

The Economist,

WEEKLY COMMERCIAL TIMES

Bankers' Gazette and Railway Monitor :

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CI.,

BEING FROM JULY TO DECEMBER, 1925, INCLUSIVE.

LONDON:
PUBLISHED AT THE ECONOMIST OFFICE,
3 ARUNDEL STREET, STRAND, LONDON, W.C.

MCMXXV.

INDEX TO THE ECONOMIST

THE MONEY MARKET.

BORROWING at the Bank of England proceeded on a large
scale until the last day of June, when it was estimated that
the total borrowed amounted to between 30 and 35
millions. Since the beginning of July the supply of money
has been comfortable, with this mass of fresh credit avail-
able, and repayments have so far been easily made; but

[July 4, 1925.]

some doubt is felt as to the existence of any surplus after the market has concluded, if it succeeds in doing so, the liquidation of this debt. Discount rates consequently showed little tendency to slip, being also maintained by the demand for call money at the beginning of the week in New York, though this was generally considered to be merely a momentary spasm. Fine October bills were quoted at $4\frac{1}{2}$ - $4\frac{3}{8}$ per cent. The reduction in the Indian bank rate is not expected to have any practical influence on the Indian demand for gold.

	July 3, 1925.	June 26, 1925.	June 19, 1925.	June 12, 1925.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	4 (Mar. 5, '25)
Banks' Deposit Rate	3	3	3	3	2 (Mar. 5, '25)
Discount (Call)	3	3	3	3	2 (Mar. 5, '25)
Houses (Notice)	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	2 (Mar. 5, '25)
Market rate (5 months' bills) ..	$4\frac{1}{2}$	$4\frac{3}{8}$	$4\frac{3}{8}$	$4\frac{3}{8}$	..

The Bank return showed an increase of £419,000 in the stock of gold, the net receipts from abroad having been given as £319,000. The demands of the turn of the half-year, however, caused an expansion of £1,359,000 in the note circulation, so there was a decline of £940,000 in the Reserve, and its proportion to liabilities was 4.3 per cent. lower at 19.7 per cent. Government and other securities expanded by $7\frac{1}{2}$ and $17\frac{1}{2}$ millions respectively. Public deposits declined by nearly two millions, and other deposits were more than $25\frac{1}{2}$ millions higher. There was an increase of £1,222,800 in currency notes outstanding this week, raising the total outstanding to £293,501,000, which includes £1,334,400 for notes called in, but not yet cancelled. The fiduciary issue is £238,216,600, or £9,928,800 below the maximum for 1925.

NEW YORK MARKETS.

Our New York correspondent cables:—Markets generally are steady, and call money is beginning to become easier after the July 1st settlements. Currency requirements over the holidays, which are now approaching, are, however, usually large. Cotton prices fell five dollars per bale on the Government's estimate of a 14,330,000 bales crop, with an acreage of nearly 46½ million acres. *Dun's* commodity price index number rose in June by 0.4 per cent., five groups showing a rise and two a fall, a big drop in breadstuffs being offset by a big advance in meat prices. The Federal Reserve statements reflect special mid-year requirements. There is a fair increase in borrowings by member banks, and deposits are higher. There has been a further moderate loss of gold, and the reserve ratio for the whole system has dropped to 74 per cent.

THE STOCK MARKETS.

Fears of a higher Bank Rate appear to have subsided, and the Consol market as a whole is firm, 5 per cent. War Loan having touched 100 on Wednesday. Several of the recently issued scrip stocks have also recovered. Liquidation, however, produced a heavy tendency at the end of the week. French bonds have weakened, but Chinese stocks have recovered from their recent flatness. Home rails are uncertain. Activity in the rubber share market continues, and tea shares have improved, but the oil market is quiet. There have been no striking features in the industrial section, and some departments of the mining market have been depressed by Paris selling.

THE COMMODITY MARKETS.

A general air of quietness pervades the markets this week. In pig-iron and the manufactured iron and steel trades orders are small, the position undoubtedly being affected by the unsettled state of the coal industry. Some useful orders have been obtained in the cotton trade, chiefly for the Continent and the home trade. The forthcoming London sales still influence the wool trade, but traders are more optimistic, and business is fair. The weakness of the wheat market is mainly due to depression in America. Sugar is steady, and coffee in fair demand. Tea shows slight improvement, though prices are irregular. The rubber market is receiving fair support. Tin, copper, and lead all show a firmer tendency.

FOREIGN EXCHANGES.

Interest in the Foreign Exchange market has again concentrated on the movements of the French and Italian rates, and dealings in these currencies have been brisk, with widely fluctuating prices. The franc from 106.65, on the 26th, recovered a little on Saturday, but the rise which began on Monday as the full significance of M. Caillaux' proposals was realised, carried up the rate to 109.20 on the 1st, the highest quotation since last year's *débacle*. At that point bear covering and vigorous intervention brought down the rate to a closing price of 104.45 on Thursday evening, and yesterday morning brought a further rapid recovery to 102.60. It is difficult to understand the motives behind the actions of the French Government. At first sight there would seem to be a repetition of last year's tactics, directed, however, this time not so much against the foreign speculator, as against the Frenchman himself, who is trying to get rid of his own currency. If this is so it is doubtful whether the plan will succeed for long, especially when the Government has set the seal on this disbelief in the franc by the proposed offer of gold bonds. It is possible that sufficient foreign funds have been accumulated to hold the franc for a time, but it is by no means certain, and an attempt to stabilise at a lower figure than at present ruling, on the facts at least as far as they are known, highly unwise. Brussels, as usual, has followed roughly the same course, moving from 107.10 on the 26th to 103.40 yesterday morning, after being up to 109.60. At one time during the week, however, the rate was quoted at a parity with Paris. Paris, one month forward, has narrowed sharply to 30 to 35 centimes above spot, as compared with 77 to 80 centimes a week ago, Brussels moving from 6.3 centimes to parity to 3 centimes. The fluctuations of the lira have been even more violent than those of Paris. From 135½ on the 27th it moved up on Saturday to 137.20, and after a slight recovery on Monday mounted rapidly again until 146 was reached on Wednesday. On Thursday a recovery began in sympathy with the franc, and the closing price was marked at 139½, while yesterday morning there was a further recovery to 137. No satisfactory explanation for these movements is yet forthcoming, little being known beyond what has been previously mentioned in these columns. There are, however, Press reports that the first impetus to the break was given by one of the larger Italian banks politically out of sympathy with the present régime. Other stories of the influence of political uncertainties are current, but no confirmation has yet been received. Amsterdam, which moved up rather rapidly a week ago, has shown a further depreciation, rising from 12.12½ on the 26th to as high as 12.14½ at one time on the 1st. Since then there has been a slight recovery to 12.13½. Sterling has remained firm, with only slight fluctuations, the dollar being quoted yesterday at \$4.86½, as compared with \$4.86½ a week ago, after being up to \$4.86½. Forward rates, at 7½ to 8 cent per month below spot, are much the same as last week. Stockholm has moved against us slightly from 18.15 to 18.13½. Oslo has continued its rapid recovery from 27.90 to 26.51½, while Copenhagen has also improved from 24.69 to 23.59½. Berlin, Vienna, and Budapest are unchanged. Helsingfors is slightly lower at 192½, Prague unchanged at 164, and Bucharest also practically the same. In the East the rupee is again firmer at 1s 6½d, as compared with 1s 6 3-32d, in spite of heavy purchases of sterling by the Government, contrary to the usual movement at this time of the year, when exports are slack. It is suggested that the explanation is the falling off in the Indian demand for gold. The yen is also slightly dearer, having moved from 1s 8 3-32d to 1s 8 5-32d. Uncertainty in China brought up the price of silver to a level higher than at any time since the early part of January, but it has fallen again, with some return of confidence, and should China start to sell a sharp reaction might be expected. Hong Kong stands at 2s 3½d, as compared with 2s 4½d, Shanghai on Thursday, yesterday being holiday, at 3s 3d, as compared with 3s 2½d. In South America, Rio has depreciated slightly from 51½d to 5 13-64d, Buenos Aires is slightly dearer at 45 9-32d, as compared with 45½d, as also Monte Video at 48½d, as compared with 48d, while Valparaiso has also appreciated a little from 41.80 to 41.50 pesos.

July 4, 1925.]

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the ten days ended June 30th:—

EXPENDITURE.	£	REVENUE.	£
Supply Services	10,754	From Revenue	12,384
Interest, &c., on Debt	3,298	Increase in Debt	5,262
Sinking Fund	2,694		
Increase in Balances	49		
Sundries	851		
	17,646		17,646

Revenue during the ten days ended June 30th totalled £12,384,300. Property and Income-tax yielded £3,032,000. Customs produced £2,695,000, and Excise £1,771,000. Estate, &c., Duties yielded £2,210,000, and Land Tax and House Duty, £1,160,000. The ten days' operations increased the National Debt by £5,262,300, and caused the following changes:—

	£		£
Telegraph Money	+ 2,200	Treasury Bills	- 1,055
National Savings Certificates ..	+ 200	Public Department Advances ..	- 5,350
Bank of England Advances ..	+ 9,750	Treasury Bonds Repaid	- 220
		Exchequer Bonds Repaid	- 157
		Sundries	- 106
	+ 12,150		- 6,888

The floating debt was increased by £3,455,000 to £791,520,000.

FINANCIAL YEAR, 1925-1926 (April 1st to June 30th.)

	£		£
Total Expenditure ..	220,458,878	Raised by Revenue ..	169,187,110
		Decrease in Balances ..	4,211,514
		Amount borrowed ..	47,060,254

Total

ESTIMATES for FINANCIAL YEAR 1925-1926.

	£		£
Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—William Beardmore and Co., Ebbw Vale Steel, Iron, and Coal, John Brown and Co., Pindeniya Rubber and Tea Estates, and Ohlsson's Cape Breweries. Lord Invernairn, at the meeting of Wm. Beardmore and Co., in a review of conditions in the iron and steel trade, put in a plea for a cut of 25 per cent. in railway rates. At the meeting of John Brown and Co., Lord Aberconway suggested that coal exports might be increased by the formation, under Government auspices, of selling committees in big export centres, with a Treasury representative on each.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

UNEMPLOYMENT AND THE FUTURE.

To a cynically-minded observer it must, we imagine, be an amusing study to watch the change of mental attitude in our politicians when they pass from office to opposition and back from opposition to office. In many matters the change is noticeable, but in nothing is it more obvious than in their speeches on the problem of employment. In opposition they are usually urgent in their demand for some active measures, indignant with a Government that after months and months of office has taken no step to remedy an evil of appalling gravity, and very free with their censure of Ministers' callousness and inertia in face of a human problem that ministerial action alone can solve. But let them by the happy chance of a successful election cross the floor of the House, and they seem at once to join the straitest sect of the Manchester school, and become the apostles of *laissez faire*. Both the parties who have recently held office have suffered this change, and been placed thereby in positions of some embarrassment, making considerable capital out of unemployment while in opposition, and becoming the target of their old arguments when they came into office. The Minister, whether he uses the more conventional language of political economy, and declares that the sphere of useful govern-

mental action in the provision of employment is necessarily a narrow one, or the homely metaphors of Mr Wheatley, who says that he cannot produce rabbits out of a hat, is equally impressed with his own helplessness, and the appalling difficulty of stimulating trade from Whitehall. If the events of the past two years have brought home to the public the simple truth that Government can kill trade, but cannot create it, the ground is at any rate cleared of some dangerous undergrowth.

In the debate on Labour's vote of censure last Monday, the Prime Minister gave us a long and rather rambling speech, with the tone of which no one could quarrel, though the general effect was one of disillusionment, and to the man who believes that Government can cure unemployment it must have made depressing reading. The remedies at which he glanced with a favouring, if not a hopeful eye, included drainage, agriculture, beet sugar, gold standard, the Pact, export credits, credit insurance, the modernising of plant, the building of roads, a tariff, electricity, scientific research, low temperature carbonisation, colonial development, British films for British cinemas, purchase of British goods, subsidies to distressed industries, brains and work. At any rate, he has got flies enough in his box for a long spell of fishing, but with which of them, if any, he expects to catch his fish is not clear. We suspect that in his present mood he does not feel happy about any of them, and it is surely significant that in a full-dress debate of this importance he should pass almost in a breath from the contemplation of State subsidies for steel and coal to the discussion of how the British film-maker can be helped to supplant his American rival in the affections of the British public. The lack of proportion in this part of Mr Baldwin's speech suggests a mind groping for a policy, failing to distinguish vital points of principle from matters of almost trivial detail.

It seems to be generally accepted that employment in the necessary volume cannot be provided until the great industries in which employment is most scarce recapture their markets, and that to do this their costs of production must be reduced. Coal cannot fight its way back into countries which are no longer buying it unless its price at the pit-head, and the cost of carriage to the port, are considerably reduced. Engineering is hampered by the high price of fuel and the high level of local rates, shipping by the scarcity of coal freights and the cost of bunker coal. And so forth throughout our great exporting trades.

The problem of the future seems to crystallise itself into this question: may we hope—as we have been hoping since 1921—that the normal process of adjustment and recuperation will restore to our struggling industries the power to compete and to force their products into the old markets? Or are we helpless and hopeless unless some great new productive power comes to our rescue by cheapening production and broadening the basis of industry, as steam came to us after the Napoleonic wars, and coming, set the prosperity of the country flowing again in a fuller, wider channel? We certainly would not number ourselves among those who despair of the future unless we are blessed with another such industrial miracle as the advent of steam, the centenary of which has been celebrated in picturesque fashion at Stockton this week; but it is undoubtedly true that never since 1815 were new methods of production so sorely needed by Great Britain as they are to-day, and that the scientist and the organiser who can supply us with a great access of power, whether by electricity or by a more economic employment of coal, may be hailed almost as the saviour of his country.

In either alternative, whether we are to win back our prosperity in the normal path of day-to-day progress, or reach it perhaps more quickly by a sudden accession of cheap power, it is certain that steady, continuous work will be the essential of success, and that without an industrious population we shall not take advantage either of our normal opportunities or of the miraculous intervention of scientific discovery. Sermons on hard work and denunciations of idleness are too often directed merely against the working man, for insufficient application and efficiency are not a monopoly of the manual worker, and his is not the only class that has failed to settle down to its job since the end of the war with the intensity demanded by a very exacting situation. In all sections of the country there is a clear disposition to cling tenaciously to higher standards

of living, more abundant leisure and pleasure, and less grim and persistent pursuit of practical efficiency than the very uphill task of industry recovery requires. The employers and employed in two of our basic industries—coal mines and transport—are presented with a great opportunity. If they can rise to the occasion and allow their deliberations to be guided mainly by a realisation of the truths which we have just enunciated, they will have given the country a start along the only road that leads to the desired goal. If they fail, they will have greatly exacerbated the nation's problems. But that alternative we refuse at the moment to contemplate.

THE MONETARY HALF-YEAR.

By the restoration, at the end of April, of the gold standard in Great Britain the past half-year marks an important epoch in our monetary annals. This event has, inevitably, been the chief influence on the feeling of our market and its sensitiveness to conjecture and possibilities, though the actual movement of rates was chiefly influenced by a rise, at the end of February, in the rediscount rate of the New York Federal Reserve Bank, followed by an advance of 1 per cent. in the Bank of England's official minimum. Even that event, however—at least, as far as the Bank of England's action is concerned—may be conjectured to have been hastened, if not produced, by the determination of the authorities to make ready for the great event which they knew to be approaching. In the discount market, and in all business circles in which the course of money rates is a matter of especial importance, the early months of the half-year were coloured by uncertainties as to the Government's intentions with regard to the gold standard, and since its restoration conjectures as to its consequences have been a dominant influence on sentiment. Everyone knew that the Gold and Silver (Export Control) Act of 1920 would, unless renewed by Parliament, expire automatically at the end of 1925, and that, consequently, some decision as to its action would have to be reached by the Government early in the year, since, if legislation were required, it would have to be given its place in the timetable. The Chancellor was repeatedly asked for a statement of his intentions both in Parliament and by outside bodies which represented the obstacle to trade confidence caused by the prevalent uncertainty; but with dramatic instinct Mr Churchill staved off all inquirers with indefinite answers, until, on the occasion of his first Budget speech, he made the memorable announcement that the gold standard was already, from that day, in effect restored. As everyone knows, the restoration was followed, not by a serious drain on our gold store, such as had been feared in some quarters, but by a general advance in the gold exchanges to a point at which withdrawals of gold from London did not pay as an exchange transaction, and by considerable receipts of gold—more than sufficient to balance withdrawals, which were chiefly in the direction of India. The time of year chosen for the change and the preparations made in advance by the Treasury and the Bank of England helped, without doubt, to produce this favourable result, and until the normal demands of the autumn have been successfully met, it is too early to congratulate ourselves on the ease with which this momentous milestone has been passed; but at least it can be said that the first two months of the restored gold standard have disappointed pessimistic prophets by failing to produce any restriction in credit, due to a diminution in our stock of gold.

To the discount market, to which cheap and plentiful credit is the first essential to monetary comfort, the change has not been pleasant. So long accustomed to having its path made smooth by timely additions to credit provided by a friendly "hidden hand" whenever stringency threatened to impede the sale of the weekly batch of Treasury bills, the discount houses did not welcome enthusiastically a state of affairs in which the market rate was kept in touch with Bank rate by the more frequent necessity to borrow, not by disposing of short Treasury bills on reasonable terms to a semi-official intermediary, but directly from the Bank at the usual $\frac{1}{2}$ per cent. above Bank rate. Even in Lombard Street, however, these inconveniences are generally recognised as well worth suffering

in order to restore our currency to its old prestige; and to those who can take a national view of the matter it must be clear that the monetary effect of the linking of the pound to the other gold exchanges cannot fail ultimately to benefit our trade, by eliminating a cause of fluctuation and uncertainty, which was a serious handicap to those who sell and buy goods abroad.

Turning to the details of the half-year's record, we find that the abundance of money with which January opened was soon corrected by the repayment of the large sums borrowed at the end of 1924 from the Bank of England, and by the lock-up connected with the new issue, made early in the month, of about £60 millions nominal of $3\frac{1}{2}$ per cent. Conversion loan. Money thus became very scarce, with the assistance of the collection of the direct taxes, but by means of purchases of short Treasury bills from straitened dealers in credit, the need for direct borrowing from the Bank of England was avoided until the last day of the month. At the beginning of February there was a temporary return of ease owing to the maturing of Exchequer bonds, but the pressure of heavy tax payments kept discount rates firm, until on Friday, February 27th, following an advance from 3 to $3\frac{1}{2}$ per cent. in the rediscount rate of the New York Federal Reserve Bank, the Bank of England raised its rate for advances from $4\frac{1}{2}$ to $5\frac{1}{2}$ per cent., and intimated that it would not discount bills below 5 per cent. On the natural assumption that this meant a rise to 5 per cent. in Bank rate on March 5th, the market rate went up nearly 1 per cent., and on March 5th the expected rise in Bank rate was duly announced.

Owing to the unusual manner in which these official movements were carried out there was, perhaps, some excuse for nervous excitement, but the outcry about the burden and suffering imposed upon industry and production by this 1 per cent. rise was so exaggerated that we thought it advisable to test, from industrial balance-sheets, the extent of the addition to the cost of production so caused. In the *Economist* of March 21st it was shown that out of 300 industrial balance-sheets published in the preceding 12 months, only 63 disclosed the amount of bank loans; in the case of these 63 the total bank loans were a little over $11\frac{1}{2}$ per cent. of their paid-up capital, and the conclusion was drawn that "if every company were compelled to pay the full 1 per cent. increase for the accommodation the increase in working expenses would amount to little more than one-tenth of 1 per cent. of the paid-up capital." Throughout the greater part of March the supply of money was remarkably plentiful for the time of year, and the three months' discount rate showed some weakness owing to a keen foreign demand for bills, which were extremely scarce, but as quarter day approached large amounts had to be borrowed from the Bank of England. April brought the usual sunshine and shadow, ease being tempered by the currency demands of the Easter holiday, and of the end of the month. Discount rates hardened appreciably on the announcement of the restoration of the gold standard, owing to fears that a rise in Bank rate might follow. These apprehensions were quieted by Mr Churchill, who, stated in the House of Commons, on May 4th, that he did not know of any immediate reason which would justify Bank rate being raised, and also by the favourable movement in the New York and other exchanges. The discount market had an easy tendency in the latter half of May, and the early part of June, but hardened in anticipation of the half-yearly squeeze.

The following table shows the daily averages for discount rates and money rates during the first half of this year and the previous four years:—

DAILY AVERAGE FOR FIRST HALF-YEAR.										
	1921.		1922.		1923.		1924.		1925.	
Bank rate	£ s d	£ s d	£ s d	£ s d	£ s d	£ s d	£ s d	£ s d	£ s d	£ s d
Market rate (3 months)	6 16 0	4 7 1	3 0 0	4 0 0	4 0 0	4 12 0	6 2 7	2 19 0	2 4 0	3 7 6

The floating debt showed the usual large reduction during the March quarter, with a sensible expansion since then, especially in that mysterious item "advances from public departments." The appended table shows the movements:—

FLOATING DEBT.			
	December 31, 1924.	March 31, 1925.	June 30, 1925.
Bank of England Advances..	£ 24,750,000	£ None	£ 9,750,000
Public Department Advances	195,015,000	166,585,000	185,185,000
Treasury Bills.....	626,060,000	575,610,000	596,585,000
	845,825,000	742,195,000	791,520,000

Bank rates abroad have shown interesting variations, with reductions predominating in Central Europe, while the Italian went up three times, and the Greek once. India went up in January, and since then has come down twice.

CHANGES IN FOREIGN BANK RATES 1st HALF of 1925.

Date.			
Jan. 14	Dutch Bank Rate	Reduced $\frac{1}{2}$ % to 4 %	
22	Indian "	Raised 1 % to 7 %	
Feb. 5	Greek "	Raised 1 % to 8 $\frac{1}{2}$ %	
26	German "	Reduced 1 % to 9 %	
26	New York Federal Reserve do ..	Raised $\frac{1}{2}$ % to 3 $\frac{1}{2}$ %	
March 6	Danzig Bank Rate	Reduced 1 % to 9 %	
9	Italian "	Raised $\frac{1}{2}$ % to 6 %	
25	Prague "	Raised 1 % to 7 %	
26	Hungarian "	Reduced $1\frac{1}{2}$ % to 11 %	
April 15	Japanese "	Reduced 0.7 % to 7.3 %	
24	Austrian "	Reduced 2 % to 11 %

Yokohama.....	Ster. to yen	24½	1/11	1/1½	1/8½

Movements have been highly satisfactory from the point of view of sterling, but the extent of the depreciation in "Allied" currencies is a serious blot on the picture.

THE EGYPTIAN TRIBUTE LOANS.

On the 15th of this month the Cairo Mixed Court of First Instance gave judgment for the plaintiffs in the conjoined actions brought by Messrs Rothschilds against the Egyptian Minister of Finance in respect of the so-called Tribute Loans of 1891 and 1894. The Court ordered the Minister to resume the payment of the annuities on these loans, which was suspended by Zaghlul Pasha in July last. This decision, though still open to appeal before the Mixed Court of Appeal at Alexandria, undoubtedly constitutes a notable step towards the solution of a financial and diplomatic issue of great importance. The annuities in question amount respectively to £280,622 18s 4d annually in respect of the 1891 loan, and £329,249 6s 1d in respect of the 1894 loan. Both annuities have approximately thirty years yet to run.

The question whether Egypt, in spite of her having attained independence from Turkey, is still under an obligation to continue to pay to the bondholders of certain of the Turkish debts the tribute which had been pledged to them, was raised as a definite issue by notes addressed in July last by Zaghlul Pasha, the then Egyptian Prime Minister, to the British and French Governments. In these notes Zaghlul Pasha contended, in substance, that in consenting in 1891 and in 1894, at the instance of the Turkish Government, to make her tribute payments, not to the suzerain Power directly, but to the latter's creditors, Egypt could not be taken to have extended or aggravated her obligations; that, consequently, any event which terminated Egypt's status as a tributary dependency must terminate her liability to the mortgagees of the tribute; and that the recognition of Egypt's complete severance from Turkey was consequently adequate to liberate her from this liability. The notes terminated with the declaration that Egypt would welcome a submission of the question to the Permanent Court of International Justice at The Hague, and that pending a decision the annuities would be paid, as they fell due, to a special account at the National Bank of Egypt. The challenge to arbitration was not accepted by either of the Governments to which the notes were addressed, one reason, among others, doubtless being the inappropriateness of international arbitration as a mode of settling an issue one of the parties to which was a group of private persons.

After some delay—that is to say, at the end of April—writs were issued on behalf of Rothschilds against the Egyptian Government in the Mixed Court of Cairo. In the interval research among the records of the negotiations which had preceded and accompanied the issue of 1891 and 1894 loans, and the pledge of Egypt's tribute to Turkey, had brought facts to light which were possibly unknown to the Egyptian Ministers when the payments were suspended. Investigation revealed the fact that Egypt, in entering into fresh specific undertakings to the bondholders, was far from having acted in passive

obedience to the dictates of Constantinople. The new undertakings were only entered into as a result of a process of bargaining, in which Egypt's right to consult her own interests was implicitly recognised by the Turkish Government; and substantial advantages were offered and accepted. These advantages consisted in a modification of the Customs arrangements between the two countries. Under the old system exports from Turkey to Egypt and *vice versa* paid a duty of 8 per cent. *ad valorem* at the port of export, on proof of which payment they were admitted free of duty at the port of import. As Turkey's exports to Egypt very substantially exceeded the trade going the other way, it was greatly to Egypt's interest to secure the adoption of a converse system, under which duties should be payable at the port of import only. It was not till this concession had been made that the Egyptian Government gave an undertaking to lend their support to the conversion of the loans in question.

It will doubtless be found, when the text of the Cairo judgment is available, that the Court was greatly impressed by these facts, and has been glad to be relieved of the task of penetrating the somewhat metaphysical atmosphere which would surround the question were it not for the substantial *quid pro quo* which Egypt stipulated and obtained.

It may be thought that Egypt's continued liability is affirmed with sufficient authority by article 18 of the Treaty of Lausanne, which, while releasing Turkey from all obligations in respect of the Tribute Loans, declares that as the annual payments made by Egypt for the service of these loans now forms part of the service of the Egyptian Public Debt, Egypt is freed from all other obligations relating to the Ottoman Public Debt. It is probable that, in the desire to steer clear of political issues, the Court has not relied upon this provision. Although it is only by the terms of the Treaty of Lausanne that Egypt has obtained from her former suzerain any recognition of her independence, the Egyptian Government, speaking by Zaghul Pasha, has disputed the authority of the Treaty on the ground that they were not signatory parties thereto.

It may be noted that Egypt's liability in respect of the 1855 loan, guaranteed by the British and French Governments, is not in issue in the present proceedings.

HALF-YEAR'S NEW CAPITAL.

In spite of a rush of new issues towards the close of the period, the total of new capital applications in London in the June quarter at £64.2 millions was some £5 millions below the figure for the June quarter of 1924. Last year circumstances connected with the advent of the Labour Government in office curtailed the activity of the market in the March quarter, after which confidence was restored, and borrowers came forward thick and fast. But taking the half-years as a whole, the total London issues for 1925 at £112.2 exceeds the 1924 figure by £6½ millions. A comparison of the totals, and of the activities of various groups of borrowers in each quarter of recent years, is given below:—

(In Million £'s.)

	Total.	British Government.	Foreign and Colonial Govt.	British and Foreign Corpns.	Foreign Railways.	Mines, & Quarries, & Exploitation.	Rubber and Oil.	Balance (Mainly Home Industry).
Total whole year, 1919.	1,017.4	805.8	14.8	2.9	1.1	15.3	18.3	160.3

Total whole year, 1924.	209.3	13.7	90.6	12.7	1.0	12.7	2.3	76.3
1925—1st quarter	47.6	4.6	8	5.6	9	4.6	1.5	9.6
2nd "	64.4	69	13.8	17.5	8	9.7	3.7	12.0

For the benefit of those who are not familiar with the method of our compilation, it should be stated that our figures only represent "new money," and exclude issues, or parts of issues, made for the purpose of repaying or replacing existing obligations. Nor, under the heading of British Government borrowings do we include Treasury Bills or Ways and Means advances. As regards the past half-year, the British Government figure of £6.7 millions represents the excess of sales over encashments of National Savings Certificates, no Treasury bonds having been put on the market.

Undoubtedly the feature of the half-year has been the existence of an unofficial embargo on foreign loans, which has reduced to an insignificant figure the total lent by London in the past half-year in long-term form to overseas countries outside the British Empire. This is clearly brought out in the next table:—

DESTINATION OF NEW CAPITAL.

	1913.	1921.	1922.	1923.	1924.	1925.
United Kingdom—Government	£ nil	20,067,000	304,258,900	63,727,000	10,542,900	6,950,000
Other	20,324,400	50,174,000	44,444,400	28,627,500	33,839,500	71,749,500
British Possessions—Government	20,324,400	70,241,000	348,703,300	92,354,600	44,382,400	78,699,500
Other	14,324,300	27,609,600	41,582,300	39,937,900	25,231,000	14,661,500
Foreign countries—Government	28,678,300	9,959,000	7,917,000	12,250,700	12,724,500	13,462,300
Other	43,002,600	37,568,600	49,499,300	52,188,600	37,955,500	28,123,800
Grand total	120,359,600	128,574,500	448,774,200	181,301,600	105,584,000	112,011,200

The position regarding London's lendings abroad this year and in previous periods becomes clearer still if we set out the following details:—

	1913.	1923.	1924.	1925.
Total of new issues	Min. £ 120.3	Min. £ 181.3	Min. £ 105.6	Min. £ 112.0
Destined for domestic use	20.3	92.4	44.4	78.7
" " British possessions	43.0	52.2	38.0	28.1
" " foreign countries	57.0	36.7	23.2	5.1

Glancing at these two tables, we find that while foreign borrowings have been very slight, and Colonial and Dominion operations lower than in the first half of 1924 by some £10 millions, there has been a very striking increase in the new flotations made for domestic purposes. Domestic issues, other than Government, have been £71½ millions, or more than double last year's comparable figure of £33½ millions. As a subsequent table reveals, the increased amount is mainly taken by British trade and industry—a fact which does not seem to attune very well with the prevalent pessimism as to the prospects of trade expansion. Borrowings in the London market are analysed in 30 groups below:—

Description.	Total, First Half-year, 1924.	First Quarter, 1925.	Second Quarter, 1925.	Total, First Half-year, 1925.
British Government loans	£ 10,542,900	£ 4,600,000	£ 2,150,000	£ 6,950,000
Colonial Government loans	25,231,000	824,000	13,017,500	13,839,500
Foreign Government loans	16,025,200	nil	nil	nil
British Municipal and County loans	3,165,000	5,615,000	10,603,500	16,218,500
Colonial Corporations	3,574,800	250,000	435,000	685,000

Miscellaneous	105,584,000	47,605,800	64,205,400	112,011,200

Local authorities and British railways have substantially increased their operations in the new capital market, while

a large advance is also shown by the "miscellaneous" group, which includes a variety of British commercial and industrial concerns not falling into any of the other classifications. But all down the list increases are the general rule, conspicuous cases being rubber plantation companies, estate and lands, iron, coal, and steel, electric lighting and power, docks, harbours and shipping, and banks and insurance concerns. A feature of the past quarter has been a number of issues for rather large amounts. The following table shows the principal issues during the past quarter, together with the rate of interest, the issue price, and present quotations:—

Issued Week Ended.	Name.	Amount of Issue.	Issue Price.	Present Price.
1925.		£		
May 16.	New Zealand Government, 4½ % red. at par March 1, 1945.	7,000,000	94½	117 dis.
30.	New South Wales, 5½ % red. at par 1943-1965	6,500,000	98½	117 dis.
23.	L.C.C., 4½ % red. 1945-1985	6,000,000	94½	117 dis.
April 4.	Municipality of Danzig, 7½ % Bonds	1,500,000	90	88½
June 27.	Great Western Railway, 5½ % Pref. Stock	6,000,000	95	117 dis.
May 23.	Niger Co., 5½ % Deb.	14,000,000	97	117 dis.
June 13.	Allied Northern Newspapers, 6½ % Deb.	2,300,000	98½	117 dis.
20.	Dunlop Rubber, 5½ % Deb., 1928-1954	(b) 5,000,000	97½	117 dis.
27.	Union Cold Storage, 6 % Cum. Pref. £1	3,220,000	par	115½-3d dis.

† Less £2,675,000 for repayment of maturing obligations. (b) Less £4,200,000 for repayment of maturing obligations.

The last column of the above table illustrates one feature of the past quarter, namely, the frequency with which large blocks of apparently attractive issues have been left on the hands of the underwriters. The public have, on the whole, displayed no greater enthusiasm for new issues than for existing securities.

Through the courtesy of Messrs Dillon, Read, and Co., Chicago, who have cabled preliminary figures for the past half-year, we are able to give the following comparative table of new capital raised in the United States in the first six months of each of the past three years:—

	(000's omitted.)	1923.	1924.	1925.
Companies	\$ 1,944,431	..	1,924,134	..
Foreign Government ..	106,500	..	320,940	..
Farm loan	293,450	..	129,500	..
Municipal	583,932	..	806,054	..
Canadian	40,250	..	29,968	..
U.S. Possessions	456	..	5,835	..
	2,969,019	..	3,215,431	..

The figures for 1923 and 1924 are those compiled by the New York *Commercial and Financial Chronicle*. The feature of these figures is the drop of practically 50 per cent. in American lendings to foreign Governments in the past half-year, as compared with the first six months of 1924.

THE BRITISH CO-OPERATIVE MOVEMENT.—II.

(BY A CO-OPERATIVE CORRESPONDENT.)

THE committees of co-operative societies are elected on the principle "one man (or woman) one vote." The law restricts the holdings of shares to not more than 200 £1 shares; but no shareholder has more than one vote. Thousands of members have never paid more than a shilling as share capital; but the accumulated dividends on purchases have made up their shareholdings. Most of the capital in the movement is the dividend that has not been withdrawn. At the quarterly meetings of members the committees are elected by popular vote. Beyond the possession of a share or two, and, in some cases, the expenditure of £5 or £7 10s in the quarter at the stores there is no obligatory qualification. The result is that the committees are composed of "all sorts and conditions" of men, including labourers, foremen, insurance agents, teachers, engineers, railwaymen, and married women. They usually meet once a week to receive the reports of the secretary and manager and decide matters of policy, engage the staff, and generally carry on the duties of management. In the larger societies many of these details are delegated to the officials; in others a system of sub-committees to watch the various departments has been developed. Only at Woolwich has a full-

time committee been appointed; at Barnsley the president and two vice-presidents devote all their time to the work. In all other societies the committee work is done in the evening by men and women otherwise engaged during the day. They are remunerated by the payment of a small fee for every meeting, or by a quarterly amount determined at the quarterly meeting. The few shillings weekly for meetings is supplemented by allowances for attendances at conferences, deputations, and other gatherings that are increasing in number and in cost to the movement.

Managers and secretaries are elected by the committees; in the early years they were selected by the members, but now such matters of management are being decided by the committees.

The relations between the retail societies and the wholesale society are much the same as those of the member and his society. The societies subscribe capital to the federation proportionately to their membership, and, acting on their behalf, the committees elect the 32 directors of the Co-operative Wholesale Society. For this purpose the country is divided into three districts, so as to secure the representation of the various areas as far as is possible. But the C.W.S. has no voice in the control of the retail societies. They, however, direct its affairs through the committee they elect and through the eight divisional meetings held every quarter. None of the directors of the C.W.S. have any shareholding in the society; they are nominated by the retail societies of which they have been members. So that they are in the unique position of being responsible for the direction of a concern in which they have no monetary qualification.

At the request of the retail societies the C.W.S. has established works in various trades. It cannot dispose of its commodities outside the movement; in a few exceptional instances, such as the sale of offals, &c., it probably does place some of its goods with non-co-operative concerns; but the turnover on that account is really negligible. But while the Wholesale Federation is thus limited as to its market, the retail societies are free as to the sources from which they draw their supplies. Very few maintain a complete loyalty to their own institution, and complaint is frequently made that in some departments and in many societies the percentage of purchases from the C.W.S. by the retail societies is below 50 per cent., while an all-round loyalty of 80 per cent. from the C.W.S. is regarded as excellent. About one-third of the sales of the Wholesale to the retail societies are its own productions; the others are of goods obtained from outside makers, many of whom have direct trading relations with the retail societies. When the Wholesale was established, the view of the pioneers was that societies would divert all their trade to its agency and to its works. In practice, however, the C.W.S. has to employ travellers and organise selling departments, the cost of which was originally intended to be eliminated, so as to lessen the cost of living. The theory has broken down, and co-operators are becoming big advertisers in order to maintain their position in the commercial world.

The C.W.S. has lately instituted a policy of fixing, in conjunction with the managers' associations, the retail prices for certain of its commodities, including boots and shoes. This was rendered necessary from the fact that many retail societies were pricing these productions at such a high figure that the demand was slackened and the private makers' goods found a readier market in the

co-operative stores. Already this tendency has been eliminated by the fixing of prices—often to the chagrin of those retail managements that have suspected an interference with the autonomy of the local societies. All the nine boot factories of the C.W.S. are now working on full time. This is attributed to the demand created by fixed uniform prices. The number of articles dealt with in this way is being extended with the view of securing uniform prices throughout the movement. Gradually the individual societies are recognising the possibility of the one National retail society advocated by the late J. C. Gray, secretary of the Co-operative Union. More than a score of societies have recently amalgamated with others; and absorptions and incorporations are reducing the number so rapidly that already district or county societies are within sight in many areas.

Alongside the difficulties connected with securing uniform conditions of trading is the problem of dealing with the labour employed. Before the war the co-operative movement set the pace with regard to the hours of employment, the regular holidays, and the wages paid for service. But then the competition of the multiple shops and the new conditions of trade lessened the difference. During the war, when the ratio of profit in many of the leading commodities brought all sellers of groceries to a common level, dividends fell in co-operative societies. In hundreds of places the drapery and kindred departments were called upon to make larger profits to supplement the profits of the food departments. But competition has again influenced the position, and co-operative societies have had to return to the policy of reasonable prices in their dry goods sections. Meanwhile, the employees have been strengthening their union and resisting reductions in wages to such an extent that many societies have been compelled to pay wages higher than those ruling outside. In hundreds of grocery shops the female labour begun during the war has been continued; in the co-operative stores it has been reduced, and in the majority the male assistants now serve without the assistance of girls. The grocery trade has changed during the last decade, and what was, at one time, a really skilled employment, where the shop assistants had to know something of the qualities of the goods they sold, is now merely the handing of packets across the counter. This can be done as well, if not better, by girls than men. But the co-operative employees by force of the trade unionists on the committees and in the membership of societies, have compelled the maintenance of men in the co-operative shops. The result is that the wages bill in relation to the takings per each assistant is higher in co-operative concerns than in private trade.

Another menace with which the co-operative societies are now threatened is the organised effort made by the employees in many societies to secure control of the committees of management. During the recent strike the committees in many places were hampered in their negotiations by the fact that two or three employees were among their number. At Coventry one of the shop assistants has been elected president, and often accompanies departmental managers on their buying expeditions. In many places a man serves behind the counter during the day and in the evening sits with his fellow committeemen to settle the conditions of employment. All this is having a disturbing effect on the trading position of the societies. It is growing to such a degree that the national congress has been compelled to consider the position with a view to lessening the anomaly, or, at least, mitigate its effect. New machinery for settling disputes is to be set up, advisory councils of committees and employees are to be formed, and as only 60 of the societies have provided for pensions, the congress at Southport at Whitsuntide resolved that superannuation funds on generous lines should be established by societies.

OUR INDEX NUMBER.

THE pronounced downward movement in commodity prices, which has been a feature of the past few months, continued in June, and our Index Number of wholesale prices shows a further decline of 107 points as compared with the end of May. This decline, which is largely due to the general weakness of the industrial position, has

been accentuated by seasonal reductions in certain commodities and reaction after speculation in others. The figure for the end of June is 4351, which is the lowest recorded since October, 1923, and compares with 4855 at the beginning of the past half-year. There has thus been a fall of 504 points in the past half-year. The table below shows the indices for each of the five groups in addition to the total:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
Basic (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	879	352	816	464	583	2668	116.6

" May, "	956	706	1261	745	789	4458	202.6
" June, "	885	704	1234	736	791	4351	197.8

The bulk of the decline last month was shared by primary foodstuffs and textiles. There was a seasonal decline in potatoes of over 40 points, and with the exception of a slight increase in rice, cereal prices were all lower, while meat quotations also fell a little. In other foodstuffs a rise in butter very nearly balanced a decline in sugar. The drop in the textile group is entirely due to wool and jute, cotton being a shade higher on balance. In the minerals section there was a further slight decline in iron and steel, and coal prices fell a little. In the minor metals, tin is lower on balance, though closing above the lowest. Among miscellaneous commodities the feature is the further advance in rubber.

A comparison with the figures for last December shows that there have been substantial declines in each group, the largest being one of 218 points in textiles. For this heavy fall wool and jute are mainly responsible, American cotton being unchanged on balance, while Egyptian cotton is a few points higher. Cotton manufactures, however, are lower, and there was also a decline in jute. In primary foodstuffs, imported wheat shows a decline of 17½ points, and flour and barley are lower, but oats have risen. More than one-half of the group's decline is in potatoes. In subsidiary foodstuffs, &c., all commodities are lower than six months ago, except tobacco, which is unchanged. In the minerals group the only movement of any size is a decline of 42 points in tin. All other changes, though small, are also in a downward direction. In the miscellaneous section, declines in oils and oilseeds and tallow are partly offset by the rise in rubber.

In the table below we show the changes in each commodity's index number, in comparison with that for the end of December last, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	103	-17	Cotton, A	121	-1	Copper	50	-6
English	97	+3	Cotton, E	127	+11	Minerals	736	-79

Tobacco	116	..	Lead	138	-42			
Other foods	704	-85	Tin	99	-5			

The relative positions of the five sections are shown in the final table, in which the indices for the end of July, 1914, are taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Mar., 1920	261	260	484	269	309	325.6
Dec., 1921	233	229	309	261	230	230.9
Dec., 1922	159	180	180	164	168	163.3
Sept., 1922	151	194	181	150	148	166.2
Dec., 1923	149	200	193	152	146	178.6
Dec., 1924	148	231	225	167	136	176.6
June, 1925	158	210	219	164	139	189.3
Dec., 1925	171	224	235	175	146	185.9
Jan., 1925	176	217	228	168	144	186.0
Feb., "	173	219	233	168	142	182.5
Mar., "	166	212	232	164	141	177.4
Apr., "	163	206	221	160	140	173.8
May, "	165	201	205	160	143	169.6
June, "	153	200	200	159	143	169.6

The lowest point reached since the Armistice was in July, 1923, when the total was 4182, and the increase over July, 1914, 63.1 per cent. At the end of that month cereals and meat stood at 141, other food at 215, textiles at 181, minerals at 160, and miscellaneous commodities at 135. The lowest point touched last year was at the end of May, when the increase over 1914 was 76.5 per cent., and the highest was at the end of December.

THE MUSICAL INSTRUMENT TRADE.

It is, of course, well known that for a generation before the war British producers of musical instruments, and particularly of pianofortes, had a severe struggle with their German competitors. German makers had been first in the field with moderate-priced pianos fitted with all modern improvements, at a time when our own producers only put these improvements into their most expensive instruments. For a long time purchasers of cheap pianos had almost inevitably to choose German makes because of their marked superiority in tone, touch, and finish. Eventually British manufacturers were aroused from their apathy, and began in earnest to compete for the trade in low-priced goods which they had allowed their competitors almost to monopolise. But it is proverbially difficult to regain lost trade, and it took many years of constant effort before the desired effect began to show itself during the ten years preceding the war. In that decade the first five years showed imports of pianos exceeding exports by about half a million sterling per annum, but in the second five years the excess was reduced to about a quarter of a million. The number of instruments landed on these shores had only fallen from 22,000 to 20,000 a year, but the number of British pianos shipped had gone up from a little over 5,000 to nearly 9,000 per annum. The tendency of the trade during the ten years immediately preceding the great war was unmistakable. In the cheaper class of goods British manufacturers had learned how to turn out instruments quite as satisfactory as those reaching us from Berlin, and they had begun to reap the benefit of their long years of uphill struggling.

Let us view the results of these ten progressive years, at the same time including organs and all other musical instruments, as well as their parts:—

OVERSEAS TRADE IN MUSICAL INSTRUMENTS FOR 10 YEARS PRIOR to the War.					
Imports.			Exports.		
In Thousand £'s.			In Thousand £'s.		
Inc. or Dec.	1904-8.	1909-13.	Inc. or Dec.	1904-8.	1909-13.
Organs and har-	111	59	20	21	+1
moniums	665	623	150	281	+131
Pianofortes	103	63	50	60	+8
All other instru-	261	270	52	100	+50
ments	1,140	1,015	272	462	+190
Parts of instruments	1,140	1,015	272	462	+190

This presents a pre-war picture of the entire trade in all musical instruments and their parts (save gramophones), and it was certainly encouraging in every section. Imports showed declines in pianos, organs, and all other instruments, while only a slight rise was registered in parts of instruments. Exports showed rises in every

section, and the total value of British shipments increased from less than a quarter of the imports in the first lustrum to not far short of half the imports in the second lustrum. Indeed, if we take the single year 1913, we find that British sales abroad amounted to more than half of the net imports (those retained for sale in this country). From the evidence afforded by these ten years it is fair to conclude that had the world continued on lines of sanity, our own producers would, in the ordinary course, have succeeded in establishing a preponderance of exports over imports long before now.

Of course, the world-upheaval of 1914 put an end to German competition for the time being. Our makers were left in undisputed possession of the entire field, and prices, as we know, soared to unheard-of heights. During and shortly after the war, such was the demand that ancient pianos, which could not have been previously got rid of for £5 each, were dragged from dusty spare rooms and offered at all prices from £20 to £30. Advances in the cost of new instruments were, of course, not so severe as this, but they were considerable. Thus, the export value of British instruments had averaged £36 each in 1913, and in 1920 it had risen to £95. Fortunately, there has been a heavy fall since, the price last year working out at £48, the fall in price being accompanied by a rise in the number shipped from 3,094 in the boom year 1920 to 6,542 last year.

This question of price is all-important, for it has played a large part in the competition between British and German makers. After peace was declared there was, of course, a rush of German instruments over here. For a considerable time the Germans were aided by the continually decreasing value of the mark, but that was a condition that could not continue permanently. Costs of manufacture were bound in the long run to rise commensurately with the fall of the mark, thus depriving our competitors of their temporary advantage. This has duly occurred, and perhaps the best way of showing the results will be as follows:—

BRITAIN'S OVERSEAS TRADE IN PIANOS.

	1913.	1920.	1921.	1922.	1923.	1924.
Imports—						
Number	24,482	6,247	9,079	16,274	12,390	10,797
Per instrument.....£	31	69	37	35	42	51
Exports—						
Number	9,780	3,094	1,538	2,441	6,465	6,542
Per instrument.....£	36	95	97	67	61	48

It will be seen that imports have decreased persistently since 1922, while exports have nearly trebled. In the same period the average prices of the foreign instruments have steadily risen, while those of the British instruments have fallen materially.

The rise in our own shipments from 1,538 instruments in 1921 to 6,542 in 1924 is particularly notable. Unfortunately it is not possible to say much about the countries which have provided us with this increased custom. The annual returns for 1923 are available, and these show that, leaving out player pianos, ordinary instruments were shipped to the number of 1,317 in 1921 and 6,084 in 1923—an increase of 4,767. Of this increase British Possessions were responsible for 4,735 and foreign

countries for 32. It is, however, impossible to say which foreign markets were the most progressive, owing to the extremely scrappy and inadequate nature of our annual trade records. Nearly all the foreign countries separately entered show declines, but sales to "Other Foreign Countries" have risen from 130 to 193. It would be very interesting to know whether the United States is one of these "Other Foreign Countries," but the Board of Trade does not publish the information. However, at the British Music Industries Convention held at Llandudno during May, Mr F. B. Allen, president of the federation, declared that "British pianos were being sent to America in spite of the tariff against them." With this we must be content, in the absence of adequate information from our trade returns.

We will now take a comprehensive view of the overseas business during the past 21 years:—

OVERSEAS TRADE IN MUSICAL INSTRUMENTS since the War.

* War years. Gramophones, their accessories and parts, have been included in both imports and exports only since September 29, 1915.

A glance at the table is sufficient to prove that our position in the overseas trade is better in every branch than it was before the war. It is true that of miscellaneous musical instruments and of parts the imports are considerably greater than in pre-war years, but our own shipments have grown much more vigorously, so that in both sections there are now large excesses of exports in place of heavy excesses of imports.

Of course, these miscellaneous instruments and parts include the gramophones and accessories, which have only been classed among musical instruments since September 29, 1915. This must be kept in mind, as gramophones constitute a very prosperous section of the trade. But if that section could be entirely excluded from the table, there would still remain a small excess of exports in 1924, as against the large excess of imports in pre-war times.

It is also true that, in spite of the excellent progress made, pianos still show an excess of imports. But it is much less than in pre-war days. In 1904-8 exports were less than a fourth of imports, in 1922 they were less than a third, and now they are considerably more than a half. The trade is undoubtedly progressing, and a further advance may be confidently looked for. Taking the whole table, a pre-war excess of imports amounting to £868,000 has been converted into a present excess of exports amounting to £395,000.

Hitherto we have dealt only with figures since 1904, when pianos, organs, and other instruments were first separately stated in the trade returns. We have, moreover, dealt only with gross imports, ignoring the fact that about 10 per cent. of these are re-exported for sale abroad, and do not compete with British producers who supply the home market. Let us now take a long view of the records for 41 years past, dealing with net imports (or goods retained here for home consumption):—

* War years. Gramophones, their accessories, and parts have been included in both imports and exports only since September 29, 1915.

It will be realised at once that an amazing change has been brought about in this period. And, be it noted, the favourable movement was in steady progress many years before the war. In 1901 the excess of imports was as high as £1,128,000. It was steadily reduced to

£751,000 in 1907, and £527,000 in 1913. After the close of the war there were small excesses of imports in 1920, 1921, and 1922, but an excess of exports was established in 1923, which was much increased in the following year.

Development of exports, rather than limitation of imports, has been the characteristic feature of the industry's success. There are many classes of cheap factory-made instruments, such as violins, cellos, and so on, upon which our manufacturers do not appear to have specialised. Really good instruments of all classes are made here, and a British violin at 20 to 40 guineas may possibly stand every comparison. It is in the very cheap goods that foreign producers succeed, and we may note that in 1923 the stringed instruments of every kind that were landed here were valued at little more than 10s each, while those exported were valued at well over £2 each.

To sum up, we may say that, taken all round, the trade is successful and efficient. Moreover, it was so even before the war, and would probably have attained its present position much earlier had that disastrous struggle been avoided.

Notes of the Week.

The Quarter's Revenue.—The revenue statement for the first quarter of the current financial year shows receipts of £169.2 millions, as against £176.2 millions in the corresponding period of 1924-25, a decrease of £7 millions, and expenditure of £220.5 millions, against £215.1 millions, an increase of £5.4 millions. There is thus a deficit of £51.3 millions, as compared with £38.9 millions at this time last year. The decline in revenue is principally due to death duties, income-tax, and corporation profits tax, which are down by £1,450,000, £4,392,000, and £1,360,000 respectively. Customs duties show a decline of £679,000, and excise duties are £753,000 lower. These declines are partially offset by increases of £437,000 in motor-vehicle duties, £510,000 in stamps, £1,500,000 in super-tax, and £442,000 in special miscellaneous receipts. The increase in expenditure is almost entirely due to a rise in sinking fund payments from £7.5 millions to £12.3 millions. The supply services have taken £2½ millions more, but there is a saving of £2.3 millions in debt interest. The deficit has been met mainly by an addition to the floating debt, which at £791½ millions shows an increase of £49.3 millions, as compared with March 31st last. It is, of course, much too early yet to draw any inferences from the figures as to the possibility of Mr Churchill's optimistic estimates being borne out by the final results. It is, however, disappointing to find no signs of reduction in expenditure by the supply services at a time when the need for economy in this direction was never more urgent. While we are studying these figures in relation to the prospects of a British Budget balance comes the news that the 1924-25 Budget of the United States has closed with a surplus of \$250 millions.

The Pensions Bill in the Commons.—Sitting from 15 to 20 hours a day during the hot spell is hard work, and flogged into subordination by the closure, the House of Commons is trying to deal with the principal clauses of the Widows', Orphans', and Contributory Pensions Bill. We have already explained at length the cost to industry and the State of this portentous measure, of which the burden, though actuarially calculable, can be realised by few people. The Federation of British Industry have put the total cost of contributions for sickness, unemployment, and pensions per head of adult males employed at 45.04d a week. That sum will have to be made up chiefly by industry, and it is no more than a beginning; for the actuarial cost of the pensions rises on a steeply ascending scale, and it will be much higher for our successors than for us. The latest Unemployment Insurance Bill of this week, which nominally lightens the total cost of the social services by cutting down workpeople's and employers' contributions for unemployment insurance, really does not help. For the unemployment figures are

advancing each week, and the increasing costs, if taken directly of industry, will fall upon the State—which means the general taxpayer ultimately. It may not be necessary to take Mr Wheatley very seriously—what is done in office differs widely from what is promised or threatened in opposition—but we must note his formal declaration, in the name of the Labour Party, that he will abolish the contributory basis of the Pensions Scheme at the first opportunity. That is the sort of thing which comes of bidding for electoral support with other people's money. The Government have thrown a large part of the cost upon the beneficiaries and upon industry; Mr Wheatley goes one better by promising to relieve the beneficiaries and industry of all contributions, and making the "State" pay. By State he means the income-tax payer. We know, from the Government actuary's very able memorandum, what the cost to the taxpayer would be of a non-contributory scheme on Mr Wheatley's lines, and without the additional benefits which the Labour Party profess to be anxious to grant. In five years time a non-contributory scheme on the Government's lines would be costing the Exchequer £31 millions a year; in 10 years time, £41 millions a year; in 20 years time, £56 millions a year; and in 40 years, £66 millions a year. That is in addition to the present statutory old age pensions at 70 and the war pensions. In 40 years time, widows', orphans', and old age pensions, taken together, would be costing the taxpayer £120 millions a year. It is a Bill which imposes this cost upon us in one form or other—the contributory or non-contributory basis is merely a question of distributing the cost—which is being hustled through the House in that period which for once deserves the name of the Dog Days.

Inter-Allied Debts.—Some light has been thrown this week upon the approach that is being made towards an eventual settlement of international war debts. The Chancellor of the Exchequer told the House of Commons on Tuesday that the Italian Government had given formal notification of its willingness to open negotiations for a settlement of its debt to Great Britain. It is not clear whether this notification preceded, or was in reply to, a circular letter which is understood to have been sent out last week from Downing Street, in which the expectation was expressed that debtor Governments should indicate a date when they are willing to enter negotiations for a settlement. In initiating this procedure, the Treasury is following the example of Washington. It is not necessary to read into this action any desire on the part of our Government to exert any pressure for immediate payments, and we are glad to see that this is properly understood in Paris. It indicates merely a desire to place debts on a regular footing; and to let the matter drift at a time when America has been taking certain steps is obviously undesirable. The conversations opened with M. Herriot regarding the Anglo-French debt have not, apparently, been resumed since the fall of his Government; while the Italian negotiations in Washington are stated to have been adjourned until the end of the summer. The autumn will, apparently, see a series of negotiations on foot.

The Coalowner's Proposals.—The negotiations for a new national wages agreement in the mining industry have been carried a further step during the week. On Tuesday last the Mining Association served a notice for the termination of the existing agreement at the end of July. Accompanying that intimation was a letter from Mr W. A. Lee, the Secretary of the Mining Association, to Mr A. J. Cook, the Secretary of the Miners' Federation, in which he stated that the proposals for a new agreement which he stated that the proposals for a new agreement would, "while according to the workers in the districts the fullest possible share in the proceeds, enable the industry in every district to continue in operation in a state of efficiency, and to make the necessary provision for its normal development." He added that the wages to be paid in future "must, on the one hand, be governed by the economic conditions in which the industry is placed, and, on the other, take account of the necessity for providing a living wage for the lower-paid

classes of workers." The proposals submitted on Thursday to the Miners' Federation are based on these principles. The present National Board and the existing Area Boards are to continue, and both are to appoint independent chairmen. The existing standard wages are also continued, except in so far as they may be altered by mutual agreement, but the total amount of the proceeds of the industry that can be distributed in wages is to be limited to 87 per cent. of the difference between the proceeds and costs of production other than wages. Thus, if the proceeds, for purposes of illustration, amount to £1,000,000, and costs other than wages absorb £200,000, then the remaining £800,000 shall be distributed in the proportion of £696,000, or 87 per cent. to wages, and of £104,000, or 13 per cent. in profits. The subsistence wages of the lower-paid are to be determined by each district. The proposals are thus fundamentally different from the terms of the existing agreement. Both national and minimum wage rates go by the board; the machinery for the payment of standard wages and profits, and for the distribution of the surpluses over and above the amounts absorbed by standard wages and standard profits are scrapped; and the whole of the operative work of the regulation of wages reverts to the pre-war practice of district agreements. The main purpose of the proposals is to secure for capital a share of the proceeds of the industry, whatever those proceeds may amount to. In the three months ending last March, the South Wales Coalfield suffered a loss of £173,663, but if the proposals now made were then in operation, and other conditions had remained unchanged, the South Wales Coalfield would have made a profit of £955,110, while the total amount of wages would have been reduced from £7,520,876 to £6,391,890. The whole of the industry in the March quarter made a profit of £1,453,207, but under the present scheme the profit would have amounted to £4,989,000, and the wages would have been reduced from £38,377,000 to £33,388,000.

The Problem of China.—Although the recovery of certain securities connected with China this week reflected the hope that the trouble in China was dying down, it is not possible as yet to take a cheerful view of the outlook. At Hong Kong, to which the troubles spread, strikes are assuming more alarming proportions, and recent reports show that the conflict at Shameen was more serious than at first appeared. Moreover, even though there may be some improvement in regard to the course of actual disturbances in some of the centres affected, the way of approach to a solution of the broad problem of the relations of China with the Powers does not become clearer. Mr Chamberlain read to the House of Commons on

Wednesday the text of 13 demands made by the Chinese Government, and in answer to questions stated that "any discussion of these large issues is impossible until the Chinese Government have taken steps to put an end to the present anti-foreign agitations, and have shown their ability to enforce law and order and respect for the treaty rights of the Powers." Doubt as to the ability of the Chinese Government in this respect is one of the most difficult points in the situation. Mr Chamberlain went on to say: "As soon as this anti-foreign agitation ceases, and as soon as foreign property and the life of nationals are safe, I hope that the Conference contemplated by Washington will take place." Rumour has been busy crediting the American Government with the intention of renouncing all extra-territorial rights, but it is now clear that they will proceed with caution in regard to the whole problem. But for the moment the agitations and disturbances continue, and until they cease it is difficult to approach the very intricate questions of international policy. Meanwhile, we commend to the study of our readers a Blue Book* issued this week containing "Papers Respecting Labour Conditions in China," and to a statement issued by the China Association. Perusal of these will provide a groundwork of knowledge as to the main elements in the chaotic condition of China and of the part played by the foreign settlements.

The United Kingdom's Growing Tariff.—Though Ministers may protest their innocence of any design to burden this country with a general tariff, the serenely impartial columns (six of them in the current issue) of the *Board of Trade Journal* bear evidence of the results of one session's labours. Our official contemporary sets forth the Customs and Excise Tariff Changes brought about by the Finance Act of 1925. It deals with no more than motor-cars and other "McKenna" imports, silk and artificial silk, lace, and embroidery—together with incidental Empire preference duties on sugar, tobacco, dried fruits, and the like—and yet the details of Customs, Excise, and drawbacks put into force by one Finance Act occupy three pages of the size of those of the *Economist*. There is no word, because no changes were made, of those Customs duties on key industry imports (some 7,000 of them) under Part I. of the Safeguarding of Industry Act, and no word of the severely regulated imports of dyestuffs. The whole series of British tariffs imposed upon us since the war ended, set forth in detail, would occupy nearer 20 pages than three, and the end is not yet. We have little doubt that should the present Government remain in office for four years, it will find means, in spite of protestations by Mr Baldwin and Mr Churchill, to supply the *Economist* with ample material for a special Tariff Supplement for the United Kingdom.

American Cotton Crop.—Our Manchester correspondent writes:—On Thursday evening the Department of Agriculture of the United States Government published important statistics relating to the cotton crop for the season 1925-26. All the figures were much better than expected. The condition of the growth as on June 25th was given as 75.9 per cent., against 76.6 per cent. a month earlier, and 71.2 per cent. in June, 1924. The estimate of the area under cultivation was 46,448,000 acres, against the revised acreage for 1924 of 42,641,000 acres. On the basis of these figures the crop is estimated at 14,339,000 bales, against 13,630,000 bales for the current season. It is worth recording that these official statistics are much more favourable as to future supplies than recent reports of private statisticians. Operations in the cotton markets in the United States during the last few weeks have conducted a "bull" campaign, but cotton users in Lancashire have refused to follow the upward movement in values. In the circumstances the attitude of Lancashire has been correct, and there is again ground for believing that growers of cotton have endeavoured to mislead the world as to the probable output.

The Age of the Unemployed.—The sharp rise in the unemployment figures in recent weeks is sufficient to drive home the lesson that the burden of maintaining a consider-

able army of unemployed people will remain on our shoulders for a long time to come. It is, therefore, all the more important that we should obtain exact information as to the nature of the burden we are carrying. Especially do we need to know to what extent the people unemployed at present are in danger of becoming permanently and intrinsically unemployable, and in what proportion they fall within the different age groups into which a working life can conveniently be divided. The Ministry of Labour has just undertaken an investigation into these and other problems, and has published the results ("Report on an Investigation into the Personal Circumstances and Industrial History of 10,903 Claimants to Unemployment Benefit," H.M. Stationery Office, 4s net). The cases were selected on a plan designed to make the results as representative as possible. The figures compiled show that 62.6 per cent. of the men and 77.3 per cent. of the women were people who in normal times would usually be in steady employment. Only 3.6 per cent. of the men and 1.5 per cent. of the women were classified as "verging on the unemployable." Moreover, over two-thirds of the men and nearly half of the women who were placed in the latter category were more than 60 years of age. This last fact suggests that to some extent the Unemployment Insurance Fund is carrying a burden which might more legitimately be thrown upon an Old Age Pension scheme, and it is likely to continue to do so so long as the Old Age Pension is a considerably smaller sum than the weekly unemployment benefit obtainable, and can only be secured at a very late stage in life. A disquieting feature of the results is the unduly large proportion of claimants to benefit who are between 20 and 24 years of age. The number below that age is low, but, unfortunately, the figures in the case of juveniles cannot be regarded as a fair measure of the number of boys and girls out of work, for many of these have not had the opportunity of obtaining insured employment for long enough a period to substantiate a claim to benefit. In the age-group 20-24 the number of claimants is high in comparison with those for the age-groups immediately succeeding it, and high also in comparison with the relative number of employed people shown by the Census of 1921 to belong to that group. Thus out of 8,850 males whose cases were examined, 1,379 fall within this age group, as against 1,093 for the age group 25-29 and 810 for the group 30-34. The comparative percentages show a figure of 15.6 of unemployed males within this group, as against a percentage of 12.5 employed males disclosed by the Census. It is worth noting, however, that a comparison of the figures compiled during this inquiry with those of a similar investigation undertaken a year earlier suggests that the proportion of younger men unemployed is declining, while that of old men is increasing.

Irish Railway Problems.—Our Dublin correspondent writes:—The position of the Irish railways and the serious hardships threatening Irish railway shareholders are engaging public attention. The Irish railways, compulsorily amalgamated under the title of the Great Southern Railways Company, comprise all the railways serving the Irish Free State except the Great Northern Railway Company of Ireland which operates partly in the Free State, but also very largely in Northern Ireland. The policy which prescribed amalgamation established (by the Irish Railways Act, 1924) a Railway Tribunal with wide and varied powers. This tribunal, at the instance of the Minister of Industry and Commerce, decreed a lowering of rates and fares of some 12½ per cent. all round as from January 1, 1925, in spite of the companies' protests that the result would be disastrous to their revenue account. Doubtless the Government policy of a simplified, improved, and cheapened administration, accompanied by cheaper transport rates, is absolutely justified on the long view. Equally without doubt is it that the warnings of the companies were well warranted and that heavy losses are being made on revenue account. Failure of dividends is regarded as inevitable if no succour from fortune—or the Government—is brought in aid of lop-sided balance-sheets. Such failure—apart from usual consequences on market values of stock—would bring into operation a provision of the Trustee Acts whereby

automatically the preference stocks would cease to be trustee investments. There is close upon £9,000,000—of preference stock of different denominations issued by the Great Southern Railways. There has been a rapid and continuous decline in the Stock Exchange quotations of Irish railway stocks and shares, and there is an obvious risk of its being rapidly accentuated. To give a brief illustration. Great Southern and Western 4 per cent. debentures amounting to some four millions were quoted in July, 1924, at 70½, yielding £5 14s per cent. to the investor. In May, 1925, the 4 per cent. debenture stock, into which they had been converted, stood at 60, and returned £6 13s 3d. Similarly the ordinary, nearly five and a half millions, stood in July, 1924, at 45½, yielding £6 13s, but in May, 1925, were quoted at 24½, with yield problematical; and to-day are at 21. The railway directorate, preoccupied with its difficulties and interested in its struggle to get wage rates and labour conditions moderated to workable standards, is telling the public that it is losing from £10,000 to £15,000 per week, compared with previous results. It does not, however, inform the public or its shareholders of the mitigating fact that its economies due to amalgamation are likely to amount to some £400,000 for the first year. The weaker shareholders, the widows and orphans represented by trustees, and the beneficiaries of Irish charities of all sorts, are, therefore, in a fair way to be hard hit if steps are not taken straightway to steady the market and ease the railway enterprise through its crisis. It is widely and strongly felt that the Government must come to the rescue. It has imposed its policy on the railways in the public interest, and it is but equitable that it should contribute to its cost. A serious *débâcle* for the most heavily capitalised enterprise in the Free State, apart from social and political reactions, would have a most serious effect upon public confidence and the national credit—consequences even more unfavourable in the long run than the more obvious set-back to the economic development at which the Government aims. It is using, or about to use, its moneys or its credit to start great enterprises, public utilities like the Shannon electrification scheme, arterial drainage, a sugar beet industry, industrial credit facilities, and the like. Thus logically it will be constrained to move at some stage. The more experienced observers who realise how great the tension has become are hoping that the relief will not be long delayed. The total capital issues of the Great Southern Railways exceed twenty-five millions sterling.

Swiss Trade and Tariffs.—A Geneva correspondent writes:—Some anxiety is felt in certain Swiss commercial circles as to the future of Swiss trade and industry, and some people even fear that a new economic crisis is close at hand. Last year Swiss exports increased. They left, it is true, an important adverse balance, but the latter was made good by the increasing receipts from the tourist industry, from the export of electric power, and from the foreign earnings of the banks and insurance companies. Moreover, the disappearance of unemployment and the activity shown by all industries was a sign that conditions in Switzerland had become normal again. But since the beginning of 1925 conditions seem to have changed. While the value of exports has gradually decreased since the end of January, the import trade has slackened, and consequently an important drop was registered in the Customs receipts; at the same time, the earnings of the Swiss Federal Railways fell as a result of a decrease in the transport of goods. Exports in April were even lower than in the previous months, the watch-making, condensed milk, chocolate and shoe industry alone recording new progress. Some economists pretend that this depression is due to the fall of the French franc; others say that it is a result of German competition, which is every month becoming more dangerous for Swiss manufacturers. These two causes may partly account for the present depression. But there is the further fact that the present depression. But there is the further fact that many countries have set up new Customs barriers: France is revising her Customs tariff; Germany is about to raise her Customs duties; Norway and Sweden have introduced new duties, and all the new tariffs are increasing the duties on articles of luxury, most of which came from

Switzerland. Great Britain is, moreover, reintroducing the McKenna duties, which will seriously hit the Swiss watchmaking, silk, lace and embroidery industries. When one has in mind that Great Britain, the United States (who increased Customs duties some years ago), France and Germany are the best markets for Swiss goods, and that over one-half of Swiss exports go to these four countries, one cannot help feeling concerned regarding the economic future of Switzerland. Even before the new Customs barriers existed, Swiss trade and industry found it very difficult to compete with other countries. This is a consequence of the economic policy pursued by the Swiss Federal Government, whose protectionist measures are in the long run harming trade and industry instead of helping them. When, after the war, Switzerland began to be swamped with cheap goods imported from countries with a depressed currency, the Swiss industrialists themselves requested the Government to protect them against foreign competition. The Government not only increased the Customs duties, but also prohibited or controlled the import of several products. When the Government found that the new measures were very productive, and might help towards the financial restoration of the country, it made them permanent, and again increased the Customs duties, so that foreign competition is now as little dangerous as possible. But, on the other hand, this increase in Customs duties resulted in a rise in the cost of living (which is now the highest in Europe) and in the price of raw materials; salaries had to be raised or maintained at a very high level, so that the production price of Swiss goods rose accordingly. At the same time, many countries made reprisals on Switzerland by raising their Customs duties or by prohibiting the import of certain Swiss goods. The result was that when the post-war crisis came, Swiss industrial exports were hampered, and industrialists asked the Government to grant them subsidies, which enabled them to carry on and to give a certain impetus to exportation. The present situation is very similar to what it was three or four years ago: higher Customs duties in many countries and the high value of Swiss currency are seriously impeding the development of trade; moreover, Swiss industry is handicapped by the high cost of production, by heavy taxation, and high costs of transport; this accounts for the fact that Swiss products are generally more expensive than others, and that it is now every day more difficult to sell luxury articles such as Switzerland is producing. The only means of helping Swiss commerce and of averting the impending crisis would be for the Government to reconsider at once and thoroughly its economic policy, so as to lessen the difficulties under which Swiss industries are labouring. Instead of revising its Customs tariff with a view to increasing duties by 40, 50, and even 80 per cent., the Government should be bold and wise enough to reduce it so as to bring down the cost of raw materials as well as the cost of living, to reduce the transport taxes on the Federal Railways—which are among the highest in Europe—to reduce taxation, which measures would rapidly result in a drop of the production cost, so that the situation of Swiss trade and industry would be much easier, and that Swiss goods might be sold abroad at a reasonable price. But will the high officials of the Trade Department and Customs understand the urgent necessity of altering their policy? Probably not.

Conditions in Peru.—A correspondent writes:—The powers of economic recuperation displayed by Peru upon many previous occasions have again been noticed in regard to the at least partial recovery from the long period of acute depression caused by both normal and abnormal occurrences. The great drawback to the reinstatement of the State's chief industry—mining—has been the throwing out of gear of two of the most important railway transport systems. Late advices show that communications on the Central Railway have been resumed, not, indeed, to full capacity, but sufficiently to allow of regular communication with the interior. The Cerro de Pasco region has been partially reopened, and is again in a physical position to permit of copper shipments. In respect of the commercial situation, while there has been an abnormal number of bankruptcies (mostly for

small amounts), collections have proved somewhat better than might have been expected. The feeling in business circles is one of guarded optimism; for although the recent rains have caused enormous material damage, they have also proved beneficial to the crops in some parts of the country. It cannot be expected that Peru for several months to come will be in a position to place foreign orders for general merchandise. Before the months of enforced inactivity a very large accumulation of imported goods took place; until these are disposed of no fresh commitments are likely to be incurred. As in other parts of Latin America, and especially the Caribbean, there is likely to be a glut of sugar, and Peruvian exports will not be upon the same satisfactory scale as last year or the year before. Trading in cotton is also inactive, although the crop, such as has been gathered, has proved of a rather superior character and is realising favourable prices. Several planters have had occasion to deplore the increase in insect pests, doubtless caused by the rains, these also rendering the ground too sodden to enable the necessary attention to be given to the plants. The Peruvian Treasury is maintaining its gold reserve, amounting (at the end of April) to £5,500,000, while the circulation reached £6,000,000 and bank clearings were £5,200,000. The exchange has fluctuated but slightly between 17 and 17½ premium. For the first two months of the year the foreign commerce of the country showed a decrease of £441,365, having declined for the period mentioned from £6,616,382 to £6,174,747.

Cotton Trade Short Time.—Our Manchester correspondent writes:—As a result of a ballot, the members of the Master Cotton Spinners' Federation who use American cotton have decided to stop their mills 8½ hours per week, which is equal to one day. It was announced on Tuesday last after a meeting of the Short-Time Organisation Committee that the owners of 84.74 per cent. of the spindles in this section had voted in favour of the proposal and 8.7 per cent. against, no replies being received from 6.39 per cent. Up to the end of May spinners stopped their mills 13 hours per week. The members of the Federation then declined to give an undertaking to continue short-time on such a scale. It was, therefore, decided that the views of the members should be ascertained as to their attitude towards a restriction of output of 8½ hours per week. The position so far as production, therefore, is concerned is not changed. It has been realised for several weeks that the Short-Time movement had become very irregular, and numerous firms have decided to make their own arrangements as to yarn output. In consequence of this action, the industry has lost considerable ground during the last few weeks. Trade in this section is again unprofitable, whereas at the beginning of the year a remunerative state of affairs prevailed. About 400 mills in Lancashire, containing 38,000,000 spindles, are affected by to-day's decision, and the operatives involved number about 200,000. On the Manchester Royal Exchange this week the opinion has been generally expressed that the stoppage of one day per week is not sufficient to prevent the over-production of American yarn. From a producer's point of view the present position is very unsatisfactory, and it is urged in several quarters that the Committee of the Federation should at once ascertain the views of the members as to reverting to a stoppage of 13 hours per week, which is equal to one and a-half days. Leading authorities in the industry are of opinion that trade at present does not warrant a larger output than four days per week.

Helping Irish Farmers.—A correspondent writes:—The Government of Northern Ireland has introduced a scheme of short-term loans at a low rate of interest to assist bona-fide farmers who, owing to the recent unfavourable season, have suffered losses of livestock. It has been arranged that these loans will be issued through the agency of the various banks in Ulster. The loans will be issued on promissory notes taken from the borrower and two sureties approved by the Ministry of Agriculture. The Government does not propose to approve loans for purposes other than the replacement of actual livestock

losses, and all loans will be repayable on December 31st next. However, in special cases an extension of this date may be granted by the Ministry.

An Eighteenth Century Danzig Loan.—A correspondent writes:—Among the few dozen securities on a London stock market list from the middle of the eighteenth century, which came recently into the hands of the writer, there appears the quotation of a City of Danzig 5 per cent. loan. To experts in eighteenth-century finance this loan may be familiar, but to others it is a surprise to find that the Danzig loan recently issued under the auspices of the League of Nations was not the first connection of this kind between the Free City and the London market. Further inquiry here yielding no information as to the history of this earlier loan, application was made to Danzig itself, and it may be of some interest to report what little light the Danzig archives throw on this transaction. In the middle of the eighteenth century, Danzig, which was at that time a Free City under the protection of the Kings of Poland, was hard put to raise funds promised as a gift to the King in settlement of some dispute concerning the internal administration of the city. Already some years earlier Danzig had had resource to foreign lenders, when in 1736, after the siege of the city by the Russians, it had succeeded, through the mediation of the firm of George Clifford and Sons, of Amsterdam, in securing in Holland what was then the large sum of 1½ million Prussian gulden (£180,000). At the end of 1751, therefore, Danzig made another appeal to the States-General of Holland through the same firm of George Clifford and Sons, but this time the Dutch Government, in spite of repeated applications over a period of nearly two years, refused its support. At last, on July 18, 1753, a letter was sent from the Danzig Council to Clifford and Sons thanking them for their efforts, and saying that the transaction had been arranged elsewhere. This new source of supply was London. Unfortunately, the negotiations which led up to the English loan were kept so strictly secret that no entries were made on the official records, as was done in the case of the Dutch transactions. We learn only that the negotiations were long and difficult, that they were carried out by a secret commission, and that they were finally concluded in 1753 for an amount of 1½ million Prussian gulden (£180,000) at 5 per cent. interest. Repayment was to commence in 1760, and to be completed by 1770. Continued reference in the Danzig archives, however, would suggest that these terms were considered unduly onerous, and every effort was made to accelerate repayment, so that by the year 1766 reimbursement was completely carried out. It was fortunate for the English creditors that this was done, as shortly afterwards began that campaign by Frederick the Great of cajolery and oppression against Danzig, which resulted ultimately in the annexation of the Free City by Prussia. It is irritating that the story of this earlier loan is so incomplete. Who were the negotiators on this side, and what was their connection with the Free City? What was the actual form of the issue in London? Perhaps some reader of this note may be able to supply the answer.

The Public Trustee.—The report of the Public Trustee for the year ended March 31st last* shows a surplus on the year's working of £38,000, which compares with £30,900 for 1923-24 and £74,500 for 1922-23. Fees and credits amounted to £281,800 and expenses to £243,800, the latter comparing with £245,000 for the preceding year. The aggregate value of new business, including accretions to old trusts, during the year was £16,176,600, as compared with £15,463,100 in the previous year. The number of new cases accepted during the year was 926, a drop of 87 as compared with 1923-24. The approximate value of the cases under administration at the end of the year was £181,500,000, in addition to large quantities of land which have not been valued. In answer to the criticism that the Public Trustee discourages trusts of small value, the Report mentions that of the new cases accepted during the year no less than 62

* H.M. Stationery Office. 9d. net.

per cent. were under £5,000 in value. "The criticism," it is added, "probably arises from the fact that the Public Trustee is sometimes asked to accept, and compelled to refuse, small cases which present complications or involve liabilities, and therefore do not admit of efficient or safe administration by the Public Trustee or any other trustee." The nominal value of the stocks and shares of the trust funds under administration at the end of the year was £161,358,500, of which £55 millions was in British Funds, £22½ millions in home railways, £19½ millions in Colonial Government and Colonial and foreign corporation stocks, and £15 millions in commercial and industrial shares. The remark in the report that "the prospects of new business continue good" may appear somewhat callous, but is good reading for the taxpayer.

The Bank Dividends.—The first batch of banking interim dividends which has been announced this week shows no change as compared with the first half of last year, as will be seen from the table below, which shows the interim dividends year by year from 1918:—

	Per Cent. per Annum.									
	1918	1919	1920	1921	1922	1923	1924	1925		
Bank of Liverpool and Martin's	16	16	16	16	16	16	16	16	16	16

* Final dividend. † On old capital.
(b) Also a special cash bonus of 10s per share, free of tax.

Pessimistic predictions of reductions in the interim rates of dividend have so far been falsified, and there seems to be no reason to anticipate any alteration in the remaining announcements, although the monetary history of the half-year has been by no means uneventful.

Distillers' Profits.—Considerable expansion occurred in the earnings of the Distillers Company in the year ended May 15th last. The gross profits advanced from £906,744 to £1,403,783, making, with the sum of £119,529 brought forward from the last accounts, a surplus of £1,523,312. The reserve appropriation has been reduced from £211,420 to £200,000, making the total of the fund £450,000; the fire insurance fund again receives £5,000, bringing it up to £160,000, while the superannuation fund is strengthened by £75,000, compared with £25,000. The acquisition during the year of the capital of Buchanan, Dewar and John Walker has resulted in the receipt of £593,610 on account of final dividends. One-third of the capital expenditure of carrying through the Buchanan, Dewar and Walker deal—namely, £100,000—has been written off, and the ordinary shareholders receive a final dividend of 13½ per cent., making 20 per cent. for the year, against 10 per cent. for 1923. The following table shows the remarkable progress made by the undertaking over a period of years:—

	YEAR ENDED MAY 15th.						
	1914.	1920.	1921.	1922.	1923.	1924.	1925.
Gross profits	£ 310,993	£ 669,464	£ 597,582	£ 642,337	£ 815,100	£ 906,744	£ 1,403,783
Brought forward	19,223	70,435	100,526	108,994	108,994	107,546	119,529

	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(20 %)
Carried forward	21,025	100,526	108,994	98,770	107,546	119,531	116,585

Two old-established gin businesses—Boord and Son, Limited, and Sir Robert Burnett and Co., Limited—were taken over during the year. From our analysis of the balance-sheet figures, which appears on another page, it will be seen that land and buildings have been written down by £89,000 to £1,049,000, while plant has been reduced by £37,500 to £416,500. Investments are up by £75,979 to £4,127,635, and cash has advanced by £278,736 to £378,211, although bills receivable are lower by £89,923 at £214,342. Loans to subsidiary companies figure for £613,807 more at £3,257,437, and a new item of £300,000 is introduced in respect of payments and provision for expenses in connection with increase of capital. On the other side of the accounts the issued ordinary capital has gone up by £115,000 to £3,800,000, and the preference capital by £50,000 to £2,200,000, the result of the acquisition of the gin businesses above mentioned. Loans from subsidiary companies are £65,104 higher at £1,080,284, carriage on spirits has risen from £125,857 to £779,407, and the total of assets has gone up from £9,209,371 to £10,354,725.

Tankers' Capital Reorganisation.—So far as results for the year ended March 31st last are concerned, shareholders in Tankers, Limited, will note with satisfaction a gratifying increase in profits. The directors state that the fleet has been occupied during the whole of the year, with the result that the trading profit advanced from £54,882 to £93,543. After paying the interest on mortgages in favour of the builders, which absorbs £57,303, against £51,059, there remains a net profit of £36,240, against £3,823, which is carried to profit and loss, making the total standing to the credit of that account £102,850. It is proposed to transfer a proportion of this balance to the extent of £60,398 to form the nucleus of a repairs and renewals reserve account, the remainder of £42,452 being applied to the reduction of the value of the assets. The latter operation has been long overdue, and the auditors, while drawing attention to the fact that no allowance has been made for depreciation, again point out that the aggregate value of investments "is considerably less than the figures appearing in the balance-sheet," namely, £1,031,840. Since the close of the financial year, the report states, freights have suffered a substantial reduction, and the directors "can only hope that in the course of the year an improvement will take place." In the meantime a drastic reorganisation of the capital is proposed, a decision which will come as no surprise to those who have followed the fortunes of the undertaking since its formation five years ago. Briefly, the scheme provides for the reduction of the capital from £5,000,000 to £1,750,000. This will be effected by writing down the nominal value of the 8 per cent. preference shares from £1 to 10s, and reducing the ordinary shares from 5s to 1s. In addition, the cumulative preference dividend is to be cut to 6 per cent., while arrears of dividend, as from March 31, 1921, will also be waived, although the participating rights up to 15 per cent. will remain unaltered. Should the scheme go through, the company will have available £1,740,071, which it will apply towards writing down the fleet, &c., while the capital will then be increased to its original figure of £5,000,000 by the creation of 2,500,000 cumulative participating preference shares of 10s each, and 40,000,000 ordinary shares of 1s each. In the report it is stated that the reduction of the 1,565,000 preference shares from £1 to 10s will write them down to £752,500. As a matter of fact, the figure should have been £782,500. The shareholders have a bitter pill to swallow, but it is in their own interests that the plan should

become operative. In commenting upon the prospectus when it made its appearance in February, 1920, we remarked, "The first point which the intending investor must ask himself is, what is the necessity for a separate company? If the profits of this undertaking prove high, grumbles might arise from shareholders in the Scottish-American Oil and Transport Co., Limited; if, on the other hand, freights fell, and the company by any chance got into difficulties, the parent undertaking could step in and acquire the assets at the market price of the day..... The right to convert into Scottish-American shares, of course, may be valuable, but the right only extends until 1923, while the acid test of Tankers' future profits will come thereafter."

Spiers and Pond.—The results of this old-established catering firm in respect of the year ended March 31st last were not materially different to those of the preceding 12 months, although a slight decline in profits falls to be recorded. The profit on trading amounted to £147,341, against £148,614, and net profits to £108,950, in contrast with £113,592. The following table shows how the undertaking has fared since 1919:—

	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
Profit	£ 151,365	£ 136,072	£ 145,748	£ 155,901	£ 148,614	£ 147,341
Deb. int., &c.	26,419	31,209	41,590	36,126	35,022	38,391
Net profit	124,946	104,863	104,158	119,774	113,592	108,950
Bright forward	15,355	15,652	22,531	13,114	12,651	13,516
Reserve, &c. ..	40,301	120,515	126,689	132,888	126,243	122,466
Directors	43,000	22,000	22,000	22,000	17,000	17,000
Dividend	5,000	5,000	5,000	5,000	5,000	5,000
	76,649	70,984	86,575	86,540	86,544	86,549
	(12½%)	(12½%)	(12½%)	(12½%)	(12½%)	(12½%)
Carried forward	15,652	22,531	13,114	19,348	17,699	13,517

The reserve once more receives an allocation of £15,000, making the total of the fund £150,000. Stocks have gone up by £15,606 to £90,013, while properties are £11,667 higher at £1,026,726. On the other hand, cash has declined by £20,460 to £66,332. From our analysis of the balance-sheet figures, which will be found on another page, it will be seen that freehold and leasehold properties account for £1,026,726 out of a balance-sheet total of £1,651,292. In view of the progress which is being made by other catering undertakings, it is to be hoped that the directors will maintain their organisation at the utmost height of efficiency.

Profits and Income Insurance Company.—The Profits and Income Insurance Company, in liquidation, is one of those insurance offices which has existed quietly for a good many years, and which, but for one or two features, would have silently faded away, as have so many other such insurance offices whose names the wide public has never heard. Among insurance offices there are a small number of companies whose names are household words, and which do the vast bulk of the serious business; the numerous others are local, trade, or specialist concerns, whose birth or death passes unnoticed except by the Companies Department of the Board of Trade. At the date of going into liquidation the Profits and Income Company had a certain small amount of life assurance business, but its speciality was the assurance of the income of policyholders during personal incapacity through sickness or accident. This involved the issue of permanent sickness and accident policies—instead of the usual accident or sickness contracts terminable or renewable annually—and these policies are not at all easy to deal with in liquidation. An arrangement with the Legal and General Assurance Society, under which certain policies were guaranteed, came to an end on July 1, 1911, but is in force in respect of the contracts made before that date to which the guarantee applies. It is announced that the Legal and General proposes through the Official Receiver to take over the policies guaranteed by it, to receive future premiums paid under them, and to accept by assignment the rights of the policyholders concerned in the winding-up of the Profits and Income's assets.

Under this arrangement these pre-July, 1911, policyholders will be fully protected. With respect to life policyholders, the British General Insurance Company, a twenty-one-year-old office which is making a position for itself, and which has already come to the rescue of life policyholders in some other liquidated offices, has made a useful offer to policyholders. The British General will issue new life policies to each holder without further medical examination at the same premium and on the same conditions as the Profits and Income's policies, "except that where a policy has been several years in force some reduction in the sum assured will be necessary." Under this offer the scaled-down sums assured will be minimum amounts, and any dividends received by the British General from the liquidator will be utilised, without deduction, to increase the sums assured under the new policies. The terms offered are, of course, subject to scrutiny by the Official Receiver and his advisers, and if passed by him cannot fail to be of benefit to the unfortunate life policyholders in the Profit and Income Company. The sickness and accident contracts will remain to be dealt with on their individual merits. The liquidation of this Profits and Income Company will, no doubt, be considered together with the other recent cases of insurance liquidations, by the Departmental Committee which is examining the working of the Assurance Companies Act, 1909.

Caucasian Manganese Concession.—A correspondent writes:—The reports of the agreement between the Soviet Government and the Harriman group having been completed in connection with the Chiatura manganese mines would appear to have been somewhat premature. There is, however, no doubt that a preliminary arrangement has been come to, and a meeting has been fixed for July 17th next between the parties interested. On that date, if all goes well, there will be a definite settlement of the whole thing, and well-informed London opinion favours the view that a plan will be formulated that will gain the approval of the former owners of the mines. This, of course, is a very important matter, as, obviously, the latter are looking for some compensation. According to present indications, they will be fairly treated. It is understood that should all parties come to terms at the forthcoming meeting, a company will be formed under the control of the Harriman group, and every effort will be made to put the industry upon a satisfactory footing. The Harriman group are practically committed to a policy that will embrace a very big exportation for 20 years, and under the new arrangements for the disposal of the output of the mines there should be no interruption, and the market will practically remain free. Ordinary Caucasian ore is now quoted at 1s 9d per unit, with 1s 10d for washed ore, and this compares with 1s 10d for Indian. Several steamers have been chartered already for manganese ore from Poti to the Northern States ports, and there are further inquiries for July loading round about 3.25 dollars, so presumably the exports will go ahead. With any improvement in the world demand for iron and steel, manganese ore will be wanted, especially in the United States and in Germany.

Aramayo.—Our mining correspondent writes:—Of the various companies mining tin and associated metals in Bolivia, only one is at all well known in London, and even this concern transferred its offices to Switzerland some time ago for the purpose of evading the oppressive taxation prevalent in this unfortunate country. The undertaking in question is the one now known as the Compagnie Aramayo de Mines en Bolivie. For the past year it is able to report the substantially increased profit of 5,762,200f (Swiss), as against 4,798,700f in respect of 1923. The capital upon which disbursements now have to be paid is considerably larger than before, having been increased from 15,000,000f to 21,000,000f by the issue of bonus shares made last November. On account of 1924 dividends aggregating 21 per cent. have been paid, and the directors recommend a bonus of 10 per cent., which will bring the total on the

increased capital up to 31 per cent., as against 35 per cent. for 1923. The balance forward at 5,524,000f is rather less than half that brought in, but the difference is, of course, virtually explained by the bonus share issue above referred to. Moreover, the exchange account balance of 651,300f has been written off. On account of the current financial year two dividends of 5 per cent. each have been disbursed, and a third payment of like amount is to be made in August. As usual, the report contains no more than a brief summary of the financial results, and of the property, details as to the operations being left for the chairman to present at the annual meeting. It would, however, be useful if at any rate particulars of the year's output were to be included in the annual reports.

Taquah and Abosso.—We have frequently referred to the manner in which mining companies operating in West Africa are handicapped by the shortage of labour. In his report for 1924-25, the manager of this consolidated undertaking again refers to the subject. He anticipates that there will be an improvement, but adds that "it is not easy to forecast the future." Somewhat curiously, last year's operations gave a profit almost identical with that secured in the 12 months ended March, 1924—round about £35,000. Not unnaturally, the dividend for both periods is at the same rate, the balance distribution of 7½ per cent. now announced making a total of 12½ per cent., as before. A credit of £10,700, however, remains to be carried forward, as against £4,800 brought in. The ore reserve

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned period of the Year ending March 31, 1926, as compared with the corresponding period of the preceding Year.

	Quarter from April 1 to June 30, 1925, compared with the corresponding Quarter of the preceding Year.			
	Quarter ending June 30, 1925.	Quarter ending June 30, 1924.	Increase.	Decrease.

Net Increase

* Includes £151,000 the proceeds of which were not carried to the Exchequer within the period of the account.

Treasury, June 30, 1925.

position also shows very little change from that of 12 months ago. The total of 529,300 tons indicates a slight falling off, an increase in the tonnage at the Abosso mine being rather more than offset by a reduction at the Taquah. Working costs last year averaged 35s 8d per ton, as against 37s 4d previously. The manager recently paid a visit to South Africa, and as a result hopes to be able to effect improvements, both in the extraction and treatment of the ore, which will beneficially affect results during the current year.

Golden Horseshoe.—Last year's earnings on the part of this once-celebrated West Australian mine exceeded those of 1923; hence the directors have been able to repeat the dividend of 2s per share, tax free, and carry forward an increased balance. Unfortunately for the shareholders, the prospects have become entirely changed by the disappearance of the gold premium. Every month this year so far has shown a loss of round about £2,000. There consequently seems little hope of a distribution on account of 1925. Moreover, the ore reserve position has become materially worse. For some time past, to meet the abnormal conditions, it has been necessary to select material above the average grade. Moreover, the rich ore in the No. 4 lode has become largely depleted, and last year's development generally proved somewhat disappointing. Thus the reserves now figure at 495,100 tons, value 8 dwts, a shrinkage both in quantity and value upon the 1923 figures. The total, however, represents between four and five years' supply. In an appended "memorandum" the managing director, who has lately returned from a visit to the property, emphasises the parlous position of goldmining in Western Australia, and urges the need of the subsidy of 20s per ounce which has been applied for.

The Baltimore and Ohio.—A substantial decrease both in gross revenue, and in operating expenses is shown in the report for 1924 of the Baltimore and Ohio Railroad Company. The ratio of expenses to revenue dropped from 77.98 per cent. to 77.01 per cent., net railway revenue being \$4,704,300 lower at \$51,566,200, as may be seen from the following table:—

	1924.	Inc. or Dec.
Railway operating revenues	224,318,794	.. — 31,275,640
Railway operating expenses	172,752,632	.. — 26,571,329
Net railway revenue	51,566,162	.. — 4,704,311
Other operating charges	13,481,839	.. — 655,506
Net railway operating income	38,084,324	.. — 4,048,805
Gross corporate income	43,741,613	.. — 4,424,036
Net corporate income	16,319,689	.. — 6,102,346

After payment of dividends on the preferred stock there was a balance of \$13,965,200, showing an earning of 9.19 per cent. on the outstanding common stock, as against 13.21 per cent. for 1923. The dividend is maintained at 5 per cent. The report points out that the loss in revenue in 1924, which was due to the general decline in business, was overcome to a considerable extent by operating economies, resulting in the largest net railway income heretofore earned, with the single exception of the year 1923.

Oversea Correspondence.

UNITED STATES.—FEATURES OF THE HALF-YEAR —FAVOURABLE OUTLOOK—MONEY PROSPECTS— TAX REDUCTION.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 24.

WITH the second quarter of the year drawing to a close, reviews are being made of the results of the first six months of 1925, and estimates are being prepared for the second six months. Despite the complaints of unsatisfactory business that have been and are heard in certain districts and certain industries, the results of the first half-year generally are admitted to have been good. Industry

has been active and efficient; trade has held up well; employment and purchasing power have been high; profits have footed up to a very substantial aggregate; and the strong securities markets have reflected a huge investment demand. The country has been prosperous, and has attained this prosperity without anything resembling an inflationary boom. In addition, the effects of record-breaking production during the first quarter of the year have been pretty thoroughly liquidated during the second quarter. Steel production rose well above 90 per cent. of capacity during the first quarter. A similar development during the first quarter of 1924 was followed by a second quarter collapse that carried output down to scarcely more than 40 per cent. of capacity in the summer. This year a liquidating movement that was brought on by the high first quarter production lasted only about six weeks, and left output at nearly 70 per cent. of capacity. One may infer that the stocking up of steel products was smaller this year than last. It also is probable that consumption has held up better this year than in 1924. Altogether, the present situation seems quite a healthy one. The way seems to have been prepared for another general buying movement.

No new strong buying movements are, of course, expected to start at just this time. The quiet summer season hardly would be the time for such a development. Besides, crop prospects still are too uncertain to furnish much support. Neither accurate ideas as to yields, nor trustworthy indications as to prices, can yet be had. The most that can be said on this score is that cotton has made an excellent start, that grain prospects are fair, and that fair prices for these staples are expected to prevail. Aside from the crop situation, however, the outlook is considered distinctly favourable. The monthly bulletin of the National Bank of Commerce, which is given to moderate views, declares, in fact, that all other signs are favourable. It avers that if the crop situation is reasonably good, business during the second half will exceed that during the first half of the year. Such an autumn revival would, in this opinion, harden the money market moderately, and so affect the prices of those securities in which substantial trading interests have been built up. First-class bonds are exempted from this generalisation because of the extraordinary demand for investment securities. The Bank of Commerce is not, however, committed to the idea that a higher money market in the fall is inevitable. On the contrary, it points out that disappointing crops might leave the money market unchanged. In addition, it declares that unless further foreign loans are forthcoming "the gold trend may be reversed, and if the gold should begin to move toward the United States again in considerable amounts, this might nullify the influence of the factors tending toward higher money."

Meanwhile, the money market itself shows no inclination really to harden. The call rate on the Stock Exchange, it is true, has risen from $3\frac{1}{4}$ per cent. to $4\frac{1}{2}$ and 4, but this movement is regarded as nothing but a minor fluctuation of a character to be expected before the turn of the half-year. Meanwhile, it is pointed out that a mild firmness around July 1st normally is followed by marked seasonal ease during the ensuing six weeks. The existing industrial and trade situations are not such as to interfere with this seasonal tendency. With the stock market again at new high levels, there has been some renewed talk of the magnitude of brokers' loans, and of a scarcity of Stock Exchange capital. On the other hand, those who are in a position to judge best regarding such matters say that there is nothing to cause apprehensions in the volume of brokers' borrowings, and that the active business and higher commissions on the Stock Exchange have brought large profits that have attracted plenty of new capital to the brokerage business. In any event, the picture is not one of a huge speculation in stocks threatening to usher in a period of higher money. On the contrary, it would be fairer to say that the surplus of funds is keeping the securities markets steady, but that the public seems little inclined to use the money in large-scale speculative ventures.

Meanwhile, the prophets of relatively easy money, and, for that matter, those of good business, are giving considerable stress to the Administration's fiscal proposals. The President reports that the Government will have a surplus of \$200,000,000 in the fiscal year that is closing.

He estimates that the next fiscal year will produce a surplus of \$290,000,000. Out of this further reductions in the public debt and in taxation will be made. A reduction of \$281,000,000 in the short-term debt, as a result of the Treasury's operations on the June 15th tax date has just been observed. Now it is reported that a tax programme calling for a cut of \$300,000,000 has been prepared, and will be presented to Congress in the autumn. It also is stated that Secretary Mellon and the Chairman of the House Ways and Means Committee have agreed on all the features of the plan with the exception of the repeal of estate taxes. It will be recalled that the inability of these two individuals to agree caused the failure of the Mellon plan last year. Current reports speak of the likelihood of a lifting of the exemption on normal taxes, the raising of the level at which surtaxes become effective, and a cut in the maximum surtax to about 25 per cent. Meanwhile, the accomplishments of the Treasury during the past several years are striking. Since June 30, 1921, the public debt has been reduced from \$23,977,000,000 to \$20,551,000,000. At the same time, Government expenditures, exclusive of those for debt reduction and the postal service, have been reduced from \$5,116,000,000 to \$3,035,000,000. In 1921 interest payments amounted to \$1,000,000,000; this year the charge on that account will be only \$870,000,000. This saving of \$130,000,000 on interest charges is due partly to the reduction in the public debt and partly to the lower interest rates at which it has been possible to refund maturing obligations. The President, however, is not content to rest with such a showing. He is impressing on all department heads the necessity for further "constructive economy."

Last week's break in Italian lire caused much surprise, partly because of the recent credit arrangement and partly because Italian exchange has been relatively stable for some two years. However, it is realised that the credit may have been obtained because the Italian authorities realised that they had large purchases to make in foreign markets, and wished to be able to stop speculators from taking advantage of those necessities. There also is a vague notion that the Italians may have wished, with an eye to the ultimate return to gold payments, to see what level the lira would seek. Meanwhile, French francs have suffered renewed weakness, and our financial people still are waiting for M. Caillaux to show his hand more clearly. Incidentally, it is now well understood that our Government has taken a definite stand in asking our bankers to defer the negotiation of loans for countries whose Governments have not taken satisfactory steps looking to the funding of their debts to the American Government.

FRANCE.—M. CAILLAUX'S PROPOSALS—NOTE ISSUE —NEW LOAN—THE FRANCO.

(FROM OUR CORRESPONDENT.)

PARIS, July 1.

THE manner in which M. Caillaux succeeded in preserving secrecy as to his further financial proposals until so late in the week that it was impossible for them to be utilised for Bourse manipulation until after the week-end, by which time the Bill had been approved by both Chambers and had become law, confirms the belief that the new Finance Minister, in spite of his trying ordeal of a few years ago, remains one of the strongest personalities in French political life. Having first obtained the approval of the Ministerial Council, at a sitting on Friday morning, M. Caillaux formally laid his propositions before the Chamber at noon, in the shape of a definite text. The Chamber met the same afternoon to discuss them, and a special sitting of the Senate was called for the same evening, in the hope that the Upper House would then be in a position to deal with the Bill as approved by the Palais Bourbon. This part of M. Caillaux's lightning programme failed to attain complete success, largely owing to a final effort by the Socialist group to upset the whole scheme unless their capital tax proposal were substituted for the Minister's proposed new bond issue. By dint of a night sitting, which lasted until after 6 a.m., the strenuous Minister triumphantly forced his proposals through, and twelve hours later the Senate's approval was also obtained. On Sunday morning the new measures

JAMES FORREST, Manager. W. F. BLACK, Deputy Manager.

Every Description of Home and Foreign Banking Business transacted

were promulgated in the *Journal Officiel*, and automatically became law. It speaks eloquently for M. Caillaux's tremendous personal energy that, notwithstanding 36 hours of sleepless exertion, during which he attended a Ministerial Council, appeared before the Finance Commissions of both Houses, and piloted the Bill personally through both Chambers, he was able to reach Le Mans on Sunday morning in time to make an important speech and coin a fascinatingly descriptive epigram. "The financial situation," he said, "is better than people say, but much more serious than people think."

The Minister's first proposal, which was to authorise the State to borrow a further 6,000,000,000 from the Bank, with a consequent corresponding increase in the note issue, was not an unexpected one, so far as the principle was concerned. It had been anticipated, however, that the amount asked for would be in the neighbourhood of 4,000,000,000 only. The practical effect is that, although the law passed in 1920 stipulated that the amount owing to the Bank shall be reduced by 2,000 millions a year (which was found possible in 1921 only), the authorised total debt to the Bank, which was increased three months ago from an authorised maximum of 22 milliards to 26 milliards, as the result of the abnormal situation in which the Herriot Government found itself, has now been raised to 32 milliards (as against 2,900 millions in August, 1914). The authorised maximum note issue, which was fixed at 6,800 millions by the law of December 29, 1911, and which was increased to 12 milliards on August 5, 1914, on the outbreak of the war, was increased from 41 to 45 milliards as a sequel to the Herriot Government's troubles last spring, and has now been raised to 51 milliards.

The second portion of the new Finance Bill, which proposed to empower the Government to issue an entirely new form of loan, in the form of (probably) irredeemable bonds, the interest on which will be paid in gold, was nothing short of a revelation to the public. The Bill, as presented and as passed, merely authorises the Minister of Finance "to issue a loan reserved solely to holders of National Defence bonds," the interest yield from which will be given a *garantie de change*. The rate of interest, and the rest of the conditions of issue, are to be fixed by decree, and are consequently still unknown. The extent to which both Chambers, by passing a Bill so drafted, have shown their confidence in the present Minister of Finance is remarkable. M. Caillaux's objects in securing authorisation for this special form of loan are, of course, twofold; first, that it will constitute a first step towards the consolidation of the floating debt, and, secondly, that it will enable the Treasury to avoid the serious situation that would be created if an abnormal proportion of holders of National Defence and other bonds, which are due for redemption in July, September, and December, 1925, fail to renew their bonds, and insist on being paid off in cash. (Bonds that mature during the present year are as follows:—July 1st, Crédit National bonds, 1922, second issue, amounting to 3,290 million francs; September 25th, the 1922 issue of three and five-year bonds, amounting to 8,236,934,000; December 8th, the first series of the 1923 three, six, and nine-year bonds, amounting to 10,090,088,000; total in 1925, 21,617,022,000.)

A further clause of the Bill, which is not the least remarkable portion of it, stipulates "the maximum total of the floating debt of the Treasury, exclusive of the advances

made by the Bank of France, shall be fixed at the amount at which it will stand at the date of the close of the subscription lists of the new loan," which reveals a third object which M. Caillaux plans to attain by this skilfully conceived measure.

The general conditions of the issue, as already stated, are as yet unknown, but it is probable that the rate of interest will be fixed at 4 per cent., and that the words "garantie de change" are to be understood as meaning that the coupons will be payable on a gold basis. The attractiveness of this factor needs no comment. In some quarters, however, the practicability of this feature is seriously questioned. The rate of issue must necessarily, apparently, be at par, as the new bonds will only be exchangeable against National Defence bonds at their nominal capital value. This will be contrary to invariable French practice, but the other advantages of the new scrip will be found greatly to outweigh this disability. The Treasury now being in a position to meet all possible emergencies that may arise from to-day's maturities, it is probable that the new issue will be postponed until about July 20th, when the disturbance caused by the great national July 14th holidays will have passed.

There are indications that the new loan—which ought not, perhaps, to be termed a "new loan" at all, seeing that it is more in the nature of a conversion—will secure a triumphant success during the three weeks in which the lists will be open. The preliminary announcements that have been made in the form of the passage of the Bill have already resulted in stimulating the sale of National Defence bonds to a very substantial extent. M. Caillaux asserts that yesterday, at the office attached to the Finance Ministry itself, the sale of new bonds for cash exceeded the value of the number paid off by nearly 100,000,000 francs. "If I am reproached on the ground that my projects are too daring," the Finance Minister states, "the first indications seem to show that I have not been wrong, and that, as I am fond of saying, audacity creates confidence." Banking experts are inclined to agree that M. Caillaux has ground for optimism in regard to the new bonds. The Minister himself insists that it would be necessary for the franc to suffer a further fall that could only be described as sensational for the State to be involved in any substantially heavier cost for the debt service that it has to bear at present. He argues that if the interest payable on the new bonds equals 4 per cent. with the pound at 100, the franc will have to fall to 125 before the cost to the State would rise to 5 per cent. The striking advantage of the new bonds to investors is that not only does the gold value of the coupons remain stable if the franc continues to fall, but also if it improves. The report that the nominal gold yield from the bonds is to be reduced to 3 per cent. if the franc improves to 75 has been flatly denied by M. Caillaux himself. Nor is it the fact that holders of National Defence bonds will be compelled to exchange their scrip for the new issue. Exchange will be purely optional. M. François-Marsal, whose opinion may be regarded as authoritative, is of opinion that the new issue, on the face of it, "will receive a very favourable welcome from capitalists." He points out that the new scrip will apparently take the form of a new kind of Perpetual Rente, which will be free of all taxation, even in regard to general and schedule income-tax, and be protected also, probably, against any future capital tax.

M. Caillaux's marked success in securing practically instant adoption of two proposals that would have been regarded as simply unthinkable six months ago, together with the manner in which those proposals have been received by public opinion in general, has undoubtedly substantially increased the authority of the Painlevé Ministry in both Chambers and in the country. The brief but exceptionally important debate on the Caillaux proposals in the Chamber gave a final opportunity for the Socialist Party to bring the Government to an issue as to whether it will rely for support in the future on the Cartel des Gauches, which carried M. Herriot into power, or broaden its basis by inclining further towards the Right and securing the co-operation of the moderates of the purely Republican groups who have held aloof from the Cartel des Gauches. The Socialists put forward a counter-proposition, which took the form of a proposal to substitute a new form of their beloved capital tax—"an issue of mort-

gage bonds secured on non-liquid capital" (by which, it was suggested, racing studs and art collections were chiefly aimed at). The Government, on a motion as to whether the counter-project should be considered, promptly made the question one of confidence, and secured a majority of 340 votes against 210. The division resulted in an entirely new shuffling of party cards, and demonstrated that on the three great national questions at present at issue—the Moroccan war, the financial proposals, and the policy to be adopted against Communism—the Government can count, bar accidents, on practically the whole of the centre parties of the Chamber. The old Poincaré party and the Royalists made common cause with the Communists, and voted largely against the Government. The lesson was a sharp one, as was seen by the fact that in the final vote on the Bill the minority consisted solely of the 26 Communists and eight irreconcilables. One further test remains, once the 1925 Budget is disposed of, and that will be when the moment comes for M. Briand to face the Chamber in support of his foreign policy.

GERMANY.—TARIFF—TAXATION—IRON AGREEMENT—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, July 1.

THE Minor Tariff Bill has gone to the Reichstag Trade Political Committee for detailed consideration. Of the political parties, only the Socialists and Communists will fight it outright. The German-Democrats have accepted the food duties in principle, but they object to the proposed fixing of irreducible rates, a feature which differentiates these duties from the industrial duties, which may be reduced indefinitely in Commercial Treaty negotiations. The Government seems determined to push the Bill through rapidly. Outside the political parties there is a good deal of opposition from manufacturers, from wholesale and retail trading organisations, and from non-political experts. The Hamburg Exporters' Association protests that the result of the food duties and of the increased duties on certain materials will result in a general price-rise, with higher wages and diminished competitive capacity in foreign markets. Foodstuffs merchants' associations also oppose, and the Textile Traders' Association predicts a decline in home buying, and estimates that on the basis of imports in 1924 the increase in the duties on half-finished and finished textiles will cost home consumers 50,000,000 marks a year. The Reichsbank president has declared against the food duties. The Minister of Industry, defending the duties, predicts that world-market food prices will decline; but Professor Sering, of Berlin University, an acknowledged authority, estimates that world consumption of grain will increase by 9,000,000 tons during the next decade, and he holds that, on the average, grain prices will be high enough to make intensive production profitable. For livestock and meat he recommends "contingency duties," to be imposed for the present, but to be suspended whenever foreign competition ceases to depress home prices. Opponents of the increase of industrial duties declare that their function is to bleed the home consumer in order to finance cheap exports, and state that this is already being done to some extent in the textiles and paper branches. The export of coal and heavy iron and steel at so-called "fighting rates" is a fact; but here the producers declare that practically no profits are made even on home sales, and, as regards iron and steel, they adduce as a reason the French and Belgian "exchange dumping." From July 1st certain coal prices have been raised: bituminous coal from the East Ruhr district by 1 mark per ton, anthracite from the West by between 3 and 7 marks.

The Reichswirtschaftsrat's detailed report on the Tariff accepts some of the textiles duty increases and reduces others. The proposed wool duty (No. 416 of the Tariff) should be reduced from the proposed 3½ marks to 2 marks per double-centner, the present rate. The motor-car duties increase is accepted, but the manufacturers are advised to reorganise their works, and to make up their minds whether they will standardise production or not. No majority could be obtained for various proposals for

alteration of the proposed grain duties, and to prevent the passing of higher rates the Cabinet's proposal of a temporary duty of 30 marks a metric-ton for rye and 35 marks for wheat was accepted. Several outright opponents of grain duties supported the proposed cattle and food duties, putting these on the same level as industrial finished products. The duties on fresh meat and butter were accepted; those on frozen meat, canned meat, bacon, lard, and conserved milk reduced. Experts reported that the 1½ per cent. sales tax increases meat prices by at least 11 or 12 per cent., and the question whether this tax should not be removed from foodstuff sales was raised.

The Reichstag Taxation Committee has rejected the Bill increasing the beer and tobacco taxes. The majority parties have submitted an alternative Bill increasing the beer tax 50 per cent. instead of the proposed 100 per cent., the rates to rise from 7½ marks on the first 2,000 hectolitres brewed to 9.15 marks per hectolitre on over 60,000 hectolitres; and accepting the Cabinet's proposed increase on the tax on cigarettes and fine-cut tobacco, while rejecting the increase on other sorts. The Sugar Tax in Committee has been fixed at 21 marks per 100 kilos, or about 26 per cent. *ad val.*, according to the Cabinet proposal. The pre-war duty was 14 marks per kilo. The Municipality of Berlin has contracted a loan of \$15,000,000, at 6½ per cent., amortisable in 25 years, in the United States. A plan has been sanctioned to erect a 200,000-kilowatt power station, costing 50,000,000 marks. Berlin Municipal Budget for 1925 has been sanctioned at a total of 550,321,000 marks. New taxes amounting to 105,224,340 marks are required. The Prussian Landtag has revoked the law of 1923 requiring official sanction for real-estate purchases, and facilitating repurchase by the original owners of houses sold in 1922-1924 at low prices. The law of 1923 was passed in order to check foreign purchasing, but such purchasing had almost ceased when it was passed.

The new Bank Law comes into force to-day. It defines deposit banks as banks which accept public money or securities for care and management, and permits their opening, whether by individuals or public companies, when the proprietors or personally responsible managers are all persons who have been at least five years (at any date) occupied as proprietors, partners, directors, or employees of a bank. The State Governments, with the consent of the Federal Ministry of Industry, can exempt from these qualifications persons who are fitted for bank management by long commercial experience, but only when the proposed bank is economically justified. Persons opening deposit banks must register and prove their qualifications, and banks must notify changes in their responsible personnel. The right to conduct deposit banks may be withdrawn from unreliable persons. Penalties are imposed for violation. The law does not require that proprietors or managers shall be German citizens, and it considerably facilitates the opening of foreign banks or branches.

The month-end settlements caused a big demand for money, but already the pressure has declined. The Reichsbank President has again declared that credit restrictions must be maintained; the present 2,500 million marks of outstanding credits, of which 1,400 millions are from the Reichsbank, 750 millions (apart from credit to the Republic) from the Rentenbank, 220 millions from the private issue banks, and 100 millions from the Gold Discount Bank, is "the highest sum that can be borne at present." Dr Schacht expressed confidence in the continuing stability of the currency. He stated that foreign assistance was offered during the Stinnes crisis, but that the assistance was not needed.

An agreement has been come to between German and French iron interests for admission into Germany at half-normal duties of a standard 1,700,000 tons of French, Saar, and Luxemburg iron, which quantity is reducible by whatever reduction ratio is fixed by the Rohstahlge-meinschaft for native concerns. Of this quantity 800,000 tons is French, 600,000 Saar, and 300,000 tons Luxemburg. This is a private agreement, and its coming into force depends upon French concessions in regard to admitting German metal manufactured goods. Luxemburg, though in Customs Union with Belgium, is brought in because it has iron interests in the Saar and in the

Rhineland, and, apparently, because it demanded inclusion as a condition for its participation in further international cartel arrangements.

The May foreign trade return shows a considerable improvement. Exports, with the exception of December, 1924, were the largest since 1914:—

Marks (000's omitted).

	April.	May.	Jan.-May.
Imports—			
Livestock.....	11,900	13,946	45,255
Food and drinks	293,072	292,712	1,544,410
Raw and half-finished materials	541,631	520,588	2,890,156
Manufactures.....	160,345	167,341	904,482
Wares	1,006,948	993,587	5,384,303
Gold and silver	73,991	90,447	380,495
Total	1,080,939	1,084,034	5,764,798
Exports—			
Livestock.....	2,030	982	8,681
Food and drinks	43,330	40,175	230,163
Raw and half-finished materials	113,330	137,796	602,656
Manufactures.....	511,357	549,049	2,590,164
Wares	670,047	728,002	3,431,664
Gold and silver	2,329	4,174	12,921
Total	672,376	732,176	3,444,585

Exports of textile raw materials, as compared with April, increased by 6½ million marks, coal by 6.8 million marks, manufactured textiles by 14.4 million marks, rolled iron and iron-ware by 6 million marks. Machinery exports declined by 4.2 million marks. The foreign trade balance of the "Heavy Industry" is improving. In 1924, coal imports were 13,202,087 metric tons; exports, 2,795,090 tons; in the first four months of 1925, imports, 3,264,114 tons; exports, 4,050,064 tons. In 1924 imports of iron and steel and wares thereof (machinery omitted) were 1,324,011 tons; exports, 1,955,110 tons. In the first four months of 1925, imports, 547,033 tons; exports, 1,122,527 tons. Exports of machinery this year have averaged approximately 28,000 tons per month, as against 22,600 tons in 1924.

DENMARK.—LABOUR CONFLICT OVER—ITS EFFECT ON FOREIGN TRADE — THE MERCANTILE MARINE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, June 22.

THE greatest labour conflict in the history of Denmark was ended on June 5th, after lasting nearly three months. Agreement had long ago been arrived at between employers and workers in the majority of industrial occupations. The point remaining at issue was the wages of the unskilled labourers, and it became ridiculous that 150,000 workers should be unemployed for months owing to a conflict which concerned only a small fraction. When the strike was extended to include the transport workers, thereby affecting the Danish community's most vital interests, the agricultural exports, it became essential for the conflict to be finished quickly. The Socialist Government had a provisional order under preparation, by which immediate resumption of work and arbitration with regard to the disagreements was to be ordered. However, before this was carried into effect the official

Conciliation Board succeeded in making both parties accept a compromise between the claims of employers and employed. It appears that on both sides the conflict has led to the understanding that strikes and lock-outs have lost their suitability as means of deciding wages conflicts, the sacrifices being quite out of proportion to what has been attained even by the workers. It appears that a strong opinion in favour of deciding future labour conflicts by arbitration is developing.

Naturally, the great labour conflict is reflected in the statistics of foreign trade for the months in question. Imports during April amounted to Kr.185,000,000, against Kr.201,000,000 during March, and exports for April were Kr.175,000,000, against Kr.186,000,000 during March. For the first four months of the year imports had a value of Kr.782,000,000, against Kr.737,000,000 and Kr.652,000,000 for the corresponding periods of 1924 and 1923, while the exports amounted to Kr.709,000,000, against Kr.667,000,000 and Kr.497,000,000 respectively. The decline in purchases from abroad is not connected merely with labour conflict, but must be read in connection with the credit restriction policy of the banks and the declining tendency of prices. Since the New Year the Danish wholesale price index has shown a continual decline; for January the figure was 243; February, 240; March, 236; April, 230; and May, 227.

The price of the Danish krone has lately improved quite considerably. When imports and exports fairly balance one another, a favourable reaction will be created by small changes. During the last few months some foreign capital has found its way to this country, partly as time deposits in Danish banks, partly through the issue of Kr.25,000,000 Treasury bills. Concerning the latter no official information is available, but it is known that the majority of the Treasury bills have been taken over abroad at a discount of 5½ per cent. per annum.

The Danish Mercantile Marine at January 1, 1925, consisted of 1,848 vessels of total gross register tonnage 1,090,500, and 1,450,000 tons deadweight. Of this number 644 were steamships of total deadweight tonnage 1,056,800 and 90 motor vessels of deadweight tonnage 257,800. In 1923 the steamship tonnage was somewhat reduced as a consequence of considerable sales to foreign countries of second-hand ships, while the increase of new-built ships was rather low. This reduction of about 20,000 tons was more than compensated for in 1924 by an increase of 53,000 tons. Of the new-built ships during the said year, 30,000 register tons emanated from Danish shipyards and 19,000 tons from abroad, practically all from Germany; 42,000 tons of second-hand tonnage was bought from abroad, principally from the U.S.A.; while 35,000 tons were sold. The ships bought from America were not "war-tonnage," but principally older, rather big tramp steamers, built about 1900, partly in Europe.

NORWAY.—COMMODITY PRICES—RUSSIAN NEGOTIATIONS—THE KRONE.

(FROM OUR CORRESPONDENT.)

OSLO, June 16.

THE wholesale price index for May of the *Farmand* shows a fall of 10.7 points, which brings it lower than at any time for about a year. Unfinished goods and raw materials mainly account for the decline; these now have come down to only 225 per cent. above the pre-war figure. As these are chiefly imported goods, the improved position of the krone in relation to sterling and dollars must, of course, be credited with a good deal of the reduction.

This country was one of the first of Soviet Russia's neighbours to recognise Russia *de facto*, in that a commercial agreement was entered into between the two countries. Negotiations for a formal and definite treaty have been going on for some time. Recently, however, the members of the Commission sent from here to Moscow have abandoned their task. The reason seems to be that the Russians claim considerable concessions from this country, but want to be let off very cheaply themselves. Probably the divergences will lead to the breaking off of the negotiations, at least for the time being.

The main board (consisting of 15 persons) of the Bank of Norway have recently been deliberating as to whether it is advisable to take steps with a view to stabilising the krone. An overwhelming majority, however, decided to recommend the continuation of the policy hitherto pursued by the bank of aiding a slow but steady deflation, and thereby bringing the krone nearer and nearer to parity with the gold standard countries.

Quietude reigns in the bond and share markets, without any marked tendency, except as to the latest Norwegian Government bonds, which have stiffened. The exchanges continue favourable to the krone.

A spell of intense heat has brought the vegetation very much forward; rainy and cold weather now has set in (in the higher regions snow is falling), but so far everything points to a good harvest.

SPAIN.—GOVERNMENT BORROWING—RAILWAY RESULTS—TRADE BALANCE—BANKING FAILURES.

(FROM OUR CORRESPONDENT.)

MADRID, June 20.

ON June 5th a fresh issue was made of 500 million pesetas Treasury bonds at five years' term, with 5 per cent. interest and 1 per cent. premium at maturity, free of all taxes. The 300 millions borrowed by the Government in November, 1924, have therefore lasted seven months, which means that the deficit is being considerably reduced, on the one hand, owing to the greatly diminished expenses in Morocco, and, on the other, owing to the discontinuance of the old policy of large State subsidies to railways, newspapers and other industries, and the selling of nitrates and foodstuffs by the Government. Owing to last year's crop deficiency the Government is buying from 60,000 to 90,000 tons of wheat free of import duty. The crops were suffering again this year from long drought, but heavy rains have been falling since the middle of May all over the Peninsula, and prospects have improved.

The rise of prices continues out of all proportion to the general movement in other countries, as may be seen from the figures below:—

	INDEX NUMBERS.			
	Mean for 1924.	Present Year—		
		January.	February.	March.
Foodstuffs	183	195	197	198
Manufacturers & materials	182	186	189	189

The results for 1924 of the two great railway companies are rather favourable. The North of Spain gross receipts were 328 million pesetas, or 18.5 millions more than in 1923, allowing a dividend of 28.50 pesetas per share, against 22.20 net for the previous year, besides an increase in the balance brought forward from 2½ to 10½ millions. This company will issue 200 million pesetas debentures for improvements in the permanent way and rolling stock. The Madrid, Zaragoza and Alicante gross receipts were 289 millions, or 16 millions more than in 1923, but owing to increases in charges the net receipts are 2.8 millions less and the dividend is maintained at 22 pesetas per share. The company issued last April 80 millions 6 per cent. debentures at 98 per cent. and is authorised to issue 30 millions more.

Commercial depression becomes every day more acute as a consequence, firstly, of unsatisfactory conditions in Europe, which diminishes the demand for the country's produce, and, secondly, of last year's bad crops. Consequently, the foreign trade balance continues to show a deficiency of about 50 per cent., the latest figures published being as follows:—

	Mil. Pesetas.
Imports	3,060
Exports	1,590
Adverse balance	1,470

In the previous year the difference was still higher at 1,640 millions. The Commercial Association of Madrid, in a communication to the Government, attributes this position to the tariff war begun in 1921, and sanctioned in the high tariff adopted in 1922, and argues that the increased import rights had the immediate effect of reducing exports without hardly diminishing imports, and compounds the policy of commercial treaties as a means of

reducing the tariff. This policy is now being followed; the treaty with Germany was recently sanctioned by the Reichstag, last April was signed the "modus vivendi" with Belgium, and the agreements with the United States, Japan, Canada, and Greece were lately renewed. The application of the "most-favoured-nation clause" and of rights even more reduced than the second tariff, will no doubt tend to stimulate exports so soon as better conditions prevail in Europe.

The banking world was badly tried during recent months by the failures of the Credito de la Union Minera, the third local bank in Bilbao; the Banco de Vigo, a small institution in that town; and quite recently of the banking company, La Agrícola, of Pamplona. Fortunately, in the first case there will be no loss for depositors, as the Provincial Government will make good the deficiency by means of a local debt issue of 60 million pesetas. The Banco de Vigo is to be liquidated in three years. As to the Agrícola, it is too soon to make any forecast.

NEW ZEALAND.—THE LATE MR MASSEY—ECONOMIC OUTLOOK—A QUARTER'S TRADE—NEW LOAN.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, May 12.

NEW ZEALAND this week is mourning, with evident sincerity and emotion, the loss of a well-beloved and characteristic leader. On the personal side there are the warmest tributes from friends and political foes alike. Mr Massey had few, if any, enemies, even among those who fought him most persistently. He was a bonny fighter, with all the dour persistence of his Belfast ancestry, but his hardest blows were always followed by some quip or jest that took the sting out of them. By any measure he was the most popular as well as the outstanding man of Parliament, and his personal consideration and courtesy made him equally liked wherever he went.

His passing with comparative suddenness while still in harness must inevitably be followed by a period of comparative unsettlement in Dominion politics. There is no leader in sight who will replace Mr Massey in the affections of the people, and, as happened after the death of the other great leaders, there will almost certainly be a period of re-shuffling and re-alignment of parties.

The economic outlook continues to give cause for uncertainty and a certain amount of anxiety. The prospect of more unemployment this winter than there has been for some years past is bound to have some effect on the election prospects in November. The turn of the year, in fact, is likely to be a landmark in New Zealand history. Much depends upon the course of wool prices. The present extremely low level, compared with the extravagant expectations of last season, while it has little immediate effect on the Dominion, is very disconcerting. It is at least possible that some recovery will take place before the local sales open in November and December, but hardly likely that peak prices will again be reached. The abstention of America from the market is ascribed to radios and automobiles in the United States absorbing too great a proportion of purchasing power, but a more immediate and obvious reason would seem to be that the present tariff (specific duties levied per pound) on wool imported into the United States has, by reason of lower levels of prices, become much more prohibitive than it was in the boom period.

Meantime, there is some little apprehension of the possibility of heavy imports following upon boom expectations. All through the recovery of prices in the last two or three years, the import increase has kept up with that of the exports, and the Dominion is not well situated for a fall in prices. The latest statistics show the following comparative figures:—

NEW ZEALAND EXPORTS AND IMPORTS MARCH QUARTERS 1924 and 1925.			
	Exports.		Imports.
	Mil. £.		Mil. £.
March quarter, 1924	20.7		11.8
March quarter, 1925	22.8		13.1

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
67 Milk Street.

BUENOS AYRES:

The increase in export values is due almost entirely to the higher wool prices. The increased value of wool exported is almost identical with the increase in the total value of exports, while imports show a tendency to increase. This demonstrates the dependence of New Zealand at present upon the maintenance of wool prices. The issue of the prospectus of a new loan for £7 millions in the same week as the fall in wool prices is not a very happy coincidence. The new loan is bigger than usual, perhaps, because this is election year, and it does not make one feel any happier when the cable messages describe the issue as New Zealand's "annual loan." The Dominion cannot go on borrowing in this way, and in the unsettled state of the markets for our chief exports, the continued piling up of loans constitutes a real danger to the future of the Dominion.

Books and Publications.

THE WORLD COURT.

PROFESSOR MANLEY O. HUDSON is well qualified by his broad outlook on world affairs to write of the work of the Permanent Court of International Justice, which has now been sitting at The Hague for three years. The Professor has confined himself in this pamphlet,* however, to summarising the advisory opinions and judgments which have been delivered, prefacing this by particulars of the States which have signed the Protocol for the establishment of the Court, of the names of the judges, and of the more important dates in the history of the tribunal since steps were taken in 1920 towards bringing it into being. America's relation to the Court is also dealt with. The position there is curious, for, although the United States elects one of the judges, it has not yet formally adhered to the Protocol. Subject to certain reservations, the United States will no doubt in due course give formal expression to the view approving of the Court which undoubtedly is generally held by its citizens. In the meantime, this condensed, but well-written, account of the work actually done should help to make more familiar an institution which, though not able to boast of any spectacular features, may yet, perhaps, play a great part. The note on each case dealt with not only states the judgment and the circumstances, but also indicates the significance of the particular matter.

* "The Work of the Permanent Court of International Justice during Its First Three Years." By Manley O. Hudson (Boston). 1925. 5 c. World Peace Foundation Pamphlets.

SHIPPING DOCUMENTS.

THE parts played in overseas trade by the invoice, the bill of exchange, the bill of lading, and the marine insurance policy are discussed by Mr Hodgson in this small volume.* As a summary of the legal rights and liabilities of the parties to these documents the book will be useful, though the author does not seem quite to have appreciated the needs of the beginner, and his work is not detailed enough.

* "Shipping Documents." By A. J. Hodgson. (London. Effingham Wilson. 1925. 5s net.

to serve the purposes of those who are not beginners. Bills of exchange, marine policies, and now, to some extent, bills of lading, are the subjects of statutes which embody important rules of law applying to them. These statutes are naturally the basis for the various chapters, the text of the enactments being given in full in appendices. Of the four chapters, that covering bills of lading is perhaps the least satisfactory. Australian and New Zealand legislation now repealed is cited as if still in force, and so is the Admiralty Jurisdiction Act of 1861, though the particular section of this which is referred to was repealed in 1920. Moreover, several passages in this chapter suggest that the author has not considered sufficiently the effect of the recent legislation as to bills of lading.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, July 8. ACCOUNT, July 9.

THE second half of the current year has entered the Stock Exchange to find markets quiet as regards business, and still a little perturbed at the economic outlook at home, the political prospect abroad, and the uncertainties that surround the monetary position. Fears of a rise in the Bank rate have melted away, and the War Loan touched 100 on Wednesday. Some of the recently-issued scrip stocks recovered substantially. The London County new 4½ per cents, for example, rose to 1½ discount, after being 3 discount. It is apparent that a good deal of the undigested amounts of new stock is going into strong hands. Some of the new issues made during the past few days proved popular and successful. Fresh money is known to be required by half-a-score of industrial companies, and the flow of prospectuses has been but slightly checked by the results of the overdose which flooded the markets last month. The news from China is held to be re-assuring. Liquidation in the Stock Exchange produced a heavy tendency towards the end of the week.

The War Loan failed to hold three figures, and, with other British Government issues, reacted from the best prices touched. The Consol market as a whole keeps firm, and the success of the Great Western Company in placing its six million pounds 5 per cent. debenture stock at 95 is held as an indication of ready surplus of capital, which can be relied upon to recognise good stock when this is offered at a reasonable price.

French Government bonds have weakened, and the French Railway series are lower. The gamble in Germans has subsided. Chinese bonds recovered with a jump from their recent flatness. Japanese are also steadier. The Mid-European Reconstruction loans, as they are called, have shown a hesitating tendency, but, after being weak, the prices rallied upon support from speculative investors.

Home railway stocks are none too certain of themselves. The market is limited, and any inquiry for stock brings about a jerky rise. As soon as the buyers are satisfied, prices turn downwards, and the industrial position as between employers and employed gives cause for a good deal of restraint upon the part of buyers, a state of mind which is also reflected in the market for iron, coal, and steel shares.

Argentine Railway stocks are fairly well maintained, though the dividend outlook is regarded without much enthusiasm. Cordoba Centrals are better and International Railways of Central America gained several points on New York buying. Nitrate Railways are lower.

The rubber market is active; next week's settlement will be the third in which the details to be arranged assume enormous proportions. The tea market is distinctly better, and it looks as though prices of the better companies' shares had touched bottom, there being a good many buyers for the good-class varieties. In the oil market nervousness was aroused by talk of there being trouble with water percolations on some of the Venezuelan properties. The general list is quiet. Court-aids forged further ahead, but fell back again. Rayon preference, the shares of the new artificial silk company, fell to 3s 3d discount, and the new Union Cold Storage preference stand at 1s discount. Indo-China deferred shares strengthened on the issue of the report. European Gas shares are good, thanks also to a report that is better than had been expected.

County of London Electrics eased off, on the issue of two million new preference shares at 20s 6d, which were underwritten for a commission of 4½d per share. The subscription lists were open but a few hours. Tobacco shares recovered in company with Chinese Government bonds, to react, however, as the settlement drew nearer. Godfrey Phillips came into lively request by reason of rumours that the company is to be taken over by another tobacco company. Mond Nickels eased off a little on the proposals for the re-financing of the company. Amalgamation rumours are again rife in the brewery market. Newspaper issues have gone back, and the wireless group is heavy.

Textiles are dull on the whole. Van den Berghs gave way sharply. Warnings were unaffected by news of the forthcoming issue of a million pounds 6 per cent. first mortgage debenture stock at 96½. Hongkong Bank shares have recovered most of the ground which they lost when the trouble in China broke out, and the new Midland Bank shares hold their price at 32s 9d premium.

The South African market is kept alive by recurring spasms of activity in platinum shares, Transvaal Consolidated Lands being the principal centre of interest. Paris has been in selling mood, owing to the incidence of the French monthly settlement, which took place in the middle of the week, and this has exercised a depressing effect upon De Beers, Rio Tintos, and a few other inter-bourse varieties. The tin share markets attract little notice, and on the Middle East proving quiescent, Malayan shares have been inclined to droop. Keffis amongst West Africans formed a firm feature, on the declaration of a

5 per cent. interim dividend. The Lake View Company is about to make an issue of debentures. Mexicans and Russians are neglected, and amongst Canadians a spasm of flatness in Selukwes has been the outstanding feature of a quiet week. The mining markets, with South Africans in particular, have suffered from the liquidation that disturbed various parts of the Stock Exchange on the eve of the carry-over.

County of London Electric Supply Company, Limited.

