 31s 9d to 32s 3d.

Our Glasgow correspondent writes:—The stronger tone recently noted in the export branch has become rather more pronounced during the past week. Not a great deal of new business is being arranged, but outputs for the remainder of the month have been well contracted for, and the collieries are in a position to command firm prices for surplus lots owing to the covering demand by exporters having shipments to complete before the holidays. Round coal moves steadily in all districts, and among washed varieties a strong demand prevails for singles and pearls on both home and export account, although the larger sizes are also firmer.

Our Sheffield correspondent writes:—Business in house coal is active, and best qualities fetch high prices. A revival is being experienced in the coke and export coal market. Prices of blast furnace are higher. Boiler slacks are in fair demand. Best South Yorkshire steams are quoted at 16s upwards, and best Durhams at 17s upwards.

Our Workington correspondent writes:—The coal trade is better, three of the important collieries working full time, but production is in excess of requirements, chiefly due to the competition of Scotland and Lancashire in the Irish market, and that of Yorkshire and Scotland in the local land sale market. There is no change in prices. The shipments to Ireland have, during the past three weeks, averaged between 11,000 and 12,000 tons weekly. Coke is a bigish make from the furnaces on ordinary iron at 18s to 19s, according to carbon content. Trade in tar products is brisker, creosote especially being strong.

IRON AND STEEL.

The following is extracted from the weekly report issued by the London Iron and Steel Exchange:—Markets are characterised by typically December conditions. Orders are principally confined to a few small lots for immediate delivery, arising principally from the warehouse trade. There is sufficient inquiry in the market for delivery in the early months of next year to maintain a note of confidence. In the pig-iron market British producers are firm, although, with the exception of the Cleveland ironmasters, none of them has ventured an attempt to advance quotations. The conditions as regards semi-finished materials are practically unchanged. Considerable quantities are arriving in this country, and Continental producers have still what is practically the control of the British home market through the low prices which they quote.

Our Middlesbrough correspondent's report, dated December 17th, is as follows:—Pig-iron.—There is not a great deal of activity in the Cleveland iron trade, partly due to approaching holidays. The recent rise in prices has, however, somewhat restricted demand. Only small transactions are taking place for home account, the

Mr. T. P. O'Connor says—

"So far as this book is an illustration of the very remarkable career of a very remarkable man; so far as it is a defence of the independence of newspapers of all Governments, and of all parties, Lord Beaverbrook has my hearty Yes. So far as it is a plea for the substitution of government by the Press for government by public men, by responsible Ministers, by the Houses of Parliament, I meet him with an equally emphatic No.

"I end by saying that his book may well pass into history as one of the most illuminating and interesting and disturbing chronicles of our eventful era."

In his brilliant review of Lord Beaverbrook's new book, "Politicians and the Press," Mr. T. P. O'Connor, M.P., concludes with the trenchant passage quoted above.

What is your view? How much foundation in fact is there to justify "T.P.'s" assertion?

If you would judge for yourself, and at the same time learn the real story of the relationship between Fleet Street and Downing Street during the past seven years, you must read "Politicians and the Press."

‡ Corrected figure.

export business having almost ceased. Meanwhile, the agreed minimum price of 66s 6d per ton is unchanged for home consumers, 6d extra being required for export orders. The Hematite position is altogether different, there being something like a famine, and prompt supplies almost unobtainable. The price has consequently been advanced to 76s per ton for mixed numbers, and this only for forward delivery. Manufactured Iron and Steel.—There has been a slight falling off in the flow of specifications, but the works are fairly well situated, and prices are as follows:—Steel ship plates, £7 5s; steel ship angles, £6 17s 6d; iron bars, £11 5s; steel rails, £8. Iron Ore.—There is no change in the foreign ore trade, and best Bilbao Rubia ore remains steady at 21s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—The quietude usual towards the end of the year pervades all branches of local industry. Confidence in the new year has lessened somewhat. The market for foundry pig-iron is still weak, and in the absence of substantial buying there is a tendency among sellers to ease prices. Hematite is in fairly strong demand at home, and a considerable tonnage is being shipped to the United States. Producers of soft steels continue to suffer from the effects of foreign competition. More than half the open-hearth furnaces are standing. Trade with Canada and South America has been increasing steadily since midsummer. The home consumption of tools of all kinds is large, but overseas demand has fallen off. A feature of the cutlery trade is the heavy importation of goods from Germany, which are being shipped with the object of anticipating the tariff. Exports of Sheffield cutlery are lower. Makers of electro-plate are feeling the most acute depression for many years.

Our Glasgow correspondent writes:—The near approach of the holiday season is shown by a quietening down all round. The feeling is maintained, however, that better things are in store on the opening of the year, and business men are beginning to look forward to an early and definite turn of the tide. A good omen is the continued activity of the structural steel industry. All the firms in the trade are well supplied with work, amongst the latest contracts placed in this districts being one of £10,000 for steel buildings to be erected in Hertfordshire for British National Pictures. Apart from sectional steel the works are in want of orders, plate mills being very badly off, Continental plates having recently come in at 30s per ton below the lowest quotations of home producers. Pig-iron is slow, with only a small export demand. Makers of malleable iron are in a slightly better position, the home demand having somewhat improved. The boom in galvanised

sheets has eased off, but makers have full order books, and are confident as regards the future.

An International Service

THE Central Union Trust Company of New York is equipped with every facility for the prompt and efficient handling of financial transactions throughout the world. Foreign banks and business houses with banking interests in the United States are invited to avail themselves of this service, which includes the purchase and sale of foreign exchange, collections, and the issuance of commercial and travelers letters of credit. In addition, the Company conducts a general banking business and acts as Executor, Trustee, Transfer Agent, Registrar of Stocks and in every other Fiduciary capacity.

Traffic Dept., 110, Hamilton House, Bishopsgate, London, E.C.2

Our Cardiff correspondent writes:—In the iron and steel market there has been no material alteration. In the tinplate trade prices have been a shade easier, with those for basis boxes ruling down to 19s 7½d per box for prompt shipment. Tinplate bars are unchanged at £6 8s per ton. Supplies received at the dock warehouses last week were heavier by 44,451 boxes than in the previous week, and stocks were consequently increased to 83,710 boxes. There was a fair market for galvanised sheets, for which the price ruled at £16 10s to £16 15s per ton f.o.b. 24 gauge. The outlook for the steel bar industry is slightly improved, and there are rumours of the probable restarting of the Port Talbot works early in the new year.

CUMBERLAND IRON.

Our Workington correspondent writes:—The end of the year finds makers of Cumberland and North Lancashire hematite pig-iron so well sold that they maintain their present output until the end of March next. There was brisk buying between the middle and the end of last month, with the result that practically all the stocks disappeared, and it became necessary to increase the make, the latest furnaces to be restarted being the pair belonging to the North Lonsdale Company at Ulverston. The number now in blast between Workington and Barrow is 13, and the whole of the output is going into consumption. The improvement has come so gradually as to warrant the expectation that it will continue, and that a further expansion of production will be justified some time in the first or second month of next year. There has been no increase in price, the feeling being that in spite of rising fuel costs, the recovery should not be retarded, but Bessemer mixed numbers are very firm at the old quotation of £4 1s 6d c.i.f. Welsh ports, £4 6s 6d at Glasgow, £4 8s 6d at Sheffield, and £4 12s 6d at Birmingham. There is considerable Midland and Scottish buying of low-phosphorus iron at £4 15s per ton, and semi-special qualities are in brisk American demand at 84s to 87s 6d, according to analysis. Ferro-manganese, which one of the Workington furnaces is smelting, is steady at £15 10s, and malleable iron is in sharp request at £6 per ton. The local consumption is heavy, because of the livelier activity at the steelworks at Workington and Barrow. At both centres a considerable tonnage of rails is being rolled, as well as other railway material. Orders on the book represent nearly three weeks' work in four until the end of March. Rails are £8 10s, sleepers £10 10s, and fishplates £12 10s. Native hematite ore is, of course, in better demand, and the Hodbarrow mines have been restarted. Parcels are being sent to the East Coast and to Scotland. Superior sorts are quoted at 18s to 19s, and ordinary kinds at 14s to 15s.

OTHER METALS.

TIN.—Values marked a sharp decline owing to liberal selling orders combined with weaker cable advices from the East, though later the decline was mostly recovered on buyers showing more disposition to operate. A fair business transpired, including cash at £283-£273 15s, £281 5s and £282, three months £278-£272, £277 15s and £277 5s. Sales in the East were reported at £285 10s to £276 15s and £278 5s.

COPPER continued in good support, but with offerings on a large scale values exhibited slight irregularity, though firmer on balance. Standard cash sold £59 6s 3d, £58 18s 9d and £59 15s, three months £60 7s 6d-£60 and £61 2s 6d.

LEAD opened easier, but subsequently improved, with active dealings. Good soft foreign pig December sold £34, £33 16s 3d and £34 15s, January £34 2s 6d-£34 and £34 15s, February £34 2s 6d-£33 15s and £34 10s, March £34-£33 15s and £34 10s.

SPELTER slightly irregular, but firm, and a good turnover resulted. December sold £37 15s-£36 18s 9d and £38 10s, January £37 10s-£38 7s 6d, February £37 2s 6d-£36 15s and £37 16s 6d, March £36 17s 6d-£36 10s and £37 5s per ton.

ANTIMONY firm. English specials quoted £90 to £95. China crude December-January sold £81 c.i.f.

ALUMINIUM.—Home trade nominally £120, export £125 ton.

QUICKSILVER firm. Spot quoted £15 to £15 10s per bottle.

WOLFRAM firmer. Forward quoted 22s to 22s 6d per unit c.i.f. terms.

THE COTTON TRADE.

LIVERPOOL, December 17, 1925.

Business has been very dull all week and the market has declined about 35 points, though demand seems to increase. The estimated spot sales from the 11th to 17th inst. (inclusive) are 23,440 are American, 2,200 Brazilian, 4,100 Peruvian, 800 Egyptian, 3,150 African, 300 East Indian, and 10 sundries. The imports for the week are 97,920 bales, of these 81,718 are American, 2,947 Peruvian, 7,883 Egyptian, 2,527 African, 2,275 East Indian, and 570 sundries. Middling American is quoted at 9-74, Egyptian F.G.F. Sakel 16.75, F.G.F. Upper 14.30, fair Brazil 10.24, G.F. mod-rough Peru 16.00, smooth 11.99, F.G.F. Tinnevely 8.85, G.F. East African 12.55, and middling West African 9.49. Egyptian futures have been very weak, mainly due to selling orders from Alexandria. The only sustaining feature being the reversing of straddles between American and Egyptian growths, the difference to-day between January American and January Egyptian is 620 points.

MANCHESTER, December 17, 1925.

Trading during the past week has been under the influences of a further fall in raw material rates, and buyers of yarn and cloth have been afraid to give out orders of any importance. Bearish sentiment is still very pronounced, and there is every expectation of cheaper prices. The turnover in piece goods has fallen off, and less business has been done for India. It is understood that arrangements are being made to restart auction sales in China in the middle of January, and a few more bids have been met with for greys and whites. Only sorting up lots have been put through for the several minor outlets East and West, and there has not been much life in the home trade. American yarns have been dull of sale, and prices have favoured buyers. Restricted purchases have been reported in Egyptian spinings.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Steadying influences have been at work during the last few days, and the market to-day appears to be more settled than for some weeks past. There seems to be a general feeling in consuming centres that values to-day are nearing an economic basis, and this is reflected in increased interest on the part of users. Spinners who have held aloof for several weeks are now buying in a quiet way, and the turnover in both merino and crossbred tops this week has been on a larger scale. Most people seem to think that 64's tops are about on a safe trading basis at 4s, and sales have been made at that figure for delivery February-March. Crossbred wool has also got down to what may be termed a workable basis, and, with steady markets, there should be a considerable expansion in machinery consumption during the next few months. Spinners are finding more inquiry for yarns on to-day's quotations, and manufacturers believe that a considerable amount of cloth business, held in abeyance during the period of uncertainty, will come on to the market as soon as buyers are convinced that the bottom has been touched.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

The final auctions of Colonial wool in London have finished with values all below the opening figures. On the whole, however, they must be regarded as satisfactory, though the weakness of the last six or seven days was certainly disappointing to those who looked for a continuance of firm values. Urgent needs had to be satisfied as quickly as possible when the series opened. The home trade, in particular, wanted certain classes of wool, and even French and German buyers had certain requirements to fill. Afterwards buyers settled down to operations on a distinctly lower basis, and at the close prices were generally 5 to 7½ per cent. below those of the September-October series. This, however, is a small decline compared to that in Australia, New Zealand, and South Africa, while the price of crossbred wool in Buenos Aires is below any other market the world over. During the opening week of the series, merino values were at least 4d clean above those ruling in Australia. They were even more for South African grease combing wools, and at least 3d above New Zealand.

The year is drawing to a finish with wool soundly situated, and prices generally are regarded as being safe. Frankly, the majority would have been still better pleased if wool could have been purchased in the primary markets on the basis of 4s for good 64's tops, and while this has obtained both at Perth and Adelaide sales, the buying basis at Melbourne and Sydney has been around 4s 2d. Even that price is not going to prevent a good trade next year in woollens and worsteds. There is far more confidence to-day, and a stronger disposition to buy wool, tops, yarns, and pieces than there was 12 months ago. This is the direct result of more reasonable raw material prices, and we are satisfied that at to-day's values a sound business can be done.

THE JUTE TRADE.

The value of raw jute has displayed decided weakness since our last report. With little business being done at any of the consuming centres, sellers have made considerable concessions. Daisee assortment in this market has declined from £60 at the end of last week to £56, the ruling value to-day. White jute is still very scarce and values of First Marks and Lightnings have not dropped to anything like the same extent. First Marks actuals could be purchased to-day at £64 10s., and Lightnings at £60. Spinners have adhered firmly to their terms, and cannot afford to make any reduction. Attempts made to break the price of 5s for common 8-lb cops and 5s 1d for medium spools were unsuccessful. Business in cloth has shown no improvement, and only small hand-to-mouth quantities continue to be taken by buyers, whose stocks must be very low. Small quantities for immediate delivery manufacturers are insisting upon 5½d for 10½ oz, 40 in., and 5½d for 8 oz, but with an order of respectable dimensions something less might be entered. Little business is being done in linoleum hessians, the nominal prices of which are 10½d for 76 in., 9½ oz, and 25½d for 150 in., 10½ oz. Calcutta gunnies have declined in sympathy with the price of raw jute, and the latest ruling quotations of resellers here are 42s 9d for 10 oz, 40 in. hessians, January-March, and 42s 6d for April-June, with 8 oz in both positions named at 35s 9d. Buyers have been few.

HIDE, LEATHER, AND ALLIED TRADES.

The home hide market remains fairly steady, auctions held this week being for the coming fortnight's supply. Best ox sold at Thursday's Bermondsey auctions from 6½d to 9½d, and seconds from 6d to 8½d—a few selections showing slight declines of ½d to ¼d. Best cows sold from 6½d to 6½d. Calfskins were again steady, with no important change in prices, best selections making from 7d to 11½d per lb. Wools sold from 6s 6d to 12s, and hogs from 3s to 12s 6d each. Business in imported hides is improving, and prices of American frogskins advancing, best Argentine ox new skins at 9d, and Montevideo at 9½d. The United States

and Russia have been of late in this market, Scandinavia also making fair-sized purchases. Latest cables from Chicago report the market as steady, with best heavy packers selling at 15 cents.

As the end of the year approaches, the demand for sole leather falls off. The demand is still for light bends, of which supplies are short, as the manufacturers of the ladies' Wellington boot are continually taking supplies. The upper leather market shows some improvement, as carriers of kip leather are better placed for orders. Coloured glacé suitable for the high-leg boot, and, in a less degree, light calf, are selling well, and the market is getting clear of stock. The outlook for the boot trade is improving, and orders are coming to hand more freely.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

In our last report of the timber market (*Economist*, November 28th) it was stated that the spot market for building woods showed more confidence. This improvement has been more than maintained during the past few weeks. The market is now in a better condition than at any other time during the year, thanks to a lower import of building woods, the early closing of navigation, and the steady increase in consumption compared with a year ago. The decline in imports last month was due principally to the falling off of shipments from Finland, Latvia, and Poland; but imports from Russia and Sweden increased. Imports for the 11 months, January to November, compared with the corresponding period of 1924, have decreased by 130,000 loads. Ice has now taken a firm grip at the Northern shipping ports. Stocks are heavy, but consumption is very good, all things considered. At present rates of consumption the stock is smaller comparatively than at the end of 1924. The housebuilding trade is the largest consumer, and is taking heavy supplies of battens and scantlings. The larger sizes, deals, are now in better demand, after having been in but moderate request for the greater part of the year. The spot market has shown decided firmness. This should be maintained during the close season, and the market may go still higher as stocks decrease. Consumers have been fortunate in securing supplies this year at comparatively cheap prices, owing to keen f.o.b. and spot competition.

In Canadian spruce the imports were not so large last month as in November, 1924, but imports for the year is larger. Stocks in the Lancashire area are moderate, and prices are firmer. Besides the uses of Canadian spruce for house construction, the lower qualities are extensively employed in packing-case and box manufacture. Any improvement in our export trade of commodities requiring packing or crating would thus benefit the spruce market. In the mahogany market the position has changed but little.

COMPAGNIE GENERALE TRANSATLANTIQUE L^r
22, FLEET STREET, LONDON, E.C.4

Good logs, squared, find a responsive market, but not much interest is displayed in inferior wood. In sawn hardwoods imports from the United States continue to increase in volume, and stocks are large, but, owing to difficulties in log transport occasioned by heavy rains, imports in the early future should be lighter, particularly also as States shippers are very firm in their ideas for futures. Shipbuilding woods, such as teak and pitch pine, are firm. In the pitwood trade imports last month were a little larger than those of November, 1924, principally as a result of increased imports from Finland, which serves our Northern collieries with timber, but imports from January to November are over half a million loads less than those of the corresponding period of 1924.

VEGETABLE OILS AND OILSEEDS.

Partly in sympathy with easier wheat, and partly on account of the maintenance of the official estimate of the new linseed crop in Argentina, the market for linseed oil has eased considerably, £35 10s per ton naked ex Hull mill being current value for prompt delivery, later positions being at a substantial discount. Cotton oils have receded again, crude Egyptians offering at £36 and ordinary refined at £38 5s prompt. Palm kernel oil is firmer at £43 10s on a better demand for export. Soya and ground nut and other oils are quiet and unchanged. In the oilseed section business in linseed has been in abeyance pending the second estimate of the Argentine crop, which, confirming the abnormally heavy figure of 1,900,000 tons previously issued, has caused prices to decline. Old crop has been done at as low as £17 10s., December-January, and new at £17 2s 6d to £17 5s, January-February, but demand from crushers is still very small. Further arrivals of linseed from Soviet Russia are reported at Hull. Egyptian cottonseed is lower, and offers at £9 12s 6d on passage and £9 17s 6d December loading.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—A steady tone governed the market for actual sugar, with a fair trade passing in British make. Messrs Tate and Lyle's cubes quoted 31s 6d to 32s 6d; crushed, 29s 6d; coffee crystals, 32s 3d; nibs, 32s 3d; granulated, stove, 30s 4½d; fine, also coarse grain, 28s 10½d; No. 1, 28s 7½d; No. 2, also London and T.L., 28s 4½d; month forward, 28s 3d; January delivery, 28s 3d; February-March, 28s 3d; mineral water sugar, spot, 28s 9d; icing, 1 cwt cases and drums, 34s 6d; ditto bags 35s; pulverised, 31s 3d; caster, finest, 32s 7½d; ditto A, 32s 1½d; B, 30s 6d; yellow crystals, 25s 4½d. English-grown granulated, Cantley, quoted 27s 9d, ex London; Ipswich, also Ely, 27s 6d ex works; Anglo-Scottish, 27s 9d, ex Colwich; and 28s, ex Kidderminster. Of foreign remained quiet. Czech granulated, December, sellers, 14s 7½d; April-August, 15s 3d, f.o.b. Hamburg. Dutch granulated, "J" quality, spot, 24s 7½d; December, 14s 9d f.o.b., Rotterdam. American granulated, spot, 27s 6d; White Java, spot, 26s 9d; ditto, January-March, 15s 4½d; July-September, 14s 4½d; October-December, 14s 9d, c. and f., Calcutta; ditto, May-June steamer to London, 15s 3d, c.i.f. Cuban, basis 96 per cent. December-January, 11s 6d, c. and f., U.K. White terminal market flat. March delivery, sold, 14s 5½d; May, 14s 7½d to 14s 8½d; August, 15s 1½d per cwt.

COFFEE.—The market maintains a firm tone, with a steady demand, especially for all home trade qualities. Kenya, bold, common to good, sold, 11s 6d to 13s; peaberry, 11s 5d to 14s 6d; Uganda, fair bold brown and green, 11s to 11½s; Kilimanjaro, bold common to fair, 10s to 11½s; Arusha, fine bold, 12s; peaberry, 12s 6d. Costa Rica, new crop, good bold, 15s 6d; peaberry, 12s to 13s; Guatemala, Maragogipe, good colory, 20s 3s per cwt. Futures firm but quiet.

COCOA.—Spot parcels move off slowly, but late rates were maintained. For shipment, Accra, F.F. grade, December-February, also January-March, sold up to 37s 6d; Lagos, December-February, sellers, 74s, f.o.b. terms; Trinidad, December-February, sellers, 57s; Bahia, ditto, 44s 6d; Guayaquil, Epoca, December-February, 66s; Caraquez, 64s, c. and f. terms, per cwt. Cocoa butter, spot, C.F.R., quoted 1s 3½d; and prime English, 1s 3½d per lb.

TEA.—Indian auctions this week embraced 58,094 packages, which came to an active market. Whilst all descriptions were in request at full rates the strongest feature was the demand for common and plain medium sorts, which mostly showed a slight advance. Pekoe, sold, 1s 5½d to 1s 11d; broken orange pekoe, 1s 6½d to 2s 6½d, with choice 1s 5½d to 1s 11d. Ceylon offerings totalled 16,933 packages. Brisk competition prevailed for all grades up to 1s 8d per lb, but above this price slight irregularity was noticeable at times. Leaf grades suitable for export were in less request, while a falling-off in quality amongst finest invoices accounted for occasional weakness in value. Pekoe, sold, 1s 6½d to 2s 2d; broken orange pekoe, 1s 10d to 2s 3½d per lb. China descriptions were in fair request, and a steady tone prevailed. Keemun sold from 1s 6d to 2s 1d, with old seasons up to 1s 4d; Souchong, 1s 10d up to 3s for finest, while Monings sold from 6d to 9½d per lb. 4,635 packages of Java and Sumatra encountered a good demand at firm rates, except for leaf grades, which disclosed slight weakness. Pekoe, sold, 1s 4d to 1s 5½d; broken pekoe, 7d to 1s 5½d; orange pekoe, 1s 5d to 1s 8d; broken orange pekoe, 1s 4½d to 1s 11d; flowery, ditto, 2s 3½d; pekoe souchong, 1s 4d to 1s 5½d per lb, in bond. In quiet support, but Eastern shippers required steady rates.

RICE. in quiet support, spot, quoted 16s; January-February, 15s 6d, Rangoon, two stars, December shipment, 22s 6d to 23s, c.i.f.; c.i.f., London. Spanish, December shipment, 22s 6d to 23s, c.i.f.; ditto, spot, 24s 6d; oil dressed, 25s; Italian, spot, 22s to 22s 6d per ditto, spot, 24s 6d; oil dressed, 25s; Italian, spot, 22s to 22s 6d per cwt. Burma rice bran, January-March, £6 7s 6d per ton, London cwt. Japanese peas quiet. Spot, 34s; November-December, 33s; January-February, 35s 6d; February-March, 35s 6d. Madagascar

butter beans, spot, 34s to 35s, as to quality; November-January, 34s 6d. Rangoon, hand-picked, December-January, 12s 3d, f.a.q.; ditto, 10s 9½ per cwt.

SPICE.—Pepper irregular, but firmer on balance, with a good demand. Black Singapore, spot, quoted 1s 3½d; ditto f.a.q.; January-March, sold, 1s 4d to 1s 4½, 1s 4½d, 1s 6½d. Lampong, spot, 1s 4d; ditto January-March, sold, 1s 5½d to 1s 6½d; white Muntok, spot, quoted 1s 7½d; January-March, sold, 1s 8½d to 1s 9½d; March-May, 1s 8½d to 1s 10d. Fair Tellicherry, spot, 1s 5½d; Aleppy, ditto, 1s 5½d per lb. Tellicherry, January-March, 150s; Aleppy, ditto, 145s cwt., c.i.f. London. Cloves slow. Zanzibar, January-March, sellers, 11d per lb. Tapioca quiet. Fair flake Singapore, to Havre, February-March, s-l'ers, 18s. Sago flour slow. Sarawak, to U.K., January-March, sellers, 14s 9d. Desiccated coconut quiet. Spot, halves, 40s; November-December, also December-January, 38s 6d c.i.f. Ginger steady. Japan, spot, 87s 6d; West African, ditto, 59s; shipment, 57s cwt.

FRUIT (Dried).—Currants quietly steady. Amalia, quoted 32s to 33s; Gulph, 35s to 40s; Pyrgos, 30s to 31s; Vostizza, 42s to 52s; Patras, 34s to 36s. Sultanias barely steady. Smyrna, new, 52s to 60s; Australian, 68s; Cretan, 65s to 85s; Greek, 68s to 80s. Figs continue in fair request. Good average, 40s to 42s; genuine, 43s to 45s. Dates steady. Hallowee, spot, 20s 6d; Siar, 14s 6d; Khadowie, 18s 6d. Raisins quiet. Valencia, quarter boxes, medium, sold, 30s seedless, 24s. Muscatels easier. Clusters, common to medium, sold, 50s to 60s; good to fine, 71s to 80s. Evaporated fruits firm, with fair inquiries, and new crop plums in small supply. Californian apricots, standard new extra choice, 127s 6d; fancy, 135s; Australian, 120s to 130s. Plums in good demand. Oregon, size 30/40, quoted 72s; 40/50, 52s. Californian, 40/50, 59s; 70/80, 46s; 80/90, 43s 6d. Bosnian, new crop, 60/70, 45s. Pears, Californian, extra choice, 90s; fancy, 105s. Lake County, extra choice, 105s; fancy, 117s 6d. Apple rings, Californian, extra choice, 55s to 70s; Canadian, 63s 6d per cwt.

CANNED GOODS.

CANNED FISH.—Sardines remain firm, with a scarcity of best quality. Portuguese ½'s quoted 4s 9d to 5s per dozen tins. Salmon slow, but rates firm for all descriptions. Red, tall, 1 lb, 63s to 64s; ½ lb, pink, 37s to 39s; tall pink, 25s to 26s. Lobsters firm and supplies short. Halves quoted 160s to 165s, and ½'s, 95s to 100s.

CANNED FRUIT.—Trade quiet, but the tone of the market remained firm. Californian Bartlett pears, standard, 13s 3d to 13s 6d; seconds, 12s to 12s 6d; Oregon, choice, 15s; standard, 13s 3d; seconds, 12s to 12s 3d; Canadian, standard, 11s 6d. Californian peaches, choice, 11s; standard, 9s 6d; seconds, 8s 9d. Californian apricots, standard, 9s 3d; seconds, 8s. Loganberries, fancy, 11s to 12s; choice, 10s 3d per dozen tins. Pines firm for shipment, with offers above parity. Italian tomatoes continue in request at full rates.

CANNED MEATS.—The market is unchanged, but there is a better demand for corned beef in the North of England. Danish lunch tongues steady, and despite the time of the year the demand for 6 lb exceeds the supply. Corned beef, South American, 6 lb tins, quoted 34s; and New Zealand, 34s. Lunch tongues, Danish sixes, quoted 116s; and 1 lb, 18s; New Zealand, 6 lb, 12s per dozen tins.

CONDENSED MILK.—The market for full-cream is unchanged. For machine-skimmed a slight weakness this week is observable, owing to large quantities of milk being shipped to this country, due to fears of navigation on the canals being held up by frost in Holland. Machine-skimmed quoted 16s to 16s 3d; full-cream Danish, 26s 6d; Dutch, 24s per case.

HONEY.—New Zealand still remains firm, but does not seem to be influenced by any other honies imported. The lower grades are in small compass, and there are some fine parcels of whites and water whites being offered.

RUBBER.

Market very unsettled owing to realisations, while easier on balance. Plantation standard sheet, spot, sold, 3s 11d, 3s 9½d, 4s 2½d, and 4s 1½d; December, 3s 10½d, 3s 8½d, and 4s 1½d; January, 3s 9d, 3s 8d, and 3s 11d; January-March, 3s 8½d, 3s 6d, 3s 8½d, 3s 11½d, and 3s 9½d; April-June, 3s 5½d, 3s 4d, 3s 8d, and 3s 6½d; January-December, 3s 5d and 3s 6d per lb.

GENERAL.

HEMP.—Manila dearer. J grade, January-March, quoted £44; K, ditto, £38; L, ditto, £38 15s; and M, £33. New Zealand H.P.F., November-January, £40; fair, ditto, £36. African sisal,

THE BANK OF TAIWAN, LIMITED.

(Registered in Japan, 1899.)

Capital Subscribed ¥60,000,000
Capital Paid Up ¥52,500,000

Head Office - - - - - TAIPEH, FORMOSA.
London Office 25 OLD BROAD STREET, E.C.2

BRANCHES:
Amoy, Batavia, Bombay, Calcutta, Canton, Foochow, Hankow, Hongkong, Keelung, Kobe, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the world.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

No. 1 Tanganyika, November-January, £44 10s; ditto, Kenya, £44 per ton, c.i.f.

TALLOW.—Messrs Colchesters and Woolner write on December 16th as follows:—The tallow market was easier during the week, and prices were unchanged to-day for inferior kinds, while good sorts met with no demand. Unless the position improves in the meantime it is not proposed to hold auctions next week. Shipments of tallow from Australasia during November amounted to 3,600 tons, against 3,500 tons during the corresponding month of last year. At auction to-day 1,217 casks tallow were offered, and 158 were sold. Quotations are:—Australian mutton: Fine, 48s 6d; good to fair, 47s to 44s; dull to dark, 41s to 39s 6d; hard, 48s. Australian beef: Fine, 44s 6d; good to fair, 43s to 41s; dull to dark, 40s to 39s 6d; sweet, 45s 6d. Present shipment from Australasia: Good mixed, 43s 6d. Present shipment from South America, 43s. The market letter is unchanged. Town tallow, 39s 6d per cwt. Rough fat, per 8 lbs, 3d; melted stuff, 30s per cwt. Quotations are:—Town, 39s 6d, net cash, naked, ex works. Country: Frail casks, 39s 6d; home melted, shipping casks, net, f.o.b., good coloured, 43s; fair to dull, 40s to 39s. Bone fat: white, none; pale, none; benzine, 36s; melted stuff, 35s 6d, f.o.b.

SHELLAC dull. Fair, T.N. spot, quoted 210s; December, 1925; March, 1926, and May, 187s 6d cwt.

GOPRA quiet and the turn easter. F.M.S. Straits, to Rotterdam, October-December, quoted £30 10s; December-January, £30 8s 9d;

January-March, £30 2s 6d. Dutch E.I., October-December, £30 5s; Ceylon, December-January, £31 12s 6d. F.M.S. South Sea Islands, ditto, £29 12s 6d. Palm kernels, to Liverpool, January-March, sellers, £21 7s per ton.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £24 10s to £40; Cochin, £30 to £54. Ceylon bristle, £16 to £22 10s; cinnamon leaf oil, 4½d; citronella, Ceylon, 1s 10½d; Java, 3s 5d.

for immediate delivery. This abnormal attitude of the market appears to be based on the continued exports of gold, a slight reaction in exchanges, and reports that new foreign issues will be on a large scale in the early part of next year, and consequent fears of a further rise in Bank rate.

NEW YORK MARKETS.

Our New York correspondent cables:—Markets are highly irregular in response to the usual mixed year-end influences. The rise in the rate for call money to 6 per cent. is considered to be the entirely natural result of holiday demands for currency and annual settlements. Relaxation is expected early in the New Year. Holiday trade is very large, and industrial news continues favourable. Talk connecting the visit of Mr Norman and Mr Parker Gilbert with the sale of German railroad bonds is believed to be premature. In the best quarters it is held that the visits are for the usual general interchange of ideas with associates here. Washington talk regarding rubber warfare is regretted in financial circles, where the matter is seen in its true perspective.

THE STOCK MARKETS.

A holiday atmosphere has pervaded the stock markets, and business has been on a small scale, but the tone has been fairly steady. Gilt-edged stocks have been firm, but foreign bonds have moved irregularly. Home rails have been inclined to droop in the absence of business, and Argentine rails are slightly lower. An improvement in the price of raw rubber produced a slight rally in the share market, but business is on a small scale. Oils are quiet but fairly steady, and in the industrial section a good many small rises have been recorded. Mines are quiet.

In this column last week it was incorrectly stated that the issue of £4 millions in 5 per cent. debenture stock by the Cunard Steamship Company was oversubscribed. We are informed, however, that it is expected that the underwriters of the issue will have to take up nearly 50 per cent.

THE COMMODITY MARKETS.

Business in many markets is at a minimum in Christmas week, but the general tone remains satisfactory. Coal prices are firm, though not much interest is shown in foreign business. Pig-iron sales are on a satisfactory scale, though foreign business is confined mainly to the hematite branch. Many steel works have received substantial orders, and holidays are being curtailed in the Cleveland district. Demand for Lancashire cotton goods remains quiet, owing to holiday influences and uncertainty as to future prices. An expansion of woollen textile business is expected in the new year. Wheat prices show a further decline. The sugar, coffee and tea markets have all been affected by holiday influences, but prices are well held. Rubber is dearer, owing to covering purchases and the reserved attitude of sellers. Among metals tin is higher on better Eastern demand, copper a generally firm market, and lead easier owing to liberal offerings.

FOREIGN EXCHANGES.

In spite of the shortness of the period under review, owing to approach of the Christmas holidays, the Foreign Exchange market has not been without its sensations. These, as might have been expected, were centred on the franc. A rally began on the afternoon of Friday on the rumours of a dramatic scheme being about to be put forward by the industrialists of the north, by which they were to pledge one-tenth of their production as security for a loan for the purpose of saving the franc. This loan was to be raised largely in America, but it was anticipated that it would also be taken up heavily in France. The suggested mortgaging of the German railway bonds held

by France under the Dawes scheme also exercised a sentimental influence in favour of the franc for a time, but nothing appears to have come of this suggestion. The rate, which had closed on Friday at 127.80, opened at 126.15 on Saturday morning, and rapidly reached 125 during the day, a clear gain of 8 points in the 24 hours. The closing rate was 126.67. A closer analysis of the industrialists' scheme seems to have led to some division of opinion in France, for whilst the stabilisation of the franc was obviously in the interests of the importing textile manufacturers, who put it forward, it was equally obviously to the detriment of the French exporters of manufactured goods and produce of French origin. Also it is doubtful whether the promoters had actually gauged the American attitude towards France since her failure to arrive at a settlement on the question of her war debts. In any event, the rate fell away rapidly, a movement which was accentuated by the heavy French buying of sterling and dollars, when the rate was about 125, it is believed, on the part of the industrialists of the north. Opening at 129.25 on the 21st, it had weakened to 133.25 at the close of the 22nd, and was slightly better at 132½ at the opening on Wednesday. At the moment of writing, mid-day, communications with Paris are interrupted, and it is not known what the rate there is, but the placing of a few large orders from London has brought the rate here, in the absence of supply, to 131½. Few of the other Continental exchanges call for remark. Brussels and Milan are practically unchanged; Oslo and Athens are slightly weaker for no apparent reason. The Batavia rate is still rather against this country, and has now so nearly reached the gold point that further shipments of gold to Amsterdam for their account are reduced to a minimum. The Stockholm rate has improved from 18.12 on the 14th to 18.06 on Wednesday for reasons which at present do not appear to be clear. Warsaw is again weak at 50, sellers nominal. The dollar rate has continued to move fractionally against this country as a result of the maintenance of high money rates in New York, and has declined by ½ from the opening rate of 4.85½ to 4.84½. South American exchanges have remained firm, Rio at 7½, Buenos Aires at 46 19-32-21-32, and Valparaiso at 39-20, indicating in each case the maintenance of a steady flow of exports, mainly seasonal at this time of year. In the Far East the yen has declined further since last week, presumably as the result of the occupation of Mukden, an event which introduces those imponderable political elements which at once react on so sensitive a market as that of foreign exchange. Silver improved on balance after slight fluctuations in either direction, by ½, spot and forward both standing at 31½d. This improvement seems to have been due to buying both on China and Continental account, but the market has been quiet and business inconsiderable. The rupee remained unchanged throughout the week at 1s 6 11-64d. Hong-Kong improved with the rise in silver from 2s 4½d to 2s 4½-5½d. Shanghai, for the same reason, advanced from 3s 1½d on the 18th to 3s 1½d-2d on Wednesday. Singapore was steady throughout at 2s 4½d-½d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 19th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	9,650	From Revenue	14,555
Interest, &c., on Debt	15,171	Increase in Debt	15,313
Sinking Fund	5,125	Taken from Exchequer Balances	359
Sundries	281		
	30,227		30,227

Revenue produced £14,555,000, against £16,820,000 in the corresponding period. Customs yielded £1,795,000, against £1,491,000, and Excise £8,099,000, against £8,094,000. Estates duties yielded £1,210,000, against £1,850,000. Ordinary receipts amounted to £294,300, against £1,350,000. The week's operations increased the National Debt by £15,313,200, and caused the following changes:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Public Department Advances	17,200	Bank of England Advances	9,500
Treasury Bills	5,300		
Sundries	5,313		
	27,813		

The floating debt was increased by £9,975,000 to £813,631,000.

FINANCIAL YEAR, 1925-1926 (April 1st to Dec. 19th).

EXPENDITURE.		REVENUE.	
£		£	
Total Expenditure ..	602,911,913	Raised by Revenue ..	484,556,471
		Decrease in Balances ..	3,784,567
		Amount borrowed ..	114,570,875
Total	602,911,913	Total	602,911,913
ESTIMATES for FINANCIAL YEAR 1925-1926.			
Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Western Australian Bank, British Columbia Electric Railway, London Nitrate Company, Baldwins, Richard Thomas and Co., W. Abbott and Sons, Samuel Allsopp and Sons, and Rudge Whitworth and Co.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a review of production and prospects in the artificial silk industry.

CHRISTMAS AND JOHN SMITH.

See where from far along the Eastern road
The star-led wizards haste with odours sweet.
Oh run, prevent them with thy humble ode,
And lay it lowly at His blessed feet.

So Milton invoked the muse as he began his Christmas ode, loveliest of all poets' offerings at the shrine of Bethlehem. To only a very few is it given to express worthily whether in prose or verse the immortal longings that all our souls are heir to; but most of those who in their own sphere, and at their own level, whether from choice or necessity, have the habit of putting words to paper, feel at one time or another the impulse to get away from the daily round of material topics, and to hitch, just for once, their rumbling wagon to a star. And if at any season this freedom may be allowed to the work-a-day journalist, that season is surely Christmas.

It is an inevitable result of the war, and of the thousand and one material problems which are part of its legacy, that we are more deeply immersed than ever in the study of material things. The difficulties of the trader and the Finance Minister, the economic suffering of men and peoples, the bitterness between capitalist and workman, tend more and more to focus our attention on the production and distribution of wealth, and lead us further from the true saying that man does not live by bread alone. Politics are more than ever concerned with considerations of pure business—how this trade or the other is to be helped over a difficult stile; how the material grievances of one class can be redressed without laying too heavy a burden on the shoulders of another, how the wheels of industry can be kept running with only half the normal driving power behind them. Individually most of us find the struggle for existence more absorbing than before the war. As a nation, we are engaged more earnestly than ever in the same struggle to the exclusion of non-material things.

For this reason, if for no other, it is as well that we should pause occasionally to remember that man does not live by bread alone, that at the root of all our economic problems lie problems of spirit and of character which are more vital than any question of pure business or economics. A degenerate nation, no matter what its resources or how great its accumulated wealth, must decline and

fall. A nation that is too careless to choose men of character for its leaders, and from laziness or of deliberate choice puts its destiny into unworthy hands, is a lost nation. A nation in which class-greed has driven out the sense of duty and fairplay, or in which the craze for pleasure has usurped the place of hard work and public spirit, is clearly beyond the help of the economist, and however admirable may be the advice the economist gives, nothing but a spiritual conversion can save it from disaster. Without a vision the people perisheth.

It is, in a word, on the character of the individual that everything depends. In the history of the world, the importance of any one average man is theoretically negligible, and most of us can say that what we do or think is from the point of view of world-progress too trivial to matter. For more than ten thousand years man has been on the earth; ten thousand years hence he is likely still to be here; and the tiny point of time that covers our life is lost in the long vista of the centuries. But in our heart of hearts we know that our actions and our thoughts do matter enormously; that the individual is everything, and that however the ultimate mystery of life resolves itself, we are by conduct and character sowing not only for ourselves, but for the society in which we live, an eternal destiny. What matters most to a country is not its natural resources, or the brilliance of a few of its sons, but the way John Smith in the suburbs or the provinces, or the back streets of Bermondsey, is looking at life, the ambitions that he is cherishing, the standard he is working by, the values that he is setting on things.

There are times when it is difficult to believe in the moral and intellectual well-being of John Smith, times when one is disposed to give him up, and with him the future of everything. When one reads, for instance, the self-revelations of Lord Beaverbrook,* and watches his personality emerge from the ill-printed pages; when one remembers that according to statistics (which can no doubt be verified by chartered accountants) this peer is the daily counsellor and guide to 900,000 John Smiths, one's first feeling is one of despair.

Egotism, self-advertisement, and love of intrigue, redeemed in some measure by a zest in life which springs, perhaps, from a Colonial tradition, appear to be Lord Beaverbrook's main idiosyncrasies, and he has certainly persuaded himself to his own satisfaction that the power he exercises in the world is enormous. If his belief is correct, and if the mentality and character of Englishmen are being formed by the organs of Lord Beaverbrook, his companion-peer, then we must write off many of the traditions of English life.

But is his lordship quite so powerful, quite so important in the life of John Smith as he imagines? Much as we may deplore John Smith's taste in daily newspapers, we may draw some consolation from the thought that he is usually a superficial, careless reader, and that his opinions are very little influenced, his true self scarcely touched by daily communion with Lords Beaverbrook and Rothermere. We do not take our spiritual tone from the daily papers, and our real characters are not revealed in the mass psychology of a 900,000 circulation. Our faults are many and tolerably well advertised. We are most of us more familiar with the local cinema than with the inside of the parish church; we are many of us too fond of wasting our money with bookmakers; we are often lazy; we are sometimes class-conscious; when we are poor we are apt to be over-bitter against the rich; when we grow richer we occasionally become snobs. But set against all his faults, John Smith's redeeming virtues are great, and have never been shown more clearly than in the last ten years. We have only to think of the men and women of our own acquaintance who have faced all kinds of suspense and dangers, all kinds of sufferings in war and peace, and still kept their courage high and their fighting spirit unbroken. They have fallen from comfort to poverty with a smiling face, and after years of ease or working security have taken up the burden and dangers of life again without a grumble. Without work and without prospect of work, they have kept their homes together, and though no one could blame them for bitterness and hatred towards their

more fortunate neighbours, they have in the main retained their common-sense and their perspective unspoilt. When Great Britain, at home or abroad, is criticised for its slackness, and its speedy doom is foretold, we may fix our minds on the courage, the endurance, the patient industry of masses of its individual citizens, and, remembering that the qualities of the individual are the qualities of the State, take heart for the future.

POOR LAW REFORM.

(FROM A CORRESPONDENT.)

THE question of Poor Law Reform is now, it appears, to be taken in hand, though legislation is improbable next session. The "time lag" between the formulation of schemes of this kind and their translation into law is an interesting and suggestive study. The Royal Commission on the Poor Laws reported so long ago as 1909, and even then drastic reform appeared to be long overdue. Action has been repeatedly promised. But it is extremely doubtful whether the present system will disappear before 1930, over 20 years after its condemnation by a Royal Commission, which made a most elaborate and detailed examination of its defects.

The so-called New Poor Law of 1834 came into existence in the heyday of individualism and before the growth of the modern local authorities. It is significant that whilst the duties and responsibilities of the latter have from time to time been extended by Parliament, the Boards of Guardians have not obtained new functions. On the other hand, they have witnessed the growth of cognate services such as unemployment insurance administered by the State and the school medical service, school meals, maternity and child welfare centres, &c., controlled by municipalities and county authorities. In 1902 the chief *ad hoc* authority—the School Board—was superseded by county, municipal, and other authorities, and the Boards of Guardians were left in England and Wales as the sole survivors of the *ad hoc* principle.

The Poor Law Commission, which reported in 1909, after three years' consideration of the problem, whilst agreeing that the old Poor Law Authority was out of date because of the development of rival local services, disagreed as to their detailed findings, but agreed as to the need for far-reaching changes.

In 1917 the Ministry of Reconstruction appointed a Committee, under the chairmanship of Sir Donald Maclean. The Report of this Committee, which was unanimous on all essential points, recommended the abolition of the Boards of Guardians, and is the foundation of the proposals of the Ministry of Health recently published as "a basis for consideration and discussion."

During the present year the passage of the Rating and Valuation Bill will undermine the position of the existing Poor Law authorities. This measure is, indeed, regarded as a preliminary to their abolition. It is unnecessary in the present connection to draw attention to the defects of this measure. The main point is that it sweeps away the present assessment authorities, and paves the way for the final transfer of all the powers of the Boards of Guardians to the local authorities.

It is by no means certain from the published memorandum what precisely the Government has in mind as regards many of the questions which arise. The document rightly confines itself to the main problem and leaves open for mutual consideration the ways in which the policy is to be applied in detail. At the same time, in some questions, for example that of unemployment, to which reference is made later in this article, the memorandum is studiously vague.

One of the objects which it is sought to attain is "the co-ordination and improvement of the provision made for the prevention and treatment of ill-health, both institutionally and otherwise, and the inclusion in this provision of all public assistance required as the result of sickness, accident and infirmity." This is to be achieved by the abolition of the Boards of Guardians, and the transfer of their functions, with the exception of the registration ser-

vice (births, deaths and marriages), to the county boroughs and the county councils, with a certain measure of devolution to the smaller authorities in the latter case. The county councils would have a general oversight of all health services and complete responsibility for the consideration of applications for relief and the grant of out-door relief, and for all institutions transferred from the Poor Law Authorities. The County Council could, under the scheme, delegate to a borough council or district council any transferred service identical in kind with a service already administered by such authorities. This proposal concentrates considerable power in the hands of the counties, and it is not unlikely that it will be resisted by the larger boroughs and urban districts. It is at least open to question whether the county councils are as a rule as energetic and progressive bodies as the municipal boroughs and larger urban district councils. In the case of London, the County Council is to be given the same powers over the metropolitan boroughs as the other county councils possess over borough and district councils, and is to carry out the services at present maintained by the Metropolitan Asylums Board. There will, it may be assumed, be some controversy on the new powers to be given to the London County Council.

The financial proposals of the Ministry will be closely scrutinised. It is intended to abolish the present clumsy system of assigned revenue grants (for which there will be general approval) and "to replace the existing grants made out of the assigned revenues for poor relief, health services and unallocated, and the grants in aid of expenditure on health services, by a system of block grants, to be expended in the discretion of the local authority (i.e., the county or county borough council) subject only to the provision of a generally satisfactory health service."

In other words, the existing health services of local authorities and the health services transferred from the Boards of Guardians are to be aided by a block grant, fixed from time to time for a term of years, instead of by the assigned revenue grants, so far as they are allotted to poor relief and public health services or unspecified services, and by the present State grants to health services. This new block grant will be distributed to county and county borough councils on a basis of population qualified by a factor representing ability to pay. Transferred services, other than health services, which are the same in kind as services at present State-aided—e.g., the education of children, will earn State grant if undertaken as part of the present State-aided service.

This new development must, of course, be considered in conjunction with the Board of Education's new policy as outlined in Circular 1371. There can be no objection to the principle of a block grant, which is merely a consolidated grant for a whole service, superseding piecemeal grants. The real issue is as to whether the consolidated grant should be fixed for a term of years or variable from year to year in accordance with variations in the approved expenditure of local authorities. On this question the local authorities will have much to say, for it may be that they will find themselves with added duties and inadequate State assistance. It is not likely, either, that local authorities will passively submit to the Ministry's proposal that transferred expenditure should continue to be subject to Government audit.

One of the greatest difficulties confronting the Ministry of Health and the local authorities is the problem of the able-bodied adult. Primarily, this is the question of the unemployed. One of the objects of the Ministry's proposals is "the co-ordination of all forms of public assistance, and especially an improved correlation between Poor Law relief and unemployment benefit." The somewhat cryptic phrase "improved correlation between Poor Law relief and unemployment benefit" is not explained in the Ministry's memorandum. It is suggested, however, that the Unemployed Workmen's Act, 1905, should be repealed, on the ground that it is now largely obsolete as a result of the institution of employment exchanges and undertaken by local authorities. More significant, though less specific, is the statement amongst the headings of the scheme, which reads: "Relief to able-bodied to be limited and correlated with unemployment insurance." The natural conclusion appears to be that it is intended to scale

down out relief to the level of the unemployed insurance benefit. In practice, local authorities will find it difficult to do this. But the main point is that this proposal leaves untouched the real difficulty, which is that of responsibility for unemployment.

Local authorities have persistently urged that the maintenance of the unemployed should not be a local responsibility. Unemployment is an evil quite outside the control of local authorities, the incidence of unemployment in a particular area cannot be laid at the door of the local authority, and the maintenance of the unemployed is often enough out of all proportion to the authority's ability to pay. Hence, local authorities, in common with economists, regard unemployment as a national problem, and the maintenance of the unemployed as a national service. It is clear that side by side with the abolition of the boards of guardians there should go an extension and development of the system of unemployment insurance.

The publication of the Ministry of Health's Memorandum is only the first step in the reform of the Poor Law, and it will obviously be some time before the discussions with the local authorities result in an agreement which can be embodied in legislation. In the interval, full public discussion is not merely desirable, but necessary, because of the large considerations involved. The three main questions which call for solution are (1) the relations between the counties and local authorities other than county boroughs; (2) the financial relations between the State and local authorities; and (3) the problem of the able-bodied poor, or, in practice, the unemployed. On these points the final scheme will depart from the outlined proposals of the Ministry of Health.

NATIONAL INCOME AND BURDEN OF TAXATION IN GERMANY.

(FROM A CORRESPONDENT.)

IN March, 1924, Dr Luther estimated the national income of Germany at 25 milliard marks. This estimate, which was for a long time quoted both in Germany and outside, has lately given place to estimates varying between 30 and 40 milliards.

Curiously enough, very little attention has been given to an article of Dr R. Kuczynski in the *Finanzpolitische Korrespondenz* of February 13, 1925, in which, utilising a memorandum issued by the German Ministry of Finance, he estimates the national income of Germany at 52.5 milliard marks. This memorandum, bearing the date of January 19, 1925, makes a calculation of the total amount of wages and salaries on the basis of the 10 per cent. wage tax payable with certain deductions for a minimum of subsistence and family members in Germany. The memorandum of the Finance Ministry contains the following passage:—

"In the German Empire there is a total of 21 million persons subject to the wage tax, and 7 million persons liable to make advance payments on their income-tax, making together 28 million persons subject to income-tax. This figure corresponds fairly well with the number of persons who have an income of their own. As the German Empire at present has about 63.5 million inhabitants, the allowance for family members works out at 1.27 per cent. to each individual subject to income-tax. On that part of the wage which exceeds the tax-free minimum, there will fall a tax (deducted at the source) of $10 - 1.27 = 8.73$ per cent. The amount in income-tax deducted from salaries and wages in the month of November, 1924, was 119.75 million marks, and the annual amount on the basis of the November standard of salaries and wages would be 1,437 million marks. As the tax payments deducted at source amount to an average of 8.73 per cent. of the income in question, the income per annum is:—

$$\frac{1,437 \times 100}{8.73} \text{ million} = 16,473 \text{ million marks.}$$

To this should be added the tax-free income of each taxpayer amounting to 50 marks per month, $50 \times 12 \times 21$ million = 12,600 million marks, so that the total income

of those who are subject to the wage tax amounts to 29,070 million marks."

The Ministry of Finance made no calculation of the income of the 7 million taxpayers who are not wage earners.

Dr Kuczynski based his calculations on the December yield of the wage tax—126.32 million marks—and thus arrived at a total of 33 milliards as the income of all persons subject to the wage tax. He remarks in this connection that this figure does not include the income of certain wage-earners such as apprentices, errand boys, a number of agricultural workers, &c., whose total income he estimates at 2,000 million marks. Salaries and wages would thus aggregate 35,000 million marks. He further estimates the average income of the 7 million non-wage earners—industrialists, merchants, artisans, farmers—at a minimum of 2,500 marks per annum as compared with an average of 1,500 for wage earners. The total income of this category would then amount to 17,500 milliards, making the German national income at least 52,500 million marks.

Dr Kuczynski's reasoning appears to be very careful, and so far we have seen no criticism of his estimate. It is of interest to follow the development of the data during 1925. The yield of the wage-tax shows the following figures in million marks:—

January	126.1	June	132.0
February	122.6	July	119.2
March	127.0	August	115.0
April	126.1	September	120.4
May	137.0		

Average January-September, 125.1, corresponding to an annual yield of 1,501.2 million marks.

The summer months show a reduction—partly seasonal, partly in connection with the crises—but the September figure is again higher. There is very little doubt that the annual salary and wage bill in Germany amounts to something between 30 and 35 milliard marks. The income-tax collected from other persons than wage earners amounts to a monthly average of 85.2 million marks as compared with 125.1 millions from wage earners. In such circumstances it seems improbable that the aggregate income of those 7 million income taxpayers could be less than between 15 and 20 milliard marks. We thus arrive at the result that the national income of Germany in 1925 must be about 50 milliard marks, or 800 marks per head of population.

How do these figures compare with the estimates of pre-war national income? Dr Helfferich, in his well-known book, *Deutschlands Volkswohlstand*, estimates the *per capita* income in Germany in 1913 at 642 marks per head. If we take into consideration that German gold prices have risen from 100 in 1913 to about 140 in 1925, those 642 marks correspond to about 900 marks to-day. The present real income in Germany would thus constitute about 89 per cent. of the pre-war income. This result is confirmed by the figures of German production given by Professor Hirsch in an article summarised in the *Economist* of November 7, 1925, according to which agricultural production has almost reached the pre-war level, while in several important branches of industrial production it varies from 86 to 106 per cent. thereof, without taking into account the production of brown coal, which has risen to 166 per cent. It would seem as if a reduction in the *per capita* income by 11 per cent. is mainly accounted for by the disappearance of interest on capital and investments abroad lost during and since the war. The serious lowering of the standard of living among the middle classes is to a large extent counterbalanced by the improved conditions for agriculturists and others who by reason of inflation have succeeded in wiping off their debts.

For the year 1924-25 the Central Government in Germany collected 7,312 million marks in taxes. The exact amount collected by local governments is not available, but was certainly less than 800 million marks. Total taxation receipts were thus not higher than 8,100 million marks. For the current year these receipts will probably be somewhat higher—say 9,000 million marks. This amount represents about 18 per cent. of the national income in Germany. The corresponding figure generally quoted for England is 21 per cent. It would thus seem

as if Germany were taxed somewhat less than England. It is interesting in this connection to note that the closed accounts for 1924-25 gave a surplus of more than 700 million marks (in spite of the fact that a great deal of expenditure was charged to the Budget after the end of the financial year), and that the first six months of the current year give a surplus of several hundred millions. These surplus millions have been, at least temporarily, made available to trade and industry by means of credits advanced through the intermediary of the banks.

DEPORTATION OF AUSTRALIAN STRIKE LEADERS.

(BY A LEGAL CORRESPONDENT.)

THE constitution of the Commonwealth of Australia confers power upon the Commonwealth Parliament "to make laws for the peace, order, and good government of the Commonwealth with respect (among many other matters) to trade and commerce with other countries, and among the States.....immigration or emigration.....and matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in any department or office of the Commonwealth." In pursuance of these powers, the Commonwealth Parliament passed, last July, an Act to amend the Immigration Act, 1901-1924, which contained the following section:—

8AA.—(1) If at any time the Governor-General is of opinion that there exists in Australia a serious industrial disturbance prejudicing or threatening the peace, order or good government of the Commonwealth, he may make a Proclamation to that effect, which Proclamation shall be and remain in force for the purposes of this section until it is revoked by the Governor-General.

(2) When any such Proclamation is in force, the Minister, if he is satisfied that any person not born in Australia has been concerned in Australia in acts directed towards hindering or obstructing, to the prejudice of the public, the transport of goods or the conveyance of passengers in relation to trade or commerce with other countries or among the States, or the provision of services by any department or public authority of the Commonwealth, and that the presence of that person in Australia will be injurious to the peace, order or good government of the Commonwealth in relation to matters with respect to which the Parliament has power to make laws, may, by notice in writing, summon the person to appear before a Board, at the time specified in the summons and in the manner prescribed, to show cause why he should not be deported from the Commonwealth.

On November 20th Messrs Walsh and Johannsen, two leaders of the recent seamen's strike, were arrested with a view to their deportation on a recommendation of the Deportation Board. They applied for writs of *habeas corpus* in the State Court, and the proceedings were subsequently removed to the Federal High Court, which last week gave judgment directing them to be released. A brief summary of the judgments has now been cabled to this country, and it is possible to form an estimate of the legal grounds underlying the decision. The British colonist when he goes abroad to an unoccupied region of the world, and makes a settlement there, carries with him the English common law, and its traditional bias in favour of the liberty of the subject. Parliament can undoubtedly take away the fundamental right of personal liberty which is enjoyed by every British subject, and in times of war or other national emergency does not scruple to do so. During the world war many things were done, and lawfully done, under the authority of the Defence of the Realm Act which would have been unthinkable in a less critical and disturbed period. But this liberty can only be taken away by express and unambiguous language. Thus in the case of *Rex v. Halliday* [1917] A.C. 260, where a British naturalised subject of German birth was interned on the ground of "hostile origin or associations," in pursuance of a regulation issued under the Defence of the Realm Act, no one doubted that Parliament could authorise the internment; it was simply a question whether the language of the particular statute was specific enough to produce this result. "Magna Carta and the Habeas Corpus Act," it has been said, "stand upon a peculiar footing, and cannot be repealed by a side wind." The recent *Art O'Brien* case, arising out of the deportation of persons by the British Government from England to the

Irish Free State for detention there by the Free State Government, under a regulation made under the Restoration of Order in Ireland Act, has been a reminder that we have not forgotten the tradition in *favorem libertatis* which prevailed before the war.

The five judgments of the Australian Federal High Court, delivered on December 11th, concur in ordering the release of the two strike-leaders, but every member of the Court found different grounds for his judgment. Whereas in England, under a "unitary" and mainly unwritten Constitution, Parliament is omnipotent, and can legally do anything except (as has been said) "make a man into a woman," the Legislature of a Federal country like the United States or the Commonwealth of Australia can only act within the limits assigned to it by the Constitution. Therefore, except in so far as the Constitution expressly permits the Legislature to override the liberty of the subject, a citizen may find his liberty even more deeply entrenched, at any rate on paper, than it is in England; for any departure outside the terms of the Constitution will be unconstitutional, *ultra vires* and void. Thus the Australian judges in the recent case had to construe the Constitution, as well as to apply the general presumption in favour of liberty referred to above. The Chief Justice, Sir Adrian Knox, took the view that compulsory deportation could not be called emigration, and apparently would apply that ruling to protect any person who had made his home in Australia and become part of the people. Two of his colleagues held that only persons who had made their homes in Australia since the federation in 1900 could be compulsorily emigrated, so that the section of the Immigration Act set out above was invalid as against Walsh, but valid as against Johannsen; but further held that Johannsen was entitled to reasonable information as to the cause of his proposed deportation, and, not having received it, could claim his liberty. Another colleague held that the section was invalid because it was intended to apply to members of the Australian community (as, indeed, seems probable), and being contrary to the Constitution, was *ultra vires* and void. It would be impertinent for an English lawyer, who has only seen a summary of the judgments, to attempt a criticism of the Australian decision. But it implies no lack of sympathy with Mr Bruce in the great difficulties of his situation when we congratulate the Federal Court on maintaining its own high tradition of independence, and on making it clear that the Dominions do not intend to be stamped by industrial crises into sacrificing the safeguards of personal liberty which they have inherited from the Mother Country.

EUROPE'S WHEAT PAYMENTS TO AMERICA.

IN our issue of December 19th we reviewed the course of wheat prices during the last few weeks, and gave our reasons for believing that, despite the rise in quotations which occurred last month, the average level would be markedly lower this season than last. While in the crop year 1924-25 the partial failure of European, Russian, and Canadian crops were reflected in a high range of prices, the more abundant yields of 1925, particularly in Canada and almost every European country, assure a substantial gain to the consumer, despite such factors as a short crop of winter wheat in the United States, and the disappointment of early hopes of excellent crops in Argentina and Australia. This gain will have far-reaching effects on European economy. Its influence has to be considered not merely in relation to the cost and general standard of living, but also as regards its bearing on the international balance of payments between Europe and America. This problem has been analysed by an American economist, who writes as follows:—

Europe is a heavy net importer of bread grains. In the crop year ending July 31, 1925, Broomhall reported wheat shipments to Europe, excluding Russia, as some 630 million bushels. This probably overstates Europe's net imports, for some of these shipments originated on the

Continent itself, and there were some exports of flour to countries outside Europe. Reported net imports of countries for which statistics are available show a total of 586 million bushels, and if all countries were included the total might reach 600 million. For the countries included this represents an increase of some 40 million bushels over the previous record established in 1923-24.

Consider now the cost of these imports. British official figures show an average dollar cost per bushel of \$1.22 in 1923-24, and of \$1.77 in 1924-25, an increase of 55 cents per bushel, or about 45 per cent. Prices of flour imports rose in about the same ratio. Great Britain ordinarily purchases her grain more cheaply, on the whole, than the Continent, and in 1924-25 a large fraction of her imports were purchased early, at prices below the levels characteristic of the year. On the other hand, certain countries on the Continent import wheat and flour of lower grade than Great Britain demands. Nevertheless, we are probably conservative in assuming that European wheat and flour imports cost, per bushel of wheat, at least 55 cents more in 1924-25 than in 1923-24, and that the weighted average price per equivalent bushel was at least \$1.77.

Using these figures, we may roughly calculate that Europe's wheat imports in 1924-25 cost her some 1,060 million dollars, as compared with 680 million dollars in 1923-24, an increase of some 380 million dollars.

Moreover, European rye imports in 1924-25 were around 60 million bushels (Broomhall's figures give 61.9 million as total international shipments, as compared with 68.1 in 1923-24). In 1924-25 these came almost wholly from North America, chiefly from the United States, whereas in 1923-24 well over half came from Russia. The increase in import prices of rye was rather more than in the prices of wheat. The average export price of rye from the United States in 1924-25 (July-June) was \$1.26, as compared with 81 cents in 1923-24. Clearly European rye imports cost at least 25 or 30 million dollars more in 1924-25 than in 1923-24.

In sum, European importing countries had to pay overseas for bread grain alone around 400 million dollars more in 1924-25 than in 1923-24. This was a weighty addition to Europe's adverse balance of payments, and it brought her no offsetting benefit. It bulks large against the huge volume of European loans floated in the United States in the same period.

In view of this experience, it appears exceedingly fortunate for Europe that the effective adoption of the Dawes Plan, in August, 1924, enabled her to obtain important foreign credits in time to assist her in financing these imports; for this was unquestionably one result of her improved credit position, whatever the stated object of the individual loans that were floated. It is interesting to note that the most striking increase in net imports of wheat and flour occurred in the case of Germany, whose official statistics indicate that these were 81 million bushels as compared with 31 million in 1923-24. Even so, Europe generally ate poorer, dearer bread, and less of it, in 1924-25 than in the preceding year. Had it been impracticable to finance the large volume of imports, her food situation would have been much more difficult still.

The outlook for the current crop year is strikingly different. Exclusive of Soviet Russia, Europe's wheat harvests are reported 300 million bushels, and her rye crops nearly 250 million bushels, larger than in 1924. In addition to ensuring abundant supplies of bread grains, this will have a distinctly favourable influence on her trade balance as compared with the previous crop year. It is impossible at this early date to forecast, with any close approach to accuracy, Europe's net imports of wheat and rye in 1925-26, or the average price at which they will be secured. Imports will certainly not be reduced to the full extent of the increase in crops. It may, however, be roughly assumed that Europe's net imports of wheat and flour will be fully 80 million bushels less than in 1924-25, and that they will be secured at an average price some 20 cents lower than in 1924-25.

On these rough assumptions, Europe's wheat imports would cost her some 250 million dollars less than in 1924-25, though somewhat more than in 1923-24, when wheat prices were at an abnormally low level. Europe's

rye imports and import prices seem likely to be more strikingly reduced. A saving of 50 million dollars on rye imports is by no means improbable.

In short, Europe will probably spend overseas, on account of bread grains and their flours, some 300 million dollars less in 1925-26 than in 1924-25. This will be possible even though Europe consumes more bread grains than in any year since the war (except possibly in 1923-24), and replenishes the stocks which were depleted in 1924-25. It would require no pronounced restriction of consumption or restocking to permit a greater reduction of net imports than has been assumed above. Such a decrease in importers' effective requirements might easily lead to greater reduction in prices per bushel than has been suggested. Under the combined influence of these two factors the actual saving as compared with the past crop year might be substantially increased.

NEWSPAPER BALANCE-SHEETS.

In a previous article (see the *Economist* of December 19, 1925, page 1038) we considered the profits of the British Press. We now proceed to examine the financial position of a number of representative newspaper undertakings.

Our first table shows balance-sheet totals, and an analysis of principal liabilities and assets over the past two years:—

Name and Date of Balance-Sheet.	Analysis of Principal Liabilities and Assets.						
	Share Capital and Reserves.	Debentures and Loans.	Creditors.	Properties.	Stocks.	Cash & Investments.	Debtors.

a Preliminary and Formation Expenses stand in the balance-sheet at £469,674. b Includes reserves against contingencies. c Loan account £14,274 and premium on redemption of First Debenture Stock. d Loan account.

It is well that the Daily Mail Trust is so named, for in the balance-sheet and report there is nothing that tells us definitely how this popular publication is linked up with the Trust. At the annual meeting, however, which has been recently held, the chairman acquainted the shareholders with many informative details, and those interested in newspaper finance will be amply repaid for examining his speech in detail. Investments total £1,929,431, and are taken at cost. During the year, the report states, the balance of the debenture stock outstanding—£3,999,935—has been repaid at a premium, and the company is now free of debenture liability. This is highly satisfactory, as in some quarters debentures partly secured on that elusive asset, "goodwill," were not received with friendly eyes, especially with ordinary share capital so top-heavy. The directors also state that "the business of E. Hulton and Co., Limited, the whole of whose issued share capital is owned by your company, is being liquidated under

voluntary liquidation. The balance at the credit of your company on this account shows a surplus of £861,776, but the final surplus cannot at present be accurately ascertained. Your directors, however, after full consideration, felt justified in transferring at September 30, 1925, to a 'special reserve account' the sum of £600,000, representing the large part of this surplus realisation, and this transfer appears on the balance-sheet now submitted. It is proposed, subject to the approval of the shareholders, to appropriate from this 'special reserve account,' the sum of £553,987 10s, and apply this amount in reducing the unpaid liability on the ordinary share capital issued by 5s 6d per share, thus making the ordinary shares 7s 6d per share paid up instead of 2s, as at present." This is certainly a movement in the right direction.

No changes in share capital fall to be recorded, the increases shown in the first column of our second table all being accounted for by additions to reserves. Creditors, it will be seen, generally figure for more, while debtors, on the whole, are also higher. Properties show very little change. It is reasonable to assume that in this item certain companies, which have taken the figure of real estate and buildings at cost, have substantial hidden reserves. On the other hand, this item in new companies has probably been revalued. Allied Newspapers accounts for the largest single item of properties, which are given at £7,917,402. Stocks in most cases are lower, but there has been an all-round upward movement in cash and investments. Both the Daily Mirror and the Sunday Pictorial report that during the year they acquired "a substantial portion" of the share capital of the Daily Sketch. The Sunday Pictorial's investment holdings (taken at cost) rose from £641,304 to £674,521, and those of the Daily Mirror from £966,275 to £1,062,565. The Associated Newspapers' investments went up from £491,429 to £1,055,122, but no intimation is conveyed in the report as to the nature of the addition. The investments of the Times also show expansion—from £347,412 to £443,504, and those of the Amalgamated Press from £1,024,005 to £1,302,584. The Financial News is to be congratulated on dividing its investments into two separate groups, and showing them separately in the balance-sheet. "Unquoted securities" at cost stand at £53,689, while there is also £20,500 of 5 per cent. War Loan at cost; namely, £20,069. This policy of showing quoted and unquoted holdings separately is commendable from every point of view, and it is a pity that many other concerns in other industries do not follow the example set by the Financial News. The Irish Times' investments remain the same as in the previous year, but those of George Outram and Co. have advanced from £287,485 to £376,906.

Our final table shows dividends in the past two years, also present prices and yields and the price of shares a year ago:—

† Free of income-tax. ‡ Price March 2, 1925. § Price 8 pt. 30, 1925. ¶ Price Aug. 13, 1925. * Price Oct. 2, 1925. † Interim dividend of 5 per cent. paid June 3, 1925, on account of 1925.

Prices do not show very much alteration compared with those ruling a year ago, although the increased dividend of George Outram and Co. resulted in a substantial advance in the price of the ordinary shares,

while Allied Newspapers ordinary benefited from the satisfactory result of the first year's operations. An indication of the speculative nature of newspaper shares is afforded by a study of the yields obtainable.

PROCEEDINGS OF THE COAL COMMISSION.

A summary of the main points of the previous evidence will be found in our issues of October 31, November 7, 14, 21, 28, December 5, 12, and 19, 1925.

On Friday last, December 18th, the Coal Commission heard evidence from Mr F. W. Cooper, a member of the Committee of the Association of Private Owners of Railway Stock, and Mr C. H. Taynton, the secretary of the association. It was stated that approximately 700,000 of a total of 1,400,000 wagons of all kinds on the railways of Great Britain were in private ownership, their value, on a conservative estimate, being between £55,000,000 and £60,000,000. The greater part were coal wagons. The present system was efficient from the colliery point of view, and "pooling" would give less favourable results than had been suggested in other evidence, experience proving that the absence of suitable traffic in a reverse direction would result in considerable empty running under any system. As regards wagon capacity, colliery proprietors already regretted the displacement of the eight and ten-ton by the twelve-ton wagon, the former being more suitable for many classes of trade. They regarded the twenty-ton wagon as suitable only in a very limited number of cases, its dimensions being unsuited to the facilities of most existing plants, while its wheel base prevented its taking the curves on many railway lines.

Mr R. F. Nelson and Mr M. W. Middleton, on behalf of the Railway Carriage and Wagon Builders' and Financiers' Parliamentary Association, stated that the abolition of private wagon ownership would involve the closing down of 40 or 50 long-established businesses in the wagon-building and financing industry without benefiting the coal producer or consumer.

Mr Ernest Bevin, general secretary of the Transport and General Workers' Union, accompanied by Mr Ben Tillett, described the labour system at the coal exporting centres. In pre-war days, he declared, the "gang" system was frequently employed, under which numbers of men took work from the offices, performing as much as possible themselves, and employing for the remainder what were known as "casual hoppers." This practice led to corruption, the pitting of gang against gang, and the sweating of the hoppers. The "pool" system, since introduced, had been found more advantageous to employers and employed alike. Amalgamation of the railways had, he believed, given good results, particularly at Cardiff, where a notable improvement in dock appliances had been effected. As regards the relation of dockers' earnings to coal prices, the witness stated that the enhanced standard of the former class of workers was directly due to their effort to "speed up" operations by accepting payment by results, cutting out intermediaries, pooling their earnings, rendering their labour mobile, and exercising innumerable forms of ingenuity in carrying out their work. Mr Bevin further declared that most ships were better manned for coal trimming to-day than at any previous time.

After evidence had been given by Mr Robert Shirkie, on behalf of the National Federation of Colliery Enginemen, Boilermakers, and Mechanics, the chairman announced the adjournment of the Commission until January 5, 1926. It is hoped in the New Year to consider proposals for the future organisation of the industry, to be submitted respectively by the Mining Association and the Miners' Federation. Public sittings will be concluded on or about January 8th, and the Commission's report may be ready for presentation before the end of February.

Notes of the Week.

The Mosul Debate.—On Monday the House of Commons debated a Government motion approving the acceptance of the award of the Council of the League of Nations on the Iraq boundary. At question time on the same day the Labour party asked the Government not to press this debate to a division at the tail-end of the session. Mr Baldwin refused, but announced that, as soon as Parliament re-assembled, he proposed to give time for a debate on the new treaty between Great Britain and Iraq, the conclusion of which was involved in the acceptance of the League's award. Mr Clynes thereupon declared that the official Opposition would take no part in the debate, and the Labour party duly left the House. Accordingly, the motion was carried by 239 votes to 4, after a discussion which was not as keen as it ought to have been, in view of the gravity of the issue. Mr Baldwin's speech was mostly devoted to demonstrating that he had merely been continuing the policy of previous Governments, and that his action was likewise consistent with his own previous pronouncements. His attempt to show that our responsibility in Iraq would be shared by other members of the League in case of untoward events, was taken up sharply by Mr Runciman, and, whatever the juridical theory may be, it seems clear that, in practice, the burden of defending the country against an attack by Turkey would fall on our shoulders alone. The most important and satisfactory statement which Mr Baldwin made was that he was inviting the Turkish Ambassador in London next day to discuss "ways and means, consistent with the fulfilment of our obligations towards Iraq, of arriving at some such agreement as will build upon the League's recognition of Iraq's just claim for the retention of her territory the superstructure of a mutually acceptable and binding settlement." In this course a majority in all parties is likely to support him, and on the Turkish side there are indications of a not unconciliatory disposition. At the same time it is difficult to see how reciprocal goodwill, however sincere, can bring about an adjustment between two policies which are diametrically opposed to one another. The Mosul question involves the political future of the Kurdish nationality, half of which lives in the Mosul Vilayet, and half in the adjoining territories on the North, which are included in the domain of the Turkish Republic. The Turks are determined to Turkify their own Kurds. Throughout, the development of Kurdish home rule has been the policy of Great Britain as Mandatory Power, and the League has now positively enjoined this upon her. The Turkish policy towards the Kurds would have failed in any case, but there is no doubt that the Mosul settlement will hasten its failure; and thus the Turks will feel that the adverse award of the League has not only lost them the Mosul Vilayet, but has created serious trouble for them at home. As the Turks' difficulties in dealing with their own Kurds increase (as they are certain to do), their resentment at the Mosul award is therefore likely to grow greater. This is perhaps the most disquieting feature in the situation. Great Britain is now involved in the Kurdish question, which is much bigger and thornier than the Mosul question, and which we should have preferred to leave severely alone.

Steel and Protection.—As foreshadowed by Sir Arthur Dorman, in his speech at the annual meeting of the shareholders of Dorman, Long and Co., the Government has rejected the application of the iron and steel industry for protection under the Safeguarding of Industries Act. In reply to questions in the House of Commons on Monday, the Prime Minister stated that the Civil Research Committee has given the subject prolonged and detailed consideration, and has heard a large number of witnesses, representing employers and employed, and that in the course of the investigations it became clear "that the safeguarding of a basic industry of this magnitude would have repercussions of a far wider character, which might be held to be in conflict with our declaration in regard to a general

THE FIRST NATIONAL BANK OF BOSTON

tariff. In all the circumstances of the present time, we have come to the conclusion that the application cannot be granted. The Government will keep these industries under close observation with a view to promoting their well-being should any other measures be deemed desirable." It is now for the industry itself to devote its attention to seeing what it can do to put its own house in order.

The Small Capitalist.—In the diatribes with which left-wing Socialists assail the capitalist system a picture is commonly drawn of the industry and commerce of this country held in the stranglehold of a few great millionaires. There are few, perhaps, who accept this picture as literally true, but there are many who do not realise the extent to which the great businesses of the country are financed by the savings of hosts of small investors, and to such we commend the study of some statistics recently issued by the Liverpool and District Economic League. These show the paid-up capital, the number of shareholders, and the average amount of each holding in the case of 25 prominent concerns. Here is the list:—

Company.	Paid-up Capital, £.	Number of Holders.	Average Amount of Holding, £.
Midland Bank	11,976,890	57,250	209
Lloyds Bank	14,372,956	55,668	258
National Provincial Bank	9,479,416	41,603	227
Westminster Bank	9,051,718	69,882	130
Barclays Bank	15,592,372	51,011	306
Bank of Liverpool and Martins, Limited	2,348,000	11,300	208
British Dominion Insurance Company, Limited	1,092,896	3,500	312
Prudential Insurance Co., Lim.	1,200,000	5,353	224
Royal Insurance Co., Limited	2,239,772	11,100	200
Phoenix Assurance Co., Limited	1,005,000	8,179	123
Cunard S.S. Company, Limited	10,956,189	27,100	404
Peninsular and Oriental Steam Navigation Company	6,632,518	9,997	663
Mersey Docks & Harbour Board	32,644,000	42,240	773
Courtaulds, Limited	20,000,000	43,826	456
Thomas Tilling, Limited	608,848	2,500	243
Vickers, Limited	23,929,290	73,382	326
John Barker and Co.	2,380,000	12,253	194
Harrods, Limited	5,915,000	33,253	178
Selfridge and Co., Limited	3,114,566	18,000	173
J. Lyons and Co., Limited	6,345,838	25,834	245
Liverpool Gas Company	3,163,000	6,254	506
London, Midland and Scottish Railway	406,429,175	308,028	1,319
London & North-Eastern Rly.	364,871,121	252,961	1,442
Southern Railway	148,000,000	90,000	1,644
Great Western Railway	146,894,466	135,108	1,087

The smallness of the average holding in many of these cases is very striking, and the figures illustrate very clearly and usefully the extent to which the finance of British business is built upon the savings of the "small man." However small the holding, the holder is none the less a "capitalist."

Electricity Commissioners' Report.—There are not many industries about which so much statistical information is accessible, as the electric supply industry. A great deal of this is due to the assiduous labours of the Electricity Commissioners, who cannot be too highly commended for their extensive compilations. Their last issue is their fifth annual report, reviewing the industry for the year ending March 31, 1925. Broadly, the report shows that the progress and state of the industry is satisfactory (with

certain reserves on the question of national reorganisation). The number of undertakers is now 568, comprising 338 local authorities, and 230 companies and persons. The sale of units during the year totals 4,997 million, of which 3,167 million are sales by local authorities, and 1,830 million by companies. The increase over the previous year was 15 per cent. The Commissioners have worked this out as an average consumption of 117 units per head of the population. The report does not deal with costs, but it is stated that "there has been a progressive decrease in the average consumption of fuel per unit generated" since 1920. For the year under review the units generated (including railway and tramway and non-statutory undertakings) showed an increase of 11 per cent., with an increase of fuel consumption of only 6 per cent. This economy in fuel points to the success of the Commissioners' policy of reorganisation, and the gradual centralisation of generation in the more economical stations. Since 1920, 75 stations have either been shut down completely, or relegated to occasional or stand-by duty. Also, it will be seen that the tabulated number of bulk supplies taken or arranged altogether total 278. Moreover, for six electricity districts, reorganisation schemes have been approved by Parliament (to which has to be added the London and home counties scheme approved since March 31st). Replacement of obsolete plant also counts in this connection, 480,000 kilowatts of new generating plant being sanctioned during the year, bringing the total so sanctioned during the last five years to 2,244,226 kilowatts. That there is plenty of scope for bulk supply to small stations is shown by the fact that out of 584 generating stations, 255 (or nearly half) generate less than one million units per annum. As regards opening up new areas for electric supply, this is shown by the applications for special orders. The Commissioners started the year with 74 applications, to which were added during the year 88 further applications. The Commissioners remark that "a noteworthy feature of many of the new applications was the large extent of the proposed areas of supply." As regards reorganisation generally, as contemplated by the Act of 1919, the Commissioners are not satisfied with what has been accomplished, and indicate that they require further powers before this can be adequately carried out. Referring to the Weir Committee, whose report on the whole question of the electrical development is before the Cabinet, the Commissioners explain that, pending the Government's decision on the matter generally, they have felt constrained not to proceed with the initiation of new schemes of reorganisation, but have devoted themselves to finishing off the concluding stages of those which were already a great way through.

Trade in Northern Ireland.—Our Belfast correspondent writes:—The linen industry has passed through a trying year. Exports of piece goods have fallen over 20,000,000 square yards as compared with 1924, mainly due to lack of demand from that great market for linens, the United States. The lack of demand for piece goods has naturally been reflected in the yarn spinning section, several mills being entirely closed down. With most of the factories on short time also, and a considerable number of looms stopped, it may be estimated that the industry is only working up to half its normal production. The acreage under flax in Northern Ireland has also fallen this year, being estimated at about 38,000 acres, with a possible production of some 5,000 tons of fibre. It is fortunate for the linen industry that flax production in other countries has not fallen to the same extent as in Ireland, otherwise the problem of raw material, which sooner or later will become a serious matter, might have been acute. The falling off in demand for Irish linens during the past few years has been marked by a similar fall in flax production, not only in Ireland, but in other countries, especially Russia and the Baltic. Fortunately the Baltic provinces are now gradually increasing their production of flax, and better conditions are reported in Soviet Russia. As a source of flax supply, however, conditions in these countries have changed, and flax is more or less a Government monopoly, with the result that the fibre is not so cheap relatively as it was in 1913. For that reason, the experiments to increase the yield of home-grown flax by adopting pedigree seed will be watched

with interest. As regards the flax position, the following table, which shows the Irish supply and the net supply of flax in tons for the United Kingdom (including British production and foreign imports), as collected by the Flax Supply Association, and also the exports of linen piece goods, in linear yards, until 1919, and square yards from and including 1920, as given by the Board of Trade returns is illuminating:—

Year.	Irish Supply. Tons.	Net Supply. Tons.	Exports. Piece Goods. Yards.
1909.....	7,565	91,928	223,934,800
1910.....	9,738	91,161	220,568,000
1911.....	11,635	86,066	193,829,200
1912.....	14,452	111,315	213,085,400
1913.....	13,439	107,258	193,681,300
1914.....	8,792	89,047	178,893,200
1915.....	10,162	88,365	128,776,400
1916.....	15,404	96,365	144,063,500
1917.....	16,271	96,800	103,538,100
1918.....	18,252	44,851	70,204,200
1919.....	14,270	24,901	76,863,600
1920.....	16,652	31,908	93,044,700
1921.....	5,210	17,878	39,962,400
1922.....	5,434	39,049	77,435,600
1923.....	6,921	29,601	89,666,400
1924.....	5,736	48,222	110,793,600

The whole point at issue as regards raw material is that if the exports were doubled, that is, if trade approached the dimensions of pre-war years, would there be flax enough available? If not, then the industry is to be continually cursed with the bugbear of high prices with the consequent crippling in demand. The course of prices of Irish-grown flax during the past year has been from 16s to 19s per stone in January last down to 9s to 14s per stone in December. Yarn prices have also fallen, and now stand roughly at the same level as obtained in December, 1923. At that time renewed buying of linens took place, and it is hoped that at present price levels history will repeat itself and so bring back some measure of prosperity to the Irish linen industry. Belfast shipbuilding output shows a decrease of nearly 50 per cent. in tonnage as compared with last year, the total launches being 57,899 tons. This includes the 22,500 ton motor boat, the "Asturias," the largest yet built, which will undergo preliminary trials soon. The sister ship, the "Alcantara," will be launched by Harland and Wolff in the spring.

Wages of Iron and Steel Workers.—The present low level of wages in the various unsheltered trades has been reached at different dates. In the engineering industry the last reduction occurred in the autumn of 1922; in shipbuilding wages were last reduced at the end of 1923, with an increase for certain classes in 1924; and in coal mining the present level was reached late in 1924. There are now indications that the minimum has been reached in the iron and steel trades. During the past year wages in these trades have shown a steady and appreciable decline, in correspondence with a fall in the selling prices of the manufactured products. In the last few weeks a further reduction has become due in many districts, as a result of the latest price ascertainment, but in a large proportion of the cases it has been agreed that the reduction shall not be enforced. This has occurred in the case of blast furnace workers in Cleveland, Cumberland, Lincolnshire, Nottinghamshire, and Northamptonshire. A similar decision has been made in regard to iron miners in Furness, Leicestershire, Northamptonshire, and Lincolnshire, and to limestone quarrymen in Cumberland, whose wages are also regulated by the price of pig-iron, and in regard to steel workers in South-West Wales. The agreements which embody the conditions under which the sliding scales operate in these cases contain no provision as to the minimum level below which wages are not to fall, and the arrangements made for the suspension of the rules, which have been made as a result of negotiations between the employees and workers, are further evidence of the goodwill which has so long existed in this industry.

Cotton Trade Depression.—Our Manchester correspondent writes:—The serious condition of the American spinning section of the cotton industry was again considered on Tuesday by the Short-Time Committee of the Master Spinners' Federation in Manchester, and it was

decided owing to the deplorable state of the yarn market to recommend a full week's stoppage of the mills between December 24th and January 9th, this stoppage to be exclusive of the ordinary holidays. Although for a long time the factories in this department have worked only 39½ hours per week instead of the usual 48 hours, stocks of yarn have steadily increased during the past month, and the trade position is causing anxiety. It is anticipated that spinners will carry out loyally the recommendation of the Federation. The absence of fresh business is very largely due to the weakness of prices. Although supplies can be obtained at very cheap rates, buyers are afraid of still lower values. Cloth manufacturers are understood to have very small supplies of yarn, and a more active market might result in a rush for deliveries of twist and weft. Sentiment, however, is very bearish, and there is not likely to be any change in the attitude of buyers until after the turn of the year.

Austrian Finance and Official Salaries.—In a letter from our Vienna correspondent in our issue of December 12th he stated that the Austrian Government had agreed to pay the officials this year one and next year three bonuses, each amounting to one-quarter of a month's salary. Our attention has been drawn to the fact that the position was not correctly stated. It appears from the 35th Report of the Commissioner-General of the League of Nations that the Austrian Government has only agreed to give all officials and retired officials one exceptional grant of 28 per cent. of one month's salary. The Report also explains that an additional grant, bringing up the total to 50 per cent. of one month's salary, would only be given, provided that a scheme for a credit operation on a large scale became practicable. This scheme has now been abandoned. In view of the doubts expressed by our correspondent as to the sources from which the money to meet the salary bonuses will be raised, the following passage from the Report on the 20th Session of the Finance Committee of the Council of the League of Nations, held at Geneva from December 3rd to 8th, is worth quoting:—"The Committee has been informed that the Austrian Government has given an undertaking to effect sufficient economies in next year's Budget as to cover the expenses necessitated by the special grant accorded to the federal officials. The Committee takes note of this declaration, which it regards as binding the Austrian Government."

British-American Tobacco.—The British-American Tobacco Company continues to go on from strength to strength, and the profits for the year ended September 30th last constituted a new record in the history of the undertaking. From the following table it will be seen that the dividend has been raised from 26½ per cent. to practically 28 per cent., which is the highest return since 1920, for which year 30 per cent. was declared:—

Sept. 30.	1914.	1919.	1920.	1921.	1922.	1923.	1924.	1925.
Profits, &c.	2,177,022	3,776,508	4,879,177	4,323,481	4,400,784	4,494,972	4,866,266	5,145,838
Prof. div'nd	188,297	225,000	225,000	225,000	225,000	225,000	225,000	225,000
Ord. div'nd	1,532,308	2,155,774	3,745,492	3,842,493	4,010,709	4,014,821	4,258,921	4,487,734
To reserve	1,500,000	nil	nil	nil	Dr 122,000	..	..	..
Balance	Dr 10,436,883	1,394,734	908,685	255,788	1,387,075	254,894	382,345	432,504
Br'ght for'd	1,973,902	5,035,578	727,778	1,634,200	1,889,877	3,276,952	3,531,770	3,914,116
Carr'd for'd	930,319	4,400,312	1,636,463	1,890,188	3,276,952	3,531,770	3,914,116	4,346,576

The net profit amounted to £5,145,238, compared with £4,866,266, and while the preference dividend absorbed the same as in 1923-24, the ordinary dividend this time requires £4,487,734, in contrast with £4,258,921. Once again no appropriation is made to reserve. The balance remaining is £432,504, against £382,345, making, with the sum of £3,914,116 brought in, a total surplus of £4,346,576, which it is proposed to carry forward. The balance-sheet shows that the item "Loans to and current accounts with associated companies" has declined from £6,459,854 to £5,913,374, but against this investments in associated companies have gone up from £16,032,944 to £16,155,231, and in the present accounts there is a new item of £29,426, representing investments in British Government securities. Stocks have fallen from £6,148,602 to £5,725,515. In the previous accounts

sundry debtors figured for £651,963; this time there is a sum of £1,876,550 on account of sundry debtors, short-term deposits (£1,250,000) and debit balances. Cash is practically the same as a year ago, while reserves are a little higher at £2,371,630.

Burma Corporation.—The annual statement of this important Anglo-Indian undertaking embodies more than one element of surprise. Despite the serious interruption to operations occasioned by the fires which broke out just before and after the middle of the company's financial year, an increased tonnage of ore was treated and a record profit earned. Expansion occurred in the quantity of refined lead produced, and a higher average price was realised; increased quantities of antimonial lead, zinc concentrates and copper matte were turned out by the supplementary plants. The value of the rupee is, however, now taken at 1s 6d (approximately the current rate), as against the basis of 1s 4d adopted in respect of 1923-24. At 1s 6d the profits of that year would have figured at £646,400. We summarise the results for the latest period, in contrast with those for 1923-24, and for the half-year to June, 1923, to which a statement was made up in pursuance of the decision to alter the date of the financial year:—

	Half-Year 1923.	Year 1923-24.	Year 1924-25.
Ore mined	118,600 ..	277,200 ..	289,010 ..
Yield refined lead	21,650 ..	47,100 ..	48,514 ..
Yield fine silver	2,266,900 ..	5,114,700 ..	5,049,328 ..
Working profit	412,100 ..	1,073,400 ..	1,413,340 ..
Debiture interest	38,050 ..	71,400 ..	76,470 ..
Depreciation, &c.	71,500 ..	199,000 ..	209,830 ..
Taxes	43,900 ..	128,400 ..	173,620 ..
To reserve	50,000 ..	100,000 ..	
Net profit	208,600 ..	574,600 ..	953,420 ..
Reserve	397,650 ..	529,100 ..	595,230 ..
Debiture Redemption			957,450 ..

* Including bad debts.

Allocation of the dividends of the past two periods is a virtual impossibility. In the 1925 appropriation account the dividends declared in December, 1924, and in June last are treated as payments in respect of the half-years then ending. At this rate only 5 annas was disbursed in respect of 1923-24. Any way, out of the profits of the past two years dividends totalling 17 annas have been paid, and nearly £1,000,000 has been transferred to debenture redemption account. An interim dividend of 6 annas per share, free of both British and Indian income-tax, is now declared; past distributions have been free of Indian tax only. The existing debenture issue is, of course, to be repaid on January 1, 1926, and from that date—relieved of interest and redemption charges—the whole of the profits should be available for the shareholders. It is in anticipation of this contingency that the shares have been bid up to a price which gives a very modest yield on the current rate of dividends. At 4½ million tons the ore reserves indicate a small shrinkage, the values also being slightly less than before. On the basis of 300,000 tons per annum the material available represents fifteen years' supply. The control of the undertaking is in course of transfer back to London—a very proper proceeding in view of the fact that the great bulk of the shares is held in this country.

The Mexican Railway Report.—Some movement in the right direction is shown in the report of the Mexican Railway for the half-year ended June 30th last. Gross receipts, at \$7,279,963, showed an increase of \$1,272,558 on those for the corresponding half-year of 1924, while working expenses, at \$6,559,591, were \$749,986 higher. Goods traffic contributed \$679,079 and passenger train traffic \$618,660 to the increase in gross receipts, but there was a decline of \$25,181 in sundry receipts. The balance transferred to net revenue account is \$720,372, as compared with \$197,800 in respect of the first half of 1924. At the standard rate of 24d to the peso, this balance is a little over £72,000. But since debenture interest claims £82,606, and nearly £7,000 is absorbed by general interest and differences in exchange, the net result of the half-year's working is a deficit of £17,636. This increases the debit to net revenue to £649,080. The improvement in traffic recorded in the first half of the year does not appear to have continued, for the direc-

tors say:—"The earnings for the four months July to October of the current half-year have resulted in a deficit of \$44,900, compared with a surplus of \$317,900 in the same period of last year. The receipts have only averaged \$34,000 per day, and it has been impossible to reduce the expenses correspondingly. The labour situation still remains very unsatisfactory." This statement damps the hopes raised by the figures of the first half-year. The report expresses welcome for the renewal of diplomatic relations between Great Britain and Mexico, and continues as follows:—"The International Committee of Bankers on Mexico signed a revised agreement on October 23rd last with Senor A. J. Pani, the Mexican Minister of Finance. The new arrangement provides that the payments on account of interest on the Government direct debt shall be resumed on January 1, 1926, the National Railways being returned to private management on the same date. The agreement, as revised, has yet to be approved by the Mexican Congress."

British Controlled Oilfields.—The report of the British Controlled Oilfields for the year ending June, 1925, is a great improvement on the last. For the first time a genuine operating profit is shown. Last year there was an illusory profit of \$90,244, arrived at before providing for depreciation and after including a profit of \$580,878 made on the sale of the company's shares in V.O.C. Holding, Limited. This year there is a real profit of \$1,262,235 derived from the sale of oil after providing \$617,323 for depreciation. Gross operating revenue was \$3,539,134 and operating and administrative expenditure \$1,766,577. The new six-inch pipe-line was only in operation since January of this year, but since that date a supplemental sale of oil contract with the Caribbean Petroleum Company (Royal Dutch-Shell group) came into force which resulted in a higher average selling price. For the calendar year the value of oil sold and in hand was over \$5,000,000, as against \$1,343,685 for the previous calendar year. The retiring board of directors are to be congratulated on these satisfactory trading results. The balance-sheet, however, through no fault of theirs, is still unsatisfactory. The issued capital is \$22,499,850 in 7 per cent. convertible preferred stock and \$22,500,150 in common stock. It will be recalled that last year there was a suspense account of some \$20,000,000 representing the loss on the Ecuador and Costa Rica concessions. It was then suggested that the directors might write off this loss by writing up the concession in Venezuela. Happily the retiring board of directors have resisted that temptation. The suspense account now stands at \$22,721,920 after adding an amount of \$1,792,500, by which the item "cost of concessions" (\$12,678,766) has been reduced. Faced with a capital loss greater than the amount of common stock outstanding, the retiring directors consider that the shareholders should submit to a drastic writing down of capital and suggest that the common stock should be converted into an equal number of shares of no par value. This scheme does not affect the rights of preferred stockholders, who would retain their conversion rights; nor does it upset the equity of the common stockholders. Some scheme of this sort must clearly be carried through. The retiring directors frankly confess in their report that "included under 'cost of concessions' there has been carried forward as assets from year to year the cost of certain concessions, options, and other interests which had been purchased by this company before the present board took office. A number of these assets..... have proved to be of no value. One the present board were able to sell for a small sum." It is to be hoped that the new board of directors under the chairmanship of Lord Buckmaster will face realities as frankly as does the old and disillusioned board. As soon as the capital is written down the company would be in the position to pay dividends if the present production is maintained. The output of the El Mene field, in the Western portion of the company's Buchivacoa concession, is given as follows:—1923, 120,100 barrels; 1924, 1,180,031 barrels; 1925 (eleven months), 2,459,998 barrels. This is a remarkable rise, and it is doubtful whether the present production can be long maintained without bringing in new fields. The future depends, as always in an oil field, on the exploratory drilling. In the eastern portion of the

Buchivacoa concession the Standard Oil Company of New Jersey is drilling on a royalty lease. The central portion is under option to a syndicate which has formed the Venezuela Central Oilfields, Limited, to carry out the drilling obligations. On its properties in the Orinoco delta the company has done no further boring. In Trinidad, in the Oropouche lagoon field, indifferent results have been obtained. The immediate future depends, therefore, on the results of the drilling campaign which the new board must undertake in the El Mene district. It seems a pity that the management which has hitherto been successful in the field should be changed at this critical stage, and it does not make for efficiency that the voting trustees should have the power to compel a whole board to retire and nominate a new one for election.

The Rand December Dividends.—Our mining correspondent writes: That the distributions of the Witwatersrand gold mining companies generally for the second half of the current year would compare unfavourably with those of the corresponding period of 1924 was a foregone conclusion. In the event they have in certain cases proved less than had been looked for; several companies, indeed, announce no dividend at all. Such is the outcome of the disappearance of the gold premium, which brought in no appreciable revenue after the end of 1924. The difference made will, perhaps, be more clearly appreciated if it is mentioned that the proceeds of the gold produced this year will fall some £2,000,000 short of the 1924 total. Nor has it been possible to offset this by any substantial reduction in working expenditure. Economy has been secured by the extended introduction of mechanical appliances of greatly increased efficiency, and some stores have cost rather less than before. On the other hand, so far from being disposed to accept lower wages, the white miners have pressed for and obtained an enhancement. On balance a saving has been effected, but it is small. The full details of the October output to hand by mail show a cost ratio of 19s 2d, as against 19s 4d for the corresponding month of 1924. Moreover, as recently mentioned in our columns, many of the mines have been seriously handicapped by shortage of native labour, due in part to the Union Government's policy of restricting recruiting and in part to the ample harvest reaped by the "boys." We append our usual tabulation:—

Company.	Dec., 1924.	Total, 1924.	June, 1925.	Dec., 1925.	Total, 1925.
Aurora West	%	%	%	%	%

* Tax free. † Including arrears. ‡ See text.
This table does not include declarations made at dates other than June and December.

It will be seen that examples of decline are numerous, and in some cases substantial. There are, however, a few examples of increase, most notable being the Brakpan, Geduld, New Modder and Witwatersrand Deep. The Government Areas maintains its rate, and is expected to do better when the new plant comes into operation early next year. The New State Areas repeats its initial distribution of 7½ per cent.; the West Springs enters the list with that rate. Some months ago an unofficial cable stated that the Randfontein would be under the necessity of cutting its dividend to 2½ per cent.; actually the company will pay nothing at all for the current half-year. The "Johnnies" company makes a departure in the shape of an interim declaration. The reduction in the rate of the Rand Selection is understood to arise from the retention of funds for the purpose of subscribing for the new issue of West Springs shares.

Chosen Syndicate.—This is one of the brace of mining enterprises in Korea in which British capital is interested, the concession having been taken over from the French concern which originally acquired it. The syndicate is still in the early stages, but there appear to be considerable possibilities. After the milling of development rock had been in progress for some time with a portion of the old plant, 50 stamps were started up in June. The new treatment and power plant is expected to be ready before long. So far, attention has been chiefly directed to the Great Nurupi mine, where the ore reserves are estimated at somewhat under 200,000 tons, value about ½ oz gold to the ton. In all, 158 "prospects" have been located, upon one of which the existence of three large veins is reported, the values running 8 to 9 dwts per ton. At present the capital is in two classes of shares—the "B" having rather onerous rights. A scheme is on foot for the extinction of these by an allotment of ordinary shares, and for the issue of the additional 66,000 ordinary shares which will incidentally come into being. Thus the slender resources of the syndicate stand to receive a welcome supplement.

Sub Nigel.—Fluctuations have lately taken place in the price of this company's shares on the possible acquisition of an adjoining area. In their annual report the directors merely announce that the question of submitting a tender for the ground in question is under consideration. A generally satisfactory position is disclosed. Owing to the shrinkage in the gold premium, the working profit declined from £104,800 to £97,600; albeit an economy in costs was effected. The real reason for the reduction in the dividend rate consisted, however, in the largely increased expenditure on capital account—£38,600, as against only £5,400. With this, the outlay in connection with the No. 1 shaft has been completed; henceforth the company will get the benefit of the new facilities. Development during the year continued, to show improvement both as regards value and the proportion of payable ore met with. Notwithstanding the performance of a lessened amount of underground work, the reserve tonnage has expanded by 139,000 tons to 509,000 tons, while the average value of 12.2 dwts is a trifle up. Even now, however, the tonnage available represents little more than two years' extraction; hence, especially in view of the prospects of increased output, there appears need for the expanded development programme which the directors have in contemplation. The improved conditions are reflected in the dividend of 5 per cent. declared for the December half-year.

Oversea Correspondence.

UNITED STATES.—RAILROAD SHARES—INDUSTRIAL OUTLOOK—MR HOOVER'S INDISCRETION.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 15.

WITH the general market still irregular as the year draws to a close, well-defined strength has developed in the railroad shares. This occurrence supports the contentions of those who have claimed that the bull market was only interrupted by the November reaction, and that it would be resumed under the leadership of the oils and rails. So far the oils have done little better than hold their ground, but the rails have advanced persistently and consistently. Their strength must be admitted to have a logical basis. The railroads are in excellent condition, having transported a record-breaking traffic during the season of maximum traffic movement without experiencing anything like a car shortage. Current earnings are excellent. During the first ten months of the year the Class I. roads produced net operating income which was equivalent to 4.83 per cent. on their property valuations. During October the earnings amounted to over \$137,000,000, or 5½ per cent. on property value. For the entire calendar year net income will run well over one billion dollars; it is expected in competent quarters to run as high as \$1,120,000,000. This record will exceed that for the best previous year in history, 1916, when net amounted to \$1,040,000,000. The year's earnings will approximate, in fact, the 5½ per cent. on the Interstate Commerce Commission's valuations, which was laid down by the Commission as the "fair" return prescribed by the Transportation Act of 1920.

Meanwhile, while considerations of this kind have been holding financial attention, an important decision bearing on the question of railroad valuation has been rendered by the United States District Court for the Southern District of California. The Court decreed that the orders of the Interstate Commerce Commission fixing the valuation of the Los Angeles and Salt Lake Railroad Company be annulled, and that the Commission be enjoined from enforcing these orders in any wise. As this was the first instance in which a final valuation of the Interstate Commerce Commission has been passed on by the courts, and as the valuations of the Commission are the basis for the application of the rate structure and the "fair" return, the importance of the decision is readily apparent. The railroads have claimed all along that the Commission's valuations are too low. The case is about to be taken on appeal to the Supreme Court, and both parties to the argument are making efforts to hasten the procedure. It is hoped that the Supreme Court may take the case up early next spring. The event has been interpreted as a very considerable victory for the roads, and has contributed to the interest in the railroad shares.

Another bullish influence was embodied in the President's remarks on the railroad situation in his message to Congress. These remarks were interpreted as favouring voluntary consolidation of the carriers. From time to time words have come from Washington that suggested that forced consolidation was favoured in official circles. While there has been a disposition to believe that these intimations have reflected a desire to apply pressure to the roads to consolidate voluntarily, and while they usually have been attributed to certain individuals who have a liking for wielding the "big stick," they have, nevertheless, been disturbing, not least because of their impractical nature. The financial community has certainly been relieved to find in the President's message an intimation that he is not in sympathy with tactics of this kind. Meanwhile, the new Congress is opening with less than the usual signs of designs on the part of radically-inclined Congressmen to bait the railroads. And as the rise in rail stocks has been relatively moderate this year, the whole picture lends itself to the purposes of those who believe that these shares should and can be made to sell higher.

As the time for year-end inventory shut-downs approaches, industrial news continues good. The steel industry is operating at approximately 85 per cent. of capacity, and the United States Steel Corporation is doing slightly better. Notwithstanding the high rate of output, the unfilled orders of the Steel Corporation increased by 472,000 tons during November. This increase, the third consecutive monthly gain, brings the total up to 4,581,000 tons, which compares with 3,512,000 tons on July 31. Iron and steel prices remain firm, and the industry seems assured on a satisfactory first quarter in 1926. Fourth quarter earnings of the current year will compare favourably with those in the third quarter, but will still reflect the lower prices that prevailed before the present improvement had gathered force. Among the other major industries there has been some slowing up in automobile production, as is inevitable at this season of the year. Many of the automobile manufacturers are, however, enlarging their capacity, and the trade as a whole is anticipating a most excellent year in 1926. It is quite possible that the motor industry will run into another period of over-production; but its present condition undeniably is good. One encouraging aspect of the industrial situation is the maintenance of the improvement in the textile districts. Cotton consumption during November amounted to 543,000 bales, which just about equals the consumption in October—a month having more working days. The November takings compare, furthermore, with 492,000 bales in November, 1924, and with 531,000 bales in November, 1923. As for the crop, the trade is now satisfied that it will equal quite 15,500,000 bales. The possibility of the yield reaching 16,000,000 bales is recognised.

As much surprise and regret has been occasioned in local circles over some of the things that have been said on this side with regard to rubber and certain other commodities as in your own. Angry statements from certain of our rubber manufacturers are only what would have been expected. What has surprised our financiers is the intemperate character of certain of the outgivings of some of our official spokesmen. A letter written to Senator Capper, of Kansas, by Secretary Hoover, was released for publication by the Department of Commerce to-day. In this letter the Secretary takes up with the Senator the question of "the present activities of combinations and monopolies to fix the prices of our important raw-material imports that have been created or fostered by foreign governments." Mr Hoover maintains that "we are now subject to the full result of monopoly action, and we have no machinery of adequate defence." After recapitulating the history of the Stevenson plan and its operation, he declares that the situation is "wholly an artificial creation," and says that "We are therefore not in the midst of a genuine rubber famine, but purely an artificial one created by restriction on production for the purpose of advancing prices."

This is, one may take it, a question on which opinions differ; and the Secretary is certainly entitled to his opinion on the subject. What seems distinctly overstrained and unfortunate is Mr Hoover's remarks about the "trade war being made upon us." Again he refers the Senator to a recent address, "in which I appealed to the other nations to abandon those wars upon us and other consuming nations."

Just why Mr Hoover should characterise the interplay of well-recognised economic and business forces as a "war" being made against this country is a question for which different answers are furnished. One is that the Secretary of Commerce has a strong streak of suspicion and pugnacity in his disposition. Another is that the thing may be explained on the basis of political aspirations. It is pretty generally recognised that Mr Hoover is ambitious, and that his eye is fixed on the Presidential nomination in 1928. The Secretary has small gifts for politics, but has been attempting to make himself more acceptable to the politicians, a thing that he failed utterly to do when he first came to Washington. At any rate, his recent declarations against foreign "enemies" have been interpreted in certain circles as an attempt to gain popular favour, and to prepare the way for 1928. One thing is certain, and that is that the

banking community regrets his recent inflammatory talk, just as it regrets his interference with the proposals to float loans in this market for the coffee growers and the potash producers.

FRANCE.—THE NEW FINANCE MINISTER—INCOME AND TURNOVER TAX—INDUSTRIALISTS' LOAN PROPOSAL.

(FROM OUR CORRESPONDENT.)

PARIS, December 22.

THE problem of financial resurrection remains as obscure as ever. The appointment of M. Paul Doumer as Finance Minister marks an appreciable step in the direction of political sanity, but there is still a question to-day whether the successor of MM. Caillaux and Loucheur will secure any greater success than they over the doctrinaire politicians who, since the General Elections in May, 1923, have enjoyed a real if more or less occult dictatorship over the Chamber. M. Doumer, who is the son of a humble Paris *conciërge*, is a typical French professional politician, who was Finance Minister in the two Léon Bourgeois Cabinets which held office for five months in 1895 and 1896, and he has also been Governor-General of French Indo-China. This septuagenarian politician enjoys general respect among his fellow countrymen, who regard him as one of the wise Elder Brethren of France. He is credited with being an apostle of an extension of indirect taxation, and an opponent of predatory Socialism; and in this respect his advent to office is undoubtedly keenly approved by the vast majority of French citizens, the real feeling of whom, whatever superficial appearances may indicate, is undoubtedly in favour of the maintenance of the *status quo* so far as private property is concerned.

M. Doumer's exact projects are as yet unknown. They were to have been laid before the Cabinet yesterday, but it was announced at this morning's Ministerial Council that they will not be ready for disclosure until after the next sitting. Semi-official announcements, however, indicate that the new Minister of Finances will propose nothing of a spectacular character, and that his plans will prove to be largely consistent with the serious facts of the situation. So far as can be gathered, M. Doumer, as might be expected, is a convinced believer in the sound theory that France can only work out her salvation by economy, hard work, and careful handling of the present delicate situation. Heroic and empiric remedies of the capital tax order he is certain to reject. The new Minister proposes—contrary to M. Caillaux—to withdraw from the revenue side of his Budget the 1,250,000,000 which France expects to receive during the coming year from the operation of the Dawes Plan for German Reparation payments, on the ground that this money should be devoted directly to purposes for which Reparation payments are intended. He told the Finance Commission of the Chamber a few days ago that he estimates that the deficit in the 1926 Budget to be met from new taxation will amount to 4,500 million francs. Of this he expects to receive 3,000 millions from the increased taxation rushed through the Chambers by his predecessor, M. Loucheur, on December 4th. The balance of 1,500 millions he counts to obtain by increasing the price of tobacco, by increasing the tax on turnover in respect of domestic sales (except in the case of articles of the first necessity), and by extending the same tax to exports. Unofficially, it is believed that the Minister will propose that the tax on turnover (so far as France is concerned, and with the notable exception already set forth) shall be doubled. The extension of this tax to French exports (on which it will amount to 1 or 2 per cent.) will naturally reduce the advantage which this country has latterly enjoyed in foreign markets, owing to the depreciation of the franc, but it is believed that its incidence will be so low that no serious prejudice to French trade will result. These additional resources, M. Doumer believes, will enable him not only to balance his Budget, but to be able to resume regular liquidation of the debt due to the Bank of France and also to set definitely on its feet some form of debt redemption machinery on the lines of the Caisse d'Amortissement proposed by M. Caillaux and adopted by M. Loucheur.

M. Doumer's programme, as already suggested, is not of an heroic character, but will undoubtedly commend itself to impartial observers by its sober and rational aspects. To it are to be coupled, it is understood, proposals for much closer supervision over income-tax and tax on turnover collections. The Minister is apparently convinced that it is hopeless, in view of the special mentality of his fellow countrymen, to attempt further raids on the income-tax paying public, and that taxes on real commodities are superior in value to taxation of persons. In this he is confirmed by experience in this country, as shown by the relative yield from income-tax and from the tax on turnover. The total yield from income-tax in 1924 was 2,253,400,000, which was paid by a total of 1,144,875 persons out of a total population of nearly 40,000,000 (but which showed that only 200,000 persons in France declared incomes of over 30,000—say £300—a year). The yield from the turnover tax, on the other hand, amounted to 4,130,197,000, which, although paid by the whole population, was collected from only 1,750,000 persons. The superiority of the indirect form of taxation is emphasised by the fact that no fewer than 17,706 income-tax payers sent in claims for reductions of their assessments, while the complaints of over-assessment received from the much larger number of traders liable to pay the tax on turnover numbered only about 1,000.

The sensation of the week has been the visit of three leading industrialists to the Elysée, for the purpose of laying before the President of the Republic, on behalf of various manufacturing associations in the Roubaix district, a proposal for the organisation of a kind of voluntary Dawes plan for the restoration of the franc and the amortisation of the floating debt. The proposal of the three delegates, to put it as briefly as possible, is that a loan of, say, 10,000 million francs should be secured in America or elsewhere, on the security of 10 per cent. of the business turnover of the manufacturers of the North of France, and that the yield from it should be utilised to furnish the Government with the money necessary to set the national finances on a sound basis. The effect of the offer of the men of the North can only be described as electrical, and its announcement last Friday resulted in a swift recovery of the franc, within 48 hours, from the neighbourhood of 135 to the pound to around 126. Calm consideration of the proposal, however, brought an equally swift reaction, and this evening the franc is back again to within measurable distance of 133. The initial enthusiasm of the northern industrialists, who insisted that, "by throwing the credit of French industry into the scale," they would be able "within a few days to bring back the franc, if we like, to a normal level," has already been chilled by scepticism as to whether it would be possible, in present circumstances, to secure a loan of 10,000 million francs, or anything like that sum, from the United States.

The check to the ill-considered proposal was all the more serious in that it followed immediately after glowing reports had been sent forth from still undisclosed quarters to the effect that the Reparations Commission were about to mobilise 3,000 million gold marks of the 11,000 million marks of German railway bonds created under the Dawes Plan, and that France would consequently be able to count in the near future on receiving some 10,000 million francs from this source, in the form of almost immediate cash. The effect of the douche of cold water thrown on the northern manufacturers' proposal during the week end, during which the word "bluff" was unkindly used in various directions, was naturally not diminished when it was officially announced last night that, in view of the fact that the German Reparation railway bonds carry interest of only 5 per cent., their mobilisation, even at a heavy discount, is not at present possible.

The foreign trade returns for November disclose total exports valued at 4,193,243,000, or a falling off of 18½ millions, as compared with October, which registered an increase of 600 millions as compared with the previous month; while imports for November, which amounted to 4,574,119,000, were about 8,000,000 more than in October, and over 1,500 millions more than in June last. The increased imports have been almost entirely in raw

materials, while the drop in exports has been chiefly in manufactured goods, the latter having declined 260 millions on the month, after a similar downward movement in October. The month's exchanges resulted in a balance of imports over exports amounting to 381 millions, following a similarly unfavourable balance of 101½ millions in October. The figures for the 11 months of the current year, however, show a surplus of exports totalling 2,250,161,000, as compared with a balance of 1,373,889,000 during the corresponding 11 months of 1924. The detailed figures for the 11 months are as follows:—

	First Eleven Months of		Differences in 1925.
	1924.	1925.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	8,126,487,000	8,167,392,000	+ 40,905,000
Raw materials	23,341,264,000	25,524,141,000	+ 2,182,880,000
Manufactured goods ..	4,522,948,000	4,843,245,000	+ 320,297,000
Totals	35,990,699,000	38,534,781,000	+ 2,544,082,000
Exports—			
Foodstuffs	3,583,263,000	3,202,544,000	— 380,719,000
Raw materials	9,376,968,000	11,202,938,000	+ 1,825,970,000
Manufactured goods ..	22,639,091,000	24,441,033,000	+ 1,801,942,000
Postal parcels	1,765,266,000	1,938,427,000	+ 173,161,000
Totals	37,364,588,000	40,784,942,000	+ 3,420,354,000

The tonnage returns for the 11 months disclose that imports of raw materials have dropped over 7½ million tons, or 17 per cent., as compared with the corresponding period of 1924, while exports of raw materials and of manufactured goods have increased over 500,000 tons each. While exports of food stuffs decreased 230,000 tons, imports of the same class of merchandise dropped 550,000 tons.

GERMANY.—FINANCES—CURRENCY—EMPLOYMENT—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 21.

THE year 1925 is ending in not very favourable conditions. As against the tranquillising effect of the Locarno agreements, the increase of foreign confidence in Germany, as shown by recent loans, and the improvement in foreign trade in the last two reported months, stands the fact of ever greater industrial inactivity. In December the last factor was very marked. As far as can be judged, it is due mainly to a decline in buying by the home market, but partly to customary seasonal influences. So far, nothing indicates that the increase in export trade, which, after a period of stagnation, has been proceeding for two years, has come to a final standstill. In view of the fact that the increase in exports in 1925 was partly due to the conclusion of commercial treaties, the signature last week of a protocol between the German and French representatives embodying the result of their negotiations is a good omen. The protocol, it is announced, sets out a basis for the last stage of the negotiations which will begin on January 12. Germany gets a promise that from a certain date she will be put on equality with her most-favoured competitors. The difficulty up till now revolved around the German demand for automatic application to her goods of the French minimal tariff. The Cabinet crisis will not be solved until after Christmas; but it is hoped that a new Cabinet will be formed by January 12th, when the Reichstag reassembles.

The Budget for 1926-27 has been sanctioned by the Reichsrat. The Treasury account for November, including the October but not the November pledged sources, shows receipts of 561,156,858 marks, outlay 609,272,784 marks. Receipts from all sources for the first eight months of the financial year were 4,945,636,638 marks, of which 4,784,154,593 marks was from taxation (net), and outlay 5,067,460,871 marks. The gross taxation receipts were 4,795,568,003 marks, out of 6,343,750,000 marks estimated for the whole financial year. Receipts from direct taxes were 3,520.7 millions out of 4,729 millions estimated for the whole financial year; from indirect taxes 1,274 millions out of 1,514.7 millions, whereof 1,201.6 and 1,425.2 millions respectively were Repara-

tions pledged taxes. Customs yielded 373.6 millions in the eight months, against 356 millions estimated for the year; the brandy monopoly only 85.9 millions out of an estimated 150 millions. The net surplus in the financial year 1924-25 is shown by a new memorandum of the Finance Ministry at 496.4 millions, of which 150 millions goes for immediate loan valorisation (to needy bondholders) in the financial year 1925, 66.4 millions for reducing the deficit in 1925, and 220 millions for balancing the 1926 Budget. The same memorandum summarises the 1925-26 Budget as revised (including supplementary Budget):—

	Millions of Marks.
Revenue.....	7,686
Whereof—	
Direct taxes	4,911
Indirect taxes	1,859
Administration receipts.....	174
Profit on coinage.....	233
Surpluses from 1924	216
Railway companies pref. shares	291
Expenditure.....	7,795
Whereof—	
Subventions to States and municipalities....	2,496
Home war burdens.....	427
Reparations payments	291
Cost of coinage	8
Other expenditure	4,571
Deficit	110

The Budget for 1926 shows receipts of 7,412 millions, whereof 2,337 millions is subventions to states and municipalities; and expenditure of 7,118 millions, whereof 2,337 millions is subventions to States and municipalities. The extraordinary Budget for 1926 contains 7 millions revenue from various sources and 301 millions expenditure; and both budgets together balance at 7,419 millions. In 1927, the memorandum notes, the crediting of surpluses from former years will cease. The Reparations liabilities will increase, but the home war burdens will decline. Assuming that general expenditure remains unchanged, about 462 millions more will have to be raised in 1927 than in 1926. The Finance Ministry expresses doubt whether it will be possible to reduce general expenditure. The Federal Debt on October 31st is returned at 2,495 million marks, whereof 1,320.3 millions were bank debts and 932.7 millions the Reparations loan.

Money has continued plentiful, and no difficulty in connection with the year-end settlements is expected. Day money has of late been quoted at 7 to 8½ per cent.; month money 10 to 10½ per cent. The Reichsbank's return for December 15th shows a new decline in note circulation by 167.9 million marks to 2,566.3 million marks; a decline in discounts by 28.5 million marks to 1,565 million marks; and an increase in deposits by 133.9 million marks to 765 million marks. Rediscounts totalled 585.2 million marks. The Rentenbanks' return for November 30th shows since October 30th a decline of circulation from 1,816.4 to 1,611 million marks. Since the coming into force of the Rentenbank Liquidation Law 469,053,376 rentenmark notes have been withdrawn from circulation. The shortage of money in business continues. Bills are increasingly used as a means of payment of petty debts.

The rate at which unemployment has been increasing becomes more rapid with every half-monthly term. Between November 15th and December 1st the publicly supported unemployed increased by nearly 200,000, as against an increase of about 100,000 in the preceding half month, 65,000 half a month earlier, and 32,000 still half a month earlier. Unemployment now exceeds the highest figure of last winter. The movement has been:—

January 1	535,529
February 1	592,479
July 1 (lowest)	195,005
November 1	363,784
December 1	669,130

Since the date of the last return the situation has become worse. Percentages of fully and partly unemployed in the trades unions on December 1st were respectively: Metal, 8.58 and 25.53; textiles, 3.84 and 20.8; boots and shoes, 3.90 and 56.61; pottery, 5.59 and 17.14; building (fully unemployed only), 27.84; miscellaneous factory occupations, 11.17 and 12.21. Inactivity in the boot and shoe industry has of late become extreme. The trade Press has little to

report except discharges of workmen and reduction of output. In the chemicals branch tolerably good conditions are reported. No improvement has taken place in iron and steel. According to the latest reports, the steel trust negotiations have made some progress, the three Rhine-Elbe (formerly Stinnes) companies having been granted an increase in their participation quotas. A capital for the trust of 600 million marks is now mentioned. The Raw Steel Syndicate has refixed the price reductions which it grants to manufacturers on material bought by them for conversion into export wares. The normal prices charged on material used for manufacture of home-sold goods and the reduced prices are (in marks per metric ton):—Ingots, 104.25 and 90; blooms, 111.75 and 92; billets, 119.25 and 95; sheet bars, 124.25 and 98; structural forms, 131.25 and 100; bars, 134.30 and 104; wire rods, 140 and 115; thick sheets (over 5 mill.), 149.25 and 118. The Association of Iron and Steel Manufacturers has passed a resolution insisting upon "immediate State help and taxation reduction....." State measures are also necessary against English coal dumping." State export credits are demanded; also, as long as the franc depreciation continues, lower emergency railway rates for coal and iron. "If the Government neglects to take the necessary counter-measures, dumping imports will further increase, the home market will be ruined, productive activity will decline still more, and more workmen will be discharged." The Federation of Industries has also issued a programme, demanding a 20 per cent. reduction of federal, State, and municipal expenditure, lower taxes, lower freight rates for export wares, and authorisation of the Government to impose supplementary import duties on "wares priced on a dumping basis," although in general "the aim of Germany's trade policy should be the lowering of international customs walls, especially in Europe." In general, the sentiment of the industrial and commercial associations is gloomy; and, as usual, there is exaggeration; a Rhenish-Westphalian association proclaims that "the death of industry has begun." The recent great increase in bankruptcies is cited in some of these proclamations; but the Reichsbank President points out that half of the newly bankrupt concerns were "typical inflation enterprises," and that if these are left out of account bankruptcies do not exceed the normal pre-war number.

The Bourse last week was, on the whole, undecided, but the average quotation slightly fell. Shipping stocks had a set-back after their big rise, but later in the week somewhat recovered. Stocks to-day were again weak and inactive. Paper mark loans are quoted considerably above their lowest point of the year. An official report upon the conversion of company balance-sheets to a gold mark basis, up to September 30th, covers 3,347 companies which existed before the war and 6,445 war and post-war foundations. The pre-war companies absorbed 300 other companies in the last ten years. Taking this into account, the new capital of the 3,347 companies is 93.4 per cent. of the pre-war figure, the absolute figures being 13,719.2 million marks and 12,812.4 million marks.

NORWAY.—MUNICIPAL ELECTIONS—WOOD PULP AND PAPER—BUDGET—UNEMPLOYMENT AND COST OF LIVING—MARKETS—ARBITRATION TREATY.

(FROM OUR CORRESPONDENT.)

OSLO, December 11. DURING the last few weeks the municipal elections all over the country have been completed. Full details are not yet to hand, but, on the whole, it would seem that no very great changes have taken place. In the capital, though the position was not much altered, the election gave a sufficiently powerful check to the Communist party, which for the last three years has sometimes been able to domineer the council. This the Communist party will be unable to do for the next three years at least.

Owing, no doubt, to a great extent to the scarcity of water in Sweden, there are plenty of enquiries, and a good volume of orders in the market for wood-pulp, cellulose pulp, and paper, as well as for wood pulp boards. With regard to wrapping papers, the sale has been extraordinarily large, owing to the threat of a duty in England. It would be a blow for several paper mills in this country

were that duty really to be levied, because they are equipped for this type of production, and did not think that Free-trade Britain (especially after Mr Baldwin's late electoral utterances) would register itself among Protectionist nations.

Our Prime Minister, in a speech at his native town of Bergen, has surveyed the present Budget, and although he makes every reservation seeing that only four months of the financial year are under review, his statements are very reassuring. On every main item he is able to state that the revenue yields have been fully up to calculation. Meanwhile, however, unemployment is increasing. On November 15th the number of unemployed was not far from 23,000, and to-day probably is at least 25,000. Nearly half the unemployed belong to Oslo. The cost of living, according to the report of the Statistical Central Bureau, as at November 15th, had gone down a further few points, from 228 to 223. There is every probability of a further decrease, especially after the turn of the year.

There is little change in the position of the Bank of Norway. With a total right of issue of 422½ million kroner, the circulation keeps around 350 millions, leaving a reserve of 72 million kroner. Also the other items in the bank return show little variation during the last few weeks. The stock markets are very quiet indeed, and without conspicuous features.

Another step towards assuring peace between Sweden and Norway was taken the other day. On November 25th the Norwegian Foreign Minister and the Swedish Minister in Oslo signed an agreement, according to which no dispute whatever between the two countries shall give rise to hostile acts, but all disputes are to be settled by arbitration. Though hardly anybody in the two countries could imagine the eventuality of a war between them, the agreement is nevertheless hailed with satisfaction as the outward expression of that belief.

CANADA.—FARMERS' PROSPERITY—GENERAL CONDITIONS—ONTARIO'S NEW LOAN—THE ASBESTOS MERGER—THE OTTAWA MINT AND ONTARIO GOLD—PULP AND PAPER—G.T.P. DEBENTURES.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 30.

WINTER, which made its appearance on the prairies more than a month ago, has now descended in good earnest upon Eastern Canada, and hard frost, coupled with a heavy snowfall, has terminated outdoor farm work for the year except, possibly, in the Niagara Peninsula. But the farming community which constitutes almost half of the population of Canada faces the winter in a more contented mood than it has enjoyed since the flush prosperity of the war years. The crops have been uniformly good, and it is almost without precedent that not a single district in the vast area of the Dominion has reported a complete crop failure. The farmers of Canada had a larger income in some years between 1915 and 1920, but they spent it extravagantly, and many of them have since been struggling with a load of debt. This year a much smaller percentage of the proceeds of the crop will go to the payment of debts, and more will be free to flow into the usual channels of trade to the general stimulus of business. Moreover, in the hard years of readjustment the farmers, particularly in the west, have acquired a very clear-cut idea of the value of money, and the best uses to which it can be put. They have largely lost their old passion for easy credit, and cash business has made greater strides on the prairies than anywhere else in Canada to the enormous advantage of all concerned. Farm implement companies report that sales in many districts are running 50 and 60 per cent. ahead of last year's figures, and that their business compares very well with the best of the pre-war years. Merchants everywhere are experiencing the benefits of this farming prosperity, and they will gradually be extended to the industrial world. Meanwhile it still shows some backward spots, and the advent of winter is responsible for rather a sharp drop in the employment figures. The settlement of the strike in the anthracite coalfields of the U.S., which seems to be im-

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up	\$25,000,000
Surplus	\$25,000,000
Undivided Profits	\$15,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 and 3, Crosby Square
Bishopsgate, E.C. 3

pending, will be very welcome, although no serious inconvenience has been suffered up to date. The province of Ontario, whose revenues during the present year have scarcely come up to expectations, is experimenting with a new kind of bond in an issue which has just been announced. Tenders up to December 1st are invited for \$21,000,000 worth of Ontario 4½ per cent. serial installment bonds, maturing on December 1, 1926-55, inclusive. Principal of the amount of \$700,000 will be repayable each year, and both principal and interest will be payable in gold at a fixed rate of \$4.86½ to the £ in London, New York, Toronto, Montreal and half a dozen other Canadian cities. The bonds will be issued in denominations of \$1,000, with interest coupons attached, and can be registered as to principal only. Two advantages are claimed for this type of bond; it obviates the necessity for the usual sinking fund and by offering simultaneously long and short-term bonds it attracts a wider range of investors.

The long-delayed merger of most of the asbestos companies of Canada is now well on the road to completion, and in it will be included the Asbestos Corporation of Canada, the Consolidated Asbestos, Federal Asbestos, Thetford-Vimy, Maple Leaf Asbestos, Asbestos Mines, Black Lake Asbestos, and Chrome Companies. Outside the merger still remain three large American concerns which manufacture asbestos products on a large scale, and own their own sources of supply in Canada, but apart from these the merger group, which have confined themselves to mining operations, controls from 90 to 92 per cent. of the remaining asbestos production of Canada. In recent years only the Asbestos Corporation has been operating successfully, and all the others have been in constant difficulties, owing to the collapse of prices and markets, and consequent over-production. It is now hoped to achieve some control of production, especially in the lower grades, with the result that a substantial increase in the price for these grades may be secured. It is also believed that a friendly understanding has been reached with the three manufacturing companies, whereby the

latter will take a substantial quantity of the merger's surplus production.

The slight premium upon the Canadian dollar in New York and the heavy express charges on bullion from the mining camps of Northern Ontario to that city have resulted in a change of policy, whereby most of the important gold producers in this field will deliver their bullion to the Royal Mint at Ottawa instead of shipping it to New York, which was the more profitable destination as long as the Canadian dollar was at a discount. The Canadian banks will be indirectly affected by the change, for the sum involved is substantial, gold production in Canada, for which Ontario at present is mainly responsible, having now passed the 30 million dollar per annum mark. The producers will probably not care to take payment for their bullion from the Mint in Canadian gold coin or Mint bars, but will expect the Mint to retain the latter and give them a cheque. Such a process, however, would entail the replenishment of the Government account on which such cheques are drawn. The bars or coin would, therefore, be deposited with the Government's banks, and in turn if these banks so desire they could be delivered back to the Receiver-General in exchange for Dominion notes when the latter were required. In any event, it seems inevitable that as long as the Canadian dollar can maintain itself a fraction above par, the gold holdings both of the Government and the banks will be substantially increased.

Despite the tendency to lower prices, the pulp and paper industry continues to flourish amazingly. October saw a record production of newsprint, and the export figures are very satisfactory; they reached 124,529 tons, as compared with 99,812 tons in October, 1924, which is a gain of virtually 25 per cent. From a percentage standpoint the gain in pulp exports was even greater, for they rose to 99,211 tons, as compared with 76,406 tons in October, 1924. For the first 10 months of the present year the exports of newsprint have amounted to 1,142,029 tons, as compared with 1,006,559 tons for the corresponding period of 1924; the respective values, however, were \$86,755,000, as compared with \$82,222,000, a noticeable decline of prices thereby being indicated. In this 10 months' period pulp exports jumped from 620,254 tons to 768,414 tons, valued respectively at \$32,476,000 and \$38,608,000.

The holders of Grand Trunk Pacific 4 per cent. debentures are naturally very deeply interested in the earnings of the Canadian National Railway system, and are basing high hopes on Sir H. Thornton's forecast that the net earnings for the year 1925 would reach 25 million dollars. The calculation is that if this figure is reached the payment of interest will be resumed, for it was paid in 1923, when the earnings reached 20 million dollars, and suspended last year, when they fell to about 17 millions. For the first three-quarters of the year ending September 30th the net earnings of the C.N.R. were \$12,325,762, but the heavy grain movement has given them a great fillip in October, and it is estimated that they will have reached 7 million dollars, as compared with 4½ millions in October, 1924. November and December earnings are likely to show a decline, but it would not be extravagant to place their joint total at 7½ million dollars, and in that event the total net earnings for the year would be within measurable distance of 27 million dollars, a figure which would at least entail a moral liability to pay the dividend on the G.T.P. debentures. But other holders, in estimating the prospects of the stock, should not lose sight of an agitation which, under the head of "Canadian ports for Canadian trade," has been gathering headway. Easily the most profitable part of the Canadian National system is the old Grand Trunk main line, which gives direct through communication between Chicago and Portland, Maine, and which is used extensively by American shippers. But the citizens of the two Canadian Atlantic ports of Halifax and St John have been casting envious eyes at the very substantial volume of traffic which, especially in the winter months, is carried over the Canadian National system, and its American subsidiaries to Portland, and their representatives are contending vigorously that if the money of the Canadian taxpayer has to be taken to pay deficits on the C.N.R., all its traffic should be retained for Canadian ports. They are, therefore, demanding that the American lines of the C.N.R.

should be sold for what they will bring, and special rate arrangements made to divert the Canadian trade now going to Portland to the Canadian ports. Political pressure will certainly be exerted for the sale of these lines in American territory, but their elimination from the C.N.R. system might have very serious results for its revenues, and there might also be the danger of inconvenient reprisals on the part of the United States. Therefore, whatever Canadian Government is in power will hesitate before it sanctions such a move, but the contingency should not be lost sight of.

INDIA.—A BRIGHT OUTLOOK—TASKS OF THE NEW VICEROY — DEPRESSION IN BOMBAY — JUTE SHORTAGE.

(FROM OUR CORRESPONDENT.)

CALCUTTA, November 12.

POLITICALLY and economically the Indian situation has never been more uniformly satisfactory since Lord Reading, now on the eve of retirement, assumed office. It is putting the case modestly to suggest that the Viceroy-designate has been fortunate in his predecessor. It is a symptom of the gradual subordination of political to economic issues that the pivot of Indian affairs is now, not Bengal, but Bombay, a province more interested in bounties than in bombs, and more concerned with the reform of the currency than with the recasting of the Constitution. Mahatma Gandhi is in eclipse, while the Swarajist leader is too busy combating rebellious subordinates to find time for effective attacks on the British administration. As political intransigence has waned, economic strength thanks to a series of good monsoons, has revived, and, in consequence of the careful conservation of purchasing power thus secured, the agricultural population are better equipped to face the inevitable vicissitudes of their industry than at any period within living memory.

Industrial development has received a check, but this is clearly only temporary, due partly to over-expansion in the immediate post-war boom, and, in the case of the Bombay cotton mills, to a concurrent distribution of the enormous profits of that period, without any regard to the possible advent of a lessened demand and lower turnover. The narrow range and limited prosperity of Indian industries, however, is due less to such transient factors as those indicated than to the diminutive purchasing power due to the appallingly low level of agricultural productivity which it will be the primary duty of the new Viceroy, as far as the resources and influence of the State can assist, to modify and improve. The most prosperous of Indian industries, jute manufacture sells all but a minor percentage of its product in foreign markets, whereas industries depending exclusively upon the Indian market are, in most instances, working, temporarily, at a loss. The explanation is simple, viz., the expansion in industrial and agricultural productivity has not kept pace. The result has been that, while industrial outputs have increased largely, and with remarkable rapidity, buying power has not advanced *pari passu*, with the inevitable sequel that so many industries are working short time, or, as with the cotton mills, have been forced for some months to face a complete suspension of production. If this lack of balance has not attained wider recognition, it is because the constitution of the Tariff Board has offered to depressed industries an apparent but deceptive "short cut" back to prosperous working, while encouraging evasion of the real problem to be solved. The prospect of an organised effort to modernise agricultural methods in India has, therefore, as yet received only a very tepid welcome in the industrial and commercial centres, and in certain quarters is even being represented as a subtle effort to sidetrack industrial progress, whereas the plain fact is that unless and until

the task assigned to the new Viceroy is faithfully and thoroughly fulfilled, the basis essential for the industrial structure inspiring the dreams of Indian capitalists is wholly lacking.