—Issued share capital £2,555,000, in addition to which there is £1,500,000 of debenture stock and £1,500,000 of 5½ per cent. one-year bearer notes outstanding. The latter mature in September next. This is an issue of 2,000,000 6 per cent. cumulative preference shares of £1 each at 20s 6d per share. The company was incorporated in 1891 to supply electricity in the County of London and elsewhere, and net profits have risen from £115,261 in 1915 to £614,678 in 1923, and £585,737 in last year. Assets total £5,966,202, and nothing is allowed in the respect of goodwill. Reserves amount to £1,779,646. The present issue is made to provide funds for the repayment of the one-year notes. The shares will rank *pari passu* with the existing £1,225,000 preference, and are an excellent investment.

Waring and Gillow, Limited.—Authorised share capital, £1,505,000, of which £1,255,000 has been issued. There is also outstanding £402,630 of 5 per cent. mortgage debentures. These will be redeemed out of the proceeds of the present issue of £1,000,000 of 6 per cent. first mortgage debenture stock at £96½ per cent. The stock is repayable at £105 per cent. by means of a cumulative sinking fund commencing in 1926, to be applied at any time in purchasing the stock on the market at or under £105 per cent. or in annual drawings, the first in 1927 and the last in 1955. It will have a specific mortgage floating charge upon the rest of the undertaking. The company reserves the right of redemption at any time after January 1, 1935, at £105 per cent. on three months' notice. It is stated in the prospectus that the concern has traded under its present title since 1897, and is the successor of the firm of Gillows, established in 1695, and which, in 1896, amalgamated with S. J. Waring and Sons, Limited. The total assets, exclusive of goodwill, were shown in the last balance-sheet at £2,660,701, making, with the proceeds of the present issue, £2,940,270. Nothing has been allowed for fixtures and fittings, which have been valued by the company at £283,000. After charging depreciation, management expenses, directors' fees, &c., but before allowing for taxation, &c., the profits have risen from £93,933 in 1922 to £148,468 last year. The underwriting commission is 2 per cent., and 3 per cent. is payable for the printing, advertising, and distribution of the prospectus, &c. In view of the fact that properties specifically secured by the trust deed have been independently valued at £1,305,850, the security is reasonably good, though in reading valuation certificates of this description one is always left wondering over the problem of what is the "dead" value of the properties as compared with a valuation (like the present) where they are described "as a going concern."

Welwyn Garden City, Limited.—Capital £250,000, of which £125,000 has been issued. There is the exception of 44,455 shares, have been issued.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised ... £3,000,000
Paid-Up Capital ... 1,050,000

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

also £150,000 of 6 per cent. debentures outstanding. This is an issue at par of £150,000 of 6 per cent. ten-year development bonds. The bonds are repayable on June 30, 1934, at £105 per cent., and constitute a floating charge on the entire undertaking of the company, excluding the uncalled capital, ranking after the 6 per cent. debentures. The company was formed in 1920 to establish near London a new industrial town of 40,000 or 50,000 inhabitants, and having an area of 2,300 acres. Various local undertakings already supply gas, electricity, and water, and the London and North Eastern Railway Company have authorised the construction of a new main line station. Over 950 houses have been built and occupied, and are approaching completion. The estate was valued at March 31, 1924, at £289,725, and the total assets, including the present issue, are put at £646,325. The company's revenue, which is derived from ground rents, premiums on leases, profits from gravel and sand, &c., shows steady expansion, from £5,105 in March, 1922, to £10,888 in March, 1924. At the latter date the accounts showed an amount of £36,768 on account of premiums for leases, sales of land, &c., which had not been taken into revenue. The total amount required to meet the loan capital, including the present issue, is £29,259 per annum, and it is stated that "until the expenditure upon development becomes fully capable of earning revenue, this interest will be met partly out of capital....." The capital is required for further expenditure upon roads, sewers, water-mains, and for further extension of the industrial area. The progress of the Welwyn Garden City should not be measured in terms of pounds, shillings, and pence, or by the application of City financial formulæ. It is an undertaking which should receive the cordial support of those who are seeking to employ surplus funds in worthy objects.

Welwyn and Hatfield Gas Company, Limited.

Authorised share capital £72,000, of which £35,266, including £1,366 for premiums, has been issued. Of the authorised loan capital of £36,000, £10,450 has been raised. Tenders are invited for 2,400 £5 additional ordinary shares, the minimum price of issue being par. The Welwyn and Hatfield companies were established in 1912 and 1860 respectively, and were amalgamated in April last. Sales of gas by both companies have steadily increased. The net revenue of the Welwyn Company for the year ended December 31, 1924, was £2,403, and that of the Hatfield Company for the twelve months to March 31st last was £2,110, making a total of £4,514. Debenture interest requires £655 per annum and preference dividends £638, leaving available £3,220 for ordinary dividends. After payment of dividends of 10 per cent. and 7 per cent. respectively on the two classes of ordinary capital, the combined balance carried forward was £4,039. The shares now offered rank equally with the existing similar shares now receiving the standard dividend of 7 per cent.

Ewart and Son, Limited.—Authorised and issued capital, £150,144. Details of the company are advertised in order to comply with Stock Exchange regulations. Application is being made to the London Stock Exchange for permission to deal in 197,478 ordinary 5s shares and 201,400 16 per cent. cumulative 10s preference shares. The company was incorporated in 1900, and acquired the business of Ewart and Son, manufacturers of "Ewart's Geysers," established in 1834. Profits are certified since 1919, since when they have risen, with some variation, from £30,836 to £62,798. According to the last balance-sheet, goodwill, patents, &c., figured for £50,000, factory buildings, fixtures, &c., for £43,920, and plant and machinery for £6,331. Investments totalled £28,566, and reserves £62,560. This is a well-established undertaking, turning out an efficient product. The question the cautious investor asks himself as he reads this comment in the Press is, "How and at what price will the shares be available to me?" Surely, if the shares are to be marketed, it would have been more satisfactory to follow the intention of our company law and issue a prospectus.

COMPANY MEETINGS, &c.

WILLIAM BEARDMORE AND COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.
TRADE DEPRESSION AND ITS CAUSES.

The annual general meeting of the shareholders of William Beardmore and Co., Limited, was held on Monday, June 29th, at the registered offices of the company, 36 Victoria street, London, S.W.

The Right Hon. Lord Invernairn of Strathnairn, chairman of the company, presided.

The secretary having read the notice convening the meeting,

The Chairman said: Gentlemen,—I presume it is your desire that the directors' report and statement of accounts of the company for the year to December 31, 1924, which have now been in your hands for some days, be taken as read. Before moving their adoption, I will deal briefly with the main points in the accounts and the factors contributing to the results disclosed.

YEAR'S RESULTS.

The period under review has been one of extreme difficulty and anxiety, and has resulted in a loss for the twelve months of £503,094, after providing for debenture and other interest and all charges and contingencies. This loss falls to be deducted from the balance of £608,094 brought forward from 1923, thus leaving at the credit of profit and loss account an amount of £104,999, out of which there has been paid the preference dividend for the half-year to June 30, 1924, amounting to £45,876, leaving the balance at the credit of profit and loss account £59,122, which your board recommends should be carried forward.

This result is a great disappointment to your directors, and is the direct outcome of the continuation of that period of trade depressions to which the iron, steel and shipbuilding industries have been subjected now for almost five years.

CONDITIONS DURING PAST YEAR.

In my address to the last meeting of shareholders I outlined what then appeared to me to be the principal reasons for the depression we had experienced up to that time; practically nothing has been done to remedy the causes to which I then referred, and, if anything, conditions during the period became rather worse. Foreign competition, particularly in the shipbuilding industry, became more marked, and as is stated in the report before you, large orders have been placed abroad which, under normal conditions, would have remained in this country. In the endeavour to retain as much work as possible in the country and in our own establishment, a number of orders were taken towards the end of 1923 and in the early part of 1924 at prices which were wholly unremunerative, in the hope that further orders at better prices would be forthcoming, which would enable the overhead charges to be spread over a larger volume of work and thus reduce the amount of our unabsorbed charges. Unfortunately, our anticipations were not realised, and work instead of becoming more plentiful became scarcer, and, in fact, was almost unobtainable even at prices which included no allowance whatever for overhead charges. This state of affairs particularly applied to the shipbuilding and locomotive industries, but it also applied in no small measure to the iron and steel industry. These are the industries with which this company is principally associated, and the conditions ruling in these industries are reflected in the results of our trading for the year to December 31, 1924.

BALANCE-SHEET ITEMS.

With your permission I will now deal with the different items in the balance-sheet.

No change has taken place in the capital of the company, which remains at the same figure as last year. The first mortgage debentures have been reduced by £50,000, and now stand at the comparatively low figure of £338,200. Loans on security of heritable property and investments have increased by £488,000, accounted for by larger borrowings from our bankers. The 3 per cent. seven-year notes are unaltered at £1,000,000. Other loans have increased by approximately £64,000, while sundry debts due by the company have increased by approximately £68,000, due mainly to an increase in the taxation reserve by the amount of tax deducted from the loan interests payable by the company and from the preference dividend for the first six months of the year.

SPECIAL PREFERENCE DIVIDEND RESERVE.

Special preference dividend reserve remains at the figure of £250,000, and in connection with this item I should like to give

a word of explanation in view of the numerous inquiries we have received from preference shareholders as to why this reserve has not been utilised for the purpose of paying the final dividend on the preference shares for the year to December 31, 1924. In our articles of association provision is made for the creation of a special reserve account out of the balance of divisible profits of the company in any year after a dividend not exceeding 7 per cent. per annum has been paid on the ordinary shares. No greater dividend than 6 per cent. per annum has ever been paid on the ordinary shares of the company, but in past years, when substantial profits were being made, the directors decided to place £250,000 to the credit of special preference dividend reserve. This reserve is employed in the company, and is not represented by separate investment. The decision of the directors not to pay the final dividend on the preference shares for the year to December 31, 1924, was come to in view of the necessity to conserve the financial resources of the company, owing to the existing serious state of these industries with which the activities of the company are so closely connected. I think you will agree with me that this decision was the only possible one to take. The general reserve has been reduced from £1,000,000 to £700,000 for the reasons stated in the report of the directors, viz., that under existing depressed conditions of industry in general, your board have thought it prudent to utilise £300,000 of this reserve to write down the book value of the interests in the subsidiary and connected companies, which have also been seriously affected by the continuation of the trade depression to which I have already referred.

ASSETS.

Turning to the other side of the balance-sheet you will observe that land, buildings, &c., are practically unchanged at £5,499,000. The figure of £456,427 for loose plant and tools and office furniture is approximately £40,000 less than at December, 1923, and is taken on a most conservative basis of valuation. Stocks of raw and manufactured materials and stores and work in progress show a reduction of approximately £163,000 on the previous year's figure, and further reflects the contraction in the activities of the company which has taken place owing to trade depression.

I have already referred to the item of interests in subsidiary and connected companies. Sundry debts due to the company have increased by approximately £117,000, which practically offsets the increases already referred to in sundry creditors and other loans.

TRADE DEPRESSION AND ITS CAUSES.

I have never before had the misfortune to be placed in the position of explaining a balance-sheet and statement of accounts disclosing such results as those revealed by the statements which I have thus briefly reviewed. I do not think I am overstating the position when I say, however, that our results for 1924 are the true reflection of the real position of the iron and steel, shipbuilding and locomotive industries of the country as a whole during that period, and these are the industries which reflect more than any others the prosperity, or otherwise, of the trade of the country in general. Surely, therefore, it is time that the country is facing the real facts of the position seriously. These facts are that under present conditions in 90 per cent. of cases manufacturers of iron and steel, ships and locomotives cannot compete with the prices quoted by their foreign competitors. Our inability to compete is due to those factors which I mentioned in my address to the shareholders last year, viz., high taxation (Imperial and local), high wages costs, short working hours, low outputs, high railway freights and dock charges, and the high cost of fuel. We must find a remedy for each and all of these causes of trade depression, or else we must be content to see the main industries of the country disappear. Taxation is high for reasons which are only too well known and deplored; our industries are still the victims and have to bear the cost of the huge increases which have taken place in national and municipal administration; I am all in place in favour of granting every possible benefit which contributes to the public welfare, but under existing conditions we cannot afford any additional luxuries and be expected to meet the competition of our foreign rivals, who have no such burdens thrust upon them.

WAGES OF SKILLED AND UNSKILLED LABOUR.

Local rates are alarmingly high, due largely to high wages being paid to the employees of municipalities, which are not subject to trade competition. It appears to me ridiculous that the unskilled labourer employed in the cleansing departments of municipalities should be paid anything from 10 per cent. to 30 per cent. higher than the skilled tradesman and be practically assured of regular employment for 52 weeks in the year, while the engineer can hardly even find a job, and if he does, has no certainty that it will last for more than a few weeks or at the best a few months. Likewise wages paid to employees in railway and other similar trades not subjected to international competition are much too high in comparison with the wages paid to men employed or employable in the vital industries of the country. It must be obvious to any person taking an intelligent view of the situation that if these vital industries with which we are connected have to survive the severe competition to which they are subjected from abroad, drastic steps must be taken to reduce costs. Longer hours without increased wages are a necessity, but it would be unfair to ask the men employed in these industries alone to agree to longer hours without increased wages without at the same time adjusting the wages and working conditions of those employed in the sheltered trades to which I have just referred. Our foreign competitors are, without exception, working longer hours for less wages, are not subjected to the high taxation and freight charges with which we are faced, and, also without exception, have a protected home market for their manufacturers.

RAILWAY FREIGHTS.

I have already referred to the necessity for reductions in taxation. It is equally essential that reductions should be made in railway freights, and I would urge that the railway administrations of the country should seriously consider making, without delay, an all-round reduction of at least 25 per cent.

The cumulative effect of such a cut would go a long way towards reducing the cost of living, and would do away with the necessity for the continued high wages paid in all our trades, thus bringing about substantial reductions in production costs to every industry in the country. With regard to protection, I am of opinion that any form of protection at the present time would only act as a palliative—it would not be a cure for the trouble from which we are suffering. The only cure is to bring down our costs of production to a figure at which we can compete in the markets of the world—and this is the only possible solution of our unemployment problem. Our Ministers, our trade union leaders, and our Press should tell the country these facts, and so enable our workpeople to understand the real situation. In the long run we must all realise that the high cost of production alone is the real cause of trade depression in this country, and further delay in facing the situation will mean ruin to many of our principal industries.

I wonder if it is realised how far a reduction of 5s per ton on coal would go towards bringing back prosperity to the steel trade of the country. A prosperous steel trade would necessitate the putting into operation of all our idle blast furnaces, with a consequent demand for coal. This could be brought about by the miners returning to pre-war conditions, and working eight hours per day. Further, a two-shift system in the steel trade as existed in pre-war days instead of the three-shift system now in vogue would reduce the cost of steel by approximately a further 7s per ton. With such reductions as these we could recapture all our home markets and, I feel sure, much of that export trade which has slipped from us in the past few years.

LAW OF SUPPLY AND DEMAND.

In the course of a discussion the other day, I had the view expressed to me that the ordinary laws of supply and demand would adjust the present dreadful state of unemployment in this country. This is a view which I believe is very generally held, but the fallacy of it is obvious when one considers that the laws of supply and demand are natural laws which are being interfered with by artificial laws at the present time. I would particularly refer to the unemployment dole, which operates so extensively against the natural law of supply and demand of labour.

NEED FOR ORGANISATION OF STEEL INDUSTRY.

In my address to the shareholders last year, I indicated the need for the consideration of a scheme for the organisation of the steel industry of this country on lines which would bring about a closer connection between the different companies connected with the industry. In my opinion that need is, to-day, greater than ever. Our greatest foreign competitors have discovered the value of such co-operation and combination, and they are now reaping the reward of their foresight; outputs of steel in Germany, France, Belgium, and the United States of America have all increased substantially within the last few years, while the output of steel from this country has decreased to a serious extent. It is well

known that in these countries there are large combinations of and working agreements between most of the companies engaged in these industries, and the imminent extension of these combinations makes it essential that similar steps should be taken in this country if we are to retain our place in world markets.

RESTRICTION NECESSARY ON FOREIGN ORDERS.

There is one further point of general interest which I touched upon two years ago, and which I should like to emphasise once more—i.e., the advisability of imposing restrictions upon the spending of money raised in this country on the manufacture in foreign countries of goods which could equally as well, if not better, be manufactured here. I feel particularly convinced of the necessity for some such restriction, especially in those cases where money is raised by railway companies, public bodies, and Government or colonial departments. It seems a suicidal policy to continue spending our money in foreign countries, while we continue to pay unemployment dole to those men who would be employed in the production of the commodities which are being purchased from our foreign competitors. If the cost of unemployment benefit paid to these unemployed men were added to the price at which goods are purchased from our foreign competitors, and the resultant figure considered as against the British price and found to be lower, my objections to the spending of British money abroad would largely disappear; but I do not think that any order which has been placed abroad by private individuals, public companies, municipalities, or Government departments could stand the test I have just indicated.

POSITION OF THE COMPANY.

I should now like to say a few words with regard to the present position of the company. The volume of work in hand is still, unfortunately, far short of our capacity; but our steel works at Parkhead and Mossend, with the one exception of our armour department, have been considerably better employed during the first six months of this year than during the same period of last year, and present indications go to show that the improved employment of these works will continue for the rest of this year. At our shipyard work is very scarce, but the contracts we have in hand are on a more satisfactory basis than the contracts in hand at the beginning of last year, and I look for a substantial

improvement in the result of this year's trading. We have closely inquired into all the items of expense of the administration of the company's business, and substantial reductions have been effected. I can only repeat what I said last year, viz., that an improvement in general trading conditions alone is necessary for a return to profit earning. The only development of note in the company's manufactures during the year has been the production of a high-speed Diesel engine for traction purposes. This development arises from the experience we obtained in the manufacture of aero engines to which I referred last year, and gives indications of proving a most valuable asset to the company.

The development of the manufacture of steel houses, to which I referred in my address to the shareholders at the last meeting, has not proceeded so rapidly as I had anticipated, largely owing to the opposition of the building trade operatives to this type of house. I am convinced, however, this opposition will shortly disappear, and that the steel house will be universally adopted by local authorities, to the considerable benefit of the coal, iron, and steel industries of the country.

Gentlemen, I now beg to move that the report of the directors produced, together with the annexed statement of the company's accounts for the year to December 31, 1924, duly audited, be received, approved, and adopted.

The report and accounts were adopted, and the retiring director and auditors were reappointed.

JOHN BROWN AND COMPANY, LIMITED.

CHAIRMAN ON POSITION OF MINING INDUSTRY.

The annual meeting of the shareholders of John Brown and Co., Limited, was held at Sheffield, on June 30th, Lord Aberconway presiding.

The Chairman, in moving the adoption of the report, which recommended the payment of a dividend of 5 per cent. on the ordinary shares, remarked that, although six years had passed since the conclusion of the Great War, there was no improvement in the conditions of trade and industry. We were taxed up to the hilt, thereby offering a fine example to other nations; we had not only paid our debts, but also the debts of other people; we had made loans to our enemies, forgetting their effect upon our trade. We had many other heroic things to our credit, such as deflating the currency and re-establishing our gold standard. What was the result? London had again become the world centre of banking and finance, but it had been little short of disastrous to our manufacturing industries.

With our high standard of finance and currency at par, how could we face the competition of countries with inflated currencies, low taxation, low wages, low standards of living, and low costs of production? That was the great problem facing them, and he was glad that the Government was about to take it into consideration.

The Chairman mentioned that the company had secured the manufacturing and selling rights in Europe for the new "Davis" rolling stock wheel, and this was being made at their Scunthorpe works. Over a million were in use in America, and the English railways regarded it favourably. There were considerable orders on hand.

Turning to their collieries, he was glad to say that their output, at all events, was as good as in the previous year. The quality of the coal was excellent, and they had had the best prices the market could afford. Their Barnsley seam at Rotherham ought now to produce 200,000 tons per annum. They had settled the price list with their men after three years' delay, but whatever they might do at their collieries they were faced with this great cloud of depression in the coal market.

POSITION OF THE INDUSTRY.

As the shareholders were aware, the agreement with the men would be terminated to-morrow, which meant that both sides, in theory, would be free to act as they thought fit, though he supposed they would go on for a time on the old terms. It was quite impossible that in the eastern area—which was more favourably situated than almost any other part of the country—they could continue on those terms. Friendly negotiations had been going on between the men and the employers. Bed-rock facts had been brought home to the miners' leaders at the London conference, and he hoped the atmosphere of suspicion which had so long clouded the relations between the miners' leaders and the coalowners would be dissipated. The leaders on both sides had got together, and there were some men of sound intelligence and high principles on the side of the men.

If they took the coal trade they would find that prices had been down every month for the last twelve months, and yet in spite of that every month saw 2,500,000 tons less coal exported. The result would be that large numbers of pits would go out of work and never be restarted, as only the best collieries like their own would be able to survive.

He had put before the Government privately that in his opinion the best plan for increasing their coal exports was to form, under Government auspices, selling committees in big export centres like Cardiff, Hull, and Newcastle, with a Treasury representative on each. These committees should buy coal at net costs according to the monthly ascertainment now in force, and should sell it at the best possible price to undercut foreign competition in the Mediterranean, Baltic, and South American ports. There would be no profits to the collieries, but they would be kept at work. It would be fair all round. It would restore hundreds of thousands of men to work; it would help the railways, it would use up the idle tonnage, and it would help the engineering trade.

OPERATIONS AT CLYDEBANK.

Turning to the company's operations at Clydebank, he said they had handed over to owners a considerable number of vessels this year, and they had launched others to be completed. For the Canadian Pacific Railway, they had handed over two beautiful coasting steamers for traffic on the Pacific coast—the *Princess Kathleen* and the *Princess Margaret*. They had handed over to the Great Western two new Channel boats for the Channel Islands traffic, and they had handed over an Orient boat. They had now nearly completed one of the big Cunard passenger liners, and, in addition, they had completed a good many sets of machinery and oil tankers.

Turning to the balance-sheet, Lord Aberconway said they would see that their debentures had decreased. That was owing to their having steadily repaid the loans which had a rate of interest in excess of what the price of money warranted. They would notice that the reserve funds were untouched, and the balance carried forward, and the profits earned from the last three years were about the same. Their assets had been increased by the expenditure on the plant for the "Davis" wheel, and by considerable expenditure in other directions on collieries and at Clydebank. This was an extension of output which, of course, concerns like theirs required.

The report was adopted, and the retiring directors re-elected.

PINDENIOYA RUBBER AND TEA ESTATES, LIMITED.

RE-ADJUSTMENT OF CAPITAL.

The meeting of the Pindenioya Rubber and Tea Estates, Limited, was held, on the 29th ultimo, Mr H. B. Vuille (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that although they had averaged about 3d per pound higher than last year for their crop of 177,020 lbs, there had been an increase in the "all-in" costs, due chiefly to a decrease of 37,397 lbs in the crop and a rise in the rupee exchange. The latter now seemed to have been established on a basis of 1s 6d. A dividend of 5 per cent. was recommended. Shareholders would notice that a forward sale ex Go-down Colombo, had been made at 1s 5d per pound—equal to 1s 6d London landed terms. That showed a fair profit, but seemed disappointing under present market conditions. It had, however, always been the policy of the board to sell forward a proportion of the rubber crop; there were now no further forward sales, and for 1926 the company was free to contract at the present price of over 2s, or to take the chance of the market. The board proposed to make a sale at an early date of about the same proportion as they usually contracted for. The book valuation of the estates and buildings had been written down to £64,550, which represented a valuation of only £50 per acre for the planted area.

As to the position of rubber, he did not regard a price of 3s 4d per pound as good for the industry as a whole; it dislocated trade, and would affect consumption if continued too long, but he thought that the 10 per cent. quarterly releases would effect a cure. Estimates had been made by an eminent American connected with the industry, who considered that consumption would increase to the point of overtaking full production of rubber, and that by 1928 there would be a world shortage. A great deal might happen before 1928, and it was sufficient to say, for the moment, that the industry had been saved by the Stevenson scheme, and that so far as the future could be forecasted there was prosperity in store for producers of rubber.

As to tea, the course of the market had been different. A year ago producers had had matters entirely in their own hands, but high prices had resulted in the market being flooded with coarse, stalky teas towards the end of 1924. He was not, however, a pessimist about tea, for he thought the evil had been realised, and that efforts were being made to right the situation.

The report and accounts were adopted, and resolutions readjusting the capital so that in place of each six shares of 1s 8d shareholders should hold five shares of 2s each were unanimously approved.

THE EBBW VALE STEEL, IRON, AND COAL COMPANY, LIMITED.

COAL PRICES AND THE SEVEN HOUR DAY.

The annual general meeting of the Ebbw Vale Steel, Iron, and Coal Company, Limited, was held, on the 30th ultimo, at the Cannon street Hotel, London, Sir Frederick Mills, Bart. (chairman and managing director), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the year just closed had proved to be one of the most difficult he could remember in all his 40 years' experience. After detailing the financial results, he said: The break in demand for our coal began in May of last year, and whilst the demand for the coal from the Ebbw Vale group of collieries has continued at a reduced price, the fierce competition from Germany, France, and Belgium has seriously affected the sales of coal from our subsidiaries in those markets overseas which used to take almost their whole output. In view of the decreased demand no fewer than three of the collieries in the subsidiary undertakings have been entirely closed down for several months, and others of them have worked intermittently. We must, therefore, either find new markets or fresh uses for our coal, or, better still, reduce the cost and so regain the markets we have lost by reason of it.

HIGH PRICE OF COAL.

There is so much spoken and written on the reason for the high price of coal in this country that it is difficult for the man in the street to obtain a clear-cut impression; I wonder if I can tell you in a few words? When the Seven Hours Act was passed it was enacted that the miner should not only work one hour less time but that he should be paid 14.2 per cent.—its equivalent—on his earnings, which provision, of course, counts in two ways, for not only is the miner paid for not working the eighth hour, but the colliery has to carry upon its reduced output all the other on-costs, including rates, taxes, and dotal labour. Obviously no reasonable man wants to reduce earnings; it follows, therefore, that liberty must be given to the miner to work that "lost hour"; if that be granted it will again count in two ways, but this time for, and not against, the industry, for not only will the 14.2 per cent. as an item of cost disappear, but there will be an eighth hour worked to help carry the on-costs. I am assured that if this course be sought and adopted the cost of coal in this country will fall sufficiently to enable us—in time—to recover our lost markets abroad, to encourage the iron and steel trades and their manifold dependent industries, and last, but not least, the men will themselves earn more, and more of them will be employed.

IRON AND STEEL INDUSTRY.

In iron and steel we have been subjected to an intense competition also from several countries abroad, and were it not for the loyalty—alas! rapidly diminishing, and not unnaturally—of our own kith and kin both at home and across the seas, our plight would have been terrible in the extreme. As it was, work could be obtained at a price; your directors reviewed the position with grave thought, and decided it was better for the company, for our workpeople, and for the district to work at a known loss than close down. A distinct and definite loss has been incurred in the manufacture of iron and steel, but I am happy to observe that the results from the departments ancillary to the iron and steel works prove that the policy of your board has been amply justified. The chief reason for the comparative high cost of British iron and steel is the price of coal. When it is borne in mind that the cost for coal in a ton of steel is as much as from 25 per cent. to 50 per cent., according to the locality, it will be apparent that without cheaper coal the advantage must lie with our competitors abroad. I am glad to record a complete absence of disputes with our employees, but I hope they will recognise it will not be possible to continue indefinitely to sell our products at a loss, or even without profit; profit means progress and prosperity, loss means stagnation and disaster to both capital and labour, and if, as I firmly believe, the cost of coal and of iron and of steel is made up of at least 90 per cent. labour, it is evident that our employees must co-operate with the management wholeheartedly to get our costs down in order to regain our markets overseas, from whence comes, for the most part, the money to pay their wages and buy their bread.

Finally, he referred to the heavy burden of local rating, mentioning that these and other imposts, as paid by their company during the past year, gave a grand total of £298,479, sufficient to pay the preference dividend and 8 per cent. on the ordinary shares. It is indeed doubtful if industry can for long stand such luxuries in the face of present world conditions. If the new proposals in regard to pensions are carried, an additional sum of at least £20,000 per annum must be added to these burdens.

The report and accounts were unanimously adopted.

OHLSSON'S CAPE BREWERIES, LIMITED.

DIVIDEND MAINTAINED.

The thirty-sixth annual general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 2nd instant, at the Great Eastern Hotel, Liverpool street, London, Mr Gerald Buxton (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that there had been a slight falling off in the sales during the past year, and the profits were therefore somewhat reduced in comparison with the previous year. He was glad to say, however, that they had been able to maintain the same rate of dividend on the ordinary shares. He was sorry to say that the consumption of beer in the Dominion did not seem to increase as rapidly as they would like. They all knew that the company had a very considerable beer duty to pay, and they had to compete with the local product of the Dominion, namely, wine, upon which no duty was paid. This made the comparative price of beer and wine very different from what it was in this country. Quite recently they had reduced the price of beer all round, and they hoped that by so doing they would sufficiently stimulate the consumption and improve the position.

Dealing with the balance-sheet, he pointed out that the company had invested some £27,000 more in properties, which he hoped would be producing trade during the current 12 months. With regard to the plant, they had spent a large sum of money in modernising the bottling plant in order to reduce labour expenses. They had adjusted it in the way of depreciation by taking £22,000 out of the reserve account, and reducing the figure at which the plant stood in the balance-sheet to £108,000. The stocks in trade were less by £8,000, and debts due to the company were about £4,000 more. Cash at bankers and in hand was about £1,000 more than last year. There was one item in the profit and loss account which was rather larger as compared with last year—namely, income-tax. That, of course, was owing to the three years' average of profits. They would now get rid of corporation profits tax, although they were liable to pay a small amount for the first three months of the year. Unfortunately, however, the powers that be in South Africa had made a slight alteration in the Colonial income-tax. It used to be 6d in the £, and an additional tax of 1s in the £ on dividends paid. It was now going to be an inclusive rate of 2s 6d in the £.

ARCOS LTD.

Sole Purchasing and Selling Agency in Great Britain for the Government of the U.S.S.R.

TURNOVER TO
APRIL 1, 1925, £56,000,000.

Exports from Russia to Great Britain include timber, flax, furs, ores, metals, crude drugs, petroleum products, etc., to a total value of £18,000,000.

The more important items of import to Russia are agricultural machinery, locomotives, tools, motors, scientific apparatus, drugs, clothes, boots, etc., to a total value of £38,000,000.

49, Moorgate, London, E.C.2

Telegrams: "Arcosarcos, Ave. London,"
Cables: Arcosarcos.
Telephone: London Wall 6628.
Codes: A.B.C., 5th & 6th edition.
Marconi, Bontleys & Zebra.

£, which would add something to their liability. As against that the Imperial rate of tax would be 6d in the £ less, so that it would not make much difference.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £40,000,000 in Treasury Bonds and Treasury Bills were opened on July 3, 1925, and the total amount applied for was £52,085,000. For bills at three months dated Monday to Friday £98 17s 2d, above in full. Saturday's bills at £98 17s 4d, and above in full. The amounts allotted were as follows:—In bills at 3 months, £37,785,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
1925.				
May 8.....	30,000,000	39,145,000	4 10 6 29	nil
May 15.....	30,000,000	49,385,000	4 13 5 66	nil
May 22.....	30,000,000	54,380,000	4 9 5 9	nil
May 29.....	40,000,000	54,460,000	4 6 4 48	nil

Messrs Samuel Montagu and Co. write on July 1st as follows:—

GOLD.

The Bank of England gold reserve against notes on the 24th ultimo amounted to £155,353,055, as compared with £155,803,610 on the previous Wednesday. The following movements of gold to and from the Bank of England have been announced since our last issue:—

	Received.	Withdrawn.
June 25.....	nil	9,000
" 26.....	nil	19,000
" 27.....	nil	nil
" 29.....	595,000	27,000
July 1.....	nil	221,000

The origin of the £595,000 bar gold received on the 30th ultimo was not officially disclosed, but it is generally understood that it was South African, a most interesting circumstance in view of the fact that it would be the first large purchase from that source by the Bank since the restoration of the gold standard. This transaction is the natural consequence of the fact that recent offerings of gold on the open market have not readily been absorbed, the price of such gold being now 3d per ounce under the Bank of England selling rate. The destinations of the £231,000 sovereigns withdrawn were given as follows:—India, £184,000; Singapore, £27,000; and Holland, £20,000. During the week under review £319,000 on balance has been received by the Bank. The net influx since the resumption of an effective gold standard is now £1,773,000. Reuter states that Rhodesia will return to the gold standard to-day, and that at present the gold held is English currency, but that it is anticipated South African coinage will be gradually introduced.

SILVER.

The absence of fresh anti-foreign outbreaks in China and a relaxation of the strikes which have been interfering with the normal economic life of Shanghai and of Peking, have been reflected in the price of silver. Recent demand for bear covering and the Indian bazaars, as well as reluctance of operators in America and elsewhere to sell, were all symptoms of the uneasiness felt as to developments in China. Hence reassuring indications of a return to more normal conditions have been the most important factor in the silver market during the last few days. Bear covering on the 27th ult. carried both prices to 32 1/2d, the highest quotation recorded this year for two months' delivery, and only exceeded by 1d on January 12th in the case of that for cash delivery. From this point quotations receded more from absence of buying than from any great pressure to sell. Should this set in from China or any other important quarter, the market does not promise much power of resistance.

URUGUAYAN

BANKS.

BANK OF BRITISH WEST AFRICA, LIMITED.—The thirty-first annual report of this bank, just issued, for the year ended March 31, 1925, shows that, after providing for current charges (including the contribution to the staff profit-sharing fund), rebate on bills, and for all bad and doubtful debts, there remains a balance of £112,352, against £95,989, to which must be added £35,680 brought forward from last year, making a total amount available of £148,032, against £130,679. Of this sum £24,000, being an interim dividend of 2 per cent., has already been distributed, and the directors now recommend the payment of a final dividend of 3 per cent., absorbing a further sum of £36,000, making a total distribution for the year of 5 per cent., less income-tax as before. The directors also recommend a transfer of £25,000 to contingency fund, and £25,000 to writing down premises and furniture account, leaving a balance of £38,032 to be carried forward to the profit and loss account for the current year. The investments held stand in the balance-sheet at less than their market value as at March 31, 1925. A branch of the bank has been opened at Oshogbo, Nigeria. In view of the close association existing between the bank and Lloyds Bank, the branches at Alexandria and Cairo have been closed, and the business conducted there amalgamated with that of Lloyds Bank in Egypt, as from June 1st last.

GUARANTY TRUST COMPANY OF NEW YORK.—A cable to the London office of this institution gives the following extracts from the company's statement of June 30, 1925:—Total resources \$716,681,181, being an increase of \$66,254,054 over the statement of June 30, 1924, and \$88,589,784 over the statement of March 25, 1925. Deposits, \$577,221,405; an increase of \$45,726,083 over the statement of June 30, 1924, and \$50,871,643 over that of March 25, 1925. Surplus and undivided profits, \$20,369,140, an increase of \$1,605,648 over the statement of a year ago, and \$809,678 over that of March 25, 1925.

IMPERIAL BANK OF PERSIA.—The report for year ended March 20, 1925, shows a profit of £90,440, to which is added £34,552 brought in from previous account, making a total available of £124,992. From this sum £5,426, the amount due to Persian Government in terms of the concession, has to be deducted, leaving £119,566. The dividend is 9s per share, free of income-tax, absorbing £45,000. The sum of £30,000 is put to reserve, and £10,000 to bank premises account. The sum of £34,556 is carried forward.

P. AND O. BANKING CORPORATION.—The net profit for the year to March 31, 1925, was £136,215 (last year, £136,382). The directors have placed to reserve £25,000 (last year £20,000), and have written £5,000 off premises account, as against nil last year. They propose to pay a dividend of 5 per cent., as against 5½ per cent. last year, carrying forward £17,584, as against £17,507. The annual general meeting will be held at the company's head office on July 10th, at 3 p.m.

TEA.

LUNGLA (SYLHET) TEA.—The crop for 1924 was 2,677,511 lbs. against 2,636,351 lbs for 1923. The average price realised by the crop, including an estimate for the tea remaining to be sold, was rs 4.44d per lb, as compared with rs 3.57d per lb in 1923. The revenue account shows a profit on the season's working of £68,226, to which has to be added £1,988 for interest on investments, and £12,438, the balance from last account. After payment of debenture interest, taxes, and sundry items, which amount to £15,445, there remains a balance at credit of profit and loss account of £67,208, which it is proposed to dispose of as follows:—Preference dividend, £4,812; ordinary dividend of 20 per cent. for the year, £41,525; write off buildings, machinery, and tramway account, £7,000; reserve account, £3,000; extra remuneration to directors, £2,500; carry forward, £8,371.

RUBBER, &c.

FEDERATED (SELANGOR) RUBBER.—The profit for the year ended March 31, 1925, after writing off the sum of £654 for depreciation, was £6,325, to which must be added the balance brought forward from last year, £4,075, making a total of £10,400, which the directors recommend should be dealt with in the following manner:—To pay a dividend of 4 per cent. (less tax), absorbing £4,224; to place to taxation reserve, £500; to place to general reserve, £1,500; and to carry forward to next year, subject to corporation profits tax for the three months to June 30, 1924, £4,176. The rubber crop harvested during the season was 203,471 lbs. The amount licensed to be exported during the season was 208,492 lbs. deduct licences used for balance of previous season's crop, 38,938 lbs.—169,554 lbs, leaving an excess of 33,917 lbs, which has been taken into the accounts at cost price. The whole of the quantity licensed to be exported during the season, viz., 208,492 lbs, has been sold, and has realised a net average price of 16.92d per lb. The standard production of the company was revised as from November last, and now stands at 372,828 lbs, being an increase of 20,788 lbs on the previous figure. The f.o.b. cost was slightly reduced during the season, being 8.49d per lb, as compared with 8.66d per lb in the previous season. A contract has been entered into for the sale of one-half of the company's output of first latex rubber from July 1, 1925, to December 31, 1926, at the approximate London equivalent of 1s 7½d per lb.

GRAND CENTRAL (CEYLON).—The directors announce that they have sold 240 tons of standard quality rubber, together with 60 tons of lower grade rubber, deliverable in equal monthly quantities during 1926 at 1s 10½d per lb, f.o.b. Colombo.

MISCELLANEOUS.

BRITISH AUTOMOBILE TRACTION.—The traffic figures are as follows:—Week ended May 29th, £41,113; week ended June 5th, £69,604; week ended June 12th, £54,906; week ended June 19th, £54,393; total, £219,946. Increase compared with corresponding

four week of 1924, £55,830. Total to date for 1925 (24 weeks), £880,868. Increase compared with corresponding period for 1924, £201,528.

ENGLISH SEWING COTTON COMPANY, LIMITED.—The directors report that the accounts for the year ended March 31, 1925, result as follows:—After providing for depreciation, debenture interest, income and corporation profits taxes, directors' and auditors' fees and law charges, the net profit amounts to £450,129; to which is added the balance brought forward from last year's accounts, £165,359, making a total of £615,488; and after deducting dividends paid, viz., on ordinary shares, interim dividend of 5 per cent. (actual), paid February 9, 1925, £100,000; on preference shares, 5 per cent. for the year ended March 31, 1925 (of which 2½ per cent. was paid on September 30, 1924, and 2½ per cent. on March 31, 1925, £50,000—£150,000; there remains a balance of £465,488, which the directors recommend shall be appropriated as follows:—Payment of a final dividend of 10 per cent. on the issued ordinary shares, making with the interim dividend of 5 per cent., already paid 15 per cent. for the year, £200,000; bonus on issued ordinary shares, 5 per cent., or 1s per share, £100,000; transfer to pension fund for employees, £11,692; balance carried forward, £153,796.

FREDERICK HOTELS, LIMITED.—The directors of the Frederick Hotels, Limited, announce that, having increased their holdings of 4 per cent. mortgage debenture stock of the company to £150,000, they have now cancelled this amount of stock, thus reducing to £750,000 the debenture stock outstanding.

MOND NICKEL COMPANY.—Balance at credit for year ended April 30, 1925, is £313,039, against £276,438 for preceding year. The ordinary shareholders again receive 12½ per cent., the sum of £50,290 is carried forward, against £40,403 brought in. A scheme is to be submitted to shareholders to increase the authorised capital of the company by the creation of 1,500,000 7 per cent. cumulative preference "A" shares. It is proposed to issue 1,250,000 of these shares, and to make an issue of a new 5½ per cent. debenture stock to the amount of £1,000,000. The proceeds of these issues will be applied to redeem the whole of the outstanding £1,300,000 8 per cent. debenture stock, to repay loans, and to provide for extensions and further working capital.

PATONS AND BALDWIN.—This firm of manufacturers of wools and hosiery yarns has experienced a reduction in net profits for the year ended April 30, 1925. The report just issued shows that the net profit is £151,755, as compared with £361,686 for the preceding year. The amount brought in was £83,192, making £234,947 available. Preference dividend at 6½ per cent., less income-tax, absorbed £68,482. The ordinary dividend of 7½ per cent., free of income-tax, absorbed £119,947, and £46,519 is carried forward. The balance-sheet shows total assets £4,382,585, against £4,851,383. Subsidiary companies' shares and advances stand at £210,942, as against £585,631. Investments at market prices (below cost) stand at £34,601, against £41,326. Sundry debtors, bills receivable, and cash on hand and in banks are lumped together in one item, standing at £879,698, against £577,547. Stocks have been reduced from £2,175,358 to £1,600,386. With regard to liabilities, reserve fund is £600,000 against £500,000. Creditors, including reserves for Government taxes, &c., stand at £437,663, against £789,523.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

General conditions remain favourable for cereal crops in the United Kingdom, and wheat has made good progress despite a spell of dry weather. Good soaking rains, however, are urgently needed, as pastures are becoming parched and root crops suffering from lack of moisture. Supplies of native wheat continue on a fairly liberal scale considering the advanced period of the season, but prices have declined in sympathy with the downward movement in imported varieties. Millers are apparently well supplied at the moment, consequently business made quiet progress. In the prevailing pressure to sell Plate and North American grades, measures pending further developments in the situation. Steamer load 57s 1½d to the Continent. Maize also dull and easier. Steamer of La Plata June-July sold 37s 6d, Dan-Gal-Foxanian afloat 39s 6d per 480 lbs c.i.f. terms. Wheat again easier. No. 1 Northern Manitoba quoted 62s 6d, No. 2 ditto 61s 3d ex-ship, 496 lbs. English quoted 11s 6d to 11s 8d per 112 lbs free on rail. Flour in quiet demand and values weaker. London standard sack delivered in the Home Counties, with 6d to 1s sack less for deliveries in London districts. Of imported, Manitoba patents 44s to 45s, and Australian 41s 6d per 280 lbs ex-store. Barley dull. Californian quoted 45s to 52s, Chilean Chevalier 47s to 65s, brewing 50s to 54s according to quality, Australian 57s to 63s ex-store per 448 lbs. No. 4 Canadian Western landed 37s 3d, Karachi 9s to 10s 8d, the latter for finest malting, per 112 lbs. Maize easier. Plate landed 43s 3d, ditto ex-ship to arrive 40s 3d per 27s 3d, No. 2 Canadian Western ex-ship 31s 6d, landed 32s 6d, No. 2 Canadian feed ex-ship 25s 3d, landed 26s 3d, Chilean tawny

AMERICAN WHEAT MARKETS.

The markets opened firm under the influence of frost forecasts, stimulating Liverpool cables and the belief that liquidation had finished, but soon weakened when speculative selling took place. Rumours of unwanted rain in many areas had a steadying effect, but by the end of the week scattered liquidation and favourable crop advices had caused prices to recede. Recent market quotations:—

(b) July delivery.

IRON, STEEL, AND COAL.

We extract the following from the weekly report issued by the London Iron and Steel Exchange:—The trade has now entered upon what is usually the quietest season, and this year the dullness is accentuated by the prevailing industrial unrest. The prospects of an early revival in business, however, are not good. The strike at the Belgian steel works continues, and there is danger of its spreading to other departments of the industry. As a consequence, the

EVERY DESCRIPTION OF BRITISH AND FOREIGN BANKING BUSINESS TRANSACTED.

[July 4, 1925.]

quantities of steel material offered from the Continent have diminished somewhat, as there is an obvious inclination on the part of producers in France, Luxemburg and Germany to withhold material in the expectation that the closing down of the Belgian works will cause prices to rise. Considerable competition is being experienced by the British pig-iron producers, and fair quantities of Continental iron are now arriving in this country, which have been sold at figures which compete with British iron, except at delivery points involving high railway freight charges. The demand for semi-finished products continues fair. Considerable irregularity in prices exists in this market. Similar conditions exist in the market for finished steel material. British works are still experiencing difficulty in obtaining business, and the labour position at home is resulting in buyers and sellers taking a cautious line in business.

Our Middlesbrough correspondent's report, dated July 2nd, is as follows:—Pig-iron: The price of pig-iron continues to decline, and makers are now prepared to accept as low as 72s 6d for Cleveland No. 3 G.M.B., whilst hematite makers are quoting 77s 6d as the present price for East Coast mixed numbers hematite. These reduced prices do not bring forth any volume of new business, and consumers are only buying small quantities to cover their immediate needs. Manufactured iron and steel: Some of the local works have secured orders recently, but they are still having the greatest difficulty to get sufficient specifications to keep their works going. The following may be taken as approximate prices:—Steel ship plates, £8 15s; steel ship angles, £8 5s; iron bars, £11 12s 6d; steel rails, £8 10s. Iron ore: Prices are easier, and there are now sellers of best Rubio at 20s 6d per ton, c.i.f. Tees.

Our Glasgow correspondent writes:—There is no evidence of improvement in the iron and steel trades. Pig-iron requirements are easily met, mostly from stock, with prices unaltered. Shipments from the Clyde last week were 470 tons, of which 355 were for foreign destination. The figures for the corresponding week of last year were 1,084 and 1,065 tons respectively. In the steel works plate orders are badly wanted. The vessels launched on the Clyde during the half-year, amounting to 302,957 tons, is a record for the period since 1913, but unfortunately the orders coming in are not adequate to fill the vacant slips. Iron bar makers are just keeping going on orders from wagon and locomotive works. Re-rollers are keenly competing, and secure most of the ordinary quality business. Export inquiry in light bars and sheets is quite brisk, and some fair orders have resulted. Light sheets for the Far East have been in better request, and several hundred tons have been secured by local makers during the last few days. In the coal trade a spurt in buying for export, on account of approaching holidays and strike rumours, has stiffened prices for some grades.

Our Sheffield correspondent writes:—The disinclination to buy iron and steel materials is more pronounced than before, and the market is being adversely affected by the unsettled state of the coal industry. A stoppage in the coalfield is a possibility which cannot be disregarded, and in such circumstances buyers are naturally unwilling to make any forward commitments. A further contraction of trade in wire rods is reported, and there is much slackness among the wire drawers. The demand for best quality wires is particularly weak. Prices of materials generally continue to ease, as there are stocks at a good many of the furnaces. There is a fair amount of work on hand at steel forges and foundries, but orders are generally small and bookings irregular. Heavy slip and engineering forgings are quiet. Work is substantial and fairly constant in the axle, tyre, and spring departments. The best tool steels are selling fairly well in the home market, but in face of falling currencies not much business can be done with the Continent. Tools made from such steels are selling rather more freely than of late. The output of files, saws, and edge tools continues equal to pre-war levels. There is further shrinkage in the buying of cutlery and plated goods. The call for the new non-corrosive steels continues to be progressive. In the present chaotic conditions of the coal trade there is little fresh to report. There are no settled price quotations at the moment. Until affairs are straightened out in the coal trade no improvement in the industries of the country as a whole is regarded as possible.

Our Cardiff correspondent writes:—Towards the end of the present week there was a better inland demand, and indications of a slight improvement in that for export. The information which has reached the market concerning the proposals of the coalowners for the amendment of the existing wage and other working conditions in the industry has aroused fears that exceptional difficulties will be met in the South Wales coalfield, and that these may quite possibly lead to a stoppage of work at the end of July. Steps accordingly have been taken to increase stocks. The volume of the new inquiries has not been sufficient to affect prices to any appreciable extent, for outputs have continued in excess of the current requirements of the market, but the undertone is firmer, and there is a possibility of a sharp advance in quotations if the impending negotiations take an unfavourable turn. The South Wales coalowners have already intimated to the workmen that they will apply for power to work double shifts where they are desirable and practicable; to discontinue the system under which men employed on the afternoon and night shifts are paid six shifts for five worked, and men employed on week-end work are paid at the rate of seven turns for six and eight for seven; and also for a revision of the customs by which the miners are now receiving their house coal at an average pit head price of about 7s 6d per ton, against a cost price of about 20s per ton.

The following are the current approximate quotations:—Best Admiralties, 25s 6d to 26s; seconds, 24s 6d to 25s; best drys, 24s 6d to 25s; black veins, 24s to 24s 6d; Western Valleys, 23s 3d to 23s 6d; Eastern Valleys, 23s to 23s 3d; best bunker smalls, 14s 6d to 15s; ordinary cargo smalls, 11s 6d to 13s; coking smalls, 14s 6d to 15s; anthracite best large, 41s to 44s; red vein large, 27s to 30s; machine-made cobbles, 51s to 52s 6d; French nuts, 52s 6d to 53s 6d; stove nuts, 48s to 50s; rubbishy culm, 12s to 12s 6d; coke (special qualities), 40s to 45s; patent fuel, 23s 6d to 26s; pitwood, ex ship, 30s 6d to 31s 6d.

There has been no improvement during the week in the position in the tinplate trade. Prices have been maintained with difficulty, and demand remains comparatively inactive.

METALS.

The market for tin ruled firmer at the week's commencement following higher cables from the East, combined with reserved sellers, a good inquiry being dealt with. Later movements, however, were attended by slight irregularity. Standard cash sold at £253 10s, £253, £253 15s, three months, £255 12s 6d, £255, £259. Copper proved a firm market, with dealings on a liberal scale at gradually hardening rates. Standard cash sold from £59 16s 3d to £60 12s 6d, and three months £60 15s to £61 11s 3d. Lead in good support, and prices firmer. Good soft foreign pig, July, sold £33 5s to £33 16s 3d; August, £33 to £33 10s; September, £32 15s to £33 7s 6d; October, £32 13s 9d to £33 1s 3d. Spelter was accorded steady support at generally firm rates. July sold £33 17s 6d to £34 7s 6d; August, £33 15s to £34 2s 6d; September, £33 10s to £33 18s 9d; October, £33 11s 3d to £33 15s per ton. Antimony, 64 ton, ex warehouse. Aluminium quiet. Home trade, also export, quoted £118 to £120 ton. Quicksilver firm. Spot, £14 to £14 2s 6d per bottle. Wolfram quiet at 14s 9d to 15s per unit, ex warehouse.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—A fair amount of business has been done this week in wool and tops, and it is evident that some users have been doing a certain amount of covering for immediate requirements. Generally speaking, traders here are inclined to take a more optimistic view of the outlook for wool, and it is now thought that the colonial wool sales which open in London next Tuesday will be well supported. Continental requirements are fairly substantial, and there is a possibility of America coming into the market, especially as the wool textile industry in the United States has shown considerable expansion during the last few weeks. Topmakers are adopting a more cautious policy in discussing new business, and although there have been a few offers about for tops to be delivered during the last two or three months of the year, there are not many sellers prepared to accept the low prices mentioned for this business. All sections of the industry are waiting for the auctions in London and Australia to reveal the true position of the raw material. There is certainly no change in topmakers' quotations, but the tendency is towards the direction of firmer prices, but the tendency for merinos. There is a moderate amount of inquiry for yarns, but in thing like remunerative prices. Demand for piece goods on home account is well maintained, but the export markets are quiet.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The long-anticipated London sales will commence on Tuesday. What takes place at the series will exert a very great influence upon the textile industry not only in this country, but throughout the world. During the past month business has been cut down to the barest possible requirements, and the idea dominant in the minds of everybody has been that nothing definite could be accomplished until a further lead had been given in the raw material. The situation has been exceptionally bare in this respect, sales having been suspended in Australia since May. Any evidence of stabilisation in wool values will react very beneficially, but if buyers are slack and indifferent when the sales commence the trade will be driven further into the mire. The Importers' Committee and the selling brokers have decided to put before the trade 136,000 bales. Considerable support will have to be given by the Continent and America if the quantity named is lifted at all creditably, for all top values, and although Bradford topmakers put up their prices at the end of the May auctions to 4s 6d for 64's, that figure has never been realised. It is a fact that 3s 6d has been accepted for has been held up long enough, and it is now high time for wool to come forward, both in London and Australia, and be sold at a business to be done, but that those nearest to the ultimate consuming end of the trade have not yet recovered their confidence in raw material values. A free movement of the raw material into consumptive channels at reasonable prices is necessary to encourage a corresponding movement in the placing of orders for piece goods.

July 4, 1925.]

A considerable weight of wool is waiting to be absorbed, but it would not be regarded with such feelings of apprehension if sufficient business could be obtained to keep machinery occupied. The inflation of raw material values has inflicted a severe blow, encouraging the use of substitutes which have displaced wool far more extensively than is generally realised.

There is reason for saying that Continental buyers will come to London prepared to buy liberally—at a market price. The severe slump in the value of the franc cannot but have crippled the purchasing power of French buyers, but they will operate liberally if sufficient encouragement is held out to them. We believe that home trade firms will be prepared to buy on a fairly large scale in order to contribute something to the stabilisation of values.

THE COTTON TRADE.

MANCHESTER, July 2.

Conditions throughout the market have continued generally quiet. Although sentiment in raw cotton circles remains bullish, many local operators do not believe in higher prices for manufactured goods. Cloth inquiry for India has shown some expansion, and in bleaching and finishing styles a few more sales have been put through. Certain advices from China have been rather better. Useful orders have been secured in fine goods, chiefly for better. The American yarn situation has been very little affected by the result of the short time ballot, and there is practically no change in output. A dragging demand has been met with at poor prices. A limited turnover has again taken place in Egyptian spinnings, and producers still tend to lose ground.

VEGETABLE OILS AND OILSEEDS.

The weakness of linseed oil has been more accentuated, and at Hull this week has actually fallen to below £40 per ton, naked ex Hull mill, which is £5 per ton less than a month ago. This has been accounted for largely by the sharp decline in seed. Lower prices have, however, had the effect of stimulating demand from customers to a considerable extent, and a good business is reported for prompt and early delivery. On Thursday the price had eased to £39 10s. for spot and delivery to December, the lowest level touched since August last year. Cotton oils have taken an easier turn, crude Egyptian offering at £42 and ordinary refined at £41 5s per ton, naked ex Hull mill. Soya bean oil is quiet, as is also palm kernel oil at about unchanged rates. Rape oil is lower at £48 for crude.

In the oilseed section Plate linseed on spot and in near positions is weak, and to Hull has been done at as low as £18 10s for seed on passage, and £18 12s 6d for early shipments. Up to £19 has, however, been paid for August-September. For Calcutta to London, July loading, £20 15s has been accepted.

Egyptian cottonseed is not so firm, old crop offering at £12 12s 6d, July loading, while new crop has receded to about £12 for November-January. Trade, however, is quiet.

CHEMICALS AND FERTILISERS.

Trading in chemicals continues to be of a limited character, though the general undertone is fair. Quotations for a number of products have eased to lower levels, and imported material is being offered at competitive rates. Acetate of soda is cheaper at £19. Acetic acid is rather dull and lower at £38 7s 6d for 80 per cent. technical. Formaldehyde, 40 per cent., is still weaker at £38, with little business. Carbonate of potash, 90-92 per cent., has dropped to £24, with some activity. Arsenic further reduced to £20 10s, f.o.r. mines. Cornish output is being restricted, with stocks ample. Citric acid is stronger at 4½d to 4¾d per lb, less 5 per cent., with demand good. Barium chloride is quieter and cheaper at £9 10s to £10 on spot. Sal ammoniac prices are lower, with crystals £22 to £22 10s in casks, and business is better. Sodium nitrate is again cheaper at £23 10s, with conditions dull; tartaric acid firmer and dearer at 10½d to 11d, less 5 per cent.; lithopone, 30 per cent., cheaper at £19 10s to £20. Carbolic acid, crystals, declined a point to 4½d per lb. Fertilisers are not attracting much attention, though fair business

An International Service

THE Central Union Trust Company of New York is equipped with every facility for the prompt and efficient handling of financial transactions throughout the world. Foreign banks and business houses with banking interests in the United States are invited to avail themselves of this service, which includes the purchase and sale of foreign exchange, collections, and the issuance of commercial and travelers letters of credit. In addition, the Company conducts a general banking business and acts as Executor, Trustee, Transfer Agent, Registrar of Stocks and in every other Fiduciary capacity.

is moving for ammonium sulphate at £12 5s, delivered home areas. Nitrate of soda is quiet at £12 10s, and superphosphate unaltered, but dull at £3 for 30 per cent.

HIDE, LEATHER, AND ALLIED TRADES.

The firmness in the hide market is very pronounced this week, and prices are advancing all round. At the Bermondsey auctions on Thursday, best ox hides sold from 6½d to 8½d per lb, and seconds from 6½d to 8½d per lb—many classes advancing ½d to ¾d per lb. Best cows made 6½d—an advance of ½d on last prices. Calfskins were all dearer, best making from 7½d to 15½d per lb, and showing advances of ½d to ¾d per lb. Lambs sold from 2s 10d to 7s 6d, and pelts from 5s to 6s 9d each. Business in fregoric hides is rather better and Artigas ox 9½d has been paid by Scandinavia. Dry hides are rather more saleable, home tanners picking up bargain lots when offered. The Chicago position is cabled as steady, with best heavy packers still selling at 15½ cents.

Trade is still rather quiet in Bermondsey, although the tone is better. Sole leather prices have been shaded of late to clear stock lines in wet salted bends, but now that the hide market has taken an upward turn, concessions will be over and values firmer. Common dry hide bends, and shoulders which will cut soles, are still the most popular lines, repairers taking a fair quantity of medium wet salted and market hide bends and butts. Offal is as dear as ever, and spready stuff is not sufficient to meet the demand. Trade in upper stock is difficult; the demand is very fitful, and curriers are short of orders, and unable to get values of rough E.I. kips lower. Coloured glacé kid, patent, and willow calf hold the field, but black leathers are neglected. The boot and shoe section is improving, one feature of business being a wholesale clearance of white goods and sports shoes, caused by the long spell of fine weather.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 3.

SUGAR.—Cuban receipts for past week totalled 63,738 tons, against 24,270 tons at corresponding period last year; exports 100,291 tons, against 79,327 tons; stock 1,121,345 tons, against 788,141 tons. Centrals working 15, against 5. A generally steady tone governed the market for actual sugar, but business is still confined to immediate wants, with British makes still largely favoured. Messrs Tate and Lyle's cubes, quoted 35s to 36s; granulated, fine, also coarse grain, 31s 1½d; No. 1, 30s 1½d; No. 2, also London and T.L., 30s 7½d; month forward, 30s 6d; yellow crystals, spot, 28s 1½d. Continental granulated maintained, while growers complain of insufficient moisture. Czechoslovak granulated, spot, quoted 29s 7½d; prompt shipment, also November-December, 16s 9d, f.o.b. Hamburg. Dutch "J" granulated, spot, 29s 7½d; ready for shipment, 16s 8½d, f.o.b. Rotterdam. Belgian ready, 16s 3d; November-December, 16s 3d, f.o.b. Antwerp. Polish crystals, prompt, 16s 1½d, f.o.b. Danzig. American granulated, spot, 29s 9d; ditto, July-August, London, 16s 10½d; and outports, 17s 3d, c.i.f. terms. Shippers of white Java show more reserve, as cheap second-hand sellers have practically withdrawn, and July-August quoted 15s 10½d, c.f. and i. London. Raw refining kinds steady, with a fair business in force. 6,000 tons Cuban, basis 96 per cent., July, sold at 12s 3d; and 12,000 tons, ditto, July-August shipment, at 12s 3½d, c.f. and i., U.K. Indian market steady, with more interest shown. White Java, October-December, sellers, 15s 9d; and January-March, 16s, c. and f., Calcutta. White terminal irregular, with fair inquiries. August, sold, 16s 4½d to 16s 1½d; November, 16s 3½d; December, 16s 7½d to 16s 4½d; March, 16s 8½d per cwt.

COCOA.—The general tone of the market remains steady. Grenada qualities being held for full rates, but business proceeded quietly. Accra flow for shipment, and F.F. grade, July-August, sellers, 38s per cwt, f.o.b. terms. English cocoa butter, prime quality, spot, 1s 6½d per lb.

COFFEE.—Spot parcels move off slowly, but late rates were maintained for all suitable home trade qualities. In auction, East India, fair to good bold, realised 13½s to 13½s; Kenya, fair bold, 140s 6d; Uganda, good ordinary, 114s; Costa Rica, good colour, 165s to 173s; fancy blue, 196s; Vera Paz, fair to bold, 141s; and Matagalpa, fine ordinary, 123s per cwt. Terminal market quiet.

TEA.—At public sales, Indian offerings for the week totalled 43,778 packages. A distinctly better tone prevailed, competition being more evenly distributed than at previous auctions. Prices, however, were again very irregular respecting common and low medium kinds, while in some instances realised slightly higher rates. All good autumnal invoices and tippy brokens commanded good support, and late rates were fully maintained. Pekoe sold, 11½d to 1s 6d, and broken orange pekoe, 1s 1½d to 2s 3d. Ceylon offerings were also lighter, comprising 27,350 packages. A good inquiry was dealt with, and where quality was maintained, good to fine liquoring grades formed a dearer market. Low medium and common sorts, however, although in fair request, ruled barely steady. Pekoe, sold, 1s 1½d to 1s 10d, and broken orange pekoe, 1s 7½d to 2s 1d. There is a steady inquiry for China teas, with regard to low and medium qualities of Keemuns at 1s 6d to 2s, while finer invoices of Keemuns, also Kintucks are held for 2s 6d to 3s 6d per lb, in bond. Small consignments of new season's arriving continue to show attractive liquoring quality. 5,450 packages Java and Sumatra in auction experienced a better demand, prices being ¾d to 1d per lb dearer. Leaf grades strong while supported by export orders. Pekoe, sold, 1s 1½d to 1s 2½d; broken pekoe, 5½d to 1s 3d; orange pekoe, 1s 0½d to 1s 4½d; broken orange pekoe, 10d to 1s 7½d; and pekoe souchong, ¾d to 1s 1½d per lb, in bond.

RICE market without new feature, demand on European account being slow though Eastern shippers adhere to steady asking prices.

Rangoon, two stars, spot, London sellers, 15s 6d; afloat, steamer, also June-July shipment, 15s 3d c.f. and i. terms. Brokens quiet. Spanish, spot, quoted 24s 6d; and Italian, ditto, 22s 6d to 23s cwt. Japanese peas steady. Spot quoted 24s; September-October, 22s. Beans quiet. Rangoon, hand picked, June-July, quoted 13s 9d. Madaga car butter beans, spot, 37s to 38s as to quality; ditto, for shipment, 36s 6d c.i.f.

SPICE.—Pepper quiet and tendency easier. Black Singapore, spot, quoted 7d; August-October, 6½d; Lampung, August-October, 6½d; white Muntok, spot, 11½d; August-October, 11½d. Cloves firm. Zanzibar, spot, 10½d to 11d; October-December, 10½d; Pimento, spot, 3½d per lb. Tapioca slow. Singapore flake, fair, spot 2½d; fine Java, 3d per lb. Singapore to Havre, July-August, 17s 6d; September-October, 17s 6d; Penang seed, to London, July-August, 16s 3d. Sago flour firmer. Sarawak to London, near sellers, 17s 6d; July-August, 16s; September-November, sold 15s 9d. Desiccated coconut steady. Spot halves, 39s 6d; afloat, 38s 6d; July-August, also August-September, 38s 3d per cwt c.i.f. terms, steady. Japan, spot 90s; July-August, 85s. West African, spot 64s; shipment, 61s cwt.

JUTE.—A quieter tone prevailed, and values in some instances were barely steady. Firsts, to Continent, July, new crop, quoted £44 15s; August, £41 10s; September, £39 10s; September-October, £38 7s 6d; October-November, also November-December, £37 7s 6d per ton. Hessians and twills move off slowly, with demand chiefly for spot parcels.

HEMP.—Manila in good demand, and prices continue to harden. J grade, July-September, also August-October, sold, £44 10s; K, ditto, £38; L, £38 to £38 10s, and M, £33 10s to £34. New Zealand H.P.F., July-August, quoted, £36; fair, £34. Sisal, No. 1 Tanganyika, ditto, £41 10s; No. 1 Kenya, ditto, £41 per ton.

SHELLAC quiet. T.N., spot, quoted 240s to 245s; August, 217s 6d; October, 212s 6d; December, 210s cwt.

COPRA remains an idle market. F.M.S. Straits, April-June, to Rotterdam, April-June, sellers, £30 7s 6d; May-July, £29 17s 6d, buyers; July-September, £29 15s; August-September, £29 12s 6d, with Dutch East Indies, 5s ton, less money. Ceylon, June-July, buyers, £31; South Sea Islands, F.M.S., May-June, £29. Palm kernels to Liverpool, July-September, value £21 per ton.

RUBBER in fair support, though movements were attended by slight irregularity and occasional weakness. Plantation standard sheet, spot, sold, 3s 1½d to 3s 3d; July, 3s 1½d to 3s 3d; August, 3s to 3s 1½d; September, 2s 11d to 3s 0½d; October-December, 2s 8d to 2s 9½d; January-March, 2s 5½d to 2s 6½d per lb. Fine hard Para, spot, sellers, 2s 10½d; soft, fine, ditto, 2s 6½d; and cauchó ball, 2s 4d per lb. To New York, ribbed smoked sheet, June-July, sold 3s 0½d to 3s 1½d; October-December, 2s 7½d to 2s 8½d; and January-December, 2s 2d to 2s 2½d, c.i.f. terms.

FRUIT (Dried).—Market steady, but trade proceeded quietly. Of currants, Pyrgos quoted 33s to 34s; Amalia, 36s to 37s; Patras, 38s to 40s; Gulph, 42s to 44s; Vostizza, 48s to 55s. Sultanias—Smyrna, fair quality, 55s to 62s; finer, 65s to 78s; Cretan, medium to good, 65s to 74s; Australian, 66s to 75s; South African, 65s to 78s. Figs—Natural, in bags, quoted 29s to 30s. Dates in moderate demand. Hallowee, spot, 19s 6d; Khadowie, 17s 6d; Siar, 16s. Evaporated fruits steady, with a good demand for apricots, but plums move off slowly. Californian apricots, standard, new extra choice, 127s 6d; fancy, 135s; Australian, 120s to 135s; Californian peaches, choice, 62s to 63s; extra choice, 65s to 66s; fancy, 70s. Plums—Oregon, new, size 30/40, quoted 71s to 72s; 40/50, at 50s to 51s; Californian, new, 40/50, 58s to 60s; 50/60, 50s to 51s; 70/80, 44s to 45s. Pears, choice, 90s; extra choice, 102s to 103s. Apple rings—Canadian, standard, 55s to 56s; Californian, extra choice, 62s to 63s; Oregon, extra choice, 72s to 73s per cwt.

CANNED GOODS.—Sardines quiet of sale, and prices easy for the lower qualities, best being in small supply. Portuguese, ½ flats quoted 4s 3d; clubs, 5s; 12 ozs, 7s 6d; 18 ozs, 12s per dozen tins. Salmon in fair demand, and market steady. ½ lb, flat tins, labelled, 76s to 77s 6d; tall, 1 lb, 50s to 51s; ½ lb, tall, pink, 26s to 28s; ½ lb flat, 32s 6d to 35s. Lobsters in good request, and halves quoted at 160s.

CANNED FRUITS.—The market is firm and good business passing. In view of the warm weather prevailing stocks may be insufficient to last until the arrival of new season's in the late autumn. Singapore pines firm, and in demand. 48-1½s quoted 86s to 87s; cubes, 2½s, in steady request. Californian pears, 15s 6d to 17s; peaches, 12s 3d to 14s; cherries, 13s 6d to 14s; apricots, 10s to 13s 6d; loganberries, 11s 6d to 14s; fruit salad, 1½s, 12s 6d to 13s 6d; 2½s, 21s 6d to 22s. Australian pears, 24-2½s, 16s to 16s 6d. Canadian, 14s to 14s 6d.

Capital Subscribed ¥50,000,000
Capital Paid Up ¥52,500,000
Reserve ¥13,780,000

Head Office TAIPEH, FORMOSA.
London Office 25 OLD BROAD STREET, E.C.2

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kinkiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

MISCELLANEOUS.—Cocoanuts quoted 25s to 27s 6d per 100. Coir yarn: Ceylon, £25 to £39; Cochín, £30 to £54. Ceylon bristle, £19 10s to £25; cinnamon leaf oil, 4½d; citronella, Ceylon, 2s 4½d; Java, 4s.

OLSEEDS.—Linseed easier, but business more active at the decline. Calcutta to London, July-August, £20 10s; bold Bombay, ditto, £21 10s. Plate to Hull, June-July, sold, £18 10s; July-August, £18 12s 6d; September-October, £19 to £18 15s. Rapeseed easier. Toria to Continent, July-August, sellers, £21 10s; brown Cawnpore, £21. Cotton-seed quieter. Egyptian black, to Hull, July, £12 17s 6d; November-January, £12 10s; white, July, £12 7s 6d; November-January, sold, £12; Bombay, July-August, £9 7s 6d. Castor-seed dull. Bombay, June-July, £22 15s. Gingly seed quiet. Chinese to Continent, June-July, £28 5s; large Bombay ditto, £26 10s. Groundnuts steady. Coromandel machined, July-August, £25 12s 6d; Nigerian, June-July, £25 7s 6d per ton.

OILS.—Linseed irregular, but easier. Spot, net, naked, 40s 6d; August, 39s; September-December, 39s. Rape lower. Crude spot, 50s; refined, 53s. Castor-oil dull. First pressure, spot, quoted 58s to 59s; second pressure, 56s to 57s; and pharmaceutical, 63s to 64s per cwt, Hull, with London, 2s per cwt extra. Cotton seed. Crude Egyptian, spot, 42s 6d; Bombay, 39s; common edible, 47s; deodorised, 49s. China-wood firm. Hankow, spot (barrels), 70s; June-July, nominally 67s 6d. Coconut slow.

Ceylon, spot, 48s; June-July, 45s 6d; Cochín, ditto, ordinary packages, 60s. Soya quiet. Oriental, barrels, June-July, 43s; bulk, 41s 6d. Cod dull. English, spot, 33s to 34s. Groundnuts quiet. English, crushed, naked, spot, 49s 6d; deodorised, barrels, 57s. Turpentine quiet and easier. American, spot, 68s; July-December, 68s 3d. Rosin quiet. American, grade B/D, 19s 6d; E, 20s; F/G, 20s 9d; W/G, 26s; W/V, 30s per cwt. French FG, 21s 6d; W/V, 24s per cwt. Petroleum quiet. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

THE BALTIMORE & OHIO RAILROAD COMPANY.

(London Traffic Office: 33, BILLITER BUILDINGS, BILLITER STREET, E.C.3.)

Synopsis of ANNUAL REPORT for Calendar Year 1924.

The Annual Report for the calendar year 1924, which the President and Directors of The Baltimore and Ohio Railroad Company submit to-day to the Stockholders of the Company, marks the ninety-eighth year of the Railroad Company's existence.

The operated mileage of the Company is 5,196 miles. Including 104 miles of subsidiary companies, the first main track mileage is 5,300 miles, and the total mileage of all tracks 10,699 miles. In addition the Company exercises trackage rights for passenger traffic only from Philadelphia to New York, a distance of 97 miles.

The Company's equipment, valued at \$199,329,764, consists of 2,585 steam locomotives, 11 electric locomotives, 100,092 freight cars, 1,441 passenger cars, 3,202 work equipment units and 179 marine equipment units.

The recorded investment at December 31, 1924, of the property devoted to and used in transportation service is \$773,814,915, an increase over the previous year of \$20,684,074.

Owing to the general decline in business during the year 1924, the revenues of the Company were diminished, compared with the peak year of 1923 when the Company handled the largest volume of freight traffic in its history. But the loss in revenue in 1924 was overcome to a considerable extent by operating economies, resulting in the largest net railway operating income heretofore earned with the single exception of the year 1923.

With the exception of products of agriculture, which showed a slight increase, the decrease in traffic was general. Especially notable was the large decrease in bituminous coal, which is the largest single item of traffic handled by the Company. The explanation for this decrease, however, lies in the fact that the bituminous coal industry in the Northern bituminous coalfields has been handicapped in the Eastern markets by the lower mining costs prevailing in the Southern or Pocahontas, New River and other fields. This condition was partly offset by the Company handling a larger proportion of coal traffic from connecting lines and finding a market for it on or via its lines. Notwithstanding the reduction in coal traffic, the revenues of the Company were generally sustained owing to increased commercial and industrial activities in the territory served by its lines.

Gross revenues of the Company amounted to \$224,318,794, divided into freight revenue, \$180,179,357, passenger revenue, \$29,047,718, and other revenue, \$15,091,719. With the exception of 1920, and the peak year, 1923, the gross revenues were the largest in the history of the Company.

Even with the decline in traffic during 1924, compared with 1923, the Company was able to make material decreases in operating expenses. In expenditures for maintenance of way and structures, it showed a decrease of \$2,680,337. Expenses for maintenance of equipment were \$15,221,968 below the same figures for 1923. Transportation expenses in 1924 were \$9,362,906 less than in 1923, while the total of all operating charges for the year was \$172,752,632, a decrease of \$26,571,329.

Railway tax accruals, amounting to \$9,548,085, absorbed 18½ cents of every dollar of operating revenues remaining after the payment of operating expenses, and railway tax accruals and miscellaneous tax accruals combined, nearly equalled the amount paid during the year for dividends on the preferred and common stock of the Company, or nearly \$9,951,864.

The Company's net railway operating income for 1924 was \$38,084,323, as compared with \$42,133,129 in 1923, a decrease of \$4,048,805 or 9.61 per cent. and was equivalent to a return of 4.92 per cent. upon investment in property devoted to transportation service. Under the Transportation Act of 1920, properties under common control and management may be combined for the purpose of determining recapturable income. Consolidating the separately operated subsidiaries with the parent company the net railway operating income of the entire system was \$38,245,514, equivalent to 4.67 per cent. on the combined investment in property used in transportation service.

There was a decrease of \$375,230 in "Other income" during the year, due in part to the sale of certain railroad properties located in Kentucky, the net income from which was previously absorbed by the Company. The increase of \$1,678,809 in "Deductions from gross income" was due largely to increased interest charges occasioned by the issue of new and the refunding of old securities which were part of the large financing arranged by the Company during the year.

On the whole, the financial results were satisfactory. Net railway operating income, that is, the amount earned in the actual operations of the railroad property was..... \$38,084,323 while the return from other investments was..... 5,657,290

making a total income of..... \$43,741,613 from which were deducted fixed charges, etc..... 27,421,924

leaving a balance of..... \$16,319,689 and after payment of dividends on the preferred stock of..... 2,354,527

there remained..... \$13,965,162

showing an earning of 9.19 per cent. on the outstanding common stock of the Company. Quarterly dividends were maintained throughout the year at the rate of 4 per cent. per annum on the preferred stock and 5 per cent. per annum on the common stock.

The Company controls through ownership of the entire capital stock the following railroads:—

The Baltimore and Ohio Chicago Terminal Railroad Company 81 miles
The Staten Island Rapid Transit Company..... 23 miles

Total 104 miles

These properties, while separately operated, are component parts of the system and the net result of the operations is absorbed in the general or combined income of the Company, so that the net income is from the

operations of all the properties comprising the Baltimore and Ohio System.

On June 17, 1924, the Interstate Commerce Commission authorized the Company to issue and sell \$35,000,000 of its Refunding and General Mortgage Series "C" 6 per cent. bonds. Of these bonds \$30,000,000 were drawn to recoup the Company for expenditures previously made for additions and betterments and for other property coming under the mortgage, the remaining \$5,000,000 being issued to retire a like amount of outstanding obligations.

Anticipating the refunding of a part of the \$131,125,280 of bonds maturing in 1925, of which \$120,000,000 become due on July 1st, the Company took advantage of favourable money conditions and in August, 1924, with the authority of the Interstate Commerce Commission, issued and sold \$75,000,000 of its First Mortgage Bonds, bearing interest at 5 per cent. per annum. This action was taken to retire at or before maturity an equal amount of the Company's Prior Lien 3½ per cent. bonds, maturing July 1, 1925. A substantial amount of these bonds were specifically reserved under that mortgage to retire the Prior Lien bonds upon maturity.

Financing conditions continued favourable and the Company, with the approval of the Interstate Commerce Commission, called for redemption Lien Equipment Certificates and \$3,813,333 of 6 per cent. Deferred Lien 4½ per cent. Equipment Certificates through the issue and sale of \$9,504,000 of new Service Corporation Equipment Trust. This will result in a net saving to the Company in interest and other charges of approximately \$50,000 per annum for the duration of the trust.

Total of new debt incurred..... \$119,504,000
Total of old debt retired..... 76,569,835

Net increase in long term debt..... \$ 42,934,165
Less further provisions for retirement of obligations at or before maturity..... \$ 28,332,725

Leaving the actual net increase in long term debt..... \$ 14,601,440

In April, 1925, the Company also concluded arrangements for extending, on advantageous terms, \$45,000,000 of its South-western Division Bonds coming due July 1, 1925, so that provision has now been made for all the obligations of the Company which mature in 1925.

The Company continued its programme of betterment and enlargement of the property, and in addition added the following equipment: 73 locomotives, 55 passenger cars, 3,386 freight cars, 15 pieces of work equipment retired from the service during 1924 had a book value of \$3,160,449 and in making changes from one class to another, there was also a reduction in the book value of equipment of \$174,773, making the net increase in investment value of equipment \$9,564,932 for the year.

The Company has been experimenting with gasoline motors as substitutes for steam locomotives on branch lines and the Management is convinced that substantial economies will ultimately be realized from such changes, at the same time improving service to the public.

The total net increase in investment in property held for and used in the service of transportation, was:

Additions and Betterments to Road..... \$11,178,733
Additions and Betterments to Equipment..... 9,564,932

Less—Net decrease in other accounts..... \$20,743,665

Net Increase..... \$20,684,074

Principal among the improvements to the property was the completion of the huge concrete grain elevator and terminal facilities at Locust Point, Baltimore, Md. The elevator is of modern type, embodying the latest capacity of 3,800,000 bushels. Its unloading capacity is 32 cars an hour. As auxiliaries to the elevator, the new grain pier No. 7 has been finished and the combined grain and general cargo pier No. 6 has also been completed, both of which are connected with the elevator by long steel grain piers is 150,000 bushels an hour. Another large improvement completed during the year was the Millvale-Etna double track elevated line, 2.16 miles in length, enabling the Company to be independent of the use of tracks of other companies in Pittsburgh.

Grade crossing elimination continued. At Falkonville, Pa., Martinsburg, W. Va., Salisbury Jct., Pa., Taylorstown, Pa., and New Md., similar work is well under way, while agreements have been reached for the separation of grades at Cambridge and Mansfield, Ohio. New Ohio. Water treating plants were installed at these points and also East Dayton and Old River Junction, Ohio, and a new dam and reservoir were finished at Somerset, Pa.

Bridge work continued to progress, resulting in the use of heavier power on several divisions. The largest improvement of this kind was the construction of a modern bridge over the Kanawha River, at Parkersburg, W. Va. Passing sidings were extended at Beckemeyer, Lebanon and Caseyville, Ill., and a new 80 car-length siding was completed at O'Fallon, Ill.

Complying with the law of the State of New York, requiring the use of electric motive power in the operation of all trains in cities with inhabitants of 1,000,000 or more, the Company has undertaken through its subsidiary, the Staten Island Rapid Transit Company, to electrify the line between St. George and South Beach and between Clifton

The Baltimore and Ohio Railroad Company—contd.

Junction and Tottenville, located on Staten Island, N.Y., a distance of 16.9 miles. Satisfactory progress has been made upon this work, the cost of which, together with the cost of the new all steel passenger equipment, will be approximately \$5,000,000. This will be advanced by the Company.

In connection with the valuation of railroads, no tentative or final valuation has yet been served upon the Company or any of its constituent or subsidiary companies, but for the valuation of the Company's property there has been expended and charged to operating expenses \$3,861,608, up to December 31, 1924.

The Commercial Development Department, during the year 1924, was instrumental in locating on the lines of the Company 419 new industries and 48 expansions of existing plants, representing a total plant investment in excess of \$38,000,000. Through this department, the Company also conducted a soil fertility programme over its entire system, in co-operation with Extension Bureaux of State Colleges and County Agents. As another aid to agriculture in its territory, the Company operated better dairy sire trains, pure-bred ram sales, organised poultry clubs, etc., and co-operated in farm educational work through boys' and girls' clubs, in states through which it operates. In the last three years the Baltimore and Ohio awarded 37 scholarships permitting winners the alternative of university training or educational trips.

There were 63,939 employees in the service of the Company at December 31, 1924, of which 54,706 were members of the Relief Department.

Pension payments to retired employees, while administered through the officers of the Relief Department, are made wholly by the Company and constitute a special pay roll. The number of pensioners on this roll at the end of 1924, 1,290, a net increase of 16 for the year. Pension payments for 1924 amounted to \$456,885, an increase of \$21,882 over the previous year. Since the inauguration of the Pension Feature in October, 1884, the Company has paid \$5,980,491 on account of pensions to superannuated employees.

During the year the Baltimore and Ohio Company was able to furnish and did furnish, adequate, efficient and satisfactory service to its patrons, and the friendly relationship between the Company and the communities which it serves has been strengthened. Public Relations Committees of Baltimore and Ohio officers and employees have been organized in 156 of the Counties which are reached by Baltimore and Ohio rails, for the particular purpose of developing a better understanding between the Company and those who depend upon it for transportation. Meetings between these committees and groups of local representatives are held at frequent intervals and much good has already been accomplished by such conferences.

The policy of co-operation between the Baltimore and Ohio management and employees has been extended and further developed during the year. Practices and methods have been put in effect whereunder different groups of employees and officers meet in conference at least once and in many cases twice each month. At such conferences a free expression of views is encouraged, and many valuable and constructive suggestions have been made by men in all branches of the service. It should be said in this connection that the officers of the several labour organizations with which most of the men are affiliated, have been sympathetic with this policy and their co-operation has been very helpful.

There were 32,174 stockholders of the Company of record on December 31, 1924.

The Board takes pleasure in recording its appreciation of the loyal and efficient co-operation of officers and employees during the year, and is desirous that this sympathetic understanding and relationship now existing may be continued.

DANIEL WILLARD,
President.

INCOME ACCOUNT AND BALANCE SHEET.

INCOME ACCOUNT.	Year 1924.	Year 1923.	Increase or Decrease.
AVERAGE MILES OPERATED	5,196.18	5,206.87	10.69

PRELIMINARY ANNOUNCEMENT.

WARING & GILLOW

LIMITED

Incorporated under the Companies (Consolidation) Act, 1908.

The Subscription Lists will open on Wednesday next of an
ISSUE AT 96½ PER CENT.

OF

£1,000,000 Six per Cent. First Mortgage Debenture Stock

(Interest payable half-yearly—1st January, 1st July).

The Stock is repayable within 30 years at 105 per cent. by means of a Cumulative Sinking Fund, commencing in 1926, and is secured by a Trust Deed constituting a specific Mortgage upon the Freehold and Leasehold Lands, Buildings, Fixed Plant and Machinery, and a floating charge upon the rest of the Company's undertaking, including the group of properties heretofore known as the Princess's Theatre site in Oxford Street, which are excluded from the specific charge.

The Prospectus, to which applicants are referred for further information, shows:—

The Company, which has now no fewer than six subsidiary undertakings, has traded under its present title since 1897 and is the successor of the famous firm of Gillows, established in 1695.

The total assets upon which the Debenture Stock is secured amount to £2,940,269, being about three times the amount of the Debenture Stock, and no less than £1,305,850 is represented by Freehold and Leasehold buildings.

The average profits for the last three years ended 31st January, 1925, amount to £113,063, which are sufficient to provide nearly twice the annual interest payment of £60,000 required for the present issue.

Holders of the outstanding Debentures of the Company applying on the conditions contained in special Application Forms supplied for the purpose will be entitled to an allotment for an amount up to, but not exceeding, the nominal amount of their present holding.

Applications from Shareholders and Customers of the Company, made on the special form provided for the purpose, will receive preferential consideration.

Prospectuses can be obtained, on Monday, July 6th, from the Head Office and Branches of
MIDLAND BANK LTD., 5, Threadneedle Street, E.C.2.

THE MONEY MARKET.

REPAYMENT to the Bank of England of the large sum borrowed at the end of June proceeded until Wednesday, when it was duly completed, without leaving the supply of credit uncomfortably scarce. The process was assisted by the receipt of another million in sovereigns from Holland on Monday, and on Thursday yet another million from the same source made its appearance. A strong Bank return was published on the same day, and the discount

market became easier, with three months' bank bills taken at $4\frac{1}{8}$ per cent.

	July 10, 1925.	July 3, 1925.	June 26, 1925.	June 19, 1925.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	4 (Mar. 5, '25)
Banks' Deposit Rate	3	3	3	3	2 (Mar. 5, '25)
Discount/Call	3	3	3	3	2 (Mar. 5, '25)
Houses (Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Mar. 5, '25)
Market rate (3 months' bills)	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	..

The Bank return showed an increase of £1,259,000 in the stock of gold, of which £1,250,000 had been announced as received from abroad. The note circulation had declined by £1,424,000, and so the Reserve was £2,683,000 higher, with its proportion to liabilities 6 per cent. higher at 25.7 per cent. Government and Other securities declined by 4 millions and 24½ millions respectively, and Public and Other deposits by half a million and 25½ millions. There was an increase in Currency notes outstanding this week of £3,836,000, to £297,337,000, which includes £1,333,900 for notes called in but not yet cancelled. The fiduciary issue is £242,053,100, or £6,092,300 below the maximum for 1925.

NEW YORK MARKETS.

Our New York correspondent cables:—Markets remain buoyant under the influence of cheap money, and a growing confidence that business in the second six months of the year will be good. The Government report on the position of the crops at July 1st estimates total wheat yield as 680 million bushels, against a June 1st estimate of 661 million. The estimate of the maize yield is 3,095 million bushels, against last year's final figure of 2,437 million. The report, therefore, confirms the expectations of a large maize crop. Bankers are surprised and puzzled over the reduction in the French Bank rate. Money is easier since the holiday, as was expected, the call money rate being $3\frac{1}{2}$ per cent., and easy conditions are expected to persist through the summer. The Federal Reserve statement shows the contraction customary after the turn of the half-year. Discounts show a fall of \$27,400,000 for the New York Bank and \$61,000,000 for the whole system. Holdings of market bills and Government securities have also decreased, and the reserve ratio for the system has risen from 74.9 to 76.1 per cent.

THE STOCK MARKETS.

Business in the Stock Exchange has been uneven, but with the satisfactory arrangement of the account the tone appreciably improved towards the end of the week. In the gilt-edged market prices have recovered substantially, and a feature has been the steady absorption of recent new issues. In the foreign market French bonds are better and Chinese issues have recovered. Home rails were being sold at the beginning of the week, but these realisations were counteracted by a little bargain-hunting. Foreign rails show an improvement on balance. With the further rise in the price of the raw material, rubber shares have been booming. Tea shares are also strong and liquidation in oils appears to have ceased. Courtaulds and the tobacco group have been somewhat erratic. In the miscellaneous section, Guinness and Watney deferred have been prominent with sharp rises. Buying from Paris has helped the Kaffir market.

THE COMMODITY MARKETS.

In some respects we may detect a slight improvement in the commodity markets this week. Pig-iron quotations, however, have declined, and foreign competition hampers the manufactured iron and steel trade. The inland demand for coal has improved, but the export trade, though prices are hardening, shows little expansion. Raw cotton prices are being maintained, and orders for the Continent and home trade are more frequent. The London wool sale results are much better than was anticipated, fairly high prices being realised. In wheat a fair business is passing between Russia and the Continent. The market for both sugar and coffee is quiet. Tea is in good demand. Rubber prices have fluctuated, but business is good. The metal market is fairly active, especially in copper and lead.

FOREIGN EXCHANGES.

In the foreign exchanges business has been quiet, the market being particularly uncertain as to the future of the Paris rate, an uncertainty in no way removed by the announcement of the terms of the new gold loan. At first sight the fixing of a rate of 95f to the pound sterling would suggest that the French Government had decided to stabilise at somewhere near that level, and the rapid improvement in quotation as the result of official support a week ago gave colour to this view. There is, however, at the same time a strong feeling that it will be very difficult indeed to hold the franc at anything like this level, and an uncertain fear that perhaps there is no such intention to do so for very long. After the recovery to a closing price of 103.90 on the 3rd, the rate moved down at one time on the 6th to as low as 101.20, but selling from New York brought it up again, so that the closing rate on the 7th was 104.50. Since then the rate has moved between 103 and 104, being quoted yesterday morning at 103.40. Brussels has moved during the week from 104.80 to 104.95, not having followed the lead of Paris quite as closely as usual. Forward quotations in Paris have narrowed again from 30-35 centimes per month above spot to 15-20 centimes. In Brussels the quotation stands at 3-7 centimes per month below spot. The lira has shown a further recovery, moving from 136½ on the 3rd to 131½ yesterday morning, having been slightly lower once or twice during the week. The resignation of the Finance Minister would appear to have had no effect on the market. Sterling has been steadier even than before, being quoted the whole week at \$4.86½. Yesterday morning, however, it seemed for the moment slightly weaker at \$4.86½. Forward rates at approximately ½ cent per month below spot show little variation from last week. Amsterdam recovered over the week-end from 12.13½ to 12.12½, owing to a shipment of gold to this country, but reacted later, and yesterday again stood at 12.13½. Geneva is steady at 25.05, and Madrid at 33.45. Of the Scandinavian countries, Stockholm fell slightly from 18.14 to 18.12, but Copenhagen rose from 23.87 to 23.92, while in Oslo a pronounced depreciation was recorded, the rate moving from 26.70 to 28.00 between Monday and yesterday morning. This is believed to have been caused by rumours of further difficulties in the banking situation—rumours which are so far without confirmation. Helsingfors stands at 193½, as against 192½ a week ago. There is no change in Berlin, Vienna, Budapest, Prague, or Warsaw. In Bucharest an improvement from 1065 to 980 is recorded, for which no particular reason is apparent at the moment. In the East the rupee is once more at 1s 6 3-32d, while the yen has continued to appreciate, moving from 1s 8 5-32d to 1s 8½d. There has been little movement in silver, but a slightly better undertone is reported. Hong Kong stands at 2s 4½d. Singapore is also steady at 2s 4½d, but Shanghai has fallen from 3s 3d to 3s 1½d. In South America, Rio has appreciated slightly from 5 13-64d to 5½d, but Monte Video has weakened from 48½d to 48d. In Buenos Aires yesterday was a holiday, but Thursday's rate of 45 9-32d showed no change from the preceding week. Valparaiso continued to improve from 41.50 to 41.10 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the four days ended July 4th:—

EXPENDITURE.		RECEIPTS.	
	(000's omitted.)		
Supply Services	5,400	From Revenue	9,322
Interest, &c., on Debt	6,935	Increase in Debt	2,763
Sinking Fund	3		
Increase in Balances	136		
Sundries	211		
	12,685		12,685

Revenue for four days to July 4th amounted to £9,922,100, against £12,323,500 for five days last year. Property and Income-tax produced £2,547,000, against £4,184,000. Super-tax yielded £650,000, against £1,040,000. Customs yielded £1,376,000, against £2,057,000, and Excise £575,000, against £852,000. Estate Duties yielded £900,000, against £530,000. The four days' operations increased

the National Debt by £2,762,700, and caused the following changes:—

	(000's omitted.)		
Treasury Bills	+ 5,424	Bank of England Advances ..	— 9,750
Public Department Advances ..	+ 7,600	National Savings Certificates ..	— 230
		Sundries	— 311
	+ 13,024		— 10,291

The floating debt was increased by £3,135,000 to £794,655,000.

FINANCIAL YEAR, 1925-1926 (April 1st to July 4th.)

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—National Bank of New Zealand, Imperial Bank of Persia, Bank of British West Africa, Australian Estates and Mortgage, General Electric Company, Howard and Bullough, Mond Nickel Company, Java Para Rubber Estates, Buchanan-Dewar, Spiers and Pond, and Taquah and Abosso Consolidated.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

INSURANCE SUPPLEMENT.

With this number our readers will find a Supplement reviewing the progress and prospects of insurance. The topics dealt with include the recent experience of life offices, the increase of business, mortality, an analysis of their funds, valuation results and bonuses; the results of fire insurance in the past year; and the results recorded in the latest reports from the marine insurance world. The Supplement is not a mere record of company results, but a general survey of the insurance problems of the day.

TROUBLES AND TONICS.

ON Monday of last week the House of Commons discussed the problem of unemployment. On Monday of this week it considered the same problem in a different form, giving the day to debating a review of the general trade position, delivered by the President of the Board of Trade, Sir Philip Cunliffe-Lister. On the latter occasion the debate suffered somewhat from the rules governing the procedure of the House; for every time any speaker came to the subject of remedies for present troubles, he was ruled out of order, because most supposed remedies require legislation. Had the rules of procedure permitted, we might have seen the protagonists of various schools of thought, Protectionists, Inflationists, and others, come out more clearly in their true colours. This would have been instructive. But the loss was not so great as it might have been, for Sir Philip Cunliffe-Lister approached the problem from an angle which left his hearers in no doubt as to his prepossession for artificial methods of protection, while Sir Alfred Mond implicitly advocated inflation by the means of placing the blame for all our present troubles upon the financial policy which successive Governments have pursued. A third contribution to the debate, that of the ex-President of the Board of Trade, Mr Sidney Webb, was remarkable for the tone of optimism which it imparted into a diagnosis which might otherwise have ended on a note of despair.

Sir Philip's review, with the substance of which we have no quarrel, opened with some estimates of the position of the trade balance. In 1913 imports exceeded exports of commodities by £158 millions, but the country's final balance was estimated at £181 millions on the right

side. In 1923 a visible adverse balance of £203 millions was estimated to be turned by invisible items into a favourable margin of £102 millions—probably, according to Sir Philip's view, an underestimate. For 1924 the revised official view gives us a net favourable balance of between £30 millions and £50 millions, although the merchandise import excess reached £341 millions. These statistics Sir Philip brought up to date by giving an estimate for the twelve months ended May, 1925. It is, in brief, this: Imports, £1,390 millions; exports, £995 millions; "apparent" adverse balance, £395 millions; final result probably just about "all square." This result did not mean that we "are living on our reserves." But "we are undoubtedly very gravely below our pre-war capacity to invest. Before the war it used to be estimated that, including our foreign trade balance of £180 millions, we had in all some £350 millions of savings available for investment. We are nowhere near that position to-day, and yet to-day we need more and not less for investment." So far as our attenuated foreign lendings are concerned, "we are not saving enough ourselves to meet the whole of the foreign loans" (the word foreign was, perhaps, a slip for overseas or external) "that come in the market, and that means that we are re-investing borrowed money." We do not know whether the President agrees with our view that the overseas trade figures of the first five months of the present year have, for special reasons, been abnormal, but we are glad at least to see that he does not regard the present position, as indicated by the figures quoted above, as one which we have to face permanently, or one that we cannot hope to mend substantially. But it is when he comes to methods of "redressing the balance" that we join issue with him. We gather from his speech that the two main methods of redress which commend themselves to him are the restraint of imports, and the turning of our eyes from unsatisfactory old markets to the possibilities of developing new markets within the Empire, especially in the Crown Colonies. He did not actually prescribe a full-blown system of tariffs—from that he was precluded by the rules of debate, and also by Mr Baldwin's anti-tariff pledge, which, in spite of the recent fiscal sins of the Government, has still to be represented by his colleagues as intact. But the advocacy of a "voluntary" campaign by the whole nation to buy only British goods, and so to reduce imports of foreign goods, shows clearly enough that the advocate still clings to a creed which pronounces an anathema upon imports in general, and forgets the elementary truth that imports are paid for, not in cash, but by exports. "If thou wilt not import, neither shalt thou export" is one of the ten fiscal commandments, by the breach of which we should not mend but intensify the troubles of our manufacturers. Tariffs were spoken of in the course of the debate as a "tonic." We would liken them rather to the use of the leech as a cure for debility—a process, happily for the human race, now obsolete in medical science. But it is high time for the country to realise that, pledge or no pledge, the virus of the tariff nostrum is rapidly infecting the policy of the Government. Sir Philip Cunliffe-Lister's speech is a clear indication of it; the extent of the recent additions to the tariff list, to which we referred last week, is a clarion warning; and ominous meanings may be read into Mr Churchill's promise in the House of Commons to take steps to see that "future duties" should not be forestalled by importers in the manner which we have just witnessed; and, to take one more sign of the times, we find the Home Secretary delivering at Dudley, on Wednesday, the crudest of Protectionist speeches, in the course of which the following passage is reported:—"I am not going to tell you that the Conservative Government is going to put a Protective tariff upon iron and steel or anything else that comes into this country, but Mr Baldwin believes, as he did formerly, that it is no use fighting France and Germany with hands tied behind your back."

Equally eloquent of the lingering of protectionist obsessions were Sir Philip's references to new markets in the Empire. We yield to no one in our desire to see an expansion of trade with the rest of the world, nor do we minimise the potentiality of the Dominions to increase

their commercial dealings with the Old Country as the years roll by, as their development proceeds, and as their populations increase. Nor among distant factors in the outlook can one rule out the gradual increase in the importance of the Crown Colonies as producers of raw materials and purchasers of British goods. But any intelligent student of the facts and figures of our external trade must realise the futility of the idea that we can afford to neglect old markets or hope to create any sudden diversion in the general direction of our overseas exchanges. Any policy based on the belief that we can by Preference experiments, or any other measures, make up for the loss of old markets by a sudden magical expansion of business with new markets within the Empire is no better than a pursuit of the will o' the wisp—a pursuit that would quickly land us on more treacherous ground than that on which we stand at present.

As regards what the President of the Board of Trade would call our "old" markets, we venture in several respects to take a less pessimistic view than he does as to the long-distance, if not as to the immediate, prospects. We enjoy, he himself admits, a percentage, comparable to our pre-war percentage, of total international trade. That total trade is lower than in 1913, because of the circumstances which the war has left behind it. In time it will recover, and with it will grow the value of Britain's share, provided we do not prejudice our capacity for competitive export by travelling any further along the tariff path. Among the obstacles to our export trade, Sir Philip laid stress upon two—namely, the discrepancy in wages and standards of living in Britain and competing countries, and the growth of manufacturing, with the assistance of Government help and nationalist enthusiasms, in countries which hitherto relied more largely on imports for their manufactures. Time, we may legitimately expect, will bring some easement in both respects. Standards of living and wages in European countries are not likely to preserve indefinitely such remarkable discrepancies. And how long will consumers in countries now experimenting with manufactures to which they are unsuited be content to pay high prices for second-rate goods? As Sir Alfred Mond put it: "Are people permanently going to pay more for goods than the real market value? Are people indefinitely going to buy goods at a dearer figure for the pleasure of having them made at home rather than to buy them outside? And can countries which permanently adopt such a policy hope to continue to live in the world market of international competition?"

Two other points are in our favour, if we take a distant view. The return to a world of stable currencies, to which the reversion of Britain and other countries to the gold standard has already made a contribution the full effect of which is not yet seen, will eventually remove one of the leading troubles of our exporters. Then, again, is it not probable that we are at the moment at the bottom of a trade cycle, in a natural curve of depression greatly accentuated by abnormal circumstances? The present position is certainly clouded over with deep anxieties. But on the distant horizon there are streaks of sunshine, into which, with patience and hard work, we shall win our way, always provided that we do not allow the troubles of the moment to drive us into panic policies in the spheres of economics and finance.

THE CRISIS IN MOROCCO.

THE Moroccan crisis is at present focussed in four places: at Paris, where it is rapidly becoming the crucial question of French party politics; at Madrid, where a Franco-Spanish conference with a view to co-operation against the Rifis is in session, without appearing to make much progress; on the North Moroccan front, where the Rifi offensive is being pressed with unabated military vigour and with increasing political effect upon the Rifis' fellow-countrymen to the rear of the French lines; and at Tangier, where the French and Spanish elements in the local foreign population have chosen this juncture to come to loggerheads.

At the moment of writing the interest centres upon

the military operations. The danger-point continues to be the Taza sector, where the Rifis have been attacking both flanks of the Kiffane salient. So far Kiffane holds out, and the latest news to hand is that the French made a successful local counter-offensive on the night of July 3-4. Nevertheless, the European women and children have been evacuated from Taza; the Rifi forces have at one point advanced to within 12 miles of the railway; several tribes between the railway and the front who fought for the French when the campaign began have gone over to the other side (where naturally their sympathies lie); and it is evidently touch and go whether the whole native population in this sector will not rise in the French army's rear. In this district, which was only occupied by the French in 1914, the population is not inured to foreign dominion, and if they join forces with their independent kinsmen, the railway will be cut and the corridor between Algeria and Western Morocco, which the French have opened, and kept open, with so much effort during the last dozen years, will be closed. In that case, much more than the corridor itself will be affected, for the Rifis will then join hands with the still armed and independent tribesmen of the Atlas, whom the French have gradually ringed round on every side except the extreme south, but whom they have never yet subdued. If the Atlas rises under Rifi leadership, and smuggles in up-to-date small arms from the Rifi coastline, the military front will suddenly be extended enormously. The French will have to hold a line to the south-east of Fez as well as to the north of it; the Sultan's capital will be caught in a salient; and in that situation the evacuation of Fez, which hitherto has seemed a remote prospect, will become an imminent possibility.

The proper move, from the purely military point of view, in this perilous state of affairs would presumably be an offensive-defensive; but in Morocco the French Army is not fighting, as it was in France a few years ago, with a friendly country behind it. An overwhelming offensive would demand either more reinforcements from Europe than French public opinion could be induced to send, or else a local concentration of the existing forces on the spot. These forces, however, are scattered in garrisons in different parts of the occupied territory, and their withdrawal to fight on the northern front would be interpreted as a sign of weakness by the Moroccan population. Thus every French soldier transferred from the interior to drive back Abdu'l-Karim on the northern front might call to arms two or three tribesmen to fight on Abdu'l-Karim's side in the French rear. In fact, Abdu'l-Karim's strength is not merely military but political, and does not lie so much in the number of his own fighting men whom he can put into the line, but in the much larger number of his potential allies in the French Protectorate.

The crisis is so grave that the French Government has relieved the Resident-General, Marshal Lyautey, of the military command in order to offer it to some soldier who has not diverted his energies from the art of war to that of administration, but has profited by the most recent military experience (assuming that experience of European warfare is a good guide to the successful conduct of a war in North Africa under totally different social, economic, and topographical conditions). The Government first turned to no less distinguished an officer than General Guillaumat, the Commander-in-Chief of the Army of the Rhine, but apparently General Guillaumat prayed them to have him excused, and the post was then offered to, and accepted by, General Naulin, an officer with Moroccan experience and with a fine record in the European war, though he has not hitherto been prominent in the public eye. The Resident-General is still to retain the nominal Commandership-in-Chief in Morocco, as well as the actual direction of the civil administration, and communications between General Naulin and the Ministry of War in Paris are to pass through his hands. General Naulin, however, is to be his own master in all that concerns the conduct of the military operations. This change of organisation casts no reflection upon Marshal Lyautey, who could hardly be expected to have kept his professional knowledge up to date in addition to performing his remarkable achievements as an administrator. But France would never have taken a step which

might even appear to cast a reflection upon one of her sons, of whom she is so justly proud, unless she felt that her position in Morocco—a position which Marshal Lyautey has done more than any other Frenchman to build up—was gravely threatened.

Meanwhile the Franco-Spanish Conference, which is sitting in Madrid, has not come to any agreement for permitting the French Army—even supposing that it found itself able to assume the offensive—to carry its operations into the Spanish zone, a sequel which would be absolutely necessary to any offensive which was intended to bring about a military decision. The attention of the conference seems to have been diverted to Tangier, where the new régime recently introduced at the instance of France, in order to fortify the local authority of the Sultan of Morocco, and therewith the influence of France herself as his recognised protectress, has aroused resentment among the non-French majority of the foreign population. On July 2nd, the somewhat ostentatious abstention of the French element from taking part in a general strike on which the majority of the foreigners had decided in order to give point to a petition which they were addressing to the Sultan's representative, provoked a riot, in which French newspaper offices were wrecked and French shop-windows broken. Since the majority of the non-French population is Spanish, this incident has not promoted the cause of Franco-Spanish co-operation against Abdu'l-Karim. It is to be noted that the native Moroccan inhabitants of the Tangier zone behaved with exemplary orderliness during this miniature civil commotion among their European guests. They even offered their services to the international police to assist in restoring order—a strange reversal of the moral relations between the native and foreign elements in a country under the régime of the Capitulations! In consequence of this riot among the foreign-born element, it has been proposed that British, as well as French and Spanish troops, should be landed at Tangier to maintain order, but it is to be hoped that the Government will think twice before undertaking to pull our neighbours' chestnuts out of the fire. It is true that a British force in Tangier would be in little danger of coming into collision with the forces of Abdu'l-Karim, for the Rifi leader has consistently respected the neutrality of the Tangier zone (as it is his obvious interest to do), although the corridor of territory under Spanish occupation which separates Abdu'l-Karim's country from Tangier is even narrower than the corridor under French occupation which separates it from the tribes of the Atlas. There would be much more danger of our troops coming into collision with the Spanish, who latterly have been violating the Tangier zone in ways which could hardly be overlooked by us as parties to the Tangier Convention, if we had forces on the spot with a mandate to maintain order. Still worse, we might find ourselves forced to intervene in some fresh outbreak between the French and Spanish elements in the local foreign population. Why should we burn our fingers?

THE COAL TRADE CRISIS.

A GRAVE situation has developed in the coal-mining industry of the country. In last week's issue of the *Economist* a brief résumé was given of the new proposals of the coalowners. Those proposals, while providing for the continuance of the existence of the present National Joint Board, restricted considerably its powers, and aimed at the restoration of the autonomous authority of the districts in the matter of the regulation of wages. The owners suggested that the proceeds of the industry should, after the deduction of costs other than wages, be distributed in the proportion of 87 per cent. to wages and 13 per cent. to profits. This suggestion necessarily involved not merely the discontinuance of the present uniform national minimum wage of 33½ per cent. on the standard rates, but also immediate wage reductions. The position of the lower-paid workmen was to be secured by special provisions, but the cost of any allowances made

to these lower-grade workers were to be met out of the 87 per cent. proportion of the proceeds to be taken by labour and, therefore, at the expense of the higher-paid workmen. All these principles, however, were to be administered on a district, and not on a national, basis.

These proposals were considered by a special delegate Conference of the Miners' Federation of Great Britain held on Friday, July 3rd, in London, and on the recommendation of the National Executive unanimously rejected on the following grounds:—(1) That they removed the present guarantee of a minimum wage; (2) that they provided guaranteed profits to the owners irrespective of rates of wages; (3) that they involved immediate reductions in wages varying from 13.14 per cent. to 47.91 per cent. on basis rates; and (4) that they meant the continued separation of mining operations from those of coking and by-product installations. Moreover, the official resolution adopted re-affirmed the claim of the workmen to a wage rate "not less than is necessary to meet the increase in the cost of living." When making their proposals the owners invited the workmen to a joint meeting to consider them. That invitation has been refused. On Tuesday last Mr Evan Williams, the President of the Mining Association, wrote to Mr Herbert Smith, the President of the Miners' Federation, expressing his concern at the position taken up by the miners, and suggesting an immediate meeting of the Joint Committee in the belief that "an interchange of views would be of value." On the same day, Mr Herbert Smith replied that he did not see what good purpose would be served by a meeting of the Sub-Committee, whose duties, he stated, were "now at an end," and suggested to Mr Williams that if he had any further communications to make he should address it to Mr Cook, the Secretary of the Miners' Federation. Apparently, therefore, no further step is contemplated by the miners until the annual meeting of the Federation at Scarborough next week.

Meanwhile, the crisis has taken up much of the time and attention of the House of Commons. The questions addressed to the Government have related to matters of fact as well as to those of policy. The policy of the Government for the moment is to abstain from intervention. The Prime Minister does not consider that a deadlock has arisen, and is hopeful that the parties will explore every avenue with a view to finding a way out of their difficulties. The Minister of Mines has expressed the view that a Government inquiry into the question of the degree to which the depression in the industry is due to lack of efficient organisation would not help matters, although if either side had a suggestion to make regarding the position the Government, he said, could be approached in the usual way. Moreover, Sir A. Steel-Maitland, the Minister of Labour, in a discussion on unemployment in the mines in the House of Commons on Wednesday, stated that no trade, including the coal trade, ought to look to the State for a subsidy to enable it to carry on. In that debate Mr Vernon Hartshorn revived the idea of the unification of the industry, but the Minister of Labour contended that that expedient would not of itself solve the problem.

Perhaps the most important of the statements made during the week relating to the statistics of the industry was that issued on Wednesday by the Mines Department in the form of a White Paper, giving for each month from January, 1924, to March, 1925, the number and output of colliery undertakings in Great Britain, showing credit balances and debit balances respectively. This statement shows that in March last there were 291 collieries producing 11.6 million tons with credit balances, compared with 512 collieries producing 21.2 million tons in the corresponding month last year, and 320 collieries producing 9.9 million tons with debit balances, compared with 122 producing 1.8 million tons a year ago. The position of the exporting coalfields is relatively worse than that of the inland districts. Thus, in Northumberland last March only seven collieries had a credit balance, compared with 25 in March, 1924, and those with a debit balance 22, compared with 4; in Durham the remunerative collieries have decreased from 38 to 14 and the unremunerative increased from 14 to 32; while in South Wales the credit collieries have been reduced from 90 to 35 and the debit collieries increased from 30 to 80. It should be explained that the terms "credit balances"

and "debit balances" refer to the credit and debit balances respectively as determined for the purposes of the wages ascertainment. In arriving at these account is not taken of certain expenses, estimated by the Mining Association to amount to 3d per ton, which are not treated as costs of production for the purposes of the ascertainment. Another rather startling fact disclosed during the week is that at the end of May the registered unemployed in the industry totalled 301,000, compared with 199,000 at the end of April.

The industry was never in so serious a plight, and no one can see clearly a way out. The claim of the owners for a 13 per cent. share of the divisible proceeds comes into sharp conflict with the claim of the workmen to a minimum wage commensurate with the increase in the cost of living; the present capacity of the industry to pay wages and profits is greatly below that needed to satisfy the claims of employers and workmen; there is neither in the inland nor in the export trade position any indication of an early improvement; while the present policy of the Government is opposed both to subsidies and to any schemes involving drastic interference with the existing organisation of the industry. The coalowners will probably have to modify their proposal for a fixed proportion of 13 per cent. of the divisible proceeds. It is true that that proportion is less than the pre-war 17 per cent. normal ratio of profits to wages, but a sliding scale ratio securing for the owners a smaller percentage when trade is good than when trade is bad would probably be more equal in its incidence, and better adapted to existing conditions; but from the economic point of view there can be no satisfactory adjustment of the present difficulties that does not secure for the owners in the exporting districts some profit and does not lead to an immediate reduction in the cost of production.

ELECTRIC POWER SURVEY OF BRITAIN.

(BY A CORRESPONDENT.)

THE publication of the statistics of electricity supply by the Electricity Commission* after three years' preparation will serve to concentrate attention on the realities of the power situation in Britain and to lead to a clearer idea of the work that has been achieved and the task which must be confronted in the future. It was certainly time that something more solid than vague theorising and cloudy estimates should emerge from the discussions that have taken place round the subject of electric power and its significance for the industrial prosperity of Britain, and we have now definite figures to be used as a basis of criticism. The power survey covers the years 1920-23, terminating in the first quarter of 1923, but the situation as described here has not altered to any great extent during the last two years, and the reflections inspired by consideration of the statistics are, generally speaking, still applicable. The electrification of industry and the greater utilisation of electrical power for every service to which it can be adapted have risen out of the special sphere of the engineer and scientist, and become matters of urgent national importance. Coal conservation, cheap power, productive efficiency have ceased to be party cries; they are now problems which must be tackled if economic progress is to be achieved. From this standpoint alone, this census of electrical power has a vital significance at the present time.

The capacity of the generating plant installed in authorised undertakings' power stations in 1923 was 3,093,679 kilowatts, 2,663,950 kilowatts, or 86.11 per cent., being represented by steam-turbo plant, 373,867 kilowatts, or 12.08 per cent., by steam reciprocating plant, while water-power plant only represented 8,006 kilowatts, or 0.26 per cent. It is clear from this that coal is fundamental to the generation of electricity in Britain since 98.19 per cent. of the total plant installed depend

* Electricity Commission, Electricity Supply, 1920-23.

on it for fuel. Under an ideal system, the great proportion of this plant would be represented by large units of high efficiency housed in power stations of at least 50,000 kilowatts since it is only above 10,000 kilowatts that real economies in fuel consumption can be realised, smaller ratings being uneconomical and comparatively inefficient. On examination, however, we find that out of a total number of alternating current generators of 541, only 56 units had a higher capacity than 10,000 kilowatts, while 340 units were below 3,000 kilowatts. The average capacity per station was 6,550 kilowatts. These details are sufficient in themselves to show that the multiplication of small generating units and small power stations has been extensive in Britain, and this factor has been chiefly instrumental in raising the costs of electric power to the consumer.

In addition to this, lack of interconnection, the rigid observance of local monopolies, the refusal to pool power requirements and purchase in bulk, combined with incomplete utilisation of electric equipment on the part of the consumer have reduced the net earning power of the generating plant. In 1922-23, for example, 3,762 million units were sold, equivalent to 1,220 units per kilowatt of plant; in other words, the generating stations were earning revenue for only 1,220 hours in the year. With a higher number of hours, fixed charges would have been less, and the efficiency of the stations improved, leading to a considerable decrease in the price of power. The load factor, i.e., the percentage of actual to theoretical utilisation, was, in 1921-22, 27 per cent., and in 1922-23 28 per cent., when a reasonable standard should have been 40 per cent. In 1921-22, 73 per cent. of the undertakings had load factors of less than 25 per cent., and in 1922-23 67 per cent.

The relation between capacity of generating plant, maximum load, total connections to the networks, and load factor in ten of the most representative undertakings in Britain is given below:—

ELECTRICITY DEVELOPMENT in BRITAIN.
(1922-23.)

Authority or Company.	Capacity of Gen'rating Plant.	Load Factor.	Max. Load.	Total Connections.
Newcastle-on-Tyne Elec. Supply Co.	Kilowatt. 199,160	% 48.1	Kilowatt. 128,600	Kilowatt. 395,920
Clyde Valley Elec. Power Co.	87,500	36.1	39,100	124,000
Yorkshire Elec. Power Co.	33,500	37.1	28,092	82,000
South Wales Elec. Power Co.	14,000	40.9	15,330	65,164
Lancashire Elec. Power Co.	42,250	30.0	34,400	47,300
Manchester Corporation	126,650	29.4	94,800	229,561
Glasgow Corporation	111,000	27.9	73,200	180,490
Birmingham Corporation	95,000	25.2	75,692	157,637
Sheffield Corporation	98,500	26.9	64,186	212,190
Liverpool Corporation	78,300	29.4	52,155	94,763
Entire country	3,093,676	28.0	2,000,178	5,484,196

The power companies, owing to the preponderance of supply to industry, can show a better load factor than the municipalities, which depend on lighting and domestic demand for a considerable part of their sales, but only the Newcastle and South Wales companies can show an entirely satisfactory position in this respect. Viewed from an American standpoint, the largest British undertaking, with 199,160 kilowatts of generating plant and an output sold of 443 million units, is of only secondary importance, while the other undertakings given are insignificant. It is doubtful, however, whether the super-power zone or the super-power station on the American model will ever be realised in this country.

Owing to better utilisation of plant and operation of new power stations, the coal consumed per unit generated declined from 3.4 lbs in 1920-21 to 2.8 lbs in 1922-23, while, in some undertakings a lower average obtained in 1922-23; the Lancashire Power Company showed a record low figure of 1.80 lbs, the Newcastle Supply Company 1.86 lbs, and Glasgow Corporation 1.90 lbs. While one ton of coal generated nationally 802 units, in the Lancashire company the yield was 1,245 units. The effect of the poor load factor, small generating units, and lack of

inter-connection was to fix the national average price for power at 2.48d per unit sold in 1921-22 and 2.07d in 1922-23, twice the average charged in the United States and over three times that in Switzerland. In the ten undertakings listed below, the average price is considerably below this, and, in the case of the Newcastle, Lancashire, and South Wales companies, may be regarded as satisfactory:—

ELECTRICITY DEVELOPMENT IN GREAT BRITAIN (1922-23).

Company.	Average Cost per Unit Sold.	Average Price per Unit Sold.		
		Light and Domestic.	Power.	All Purposes.
Newcastle Elec. Supply Co.	0.51	4.15	0.65	0.76
Clyde Valley Elec. Power Co.	0.54	3.46	1.09	1.02
Yorkshire Elec. Power Co.	0.60	...	1.07	1.05
South Wales Elec. Power Co.	0.87	7.27	1.02	1.09
Lancashire Elec. Power Co.	0.45	...	...	0.95
Manchester Corporation	8.82	4.89	1.26	1.77
Glasgow Corporation	0.62	2.93	1.23	1.72
Birmingham Corporation	0.77	4.83	1.43	1.77
Sheffield Corporation	0.50	3.30	1.18	1.47
Liverpool Corporation	0.86	5.75	1.55	2.01
Entire Country	1.15	5.30	1.30	2.08

Since 1923 prices have fallen by 20 per cent. to 25 per cent., so that large industrial firms in the West of Scotland, Lancashire, Yorkshire, North-East Coast, and South Wales are now buying power at .55d to .7d per unit.

The total capital expended on electricity supply by authorised undertakings was, in 1921-22, £143,716,260, while £14,508,076 was added in the following year. Generation accounted for 46.5 per cent. of the total, the remaining 53.5 per cent. being covered by transmission, distribution, and other charges. The total revenue from operation was, in 1922-23, £35,520,539, and the gross surplus £16,480,082, equivalent to 10.8 per cent. of the total capital expenditure—a distinctly satisfactory position. The position in ten undertakings is shown below:—

ELECTRICITY DEVELOPMENT in BRITAIN (1922-23).

Station or Company.	Total Capital Expenditure. (Millions £).	Per Cent. of Surplus of Revenue over Expenses of Capital Expenditure.
Newcastle-on-Tyne Elec. Supply Co.	7.670	5.41
Clyde Valley Elec. Power Company	2.363	6.50
Yorkshire Elec. Power Company	2.093	7.74
South Wales Elec. Power Dist. Co.	1.033	2.97
Lancashire Elec. Power Company	1.630	10.37
Manchester Corporation	7.211	8.25
Glasgow Corporation	7.965	6.97
Birmingham Corporation	4.166	11.39
Sheffield Corporation	3.804	13.01
Liverpool Corporation (15 months)	3.734	15.96
Entire country	158.224	10.00

The degree of electrical penetration in Britain has been slight, over 56 per cent. of the areas supplied showing a consumption per head of population of less than 50 units, while 79 per cent. had less than 100 units. It is only possible to regard 6 per cent. of the areas (200 units and above) as moderately electrified, 94 per cent. under-electrified, while, even in the denser areas, industry has been responsible for the higher consumption. For lighting and domestic purposes, only 15 units were consumed, owing almost wholly to the fact that electricity is still too expensive, particularly in the areas served by London companies, where the principle of high profits, lack of efficient service, and excessive capital has made electricity a privilege of the leisured few, and, until the stigma of high prices is removed, it is difficult to see how this can be improved. Developments in the future will probably take the form of a general levelling-up of power consumption consonant with better facilities for standardisation of frequencies and pressures, wider regional distribution of electricity, and greater specialisation in generation and transmission, with its accompaniment in more extensive advocacy and use of bulk supplies from central stations. The regime of the small station supplying restricted localities has been shown, on the evidence of this publication alone, to be economically unjustifiable.

A GOLD STANDARD WITHOUT GOLD CIRCULATION.

(BY A CORRESPONDENT.)

THE new gold standard by which the gold held for monetary purposes is centralised in the Bank of England (and the Treasury), and no gold coins are permitted to pass into circulation—called in German *Goldkernwährung*—represents an innovation that was recommended by David Ricardo more than a hundred years ago in his pamphlet entitled "Proposals for an Economical and Secure Currency" (1816). Ricardo's main arguments in favour of his proposal may perhaps best be recalled by a quotation from his pamphlet: "The saving which would take place from not submitting the guineas to the loss of weight from the friction which they must undergo in their repeated journeys, as well as of the expenses of conveyance, would be considerable; but by far the greatest advantage would result from the permanent supply of the country as well as of the London circulation, as far as the smaller payments are concerned, being provided in the very cheap medium paper instead of in the very valuable medium gold, thereby enabling the country to derive all the profit which may be obtained by the productive employment of a capital to that amount. We should surely not be justified in rejecting so decided a benefit unless some specific inconvenience could be pointed out as likely to follow from adopting the cheaper medium."

It is fundamentally the same argument in favour of economy that has prevailed at the present juncture. The members of the Treasury Committee on the Currency and Bank of England give it as their opinion that the use of gold for domestic circulation is a luxury which can well be dispensed with, and which the English people are, in fact, at any rate during the next few years, not likely to be able to afford. It may be added that most countries all over the world take the same view. The result may be shown by the statistics of gold distribution as published by the Controller of the Mint in the U.S.A. in his annual reports, from which the following figures have been taken:—

Year.	Monetary Gold.			Gold in Circulation as Percentage of Total Monetary Gold.
	In Banks, &c.	In Circulation.	Total.	
1912	\$ 5,408,000,000	\$ 3,072,000,000	\$ 8,480,000,000	36.3
1923	\$ 9,300,575,000	\$ 107,186,000	\$ 9,407,761,000	1.1

Even if we must admit a comparatively large margin of error, the changes are so marked as to eliminate any doubts regarding the tendency.

We may now ask: What influence is this change likely to have on the value of gold? Curiously enough, Ricardo never put that question, and the report of the Treasury Committee does not deal with it. Perhaps the reply may seem simple: the new system limits the field of employment of gold, and thereby lessens the demand, with a consequent possibility of a lower gold value than under the old system. This is no doubt true in a way, but it is not a sufficient reply. Before going further, let us consider some of the forces which operated before the war to make gold a relatively stable commodity.

Suppose a country was inflating by granting too lavish credit facilities on the domestic market. In that case, prices rose and the exchange reacted in the usual way. There was a flow of gold abroad, and steps had to be taken to protect reserves. We may call this check No. 1. Suppose, on the other hand, that the lavish credit policy were adopted more or less by all countries, or that by reason of increased gold production credits were extended on the basis of the increased reserves. Prices would rise simultaneously in all countries, and check No. 1 would not come into operation. But there would be other safeguards. The rise in prices would make gold production less remunerative—check No. 2—though for many

reasons the falling off in gold production would probably take place very slowly. The cheapening of gold in relation to other commodities would increase the industrial demand for gold—check No. 3. This reaction might take place fairly quickly. In 1919, when gold had fallen to such a low value, the industrial demand absorbed about 60 per cent. of the new production, as against 20-37 per cent. before the war. The rise in prices of commodities would necessitate more gold coins in circulation. Check No. 4. If we compare the old and the new system we find that, while paper notes may be issued on the basis of a cover of 30 to 40 per cent., new gold coins, of course, demand 100 per cent. gold (or very nearly 100 per cent.). The automatic reaction against an inflationary credit policy has thus become considerably weakened under the new system. But is the disappearance of check No. 4 really of importance? Its importance may best be illustrated by considering the change that has taken place in the value of gold since the beginning of the war. In 1912 the total value of the gold coins in circulation was about \$3,000 millions. If prices rose by 60 per cent., the gold in circulation would have to rise by 60 per cent.—i.e., \$1,800 millions—nay, more, owing to the increase in population. The total amount of gold needed in circulation after prices had risen we may put at \$4,800 millions at least. Out of an aggregate stock of monetary gold of \$9,400 millions there would only be \$4,600 millions left for reserves in banks, &c., as against \$5,400 millions in 1912. But it would, in fact, have been necessary to increase the reserves, as the volume of credit would have risen *pari passu* with the increase in prices. Consequently a fall in the value of gold of such proportions as those we have experienced during the war would not have been possible if the old system had been adhered to. But the actual development shows that it can take place under the new system, and what has happened once may happen again.

Is it, then, possible to return to the old system? It is doubtful, as such a return would probably lead to an abrupt rise in the value of gold—very harmful to trade and industry—and also involve great cost to procure the necessary gold for poor European countries. Further, it may be doubted whether the public would be willing to exchange the more convenient notes against gold coins; at least, the experience of Switzerland during 1922, when the authorities practically failed in their attempt to introduce gold coins into circulation, points in that direction. But if gold has disappeared from circulation for good, we must find a substitute for the safeguard, the check we have lost. There can only be one—viz., that the leading banks of the world, as recommended by the Genoa Conference, should co-operate in order to stabilise the value of gold by an intelligent and universal credit policy. It is probably a development of that kind that the members of the Treasury Committee had in mind when they declared that "the payment of notes in gold is not in itself essential to the maintenance of the gold value under modern conditions." One might even go a step further. The accumulation of gold in the central banks gives ample elbow-room for carrying out a credit policy more free from legal restrictions than when the reserves were of smaller proportions. The new system leads necessarily to the adoption of new criteria for currency policy at the same time as it provides the legal possibility of such a development.

We may now ask whether the new system will really lead to a saving in gold. As the present low value of gold increases the industrial demand for gold, there will be a more productive use of gold. But the saving does not go further, as the only means of increasing the industrial stock of gold is to lower still further its value. It is unlikely that the industrial demand will exceed the annual production of gold. The large stocks of monetary gold at present held by the Federal Reserve and other central banks must thus be maintained even under the new system. The substitution of the cheaper medium paper for the more expensive medium gold, as advocated by Ricardo, may constitute a saving for one country, but it can never reduce the stock for the world taken as a whole without involving serious changes in the value of gold. The burden of keeping gold locked up unproductively is an inevitable element of the gold standard system.

THE CHEMICAL TRADE

(BY A CORRESPONDENT.)

THE past twelve months have witnessed a slow but steady improvement in the chemical trade and industry in the United Kingdom, though it must be admitted that most of the progress has been effected in the domestic markets. In the heavy chemicals, certainly, the position is fairly good, but a glance at the trade figures for the first few months of the current year will show that, whereas imports of chemicals and chemical products have risen in value from £6,127,000 in the period January 1 to May 31, 1924, to £6,321,000 in the corresponding period of this year, the exports have fallen in value from £11,087,000 to £10,407,000 respectively. Nevertheless, it is the considered opinion of Mr Roscoe Brunner, chairman of the well-known chemical-manufacturing firm of Brunner, Mond and Co., that the chemical trade is one of the very few trades in the United Kingdom which are expanding. Naturally, the chemical trade, and particularly the heavy chemical trade, is dependent to a very great extent upon the prosperity of the industries which it serves, as, for instance, the soap, paper, and textile industries. The keen competition experienced in the home market by British manufacturers from foreign suppliers has tended to bring prices down to comparatively low levels on the whole, though the gradual move towards more stable conditions abroad is bound to have its effect.

With the lessening fluctuations in exchange rates, and the improving economic position of not only our competitors, but also of our customers, there is more opportunity for the British exporter of chemicals to explore areas hitherto served by other interests. Unfortunately, tariffs still continue to be amended and revised, and in many cases higher barriers are being erected, with the consequent adverse effect. On the other hand, there is evidence of concession on the part of certain foreign countries; Czechoslovakia, for example, has made it possible to import fertilisers, dye extracts, nickel, sulphate, &c., into that country free of restriction. But the main difficulty of the future undoubtedly will be the intensive development of a national chemical industry in the principal countries of the world. It is hardly necessary to refer to the strides made by America, France, Italy, Japan, and the Dominions, whilst Germany has always been considered as one of the greatest factors in the world's chemical trade.

In the leading heavy chemicals, the soda compounds, British manufacturers, of course, stand pre-eminent, and not only supply the whole of the home market, but export very large quantities. Caustic soda is the only member of this group which shows a decline in exports during the first few months of this year as compared with 1924, but with sodium carbonate, bicarbonate, chromate and bichromate and sulphate heavy increases are recorded. Future developments in the markets for these products are to some extent affected by the recent acquisition by the Brunner Mond interests of the Magadi Soda Company's properties in East Africa, which had previously proved a severe competitor in the Far Eastern markets. In most of the other sodium compounds, Continental competition enters into the British market with a healthy effect. So far as the acids are concerned, far-reaching developments are taking place, which may influence very appreciably the outlook for sulphuric, nitric, and hydrochloric acids. The production of the first-named is largely dependent upon the twin fertiliser industries, ammonium sulphate and superphosphate, which together account for about half of the production. Since the capacity of the by-product ammonium-sulphate industry is distinctly limited, and the superphosphate manufacturers are under a cloud, the position of sulphuric acid is rather gloomy. Nitric acid manufacture, too, in this country is threatened with very severe competition from synthetic acid from Germany and Norway, and in many cases plant is being closed down, as the material can be purchased from abroad far more cheaply than it can be made here. There is, however, a promising possibility that the manufacture of nitric acid, so essential to the dyestuffs and explosives industries, may yet be pursued in Great Britain by the

newer methods. With regard to hydrochloric acid, which has such a wide range of uses in modern industry, the perfection of the process whereby the acid is produced synthetically from electrolytic chlorine has led to its increased production, not only in this country, but in America and Italy.

Of the other industrial chemicals, the potash compounds, which are mainly imported, are much more stable than was the case a year ago. The speculative element in these products has been largely eliminated by the formation of a convention in Germany to regulate supplies to importing countries. Lead products have varied, prices being influenced by the fluctuations in the value of the metal. Of the borax products, borax has shown the best results to British makers, but boric acid is rather a disappointing market. The persistent price-cutting war between British interests and importers has led to business being done on almost unremunerative lines, and it is quite possible that prices may move upwards again when economic pressure prevails. One of the most depressing features of the chemical trade is the unprecedented fall in arsenic values during the past few months, but there are signs that the American demand may again rise to large proportions later on. Barium compounds have met with considerable competition, and chloride has fallen in price by 30 per cent. since the beginning of 1925.

Pharmaceutical and fine chemicals have continued to decline in value over the first half of this year, but in one or two isolated instances higher figures are recorded. The most striking advance has occurred in the bromides, ammonium, potassium, and sodium, which are very firm at the present time, and likely to remain so. Otherwise, there is a general weakening, and should the protection now afforded by the Safeguarding of Industries Act be removed, which is hardly likely under the present régime, British manufacturers might temporarily find themselves in a difficult position. In the coal-tar products market, matters are distinctly disappointing. For some considerable time now the prices obtained for gas-works residuals have been on a very low level, and successive reductions have not resulted in any increase of business. Carboic acid crystals have, in common with other products, continuously declined, but the market is now inclined to be steadier, with some inquiry in evidence. There appears to be a feeling that rock-bottom quotations have been reached, and that any movement which may take place will be towards higher rates. The general dullness, however, does not lead to any such anticipations for the immediate future.

At this time of the year, fertiliser materials are usually at a low ebb, with manufacturers and importers stocking supplies against future demands. It is significant, however, that British manufacturers of ammonium sulphate have, in sympathy with foreign producers, reduced prices, both in the home market and for shipment, by a very considerable margin. The probability of steadily increasing supplies from the Billingham factory of the Brunner, Mond subsidiary concern, Synthetic Ammonia and Nitrates, Limited, doubtless influenced the British makers' organisation in their decision to lower prices. This has had its effect, and a fair volume of orders on next season's account has already been received. In the export market, total shipments are well maintained, the loss of the Japanese market to German competitors having been counterbalanced by the increased demand from Spain. The use of nitrate of soda as a fertiliser in this country has been slackening for some years now, and, indeed, it is much more expensive than the home-produced sulphate, based on the unit value of nitrogen content. The super-phosphate industry has received much attention during the past month or two in connection with the demand on the part of British manufacturers for a prohibitive duty on imports amounting to about 40 per cent. This is its own commentary. Basic slag as a fertiliser is not so popular as it once was, and the use of potash fertilisers does not appear to increase in large proportions. Extensive propaganda work is in progress in all classes of fertiliser materials, but there is every reason to believe that not only will existing markets increase their commitments, but potential markets like China, India, and South America will eventually realise the advantage of increased crop yields resultant upon the use of suitable artificial manures.