As Bombay is pre-eminently the headquarters of the indigenous industrial revival, it is distinctly unfortunate that, for various reasons, the relations between the commercial community of that city and the Government of India are less happy than could be desired. Without embarking upon a detailed examination of the sources and nature of these unfortunate differences, which give so sharp an edge to public controversies, it may be hoped that in the near future the course of events will enable the western capital and the Central Administration to get into closer accord. It can hardly be doubted that one means to this end would be, as opportunity offers, after a very long interval, to give Bombay direct representation in the Viceregal Cabinet. It is also averred, with considerable force, that Bombay interests and opinions should have received fuller representation in the *personnel* of the Currency Commission; despite the strong feeling upon that point, there will be no attempt to boycott that body by refusing to tender evidence or delegate witnesses for oral examination. Bombay representatives, as might be expected, will press hard for adoption of the gold standard, and will probably be found to attach even more importance to that reform than to re-establishment of the former ratio of 1s 4d, as against the ruling ratio of 1s 6d. Bombay, in view of the present crisis in the cotton industry, is also extremely insistent upon early abolition of the excise duty. In relation to the Protectionist movement, while Bombay led the campaign for a tariff on steel, it evinces no desire for higher tariffs on cotton manufactures, except the cheap Japanese goods, and, in relation to the suggested tariff on coal, is understood to be sharply antagonistic. It is significant in this connection, that the refusal of the Government of India to extend tariff aid to the overgrown cement industry failed to evoke a single authoritative protest. The Fiscal Commission advised "discrimination" in relation to tariff duties, and commercial opinion is evidently quite content to see this circumspect policy put into operation. Taking a comprehensive view, it is clear that Bombay cannot be described as irreconcilable, and that if that city is given its proper place "in the Indian sun," no deleterious twist will be given to the economic and financial interests of the country at large.

Meanwhile Bombay does not lack advice or assistance in setting its own house in order. Reckless and dangerous gambling on a badly regulated stock exchange has forced the Local Government, with wide support from public opinion, to pass legislation bringing this pivotal institution under regulations as to the conduct of business common to stock exchanges throughout the world; and it is evident, before the cotton industry can regain prosperity and stability, that drastic reforms will be forced in relation to some of the more obvious abuses sapping the efficiency of mill management. It is also anticipated that considerable curtailments will have to be effected in the over-ambitious schemes of civic development planned and initiated during the governorship of Sir George Lloyd. To-day, as the combined result of industrial speculation and official extravagance, Bombay is passing through perhaps one of the severest crises in its remarkable history.

Raw jute remains a soaring market, and the yield to cultivators at present prices will hardly fall short of 75 crores of rupees for a crop not exceeding 85 lakhs of bales. This compares with 50 crores paid for about the same quantity last year. A Jute Forecast Committee representative of local jute interests having been formed to assist the Director of Agriculture in framing his estimates, mill interests in Calcutta have greater confidence in the forecast than in previous years; it is, in fact, a joint effort, the new method of calculation coming into operation for the first time last year, when, it will be remembered, the estimate was remarkably close to the actual yield of the crop, as determined by the total receipts. A discouraging factor is a reported shortage of seed, tending to an artificial curtailment of the next crop. It is possible, however, that this conjecture betrays more pessimism than is warranted by the available supply.

Letters to the Editor.

LIFE POLICIES IN REICHSMARKS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—On page 892 of the issue of the *Economist* of November 28th appeared an article commenting with approval on the curious judgment of Mr Justice Acton in the case of *Anderson v. Equitable Life Assurance Society of the United States*. Admitting that the decision (against which an appeal is being lodged) was based only on the special circumstances of the policy in question, it may, unless reversed, have far-reaching effects upon the position of life policies issued in German currency by British insurance companies which carried on business in Germany until the end of 1901.

In order to form a correct view of the position, it is necessary first of all to consider what is the true interpretation of these contracts, taking account of their terms, the intention of the parties, and ordinary commercial practice. Stated in the simplest terms, and ignoring any exceptional conditions contained in individual policies, they were undertakings to pay a sum in marks in Germany on the happening of a specified event at a future date in consideration of the payment of a premium (annually or otherwise) in marks. Nothing was stated as to the value of the marks, measured either in gold or in British currency, the intention being that both premiums and sums assured should be paid in the German marks currency then existing, regardless of its value. Now this form of contract does not differ in essence from an ordinary transaction in foreign exchange. Such difference as exists is mainly in the length of time elapsing between the beginning and end of the transaction. After the War German marks were freely purchased in this and other countries, in the expectation that that currency would regain its value. The reverse happened, and the purchasers had to bear the loss, and no one proposes to recoup them. The foreign holders of German Government securities, including British insurance companies, have seen these investments become entirely valueless, and it has only been the popular clamour in Germany itself which has brought forth the Government's scheme to make good 2½ per cent. of the nominal value. The principle that a holder of foreign currency, or of any security payable in such currency, has to abide any loss it may bring him through depreciation has not, so far as is known, previously been called in question. And until marks had become almost valueless it was not suggested that a contractor to pay a specified sum in marks should pay more because their value had fallen. When marks had fallen to 100 to the £ no demand for revaluation at their pre-war value arose, but they had then lost 80 per cent. of their value, as is the case with French francs to-day. Further depreciation beyond that point is relatively unimportant. At what point did it become unfair to the German to pay him in his own currency the amount specified in his policy? When does "unjustifiable enrichment" (to use the German catch-phrase) begin, and on what ground is it unjustifiable?

It is argued in the judgment that the insurance company had always dealt with the policy as if it had been an assurance for dollars equivalent to £ sterling at M.20.43 = £1, and had made its allotment of profits to the policy on this basis. It is difficult to imagine that anything the company did in its internal management could have the effect of altering the essential nature of the contract. Its funds were in dollars, or were estimated in that currency, though no doubt partly invested in other currencies. In making its valuation and ascertaining its divisible surplus, it had to reduce all its liabilities as well as its assets to a dollar denomination, and in so doing it could use either normal or current rates of exchange, but in either case it must make such reserves as safety demands. So long as normal conditions prevailed the results of either method would be approximately the same. But when a particular currency is subject to abnormal depreciation and frequent fluctuations, it would be most unwise to ignore the possibility of its recovery. If this were done and no special reserve for the contingency of recovery were made, the apparent surplus would be largely increased, and were this distributed as bonus in cash or addition to sums assured funds would be depleted or

additional liability created. Should that currency subsequently recover its value, reserves on the normal basis would again be required, and in respect of the further bonus allotted as well as of the previous liability, and would have to be created out of the profits of the then current period, and if the profits were insufficient the company's funds would show a deficiency.

So far as the German policyholders are concerned, a distribution of surplus on marks policies when marks are valueless would have the same result whichever estimate of the surplus were made. Surplus is usually distributed in proportion to sums assured, reserves or premiums paid, and if all these are expressed in a valueless currency the value of the resulting bonus, even though counted in millions of marks, is still nothing. But if millions of marks had been allotted as bonus any future recovery in their value would be disastrous to the company unless full reserves had been set aside to meet this very contingency, and had this been done the surplus would not have been inflated. When a currency became permanently valueless, as the mark, it is time enough to consider the question of the valuation of contracts in that currency at nil, but even then there is no safety in taking that course if fantastic interpretations of the meaning of the contract are to be introduced at a later date. And it must always be remembered that a life assurance company's valuation is only a means of measuring its liability, on the basis of assumptions which it is anticipated will be realised more or less closely in the future. The surplus shown is not profit in the same sense as that realised from closed transactions, and only such portion of it can safely be distributed as remains after full provision for every foreseeable contingency has been made. If, because a company makes such provision by the use of normal instead of abnormal rates of exchange, some of its contracts are to be deemed to become altered in an essential manner, how can it measure its liability?

Incidentally, it may be remarked that no German policyholder has hesitated to take advantage of the depreciation of the currency when paying his premiums, and that French, Spanish, Danish, Norwegian and Greek policyholders of British companies are availing themselves of the same advantage to-day.—I am, Sir, yours faithfully,

W. K. PAGDEN.

Holmstoun, West Byfleet, December 16th, 1925.

SYNTHETIC NITRATE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read an article in your number of November 7th last, under the heading "Synthetic Nitrate," where, among other things, is written:—".....i.e., the Birkeland-Eyde furnace—but had to be abandoned for various obscure reasons, including risk of explosion; but this latter reason in itself is not of much moment, for all the various processes are attended with some risk of explosion. This was particularly the case in the early days, but the risk has now been much reduced, and safe working practically guaranteed....."

I have to express astonishment that a prominent newspaper like yours can be so badly informed about the great Norwegian nitrogen industry, an industry which to-day has in its service about 400,000 electr. horsepower.

There have been given in England, as well as in the United States and France, public lectures about this industry, and the periodicals of these countries have published detailed accounts of these lectures.

The furnaces of Birkeland-Eyde have now without any accident worked for more than twenty years in the Norwegian nitrate industry. There has never been any explosion as the system excludes any such possibility. The great pioneering work through Birkeland and Eyde which is laid down in the synthetic nitrogen industry, a work which is recognised and admired in the whole technical world, has through your correspondent's inaccuracy been depreciated.

If your newspaper had been an unknown one without importance, of course, I should not have paid any attention to the matter; as I, however, highly appreciate your publication as a prominent and veracious paper, I have thought fit to draw your attention to the incorrect information which your correspondent has given about the synthetic nitrogen industry.—Yours faithfully,

S. EYDE.

Hotel Vier Jahreszeiten, Wiesbaden, Germany,
December 11th, 1925.

[The statement that the arc process was tried in Germany and then abandoned for various reasons, including risk of explosion, has been frequently made in the technical Press, and by no means originated with the *Economist*. It will be noted that reference is made to the arc process generally, and not specifically to the Birkeland-Eyde furnace; also acknowledgment is made of the valuable pioneer work done in Norway. It is a little difficult to see how the fact that the arc process was given up in Germany reflects any discredit on or depreciation of the Norwegian nitrate industry. If anything, it might indicate that the Norwegians are more successful in the business than the Germans!—THE WRITER OF THE ARTICLE.]

Books and Publications.

POWER AND PROGRESS.*

THIS book is a timely contribution to a problem which was the subject of the Weir Committee's report (as yet unpublished), and which promises shortly to engage the attention of Parliament, namely, the national co-ordination of public electricity supply. Mr Quigley sees in the universal adoption of electrification throughout the country the key to national prosperity. This has been the case abroad, he argues, and cites France and elsewhere. So impressed, indeed, is he with the part that electricity is playing in certain countries that he claims that in Norway for instance, "the whole economic and social structure has become organised in terms of electric power." He sees Britain somewhat backward in this respect, and shows what requires to be done in the way of electrical development by the evidence of facts and figures of progress and low costs of supply in other countries more fully organised electrically. The value of the book, which is considerable, consists, indeed, in the excellent marshalling of comparative statistics relevant to electric power supply in the chief countries of the world, and by these the writer presses home his conclusions. In the chapter on "Coal Conservation and Electrical Power," there are also some significant figures and calculations. All this constitutes valuable data quite apart from agreement or otherwise with the author's conclusions.

Broadly, the immediately practical part of Mr Quigley's thesis may be stated thus. He finds that as regards national average prices per unit sold, Britain comes out high. Northern Italy, for instance, is .46d, Canada .72d, the United States 1.05d, whereas Britain stands at 2.07d. The problem, if Britain is to keep a place in the world's market, is how power can "be reduced in price to the international level." Mr Quigley emphasises as one of the leading factors that the earning capacity of the generating plant must be increased by fully loading it for a greater number of hours than at present, through securing the diversified supply of a large and varied area. This would reduce the capital costs per unit. Here again Britain, with .79d capital costs per kilowatt hour, compares unfavourably with America at .54d, and Italy at .29d. The author, therefore, suggests the delimitation of regional zones "served by stations of 40,000 kilowatts upwards or even less, scientifically interconnected to cover wider areas than at present, and reach a greater proportion of the total population," the final step being that "the whole of Britain must be converted into a super-power zone—and this is a consummation which can only be carried out by the State and private enterprise in co-operation."

The proposals in effect mean that in the present 15 districts already delimited by the Electricity Commissioners the supply should be more completely co-ordinated, that other districts should be added, and the whole interlinked into a national system. A complete interconnected system of this kind, however, appears to have but little expert support. However, the Weir Committee have gone fully into the whole matter, and when their report is published something like an authoritative verdict will be forthcoming. The present book should, therefore, be of interest to Members of Parliament and others interested in this problem and desiring data free from technicalities.

THE 1926 BANKERS' ALMANAC*.

IN the "Bankers' Almanac" for 1926 a further extension is to be noticed. Its pages are numbered to 3,022. We would suggest that the time is not far distant when either larger pages, or two volumes, will be needed. A further number of institutions has been added in the section "International Banks" this time. The "Geographical Index" now gives not only the name of nearly every

* "The Bankers' Almanac and Year-Book, 1926." (London) Thomas Skinner and Co. 42s net.

city and town of any importance in the world, where there is a bank, and the name of the bank in that place, but also the names of the London, and in some cases other, agents of such banks. We are glad to see that the publishers now insert in "Telegraphic Addresses" the names of the codes used by the various banks. Another interesting compilation in the present volume is that showing the relative position of the banks of Great Britain and Ireland. Totals are provided for the pre-war year 1914, at the Armistice and annually since, which indicates (to take only one item) that the deposits for these banks totalled £1,320,607,463 before the war, £2,589,010,517 at 1919-20, £2,703,983,628 at 1921-22, £2,524,928,639 at 1922-23, £2,460,822,646 at 1923-24, and £2,448,167,878 at 1924-25. Altogether the publication is of considerable value as a work of reference, and the arrangement of the various sections renders it comparatively easy to handle.

A LEGAL DIGEST.*

THE Digest No. 2 of the cases reported in "Lloyd's List Law Reports," which has now been issued, covers the period from Easter, 1922, to Michaelmas, 1924. It is a piece of work well done, and gives a very useful summary of the decisions of the courts, so far as they relate to commercial and shipping law, within the limits of time referred to. The "Lloyd's List Law Reports," though not authoritative in the same way as various other series of reports prepared by members of the Bar, nevertheless give in a convenient form reports of a range of cases of interest to commercial men, and the digest under alphabetical headings of the contents of volumes 11-20 of the reports brings together into one compact volume the substance of these cases. The two members of the Bar responsible for the digest have given cross references to other series of reports, and, besides succinctly stating the effect of each case, have quoted short salient passages from some of the judgments. Decisions relating to the various classes of insurance, to shipping documents, and to sale of goods, are among the largest groups, but the scope of the contents is wide, and the digest may be commended as a helpful work of reference.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, January 6, 1926. ACCOUNT, January 7, 1926.

BUSINESS in the stock markets this week quietened down very much, but although the holiday spirit has pervaded the House, prices for the most part remain fairly steady. The rise in gilt-edged stocks which occurred at the end of last week has been held in most cases, but liquidation of short-term bonds, presumably for end-of-the-year requirements, has influenced prices in some directions. Foreign bonds have moved irregularly, the renewed decline in the franc causing dullness in French bonds. Japanese and Chinese bonds were in some demand, and Brazilian and Peruvian bonds improved a little. There was a rise of a point in Turkish Unified, on the anticipated interview between the Prime Minister and the Turkish Ambassador. Mexicans have been weak owing to the delay in the ratification of the revised debt agreement.

Home Rails have been neglected, and in the absence of business prices were inclined to slip back. Southern and Underground stocks, however, kept steady. Slight declines are recorded in foreign and Colonial rails. Rubber shares have rallied a little on an improvement in the price of the commodity, but business has been on a very much smaller scale than in recent markets. Tea shares are inclined to dullness after their recent strength. The oil market has been quiet, but there has been a little Continental demand for some of the favourites. British Controlled Common have been weak.

In the industrial section there have been a few good features, including Courtaulds, Bradford Dyers and Dunlops; tobacco shares have hardened a little, and breweries were firm, but iron and steel shares were mostly lower after the announcement that the application for protection had been refused. In the mining market the main incident was a revival in demand from the Cape for low-priced platinum descriptions. Chartered have been in favour and are slightly higher, while tin shares have remained steady.

NEW ISSUES.

Sumatra Consolidated (Extended) Rubber Plantations, Limited.—Share capital £150,000, in shares of £1 each, of which 10,000 shares will be allotted as fully paid to the vendor company in satisfaction of the purchase price and approximately 10,000 shares in payment of preliminary expenses; 100,000 will be held in reserve to provide for the conversion rights of the debenture stock, and 10,000 are under option to the vendor company. This is an issue at par of £100,000 6 per cent. first mortgage convertible debenture stock which, when fully paid, is convertible at the option of the holder into shares of equal nominal amount, on one month's notice. Any stock not converted will be redeemable at £105 on December 31, 1945, the company reserving the right of redemption at £105 on or after December 31, 1932. The stock is secured by a specific first charge on the estates and fixed plant, machinery and buildings thereon, and a floating charge on remaining assets. The company has been formed to acquire a block of 4,000 acres in Sumatra. According to an independent report, most of the land is primary forest, which it is proposed to clear off and plant with rubber. The purchase price is £10,000, satisfied by the allotment of shares, together with the option to the vendor of subscribing until December 31, 1932, for 10,000 of the unissued shares. Interest is guaranteed by the vendor company for six years. The security behind the

stock does not, in our opinion, seem very attractive, and until the producing stage is reached this can only be described as a speculation.

Scottish Capital Investment Company, Limited.—We have now received a copy of the prospectus issued by this company. Last week, quoting from an advertisement in the Press, we described this issue as "prospectusless." The facts are that the issue was subscribed in advance of the publication of the advertisement, and it was therefore decided simply to insert the advertisement to comply with Stock Exchange regulations.

The new issues of the week and the current year have been as follows:—

	Nominal Capital.	Cash Subscription.	Subscriptions.	First Payment.	Further Liability.
Amount previously recorded.....	£2,224,420	£2,224,420	£2,224,420	£2,224,420	£2,224,420

plant in every department, and during the year your enterprise expended over \$4,500,000 on capital account, mainly on additions to power generating plants, transmission systems, rolling stock, and on extensions to the light, power, and gas systems. As I have explained to you on many previous occasions, it has been the policy of your directors to keep every branch of the company's services in a position to meet all the requirements of the communities served, so that no user of these services may have his business retarded through any failure on the part of your company to meet all his requirements. This involves looking some distance ahead, and making timely provision for the growth of the demands upon the various services. Owing to the rapidly increasing demand for electricity for power and lighting purposes, we have deemed it wise to acquire the water rights of the Bridge River, situated some 130 miles from Vancouver. The thorough examination to which this water power has been subjected shows that it possesses natural features which render it capable of economic development to yield at least 200,000 horse-power of electric power. This, of course, will not be developed in its entirety at once; indeed, much remains to be done, both from a legal and an engineering point of view, before construction work can commence, but from our records of the demand for power, particularly during the past few years, we believe it will be necessary to commence the construction of the Bridge River power scheme as soon as the preparatory work referred to has been completed, and I am convinced, as I always have been convinced, that the commanding position of Vancouver on the Pacific Coast of Canada makes it inevitable that it shall become a very great centre of shipping and industry, absorbing steadily an increasing amount of power.

THE ACCOUNTS.

I want now to say a word upon the altered form in which the accounts are presented. I am sure I am right in anticipating that the altered form will meet with your approval. The directors have felt for some time that owing to the growth in size and importance of the allied and subsidiary companies, the balance-sheet of the British Columbia Electric Railway Company, Limited, which is the form of balance-sheet required by the Companies Acts, is insufficient in itself to convey to the shareholders a comprehensive view of the size and importance of the enterprise. Therefore, after considering the matter with the auditors, Messrs Price, Waterhouse, and Co.—a firm who have had the most extensive experience in the accounts of public utility companies throughout the world—it was decided to publish also a consolidated statement of the entire combined enterprise, and this is contained on pages 10 and 11 of the report. It was also decided that this consolidated statement should be stated in dollars (1) because the company's assets and earnings are in British Columbia and are represented by dollars, and (2) because there are already a considerable quantity of the company's securities held by investors in British Columbia, which will tend to increase. It is the policy of your directors, in accordance with established practice of public utility companies in Canada and the United States of America, to encourage their own customers to take and retain a financial interest in the concern.

Following the consolidated statement is a page setting out certain information regarding the company's properties and activities, which it is hoped will convey to the shareholders a better idea of the size and importance of the enterprise. The statement of revenue is contained on page 4 of the report, and is also set out both in the balance-sheet and the consolidated statement on pages 9 and 11. Our one aim in making these alterations is to give you a clearer statement of the company's position and the magnitude of the enterprise, and I am satisfied that you will agree that this result has been achieved.

RATES AND DIVIDENDS.

You will see from the report that a reduction in rates charged for commercial light in Vancouver became effective last autumn. I would remind you that reductions in lighting rates were granted in 1918, 1919, 1923, and again in 1924, and that this new reduction in commercial lighting rates is in accordance with the settled policy of the company, which is that reductions shall be granted whenever it is possible to grant the same in fairness to the employees and to the shareholders. So far as the employees are concerned, it may interest you to know that the wages bill of the company last year amounted to \$4,013,617. So far as the shareholders are concerned, it has been laid down over and over again by Public Utility Commissions, indeed so often that it has now become axiomatic, that a public utility company is entitled to rates enabling it to earn 8 per cent. on its entire capital. Taking the whole of the capital employed in this enterprise, the return earned is only between 5 per cent. and 6 per cent., and it is only by the most careful and skilful management and operation, and the fact that a large proportion of the capital raised only pays 4½ per cent., that we are able to recommend to you the payment of final

SECURITY FIRST ROYAL INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON

dividends of £2 9s 3d per cent. on the preferred ordinary and £4 2s 6d per cent. on the deferred ordinary, making total dividends for the year of £6 6s 9d per cent. on the preferred ordinary and £8 per cent. on the deferred ordinary.

This leads me to my final remarks, viz., that the results before you to-day are due to the able management of your company. It is indeed difficult for me to find words with which to express our appreciation of the services rendered to the company by your president, Mr Kidd, and your vice-president, Mr Murrin. If I mentioned by name all those whose services are greatly appreciated, I should indeed give you a long list, but I cannot sit down without paying a special tribute to Mr Goward, your vice-president in Victoria; Mr Adams, your controller; Mr Glover; Mr Laursen, your solicitor; Mr Carpenter and Mr Newell, your extremely able engineers; Mr Keillor, the manager of your gas company; and Mr Power, the manager of your freight department. The whole staff are as able, loyal and enthusiastic a body of employees as can be found anywhere in the world.

Now, gentlemen, before inviting any discussion on the accounts, I should like to move: "That the balance-sheet as at June 30, 1925, together with the reports of the directors and auditors thereon, be and are hereby received and adopted."

Mr G. P. Norton seconded the motion, which was carried unanimously.

The Chairman then moved: "That the payment of the following dividends be and are hereby approved:—Dividend on the cumulative perpetual preference stock at the rate of 5 per cent. per annum (less income-tax) for the half-year ended December 31, 1924, on January 15, 1925, and for the half-year ended June 30, 1925, on July 15, 1925. Interim dividends on the preferred ordinary and deferred ordinary stocks for the year ended June 30, 1925, at 3½ per cent., free of income-tax, on June 4, 1925. Also that dividends be now declared in respect of the year ended June 30, 1925, as follows:—On the preferred ordinary stock at the rate of £2 9s 3d per cent. per annum, free of income-tax, making a total dividend for the year of £6 6s 9d per cent., free of income-tax. On the deferred ordinary stock at the rate of £4 2s 6d per cent. per annum, free of income-tax, making a total dividend for the year of £8 per cent., free of income-tax."

Mr Harold G. Brown seconded the resolution, which was unanimously approved.

RE-ELECTION OF DIRECTORS.

Mr G. P. Norton, in proposing the re-election of the retiring directors, Mr R. M. Horne-Payne and Sir Ernest Harvey, K.B.E., said that it was his honour, when the company was formed, to be associated with the chairman, Mr Horne-Payne, as one of the original directors of the company, and he had had the opportunity for nearly 30 years of watching the extraordinary and most satisfactory growth, from quite small beginnings, of the undertaking into the most important and successful enterprise which they, as a company, possessed to-day. Their chairman was responsible for the starting of the company, and he (the speaker) ventured to say—he believed all would agree with him—that Mr Horne-Payne had very great reason to be proud of the enterprise which he started 30 years ago. It was an undertaking which had done an immense amount of work and had given the greatest amount of assistance in the development of one of our great provinces, British Columbia. Not only had it done good to the municipalities and to the communities living in British Columbia, but it had rendered to them as a body of shareholders a reasonable and continuously fairly satisfactory return on the money which they had the courage to invest. With regard to his other colleague, Sir Ernest Harvey, he was able to say that no body of directors could have a more genial colleague and nobody could wish for a more able and efficient director. He had much pleasure in moving the re-election of those two gentlemen.

Mr T. Blundell Brown seconded the resolution, which was unanimously agreed to.

Mr James H. Mackay proposed the reappointment of Messrs Price, Waterhouse and Co. as auditors of the company both in London and British Columbia for the ensuing year. In doing so he asked if the directors could report a growing increase in the population of Vancouver.

Sir Charles Davidson seconded the motion, which was passed unanimously.

VOTE OF THANKS TO PRESIDENT AND STAFF.

Sir Ernest Harvey proposed a hearty vote of thanks to the president and staff in British Columbia; and remarked that on behalf of Mr Horne-Payne and himself he desired to thank the shareholders for their re-election. He paid a warm tribute to the work which Mr Horne-Payne did for the company, and stated that there was no man in England who worked so intelligently, so effectively, and with such wonderful cleverness and clearness of mind, and who at the same time laboured under such physical disability. He thought they would all recognise that Mr Kidd, the president, had a most difficult duty to perform as the manager of a public utility company; he had to consider the views of the stockholders and also those of the customers, and he thought everybody would agree that he had been successful in satisfying both parties. So far as the development of the company's area was concerned, he would point out that during the existence of the company the demand for power had doubled itself every eight years, and that was simply symptomatic of the development which went on in every direction in which they served the community.

Mr T. Blundell Brown seconded the motion, which was carried unanimously.

On the motion of Lord Stopford, seconded by Mr E. S. West, a hearty vote of thanks was accorded to Mr Davidson for presiding, and the proceedings terminated.

WESTERN AUSTRALIAN BANK.

The one hundred and sixty-eighth half-yearly meeting of shareholders of the Western Australian Bank was held on Wednesday, November 4th, at the Banking House, St George's terrace, Sir E. H. Wittenoom (chairman of directors) presiding.

The directors, in their report for the half-year ended September 28th, stated that the net profit, after providing for bad and doubtful debts, rebate on discounted bills current, interest on deposits, and all expenses of management, was £62,907 os 2d, which with the balance of £37,523 10s carried forward from the previous term, gave £100,430 10s 2d for distribution. This compared with a net profit of £46,267 9s 8d for the March half-year and £40,877 19s 9d for the corresponding period last year. Paid-up capital now stood at £700,000, and the reserve fund figured at £1,269,240.

The Chairman, in moving the adoption of the report and balance-sheet, said he thought they would consider the results satisfactory, seeing that the bank was again able to pay the usual dividend of 17½ per cent., and carry forward the substantial balance of over £39,000. It would be noticed that the net profits, after making the usual provision for bad and doubtful debts, were £62,907, being £16,640 more than in March, and the carry forward £39,180. Deposits at £2,862,430 were £111,779 less than in March; advances at £3,778,274 were £381,846 more than in March last, and specie, bullion, &c., at £772,271 were £86,475 less than in March. With reference to exchange, he was glad to be able to inform them that the position was now becoming normal owing to the adoption of the gold standard.

Fairly good rains had fallen over the pastoral areas, and a moderate lambing had taken place, but early rains were required to assure a good summer. Fortunately the price of wool had improved to a large extent, whilst store sheep and mutton realised good prices, and beef was saleable at remunerative rates. The season throughout the agricultural areas, whilst patchy in places, might be considered to have been good, and there was every prospect of an average yield.

The report and accounts were unanimously adopted.

RICHARD THOMAS AND COMPANY, LIMITED. TINPLATE INDUSTRY.

The seventy-sixth ordinary general meeting of Richard Thomas and Co., Limited, was held, on the 21st inst., in London, Mr F. Treherne Thomas (the chairman) presiding.

The Chairman, dealing with the accounts, said that the profits for the year, including dividends received from subsidiaries, amounted to £417,718, from which had to be deducted interest on debentures and other interest charges amounting to £109,076, and the reserve for depreciation and special expenditure amounting to £82,194, leaving £226,446. Adding the £75,000 transferred from reserve for contingencies and £200,955 brought in from last year, there was a total of £502,402. After paying the dividend on the preference shares, the directors recommended a dividend of 2½ per cent., less income-tax, on the ordinary shares, leaving to be carried forward £230,540—a sum about £30,000 in excess of last year's figure.

The profits for the year showed a substantial decrease as compared with last year. This falling-off was not altogether unforeseen. Last year he stated that the tinplate trade had had a setback, and was experiencing difficulties in many directions. As the Redbourn amalgamation took place on March 2nd last, the Redbourn results had formed part of the Richard Thomas results

as from that date. The Redbourn works, with the exception of the brickworks, had been idle during the whole period.

The investments in subsidiary companies still exceeded £2,000,000, but of this amount one-half was the reinvestment in the Grovesend Company. The balance represented investments in collieries in Yorkshire and South Wales and the sums invested in the company's sales organisation, the Richard Nevill Foundry, and the retail coal and toy manufacturing undertakings. Later on it might be possible to carry the process of incorporation of their subsidiaries a step further, but the directors were advised that such a step was not yet practicable.

TINPLATE POSITION.

At last year's meeting he indicated that the demand for tinplates from South Wales had received a check, and that they were unable to keep all the company's tinplate works in South Wales fully employed. This condition was accentuated in the early months of this year. For some time the tinplate industry of Wales, by agreement among the makers, had maintained prices at a level which ensured a certain margin of profit both for the steelworks and tinplate works employed in the business, but they were forced to the conclusion that the high price was not only encouraging existing foreign competition, but also encouraging the erection of new plants abroad and at home. They realised that only by reducing prices substantially could they hope to bring idle works into operation, and so they felt compelled to bring those agreements to an end. Their decision had been justified. Schemes for the manufacture of tinplates abroad had been abandoned, their foreign competitors were finding it difficult to compete with our prices, and our exports had increased.

Through their large subsidiary the Grovesend Steel and Tinplate Co., Limited, they were also interested in an important degree in the black sheet and galvanised iron industry. He was glad to tell the shareholders that their sheet works were fully employed. Just as in the tinplate industry so in the sheet industry the maintenance of these conditions must depend upon their ability to keep down costs and selling prices and maintain a high standard of quality.

It was impossible to contemplate the restarting of the Redbourn Steel Works unless they could work them to their full capacity. He did not despair, however, of the future of the iron and steel industry. The day must come when the world-wide demand for iron and steel would equal the world supply.

POSITION AT THE COLLIERIES.

Dealing with the coal trade and the colliers, he stated that the demand for coal had been very restricted, and it had been very difficult to keep the pits working. Every effort was being made to reduce costs and to bring the collieries to the highest possible state of efficiency. The results for the year had again made possible a contribution to the profits of the parent company, although a reduced scale as compared with the previous year. Unless the cost of raising coal and the cost of transport were reduced the iron and steel trades could not revive. He did not want to see wages reduced if they were given a fair output for the wages paid. No one could be expected to provide capital for any business unless there was a reasonable security for the capital advanced and for the payment of a reasonable interest on the amount advanced. They were producing at their own and the Grovesend group of works over 8,000 tons of tinplates and sheets per week, and their wages bill in the steel works, tinplate works, and sheet works in South Wales was in the neighbourhood of £45,000 per week.

The report and accounts were unanimously adopted.

BALDWIN, LIMITED. BURDENS OF TAXATION.

The twenty-third annual meeting of shareholders of Baldwin, Limited, was held, on the 18th instant, at Birmingham, Colonel Sir William C. Wright presiding.

In moving the adoption of the report and accounts, the Chairman said the amount brought forward into credit from manufacturing, trading, interest, and others accounts was £214,078, a decrease of £279,442 as compared with the previous year. The trading results reflected the abnormally severe depression through which the company and other kindred firms had been passing. The great difficulty in competing in the export markets of the world had been the very low rate of exchange ruling against us in France and Belgium. Continental competitors had thus enjoyed artificial advantages as well as lower taxation, which assisted them materially in stimulating their exports. The financial burden placed upon commercial enterprise in this country by the ever-increasing national expenditure was one of the principal handicaps to industry.

EXCESSIVE TAXATION.

Since the war national and local taxation had increased out of all proportion to the increase in prices, and was to-day about 250 per cent. higher than pre-war, while iron and steel prices were only 20 per cent. higher. The relative wages in the iron and steel industries per 48-hour week were: Great Britain, 61s; Belgium, 33s 6d; Germany, 32s 6d; and France, on the basis of the franc at 124 to the £, 24s 2d. Another factor operating much to their disadvantage in comparison with Continental competitors was the continued high charge for transport. Both on the railways and at the docks they were paying very much higher rates per ton mile, and, as transport charges represented from 20 per cent. to 25 per cent. of the present selling price of iron and steel, if we were to compete successfully in the export market, railway and dock charges must be substantially reduced. It could not be too strongly emphasised that our great industries would not recover except on the basis of the lowest possible cost of production, and to attain this they must not only have the whole-hearted co-operation of labour and the highest efficiency of plant, but also a lightening of the burden of taxation, which was pressing so ruinously at present, and this could only be accomplished by the exercise of the most rigid economy in both national and local expenditure.

Referring to the operations of the subsidiary companies, the Chairman said the Port Talbot Steel Works, chiefly engaged on the manufacture of heavy steel, had had a very bad year. The British Mannesmann Tube Company had also experienced a bad year, owing to excessive competition for both home and export orders. In foreign markets the competition was very keen, and orders had been taken at low prices to keep the works even partly going. The Locarno Pact would, it was believed, help in no small measure to stabilise international credit, and thereby international trade.

COAL INDUSTRY.

From the coal industry point of view the year had been one of unrelieved gloom and depression, and at no time had it been possible to keep the collieries fully and regularly employed. Stoppages through lack of orders were continual, and the output for the year amounted to only a little over 900,000 tons, as against a normal capacity of over a million and a quarter tons. South Wales, as a coal exporting district, was the most seriously affected of all the coalfields. The wages agreement, which came into operation in May, 1924, increased the wages percentage in South Wales from 28 per cent. to 42.2 per cent., and added anything from 1s 6d to 2s per ton to the cost of production, whilst during 1924 the coal exports from South Wales dropped by four and a quarter million tons. An increased demand for coal could only be brought about by cheapening the product, and this could only be done by bringing down production costs. The quickest way to bring this about was a return to the eight-hour shift. If the demand for coal could be expanded and the industry made self-supporting again, we should not only have solved the problem of the mines, but have gone a long way towards reviving those industries of which cheap coal was the life blood.

The motion was seconded by Sir John Cecil Davies, and agreed to.

W. ABBOTT AND SONS, LIMITED. RECORD TAKINGS—GOOD PROSPECTS.

At the sixteenth annual general meeting, which was held at the registered offices of the company, 34 and 36, Gresham street, in the City of London, on Tuesday, December 22, 1925, Mr O. H. Abbott, the chairman and managing director, said, among other things:—

That with the shareholders' permission he would adopt the usual procedure and take the report and accounts as read. The company had now reached the sixteenth year of its existence. He felt it should be explained that the French side of our business had shown a satisfactory profit, and it was only through having to write down the whole of our French assets to the rate of exchange ruling at the close of our financial year that had converted this profit into a loss—a loss which had been successfully met by our English profits. He considered that the result as shown in the balance-sheet was, under the circumstances, very gratifying.

THE DIVIDEND.

It would be seen from the accounts that the year which ended August 31, 1925—after charging all trading expenses, loss on exchange, &c., and writing off £5,487 14s 4d for depreciation of leases, fixtures and furniture—had resulted in a balance of £26,986 5s 7d, and after deducting the further sum of £4,100 9s 1d charged against the gross profit, there remained a balance of £23,095 14s 5d; to that sum must be added the sum of £35,858 0s 9d, the amount of the carry forward from last year, making a total of £58,953 15s 2d, which it was proposed should be dealt with as shown in the report. The directors had pleasure in recommending payment of a final dividend, making for the year 15 per cent.

FRENCH ASSETS.

The reserve account now stood at £62,500, a sum which exceeded the preference share liability. The carry forward of £38,863 15s 2d showed an increase of £3,005 14s 5d. The directors still deemed it advisable to leave this sum intact against any possible further depreciation of the franc. At the same time, it was very

satisfactory to know that the French assets had year by year been written down, so that they now stood in the books at a figure far below their actual realisable value in sterling—he referred to that portion of the assets represented by stock. The position in France was uncertain, but it was undeniably true that intrinsically and individually that country was rich—but, unfortunately, its wealth was—for the moment—not gettable by the Treasury. There appeared to be little doubt, however, that it was gradually being brought home to the French people at large that the time had come for some personal sacrifice, and the stabilisation of the franc should follow. When this took place the directors would look with more favour on an increased distribution.

STOCKS.

The stocks showed an increase of £16,857 0s 6d, and was accounted for by the stocking of four new branches since the date of the last annual meeting. A sum of no less than £37,000 had been written off the selling prices during the year with a view of quickly disposing of back numbers and any stock which was likely to depreciate through a sudden change of fashion. The directors felt that the continuity of this policy was a very wise one, and was not only responsible for the excellent condition of their stocks to-day, but truly represented the figure at which they stood at in our balance-sheet.

GOOD PROSPECTS FOR CURRENT YEAR.

The four new branches opened since the date of the last general meeting had met with an immediate response from the public—a proof of the value of our goodwill. The year's takings were the largest in the history of the company, and the current year showed a substantial increase over those of the same period last year.

The Chairman stated that he would like on behalf of the board, and he felt sure he might do so on behalf of the shareholders, to thank their staff, both in London and Paris, for their loyal co-operation in everything which had contributed to the results that had been placed before the shareholders that day.

He had much pleasure in moving:—
“That the report and statement of accounts as submitted be received, approved, and adopted.”

Which was duly seconded and carried unanimously.

RUDGE-WHITWORTH, LIMITED. LARGE EXCESS OF ASSETS OVER LIABILITIES.

Mr John V. Pugh, J.P., presided over the thirty-first ordinary general meeting of shareholders of Rudge-Whitworth, Limited, at the registered office, Crow lane, Coventry, on the 23rd instant.

The Chairman said: This meeting is simply formal to comply with the law, and will be adjourned to a date to be decided when the accounts of the company are available. I hope that date will be early in 1926. The accounts are not available to-day, and they depend on, among other things, the completion of the valuations being made by Messrs Edwards, Son, and Bigwood of certain of the company's freeholds, leaseholds, plant, and tools.

Last year, 1924, you will remember these were set out in the balance-sheet:—

	£
Freeholds	126,662
Leaseholds	6,736
Bearing works	91,086
Plant and tools	97,495
Total	321,979

And you will remember that I gave it as my opinion that they were worth at least £200,000 more than £321,979.

Speaking with a full sense of my responsibility as your chairman and managing director, I told you then that in my considered opinion these assets were worth more than £521,979. These are the assets that are now being valued, and the valuation is complete for the Coventry Factory and Bearing Works, Tyseley.

These valuations do not include our Rea street factory, our depots, and certain parts of our land, and they are as follows:—

	£
Coventry and Tyseley only—freeholds ...	233,350
Plant	227,897
Tools	39,240

Making a total of 500,487

The other items, including Rea street and land, are, again in my considered opinion, worth far more than another £80,000, so

that the value of our assets, freeholds, leaseholds, plant, and tools may be expected to exceed £580,000, so that what I told you a year ago was well within the mark.

WHEEL PATENTS.

I told you also that our wheel patents were bringing in an income of over £20,000 per annum. These patents are increasing in value with the increasing vogue of the Rudge-Whitworth Detachable Wire Wheel generally, and more particularly with new inventions which promise to make the wire wheel not only the best wheel for the best car, but even the cheapest wheel for the cheapest car, and, therefore, I think we might well say that they are worth over £100,000. If we decided to include this value of patents in our balance-sheet, we should show on one side assets of over a million, and liabilities including creditors of less than half-a-million, and a surplus of assets over liabilities of over half-a-million. We shall probably decide not to include the value of the patents in our balance-sheet, in which case the surplus of assets over liabilities will be stated at well over £400,000. The share capital of the company is £100,000 preference shares and £100,000 ordinary shares.

The past year has not been without its difficulties, but since the accounts are not complete, I will not attempt to forecast their result.

SAMUEL ALLSOPP AND SONS, LIMITED. GOOD YEAR—HALL'S OXFORD BREWERY.

The ordinary annual general meeting of Samuel Allsopp and Sons, Limited, was held, on the 23rd instant, at the Cannon street Hotel, E.C., Sir William Barclay Peat, C.V.O., the chairman, presiding.

The secretary (Mr T. H. Collinson) read the notice convening the meeting and the auditors' report.

The Chairman said that the year's profit on trading had increased by £10,000, while interest and dividends received were less by £2,000 because a good deal of money had been used to purchase their interest in Hall's Oxford Brewery. Expenditure on repairs was greater by £2,000; and the effect was that the net increase in the profit was £6,600. Other items of expenditure compared quite favourably with the previous year, and the net result was a profit of £102,000, as compared with £95,000, after paying all interest, directors' fees, compensation levy, and liberal depreciation.

Trade investments had increased in the year by £290,000. It had been the policy to ally themselves with other brewery companies which might desire to have their beer brewed at Allsopp's brewery; and an opportunity had arisen of buying a controlling interest in Hall's Oxford Brewery. They had accordingly acquired 19,740 ordinary shares in a total of 20,000 such shares, together with a proportion of preference shares. Hall's Oxford Brewery had 318 licensed houses taking their beer, which was a potential addition to the houses owned by Allsopp's. Part of the arrangement was that, under certain conditions, Allsopp's should brew the beer for Hall's Oxford Brewery. It might be asked what was the advantage of such an arrangement. The answer was that Allsopp's had large overhead charges, and any additional barrelage brewed by them meant that they brewed their whole production on rather better terms, because the standing charges were spread over a bigger area. Hall's Oxford Brewery dated back to 1795, and the balance-sheet was admirable. There were investments of £168,000, including £151,000 of British and Colonial Government securities. The reserve and depreciation funds were

£179,000, and there was an employees' compensation fund at £20,000. The creditors were not important, and the assets were of the usual character. It was a successful concern, the profits in the last three years being £32,798, £40,229, and £48,034 successively, after charging debenture and other interest, compensation fund, &c. Apart from the benefits accruing from brewing the beer at Burton, the return to Allsopp's on the investment would be rather more than 8 per cent. on the basis of recent dividends.

The business of Allsopp's itself had been and was prosperous, having regard to the times, and showed fair recuperative powers. Apart from the breweries of which he had spoken, the undertaking as a whole was worth considerably more than its balance-sheet figure, he was informed, and, so far as sales effected from time to time were an indication, that opinion was justified. The balance-sheet was conservative—again apart from the question of the breweries. The quality of the beer continuously improved, and although that improvement involved considerable expense, they maintained and improved their profits. It was not generally realised that this concern was established in 1708, and their actual records went back to 1730. Allsopp's were the pioneers of India Pale Ale, in which a great business was done; but that trade had dwindled to a proportion which the present directors and officers were struggling to restore. It was a great mistake to forget to push the sale of India Pale Ale, which had centuries of approval behind it, and to substitute a lager beer, the production of which had been abandoned after involving severe loss.

The report and accounts were unanimously adopted, and the usual formal business transacted.

Reports and Notices.

Mr Richard George Salmon, F.I.A., actuary of Sun Life Assurance Society since 1905, has been appointed by the board "Joint General Manager and Actuary."

Mr J. Proctor Green, who has held the office of a general manager of the Refuge Assurance Co., Ltd., for the past twelve years, has been appointed a managing director of the company.

BANKS.

IONIAN BANK, LIMITED.—The report for year ended August 31, 1925, shows the net profit amounted to £69,399, against £63,077. The ordinary dividend is again 8 per cent., free of income-tax. The sum of £30,000 has been put to reserve, making total reserve £220,000. The carry-forward is £13,193, against £12,640 brought in. The continual expansion of the bank's business made it advisable to issue the balance of the authorised capital, amounting to 22,884 shares. These were only issued to the shareholders in June last, so the present accounts are not affected thereby. The directors have decided to recommend the increase of the capital to £1,000,000 by the creation of 80,000 new shares of £5 each. It is not the directors' intention to make any immediate new issue.

ULSTER BANK, LIMITED.—The net profit for year ended November 30, 1925, amounted to £216,380, against £211,378 in preceding year. The ordinary dividend is again 2½ per cent. The sum of £100,000 is put to reserve fund and £50,000 to superannuation fund. The carry-forward is £73,895. All ascertained bad and doubtful debts have been written off or fully provided for.

WESTERN AUSTRALIAN BANK.—The report for half-year ended September 28, 1925, shows a net profit of £62,907, which added to balance of £37,524 brought in makes £100,431 available. The ordinary dividend is 1½ per cent. per annum, free of dividend duty. This dividend absorbs £61,250, leaving £39,181 to carry forward. The reserve fund is £1,269,240.

Commercial Reports.

THE CORN TRADE

Mark Lane, Wednesday Evening.

Climatic conditions have been adverse to field work, which has enabled farmers to attend to threshings. Supplies of native wheat at the principal markets have therefore been on a liberal scale. Prices, however, marked a downward tendency in sympathy with the position of imported varieties. No cargo sales of wheat were reported, while only small parcel business transpired. Wheat quiet and easier. No. 1 Northern Manitoba ex-ship to arrive quoted 63s, No. 2 ditto 62s, No. 3 61s, No. 2 mixed Durum 59s 6d, Barusso 62½ lbs ex-ship 63s per 49½ lbs. English quoted 12s-12 3d per 112 lbs free on rail. Flour dull. London standard grade quoted 49s, patents 51s-52s, town whites 49s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported Manitoba patents range from 46s-49s, Minneapolis 48s-49s, Australian 46s-46s 6d per 280 lbs ex-store. Maize tends easier. Plate ex-ship to arrive quoted 36s 9d, landed 39s 3d, white flat African ex-ship 36s 3d, landed 38s 3d per 480 lbs. Yellow African maize meal ex-ship to arrive £9, white ditto £8 5s per ton. Barley weak. Californian ex-store quoted 38s-50s, Chilian Chevalier 58s-63s, brewing 50s-53s according to quality, Australian Chevalier 50s-58s ex-store, Danish ex-ship 45s-60s per 448 lbs. American malting ex-ship 29s 6d, No. 3 Canadian Western ex-ship 32s 6d, Russian ex-ship 28s 6d, landed 30s per 400 lbs. English quoted 8s 10d-17s 6d as to quality per 112 lbs. Oats easier. Plate ex-ship quoted 24s 3d, landed 25s 9d, No. 2 Canadian Western ex-ship to arrive 20s 3d, No. 2 Canadian feed ex-ship to arrive 25s, landed 26s 3d, all per 320 lbs. Danzig ex-ship 28s 6d-29s 6d per 336 lbs. English quoted 9s-9s 8d per 112 lbs free on rail. Millers' offals quiet. Broad bran quoted 8s 6d-8s 9d, middlings 8s-8s 3d, fine ditto 10s 6d bags included ex-mill, powdered oat husks 6s 3d, feed oatmeal 7s 9d, ground oats 12s 3d per cwt free on rail. Oatmeal steady. London-made flaked 18s, head 17s ex-mill, ordinary Scottish oatmeal 17s 6d, American ditto 16s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1925-26, 1924-25, 1923-24, 1922-23.

	1925-26.	1924-25.	1923-24.	1922-23.

The cutlery trade is quieter than at any time since the beginning of the year.

Our Glasgow correspondent writes:—The works are chiefly occupied in finishing off contracts for delivery before the end of the year and making preparations for stocktaking. There has been a fair inquiry for pig-iron, but the business passing has been mostly in small parcels, buyers holding off in the hope of further reductions. The shipments from Glasgow Harbour last week of all grades totalled 1,272 tons, of which 1,192 tons were for foreign destinations. For the corresponding week of last year the tonnage was 434 and 342 tons respectively. With the exception of the sheet-makers most works will close for the full ten days at the New Year. Prices for finished materials have sagged considerably lately, and steel plates for export have been quoted as low as £7 2s 6d per ton, a figure at which there can be no margin for the manufacturer. Galvanised corrugated sheets are in steady demand.

OTHER METALS.

TIN.—The market for tin displayed firmer features in view of higher Eastern advices, and prices advanced sharply under a steady demand, with sellers showing more reserve. Movements, however, were attended by some irregularity, especially regarding forward positions. Standard cash sold £286 5s to £285 10s, £286 10s, and three months £279 5s to £280 and £279 5s. Sales in the East were reported at £282 5s to £283.

COPPER. was also a generally firm market, and business proceeded on active lines, closing weak. Standard cash sold £60 3s 9d to £60 5s and £59 13s 9d, three months at £61 2s 6d to £61 7s 6d and £60 13s 9d. English ingots quoted £285 10s to £286.

LEAD rather easier on liberal offerings, but business was on a fair scale, closing firm. Good soft foreign pig, December, sold £34 12s 6d to £34. January £34 13s 9d to £34 17s 6d, February £34 10s to £34 13s 9d. March £34 7s 6d to £34 8s 9d.

SPELTER barely steady owing to some pressure to sell, but offerings were well absorbed. January sold £38 7s 6d to £38 5s, February £38 to £37 17s 6d, March £37 10s to £37 8s 9d, April £37 7s 6d per ton.

ALUMINIUM.—Home trade nominally £120, export £125 per ton. **ANTIMONY** firmer. English special brands quoted £95 per ton. **QUICKSILVER** firm. Spot quoted £15 to £15 10s per bottle.

WOLFRAM firm. Forward quoted 22s to 22s 6d per unit, c.i.f. terms.

THE COTTON TRADE.

LIVERPOOL, December 22, 1925.

Cotton has only been in quiet demand for the last four days, mainly due to the approach of the Christmas holidays. The estimated spot sales from the 18th to 22nd (inclusive) are 19,000. Of these 12,280 are American, 850 Brazilian, 2,500 Peruvian, 750 Egyptian, 2,360 African, 160 East Indian, and 100 sundries. The imports for the same period are 94,123 bales. Of these 65,697 are American, 6,208 Brazilian, 3,176 Peruvian, 18,773 Egyptian, 156 African, 91 East Indian, and 22 bales sundries. Middling American is quoted at 9.72d, Egyptian F.G.F. Sakel 16.70, F.G.F. upper 13.70, fair Brazil 10.22, G.F. mod-rough Peru 16.00, smooth 11.97, F.G.F. Tinnivelly 8.85, G.F. East African 12.50, and middling West African 9.47. Futures have been quiet, and quotations are practically unchanged from those of Thursday last. The ginning figures issued on Monday were a little larger than expected, namely, 14,826,000, and on their appearance the market dropped a few points, but soon recovered.

MANCHESTER, December 22, 1925.

The tone of the market has continued quiet, holiday influences having interfered with business. The chief reason for inactivity, is, however, distrust of current prices. Reports relating to supplies of raw cotton remain very favourable, with a tendency to increased estimates of the American crop. Only scattered sales have taken place in piece goods for India, and merchants have received comparatively few bids from the other side. Isolated transactions have been put through in sheetings and fancies for China and the minor outlets of the Far East. No improvement can be recorded in the turnover for Egypt. Finishing styles have attracted some attention for the United States and the Continent. More difficulties are being met with in getting customers to take delivery of dear goods. A slack feeling has prevailed in the yarn market, the turnover in American and Egyptian qualities being unimportant.

THE WOOL TRADE.

Our Bradford correspondent, writing on Tuesday, says:—There is no new feature in the general situation, and it is improbable that anything of outstanding interest will develop until after the turn of the year. Raw material values are steady, and more encouraging reports are coming to hand from overseas. There is not likely to be any great activity, however, until the beginning of next month, when, if the London sales go well, there should be a steady trade. Stocks are by no means heavy, and even if machinery can be run as during the last month or two, there will be a big consumption. The really unsatisfactory feature at present is the bad state of Continental finance. Financial stringency in Germany makes business almost impossible, and as the German market is of the utmost importance, both as regards raw material and semi-manufactured articles, trouble in that country may have far-reaching effects here. The position in France is also causing some uneasiness, for without adequate support from France and Germany, it will be impossible to maintain wool values. Traders as a whole, however, are inclined to take a more hopeful view of the immediate future. There is, of course, a good deal of wool to

come on the market during the next few months, and it is impossible to see any justification for higher values. What is wanted is a steady demand to keep prices stable and give manufacturers and merchants a chance to sell at a reasonable profit.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Last Saturday the final auction for the year took place at Dunedin. Private cables report a very good sale, with prices slightly against the buyer. Altogether, nine sales have been held, and there should be a resumption on January 7th at Christchurch. The course of the sales in New Zealand has been to the liking of home trade buyers, values having gone in a way that means nothing but good. All users are determined that this season they will not commit the blunder of a year ago. Wool generally is being purchased at about 1s per lb less than during the first round a year ago. At that time good 40's preparing crossbreds were selling at 23-24d, whereas this season we should say that the bulk of the wools of that quality have been purchased at 10d to 11d. This means that crossbred wool is going to be landed in Bradford at very reasonable prices, and, no doubt, New Zealand has been forced lower because of the very cheap prices ruling in Buenos Aires. Through the past fortnight there has been a very big business done in B.A. crossbreds on the basis of 16d clean, c.i.f. English port, for 36-40's, 16d for 40-44's, and 18d for 46's. Wool at these values is right, and cannot but make for the future good of the industry. Colonial prices during the past few weeks have confirmed our contention that reasonable wool would inspire confidence in the minds of all sections of the trade. Consumption is larger to-day in the West Riding and elsewhere than at any time this year. There are still plenty of looms to be got running, but very few spindles are standing, and full time is general. All this is due to the belief that values are not going to fall further, or that, if they do, the decline will be of little significance.

During 1924 the home trade absorbed the biggest weight of wool, 370,000 bales, the Continent 301,500 bales, and America 9,000 bales. This year the home trade falls to the second position, 249,500 bales, while the Continent has taken 335,500 bales, and America 17,000 bales. The increased takings of the Continent are largely due to France, where trade has been in a very healthy condition during the greater part of the year.

HIDE, LEATHER, AND ALLIED TRADES.

No sales of market hides will be held in London or the provinces this week. Little has been done in imported hides, but Argentine frigorific ox are now quoted at 9 1/2d and Montevideo at 9 1/4d. Dry hides are firm, tanners showing interest in sorts which will produce the light cheap bends now demanded by the shoe trade. Chicago packer hides are cabled as steady, with best heavy steers selling at 15 1/2 cents. As regards sole leather, a few orders have come to hand for light bends for the Russian boot, whilst repairers have required a supply of medium wet salted bends. Offal is a firm market. In upper leathers there is no cessation for the demand for coloured glacé kid and light willow calf, and stocks are almost cleared up. Patent is slow, but curriers are much busier on semi-chrome and wax kips, orders for lining leathers having again come from the United States. The outlook in the boot and shoe trade is regarded as hopeful; the fillip due to the Russian boot has been most useful, but has delayed orders for spring wear. Makers of travelling gear and fancy leather goods report that good business has been done for the Christmas trade.

VEGETABLE OILS AND OILSEEDS.

Markets are under holiday influences. There has been no reduction in the official estimate of the new crop in Argentina. This disappointed expectations, old crop Plate offering freely at £17 15s afloat and December shipment, and £17 2s 6d December-January. With new crop at £17 January-February, crushers are still holding aloof and indisposed to do business, in view of the poor oil market, and the possibility that world supplies of linseed in the coming year will be more than ample to meet requirements. Linseed oil has also been weaker in sympathy, current value being around £34 10s per ton naked ex Hull mill, spot and December delivery, and £34 5s for January-April. Cottonseed is again easier and lower, black Egyptian offering at £9 10s afloat and December later positions being at a slight premium. New Bombay cottonseed is quoted £8 for shipment. Demand for the oil product has been fair, and values steady at £36 for crude Egyptian and £38 for ordinary refined. Little or nothing is passing in soya, palm kernel, and ground nut oils.

OVERSEAS PRODUCE.

FOODS, BEVERAGES, &c.

SUGAR.—With the exception of filling up a few gaps, there is no generality of buying on the part of trade interests, and the market begins to wear a holiday appearance. The undertone, however, is one of steadiness as no pressure of supplies is felt. Of British refined, Messrs Tate and Lyle's cubes quoted 31s 6d to 32s 6d; crushed, 29-6d; nibs, 32s 3d; granulated, fine and coarse grain, 28s 10d; No. 1, 28s 7d; No. 2, also London and T.L.S., 28s 4d; ditto, January delivery, 28s 3d; February-March, 28s 6d; yellow crystals, spot,

25s 4 1/2d; caster, finest, 32s 7 1/2d; A, 32s 1 1/2d; B, 30s 6d. English-grown granulated, 27s 6d, ex wharf, London for Cantley, Ely, also Ipswich, 27s 6d, ex works; Kidderminster, 27s 9d; Colwich, 27s 9d. Crystallised West India in but retail support at 22s to 26s 3d, according to sample. Dutch granulated, J quality, on spot, sold, 27s 3d; ready for shipment, quoted 14s 6d; April-August, 15s 1 1/2d, f.o.b. Rotterdam; Czecho granulated, December, 14s 4 1/2d; January-March, 14s 9d; April-August, 15s 1 1/2d, f.o.b., Hamburg. American granulated, spot, sold, 27s 2 1/2d; ditto, afloat, quoted 15s 3d, c.f. and i., London; and 15s 6d outports. White Java, spot, 26s 7 1/2d; May-June, steamer, London, 15s 1 1/2d, c.f. and i. terms. White Mauritius crystals, spot, 25s 9d to 26s 3d, as to sample; ditto, December-January, to London, 16s, c.f. and i. Belgium granulated, prompt, 14s 1 1/2d, f.o.b., Antwerp. Polish crystals, prompt, 13s 10 1/2d, f.o.b., Dantzig. Cuban, basis 96 per cent. December-January, 11s 1 1/2d, c.f. and i., U.K. White terminal section very steady. Fair sales include December, 13 1/2d to 13s 10 1/2d; March, 14s 4 1/2d; May, 14s 7 1/2d to 14s 9d; August, 15s 3d to 15s 4 1/2d per cwt. Cuban receipts last week, 28,562 tons new crop, against 15,006 last year; old, 4,238, against 6,777; exports: new, 9,611, against 6,500; old, 68,466, against 5,314; stocks, new, 34,921, against 12,295; old, 115,004, against 3,286; c-ntrals at work 63, against 64 at same time last year. Mr F. O. Licht reduces German estimate 50,000 tons, making total for Europe 7,482,000 tons, against 7,077,791 last season. German estimate now 1,630,000 tons.

COFFEE.—Business was of a holiday character, but the finer sorts came in for certain support at full recent rates. Common slow.

COCOA.—Only a retail business in spot parcels on former terms. Accra, F.F., December-February, sold, 36s 6d; January-March, sellers, 37s, f.o.b.

TEA.—Quite a holiday tone pervaded this market, but all common teas were held for full recent prices. Some of the finer parcels show slight irregularity and weakness, due mainly to falling in general run of quality.

RICE.—This market remains quite featureless at the moment. Prices remain unchanged, with business of a holiday character. Two Stars Rangoon, spot, London, 16s; January-February, 15s 6d. No. 3 Spanish, December-January, 22s 6d; oiled, 23s, c.f. and i., London. Broken rice firm, but quiet. Beans in slow request. Peas easier. Japanese, afloat, quoted 31s; January-February sold, 34s 3d cwt, c.f. and i., U.K.

SPICE.—A moderate business resulted in pepper at rather irregular and again easier prices. Black Singapore, f.a.q., January-March, sold, 15 1/2d to 15 1/4d and 15 1/2d. Lampong, ditto, 15 1/2d to 15 1/4d. Muntok, white, L.S., January-March, done 15 1/2d to 15 1/4d. Pimento, spot, 7 1/2d per lb. Tapioca quiet. Singapore flake, January-March, to Havre, quoted 18s. Penang seed, ditto, to London, 17s. Sago flour firm. Sarawak, January-March, sold, 15s, c.f. and i., U.K. Desiccated coconut dull. Halves, on spot, quoted 39s 6d; forward, 38s, c.f. and i., London. Ginger quiet, but steady. Japanese lime, spot, 87s 6d; Cochin, F.W.R., 100s; West Coast African, 59s cwt.

FRUIT (Dried).—Trade quiet in view of the holidays, and prices without material alteration. Currants, Amalia, quoted 32s to 33s; Gulf, 35s to 40s; Pyrgos, 30s to 31s; Vostizza, 42s to 52s; Patras, 34s to 46s. Sultanas, Smyrna, 65s to 90s; Australian, 66s to 75s; Cretan, 65s to 85s; Greek, 68s to 80s. Figs, good average, 40s to 42s; genuine, 43s to 45s. Dates, Hallowee, spot, 26s 6d; Siar, 14s 6d; Khadowie, 18s 6d. Raisins, Valencia, quarter boxes, 28s to 45s; halves, 28s to 30s. Evaporated fruits steady, and new crop plums continue in small supply. Californian apricots, standard new extra choice, 127s 6d; fancy, 135s; Australian, 120s to 130s. Plums, Oregon, size 30/40, quoted 72s; 40/50, 52s. Californian, 40/50, 59s; 7/80, 46s; 80/90, 43s 6d. Bosnian, new crop, 60/70, 45s. Pears, Californian, extra choice, 90s; fancy, 105s. Lake County, extra choice, 105s; fancy, 117s 6d. Apple rings, Californian, extra choice, 55s to 70s; Canadian, 63s 6d per cwt.

CANNED GOODS.

CANNED FISH.—Sardines: Trade restricted, but general tone firm. Portuguese 1/2s quoted 4s 9d to 5s per dozen tins. Salmon in moderate demand, but prices show a hardening tendency. Red, tall, 1 lb, 63s to 64s; 1/2 lb, pink, 37s to 39s; tall pink, 26s to 27s. Lobsters firm and supplies short. Halves quoted 160s to 165s, and 1/2s, 95s to 100s.

CANNED FRUIT.—Market steady, with fair inquiries for best apricots and peaches. Californian Bartlett pears, standard, 13s 3d to 13s 6d; seconds, 12s to 12s 6d; Oregon, choice, 15s; standard, 13s 3d; seconds, 12s to 12s 3d; Canadian, standard, 11s 6d. Californian peaches, choice, 11s; standard, 9s 6d; seconds, 8s 9d. Californian apricots, standard, 9s 3d; seconds, 8s. Loganberries, fancy, 11s to 12s; choice, 10s 3d per dozen tins. Pines quiet on spot but shipment parcels firm with scanty offers. Italian tomatoes continue to realise full rates.

CANNED MEATS.—The general position is unaltered and trade slow. Corned beef, South American, 6 lb tins, quoted 34s; and New Zealand, 34s. Lunch tongues, Danish sixes, quoted 116s; and 1 lb, 18s; New Zealand ox, 6 lb, 12s per dozen tins.

NATIONAL PROVIDENT INSTITUTION.

INCREASE IN INTERIM BONUSES

to

£2 : 5s. per cent. per annum, rising to £3 : 5s. per cent. per annum, on all Whole Life With Profit Policies in respect of premiums paid after 20th May, 1925.

48 GRACECHURCH STREET, E.C.3

CONDENSED MILK in fair demand, at about late rates. Machine-skimmed quoted 16s to 16s 3d; full-cream Danish, 26s 6d; Dutch, 24s per case.

HONEY.—New Zealand remains firm, with sustained inquiries, but other descriptions generally quiet at previous rates.

RUBBER.

Dearer, a good demand, mainly in order to cover, causing sellers to exercise reserve. Plantation standard, spot, sold, 3s 10d to 3s 11d; December, 3s 10d to 3s 10½d; January, 3s 8½d to 3s 10d to 3s 8½d; January-March, 3s 7½d to 3s 9½d and 3s 7d to 3s 8½d; April-June, 3s 4½d to 3s 6½d to 3s 4d; January-December, 1926, quoted 3s 3d. To New York, standard estate sheet, December, sold, 3s 7½d per lb, c.f. and i. terms.

GENERAL.

HEMP.—Manila still reservedly offered, and market firmer. J, January-March, quoted £45; K, £38 10; L, £39 15s; M, sold, £34 10s. New Zealand quiet, but fully steady. Fair, January-March, £37. African sisal, No. 1 Taunganyika, January-March value, £44 10s; Kenya, £44 ton.

SHELLAC quiet. Fair, T.N. spot, 210s; December, 1925 6d; March, 1926 cwt. sellers.

COPRA.—Market dull, at about late rates. F.M.S. Straits, October-December, to Rotterdam, quoted £30 7s 6d; December-February,

£30 5s; January-March, £30 2s 6d. Dutch East Indies, October-December, £30 2s 6d; January-March, £29 17s 6d. Ceylon, December-January, £31 12s 6d. Palm kernels, January-March, Liverpool, £21 2s 6d ton.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £24 10s to £40; Cochin, £29 to £53 10s. Ceylon bristle, £17 to £23; cinnamon leaf oil, 4½d; citronella, Ceylon, 1s 1½d; Java, 3s 4½d.

ing something like temporary stability, with prospects of a renewed up-swing of business in the autumn. Among the Dominions of the Empire the outlook is promising. Canada hopes to harvest a reasonably good wheat crop and to market it at prices which, though less than those of last season, will be remunerative to the grower. The progress of the Indian monsoon is so far giving rise to no anxiety, and in Australia disappointment at the recent fall in wool prices has been offset by the promise of a much enlarged clip this year. In Europe, seasonal conditions are unfavourable to industrial activity at the moment, and some countries, such as Germany and Belgium, have their own peculiar difficulties, but the satisfactory crop situation is likely to have a good effect on affairs generally in a few months' time.

The following notes on conditions in various trades and countries call attention to the most striking tendencies:—

HOME INDUSTRIES.

Iron and Steel.—The iron and steel trades are in a lethargic condition, labour troubles in the coal industry having intensified factors already present. Apprehensions of the closing down of plant which would inevitably follow a coal stoppage have led to the speeding up of work already under contract, but restricted the giving out of new work. At the quarterly meeting held at Birmingham on July 9th, purchases were reduced to the barest possible limit in a buyers' market. Nine blast furnaces went out of production last month, the output of pig-iron falling consequently to 510,000 tons, as against 575,000 tons in May. This is the lowest figure for two and a half years. The output of steel at 585,000 tons showed a decline of 62,000 tons, as compared with May, partly owing to the Whitsun holidays. The pig-iron market has been consistently dull, though a slight expansion of inquiry has been lately in evidence, with prices better maintained, but foreign competition is keenly felt in the steel trade, and pressure is being brought to bear on manufacturers to reduce their quotations. The tin-plate trade is only moderately employed. Although fair quantities of plates have been bought for South America and the East, many buyers are tending to hold off pending developments in the labour world. The sheet trade remains one of the few bright features in the picture, orders having been placed recently, in some cases, as far forward as September.