Finally, the most illuminating index, perhaps, to the position of British chemical industry and trade is to be found in the unemployment figures for the industry, and perusal of the official statistics reveals a steady diminution since the great slump of 1921. The opinion of Mr Roscoe Brunner, referred to at the commencement of the article, is reflected in the fact that of the total unemployed of three years ago, less than half remain outside the industry to-day, and the possibilities of further recuperation are most promising.

THE RUBBER BOOM.

(BY A STOCK EXCHANGE CORRESPONDENT.)

As most of the elements essential to a boom are apparent in the present excitement over rubber shares, the student of the market may justly fall into line with the Stock Exchange in applying that flamboyant description to the existing state of affairs. Day after day the market boils and seethes with a strenuous exuberance. The roar of the bidding goes on with little intermission from half-past ten in the morning until the House closes at four o'clock in the afternoon. Transactions on the telephone continue for another three or four hours. Night brings but brief relief at the settlement time, and those clerks count themselves fortunate who can catch the last trains home on the contango and ticket days. Telegrams arrive at all hours of the day, and, from the Continent, of the night. The mechanical part of the work is enormous, owing to the thousands of small bargains transacted on account of the men and the women with twenty pounds, fifty, or a hundred, the money being spread over purchases of handfuls of florin shares whose market prices stand in the early shillings. All classes of the community are taking a hand in the gamble. The name of a famous artist will appear on the same transfer deed as that of another client who does not mind calling himself a fitter. There cannot be scope for making any appreciable profit out of the purchase of, say, 200 shares at half-a-crown apiece, but the prospect of snatching a ten-pound note from the deal brings a fearful joy which sets a-tingling the speculative nerves of the country parson or the lady shopkeeper, and gives all the sensation that, by tradition, fires the spirit of the wild gambler. And to many of to-day's speculators the purchase of rubber shares is the merest chance of a name, seized upon as the result of tip from newspaper or friend, turning up trumps in the share market. It is open for all men to see, of course, that raw rubber has jumped up in price with a tremendous bound, more than doubling itself within a month. Manipulations or natural cause, the result must be a very profitable, however temporary, affair for companies producing rubber at a cost of a shilling to one and six per lb, and selling it at half-a-crown. The spot price of 3s 11d may be—probably is, speculation acknowledges—more or less artificial, but it governs the forward quotations as well, and, unless a company has sold forward at some low figure all its crop, it stands to reason that the producer is likely to net handsome profit. Bumper dividends appear in sight, and, as always happens in a boom, there seems little or nothing to stop the attainment of higher prices, bigger profits.

On the first of next month a further addition will be made to production of raw rubber through the raising of the percentage of output permitted to the companies complying with the Stevenson Restriction scheme. There is, as all admit, the rather unlikely prospect of restriction being removed entirely, which, if it came about, would allow of companies tapping to the maximum extent of their capacity in order to take full advantage of rubber's high price. Some experts say, however, that even the removal of all restriction upon production could not make much immediate difference to companies that are none too amply supplied, as things are, with labour forces, or the means for immediate handling of any great increase of rubber. Doubtless the American buyers would be only too pleased to see such a rise in the supplies as would enable those buyers to fill their requirements at a cheaper price than rules now. The holder of rubber shares is

not wholly displeased at the reflection that the appreciation in the market price of his interest has come about at the expense of that American buyer, whose methods of purchasing raw rubber have been so successful in the past in keeping down the price of the produce. Now that the boot is on the other foot, and the buyer is threatened with a shortage of supply, the sellers indulge the comfortable thought that they are now coming into their own inheritance, out of which they have been squeezed for so long a time by skilful organisation of their chief customers.

Already the dividend announcements are beginning to show, in their increased rates, what may be expected in the shape of distributions a year hence. New companies are being formed, floated, and their shares over-subscribed in the manner to which former booms have accustomed the public. There is so gay an air about the rubber share market as to make it seem almost churlish to dwell upon the desirability of dealing only in the good-class companies' shares, lest the unexpected should happen, and the boom become suddenly rent by the operation of forces that cannot be ignored when speculation is rife in the product of any tropical industry.

Notes of the Week.

The Position in India.—A glance back at the menacing conditions a year or so ago is enough to remind us that an improvement in the Indian position is one of the more promising features in the general outlook. This perhaps is the first thought that occurs to the reader of the two Parliamentary debates on India this week, on Monday in the House of Lords and on Thursday in the House of Commons. Lord Birkenhead's statement in the Lords was the more eagerly awaited because it was expected to disclose the results of recent consultations with Lord Reading. But if he disappointed his hearers in this respect, and said that he had "no decisions or conclusions" to announce, his review of the position was not lacking in interest or importance, and the tone of his pronouncement on the whole fulfilled the expectations expressed at the time of his succession to office, that he would approach Indian problems in a liberal spirit and with a broad outlook. Opening with a careful review of the financial, commercial, and agricultural position—a review in which a cheerful note predominated—Lord Birkenhead turned to the constitutional problem as his main theme. A generous tribute to the late Mr Montagu led up to a sketch of the working of the 1919 Act, and to the conclusion that the experiment has neither altogether failed nor altogether succeeded. He made it clear that the present Government's aim was to pursue the road towards self-government on which our feet are set. But "the door of acceleration was not open to menace; still less would it be stormed by violence." The Montagu-Chelmsford Act provided for a reconsideration by a Royal Commission after ten years—that is in 1929—or earlier. But "there could be no reconsideration until they saw everywhere among responsible leaders of Indian thought evidence of a sincere and general desire to co-operate with them in making the best of the existing Constitution." Having dwelt on the disastrous policy of non-co-operation, Lord Birkenhead, in a striking passage, threw out an invitation to the Swarajists to come forward with definite proposals of their own. This invitation, in slightly modified form, together with the gist of Lord Birkenhead's review, was repeated in the House of Commons by Lord Winterton, the Under-Secretary of State for India, whose statement was well received in all quarters of the House. Col. Wedgwood, who initiated the debate on behalf of the Labour Party, declared that "non-co-operation was the curse of India," while Mr MacDonald's speech was in most essentials in harmony with the Government's statements. The comparative harmony of the views of all parties on the general lines of Indian policy was merely silhouetted by the discordant note struck by Mr Saklatvala, who gloried in subversive propaganda. No greater mistake, however, could be made than to suppose that, because there is in this country no party conflict over Indian

policy, progress in the solution of the intricate constitutional problem is therefore easy. Any such complacent supposition is shattered by the news of the chilly reception accorded in India to Lord Birkenhead's speech—a first impression, which, we trust, will be modified by the subsequent study of the full text of the statement.

Forestalling the McKenna Duties.—The June returns of overseas trade will not be available till early next week, but one feature of them was disclosed by the Chancellor of the Exchequer in the House of Commons on Tuesday. In answer to questions, Mr Churchill revealed the extent to which motor cars and other goods which became dutiable on July 1st have been rushed to this country in order to forestall the new duties. He said:—"During the first month after the Budget announcement importations were not more than had been anticipated, and it was not until the early days of June that a large expansion of imports became evident. This continued during the whole month, and I regret to say that, on the average, nearly four months' importations have been forestalled, entailing a loss to the revenue, above what has been allowed for, of possibly a million on the McKenna duties." The Government had been considering, but had rejected, the obviously impracticable course of retrospective collection, but Mr Churchill foreshadows legislation to prevent such forestalment in future. Mr Wedgwood Benn voiced the fear that such legislation would mean that future duties would be imposed by a single resolution of the House of Commons. Mr Churchill denied that the legislation which he contemplates would have that effect. Obviously, if we are in for a succession of additions to our tariff, the Treasury will take steps to prevent the loss of revenue; but such legislation, when brought forward next year, will require the most careful scrutiny. For the moment the position is that Mr Churchill's wanton re-imposition of the McKenna duties has been made to look more foolish than ever, and the revenue which he may expect has been reduced to even more insignificant proportions. As to the future, his contemplation of legislation in time for next year's Budget ominously suggests that more bites at the tariff cherry are in prospect.

The French Bank Rate.—The announcement on Thursday that the discount rate of the Bank of France had been reduced from 7 per cent. to 6 per cent. caused surprise and comment in the market. It was, of course, a natural desire on the part of the Government to have as favourable an atmosphere as possible for the new gold loan, but the technical position of the Bank would seem to give no justification whatever for such a reduction, and in this way emphasises still more the political nature of this action. When the rate was raised from 6 per cent. to 7 per cent. on December 11th last, note circulation stood at 40,568 million francs, advances to the State at 22,700 million. From that time until the end of March the note circulation showed little movement, and advances to the State were slightly reduced. At the turn of the quarter came a sharp rise both in advances to the State and in note circulation. Recently, however, there has been the further rapid increase in advances to 27,400 million francs, and the rise, although less rapid in note circulation to 44,494 million. When the Bank rate was last raised sterling stood at about 88½; to-day, after the recent official support, it stands at 103.45. In December of last year the official French index number of wholesale prices stood at 586; in May, the last available figure, it stood at 601. In view of these factors, the reduction for any reason other than that of propaganda seems difficult to explain.

Austrian Bank Rate.—The statement made this week by Dr Reisch, President of the Austrian National Bank, to the effect that the anticipated reduction in Bank rate would not be made, will strengthen confidence in London in the National Bank's policy. The sharp rise in prices on the Vienna Bourse this week, after six months of comparative stagnation, is due partly to anticipations of a lower Bank rate, partly to the rumour that arrangements had been come to in Switzerland to carry Herr Bosel's

stocks, which the market had expected to be liquidated, and partly to bear covering on a large scale. Prices are admittedly low, but there are signs that funds might be found for speculation. Dr Reisch, however, insists that the rise must be gradual. He declares that the assistance of a committee of bankers will be employed to check an excessive or sudden rise by selling shares taken over with his help during the last crisis, and that, if necessary, Bank rate will be raised. Such action would be extremely unpopular, as the rate is at a burdensome level, but it is evident that the Austrian National Bank is acting on the lines favoured by the Bank of England and the Reichsbank.

Crop Prospects.—The monthly report of the Ministry of Agriculture and Fisheries states that wheat has done well during the hot weather, and looks better than it did earlier in the season. There are very promising crops in the Fens, and on heavy land where the plant withstood the winter, but, with a certain proportion of thin plants, the yield per acre over the whole country will probably be rather under average. Winter barley benefited from the sunny weather, but the spring sown, especially that sown late, suffered from the drought, and was losing colour and vigour towards the end of June. On present appearances the yield per acre of barley is expected to be poor. Over the greater part of England most of the oats had not suffered much from the lack of rain up to the end of June, but in the north-west many fields were losing colour. The corn crops are frequently short in the straw. Beans are promising on the whole. The prospective yield per acre is estimated as about average. Peas are variable and require rain badly in all districts. Early potatoes are mostly small and giving light yields. Main crops have grown fairly well, and are healthy, but were beginning to be checked by the lack of rain before the end of June. Yields on the whole are expected to be somewhat lighter than usual. Mangolds are fairly promising. Large areas intended for turnips were still unsown at the end of June as the land was too dry for germination, and heavy land was so hard that it could not be worked down into a satisfactory seed bed. On the whole there are good plants of sugar beet, but some of the later sown is patchy. The crop made good growth during June and prospects are generally favourable, especially in the Fens. An early start was made with the hay harvest, and in most parts of the country all the seeds and a good proportion of the meadow hay was in stack before the end of June. The average yield per acre of seeds hay over the whole country is estimated at about 29½ cwt per acre, or about 1 cwt per acre above average. Owing to the dry weather, meadows did not fill up well with bottom grass and yields are not expected to exceed an average of 20 cwt per acre, which is nearly 1 cwt per acre below average. On the whole the supply of labour is barely sufficient for the demand, and in some districts more casual workers for hay-making and root-hoeing could have been employed if available.

More Bank Dividends.—With the exception of Lloyds Bank, all the English banks have now declared their mid-summer interim dividends, and as will be seen from the table below, no changes have been made in comparison with the rates paid at this time last year:—

	Per Cent. per Annum.									
	1918	1919	1920	1921	1922	1923	1924	1925		
Bank of Liverpool and Martin's	16	15	16	16	16	16	16	16		
Barclays Bank "B" shares	20	20	14	14	14	14	14	14		
Lancashire and Yorkshire	16	16	16	19	19	20	20	20		
Lloyds	18	18	18	18	18	18	18	18		
Midland Bank	20	20	20	20	20	20	20	20		
Westminster Bank	15	15	15	15	15	16	16	16		
Manchester and County	15	15	15	15	15	18	18	18		
District Bank	17	17	18	18	18	18	18	18		
National Provincial Bank	16	16	16	16	16	16	16	16		
Williams, Deacon's	14	12	12	12	12	13	13	13

Foreign exchange orders executed in the New York market for banking correspondents abroad. Commercial banking business of all descriptions transacted.

Special Representative:
24, OLD BROAD STREET, LONDON.

This table presents a remarkably steady record of payments, the change from boom conditions to trade depression having had no apparent effect. However, such influence would be more likely to show itself in the final dividends, but in the past three or four years these have also been mostly unchanged. Conditions during the first half of the current year have been fairly good from the profit-earning point of view, and although allowances for bad debts may have to be slightly increased owing to the acute depression in certain industries, it seems hardly likely that dividends for the full year will have to be reduced. Hidden reserves are substantial, and there should be ample margin to enable rates to be maintained, even if profits should fall, or investment depreciation necessitate some allocation therefrom.

Shipping Freight Index Number.—Whole-cargo charter rates, as measured by our Index Number, fell in June by 6.61 per cent. The Index figure for the month, 106.73, compares with 114.28 for May, and 126.37 for June, 1924. The movement of the various groups in the Index are summarised as under:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920.....	814.31	529.89	757.52	744.81	587.02	712.16	690.95
December.....	268.90	277.17	244.10	256.79	286.72	347.18	280.14
December, 1921.....	160.06	164.07	163.72	144.43	141.25	166.47	156.67
December, 1922.....	137.09	135.15	129.19	122.61	136.08	159.34	136.67
December, 1923.....	134.03	132.72	120.09	124.35	125.07	144.21	130.08
July, 1924.....	123.66	121.87	121.91	120.13	114.69	121.96	120.70
August.....	120.45	128.10	119.94	118.97	113.31	128.19	121.49
September.....	117.90	138.94	123.20	124.93	122.19	144.22	128.66
October.....	118.80	143.09	125.96	126.59	135.47	156.68	134.43
November.....	115.01	137.32	120.31	120.50	131.95	162.02	131.18
December.....	117.44	129.18	119.45	119.76	129.29	161.13	129.38
January, 1925.....	115.26	134.60	120.38	123.83	132.44	172.70	133.20
February.....	114.92	146.54	118.04	121.95	129.99	178.04	134.91
March.....	116.34	130.81	110.41	116.99	118.42	151.33	124.05
April.....	114.18	133.39	110.62	115.95	114.60	138.87	121.27
May.....	109.86	124.85	110.97	108.43	105.16	126.41	114.28
June.....	109.25	104.78	108.24	105.53	100.43	112.17	106.73

The month's changes in the Index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	93.59	- 1.41	S. America—outwards.....	134.84	+ 18.06
Bay—outwards.....	111.93	- 1.83	" homewards.....	81.64	- 20.52
" homewards.....	123.38	+ 0.80	India—outwards.....	122.11	+ 4.21
Mediterranean—outwards.....	127.46	- 1.24	" homewards.....	88.94	- 10.02
" homewards.....	105.55	+ 1.42	Far East, &c.....	100.43	- 4.73
North America.....	104.78	- 2.07	Australia.....	112.17	- 14.24

Homeward demand in June was reduced to a low level, grain moving slowly, and shippers generally finding the space offered by liner sailings adequate for their requirements. India and the Far-East had little or no business to provide for "tramp" shipping, and in the case of both the Americas redundancy of tonnage resulted in heavy concessions having to be made by owners. The coal trade in European waters was featureless, but as an offset to the fall in homeward rates from the Plate coal freights

to South America rose steeply. As compared with a year ago, outward and homeward quotations to the Argentine show a remarkable change:—

	Average, May-June, 1924.	Average, May-June, 1925.	June, 1925.
South America—			
Outward	98.42	127.31	134.84
Inward	169.82	91.91	81.64

The effect of this reversal is unfortunately adverse to exports of British coal to South America in competition with supplies from the States. The relation of the Index to the average for 1913 may be seen from the following table:—

Month.	(1913 = 100.)	1922.	1923.	1924.	1925.
January	131.60	114.05	117.11	114.49	
February	135.76	112.73	123.78	115.96	
March	135.53	115.23	122.09	106.63	
April	129.46	115.45	117.22	104.24	
May	125.12	114.55	114.27	98.23	
June	117.45	106.82	108.62	91.74	
July	114.52	103.39	103.75		
August	113.16	100.16	104.43		
September	110.37	103.04	110.50		
October	114.42	107.86	115.55		
November	119.43	111.21	112.76		
December	117.39	111.81	111.21		
Mean for year	122.02	109.69	113.44		

There is reason to think that, barring such a disastrous eventuality as a stoppage of work in the British coalfields, the downward swing of freights which normally takes place between spring and summer has now run its full course. In the past three years this seasonal decline has amounted in round figures to:—1923, 13 per cent.; 1924, 16 per cent.; 1925, 21 per cent. Thus the temporary summer depression now recorded by freight markets is somewhat more pronounced than in either of the last two years, a contributory factor being that, apart from dull demand, remarkably cheap quotations for bunker coals have tended to render possible acceptance of lower freights.

Empire Cotton Futures Contract.—Our Manchester correspondent writes:—This week the directors of the Liverpool Cotton Association have taken action which will probably have an important bearing upon the development of cotton-growing in the British Empire. For a long time a committee of the association has had under consideration a new futures contract, against which outside growths of cotton other than American and Egyptian can be tendered. There have been many difficulties in the way, but the members of the association have now adopted a new form of futures contract entitled "The Empire and Miscellaneous Cotton Delivery Contract," against which all growths of cotton not lower than the grade and value of strict low middling American cotton may be tendered, the contract only excepting certain grades of Egyptian cotton tenderable on the present Egyptian futures contract. The importance of this decision is that a hedge in the futures market is now provided for growers and importers of Empire cotton, and it is expected that this will greatly benefit cotton-growing in the British Empire. The contract will come into force on September 1st next for delivery of cotton in October and onwards. Trading will be in multiples of 50 bales (containing 24,000 lbs of cotton).

Shipbuilding and Textiles in Northern Ireland.—Our Belfast correspondent writes:—The fact that a conference of representatives of all branches of industry and labour has recently been sitting in Belfast to consider the question of unemployment is an indication of the state of local industry. At this conference special sectional committees were set up for different branches of industry to consider and report to the Ministry of Labour as to the causes of unemployment and to suggest remedies. In the case of shipbuilding and the linen industry, the causes of unemployment are well known, but the question of remedies is a different and a much more difficult matter. At the end of June the number of persons seeking employment through the Ministry of Labour was roughly 57,000, and this figure has been considerably augmented during the past few months by the declining amount of employment in the linen trade. In fact, both shipbuilding and

linen manufacture in Belfast, upon which the city mainly depends for its industrial prosperity, are both suffering severely from lack of orders. The state of the British shipbuilding industry is too well known to require comment, and Belfast yards, like those of Great Britain, are passing through a bad period. A record of the launchings from local yards during the past six months shows a total of about 34,000 tons, against between 58,000 and 59,000 for the same period last year. This record is the worst experienced in Belfast for some considerable time, and it is remarkable that, in a centre noted for big ships, not a single vessel with a tonnage of over 10,000 has been launched this year. A 22,000-ton motor-ship, the largest yet built, will, however, be launched early in July from Messrs Harland and Wolff's yard. Reports of new business are current, and it is hoped that these will materialise in order that more employment may be found for the skilled shipyard labour available. The condition of the linen industry is also very unsatisfactory. From all accounts the Irish flax crop will not even be so large as last year's, and this alone is a discouraging factor. High prices of raw material have to a large extent affected the selling price of the finished article, and much of the present depression can be traced to that cause. What is required is a cheap, ample, annual supply of flax, and until this is attained the linen industry will be faced with these periodic spells of bad trade. There are, however, other contributory factors, such as lack of confidence in yarn and cloth values, competition of foreign manufactures in both home and foreign markets, change of fashion, &c. The falling off in demand from the United States, which is the largest market for Irish linens, has been most marked. In May, 1924, about 7,000,000 square yards of linen piece-goods were exported to that market, whereas in May this year the figure had fallen to 2,235,900 square yards. Some other important overseas markets, such as Canada and Egypt, showed reduced takings of no less than 50 per cent. for the same month as compared with 1924, with the result that the adverse balance was roughly five million square yards on the month. Taking the situation broadly, there has been a declining cloth market since about October last. In the home market the influence has been felt of imports of linen goods from the Continent at prices well under those of home manufacturers. These imports of linen piece-goods totalled no less than 5,613,562 square yards in the first five months of this year. Irish flax spinners are also being faced by the competition of Belgian and French spun yarns, which, with recent exchange movements, are becoming still more competitive. Linen weavers, taken as a whole, are not producing 50 per cent. of their normal capacity. Damask manufacturers are having a very lean time, whilst makers of plain goods are rapidly depleting their order-books.

Conditions in Egypt.—An Alexandria correspondent writes:—Lord Allenby, after a proconsulate of six years, takes with him the good wishes of every class of resident in Egypt, and of none more than the British colony. He found British prestige at the lowest ebb; he has restored it to its highest flood in Egypt, which is already a considerable asset for his successor. What the future holds remains to be seen, but it cannot be denied that influential circles face it with, if not misgiving, at least a certain anxiety. The chief subject of economic interest in this country is always cotton. At present the position gives rise to some uneasiness. May opened with quotations at \$65 the cantar of 99 British pounds for June contracts, and though prices, with many fluctuations, have sagged since to 58, the feeling is still undecided. Very little cotton is left in the interior for delivery against contracts, and with the ever-present possibility that an oversold position may require to be liquidated, a renewed rise in spot prices is not to be ruled out of account. The market is very firm at present. Interest, however, is now being directed towards the new crop. A good deal of resowing, which means tardy development and liability to boll worm later, has been necessary, but that has now been completed. There are complaints that the cold nights of April have

kept the crop back a fortnight, and cotton worm and other pests have been reported from various localities, but these complaints are normal at this season, and are not always disinterested. Warm weather in May has enabled the plant to recover most of the lost growth, and, on the whole, the condition of the crop may be termed normal. The estimator is already at work. The area is considered to be greater than that of last year, by some valuers as much as 6 per cent. more, and an out-turn of 7.6 cantars is forecast. But such estimates have at present little real value, and the first reliable indication will be obtained when flowering becomes general in about a fortnight's time. The most recent statistics are as follows:—

	(Thousands of Cantars.)	1922-23.	1923-24.	1924-25.
Initial stock (Sept. 1)	1,332	803	260	
Arrivals to date	6,600	6,370	7,031	
Exports	6,517	6,399	6,540	
Stock at the port	1,415	774	751	

Arrivals of cotton seed at Alexandria have reached 3,638,000 ardebs, against 3,339,000 last year; exports (mostly to Great Britain) have been 2,555,000 ardebs, against 2,367,000; and local consumption has been about the same as last year, 1,000,000. The onion season is now nearly over. The crop has been above average, and since the opening of the export season on March 1st, 1,053,000 cantars have been exported, against 809,000 last year. The increase of trade between Egypt and the United States merits attention in Great Britain. During the first quarter of the year, the States imported from Egypt goods (almost entirely cotton) valued at \$19.3 millions, against \$13.9 millions last year. Since Egyptian cotton is very largely utilised in the manufacture of motor-car tyres, these figures relate to a resumed activity in automobile manufacture. The following figures for recent imports of motor-cars into this country are therefore of interest:—

MOTOR VEHICLES (COMPLETE) IMPORTED into EGYPT.					
		1924.		1925.	
Country.	No.	Value £s.	No.	Value £s.	
Great Britain....	37	7,302	61	17,484	
France.....	117	27,118	154	34,635	
Italy.....	258	63,197	321	69,841	
U.S.A.....	373	44,654	848	80,650	
All Countries	801	146,884	1,400	208,090	

The American imports consist mainly of Fords and other low-valued cars, which are favourably reported on, and of which great numbers are now to be found all over the country. Indeed, nothing strikes a visitor who knows Egypt more than the increase that has recently taken place in motor traffic, especially in the Delta, where the antediluvian, ramshackle conveyances, drawn by a pair of half-starved mules, that used to ply between village and village, have given place to small petrol 'buses of the charabanc type. Motor lorries, too, are replacing the immemorial camel in the conveyance of cotton and other agricultural produce, and Egypt would appear to be on the verge of a great extension of mechanical transport. The far-sighted road-making policy initiated by Lord Kitchener is now being justified.

Tariff Conflict Between Poland and Germany.—So far no agreement has been reached, writes a correspondent, in the economic conflict between Poland and Germany. The Germans are not likely in future to admit 500,000 tons of coal a month from Poland, as they had up to June 15th under the agreement concluded in 1922 on the partition of Upper Silesia. But they have already raised their offer from 60,000 to 100,000 tons, and the Polish allegations that Germany means to make the Polish part of Upper Silesia feel the consequences of the partition seem devoid of foundation. The mine-owners in Polish Upper Silesia and their employees are mainly German, and Germany naturally would wish to avoid anything which might weaken the German element in the Polish part of Upper Silesia, or impair its economic connection with Germany. These considerations account for the, on the whole, conciliatory attitude of the Germans. The Poles, on the other hand, seem at once to have adopted a sharp tone, and on June 17th published a long list of goods of which the import from Germany is to be stopped for the

time being. Such action would seem ill-advised, seeing that in reality normal economic relations between the two countries are of much greater importance for Poland than for Germany. The following figures show, in Polish zlotys, Poland's trade with Germany, and the percentage it forms of Poland's total imports and exports:—

	Imports From Germany. Millions.	% of Poland's Total Imports.	Exports to Germany. Millions.	% of Poland's Total Exports.
1922.....	312	37	324	49.5
1923.....	487	43.6	605	50.6
1924.....	506	34.3	536	42.4
Jan.-March, 1925	125	..	169	..

Germany thus takes almost half of Poland's export trade, whilst her exports to Poland form less than 5 per cent. of her total export trade. Moreover, there are hardly any imports from Poland which Germany could not easily obtain from elsewhere, whereas Polish industry is dependent on Germany for many half-manufactured articles (especially chemicals). Even now there are in Poland some 170,000 registered unemployed, besides many unregistered, and tens of thousands working part-time only. These figures are certain to rise as the result of a struggle, which Germany can endure much better than Poland. On May 19th Poland raised the imports duties on a number of articles to a truly prohibitive level, which, following directly on the conclusion of the commercial agreement with Czechoslovakia, has produced disappointment and dissatisfaction among the Czechs. It was given out in certain quarters that such prohibitive import duties were necessary to protect the Polish currency. But if that currency really requires such careful nursing, one wonders how it will be affected by the cutting of a large part of the Polish foreign trade, where, in addition, exports invariably exceeded imports.

U.S. Shipping Board.—A correspondent writes:—The *New York Evening Post*, after a careful survey of the official reports of the U.S. Shipping Board, pronounces it "one of the most expensive and utter failures ever experienced by any Government at any time," and supports its verdict by a damaging array of statistics. In nine years the Board has spent \$3,523,000,000, and its total assets to-day are not valued at more than \$300,000,000, which means that the total loss in this period has exceeded \$3,000 millions, or a sufficient sum to run the whole Federal Government for a single year. Seven years after the war the Government still owns 1,207 out of the original 2,200 ships, and out of this great fleet no fewer than 887 ships are idle, "chained together and rusting their heads off." Last year the 305 cargo ships in operation lost \$27,393,824 and the fifteen passenger ships lost \$4,420,850, the *Leviathan*, after being reconditioned at a cost of \$8 millions, losing a cool million in thirteen voyages. The *Post* urges that all this "floating junk" should be sold for what it will bring, and that the Shipping Board, which it depicts as a quarrelling body, should be abolished.

The Export of Roumanian Oil.—Last month a deputation from the oil industry waited upon the Roumanian Minister of Industry and repeated its requests, first, that the surtax of 50 per cent. charged by the Government on railway rates for oil destined for export overseas be abolished; secondly, that the export of residual fuel oil be freed. These requests were based upon the fact that the oil production of the country had largely increased; that oil storages both of the oil companies and of the railways were full to overflowing, and that with such a huge reserve of oil in the country there could be no political objection to the removal of the embargo on exports. It should be appreciated that the export of light fuel oil, such as diesel oil or gas oil, is permitted, but that there is an absolute embargo on the export both of crude oil and of the heavy residual oil left over in the first refining process. The oil companies are obliged to sell a proportion of this heavy oil to the Government for the railways and other Government undertakings at prices which the oil companies have always regarded as uneconomic. The striking increase in the production of the

Roumanian oilfields certainly lends force to the oil industry's application. The following table shows the output of the Roumanian fields during the first quarter of this year as compared with that of the corresponding quarter in 1924:—

	OUTPUT OF ROUMANIAN OILFIELDS.	
	First Quarter, 1924.	First Quarter, 1925.
	Metric Tons.	Metric Tons.
Prahova	302,041	421,709
Dambovită	57,490	67,243
Buzău	23,049	28,286
Bacău	9,868	11,330
	392,448	528,568

It will be seen that there was an increase in production during the first quarter of 1925 of no less than 136,114 tons. There is little need to question the oil companies' statement that oil storages are full to overflowing. Why the Government should not remove the embargo on surplus fuel oil which its railways and works cannot take is difficult to explain, but as regards the reduction in export taxes, it is not clear that it can take any action even if it desired to do so, for the external Government loans of 1913 and 1922 are specifically secured on the export taxes. The Roumanian Government has not lately shown itself unsympathetic with the oil industry's application, and the fact that it has agreed to abolish the surtax charged on Roumanian dividends received by foreign corporations is some evidence that it is becoming more mindful of the claims of foreign capital in Roumania.

The Outlook for Tin.—A correspondent writes:—It happens not infrequently that rubber and tin move together, and the marked strength displayed by the first-named commodity this week has begun to creep into the tin market, where the outlook is regarded with more confidence. The price of tin has now been maintained at a very satisfactory level for a long time, and the market has withstood with ease all sorts of adverse factors and bear raids. Taking the year ended June 30th last, the total supplies amounted to 111,235 tons and the world's deliveries during the same period were 111,263 tons. Thus the amount of tin used all over the globe was exactly 28 tons above total supplies, and from this it is quite easy to argue that any improvement in the industrial position would call for additional supplies of metallic tin. The world's visible supply now stands at 19,414 tons, and there are no other supplies anywhere, the last of the Eastern "pooled" surplus having been disposed of. The feeling in the market is becoming very bullish on tin, and no doubt sentiment has been helped by the firmness in rubber. The Eastern price has gone over £260 again, and on the London market the undertone of standard tin has been firmer, with a fairly good rise in values, the forward positions at one time evincing marked strength. The U.K. stocks this week have been reduced by 350 tons, and now stand at 5,275 tons, against 5,700 tons at the close of June. The Welsh tinplate trade is not very active at the moment, and the whole industrial position here is more or less overshadowed by the coal strike menace, but the bulk of the world's tin, it should be remembered, goes to the United States, where last year consumptive needs accounted for 68,000 tons. The Continent should call for tin at the rate of 20,000 to 25,000 tons per annum over the next year or two; thus in some quarters fair lines of the metal are being taken off the market and held for higher prices. The market at the moment looks very firm again, and assuming that the July shipments from the Straits come out at about 6,000 tons and the U.S. deliveries are up to recent average, the next monthly statement should favour the bulls. Reports from America indicate that a good packing season is expected, and if this is confirmed there should be a brisk demand for tin for American account over the next month or two. Many of the U.S. rubber users have been caught short of supplies through anticipating larger supplies and falling markets, and it is quite possible that some of the American tin users have made a similar mistake in regard to the extent of supplies of tin from the Straits. The margin is very slender, and there is no doubt that this would play a very important part on any new upward movement starting in the early autumn.

The Phoenix-Norwich Union Insurance Rearrangement.—It is not often that the word "unique" is correctly applicable to a business transaction. It certainly is to the remarkable case of the Phoenix and the Norwich Union Fire insurance companies. Five years ago the Phoenix Assurance Company bought the shares of the Norwich Union Fire Insurance Society, issued 10 fully-paid Phoenix £1 shares for each Norwich Union share (44,000 of them, £25 each, £3 paid up), combined the managements of the two companies, and, so far as the Phoenix is concerned, amalgamated the accounts. Now we learn that the Phoenix has sold all these Norwich Union shares, and the business that goes with them, at a price of £147 each (approximately), to the Norwich Union Mutual Life Office, a society which transacts exclusively life assurance business, and whose life funds are earmarked by the Assurance Companies' Act of 1909 for the benefit of life policyholders. It is not the first time that a mutual life office has acquired the shares of a composite insurance company. The Friends' Provident Institution bought, some time ago, the shares of the Century Assurance Company. But the curious circular route by which the Norwich Union Life and the Norwich Union Fire offices become one—after living and working side by side for a century or more—is the strangest instance of deferred insurance matrimony that we have heard of. As the transaction is one of share purchase, and the Norwich Union Fire Insurance Society has technically preserved its separate identity, the operation of transfer can scarcely present legal difficulties. But the Departmental Committee of the Board of Trade, which is inquiring into the working of the Assurance Companies Act, will probably have something to say about it. A good deal of evidence has already been taken by the Committee in regard to the Friends' Provident-Century transaction, and it was urged by some witnesses before the Committee that no mutual life office should be permitted to assume liability for the unpaid portion of the share capital in a composite insurance office. In this instance the unpaid liability under the Norwich Union Fire Office's shares is £968,000. It is not, perhaps, a very urgent liability, in view of the large free reserves of the Norwich Union Fire Office, but it exists, and clearly it cannot properly be laid upon the mutual funds of the Norwich Union Life Office, which are earmarked by statute for life policyholders. In view of the fact that this question is an important one for mutual life policyholders, and is a subject of inquiry at present by a Departmental Committee, it seems to us that the completion of this purchase transaction by the Norwich Union Mutual Life Office should be deferred until the Board of Trade Committee has reached the end of its labours and issued its report. It would place the Norwich Union Mutual Life Office in an invidious position if it had just done something on a large scale which the Departmental Committee recommended should be forbidden to mutual life offices by legislation.

Van Den Bergh's Report.—A substantial decline in the profits of Van Den Berghs, Limited, for the year 1924 is ascribed by the directors to conditions on the Continent, combined with heavy advertising expenditure, which affected the results of the associated companies unfavourably. Trading profit dropped from £457,500 to £295,200, and the net profit was £137,000 lower at £221,700. Results for the past three years are compared in the appended table:—

	1922.	1923.	1924.
	£	£	£
Net profit	346,842	358,757	221,681
Brought forward	106,964	108,327	114,624
	453,806	467,084	336,305
Preference dividend	157,000	157,000	157,000
Preference ordinary dividend....	140,625	140,625	140,625
Ordinary dividend	93,750	93,750	nil
	(50%)	(50%)	..
Total dividends	391,375	391,375	297,625
Less income-tax	45,896	38,915	25,908
	345,479	352,460	271,717
Carried forward	108,327	114,624	64,588

The ordinary shares of 5s, which received a 50 per cent. dividend in 1922 and 1923, get no distribution for 1924, and the balance forward is substantially reduced. New items in the balance-sheet are a loan from bankers for £400,000, secured by deposit of shares in an associated company, and liabilities on bankers' acceptances for £214,500. Bills payable are also £428,400 higher at £655,100. Holdings in associated companies are £690,500 higher, and stocks are £294,600 higher. Goodwill is unchanged at £656,500, but there is also included an unstated amount of goodwill in the item relating to associated companies.

Lipton's Setback.—We have to go back to the years 1915 and 1916 to find a period when the dividends on ordinary shares were passed, and shareholders will no doubt be disappointed after receiving the recent substantial dividends in the past few years to receive the accounts of Lipton, Limited, for the year ended March 31, 1925. The following table summarises results for some years past:—

Year Ended March.	Gross Profits.	Expenses, &c.	Net Profits.	Depreciation.	Div.
	£	£	£	£	%
1902.....	228,202	39,441	188,761	19,063	8
1908.....	274,335	83,935	190,400	27,624	8
1912.....	307,207	103,922	203,285	51,341	6
1913.....	315,606	111,967	203,639	41,095	6
1914.....	314,949	131,461	183,488	23,202	6
1915.....	272,182	149,509	122,673	262,274	nil
1916.....	295,089	125,645	169,444	45,104	nil
1917.....	442,776	140,189	302,587	44,057	7½
1918.....	544,322	126,222	418,100	44,055	12½
1919.....	579,678	130,902	448,776	47,411	12½
1920.....	644,564	177,005	467,559	51,866	12½

1923.....	547,342	140,374	406,968	69,912	12½
1924.....	502,758	129,809	372,949	80,704	10
1925.....	349,674	126,006	223,668	80,955	nil

* Including £220,889 drawn from "premium on shares account."

This, however, is not the full story of the check to what appeared to be excellent progress to at least a decade of prosperity. The report states that liability for taxation has been practically agreed with the Board of Inland Revenue, and to meet claims £75,000 has been set aside from the general reserve. In referring to the decline in profits, the directors state that "steps have, however, already been taken to remedy the position, and these measures, it is considered, will prove effective." Turning to the balance-sheet, we notice that cash is down from £197,464 to £66,471, but stocks are up from £1,161,016 to £1,306,463. The former reserve of £400,000 is now split into income-tax reserve £75,000 and general reserve £325,000. Savings banks deposits, together with accrued interest, figure at £148,277, as against £153,409 a year ago, while interest paid on these deposits during the year amounted to £5,285, as against £5,544. The balance-sheet will be found fully analysed in our usual column. It is a pity that the directors do not state in the balance-sheet how much of the first item under assets, consisting of goodwill and property, represents goodwill.

Glasgow Corporation Tramways.—For the second time only in a quarter of a century the tramways undertaking of the Glasgow Corporation shows a deficiency in net revenue after providing for depreciation and renewals. The previous occasion was a deficiency of £108,531 in respect of the year 1919-20; the present deficiency for 1924-25 is £80,276. The financial year of the undertaking ends on May 31st, and the accounts show receipts for the year 1924-25 of £2,352,470, against £2,323,245 in 1923-24. The working expenses, exclusive of depreciation, were £1,746,000, against £1,691,170, and the net revenue balance on working £606,469, as compared with £632,075. After adding interest on investments, the net income was £634,407, as

compared with £634,565. This net revenue was charged with losses on the subway section and the buses, income-tax, sinking fund, and Parliamentary expenses, and the net revenue balance was then £406,799, as compared with £512,687 in the previous year. A provision for depreciation and renewals was then made of £490,075, against £463,488, leaving a net deficiency of £80,276 for 1924-25, as compared with a net surplus of £49,199 for 1923-24. More passengers were carried last year than in the previous year—439 millions, as against 430 millions—but the average traffic revenue per car mile was lower at 18.22d, as against 18.77d. The deficiency for last year has been carried to the balance-sheet, which is in a healthy condition. The net loan debt on May 31st last stood at £2,469,488, against which there was a depreciation and renewals fund of £1,398,199, leaving £1,071,289, as compared with a total capital outlay of 6½ millions. In 1916-17 the balance of the loan debt was paid off out of the depreciation and renewals fund, and the net loan debt, less depreciation and renewals (£1,071,289), incurred since then has been in respect of new works. The total balances contributed by the Tramways undertaking to the Common Good of the City of Glasgow have amounted to £1,216,504. The only years since 1894 in which there have been no contributions have been 1919-20, 1920-21, and 1924-25.

Mount Morgan.—Our mining correspondent writes:—For several years past this important Queensland proposition has provided the spectacle of a good mine struggling against adversity. No dividend has been paid since the early part of 1920, and it would appear doubtful whether another will be forthcoming. In their report for 1924-25, a cabled summary of which is now to hand, the directors intimate that the assistant general manager has just returned from a visit to America paid for the purpose of investigating the most economical methods of treating low-grade copper ore. Armed with his report, they propose visiting the mine, there to consider the important question of continuing mining treatment operations, which are being carried on at a serious loss. The phrase has an ominous look. It certainly does not constitute an exaggeration. Last year's operations showed a deficit of no less than £157,400, reduced by interest on investments, &c., to £66,400. In the twelve months ended May, 1914, there was a working deficit of £65,100, cut down to £15,300 by interest and the like. The present parlous condition of affairs has been brought about by a number of adverse factors. The value of the ore has fallen off, both in copper and gold content, and during the past session the premium on the last-named metal, of course, disappeared. There has been a constant succession of labour troubles of one kind and another. As a counterblast to some of these adverse influences, great efforts have been made by the management to secure better results from the treatment plant. The success achieved has, unfortunately, been neutralised by other conditions—in particular, an underground movement. Unless a change for the better occurs in the position generally, it would be to the advantage of shareholders for the company to go into liquidation. The last complete accounts available—those for 1923-24—showed net cash assets to the amount of £420,000. This, irrespective of other items, would represent fully 8s per share, now quoted under 6s.

Transvaal Gold Mining Estates.—This company has been "in the public eye" on several occasions recently by reason of the circumstance that its properties are situated in the Lydenburg district, some not far from areas upon which discoveries have been made. Speculators rushed in to buy on the announcement that prospecting operations were to be commenced, and rushed to sell when it was intimated that results had proved unsatisfactory. The limited work was, however, performed under difficulties, and in their annual report the directors state that in view of the situation of the farm, a further investigation will be made under the more favourable conditions of the

winter season. From a financial point of view, the net outcome of last year's operations corresponds very closely to that of the twelve months ended March, 1924. An increased tonnage was crushed at a lower cost ratio, but these factors were rather more than offset by the reduction both in the average yield of gold itself and in the price secured. Hence the working profit came out some £5,000 down at £50,800; the difference was, however, fully compensated for by a surplus from sundries instead of a deficit. The increase in the dividend from 5 to 7½ per cent. is accounted for by the liberal policy followed on the part of the directors. Expenditure on prospecting to the amount of £10,900 now figures in the appropriation account, also £9,900 net capital outlay. These sums were in effect provided out of the carry forward, reducing the latter to £167,800. As an outcome of the improved developments in the Vaalhoek mine, the ore reserves have become increased by 17,200 tons to 702,900 tons, the value of 8.2 dwts. being a shade less than before. Development at Elandsdrift—the richer of the three principal mines—has been hampered by the large amount of water in the lower levels, but the indications at depth are stated to be good. On last year's dividends the shares yield 9 per cent., and there are, of course, the "platinum possibilities."

The Colombian Northern Railway.—A correspondent writes:—The cancellation by Presidential Executive of the remaining 75 years of the concession granted to the Colombian Northern Railway has caused an unfavourable impression upon the Stock Exchange, in spite of the mitigating effects mentioned officially, while something like consternation has been expressed in Colombia itself owing to the impression that it is bound to have upon future foreign investments there. Although a certain amount of misunderstanding has existed for some time between the Government and the company (an action brought in the Supreme Court had been decided, upon certain points, against the Northern Railway Company), there was no reason to suppose that such drastic steps would be taken or allowed to stand. The reason for action is the alleged non-fulfilment of certain requirements by the company according to the terms of the concession. It is barely a year since the President of the Republic paid a friendly visit to the extension works carried on by the company, which had made so much progress upon a difficult undertaking as to promise speedy completion to the town of Chiquinquirá; while by 1928 the line, which has been a good many years in building, would have been completed by the company to Bucaramanga, capital of the important Department of Santander del Sur. The construction of this line, which doubtless will now be undertaken by the Government, will shorten considerably the journey from the coast to the capital, Bogotá. The distance between Bucaramanga and Chiquinquirá, via the Sogamoso River, is not more than 200 kms. The completion of the line means the joining-up of the three Departments of Cundinamarca, Boyacá, and Santander, linking them with the Magdalena River. Thus would be provided a direct route to the principal countries of the world, and finding therein markets for the abundant products of the great agricultural districts. The Colombian Northern Railway had reason to expect very much more profitable business than last year, which, however, marked an improvement upon the earnings of both 1923 and 1922 as regards goods and passenger traffics. Up to the end of June, 1924, the net receipts had reached £67,130, compared with £59,538 in 1923 and £53,476 in 1922, while the ratio of working expenses, in spite of additional trains run, showed a sensible reduction. In the chairman's speech in December last, at the twenty-fifth ordinary general meeting of the company, Mr P. C. Matts, who had recently returned from a visit to Colombia, referred to the lawsuit now pronounced, upon final appeal, against the company, describing it as "a vindictive action of a person or persons actuated by personal gain rather than loyally serving the best interests of the country. Indeed," added Mr Matts, "I am not sure that the credit of Colombia may not suffer by their misplaced zeal in instituting the lawsuit and its results."

UNITED STATES.—THE STOCK MARKETS AND MONEY—ALLIED DEBTS—CROP PROSPECTS—TRADE CONDITIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 30.

News of the California earthquake brought a sharp burst of selling on the Stock Exchange yesterday, but the reaction was of short duration. The news came in the early afternoon, and the selling was general for a half-hour or so. Before the close, however, a good rally set in. To-day the rally continued. All the loss was made good within a period of 24 hours. The selling that occurred is considered to have been of poor quality. The reaction probably occurred because the market had been rising for several days and the technical position had been somewhat weakened. The incident is interpreted as indicating that the market is resting on a firm foundation, no small part of which is the extremely strong demand for investment securities. As for the earthquake itself, the disaster clearly is of minor magnitude, and should have no appreciable effect on general business conditions. Santa Barbara is a small city, and tourist business is the leading source of revenue.

The stock market has also shown an ability to disregard a material tightening in the call money market. The call rate on the Stock Exchange recently advanced to 6 per cent., which is the highest quotation since December, 1923. The disregard displayed is probably due in part to a firm belief that the tightening in call money is only temporary. The markets realise that higher rates at the turn of the half-year are quite the normal thing. Funds are accumulated to meet the very large July 1 interest and dividend disbursements. After these are out of the way, however, a period of ease usually ensues that lasts until the preparations for fall trade and the crop-moving season begin to make themselves felt. The summer ease generally is most pronounced shortly after the middle of August. In the present instance some of the tightness in the call money market is being ascribed to the maintenance by bankers of strong cash positions in anticipation of an early call for statements of condition from the Comptroller of the Currency. In any event, the industrial and trade situations do not nourish the idea that larger demands for credit are likely to be made during the next six weeks. During this period money is expected to continue to search for employment. No change is anticipated in the official banking position. The Federal Reserve authorities, as judged by their operations, are still steady rather than leading the money market. They are believed to be satisfied with the existing situation. Francs and lire are, it is true, weak, but the explanation of this weakness is found in the trade and fiscal positions of the individual countries and in the situations with regard to their debts to the American Government. The Federal Reserve authorities would hardly change their rate policy to assist these currencies, even if they thought that such a change in policy would render effective aid to the currencies in question.

The Administration's attitude with regard to funding of the foreign debts apparently calls for definite action on the part of the debtors that shall show a clear intention to arrive at a settlement. It is believed that the Administration is prepared to adopt what it considers a lenient attitude with regard to terms; it declines, however, to be put off longer with vague assurances. The British settlement is thought to be taken as a model of what the other debtors will be allowed. The precedent to be

followed, however, is likely to be that of principle rather than that of precise terms. It will be recalled that the British settlement recognised a distinction between the treatment of principal and interest. The opinion is held that in the present instance the Administration will insist that the debtor Governments begin payments on account of the principal of their debts, but that it will be willing to make the payments on account of interest on the principal distinctly easy. Meanwhile, it is felt that the debtors' ability to pay will be given appropriate weight. It is clear, of course, that if settlements within the debtors' capacities can be reached, the debtors' credit will be considerably improved in this market. At present the absence of funding negotiations is proving an effective bar to new borrowing in certain instances.

Crop news is somewhat better than was the case a month or so ago, and the prospects in the agricultural districts are now regarded rather cheerfully. While official data still is lacking, the outlook for corn has improved very materially. The crop that is coming on promises to be, in fact, one of the largest on record. Such a crop would mean much to the livestock growers and to the farmers in general. Wheat still promises to be short because of the smaller winter crop, but the spring crop continues to make good progress, and prices are reasonably good. The signs still point to a large yield of cotton. Travellers who have returned from the agricultural districts emphasise the fact that different localities present sharply different appearances with regard to the same crop. However, the aggregate result promises to be reasonably satisfactory. Owing to the smaller estimates of wheat, it has been inferred that the farmers would be in no mood to hasten marketing, but would hold their grain for higher prices later in the crop season. Early returns from the south-west report, however, that, contrary to such expectations, a strong early shipping movement has developed. The movement is explained on the basis partly of the unusually early harvest, and partly of the hot weather of early June. Nevertheless, the development probably has real significance, and may forecast an earlier arrival of autumn trade than might otherwise be the case.

Evidence continues to accumulate to show that the way has been cleared for an industrial revival and active trade in the fall. The steel situation is fairly well stabilised, although prices still are unsatisfactory and weakish. Surplus stocks of steel, which were not large, seem to have been worked off, while consumption remains high. Speaking generally, the situation with regard to stocks of goods seems to be strong, there having been little departure from the established policy of hand-to-mouth buying. General trade has held up well through the spring reaction in industry, and purchasing power seems strong, even though it is exercised with discrimination. Here, again, conditions are "spotty," a few industries finding the going hard, while others are prosperous, and many small manufacturers and traders finding profits scanty, while the large and efficient organisations are earning well. Important readjustments in the organisation of the country's economic fabric still are going on, and seem likely to go on for some time to come. But that the country as a whole has been prosperous during the first six months and is likely to remain so during the second six months seems a matter that is beyond doubt.

Part of the stability of business during the last few years has been due to the efficient service supplied by the railroads. With their equipment in first-class condition, the carriers have been able to handle a record-breaking volume of freight without delay, and without anything resembling a car shortage. This obviously has made possible a continuance of short-time buying, and has helped to prevent over-buying and an inflation of the demand for goods. Some thoughtful observers have been making inquiries to determine whether this condition will persist through the coming autumn, or whether the moving of the crops and of the other commodities that make up the heavier traffic of the fall season would use up the railroad's surplus carrying capacity, and so bring about a car shortage. If such a condition developed, the industrial and price situations might undergo a sharp and radical change. So far, however, the inquiries have been reassuring. The best judges believe that we shall get through the fall without a shortage.

FRANCE.—BUDGET PROGRESS—THE NEW CONVERSION ISSUE—RETURNING CONFIDENCE—DECLINING DEFICIT.

(FROM OUR CORRESPONDENT.)

PARIS, July 8.

WITH the progressive revelation of M. Caillaux's proposals for the restoration of the national finances, there are increasing signs that the confidence of the French public in the future of the country is rapidly returning, and the outlook is now brighter than it has been for many months. M. Caillaux has now, after many difficulties, succeeded in inducing the Chambers to take what he has always insisted must be the first step towards a return to financial health, and has forced through the Lower House (as stated last week) a really balanced Budget. The Senate is still engaged in discussing the measure as sent up for a second time from the Chamber, with not only M. Caillaux's own additions, but also with several of the contentious clauses reinserted that have already been once rejected by the Upper House. It is evident that some of the latter, at any rate, will again meet with sharp opposition by the Senate, and that the Bill, before final adoption, will be shuttlecocked an appreciable number of times between the two Chambers before agreement is finally reached. Last week, also, M. Caillaux succeeded in inducing both Houses to adopt his proposal for the issue of an unlimited amount of an entirely new form of bond, which is to be utilised for the consolidation of the bulk of the floating debt. It will be remembered that these bonds are to be subscribable only by holders of National Defence Bonds (the total issue of which is understood to amount to about 56,000,000,000fr.), and that both Chambers agreed that the detailed conditions of the issue shall be legalised by decree. The text of this decree was promulgated last Saturday, and it reveals that the interest yield of the new bonds has been fixed, as was anticipated, at 4 per cent., and that for all practical purposes the issue will be one of *perpetuelle* (or irredeem-)

able) Rentes, backed by a guarantee that, whatever variation there may be in the value of the franc, the real value of the interest yield will remain constant. It will not, however, be paid in gold, as was unofficially stated last week would be the case. The scheme put forward by M. Caillaux is an exceedingly ingenious one, and appears to have in it all the elements of success.

The new issue is not a loan proper, but a conversion operation. It will only be obtainable in exchange for existing National Defence Bonds, but no holder of these bonds is under any compulsion to exchange them against the new scrip. The future authorised limit of the floating debt (exclusive of the advances made by the Bank) will be fixed at the total amount existing after the subscriptions for the new issue have closed. While not in the nature of a gold loan, in the proper sense of the word, the new issue is really better than what would be known by this name. It may be defined as a loan comparable to a gold loan when the franc falls, but assimilable to the franc when the latter improves. This is ensured by fixing the half-yearly interest payments on the basis of the franc at 95 to the pound. (It may be noted that M. Caillaux has chosen sterling rather than the dollar in this connection.) Let us take a subscription of 10,000 of the new scrip for the purpose of setting forth the mechanism of the *garantie de change*. So long as the pound remains at 95, the holder will receive 400f paper, or 4 per cent. per annum. If the franc falls to 120, the holder of the bonds will receive interest in paper francs at the rate of 500f a year, or, with the pound at 145, 600f a year. If, on the other hand, the franc improves to 75, 50, or even higher levels, the Government will continue to pay the holder the base figure of 400f a year. While never less than 4 per cent. of the nominal capital value of the bond, the holder, if the pound stands at 100, will receive 4.20 per cent.; at 110, 4.60 per cent.; at 120, 5.05 per cent.; at 130, 5.60 per cent.

In order that potential subscribers may be assured that the capital value of their scrip will not shrink in a similar manner to that suffered by practically the whole of the other so-called gilt-edged French Government issues, the Government reserves the right to redeem the bonds by buying in on the Bourse, subject to the undertaking that in no case will bonds be redeemed at less than 50 times the amount of the previous half-yearly coupon. That is to say, that if the coupon were the normal one of 2f, the bond would be redeemed at 100f; if the coupon were 2f 21c, the redemption price would be 110.50; if 2.52, 126f; if 2f 73c (in which case the pound would be in the neighbourhood of 130), the redemption price would be 136f 50c per 100f nominal. The subscription lists are to open on July 20th and close on September 6th. Although nominally irredeemable, the Treasury will have the power to buy in a certain quantity of the new bonds every year, the amount that can be so dealt with being limited to the difference between the total annual debt service on the 5 per cent. National Defence bonds and the interest service in respect of the new 4 per cent. issue. Enough has been said, perhaps, to support the statement previously made as to the ingenious nature of the scheme and as to its prospects of success. The opinion is already being expressed that it is more than within the bounds of possibility that M. Caillaux's new issue may result in wiping out practically the whole of the 56,287 millions of Bons de la Défense Nationale (which was the figure at which they stood on July 31st last), and thus reducing the total of the floating debt (exclusive of the sum borrowed from the bank) to a comparatively negligible figure.

Proof of the extent to which confidence has begun to return since M. Caillaux reassumed the headship of the Treasury is shown by the renewed absorption of National Defence bonds. Nothing showed more strongly the alarm and distrust caused by the exposure of the financial methods of the Herriot Government than the falling off which occurred in the renewal of these bonds towards the end of 1924. The culminating point was reached in April, when the demands for repayment exceeded the sales of new bonds by over 1,000 million francs, and in May, when there was a further deficit of 597 millions in the first half of the month, and of 585 millions in the second. During the first half of June the deficit fell to 255 millions, while the second half of the month showed a slight surplus of sales over repayments. The fact that

since the Finance Minister's proposals concerning the new issue became known, this improvement has been enormously increased is striking proof of M. Caillaux's ability to gauge the financial psychology of his fellow-countrymen.

No details have yet become known as to M. Caillaux's further plans for dealing with the inter-allied debt and other financial problems. It should be remembered, however, that the last clause of the Bill authorising the increase of the authorised limit of advances to the State by the Bank of France and the issue of the new 4 per cent. bonds, the Government undertook to lay before the Chamber before the end of the session a project of financial reform "including the amortisation of the public debt," which is to be carried out by the creation of a special organism. At the same time, proposals for modifying succession duties in cases where the estate consists of French State issues will also be put forward.

The last word on the Budget for 1924, which has now been finally closed, was said in the Senate by M. Henry Bérenger, in his report on the Bill authorising supplementary credits for the past financial year and annulling others, in order to close the account. The accounts finally show that during 1924 the national expenditure amounted to 32,490,775,314f, and the total revenue to 29,036,153,000f, leaving a deficit of 3,454,622,014f. The Rapporteur claimed that these figures indicate progress towards the re-establishment of Budgetary equilibrium, in view of the fact that the annual deficit has now reached the vanishing point. In 1920 it amounted to 20 milliards, in 1921 to 13 milliards, in 1922 to 11 milliards, and in 1923 to 10 milliards. M. Bérenger insisted that, had Germany fulfilled her treaty obligations, the Budget for 1924 would have shown a surplus of 3,600 millions, instead of a deficit of 3½ milliards.

The 1925 Budget Bill, as already remarked, has still to stand fire in the Senate, but it is expected that most of M. Caillaux's own additions to the Bill as originally drafted will be accepted. The Chamber approved, after all, his proposal to revise upwards the scale of assessment to income-tax of incomes derived from agricultural profits. The schedule rates on agricultural incomes up to 10,000f (subject to abatement in respect of the first 6,000f) have been increased by 75 per cent., while those between 10,000 and 20,000f have been increased by 150 per cent., and those above 20,000f by 225 per cent. Increased postal and telegraphic rates were also approved. The most significant feature of the Budget debate was relative to the proposal that the State shall in future share the profits of insurance companies, which is worthy of detailed reference later, in view of the fact that, as M. Bokanowski stated, the question was "the most serious, from the economic point of view, that has been raised since the general elections."

GERMANY.—TARIFF—TAXATION—CREDIT— VALORISATION.

(FROM OUR CORRESPONDENT.)

BERLIN, July 8.

THE Cabinet's plan to get the Tariff Bill through the Reichstag by about the middle of the month has been abandoned. The prolongation of the Reichstag session until the beginning of August is being considered. Decision concerning the Food Duties has been delayed by the institution of a Reichstag Commission of Enquiry. The tariff question is complicated by the failure of and suspension of the Franco-German negotiations. The German negotiators considered the French concessions regarding the chief German export wares—that is, chemicals, machinery, small iron articles, optical and electro-technical wares, leather, pottery, and toys—insufficient, and the French were not satisfied with German offers regarding wines, woollen wares, and motor vehicles. German buying of French textiles is a very important question for France, very large exports to Germany of Alsace-Lorraine textiles having taken place when these were duty-free. The question of foreign wines is a sore one in West Germany. The Commercial Treaty with Spain was strongly opposed on this score, and nearly failed to obtain ratification. According to the first official and other statements the private iron and steel agreement with the

AND PRODUCE COMPANIES.
1-4, GREAT TOWER STREET, LONDON, E.C.3

French "heavy industry" cannot come into force until the French concessions regarding German finished goods are made, which will not be, at soonest, before September next; but the French trade Press writes as if the agreement is to come into force at once. The Reichstag trade-political committee has approved of the proposed increases in the textiles duties. The Enquiry Commission into the Food Duties has brought some expert evidence, so far mostly unfavourable to the proposals. Reasons have been given why food prices will continue to rise, and why intensive agriculture will continue to be profitable.

A settlement of the financial relations between the Republic and the States and municipalities has not yet been come to. The temporary regulation contained in the Third Taxation Decree of February, 1924, expired on March 31st this year, and was replaced by a provisional regulation lasting until September 30th. In the pending Bill the Republic claims 25 per cent. of the yield of income and corporation income-tax, and (after the first six months) 80 per cent. of the Sales Tax. The Reichsrat, representing the State Governments, would concede only 10 per cent. of income-tax and 70 per cent. of Sales Tax. The Republic, as compensation, offered the States the right, from April, 1926, on, to impose supplements of unlimited amount to the income-tax. This condition is strongly opposed by business. The maximum income-tax rate has been raised by the Reichstag Taxation Committee from 33½ per cent. (as in the Cabinet Bill) to 40 per cent., and unlimited supplements by the local governing organs might tax away the greater part of income. The Government parties in the Reichstag have also condemned the unlimited supplement, and they propose that no supplement at all should be allowed before April, 1927. The Taxation Committee has approved of compromise proposals, which may not go through. The Federal Finance Minister announces that it adheres to the claim for 25 per cent. of the income-tax yield. The Taxation Committee has approved an amendment giving the Republic a right of direct supervision (not control) over the municipal finances. At present this right belongs exclusively to the States.

The demand for money which set in in late June has continued, owing apparently to the marked increase in business activity. The interest rate on day money in the first week of July was 9½-10½ per cent.; the rate for monthly loans 10½-11½ per cent.; private discount rate 7½ per cent. Very little money is being borrowed for Bourse purposes. The Rentenbank Credit Institution Bill has got through its first reading in Reichstag Committee, with alterations in the directorate which will increase the influence of the states and diminish that of agriculture. The Reichsbank's return for June 30th shows only moderate pressure as a result of month-end demand. Discounts increased by 32½ million marks, advances by 39½ million marks, and circulation by 236 million marks. The circulation of all currencies at the end of June was 4,790 million marks, against 4,786 million marks at the end of May. Changes in the chief Reichsbank items during the past half-year have been:—

	(000's omitted.)	Dec. 31, 1924.	June 30, 1925.
Gold	759,609	1,061,717	353,905
Exchange valid as cover	253,202	1,691,467	46,453
Discounts	2,064,094	639,327	2,474,416
Advances	16,960	564,446	724,116
Other assets	1,654,426	492,820	539,406
Note circulation	1,941,440		
Deposits	820,865		
Other assets	1,570,581		
Re-discount liabilities	492,820		

A Reichs-Kredit A.G. report for the first half of 1925 puts the foreign payment balance as follows:—

JANUARY-MAY INCLUSIVE.		(Millions of Marks.)	
PASSIVE.		ACTIVE.	
Import surplus	2,119	"Invisible exports"	150
Reparations deliveries	431	Foreign loans, investments,	
Export credits	200	return of capital, realisa-	
		tions of exchange, &c.	2,600
	2,750		2,750

Of the 2,600 million marks, 215 millions were long-term foreign loans. Discussing general conditions, the report predicts that industrial production will continue to increase over the home demand. The loss through Reparations deliveries will prevent or retard any increase in home-buying power. Sharp competition will therefore be the rule, and in industries which are organised in cartels the less economically working undertakings will be closed down, output being maintained by rationalisation of the more efficient undertakings, accompanied with reduced cost of production. A process of transfer of capital and labour from unprofitable into profitable branches will take place. The influence of the banks will favour these changes. In the western "Heavy Industry" there are already signs of this process; many important changes are reported in the higher management of the coal and steel concerns; also some cessations of operation. Unemployment continues to decline. The number of publicly supported unemployed fell further to 214,092 on June 15th. The cost-of-living index for June is 138.3, against 135.5 in May; the wholesale index for July 1st, 134.9, against 134.2 on June 24th. Wages are still rising. The average weekly skilled wage in six raw material producing industries in May was 42 marks 75 pf, against 41 marks 60 pf in April; in four finishing industries 35 marks 43 pf, against 35 marks 25 pf. The highest wage is in building, 49 marks 43 pf, the lowest in textiles, 27 marks 55 pf for men and 21 marks 89 pf for women.

The Valorisation Bills are practically disposed of. Both have been amended and made more elaborate, the private debts Bill being expanded from 15 to 86 articles. Extant mortgages and secured debts of similar type have been valorised to 25 per cent. of the original gold value. Debts of these classes which were paid off after June 15, 1922, in paper marks are revived, and valorised also to 25 per cent., less the gold value of the repaid paper marks. Where the securing property has been sold mortgage free, the revived claim lies against the seller only, and is therefore unsecured. Company debentures paid off in the inflation years are not revived; and the 15 per cent. valorisation of extant debentures is in principle retained, but "old" holders of debentures who acquired before July 1, 1920, get an additional 10 per cent., only, however, after the debtor undertaking has paid certain dividends. Repayment of mortgage and debenture capital cannot be claimed before January 1, 1932; meantime interest rises from 1.2 per cent. in the first half of 1925 to 5 per cent. after January 1, 1928. For federal loans the discrimination between "old" and "new" bondholders (date also July 1, 1920) is maintained. The "old" holder will receive for every 1,000 marks nominal of paper mark bonds 50 reichsmarks nominal of "loan redemption debt." "Old" holdings are estimated at 20 milliard marks nominal. The "loan redemption debt" issued to "old" holders will be amortised within 30 years at a 150 per cent. premium, plus simple interest between January 1, 1926 and the date of amortisation. The "old" holder of 1,000 marks nominal will therefore receive 125 reichsmarks, plus, should he be repaid only in 1956, 30 times 4½ thereon. Where more than 50,000 marks nominal are held, the valorisation is reduced. A special fund for shortening the amortisation term may be created. The "new" bondholder will for every 1,000 marks nominal of paper mark bonds get 25 reichsmarks nominal of "loan redemption debt," which will bear no interest and will not be amortisable until after Reparations are paid. The provisions regarding state loans are general similar, but a clause forbidding States to valorise more liberally than the Republic has been dropped. Municipal bonds will be valorised by, according to the financial position of the municipality, between 12½ and 25 per cent.

HOLLAND.—GENERAL ELECTIONS—TARIFF ACT AND TAX ON LUXURIES—ECONOMIC POLICY—DUTCH-GERMAN ECONOMIC DIFFICULTIES.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, June 24.

IN economic matters of action there have been few interesting events to note of late in this country. The influence of the summer season is strongly felt, and another factor is the approach of the general elections for the Second Chamber on July 1st. The Government now in control, supported by a majority in the Second Chamber, which is largely made up of the so-called "Christian" parties (Church parties), has, particularly last year, passed a number of regulations which have brought about much opposition. Among these is the new Tariff Bill, which is now to take effect on July 1st, election day; this Act is looked upon by many as a dangerous step in the direction along the way which might lead to Protection. The Government, however, has defended its introduction thereof on purely revenue grounds. It has similarly defended the proposed tax on luxuries, which was discussed at some length in the *Economist* of February 28th. Under pressure of protests against these proposals, and in view of the elections, the Government has now adopted some changes, which, however, are of very small extent.

The action of Germany with regard to Dutch trade has attracted attention. Measures which Germany, under the new Tariff Bill, proposes to take will especially hit Dutch agriculture hard. While, for instance, before 1914 only spring potatoes were taxed, it is now proposed to levy a duty of not less than five marks per 1,000 kg on all potatoes (until August 1, 1926, 2.50 marks). Further, vegetables, fruit, butter, cheese, and meat will be taxed when imported into Germany.

A few figures will be sufficient to show what this means for Holland. In 1924 Holland exported to Germany 185,000 tons of potatoes, or 45 per cent. of Dutch potato exports; 32,000 tons of cheese, or 59 per cent. of Dutch cheese exports; 23,000 tons of butter, or 65 per cent. of Dutch butter exports. Livestock, dairy products, and agricultural produce together, Holland exported to Germany in 1924 to the value of more than 300 million francs, which is more than 18 per cent. of the entire Dutch exports. Should these products be taxed, as now proposed by Germany, it is clear that large Dutch interests will be seriously affected.

In the second place, it has long been a thorn in the flesh that Germany has introduced special railway rates for carriage of a large number of articles to the ports of Hamburg and Bremen. These tariffs—introduced one and a-half years ago—had as their purpose the diversion of the transportation of certain goods from the harbours of Amsterdam and Rotterdam to Hamburg and Bremen. Protests on the part of Holland were immediately made, and the expectation was entertained that changes would be introduced; not by again increasing the tariffs to Hamburg and Bremen, but by bringing the rates to Amsterdam and Rotterdam to the same level. The German railways, however, have now proposed a regulation which knocks out the bottom of this hope. In certain respects Holland is even placed at a disadvantage *vis à vis* Belgium.

All this has caused the greater surprise, because the attitude of Holland towards Germany has always been exceptionally conciliatory.

Some time ago the Netherlands Bank decided that drafts which have been drawn in connection with commercial reimbursement credits may be discounted, even if Dutch interests are not exclusively served hereby; in other words, the close policy formerly adhered to, in which it was prescribed that *only* Dutch interests would be considered, has become much milder. The possibility was hereby created that the international banks established in this country should be able to extend their foreign credit business, and especially the reimbursement credit business. It seems now that the Netherlands Bank intends again to introduce the severe policy formerly in vogue, unless Germany in the meantime shall have changed her trade policy with regard to our country.

Consultations between the Governments of the two countries have now begun concerning these difficulties. Germany has declared that it was not the intention of the Government to cause injury to Netherlands interests. In other respects, it seems, they have declared themselves prepared to lighten some of the specifications of the Tariff Bill which are particularly disadvantageous to Holland. As for the special railway rates for the North German seaports, the negotiations are still in progress.

GREECE.—THE BUDGET—PUBLIC DEBT—A NEW REFUGEE LOAN—GENERAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

ATHENS, July 3.

THE Budget for the current year has now been ratified by Legislative Decree. The estimates anticipate an equilibrium of revenue and expenditure, as is shown in the following table, in which comparison is made with the estimates for the financial year 1924-1925:—

		(Millions Drachmæ.)			
		1924-25.	1925-26.	Estimates—	
				(+) Increase or	(-) Decrease.
I. Revenue—					
Ordinary	4,411	6,906		+	2,495
Extraordinary	1,325	114		-	1,211
	5,736	7,020			
II. Expenditure					
Ordinary	3,986	4,927		+	941
Extraordinary	2,743	2,093		-	650
	6,729	7,020			
Estimated deficit..	993			+	291

As regards the financial year 1924-25, ordinary revenue receipts up to March 31, 1925, amounted to 4,496 millions, while expenditure, ordinary as well as extraordinary, for the same period is slightly over 5,025 millions. Estimates for the current year show an increase in ordinary revenue (almost entirely from taxation) of 2,495 millions, of which 1,300 millions represent newly-imposed taxes. After covering ordinary expenditure, they leave a surplus of 1,979 millions, which very nearly balances extraordinary expenditure. The latter includes 101 millions for reduction of circulation, 750 millions for amortization of the floating debt, and 275 millions for the refugees.

The yield of the revenues assigned for the service of the public debt, including the Refugee Loan, amounted in 1924 to 1,459 million drachmæ, as against 970 millions in 1923. In both cases the yield from the special revenues guaranteeing the Refugee Loan are not included, as they have been assigned since January 1, 1925. For the first four months of 1925 the yield of all these revenues amounted to 719 millions, as against 470 millions for the same period of last year. Deducting from the first figure the proceeds of the special revenues added this year—that is, 204 millions—there remains a net increase in receipts of 105 millions. Total receipts for the whole year are officially estimated to exceed 2,000 million drachmæ.

It is now announced that the proceeds of the Refugee Loan will not suffice for the settlement of all the refugees, whose number has very considerably increased since the original estimates were drawn up, on the basis of which the amount of the loan was fixed. A new loan of a smaller amount will have to be issued next year, for which the Government is ready to grant special guarantees. It is expected that to that effect Greece will apply to the Council of the League of Nations in the course of this year. Meanwhile the work of the Refugee Settlement Commission is showing satisfactory progress.

The revolution has left people quite apathetic. Business is going on normally. The decision of the National Assembly to dissolve at the end of the year for the purpose of holding general elections early in 1926, which will allow the country to enter in a normally Parliamentary life, is put to the credit of the revolution.

Foreign exchange rates have hardened. This is attributed to the large imports of last year owing to bad crops and to a great industrial and building expansion. Forecasts for this year are more encouraging, especially since the outlook for the crops is very promising. A great stringency of money is being experienced.

CANADA.—CROP REPORTS—WESTERN OPTIMISM—TRAGIC END OF THE PETERSEN CONTRACT—RAILWAY FREIGHTS—THE AUSTRALIAN COMMERCIAL TREATY.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 23.

THE bright spot on the Canadian horizon is the uniformly optimistic character of the crop reports now being received from Western Canada. Heavy and regular rains during the first half of June, which were followed first by a cool, drying spell and then by equable warm weather, have produced abnormally favourable growing conditions, and it is many years since there was at this date such a hopeful promise of an exceptionally good wheat crop on the prairies. The acreage is about the same as last year, and Mr James Stewart, formerly chairman of the Canadian Wheat Board, who is now recognised as the leader of the grain trade in Winnipeg, has recently prophesied of the grain trade in Winnipeg, has recently prophesied a western wheat crop of 500 million bushels. Normally such a prophesy would have caused a serious slump in prices, but it happens that reports about the American wheat crop are decidedly pessimistic, the latest estimate from Washington forecasting a decline of over 200 million bushels from the 1924 figures. If this estimate is reasonably correct, it means that the United States will have no wheat available for export, and will probably require larger supplies from Canada than in recent years. Under such circumstances, the grain trade in Canada is expecting the price of No. 1 wheat to be maintained around \$1.50 per bushel, which for a heavy crop would yield very satisfactory returns for the farmer. Of course, the Canadian wheat crop is never immune from various vicissitudes until it is reaped, but its present condition is creating a very optimistic spirit among the numerous people whose welfare depends directly or indirectly upon its fate. Already there is said to be visible a certain stimulus to business in the Western towns and cities, and unless some disaster overtakes the crop a progressive improvement is looked for.

Elsewhere agricultural conditions are by no means so good. The fruit crop in British Columbia has been seriously impaired by excessive drought, and considerable damage has been suffered by Ontario farmers and fruit-growers from a similar cause. However, at least in the East, heavy rains have now come to relieve the situation, and the spell of fine, warm weather which is now being experienced will work wonders.

The strange project for providing competition for what was regarded as an oppressive monopoly created by the operations of the North Atlantic Steamship Conference has come to a tragic and decisive end. The plan never commanded any enthusiasm, even among supporters of the Government, and the character of the evidence rendered before the committee did little to convince people of its merits and revealed various dangers and difficulties involved in it. Before the hearings of the committee were concluded, proof was available that the Government had abandoned any hope of securing endorsement for the original contract, and had made arrangements with Sir William Petersen for drastic modifications. When the committee came to discuss a report, out of its 15 members only one or two Liberals were ready to endorse the original Petersen contract, but the Government are understood to have exercised strong pressure for a report which would endorse the contract in its modified form. However, Mr A. R. Macmaster, the able Liberal who served with admirable impartiality as chairman of the committee, absolutely declined to endorse even the modified report, and without his signature even a majority report favouring it would have been valueless. The Conservative members of the committee stuck out for a categorical condemnation of the contract as unwise and dangerous, but eventually a majority report was evolved without their concurrence. It declared, in substance, that a steamship combine did exist, that there was good ground for the contention that rates on many commodities had been unduly enhanced, specific cases being quoted, and that some form of regulation of ocean freight rates was desirable. But it found that it could not recommend endorsement of the Petersen contract, and would only advise that Sir William Petersen should be given an opportunity to sub-

stantiate, without help of a subsidy, the claims made by him in respect to his corrugated ships under conditions which would ensure him freedom of competition in obtaining cargoes.

Sir William Petersen, whose health had not been good for some time, had remained in Ottawa to await the result. He had been persuaded that the committee would endorse the contract in modified form, and the contents of their report proved such a shock that he collapsed and died almost at the very moment it was being submitted to the House of Commons. His death, which is deeply deplored, was a most fortunate event for the Government, for Mr Mackenzie King met with no opposition to his suggestion that under the circumstances further discussion of the project was inadvisable, and thereby evaded what would certainly have been a most damaging debate. Since Sir W. Petersen's enterprise was purely personal, nothing more will be heard of it, and the general view is that the Government's shipping venture had ended in a humiliating fiasco.

For the next few months the Railway Commission will have its hands more than full with a task which has now been entrusted to it by Parliament. It is nothing more than a wholesale reconstruction of the railway rate structure of the Dominion. The proposals of the Government which gave statutory permanence to the special eastbound rates on grain and flour, but left the fixation of all other rates to the unfettered discretion of the Railway Commission, was opposed by the members from the prairie provinces, who contended that the virtual elimination of the Crows' Nest Pass agreement involved a gross breach of faith with thousands of people who had settled in Western Canada on the strength of its terms. The Westerners claimed that rates on the prairies, where cost of operation is lower, were on the average higher than rates for parallel distances in the East, and they moved an amendment which sought to instruct the Railway Commission that no Western rate should ever be more than 10 per cent. higher than the Eastern rate for the same distance. At one time the Westerners threatened to organise a prolonged blockade of the Bill, but bad leadership and Parliamentary inexperience foiled their plans, and when they found all the Eastern members, regardless of party, arrayed against their amendments, their resistance collapsed, and the Bill was sent on to Senate, who are not likely to change it.

On May 22nd the House of Commons gave consideration to the trade treaty with Australia, which has at last emerged from its lair. The negotiations have been extremely protracted and surrounded by mysterious circumstances, but the treaty as it now appears seems to have been shorn of some of its more objectionable features. At any rate, the plan for raising a number of items in the Canadian tariff on agricultural products in order to make possible preferences for Australia has been abandoned, and most of the preferences given are achieved by reductions of existing duties. Mr Robb, the acting-Finance Minister, after tracing the long and involved history of the treaty, explained its salient features and expatiated upon the benefits which it was likely to confer upon certain industries, like motor and pulp and paper manufactures; he also maintained that some of the reductions, particularly on the butter duties, would reduce the cost of living to the Canadian consumer. Likewise he intimated that negotiations were proceeding for further concessions from Australia, and intimating that "It was not all plain sailing in Australia with regard to our trade relations," besought the House to use discretion and discuss the treaty in moderate language. He must have been very disappointed at the reception which it met, for it was subjected to a formidable barrage of criticism from the Opposition benches. A group of Conservative members for rural constituencies protested that the reductions of duties on farm produce would be harmful to agrarian interests, and Mr Stirling, a British Columbian Conservative, joined Mr Robinson, a Liberal from Nova Scotia, in objecting to its probable effect upon the fortunes of Canadian fruit-growers. But the worst blow came when Mr Forke, the leader of the Progressives, while disclaiming any fears of the danger of serious competition for Canada's farm products, fastened upon the provisions in regard to dried fruits, whereon the general tariff is substantially raised; he declared that it could not fail to in-

crease the cost of living, and therefore, on principle, he felt bound to oppose the treaty. Apart from the Minister in charge, the only vigorous support for the Bill came from a political friend of the pulp and paper manufacturers, who are very anxious for its passage, and the Government, fearing the possibility of defeat, suspended its attempt to get the Bill through. Its fate is now extremely doubtful, and there is a surmise that it may be quietly dropped for this session at least.

AUSTRALIA.—CONVERSION LOAN—QUARTERLY BANK RETURNS.

(FROM OUR CORRESPONDENT.)

MELBOURNE, May 28.

As a preliminary to the Conversion Loan to be issued to provide for the 4½ per cent. War Loan of £68 millions maturing next December, the Commonwealth Government invited holders to tender for immediate repayment on May 29th. Tenders for about £2,000,000 have been accepted, and, allowing for recent sinking fund purchases, the total outstanding is thus reduced to about £65 or £66 millions. Although no announcement has at the moment of writing been made as to the terms of the Conversion Loan, the Government has settled one point, much discussed lately in business circles, by stating that the new loan will not be free of income-tax. The earlier War Loans at 4½ per cent. were issued free of income-tax, following previous practice by the various State Governments in issuing loans locally, but in 1918 the Commonwealth Government decided that all its subsequent loans should be subject to Federal income-tax, though this has meant paying higher rates of interest. The exemption in the case of the earlier loans was specially attractive to wealthy individuals, whose rate of tax on the graduated scale is high, and who appreciated the certainty of a net fixed rate of interest. It is feared, however, that some of the present holders of the 4½ per cent. loan maturing in December will prefer to look outside Australia for an investment of their money instead of accepting conversion terms, seeing that the tax-free method is not to be followed.

The principal totals of the quarterly average returns to March 31st of the banks in Australia and New Zealand (exclusive of the Commonwealth Bank of Australia) compare with those for the previous quarter and the corresponding quarter of 1924 as follows (the figures relating only to local business, exclusive of London):—

	March 30, 1924.	December 31, 1924.	March 31, 1925.
Deposits—			
Australia	£ 244,274,262	£ 234,683,749	£ 251,483,695
New Zealand	51,693,551	46,856,013	53,090,842
Total deposits	295,967,813	281,539,762	304,574,537
Advances, &c.—			
Australia	212,446,077	210,539,099	208,373,310
New Zealand	50,496,157	52,048,080	49,898,909
Total advances	262,942,234	262,587,179	258,272,219
Cash items—			
Coin and bullion (Australia and New Zealand)	27,877,587	27,905,209	29,466,807
Australian notes	24,778,237	*23,821,957	*28,684,773
Legal tender notes of other banks (New Zealand only)	448,308	278,531	269,806
Total cash	53,104,132	52,005,697	58,421,386

* Including cash with Commonwealth Bank.

During the quarter deposits have increased by £23,034,775, and advances (inclusive of Government securities) have decreased by £4,314,960. The increase in deposits is a normal movement at the period when the proceeds of annual production are coming in freely, but on the present occasion the increase is exceptionally large, owing to the extreme prices at which a considerable proportion of the wool clip was realised and the high prices obtained for wheat, of which the Australian crop was one of the best on record. The movements as compared with

a year ago are an increase of £8,606,724 in deposits, and a decrease of £4,314,960 in advances. These movements are in favour of the banking position, while the ratios of cash to liabilities have been improved by the importation of over £10,000,000 in gold, though the full effect of this will only be apparent in later figures than those shown above.

The principal figures (within Australia) of the Commonwealth Bank of Australia, not included above, compare as follows:—

	March 30, 1924.	Dec. 31, 1924.	March 31, 1925.
Deposits	£ 29,940,516	£ 27,099,919	£ 26,051,895
Savings bank deposits	38,739,378	39,621,386	39,750,611
Balances due to other banks	24,512	20,812	3,309,563
Discounts, bonuses, &c.	13,935,591	10,943,996	12,489,389
Govt. and municipal securities	39,464,547	38,933,457	38,758,386
Coin and bullion	2,226,862	1,994,093	2,559,566
Australian notes	3,990,336	9,549,397	9,252,489
Balances due from other banks	6,163,056	4,422,781	4,669,798

A feature is a fall of nearly £4 millions in deposits as compared with a year ago.

UNION OF SOUTH AFRICA.—MANAGING DIRECTOR OF CROWN MINES ON UNION'S HEAVY TAXATION—LEGISLATION AND MINING COSTS—COST OF COMPANY LIQUIDATION—PLATINUM.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, June 3.

MR SAMUEL EVANS, chairman and managing director of the Crown Mines, who has been a profound student of economic questions ever since he came to the Rand, entirely endorses the views I have expressed in your columns concerning the extravagance of the Central and Provincial Governments of the Union. He contends that there are "few, if any, European communities in the world that have to carry on their shoulders such a crushing burden of taxation as that imposed on the white inhabitants of South Africa." The heavy additions made to public expenditure in the past ten years, and largely since the Armistice, have been met by an increase of over 60 per cent. in the direct taxation of the mining industry. Customs revenue has doubled, Excise has trebled, stamp duties and fees nearly doubled. Before 1914-15 there was no income-tax. In the first year of its introduction the exemption was £1,000, as it still is in Rhodesia, though it has fallen to £300 for married persons in the Union, with an allowance of £50 for each child. Now it is second only to Customs in its magnitude. Compared with the first year of its imposition, there has, avers Mr Evans, been an advance of no less than 1,386 per cent. in the collections. The revenue of the Postal and Telegraph Department, which, it may be argued, is largely in respect of services rendered, has more than doubled. Provincial Councils have quadrupled their exactions. "Our present plight," declared Mr Evans, "is mainly the result of unsound currency and extravagant policies indulged in after the Armistice." In 1899-1902 the Crown Mines paid less than 3 per cent. of its distributed net profit in taxation. Last year it paid 16 per cent., while the phthisis levy represented 9½ per cent.

Furthermore, Mr Evans said, and I think he is right, that the gold mines of the Transvaal "are more heavily taxed and subjected to greater Government interference, and to more numerous and vexatious Government regulations than any other metalliferous mines in the world." But these regulations are being made more vexatious, and the excessive burdens added to by four new Bills, increasing the already extravagant compensation payable to miners' phthisis beneficiaries, amendment of mining regulations preventing the industry employing thoroughly competent natives in any occupation which, in the opinion of the Minister of Mines, should be reserved for Europeans, and a couple of specious wage Bills "which

inevitably lead to dismissal of practically all coloured persons now employed in certain occupations on the mines." The Crown Mines is doing remarkably well on a recovery of 6½ dwts, and when in long months it is able to deal with 230,000 tons, earns a profit of about £92,000. For May, costs were reduced to 18s 2d per ton. The opening up of the southern area is progressing steadily, but involves a large amount of work and considerable capital expenditure. Working costs are now down within a florin a ton of the rate in 1914, when workings were much shallower, a lesser proportion of development was being done, and the assessment for Miners' Phthisis Compensation much lower.

Mr Evans considers it certain, if the Bills become law, "working costs would be increased to such an extent as to involve the closure of several mines, and the rendering unpayable of a considerable body of low-grade ore in the other mines." That this is not mere special pleading is shown by the fact that in April no less than eight mines on the Rand made a profit of below a shilling a ton, while a further batch of seven made less than a modest half-a-crown; only one mine (namely, Sub Nigel) out of three working in outside districts secured a profit. May results are not yet available in detailed form, but the Consolidated Main Reef has also fallen into the low profit category, making only 1s 4d per ton, "owing to abnormally low yield." In the Central Mining-Rand Mines group, with which Mr Evans has so long been prominently connected, 416,100 tons, or nearly 40 per cent. of the whole, was milled by these small-profit mines for a net profit of only £6,770, or about 4d a ton, so there is little attraction left for shareholders.

Some really astonishing figures were given recently as to the cost of liquidation. In the case of the S.A. Toilet Requisite Company the assets realised £43,363, while the costs of administration swallowed up no less than £25,147. Preferential and secured creditors received £17,850, while unfortunate concurrent creditors, whose claims were £18,830, had perforce to be content with a meagre £365 in dividends! Then, again, the Meat Producers' Exchange's assets realised £71,405, while the cost of realisation was £28,558; in this case concurrent creditors, with claims of £41,054, received 7s 3d in the £.

Sir Ernest Oppenheimer, M.L.A., in the course of his speech at the annual meeting of the Anglo-American Corporation of S.A., Limited, put the gold currency premium at £2,386,500, while the estimate of Mr H. R. Hill in the engineering report of the Union Corporation estimates the figure as high as £4,075,000. The difference of no less than £1,688,500 between the two sets of figures, the one being net and the other gross, presumably represents the cost of realisation, which on this basis works out at 3s 7d per ounce. A very substantial proportion of this would represent bank charges levied for returning proceeds of sales, or such portions as are required locally to meet wages and stores accounts and provide for payment of dividends.

Several platinum syndicates and companies, mainly of merely local importance, have been subscribed during the past month or so. The offer of 120,000 shares of 5s issued (as in the case of "Hendies" at 7s 6d) were promptly taken up. Its sponsors are calculating on an extraction of 5 dwts gold and 15 dwts platinum per ton; so with working costs even at 30s a ton, a substantial profit is expected. Mr W. H. A. Lawrence, the chairman of the Transvaal Consolidated Land and Exploration Company, at the annual meeting emphasised that the Onverwacht occurrence was "not merely a lucky chance," as Dr Mellor's systematic investigation had led to the decision to "prospect that farm and certain neighbouring farms, mainly for chrome ore, but bearing prominently in mind the known possibilities of locating platinum occurrences. The results exceeded expectations, and it was only some time afterwards learned that similar discoveries had already been made in the vicinity by other parties, who had succeeded in keeping their knowledge entirely secret." On the 100 foot level the deposit has been proved over a distance of 34 feet north and south, and 48 feet east and west. The highest value so far disclosed is on this level, where a sample over 6 feet in the north crosscut assayed 137 dwts. "The ore body is columnar, or pipe-like, in form, a condition which favours its continued persistence in depth."

Letters to the Editor.

AUSTRALIAN BORROWING IN AMERICA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It is reported that the Commonwealth of Australia is negotiating for a loan of \$100,000,000 in New York because our Government and its financial advisers in the City discourage any further Australian borrowing in London at present. It is obvious that Australia must borrow in order to pay off loans falling due in London this year.

New York bankers will lend the money readily enough, or rather supply Australia with the goods she requires at prices which will not only be remunerative to her financiers, but will provide employment for American workers. Then the New York banks will send the 20 million sterling in gold to London, and pay off Australian loans falling due here. This gold, which America does not want and cannot use, will go into the Bank of England, and make money "easy" for financiers in London; but what this country wants is work for the unemployed, which can only be found by increasing our manufactures and filling our ships with exported goods.

A little less "sympathy" and a little more practical help might convince the working classes that our Government and their financial advisers have the well-being of the country really at heart.—Yours, &c.,
G. S. PAWLE.
London, July 9th, 1925.

Books and Publications.

LAND AND LABOUR.*

It is claimed that this book "throws a new light on the land question." It is mainly a concise and clearly-written re-statement of the main facts of English economic history viewed from the same standpoint as that of the Hammonds in their more detailed history of the Village Labourer. The sorry story of the Enclosures in England and of the clearances in the Highlands is told again forcibly and lucidly. The happy centuries when the country was "self-supporting" are depicted with an admiration which conveniently ignores the fact that from time to time famine decimated the population, and that among the most frequent causes of death was starvation. Our present parlous state with "millions of acres unused or very much under-used" is contrasted with the productivity of the common-field system of mediæval farming, and generally the present position of English agriculture in the twentieth century is compared, to our discredit, both with that of our past and with that of other countries. The author sets out to discover the cause of unemployment, and to indicate the remedy. Shortly he finds the cause to be "the Land Monopoly" and the remedy "access to the land." Both phrases are familiar, but in themselves are not very helpful. The practical question is how to abolish the one and secure the other. It is here that the author is less explicit. He speaks of "forcing the land into use," and it may be gathered that he thinks this can and should be done by taxation. The weapon of taxation is no doubt a powerful one, but whether it would be effective in extending the use and increasing the production of agricultural land is a question which the author does not discuss. Like many other advocates of the taxation of land values, he appears to assume that its results would be the same in town and country, without attempting to justify the assumption.

TWO ECONOMIC TEXT-BOOKS.

PROFESSOR BYE, of the University of Pennsylvania, and Mr S. E. Thomas, of the British Institute of Bankers, have produced almost simultaneously two complete and comprehensive text-books*, covering in broad outline the whole field of economic theory. Neither adds anything—indeed, do not their modest authors hasten to confess as

* "Principles of Economics." By R. T. Bye. Alfred A. Knopf (New York). Pp. vi.-x., 508.

"Elements of Economics." By S. E. Thomas. The Donnington Press. Pp. 650. Price. 10s 6d.

much—to the science which they so compendiously summarise. Neither contains any notable lapses or outstanding absurdities. Both are written in concise and decent English. Both are as orthodox as economic text-books can be. Both, one must confess it, are a little uninteresting, and doubtless for the reason that the immediate incentive of their authors has been to provide convenient and non-controversial information for the day to day class and examination needs of a given set of students. Indeed, it must be further confessed that in the case of Mr Thomas' book, this particular need has engendered a passion for condensation and classification which is likely to deter, on the threshold of study, any reader whose interest in economics is not inspired by pressing examination necessities.

Of definite and irresistible criticisms we have, considering the vast extent of the area under fire, singularly few. We are inclined to quarrel with Mr Thomas' analogy of rent and profits, and with his statement that profits, like rent, do not enter into price. And we think that he has adopted an unduly naïve version both of the Labour and Cost of Production Theories of Value, for purposes of subsequent (and duly classified) criticism. Meanwhile, Prof. Bye introduces a time element into his statement of the Law of Diminishing Returns, of which Prof. Cannan, with whose works he appears to be generally familiar, would make short work. And in omitting to consider the theory of Economic Rent in relation to incomes other than those derived from the ownership of land, he neglects an interesting and socially significant development of modern economic theory. Both authors, and in this they further demonstrate their unimpeachable orthodoxy, give rather poor summaries of the Malthusian Law of Population. Both, but especially Prof. Bye, deal fairly, squarely, and lucidly with the main theory of Distribution.

On the whole, therefore, both authors deserve a mead of praise. So long as Economics remains an examination subject (and long may it do so), those who work for pass degrees and diplomas will require text-books of this kind, and will doubtless derive much benefit from their use.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, July 22. ACCOUNT, July 23.

Business in the Stock Exchange markets is singularly patchy and uneven. A few departments are exceedingly busy. Firms connected in any way with the rubber share market found the ticket day to be extraordinarily heavy. Many men worked through the night, well into the small hours of Thursday morning. The tendency throughout the House strengthened after the general account had been arranged, and it became commonly known that difficulties which threatened had been passed, or, at all events, smoothed over. One of the features of the moment is the steady manner in which absorption of new issues is going on in the gilt-edged and in other investment securities.

The War Loan has moved up to par, and a rise of 10s in Conversion stock in a single day exemplified the changed conditions of the monetary outlook. The scrip stocks of New Zealand, New South Wales, and the L.C.C. have all advanced materially above the prices at which they stood a fortnight ago. A jump in Synthetic Ammonia Fives lifted the stock to 2½ pm. There is still a fair amount of new Great Western 5 per cent. preference stock on offer at 95½—i.e., 5s above the issue figure. Several new loans are said to be awaiting a favourable opportunity for putting in an appearance whose advent was delayed by the Bank rate fears, which blighted prices in the Consol market a month ago.

French Government bonds are distinctly better, and the French Railway guaranteed quartette has risen substantially on the latest proposals that are made for setting the finances of France upon a sound foundation. Chinese bonds have recovered, and, after a shake-out, the European Reconstruction varieties developed renewed strength. Rio Tintos came into active demand following upon an acute spasm of flatness.

Home Railway stocks gave way heavily at the beginning of the week. The industrial crises led to further sales of comparatively large amounts of stock on behalf of proprietors who saw no hope in the immediate future for railway stock. These realisations were counteracted by a little bargain-hunting, and prices rallied as soon as a few supporters came in. The Undergrounds are weak, however, and the temper of the market is extremely sensitive. Argentine Rails are a little better, and United of Havana enjoyed a brisk rise.

The rubber market has been booming, as it could scarcely be otherwise considering the rise in raw rubber to 3s 11½d per lb, comparing with 1s 9d at the beginning of May. An enormous business is doing in the shares, and a good deal of indiscriminate buying is now indulged in by an ever-widening circle of the public. Tea shares are also strong. The leading shares advanced hand over fist, taking the rest of the list with them, though more temperately. The oil market is better, in consequence of the liquidation having ceased. Courtaulds and the tobacco shares have pursued a somewhat erratic course, having been swayed also by rumours of trouble and its surmounting. Textiles, apart from Courtaulds, are heavy as a whole.

In the insurance market, the not-unexpected developments in connection with Phoenix and Norwich Union shares brought about moderate rises. The banking market is steady to quiet, Hongkong and Shanghai fluctuating sharply. Liptons went flat, on the issue of the report, and Baldwins gave way on the directors' decision to pass the dividend on both classes of preference due to be paid next month. In brewery stocks, Guinness and Watney deferred stand out with conspicuous rises. County of London Electric eased off. Gas Light ordinary stock is harder. Cable securities are inclined to be heavy; in the wireless group there is little doing.

Dunlops went up again, on the expectation that there will be another rise in the price of tyres. Furness Withy are better in the shipping list, though Royal Mail became pressed for sale upon an unwilling market.

Paris veered round from its selling mood, and turned a

buyer of De Beers, Chartered, and some of its favourite gold shares, with the result that Kaffir prices are better as a rule. Chartered rallied without much difficulty after a fall, said to have been caused by the realisation of a well-known deceased account. The platinum group has proceeded a little more slowly, prices keeping on the firm side, the Cape appearing as the principal operator in this market. Malayan Tin shares have swung idly within narrow bounds, and amongst West Africans the volume of trade on account of the public has subsided to a mere trickle.

Bright and Colson, Limited.—Authorised capital £400,000. This company has been formed to amalgamate Bright's Stores, of Bournemouth, including all the issued ordinary shares of the subsidiary concern, Bright's (Southsea), nary shares of the subsidiary concern, Bright's (Southsea), Limited, Southsea, and Colson and Co., of Exeter. The capital is divided into 250,000 7 per cent. cumulative preference and 150,000 ordinary shares of £1 each, and there are now being issued at par 225,000 preference shares, of which 55,415 will be allotted in part payment of the purchase price. There are also being issued 110,000 ordinary shares, of which 80,666 are to be allotted in part satisfaction of the purchase consideration, and 29,334 have been applied for by the directors and their friends, and will be paid for in cash. There are no debentures. The certified combined net profits for the last four years, after charging all working expenses, depreciation, and directors' salaries, but before charging taxation, interest, and directors' commissions, show a yearly average of £49,100, sufficient to cover the amount required to pay £15,750, the dividend on the preference shares now being issued, very comfortably. No commission (as distinct from salary) can be paid any director who may be appointed a manager or director or manager until 7 per cent. has been paid on the preference share capital and 10 per cent. on the ordinary share capital, while at least £5,000 a year is to be placed to reserve in each year before the ordinary dividend for such year is increased beyond 10 per cent. until such reserve amounts to not less than £25,000. This appears to be an informative prospectus, and the amalgamation should effect economies.

William Hancock and Co., Limited.—Authorised and issued share capital £545,000. This is an offer for sale of £400,000 6 per cent. first mortgage debenture stock at £97 per cent. An outstanding issue of £192,454 4 per cent. debenture stock is in part being converted into the 6 per cent. stock, and the balance will be repaid in cash out of the proceeds of the issue. The stock will constitute a specific first charge on the company's properties, and a floating charge upon the undertaking and other assets. It will be repayable by means

of a sinking fund beginning on June 1, 1927, and calculated to redeem the stock on or before June 1, 1960. Power will be reserved to redeem any amount outstanding at £103 per cent. on or after June 1, 1935. The company operates at Cardiff, and was incorporated in 1887. It now controls three breweries. The proceeds of the present issue, after providing for the cancellation of the existing debenture stock, will be utilised in paying off all other mortgages and loans, and the balance—about £60,000—will be available for general purposes. Net assets are stated at £1,126,596. A table of the profits for the last 30 years is given. The precise value of the properties to be included in the specific charge is not clearly stated.

The Tarapaca and Tocopilla Nitrate Company, Limited.—Particulars have been published in the Press for public information only of an issue of £400,000 6½ per cent. debentures in registered debentures of £100 each of the Tarapaca and Tocopilla Nitrate Company, Limited. The whole of the issue has been placed at the price of 96½. These debentures are to be secured by a first mortgage and charge upon the property of the company (under Chilean law). They will be repaid by the operation of a sinking fund of £34,000 per annum, beginning in the year 1928, to be applied annually in purchasing debentures when their price (exclusive of accrued interest) is below 102 per cent., and in drawing at 102 per cent. when the price (exclusive of accrued interest) is 102 per cent. or over.

Yorkshire Paper Mills, Limited.—Capital £130,000, divided into 80,000 8 per cent. cumulative preference shares of £1 each, 45,000 ordinary shares of £1 each, and 20,000 deferred shares of 5s each. Holders of the ordinary shares are entitled to a 10 per cent. distribution and 25 per cent. of surplus profits; the remaining 75 per cent. going to deferred shareholders. This is an offer at par of 80,000 preference and 25,000 ordinary shares. The undertaking has been formed to carry on the paper-making business formerly known as Charles Marsden and Sons, Limited. The latter business has been run for some time past by the receiver for the debenture-holders, and profits during this period are mentioned. Properties have been independently valued at £223,000, and as the price which the company is paying to the vendor is but £65,000, one is left wondering how the receiver for the debenture-holders came to consent to the original sale. The old undertaking has, however, supplied its products to many influential newspapers in and around Yorkshire, and as this is a brave attempt to put fresh life into the concern, no doubt support will be forthcoming from the debenture-holders in Charles Marsden and Sons, Limited.

The East Kent Gas Company, Limited.—Authorised capital £350,000, in shares of £1 each. Excluding the present issue, 71,479 shares have been issued. This is an issue of 100,000 shares of £1 each at par. The directors will proceed to allotment on a minimum subscription of 40,000 shares—an amount which they have guaranteed personally, free of any underwriting or other commission. The company has the statutory right to supply gas over a territory of about 200 square miles in East Kent, comprising a population estimated at over 100,000. Among the assets already owned is 93½ per cent. of the issued share capital of the Whitstable Gas and Coke Company, Limited, which was acquired for £67,860. The prospectus shows an estimated revenue equal to nearly 8 per cent. on the capital issued and now offered; but those conservative investors who prefer gas supply undertakings will probably consider that an estimated 8 per cent. is not sufficient inducement to take shares in the concern.

Hoscote (Malaya) Rubber Estates, Limited.—Authorised capital £250,000 in shares of £1 each, of which it is agreed that £185,000 shall be issued. This is a prospectusless proposition, but full details are published in the Press, to comply with Stock Exchange regulations. The company has been formed for the purpose of acquiring and further developing two rubber estates in Negri Sembilan and another in Johore, comprising some 5,400 acres, of which the total mature area is given at 2,027 acres, while out of the proceeds of the issue the planted area is proposed to be increased by 906 acres. Standard production is put at 568,251 lbs. The estimated output is given at 493,000 lbs in the year to June 30th next, rising to 890,000 lbs in 1929. The all-in cost for the first year is taken at 11½d, declining to 9½d during the four years' period. The announcement proceeds to point out that "the proceeds of the present issue, allowing for the premium at which the shares are being sold, will amount to £222,000. After providing for the purchase price of £150,000 and preliminary expenses estimated at £4,000, a sum of £68,000 will be available for maintenance and development of the estates and proposed extensions, and for the general purposes of the company." The undertaking appears to be in capable hands.

Layang Rubber Plantation, Limited.—Authorised share capital £150,000, in ordinary shares of 2s each. This is an issue of £1,250,000 shares at par. The company has been formed to acquire certain rubber plantations in the Malayan State of Johore. The estates cover a total area of

3,483 acres, and the vendors have guaranteed that the area of five to twelve-year-old rubber exceeds 1,500 acres, and have agreed in the event of any shortage to accept a proportionate reduction in the purchase price, which is approximately £87,500, against a valuation of £107,211. The output of the present planted area for 1925-26 is estimated at 227,500 lbs. increasing by 1930-31 to 619,400 lbs. For the current year the standard production is 443,750 lbs. Production costs are estimated not to exceed 9d in the first year, 8d in the second, 7½d in the third, and 7d in the following years. On an estimated basis of output and costs the profits for 1925-26 in respect of the present planted area are estimated at £8,531 with rubber at 1s 6d per lb, and at £11,375 with rubber at 1s 9d, rising to £28,389 and £36,132 respectively by 1930-31. These figures are subject to transport, selling charges, and London expenses. The company is not committed to any forward sales, and will derive immediately the benefit of selling the monthly output of approximately 19,000 lbs at market prices. A reasonable speculation.

Sungei Raya Rubber Estate, Limited.—Authorised capital £100,000 in ordinary shares of 2s each. Subscriptions are invited at par for 850,000 shares. The company has been formed to acquire property covering about 1,640 acres on the Island of Langkawi, State of Kedah, Malaya. The present standard production of the estate is warranted at 415,000 lbs per annum. A purchase price of £66,385 (equal to £55 per planted acre) is payable in cash, and the vendors also have the option until June 30, 1928, of subscribing at par for the unissued 150,000 shares of the company's capital of £100,000. On the basis of seven years' purchase, with rubber at 1s 4d per lb and output restricted to 60 per cent. for three years, the estate is valued at £98,410. Preliminary expenses amounting to £4,500, in addition to brokerage and underwriting commission and cost of and stamp duty upon transfer of the property, are payable by the company. The issue has been underwritten for a commission of 4 per cent. and an over-riding commission of 1 per cent. A speculation.

COMPANY MEETINGS, &c.

NATIONAL BANK OF NEW ZEALAND, LIMITED. IMPROVED NET PROFITS.

The fifty-third ordinary general meeting of the National Bank of New Zealand, Limited, was held, on the 8th instant, at 17 Moorgate, London, the Hon. William Pember Reeves, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said: Our net profit is £279,826, as against £243,934 last year, an increase of £35,892, or, including the carry forward, a total increase of £45,882, out of which we have to provide for the increased amount of dividend required for the capital issued last year. This balance we show after paying a bonus to the staff of £13,100.

The dividend and bonus which we propose to pay to you are the same as last year.

We have allocated £9,000 to the pension and gratuity fund, which will be our normal contribution to the fund on its present basis. The reduction from £28,000 last year only indicates that the special grant made by us to establish pensions for sickness has been fully paid and therefore does not recur.

Gross profits show an increase of £28,026, and expenses a slight decrease, and we are able to carry forward £167,697, which is £12,139 more than last year.

EXCHANGE POSITION.

A year ago I told you that exchange between Australia and New Zealand and this country had been very unstable, and that the only solution of the difficulty was a general adoption of the gold standard. Now that the gold standard has been re-established in Great Britain and Australia the position has become stabilised and rates are much lower. If I have not dwelt much on this exchange problem in previous addresses, it has not been because I regard it as unimportant, but the only real remedy—a return to the gold standard—was one which a small community like that of New Zealand could not venture to try alone. It was obvious that we must wait until the Motherland and Australia made a move. This has now been made with the result of a sharp reduction in charges, which, while it is of especial value to the New Zealand exporters, should be more or less advantageous to all concerned in our commerce from both ends. This time last year the selling rate for telegraphic transfers to New Zealand was 30s per cent. premium, but has now been reduced to 5s per cent. premium.

The banking averages for the first quarter of 1925 afford clear proof that the Dominion has recovered from the depression of 1920-21. The figures are:—

	£
Deposits ..	49,897,000
Advances ..	43,730,000
Excess of deposits ..	6,167,000
Deposits increased by ..	2,854,000
Whilst advances decreased by ..	673,000
Or an increase in banking resources of ..	3,527,000

On the whole I think the position to-day is more satisfactory than that of 1919, because apart from the feverish rise in wool last November, there is nothing abnormal about it. There has been a substantial increase in production, freedom from serious industrial conflicts, and an absence of any very mischievous speculation.

FURTHER ADVANCE.

In speaking to you last year I was able to claim that the improvement in the state of the country amounted to "a further stride towards complete recovery." In other words, the improvement which began in 1922 had last year been well sustained. I can only say as much—perhaps rather more—for the advance

made during the year from March, 1923, to March, 1924. The banking figures were better than for many years past, there was a marked and very satisfactory advance in values of primary products, the restored balance of trade was fully maintained, the public revenue was buoyant, especially that brought in by the Customs, the concessions to taxpayers encouraged traders, the cry of the unemployed was not heard in the land, and although there were sporadic outburst by dissatisfied labour, there was no prolonged trouble.

At one time it seemed likely that New Zealand would be dragged into the Australian shipping and waterside conflicts, but she escaped that after a few anxious days. Once more, therefore, it may be chronicled that the amount of time and money actually lost by capital and labour in New Zealand in needless conflicts has been extremely small.

NEW ZEALAND FINANCES.

As you are aware, the Government was able to show a substantial surplus—£1,235,000. This is all the better because it follows a reduction of taxation. The income-tax was reduced from a maximum of 5s 10 2-3d to 4s 10 2-3d. The land tax was reduced by 10 per cent., and it was estimated that the loss of revenue under these two headings would be more than £720,000. Direct taxation in New Zealand is now more reasonable than it was, but it is still high—indeed, too high. Another improvement to be noted is that arrangements have been made for ending the moratorium on mortgage debts which has been such an uncomfortable feature of the economic position of New Zealand for a very long time. One may hope that the result will be an increasing readiness on the part of lenders to advance money on land to a reasonable extent. Of recent years they have shown a preference for lending to local bodies, a form of loan which has been favoured by substantial concessions in the way of taxation.

One of the results of the reluctance of capitalists to lend on mortgage has been the insatiable demands made on the Government to do the lending itself by way of advances to farmers and house builders. Owing to this and other causes, the Government of New Zealand still continues to be a heavy borrower. In previous speeches, I have more than once told you plainly that I think the New Zealand Government is borrowing too heavily. A country as prosperous as New Zealand can well afford to reduce the annual dose of stimulant from outside. The more she does so, the more easily will she be able to borrow when depression again overtakes her, as some day it might, and a certain amount of stimulant may be judicious.

TRADE FIGURES.

For the financial year to March 31st the overseas trade was:—

Exports ..	£54,771,000
Imports ..	49,821,000

Surplus of exports .. 4,950,000

For the calendar year 1924 the overseas trade amounted to over £100,000,000. This has only been exceeded in one previous year, and that a year when there was a most undesirable excess of imports. The trade is now over £70 per head of population—a remarkable figure.

I note that imports from Australia increased from £3,600,000 to £6,600,000, and that the balance of trade between Australia and New Zealand was not less than £4,100,000 against New Zealand. This is almost entirely due to the fact that New Zealand does not now produce enough wheat and coal to meet her own requirements. The only country in the world with which New Zealand does a very large trade with a balance heavily in her favour is the United Kingdom.

Prices for wool during last season took a course curiously different from that of the previous summer. In 1923-24 they began to rise very gradually in November, but went on rising to the closing sales in March. In the season just ended there was in November a sensational advance of not less than 25 per cent. After December, however, a steady decline set in, until at the March sales the sharp advance of November had been completely lost. This, of course, was disappointing. It may, however, be pointed out that the amount of wool sold for cash during the first half of the season was large enough to put a very handsome sum in the pockets of New Zealand growers. The causes of this fluctuation, so far as they originated in New Zealand and Australia, were partly the erratic character of American buying out there and partly financial. Nevertheless, the present price is by no means bad. Prices obtained at the close of last season were still ahead of the "commandeer" prices for New Zealand wool by the Imperial Government during the war. Moreover, the statistical position is very strong.

We may, perhaps, see some clash of rival forces. Still, I cannot, taking a long view, regard the outlook for New Zealand wool as bad.

It is interesting to note that the Government is giving attention to the large areas of land in the North Island, where settlement in the past has been slow.

CHAIRMAN'S VISIT TO NEW ZEALAND.

The Chairman, in conclusion, intimated that, at the desire of his colleagues, he was about to pay a visit to New Zealand on the business of the bank. It would be his duty there to discuss affairs with their very able general manager, Mr Jolly, to visit most of their branches, and to make the personal acquaintance of their inspectors, managers, and other members of the staff. In addition, he hoped to go through the Dominion from end to end and make a careful economic study of its development, condition, and prospects. He hoped the knowledge thus obtained would be of benefit to the bank in the future; but, in any case, he would spare no pains to make it as full, exact, and trustworthy as possible. He concluded by moving the adoption of the report and accounts, and the payment of the dividends as recommended.

The Hon. Sir Arthur Myers seconded the motion, which, after some congratulatory remarks from shareholders, was unanimously agreed to.

IMPERIAL BANK OF PERSIA.

GOVERNMENT'S INCREASED STRENGTH AND EFFICIENCY.

The thirty-sixth ordinary general meeting of the Imperial Bank of Persia was held on July 7th at Cannon street Hotel, London, Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (the chairman), presiding.

The manager and secretary (Mr Sydney Rogers) read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his speech, said: As the report discussed at our general meeting a year ago was for six months only, the accounts now before you should be compared with those dealt with at our meeting in December, 1923. The past year has been one of ordinary, steady, and progressive business, about which there is little to remark, except that our profits have been well maintained, that the financial position of the bank is strong, and that the final dividend we propose to pay makes the total dividend for the year the same as before—namely, 9s per share, free of tax. This, I trust, you will consider satisfactory.

But while the business and progress of the bank have been comparatively uneventful, the year has been an interesting one for Persia, and for the growing power and popularity of the Prime Minister and Commander-in-Chief of the Army, Reza Khan Pehlevi, by whom, in the absence of H.M. the Shah, the Government has been carried on with increased strength and efficiency. This remarkable officer became Minister of War in the summer of 1921, when the Ghavam-us-Saltaneh was Prime Minister, and, in spite of several changes of Government, he continued to hold this post undisturbed until he was also appointed Prime Minister in October, 1923. Since that date he has remained in power, and has governed the country with a firm hand. During the past 12 months his great achievement has been his successful assertion of the authority of the Central Government over such semi-autonomous chiefs as the Sheikh of Mohammerah, the Wali of Pusht-i-Kuh, and the Bakhtiari and Luristan Khans. At one time it looked as if there might be serious fighting in Arabistan—or Khuzistan, as it is called by the Persians—but the determination displayed by the Commander-in-Chief and his prompt movement of troops to the south enabled him to overcome all opposition with little more than a show of force. He himself proceeded to Mohammerah and Ahwaz to arrange matters with the Sheikh, and he took the opportunity to pay a visit to the oilfields and the Anglo-Persian Oil Company's refinery at Abadan, by which we are told he was very favourably impressed.

IMPROVED FINANCES.

In the domain of finance, judging by the quarterly reports now issued by the American Mission, considerable progress has been made under the auspices of the Administrator-General, Dr Mills-paugh, and his staff. Last year Dr Millspaugh budgeted for a small surplus; whether it will be realised remains to be seen, but the influence of the American Mission is being felt practically in every department, and there is no doubt that the revenues have increased, that there is a much stricter control of expenditure, and that the system of taxation is being steadily reformed.

We continue to receive satisfactory reports of the trade of the country, which, year by year, shows expansion. The latest figures, just received by telegram, are: Imports, Ts. 77,000,000, and exports Ts. 100,000,000, as against the figures I mentioned last year of Ts. 69,400,000, and Ts. 76,700,000 respectively. I think we may accept this as mainly the result of the improvement that has taken place in the Government of the country, and the safer conditions that exist for carrying on trade. It is needless to remind you that good trade has an important relation to the well-being of Persia, and incidentally of the bank, and, given security and the

continuanee of sound financial administration, the volume of trade can hardly fail to increase.

COMMUNICATIONS.

There is one branch of the administration which has hitherto been rather neglected; better communications are sorely needed, so that quick transport facilities may be at the disposal not only of merchants and traders, but also of the Government, for the preservation of peace by the necessary movement of troops to outlying districts, and for the prevention of famine by the timely transfer of foodstuffs from a district where crops are good to one where famine conditions prevail, which is almost impossible to accomplish with the slow methods of the caravan—mule or camel. In this respect the Prime Minister is credited with a far-seeing policy; as a military man, he recognises the value of mobility in his army, and as a good administrator he knows well the needs of his country and the advisability of having a well-fed and contented population.

The question of railway construction stands well in the foreground of his views, and I understand that all the recent plans for pushing on the various schemes suggested for linking up the capital with the sea emanate from him. The main roads have of late years received attention, and, with the advent of the motor-car, they are serving their purpose fairly well, but there is still much room for improvement. You have no doubt seen it publicly announced that the Persian Parliament had in contemplation the institution of a surtax on tea and sugar entering the country, the proceeds of which are to be devoted to railway and road construction. In all these matters the bank will no doubt be called upon to take its part, and I need hardly say that the Government may rely upon us, as the State bankers, to assist in any sound and progressive programme.

The report was unanimously adopted.

BANK OF BRITISH WEST AFRICA, LIMITED.

BETTER TRADE PROSPECTS

The thirty-first annual general meeting of the Bank of British West Africa, Limited, was held, on the 9th inst., at the head office, 37 Gracechurch street, London.

The Right Hon. the Earl of Selborne, K.G., G.C.M.G., who presided, said that the profits amounted to £112,352, or some £16,000 more than a year ago, and, while he was not disposed to be too optimistic as to the future, he thought they might congratulate themselves upon this definite evidence of some improvement in West African trade. In the balance-sheet, current, deposit, and other accounts, at £6,726,000, showed an increase of £186,000, but, with the disappearance of their Egyptian deposits, owing to the amalgamation of their business in Egypt with that of Lloyds Bank, Limited, in that country, they must expect that a reduction in the total deposits would be shown next year so far as their own accounts were concerned, although Lloyds Bank's Egyptian business would have benefited. Bills for collection showed a gratifying increase of £120,000.

On the assets side, cash in hand showed a decreased of £185,000, but trade bills and loan totals showed that £500,000 more than a year ago was being employed in financing trade transactions. At the last two general meetings he had stated that they wanted to use more of their money in trade, also that they were in a position to meet increased demands, and it was pleasant to observe a movement in the desired direction. They had applied £25,000 to contingency fund, as they did a year ago, and £25,000 to writing down the cost of premises and furniture. The dividend of 5 per cent. proposed was the same as that paid in each of the last two years. Uncertainty and unrest still prevailed in the world, disturbing the course of trade, but he trusted that conditions might so improve that they might be able some day to give the shareholders a larger return on the capital they had invested.

Reverting to the arrangement arrived at in Egypt with Lloyds Bank—who, he said, were the largest shareholders in the Bank of British West Africa—the Chairman stated that this bank retained a substantial interest in the results of this amalgamated Egyptian business carried on by Lloyds Bank, and, with the saving in overhead expenses which would result, the goodwill which each side to the bargain brought in, and the local experience now united, they looked forward with confidence to increasing profits from the combined business.

Their business in Morocco continued to be carried on under the disadvantages of unstable exchanges, and there were other problems connected with that country which also tended to make conditions difficult. Perhaps there was no more important matter from the point of view of British trade interests than that of the capitulations. It was most earnestly to be hoped that our Foreign Office would resist any and all attempts to deprive our country of our capitulatory rights in Morocco.

So far as exports were concerned, the quantities of many pro-

ducts exported from British West Africa were greater in 1924 than in any previous year, and, presuming the absence of any untoward and unforeseen occurrences in Europe or America, he saw no reason why these exports should not continue to increase, and thereby enable the West African Colonies to acquire and consume an increasing quantity of manufactured goods notwithstanding the higher prices they were called upon to pay for them.

Mr Leslie Couper, C.M.G., their general manager, paid his second visit to West Africa early in the present year, and had reported hopefully to the board with regard to trade prospects there.

The report and accounts were unanimously adopted.

GENERAL ELECTRIC COMPANY, LIMITED

PROFITS EXCEED £1,000,000.

The annual general meeting of the General Electric Company, Limited, was held, on the 8th instant, at Magnet House, Kingsway, London, Sir Hugo Hirst, Bart. (chairman and managing director), presiding.

The Chairman, in moving the adoption of the report and accounts, said: It is a great satisfaction to your directors that both balance-sheet and profit and loss account show that the company has overcome the difficulties caused by the aftermath of the war. They also feel some sense of pride that their provision as to the services which the electrical industry can render has been justified by our expanding business and corresponding results. Our profits, which for the first time in our history exceed the million pound mark, are nearly £200,000 in excess of those of last year. These results are not only due to a greater demand for our goods; they reflect also the increasing efficiency of our recent enterprises, but they are mainly due to the comparative industrial calm which we enjoyed during the last twelve months—the first year since the war without any serious disturbance of the relations between employers and employed.

I will only just mention one or two of the products of this company which, to the uninitiated, seem to have developed into staple industries, and I am sure the few facts I tell them will cheer them up as to what is in store and what we may look forward to. The supply of electricity in the London area by some seventy or eighty authorities has involved a capital expenditure of over thirty millions. If the engineers of this company were given the chance of a modern lay-out of a big power station, we could, for less than half that capital, give a bigger output at a considerably reduced cost of production. This is just an indication of what will happen sooner or later to 90 per cent. of existing power stations in the country. But we need not wait for the reconstruction of power supplies; our ordinary staple articles offer great opportunities.

TELEPHONE AND ELECTRIC LIGHTING.

Look at the telephone industry, one of the essential means of modern communication. Whilst the United States have 142 telephones per thousand inhabitants, Denmark 88, New Zealand 79, Sweden 67, Switzerland 45, Great Britain is still twelfth on the list with 26 telephones per thousand inhabitants. Good reasons can be given for this slow development, but the point that interests us is that an industrial and trading company such as Great Britain has no business to be so low down in the scale, and I am glad to know that the Government have realised for some time the need for speeding up a big development programme. Industry is both ready and anxious to do its share to retrieve the misfortunes and mistakes of the past. This company is well equipped to meet the demand for automatic or any other kind of telephone service.

A similar state of affairs exists still in the lighting industry. Official figures were presented at last year's world power conference showing that the lamps per head of population used in U.S.A. are 1.74, in Switzerland 1.62, Germany .88, France .72, and in the United Kingdom .42. The improvement of lamps and the study of better lighting methods have led to a considerable increase in the use of electric light during the last few years, and I am satisfied that the combined efforts of the industry to educate the public in the proper use of lighting, how to light houses, shops, streets, and factories, will mean a considerable growth of this industry in which we hold an important place.

WORLD'S WORKING CONDITIONS.

The recent investigation which my colleague, Mr Railing, and I made of the working conditions of the Continent satisfied us that most industries in most Continental countries work up to 55 hours and more. Whilst there is such a tremendous difference in the working hours of our people compared with the foreigner, our greater skill, our greater loyalty, our greater efficiency cannot make up the difference; we must realise that we must meet the situation in this direction somehow, particularly in the basic industries of coal, steel, and iron, on which almost every other industry depends. But there is one other aspect of the present state of production throughout the world to which I would like to

make reference. Even if we settled all our differences, even if we worked as long as the foreigner, I still feel that the power of production of the world is too great for the absorbing power of the world at the present moment. The great needs of the war developed the power of production of each country to at least double what it requires; if wild competition between countries is allowed to go on unchecked, it will lead to political difficulties and to great industrial crises, first in the weaker countries, but eventually to the detriment of all, and particularly to the detriment of the wage earners. I cannot but feel that the big industries of the principal countries will have to put their heads together in a spirit of collaboration rather than in a spirit of the "survival of the fittest." They will have to discuss standardisation, working conditions, and sharing of markets. Only by such collaboration can industrial steadiness gradually be obtained and the steady recovery of the world can be helped.

Mr E. G. Byng seconded the motion, which was carried unanimously.

AUSTRALIAN ESTATES AND MORTGAGE COMPANY, LIMITED.

MR WILLIAMSON ON POSITION OF WOOL INDUSTRY.

The annual ordinary general meeting of the Australian Estates and Mortgage Company, Limited, was held, on the 8th instant, at the Cannon Street Hotel, London.

Mr Andrew Williamson (the chairman of the company) presided, and in the course of moving the adoption of the report and accounts said: When I last addressed you I had to report on a year of severe drought over large areas in both Queensland and New South Wales. The severity of the drought in 1923 and its continuance into the beginning of 1924 left its mark in the reduced number of sheep shorn, the net reduction in shearing numbers being equivalent to nearly 70,000 grown sheep. The average cut per head was, however, nearly 2 lbs more than in 1923, so that the 1924 clip was heavier by nearly 500,000 lbs. This increased clip was disposed of at very satisfactory prices, resulting in an increase of substantially over £100,000 in the proceeds.

After providing for interest on the debenture stocks, a net profit is left of £211,902 10s 3d, from which £90,000 has been transferred to reserve, leaving a balance of £129,293 to be dealt with. Out of this the directors recommend that £25,000 be carried to a special

reserve account, with a view to establishing a superannuation or provident fund. Out of the balance of £104,223 the directors recommend the payment of a dividend for the year 1924 of 6 per cent. and a bonus of 4 per cent., in all 10 per cent., less tax. The prosperity which we have experienced during the past year was mainly due to our increased wool clip, and to the very satisfactory prices at which we were able to dispose of it. This year we have the prospects of a good clip, and somewhat larger than last year. Prices, however, since the very high point reached at the end of last year, have given way very seriously, and the present position as regards market values is full of difficulty and uncertainty.

CHAIRMAN'S WARNING JUSTIFIED.

At our last two annual meetings I have given you very full information with regard to the statistical position of wool, showing the growing tendency of production to fall short of consumption, and the prospect this gave of a continuance of highly satisfactory returns to the wool growers. I was, however, careful to sound a warning note. I said that there was a danger of prices going too high, for that inevitably produced reaction. In the November-December sales buyers rushed prices up to a level that was unwarranted by the general condition of the trade. This was immediately followed by a cessation of orders, a sudden and severe break in wool values, and a heavy fall in prices of manufactured goods. Just as the prices paid for wool in December were not justified by the condition of the trade as a whole, so the subsequent fall has, in my judgment, been overdue. There is no likelihood of any material increase in production (indeed, the likelihood is all the other way), and the experience of a long series of past years shows a steady tendency to the increased use of wool fabrics. The steady continuance of this expansion, however, must depend on the prices for wool being prices the consumer can afford to pay. The position we are faced with to-day is no new one.

CAUSES OF THE SLUMP.

The questions that interest us most are, how long is it likely to last, and what is the best way to meet them? To find the answer to these questions, we have first to ascertain the causes of the calling off in consumption, and the slump in values. One has been the prices obtainable for the manufactured article lagging so far behind the high prices reached in December for the raw material. Then a further very important factor has been the continued prolonged abstention from buying on the part of the United States of America, for which many causes have been assigned, and in which doubtless many causes have contributed.

It is reasonable to regard this as a temporary phase. The difficulties, industrial and financial, of the Continental markets for our wool, together with the troubles from which Japan has recently been suffering, and the alarming upheaval now distressing China, have been a powerful temporary restriction in consumption. Another factor having some influence, though a minor one, in regard to consumption has been the introduction of new fabrics, such as artificial silk, used both as substitutes and for blending. To these, too, high wool prices prove a perfect godsend. Last, but by no means least, temporary loss of confidence on the part of buyers and manufacturers, who, in the circumstances, naturally fear further falls in values.

Returning now to the question of what is the best way for wool growers to meet the present adverse situation, it seems to me that the only way that is not open to fatal objection is to agree to regulate the offerings at the public sales so as to ensure that the market is not at any time flooded with excessive quantities of wool, and at the same time taking care not to starve the market.

The Chairman concluded by stating that they were definitely against the new proposal for a semi-Government institution to control the export and marketing of Australian wool.

The resolution was carried unanimously.

JAVA PARA RUBBER ESTATES, LIMITED. DIVIDEND OF 17½ PER CENT.

The fourteenth annual general meeting of the Java Para Rubber Estates, Limited, was held, on the 7th inst., in the Council Room of the Rubber Growers' Association, 2-4 Idol lane, London.

Mr R. J. Arnold (chairman of the company) presided.

The secretary (Mr J. J. Sneddon, A.C.I.S.) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and statement of accounts, said that the final result of the year's working was a profit of £37,390, which, being added to the balance brought forward from last year's accounts, made a total of £51,136. He thought the shareholders had good reason to be satisfied with the results, which, however, would have been much higher but for the facts that they were now charging against revenue the expenditure on the upkeep of immature areas, that they had started depreciating their leasehold estates, and, further, that there had

been considerable increase in Java taxation. It was proposed to declare a dividend of 17½ per cent. for the year 1924, which would absorb £28,000, and to carry forward to next year £23,136.

With regard to the current year, 1925, their restricted crop of rubber was estimated at 800,000 lbs, and of this amount 487,214 lbs had been collected for the six months ended June 30th. They had sold forward five tons a month from January to December of this year at 15½d per lb ex warehouse Java, equal to at least 18½d per lb London. They had also sold forward five tons per month from January to December, 1926, at 18½d per lb ex warehouse Java, equal to 18½d per lb London. He did not desire to discuss the wisdom of forward contracts, but in the board's opinion it was desirable to ensure a regular monthly revenue in Java, sufficient, at any rate, to meet the cost of the development of their young estate Tjikasso. With regard to coffee, the estimate for the year was 6,500 piculs, equal to 7,893 cwt, and up to the end of June 2,252 piculs, equal to 2,735 cwt, had been harvested. The condition of the estates was in every way satisfactory. The visiting agent stated that he was looking forward with confidence to Tjikasso soon taking its place in the front rank.

Dealing with the rubber position, the Chairman said that the commodity had now reached a price which the most sanguine had hardly hoped for; and a very satisfactory feature was that, although forward prices were absurdly below the price of spot rubber, the forward market was gradually creeping up, and they were beginning to hope that the poor producer was about to recoup a portion of his losses.

Colonel the Hon. Edward Coke seconded the resolution, which was unanimously adopted.

TAKUAH AND ABOSSO CONSOLIDATED, LIMITED. REDUCED WORKING COSTS—BRIGHT PROSPECTS.

The ordinary general meeting of the members of Takuah and Abosso Consolidated, Limited, was held, on the 6th instant, at the Institute of Chartered Accountants, Moorgate place, London, Mr T. F. Dalglish (the chairman) presiding.

The secretary (Mr T. J. Foster, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Turning to the balance-sheet, the issued capital remains at the same figure as last year, namely, £233,305 15s; sundry creditors in London show an increase of £6,052, which is more than accounted for by a reserve for taxes. In Africa there is a small decrease. Bills payable are about the same.

On the credit side property account has not been altered, and remains at £111,804 10s. I would remind you that this item represents concessions covering an area of over 12 square miles of mining rights, through which our reef runs for about three and a-half miles, and 39 square miles of timber concessions.

Plant and machinery, &c., has been increased by £6,970, which includes the cost of a Merrill plant, which has much improved the process of recovery of gold, a Bellis and Morcom steam and electric engine, new electric cables, a locomotive and sundry items necessary to bring the Adjah Bippo mine into production. The cost of a new water service and improvements in the native village is also included.

Mine development shows an increase of £10,577 13s 3d, which is accounted for by the cost of opening up and reconditioning the Adjah Bippo mine, and of an internal shaft in the Abosso mine. The total ore reserves of 529,270 tons now stand at a cost of rather less than 2s 6d per ton, and are estimated of the value of 38s per ton. Stores and materials are normal. Sundry debtors call for no comment. Preliminary expenses have been written down by a third. Shareholdings have been reduced £2,735 19s 8d, being half the cost of the shares held in the Takuah Central Mines, referred to in the general manager's report.

Taking the stores and materials and adding the Government securities and the gold and cash, amounting together to £64,002 2s 7d, and deducting sundry creditors, bills payable and unclaimed dividends, amounting together to £29,245 8s, there is a surplus of liquid assets amounting to £34,756 14s 7d, which, I think you will agree, is a very satisfactory financial position.

PROFIT AND LOSS ACCOUNT.

Taking now the profit and loss account, each item, except development redemption, I am glad to say, shows a reduction, although about the same tonnage of ore was passed through the mill. The net result is that we have effected a reduction of 1s 7.8d per ton compared with the costs of the previous year. The working profit amounts to £44,818 8s 9d. After writing off the items shown in the account there is a balance of £35,029 2s 2d, from which an interim dividend of 5 per cent. was paid in October last. We now recommend the payment of a final dividend of 7½ per cent., which will leave, with the amount brought forward from the previous year, a balance of £10,680 13s 2d.

With regard to the mines, the work of development has not proceeded as fast as we could have wished owing to the shortage of labour. The work done in the Abosso mine has disclosed both a good width and good values up to the lowest point reached. The internal shaft is now down 90 feet below No. 14 level, and assays 56s per ton over 50 in. The lowest point reached is in a winze at 270 feet S., which is now down about 160 feet. The reef in this winze shows an average value of 38s 6d per ton, which is above the average value of the mine. We hope to open up No. 15 level during the current year.

In the Adjah Bippo mine the ore included in our reserves is entirely to the south of the main shaft. As you will have seen from the general manager's report, the water is now down to the 10th level, and a large amount of resampling has been done, which proves that the tonnage and value in this mine are calculated on a very conservative basis. There are still three levels below No. 10 which we have not tackled yet. In the Taquah mine we have still 86,400 tons of ore averaging 51s per ton.

At the present rate of crushing our total reserves are five years ahead of the mill.

REDUCTION OF COSTS.

With the gradual disappearance of the premium on gold, our efforts have been concentrated on the reduction of our costs. During the year, as I have already pointed out, these have been reduced by 1s 7.8d per ton. This reduction has been progressive throughout the year. During the first six months the working costs were 36s 4.6d per ton, during the second 34s 11.1d, as against 37s 3.6d in the previous year. For April and May of the current year they were still further reduced to 31s 9.8d.

It is not always wise to prophesy, but I think with such evidence of economy and promise of increased production before us we are justified in expressing the hope that the profits for the current year will show a welcome increase.

Mr William Clark seconded the resolution, which was carried unanimously.

HOWARD AND BULLOUGH, LIMITED. "BETTER TRADING YEAR." DIVIDEND MAINTAINED.

The 31st annual ordinary general meeting of the shareholders of Howard and Bullough, Limited, was held at Globe Works, Accrington, on Wednesday, at 12 o'clock noon.

The chairman of the company, Sir George Bullough, Bart., presided.

The report of the directors and auditors and balance-sheet was taken as read.

In moving the adoption of the reports and accounts, the Chairman said:—I assume you will allow the report and balance-sheet to be taken as read, and this being so, I would like to call your attention to the fact that, although the amount of net profit shown this time is less than before, we have had a better trading year than last. For two-thirds of the year we have had the good fortune of being able to work full time, resulting in a larger output at average prices closely approximating those of the previous year.

SATISFACTORY RESULTS.

Having regard to the very keen competition arising from an insufficient demand to keep all textile machine makers fully occupied, this must be considered very satisfactory, and goes to show that our high standard of manufacture is fully maintained and recognised.

In our previous balance-sheet we had the help of a substantial profit which the sale of a block of shares in the Howard and Bullough American Machine Company brought us. This was an exceptional transaction, and the profit this year is therefore due to more extensive trading.

I am glad to say that a better demand has sprung up during the last few months both at home and abroad. On the Continent, the last few months both at home and abroad. On the Continent, South Germany, Holland, and Italy have been most prominent. But the America and also Mexico have shown greater liveliness, but the demand from India is not as brisk as it was; and as regards the Far East, the many disturbing influences there have militated against a resumption of nominal trading conditions.

Our works are at present fully employed, and we are deriving the benefit of the extensions completed over twelve months ago, whereby we are enabled to cope with the many urgent demands for delivery made upon us.

DIVIDEND MAINTAINED.

We are maintaining our regular dividend of 10 per cent. on the ordinary shares, and are proposing to carry forward the balance of £155,129 to next year's account. I beg to move that the report of the directors and auditors as presented in the balance-sheet be allowed and passed.

The resolution was duly carried, after being seconded by Mr F. J. Fletcher, of Oswaldtwistle.

It was moved by Mr T. Harrop, of Haslingden, seconded by Mr V. Murphy, of Blundellsands, and agreed to, that a dividend be paid for the half-year ending May 31, 1925, at the rate of 6 per cent. per annum, less income-tax, on the preference shares, and a fourth quarterly dividend of 2½ per cent., making with the dividends already paid, 10 per cent. for the year, less income-tax, on the ordinary shares.

RE-ELECTION OF DIRECTORS.

Mr J. A. Hall, of Ansdell, expressed his pleasure in moving the re-election of Sir George Bullough, Bart., and Mr. C. A. Peltzer, as directors of the company.

This was seconded by Mr W. Hay, of Manchester, and afterwards unanimously approved of. In tendering thanks for their re-election, Sir George added that it was very gratifying to have the confidence of the shareholders, especially during the difficult times they had to pass through.

Messrs John Adamson, Son and Co., of Manchester, were re-elected auditors of the company, on the same terms as before, under a resolution moved by Mr C. Moorhouse, of Altham, and seconded by Mr J. Drake, of Altham.

Mr A. Webster, of Accrington, proposed a vote of thanks to the chairman and co-directors.

Mr R. Hacking, of Accrington, seconded.

Sir George Bullough, Bart., suitably responded, and expressed his personal thanks, along with those of his co-directors, and remarked that they had been very ably helped by the staff and workers.

SPIERS AND POND, LIMITED. PROFIT MAINTAINED.

The forty-first annual general meeting of Spiers and Pond, Limited, was held, on the 8th instant, at the Hotel Cecil, Strand, London.

Mr J. Douglas Broad presided, in the absence through illness of the chairman, Sir J. Harwood Banner.

The Chairman, in moving the adoption of the report and accounts, said that the trading profit at £139,977 was practically the same as in the previous year. The profit carried to appropriation was £108,949, and the board recommended the payment of a final dividend of 7½ per cent. on the ordinary shares, making, with the interim dividend 12½ per cent. for the year. Further, they recommended the allocation of £15,000 to reserve, bringing it up to £150,000. On the assets side of the balance-sheet the property account had increased by £11,700, which was accounted for by the purchase of 83 acres of freehold land at Bushey held previously under a lease. They now had about 180 acres as their Bushey freehold, and the board looked upon that as a very valuable asset. Referring generally to the business of the past year, the Chairman said it had been confidently anticipated that the Wembley Exhibition would benefit London hotels. Undoubtedly it did benefit them, but, unfortunately, it reacted to the detriment of provincial hotels. So far as they were concerned, the position was a case of "swing and roundabout"—what they lost on the one they had made on the other. They could thus report that their hotels as a whole fully maintained their usual satisfactory return, and indications pointed to a continuance of good business in that department. As to the catering at Wembley, it had been mentioned several times to him (the chairman) that their tender was not accepted. The facts were that after careful con-

BULLION.

IMPORTS AND EXPORTS OF GOLD.

Week ended July 8, 1925.

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	To—	£
Netherlands	1,000,624	Germany	18,740
France	10,119	Netherlands	92,750
British West Africa	27,851	France	1,364
British South Africa	495,523	Spain	1,700
Other countries	214	Egypt	14,700
		British India	220,900
Total declared value of imports	1,534,331	Total declared value of exports	349,724

Messrs Samuel Montagu and Co. write on July 8th as follows:—

GOLD.

The following movements of gold to and from the Bank of England have been announced since our last issue:—

	Received.	Withdrawn.
July 2	nil	nil
" 3	27,000	nil
" 4	nil	nil
" 6	1,405,000	nil
" 7	nil	19,000
" 8	nil	163,000

Of the £1,405,000 gold received on the 6th inst., £1,000,000 was from Holland in the form of sovereigns, whilst the balance, £405,000 in bar gold, was generally understood to be African, though the origin was not officially disclosed. The destinations of the £182,000 sovereigns withdrawn were given as follows:—£163,000 to India, £13,000 to Chile, and £6,000 to Holland. During the week under review £1,250,000 on balance has been received by the Bank. The net influx since the resumption of an effective gold standard is now £3,023,000.

The following figures show the imports and exports of gold to and from the United States of America during May last:—Imports, \$11,404,051; exports, \$13,389,967.

SILVER.

The market has been rather quiet. In the absence of pronounced views as to the future, business has been restricted to actual necessities and to the prolongation of contracts falling due. During the last day or so India has shown more interest, and some buying coming upon a rather scantily supplied market has acted as a tonic. The undertone seems fairly good. Trade is moving to some extent in Shanghai, and alarmist views are not held as to developments, though the situation, especially upcountry, naturally still possesses possible seeds of trouble.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	June 15.	June 22.	June 30.
Notes in circulation	17,492	17,653	17,825

BROKEN HILL PROPRIETARY.—Four weeks ending June 17, 1925:—Iron and steel works, Newcastle, N.S.W.: Coke ovens produced 21,096 tons of coke, 237,633 gallons of tar, and 265 tons of sulphate of ammonia. Nos. 1 and 2 blast furnaces produced 21,914 tons of pig-iron. Open-hearth furnaces produced 24,584 tons of steel. Blooming Hill produced 22,375 tons. 28 in. mill produced 15,154 tons. 18 in. mill produced 5,146 tons. 12 in. mill produced 2,199 tons. 8 in. mill produced 1,208 tons. Rod mill produced 6,880 tons. Steel foundry produced 1,015 tons of cast-iron. 11,709 tons of crude ore raised. Crushing plant treated 10,179 tons of crude combined production from 16s and 18s lead concentrates, 1,919 tons. Figures do not include tonnage other companies.

BURMA CORPORATION.—During the month of June 27,580 tons of ore were mined, including 4,032 tons of high-grade ore. 19,100 tons of ore were milled in the treatment plant, producing 8,029 tons of lead concentrates; 10,450 tons of lead-bearing material, including 3,388 tons of high-grade ore, were smelted in the blast furnaces, producing 3,648 tons of hard lead for treatment in the refinery. Refinery products were 3,504 tons lead and 383,264 ozs silver. Of silver production, 56,993 ozs were recovered from the treatment of copper matte. Experimental zinc plant produced 1,200 tons concentrates, assaying 15% zinc. Experimental zinc plant produced 435 per cent. zinc. In addition to the above, 718 tons copper matte were produced from the accumulated smelter by-products and 3,792 tons copper ore; 150 tons of antimonial lead were also produced. Included in the tonnage of refined lead is 451 tons recovered from the smelting of copper ore.

THE MOUNT MORRAN GOLD MINING COMPANY, LIMITED, have received the following cable, dated 7th inst., from Melbourne:—For the month of June treated 1,787 tons of Mount Morgan ore, 5,486 tons concentrates, and 493 tons of purchased ore and secondary products. Produced 407 tons blister copper, containing 403 tons copper and 4,406 ozs gold, including 58 tons of copper from purchased ore and secondary products. Concentrator treated 17,596 tons ore for a production of 7,485 tons of concentrates, containing 386 tons copper and 3,831 ozs gold. In addition to above production, have matte on hand, containing 43 tons copper and 651 ozs gold.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LIMITED.—By cable for the week ending July 1st:—Production, 42,000 barrels; shipments, 6,600 tons.

CALTEX OIL COMPANY.—The Caltex Oil Company advises having received the following cable from Mexico:—Production for June, 10,426 barrels, or 1,655 tons.

LOMITO OILFIELDS, LIMITED.—The production for June is cabled as 19,163 tons.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during June amounted to 148,880 barrels, or approximately 21,268 tons, as follows:—

	Barrels.	Approx. tons.
Kern River Oilfields of California, Limited ..	46,691	6,670
St Helens Petroleum Co., Limited ..	32,105	4,586
Kern Trinidad Oilfields, Limited ..	36,297	5,185
Kern Romana, Limited ..	3,503	509
Kern Mex Oilfields, S.A.	30,224	4,318
Total ..	148,880	21,268

STEAUA ROMANA (BRITISH), LIMITED.—The production of the Steaua Romana Company, Bucharest, for June was 25,240 tons, which brings the total production for the half-year to 140,168 tons, as compared with 125,287 tons for the corresponding period of 1924.

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended July 4, 1925—La Rosa, 4,376 m. tons. Previous week ended June 27, 6,299 m. tons. Maracaibo district, 1,835 m. tons. Previous week ended June 27, 1925, 2,456 m. tons.

Reports and Notices.

Lord Balfour of Burleigh has accepted a seat on the London board of the Australian Mutual Provident Society.

We are officially informed that Oscar B. Cintas has been elected a director of the Cuba Railroad Company.

Mr H. Hobson has left the staff of Messrs Merz and McLellan to take up the position of joint manager of the County of London Electric Supply Company, Limited.

† Tax free.

a Including arrears.

interest certificates. These amounts, together with the interest earned by the sinking funds, have secured the purchase in the market at current rates of debenture stock, nominal value, £4,886, deferred interest certificates, nominal value, £3,756, which will be cancelled. During the past year the sales of Apollinaris have shown considerable expansion. But the hopes, previously expressed, that a more stable political situation on the Continent would result in a reduction in costs, have not materialised. With stabler exchanges on the Continent the costs of marketing both Apollinaris and apenta water have risen very considerably, thus largely reducing the benefits arising from the increased output. The usual amounts for depreciation have also, as customary, been written off.

AUSTRALIAN ESTATES AND MORTGAGE.—The profit and loss account shows that the gross profit for the thirtieth year of the company's operations to end of 1924 amounted to £460,156, and after deducting the current expenditure and English and Australian income-tax a balance of £297,793 is brought down. After providing for the interest on the debenture stocks the net profit for the year was £211,902, to which is to be added the amount brought forward from last year, £7,391—£219,293, less transferred to reserve account, bringing this up to £275,000, £90,000, leaving an available balance of £129,293, which the directors recommend should be appropriated as follows:—To a special reserve account with a view to establishing a provident or superannuation fund, £25,000; to the payment of a dividend for the year 1924 of 6 per cent. and a bonus of 4 per cent., in all 10 per cent., less tax, on the consolidated ordinary stock and the capital paid up on the ordinary shares, £95,516; to carry forward to next account, £8,777. It is pointed out that the year 1924 was an exceptionally prosperous one for the company. Favourable seasonal conditions were experienced on most of the properties in both New South Wales and Queensland. The wool clip, which was somewhat larger than in 1923, sold at very satisfactory prices. The market for sheep during the year was also good, and receipts from that source showed an appreciable increase. On the other hand, prices for cattle were not on a remunerative basis. Fairly good results were obtained from the sugar estates.

Commercial Reports.

THE CORN TRADE

Mark Lane, Friday Evening.

Although useful rains have fallen over most parts of the country, further moisture is needed, as the spell of dry weather has had a detrimental effect on spring crops. Winter wheat and oats, however, are in good condition, and cutting should commence in a few weeks' time. English wheat continues in light supply, and prices without material alteration. Business during the week proceeded on quiet lines, though there was rather more inquiry for imported wheat at the lower rates recently ruling. A dull tone, however, prevailed in the floating and forward cargo section, business being restricted to a few cargoes to the Continent. Holders, from North and South America, and values maintained a steady level. Steamers of Rosafe 63½ lbs arrived sold 55s 9d, South America arrived 54s 3d to Spain, Victorian afloat 54s to Alexandria, and a sailer of South Australian 53s 6d. A feature was the report sale of several cargoes of South Russian wheat to the Continent for August and September shipment, and further tonnage has since been booked for these positions. Of maize, Plate steamers, loading, sold, 38s 1½d, June shipment, 39s 3d, June-July, 37s 6d to 38s, July-August, 37s 3d, and Jugo-Slavian, afloat, 39s 6d, all per 480 lbs c.i.f. Wheat firm. No. 1 Northern Manitoba quoted 62s 6d, No. 2 ditto 61s 6d ex ship, No. 1 Northern Duluth 58s ex ship, Australian 56s 6d ex ship per 496 lbs. English quoted 11s 2d-11s 9d per 112 lbs, free on rail. Flour steadies. London standard straight run quoted 46s 6d, patents 48s 6d. 49s 6d, town whites 46s 6d per sack, delivered in the Home Counties, with 6d to 1s per sack less for deliveries in London districts.

tricts. Of imported, Manitoba patents range from 46s-48s 6d, Minneapolis 45s 6d-46s 6d, Kansas patents 45s-46s, Australian 41s 6d per 280 lbs ex store. Barley quiet. Californian quoted 45s-52s, Chilian Chevalier 47s-65s, brewing 50s-54s, according to quality, Australian 57s-63s ex store per 448 lbs. No. 4 Canadian Western, landed, 37s 3d, Karachi landed 37s 6d, Morocco 36s 6d per 400 lbs. English ranges from 9s 2d-11s 3d, the latter for finest malting per 112 lbs. Maize quiet. Plate landed 42s 6d, ditto ex ship arrived 40s 6d per 480 lbs. Oats firmly held. Plate ex ship to arrive quoted 26s, landed 27s 3d, No. 2 Canadian Western ex-ship 31s 6d, landed 32s 9d, No. 2 Canadian feed ex-ship 25s 6d, landed 26s 6d, Chilian Tawny 27s, South African (Cape) 27s landed, all per 320 lbs. English quoted 9s 10d-10s 8d per 112 lbs, free on rail.

Millers' offalls steady. Broad bra quoted 8s, millings 7s 9d-8s, fine ditto 9s 3d bags included ex-mill, powdered oat husks 6s 3d, feed oatmeal 7s 9d, ground oats 12s 9d per cwt, free on rail. Oatmeal unaltered. London-made flaked 19s, rolled oats 18s, medium also fine cut 18s, coarse also medium pinhead 18s ex-mill, ordinary Scottish oatmeal 18s 6d, American ditto 17s 9d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1924-25, 1923-24, 1922-23, 1921-22.

1924	36,254	3,012	5,308	11 9	10 11	10 3

AMERICAN WHEAT MARKETS.

In the early part of the week there was an active covering demand for October, on account of a lower official crop estimate than was expected. This, together with unfavourable weather advices, good export business, and the holding tendency of farmers, caused prices to rise, but the reports of Continental buying of Russian wheat exercised a restraining influence.

IRON, STEEL, AND COAL.

We extract the following from the weekly report issued by the London Iron and Steel Exchange:—There has been a fair volume of inquiry, considering that midsummer conditions have ruled in this market. In the pig-iron department prices have gradually sagged, until in some cases firms must be producing at a loss in order to keep their plant employed. Competition from foreign iron is still keenly felt in those districts which are within easy reach of the coast, but consuming points further inland are experiencing less competition, owing to the high cost of delivery. A slackening of operations in most branches of the steel trade is recorded. In the semi-finished department inquiry has been brisk, one of the features of the position being the active overseas demand for rods for wire making. Canadian works, however, have been pressing the sale of similar material in this country. The quantities of semi-finished material offering from the Continent have diminished somewhat. Business in finished iron and steel materials has been particularly dull, both on home and export account, and British works continue to experience great competition in all overseas markets, as well as in the home market, from Continental manufacturers. The actual amount of business which has been transacted has been small.

Our Middlesbrough correspondent's report, dated July 9th, is as follows:—Pig-iron: Since our last week's report the market has declined still further, and the general quotation for No. 3 G.M.B. pig-iron is now 71s 6d per ton. East Coast mixed numbers hematite is also down to 77s per ton, but business is very limited. Manufactured iron and steel: Local steel makers are still being undersold by foreign competition, and this branch of the trade has relapsed into a state of partial inactivity. The following may be taken as approximate quotations:—Steel ship plates, £8 15s; steel ship angles, £8 5s; iron bars, £11 12s 6d; steel rails, £8 10s. Iron ore: With freights very low and sellers eager for business, the best Bilbao Rubio quotation may be put at 20s 6d, but there are no buyers.

Our Glasgow correspondent writes as follows:—The iron and steel market shows practically no change, general weakness characterises all branches. Pig-iron is lower in value, and with Continental and Indian brands offering at cheap rates consumers are only taking small quantities of home production to cover immediate needs. The shipments from Glasgow harbour last week of all grades totalled 440 tons, of which 390 tons were for foreign destination. For the corresponding week of last year the shipments were 1,722 and 1,485 tons respectively. The approaching holiday period is foreshadowed by the paucity of business in the finished steel and iron trades. Large quantities of Continental steel are coming in, both as finished ship plates and semi-raw material, at prices substantially below what home producers can quote. Belgian sheet bars have been offered here as low as £5 7s 6d per ton delivered, as against £7 10s for British steel. Makers of black sheets are only moderately busy. Galvanised sheets are in fair request, and works are well employed and booked till after the middle of August. The outlook in shipbuilding is slightly better, one or two further contracts having been placed this week. Coal trade is experiencing a very brisk demand from both home and foreign buyers. Prices are stiffening up, and some brands are difficult to procure. All the collieries are well sold up with output till after the Fair holidays, but forward position obscure.

Our Sheffield correspondent writes:—The severity of the depression in the heavy steel branches is reflected in the action of a number of large firms, who on the occasion of stocktaking have closed their works for a week. The market for pig-iron steel billets and rolled steel is flatter, as the possibility of a stoppage of the coal supply is having a paralysing effect upon trade generally. The execution of orders from China has been suspended. The production of open hearth steel has dropped considerably. Trade is also poor in wire rods. The steel foundries are moderately employed on castings of special steels for engineering work. The light foundries specialising on castings for the building trade are fully occupied. Machine tools are quiet. Sheffield's best customers at the moment for light steel and tools are the motor and electrical industries, whose requirements have been expanding continuously since the opening of the year. The demand for farm and building tools, saws, and files continues brisk. Specifications for railway tyres, axles, springs, and forgings are on a declining scale, as the British railway companies find it imperative to adopt a policy of severe economy. The collieries are buying little or nothing in the way of equipment and tools. Exports are being maintained in hand tools, but are easier in tool steel, cutlery, and plate. The coal market continues unsettled with prices anywhere. Heavy stocks exist at most of the collieries, and bargains are available for users in a position to take prompt delivery. We have heard of no orders being placed in anticipation of a strike or lock-out in the coal trade. In this district few of the manufacturing firms possess any facilities for storing fuel, and supplies are usually brought to the works from day to day.

Our Cardiff correspondent writes:—On the Cardiff coal market this week the improvement in the inland demand has been maintained, and the export prices have shown a hardening tendency. There has been very little increase, however, in the volume of export business and the absence of any demand pressure, with the possibility of a general stoppage at the end of the month is probably unprecedented. From the purely commercial point of view sellers would probably welcome a several weeks' stoppage, for stocks are heavy, and the new impetus which the crisis has given to the arrangement of contracts for the supply of foreign coals will further restrict the demand for South Wales coals for some months to come.

The following are the current approximate quotations:—Best Admiralties, 25s 3d to 26s; seconds, 24s 6d to 25s; best dries, 24s 6d to 25s; black veins, 24s to 24s 6d; Western Valleys, 23s 3d to 23s 6d; Eastern Valleys, 23s to 23s 3d; best bunker smalls, 14s 6d to 15s; ordinary cargo smalls, 11s 6d to 13s; coking smalls, 14s 6d to 15s; anthracite best large, 43s to 45s; red vein large, 27s to 31s; machine-made cobbles, 51s 6d to 53s 6d; French nuts, 52s 6d to 55s; stove nuts, 48s to 51s; rubble culm, 12s 6d to 13s; coke (special qualities), 40s to 45s; patent fuel, 23s 6d to 26s; pitwood, ex ship, 32s to 32s 6d.

The Welsh tinplate market is still in a depressed state. Prices are a shade steadier at 10½ 3d to 19s 6d, f.o.b. per basis box.

METALS.

The market for tin opened with a quiet tone and sellers inclined to press, but subsequently prices improved on buyers showing more interest, combined with higher cable advices from the East. A good turnover resulted, and sales comprised standard cash at £253 10s to £258 10s and £257 10s, three months registered at £256 to £260 5s and £258 17s 6d. Sales in the East were reported at £260 10s-£261 15s and £261 and £262 10s. Copper also steadier, with dealings on a liberal scale, though movements were attended by slight irregularity. Standard cash sold £60 11s 3d to £61 12s 6d, three months £61 2s 6d to £62 10s and £62 7s 6d. Lead irregular, but fairly active dealings were recorded. Good soft foreign pig July sold £33 5s-£34 5s and £34 2s 6d. August £33-£33 12s 6d and £33 17s 6d, September £32 15s-£33 12s 6d and £33 10s. Spelter firmer, and a good business transpired. July sold £34 7s 6d to £34 13s 9d, August £34 3s 9d-£34 10s, September £3

48 GRACECHURCH STREET, E.C.3

Groundnuts easier. Coromandel machined, July-August, £25; Nigerian, June-July, £25 per ton.

OILS.—Linseed firm. Spot, net, naked, 41s 6d; August, 40s 6d; September-December, 40s 9d. Rape quiet. Crude spot, 50s; refined, 53s. Castor-oil lower. First pressure, spot, quoted 56s 6d; second pressure, 54s 6d; and pharmaceutical, 61s 6d per cwt. Hull, with London, 2s per cwt extra. Cotton slow. Crude Egyptian, spot, 42s 6d; Bombay, 39s; common edible, 47s; deodorised, 49s. China-wood easier. Hankow, spot (barrels), 68s; June-July, nominally 67s. Coconut slow. Ceylon, spot, 48s; June-July, 45s 3d; Cochin, ditto, ordinary packages, 60s. Soya quiet. Oriental, barrels, June-July, 43s; bulk, 40s. Cod dull. English, spot, 33s to 34s. Groundnuts quiet. English, crushed, naked, spot, 49s 6d; deodorised, barrels, 57s. Turpentine quiet and easier. American, spot, 66s 3d; July-December, 67s. Rosin firm. American, grade B/D, 19s 9d; E, 20s; F/G, 20s 9d; W/G, 26s; W/W, 30s per cwt. French FG, 21s 6d; W/W, 25s 6d per cwt. Petroleum quiet. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on July 8th as follows: The tallow market was quiet during the week, and prices were unchanged to-day. Higher prices are asked for shipment from Australia as well as from South America, but buyers on this side do not respond sufficiently for business to result. At auction to-day 401 casks tallow were offered, and 222 were sold. Quotations are:—Australian mutton: Fine, 46s 6d; good to fair, 46s to 44s; dull

to dark, 41s 6d to 40s; hard, 46s. Australian beef: Fine, 46s; good to fair, 45s to 43s; dull to dark, 41s to 39s; sweet, 46s. Present shipment from Australasia: Good mixed, 45s. Present shipment from South America, 44s 9d. The market letter is unchanged. Town tallow, 41s 6d per cwt. Rough fat per 8 lbs, 4d; melted stuff 32s per cwt. Quotations are:—Town, 41s, net cash, naked, ex works. Country: Frail casks, 41s; home melted, shipping casks, net, f.o.b., good coloured, 44s; fair to dull, 41s 6d to 40s 6d. Bone fat: white, none; pale, none; benzine, 38s; melted stuff, 37s f.o.b.

in Government securities shown in the Bank return was puzzling to those who still try to account for the movements displayed in it; the obvious inference is that the Bank does not wish credit to be too abundant in view of approaching holiday demands and autumnal problems later on.

	July 17, 1925.	July 10, 1925.	July 3, 1925.	June 26, 1925.	Previous Rate and Date Changed.

Houses (Notice	3½	3½	3½	3½	2½ (Mar. 5, '25)
Market rate (3 months' bills) ..	4½	4½	4½	4½	..

The Bank return showed an increase in the stock of gold of £2,705,000, of which £2,703,000 had been reported as received from abroad. Notes had come back from circulation to the extent of £2,057,000, with the result that the Reserve was £4,762,000 higher, while its proportion to liabilities had risen by 4.1 per cent. to 29.8 per cent. Government and Other securities declined by £6,510,000 and £308,000. Public deposits rose to the extent of £1,345,000, and Other deposits declined by 3½ millions. Currency notes outstanding increased this week by £733,200 to £298,070,200, which includes £1,333,200 for notes called in but not yet cancelled. The fiduciary issue is £242,787,000, or £5,358,400 below the maximum for 1925.

The June statement of average weekly balances of the London Clearing Banks, given in full in a later column, bears the marks of "window dressing" for the half-yearly balance-sheets. The latter are examined in a leading article. The aggregate figures of the nine English banks compare with previous months as follows:—

	June, 1924.	Dec., 1924.	Mar., 1925.	Apr., 1925.	May, 1925.	June, 1925.

Money at call	108.1	112.8	108.0	112.2	104.3	113.0
Investments	349.3	328.8	308.2	303.5	300.0	292.6
Accounts	245.0	234.4	202.3	190.9	200.1	205.5
Loans and advances	791.7	811.2	840.8	847.6	848.6	850.5
Over for accept., premises, &c.	113.2	138.5	142.1	136.1	128.3	118.8
Total assets	1,856.4	1,885.4	1,838.5	1,833.6	1,817.5	1,834.3

Deposits have risen by over £26 millions, as compared with May, but are £27 millions lower than at this time last year. The increase in deposits last month is covered by additions of £17½ millions to cash and £8½ millions to money at call. Advances rose by a further £2 millions, and discounts are £5½ millions higher, but there was a further reduction of £7½ millions in investments, the latter now being nearly £57 millions lower than at this time last year.

NEW YORK MARKETS.

Our New York correspondent cables:—The markets retain their buoyancy, with Stock Market call money at 3½ per cent. Monetary ease is expected to continue next month until fall business approaches. Most observers are distinctly optimistic as to the outlook for business during the second half of the year, laying stress on the good crop prospects and the well-liquidated condition of industry. The Bureau of Labour index number is up 1.4 per cent. at 157.4, the chief increases being in farm products and foodstuffs. Clothing, metals, and building materials are slightly lower. The Federal Reserve ratio is 76.1.

THE STOCK MARKETS.

Attention in the stock markets has been mainly centred in the rubber share market, which has been in a state of feverish activity, the price of the raw material having risen to 4s 6d per lb. The oil share market has also been very active in the last few days. Elsewhere business has been on quite a moderate scale, though the gilt-edged market shows a number of gains on balance owing to easier conditions in the money market. Home rails have been quiet, but steadier. The industrial section appears to be overshadowed by the boom in rubber shares, and

there have been but few features. The recent favourites, Courtaulds and tobacco shares, are somewhat subdued. The only feature in the mining section is a revival of prices of the shares in the platinum group.

THE COMMODITY MARKETS.

The slight improvement recorded in the commodity markets last week has been fairly well maintained. Business in pig-iron shows a little more activity, but the market for manufactured iron and steel remains quiet. The price of coal has hardened, and the home demand has improved. Raw cotton prices are fluctuating but inquiry from India and China is on a larger scale. The turnover for the Continent and the United States is encouraging. The wool trade is overshadowed by the possibility of a stoppage on account of wage reductions. Wheat is rather quiet. Sugar, tea, and coffee realise steady prices. Rubber has risen to 4s 6d per lb, and business is good. The metal market is firm, copper prices showing some advance.

FOREIGN EXCHANGES.

The week in the foreign exchange market has been extremely quiet. The Paris rate moved within narrower limits than has been the case for a considerable time past. This is to be attributed largely to the public holidays in France on Monday and Tuesday, but also in part to the final passing of the Budget for 1925, and the enthusiastic notices in the French Press regarding the new loan. How far these reports are justified it is as yet too early to say. From 103.60 on the 10th, the rate fell to 103.35 by Monday, and after a relapse to 103.75 on Tuesday, to 103 on Wednesday. Since then a slight setback appeared, and the rate touched 103.30 yesterday morning. On the other hand, the margin between Belgian and French francs has once more widened to approximately 2 francs, after a narrowing to 1.10 francs at the beginning of the week. Brussels followed the Paris movement, falling from 105 on the 10th to 104.40 on Monday, and moved within those limits until yesterday morning, when it opened at 105.30. Forward quotations in Paris have widened again from 15.20 centimes per month above spot to 25.30 centimes. In Brussels the quotation is par-5 centimes below spot for one month. Italy, at 131½, shows little change on balance, though at one time on the 11th a recovery to 128½ was reported. Sterling has again been very steady, the variations not having exceeded ¼ cent on either side of 4.86½. New York forward rates are slightly narrowed at ¼ cent per month below spot. Amsterdam has moved slightly, but steadily against us, and stood on Friday morning at 12.12½, as compared with 12.13½ a week ago. Geneva is steady at 25.05. Madrid, on the other hand, fell during the week-end from 33.45 to 33.53, but recovered subsequently to 33.49. A more distinct movement is reported from the Scandinavian countries. Oslo recovered during the week from 27.70 to 27.05, largely, it is believed, owing to American speculative purchases of kronen. Copenhagen followed a similar movement from 23.70 to 23.20, and Stockholm from 18.11 to 18.09. Helsingfors is steady at 193. Berlin is unchanged at 20.42, Vienna at 34.55, and Budapest at 346,000. Prague has not varied from 164, nor Warsaw from 25.40. In the East, the rupee is steady at 1s 6 3/32d, but the yen has moved from 1s 8½d to 1s 8¾d. The silver market has been quiet, but prices have been maintained on inquiries from the Far East, though the prices offered from India have been at too low a figure for business to result. Hong Kong still stands at 2s 4½d, Singapore at 2s 4½d, and Shanghai at 3s 1½d. In South America, Rio at 5½ shows little change. Buenos Aires is steady at 45½d, but Monte Video is ¼d stronger at 48½d. Valparaiso has moved from 41.10 to 41 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 11th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	£ 8,005	From Revenue	£ 14,157
Interest, &c., on Debt	2,613		
Sinking Fund	649		
Increase in Balances	44		
Sundries	221		
Reduction of Debt	2,625		
	14,157		14,157

Revenue amounted to £14,157,500, against £12,460,300 in the corresponding period last year. Customs receipts were higher at £2,172,000, as compared with £1,821,000. Excise at £983,000, compared with £1,115,000. Property and income-tax yielded £6,472,000, against £5,717,000, and super-tax £1,080,000, against £980,000. The week's operations reduced the National Debt by £2,625,000, and caused the following changes:—

(000's omitted.)	
Public Department Advances	£ 250
National Savings Certificates	200
Treasury Bills	1,905
Sundries	270
	2,625

The floating debt was reduced by £2,165,000 to £792,490,000.

FINANCIAL YEAR, 1925-1926 (April 1st to July 11th.)

£		£	
Total Expenditure ..	244,495,495	Raised by Revenue ..	193,266,724
		Decrease in Balances ..	4,030,861
		Amount borrowed ..	47,197,910
Total	244,495,495	Total	244,495,495
ESTIMATES FOR FINANCIAL YEAR 1925-1926.			
£		£	
Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—P. and O. Banking Corporation, Anglo-Ceylon and General Estates, Kwaloe Rubber Estates, Dalkeith (Ceylon) Rubber Estates, Aramayo Mines in Bolivia, General Mining and Finance Corporation, Apollinaris and Johannis, Louise and Co., Van Den Berghs, Liptons, John Walker and Sons, and International Tea Company's Stores.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

GERMAN ECONOMIC SUPPLEMENT.

We publish this week a Supplement surveying economic conditions in Germany, with special reference to the actual working of the Dawes Plan. An outline of the Plan itself is given: the work of the London Conference is briefly surveyed, and the stages through which the execution of the Plan has passed recorded. These sections are followed by an analysis of the German Budget and an account of the commercial and industrial position of Germany to-day. Finally, the question of Germany's competition and the effects of its payment of Reparation on the recipients are discussed.

BRITISH TRADE AND OVERSEAS MARKETS.

MR MACDONALD, during his Premiership, appointed a Committee, with Sir Arthur Balfour as chairman, to investigate the conditions and prospects of British industry and commerce, with special reference to the export trade. The task of exploring so vast a field must obviously absorb a long time. Yet the subjects to be investigated are of such immediate and urgent importance that some light upon them was expected from the Committee at the earliest moment. Most welcome, therefore, is the action of the Committee in issuing this week a volume embodying a series of surveys of overseas markets, together with a long introduction drawing attention to facts and figures of primary interest. It is not a Report in the proper sense of the word, since no recommendations are made; but it is none the less a document of first-class importance, since it presents a valuable collection of essential data and a thorough prefatory comment in which the main deductions to be made from these data are suggested; and we welcome the decision to price this volume of 700 pages at the by no means prohibitive level of six shillings. We shall take the opportunity to discuss in future issues various aspects of the economic data presented, and pro-

pose in this article to attempt no more than a brief survey of some main points.

The first question to which the Committee addresses itself is the volume of international trade and of Britain's share in that volume. The result of statistical investigation on this point is that so far from declining, our pre-war percentage of the world's volume of export trade has increased. In 1913, we are told, the aggregate sterling value of the exports of the world was £4,035 millions. In 1923 the latest year for which complete figures can be obtained, the corresponding aggregate was £5,299 millions. In the two years respectively, the exports of the United Kingdom were valued at £525 millions and £743 millions. This means that the British proportion of the world's export trade, measured in sterling values, was 14 per cent. in 1923 as compared with 13 per cent. in 1913. A similar conclusion is reached by the method of comparing British exports with the total aggregate value of the imports received by all other countries. In other words, British exporters are more than holding their own in world competition. The reason why, in spite of this fact, British export industries are in a period of extreme difficulty is that, owing to the general rise in prices, the increased value figures of world trade represent a substantially smaller actual volume of commodities than before the war. Although our export trade in 1923 represents a larger percentage of the world's export trade than in 1913, the volume of our exports in 1923 was only 74.5 per cent. of that recorded in 1913. The Committee's investigations, therefore, start by underlining the truth that it is in the decline in the volume of international trade that the chief cause of the malaise of our own export industry must be sought.

Having established this point, the Committee turned to examine this decline in international trade, and to analyse its causes under three headings:—(1) Decline of purchasing power by local populations. (2) The growth of local manufactures. (3) Displacement of British imports by imports from other countries. Dealing with these three causes in detail, the Committee describe the decline in purchasing power as a factor of "predominating" weight in the years immediately following the war, and as one which still retains considerable, though decreasing importance. Under this heading, brief reference is also made to currency and exchange disorganisation, shortage of capital, and obstacles imposed by the terms of credit. Turning to the question of local manufacture, the Committee described this factor as "perhaps the most important permanent factor, tending either to limit the volume or to modify the character of British export trade." We are not quite sure that the Committee have correctly balanced the emphasis laid on this factor in relation to the other restrictive factors discussed, and doubt on this point is not removed by a study of the Committee's detailed discursus upon the various means by which the growth of local manufactures is assisted in various countries—such as Customs tariffs, import prohibitions or restrictions, and State control or monopoly. As regards Customs tariffs, on which subject a mine of statistical data is presented in the volume, the conclusion is as follows:—"It is a legitimate inference that, taking British trade as a whole, tariff increases since 1913 have not so far been an important factor in retarding recovery." As regards *ad valorem* incidence of tariff increase, the following passage is highly instructive:—"A study of the table and note in question will make it clear that, given the nature of the material available and the very wide range of diversity in the movements of tariff rates on particular articles in different markets, any general estimate based on averages can only be regarded as a very rough approximation, and must only be employed with important qualification. Subject to this caution, it may be stated that the average increase of tariffs on the articles selected as representative—i.e., the increase of charge expressed in terms of sterling per unit of product (not per unit of value), has not materially exceeded the average increase in value of the articles exported."

The harmful effect on trade of import prohibition and restriction is suitably emphasised, and attention is drawn to the uncertainty with which they operate and the delays and difficulties which they cause, but it is agreed that a tendency is making itself felt towards the removal of these hampering restrictions—a tendency which has

been fostered by numerous international conferences of recent years. Under the heading of "State Monopoly or Control," the Committee indicate that, except as regards Soviet Russia, British trade "does not appear to have been materially affected by an abnormal increase in such monopolies in recent years." Some weight—probably too much weight—is also given in the report to the multiplication of Customs formalities, while the more important subject of flag discrimination is also discussed. This leads up to the last section of the Introduction, which is, perhaps, the most interesting of all. This section deals with the effect on British trade of the competition of goods exported from other countries, and shows that the result of the war has been to strengthen some of our competitors and to weaken others. In this connection some striking figures are given. It is shown that, on the basis of 1913 prices, the exports of Germany and Belgium in 1923 amounted to only 53 per cent. and 63 per cent. respectively of the 1913 volume, while those of France and the United States have risen to 106 per cent. and 120 per cent. respectively. It is, however, pointed out (and in this connection we may refer our readers to the Special Supplement which we publish with this issue) that the working of the Dawes Scheme, if successful, entails the rehabilitation of German industry and the increase in the severity of the foreign competition which some branches of British trade must expect to meet in future years.

Inevitably, before its close, the Committee's survey leads it into the realms of fiscal controversy. The Committee, it must be remembered, represents all parties and all angles of fiscal belief; nor is it in the present document attempting to indicate recommendations or to go beyond the task of presenting facts with broad comment. But there is in this volume, none the less, plenty of good meat for the student of fiscal policy. Two points in particular should be noted. Less than two years ago Mr Baldwin told the country (as he may tell it again) that he must "have tariffs to bargain with," because British exports are being shut out by high tariff walls. We commend to him the Committee's brief conclusion, based on an exhaustive study. It is as follows:—"Taking it all round, there is no doubt that British trade is treated at least as favourably in foreign markets as that of any other country." In other words, thanks to the "most-favoured-nation" treatment accorded to us in most countries, the high tariffs of competing countries have not in the least assisted the manufacturers of those countries to surmount tariff walls any more easily than their confrères of Great Britain. The second point is one which demands the attention of that school of thought which tells us that we can, and must, replace old and unsatisfactory markets by developing trade within the Empire. "The percentage of British exports," we are told, "taken by Empire destinations rose from 37.3 before the war to 38.5 in 1924, while concurrently the *ad valorem* rates of the preferences have, generally speaking, grown materially in recent years." In spite of growing preferences, and in spite of the fact that many parts of the Empire were, comparatively speaking, very little damaged economically by the war, the proportion of our trade with the Empire to our total trade recorded only an insignificant increase. Such figures as these, as we have frequently pointed out, prove the futility of any attempt to make a sudden or drastic diversion of the natural direction of our overseas commerce.

This work of Sir A. Balfour and his colleagues will, we hope, be studied carefully by all sections of trade and industry; and the effect should be to remove the tendency to extreme pessimism which is all too prevalent at the moment. In our view, there are three main lessons to be drawn from the volume before us. Our own troubles are, in the main, the reflection of world conditions, and will mend as and when those conditions improve. Secondly, of the main export difficulties, of which we hear so much to-day, most appear to be temporary rather than permanent. Thirdly, we have nothing whatever to gain and everything to lose by rash experiments in fiscal policy. The world is still impoverished by the war. The re-establishment of its purchasing power can only take place slowly as a result of hard work under conditions conducive to security and confidence. For the pace of that recovery much will depend upon the wisdom of the Chan-

celleries. But, as the Balfour Committee point out, "other forces, like the growth of manufacture in the less industrially developed countries, undoubtedly represent permanent tendencies, with which traders must inevitably reckon in future, and to which it is, therefore, essential that they should strive with all their power to accommodate their outlook, their methods and their organisation." Great Britain, the Report conclusively shows, has more than held her own in world competition in a period of intense difficulty. This fact, even amid the great difficulties that remain, should hearten our industrialists, both employers and employed, to redouble their pursuit of efficiency by the road of goodwill and co-operation.

THE NATION'S HEALTH.

THE Annual Report of the Chief Medical Officer of the Ministry of Health "on the state of the public health" invariably arouses mixed feelings. Those who read its pages must thrill with satisfaction at the gradual conquest of life over death. But this lively sense of gratification is marred by the reflection that disease and death still levy an unnecessarily heavy toll upon the community, and that our knowledge of certain diseases is inadequate.

The birth rate continues to decline. With the exception of the war years, the birth rate of 1924 was the lowest yet recorded. The general death rate, though 0.6 per cent. higher than in the previous years, remains low. In the decade 1871-80 the average annual death rate was 21.4 per 1,000. During the decade 1901-10 it had fallen to 15.4, and since the war the rate has sunk below this level, the lowest rate being 11.6 per 1,000 two years ago. Equally significant is the striking decline in the mortality amongst infants. During the last ten years of the 19th century the average annual infant death rate per 1,000 births was 153. During the years 1911-15 it was 110, and from 1916 to 1920 it averaged 90 per 1,000. The lowest rate recorded was 69 in 1923, the figure being 75 for last year. Though the population of England and Wales is over half as large again as it was half a century ago, the number of deaths each year at all ages is actually over 40,000 per annum less, an enormous saving of human life, behind which lies an equally welcome improvement in the standard of health and in length of life.

A clean and ample water supply, effective sewage disposal, street cleansing, the increasing belief in the value of fresh air and sunshine, to mention but a few factors, have rid or are ridding this country of many a scourge. Last year, for example, there was not a single case of plague in England and Wales, though during the past quarter of a century the officially reported total plague mortality in India exceeded eleven millions. Cholera has been virtually extirpated, whilst smallpox and typhus fever are immensely less potent sources of death than they used to be. Similarly, the death rate from the various forms of tuberculosis has in recent years showed a marked decline. According to the official returns, there were 53,120 deaths in 1911, 40,788 in 1923, and 41,108 last year. "The figures for 1924 indicate, as regards tuberculosis of the respiratory system, a check in the decline which has been experienced since 1918." The report states that several observers are inclined to attribute the increased death rate last year "to poverty and distress associated with the large amount of unemployment. In certain cases an increased mortality from pulmonary tuberculosis was noted in 1923, and the conditions associated with lack of employment seemed to be the probable explanation."

There is little doubt as to the general trend of public health statistics. At the same time, notwithstanding the decline in the general death rate and in the infant mortality rate, and all that this decline implies, there is a large canker of disease and disability representing a drain upon health, strength, and efficiency which a nation called upon to husband its resources cannot view with equanimity.

The disparity between the infant mortality rates in different places, and between those for legitimate and illegitimate children indicates the leakage of life which is still taking place and the impairment of health amongst those who survive. The following table, summarising

statistics from Sir George Newman's Report, throws a most disconcerting light upon the variations in the infant death rate:—

	Legitimate.	Illegitimate.
Administrative counties	62	116
County boroughs	77	153
Metropolitan boroughs	58	139
Total (England and Wales)	67	132

The legitimate infant mortality may be used to show the differences which exist between one district and another.

ADMINISTRATIVE COUNTIES.

Lowest.	Highest.
Isle of Wight	Durham
W. Sussex	West Riding
Buckinghamshire	Cardiganshire
Surrey	Lancashire

COUNTY BOROUGH.

Lowest.	Highest.
Eastbourne	Oldham
Oxford	Rotherham
Bath	Newcastle-on-Tyne
Croydon	Sunderland

METROPOLITAN BOROUGH.

Lowest.	Highest.
Woolwich	Shoreditch
Westminster	City of London
Stoke Newington	Holborn
Lewisham	Bermondsey

It is clear that there is still room for a further improvement in the death rate. It is also clear that there is still an enormous mass of sickness, much of it preventable. Some measure of this may be obtained from the statistics of National Health Insurance quoted in the Report. "The total number of weeks represented by the sickness and disablement payments in 1924 may be estimated at about 7½ million weeks' sickness and 6½ million weeks' disablement for men, and at 5 million weeks' sickness and 4 million weeks' disablement for women. These figures, which do not include the first three days of incapacity for which sickness benefit is not payable, give a total of 23½ million weeks' work lost in 1924 through sickness, or a period of 447,115 years. That is to say, in England and Wales there was lost to the nation in the year, among the insured population only, and excluding the loss due to sickness for which sickness or disablement benefit is not payable, the equivalent of twelve months' work of 447,115 persons. Moreover, it must be remembered that it is not only the working equivalent of 447,115 persons that was lost, but also the labour and expense involved in their care during their incapacitation." As is said in another place in the Report, these figures show "what temporary and often preventable conditions really cost a nation when reviewed in bulk. In a word, national ill-health loses time and reduces production as well as resulting in suffering, discontent, and premature death."

It is recorded, so far as last year was concerned, that "the returns of the notifiable infectious diseases show a great increase in the number of cases of smallpox and of the epidemic disorders of the nervous system, particularly encephalitis lethargica.....Pneumonia was also more prevalent than at any other time during the last five years, and though on a smaller scale the same must unfortunately be said of enteric. The last-named and smallpox are controllable, smallpox directly and enteric fever indirectly. Their occurrence in epidemic form is almost culpable."

The truth is that knowledge is ahead of its general application. This, of course, is not to say that the pursuit of knowledge should cease. What is needed is that the fullest use should be made of the knowledge now available and more particularly of the knowledge which would prevent the onset and spread of disease. But it is equally important that the work of research should be actively developed. The Report draws attention to recent reports and memoranda embodying the results of research and experience, to the investigations now being carried on at the Ministry of Health's Pathological laboratory, and to other researches into problems affecting public health. The general impression produced by Sir George Newman's Annual Report is that, whilst there are many baffling problems which up to the present have defied solution, there has been very substantial progress towards a satisfactory standard of national health, but that much still remains to be done, largely because of the lack of an energetic public opinion. "It is the business of the

Public Health Service," as Sir George Newman rightly says, "to concern itself in all that saves life, that postpones the event of death, that reduces sickness and invalidity, and that increases human energy, enlarges its capacity and develops productivity. Thus it should contribute to the efficiency and happiness of life." "The public health," he goes on to say, "is the primary asset of the nation's welfare, whether measured by capacity, employability and production, or by length of days, or by personal wellbeing." It is, therefore, the duty of local authorities and of individuals to lend full and active support to the Public Health Service. It is equally the duty of industry to insist upon a proper social environment and the essential conditions of a healthy life for the mass of workers, partly because preventable disease and disability are intolerable burdens upon the national income, but partly because modern industry demands the highest possible standards of efficiency in those it employs. It cannot be denied that industrialists in the past have, with individual exceptions, shown little sympathy with public health developments, and that industry has often been careless of the health and vigour of its servants. But the stern call of the times demands the wholehearted adoption of new standards in industry. A perusal of the Report on the State of Public Health will bring home with great force the need for and possibilities of a new standard so far as the health of the people is concerned.

INDUSTRIAL PROFITS.

OUR quarterly figures of the profits of industrial companies show a further increase in aggregate net profits, the percentage increase in the past quarter, which covers the largest number of companies, amounting to over 11 per cent. During the past three months the reports of 492 industrial undertakings have been analysed in our weekly summary of profit and loss accounts, and the aggregate net profits for their past financial year, after payment of debenture interest, &c., amounted to £56,985,900, as compared with £51,283,900 earned by the same companies in their preceding financial year, an increase of £5,701,900, or 11.1 per cent. The majority of the profit and loss accounts analysed refer to the years ended December 31, 1924, or March 31, 1925, but some are for earlier or intervening periods. During the past twelve months the reports of 1,443 companies have been analysed, and these show an increase of 9.7 per cent. in net profits, as may be seen from the following table:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in		Increase.	
		1923.	1924.		
Third quarter	214	£ 17,667,060	£ 18,029,800	402,740	2.3
Fourth quarter	312	26,142,899	29,616,628	3,473,729	13.3
First quarter	425	41,542,744	45,306,369	3,763,625	9.1
Second quarter	492	51,283,900	56,985,863	5,701,919	11.1
	1,443	136,636,643	149,978,660	13,342,017	9.7

At this time last year our analysis of the accounts of 1,406 companies showed an increase in net profits of 11.8 per cent. These percentages at first sight may appear rather large, but they assume lesser importance in the light of the next table, which shows the quarterly increases since the beginning of 1919:—

	1919.	1920.	1921.	1922.	1923.	1924.	1925.
First quarter	+10.4	+26.9	+6.5	-3.4	+11.4	+7.7	+8.1
Second quarter	-5.1	+37.8	+8.4	-33.7	+32.1	+3.0	+11.1
Third quarter	-3.4	+41.9	-42.4	-23.5	+65.2	+2.3	..
Fourth quarter	+10.5	+27.1	-52.9	+3.9	+11.4	+13.3	..

The heavy decreases disclosed in 1921 and 1922 have not yet been made good. Take the second quarters of the year, for example. If 1921 be taken as 100, the profits disclosed in the second quarter of 1922 will be approximately 66, in 1923 80.6, in 1924 83, and in 1925 92.2; so that the profits disclosed in the past quarter are nearly 8 per cent. less than in the same period of 1921, which, in turn, were over 8 per cent. lower than in the preceding year. This is, of course, only a rough approximation, for the companies are not identical from year to year, but we mention it in order that the impression may not be given that as a result of a number of successive

increases in profits the earnings of industry have now recovered to or surpassed the level of the post-war boom.

In the next table we classify the profits disclosed during the past twelve months into 20 groups of companies, giving a comparison with those of the preceding financial year:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	Number of Companies	Reports Published in Year Ended June 30.		Increase.		Decrease.	
		1924.	1925.	£	%	£	%
Breweries	86	8,496,184	9,835,788	1,339,604	15.8		
Canals	8	522,409	530,767	8,358	1.6		
Electric Light & Power	42	4,330,133	4,749,863	419,730	9.7		
Gas	49	2,844,577	2,857,413			187,164	6.6
Hotels, restaurants, &c.	25	1,755,084	2,218,236	463,152	26.4		
Iron, coal, and steel	109	12,890,359	9,269,358			3,627,994	28.2
Land, mortgage, &c.	77	4,886,014	5,556,810	670,796	13.7		
Motor and cycle	27	652,848	1,301,626	648,778	99.4		
Nitrate	17	546,148	1,467,478	920,330	168.8		
Oil	16	9,933,170	11,875,539	1,942,369	19.6		
Rubber	274	2,592,369	3,846,401	1,254,032	48.4		
Shipping	28	5,188,698	5,984,577	795,879	15.3		
Shops and stores	51	5,713,180	6,413,760	700,580	12.3		
Tea	19	4,618,708	5,121,739	503,031	10.9

Water	266	46,778,627	52,211,466	5,432,839	11.6		
Miscellaneous							
		1,443,136,643	1,497,660,134	55,523,491	3.8		

The large decline shown by the iron, coal, and steel group, which contains 109 companies, is a reflection of the severe depression through which these industries are passing. Nearly two-thirds of the decrease is shown by 42 companies whose profits were disclosed in the past quarter. In contrast with these unsatisfactory figures is the increase of nearly 100 per cent. shown by the motor and cycle group, the British motor trade having been able to double its profits in spite of the removal of the McKenna duties. The nitrate group is prominent with a large increase, while the rubber companies make an excellent showing, with the price of rubber, of course, at less than half its present figure. The hotel companies have done well, partly, no doubt, owing to the British Empire Exhibition, while the increase in the shipping group is larger than might have been expected.

The distribution of profits in each of the past four quarters is shown in the next table:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
Third quarter 1924	18,069,800	10,737,274	59.4	3,255,099
Fourth quarter 1924	29,616,628	17,201,668	58.1	5,096,814
First quarter 1925	45,306,369	26,590,348	58.7	7,859,662
Second quarter 1925	56,985,863	32,673,351	57.4	12,997,105
	149,978,660	87,202,641	58.2	29,248,680
			19.5	33,527,339
				22.3

The sum of £33½ millions, equal to 22.3 per cent. of net profits, which was not distributed to shareholders, compares with £27 millions, or 20.3 per cent., twelve months ago. These amounts include not only specific reserve allocations, but also the differences between the amounts brought forward and the sums carried forward to next accounts. The larger percentage of profits going to preference shareholders in the last quarter is partly due to the fact that the companies concerned have proportionately more preference capital than those issuing reports in the preceding quarters.

The following table shows the method of distribution adopted by each of the groups:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	Carried to Reserve, &c.
Breweries	8,835,788	5,778,697	58.8	1,470,213
Canals	530,767	271,275	51.1	255,234
Electric light and power	4,749,863	1,422,408	29.9	1,041,752
Gas	2,857,413	2,326,957	81.4	530,456
Hotels, restaurants, &c.	2,218,236	913,343	41.2	375,177
Iron, coal, and steel	9,269,358	5,749,747	62.1	2,804,345
Land, mortgage, &c.	5,556,810	3,218,425	57.9	940,564
Motor and cycle	1,301,626	597,837	46.0	180,580
Nitrate	1,467,078	1,014,634	69.1	452,444
Oil	11,875,539	8,191,585	69.0	1,749,465
Rubber	3,846,401	3,238,480	84.2	66,781
Shipping	5,984,577	2,509,328	42.0	1,487,130
Shops and stores	6,413,760	3,065,170	47.8	1,751,463
Tea	5,121,739	3,480,574	68.0	970,689
Telegraphs, &c.	3,804,144	2,376,190	62.5	298,404
Textiles	1,500,266	554,944	37.0	587,879
Tramways	5,706,685	3,247,865	56.9	1,427,407
Trust	859,074	542,229	63.1	196,667
Water	52,211,466	29,903,338	57.3	11,745,965
Miscellaneous				
	149,978,660	87,202,641	58.2	29,248,680
			19.5	33,527,339
				22.3

The most conservative distribution is that of the Electricity group, which conserves nearly one-half of net profits. The motor section appears to be proceeding reasonably cautiously, but the rubber group hands over the bulk of its profits to ordinary shareholders. Apart from the tramway group, which reserves nearly 24 per cent. of profits, the public utilities make a poor showing. The oil group appears to distribute a high proportion in dividends.

In the next table we give the ratio to total ordinary and preference capital of net profits and of amounts reserved in each of the past four quarters:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1924.	£	£	%
Third quarter	186,170,600	18,069,800	9.7
Fourth quarter	260,143,703	29,616,628	11.4
1925.	£	£	%
First quarter	404,258,351	45,306,369	11.2
Second quarter	554,033,191	56,985,863	10.3
	1,404,615,845	149,978,660	10.7
			33,527,339
			2.4

The ratio of profits to capital has shown a steady improvement in the past three years, the figure a year ago being 9.9 per cent., two years ago 9.1 per cent., and three years ago 6.8 per cent. In July, 1921, however, a ratio of 13.2 per cent. was shown.

The average rates paid on the three classes of capital quarter by quarter since the beginning of 1922 are set out below:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1922.	1923.	1924.	1925.	1922.	1923.	1924.	1925.	1922.	1923.	1924.	1925.
1st quarter	4.70	4.61	4.62	4.63	5.53	5.57	5.53	5.53	8.55	9.2	9.6	10.5
2nd "	5.00	4.68	5.17	5.40	5.50	5.54	5.55	5.8	8.8	9.9	10.1	9.9
3rd "	5.21	4.90	4.77	5.28	5.5	5.4	5.5	5.8	7.6	8.8	9.0	9.9
4th "	4.83	5.03	4.94	5.2	5.5	5.4	5.8	5.8	8.6	9.6	10.0	10.0
Year	4.91	4.90	4.92	5.2	5.5	5.3	5.4	5.8	8.4	9.3	9.8	10.0

The average dividend on ordinary capital for the past quarter shows a decline in comparison with the first quarter of the year, but is a shade higher than the average for the calendar year 1924. The fluctuations shown in the rates of preference dividends for comparable periods are partly due to payments of accumulations of arrears.

The final table sets out the average rates paid by each of the groups during the past 12 months, together with the average rate of ordinary dividend shown in our article a year ago:—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.	Rate a Year Ago.
Breweries	34,344,894	4.3	26,895,363	5.5	3,967,399	14.5	14.8
Canals	1,542,284	3.6	5,484,310	4.7	6,813,316	3.9	3.6
Electric lighting and power	20,057,944	5.3	18,504,655	5.6	20,871,597	6.8	8.2
Gas	11,107,636	4.1	8,997,019	4.4	41,693,482	5.5	5.5
Hotels, restaurants, &c.	5,122,040	6.3	9,897,681	5.3	9,173,070	9.9	9.2
Iron, coal, and steel	51,644,008	5.6	58,725,559	4.8	140,202,320	4.1	5.0
Land, mortgage, &c.	21,674,953	4.3	19,854,968	4.7	33,386,634	8.2	6.9
Motor and cycle	5,063,326	6.7	6,592,186	2.7	14,599,872	4.1	2.3
Nitrate	1,080,780	6.3	Nil		4,468,570	12.0	14.3
Oil	9,193,878	8.0	26,147,847	6.7	44,302,501	18.3	18.2
Rubber	1,762,125	7.1	1,194,224	5.6	46,623,794	6.9	6.9
Shipping	28,345,958	5.2	26,135,130	5.7	41,179,627	6.1	6.0
Shops and Stores	7,557,780	5.0	24,434,306	7.1	26,193,670	11.7	10.2
Tea	1,017,656	5.1	4,658,705	6.0	9,912,868	35.1	33.6
Telegraphs	6,234,551	4.8	6,443,889	4.6	27,538,202	8.6	13.4
Textiles	19,248,689	4.7	43,692,752	4.7	62,460,292	14.1	11.1
Tramway	12,240,536	4.6	11,847,337	5.0	13,916,499	4.0	5.2
Trust	37,069,848	4.2	35,616,482	4.1	40,346,807	8.1	7.2
Waterworks	3,565,187	4.6	3,843,833	5.1	7,584,803	7.2	7.1
Miscellaneous	65,874,244	5.6	189,929,418	6.2	234,797,758	12.8	11.4
	354,760,517	5.0	528,275,434	5.5	876,340,411	9.9	9.5

Six groups show a reduction in the average rate of ordinary dividend, the most prominent being the fall from 13.4 to 8.6 per cent. in the telegraph section. Increases in capital account partly for the lower average rate in the electricity group. Prominent increases are shown by the motor and tea groups.

THE BANKING HALF-YEAR.

In a previous issue we have set out the rates of interim dividend paid by the joint-stock banks for the past half-year, which in every case were the same as were distributed at this time last year. Beyond this we are afforded no indication as to the results of the operations of the past six months, as no profit and loss accounts are submitted with the half-yearly figures. Monetary conditions have been fairly favourable from a profit-earning point of view, the rise in Bank rate from 4 to 5 per cent. at the beginning of March being of more importance to revenue from advances than the previous rise from 3 to 4 per cent. which took place in July, 1923, for a minimum rate is usually charged for advances, which would come into operation in almost all cases when a 3 per cent. Bank rate is in force. The figures of average weekly balances of the Clearing banks have shown a steady expansion in the total of loans and advances, from which the banks derive a large percentage of their revenue. Furthermore, while the average rate paid on deposits was 2½ per cent., or ⅓ per cent. more than in the first half of 1924, the average rate obtained for short loans was 1 per cent. higher at a shade under 3½ per cent. The margin between the average market rate of discount for three-months' bills and deposit rate was 1½ per cent., as against 1½ per cent. in the corresponding period of last year. It would thus seem probable that banking profits were higher than they were in the first half of 1924, but it is quite possible that, with the continuation of the severe depression in many branches of industry, it has been found necessary to provide larger sums for bad and doubtful debts. No allowance has probably been necessary to meet depreciation in the market value of securities, and there seems to be no reason to think that ordinary expenditure has risen.

Turning to the figures of the half-yearly statements as at June 30th, we append a table comparing the aggregate figures of the "big five" banks with those of December 31st last and June 30, 1924:—

(Million £'s.)

	June 30, 1925.	Compared with Dec. 31, 1924.	Compared with June 30, 1924.
Paid up capital	60.6	— 0.2	+ 0.1
Reserves	48.7	— 22.7	+ 6.8
Acceptances and endorsement	79.8	— 20.6	— 9.7
Deposits (including undivided profits)	1509.0		
Total	1698.1	— 43.5	— 2.8
Cash, notes, balances at bank, and cheques in course of collection ..	252.4	— 10.2	+ 6.2
Ratio to deposits	(16.7%)	(— 9.5%)	(+ 0.5%)
Money at call and short notice	101.6	+ 3.0	+ 12.8
Investments	264.7	— 32.8	— 54.3
Discounts	188.4	— 18.6	— 31.5
Loans and advances	785.8	+ 37.2	+ 56.6
Premises and sundries (including cover for acceptances)	105.2	— 22.1	+ 7.4

The monthly figures of average weekly balances have indicated that these changes were taking place, the most prominent of which are the expansion in loans and advances and the decline in deposits. The monthly figures showed that the reduction in deposits was most pronounced in March, the figure for the nine English Clearing banks dropping by over £38 millions. In the same month advances increased by nearly £20 millions. These large movements were counterbalanced by declines of £9 millions in cash, of £13 millions in money at call, of £4½ millions in investments, and of £31 millions in bills discounted. The balance-sheet figures show that the increase in advances over the six months has mainly been met by sales of investments, there being a small reduction in cash, a slight increase in money at call, and very little change in discounts. Acceptances, which are substantially lower than they were six months ago, are still considerably higher than at this time last year.

BANK ESTABLISHED IN 1864.

SKANDINAVISKA KREDITAKTIEBOLAGET

GOTHENBURG. STOCKHOLM. MALMO.

Branches in all parts of Sweden.

Paid-up Capital and Reserves - - Kr.182,000,000

Telegraphic Address: "Kreditbolaget."

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

In the next table we show the changes in the items of the individual banks as compared with six months ago:—

COMPARISON WITH DECEMBER 31, 1924.
(Million £'s.)

	June 30, 1925.	Barclays.	Lloyds.	Midland.	National Provincial.	Westminster.
Deposits	— 2.0	— 3.0	— 9.1	— 1.5	— 5.0	
Acceptances	— 0.3	— 3.8	— 9.7	— 3.7	— 5.2	
Cash, &c.	— 2.0	— 5.1	+ 0.7	— 1.9	— 1.9	
Money at call	+ 0.1	+ 0.7	— 0.8	+ 2.2	+ 0.9	
Investments	— 4.3	— 15.6	— 6.7	— 2.9	— 3.3	
Discounts	— 5.5	+ 4.8	— 9.7	— 0.6	— 7.6	
Advances	+ 9.5	+ 12.0	+ 7.3	+ 1.6	+ 6.8	

An increase in advances and a reduction in investments is general, but the tendency is very marked in the case of Lloyds, whose investment holding is now £32 millions lower than it was twelve months ago, having dropped from £93 to £61 millions. This reduction has been made almost entirely in British Government securities, which now amount to £50 millions, as against nearly £82 millions at June 30, 1924. Only small changes are recorded by the National Provincial, but the Westminster shows the heaviest decline in deposits, and has met the increase in advances more by reducing bills discounted (which include Treasury Bills) than by selling investments. Barclays and the Midland have also substantially reduced their holding of bills.

The figures of the five principal provincial banks show less pronounced changes:—

COMPARISON WITH DECEMBER 31, 1924.
(Million £'s.)

	June 30, 1925.	Bank of Liverpool & Martins.	District Bank.	Lancashire and Yorkshire.	Manchester & County.	Williams, Deacons.
Deposits	— 3.5	— 3.3	— 1.1	— 1.5	— 2.1	
Acceptances	— 3.8	— 2.1	..	— 0.6	— 1.6	
Cash, &c.	— 1.8	— 3.1	— 0.8	— 1.7	— 0.6	
Money at call	+ 0.7	— 0.5	..	— 0.3	— 1.2	
Investments	— 1.5	— 1.8	— 0.1	— 0.3	— 1.0	
Discounts	— 1.2	— 0.3	— 0.6	..	— 1.1	
Advances	+ 0.3	+ 2.6	+ 0.5	+ 0.6	+ 1.8	

The same tendencies are shown here as with the "big five," the largest increase in advances being recorded by the District Bank, whose cash holding has been substantially reduced. The Bank of Liverpool and Martins shows a very small expansion in advances, accompanied by an appreciable increase in bills discounted. Both deposits and acceptances show a large reduction.

In the concluding table we show the ratios of the advances of the big five banks to their deposit liabilities at the dates mentioned:—

THE WORLD'S MERCHANT FLEETS.

THE publication of a new edition of Lloyd's Register of Shipping—the Domesday Book of the various merchant fleets—renders opportune a survey of developments in the size and structure of the world's mercantile marine. This year's Register Book puts the total tonnage owned in the world (excluding small craft of under 100 tons) at 64,641,418 gross tons, an increase of 617,851 tons, as compared with a year ago, but 524,820 tons below the "peak" reached in 1923. Since, however, sailing tonnage has declined by 248,385 tons in the last twelve months, and by 569,823 tons since 1923, the aggregate tonnage of steamers and motorships in June, 1925, reached the highest level yet recorded. In the following table the growth of British and world shipping—and, incidentally, the passing of "sail"—during the last 30 years is summarised:—

SHIPPING AFLOAT, 1895-1925.

Year.	Gross Tonnage (in Millions) owned in:—					
	United Kingdom.			World.		
	Steam & Motor.	Sail.	Total.	Steam & Motor.	Sail.	Total.
1895.....	9.7	2.4	12.1	16.9	8.2	25.1
1905.....	14.5	1.3	15.8	30.0	6.0	36.0
1915.....	19.2	0.3	19.5	45.7	3.5	49.2
1925.....	19.3	0.1	19.4	62.4	2.2	64.6

In each of the two decades ending with 1915, British tonnage increased by 3.7 million tons, while the total tonnage owned in the world rose by 10.9 and 13.2 million tons respectively in the two periods. The British share of the whole had fallen from 48 per cent. in 1895 to 40 per cent. in 1915, but (excluding sailing vessels) the merchant tonnage owned in this country had doubled itself in these 20 years. In the decade now concluded there is recorded an addition of 15.4 million tons to the world fleet, while the expansion of British tonnage is shown to have been completely arrested, the present British proportion of the world total being no more than 30 per cent. The effects of the years 1914-18 are still only too apparent.

The foregoing figures, however, include a quantity of Lake tonnage and of wood and composite steamers unimportant as a factor in international trade. The relative developments of the various national fleets is therefore more fairly presented in the next table, which comprises only sea-going steel and iron steamers and motorships. The fleets of Denmark, Norway, and Sweden are grouped under "Scandinavia," while the tonnage of Italy and Austria (the latter being now shipless) is, for comparative purposes, combined:—

SEA-GOING STEEL AND IRON STEAMERS AND MOTOR SHIPS.
(Thousands of Gross Tons.)

Country of Ownership.	June, 1914.	June, 1921.	June, 1923.	June, 1925.
U.K.	18,877	19,288	19,077	19,274
British Dominions	1,407	1,950	2,219	2,230
U.S.A.	1,837	12,314	12,467	11,605
Austria and Italy	2,480	2,378	2,788	2,894
Germany	5,098	654	2,496	2,993
France	1,918	3,046	3,265	3,262
Holland	1,471	2,027	2,606	2,585
Scandinavia	3,683	4,188	4,311	4,778
Japan	1,642	3,063	3,402	3,741
Other countries	4,101	5,129	5,308	5,423

World total..... 42,514 54,217 57,939 58,785

Comparing, first, the position in June, 1925, with that in June, 1914, it will be observed the bulk of the increase in the world total is due to the rise of 9½ millions in American tonnage, the other countries showing the largest increases being Japan, 2 million tons; Italy, 1.5 millions; France, 1.3 millions; Holland, 1.1 millions; and Scandinavia, just over 1 million tons. The British increase is less than 400,000 tons. Developments from 1921 to date—i.e., since the collapse of the war "boom"—indicate, however, that a process of attrition is beginning substantially to reduce the artificially inflated U.S.A. fleet, and that the expansion of French and Dutch shipping (on the evidence of the last 24 months) is being checked. On the other hand, the fleets of Japan and the Scandinavian coun-

tries show a consistently high rate of growth. Reconstruction of the German fleet has slowed down considerably, while the increase in the tonnage owned by the British Dominions and Italy this year, as contrasted with 1923, is much less than the corresponding increase in the two preceding years. It is satisfactory to note that, following on a decline between 1921 and 1923 the volume of British tonnage is now on the up grade again, and as a further corrective to pessimism regarding our shipping position, it may be pointed out that what Italy has gained Austria has lost, and that the combined tonnage of France, Holland, and Germany is now little greater than before the war, so that we can be said to have lost ground only to Scandinavia, Japan, and the United States. In the case of the last-named country, the trading losses of whose ships are notorious—some 4 million tons being laid up—the nominal figure of tonnage owned does not represent the "effective" position from the competitive aspect; Norway and Denmark are confronted with the loss of the advantage recently accruing to their shipowners from their comparatively low internal price levels; while the rise of Japan as a shipping power conforms to that country's general development, and in no real sense represents a "loss" to Great Britain. We still own five times as much tonnage as any other country except the U.S.A., and our supremacy as the world's greatest sea-carrier remains unchallenged.

None the less, when every allowance is made for "economically-defunct" American vessels, and for the 5 million odd tons of "tankers" included in the total world fleet, it is apparent that the cargo-carrying space available remains, as throughout the last four years, considerably in excess of requirements—as the present freight-depression demonstrates. This being so, considerable interest attaches to statistics, included in the Register for the first time, showing tonnage broken up. As compared with the pre-war normal rate, scrapping has recently proceeded as under:—

	Tons.
1908-13 (average)	171,000
1921	77,545
1922	315,110
1923	962,506
1924	1,174,258

During 1925 the process of breaking-up is stated to have shown a "decided falling off," due, one may imagine, to slower demand for scrap steel. Seeing that shipbuilding is likely to be limited, for the next few years at least, to replacement of discarded vessels, this recent diminution of "scrapping" is, from the aspect of shipyard employment, disappointing. From the point of view of shipping efficiency, it is also disconcerting to find that aged vessels are increasing, while the proportion of new ships declines. The following are the figures for the last four years:—

Year.	OLD and NEW SHIPPING (in Millions of Gross Tons).		25 Years Old and Over.	
	Under Five Years Old.	World Total.	British.	World Total.
1922	6.01	25.01	1.53	7.07
1923	5.57	21.93	1.56	7.42
1924	4.95	16.56	1.62	7.77
1925	4.92	13.09	1.65	8.25

That the British proportion of up-to-date tonnage should be increasing is satisfactory, but it is unfortunate that we should share the world's tendency to cling to vessels outworn and economically inefficient. It is perhaps significant that half the total "over-age" tonnage in the world is between 1,000 and 4,000 tons in size, the post-war tendency, as disclosed by Lloyd's statistics, being for larger vessels to replace this type of unit. In 1914 there were 3,608 vessels of over 4,000 tons; there are now 6,069. More recent changes in the composition of shipping can be seen from the following:—

SIZE OF UNITS.

Number of ships in the world of gross tonnage between:—

	A.		B.		C.		Total.
	1,000 and 5,000 Tons.	5,000 and 8,000 Tons.	8,000 and 10,000 Tons.	10,000 and 15,000 Tons.	15,000 and 20,000 Tons.	20,000 and 30,000 Tons.	
1921	10,048	3,315	727	14,090			
1923	10,226	3,580	791	14,597			
1925	9,977	3,622	823	14,422			

In the British fleet between 1921 and 1925 the numbers of vessels in Class A alone fell from 3,057 to 2,906; the numbers in Classes B and C rose respectively from 1,151 and 372 to 1,214 and 395. The larger units, usually run

as "liners," and belonging to the big shipping combines, are thus steadily replacing the smaller "tramp" type of vessel, many of which are now, as already shown, specially handicapped by excessive age, as well as by their haphazard and often wasteful system of operating.

Equally striking are recent changes in methods of ship propulsion. The percentages of the total world fleet propelled as specified hereunder may be thus summarised:—

	June, 1914.	June, 1923.	June, 1924.	June, 1925.
Steamers (coal-fired)	88.8	68.9	66.2	64.8
" (oil-fired)	2.6	24.2	26.8	27.5
Motorships	0.5	2.6	3.1	4.2
Sail	8.1	4.3	3.9	3.5

The percentage of oil-fired steamships has increased somewhat more than ten times since 1914, and the motorship percentage just under ten times. Since 1923, however, the increase in the proportion of oil-fired steamers has been 13.6 per cent., and of motorships no less than 67 per cent. With this evidence of the progress being made towards the greater efficiency and economy which the Diesel engine represents, it is satisfactory to find that, of the 2½ million tons of motorships existing, this country is by far the greatest single owner, operating at present 734,000 tons, against Norway, 325,000 tons; Sweden, 260,000 tons; Germany, 234,000 tons; and America, 216,000 tons. As a curious contrast to the generally progressive tendency of Japanese shipping, "Dieselisation" has made almost no progress in that country, Japanese-owned motorships totalling only 41,000 tons.

HALF-YEAR'S OVERSEAS TRADE.

In his statement to the House of Commons on the forestalling of the McKenna duties, to which we referred last week, Mr Churchill had prepared us for abnormal import figures in the June returns. The official statistics, however, show that it was not merely goods of the McKenna duty classes that figured to an exceptional extent. Imports of silk and silk manufactures also for reasons of forestalment were £5.8 millions against £1.8 millions in the previous June. Raw rubber imports also show a rise of over £1 million, owing largely to the rise in price. The result of these and other movements is that total June imports are £22 millions higher than those of a year ago. At the same time exports have fallen off by £3 millions. A summary comparison of the value figures reads as follows:—

MONTH OF JUNE.

	1924.	1925.	Increase (+) or Decrease (—) in June, 1925.	
	£	£	£	%
Imports	88,556,714	110,982,155	+ 22,425,441	+ 25.3
British exports	62,024,238	58,893,190	- 3,131,048	- 5.1
Re-exports	10,023,513	10,600,201	+ 576,688	+ 5.7
Total exports	72,047,751	69,493,391	- 2,554,360	- 3.5
Excess of imports over total exports	16,508,963	41,488,764	+ 24,979,801	+ 151.4

Coal exports account for nearly £2 millions of the export decline, while exports of iron and steel and manufactures thereof and of woollen and worsted goods and manufactures are each £1 million or more below the level of June, 1924.

A merchandise import excess for June of £41½ millions is certainly disquietingly large; but since some of the factors contributing to it were so abnormal, it is the figures of the past half-year's trade rather than those of the past month that provide a profitable yield for study. A summary of the value figures for the first six months of this year and last is appended:—

SIX MONTHS JANUARY TO JUNE.

	1924.	1925.	Increase (+) or Decrease (—) in 1925.	
	£	£	£	%
Imports	598,302,268	677,543,832	+ 79,241,564	+ 13.2
British exports	388,464,802	392,659,170	+ 4,194,368	+ 1.1
Re-exports	74,128,131	77,449,087	+ 3,320,956	+ 4.4
Total exports	462,592,933	470,108,257	+ 7,515,324	+ 1.6
Excess of imports over total exports ..	135,709,335	207,435,575	+ 71,726,240	+ 52.9

THE
FIRST NATIONAL BANK
OF BOSTON

BOSTON, MASS., U.S.A.:

HAVANA:
Pedro Gomez Mena Bldg.

One of the largest and strongest Banks in America. Resources of \$300,000,000.

Special Representative:
24, OLD BROAD STREET, LONDON.

The President of the Board of Trade told the House of Commons last week that for the twelve months ended May last the adverse balance on the merchandise figures was £395 millions, and the final balance, after allowing for all invisible items, about "all square." We may assume, therefore, that an import excess of £207 millions for the past six months—that is, at the rate of £414 millions per annum—leaves us no margin for investment abroad. In the past half-year, however, imports have been subject to a number of disturbing influences, such as price rises for wheat, wool, rubber, and tin, as well as duty-forestalling, that one may perhaps expect a rather less unhealthy movement in the balance during the remainder of the year. Some of the more striking import movements are shown below:—

	First Half of 1924.		First Half of 1925.	
	Quantity.	Value.	Quantity.	Value.
Wheat	cwt.	£	cwt.	£
Barley	8,417,933	3,941,663	4,603,338	2,962,862
Raw cotton	6,852,389	56,281,785	9,761,245	66,934,523
Sheep and lambs' wool ..	5,187,770	44,294,524	4,647,540	49,810,158
Raw rubber	701,953	4,024,512	760,214	6,113,706

While cotton prices have fallen, the effect of the price rises is clearly shown in the other items in this list. The composition of the £79 millions increase in imports in the half-year is as follows:—Food, drink, and tobacco, + £16.6 millions; raw materials and articles mainly manufactured, + £27.7 millions; articles wholly or mainly manufactured, + £34.4 millions. To this last-named figure of £34.4 millions the following are among the noteworthy contributions:—Non-ferrous metals and manufactures thereof—mainly semi-finished goods—+ £4.3 millions; silk and silk manufactures, + £5 millions (here the forestalling of the duty is the chief cause); vehicles, + £3,804,497—an important part of the increase being again due to duty forestalling. These examples are perhaps sufficient to illustrate the point that the increase of £34.4 millions under this class of imports by no means represents purely manufactured goods, and is also due to some important extent to non-recurring factors.

When we turn to the export side of the accounts, coal, of course, provides the most lamentable feature. In value coal exports were lower in January to June, 1925, than in the corresponding period of 1924 by £11.1 millions, while the drop, as compared with the first six months of 1923 was £23.5 millions. In quantity the coal exports in the first half of 1923, 1924, and 1925 respectively have been 50,415,430 tons, 38,002,992 tons, and 26,912,336 tons. The bunker coal figure for the past six months is 8,260,926 tons, against 8,608,033 in the first half of 1924, and 9,118,233 the first half of 1923. The progress, or backsliding, of some other leading exports is shown in the following table, which gives export quantities for the first half of this and the two previous half-years:—

	1922.	1923.	1924.	1925.
Iron and steel and manufactures thereof	1,539,938	2,215,643	2,024,549	1,831,556
Cotton yarns	106,309,100	70,225,700	87,485,600	96,815,500
Cotton piece goods	1,850,860,000	2,106,868,600	2,224,012,700	2,284,112,500
Woollen tissues	56,740,900	69,365,500	75,503,000	66,517,900
Machinery	187,675	224,755	215,509	253,721
Motor cars	1,347	2,258	6,124	10,594

Iron and steel, though the falling-off in the past two years is serious, is well above the 1922 figure. Imports, how-

ever, have risen very largely, the figures for the first six months of the past three years being 665,237 tons, 1,171,621 tons, and 1,396,182 tons respectively. The cotton export movement is upward, although woollen exports have receded. Machinery shows up well, and motor-cars, for a period when the McKenna duties were not in force, make an exceedingly good showing.

The bullion and specie figures for the first half of 1923, 1924, and 1925 read as follows:—

Imports.	Exports.
£	£
23,401,980	24,595,860
25,488,405	38,692,492
29,464,791	33,669,767

In May and June, the two months since the gold standard resumption, the gold figures have been as follows:—

	Imports.	Exports.
	£	£
May	2,650,224	2,634,393
June	5,620,459	1,616,455

The movements are insignificant compared with expectations.

The trade returns include figures of shipping engaged in the overseas trade. These show that in the past half-year the tonnage cleared with cargoes was 30,662,951, as compared with 31,561,345 and 34,910,322 in the first half of the two previous years respectively. An analysis of the chief value figures for June and the six months of this year and last will be found in the statistical section of this issue.

ELECTRICAL DEVELOPMENT COMPANIES.

The growth and development of undertakings catering for the requirements of those who have devised and planned our progress in the use of electricity is a subject deserving more space than we can spare in these columns. From cable-manufacturing companies to the General Electric Company and Metropolitan-Vickers may appear to be a big stride, but the connection will be more fully realised if the history of electrical development in this country is considered. To some extent the activities of those concerns which experienced the wave of prosperity arising from the laying of the network of cables encircling the globe have changed, and place is given to production of rubber tyres, &c. But although conditions have changed, it is quite clear that, given efficient directorates, these concerns can adapt themselves to the many changes which economic developments will dictate.

Companies engaged in these allied industries have enjoyed a good measure of prosperity during the past year. In order to illustrate the trend of operations, we have grouped together a number of representative undertakings, showing net profit over the past two years, also the amount brought in and how the available balance was utilised:—

Name of Company.	Year.	Amount Brought In.	Net Profit After Payment of Dividend.	Preference Dividend.	Ordinary Dividend.	Amount Placed to Reserve, &c.	Carried Forward.
British Insulated & Helsby Cables	1923	391,675	306,198	30,000	150,000	105,000	412,873
British Insulated & Helsby Cables	1924	412,873	323,244	30,000	150,000	334,407	221,710

Telegraph Construction & Maintenance	1924	123,159	111,343	..	89,640	30,000	114,862

† For 15 months.

Progress has been complete and general, since in every case the companies included in our list increased their net profits last year. In some instances the increases were of substantial amount, notably in the case of the General Electric, where the figure went up from £594,320 to £791,455, and the reserve was brought up to a total of £1,229,403 by the allocation of £172,386. This increase, the report states, "is largely due to the recovery of a pre-war debt." The directors, however, with a view to consolidating the position, have decided to apply the increase of £587,000 in liquid assets, together with a portion of the trading profits, "to writing off from the balance-sheet the two nominal assets—'Premium on purchase of Fraser and Chalmers, £110,000,' and 'Expenses of Issue of Mortgage Debenture Stock, £409,403.' The reserve account will then stand at the increased figure of £710,000." Another good achievement was that of Siemens Bros., whose net profits rose from £70,452 to £187,641. For 1923 the company was enabled to pay off six months' arrears of preference dividend; this time it is able to pay an ordinary dividend of 7½ per cent. Johnson and Phillips' profits rose from £28,715 to £105,838, those of the British-Thomson-Houston from £197,051 to £225,433, and those of the British Insulated and Helsby Cables from £306,198 to £323,244. The last-named company increased its reserve appropriation from £105,000 to £334,407. The companies have good reason to feel pleased with their year's work—a pleasure that will be heartily endorsed by shareholders.

We now tabulate the principal balance-sheet items, showing how they compare with the preceding balance-sheet:—

Name of Company.	End of	An Analysis of Principal Liabilities and Assets.						
		Share Capital and Reserves.	Debentures and Loans.	Creditors.	Properties, Plant, &c.	Stocks.	Cash and Investments.	Debtors
British Insulated & Helsby Cables	1923	1,960,000	729,856	770,973	977,184	977,972	1,102,876	902,457
British Insulated & Helsby Cables	1924	2,171,000	821,582	994,197	1,068,591	985,007	986,648	1,275,897

(a) Year ends March 31. (b) Shows position at end of 1923 and at March 31, 1925. (c) Year ends August 31.

The British Insulated and Helsby Cables has reorganised its loan capital. During the year it reduced the total of 4½ per cent. first mortgage debenture stock from £508,718 to £82,897, and the 5 per cent. second mortgage debenture stock from £203,874 to £27,146, but issued £700,000 of 5 per cent. mortgage debenture stock. The increase under the heading in the case of Callender's is accounted for by a gain in bills payable from £17,272 to £358,782. The report states that, in view of the rapidly expanding business, the existing capital resources are inadequate, and "the directors, therefore, consider that the capital should be increased by an issue of ordinary shares" to the extent of £200,000. The directors of Siemens also report that extensions have necessitated the use of further capital, so that during the year 250,000 10 per cent. preference shares were issued. Taking all the companies, creditors are higher, and a number of increases occurred in properties and plant. Changes under the heading of cash and investments are fairly numerous, as is to be expected with trade so active. The English Electric Company increased its holdings in subsidiary and other companies from £1,921,440 to £2,023,003, while sundry creditors have risen from £851,544 to £1,336,714. On the present occasion, however, this item includes a secured bank loan. The General Electric's interest in British Government securities rose from

£294,575 to £899,078, but the totals of both cash and investments of the Metropolitan-Vickers are lower. In the majority of cases debtors figure for more.

Our concluding table shows the highest and lowest prices of ordinary shares for year 1924, dividends for 1923 and 1924, and prices and yields at the end of June, 1924, and end of June, 1925:—

Name and Amount of Share.	Prices, Year 1924.		End of June, 1924.			End of June, 1925.

† Free of income-tax.

The prosperity enjoyed during the year 1924 has been reflected in the noteworthy advance that has taken place in share values. Prices are now well above the lowest of 1924.

The need of electrical development in this country and throughout the world has so often been pressed home to the public that there is a slight chance of the progress actually made being overlooked, on account of the many trumpet blasts. But it does not need much imagination to visualise the requirements of our railways alone years hence without taking into consideration the use of electricity in our households. Therefore it is reasonable to conclude that an efficiently managed company manufacturing electrical apparatus should have an excellent investment.

Notes of the Week.

The Coal Crisis.—The present position of the coal mining dispute is perhaps best described by a narrative of the disquieting events of the past week. The rejection by Mr Herbert Smith last week of the suggestion of Mr Evan Williams, the president of the Mining Association, for an interchange of views on the owners' proposals led to the mediation of Mr Bridgeman, the First Lord of the Admiralty, who interviewed both sides in an attempt to persuade them to reopen negotiations. The miners' leaders demanded the withdrawal by the owners both of the notice to terminate the present agreement and the proposals for a new agreement. The Mining Association regretted that it could not consent to the withdrawal of the notice, but Mr Evan Williams undertook to recommend the association to meet the Miners' Federation "in conference on an open situation, taking up the discussion at the point where it was suspended." This offer was unacceptable to the miners, and on Saturday, July 11th, the General Council of the Trade Union Congress, with whom the Executive Committee of the Miners' Federation had been in conference the previous day, issued a manifesto pledging "complete support" to the miners. In these circumstances, the Government, on July 15th, announced the appointment of a Court of Inquiry to investigate "the causes and circumstances of the dispute," and constituted by Mr H. P. MacMillan, K.C., Sir Josiah Stamp, and Mr W. Sherwood, the Prime Minister in making the announcement expressing the hope that it might be of some assistance. That day the South Wales Coalowners' Association, meeting at Cardiff, issued notices terminating all service contracts in the coalfield at the end of the month, but intimating at the same time that the pits would remain open from August 1st under new terms and conditions. Meanwhile, the Miners' Executive, which had assembled at Scarborough for the annual Conference of the Miners' Federation, was reconsidering the offer made by the owners to Mr Bridgeman to meet the workmen in conference on "an open situation," and Mr Evan Williams was asked by telegram if the Mining Association had adopted his recommendation,

and if such recommendation meant the withdrawal of the owners' proposals. In this communication no reference was made to the question of the withdrawal of the notice. On the following day Mr Williams replied that the proposals had not been withdrawn, that they still represented the views of the association in regard to the basis of a new agreement, but that the owners were prepared to meet the workmen's representatives and discuss any proposal they cared to submit. This reply extinguished a flickering hope of an immediate resumption of negotiations which Monday's telegram from the Miners' Executive to Mr Williams had raised, and on Wednesday the delegate conference adopted a recommendation of the executive expressing the willingness of the federation to meet the owners' representatives in an open conference "as soon as they have withdrawn their proposals," and rejecting the Court of Inquiry appointed by the Government. In the terms of reference to the Inquiry, the duty imposed on the Court is to inquire into "the causes and circumstances of the dispute," but the Miners' Executive are distrustful of the course the proceedings of the Court may take, and the communication made to the Government was that the miners "can accept no Inquiry that has for its object the ascertainment of whether mine-workers' wages can be reduced, or their hours extended, as these questions were fully discussed at the last Inquiry." The reply of the Government to this communication has not yet been published. The Court met yesterday, but adjourned to give the miners further opportunity to attend. A complete deadlock has thus been reached. Matters have gone too far to allow the owners to withdraw their proposals. The financial position of the industry is worse than it was a month ago, and the owners in some of the coalfields have already given effect provisionally to the proposal conferring autonomous powers on the districts to apply the suggested principles of a new national agreement. If the miners insist on a national agreement and on a minimum wage commensurate with the increase in the cost of living since 1914, it is difficult to see how now either a national or a number of sectional stoppages can be averted in August.

The Government and Economy.—At a dinner given at the Mansion House on Wednesday to the Chancellor of the Exchequer and the Governor and Court of Directors of the Bank of England, Mr Churchill made a speech which was important in several respects. It was remarkable chiefly for a cogent defence of the gold standard policy, and an exposition of the illusory, transient, and dangerous stimulus to be obtained by currency depreciation. At the same time, the Chancellor took the opportunity to deliver a survey of the economic situation, which, while not minimising present troubles, may serve as a corrective to the more extreme phases of pessimism. There was, however, one passage in his speech which gives rise to serious misgivings. This passage referred to the possibility of economy in public expenditure. We quote from the report in the *Times* of Thursday:—

The vested interests of expenditure were so strongly entrenched that it would take all the efforts of a united Cabinet to achieve even a moderate reduction next year. He would be misleading them if he led them to suppose that such a reduction is now in sight. On the contrary, they were endeavouring at present, not so much to reduce the total of expenditure, but to prevent that total being seriously increased by the dull tide of upward expansion. It was not until they had stemmed that tide and resisted the automatic growth of expenditure that they would be free to move forward into the more hopeful sphere of a positive reduction.

Such phrases as these, and their difference in tone from the promises of economy contained in the Budget speech, seriously detract from the satisfaction with which the appointment of a Cabinet Committee on retrenchment, announced in the House of Commons by the Prime Minister on Thursday, would otherwise have aroused. The question of Departmental expenditure was also to the fore in the debate on the Navy on the same day, in the course of which Commander Hilton Young, himself ex-Financial Secretary of the Treasury and a student of naval matters, roundly declared that "it was notorious in all naval circles that the dockyards of Chatham, Sheerness, and Pembroke were wholly unnecessary and excessive for the requirements of the Navy." He also demanded a reduction of the Admiralty staff—now 60 per cent. higher

than before the war, and reminded his fellow-members of the elementary truth, which most are apt to forget—namely, that “if we are sincere in our advocacy of economy, we must be prepared for economy not only in the other fellow’s estimates, but in those which we care most about.” Mr Bridgeman’s reply, weakened by the fact that he had no policy to announce, did not deny that economies could be made at the Admiralty, but somewhat naively stated that the Admiralty was not alone in this respect. “Let them make their cuts,” he solemnly remarked, “in all the Government Departments.” The Cabinet Committee should ask Mr Bridgeman to explain his views on the subject in detail. The Navy debate will, we hope, have a sobering effect on the present Cabinet deliberations on cruiser-building policy and the Singapore dock project; for the savings to be obtained by staff reductions are trivial in amount compared with those that may be effected by high Government policy.

Germany, the Pact, and the League.—The centre of international interest at the moment lies at Berlin, where Dr Stresemann is fighting for his life. Less fortunate than French Ministers, who have secured the adjournment of the Chamber and thus gained some months’ respite, Dr Luther and his colleagues are still plunged in full crisis as result of the threats of the Nationalists to withdraw from the Ministry altogether. Once more great international decisions are at the mercy of domestic differences of incomparably less importance. So far Dr Stresemann, who has to bear the full brunt of the attack, has weathered the storm, and appears to have gained the approval of the Cabinet for his reply to the French note. The situation must, for the moment, at any rate, be discussed on the assumption that this Note will make continuation of the Pact discussions possible. It may be doubted, none the less, whether the German reply will in itself carry matters much further. Even moderate Germans find so much to criticise in the Allied Note that the Cabinet will have all its work cut out to frame an answer which, without adopting a tone of hostile criticism, will emphasise the need for second thoughts on certain of the Allied, or French, suggestions, and at the same time keep the door well open for a continuance of the conversations. On the whole, the complaint that while Germany merely threw out certain broad principles as basis for discussion, the Allies have at once entered into practical and premature detail has little ground. A first step must be followed by a second, and the general must lead to the particular. There is more substance in the objection to the French proposal that France (and possibly other Western States) should act as guarantors of the eastern arbitration treaties, with, by implication, at any rate, the right to take immediate action in the event of those treaties being, in France’s opinion, violated, while the reservation of all the rights of forcible action embodied in the Treaty of Versailles is hardly calculated to secure the enthusiastic approval of Berlin. In an agreement in which the basis of the whole plan is arbitration, Germany is fully entitled to insist that no forcible action shall be taken anywhere without recourse to arbitration first, and if she takes that ground, as no doubt she will, it is hard to see how British opinion can refuse to support her. But far more important in its ultimate effects than any regional pact is the question of Germany’s entry into the League of Nations. If the Pact negotiations secure that they will have done their best work, and once Germany is in the League the Pact provisions will, for the most part, be superfluous. On the question of the League, public opinion in Germany may not have moved much, but official opinion, and, in particular, the opinion of Herr Stresemann himself, has undoubtedly moved a good deal. There is in such circles only one serious difficulty remaining, the old and familiar one involved in the rôle Germany might be called on to play in connection with the possible imposition of sanctions under Article XVI. of the Covenant. The strength of German opinion on that point has, on the whole, been underrated in Great Britain. The time, unfortunately, is short, if there is to be any hope of seeing Germany admitted in September, but so long as even a remote hope exists, every effort to clear away any outstanding obstacle must be made. Presumably the German reply will suggest a conference between the British,

French, and German Foreign Ministers. If it is declined by the Allies, any hope of seeing Germany a member of the League before September ends will have vanished. If, on the other hand, such a meeting does take place—and the obvious place and time are Geneva and the latter part of August—then there is at least a prospect, even if it cannot be called a probability, that the three apparently inseparable questions of the Pact, Germany’s entry into the League and the evacuation of the Cologne zone, may be liquidated by a bold stroke of statesmanship in time for a German delegation to take part for the first time in the work of the League Council and Assembly.

French Coal Output.—While the output of coal in Great Britain during the year ending May 31st was 92,000 tons less than during the previous twelve months, French coal production returns continue to show a steady increase in the monthly output. The total output of the French collieries for the first five months of the present year (writes our Paris correspondent) was 19,871,998 tons, as compared with 18,692,800 tons for the first five months of 1924, or an increase of 1,255,102 tons, equivalent to nearly 7 per cent. The average daily output of the mines (which stood at 136,147 tons in 1913, before the return of the Alsace-Lorraine pits to France), was 121,064 tons in January, 1923, 144,680 tons in January, 1924, 160,445 tons in January, 1925, and 159,530 tons in May. The number of men employed, which stood at 203,208 in 1913, and at 242,566 in January, 1923, has averaged 311,000 since the beginning of the present year. The progress of the reconstitution of the mines in the Pas de Calais and the Nord, which were wrecked by the Germans on their retreat, may be gauged by the fact that the average daily output during May was 95,005 tons, or 3,708 tons more than in 1913. Taking the pits that were within the French frontiers before the war, these alone produced a daily average of 141,758 tons in May, or 5,611 tons a day more than before the war. These figures suggest that, in view of the steady increase in the use of oil fuel for shipping and the progress that is being made in the scheme for replacing coal with electricity as a source of motive power on the French railways, there is little likelihood that this country will absorb in the future anything like the same amount of British coal as she has required in the past. During May the French coke plants produced 255,301 tons of metallurgical coke, and thus for the first time since the war exceeded the monthly output of 245,000 tons produced in 1913.

Iron and Steel Production.—The statistics of output just issued by the National Federation of Iron and Steel Manufacturers shows that the production of iron and steel continues to decline. Nine blast furnaces went out of operation during the month, leaving the number blowing at the end of June at 148. Production of pig-iron therefore also declined, and amounted to only 510,300 tons, compared with 574,700 ton in May. This figure is lower than in any month since November, 1922. The output of steel, which was partly affected by the Whitsun holidays, declined from 651,600 tons in May to 585,400 tons in June. The recent decline in the franc is not yet reflected in the import figures, which, in fact, fell slightly from 205,400 tons in May to 201,700 tons in June; the decline in exports was, however, much greater, and amounted to nearly 50,000 tons (from 322,100 tons in May to 275,700 tons in June). The following table shows the production, imports, and exports of iron and steel for the first six months of 1925, compared with the same period in 1924, from which it will be seen that the production of pig-iron declined by 11 per cent. and steel ingots and castings 15 per cent., while imports increased by 19 per cent. and exports declined by 9½ per cent.:

	Production.		Imports.	Exports.
	Pig Iron.	Steel Ingots and Castings.		
	Tons.	Tons.	Tons.	Tons.
1st six months, 1925.....	3,379,100	3,776,700	1,396,100	1,831,700
Do, 1924.....	3,795,000	4,451,500	1,171,700	2,024,500
Increase (+) or decrease (—) per cent.	— 11%	— 15%	+ 19%	— 9½%

While production continues to decline in Great Britain, output in France, Belgium, Luxembourg, and the United States continues at a consistently high level, as will be seen from the following table, which compares the output of these countries in the first six months of 1925 with the same period last year:—

Country.	(Production in Thousand of Tons.)			
	Pig Iron.		Steel Ingots and Steel Castings.	
	First Six Months.	First Six Months.	First Six Months.	First Six Months.
	1924.	1925.	1924.	1925.
United Kingdom	3,795-0	3,379-1	4,451-5	3,776-7
France.....	3,705-6	4,013-6	3,336-9	3,501-1
Belgium.....	1,346-8	1,538-7	1,392-3	1,458-5
Luxembourg.....	1,042-7	1,114-8	891-6	992-6
United States.....	17,429-1	19,010-5	19,649-0	22,499-0

Thus production in all countries except Great Britain was higher in the first half of 1925 than in 1924. Production figures are not available yet for Germany, although the Dawes Scheme laid it down that the publication of monthly figures of output should be resumed.

Employment in June.—There was a decline in employment during June. According to the *Ministry of Labour Gazette*, the total number of registered unemployed on June 29th was 1,368,000, as compared with 1,253,000 on May 25th, an increase of 115,000. At the end of June, 1924, the total was 1,049,000. Among the 11,500,000 workpeople insured under the Unemployment Insurance Acts, the percentage unemployed at June 22nd was 12.2 per cent., as compared with 11.2 per cent. at May 25th and 9.4 per cent. at June 23, 1924. The percentage of members of trade unions unemployed was 12.3 at the end of June, as against 10.1 per cent. at the end of May and 7.2 per cent. at the end of June, 1924. The table below gives the trade union figures for a number of past years:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.									
	1913.	1919.	1920.	1921.	1922.	1923.	1924.	1925.

December...	2-6	3-2	6-0	16-5	14-0	9-7	9-2	..	

* Excluding coal miners.

The increase in unemployment in June was due mainly to the decline in employment in the coal industry. There was also increased unemployment in the iron mining, iron and steel, shipbuilding, cotton, wool textile, jute, carpet, pottery, and brushmaking industries; but in a number of other industries, including tinplate and steel sheet manufacture, the linen industry and glass trades, minor improvements were recorded.

Cost of Living.—There was a slight increase during June in the cost-of-living index number calculated by the Ministry of Labour. Taking the figure for July, 1914, as 100, the cost-of-living for an average working-class family was 173 on July 1st, as compared with 172 on June 2nd. The monthly changes in the percentage increases over July, 1914, are shown below for a number of years:—

1st Day of	1918.	1919.	1920.	1921.	1922.	1923.	1924.	1925.
	%	%	%	%	%	%	%	%
Jan.....	85-90	120	125	165	92	78	77	80
Feb.....	90	120	130	151	88	77	79	79
March...	90	115	130	141	86	76	78	79
April ..	90-95	110	132	133	82	74	73	75
May ..	95-100	105	141	128	81	70	71	73
June ..	100	105	150	119	80	69	69	72
July ..	100-105	105-110	152	119	84	69	70	73
Aug....	110	115	155	122	81	71	71	..
Sept....	110	115	161	120	79	73	72	..
Oct....	115-120	120	164	110	78	75	76	..
Nov....	120-125	125	176	103	80	75	80	..
Dec....	120	125	169	99	80	77	81	..

The rise in the percentage in June was due to an increase in the food group from 66 to 67 per cent. above the pre-war level.

Petrol Consumption.—As the Customs authorities are now publishing the details of oil exports and re-exports under the headings of the different products to correspond with the headings of the oil imports, it is possible to estimate the consumption of motor spirit with a greater degree of accuracy. Imports of petrol for the half-year ended June amount to 217,199,299 gallons, as compared with 184,990,147 gallons for the corresponding half of 1924. Estimating the amount of petrol refined in this country at 20 per cent. of the amount of crude oil imported, the new supply of petrol for the six months amounts to 270,459,175 gallons, against 222,907,973 gallons for the first half of 1924. Exports of petrol refined in this country are shown as 22,455,905 gallons and re-exports as 21,059,955 gallons, as compared with 10,089,675 gallons and 17,747,889 gallons respectively last year. This leaves the net supply at 226,943,315 gallons for the first half of this year, against 195,070,409 gallons for the first half of 1924. Assuming that there has been no change in stocks, and that the amount of petrol refined from Scottish shale oil together with the amount of benzol refined from crude tar would increase supplies by about 8,000,000 gallons, we arrive at a consumption of 234,943,315 gallons for motor spirit this half-year, as compared with 187,070,409 gallons in the corresponding half of 1924, an increase of about 25 per cent. Seeing that the increase in consumption of motor spirit last year was nearly 30 per cent., the figures this year point to a very large trade. There is no doubt that the stabilisation of the price of petrol by the large distributing companies at the low level reached in September, 1924, has acted as a stimulus to the increase in motor traffic. The price of petrol has recently been advanced by some small merchants, who are anxious to advance in gasoline prices in the United States, but there is no indication that the large petrol distributors are contemplating any change in their prices, in view of the success of their policy of small margins on a high turnover.

The Rubber Boom.—A Stock Exchange correspondent writes:—Last Monday was a day which is likely to stand out for many years to come in the annals of the rubber share market as being one of the maddest that the Stock Exchange has witnessed since the outbreak of war. Over the week-end there was a sharp rise in the price of the raw material. The public’s appetite was evidently whetted by the Stock Exchange holiday on the previous Saturday, and, as soon as business started this week, it assumed proportions so gigantic as to defeat literally its own eager desires. Round the principal dealers in the market there surged impatient crowds of brokers and authorised clerks, anxious to buy rubber shares, and caring little what price they paid so long as they were able to execute their orders and escape from the heated furnace of the market ardour. One firm dealing in the smaller-priced varieties turned over 260,000 shares in the day, this excluding every order under 1,000 shares, and also leaving out of account a few lines running into 50,000 shares or more. Shares were quoted at different prices in different parts of the market. Not everyone was a buyer, but it seemed as though 95 per cent. of the brokers wanted to purchase shares. Considerations of merit in the shares dealt in were disregarded. The very fury of the movement led to the enthusiasm being spent and tired by the end of the day. The Government have definitely declined to interfere with the operation of the Stevenson restriction scheme. The present Chancellor of the Exchequer was the original author, it may be recalled, of the proposal to set up the Stevenson Committee. Mr Churchill must be watching with profound interest the result of his action, taken with the professed intention of saving the British rubber industry from destruction. The Government’s attitude, as enunciated in Parliament this week, is that the present high price of the produce will prove to be temporary. Common sense will endorse this official viewpoint. Rubber, no more than anything else, can for long command a price that offers a profit of 400 to 500 per cent.

for spot delivery. To-day's position is abnormal; the economic situation artificial. This the Government recognise, as do business men. The speculator and the gambler are struggling to make their fortunes before the boom shall break. Of some such fracture the market gave signs on Wednesday, when tens of thousands of shares were forced to market in consequence of a slight reaction in raw rubber. The supply became absorbed without much effort, and the market rallied. But the public had been given a brief object lesson in what can happen when the brake is applied to any wild buying movement. The people who have been selling Home Railway stocks, tobacco shares, Kaffirs—even the War Loan—in order to embark, at tolerably high prices, upon speculation in the popular market of the moment may find that even this risky policy may provide satisfactory results if the expected buying of rubber shares should materialise, next week, for the mid-August settlement. So long as rubber remains at anything like 4s per lb for cash, and at relatively high prices for later positions, there can hardly be a real slump in the market for rubber shares.

Agricultural Progress.—A correspondent writes:—The annual show of the Royal Agricultural Society affords an opportunity each year of a survey not only of the livestock interest, but also of the progress made in the application of mechanical ingenuity to the processes of the farm. The live-stock at the Chester Show were up to the usual high standard of quality, and the notable features were the predominance of dairy cattle and the continued multiplication of breeds. In the implement section the mole-drainer shown by John Fowler and Co. was the most important novelty. That the draining of land has been generally neglected for many years past is recognised, but its high cost at present is a serious deterrent. By this machine not only can the drain be bored, but pipes can be inserted without more digging than that of making pits or "lead holes" at intervals of 60 to 100 yards. The cost is reduced at from £4 3s 6d to £5 12s per acre, according to the width of the drains apart. These figures represent a saving of at least 50 per cent. One of the first-fruits of the Institute of Agricultural Engineering recently established at Oxford was a crop-drying plant shown by Gascoigne and Co., and applied to a hayrick. Hot air is generated and injected into a space formed in the interior of the rick. The idea seems sound, and it will no doubt be further developed. The silver medal of the society was awarded to three other new implements—a combined tractor harvester and binder shown by the International Harvester Company, a mower shown by Blackstone and Co., and a manure distributor shown by Birtwistle and Co. There were numerous other new implements, some of evident merit, which did not win the medal. It is clear that the makers of farm implements are alert in attempting to meet the needs of the times. Another sign of progress was the conference on the use of electricity in agriculture, held in the show yard under the chairmanship of Lord Bledisloe. The problem of the supply of cheap power to farms is not solved, though steady progress is being made in some districts. For its ultimate solution organisation over wide areas in a nationally co-ordinated scheme is needed.

Canada's Railway Problem.—For two months, writes our Ottawa correspondent, a special committee of the Canadian Senate has been holding behind closed doors an exhaustive inquiry into the country's railway problem, whose gravity has been steadily increasing each year. Under a guarantee that no statements or suggestions of witnesses would be published, a number of witnesses of the highest standing, including the presidents of the Canadian Pacific and Canadian National systems, Sir Herbert Holt, Sir Joseph Flavelle, Judge McKeown, the chairman of the Railway Commission, Sir Clifford Sifton, Mr D. B. Hanna, and some American railway experts, have freely expounded their views to the committee. Five alternative solutions were carefully examined, and the opinions of the witnesses about them invited. Four were rejected as politically or economically impossible, but the report of the committee recommends a fifth scheme as worthy of the Government's consideration. It proposes the amalgamation of the C.P.R. and C.N.R., under the

absolute control of a board of fifteen directors, of whom five would be nominated by the Government and five by the C.P.R. and the balance co-opted by these ten members. It suggests that the Canadian National system be re-valued on the basis of its earning power and its quota of capitalisation readjusted, that the C.P.R. dividend be guaranteed, and that any surplus over the C.P.R. dividend and the fixed charges on the new valuation of the C.N.R. be divided equally between the C.P.R. and the Government. Other issues are dealt with in the report, and it is understood that most of the witnesses took a very pessimistic view of the situation, and expressed the conviction that heroic remedies were necessary. The Senate as a body will probably not officially sponsor such a solution, but will urge the Government to give careful consideration to it or some alternative scheme of amalgamation.

The Rise in Copper.—A correspondent writes:—The feature this week in the non-ferrous metal markets has been the strength of copper, with a very marked expansion in the daily turnover. This is in accordance with the forecast made late in June, when it was suggested that the statistical position would bring about an improvement in the commodity. The dealings in standard copper since the beginning of the present month have been on a heavy scale, and this week sales of 1,500 tons to 2,500 tons have been recorded day by day. This has led to a further improvement in values, and at the mid-week session cash touched £62, with three months £63, electrolytic rising sharply to over £66 per ton. According to reports from the States, the copper market in New York is very firm, and rates have gone well above 14 cents per lb, both for nearby metal and for forward shipment. The June production goes to prove that the output is being kept down, and with deliveries well above current output the stocks at the close of last month were down to 81,250 tons, against 122,500 tons at the close of March last. There has thus been a shrinkage of well over 40,000 tons on the quarter, and this is certainly a bull point for the commodity. Recent offers for fairly big quantities of refined copper sent from this side to the States have been refused, and it certainly looks as though all the second-hand metal had been cleared off the market. There is, considering all things, a good demand for Continental account, and French business is becoming more prominent again. There are numerous schemes under contemplation, including electrifying railways and building cruisers, which will call for large supplies of copper, and thus the outlook for the commodity must be considered favourable, with every prospect of a further recovery in values once the industrial outlook is better again.

Furness, Withy, and Co.—A slight decrease in profits is recorded in the report of Furness, Withy, and Co. for the year ended April 30th last. The report mentions that, owing to the continued depression in the shipping industry, the profits are again derived mainly from other branches of the company's business and from dividends on investments. As will be seen from the table below, profits are now below the level of the years immediately preceding the war:—

	Total Profit.	Depreciation.	Reserve, &c.	Dividends.	Ord. Rate.
1908-9	£ 267,075	£ 114,897	£ ..	£ 166,361	% 5
1909-10	332,992	145,417	..	187,575	5
1910-11	440,732	179,603	50,000	220,620	7½
1911-12	653,207	240,000	125,000	270,620	10

1913-14	620,928	350,000	..	270,620	10
1914-15	653,548	350,000	15,000	268,431	10
1915-16	1,386,960	350,000	300,000	463,125	20
1916-17	*787,564	350,000	200,000	456,250	20
1917-18	645,077	200,000	..	456,250	20
1918-19	747,661	..	300,000	452,500	20
1919-20	1,004,821	500,000	..	452,500	10
1920-21	782,944	300,000	..	452,500	10
1921-22	655,207	..	200,000	452,500	10
1922-23	552,511	200,000	..	356,250	7½
1923-24	572,443	200,000	..	358,122	7½
1924-25	528,742	200,000	..	358,122	7½

* After payment of two years' Excess Profits Duty.

Depreciation is again credited with £200,000, and the ordinary dividend is maintained at 5 per cent., with a bonus of 2½ per cent., both free of income-tax, leaving £187,259 to be carried forward, as against £216,637 brought into the accounts from the previous year. The balance-sheet shows that the item "steamships, investments in associated shipping companies, and payments on account of new tonnage" stands at £4,873,730, as against £5,402,906 a year ago. Investments in gilt-edged securities total £3,863,237, as compared with £3,661,073. Total assets are well over half a million higher at £12,677,391. A detailed analysis of the balance-sheet will be found in a later column.

English Sewing Cotton.—A substantial reduction in profits is shown in the accounts of the English Sewing Cotton Company, Limited, for the year ended March 31st last, the net profit being over £180,000 lower at £450,100. As will be seen from the table below, however, this figure is considerably better than the profit for 1920-21 and 1921-22:—

	1913-14.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
Trading profits	£ 376,365	£ 794,136	£ 254,242	£ 414,915	£ 725,328	£ 712,352	£ 521,975

* Includes £200,000 transferred from stock contingencies reserve.

There is a reserve fund for the equalisation of dividends amounting to £400,000, so that the directors appear to be justified in maintaining the dividend on the ordinary shares at 15 per cent., together with a bonus of 5 per cent. No allocation is made to reserve, but a transfer of £11,700 goes to pension fund. The balance-sheet shows a reduction of £80,300 in stock-in-trade, which, valued on the basis of cost or market value, whichever is lower, stands at £733,000. Investments in British Government securities figure at the substantial amount of £1,219,000, an increase of £49,000 as compared with last year, while cash is £33,300 higher at £72,200. Creditors have been reduced by £124,200 to £221,700, but £139,100, or or £117,300 more, is owed to subsidiary and other companies. An analysis of the balance-sheet will be found in another column.

British Celanese.—"Subject to the adequacy of the provision for depreciation, in our opinion the.....balance-sheet is properly drawn up." We extract these words from the auditors' report attached to the report and accounts of British Celanese, Limited, for the year ended February 28, 1925. Shareholders have little to congratulate themselves about, in spite of optimism expressed in the directors' report. It is true that belatedly appears the notice that "These accounts have been drawn up in a somewhat different form, and in more detail than heretofore, in order that shareholders shall have as full information as possible as to the position and progress of the business." It would be interesting to know from whence comes this sudden desire to enlighten shareholders about their own property. Anyway, the recognition that shareholders are entitled to more light is a welcome sign. Frankly, the accounts are not clear. In the accounts for the financial year 1924 we read the definite statement that there is a "trading loss for the year ended February 29, 1924," of £34,478. Yet in the accounts for 1925 it is stated that "the trading profit for the year under review amounted to £408,809, as compared with £101,559 for the previous year. This trading profit is, however, something in the nature of an optimist's hope, for we find that net profits are whittled down to £193,494, these finally disappearing by transferring them to a depreciation reserve. The report naively points out that "hitherto it has not been possible to provide for depreciation." Meanwhile the balance-sheet presents a sorry spectacle. Assets total £6,283,792,

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.

Capital Authorised £3,000,000

Paid-Up Capital 1,050,000

Reserve Fund and Undivided Profits 1,458,221

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1. JAMES STEUART, Chief Manager.

showing a deficit of £565,827 when compared with liabilities. Out of these assets goodwill, patents, and patent rights account for £1,886,945. This item is taken at cost. In the accounts for the year ended June 30, 1920, this item is given as £1,884,678. Evidently the goodwill has not conducted to profits. We would suggest that when the depreciation reserve is to be allocated, this item should receive generous treatment. Although the prospectus of this concern, issued in March, 1920, held out promise of early success, and the board had "exact knowledge of the cost of manufacture," we ventured to point out at the time that the company had yet to prove that it could "produce artificial silk on a commercial basis." The balance-sheet is fully analysed on another page. We wonder if it has occurred to the directors that reconstruction might be a subject worthy of discussion.

Malayan Tin Dredging Results.—Our mining correspondent writes:—Three well-known companies of this group—the Tronoh, the Sungei Besi, and the Ipoh—held their annual meetings yesterday. The price of tin having ruled at an increased average during the period covered by the reports presented, the latter naturally show increased profits. In some respects, however, the operating results differ considerably. Thus both the Tronoh and the Sungei Besi (its subsidiary) turned out a slightly larger quantity of the metal than in 1923; but whereas the tin ore produced by the former company realised an average of £146 per ton, that of the latter fetched £152 12s. The profit from mining of the Tronoh amounted to £68,800, supplemented by £13,700 from realisation of investments. For 1923 the figures were £49,700 and £4,350 respectively. Payment of dividends totalling 5s. per share (against 4s.), left a balance of £63,500. This is carried forward, presumably to assist in the financing of the new area of 1,300 acres, although additional capital is to be raised by the issue of 25,000 shares on bonus terms. The fortunate shareholders are also receiving one bonus share in respect of every eight shares held. Investments figure in the balance-sheet at £161,000, an increase of over £30,000 on the year. The holdings are not specified, but at the date of the latest available information they included 300,000 shares in the Sungei Way, 71,800 in the Sungei Besi, 14,300 in the Kepong Dredging, and 16,500 (preference) in the Pengkalen. Last year's profit of the Sungei Besi, £46,200, showed an expansion of £15,600 upon that of 1923. The dividend total, however, remained at 4s. per share, the substantially increased balance of £30,500 being carried forward "in view of commitments in the acquisition of further areas." While this procedure will doubtless redound to the benefit of the shareholders in the long run, it has proved a great disappointment to those who purchased shares on the prospect of increased dividends in the near future. On the basis of the distributions of the past two years, the shares, even at 2½, yield no more than 8 per cent. Six months ago the price was around £3. Some people had expected that Ipoh would pay a final dividend of 1s 6d, or possibly even 1s 9d, per share. The actual declaration of 1s 3d made a total for the year of 3s 6d, as against 2s 6d for the twelve months ended March, 1924. The accounts show that a larger dividend could have been paid, a sum of £20,000 being placed to reserve. On last year's distributions the yield indicated is 10 per cent. Should the

metal maintain anything like its present enhanced price, increased returns may be anticipated for 1925-26. The directors intimate that of the total area of 518 acres owned, 123 acres have so far been worked out.

Transvaal Gold Output in June.—According to the figures published by the Transvaal Chamber of Mines, the gold output of the mines of the Transvaal declined from 813,249 ozs of fine gold in May to 780,251 ozs in June. The output for the month of June, 1924, was 773,053 ozs of fine gold. The following table shows the monthly output for the past six years:—

	1919.	1920.	1921.	1922.	1923.	1924.	1925.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

The following table shows the number of natives employed at the end of the last few months by members of the Witwatersrand Native Labour Association and Contractors:—

	Nov., 1924.	Dec., 1924.	Jan., 1925.	Feb., 1925.	Mar., 1925.	Apr., 1925.	May, 1925.	June, 1925.
Gold mines	177,733	177,292	180,970	182,099	179,061	176,188	172,982	169,810
Coal mines	15,183	15,121	15,279	15,530	15,634	15,823	16,180	16,474
Diamond	2,769	2,739	3,011	3,187	2,969	3,071	3,172	2,969
	195,685	195,152	199,260	200,816	197,664	195,082	192,334	189,273

The number employed at the gold and diamond mines again shows a decline.

THE eleventh International Fair will be held at Prague from September 6th to 13th.

Overseas Correspondence.

UNITED STATES.—STOCK MARKETS—THE OUTLOOK—COMMODITY PRICES—CROP PROSPECTS—TRADE.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 9.

HAVING disregarded the California earthquake and 6 per cent. call money, the markets were called on to meet another test, and came through in impressive fashion. Quite unexpectedly, the suspension of a large Stock Exchange house was announced last Friday morning. The assets and liabilities involved were stated to run between \$30,000,000 and \$35,000,000, which placed the failure among the largest of its class. The difficulties of the firm in question, which was identified with large Chicago grain interests, were precipitated by the calling of bank loans. The volume of selling was not, however, large, and the market was not much worse than irregular. The irregularity that resulted from the announcement lasted, furthermore, for only an hour or two. The market, in other words, displayed a rather impressive ability to disregard an unexpected piece of bad news, a circumstance that argues well for its technical position. At the present moment it appears that the matter may be cleared up without a protracted receivership.

The bond market continues to display a steady tone, although events seem to prove that the huge reinvestment demand that centres around the turn of the half-year had been pretty well anticipated. Bond prices weakened slightly, in fact, toward the last of June as it became apparent that the dealers had stocked up with securities with which to supply their customers when the July 1st

funds became available. Since the first of the month the market has turned upward again, but the gains average out at relatively small fractions. Many shrewd observers now believe that the bond market will reach its peak in the fall, and then will ease off moderately as expanding business makes larger demands for capital. At the same time, some of these observers declare that after this reaction has run its course, the next rally will reach a higher top than will be seen this year. Altogether, there is a strong undertone of confidence with regard to the future of bond prices. The money market, meanwhile, has achieved the relaxation that was expected to follow the completion of the special early July transactions. Call money on the Stock Exchange, which reached 6 per cent. about a week ago, is now back to 3½ per cent. The other forms of money are unchanged, but, it must be remembered, these forms did not advance with the call rate. In order to meet the special demands of the period, the member banks increased their discounts with the Federal Reserve banks, and the latter entered the open market and bought rather freely of short-term paper, thus helping to keep the sensitive call rate from advancing too sharply. Circulation also expanded to supply the currency needed to finance the holiday. As a result of these things and of a loss of \$25,000,000 in gold holdings, the reserve ratio of the system fell 2.1 per cent. to 74.9 per cent. Changes of this kind are, however, quite normal to the season. The succeeding Federal Reserve statements probably will reveal a corresponding contraction as the effects of the July 1st demands disappear. Easy money until, and if, trade and industry pick up in the autumn, continues to be generally expected.

Both Dun's and Bradstreet's indices of wholesale commodity prices moved to slightly higher levels during June. The Dun index gained 0.4 of 1 per cent., and on July 1st stood at 162 per cent. of the 1913 average, as compared with 153 a year ago. The Bradstreet index gained 1.7 per cent., and came to 150 per cent. of pre-war, as compared with 133 on July 1st last year. The advance in the Dun index constituted the first gain since February 1st; that in the Bradstreet index followed an advance during May. These statistics suggest what is the fact—namely, that the movement of prices during the last month or so has been distinctly irregular. What is apparent, however, is that a clear-cut movement came to an end in the spring, this movement being a fairly sharp reaction that reflected the slackening in industry brought on by the rising prices of the post-election period and by the high production of the first quarter of the year. How irregular the price movement is may be seen from the fact that while breadstuffs fell sharply during June, this loss found an offset in a sharp rise in meats. The industrial groups of commodities were relatively little changed in June, textiles being up slightly and metals being off a little. If one were to say that the general level is holding relatively steady in preparation for a new swing in industry, and that fairly sharp group movements meanwhile are taking place in response to special circumstances, one probably would not go far wrong.

The Government report on the condition of the cotton crop as of June 25th proved quite a surprise. Earlier ideas of a big crop had been somewhat modified, particularly as the Government had just reduced the pars at which the estimate was to be made from 208 to 195 bales to the acre. Notwithstanding these things, the Government placed the indicated yield at 14,339,000 bales. This crop, if realised, would be the third largest on record. It would be exceeded only by the 14,885,000 bale crop of 1911, and by the high record crop of 16,135,000 bales that was harvested in 1914. The feature of the report was the enormous estimate of acreage, 46,448,000 setting a new high record for all time, and comparing with 42,641,000 a year ago. Rightly or wrongly, the market felt that the Government estimators had been inclined to give the benefit of the doubt to the farmers. As a result, it swung over from its expectation of a smaller yield to one calling for even the latest Government figures to be exceeded. Prices broke sharply on the announcement, the leading futures reacting about one cent a pound to about 23 cents. About two-thirds of the loss subsequently was recovered, the rally being helped by bullish weather reports.

This afternoon's Government crop report confirmed expectations of a big corn crop. The Department of Agriculture places the condition of the crop as of July 1st at 86.4. This compares with 72.0 a year ago, and with a ten-year average of 83.6. The estimated yield is placed at 3,095,000,000 bushels, which compares with last year's final of 2,437,000,000 and with a five-year average of 2,935,000,000. As corn is perhaps the most important to the farmer of all the crops, the Government's estimate will be interpreted as a bullish point on general business. The report also revealed an improvement in the estimated condition of the wheat crop. The condition of winter wheat is reduced from 66.5 on June 1st to 65.9, and the yield on this part of the crop is estimated 3,000,000 bushels lower at 404,000,000 bushels. The condition of spring wheat, on the other hand, has been marked up from 87.1 to 88.1, and the estimated yield has been raised from 254,000,000 bushels to 276,000,000. As a result the total yield of wheat now is placed at 680,000,000 bushels, as against 661,000,000 in the June 1st estimate. That the wheat crop is subnormal to date may be seen when these figures are compared with last year's yield of 873,000,000 bushels and with the five-year average of 837,000,000. However, there is still time for a further improvement in the crop, while it also must be noted that the farmers are receiving some 50 cents more a bushel for their wheat than they did a year ago. Altogether it would appear that the crops promise to be sufficiently good to support a satisfactory degree of prosperity throughout the country. With money plentiful and cheap, with industry well liquidated, with employment and purchasing power high, and with good crops, the prospects seem promising. However, there is little expectation that a business revival will develop inflationary tendencies.

Industrial news continues encouraging, although the normal quietness of the summer season prevents it from being decisive. The steel industry still is operating at close to 70 per cent. of capacity, and the producers are taking a firmer line in the matter of prices. They anticipate a good autumn business. Pig-iron prices still are at low levels; but here, too, sentiment among the producers is more cheerful. Automobile manufacture is showing the normal seasonal slackening, but output is holding remarkably high. Preliminary estimates for June suggest that about 370,000 passenger cars were produced during that month, a record that is only slightly below those established during April and May.

FRANCE.—BUDGET PASSED—NEXT YEAR'S BUDGET NEW TAXES.

(FROM OUR CORRESPONDENT.)

PARIS, July 15.

AFTER over nine months of discussion, the Budget Bill for 1925, which was originally drafted by M. Clementel, M. Herriot's Minister of Finance, in the hope that it would be passed into law by Christmas, was finally adopted after repeated all-night sittings, shortly before six o'clock on Monday morning, and has already become operative. Never, it may safely be said, has a French Budget Bill undergone so many vicissitudes and transformations. It has undergone modifications without end, not only at the hands of both Houses of Parliament, but also by three successive Finance Ministers, and its final passing has been due above all to the extraordinary persistence, grip of Parliamentary tactics, and financial genius of M. Caillaux, whom nobody believed a year ago would ever hold high office in the State again. The result of all the changes that have been made has been crystallised into the following figures, which represent the provisional aspect of the French national balance-sheet for 1925 (the word provisional being necessary because it yet remains to be seen what effect the supplementary credits that are sure to be asked for and the unexpected balances of the authorised credits will have upon these figures when the real final statement of the year's accounts is presented after the close of the present financial year):—

	Francs.
Estimated revenue.....	33,150,844,678
Estimated expenditure	33,137,180,618
Estimated surplus	13,664,060

Both M. Caillaux and his predecessor, it will be recalled, insisted that the Budget for 1925 must be a balanced Budget, and undoubtedly, in the qualified sense in which the term was used, the Finance Act of 1925 conforms to that stipulation. If "a balanced Budget" means one in which provision is made for all the authorised expenditure of the year to be met from taxation, which was the definition given to the term by both M. Clementel and his successor, then the claim put forward for the present Finance Act may be admitted as well founded. On the other hand, from the normal or British point of view, the French Budget cannot yet be regarded as having anything like attained what is usually regarded as a balance in the proper sense of the word. This, indeed, was recognised by no less an authority than M. Henry Bérenger, the *rapporteur général* of the Budget in the Senate, when he announced the final figures. "The Budget is sincere," he stated, "in the form in which it has been presented. But between the Treasury and the annual Budget there is still a difference of several milliards, including certain capital expenditures which do not belong to the Budget, but also certain disbursements which should be included in the Budget, which are still extra-Budgetary." Chief among these are, of course, the expenditure which still has to be faced in regard to the reconstitution of the devastated regions, and a large proportion of the necessary expenditure on war pensions. It was M. Caillaux's original intention to utilise the French share of the yield from the operation of the Dawes Plan for some of these purposes, and in his original revenue estimates he ignored entirely the fact that this country will receive a certain amount from this source during the current year. Under pressure of circumstances, however, he was ultimately compelled to incorporate the estimated yield from the Dawes Plan on the revenue side of his Budget, and leave the amount required for reconstitution and pension purposes to be found by other means.

It would be churlish, however, to condemn the Finance Minister on this ground. M. Caillaux, it will be agreed, has handled in a masterly manner the first part of the colossal task of restoring the national finances, and his unqualified success so far is an augury that he will have to a very large extent the support of all parties in the Chamber and the Senate—with the exception, perhaps, of the doctrinaire Socialists—in his efforts to carry out the remainder of his plans. His next step, which has already been authorised, is the issue of the new form of 4 per cent. bonds, which are designed to get rid of the perilous burden of floating debt constituted by the 56 or more milliards of National Defence bonds, by transforming them into Perpetual Rentes. The belief that M. Caillaux's brilliant efforts have already resulted in inspiring renewed confidence in investors has again been confirmed by the fact that on July 10th and 11th the total purchases of National Defence bonds in Paris alone exceeded the demands for repayment by 100,000,000f. Similar reports have been received from provincial France.

Although both Chambers have adjourned until October, the Finance Minister is already well advanced with his Budget for 1926, which he proposes to hammer through at any cost before the end of the current year, in order to avoid the costly expedient of *douzièmes provisoires* in the future. The net result of the eight monthly votes on account that have had to be asked for this year is that the Treasury, owing to the delay in passing the Budget into law, has been deprived of nearly three-quarters of the yield that would have been received from the new taxes had they come into operation on January 1st. To this end M. Caillaux, before the Decree proroguing the Chambers was signed, formally laid before Parliament his Budget Bill for 1926 in blank. By this means it will be possible for the Finance Commission of the Chamber to begin its work at once, and to consider the various credits as and when they are successively laid before them. It is probable the Commission will be convoked by the end of July, so that the Minister's further proposals may be thoroughly threshed out during the recess. These proposals will include those which M. Caillaux is understood to be framing for dealing with the inter-Ally debts.

The taxes imposed by the new Budget Act include many novelties, among them being an appreciable revision upwards of the schedule rates for income-tax on agricultural

profits, which have been brought approximately nearer to the level of those in respect of incomes derived from other industries. The amount of abatement allowed in respect of incomes derived from wages and salaries has been raised from 6,000f to 7,000f, and has been made uniform throughout the country, instead of varying according to population. A tax of 68f per head has been imposed on foreigners, who must procure an "identity card" (renewable every two years) if they reside more than two months in France, this being reduced to 10f in the cases of foreign wage-earners, "fathers or mothers of one or more French children," students and authors, the tax in the case of employees being payable by the employer. The scale of taxation on motor-cars is substantially increased. A tax of 20 per cent. is imposed on the total net revenue of all insurance companies. This replaces M. Caillaux's original proposal that 50 per cent. of all premiums should be handed over to the State; but it is understood to be intended merely as a preliminary step with a view to an eventual "participation by the State" in the profits of such "practical monopolies" as M. Caillaux regards the insurance industry to be. The adoption of this proposal was largely due to the revelation that for many years past most of the French insurance companies have escaped scheduled income-tax by carrying their profits to reserve and investing them. One company, which declared a loss on the year, admitted having 36 millions of invested reserves.

GERMANY.—VALORISATION OF BONDS—COMMERCIAL TREATIES AND TARIFF—TAXATION—CREDIT—CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, July 15.

THE amendment in Reichstag Committee of the Public Debts Valorisation Bill by reducing to half the already meagre dole to "new" bondholders caused a great stir here, and, judging by reports from London and New York, has evoked protests abroad. Immediately after the amendment was accepted, all bourses closed in protest for one day; and federal, state and municipal bonds are removed from the bourse quotation lists, dealings in them being forbidden. The Bankers' Association has also protested against the amendment. The ground of these protests is that the bonds were bought and sold for four months on the basis of Cabinet and party declarations that they would be valorised to a certain measure, and that the sudden reduction to half is a blow to confidence, and will damage credit at home and abroad. This view seems to be justified. But foreign protests based on the belief that "new" bondholders will suffer material losses from the amendment, and that in general they will lose on their investments or speculations, indicate misunderstanding. As reported last week, "new" bondholders (those who acquired after June 30, 1920) are to get 25 reichsmarks nominal of new "loan redemption debt" in exchange for 1,000 marks nominal of their old (paper-mark) loans, and the new bonds will bear no interest until after Reparations are paid. The original Bill promised 50 reichsmarks per 1,000. The Reichstag Valorisation Committee a week ago accepted a snap Socialist amendment reducing the amount to 25 marks. Thereupon began the protests. The protests from German quarters are, however, merely on principle. According to actuarial calculations (based on the present high rates of interest), the 50 reichsmarks originally to be given per 1,000 marks nominal have a present value of about 52 gold pfennigs. The original valorisation was, therefore, equivalent to repudiation; and only very large "new" bondholders would have found it worth their while to hand in their paper-mark bonds for exchange; in fact, the whole 50 milliards nominal which are officially estimated to be in "new" hands would have had a present value of about £12,500,000. Materially, and apart from the question of principle, the reduction to 25 reichsmarks is therefore of no importance. Further, the "new" bondholders will not sacrifice much except their expectations. The bonds were mostly bought in the expectation that the paper-mark would either itself increase in gold value or would be retained and fixed by financial measures at some

moderate proportion of its old gold value. In either of these cases the value of bonds would have automatically increased. The "new" bondholders invested practically nothing. Before 1923 bonds were quoted in paper-marks below par, there being no question of valorisation; a bond's then gold value depended only upon the value of the mark at the time of purchase. Before 1923 War Loan sold at around 80 paper-marks per 100 marks nominal. On the first bourse day of 1923 it sold at around 81. With the dollar exchange at 7,500, and the mark's depreciation 1,800 paper-marks to 1 gold mark, War Loan cost about 5 gold pfennigs per 100 marks nominal. When the mark exchange in 1923 began its runaway course, bond paper-mark quotations began to rise; but the gold prices remained microscopic, and at the end of the year War Loan (quotation, 50 milliard paper-marks per 100 marks nominal, at exchange of one billion paper-marks to one gold mark) was still selling at about 5 gold pfennigs per 100 marks. Between June, 1920 (the date qualifying "new" bondholders), and the end of 1922 the gold prices of bonds on the Bourse were also microscopic. "New" bondholders who acquired before 1924 will, therefore, lose nothing; they will make a profit of several hundred per cent. In 1924, when the Valorisation question first came up, gold prices of bonds rose considerably. At the end of 1924 War Loan sold at 85 gold pfennigs per 100 marks. As the holders will get "loan redemption bonds" for 2 marks 50 pfennigs in new currency, with an estimated present value of some 25 pfennigs, they will lose; but the sum here involved is wholly insignificant. On the average "new holders" will get much more than they invested. The real losers are such of the "old" bondholders as subscribed at first or bought when the mark exchange stood high, who to-day are promised only 12½ per cent. valorisation. The handling of the Valorisation questions by the Cabinet and Reichstag has not been skilful, but the foreign belief that some new drastic expropriation is involved by the amendment of last week is mistaken. The expropriation took place when the mark depreciated, and nobody except very badly informed speculators believed that it would ever be made good.