Coal.—The prospect of a national stoppage in the coal industry has been received on the whole with rather less apprehension among coal users than might have been expected. A steady increase in the weight of orders has been recorded and employment has improved, but there has been no "panic" rush to obtain supplies at the last moment. Stocks of coal in the country are relatively heavy, and have recently been accumulated at an increased rate. Industrial demand has been a little more steady, and gas coals are being bought, but foreign users are apparently relying on supplies from other sources in the event of a stoppage in this country.

Engineering.—Though it is difficult to put a finger on any one outstanding feature, the general tone in the engineering trades seems to have deteriorated lately. As before, the brightest features are the motor and electrical industries. Makers of light cars have, in some cases, been working overtime, and although business is quieter after the phenomenal rush of the spring, sufficient orders are in hand to keep most works busy for some months. A significant feature is the demand for heavy road vehicles, which has favourably affected makers in the Manchester district. New contracts in the electrical manufacturing industry continue to be obtained in satisfactory volume, though profits are not in every instance on the scale of a few months ago. The motor-cycle trade remains extremely busy, and although pedal bicycles are rather less in demand, the undertone is healthy. The machine tool trade is uneven and depressed, and the textile machinery industry dull. Shipbuilding also fails to show signs of better times, the latest Lloyds' Register figures confirming previous diagnoses of the depressed state and prospects of the industry.

Cotton.—Our Manchester correspondent writes: Since a month ago the conditions in the cotton industry have shown very little change. Lately some increase in inquiry has been experienced, and in small lots a little more business has been done. There is now not quite so much expectation of cheaper goods. On the whole, the new cotton crop in the United States is making fair progress, but the drought in Texas has not been relieved, and the latest Bureau report is disappointing. During the last couple of weeks inquiry in cloth has broadened, and rather more business has been done. Demand for India has been on a larger scale, and freer operations have occurred in light fabrics, with occasional transactions in grey shirtings. Merchants are encouraged by the favourable monsoon reports. Compared with a month ago, the trade outlook for China is rather better, and some exporters have resumed shipments,

whilst fresh business of an isolated character has taken place. The better conditions in the home trade have been maintained. The yarn market continues depressed. Spinners of American qualities are now restricting output to the extent of 8½ hours per week, which is equal to one day, and in addition have been recommended to stop a full week between now and the end of August.

Woollen and Worsted Trades.—Prospects in the woollen industry have been seriously affected by the decision of employers to post notices announcing an average reduction of 5 per cent. in wages, as from the beginning of next week. Business has been confined within very narrow limits owing to the reluctance of both producers and consumers to commit themselves until the situation becomes clearer. Firmer conditions at the recent wool sales were due not to home but to Continental demand, domestic buyers being indisposed to operate freely. Orders in the worsted section are coming in very slowly, but the woollen section is rather better. The autumn outlook for drapery and clothing is not unsatisfactory, travellers reporting a fair demand from most parts of the country. The larger wholesale and retail houses have had a satisfactory half-year, though the position of some of their smaller colleagues is not quite so happy.

Boots and Shoes.—Continued fine weather has increased sales of boots and shoes of "seasonal" descriptions, but as regards the heavier grades demand is still disappointing, and the volume of production is less than was expected at this normally active period of the year. Overseas requirements are on a moderate scale.

Pottery.—The home market is still relatively inactive, and, although overseas demand is fairly well maintained, production shows some little decline over the last few weeks.

Building Trades.—Little change has occurred in the general situation, the industry remaining more actively employed than at the corresponding period of last year. Unemployment is lowest in the South-Eastern and South-Western districts of England, and highest in Wales and Northern Ireland, though even in these areas improvement has recently been reported.

Shipping.—The downward swing of the freight markets gained slightly increased momentum last month, our Index of "tramp" freights declining from 98 per cent. of the 1913 level in May last to less than 92 per cent. in June. The fall over the spring and summer has been much more pronounced than in previous periods, the decline of the Index from the highest point reached during the winter being 21 per cent., as against 16 per cent. in 1924 and 13 per cent. in 1923. Demand for homeward tonnage was reduced last month to painfully small dimensions. Grain moved slowly, while the coal trade in European waters was featureless. Tonnage remained generally redundant in North and South American ports. Homeward rates from the Plate have, however, moved in favour of owners this month, and the experience of earlier years suggests that the next few weeks may reveal a better tendency. The troubles of the mining industry have provoked a certain amount of demand for prompt coal steamers.

UNITED STATES OF AMERICA.

The following "indicators" of American trade conditions have been extracted from the current number of the "Survey of Current Business," issued by the United States Department of Commerce, and may serve as an approximate guide to recent business conditions:—

	April, 1925.	May, 1925.	Compared with May, 1924.
Production—Pig-ironthous. tons	3,259	2,931	+ 316
Steel ingots..... "	3,588	3,458	+ 818
U.S. Steel Corporation unfilled orders, thous. tons	4,447	4,050	+ 422
Wholesale prices (1913=100).....	156	157	+ 10
Bank clearings—New York.....million \$	22,849	23,847	+ 3,125
Outside..... "	17,717	17,103	+ 1,175
Retail business: (Total sales of mail order houses).....	36.3	29.5	+ 2.1
Imports—Value..... "	349	328	+ 25
Exports—Value..... "	399	370	+ 35

The general business situation is tending to become more stable, although some branches of production are still retarding their activities in order to bring output more closely into line with consumption. In contrast with the setback which was so noteworthy a feature at this time last year, the recession has been of moderate dimensions, and on the distributive side, at any rate, something like stability has almost been achieved. Although prices have been firmer after the narrower profit margins, competition being unusually keen. The average daily pig-iron production declined from 94,500 tons in May to 88,900 tons in June, the latter figure comparing very favourably, however, with that of 67,500 tons in June, 1924. The steel trade continued to run at about 70 per cent.

(Continued on page 12.)

BRITISH TRADE IN OVERSEAS MARKETS.

The Survey of conditions affecting British trade in the chief markets of the world, issued by a Committee under the presidency of Sir Arthur Balfour,* is a document of the first importance to the economist, the trader, the manufacturer, and, not least, the politician. For a critical summary of the main conclusions reached by the Committee we refer our readers to a leading article on page 71 of the "Economist" of July 18, 1925. We now propose to reproduce a few of the many illuminating statistical tables which have been prepared under the Committee's direction, with a statement of the main lessons to be drawn therefrom, expressed in the words of the "Survey" itself. The material for the tables is stated to have been derived, mainly, from official sources, and the whole forms a comprehensive picture of Great Britain's post-war trade position.

* "Survey of Overseas Markets," prepared by the Committee on Industry and Trade, with an Introduction by the Committee. (London) Obtainable from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2. 6s.

I.—Great Britain's Share in the World's Trade.

THE detailed reviews of conditions in individual markets, which form so valuable a feature of the Survey, are too lengthy to be dealt with here. Before entering on that part of its task, however, the Committee deemed it advisable to clear out of the way certain questions of a general order, the replies to which can be very conveniently indicated. What has been the general trend of the world's trade since the war? How does its present magnitude compare with its magnitude in the years just preceding the war? And is the share of Great Britain in the aggregate world's trade an increasing or a decreasing share?

The following table affords an approximate answer:—

WORLD TRADE, 1913 AND 1923.—BRITISH, AMERICAN, AND FRENCH SHARE.

	Total Value.		Per Cent. of Total	
	1913.	1923.	1913.	1923.

All other countries	2,238.9	2,405.9	55.49	45.40

Conversions of foreign currencies to sterling have been made at the averages of the quoted rates. The figures for 1923 are available for about 91 per cent. of the imports and 89 per cent. of the exports, and the balance has been estimated from the 1922 records. For better comparison with 1913, the figures of trade of the United Kingdom in 1923 have been adjusted (reduced) to apply to the British Isles as a whole, and not to Great Britain and Ireland only.

In 1913 the aggregate sterling value of the exports of the world was £4,035 millions. In 1923 (the latest year for which figures for some of the countries can be obtained), the corresponding aggregate was £5,299 millions, an increase of 31 per cent. In the same two years the exports of the United Kingdom were valued at £525 millions and £743 millions respectively, an increase of 41 per cent. In other words, our proportion of the world's export trade (measured in sterling values) rose from 13 per cent. in 1913 to 14 per cent. in 1923.

A very similar result is reached if the calculation is made in a slightly different way. The sterling value of the aggregate imports of the world (excluding the United Kingdom) was, in 1913, £3,706 millions, and, in 1923, £4,742 millions. Thus, the proportion borne by the value

of our exports to the aggregate value of the imports from all sources into other countries was, in 1913, 14.2 per cent. and, in 1923, 15.7 per cent.

Up to this point the results seem *prima facie* to be highly satisfactory. Measured in sterling values, the world's trade has increased, and of this increased value a larger share appears to have fallen to the United Kingdom. Before, however, we can draw conclusions from a statistical position which seems so little consistent with the excessive unemployment which has persisted in this country for the last few years, there are several important considerations which have to be weighed.

In the first place, all the above figures are in terms of sterling values, and it is notorious that, during the period considered there has been a great rise of the general level of prices, which makes sterling values (unless corrected for this rise) a very misleading measure of the real volume of trade. It is when we attempt to apply this corrective that the difficulties of exact measurement begin.

The Board of Trade index number of wholesale prices indicated a rise of about 59 per cent. in 1923, compared with 1913. It is more difficult to state a percentage for the world as a whole, but we shall probably not be wrong in assuming a general rise of from 50 to 60 per cent. (or, say, 55 per cent.) in the world prices of commodities measured in sterling.

As the percentage rise in the value of the world's foreign trade has not been much more than one-half of the rise of prices, it is evident that there must have been a considerable shrinkage in the real volume of that trade, and it is further evident that the increased percentage of the world's trade, which appears from the figures to fall to our share, masks a real falling off in the total volume of goods exported from Great Britain. In order to measure this decline, and as a step towards a clearer appreciation of the true position, the Committee obtained from the Board of Trade the results of a recalculation of the external trade of the United Kingdom during recent years on the basis of the 1913 level of prices, which are shown below.

EXTERNAL TRADE OF THE UNITED KINGDOM.

NET IMPORTS, BRITISH EXPORTS, and RE-EXPORTS during the HALF-CENTURY 1875-1924.

(Declared Values.)

NOTE.—From April 1, 1923, the particulars include the trade of Great Britain and Northern Ireland with the Irish Free State, and exclude the direct foreign trade of the Irish Free State.

NET IMPORTS, BRITISH EXPORTS, AND RE-EXPORTS, 1900-1924.
(Values on the basis of 1913.)

In the following table, which relates to the period 1900 to 1924, the trade of each year is expressed approximately at the amount representing the imports and exports of that year at the average values of corresponding goods imported or exported in the year 1913.

TOTAL TRADE.—ALL CLASSES.

Period.	Net Imports.		British Exports.		Re-exports.	
	Value.	Relative Figures.	Value.	Relative Figures.	Value.	Relative Figures.
Annual average—						
1900-1904	523.6	79.4	326.6	82.2	89.8	75.6
1905-1909	556.8	84.5	412.4	78.5	95.3	85.1
1910-1913	614.9	93.3	493.1	93.9	105.3	96.1
1910	573.4	87.0	462.4	88.0	99.6	90.9
1911	590.9	89.6	479.2	91.2	102.3	93.3
1912	636.3	96.5	505.6	96.3	109.8	100.2
1913	659.2	100.0	525.3	100.0	109.6	100.0
1919	591.4	89.7	288.2	54.9	85.9	78.4
1920	578.8	87.8	372.2	70.9	98.0	90.4
1921	484.2	73.5	261.7	49.8	86.0	78.5
1922	570.1	86.5	361.8	68.9	89.3	81.5
1923	641.7	97.3	404.4	77.0	94.6	85.8
1924	719.5	109.1	420.6	80.1	106.2	96.9
Including trade with the Irish Free State	625.7	94.9	391.4	74.5	89.0	81.3
Adjusted approximately for comparison with earlier years.	701.1	106.4	396.5	75.5	99.2	90.5

It will be seen that for the year 1922 the volume of our exports calculated at 1913 prices was only 68.9 per cent. of the 1913 volume. In 1923 the percentage rose to 74.5 per cent., and in 1924 it has further risen to 75.5 per cent.

There is, however, reason to believe that these figures, taken by themselves, give somewhat too dark a picture of the recent and present trade position. The two last tables combined show that the average increase shown in the price level of British exports is nearly 90 per cent., compared with about 50 per cent. in the case of imports. There is ground for belief that some part of this wide divergence is due to a shift of export trade towards the higher and more expensive qualities of goods, which could not be fully taken into account in the calculation. Exactly how much of the apparent rise is referable to this cause is difficult to estimate, but the available indications would seem to support the view that the true rise of the level of export prices has not exceeded 80 per cent. If the consequential modifications were made in the figures given above, we should find that the volume of our exports in 1923 was 79 per cent. of the 1913 volume, and that the corresponding figure for 1924 was 80 per cent. Meanwhile the volume of our imports in the same two years was 94.9 per cent. and 106.4 per cent., respectively, of the 1913 volume.*

Even after these allowances have been made, there remains a considerable excess in the rise of the price level of exports compared either with that of imports, or with the general index number of wholesale prices. This excess can only be attributable to the fact that the selling prices of the manufactured goods, which form the staple of our exports, have risen faster than the prices of commodities in general. This excess suggests two reflections. First, it tends to check any over-sanguine conclusions which might be drawn from the fact that, *measured in values*, an increased percentage of the world's trade has fallen to our share, since it appears probable that this increase is at least partly due to a disproportionate rise of price rather than to an expansion of volume. Secondly, it confirms the apprehensions which are widely entertained, that a material factor in checking the recovery and expansion of the volume of our overseas trade is the great increase in productive and distributive costs, reflected in an abnormal increase of selling price.

II.—Great Britain's Position in Individual Markets.

If it could be said that British trade is not only holding its own in comparison with that of other countries, but is sufficient in volume to provide full employment for the

* It is perhaps desirable to explain that the term "volume" is used throughout in the sense of total value corrected for changes of price, and not of total quantity or weight. The actual weight of our exports is completely dominated by coal and coke, which in 1924 accounted for 64½ million tons, as compared with about 14 million tons of all other commodities combined, while the value was less than 10 per cent. of the total value of our exports. A figure of quantity made up by adding together the weights of articles of such very different values would be meaningless in relation to the measurement of our foreign trade. It has, however, a very important significance in relation to shipping and rail transport, where the weight or bulk of goods carried is of primary importance.

population of the United Kingdom, we might regard the fluctuations of particular overseas markets with comparative complacency, except in so far as a serious falling off in any particular market might be an index of some future danger to the maintenance of our general trade position. Given that we were exporting up to the limit of our producing capacity, changes in the local distribution of our exports would be a matter of secondary interest from a national point of view. That this comfortable position is far from having been reached is plainly shown, not only by the statistical indications of the deficiency in the volume of our exports compared with pre-war times, but also by the large number of workpeople in the United Kingdom unable to obtain employment.

It is, therefore, of the highest importance to scrutinise each group of markets, and to estimate the weight of the various factors which in the case of each group are mainly responsible for obstructing the recovery and development of British trade with those markets. This scrutiny will be facilitated by a close study of the table on page 5, which shows for each overseas market separately the percentage of total imports which was derived from the United Kingdom in 1913 and 1923, and also, side by side with these figures, the percentage of the total British exports which in the same years was destined for that market.

It is evident, the Committee observe, that if the statistics disclose a serious falling off in British exports to a particular market (other than a merely casual decline due to transitory and superficial conditions), the observed falling off must be due to one or more of three main groups of causes:—

I.—Decline of purchasing power of the local population.

II.—Growth of local manufacture.

III.—Displacement of British imports by imports from other sources.

Frequently an observed decline is due to a combination of all these causes, and they are sometimes so interconnected that it is difficult to estimate precisely the relative importance of each.

The survey proceeds to consider each of these groups of causes in detail. The first-named is deemed to have been of predominant weight in the years following the war, and to have retained considerable, though decreasing, importance. Deficiency of capital and credit, and the temporary impairment of the will to work, due to "war weariness" and general unrest, were factors very unfavourable to economic recovery. Broadly speaking, the markets in which the decline of purchasing power has been most noticeable are the countries of Central and Eastern Europe, and of the Near and Far East.

Another kindred but slightly different cause, which undoubtedly had a very detrimental influence on British trade with overseas markets during the period of rapidly falling and fluctuating prices, which began in 1920, was the temporary reduction in the will (as distinct from the power) to purchase, arising from a general expectation that prices would fall still further. As the fall of prices slowed down this tendency decreased, and the arrears of orders which then materialised contributed not a little to the increased volume of British exports in 1922, which was the first symptom of reviving trade. While the will to purchase has thus for the time been to some extent restored, considerable advance has also been made towards the recovery of the world's purchasing power, except, perhaps, in countries like China or Mexico, where political conditions remain unsettled. A complete recovery, however, can only be looked for when the political and financial conditions of the chief consuming and producing countries are definitely stabilised.

On this subject the Committee conclude their remarks by observing that the future development of British trade and industry is intimately bound up with the general restoration of the economic health and prosperity of the countries with which we trade. To promote the restoration of that general economic health, rather than to cripple the power of particular competitors by impeding their recovery, should be the immediate object of British commercial policy.

Considerations arising under the remaining heads specified by the Committee ("Growth of local manufacture" and "Replacement of British imports by imports from other sources") are dealt with below.

Country.	Column A.—Imports from United Kingdom shown as a percentage of Total Import Trade of each Importing Country.		Column B.—Exports to each Country from United Kingdom shown as a percentage of Total Export Trade (U.K. produce and manufactures) of the United Kingdom.		Column C.—Exports to the United Kingdom shown as a percentage of the Total Export Trade of each Exporting Country.		Column D.—Net Imports into the United Kingdom from each Country shown as a percentage of the Total Net Import Trade of the United Kingdom.

III.—Competition from Local Industries.

The Committee find that, taking the world as a whole, the widespread development of home manufactures to meet needs formerly supplied by imported goods is one of the outstanding features of the post-war economic situation, and this is perhaps the most important permanent factor tending either to limit the volume or to modify the character of British export trade. In part, this tendency is a natural and universal one, inseparable from healthy economic progress, and dating from a period long before the war; but undoubtedly the tendency has been stimulated by war conditions and necessities. It is impossible, in the absence of general production statistics, to estimate the total increase of manufacturing industries which has taken place since the beginning of the war in countries in which such manufacture had previously been comparatively undeveloped, but the general tendency may be illustrated by the following figures with regard to certain industries and countries. The number of cotton spindles in Japan, China, India, and Brazil in 1913 was about 10 millions; by 1924 the number had risen to nearly 18 millions. Between 1913 and 1922 the number of cotton power looms in India and Japan rose from 120,000 to 200,000. The annual production of steel just before the war in Japan, China, India, and Australia was 360,000 tons. In 1922 it was 858,000 tons.

The most obvious and immediate effect on British trade is, of course, restrictive, but there are certain partial compensations which may in the long run be of great importance to British traders, provided their methods and organisation are sufficiently flexible. As the new local manufactures are generally concerned at the outset with the simpler and coarser classes of goods, international commerce is driven more and more on to the finer qualities of manufacture. It follows that, while the total volume of international trade open to competition may be diminished, there is a probability that an increased share of what remains will be captured by the exporting country most capable of adapting its production to special qualities of goods. At present the reputation of this country in most markets for quality of goods stands high compared with that of its competitors.

The second compensation is more indirect and distant, but may nevertheless be very important in the long run. New industries create new wants for plant and materials, and, though this demand cannot of itself be sufficient to counterbalance the loss of the market for the goods themselves, we have also to take into account the demand resulting from the increased purchasing power of those for whom the local industries provide employment. Part of this purchasing power will almost inevitably be expended, directly or indirectly, on foreign goods. Whether or not the product of the new industries is itself exported, it tends as a rule to give rise in the long run to a new demand for imports either on the part of the same or of some other country. A consideration of cardinal importance in this connection is that the capacity of overseas markets to absorb imports of manufactured goods is strictly limited by the outlets which are available for the exports of their local produce. It is clear that, other things being equal, a country like Great Britain, which is one of the greatest consumers of imported materials and foodstuffs, must be in a relatively strong position for securing a full share of the export of manufactures by which payment for these materials and foodstuffs is made.

The practical lessons to be drawn by the trading community are plain. The widespread growth of local manufacture has come to stay, and is likely to develop. It does not necessarily follow that international trade as a whole will shrink, but its local distribution will necessarily be affected. Concurrently with this geographi-

cal rearrangement, there will probably be a continuous trend or shift towards the importation of the higher qualities or more distinctive classes of goods, i.e., towards goods the production of which depends on special skill or local conditions. This double re-adjustment is bound to make great and increasing demands on the foresight, intelligence and adaptability of those concerned in overseas export trade, and the future of British commerce will depend in no small degree on the capacity of British manufacturers and traders to understand and react to these changing conditions.

The Committee proceed to examine the expedients adopted by various countries to give an advantage to the products of their native industries. While the Committee agree that the obstruction offered by tariff barriers to British trade is, in the aggregate, very great, they find reason for questioning the widely held thesis that their post-war rise has been a serious factor in retarding the recovery of our export trade. The results of a most painstaking inquiry, made under their auspices, covering a number of typical articles in the major-British export industries, suggest that the increase of charge expressed in coins of sterling per unit of product (not per unit of value) has not materially exceeded the average increase in value of the articles exported. In other words, the average *ad valorem* incidence of tariffs has not materially increased. Taken altogether, the average increase of import duties per unit of product has probably not exceeded 80 per cent.—a rise not more than sufficient to keep pace with the average rise of price level of the exports. It is a legitimate inference that, taking British trade as a whole, tariff increases since 1913 have not, so far, been an important factor in retarding recovery, though, unfortunately, there is reason to fear that further increases are probable in the near future; while, in the event of a fall in prices, the *ad valorem* incidence of existing specific duties would, of course, be automatically raised.

A remarkable confirmation of this diagnosis is afforded by an estimate of relative tariff incidence in different countries which has recently been made, quite independently, by the Board of Trade on a different basis. The Board of Trade have calculated "index numbers" by which the average *ad valorem* incidence of the tariffs of various countries on British exports as a whole may be roughly compared. If the results be "weighted" in accordance with the relative importance of each market, the conclusion emerges that, taken as a whole, the *ad valorem* incidence of overseas tariffs on British goods has slightly declined since 1914, the average rise of tariff rates reduced to a "specific" basis being rather less than 70 per cent.

The relative levels of the tariffs of the eighteen countries covered by the investigation, as applied to staple British exports, in the years 1914 and 1924, are shown in the following statement:—

Country.	Index Number expressing the Estimated <i>ad valorem</i> Incidence of the Tariff applied to British goods in—	
	1914.	1924.
Empire Countries—	Per Cent.	Per Cent.
India	23	10½
Australia	61	9½
Canada	15½	13½
Union of South Africa	7½	9
New Zealand	8½	8½
Foreign Countries—		
U.S.A.	19½	32
Germany	17½	10
Argentina	24	20½
France (and Algeria)	21½	12½
Japan	19½	10½
China	5	5
Netherlands	22	22
Brazil	88	41
Belgium	10	8½
Egypt	8	8
Italy	18½	15½
Spain	42	37½
Sweden	23	12½

This table may usefully be supplemented by one giving

index numbers to show the estimated "effective preference" enjoyed by British goods in the self-governing Dominions:—

	1914.		1924.	
	<i>Ad Valorem</i> Level of Duties on British Goods	Extent of Preference Over Foreign Goods	<i>Ad Valorem</i> Level of Duties on British Goods	Extent of Preference Over Foreign Goods
Australia	6½ per cent.	3½ per cent.	9½ per cent.	11½ per cent.
Canada	15½ per cent.	5½ or 6½ per cent.	13½ per cent.	5 or 8½ per cent.
Union of South Africa	7½ per cent.	2½ per cent.	9 per cent.	2½ per cent.
New Zealand	8½ per cent.	3½ per cent.	8½ per cent.	12 per cent.

* Over countries enjoying Intermediate Tariff Rates (France, Italy, Belgium, Netherlands).

† Over countries subject to General Tariff Rates (Germany, United States of America).

The Board of Trade calculation brings out clearly the remarkable fact that the main increases of tariff rates on British exports have been within the British Empire, where the average *ad valorem* incidence has risen by nearly two-thirds, while in foreign countries, despite the great increase in the United States tariff, the average *ad valorem* incidence has decreased by one-fifth, the net result, on balance, being a slight decline, as stated above. As will be seen later, however, the disadvantage to British trade of the increased tariffs in overseas parts of the Empire has in several cases, but not in all, been offset by a concurrent increase in the preference accorded to British goods.

It is also to be observed that the average incidence of Empire tariffs on British goods, even after the rise, is still materially lower than the average incidence of foreign tariffs, i.e., roughly in the proportion of 10 to 17.

IV.—Competition from Other Countries.

The concluding section of the Committee's introduction to their Survey deals with the growth of competition from other exporting countries in overseas markets. The position is summed up as follows:—

The effect of the war has, so far, been to strengthen some of our competitors and to weaken others; and the net result, on balance, of the changes in the decade 1913 to 1923 was to leave the relative position of Great Britain as an exporting country unimpaired and perhaps slightly improved. Germany disappeared during this period as a serious competitor, while France became a more serious factor in international trade, owing to its great increase of mineral wealth and manufacturing capacity resulting from the territorial changes, added to the improved position arising from the re-equipment on modern lines of the industries of the devastated districts, and to the temporary assistance of the impetus to export resulting from the depreciation of the franc. The comparative immunity of American industry from the direct effects of the war, combined with the enormous financial strength of the United States and the gradual attainment of control over industrial enterprises overseas, gave United States trade a much stronger position than before the war in certain markets, especially those of the American Continent. On the other hand, Belgium, which, though a comparatively small country, is very highly industrialised, and more dependent on exports than any other Continental State, has not yet fully recovered its pre-war position in foreign trade, though the process of recovery has been rapid, especially in the case of iron and steel and other manufactured goods.

These results are suggested by the following table:—
COMPARISON OF PRE-WAR AND POST-WAR EXPORT TRADE OF U.S.A., BELGIUM, FRANCE, AND GERMANY.
(COMPARISON BETWEEN 1913 AND 1923 ON THE BASIS OF 1913 PRICES.)

	1913.		1923.		Percentage Col. (3) to Col. (1).
	Values as Recorded.	(1)	Values as Recorded.	Values at 1913 Prices.	
United States.	(1)	(2)	(3)	(4)	
Total exports	2,448.6	(Millions of Dollars.)	4,091.3	2,924.3	119.4
Exports of manufactures only ..	1,052.4		1,850.7	1,559.3	148.2
Belgium (see Note A).	3,634.6	(Millions of Francs.)	8,356.5	2,285.7	62.9
Total exports	1,800.9		6,308.9	1,621.5	30.0
Exports of manufactures only ..	6,880.2	(Millions of Francs.)	30,431.5	7,299.3	106.1
France (see Note B).	4,161.9	(Millions of Gold Marks.)	19,703.4	4,886.1	117.4
Total exports	10,095		6,064	5,335	52.9
Exports of manufactures only ..	6,778		5,200	4,519	66.7

(A) Belgium.—For 1923 the particulars relate to the economic Union of Belgium and Luxembourg, whereas those for 1913 relate to Belgium only.

(B) France.—For 1923 the particulars relate to the enlarged territory, including Alsace and Lorraine. It is, however, difficult to determine whether the inclusion of Alsace and Lorraine within the French Customs border would in itself have a tendency to increase or to decrease French recorded exports.

(C) Germany.—For 1923 the particulars relate to the post-war diminished territory.

(D) Note on the method of obtaining the figures.—In the case of Germany, no revision has had to be made. In the other three cases, the 1923 figures have been revalued on approximately the same lines as are followed in the corresponding work done on the U.K. returns, i.e., where quantity particulars are available, the different headings shown in the accounts for 1923 have been revalued at the average valuation shown for the same headings in the accounts for 1913. The methods adopted to deal with cases in which quantity particulars are not available have been as nearly as possible similar to those adopted in the revaluations of United Kingdom trade. In view of the fact that the absence of exhaustive particulars has rendered it necessary to have recourse to estimates for a proportion of the goods, the results cannot be regarded as of a high degree of precision, but they probably approximate to the facts much more closely than would be possible by the use of any other mode of calculation.

The table shows that, calculated on this basis, the exports of Germany in 1923 amounted only to about 53 per cent., and those of Belgium to 63 per cent., of the 1913 volume, while those of France had risen to 106 per cent., and those of the United States nearly 120 per cent. If the comparison be confined to manufactured goods, the percentages become 67, 90, 117, and 148 respectively.

If we look, not at percentages, but at the aggregate magnitude of the changes as measured in gold value on the basis of 1913 prices, we find that decreases of £238 millions in German, and of £54 millions in Belgian, exports were partially offset by increases of £98 millions for the United States and £17 millions for France, the net decline, on balance, being £145 millions, or about 12½ per cent. of the aggregate exports. A similar calculation, for manufactured goods only, shows that the increases for the United States and France (£105 millions and £30 millions respectively) rather more than counterbalanced the decreases of £113 millions for Germany and £7 millions for Belgium, the net result being a small increase, on balance, of £15 millions, or rather less than 2 per cent.

The Committee do not find that British trade suffers from adverse discrimination as compared with that of other exporting countries, but that (with minor local exceptions, which do not appreciably affect the general situation), it enjoys an equal position in all important foreign markets, together with a preferential position in Empire markets. The adverse forces which still operate in the markets themselves to retard the full recovery of British trade are in the main world-forces, which operate with equal intensity against the trade of other exporting countries. Their effects are, however, felt with special acuteness by a country like Great Britain, which depends so greatly on foreign trade to maintain the employment of its population. Of the forces referred to, some are transitory, like the instability of exchange, the dearth of capital, the impaired purchasing power, and the general financial and economic weakness of our customers, following the great war. The world is still poorer for the waste of war, and years of hard work will be necessary to re-establish its purchasing power. But, given peace and political stability, there is no reason to doubt that recovery will take place. It may also be hoped that such difficulties as arise from unwise measures restricting commercial, maritime or financial intercourse will, in the long run, be mitigated by international agreement, or by national action based on the teachings of experience. But other forces, like the growth of manufacture in the less industrially developed countries, undoubtedly represent permanent tendencies, with which traders must inevitably reckon in future, and to which it is, therefore, essential that they should strive with all their power to accommodate their outlook, their methods, and their organisation.

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 2.

of capacity, with new orders at about 50 per cent. The last Bureau report reveals a decline of condition of the cotton crop, but other crops are reported to be doing well with generally favourable weather. Encouraging farm prospects and the well liquidated condition of industry have inspired many observers with some degree of optimism regarding the autumn business outlook.

BRITISH EMPIRE.

Although the somewhat exuberant forecasts of this year's harvest in Canada, made last month, have since been toned down, the consensus of opinion still regards the situation as eminently satisfactory. Though hail and various pests have caused a loss in some areas, a yield well above the average is expected from the Prairie Provinces, and although the abnormally high figure of 1923 will probably not be reached, the abnormally low one of 1924 will certainly be exceeded. As planting has been cheaper than in any year since the war, the maintenance of something like present prices would assure a generous return to the farming community. Australian trade has slowed down to some extent over the last few months, the position of wool having much to do with this development. The timely and substantial rainfall which has occurred in many areas will, however, have a favourable bearing on conditions in the coming season. Reports from India at the end of last month indicated an earlier onset of the monsoon than usual, of which cultivators have taken full advantage, so that in some districts the sowing of the cotton crop had been completed by the end of June. Although a spell of better weather has supervened in the jute districts, the heavy rains of May and June have unfavourably affected the prospects for that crop. South African conditions show no marked change.

SOUTH AMERICA.

A more generous rainfall has facilitated late ploughing and sowing for the main crops in Argentina, and operations are progressing favourably. The export movement of grain has slowed down, owing to a disposition to withhold stocks pending the recovery of prices. The livestock market is rather firmer. The extent to which production and exports of Chilean nitrate have expanded is shown by the following figures of reported production and total exports for the last three seasons

respectively (based on figures supplied by the Anglo-South American Bank):—

TWELVE MONTHS ENDED JUNE 30.
(Million Metric Quintals.)

	1923.	1924.	1925.
Reported production	15.0	22.2	24.1
Total exports	21.1	21.8	25.7

Brazilian business is on quiet lines, the prices of the principal commodities having weakened to some extent.

EUROPE.

A slight quickening of activity in the French metallurgical trades has followed the lowering of the Bank of France's discount rate, and the prospects of a renewal of the producers' combines. Business on the wool market continues moderately active. Belgian conditions are still unfavourable, influenced by the doubtful political situation, exchange instability, and labour troubles. The effect of the "Stinnes Crisis" was felt throughout last month over almost the whole field of German trade and commerce. Lack of working capital is still the main hindrance to economic recovery. Dutch trade is passing through a period of seasonal dullness, similar influences being apparent in Scandinavia, where the timber market is inactive and money easier. The labour situation, on the other hand, is better. In Austria unemployment is slowly declining, chiefly as a result of improved conditions in the engineering, building, and food industries. In Hungary, Roumania, and other agricultural areas in Eastern Europe business is dull pending the autumn harvests, but crop prospects are fairly good. The so-called "Battle of the Exchanges" in Italy did not have any marked repercussion on internal business conditions in Italy last month, the cotton industry being very actively employed, though in wool and silk the tendency among buyers to hold off is becoming more apparent. Crop prospects are generally above the average. Spanish business continues slightly more active.

FAR EAST.

The Chinese situation is for the time being a little easier. The Shanghai strike has virtually collapsed, and some inquiry for cotton goods is reported. Japanese trade during the first half of July was inactive.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, AUGUST 22, 1925.

No. 27.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," rs 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

THOUGH one does not look for active trade at the holiday season, there appears, in fact, to have been no further slackening of activity in the past month. A disastrous stoppage in the coal-mining industry, which threatened to involve many other trades, has been averted at a cost to the taxpayer as yet uncomputed, while the woollen textile industry, after a three weeks' wages dispute, has resumed operations pending arbitration. Prospects for the next few months are shrouded in uncertainty until the pressure of autumn demand can be estimated, and the practical effect of the Government's subvention on coal output prices and competitive power has been revealed.

Two distinct views as to trade possibilities hold the field at the moment. The more pessimistic is based on the admittedly unsatisfactory method by which the recent coal crisis was obviated, and lays down that so long as workers refuse to contemplate basic wage reductions in any trade, sheltered or unsheltered, unduly high costs are likely to delay indefinitely any increase of our trade in foreign markets, where the trouble avowedly lies. The more optimistic view points out that the chief drag on industry during the last twelve months has been the coal, and, to a less extent, the heavy iron and steel industries, the engineering trade as a whole having gained rather than lost ground, while the cotton textile trade has made quite definite headway. Assuming that the coal industry is "stabilised" for way. During the next nine months, the slow but steady improvement in other directions may have the opportunity to assert itself. Which of these divergent interpretations is the more correct we shall have the opportunity of judging before many months are past.

The improvement in the employment figures for July was due chiefly to the accelerated production of coal in anticipation of a stoppage, but the weekly figures for August still show some improvement as compared with six weeks ago. The recent fall in the cost of living index number is now being reflected in the wages bill, decreases in full-time wages, chiefly under sliding scales, being more widespread last month than for some time. While coal production increased last month, the output of

pig-iron declined still further, and is now very considerably below the by no means satisfactory level of twelve months ago. The steel situation is scarcely more encouraging. Foreign trade returns last month showed a welcome decline in imports, due almost entirely to reduced purchases of foreign manufactures, and a small rise in British exports. The latter remain, however, below the level of twelve months ago. In volume, the 1925 exports of coal, iron and steel and woollen goods are well below the figures of

last year, but cotton and engineering are steadily expanding their export trade. Railway receipts show an expansion due to increased seasonal passenger traffic, which has so far exceeded that of 1924. The influence of the holidays is also evident in an increase of Treasury note circulation, but current financial statistics afford more tangible encouragement than this, since the deposits and advances of the London Clearing Banks both showed an increase last month as compared with June, while the total clearings at London and important provincial centres such as Manchester moved in a similar way. The fall of $\frac{1}{2}$ per cent. in Bank rate, though unexpected, has been well received. Security values are fairly steady, with the notable exception of certain railway stocks, though there is a tendency for gilt-edged securities to gain ground at the expense of "industrials."

Among the main industries, iron and steel is still stagnant, but a rather better tone has obtained during the last fortnight. Coal has experienced a reaction after the artificial stimulus of last month, and engineering is just holding its ground. The Lancashire cotton trade, favoured by comparative stability in the price of its raw material, is rather better situated than a month ago, but the woollen textile trade has not yet settled down after the recent stoppage. The minor industries reflect the instability of seasonal conditions. Some small improvement is recorded in the demand for shipping tonnage, but the end of the "slump" of the last few months is not yet in sight.

Among overseas countries, the United States is preparing for active trade in the autumn, while

MONTHLY BULLETIN OF STATISTICS

ISSUED by the LEAGUE OF NATIONS

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.
FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.
PRICE: Wholesale and Retail Price Index Numbers.
CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.
LABOUR: Unemployment Percentages.

This information is given where available for the following countries:—

ARGENTINE	DANZIG	JAPAN	PORTUGAL
AUSTRALIA	DENMARK	JUGO-SLAVIA	ROUMANIA
AUSTRIA	DUTCH EAST INDIES	LATVIA	RUSSIA
BELGIUM	EGYPT	LITHUANIA	SIAM
BOLIVIA	EQUADOR	LUXEMBURG	SOUTH AFRICA
BULGARIA	ESTHONIA	NETHERLANDS	SPAIN
BRAZIL	FINLAND	NEW ZEALAND	SWEDEN
CANADA	FRANCE	NORWAY	SWITZERLAND
CHILI	GERMANY	PALESTINE	UNITED KINGDOM
CHINA	GREECE	PARAGUAY	UNITED STATES
COLOMBIA	HUNGARY	PERU	URUGUAY
CUBA	ITALY	POLAND	VENEZUELA

satisfactory harvest prospects give a tinge of optimism to the general outlook in many parts of Europe, and in Canada. The so-called "sales crisis" continues in Germany, and French trade is marking time. On the other side of the world, there is little improvement to record in the Chinese situation, but the Japanese trade balance continues to improve.

The following notes on conditions in various trades and countries call attention to the most striking tendencies:—

HOME INDUSTRIES.

Iron and Steel.—The recent course of business in the iron and steel trades has been without any well-marked feature. Neither the threat of a coal stoppage nor the manner in which it was obviated caused any violent movement in the market, but the ensuing reductions in fuel prices, with the prospect of others to come, suggest the prospect of cheaper iron and a better competitive position vis-à-vis foreign producers. At the moment, however, smelters are having a very quiet time, due, in part, to the holiday season. Hematite has been bought rather more freely, and stocks have been reduced. The semi-finished market is distinguished by a slight access of Continental competition for a very limited amount of trade, but uncertainty as to due delivery of foreign material is enabling some British works to retain business which, on price considerations alone, would be placed abroad. Producers of constructional steel, galvanised sheets, and—in some cases—rails are rather more favourably situated, with a fair amount of work on hand, and, generally speaking, the more finished branches are least affected by current depression. The tin-plate market is steadier, but substantial orders are difficult to secure.

Coal.—The spurt of buying at the end of July came abruptly to an end with the settlement of the labour dispute, and markets have since been stagnant. Some uncertainty still prevails as to the exact effect of the Government's financial intervention, but the prevailing view is that the downward tendency of prices, already apparent, will persist still further. In the circumstances, buyers are tending to hold off, and until autumn business is under way no great change can be looked for. Industrial demand is seasonally slow, and merchants have fair supplies on hand for domestic requirements. Gas coals are in quiet request. The export trade shows little life, many foreign consumers having anticipated their normal requirements in view of the threatened stoppage last month, and there has not yet been sufficient time to test the effect on business of a lower range of prices.

Engineering.—The situation in the engineering trades generally shows little or no change. Depressed sections remain depressed, while more active branches have, as a rule, maintained their position, with little to spare. The motor and cycle trades are still an outstanding feature. Orders for the current season are still being actively carried out, and preparations for next season pushed forward. Electrical manufacturing is rather less active, but prospects for autumn business are fairly good. Wagon building is an exception to the general rule, the home market having improved, and textile machinery makers have obtained rather more orders, chiefly from Continental sources. The machine tool trade, on the other hand, continues to make little headway, and no change for the better is reported by locomotive manufacturers. Shipbuilding, unfortunately, is still without any sign of a turning in the long lane of depression, and the outlook for marine engineering is correspondingly unsatisfactory.

Cotton.—Our Manchester correspondent writes:—On the whole the position of cotton spinners and manufacturers in Lancashire is rather better. Inquiry has broadened, and although buying has been irregular, turnover shows an improvement. Trading has been favoured by comparatively small fluctuations in raw cotton rates, but latterly bearish sentiment has been rather more pronounced, and manufactured goods merchants are afraid of committing themselves very far ahead. Further progress has been made by the cotton crop in the United States, and there is now every probability of the output being larger than last season. Cloth demand during the month has been more varied than for some time. Although clearances in the Indian bazaars are not all that could be desired, the general trade outlook is considered healthy, and another successful monsoon season appears to be assured. The trade done for China has been rather surprising, in view of the unsettled conditions. Quite an encouraging turnover has taken place in white shirtings and fancies. It has been a poor month for fresh trade with Egypt, but this is usually a quiet time of the year for that outlet. The markets of South America have given moderate support, and quite a healthy business has been done with the Continent, special reference being made to the substantial contracts in yarn and cloth for Russia. All round quotations for piece-goods are steadier than a month ago. The yarn market has also gained a little ground. The extra restriction of output, in addition to the annual holidays, has resulted in a considerable curtailment of production, the accu-

mulation of stocks has been checked and most spinners have booked more orders. Slightly more activity has been experienced in yarns for India and the Continent. Demand in Egyptian spinnings, which has been slack for several months, has shown signs of improvement, but in this section there is still an anticipation of lower values.

Woollen and Worsted Trades.—The July wool sales passed off without any further decline of prices, and induced a partial return of confidence in the trade. No considerable accession of business resulted, however, before the occurrence of a stoppage throughout the greater part of the West Riding, lasting from the last week of July to the middle of August. Business became entirely stagnant, the few spinners who continued working having taken up comparatively small weights of merino and crossbred tops. The resumption of operations witnessed some little improvement in demand, though buyers have as yet insufficient faith in the future to do much forward buying.

Boots and Shoes.—Business before the holidays was quiet, summer trade as a whole having scarcely come up to expectation. The boot and shoe trades are particularly sensitive to depressed conditions in other industries, and many factories are much less favourably situated as regards orders than at this time last year. Export demand shows little change.

Pottery.—Output continues on a restricted scale, and the annual holidays were extended over a fortnight, and, in some cases, three weeks. Some improvement is looked for over the autumn.

Chemical Trades.—Conditions have improved, on the whole, during the last few weeks, and prices have increased in a number of cases. Slightly more activity is reported from the coal-tar group, and in the fine chemical market the tone is firmer.

Shipping.—The freight market has been appreciably more active, a condition reflected in a rise of our index number of "tramp" freights from 91.7 in June to 94.9 last month (1913 = 100). Of the three factors responsible—demand for collier tonnage in anticipation of a coal strike, restricted offerings due to the laying-up of vessels, and tentative signs of increased activity in the grain markets—only the last-named can be deemed entirely satisfactory. A much greater rise in freight levels is needed to put an end to the acute depression of the last few months, and it is too early as yet to pronounce on the possibility of such a movement.

UNITED STATES OF AMERICA.

The following "indicators" of American trade conditions have been extracted from the most recent number of the "Survey of Current Business," issued by the United States Department of Commerce, and may serve as an approximate guide to recent trade tendencies:—

	May, 1925.	June, 1925.	Compared with June, 1924.
Production—Pig-ironthous. tons	2,931	2,666	+ 640
Steel ingots.....	3,458	3,207	+ 1,141
U.S. Steel Corporation unfilled orders, thous. tons	4,050	3,710	+ 447
Wholesale prices (1913=100).....	155	157	+ 12
Bank clearings—New York.....million \$	23,847	24,019	+ 4,060
Outside.....	17,103	18,244	+ 2,844
Retail business: (Total sales of mail order houses).....	29.5	30.5	+ 3.5
Imports—Value.....	327	326	+ 52
Exports—Value.....	371	326	+ 19

(Continued on page 20.)

SOME STATISTICS OF THE WORLD'S COAL TRADE

Continued from p. 15.

indeed. Argentina and China purchased more, and the United States less than in 1923.

The following, then, seem to be the main conclusions to be drawn from this survey. During 1924 the world's coal production showed practically no change as compared with the previous year, but as the world's trade in this commodity fell by something between 10 and 15 per cent., a larger proportion of the whole was either consumed in producing countries or put into stock. The decline in demand originated chiefly in two areas: (1) North America, where a set-back in general trade was experienced, and (2) Central Europe, where imports returned to a more normal level after the Ruhr adventure. The brunt of these movements fell on the three major exporting countries, but was disproportionately great as regards the United Kingdom. This disproportion could probably be remedied by improved efficiency and lower costs in the British coal industry, but a more ample degree of recovery would seem to wait upon events in the world market.

SOME STATISTICS OF THE WORLD'S COAL TRADE.

THE British taxpayer, whose hand must shortly search his pocket on behalf of a great national industry, is concerned to know whether the coal trade's present difficulties are "subjective" or "objective"—in other words, whether the undoubted depression of the moment is confined to Great Britain or reflects a world movement which is handicapping all coal-producing and exporting countries. The two views came sharply into conflict during the recent negotiations, and it is clearly of the utmost importance to know whether the industry may hope to overcome its disabilities by putting its own house in order or must await the favourable conjunction of external circumstances over which it may have little or no control. The following tables, based on data supplied through the courtesy of the Mineral Resources Department of the Imperial Institute, throw some light on the fluctuations in the world's coal trade down to the end of 1924, and Great Britain's part therein.

Our first table shows the approximate world production of coal in 1913 and during each of the years 1921 to 1924, the chief producers being arranged in order of magnitude in the latter year:—

COAL PRODUCTION (including Brown Coal), 1921-24.
(In Thousands of Long Tons.)

Country.	1913.	1921.	1922.	1923.	1924.
U. S. of America	508,893	452,139	425,849	587,050	511,860
United Kingdom	287,431	163,251	249,607	276,001	267,118
Germany (a)	274,264	255,148	262,878	177,573	239,280
France (b)	40,188	37,916	42,460	46,121	58,039
Czechoslovakia	..	32,174	28,385	27,380	34,306
Poland (c)	..	7,717	24,300	35,701	31,793
Japan	20,973	25,944	27,420	28,632 (d)	30,000
Belgium	22,474	21,401	20,868	22,554	22,984
India	16,208	19,303	19,011	19,658	21,177
22 other countries ..	142,107	92,376	98,179	103,641 (e)	106,116
Total, 31 countries ..	1,312,538	1,107,369	1,198,957	1,324,311	1,322,673
British share of total (%).....	21.9	14.8	20.8	20.8	20.1

(a) Excluding Upper Silesia from June, 1922. (b) Including Saar. (c) Including Polish Upper Silesia from June, 1922. (d) Approximate. (e) Assuming Chinese production as in 1923.

There was practically no falling off in production last year. Taking the 1924 total figure as 100, we have the following:—1921, 83; 1922, 90; 1923, 100. The shares of individual producers have, however, shown considerable variation. The United States contributed, broadly, 38.6 per cent. of the total last year, as against 44.4 per cent. in 1923; Germany, 18.1 per cent., against 13.4 per cent.; France, 4.4 per cent., against 3.5 per cent.; but the United Kingdom's quota was surprisingly steady—20.1 per cent. in 1924, as compared with 20.8 per cent. in 1923. To put the same thing in another way, increased production in France and Germany broadly compensated for a decrease of 75,000,000 tons in the United States, which last year experienced a marked recession in domestic business, while Great Britain largely maintained her position among world producers, both absolutely and relatively.

COAL EXPORTS (including Bunkers), 1921-24.
(In Thousands of Long Tons.)

Country.	1921.	1922.	1923.	1924.
United Kingdom	24,661	64,198	79,459	61,651
United States of America	10,926	18,259	18,159	17,689
Poland	24,829	13,450	23,710	19,851
Czechoslovakia (b)	7,548	4,120	4,547	3,989
South Africa	(a) 330	(a) 5,237	12,355	11,346
China	5,691	4,420	3,758	4,595
Netherlands	3,064	3,696	3,317	3,337
Belgium and Luxembourg (e) ..	1,886	2,377	2,808	3,197
Germany	1,902	2,220	2,214	2,775
Australia	6,545	3,095	2,447	2,111
France	(c) 4,084	4,998	2,609 (d)	2,609
9 other countries	3,678	2,526	2,238	2,209
Total, 20 countries	1,680	2,070	2,401	2,235
British share of total (%).....	35.6	61.5	59.9	56.5

(a) Including briquettes. (b) About 60 per cent. brown coal. (c) 8 months only. (d) Approximate. (e) 1921 Belgium only.

When we come to trade, as distinguished from production, a very different state of affairs is discovered. We have taken 1921-24 the figures for 20 countries, which are responsible for the bulk of the world's coal exports (with the exception of Japan, for which returns are not available). The results are shown above. Coal supplied for bunkers is given separately in the case of the two most important exporting countries, and included in the figures for other countries where known.

The figures do not tell the whole story, since exports of coke, patent fuel, and by-products are not included, but this does not seriously affect the general conclusions, which are sufficiently plain. The total exports (including bunkers) of the 20 countries declined by 14 per cent. last year, as compared with 1923. Exports from the United Kingdom fell 22 per cent., or, if bunker coal be included, 19 per cent. American exports declined by 16 per cent., Polish by 8 per cent. These three countries account for more than four-fifths of the total exports shown in our table. Their figures show a drop last year of 23,700,000 tons. As the falling-off in the combined figures of the 20 countries is 22,300,000 tons, the trade of the remaining 17 States would appear to have changed very slightly for the better on balance.

Our final table shows the imports of 29 countries for the past four years:—

COAL IMPORTS (less Re-exports), 1921-1924.
(In Thousands of Long Tons.)

Country.	1921.	1922.	1923.	1924.
British Empire—	15,329	12,788	18,292	13,968

Czechoslovakia	436	784	766	886
Portugal	80	225	482	609
Finland	..	..	..	..
Total, 13 European countries	47,949	69,089	90,252	81,766
Argentina	1,693	2,184	2,538	3,246
United States of America	1,127	4,721	1,944	478
China	1,362	1,151	1,366	1,610
Grand total, 29 countries ..	72,169	93,295	117,360	104,282

(a) Excluding Government stores. (b) Including brown coal. (c) 1921, Belgium only. (d) Including coke and patent fuel. (e) Approximate.

The total imports of the 29 countries show a falling-off of 12 per cent. in 1924, as compared with the previous year. In the case of the 13 Dominions and Colonies of the British Empire, whose figures are available, the decline amounts to 19 per cent., and in that of 13 European countries to 9½ per cent. Canada, far and away the largest coal importer in the Empire, reduced her purchases from 18½ million tons to less than 14 millions. India and Hong Kong took less, and the rest of the Empire more coal last year than in 1923. Of European importers, Germany and France are pre-eminent. France's purchases fell by only 1 million tons, but Germany, whose 1923 import figures were altogether abnormal as a result of the Ruhr occupation, showed a decline of over 12 million tons. It is significant that of the remaining 11 European countries, 9 imported more coal last year than in 1923, while the other two showed a very slight decline

(Continued on page 14.)

PRODUCTION. (Thousands of Metric Tons.)

[illegible]

^a Including lignite. ^c Including the production of Lorraine and Saar. ^d Saleable coal only. Irish Free State production omitted since 1921. ^e Average of two months. ^f Strike period. ^g From 1919 excluding Alsace-Lorraine and from 1920 excluding Saar and Palatinat: from June, 1922, excluding Upper Silesia. ^h Since July, 1922, including Upper Silesia. ⁱ Excluding Rhine mines. ^m Excluding Saar. ⁿ Decrease in production.

† Since January, 1922, gold marks valuation. ‡ Until February, 1923, Julian Calendar. § Old Greece only. ¶ Valued at 1921
 official rates. † Since January, 1922, the value of imports is based on declarations of importers, instead of official evaluations previously used.
 ** Since May, 1922, figures refer to "Union Economique Belgo-Luxembourgeoise." *** Period September 1-21. ° Official values. p January
 to October, 1923, official figures. From November, 1923, provisional figures based on merchants' declarations, which may differ considerably from final
 figures based on official quarterly valuations. † From April 1, 1923, including trade of Great Britain and Northern Ireland with the Irish Free State, and
 excluding the direct foreign trade of the Irish Free State.

IMPORTS for Domestic Consumption—Merchandise Only. (000's omitted.)

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 14.

The American situation continues to inspire confidence. The usual summer slackness has been less pronounced than was expected, and anticipations of a new forward movement in the autumn are widespread. The agricultural outlook, though a little less bright than a few weeks ago, is still satisfactory. Building and construction are at "record" levels, while a very large volume of goods continues to pass steadily into consumption. Prices are showing considerable firmness, and although money rates may advance when the autumnal pressure is experienced, there is probably ample credit available for financing a significant increase in the volume of business without straining the present financial machinery. The chief uncertain factors are the possibility of increased labour costs, or, alternatively, labour troubles in certain industries, the continuance of depressed or disturbed conditions in some important foreign markets, and the possibility that the cotton and maize crops, the estimates for which have already been reduced from earlier levels, may not ultimately realise all that is expected of them. With these provisos, however, the outlook may be accepted as promising.

BRITISH EMPIRE.

Although drought, hail, and the depredations of the sawfly were reported from some of the grain-growing districts of Canada last month, the condition of the main crops was not seriously impaired. With a prospective yield substantially above that of last year, and prices at a moderately high level, the general tone is confident. Manufacturers have obtained more orders than at the corresponding period of last year, though the margin of profit is not very wide in some cases. The mining industry continues to increase its output, building is fairly active, and unemployment, for the present at any rate, has been appreciably alleviated. Indian trade is normally at its lowest point at this season, and, with quietness characterising all markets, money is difficult to employ. The grain market is irregular, and the demand for piece goods, though probably better than at this time last year, is affected by the prevailing sentiment. The monsoon has, on the whole, confirmed the favourable impression previously recorded. Seasonal conditions are good throughout the greater part of Australia, though merchants report a falling-off in demand from the interior districts. The possibility of "stabilising" wool prices is still being seriously considered. Trade conditions in South

Africa continue quiet, without marked development. Weather conditions have lately been more favourable to the main crops, that of maize being much larger than a year ago.

SOUTH AMERICA.

Early-sown crops are in good condition in Argentina, the area under wheat and oats exceeding that of last season. Shipments, however, are still below the seasonal average. Sales of Chilean nitrate have recently been on a fairly large scale, and business generally remains satisfactory. Peruvian trade shows much dullness, partly as a result of the failure of the sugar crop. Conditions in Brazil are fairly stable, coffee prices having lately been steadier at rather lower levels.

EUROPE.

Trade in France exhibits seasonal quietness, although no considerable falling off is reported. Home demand is rather better in the metallurgical group, but the situation still leaves something to be desired. Buyers are tending to hold off in the cotton trade, but the woollen industry continues to find satisfactory employment. The continued strike of the metal workers unfavourably affected the Belgian situation. Apart from an improvement in the glass trades, the general industrial situation is far from favourable. In Holland, business as a whole is inactive, but confidence in the future still obtains. No improvement took place in the economic situation of Germany last month, the "sales crisis" being, if anything, more acute. Such improvement as occurred was confined to industries of secondary importance, such as potash, printing, brewing, certain textiles, and the food trades. Scandinavian markets are quiet, the appreciation of the currencies of Norway and Denmark tending, for the moment, to restrict export activity. Harvest prospects are satisfactory, though perhaps less so than a month ago. The Austrian unemployment figures showed a further decline last month, owing chiefly to improved conditions in the electrical, machinery, and brewing industries. In both Austria and Hungary, the excellent harvest conditions which are in prospect may tend to alleviate problems connected with the high costs of living. No material change has occurred in Italy. The volume of business is still considerable, though less than a month ago owing to summer conditions. Spanish business has maintained the improved tone of the last few months.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, SEPTEMBER 26, 1925.

No. 28.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

THE trade situation shows very little change as compared with a month ago. Some industries, notably the iron and steel industry, had a lower production in August than in July, and were substantially below the level of 1924. These cases are offset by a certain amount of improvement in other directions. On balance, it may be said that there has been no further setback since a month ago, and that there are some small signs of improvement. The gross figures of unemployment at the end of August were worse than at the end of July, but this has hardly any real significance, since the latter figure was reduced by the temporary activity in the coal trade which took place in the last two or three weeks of July in anticipation of a stoppage of the mines in August. If this special influence is omitted, and the figures examined over a period of twelve months, they show that the normal seasonal deterioration in employment last autumn and winter continued, accompanied by an actual increase of unemployment, until the middle of this year. Since the last week of August, however, there has been a marked decline in the unemployment figures.

Coal, iron and steel still remain the two chief industries whose condition is holding back trade recovery. Cotton and wool have not been doing very well lately, the former being affected by the trade difficulties in China and the latter by the uncertainty as to the price of wool. But these textile trades are not in so difficult a position as the coal and iron trades, and reports from Lancashire are, in fact, a little better, thanks to improved conditions in China. As against these adverse factors, the engineering industry continues to show improvement as regards both employment and the volume of its exports. Among the more finished branches of the industry, agricultural machinery shows a seasonal decline, but manufacturers of locomotives and textile machinery are better employed. The motor industry continues very brisk. It is difficult to escape from the conclusion that this situation in the finishing branches of the metal group of trades has been assisted by the increasing import of iron and steel at low prices. Our table of statistics of home trade shows that the average level of industrial securities was a little

better at the end of August than of July, that bank advances continued substantially higher than a year ago, and that the currency note circulation also showed some expansion. The reports of various industries, summarised below, together with the pronounced ease in the money market, hold out some hope of an autumnal improvement.

In respect of overseas countries, reports for the most part continue good, or show improvement in those cases where conditions have been depressed, except, perhaps, in regard to Germany, where activity in the coal and iron and

steel industries continues to decline. Crop prospects in Canada are excellent. There is a little more movement of commodities from the Argentine, and other South American countries report trade improvement. In almost all European countries harvest prospects are good, and even in China the effect of the disturbances is showing signs of passing away. The strike of seamen in South Africa and Australia has not, as yet, had a serious effect on the trade situation, though it may be responsible for temporary movements in some of the commodity markets, particularly metals. Unless, however, the situation improves in South African ports the season may be spoiled. The condition of world trade, unfortunately, is not such as to hold out any hope of substantial improvement in international shipping in the near future. Our freight index number, indeed, shows a slight hardening

tendency, but the movement is very small, and leaves the level of tramp freights below the 1913 level—a situation which is obviously quite abnormal.

The following notes on conditions in various trades and countries call attention to the most striking tendencies:—

HOME INDUSTRIES.

Iron and Steel.—The volume of business in the iron and steel trades remains below normal for this time of the year. Pig-iron production in the holiday month of August was returned at 444,500 tons, as compared with 492,000 tons in July, and 588,900 tons in August, 1924, while the output of steel ingots and castings amounted to 477,100 tons in August, as against 490,400 tons in July and 527,500 tons a year ago. These figures are the lowest for any month in the last three years. Within the last week or two demand has improved to some extent. Prices, however, show but slight strength, inquiries

MONTHLY BULLETIN OF STATISTICS

ISSUED by the LEAGUE OF NATIONS

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.

FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.

PRICE: Wholesale and Retail Price Index Numbers.

CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.

LABOUR: Unemployment Percentages.

tend to be of a "hand-to-mouth" description, and Continental competition is rather more intense. Taken all round, demand has not yet broadened on a scale to suggest an active autumn and winter. Continental steel makers have lately reduced their quotations, and prices are weak generally. Steel rails are having a better sale, and constructional steel continues in good demand. Sheet manufacturers have orders in hand for some months ahead, but shipbuilding requisites find a poor market. The tinplate trade reports better business, and the re-establishment of price "stabilisation" arrangements has been brought a little nearer.

Coal.—Little improvement can be traced. A very slight expansion of business has taken place, but stocks on hand are heavy, and in some cases resort is being had to forced selling at reduced prices in order to prevent their further increase. The steam coal trade remains dull, though inquiry is on broader lines. The house coal market has responded to the stimulus of colder weather, but export trade remains of moderate dimensions. Within the last few days, a rather more cheerful tone has obtained among sellers, but no corresponding recrudescence of forward business is observable.

Engineering.—Taken all round, the engineering outlook is better. Apart from certain sections, such as agricultural machinery, which are affected by seasonal influences, most branches have at least held their ground, and a few have improved their condition. Lancashire textile machinery makers have obtained on satisfactory terms orders from Russia which are said to run into seven figures, with which almost every firm of note is concerned. These should ensure a fair activity throughout the autumn and early winter. Electrical engineering has become more active after the usual end-of-season slackness, the telephone section being particularly well off for orders. The motor trade is awaiting further accessions of business after next month's Olympia Exhibition. Prospects for the 1926 season are reported as excellent. In the motor-cycle section, business remains fairly good, while the pedal cycle industry, although approaching the quietest season of the year, is fairly well occupied. Marine engineering remains depressed, and the outlook for boiler makers is by no means satisfactory. The machine-tool trade is quiet, and the same applies to locomotive manufacture and railway work generally.

Cotton.—Our Manchester correspondent writes:—During the past month cotton spinners and manufacturers in Lancashire have experienced a large inquiry, but it has been extremely difficult to secure contracts of weight. The past fortnight, however, has brought a distinct advance in values, and the upward movement has forced out more orders. There is now an inclination to reduce estimates of raw cotton production. Doubt exists as to whether the crop will be more

than sufficient to meet the requirements of users. Favourable news has been received relating to the growth in Egypt. Much uncertainty continues with regard to financial matters, the money stringency undoubtedly holding back enterprise on the part of merchants. Manufacturers of cloth have experienced a considerable demand. Although free buying has not taken place for India, the turnover has been fairly encouraging, especially in the lighter styles of cloth and fancies. In view of the unsettled state of affairs in China, the trade done can be described as healthy, there being a substantial turnover, especially in white shirtings. The auction sales in Shanghai, however, have not yet been resumed. On the whole, producers of American qualities are in a rather better position, and the present output is being well absorbed.

Woollen and Worsted Trades.—The September wool auctions showed little change in prices, French buying being in evidence. Recovery in the woollen textile trades must, it is now recognised, be a comparatively slow process. Although the dislocation caused by a further decline in raw material prices would temporarily have a depressing effect, a lower level of prices is essential before buying on a really large scale can take place. There is a steady turnover in Bradford tops and yarns, although prices are still frequently below replacement costs. During the recent stoppage, stocks were considerably reduced, and although there is a general absence of anything resembling speculative buying, more plant is at work both in the West Riding and in Scotland.

Boots and Shoes.—Except in the sports section, autumn trade in boots and shoes has not yet developed on any considerable scale. The export trade is, however, by no means unsatisfactory, and the forthcoming Shoe and Leather Fair may result in improved business all round.

Pottery.—Conditions are only moderately good as regards domestic demand, and foreign competition has lately been more in evidence. The volume of exports is, however, well maintained.

Chemicals.—The market shows no marked tendency. Prices are steady for the most part, the most active sections are caustic soda, alkali, sulphate of copper, and borax.

Building Trades.—Employment during August showed little variation. Most classes of skilled labour were well employed, overtime being worked in some centres, while in certain branches, such as bricklaying and plastering, the demand for labour exceeded the supply. The position as regards unskilled labour is better than a year ago.

Shipping.—The rise in freights recorded during July continued with less impetus during August, our Index Number of "tramp" freights rising from 95 to 96 per cent. of the 1913

(Continued on page 28.)

RUSSIA'S INDUSTRIAL PROGRAMME—Continued from page 23.

100 per cent. Necessary capital expenditure in iron and steel is 88 million roubles; in engineering, 51 million roubles. The value of output of all metal industries, including shipbuilding, in 1924-25 was (programme, at pre-war prices) 349,743,000 roubles, of which 138,920,000 roubles fell to iron and steel and about 140 million roubles to machinery. The three great electrotechnical trusts have been fused into one, under the title "GET" (State Electrical Trust). The "GET'S" programme provides for output in 1925-26 of electrical wares of value 77 million roubles, as against 49 million roubles in 1924-25. Many ambitious plans are under way, including electrification of the Central Asian Soviet Republics, and the "Dnieprstroï," or central power station, for the Ukraine; and the old plan for a Volga-Don canal, joining the Caspian and Black Seas, is being again considered.

The transport programmes are also so big that they explain the official statement that 80 per cent. of iron and steel production will be absorbed by the State. A five years' shipbuilding plan, already sanctioned, provides for construction of 193 vessels of 658,300 tons, also tug-boats and a floating dock, total cost 191 million roubles, of which half goes to the Leningrad Shipbuilding Trust. Internal navigation is still in a bad way. A small sum has been allotted for preliminary railway electrification work. The 1925-26 railways programme provides for construction of 250 locomotives and 2,500 freight cars. This is part of a construction plan covering the next five years, at the end of which, says the Communications Commissariat, passenger traffic will have recovered to 95 per cent., freight traffic to 90 per cent., of the pre-war volume (on the same area). About half the cost of the construction programme (which involves also expenditure on the permanent way) is to be covered out of five years' profits, total-

ling 1,045 million roubles. Railway profits in the business year 1925-26 are put at 147 million roubles.

The textile production programme for 1924-25 fell far behind needs; and, owing to the good crops, a much-increased demand is expected in the new business year. Large expansion and re-equipment plans for the year, including the manufacture of 600,000 spindles and 10,000 looms, have been prepared. The textile production programme for 1925-26, not available in detail, provides for increases as compared with 1924-25 of different sorts varying from 30 to 84 per cent. The *Gosplan* publishes the following figures concerning earlier developments in the cotton branch. Employed in the present area of all the Soviet Republics in 1912 were 429,630 persons; in the business year 1923-24, 226,654 persons; number of spindles operated 1912, 7,245,000; 1923-24, 2,340,000; looms operated 1912, 176,000; 1923-24, 65,000; raw cotton consumed in manufacturing, 1912, 20 million puds; 1923-24, 6½ million puds. The programme for the current business year was:—Persons employed, 307,900; spindles operated, 3,493,000; looms, 95,000; cotton consumed, 10.2 million puds.

The above figures give a very favourable picture of recovery. But it must be noted that, after an almost complete collapse, even a very moderate absolute increase involves a high percentage increase. In summarising the official reports, it has been necessary for reasons of space to ignore certain inconsistencies and certain admitted obstacles. Most of the programmes make fulfilment contingent upon increased capital expenditure; and it is not always clear whence the capital is to come. Making, however, a liberal allowance for errors and undue optimism, it seems certain that Russian industry is moving towards restoration.

RUSSIA'S INDUSTRIAL PROGRAMME.

(FROM A CORRESPONDENT.)