The Tariff Bill has made little progress. The Food Duties continue to dominate the question; but the Reichstag Commission of Inquiry has not yet rendered its report. Owing to the attitude of the Centre, it is doubtful whether the proposed minimum Food Duties can be imposed. The German Nationals insist upon the minimal duties, threaten to wreck the whole Bill if they do not get them, and oppose the suggested compromise of a sliding scale. The Foreign Minister desires to get the Commercial Treaties, in particular that with Great Britain, through the Reichstag at once, but the People's party has raised objections to the British Treaty. The pig-iron duties have been upheld in Committee, against Socialist and Democratic demands for a reduction. A mutual most-favoured-nation treaty agreement has been come to with Turkey, and a provisional agreement for four months with France admitting Saar iron duty free into Germany and admitting limited quantities of German goods into the Saar district. No understanding has been come to with Poland, and a trade war is under way. The provisional Commercial Treaty with Belgium proclaims in principle for mutual most-favoured-nation treatment; but for periods of six months or one year exceptions for certain goods are made, Belgium undertaking not to impose on these goods duties exceeding her minimum by more than 50 per cent., while Germany imposes her normal tariff on Belgian goods on her exception list. For other classes of goods both countries make concessions. The negotiations for the provisional Commercial Treaty with France have been suspended until September 15th, and until then both countries promise to take no aggressive trade measures. Meantime, the undertaking to admit French and Luxemburg iron does not come into force; but the question of Saar iron is provisionally regulated by the agreement mentioned above. The bounty payable upon iron exports has been increased from (for bars) 12½ to 15 marks per metric ton. The fund for these bounties is fed by producers themselves. Iron trade journals state that whereas bars here sell at 130 marks per ton, they are exported at 114 marks, or net (after deduction of cost of

water transport) 110 marks, a price at which, even, including the 12½ marks bounty, is below the home price and even the production cost. The iron and steel market, both home and export, is increasingly dull. In the coal trade further discharges of miners are reported: Coal output is as follows:—

	JANUARY to MAY INCLUSIVE. (Metric Tons.)		
	Coal.	Lignite.	Coke.
1925	54,673,980 ..	56,724,170 ..	11,820,616 ..
1924	42,397,564 ..	49,271,739 ..	8,461,936 ..
1913 (present area)	58,084,360 ..	35,041,459 ..	12,243,418 ..
(then area)	77,048,129 ..	35,041,459 ..	13,333,419 ..

No agreement has been yet come to concerning the distribution of the tax yield between Republic, States, and municipalities. The Sales Tax is to be reduced from 1½ to 1¼ per cent. A Cabinet Bill has been submitted freeing professional men and artists from Sales Tax on their receipts in so far as these do not exceed 1,500 marks per quarter. Concerning the beer tax, a compromise has been come to, under which the yield will be 40 to 45 per cent. above the present yield. The new tax rises from 6 marks per hectolitre on the first 1,000 h brewed to 9 marks per h on production exceeding 60,000 h. Money remained tight between the end of last month and the beginning of this week. Interest rates have fallen slightly in the last few days, but new tightness is expected, owing to the impending quarterly Income-tax and Sales Tax payments. The Reichsbank's report for the first week of July shows the usual decline in credits. Discounts fell by 112 million marks to 1,579½ million marks; circulation by 32 million marks to 2,422½ million marks. Gold cover was 43.6 per cent.; combined gold and exchange cover 58.2 per cent. The wholesale prices index number on July 8th was 135.8, against 134.9 one week earlier. Under a decision of the Reichstag Taxation Committee rents are to be raised to at least the pre-war level by April, 1926, and thereafter between 15 and 20 per cent. of gross rents will be taken for subsidising house-building. Bankruptcies in the first half of 1925 numbered 4,324, against 1,184 in the corresponding half of 1924. Bankruptcies now average about the same as before the war.

The crops report for July 1st shows a slight deterioration in conditions, due to drought. This in the main affected only spring sowings, and the index figures for all crops are still materially better than at the same date in 1924. With the exception of spring wheat and oats, all crops register as better than middling.

ITALY.—THE FOREIGN EXCHANGES SCORE—EXTRAORDINARY PAYMENTS FOR WHEAT—PAPER ISSUES STATIONARY—THE INTER-ALLIED DEBT PROBLEM.

(FROM OUR CORRESPONDENT.)

TURIN, July 4.

THE new turmoil has apparently spent itself. The past month was characterised by a continuous rise in the foreign exchanges rates, which eventually took a rather alarming turn. The financial world has been since February last in an excitable mood. I have endeavoured to describe in past letters the origin and the phases of the crisis so far as relates to bourses, quotations of joint-stock securities, losses of operators, and so on. Operators, when their mind was concentrated on the slowing-down of prices of variable dividends securities, were not alive to the undercurrents in the foreign exchanges. Meanwhile, little by little there was originating in the exchange market a very delicate situation.

In the year 1924 imports were exceptionally heavy:—19,388.4 millions lire against exports of 14,318.3 millions lire. The adverse movement was accentuated in the first four months of the present year:—9,088.3 million lire on the side of imports and 5,346.1 on the side of exports. The excess of imports over exports, which was 5,070.1 million lire in 1924, reached 3,742.2 million lire for the four months January to April, 1925. The most important cause of the adverse balance was the low wheat yield of the past agricultural year. In the four months from January to April, 1925, we were obliged to import 1,198,312 tons of wheat, against 582,865 tons in the corresponding months of the preceding year. The exceptional

LONDON PARIS
26 Old Broad Street 3 & 5 Place Vendôme

rise in the adverse commercial balance was not compensated by invisible exports. The number of foreign visitors in Italy is, indeed, increasing enormously, especially since April, in virtue of the jubilee year of the Roman Catholic Church. But we are feeling the pinch of diminished remittances of emigrants from America. In the first place, the quota of Italians admitted in the United States is ridiculously low; and, in the second place, emigrants already living in America are urged to deposit their savings in local savings banks, so that remittances to Italy may be diminished.

Against the increased need of foreign exchanges, importers were slow to cover themselves. When in the period January to April the price of the pound sterling oscillated between 115 and 117 lire, importers postponed covering, in the hope that the price to be paid might diminish. They preferred to borrow exchanges from month to month. Exchange borrowings were repeatedly prolonged, until early in June importers, seeing that foreign exchanges, instead of receding, continued to rise, suddenly took alarm. Then came a stampede, when, fearing still higher increases, everyone began to cover.

A second cause of the rise was the conduct of certain exporters, who, seeing sterling and dollars go up, preferred not to sell bills received in payment of goods sold abroad, in the hope of a more profitable sale later. The general public came third. When the pound reached 130 lire wild fancies spread: that the lira would be de-valued; that the Government planned the introduction of a new gold-lira, which the public assumed would mean outright cancelling of the present paper-lira. The beginning of official Washington conversations on the inter-Allied debt problems and the publication of the huge bill of \$2,133 millions presented by America instantly persuaded some people that we would never be able to pay, that the State was bound to bankruptcy, and that the lira would follow the German mark. From Saturday, June 27th, to Wednesday, July 1st, we lived days of true panic. People began to sell Consols at every price: old 3.50 per cent. Consols were to be had for 58 lire net, new 5 per cent. for 80, Treasury seven and nine-year bonds were offered for 80 lire, a price which in certain cases of bonds falling due in 1928 signified an investment at 12 or 13 per cent. July 1st was the blackest day, when Consols and Treasury bonds found no buyers, and the exchange on London ran almost to 150 lire, and on New York to 30.60. The reaction from the worst was sudden. Signor Mussolini promptly issued a declaration that the Government had not even thought of a gold-lira; and the Washington conversations were suspended until the Italian delegates could bring back from Italy facts and figures illustrating the effective ability of Italy to pay.

At this point reaction was imminent. Foreign exchanges receded; and at the time of writing (July 4th) the pound sterling is to be had for 133 lire and dollar for 28; old 3.50 per cent. Consols are up to 67.40; new 5 per cent. to 86.35; and seven and nine-year Treasury bonds to 91 lire. People are wondering how they were scared out of their securities at the level of 58 and 80 lire respectively.

Figures of total paper issues are as follows:—December 31, 1923, 19,674.3 million lire; June 30, 1924, 19,952.8. December 31, 1924, 20,514.2; May 31,

1925, 19,843.5. As long as the Treasury and banks of issue do not increase the quantity of paper issued, how can paper depreciate? In an editorial note, your newspaper wondered why Italy delayed, notwithstanding our good financial situation, to stabilise the lira at a fixed gold exchange. It is extensively felt in Italian financial circles that the problem of the stabilisation of the lira cannot be put on the practical stage until the problem of inter-Allied debt is settled. Very small sums can be paid by our taxpayers to the service of external debt. But Italy must know exactly where she stands before embarking on new monetary schemes.

AUSTRIA.—STATE FINANCES—ECONOMIC POSITION—VIENNA BANKS—FOREIGN CREDITS.

(FROM OUR CORRESPONDENT.)

VIENNA, July 1.

THE Austrian Government intends increasing the "Normal Budget" by another 50 million gold kronen, and hopes to get the consent of the League of Nations to this measure. On the other hand, the Government tries to cut down expenses by reducing the State's subsidies which were granted to banks and industries in order to facilitate the repayment of pre-war debts; the Treasury intends reducing these subsidies by S.14,000,000. Banks and industries, however, fiercely oppose this plan. During the next months a considerable reduction of the staffs of the various Ministries will be carried through. It is also intended to obtain savings by reforming the administration of the State forests and by reducing the interest of the Treasury in State enterprises, which, as, per example, the Arsenal, are working at a loss.

The most important feature to mention is that unemployment is slowly but steadily decreasing. Whilst on January 1st the number of unemployed was over 200,000, it amounts now to 120,000. This is mainly due to an improvement in the engineering, the shoe manufacturing, the building, and the food industries. In trade, however, the situation is still very unsatisfactory, and also the number of dismissed bank clerks is still increasing. But the decrease in the number of bankruptcies and arrangements with creditors shows that the economic depression is gradually lifting. In the banking business no failure at all has occurred for some time. Another instance of the improvement of the economic situation is the fact that a larger influx of foreign capital can be noted, and that the loan of 88 million gold kronen granted by the League of Nations for the electrification of the Federal Railways will supply a great part of the Austrian industries with orders for the next three years. The agreeable surprise that the League of Nations not only gave this amount free, but even found some encouraging words for Austrian reconstruction work, had a very favourable influence on public feeling.

During the month under review all the big Vienna banks have published their balance-sheets. The Credit-Anstalt, the Bodencreditanstalt, the Niederösterreichische Escomptegesellschaft, the Wiener Bankverein, and the Mercurbank are paying the same dividends as for last year, the Unionbank has reduced its dividend by a mere trifle, and even the Allgemeine Verkehrsbank, which for some time had to struggle against difficulties, has succeeded in overcoming them, and is paying a dividend of 3,000 kronen—against 5,000 kronen last year. The Anglo-Austrian Bank, however, will again this year pay no dividend. It must be considered that although the Vienna banks during the last year suffered considerable losses by the failure of the Depositenbank and by their action of supporting the Stock Exchange during the heavy and long slump, they were all able to write off these losses in the recently published balance-sheets. The banks also succeeded in notably cutting down their overhead expenses, by reducing their staffs, and closing down unnecessary branch offices. At present the business of the banks is satisfactory only in the foreign exchange and deposit business, whilst the issue and stock exchange business is still quite dull.

The Austrian Provinces, Upper Austria, Salzburg, Tyrol, Styria, and Carinthia, had arranged to contract a joint loan in the U.S.A., and had entered into negotia-

tions with two American groups. In the last moment, however, difficulties arose, and only Upper Austria concluded with a group formed by the New York bankers Messrs. Morgan, Livermore, and Co., and Messrs. Blyth, Witter, and Co., who have placed an issue of 5,000,000 dollar mortgage loan bonds in New York. The other provinces are still negotiating with another American group formed by Mr James Speyer, the Equitable Trust Company, and Blair. A number of Austrian industrial firms have succeeded in placing issues of 7 to 8 per cent. debentures in the U.S.A. The proceeds of these loans is nearly always used for paying off the debts contracted with Vienna banks, as the rate of interest to be paid for these American loans generally amounts to not more than 10-11 per cent., including all charges, whilst credits in kronen are still more expensive. Some industrial firms, however, are afraid to issue such debentures, as they are of the opinion that money conditions in Austria will improve before long, and are therefore not willing to contract long-term loans at a comparatively high rate of interest. Recently it could be noted that several foreign credits which were placed in Germany were, after the Stinnes crisis, withdrawn and placed in Austria.

ROUMANIA.—THE CROP SITUATION—EXPORT TAXES—BESSARABIA—OIL.

(FROM OUR CORRESPONDENT.)

BUCHAREST, July 1.

ECONOMICALLY, Roumania is practically standing still, waiting for the grain harvest. Commercial expectations run high for the autumn, but, at the moment, business is completely stagnant. The spring optimism in regard to crop anticipations is now undergoing what has come to be looked upon as the usual summer reaction, the Department of Agriculture's "provisional" figures on the autumn and spring plantings having turned out to be much smaller than anticipated. The published figures for the principal grains are as follows:—

(Areas Sown—Hectares.)

	1923-4.	1924-5.
Wheat.....	3,172,102 ..	3,065,781
Rye.....	271,454 ..	233,318
Barley.....	1,850,731 ..	1,407,037
Oats.....	1,236,580 ..	884,146
Maize.....	3,621,454 ..	2,286,148

Official reports state that the condition of the crops throughout the Old Kingdom, Bucovina, and Transylvania continues highly satisfactory, but that the crops in Bessarabia have been "compromised" by the long spring drought. Private reports, however, indicate that the Bessarabian crop is almost a total loss, and it is significant that the Government a few days ago arranged with the National Bank for the opening of a special credit of Lei 2,000,000 for provisioning the province. Foodstuffs are now being shipped to Bessarabia from the Old Kingdom, which, in turn, is still importing American wheat to tide over until the new crop comes in. Meanwhile, the Council of Ministers announced a few days ago that all grains from the new crop would be permitted for export, and that the export taxes would be determined later.

It is not so much spring droughts that are "compromising" Roumanian agriculture as the export tax on grain. The Roumanian peasant-farmers simply will not raise large surpluses of grain for export which, because of the export tax, they must sell at approximately 75 per cent. (or less in the case of wheat) of the world-market price. The greater part of the maize shown as having been exported from Roumania so far this year is actually Yugoslav maize that has been shipped out from Danube ports. Roumanian farmers cannot market their surplus of maize from last year's crop in competition with Yugoslav maize, because the Roumanian grain must stand an export tax. One direct result of this is that the area planted to maize this year is some 1,400,000 hectares less than in 1924.

Official figures on grain exports for the first quarter of the present year, shown in comparison with the same period of 1923 and 1924, are as follows:—

(JANUARY 1ST TO MARCH 31ST.)

(Metric tons.)

	1923.	1924.	1925.
Exports of grain from Roumania	335,607 ..	311,537 ..	212,237

While agrarian reform and grain export taxes have left their mark on the economic life of Bessarabia, just as they have on other sections of Greater Roumania, Bessarabia has been under the further handicap since the war of having been abruptly separated from its natural markets. Bessarabia before the war had a definite place in the economic life of Russia, and particularly that part of pre-war Russia which is now Poland. Since the war, however, trade has not been permitted between Roumania and Russia, and the bulk of Bessarabia's exportable products (all agricultural) must either surmount the Polish or Czechoslovak tariff walls or be absorbed by the Old Kingdom, which itself produces much the same commodities as does Bessarabia. It is a necessary re-alignment that is proving very difficult of accomplishment.

Oil continues to be the one economic activity in Roumania (with the possible exception of lumber) that is showing any distinct signs of advancement—due in large measure, no doubt, to foreign capital and enterprise. The following table shows the production of crude oil for the first five months of the years indicated, and the export of finished products for the first three months, these being the latest figures yet available:—

(Metric Tons.)

	1923.	1924.	1925.
Crude production, Jan. 1 to May 31 ..	636,630 ..	707,724 ..	872,257
Refined oil exports, Jan. 1 to March 31 ..	73,918 ..	61,962 ..	139,486

The export figures could be increased considerably if the Government would permit the export of fuel oil, the stocks on hand of which now approximate 250,000 tons, much to the embarrassment of the big refiners which have considerable storage and large amounts of capital immobilised by what now seems to be an entirely unjustified export prohibition. The oil companies have made repeated requests to the Government for permission to export fuel oil, but, so far, without avail.

JAPAN.—TRADE BALANCE—SILK MARKET—NORTHERN SAGHALIEN—TRUST COMPANIES.

(FROM OUR CORRESPONDENT.)

TOKIO, June 11.

THE foreign trade returns for the first five months of the year show that the value of imports totalled 1,298,516,000 yen, and that of exports totalled 802,407,000 yen, the excess of imports amounting to 496,109,000 yen. As compared with the corresponding period of last year, imports record a slight expansion, a falling off in value by 190,000,000 yen in iron and steel, timber, machinery, and other "reconstruction materials" having been set off by an increase in value by 200,000,000 yen in raw cotton, while exports are found to have increased in value by 140,000,000 yen, for which raw silk and cotton manufactures are mainly responsible.

Since the heavy imports season had practically come to an end by last month, these figures are sufficient enough to predict the whole balance of trade of the present year. Judged from the record of the past five months, it is inferred that, if the adverse effects on the trade of the present disturbance in China may not prove so serious, the balance of trade will possibly be reduced to about 350,000,000 yen. On the most favourable estimates, therefore, the year's final adverse balance of trade, after allowing for all the invisible items, which is nearly 100,000,000 yen, would amount to 250,000,000 yen in round numbers. This is a colossal sum for this country, and must be met with specie held abroad, which now leaves a very little margin to be available. The cardinal point in the country's financial policy is to minimise the payments abroad. The Treasury, forming an *ad hoc* committee, is considering how to make a substantial saving in its own payments abroad. The Government also intimates a strong wish that a very tight rein should be kept upon flotation of foreign loans by municipalities and business concerns.

The spring cocoon crops are arriving at the markets. They are quoted at 10.70 yen per kwan, being 4.50 yen higher than last year. This is accounted for by a smaller stock of raw material in the reellers' hands, poor crops

owing to the bad weather during the season, the encouraging tone of the trade at Yokohama, and the plentitude of the reellers' funds due to easy money. Financed by the bankers, who are eager to employ their idle funds, the reellers are buying heavily to replenish their stock. But the raw silk price to be worked out of the present price of cocoons should be over 2,000 yen per 100 kin, or about 50 yen higher than the ruling price at the Yokohama silk exchange. It is feared by a sober section of the business circles that the price is out of business calculation.

After a conference at the Premier's official residence on Wednesday, the Government and the representatives of the business interests came to an understanding about the organisation of "parties of exploiters in Northern Saghalien, to be named under the new Russo-Japanese treaty." The two companies, one for the oil concession and another for coal concession, are to be capitalised at 10,000,000 yen each. The first is to be known as the Saghalien Oil Company, and the second, for coal-mining, is to be called the Northern Saghalien Mining Company. According to the prospectuses, the oil company, with a paid-up capital of 4,000,000 yen, will earn net profits of 500,000 yen in its third business year, and pay 8 per cent. dividends on its shares, while the colliery company, with a working capital of 6,000,000 yen, can secure net profits of 131,000 yen in its third business year and pay the first stock dividends at 2 per cent. per annum.

An enlarged interest in the organisation of the trust company is now manifested in this country. Since the incorporation of the Mitsui Trust Company under the new law just a year ago, the Yasuda family of Tokio and the Sumitomo family of Osaka have followed suit. A few other financial families are said to be contemplating the establishment of such companies. The Mitsui Trust Company is paying 7.2 per cent. per annum interest on the money in trust, while the banks' interest on deposit is 6 or 6.5 per cent. The higher interest naturally appeals to the investing public, and consequently the trust money is rapidly on the increase at the expense of bank deposits. This is why the financial families are organising trust companies as the "flying column" of their banking institutions.

COMPANY MEETINGS, &c.

THE P. AND O. BANKING CORPORATION, LIMITED.
A CONSERVATIVE POLICY.

The fifth ordinary general meeting of the P. and O. Banking Corporation, Limited, was held, on the 10th instant, at 122, Leadenhall street, London, E.C.

The Right Hon. Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E. (the chairman), presided.

He reminded the shareholders that last year he had briefly set out the lines upon which, in his view, their policy should run. As a young bank they must, he said, go slowly, conserve their resources in their business, and build up their reserves, distributing their profits with cautious regard to possible vicissitudes which might arise in the trades they were financing. In this policy he was sure they, the board, would have the shareholders' complete agreement.

TRADE DIFFICULTIES.

Last year he had referred to the hopes expressed in some quarters of an early revival of trade. These hopes had not been realised; on the contrary, there was an even greater uncertainty now than there had been at that time, while in the last few weeks a new cloud, the trouble in China, had appeared on the horizon. In such conditions they would, he felt sure, endorse the board's view that it was wise and prudent to increase the bank's reserves rather than to distribute up to the hilt.

THE YEAR'S RESULTS.

The year's results showed very little material change, and they were indebted for the surplus on the year's operations to the efforts of the management at home and abroad. Their current and deposit accounts stood at £9,419,000, much the same figure as last year; and this important branch of their business was everywhere being steadily maintained. Liabilities on loans against security had been reduced to about 3½ million pounds; on the *contra* side, they had—in their cash money at call, £2,476,224—a satisfactory reserve of 26 per cent. against their liabilities on current and deposit accounts. Their investments, loans, and advances did not differ materially from last year's. The decline in the amount of bills in their portfolio on March 31st did not imply a decline in the bank's share of the financing of Eastern trade; on the contrary, their bill business to and from India and China had greatly increased, the turnover having been more than two and a half million pounds greater.

The past year had not been without its anxieties. Bad trade all over the world was bound to be reflected in a bank's business; but with a return of prosperity, peace in industry, and settled conditions, which they hoped soon to see, those banks which had conducted their business prudently would, he concluded, reap the reward of their prudence.

The Chairman then moved:—"That the directors' report and statement of accounts for the twelve months ending March 31, 1925, be, and the same are, hereby adopted."

Mr Alastair Cameron seconded the motion.

The resolution was unanimously adopted.

THE DIVIDEND.

The Chairman then proposed:—"That a dividend of 5 per cent. per annum, less income-tax at 3s 7½d on 259,416 shares, be, and the same is, hereby declared payable on July 16, 1925, to the members who were on the London and Bombay registers of the corporation respectively on July 3, 1925."

The Earl of Selborne, K.G., G.C.M.G., seconded the motion, which was carried unanimously.

The retiring directors, Sir Frederick Eley, Bart., Mr W. O. Grazebrook, the Hon. Alexander Shaw, and Mr Alastair Cameron, were unanimously re-elected directors of the corporation.

Messrs Peat, Marwick, Mitchell and Co. were re-elected auditors of the corporation.

A cordial vote of thanks to the chairman, the directors, the managers, and the staffs of the bank, both at home and abroad, terminated the proceedings.

GENERAL MINING AND FINANCE CORPORATION, LIMITED.
IMPROVED OUTLOOK.

The annual meeting of the General Mining and Finance Corporation, Limited, was held, on the 14th instant, in Johannesburg, Mr Arthur French (acting chairman and managing director) presiding.

The Chairman, in moving the adoption of the report, said: The very great improvement manifest in the affairs of the corporation during the past few years had been more than maintained, mainly by reason of the much enhanced prospects of some of the more important mining companies controlled by the corporation. A large proportion of this improvement was directly traced to the continuance of more efficient work on the mines, which had been so much in evidence since the management had been able with the reasonable co-operation of the workmen to organise the work without undue interference from irresponsible and extremist quarters.

This state of affairs encouraged us to acquire additional mining ground in the instance of all our gold-producing mines, which in each case promises to be remunerative to the company concerned. It also prompted us to increase very extensively the development programme on our largest subsidiary, West Rand Consolidated Mines, with very gratifying results, to which I will refer later.

DIVIDEND PROSPECTS.

The general reserve had been increased by £150,000 to the total amount of £250,000. The reasons which influenced the directors in adopting this course instead of declaring a dividend out of the profits of last year had been explained in the directors' report, and he could only add that the directors saw no reason to alter their considered opinion that the policy of conserving the resources of the corporation so as to place it in a better position to carry out its functions will eventually lead to a higher earning capacity, and thus ultimately be to the permanent benefit of the shareholders. This was the sole reason for the non-payment of a dividend last year, and as the financial position of the corporation had been adequately strengthened by the creation of a large reserve, he thought they could now look forward to re-entering on the dividend-paying stage in the early part of next year.

Turning to the profit and loss account, the chairman said the revenue from dividends—namely, £126,789—showed an increase of nearly £60,000 as compared with the previous year. Profit on stocks and shares of £55,752 reflected an improvement of £14,525. Administration expenses of £34,146 showed an increase of £11,524, owing to the necessity of employing a large staff to deal with the claims on the Custodian of ex-Enemy Property, and also because the amounts received from other companies showed a diminution as compared with the previous year. The net profit of £151,047 must be considered as highly satisfactory, as it reflected an increase of £50,714 over the previous year.

WEST RAND CONSOLIDATED.

The Chairman then dealt with the results of the operations of the mines controlled by the corporation since the beginning of the current year, and having dealt at some length with the West Rand Consolidated results, continued:—

As a result of the greatly improved outlook for the company, we are now considering a scheme for doubling the treatment capacity plant in order to effect a reduction in the present high scale of standing charges per ton milled, and thus increase both the profit per ton and the total profit.

When he mentioned that, by doubling the capacity plant to a total output of approximately 1,000,000 tons per annum, a reduction of 2s per ton in the working costs was anticipated, it would be seen that, even at the present grade of ore reserve, a substantial profit was likely to be earned by this company. More than this he did not care to say at the moment, except to repeat that the position was unquestionably most encouraging, and that the time when a scheme could be put forward for enlarging the plant

prove of considerable value to the company, particularly since they can be opened up and placed under attack without any additional shaft sinking other than that required for the development of the existing claim holding of the company. This huge property now consists of 2,135 main reef claims, of which 806 are also underlain by the battery reef.

The Cinderella Consolidated Company's negotiations with the East Rand Proprietary Company have not yet reached any finality, but the merging of two such large and important properties naturally involves a solution of difficult questions before arriving at terms satisfactory to both parties.

In conclusion, the Chairman said, it would not be an exaggeration to state that the corporation had never in its history been on stronger ground.

ARAMAYO MINES IN BOLIVIA COMPANY.

A VERY SATISFACTORY YEAR—LARGE DIVIDENDS DISTRIBUTED.

The fifth ordinary general meeting of Compagnie Aramayo de Mines en Bolivie was held on Tuesday, July 7, 1925, at the company's offices, 16 Quai de la Poste, Geneva, Mr A. Charpentier presiding, in the absence of Mr F. A. Aramayo, whose written report he read as follows:—

Ladies and Gentlemen,—As you have already seen from the balance-sheet and the directors' report, which you have before you, the balance of profit and loss at December 31, 1924, as remitted by the local administration in Bolivia, shows as the result of the year a profit of 5,534,201.83f. Exchange account was reduced during the year from 997,879.59f, at which it stood in 1923, to 651,268.78f, due to the continued enhancement of the Bolivian dollar in relation to the Swiss franc, it having risen from the equivalent of 1.70f to 1.75f. You will also see that this exchange account has totally disappeared from the balance-sheet, the amount of same having been deducted from the accumulated balance of profit and loss of previous years. The profit is also modified by the addition to the credit of interest upon investments, which amounted to the sum of 259,738.35f, as also by a small amount of local exchange in Geneva amounting to 212.85f, also by an item on the debit side for depreciation of investments which amounts to 31,932f. The net profit for the year is, therefore, 5,762,221.03f, against 4,798,608.87f for the previous year.

SALES OF VARIOUS PRODUCTS.

The sale of tin barilla during the period of these accounts was 2,202.35 tons at an average price of £125 8s 10d, against 2,590.62 tons at an average price of £101 3s 5d in 1923. The sale of silver sulphides was 939,895.756 ozs troy at the price of 35.5d per oz, against 815,798.42 ozs at the price of 33.7d the previous year. That of rich silver ore 418,898.83 ozs at 32.7d per oz, against 619,997.53 ozs at 29.7d in 1923. The sale of copper cement was 115.64 tons at an average price of £33 11s 6d, against 124.6 tons at £37 11s 10d in the year before. The sales of bismuth have risen considerably, although the price obtained was lower than that of the year before. The total production of barilla (60 per cent. concentrates) in the various mining sections of the company was 2,572.5 tons, as against 2,506 of the year 1923. The production of metallic bismuth in bars, residues, and export ores was 210,731 kilos, against 163,635 kilos and that of silver sulphides, export ore and copper cement amounted to 1,528,715.53 troy ozs, against 1,369,496.69 troy ozs in 1923. The cost of production of tin barilla has risen considerably principally owing to important development work which has been carried out in the San Bartolomé mine of Chorolque, and also on account of the heavy tax on mining profits which was imposed at the commencement of 1923. On this account the cost of production of tin barilla has increased from £64 12s 9d to £47 6s 8d per ton. The cost of bismuth has been reduced in comparison with that of last year on account of the greater production.

WORK ON THE MINES.

The total metres run during the year are 1,531.2, against 2,349.35. In the Chorolque section work has been limited to the sinking of the shaft in San Bartolomé, whilst in Chocaya it has been considered that development is sufficiently advanced to allow of a reduction in expenditure in this direction. This explains the important diminution in the total of metres run. There has also been a reduction in the Tasna section on account of the unsatisfactory state of the bismuth market, which has caused all superactivity in production to be considered unnecessary. It is only lately that conditions have changed for the better in the demand for bismuth, thereby permitting work in these mines to be recommenced. The new shaft in San Bartolomé is down to a depth of 71 metres. There has been no difficulty with water since its commencement, but a powerful pump has been installed to meet all eventualities. Development in the mine of Chocaya in both

silver and tin has been on the best of conditions. In spite of the reduction in the number of metres run, and of the increase in the amount of ore extracted, new reserves during 1923 have been prepared to the extent of 21,115 tons of a grade of 97.04 czs of silver to the ton, and 3.27 per cent. of tin over a mean width of 1.43 metres, which brings the figures of total reserves in this mine to 243,670 tons of ore with an average contents of 71.41 ozs per ton of silver and 5.6 per cent. of tin over a mean width of 1.18 metres. In this calculation the "Llampera" and "Judios" veins, rich only in silver, are included, which consequently brings down the average contents of tin. If these are not taken into account the average of the rest of the mine would be 6.32 per cent. of tin. The latest news as to the running of the Establishment of Telamayu is favourable, and very shortly extraction will be perfect.

CURRENT YEAR'S WORKING.

I have recently received the result for the first six months of 1925 which shows that as compared with the same period of 1924 the production of tin has increased by 281 tons, silver by 35,000 ozs troy, bismuth by 18 tons, and copper by 20 tons. The news concerning the increase in the ore reserves of Chocaya is satisfactory. There has been a reduction in the production of rich silver ore and this reduction will continue for the reason that it has been decided to treat the whole of the silver ore in Telamayu without selecting the rich silver mineral for exportation. I have pleasure in stating that the technical staff in Bolivia continues to give every satisfaction. In January, 1925, Mr Carlos Victor Aramayo returned to France on leave after having handed over the direction of affairs to Mr Malcolm Roberts, the consulting engineer of the company.

INCREASE OF CAPITAL.

As a great part of the accumulated profits over preceding years was already employed in Bolivia in the construction of the Telamayu establishment, and in the aerial ropeway, as also in the purchase of new mining properties, your directors decided at their meeting of October 6, 1924, to raise the capital of the company to 21,000,000f by the issue of 240,000 fully-paid shares. This decision was approved at the extraordinary general meeting of October 20th last. I may add here that we obtained the authorisation of the Bolivian Government to this operation.

DISTRIBUTION OF THE PROFIT.

In view of the result of the profit and loss account and balance-sheet which you have already had, your directors propose that you should approve the interim dividends paid during the year 1924, amounting to 21 per cent., upon the old capital of the company, to vote a bonus of 10 per cent. upon the capital as increased, to transfer to statutory reserve the sum of 300,000f, and to carry forward the remaining balance of 5,524,020.62f.

RESIGNATION.

And now, gentlemen, it is left for me to make a request which is painful, but which I believe necessary. In view of my age, and the care which my health now calls for, I must ask you to relieve me of my duties of director and managing director of this company, and I propose that you should replace me by my son, Mr Carlos Victor Aramayo, whose suitability for the position you are able to appreciate by the services which he has already rendered as general manager in Bolivia.

No questions being asked, and after the reading of the auditors' report, the following resolutions proposed by the Board were carried unanimously:—

1. The meeting approves the statement of accounts presented for the year 1924, and gives entire discharge to the directors, especially Mr F. A. Aramayo, as regards the management of the company's affairs in his capacity as managing director.

2. The four interim dividends, totalling 21 per cent., paid during 1924 on the old capital are confirmed.

The declaration of a bonus of 10 per cent. also for 1924, but upon the increased capital, which will absorb the sum of 2,100,000f, is approved, as well as the transfer to statutory reserve of the sum of 300,000f, and the balance of 5,524,020.62f is carried forward.

3. Mr Carlos Victor Aramayo is duly elected a member of the board in the place of Mr Felix Avelino Aramayo, resigned.

4. Messrs. Tribe, Clarke, Painter, Darton and Co., chartered accountants, are duly reelected auditors of the company for the year 1925.

The Chairman informed the meeting that the board had elected Mr Carlos Victor Aramayo as managing director of the company in the place of Mr Felix Avelino Aramayo, and asked the meeting to confirm this appointment.

This appointment was unanimously confirmed, and Mr Charpentier expressed the unanimous regret of the meeting that for reasons of health Mr Felix Avelino Aramayo was obliged to relinquish his position in an enterprise which had been the work of his life, and to which he had devoted the whole of his strength and abilities. The meeting expressed the hope that at some future

date he would be able to again occupy the position which he had held with such distinction and competence.

Mr Charpentier also welcomed Mr Carlos Victor Aramayo, and expressed the hope that in following the footsteps of his father he would conduct the company's affairs as brilliantly as the former chairman and managing director.

Mr Carlos Aramayo thanked the chairman on behalf of his father and of himself.

The meeting unanimously decided to forward to Mr Felix Aramayo a telegram of regret, and also expressed their warm thanks to Mr Malcolm Roberts, the company's consulting engineer, and the staff in Bolivia for their continued able services.

The Chairman informed the meeting that the board had decided to pay a third interim dividend on account of the current year, payable on August 1st next, together with the bonus of 10 per cent., to all shareholders. That is to say, as far as the registered holders are concerned, to all those on the register of the company on July 21st.

The proceedings then terminated.

ANGLO-CYLON AND GENERAL ESTATES COMPANY, LIMITED.

RECORD TEA CROP.

The thirty-ninth annual ordinary general meeting of the Anglo-Ceylon and General Estates Company, Limited, was held, on the 16th instant, at 6, Laurence Pountney Hill, London, Sir Edward Rosling (the chairman) presiding.

The secretary (Mr H. J. Hitchcock) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: The tea crop in Ceylon again shows a satisfactory increase on the previous year of 329,075 lbs, a total of 3,581,234 lbs having been harvested. Our previous record crop was in 1916-17, when 3,453,372 lbs was made from estate leaf, but since that date there has been an increase in our acreage under tea. The quality of our tea has been well maintained, so far as climatic conditions would permit, and the net price realised was a shade under 1s 6d per pound, as compared with a trifle over 1s 4½d in the previous season.

The disappointing feature is that, in spite of the increased crop, there is again an increase in the cost of production. The actual cost, including general cultivation and manufacturing charges, is little more than in the previous season—namely, 54.45 cents, as against 53.32 cents, but the rise in exchange accounts for 1.36d, the increase in the cost of rice for .28d, and the maintenance and renewals of buildings for .57d. Exchange and rice are beyond our control, as is, to a certain extent, the expenditure on buildings, in that we are required to bring up all labourers' dwellings to a certain standard as laid down by the Government. In addition, we have continued the policy of gradually bringing our factories and bungalows up to date. Our cacao crop was again a good one, giving a total of 6,284 cwts, as against 6,032 cwts in the previous season.

RUBBER CROP.

The rubber crop was 202,531 lbs, but our exportable allowance was only 178,207 lbs, which netted 1s 3½d, an improvement of nearly 3½d per pound. Our standard production is 285,279 lbs, and if the price remains at 1s 6d for the current season we shall be allowed to export nearly 77 per cent. of our standard, which would be an increase of 42,000 lbs on last season. We have sold forward approximately half our crop for July-December at 2s 3d, and about half our crop for January-December, 1926, at the equivalent of 2s.

In regard to our acreage, small additions to our Ceylon estates have been made at Delmar, Niriella, Kondesalle, and Mahaberiatenne, and since the close of our financial year we have purchased the remaining quarter of Nilloomally, so that the whole estate now belongs to us, and after this the small acreage known as Ellerton will be included as a division of Nilloomally.

In Mauritius there has been an addition to Highlands by the purchase of 118 acres, part of the St. Antoine estate.

The year's working results in a profit from the Ceylon estates of £87,564, an increase of over £8,000 as compared with the previous year. There is an increased income from interest, commission, &c., of rather more than £2,750; this account now shows an income of over £25,000. The Mauritius account shows a loss of £9,667, and the London expenses an increase of rather over £700, or practically the same as in the season 1922-23. We have also utilised £10,000 out of our machinery improvement account by the purchase of a new third mill and a new millhouse for our Britannia sugar estate.

CURRENT YEAR'S PROSPECTS.

In regard to the prospects for the current year, given a normal season we would expect our tea crop to be maintained at last year's

level, if not increased. The market for Ceylon tea is practically the same as a year ago, and there are at present no indications of any material change one way or the other, but much depends on what sort of crop India produces. As our main cacao crop is harvested towards the end of our financial year, any forecast is of little value, but at present the outlook is quite normal. The prospects for rubber show a great improvement, and, instead of being restricted to 178,000 lbs, we hope to be able to ship nearly 220,000 lbs. We also look for increased dividends from our rubber investments. In regard to sugar, I am afraid we cannot look for any very material improvement in the near future. The crop is expected to be rather under than over that of last year, and the sugar market continues on an unduly low level. I have no doubt whatever that we shall eventually see the swing of the pendulum, and that sugar will once more give satisfactory profits.

I may say that the present value of our investments is considerably more than the amount at which they appear in our books.

As you have been advised by circular, our outstanding debentures are due to be paid off on October 4th. The circular sets out clearly the proposals of the directors, and I do not think I can add anything to it.

The report and accounts were unanimously adopted.

At an extraordinary general meeting resolutions were passed providing for the insertion of a new "objects" clause in the memorandum of association and the adoption of new articles, in view of the enlarged scope of the undertaking.

DALKEITH (CEYLON) RUBBER ESTATES, LIMITED.

FAVOURABLE FORWARD SALES.

The ordinary general meeting of the Dalkeith (Ceylon) Rubber Estates, Limited, was held on the 13th instant, at Winchester House, Old Broad Street, London, Mr A. J. Gordon Field (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that it afforded him great pleasure to present to them the report and accounts for the past year, and he thought they would agree with him that the shareholders were to be congratulated on the results set out therein, which, in the whole circumstances, should be considered satisfactory. The total crop harvested was only 431,729 lbs, as compared with 615,008 lbs in 1923, and,

although the average gross price realised was 1s 2.68d, as against 1s 0.14d per lb in the previous year, the net profit only amounted to £8,130. The "all in" cost showed an increase of nearly 2½d, chiefly due to the decrease in the amount of rubber harvested, the rise in the rate of exchange, and the rather heavy loss on rice. In view of the modest profit actually earned, the board's recommendation of a final dividend of 5 per cent., making 10 per cent. for the year, might at first sight appear to be open to some criticism, but, in view of the fact that they had made such favourable sales during the early part of the current year, they felt perfectly justified in the policy they had adopted.

The argument of some of the opponents of selling forward was that producers would have had all their year's crop of rubber available for sale at current prices had they not entered into forward contracts. The objectors to forward sales must, he thought, have lost sight of the fact that the present shortage of supplies on the London market was very largely, if not entirely, due to the heavy shipments being regularly made direct to New York and elsewhere under those very forward sales which they so much disliked. The board's policy had invariably been to sell the whole of the company's rubber on the London market, with the exception of a small quantity ex-go-down Colombo. At the same time they considered that it would have been mistaken policy on their part not to take advantage of such opportunities as had recently occurred to sell forward a portion of their crop at prices which, at the time, appeared to be so tempting.

No less than 182 rubber companies had made forward sales at an average price of round about 1s 6d per lb. He was, therefore, not going to make any apology for having sold forward a portion of the company's crop at the very satisfactory average price of 1s 8½d per lb. With an assured profit of 1s per lb, or a little over, on 284 tons of rubber, the difference between the forward sale price and the average price realised for the whole of last year's crop would amount to a very appreciable sum, and if they got anything like the rate ruling to-day for the balance of the crop the shareholders would have very little cause for complaint.

The report was adopted.

LIPTON, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The annual general meeting of Lipton, Limited, was held on the 13th inst. at Winchester House, Old Broad street, London, Sir Thomas Lipton, Bart. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, dealing with the fall in trading profit, said that he was far and away the principal sufferer, holding, as he did, the whole of his original shares and a very large number that he had bought since. They all, from the Government down to the humblest worker, had been looking forward with hopeful anticipation to a recovery from the serious and prolonged depression, which had proved such a hindrance to progress and rendered it difficult, and in many cases impossible, to maintain profits. A large part of their business was done in many districts where trade depression and unemployment were at their worst, and if any of them were inclined to make unfavourable comparisons of the company's figures with those of some other companies, he would ask them to bear in mind that their business was so widely extended that, as the company benefited from the conditions of local prosperity, so it must also suffer from local adversity.

FALL IN PRICES.

Although the fall in prices had not been so marked as during the last two years, the company had again suffered substantially through reductions, as, in the event of any fall in prices, the benefit was immediately passed on to their customers. This had been particularly the case during last year with regard to tea and sugar, consequent on reductions in Customs duties. It was not his object or intention, however, to be pessimistic as to the future. His confidence in the soundness of the business, which had been built up during the last 50 years, was as strong as ever it was. He and his co-directors, he could assure the shareholders very strongly, were taking every possible step to cope with the situation and to bring back the business to its former prosperity. The times were difficult, and their task not easy, but they were bringing all their resources, their experience, and their energies to bear upon this work, and with the support of the shareholders they were confident of success. The most careful attention was being paid to economies in working and administration, which, without adversely affecting the efficiency of the business, should have the effect of substantially reducing expenditure and improving the profits. Their factories had been maintained in a state of first-class efficiency, and they were kept thoroughly up to date, advantage being taken of every advance in technical

science for the improvement of their products and their manufacture on the most economical and profitable lines.

CHANGES IN ADMINISTRATION.

They all would be pleased to see Mr J. Frank Gregory as a member of the board again, and by the acquisition of his services the technical side of the administration had been considerably strengthened. They had also appointed Mr Tomlin to the position of managing director; he had had a long experience of the grocery and provision business, which would be of great value to the company. There was much for them all to do before they could say they were back at their old standard of prosperity, but there was every sign of encouragement, and, with the support of the shareholders, he felt confident of greatly improved results soon. Referring to the company's tea estates, the chairman said that they were being kept in first-class order and condition, and were among the best, if not the best, on the island of Ceylon. In conclusion he said:—"Permit me to say just this: It is many, many years ago since I first began, in a single shop in Glasgow, to build up this business. In those earliest days I was very confident of success. To-day, after a lapse of over half a century, I am just as confident as I was then. I ask you now to give me and my directors your confidence, and I am sure that the future will show that it was not misplaced. From the day this company was formed I have retained my faith in the business of which we are all the joint proprietors, for I have never sold a single share of my original holding. On the contrary, I have bought many additional shares on the market, some of them at very high prices, and I hold them all to-day, notwithstanding many tempting inducements to sell, and I may say nothing would persuade me to part with a single one of them. If actions speak louder than words, what better proof could I give you of my faith in the future of the business? I know that if the directors are assured that the shareholders are behind them with their united strength and support, the work which is before them will be accomplished with complete success. I now beg to move: "That the report and statement of accounts as submitted be received, approved, and adopted."

Mr J. Frank Gregory (deputy-chairman), in seconding the resolution, observed that he did not believe in prophesying, but he could only say that if he had not the strongest belief in the possibilities of this business, nothing would have induced him to return to it.

The report and accounts were adopted.

KWALOE RUBBER ESTATES, LIMITED.

FAVOURABLE PROSPECTS.

The fifteenth ordinary general meeting of the Kwaloe Rubber Estates, Limited, was held on the 14th instant, at 2, Idol lane, London, Mr Richard J. Arnold, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that in respect of the year 1924 they had cashed something over £24,000 for 371,523 lbs of rubber, and had spent slightly less than half the income. The net price averaged 1s 3½d, the f.o.b. costs were just under 7d, and the profit was £12,302. The dividend would absorb £12,000, leaving £4,509 to be carried forward, or £302 more than was brought in from 1923. The dividend was only payable on £120,000, as two years ago £30,000 of capital was written off to get rid of the debit of profit and loss account and a heavy item of preliminary expenses. As was then explained, this action enabled them to distribute any profits up to the hilt, especially as they resisted the temptation to pay a dividend for 1923, although quite a substantial sum was earned. They must always remember, in estimating the value of the property, that actually £30,000 was spent in excess of the amount of the capital. For 1925 they had sold 83 tons at a London equivalent of 1s 6d, fully covering the cost of an expected crop of 190 tons. The profit for 1925 would, therefore, be the amount realised for about 107 tons, which would give exactly 10 per cent. dividend for every 1s realised for such balance. Thus, 2s 6d would earn 25 per cent., and 3s would give 30 per cent. For 1926, also, they had sold sufficient for all outgoings, viz., 60 tons at an average of 2s 2d. The crop of 1926 was placed at the conservative figure of 220 tons, and the forward sales thus left 160 tons with which to pay the 1926 dividend. For every 1s realised for that quantity they would earn almost 15 per cent. on the capital. Thus, the present forward price for 1926 being 2s 8d, they could, if they wished, secure a 40 per cent. dividend for the year. The board might be tempted to make a further forward sale if the forward price approached closer to the present high spot price. If they got 60 per cent. for the years 1925 and 1926 it would make 70 per cent with the dividend now proposed, and such a return over the 16 years of the company's existence could not be called profiteering, for it was only about 4½ per cent. per annum. They would eventually get larger

crops, increasing gradually to between 650,000 lbs, and 700,000 lbs per annum. He thought rubber was likely to remain at a remunerative price for quite a long period.

The report and accounts were unanimously adopted.

APOLLINARIS AND JOHANNIS, LIMITED.

IMPROVED POSITION AND PROSPECTS.

The 28th ordinary general meeting was held, on the 14th instant, at the Holborn Restaurant, London, Mr Alfred R. Holland (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the sales of Apollinaris had increased considerably, but profits had not shown corresponding expansion, owing to cost having gone up. Such increase in cost had neutralised to some extent the additional profits which the increased sales should have given. Profits had grown from £2,000 in 1920 to £60,000 this year. This sufficed to pay debenture and certificate interest, also to provide for the sinking funds, and to carry forward £8,669, but shareholders must still have patience. Some time must elapse before profits would suffice to justify a dividend on the ordinary shares. To the carry-forward of £8,669 should be added £37,605, brought in from previous years, making £46,274.

Though trade in this country showed expansion, many export markets were closed by the enormous duties. The Irish Free State recently placed a high duty on bottles, as well as on mineral water, and even declined to allow a refund on the empty bottles when re-exported. If such difficulties were met so near home, it would be realised how difficult it was in foreign countries. Expansion of American trade was slow, but seemed to justify rather a larger sum being spent on advertising in that market. As the company sold in the States in dollars, and were unable easily to vary such selling prices, the rise in sterling had the effect of reducing by several thousands of pounds the proceeds of such dollar sales.

Under the settlement of the German claims the company had to receive about £50,000 for liquidation, and about £37,000 for compensation. The money for liquidation had been promptly paid. A year ago only 15s in the £, or some £27,600, had been received for compensation. The remaining 5s in the £, or £9,081, had since come in, and £1,142 for interest. These moneys, belonging to capital account, were not included in the profits, but the financial position was strengthened thereby.

A claim against the Hungarian Government was brought before the Mixed Arbitral Tribunal, which granted £3,870 as compensation. So far only 3s 6d in the £, or £681, had been received, and £3,189 still remains to be paid.

Though progress had been slow, yet forward movement was being made, and the chairman believed that the time would not be too far distant before the ordinary shareholders would also be satisfied.

The report and accounts were unanimously adopted.

JOHN WALKER AND SONS, LIMITED.

"STILL GOING STRONG."

The second annual general meeting of the shareholders of John Walker and Sons, Limited, was held, on the 15th instant, at the registered office of the company, 12 Mark lane, London.

Sir Alexander Walker, K.B.E., presided.

The Chairman, in moving the adoption of the report and accounts as at March 31, 1925, said: "The accounts speak for themselves, and with your consent I will take them as read. You will agree with me that they are satisfactory. Our stocks have been valued on conservative lines, and in our recommendations as to the final dividend on the ordinary shares and the sums to be placed to reserve and carried forward we have borne in mind the need for consolidating our financial position. These reserves strengthen the security of our debenture stockholders and our preference shareholders."

The period under review in the accounts is for ten months only, as it has been found expedient to have our annual accounts made up to March 31st instead of May 31st in each year to suit the arrangements of the Distillers Company, Limited, who now hold the bulk of our ordinary shares.

PRE-EMINENT POSITION MAINTAINED.

The figures show that the company maintains its pre-eminent position in the trade, and that the popularity of its whisky is higher than ever. It will be our endeavour still further to entrench ourselves in public favour. While we are satisfied that our quality cannot be surpassed, by research and methodical care we are continually improving the product of our distilleries.

Our stocks are now much greater than at any period of our history, so that we can continue to ensure uniformity in the age and style of our brands.

ASSOCIATION WITH THE DISTILLERS COMPANY.

The change which has taken place in the ownership of the ordinary shares of the company will make no difference to the conduct of the business. We shall continue to carry on the old firm on the traditions and policy of the past, and "Johnnie Walker" will still be individual in his attitude and service to his good friends in the trade. We have every reason to believe that our association with the Distillers Company, Limited, will be advantageous to all concerned.

It is gratifying to record the fact that our sales have been maintained during these times of depression in industry.

We are very fortunate in having in our various departments and branches a loyal and efficient staff, and I take this opportunity of thanking them for their services.

WORLD-WIDE CONNECTIONS.

Lord Stevenson, in seconding, said that the well-established business of Johnnie Walker was "still going strong." Its profits were not dependent upon dealings with bootleggers, and its connections stretched out from every village and hamlet in the United Kingdom to the Dominions, Colonies, Protectorates, and mandated territories, as well as to foreign countries.

The report and accounts were unanimously adopted.

The retiring directors, Messrs A. J. Hogarth, A. C. Smith, W. H. Ross, and A. J. Cameron, were duly re-elected, as were also the retiring joint auditors, Messrs Dunlop and Murray, of Glasgow, and Messrs Baker Sutton and Co., of London.

VAN DEN BERGHS, LIMITED.

"DISTINCTLY BRIGHTER PROSPECTS."

The twenty-fifth ordinary general meeting of Van den Berghs, Limited, was held, on the 14th instant, at Winchester House, Old Broad street, London, Sir Walter Townley K.C.M.G., presiding.

The Chairman said: "Ladies and Gentlemen—I regret to say that your chairman has been indisposed for some weeks past and cannot, therefore, attend this meeting. I have seen him, and he has handed me the statement of the board, which, with your permission, I will read out to you. It is as follows:—

"Many of you will probably have read the balance-sheets of other companies in our line of business, and you will have gained the impression that the year under review has not been a good one for the margarine trade. If I am not mistaken, none of these companies have paid dividends on their ordinary shares, and we are not in a more favourable position. The competition has been very strong, yet we are satisfied with our achievements last year, as we have secured for ourselves a strong position by the introduction of proprietary brands. These brands, through the excellence of their qualities, stand out above all others, and command better prices."

"BLUE BAND" ON THE CONTINENT.

"At former meetings you have been told that we successfully launched 'Blue Band' in this country, and this success induced our associated companies to follow in our footsteps. Thus Holland has taken up the sale of 'Blue Band.' Belgium and France followed, and in the course of last year it has been introduced in Germany. The managers in that country hesitated at first to take this step, as the purchasing capacity there, especially during the first half of last year, was at a low ebb; later in the year, however, when conditions improved, they introduced the brand, and supported it by a very extensive advertising campaign, and, according to the reports of this associated company, a very large sum was spent with the object of establishing the brand on that important market. I am extremely pleased to say that they have succeeded beyond expectations; to-day the sales are large, and the quality is of the highest standard, while new processes secure absolute uniformity, and a good price is obtained; the public are asking for the brand and they insist on obtaining it. I wish I could convey to you an idea of the value of the goodwill thus acquired, as I am glad to say that the trade is not only fully maintained, but is still extending considerably. This being so, it would have been a fair policy for our associated companies to have written off the expenditure incurred on this advertising over a number of years, but it was considered a sounder policy to write the whole of it off in 1924 and start the new year with a clean sheet. This, in short, explains to a large extent the absence of a dividend on the ordinary shares for 1924. It was a year of transition, and we are satisfied beyond doubt that we shall derive great benefit from the course adopted."

HOME TRADE PROGRESS.

"We are fairly satisfied with the trade carried on in this country during the year covered by the accounts before you. Notwithstanding the larger butter imports, to which Russia contributed as a new entrant, the quantity of margarine turned out in the home

trade shows a satisfactory increase. The remarks made with regard to the uniformity of qualities and best brands in respect of associated companies also apply to this country, where our brands continue in great favour. The policy of promoting the sale of the higher grades is proving a sound one, and, although we are still faced with many difficulties, your directors consider that the course which they are following will prove beneficial to the company, and that inspires confidence with regard to the future. One of the difficulties with which we had to contend, and to which I wish to draw your attention, arose from the fluctuations in the prices of raw materials. Some of these raw materials required for the higher grades, in which we specialise, showed an increase of no less than 75 per cent. between the months of April and November last year. We have, however, reason to be satisfied with the result of our efforts to cope with these difficulties (which, on the other hand, have proved very troublesome for a number of the competitors of our associated companies on the Continent.)"

The Chairman, having dealt with the accounts, said:—

"Business during the first few months of this year did not show much improvement, but since then the results have become better through increases of prices, both here and on the Continent. The prospects of the business at the moment are distinctly brighter.

"In conclusion, I would say that margarine has lost nothing of its popularity, and that the high prices realised by colonial butters lead us to think that the article will prove more and more a boon to the population."

I now beg to propose: "That the directors' report and statement of accounts as at December 31st last, now submitted to this meeting, be and the same are hereby received and adopted."

Mr Jacob Van den Bergh seconded the resolution, and, the Chairman having replied to questions, it was carried unanimously.

INTERNATIONAL TEA COMPANY'S STORES, LIMITED.

RECORD PROFIT.

The thirtieth annual general meeting of the International Tea Company's Stores, Limited, was held, on the 16th instant, at Winchester House, London, Mr G. Collier (vice-chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, and after referring to the unavoidable absence of the chairman, Mr Tonge, said:—I am very glad to have a most satisfactory balance-sheet to submit to you this morning. The profit of £439,120 is a record, and is even better than appears on the surface, because this year is a normal one of 52 weeks, whereas last year we took in an extra week, making 53 weeks for the year, as we are compelled to do about once every seven years. This result, I am sure you will agree, is most encouraging, especially when you remember that the first and second preference dividends absorb only £53,500. I do not propose to elaborate on the balance-sheet; the figures speak for themselves, but there is one item of particular importance to us as a multiple shop concern in view of the very high rents ruling to-day, and that is the item £848,845 for freehold properties. As our chairman has often told you, these properties are undoubtedly worth a great deal more than the amount which appears in the balance-sheet.

Debtors, £285,344, refers chiefly to our wholesale trade, and, as our trading is done on a short credit, you may be sure that the whole of this amount has now been liquidated.

PROSPERITY OF THE BUSINESS.

In regard to the general prosperity of the business, I think this may be summed up very briefly in a few words—it is dependent on work, hard work, and still more hard work. These are some tendency to-day, or so it appears to me, throughout the country, to wait for the State to provide rare and refreshing fruits, instead of working hard on one's own allotment.

With sane and proper management in the future, we must go on showing the same progress that we have been able to show for so many years past.

Mr F. Drowley seconded the resolution, which was carried unanimously.

Mr Paterson proposed a hearty vote of thanks to the chairman, directors, and staff, and congratulated them on the satisfactory results shown by the accounts, which, he said, were largely due to the management and devotion on the part of those who conducted the business.

Mr Beale seconded the vote, which was passed unanimously.

LOUISE AND COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The 30th annual general meeting of Louise and Co., Limited, was held, on the 17th instant, at Winchester House, Old Broad street, London, Mr F. R. Brighton (general manager) presiding. The Chairman, after apologising for the absence of the chair-

man of the company, Mr Edgar Cohen, said that the year under review had been one of equal or even greater difficulty than the preceding year. The condition of Regent street, so far as rebuilding operations were concerned, had gone from bad to worse, and practically from one end to the other building materials, bricks, sand, and rubbish had been dumped in the street, rendering comfortable shopping facilities an absolute impossibility. On the other hand, the company's interest in the magnificent block of premises which had been erected under the pooling arrangement with Messrs. Liberty and Co., extending from Beak street to Regent place, represented a capital accretion the full extent of which it was difficult to estimate. At any rate, it was extremely valuable, and, as soon as the general upheaval due to the rebuilding of Regent street had subsided, should become a substantial revenue-producing asset, and a valuable addition to the increased returns of their London business, which, it was hoped, would accompany the restoration of normal trading conditions. The buildings were now rapidly approaching final completion, and it was hoped that the rebuilt premises, 152 and 154 Regent street, at the corner of Beak street (formerly occupied by the company), would be finished and ready for occupation within the next month or six weeks.

The diminution in profits of £6,900 was almost entirely accounted for by increased expenses in the Continental establishments, due largely to the increased cost of living in France, which had necessitated considerable increases in almost every item of expenditure, so that, whilst the turnover had been maintained, the trading profit had been very considerably affected. The question of the French exchange continued to receive the anxious consideration of the board. The matter, however, was one entirely beyond their control, and until some method was found of more or less stabilising the rate of exchange, it seemed hopeless to endeavour to deal satisfactorily with the problem. If only they could see some prospect of the stabilisation of the French exchange, the shareholders might confidently look forward to the time when the directors would be in a position to place before them some scheme for the reorganisation of the company's finances and a return of the company to a dividend-paying basis.

After some discussion the report and accounts were adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills were opened on July 17, 1925, and the total amount applied for was £49,605,000. For bills at three months dated Monday to Friday, £98 18s 7d, about 28 per cent., above in full. Saturday's bills at £98 18s 10d, and above in full. The amounts allotted were as follows:—In bills at 3 months, £31,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months, Average Rate.	4% Treasury Bonds, Average Price.
1925.				
May 22.....	35,000,000	54,380,000	4 9 59	£ s d
May 29.....	40,000,000	54,460,000	4 6 448	nil
June 5.....	40,000,000	47,945,000	4 7 662	nil
June 12.....	40,000,000	54,150,000	4 7 1014	nil
June 19.....	40,000,000	49,235,000	4 8 335	nil
June 26.....	40,000,000	60,805,000	4 10 519	nil
July 3.....	40,000,000	52,085,000	4 10 247	nil
July 10.....	35,000,000	51,850,000	4 7 1046	nil
July 17.....	35,000,000	49,605,000	4 4 641	nil

Tenders will be received on July 24, 1925, for Treasury Bills and Treasury Bonds to be issued to the maximum amount of £35,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000.

1924	25,651	664	3,276	11 10	10 9	9 10

AMERICAN WHEAT MARKETS.

Prices continue to advance in the American wheat markets, the rise being partly due to the prolonged hot weather, lack of rain, and reports of black rust, and partly due to rumours that Russia is asking buyers to make partial payments on their wheat purchases. A slight set-back occurred in the middle of the week owing to scattered liquidation, but recovery took place on reports of hailstorm damage in Saskatchewan and an improved export inquiry. IRON, STEEL, AND COAL.

We extract the following from the weekly report issued by the London Iron and Steel Exchange:—Business has shrunk to the small volume usually associated with the summer months. The industrial unrest in the coal and engineering trades and the railways has had a discouraging effect on trading, and until some indication can be obtained as to the future outlook there is little prospect of active trade developments. Prices generally are weak in the absence of any sustained demand on either home or export account. In the pig-iron market the offerings of Continental iron have declined somewhat, partly as the result of the Belgian strike, the iron and steel trade. The demand for British iron continues on spreading, and difficulties are now being experienced regarding materials contracted for some time ago and now due for delivery, particularly in the case of semi-finished and finished steel materials. British steel manufacturers, in view of the industrial situation in holidays in Scotland and the North, are disinclined to commit themselves.

Our Middlesbrough correspondent's report, dated July 16, 1925, is as follows:—There has been a little more activity in the pig-iron market, but this is confined to small quantities required by local consumers. The nominal quotation for No. 3 G.M.B. remains at 77s per ton, whilst mixed numbers East Coast hematite are quoted at 77s per ton, but in both cases for good business these prices could be shaded. Manufactured iron and steel: With the exception of the corrugated sheet trade, the works are very quiet, and are short of orders. Prices are weaker, and the following are the nominal

OVERSEAS TRADE RETURNS.

The Colonies are falling off to a considerable extent. The coal market remains slack. Billets have been reduced in price, Siemens acid being 10s lower at £10 10s. Acid wire rods have fallen £2 per ton to £16, and there have also been declines in medium basic wire rods to £12 5s for lots under 50 tons, and £11 15s for 50 tons and over, while hard basic wire rods have fallen to £14 per ton (under 50 tons), and £13 10s (50 tons and over).

Our Cardiff correspondent writes:—On the Cardiff coal market this week all classes of coal have been stronger. The supply of shipping has been very scarce. Tonnage is being laid up wholesale, and at none of the South Wales docks have all the tips been employed. Although prices are harder, and in most cases higher than they were a week ago, the volume of trade has shown very little increase over the average of recent weeks, while at Swansea it has been reduced by the strike of the miners employed in the anthracite coalfield. For inland consumption stocks are being accumulated at an increasing rate to meet the contingency of a general stoppage of work throughout the South Wales coalfield. It is expected that the terms and conditions on which the pits will be kept open for work on August 1st will be posted at the collieries next week, and that the changes they will propose will be stubbornly resisted.

The following are the current approximate quotations:—Best Admiralties, 26s to 26s 6d; seconds, 25s to 26s; best dries, 25s to 25s 6d; black veins, 25s to 25s 6d; Western Valleys, 24s 9d to 25s; Eastern Valleys, 24s to 24s 6d; best bunker smalls, 15s 6d to 16s; ordinary cargo smalls, 12s 6d to 14s; coking smalls, 15s 3d to 16s; anthracite best large, 43s to 47s 6d; red vein large, 27s to 31s; machine-made cobbles, 51s 6d to 53s 6d; French nuts, 48s to 51s; stove nuts, 48s to 51s; rubbly culm, 13s to 14s; coke (special qualities), 40s to 45s; patent fuel, 24s to 26s 3d; pitwood, ex ship, 37s to 37s 6d.

The situation in the tinplate trade shows no improvement; on the contrary, outputs continue considerably below normal, and prices have, in some cases, fallen to 19s per basis box.

METALS.

The market displayed very firm features during the week, and prices advanced sharply under stimulating advices from the East, combined with a good demand. Later, however, selling orders imparted some irregularity. Standard cash sold £257 15s to £259 10s, £258 10s, and £261, three months £260-£262 10s-£260 15s-£263 7s 6d. Sales in the East were reported at £265 to £268 10s c.i.f. terms. Copper was accorded active support, and prices hardened, while sellers exercised reserve. Standard cash done at £61 7s 6d to £62, and three months £62 7s 6d-£63. Lead slightly irregular, but a good business transpired. Good soft foreign pig, July, sold £34 7s 6d-£34 15s, and August £34 2s 6d-£34 7s 6d; and £34 5s; September £34-£33 16s 3d, October £33 17s 6d-£34, and £33 18s 9d ton. Spelter steady, with fair support accorded. July sold £34 12s 6d to £34 18s 9d, August £34 12s 6d-£34 13s 9d, and £34 16s 3d, September £34 10s-£34 12s 6d, and £34 7s 6d, October £34 5s-£34 10s, and £34 5s, and £34 10s. Antimony firm. English special quoted £74 10s to £85, as to quality and make, foreign refined £63 10s to £64 10s ton, ex warehouse. Aluminium nominal at £120 to £125 per ton, ex warehouse. Quicksilver firm. Spot quoted £14 to £14 5s per bottle. Wolfram firm at 17s per unit, ex warehouse.

MANCHESTER, July 16.

Sellers in the market continue to be encouraged by a rather larger inquiry, but buyers are slow in coming up in price. The undercurrent of demand, however, is healthier than a little time ago. The fluctuations in raw cotton rates are disconcerting, and there is some anxiety as to the outcome of the labour dispute in the coal industry. In cloth for India inquiry has again been on a freer scale. More transactions have been put through for Calcutta in grey shirtings and lighter bleaching descriptions. A scattered business has also been done for Bombay and Madras. Favourable advices are being received as to the progress of the monsoon. China reports also continue better, a few fresh contracts having been arranged. The Near Eastern outlets have given very little support, but an encouraging turnover has taken place for the Continent and the United States. Quotations in American and Egyptian yarns remain irregular. There has been a restricted turnover in home counts and export numbers.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The outstanding feature this week has been the decision of the employers to post notices intimating an all-round reduction in wages amounting to about 5 per cent. on average. This action has been taken as a result of the inability of the Industrial Council to negotiate a settlement of the wages question. There seems to be a very general impression that a strike will follow, for the employers' leaders have already announced that trade unionists are not to accept the terms offered by the employers. In these circumstances business is again being conducted on exceedingly restricted lines. Neither spinners nor manufacturers are anxious to add to their present commitments until the outlook becomes clearer, and it is obvious that if a strike occurs there will be a certain amount of bother in connection with urgent deliveries. Topmakers' quotations show very little change compared with those ruling a week ago. The real fact is that the course of trade in London and in Australia has had very little effect on this centre so far. Wool is selling well at prices quite beyond the reach of most users here, and this is almost entirely due to the strong Continental buying of raw material. Bradford buyers are getting very little wool at the sales, simply because they cannot obtain for tops anything approaching cost of production.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Considerable interest continues to be displayed in the course of the raw material, and wool sales may now be said to be in full swing with the reopening of the auctions in Australia. All markets are certainly better, as the direct result of the six to eight weeks' rest. The lesson of the cessation of wool sales is obvious to those who have made a careful study of the position. Whenever there is a repetition of similar conditions, it will be wise to give buyers a rest, and it is apparent that even America is now feeling inspired to enter the Australian market and purchase the best wools. We think the buying should be encouraged, and growers can help in this direction by meeting the market. We do not see the slightest good to be obtained by putting on excessive reserves, either in London or Australia, because there is nothing to warrant any permanently higher prices than are being paid. It is acknowledged by buyers who have come home during the interval that Australian values were slightly below a London parity when the auctions finished, and we attach far more importance to the spirit and temper of buyers in Australia and the willingness to operate freely than we do to any 5 to 10 per cent. advance that is recorded in the best merinos and comebacks. Now that Australia has recommenced selling, we sincerely hope there is sufficient buying power in the trade to maintain the sales, and that there will be equally as good a response at both Brisbane and Sydney.

The course of the auctions in London can be regarded as good, and the irregularity in prices is very slight. The worst feature in Coleman street is that the bulk of the buying of merinos is having to be done by the Continent, the home trade not being disposed to operate at all freely. No doubt the threatened strike throughout the whole of the textile areas of the West Riding is playing some part in the sale-room, and certainly influencing buyers adversely. There is nothing now to prevent a strike, except the willingness of the operatives to submit to a 5 per cent. reduction in wages on their net earnings.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market remains very steady at the recent advances established. Best ox hides again sold at Thursday's Bermondsey auctions from 6½d to 8½d, and seconds from 6½d to 8½d per lb. Best cow hides made from 6½d to 8d. Calfskins were also firm, best selections selling from 7½d for heavy, to 1½d for light in the best pelts from 5s 9d to 7s 6d each. Fregoric hides share in a general firmness, and sales have been made of Argentine ox on a basis of 8½d to 8½d, with Montevideos at 9½d. 16,000 Liebig saladeros ox have, however, been sold to the Continent from 8½d to 11½d has been obtained for B.A. Americanos. The Chicago market is cabled as strong, with best heavy packers selling at 17 cents. Tanners are in an awkward position, as it seems impossible to control the raw hide market, and equally difficult to obtain prices for leather which will show a profit. The turnover in sole and prices, and tanners are now holding out for list prices again. Light dry hide bends are still the best sellers, but the advent of the autumn and winter trade has led to more enquiries for medium and heavier weights. The upper leather position remains quiet, with small parcels selling at firm prices. Kip and heavy chrome leathers are still dull, and curriers not well employed. Patent black glaze and coloured kid are selling fairly well. Imports of dressed leather continue to advance, the values for the first six months of 1924-25 being £3,499,650 and £3,779,002 respectively. On the whole, the boot trade is better employed. The export section, however, remains fairly good, as the values of exported leather footwear for the first six months of 1924-25 amounted to £2,179,630 and £2,160,750—the slight drop this year being due to a decline in Free State orders.

CHEAP RAPID RELIABLE TRANSPORT

VEGETABLE OILS AND OILSEEDS.

Linseed oil has been a somewhat erratic market, and recent advances have not been maintained. Prices have moved principally in sympathy with seed, and only a moderate business has been done. Thursday's value ex Hull mill was £41 per ton naked for spot, July-August and later positions being at a slight discount. Demand for cotton oil continues poor, but there is not much offering, crude Egyptian now being held for £43 and ordinary refined for £42 prompt. Soya oil has recovered to £41 15s, and palm kernel oil is dearer at £43. Rape and other oils are unchanged.

In the oilseed section demand for linseed by crushers has been almost negligible, and, following lower Plate options, prices have had a declining tendency. Spot and near positions are weak, and forward are lower, though on balance above those of a week ago. Up to £19 15s has been paid for August-September to Hull, and £22 for Calcutta to London, same positions. Further business in new crop Plate for January-February shipment is reported at £19 7s 6d after £19 12s 6d paid. Egyptian cottonseed old crop is held by shippers for £13 5s, July, and new £12 12s 6d November-January. Trade in oilcakes is quiet, as is usual at this time of the year.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 17.

SUGAR.—The market is firm, but at the same time generally quiet, and the continuance of a hand-to-mouth policy on the part of manufacturers and distributors favour the sale of British refined goods. No change was made in quotations of spot parcels. Crop prospects in Europe, with perhaps the exception of Germany, remain favourable, and the situation is still mainly dominated by America. Liberal and comparatively cheap offers of this granulated are made to the United Kingdom, while Cuba continues to furnish the raw product to British refiners. Messrs Tate and Lyle's cubes quoted 34s 6d to 35s 6d; crushed, 32s 6d; nibs, 35s; granulated stove, 32s 10½d; fine, also coarse, 30s 7½d; No. 1, 30s 4½d; No. 2, also London and T.L., 30s 1½d; ditto, month forward, 30s; yellow crystals, spot, 27s 7½d; caster, finest, 34s 4½d; A, 33s 10½d; B, 32s 3d; pulverised, 33s. Czech granulated, spot, 29s 6d; November-December, 16s 4½d, f.o.b., Hamburg. Dutch granulated, J quality, spot, 29s 6d; August, 16s 4½d, f.o.b., Rotterdam. Belgian crystals, ready, 16s 1½d, f.o.b., Antwerp. Polish crystals, ready, 15s 10½d, f.o.b., Danzig. American granulated, spot, 29s 4½d; July-August, London, 16s 6d; outports, 16s 9d, c.f. and i. terms. White Java, July-August, to London, quoted 15s 9d, c.f. and i. Cuban basis, 96 per cent., July-August, 12s 1½d, c.f. and i. White terminal market firm, with fair dealings. August delivery sold, 15s 9½d to 15s 11½d to 15s 9d; December, 16s to 15s 11½d and 16s; March, 16s 3d to 16s 1½d and 16s 3½d; May, 16s 6d to 16s 7½d per cwt.

COFFEE.—A steady tone governed the market, and fair absorption took place, both on home and export account, of the finer qualities. Common, however, remained difficult of sale. Costa Rica, bold hard grey to fancy blue, sold, 173s to 179s; Kenya, bold, 125s 6d to 144s 6d. Brazilian varieties for shipment met with very slow support.

COCOA.—Spot market steady, but business proceeded quietly. Accra, F/F, July-August, quoted 39s 6d; August-September, 40s; October-December, 42s, f.o.b.

TEA.—About 43,700 packages Indian were brought to auction and experienced subdued competition. All the finer liquoring teas, however, realized steady prices but medium and common ruled 3d to 3d per lb lower. Pekoe sold 1s 1d to 1s 8d; broken orange pekoe, 1s 3d to 2s 2d. Ceylon sales of 31,700 packages disclosed features similar to those prevailing for Indian. Pekoe sold 1s 2d to 1s 10d; broken orange pekoe 1s 6d to 2s 2d per lb in bond. In auction 7,900 tons Java and Sumatra were submitted. A quiet tone prevailed, with common and low medium sorts 3d to 3d per lb lower, but all the finer grades realised steady prices. Pekoe sold 1s to 1s 2d; broken pekoe 3d to 1s 5d; orange pekoe, 1s 3d to 1s 5d; broken orange pekoe 1s 2d to 1s 7d; and pekoe Souchong 10d to 1s 1d per lb in bond.

RICE.—Firm, but buyers do not show much interest at the moment. Rangoon two stars, spot, London, quoted 15s 6d; float, steamer, 15s 3d; June-July, 15s; July-August, 15s 1d, c.i.f. Japanese peas,

spot, 25s; September-October, 24s 4d. Madagascar butter beans, spot, 36s to 37s 6d, as to quality; July-August shipment, 34s, c.i.f.

SPICE.—Pepper steady, but generally quiet. Black Singapore, spot, quoted 74d; L.S., August-October, 74d; Lampung, spot, 74d; August-October, 7d; white Muntok, spot, 1s; August-October, 1s 1d to 1s 2d. Zanzibar cloves, spot, 11d to 11d; October-December, 11d to 1s. Sellers, 10d, c.i.f. and i., per lb. Tapioca steady. Fair Singapore, flake, spot, 23d; fine Java, 3d per lb. Singapore, August-September, to Havre, quoted 18s 3d; September-October, 18s 6d; Panang seed to London, July-August, 16s 9d. Sago flour quiet. Sarawak, July, to U.K., quoted 16s 6d; July-August, 16s 3d; September-October, 15s 10d. Desiccated coconut, fine cut, spot, 39s 9d; medium, 40s; halves, August-September, 39s 6d per cwt. Ginger steady, Japan, spot, 90s; August-September, 85s; West African, spot, 64s; shipment, 61s per cwt, c.i.f. terms.

JUTE.—Steady, with moderate inquiries. Firsts to Continent, July, quoted 44s; August, 44s 10s; September, 44s 10s; October, 44s 10s; October-November also November-December, 44s 10s. Lightnings quoted at 30s per ton less. Hessians and twills firm; especially for near positions, but trade generally quiet.

KEMF.—Manila dull, and trend of values weaker. J grade, August-October, 47s 10s; K ditto, 42s; L, 42s 10s; M, 43s 10s. New Zealand H.P.F., August-October, 44s; fair at 43s. African sisal, No. 1 Tanganyika, August-October, 44s; and Kenya, 44s 10s per ton.

COPIA firm, with a moderate demand. F.M.S. Straits, April-June, Rotterdam, quoted 31s 2s 6d; May-July, buyers, 30s 15s; July-September, 30s 12s 6d; August-October, 30s 10s. Dutch E.L., May-July, 30s 10s; July-September, 30s 5s. Ceylon, July-August, 31s 15s. M.S. South Sea Islands, July-August, 29s 12s 6d. Palm kernels, August-October to Liverpool, quoted 22s per ton.

SHELLAC easier. Fair T.N., August, sold, 217s 6d; December, 20s per cwt.

ESSENTIALS.—Star aniseed oil, spot, 3s; Cinnamon leaf oil, spot, 4d; shipment, 4d; Citronelle oil, Ceylon, spot, 2s 4d; shipment, 3s 2d; Java, spot, 3s 9d; shipment, 3s 10d; lemongrass oil, spot, 3s 13d; shipment, 3s 6d per lb.

EGG PRODUCTS quiet. Dried yolk, spot, quoted 11d; Albumen, spot, 4s; July-August, 3s 9d lb. Prime hen liquid yolk, 75s to 80s per spot; and July-August, 70s per cwt.

RUBBER.—Prices further hardened under sustained buying orders, though movements were attended by some irregularity. Plantation standard sheet, spot, also July, sold, 4s 5d to 4s 6d; August, 4s 4d to 4s 5d; September, 4s 3d to 4s 4d and 4s 4d; October-December, 3s 10d, 3s 11d, 3s 10d and 4s; January-March, 3s 5d to 3s 6d per lb.

FRUIT (Dried).—Market steady, but business proceeded on quiet lines. Of currants, Pyrgos quoted 33s to 34s; Amalia, 35s to 36s; Atlas, 38s to 40s; Gulph, 40s to 42s; Vostizza, 45s to 53s. Sultanias: myrta, fair quality, 58s to 62s; finer, 65s to 78s; Cretan, medium to good, 68s to 74s; Australian, 6s to 75s; South African, 65s to 75s. Figs: Naturals, in bags, quoted 29s to 30s. Dates quietly steady. Hallowee, spot, 19s; Khadowie, 17s 6d; Siar, 16s. Raisins: south African, 40s to 50s; Lexias, 50s. Evaporated fruits quiet, apart from a fair demand for apricots. Californian apricots, standard new extra choice, 127s 6d; fancy, 135s; Australian, 120s to 135s; Californian peaches, choice, 62s to 63s; extra choice, 65s to 66s; fancy, 70s. Lums: Oregon, new, 30/40, quoted 71s 10 72s; 40/50, at 50s 51s; Californian, new, 40/50, 58s to 60s; 50/60, 50s to 51s; 70/80, 4s to 45s. Pears, choice, 90s; extra choice, 102s to 103s. Apples: California, extra choice, 50s to 51s; Oregon, extra choice, 5s per cwt.

CANNED GOODS.—Sardines in moderate demand at late rates, with fine quality scarce. Portuguese, 3 flats quoted 4s 3d; clubs, 5s; 2 ozs, 7s 6d; 18 ozs, 12s per dozen tins. Salmon continues in good request at full rates. 1 lb, flat reds, labelled, 77s to 78s; tall, 1 lb, 52s 6d to 53s 6d; 1 lb, tall, pink, 26s to 27s; 1 lb flat, 33s to 36s. Lobsters in good request, and halves quoted 165s.

CANNED FRUITS.—Market generally unaltered, with a steady demand. Loganberries are again firmer, and parcels not up to grade are practically cleared. Singapore pines continue in demand, and prices tend firmer. 48-1 1/2's quoted 86s 6d to 87s 6d; cubes, 2 1/2's, 3s to 13s 6d; slices, 24-2 1/2's, 12s 6d to 13s 6d; South African and Hawaiian in steady request, at late rates. Californian pears, 15s 6d to 7s; peaches, 12s 3d to 14s; cherries, 13s 6d to 14s; apricots, 10s to 13s 6d; loganberries, 13s 6d to 16s; fruit salad, 1 1/2's, 12s 6d to 14s; 3's, 21s 6d to 22s 6d; Australian pears, 24-2 1/2's, 16s to 16s 6d. Canadian, 14s to 14s 6d.

MISCELLANEOUS.—Cocoanuts quoted 25s to 27s 6d per 100. Coir yarn: Ceylon, 25s to 33s; Cochinchina, 30s to 34s. Ceylon bristle, 19s 10s to 25s; cinnamon leaf oil, 44d; citronella, Ceylon, 2s 4d; Java, 3s 9d.

OILSEEDS.—Linseed irregular, with a fair demand. Calcutta to London, August-September, sold, 22s 2s 6d to 22s 17s 6d; bold Bombay, ditto, 22s 2s 6d. Plate to Hull, July-August, sold, 19s 15s to

19s 2s 6d; September-October, 22s to 22s 10s; January-February, 19s 10s to 19s. Rapeseed firm. Toria to Continent, July-August, 21s 17s 6d; brown Cawnore, 20s 17s 6d. Cotton-seed firm. Egyptian black, to Hull, July, 13s 7s 6d; November-January, sold, 12s 12s 6d; white, July, 12s 12s 6d; November-January, sold, 12s 12s 6d; Bombay, July-August, 19s 10s. Castor-seed steady. Bombay, July-August, 22s 10s. Gingly seed quiet. Chinese to Continent, July-August, 27s 15s; large Bombay ditto, 26s 5s. Ground-nuts firmer. Coromandel machined, July-August, 25s 10s; Nigerian, July-August, 25s 10s per ton.

OILS.—Linseed irregular. Spot, net, naked, 42s; August, 41s; September-December, 41s 3d. Rape easier. Crude, spot, 48s 6d; refined, 51s 6d. Castor-oil quiet. First pressure, spot, quoted 56s 6d; second pressure, 54s 6d; and pharmaceutical, 61s 6d per cwt. Hull, with London, 2s per cwt extra. Cotton seedier. Crude Egyptian, spot, 43s; Bombay, 39s 6d; common edible, 47s 6d; deodorised, 49s 6d. China-wood easier. Hankow, spot (barrels), 68s; June-July, nominally 67s. Coconut firm. Ceylon, spot, 48s; June-July, 46s 6d; Cochinchina, ordinary packages, 60s. Soya quiet. Oriental, barrels, July-August, 43s; bulk, 40s. Cod dull. English, spot, 33s to 34s. Ground-nuts steady. English, crushed, naked, spot, 49s 6d; deodorised, barrels, 57s. Turpentine firmer. American, spot, 67s 6d; August, 67s 9d; September-December, 68s 6d. Rosin firmer. American, grade B/D, 20s 6d; E, 21s 6d; F/G, 22s; W/G, 28s; W/W, 30s per cwt. French F/G, 21s 6d; W/W, 26s 9d per cwt. Petroleum quiet. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on July 15th as follows: The tallow market was firmer during the week, and prices were 2s dearer to-day. The spot demand showed some improvement and the small quantity offered being insufficient for requirements, met with lively competition. Shipments of tallow from Australasia during June amounted to 6,900 tons, against 1,700 tons during the corresponding month of last year. At auction to-day 768 casks tallow were offered, and 715 were sold. Quotations are:—Australian mutton: Fine, 49s; good to fair, 48s to 45s 6d; dull to dark, 43s 6d to 41s; hard, 48s. Australian beef: Fine, 48s; good to fair, 47s 6d to 44s 6d; dull to dark, 43s to 40s; sweet, 48s 6d. Present shipment from Australasia: Good mixed, 46s. Present shipment from South America, 46s 3d. The market letter is dearer. Tallow, 1s; stuff, 1s. Town tallow, 42s 6d per cwt. Rough fat per cwt, 43s 6d to 44s 6d; dull to dark, 43s to 40s; sweet, 48s 6d. Present shipment from South America, 46s 3d. The market letter is dearer. Tallow, 1s; stuff, 1s. Town tallow, 42s 6d per cwt. Rough fat per cwt, 43s 6d to 44s 6d; dull to dark, 43s to 40s; sweet, 48s 6d. Present shipment from South America, 46s 3d. The market letter is dearer. Tallow, 1s;

make weekly advances below $3\frac{1}{2}$ per cent. were not successful. Discount rates, after being weak, steadied appreciably when it was found that money was less easy, and had apparently been helped to become so by a further reduction in the Bank of England's holding of securities. The transfer of another half million in Bank notes to the Treasury note reserve was another indication in favour of caution, calling emphatic attention to the approach of the holiday demands for currency. Treasury bills had been dealt in as low as $4\frac{1}{8}$ per cent., but yesterday's batch went about $\frac{1}{8}$ above this rate. Bank bills were wanted on Continental account, but the working rate for them was practically $4\frac{1}{8}$ per cent.

	July 24, 1925.	July 17, 1925.	July 10, 1925.	July 3, 1925.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	4 (Mar. 5, '25)
Banks' Deposit Rate	3	3	3	3	2 (Mar. 5, '25)
Discount (Call)	3	3	3	3	2 (Mar. 5, '25)
Houses (Notices)	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	2 (Mar. 5, '25)
Market rate (3 months' bills) ..	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	..

The Bank return showed an increase in the stock of gold of £1,667,000, which is £2,000 below the amount announced as having been received from abroad during the week. The note "circulation" increased by £243,000, £500,000 having been transferred to the currency notes account, also the Reserve was £1,424,000 on balance higher, with its proportion to liabilities 1.5 per cent. higher at 31.3 per cent. Government and Other securities declined by one and two millions respectively, and Public deposits expanded by three millions; the Other deposits were thus $4\frac{1}{2}$ millions lower. Currency notes outstanding increased this week by £866,000 to £298,936,000, which includes £1,332,600 for notes called in, but not yet cancelled. The Bank of England notes in the Currency Note Redemption Account increased by £500,000 to £54,450,000. The fiduciary issue is £243,153,100, or £4,992,000 below the maximum for 1925.

NEW YORK MARKETS.

Our New York correspondent cables:—Cotton has risen \$7 per bale on the bullish Government estimate, which puts the condition at 70.4 and the probable yield at 13,339,000 bales. The deterioration in condition is due to hot dry weather in the south-west. The security market has shown slight signs of tiredness, with bond prices soft, but stocks still show little real inclination to go down. The money market remains easy, with more talk of hardening as autumn approaches. The Federal Reserve ratio is 77.1.

THE STOCK MARKETS.

Easier monetary conditions have reacted favourably on investment business. Prices have been advancing in the Consol market, and quotations for various issues are better on balance. A new South African loan for £4 millions was underwritten yesterday. The strength of French Railway bonds was an outstanding feature in the foreign market, and Home Rails also enjoyed substantial rises, but fell back yesterday. Business in Rubber shares, though less exuberant, is still of large dimensions, but Tea shares are neglected. Among Industrials, Textiles are firm, and the Shipping stocks rather better than of late, but Iron and Steel shares still lack public support. The Kaffir market is featureless.

THE COMMODITY MARKETS.

Business in the coal market has been more active this week, in view of consumers' apprehensions of a stoppage at the end of July. In iron and steel, however, very little business is being done for the same reason. An increased demand has been experienced in the cotton trade, buyers apparently having more confidence of the future of prices in this market. The wool textile industry of the West Riding being faced with prospects of a labour stoppage next week, very little business has been done at Bradford during the last few days. The hide market remains firm. Wheat has moved irregularly during the week. In the metal markets tin has been strong, with a sharp advance

in price. Copper and lead have also been firm. Dealings in sugar are featureless, and in tea, irregular. Rubber continues its active course.

FOREIGN EXCHANGES.

Business on the foreign exchange market has again been very quiet, the most marked activity being in French francs. Official intervention has continued to keep the rate relatively steady with some improvement down to as low as 102.50 at one time on the 21st, as compared with the closing rate of 103.25 on the 17th. On Wednesday and Thursday, in spite of a more favourable Bank return, there was a slight reaction up to 103.75 at one time on Thursday, but yesterday morning the quotation was back at 103.07 $\frac{1}{2}$, and the situation would appear for the time being to be well under control. Brussels has continued to show a marked spread, having moved from 105.20 to 105.07 $\frac{1}{2}$. Forward rates in Paris have widened again from 25.30 to 30.33 centimes above spot for one month ahead. Brussels for the same period stands at 7.4 centimes below. Italy, after a slight recovery at the end of last week, has again shown an upward tendency, being quoted as high as 133.75 at one time on the 23rd, as compared with a closing price of 131 $\frac{1}{2}$ on the 17th. Yesterday morning the rate stood at 133. Sterling has remained very stable; in the earlier part of the week there was a slight improvement to \$4.86 $\frac{1}{2}$, but the quotation is now back again at \$4.86 $\frac{1}{8}$. Forward dollars have narrowed again to 5.32-1-32 cent for one month ahead. Amsterdam, which stood at 12.11 $\frac{1}{2}$ on the 17th, improved sharply down to as low as 12.09. Since then there has been some reaction to 12.10 $\frac{1}{2}$. In spite of the strong disfavour with which the recent rapid appreciation is viewed both in Oslo and Copenhagen, the currencies of both centres have continued to improve, that of Norway from 27 to 26.57 $\frac{1}{2}$, and of Denmark from 23.02 $\frac{1}{2}$ to 21.87 $\frac{1}{2}$. The cause of this movement would appear to be speculative buying from abroad on the recent announcement of the policy of the Bank of Norway gradually to return to pre-war parity. In view of such announcement the action of the speculator is quite comprehensible, and it is difficult to see what action can be taken against such buying, in spite of the disadvantages which are caused to the trade of the two countries. In the case of Denmark, where no policy has been defined, the speculator would seem to be acting merely on the assumption that Denmark will in any case follow the example of Norway. Stockholm, over the week, has moved slightly in our favour from 18.08 to 18.08 $\frac{1}{2}$. Madrid has again moved up from 33.51 $\frac{1}{2}$ to 33.60 $\frac{1}{2}$, after being higher. Switzerland has risen from 25.03 to 25.03 $\frac{1}{2}$. The gold exchanges, Berlin, Vienna, Warsaw, Budapest, &c., show no appreciable change, and Helsingfors and Prague remain at their stabilised rates. Athens shows a rising tendency, but in Budapest there is a marked improvement from 1,005 to 920. In the East the rupee is very slightly cheaper at 1s 6 $\frac{1}{2}$ d, as compared with 1s 6 3-32d, but the yen has appreciated slightly from 1s 8 13-32d to 1s 8 11-32d. The silver market has been steady, but extremely sluggish, and both Hong Kong and Shanghai are unchanged. In South America Rio shows a distinct improvement from 5 $\frac{1}{2}$ to 5 13-16d, after being as high as 5 29-32d. Buenos Aires has also moved up slightly from 45 $\frac{1}{2}$ d to 45 11-32d, while Monte Video has risen from 48 $\frac{1}{2}$ d to 49 $\frac{1}{2}$ d. In Valparaiso there is also a slight appreciation from 40.80 to 40.60 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 18th:—

(000's omitted.)		(000's omitted.)	
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	8,850	From Revenue	20,034
Interest, &c., on Debt	699		
Sinking Fund	270		
Increase in Balances	260		
Surpluses	1,433		
Reduction of Debt	8,522		
	20,034		20,034

The Revenue for the week amounted to £20,033,900, as compared with £18,350,000 in the corresponding week last year. Customs were slightly higher at £1,356,000, against £1,217,000, while Excise was lower at £7,016,000, against £7,407,000. Property and Income-

tax brought in £5,431,000, as compared with £5,756,000, and Super-tax amounted to £740,000, against £550,000. Ordinary Receipts, at £120,200, were £10,200 higher, while Special Receipts brought in £2,315,000, against nil last year. The week's operations reduced the National Debt by £8,522,000, and caused the following changes:—

(000's omitted.)	
Treasury Bills	+ 3,891
National Savings Certificates ..	+ 150
Surpluses	+ 287
	+ 4,328
Public Department Advances ..	— 12,850
	— 12,850

The floating debt was reduced by £8,935,000 to £783,555,000.

FINANCIAL YEAR, 1925-1926 (April 1st to July 18th.)

£	£
Total Expenditure .. 255,747,467	Raised by Revenue .. 213,300,587
	Decrease in Balances 3,770,970
	Amount borrowed .. 38,675,910
Total	255,747,467

ESTIMATES FOR FINANCIAL YEAR 1925-1926.

£	£
Expenditure	799,400,000
Revenue	801,060,000
Surplus	£1,660,000.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Standard Bank of South Africa, Dorada Extension Railway, Argentine Navigation Company, Distillers Company, British Celanese, Furness, Withy, and Co., Malayalam Plantations, and Transvaal Gold Mining Estates. At the Furness, Withy meeting Sir Frederick Lewis referred to the shipbuilding orders placed abroad by the company. At the Distillers Company meeting the terms of an agreement for exchange of capital with the Scottish Malt Distillers, Limited, were announced.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a summary of the Balfour Committee's Survey of British Trade in Overseas Markets.

THE VICTORY OF THE "VESTED INTERESTS."

THE Government's Navy Estimates, as presented in March, showed an increase of £4,700,000, and this although no new construction was included. Until Thursday, although questions were repeatedly asked, no official information was forthcoming as to the Admiralty's plans under this head. Sanguine persons hoped that, since our complement of modern (i.e., post-1915) cruisers was more than equal to that of the United States, Japan, France, and Italy added together; since the proposed pact advocated by Mr Chamberlain was, professedly, a step in the direction of disarmament; since the world pants for peace, and this country for economy, the dead silence of the Government implied that Mr Churchill's reference, in his Budget speech, to a £10 millions saving, and his talk of a Committee "overhauling expenditure in blocks" could be taken as implying that, for once, the Cabinet, and not the Lords of the Admiralty, were to control naval spending. So it was hoped; but, as the weeks ran out, and rumours of struggles behind the scenes began to percolate, the hope grew fainter. Speaking at the Mansion House in the middle of last week, the Chancellor of the Exchequer used an expression of sinister augury. "The vested interests of expenditure are so strongly entrenched," he said, "that it will take all the efforts of a united Cabinet to achieve

even a moderate reduction this year." In his next sentence he at once proceeded to extinguish the tiny candle of optimism thus lit. Really, there was no question of a reduction; the fight was against a further increase in the naval bill. "We are endeavouring at present not so much to reduce the total of expenditure, but to prevent that total being seriously increased by the dull tide of upward expansion." In the House of Commons, next day, powerful arguments were adduced in favour of reduction, both on domestic and on international grounds. Commander Hilton Young, in particular, dealt in advance with any plea for new construction. Efficiency to-day lay along the road of reduced outlay; it was folly to build ships at a time when design was rapidly changing. This is a point that applies at least with equal force to what is called replacement. The First Lord said nothing in his reply, but during the week-end the rumblings of battle, inside the "united Cabinet," became more and more audible, and rumours of resignation flew about.

In the upshot the "vested interests" have triumphed. The "dull tide of upward expansion" has flowed over those who attacked them. The Sea Lords have maintained their claim to determine policy. Presumably they have won because their threat of resignation was taken seriously, while that of Mr Churchill, if made, which is doubtful, was not. Anyhow, on Thursday afternoon Mr Baldwin, who has talked so eloquently about economy, and actually, with a singular sense of humour, proceeded to do so then, announced that the Admiralty's "minimum" programme had been sanctioned. Seven cruisers are to be built. Four are to be laid down in this financial year, two in October, two in February; then three more in every year during the life of the present Parliament. The Admiralty wanted eight; they have got seven. They wanted a "continuous programme" of 45, over a period of nine years. They have made a very good start. The "dull tide" is flowing.

Whenever or however it is paid, the bill for these cruisers is an addition to the Navy Estimates. These Estimates, at £60 $\frac{1}{2}$ millions, represent an increase of nearly £5 millions over the Labour Government's actual expenditure, which included charges for five cruisers and two destroyers, part of the replacement programme they had inherited from their predecessors and substantially cut down. At £60 $\frac{1}{2}$ millions, the Estimates show an increase of no less than 24 per cent. (£11,667,000) over those for 1913-14, although the latter included large amounts on account of new construction. To that huge bill the new cruiser programme is an addition. The Opposition has asked for Vote 8 to be taken on Tuesday. The debate then will give an opportunity for discovering, with rather more precision than is possible at present, what the addition is to mean. The Prime Minister, with singular naïveté, coupled his announcement with the declaration that a Committee of three outsiders is to be appointed to look into economies in the service departments. Presumably this is on top of the "overhauling" committee to whose beneficent operations Mr Churchill referred. In any case, its field seems restricted in advance. Individuals, when hard up, do not, as a rule, go out and make extensive purchases, and then call in an outsider to advise them how to make ends meet; or, if they do, they find themselves in the Bankruptcy Court. It is difficult to take this part of the Prime Minister's announcement seriously.

The general position is, however, very serious. The King's Speech promised that "Every effort will be made to reduce public expenditure to the lowest possible limit consistent with the security and efficiency of the State. The present heavy burdens on the taxpayer are a hindrance to the revival of trade and employment. Economy in every sphere is essential if we are to regain our industrial and commercial prosperity." That was in December. In July, growing unemployment, a heavier burden of depression throughout our major industries, a mounting adverse trade balance, a menacing industrial crisis, register the effect of the disregard of this solemn warning, uttered by the Government to itself. Economy is a rigorous and concrete process. Words do not further it. It has to be addressed specifically. What is should be addressed to unproductive services. What is actually happening? On Thursday the Prime Minister's

announcement of more money for cruisers was immediately followed by a dreary debate on education, from which the Front Bench, perhaps from a sense of shame, conspicuously absented themselves, while the Minister wrung his hands and said he could not do what he would because there was no money. That is one side of the picture. On the other, £116 millions for armaments, apart from this new incalculable addition. What Singapore is going to cost us, nobody knows. What the new cruisers are going to cost us, nobody knows. What we do know, however, is that no expert has yet justified the expenditure, and that we cannot afford it.

From the international point of view, the case is even worse. The Prime Minister's announcement is a declaration to the world which the world will be only too ready to understand. Cruiser building is a gesture, which no arguments about subsequent economies, replacements, and so on, can offset. With the German fleet at the bottom of the ocean, the Washington Agreement for limitation signed and sealed, and the League of Nations Covenant binding all its signatories to "reduce armaments to the lowest point consistent with national safety," Great Britain embarks on a new building programme. Inevitably, the action is read as wantonly queering the pitch, in advance, for any effort at disarmament. Small wonder that the French Press again resounds with complaints of British hypocrisy and declarations that we have now shown the insincerity of our pacific professions. France is asked to reduce its military forces. Is it likely that it will do so, or that anyone else will do so, with this flag of aggression flaunting before their eyes? It can have no effect but an all-round revival of the old, mad race of competitive preparations—always called "insurance," "security," and so on, always, inevitably, creating the very danger that is feared and, at once, re-establishing the old bad atmosphere of mutual suspicion and distrust. At Washington we agreed to limit our battleships, and the gesture was applauded to the echo. What is the effect likely to be on our moral status, and on the authority of any disarmament conference or any effort at international agreement, of the discovery that, having signed a pledge in the letter, we immediately proceed to violate its spirit? We are not building battleships of over 10,000 tons. The letter has been observed. But we are building a fleet of cruisers—because they are not specifically included. How can we expect that a pact or any other instrument can ensure peace when we give such practical demonstration of our disbelief in it?

GERMANY'S REJOINDER.

THE German reply to the Allied Note of June 16th on the original Rhineland Pact proposals has been received with considerable relief. In view of the difficulties the Nationalists have been making for Herr Stresemann, a much less satisfactory document might reasonably have been expected. As it is, while protracted and possibly difficult negotiations are in store, progress is, at any rate, being registered, and the German communication, so far from arresting the march of events, does represent definitely a further step towards peace and stability in Europe. We are still, it is true, in the region of elucidations. The Allies devoted themselves in June to eliciting explanations of certain doubtful points in the deliberately vague German proposals of February. To-day Germany, in her turn, perplexed and a little uneasy about certain Allied stipulations, is endeavouring to discover precisely where she stands. But the upshot of the whole thing is that we are making headway, and shall make it more effectively when the time comes for abandoning written interchanges and substitute the more swiftly moving mechanism of personal conversations. Germany clearly thinks the time for that has come already, and most people in this country will be disposed to agree with her on that point.

The German Note deals with two sets of questions: those as to which there is substantial agreement between

Germany on the one side and Great Britain and France on the other, and those as to which there so far manifestly is not. The former, fortunately, predominate. Germany, for example, admits at once that the conclusion of the proposed Rhineland Pact is to be in no sense dependent on a modification of Treaty provisions regarding the military occupation of parts of Germany, though she points out, quite reasonably, that the very fact of the conclusion of a Pact will create an atmosphere in which a new view may well be taken of conditions in the occupied territories and the whole question of occupation in general. She is in agreement with the Allies on the conclusion of a system of arbitration treaties, though there is an important difference, regarding which something more must be said in a moment between the German and the Allied conception of the nature of such Treaties. She has no objection to linking the two problems of security and entrance into the League of Nations, though she is not so far satisfied as to the conditions under which she might enter the League. In a word, to quote the actual text of the German Note, "The interested Governments are in principle unanimous in the earnest desire to settle the Security problem by a Guarantee Pact, as suggested by Germany, and by further development of the system of arbitration treaties."

There remain two points on which Germany definitely registers reserves. One is the right of the Allied Governments to take coercive action under the Treaty of Versailles, the other the suggestion that signatories of the Treaty of Versailles or of the Rhineland Pact should have the option to be guarantors of any Arbitration Treaties to be concluded between Germany and her neighbours in the East. It is to such problems as these that the statesmen of the three countries primarily concerned must apply themselves, and there is little time to be lost if difficulties are to be sufficiently cleared away for Germany to apply for membership of the League of Nations in September. As to the original proposal of a Rhineland Pact, agreement is already sufficiently general to enable action to be taken if the Pact proposal could, as it cannot, be isolated and dealt with by itself. In Germany those sections of Liberal opinion represented by the *Berliner Tageblatt* who have been criticising the German Government's proposals do so on the ground of their Eastern implications, but are entirely satisfied with the actual Rhineland plan. France, again, has obvious reason to be content with a proposal which establishes finally the existing situation in Alsace Lorraine and leaves the temporary Saar arrangements unchallenged. As for this country, most people will agree, even though it may be reluctantly, with Mr R. B. Mowat's contention in Thursday's *Times* that should fighting break out on the Rhine we should be implicated in any case, and that the only effect of our accepting obligations in advance in regard to such a possibility is to make any outbreak much less likely.

Our obligations on paper will be extensive. They will amount to a pledge of the whole of our armed forces. They will no doubt involve negotiations of some delicacy with the Dominions, though General Smuts' warning on that point has created little disquiet. The South African statesman has been long cut off from any close personal contact with European problems, as is shown by his confident reference to the revision of the Peace Treaties, a proposal which, if seriously pressed at this moment, would make inevitably not for peace but for war. Towards modifications of the peace settlement we must evolve by slow stages, and nothing will so much promote progress in that direction as the strengthening of the League of Nations, and, to a lesser degree, the creation of such a sense of security as the Rhineland Pact is designed to confer in one particular region. Whether all or any of the Dominions will be ready to associate themselves with the Rhineland Pact obligations is still quite uncertain, but it is hardly to be contemplated that their attitude should be such as to fetter Great Britain's freedom to apply her own policy in regard to a region in which her geographical position gives her a definite concern. Our position in the British Empire cannot affect the hard facts of our relationship to Europe.

British obligations, under the German proposals, will be confined to the guarantee of the existing situation on the Western frontiers of Germany, for there is no prospect whatever of the assumption of any commitments beyond those already embodied in the Covenant of the League of

Nations in regard to other frontiers in Europe. The course of future negotiations would be greatly simplified if France, too, were content, apart from the special Rhineland arrangement, to rely on the Covenant of the League. Germany has, not unnaturally, taken exception to the suggestion of Western Guarantees of the Eastern Treaties. She translates that in one way only. To contract an arbitration treaty with Poland, and to have that treaty guaranteed by France, the formal ally of Poland, is an arrangement she could hardly be expected to find satisfactory, even though—theoretically, of course—France would guarantee Germany against Poland, as much as Poland against Germany. There ought, however, to be no difficulty here that will not yield to frank diplomatic discussion. With regard to the form of the arbitration treaties generally, a more serious question arises. Germany now makes it clear, what was a little doubtful before, that the treaties she proposes are of the type she has herself contracted with Sweden, Switzerland, Finland, and other countries. Those treaties provide that the decision given in any purely legal or justiciable dispute shall be final and binding, but that broader political differences shall merely be submitted to a process of conciliation, neither side undertaking to abide by the findings of the arbitrators. That, of course, leaves the door open to war, and the whole purpose of the present arrangement is to close doors to war. Other and more numerous treaties contracted in recent months—as, for example, between France and Switzerland, Switzerland and Italy, Poland and Czechoslovakia, provide for a decision that shall be binding in the case of every dispute submitted. The system of treaties proposed by Germany can only be watertight if the agreements are of the latter comprehensive character, not of the type she has so far favoured. It is not clear what importance Germany herself attached to the distinction between the two classes of treaty. If she is wedded to the more limited type, there may be some difficulty in reaching agreement.

But on a long view the most important passage in the Note is that regarding Germany's attitude towards the League of Nations. Her objections to entering the League are, to all appearance, fined down to one point, the obligation on every member State to grant passage to the troops of another country acting at the behest of the League against a violator of the Covenant. That might mean for Germany, theoretically at any rate, allowing a French force to go through to help Poland against Russia, and from that possible commitment Germany still shrinks. Whether, if the League stands firm, she will in the end abandon her scruples is a question no one can answer with any assurance, but the prospect is too doubtful to justify any unnecessary risks. If Germany stays out of the League there can be no question of any passage of troops across her territory. If she comes in there can be every question of it, subject, it may be, to some safeguards or reservations which it ought to be possible to devise without seriously weakening the force of one of the most important articles of the Covenant.

Agreement on such matters is unlikely to be reached by a

further interchange of Notes, the inevitable defect of which is that each side is compelled to assume before the world some position from which it is for that very reason the harder to retreat. Moreover, Germany's lack of imagination about the League and the prestige and influence her membership of it would confer on her makes it the more essential that personal conversations shall be entered on as soon as may be. That does not mean a formal conference, for which the situation is by no means ripe. But a frank interchange of views between the Foreign Ministers of Great Britain, France, and Germany, and, if desired, of Belgium, should with goodwill and earnestness on each side result in a broad agreement bringing, as a whole, sufficient advantage to everyone concerned to command general approval in each country in spite of concessions which must inevitably be made as the price of accord. The Pact as a whole is a paper agreement, but even as such it promises to have a certain value as a factor for peace. Germany's entrance into the League of Nations, on the other hand, would be the beginning of a living and continuing co-operation and the establishment of a relationship which alone would suffice to reduce to compassable volume the varied difficulties of the future as they arise. That particular step forward is so important, and the time between now and September, when the League Assembly meets, is so short that Germany's concealed but unmistakable desire for direct conversations ought at once to be gratified.

REPARATION AND INTERNATIONAL TRADE.

APPOINTED by the Economic Restoration Committee of the International Chamber of Commerce, a sub-committee composed of Sir Josiah Stamp, Signor Alberto Pirelli, and Comte André de Chalendar, has issued a report on Reparation Payments and Future International Trade,* setting forth (a) the economic principles underlying the problem, and (b) a programme of action and research by the Restoration Committee. It begins by correcting a common misapprehension concerning the Dawes Commission, which ascribes to it the task of "settling reparations." This, it says, was not, as such, the business of the Commission, which had been set up to make proposals for stabilising the mark and balancing the German budget; but in dealing with both these problems it inevitably came into contact with Reparations, which stood in the way of each of them. Such, at least, is the account of the matter given in this report, which must be accepted as correct, seeing that it is signed by Sir Josiah Stamp, who was a member of the Dawes Commission. At the same time it may be suggested that popular error is not really so very erroneous, seeing that if it had not been for the general desire for a settlement of the Reparation question, there would not

* Published by the International Chamber of Commerce, Paris.

have been so much eagerness on the part of Germany's neighbours and creditors to help her to stabilise her currency and balance her budget.

But whether the dog wagged the tail or the tail wagged the dog, it is certainly true that the question of the amount that Germany will finally pay to the Allies has been left to be settled by the course of events. The Dawes report recommended that a certain number of gold marks should be collected each year in Germany, and left the conversion of these marks into foreign currencies to a transfer committee, whose duty it will be to see that "only so much of the funds provided by Germany shall be removed from Germany as can safely be done without endangering German financial stability." The report now before us points out that assuming Germany's obligation to produce a given annual amount in marks to be duly met, the success of the transfer stage depends upon two main factors:—(1) The capacity of Germany to export, (2) the ability or willingness of the inhabitants of the creditor countries to receive, these two problems being closely interwoven. The report is a masterly exposition of the difficulties that surround both these questions, with interesting proposals for surmounting them, and though from the nature of its inquiry it calls special attention to the difficulties, it is careful to point out that "the problem is not insuperable." This cheerful decision may be commended to the attention of those who have concluded in advance either that it is impossible for Germany to pay, or that if she does the receipt of her payments will ruin her creditors. A sense of proportion is necessary in considering the question, and may be assisted by the figures of international trade in the aggregate. As was shown in last week's *Economist*, the total sterling value of the exports of the world, as estimated by the Committee on British Industry and Commerce, was in 1923, the last year for which figures are available, £5,299 millions. The addition to this total of 2½ milliards of gold marks, the sum expected from Germany in a standard year, does not look so very terrifying. To England the problem is simplified by the fact of her debt to America, to which receipts from Germany would be a set-off; and since by the Balfour Note she has engaged herself not to ask more from her Allies in repayment of war debts—a problem which is closely connected with that of German Reparation payments—there is just a possibility that she may some day be neither a debtor nor a creditor on balance, but just an "honest broker" reading through, as they say on the Stock Exchange, between one account and another. This does not mean that her export industries may not be uncomfortably affected by the process, but it does mean a certain alleviation of the difficulties involved by international payments on the scale that would be involved if Germany and all the Allies were to join in a harmonious chorus of full payment.

As to whether Germany can pay—not only collect the marks internally, but have them transferred into foreign currencies without impairing her financial stability—the Committee decides that her pre-war experience, or that of any other country, is of little value as a guide. It concludes that "no reason exists to throw doubt upon Germany's capacity to produce an adequate surplus of exportable goods." This conclusion is based on the following, among other considerations:—(1) Pre-war figures have to be corrected to agree with current values; (2) productive plants have been greatly increased; (3) power to produce exports has been set free by the reduction of military service, and of munitions manufacture; (4) the ruin inflicted on the propertied classes by the wiping out of debts has obliged the leisured class to work; and (5) capital accumulation can be diverted into exports or into investment for export. Whether such alterations in German conditions, and what the Committee calls the "entirely new economic dynamic which exists because of the obligation to pay Reparations," will produce the necessary export surplus, time will prove; in the opinion of the Committee, as shown, there is no reason to doubt that they may.

All the more urgent, therefore, becomes the problem of thinking out methods by which the payments may inflict least hurt upon those who receive them. The

Committee asserts "without hesitation" that "the only way in which a debtor country can really pay its debts is by the harder work and superior skill, and by the more economical living of its inhabitants"; and it urges that it is inconsistent for the creditor countries to wish to receive reparations while limiting the industrial activity of their debtor. There is certainly a good deal of inconsistency about the whole business. We, for example, cry out because we are burdened with a debt to America; at the same time, some of us cry out because our burden is lightened by a debt from Germany, sometimes at the same moment urging that our debt burden ought to be still more lightened by the payment of their debts by our Allies. As the Committee shows, the inconsistency is chiefly superficial. As taxpayers and consumers we are all hurt by the American debt, and shall all benefit by receipts, if any, from Germany and the Allies. But our export industries (including our rubber and tea plantations) are stimulated by our debt to America, and all our industries that compete with foreign goods may feel greater pressure from this competition owing to the payment of their debts by Germany and our Allies. This pressure will be lightened by relief to taxation here, and by its increase in the paying countries, and it need hardly be said that anything like real revival of international trade would reduce the whole problem to much more manageable dimensions. The fact remains that, as the Committee says, the "advantages of Reparation payments are so diffused over the country as not to be easily discernible, whereas the disadvantages for particular industrial sections are striking and obvious, and, therefore, doubtless more vocal." It considers, however, that the moral objection to a defeated enemy's escaping his just obligations is so strong that insistence on the nation's rights, even at some discomfort to individual industries, seems to be "an obligation in the interests of civilisation and moral principle."

In order to make the process of payment as smooth as possible for all parties, the Committee concludes that it will best be carried out, firstly, by a considerable expansion of German exports to general world markets in the ordinary course; secondly, by arrangements between each Ally creditor and Germany with a view to developing deliveries in kind—locomotives to Serbia, coal to Italy, dyestuffs and potash to England and France, and so on; thirdly, by a system of what are called "Assisted Schemes." It is to be noted that Signor Pirelli makes reservations concerning the feasibility of this system, and it certainly bristles with difficulties. Under it there would be a general invitation to allied and neutral countries to submit such schemes as might be eligible for assistance now or later on. As an example, it is suggested that Argentina might put forward a scheme for a railway or dock which could be supplied to the extent of 40 per cent. from outside, calling for no immediate payment of interest; that the whole undertaking is to cost £2 millions, and that the prospect of return rises from nil in the first year to 6 per cent. in the eighth year. Argentine interests, with the sanction of their Government, put the scheme before an Argentine sub-committee, and this body commends it to a Central Committee, "which chooses it as eligible and passes it through its recognised agency to the notice of, say, British financial or Government interests for development as an assisted scheme. The British Government agree after the financial interests concerned have given the necessary assurances that marks to the extent of £800,000 for the British Reparation account can be spent in Germany for purchases for the scheme when the contract and local position is elaborated to British satisfaction." It is supposed that the Argentine Government might guarantee the interest on the £2 millions, or at least on the £800,000 to be spent in Germany; the British Government would receive bonds of the undertaking for the marks that it supplied, would sell them to British investors and use the proceeds for redeeming war debt. The number of committees involved by this system is in itself a serious bar to its practical working, and one can imagine the mutterings of our industrialists and the outcry in our Yellow Press at a process definitely designed to send contracts to Germany. But if Reparations are to be paid, Germany will have to be allowed, and helped, to work to pay them.

THE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

THE past three months has been an unsatisfactory period for cotton spinners and manufacturers. The sales have been less than the production, and in the circumstances producers have lost ground. Order lists in piece goods have been reduced, and stocks of yarn have increased. Selling prices, therefore, are less favourable. The limited business has been largely due to an anticipation of lower values, and, owing to the comparatively small turnover, prices for manufactured goods have given way, although there has not been any marked change in raw material rates.

On March 31st the quotation for middling American cotton on the spot in Liverpool was 13.52d. Prices during April fluctuated a good deal, and the figure on the 30th was 13d. Early in May there was a downward movement to 12.11d on the 13th. By the 29th, however, the price had recovered to 13.04d. The rising tendency was maintained in June until 13.71d was registered on the 17th. After a decline on the 20th to 13.43d, there was another advance to 13.93d on the 30th. The quotation on Thursday last (July 23rd) was 13.48d. As is usual at this time of the year there has been increasing interest in the prospects for the new crop in the United States. According to the Government, the condition of the growth on June 25th was 75.9 per cent., against 76.6 per cent. a month earlier and 71.2 per cent. at the same time last year. The area under cultivation has been estimated at 46,348,000 acres, an increase of nearly 9 per cent. on the previous year. On the basis of these statistics the indicated crop at the time of writing is 14,339,000 bales. It must be said that many things may happen to the plants during the next couple of months, but there is a possibility of a big output. The absence of rain in certain parts of the belt is injuring the plants, but in large areas the conditions are very favourable. On the whole, users are anticipating lower prices. With regard to Egyptian cotton, many ups and downs in prices have taken place. On March 31st the quotation for fully good fair sakellaridis on the spot in Liverpool was 32.10d. By April 14th there had been a decline to 30.15d, but there was a rise to 32.55d on the 21st, with a drop to 30.20d on the 28th. By May 9th the price had risen to 33.05d, but there was a fall to 29.25d on the 18th, the figure on the 29th being 30.25d. Fluctuations continued during June, the quotations on the 30th being 32.30d. On Thursday last (July 23rd) the quotation was 32.40d. Conflicting advices are coming to hand relating to Egyptian cotton supplies for next season, and so far there have not been any official statistics as to acreage or probable output. On the whole, however, the outlook is fairly good.

During the past quarter the feature of interest in the cloth market in Manchester has been the determination of buyers to purchase only limited quantities. It is a long time since orders were of such retail dimensions, and occasional transactions of moderate size have caused comment. Merchants and dealers are afraid to operate with any freedom, as there is much fear of depreciation in values later on. Naturally, the disturbances in China have had a very adverse effect upon trade for that part of the world, and a few weeks ago exporters were compelled to suspend shipments and to ask manufacturers to stop deliveries for the time being. Since then rather better news has come through, but it is realised that some time will have to elapse before fresh business of any importance can be done. This situation is a serious matter for Lancashire, as China is our second most important outlet. For India a miscellaneous business has been done from week to week, but the turnover has not been sufficient to meet the requirements of makers, and order lists have run down. Our customers in India are not in any hurry to place contracts, as in their opinion conditions in Manchester are not likely to go against them just at present. A policy, therefore, of purchasing from hand to mouth has been adopted. The monsoon season is developing on right lines, and, on the whole, the trade position in India is not unsatisfactory. Fairly encouraging support has been met with from the minor outlets of the Far East, such as Java and Singapore, but demand recently for Egypt and the

Near East has fallen off, and less favourable reports have been received from those outlets. A steady demand has been met with for Central and South America without individual contracts being important. Quite a healthy business has been done for Continental countries, especially in finishing styles. The home trade has benefited from the hot weather, and heavy clearances have been effected in light goods, with the result that stocks in the distributing houses are now comparatively low. Production in the weaving towns of Lancashire is now very irregular as a result of the annual holidays.

The following is a comparative table of exports of cotton piece goods from the United Kingdom, the figures being given for the six months ended June in each year:—

	Yards.	£
1913	3,582,788,800	48,756,738
	Square Yards.	
1923	2,106,868,600	70,098,846
1924	2,224,012,700	75,635,829
1925	2,284,112,500	79,290,645

It has been a very trying three months for spinners of yarn. In all counts and qualities there has been a distinct reduction in the margin of profit which has resulted in numerous spinners being compelled to sell at prices which only just cover the cost of production, and in some cases at a loss. In the American section there has been considerable discussion as to the policy of organised short time. At the beginning of April the mills were working 35 hours a week. A little later production became very irregular owing to certain firms disregarding the scheme of the Masters' Federation. The committee, therefore, asked for an undertaking from the members that they would not exceed the hours stipulated. The replies were not satisfactory, and it was decided to relieve all spinners of their promise to run the mills only 35 hours a week. It was recommended that curtailment to the extent of 8½ hours per week should take place, making the weekly hours 39½. A ballot on this proposal has been successful, and the owners of 90 per cent. of the spindles in this section have supported the scheme. It is feared, however, that production on this scale will be more than sufficient to meet the requirements of users. There has not been much activity in shipping yarns. Continental demand has kept up fairly well, but it has been hard work to secure orders of any importance for India. Restricted operations have occurred in Egyptian yarns. No organised restriction of output exists in this branch of the industry, but some mills have part machinery stopped. There is a possibility of better times in this department when new cotton is available.

The following is a comparative table of exports of yarn from the United Kingdom, the figures being given for the six months ended June in each year:—

	Lb.	£
1913	106,409,000	7,512,062
1923	70,225,700	10,170,024
1924	87,486,600	14,170,024
1925	96,815,500	16,462,934

Cotton spinners, manufacturers and merchants have united in their opposition to the duties on artificial silk. Although the Government has granted some concessions from the original scheme the protests have not been strong enough to prevent the duties becoming an established fact. These taxes are causing much irritation and annoyance, and whatever may be the effect upon values and the extent of trade in the future, strong objection is taken to the principle of placing duties upon raw material.

The immediate outlook for the industry is not very cheerful. Recent events in relation to trading conditions between the countries of the world are having an adverse effect upon developments. Merchants are certainly more nervous as to the future, and in all directions there is determination to limit commitments as much as possible. In the circumstances, enterprise is at a very low ebb. Possibly, however, a short interest is being created, and we may experience a rather unexpected rush of business before very long. Cloth manufacturers would like to see practically all the markets of the world wanting goods at the same time, but nowadays either one outlet or another seems to be out of joint and unable to give any support. Consequently buyers for the other markets feel there need be no hurry to place orders. Industry, of course, cannot be healthy when there are more sellers than buyers.

In the spinning branch of the industry we are again suffering from over production, and that, of course, always means unprofitable prices. A great need at the moment is a reduction in production costs and overhead charges so that prices for manufactured articles may be brought to a level more in keeping with values for other commodities. Fortunately, there is every likelihood of a substantial output of American cotton next season, and this should at any rate prevent prices from rising.

INSURANCE COMPANIES AND MOTOR ACCIDENTS.

WE shall be doing no injustice to insurance officials as a class if we describe their mental attitude towards motor-car accidents in a single sentence: "It is our business to pay for accidents, not to prevent them." This is a particular application of the general doctrine that the business of insurance is to insure. And yet under stress of everyday practice the logical severity of this central idea of insurance is tempered very considerably. Marine underwriters employ salvage steamers and plant to save vessels from the full consequences of strandings; fire underwriters save goods from burning premises; and underwriters of boilers see to it by inspection that the boilers should be up to the work expected of them. On the economic side, the side of premiums, much pressure is exerted to improve risks and to keep down casualties. Marine underwriters will cover the fleets of good and careful owners more cheaply than those of inferior owners; fire underwriters make strict regulations in regard to the construction and equipment of the factories and warehouses which they insure, they penalise risky buildings or risky employment of buildings, and give rebates for safety equipment such as sprinklers. Both on the material and on the economic side insurance offices do a great many things to reduce and prevent casualties, because, in the first place, it pays them to reduce risks, and, in the second place, because they are conscious of being organisations upon which fall public responsibilities. They exist and flourish not merely because they earn dividends for shareholders, but because they discharge an essential public service. They admit, in deeds if not in words, that it is part of their job to prevent accidents as well as to pay for them.

Motor-car insurance is a new branch of business. Twenty-five years ago it scarcely existed, twelve years ago it was still feeling its way by trial and error; to-day it is the largest earner of premiums among the miscellaneous newcomers to the insurance fold. Motor-car insurance premiums in the aggregate exceed those paid for workmen's compensation, and are a very substantial factor in the annual accounts of many companies. The business has expanded so rapidly, especially since the war ended, that managers have been more concerned with putting and keeping the various categories of risks on a paying basis than with exerting material and economic pressure on motorist for the prevention of accidents. Yet something has been done, and much more—if we may judge by the practice in older branches of insurance—much more will be done.

A rebate of 10 per cent. of the premium is given to a motor-car owner who makes no claim during the first year of insurance, and this rebate is repeated as a bonus for subsequent clean years. A motorist is allowed one accident in a year; if he should have the misfortune to incur two accidents in the same year he may find it difficult to get a renewal of his policy. That penalty may in some cases be too severe, for the accidents may not have been the fault of the insured. Where accidents do not involve large claims—for third party damage, for example—the offices directly involved pay without determining the degree of culpability of their insured customer. This is called "knock for knock"; a collision always involves two cars, and usually two insurance offices. The cost of investigating every accident would be prohibitive, so that losses rest where they fall unless the amounts involved are large. It seems to us that the rebate for a clean policy (10 per cent.) is scarcely generous enough, and that

the penalty of refusing renewal may be too severe. We would suggest for consideration: a progressive rebate for the second and subsequent clean years; and for persistent claimants a progressive increase in rates of premium. Seeing that the clean policies are no more than 40 per cent. of the whole number in a year, a system of progressive rebates in premium would need to be offset by progressive penalties on the errant 60 per cent. who caused claims. In many of the States of the American Union the no claim bonus is as much as 33½ per cent., but since the motor-car population is seven times as thick in the United States as it is here, the proportion of no-claim policies is probably lower.

On the material side something is done to prevent accidents. It is the practice of some offices to maintain an inspection department, which examines all second-hand commercial cars before they are accepted for insurance. By this means defects in brakes, steering gear, and bearings are discovered and put right before they reach the stage of causing accidents. This inspection is similar in principle to boiler inspection, and should be of great value. Then in America—though, we believe, not yet in this country—the use of front and rear spring steel "bumpers" is encouraged by rebates of premium. The allowances in America for these collision shock absorbers is 10 per cent. for front bumpers and 2½ per cent. for those at the rear (12½ per cent. for both together), the percentage being reckoned on the collision portion of the premium, which is between 60 and 70 per cent. of the whole premium paid for the car. When we bear in mind that some 2,000 new cars are each week being put upon our British roads this summer, and that most of their owners are new hands at driving, it would seem worth while to encourage the fitting of bumpers. It is claimed for the best of them that up to 15 miles an hour one may run them with impunity into a lamp-post. If this be well founded, they should prove a most useful barrier between new owners of light cars and more delicate and more mobile victims than lamp-posts.

It is not possible for roads to expand at anything like the pace at which motor cars can be multiplied. We may not for many years reach the ludicrous congestion of the large American cities, but we are moving in that direction. We shall find, as has been found in America, that the proportion of accidents to cars registered rapidly and inevitably increases. We shall be obliged, for our own safety's sake, to prevent all accidents that may be preventable, and here the insurance offices can undoubtedly help us. So far they have not done much. We shall also be compelled before long to clamour for the enforcement of driving tests before new owners are granted licences for their cars. There is no great security in tests; some of the most dangerous "hogs" would easily pass any test. But the first twelve months of a motorist's driving life are his most fruitful months—in accidents—and strict tests would at least ensure that he understood how to handle his car and was acquainted with the rules and courtesies of the road. We are the one country in the civilised world which allows anybody to drive any car anywhere without inquiry if he knows his right hand from his left, and is aware of the difference between the clutch and the brake pedal.

NITRATE PRODUCING COMPANIES.

ACCORDING to estimates appearing in the half-yearly report of Henry Bath and Son, Limited, the world's consumption of nitrate of soda during the 12 months ended June 30th amounted to about 2,350,000 tons, compared with 2,190,000 tons in the previous 12 months, and happens exactly to confirm the forecast of a year ago, while at the same time belying the somewhat pessimistic views concerning the season's prospects which were expressed in December last. A very substantial increase in consumption was registered in the U.S.A.; Egypt increased by over 25 per cent., France and Poland by 10 per cent. and Belgium by 8 per cent.; Germany's consumption of Chilean nitrate more than doubled itself, but amounted only to about 20,000 tons, while the demand from Russia fell from 15,000 tons to 2,000 tons. In other Euro-

pean countries consumption was well maintained, except in Holland, where a slight decrease is perceptible, and in the United Kingdom, where an improved inquiry from agriculture failed to counterbalance a reduced demand for industrial purposes. Notwithstanding a growth of demand in some of the newer markets, shipments to the rest of the world showed a small falling-off, and this must be attributed almost entirely to a loss of ground in Japan, where the consumption of nitrate has declined from 59,000 tons to 34,000 tons, whilst that of sulphate of ammonia has largely increased.

The following table, showing shipments, production, and stocks for various periods, is compiled from statistics presented in the half-yearly report of Messrs Aikman (London), Limited. The figures for the six and twelve months ended June 30, 1914, 1923, 1924, and 1925 are shown:—

(In Thousand Tons.)

	1914.	1923.	1924.	1925.
Shipments to Europe and Egypt for six months ending June 30	831	500	380	405
Shipments to Europe and Egypt for twelve months ending June 30	2,025	991	1,066	1,296
Shipments to United States for six months ending June 30	510	482	524	725
Shipments to United States for twelve months ending June 30	547	912	930	1,206
Shipments to other countries for six months ending June 30	41	79	68	52
Shipments to other countries for twelve months ending June 30	87	169	145	134
Production in Chile for six months ending June 30	1,455	841	1,150	*1,145
Production in Chile for twelve months ending June 30	2,822	1,476	2,184	*2,360
Visible supply for Europe and Egypt at June 30	416	173	127	*234
" " United States " "	84	54	62	*127
" " other countries " "	11	26	20	*13
Stocks in Chile at June 30	754	997	1,024	*848
Total supply in sight at June 30	1,265	1,250	1,233	1,222

* Estimating production in June at 180,000 tons, and shipments at 120,000 tons to Europe and Egypt, 80,000 tons to the United States, and 10,000 tons to Japan and other countries. † Excluding about 60,000 tons reserve stock held by the American Government.

From this table it will be seen that shipments to the United States continue to expand, the past year's figure being more than double that of 1914. The shipments to America in the last half of the year, it will be observed, were larger than in the preceding six months, but the dispatches to Europe and Egypt and those to other countries were not so good as in the earlier period. Production in Chile was maintained at about the same level in the second as in the first half of the year. Stocks in Chile at June 30th were lower than at the same date in 1924, but with the exception of "other countries" the visible supplies for all countries were higher.

Since January the Chilean exchange has fluctuated between \$12.30 and \$13 per £ for gold and \$40.70 and \$44.10 for paper currency. Labour troubles have been marked during the period under review in the industry. A long succession of strikes in Chile culminated in a very serious disturbance, when strikers took possession of certain oficinas, after killing a number of employees. Military intervention restored order, but only after about 1,000 casualties had been inflicted upon the rioters, the ringleaders having been deported. Transactions on c.i.f. conditions were effected at £11 19s 6d in January down to £11 10s in April, and up to £11 18s 6d at the end of May, since when no c.i.f. business for the usual range has taken place. Nitrate freights during the spring ruled steady at about 27s 6d per ton. Heavy fixtures of liner space for the new season were effected at about 25s June-July, 26s July-December, 26s 6d July-March, and 27s 6d September-December, since when values have slumped to about 20s for early loading. Tramp steamers were fixed for June-August loading from 27s to 22s per ton, basis Bordeaux-Hamburg range, when sailers for summer and autumn loading realised 24s 6d and 25s per ton.

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

Established 1836.

ESTATE DUTY ASSURANCES

Head Office: 10, FLEET STREET, LONDON, E.C.4.
near Temple Bar.

Assets Exceed - - £16,750,000

General Manager: W. A. WORKMAN, F.I.A.

In our next table we show the amount brought in to the 1923 and 1924 accounts, together with net profits for each year and how the available balances were utilised:—

Name and Year.	Brought In.	Net Profit after Payment of Deb. Interest.	Ordinary Dividend.	To Reserve.	Carried Forward.
	£	£	£	£	£
Angela Nitrate	1923 1,004	24,498	17,500	3,350	4,652
	1924 3,804	23,638	17,500	5,000	4,942
Lagunas Nitrate	1923 14,353	18,775	18,000	15,128	15,128
	1924 15,128	16,398	18,000	..	15,526
Lautaro Nitrate	1923 100,714	46,663	..	..	147,377
	1924 147,377	671,375	446,603	..	372,149
New Paocha and Jazampa	1923 1,017	6,824	4,122	..	3,719
	1924 3,719	4,684	3,195	..	5,208
Rosario Nitrate	1923 28,614	51,303	50,554	..	28,193
	1924 29,180	50,554	51,160	..	28,584
Salar Del Carmen	1923 16,218	78,053	50,737	27,040	16,494
	1924 16,494	33,985	42,625	..	7,854
San Sebastian	1923 8,055	8,418	5,525	5,000	5,948
	1924 5,948	7,668	5,570	..	8,046
Santa Rita	1923 6,333	20,672	15,000	..	12,605
	1924 12,605	20,808	17,500	..	15,913
Tarapaca and Tocopilla ..	1923 54,682	43,634	38,438	30,000	29,878
	1924 29,878	41,599	31,000	..	40,477

The Lautaro Company has done very well indeed, its net profit rising from £46,663 to £671,375—a result which is the more noteworthy, as in only one other instance has an advance been achieved. This was done by the Santa Rita, whose figure rose from £20,672 to £20,808. The gross trading profits of the Lautaro amounted to £814,365, against £230,292, and whereas in 1923-4 dividends on investments totalled £78,387, for the last financial year they were £296,669. During the year the company acquired control of the Compañía Salitrera Lastenia and the Compañía Salitrera Encalada. At the same time we notice that included in the gross profit is an amount of £411,131, being the reserve fund transferred from the Lastenia Company, and while this is more than wiped out by an allowance of £443,174 for capital amortisation on nitrate grounds, properties and equipment, expenses of debenture issues, and increase of capital, its inclusion renders difficult direct comparison of results. The Salar Del Carmen did not have a very satisfactory experience, its net profits declining from £78,053 to £33,985. Otherwise, results for 1924 were very much the same as those for 1923.

Our next table shows the balance-sheet totals and principal assets and liabilities during the past two years:—

Name and Year.	Balance-sheet Total.	Share Capital and Reserves.	Debentures and Loans.	Creditors.	Properties.	Stocks.	Cash and Investments.	Debitum.
	£	£	£	£	£	£	£	£
Angela Nitrate	1923 154,862	105,000	..	131,360	40,477	41,842	31,139	41,410

† Includes bills payable.

The development campaign undertaken by the Lautaro is reflected in an increase in the total of assets from £2,987,519 to £6,424,447, an advance in share capital and reserves from £2,583,211 to £3,911,331, and a gain

in debentures and loans from £207,478 to £1,500,000. Properties have advanced from £1,052,994 to £4,453,498 and stocks from £249,957 to £1,099,389, but cash and investments have declined from £1,527,941 to £652,338. On the whole, stocks are higher than a year ago, notably in the case of the New Paccha, where the total has risen from £8,646 to £42,604, but cash and investments generally have declined. Debtors on balance figure for more, while creditors also are higher.

Our final table shows prices, dividends, and yields of the companies listed above:—

PRICES, DIVIDENDS, and YIELDS.

Company.	Share.	June 30, 1923.			June 30, 1924.			July 23, 1925.		
		Price.	Div.	Yield.	Price.	Div.	Yield.	Price.	Div.	Yield.

* Free of income-tax.

It will be seen that during the past few years yields have materially advanced, although dividends have been kept at quite satisfactory levels. The uncertainty of the position in Chile regarding the export duties in the Republic has doubtless played a prominent part in the general marking down of prices, which has been accentuated more recently by fears of severe competition from synthetic nitrogen. Moreover, the labour question should not be overlooked. It might be a considerable advantage to the investing public if more detailed information of the labour troubles during the year and a considered estimate of the outlook for the future could be published. Nitrate shares have been out of favour with the public for some little time, and when interest does revive it is probable that considerably higher prices will prevail. Confidence is, however, wanting. And more light will assist to restore it.

Notes of the Week.

The Coal Crisis.—The situation in the coal mining dispute is worse than it was a week ago. The course of events since Friday, July 17th, has been as follows:—On that day the court of inquiry met, but adjourned until the following Monday to give the workmen's representatives another opportunity to attend. In reply to the invitation of the court, Mr A. J. Cook, the secretary of the Miners' Federation, stated that he had nothing to add to the telegram which had already been sent to the Minister of Labour, and in which the Federation had declared that they could "certainly take no part in the proceedings when the terms of reference, and the constitution of the court, were so obviously designed to justify the present attack on the mineworkers' standard of living, and in respect of which we were in no way consulted." In their telegram to Sir A. Steel-Maitland, however, the miners repeated their willingness to meet the owners "in an open conference, after and when their proposals were withdrawn." On Monday the Court of Inquiry resumed its proceedings, during which the chairman, Mr MacMillan, questioned Mr Evan Williams, the president of the Mining Association, as to the interpretation placed by him on the workmen's demand for the withdrawal of the owners' proposals. Mr MacMillan pointed out that the conference would not be "open" if it were merely to consider the owners' proposals, and that the withdrawal of the proposals did not necessarily mean that they did not still represent the views which the owners might advance in further argument. Mr Williams replied that the owners were not in the least desirous of laying down what should be the procedure if they again met the miners, and while

prepared "to meet the workmen's representatives in an absolutely open position they could not say that the views they had put forward were no longer held by them." This interchange of views as to the implications of the term "withdrawal" led to a temporary improvement in the outlook, and on Tuesday morning the coalowners' representatives were hopeful of an immediate joint conference. A private conversation between officials of the two organisations, on Monday evening, and the publication on the following morning in the Press of a statement by Mr A. J. Cook that there was, apparently, a misunderstanding that should be removed, were followed by an early meeting of the coalowners' executive committee, and the despatch by hand of a communication from Mr W. A. Lee, the owners' secretary, to Mr A. J. Cook, stating that, "in view of the misunderstanding which evidently exists as to what each side means by its recent declarations in regard to a further joint conference," the two executives "should meet as early as possible to ascertain exactly what each side does mean." Mr Cook replied immediately that Mr Lee's letter would be submitted to the executive committee of the Federation on Wednesday morning, but on his own authority he added, "I can assure you that a meeting between the two sides could be arranged to-morrow (Wednesday) if you could see your way clear to withdraw your proposals, and thus clear the ground for an open conference wherein both sides should bring forward whatever proposals they choose." This is the first occasion on which an official explanation has been given on behalf of the workmen that their demand for the withdrawal of the owners' proposals did not mean a demand for their abandonment. Apparently, however, the action of Mr Cook was repudiated by his executive. That body disclaimed the misunderstanding which Mr Cook admitted in his statement to the Press on Tuesday, and they instructed him to reply to Mr Lee that, "in their view, there can be no misunderstanding regarding the situation. Our position is simply that we agree to meet the owners in open conference if, and when, their proposals are withdrawn." The deadlock has thus hardened. It now seems clear that the demand of the workmen means the abandonment by the owners of their proposals for a new national agreement. The court of inquiry concluded its work on Thursday, and its report is expected to be in the hands of the Government during the week-end. Meanwhile, the colliery owners in the various districts are acting in accordance with the principles laid down in the owners' proposals. In some of them the terms and conditions on which the pits will be open for employment on August 1st have been posted, while in the midlands an intimation has been given that the collieries will be open for work under existing conditions on day-to-day contracts pending a settlement. The Miners' Federation, however, has banned any negotiations on a district basis, and is now relying mainly on the support of the other Labour organisations in the country. The notices expire on Friday next, but the fact may be recalled that leading officials of the Federation have stated repeatedly that they will not enter on another national struggle without the support of the workmen in the other industries. Dramatic developments are probable during the next few days.

The Family Wage System.—Under the terms and conditions which the South Wales coalowners have posted at their collieries for employment on and after August 1st next, the principle is introduced for the first time, we believe, in the history of coal mining in this country of family subsistence allowances. In France, Belgium, and other Continental countries the family wage has made considerable progress in recent years. In France to-day the system applies to nearly 10,000 undertakings employing over a million workmen, and involving an expenditure in allowances for children of between 130 and 140 million francs per annum. In Belgium it has been adopted by firms employing in all about 280,000 men, of whom 160,000 are in the coal industry. The practice on the Continent is to make monthly allowances in respect of the children of the workmen. In Belgium these monthly allowances range from 10f for one child to 100f for four children, and in France from about 16f to 124f respectively. The terms offered by the South Wales coalowners

differ both in character and in their financial incidence on those in force at Continental collieries. The allowances are graded not only in accordance with the size of the family, but also in accordance with the standard basis rates of the various grades of labour employed, and are thus intended to discriminate between single and married adults, and to remove the anomalies created by the present individual subsistence wage. There is an allowance of 1s 3d per shift for the wife of a low-grade day worker engaged at the minimum standard rate of 5s per shift, but none to a higher-grade worker with a standard rate of 6s 10d per shift. Between these two extremes the wife allowance falls as the standard rate increases. In addition to the wife allowance, there is another of 5d for the first child, 4d for the second, 3d for the third, and 2d for the fourth. A low-grade workman with a wife and two children is thus guaranteed a subsistence wage per shift of 7s, and a higher-grade workman with a standard rate of 6s 10d and with a wife and two children a subsistence wage of 7s 7¹/₂d per shift. These allowances are to be met out of the 87 per cent. of the proceeds of the industry allotted to wages after the deduction from the total proceeds of costs other than wages. If the divisible balance of the industry is large enough to pay wages above the subsistence rates, then the day-wage worker will share equally with other grades of labour in the percentage payable on standard rates. The scheme, however, involves a reduction below the present individual subsistence wage of 8s. per shift, and the offer of the South Wales coalowners has excited no enthusiasm.

The Outlook in China.—The situation in China has shown little sign of change in the last few days, and there is some ground for hoping that the worst of the immediate trouble is over. Student demonstrations still continue, the Peking Government doing nothing to discountenance them. Rather the reverse, indeed, for free railway tickets appear to be at the disposal of any agitator who wants them. But the strike is petering out in certain of the industrial centres, and there are indications that the merchants who care about unimpeded trade are gradually beginning to reassert themselves. As regards Shanghai in particular, a new inquiry into the recent incidents in the international settlement is in prospect, the Diplomatic Body at Peking being about to propose a public investigation to supersede the private inquiry whose results have never been disclosed here, though persistent rumour has it that the Municipal Council and the police force came in for pointed criticism. All that, however, though it happens to be immediate, is of small account compared with the wider problems the Western Powers have to hammer out in relation to China. The ratification by France of the Washington agreements has removed the last formal obstacle to the long-anticipated conference on a revision of tariffs, and the American desire for the despatch of an international commission of investigation into the whole question of extra-territoriality seems likely to be approved by the British Government in spite of the hesitations that prevailed for a time in Whitehall. The recommendations of such a commission were never intended to be more than recommendations, so that no Government is committed to anything by taking part in the inquiry, which would be of value both for its immediate results and for the fresh opportunity it might provide for establishing fruitful contacts with China. But the problem, of course, with regard both to this and to the tariff inquiry, is how to find a China with which effective negotiations can be conducted at all. To talk to the existing Peking Government would seem futile enough, though it must be remembered that in China more than in most countries an administration which so far as internal affairs are concerned may be virtually impotent, often has a real claim to voice the national will in relation to foreign States. In that lies, perhaps, the only hope of effecting progress through the tariff conference. Both that and the extra-territoriality commission will be so important for China that even as things stand it may be realised in time that obligations must be contracted by some Government with authority to contract them. Even a temporary composition of differences between the principal tuchuns and military leaders might give the necessary opportunity for sober counsels to pre-

vail in the interchanges with representatives of the nine Treaty Powers. In view of the possibility, even though it be only a remote possibility, of that, the choice of the British representative at such a conference is a matter of the first importance. There will no doubt be work for experts, and experts must be there, but the opportunities that may quite conceivably open up call imperatively for the presence of a statesman.

Conditions in the Irish Free State.—Our Dublin correspondent writes:—The half-yearly balance-sheets of such of the banks in the Irish Free State as publish them make a good showing. There are large deposits well balanced by assets, mostly liquid, on the other side of the account, and there are satisfactory half-year's dividends after full provision has been made for reserves and contingencies. The National Bank, the Munster and Leinster Bank, the Provincial Bank of Ireland, and the Hibernian Bank are in this category. The Bank of Ireland does not publish a half-yearly balance-sheet, nor does the Royal Bank of Ireland; nor, again, do the Ulster Bank and the Northern Banking Company, which both do a substantial business in the Free State. The first half of 1925 has, however, been a period of continued depression—contrary to expectation in some respects. There was a marked decline in the export of livestock—due apparently to the unfavourable weather conditions of last autumn and winter, when incessant rainfalls led to a prevalence of "fluke," a parasite fatal to sheep, which on this occasion unprecedentedly extended its depredations to cattle also. The extent to which the resultant losses occurred appears to have been much greater than was generally known. This was an additional factor to the bad in the gradual process of recuperation after political and economic troubles. The Government schemes for stimulating agriculture and industrial enterprise, and for improving the methods employed in both have had, so far, no time to bear fruit. For this reason a great deal depends on the next two months' weather, and upon whether the promise of a satisfactory harvest is safely fulfilled. The Oireachtas, the legislature of the Free State, has adjourned for some months. Political interest will now centre in the Senatorial elections, which have the merit of novelty at least in their conditions. Seventy-six candidates will present themselves for election to nineteen vacancies by the whole electorate (aged thirty years and upwards) of the twenty-six counties of the Free State voting as a single constituency on the P.R. method. The seventy-six are intended by the Constitution to be candidates with special qualifications, and a record of useful public service. The method of securing compliance with this condition is also novel. Nineteen of the seventy-six are outgoing Senators retiring by rotation, and eligible for re-election. A further nineteen have been nominated by the Seanad itself, as the result of an election, also on the P.R. method, from a large number of candidates put forward, seconded by senators. The remaining thirty-six were nominated by the Dail, also on the P.R. method, under similar arrangements. There is some disposition to criticise the system, but the election will arouse some interest, and the results will be scrutinised closely by students who wish to judge of its value. The revenue is coming in well, and the increased return from stamps in particular seems to point to some stir in the business world—in preliminary stages at least. A slight falling off in customs and excise is evidence doubtless partly of depression, and partly of the relief from indirect taxation afforded by Mr Blythe's Budget.

Industrial Life Assurance.—Mr G. Stuart Robertson, who combines the office of Industrial Assurance Commissioner with that of Chief Registrar of Friendly Societies, has produced an attractive report on the first year's working of the Industrial Assurance Act, 1923. The subject may sound severe, yet in Mr Robertson's hands it sparkles with interest and wit. His main job at first is to employ the very wide powers of his statutory office to abolish insolvent collecting societies, and to screw up (kindly and gently) the less bad societies to the point when they may become both solvent and able to deposit £20,000 as the price of lawful continuance. As regards the others within

his jurisdiction—the strong companies and the solvent societies—he has merely to see that they observe the new law as laid down in 1923. He writes unofficially and pleasantly, with many a quip and agreeable turn of phrase, and actually ends his preface with a Latin quotation. So far he has not put any society out of existence solely from inability to put up the statutory deposit. He has allowed temporary exemption, so that societies which are decently conducted, though not actually solvent, may have an opportunity of putting their finances straight. But in some cases which were specially inspected, Mr. Robertson has shown that he is prepared to act promptly in the interests of policyholders. Inquiries were heard in respect of seven collecting societies. The Commissioner, on the recommendation of his inspector, ordered three of them to be wound up—they had practically no assets—and two others were taken over by a stronger society. The reports of the deputy commissioner, Mr. Fox, who inspected these societies, are most lucidly phrased, and show how urgently necessary the Act was. Of one of them, the United National Friendly Assurance Collecting Society, Mr. Fox writes: "I have endeavoured to find anything which could be said in favour of the officials of the society in connection with their conduct of its affairs, but, in my opinion, there is nothing. They entered into a transaction which they knew to be illegal, and sought to cover up their actions by issuing false accounts." That society has been wound up; there were no assets available for distribution. Another, which has also disappeared under Mr. Robertson's reforming boot, combined the business of industrial assurance with that of selling tea. "From the evidence which I heard," wrote the inspector, "there can be no doubt that the main object of the promoters of the scheme was to sell tea, and that the object of tacking insurance business on to the sale of tea was to use the insurance as a lever to induce people to continue the purchase of tea upon the assumption that if they discontinued the purchase they would lose the benefit of their past contributions for insurance." Mr. Robertson has begun admirably, and we shall look forward to his subsequent reports with the deepest interest.

Cotton Trade Short Time.—Our Manchester correspondent writes:—The position of the American spinning section of the Lancashire cotton industry remains very unsatisfactory, and the situation has again been discussed this week by the Masters' Federation. At present the mills are working only 39½ hours per week instead of 48 hours, the curtailment of production by 8½ hours per week being organised by the Federation. It is now recommended that the mills should close down for a full week between now and the end of August. This means an extra stoppage of 39½ hours, in addition to the weekly curtailment of 8½ hours. At present the output of yarn is more than equal to the requirements of users, and during the last few weeks stocks have increased in first hands. It is thought likely that this extra restriction of output, and the Oldham holidays which come at the end of August, will relieve the depression, and enable spinners to sell at prices which, at any rate, will not result in any loss.

Lancashire and Artificial Silk Duties.—This week the members of the Manchester Chamber of Commerce have supported the action of the board of directors in their strong protests against the duties on artificial silk. This action was taken at the half-yearly meeting of members held on Monday last. A resolution was moved in the following terms:—"That the Manchester Chamber of Commerce at this, the first meeting of members held since the proposal was made by the Chancellor of the Exchequer to impose a duty on artificial silk, takes this opportunity to support the board of this Chamber and its Merchants' Committee in their strong protests against the taxation of a raw material which was becoming so important to the cotton trade, and urge the board to take every opportunity of impressing on the Government their conviction that the taxation of artificial silk will prove damaging and detrimental to the home and export trade of Lancashire."

The resolution was moved and seconded by members who hold no official position in the Chamber. There was some opposition, and an amendment was moved that the resolution be left on the table for further consideration. This was seconded, but the President (Dr. A. Ree) declared it to be substantially defeated. When the resolution was put to the meeting it was carried by 75 votes to 33. The opinion is being expressed in cotton trade circles that the organisations connected with the industry might have done more to prevent the duties on artificial silk becoming an established fact. Manchester firms are now receiving the forms from the Customs officials which have to be filled up for the purpose of claiming the rebate on goods for export, and the information required will mean a large amount of work. Merchants are being considerably irritated and annoyed by the necessary regulations.

The American Cotton Crop.—Late on Thursday last, writes our Manchester correspondent, the Agricultural Bureau of the American Government published its third report on the cotton crop for 1925-26. A return of 70.4 per cent., indicating a yield of 13,588,000 bales, was much worse than the market expected, and after the figures became known there was a distinct rise in prices. A fortnight earlier the condition was given as 75.9 per cent., indicating a crop of 14,339,000 bales. It is understood that the decline in condition is largely due to the dry weather in Texas. Lancashire spinners are disposed to discredit the Government statistics as it is well known that in most parts of the belt the plants are doing well, and the area under cultivation is nearly 9 per cent. bigger than a year ago. The advance in prices, if maintained, will be unfortunate for Lancashire, as dearer goods are likely to restrict consumption.

The Quarter's Shipbuilding.—"Lloyd's Register" shipbuilding returns for the quarter ended June 30th show that the tonnage under construction in Great Britain and Ireland—1,093,587 tons—is about 72,000 tons less than at the end of March, 1925, and about 423,000 tons less than the tonnage building twelve months ago; the tonnage on which work was suspended at the end of June, 1925, amounts to 76,000 tons, as compared with only 52,000 tons at the end of June, 1924. The average tonnage building during the twelve months immediately preceding the war was 1,890,000 tons, i.e., 796,000 tons more than the present total. A slight decrease is shown in the tonnage commenced during the quarter, namely, 189,805 tons, as compared with 202,352 tons during the first quarter of 1925, and the tonnage launched during the present quarter—298,161 tons—is 40,959 tons lower than that for the previous three months. The total merchant tonnage building in other countries—1,276,244 tons—is about 45,000 tons more than at the end of March, 1925. The figures for the leading countries abroad are: Germany, 407,366 tons; Italy, 212,798 tons; France, 169,485 tons; Holland, 100,682 tons; and United States 92,001 tons; 232,309 tons were commenced abroad and 295,126 tons were launched, an increase, as compared with the previous quarter, of 39,691 tons in the tonnage commenced, and of 28,025 tons in the tonnage launched. The total world tonnage under construction—2,369,831 tons—shows a decrease of 27,000 tons as compared with the previous quarter, and is 1,076,727 tons below the highest pre-war record reached on June 20, 1913, viz., 3,446,558 tons. There are at the present time under construction in the world 23 vessels of between 10,000 and 20,000 tons each and nine of 20,000 tons and upwards. Twelve out of the 23, and five of the larger vessels, are building in Great Britain and Ireland. The returns show that there are at the present time 53 steamers and motorships, each of over 1,000 tons, with a total tonnage of 372,267 tons, under construction in the world for the carriage of oil in bulk. Of these tankers, 24 of 165,467 tons are under construction in Great Britain and Ireland, twelve of 105,600 tons in Germany, and ten of 54,200 tons in Holland. The tonnage of vessels now building in the world, which are to be fitted with internal combustion engines, amounts to 1,129,912 tons, while the tonnage of steam vessels under construction is 1,212,525 tons. The motor tonnage thus equals over 93 per cent.

of the steam tonnage, showing the remarkable development which is taking place in the adoption of this system of propulsion. The tonnage of motorships building at the end of June in Great Britain and Ireland—399,070 tons—amounts to 58 per cent. of the steam tonnage under construction. In Denmark, Germany, Holland, Italy and Sweden the motor tonnage under construction greatly exceeds the steam tonnage; the combined totals for these five countries being 216,257 tons of steamers and 645,600 tons of motorships. The world figures include 115 motorships each of between 5,000 and 10,000 tons; five of between 10,000 and 15,000 tons; and seven of between 15,000 and 25,000 tons. For the first time since these returns have been issued by Lloyd's Register, figures have been compiled showing the number and the horsepower of the marine engines (intended for the actual propulsion of vessels) under construction in the world. The total horsepower of the engines building or being installed on board vessels at the end of June, 1925, amounted to 1,721,378 h.p., of which 709,202 h.p. are building or were built in Great Britain and Ireland, 294,801 h.p. in Germany, 155,800 h.p. in France, 128,050 h.p. in Denmark, and 433,525 h.p. in other countries. These totals, as stated in the return, are not quite complete as regards steam engines for the smaller vessels building abroad and not classed with Lloyd's Register. Excluding engines of less than 500 h.p., the average horse-power of each set of engines reaches 3,356 h.p.; the average for reciprocating steam engines being 1,995 h.p., for oil engines, 4,027 h.p., and for steam turbines 10,387 h.p.

The Rubber Boom—and After.—A Stock Exchange correspondent writes:—Mad Monday, as the first business day in last week is coming to be called in the Stock Exchange, provided cause for a good deal of mild trouble, which cropped up in the course of settling the rubber share account this week. The public, as already noticed, poured in buying orders without discrimination; in too many cases, without giving any limit to the price beyond which the shares should not be purchased. Shares were bought at all kinds of prices, which in some instances turned out to be reasonable, and to be less than the quotations which prevailed a little later on. The buyers, in other words, were offered the opportunity for selling subsequently at a profit. If the full list of rubber shares could be analysed, it is probable that there would be a fairly equal division between the shares which reached their highest prices on the Monday, and the others which enjoyed further improvement later in the week. The mischief, however, lay in the fact that hundreds of people from all over the country bought shares on the Monday which they intended to keep for a short profit, but which, as it turned out, they did not sell. This week the holders have been trying to get out of such purchases. It became obvious, before the contango-day, that a good many people had bought more than was good for them. The attempt to carry-over was met by polite refusals on the part of jobbers to contango shares which the buyers could very reasonably be called upon to pay for. The contango account became enormously expanded, but obviously it was impossible for Stock Exchange members to finance the full extent of the boom, the result leading to a considerable stream of selling which took place early this week. It has to be remembered that the sellers, though faced with the necessity for accepting lower prices than had prevailed a few days earlier, were still able to secure, with many shares, a substantial profit upon original prices. These realisations had an effect upon the market less than might have been expected. The sales were absorbed readily, and, although prices gave way, the reaction proved to be slight as compared with the rises that had occurred beforehand. On Wednesday in this week, however, the dullness became accentuated by news that 5,000 tons of rubber, held up ever since 1923, had been released for the next quarter, subject to the export duty of 42 cents per lb, which is the maximum rate of penalty provided in the Stevenson Restriction Scheme for shipments in excess of the officially permitted output. This announcement came on the top of pressure still exerted upon the Government to induce the latter to grant

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:

unrestricted production in the interests of the India Rubber Manufacturers' Association, and of other users of the commodity. As the principal buyer of rubber is America, the benefit to be secured by the India Rubber Manufacturers' Association would be a trifle when matched against that of the United States if the price of rubber were to be suddenly lowered, as a result of the agitation to do away with restriction altogether. The Government have taken up a firm stand on the ground that the rise in the price of raw rubber is a temporary movement, and that the produce can be trusted to find its own price level in due course. But the speculator in rubber shares looks at the persistency of the effort to induce a greater production, and is undoubtedly impressed by the check administered to the boom. Experience shows that as soon as any such condition of boom in the Stock Exchange markets comes to a halt, it is not often that the excitement can be recreated to anything like the extent which prevailed before the air of wild optimism had been cooled by a readiness to take good profits. Companies continue to make forward contracts at prices that will give them remarkably fine profits for a year or two. Hints of labour trouble in the Middle East are not disregarded, but the people who have money in sound rubber shares are not shaken in their confidence that the prosperity of the rubber industry is far from being over, whatever hiatus may occur in the hectic madness of a boom that rushed, as all booms do, too fast and furiously at first.

Oil Imports and Coal Bunkers.—Figures published by the Customs show an increase of 15 per cent. in the imports of crude oil and refined oil products for the six months ended June, as compared with those of the first half of 1924. The totals were 808,540,064 gallons and 699,982,193 gallons respectively. Exports at 54,523,668 gallons were 9 per cent. higher and re-exports 23 per cent. higher at 34,282,736 gallons. The oil trade, at any rate, continues to expand, particularly the refining end of the business. The imports of crude oil for British refineries were 40 per cent. greater at 266,299,386 gallons (this is the more remarkable, as last year's imports were 39 per cent. above those of 1923), whereas the imports of refined oils were only 6 per cent. greater at 542,240,678 gallons. The refined oils, however, remain more than double the volume of the raw material imports. These imports appear large, but when reduced to tons—taking 250 gallons to the ton for black oils and about 300 gallons to the ton for white oils—it will be seen that their proportions are small compared with those of the coal industry. Taking the case of fuel oil, which is generally regarded, though not always rightly, as the competitor of coal, it will be found that in the first half of this year 489,787 tons of fuel oil were shipped as bunkers for vessels in the foreign trade, as compared with 495,352 tons in the corresponding half of 1924. This decline, though slight, does not suggest that the coal bunkering trade has lost business to oil this year. Last year 1,007,900 tons of fuel oil were taken for bunkers (a small proportion of which was diesel oil for use in internal combustion engines), against 17,689,000 tons of coal—in both cases for vessels in the foreign trade. These figures show up the competition of oil in its true and humble proportions. Even taking less than two tons of oil as the equivalent for steam-raising purposes of three tons of coal, and five or six tons of coal as the equivalent

of one ton of diesel oil, it cannot be held that the competition of oil is appreciably responsible for the prevailing depression in the coal bunkering industry. Oil captured the passenger steamship bunker trade some years ago, and the growth of motor ships is not yet big enough to have displaced any considerable quantity of coal bunkers.

United States Oil Consumption.—Our New York correspondent writes:—One part of the stock market that has moved against the general trend during recent reactions is the oil group. The shares have been notably firm, and the explanation is to be found in the recently published statistics on gasoline production and consumption. The outstanding fact is that gasoline consumption set a new high record during April for any month in history, 811,000,000 gallons being taken, and this despite the fact that the peak of seasonal demand generally comes in August. As a result of this remarkable consumption, which was 35 per cent. ahead of that of April last year, stocks of gasoline declined in the face of record production. Here again the decline is bullish, as stocks generally go on increasing until later in the season. Last year they increased until June. Stocks on hand at the end of April amounted to 1,561,000,000 gallons, which is less than on the corresponding date last year. Consumption of gasoline during the first four months of the year has run 30 per cent. above that in the same period of last year. This gain has exceeded sanguine expectations. Early in the year a 25 per cent. gain was about the best that had been hoped for; some even thought that it might be no more than 15 per cent. Under these circumstances oil prices are firm, and are materially above the level of twelve months ago. Accordingly, with consumption at record-breaking heights, with stocks reduced, and with prices higher, the refiners are expected to have a very satisfactory season. There has been, during the last month or two, some over-production of crude oil, but this excess has been in the heavier grades. The gasoline situation has not been affected by it. The remarkable consumption of gasoline is due partly to the large number of new motor-cars that have been placed in service this spring. One may recall that the production of cars during April set a new record. The May figures are expected to show that the demand has been maintained. In addition, the closed car is coming into greater and greater use. The General Motors Corporation, which makes a diversified line of cars, for example, is now giving over about 60 per cent. of its production to the closed type of vehicle. This type naturally increases the consumption of gasoline during the inclement seasons. The greatly increased use of trucks and buses also is swelling gasoline consumption. Altogether, it seems as if the refining industry has an excellent opportunity to extricate itself from the somewhat uncomfortable position in which it has been for the past several years.

Venezuelan Oil Industry.—In recent months progress in two of the oilfields of Venezuela—El Mene and La Rosa—has received a distinct check, though there are now signs that the worst of the trouble has been overcome. In April both the production of the British Controlled Oilfields in the El Mene field and the production of the Venezuelan Oil Concessions, Limited, and the Lago Petroleum Corporation in the La Rosa field, began to fall off for quite different causes. The following table of shipments will show that if the production from the Mene Grande Field of the Caribbean Petroleum Company of the Royal Dutch-Shell Group had not continued to increase in a satisfactory manner, there would have been a sensational drop in the output of the Venezuelan oil industry:—

SHIPMENTS OF VENEZUELAN OIL (BARRELS).

District.	January.	February.	March.	April.	May.	June.
Mene Grande	311,000	321,000	466,000	441,000	532,000	*
El Mene	243,000	222,000	319,000	185,000	175,500	147,500
La Rosa	634,000	726,000	932,000	744,000	468,000	*
Total	1,188,000	1,269,000	1,717,000	1,370,500	1,175,500	..

* Not yet available.

The decline in output is capable of simple explanation. As regards the El Mene field, the rise in production in the first quarter was due to a large number of wells having

been drilled into the oil sand within a few weeks of one another, on completion of the new pipe line from the field to the Lake. This meant a sudden flush production, and in most of these wells the falling off from flush to normal production occurred simultaneously. As there were no new wells in the proved area of the field ready to make good the loss of flush production—the work of the field staff had been concentrated at that time on drilling exploratory wells, which were not wholly successful—the fall in the output of the field was naturally severe. As regards the La Rosa field, the intense competitive drilling of the three companies—V.O.C., Limited, Lago, and Gulf—had resulted during May in several of the wells sanding up. Off-setting, or “staggering,” as it is called, in this field was so intense that 45 wells have been drilled within a small area on the shore and foreshore of the Maracaibo Lake. In a field where wells ordinarily are inclined to sand up, offsetting on this scale prevents scientific draining of the oil sand. At the beginning of May the production of the Lago fell from 15,000 barrels a day to about 3,000 barrels a day, while that of the V.O.C., Limited, fell from about 20,000 barrels a day to 13,000 barrels. Then, on June 1st, one of the V.O.C., Limited, wells blew in at a rate of 40,000 barrels a day, and on June 2nd caught fire. The burning oil spread over the lake and set on fire the piers and derricks of some of the Lago wells. All the wells had temporarily to be shut in. On the following day the V.O.C. well sanded up and so extinguished its own fire. This put back development just when it was most needed. Fortunately, the damage done was not great, and good has come out of it. The sanding-up difficulties and the fire taught the competing companies a much-needed lesson. They have now come to an agreement to drill wells farther apart, not directly offsetting one another. This is perhaps the best news that has yet come from Venezuela. Production should now go ahead. The Lago has proved the existence of a second and lower sand in La Rosa, which should ensure a long life to that field. Moreover, in the El Mene field the British Controlled Oilfields are completing five wells in the proved area, and have extended the area of the field to the west. The output of this field, too, should now increase.

Bad Debts in the Export Trade.—We have written more than once on the developments in that very difficult branch of insurance which seeks to cover the risks of loss to British exporters through the inability of their overseas customers to pay. The system of the Trade Indemnity Company, Limited, organised by Mr Cuthbert Heath and Mr Spain, has been running alongside the Government system by export credits worked through bankers; both have been useful, though neither fully meets the needs of British exporters. Mr Heath has frequently urged upon the Government the consideration of a method under which the State, in return for a premium, should reinsure what is called the “catastrophe risk” involved in export credit insurance. This means, roughly, the risk of war or revolution, which no commercial company can possibly include within the cover of its contracts. In order to go fully into a very intricate subject, Mr A. M. Samuel, Parliamentary Secretary of the Department of Overseas Trade, has appointed a Committee, with the Hon. Sidney Peel as chairman, “to consider the question of insurance against bad debts in export trade.” The Committee is a strong one, representative of banks, accepting houses, insurance companies, Lloyd’s, the Association of Chambers of Commerce, the Federation of British Industries, and the Department of Overseas Trade. The secretary is Mr F. H. Nixon, of the Government Export Credits Department, 30-31 King Street, Cheap-side, London, E.C. 2.

Tariff Reinsurances.—In the report for 1924 of this company, which was started since the war ended, the decision is announced of discontinuing for the present marine business. The accounts for recent years consisted entirely of cargo risks which run off comparatively quickly. There was a credit balance on the 1922 account of £3,775, and in the 1923 account of £10,860; these amounts, together with the balance on the 1924 account, make a marine reserve of £28,729. In the fire account

last year the premiums were £169,200, and the surplus transferred to profit and loss £4,153, after provision for unexpired risks. In the accident and general account the premiums were £27,239, and the deficiency taken from profit and loss £7,249, to make up the reserve for unexpired liabilities to 40 per cent. of the premiums. Interest receipts, less tax, amounted to £11,499. At the end of the year, after providing for the deficiency on the accident and general account, and adding £2,000 to the fire fund, there was a credit balance at profit and loss of £1,347. It is stated that an offer by Tariff Reassurances, Limited, to purchase the shares of the City Fire Office—also a reinsurance company—at 18s 6d for each £1 share, 5s paid, and £3 14s for each £1 share, fully paid, has been accepted by over 99 per cent. of the shareholders of the latter company, and the agreement has therefore become absolute. The City Fire Office will be continued as a separate company, and three of the present directors will remain on the board, Mr. E. C. Fester, Mr. S. P. J. Melin, and Mr. Wharton Tomson, directors of Tariff Reinsurances, Limited, have joined the board. Mr. Louis J. Jarvis will continue as manager and secretary of the company. The head office has been removed to St. Swithin’s House, St Swithin’s-lane, London, E.C.

The Sea Fisheries.—The preliminary statement issued by the Ministry of Agriculture and Fisheries shows that the quantity of sea fish of British taking returned as landed in England and Wales, and in Scotland, during the six months ended June 30th was in the aggregate considerably over a million hundredweights less than in the corresponding period of last year, the decline being solely attributable to the reduced landings at Scottish ports. The details of the landings of wet fish by British-owned vessels, and those of foreign vessels, together with imports of wet fish from January to June, are as under:—

	Weight.		Value.	
	1924.	1925.	1924.	1925.
England and Wales	Cwts. 4,811,309	Cwts. 4,977,323	£ 6,396,054	£ 6,202,343
Scotland	3,441,569	2,027,458	2,096,166	1,785,838
Total	8,252,878	7,004,781	8,492,220	7,988,181
Foreign landings	978,774	1,029,637	612,540	593,619
Imports from abroad	796,211	1,062,688	1,414,532	1,572,573

In addition, the landings of shell-fish at ports in England and Wales during the half-year had a value of £201,373, against £203,928 in the corresponding six months of 1924. It will be noted that the landings by British vessels at English and Welsh ports showed a slight increase of 166,014 cwts in weight, and a decrease of £193,711 in first-hand value. This, of course, affected the average realised, which was 24s 11d per cwt, against 26s 7d per cwt a year ago. In the Scottish landings there was a very considerable decrease of 1,413,911 cwts in weight, but only £310,328 in value, the result being that the average realised rose to 17s 7d per cwt, against only 12s 2d. Supplies in this case appear to have been better adjusted to demand. The catches of foreign-owned vessels continue to show an increase, the percentage of the total (English and foreign) being 12.8, against 10.6 a year ago. Imports of wet fish from abroad are greater than in the first half of last year, owing in the main to the heavier arrivals of herrings from Norway for the use of the British curing industry. The last few months have seen the steam trawling industry working on an economic basis, but the complaint is still heard of the high cost of coal and working expenses generally, while prices have allowed of only a bare margin of profit. The first of the trawlers to be despatched to the new fisheries off the coast of Greenland have returned to Hull. Owing to bad weather and difficult ice conditions the catches were disappointing. They, however, located the fishing grounds, and secured valuable data, which lead the owners to believe that their pioneer work will be ultimately rewarded. The exports of fish cured or salted (not canned) from Great Britain during the past half-year showed a marked falling off. These consist principally of herrings, of which only 913,601 cwts were sent abroad, as compared with 1,421,350 cwts in the corresponding half of last year. The quantity exported to

Germany fell from 787,205 cwts to 451,533 cwts, this being due to the fact that German curers imported herrings in their fresh state extensively from this and other countries engaged in the herring fisheries, and cured them in their own smoke houses.

Trade and Prices in Finland.—A correspondent writes:—The chief feature of the returns of Finnish foreign trade during May was the steady growth of exports from Finland to Russia. These amounted to 147.5 million marks, against 88.6 million marks in May, 1924. The total value of imports during May was 438.5 million marks, as compared with 521.8 million marks in the corresponding month of last year; on May 31st the excess of imports over exports was lower by 372.8 million marks than on the same date last year. A regrettable feature of the returns for May is the continued decline of imports from Great Britain; these amounted to 304.5 million marks, as against 356.7 million marks in May, 1924. Germany, on the other hand, improved her lead, exporting to Finland goods valued at 593.0 million marks, as compared with 503.6 million marks in May, 1924. The United States, Sweden, Norway, Denmark, Holland, France, Italy, and Brazil are all credited with increased exports to Finland, the United States (with goods valued at 277.5 million marks) approximating closely to the British figure. The success of German exporters in the Finnish market may be attributed in part to the thorough spadework of the German commercial travellers; British trade is, perhaps, handicapped by insufficient attention to the need of publicity, and by the restrictions on entry into this country, which cannot but have a hampering effect upon the development of trade relations. Of the 105 foreign commercial travellers who were registered at Helsingfors during May, 47 were Germans and only five English. Only one or two British firms applied for admission to the Finnish Industrial Fair held at Helsingfors on July 1st-6th, while a considerable number of American, German, French, and Swedish firms exhibited their products there. During May there was a general fall in wholesale prices. The general index fell 11 points to 1122; in leather goods there was a fall of 36 points. The index number for pulp, cardboard and paper, however, rose three points, while the index number for timber goods remained unchanged. As many as 1,933 motor-cars were imported during the period January-May, representing a new factor in the national economy rendered possible by the development in recent years of motoring roads, which now aggregate a total mileage of 10,388 kilometres.

The Marconi Report.—The directors of Marconi’s Wireless Telegraph Company, Limited, remind us in their report for the year ended December 31, 1924, just issued, that a large amount was transferred from the general

reserve a year ago in order to write down or off assets. In the 12 months under review, foreign currencies have declined, and the value of the company's assets has also fallen, "in several cases in a marked degree." Thus a further writing down has been undertaken, and in consequence the general reserve now stands at £1,043,120; the figure would have been still lower had not the fund been credited with £75,141, being the company's proportion of the sum of £127,609, received from the Post Office in respect of war services, the balance having been paid over to the subsidiary company which conducts the transatlantic telegraph service. It is also stated that the recent issue of 500,000 ordinary shares will have the result of increasing the general reserve account by reason of the premium at which the shares were issued. In the following summary we show the progress of the company over a number of years:—

	1913.	1919.	1920.	1921.	1922.	1923.	1924.
Gross profits ...	£246,682	£1,538,040	£564,838	£554,515	£557,419	£552,924	£642,193
Expenses ...	124,359	317,300	267,156	279,154	254,471	380,381	416,593
Net profit ...	122,323	1,220,740	297,682	275,361	302,948	172,543	225,600
Pref. dividend..	42,500	117,500	30,000	30,000	30,000	17,500	17,500
Ord. dividend..	150,000	617,824	391,567	397,036	412,507	275,007	300,007
To reserve ...							
Balance ...	Dr 70,177	491,416	Dr 123,883	Dr 151,737	Dr 139,559	Dr 119,964	Dr 91,907
Brought forw.	146,726	463,786	944,452	818,567	664,830	523,272	402,559
Carried forward.	76,549	955,802	820,567	666,830	525,271	403,308	310,652

Once again the preference shareholders receive their maximum dividend of 7 per cent., while the ordinary distribution also is maintained at 10 per cent. for the year. Investments in allied companies are given at £2,017,786. Of this amount it is stated that £1,034,659 represents quoted securities, but the auditors report that they are unable to form an opinion of the remainder, which are unquoted. Nor do the directors afford any indication of their value, contenting themselves by saying that in those cases where there is no market quotation for shares they have brought them into the accounts "on what they consider a fair and proper basis." It is satisfactory, however, to find that it has been deemed desirable to show the amount of sundry debit balances as a separate item instead of aggregating them with sundry debtors and expenditure on developments as in previous years. The amount of the sundry debit balances—£118,031—is chiefly made up of two items. Firstly, the cost of obtaining a foreign concession and payments in connection therewith, and secondly, the cost of acquiring certain important patent interests in connection with the claims against the Government, which are now the subject of arbitration. In addition, "Contracts in progress," figuring at £137,618, appears as a separate balance-sheet item for the first time. Good progress is reported with the development of the "beam" system, and tests have been successfully conducted.

Geevor and Levant.—Our mining correspondent writes:—On the whole, the reports of these two Cornish enterprises to March 31st are somewhat of a disappointment. From the operating standpoint the Geevor records considerable progress. An increased tonnage of ore was treated for a higher average yield, and fetched a better average price. As a result, the gross profit rose from £7,100 to £15,800. Unfortunately for the shareholders the latter amount had to be expended upon the mine and plant, the company being short of working capital. Depreciation on investments to the tune of £5,900 has been written off share premium account. The current year should benefit from the work above referred to, and the appointment to the board of Mr. Arthur Richards, the well-known engineer, after an inspection of the mine, should prove of value to the company. The ore reserves have been expanded by 38,400 tons to 150,400 tons, a quantity representing four years' supply for the mill. The statement of the associated Levant Tin Mines, which covers 15 months, shows a profit of £1,650, reducing the debit balance to £17,700. As against debtors for £5,100, the company, on March 31st, had debenture and other indebtedness to the tune of over £41,000. The directors state that several schemes for the provision of further capital have been considered, but they decided to

use their borrowing powers to increase the capacity of the mine and await results. Allowing for the difference in the periods covered, the 1924-25 statistics show an increase in the tonnage treated, and a more than corresponding expansion in the black tin and arsenic produced, giving an average of 31s 1d in place of 29s 5d, while costs were brought down by about 2s to 28s, hence a mining profit of 3s 1d per ton in place of a loss of 7½d. With an additional unit of milling plant at work, costs this year are expected to be lowered still further.

UNITED STATES.—MONEY AND STOCKS—INDUSTRIAL POSITION—STEEL—COTTON—EUROPEAN DEBTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 15.

ALTHOUGH the July 1st reinvestment demand has now played itself out and was in some respects disappointing, the markets remain steady. To say that this demand was somewhat disappointing is not to say that it was not large. On the contrary, there is just as much reason as ever to be impressed with the magnitude of the country's investment resources. It seems pretty clear, however, that investment dealers were forehanded in anticipating the public demand for securities after the turn of the year. They laid in plentiful supplies of bonds so as to be able to supply the needs of their customers. The first effect of this preparedness was to advance the bond market before the July 1st dividends and interest payments were distributed. The later effect was to remove the basis for a fresh advance in bond prices after the fresh funds were distributed. Prices even reacted slightly after the turn of the half-year. Now, however, they are steadier, and talk of a reaction in this department centres around a late fall movement rather than one during the weeks immediately ahead.

For the rest, the securities markets are encouraged by the signs of returning ease in money. The early July hardening is now disappearing into the past, although it was followed, after the first relaxation, by a secondary flare-up in call money. The rate on the Stock Exchange, which touched 5 per cent. on Monday, is now back to 3½ per cent. Money market followers, meanwhile, point out that the normal seasonal movement is downward during July and the first part of August. Not until the end of August do rates begin to harden. Even though wheat is being harvested earlier than usual in the south-west, the usual seasonal tendency is expected to persist. Most judges expect that money will be dearer in the fall, not merely because of crop needs, but because they expect business to enter on a new upward movement. They do not believe, however, that the improvement in business will reach such proportions during the next few weeks as to increase materially the demand for credit. Consequently they expect relatively easy conditions to persist through the summer season. Even where they look for higher rates during the autumn they do not anticipate any very sharp advance. The likelihood of a speculative boom is considered small, while the resources of the Federal Reserve system are expected to be available for all legitimate commercial needs.

As for the industrial situation, it is fairly clear that conditions are favourable to a revival. Business as a whole is in a thoroughly liquidated condition. Inventories are, for the most part, small. Prices are relatively low, and credit is plentiful and cheap. Employment is high, and real wages are, according to Secretary Hoover, the best in history. The country seems poised, in short, for new buying movements. No extravagant ideas are entertained with regard to what these buying

movements will bring. No one expects that they will cause more than a mild advance in commodity prices. No one looks for boom conditions. Very few, in fact, desire them. A common opinion is that the new buying movements will bring excellent business but no inflation. Industry, including transportation, is expected to retain its efficiency. The short rather than the long form of business cycle seems likely to prevail for a while longer.

The condition of the steel industry illustrates the present position rather well. The manufacturers of steel are decidedly more optimistic than was the case a short while back. They feel that the end of the decline in steel and iron prices has been reached. They are encouraged by the fact that steel mill operations have held above 60 per cent. of capacity during the normally quiet summer season. They point out that consumption of steel products is going on undiminished, and are confident that consumers are about to come into the market in a larger way. Unfilled orders of the steel companies are still declining, but the rate of loss is diminishing, and the last of the ebb is believed to be in sight. Even the consumers of steel admit the likelihood of stabilisation. While, therefore, confidence is returning, no sudden and sharp upturn in activity is expected. There still are many doubting Thomases who are waiting to see whether they cannot secure a further slight concession in prices. There are others who are waiting for a clearer line on what the crops will be like. The return to more active business promises, in other words, to be an orderly affair, and not to bring any surprising disturbances in the money market.

Cotton prices have been firm since the first effects of the recent Government crop estimate wore off. There has been a great deal of hot, dry weather in the south-west, and this has had a favourable effect on sentiment as far as prices are concerned. The feeling is that acreage is so large that some deterioration of condition and reduction in prospects can be stood. Meanwhile, consumption figures show that the curtailments at the textile mills this spring have been less serious than had been thought. Thus, June's takings, 493,000 bales, while substantially below those of the spring months, 597,000 bales having been taken during April, are well ahead of those of last June, when only 350,000 bales were consumed. With only one more month of the crop year to run, stocks of cotton compare favourably with those of a year ago. Stocks of lint in consuming establishments on June 30 amounted to 1,123,813 bales, as compared with 949,649 bales on June 30, 1924. In public storage and at compresses there were 759,945 bales of lint, as against 882,197 a year ago.

While much is said about the prospective improvement in business, more particularly in the primary industries, it is generally admitted that the current volume of trade is remarkably large. Distribution of goods plainly is going on actively. As a reflection of this, car loadings on the railroads during the first six months of the year ran 5 per cent. ahead of those of the first six months of last year. Even when compared with the exceptional performances of the first six months of 1923, the showing is favourable. During the week ended July 4 the loadings exceeded those in the corresponding weeks of both 1923 and 1924. Notwithstanding these things, the railroads have been sufficiently supplied with equipment to be able to stay out of the equipment market in order to obtain the best possible prices. On June 30 there were 307,495 freight cars in good order, and available for immediate service that were idle. This supply of cars represents a strong protection against inflationary tendencies as autumn business develops.

Considerable interest has been displayed in recent moves on the debt-funding checkerboard. The Italians have gone home for more data bearing on their capacity to pay. In some quarters the opinion is held that a French settlement is likely to come before one with Italy, and for rather obvious reasons. Just how the French negotiations will develop is a matter on which views are rather hazy. There is, perhaps, a growing realisation of the need for moderation in framing the requirements. At the same time it is perfectly clear that the Administration is determined to push the negotiations, and that the probable attitude of Congress must be taken into account.

FRANCE.—POLITICAL CALM—FOREIGN TRADE—REVENUE—PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, July 22.

WITH the adjournment of the Chambers until October and the advent of the holidays, the hectic activity of the past three months has been succeeded by an almost unbroken calm, of which M. Caillaux is taking advantage to complete his plans for the Budget Bill for 1926, and to put the final touches to the second part of his proposals for the restoration of French credit. Public opinion has received with astonishing calm the increased taxes that were so boldly forced through Parliament, which can only be explained as due to the satisfaction that is felt at the fact that at last, apparently, a comprehensive and well-thought-out practical method is being adopted to place the national finances once more on a sound footing.

The past week has given two further indications in support of the belief that the pessimism which was felt in many quarters two months ago as to the duration of the Painlevé-Caillaux-Briand Cabinet's term of office was uncalled for. Last Sunday's elections for the renewal of 50 per cent. of the membership of the conseils généraux (which correspond to a great extent to our county councils, but which are always regarded as much more accurately reflecting the tendency of political opinion) resulted in substantial gains by the Radical, Radical-Socialist, and Socialist parties, heavy losses by the Right and an appreciable check to the Communists. Secondly, there has been a remarkable increase in the number of National Defence Bonds that has been absorbed by the public, since the exact conditions of the terms of issue of the new 4 per cent. Perpetual Rentes were made known. These two factors are universally regarded as proof that the new Cabinet has succeeded in winning the confidence of the country, and as indications that the new conversion loan, which it is hoped will effectively remove the bugbear of the floating debt, will prove an unquestionable success.

French Cabinets usually die from atrophy or inanition; there is no present indication that the present Ministry is likely to succumb from either of these causes. The German reply to M. Briand's Note concerning the proposed Security Pact suggests that the question is unlikely to receive solution for some time yet, and the inter-Allied debt question is in a similar situation. It may be regarded as certain that by agreement between the Governments primarily concerned, steps will be taken in the near future to give some kind of satisfaction to public opinion, particularly in America, in regard to the debt problem; but it is equally certain that no real attempt to settle the difficulty will or can be made for some time to come. There remains, so far as the present Ministry is concerned, the problem of the method to be adopted to replace the existing and universally condemned system of "scrutin de liste," with proportional voting. Seeing that the Universal Suffrage Commission of the Chamber, which has been given the duty of studying the problem, is hopelessly at a loss to agree on any one system, and is about equally divided in support of five widely differing proposals, the Ministry need have no fear of a defeat on that score. So far as the immediate future is concerned, therefore, the situation of the Government, like that of the franc, may be regarded as more or less stabilised.

The volume of foreign trade continues excellent. The total exports during June had a value of 3,506,534,000f, which, although 82½ millions less than during the previous month, was still 626,065,000 millions more than in June, 1924. Imports rose slightly, and had a value of 2,991,243,000f, or 22½ millions more than in May. Compared with June, 1924, however, French purchases from abroad were 189,130,000f less than in June last year. This falling off in imports was in raw materials and manufactured goods. Exports of manufactured goods, on the other hand, were 383 millions greater than in June, 1924, while this country exported 240,000,000f more raw materials than in the corresponding month of last year. The volume of trade for the month showed an excess of exports over imports to a value of 515 million francs. The total balance in favour of this country for the first six months of 1925 amounts to 2,787,862,000f (or, in round figures, £27,750,000), as compared with a favourable

balance of 1,385,726,000 in the corresponding period of 1924. The detailed comparative figures are as follows:—

	First Six Months of		Inc. or Dec. in 1925.
	1924.	1925.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	4,136,558,000	3,595,128,000	— 541,430,000
Raw materials	13,188,837,000	12,646,622,000	— 542,215,000
Manufactured goods ..	2,528,129,000	2,594,773,000	+ 66,644,000
Totals	19,853,524,000	18,836,523,000	— 1,017,001,000
Exports—			
Foodstuffs	1,995,063,000	1,652,635,000	— 342,428,000
Raw materials	5,628,328,000	5,890,396,000	+ 262,068,000
Manufactured goods ..	12,677,935,000	13,063,142,000	+ 385,207,000
Postal parcels	937,924,000	1,018,212,000	+ 80,288,000
Totals	21,239,250,000	21,624,385,000	+ 385,135,000

In considering these figures, it should not be overlooked that nearly 40 per cent. of the favourable trade balance for the first half of 1925 was derived from the trade carried on between France and her colonies and protectorates, which in these returns are always treated as if they were foreign countries.

The revenue returns for June show that the total yield from all sources (exclusive of Posts, Telegraphs and Telephones, which department has an autonomous Budget), amounted to 1,896,681,900f. Of this 1,811,120,300f was from "normal and permanent" sources. Of the balance of 85½ millions which was received from "exceptional resources, 47,594,700f was represented in payments of outstanding arrears of the long-expired special tax on war profits. The total yield from normal taxation was the lowest recovered since last August, when 1,690,073,100f was the total yield. The substantial falling off in the revenue during the past two months has been due to the speeding up methods adopted during the Herriot Government's term of office. One of these, it will be recalled, was the institution of the system of giving taxpayers a rebate on taxes paid in advance, which is stated to have resulted in furnishing the Treasury with about 1,500 millions of ready money, but which must necessarily have a serious effect on the yield obtained from taxation for some months yet to come. The revenue from indirect taxation and State monopolies during June amounted to 1,613,561,000f, or practically 150 millions more than in June, 1924. The tax on turnover during the month yielded over 351 millions, or over 20 per cent. of the whole of the indirect taxes, being exceeded only by the yield from registrations, which amounted to 367,381,000f. Income-tax produced 162,659,960f during the month, or less than 33 per cent. of the total from this source in June, 1924.

The index figure for wholesale prices for June, which has now been issued by the Statistique Générale, reveals a further sharp rise in all categories. The detailed figures are as follows (calculated on the basis of 100 as representing the prices of the same classes of commodities in 1914:—

	Categories.	June.	May.	April.
General index figure	45	554	531	523
Foodstuffs alone (general figure)	20	486	470	449
Vegetables	8	529	503	469
Meat	8	448	447	429
Sugar, coffee, cocoa	4	477	446	448
Raw materials (general figure)	25	614	584	589
Minerals and metals ..	7	550	510	508
Textiles	6	739	705	731
Various	12	577	557	553

The general index figure at the end of June, 1924, was 474. The rise is most marked in connection with raw materials, where an increase of 40 points is registered, as compared with only 16 in the case of foodstuffs. The rise in this case is obviously due to the renewed fall in the exchange value of the franc. The index figure for retail prices in Paris at the end of June is returned as 422 (as compared with 409 in April and 418 in May), the calculation being worked out (on a basis of 100 as representing the corresponding commodity prices in 1914) in relation to 13 articles of common necessity, all of which, with the exception of petroleum, are of French origin. The index figure representing the cost of living for a Paris

working-class family of four persons, during the second quarter of 1925, is returned at 390 (as compared with 100 in the corresponding period of 1914), the figure for food being returned as 412, heating and lighting 345, housing 200, and clothing 440. The corresponding general figure for Dijon (end of June) is returned as 430; for Grenoble (April 30th), 438; Marseilles (April 24th), 427; Rouen (April), 380; and Lyons (June 1st), 348.

GERMANY.—TARIFF—VALORISATION—STATE FINANCE—CURRENCY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, July 22.

The industrial duties in the new Tariff Bill have gone through Reichstag Committee on first reading with little change. Not much opposition, and this mainly from Socialist and Democratic circles, was raised, and the Agrarian representatives, being confident that the food duties will be passed, accepted increases in duties of numerous industrial products which agriculture uses in production, or which farmers consume. The controversy as to the proposed prohibitive motor car duties (which the Reichstag Committee also accepted) has brought out many facts showing that this industrial branch has enjoyed an almost complete monopoly under the import prohibition system, which is now about to cease. The Motor Car Industries Association admits that cars are being exported at prices much below the very high prices charged at home, and justifies this on the ground that it is necessary to hold old markets until export can be resumed on a great scale. The prevailing high prices and the large home demand have encouraged new foundations in the industry, and three railway rolling stock companies (whose branch is badly depressed) have taken up the manufacture of light cars. The critical question of the food duties is now up for Reichstag treatment. The special Enquiry Commission rendered a majority report proclaiming for the restoration of moderate food duties. Causes of the agrarian crisis, says the report, are the general conditions resulting from the war, the lack of credit, and too heavy taxes. The sales tax should be removed from food products, and the export prohibitions should cease. Agriculture could do without protection were the industrial duties removed; and duties on leather, textiles, and wood should be reduced. As long as abolition of the industrial duties does not take place, agriculture cannot be refused import duties, and here dairy products and other "finished" agricultural products have the strongest claim. A long-term agrarian tariff is not advisable. In addition to moderate breadstuffs duties, moderate duties should be imposed on maize and fodder barley, but concentrated fodder should be duty-free. The fixing of high maximum duties on breadstuffs is defensible as a leverage for exacting concessions from grain-exporting countries. Two members of the Commission demanded duty-free breadstuffs and maize. It seems certain that the breadstuffs duties will go through, but the proposal to fix minimum rates is still strongly opposed, among others by part of the Centre, and according to latest reports, it will be abandoned.

The two Valorisation Bills have become law. That dealing with public debts may be considered definitive. A reopening of the question is very unlikely. The question of private debts is, however, likely to remain alive. The association which represents the creditor class refuses to accept the settlement, and condemns the law (apparently with reason) as anti-constitutional and void. It is certain that the present Government, the chief members of which were against any valorisation, will not willingly reopen the question, but the new law contains many impracticable provisions, and so many obscurities, that a large proportion of claims under it must become the subject of lawsuits. Experience of the first valorisation decree of February, 1924, shows that new legislation designed in order to clear up doubtful points may develop, under the strong agitation of the creditor class, into a reopening of the question of principle, which is what percentage of valorisation shall be granted? (The "52 gold pfennigs" given last week as the present value of 50 reichsmarks of non-

interest-bearing loan redemption bonds should read "520 gold pfennigs," that is, 5 marks 20 pfennigs.)

The Treasury report for June and for the first quarter of the financial year is as follows:—

	June.	April-June inclusive.
	Reichsmarks.	Reichsmarks.
Receipts—		
From taxation and fees	543,789,251	1,814,020,014
From other sources	3,159,957	30,949,705
	546,949,218	1,844,969,719
Expenditure—		
General administration and war burdens	362,133,152	1,186,664,508
Subventions to states and municipalities	224,147,708	696,341,870
	586,280,860	1,883,006,378

The account does not include 150 million marks of pledged taxes received in June, but includes 133 million marks of May pledged taxes since refunded by the Commissioner of Controlled Revenues. The quarter's taxation receipts of 1,814 million marks are 34.6 per cent. of the 5,239.7 million marks estimated receipts for the whole financial year. The Finance Ministry now estimates the deficit of 1925-26 at 385 million marks, and states that 1926-27 will show a deficit of 600 to 700 million marks. The Ministry has failed to come to an understanding with the States on the subvention question. It is unwilling to make further concessions. The opposition mainly comes from Bavaria, Württemberg, and some other States in which the Right parties, as in the Federal Cabinet, hold power, and if no compromise is attained the "Finanzausgleichsgesetz," which embodies the furthest concessions the Finance Ministry is willing to make, may be rejected by the Reichsrat. The collection of the triennial increment of property tax which was first due at the end of 1926, has been postponed until the end of 1928. The Succession Duties Bill has been amended in Reichstag Committee by making the tax payable in ten annual instalments in cases where immediate payment would be a hardship. The income-tax has been again amended in committee in the interest of small wage-earners. Hitherto the 10 per cent. tax deductible from wages has been reduced by 1 per cent. for each member of the taxpayer's family; a wage-earner with a wife and three children, whose annual income was 3,000 marks, paid 6 per cent., or 180 marks, equal to 10 per cent. on 1,800 marks, leaving 1,200 marks or income entirely tax-free; and a person with a family of the same size, but with larger income, had the same exemptions, paying 6 per cent. on an income of 8,000 marks, equal to 10 per cent. on 4,800 marks, thereby having 3,200 marks entirely tax-free. This has been criticised as being against the principle of the law, which was to spare those who could least afford to pay. The amendment substituted fixed abatements for wife and children, regardless of the dimensions of the income, being for wife 90 marks a year, and for children from 120 marks for the first to 600 marks for the fifth and later children. By this system wage or salary earners with four dependents, with incomes of up to 3,000 marks a year, will pay a lower tax than at present, and those with higher incomes will pay more.

The Bill converting the Rentenbank into an Agricultural Credit Bank has become law. The capital is 220 million marks, and will increase to 500 million marks. In the directorate the Federal Government and Agriculture are equally represented. The June 30th return of the Rentenbank shows a circulation of 1,855,559,423 marks. The Reichsbank's return for July 15th shows a further decline of discounts by 53 million marks, of advances by two million marks, and of circulation by 145 million marks. Deposits grew by the large sum of 192 million marks, mainly owing to payment-in of public monies. The money market, owing to demands for quarterly taxes falling due on July 17th, has remained tight. Day money in Berlin at the close of last week cost 8½-9½ per cent., against 8-9 per cent. one week earlier. Foreign credits are not being received, with the exception of the first instalment of the Berlin city dollar loan. The private discount rate has risen to 8 per cent. A leading Berlin bank publishes some capital estimates. Of 11½ milliard marks mortgages negotiated through mortgage banks outstanding before the war, 15 to 20 per cent. will remain

after execution of the Valorisation law. This, though no national loss, means an immobilisation of capital. Pre-war life insurance policies totalled 6 milliard marks, and were increasing by 500 million marks a year. The present total is about 600 million marks, and the present increase is one of 400 million marks a year. The quotation value of all Bourse stocks in 1913 was 30 milliard marks; at present it is about 8 milliard marks. Public loans, corporation debentures, and mortgage bonds before the war totalled 40 milliard marks. After valorisation this total will have shrunk by 80 to 90 per cent. Total mobile capital is estimated to have declined since 1913 by 100 milliard marks, which, again, is not all a national loss, but is largely a transformation in the character of values.

The industrial situation has changed little. Greater activity is reported in the electro-technical branch, the demand for electro-motors, dynamos, and installation material having greatly increased. The clothing branch also reports prosperity. The trades union reports for July 1st show a decline in unemployment among organised workers from 3.5 (June 1st) to 3.11 per cent. in the metal branches; from 6.11 to 3.94 per cent. in transport; and from 4.31 to 4.1 per cent. in general factory workers; while the percentage in the textiles branch increased from 3.24 to 3.44; woodworkers from 2.9 to 3.2; boot and shoe makers from 4.56 to 5.33.

An institute for study of trade cycles has been established, being attached to the Federal Office of Statistics, and financed by the State, the Reichsbank, the Railways Corporation, and associations of employers and employed. Hamburg shipping in the first half of 1925 has again overtaken Antwerp's, arrivals being 8,490,000 net tons, against 8,249,000 tons at Antwerp. In 1924 Hamburg's shipping arrivals totalled 15,622,000 tons, and Antwerp's 16,389,000 tons.

The bourse has been very weak, and stocks are lower than at any other time this year. Considerable foreign selling is observed, and it is understood that foreign bull

speculators have transferred their activities to Vienna. The Stinnes concern has been obliged to sell its 7,500,000 marks stock holding (out of a total 22,000,000 marks capital) in the Berliner Handelsgesellschaft Bank. In connection with the Stinnes concern's liquidation of other holdings, including its holding in the Rhenish-Westphalian Electricity Company, metal stocks have been particularly weak. The *Frankfurter Zeitung's* stocks index for July 17th shows 74.76; July 10th, 75.80; January 31st, 111.37; January 2nd, 100.

CANADA. — CROP REPORTS — PROROGATION OF PARLIAMENT — NOVA SCOTIA ELECTIONS — POSSIBLE POSTPONEMENT OF FEDERAL ELECTION — THE WEST INDIES TRADE CONFERENCE — TRADE RETURNS — THE RAILWAY PROBLEM — IMMIGRATION.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 6.

WHILE the note of exuberant optimism which characterised the earlier crop reports has now abated, there is still among them a gratifying consensus that the situation is eminently satisfactory, and that the prospects of a yield well above the average are excellent. In practically every district of the prairie provinces the wheat is now in the shot blade, and the harvest will begin at least two weeks earlier than in 1924. In certain areas there has been substantial damage from hail, and in others cutworms have caused a loss of 10 to 15 per cent. of the crop, but the aggregate harm is not serious. The Dominion Bureau of Statistics, in its first preliminary estimate, contents itself with a forecast of 350 million bushels for the wheat crop, but this figure is regarded as extremely conservative, and the C.P.R. report published a few days later suggests a much larger yield. In the West pasturage is excellent and coarse grains are doing well. In Ontario the crops have derived great benefit from recent rains, and although these came too late to prevent the hay crop being short, they have enormously helped the pasture lands. The winter wheat crop, which is ready for harvesting, promises an average yield, and the root crops are excellent. The condition of the fruit crop, especially of apples and pears, is very satisfactory. In contrast with Ontario, many areas of Quebec have suffered from excessive rainfall, and in the northern and lower St Lawrence districts heat and dry weather are badly needed, but the pastures and hay crop are in good condition. In the Maritime Provinces the two most important crops, hay and potatoes, have rarely shown better prospects, and the apple crop in Nova Scotia is also good. In British Columbia, owing to prolonged spells of drought, the fruit crop will, on the whole, be below the average, both in yield and quality, but roots and vegetables promise a good return. In view of the excellent crop reports, grain prices have been falling steadily on the Winnipeg Grain Exchange, but there is still confidence that they will not go back to the level of 1923, and that, given a fulfilment of the present prospects, the 1925 crop, whose planting was much cheaper than in any post-war year, should offer the farmers a good return.

The fourth session of the present Federal Parliament of Canada, which had lasted practically five months, came to an end on June 27th, and so far from being marked by the lively controversies which had been foreshadowed, it is regarded in retrospect as singularly dull and unprofitable. The new Grain Act and the Bill concerning railway freight rates were the only two measures of major importance which were passed, and a number of the King Government's legislative enterprises besides the Petersen contract came to disaster. The Senate stood firmly to their ground in connection with the Home Bank Bill, and as public opinion realised the wisdom of their amendments, which restricted relief to the small depositors of the defunct bank and needy cases, and, incidentally, will save the Treasury nearly three million dollars, the Government, after challenging the right of the Senate to amend a money Bill, yielded, and accepted the compromise. The Senate also, in the dying days of the session, killed a Rural Credits Bill, which the agrarian members in the House of Commons had criticised severely,

and stopped the construction of two railway branch lines, clearly planned for political purposes. In the end the commercial treaty with Australia, after being severely attacked in the Commons, both by Conservatives and Progressives, secured a substantial majority, and no serious opposition, except by a jam manufacturer, was voiced to it in the Senate. A pre-election atmosphere had enveloped the whole session, and the King Government were obviously planning to appeal to the country in the early autumn. But their calculations of success received a rude shock from the result of the provincial elections in Nova Scotia on June 25th, when the local Liberal Party, after being in uninterrupted power for 42 years, were completely overwhelmed, and were able to retain only 3 out of 43 seats in a traditional Liberal stronghold. Voters do not always support the same party in Federal, as in provincial elections, but the same factors which were responsible for the result in Nova Scotia—notably the scandalous state of affairs in Cape Breton, where the industrial conflict is still raging with great bitterness—will operate in the Federal field. In view, therefore, of the symptoms of electoral sentiment which were revealed by the Nova Scotia election, most of the Liberal members at Ottawa, outside the Quebec contingent, are now pressing for a postponement of the election till 1926 in the hope that a good crop may improve the temper of the voters, and Mr King is credited with a disposition to accede to their wishes.

The Canada-West Indies Trade Conference, which sat regularly for a fortnight after Parliament was prorogued on June 27th, was comparatively barren of results. Some of the West Indian delegates made no secret of their opinion that their time had been largely wasted, but they carried off with them a useful increase in the preference given by Canada to their sugar. Attention was also paid to their complaints about the inadequacy of the existing steamship service between Canadian and Caribbean ports, and arrangements were made for its improvement; henceforth steamers with a good refrigerating equipment, which is indispensable to the fruit trade, are to be provided through the joint subsidy. It was also agreed that the preferential benefits should only be available to goods shipped directly through Canadian ports. The fact, however, is that the commercial ties between the British West Indies and the adjacent areas of the United States are through the forces of geography very strong, and powerful interests are opposed to any preferential arrangements which might provoke the United States to tariff reprisals. On the other hand, revenue necessities prevent the Canadian Government from making some concessions which the West Indians desire.

The foreign trade of Canada showed a slight decrease in May; it is true that imports for the first time in many months showed an increase of \$3,836,000, but a fall of \$7,794,000 in exports left a net loss of about four million dollars. The larger importation, wherein the gain was chiefly from raw materials on the free list, fibres being up \$920,000, is interpreted as a favourable sign, probably marking a revival of domestic industry. On the export side there was a notable decrease of \$13,558,000 in agricultural foods, but the shipment of animal products was larger than in May, 1924, and the exports of wood, pulp, and paper were about a million dollars greater. Although somewhat less than in May, 1924, the export balance is still very substantial, and the indications are that during at least the summer months exports will continue to exceed imports in value. Canada has still a very much larger *per capita* foreign trade than her neighbour; in May, although her population is only one-twelfth of that of the United States, her foreign trade was about 40 per cent. of the American figures.

The railway problem continues to be a constant topic of discussion, largely as a result of the report of the special committee of the Senate, and undoubtedly a very large body of public opinion in Canada is now ready to support some such plan of amalgamation of two great systems, as was foreshadowed in the senatorial report. But the all-important point is the terms of the amalgamation, and there controversy at once develops. It is rumoured that Mr Mackenzie King contemplates adopting the recommendations of the report as the policy of his Government, and making it the basis of an appeal for re-endorsement by

the electorate. It would probably ensure for him the very powerful support of the C.P.R., but it would also ensure the ruin of the Liberal party, for outside Quebec very few Liberals would endorse a proposal to guarantee in perpetuity the dividends of the C.P.R., and the whole West would be up in arms against it. There is every desire to give the C.P.R. fair and equitable treatment, but if sacrifices have to be made for the common interest, it will have to bear its share, or a merger will be impossible.

A most disquieting feature is the poorness of the immigration figures. A number of British families are coming to Canada under the schemes of the Overseas Settlement Board, but otherwise the flow of immigrants from the British Isles is very disappointing, and a number of boats which in other years were fully utilised all the year for this traffic are being laid off in August. Nor is there any great influx from the Continent of Europe or the United States, and there will be a decline even from the disappointing figures of 1924. On the other hand, however, there is evidence that the southward outflow of population has markedly diminished in volume.

NEW ZEALAND.—MR MASSEY'S SUCCESSOR—POLITICAL OUTLOOK—REVENUE AND EXPENDITURE.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, May 29.

THE meeting of the Reform Party called for the purpose of electing a leader in place of Mr Massey has duly chosen the Hon. J. G. Coates, the Minister of Railways and of Public Works and Postmaster-General in the Massey Ministry. The only serious rival to Mr Coates would have been the Minister of Customs, the Hon. W. Downie Stewart, who is practically certain now to be offered the Ministry of Finance. Mr Stewart is at present in New York undergoing extended treatment for rheumatoid arthritis, contracted as a result of war service, but it is doubtful whether, in the present state of his health, he would have been chosen by his party even if he had been here. The reputation of the new Prime Minister has been made as a vigorous administrator of public works and railways. He is too young and too inexperienced to have had the chance to acquire the Parliamentary dexterity and general political ability of which both Seddon and Massey were masters. He is a popular figure, and his vigorous handling of administrative problems has won him a certain reputation.

It is certain that a period of political change and possibly confusion will follow. There has for some time been no real cleavage between the Liberal and Reform parties, and only personal ambitions and force of habit kept the organisations distinct. The Reform party caucus is known to have discussed overtures for amalgamation, and the Prime Minister, who began his political career as a Liberal, is believed to favour it. The newspapers of the country are almost unanimous in their advocacy of fusion, and it seems also certain that, possibly before an election is held, but more likely after a short session followed by an election, both of the old parties will disappear and be replaced by a new anti-Labour party. Such a development, however, will not end the manoeuvring and bargaining that will go on. A considerable minority of the farmers' organisations have been restive for many years, and there have been spasmodic efforts at the formation of a Country party, which were kept in check mainly by the personal popularity of Mr Massey. It is unlikely that any composite party which gave townspeople a predominant voice in policy would continue to command the support of the small farmers. There is a clear economic cleavage on superficial issues between big business in the towns and the interests of those farmers who have been active in demanding rural credit banks, State-aided marketing schemes, &c. To keep these discordant elements together will need almost superhuman tact and ability. Meantime, the Labour party, standing apart as a distinct entity, wooing the small farmers and urging them on in their discontent with banks and mercantile institutions, stands to gain a good deal from the confusions of its opponents. More immediately, the latest financial returns must prove a rock ahead for any new Government. Revenue

HARRISONS & CROSFIELD, LTD.
EASTERN AND GENERAL MERCHANTS.

TEXTILES AND HARDWARE GENERALLY.
1-4, GREAT TOWER STREET, LONDON, E.C.3.
Associated with Harrisons Ramsay Proprietary Ltd., established throughout Australasia

and expenditure figures for the past two years are compared below:—

Revenue.			Expenditure.			
	1923-4.	1924-5.		1923-4.	1924-5.	
	£M.	£M.		£M.	£M.	
Customs.....	7.3	7.6	Interest.....	7.9	9.9	
Stamp and Death Duties.....	3.3	3.2	Debt Amortisation.....	1.0	1.0	
Post and Telegraph.....	2.7	2.7	Railways.....	5.2	6.5	
Land Tax.....	1.4	1.3	Post and Telegraphs.....	2.1	3.0	
Income Tax.....	3.8	3.4	Other Departments.....	6.4	8.0	
Railways.....	7.0	7.1				
Total Revenue.....	28.0	28.7	Total expenditure.....	26.1	32.2	

The apparent increase of £6 millions in expenditure is, however, due to a change in bookkeeping. Credits of various kinds in reduction of the gross expenditure are included in a special section on the revenue side, amounting to £4.7 millions, so that actually there is a surplus of approximately £1½ millions. This compares fairly favourably with preceding years, as the following table shows:—

	Revenue.	Expenditure.	Surplus.
	£M.	£M.	£M.
1920-1.....	34.3	28.1	6.2
1921-2.....	28.1	28.5	0.3
1922-3.....	27.6	26.3	1.3
1923-4.....	28.0	26.1	1.8
1924-5.....	28.6	27.4	1.2

NORWAY.—EXCHANGE PROBLEMS—CROPS—BUDGET.

(FROM OUR CORRESPONDENT.)

OSLO, July 18.

THE preponderating economic question in this country at present is the relation of the Norwegian krone to foreign exchanges, chiefly to the £ and the dollar. As is well known, the object of the National Bank always has been to bring the krone, by successive stages, at a slow but steady rate, back again to parity. But how abnormal the present state of things is will best be seen from the fact that on April 8th the official rate was Kr.30.05, while in less than three months, on July 3rd, it was down to Kr.26.90 to the £. Since then it has been as high as Kr.27.50, but to-day is again Kr.27.15. There has, no doubt, been some increase in the intrinsic value of the krone. Some branches of the export have brought a good deal of money into the country. The Budget for 1925-26 has been balanced without any estimated deficit, and with only a comparatively very small increase of taxation. Certain countries with weak foreign currencies also no doubt have made bona-fide purchases of Norwegian values. All this tends to raise, in a natural way, the value of the Norwegian krone. But recent abnormal and violent changes are now acknowledged to be the result of speculation, especially from America. Such gambling, which to-day has chosen for its victim the Norwegian krone, but to-morrow may choose the money of some other smaller country, is nothing less than a disaster. The fact is followed with the keenest interest by the authorities concerned, and it is very likely that measures will be taken to neutralise, as far as possible, the consequences of speculation.

So far, this is one of the finest summers that anybody can remember. Everything points to very abundant crops of the chief products of agriculture. Hay-making is in full swing, and cereals and potatoes, as well as minor crops such as vegetables, are in a very flourishing condition. Horticulture, perhaps, will be an exception. The prospect of reduced imports of foodstuffs also may influence the exchange. The Storting rose to-day, having voted the final amounts of the Budget. The total amount of the same is Kr.438,500,000.

Letters to the Editor.

GOLD STANDARD WITHOUT GOLD CURRENCY.

TO THE EDITOR OF THE ECONOMIST.

STR.—In your article of the *Economist*, July 11th, you say that Ricardo never put the question, what influence a system of gold standard without gold circulation is likely to have on the value of gold. But really Ricardo affirms that the convertibility of bank notes in gold bullion will keep the value of gold at a low level.

In fact, in his essay on protection to agriculture (pages 468-69 of MacCulloch's edition), we read: "If the plan to make the Bank liable to the payment of a certain large and fixed amount of their notes in gold bullion had been adoptedit is demonstrable that the value of money could only have been raised 5 per cent. by reverting to the fixed ancient standard, for that was the whole difference between the value of gold and paper.....and we will have escaped the further pressure which the country has undoubtedly undergone from the effects of the great demand for gold, which specie payments have entailed upon us."—I am, yours,

Turin, July 14th, 1925. ACHILLE LORIA.

THE FINANCE OF RAILWAY AND BANKING NATIONALISATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There could scarcely be a better object lesson of the effect of the nationalisation of railways and banks than the Bill just passed by the Reichstag in Berlin. Bondholders of pre-war German and Prussian bonds are to receive 25 reichsmarks nominal of new loan redemption debt in exchange for 1,000 marks nominal of their old loans, but no interest will be paid on these new bonds until after Reparations are made.

German and Prussian bonds were always reckoned as gilt-edged securities before the Great War, but now, by an act of German Legislature, their value has practically ceased to exist. Perhaps one concrete case is the best illustration of the danger of investing in Government security. In 1902 an issue was made of Prussian 3 per cent. State bonds at 89, of which 211,753,600 marks were issued in exchange against shares in the Prussian railways taken over by the State, and 12,000,000 marks advance to the Prussian Central Banking Corporation. The holders of the railway securities were forcibly made to take Prussian 3 per cent. bonds in exchange. Not only do they see their holdings now pronounced to be worthless, but they have to endure the added insult of seeing their original securities now pledged to a foreign "Commission" as security for a 7 per cent. loan recently floated on the international market to provide Germany with a small sum of ready money, with the object of enabling her to carry on somehow with a "managed" currency.

Not being a financier, but only a plain business man, it appears to me that if one Parliament in a civilised community can repudiate its debts raised on a gold basis, it is certain that sooner or later every Parliament will proceed to do the same thing. It is argued, and rightly argued, that the workers of every country have to provide the interest on the public debt. Our working classes have been content to do this up to the present time, but with this German object lesson in view it seems to me that Government security in future must clearly be based on goodwill alone, and is at the mercy of any group of politicians who are able and willing to persuade the workers that it is economically unsound to endow the holders of Government obligations, as we do, with 50 per cent. of the national income. On the other hand, I note that, according to your Berlin correspondent, "although these financial matters move with a clockwork precision, which speaks well for the comprehensiveness of the arrangements made by those responsible for the drafting of the Dawes Plan and the London Agreement," and that "the Dawes laws passed by the Reichstag provided for the initiation of the new bank, the railway company, and the mortgage on industry"; and that the "whole 50 milliards nominal which are officially estimated to be in 'new' bonds would have a present value of about £12,500,000. Materially, and apart from the question of principle, the reduction to 25 reichsmarks is therefore of no importance"; still, the fact remains that there is no money in Germany, and in the opinion of any ordinary individual there is no likelihood of any money being invested in that or any other country which is foolish enough to adopt repudiation of its debts as a national programme for the rehabilitation of its financial system.

Yours, &c.,
July 21st, 1925.

POLAND AND GERMANY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I notice that in your issue of July 11th, in a paragraph entitled "Tariff Conflict Between Poland and Germany," a correspondent presents the German point of view on the question at issue. May I briefly state the case for the other side? I think that nobody acquainted with the facts could deny that the conflict was deliberately provoked by Germany, who, on the one hand, arbitrarily restricted the imports of Polish coal in the middle of negotiations for a commercial treaty, while on the other she put forward demands of a political nature which Poland could not possibly concede. Thus there cannot be any doubt that Poland retorted with restrictions on certain German imports only after Germany practically put an embargo on Polish coal.

I agree with your correspondent that Poland cannot profit by such a conflict, and this fact alone is sufficient proof that Poland has not initiated it. Poland's experience of commercial relations with Germany is neither new nor isolated. Did not Germany try to boycott Poland commercially during the first three years after the Armistice? Germany called it off, seeing that it injures her much more grievously than a self-sufficient country like Poland. For, contrary to the assertion of your correspondent, Germany has much more need of Polish imports, consisting chiefly of agricultural raw materials, than Poland has of German manufactures, which she can get as easily from England, or nearer home, from Austria or Czechoslovakia.

Incidentally, German action with regard to Polish coal shows how utterly mendacious were the arguments put forward by official Germany after the Upper Silesian plebiscite that Germany cannot exist without Silesian coal, if Germany takes the earliest opportunity to put an embargo on that coal even at the risk of provoking a tariff war.

Nor, as I said, is Poland's experience isolated. Have not the negotiations with France broken down? Have not the negotiations with Czechoslovakia for free transit of Czechoslovak goods through Hamburg and Stettin broken down, although in this case Germany was solemnly bound by treaty to grant it? Have not the Nationalists who are in power in Germany endangered the commercial treaty with England which they refuse to ratify?

All this seems to give substance to the complaints of the progressive parties in Germany that the Nationalists have become, as *Vorwaerts* puts it, "tariff mad."

In short, Sir, Poland deprecates the conflict, and is ready for a reasonable compromise, offering meanwhile a profitable market to the million unemployed in this country.—Yours faithfully,
F. B. CZARNOWSKI.

47a Portland place, London, W. 1, July 15th, 1925.

Books and Publications.

BRITISH PUBLIC FINANCE.*

This is a laudable effort to explain to the general reader the nature and working of the financial machinery of the British Government. Major Hills was a member of the House of Commons from 1906 to 1923, and served as Financial Secretary to the Treasury under Mr Bonar Law. His experience enables him to present in a hundred small pages of large print a fairly complete account of his subject. The rest of the book is devoted to discussions of public economy, currency, and debt. Our financial system is a complicated business, and such a highly compressed description of it as we have here is necessarily somewhat difficult reading. The general reader must be possessed of much perseverance and capacity if he can read, and understand it at the first attempt. If the subject is new and obscure to him he must not only read, but re-read, mark, and digest to reap the reward of a good working idea of our formal public finance. The descriptive portion of the book has been carefully prepared, but it is surprising to be told that Exchequer bonds were first issued in March, 1915. Major Hills ought to have known that they were introduced by Gladstone in 1853, and that they were constantly resorted to for various purposes, including not only naval and military expenditure, but the purchase of the Suez Canal shares by Disraeli, and the payment of dis-sident holders of 3 per cents. at the time of Goschen's great conversion.

* "The Finance of Government." By John Waller Hills (some-time Financial Secretary to His Majesty's Treasury), assisted by Dorothea Cotter Morison. The Westminster Library. Published by Philip Allan and Co. London. 194 pages. Price, 3s 6d net. 1925.

In describing the work of the Treasury, the authors say: "Seeing the estimates of all spending departments year after year, the Controller of Supply Services can compare costs in different years, and in different departments. He is thus able to form a fairly accurate judgment as to what costs are excessive and what are justifiable. The Controller of Establishments can at once put his finger on a case of redundant staff. He is the final arbiter of the establishments of all the departments." If this were even approximately correct the responsibility for waste would be narrowed down to these two officials, and the ministers under whom they serve, and there would be no need of committees except to consider their competence. When the authors venture opinions they are not always so happy as in their narrative. "Volumes could be written on the errors into which the human mind has fallen through explaining the State by analogy.....with an organism." If a modern civilised state is not an organism, what meaning can be attached to the word? Or, again, we are told that the dead-weight debt at the outbreak of the Great War was £651 millions. In 1920 it was £7,829 millions. "Therefore, the Great War added £7,178 millions to our burdens." It is surely a strange measure of the burden of the war which ignores floating debt, takes no account of the burden met by increased taxation as distinct from debt, and assumes that the aftermath does not extend beyond 1920.

The section devoted to currency was written before our return to the gold standard. Its title, "Our Present Currency System," is not now appropriate, but the authors have thought it well to leave both title and description unchanged, as they feel that "an account of the system as it was before April, 1925, will be of value." The conclusion, dealing with debt, is interesting chiefly for its comment upon the 3½ per cent. Conversion Loan, 1961. Holders of National War bonds were offered in 1921 from £160 to £163 (varying with the date of repayment between 1922 and 1925), for each £100 of bonds. "This," say the authors, "gave them interest from £5 12s to £5 14s per cent." for 40 years. They might have added that in 1961 £160 or more will be paid back for each £100 originally borrowed. But we are told that these "were wise terms" for five reasons, of which the fourth is that the debt would be "off the minds" of Government till 1961, and the last is that as time went on large blocks of war debt would fall due and need conversion, and that "the terms of subsequent conversions had to be progressively worse for the investor.....Therefore the first offer had to be very high, to allow of this scaling down." All this is far from convincing.

POLITICAL THEORIES.*

THE colleagues and students of the late Professor Dunning, of Columbia University, planned the present volume of 13 essays on contemporary developments in political theory as a tribute to his continuing work and ever-present inspiration. Fate, however, decreed that its appearance should commemorate his untimely death. It is, we venture to think, worthy of its object. In scope, it represents a survey of the ground immediately following that covered by Professor Dunning in his three-volume "History of Political Theories, Rousseau to Spencer." Professor Merriam, of Chicago University, opens the subject with a survey in outline of the field of political thought during this latter period of its development. M. W. Willey concentrates on the theory of democracy, with a wealth of scholarly reference which, it must be confessed, leaves too little room for critical analysis. F. W. Coker deals with the clash between pluralism and State sovereignty; E. M. Borchard and C. P. Patterson with the bearing on political theory of international law and jurisprudence. From that we pass to proletarian political theories (Mr Paul Douglas contributes an admirably lucid and comprehensive analysis of modern Socialist doctrines) and the politico-scientific implications of recent developments in philosophy, sociology, social psychology, anthropology, geography, and racial considerations. In his critical survey of recent philosophical thought, H. W. Schneider covers a wide field with a

* "Political Theories." By Merriam, Barnes, and others. Macmillan Co. of New York. Pp. viii. + 597. 17s.

vivacity and charm of phrasing which helps to lighten its heavy demands upon the understanding of the general reader. And the volume closes with a discriminating valuation of racial theories by F. W. Hankins, which should bring comfort to the devotees of Mr Hilaire Belloc. There is, its author considers, "no convincing demonstration of the superiority of one European race over another." The "Nordic Man" is, in fact, no better than his neighbours.

INCOME-TAX LAW AND CASES.*

THIS volume is the work of a well-qualified writer on the subject. It contains an exposition of the Statutory and Case Law relating to Income-tax, and is specially designed to meet the needs of accountants, solicitors, secretaries, and others who require an authentic legal guide to a complicated code. Indeed, so complicated has income-tax law now become that, according to the published opinion of a well-known member of the Bar, "its tendency towards the chaotic is persistent." The work is conveniently arranged in the form of a handy subject index which occupies 600 out of the 700 pages. United Kingdom income-tax extends to (a) the income of individuals, corporations, companies, and other "legal persons" resident in the United Kingdom; and (b) the income arising in the United Kingdom receivable by individuals, corporations, companies, and other "legal persons" not resident here. It thus happens that the legal meaning of the words "residence" and "resident" are of great importance in the construction and administration of income-tax law. In this book no less than fifty pages are usefully devoted to a consideration of the legal meaning of the word "residence." The word is nowhere defined in the Income-tax Acts, but No. 2 of the Miscellaneous Rules relating to Schedule D (Income-tax Act, 1918) specifically grants exemption in respect of certain external profits or gains of non-residents, even though these are received in the United Kingdom. To be exempt these profits or gains must be received from possessions or securities out of the United Kingdom by a person "who is in the United Kingdom for some temporary purpose only, and not with any view or intent of establishing his residence therein, and who has not actually resided in the United Kingdom at one time or several times for a period equal in the whole to six months in any year of assessment." The question of liability to British income-tax thus depends wholly upon legal residence and not at all upon nationality. The provisions of the Income-tax Act, 1918, in their application to Ireland, are fully considered under the head of "Ireland." Under the head "Exemptions" the tax position of charities is discussed. This book will prove a useful addition to the extensive literature already at the service of those concerned with the administration of income-tax.

COMPANY MEETINGS, &c.

THE DISTILLERS COMPANY, LIMITED.

BIG AMALGAMATION CONSUMMATED.

ANOTHER DISTILLERY MERGER.

The annual general meeting of the Distillers Company, Limited, was held at Edinburgh, on Friday, 17th instant, when Mr William H. Ross, chairman of the company, presided.

Before moving the adoption of the report, the Chairman said: Following the usual practice, I shall ask you to hold the directors' report as read, although there are many points arising in that report which will be dealt with in the course of my remarks.

Since the accounts were closed on May 15th a great change has taken place in the complexion of the company. In the interval we have secured practically the whole of the ordinary shares of Buchanan-Dewar, Limited—a company which controls the well-known businesses of Jas. Buchanan and Co., Limited, and John Dewar and Sons, Limited—while we have also secured about 92 per cent. of the ordinary shares of John Walker and Sons, Limited—an equally well-known and important company—on terms with which you are already familiar.

In the carrying out of this important amalgamation we have increased our ordinary share capital by over 170 per cent., bringing the total issue of ordinary shares at this date up to 10,289,812 shares, which, added to the preference capital, makes a total issued capital in this company of nearly 12½ millions, against an authorised issue of £15,000,000.

DIVIDEND PROSPECTS.

That completes my review of the accounts, and if I refer at this stage to the improved dividend which we have pleasure in recommending this year in place of the stabilised dividend of 10 per cent., free of tax, which we have paid for a period of 23 years, it is only to emphasise the highly satisfactory position in which the company is now placed by reason of this latest fusion of interests. Hitherto the company has been mainly a manufacturing company, but with a growing business as distributors. The fusion referred to places the company in the front rank of distributors as well, and secures to the parent company an outlet for a large part of its production, which the former position did not ensure. While I would be averse at any time from dividing our profits up to the hilt, there is now less reason for us to be so ultra conservative in our distribution as we have been in the past, and I hope it will be possible, therefore, to at least maintain the new rate of dividend in the years to come. After all, this 20 per cent., which we are now going to divide for the first time, has only been attained after years of toil and by careful handling of the finance. Like a provident parent, we have been careful to husband our resources and put back into the business each year sums of varying amount, which in their turn have borne fruit. It must be remembered that the 20 per cent. dividend we are now recommending only applies to a portion of the capital employed in the business. Apart from the debentures and preference shares, which provide capital for the business at varying rates of interest, we are employing very large sums of money in the form of reserves, on which no dividend is being paid. I have just had taken out for me a return showing the total capital employed in the various businesses which we as a company own or control. On the other hand, I have taken out the total dividends or interest paid on these various classes of capital, and, dividing the one total by the other, there is shown an average return on the capital employed of less than 9½ per cent. This does not seem an extravagant return for an industrial concern subject to so many restrictions and weighed down by taxation, both direct and indirect, not to speak of the pin-pricks we continually receive from other quarters.

COMPANY NO MONOPOLY.

And now as regards the taunt which is sometimes applied to us that this company has become a monopoly, a trust or a combine, all I would say is that we are at least in good company. When we see banks, insurance companies, railways, industrial companies of every description, and even churches amalgamating, there must be something more in the movement than mere greed of gain. In no industry at present is there more need of close co-operation—nay, even amalgamation, if necessary—than in that of distilling and its allied trades. It is not a question of placing oneself in a position to make huge profits, but it is an act of self-preservation. Where we have so many enemies without the gate it behoves those within to close their ranks. Take the case of production. It is obvious to every one within the trade who takes an intelligent interest in the statistics that there is a very considerable over-production of whisky taking place, and that if this is not checked it will mean a débâcle in the trade which only the strongest may survive. Each

distiller hangs back, hoping that his neighbours will restrict so that he may continue working full. This is not a matter which can be remedied by one distiller or company of distillers, but must be tackled by the whole distilling trade.

ANOTHER PROPOSED MERGER.

In this connection you will probably have seen a reference in the public Press to a possible arrangement between this company and the shareholders of the Scottish Malt Distillers, Limited. A few weeks ago the managing director of that company approached me with the suggestion that in order to deal adequately with the question of over-production, about which he was somewhat concerned, he would welcome a proposal from this company to take over the shares of the Scottish Malt Company so that we might be in a position to deal with the production problem as affecting both companies. We have since gone into figures, and the boards of the two companies have now agreed upon the terms to be offered by us, and which will be recommended by the directors of the Scottish Malt Distillers, Limited, for the acceptance of their shareholders. The offer will be to acquire the preference shares of that company for cash at par, and to exchange one D.C.L. ordinary share for one Scottish Malt ordinary share. This we consider will be a fair deal for both companies, and it is hoped that the respective shareholders will see it in the same light.

FARMERS AND FOREIGN BARLEY.

I noticed recently that the Scottish Conference on Agricultural Policy in their report favour the imposition of a duty on imported foreign barley as a remedy for agricultural distress. It never seems to occur to them that a duty on malting barley, if it is to have the effect desired, must lead to an increased cost of whisky and beer, which if passed on to the consumer will inevitably lead to a further shrinkage in the consumption and to a diminished use of barley, the sale of which the farmers desire to stimulate. My advice to the farmer would be rather to bring pressure to bear upon the Government to reduce the present monstrous duty on whisky, and so recover part of that market which they have lost for their barley through the greatly diminished consumption. The duty on whisky has been raised since 1909 from 11s per gallon to its present rate of 72s 6d. To make it clearer to the lay mind, a bottle of whisky which to-day sells at 12s 6d, duty paid, contributes to the Government practically 8s 6d in duty, while the whole cost of the same whisky, including duty, was not more than 4s per bottle pre-war, since when, of course, the cost of production has risen enormously. Can it be wondered at that the home consumption of whisky has fallen from 32,050,000 gallons in 1908-9 to 13,039,000 gallons for the year ending March 31, 1925. Here, then, is a big field for the farmers to work upon. Instead of trying to buttress their own industry by placing further taxation on another industry on which they are so dependent, let them convince the Government that the surest method of stimulating agriculture is to reduce the present penal taxation on whisky, and so permit of the gradual recovery of the distilling industry, which in turn will be able to place larger orders for barley. Unless something is done in this direction, there is likely to be a drastic reduction in the distillers' requirements of home barley for the next few years if the present over-production of whisky is to be tackled as it should be. I submit these views in the most friendly spirit to distillers and farmers alike. The two interests have much in common, and it will be a pity if they get athwart each other when they could be so mutually helpful.

FALLING CONSUMPTION.

I am conscious that in expressing these views I shall have the whole weight of the Teetotal party against me, as they desire nothing better than the destruction of the whole trade. This party, which numerically is weak compared with the activity it displays, gathers its support largely from those who deplore the abuse to which ours and kindred productions are sometimes subjected. I wish to say to these good people that we, as a company—and I think I can speak for practically the whole trade—are equally desirous of seeing this abuse eliminated. The only difference between us is in our method of attack. We believe if the surroundings for dispensing this blessing were made more attractive, so that the working man could associate with his fellow-men in comfort without being regarded as an outcast, the man who now drinks in secret and for drinking's sake, would be won over to a more reasonable frame of mind. There would then be no necessity

for depriving the man of his glass of whisky or beer when taken in moderation, and thereby we would avoid that bitterness of feeling which is the accompaniment of every form of prohibition. My view, therefore, is that there is nothing incompatible with true temperance in seeking to increase the sale of alcoholic beverages to those who will use them in moderation.

SUGGESTED EXPORT TAX CONDEMNED.

Previous to last Budget, rumours were current that an export tax was to be placed upon spirits. We did not treat the suggestion seriously, as we could not conceive that the Government would ever so far forget themselves as to place a handicap upon any commodity which formed a staple industry of this country. An export tax might be justifiable in the case of some commodity which is scarce, or where its free export was drawing upon the capital reserves of the country, but neither of these conditions apply to the spirit trade to-day, and, therefore, it is the duty of the Government to encourage rather than hinder the export of goods manufactured in this country.

THANKS TO THE STAFF.

Ladies and gentlemen,—Had time permitted, I could have dealt with many other aspects of our trade, but these I must reserve for another occasion. Before closing I wish to express on behalf of the board our grateful thanks to the staff and employees for their loyal services during the past year. A very large measure of such success is due to them.

BRITISH CELANESE LIMITED.

MARKED IMPROVEMENT IN RESULTS.

The sixth ordinary general meeting of the British Celanese, Limited, was held at the Cannon Street Hotel on Thursday, July 23, 1925. The chair was occupied by Major-General G. P. Dawnay, C.B., C.M.G., D.S.O. (chairman of directors).

CHAIRMAN'S SPEECH.

The Chairman said:—

On the assets side of the balance-sheet, the fixed capital assets in the first item are increased by £51,000, a moderate capital increase as compared with the development shown by your trading account. Stocks are increased by 50 per cent., the natural result of a turnover increased in a far higher proportion. The increase in sundry debtors is due to the increased business, and the figure is quite satisfactory. The cash position at the end of the year was improved by about £10,000 in comparison with the preceding year, and is to-day very much stronger still.

On the liabilities side, loans have been reduced to £50,000. Sundry creditors show an increase of £40,000, a quite moderate augmentation in relation to the very greatly increased turnover.

You will observe that the year's balance to profit and loss for the year has been carried to depreciation account, leaving the debit balance to profit and loss at the same figure as last year. The situation as regards provision for depreciation is, as you must have realised from previous reports, not satisfactory. The first item on the assets side of your balance-sheet has never been subject to depreciation. On the other hand, from time to time, as capital expenditures have been undertaken, the item has been added to accordingly. It follows that it will be necessary to make very large provision for depreciation. You may take the proper provision for the year under review at £200,000 at least. The balance to credit of profit and loss is therefore a little less than sufficient to meet the proper provision for depreciation during the period. Though the comparative figures given in the profit and loss account are therefore satisfactory in the matter of comparison, a very considerable development of your business will be necessary before you can be presented with a satisfactory balance-sheet. For the development of your business you are dependent on the appropriations which we can safely make from time to time out of current trading receipts. Your cash position is, fortunately, a comparatively strong one, and one of our chief concerns is to keep it strong while sanctioning such expenditures for the expansion of the business as will afford the quickest and most profitable returns. The development of the trading account and the increase of annual profit is strictly limited by what we can safely afford, and by what is the most immediately profitable direction for development.

In the profit and loss account, the chief points to which I should wish to draw your attention have already been mentioned in the report. Comparatively, the trading profit increase of £307,000 in relation with the improvement in the balance to profit and loss by £267,000 indicates a turn of the tide, which is something more than satisfactory, for while the profit on the trading account proper is increased by 300 per cent., over 80 per cent.

I now formally move the adoption of the report, which recommends:—

1. The writing off of £100,000 from special capital expenditure;
2. The payment of the usual half-yearly dividend on the preference shares;
3. The payment of a final dividend of 13½ per cent., less tax, on the ordinary shares, making, with the interim dividend, 20 per cent. for the year; and,
4. To carry forward £116,585 to next year.

REPORT UNANIMOUSLY ADOPTED.

Mr Archibald Bowman seconded the adoption of the report.

Lord Forteviot, in supporting the motion, referred to the advantages of amalgamation, and said the companies were all in a thoroughly sound condition.

Sir Alexander Walker also supported the motion, and said he was hopeful there was a prospect of an increased consumption, especially in the export markets.

The motion was carried unanimously.

Mr W. H. Fraser, W.S., proved the re-election of the directors, and this was also carried unanimously.

Lord Dewar, in replying for the directors, referred at length to the high qualities of Mr W. H. Ross, the new chairman, and said that in him they had got the right man to direct the company's affairs.

The proceedings terminated with a vote of thanks to the chairman.

of that increase goes to net profit. That relation is remarkably encouraging.

Your yarn sales have grown very substantially and satisfactorily. The output has been increased correspondingly to a level which is very considerably higher than your company has ever before attained.

But your business in fabrics has also grown important, and is still growing. The output of the Circular Knitted Fabric plant was doubled during the period under review. The "Celanese" tricot which it produces is highly appreciated by the trade and by consumers. The establishment of this department has proved an important addition to the profit-earning capacity of your enterprise.

Great progress has been made in the development of other knitted fabrics, particularly in what is known as the Warp Knitted Fabric. The product has been extremely well received. It has a special advantage in that it is incapable of laddering, and, further, a new Tricot has now been produced at your factory, which is also non-laddering.

Progress has also been made with your weaving plant. A large number of woven fabrics have been produced, and have met a reception from the trade which justifies your confidence in the eventual development of this branch of the business also.

The sales of the commodity known as "Celfect," a mixture of our silk and cotton, have also made considerable growth. The finished articles made from it find an easy and increasing market.

Finally, both in "Celanoid" and Dope, the branches concerned are maintained on a small scale, and return a small but satisfactory profit.

Your factory has been well and properly maintained; a substantially increased output has been developed, side by side with a progressive reduction in costs.

The sales policy and organisation has been fully justified by the results, as is indicated by the very large increase in your turnover.

OUTLOOK.

The development of your business is, therefore, healthy, and the progress registered is satisfactory and encouraging. But it will be obvious from what I have said that there remains much to be done to re-establish your company in a strong financial position. The progress made since the beginning of the present financial year is such as to inspire us with confidence. On the other hand, we meet with the actual position obscured at the moment by various factors. The original silk duties proposals would undoubtedly have inflicted grave disadvantage on your company. As the result of negotiations, however, in which we took an active part, the Excise duty was decreased from 2s 6d to 1s per lb; and the margin between the Excise and Customs duties increased from 6d to 1s per lb; so that when the position stabilises we shall only be subject to half the amount of the tax imposed on the foreign importer. But the result has been to glut the British market with a vast mass of foreign imports, which during May and June of this year were between eight and nine times as great as the imports of artificial silk in June, 1924. The market will take a considerable time to

absorb the mass of cheap goods. This necessarily forces down prices and renders all immediate forecasts more or less unreliable.

These factors, together with the possibility of industrial troubles and of a general reduction in the spending power of the country, make me disinclined to commit myself as to the immediate outlook. But when once these factors are taken off the market, you may justifiably feel confidence, I think, in the profit-earning capacity of your business, and its progressive, if gradual, expansion under the policy which we are now following.

The potentialities of your business are obviously very great. The progress shown is gratifying, and wisely pursued, cautiously conserving and building up our resources, and following tried lines of advance, should lead to the establishment of your business on a broad, stable, and profitable basis. I speak in no spirit of facile optimism—the too-evident necessity for careful rebuilding disclosed by your balance-sheet prevents that. But I believe that this result can be attained.

FURNESS, WITHEY, AND COMPANY, LIMITED.

"YEAR OF UNPRECEDENTED DIFFICULTY."

The thirty-fourth annual general meeting of Furness, Withy, and Co., Limited, was held, on the 22nd instant, at the registered office of the company, Furness House, Leadenhall street, London, Sir Frederick W. Lewis, Bart., presiding.

The Chairman, in moving the adoption of the report and accounts, said: In the midst of the very depressing conditions in which the trade of the country is being carried on, it is a source of satisfaction to your directors to be able to present to you what I think may be regarded as a comparatively satisfactory balance-sheet. It is but natural that our profits should show a reduction, and those of our shareholders who are in close touch with the shipping industry will not be surprised at that fact. So far as the profit and loss account is concerned, the credit balance as the result of the year's operations is £528,742 5s 4d, which, of course, is arrived at after paying all expenses and making provision for taxation. As there are no prior charges in the shape of debenture interest, the total disposable amount, which includes the balance brought forward from the previous year, amounts to £745,379 3s 2d, and, as shown in the accounts, there have already been distributed the two half-yearly dividends on the preference shares, as well as two dividends at the rate of 5 per cent. per annum upon the ordinary shares. As will be seen from the directors' report, we have thought it prudent to transfer £200,000 to depreciation, as whilst our assets are of greater value than the amount at which they stand in our books, the steamers and other similar wasting assets should, of course, gradually be written off over the period of their estimated life. After making these allocations, we propose to distribute a bonus of 2½ per cent. to the ordinary shareholders, which, with the interim dividends already paid, will make a total distribution of 7½ per cent. per annum, free of income-tax. The balance of £187,259 9s 1d will be carried forward to the current year.

As I have mentioned on previous occasions, we have no debentures or prior charges upon the assets of the parent company, and only in the case of two or three of our subsidiary and associated companies are there such debentures. In some of these instances the parent company has guaranteed the principal and interest thereon. I think it will probably interest you to know that the total amount of such guarantees at the present time is only £1,547,500, which, of course, includes the issue of £1,000,000 debentures recently made by the Rio Cape Line, Limited. In every case the actual value of the assets of the subsidiary companies upon which such debentures are secured, far exceeds the amount of the debentures, and in effect the guarantees we have given do not represent any real liability to us, and may be looked upon more as a means of reducing the rate of interest that is payable upon these securities.

BRITISH MARITIME TRUST AND ECONOMIC INSURANCE COMPANY.

Under the conditions that have prevailed, it is but natural that we have not derived a great deal of advantage from those of our associated companies which are purely shipowning companies, but other allied undertakings have continued to prosper, and these varied ramifications are a source of great strength to us. Particular reference might be made to the British Maritime Trust and the Economic Insurance Company, both of which are extremely helpful adjuncts to our main business. The Trust has a paid-up capital of £1,000,000 in ordinary shares, the bulk of which is held by our company, and its balance-sheet assets total £1,941,329, against which outstanding debentures amount to £340,000. The Economic Insurance Company is rapidly gaining a very high place in the records of marine and fire insurance. For instance, for the year 1924 the premium income from these two sections of the insurance business amounted to £337,546, and the percentage of the accumulated funds in relation to premium income was 144 per cent. in the case of the marine account and 81 per cent.

£700,000 IN A YEAR

This amount represents the
MOTOR CLAIMS PAID
in 1924 by

THE LIVERPOOL & LONDON & GLOBE INSURANCE CO., LTD.

Branches and Agencies throughout the World.
General Manager and Secretary:—HUGH LEWIS.

in the case of the fire account, in addition to the general reserve fund of £475,000. The Economic has not been engaged in other sections of the insurance business for a sufficiently long period to justify my quoting further details, but it will be obvious that strong and steady progress is being made, and a very valuable business has been developed.

The steamship services have been well maintained, and wherever developments have justified expansion we have not hesitated to provide additional tonnage, even at the cost of building at present high prices. We have just taken delivery of a new passenger and cargo vessel built by Messrs Vickers, of Barrow-in-Furness, for the Liverpool, Halifax, and St John's trade. This vessel has been named the *Newfoundland*, and whilst, of course, she is not of the same size as the largest Atlantic liners, she is beautifully appointed, and her public rooms and cabins have been designed to give passengers the maximum pleasure and comfort on a boat of this description. She will make the passage between Liverpool and St. John's in five and a-half days, and in order to encourage travel by this route we have within the past two or three weeks placed with the same builders an order for a second duplicate ship. The *Digby*, which has been a most popular ship in that service, will be transferred to the New York-West Indian service, and is now being overhauled and refitted for that purpose.

HIGH SHIPBUILDING PRICES.

It is a matter of great regret to your directors that circumstances compelled us recently to place some of our shipbuilding work abroad. I have on a previous occasion related that in that particular instance we were quoted a price from the Continent which was £60,000 per ship cheaper than the lowest tender in this country, and although we exhausted every possible effort to retain the business here, even to the extent of offering British builders a higher price than that quoted on the Continent, the difference was altogether too great to be bridged. It is not for me to determine the reasons for the great difference in prices. It may be wages; it may be hours of working; it may be trade union restrictions; it may be management; or it may be a combination of some or all of these things. At the time the contracts were entered into we drew the attention of the Employers' Federation to the matter, and as a result they and the unions concerned are, I understand, examining the whole question. I am sure you will all join me in the hope that both sides may be given wisdom to ascertain the actual causes of the existing difficulties, and the proper solutions.

Since the war we have contracted for and built in this country 280,000 tons of shipping, including four vessels now on the stocks—two on the East Coast, one on the Clyde, and one at Barrow. This excludes 85,000 tons of British-built standard and other ships purchased by us. We are still in the market for additional tonnage for one of our trades. We have within the past few weeks called for tenders for high-class Diesel engine cargo liners, and I regret to say that the result is so disappointing that if we are to pay proper regard to economic conditions, and to our shareholders' interests, we will be compelled to defer placing the orders. In this particular case, as the ships are not urgently needed, we have decided to defer building for the present in the hope that it may later be found possible to place the contracts in this country at a reasonable figure, and one that we will feel justified in paying, having proper regard to the operating conditions.

COMPANY'S FLEET.

Our fleet, including the vessels owned by our associated companies, now totals over 1,000,000 tons, including 100,000 tons of motor vessels and 150,000 tons of refrigerated tonnage. Part of

the tonnage we have under construction is engined by Diesel engines and part by steam engines. We have amongst our fleet five different types of Diesel engines, and, notwithstanding the fact that it is now some thirteen years ago that we constructed our first vessel with British-built Diesel engines, we are still more or less in the experimental stage, and one of the most important factors standing in the way of the further development and use of the Diesel engine for marine purposes is the very high first capital cost. Our experience leads us to the conclusion that the efficiency of the Diesel engine is firmly established.

I am glad that the Canadian Government has given the Steamship Lines a full opportunity of explaining their situation to a Parliamentary Committee in Canada, and I understand that the matter will in all probability also be investigated by the Imperial Shipping Committee at this side. As a result, I am sure the lines will be able to convince the Canadian Government that it has ever been their desire, by providing adequate steamship services at fair and reasonable rates, to encourage the development of the overseas trade of the Dominion, and that they are always ready to adjust any anomalies that may, and almost inevitably must, arise during the building up of such an intricate piece of work as a Transatlantic freight tariff.

I am very glad to be able to state that in spite of the difficult conditions which prevailed in Russia last year owing to the comparative failure of the crops, the business which we have transacted from the Black Sea under the agreement to which I referred at our last meeting, has worked very smoothly, and, I believe, to mutual satisfaction, and we confidently look forward to a substantial improvement in this trade during the current year.

1,150,000 TONS OF SHIPPING IDLE.

The year just past has been one of unprecedented difficulty and depression. In the principal British ports alone it is calculated that there are some 420 ships of about 1,150,000 gross tons lying idle, these figures actually representing an increase of practically 100 per cent. during the past three months. The reason for this increase in idle tonnage is not far to seek, as I think I am correct in saying that the general condition of the freight markets of the world is worse than it has been in the recollection of anyone engaged in the industry. It is no wonder, therefore, that shipowners are to a large extent living upon their reserves, but in the meantime they are doing everything they possibly can to increase trade by reducing costs and management expenses, and I am very glad to be able to state that by mutual agreement with the National Sailors' and Firemen's Union, a reduction in seamen's wages will take effect as from August 1.

The fact of the matter is that we are carrying too big a burden both nationally and industrially. A general effort towards a reduction in costs is essential. On these occasions I so often pay a tribute to the work of our staffs that there is a risk of its being regarded more or less as a meaningless formality, but I can assure you that is far from being the case. The loyalty and enthusiasm of the members of all our organisations contribute materially to our success.

The resolution was seconded by Mr R. E. Burnett, and carried unanimously.

TRANSVAAL GOLD MINING ESTATES, LIMITED.

IMPROVED RESULTS SHOWN—PLATINUM PROSPECTS.

A special general meeting of members of the Transvaal Gold Mining Estates, Limited, whose registered address is elsewhere than in South Africa, was held, on the 21st instant, at Winchester House, London. Mr M. T. Brown (a London member of the board), who presided, said the net profit for the year of £53,523 was £420 above that of the previous year, but the items constituting that profit showed considerable variations. All the mines showed working profit on the present occasion, whereas last year Vaalhoek showed a loss. The improvement at Vaalhoek was, however, more than counterbalanced by a drop at the Central and Elandsdrift mines, the difference on balance being about £7,700. One interesting new piece of prospecting was the borehole that was being put down on Hendriksdal. That farm was to the west of Elandsdrift, and should test the reef to the dip of that farm. Some time would lapse before the horizon of the reef was reached. Prospecting operations generally had been continued over a very wide area, but far without any important discoveries having been made. The developments had been well maintained at the Central Mines, the reserves being increased by just over 500 tons, and the values being much the same as at March 31, 1924. Taking the three mines together, the total increase in the ore reserves amounted to 7,000 tons. A new feature of the report was the space given to particulars of their tree plantations. In addition to their wattle plantations, which covered an area of 3,680 acres, and from which they derived a profit, they had now 4,380 acres planted, with an estimated number of over 4,000,000 eucalyptus, pine, and other

trees, and a revenue might be expected from these plantations at no distant date.

As regarded the current year, they had, unfortunately, made a rather unpropitious start, as the first three months showed a profit of only £6,311, as compared with £13,236 for the corresponding period last year, this being due to the abnormal rainfall towards the end of an otherwise normal rainy season. As to platinum, they had only one farm, so far as they knew, on which there was a possibility of this being found, and preliminary examination had not so far yielded any encouraging result. The rest of their farms were on quite a different geological formation from the norite and dunite formations in the Steelpoort district, or the felsite of the Waterburg district, in which the platinum discoveries had so far been made.

STANDARD BANK OF SOUTH AFRICA, LIMITED.

SATISFACTORY PROGRESS.

The one hundred and twelfth ordinary meeting of the Standard Bank of South Africa, Limited, was held, on the 22nd instant, at the Cannon street Hotel, London.

Mr Robert E. Dickinson, who presided, said that the economic situation of South Africa had not materially changed during the year under review, and, although the figures now presented indicated a satisfactory improvement, the volume of business had continued below expectations. The directors trusted, however, that some material improvement would soon be apparent, in spite of the drag on industry felt throughout the world as a result of the very slow progress being made in the reconstruction of Europe.

RETURN TO THE GOLD STANDARD.

The most important event of banking interest since the last meeting was the decision of the Union Government to return to the gold standard. This step, which was in itself of world-wide importance, had been followed by the decision of Great Britain to revert also to a gold standard. During the past few years business with South Africa had at times been seriously hampered by the difference between the values of the English pound and the South African pound, and this had led to a wide divergence in exchange rates. Now, however, with both countries on a gold standard we could confidently look forward to greater stability in rates of exchange, with only such variations as were demanded by fluctua-

tions in trade. He thought they might claim to have had their share in assisting to restore more normal trading conditions with South Africa. The margin between the rates for buying and selling exchange had been reduced to the figure at which it stood before the war.

South Africa, in common with other parts of the world, had experienced a trying year, the partial failure of the grain crops, owing to severe drought and damage by locusts, being an important factor in retarding recovery from trade depression. There was, however, a healthier tone in both South and East Africa, and the returns of imports and exports showed a considerable expansion in overseas trade, while public finance, Customs, and railway receipts all indicated a steady advancement. East Africa, in particular, had enjoyed a period of steady progress. Climatic conditions there had, on the whole, been generally favourable, and development was proceeding satisfactorily. Trade in the bazaars showed signs of a return to a normal position, and the unsettled feeling which had prevailed since the beginning of the year as a result of some dislocation owing to over-importation was disappearing. The value of merchandise imported into Kenya and Uganda in 1924 was £6,178,547, as compared with £4,302,574 in 1923, an increase of £1,875,973. Exports of domestic produce from the two countries showed an increase in value of 54 per cent., or £2,140,577 over the 1923 figures.

Several important land sales had recently taken place in various parts of East Africa, and satisfactory prices were realised. The secretary of the bank had recently returned from a tour of East African branches, and had reported favourably on the progress apparent in all branches of farming activities and on the increase in production being achieved, the result of hard work on the part of the settlers. There was undoubtedly a feeling of great confidence in the future of these territories, and when more could be done to overcome the present shortage of native labour East Africa should make even more rapid progress.

BALANCE-SHEET.

Turning to the balance-sheet, there was little change in the figures as compared with those of the previous year. When last he occupied the chair, eight years ago, the current and deposit accounts stood at a little over £25,000,000 and the advances at £16,250,000, whereas these items in the present balance-sheet were, roughly, £47,000,000 and £30,000,000 respectively. Other items had increased approximately in the same proportion, and it was obvious that such rapid expansion could only be met by a much larger staff and greatly increased office accommodation.

The profit and loss account showed that the net profits for the year amounted to £508,951, which, with £112,281 brought forward from the previous year, gave a total of £621,232 to be disposed of. Of this sum they had already distributed £156,041 as an interim dividend, and appropriated £75,000 for the writing down of bank premises. This left a balance of £390,191, which the directors recommended should be dealt with by the allocation of £125,000 to officers' pension fund and the payment of a final dividend of 7s a share, amounting to £156,041, leaving £109,149 to be carried forward to the next account. He thought the proprietors would agree with him that, in spite of the many difficulties encountered, these figures reflected satisfactory progress.

Sir David Barbour seconded the resolution, and, after some discussion, it was carried unanimously, the dividend, as recommended, being also approved.

Votes of thanks having been passed to the general managers and staff, and to the chairman and directors, the proceedings terminated.

DORADA EXTENSION RAILWAY, LIMITED. SUCCESSFUL YEAR—INCREASED DIVIDEND.

The twentieth ordinary general meeting of the Dorada Extension Railway, Limited, was held, on the 21st instant, at Moorgate Hall, London.

Mr J. A. Goudge, C.B.E., presided, and, in moving the adoption of the report and accounts, said that the report presented now was of the best year's working in the history of the company. They carried 150,000 tons of traffic, as compared with 121,000 in the previous year. Part of this increase was due to fortuitous causes. The general progress of Colombia was a prominent cause of increase, and there were items of railway construction which they could only regard as in the nature of a windfall, and which they could not hope would be continued. Another item which he might call fortuitous was that, owing to the rate of exchange, their remittances gave them a profit of £18,000. This year, the circumstances having changed, they could not look for anything like a repetition of that item, and possibly it might disappear. Expenses were greater, because, owing to the demand for labour, wages went up. They had done something towards completing their policy of converting their engines to oil, and there was reason to think they would completely eliminate the use of firewood very soon.

The general result of the year's working was satisfactory, and

SECURITY FIRST ROYAL INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON

they had been able to make substantial reserves, one of which was for the depreciation of the concession. The Colombian Government, having certain reversionary rights in the property, the directors had considered it desirable to begin to make some provision against the exercise of those rights. After making these provisions, they had pleasure in recommending an increased dividend of 7 per cent., in lieu of 6 per cent. During the year they had reduced their debt, and the directors would pursue their policy of getting rid of the debentures as soon as possible. As regarded prospects, oil developments in Colombia were taking a serious shape. There were indications of extensive deposits along the River Magdalena. Generally, as regarded traffic, they had, since April, been faced with a recrudescence of the river competition. He did not say that they would do as well in the current year, but they might take it that the board would not have recommended 7 per cent. unless they had seen a fair and reasonable possibility of its continuance. The Ropeway Company was progressing, and was paying its first dividend at the rate of 5 per cent. per annum, less tax.

The report and accounts were unanimously adopted, and the resolution that the 35,000 fully-paid shares of £10 each be converted into £350,000 stock was carried unanimously.

MALAYALAM PLANTATIONS, LIMITED. INCREASED PROFIT—BRIGHT PROSPECTS.

The fourth ordinary general meeting of the Malayalam Plantations, Limited, was held, on the 23rd instant, in the Council Room of the Rubber Growers' Association (Incorporated), 3 Idol lane, E.C., Mr H. J. Welch (chairman of the company) presiding.

The Chairman said: The year's working resulted in a profit of £283,173, against £209,450 the previous year. After adding the unappropriated profits brought forward and deducting the interim dividend of 5 per cent. paid in February, we are left with £247,446 to deal with to-day. Your directors recommend the payment of a final dividend of 12½ per cent., less tax, making 17½ per cent. for the year, and the transfer to taxation reserve of £33,000. In addition, it is proposed that £33,914 should be transferred to general reserve to bring that account up to £160,000, and to carry forward £39,821, against £19,783 carried forward last year.

The tea crop harvested was 8,025,388 lbs, as compared with 7,718,902 lbs in the previous year. The f.o.b. cost of production (excluding loss on exchange of .75d per pound) was 7.87d per pound, against 7.64d per pound in 1924, with a loss on exchange in that year of only .21d per pound. This slightly increased cost was more than accounted for by commission on profits to the staff and unusual furlough expenses. The average yield per acre was 616 lbs, against 607 lbs in 1924.

Of the current year's tea crop, without changing the method of plucking or manufacture, we have harvested for the first three months ended in June 2,465,784 lbs, a satisfactory increase of 600,000 lbs over the previous year to the same date.

As you were advised last year, the whole outputs of tea have been sold forward for the year 1926 at an average gross price of 1s 4.08d per pound landed London terms, and for 1927 at 1s 4.25d per pound, equal to an average net price of 1s 2.29d and 1s 2.38d per pound respectively.

During the year approximately 200 acres were opened and planted with tea, and a further 300 acres will be planted during the current year. The policy of the directors in this respect is to gradually increase, as labour is available, the planted areas of existing estates by small economical additions to them, and also to plant up two entirely new tea estates in districts where labour is abundant and the land is very suitable for tea. For these new estates nurseries have already been laid down.

RUBBER.

The rubber crop harvested was 2,593,999 lbs, as against an actual crop of 2,276,658 lbs in the previous year, an increase of over 300,000 lbs. The f.o.b. cost of production (excluding loss on exchange of .64d per pound) was 7.11d per pound, against 7.41d per pound in the previous year, which had a loss on exchange of only .20d per pound. The average net price realised was 1s 5.37d per pound, against 1s 0.62d per pound in 1924.

Of the current year's crop 708,825 lbs have been harvested for the first three months ended in June, an increase of over 90,000 lbs as compared with the same period last year.

Of the current financial year's crop 708 tons (or 70 per cent. of the estimated crop) have been sold at an average gross price London equivalent of about 2s 1d per pound, and out of the 1926-27 crop 294 tons (or about 30 per cent. of the estimated crop) at an average gross price London equivalent of just over 1s 7d per pound.

Our cardamoms crop was 15,013 lbs, which was harvested at a cost of 3s 7.18d per pound f.o.b. and realised an average net price of 4s 8.65d per pound.

THE OUTLOOK.

With regard to the tea industry this company's selling prices for the next two and a-half years are secured and stabilised by the forward sale contracts already referred to.

Our great interest is, therefore, in the more distant future, and I see no reason to think that for many years, after our present forward contracts expire, we should not be able to secure a substantial profit upon our tea production. We shall lose no opportunity in the meantime of reasonably improving the qualities of our teas, so as to increase their reputation and prepare for the time when such teas must again be realised at competitive prices.

The outlook for rubber producers, at least for the next year or two, appears to be very satisfactory.

I should like again to refer to our company's immediate affairs. Calculated on our issued capital the cost per planted acre equals just over £54. After payment of the dividend proposed to-day, however, the surplus of our liquid assets over our liabilities will be £415,000, or £15 14s 6d per planted acre. If this surplus is deducted from our issued capital the present net cost of our planted acreage is under £39 per acre, without allowing any value for the 57 square miles of reserve land, on the one hand, or anything for the cost of bringing our immature areas into bearing on the other.

From the figures given, I think it is apparent that our shareholders may congratulate themselves upon the progress made by the company during the last few years, and also upon its future prospects, which, so far as I can judge, are brighter to-day than they have been on any previous occasion on which I have had the privilege of addressing you.

The report and accounts were unanimously adopted.

ARGENTINE NAVIGATION (NICOLAS MIHANOVICH), LIMITED.

RESULTS OF A DIFFICULT YEAR'S TRADE.

The sixteenth ordinary general meeting of the Argentine Navigation Company (Nicolas Mihanovich), Limited, was held, on the 21st instant, at Winchester House, Old Broad Street, London, Lord Kysant, G.C.M.G., chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said: After making provision for depreciation and insurance there was a loss on the year's working of £34,304, making a total debit balance of £535,771.

The results of the first three months of the year were well above the average, but the events of subsequent months completely nullified this promising commencement. The combined effects of the fresh labour troubles in 1924, and the abnormal fall of water in the rivers contributed largely to the falling off shown in the results for the whole year.

Exchange also involved heavy loss.

The fleet of 249 vessels of all descriptions has been maintained in excellent condition.

In view of the fact that freights were on a more stable and satisfactory basis, the board placed orders for two new motor cargo vessels, and we hope that these two vessels will be ready to take up their position in the River Parana service early next year.

In towage there was a fair increase in the takings, which, however, was considerably counterbalanced by fallings off in passages and cargo.

Under salvage our earnings were considerably higher, due mainly to the large number of strandings caused by the low water in the rivers.

The working of our shipbuilding and repairing yards showed a loss for 1924, compared with a small profit earned in 1923.

The current year has opened satisfactorily with larger gross earnings than for several years, while the labour outlook shows a decided improvement. On the other hand, recent harvests in the Argentine have been disappointing, the level of water in the rivers is uncertain, and we are faced with heavier expenditure in wages and uncertainty in regard to the Pensions Law.

I mentioned last year that the board proposed giving careful consideration to the question of writing off the debit balance by a capital reorganisation scheme or otherwise. We hope before long to be in a position to submit for your consideration proposals that will be acceptable to both the preference and ordinary shareholders. The report and accounts were adopted.

purchased amount to \$32,702,181. Calls loans are at \$42,988,760, and time loans stand at \$34,112,250. Bonds, stocks, &c., are at \$24,612,475. With regard to liabilities, the deposits stand at \$164,136,614. Capital stock is \$10,000,000. Surplus and undivided profits stand at \$18,028,029.

GUARANTY TRUST CO. OF NEW YORK.—The condensed statement of this institution, dated June 30, 1925, reveals total assets \$716,681,181. Cash stands at \$175,342,760. U.S. Government bonds and certificates amount to \$38,403,613. Public securities stand at \$21,522,332, and other securities are at \$23,408,801. Loans and bills purchased amount to \$394,639,638. Acceptances stand at \$39,290,505. With regard to liabilities, deposits stand at \$577,221,465. Outstanding Treasurer's checks amount to \$50,347,225. The capital of the bank is \$25,000,000. Surplus fund is \$15,000,000. Undivided profits amount to \$5,369,141.

MOSCOW NARODNY BANK, LIMITED.—The balance-sheet of this bank dated June 30, 1925, has just been issued. Total assets are \$3,289,021. Cash stands at \$430,911. Loans at short notice (secured by British Government securities, &c.) stand at \$250,000. British Treasury bonds and accrued interest amount to \$50,693. Investments (at cost) in Co-operative Transit Bank, Riga, stand at \$24,042. Bills discounted amount to \$290,590. Advances amount to \$842,957. Debtors in respect of documentary credits amount to \$815,229. With regard to liabilities, the issued capital of the bank is \$350,000. Reserve account is \$25,000. Current accounts stand at \$417,251. Deposit accounts stand at \$1,200. Documentary credits stand at \$760,626.

NATIONAL CITY BANK OF NEW YORK.—The National City Bank of New York has just issued its statement dated June 30, 1925. The total assets reached the sum of \$1,154,730,350. This marks an increase of about \$12,000,000 over the bank's resources six months earlier, and an increase of about \$51,000,000 over the figure on April 6, when the last statement was published. Thirty-one years ago the resources of the National City Bank were \$36,000,000. In 1914 they were \$353,000,000. Liquid assets of the bank are revealed in the statement as exceeding \$937,000,000, these being actual cash, or its equivalent, divided as follows:—\$95,185,184 in cash; \$205,051,014 due from banks, bankers, and the United States Treasurer; \$531,417,313 in loans, discounts, and acceptances; and \$105,847,465 in United States securities. The rest of the assets consist of State and municipal bonds, stock in the Federal Reserve Bank, bank buildings, and sites, &c. Deposits amount to \$910,903,905. The bank is capitalised at \$50,000,000, with an equal amount of surplus. Undivided profits amount to another \$12,255,584, giving a total of capital invested in the institution by its owners of \$112,255,584.

RUBBER, &c.

BERTAM CONSOLIDATED RUBBER.—The following is extracted from a circular to shareholders from the secretary of the company, dated July 22, 1925:—The company has now entered into a contract on favourable terms for the purchase, as from 1st instant, of the Taisho rubber estates, situated in the Bahau district of Negri Sembilan, Federated Malay States. The planted acreage of the estates comprise an area of about 2,030 acres of rubber planted during the years 1918 to 1920, a large portion of which was brought into production during the year 1924. The restricted production from the property for the year ended March 31st last was 270,661 lbs, and the production for the current year's working is estimated at the rate of approximately 400,000 lbs rubber per annum, which is within the estimated restriction allowance, and which may be expected to be largely increased in future years on the plantations reaching full maturity. About 84,000 lbs of the current crop from July 1st have been sold under contracts for monthly shipments during August to December, 1925, at prices approximately equal to 15 7d per lb, London delivery. This company takes over the benefits and obligations under those contracts. The entire purchase consideration for the estates, together with provision for the costs of the issue, the transfer of the property, and a small addition to the working capital, will be provided from the proceeds of the issue of the £55,102 8s of capital at present unissued. Of the shares of 2s each representing this capital, 244,897 shares are offered to the shareholders, in the proportion of one new share to each ten shares at present held, at the price of 4s per share (see rights letter herewith), and 306,000 shares will be subscribed by the vendors of the estates at the same price. All the shares of the new issue will rank *pari passu* in every respect with the existing shares. As a result of this purchase, the company's capital per acre of rubber will be reduced from the present low figure of approximately £38 to about £35.

KAWIE (JAVA) RUBBER ESTATES, LIMITED.—In the statement of accounts for the year ended March 31, 1925, the directors are pleased to report a final settlement of the company's liability for excess profits duty with the revenue authorities, the result being that the company has over-reserved the sum of £12,455, which has now been written back to profit and loss account. The sum of £10,900 has been charged to this year's profit and loss account for Dutch taxes over the years 1920, 1923, and 1924. Appeals have been lodged against these assessments. After allowing for these adjustments, the balance to the credit of the profit and loss account is £34,898; balance brought forward, £7,863—£42,761; less dividend of 5 per cent. for the year ended March 31, 1924, £3,750; transferred to amortisation account, £1,645—£5,395—£37,366; less interim dividend of 5 per cent. paid April 8, 1925, £3,750, leaving a balance of £33,615, out of which the directors recommend the payment of a final dividend of 15 per cent., less tax (making a total of 20 per cent., less tax) for the year ended March 31, 1925, which will absorb £11,250; leaving to be carried forward, £22,365.

MARAWAN (JAVA) RUBBER PLANTATIONS, LIMITED.—The report for the year ended December 31, 1924, states that the profit as shown by the profit and loss account was £2,805. Adding balance

brought forward from last account, £2,146—£4,951; less reserve for Dutch taxation, £850; amortisation reserve account, £750—£1,600; leaving an available balance of £3,351, out of which the directors recommend the payment of a dividend of 4 per cent., less tax, which will require £2,188; leaving a balance to be carried forward of £1,163.

MISCELLANEOUS.

BRITISH STEAMSHIP INVESTMENT TRUST.—In presenting their report for year ended June 30, 1925, the directors state that the long-continued depression in shipping freights has been intensified during the year, and the revenue of the Trust from its shipping investments has further declined by £9,900. As a result, however, of the past policy of the board of investing in varied securities outside shipping, and to the further reduction of management expenses, the net revenue shows a decrease of £1,361 only. Until the shipping trade shows some sign of revival, the directors do not deem it advisable to reinvest to any large extent in shipping securities. It is largely due to this circumstance that proposals for the adoption of a new memorandum and articles of association are now placed before shareholders, as the board are desirous, in the interests of the Trust, of having the range of authorised investments extended, and otherwise bringing the articles of association into line with the modern practice of Trust companies. A valuation of the investments in the aggregate shows an excess over the figures appearing in the balance-sheet. The income of the year amounts to £178,256, to which has to be added the balance brought forward from last year, £305,726, making a total of £483,982. After deducting debenture interest, directors' fees, office expenses, and other charges, a balance remains of £401,282. Preferred stock dividend absorbs £14,062; deferred stock dividend of 11 per cent. for year absorbs £154,687; leaving balance carried forward, £292,533.