THE Russian business year dates from October 1st. As big industry is almost wholly conducted by the State, precise plans, or "programmes," as with the State undertakings of non-Socialist countries, must be prepared in advance; and in the late summer these programmes appear. The programmes are nothing less than little Budgets, giving the coming business year's volume of production, receipts, expenditure, and sometimes even prices and wages; and with them are usually published, for comparison, preceding years' programmes and their fulfilment. The programmes for the coming business year 1925-26 are very optimistic, in that nearly all of them provide for greatly increased, sometimes doubled, output, so that if only expectations are realised industrial production as a whole will be within sight of that of 1913 (on the present national area). The official reports state that the fulfilment of the 1924-25 programmes was satisfactory, and improved from month to month, being as high as 98 per cent. in some important branches, and over 100 per cent. for short periods. How far official statistics are reliable will not be considered here. The fact that they are extremely minute and voluminous does not help, but rather hinders, analysis. The official *Ekonomicheskaya Zhizn* (June 1, 1925) exposes inconsistencies between the figures for the same industries issued by different departments; and suspicion is aroused by the fact that whereas two departments' valuations of combined outputs of 15 branches agree closely, the figures for some of the separate branches differ materially. It should not, however, be presumed that the whole elaborate system of Soviet statistics has for years past been erroneous or fraudulent; and a very marked recovery of industry since 1920 must be taken as a fact.

The programme for 1925-26 assumes not only a great increase in the State industries' output, but also an increase in their share in the total output. M. Strumilin, an official publicist, has compiled the following figures:—

GROSS PRODUCTION, in Millions of Roubles and in %.

Business Year.	State and Co-operative.		Private.		Total.	
	Absolute.	Per Cent.	Absolute.	Per Cent.	Absolute.	Per Cent.
1923-24	5,562	76.3	1,728	23.7	7,290	100
1924-25	7,550	79.3	1,970	20.7	9,520	100

The new programme assumes a further movement in the same direction:—

1925-26 9,186 .. 79.7 2,334 .. 20.3 11,520 .. 100

In big industry, 99 per cent. of production will be State or co-operative. M. Svirneff (*Ekonomicheskaya Zhizn*) shows that 77.6 per cent. of private industries belong to the "first class."

The official comparison of the production of State industry since the first complete year of the "new economic programme" shows:—

	Percentage of Pre-War Production.	
	1921-22.	1924-25.
Chemicals.....	27.3	79.7
Paper.....	14.0	74.5
Textiles.....	25.3	69.9
Coal.....	42.0	69.2
Oil.....	31.8	56.6
Metals.....	14.6	47.7
Ores.....	3.6	24.8

The 1924-25 figures are the programme. The 1921-22 figures do not represent the lowest level, which was reached in 1919-20. The new programme of all national production, published by the *Gosplan* in August, contains the following figures, values being at pre-war prices:—Gross agricultural production in 1924-25 was 9,150 million roubles, or 71 per cent. of that of 1913. The figure for 1925-26 (which includes the 1925 harvest) is 11,436 million roubles. Of this, 10,236 million roubles from forestry, ture proper, and 1,200 million roubles from forestry, fishing, and hunting. The production of "big" industry in 1924-25 was 70 per cent. of the pre-war. The programme for 1925-26 raises production of "big" industry to 94 per cent. of pre-war; gross value, 5,275 million roubles, against 3,950 million roubles in 1924-25 and 5,620 million

roubles in 1913. This does not include petty and home industries. The whole national production—State and private, industrial and agricultural—in 1925-26, according to the programme, will be 18,100 million roubles, which is 90 per cent. of the figure of 1913.

The oil industry, according to the *Gosplan's* programme, will in the new business year nearly reach the pre-war figure. The following are gross production figures (including gas as its naphtha equivalent) in millions of puds, the figures for 1924-25 being those of the programme:—

	1913.	1924-25.	1925-26.
From Baku	467.4	291	352
From Grosny	73.6	123	144
Total (including other yields)	561.8	431.8	521

Of the other small oil districts, only Turkestan yields less than before the war. The 1924-25 programme will be realised, it is officially stated, as to 98 per cent. Regarding 1925-26, it is stated unofficially that the programme may not be realised, owing to the refusal of the Finance Commissariat, which considers that the oil branch has "recovered too rapidly in comparison with other industries," to grant the capital required for borings and equipment. The capital requirement was 109,570,000 roubles. The estimated loss in 1925-26 on Grosny oil is 22,948,000 roubles.

For the coal industry there is also planned a great increase in output, which, it is stated, will be fully realised. In the last reported quarter (April-June) the Donetz Trust programme was fulfilled as to 98 per cent. The programme (gross production) of this Trust for 1925-26 is 790 million puds, which is 42 per cent. more than in the current business year. Donetz coke output is planned at 30 million puds, against 23 million puds this year. An advance of 5,480,000 roubles has been sanctioned for improving the mechanism of production. After deducting consumption on the spot, and consumption in coke production, 575 million puds are promised for the general market. The coal programmes for the minor production districts are not at present available. The value of wood output by all the State Trusts in 1925-26 is put at 141 million roubles. The output of sawn wood is to exceed by 40 per cent. that of the current business year, veneer 23 per cent., unsawn logs for sawmills 45 per cent., fire-wood 80 per cent. For fulfilment of this programme, 165 million roubles working capital is required. In August the Supreme Council of Economy decided that twelve wood trusts should be united in a single syndicate.

The official accounts show rapid increase in output by the iron, steel, and engineering industries. This is in part explained by the fact that these branches suffered worst of all, production of pig-iron in 1920 having fallen to 2.4 per cent. of the pre-war. The 1924-25 programme was revised and considerably increased last spring. Comparative pig-iron production figures are:—

District.	(In Thousands of Puds.)	
	1913.	1925-26.
South.....	189,725	48,220
Urals.....	55,765	22,247
Central.....	11,820	2,504
	257,310	72,971

Other heavy materials are:—

	(In Thousands of Puds.)	
	1924-25.	1925-26.
Steel.....	102,000	182,400
Rolled goods.....	75,700	141,800

The month to month output in the current business year has increased almost without a break; pig-iron, from 5,399,000 puds in January to 7,869,000 puds in June; steel, from 8,730,000 puds to 10,943,000 puds; roller goods, from 5,610,000 puds to 7,880,000 puds. Fulfilment of the programme of late is stated to have been, for different sorts, between 94 and 102 per cent. President of the "Glavmetal" Mezhlauk, states that the output of all the metal industries will exceed that of 1924-25 by

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 22.

level. Outward coal freights remained extremely depressed, and the North American grain markets are less active than was expected. A feature during the month was the exceptional outburst of grain chartering activity from South Russia. The unofficial seamen's strike had a negligible effect on business in home ports. With regard to the South African and Australian services, such dislocation as was experienced applied rather to passenger than to freight carriage, though both would suffer from a prolongation of the dispute.

UNITED STATES OF AMERICA.

Trade has remained generally active, though dominated by seasonal conditions, and the business community is looking forward to the next few months with noteworthy confidence. That the movement of goods is on a very large scale is evidenced by the returns of railway freight traffic, which continue to make new high "records," by cheque payments, bankers' clearings, and the volume of retail sales. Since September 1st 158,000 anthracite miners have been on strike, and no immediate prospects of settlement are in view. This development, together with the scaling down of recent estimates for the wheat and cotton crops, is the chief unfavourable feature in a picture otherwise decidedly bright.

BRITISH EMPIRE.

Official estimates put Canada's wheat crop at 392 million bushels, as compared with 262 million bushels last year, this year's production being only thrice exceeded in the history of the Dominion. Private estimates are slightly lower. Ideal harvest weather has prevailed almost everywhere. In India, the monsoon which opened very favourably showed signs of failure about a fortnight ago, and although anxiety has been allayed by further heavy rainfall in some areas, in other places partial crop failure may be unavoidable. Australian business remained brisk during August, wool showing greater strength, while labour conditions were relatively good. During the present month, however, the latter has been less satisfactory, and the business outlook during the coming Australian summer may depend to an appreciable extent on the results of the forthcoming elections. In South Africa trade is steady, though anxiety is felt regarding the strike of British seamen, which is dislocating business in maize and fruit, and will, if prolonged, affect the shipment of the wool clip.

SOUTH AMERICA.

Although exports of cereals from Argentine are still restricted, the general position remains favourable. Crop and livestock conditions are satisfactory, with prices well maintained. In Chile, improvement in business is continued. The Brazilian coffee market is firm, but cotton and sugar are weaker, and import business is dull pending greater exchange stability. In Peru trade has recovered somewhat from the depression caused by the flooding of crops earlier in the season, but in Uruguay and Paraguay business remains dull. In Mexico mining activity has increased, but oil production continues to decline and business turnover shows slight expansion.

EUROPE.

French trade shows a certain expansion after the holidays. In Belgium, a slight improvement has occurred in the coal and metal trades, and prices show a firmer tendency. In Germany, apart from the potash, building, and certain branches of the textile industry, no improvement in industrial conditions was experienced in the course of last month. There has been a further closing down of pits on the Ruhr. Czechoslovakian business is less active than a few months ago, and labour conditions are less settled. The grain harvest has been handicapped by unfavourable weather, but a good sugar beet crop is expected. Financial stringency continues to restrict trade in Poland. A falling off in activity was common to most branches of Italian industry in Italy last month, but the outlook remains satisfactory. In Austria the situation shows no marked change, but the outlook for the future is all the better for the excellent crops harvested this year, and the same remark applies with even greater force to Hungary.

FAR EAST.

The Japanese money market is easier, and the situation as a whole is favourably regarded as a result of a good crop of autumn cocoons and a prospective rice harvest of satisfactory dimensions. The situation in China is becoming more settled. With the return of numbers of labourers to work and students to study, business prospects in the remaining months of the year are not unfavourable, provided always that political conditions show no sudden turn for the worse.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, OCTOBER 24, 1925.

No. 29.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

THE trade situation shows a slight improvement. This is to some extent seasonal, but there seems reason to think that, apart altogether from this factor, the outlook is a little more hopeful. The unemployment figures at the end of September were no worse than in August, and since that date there has been an appreciable fall. Coal production in September was still on a very low level, but production on the North-East Coast, which, with South Wales, has been very hardly hit by the decline in export business, has recently shown some improvement.

Exports as a whole do not as yet show much elasticity, but it is satisfactory that the trade balance for the third quarter of the year is on a markedly lower level than for the first six months. Financial conditions continue to be reasonably favourable to industry, and part of the recovery may perhaps be due to the fact that six months' experience has served to dissipate fears that our return to the gold standard would involve heavy charges upon industry in the form of high interest rates. But perhaps the most important underlying influence is the satisfactory harvest in Europe and North America. Imports into Europe will be less than a year ago, and the prices at which Great Britain has to buy both its food and some of its chief raw materials are already relatively lower than a year ago.

As regards overseas countries, there is no important change as compared with a month ago. The list of "prosperous" countries still includes the United States, India, some of the South American countries, Australia, and Canada. So far as Europe is concerned, French trade, on the whole is good, and Italy is still doing well, but Norway and Denmark, whose currencies have for some time been rapidly appreciating, report bad trade, while Germany remains in a state of depression, particularly in the heavy industries. There is, however, a certain, though not very marked, improvement in

In the cotton trade the prospect of a very large crop has produced a considerable drop in the level of prices, and this will be very much in Lancashire's favour. The first effect, however, was to disorganise the market, and the full benefit is only now beginning to make itself felt. In the engineering industry reports as to production, confirmed by the rising statistics of exports, seem to show that our manufacturers have taken the measure of the world market. Unemployment in this industry, which, almost since the end of the war, has been among the highest in the country, is now down to the average level of the country as a whole. The building trade continues to be fully occupied, both in those branches concerned with the production of small houses and those engaged on large buildings in London and elsewhere. Minor industries, including those catering for the home market, all report a freer flow of orders, and there is reason to hope that a general expansion in business may be reflected in falling unemployment.

other directions.

The chief element of uncertainty in European industry to-day is the French exchange, for French commerce is now a sufficiently important matter to make the price of French products a disturbing factor in many markets, the most important being iron and steel and woollen textiles. Outside Europe the factor most difficult to forecast is the progress during the next twelve months of American production. There are some signs that building in America, in some of the most important centres, has been overdone, and that the railways, which are succeeding in handling record quantities of freight without any congestion, have reached the highest point of their replacement programme. These are the two largest single factors in the American industrial position, and it may be

MONTHLY BULLETIN OF STATISTICS

ISSUED by the LEAGUE OF NATIONS

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.

FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.

PRICE: Wholesale and Retail Price Index Numbers.

CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.

LABOUR: Unemployment Percentages.

that for these reasons production has reached its peak for the time being. On the other hand, there are those who hold that the agricultural prosperity of the country, and the apparently inexhaustible demand for automobiles, point to continued growth during the winter. The matter is of some importance to Great Britain, for price levels are such that we have begun to sell once more over the American tariff barrier.

The following notes on conditions in various trades and countries call attention to the most striking tendencies:—

HOME INDUSTRIES.

Iron and Steel.—During the last fortnight a more hopeful tone has obtained. Improvement is doubtless partly seasonal, and paralleled by a similar movement last year, which came abruptly to an end at Christmas. At the same time, it would seem that recent price reductions have stimulated demand to some slight extent, and trade psychology has been perhaps unduly affected by recent orders placed here by the United States, with the prospect of others to follow. Pig-iron output in September recorded a slight advance over the depressing August total, but that of steel recovered much more markedly, and practically reached the level of a year ago. The quarterly meeting at Birmingham this month brought no change in iron prices, but rather more business was forthcoming than had been expected. In the semi-finished department conditions remain weak, but finished steels are in better demand. The Continent has bought tinplates freely, and many firms are booking orders for some weeks ahead. Galvanised sheets are also a firm market. These signs are encouraging after nine months of almost unbroken depression in the industry as a whole, but it is much too early to say whether or no better times are in sight.

Coal.—The market has a firmer undertone, but the situation generally is still far from satisfactory. Large stocks are available in many places, and until these have been further diminished the placing of forward orders can scarcely be expected. Prices, however, are steadier. Domestic demand has expanded, and industrial fuels are in a rather better position. The steam coal position is irregular, Cardiff recording no material expansion, while Newcastle has been doing a much more satisfactory trade. Coking coal is in improved demand, as a result of better conditions in the iron and steel districts.

Engineering.—This group has been able to make slow, but, on the whole, sustained progress, throughout the last few months. The slight acceleration which has recently been reported is gratifying, though seasonal factors may be chiefly responsible. The really black spot is shipbuilding and its ancillary trades, in which activity remains at a low level, as demonstrated by the *Lloyd's Register* returns for the September quarter. On the other hand, such recently depressed branches of engineering as machine-tool manufacture report a better volume of home and foreign orders, and locomotive makers are improving their position. Electrical engineers continue to receive good support, especially as regards orders for primary plant. The Olympia Motor Exhibition evoked a very satisfactory amount of business, especially from the overseas side, and the Textile Machinery Exhibition in Manchester achieved similar gratifying results as regards various Lancashire firms in that trade. These indications certainly point to a healthier tone among buyers.

Cotton.—Our Manchester correspondent writes:—The outstanding event in the cotton industry has been a decline in raw material rates of fully 2d per lb, due to increased crop estimates, with a possibility of record output. As is usual in a falling market, there has been a good deal of nervousness on the part of operators, but recently demand has broadened, and a larger turnover taken place. Cloth inquiry has increased, a feature having been the freer activity on the part of Indian merchants. It is understood that stocks in India, especially in the up-country districts, are comparatively light. It was hoped that by this time there would have been a resumption of the auction sales in Shanghai, but the decision to restart has had to be postponed. Rather depressing reports have been circulated as to conditions in the Near East, and

trade has dragged. A considerable demand has again been met with for the Continent, especially for Germany and Switzerland. Steady clearances have taken place in the home trade, and in certain quarters rather more orders have been placed with manufacturers. The yarn market in Manchester has been very irregular. Spinners have tried very hard to derive some advantage from cheaper raw material, and some success has been met with. There has not been any general flow of orders in yarns for shipping purposes, and the Continent has given more support than Eastern markets.

Woollen and Worsted Trades.—The firmness of wool at the recent London auctions undoubtedly came as a surprise to many people. Competition was good, and prices ruled in sellers' favour, but the running was made by the Continent. Had the market been dependent on West Riding demand, results would have been very different. In the latter area, however, more business has recently been done. An active demand has occurred for wool and tops, and as most topmakers have been carrying minimum stocks, some scarcity has developed, many firms being booked up to the end of the year. Spinners are making higher quotations, and the piece goods demand is maintained. The worsted trade shares this improvement to some extent, the application for "Safeguarding" facilities pre-dating the present movement.

Boots and Shoes.—The home trade is better, makers of heavy winter footwear having secured a larger amount of business. Orders are chiefly of small dimensions, however, and no appreciable quickening of export business is recorded.

Chemical Industry.—The volume of inquiries is larger, and export business rather more satisfactory. Coal-tar products have met with a fair demand.

Shipping.—Recent business has been without special feature. The upward movement of "tramp" freights, which began in July last, continued during September, but our index number remains nearly 2 per cent. below the 1913 level. The seasonal movement of Northern Hemisphere crops has not as yet given evidence of producing any marked increase in the demand for shipping. The strike of seamen has come to an end this month in South African ports, and appears to be petering out in Australia.

UNITED STATES OF AMERICA.

The following "indicators" of American trade conditions have been extracted from the most recent number of the "Survey of Current Business," issued by the United States Department of Commerce, and may serve as an approximate guide to recent trade tendencies:—

	July, 1925.	August, 1925.	Compared with August, 1924.
Production—Pig-iron thous. tons	2,664	2,704	+ 817
Steel ingots "	3,088	3,424	+ 871
U.S. Steel Corporation unfilled orders thous. tons	3,539	3,513	+ 223
Wholesale prices (1913=100)	160	160	+ 10
Bank clearings—New York . million \$	23,396	..	+ 2,269*
Outside "	18,570	..	+ 3,226*
Retail business (total sales of mail order houses)	27.9	28.7	+ 4.9
Imports—Value "	326	377	+ 122
Exports—Value "	340	384	+ 53

* July, 1925, compared with July, 1924.

The expected expansion of business has become more general during the last few weeks. Industrial output is steady, distribution to consumers sustained, and forward orders are reported as on a larger scale than in the corresponding periods of recent years. The opinion is currently put forward that trade volume this autumn will prove to be the largest in American history. The better balance between prices on the agricultural and manufacturing sides is now becoming apparent, and has not been upset by recent price variations in the cereal markets. Other indications of the larger movement are the quantitative increase in iron and steel output,

(Continued on page 36.)

TRADE POLICY OF CZECHOSLOVAKIA—Continued.

in 1924. Imports from Hungary, Yugoslavia, and Roumania amounted together to about 11 per cent. last year, from France 3.5 per cent., Holland 4 per cent., and Poland 3.5 per cent.

Czechoslovakia exports chiefly to Austria (20 per cent.), Germany (19 per cent.), Great Britain (9 per cent.), Hungary (6 per cent.), U.S.A. (4 per cent.), France, Italy, Poland, and Roumania. Her trade balance is active in relation to Austria (6,636 million kc in 1920, 1,972 millions in 1923, 2,278 millions in 1924), also with Hungary, Great Britain (1,089 millions in 1924), Yugoslavia and Roumania. Her trade balance is passive in relation to Germany (2,266 millions in 1924), Holland,

United States, Poland, and lately also Denmark (250 millions in 1924).

It is obvious that since most industries depend chiefly upon exports, Czechoslovakia is not unwilling to grant tariff reductions to those countries which are prepared to grant concessions to her. Unfortunately, few of the countries in Central Europe are as yet willing to reduce their tariff barriers. This, of course, makes any scheme of preferential tariffs between them illusory, even if the other States which at present enjoy most favoured nation treatment were willing to consent to the formation of such a preferential Customs union in Central Europe, which would place them outside it.

THE TRADE POLICY OF CZECHOSLOVAKIA

(BY A CORRESPONDENT.)

MORE than almost any other country, the Czechoslovak Republic depends on foreign trade for its prosperity. About 80 per cent. of all the industries and coal mines of former Austria are situated in Czechoslovakia. About 50 per cent. of her population is engaged in trade and industries, and her agriculture is devoted mostly to the lucrative production of those products which support food-while grain production and cattle-breeding is inadequate for home consumption. Czechoslovak industries naturally depend mostly on exports. Most important of all, however, the balance between national cash receipts and payments abroad makes a surplus of exports over imports imperative.

Even in the cash balance-sheet of the U.S.A. receipts for exported goods form 80 per cent., and payments for imported goods 60 per cent., and America is the world's greatest financier to-day. The exact figures for the compilation of a cash balance-sheet of Czechoslovakia are not available, but there is no doubt that the visible trade balance occupies an even more important place in it. The Czechoslovak visible trade balance up to the end of 1923 did not include goods imported for repairs and improvement and re-exported; but if we calculate this on the basis of 1924 we arrive at the following figures, showing the export surpluses during the past five years:—

	In Million Kc.	In Million \$
1920	5,456	87
1921	6,167	79
1922	6,329	152
1923	2,948	89
1924	1,160	35

The surplus for this year will be considerably larger than last year, because during the first eight months it had already reached 1,412 million kc (\$43 millions), and thus exceeded the figure for the whole of 1924. The net profit from foreign trade during the past five years, therefore, amounted to \$442 millions, the aggregate receipts from exports being \$2,225 millions, and the payments for imports \$1,783 millions.

Obviously, very little may be added on the side of receipts besides the proceeds from exports. Czechoslovakia, as an inland country with no sea-coast, cannot make profits from the shipping of foreign goods, and the interest which she receives from investments abroad is practically nil. On the other hand, we must include remittances from Czechoslovak settlers in U.S.A. (in 1922 these amounted to \$45 millions), receipts for transportation from the transit of goods and passengers, proceeds from tourist traffic, health resorts, and baths, and loans received from other countries (\$41 millions in 1922). According to the estimates of Dr K. Uhlig, a prominent Czech authority, the total receipts for 1922 were \$588 millions, out of which \$472 millions were for exported goods. Payments include \$320 millions for imports, \$20 millions loaned to Austria, the cost of houses and factories built abroad, the cost of the diplomatic service, and money spent by Czech tourists abroad. After estimating for all these visible and invisible items, we are still faced with an apparently unaccountable surplus of receipts of some \$158 millions, only a small part of which (about \$30 millions in six years) went towards the enrichment of the Treasury's gold reserve. An Austrian authority, Dr F. Hertz, proved, however, quite recently that this cash surplus goes to Vienna in the form of dividends, for a large portion of shares of Czechoslovak concerns is still held by Austrian shareholders, and the income from this investment provides, in fact, the deficiency of the Austrian trade balance. A small portion of these shares, nevertheless, has been bought back by Czechoslovakia out of her trade profits. The money spent abroad on investments and loans, on the repayment of debts, and on the repurchase of Czechoslovak shares cannot, of course, be counted as a loss, because it promotes her emancipation from dependence on foreign capital, decreases her indebtedness abroad, and increases her income from capital invested abroad.

Czechoslovak trade policy has from the beginning

striven for the development of foreign trade through commercial treaties with other countries, through the gradual abolition of trade restrictions, and through the reduction of her tariffs. Immediately after the war, when industries were at a standstill, when there was a general lack of foodstuffs, and when the Customs service was inadequately organised, a strict State control of all foreign trade was inevitable. Later, goods were classified into three groups:—(1) Goods the import of which was prohibited unless the importer obtained a special licence; (2) goods which simply had to be announced to the Ministry of Commerce by the importer (whose good faith the Ministry wished to examine); and (3) goods which could be imported without any formalities except a Customs declaration. The same applied to exports. This classification still exists to-day, but the list of goods in the second category has been gradually extended at the expense of the first, and the list of the third at the expense of the second.

The earliest treaties were compensation treaties providing for the mutual exchange of certain classes of goods, the import of which was otherwise prohibited. Secondly, Czechoslovakia proceeded to conclude treaties with most European countries and the United States, providing for "the most-favoured-nation" treatment. The opening of the third period is marked by the conclusion of important tariff treaties with France in 1923, and with Italy, Austria, and Switzerland in 1924. The reduced tariffs accorded to these countries, of course, extend equally to all the countries to whom Czechoslovakia granted the most-favoured-nation treatment.

If Czechoslovakia could not proceed as quickly with the reduction of her Customs tariff, and with the abolition of trade restrictions, as she wished, it was not entirely her fault. She was surrounded by States with highly inflated currencies, some of which even now keep on raising their tariff walls, presumably in order to develop and create their own industries. Obviously, Czechoslovakia cannot open her door to foreign competition so long as most of her neighbours do not assure her reciprocity, but, on the contrary, make her export policy more difficult than ever.

Czechoslovakia is not only an important exporter, but, like every industrial country with a high civilisation and high standard of living, a good consumer not only of foodstuffs and raw materials, but also of finished goods. The first place in imports is occupied by cotton (17 per cent.) and wool (12.65 per cent.), then come minerals (8.5 per cent.), corn and foodstuffs generally, machines, &c. The chief export articles are textiles (cotton goods, 12 per cent., woollen 9 per cent.), coal and timber (18.58 per cent.), sugar (15 per cent.), pig-iron and iron goods, machinery, glass, china, wooden articles, hops, &c. If we take the figures for 1923 as typical, we find that Czechoslovakia imported livestock for 652 million kc, foodstuffs for 2,381 millions, raw materials for 5,192 millions, finished articles for 1,994 millions, and gold for 0.8 millions. Her exports consisted of 18 millions worth of livestock, 2,581 millions worth of foodstuffs (sugar, beer, malt, barley, spirit, &c.), 3,356 millions in raw materials (of which 1,121 millions represented coal), manufactured goods for 6,493 millions, and gold, silver, and coins for 123 million kc.

These facts and her geographical position explain her trade relations with other countries. The chief place in Czechoslovakia's import trade is held by Germany. Her share in Czechoslovak imports was 21 per cent. in 1920, 26 per cent. in 1921, 27.8 per cent. in 1922, 40 per cent. in 1923, and 35 per cent. in 1924. The United States comes second with 18 to 20 per cent. in 1920-1922, but her share in Czechoslovak imports fell to 7 per cent. in 1923 and 5.6 per cent. in 1924. Austria's share has gone up from 6.52 per cent. in 1923 to 7.8 per cent. in 1924, imports from Italy from 4.53 per cent. to 5.9 per cent., while imports from Great Britain fell from 5.14 per cent. in 1922 to 3.29 per cent. in 1923 and 2.9 per cent.

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 30.

more than usually marked after the seasonal decline, "record" railway traffic, and well-maintained retail demand. Demand for financial facilities has been reflected in a tightening of the money market, but although this is expected to become more pronounced, no large increase in money rates is expected.

BRITISH EMPIRE.

Despite heavy rainfall during early September in the prairie provinces, the marketing of Canadian wheat crop has proceeded rapidly. Grain is coming forward in much greater volume than at this time last year, and the average grade is high. The yield having been much more generally distributed than last year, more satisfactory purchases of goods by farmers are expected in the coming months. Business in Eastern Canada is of a somewhat uneven character, but unemployment shows a further decline. The Indian monsoon is stated ultimately to have been satisfactory except in parts of the Bombay Presidency. The usual quickening of business associated with the end of the monsoon is beginning under not unfavourable auspices. The strike of cotton operatives at Bombay has assumed serious dimensions, 145,000 workers being reported unemployed at the end of last month. The strike of British seamen in Australian ports caused considerable interruption to overseas trade, but the situation improved materially during October. Recent wool sales have been satisfactory from the grower's point of view, the fall in prices having been more than arrested. South African conditions continue quiet, but some improvement has followed the collapse of the seamen's strike.

SOUTH AMERICA.

Argentine crop prospects are good, and given favourable weather large yields are expected throughout the country. The meat trade remains prosperous. Chilean business has generally been dull pending the outcome of the Presidential elections. Brazilian business has also passed through a somewhat quiet period, but export prospects are more favourable. Peruvian trade shows a slight seasonal increase, though many parts of the country are still depressed. Business in Mexico showed no tendency to expand last month, although the undertone was better.

EUROPE.

The French wheat crop is placed at 85 million quintals, against about 75 million quintals in 1924. Consumption is estimated at 90 million quintals. The metallurgical industry is moderately active, chiefly on account of home demand. The woollen textile trade has large orders in hand at current quotations. In Belgium, coal has been in slightly better demand, while in the metal trades some fair-sized orders have recently been received. In Germany the shortage of working capital is still a dominating factor in industry, as the experience of the Leipzig Fair showed quite clearly. The coal and metal industries are among the most depressed, but in certain sections of these trades and in industry as a whole, the situation is now probably a little easier. The rapid appreciation of Danish currency has been marked by trade dullness, particularly in shipping, where real wages are now above the British level. Similar difficulties which occurred in Norway are being slowly obviated. Labour conditions are better, various disputes having been adjusted. Prices in the Swedish timber markets have been more stable, and the autumn outlook is fairly good. Similar remarks apply to Finland, which will be greatly assisted by this year's good harvest. Polish trade remains hampered by shortage of capital and dullness in the export trades generally. Money is easier in Austria, and production as a whole has expanded slightly, though the latter factor has not so far been reflected in the unemployment figure. Normal activity obtained in most branches of Italian trade last month, but monetary stringency was an adverse factor in some cases. Spanish trade showed some improvement.

FAR EAST.

In Japan there is evidence of undoubted recovery from the unfavourable conditions of the last twelve months. The trade balance has become favourable, exports of raw silk and cotton textiles being of large dimensions, credit is easier, the rice harvest adequate for Japanese requirements, and general financial conditions more satisfactory. In China the prospect of further hostilities between military factions will have a regrettable effect on the movement towards more normal trade conditions, instanced by the willingness of merchants to resume purchases and of labour at the treaty ports to work more regularly.

The Economist
MONTHLY SUPPLEMENT.

New Series.

SATURDAY, NOVEMBER 28, 1925.

No. 30.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

THE features of the industrial situation since our last report have been a slow but steady improvement in the main export industries, combined with a slight decline in such trades as building, printing, catering, &c., which usually feel a seasonal reaction in the winter. But as the latter feature is a normal one, the net result is unquestionably a more hopeful feeling in industry generally. The number of unemployed on the Labour Exchange registers has fallen rapidly in the last eight weeks, and in the middle of November was below the corresponding

figure a year ago, in spite of the fact that in the coal mining industry, the numbers are still very much larger. It is suggested in some quarters that these figures are not to be taken at their face value, but that more stringent administration has driven some of those in receipt of the dole on to the Poor Law, the figures of which have increased. They have not increased, however, so fast as the unemployment figures have fallen, and a study of the summaries of the trade reports which follow leaves no doubt of the real progress that has been made. The most important improvement is in the coal trade, the export branch of which is beginning to recover. Iron and steel output also has risen, and is likely to be higher again in November. Pig-iron, it is true, is well behind last year, but steel output is relatively better placed. Another index (which, as we explain elsewhere, we have arranged to show monthly) is that of the heavy section of the electrical industry, the new orders in which have shown a substantial recovery since the middle of the year. The figures are not yet as good as those for 1924 when taken as a whole, but it is significant that the export figures are very much higher than in 1924, and, indeed, than the average level of 1920. Home orders are slow in coming forward owing to the lack of a definite and final policy on our internal standardisation. The cotton, wool, hosiery, hemp, and carpet trades are all better than in September. The tin plate industry is expanding, and its demand for material is one of the factors that has improved the situation in the iron and steel industry. Boot and shoe production is below normal, but here, too, an improvement is taking place in the heavy sections of the trade, while

the sudden coming into fashion of Russian boots for ladies has created brisk activity in the light sections. The ship-building industry alone seems to remain in the bottom of the depression, the only sign of life being in the case of cargo steamers. This has benefited such ports as the Hartlepoons, but the cargo-building slips at Glasgow remain deserted.

As regards the more general indices, wholesale prices are considerably lower than at this time last year, and still show a dwindling tendency; traffic receipts are also down

but industrial securities have risen, in spite of the gloomy balance-sheets issued by important companies in the metallurgical group of trades. The note circulation remains at an appreciably higher level than last year, and bank advances are also high. The same is true of London clearings, but this is largely a reflection of the rubber boom on the London Stock Exchange.

As regards conditions abroad, business in the United States continues to expand; indeed, the prosperity of that country is so great that it seems too good to last. With the exception of Brazil and Mexico, the greater part of the New World is also in a prospering situation. The collapse of the seamen's strike, and the general election, point to the resumption by Australia of its former prosperous development. Reports from India and South Africa, though in a more temperate tone, are

good. So far as Europe is concerned, there are no marked changes. The most important underlying facts remain, on the one hand, the stimulating effect of good harvests in most countries on the Continent, and, on the other, the financial difficulties with which German industry is wrestling. The Scandinavian countries, on the whole, are not doing quite so well as a month ago, but French industry appears to be prosperous. In China there is no appreciable improvement in sight, but Japan is getting some share of the general world recovery.

The following notes on conditions in various trades and industries call attention to the most striking tendencies:—

MONTHLY BULLETIN OF STATISTICS

ISSUED by the LEAGUE OF NATIONS

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.
FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.
PRICE: Wholesale and Retail Price Index Numbers.
CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.
LABOUR: Unemployment Percentages.

This information is given where available for the following countries:—

HOME INDUSTRIES.

Iron and Steel.—Steady progress has continued during the past month, an encouraging feature being the increased willingness of buyers to place forward business. As a result, order books in many cases make a much less depressing showing than at the end of last summer. The output of pig-iron in October was 473,700 tons, an increase of 25,000 tons on that of September, but 112,700 tons less than that of October, 1924. The net increase in the number of furnaces blowing during the month was seven, a larger increment than in any month for nearly two years. Steel ingots and castings were produced to a total of 647,100 tons, an increase of 7,000 tons as compared with September, and a decrease of 31,400 tons as compared with October, 1924. Further reports as to the re-starting of furnaces and mills have been received this month, and all indications point to a continuance of the tendency over the next few weeks, though the usual "stock-taking" lull at the end of December may somewhat obscure it. Pig-iron stocks have been reduced, but smelters, who are in some cases well sold, are inclined to move with caution, owing to uncertainty regarding possible advances in fuel prices. Competition in some of the heavier branches of the steel market remains keen, but the demand for steel sheet and tinplate bars has improved concurrently with further recovery in the tinplate trade. Considerable business continues to be done in galvanised sheets. Continental competition remains formidable chiefly in the semi-finished branches, and the improvement in the iron and steel trades as a whole has not yet been accompanied by a general advance of prices to levels ensuring a very satisfactory profit margin to the average producer.

Coal.—The situation as a whole is better than a month ago. Prices are firmer, and less difficulty is experienced in disposing of current output. Domestic demand has been stimulated by the coming of cold weather, the best qualities being most in demand, though the tonnage moving is still below normal. Coking coal is moving fairly well, and industrial fuel is in greater request. The export trade has been largely affected by the continuance of the miners' strike in the United States, though European and Mediterranean markets have recently been more active. Taken on the whole the industry remains depressed, but the omens are rather better than most people would have prophesied six or seven weeks ago.

Engineering.—The gradual improvement in the engineering group has continued over the past few weeks, without any noteworthy change in the volume of the trade. Locomotive builders have recently obtained colonial and foreign orders of some moment, but in the shipbuilding and ship repairing sections new contracts are still few and far between. The machine tool trades are again slightly better, and textile machine makers fairly actively engaged completing existing orders. The motor and allied trades remain busy, and cycle and motor-cycle manufacturers are actively engaged on production for the 1926 season.

Electrical Manufacturing.—Since the end of September a period of fairly steady improvement in the home trade has succeeded the less satisfactory conditions of early 1925. The most active branches are small motors, domestic heating and cooking, and accessories, where order books are filled, in some cases, for four months ahead. The home market generally is affected by uncertainty as to the Government's policy, which has discouraged the construction of new power stations, and production has fallen to about 60 per cent. of the 1924 volume. A compensating gain has been made, however, on the export side, especially as regards heavy electrical plant, turbo-alternators, condensers, and large motors, the most important markets being Japan, Australia, India, Argentina, and Brazil. No large amount of business is being done with European countries, with the single exception of Holland.

Cotton.—Our Manchester correspondent writes:—Values in the cotton industry have continued to fall, and spinners and manufacturers have had to give way in price for yarn and cloth. There is now a probability of an output this season of 15,500,000 bales. Available statistics indicate a much larger consumption than last year. One forecast has been made of 14,300,000 bales, against 13,256,000 bales in 1924-25. Estimates of the Egyptian crop have also increased, and there is now a likelihood of a "record" output of over 8,000,000

cantars. Inquiry in cloth has been considerable, but buyers have not been prepared to place contracts of importance. India has provided a very fair turnover in the lighter styles of goods. The news from China has been worse, business for Shanghai and Hong Kong being very restricted. Disappointing advices have again been received from Egypt and the Near East. The most active market has been the Continent, free buying being reported, especially from Germany. The home trade has recently displayed more life. The yarn market remains unsatisfactory, and it is now proposed to close the mills spinning American cotton one and a-half days instead of one day per week. Business in export yarns has been rather better, both for the Continent and India. There has not been any free movement in Egyptian yarns. Some special contracts have, however, been placed for thread manufacturing.

Woolen and Worsted.—Colonial wool markets have tended to react slightly after their recent firmness, and conditions generally point to approximate equilibrium between supplies and effective demand in the near future. Topmakers have sold forward very largely, and are awaiting developments before committing themselves further. Employment in the spinning section has improved, but for the present the trade is disinclined to believe in the permanence of present conditions. The piece goods trade is moderately active, but efforts to pass on recent increases in manufacturing costs are meeting with resistance.

Boots and Shoes.—Trade is still below normal, but the improvement on the heavy side, formerly most depressed, is gratifying. Export business is slightly larger, and the outlook for the trade as a whole seems better, on balance, than a month or two ago.

Pottery.—Trade remains below the level of a year ago, but some ground has been gained in the last few weeks, most noticeably on the export side.

Chemicals.—Recent price changes in this industry have not been important. Trade in fine chemicals continues to make slow but steady headway in the face of foreign competition. Recent price reductions for some heavy chemicals have stimulated demand.

Building Trades.—Despite a slight seasonal decline, employment in these trades remains very satisfactory, a shortage of bricklayers and plasterers still being experienced in some districts. The seasonal recession has been most evident, geographically, in London, and, among different trades, in painting.

Shipping.—Seasonal recovery in freights continues to make slow progress, our Index Number of "tramp" freights showing a rise of just over one point during October. In the present month business has further expanded, the Plate market showing a marked revival. Outward rates are firmer on increased charterings for coal shipment, but so far as this reflects artificial conditions in the American market, its importance should not be over-emphasised.

Retail Trade.—A large London store reports that a distinctly increased business has developed this month in Bradford woollen fabrics. The boot and shoe section has generally been good, the vogue for the Russian boot being a strong feature—mostly, however, in the medium and lower price lines. Hosiery has also sold well.

UNITED STATES OF AMERICA.

The following "indicators" of American trade conditions have been extracted from the most recent number of the "Survey of Current Business," issued by the United States Department of Commerce, and may serve as an approximate guide to recent trade tendencies:—

	August, 1925.	Sept., 1925.	Compared with Sept., 1924.
Production—Pig-iron thousands tons	2,704	2,726	+ 673
Steel ingots "	3,424	3,493	+ 595
U.S. Steel Corporation unfilled orders thousands tons	3,513	3,717	+ 243
Wholesale prices (1913=100)	160	160	+ 11
Bank clearings—New York million \$	20,219	21,774	+ 2,483
Outside "	16,850	18,021	+ 2,035
Retail business (total sales of mail order houses)	28.7	34.8	+ 3.4
Imports—Value	340	342	+ 64
Exports—Value	380	413	— 6

Production continues on a high level, and an all-round increase was recorded last month. The iron and steel trades are

(Continued on page 44.)

BROWN COAL AND ELECTRICAL POWER IN GERMANY.

(BY A CORRESPONDENT.)

THE importance of scientific utilisation of our power resources has become clearer with fuller comprehension of the fuel problem in Britain, and the need for intensive electrification on an economic basis is now seen to be a matter of national interest. The issues have been confused to some extent, as far as electrification is concerned, through the belief that electrical development is impossible without cheap power, and that cheap power can only be obtained through water-power. If we remember that in the United States, where electrical progress has been greater than in any other country of industrial importance, water-power only accounts for 35 per cent. of the annual output of electricity, and also that in Germany, where the output of electricity is now over five times the output of 1913, water-power still accounts for less than 10 per cent., it is difficult to attach much importance to this dictum. The fact remains that electrification constitutes the only method of approach to a complex and very difficult problem, and it is in the more effective utilisation of our coal resources that it finds its fullest justification.

The example of Germany is decisive. The intensive electrification that has taken place in that country during the last five years has been due in no small measure to the fact that the loss of the Saar and the necessity to provide a heavy tonnage of coal each year for Reparations reduced the annual coal output to a level below that necessary to cover the minimum requirements of industry. This meant either reduction in industrial activity, or the exploitation of new materials and new methods sufficient to make good this loss. In other words, Germany had to meet the problem of effective utilisation of her fuel and power resources as long ago as 1919, and the problem was met by increased production of brown coal, improved methods of briquetting, and, in many cases, more extensive systems of brown coal distillation, and, finally, utilisation of brown coal for raising steam in electrical power stations.

In 1913 514 million units were produced from brown coal; in 1922, 2,979 million units; and in 1924, over 4,000 million units—an increase of almost 700 per cent. in 11 years. The production of brown coal rose from 87 million tons in 1913 to 124 million tons in 1924, and, judging from the returns for the first nine months, will reach 144 million tons in 1925—an increase of 16 per cent. over the previous year. Of this total over 14 million tons were used to generate electricity in brown coal power stations, while the remainder was converted into briquettes for direct sale as fuel or for distillation purposes. In almost every case, power stations were built in the vicinity of the brown coal deposits, and special companies formed to undertake the generation and transmission of power. The main brown coal syndicate, with about 30 per cent. of the total production of Germany, the Rheinische Braunkohlensyndikat, with its subsidiary in the Rheinische A.G. für Braunkohlenbergbau und Brikettfabrikation, feeds into the Fortuna power station of the Rheinisches Elektrizitätswerk, which supplies Cologne and the surrounding industrial area with a large part of their power requirements. In 1924 this station generated 173 million units, while the new Fortuna station, destined to have a capacity of 200,000 kilowatts, has now 48,000 kilowatts in operation. This brown coal undertaking, with a present capacity of 88,000 kilowatts, will in a few years reach 240,000 kilowatts and an annual output of over 450 million units.

The second great brown coal mining company, the Roddergrube A.G., with an annual output of over 35 million tons, feeds into the Goldenberg power station of

the Rheinisch-Westfälisches Elektrizitätswerk, with a generating capacity of 300,000 kilowatts and an output, under normal conditions, of 850 million units. In the Rhineland, considering those two stations, Fortuna and Goldenberg, alone, over 1,000 million units are generated annually from brown coal. A greater development still has taken place in Central Germany, where the creation of the Electrowerke A.G. must be regarded as one of the most important acts of the German Government. Electro-chemical and electro-metallurgical works controlled by one of the leading members of the dye combine, the Griesheim-Elektron Company, and the German General Electric Company, grew up round the large brown coal deposits at Bitterfeld. In 1921, through association of the Golpa mines, the Brigetta and the Sachsenburg mines, a constant supply of fuel was ensured for the Electrowerke, which has now in its three power stations—Zschornowitz (160,000 kilowatts), Tattendorf (86,000 kilowatts), and Lauta (66,000 kilowatts)—a total capacity of 312,000 kilowatts. If we add to this the station owned by the Griesheim-Elektron Company, with 60,000 kilowatts, we can see now in realisation a brown-coal super-power zone in Central Germany with an annual output of almost 2,000 million units. In this case, by-product and aluminium industries have grown up through scientific utilisation of brown coal.

A similar process has been at work in Saxony, where the Sächsisches Werke, with an annual output of 310 million units, is now operating the Hirschfeld station of 85,500 kilowatts, and has under construction the Bohlen station outside of Leipzig, destined to house generating plant of a total capacity of 100,000 kilowatts. Those two stations will feed into the Central German power zone and make it one of the greatest examples of scientific interconnection in the world. In this case again, the construction of large electro-chemical works has taken place at the same time as electrical power station construction, and the result has been a high standard of output at low rates, with more effective utilisation of the fuel. To show the progress achieved in four undertakings alone, the Rheinisches Elektrizitätswerk, the Rheinisch-Westfälisches Elektrizitätswerk, the Electrowerke A.G., and the Sächsisches Werk had together an output of about 730 million units in the year 1915 and 3,400 million units in 1924, an increase of 365 per cent. in nine years. In Britain the corresponding rate of increase for four of the most progressive undertakings has been less than 150 per cent.

Although it is impossible to reproduce the conditions existing in Germany which led to intensive utilisation of her brown-coal resources—the presence of brown coal itself first of all and the economic pressure exerted by the Treaty of Versailles to make good the diversion from home consumption of essential coal supplies—it is still possible in Britain to utilise low-grade fuel at the coal mines, and use it for the generation of electricity at low prices, and for the creation of important electro-chemical and electro-metallurgical industries based on low cost of energy. There is no doubt that Germany is now reaping the benefit of the power policy which, carried out in 1920, 1921, and 1922, concentrated the supply of electricity in undertakings large enough and efficient enough to make full use of the resources at their disposal.

The recovery in the iron and steel industry must be attributed, at least in part, to this provision of cheap power, with its consequences in low costs of production. During the first nine months of this year, to quote actual statistics, 9,644,000 metric tons of steel ingots were produced, compared with 6,878,000 in 1924, rolling mills increasing their output in the same proportion. Everything in modern production hangs together, fuel utilisation, power production, industrial production, and recognition of the truth of this fact is bringing Germany back to a high place among the great industrial nations.

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 38.

operating at something over 80 per cent. of capacity, the most steady buyers being the structural, railway and automobile industries. The chief "business indicators" point all the one way. Confidence generally runs high, as is shown by a wider disposition towards future commitments, but most observers hold to the opinion that no wide speculative movement is to be expected in the commodity markets. Recent events on the Stock Exchange have given a salutary check to the movement towards inflated security values, which was not unconnected with the advance in the discount rates of several Federal Reserve banks—designed to withdraw New York's excessive supplies of funds employed in Stock Exchange speculation.

BRITISH EMPIRE.

The outlook for Canada is brighter than for some time past. The purchasing power of the farming community is expected to be greater and more widely distributed than at any time since 1920. Mineral production shows a steady growth, coal mining having made rapid progress since the strike settlement. The iron and steel and textile industries are more active, and wholesale houses report an increased turnover without as yet any disposition to buy far ahead. The collapse of the seamen's strike and the result of the general election have favourably affected the outlook in Australia. Wool sales have been well attended. Monetary conditions in India have been markedly easier than usual, but with the advent of heavier crop demands conditions are becoming more stringent. The strike of the Bombay cotton operatives continues. South African trade last month was quiet, the dislocation caused by the shipping strike being still productive of irregularity. The gold output continues at a high level. The maize crop is being freely moved, and with satisfactory rain throughout the country prospects are more hopeful.

SOUTH AMERICA.

Argentine crop conditions are excellent, record yields being indicated, although the danger of damage from unfavourable weather has not yet passed. Chilean business was generally good last month, despite a one day general strike on October 26th. Nitrate production continues at a high level, and reports

from agricultural areas point to larger crops than last year. Brazilian markets are generally dull, coffee prices having declined still further during October, while trade in cotton and sugar remains depressed. Peruvian trade is similarly affected. Unemployment is growing in Mexico as a result of decreased petroleum output and unfavourable crop conditions.

EUROPE.

French business is generally active. The metallurgical trades have received increased export orders, but are unwilling to trade very far ahead in view of price uncertainties. The woollen textile industry is still a heavy buyer of raw material, but the cotton trade has been unsettled by price fluctuations. French competition has affected the coal and metallurgical industries of Belgium. The German situation shows no marked change, iron and steel and engineering remaining depressed, although some improvement has taken place in the coal trade. Seasonal conditions are responsible for slightly increased production in textiles. Among Scandinavian countries, Norwegian industries are more active in the export branches, but, as a whole, dulness obtains and unemployment is increasing. Denmark is still feeling the effects of deflation, and seasonal quietness is overtaking Swedish trade. Business in Poland remains restricted. In Czechoslovakia the coal and metal industries are active, but the Austrian situation is rather less favourable, owing partly to Polish import restrictions. Italian conditions are generally satisfactory, with labour shortage in certain areas, but seasonal unemployment in agriculture has begun. The favourable returns from Turkey's staple crops this season may be a factor in producing the long-awaited trade revival in the Near East.

FAR EAST.

Chinese trade has again been hampered by political unsettlement and transport difficulties arising out of the commandeering of railways for military purposes. Easier monetary conditions obtained in Japan in the first half of this month. The trade balance remains favourable, the raw silk export market being particularly active.

The Economist
MONTHLY SUPPLEMENT.

New Series.

SATURDAY, DECEMBER 26, 1925.

No. 31.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

The slow, but welcome improvement noted in our survey last month has been maintained. The movement is now seen to have originated with the "heavy" trades—coal, iron and steel—which were the most depressed during the summer and autumn months, the better sentiment obtaining having spread to industry generally. The number of insured workers lacking employment continues to decline, despite the fact that 42 per cent. of insured persons have been shown to be engaged in industries subject to greater unemployment in winter than summer. In five "staple" industries—iron and steel, engineering, shipbuilding, cotton and wool—the decline in unemployment during the last three months has more than compensated for the whole of the increase during the previous eight months, while in a sixth—coal mining—although the figures are much higher than at this time last year, they show a reduction of 103,000 since September. If comparison be made with the figures of a year ago, it will be found that while coal-mining has 59,500 more, all other industries taken together have 24,000 less unemployed, and as the insurable population has increased by some 250,000 in the meantime, the numbers in employment have clearly increased quite considerably.

The present spirit of cautious expectation is very different from the optimism with which the change of Government was hailed a year ago. The more conservative section of industrial opinion, indeed, while admitting the favourable nature of recent developments, is inclined to question the part played by the temporary and artificial stimulus of the coal subsidy. The real test will, in its opinion, come next spring, when the coal-mining industry is dependent once again on its own efforts, and the taxpayer is no longer helping to provide home industry and foreign consumers with cheap fuel supplies.

As regards individual industries, the output of iron and steel was further increased last month. Although production has not regained last year's level, the extremely low relative prices at which these commodities are being marketed (reflecting, in turn, further reductions in working costs this year) seem already to have stimulated demand and placed this country in a more favour-

able competitive position as regards the Continent. Current consumption is at least equal to production. The coal trades have benefited partly as a result of recent weather conditions and partly owing to improved export demand. Engineering continues its slow, steady progress. The cotton trade is still unsettled by falling prices for its raw material, and uncertainty as to the financial position of some of its members, but the woollen textile industries, having now reached a more economic price basis than prevailed 12 months ago, should be in a position to do more business next year. Shipping is making slow headway, and even shipbuilding shows a very slight improvement, though signs of permanent revival are still to seek. In the retail trades, Christmas demand has been active, after an earlier start than usual.

As regards more general indications, the foreign trade figures show a falling-off in British exports, but this reflects the conditions of two or three months ago rather than the immediate present. Wholesale prices are fairly steady. On the Stock Exchange, industrials have risen, partly, but not entirely, at the expense of fixed-interest securities. The note circulation remains higher than last year, and total bank advances are steady, although deposits declined appreciably last month.

Outside Great Britain, the expansion of business in the United States continues without interruption,

while Canadian feeling is decidedly hopeful. Financial uncertainty is a limiting factor in French business. The shortage of working capital in Germany is rather less acute, but in Poland and other Central European States trade remains restricted. In the Far East, political instability still hampers China, but Japanese trade has more than consolidated its recent advance.

The following notes on conditions in various trades and industries call attention to the most striking tendencies:—

HOME INDUSTRIES.

Iron and Steel.—Business has been quieter, as is usual at the end of the year, but the general attitude is one of restrained confidence. The November production figures show a further

MONTHLY BULLETIN OF STATISTICS

ISSUED by the LEAGUE OF NATIONS

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.

FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.

PRICE: Wholesale and Retail Price Index Numbers.

CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.

LABOUR: Unemployment Percentages.

slight increase, pig-iron output at 494,100 tons being the highest figure for five months, and that of steel ingots and castings, at 653,800 tons, the highest for eight months, though both are below the corresponding figures for last year. Current production is, however, balanced by consumption, and some progress is being made in working off surplus stocks. New business in pig-iron is confined at the moment to small lots for immediate delivery. Hematite production shows a noteworthy increase, and in the North-West numerous furnaces have restarted, some works having booked orders running into March of next year. Considerable quantities of semi-finished material continue to come to this country from the Continent. Structural steel remains one of the most active branches, but in the general steel trade orders are somewhat scarce. Business in galvanised sheets remains firm, with most works booked up till March. The tinplate market is a shade quieter, though a fair amount of foreign business has been done, and feeling with regard to next year is most hopeful.

Coal.—Most coal areas are busier than a month ago. The cold weather has sharpened home demand, although snow and fog resulted in delay to transport in some cases. Stocks of house coal are no longer heavy, and as regards the better qualities, at least, satisfactory placing of new orders has been effected. Steam coals have, again, shown strength, and a fair number of contracts have been arranged for supplies in 1926, but at prices well below those of a year ago. The demand for industrial fuel has strengthened during the last week or two. Altogether, the advance of the late autumn has shown no signs of a check so far, but quotations remain at low levels.

Engineering.—Slow but steady progress continues, and the industry closes the year with an appreciably improved outlook. The cheapness of steel is an asset, but the competitive power of the industry on the export side appears to have increased independently of this factor. Except in "depressed" branches orders are satisfactory in number, and the average amount involved tends slowly to increase. The most active branches are the motor-car and cycle and textile machinery industries, the former being booked up for some time to come, while the latter is busy on contracts placed some weeks ago. Agricultural machinery has passed its seasonal peak, but is better employed than a year ago. Shipbuilding is slightly better, chiefly on the cargo side. Marine engineering shows no signs of life. Activity in the locomotive industry is sporadic, but orders are more satisfactory in volume than three or four weeks ago.

Electrical Industry.—The following index of production is copy-right by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association. An explanation of the manner in which it has been computed will be found on page 888 of the *Economist* of November 28, 1925.

INDEX OF ACTIVITY IN THE ELECTRICAL INDUSTRY.

(1920 = 100.)

1924.	Home.	Export.	Total.	1925.	Home.	Export.	Total.

Conditions have improved during the past month over the entire industry. The heavy engineering side is beginning to benefit from the development of new schemes in the Midlands, at London, and at Bristol, where orders have been placed for a new station destined to house over 200,000 kilowatts. In New Zealand and Australia important hydro-electric projects have passed the survey stage. Signs of renewed activity are observable in the small motor branch, and a steady demand obtains for small fractional horse-power motors for export. Makers of transformers and switch-gear are rather less active, after a busy year, but firms specialising in small domestic apparatus and electrical necessities are booked up for the next six months. Radio valve manufacturers are extremely well occupied, and are working in some cases with a long waiting list.

Cotton.—Our Manchester correspondent writes:—During the past month there has been another fall in raw cotton prices, and quotations for yarn and cloth have declined, with resulting

caution in the giving out of orders to spinners and manufacturers. The United States Government has published its final estimate of 15,603,000 bales. If to this is added 1,000,000 bales of linters and the carry-over from last season of 3,400,000 bales, total supplies of approximately 20,000,000 bales are indicated. As consumption is not likely to be more than 15,000,000 bales, including linters, there should be a substantial increase in stocks at the end of next July. In the cloth market the feature of interest has been the revival of demand for India in light fabrics, and a large business has been done. Numerous makers have extended their order lists. Some advices from China have been rather better. There has been no improvement in the offtake for Egypt and the Near East. A fair business has been done for South America. Spinners of yarn are in a worse position. Although the proposal to reduce the working hours from 39½ to 35 per week was not approved, it has been difficult to clear production, and stocks in first hands are larger. It is feared that many mills are having severe losses, and the disclosures relating to the Belgrave failure have caused nervousness.

Woolen and Worsted Trades.—The December wool sales closed with prices from 5 to 7½ per cent. below those of the September-October series, while in overseas centres the decline was still more marked. The end of the year finds wool values decidedly lower than at the beginning of 1925. The decline has been accompanied by an extensive contraction of activity in the woollen textile trades, and has severely tried the finances of many firms, but at to-day's values there is much more confidence and a stronger disposition to buy tops, yarn and pieces. Spinners, for instance, are buying quietly but steadily, and the demand for yarn has increased. With prices on a more economic basis, numerous orders held over during the last few months are likely to find their way to the market.

Boots and Shoes.—Business remains somewhat uneven, but its volume has expanded slightly. A few spring orders have been received, and prospects for the remainder after the turn of the year are regarded as fairly good. The success of the Russian boot took the market by surprise, and supplies have not always been obtainable. Demand is chiefly for the cheaper grades, and although the medium-priced boot finds a sale, there is no demand for the expensive type.

Pottery.—With the completion of Christmas orders the industry has been quiet. Foreign competition tends to increase. **Chemicals.**—Coal tar products continue in active demand at firm prices. The fine chemical group shows little change, but demand for dyestuffs is rather better. Numerous artificial silks concerns have been floated during the past few weeks.

Building Trades.—The building trades are now approaching the bottom of their seasonal curve. A decline was recorded in all parts of the country last month, Scotland and North-West England being most affected.

Shipping.—Conditions in the open freight market have generally been steady. The *Economist's* Index Number of "tramp" freights showed a further slight rise during November, and now stands above the 1913 level for the first time since April. Part of the rise, however, is due to Australian rates, which are temporarily well above those on other routes. Grain chartering has been restricted by fluctuations in wheat prices, but tonnage is firmly held by owners. Recent rates have been fairly well maintained during the present month, and though freights are somewhat irregular in view of the holiday season, there is no marked surplus of vessels on offer.

Retail Trade.—A large London store reports that Christmas buying opened earlier this year than usual. The most active lines have been hosiery, ironmongery, and small furnishings. British-made toys have sold well. Demand for the cheaper grades of Russian boots has been heavy, but the expensive type has not been required, and caution in placing future orders is regarded as advisable. The sale of expensive fur coats has been noticeably good, demand having exceeded that of either of the last two years.

UNITED STATES OF AMERICA.

Underlying conditions remain favourable to production, a seasonal decline in some directions being balanced by increased activity in others. Iron and steel output has again increased, demand from the railroads having expanded. Building operations show a smaller seasonal falling off than usual, while the automobile industry is operating little below capacity. Con-

(Continued on page 52.)

THE ARTIFICIAL SILK INDUSTRY.

(BY A CORRESPONDENT).

THE commercial development of artificial silk by the viscose process being almost exclusively the result of British genius, it will be of interest to examine the position in which the industry stands to-day.

The chief countries producing artificial silk are the United States, Great Britain, Italy, Germany, and France, but rapid developments are being made in other countries, notably in Holland. The estimated world production for 1925 is 185,000,000 lbs, as against 141,000,000 lbs for 1924 and 97,000,000 lbs in 1923. Great Britain's proportion, as the second largest producer, has usually been from 16 to 18 per cent., and this figure gives little idea of the real position. The leading producers in this country are Messrs Courtaulds, Limited, who have subsidiary companies in different parts of the world, notably in America, where they account for 75 per cent. of the output. On account of this Messrs Courtaulds, apart from other British firms on a much smaller scale, are responsible for 50 per cent. of the output of the whole world. It is reasonable, therefore, to suppose that, generally speaking, prices will be controlled from this country. It is important to note this point when considering the position of the industry as a whole and of the British share in particular.

It was unlikely that this enviable position would remain unchallenged, but of all the countries who are strenuously endeavouring to gain the ascendancy, the only one which has attained any great measure of success is Italy. In saying this, one is quite aware of the large output of both America and Germany, but in each of these cases the home markets have hitherto absorbed a very large proportion of the material, and in the world market, as generally known to the textile industries, the only serious competitors of this country are the Italians. Certain companies in this latter country, notably the Snia Viscosa, have recently attained a very high rate of production, and are invading our markets, especially India, to an important degree. We are actually sending less artificial silk yarn into India than Italy is, and Italian imports into England, until materially reduced by the recent duties, were becoming a serious factor. A glance, however, at the trade figures will show that, apart from this competition, our industry is in a satisfactory condition. Taking the average imports for October and November, 1925 (£266,360 and £255,279 respectively), our total takings in a normal year should be slightly over £3,000,000, and as our exports for the first 11 months of 1925 amounted to £4,798,747, it will be seen that the balance of trade will in future years tend to be very much in our favour. When it is appreciated that the average imports for October and November, 1925, are 231 per cent. less than the average for the first 11 months of the same year, the effect will be seen both of the exceptionally heavy imports made to forestall the duty, and of the duty's subsequent restraint of imports. It must not be forgotten that tariffs are dangerous weapons, and may be used with equal or greater force against us.

Thus, with a strong hand in the control of prices, and with a rapidly improving balance of trade, the prospects for the home producer appear excellent. However, the present state of under-production cannot last very long when such a rapid increase is being made in the world output. Estimates for 1926, even though possibly a little "coloured," lead to the conclusion that another very great increase will be made. The brightness and lustre of artificial silk, combined with its moderate price, were the reasons for its first success, and these are sufficient to guarantee an expanding demand, more especially when further advance has been made both in regard to dyeing and waterproofing. However, artificial silk, though not

dependent upon seasonal harvests for its main raw material, is at the mercy of fashion's whims. For these reasons it is likely that the industry, when the present shortage is made up, will in future years be subject to occasional depression. A fluctuating demand is an exceedingly difficult matter for the yarn producer, and it has been said with much truth that those companies which both produce the yarn and manufacture it themselves will be better placed than producers only. With a known demand, the labour costs on the technical process of spinning may be gauged to a minimum.

In any survey of the industry one must point out that several processes of manufacture are used. The most popular is the Viscose or Wood-Pulp system, and this is adopted by Messrs Courtaulds, Limited, Snia Viscosa, and the other great producers. It is not necessary, perhaps, to describe the process, but approximately 45,000,000 lbs of wood-pulp will be utilised in this industry during 1925. The commercial success of the viscose process is due to the comparatively low price of the raw material and the ease with which large quantities can be produced when technical details have been satisfactorily arranged. The other processes used in this country are Cellulose-Acetate (British Celanese, Limited), Cuprammonium (Brysilka), and Nitro-Cellulose (Bulmer Rayon). In these, the basic raw material is cotton treated with acetic acid, copper-ammonia after caustic soda, and nitric acid followed with ether and alcohol respectively. The product resulting from the last three processes has qualities of a better kind than Viscose, but the commercial success has not so far been exceptional. A number of new processes are now being introduced, in most cases modifications of either the Viscose or the Cellulose-Acetate. Their commercial success in this country has not, however, been proved.

The obvious success which has attended the efforts made by Messrs Courtaulds, Limited, has resulted in many attempts to start production both in this country and abroad. Artificial silk production is a most difficult matter, and even when a site with an adequate water supply of the right quality has been found there is required an almost unique combination of chemical and technical textile brains working in close harmony with the commercial or sales side of the business. It was this combination which gave Courtaulds their success. The industry being as yet in its infancy, only a general idea can be obtained as to future demand and price. The particular quality which will be required cannot be definitely predicted, the present tendency being towards the better qualities. It is therefore obvious that the costs of selling an article the future uses of which have largely to be developed will be high, and it is perhaps more certain that much money will be required to be set apart for research both as to uses of the fibre and methods of making it. Machinery must be subject to a possible depreciation far in excess of that engaged on standard textiles where little change takes place for many years. These are some of the difficulties facing the newcomers, and it may be that the rather optimistic estimates of profit and of production dates will be subject to revision.

In conclusion, the artificial silk industry in this country would appear to have, on the whole, an exceedingly prosperous future. Prices are scarcely likely to remain as high as at present, but, on the other hand, a reduction should once again stimulate demand, and the many lines of development as taken up by the public should from time to time cause a return to the under-production situation as it is at present. Artificial silk cannot be regarded as a competitor of cotton, wool and silk. On the contrary, it has been, and will be in the future to an even greater extent, a most important asset to those industries. It is in the mixture of artificial silk with the standard textiles that its great future would appear to lie. Lancashire is rapidly realising this, having trebled her consumption of artificial silk in 1924, and in 1925 having doubled the 1924 takings before September.

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 46.

sumption is keeping step with production, and there is generally an absence of accumulation of stock. A certain amount of forward business is being done, but buying remains predominately conservative, and prices fluctuate within narrow limits. The reaction in stock market prices has passed without appreciable effect on trade and industry generally, the steps taken by the Federal Reserve authorities having apparently been effective.

BRITISH EMPIRE.

The upward trend of business in Canada became more definite last month, and with increased agricultural purchasing power more widespread, a cheerful sentiment prevails throughout the country. The early advent of cold weather interfered with the disposal of the second largest wheat crop on record, but stimulated demand for seasonal goods. The production of iron and steel shows surprisingly rapid expansion, and building construction has increased at a time when a decline was expected. The Indian monsoon which ended last month is regarded as fairly satisfactory, although its course was marred by floods and storms in Southern India and a shortage of rain elsewhere. The cotton crop is expected to be large, but not of high quality. Trade is becoming more active. Money remains easy, although many bazaar dealers are not too well off. No settlement of the Bombay cotton mill strike has yet been reached. Australian conditions are good, the wool sales having passed off satisfactorily, though at a reduced level of prices. Wheat prospects are not so good as a year ago, though somewhat improved by rains during November in Queensland, South Wales, and Victoria. South African conditions are quiet, with a brighter tendency. The daily Transvaal coal output last month was the highest since March, but native labour remains scarce. Building is becoming more active.

SOUTH AMERICA.

Recent heavy rains in Argentina have been unfavourable to cereals, particularly in the northern districts, but a wheat output in excess of last year's is still anticipated. Maize and

fruit have been less affected by recent weather. A seasonal slackening is noticeable in wholesale and retail business. Chilean trade is steadily improving, but that of Brazil is hampered by credit stringency. Mexican business is slightly more active than a month ago.

EUROPE.

French metallurgists have raised their quotations, and consumers are exhibiting caution with regard to future commitments, in view of the prevailing uncertainty as to the financial situation. The latter is also restricting activity business in other markets, especially wool and silk textiles. In Belgium, stocks of coal remain large and owners have submitted proposals for wage reductions. The iron and steel trades are quiet, and the effects of restricted credit are felt in industry as a whole. Unemployment continues to increase in Germany, partly as a result of the seasonal falling off in agriculture and the building trades, and partly to lack of orders in the metal and engineering industries. Textiles and paper, together with most industries producing "consumption" goods, show, however, some improvement. Swedish conditions are promising, the wood pulp and paper industries working to capacity. The Danish and Norwegian situation is, however, more uncertain. Many branches of business remain slack and unemployment tends to increase. Slow but steady improvement continues in Holland. The tone of business in Czechoslovakia is largely optimistic, the sugar industry being particularly active, but unsatisfactory financial conditions are restricting Polish business. Unemployment in Austria again shows signs of increase, industry being dull with the exception of the cotton, electrical, and rubber trades. Italian business shows very slight change, while Spanish trade as a whole is quiet.

FAR EAST.

The uncertainty of the political situation continues to restrict Chinese trade. Business throughout South China is irregular, merchants being unwilling to carry any amount of stock while movements in the interior are interrupted. The continuance of favourable conditions as regards Japanese export trade and the reduction effected in stocks have induced a better feeling in most branches of industry. The production of cotton yarn is higher than at any time in the history of the trade, but steel and engineering remain dull.

MONTHLY BULLETIN OF STATISTICS

ISSUED by the LEAGUE OF NATIONS

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.

FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.

PRICE: Wholesale and Retail Price Index Numbers.

CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.

LABOUR: Unemployment Percentages.

RADIO RISKS

and the remedy—
the C.I.S. Wireless
Insurance Policy

THE CO-OPERATIVE INSURANCE SOCIETY is prepared to issue Policies to owners of Wireless Receiving Sets, indemnifying them against any one or more of the following risks:—

Public Liability. Claims for injury to the person or damage to the property of third parties resulting from breakdown of the installation. Annual Premium, 5/-.

Damage to Premises. Damage caused by the breakage or collapse of the installation to the structure of buildings, whether the owner is landlord or is liable as tenant. Annual Premium, 5/-.

Damage to Apparatus. Loss or damage to the whole apparatus (indoors or out), including loss or damage by fire, lightning, storm, tempest, malicious damage, burglary, housebreaking, larceny or theft. Annual Premium, 5/-.

Any two or more Tables will be covered for an Annual premium of 7/6. The limit of indemnity for any one accident, under Tables 1 and 2, is £500, but may be increased to £1,000 for an Annual Extra Premium of 2/6.

The above Premiums apply only to apparatus not exceeding £50 in value and fixed on or in private dwelling-houses.

Transmitting sets not insured.

For full information as to details of cover rates, etc., see Prospectus ET.27, posted free on application to—

the CO-OPERATIVE INSURANCE SOCIETY LIMITED

ESTABLISHED 1867.

Chief Office: 109, Corporation St., MANCHESTER.

ASSETS EXCEED £3,750,000.

Classes of Business Transacted.

LIFE :: ANNUITY :: PENSION
HOUSE PURCHASE :: BURGLARY
FIRE :: WORKMEN'S COMPENSATION
HOUSEHOLDERS' COMPREHENSIVE
PERSONAL ACCIDENT :: LIVE STOCK
FIDELITY :: PLATE GLASS :: MOTOR

The Sign of Security.

Fire!

In order that its Policyholders in particular and the community in general may be afforded complete protection against all the ills and calamities which may befall them, the Wesleyan and General Assurance Society has, after eighty-four years' existence as a purely Life Office, decided to incorporate Fire and other general forms of Insurance in its undertakings.

Policies are now available to cover, in addition to the wide range of Tables offered in the Society's Life Assurance Prospectus, the following contingencies:—

FIRE INSURANCE : BURGLARY
AND HOUSEBREAKING : PLATE
GLASS : EMPLOYER'S LIABILITY
AND WORKMAN'S COMPENSA-
TION : MOTOR CYCLES AND
CARS : PERSONAL ACCIDENT :
THIRD PARTY RISKS : PROPERTY
OWNERS' LIABILITY : FIDELITY
GUARANTEE, ETC.

YOU should insure with the Wesleyan and General Assurance Society, which is entirely mutual and offers the utmost to all its policyholders in both value and service.

GENERAL RESULTS OF THE YEAR.

In subsequent and particularised sections of this review we shall give in considerable detail the results for last year of the British life, fire, accident and miscellaneous, and marine insurance companies and branches as shown by their published accounts. In this brief preliminary survey we are concerned with the broad effects of the year and its contribution to the resources of British insurance. It is rather misleading to talk or write of "profits" when we are considering the underwriting surpluses of insurance companies, those balances of the annual premiums which remain over after claims, expenses, and unexpired liabilities have been met. In the technical and legal sense they are, of course, profits belonging to the shareholders. But, unlike the profits of an ordinary trading company, they are not, except to a very small extent, available for distribution. These annual profits of insurance—or, as we prefer to call them, these annual surpluses—are the materials, and the sole materials, out of which the powerful structure of insurance is built up. They provide the slowly accumulating reserves for contingencies upon which security rests, and without which insurance, from the public point of view, would be little better than a gamble. In order to achieve security of the highest class, these annual surpluses, when they are earned, are always treated as funds held in trust for the public rather than as cake to be cut up and divided among shareholders. Out of them British taxes are paid, and almost the whole balance, sometimes even more than the balance, is put away to permanent reserve. Dividends are based not on these surpluses, but upon the interest earned by the reserves. This sound system of insurance finance has been taught to the world by the British companies, and no other system will give that endurance and impeccable security which is of the essence of insurance, and without which insurance is a mockery.

Last year the fire insurance offices did fairly well, in spite of rather unfavourable results in the United States. The accident and miscellaneous departments, though not productive of large surpluses, did better than in 1923. Marine insurance remained in the trough of the wave, and showed few, if any, signs of becoming seaworthy. Life assurance was prosperous, but as the bulk of the surpluses in this class of insurance, even in proprietary com-

panies, goes in bonuses to policyholders, it is not a large contributor to profit and loss accounts.

While making up the figures for the table of general results on this page, we have observed certain recognised principles. The underwriting surpluses in the fire, accident, and miscellaneous accounts were arrived at after charging against premiums all the claims paid and outstanding, all expenses and commissions, including those carried to profit and loss accounts, and including colonial and foreign taxes when specified in the companies' accounts, and the amounts required to maintain the reserves for unexpired risks at 40 per cent. of the premium incomes. When the premium income falls the yearly contribution to current reserve is negative, and becomes an addition to the surplus; but when the premium income increases it is positive, and a reduction of the apparent surplus. With marine insurance we have been obliged to adopt a different system. No one knows how a marine account works out except the officials of the individual companies, and they only after an account has been finally closed. For marine surpluses we have taken the amounts transferred to profit and loss by the companies in respect of the latest closed year. For the contribution of life assurance we have taken those amounts which have been disclosed by valuations as belonging to shareholders, and accordingly carried to profit and loss.

So much for surpluses. The interest receipts are those yielded by the available funds, other than life and capital redemption, less income-tax and less debenture interest

payable by the companies. The taxes, which are chargeable against surpluses, are in most cases British taxes only. But where a few companies have lumped all their taxes together and put them into profit and loss account, we have been obliged to follow them. Dividends are those provided in respect of 1924; many of them have been increased as compared with 1923. Increases in dividend are permissible, as and when the interest yielded by the funds increases.

After applying the above principles we find that the total surpluses of the 21 companies in our table amounted to £6,469,747 before charging taxes. Taxes, net, required in the aggregate £1,535,404, so that there remained £4,934,343 as the final surplus from all sources on about £100 millions of premium income (excluding life premiums). The dividends provided for 1924 cost £6,159,661, towards the payment of which the interest receipts on the funds yielded £5,638,288, leaving only £521,373 to be drawn from the surplus. We see, therefore, that the aggregate surplus of £4,934,343 was disposed of as follows:—£4,412,970 undivided and set aside to strengthen reserves, and £521,373 expended in the payment of dividends.

LIFE ASSURANCE.

NEW BUSINESS AND EXPENSES.

A good volume of new business each year is a necessity of healthy life in an assurance office. And ever since the war came to an end the volume of new entrants flowing into our life offices has been remarkably constant. The bumper year was 1920, and one might have expected, and did expect, that with the collapse of the artificial trade boom there would be a considerable falling in the number of young men who desired, or were able, to effect life and endowment assurances. And yet in 1924, after four years of depression, the new business of the life offices was, in the aggregate, not much less than in 1920, and in many instances actually better than in 1920. For purposes of comparison we have left the figures for that bumper year in the following tables of new business, premiums, and expenses, and given in addition those for 1923 and 1924. The new entrants last year were very frequently more numerous than in 1923, and the amounts of new assurance were generally larger. This was partly due to the unusual feature last year of substantial amounts of life and endowment assurance—especially endowment assurance for short terms—taken out by single premiums. We will deal with that feature presently. For the moment it is sufficient to point out that a mass of single-premium business coming along in one year has had two disturbing effects: the total premium incomes have been abnormally increased and the proportions of commission and expenses to premium incomes have been abnormally reduced. It will be obvious that the expenses and commission incurred in connection with a single premium assurance are smaller in proportion to the premium credited in the year of entry than would have been the case had the same amount of assurance been taken out by annual premiums. It is not therefore permissible to conclude that the reduction in the annual cost of carrying on life assurance has been lowered to the extent shown in our tables. There has been a steady reduction—in fact as well as in appearance—since 1920, but it has not, in proportion to premium income, been as great as our figures for 1924 would seem to indicate.

We have outlived the days when it was considered the mark of a heaven-born life assurance manager to rush

after new business in huge volume at almost any cost. New life assurance business, like other kinds of business, can be bought too dearly. But it did cause some surprise early this year, when a strong mutual life office, the National Mutual, declared its intention to limit the amount of new business accepted. The idea, for which there was much to be said, was that the large surplus carried forward undivided by this office belonged in the main to existing policyholders, and that new entrants should not be permitted unduly to encroach upon profits to which they had not contributed. The tentative solution of this difficulty decided upon by the directors was not to accept new assurances for less than £500, though existing policyholders would be permitted to take out additional with-profit policies for £250 and upwards. At the same time, the non-profit tables were revised and made slightly more attractive.

LIFE ASSURANCE AT SINGLE PREMIUMS.

The past year was remarkable for an outburst of assurance, chiefly of endowment assurance for comparatively short terms, at single premiums. This, unlike most developments in life assurance, was the result of spontaneous public demand; by the life offices it was not much liked, and by one or two actively discouraged. It was due to the discovery that in this way one could combine an excellent investment with some relief in both income-tax and super-tax. Suppose, for example, one took out a large endowment assurance policy, payable in ten years or at previous death. The surrender value at a single premium was immediately very high, and one was able to borrow at once from the office about 90 per cent. of

the premium, paying only 10 per cent. in cash. Income-tax at half the standard rate would be allowable in respect of 7 per cent. of the sum assured; subject to the limitation that the total life assurance premiums on which abatement was permitted should not exceed one-sixth of a policyholder's income. The chief gain was in respect of super-tax, for as some 90 per cent. of the single premium was borrowed from the life office, and interest at, say, 5½ per cent. was paid annually upon it, the interest charge was allowed as a deduction from total income of the policyholder upon which super-tax was levied. The investment, after making allowances for the savings in income and super taxes, worked out favourably, and there was at one period in the year a great rush for this unusual kind of policies.

We have taken out the figures of 25 life offices (as samples) in order to show how great was the volume of this single-premium assurance. The most striking example is that of the Equity and Law, whose new single premiums amounted to as much as £309,660, and the new annual premiums to no more than £22,766. The London Life also had a very high proportion of its new premiums in single payments, for, of course, the whole premium would be credited as paid and the amount borrowed set down as a loan on the other side.

It may be doubted whether this class of business will be a permanent feature of life assurance accounts. The life offices do not care for it, and one or two of them have increased the rate of interest charged on loans in connection with it. The practice of granting loans to policyholders against surrender values at low rates of interest was instituted as a genuine means of assisting policyholders, and not as a device for enabling comparatively wealthy people to reduce their payments of super-tax.

of 2s in the £ on the gross interest is the equivalent of nearly $\frac{1}{2}$ of 1 per cent. in the net yield.

The actual net yields on the mean funds for the year are curiously uneven. They range from about $\frac{1}{4}$ per cent. for an office with a very low rate of expenses up to about $\frac{1}{2}$ per cent., and even higher with some companies. Methods of investment play a great part in the yield, and upon this enthralling subject there are almost as many theories as there are actuaries. With the improvement in security values which began in 1920, and has now, perhaps, slightly passed the peak, new money cannot be invested to quite the same advantage as it could a few years since. We may therefore expect rates of interest as shown by the companies' accounts to be fairly stable, the lower yield on new investments being offset by the reduced charges for income-tax. The figures given in our tables show slight reductions in many cases when 1924 is compared with 1923, but decided advances when the yields of 1924 are set alongside those for 1920.

INVESTMENTS IN GOVERNMENT SECURITIES.

We are able to give in this issue a comparison between the amounts of life office funds invested in British and Colonial Government securities at the end of last year, and at the end of 1923. It is clear, taking the companies as a whole, that British Government securities have become rather less popular, and Dominion, Indian, and colonial securities rather more popular. There has not been in many cases an actual falling off in the amounts invested on the security of the British Government; the proportions of such amounts to total funds are lower,

which suggests that the new money available during the year for investment has partly, in some cases wholly, gone elsewhere. The yield on British Government stocks was less attractive last year than it has been in recent years, and life office managers have to watch closely their interest yield.

There is great divergence in practice among the companies. Some offices, and very good ones, continue to regard the stocks of the British Government as their main stand-by; with others, not less good, there is a strong tendency to look elsewhere. Perhaps the memory still lingers of those bitter days of depreciation, when the stocks with the most gilded edges had to be written down the most remorselessly. The Scottish Amicable continues to support the Home Government with 60 per cent. of its funds, though the proportion has fallen from 62.5 per cent. At the opposite end of the scale is that sound little office the Friends' Provident, which has reduced its holdings of Government stocks from 8.9 per cent. of its funds to 6.7 per cent. No other company takes quite so indifferent a view of the attractiveness of our War Loans—it may be that the Society of Friends holds aloof from all war loans—but it is rather surprising to find the "Old" Equitable reducing its holdings of Government securities from 14.7 per cent. to 12.1 per cent. In this instance the reduction was actual as well as relative. On the other hand, the huge holdings of the Prudential have been increased in amount, and exceed £70 millions, though the proportion to total funds is slightly less at 42.6 per cent. All the Scottish offices remain faithful to the Government, with some 40 to 60 per cent. of their life funds in its charge, and no one would be so foolish as to suggest that the managers of the Scottish life offices do not understand their business. Most of the English mutual offices also remain faithful to the extent of from 30 to 40 per cent. of their funds. But one can discern no rule; each office is a law unto itself. For instance, the Sun Life, a proprietary company, has cut down its British Government holdings from 57.2 per cent. to 48.4 per cent., while the Eagle, Star, and British Dominions, also a proprietary company, has invested an additional two millions with the Government, and has raised its percentage from 35.8 per cent. to 49.1 per cent. There is no rule. All we know is that the British life offices still have about £200 millions invested in the securities of their home government, and we may feel sure that should the emergency arise they would support the issues of the British Government as actively in the future as they did in the years of war.

MORTALITY EXPERIENCE.

Nothing is more certain than that the rates of mortality of assured lives are steadily improving, and that what is called the profit from mortality is of increasing value to life offices and to their with-profit policyholders. Revised annuity tables are already coming into use, for, in the case of annuitants, the selection is against the issuing office, which must endeavour to make sure that its charges are adequate to cover the cost of annuities granted. With life assurances, on the other hand, the selection is with the office, and the more skilled its medical advisers prove to be the lower the mortality experienced. That would be to the disadvantage of the assured, were it not for the with-profit system, which is designed to give back to participators in bonuses the profits which are earned from improved mortality, as from the other sources of surplus

interest and lowered expenses. We shall come before very long to revised mortality tables for assured lives as for annuitants, yet one may doubt if much change will be seen in the rates of premium charged for with-profit assurance, though the non-profit rates, which are directly competitive, will doubtless be subject to periodical testing and revision. There is, perhaps, no business in existence which is so truly co-operative as with-profit whole life and endowment assurance, and none in which participants are more certain to benefit under present-day conditions.

We have collected from the reports of life offices examples showing the actual experience of death claims in comparison with the claims "expected" and provided for in the tables employed—tables which now relate to the latter half of the nineteenth century and not to the first quarter of the twentieth. These results broadly show that the amounts paid last year in death claims were from 60 to 70 per cent. of those anticipated in the office calculations.

ABSTAINERS' AND GENERAL.—This office states that, excluding war casualties, its mortality experience during the past 41 years has been 44 per cent. of the rates given in the tables excluding war casualties.

CLERICAL, MEDICAL AND GENERAL.—During the year ended June, 1924, the death claims were 62 per cent. of the amounts allowed for by the tables.

EQUITY AND LAW.—The death claims paid were 64 per cent. of expected amount.

FRIENDS' PROVIDENT.—This office gives the average mortality for the past five years at 61 per cent. of the expectation, and the rate for 1924 as 67 per cent.

GENERAL LIFE.—Mortality during 1923 71 per cent. of that allowed for.

LONDON LIFE.—Death claims 59.9 per cent. of amounts expected.

LEGAL AND GENERAL.—The death claims of this office in 1924 in amount were 71.2, against 62.9 per cent. in 1923, of that expected.

NATIONAL PROVIDENT.—Last year's claims paid at death were 63.5 per cent. of the amount allowed for.

NORWICH UNION LIFE.—The corresponding percentage for this office was 71 per cent.

SCOTTISH AMICABLE.—The percentage of actual death claims to claims expected in 1924 is given as approximately 69 per cent.

SCOTTISH LIFE.—The mortality was 63.5 per cent. of the amounts shown by the tables.

SCOTTISH PROVIDENT.—The death claims paid last year were less than 78 per cent. of the amounts expected.

SCOTTISH WIDOWS.—The death claims in 1924 were about 75 per cent. of the expectation.

UNITED KINGDOM PROVIDENT.—In the temperance section the death claims paid last year were 54.1 per cent., and in the general section 62.7 per cent., of the amounts allowed for by the tables. For both sections taken together the mortality rate worked out at 65.6 per cent. of that expected.

UNIVERSITY.—The death claims in 1924 were 50 per cent. in number and 69 per cent. in amount of those expected.

VALUATIONS AND BONUSES DECLARED.

It happened that comparatively few of the offices which value after three and five-year intervals issued valuation statements made up to the end of 1924. Those that did included the Guardian, Law Union and Rock, Royal, University, and Gresham. The others, whose reports supply our summaries this year, made their usual annual valuations. The results both of the annual and the periodical offices are uniformly favourable. Relieved of the incubus of depreciated assets, which worried the life assurance offices for so many years, the actuaries find themselves able to recommend the distribution of bonuses with relaxed hands. There has been of recent years a substantial appreciation in security values above the points to which they had been written down, and grave caution has properly been exercised in dealing with this apparent profit. The general rule has been not to distribute it;

rather to treat it as a reserve to be carried forward against the contingencies of the unknown future, or to leave as a hidden reserve with the same end in view. It does not matter much in principle which course is adopted so long as profit, apparent or hidden, on revaluation of assets is not divided among policyholders or shareholders. In the hands of the offices the undivided reserves remain fructifying and earning surplus interest for distribution in the future.

The profits from interest earned above the valuation rate (now usually 3 per cent.) and the profits from light mortality are most substantial. Let us take one example from a periodical valuation, that of the Guardian. The total surplus shown on five years was £648,349, of which £202,536 consisted of profit on mortality. The average rate of interest earned by the funds during 1920-1924 was £4 7s 6d per cent. net, after deducting income-tax, as compared with a net rate of £3 17s 9d per cent. during the previous five years, 1915-1919, and a valuation rate of 3 per cent. The margin nowadays of profit to be derived from economies in expenditure is less than it was before the war, but the other sources of profit—light mortality and surplus interest—are substantially greater.

We have entered upon a period of bonuses to with-profit policyholders at materially higher rates than they were before 1914. A dozen years ago an office congratulated itself if it were able to maintain a flat rate of bonus of 30s per cent. per annum on sums assured and previous bonuses. The flat rate of the immediate future to which we are tending is about 40s per cent. per annum. Some offices have already exceeded that rate, others are reaching the stage of contemplating it. The annual bonus to ordinary branch policyholders of the industrial life offices is now £2 per cent. on sums assured, which some of the companies provide easily and others not so easily. The Royal, which for 60 years has kept up, in good and bad times, a simple reversionary bonus of 30s per cent. per

annum—and held on to it all through those evil years of depreciation at some cost to the shareholders—is contemplating, in cautious fashion, a higher level—we hope for the next 60 years. In this matter actuaries and managers have little voice in determining the future. All depends upon peace between the nations and sense among the world's rulers in the place of folly. In so far as human eyes can discern, the prospects before the British life offices and their participating policyholders were never more rosy than they are at present. The bonuses which are being declared are well secured, and can, without doubt, be maintained if the civilised nations keep clear of the wretched business of cutting their own and one another's throats.

ATLAS.—Although the three-year period between bonus distributions does not end until December 31st of this year, a valuation of assets and liabilities was made as at December 31, 1924. The basis for assurances was the British Offices OM (5) table, with 3 per cent. for with-profit and 3½ per cent. for non-profit business. The total surplus shown was £144,973, including £33,436 brought forward. This sum was apportioned as follows:—£15,000 to strengthen the valuation, £3,491 for interim bonuses, £13,586 to proprietors (percentage of premiums in lieu of profits), and £112,896 carried forward. The rate of interim bonus payable with claims for the current year remains at 36s per cent. on the sum assured and existing bonuses.

BRITANNIC.—In the ordinary branch the annual valuation for 1924 was made by the OM table, with interest at 3 per cent. The surplus was £200,043, including £58,280 brought forward. In the industrial branch the English Life Table (No. 6) was used, with interest at 3½ per cent. For monthly premium business the valuation was by net premiums; for weekly premium business, 39 per cent. of the premiums was reserved under whole-life policies, and 37½ per cent. under endowment assurances. After eliminating negative values, the margin of premiums reserved was 39.5 per cent. on weekly business, as compared with 38.1 per cent. for 1923. The surplus of

the industrial department was £114,780, including £34,833 brought forward. The joint surplus was allocated as follows:—£115,478 to participating policyholders in the ordinary branch; £30,000 to the staff pension fund; £72,000 to profit and loss; and £97,345 carried forward. The reversionary bonus to ordinary branch with-profit policyholders for 1924 was £2 per cent., as against 36s per cent. for 1923, 30s for 1922, 26s for 1921, and 24s for 1919 and 1920.

FRIENDS' PROVIDENT.—A valuation for the five years to December 31, 1924, was made by the OM (5) table, with 3 per cent. interest. Annuities were valued by the new Life Annuity tables, which involved an increase in the liability of £53,400. The total surplus was £464,326, including interim bonuses paid during the five years. The compound reversionary bonus declared on new series whole-life and endowment assurances was 36s per cent. per annum, as compared with 30s per cent. per annum in 1919. The distribution, with interim bonus, cost £439,924, leaving £24,402 to be carried forward. Interim bonuses during the current five years will be at the full rate of 36s per cent. per annum.

GRESHAM.—A valuation was made for the five years ended December 31st last. The foreign securities and liabilities in foreign currencies were revalued, and the amount of the funds written down by £786,010. This decrease does not represent loss since the reduction in the sterling value of currency securities is accompanied by a corresponding fall in the liabilities under policies in the same currencies. The assurances were valued by the Institute HM table with 3½ per cent. interest, against a net rate of interest earned in the five years of £4 8s 6d per cent. The death claims were 79 per cent. of those expected by the tables. There was a surplus of £517,144 on funds of £6,263,909. The surplus was apportioned as follows:—£405,000 to policyholders; £45,000 to shareholders (in addition to £5,594 required to pay the annual 5 per cent. dividend on the paid-up capital); £50,000 to staff pension fund, and £11,549 carried forward. The reversionary bonuses range from £1 5s per

cent. per annum on recently effected assurances to £2 10s per cent. per annum in the case of those of the longest duration.

GUARDIAN.—A valuation for the five years ended December 31st last was made by the British Offices OM table, with interest at 3 per cent. The actual rate of interest yielded by the fund was £4 7s 6d per cent. net, as compared with £3 17s 9d per cent. for the five years 1915-1919. Mortality profit during the five years was £202,536. The total surplus on funds of £5,104,257 was £648,349, after restoring to the life fund £163,000 from the investment reserve fund. The surplus (including £16,514 paid in interim bonuses) was apportioned as follows:—£500,000 to policyholders, £125,000 to proprietors, and £39,863 carried forward. The amount apportioned to policyholders five years earlier was £165,404.

LAW UNION AND ROCK.—The valuation as at December 31st last, covering five years, was made by the British Offices OM table at 3 per cent., against £4 12s 1d per cent. net yielded by the funds. The surplus was £858,715 on funds of £6,449,153, of which £95,690 was carried to the shareholders' profit and loss account, £692,674 divided among policyholders, and £70,351 carried forward. The reversionary bonus declared on sums assured and existing bonuses was at the rate of £2 5s per cent. per annum. At the 1919 valuation the surplus was carried forward undivided.

LONDON AND MANCHESTER.—The annual valuation was made for the year ended March 24th last. In the ordinary branch the basis was the British Offices OM table, with 3 per cent. interest, net premiums being taken credit for. For the industrial branch the English Life table No. 6 was taken, also at 3 per cent. interest. Credit was taken for not more than 61½ per cent. of the office premiums in the case of whole-life assurances, and not more than the net premiums in the case of other classes. The gross surplus of both branches was £212,135, including £64,582 brought forward. The directors declared, at a cost of £69,908, a reversionary bonus of £2 per cent.

for the year on all existing with-profit policies; £35,000 was transferred to the staff pension fund, £32,933 to the shareholders, and £74,294 carried forward. The reversionary bonus for 1923-24 was £1 18s per cent., as compared with 32s per cent. for 1922-23, 26s per cent. for 1921-22, and 24s per cent. for 1919-20 and 1920-21.

LONDON LIFE.—The annual 3 per cent. valuation for assurances by the British Offices OM (5) table allowed the rates of reduction of premium to be increased by two, so that for the year beginning July 1, 1925, the rates for fully-participating policies will range from the equivalent of 133 per cent. for the First Series to 52 per cent. for the Nineteenth Series. The reversionary bonus, in respect of policies with right to full participation, was 36s per cent. of the sums assured and existing bonuses, as compared with 35s per cent. declared each year since 1914. The average rate of interest earned was £4 9s 3d per cent. net. A valuation of Stock Exchange securities showed a margin over the book values of £502,000, which, with reserves and unappropriated balances, made a total margin over the actuarial reserves of £835,000.

NATIONAL MUTUAL.—The annual valuation was made by the British Offices OM table for assurances, with 3 per cent. interest. The assets were revalued, and showed a balance of profit on securities revalued or realised of £117,019. The gross surplus on funds of £4,108,000 was £654,576, of which £76,530 was divided among policyholders, and £575,290 carried forward, as against £468,531 brought in. The reversionary bonus for 1924 was at the rate of 42s per cent. on sums assured and existing bonuses (the same rate as for 1923), and the interim bonuses payable on claims during the current year will be at the same rate.

PEARL.—The valuation for 1924 of the ordinary branch was made by the HM table, with 3 per cent. interest, net premiums being credited. The surplus was £507,661, including £43,405 brought forward. The reversionary bonus for the year was £2 per cent. on sums assured, as compared with 36s per cent. for 1923, 30s per cent. for 1922, 26s per cent. for 1921, and 20s per cent. for 1920.

In the industrial branch the valuation was by the English Life Table No. 6, with 3 per cent. interest, the percentage of premiums reserved for expenses being 36.3 per cent. on the average. The surplus in this branch was £284,851, including £51,816 brought forward. The total surplus of £792,512 was appropriated as follows:—£346,658 to participating policyholders in the ordinary branch, £216,664 to profit and loss, £100,000 to staff pension fund, and £129,190 carried forward.

PIONEER.—The valuation for the year ended March 31 last was made by the HM table in ordinary branch, and the English Life Table No. 8 in the industrial branch, with interest at 3½ per cent. The proportion of office premiums reserved for expenses in the industrial branch was raised from 32½ per cent. to 34 per cent. The surplus in the ordinary branch was £5,159, and in the industrial branch £3,748. These surpluses were carried forward. No with-profit policies are issued.

PRUDENTIAL.—The annual valuation was made by the HM table in the ordinary branch, and the English Life Table No. 8 in the industrial branch at 3 per cent. interest. The net yield on the combined funds was £4 17s 6d per cent. The ordinary branch funds of £73,028,988 showed a surplus of £2,423,829, and the industrial branch funds of £88,574,775 a surplus of £3,669,752. The net ratio of expenses and commissions to premiums in the industrial branch was 27.86 per cent., as against 40.5 per cent. in 1920. In the ordinary branch a reversionary bonus was declared for the year of £2 per cent. on sums assured, as compared with the same rate for 1923, 32s per cent. for 1922, and 26s per cent. for 1921. The ordinary branch surplus was apportioned as follows:—£1,660,648 to participating policyholders, £250,000 to investment reserve fund (making it £3,250,000), £183,070 to profit and loss, and £330,111 carried forward. In the industrial branch the surplus was apportioned as follows:—£250,000 to investment reserve fund (making that fund £2,500,000), £1,719,301 set aside to provide a bonus for industrial policyholders, £1,152,952 to profit and loss, £387,097 reserved for a bonus to the outdoor staff, and

£160,402 carried forward. The bonus to industrial life policyholders took the form of a contingent reversionary bonus vesting after 15 years from the date of the policy of £1 10s per cent. on the sum assured, added to all policies issued since January 1, 1923, and on which premiums were being paid on December 31st last. The bonus will be calculated on the amount payable on a claim arising by death or maturity provided the policy has then been 15 years in force. In addition, these policies on becoming claims after they have been not less than five years and under 15 years in force will share in any interim bonus which may be declared.

REFUGE.—The annual valuation in the ordinary branch was made by the HM table, with interest at 3 per cent. The surplus was £1,276,317, of which £545,669 was carried forward. The reversionary bonus to ordinary with-profit policyholders was at the rate of £2 per cent. for the year of sums assured as compared with 38s per cent. for 1923, 32s per cent. for 1922, and 28s per cent. for 1921. The industrial branch was valued by the English Life Table No. 8 with 3½ per cent. for weekly whole life assurances, and 3 per cent. for the remainder of the assurances. The surplus was £40,994.

ROYAL.—The valuation for the five years ended December 31st last was made by the British Offices OM and OM (5) tables, with interest at 3 per cent. Annuities were valued by the new 1924 tables with interest at 3 per cent. The life funds of £16,607,520 showed a surplus of £1,611,626, which was apportioned as follows:—£1,170,009 to with-profit policyholders, £130,000 to shareholders, and £311,617 carried forward. The reversionary bonus will be at the rate of £1 10s per cent. per annum of sums assured. This rate of bonus has been maintained for 60 years. The actuary states:—"After giving the fullest consideration to all the circumstances of the situation, and after making special investigations and calculations with the aid of tables constructed to represent the mortality actually experienced by the company, I feel justified in anticipating that in the absence of national or international catastrophes, bonuses will for

the future be definitely maintained at a higher level. I recommend, therefore, that interim bonuses should be paid at the rate of 30s per cent. per annum for 'Royal' participating policies terminated before May 1, 1925, and should then be increased to the rate of 35s per cent. per annum for 'Royal' participating policies terminated in the period of twelve months ending April 30, 1926, and that the subsequent rates should be specially considered and determined from year to year."

UNIVERSITY.—At its valuation five years ago—for the period May 1st to April 30, 1920—this life office, which is now associated with the "Old" Equitable, carried forward its surplus undivided, so that bonuses to policyholders were temporarily suspended. The new valuation for the five years ended April 30th last by the British Offices OM (5), on a 3 per cent. basis, shows that the profit-earning position has been restored. The surplus was £161,622 in excess of liabilities of £947,417. Of this surplus £101,622 is to be divided among policyholders, £11,207 goes to the proprietors' fund, and £48,793 is carried forward. Then reversionary additions to with-profit whole life, and endowment assurance policies, vesting when six years' premiums have been paid, are at the rate of £2 10s per cent. per annum of sums assured. In 1915 and 1910 the reversionary bonuses were at the rate of £1 10s per cent. per annum, and in 1905 at the rate of £2 5s per cent. per annum. A net profit on securities realised was made of £16,361, which forms part of the carry-forward of £48,793.

WESLEYAN AND GENERAL.—The annual valuation was made in the ordinary branch by the British Offices OM table, at 3 and 3½ per cent. interest, and in the industrial branch by the English Life table No. 6, at 3½ per cent. In the industrial department 34.38 per cent. of the premiums was reserved for expenses. The surplus in the ordinary department was £107,617, and in the industrial department £23,704. In the ordinary branch £71,216 was allotted to policyholders as a reversionary bonus of £2 per cent. on sums assured, £31,401 being carried forward. The corresponding reversionary bonus for 1923

was 36s per cent., for 1922 30s per cent., and for 1921 24s per cent. Bonuses do not vest until a policy has been two complete years in force.

FIRE INSURANCE.

A FAVOURABLE YEAR GENERALLY.

In spite of reduced premiums in the United States and Canada, and underwriting results in these countries a good deal less favourable than in 1923, the past year over the whole business of the British fire offices has been fairly good. Home and foreign fields were free from serious disaster, and the margin of profit, after allowing for current liabilities, has made up to some extent for the comparatively poor surpluses yielded by America. We give the premiums, claims, expenses, and underwriting results (after providing for unexpired risks on the basis of 40 per cent. of the premiums) for the years 1920, 1922, 1923, and 1924. Last year there was in some cases a reduction in premium incomes. This was chiefly due to a falling off in United States incomes, partly through the re-insurance of business by one or two companies—notably the British Dominions—and partly through increased competition with native American companies. It was pointed out by Mr Rutter at the annual meeting of the London and Lancashire that the American companies are expanding rapidly in their country by writing larger and freer lines, and are so making more difficult the task of British companies in seeking good and profitable business.

The reduction in premium income, when it occurred, released corresponding sums from the reserve for unexpired risks, and to this extent helped out the margin of

GRESHAM LIFE OFFICE

Extract from the 76th Report of the Directors on the operations of the Society for the twelve months ending 31st December, 1924.

POLICIES ISSUED - 4,138 for £2,235,366
NEW ANNUAL PREMIUMS (Net) - - £98,768

Founded in the first half of the last century, the GRESHAM has paid to policy holders in Claims & Bonuses over £41,000,000.

SPECIAL FEATURES.

1. Comprehensive Family Policies, with Guaranteed Income of 10 per cent.
2. Endowment Assurances with Guaranteed Premium reductions and Options at maturity.

General Manager & Secretary.

IS YOUR INCOME SAFE?

Dividends have a habit of crumbling. No matter how carefully you arrange your investments, you can never be sure that next year will not find you worse off than you are to-day. Can you afford to take the risk?

You can get a guaranteed income for life if you purchase a Canada Life Annuity. It is, humanly speaking, equivalent in safety to a Government pension. It cannot shrink. What you contract to get is paid you punctually. And you get a much larger income.

FOR INSTANCE—

A man of 62 who takes out a Canada Life Annuity for £1,000 gets a yearly income of £100 12s. 1d. A woman of 67 gets a yearly income of £101 12s. 6d. for the same investment.

OVER 10% PER ANNUM

Other ages pro rata, on equally generous terms. You can invest any amount from £100. The Assets of the Canada Life Company are over £21,000,000, and are under direct Government supervision. Write at once for full particulars to the Canada Life—the oldest Colonial Life Assurance Company, and the office that gives the best value for Annuities.

Write to-night (stating age) to J. R. Wandless, F.I.A.

premiums over claims and expenses. It will be seen that the surpluses, in proportion to premiums, were generally higher than in 1923. The Alliance, which eschews the United States, with their high premiums and their perils, had a striking surplus of 22.5 per cent. of the premium income due to the abnormally low claims ratio of 33 per cent. This surplus of 22.5 per cent. compares with 15.2 per cent. for 1923, and 10.3 per cent. for 1922. The Guardian, another company which keeps clear of America, had a surplus of 14.9 per cent., as compared with 11 per cent. in 1923 and 5.1 per cent. in 1922. The London and Lancashire, thanks to its fairly good results in the United States, showed a surplus on its whole business for last year of 13.1 per cent., as against 13.4 per cent. in 1923 and 11 per cent. in 1922. The North British, another company which did well on the other side of the Atlantic, had a surplus of 9.6 per cent. of its premiums, as compared with 8.8 per cent. in 1923 and 7.5 per cent. in 1922. Neither the Royal, nor its ally the Liverpool and London and Globe, did quite so well last year as the year before, though both showed considerably better results than in 1922. Perhaps the most interesting feat of all was that of the Commercial Union. It made a small loss on its very large business in the United States, yet by its successes elsewhere—and, one may suspect, by judicious reinsurances on this side of American risks—made a final surplus of 7.1 per cent. over the whole of its retained premium income of £8.3 millions sterling. This result compares with 7.4 per cent. in 1923 and 6.6 per cent. in 1922. The small and well-managed Scottish Union did relatively better than any other British company in America, and showed on its total net premium income a surplus of 13.9 per cent., as against 9.8 per cent. in 1923 and 7.9 per cent. in 1922.

On an aggregate premium income for last year of just £45 millions, the average surplus of all the companies in our table was 9.2 per cent., after allowing for the claims, expenses, and reserve for unexpired risks. It was quite a good result, and enabled the resources of the companies to be increased by about four millions.

POOR RESULTS IN AMERICA.

We have already discussed the results shown by America in relation to the total business of the fire offices. In our table below we give details for three years: 1924, 1923, and 1922. With the exceptions of the Scottish Union Company and the British Dominions, they were substantially worse last year than in 1923. This is especially noticeable with the big companies. The Royal had a surplus of 3 per cent. of its premiums as against

7.2 per cent., the Liverpool and London and Globe had a surplus of 1.9 per cent., as against 2.9 per cent., and the London and Lancashire dropped from 11.3 per cent. in 1923 to 6.7 per cent. in 1924. The North British did not decline very far with its surplus of 5.3 per cent., as compared with 6.1 per cent., but the Commercial Union, which had in 1923 a surplus of 3.9 per cent., had to admit a fractional deficiency for last year. The British Dominions Company boldly reinsured a large portion of its American risks, and came out with a deficiency of 1.4 per cent., as compared with a serious deficiency for 1923 of 8.4 per cent.

Though the results as published in the United States, and recorded by the Insurance Departments of the several States, are net there, it does not follow that they are final in the British accounts. It is well known that considerable changes are made by the administrations in this country, and reinsurances effected which materially alter the character of the contribution of America to the final results. We cannot, as the individual companies can for their own business, go behind the official American figures, though we may suspect them of not revealing the ultimate results. Taking the figures available to us, the net premium income of British—and British Colonial—offices in the United States last year was £32.3 millions, as against £34.7 millions in 1923, and the surplus was £805,000 (2.5 per cent.), as compared with a surplus in 1923 of £1,386,000, or 4 per cent. of the premium income.

THE LONDON GENERAL INSURANCE COMPANY LIMITED

MORTGAGE LOANS AND INVESTMENT CERTIFICATES

A System of House Purchase by Easy Payments

The Company has paid in claims over £1,000,000, and has advanced to Policy and Certificate holders for purchase of property over Half-a-Million Pounds.

Prospectuses and full particulars on application to any of the Company's Representatives, or to the

HEAD OFFICES :
City House, 158-160, City Road, London, E.C.1

The Saving Power of a good Life Assurance Policy

is judged by the Bonus declared and the financial strength of the office issuing the policy.

THE BRITANNIC ASSURANCE COMPANY, LTD., is eminently satisfactory in both respects. The Reversionary Bonus declared for 1924 was £2 per cent. The substantial margin of interest earned over the rate assumed in the Valuation renders the possibility of maintaining this high rate almost a certainty, while the Funds, amounting to £10,000,000, are an indication of careful and wise management.

ACCIDENT AND MISCELLANEOUS INSURANCE.

IMPROVEMENT IN AMERICA.

In the wide categories of accident and miscellaneous insurance are included nowadays almost numberless branches of business which, in the aggregate, rival fire insurance itself in importance. We may take it that the total premium income derived from accident, workmen's compensation, motor insurance, burglary, plate glass, boiler, and so on amount for the score or so of leading British offices to about £43 millions sterling. The United States, as with fire insurance, make the largest contribution through the subsidiaries of such companies as the Employers' Liability, the Commercial Union, the Royal, Liverpool and London and Globe, the Phoenix, General Accident, and the London and Lancashire. It follows, therefore, that the results shown by America are of high importance. Next to workmen's compensation in this country and in the United States comes motor-car insurance, which since the war has expanded enormously. In this country, as the result of trade depression, the premium income from workmen's compensation has fallen off, whereas the premiums from motor cars have mounted up, and are now the most considerable single item in the office accounts. The companies distinguish in their reports between workmen's compensation in the United Kingdom and outside of it, but all the miscellaneous classes are put together, so that one cannot tell, for example, how motor insurance in this country compares in profit with similar kinds of insurance in America. This does not affect, however, the broad results, which are all that we can be concerned with in this brief review.

Last year it was explained that the very large workmen's compensation business transacted by British com-

panies and their subsidiary companies in the United States had become unprofitable, and that the official rates were being revised by the various State Insurance Departments. The companies are not allowed to fix their own rates; this is done for them by the insurance superintendents, after taking into account the experience of the offices over a series of years. The revision of rates was undertaken during 1923, and the new rates came into operation in practically all the States between January and July of last year. The majority of the revised rates did not become effective until April, May, June, and July, while those in the great State of New York did not come into operation until January of 1925. It follows that the full effect of the revision was not apparent last year, and will not be fully seen until the accounts are made up and presented for 1925. Nevertheless there was a distinct improvement, and several of the companies with large American commitments did not repeat last year their highly unfavourable experience of 1923.

The company with the largest American business is the Employers' Liability. Last year its final results for all business showed a surplus—after provision for claims, expenses, and reserves for unexpired risks on the basis of 40 per cent. of the premiums—of 1.9 per cent. of the premiums as compared with a serious deficiency for 1923 of 4.9 per cent. of the premiums. The Commercial Union, which through its subsidiary the Ocean Accident has the largest aggregate accident and miscellaneous business, showed a surplus of 3.9 per cent. of its premiums, as against a surplus for 1923 of 2.1 per cent. The Royal had a surplus of 3.9 per cent., as against 3.2 per cent., and the Liverpool and London and Globe a surplus of 4.3 per cent., against 1.8 per cent. On the other hand, the Phoenix, with the London Guarantee and Accident, showed a deficiency of 1.1 per cent., the same deficiency as in 1923, and the British Dominions had a surplus of no more than 1.4 per cent., as compared with 7.4 per cent. in the earlier year. The Scottish Union, though

less successful in 1924 than in 1923, had the excellent surplus last year of 15.5 per cent., as against 20 per cent. The distinguished record of this company, both in fire and accident insurance last year, shows how it is possible for a small office to set an inspiring example in careful management to its big brethren. The net result of all the companies in our table for 1924 was a surplus of 3.4 per cent. on an aggregate premium income of £43 millions.

MARINE INSURANCE.

NO SIGNS OF BETTER CONDITIONS.

There are no immediate prospects of improvement in the condition of the marine insurance market. The trade depression involves a reduction in the employment of ships, which in turn means fewer ships to be insured, and less cargo to be covered. The insurance market expanded enormously during the war, and though it has very considerably contracted since, is still much larger than is required to do the business which is offered. The result is competition for the insurance of hulls and cargoes in excess of what is healthy, and a tendency on the part of many underwriters to write large lines at inadequate rates. Under conditions such as these, the best that individual underwriters can do is to move warily, to limit their commitments, and to strive to avoid losses.

Accounts are issued by the marine companies in two forms. In one of them—in our view the best and simplest—a marine insurance account is kept open for two years, and is then closed by carrying to suspense a sum judged by the underwriter to be sufficient to meet future liabilities. The net result is, then, the estimated profit or loss. The other method is to give for each year the total income from premiums and the total outgoings for claims and expenses, and to carry to profit and loss some amount—it may be a profit or a loss—which is judged to be the result of the latest amount actually closed in the office books. By the first method one can see how the marine underwriting of a particular year has approximately worked out. By the second method one has no data for judgment concerning a particular year. All that can be done is to give the premiums, claims, and expenses of a series of years, and see how the series has worked out. One company, the London and Lancashire (which owns the Marine and Standard companies), has adopted the fire insurance system of accounts, and declares the result to be satisfactory in showing the working out of its marine business. Under this system the premiums for a year are given, then the claims paid and outstanding, then the expenses, and a provision is made for unexpired liabilities on the basis of 40 per cent. of the premium income. We do not find, however, that other marine companies are willing to admit the adequacy of this method, though its employment is practically universal as giving the substantially correct underwriting results of fire and accident insurance business.

The results of five companies who keep their accounts open for two years, and then estimate the profit or loss on the closed account, are given in the table below. We have taken the figures for five years in each case, from 1918 to 1923 inclusive. Of these five companies one only, the British and Foreign, shows a profit for each year. The others reveal deficits in some years and no profits in others. All show large reductions in premium since 1918, which was, of course, to be expected.

INCREASE IN ESTATE DUTIES

Life Assurance provides an excellent means of obviating the disintegration of estates which frequently arises through the operation of death duties; the recent increase, which in some cases is as much as 5 or 6 per cent. on the value of the estate, renders the necessity for provision even more imperative than before.

The PRUDENTIAL ASSURANCE Co. LIMITED

issues policies expressly designed to meet these duties and is prepared to endorse any new or existing policy to the effect that the whole or such part of the policy money as may be necessary shall be paid direct to the Inland Revenue before probate or letters of administration are obtained.

For full particulars apply at the

Chief Office - - HOLBORN BARS, E.C.1
or of any local representative.

MUNICH REINSURANCE COMPANY of MUNICH

Extract from the Annual Report for the Year 1923/24.

In accordance with the special Laws enacted and the Ordinances applying to the subject the Company's Balance Sheet has been reconstituted on the Goldmark basis.

The Company's Real Estate has been re-valued upon a pre-war basis, and 40% has been written off its own Office building. All its other Real Estate property, consisting of 49 separate Premises, has been written down to the extent of 75%.—All furniture and all printed supplies have been written off.

The Mortgages pro and contra have been valued as prescribed by the official ordinance.

The Securities were valued not higher than at Stock Exchange prices of the 30th June, 1924, in some instances at lower prices. Where no quotation was available most conservative estimates were applied.

All the Company's German Papermark securities, of a nominal value of Papermark 40,011,900, have been written off. The Company's property still sequestered in the United States is estimated, in default of authentic information, at the amount of M5,000,000, but this Asset is neutralized by a Reserve of equal amount.—All property still under sequestration in other countries stands to book at the nominal sum of M1.

The Premium and Loss-Reserves have been computed with the greatest care.

The excess of Assets over Liabilities being M17,007,500 has been applied as to M12,007,500 to reconstitute the Ordinary and Preference Capital, both being fully paid up, and as to M5,000,000 to create special Reserve Funds (v. items II and III).

GOLDMARK BALANCE SHEET As on 1st July, 1924.

In May of last year we published a supplement giving an outline of the history of the Reparation question from the Armistice until the publication of the Dawes Report. In the following pages we propose to bring the story up to date, and to sketch the economic conditions created by the bringing into effect of the Dawes Plan.

The first section gives a résumé of the chief steps taken by the Allies, and a record of the bringing into effect of the Plan. The second part describes the results achieved in the various spheres in which the Allies have imposed some control over Germany. A third part briefly sets out the leading features of recent economic life in Germany, and, finally, some figures are given bearing upon the question of German competition and the influence of Reparation receipts upon other nations.

In brief, this record shows that the Dawes Scheme was brought into effect, with comparative ease, by the arrangements made at the London Conference of last July and August, that the settlement of Germany's economic future made it possible for German currency to be maintained on a stable basis under the strong direction of the President of the Reichsbank; that, in consequence, the German Budget, about which the Experts expressed some doubt, has more than balanced; that Germany has had no difficulty in paying her first year's annuities, the greater part of these being the proceeds of the international loan successfully floated last winter; that the mortgage on German industry has proved to be lighter than was feared; that the railway company is making adequate profits and supplying its contributions under the Dawes Scheme; that there is no reason to expect difficulty under the Plan for some time to come, but that present experience throws no light upon the critical question, namely, whether the Allies will be able to get money out of Germany without upsetting the currency settlement; that the payment of Reparations on the Dawes scale should not have a devastating effect upon other countries' trade if world commerce shows anything like a reasonable normal expansion, but that present experience gives no indication of how an export surplus is to be created; that in the meantime Germany has immensely benefited from the stabilisation of money, but her foreign trade, as well as her home trade, is still far from normal; that her chief handicap is shortage of capital; and that there are no indications as yet that she is supplanting other countries' trade.

A rich volume of material for the further study of the whole problem has recently been provided in the Report of the Agent-General for Reparation Payments; the reports submitted to the Brussels Conference by Sir Josiah Stamp; and the Survey of Overseas Markets issued this week by the Balfour Committee on Industry and Trade.

RECENT HISTORY OF THE REPARATION QUESTION.

(I) THE DAWES PLAN.

Readers of our supplement issued last May will remember that the Expert Committee, consisting of representatives of the United States of America, Great Britain, France, Italy, and Belgium, which was appointed in December, 1923, reported in the following April in favour of a plan, of which these are the main features:—

(a) A schedule of payments rising from a comparatively small figure to a standard was laid down covering a period of five years, the figures being: 1924-25, 1 milliard gold marks; 1925-26, 1.22; 1926-27, 1.20; 1927-28, 1.75; 1928-29, 2.50.

(b) The experts did not fix a total to be paid by Germany, but, on the other hand, they could not confine themselves merely to five years' payments. They therefore provided that the last figure should continue over subsequent years, subject to variation, in accordance with an index of German prosperity, the calculation of which was carefully laid down; it was also provided that the annual payments might be varied up or down if the value of gold changed appreciably.

(c) The payments were not, however, all to be met from the Budget, but were to be made up by the interest from the bonds to be issued by the German railways (which were placed under new management independent of the State),

by certain other charges upon transport, and by a mortgage imposed upon industrial undertakings. In the first year, four-fifths of the annuities was to be paid from the proceeds of an international loan, the floating of which the Allies undertook to facilitate, it being realised that the placing to Germany's credit of this sum in foreign currencies would assist her to maintain her exchange at parity with gold.

(d) The new railway company was to be put under some degree of foreign control, and trustees for both the railway and the industrial debentures were to be appointed.

(e) Contributions from the Budget were to be safeguarded, not by putting the whole of German finances under Allied supervision, but by the assigning of certain specified revenues to a representative of Germany's creditors. The general direction of Germany's finances was left unfettered, subject to the right of the Commissioner of Controlled Revenues to take measures to increase their productivity if the assigned items should prove insufficient.

(f) The Plan laid down the important principle that Germany should be held to have paid her debt when she had placed at the disposal of the Allies the necessary sums in German currency. These sums were to be placed in the hands of an Allied Transfer Committee, who would

have the task of converting them into foreign money without upsetting the exchange. The experts indicated that the Allies must take powers to act if Germany were found to be indulging in "financial manoeuvres" definitely intended to defeat this process of transfer abroad.

(g) In order to prevent a new currency slide, a new bank was to be set up, over which the creditors of Germany should, in the last resort, have equal authority with the German representatives. This governing board was to be represented by a commissioner, who would be kept informed of the bank's proceedings.

(h) The Experts, whose proposals were based upon the postulate that Germany should regain her economic sovereignty, nevertheless added that control would have to be enlarged if flagrant default were proved.

Two factors combined to give the Plan the chance denied to previous efforts to solve the Reparation problem. The first was the prompt announcement by Mr MacDonald, Prime Minister and Foreign Secretary in the Labour Government that had come into power in February, 1924, that Great Britain accepted the Plan as a whole—a declaration followed by the agreement of Germany. The second was the new relations he had been able to establish with France, relations which led directly to the substitution for M. Poincaré, who had quibbled over the Plan, of M. Herriot.

Preliminary difficulties created by M. Herriot's effort to link the settlement of Reparations with the problems of debts and security were overcome by Mr MacDonald's insistence, on the one hand, on the importance of concentrating on the single concrete issue of the Plan as the agenda for a Conference, and, on the other, by his undertaking to raise the matter of inter-Allied debt at a later stage, and to discuss, as soon as possible, the question of security.

The London Conference, therefore, assembled in July, 1924, for the single purpose of working out the method and conditions of applying the Dawes Plan, and was able to face its problems in an atmosphere of mutual goodwill that contributed largely to success.

(2) THE WORK OF THE LONDON CONFERENCE.

The London Conference opened its deliberations at the Foreign Office on July 16th, and concluded them exactly one month later. The following signatories of the Versailles Treaty were officially represented:—The British Empire, France, Italy, Belgium, Japan, Portugal, Greece, Rumania, and the Serb-Croat-Slovene kingdom; while two "observers" from the United States attended the meetings and played a prominent part in the Conference. On August 2nd Germany was invited to send representatives, not, as on previous occasions, to be presented with the cut-and-dried decisions of the Allies, but to "discuss" with the Conference the best means of achieving its end—a new and significant departure in post-war diplomacy. The German delegates arrived three days later, and many of the subsequent decisions of the Conference were rendered additionally valuable for practical purposes by reason of their "agreed" character.

The Terms of the London Agreement.

In the London Agreement, initiated by the representatives of the conferring Governments and of the Reparation Commission on August 16th, and formally signed as a Protocol on August 30, 1924, the signatories confirmed their acceptance of the Dawes Plan, and agreed to its being brought into operation. Certain agreements necessary for that purpose were signed *ne varietur* (except as regards certain dates mentioned in Annex III. below), and are to be regarded as mutually interdependent. The Protocol was followed by four annexes, the first of which was as follows:—

Annex I. set out the terms of agreement between the Reparation Commission and the German Government:—

(1) The German Government undertakes to take all appropriate measures for carrying the Dawes Plan into effect, especially as regards the promulgation of laws and regulations, notably those concerning the banks, the railways, and the industrial debentures in the form approved by the Reparation Commission. It will also apply the necessary provisions as to the control of the revenues assigned as security for the annuities under the Dawes Plan. (2) The

Reparation Commission undertakes on its side to take all appropriate measures for carrying the Plan into force, and in particular to facilitate the issue of the German Loan, and for making necessary financial and accounting adjustments. (3) The Reparation Commission and the German Government agree in their respective spheres to carry into effect such additional arrangements as may be agreed as necessary to the application of the Plan—these to be signed later on, and to form a schedule to the London Pact. Further, any dispute that may arise as regards the agreements or the German legislation to put them into effect shall be referred to arbitration.

Annex II. contained an agreement between the Allied Governments and the German Government, set out in six clauses. Clause 1 laid down that disputes arising under Annex I. above should be referred to three arbitrators appointed respectively by the Commission, the German Government, and the two authorities jointly, or, failing agreement as to the third member, by the Permanent Court of International Justice at The Hague. Clause 2 set up a Transfer Committee in connection with German Reparation deliveries, and defined its functions in great detail. Germany recognised the right of this Committee to pursue ordinary commercial methods in employing the funds at its disposal, and that the programmes for deliveries should not go to the limitations fixed by the Treaty of Versailles, but should be fixed "with due regard to the possibilities of production in Germany, to the position of her supplies of raw materials, and to her domestic requirements in so far as is necessary for the maintenance of her social and economic life, and also with due regard to the limitations set out in the Experts' Report." Germany undertook to facilitate the execution of programmes drawn up on these lines, but in default of agreement, either between the members of the Reparation Commission or between the latter body and Germany, provision was made for their being fixed for certain periods by an Arbitral Commission appointed in advance in the same manner as the arbitrators referred to above, the chairman of which was to be a citizen of the United States of America, and whose decision was to be final. Allied Governments, if dissatisfied, might submit reasoned claims to this Commission. Clause 3 provided for a Special Commission, on which the Allies and Germany would be equally represented, with power to co-opt a neutral member to determine procedure with regard to deliveries in kind. Clauses 4 and 5 made provision for arbitration in case of possible differences between the Transfer Committee and the German Government, or of divided opinion on the Transfer Committee itself on certain matters, including the question whether Germany was indulging in financial manoeuvres to defeat the Plan. Clause 6 prescribed the procedure for an appeal to arbitration where any Allied Government might consider that a defect existed in the Plan, as regards collection or deliveries, which might be remedied without affecting the vital principles of the Plan.

Annex III. stated that the Dawes Plan would be considered to have been put into execution when the Reparation Commission had declared that Germany had (a) voted in the Reichstag, and promulgated, the necessary legislative measures for imposing a mortgage on industry, for placing the railways under an independent company, and for establishing a new and independent bank of issue; (b) installed the executive and controlling bodies provided for the Plan; (c) constituted the bank and the German Railway Company; and (d) deposited with trustees certificates representing the railway bonds and industrial debentures; and when, in addition, contracts had been concluded assuring the subscription of a loan to Germany of 800 million gold marks, as envisaged in the Dawes scheme. The fiscal and economic unity of Germany was to be considered as restored when the German authorities in occupied territories had been re-invested with the relevant powers they exercised before January 11, 1923, all undertakings exploited under Allied management had been restored to their owners, and restrictions on the movements of persons, goods, and vehicles in the occupied areas had been removed. The annex also contained a time-table for the carrying out of the various measures, and provided for amnesty in respect of offences in occupied territories since January, 1923, and other conciliatory measures.

Annex IV. gave the terms of agreement between the Allied Governments. In all deliberations affecting the

Dawes Plan a seat on the Reparation Commission was to be occupied by a representative of the United States, holding office for five years. To secure the service of the contemplated gold mark loan the Allies undertook to safeguard any pledged specific securities if it were found necessary to impose sanctions in consequence of a German default, and further stipulated that the service of the loan should enjoy absolute priority over all other claims whatever. Unless otherwise stated in the London Agreement, the signatory Governments reserved all their rights under the Treaty of Versailles.

Outside the main body of the Agreement was the promise given by the French and Belgian delegates of the complete evacuation of certain occupied zones forthwith, and the withdrawal of their military forces from the Ruhr in a maximum period of twelve months.

The Significance of the Agreement.

The significance of the London Agreement has been well described by an American critic, Mr George P. Auld, in a recent address before the Chicago Council on Foreign Relations. The Dawes Plan, he stated, gave Europe what it had badly needed for six unhappy years—a *modus vivendi*. "It was a triumph of the principle of attending to first things first, of acting on things agreed instead of waiting for agreement on everything." "The general background of the arrangement created by the London Conference was acceptance of the principle of arbitration. Sixteen or seventeen separate arbitrations were provided for. Many of them are likely never to be invoked, for an agreement to arbitrate is evidence of a frame of mind which leads toward direct settlements by the parties themselves. . . . The chief significance of the machinery set up is psychological rather than technical."

The Dawes Plan and the London Agreement, indeed, marked a considerable advance in numerous ways on the policy which had previously made of the Reparation question a running sore in European politics. For the first time since the war the Allies negotiated with instead of dictating to Germany. The principle of arbitration, which was a natural corollary, did not, indeed, supersede the appeal to force, but, nevertheless, succeeded in interposing an elaborate series of barriers between a complaint of German default and extreme action by any one Allied Power. The Agreement promised a long respite from the periodical crises over Reparations which had previously occurred with distressing frequency. Last and not least, the carrying out of its provisions offered the chief European Powers an opportunity for stabilising their own internal finances, and thus avoiding many of the currency troubles which had proved so formidable a barrier to international trade.

These beneficial results—which may be summed up in a phrase, the translation of the Reparation problem from the political to the economic sphere—are by this time fairly well known and appreciated.

At the same time, the Agreement left several loopholes for future dispute in certain circumstances. Thus France did not agree to the immediate military (as distinguished from "economic") evacuation of the Ruhr, and until her troops have left this area it is questionable whether Germany can really be said to have regained her economic sovereignty. As the evacuation promised by this August is, however, contingent only on the carrying out of the London Agreement "in the spirit of good faith and pacification which inspired the deliberations of the London Conference," and is not related to such controversial questions as German "disarmament," &c., the next two or three months should witness its complete and final accomplishment.

A more serious set of considerations centres round the possible consequences of a hypothetical German "default," i.e., a failure to provide, for one reason or another, exactly what is required of her under the heading of Reparation. The Dawes Plan and the London Agreement make it as difficult as possible for any power to take the law into its own hands. Arbitration is provided if the Reparation Commission is not unanimous on a default question. Sanctions can be applied only in the event of "flagrant failure (by Germany) to fulfil the conditions accepted by common agreement," and in the event of such default the Allies have undertaken to confer without delay as to the nature of the sanctions to be

applied. As to what is to happen should the Allies fail to come to agreement in such a contingency the London Agreement is silent, except in so far as its concluding words suggest somewhat disquieting possibilities. "The existing rights of the signatory powers under the Treaty of Versailles, read with the Dawes Report, are reserved." In other words, France might conceivably revert to her earlier interpretation of that clause in the Treaty which speaks of action by "the respective powers," and proceed to re-occupy the Ruhr. That weighty arguments exist, however, against the probability of such an occurrence, we endeavour to show at the end of Part I. of this "Supplement."

(3) IMPLEMENTING THE LONDON AGREEMENT.

The London Agreement came before the French Legislature during the last week of August, 1924, and secured a surprisingly easy passage, M. Herriot's policy being approved in the Chamber by 336 votes to 204, and in the Senate by the surprisingly large vote of 200 to 40. In the course of debate, M. Herriot revealed that he had agreed to the evacuation of the Ruhr after consultation with Marshal Foch, who did not regard the occupation as necessary to French security. In Germany the position for a time appeared less promising, as the Nationalist Party proclaimed its decision to vote for the rejection of the Agreement, the Government's counter-move being a threat of dissolution of the Reichstag if the necessary two-thirds majority was not obtainable. On matters being brought to an issue, more prudent counsels prevailed among various members of the intransigent party, and the Dawes Bills having been duly passed by the Reichstag, the terms of the London Agreement became definitive with the final signature of that document by the parties concerned on August 30, 1924.

Matters thenceforward moved with a clockwork precision, which spoke well for the comprehensiveness of the arrangements made by those responsible for the drafting of the Dawes Plan and the London Agreement. The "Dawes Laws" passed by the Reichstag provided for the initiation of the new Bank, the Railway Company, and the Mortgage on Industry in the form laid down in the Report. The French, who had already carried out the promised evacuation of certain areas outside the Ruhr, thereupon handed over the administration of the Ruhr and other occupied districts to the German authorities, restored the mines and factories to their German owners and management, and relinquished their hold on the railways according to the time-table arrived at by the London Conference. The Agent-General for Reparation and his staff were duly appointed and installed in Berlin. The resultant partial demobilisation and reorganisation of the Reparation Commission not only represented a saving of cost, but replaced a body which had become associated in many people's minds with a policy scarcely judicial by one which had at least the advantage of a clean sheet in this respect. The machinery of control over German revenues and the new Bank came into being without friction, and the mortgage bonds which were issued on industrial concerns proved a less onerous burden than had been expected.

The Loan.

Finally, the issue of the 800 million gold marks loan, "the most important single development of the transition period," according to the Agent-General, turned out to be a conspicuous success. The London emission in October, 1924, of £12,000,000 7 per cent. sterling bonds at 92 per cent. was rapidly over-subscribed, despite a hostile campaign which had been carried on for some weeks previously in a section of the British Press, while in the case of the New York issue of \$110 millions, it was found necessary to close the lists within a quarter of an hour of opening. The following table, extracted from the Report of the

Agent-General issued on May 30, 1925, shows the tranches of the Loan taken up by the various countries:—

Tranche.	Nominal Amount.	Net Proceeds.*	
		Foreign Currency.	Gold Marks.
1. American	\$ 110,000,000	\$ 95,625,000	400,628,338.50
2. British	£ 12,000,000	£ 10,255,386 13 11	192,943,039.66
3. Belgian	£ 1,500,000	£ 1,295,625 0 0	24,375,656.83
4. Dutch	£ 2,500,000	£ 2,160,231 4 8	40,642,203.74
5. French	£ 3,000,000	£ 2,570,808 3 9	48,178,586.86
6. Italian	Lire 100,000,000	Lire 85,500,000	15,696,751.68
7. Swedish	S.Krs. 25,200,000	S.Krs. 21,751,060	24,250,126.64
8. Swiss (sterling)	£ 2,350,000	£ 2,065,000	38,850,540.37
9. Swiss (Swiss francs)	S.Frs. 15,000,000	S.Frs. 11,855,468.70	9,521,735.95
10. German	£ 360,000	£ 315,000	5,926,353.62
Less expenses of issue, negotiation, and delivery since receipt of proceeds..			19,623.10
Total			800,993,655.75

* The figures are subject to final adjustment, depending upon the expenses of issue, negotiation and delivery.

The bonds in every case bear interest at 7 per cent., and are redeemable in 1949. Since certain concessions made by one or more of the Allies at the London Conference were not unconnected with the necessity for providing sufficient security for the investor to make the issue of this loan a feasible commercial proposition, we may usefully set out the gist of a "statement" attached to the prospectus of the London issue giving the nature of the security provided.

The service of interest and amortisation is (1) A direct and unconditional obligation of the German Government chargeable on all the assets and revenues of that Government. (2) A specific first charge on all payments provided for under the plan of the Dawes Committee to or for the account of the Agent-General for Reparation Payments, such charge being prior to Reparation and other Treaty payments, which in turn have a specific precedence over the existing German debt. (3) A first charge by way of collateral security on the "controlled revenues," i.e., the gross revenues of the German Government derived from the Customs and from the taxes on tobacco, beer and sugar, the net revenue of the German Government from the spirits monopoly, and such tax (if any) as may hereafter be similarly assigned by the German Government in accordance with the terms of the final protocol of the London Conference. The Reparation Commission have postponed in favour of the charges created in respect of the loan all Reparation and other charges upon the payments to the Agent-General for Reparation Payments, including charges in respect of deliveries in kind or payments therefor, whether direct or through the operation of any Reparation Recovery Act or Decree.

Thus, though there is no direct Allied Government guarantee, as in the case of the Austrian loan of June, 1923, the investor possesses security of the highest order. Moreover, the service of the loan is amply covered. The amount required for interest and sinking fund should not exceed about 91½ million gold marks. The payments to the Agent-General for Reparation Payments have been fixed at 1,000 million gold marks for the first year, and are expected to increase thereafter until they reach 2,500 million gold marks for the fifth and subsequent years. The annual gross receipts of the controlled revenues should exceed 1,000 million gold marks. Further, the German Government may not create any further charge upon the controlled revenues ranking in priority to or *pari passu* with the charge created in favour of the bondholders of this issue. The Agent-General for Reparation Payments is one of the trustees for the bondholders, and it is provided that funds which have to be sent abroad shall have an absolute right of remittance, which will have priority over Reparation or other payments.

The results achieved up to the present by the various institutions set up in accordance with the terms of the Dawes Plan and the London Agreement are dealt with in Part II. of this supplement. We append here a list of their personnel:—

(4) THE PARIS CONFERENCE.

The carrying out of the Dawes proposals regularised the financial relations of Germany and her Reparation creditors. The next stage was the effort of those creditors to determine varying outstanding questions as to the distribution of available receipts at a Conference of Finance Ministers held in Paris in January, 1925. The discussions were mainly concerned with the costs of various Commissions and Armies of Occupation provided in the Treaty of Versailles, America's claim to a share in the Dawes annuities, Belgian priority, and the respective percentage of the total receipts to be obtained by the remaining Allies, and last, but not least, with the division of the spoils obtained by France and Belgium from the "exploitation"

of the Ruhr. The Conference succeeded in escaping the obvious danger of being drowned in a sea of detail, and a comprehensive agreement was signed on January 14, 1925, after a shorter period of negotiations than had been expected.

The Terms of the Paris Agreement.

(a) It was agreed that the maximum annual charge for the Reparation Commission—to be defrayed, of course, out of the Dawes annuities—should be 7½ million gold marks from September 1, 1925, inclusive of 3.7 millions for the various organisations set up under the Dawes Plan. The maximum annual cost of the Inter-Allied Rhineland High Commission and the Military Commission of Control was fixed at 10 million and 8 million gold marks respectively (exclusive of the Military Commission's expenses in national currencies). The extent to which the cost of armies of occupation is to be allowed as a prior charge on the annuities was fixed for the twelve months ended August 31, 1925, at 110 million gold marks for the French army, and 25 millions each for the British and Belgian, any further charges falling to be added to Reparation arrears. The scale for costs in subsequent years is to be assessed later.