VICKERS, LIMITED.—The directors give notice that the following interim dividends for the half-year ended June 30, 1925, will be paid to the holders of the preferred stock and preference shares of the company, who are registered in the books of the company on Wednesday, August 12, 1925:—2½ per cent. on the preferred 5 per cent. stock (less income-tax), 2½ per cent. on the 5 per cent. preference shares (less income-tax), 2½ per cent. on the cumulative preference shares (free of income-tax). Payment will be made on Monday, August 31, 1925. The transfer books of the company relating to these issues will be closed from Thursday, August 13 to Tuesday, August 18, 1925, inclusive.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Agricultural prospects are improved by heavy rains which have fallen over most parts of the country, as all spring cereals were in need of moisture, while pastures and root crops will derive considerable benefit. Harvesting of winter cereals is proceeding in the early districts. English wheat of the old crop in small supply, while held for full rates, but imported descriptions tend easier in sympathy with lower forward offers, while trade proceeded quietly. In the floating and forward cargo section values were largely influenced by North American crop and weather reports, and with prospects at present rather more favourable, the general tone proved in buyers' favour. Steamers of South Russian September-October 15th, sold 538 9d, Australian afloat 58s to 58s 9d, sailer ditto arrived 56s, Baril, 63 lbs, July, 56s 3d. Maize cargoes firmer on improved inquiries and advancing freights. Steamers of Plate arrived sold 42s 6d; ditto afloat, 41s 10d to 42s 3d; ditto, guaranteed July shipment, 41s; August, 40s 3d to 41s 6d; and No. 6 yellow African, August 10th loading, 39s 1½d per 480 lbs. Steamers of Azoff Black Sea barley, July-August, changed hands at 35s to 35s 3d per 400 lbs, c.i.f. terms. Wheat steady, No. 1 Northern Manitoba quoted 63s, No. 2 ditto 61s 9d, choice white Karachi 58s 6d, Australian 59s 6d, Rosafe, 62½ lbs, 60s 6d, all ex-ship, per 496 lbs. English quoted 11s 6d to 12s per 112 lbs, free on rail. Flour quiet. London standard grade quoted 48s, patents 50s-51s, town whites 48s per sack, delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 45s-48s, Minneapolis 45s-47s, Kansas patents 45s-46s, Australian 41s-41s 6d per 280 lbs, ex store. Maize firm, and spot parcels reservedly offered. Plate, ex-ship, quoted 43s 9d, ditto landed 45s 3d per 480 lbs. Barley quietly steady. Californian quoted 43s-52s; Chilian Chevalier, 60s-65s; brewing, 52s-55s, according to quality; Australian, 57s-63s, ex store per 448 lbs; No. 4 Canadian Western, landed, 38s; Karachi, landed, 37s 9d; Morocco, 36s 6d per 400 lbs. English ranges from 10s-11s 3d; the latter for finest malting per 112 lbs. Oats quiet, but Plate descriptions Canadian Western, ex ship, quoted 26s 6d, landed 27s 9d; No. 2 feed, ex ship 25s, landed 26s 3d; Chilian Tawny 27s 6d, South African (Cape) 27s landed, all per 320 lbs. English quoted 9s 10d per 112 lbs, free on rail. Millers' offals, maintained. Broad ex mill; powdered oat husks 6s 3d; feed oatmeal 8s 3d, ground oats London-made flaked, 19s; rolled oats, 18s; medium, also fine-cut, 18s; coarse, also medium pinhead, 18s, ex mill; ordinary Scottish oatmeal, 19s 6d; American ditto, 17s 6d-18s per cwt.

AMERICAN WHEAT MARKETS.

The main feature of the American wheat markets this week has been the steady downward movement of prices, due chiefly to the absence of export demand. The Washington Department of Agriculture's estimate of the carry-over figure came out at some 87,000,000 bushels, which caused a further recession of prices. Reports of cheap sales of Russian wheat prompted further selling pressure towards the end of the week.

(b) July delivery.

IRON, STEEL, AND COAL.

We extract the following from the weekly report issued by the London Iron and Steel Exchange:—Iron and steel: The markets remain in an uninteresting condition, and the business conducted is principally for small parcels for early delivery, these conditions characterising the trade in all the world's markets. In spite of the labour disorder in Belgium, and the consequent disorganisation of the Belgian iron and steel market, Continental prices in most departments have weakened to the extent of a few shillings. In the pig-iron department, prices of British material have shown fresh weakness, in spite of the fact that offers of Continental iron have contracted during the past few days. The risk of a coal strike has occasioned a certain amount of forward buying, but this was of insignificant proportions, since, in the event of the cessation of coal production, users' works, as well as producers', would soon have to cease operations. The demand for semi-finished materials has been light, but a further lowering of Continental prices has made it increasingly difficult for British manufacturers to secure orders, even in the home market. In the case of finished materials the demand shows little change.

Our Middlesbrough correspondent's report, dated July 23, 1925, is as follows:—Pig-iron: In spite of the possibility of a stoppage of work owing to the coal position, there is very little business doing, and what there is of a "hand-to-mouth" character. Prices, therefore, have undergone no change, and the following remain the general quotations:—No. 3 Cleveland G.M.B., 7½ per ton; East Coast mixed numbers hematite, 7½ per ton. Manu- factured iron and steel: There is no new feature in this branch of the industry; if anything the position is worse, and it is difficult to find buyers, who are content to adopt a waiting policy. Prices are unaltered. Steel ship plates, £8 10s; steel ship angles, £8; iron bars, £11 12s 6d; steel rails, £8 10s. Iron ore: The foreign trade remains utterly stagnant, with 20s. 6d. per ton c.i.f. Tees as a nominal figure for best Bilbao Rubio.

Our Sheffield correspondent writes:—The week has been of a disturbed character in the steel trades. Actuated by individual

opinion as to the prospects of a stoppage in the mining industry, buyers of various firms have either placed orders freely in the belief that it was imperative to buy at the eleventh hour, or have held off the market in the hope that nothing could be gained by rushing in for supplies. There is no actual improvement in trade to account for the freer buying, but merely a feeling that it would be wiser to buy than to abstain from adding to the present meagre stocks of raw and semi-manufactured materials in users' hands. In the matter of fuel there has been a rush for supplies, and the stocks at the pits, which were heavy a few weeks ago, have been ordered away under contract in some cases, and in response to buying on the open market in others. The bulk of the supplies in wagons has been cleared, but there is still an enormous tonnage of small coal on the ground at the pit heads, as well as a fair supply of blast-furnace coke in wagons at colliery sidings. For a long time the make of coke has been in excess of the requirements of the blast-furnaces, and the excess make is proving very useful in this time of safeguarding supplies. Offers of spot lots of coal at give-away prices—a feature of the coal market for several months—have all been withdrawn, and fuel prices generally are in the ascendant. Engineering departments are getting rather busier as work on the Australian cruiser and submarine contracts proceeds. There is still some work going through the shops in connection with contracts placed some time ago for iron and steel works equipment. The cutlery trades are in the doldrums. Very little business is being placed either on home or export account. In pen and pocket cutlery the lower prices which now prevail leave little or no difference between the prices asked for knives of German manufacture and prices of Sheffield-made knives. There are signs of the Japanese cutlery industry having made some progress in Far Eastern markets with low-priced pen and pocket knives of good appearance, but pathetically poor quality steel, very badly ground. It should not be difficult to overcome the opposition on the question of quality, but there is a wide difference in price which is probably the determining factor in the case of the buyer attracted solely by appearances.

Our Glasgow correspondent writes:—The iron and steel market here has been lifeless during the week, owing chiefly to the fact that all the works in the district are closed for Annual Fair Holidays. The pig-iron shipments from Glasgow harbour of all grades amounted last week to about 730 tons, most of which went to foreign ports. Inquiries for heavy steel are only on a small scale, and, despite the stoppage in Belgian works, Continental competition is as keen as ever, large quantities being on offer at prices which leave a margin of £2 per ton as compared with those quoted by local producers. Plates from steel works here can be bought at £8 12s 6d per ton, and even lower has been quoted for attractive specifications. Before the stoppage there was some buying for immediate delivery by consumers who feared a longer holiday than usual, partly on account of scarcity of orders, but principally in view of the threatened coal strike. It is certain that should a strike take place in the coal trade several steel works will not resume until it is settled, as the stocks of coal are not at any time more than sufficient to keep them going for two or three weeks. Business in galvanised sheets continues satisfactory in volume, and prices are somewhat firmer. Indian buyers are fairly numerous, and offers from that market are coming nearer the level of possible acceptance. Black sheets are in steady request for the Far East, and makers are in a position to stiffen prices, which have been for some time at a level which left no margin of profit. This extensive trade depends principally on Continental raw steel, and can only hold its own at present against Belgium with sheet bars at £5 10s per ton delivered this district.

Our Cardiff correspondent writes:—On the Cardiff coal market this week business has been more active and prices firmer than at any other period this year. A stoppage of work in South Wales is now thought inevitable. On Tuesday the owners posted at the pit-heads the terms and conditions on which the collieries will be open for work on and after August 1st. These include freedom to work a double shift; the withdrawal of the bonus turn (i.e., the payment of six shifts for five worked) on the afternoon and night shift; the reduction of the percentage payable on the standard rates from the present minimum of 42.22 per cent. to 23½ per cent.; the payment for miners' house coal of a price equal to the certified cost of production instead of the existing varying customary prices, which average 5s 7d per ton, as compared with an average cost of production of 19s 1d; and the substitution for the existing individual subsistence wage of graded subsistence allowances governed by the size of a miner's family. The miners have declined even to discuss these terms, and in these circumstances the market has been subjected to an exceptional pressure of orders from consumers anxious to increase their stocks to meet the contingency of a long stoppage. During the early part of the week the docks were badly supplied with tonnage, but arrivals increased, and towards the end of the week all coal shipment appliances were employed and many vessels awaiting their loading turns. There has been no panic, and it is only to a slight extent that prices have increased. The following are the current approximate quotations:—Best Admiralties, 26s 6d to 27s 6d; seconds, 25s 9d to 26s; best dries, 25s to 25s 6d; Black Veins, 25s 6d to 26s 6d; Western Valleys, 25s to 25s 6d; Eastern Valleys, 24s 9d to 25s; best bunker smalls, 16s 6d to 17s; ordinary cargo smalls, 13s to 14s; coking smalls, 16s to 17s; anthracite best large, 43s to 47s 6d; red vein large, 27s to 31s; machine-made cobbles, 5s 6d to 5s 8d; French nuts, 5s 6d to 5s 8d; stove nuts, 4s 8d to 5s; rubbly culm, 13s to 14s; coke (special qualities), 40s to 45s; patent fuel, 24s to 26s 3d; pitwood, ex ship, 42s to 42s 6d. In the tinplate trade there is no improvement to

report, and it is anticipated that many of the factories will close down if the collieries stop working.

METALS.

The tin market displayed very firm features, and prices advanced rather sharply under stimulating Eastern cables, while holders showed more reserve in face of improved buying orders, but reacted at the close. A good business resulted, including standard cash from £261 10s to £263 5s and £259, and three months £264 10s, £266 and £261 7s 6d. In the East, business was reported at £259 15s up to £269 15s, £269 10s and £267. Copper also firmer, with dealings on a liberal scale, while closing easier. Standard cash changed hands at £62 to £62 5s and £61 12s 6d, and three months £63 5s-£63, £63 7s 6d and £62 12s 6d. Lead firmer on liberal buying orders combined with higher American cables. Good soft foreign pig July sold £34 15s to £35 7s 6d, £34 18s 9d, August £34 7s 6d to £35 1s 3d and £34 17s 6d, October £34 3s 9d to £34 15s and £34 10s, and November £34 10s to £34 13s 9d and £34 5s per ton. Spelter in good demand, and market irregular. July sold £35 2s 6d to £35 13s 9d, £35 2s 6d, August £35 to £35 11s 3d, £34 18s 9d, Oct. £34 12s 6d to £35 6s 3d, £37 17s 6d, Nov. £34 15s to £35 5s, £34 17s 6d. Antimony firm. English specials quoted £74 10s to £85 as to make and quantity, foreign refined £64 to £65, ex warehouse, per ton. Aluminium nominal. Home and export £120 to £125 per ton. Quicksilver quiet. Spot quoted £13 15s to £14 per bottle. Wolfram firmly held. Spot 17s to 17s 6d per unit, ex warehouse.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—After many years of complete freedom from serious labour trouble the wool textile industry is now confronted with a general strike, as a result of the breakdown of the negotiations on the wages question. The employers still stand out for a reduction of 5 per cent. on average, and the employers assert that they will only resume under the old agreement which expired at the end of last May. In other words, they are prepared to carry on at the old rates, but will not agree to a reduction. As things are, there will be a general stoppage throughout the industry to-morrow, for, although there are a few firms who have not posted the notices and are prepared to continue on the old agreement, the great majority have signified their intention of being loyal to their representatives on the Industrial Council, who, in making the last offer, stated that it was absolutely as far as they could go in the direction of making concessions. Naturally, in these circumstances there has been practically no business on 'Change to-day. For months past spinners and manufacturers have been operating on hand-to-mouth lines and selling at prices which have left no margin of profit, and some there are who welcome the opportunity of closing their mills for a period. It is significant that wool is selling in Australia and in London at prices in many cases pence per lb above the Bradford parity, and it is only foreign buyers who can afford to pay the prevailing rates for the raw material, their lower production costs and cheaper labour enabling them to outbid British users everywhere and then under-sell British producers.

COLONIAL WOOL. (FROM A CORRESPONDENT.)

The fourth series of London sales came to an end last Thursday, and satisfaction can be felt over the final results. True, values generally eased about 5 per cent. from the highest point of the series, but that is nothing to be concerned about at a time like the present. One regrets that West Riding buyers in particular have been unable to give their accustomed support. At least 85 per cent. of the merino offerings have gone to the Continent, France, Germany, Switzerland, and Belgium having made the market for fine wools. No matter what financial crisis there may be, as evidenced in demoralised exchanges and lack of credit, German firms want raw material, and have supported the market in a wonderful way.

The sales during the past week have passed off well, although bidding has been a little slower and lower values have been offered. We should say that good merino wools are fully up to the best of the May sales, with here and there the best wools making about 5 per cent. more. This, however, has not been general during the latter half of the series. Still, competition has been as good as anyone could expect, particularly for fine 70's quality and upwards. One has been impressed with the fact that 60-64's merinos have wanted customers. The big weight of Australian merinos, which can be regarded as no more than of medium quality, are finding very little favour, particularly at the hands of the Continent, trade being too bad in Bradford to warrant topmakers purchasing these on speculative account. Crossbreds have held their ground fairly well throughout the series, and the home trade has purchased the bulk.

THE COTTON TRADE.

MANCHESTER, July 23.

The tone of the market during the past week has shown some improvement. Most sellers have experienced an increased demand, and in one way and another more business has been done. Certain buyers appear to be getting increased confidence in current prices. Cloth inquiry for India has been of larger dimensions and a fairly substantial trade has been done, especially in light fabrics

such as dhooties. No general activity can be recorded for China, but isolated sales of moderate weight have been put through in white goods and fancies. Of the minor outlets the Continent has been the most encouraging, but a fair amount of business continues to be done for the United States. Demand remains rather slow for the Near East. Manufacturers are more hopeful than a week or two ago. Quotations in American yarns have been firmer on the proposal of the Masters' Federation to increase curtailment of production. Rather more orders have been booked. Operations in Egyptian spinings have been irregular.

THE TIMBER MARKET.

(FROM OUR CORRESPONDENT.)

A month ago it was stated that, with a decline in the import of building timber for May and a decline in the stocks of battens, scantlings and boards on the Port of London Authority's premises, the position of importers and merchants was better than for some months past. More recent events, however, have tended to turn the scale in favour of the consumer, the imports of building woods for June showing a decided increase, and for the six months 226,590 loads (a load equals 50 cubic feet) over the import for the first half of 1924.

The call for building woods is fair, wanting an improvement in general trade to bring about a more healthy state between supply and demand. Consumers are getting their timber very cheaply, thanks to the very severe competition prevailing in wood shipping centres, in which the North Russian supplies are, and have been, playing a prominent part, and the North of Europe shippers must

be making heavy losses, judging by recent quotations accepted. Prices of imports of building woods have averaged for the half-year £5 3s 2d a load, c.i.f., compared with £5 6s 10½d a load, c.i.f., for 1924 shipments and £5 13s 11d for 1923. Planned wood averaged £6 6s 10d a load, compared with £6 16s 3d and £7 4s for 1924 and 1923 respectively. A still further fall is likely when the present month's import prices are analysed.

In the furniture woods market, mahogany logs of good size and condition find a sale, but inferior grades have shown a weakness. Logs have arrived sparingly in number of late weeks, but the import for the first half of 1925 is larger than for the first six months of 1924; sawn mahogany planks and boards show increases, both in June and for the six months, in comparison with a year ago. Other hardwoods, and especially lumber from the United States, have again been exceedingly heavy, States wood being considerably in excess of requirements, surfeiting a depressed market.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market remains very firm in spite of tanners' efforts toward reduced input. Best ox hides sold from 6½d to 9d per lb at Thursday's Bermondsey auctions, and seconds from 6½d to 8½d. Cows were firm at 6½d to 7d, and best calf sold from 7½d for the heavy class of best to 14½d for best light. Lambs made from 3s to 8s each, and shorn pelts from 6s to 7s 6d each. Trading in imported hides is quiet, but there has been a slight advance in S.A. fregorifics, this class making from 8½d to 8½d per lb. Germany is still a frequent buyer of fregorifics—a rather remarkable fact as the leather trade is very dull in that country. Latest cables from New York report the Chicago hide position as steady, with best heavy packers selling at 17 cents.

The advance in hides has reacted on the sole leather position, and tanners are very firm on quotations. There is now no talk of a slump in leather, although buyers do not as yet feel sufficiently secure to order far ahead of requirements. Business this week has certainly improved in Bermondsey, and quite a fair quantity of leather has gone to the shoe trade centres. Cheap dry hide bends are still the best sellers, but now the weather has changed a better demand for medium and stout wet salted bends will set in. There are plenty of the latter about at relatively cheap rates, and tanners are anxious to clear stocks.

Business in upper leather remains moderate, but shoe manufacturers are only sending on small orders as the end of the summer season approaches. Willow calf sells slowly, also coloured kid and patent; glacé tanners report an improved demand at last for black kid, which has hung fire so long.

The boot and shoe section is fairly well employed, but there are few manufacturers who are working full time. Autumn samples are now being sent to buyers, and better business is looked for after the holidays.

VEGETABLE OILS AND OILSEEDS.

Markets generally have been only moderately active. Raw linseed oil has again proved very erratic, and there have been daily fluctuations, but closes steadier around £40 10s for prompt and July-December. Demands from actual consumers has been fairly good at the lower levels. A rather better inquiry for cotton oils has been experienced, and on scarcity prices are firmer, crude Egyptian being held for £43 and ordinary refined for £42 10s per ton, naked ex Hull mill. Edible qualities are also in more request. Soyab oil is dearer at £42, and palm kernel oil also higher at £43. Ground nut, rape, and castor oils are only a quiet trade. In the oilseed section the feature has been the decline in linseed,

value of Plate on spot at Hull having dropped to £19, while forward positions are at a premium. Up to £19 10s has been paid for September-October to Hull, and further business in the new crop. January-February loading, is reported at £19 15s and £19 12s 6d. Calcutta to London has commanded £21 10s, September-October. Only a small business has been passing in Egyptian cottonseed, and shippers have had to modify their ideas of value and accept £13 for old crop, July and August loading. For new crop, November-January, £12 12s 6d is asked. Trade in soya beans is chiefly confined to the Continent, current value being about £13 2s 6d, October-November.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 24.

SUGAR.—The market for actual parcels remained without new feature. Business proceeds on quiet lines, with British descriptions chiefly favoured. Consumption at the reasonable prices current for some time past is steadily increasing in Europe, apart from United Kingdom, while in America same is maintained at a high level. Production, however, proves quite adequate. Of British refined Messrs Tate and Lyle's cubes quoted 3s 6d to 3s 6d; crushed, 3s 6d; granulated, fine, and coarse, 3s 7d; No. 1, 3s 4d; No. 2, also London and T.L.S., 3s 1d; ditto, month forward,

30s; yellow crystals, spot, 27s 7d; caster from 32s 3d to 34s 4d, as to quality. Czecho granulated, spot, 29s 1d; ready for shipment, 17s 3d; August, 17s; November-December, 16s 3d, f.o.b., Hamburg. Dutch granulated, J quality, spot, 29s 1d; ready, 16s 4d; November-December, 16s 3d, f.o.b., Rotterdam. American granulated, spot, sold, 29s 1d; July-August, London, quoted 16s 3d; outports, 16s 6d, c.f. and i. terms. White Java, July-August, London, 15s 6d, c.f. and i. Cuban basis, 96 per cent., July-August, 12s, c.f. and i. terms, U.K. White terminal market opened very quietly, but assumed a firmer tone later. Business proved of fair dimensions. August, sold, 15s 3d to 15s 5d; October, 15s 6d; December, 15s 8d to 15s 9d; March, 16s 1d; May, 16s 3d per cwt.

COFFEE.—Spot parcels firm respecting the finer grades, which continue in limited supply, but inferior qualities more or less neglected. Costa Rica good middling blue sold, 160s; fancy blue, 196s; Colombian good bold, 143s 6d; Uganda good ordinary, 96s 6d; Kenya common brownish, 103s; East India, Coorg, peaberry common, 125s to 126s per cwt. Brazilian quiet for shipment.

COCOA.—Spot parcels in good demand at full to dearer prices. Sales include fine Trinidad up to 80s; ditto Grenada, 70s to 71s; and Accra ditto, 48s to 50s. Accra firmer for shipment; and F.F. grade, October-December, also December-February, sold, 43s 6d to 44s and 43s, f.o.b. terms. Cocoa butter, prime English, spot, quoted 1s 6d; and C.F.R., 1s 6d per lb.

COMMERCIAL TIMES—WEEKLY PRICE CURRENT.

The prices in the following list are revised with the assistance of an eminent firm in each department.

TEA.—Indian offerings at public sales during the week embraced 42,442 packages. Demand proved somewhat quiet, and with the exception of finest grades, prices moved in buyers' favour. A large proportion of supplies were unattractive, both with regard to leaf and liquor, and for such quotations were mostly 3d to 1d per lb under last sales parity. Finest fannings, however, aroused good competition, and realised up to 2s 5d per lb. Pekoe, sold, 11d to 1s 8d; broken orange pekoe, 1s 2d to 2s 4d. Ceylon catalogues totalled 31,708 packages experienced fair competition, and medium to fine leaf teas suitable for export fully steady. Lower qualities, however, moved off quietly at an irregular decline. Of China, finest new seasons Kintucks continue in request up to 2s 8d per lb, with old up to 2s 1d, but above these prices business is somewhat restricted, while a fair inquiry is experienced for the commoner grades. Java and Sumatra auctions of 8,700 packages met with fair competition, and all fine tippy brokers and leaf teas, suitable for export, sold at steady rates. Other descriptions declined from 3d to 3d per lb, at which a fair clearance was effected.

RICE.—Market steady, but demand on European account keeps quiet. Two Stars, Rangoon, spot, 15s 9d; adfloat, 15s 6d; July-August, 15s 7d. Spanish and Italian steadily held. Beans and peas firm, but quiet. Japanese peas, spot, 26s; September-October, 24s 9d cwt, c.f. and i. U.K. Rangoon bran firm, but quiet.

SPICE.—Quite a strong demand continued for pepper, both spot and forward, largely on continental account, with Russian buying a feature. Fair black Singapore, spot, sold, 8d; August-October, 8d; Lampong, spot, 8d; August-October, 8d to 8d; Muntok, spot, 1s 1d; August-October, done 1s 1d to 1s 2d; October-December, 1s 1d to 1s 2d. Cloves steady, quiet. Zanzibar, spot, 11d to 11d; October-December, 11d per lb. Tapioca firm, quiet. Singapore flake, September-October, to Havre, quoted 18s 10d. Sago flour firm, quiet. Sarawak, July steamer to the U.K., quoted 17s; July-August, 16s 9d; September-October, 16s 3d, c.f. and i. Desiccated cocoanut steady, quiet. Halves, spot, 40s 6d; September-October, 40s 3d cwt. Ginger firm, quiet.

JUTE.—A fair demand was experienced, and steadiness governed the market. Firsts, August, Continent, sold, £43 2s 6d to £43 1s; September, £41 5s to £41 15s; October, £40 10s; October-November, £40 10s; and November-December, £40 10s. Hessians quiet and slightly easier. Twills quiet on about former terms. 10 oz hessians, July-September, sold, 38s per 100 yards.

HEMP.—Manila steadier, as sellers showed more reserve. J grade, August-October, quoted £45 10s; K, £40 10s; L, sold, £41; M, sellers, £35. New Zealand H.P.F., August-October, quoted £38; fair, £36. African sisal firm. No. 1 Tanganyika, August-October, £46; Kenya, £45 ton.

SHELLAC steady, but general course of business proved quiet. Fair T.N., spot, 235s to 240s; August, 220s; October, 217s 6d; December, 215s cwt.

COPRA.—Market steady, but quiet. F.M.S. Straits, April-June, to Rotterdam, quoted £31 2s 6d; May-July, sold, £30 15s; June-August, buyers, £30 12s 6d; July-September, sellers, £30 12s 6d. Dutch East Indies, May-July, quoted £30 8s 9d. Ceylon, July, sold, £32; South Sea, F.M.S., ditto, quoted £29 12s 6d; ditto, smoked, July-August, to Marseilles, £29. Palm kernels, July-September, sellers, £22 per ton.

RUBBER.—Business proceeded with activity, in which the October-December and January-March positions participated largely. Market manifested a good deal of irregularity at times. Standard plantation sheet, spot, and July, sold, 4s 6d, 4s 5d, and 4s 6d to 4s 3d; August, 4s 5d to 4s 1d; September, 4s 4d to 4s; October-December, 3s 10d, 3s 9d, 3s 10d, and 3s 6d; January-March, 3s 4d, 3s 3d, 3s 4d, and 3s; January-December, 2s 7d to 2s 5d. To New York, standard European estate sheet, July-August, sold, 4s to 3s 9d per lb, c.f. and i. terms. Wild sorts steady, quiet.

FRUIT (Dried).—Market generally quiet. Of currants, Pyrgos quoted 33s to 34s; Amalia, 35s to 36s; Patras, 38s to 40s; Gulph, 40s to 42s; Vostizza, 45s to 51s. Sultanas: Smyrna, good quality, 64s to 69s; finer, 75s to 80s; Creten, medium to good, 68s to 74s; Australian, 66s to 72s; South African, 65s to 80s. Figs: Natural, in bags, quoted 26s to 27s. Dates quietly steady. Hallowee, spot, 19s; Khadowee, 17s 6d; Siar, 16s. Raisins: South African, 40s to 50s; Lexias, 48s to 52s. Evaporated fruits steady. Californian apricots, standard new extra choice, 127s 6d; fancy, 135s; Australian, 120s to 130s; Californian peaches, choice, 62s to 63s; extra choice, 65s to 66s; fancy, 70s. Plums: Oregon, new, size 30/40, quoted 71s to 72s; 40/50, at 50s to 51s; Californian, new, 40/50, 58s to 60s; 50/60, 50s to 51s; 70/80, 44s to 45s. Pears, choice, 90s; extra choice, 102s to 103s. Apple rings, Californian, extra choice, 58s to 60s; Oregon, extra choice, 65s per cwt.

CANNED GOODS.—Sardines. Good packs in demand but inferior

slow. Portuguese, 1/2 flats quoted 4s 3d; clubs, 5s; 12 ozs, 7s 6d; 18 ozs, 12s per dozen tins. Salmon continues in good request at full rates. 1 lb, flat reds, labelled, 77s to 78s; tall, 1 lb, 52s 6d to 53s 6d; 1 lb, tall, pink, 26s to 27s; 1 lb flat, 33s to 36s. Lobsters in good request and firm, halves quoted 16s.

CANNED FRUITS.—The market has been on the quiet side but stocks are firmly held. Quantities on spot of apricots and pears will not be sufficient for the summer trade. Prices of loganberries are firming up and during the last two or three weeks have advanced 9d to 1s per dozen. Singapore pines continue in demand, and prices firm. 48-1 1/2's quoted 86s 6d to 87s 6d; cubes, 2 1/2's, 13s to 13s 6d; slices, 24-2's, 12s 6d to 13s 6d; South African and Hawaiian in steady request, at late rates. Californian pears, 15s 6d to 17s; peaches, 12s 3d to 14s; cherries, 13s 6d to 14s; apricots, 10s to 13s 6d; loganberries, 13s 6d to 16s; fruit salad, 1 1/2's, 12s 6d to 14s; 2 1/2's, 21s 6d to 22s 6d; Australian pears, 24-2 1/2's, 16s to 16s 6d; Canadian, 14s to 14s 6d.

MISCELLANEOUS.—Cocoanuts quoted 25s to 27s 6d per 100. Coir yarn: Ceylon, £25 to £39; Cochin, £30 to £54. Ceylon bristle, £19 10s to £25; cinnamon leaf oil, 4 1/2d; citronella, Ceylon, 2s 4d; Java, 3s 9d.

OLSEEDS.—Linseed irregular but easier, with moderate sales Calcutta to London, August-September, sold, £22 7s 6d; bold Bombay, ditto, £22. Plate to Hull, July-August, sold, £19 2s 6d; September-October, £19 8s 9d; January-February, £19 to £18 12s 6d. Rapeseed quiet. Toria to Continent, July-August, £21 15s; brown Cawnpore, £20 17s 6d. Cotton-seed easier. Egyptian black, to Hull, July-August, £13; November-January, £12 10s; white, July-August, £12 10s; November-January, £12 2s 6d; Bombay, July-August, £9 10s. Castorseed firm. Bombay, July-August, £22 12s 6d. Gingly seed quiet. Chinese to Continent, July-August, £28 5s; large Bombay ditto, £26 5s. Groundnuts quiet. Coromandel machined, July-August, £25 7s 6d; Nigerian, July-August, £25 10s per ton.

OLLS.—Linseed irregular. Spot, net, naked, 41s 3d; August, 40s 3d; September-December, 40s 4d. Rape steady. Crude, spot, 48s 6d; refined, 51s 6d. Castor oil quiet. First pressure, spot, quoted 56s 6d; second pressure, 54s 6d; and pharmaceutical, 61s 6d per cwt, Hull, with London, 2s per cwt extra. Cotton oil. Crude Egyptian, spot, 43s; Bombay, 40s; common edible, 48s; deodorised, 50s. China-wood nominal. Hankow, spot (barrels), 68s; June-July, 67s. Cocoon oil. Ceylon, spot, 48s; June-July, 46s 6d; Cochin, ditto, ordinary packages, 60s. Soya oil. Oriental, barrels, July-August, 43s 6d; bulk, 40s 9d. Cod steady. English, spot, 34s to 35s. Ground-nuts steady. English, crushed, naked, spot, 49s 6d; deodorised, barrels, 57s 6d. Turpentine irregular. American, spot, 66s 6d; August, 66s 6d; September-December, 68s. Rosin firm. American, grade B/D, 20s 6d; E, 21s 3d; F/G, 22s; WG, 28s; WW, 30s per cwt. French FG, 21s 6d; WW, 26s 9d per cwt. Petroleum quiet. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on July 22nd as follows: The tallow market was quieter during the week, and prices were mostly 6d lower to-day. With a larger quantity offered at to-day's auctions, and less eagerness on the part of buyers, values could not be maintained except for fine mutton. At auction to-day 1,291 casks tallow were offered, and 629 were sold. Quotations are:—Australian mutton: Fine, 49s; good to fair, 48s to 45s 6d; dull to dark, 43s to 39s; hard, 48s. Australian beef: Fine, 48s; good to fair, 46s 6d to 44s 6d; dull to dark, 42s 6d to 38s; sweet, 48s 6d. Present shipment from Australasia: Good mixed, 46s 6d. Present shipment from South America, 46s 6d. The market letter is unchanged. Town tallow, 42s 6d per cwt. Rough fat per 8 lbs, 44d; melted stuff, 33s per cwt. Quotations are:—Town, 43s, net cash, naked, ex works. Country: Frail casks, 43s; home melted, shipping casks, net, f.o.b., good coloured, 45s 6d; fair to dull, 43s 6d to 42s 6d. Bone fat: white, none; pale, none; benzine, 40s; melted stuff, 39s f.o.b.

THE STOCK EXCHANGE.

NOTICE.
MEMBERS OF THE STOCK EXCHANGE are NOT ALLOWED TO ADVERTISE for business purposes or to issue circulars or Business Communications to persons other than their own Principals. Persons who advertise as Brokers or Share Dealers are not Members of the Stock Exchange or in any way under the control of the Committee. Members issuing Contract Notes are required to use such a form as will provide that the words "Member of the Stock Exchange, London," shall immediately follow the signature. A list of Members of the Stock Exchange who are Stock and Share Brokers may be seen at the Bank of England Stock Transfer Office, Finsbury Circus, or obtained on application to Edward Satterthwaite, Secretary to the Committee of the Stock Exchange, Committee Room, the Stock Exchange, E.C.2.

THIRD IMPRESSION WITH ADDITIONAL CHAPTER AND STATISTICS.

AN INTRODUCTION TO THE STUDY OF PRICES

with special reference to the History of the Nineteenth Century.

By WALTER T. LAYTON, M.A. 7s. 6d. net.

The Economic Review:—"His excellent and clear little book ought to be in the hands of every student of social conditions."
The Practical Economist:—"This book should be valuable to the student of monetary values and prices, especially of the nineteenth century."

MACMILLAN & CO., LTD., LONDON, W.C.2

	July 30, 1925.	July 24, 1925.	July 17, 1925.	July 10, 1925.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	4 (Mar. 5, '25)
Banks' Deposit Rate	3	3	3	3	2 (Mar. 5, '25)
Discount (Call)	3	3	3	3	2 (Mar. 5, '25)
Houses (Notice)	3½	3½	3½	3½	2½ (Mar. 5, '25)
Market rate (3 months' bills)	4½	4½	4½	4½	..

The Bank return showed an increase in the stock of gold of £1,024,000, which is £4,000 less than the amount announced during the week as received from abroad. The circulation had expanded by £1,359,000, half a million in notes having been transferred to the currency notes reserve, and the Reserve was thus £335,000 lower, though its proportion to liabilities is 0.3 higher at 31.6 per cent. There was a further decline of £1,360,000, and £588,000 in Government and other securities, and Public deposits expanded by five millions; these movements were all at the expense of the Other deposits, which declined by 7½ millions. Currency notes outstanding increased this week by £2,104,600 to £301,040,300, which includes £1,332,100 for notes called in but not yet cancelled. The fiduciary issue for the week amounted to £244,758,200, being £3,387,200 below the maximum for 1925.

THE STOCK MARKETS.

The coal crisis has produced dulness in Stock Exchange markets, and although the House has been inclined to take a hopeful view, business has been quiet. The gilt-edged market has been a little firmer, 3½ per cent. Conversion Loan closing higher on balance after considerable fluctuation. French bonds have improved, but Home Rails fell on the lower interim dividend of the L.M.S. A sharp drop in the price of raw rubber caused a selling of rubber shares. In the industrial group a feature has been the fresh spurt in Courtaulds, but elsewhere there have not been many changes. Mining markets have been quiet.

THE COMMODITY MARKETS.

Despite a certain amount of eleventh-hour buying, consumers of iron and steel have been disinclined to commit themselves this week for more than immediate necessities, the only branches of the industry to show any marked activity being constructional steel and galvanised sheets. The shadow of the threatened stoppage has hung heavily over the coal markets, and though prices have hardened, there has been no exceptional pressure for shipment. Demand for cotton textiles has continued on a freer scale, although financial difficulties are reported to have caused some nervousness. Quotations for wool tops and yarn are purely nominal, the strike of operatives being general throughout the West Riding. The hide markets have remained firm, and shoe factories are busy on holiday orders. Wheat has been firmer in view of reported unfavourable harvest weather in producing areas. Sugar is in fair demand, and tea prices have been well maintained. Rubber has continued to recede from the high "boom" levels of recent weeks. Business in metals, especially copper, has been influenced by the unfavourable industrial outlook, but tin and lead have remained very firm.

FOREIGN EXCHANGES.

The features of the Foreign Exchange market during the week were the continued strength of Oslo, Copenhagen, and Amsterdam, a certain weakness of sterling against the dollar and a sensational decline in the Polish zloty at the end. Other securities were featureless and markets quiet, but the general tendency of the French franc was firmer, owing probably to steady official control, coupled with a favourable weekly statement from the Banque de France, and the visit of the French financial mission to London. The dollar rate, after opening on the 22nd at 4.86, showed signs of weakness at 4.85½ on 24th and 27th, under the influence of the coal strike threat. A slight subsequent improvement to 4.85¼ on Thursday may be attributed to hopes of a settlement on the intervention of the Prime Minister. Forward rates are ½ to 1 cent above spot for one month ahead. Paris opened on the 22nd at 103.25, improved on 24th to 102.90 as a result of the Bank statement showing a decrease of 450 million francs in advances to the State and of 311 million francs in the note circulation, and later, as a result of the

factors to which reference has been made, improved steadily to 102.60 on 27th, 102.30 on 29th. On Thursday it stood at 102.10. Brussels, after a slight improvement in sympathy with Paris from 105.15 on 22nd to 104.95 on 24th; weakened again, under the influence of labour trouble, presumably, to 105.10 on Thursday. The Amsterdam rate opened the week at the firm previous closing rate of 12.09½, but rose rather sharply the next day to 12.10½-12.10½. The transfer of £1,000,000 gold to the Bank of England later served to steady the rate again to 12.10 on 24th and 12.09½ on 25th. A slight weakness on profit-taking developed on 28th, which brought the rate back to 12.10 on 29th, where it remains firm. Oslo, under the influence of the speculative pressure to which reference was made last week, continued to improve, to the detriment of Norwegian export, from 26.90 on 22nd to 26.30 on 29th, after touching 25.88 on 28th. It remains firm at 26.30. Copenhagen, after a struggle, appears to have managed to stop the too rapid, and therefore unwelcome, appreciation of the kroner, probably as the result of Government intervention under continued pressure from the trading fraternity. Opening the week at 20.48 on 22nd, the rate was pushed to 22.10 on 23rd, but this movement appears to have been exaggerated, and the rate reverted to 21.87 on 25th. On 26th it again improved to 21.15, and on 28th to 20.48, the speculative element again having prevailed apparently. On 29th, however, it was brought back to 21.25, and remains steady at somewhere about that level. Italy showed no great change, but is rather weak at 132; Madrid remained firm throughout at 33.53-57, and Berne at 25.00. Berlin calls for no remark. The Polish zloty is at the moment the most interesting European currency in the market, having provided a sensation by its sudden decline on 29th. It was featureless in the early part of the period under review, as it has been for some weeks past, and remained steady at 25.30-50; but about midday on Wednesday it began to crumble, and zloty were on offer and business done at 26.30 and 27.50, later in the afternoon. The market closed in the evening at 29 sellers, but nominal. It is difficult to account for so sharp a depreciation in so short a time in a currency which has recently been stabilised, and has remained stable since its introduction. Before attempting any explanation, it must be emphasised that the market in zloty here is a small one, and that it requires only comparatively small transactions to give the market a momentum which may easily become irresistible, especially if speculators and merchants take up identical positions. In this case, selling appears to have developed simultaneously in London, New York, and Prague, accompanied by rumours of an increase in the note issue unsupported by gold, of the selling of Polish securities in Prague by German interests, and of the possible shortage of foreign currency in Poland caused by the eviction of Germans from Poland. In any event, the depreciation does not appear to be justified by the economic position, although it is probably fair to say that a combination of abnormal features, and the efforts of the speculative element have exaggerated a tendency which, though slight, was evident, and is, perhaps, natural at the present time. Of the South American exchanges, Buenos Aires is firm at 45½d, Valparaiso rather stronger at 40.30, and Rio steady at 5 25-32d. In the East the yen is practically unchanged at 18 8d 11-32d-18 13-32d. The rupee has remained steady at 1s 6 7-64d throughout; Shanghai at 3s 2d, but Hong Kong is a shade weaker at 2s 3½d. The silver market has been quiet, and even dull, during the week. Silver finished weaker on balance at 31½d spot, and 31½d forward, in the absence of buyers and slight selling on China account.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 25th:—

EXPENDITURE.	(000's omitted.)	RECEIPTS.	£
Supply Services	5,500	From Revenue	12,301
Interest, &c., on Debt	512	Decrease in Exchequer Balances	147
Sinking Fund	1,503		
Sundries	128		
Reduction of Debt	3,699		
	12,448		12,448

The Revenue for the week amounted to £12,300,700, as compared with £11,692,700 in the corresponding week

last year. Customs and Excise were both slightly higher at £2,384,000 and £1,130,000, against £2,331,000 and £1,036,000 respectively. Property and Income-tax amounted to £4,288,000, as compared with £3,641,000, while Super-tax brought in £750,000, against £730,000. Ordinary receipts were lower at £23,700, against £172,200, but Special receipts brought in £515,000, as compared with £3,300. The week's operations reduced the National Debt by £3,699,000, and caused the following changes:—

	(000's omitted.)	£
Treasury Bills	+ 465	Public Department Advances .. - 4,264
National Savings Certificates ..	+ 100	
	+ 565	- 4,264

The floating debt was reduced by £3,764,000 to £779,791,000.

FINANCIAL YEAR, 1925-1926 (April 1st to July 25th.)

	£		£
Total Expenditure ..	264,496,893	Raised by Revenue ..	225,601,333
		Decrease in Balances ..	3,918,650
		Amount borrowed ..	34,976,910
Total	264,496,893	Total	264,496,893
ESTIMATES FOR FINANCIAL YEAR 1925-1926.			
Expenditure	799,400,000	Revenue	801,060,000
Surplus			£1,660,000.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Imperial Ottoman Bank, Union Bank of Australia, Tariff Reinsurances, Threlfall's Brewery, Bisichi Tin (Nigeria), Tanganyika Concessions and Zambesi Exploring. At the Imperial Ottoman Bank meeting the chairman gave an interesting review of conditions in Turkey, and mentioned that negotiations were proceeding for a prolongation of the bank's concession.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

SALVING THE COAL INDUSTRY.

ALTHOUGH the problem of how to save the coal industry, how to get it off the rocks on which by common consent it has crashed, has not been illuminated by the Court of Inquiry, nevertheless the immediate national emergency is less perilous. The crude wage proposals of the coal owners which it seemed were about to precipitate a stoppage of the coal mines and involve us in the most serious industrial paralysis in our history, cannot survive the severe examination which the members of the Court have turned upon them. They stand condemned as too harsh and too elementary a method of dealing with a great crisis in an essential national industry. The miners were prepared to resist at all costs, and the other great trade unions were prepared to support the miners by all means in their power. Whatever else may happen, the public will support the Government in demanding that the coal owners' proposals shall be "withdrawn," and the way opened for a calm and searching examination of the problem before the country. There never has been a graver problem; the coal industry as a whole is going rapidly from bad to worse, and it has reached a pass which in an ordinary commercial concern would involve drastic closing down. Whether the causes are those wide and general ones set forth by the three members of the Court—Mr Macmillan, K.C., Mr Sherwood, and Sir Josiah Stamp—or whether the return to the gold standard has contributed—as Sir Josiah Stamp is disposed to believe—need not for the moment be discussed here. They will require the closest examination, for remedies are vain unless a disease be first accurately diagnosed. But just now we are concerned less with the causes of the trouble than

with the immediate fact that the coal ship is on the rocks and must be got off before it can be repaired. As each month passes the rocks are getting a tighter hold and making the unlucky hulk less seaworthy.

During the seven months which ended in March last more than half the collieries showed debit balances on working. In April the number producing at a loss rose to over 64 per cent., and in May to nearly 67 per cent. In May 60 per cent. of the coal raised was being raised at a loss. It is understood that the results for June, as shown by the preliminary figures, were even worse. Exports, which in 1913 were 73.4 million tons, fell to 59.2 million tons last year. During the six months ended June the exports were at the rate of 49.4 million tons per annum, and for June itself were at the rate of 43.7 million tons. This progressive degeneracy in the industry month by month is the worst feature in a most baffling situation. It adds enormously to the difficulty at the moment of determining any stable basis upon which can be constructed a working agreement between coal owners and coal miners for carrying on the industry.

The Court of Inquiry, who in seven days got through an immense amount of work, and have contributed a most valuable Report, are satisfied that the claim of the miners to a minimum wage before profits are taken is justified. What that minimum should be they leave to negotiation between the parties, but they do not regard as satisfactory any method of fixing wages which allows of their indefinite diminution. The Court also hold, in face of the contrary opinion of the coal owners, that there are means of improving the efficiency of the industry, and of reducing costs of transport and distribution. "The improvement of the distribution of coal," they say, "while not entering directly into the present question, has an important indirect bearing upon it, for it would result in lowering the prices to all classes of consumers, and might have a considerable effect in stimulating demand." The tonnage charges due to the royalty system, though unimportant relatively to the wages bill, are not, in the Court's view, negligible. "It (the royalty system) has been the source of much ill-feeling among the ranks of the workers, where the promotion of good will is of so much importance." Suggestions of this kind, and of others for improvement in the management, organisation, and development of the mines, are not put forward as remedies for the present emergency, but "as matters which should not be overlooked in any projects for the permanent rehabilitation of the industry."

In the past year up to July, 508 mines were closed down and not reopened, involving 110,483 wage earners; in the same period only 96 mines employing 8,522 wage earners were opened or reopened. Even if the immediate peril of a stoppage be averted, this process of closing down unprofitable mines must go on, maybe at an accelerated speed. The Court do not offer any direct suggestion for carrying on the industry, but they very plainly hint that it is not an industry which can be allowed to go out of business. They ask "whether the coal industry is one whose fate, from the national point of view, can be left to be determined by the unmitigated operation of purely economic forces. It is a basic industry whose product is indispensable for our industrial, commercial, and domestic life. Upon its continuance on its present scale many interests depend. It affords, moreover, the means of livelihood of a tenth of our population. A drastic restriction of its activities would be fraught with grave consequences. These, however, are wider questions, and do not fall within our terms of reference."

The hint is plain enough. It is that the nation as a whole, through the Government, should in some way come to the temporary assistance of the coal industry. Mr Hartshorn said recently in the House of Commons, in the course of a speech both illuminating and cool in temper, that the coal industry did not contain within itself the power to restore itself. The Court, though they do not say so directly, clearly have the same thought at the back of their minds. And yet it is a thought which must make any Government tremble, even one composed of Socialist Ministers. Men of all parties are willing to take over for the State, on fair terms, the ownership of coal underground—in other words, the right to be paid royalties for

it. But the State ownership of coal is one thing, and State working of coal mines another and far different thing. From the "temporary" assistance of the coal industry by some kind of subsidy to the nationalisation of the coal undertakings of the country, the step would be brief. The one would almost inevitably lead to the other, for the taxpayers would rapidly rebel against any system—however temporary it might profess to be—which placed the resources of the State at the disposal of a privately owned and privately managed industry. The more carefully guarded subsidies were, the more surely they would involve control, and control must lead rapidly and directly to national ownership. To this we may be driven, but let us, at least, keep our eyes clear, and realise whither any hasty move would lead us.

THE EUROPEAN WHEAT POSITION.

THE latest estimate of the International Institute of Agriculture, summarised in a later note, forecasts a substantially increased wheat yield in the coming cereal year. The moment is opportune, therefore, for examining the question of Europe's potential requirements—i.e., the commercial as distinguished from the agricultural aspect of the matter. The grain trader bases his diagnoses on the experience of previous seasons, as indicated most conveniently by published returns of imports and exports. He classifies the countries of the world, for his purpose, according as they are on balance importers or exporters of his commodity. Thus, in Europe, the British Isles, Belgium, Holland, Sweden, Norway, and Denmark are invariably importers of wheat; the Latin countries—France, Italy, Spain, and Portugal—come somewhere near the border line, and although they usually find it necessary to import a small amount, can be broadly described as "self-supporting"; Russia, Roumania, Hungary, and Bulgaria were among exporting countries in pre-war days, but have so far scarcely merited that distinction since the war; while, lastly, the "new" States—Czechoslovakia, Yugoslavia, Poland, Finland, and the Baltic Republics are importers on the way to becoming self-supporting. We may examine each of these groups in turn.

The first named, which can conveniently be referred to as North-West Europe, includes one Great Power and five small States, and is a colossal magnet drawing to itself wheat from all over the world. It makes no serious effort to be self-supporting, but relies for its daily bread on the produce of its industrial exports. The wheat crops of North-Western Europe are somewhat above the average this season. Wheat is the most drought-resisting of the cereals, and has obtained striking benefit from the heat and light of June. The 300 hours of bright sunshine of a Canadian June are held by competent botanists to "make" the quality of the Canadian wheat, and Great Britain had 270 hours' sunshine last June. The gain to the British yield is probably half a million quarters, but the total area sown is too small for the effect on the wheat supply of the North-Western group to be very material. The probable position as regards the group is shown in the following table:—

NORTHERN EUROPE—IMPORTING AREA.

(Quarters—480 lbs.)			
	Needs.	Yields.	Imports.
British Isles ..	33,000,000	7,500,000	25,500,000
Belgium	6,650,000	1,650,000	5,000,000
Holland	2,975,000	575,000	2,400,000
Sweden	2,350,000	1,000,000	1,350,000
Norway	450,000	75,000	375,000
Denmark	1,605,000	750,000	855,000
	47,030,000	11,550,000	35,480,000

With wheat at 55s per quarter, and 35,480,000 quarters needed, some £97,570,000 will have to be found by consumers in North-Western Europe in the cereal year commencing September 1st next for payment to American, Argentine, Canadian, Australian, and Indian wheat producers.

In the Latin group of countries, France has long made spirited efforts to increase her wheat area. The veteran M. Meline has lately headed an Agricultural League, and

the Union Sacrée preaches independence of foreign breadstuffs as a matter of patriotic duty. This year, with an average yield per acre slightly over the average and 360,000 more acres under cultivation, it is hoped to limit wheat imports to 2,000,000 qrs, or, roughly, 4 per cent. of the whole. During the war ten to twelve million quarters were imported annually. Italy this summer has a really good crop. Spain and Portugal are constantly striving to do without imports. The extent of their wheat area should make the task very easy, but culture is poor. We sum up the possibilities in this group as follows:—

LATIN COUNTRIES—"SELF-SUPPORTING."

(Quarters—480 lbs.)			
	Needs.	Yields.	Imports.
France	43,000,000	41,000,000	2,000,000
Italy	30,000,000	28,000,000	2,000,000
Spain	18,000,000	17,250,000	750,000
Portugal	1,750,000	1,500,000	250,000
	92,750,000	87,750,000	5,000,000

We next come to four countries whose history has earned for them the title of "lost exporters." Their pre-war position may first be stated:—

LOST EXPORTERS—PRE-WAR POSITION.

(Quarters—480 lbs.)			
	Yields.	Needs.	Exports.
Russia	100,000,000	75,000,000	25,000,000
Roumania	16,000,000	11,000,000	5,000,000
Hungary	9,000,000	6,000,000	3,000,000
Bulgaria	5,500,000	4,250,000	1,250,000
	130,500,000	96,250,000	34,250,000

With this may be compared the following:—

PRESENT POSITION.

(Quarters—480 lbs.)			
	Yields.	Needs.	Imports.
Russia	50,000,000	51,000,000	1,000,000
Roumania	10,250,000	10,000,000	250,000
Hungary	7,000,000	6,000,000	1,000,000
Bulgaria	3,750,000	4,000,000	250,000
	71,000,000	71,000,000	1,250,000

Russia, as a whole, probably produces anything up to 98 per cent. of her total requirements, but as her Government is not unitary, and one allied Republic is not bound to sell to another, we have a position in which the Southern Soviets may be selling wheat for export, while Central and Eastern ones are buying flour for import. Hungary seems to be reasonably well fed, but Russia, Roumania, and Bulgaria are undoubtedly under-supplied. Roumania's record, considering her extended agricultural territory, is disappointing.

The "new" countries of Europe are making praiseworthy efforts to feed themselves. Although none is primarily a wheat country:—

THE NEW COUNTRIES.

(Quarters—480 lbs.)			
	Yields.	Needs.	Imports.
Czechoslovakia ..	5,000,000	5,500,000	500,000
Jugoslavia	8,000,000	6,500,000	1,500,000
Poland	4,500,000	5,500,000	1,000,000
Finland	100,000	850,000	750,000
Baltic Republics...	750,000	1,500,000	750,000
	18,350,000	19,850,000	3,000,000

All the five States show improved areas and better yields since the war. Czechoslovakia finds malting barley and beet sugar pay better than wheat, but none the less aims to dispense with wheat imports. Poland exports rye and potatoes on a really large scale, but is buying fertilisers and striving to grow more wheat to the acre. Yugoslavia already exports wheat, and Italy competes with Greece for the surplus. The Eastern Baltic peasant proprietors are handicapped by the difficulty of growing wheat on a sufficiently large scale to make its culture a paying proposition, but they are very thrifty, and live mainly on rye bread.

This survey may be rounded off by considering the position of Germany, Austria, and Greece. Germany, after the very bad crop of 1922, reckoned at 9 million quarters, bought in all 5 million quarters, thus showing needs of 14 millions. After the good crop of 1923, put at 13 millions, imports were only 1,800,000 quarters. This would indicate a requirement of 14,800,000 quarters, a total which, allowing for usual replenishment after a time of dearth, is probably very near the mark. Austria usually

grows about a million quarters and imports another million, thus total needs of two millions is indicated. Greece is a curiously large buyer of wheat in proportion to her population of six millions. Imports are often 1½ million quarters, and consumption is quite three million quarters, despite the large use of barley for human food and of maize. Germany, Austria, and Greece together need on an average year 5 million quarters of imported wheat between them; but this does not exceed their pre-war requirements. Austria always absorbed wheat from Hungary, and Greece from what is now Yugoslavia. Greece also bought of Roumania.

In pre-war times Europe required about 47,000,000 quarters of wheat for regions not able to satisfy their own needs. Of this total, about 34 millions were drawn from areas between the Urals and the Atlantic, reached largely by rail traffic, and, even when ships were used, having to face the milder navigation of two tideless seas. To-day the whole of the 47 millions come from other continents. The effects of this change have yet to be fully appreciated. A few may be indicated. In place of "mineral" trains of 100 six-ton trucks, and of small vessels of 1,000 to 3,000 tons, great ocean-going ships of 5,000 to 12,500 tons are engaged in the wheat trade. Large quantitative arrivals are followed by pauses without supply, which makes for more violent oscillations. There is gain to Britain in the increased call for her shipping to bring wheat to European ports. The losses to the mid-European railway systems from the cessation of Russian and Roumanian transfrontier consignments have not been estimated, but must obviously be substantial. Finally, of course, "loss of propinquity" has ensued. To convey wheat from the Canadian prairie or the Argentine pampa is a much more formidable operation than to obtain it from the banks of the Lower Danube or the black soil of the Ukraine.

INDIAN FINANCE AND CURRENCY.

IN view of the impending appointment of another Indian Currency Commission, the Report of the Indian Controller of Currency for 1924-25 is of exceptional interest, and throws valuable light upon some of the problems the new inquiry will be expected to solve. With European conditions nearer normal, and Indian supplies of exportable produce ample as the resultant of the fourth good monsoon in succession, Indian exports in 1924-25—as has already been noted in these columns—established a new record. The agricultural prosperity, however, as Mr Denning remarks, "was not fully reflected in the demand for imported commodities, partly on account of the high level of prices and partly on account of the superior attractions of cheap gold and silver." With a consequent balance of trade in merchandise even more in favour of India than was recorded in 1923-24, liquidation was to a large extent effected, to quote the Controller's phrase, "by colossal imports of bullion; but in spite of this adverse influence, exchange rose steadily during the first half of the year, and remained fairly stable in the neighbourhood of 1s 6d for the last six months of the year. This improvement in the value of the rupee and the progress made in restoring disordered exchanges of the world have established a confident feeling that the time is not far distant when it will be possible to stabilise the rupee and place the Indian currency system on a sound permanent basis." Meanwhile, the Indian Finance Member, in public declarations, has not concealed his own conviction that the present ratio of 1s 6d should be accepted as the statutory ratio. Addressing the Indian Chamber of Commerce at Bombay early in July, Sir Basil Blackett declared that he was unable to agree that, so long as a considerable raising of prices all round must inevitably result, anything would be gained by an attempt to lower the ratio to 1s 4d, whether it is done suddenly or by gradual stages. It is not only (he added) prices of imported goods, or prices of goods such as wheat and rice, having a world price which are affected by exchange, but all internal prices, whether connected with or

entirely disconnected from imported goods or goods having world market, necessarily tend to move up and down in accordance with the value of the counter which is used as the medium of exchange. In the current year Sir Basil not only anticipates exchange adhering to its present level (not rising above 1s 6½d), but holds that Government reserves are ample to prevent any variation from this ratio.

In view of the dominating influence at present exerted by Government operations and remittances, this claim is probably well founded. Government remittances average £2½ millions a month; but, in addition, recourse will be had, if necessary, to the large resources of paper currency which were utilised so effectively a couple of years ago, and can—and will—be employed again in analogous circumstances. The prophecy may be added that, in the event of the new Currency Commission advising reversion to the 1s 4d ratio, it will be invited, in view of previous experiences, to detail the methods whereby its recommendations are to be carried into effect. In the case of the Babington-Smith Committee, it will be recalled, the Government of India accepted their recommendations without demur or hesitation—with consequences that are on record. The forthcoming Commission, it is being emphasised in India, will be expected to advise the Government of India not only what to do, but how to do it. The latter point is, indeed, pivotal. The statutory fixation of the rupee at 2s involved political as well as financial complications which the Government of India is naturally anxious not to see repeated. We may add that, the Indian demand for a Commission with an Indian majority having been refused, it is of peculiar importance that the non-Indian personnel should inspire complete confidence, not only here, but in Calcutta and Bombay.

The present strength of the Indian exchange derives from the coincidence of large exports at a time when merchandise imports—allowing for the effect upon total values of the present level of prices—are on the smallest scale known for many years. It is difficult to conceive either piece-goods or other merchandise imports into India falling appreciably below last year's level, though Lancashire exports, unless a bumper cotton crop facilitates a lower level of prices, may, in the current year, show a small decline. The Controller of Currency notes it as rather remarkable that in a year when exchange was consistently strong and the gold value of the rupee increased by 18.9 per cent., the visible balance of accounts should be against India (—Rs. 47 lakhs, compared with plus Rs. 53.24 lakhs in 1923-24), while in the preceding year there was a very large balance in favour of India. The large difference between the two years was due mainly to two factors—(1) there was a large balance in favour of India in 1923-24, which was left over for subsequent adjustment, and the strength of exchange and the large Government remittances between April and September, 1924, indicate that the adjustment was made in 1924-25; (2) the imports of treasure in 1924-25 were extraordinarily large, and not only were the stocks in the hands of the bullion dealers very heavy at the end of the year, but also private purchasers throughout India seem to have anticipated their demands for subsequent years to a large extent. In consequence a better idea of the present visible balance of India's international account is obtained by taking an average of the last two years, which shows a favourable balance of Rs. 26.38 lakhs.

Assuming that merchandise imports into India in the current year follow last year's standards, while exports remain undiminished the question of bullion purchases by India will prove of even more consequence than it did in 1924-25. In the latter period, India's acquisitions of gold and silver reached the unprecedented figure of Rs.98.42 crores. The import of this enormous quantity of bullion, and its distribution up country, had far-reaching effects. In the first place, these imports balanced to a large extent the large excess of exports over imports of merchandise, and, together with the large Government remittances, prevented the rate of exchange rising unduly. In the second place, bullion replaced considerable quantities of currency as a store of value, and the currency thus returned to circulation helped to prevent undue money stringency during the busy season. India's net import of gold in 1924-25 amounted to Rs. 73.78 crores, i.e., nearly double the net import in 1922-23, the previous record year. In the Controller's judgment, this extraordinary increase was due mainly to the agricultural prosperity following on four good harvests, to the high prices of the commodities on which the agriculturist usually spends his surplus, and to the low price of gold. There was a drop of Rs.4.7 per tola, or 16.9 per cent. in the price of gold in the course of the year, and during the latter part of 1924-25 the price was about Rs.2 per tola, or 8.3 per cent. below its pre-war level. In the same period, general prices were about 70 per cent., and the price of piecegoods about 170 per cent. above the pre-war level. There were other factors, some of which have now ceased to operate. To quote the Controller:—"The natural effect of the decrease in the price was increased by the uncertainty as to whether gold would continue to be so cheap. Exchange was two pence higher than it had been for many years previous to the war, and there was a considerable doubt as to whether it would remain at 1s 6d or return to the pre-war figure. Moreover, there was also the possibility of a reaction in the dollar sterling exchange. As a result there was a general belief that the price of gold could not go much lower, and might go higher, and this belief undoubtedly contributed very largely to the demand for the metal. From reports received from various parts of India, it appears that most people who had surplus cash invested it in gold, and that almost every family, in which marriages were likely to occur during the next year or two, took the opportunity to lay in the necessary store of gold while it was cheap. It is probable, therefore, that India's requirements for gold for the next year or two have to a large extent been anticipated, and, if the price of gold remains at its present level, the normal annual import will probably be considerably smaller than the import during the year under review." The wide significance of this statement, in view of the British reversion to the gold standard, needs no elaboration. (It may be noted, in parenthesis, that of the gold imported by India last year, 23.02 crores derived from the United Kingdom, 23.47 crores from Natal, and 20.2 crores from the United States.) It remains to be seen, in relation to the Indian exchange, whether the predicted drop in bullion purchases will be compensated, and offset, by corresponding increases in imports of merchandise. Otherwise the natural tendency of the rupee will be strongly upwards, the principal counterweight being Government remittances, partly to meet immediate expenditure, partly through the Paper Currency Reserve, as an exchange transaction *per se*. Our information is that the Indian Finance Department entertains no doubt whatever of its ability to prevent violent fluctuations, notwithstanding the anticipated decline in gold purchases.

As with gold, so with silver, Indian purchases last year established a record. The reasons given above for the abnormal imports of gold apply for the most part to silver, though the decrease in the price of the latter metal was less marked. Of the total gross imports of silver (Rs.24.28 crores), Rs.5.28 crores came from the United Kingdom and Rs.14.09 crores from the United States of America. It is explained in the official analysis that the large increase in the direct imports from America is due to an arrangement between the two large British shipping companies by which the through rate of freight from New York to India is cheaper than the total of the rates for the separate journeys from New York to London and London to India.

CREDIT INSURANCE. (FROM A CORRESPONDENT.)

"I AM ready," said Jurgen, "to taste any drink once." The Prime Minister, looking backwards and forwards along the row of prescriptions tendered by his various advisers for the restoration of British trade, can seldom be said actually to taste any of the drinks, but he is always ready to handle any drink once; to talk about it, look at it, and shake the bottle once; even to go so far as smell it once before he puts it back among its companions on the medicine shelf—a procedure that so far has not produced any great improvement in the patient's condition. One of his latest experiments is with the bottle labelled "credit insurance," which has been taken down from the shelf a good many times in the last few years, and is now to be submitted to another new Commission, which will no doubt hear evidence, examine the subject from every quarter, and when it reports, as it will in due season, leave the whole business in exactly the same position that it is in to-day.

It is probably true that the public mind, or, rather, that part of the public mind that takes any interest in such matters, has much the same feeling about credit insurance as it has about low temperature carbonisation, regarding them both as very clever, but deplorably technical, and hoping vaguely that one or other of them may do the trick in restoring British supremacy in the markets of the world. Coal experts, it would appear, are sharply divided in their opinions of low temperature carbonisation, and insurance experts certainly differ very widely in the value they place on credit insurance and the possibility they see of its future development, some of them ranking this kind of insurance very high indeed, while others look on it with grave suspicion, and refuse to consider it as within the legitimate scope of insurance business. To the layman this contradiction of opinions is naturally confusing, and it may be of some service to set out and compare the different views and the arguments with which they are supported. Broadly, it may be said that there are four schools of thought.

(1) That credit insurance with the right kind of help can be developed along the present lines to become one of the great factors in restoring our foreign trade.

This is the view of the enthusiast who believes that loss by bad debts is as much an insurable risk as loss by perils of the sea, loss by fire, loss by burglary, or loss by death. The man of business, he argues, has many risks to face, against some of which he can protect himself by insurance, some of which (such as defects in his own judgment) he must run himself. Past experience proves that in the first class of risk—the risks that insurance can lift off his shoulders—are fire, shipwreck, &c., which any prudent commercial man can place on the broad shoulders of his insurance company or underwriters. There is no reason why the risk of bad debts—no less serious, but at the same time no less calculable, than the other risks—should not, in part at least, be put on to the shoulders of an insurance company; and there is no reason why the business man of the future should not look as naturally and spontaneously to the credit underwriter for protection as the business man of to-day looks to the marine underwriter and the fire insurance company. The main difficulty, as the world is at present constituted, is the political risk—the danger of some political catastrophe wiping out the credit of a whole section of a continent and rendering whole populations in some sense insolvent. It is beyond the power of any company to take that risk wholesale, just as it is beyond the power of a fire company to take the earthquake risk wholesale in Japan; but what private enterprise cannot do State enterprise can, and for a consideration Government may run the political risk in much the same way that it ran the submarine risk and the Zeppelin risk during the war. That is the view of the convinced believer in credit insurance.

The second, and directly opposite, view may be expressed as follows: (2) That credit insurance is unsound because it tries to do by insurance the business of the banker, and by a process of natural selection gets the banker's leavings.

This is the view of the sceptic, and the ranks of the sceptics were probably swollen by the unfortunate scandal which centred round a reckless—indeed, a fraudulent—experiment in credit insurance attempted since the war by one unhappy underwriter. The details of that unsavoury episode need not be revived, but the impression left on the minds of those who had most to do with clearing up the mess was that people who have security, people who can reasonably be given credit, get what credit they deserve from the banks, and it is only when the security is exhausted and the credit unsatisfactory that they turn for help to an insurance policy. Some of the great banks, it is true, have shown a certain sympathy with credit insurance by taking shares in the chief credit company, but though they are themselves the greatest experts in credit, and have better means than any outsider of judging the amount a man is good for, they do not touch the business of credit insurance directly, and will only go into it by an investment of limited liability which, whether it fails or prospers, can make no material difference to their fortunes. It may be convenient for the banks to have an outside organisation ready to prop up a customer's credit, but this particular kind of chestnut ought to be pulled out of the fire by the expert banker, not by the expert insurance manager. That is the view of the sceptic.

The timid view may be expressed as follows:—

(3) That credit insurance is unsuitable for a private underwriter or for a company constituted in the ordinary way, but may be successfully managed by a mutual concern.

This, if we read him aright, is the view taken by the author of a book recently published on credit insurance—"Commercial Credit Risks," by Mr A. H. Swain.* It is the work of a practical insurance broker who has devoted much attention to the subject, and especially to the criticisms of the current forms of credit insurance policy. Into the details of his criticism we need not enter here, but he argues with some force that an insurance policy which contains such stringent definitions and clauses as form the basis for the only successful form of credit policy, must be of limited value to the ordinary merchant; and, further, that a form of insurance which, after years of work and propaganda still attains to such small dimensions, must have in it some essential flaws which deter the ordinary man of business from making use of it. These flaws, he suggests, would be less noticeable in a mutual scheme such as is practised successfully in America, and if export merchants had at their service the kind of mutual club or society which they have at present for employers' liability, and which shipowners have had for years for their protection risks, the scope of credit insurance could be greatly widened and its value enormously increased. This argument in favour of a mutual scheme requires considerable development before it becomes convincing, and it is not easy without direct experience to see how the catastrophe difficulty and the difficulty of mutual suspicion and jealousy are to be overcome, or why a mutual club can give quicker, fuller indemnity than a private company.

The last view may be summarised as follows:—

(4) That credit insurance may be a convenience for some merchants, but can never be a vital factor in export trade or play an essential part in the restoration of our commerce.

This would probably be the view of most insurance brokers who have tried their hand at credit insurance and attempted to build up an account with their own clients. They are inclined to argue that the restrictions which are of necessity placed on the merchant, the difficulty of persuading him to accept cover on the only terms on which it can be granted, are so great that, in general, the time and labour spent on trying to develop the business are not repaid by the resulting profits. To this, of course, there are exceptions. People doing business in the disturbed areas of Eastern Europe, where the political risk is at its worst and credit at its lowest, will pay high rates of premium to insure the bills accepted by their customers; but the market for this kind of risk is naturally small, and the business for this reason is not easy to

place. At best, too, such insurance is spasmodic, depending on the inflated profits resulting from trade with an unsettled creditless country; and while the cover in the comparatively small quantities available may have some use as a starting-handle to get the engine of trade moving, it cannot, from the nature of things, be a permanent factor in the trade of a settled continent. Credit insurance, according to this view, has justified itself as a convenience in certain circumstances and to certain firms, but it will never be of greater value than that, never rank with fire, life, and marine insurance as one of the necessities of trade. It will continue as a luxury and a speciality, but never become one of the main tram-lines of trade, as was recently suggested by one of our minor political thinkers.

Among and between these different opinions the new Commission may form its choice.

THE SITUATION IN CHINA.

(FROM A CORRESPONDENT.)

EMERSON, in one of his essays, maintains that "there is a tendency in things to right themselves, and the war, or revolution, or bankruptcy, that shatters a rotten system, allows things to take a new and natural order." Comforting as this doctrine may seem to the Western mind, its application to the course of events in China is doubtful, for things Chinese are invariably contrary to our accepted notions. It is fourteen years since the decrepit, but by no means impotent, Chinese Empire was overthrown, but no new and natural order has been evolved from the confusion which ensued. The Republic, which was inaugurated with so much pomp, has been a sorry failure, and gradually China has drifted into a state of anarchy. The crisis which has now been reached has many conflicting circumstances, but fundamentally it has been brought about by the absence of any effective control on the part of the Peking authorities. The anti-foreign movement shows no signs of abating, and the future for foreign trade is full of anxiety. The more responsible Chinese no doubt realise the folly of allowing the discontented elements in the Treaty ports full rein, but mutual distrust and fear of physical violence stand in the way of any concerted measures being taken to restrain the mob.

The problem facing the foreign Powers is a difficult one, for it is no simple matter to call to order a nation of 400 millions, and galvanise an enfeebled government into action. Nor will the task be rendered any easier if there are dissensions amongst the Powers as to the course to be pursued. The suggested policy of calling a Conference is sound enough, but it would be advisable to postpone consideration of the subject of tariffs, for until the channels of trade are secured the adjustment of customs duties is of little more than academic interest.

An example of the helpless position into which foreign importers and Chinese dealers have drifted is shown in recent correspondence exchanged between the Hongkong General Chamber of Commerce and the Chinese Piece Goods Guild. The latter, representing all the principal piece goods dealers in Hongkong, appealed to the Chamber for assistance in facing a situation "wholly un-

precedented in the history of the colony," and asking for a six months' moratorium. In making out their case the Guild mentioned that "the militarists have commandeered practically every available means of transport in the fighting areas, making it totally impossible to deliver goods to the dealers in the interior"; and, further, "the depreciation of the subsidiary coins has gone from bad to worse, being 33 per cent. discount in Kwantung, while in Yunnan it is as much as 50 per cent., making it utterly impossible for the Yunnanese customers to remit money to Hong-kong in settlement of their accounts with the merchants in this colony."

To this appeal the Chamber replied, expressing their sympathy with the dealers, but denying that the situation was altogether unprecedented, and observing that stocks were not so heavy as to be unmanageable. The Chamber undertook to approach the Chinese banks, who had advanced their rates of interest from 8 per cent. to 12 per cent., asking them to ease the pressure upon native dealers, and to request the foreign banks to facilitate as far as possible extension of bills drawn on foreign importers by British piece goods shippers. Beyond urging its members to deal as leniently as possible with native customers the Chamber was prepared to do nothing further, and flatly declined to authorise the waiving of penalty clauses in the contract between importer and dealer.

In a subsequent letter the Guild reverted to the subject of currency difficulties in the interior, expressing their fear that the problem was by no means a temporary one. The Guild pointed out that "The minting and circulating of these base coins constitutes one of the primary means of the militarists or commanding generals to raise revenue with which to pay their troops. The more impecunious they are, the more apt they will be to resort to debasing the coins by adding more alloys to the silver..... The only time that we can hope to see the end of this disrupted state of affairs is the establishing of a decent and stable government in Canton. From all appearances, that hope remains as remote as ever." The Guild went on to observe that "the ruinous taxation, coupled with the depreciated currency and other attendant evils, have so reduced the purchasing power of the general consumers that, though the dealers would desire to sell their goods on longest possible credit, they could not elicit response."

The Chamber, in their final letter, expressed their agreement with the Guild's contentions, "which go to show conclusively that the deplorable situation in China is at the root of all the present trouble. Unfortunately, neither importers nor dealers can do anything to alleviate conditions which are entirely outside their province."

The situation presented by this correspondence, which closed two weeks before the riot in Shanghai, could be applied to any branch of foreign trade in China previous to the present stoppage. There are signs that the strikers are wavering and that business may be resumed in the near future, orders having been received within the last few days from both Shanghai and Hong Kong. Such business is, however, almost negligible, in view of the potential demand which exists in China and cannot be catered for so long as the widespread restriction continues. Foreign traders would probably be content to bide their time if there were any prospect of a thorough pacification of the country to prepare the way for commercial expansion. No foreigner or Chinese engaged in business can grapple with such a problem, the solution of which is undoubtedly a matter for the politician. But the politician must lose no time in getting to work, otherwise a market of vast possibilities will be lost to the world. It is unfortunate that the American and British Governments do not see eye to eye as to the course to be pursued in China. The American view that the question of extra-territoriality should be the first to be inquired into is no doubt put forward with the idea of soothing the inflamed feelings of the Chinese people, but it is hardly likely to arouse much enthusiasm outside extremist circles. The vagaries of justice in the Republic have forced the Chinese citizen of substance to invest his savings where they will be safeguarded by foreign law, and until China has a government that can protect its own people the foreign concessions will continue to be the storehouse and safe

refuge for the Chinese in times of trouble. Undoubtedly the paramount need is a stable government, and if the Powers would enlist the support and co-operation of the principal figures in Chinese political life, the remedy might be found without undue delay.

THE TANGANYIKA GROUP.

(BY OUR MINING CORRESPONDENT.)

THE recent activity in the shares of the Tanganyika Concessions is largely explained by the declaration of a maiden dividend; it is at the rate of 1s per share, and represents an interim distribution on account of 1925. Certainly, the shareholders have been called upon to exercise an exceptional degree of patience. The company was registered as far back as January, 1899, and in the meantime the price of the shares has been up to £26 10s and down to 14s. About the middle of 1922, it may be recalled, an issue of 10 per cent. preference shares was made at par for the purpose of enabling the company to take up its proportion of the Union Minière new capital. Until June, 1927, these shares are convertible (at one month's notice) into ordinary shares upon payment of 2s per share. For each of the first two years the interest was, in effect, mainly provided out of the carry-forward. In 1923 the company received in respect of its holdings in the Union Minière Company a total of 5,829,750f. This, taken at the exchange of 96.28 to the £1, represented £60,200; but after providing for administration expenditure and interest only £18,900 remained. The dividend called for £109,600. Last year's dividends on the Katanga holding—13,325,100f—are set out as equivalent to £138,700, giving a net profit of £99,750. Even this scarcely covers the preference dividend; still, on the present occasion, the payment of the latter only entails a small draft on the carry-forward.

The report and accounts of the Union Minière Company, a translation of which is appended, abound in points of interest. Progress is shown practically all along the line. The output of copper amounted to 85,570 tons, comparing with 57,900 tons in 1923 and only 18,960 tons in 1920. [The production for the first half of the current year totals 43,695 tons, as against 36,830 tons in the corresponding period of 1923.] Of cassiterite (tin ore) the production, at 690 tons, indicated a small falling off, operations being hindered by shortage of native labour. The production of cobaltic alloy was started in June, about 1,000 tons being turned out. Of radium 22 grammes were obtained, this quantity representing 80 per cent. of the world's supply. The collieries turned out 75,000 tons, an increase of 18,000 tons on the 1923 amount. A gross working profit was made of 111,715,400f, in place of 78,872,760f. Interest and amortisations absorbed respectively 17,732,400f and 15,762,730f, leaving the net surpluses at 82,341,800f and 51,031,630f. After the payment of 80f dividend for 1923, a balance of 4,456,000f was brought forward. The distribution of 135f for 1924 will leave only a small sum to go over. The portfolio has been increased to 33,305,800f, mainly by the subscription for additional capital issued by the Hoboken Metallurgical Works of Antwerp, which refines a large proportion of the company's products. A 50 per cent. interest is now owned in this concern.

Transport expenses representing—it is estimated—something like one-half the company's production costs, much importance attaches to the measures now on foot for the provision of additional facilities. Hitherto the company's imports and exports have passed either over the Rhodesian railways to Beira, or by way of the rivers, the Great Lakes, and the railway to Dar-es-Salaam, higher up the eastern coast of Africa. It has always been intended that the Benguella Railway from Lobito Bay should be extended to the copper field. A contract has now been made with a British firm to construct the balance of the line by about the end of 1927. Moreover, the completion of the Bas Congo Railway has also been put in hand. Important extensions to the Union Minière's treatment works are in progress, with a view to the gradual expansion of the copper output to 200,000 tons per annum within a period

of five years. A subsidiary hydro-electric power company is also on the tapis.

Thanks almost entirely to the inclusion of £118,500 profit on sales of shares and debentures, the income of the Zambesia Exploring Company last year jumped to £166,160. Of this the directors transferred £100,000 to reserve for general purposes, but especially against fluctuations in exchange. A dividend of 1s per share was paid in August last—in effect, out of the carry forward—on the strength of the profits made since the closing of the accounts. A further distribution of 1s 6d is now recommended. This will absorb the year's net profit, plus the surplus brought in. The company's investments figure in the balance-sheet at £615,000. On July 15th last the quoted investments alone had a value of £1,780,000. Outside gilt-edged stocks the principal holdings comprise 352,800 ordinary and 30,800 preference shares in the Tanganyika and £914,700 5 per cent. debentures of the Benguella Railway. The Tanganyika Concessions, of course, holds a controlling interest in the latter concern and in the Rhodesia-Katanga Railway. The two companies also hold between them the bulk of the capital of the Nile-Congo Divide Syndicate, which has prospecting rights granted by the Sudan Government over an extensive area. The most interesting discovery so far is a gold-copper deposit upon which extensive native workings exist.

Notes of the Week.

Cost of Naval Construction.—Details of the programme of new construction for which the Admiralty has obtained Cabinet approval are given in a White Paper issued this week.* The existing programme provides for progress on vessels under construction, provision for which was made in the 1925-26 estimates to a total of £6,708,567. If construction proceeds uninterruptedly, however, and accounts can be liquidated punctually, the Admiralty believes that the total expenditure may prove to be about £7,647,000, or about £939,000 more, and the amount remaining to be met in subsequent years will be £10,158,000, or £9,219,000 if the £939,000 is paid in 1925-26. The new programme contemplates, over and above this, the construction between 1925-26 and 1929-30 of nine Class "A" and seven Class "B" cruisers, 27 destroyers, 24 submarines, and various other craft, which will cost in all £58,000,000, of which £37,670,000 will fall on Navy Votes during the period. The total expenditure falling to be met year by year if construction proceeds uninterruptedly is:—

	1925-26.	1926-27.	1927-28.	1928-29.	1929-30.
Old programme	£ 7,647,000	£ 6,954,000	£ 2,197,000	£ 68,000	£ ..
New programme ..	527,170	3,724,000	8,526,000	11,997,000	12,896,000
	8,174,170	10,678,000	10,723,000	12,065,000	12,896,000

The extra £527,170 required for 1925-26 is to be obtained as to £447,070 by reduced expenditure in other directions, and as to £80,000 by utilising anticipated surpluses of appropriations-in-aid, while a Supplementary Estimate has been tabled to meet the net deficiency of £100. The Admiralty states further that in the light of all past experience it is reasonable to anticipate that payments will not fall due at the rate shown above, and a deduction of 10 per cent. or more over part of the programme will almost certainly be made in order to arrive at the estimates laid before Parliament in any given year. Even so, the taxpayer may be excused a certain amount of scepticism as to the possibility of squaring this programme with a progressive reduction in the total bill he will eventually be called upon to meet, despite the promised retrenching zeal of the Admiralty, Mr Churchill, a Cabinet Committee, and an outside triumvirate.

* Cmd. 2476. H.M. Stationery Office.

The Food Council.—In the House of Commons on Tuesday an announcement was made of the terms of reference and the names of members of the Food Council, appointed as a result of the recommendation of the Royal Commission on Food Prices in its first report. The new Council is "to investigate and from time to time report to the President of the Board of Trade on such questions as, by reason of complaints from persons interested or otherwise, appear to the Council to require investigation in the interests of consumers or traders, or are referred to them by the President of the Board of Trade, relating to the supply or price of articles of food of general consumption, and in particular the following:—Wheat, flour, bread, meat, bacon and ham, milk, butter, cheese, eggs, fish, fruit and vegetables, sugar, and tea." Lord Bradbury, who has accepted the chairmanship, will be assisted by eleven other members, three of whom were members of the Royal Commission, while one, the wife of a railway plumber, was a witness before the Commission, and sits in her capacity as a working housewife. Lord Bradbury stated on Tuesday that the main objects of the Council were to advise the Government on all questions relating to the production and distribution of food and to make public certain facts with regard to food prices. The Royal Commission had recommended that the Council should have statutory powers to send for persons and documents, and, if considered necessary, direct an inquiry into the trading accounts of the particular persons concerned. The Government, however, had decided that those powers should not at present be conferred. It was desirable that, if possible, there should be cordial co-operation between traders and the Council. He believed that information would be supplied voluntarily to the Council, and if there was any difficulty or if information was found to be inaccurate, it would then become necessary that such powers should be sought, and the Prime Minister had given a pledge that the Government would be asked to confer them upon the Council. If necessary, the question of trusts and combines would have to be tackled.

Germany and the League.—In a speech at Birmingham on Saturday, Mr Austen Chamberlain expressed some regret that the recent German Note was of such a character as to make a continuance of written interchanges, rather than personal conversations, necessary. That appears to be another way of saying that the Foreign Minister has comparatively little hope of seeing Germany admitted to the League in September, for further negotiations by formal Notes can at the best form only a penultimate stage, with something in the nature of a conference to follow, at which definite agreements can be struck. So far there has been no real discussion between London and Paris regarding the German Note. M. Briand has put his first impressions on paper and sent them to London, and Mr Chamberlain has done much the same for his French colleague's benefit. It is clear that, as usual, the French are the more exacting in their requirements, but no very serious divergence between the two Foreign Ministers has been revealed. The uncertain element in the whole affair is the extent to which the German Note was worded to meet the exigencies of public opinion at home. Is it, for example, politically impossible for Dr Luther and Herr Stresemann to carry their country into the League of Nations over the barrier which Article XVI. appears to present, or will they, having made their demonstration in public, be content, as part of a general settlement, or in the recognition of the manifest advantages League membership would confer, to come in without the kind of absolute reservation which the League Assembly would find it out of the question to accept? That is the sort of question which personal conversations between the Allied and German Foreign Ministers might settle in 10 minutes. It can clearly never be resolved by the written communication method. But despite signs that the negotiations are tending to drag, there is always the possibility that they may take a sudden turn, particularly since the evacuation of the Ruhr by the French and the new reasonableness of the Germans in the matter of the disarmament demands is creating an increasingly favourable atmosphere. If Dr Stresemann is really anxious, as he appears to be, to get Germany into the League, it will be easier for him to do it

by a sudden stroke at the eleventh hour than to embroil himself in long discussions which would give his opponents time to mobilise their full forces.

The Mosul Report.—The report of the League of Nations Commission on Mosul is now in the hands of the British and Turkish Governments, and is likely to be published at any moment. That is just as well, for speculation (with various inspired rumours in the Turkish Press as basis) on its contents is already rife, and the sooner the whole truth is given the opportunity of killing half-truths the better. What is certain is that the three commissioners who were appointed by the League Council to investigate the whole situation and report have produced no clear-cut recommendations as to the frontier line, and the task of actually delimiting the disputed boundary will therefore fall on the Council itself. The Council would, of course, have had in any case to give the final ruling, whether it merely endorsed proposals framed by its Commission or not, and it is to be noted that both the British and the Turkish Governments have undertaken to abide by the award. Both of them will be entitled to take part in the discussion of what that award shall be, but when it comes to actually adopting it neither of the interested parties has a vote. It appears, however, that a more important decision will have to be taken in Whitehall than in Geneva, for it is understood that the League Commission takes the not unnatural view that everything depends as to whether Iraq is to cease to be under British tutelage at the end of the four years contemplated in the Treaty of 1922, or whether the "administrative advice and assistance" at present extended by this country is to be continued for a longer period than that. It is quite intelligible that any body of commissioners should conclude that even though Iraq can make good its claim to the Mosul vilayet on ethnical grounds, it would be only asking for trouble to assign the territory to a State which could not defend it, leaving Turkey to walk in whenever she felt so disposed. In these circumstances the League Council will have a delicate enough task before it when it assembles at Geneva in September. The Turks have already been making an active propaganda against the Report, or what they believe to be the Report, of the League Commission. That is sufficiently characteristic of Turkish diplomatic methods to occasion no small surprise. But it is a little unfortunate that the *Times*, in an article which in almost so many words accuses one of the Commissioners of strong pro-Turkish bias, should seem similarly to be attempting to discredit the Commission's report in advance. That kind of weapon is better left to the Turks. This country has pledged itself to abide by the League Council's ruling, and whatever it is it may as well be accepted with good grace.

The Superphosphates Inquiry.—That the Government have decided not to put a duty on imports of superphosphate is not surprising in view of the several facts which emerged from the public inquiry. When the announcement was first made that the Board of Trade had given its sanction to the holding of an inquiry, the opinion was expressed in these columns that a case for protection would be very difficult to substantiate. The Board of Trade submitted the case to a Committee consisting of Sir Arthur Whinney (chairman), Sir Henry Rew, and Mr Arthur Hollins, and after a full inquiry the Committee have split to the extent of issuing two independent and directly conflicting reports. Sir Arthur Whinney came to the conclusion that the claim had been made out in terms of the Government's famous White Paper of February 3rd, but even he was not prepared to go very far in the recommendation of a duty. Against the applicants' demand for a prohibitive duty of £1 a ton, Sir Arthur Whinney held that no more than 7s 6d a ton should be imposed, and that for two years only. The other members of the Committee would not have any duty at all. Certainly, the evidence adduced by the superphosphate manufacturers' organisation could hardly have been less convincing. In the first place, the number of men employed in the industry was stated to be over 16,000, but it was

found necessary at a later stage of the inquiry to modify this total to the comparatively insignificant number of 5,000. Again, owing to statistical errors, the statement submitted by one prominent witness on behalf of the applicants was ruled out entirely. Even the slender argument for a protective duty which might have provided a basis for an appeal was carelessly presented, and so much admitted by the applicants' legal representative. But apart from this, it was made clear at the inquiry that improvements could be made within the industry, and that the cost of production could be lowered by closer attention to details of organisation, not only among producers, but in works management. The export trade in this product is now virtually non-existent, not because of unfair competition, but in consequence of the growth of manufacture in consuming markets. This is an obstacle which is met with in almost all branches of British export trade, as was clearly demonstrated in the recent report of the Balfour Committee on Industry and Trade. The effect of a duty would certainly have been to increase the price considerably to the British user, and even now current quotations for superphosphate are proportionately higher than for any other fertiliser, as compared with pre-war rates, without any such artificial stimulus. Here then would have been an industry employing about 5,000 men subsidised by another industry equally hard hit, but employing one million persons. It is an established fact that the acreage of land under cultivation has decreased during recent years, owing to the depression in agriculture, and any further burden, such as an appreciable increase in the price of an essential fertiliser, would have served only to accelerate this decline, and thus swell the number of unemployed.

The World's Harvest Prospects.—The July Bulletin of the International Institute of Agriculture indicates that cereal production in countries North of the Equator is likely to give better results this year than last. The situation is summarised, on the basis of the most recent available estimates, in the table which follows:—

PRODUCTION OF CEREALS.
(Million Centals of 100 lbs.)

Crops and Countries.	1922.	1923.	1924.	1925.
WHEAT.				
Europe (12 countries)	312.0	389.2	290.7	374.2
Canada and United States	760.4	763.0	680.9	626.8
Asia (4 countries)	243.2	244.1	238.8	226.2
North Africa (3 countries)	20.1	39.8	30.6	41.1
Total (21 countries)	1,335.7	1,436.1	1,241.0	1,268.3
RYE.				
Europe (11 countries)	181.2	204.9	142.7	211.2
Canada and United States	76.0	48.3	43.2	37.6
Total (13 countries)	257.2	253.2	185.9	248.8
BARLEY.				
Europe (11 countries)	137.3	148.0	103.6	107.4
Canada and United States	121.9	131.9	132.8	141.4
Asia (3 countries)	59.0	50.8	54.1	67.0
North Africa (3 countries)	22.0	45.0	35.8	41.3
Total (19 countries)	340.2	375.7	326.3	357.1
OATS.				
Europe (10 countries)	137.1	153.8	116.0	118.3
Canada and United States	556.1	609.6	631.4	572.9
North Africa (3 countries)	2.7	7.2	3.8	6.6
Total (15 countries)	695.9	770.6	751.2	697.8

As regards wheat, the table comprises only 70 per cent. of the aggregate production, and it is expected that a much greater increase over last year's figures will eventually be shown. The figures for rye are still more incomplete, Russian and German data being lacking, while the European figures include only 30 per cent. of the total barley crop, but in both cases a substantial advance on last year's results is anticipated. The estimated yield of oats (based on data covering about one-half of the whole production) shows, on the other hand, a decline of 7 per cent. as compared with 1924, and of 9 per cent. as compared with 1923. Prospects are, on the whole, quite encouraging. An analysis of the chief factors in the present European wheat situation appears in an earlier article in this number.

Workplaces—A 1921 Censal Experiment.—The latest volume of the 1921 Census of England and Wales * embodies the results of an interesting experiment, carried out for the first time either in this country, or, so far as can be ascertained, in any country in the world. An inquiry into statistics of *workplace* was instituted in 1921 for the purpose of furnishing assistance in connection with such problems as improved transport facilities for the workers, housing, and continuation schools—problems which are certainly no less pressing to-day than four years ago. The analysis of the daily tides of population movement between one area and another was also expected to provide material for inferences in regard to the day populations and the limits within which individual populations regularly expand and contract, of especial service to local authorities, tradesmen, and those who supply the material needs of these pulsating populations. The present volume consists of three tables—the first showing for each urban and each rural area of England and Wales its total population and the number of occupied persons over 12 enumerated in the district, the number of these who work outside the district, and the number of persons travelling to work into the district; the second table carries the analysis further, and shows for the more important movements, the districts to and from which the latter persons travel; while the third table shows for the principal towns (of over 20,000 population) the aggregate of the inward and outward movement, the net balance of the two movements, and a comparison of the night and day populations of the several towns. As would be expected, the largest total movements are towards the centre of London; the night population of the City of London being raised from 13,709 by a net inward movement of 423,006 persons to no less than 436,715 during the day; while the City of Westminster receives a net inward movement of 244,406 persons. The effect of these heavy movements results in the City of London having a day population nearly 32 times its night population, while the corresponding ratios for Westminster and Holborn Metropolitan Boroughs are 2½ and 2½ respectively. Amongst towns with more than 20,000 inhabitants (outside London), the following show large daily changes:—

Increases during the Day.	%	Decreases during the Day.	%
Walsand	24	Leyton	25
Stratford	22	Hornsey	25
Rugby	17	East Ham	24
Eaton	17	Hanwell	23
Hebburn	17	Walthamstow	22
Bedwellty	16	Sutton-in-Ashfield	21
Chelmsford	14	Edmonton	20
Chadderton	13	Southgate	20
Manchester	10	Newcastle-under-Lyme	20
Newcastle-upon-Tyne	8	Castleford	19
Luton	7	Mansfield	15
Derby	6	Eccles	14
Coventry	5	Salford	12

There are even greater percentage variations in smaller towns, though the numbers involved are naturally of less significance.

Industrial Disputes.—The Ministry of Labour presents, in the current issue of its Gazette, a series of figures showing the number of workpeople involved in industrial disputes causing stoppage of work in each of the years 1893 to 1924, together with estimates of the working time lost. Statistics are also given as to the causes, results, and methods of settlement of such disputes in the last 15 years. As this is the first occasion since 1913 that such a series of figures has been published, the statistics are of considerable interest. From the first table in the review it is possible to derive the following averages:—

	Average Number Involved.	Average Number of Days Lost.
1893-1913 (Pre-War)	380,000	8,750,000
1914-1918 (War)	630,000	5,400,000
1919-1924 (Post-War)	1,300,000	31,000,000

This summary illustrates the serious extension of industrial disturbances in the post-war period. The details on which it is based, however, show that the high figures occurred in the years 1919 to 1922. In 1923 there was a marked

* "Census of England and Wales, 1921: Workplaces." Obtainable from H.M. Stationery Office, Adastral House, Kingsway, W.C.2. 16s.

decline in the number of days lost. In 1924 the loss of time was below the average of the pre-war years, and in the first half of 1925 the loss (950,000 days) has been considerably below the average. An important feature of the figures for 1919 to 1922 is that over 80 per cent. of the days lost were accounted for by only nine stoppages, and over 50 per cent. by the two coal disputes of 1920 and 1921. In considering the bare figures of the loss of time as a barometer of industrial unrest, therefore, it must be remembered that they reflect not only expansions and contractions from year to year in the amount of dislocation in industry as a whole, but also such factors as the development of trade unionism and the growing use in the later years of the strike weapon on a national basis. The statistics as to the causes of disputes indicate that during the last 15 years 69 per cent. of the workers involved were, on average, in disputes over wages questions. One value of this figure is that it enables a sense of proportion to be brought to bear on the disputes statistics as a whole. The average number of workers directly involved in disputes on wages questions in the years 1919 to 1924 was 935,000. The average number of workers whose wages were changed in this period was 6,100,000. The proportion of workers who had recourse to a stoppage of work was thus about 15 per cent. of those whose wages were actually varied. In the four years preceding the outbreak of war, for which corresponding figures are available, the proportion was 36 per cent. While, therefore, the figures as to disputes come as a timely warning of the serious results of industrial strife, they should not be allowed to lead to exaggerated conclusions which tend to detract from the value of the work of peaceful negotiation which is constantly being performed with success to avoid stoppages of work. The details as to results are not without significance. On average 19 per cent. of the workers involved gained their point, in 15 per cent. of the cases the employers were successful, and in 66 per cent. the result was a compromise.

Subsistence Wages.—A feature of wage negotiations of recent months which has a certain significance has been the tendency to alleviate the burden of low wages in certain industries in which, under the normal machinery for wage regulation, wages have become exceptionally depressed. The outstanding instance occurs in the coal mining industry, in which subsistence rates have been fixed in most of the principal coalfields, which represent the lowest amounts payable to any class of worker. These rates range from 6s 2d a shift in South Staffordshire and Salop to 8s 0½d in South Wales. In other districts specified amounts are granted to workers whose earnings fall below a certain limit. In the steel smelting shops allowances are

granted, in addition to the earnings yielded by the selling price sliding scale, ranging from 1s 2d per shift to those whose base rate is 3.10d to 2d to those whose base rates are 6s 6d to 7s. Another example of a slightly different character occurs at the blast furnaces and iron mines in Cumberland, where the normal earnings are determined by the selling price of pig-iron. To these workers a special bonus has been granted, over and above such earnings, which varies in accordance with changes in the cost of living index numbers. Other instances have also occurred where concessions have been made to all classes of workers in certain industries whose wages, as determined by selling prices, are abnormally low. In the tinplate industry in South Wales a special addition of 7½ per cent. is being paid on basis rates over and above the percentage warranted by the selling price of steel tin bars. In Cleveland the last reduction under the sliding scale for blast furnace workers has been waived, and in Northamptonshire reductions due in the wages of blast furnace and iron mine workers have been postponed, and spread over a period of six months. These instances differ in character from such general provisions as are contained in the railway, coal mining and other agreements, which specify certain limits below which wages generally are not to be reduced under the operation of arrangements for periodical adjustments. They represent in most cases the granting of additional amounts after wages have reached a point which the employers and workers consider to be the subsistence level. They are, in fact, definite attempts to satisfy the demands of the workers for a reasonable living wage, irrespective of the rate of wages which the economic position of the industry would normally warrant.

Rubber Market Petitions.—As a direct outcome of the recent excitement in rubber shares, the Stock Exchange Committee have been presented this week with three petitions dealing with the situation caused by the sudden accession of business in the rubber share market. The first of these petitions, writes a Stock Exchange correspondent, asked that the making-up day for rubber, tea and coffee shares should be made the same as that for mining shares; the second memorial counter-petitioned against this; and the third, presented by a small number of members, prayed that the tea share market should be left out of whatever legislation was made in the direction of altering the present state of affairs. Public interest is closely touched by the effect of the rubber boom, and these petitions deserve recognition as holding points of importance which go far beyond the convenience of brokers and jobbers in dealing. The pay day is now always a Thursday. Four times a year there are twenty-one days in an account, as, for instance, there is in the current settlement; the rest of the year is given up to settlements of fourteen days each. All of them end, as already mentioned, on Thursday. Mining contango day falls on a Monday; and the general contango day is Tuesday, in the alternate weeks. By Stock Exchange practice, which has become so deeply rooted as to render its abandonment practically impossible, the mining contangoes are now done, not on Monday, but on the preceding Friday. The petitions upon which the Stock Exchange Committee have been deliberating on Monday and Thursday in this week, arose through the suggestion that contangoes in rubber shares should be done on the mining day, that is Monday. The great objection is that if this were permitted, the carry-over would be pushed still further back, and start on the previous Friday in respect of the settlement that ended on the following Thursday. Although the preliminary contango day has established such a hold as to render it almost ineradicable, there is a good deal of quiet grumbling on the part of the public at the disability which this lays upon them of being unable to deal, except at a disadvantage, for cash after the Friday that precedes the following Thursday account day. If the rubber share market were to come under the operation of the mining rule, buyers of shares who wished to sell them before the account would have to do so by Friday at the latest, instead of being able to wait until the Monday in the same week as the account day itself. Experience shows that Saturday and Sunday, although the Stock Exchange is closed on those days, are of some consequence to business, in that they produce the largest number of

bargains on the Monday, transacted on any day in the week. If bargains in rubber shares had to be practically closed by Friday night in respect of the account which finished on the following Thursday, the public would have a legitimate grievance. Nevertheless, the fixing of the rubber market contango day for Monday would mean that the work of passing names, and other such transfer details, could be started on the Tuesday, thus enabling clients to receive their cheques for sales on Thursday if they deliver stock on that day. The last few Stock Exchange settlements have been particularly heavy in the rubber share market, with the result that on Wednesday, ticket day, it has been found impossible in many offices to get transfers prepared and sent away before Thursday, the account day itself. Numbers of deeds have been delayed, in fact, until Friday, or even the following Monday. This involves the public in delay, which may prove decidedly inconvenient to people who, having sold for a certain date, expect to be in a position to get their money on that date. It may be said that in any rush of Stock Exchange business that may occur, such delays are inevitable. It may be further admitted that the Government's contention of the probable temporary character of the recent rise in the price of raw rubber is likely to prove correct, and that, as rubber comes down in price, so will the excitement subside. This, indeed, it has already started to do during the present week, owing to sympathy with the generally dull conditions prevailing in the Stock Exchange as a result of the crisis in the mining industry. It is difficult for the Stock Exchange Committee to legislate for abnormal and exceptional times. Fresh rules, introduced in a hurry in order to deal with immediate difficulties, may lay a handicap upon business rather than prove a benefit to it when the market returns to calmer and more tranquil conditions.

South Africa's New Tariff.—Our Johannesburg correspondent writes:—Mr Plant, Professor of Commerce at the University of Cape Town, recently delivered an address on the Customs tariff of the Union of South Africa before the Economic Society. He pointed out that in South Africa the predominance of the Customs duties in the revenue systems of the Cape, after the beginning of last century, was due to ease of collection in a vast new country, where the population was scattered and the tax-collectors were few, and the partiality of the Administration for a system which left the public doubtful as to the actual weight of the burden they were carrying. With improvements in transport, trade increased rapidly during the century, and the revenue from Customs became the most important source for Cape Colony, and later for Natal, the Transvaal, and the Orange Free State. The percentage of total revenue obtained from this source immediately before and after the war was as follows:—

Year.	Customs.	Excise.	Income-tax.	Total Revenue
	%	%	%	(£'s millions).
1911-1912	26	2½	nil	17.37
1912-1913	26½	2½	—	17.44
1913-1914	29½	3½	—	15.98
1918-1919	27½	5½	20	21.91
1919-1920	23½	6½	17½	26.89
1920-1921	30½	4½	16½	29.68
1921-1922	17½	6	24	28.88

In the past 10 years the total yield of Customs duties has increased from £4,634,000 to £6,031,000, or from 15s to 17s per head of the total population. If, however, only Europeans are considered, the amount per head has increased from 70s 6d to 78s. The latter figures are only approximate, as allowance should be made for such part of the imports as is sold to non-Europeans. Taking them as they stand, however, the figures are higher than for other countries, and compare with 62.34 shillings for New Zealand, 55.16 shillings for Australia, 48.6 shillings for Canada, and as little as 13.53 shillings in the United States of America and 14.75 shillings in the United Kingdom. In South Africa a surprisingly small percentage of revenue is obtained from Excise, averaging since the war only about one-twentieth of the revenue. Viewed as a whole, the proposals for increased protection do not carry conviction, while a regrettable feature is the failure to recommend bounties instead of import duties, so that the prices would not have risen, and that

the public might know the cost involved in industrial aspirations. The burden as at present arranged will continue to fall on the mining and farming community, who sell their produce in the world market at the world's price. It is clear that the small white population of the Union does not afford an adequate market for the building up of large industries, and protected industries in South Africa have no hope of competing in the world market. Industrial development should take the form of working up of South African raw materials, and the rate of development will depend upon the efficiency of the methods employed and on the cost of production.

Balance of Payments in Argentina.—Mr Carlos A Tornquist has prepared a statement showing the balance of payments in Argentina for the economic year 1922-23. The various items are:—

DEBTOR.	Mil. \$ Gold.	CREDITOR.	Mil. \$ Gold.
Imports	846.0	Exports	767.0
Service of the Public Debt	52.0	Issues of already established undertakings	8.0
Service of "Odéus Hipotecarias"	6.9	New capital	15.0
Railway companies' dividends & interest	69.5	Convention with France and England—Interest	1.7
Earnings of other capital	32.8	Interest on foreign securities	2.0
Remittances & savings of foreign residents in Argentina	38.0	Sale of Argentine bonds	14.0
Expenditure of Argentine travellers in foreign countries	12.0	Expenditure of foreign travellers in Argentina	6.0
Argentine bonds repatriated	16.0	Decrease in gold stock	1.85
Convention with England and France—Increase of balance	0.8	Loans	15.1
Cancellation of loans	0.8	Foreign correspondents' and accounts	9.0
Decrease of mortgage capital	1.9	Balance	239.05
Total	1,076.7	Total	1,076.7

The account thus closes with a debit balance of, roughly, 240 million gold pesos, which is increased to nearly 264 millions when new loans placed and accounts opened abroad during the period are included. Deducting about 30½ millions for repatriation of Argentine bonds, &c., Mr Tornquist arrives at the final conclusion that the "national patrimony" of Argentina was reduced by approximately 233 million gold pesos during the year in question. This result, which can scarcely be called gratifying, gives rise to the following comment:—"Argentina still lacks a fixed economic-commercial policy. The economic state of the world..... obliges her, to-day more than ever, to defend and develop her production and her future as a nation. It renders it indispensable that she should fix the main lines of her economic evolution for the future, and co-ordinate Governmental action and productive activity. As a debtor country, her primary aims ought to be directed towards balancing her commercial interchange as favourably as possible, in order thus to accentuate her economic independence. This thesis ought to be the great guiding principle of all her economic life in the future." The soundness of these remarks will be apparent to all.

Swiss Finances and Exports.—A Geneva correspondent writes:—The Swiss Parliament in its last session approved the final accounts of the Confederation for 1924. The total deficit reached £1,739,124 (43,478,122f), while it had been estimated at nearly £2,520,000 (63 million francs). This improved result is mainly due to an increase in the receipts from Customs (+ £628,000), military tax (+ £180,000), post and telegraph service (+ £140,000), and to a reduction in the expenses of all Federal services. This result is the more satisfactory since extraordinary expenditure was last year very high, its total being £1,600,000 (40 million francs), including £400,000 for the electrification of railways, £1,800,000 for unemployment, £500,000 for the hotel industry, and £600,000 for helping the embroidery industry. That Swiss Federal finances have very much improved during the past five years is clearly shown by the reduction in the yearly deficit which reached £5,200,000 in 1914, £8,360,000 in 1915, £10,600,000 in 1919, and £8,720,000 in 1921, but which thereafter decreased gradually to £2,080,000 in 1922, £2,640,000 in 1923, and £1,739,124 in 1924. It is now expected that in 1926 there will be a surplus of between £1,600,000 and £2,000,000, which will be used

for repaying the public debt according to the plan set up by the Finance Department. After a period of four years, during which Swiss exporters laboured under difficult circumstances, the economic situation so much improved that it was nearly normal last year. During 1924 foreign trade was very satisfactory; exports increased month after month, the adverse balance was reduced, failures totalled only 553 as against 677 in 1922 and 685 in 1923; the number of factories, for the first time since the end of the war, showed an increase, its total being 8,103 at the end of 1924, compared with 7,934 in 1923, and 9,316 in 1918, which was a record year; and the number of hands employed in those factories was 357,000 in 1924, as against 305,000 in 1923 and 400,000 in 1918. But since the beginning of the present year there has been a certain slackness in foreign trade; exports were £20,177,972 during the first quarter, or £1,433,307 less than in 1924, and reached £6,588,727 in April, or £186,175 less than in April, 1924. It is true that they suddenly leapt to £7,641,978 in May, or £992,762 more than in May, 1924, but this increase is only temporary, and resulted from the re-establishment of the McKenna duties in Britain. Statistics show that while Britain purchased a monthly average of £1,440,000 of Swiss goods during previous months, her May purchases amounted to £2,509,342, a surplus of £1,069,341, which nearly corresponds to an aggregate increase of £1,197,515 in the exports of Swiss watches, silks and laces. If we deduct the additional £1,069,341 exported to Britain, Swiss exports in May show a decrease of £800,000 compared with May, 1924. It is pretty certain that June exports will be much higher than usual, and that the greater part of them will have gone to Britain, but after July 1st there is sure to be a drop, so that, on the whole, the recent figures do not indicate any marked improvement in the general situation.

Bolivian Prosperity.—A correspondent writes:—The centenary of the Bolivian Republic, to be celebrated next month (August 6th), finds the third largest State in South America in a more settled and sounder condition financially than for some time past. The recent election to the presidential chair of Dr José Gabino Villanueva was carried through without the customary untoward incidents, and this, in itself, seems something of a triumph for a Latin-American republic. A skilfully balanced national Budget for the current year has been submitted to, and approved by, Congress, while the exchange remains steady at about 2.96 bolivianos to the dollar. While there has been an increase in internal funded debt (from 12,372,962 bolivianos, at the end of 1923, to 19,501,833 bolivianos at the end of last year), the floating and short-time debt, which is likewise wholly internal, has been reduced from 17,204,045 to 14,224,739 bolivianos. The greater part of the Bolivian loans raised abroad have been employed upon reproductive enterprises, mainly railways, and there is every reason to believe that in a few years' time the remaining part of these loans will be repaid without undue pressure of taxation, as

have others raised for similar purposes. The volume of older internal bonds has gradually been reduced by the operation of their sinking funds. The prosperity of Bolivia will undoubtedly be largely increased by the connecting-up of its chief railway system with that of Argentina, thus, for the first time, affording direct transportation to the Atlantic coast. The distance now separating the Bolivian and Argentine railway systems is less than 70 miles. The last link between Tupiza and La Quiaca (a distance of 66 miles) is being rapidly bridged. The Argentine part of the work, as far as Atocha, has for some time been completed. The cramped position hitherto occupied by Bolivia will soon be sensibly relieved. Although the Pacific Chilean ports of Arica and Antofagasta will still be used, it is the intention of the Bolivian Government to send as much of the export traffic as possible over the newly-made line. The Industrial Exhibition, to be held in connection with the Centennial, is also likely to bring to Bolivia a considerable number of foreign visitors, among whom it is certain that some will be impressed by the great mineral values of the country. These have not been developed to anything like the extent that is known to be possible. The demand for antimony from the mines of Bolivia has recently been unprecedented, owing largely to the temporary cessation of supplies from China. Further capital is also being placed in the great mining districts of Potosi and Oruro, through which the new railway to the Atlantic coast, with its terminus at Buenos Aires, will pass. Great Britain stands still at the head of Bolivia's export trade, while from this country considerable shipments of iron and steel, machinery and cotton goods proceed.

Anglo-Dutch Results.—It is a pleasure in these days to see the accounts of an important company presented in a lucid manner, and in such detail as to enable shareholders to ascertain both the exact financial position of their undertaking and the measure of progress achieved from year to year. In this respect the directors of the Anglo-Dutch Plantations of Java are to be congratulated in setting a much-needed example to those of other enterprises. The outcome of operations for the 12 months to December 31st last will be seen from the following table:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
Share capital.....	£1,285,780	£1,285,780	£1,330,170	£1,330,170	£1,330,170	£1,330,170	£1,330,170
Loan capital.....	..	..	..	..	..	149,918	500,000
Net profit.....	89,317	215,350	147,186	116,556	231,653	233,735	242,540
Brought forward.....	71,937	58,311	48,475	50,898	51,644	109,581	111,696
Available for distribution.....	161,254	273,661	195,661	167,454	283,297	343,316	374,235
Paid in dividends....	102,943	235,187	144,763	115,810	173,715	231,620	251,753
Rate per cent.	8	17½	10 on old shares 2½ on new shares	6	9	12	13
Carried forward....	58,311	48,475	50,898	51,644	109,581	111,696	110,351

The recovery which has recently taken place in the price of rubber came too late to have any effect upon the results for 1924. The net profit, however, was slightly higher, the figure being £242,540, compared with £233,735 in 1923, so that with the sum of £111,696 brought forward the balance available for distribution was £374,235, compared with £343,316. Thus, the dividend was increased from 12 to 13 per cent., and the amount carried forward was £110,356. Since last year three estates have been amalgamated, and one new estate purchased, so that there are now 32 estates with a total planted area of 68,678 acres, compared with 34 estates of 63,439 acres in 1923. The total expenditure incurred last year on the estates and new clearings was £909,881, of which £472,693 has been charged to capital and £437,188 to revenue. This, however, does not include the purchase price of the Penggoeng Coffee Estate—namely, £11,179—which was satisfied by the allotment of 6,388 of the company's shares at 35s each. It is stated that the directors have entered into a contract with the General Rubber Company of New York for the sale of the greater part of the output as sprayed rubber for the next five years, the price received for delivery being the daily spot price for smoked sheet in London.

Obersea Correspondence.

FRANCE.—RETURNING CONFIDENCE—RISING STOCK PRICES—NEW ISSUES—PHOSPHATES IN MOROCCO.

(FROM OUR CORRESPONDENT.)

PARIS, July 28.

No better proof could be given of returning confidence in this country, owing to the recent marked improvement in the political and financial outlook, than the remarkable recovery of French Rentes during the past few days. Three per Cents, which dropped to 42.55 early in the month and remained there until last Wednesday, recovered half a point on the following day and closed last night at 50. All other gilt-edged issues show the same tendency, and Crédit National, Crédit Foncier, and industrial bonds have participated in the improved situation, as well as practically all other issues yielding fixed rates of interest. The improvement in the various issues of Rentes is shown by the following detailed table:—

	Lowest in 1925.	Closing Prices on	
		July 23.	July 29.
3 per cent. Perpetual Rentes.....	42.55	44.50	51.40
5 per cent. 1915-16.....	52.95	54.70	60.00
4 per cent. 1917.....	44.35	44.35	50.00
4 per cent. 1918.....	43.70	43.90	49.60
5 per cent. 1920.....	66.25	70.50	74.25
6 per cent. 1920.....	60.85	60.85	68.70

Much of this has, of course, been due to the manner in which the new issue of 4 per cent. Rentes, in exchange for National Defence Bonds, is being taken up by the public. Both official and private opinion agrees that the success of M. Caillaux's attempt to get rid of the floating debt may already be regarded as a foregone conclusion, and this has induced a revival of confidence and a firm belief that the remainder of the Finance Minister's plans for the restoration of the national finances will prove equally satisfactory.

Another sign of returning confidence is seen in the large increase in appeals for new capital during the month of June, the last for which the figures are available. The total new issues amounted to 664,200,000f (including both shares and debenture bonds), as compared with 413,800,000f in May, and 217,800,000f in February last. The detailed monthly figures are as follows:—

(In Millions of Francs.)			
	Shares.	Debentures.	Total.
January.....	195.2	34.6	229.8
February.....	156.5	61.3	217.8
March.....	320.7	40.2	360.9
April.....	192.76	121.24	314
May.....	351.26	62.54	413.8
June.....	394.8	269.4	664.2
Totals.....	1,611.22	589.28	2,200.5

The respective average monthly totals during the first six months of 1923 were 178,223,000f of shares and 401,000,000f of bonds, and in 1924 of 300,500,000f of shares and 103,300,000f of bonds. The large rise in figures for June was largely due to the Paris Gas Company's new issue of 100,000,000f in debentures, and those of the Courrières Collieries of 70,000,000f and of Pechiney of 50,000,000f. A number of other important issues are pending.

The growing importance of Morocco from the economic point of view is best exemplified, perhaps, by the remarkable development of the vast deposits of phosphates which the country contains. Corn, fruit, and even flowers—large quantities of which are sent to Paris every day by aeroplane—are among the principal exports, and successful experiments are being made in cotton-growing, for certain varieties of which the Moorish soil is well suited. The phosphate deposits, however, are practically certain to prove the greatest source of Moorish economic wealth, so far as the immediate future is concerned. The principal beds of which exploitation has been begun form a triangular mass, covering an area of some 750,000 acres, and are situated between Casablanca and the River Zem, at a point called Kourigha. The latest estimates place the

exploitable total of marketable phosphates in these beds at 25,000 million tons. Other enormous beds extend southwards to beyond Taroudant, and are estimated to contain a tonnage that can only be expressed in astronomical figures.

The Kourigha section, which is situated at an average distance of less than 90 miles from the port of Casablanca, began development in 1921, under direct Government exploitation. The area under exploitation contains several hundred million tons, and already a town of appreciable size, containing villas and habitations for native labour, has sprung up on the beds. The remarkable development of the undertaking is shown by the facts that in the first year, 1921, 8,000 tons were shipped; in 1922, 80,000 tons; in 1923, about 200,000; in 1924, over 400,000. This year the total output is expected to reach 600,000 tons. The world's total output of phosphates in 1924 amounted to 7,000,000 tons. This year, for the first time, the tonnage produced by France and her colonies and the protectorates will reach nearly 60 per cent. of the total world output, while it is certain to exceed this in the future. The French should therefore be regarded, unless other large deposits are discovered elsewhere, as likely to control the world's markets for this valuable product in the future. This control, it will be remembered, was held before the war by the Germans, who were able some years ago arbitrarily to raise prices against their principal customers, the American farmers, who were absolutely dependent on German phosphates.

A remarkable factor in the situation is that the Moorish phosphates are being directly exploited by the French Government, through its Office National des Phosphates. This is probably the only instance worthy of the name in which a great industry in raw materials or natural resources is being successfully carried on as a State monopoly. Not even the Russian Soviet Government can parallel the French phosphate industry in Morocco. The fact is merely one other that explains much that is obscure in regard to the motives for Socialist and other party in regard to the war in the Riff. The political policy in regard to the war in the Riff. The importance of the rapid development of the Moroccan phosphate deposits in connection with the effort that is now being made for the restoration of the French finances, and particularly in relation to the exchange value of the franc, need not be emphasised.

GERMANY.—TARIFF—FINANCES—COAL AND IRON INDUSTRIES—FOREIGN TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, July 26.

THE Tariff Bill seems likely to become law. The food duties, with certain modifications embodied in a compromise come to last week by the Government parties, have been accepted by the Trade-Political Committee of the Reichstag; and thereby the difficulties raised through the rejection by part of the Centre of the proposed minimum food duties has been overcome. The minimum duties on breadstuffs have been abandoned, so that these duties may—at least, theoretically—be reduced indefinitely in exchange for concessions from grain-exporting countries. The proposed minimum duties were 55 marks per ton for wheat and 50 marks for rye. The normal rates in the absence of treaty reductions were to be 75 marks and 70 marks respectively, as before the war. The latter remain. In exchange for the abandonment of minimum grain duties, the Agrarians have got considerable concessions. The original Bill provided for reduced rates of 35 marks and 30 marks on wheat and rye respectively until July 31, 1926; the compromise shortens this term until March 31, 1926. The Cabinet declares, however, that the normal 75-mark and 70-mark duties are too high to be put so soon into force, and promises that it will not impose them even if they are not reduced by treaty before the last-mentioned date. A clause of the compromise agreement enables this to be done. It empowers the Cabinet, "in case of pressing economical necessity," and with the consent of the Reichsrat and of a Reichstag Committee, to alter or abolish any duties whatsoever, and to impose duties on wares free of duty at present. The Opposition contends that this power involves a Constitutional change,

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

and cannot be conferred except by a two-thirds Reichstag majority. For livestock the compromise fixes minimum duties for cattle and sheep, 130 marks per ton; for pigs, 145 marks. Both rates are much higher than the pre-war treaty rates.

The compromise enacts that the whole new "Minor Tariff" shall lapse on July 31, 1927, by which time the definitive revision of the 1902 tariff will presumably be put through. The temporarily reduced (also until March, 1926) duty on fresh meat is (per ton) 210 marks; bacon, 240 marks; lard, 60 marks; butter, 225 marks; margarine, 200 marks; canned meat, 400 marks; canned milk, 400 marks. The Customs receipts from breadstuffs, livestock, and meat are, after they are refunded by the Commissioner for Controlled Revenues, to be devoted to social and scientific purposes. The Left opposition to the tariff—in particular to the food duties—is very strong. The Cabinet is regarded as high Protectionist, and its willingness to reduce the "Minor Tariff" duties materially in exchange for foreign concessions is doubted. The treaty rates fixed lately with Belgium, which were negotiated on the basis of the "Minor Tariff," are mostly much higher than the treaty rates of 1914.

The conflict between Republic and States concerning the tax-yield subventions has not been allayed. The Finance Minister refuses to reduce the Republic's proposed shares, but has offered to guarantee the States 1,500 million marks from the sales tax yield. The Prussian Finance Ministry declares that the proposed reduction of Prussia's subvention from taxes means a deficit of 550 million marks. The Reichstag Taxation Committee has accepted the Government parties' proposal to reduce the sales tax to 1½ per cent., and the luxury sales tax to 7½ per cent., from present rates of 1½ and 10 per cent. respectively. A Socialist proposal to remove the sales tax from foodstuffs was rejected. The yields of the chief taxes in the first quarter of the financial year, as compared with estimates for the whole year, are:—

	April-June.	Financial Year.
	Marks.	Marks.
Income-tax.....	625,787,675	1,344,000,000
Corporation income-tax....	54,009,011	144,000,000
Property tax.....	67,179,970	376,000,000
Sales tax.....	370,709,195	1,260,000,000
Luxury sales tax.....	27,574,907	180,000,000
Capital transactions tax ..	38,807,135	198,000,000
Traffic tax.....	81,198,632	230,000,000
Customs.....	111,613,608	160,000,000
Tobacco.....	152,194,175	360,000,000
Beer.....	65,076,020	126,000,000
Sugar.....	60,864,967	231,000,000
Spirits monopoly.....	30,408,229	140,000,000
Wine.....	25,397,682	48,000,000

The total gross taxation receipts of 1,825 million marks (the Treasury account published last week gives nett taxation receipts after deduction of locally paid charges) is 311 million marks over receipts in the corresponding quarter of 1924.

The industrial situation outside the coal and heavy iron and steel branches continues to improve. Business is getting better in the electro-technical, farm machinery, and certain engineering branches. Unemployed on July 1st were 195,582 persons, showing a decline of 20,000 unemployed during the preceding half-month. The present number of unemployed is less than one-third of the number of February (593,000). The last trades union report shows an improvement of employment in the metal industries, taken as a whole. The depression in the heavy iron and steel branch, however, is daily more marked. Few orders

are being given, old orders have been withdrawn, delivery terms have been shortened (now about a fortnight for bars), and prices have declined. The scrap-iron market, which is a good index of conditions, is very weak. The Pig-Iron Syndicate reports dullness both in home and export trade, and it has reduced prices by up to 4 marks per ton, by 6 marks for foundry iron, Luxemburg quality. The employees in steelworks and rolling mills have given notice to terminate their agreement of last January, accepting the ten hours' day or three shifts per day system. The eight hours' day has been in force in iron-smelting since April, and the Economical Council has recommended that the compulsory eight hours' day be permanently enforced in all smelting concerns. The steel and rolling-mill employers declare that the increase in production cost which would be caused by a reversion to the three-shifts system would compel them to close down altogether. For exported bars only, 106 marks net is now being received, and even with the export bounty (paid ultimately by the employers themselves) the yield is only 118½ marks, although the higher price of 126 marks, ex works, charged at home does not (according to the manufacturers' statement) cover production cost. The price rebates to be granted by the Raw Steel Syndicate to manufacturers on iron consumed in manufacture of export goods have been fixed for the present at per metric ton, bars, 15 marks; hoop-iron, 7½ marks; wire rods, 12 marks; medium sheets, 7 marks; thin sheets, 10 marks; no rebate on heavy sheets. This will considerably help the engineering and other metal industries to compete abroad, but the home consumer of manufactured goods will pay correspondingly higher prices. The revival of the cartels and syndicates has made possible this kind of home exploitation and foreign dumping, and the cartels policy is being strongly criticised for monopolistic tendencies by, among others, the Reichsbank President, who holds that the whole price level could be reduced. The coal masters are negotiating with the Government for relief. They demand a prolongation of working hours, reduction of the social insurance burdens, and a new cut in railway rates. The last demand is opposed by the railways company on the ground of its liability for interest on Reparations bonds. The coalmasters declare that the freight reductions of May, granted in order to enable them to expel English coal from the coast, have proved inadequate. The output of Ruhr coal in June fell to 7,880,000 tons, against 8,400,000 tons in May. Exports of coal, coke, and lignite were 7 million tons in the first five months of the year, against 700,000 tons in the same months of 1924. Conditions in the whole Western "Heavy Industry" are highly unfavourable; and the present cartel and syndicate system of bolstering things up by reduction of output, differential prices, "fighting" freight rates, export bounties, and home exploitation, is not calculated to produce any lasting improvement.

The foreign trade report for June shows a new slight increase in the passive balance:—

(In Thousands of Reichsmarks.)

	Imports.		Exports.	
	May.	June.	May.	June.
Livestock.....	12,946	15,046	982	730
Food and drinks	292,712	344,450	40,175	34,357
Raw and half-manufactured foods	520,588	484,926	137,796	120,201
Manufactured goods....	167,101	164,766	549,049	530,436
Gold and silver	90,447	62,600	4,174	1,988
Totals	1,083,794	1,071,788	732,176	687,712

Imports in the first half of the year were 6,836.27 million marks, exports 4,132.09 million marks. Exports of most finished goods in June declined. It is an interesting question how much of the import surplus is due to export of coal, iron, motor-cars, paper and textiles at below world-market prices or even below production cost. These five classes are mentioned only because data concerning underselling in them has been much in evidence of late. Ultimately this question must be taken up in connection with Reparations transfers, although on the theory of Reparations dumping could hardly be objected to by competing countries.

The Bourse last week was again depressed, but there was

a marked recovery to-day, which mainly affected coal and iron stocks, the chief sufferers in the recent decline. On the 24th (*Frankfurter Zeitung's* index) a new low point of 74.12 was reached for home stocks, as against 74.76 one week earlier, and 111.37 on January 31st (100 at beginning of the year). There has been further foreign selling. The banks, which intervened with purchases a couple of months ago—as it appears too soon—have of late done nothing to support the market.

INDIA.—OVER-PRODUCTION OF COTTON GOODS— LOP-SIDED DEVELOPMENT—NEW ESSAY IN PROTECTION—TEA OUTLOOK—JUTE CROP.

(FROM OUR CORRESPONDENT.)

CALCUTTA, June 25.

WHILE Indian cotton manufacturers attribute current difficulties (including accumulation of stocks valued at eight crores of rupees) to official policy in retaining the excise duty while simultaneously maintaining exchange at 1s 6d, and the Indian-edited Press at Bombay lays at least equal stress on defects in technique and commercial management, a study of mill outputs suggests that at least a partial explanation of the present *impasse* must be sought in the rapid increase in production without any corresponding fall in prices, or, alternatively, any improvement in the economic position of consumers. That manufacturing prices are out of harmony with agricultural price-levels does not call for statistical demonstration; all the practical evidence required on that point being at hand in the reduced imports of piece-goods from Lancashire. A development less familiar to traders and manufacturers abroad is the rapid increase in the outturn in mill-made goods in this country. The following figures are in thousands of yards:—

	1913-14.	1923-24.	1924-25.
Grey and bleached—			
Shirtings and longcloth	292,487	443,847	525,526
T. cloth, domestics, & sheetings	128,988	68,075	77,742
Dhoties	284,769	399,214	458,404
Ohadars	69,870	58,003	61,614
Coloured piecegoods	291,845	503,920	588,078

From 1,164 million yards in the last pre-war year, Indian mills therefore increased their output by last year to nearly 2,000 million yards, imported piece-goods having dropped meanwhile from a pre-war average of 2,631 million yards to approximately 1,800 million yards in 1924-25. To the extent that indigenous manufacture has expanded, Lancashire exports, except on the remote chance of an early and substantial increase in the total Indian demand, may be regarded as permanently reduced. Labour and other difficulties notwithstanding, it may be predicted that as long-staple cotton growing increases, mill production of the finer qualities will increase almost concurrently. A glance at the growth in the production of coloured goods confirms the confidence thus expressed in the adaptability of the Indian industry to new demands.

Meanwhile production has undoubtedly outrun demand, necessitating, for a short period, either short-time working (some mills have already resorted to this policy) or lower wages, or both. This, at the cost of labour and other troubles, may meet immediate difficulties, but it ignores the main problem, which is to devise measures to the present low standards of agricultural productivity in this country, and therefore the purchasing power of the great body of consumers. Tedious and protracted as this solution may prove, it is the only one that really goes to the root of the problem that the cotton industry presents to us for treatment. An Economic Commission is forecast, and, provided its terms of reference bear primarily upon rural problems, one hopes it will be appointed, and will be composed of the ablest available authorities on rural economy drawn from every part of the world. A low level of demand is the primary obstacle to industrial development in India at this stage, as a close analysis of the position of such representative industries beyond challenge. The present cement factories, with a combined outturn not exceeding 600,000 tons, and imports less than a fourth of that figure, are compelled, in many cases, to close down for half of each year. There are other handicaps, but under-consumption stands first. The position of cotton manufacture has been already

analysed. With the aid of a high tariff *plus* a bounty, the Tata steel enterprise is showing a steady increase in output and sales, and is over its worst difficulties. In two years it calculates to produce at the rate of 400,000 tons of steel per annum; another works with an equal output would nearly exhaust the Indian demand. The lack of local demand is consequently an even stronger deterrent to the realisation of various steel projects than the immediate lack of adequate capital. In 1924-25, of 800,000 tons of pig-iron produced in India, 300,000 tons were exported. Export of Indian steel, in the event of new works outrunning Indian consumption, might prove more difficult. It follows that until Indian demand in many lines shows a vast expansion, industrial development must remain subject to limits so narrow as to debar exploitation of the advantages attached to large-scale production. In other words, the economic development of India is at present failing to preserve a healthy equipoise. Industries that may be described as premature births are being kept alive by highly artificial expedients; and industries that might be regarded as the natural offspring of Indian conditions are suffering from malnutrition if not positive starvation. A case of the latter description is sugar. Though a large producer, India last year paid Rs. 20 crores for sugar imported, mainly from Java, where State action has assisted to evolve a highly efficient industry. In India the Government Sugar Bureau is not even on a permanent basis, but lives, financially, from hand to mouth, a condition which greatly reduces its utility. Its officers, aided by small grants from factory-owners, have nevertheless evolved new types of cane which it is predicted "will completely revolutionise the sugar industry," subject only to a definite policy being planned for a term of years, an opportunity denied to the Bureau under the present administrative arrangements. This neglect of a semi-agricultural industry in favour of urban industries sustainable only by high tariffs offers a typical illustration of the empirical fiscal policies at present operative in India. The Agricultural Departments are financially starved, despite the large sum raised by special taxation of certain agricultural products. Thus the export duty on jute yields the Central Government a larger revenue than the cotton excise duty. The import duty on sugar last year yielded 6 crores of rupees. If the projected Economic Commission rectifies anomalies of the character thus indicated, it will render India an inestimable service, helping to revivify agriculture, thereby giving urban industries a more solid and wider foundation than can ever be obtained from tariffs, however high and however prolonged in their operation.

The Tariff Board has declined to recommend protection for the magnesium chloride industry, but favours an increase from 2½ to 5 per cent. in the tariff on imported inks in favour of the Hooghly Ink Co., a branch of three British firms, and at present the only firm in India manufacturing printer's ink on a large scale. The capital and control are wholly British, less than a hundred coolies being employed as labour. The printing and publishing trades opposed the application; and if paper mills are also to receive tariff aid, the burden of increased charges on these will be heavy.

Tea outturns, it is expected, will not greatly exceed those recorded for last season. The initial sales in Calcutta opened inauspiciously as regards quality and price, but there were technical reasons for the poorness of quality which hold the promise of a better standard as the season advances. An expert estimate of tea prospects placed at my disposal emphasises that while an early start with the 1925 crop does not necessarily mean a large crop for the whole season, it does mean a considerable increase in supplies in the near future. Labour remains inadequate, and checks larger production, despite every effort to tap new recruiting grounds, and secure fuller exploitation of old ones. A further increase in crops from both Java and Sumatra is probable, although not to the same degree as last year, and such increase may be counterbalanced by Ceylon, whose big jump of 20 million pounds last year was more than probably the direct outcome of an intensive two-year manuring programme. There is also the possibility of larger sales to Russia provided financial facilities can be arranged. In this case the danger of a definite shortage would again ensue.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,468,221

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS,
CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

Although the official forecast will probably show a much larger acreage allotted to jute this season, it will be necessary to make heavy allowances for the effect of excessive rains subsequent to sowing operations. A crop of 95 lakhs of bales would accord closest with expert calculations; as local mills require 55 lakhs, this would leave a considerably larger surplus than last year for export.

AUSTRALIA.—WOOL STABILISATION SCHEME.

(FROM OUR CORRESPONDENT.)

MELBOURNE, June 25.

A SCHEME for "regulation and stabilisation" of wool values was presented by Sir John Higgins at a conference of wool-growers at Melbourne on June 23rd. He explained that "stabilisation" is to be interpreted not as a method for the artificial fixation of prices, but as the means to minimise or eliminate as far as possible such price fluctuations as produce booms or slumps, which is to be accomplished through co-operation and co-ordination in collective marketing. He proposes to form a company, to be entitled British Australasian Wool Regulation and Realisation Association, Limited, or British Empire Wool Regulation and Realisation Association, Limited, to be registered with a capital of £50,000,000 in £25,000,000 interest-bearing wool certificates, and £25,000,000 shares of £1 each, the amounts of subscribed and paid-up capital being left blank in the draft. The shares are to be dividend-earning after a certain number of years at not exceeding, say, 7 per cent. per annum, and are not to be negotiable or transferable, except to members of the association or *bona-fide* producers of wool.

Apart from minor matters, such as freights, reconditioning of wool, dumping charges, and so forth, the principal part of the programme is that the association shall become the owner of the wool clips on an appraisalment under a Table of Limits based upon the statistical position of wool, including, amongst other things, world production (quantities and qualities), consumption, stocks (manufactured and semi-manufactured), purchasing power, fashions, &c., a deduction for contingencies being made. The first payment to the grower is to be made 14 days after appraisalment, the final at the close of the wool year, and the third payment (final, less deduction and expenses) when the whole of the clip for the particular wool year has been sold. Having acquired the wool from the growers, the association is to offer it for sale, with reserves to be fixed before auction sales.

In many respects the scheme is indefinite, and a number of questions are to be placed before Sir John Higgins to elucidate various points. As to its probable operation, the danger apparently is that in attempting to "stabilise" the market, a stock of unsold wool may be carried for more or less indefinite periods. On the other hand, if it is only intended to spread the selling throughout the whole of a season, but within the 12 months, it is believed that such an object, so far as it is judicious, can be effected by co-operation amongst existing organisations of selling brokers and wool-growers without establishing a great new organisation of a somewhat dictatorial character.

The scheme would not be a purely co-operative one amongst wool-growers, as it would involve obtaining the authority of the Commonwealth Government for the association to issue export licences, while in the early stages, at least, a financial guarantee from that Government would be required. In addition, Sir John Higgins considers

"that the Commonwealth Government would be warranted in asking the British Imperial Government and the Government of the Dominion of New Zealand and that of the Union of South Africa to co-operate and to contribute to a common guarantee." He states:—

"A stabilisation scheme which is beneficial for Australia is beneficial for the Empire, and particularly for those Dominions producing wool. It can therefore be logically held that in an application for a monetary guarantee the Commonwealth Government should consider the advisability of asking for an Empire guarantee, and can advance good and sound reasons why Australia should not be called upon to bear the whole load."