(b) The United States of America was allocated a definite sum of 55 million gold marks per annum out of the Dawes annuities as payment for her occupation costs, and a share in Reparation receipts of 2½ per cent. (with a maximum of 45 million gold marks in any one year) in respect of her Reparation claims, to be contributed proportionately by the other participants out of their own shares.

(c) Belgium waived her claim to priority in the distribution of Reparation moneys. As a *quid pro quo* her share was fixed at 8 per cent. instead of 4½ per cent. for the years ending August 31, 1925 and 1926—the lower figure to be reverted to when her priority rights have been fully met—and 4½ in succeeding years. The Greek and Roumanian percentages were fixed at 0.4 per cent. and 1.1 per cent. respectively. Apart from the adjustments rendered necessary by these decisions, the general provisions agreed on at the Spa Conference were confirmed as regards Great Britain and France.

(d) It was agreed that any profits accruing from the occupation of the Ruhr were to be set off against the Reparation claims of the Powers receiving them, but that the Dawes annuities were not subject to claims in respect of the Ruhr occupation arising earlier than September 1, 1924.

The conclusion of the Paris Financial Agreement reflects in no small degree the willingness of many of the chief protagonists to make substantial concessions. America reduced her initial claims in deference to the wishes of the Conference, while the other Allies waived their theoretical objection to a Power which was not a signatory to the Versailles Treaty obtaining a share of the receipts resulting therefrom. Belgium contributed to the pool of conciliation and accommodation by making a sacrifice in respect of her priority rights, Great Britain consented to put her signature to a document which, while not explicitly admitting the legality of the Ruhr adventure, certainly recognised it as a *fait accompli*, and acquiesced in the retention of the spoils by those who had seized them.

(5) THE REPARATION RECOVERY ACT.

In 1921, when the Allies were endeavouring to bring pressure to bear on Germany to secure her acceptance of the abortive London Agreement of that year, the so-called Reparation Recovery Act was passed as one of a number of coercive measures designed to secure that end. This of measure has, in practice, proved a principal means of obtaining a regular flow of Reparation payments, aggregating some £25,000,000. The procedure adopted, with the co-operation of the German Government, has been as follows:—The English importer of German goods has paid 74 per cent. of the price to the German seller, and the 26 per cent. to the English Customs, and sent the Customs receipt to the seller, who has obtained an equivalent payment from the German Government. For a limited period during the Ruhr occupation the German Government protested its inability to find the cash with which to reimburse its exporters, and the levy became purely protective in effect, while at a later date the Labour Government in Great Britain reduced the percentage from

26 per cent. to 5 per cent. for a short time, but with these exceptions the method of collection remained substantially as indicated. Great Britain's initiative in the matter was followed later by France.

After the machinery of the Dawes Plan had been set up, however, a rather anomalous position arose as between the British authorities and the Agent-General for Reparation Payments. The latter naturally disliked a plan under which a substantial amount of the receipts obtainable from Germany did not pass through his accounts, and one, moreover, which put a charge upon the exportable assets of Germany without bringing them under review by the Transfer Committee. After much discussion an agreement has therefore been made with all the parties concerned that the Acts shall function in a new way. German exporters will, in future, periodically surrender to their Government an amount of sterling equal to 26 per cent. of the British customs' valuation of imports from Germany during the previous month, against subsequent reimbursement in marks through the Agent-General, 800 of the principal German exporting firms having given an undertaking to this effect. The money will thus be paid in bulk instead of on specific transactions, and the amount will be reduced if the yield is greater than the sum due to Great Britain for her share of Reparations. The German Government, on the other hand, has agreed to establish a reserve fund of £500,000 sterling to provide against temporary fluctuations in the amount of sterling received from German exporting firms.

(6) FUTURE PROSPECTS OF THE PLAN.

The extent to which the Dawes Plan has removed Reparations from the political arena has been strikingly demonstrated by recent events. Of the most important European Governments whose representatives negotiated the London Agreement not one remains in office to-day (with the exception of Signor Mussolini's Government in Italy), but the mechanism of Reparation has remained absolutely unaffected. While Great Britain has exchanged a Labour for a Conservative Administration, and France has replaced M. Herriot by M. Painlevé with his colleagues MM. Briand and Caillaux; while Belgium has been endeavouring to forge an effective Government out of a political stalemate, and Germany has admitted Nationalists to her Cabinet and elected a Nationalist President—the Agent-General for Reparation Payments has continued imperturbably to issue the colourless monthly reports which are the sole outward and visible sign of the present existence of a Reparation problem. In the "disarmament" controversy, and the tentative "security pact" negotiations, Reparations have played no part whatever.

But this appearance of tranquillity should not deceive anyone into a belief that the Reparation question has been finally disposed of, and nothing remains but to take the proceeds as they mature. The facts as they stand fully justify the note of caution expressed in a recent speech by Lord Bradbury, who of all men ought to be able to form an accurate judgment. When Germany has begun to defray the Dawes annuities, not out of borrowed money but out of her own resources, it will be possible to measure her ability to sustain the full weight of the burden imposed on her by the Dawes Plan. When extensive payments abroad have to be made in cash, as well as in kind, the machinery set up under the plan will for the first time be severely tested, and the ability of the Allied nations to receive Reparations without straining their own economic systems disclosed. In the second part of this Supplement we give the latest available information regarding the various sources from which the wherewithal for Reparations must ultimately come—the German State revenues, the Railway Company, the Industrial Bonds, &c.—and leave our readers to draw their own conclusions from the evidence. We have shown above that if Reparations are not forthcoming on the scale envisaged by the Dawes Committee, the Allies have reserved, in the last extreme, all their right under the Treaty of Versailles, which, on the French thesis, would permit of a re-occupation of the Ruhr, and throw the whole question into the melting pot once more. Is such a contingency at all likely? No definite answer can safely be hazarded at this stage, but one or two factors may be pointed out suggest-

ing that independent action by France on these lines is much less probable than would have been the case two years ago. In the first place although the Government of the United States have accepted no formal responsibility for the Dawes Plan, that country is interested in so many different ways as to make it unlikely she would stand by and see it completely wrecked without making a considerable effort to save it. The scheme has for its god parent the Vice-President of the United States; American investors found one-half of the money raised to finance it, and were encouraged so to do by President Coolidge; on its administrative side the scheme is manned predominantly by Americans, and their Government is to receive two and a-quarter per cent. of the money it produces. No European State would care lightly to resist the weight of American influence were the latter to be thrown decisively

into the scale at a time of crisis. In the second place, French expectations in 1925 are framed on much more modest lines than in 1923. The process of disillusionment may be said to have started in the early months of the Ruhr occupation, when France discovered that the whole coal output of the Ruhr mines was not available for Reparations, but that costs of production must first be met, and only the profit—if any—was available for Reparations. For the future, France is much less likely to confuse substance—however disappointing—with shadow. One may therefore venture to hope that the Dawes Plan will be given every opportunity to succeed on its own merits, and that for five years at least Europe will enjoy a respite during which it may put its economic affairs in order without the intervention of the Reparation question to upset its hopes at every stage.

THE DAWES PLAN IN OPERATION.

(1) THE BUDGET.

Germany's Budget for 1924-25 shows considerably better results than the Experts anticipated. The Treasury return showing actual intakings and payments-out April, 1924, to March, 1925, inclusive, is:—

	Millions of Marks.
Receipts—	
Taxation	7,311.7
Administration receipts	474.5
	7,786.2
Expenditure—	
Subventions to States and Municipalities ..	2,629.3
Federation administration	4,266.2
	6,895.5
Redemption of gold loan	230.9
	7,126.4
Surplus	659.8

These sums are a little less than Germany will actually receive in respect of 1924-25, for the reserved revenues for March, 1925, were handed over to the Controller, Mr McFadyean. As the Dawes Plan does not ask Germany to pay anything out of the Budget this year, such sums are passed back to the Government. But as they have to be verified there is a period of delay, and on the last day of March, Mr McFadyean had sums in hand payable to the Government. The surplus shown is much better than was expected. Indeed, the yield of taxes increased rapidly from quarter to quarter in the financial year 1924-25, the figures for each quarter being as follows:—

	Millions of Marks.
1st quarter	1,514.8
2nd "	1,784.3
3rd "	1,993.9
4th "	2,018.9
	7,311.7

As the revenue showed much better results than the Government budgeted for, it permitted itself certain expenditure, which were detailed by the Finance Minister to the Reichstag on April 30th:—

	Millions of Marks
Estimated receipts from taxation were	5,244
Estimated Federal share thereof	3,382
Actual receipts	7,312
" Federal share	4,567
Surplus of Federal share over estimate	1,185
Or, including profits from Mint, interest, &c.	1,922
There against—	
For covering of estimated deficit	348
Realised surplus	1,574
Special liabilities to be met out of surplus—	
Old debts from passive resistance time, &c.	577
Redemption of Gold Loan (above estimated 100 million marks)	136
Compensation for losses through enforced liquidation, &c., to States for property lost through Peace Treaty, &c.	527
	1,240
Net surplus in hand after payment of special liabilities	344

The Finance Minister in the period covered, however, must have underspent, his actual balance on April 1st being—as shown above—659.8 million marks. It is of considerable interest to see what items are responsible for the great difference between the estimate and the actual realised income. This is given in the following table:—

	Estimated. Marks	Realised. Marks.
All taxes	5,243,747,035	7,311,748,258
Thereof—		
Income-tax	1,344	2,210
Company income-tax	144	314
Property tax	376	499
Sales tax	1,260	1,794
Luxury tax	180	119
Capital transactions tax	198	168
Traffic tax	230	313
Customs	160	356
Tobacco	360	513
Beer	126	195
Sugar	231	217
Spirits	140	141
Wine	48	94

The corresponding details of expenditure are not yet known.

As regards the future, however, it has to be remembered that there are heavy items still to go upon the German Budget, the Reparations being the most important of these. The Dawes Committee Report, therefore, contained a somewhat detailed criticism of the German Budget system and the various items in it, and suggested additional taxation. The present German Government accepts this view, and has put forward a plan for additional taxation.

The Budget and Supplementary Budget for 1925-26 have, however, not yet been sanctioned. This Budget was drafted before the taxation results of 1924-25 were known; and the taxation yield estimates of 1924-25 were accepted for 1925-26, almost without change. The original Budget for 1925-26 showed a deficit of 277 million marks, or with the Supplementary Budget 349 million marks. The combined Budgets show:—

	Mills. of Marks.
Revenue, ordinary and extraordinary	5,671
Expenditure, ordinary and extraordinary	6,020
Deficit	349

According to the Finance Minister's statement to the Reichstag of May 14th, the surplus yield of taxation remaining to the Republic will be less than in 1924-25, being 840 million marks as follows:—

	Mills. of Marks.
Gross taxation receipts	6,527
Subventions to States and Municipalities	2,305
Net to Reich	4,222
Net to Reich as in Budget	3,382
	840

Against this 840 million marks stands the above Budget deficit of 349 million marks, a sum of 338 million marks representing increases in expenditure estimates made by Reichstag Budget Commission, in addition to which the Republic proposes to create a Reparations Fund of 300 millions, in all 987 millions, so that the final result is a deficit of 147 millions. To meet this the Government proposed to increase the tobacco and beer duties so as to yield an additional 130 million marks, thus reducing the deficit to 17 million marks. These taxation increases have been rejected in Reichstag Committee, and compromise proposals are under way. Other taxation questions handled of late are: The definitive Income-tax. The exemption limit has been raised from 60 to 80 marks monthly, and the family abatements made more liberal. The maximum

e, which was (provisionally) 20 per cent. in 1924, and the new Government Bill 33.3 per cent., has been raised Committee to 40 per cent. The tax payable on an income 8,000 marks is 10 per cent., 15,000 marks 11.67 per cent., 110,000 marks 36.87 per cent., 3,990,000 marks 9 per cent. (family abatements disregarded). Property x:—As amended in Reichstag Committee, this rises from 10 per mille annually on property worth under 10,000 marks 7½ per mille on over 5,000,000 marks; but in 1925 and 26 the maximum rate is to be 5 per mille. The Government has refused to reduce the Sales Tax further below present 1½ (formerly 2½) per cent. The triennial tax increment of wealth has been abolished, and the Cabinet has refused to substitute an inflation profits tax. Capital Transactions Taxes on company issues, stock transfers, bills of exchange, &c., were very much reduced in 1924. A considerable increase in revenue will result from the pending Customs Tariff reform. On the basis of the tariff and on the import volume of 1924, Customs receipts would increase from the estimated 160 millions to around 600 million marks. The Tariff Bill restores the pre-war maximum duties on grain, and fixes irreducible minimum rates, restores also the abolished duties on meat, dairy products, and other necessary foods, and while increasing moderately the duties on most industrial articles, imposes prohibitive rates on certain of them, in particular luxury articles, motor vehicles, typewriters, cash registers, and other articles in these classes, and certain kinds of chemicals. The duties on heavy iron and steel are, with certain minor exceptions, not increased.

The Financial Outlook.

There is no reason to regard the satisfactory Budget results as merely temporary, for in view of the wiping out of her war debt by inflation and a low level of military expenditure, the burden placed upon the German Budget by the Dawes Plan is not very large. In this connection, however, two points call for comment. One was the possibility that some portion of the charge on the repudiated war debt might have been restored. But certain events show that this will be a relatively minor matter. The re-war debt, war debt, and such part of the post-war debt as was contracted in old marks, entirely disappeared, having been first turned into paper mark liabilities by law of August 4, 1914, and ultimately stabilised in November, 1923, at the ratio of 1 billion paper marks to 1 gold mark. The nominal debt had, however, already been reduced out of the yield of sold Army material and as result of its acceptance in payment of taxes. The condition of the old debt as determined late in 1924 for the purpose of amortisation was as follows:—

	Marks.
Outstanding pre-war debt (Federal)	18,956,528,042
Whereof 4,805 millions were original Federal debts, and the remainder State debts taken over in exchange for the railways.	
War debts	51,148,330,400
Post-war	3,840,000,000

The forced loan of 1923—the last loan subscribed in paper marks—has been declared officially to have been practically a tax, and is not to be recognised as a debt.

The valorisation of the above debts has gone through several stages. According to the Third Taxation Decree of February, 1914, which partially restored private depreciated debts, no claim for principal or interest on paper-mark public debts could be made until after full payment of Reparations, but no bondholder could meantime be compelled to accept repayment in paper marks at the nominal sum. A Government Bill submitted in the spring of 1925, which has passed its third reading after much alteration, enacts: (1) "New" bondholders, i.e., those who acquired after June 30, 1920, shall receive 25 reichsmarks nominal of new "loan redemption debt" bonds in exchange for every 1,000 marks nominal of their old paper mark bonds. Until after Reparations have been fully paid, the "loan redemption bonds" issued to these "new" bondholders will not bear interest nor will they be amortised. (2) "Old" bondholders, those who acquired before July 1, 1920, and who have held since their bonds uninterruptedly, shall receive 50 reichsmarks nominal of new "loan redemption debt" bonds for every 1,000 marks nominal of old paper-mark bonds. The loan redemption debt bonds of "old" holders will also not at present bear interest; but they will be amortised gradually in the course of the next thirty years at a premium of 150 per

cent., so that the "old" bondholder will get 125 reichsmarks cash for every 50 reichsmarks of new "loan redemption debt" bonds, that is for every 1,000 marks nominal of his paper-mark loans. To the sum thus due on amortisation will be added 4½ per cent. per annum simple interest between January 1, 1926, and the date of amortisation. Finally, if the "old" bondholder is destitute and has an income of under 800 marks, he will get an inalienable life pension of 20 reichsmarks per 1,000 marks nominal of his paper mark bonds, but not exceeding 800 marks. It is estimated that 20 milliard marks nominal out of a total 70 milliard marks nominal of paper-mark loans are in "old" hands.

The second matter of uncertainty arises out of the relation of the central finances to those of the different States. In the pre-war Germany the States were the main direct tax authorities; in present Germany, with its centralised finances, the Central Government is the main collector of revenue. Before the war, with exception of the postal, telegraph, and telephone services (which are now separated from the Federal finances), and of the State contributions based on population, nearly the whole of the Federal revenue came from Customs and Excise. Income-tax was wholly left to the States and Municipalities. The States Taxation Law of March, 1920, delimited anew the tax competence of Republic, States, and Municipalities; and in particular prohibited the latter two from levying any tax based on the personal paying ability of citizens, thereby taking income and property taxation in particular into the Federal domain. The chief sources left to the local Governments were the industry and land taxes. As compensation, the Republic has paid since subventions to the States and municipalities out of the yields of direct taxes and of the sales tax. The proportions so paid over have varied, and are at present under revision. No settlement has been come to. When the temporary regulation of February, 1924, expired at the end of the financial year 1924-25, a new provisional regulation for the next six months was made. A Bill now before the Legislature gives the Republic 25 per cent. of the income and corporation income-tax yield, and (after the first six months) 80 per cent. of the yield of the sales tax. The State Governments will agree to the Republic's retaining only 10 per cent. of the income-taxes and 70 per cent. of the sales tax. As compensation for taking 25 per cent. of the income-taxes, the Republic proposed that the States be authorised after March, 1926, to themselves impose unlimited income-tax supplements, thereby breaking with an important provision of the States taxation law, and, in fact, abandoning the main principle of the Erzberger Financial Reform of 1919-20. No agreement has yet been come to.

It is clear from this statement that, as in the case of Austria, the expenditure of the States and smaller local bodies might have a very important influence on the question whether or no the finances of the nation are in a state of equilibrium.

Pre-war Comparisons.—The change in the constitution, the alteration in the area of Germany, as well as the movement of prices, makes it impossible to give comparison with the pre-war situation. It may, however, be convenient to put on record the figures:—

	Marks.
The Federal Budget for 1913 balanced at	3,696,033,200
Ordinary revenue	3,577,398,700
Whereof—	
From taxation	2,488,998,800
" posts, telegraphs	842,369,000
Extraordinary revenue	118,634,500
Whereof—	
From loans	39,151,000
Ordinary expenditure	3,577,398,700
Whereof non-recurring 1,127,639,500 marks, including 580,559,900 marks on Army and 233,207,600 marks on Navy.	
Extraordinary expenditure	118,634,500
Whereof 12,700,000 marks on Army and 49,650,000 marks on Navy.	

An official summary of the distribution of taxation in 1914 and 1924 is:—

1924 is:—	Marks per Capita of Population.	
	1914.	1924.
Federal	33.73	52.02
State (Prussia).....	13.40	26.27
Municipal	30 to 40	40 to 60

Approx. 82 Approx. 129

The heavier increase in State taxation since 1914 is due to the fact that railway surpluses then provided a considerable part of total revenue. The increase per head is remarkably small in comparison with the great increase in the burden borne by other nations whose debts have not been eliminated by depreciation. Germany is, however, creating a new debt. The following shows what it at present amounts to and the comparison with 1914:—

DEBT.	Marks.
Federal Debt, March 31, 1914	5,157,897,000
April 30, 1925	2,782,300,000
(whereof 941.6 million marks Reparations Loan, and 1,771.7 million marks debt to Rentenbank).	

National Income and Taxation.—It is obviously peculiarly difficult to assess at all accurately Germany's national income. The last official summary (based on private estimates) put pre-war national wealth at 300 to 310 milliard marks; post-war at 170 to 180 milliard marks. The pre-war national income (on pre-war area) is put at 42 milliard marks; and it is estimated that 20 per cent. has been lost through territorial cessions only; also, an estimated loss of 2 milliard marks per annum formerly received from capital and undertakings abroad. The estimate of the late Dr Helfferich of from 18 to 22 milliards as the post-war national income has been officially endorsed; but the Berlin Chamber of Industry and Commerce, on a basis of its own more recent calculations, puts the national income at 35 milliards, with the same buying power as 23.24 milliards before the war.

Pre-war estimates of national wealth were:—

Highest....	397	milliards (Steinmann-Bucher).
Lowest	300	" (Present Chancellor, Luther).

Post-war:—

Highest....	243.6	" (Mario Alberti, for 1920).
Lowest	150	" (Luther, 1924).

Pre-war estimates of national income were:—

Highest....	43.5	milliards (Dr Raedel, for 1913).
Lowest	40	" (Dr Friedrich Raab, for 1913).

Post-war:—

Highest....	35	" (Berlin Chamber of Ind. and Com.).
Lowest	18	" (Helfferich).

Figures for State and municipal taxation are not available for very recent dates. The Cabinet estimates the total at from 9 to 10 millions, and the Berlin Chamber of Commerce accepts the latter figure. On the basis of the Chamber's estimate of national income, the percentage of taxation of all kind works out at about 28½ per cent., which is substantially higher than in either Great Britain or France. But there are many elements in this calculation which require verification before it can be used with confidence.

A calculation of some interest to British readers is that of the Federal Ministry of Labour, which estimates the burden of taxation and premiums for social purposes (insurance, &c.) at 1,600 million marks annually. Dr Tanzler puts the figure at 1,900 million marks.

(2) THE NEW RAILWAY COMPANY.

The new constitution of the railway company is laid down in the law of August, 1924, which provides for the creation of a German railway company (*Deutsche Reichsbahn-Gesellschaft*), with a capital of 15 milliard gold marks, whereof 2 milliard preferred shares and 13 milliard ordinary shares, which shall issue 11 milliard gold marks in Reparation bonds, secured as a first mortgage on all the company's movable and immovable property. The company has exclusive operation right, which is to terminate at the end of 1964, or whenever all the Reparations bonds have been amortised or brought back. The company may not alienate property without the consent of the trustee; and may not encumber its property for new loans for longer than to January 1, 1965, without the consent of the Government. It is free from all taxation imposed after February 12, 1924. Its employees, as regards rights and duties, remain officials of the Republic. The Republic has a supervision right as regards safe and satisfactory operation, and certain rights of control, prohibition, and collaboration, and it can demand information on matters within these rights. The company must liquidate as soon as its operating right terminates as above, and must retransfer its properties to the Republic. The accounts of the new railway company up to February 28th show a considerable profit. The company's normal business year is the calendar year, but the

first business year stretches from October 1, 1924, to December 31, 1925. On October 11, 1924, the company took over the railways in unoccupied territory, and on November 15th those conducted by the Franco-Belgian regie. The result of the five months' management was:—

Receipts—	Millions of Marks.
Passenger and luggage	457
Goods	1,102
Other	109
	1,668
Expenditure—	
Salaries and wages	945
Material	500
Interest	4
	1,449
Extraordinary expenditure	116
Interest on Reparations Bonds	100

Thus the railway company has not only met its reparation obligations, but had a margin for capital expenditure. This is very satisfactory in view of the period of deficits through which the railways of Germany passed during the inflation period.

The Agent-General's Report notes that the results so far are, on the whole, satisfactory. Despite somewhat unfavourable conditions, the receipts for the six months have nearly tallied with the estimates of the company, leaving a working surplus of 276,809,000 reichsmarks, of which 142,469,000 has been devoted to extraordinary expenditure. This result has been attained notwithstanding substantial reductions in freight rates and a considerable excess of expenditure over the estimates.

The Report of the Commissioner emphasises the necessity, on the one hand, of keeping expenditures within proper limits, and, on the other, the importance of maintaining tariffs for both passenger and freight transportation that will yield an adequate return for the services rendered by the railway company. The figures given in the Commissioner's Report show the substantial extent to which freight tariffs have been reduced since September 1, 1924, particularly on goods of numerous classes, and the relatively low increase over pre-war passenger rates in Germany as compared with the rates in other countries. It shows also the extent to which the recommendations of the experts for increases in workmen's wages have already been carried into effect. As against this, it is interesting to note the extraordinary charges which the railway company has to bear, such as the increase in expenditure for pensions, particularly those to discharged employees.

(3) THE INDUSTRIAL BONDS.

The Dawes Plan provided that a bond for 5 milliards of gold marks should be drawn against certain industrial undertakings. This was imposed by the Act of August, 1924, which provides for the distribution of the burden among the individual industrial undertakings on the basis of their property tax assessments. Thirty-two milliard marks of property was found assessable for this special charge, which is a good deal higher than was expected, and the charge, therefore, works out at 15½ per cent. instead of the 25 per cent. at first anticipated. The German Government has, however, accepted the view of the industrialists that a bond on industry means in effect a tax discrimination. They have, therefore, imposed a charge upon the capital value of banking, commercial, and other forms of economic activity which will produce a part of the interest required on the present bond, and will, perhaps, reduce it by one-half. If this should materialise, the burden on industry proper will be proportionately reduced.

(4) THE BANK CONTROL.

There is little to be said about the bank control. A Controller has been installed, but his primary function is to watch the note issue to see that it conforms to the constitution of the bank. He also must be kept informed of what is passing, for it is to him that the Allies would first look for an opinion if any question arose as to whether "financial manœuvres are being resorted to with the intention of making it difficult to transfer funds abroad." But these phrases, as well as Dr Bruin's function, are a matter of considerable ambiguity and doubt. Recently the Bank rate was lowered, and the Controller was doubtless kept informed of the discussion on this matter. But there is no reason to suppose that his opinion played any

part in the matter. In other words, the Allies are not attempting to make themselves generally responsible for monetary policy. They may, however, find themselves driven to attempt some intervention if difficulties arise when the time comes to transfer money abroad. For the time, however, it is sufficient to observe that the position of the Controller is a negative one.

(5) THE AGENT-GENERAL'S ACCOUNTS.

Up to the present, Germany's obligations under the Dawes Plan have been punctually met. Thus, the Note presented by the Allies to Germany on June 4th (Cmd. 2429) contains a statement by the Reparation Commission to the effect that "Germany is faithfully fulfilling her Reparation obligations as they are at present fixed." The following is a summarised statement of receipts and payments issued by the Agent-General for Reparations, and covering the "First Annuity Year" as far as the end of April, 1925:—

(On cash basis, reduced to Gold Mark equivalents.)

Receipts.	Million Gold Marks.	Payments.	Million Gold Marks.
Cash withdrawn from proceeds of German External Loan, 1924	529.6	Payments to various Allied countries	560.0
Interest on Railway Bonds, half-year to Feb. 28, 1925	100.0	Coal, transport, &c., to Belgium and Luxembourg	10.4
Receipts from Belgium and Luxembourg	10.2	Expenses—	
Exchange difference & interest received	0.29	Reparation Commission	4.3
		Rhineland High Commission	5.5
		Military Com. of Control	7.0
		Naval	0.07
		Service of German External Loan	41.6
		Administration costs of Office for Reparation Payments	2.0
		Balance of cash in hand, April 30, 1925	9.2
Total	640.0	Total	640.0

* Receipts is reimbursement of cost of coal, coke, and lignite delivered other than on Reparation Account, and transport charges in respect thereof.

† To be reimbursed to Agent-General.

From this balance-sheet the significant fact emerges that the payments made by Germany this year are being provided almost entirely out of amounts borrowed from other countries. For the present, Germany is enjoying a virtual moratorium, during which she is steadily benefiting from the stabilisation of her currency, and consolidating her internal position against the time when substantial amounts will fall due to be paid out of her own budgetary resources.

Another important point to be noticed is that the amounts received so far have not involved any transfers in cash. An analysis of the value of Reparations received by the chief Allies reveals the following position (to April 30, 1925):—

(Million Gold Marks.)

	To Great Britain.	To France.	To Italy.	To Belgium.	Total Four Countries.
Arising on account of—					
Reparations Recovery Act	120.4	12.2	..	..	132.6
Cost of armies, requisitions, &c.	23.8	81.2	..	11.9	116.9
Delivery of dyestuffs and receipts in kind	4.5	174.3	44.6	53.8	277.2
Total	148.7	267.7	44.6	65.7	526.7

The inclusion with the above figures of miscellaneous deliveries to other Allies, valued at 33.2 million gold marks, payments for coal delivered to Belgium and Luxembourg, to be reimbursed, 10.4 millions, and other expenses (including service of German External Loan), brings the total payments to the equivalent of 630.9 million gold marks. The Transfer Committee has thus had not a single problem to consider as yet, and no opportunity has arisen of testing its efficacy as a means of preventing undesirable consequences when international payments are being effected.

ECONOMIC CONDITIONS.

Economically, Germany is still in a transition stage. The industrial and commercial effects of inflation have not wholly disappeared, and the legislative readjustment of private property relations is still pending. The volume of circulating currency is below the normal and expected figure, the supply of capital is inadequate, and the creation of new capital out of savings has only begun. Credit, whether home or foreign, is obtained with difficulty, and at abnormally high rates. These conditions powerfully affect industry. Foreign trade is still more emphatically in a transition state. Important economic restrictions in the Peace Treaty were removed only in January. With several leading countries commercial-treaty relations do not exist, and future trade will be conducted under a Customs Tariff materially differing from the existing one, which dates from 1902. Germany under present conditions is a low-tariff country, since the specific duties imposed in 1902 are lower in relation to the prices of to-day than was intended. Moreover, the war swept food duties away, and it is only recently that new agricultural protection has been proposed. An increased tariff is now before the Reichstag. For this, as well as for the other reasons mentioned, business in the next few years will develop under conditions very different from those at present prevailing, and it is impossible to foresee its trend.

(1) CURRENCY AND PRIVATE FINANCE.

German currency is dominated primarily by the Reichsbank's credit policy. A limit upon Reichsbank note circulation, given the legally necessary cover, does not exist. The supply of currency, including rentenmarks and the emergency currencies which have since disappeared, was wholly inadequate in the first months after the currency reform of November 15-20, 1923. After that date the Reichsbank note circulation rapidly increased, partly owing to its being issued in exchange for emergency currencies, partly owing to expansion of credit. In the spring of 1924 the Bank and the Government took fright, fearing of internal depreciation of the "mark," by which was then meant 1 billion paper marks or its equivalent, 1 renten-

mark; and the Bank announced that it would not increase credits beyond the figures reached in April. In September the Bank increased its credit ration by 10 per cent., and also admitted bank acceptances to discount. The discount rate, which had been 10 per cent. (for "stable-value" transactions) since the currency reform, was reduced to 9 per cent. on February 26, 1925. After the adoption of the credit rationing system prices fell, and though they have again risen, there is no sign of inflation. Reichsbank circulation has, however, greatly increased. In addition to calling in of emergency currencies is the factor of foreign credits, which, though in part spent on imports, were in part handed over to the Bank for conversion into marks, needed for internal industrial expenditure. Under the latter influence, the Reichsbank's circulation has increased more or less independently of its volume of credits:—

	Millions of Gold Marks.	Circulation.	Discounts.
1913—December 31	2,593		1,491
1923—November 23 (after mark stabilisation) ..	224		144
—December 31	496		307
1924—June 30	1,097		840
—December 31	1,941		2,064
1925—June 30	2,474		1,691

The total currency circulation, which at present consists of Reichsbank notes, Rentenbank notes, and private issue bank notes, has moved as follows. The figures for 1913 include coined gold:—

1913 (year's average)	6,070
1923—December 31	2,273
1924—June 30	3,129
—October 31	3,826
—December 31	4,274
1925—June 30	4,790

The Rentenbank, which was founded late in 1923, in order to provide a stable currency, and to lend a limited sum to the Republic, so as to help it over the transition period until the inflow of taxes in good money should make Budget equilibrium possible, has fulfilled its functions, and is now being converted into an agricultural credit bank. The Gold Discount Bank, which was founded early in 1924, with English capital, and later American rediscount

credits, in order to grant credits for import of raw materials designed for re-export in finished form, suspended further credit-giving late in 1924, and began to liquidate old credits, but it has since resumed credit-giving. Its rate, which had been 8 per cent. since foundation, was reduced to 7 per cent. in May, 1925.

Credit conditions since the stabilisation have been extraordinarily strained. At the end of the depreciation period interest on short-term paper-mark loans cost up to 40 per cent. per day, the intent being to cover the risk of depreciation. After stabilisation, and until lenders concluded that the stability would endure, a modified "depreciation premium" was charged, with result that in January, 1924, day money cost 85 per cent. per annum, and month money 35 per cent. These rates quickly dropped to around about 30 and 25 per cent. approximately, but rose to respectively about 50 and 40 per cent. in April, after which they dropped slowly to around 10 per cent. at the end of the year. The tendency for day money has since been slowly downward, and the supply has been abundant, the Berlin rate in mid-May being $7\frac{1}{2}$ to 9 per cent., while month money cost $9\frac{1}{2}$ to 11 per cent. In spring the Berlin bourse resumed the pre-war practice of daily quoting a private discount rate, which began at 8, and fell to $7\frac{1}{4}$ per cent. Long-term credit, except from abroad, is very difficult to obtain. The industrial debenture market is almost non-existent, and mortgages, which bear nominal interest of 12 per cent., in fact cost 3 to 4 per cent. more, the capital sum being either paid in cash at a discount, or in form of mortgage-bonds, which sell at a loss. Owing to the pending Valorisation Bill, which annuls old contracts, revives extinguished mortgages, and in certain conditions repudiates the records of the land registers, mortgages are risky transactions, and this market is practically dead. Bank interest-rates on loans are about double the rates granted upon deposits. This is defended on the ground that the banks are drawing practically no revenues from capital issues, Bourse transactions, and some other former sources of profit.

In spite of such obstacles, credit greatly expanded in 1924. The total of discounts and advances by the Reichsbank and private note banks, and the agricultural credits of the Rentenbank increased from about 600 million marks at the beginning of 1924 to 2,500 million marks in June, 1925.

Though still weak, the capital issue market has greatly improved since the stabilisation. In the first quarter of 1924 under 12 million marks were raised for increase of existing company capitals; in the last quarter, 138 million marks. The total for the year was 230,120,000 marks. No increase took place in capital issues by new foundations, and the number of these declined. The total issues by new foundations for the year was 128,520,000 marks. Fixed interest issues totalled 176,320,000 marks, but of this sum 130,000,000 marks were railway and post loans. The re-accumulation of national capital proceeds fairly satisfactorily, but it is believed that a part of the increase in deposits in banks and savings banks does not represent money spared out of income, but rather realisations of foreign currency and other stable values hoarded during the inflation years. Complete savings bank figures are not obtainable. In February the Reichsbank President estimated Savings Bank deposits at 2,000 million marks, as against 400 millions in 1923, and added that the German nation has altogether, including insurance reserves, 8 to 9 milliard marks of savings. All local savings bank reports show increases. Between November, 1924, the date of stabilisation, and March, 1925, deposits in the Prussian savings banks increased from 332 million marks to 621 million marks. The estimates of Germany's present income from investments differ materially. The Minister of Industry estimates that after valorisation of debts is carried through according to the present plan, the pure rentier capital invested in loans, debentures, mortgages, and similar investments will be 25 to 35 milliard marks, which is one-fourth to one-fifth of the pre-war figure.

(2) FOREIGN TRADE.

Foreign trade statistics are unreliable. Before the currency stabilisation of November, 1923, the value returns were in paper marks of varying value. The later-published gold mark totals were estimates, based upon

quantities of goods imported and exported. Since the stabilisation the value returns have been in gold or reichs (new) marks. The chief feature of post-war foreign trade was a practical equilibrium of imports and exports until the end of 1923, since when there have been heavy import surpluses:—

(Millions of Gold Marks.)		
	Imports.	Exports.
1913	10,769.7	10,097.2
1920	3,928.7	3,709.3
1921	5,732.1	2,990.6 (May-Dec.)
1922	6,302.8	6,181.5
1923	6,081.3	6,079.5
1924	9,317.3	6,568.2

The first annual import surplus of dimensions worth mentioning occurred in 1924. Of a return to trade equilibrium in 1925 there is so far no sign:—

(Millions of Gold Marks.)		
	Imports.	Exports.
1913, monthly average	897.0	841.0
1925, January	1,365.6	697.4
February	1,123.6	631.4
March	1,110.5	711.1
April	1,080.9	672.3
May	1,084.0	732.1

The geographical distribution of trade in post-war years before 1924 is not reported. In 1924 it was:—

(Millions of Gold Marks.)		
	Imports.	Exports.
Europe	5,182.8	4,762.7
Africa	380.7	143.2
Asia	857.3	511.0
America	2,623.7	1,117.9
Australia	269.9	29.1

The main difference as compared with pre-war years is the conversion of an active balance with Europe into a passive balance. This is due to increased European Protection, special measures against German trade, including anti-dumping measures adopted in the mark depreciation years, the rise abroad of competitive industries in former special German branches, and the now withdrawn restrictions of the Peace Treaties, including the duty-free import contingents. In 1913 the trade balance with Europe was active, imports being only 5,888.0 million marks, against 7,677.5 million marks exports. The change since 1913 in the American trade balance is relatively small, imports from both Americas in 1913 having been 2,994.6 million marks, as against 1,546.7 million marks exports. In a broad sense, the unfavourable trade balance is due to continuing dependence upon abroad for necessary food-stuffs and raw materials, while exports of manufactures have declined; but an additional factor is the disappearance of the former favourable trade balance in heavy goods, in particular coal and iron. The year 1924 also witnessed a large increase in imports of manufactured, partly luxury, goods, and in a deterioration of the trade balance in textiles, which was only partly due to necessary import of raw and half-finished materials.

The very unfavourable foreign trade balance of 1924 and 1925 is not necessarily symptomatic of the future trend. Owing to conditions on the Western frontier in 1924, exports were considerably larger than appears in the return. The impending termination of the treaty restrictions on January 20, 1925 resulted in the rushing in of large quantities of Alsace-Lorraine duty-free goods, and this appears plainly in the statistics. The currency stabilisation and the general rise in earnings suddenly created buying power, which enabled citizens to make up for privations of past years, and many foreign products not seen since 1914 reappeared on the home market. But a main factor was the replenishment of native capital by means of foreign loans and credits, which were transferred largely in shape of foreign goods. Through this, through the foundation of the Gold Discount Bank, and through the resulting abundance of, and later removal of restrictions upon dealings in, foreign exchange, the influences which checked importing in the inflation years disappeared. The passive balance was, therefore, due entirely to greatly increased imports, and not to declining exports, which, on the contrary, after remaining unchanged in 1922-23, increased materially.

The year 1925 opened very badly. The first five months show an adverse balance of 2,320 million marks, which for the whole year would mean about 5,570 million marks, or equal to nearly the whole volume of exports in

1923. This development, however, is not expected. The import flood reached its height in January, and shows signs of declining. Imports in 1924 were highly erratic, being considerable in the spring, very small in the summer after the Reichsbank began to ration credit, and very large in the last months, when the Dawes Settlement restored international confidence and induced foreign capitalists to end. As against this, exports have increased from month to month almost without a break. Exports per quarter were:—

	Millions of Gold Marks.
January-March	1,353.8
April-June	1,473.4
July-September	1,726.9
October-December	1,995.2

Unless financed by further foreign credits, a continuation of the large import surpluses seems impossible.

The question of the foreign trade balance is associated with Germany's ability to make net payments to abroad, whether for her normal liabilities for interest upon foreign loans and investments, or for the Reparation scheme. The doubtful question how far future Reparation deliveries will be made in kind is of no importance in principle, because deliveries in kind must affect the foreign payment balance quite as much as cash transfers. The present foreign trade balance, even assuming, as seems justified, that 1924 was an exceptional year, does not promise the creation of a large favourable payment balance. It is denied by authoritative Germans that the whole national economy is passive—that is, that consumption values exceed production values, and that the balance is for the present made good by foreign borrowings. This view is confirmed by certain factors, notably the recovery in deposited savings. Owing, however, to the sharp credit restrictions imposed by the Reichsbank in April, the year 1924 compelled the sacrifice of large hoards of foreign exchange holdings; and the import surplus was paid for in this way, in so far as it was not covered by foreign loans. The official analysis of the foreign payment balance of 1924 is:—

	Millions of Gold Marks.
Receipts from—	
Export of foreign banknotes	700
Export of foreign bills	1,800
Foreign loans and credits	1,400
Total receipts	3,900
Net liability on trade balance	2,700
Surplus	1,200

The surplus, after provision for certain small interest payments to abroad, is represented in an increase in the Reichsbank's holdings of gold and foreign exchange.

With present trade conditions, there is no possibility of making payments to abroad otherwise than by further borrowing from abroad. The prospect for the future depends almost exclusively upon the development of foreign trade.

(3) INDUSTRY.

Since February, 1925, a steady improvement has taken place in the condition of industry, but activity has not recovered to the degree witnessed during the best period of the so-called "Catastrophe (Inflation) Boom." This boom reached its highest point about September, 1922, after which activity declined slowly, until the decline was accelerated by the Ruhr invasion of January, 1923. The Ruhr invasion, apart from its local effects, seriously deranged the distribution of goods at home, and almost completely stopped export from the West. Throughout 1923 unemployment rapidly increased. After the currency depreciation had reached a certain point it ceased to operate as a tonic; and the stabilisation of November, 1923, had at first no remedial effect, being followed by abnormally high gold prices and by a serious shortage of credit. In 1924 industry improved; but there was a setback in the early summer in connection with the money crisis and the Reichsbank's credit-rationing system, and towards the end of the year, after a recovery, which was apparently due to the Dawes Settlement, there was the usual seasonal decline in activity. Nevertheless, 1924, taken as a whole, showed a very great improvement, unemployment in the whole Republic falling by about one-fifth. On May 1st there were 320,800 registered unem-

ployed; on June 15th, 214,092. At the end of June, 1925, industrial conditions, even when measured by pre-war standards, were fairly satisfactory; but there were great differences between the degrees of activity in different trades.

Coal.—The coal-mining industry is one of the worst sufferers, and this in an unexpected way. The prediction that the Republic, deprived of the Saar and East Upper Silesian mines, and compelled to make Reparation deliveries, would be chronically short of coal, and probably (owing to payment-balance conditions) unable to import it, with result of paralysis of industrial production, has proved incorrect. Of late, though mining operations are reduced, more coal has been produced than can be sold. The free export of coal, independently of Reparation deliveries, has considerably increased; and though importing continues on a small scale, this is due to price considerations, depending on transport rates to particular German districts. The home mines, if working at full capacity, could easily supply the home market, fulfil the Reparation liability, and yet export considerable quantities. Causes of this, apart from the fall in industrial activity as compared with 1913, are the increased output of lignite and its better technical application, the use of oil, water-power development, the increased smelting of foreign ores which require less coke than Alsace-Lorraine minette, and fuel-saving inventions. Of a future shortage of home-mined coal there is no likelihood, even if industrial consumption increases. The coal problem is still serious, but only as a matter affecting the foreign trade balance.

The output of coal in Germany nearly doubled in the first 13 years of the present century. The output of lignite increased two and a-half fold. Figures for the last pre-war year and the post-war years are:—

	Coal.	Lignite.
	Metric Tons.	
1913	149,753,158	87,233,084
1919	116,707,234	93,648,264
1920	131,346,722	111,633,763
1921	136,210,088	123,011,250
1922	119,144,522	137,072,707
1923	62,224,535	118,248,735
1924	118,828,644	124,359,829

These figures are for the present area, without the Saar, and from 1922 on also without Polish Upper Silesia. The latter exclusion partly explains the decline from 1922 in coal output. The output of Polish-Silesian coal in 1923 was 26,479,946 tons. The development of lignite mining in the first post-war years was largely due to the shortage of coal; since the coal superfluity showed itself lignite development has fallen off. The capacity of the Ruhr mines has greatly increased; and for a fortnight in January, 1925, the average daily output exceeded that of 1913, but since then there has been a rapid decline. Nevertheless, total output in the first months of this year exceeded that of the corresponding months of 1924:—

	Coal.	Lignite.
	Metric Tons.	
January-March, 1924	29,337,012	28,231,328
1925	33,875,290	35,609,668

Of late the stock of unsaleable coal at the Ruhr has increased. In order to help competition against English sea-borne coal, the Railways Company in May reduced carriage rates for Ruhr coal to Hamburg, Bremen, Emden, and Luebeck. The stagnation in the coal trade this year brought about the resurrection of the former Ruhr Coal Syndicate, whose term expired in 1923. The syndicate is organised on centralised lines, and it fixes both home and export prices. Ruhr coal is being sold to so-called "competitive" districts, including Hamburg and East Germany, as well as foreign countries, at reduced prices. A new feature of the syndicate is that henceforth the loss on such sales will be assessed only upon such mining concerns as wish to share in the "competitive" trade, whereas formerly it was borne by all the syndicate's member concerns.

Since 1922 Germany has had an adverse coal foreign trade balance, which became very large in the first year of the Ruhr occupation.—

(In 1,000 Metric Tons.)

	Imports.	Exports.	Reparation Deliveries.
1922	12,598	5,062	9,451
1923	25,121	1,209	4,250
1924	13,202	6,682	13,200

The Reparation deliveries figures for 1923 and 1924 are French estimates. Of late Germany has been effectively working foreign coal markets, including South Europe and South America, and exports in the first quarter of 1925 were 3,128,901 tons, against 2,494,385 tons imports. In lignite practically only importing is done.

Iron and Steel.—The iron and steel industry in the past few years has gone through a process which has some resemblance to that of coal. First came apprehensions of chronic shortage, owing to the loss of Alsace-Lorraine and part of Silesia; and, in fact, for a time shortage did prevail. The iron and steel concerns left to the Republic have, however, adapted their methods and increased their output; and last year it was for the first time declared that Germany can supply herself with all kinds of heavy iron and steel, apart from certain sorts of minor importance, of which quality thin sheets are the chief. In order to encourage production of the latter, the pending Customs tariff considerably raises import duties, while in general leaving iron and steel rates unchanged. A result of the adaptation is that the recent import surplus of heavy iron and steel goods has changed into a small export surplus.

The iron and steel branch, which stagnated during the greater part of 1924, underwent a marked improvement towards the end of the year, but the improvement has not been fully maintained. The pig-iron market has been quiet, but steel works and rolling mills have work for a long time ahead, and show no inclination to hunt for new orders at present low prices. Syndicates and cartels, which fell into disfavour during the "Catastrophe Boom" years, when home production was insufficient, have come into fashion again, mainly as a means of reducing output and maintaining prices when trade is bad. First was created a Raw Steel Syndicate (*Rohstahlgemeinschaft*), with authority over all branches; later, a subordinate *Stahlwerksverband*, embracing only semi-finished material, railway permanent way material, and structural forms. A Tubes Syndicate has also been organised, but the special syndicates for bars and other sorts, which are to be subordinate to the Raw Steel Syndicate, are still in course of negotiation. Export prices are considerably below home prices, owing to the need, it is declared, of meeting French, Belgian, and Luxemburg competition, which takes the form of exchange dumping. Of late the export price of bars has been £5 13s per ton, as against approximately £6 15s at home; structural forms, £5 9s, against £6 12s.

Pig-iron and steel production, starting from figures of less than one-third, and less than one-half respectively of the pre-war, increased in the post-war years until it had a bad set-back in 1923:—

	Metric Tons.	
	Iron.	Steel.
1913.....	19,309,172	18,935,089
1919.....	6,283,873	7,847,356
1920.....	7,043,617	9,277,882
1921.....	7,845,346	9,996,538
1922.....	9,395,670	11,714,302
1923.....	4,936,340	6,305,250
1924 (estimated).....	7,190,000	9,150,000

The potential output of steel is estimated by the secretary of the Iron Industrial Association, at as high as 17 million tons, or little behind the pre-war figure. The present production is certainly far below the highest possible. The Raw Steel Syndicate, since its foundation last year, has pursued a severe rationing system. The ration of each member concern during July is to 75 per cent. of its full quota.

The foreign trade balance in heavy iron and steel is improving, but has no resemblance to the pre-war balance, which was strongly active. Movements of imports and exports are:—

	In 1,000 Metric Tons			
	1913.	1922.	1923.	1924.
Imports.....	300	1,827	1,731	1,240
Exports.....	6,202	2,516	1,307	1,510

Of iron and steel and wares thereof of all kinds (machinery excepted) Germany imported in 1924 1,324,011 tons, and exported 1,955,110 tons. Whereas exports in 1924 were about half as great again as imports, in the first quarter of 1925 they were twice as great (imports 1,28,271, exports 873,952 tons). Foreign trade in value in iron and steel products of the heavy iron and steel branches, as compared with the last pre-war year, was:—

	—Millions of Gold Marks—			
	Imports.		Exports.	
	1913.	1924.	1913.	1924.
Iron ore.....	250	68	11	5
Pig and scrap.....	37	27	77	33
Semi-finished.....	2	22	65	5
Bars, &c.....	6	73	204	38
Sheets and wire.....	21	43	179	92
Railway materials.....	..	30	80	14

The whole export of iron and steel wares (omitting machinery) had a value in 1924 of 844½ million marks, as against 1,413 million marks in 1913: the value of imports 301 million marks, against 394 million marks. The export surplus has, therefore, fallen from about 1 milliard to half a milliard marks.

Fine-Steel Products.—The fine steel industry, which suffered from a serious crisis last year, 20,000 persons being unemployed in the Solingen district alone, has of late recovered. While selling at home has been fairly active, it has been mostly in second-class wares; and export has been injured not only by high import duties (the United States, in particular), and by Ally trade policy, but also by the sale to abroad of vast quantities of very inferior goods which bore the Solingen mark, and were, in fact, made at Solingen. The leading Solingen firms this spring formed a syndicate for joint selling operations at home and abroad. The sale of goods, chiefly the cheaper qualities, to Asiatic countries has increased. Exports of Solingen wares by weight have of late considerably exceeded the pre-war average:—

	Double-Centners (200 Metric Lb.)	
	1909	1911
.....	35,189	47,337
.....	59,511	67,944
.....	48,345	52,312

Exports increased greatly from month to month in 1924, being 2,900 d.c. in January, and 6,112 d.c. in December. The foreign trade balance for all kinds of cutlery is better than before the war:—

	—Millions of Marks—			
	Imports.		Exports.	
	1913.	1924.	1913.	1924.
.....	0.62	0.17	38.33	48.23

Engineering.—Conditions in the engineering industry vary very much in different branches. In the locomotive and railway rolling stock branches less activity prevails than in the first post-war years, when large orders were given for replacement of material worn out during the war, or handed over at the Armistice. The conversion of the railways into an independent corporation had the effect of temporarily reducing orders, and of late hardly any have been given. The nineteen locomotive-building concerns lately formed a syndicate under the title *Deutscher Lokomotiv-Verband*. Russian orders for locomotives have ceased. The machinery branches have been hit by measures taken by Ally countries, and sometimes during the inflation time by neutrals. Capital shortage has effected the home buying of industrial machinery, and during the war and the inflation years many manufacturing concerns installed more machines than they can now use. Credit shortage checks the sale of agricultural machinery. Although the textile manufacturers are mostly well occupied, their finances are particularly weak, and a great deal of the present production of textile machinery is intended for stock, and cannot be kept up indefinitely. Sales of machinery to abroad have of late increased, but they are much smaller than before the war. As compared with 1913, exports have proportionately declined less than imports; but as pre-war imports were only about one-eighth of pre-war exports, the absolute export surplus has fallen very considerably. Comparative trade balances in the different branches are:—

	—(Millions of Marks.)—			
	Imports.		Exports.	
	1913.	1924.	1913.	1924.
Locomotives, tenders.....	0.55	..	55.22	20.11
Internal explosion motors.....	1.84	1.56	35.62	21.49
Sewing machines.....	4.05	3.12	47.16	43.26
Other textiles machines.....	16.94	9.71	60.43	64.27
Agricultural machines.....	29.36	2.90	34.98	20.18
Machine tools.....	9.95	3.06	98.27	68.31
Other machines.....	20.14	7.50	276.47	179.12

The machine-manufacturing concerns are in a strong position, though suffering from shortage of working capital. Nearly all companies, through having cleared off in de-

preciated marks their debentures and mortgages, have been able to fix their capitals considerably higher than before the war.

Electrical.—As the result partly of the expectation of a chronic coal shortage, the electrification of Germany proceeded rapidly after the war. According to a statement published a year ago, electrical installations totalled nearly 3,000,000 kw in 1922, as against under 1,500,000 kw in 1913, while production of electricity in milliards of kilowatt hours rose from 2,238 to 7,233. This development, which has proceeded farther in the last three years, made possible the use of lignite and water-power at the expense of coal. This process led at first to great activity in the electro-technical branches; but the credit crisis which followed the currency stabilisation, and the financial difficulties of municipalities and other local bodies have since checked home buying. The number of persons engaged in manufacturing electrical wares is 27.5 per cent. higher than in 1913. The export trade has been affected by the efforts of foreign countries to put their own electrical industries upon a national basis. Nevertheless, compared with other manufacturing branches, exports have fallen off relatively little. The following figures comprise electrical machinery and articles of all sorts:—

	—(Millions of Marks.)—	
	Imports.	Exports.
1913.....	12,820	290,250
1924.....	9,060	259,160

The present tendency is strongly towards concentration and standardisation. In North Europe German installation materials have practically a monopoly, owing to the fact that the legal requirements for safety, &c., are identical with the German.

Motor-Vehicles.—The motor-bicycle and motor car businesses are entrenched behind a general import-prohibition, and according to the pending tariff they will be protected by prohibitively high duties in future. The use of motor-driven vehicles is rapidly increasing, but prices are high, production cost being kept up by the large number of manufacturing firms with a small average output. The combined productive capacity of all concerns is estimated at only 60,000 cars. Several important fusions have taken place in the last three years, and there is a movement in favour of standardisation. The formation of a company to produce light, cheap cars on mass-production principles is being considered. The development of motoring is shown by the following figures, which include motor-lorries, of cars in use:—

	1914.....	1923.....	1924.....
.....	57,800	152,068	216,300

The foreign trade balance is less favourable than before the war, exports having fallen nearly to half, while imports have increased:—

	—(Millions of Marks.)—			
	Imports.		Exports.	
	1913.	1924.	1913.	1924.
.....	15.7	38.9	110.7	69.7

The exclusion of foreign motor-vehicles which is demanded by manufacturers is being strongly opposed by the motor-car traders' association, and by other trading interests. Financially the motor-car manufacturing companies are strong. Owing to the redemption of mortgages and debentures at practically no cost during the inflation years, the total capital of eleven leading companies increased from 65,500,000 marks in 1914 to 128,910,000 marks in 1924. All the chief companies are fully occupied, and they refuse to deliver on short notice.

Shipbuilding.—The shipbuilding industry is depressed. Although the yards seem able to build more cheaply than foreign yards, particularly in the domain of motor-ships, tank-ships, and other special types, they have not escaped the general shipping depression, and have been badly hit by the decline in capital strength of native shipping companies. Whereas industrial companies proper often increased their assets during the war, the chief assets of the shipping companies, their tonnage, disappeared. The reconstruction plan, financed partly by the State, with compensation for losses, came to an end in 1923. This plan provided for restoration of one-third of the pre-war mercantile fleet. The original compensation fund of 11,970 million paper marks was later increased to 18,000 millions. Since the termination of this reconstruction

programme, shipbuilding for home concerns has heavily declined, but building on foreign orders has tended to increase, and in 1924 was the highest on record. Ships under construction in all German yards were:—

	—German Orders—		—Foreign Orders—	
	Sea Ships.	River and Canal Ships.	Sea Ships.	River and Canal Ships.
	Tons.	Tons.	Tons.	Tons.
1913.....	1,296,800	17,810	49,100	4,500
1921.....	1,667,027	14,416	59,372	272
1922.....	1,171,576	221,649	86,450	16,020
1923.....	597,404	130,456	119,187	11,073
1924.....	405,700	..	231,600	..

The increase in constructions for abroad gives a more favourable picture of conditions than is justified, because some of these orders date from inflation times. The building companies are at present accepting orders which individually yield no profit, but the effect is to make for economical working. Conditions this year are only moderately good, though there have been some large foreign orders, including, apart from the British motor-ships, an order for a series of oil-tank ships for the Standard Oil Company. The Railway Company lately cut rates considerably for iron and steel consigned to shipbuilding yards.

Potash.—The potash industry, which is of great importance to the foreign trade balance, has developed satisfactorily. In 1924 an agreement was concluded with the French Société Commerciale des Potasses d'Alsace for a common policy in selling, and for division-up of total sales to the United States and Sweden, and this year an agreement covering the whole world was come to. The intention is to keep prices steady, but not, it is stated, to increase them. The first agreement with France was forced on Germany by the fact that, whereas between 1919 and 1923 her sales of pure potash to the United States rose only from 700,000 to 1,190,000 d.c.'s of pure potash, France's sales rose from 54,500 d.c. to 980,000 d.c. Sales at home were for a long time checked by shortage of agricultural credit, but in 1924 credits for purchase of potash (as well as nitre) by farmers, were organised through the Reichsbank. About 40 per cent. of potash produced is exported, and Germany uses more than the whole rest of the world. Total sales at home and abroad will this year exceed pre-war level:—

	D.c. of Pure Potash.	
	1913.....	1923.....
.....	11,103,690	8,859,419
.....	8,420,000	13,200,000

Potash prices are to-day lower than before the war. The average price per d.c. of pure potash in 1924 was 14 marks, against about 18 marks in 1913, and 22 marks in 1890. Reorganisations with aim of economy have been made necessary. Many mines have ceased working, being compensated therefor by the Potash Syndicate. At the end of 1924 100 mines were not working, and 53 mines had undertaken not to reopen for 30 years. The present maximum demand is put at 14,000,000 d.c. of pure potash, which can be produced by 40 or 50 of the best mines out of 218 in the syndicate.

Chemicals and Dyes.—The chemicals and dyes branch is not prosperous. Production capacity is (with certain exceptions) greater than before the war, and a new synthetic nitre industry has grown up. While the home sales of certain chemicals have been reduced by declines in various branches of industry, export has been hemmed by foreign tariff measures, and still more so by competition from concerns newly founded abroad. The coal tar industry, organised in the German Aniline concern, claims to have supplied 75 per cent. of the world's demand for coal tar dyes before the war; but as the result of new enterprise in Britain, the United States, France, Japan, Italy, and other countries, Germany has lost her commercial predominance, though she claims to have retained her technical superiority. Financially most of the chemical companies are in a strong position, owing mainly to extinction at small cost of their pre-war debts, and to the acquisition of new large values in the shape of unencumbered real estate and plant. The first gold-mark balance-sheets of six companies in the Aniline concern show real estate and plant worth 317 million marks, as against 181 million marks in 1913, while debenture and mortgage debts declined from 25 to 1.35 million marks.

The foreign trade balance in chemicals and dyes is relatively favourable, but this is mainly due to the fact that import of Chile nitre fell from 172 million marks in 1913 to 3 million marks in 1924. The movement in dyes was:—

Imports.		Exports.	
1913.	1924.	1913.	1924.
21-04	9-58	298-11	195-7

(Millions of Gold-Marks.)

and the movement in chemicals and dyes of all sorts, including potash, as prepared for export:—

Imports.		Exports.	
1913.	1924.	1913.	1924.
510-15	170-74	989-22	585-76

Textiles.—Ever since the war the textile industry has proved specially sensitive to variations in general trade conditions. Since the trade recovery of the second half of 1924 great activity has prevailed, and the unemployment figure has been low. At times Saxon, and sometimes western, manufacturers have refused to accept orders except for long delivery terms. The activity is greatest in the cotton branch, and greater in spinning than in weaving. Before the war the value of the textile production was estimated at 5,300 million marks, and exceeded that of coal, or iron and steel. Although, according to official estimates 10 per cent. of spinning and weaving capacity was lost under the Peace Treaty, the textile concerns have still the highest potential output, measured in values. Textile prices are in general above world-market prices, and this, and the duty-free system imposed temporarily by the Peace Treaty, last year caused very large imports of Alsace-Lorraine goods. Very long hours are worked in the textile branch, and wages are low. The cotton industry is still much less productive than before the war, but in part this is explained by the territorial losses. Imports of raw cotton in 1924 were 276,000 metric tons, as against 195,217 tons in 1923; 315,303 tons in the "Catastrophe Boom" year, 1921; and 477,944 tons in 1913. The textile concerns are particularly short of working capital, but their reports for 1924 show that nearly all reaped fair profits, and dividends of 10, 12, or more per cent. were common. The present activity is mainly due to home buying. The export market is still unsatisfactory, and owing to the high home prices very large quantities of finished textiles, partly luxury qualities, have been imported of late. Imports of cotton and woollen yarn, by value, have of late greatly exceeded the pre-war figures, but this is largely accounted for by the great rise in prices:—

(Millions of Marks.)			
Imports.		Exports.	
1913.	1924.	1913.	1924.
Cotton yarn	116-21 .. 276-28	61-10 ..	32-42
Cotton cloth	72-09 .. 322-75	446-50 ..	394-39
Woollen yarn	108-07 .. 237-11	90-64 ..	86-69
Woollen cloth	44-36 .. 111-65	271-55 ..	221-25
Silk yarn	30-69 .. 24-49	17-04 ..	17-28
Silk cloth	43-03 .. 51-83	148-28 ..	130-40

The foreign trade balance in all kinds of textiles, raw to finished, including clothing was:—

Imports.		Exports.	
1913.	1924.	1913.	1924.
2,096-15	2,945-03	1,521-79	1,310-90

As compared with before the war, the import surplus has increased nearly threefold. By its nature, the textile branch, for which most raw materials are imported, while most finished goods are home consumed, must show an import surplus; and it is a misfortune for the foreign payment-balance that the greatest price-rise has taken place in this branch.

Other Industries.—The leather goods industry is fairly prosperous, but present activity in the boot and shoe branch is mainly confined to luxury sorts. The production of leather has of late exceeded the demand. Export of boots and shoes has fallen to about 5 per cent. of production, as against 14 per cent. in the inflation years. In 1924 4 million pairs of boots and shoes were exported, against 6 million pairs in 1923. The pottery and glass branch is tolerably active. The export of bottle glass has fallen heavily as compared with before the war. The paper industry is prosperous, its chief trouble being the insufficient supply of paper-wood at moderate prices. The output of pulp and paper concerns when working at full capacity is about double the home consumption. Present maximum home consumption of wood paper is 250,000 metric tons, maximum output 550,000 tons. Full capacity

of cellulose mills is 800,000 tons, of mechanical pulp mills 675,000 tons. Exports, by weight, of pulp and paper declined in 1924, but are again increasing. The rubber industry, which is mainly a home-consumption branch, is prosperous; in 1923 the net exports of rubber goods, with 17,177 tons, exceeded those of 1913, with 15,516 tons; but in 1924 net exports declined to 13,739 tons. Imports of rubber goods in 1924, by weight, were only one-fifth of the pre-war figure. The re-export trade in raw rubber has badly fallen off, being 764 tons in 1924, as against 3,972 tons in 1913.

The foreign trade balances of the above branches are as follows:—

(Millions of Marks.)			
Imports.		Exports.	
1913.	1924.	1913.	1924.
Boots and shoes	20-20 .. 14-44	114-23 ..	84-08
Pottery and glass	40-91 .. 25-30	268-72 ..	272-31
Paper industry products	68-58 .. 61-78	263-72 ..	327-47
Rubber, raw and manufactured ..	170-30 .. 64-31	155-17 ..	74-67

(4) PRICES AND COST OF LIVING.

Reliable price statistics have been compiled only since the currency stabilisation. Before that statistics were in paper marks. The "gold" prices issued during part of the inflation period were unreliable, being obtained by converting paper mark prices at current gold (dollar) exchange, a method almost useless, owing to the fact that at times the exchange varied 100 per cent. in one day. With exception, however, of times of temporary mark exchange recovery, gold prices were below the world-market level until well on in 1923. Immediately after the stabilisation they rose enormously; after which came a fall, followed by the moderate fluctuations usual with a fully stable currency. In the late spring of 1924 an avowed policy of depressing prices by means of credit and currency restrictions was pursued by the Reichsbank with some success, but an upward movement followed. High and low points of the official wholesale price index are:—

1913-14	100-0
1924—January	117-3
April	124-1
July	115-0
1925—January	138-2
April	131-0
June	134-9

The cost-of-living index is imperfect. Until March, 1925, appeared an index which was admittedly on a wrong basis, showing the cost lower than was correct. This index has been revised, and retrospectively corrected, but only back to February, 1925. The old index, however, correctly shows the relative movement:—

Old Index.		New Index.	
1913-14	100	1913-14	100
1924, January	110	1924, January	110
February	104	February	104
July	116	July	116
1925, January	124	1925, January	124
February	125-1	February	135-6
April	136-7	April	136-7
June	138-3	June	138-3

A factor in the increase in the cost of living is the partial restoration of rents. Until early in 1924 no net rents (landlord's profit) and practically no gross rents were paid. To-day rents (Berlin) are 78 per cent. of the pre-war level. As the present housing law requires the gradual increase of rents until the pre-war level is reached, a further rise in the cost of living is likely.

(5) WAGES.

Wages, like prices, in the inflation years cannot be given. Gold wages, except, perhaps, during temporary periods of mark recovery, were extremely low; and real wages, though higher as compared with before the war than nominal wages owing to the low gold cost of living, were still much below the pre-war level. Immediately before the correction of the cost-of-living index, real wages were shown as being a little higher than before the war, but the correction set them materially back. During the inflation period the difference between wages of skilled and unskilled workmen was much smaller than before the war; but of late the difference has increased.

Immediately after the currency stabilisation wages (thenceforth paid in stable, and for practical purposes gold, marks) began to rise. In June, 1924, the average nominal skilled workman's wage, with 34.56 marks a week, first exceeded the average 34.35 marks of 1913; but the un-

skilled wage, with 24.43 marks, exceeded already in April the pre-war 24 marks. At the end of 1924 the skilled average wage reached 36.52 marks, unskilled 27.69 marks. These figures are mostly for workmen working not longer than 48 hours; wages for men working longer than 48 hours are higher.

Average wages in March, 1925, in nine industries taken together, and in five of these separately, were:—

	Skilled.		Unskilled.	
	Hourly.	Weekly.	Hourly.	Weekly.
	Pf.	M.pf.	Pf.	M.pf.
All nine	80-6	39-79	57-5	29-98
Mining	90-4	43-38	53-2	31-62
Metals	78-6	39-51	53-8	27-09
Textiles—				
Men	57-2	27-46	47-4	22-75
Women	45-3	21-74	35-1	16-85
Chemicals	74-5	35-76	63-4	30-43
Paper	58-7	28-18	53-0	25-44

The weekly wages are mostly for 48 hours' work, or slightly less; but for the metal workers in certain districts 54 hours, and for surface mining employees 60 hours.

Owing to the small rise since 1913 in nominal wages (for skilled workmen from 34.35 marks to 39.79 marks, and for unskilled from 24 marks to 29.98 marks), taken together with the much greater rise in the cost of raw materials, in taxation, and in other cost factors, the proportion of wages to total production cost is lower than before the war. In December, 1924, the percentage of wages in the wholesale price of cotton yarn was put at 3.8, and in April, 1925, at 2.8, as against 6.6 in the first half of 1924. In cotton cloth the respective percentages were 6.8, 5.5, and 12.6. The decline in the loan percentage in those industries, the raw materials for which have risen less in price than textiles, is not so great.

In spite of low wages and hard living conditions, Labour has been increasingly quiet; and with exception of the Ruhr coal strike of early 1924 no conflict of great dimensions has taken place for a long time. In 1923 (for 1924, no statistics) were 2,200 strikes and lock-outs, involving a loss of 15,171,773 working days.

Any comparison with British wage rates in general is impossible; so far as specified industries are concerned the following figures (given by the Ministry of Labour in the February issue of the *Gazette*) may be quoted as giving representative rates for December, 1924:—

Mining (average earnings per shift)—		s	d
Highest (Yorks and Sunderland)		11	8
Lowest (Northumberland)		9	6
Engineering (weekly time rates)—		s	d
Skilled		56	6
Unskilled		40	2
Shipbuilding (weekly time rates)		s	d
Skilled		55	7
Unskilled		38	5
Textiles (average weekly rate)		s	d
about		40	0
Boot and shoe—		s	d
Skilled		60	0
Unskilled		36	0
Building—		s	d
Skilled		73	4
Unskilled		55	0

The general rise in British weekly full-time rates was put by the Ministry at 70 per cent., while the cost of living index for June was 72 per cent. above pre-war.

Working Hours.—No recent official statistics of working hours have been issued. Late in 1923 the Marx Cabinet issued a Decree practically abolishing the compulsory eight hours' system, which had been in force since November, 1918. The Decree enacted that 10 hours might be worked in trades which were not unhygienic or dangerous. In any particular trade 10 hours might be proclaimed as permissible either by agreement between employers and employed or by the public authorities. The 10 hours' day largely returned, mainly in the textiles and heavy metal branches; in the latter the two shifts per day system replaced the three shifts. The Luther Cabinet modified this Decree, and the eight hours' day has been restored in blast furnaces and cokeries; but already hours were shortening under influence of Socialist and trades union pressure. The last statistics, compiled by the General Trade Unions Association, refer to November, 1924. They are based on a census of 51,166 industrial concerns in seven chief industries:—

	Working Longer Than 48 Hours.		Thereof Longer Than 54 Hours.	
	Concerns.	Employees.	Concerns.	Employees.
	%	%	%	%
All seven industries	24-3	45-4	4-5	10-7
Metal branch	39-0	53-1	10-8	16-6
Chemicals	38-7	38-8	10-2	5-9
Textiles	65-1	66-0	1-5	3-3
Boots	5-9	8-1	0-5	0-2

The percentage of employees in all seven industries working over 48 hours was 54.7 in an earlier (May) census. The percentage working over 54 hours was then 13. The Government is preparing a law definitively regulating the working hours question, which, it declares, will embody the "principles" of the Washington Agreement.

Employment.—Employment greatly improved after February, 1925. The average percentage of unemployed members of trades unions in the last pre-war year was 2.9. In March, 1925, it was 5.8, but the absolute number of unemployed has fallen greatly since then. The number of publicly supported unemployed has varied enormously since the war. The more important high and low points, and the movement for this year so far are:—

1918—December	501,610	1923—August	139,016
1919—February	1,076,368	December	1,464,447
1920—June	271,660	1924—February	1,588,939
1921—March	426,619	June	208,258
December	149,337	August	358,331
1922—March	212,526	September	566,957
September	11,671	November	426,729
1923—February	150,220	1925—February	593,024
March	190,217	June (15th)	214,092

The figures from and including March, 1923, to August, 1924, are for unoccupied territory only. According to official statements, there were 1,500,000 unemployed in occupied territory at the close of 1923.

GERMANY AND COMMERCIAL COMPETITION.

(1) PAYMENTS ABROAD.

Before any opinion can be formed as to the effect of Germany's payments upon world trade, it is first necessary to consider whether the sum received in Reparations can ever be paid abroad, and if so, in what form. In other words, this means will Germany be able to create an export surplus, and if so, of what size? In this connection a recent American investigation summarises the pre-war position of Germany thus:—Her actual trade showed an adverse balance of 1.7 milliards a year in the decade preceding the war. Her earnings on foreign investments, shipping, banking, and other services, though difficult to estimate, are at approximately 2.1 milliards, leaving about 4 milliards available in the ten years for foreign investment. To-day the items commonly described as invisible exports are greatly reduced, a current estimate putting them at about 500 millions, against over 2 milliards before the war. On the other hand, German property and under-

takings have been sold in great numbers to foreigners, and it is estimated that this figure of earning is completely offset by the interest which she now owes abroad. She has, therefore, nothing to help her to pay the debit balance on her visible trade, which amounts to-day to 2 milliards. This is the leeway to be made good either on physical trade or by means of invisible items before she begins to create an export surplus.

She has not, however, to provide the whole of the Dawes annuities abroad. The armies of occupation and the cost of administering various schemes is mostly incurred in Germany. These items are a substantial part of immediate payments, but are, of course, comparatively small in relation to the final total under the Dawes Plan.

The problem is greatly eased by payments in kind and the Reparation Recovery Act. Both of these devices mean that the Allies get these payments regardless of the needs of commerce. It increases the competition in private trade

for exchange, and if Germany is endeavouring to import an unduly large amount, it will force the Bank to take action to protect the value of German currency by manipulation of the money market, by rationing exchange, by moving the Government to check exports by licensing or tariffs, or by other means. Having first secured some of their debt in foreign money, the Allies may force Germany into the position of protecting her currency. This is a very different thing from assuring that the German Government will actively take steps to create a large export surplus for the Allies. How this is to be done remains an unsolved problem. It would not be surprising to find that in fact the transfers abroad may be limited to the amount paid in kind or by the Reparation Recovery Act.

In this connection attention should be directed to the Report of Sir Josiah Stamp to the Brussels Conference, in which a not unhelpful view of the transfer question was taken—subject, of course, to important provisos.

Before leaving this subject, it is worth noting the great contrast between the positions of France and Germany respectively. In the latter the Budget position is easy, but the facility for making transfer abroad very restricted. In the former the trade position would permit considerable payments abroad; the difficulty is to get a Budget surplus in view of the fact that France's internal war debt has only partially been written off by inflation; her expenditure on armaments remains at a high figure, and she has had to add greatly to her debt by paying the cost of restoring the devastated areas out of her own pocket.

(2) THE ABILITY TO RECEIVE PAYMENT.

In the second place, the effect upon the receiving countries must be considered.

It is sometimes assumed that receiving goods for nothing will put out of work those who would have made these goods. This is only part of the truth. Free receipts by a nation add to its wealth and are a net addition to its consuming capacity. In the case of reparation receipts, for example, they will either enable the Government to repay debt or to reduce taxation. In any case, the funds in the hands of the public will be increased, while the Government will still pay its way.

Taking the world generally outside Germany, the effect of reparation payments is to increase total demand, but to create a change in the character of the trade done. If the payment from Germany is made by an increase in her exports, there is an excess production of the type of goods Germany produces—chemicals, metallurgical products, electrical apparatus, &c. It is unlikely that increased total payment will express itself in increased demand for these particular articles. Similarly, if Germany pays by importing and consuming less, certain trades abroad will have a diminished market. Unless the recipients of reparations spend their money where Germany would have done, there is again a disturbance of trade. As a matter of fact, such disturbances are likely to be increased by unwise use of reparation payments, and particularly payments in kind. Thus France is alleged to be selling coke at 119s for which Germany is credited with 145s a ton. In other words, the allocation of reparations in kind is used as a direct subsidy to a particular industry.

But there are two considerations which diminish any fears which we might be likely to entertain. The first is that the Dawes annuities will only gradually increase, even under the full scheme, and dislocation will, therefore, not be sudden. The second is that it is very difficult to conceive ways of artificially stimulating Germany's exports without depreciating her currency. The necessary export margin is more likely to be secured by positive measures for checking her imports than for stimulating her exports, and therefore it is conceivable that even the ultimate effects on the receiving countries will be very small. From the annuities have to be deducted cost of administration and the cost of the armies of occupation. Even on the very favourable assumption that the annuities are paid in full (i.e., ignoring for the moment the difficulty of making transfers), it may be that half of this might be met by German imports being, say, 50 millions sterling less than they

otherwise would be and German exports, say, 50 millions more. This last figure is not an enormous one in comparison with the world's export trade in manufactured goods. The exports of the chief countries of the world before the war amounted to 2,326 million sterling, of which some 1,300 millions represented manufactured goods. On the assumption of a 66 per cent. increase in gold prices, this means that if trade were equal to that of 1913, the value to-day would be 3,876 for total exports and 2,160 for exports of manufactured goods. An increase in Germany's exports of 50 millions represents 2½ per cent. of this latter total. If the world recovers to something like normal conditions by 1932, the volume of the exported manufactures of the chief industrial countries ought to have risen by at least 15 per cent. as compared with 1913. On pre-war proportions, Germany should get 3½ per cent. of this increase; if she is to have an additional 50 millions of exports, she must have nearly 6 per cent. of it. Other countries will have their share correspondingly reduced.

(3) PRESENT COMPETITION FROM GERMANY.

The figures given in the previous part will have indicated to the reader what are the strong and weak points respectively in the German situation. It was there indicated that the foreign trade figures of Germany are not entirely to be relied upon. We may supplement them from our own figures of British trade with Germany. These are given in the following table:—

BRITISH TRADE WITH GERMANY. (Quarterly Totals.)			
	Imports from Germany.	Exports to Germany.	Re-exports to Germany.
	£	£	£
1922—			
January-March ..	5,475,462	5,410,053	4,708,029
April-June	6,539,640	8,820,536	5,517,572
July-September ..	6,685,789	10,153,330	3,417,873
October-December..	7,823,586	7,691,773	3,342,292
1923—			
January-March ..	8,643,078	8,541,911	4,061,225
April-June	8,287,015	12,254,741	6,327,371
July-September ..	8,523,854	12,217,823	3,919,468
October-December..	9,546,969	9,555,591	3,958,310
1924—			
January-March ..	6,731,115	10,013,570	9,369,573
April-June	7,675,371	12,893,842	8,602,718
July-September ..	10,918,567	8,108,144	3,320,771
October-December..	11,571,687	11,629,127	7,619,113
1925—			
January-March ..	10,854,078	11,854,505	8,605,222

In 1913 the quarterly averages were £20 millions, £10 millions and £5 millions for imports, exports, and re-exports respectively. Allowing for the change in values, these figures at to-day's prices would be equivalent to £30 millions, £21 millions, and £7 millions respectively. These figures show that exports from Germany to this country are very much below normal. Our imports to Germany are much nearer normal, and our exports of colonial produce are practically normal.

Looking at the total trade of the two countries, and without attempting to give exact figures, we may say that after allowing for the fact that present-day Germany is 10 per cent. smaller than pre-war Germany, that the exports of Germany to-day represent more than 60 per cent. of her pre-war exports; those of Great Britain represent 80 per cent. of pre-war exports. Both countries are suffering from reduced trade, but Germany's exports are still far more restricted than those of this country.

If the report about German industry given in Part III. is compared with our own condition, the point that will strike the reader most forcibly is that those industries are most depressed in Germany that are also depressed in this country. Coal has been hit not only by general industrial depression, but by the competition of other sources of power. Iron and steel are under the weather, mainly because the world's expansion outside the United States is still seriously checked, and the industry, which above all provides capital goods, is therefore unusually quiet. Shipbuilding all over the world is suffering from the general reduction in the total of the world's trade, and from the expansion of shipbuilding facilities due to the war. This aspect of the situation is fully explored in the survey by the Balfour Trade Committee, which has been published this week, and is analysed in the current issue of the *Economist*.

THE ENGLISH BANK FIGURES.

FROM the aggregate figures of those of the home banks which publish them at the end of June, it might be inferred that during the first half of the current year the apprehensions which were current in certain quarters concerning the effects of the return to the gold standard were shared by those responsible for the financial policy of the banks. As our readers will remember, it was feared that the return to gold might be followed by a serious drain on the Bank of England's stock of metal, and a consequent contraction of credit and rise in its price; and these fears of dear money made the market for gilt-edged investments sensitive and weak. This weakness is now shown to have been materially assisted by the action of the banks, since the aggregate balance-sheet which we produce on the opposite page is chiefly remarkable for a decline of no less than £58.8 millions in the figure of the investments held, which thus came down from £376.9 millions to £318.1 millions, a fall of 15.6 per cent. It is also interesting to note that the decline in this item has been continuous since 1922, when the total stood at £447 millions, and represented 21.9 per cent. of the aggregate assets held by the banks; at present the investments are 16.3 per cent. of the total, the lowest proportion shown since the war. On June 30, 1914, the total investments came to £117.3 millions, representing 13.5 per cent. of the total assets. The banks have thus made considerable progress in the process of extricating themselves from the position of investment companies, into which they were, to a certain extent, forced by the importunities of the Government during the war in inducing them to take large blocks of the securities created for the purpose of carrying it on. In normal times, when official pressure of this kind rarely influences the changes in the banks' assets, the investment item is the one which is probably most easily varied by the inclination and opinion of the banks. With regard to their cash in hand, they are guided by the rule at which they have arrived concerning the amount that ought to be visible in relation to the liabilities, while the discounts, loans, and advances are inevitably influenced by the course of trade and the demands of the banks' customers. The extent to which the banks choose to meet these demands is, of course, a matter on which the banks can exercise judgment; but they are evidently obliged, if they are to perform the function for which they exist, to meet the requirements of the public that they serve, in so far as they can do so without transgressing the rules that prudence imposes on the conduct of their business. In the matter of their investments, there is no convenience of customers to be considered—the banks buy them and sell them to suit their own purposes and opinions, unswayed by the outside influences which cause fluctuations in the contents of their portfolios of bills of exchange and in the figures of their loans and advances. On this occasion, therefore, when we see that the decline in the investments is by far the largest change in the banks' figures, it is clear that they were not impelled to reduce investments in order to meet the demands of their customers for advances and discounts, because the increase in this item is much less than the decrease in the investments. In fact, it may perhaps be conjectured that the process was just the opposite, and that the banks, having sold securities, enabled some of the buyers, by lending them the where-withal, to finance the purchase until the stock found a permanent home—in other words, the banks lent the market the money to buy their stock. By so doing they helped to prevent any symptom appearing of the stringency that had been anticipated as the result of the return to the gold standard. There was no diminution in their own cash resources, which, in fact, showed an aggregate increase of half a million; and so industry, instead of being squeezed and pinched as it had feared, was given the opportunity of borrowing more than it needed; industry being unable, owing to the slackness of trade, to fill the gap which the banks had made in their assets by sales of securities, the consequence was a decline of nearly twenty millions in the amount of the deposits, this being, roughly, the difference be-

tween the fall of nearly £59 millions in investments and the rise of nearly £39 millions in discounts and advances. By this increase, the loans and discounts item has risen to 63 per cent. of the total assets, a higher proportion than it has shown since 1921, when it reached 64.9 per cent. In 1914 its proportion to aggregate assets was 66.6 per cent., exactly two-thirds of the total. How far changes in the banks' holdings of Treasury bills affected the decline in investments and the increase in discounts and advances it is impossible to say, because some of them include Treasury bills under investments, and others under discounts. It may be added that an increase of £6½ millions in acceptances, balanced by the usual liability of customers on the other side, is a small indication of trade activity, which is hardly in accordance with all that was heard, during the half-year, of stagnation and depression.

Continuing our usual table of the growth or contraction of deposits in the war and after-war period, we present the following picture:—

INCREASE or DECREASE in DEPOSITS.	
June 30, 1915	Million £
1916	+ 197.2
1917	+ 44.5
1918	+ 81.1
1919	+ 282.5
1920	+ 406.2
1921	+ 103.4
1922	+ 20.3
1923	+ 27.9
1924	+ 113.9
1925	+ 11.9
	+ 985.9

Much more interest, however, is on this occasion attached to the figures of the Bank of England than to those of its satellites, because its weekly returns, which are all the information—apart from the reticences of the Governor at the half-yearly meetings—that it ever utters, show the effect of the return to the gold standard and the measures that were then taken. It will be remembered that an attempt had been made to confer an air of respectability on the Treasury notes by giving them a backing of gold, the said gold having been inevitably taken from the Bank of England's stock. At the end of April, when the great restoration was effected, this gold in the currency note reserve, which then stood at £27 millions, was returned to the Bank of England in exchange for its notes, with the result that the Bank return of April 29th showed increases of £27,009,000 in the coin and bullion and of £28,107,000 in the note circulation. In the currency note return the gold had disappeared, and there was an increase of £27,000,000 in the Bank of England notes held as backing for the Treasury notes. The subjoined table enables us to see the effect on the Bank's position during the full year from the beginning of July, 1924, to the corresponding date in 1925:—

BANK OF ENGLAND.	
(Million £'s.)	
	July 1, 1925.
	Comparison with
	July 1, 1924.
Rest	34
Public deposits	117
Other deposits	144.0
Govt. securities	46.6
Other securities	96.3
Notes issued	175.5
Total	157.6
bullion	146.6
Gold and silver in banking dept.	1.0
Reserve	30.7
Proportion	19.2%

The figures are, as far as they go and as far as their significance can be divined, highly satisfactory. The net increase in the Bank's stock of gold is slightly greater than the £27 millions by which it was reinforced by the aforesaid restoration. The Reserve is £10½ millions higher, with an increase of 6½ per cent. in its proportion to liabilities, which, however, is still more than 20 per cent. below the proportion shown on July 1, 1914. As far as the figures of the deposits are a test,

(In Million £.)

* Includes Money at Call and Short Notice.

there has been no deflation and no contraction of credit, the Public deposits showing no change on balance, while the Other deposits are £3½ millions higher, and show much larger increases over their level in the three preceding years. The only symptom of contraction is in the Government securities, which have declined in the course of the year by £7½ millions, but this diminution has been more than balanced by a decline in the ordinary note circulation, since, in spite of the transfer of £27 millions in notes to the currency note reserve, there has been a net expansion of less than £19 mil-

lions in the total circulation. It must be borne in mind that inferences drawn from the figures of the Bank return are more than usually likely to be incorrect at the beginning of a half-year, since they are then swollen and distorted by borrowing for balance-sheet purposes and by the seasonal demand for currency. But when all necessary allowances have been made, the fact remains that the table given above is comfortable evidence of the dignified calm with which a corner was turned which had been approached amid cries of dismay from some of the onlookers.

BANK SHARES AND YIELDS.

IN this article we give our usual survey of the prices and yields of bank shares, and the result, as usual, is to indicate that good banking shares are an eminently safe and steady investment. Capital appreciation in this market is, in general, not rapid, but to an investor who wants a security which will return him a yield slightly higher than the normal gilt-edged yield, without the fear of possible depreciation inseparable from most industrial investments, there are few more appropriate fields of inquiry than bank shares. In some ways banking securities are akin to insurance shares, but the investor, when he buys even the very best bank shares, need not content himself with the exiguous yields obtainable in the insurance market. On the other hand, the strength and solidity of our banking system have been so amply proved in the past ten years, and the management of our great banks has so amply justified itself, in bad trade as well as in good, that the security of a bank share can scarcely be rated lower than that of the greatest British insurance office.

In the following table we set out a comparison of the prices of a number of banking shares, British and overseas, covering a period of three years, and ending with the yield obtainable at the prices of last month:—

Share.	Am't of Share.	Paid up.	Price Sept. 28, 1923.	Price Sept. 30, 1924.	Price Sept. 30, 1925.	Yield %
Bank of England	Stock	£ 100	256½	259½	252½	4½
Barclays, "A"	1	4	8½	7½	8	5½

Bank of British West Africa	10	4	4½	3½	4½	4½
National Bank of S. Africa	10	10	6	6	8	4½
Standard Bank of S. Africa	20	5	11½	11	11½	6½

† Free of tax. (b) £5½ shares fully paid. (c) £10 with £4 paid.
(d) £40 fully paid shares. (e) £20 shares fully paid.
(f) £25 shares with £12½ paid. * Allowing for rate of exchange.

Prices as a whole, it will be seen, have moved but little, and of the English banks the yield is about what it was twelve months ago, varying for the most part on either side of 5½ per cent. Bank of England stock is a shade lower than in September, 1924, but nearly all the other shares are the fraction higher. Barclays, which has recently launched out in an interesting new overseas experiment that will be considered later when we come to the African banks, gives 5 per cent. and just over 5 per cent. respectively on its "A" and

"B" shares. Lloyds shares yield almost exactly 5½ per cent., while the yield on Midland shares, which show remarkably little movement, is exactly what it was twelve months ago. National Provincial and Westminster shares are both a trifle higher, and the yield is fractionally less than at this time last year.

Of the seven Australasian bank shares included in the table, three have risen slightly during the past twelve months, three are slightly lower, and one remains unaltered. The yields vary from the low return of less than 5 per cent. offered by the Bank of New Zealand to the fraction over 6 per cent. returned by the National Bank of Australasia. In Canadian banking securities the movements are equally small, and prices of none of the three shares included in the table gives a return of 6 per cent. In spite of the troubles in China and unsettlement in the East, the Eastern group is also very steady, and while a return of more than 7 per cent. is obtainable on the shares of the Eastern Bank, none of the others give 6 per cent., and the Hong Kong and Shanghai shares are £11 higher than they were two years ago.

Perhaps the most interesting share in the whole table at the present moment is the National Bank of South Africa, which has risen in twelve months from 6½ to 8, though, so far, no dividend has been paid. The troubles through which the bank passed a few years back owing to its loose management are still remembered, but the strong policy adopted by the board had brought the institution into smoother water, and now it is on the point of being linked up with Barclays in the new Barclays Dominions and Overseas, which may prove to be the first step in an entirely new era of British Imperial banking. The National Bank of South Africa had, in the course of its development, bought a large number of shares in the Colonial Bank. These shares it sold to Barclays, so that the control of the Colonial passed over to one of the great five. Subsequently, Barclays made an offer to the National Bank's shareholders of an interest in the new Dominion and Overseas, which will embrace both the Colonial and the National Bank of South Africa, as well as an Egyptian bank that will give the new undertaking an interest in Africa north of the equator. This new Imperial banking development will be watched with interest, and at their present price National Bank of South Africa shares scarcely seem to be overvalued. Standard of South Africa shares are as steady as ever, giving the satisfactory yield of about 6½ per cent.

The following table brings together a few bank shares on which there is no uncalled liability, and shows the yield obtainable on them:—

Bank.	Denom-ination.	Am't Paid Up.	Price Sept. 28, 1923.	Price Sept. 30, 1924.	Price Sept. 30, 1925.	Yield %

IRISH FREE STATE BANKS.

THE latest reports of the joint-stock banks of the Irish Free State cover the period ended June 30th last, with the exceptions of the Royal Bank of Ireland, whose accounts come down to August 31st last, and the Bank of Ireland, whose latest report is that for the year ended December 31, 1924. It will be observed from the table of net profits below that while the profits of the Bank of Ireland, which cover the year 1924, are substantially higher, those of the other banks, which refer to a later period, are lower, with the one exception of the Provincial Bank of Ireland. At the annual meeting of the Royal Bank at the end of last month the chairman mentioned the decline in profits as compared with the previous year, which was a record, but described the result of the past year's working as "quite satisfactory." He added that conditions in the Free State were becoming more settled, as witness the number of

cross-Channel firms who have secured, and are looking for, factory sites and warehousing accommodation. "It is a gratifying and reassuring sign to see outside capital being invested in our country. It is a proof that people outside the Free State, in addition to ourselves, look forward with confidence to the ultimate prosperity of this country."

Though profits are mostly smaller than they were for the preceding period, they show a substantial increase over those recorded two years ago. Owing to difficulties in arriving at agreement with the authorities as to the amount of income-tax for which the banks were liable to both the British and Irish Free State Governments for 1923 and the first half of 1924, some dividends were paid free of income-tax, but in most cases the old practice of paying dividends less income-tax has been resumed. Comparison of dividend rates for the two periods is, therefore, rather complicated:—

a) 4½ per cent., free of tax. (b) 5 per cent., free of tax. (c) 5½ per cent., free of tax. * Free of income-tax. (d) 9 per cent., free of tax.

The balance-sheet figures are set out in historical tables for each bank on later pages, and the latest figures for each of the Dominion groups will also be found summarised in a large table. The comparative table below gives the aggregate balance-sheet items of the six Free State banks for the past four years, and of all the Irish banks for a number of preceding years. This

shows a further substantial decline in deposits, a small contraction in the note circulation, a large drop in cash and money at call, and a moderate reduction in discounts and advances. As compared with this time two years ago, deposits are £9 millions lower, and cash and money at call £7½ millions lower, but discounts and advances are a trifle higher. Investments are a

* Irish Free State.

little higher than they were 12 months ago; the ratio of this item, which consists largely of Government securities, to total liabilities is very much higher at 44 per cent. than the ratio for all the Irish banks in the pre-war period. The ratio of cash and money at call, on the other hand, has fallen to a low figure. It is common knowledge in Dublin—although, of course, confirmatory statistics are necessarily wanting—that Irish depositors transferred considerable sums from Irish to English banks a few years ago, and the total of Irish money temporarily lost to England in this manner is quite impressive. There were many reasons for this. Nervousness concerning the political outlook under the new constitution, and realisation that England was, if less convenient, a safer depository for Irish funds of a floating character, were prime factors; sentimental reasons also led those in Ireland with pro-

British feelings to send their money to follow in the wake of the British officials and soldiers whom they were so sorry to lose. Finance, however, has little room for mere sentiment, and there is no doubt that the difference of $\frac{1}{2}$ per cent. in the rates allowed by the British and Irish banks has operated to the advantage of the former. With London bank rate reduced to 4 per cent., the British and Irish banks now offer identical terms—2 per cent. It may be expected, therefore, that, having regard to the improved political situation and to the undoubted convenience to the depositor of having his funds close at hand, some of this money may begin to flow back again to Ireland. As bank deposits are the chief source of credit facilities in any community, the credit stringency which has been such a feature of Irish commercial life during the last few years may thereby be alleviated.

AFRICAN BANKS.

FROM the banker's point of view the year 1924 in South Africa was appreciably better than 1923, and the accounts of the two prominent commercial banks, the Standard Bank of South Africa and the National Bank of South Africa, for the year ended March 31st last reflect this improvement. External trade increased by £10 millions, and public finance and railway receipts showed a steady advance. Gold production was the highest on record, while there was also a satisfactory expansion in the value of the production of diamonds and wool. A severe drought and pests, however, resulted in a partial failure of the grain crops, which retarded industrial progress, and the volume of banking business transacted is described as below expectations. The table of profits below shows that the profits of the Standard Bank increased by over £54,000, while those of the National Bank were £12,000 higher. There was also an expansion of £5,000 in the profits of the Netherlands Bank of South Africa, a relatively small Dutch bank, with head office in Amsterdam.

The profits of the Bank of British West Africa advanced by over £16,000, affording definite evidence of an improvement in West African trade. Since the close of the financial year, namely, in June last, Lloyds Bank and the Bank of British West Africa have amalgamated their businesses in Egypt, which are now carried on in the name of Lloyds Bank, Limited, for the benefit of both banks. At the annual meeting of the Bank of British West Africa the Chairman stated that his bank retained a substantial interest in the results of the amalgamated Egyptian business carried on by Lloyds Bank—who were the largest shareholders in the Bank of British West Africa—and with the saving in overhead expenses which would result, the goodwill which each side to the bargain brought in, and the local experience now united, they looked forward with confidence to increasing profits from the combined business. The table below shows the net profits and appropriations for the last financial year of the four banks, together with the profits and rate of dividend for the preceding year:—

	Year Ended.	Net Profit.	Dividend.	To Reserve, &c.	Pre-mises.	Staff Funds.	Carried Forward.	Profit and Dividend for Preceding Year.
		£	£	£	£	£	£	£

Total		864,538	384,083	..	187,779	102,672	14,914	778,191

The National Bank of South Africa again paid no dividend, the directors maintaining their policy of building up reserves which were depleted as a result of the crisis through which the bank passed three years ago. The three other banks repeated the previous year's distribution.

From the table summarising the main items of the balance-sheet it will be seen that there is a further diminution in the total of notes in circulation. The commercial banks have now no note circulation in South Africa, and notes shown in the balance-sheet represent those circulating in Rhodesia and elsewhere outside the Union. The amounts of Union notes outstanding on June 30, 1924, were paid over to the South African Reserve Bank under the terms of the Currency and Banking Act of 1920. The Reserve Bank constituted under the Act was given the sole right of issue of currency notes for a period of 25 years, and this was to be its principal function. The Act also provided that every South African bank must hold stock in the Reserve Bank to the equivalent of 5 per cent. of its own capital, and must deposit large reserves with it. In respect to demand liabilities, 10 per cent. of the total

was to be provided, and in the case of time liabilities, including interest-bearing deposits, the proportion was 3 per cent. After the first three years the proportion of reserve against demand liabilities was to be increased to 13 per cent. The Reserve Bank's note issue has to be secured by at least 40 per cent. in gold, and as to the remainder, by commercial paper or trade bills, and by a first charge on all the assets of the bank. A decision by the authorities not long ago that the Reserve Bank should take a more active part in supplying the financial and banking requirements of the Union, and that branches should be opened in the larger Union centres and in London aroused some discussion and a mention of "unfair competition" with the commercial banks, but such apprehensions were allayed by the clear statement of policy made by the Governor of the Reserve Bank at the annual meeting last June.

Two important events affecting South African banking have occurred since the dates of the last balance-sheets. The first is the return to the gold standard by the Union, the natural sequel of which was the stabilisation of exchanges, which enabled the commercial banks to adjust their sterling position in accordance

with the laws of supply and demand. The margin between the rates for buying and selling exchange has been reduced to the figure at which it stood before the war. The other event, which is more of domestic interest, is the absorption by the Colonial Bank of the National Bank of South Africa and the Anglo-Egyptian Bank, under the title of Barclays Bank (Dominion, Colonial, and Overseas). The chairman of the National Bank, in the course of his speech at the annual meeting, said that the directors had explored every possible method of so arranging the finances of the bank that the date of the resumption of dividend payments should be brought closer to hand without sacrificing the fundamental principle of increasing the reserves in order to preserve public confidence. The one method that seemed to offer the best solution from the point of view of the shareholders was an alliance or affiliation with some existing banking institution of undoubted standing. After giving details of the agreement, which have been set out in the *Economist* (August 15th, p. 264), he concluded by saying:—"The whole matter naturally has given your directors food for a great deal of thought. In the result they are perfectly satisfied that the scheme is one that they can recommend to shareholders with the utmost confidence. In place of having to wait for a year at least, probably for more than a year, for a dividend on their present shareholdings, our shareholders will be entitled as from July 1, 1925, to a dividend at the rate of 8 per cent. per annum on two-sevenths of their holding, and to a dividend of such amount as the amalgamated profits may permit on the remaining five-sevenths of their holding. What the rate of such dividend will be I am not prepared to express an opinion to-day, but, having regard to the established position of the Colonial and Anglo-Egyptian Banks, and to our own improving prospects as a profit-earning machine, and having regard, too, to the expansion in our business that may confidently be expected to flow from the powerful backing that we

should gain by entering the proposed merger, I have no manner of doubt that the shareholders will have no cause to regret it if, as I expect, they affirm the provisional agreement at the forthcoming extraordinary general meeting. Apart from our own personal interest in the scheme, I venture to think that South Africa as a whole will receive with satisfaction the news that banking in this country is to receive such an impetus as is involved in this project. Your directors, too, are pleased to think that the bank will now have an opportunity of playing a much more prominent part than has hitherto been practicable in forwarding the interests of South Africa. I think, too, that the fact of Barclays Bank, Limited, being prepared to take a substantial share interest in the new bank, and being willing to assume an additional liability of two millions of the uncalled capital, is an eloquent testimony to the confidence of that powerful bank in the future of South Africa, and to its belief that the time is ripe to introduce fresh capital for the purpose of aiding in the development of our great natural resources."

The table below shows that deposits have decreased by over £3½ millions, but discounts and advances show an expansion of a million, while investments have been reduced by over £2 millions. The deposits of the National Bank were about £2½ millions lower. This was balanced by a reduction of £1½ million in the cash items, of £2 millions in investments, and of £800,000 in discounts and advances. Bills of exchange purchased were £2 millions more, the bank having that amount less of foreign bills under rediscount with the Reserve Bank than in the previous year, the where-withal to reduce the Reserve Bank obligations being provided by the transfer of cash from London. The deposits of the Bank of British West Africa were £186,000 higher, but the chairman pointed out at the annual meeting that, with the disappearance of the Egyptian deposits owing to the amalgamation of their Egyptian business with Lloyds Bank, a decrease in deposits must be expected in the current year.

AUSTRALASIAN BANKS.

WITH the restoration of the gold standard in Australia, the step having been taken when this country made the change, normal exchange rates followed, and the serious difficulties of the exchange position with Great Britain which had been experienced since the war have

been disposed of, for the time being at least. Before the change was made, however, the exchange position had become acute, and special measures were needed to ensure the marketing overseas of Australia's primary products. But by the pooling of the whole of the wool

and wheat exchange; by the Federal Note Board agreeing to make available to the banks in case of need £15 millions in notes against funds or securities to be deposited in London; and by the Government agreeing to refrain from borrowing (except for redemption purposes) in London and Australia until June 30th last, the most serious difficulties were overcome. During the period covered by the latest accounts of the Australian banks trading conditions in Australia were fairly satisfactory. The wool clip showed an increase in quantity of about 300,000 bales, and prices were very high up to November, when they reached the highest point, but thereafter a considerable fall took place. Prices for fine wools, however, are still favourable as compared with many past years, and a further substantial increase is expected in the coming new clips. The wheat crop was also satisfactory, the exportable surplus being

estimated at 80 million bushels, and growers benefited substantially from a good market. An abundant sugar crop was also harvested in New South Wales and Queensland, there being a large surplus for export. The financing of these unusually large surpluses were the chief cause of the exchange difficulties at the beginning of the season, but the measures taken had an ameliorating effect, while further relief was afforded by the removal of the embargo on gold export, which proved of substantial benefit to the primary producer and the commercial community generally.

In nearly all cases the profits of the Australian banks for the past year showed an appreciable increase, the aggregate figure for the Australian and New Zealand banks together being £353,200 higher at £5,791,500, as may be seen from the attached table, which also shows the appropriations:—

* Free of tax.

Dividends have in all cases been maintained, though in several cases paid on a larger capital, several of the banks having enlarged their share capital, and in one or two cases reduced the amount of inscribed deposits therewith. The two New Zealand banks earned larger profits on an increased capital. Production in the Dominion has increased, there has been freedom from serious industrial conflicts, and an absence of speculation on a large scale. At the meeting of the National Bank of New Zealand in July the chairman described the banking figures of the country as better than for many years past, and added that there was a marked and satisfactory advance in values of primary products. "The restored balance of trade was fully maintained, the public revenue was buoyant, especially that brought in

by the Customs, the concessions to taxpayers encouraged traders, the cry of the unemployed was not heard in the land, and though there were sporadic outbursts by dissatisfied labour, there was no prolonged trouble."

From the table below, which summarises the main items of the balance-sheets of the Australasian banks, it will be seen that both deposits and discounts and advances have again increased substantially. The increase in deposits is a reflection of the prosperity of the farming industry, both in Australia and New Zealand. The note circulation shows only a slight decline, and cash and money at call is at the lowest figure since 1921, but there has been an expansion in the holding of investments. Paid-up capital and reserves have increased by £4,900,000, capital having increased by £2,200,000 and reserves by £2,700,000.

CANADIAN BANKS.

WHEN 1924 began hopes were entertained in Canada that a steady return towards the pre-war scale of prosperity was in near prospect. But such hopes were doomed to disappointment. General trade failed to develop according to expectation, but crops were good without fulfilling early promise. Reflection of this state of affairs may be seen in the aggregate balance-sheet figures appended to this article. Against an increase of nearly £23 millions in total deposits, investments rose by nearly £18 millions, and cash by over £9 millions, discounts and advances being between £3 millions and £4 millions lower. The profit figures,

given in a separate table, also show that the banks found it a little more difficult to discover remunerative channels for the employment of their funds. Aggregate net profits, it will be seen, of the seven banks with London offices fell by some £129,000. The Canadian Bank of Commerce alone records a substantial increase in profits; but the two years' figures are not strictly comparable, owing to the absorption of the Bank of Hamilton, which caused a considerable expansion of capital. Dividends were maintained in every case except in that of the Union Bank, which since the end of the period under review has been absorbed by the Royal Bank of Canada:—

In discussing a decrease in earnings of the Bank of Montreal, the general manager, Sir Frederick Williams-Taylor, said: "The principal cause of our somewhat diminished earnings is that, though our total resources have been greater, our commercial loans in Canada are \$22,000,000 less than a year ago. It has been impossible to find suitable employment for these increased resources at commercial rates of interest, and as the best alternative we have invested them in gilt-edged short-term securities at less remunerative rates. This is reflected in the following figures:—

	October 31, 1923.	October 31, 1924.
Commercial loans	236,000,000	214,000,000
Investments	103,000,000	140,000,000

Also, the overhead charges of our banks in the way of salaries are greater, and taxation and upkeep have increased by leaps and bounds, whilst banking losses in such times as we are now passing through are far beyond normal." Developing this theme in relation to the Dominion as a whole, Sir Frederick remarked:—"It is a matter of national importance that the commercial loans in Canada of all our banks are

\$100,000,000 less than a year ago. These figures, taken with a reduction in railroad earnings of \$11,900,000 for the same period, and about stationary figures in our total foreign trade, reflect what a section of the community is wont to describe by the expression 'business is quiet.' A stronger definition might be used without exaggeration. From another point of view these figures indicate the ability of the banks of Canada to finance a trade revival when it occurs." Incidentally, it may be noted, the same authority threw some light on the increase in deposits. This increase in the aggregate figure is, in part, due to absorptions and amalgamations; but Sir Frederick explained that, so far as his bank was concerned, at the date the balance-sheet was made up "the Dominion Government had unusually large balances with us in connection with the retirement of a public loan of \$107 millions."

A feature of recent bank history in Canada is the further step that has been taken in the current year towards banking consolidation. Early in 1925 rumours were current, and were denied, that the Royal Bank of Canada was about to absorb the Union Bank. However, on May 22nd the Acting Minister of Finance announced that official consent had been given for this

step. In explaining and defending the granting of consent, he stated that the directors of the Union Bank had represented that they were confronted with a substantial reduction in earnings, in which respect there was no prospect of early improvement, and the consequent necessity for a drastic cut in the dividend rate, which might have seriously impaired the bank's standing and the market value of its shares. The merger was, therefore, sanctioned by the authorities to obviate the possibility of such a development, which might have produced certain repercussions upon the financial position. At the date of the latest balance-sheets of the separate institutions, the Royal had a paid-up capital of £20,400,000, and the Union a paid-up capital of \$8,000,000, while the deposits of the former were about \$481 millions, and of the latter about \$92 millions. This merger will reduce the number of banks in our table to six, and a further change will take place,

owing to the reconstitution of the Colonial Bank, under the title of Barclays Bank (Dominion, Colonial, and Overseas).

Another recent point of interest in connection with Canadian banks is the steady and persistent advance in the quotations for their shares on the Canadian Stock Exchanges, due, it is reported, partly to American and partly to local buying. The return of these shares to favour is an indication of a welcome revival of confidence. For a considerable period Canadian banks suffered in the eyes of investors from their occupation of a place in the arena of political discussion, and from the repercussions of a number of unfortunate incidents in connection with minor institutions. After these disturbances, the Canadian investing public appear to be restoring to their leading banking houses the degree of attention and confidence which they certainly deserve.

INDIAN BANKS.

THE events of the past year in India have borne out the moderately optimistic forecasts of the chairmen of the exchange banks, on which we commented a year ago. The monsoon of 1923, like its predecessor, was favourable, merchandise exports have considerably exceeded imports, the rupee has commanded an enhanced value in terms of sterling, the Empire has been a large importer of the precious metals, and the finances of the Central Government have been still further consolidated.

The revised estimates of the Central Government for 1924-25 showed a revenue of Rs. 1,34,82,25,000, against an expenditure of Rs. 1,30,82,75,000. On the strength of the surplus of Rs. 3,99,50,000 thus shown, the Finance Member effected further reductions in Provincial contributions to the Central Exchequer. The Budget of 1925-26 obtained a much smoother passage than its predecessor, and the Government can now look forward, in the words of Sir Basil Blackett, "to building up a new India without the exasperating restrictions imposed by financial penury." The export trade has shown noteworthy activity, accompanied by increased world prices for many of India's principal exports. On the import side, however, continued high quotations for Lancashire cotton goods have restricted demand from the bazaars, though in this respect some improvement has lately been recorded. Total imports in 1924-25 amounted to 2,46.6 crores of rupees, against 2,27.6 crores in 1923-24, and exports to 3,98.4 crores, against 3,61.9 crores. Owing to heavier net imports of treasure, however, the net visible balance of trade was reduced from Rs. 96,23 lakhs in 1923-24 to Rs. 61,06 lakhs last year.

At the annual meeting of the Imperial Bank of India the chairman pointed out that financial stringency, which has in the past been an inevitable though regrettable seasonal feature in Indian economic life, has been less severe and less prolonged this year than last, the average Bank rate for the six months ended June 30th last being 6.58 per cent., as against 8.05 per cent. in the corresponding period of 1924. As a result the Bank did not find it necessary to strengthen its resources by borrowing from the Government of India to the full extent of its powers, as laid down by the Paper Currency Act, four crores of rupees remaining unborrowed even when the pressure for money was

greatest, while Bank rate did not rise higher than 7 per cent., as against a maximum of 9 per cent. last year. The chairman's report showed also that steady progress had been effected in opening new branches of the Imperial Bank. The Act of 1920 foreshadowed the establishment of 100 branches within five years; up to the present 87 branches and 16 sub-agencies have actually been opened. The Imperial Bank's profits for the past year permitted the maintenance of dividend at the rate of 16 per cent., and a substantial allocation to reserves. A noteworthy development during the past year has been the setting up in London of an Advisory Committee to the Bank, as the outcome of conferences between the Managing Governor, Sir Norcot Warren, the Governor of the Bank of England, and representatives of the Secretary of State for India. The ultimate scope of this Committee is at present undefined. Although it is given no power to interfere with the Bank's operations in India, it will bring about a greater ultimate measure of co-operation between the Imperial Bank and the Bank of England.

The future of Indian finance and commerce will be profoundly affected by the setting up of a Committee "to examine and report on the (Indian) exchange and currency system and practice, to consider whether any modifications are desirable in the interests of India, and to make recommendations." Since 1921 the rupee has steadily appreciated from 1s 3½d to an average of 1s 5½d in the financial year 1924-25, and over 1s 6d to-day. One section of Indian commercial opinion has long urged the Government to "stabilise" the rupee at its pre-war level of 1s 4d, while another holds that 1s 6d should be the "permanent" level. The recommendations of the Committee, which has a strong and representative personnel under the chairmanship of Lt-Commander Hilton Young, will doubtless form the basis of the Government's ultimate decision on this crucial matter.

From the summarised accounts of the four exchange banks given below, it will be seen that net profits for the year 1924 declined by £25,956, following on a decline of £14,386 in the previous twelve months. Dividends, however, were maintained in every case at the previous year's level. Comparisons of dividends and profits for 1924 and 1923 and details of the past year's appropriations are given below:—

Year Ended.	Net Profit.	Dividend.	To Reserve, &c.	Pre-mises.	Staff Funds.	Carried Forward.	Profit and Dividend for Preceding Year.
	£	£	£	£	£	£	£

* Free of tax.

Our next table gives a comparison of the main figures of the four exchange banks, whose operations are concerned mainly with the finance of trade at the great ports. The table gives the aggregate figures of the main balance-sheet items as at December 31st in each year. It will be seen that for the first time since 1919 deposits show a slight advance, having risen rather more than £1½ millions last year, as against a drop of £2½ millions in the preceding year, the total, however, remaining some £30 millions below the "peak" of 1919. The total of the four balance-sheets rose from £123½ millions to nearly £129 millions. On the liabilities side, the most interesting features are the rise

in the cash items from less than £17 millions to nearly £19½ millions, a fall in investments from £36 millions to £31 millions, and a corresponding rise in discounts and advances from £62½ millions to £68½ millions. These latter factors point to more active conditions. A year ago we referred to a feeling on the part of many of those concerned that the investment of a larger proportion of banking resources in trade and industry was desirable. Our table shows that some progress has already been made in this direction, discounts and advances being 53.2 per cent. of the total liabilities of the four institutions, at December 31, 1924, as against 50.5 per cent. twelve months earlier:—

Among institutions other than the four exchange banks, the P. and O. Banking Corporation shows noteworthy stability in its earnings, net profits for the year ended March 31st last being £136,215, as against £136,382 and £139,388 in the two preceding years respectively. The dividend has, however, been reduced from 5½ per cent. to 5 per cent. this year, taking £106,198, as against £113,944 in 1923-24, while £30,000 was put to reserve, as against £20,000 a year ago.

The chairman of the Mercantile Bank of India referred briefly to the political situation in his last annual speech. While the general position still left much to be desired, the firm stand taken by the Govern-

ment against reactionary elements in Bengal had, in his opinion, had a beneficial effect. While remaining unconvinced of the possibility of permanently satisfying the more extreme political parties, he believed that a settlement of economic and financial questions in accordance with moderate Indian views would do much to relieve the present political tension. Another favourable sign was the growing recognition by the Independent party of the folly of purely negative and destructive Swarajist tactics. Altogether, India's prospects have improved considerably during the last two or three years, and provided that the partial failure of the monsoon in certain areas during the present summer does not exert a reactionary influence, the near future may be regarded without undue misgiving.

FOREIGN BANKS WITH LONDON OFFICES AND BRITISH BANKS TRADING OVERSEAS.

FOLLOWING our usual practice, in order to render complete our review of British banking we deal below with all those banking institutions trading overseas which have offices in London. These are divided into two groups, the first comprising British banks with headquarters either at home or abroad, and the second foreign institutions with branch offices in London.

It is, of course, very difficult to draw a distinct line between the various British banks operating abroad, but in our first table will be found a little group of companies including a few concerns of comparatively recent growth, together with some dating back before the war.

Further expansion has occurred in the business of the British Italian Banking Corporation, profits having advanced from £41,016 to £47,050, while shareholders received 6, compared with 4, per cent., and the reserve was strengthened from £233,418 to £250,000. Turnover increased from £57½ to over £78½ millions, which is the more extraordinary when it is mentioned that in 1917 the figure was only £4 millions. The chairman's speech at the annual meeting was supplemented, as usual, by some interesting statistics which should prove useful to those seeking to ascertain the extent of our trade with Italy. Mr J. W. Beaumont Pease, the chairman, pointed out that trade and industry in Italy have developed at an unprecedented rate, public ser-

	Capital and Reserves.		Deposits.		Cash.		Investments.		Discounts and Advances.

vices have been reorganised, and the finances of the State have been so far restored that, excepting for the settlement of external war debts, the revenue is well on the way to covering expenditure. Last year we referred to the fact that certain alterations had been made in the constitution of the British Overseas Bank. These changes, states the present report, did not completely meet the objects in view, and further alterations were necessary. These further changes, however, have accomplished all that was hoped from them. The Anglo-Austrian Bank, apart from the position in Austria, continues to show steady and satisfactory development. It was necessary, however, to effect very considerable economies in expenditure in Vienna, so that no dividend was declared and the substantial sum of £109,719 was carried forward.

As regards Continental banks, whose detailed balance-sheets will be found elsewhere, the Credit Lyonnais shows net profits of 43,929,182f for 1924. In that year deposits, including current accounts, declined from 5,289,417,754f to 5,148,435,945f. Bills receivable and French Treasury bills, however, also decreased from 4,088,109,247f to 3,644,158,006f. The ratio of reserve to paid-up capital is 90 per cent. Its report reviews with satisfaction the progress of the bank, both at home and abroad. The Société Générale pour Favoriser considers that its figures may be regarded as favourable, in spite of adverse conditions. The total of the balance-sheet is 6,358,995,221f, an increase of 98,385,935f over 1923. "Comptes de cheques" at 1,390,277,179f showed an increase of 117,343,748f, while "Comptes courants divers" amounted to 3,823,583f. Profits for 1924 were 33,539,876f, being an increase of 5,057,474f. The maps in the report of the Société Générale, especially that of Paris, are of particular interest, and should prove of considerable convenience to the customers of that institution.

The Comptoir National d'Escompte de Paris presented total balance-sheet figures of 4,753,479,043f, being an increase of 53,530,173f. "Compte de cheques et comptes d'Escompte" totalling 2,525,624,521f, increased by 112,560,780f. Profits were 35,629,554f, a satisfactory increase of 1,289,976f on the figures of the preceding year. The progress of the Société Belge de Crédit Industriel again calls for notice. Deposits have increased from 54,628,005f to 68,341,557f. The report of the Banca Commerciale Italiana states that the bank maintained its position in the revival of industrial activity; gave assistance whenever it was justified, "without losing sight of those principles of caution which, in the past, have always enabled us to face any emergency." Progress has been general in all departments, and money has come in freely for investments of every kind. Development has also proceeded apace in other parts of the world. In New York, besides the agency which has now been established for many years, there has been formed the Banca Commerciale Italiana Trust Company, with a capital of \$1 million and a reserve of half-a-million dollars. This institution already shows results which, it is said, fulfil ex-

pectations. In South America, expansion continues, while with a view to facilitating trade between Italy and Egypt, the Banca Commerciale Italiana per L'Egitto has been created. The capital of the company, itself was increased from 400 to 500 million lire, owing to the necessity of bringing capital more into line with turnover, and, to some extent, to currency depreciation. The Credito Italiano continued to make progress, partly by reason of its excellent relations with the principal banks, and partly by reason of the activities of the London branch, and the representative branch offices in Paris, Berlin, and New York, and of the banks in which it is interested, including the Banca di Credito Italo-Viennese, the Banca Unione di Credito, the Banca Italo-Belge, &c. An interest also was acquired in the Banco Italo-Egiziano, which operates in Egypt. These extensions necessitated the raising of the capital from 300 to 400 millions. Profits during the year rose from 38,858,987 lire to 49,500,503 lire, and advantage is taken of this prosperity to add 20 million lire to reserve, making the total of the fund 130 million lire.

Greek affairs are dealt with at length in the report of the Bank of Athens. The past year has been marked by an event "of the greatest political importance; namely, the proclamation of a Republic." In general, business activities increased, and industry received a new impetus. During the last two months of the year, twelve new companies were formed, of which five were banks. As a comparison, it is to be noted that during the whole of 1923 only twenty-four new companies were formed. The bank itself developed a very active movement of affairs, and although the capital was raised by 50 per cent., the dividend was maintained at the 1923 level. Liquid assets have been well maintained, and the balance-sheet total has gone up by Dr 260,672,242 to Dr 1,412,157,800. Discounts have more than doubled, and advances have increased by about one-third. The results achieved by the Ionian Bank were considered satisfactory enough to warrant an increase of 1 per cent. in the shareholders' bonus. The increased profits, it is reported, have accrued from a general extension of activities not only in Greece, in London, Egypt, and Constantinople, but also throughout the Continent of Europe, and more particularly in America. The balance-sheet total increased during the year by 30 per cent. to £6,536,314. Concerning conditions in Egypt, the directors consider that although the situation is not yet clear, it is probable that the better elements will prevail, and that the future prosperity of the country will be assured. The issued capital of the Moscow Narodny Bank, according to the balance-sheet to June 30th last, has been increased from £300,000 to £350,000. The reserve remains at £25,000, while an increase in deposits has been accompanied by a gain in bills re-discounted, acceptances, and advances. The holding of British Treasury bonds has been reduced from £100,000 to £50,692. The volume of bills discounted has risen from £233,948 to £292,140, while advances against merchandise, bills of exchange, &c., now figure for £842,957, against £589,119. The balance-sheet

total has advanced from £1,441,238 at June 30, 1924, to £2,391,629 at December 31, 1924, and to £3,289,021 at June 30 last. During the first half of the current year the turnover amounted to £50,418,087, as com-

pared with £23,983,497 for the corresponding period of 1924.

Our next table indicates the trend of banking operations in Asia:—

ASIATIC BANKS.

At the annual meeting of the Hong Kong and Shanghai Banking Corporation the chairman described the year under review as "even more difficult than its immediate predecessors." Yet, in spite of this, the bank's operations resulted in a satisfactory net profit, though the figure was slightly lower than twelve months previously. Deposits advanced, though the holding of British Government securities was smaller. "In making a review of events in China," said the chairman, "it is difficult to avoid repetition of what was said from this chair last year. The tragic tale of internal strife continues." From an undeniably gloomy picture it is agreeable, said the chairman, to turn to an invariably bright spot on the horizon of Chinese affairs. "In spite of the tale of floods, famine, civil war, and the virtual strangulation of trade reported from many centres, the figures of the Maritime Customs Revenue for the past year show an increase of Haikuan taels 6,050,000," or about £1,700,000 over the previous highest collection, which was in 1923. The potentiality of China's trade, he went on, is almost boundless, and could she be induced to set her house in order, the revenue resulting from an adequate increase in the Customs tariff should furnish a solid foundation for the solution of the urgent problem of debt consolidation.

The Imperial Ottoman has now changed its name to the Ottoman Bank. The report for 1924 showed that after providing for bad and doubtful debts out of revenue, and provisions already made, there was an

available balance of £326,952, after taking into account the amount of £128,371 brought forward from the previous year. The Anglo-South American Bank's net profit amounted to £425,900, as compared with £436,000, the decline being principally accounted for by currency depreciation. The balance-sheet figures were affected by the exclusion of those of the Paris and New York offices. If these had been included the balance-sheet total would have gone up by £3 millions, instead of having declined by £3 millions. Business conditions in South America showed a recovery during the year, especially in the case of Argentina. The Chilean export trade is also expanding. In Mexico "the existing Government proved more successful than the majority of its predecessors in being able to suppress a serious and widespread rebellion," while in Peru the commercial and economic position is sound. In Spain the question of taxation has been satisfactorily settled, and is now based on reciprocal terms, whereby as England permits foreign banks to establish themselves in this country under the same conditions as English concerns, the Anglo-South American is allowed to operate in Spain under practically the same conditions as Spanish institutions. The preliminary figures for the year to June 30, 1925, show profits of £431,000, against £425,900 for the previous year; the dividend is maintained at 10 per cent., and after transferring £25,000 to staff pension fund, a balance of £414,900 is carried forward, as against £350,100 brought in.

GERMAN BANKING.

(BY OUR BERLIN CORRESPONDENT.)

THE recovery of German banking in the present, second, year of stable currency has so far been slower than in the preceding year. In the general position of the banks no change of importance has occurred. There are signs that banking is recovering the influence which it exerted over industry before the war, but which it lost in the inflation years. Although the liquidation of the Stinnes concern, and the later struggle with Dr Edmund Stinnes, first called public attention to this reversion towards former conditions, it is plain that also in regard to other industrial concerns the banks are in an increasingly strong position. In the inflation years the progressive dwindling of the banks' own capital and of their customers' deposits weakened them as dictators of credit at a time when the more important industrial companies were strengthening their positions by extinguishing old debts, and (what counted for still more) by profitably investing in expansions their newer borrowings. Many industrial magnates were thereby enabled to acquire large parcels of bank shares, and even to buy up minor banks; so that certain "concerns," in particular the

Michael and Barmat, exercised joint control in production and banking. In September, 1922, the late Herr Stinnes, by a secret coup recalling traditional American methods, acquired 35,000 shares in the Berliner Handelsgesellschaft, one of the great banks, and one of the best managed, and so obtained representation on the board of control; and later Herr Stinnes (and after his death his sons) extended the concern's influence to the Barmer Bank-Verein, and through the Barmer's affiliations gained control of several provincial banks. This process has come to an end simply because industry, after injudiciously locking up vast sums in expansions, finds itself without liquid capital at a time when the banks, having deposits available for lending of much greater magnitude than in the later inflation years, are again in a position to dictate. In connection with the Edmund Stinnes controversy, an attempt has been made to represent the banks' policies as despotic and injurious to national economic interests. But the period in which industry was the stronger partner produced some

Continued from page 15.

undesirable phenomena, including several credit scandals of a kind formerly unknown. For the present, with money, as result of its scarcity, once more trumps, and with the *Sachwerte* doctrine somewhat discredited, the banks seem likely to increase their influence further.

The slower increase of banking transactions in 1925 than in 1924 is the result of a normal currency development. After the rapid recovery of circulation and savings in 1924, relative stability has necessarily been reached. The whole currency circulation at the end of 1923 (including gold-loan scrip, and also all paper-mark issues at their already stabilised gold value) was only 2,273 million gold marks, and the whole Reichsbank circulation, including about 110 million gold marks of emergency currency, was only 608 million gold marks. Total circulation was 37.46 per cent. of the pre-war figure of 6,700 million marks. At the end of 1924 the total of all circulations had risen to 4,273 millions, or nearly double, of which 1,941 millions was the Reichsbank issue. On August 31, 1925, circulation had further risen to only 4,983 millions, of which 2,594 millions were the Reichsbank issue. In the present year, until lately, the inflow of proceeds of foreign loans to industry fell off much as compared with the later months of 1925. These foreign loans, where not spent abroad, had a considerable effect in increasing the volume of currency because the Reichsbank issued mark notes against the exchange so obtained, and, indeed, used part of the new exchange in paying for gold bought abroad, thereby materially increasing its gold cover for circulation, as well as its exchange cover. In the matter of home credit, also, a certain stability has been reached. Whereas in 1924, with exception of a sharp reaction in the spring, credit became more plentiful, and interest rates rapidly fell, this year there has been no credit improvement, and of late rates have sometimes been higher than early in the year. On the Berlin money market the movement of interest rates (monthly averages) during the decline period was:—

1924.	Day Money.	Month Money.
January	87.64	28.25
March	33.09	30.00
April	45.49	44.45
June	22.60	32.59
December	11.11	12.61
1925.		
March	8.97	11.26

Since the spring there has been no steady movement either way; but of late day money has occasionally risen to 11 per cent., and at the end of September even to 12 per cent. In general, therefore, it seems that the prolonged decline in the price of credit has come to an end. The increase in the volume of credits to business from the central banking institutions has also slackened. Between July, 1924, and December, 1925, the total discounts and advances of the Reichsbank, and of the private note banks, and the agricultural (not State) credits of the Rentenbank, rose from 1,947 to 2,550 millions; from December, 1925, to August, 1925, only to 2,786 millions. Concerning public savings, no full figures are available; but as these had practically disappeared at the beginning of 1924, the at first rapid percentage increase inevitably tended to decline, and for some months the absolute increase also declined. At the end of August, 1925, deposits in Prussia's savings banks totalled 896 million marks, against 404 million marks at the end of 1924.

Since the banks resumed the practice of issuing bi-monthly balance-sheets (February 28, 1925), four sets of balance-sheets have appeared. On the last two, for June 30th and August 31st, is based the above judgment that the pace of recovery of banking operations towards their pre-war magnitude has materially slackened. The balance-sheets for December 31, 1924, of the seven chief banks showed during the preceding year a threefold increase from 1,170 to 3,470 millions, in the item "creditors," as which are booked all liabilities except capital, reserves, acceptances, and

guarantees. In the two months preceding June 30th, the balance-sheets of the six chief banks (Handelsgesellschaft issues no balance-sheet) only shows a rise for this item from 3,940 to 4,127 million marks; and in the balance-sheets for August 31st a further rise to only 4,139½ million marks. The total for all commercial banks rose in these last two months from 5,179 (84 banks) to 5,248 million marks (88 banks). The deposits proper in the six great Berlin banks (2,300 millions at the end of 1913) rose in the two months ending August 31st only from 1,549 to 1,705 million marks. (Owing to fusions, expansions, and other causes, comparisons with 1913 have only a qualified value.) The chief assets and liabilities of the six banks (Deutsche, Disconto, Darmstaedter, Dresdner, Commerz-und-Privat, and Mitteldeutsche Credit) were:—

(000's omitted.)	June 30, 1925.	Aug. 31, 1925.
Total assets	5,013,707	5,051,344
Thereof Bills and Treasury Bills	1,095,175	1,113,404
Correspondents	608,802	583,079
Advances on Bourae securities	68,825	82,051
on wares	343,525	339,090
Own securities	68,723	69,671
Syndicate participations	74,997	71,861
Debtors on current account	2,252,082	2,333,063
Shares in other banks	135,246	137,929
Capital	452,020	452,020
Reserves	178,128	177,663
Creditors	4,127,357	4,139,169
Thereof deposits	1,549,236	1,705,962
Acceptances and cheques	231,036	259,962

The liquidity of the banks has declined all this year. By some critics it is declared that more resources are tied up in industry than is judicious. Whereas the liabilities between December 31, 1924, and August 31, 1925, of the six chief banks increased from 3,214 to 4,399 millions, liquid resources rose only from 1,981 to 2,239 millions. The liquidity percentage of the six banks fell in this year's four bi-monthly terms as follows:—

Dec. 31, 1924.	Feb. 28, 1925.	April 30, 1925.	June 30, 1925.	Aug. 31, 1925.
61.6	54.1	53.3	52.4	50.9

Figures for 88 credit banks (not including State and provincial banks) on August 31st were:—

(000's omitted.)	
Total assets	6,593,508
Thereof bills and Treasury bills	1,421,318
Correspondents	748,230
Advances on wares	382,201
Debtors on current account	3,046,416
Capital	699,293
Reserve	232,755
Creditors	5,248,510
Thereof deposits	2,168,484

Money in the hands of public authorities increases much more rapidly than commercial bank deposits, and has an abnormally high ratio to the latter. In the last bi-monthly terms the creditors of the State and provincial banks rose from 1,506 million marks to 1,829 million marks, whereas creditors of the commercial banks rose, as shown in the tables, very slightly. The mortgage banks are rapidly recovering. In the first half of 1925 their new mortgage loans (all Germany) totalled 300 million marks, against 270 million marks in all 1924, and about reached the pre-war average. Including their gold and rye communal loans, the total of outstanding long-term credits by these banks on June 30th was 686 million marks, the total of their outstanding bonds 667 million marks.

The question of the interest and commission rates of the commercial banks has been much in discussion. The banks still maintain that, owing to increased administration costs, and to the decline in their bourse and capital-issue business, they cannot exist without maintaining a very high interest tension (at present, on current accounts 14 per cent. and 5 per cent. on debits and credits respectively). By investors, however, the banks are regarded as more prosperous than industrial, trading, and shipping companies. They are already dividend-payers; and their stocks quote much higher, and have fallen this year much less.

BARCLAYS BANK

Head Office - 54, Lombard Street, London, E.C. 3,

and over 1,800 Branches in England and Wales, and Agents and Correspondents in all the principal towns throughout the World.

FREDERICK CRAUFURD GOODENOUGH, Chairman.
Sir HERBERT HAMBLING, Bart., Deputy-Chairman.
EDMUND HENRY PARKER, Vice-Chairman.

GENERAL MANAGERS: WILLIAM FAVILL TUKE. JOHN CAULCUTT. EDWIN FISHER.

Authorised Capital	£20,000,000
Issued and Paid-up Capital	£15,592,372
Reserve Fund	£8,250,000
Deposits (30th June, 1925)	£298,947,270

EXECUTORSHIPS AND TRUSTESHIPS UNDERTAKEN.

JOINT-STOCK BANKS OF ENGLAND AND WALES

BANK OF ENGLAND.

At the half-yearly Court of the Bank of England, held on September 17th, the Right Honble. Montagu Collet Norman, the Governor, stated that the profits of the half-year ended August 31st, after making provision for all contingencies, had been £698,889, making the amount of the "rest" on that day £3,721,981, and that after providing for a dividend of 6 per cent., less income-tax, the "rest" would be £3,023,436.

Australian Mutual Provident Society

(A.M.P.)

Established 1849.

(A.M.P.)

SEVENTY-SIXTH ANNUAL REPORT.

Remarkable Figures.—Ordinary Department.

NET NEW BUSINESS.—26,397 Policies Assuring £13,230,721, with Annual Premiums of £408,173.
 DEATH CLAIMS.—£1,605,254, including Bonus Additions of £525,788. This is only 55 per cent. of the "Expected."
 MATURITY CLAIMS.—£1,172,410, including Bonus Additions of £323,954.
 ACCUMULATED FUNDS (including Industrial) have increased by £3,534,680 and amount to £55,812,779.
 WAR AND REPATRIATION LOAN SUBSCRIPTIONS total over £14,514,000.
 THE DIVISIBLE SURPLUS is £2,223,786, which represents a return of 52.9 per cent. of the premiums received under participating policies. The corresponding Reversionary Additions amount to about £3,800,000.
 THE VALUATION (on a Pure Premium Basis) has been made at 3 per cent.
 THE EFFECTIVE RATE OF INTEREST (after deducting Income Tax) was £5 9s. 9d. per cent. There is therefore an Interest Margin of nearly 2½ per cent.
 THE EXPENSE RATE (excluding Taxes) was 12.77 per cent. of the Premium Income. This is only about three-quarters of the provision for expenses included in the Premiums.
 THE TOTAL ASSURANCES issued in 76 years amount to £253,342,982, of which £137,681,128, or nearly 51 per cent., are still in force.

LONDON OFFICE: 73-76, KING WILLIAM STREET, E.C.4.
 W. C. FISHER, Manager for the United Kingdom.

BANK OF ROUMANIA, LIMITED.

The report presented to the meeting held on July 22, 1925, at 12.30 p.m., states that after writing down investments, and making provision for bad and doubtful debts, income-tax, and corporation tax, the amount available is £18,551. An interim dividend of 3s per share, less tax, was paid on December 17th last, absorbing £5,812 10s. The directors recommend a final dividend of 3s per share, less tax (making 6s per share, less tax, for the year), placing £3,227 to contingency account and carrying the balance of £3,699 to reserve account (new), thus bringing the total of the reserve accounts (old and new) up to £80,000. The accounts from Bucharest have been converted into sterling at the rate current on December 31st last.

BALANCE-SHEET—December 31, 1924.

THE DOMINION OF NEW ZEALAND

THE LAND OF GREAT OPPORTUNITY.

New Zealand offers the best investment for
CAPITAL, INDUSTRY, ENTERPRISE.

Last year Gt. Britain received from New Zealand:

ONE-FOURTH of her BUTTER Supplies from abroad.
ONE-HALF " " CHEESE " " "
ONE-HALF " " MUTTON & LAMB " " "
ONE-THIRD " " TALLOW " " "
MORE CROSS-BRED WOOL than from any other country.

New Zealanders, per capita, are Britain's best customers. Last year they purchased manufactures, etc., from British mills to the extent of £17 per head.

IMPERIAL BANK OF PERSIA.

The report submitted to the meeting held on July 7, 1925, is as follows:—The profits for the year ended March 20th last, after making provision for expenses of management and general charges in London, and at the chief offices and branches, income-tax, corporation tax, and bad and doubtful debts, amount to £90,440, to which has to be added £34,552 brought forward from last account, making a total of £124,992. From this sum £5,426, the amount due to the Persian Government in terms of the concession, has to be deducted, leaving £119,566, which the directors have dealt with in the following manner:—Six months' interim dividend at the rate of 4s per share, paid January 19, 1925 (free of income-tax), £20,000; transfer to reserve account, £30,000; transfer to Bank premises account, £10,000; final

dividend, at the rate of 5s per share, payable on July 10, 1925 (free of income-tax), making a total of 9s per share for the year, £25,000; carry forward to new account, £34,566—£119,566.

BALANCE-SHEET—March 20, 1925.

THOUGHT

Industrial Great Britain was created by the man of thought and imagination, and yet few of us to-day wish to take the trouble to think deeply.

The banker, and those with treasure to protect, have every reason to give thought to the degree of protection upon which they rely for security, because the modern burglar, by giving thought to his job, has become a great danger.

During the last 10 years he has made greater progress in his method of attack and has been more successful than in the previous 50 years, while the ingenuity shown in achieving his success proves that the modern burglar is an educated man possessing a knowledge of engineering.

The Chatwood Security is the result of continued thought arising from the experience of almost three-quarters of a century.