The circumstances under which the scheme was unfolded at the meeting on June 23rd did not require any immediate decision, and public discussion on its merits is only beginning.

ARGENTINA:—BUDGET AND BANKING—POST-OFFICE SAVINGS BANK—PUBLIC FINANCE.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, June 25.

ARGENTINE affairs during the past month have not suffered any appreciable change, the uncertainty ruling in respect of markets for her principal export products and the delayed recuperation of the exchange quotation for the Argentine dollar being reflected in business circles generally. Nor has the first month's session of Congress registered anything to warrant the hope that the business of the nation will be treated with the attention and urgency it undoubtedly demands, party interests being all-paramount, and the result deplorable, viewed from a Parliamentary standpoint. Fortunately for the Republic, the fact that Dr Alvear has gathered round him a Cabinet of able men working harmoniously together keeps administrative affairs moving forward, thanks to the expedient of Presidential Decrees; but inasmuch as this method of government is, strictly speaking, *ultra vires*, it becomes increasingly plain that a reform of Argentina's Parliamentary Customs and regulations is long overdue. Where this affected or real indifference to the business of the country more particularly clogs the wheels of progress is in the matter of the finances. The 1926 Budget estimates have been drawn up with an approximate total of \$626,000,000 paper; but inasmuch as the 1925 Budget still awaits discussion, and the slight probability of such discussion taking place is discounted by everyone, both this year's and next year's figures are looked on as mere academic statistics. Hence little attention is given to the proposal of the Government relative to the inclusion in the Budget receipts of contributions from the net profits of the Banco de la Nacion and the Banco Hipotecario Nacional. Yet both in principle and in practice this is a matter of the first moment, seeing that it renders the State directly interested in the financial result shown by these two most important institutions. To take, as has been suggested, the sum of \$1,500,000 paper from the 13 odd million dollars' profit of the National Mortgage Bank is practically feasible, the question of principle being omitted; but in the case of the Banco de la Nacion, with its widespread commitments and multiple functions, the affair must be considered from quite another aspect. The published net profits for the year ending December 31, 1924, were \$1,181,149 paper. Better than last year's figures, which were but \$644,000 paper, they are trifling in relation to the capital of the institution, which is \$153,017,260 paper, exclusive of the reserve fund, while the large sum standing in accounts which correspond to the phrase "bad and doubtful debts" has led *La Prensa*, the premier daily paper, and a journal admittedly without party bias, to publish a series of leading articles, wherein it concludes, solely by analysis of recent balance-sheets, that the Banco de la Nacion has, in effect, lost money during the past three years, and is only able to show its latest figures with a net profit thanks to reducing the amounts which ought rightly to be written off old outstanding debts. Without touching further on this very delicate yet most important subject, one may say that unless the confessed altruistic policy of the bank towards those of its customers who are in difficulties is counterbalanced by closer scrutiny

of its loans, not only as regards the morality of borrowers, but also in relation with the sum total of their capital responsibility, inclusion of the institution as contributory to the revenues of the Treasury is not desirable. The fullest publicity characterises the annual reports, and, indeed, the operations in general of the Banco de la Nacion, hence the only question at stake is that of the banking criterion to be adopted in the conduct of its vast and ever-expanding business.

Such publicity has not, unfortunately, marked the affairs of the Post Office Savings Bank, established in 1915 and recently the subject of Congressional investigation. The Report, signed by a large majority of the special investigatory Committee, calls for the immediate removal of the president of the Savings Bank, its complete reorganisation, a vote of censure on what it describes as the negligent conduct of the Minister of the Interior, under whose portfolio its affairs come, and the initiation of criminal actions against such of the employees as have been found liable to prosecution for what the Committee describe as gross defalcations. The innumerable charges and exposures made by the investigators cannot be detailed, even in the briefest possible manner, but some idea of the position revealed may be gathered from the statement that whereas in 1920-23 the results shown officially by the Post Office Savings Bank were \$214,000 paper profit, the Committee's accountants find, over the same period, a net loss of \$4,300,000 paper. "Books and balances have alike been systematically falsified"—the phrase is translated literally from the Committee's Report—and although the depositors have no reason to fear for their funds, since the nation is responsible for the assets of the bank, the disclosures make far from pleasant reading. At the same time, it is but right to lay emphasis on the manner in which this subject has been handled. Instead of being hushed up, as would have occurred a few years ago, the result of the inquiry has appeared in full in every paper in the country, and, once the dead wood is cut away, there is reason to expect that the proved utility of the Post Office Savings Bank to the general public of Argentina will result in its speedy rehabilitation, and that rapid expansion which is characteristic of this country when its convenience is thereby served. Incidentally, the discovery that the Post Office Savings Bank was taking money running into millions from private banking institutions, paying interest rates superior to those obtainable in the Banco de la Nacion, yet on occasion borrowing in haste from that institution to return such deposits at call, is held in some quarters to be an argument in favour of the proposed modification of existing legislation affecting the operations of banks, both home and foreign, working in Argentina.

Conditions in the local money market are easier for first-class business, though 6½ to 7½ per cent. for discount of trade lists and 8 per cent. for facilities in current account may still be quoted as the general rate. Deposit figures at the end of May showed a small decline when contrasted with the April totals, being some thirty million paper down on the published statistics, though these are at times subject to correction. Business in the city of Buenos Aires is not as brisk as it should be at this season, though the recent sharp cold has been of distinct benefit to retail dealers in dry goods. Failures, too, are heavy, which keeps the 1925 monthly average at over ten millions paper. There is a general feeling that Argentina should benefit greatly by the unrest still observable in other parts of the world, but it is certainly not realised that impoverished customers make bad purchasers, though home little by little to exporters. Further provincial loans on behalf of the provinces of Tucuman and Santa Fé, some ten million American dollars for the latter, and about eight million for the sugar province, the loan in this case to be guaranteed by earmarking a tax on the cane consumed. Interest at 7 per cent. per annum, and 3 per cent. cumulative amortisation, to be set aside every half-year, with 85 as the price to the bankers interested, are said to be the terms arranged. The Argentine provinces are financially autonomous, but it is felt in many quarters that this sudden determination to borrow abroad is not a thing to be encouraged, the proceeds of such loans being

applied to ends that are largely unproductive, and in no way calculated to improve the financial stability of the provincial Governments should present prosperity suffer a setback in the near future. The National Government's efforts to consolidate its finances, including the \$330,000,000 paper owing to the Banco de la Nacion, and likely to be converted into bonds amortisable in the space of 12 years' time, are too important even to run the risk of interference by sporadic forays on the international money market by the provincial authorities, whose chief interest is to obtain ready funds, leaving their successors to meet the amortisation payments and lament the leonine conditions under which the obligation was incurred.

Cereal shipments are still far from heavy, and prices have dropped considerably during the month, Buenos Aires spot quotations at date being as follows:—Wheat, \$13.45 paper the 100 kilos; linseed, \$20.15 paper; maize, \$8.95 paper. Shipments to date are 2,200,000 tons wheat, 1,100,000 tons maize, 440,000 tons linseed. The recent cold weather has helped to condition the maize, and better movement is expected shortly.

POLAND.—POLITICS—AGRARIAN REFORM BILL—FOREIGN TRADE—POLISH BANK—RELATIONS WITH GERMANY.

(FROM OUR CORRESPONDENT.)

WARSAW, July 20.

THE most important political events of recent weeks are the passing of the Agrarian Reform Bill by the Diet, and the understanding between the representatives of the Jewish parties and the Government. The Agrarian Reform Bill has been introduced under the pressure of the peasant parties, which were unsatisfied with the results of the agrarian legislation hitherto in force. The new Reform Bill makes it possible to expropriate the owners of large estates without paying the market price for the land. The indemnity can fall as low as one-fourth of the real value. In the negotiations which were conducted by the Minister of Education, Mr Stanislas Grabski (brother of the Premier) the Jewish minorities obtained very important political and economic concessions. The full details of these concessions are not yet known, but it is certain that they are characterised by a spirit of great toleration. The Jewish representatives, in signing the pact, have undertaken to give their support to the Polish State, and they have severed the connection with the other minorities (Germans, Ukrainians, &c.) which remain in opposition. Both these measures will exert a profound influence on the Polish party structure. They have undermined, in the first instance, the cohesion of the strongest party in the Parliament, the National Democrats. This party is a very heterogeneous group, composed of great landowners, peasants, middle-class representatives, &c. The party won the election, putting forward as a political programme the necessity of national unity. This, however, is not a sufficient tie for keeping together the different groups having a diversity of economic interests. The party by voting for the Agrarian Reform Bill has lost the support of the landowners who belong to this group. Though the Jewish pact has been negotiated by Mr Stanislas Grabski, a National Democrat, this measure has roused among the right wing of this party, headed by Mr Dmowski, a storm of indignation. In consequence, a change in the structure of the National Democratic party seems inevitable.

The great economic and financial difficulties which the Government has had to face since the beginning of this year have not subsided. The foreign trade statistics for April reveal a surplus of imports over exports of 93.1 million zlotys (imports, 182.7 millions; exports, 89.6 millions). During the first four months of the year the import surplus amounted to 272.2 millions (imports, 692.7; exports, 420.5 millions), as compared with an excess of imports of only 8.7 million zlotys during the same period in 1924. The figures given below throw much light on the change which has taken place since last year:—

	(Million Zlotys.)		Excess of	
	Imports.	Exports.	Imports.	Exports.
January-April, 1924	452.6	443.9	8.7	
" " 1925	692.7	420.5	272.2	

Imports have increased by 240.1 millions, while exports have decreased by 23.4 millions. During the first three months of this year exports were maintained on a higher level than in 1924, and it is only in April that this fall took place. Exports fell from 120.4 million zlotys in March to 89.6 millions in April.

In the position of the Polish Bank no marked improvement took place in June. The outflow of foreign currencies has not been stopped, as may be seen from the figures below:—

RESERVE OF FOREIGN CURRENCIES.			
(Million Zlotys.)			
End of December, 1924	269.1	..	27.0
" January, 1925	242.1	..	35.8
" February, "	206.3	..	53.1
" March, "	259.4	..	43.3
" April, "	216.1	..	43.6
" May, "	172.5	..	52.7
" June, "	119.8	..	

During the first six months of the year the reserve of foreign currencies held by the Polish Bank declined from 269.1 to 119.8 millions, or by 149.3 millions. In reality the outflow has been much greater, because in March and April the bank obtained the first instalment of the American loan of more than 100 million zlotys.

It would be wrong to draw from the figures given above the conclusion that the efforts of the Government to stop this process were without success. The returns of the Polish Bank show that the outflow of foreign currencies, which during the first ten days of June amounted to 26.3 millions, fell during the second to 19.1, and during the third to 7.2 millions. According to a statement made by Mr Grabski, this decline was due exclusively to the great foreign payments which were due in June by the Government. He expects that during the following months no further decline will take place.

The returns of the Polish Bank for July will show how far this optimism is founded. The Customs war between Poland and Germany, which is assuming a very acute form (new import prohibitions have been proclaimed by both Governments), makes all predictions very uncertain. It is impossible to arrive at any conclusions as far as these measures will influence the Polish trade balance. Will the decreased exports of timber, coal, iron, and other goods to Germany be offset by smaller imports from that country, or will the balance move in an opposite direction? This will determine to a large extent the state of the reserve of foreign currencies held by the Polish Bank.

Letters to the Editor.

EXPORT TRADES AND DEBT POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It may be some little satisfaction to some people to know that some of our competitors, including the enemy whom we recently repulsed, are in difficulties quite as bad as, and possibly worse than our own. (For this conclusion can be drawn from the first "Survey of Overseas Markets," just issued by the Balfour Committee on Industry and Trade.) But it does not alter the fact that at the moment we are undoubtedly on the down grade. And as our position—a couple of small islands dependent upon the profitable sales of our products abroad for our daily food supply, also from abroad—is quite different from that of most of our industrial rivals who are self-supporting so far as food is concerned, we shall be wise to exert ourselves to the utmost to recover our former upward momentum.

In the *Economist* of the 11th inst. you recalled an old Free Trade "commandment"—"If thou wilt not import, neither shalt thou export." In the case of Great Britain, would it not be more to the point to say, "If thou can't export, neither shalt thou import thy daily bread, and thou shalt starve"? For this is the truth. And as the ability to export depends upon British goods being offered at a price which can compete with foreign goods, anything which tends to make British goods too dear to compete, is nothing less than a threat of starvation and disaster to the people of these islands. Will continued adherence to a fiscal system appropriate to world conditions of 50 years ago, help us in the peculiar conditions in which we find ourselves to-day?

One of the causes of the dearth of British goods to-day in the eyes of overseas buyers is our present crushing load of taxation—central and local—three to four times the weight of

the loads borne by our competitors. The chief item in the British load is interest on National Debt—roughly £300,000,000 per annum. There is at present only one way to lighten this interest, and that is to repay a portion of the principal. The £50 millions per annum which it is now proposed to set aside for the purpose would be adequate in normal times, but, I submit, is quite inadequate in the present crisis. Therefore I would urge the imposition as soon as practicable of a general import revenue tariff. Let every wholly manufactured article, and every luxury imported from overseas, pay duty. (A "luxury" might be defined as anything not absolutely essential for our daily life.) The proceeds of these revenue duties to be specially ear-marked for the repayment of National Debt. The repayments of capital and the savings in taxation would place large sums of money at the disposal of our export industries and overseas borrowers—British and foreign. We might be spared any repetition of the unpleasant spectacle of our own kith and kin having to go to New York to raise a Commonwealth loan.

The idea is not to introduce a policy of Protection, though a general revenue tariff, such as that now proposed, might have that effect to some degree. No doubt a portion of this new taxation would be paid by consumers in this country (there is plenty of money about), but not, as far as could be avoided, by the exporting industries; for it is the restoration of those particular industries to prosperity that is the first essential for our continued well-being as a First-class Power.

Is it too much to hope that even orthodox Free Traders would give support to such a scheme in the present grave emergency? After all, ability to adapt oneself to one's environment is Nature's test for fitness to survive. At present, nearly all overseas buyers of British goods are discriminating in what they will accept from us in exchange for the vitally necessary foodstuffs and raw materials which they sell us, and are thus, in effect, shaping our economic development as they find best in their interests, and not as may be best for the industrial population of these islands. Unless we now adapt ourselves to present world conditions, it is difficult to see how the British Empire can possibly survive.—Yours faithfully,

M. DE P. WEBB.

Sandgate, Kent. July 21st, 1925.

[Sir M. de P. Webb's plan is surely one which, by raising prices and costs, and provoking retaliation, will have precisely the opposite effect on our export industries than that which he desires to produce.—Ed., *Economist*.]

THE NEW PROTECTIVE DUTIES ON TEXTILES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—On made-up goods the duties are as follows:—

- A.—Not exceeding 5 per cent. of silk, 2 per cent. duty.
- B.—Not exceeding 20 per cent. of silk, 10 per cent. duty.
- C.—Exceeding 20 per cent. of silk, 33½ per cent. duty.

Or, in other words, 95 per cent. of other textiles than silk in Class A, including labour, are taxed at 2 per cent.; 80 to 95 per cent. are taxed at 10 per cent. in Class B, including labour; up to 80 per cent. are taxed at 33½ per cent. in Class C, including labour.

Of course, a Chancellor of the Exchequer who knew anything about these things would have used the weight basis throughout instead of the present mongrel system. To be consistent, they should alter the proof gallon duty on spirits to an *ad valorem* duty on old brandies, wines, or anything but pure alcohol.

Imported into this country from France every season are large quantities of gowns, &c., made of Macclesfield silks, Manchester cottons, embroidered silk, coats and costumes made of Scotch tweed and West of England Saxony and other fine suitings, all of which will be taxed *ad valorem*. The duty may be sufficient to stop their importation, and the French will buy less of our goods, but we may lose the great advantage of Paris boosting our materials and exporting them all over the world, leading to further direct inquiries in England for copying purposes. This *ad valorem* tax will act as a protective tax, and all textiles in England will rise directly on account of the tax, or indirectly in sympathy with the direct rises.

The *Economist* Index figure for the end of June gives textiles at 1,234 = 247 per cent. increase on the basic figure as compared with cereals, meats, 177 per cent.; other foods, 234.7 per cent., and a total of 197.8 per cent. An *ad valorem* increase in textiles (a percentage of a highly inflated figure) will have a very considerable effect on prices—the per cent. increase being multiplied 2½ times, as compared to the basic figure. The productive wage-earner spends a large proportion of his wages on textiles (clothes, linen, carpets, linoleum, curtains, &c.). The effect on the purchasing power of wages will be considerable, and the effect on cost of production serious. Of course, the increased cost to the unproductive classes will be considerably more.

Increases on raw materials have far less effect on prices than increases on finished products, but even before this insidious protection was sneaked through the Budget after being

mandated against by the voter, our products were too dear to export because cost of production was too high. An economic production wage was too low to enable a worker to live, on account of the high price of food and textiles chiefly.

If the mineral men could only see that a reduction in cereals, meat, other food, and textiles is the only way to reduce their costs of production considerably by making the real value of wages higher and the demand for their products correspondingly greater, we should hear less of protection for the steel and iron industry, nor would Cabinet Ministers bemoan their loss of capital in industrial enterprises.—Yours faithfully,

50 Bald street, Liverpool.

J. J. E. SLOAN.

P.S.—As examples of this idiotic tax take the following:—
Example 1.—Fur coat, £1,000, without silk lining, sewing silk used to sew up skins 1s, tax £20 = to 40,000 per cent. on the value of the silk. If it is said we can do without these imports, we forget that the actual skins were bought at the international fur sales, London, from English brokers or merchants.

Example 2.—Blouse made of Irish lawn, embroidered 6s centimes of silk, total value 166f, duty 8d = to 512 per cent. on the value of the silk. Plus delay of three weeks in delivery to importer and an appreciable sum for clearing, &c. This is an actual case of my own.—J. J. E. S.

FAMILY WAGE ALLOWANCES.*

PROFESSOR PAUL DOUGLAS, of Chicago University, has done for American economic thought what Miss Eleanor Rathbone did for British economic thought a little more than a year ago, by the publication of "The Disinherited Family." His thesis is the same thesis as Miss Rathbone's, the same as that propounded by the well-known Australian lawyer and administrator, Mr Piddington, K.C. It is the thesis which lies behind the significant and rapidly developing family allowance movement of Continental Europe, and it is a thesis which should be by now familiar to the readers of this paper. Professor Douglas believes that the largest possible wage bill which modern industry can bear is, nevertheless (given our twentieth-century scruples regarding child labour), insufficient to secure the payment to every adult worker of a wage sufficient to provide adequately for a family during its period of maximum dependence. The moral, therefore, which Professor Douglas and his distinguished collaborators in other countries have drawn is that in future it must be made possible for industry to pay a family wage in cases where a dependent family exists, without being obliged to shoulder the burden of paying a family wage in those cases (at any given time actually a majority) where it does not exist. And, frankly, given the preceding premise, it is difficult to visualise any way out other than the frank recognition that a "living wage" is an impracticable ideal, or the optimistic belief that if we could do away with the capitalist system, the product of industry would leap to undreamed of heights. All our above-mentioned authors challenge the current conception of a "standard," or five-member, family as basis for the accurate calculation of a "living wage." They point out that such a living wage, even were it achieved (and they are agreed that it cannot be), would make grossly insufficient provision for a large minority of workers and their dependents, while at the same time providing a relative sufficiency for a small majority. And all of them offer as practical solution the introduction of a system of wage payment involving the approximation of the minimum basic wage rate to the needs of a childless couple, with the superimposition on that wage of a system of family allowances paid to the mother and proportioned to the actual number of her dependent children.

But, on what scale and by what machinery is this approximation of wages to family needs to be accomplished? There are, as Professor Douglas indicates, a number of alternative methods. There is the method of national family endowment: the partial assumption by the community of the economic burden of parenthood, by the payment of money allowances to mothers, or by the more extensive provision of public services for the sustenance of mothers and children. There is the method of the

* "Wages and the Family." By Paul H. Douglas. University of Chicago Press. 83. Pp. 290.

State-controlled industrial equalisation fund: an ingenious device for the pooling of family burdens over the whole field of industry, first projected by Mr Holman, of New South Wales, and embodied by him in his abortive "Maintenance of Children Bill" of 1919. Or, again, as a practical application of the foregoing principle, there is the method of the voluntary industrial equalisation fund, covering particular groups of firms organised on an occupational or on a regional basis: the method which, as described by Professor Douglas, is actually spreading like wildfire throughout Continental Europe under the initiative of the employers, and with the critical, but progressively more sympathetic, acquiescence of organised labour. Finally, and this last line of approach Professor Douglas leaves unexplored, there is the method of family insurance on a national scale, tentatively advocated in this country by Sir William Beveridge. Professor Douglas himself, and speaking for his own country, favours the spread of voluntary industrial equalisation funds, administered preferably by joint bodies representing both employers and employed. He tentatively advocates a regional basis for the grouping of firms, and the assessment of the employer's contribution to the fund according to the actual number of persons employed. He offers further undogmatic, but in all cases practical and well considered, suggestions for the framing of a concrete scheme, and concludes with the sound advice that the ideal moment for the introduction of the new system is during a period of rising prices and increasing wages, when that increase can be concentrated on the families without involving a direct cut in the existing basic wage.

Professor Douglas is to be congratulated upon having written a lucid and forcible treatise on a little-explored topic of burning and world-wide interest. Of special value are his earlier chapters, containing an analysis of current statistics of economic dependence, and an exhaustive statistical investigation into the capacity of American industry to bear the payment to all workers of a "living wage."

EDUCATING THE CONSUMER.

It is an oft-repeated truism that consumption, though the ultimate aim of all economic endeavour, is a neglected branch of economic study. Can we not go further and say that it is a neglected branch of human education? Man *qua* consumer is conservative, stupid, unenterprising, easily led by specious representations. Above all—and we have the authority of the Linlithgow Committee for the accusation—he is lazy. Too lazy to discriminate in the matter of quality and price. Too lazy to change his habits. In our own country, and as far as women are concerned, piecemeal attempts are made to meet this deplorable shortcoming through the medium of domestic science and housewifery courses. In the U.S.A., however, more ambitious proposals are on foot; and Dr Harap's recent book, "The Education of the Consumer," aims at providing a complete survey of the raw material out of which those engaged in the formulation of educational curricula may "select such units of content as are adapted to a particular age, sex, and local condition," whereby the young consumer may be instructed in the difficult art of "effective living." Thus the bulk of the book, indeed the whole of it with the exception of the first chapter, consists of a vast survey of the whole field of choosing, buying, and doing without, grouped under the headings of food, housing, household materials, household skills, fuel, and clothing. We are told what people, according to standard authorities, ought to consume. We are told what, according to carefully sifted statistics, they do consume. There are (and how could there fail to be?) some obvious gaps in the information presented. We are surprised, for instance, to find that in his discussion of food values Dr Harap omits all reference to a certain elusive factor with whose name current dietetic controversies in this country have rendered us only too

familiar. To some people a section on food values which gave no guidance regarding the vitamin content of foodstuffs would be as a performance of "Hamlet" without the Prince of Denmark. But, all said and done, the book remains a positive mine of information, much of it relevant to the conditions of Great Britain, whose contemplation is likely to convince the most happy-go-lucky consumer that the business of getting an income is mere child's play as compared with the business of intelligently spending it.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET,
August 12.ACCOUNT,
August 13.

While the coal crisis has been the predominant factor in the Stock Exchange markets, other influences have also played their parts in determining the course of prices in particular departments. The Stock Exchange refused to believe that the coal crisis would be allowed to drift to the full extent of a lock-out, members holding that the consequences of such a step would be calamitous to industry throughout the country. At the same time, the uncertainty that prevailed had cast a dulness over most markets. On Tuesday afternoon a better tone supervened, owing to an impression that the lock-out would be postponed, but while this caused a brighter disposition to develop throughout most parts of the House, nervousness and apprehension remained. Business has been quiet; the rubber market is concerned with a much smaller volume of business than it has been called upon to handle of late.

Conversion 3½ per cent. stock proved to be the principal bellwether of the markets, the price fluctuating with remarkable rapidity for a gilt-edged stock. The War Loan gathered greater strength on the more favourable turn, which, according to rumour, the coal negotiations had taken, and several of the scrip stocks braced up, the gilt-edged market as a whole looking firmer than it has done of late.

French Government bonds recovered after being flat, while the French railway issues, which showed substantial rises last week, improved upon their prices in consequence of the satisfactory revenue statements published two or three days ago. Peruvian Corporation preference and Rio Tintos have both been in demand from Paris, although as soon as the French inquiry ceased prices showed an inclination to react. Mid-European bonds are steady to better, and Brazilians keep hard, Brazilian Tractions being noticeably good.

Home Railway stocks showed small gains, as bears came in to close their stock on the expected postponement of lock-out notices. Declarations from the four leading companies of their dividends, in respect of the half-year just finished, arrived this week. Market estimates in advance were cautiously bullish, and a decline in the North-Western rate caused a little surprise.

Argentine railway stocks have been better, and the market became coloured by the general disposition prevailing elsewhere. Cordoba stocks are a little lower, and Brazilians have hardly moved.

The rubber market went flat on Tuesday, on a fall to 3s 9d in the price of raw rubber, comparing with 4s 6d as its recent best. There was vague gossip, generally discredited, of a failure in the raw rubber trade, and people began to sell their rubber shares. The reaction was arrested by a rally in the price of the produce, but the market is sensitive, and hopefulness is more apparent than buying. Tea shares have gone back again. The oil market displays firmness. It is argued, once more, that if the coal-mining industry should be plunged into chaos, this will afford an excellent advertisement to oil. Moreover, the statistical position of oil is improving, and a number of rises have occurred in prices.

Courtaulds in the textile group spurted strongly on talk of a probable distribution of preference shares by way of bonus. Imperial Tobacco shares went back upon the interim dividend announcement being made without notification of the expected bonus issue of shares. The iron and steel market is not bad, considering the adverse circumstances with which it has been faced. Some of the shipping issues are better, more particularly P. and O. and Indo-China deferred. The banking, insurance, and financial issues show little variation. In the brewery group, the Watney dividend, making 17 per cent. for the year, met the optimists' anticipations, but brewery stocks as a whole are neglected, and so, too, are the shares of the stores and catering companies. Marconis were unaffected by the meeting. Sudan Plantations and a few other Egyptians tended to droop for want of attention.

The Kaffir market has been taking things very easily, holiday influences combining with the coal-mining excitement to check any disposition there might otherwise have been on the part of local supporters of Kaffir shares to take an active interest in their stocks. The Cape has also played passenger. Tanganyikas and Zambesias are outstanding features of strength, thanks to the recent dividend declarations. De Beers and Jagers strengthened when Paris came and bid for them. Malayan tin shares find no difficulty in recovering an occasional setback. Zinc and sulphide shares are still in demand from Australian buyers. Other base metal shares keep good as a whole. The remaining sections of the mining markets are left largely to their own devices.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

Amount previously recorded.....	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

Union of South Africa.—This is an issue of £4,000,000 of 5 per cent. inscribed stock, 1945-75 at £99½ per cent. The stock is a trustee investment, and the loan is being raised to provide for repayment of temporary borrowings in connection with the redemption of £3,000,000 4½ per cent. stock and debentures paid off on July 1st last, and for the redemption of the holdings in the New Cape Central Railway now being acquired. The accumulated sinking funds for debt redemption are given at £12,351,000; in addition, debt to the extent of £18,436,000 has been extinguished. The stock is repayable at par on July 1, 1975, the Union Government reserving the right of redemption at par on and after July 1, 1945, on three months' notice. An excellent investment. The last issue made in London by the Union Government was in November last, when an offer of £8,000,000 5 per cent. inscribed stock was offered at 99½ per cent.

Lake View Investment Trust, Limited.—Particulars of this undertaking are advertised in accordance with Stock Exchange regulations. Issued capital £600,000 in 10s shares, in addition to which £250,000 of 5 per cent. debenture stock has been issued at £90½. The stock will be a first floating charge on the undertaking and assets. It is to be repaid at par on January 1, 1965, but the right of redemption at par at any time after January, 1955, is reserved by the company. It is stated that the net revenue of the company for 1923-4 was £56,387, and for 1924-5 £65,937, and the advertisement points out that the income is given only for the above-mentioned periods, because previously the company held a large interest in the Burma Corporation, then a non-dividend-paying security. This holding has been sold and the proceeds invested in good trust company securities. The annual service of the stock requires £10,000. The surplus of assets as at March 31st last was put at £826,461. As a floating charge the debentures lack definite security—at least, so far as we can ascertain from the published matter.

Glasgow Bonding Company, Limited.—Authorized capital £200,000, of which £175,000 has been issued, or is included in the present issue at par of 100,000 8 per cent. cumulative preference shares of £1 each. The company has been promoted to acquire an under-taking of the same name, which was formed in 1920, and whose principal business was the storage under bond of whisky, bottling of whisky, blending of whiskies, and the sale of specially blended whisky to the trade generally. After providing for depreciation, management expenses, &c., but profits for the year to May 31, 1923, are certified at £23,347, those for 1923-4 £29,823, and those for 1924-5 £44,298, against which the preference dividend requires £8,000. Net assets, including £27,792 for goodwill, are valued at £135,000. The company is interested in an industry which is booming, but a period of depression may follow.

Buloh River Rubber Estates, Limited.—Capital £80,000 in £1 shares, of which £70,000 has been issued. The company was incorporated on July 21st last to acquire a rubber estate in Johore of about 1,669½ acres, of which 1,550 acres are planted, and 588 acres are at present being tapped. The purchase price of £52,500 is payable in cash. No valuation is given of the properties in the advertisement, which is issued in accordance with Stock Exchange regulations.

Deberham's, Limited.—Authorized capital £15,000, of which £5,000 has been issued, £4,500 being in ordinary, and £500 in founders' shares of £1 each. This is an issue of the remainder of the capital, namely, 10,000 7 per cent. cumulative preference shares of £1 each, at par. The company was formed as a private undertaking in April, 1922, and was recently converted into a public company. The auditors certify that, excluding preliminary expenses, assets at March 31st last totalled £237,601, of which £218,243 was represented by investments. Total liabilities were £26,000. It is stated in the prospectus that the net profits available for distribution during the past three years have been as follows:—1922-3, £10,106; 1923-4, £14,237; and 1924-5, £14,673. The purchase consideration was £33,998, satisfied by the allotment of £4,498 in ordinary shares, £500 in founders' shares, and £29,000 in cash. The directors appear to display some reticence over the nature of their investments, and the amount of assets as compared with the modest capital of the undertaking will no doubt receive the careful attention of the shrewd investigator.

Chungloong (Kedah) Rubber Estate, Limited.—Authorized capital, £45,000, in 2s shares, of which 50,000 are issued and fully paid, and 350,000 are 6d paid. Particulars of the company are advertised in order to comply with the regulations of the London Stock Exchange Committee. The company has been formed to acquire a rubber estate in Kedah of about 873 acres, of which 588 acres are planted, but it is not stated what area is in bearing. On the basis of the profits for six years' output of rubber at a selling price of 1s 6d per lb and a cost of 8.4d per lb, the properties are valued at \$415,924, equal, at 2s 4d, to £48,524. This, however, can only be regarded as very much of an estimate. The purchase price is £35,000, payable in cash.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

ARCOS LTD.

Sole Purchasing and Selling Agency in Great Britain for the Government of the U.S.S.R.

TURNOVER TO
APRIL 1, 1925, £56,000,000.

Exports from Russia to Great Britain include timber, flax, furs, ores, metals, crude drugs, petroleum products, etc., to a total value of £18,000,000.

The more important items of import to Russia are agricultural machinery, locomotives, tools, motors, scientific apparatus, drugs, clothes, boots, etc., to a total value of £38,000,000.

COMPANY MEETINGS, &c.

IMPERIAL OTTOMAN BANK.

SATISFACTORY RESULTS OF A DIFFICULT YEAR.

TRADE AND FINANCIAL POSITION IN TURKEY.

UNFAVOURABLE CONDITIONS FOR AGRICULTURE.

NEGOTIATIONS FOR PROLONGATION OF THE CONCESSION.

The annual general meeting of the shareholders of the Imperial Ottoman Bank was held, on the 29th ultimo, at Winchester House, Old Broad street, London.

Gen. the Hon. Sir Herbert A. Lawrence, K.C.B., presided.

The secretary of the London Agency (Mr Charles E. L. Corthorn) having read the notice convening the meeting,

The Chairman said: Ladies and gentlemen,—I have been informed that this meeting is properly constituted, and I presume that it is your pleasure that the report and balance-sheet circulated among you shall be taken as read.

Before proceeding to refer in detail to our own immediate business, I propose to sketch briefly the state of affairs which obtained during the year under review in the various spheres of our activity.

In spite of various symptoms of improvement, the year 1924 did not bring that stability which is necessary for the restoration of Turkey. The Treaty of Lausanne which was signed on July 24, 1923, did not receive ratification until August 6, 1924. Its execution involves the settlement of various delicate questions—which, by reason of the apprehension they aroused, have contributed to disturb production and commerce, and thus to act as a drag on the economic movement of the country.

AGRICULTURE.

In agriculture, climatic conditions of an unfavourable nature were responsible for results which were less satisfactory than expected, in view of the encouragement given by Government authority and the real effort made by the best elements of the population towards developing the resources of the country.

The cereal harvest was less than half that of 1923, and it did not suffice to meet the needs of the country. It became necessary, therefore, to make important purchases abroad in America and Australia. This depressed the commercial balance, the more so as at the moment there was a pronounced rise in prices throughout the world. Other agricultural products suffered equally through the abnormal spring rains.

The opium crop amounted to 2,000 cases, against an average of 5,000.

Mohair, 27,000 bales, as against 100,000.

Wool, 2,000,000 ocques, against 5,000,000.

Sultanas from Smyrna, 40,000 tons, against 80,000.

In silk and figs there was a similar falling off.

On the other hand, the tobacco crop has been particularly abundant. The cultivation of tobacco is becoming each year more extensive in Turkey, and during 1924 60,000,000 kilos were produced, or twice the amount of the preceding year. Adana cotton, in spite of damage caused by various pests, continued to progress.

IMPORTS AND EXPORTS.

During 1923 imports into Turkey amounted to £T145,000,000, and exports to £T85,000,000, showing an adverse trade balance of about £T60,000,000.

In 1924 statistics are only available for the first half-year. For this period imports amount to about £T84,000,000, as against £T62,000,000 in the previous year, and exports to £T56,000,000, as against £T32,000,000 in 1923.

EXCHANGE.

The tendency towards depreciation of the Turkish pound is explained by the adverse trade balance. It is not the result of speculation or inflation. The latter, indeed, is a policy which we are glad to state continues to be contrary to the views of the Turkish Government.

It is true that the rates during the past year have not been subject to sudden and violent fluctuations, but, nevertheless, they show a continued depreciation, broken only by the usual temporary relief in the autumn resulting from the export campaign. Thus the pound sterling rose gradually from 819 piastres on December 31, 1923, to 872 piastres at the end of 1924.

MONETARY CRISIS.

Commerce had to suffer in Turkey from a monetary crisis which was acutely felt during the second half-year, a season in which heavy transfers of money to the provinces are necessary for the movement of the crops.

This monetary tightness is not peculiar to Turkey. It is a feature of every deflationist country as soon as the revival of production begins.

The Turkish Government cannot do better with a view to improving its exchange than to concentrate its efforts on the agricultural equipment of the country. It has not failed in this, and there is every ground to hope that the effects of its action will soon be apparent.

On the other hand, economies have been made in expenditure, and the budget deficit has been reduced to £T17,000,000.

OTTOMAN PUBLIC DEBT.

The application of the procedure laid down for arriving at the distribution of the public debt of the old Ottoman Empire between Turkey and the various Successor States has been in progress since November, 1924.

It is easily to be understood that each of the political and economic factors to which I have referred has exercised a depressing effect upon the trade of a country which had not yet emerged from a stagnation lasting over a period of years.

This situation has affected the activities of our Constantinople office and of our branches in Anatolia. They have been able to do little more than cover their expenses.

We have reason to hope, however, from certain more favourable signs, barely perceptible during 1924, but more pronounced in the first half of 1925, that we are near an economic revival in Turkey. Of this our establishment should be one of the most active agents, to the mutual advantage of the bank and the country.

EGYPT AND CYPRUS.

In Egypt, where we have seven branches established, there has been steady improvement in business in the face of keen and constant competition, not only from the other old-established banks in that country, but also from a steadily increasing stream of new competitors.

In Cyprus, where we have six branches, our bank takes a prominent lead. Our relations with the Government, for whom we act as bankers, are most cordial.

In this connection you will be interested to know that we have recently proceeded with the establishment of an Agricultural Bank in the island, with the Government's approval and support.

MESOPOTAMIA, PERSIA, ETC.

For our three branches in Mesopotamia the period under review has been one of marking time. The question of currency in Iraq has been inquired into by a Commission appointed by the British Government, who have recommended that the system now in use should be continued for the present.

In Persia we have three branches, the results of which have been satisfactory, and the prospects are encouraging.

In Palestine our five branches show good results, and, with the prospects of steady development and improvement in this sphere of our activity, we look to these branches as being likely to show even more satisfactory results in the future.

In Syria and the Lebanon the Banque de Syrie et du Grand Liban, in which we are interested, profiting by the progress of the country under the administration of the Mandatory Power, has been enabled to improve its results and increase its dividend from 5 per cent. to 6 per cent.

EUROPEAN BRANCHES.

The general situation in Jugo-Slavia appears economically and politically to present a more favourable aspect.

The Banque Franco-Serbe, in which we have, as you know, important interests, has profited by the improved circumstances. Its activities in 1924 showed a marked progress over preceding years, and have enabled it to hasten the liquidation of the situation which was a legacy from the war.

In Greece we have branches at Salonica and at Cavalla. These branches developed to an even greater extent the assistance which they have always rendered to the trade of this important export region.

In Roumania, where we are largely interested through the Bank of Roumania, the production both of cereals and oil is prospering favourably and holds out good hopes for the future.

PARIS AND LONDON.

Finally our agencies of Paris and London have achieved particularly good results in the development of their important financial and banking operations.

The branches in Marseilles and Tunis, which depend on Paris, and that of Manchester, which depends on London, have accounted for a reasonable share of the business of these two agencies.

PROLONGATION OF THE CONCESSION.

I have to inform you that the negotiations for the prolongation of the concession are proceeding, and that the duration of the bank has been prolonged by the Committee in accordance with the resolution passed at the general meeting of 1906.

As regards the negotiation for the prolongation of the concession, the situation to-day is clearly favourable. Not only have the Government not given us notice to dissolve, but we are informed that the accord is already established between our Direction Générale and the Minister of Finance, and that it will be submitted immediately, perhaps even to-day, to the official approbation of the Council of Ministers.

We are in addition authorised to declare that while awaiting this decision the bank will continue to function regularly.

It is, therefore, for all eventualities that we shall ask you to give the Committee the powers referred to at the end of the resolution which will be submitted to you.

It must be fully understood that in the event of these powers having to be utilised with regard to any solution, other than the normal prolongation of the duration of the company and the conclusion of agreements with the Turkish Government, decisions taken by the members of Committee in virtue of the said powers will be submitted to the ratification of the shareholders.

BALANCE-SHEET ITEMS.

Let us now turn to the consideration of the balance-sheet as shown in the report. Our assets and liabilities in foreign currencies have been converted into sterling at the rates ruling on December 31, 1924. Francs have been taken at 87.50, as against 85 at the end of the preceding year.

The accounts made up to December 31, 1924, after providing for bad and doubtful debts out of revenue and provisions previously made, show an amount available of £326,951 10s 7d, after taking into account an amount of £128,370 15s 4d brought forward from the previous year.

Taking into consideration the circumstances under which our business has been transacted during the year 1924, this result will certainly appeal to you as satisfactory.

Your committee would not have hesitated to propose to you the distribution of this balance, but after the closing of our accounts a period of fluctuations in the depreciated currencies set in. This recalls to us the need of maintaining the prudent policy which we have followed since the Armistice. The aim of this policy has been, by the constitution of proper reserves, to protect the assets of the bank from the risk entailed by depreciation in foreign currencies included in those assets.

This result once achieved—and the profits reserved from the year 1924 justify us in looking for this in the near future—you will reap the reward of your long patience.

For these reasons I think you will endorse the recommendation of your committee to carry forward the balance shown.

TRIBUTE TO THE STAFF.

Our staff, from the highest to the lowest, both in the East and in the West, has continued to render us most active and devoted service, for which year after year we have to thank them. We beg you to join with us in acknowledging to our staff our appreciation and satisfaction.

Now, ladies and gentlemen, I beg to move:—

"That the report and accounts now read be received and adopted."

The resolution was seconded by the Lord Oranmore and Browne, K.P., P.C., and carried unanimously.

The Chairman: I have also to move:—"That Monsieur Jean Boissonnas, Monsieur Félix Vernes, the Earl of Bessborough, the Earl of Chichester, Sir W. Guy Granet, and Sir Albert Stern be and they are hereby re-elected members of the general committee."

Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E., seconded the motion, and it was unanimously adopted.

THE COMMITTEE AND CONCESSION NEGOTIATIONS.

The Chairman: I have further to move:—"That the chairman having fully explained to the meeting the position of the negotiations with the Turkish Government for prolongation of the concession, the members of the committee are hereby requested and authorised to settle all details of the new concession and of the prolongation of the duration of the company in such manner as they in their discretion may think fit, and in case they think necessary to exercise all or any of the powers conferred by

Articles 43 and 45 of the statutes of the company upon the general meeting."

The Earl of Chichester, O.B.E., seconded this resolution, and it was also unanimously approved.

Mr A. Hood: Mr Chairman and gentlemen, on behalf of the shareholders I wish to propose a very hearty and sympathetic vote of thanks to the committee, the management, and the staff.

The vote was seconded by Mr J. Rosselli, and unanimously accorded.

A brief acknowledgment by the Chairman concluded the proceedings.

UNION BANK OF AUSTRALIA, LIMITED.

STRONG LIQUID POSITION.

The annual general meeting of the Union Bank of Australia, Limited, was held, on the 27th ult., at the head office, 71 Cornhill, London, Mr Henry P. Sturgis (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that, in accordance with the powers conferred upon them by the proprietors in July of last year, the directors made an issue of 100,000 shares in the following October. The issue having been fully subscribed, the total dividend now announced was payable on the present paid-up capital—namely, £3,500,000. The premium, £600,000, received on the new shares had been added to the reserve fund. It was pleasant to be able again to congratulate the shareholders on the excellent results of the year's working. There was a net profit, inclusive of £90,003 brought forward, of £680,401. From this the directors had appropriated £100,000 to the reserve fund, increasing it to £4,150,000, and had declared a dividend at the rate of 15 per cent., free of income-tax.

The balance-sheet figures, compared with those of a year ago, showed a growth of £2,334,000. The increase of £1,157,000 in deposits was very satisfactory, and, on the other side, the liquid assets amounted to about 10s 4d in the £ of the bank's total liabilities to the public. The exports from Australia for the year ended December, 1924, amounted to £142,000,000, showing a large increase of £28,000,000 compared with December, 1923. Imports for the same period amounted to £145,000,000, an increase of £9,000,000, due to a large extent, as in the previous year, to imports of metals, machinery and motor-cars. In New Zealand the exports for 1924 were £53,000,000, an increase of £7,000,000 as compared with 1923, while imports were £49,000,000, an increase of £6,000,000. Owing to the re-establishment of the gold standard exchange rates between this country and Australia would in future be governed by the ordinary factors affecting the balance of payments between the two countries, the extreme fluctuations depending upon the cost of shipping gold either way.

Trade, taken as a whole, might be considered to have been satisfactory, but merchants generally were fairly heavily stocked and traders were feeling the effects of the present financial stringency. The soft goods people, in addition, had suffered through the past unseasonable weather experienced. The wool clip showed an increase in quantity from the previous season of about 300,000 bales, and a further substantial increase was expected in the coming new clip. Prices were very high up to November last, when they reached the highest point, since when a considerable fall had taken place. The wheat crop had been very satisfactory, the exportable surplus being estimated at 80,000,000 bushels. The following telegram from the acting general manager was received last week:—"Conditions throughout Commonwealth generally satisfactory, and seasonal outlook for both agricultural and pastoral pursuits is promising. In New Zealand prospects and weather conditions generally good." In conclusion, the Chairman paid a warm tribute to the staff both in Australasia and in London, and referred with pleasure to the presence of Mr A. H. Chambers (general manager) at that meeting.

The report was unanimously adopted.

TARIFF REINSURANCES, LIMITED.

THE NEW BOARD.

The fifth annual general meeting of Tariff Reinsurances, Limited, was held, on the 27th ult., at the Cannon street Hotel, London.

Mr Charles Marshall (chairman of the company) presided, and, in moving the adoption of the report, said that those shareholders who were present at the last annual meeting would not have been surprised to receive the intimation early this year that certain directors had retired and others had been appointed in their place. The new directors were probably well known to all the shareholders. Sir William Carruthers was a present director and a former general manager of Barclays Bank, and his name was well known throughout the banking and insurance world. Mr Cecil

Braithwaite, senior partner of Messrs Foster and Braithwaite, was also well known and highly respected throughout the financial, banking, and insurance world. Mr E. C. Fester was a partner of the firm of Messrs. Fester, Fethergill, and Hartung, an important firm of reinsurance brokers whose ramifications were world-wide. Mr C. P. Hailey was a gentleman of great influence in the commercial world, and it was very largely due to him that this reorganisation of the board was made possible. The remaining new director, Mr Wharton Tomson, had been the general manager of the company from its inception.

The Chairman then dealt with the position of the various departments. The premiums in the fire department, he said, amounted to £169,200; the board considered that this department was satisfactorily established. The net premiums for the year in the accident department amounted to £27,238. Claims paid and outstanding amounted to 100 per cent. of the premiums, but the directors felt quite satisfied with the contracts remaining on the books of the company. Their marine accounts consisted entirely of cargo business. The directors, however, had now decided to discontinue writing this class of business for the present.

Last year he referred to the tendency of ceding companies to withdraw their treaties for the purpose of reciprocity. He also stated that the directors regarded the position at that time as being difficult, in that this form of competition was one against which purely reinsurance companies found it anything but easy to contend. The difficulty was still present with them. While during the year 1924 they retained most of the treaties they had with their principal companies, it was very desirable that their income from this source should be increased, and some of the new directors had been in close touch with some of the leading companies with this object in view. The directors had confidence in the future, and they considered that the company, with careful management, would attain the success they all desired.

Sir William Carruthers seconded the motion, which was unanimously adopted.

TANGANYIKA CONCESSIONS, LIMITED. DIVIDEND STAGE ATTAINED.

The ordinary general meeting of Tanganyika Concessions, Limited, was held, on the 30th ult., at River Plate House, London, General Sir Reginald Wingate, Bart. (the chairman), presiding.

The Chairman, after referring to the report and accounts of the company, read a resolution passed at a board meeting of the directors appreciative of the great work of Mr Robert Williams, the managing director, in overcoming almost insurmountable difficulties and bringing the company to the dividend stage.

Mr Robert Williams (managing director), in the course of his speech, said: The position at the end of 1924 did not warrant the payment of a dividend on the ordinary shares. Since the close of the accounts, however, the Union Minière have declared their dividend for 1924, our participation in which has yielded over £250,000—nearly double the amount received in 1924. In view of the increasing profits of the Union Minière and the value of your company's assets, and particularly having regard to the fact that the whole enterprise has now been put on a proper basis by the provision which has been made for the rapid completion of the Benguela Railway, the board has decided to pay an interim dividend for 1925 of 1s per share, less tax.

BENGUELLA RAILWAY CONSTRUCTION.

With regard to the finance for the completion of the Benguela Railway, you are aware that some two years ago negotiations which were practically completed with the Trade Facilities Committee, with the object of securing a guarantee for a loan to the Benguela Railway Company for the purchase in this country of the steel rails and other materials necessary to complete the railway to the frontier, were broken off at the intervention of the South African Premier. Since then the railway has been extended some 200 kilometres, financed by the issue of preference shares of your company and with the assistance of the Zambesia Exploring Company. All orders were placed in British workshops as hitherto. Latterly, however, the cost of British materials as compared with Continental materials became prohibitive, without the compensating advantage of cheap finance from the Trade Facilities Committee. A new Government at the Cape having come in, with a new Premier in the person of General Hertzog, I immediately inquired whether they had any objection to a Trade Facilities guarantee for the Benguela Railway to enable British materials to be bought, and pointed out the bad state of unemployment here. Having received a favourable reply from the Union Government, I at once reopened negotiations with the Trade Facilities Committee in respect of the materials for the completion of the line, but was met by strong opposition from another quarter, which made me reconsider the position. I had been negotiating with the Trade

Facilities Committee for about three years. The time for the completion of the railway was getting short, I was being offered by Continental firms prices far below British prices, and I wondered whether it was worth while struggling further to secure the order for British workshops which had already benefited to the extent of about £3,000,000 sterling for materials for the Benguela Railway and the Rhodesia Katanga section of the Cape to Cairo Railway. Finally, as new shares and bonds were being issued by the Union Minière, I decided to put your company in a position of complete financial independence by an increase of capital for the purposes subsequently approved at the extraordinary general meeting of your company last March, and in case the Trade Facilities Committee should not agree to assist, I arranged terms for the purchase of the whole of the materials on the Continent, at about £250,000 under British prices as then quoted, and for payment to be made out of the proceeds of the sale at a profit of about £300,000 of the Union Minière privileged shares which your company were to take up. I saw that in the event of the Trade Facilities Committee agreeing to fair terms, your company would have the Union Minière privileged shares as a sort of working capital to keep or sell, as might be best. The privileged shares with the capital shares which were taken up at the same time, are worth at to-day's prices and exchange £1,013,855, being over £544,243 above their cost. After you had passed the above proposals, the Trade Facilities Committee agreed to guarantee a loan to the Benguela Railway Company of about £1,250,000 on most satisfactory terms, and asked that orders should be placed as soon as possible. As a result a contract has been made for the completion of the railway to the frontier in two years, with British materials, and orders for the steel rails, sleepers, and other materials have already been placed in England, Scotland, and Wales.

COMPANY'S ENORMOUS INTERESTS.

Your interests are enormous. Your interest in the completed Benguela Railway alone will, at cost, exceed in value your nominal share capital. You own the greatest copper interests of any company in the British Empire—your interest in the Union Minière alone represents at to-day's market prices a value of over £12,700,000. Besides this, you are indirectly interested in the great coal areas and minerals in Rhodesia and in the Sudan.

The report and accounts were unanimously adopted.

ZAMBESIA EXPLORING COMPANY, LIMITED. IMPROVED RESULTS AND PROSPECTS.

The ordinary general meeting of the Zambesia Exploring Company, Limited, was held, on 30th ult., at River Plate House, London, General Sir Francis Reginald Wingate, Bart., G.C.B. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that what had been accomplished in the development of Africa and in the interest of its enormous native population and its European settlers had not been to the advantage of our Empire alone; it had equally affected the colonial interests of our Belgian friends and collaborators, whose wonderful development of the Congo was the admiration of all who had watched the steady progress of trade and commerce, and the successful exploitation of probably one of the richest mineralised areas in the world, thus bringing the remote regions of Central Africa into far closer touch with European markets by railway extensions in all directions.

Mr C. F. Rowsell seconded the resolution.

Mr Robert Williams (managing director), dealing with the accounts, said that the company had created a substantial reserve, the purpose of which was to provide against contingencies and ensure the payment of regular dividends in the future. The debt of the Tanganyika Concessions which appeared in the accounts, amounting to £109,137, had been repaid since the date of the balance-sheet. Last year the Zambesia Exploring Company agreed to advance the Tanganyika Concessions a sum not exceeding £400,000 to enable that company to continue without interruption the construction of the Benguela Railway in compliance with the terms of the concession. Any sums advanced were to be repaid by December 31, 1926, and as consideration an option to call for 400,000 Tanganyika shares at par for six months after the shares were created was granted to the Zambesia Company. To enable them to carry out the arrangement, some of their Union Minière shares were sold at a good profit, and the proceeds utilised for making advances under the agreement. As a result, the Zambesia Company had been able to exercise options on a large number of Tanganyika shares, and all advances made to date had been repaid. The arrangement had, in his opinion, proved most advantageous to both companies. The profit shown by the profit and loss account for 1924 was £52,051, as compared with £9,536 for 1923, and the for 1924 was £52,051, as compared with £9,536 for 1923, and the for 1924 was £52,051, as compared with £9,536 for 1923. Last profit remaining to credit of profit and loss was £68,632. Last year the directors paid the shareholders 1s per share, less tax, in view of the improved position and prospects, they now recommended the payment of 1s 6d per share, less tax, for 1924.

The report and accounts were unanimously adopted.

BISICHI TIN COMPANY (NIGERIA), LIMITED. IMPROVED RESULTS.

The annual general meeting of the Bisichi Tin Company (Nigeria), Limited, was held, on the 28th ultimo, at the Cannon street Hotel, London, Mr James Gardiner (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the working profit in Nigeria had been £53,147, or an increase of £12,378, and the actual profit of the year had amounted to £49,685. Production had reached 630 tons, a small but satisfactory increase of 19 tons. The proportion of the total output derived from "plant" had also improved, and in future years tin derived from hydraulic and mechanical plant should figure much more largely in the returns, as the board looked to those methods to produce the bulk of the company's output. As to the Suction Cutter dredge referred to at the last meeting, not only had the whole of the machinery been safely delivered on the property, but the steel pontoon had been riveted up and floated, and the rest of the machinery was in an advanced stage of erection. The company's engineer had expressed the hope that the entire erection of the new dredge would be completed towards the end of August. The ground treated during the year under review had been of lower grade than in 1923, but the total of 618,508 cubic yards dealt with had been the largest turnover in the history of the company. His prediction, a year ago, of a satisfactory price for tin, which had been fulfilled, and as regarded the future in that respect, he was still inclined to take an optimistic view. On the other hand, another year had passed by without any relief from what could only be termed the severe tax on the industry imposed by the railway rates on concentrates. It was probable that they would have to await the completion of the railway extension from Port Harcourt to the tin fields to obtain some alleviation. When that work was completed, however, they were promised a substantial reduction on freight rates for concentrates, and, what was even more important, in the freight rates on coal from the Udi fields. It was on this latter that the prosperity of the Nigerian tin fields

in a large measure depended. In relation to the abnormally low returns for the months of May and June last, he would say that, like the majority of companies operating on the plateau, they were practically dependant on the local rainfall. As the rains gathered force, he hoped, in a short time, the output would again become normal. When the new plant was steadily at work they should, to a large extent, be independent of the vagaries of the season, and be in a position to operate throughout the year.

The report and accounts were unanimously adopted.

THRELFALL'S BREWERY COMPANY, LIMITED. LARGE INCREASE IN SALES

The 38th annual general meeting of Threlfall's Brewery Co., Limited, was held, on the 29th ult., at Cannon street Hotel, London, Mr Thomas Barker presiding in the absence through illness of the chairman, Major C. M. Threlfall.

The secretary (Mr F. Cornwall, A.C.I.S.) read the speech prepared by Major Threlfall, in the course of which, after referring to the death of Mr W. G. West and the appointment of Mr W. B. Feeny to succeed him, he said:—

Referring to the accounts, I feel certain you will agree that the results for the year, as submitted to-day, are highly satisfactory, in view of the present state of trade in the country. Our residential hotels are becoming increasingly popular year by year, and the number of visitors has far exceeded our expectations. We have had to meet a large increase in the price of malt as compared with the previous year, on account of the 1924 season having been such an unfavourable one for barley-growers, and the accounts have had to bear a much heavier debit this year in consequence. We believe that the policy of giving the public a beverage manufactured from the highest quality materials is one of the chief reasons for the company's sound financial position as placed before you to-day. This is borne out by the enormous increase in the sales of bottled bitter beer, well known in Lancashire as "Blue Label." Another gratifying feature is that our beers are now being supplied to some of the best restaurants and hotels in Liverpool and Manchester, which are in no way connected with the company.

It will be noted that the item for fire insurance has been increased by £16,000. This is accounted for by the yearly increase of £1,000, and in addition your board has thought fit to make a further special allocation of £15,000, having decided that the company shall carry a larger percentage of its own insurance in the future. During the year the company discharged its final liability due for excess profits duty, and it is our fervent hope that we may now look forward to a period of peace and quietness, free from any imposition of new taxation, which only tends to discourage enterprise.

As in the past, the relations with all our employees have been of the happiest nature, and I have pleasure in stating that this year again we propose, with your sanction, to award them a substantial bonus for their services in having helped the board to place before you to-day such satisfactory results. The gross profit for the year is £417,183 8s 2d, and, after writing off for depreciation of leasehold properties and plant, and making reserves for fire insurance and salary and wage bonus to employees, amounting in all to £51,708 14s 11d, there remains a net trading profit of £365,474 13s 3d. After deducting interest on debenture stock, interest on deposits, directors' fees, compensation levy, and adding transfer fees, bank interest, and interest on War Loan, there is a net profit of £301,816 4s 6d for the year, which, together with the carry forward from last year, makes a total of £565,130 11s 2d to be dealt with.

The Chairman moved the adoption of the report and accounts and the payment of a dividend at the rate of 6 per cent. per annum on the preference shares and a dividend at the rate of 20 per cent. per annum on the ordinary shares for the half-year ended June 30, 1925, which, with the interim dividends, made 6 per cent. on the preference and 20 per cent. on the ordinary shares for the year.

Mr W. B. Feeny seconded the resolution, which was carried unanimously.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, July 22, 1925, amounted to 864 tons.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

NOTE.—Budget Estimate as in H.C. No. 84 of 1925.
Treasury, July 27, 1925.

Since July 21, 1920, notes and certificates outstanding include notes called in but not yet cancelled. Maximum fiduciary issue for 1920 fixed at £320,800,000, for 1921 at £317,555,200, for 1922 at £309,988,400, for 1923 at £270,183,800, for 1924 at £248,190,900, and for 1925 at £248,145,400.

Head Office: 38-44. MOORGATE, LONDON, E.C.2.

COFFEE.—The market remained steady for all the better liquoring grades, which are in limited supply, but inferior qualities move off slowly. East India Neilgherry, fair bold, sold, 135s; Jamaica,

mountain grown, good middling, 178s 6d; ditto, bold, 185s; Kenya, fair bold, 130s 6d; Costa Rica good middling colory, 159s 6d; bold fancy blue, 190s 6d; Colombian good bold, 141s per cwt. Brazilian for shipment remains in quiet request.

COCOA.—Spot parcels continue in fair demand, and at the auctions prices ruled fully up to recent private level. Good Trinidad, sold, at 76s; fair to fine Grenada, 65s to 70s; St Lucia, fair to good, 64s to 65s; and Ceylon, good estate, 95s. Accra quietly steady for shipment. F.F. grade, October-December, also December-February, sold, 43s f.o.b. terms. Trinidad, July-August shipment, sellers, 74s 6d; Bahia, ditto, 49s 6d; October-December, 49s 6d; St Thome, July-August, 53s, c.f. and i. terms. Cocoa butter, C.F.R., quoted 1s 6d; and prime English, 1s 6d; while Brazilian sold in auction at 1s 1d per lb, in bond.

TEA.—Indian supplies at public sales totalled 37,831 packages and encountered a good inquiry at generally steady rates, all autumnal flavoured invoices being well competed for. Offerings however included some very low, stinky and inferior grades which realised low figures. Pekoe sold 11d to 1s 6d; and broken orange pekoe, 1s 3d to 2s 6d. Ceylon sales of 27,547 packages were accorded fairly good support, but values displayed considerable irregularity owing to a falling off in quality in many instances. Pekoe sold 1s 1d to 1s 10d; and broken orange pekoe 1s 5d to 2s 2d per lb in bond. Of China, a good demand continues for common monings at 6d to 7d; while new season's Keemuns realised up to 3s 4d, with old seasons ditto ranging from 1s 3d to 2s per lb as to quality. Java descriptions moves off slowly except for fine quality.

RICE fairly steady on the part of shippers, but demand continues quiet. Rangoon two stars, spot, London, quoted 15s 6d; afloat, 15s 3d; July-August, 15s 3d, c.f. and i., London. Beans and peas steady, but inactive. Japanese peas, 25s 6d, spot; September-October, 23s 6d; October-November, 23s 7d. Madagascar butter beans, spot, 36s 6d to 37s 6d, as to quality; and July-August 34s, c.f.i., per cwt.

SPICE.—Pepper quiet and easier forward. Black Singapore L.S., August-October, sellers, 84d; Lampong, ditto, sold, 84d to 8d; white Muntok, August-October, sold, 1s 1d to 1s 1d; October-December, 1s 1d to 1s 1d. Cloves weak. Zanzibar October-December, sold, 1s 1d to 1s 1d. Tapioca quietly steady. Singapore flake, September-October, also October-November, to Havre, quoted 10s 6d; Penang seed, ditto, to London, 18s. Sago flour inactive. Sarawak, July-August, to U.K., 16s 6d; September-October, 16s 3d per cwt, c.f. and i. terms. Desiccated cocoanut quiet. Spot, halves, quoted 40s 6d; August-September, 39s 9d cwt.

JUTE.—Values continue firm, under stimulating advices from Calcutta, and fair inquiries with sellers more reserved, closing quieter, however. Firsts, to Continent, July, sold, £46; August, £43 5s; September, £42 2s 6d to £42; September-October, £41 10s; October-November, also November-December, £41. Lightnings, August, £42; September, £40 10s ton. Hessians and twills quietly steady.

HEMP.—Manila dull, and trend of values in buyer's favour. J grade, August-October, £46 10s value; K, ditto, £42, sellers; L, £42; and M, £35 ton. New Zealand H.P.F., July-August £38; and fair, £36 ton. African sisal, No. 1 Tanganyika, July-August, £45 10s, and No. 1 Kenya, ditto, £45 ton, c.f.

SHELLAC remains quiet. T.N., August, quoted 220s; October, 217s 6d; December, 215s cwt.

COPRA.—Firm, with a fair demand, and sellers somewhat reserved. F.M.S. Straits, April-June, to Rotterdam, sellers, £31 5s; May-July, £31 1s 3d; July-August, £31; July-September, sold, £31 to £30 15s; August-October, £30 12s 6d; and October-December, £30 7s 6d. Dutch East Indies, June-July, sellers, £30 12s 6d; June-August, £30 10s; July-September, sold, £30 10s; October-December, £30. Ceylon, July-August, buyers, £32 2s 6d; South Sea Islands, F.M.S. quality, July-August, Rotterdam, sellers, £29 17s 6d. Palm kernels firm, and July-September to Liverpool buyers, £22 7s 6d per ton.

ESSENTIALS.—Citronelle oil, spot, Ceylon, 2s 1d; forward, 1s 9d; Java, spot, 3s 9d; shipment, 3s 7d. Cinnamon leaf oil, spot, 44d; forward, 4d. Japanese peppermint oil, spot, 17s per lb.

EGG PRODUCTS slow. Dried yolk, spot, sellers, 11d; albumen, spot, new seasons, 3s 11d; July-August shipment, 3s 10d per lb. China hen liquid yolk, spot, 72s 6d; July-August, 72s 6d cwt.

RUBBER.—Market easier on realisations, while very irregular, with dealings on a moderate scale. Plantation standard sheet, spot, sold, 3s 9d to 3s 8d; August, 3s 7d to 3s 6d and 3s 7d; September, 3s 6d to 3s 5d and 3s 6d; October-December, 2s 11d to 2s 11d and 3s; January-March, 2s 6d, 2s 5d, 2s 7d, and 2s 6d. First crepe, spot, sold, 3s 7d to 3s 8d; August, 3s 7d, and 2s 6d. 3s 3d to 3s 6d; October-December, 2s 11d to 3s; January-March, 2s 6d to 2s 7d. Fine hard Para, spot, sellers, 4s 4d; soft fine, 3s 11d; cauchó ball, 2s 11d. To New York, rubbed smoked sheet, January-December (1926), sold, 2s 3d, c.f.i., terms.

FRUIT (Dried).—Trade quiet but prices generally steady. Of currants, Pyrgos quoted 31s to 32s; Amalia, 35s to 36s; Patras, 38s to 40s; Gulph, 40s to 42s; Vostizza, 45s to 51s. Sultanas: Smyrna, good quality, 64s to 69s; finer, 75s to 80s; Cretan, medium to good, 68s to 74s; Australian in fair demand at 66s to 72s; South African, 75s to 80s. Figs: Naturals, in bags, quoted 27s to 29s. Dates quietly steady. Hallowee, spot, 19s; Khadowie, 17s 6d; Siar, 16s. Raisins: South African, 40s to 50s; Australian, 48s to 50s; Lexias, 48s to 52s. Evaporated fruits steady. Californian apricots, standard new extra choice, 127s 6d; fancy, 135s; Australian, 120s to 130s; Californian peaches, choice, 62s to 63s; extra choice, 65s to 68s; fancy, 70s. Plums: Oregon, new, size 30/40, quoted 71s to 72s; 40/50, at 50s to 51s; Californian, new, 40/50, 58s to 60s; 50/60, 50s to 51s; 70/80, 44s to 45s. Pears, choice, 90s; extra choice, 102s to 103s. Apple rings, Californian, extra choice, 58s to 60s; Oregon, extra choice, 63s per cwt.

CANNED GOODS.—Sardines in moderate request on former terms. Portuguese, 1/2 flats quoted 4s 3d; clubs, 5s; 12 ozs, 7s 6d; 18 ozs,

12s per dozen tins. Salmon continues in good request at full rates, with limited stocks. 1/2 lb, flat reds, labelled, 77s to 78s; tall, 1 lb, 52s to 53s; 1/2 lb, tall, pink, 26s to 27s. Lobsters firm, and in fair request. Halves quoted 165s.

CANNED FRUITS.—Market quiet, but firm. Packers are withdrawing their offers for new season's, and trying to cut down their contracts. Loganberries and apricots are in good demand. Singapore pines continue in demand, and prices maintained. 48-1 1/2's quoted 86s 6d to 87s 6d; cubes, 2 1/2's, 13s to 13s 6d; slices, 2-2 1/2's, 12s 6d to 13s 6d; South African are coming to hand freely, and realise steady rates. Californian pears, 15s 6d to 17s; peaches, 12s 3d to 14s; cherries, 13s 6d to 14s; apricots, 10s to 13s 6d; loganberries, 13s 6d to 16s; fruit salad, 1 1/2's, 12s 6d to 14s; 2 1/2's, 21s 6d to 22s 6d; Australian pears, 24-2 1/2's, 16s to 16s 6d; Canadian, 14s to 14s 6d.

MISCELLANEOUS.—Cocoanuts quoted 25s to 27s 6d per 100. Coir yarn: Ceylon, £25 to £39; Cochin, £30 to £54. Ceylon bristle, £19 10s to £25; cinnamon leaf oil, 44d; citronella, Ceylon, 2s 1d; Java, 3s 9d.

OILSEEDS.—Linseed firmer, with moderate sales. Calcutta to London, August-September, sold, £21 15s; bold Bombay, ditto, £22 10s. Plate to Hull, July-August, sold, £19 12s 6d; September-October, £19 16s 3d; January-February, £18 15s to £19. Rapeseed quiet. Toria to Continent, July-August, £21 15s. Cotton-seed easier. Egyptian black, to Hull, July-August, sold, £13; November-January, £12 15s; white, July-August, £12 10s; November-January, sold, £12 3s 9d; Bombay, July-August, sold, £9 10s. Castor-seed firm. Bombay, July-August, £22 10s. Gingly seed quiet. Chinese to Continent, July-August, £28 5s; large Bombay ditto, £26 7s 6d. Ground-nuts quiet. Coromandel machined, July-August, £25 10s; Nigerian, July-August, £25 10s per ton.

OILS.—Linseed irregular. Spot, net, naked, 41s 6d; August, 40s 7d; September-December, 40s 9d. Rape steady. Crude, spot, 48s 6d; refined, 51s 6d. Castor-oil quiet. First pressure, spot, quoted 56s 6d; second pressure, 54s 6d; and pharmaceutical, 61s 6d per cwt. Hull, with London, 2s per cwt extra. Cotton firmer. Crude Egyptian, spot, 44s; Bombay, 41s; common edible, 49s; deodorised, 51s. China-wood nominal. Hankow, spot (barrels), 68s; June-July, 67s. Cocoanut quieter. Ceylon, spot, 48s 6d; June-July, 46s 9d; Cochin, ditto, ordinary packages, 60s. Soya quiet. Oriental, barrels, July-August, 44s 3d; bulk, 41s. Cod steady. English, spot, 34s to 35s. Ground-nuts steady. English, crushed, naked, spot, 49s 6d; deodorised, barrels, 57s 6d. Turpentine firmer but quiet. American, spot, 67s 6d; August, 67s 6d; September-December, 68s 9d. Rosin firm. American, grade B/D, 20s 6d; E, 21s 3d; F/G, 22s; W/G, 28s; W/V, 30s per cwt. French FG, nominal; W/V, 26s 9d per cwt. Petroleum quiet. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on July 29th as follows: The tallow market was steadier during the week, and prices were occasionally 6d dearer to-day. The best kinds changed hands most freely, and it was for such that the advance was most

An International Service

THE Central Union Trust Company of New York is equipped with every facility for the prompt and efficient handling of financial transactions throughout the world. Foreign banks and business houses with banking interests in the United States are invited to avail themselves of this service, which includes the purchase and sale of foreign exchange, collections, and the issuance of commercial and travelers letters of credit. In addition, the Company conducts a general banking business and acts as Executor, Trustee, Transfer Agent, Registrar of Stocks and in every other Fiduciary capacity.

THE MONEY MARKET.

FOUR AND A-HALF PER CENT.

Much to the surprise of all concerned, the Bank Court on Thursday reduced the official minimum rate of discount from 5 to 4½ per cent. A fortnight ago such a movement was thought by some observers of monetary conditions to be possible, but the hope had lately receded in view of the approach of the autumnal pressure on the exchange value of sterling. Apparently, however, the authorities con-

sidered that a sufficient stock of gold has now been acquired to permit this relaxation, with certain safeguards. The most obvious is the fact that the clearing banks have only reduced their rate for weekly advances to the discount market by $\frac{1}{4}$ per cent. to $3\frac{1}{2}$ per cent., and this arrangement, which may be relied on to be observed and maintained, will be an important influence in keeping the market rate within reasonable distance of the official minimum. In other words, industry, whose "sufferings," owing to the 5 per cent. Bank rate have been so eloquently over-stated, gets a certain relief, while it may perhaps be expected that the effect on the market rate of discount, which is so important an influence on the exchanges, will, when conditions have settled down, be found to have been slight. It also seems reasonable to suppose that the temporary settlement arrived at in the matter of the coal industry may have influenced the decision of the Court. The official movement was followed by the published deposit rates of the banks and discount houses, which were reduced by $\frac{1}{4}$ per cent.

Money was wanted in the early part of the week, but was rather more abundant yesterday, when it was seen that a substantial amount has been paid out by the Treasury, to the benefit of the Other deposits. The three months' discount rate, which was in the neighbourhood of $4\frac{1}{2}$ per cent. before the reduction in Bank rate, was quoted after it at 4 per cent., with business in fine bills at a shade below, the Continental demand being still in evidence. Yesterday's batch of Treasury bills went in accordance with the new conditions.

	Aug. 7, 1925.	July 30, 1925.	July 24, 1925.	July 17, 1925.	Previous Rate and Date Changed.
Bank Rate	$4\frac{1}{2}$	5	5	5	$\frac{1}{4}$ (Mar. 5, '25)
Banks' Deposit Rate	$2\frac{1}{2}$	3	3	3	2 (Mar. 5, '25)
Discount/Call	$2\frac{1}{2}$	3	3	3	2 (Mar. 5, '25)
Houses' Notice	$2\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Mar. 5, '25)
Market rate (3 months' bills)	$4\frac{1}{4}$	$4\frac{1}{4}$	$4\frac{1}{4}$	$4\frac{1}{4}$	..

The Bank return showed an increase in the stock of gold of £242,000, of which £228,000 had been announced during the week as received from abroad. The circulation of notes had expanded by £1,569,000, of which £1,300,000 had gone into the currency notes reserve; the Bank's Reserve was thus £1,327,000 lower, and its Proportion to liabilities had fallen by 0.4 per cent. to 31.2 per cent. Government and Other securities declined by £92,000 and £944,000, and Public deposits by £9,653,000, the Other deposits being thus increased by £7,234,000 on balance. Currency notes outstanding increased this week by £4,443,900 to £305,484,200, which includes £1,331,600 for notes called in but not yet cancelled. Bank of England notes in the currency note redemption account were increased by £1,300,000 to £56,250,000. The fiduciary issue is £247,902,500, or £242,900 below the maximum for 1925.

NEW YORK MARKETS.

Our New York correspondent cables:—Much interest is being taken here in the reduction in your Bank rate, which is considered reassuring in regard to the condition of our money market this autumn. The reduction is looked upon as a natural result of your gains in foreign balances, and emphasises the fact that the high Bank rate is a temporary measure. Meanwhile, you have accumulated an impressive amount of gold. Our markets remain steady, with recurrent touches of buoyancy and further signs of an industrial revival in the autumn. While the wheat crop is likely to be below normal, raisers of corn and cattle are faced with a better situation. During July, Dun's index number rose by 1.1 per cent., and Bradstreet's by 2.8, industrial groups becoming firmer towards the end of the month. The Reserve banks have extended the credit in consequence of end-of-month requirements. The Reserve system's discounts are up by \$75 millions, and there are moderate increases in acceptances and Government securities. The ratio is 75.3 per cent.

THE STOCK MARKETS.

Bank rate reduction took the Stock Exchange completely by surprise, and there was a general rise in prices, particularly in the gilt-edged market. The House had not been particularly pleased with the coal agreement, but was making the best of it, though business was small and markets quiet, with the exception of Courtaulds and the mining section which was supported by Cape and Paris buying. Home Rails fell sharply on the coal agreement, but recovered when Bank rate was lowered. In the foreign market there have been declines in German and French bonds, but mid-European issues have been steady. Argentine rails show a mild improvement. Rubbers have been quiet by comparison, but tea shares are better, and there has been a better tone in the oil market.

THE COMMODITY MARKETS.

Business in most markets has been affected by the holidays. There is very little inquiry for pig-iron, and constructional steel remains almost the only branch of the manufactured iron and steel trade to show any marked activity. The settlement of the coal dispute has caused some degree of disorganisation in the coal market, and at Cardiff prices have dropped from 1s to 2s 6d per ton. A better tone is maintained in the cotton trade, cloth demand from India being more active, while inquiry from China has tended to broaden. The wool textile trade is still under the depressing influence of the West Riding dispute, but conversations between the two sides are now being initiated. The wheat market has been firmer on news of the fall in Bank rate. Among metals, tin shows further improvement, copper has been active, and lead well supported. Trade inquiry for sugar has been on a broader scale than of late. The present quiet tone in tea is attributed to the large available stocks, especially of common grades. Jute has been distinctly easier, and rubber continues irregular.

FOREIGN EXCHANGES.

Under the influence of the holidays, the foreign exchange market has been extremely quiet during the week. The measure of general stability now obtained in the exchanges may be gauged by the comparatively small effect produced by the surprise announcement of the fall in the Bank rate from 5 to $4\frac{1}{2}$ per cent. The New York rate, which moved from $4.85\frac{1}{8}$ on Friday of last week to $4.85\frac{1}{4}$ on Saturday, remained steady over the week-end, but rose to $4.85\frac{1}{2}$ on Wednesday. On Thursday the change in the Bank rate produced a fall of only $\frac{1}{8}$ to $4.85\frac{1}{4}$, and by yesterday morning a further rise of $\frac{1}{8}$ to $4.85\frac{1}{2}$ was reported. With regard to forward rates, the same cause led to a narrowing of $\frac{1}{8}$ to $\frac{1}{4}$ cent per month below spot. There is considerable speculation as to whether it will be necessary to raise the Bank rate again when the autumn adverse movement sets in. Much depends on money rates in New York, which at present show signs of being easy for some time to come. Paris, after dropping from 102.35 on July 31st to 102.25 on August 1st, rose again to 102.55 on Tuesday. On Wednesday the rate touched 103.60 at one time on rumours of an unsatisfactory return of the Bank of France, which were justified on Thursday, when an increase of 950,000,000 in Advances to the State, and of 838,000,000 in the note circulation were recorded. The rate moved around 103.60 on that day, but yesterday morning had eased slightly to 103.45. Brussels followed a similar but stronger movement from 105.45 on Friday last to 107.85 on Wednesday, but had recovered by yesterday to 107.45. Forward rates in Paris broadened from 30 to 45 centimes per month above, but in Brussels were steady at 5 centimes per month below spot. Italy rose from 132 $\frac{1}{2}$ to 133 $\frac{1}{2}$. Amsterdam fell during the week-end from 12.09 $\frac{1}{2}$ to 12.08, but recovered slightly to 12.08 $\frac{1}{2}$ by yesterday morning. Geneva is steady at 25.01, but Madrid rose from 33.57 to 33.67. Of the Scandinavian countries, Stockholm is unchanged at 18.07, while the other centres have been quieter than for some time past. Oslo, which reacted from 26.25 to 26.70 on Friday, fell again during the week to 26.27, and Copenhagen, which had also risen from 21.20 to 21.65, stood once more at 21.30 yesterday morning. Helsingfors is steady at 192 $\frac{1}{2}$. Berlin is unchanged at 20.40, Vienna at 34.50, Prague at 163 $\frac{1}{2}$, and

Budapest at 345,000. Warsaw, after the sudden rise of last week, has been steady at 26.00, with practically no business transacted. Bucharest is slightly stronger at 945. In the East the rupee has shown little variation from 1s 6 $\frac{1}{2}$ d, but the yen has improved slightly from 1s 8 11-32d to 1s 8 15-32d. The silver market has also been extremely quiet, with a slight surfeit of supplies at the moment. Hong Kong is $\frac{1}{4}$ d cheaper at 2s 3 $\frac{1}{2}$ d, and Shanghai $\frac{1}{4}$ d cheaper at 3s 1 $\frac{1}{2}$ d. In South America, Rio has fluctuated slightly round 5 $\frac{1}{2}$ d, Buenos Aires round 45 $\frac{1}{2}$ d, and Monte Video round 49 $\frac{1}{2}$ d. Valparaiso is steady at 40.30.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 1st:—

EXPENDITURE.	RECEIPTS.
Supply Services	From Revenue
Interest, &c., on Debt	Increase in Debt
Sinking Fund	
Sundries	
Increase in Exchequer Balances	
14,098	14,098

The Revenue for the week amounted to £11,911,000, as compared with £14,233,100 in the corresponding week last year. Customs were slightly lower at £1,608,000, against £1,722,000, while Excise was higher at £1,026,000, against £971,000. Estate Duties brought in £720,000, as compared with £1,420,000. Property and Income-tax amounted to £5,467,000, against £7,086,000, while Super-tax at £750,000 was £160,000 higher. Ordinary receipts were nil, against £400, and Special receipts were nil for both periods. The week's operations increased the National Debt by £2,187,000, and caused the following changes:—

EXPENDITURE.	RECEIPTS.
Public Department Advances	Treasury Bills
3,050	National Savings Certificates
	Sundries
	863
3,050	

The floating debt was increased by £2,910,000 to £782,701,000.

FINANCIAL YEAR, 1925-1926 (April 1st to August 1st.)

EXPENDITURE.	REVENUE.
Total Expenditure .. 278,493,063	Raised by Revenue .. 237,512,333
	Decrease in Balances .. 3,816,820
	Amount borrowed .. 37,163,910
Total .. 278,493,063	Total .. 278,493,063

ESTIMATES FOR FINANCIAL YEAR 1925-1926.

EXPENDITURE.	REVENUE.
Expenditure .. 799,400,000	Revenue .. 801,060,000
Surplus .. 1,660,000	

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Anglo-Dutch Plantations of Java and La Guaira and Caracas Railway.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MR BALDWIN'S DILEMMA.

In the long line of disputes and settlements that forms so great a part of our industrial history in the last 20 years none has left in the public mind a greater sense of discomfort and apprehension than this battle and truce between the mineowners and the workmen. The extremists of the Labour movement who see it as a spectacular victory for organised labour, a proof of what Labour, organised and unified, can extract from a capitalist Government, are jubilant and vocal. The more moderate sections of Labour, including most of the men who have shared in the work and burden of Government, are almost certainly uncomfortable and nervous at the issue of these three-cornered negotiations, and in their

hearts are probably more out of sympathy than ever with their left wing. Conservatives are openly dissatisfied; Liberals are definitely hostile, and the general public has an unpleasant feeling that a new and dangerous chapter has been opened in the book of government.

The truce patched up at the last minute took the form of a suspension of the masters' notices, while the Government works out the details of a new inquiry and the scheme for Government assistance to the industry, which was the basis of the agreement. That the scheme of assistance was shadowy and half-defined was indicated by the delay in producing the details and the slow publication of the White Paper. That the ultimate cost to the taxpayer is problematical was proved by the very various estimates, with which the daily papers were supplied. That the Treasury is seriously embarrassed by the problem of tapping a new source of revenue is clear from the kite-flying rumours of an extra penny a pint on beer, from the vigorous protests instantaneously raised by the brewing interests, and from the decision to impose no new taxation announced by the Chancellor on Thursday. Nothing was clear except that from now until the spring the 1924 scale of wages is to remain in force, and that a Government subsidy is to make good the losses suffered in those districts which cannot pay the wages without encroaching on the owners' percentage of profits.

The position of the Prime Minister in trying to effect a peace between miners and masters was undeniably very difficult, and the decision he was called upon to make was momentous. Trade is bad, and the general situation more formidable than at any time since the close of the war. Our staple industries are hard put to it to keep their heads above water, and our export trades are finding it constantly more difficult to maintain their footing in the world's markets. In these circumstances what disaster could be greater than the stoppage of the whole mining industry, which has always supplied the greatest proportion of our exports in bulk and the power material for every trade in the country? And if that is not enough, what was Mr Baldwin's problem when faced with the action of the Trades Union Congress and the sympathetic threats of transport workers, which might have led to the immediate paralysis of the whole body of British trade? Presented with the alternative choice of these two evils—the general stoppage of industry at one of the most critical times in our history, or the outlay of anything up to £24,000,000 of public money to keep the mines at work for six months—could he, as a responsible statesman, invoke so great a disaster on a mere point of principle? The circumstances being so exceptional, and the offer of a subsidy being made with the stringent reservation that it was temporary and would not serve as a precedent, has any harm been done or any loss incurred one-tenth so great as would result from a stoppage of the mines? Of two evils, did he not choose, as any man in his position must have chosen, the smaller?

The argument for the Prime Minister's decision can be powerfully stated, but the more strongly it is put, the more we know of the pressure exercised by the Council of the Trades Union Congress, the more alarming are the consequences which flow from it. If a quarrel over wages in any vital industry can be taken up by the workmen in other industries, and extended till it becomes an immediate menace to the country's trade, and if at the first sight of that menace the Government is to sign a blank cheque in favour of the particular industry, and the taxpayer to foot the bill for losses until peace and equilibrium are restored, it is easy to see where the path leads, and very difficult to see why we should not be forced to follow it. The circumstances in this case may be exceptional, but circumstances often are exceptional, and exceptions swiftly become the rule. The subsidy is said to be temporary, but subsidies are like tariffs, easy to begin and uncommonly difficult to stop; and there is no guarantee—from the nature of things there cannot be a guarantee—that the time-limit which the Government so emphatically puts on the subsidy now will be effective next spring. Nor is there any great importance to be attached to the plea that this subsidy shall not form a precedent; for whatever the Prime Minister and his colleagues say to-day, the deciding word may rest not with them or

their successors, but with the leaders of the trades union movement, and with the use they make of the power which they have been proved to possess, and which at any moment they can employ. There seems to be nothing to prevent railwaymen, transport men, sailors, engineers, shipbuilders, or textile workers from doing with the help of their fellow unions what the mines have done in the past fortnight—nothing to stop them from extracting from the public purse any subsidy required to keep any given trade going over any undefined period.

It must not be forgotten, either, that State subsidies are a half-way house to State management. If the losses of mining are to fall on the State, an unanswerable argument can be established for handing over the profits to the State as well, for it is clearly absurd that Society should allow private ownership to enjoy the prosperity of the mines while the taxpayer carries the weight of their depression. Unless the industry of coal-mining is reorganised in such a way that the owners can carry their own losses without support from the taxpayer, it is difficult to see what defence we shall have against the demand for State management in an industry which of all industries is worst adapted for this experiment.

In looking back over the history of this dispute, however much we may sympathise with the Prime Minister's difficulties, we cannot but regret that the solution should have rested with one of his peculiar temperament. It is characteristic of him, even more than of Lord Balfour, that he has no settled convictions, and he has an inveterate habit, which may be attractive in a private speaker at a debating society but is disastrous in the head of a Government, of thinking out his perplexities in public. When the problem of unemployment was raised in the House of Commons in June he delivered a discursive speech, touching on many possible remedies, and closing with the following:—

It would be useful if the House would examine and consider, as the Government are proposing to do, whether by any form of subsidy it may be possible to give stimulus and lift in the region of those industries which seem at the moment beaten down into a position of helplessness.

Is it merely coincidence that within a month of this hint being dropped masters and men in one of the beaten-down industries forced the Government to produce a subsidy of ten to twenty million pounds?

THE COAL SUBVENTION.

THE Government, in the financial assistance which it has decided to give the mining industry for a period of nine months, follows the precedent of the subvention granted in 1921 after the national coal strike of that year. It will be recalled that on that occasion the Government of the day stepped in with a subvention of £10 millions to abate the severity of the fall in wages that was considered necessary to restore the industry to a sound economic basis. In the three months immediately preceding the strike of 1921 the industry had been losing at the rate of approximately between £40 and £45 millions per annum, exclusive of the profits and capital charges provided for under the Coal Control Act. To adjust wages to an industry suffering these huge losses would have necessitated unprecedented reductions, and the purpose of the £10 million subsidy in that year was to bring about this process of readjustment by stages. On the present occasion the Government is acting primarily in the interests of the miners, but the owners are also secured profits at a higher rate on the average than they have been earning under the agreements of 1921 and 1924. The Government has given the workmen a guarantee that their wages shall not fall below the minimum of 33½ per cent. on the standard wages to the end of April, 1926, and the following are the principal clauses of the agreement into which it has entered with the Mining Association of Great Britain:—(1) The wages payable shall continue to be determined according to the 1924 national agreement;

(2) the wages in August shall be determined by the trading results in April, May, and June, and in September by the trading results in May, June, and July; (3) the Government will pay monthly to each colliery the excess, if any, of its wages bill calculated at the minimum percentage or basis rates (plus allowances) over the wages which would be payable on results ascertained in accordance with the owners' proposals of July 1st last; (4) the areas and districts shall be those scheduled to the national agreement of 1924; (5) district profits are not to exceed 1s 3d per ton; in any period in which that profit is exceeded the subvention shall be correspondingly reduced; and (6) no colliery will be entitled to the subvention unless it accepts the provisions of the agreement.

It will be recalled that in the proposal of July 1st last the coalowners proposed that the proceeds of the industry, after the deduction of costs of production other than wages, should be distributed in the proportion of 87 per cent. to labour and 13 per cent. to profits. For the purposes of their scheme the Government have accepted this ratio of distribution. The liability of the coalowners to pay wages is limited to the amount represented by 87 per cent. of the divisible balance of the proceeds. If that 87 per cent. proportion, calculated on a district basis, is not large enough to pay the workmen the minimum wages provided for by the national agreement of 1924, the Government steps in and makes good the difference. The difference will vary as between district and district. In the South Wales coalfield the audited figures for the three months ended last June, under the Government's scheme, involve the owners in liability to pay only between 15 per cent. and 15½ per cent. on the standard rates in that coalfield; in other words, the 87 per cent. proportion of the divisible balance is equivalent to only that low percentage on standard wages. The South Wales miners, however, are entitled under the national agreement of 1924 to a minimum of 42.22 per cent. on their standard rates, and it is the difference between that 15 per cent. and the 42.22 per cent. that the Government will meet out of the subvention. The collieries will retain the remaining 13 per cent. share of the divisible balance. In the first three months of the present year the South Wales coalowners suffered a loss of £173,000, without taking into account the additional 3d per ton represented by expenses that are excluded from the terms of the joint audit; but if the Government scheme were applied to the trading results of that period the coalowners would have a profit of £949,000. There is no specific guarantee of profits, as is the case with wages. The owners can get no more or less than 13 per cent. of the divisible balance, providing that that proportion does not yield any of the administrative districts a general rate of profit of more than 1s 3d per ton; but the amount represented by the 13 per cent. of the divisible balance will vary with the amount of the gross proceeds, and also with the expenditure represented by costs other than that of wages, or with changes in both proceeds and costs. A simple calculation will show that a decrease of 10 per cent. in the proceeds would, on the basis of the Mines Department statement for the first quarter of the year, reduce the profits in the South Wales coalfield from £949,000 to £817,000 per quarter, and that an increase in costs of 10 per cent., as well as a 10 per cent. decrease in proceeds, would further reduce the aggregate profits represented by 13 per cent. of the divisible surplus to about £777,000. But while no specific guarantee is thus given to the coalowners in regard to profits, and while those profits must in any event vary from month to month, the colliery owners are at any rate assured of a rate of profit which, on a district basis, would compare not unfavourably with the pre-war rate of profit.

The Government scheme does not involve anything in the nature of the district pooling of profits; on the contrary, it may quite possibly have the effect of aggravating existing anomalies. For the purposes of illustration, let us take two collieries in the South Wales coalfield. One of these, working new pits in a comparatively virgin area, and admirably equipped, was able to show a fair profit even under the depressed conditions of the twelve months ending last July; another, but older, colliery working the deep measures in the Rhondda district, suffered a loss of between 2s and 3s per ton. Under the Government scheme these two collieries will pay the same general wage rate. In August the general wage rate applicable to both

will be about 15 per cent. on the standard rates, and it is estimated that the wage subsidy paid by the Government will in each case amount to between 2s and 3s per ton. If the subsidy were the only factor to be taken into account, the profits of the more favourably placed colliery would be increased to the extent to which it was relieved in the payment of the minimum wage of 42.22 per cent., while the other would, with the aid of the subsidy, be brought back to the margin of productiveness. If the loss of this less favourably situated colliery were, say, 1s a ton before the subsidy, it will earn a profit of over 1s per ton under the subsidy. This is one of the effects which have led the Government to believe that among the consequences of its action will be an increase in the number of miners employed, and a diminution in the amount absorbed by the dole. The incalculable factor in the problem is the incidence of the subsidy on the general economic conditions of the industry. Will outputs be increased, and to what extent? Will prices fall, and how far? Will costs of production other than wages be increased, and by how much? These are questions to which no definite answers can be given. In most trades where both supply and demand conditions are elastic, a fall in price usually stimulates demand. That is not always the case with coal, where a small excess of supply over demand leads to a disproportionate fall in prices or *vice versa*. We must, therefore, wait and see how far the lower price (South Wales f.o.b. prices are already from 1s 6d to 2s per ton less than they were at the end of July) will stimulate the demand for coal; and how far that increased demand will help to maintain the proceeds of the industry.

It is not difficult, in the light of these considerations, to understand why the Government in its explanatory memorandum of the terms of settlement estimates the cost of the subsidy at anything from £7½ millions to £24 millions. The probabilities are that unless there is a great and unforeseen expansion in the demand for coal, the cost to the Treasury will be nearer the larger than the smaller of these two estimates.

ECONOMIC INCONSEQUENCES.

IN the present depressed and depressing condition of our chief export industries it is much to be deplored that certain distinguished economists should disturb the public mind by attributing far too much effect to our monetary policy as a cause of the depression. It has long been evident to all who take an interest in these matters that international trade is running with a slack stream, chiefly owing to loss of buying power in countries that have been impoverished by the war, and political differences and uncertainties which check the economic revival which greater productive power has made possible. As the country which depends more than any other on the prosperity of international trade for its own economic activity and health, England has, as is obvious, suffered especially severely from this state of things, and her difficulties have been increased by depreciation of foreign currencies which has put a temporary advantage into the hands of certain of her rivals, and also by her high cost of production, due to high wages and relatively short hours enjoyed by her workers, and possibly by slack organisation and management on the part of some of her employers. Attention has also been especially called to the extent to which what are called the sheltered industries—that is, those which are not directly faced by the pressure of foreign competition—have taken advantage of their position to insist on a standard of wages and profit which the state of the country's trade does not justify, so increasing the working costs of those who produce our exports; high municipal rates, high cost of Government services, high cost of transport, and high port charges, all make it harder for the industries which sell goods abroad to meet foreign competition. In the case of coal, there are, as everyone knows, special causes which make it an article which is difficult to dispose of at a satisfactory price, namely, the competition of oil and of water-power and the introduction of fuel-saving appliances, all of which were

very vigorously stimulated by the very high prices charged to foreigners for British coal in the after-war period, when the mining industry was still under Government control. With these handicaps against it, coal-mining in Germany, as well as in England, finds a good deal of difficulty in disposing of its product.

It was necessary once more to tell over the tale of the causes which have been, and still are, depressing our foreign export trade, and especially that in coal, because language has lately been used by authorities who are rightly regarded by the public as unimpeachable on financial subjects, which leads it to believe that the only reason why we are suffering from trade depression and unemployment is because we have returned to the gold standard. Mr Keynes, in fact, goes even further, and attributes all our distresses to the fact that Mr Churchill is Chancellor of the Exchequer. The pamphlet in which he tells us what is the matter is entitled "The Economic Consequences of Mr Churchill," and the mere use of this title shows how far its brilliant author has been led astray from his usual detachment and clear-sightedness. For no one knows better than Mr Keynes that Mr Churchill had not much more to do with the restoration of the gold standard than the Serjeant-at-Arms. His was the voice that made the announcement, but the policy of which he declared the fruition had been aimed at by every Government that has been in power since the war, and would have been carried out, whoever happened to be Chancellor of the Exchequer, whenever the Bank of England and the Treasury agreed that the right moment had come. Mr Churchill has plenty of sins to answer for since he took office, but in arguing that depression and unemployment are due to the gold standard, and that the gold standard is due to Mr Churchill, Mr Keynes commits the vulgar error—most surprising in a controversialist of his kidney—of endeavouring to prove too much, by asserting with great emphasis what is palpably incorrect. That depression is due to Mr Churchill, he says in his title, that it is due to the gold standard, he says, almost in so many words, in the course of his pamphlet. "The monetary policy," he writes, "announced in the Budget being the real source of our industrial troubles, it is impossible to recommend any truly satisfactory course except its reversal." This sentence, penned by so high an authority, cannot fail to be taken literally by thousands of ill-informed people, who will, interpreting it at its face value, conclude from it that all we have to do in order to set the wheels of trade turning and make everybody prosperous and happy, is to restore and continue the prohibition of the export of gold except under licence. It implies that all the causes of depression which have been reiterated above are fanciful imaginings, and it ignores the depression that has been chronic, with occasional variations in acuteness, ever since the after-war fever burnt itself out. In hurling his thunderbolt at the innocent Mr Churchill, when all parties have been pledged to the policy which he happened to carry out, Mr Keynes allies himself with disappointed politicians; in saying that our monetary policy is the real source of our industrial troubles he shows symptoms of falling into the dangerous habit of concentrating the attention too closely on one branch only of the science of which he is so distinguished an exponent.

In his opening chapter he begins with the statement that "world trade and home consumption are both moderately good." Home consumption certainly is so, perhaps in certain lines rather better than we can afford; but moderately good is surely a flattering description of the present state of world trade. But it is in the chapter on the policy of the Bank of England that he seems, if we may venture to suggest such a thing, to use imagination rather than examination of available facts. He there says (pp. 16 and 17) that to restrict credit is the "orthodox policy of the gold party; the adverse trade balance indicates that our prices are too high, and the way to bring them down is by dear money and the restriction of credit. When this medicine has done its work, there will no longer be any need to restrict foreign loans or to borrow abroad. Now, what does this mean in plain language? Our problem is to reduce money wages, and, through them, the cost of living, with the idea that, when the circle is complete, real wages will be as high, or nearly as high, as before. By what *modus operandi* does

credit restriction attain this result? *In no other way than by the deliberate intensification of unemployment*" (Mr Keynes' italics). "The object of credit restriction, in such a case, is to withdraw from employers the financial means to employ labour at the existing level of prices and wages." But where is the evidence for this restriction of credit? The Bank return for the week ended April 29th, just after the restoration of the gold standard had been announced, showed Other deposits standing just below £105½ millions; by July 15th they had risen to £115 millions, largely owing to considerable receipts of gold from abroad. It is true that in recent weeks, when the market rate of discount was weak, there were considerable reductions in the Bank's holding of securities, but these movements were surely too recent to have caused the depression alleged by Mr Keynes to be due to the monetary policy announced in the Budget. In fact, since the restoration of the gold standard the basis of credit has been widened by receipts of gold, and increases in advances to customers have been an almost uniform feature of the periodical statements of the clearing banks. Money was certainly made dearer by a rise in Bank rate at the beginning of March, which may be attributed to preparations for the return to gold; but we showed in an article in the *Economist* of March 21st how small an item in the cost of production is a rise of 1 per cent. in the price of floating credit charged to industrialists. If deliberate intensification of unemployment, by restriction of credit, has really been the policy of the Bank of England, it seems to have been curiously slow in getting to work.

In his addendum to the Coal Inquiry Report, Sir Josiah Stamp also thought it necessary to ascribe the special plight of the coal industry since March to the "recent improvement in the exchange or decline in the price level, whether or not compulsorily brought about by the anticipation and then the realisation of the gold standard." More careful than Mr Keynes, he only says that "currency policy has aggravated the evil." His opinion is entitled to the highest respect, but he can hardly suppose that it is practical politics to propose to abandon the gold standard; and this being so, it was somewhat inopportune, at the present crisis, to lay so much stress on a view which is so likely to be misunderstood. We have not yet seen evidence that countries with low exchanges are, in fact, driving us out of international markets, either in coal or in general foreign trade. Mr Churchill, in the House of Commons on Wednesday, effectively recapitulated the reasons which had led to the restoration of the gold standard at the time when it took place—namely, the position of exchange, the favourable conditions of spring as compared with autumn, the fact of the approaching expiry of the export prohibition and the consequent need for a decision, and lastly "it was the case that if we had not taken this action the whole of the rest of the British Empire would have taken it without us, and it would have come to a gold standard, not on the basis of the pound sterling, but a gold standard of the dollar." He also laid bare once more the fraud on the wage earner that is perpetrated by depreciating the currency.

THE SHIPPING POSITION AND OUTLOOK.

DEVELOPMENTS in the past six months suggest that a setback in British industry, even if unaccompanied, from a world standpoint, by any marked general retrograde movement in commerce, suffices by itself to produce grave repercussions on British shipping. With the exception of disappointingly small cereal exports from the Argentine, world trade conditions and the fundamental economic position of overseas markets have not greatly deteriorated since last January. Pre-existing adverse factors, such as instability of the "Reparations" currencies and shortage of liquid capital in Germany, have not been aggravated to an extent capable of accounting for a shipping depression. At the worst, expansion of world trading activity in the first half of 1925 was temporarily arrested. It is difficult to detect anything more serious than signs of a commercial lull. The same cannot be said of conditions

in Great Britain. Here a positive retrograde movement has developed, and a decline of 15 per cent. in open-market freights—comparing June, 1925, with June, 1924—and an increase of 60 per cent. in the quantity of unemployed British tonnage indicate how this setback in "national" trade has reacted on "national" shipping. Although international in the sense of being exposed to the widest foreign competition, the shipping industry is still largely conditioned by industrial fluctuations within the country on whose ports it is based. Another feature of the present shipping position is that, just as depression has affected unequally different internal British industries, so adversity in the case of shipping has been sectional, falling primarily on "tramp" vessels, designed for carriage of bulk cargoes of "rough" goods, and leaving the "liners" comparatively unscathed.

In the following table are given the half-yearly averages of our Index Number of charter rates for whole cargoes, based on fixtures in the open market:—

FREIGHT INDEX—AVERAGE 1898-1913 = 100.

	Average Figure for First Six Months of		
	1923.	1924.	1925.
European waters	142.43	136.28	113.30
North America	125.35	143.36	129.16
South America	130.69	138.37	113.11
India	124.95	128.46	115.45
Far East and Pacific	134.07	131.40	116.84
Australia	132.27	140.13	146.59
	131.63	136.33	122.41

It will be observed that, with the exception of Australia, whose ample harvest provided profitable employment for much large-sized tonnage in the early months of the year, each group records a fall in 1925 as compared with 1924. A marked drop is shown by South America, where the wheat harvest yielded a reduced exportable surplus and the maize crop was late. A serious congestion of unfixed steamers occurred in the Plate, shippers' requirements being miscalculated by shipowners, and rates to Europe fell to the lowest level since 1914. The continued grave decline in the index figure for European waters reflects lessened exports of British coal and reduced imports of the raw materials for our "heavy" industries.

The next table summarises movements of our freight index since the beginning of 1923 in relation to corresponding fluctuations in the value of a new ready "tramp-type" cargo steamer of middling size (calculations based on figures from *Fairplay*), and in the cost of a typical quality of steam coal:—

	Indices Expressed as Percentage of Average for 1898-1913.		Cost per Ton Best Tyne Steam Coal.
	Freights.	Tonnage Values.	
1923—January	132.69	147	25/-
"—June	124.27	140	28/-
1924—January	136.25	134	25/-
"—June	126.37	134	21/-
1925—January	133.20	138	18/3
"—March	124.05	135	17/9
"—June	106.73	124	16/6

The above figures indicate clearly the normal tendency for "tramp" freights to be high in winter and low in summer. They also show that in the present year the downward swing in freights has far exceeded normal "seasonal" dimensions. The comparative cost of bunkers is interesting, and throws some light on the course of tonnage values—the latter being, in effect, a measure of the industry's anticipations of profit from the "tramp" class of vessel. Thus, whereas the reduction in bunker costs between January and June, 1924—amounting to 4s per ton of coals—was sufficient in market opinion to counterbalance the seasonal drop in freights during the same period, the relatively smaller benefit accruing from cheapening of coal prices between January and June of this year was considered not to offset the comparatively much greater decrease in freights, the index of which, together with that of tonnage

values, reached in June, 1925, the lowest level recorded since the war.

The tangible result of this setback in "open-market" freights has been a distinct aggravation of unemployment for the "marginal" vessel, as the following returns of laid-up British shipping, as compiled by the Chamber of Shipping, demonstrate:—

BRITISH SHIPPING LAID UP IN U.K. PORTS (Net Tons).

	Vessels of under 1,000 net Tons.	Vessels of over 1,000 net Tons.	Total.
1921—July	130,000	1,521,000	1,651,000
1922— "	87,000	1,093,000	1,180,000
1923— "	56,000	612,000	668,000
1924— "	67,000	381,000	448,000
January	67,000	403,000	470,000
April	79,000	298,000	377,000
July	153,000	601,000	754,000

It is probable that fuller analysis of the sizes of laid-up vessels would show that the majority of the idle ships of over 1,000 net tons burden belong to the group of 1,000-3,000 tons, i.e., those designed primarily for coal carrying and trade in European waters.

In view of the above evidence of depressed "tramp" freights and unemployment of tonnage, it would be natural to expect traffic returns of shipping to display a correspondingly adverse tendency. Such expectations, if entertained, would be completely falsified. The relevant statistics, so far as this country is concerned—and port returns from France, Holland, and Germany show the same tendency—are summarised below:—

TRAFFIC INDICATORS (in Millions).

	First Six Months of—		
	1923.	1924.	1925.
Net tons of shipping cleared with cargoes from U.K. ports—			
British	19.6	17.8	18.0
Foreign	14.3	11.6	10.5
Total	33.9	29.4	28.5
Per cent. British	57.8	60.3	63.1
Tons of coal and coke exported	41.8	33.0	27.3
Manufactured goods exported	£290	£301	£313
Net tons of shipping entered with cargoes at U.K. Ports—			
British	14.7	15.2	16.4
Foreign	8.3	8.4	8.4
Total	23.0	23.6	24.8
Per cent. British	64.0	64.4	66.2
Cwts of grain and flour imported	85.8	89.1	73.9
Total imports	£539	£598	£678

Not only do the aggregate figures of tonnage entered during the first six months of the past three years show a consistent rise, but the share taken by British vessels in both entrances and clearances has steadily risen. Diminished exports of coal betoken a serious curtailment in revenue for the class of vessel designed for carriage of this type of cargo, and total British and foreign clearances record, as might be expected, a substantial decline. Foreign vessels, however, have borne the brunt of this setback in the volume of outward cargoes, the British percentage having risen from under 58 to over 63 per cent. in 1925, as contrasted with two years ago. With respect to entrances, comparison of the values of total imports with the quantity of grain imported suggests that, just as has been the case with exports, "tramp" cargoes have declined, while cargoes of finer goods, whose carriage is effected by the regular "liners" sailings, have been at least maintained, and have probably expanded in volume.

Under these circumstances, and given the relative stability of freights enjoyed by "liners" through the operation of the conference system, the financial results of shipping are inevitably tending to reveal a striking discrepancy in favour of the "liner" combines and against the "independent" cargo companies. To illustrate this tendency, we have amalgamated the profits of 20 shipping companies, divided into two groups:—Group A., ten passenger and cargo liner companies; Group B., ten "tramp-owning" firms of the highest class, i.e., includ-

THE FIRST NATIONAL BANK OF BOSTON

24, OLD BROAD STREET, LONDON.

ing no "boom-flotations" or financially unsound concerns. The result is striking:—

Profits, after providing for depreciation but before meeting Debenture Interest, earned in trading periods relating wholly or mainly to:—

	1920.	1922.	1923.	1924.
Group A (Liners)	£ 4,560,637	£ 4,428,014	£ 4,466,930	£ 4,732,778
Group B (Tramps)	1,360,783	315,708	132,300	243,489

The ultimate effects of these dissimilar results as between types of shipping remain to be seen.

Prospects for the remaining months of 1925 are uncertain and doubtful. With the approaching movement in northern hemisphere crops, a seasonal quickening in grain chartering is due to set in, but it is difficult to forecast how far good European harvests are likely to restrict importation of cereals this autumn from North America. Better employment for the smaller class of ship in the Black Sea export trade seems probable, but owners of this type of tonnage are more concerned to know what likelihood there is of sufficient volume of British coal exports to make European trading profitable, and, until the effects of subsidised production are ascertained, this question cannot be answered. It is, however, only too apparent that no sustained recovery in "tramp" freights can be expected before the British tonnage at present idle has been absorbed, and for that condition precedent to be attained a much greater flow of bulk cargoes than at present must be forthcoming.

TEA PLANTATION COMPANIES IN 1924.

In spite of the fact that towards the end of the year there was a pronounced break in the tea market, most producers were able to secure better prices for their crops, with the result that profits were very well maintained. The demand for the finer grades continues to expand, with Russia a particularly good buyer. Consumption in this country, too, is steadily increasing, while the export demand to America—a very difficult market—and the British Colonies is expanding. Trade with the North European countries has, in recent years, been handicapped by exchange difficulties. These have now been largely removed. The position, indeed, was probably never stronger than it is at present, and although the Mincing Lane market is inclined to depression, that refers entirely to the balance of the old crop. The new season's crop is commanding high prices, especially for the better quality leaf. The progress made in the industry may be gathered from a study of the following table of tea imports and re-exports:—

IMPORTS AND EXPORTS OF TEA.

From—	1913.	1923.	1924.	1913.	1923.	1924.
	Lbs.	Lbs.	Lbs.	£	£	£
India	203,459,657	267,993,207	295,089,571	7,839,223	19,973,661	24,313,294
Ceylon	110,936,427	12,550,546	130,651,730	4,179,462	9,289,323	10,643,073
China	16,272,548	25,565,425	24,984,672	613,147	1,622,120	1,588,809
Dutch Indies	32,052,717	38,910,236	57,654,634	1,072,515	2,354,576	3,787,822
Other countries	2,322,115	4,194,069	3,938,081	78,558	271,611	257,300
	365,043,464	456,513,513	512,348,688	13,782,905	33,461,491	40,570,298
Re-exports	57,555,661	63,982,869	75,782,119	2,808,940	5,440,239	6,939,021

Rapid strides have been made since 1913, and it is satisfactory to find that India and Ceylon, where the British interest is centred, have maintained a rate of progress which compares favourably with other areas. The exports from China, on the other hand, show a decline, which is probably accounted for partly by internal trouble, and partly by the popularisation of other grades of leaf. The Dutch East Indies has done very well indeed, exports from that district having risen from nearly 39 million lbs in 1923 to over 57½ million lbs in 1924, while the value has gone up from less than £2½ millions to more than £3½ millions.

The following table shows crops for the past three years and financial results over a period of five years, of 13 selected undertakings:—

	Crops.			Net Losses.	Net Profits.	Net Profits.	Net Profits.	Net Profits.
	1922.	1923.	1924.

* Net profit.

This table illustrates the remarkable change which has come over the position of the industry. In 1920, with but one exception—the Ceylon Plantations earned a profit of £65,811—losses were the general rule. To take as an example the most important concern in our list, the Consolidated Tea and Lands, the net loss incurred in respect of the year 1920 was £240,598. In the following year, however, conditions improved to such an extent that the company earned a net profit of no less than £166,667, which was still further increased in 1922 to £425,065, and in 1923 to as much as £709,480, although last year there was a slight setback to £604,664. The decline recorded for 1924, however, was not the general experience, although on reference to the foregoing table it will be seen that profits of several companies in that year were not quite up to the level of the preceding period. The Ceylon Plantations was able to secure larger net profits, as also were the Amalgamated, which shows a particularly progressive recovery since 1920, the East India and Ceylon, Eastern Produce, Jhansie, Jokai, Lungla, and Yatiantota. On balance, crops were higher in 1924.

Our next table shows the average prices of tea crops in 1923 and 1924, together with the total available balance and how it was utilised:—

		Average Price of Crops per Lb.		Available Balance.	Distribution of Available Balance.

Yatiantota	1923	15.53	15.55	136,498	4,812	41,525	10,000	8,372
Tea	1924	15.53	15.55	144,412	10,835	11,165	94,500	21,157
Yatiantota	1923	15.53	15.55	16,120	2,700	8,681	17,000	19,925
Tea	1924	15.53	15.55	21,950	2,700	7,875	3,000	2,545

The higher prices which were obtained for leaf were, of course, responsible for the excellent results disclosed. The Ceylon Plantations was able to mark a particularly good increase in price per pound for its crop, last year's figure being 17.93d, compared with 14.63d. The highest price was obtained by the Amalgamated, with the Chubwa a close second, and the Dooars not far behind. The Yati-

yantota's figure, however, showed only a very small advance. The amounts required for preference dividends show little alteration, but ordinary dividends, in the great majority of cases, absorbed more than twelve months previously. The exceptions were the Dooars and the Nedem, where the totals were both lower on account of reduced dividends. The East India disbursement required the same as in 1923. In the cases of the Consolidated and Jhansie companies, however, the payment was higher, although, owing to capital alterations, the actual rate of dividend was lower, while the Dooars also paid a smaller dividend on a different capital basis. Reserve appropriations were increased by most of the undertakings, while larger sums were carried forward.

The following table shows the principal balance-sheet items during the past two years:—

Name.	Bal. nee Sheet Total.	Share Capital & Res.	Creditors.	Properties.	Stocks.	Cash & Investments.	Debtors.
	£	£	£	£	£	£	£
Amalgamated (Nov. 30, '23)	1,729,917	1,224,350	113,385	772,650	296,529	519,991	140,744

Yatiantota Tea (1924)	772,155	591,565	46,744	456,018	67,880	192,438	17
Yatiantota Tea (1923)	233,164	213,500	4,035	202,174	26,075	4,915	..
Yatiantota Tea (1924)	245,328	216,500	7,258	203,841	28,631	12,864	..

The values put on properties are practically unchanged, but cash and investments are higher in most cases, while stocks also have risen. Both creditors and debtors are higher on the whole, while share capital and reserves taken together account for more. Balance-sheet totals, with one exception—the Dooars—have increased.

Our final table shows a comparison of dividends and prices and present yields:—

Name.	Prices of 1924.		Dividends.		Price End of 1924.	Price End of July, 1925.	Present Yield.
	Hgts.	Lowest	1923.	1924.			
Amalgamated (£10).....	51	16 3/4	%	%	48	37 1/2	8 7 0
British Indian (£1).....	48 1/2	32	40	45	4 1/2	5 1/2	12 4 0
Ceylon Plantations (£1).....	58	40	50	50	5 1/2	5 1/2	8 17 0

Nedem (£1).....	58	24	10 3/4	40	4 1/2	3 1/2	12 16 0

† On old capital.

(b) Free of tax.

From this it will be observed that present prices do not compare very favourably with those prevailing at the end of 1924, and yields are exceptionally high. It is not unlikely, however, that before very long interest in the share market will revive on the knowledge that very good prices are being obtained for the best teas. At present lower values for the balance of the old crop are exercising a depressive influence in Mincing Lane. When this has been disposed of a better tone is expected.

RUSSIA'S CROPS.

(BY A CORRESPONDENT.)

OBSCURE reports as to Russia's crops, which have now partly been got in, have appeared in the West-European Press. If the Soviet official data are reliable, there is no reason for this obscurity, for very full data have been appearing ever since the spring. In some minor points data from different official sources do not agree; but the crop conditions indices, and comparisons with former years, are complete and minute; and those official figures, which are admittedly estimates, differ very little. Further,

as there is no alternative authority, the data must be provisionally accepted.

The crop is a good one, judged by Russian standards, where at best local famines occur every year. Doubt as to this in West Europe probably arises through comparing out-of-date fortnightly condition indices with recent extremely optimistic official utterances. This produces confusion, because the earliest 1925 indices showed little better conditions than those of the same time in 1924, a famine year, whereas the July, 1925, indices show very much better conditions. In May and June, 1924, crops badly deteriorated, whereas in these months this year they somewhat improved.

The following figures are for all the federated Soviet republics, where not otherwise stated, and are compiled on a 5 ball system, according to which 1 is very bad and 5 excellent, 3 being "medium," which does not necessarily mean average in regard to quantity:—

	Winter Grain Crops.			All Grain Crops.		
	May 1.	June 1.	July 1.	May 1.	June 1.	July 1.
1924	3.3	2.8	2.5	3.3	2.8	2.5
1925	3.1	3.1	3.3	3.1	3.1	3.3

The area sown with grain crops in 1925 was 72 million desyatines (of approximately 2.7 acres), against 69 million desyatines in 1924, an increase of 4 per cent. The official *Ekonomicheskaya Zhizn* puts the sown area at 30 per cent. more than in 1922 (which seems doubtful). The comparative index of conditions for the various grain crops on July 1st was:—

	Rye.		Wheat.		Barley.		Oats.		Millet.		Buck-wheat.		Maize.		All.
	Wint.	Spring.	Wint.	Spring.	Spring.	Spring.	Spring.	Spring.	Spring.	Spring.	Spring.	Spring.	Spring.	Spring.	
1924	2.7	2.9	2.4	2.5	2.2	2.5	2.5	2.1	2.4	2.4	2.4	2.4	2.4	2.5	2.5
1925	2.7	2.9	2.4	2.5	2.2	2.5	2.5	2.1	2.4	2.4	2.4	2.4	2.4	2.5	2.5

The index number for "All" is based on the quantities of the different crops, and therefore mainly represents rye and wheat. On July 1st the index figure for "All" in Great-Russia was 3.3, against 2.5 at the same date last year; Ukraine 3.5, against 2.4; Siberia 3.1, against 2.9; North Caucasus 3.7, against 2.1. In late July the Inter-Departmental Export Commission put the grain crop per desyatine at 58 puds (of 16.38 kilos), against 38 puds in 1924. The crop conditions locally are anything but even. But whereas the condition map of July 1, 1924, showed very large areas of failure, and only a small patch as "better than medium," the July, 1925, map shows a very small patch as failure, a very large area stretching from the Black Sea to well north of the Asiatic frontier as "better than medium," and most of the remaining area as medium. The earlier reports recorded failure only in four provinces, Riazan, Tambov, Voronezh, and Penza, all in the "Central Agricultural District." Here crops largely registered below 2; and already in June relief measures were being organised. Although, as shown above, the Ukraine crops on July 1st had, as a whole, a better index figure than the Great-Russian, the official journal mentioned gave a very unfavourable picture of part of them in late July. On July 15th considerable areas had winter rye below 2, and still larger areas winter wheat under 2, from 42 to 73 per cent. of the crops having perished altogether. The total area of failure in the Ukraine embraces 242,000 farms, with a population of about 1,000,000.

The Commissariat of Agriculture reported on July 20th that "the grain yield per unit of area will be equal to that of 1922, and higher than the pre-war yield per area. He estimated that the yield *per capita* would be 28 puds, against 20 puds in 1924. Earliest reports put the total yield at about that of 1923, which was 2,802 million puds, as against 2,564 million puds in 1924. At the beginning of June an official estimate was 3,300 puds. At the end of June, Commissary of Finances, Sokolnikoff, estimated "800 to 900 million puds more than in 1924." In July the Soviet Commercial Agent at Vienna said 3,800 million puds. The latest official estimate, which is backed by precise data, says 4,100 million puds. A simultaneous report from a different official quarter states:—"Consuming" means producing no surplus for sale, and "producing" means producing such a surplus.)

	Millions of Puds.
Great-Russia (Consuming belt)	480
North Caucasus	458
Ukraine	1,113
Siberia	353
Turkistan	80
Trans-Caucasia	95

According to *Ekonomicheskaya Zhizn*, the need is (in millions of puds): For seed, 652; for consumption by the peasantry, 2,305 to 2,451; for consumption by the town population, 320. The estimates of surplus have risen from 600 to as much as 1,000 million puds. Latest estimated surpluses of the different crops, as reported by M. Popoff to the "Gosplan," are:—

Poles, on the other hand, who had only some 7,500 of their countrymen returning from Germany to deal with, had their preparations well in hand, and have given the optants a warm welcome. Such transferences of population are always to be regretted, but when territory changes hands, as it has in so many cases as the result of the Peace Treaties, it is reasonable enough that the inhabitants of the transferred territory should be required to accept the new sovereignty if they remain there at all. There is, of course, nothing peculiar to the Treaty of Versailles in these provisions. Similar requirements are embodied in all the Treaties of Peace.

Inter-Allied Debts.—The unexpected return to Paris at the end of last week of the French financial experts who had been discussing the French war debt with British Treasury officials appears to have caused considerable surprise in French financial circles, and was the subject of questions to the Chancellor of the Exchequer on Wednesday. In a somewhat non-committal answer it was stated that negotiations had not been broken off, but that they will be resumed in due course. It was also stated that a preliminary exchange of views has taken place between the British and Italian Governments in regard to the settlement of the Italian debt to this country, and it is understood that the Italian Government is at present engaged in framing proposals on the subject. In reply to a further question, it was added that replies have not yet been received from all the Governments to which the British Note of June 26th was addressed, but no difficulties were expected with regard to the principle of equal treatment with the United States in the matter of payment, which has been adopted by the British Government as a fundamental basis for any settlement of these war debts.

Relative Taxation Burdens.—The July number of the *Index* (published by the New York Trust Company) gives an interesting table showing annual taxation and national income *per capita* for leading countries in Europe compared with the United States. Figures for taxation are based on national and local taxes in 1923 and 1924, converted at average exchange rates. The table is adapted from the computations of the United States National Industrial Conference Board, and may be compared with similar estimates made in the *Economist* from time to time:—

	Taxation (National and Local) per Capita.	National Income per Capita.	Proportion of National Income Absorbed by Taxation.
Great Britain....	\$6.94	\$74.74	23.2
France.....	39.07	186.98	20.9
Italy.....	19.04	99.17	19.2
Belgium.....	24.83	146.06	17.0
United States....	69.72	606.26	11.5

The final figure for Great Britain is slightly higher than those arrived at by Mr G. Findlay Shirras and ourselves (see page 1288 of our issue of June 27, 1925), but the difference is not very material. The present ratio in the case of France may be somewhat higher than that shown in the *Index*, while our own estimates coincide almost exactly with the figure given as regards the United States. The New York Trust Company rightly points out that while the taxes of foreign countries, converted into dollars, are of interest for comparison, it should be understood that the actual taxation in a country does not necessarily represent the true tax burden on the people of that country. It is the relation of taxation to national income which constitutes more nearly the real tax burden.

Comparison of the *per capita* taxation of countries is also significant as indicating to a certain extent the degree of governmental enterprise, such as "social" undertakings

or departmental work, in the respective countries. In the United States approximately three-fifths of the total taxation is for States and municipalities, whereas the major part of taxation in European countries is national.

Our Index Number.—The decline in commodity prices recorded in our Index Number a month ago has been nearly made good by the rise which has taken place in July, the total having risen from 4351 to 4446; the latter compares with 4458 at the end of May and 4855 at the end of December last. The upward movement was fairly general, though other foodstuffs provided an exception. The table below shows the latest position of the five groups and of the total in comparison with preceding months:—

Date.	Cereals & Meat.	Other Food Pro- ducts (Tea, Sugar, &c.)	Textiles.	Minerals.	Miscellaneous (Rubber, Tim- ber, Oils, &c.)	Total.	%
Basic (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	879	382	616	464	853	2698	118.6

" June, "	885	704	1234	736	791	4351	197.8
" July, "	908	698	1274	756	809	4446	202.1

The rise in primary foodstuffs is largely due to meat and potatoes, cereals being mostly a trifle lower. In the subsidiary foodstuffs group tea was higher, but this increase was more than offset by decreases in coffee, sugar, and butter. In textiles there was a rise in both American and Egyptian cotton, but the increase in the total is principally due to English wool, and flax, hemp, and jute. Australian wool was lower, and there was a slight decline in cotton cloth. Pig-iron was again lowered slightly, but coal prices rose a little in anticipation of the stoppage, and the non-ferrous metals were all a trifle higher. In the miscellaneous section the further sharp rise in rubber was the only feature. The table below shows the changes in each commodity's index number in comparison with that for the end of June, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	105	+ 2	Cotton, A	126	+ 3	Copper	50	+ 1
English	32	- 5	Cotton, E	224	+ 7	Minerals	755	+ 20
Flour	80	+ 4	Earn	126	+ 1			
Barley	80	+ 2	Wool	129	+ 4			
Oats	82	+ 1	Do	120	+ 13	Baltic timber	100	..
Potatoes	75	+ 12	Do	120	+ 4	Amer. timber	80	..
Rice	117	+ 2	Silk	94	- 2	Leather	100	..
Beef	82	+ 4	Flax	123	+ 6	Petroleum	100	..
Mutton	91	+ 3	Hemp	66	+ 7	Oils	77	..
Pork	91	+ 11	Jute	144	+ 5	Oilseed	86	- 3
						Tallow	76	+ 2
Cereals & meat	908	+ 22	Textiles	1,274	+ 40	Indigo	90	..
Tea	153	+ 7	Pig-iron	76	- 2	Crystals	85	+ 20
Coffee	137	- 3	Steel rails	71	..	Rubber	54	+ 20
Sugar, cane	96	+ 3	Iron bars	132	+ 4			
Sugar, beet	103	- 5	Coal, steam	132	+ 3	Miscellaneous	809	+ 18
Butter	92	- 2	House coal	85	+ 3			
Tobacco	116	..	Lead	149	+ 11	Total	4,446	+ 95
			Tin	101	+ 2			
Other foods	698	- 6						

These changes bring the increase in the total over the figure for the end of July, 1914, to 73.3 per cent., which compares with 69.6 per cent. at the end of June. The

increases of the five groups over the pre-war figure may be seen from the following table:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals	Miscel- laneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Mar., 1920	261	260	484	269	309	325.6
Dec., "	233	229	209	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6

Dec., "	149	200	193	152	146	166.2
Dec., 1923	148	231	225	167	136	178.6
June, 1924	158	210	219	164	139	176.6
Dec., "	171	224	235	175	146	189.3
Jan., 1925	176	217	228	168	144	185.9
Feb., "	173	219	233	168	142	186.0
Mar., "	166	212	232	164	141	182.5
Apr., "	163	206	221	160	140	177.4
May, "	165	201	205	160	143	173.8
June, "	153	200	200	159	143	169.6
July, "	157	198	207	163	146	173.3

At this time last year the increase shown by the total was 81.6 per cent., cereals and meat standing at 164, other food at 208, textiles at 231, minerals at 167, and miscellaneous at 140.

Foreign Investment and Trade Stagnation.—A little booklet published this week by the Federation of British Industries suggests an explanation of "Some Causes of the Present Stagnation of British Trade" which has at least the merit of novelty. The Balfour Committee in its recent "Survey," it will be remembered, came to the conclusion that the *malaise* which affects some of our great export industries was due mainly to a decrease in the volume of the world's trade as a whole, our relative share in the latter being actually higher than in pre-war days. The two members of the economic staff of the Federation who have conducted the present investigation suggest that the ruling cause of trade depression is a decline in our export of capital. They show that for many years before the war periods of active foreign investment coincided with periods of prosperity in the export trades, and produce the following table to show the magnitude of our export of capital in relation to the trade figures before the war, and its subsequent decline:—

	(a) Export of Capital.	(b) Post-War Export of Capital Converted to 1913 Values.	(c) New Overseas Issues on the London Market.	(d) British Exports.	(e) Total Over- seas Trade.	% to (d)	% to (e)
	Mill. £.	Mill. £.	Mill. £.	Mill. £.	Mill. £.	%	%
1910 ..	153	..	207	430	1,212	36	13
1913 ..	181	181	198	525	1,294	35	14
1922 ..	154	97	135	719	2,216	21	7
1923 ..	102	64	136	767	1,982	13	5
1924 ..	29	18	134	795	1,826	4	2

Although the writers appear to have gone to considerable trouble to demonstrate the obvious fact that two and two make four when the Board of Trade is calculating our annual balance, some of their diagnoses of trade tendencies merit careful consideration. They suggest that in the 10 years before the war there was a definite diversion of some part of the country's activities from home trade to foreign trade, and that recently the current has set the other way. The latter explanation is, they state, in accord with such facts as the increase as compared with pre-war in our home consumption of coal; the movements in country and provincial bank clearances relative to those in London; the fact that, despite the reduction of our export trade to 75 per cent. of the pre-war amount, there were in 1923 approximately as many persons in employment as before the war; the alteration in the relative positions of sheltered and unsheltered industries; and, lastly, the relatively greater prosperity—as compared with pre-war—of the home trade of many of our export industries. The writers believe that while heavy pre-war taxation has reduced the fund of savings, the heavy annual payments on account of War Loans involve the transfer of savings from holders who would normally largely reinvest them

* Obtainable from the Federation's offices, 39 St James' street, S.W.1. Price 1s.

in home industry or foreign development to investors in securities of the gilt-edged class—a somewhat questionable assumption. Mr M. T. Nugent, director of the Federation, in an introduction, touches on current controversies regarding the gold standard and British industry, and comes to the following conclusion, which is especially interesting in view of the Federation's previous pronouncements on monetary policy:—"The prospects of a general return to stable exchange conditions must have been improved by the return of the British Empire to a gold standard, and it is to be hoped that an early meeting of that General Conference of Central Banks contemplated by the resolutions of the Genoa Conference will still further assist the return to normal conditions."

Labour in Ireland.—Our Dublin correspondent writes—In the Irish Free State, as in Britain, there is trade depression and a clearly recognised necessity for negotiation, with a view to readjustments for the benefit of all, between employers and employed. Subject to that similarity, all the conditions of the Irish problem are different. Ireland is very much under-industrialised where Britain is predominantly industrial. Labour, consequently, is relatively less numerous, less highly organised, and less powerful. The Executive is probably strong enough to deal with any attempt to paralyse the State by a wholesale sympathetic strike if there were any attempt—of which there is not the slightest sign—to have recourse to such an expedient. But there are very pressing problems crying out for treatment. Economic recuperation is slow, and there is a lack of confidence, and therefore of investment in new enterprise, for which the Government is not wholly free from blame. It has been somewhat rough-handed and inconsiderate occasionally in dealing with the interests of capital invested in the railways, the breweries, the distilleries, and the retail liquor trade—even the banks have required to be reassured. The result is that the moneyed classes, who have all got something in these enterprises, are most reluctant, in spite of double income-tax difficulties, to sell out their British investments and bring home their money to start new industries or enterprises. The bearing of general public confidence on industrial and national credit seems as yet to be imperfectly appreciated. Apart from lack of confidence, the cost of conditions of labour are alleged to be a big factor in the prevailing depression and the resulting unemployment. Now Labour, as a whole, is willing to join in a National Conference upon broad lines. The proposal actually came from a leading Dublin employer in the Dail. Most sober and far-sighted publicists are in favour of its adoption. But it will be for the Government to make the first move to bring the parties together and to promise its assistance and counsel. The opportunity for an open and comprehensive discussion in a spirit of goodwill which may not recur is afforded by the resolutions and debates at the recent annual meeting of the Irish Labour Party and Trades Union Congress, where an excellent spirit was shown by the leaders, and the proposal for a National Conference was formally approved. The volume of unemployment makes the matter urgent, and the curtailment of the "dole" within the strict covenanted limits accentuates the pinch from which a large section of the population is suffering. Nationalists and students of economics point out how greatly the project would tend to keep Irish Labour within national bounds and to free it from international control. They deprecate, on various grounds, Irish Labour getting its instructions from English unions, and suggest—an old suggestion redolent of bygone controversy—that the decisions in England upon Irish problems follow the bias of English rather than of Irish interests. Thus recently the Irish railways applied for concessions as to wages and conditions from Irish Labour, on the ground of the extraordinary urgency of the companies' financial position. The application was referred to the English trade union chiefs in London. The latter, very naturally, turned it down, as they proposed to turn down a similar application from the English companies which was to come before them a few days later. Yet the circumstances of the Irish case differ entirely from the circumstances of the English case. The Irish Government is favoured with an opportunity for a signal act of beneficent and constructive statesmanship.

American Cotton Crop.—Our Manchester correspondent writes:—The cotton season in the United States for 1924-25 closed on July 31st, and interesting statistics have been published by several authorities. Mr H. G. Hester, the secretary of the New Orleans Cotton Exchange, gives the commercial crop as 14,698,356 bales, against 11,290,397 bales in the previous year, and 11,282,806 bales in 1922-23. He estimates the carry-over at 2,880,000 bales, against 2,319,000 bales a year ago. His estimate of consumption has caused surprise, the amount being 14,247,000 bales, against 11,243,000 bales in the previous twelve months. Some figures have also been issued by Mr Alston Garside, of the Merchants' National Bank of Boston, but his estimate of consumption is only 13,200,000 bales, as compared with 10,926,000 bales in the previous year. According to Mr Garside, the mills of the world are now consuming American cotton at an annual rate of between 14,000,000 and 14,250,000 bales. He estimates the carry-over at 3,388,000 bales, as compared with 2,754,000 bales on July 31, 1924. The International Cotton Federation is now obtaining returns from the members as to consumption during the second half of the season, and stocks at mills, but it is not likely that the figures will be published until the end of this month. It is generally recognised that if cotton prices are to remain on the present level, a growth this season fully equal to last year will be necessary. Forecasts of the yield in 1925-26 vary considerably. The United States Government will publish another condition report on the crop with an indicated yield to-day.

Home Railway Dividends.—The Home Railway market has lately been very sensitive to developments in the coal crisis, and it is therefore difficult to gauge the effect produced by the interim dividend announcements. In view of the declines in gross traffic receipts for the half-year, however, it is not surprising to find reductions. The London, Midland and Scottish and the Great Western reduce their interim ordinary dividends from 6 to 5 and 5½ per cent. per annum respectively, no mention being made of withdrawals from reserve:—

Name of Line.	Interim Dividends Rate % per Annum.		Prices of Ord. Stocks.		Present Yield.
	1924.	1925.	Highest 1925.	Aug. 6, 1925.	
Great Western ord. stock	6	5½	111½	89½	5 3/8
London and North-Eastern pref. ord. stk.	5	5	83½	61½	5 3/8
London, Midland, and Scottish ord. stk.	6	5	102½	80	5 5/8
Metropolitan cong. stock	4	4	83	70½	5 13/16
Southern pref. ord.	5	5	85½	78	6 8/8

Neither the Southern nor the London and North-Eastern make interim distributions on their deferred ordinary stocks, but pay the usual 5 per cent. per annum on the preferred ordinary. The Southern showed a slight increase in traffic receipts for the first half-year, and is obviously able to pay this dividend out of revenue, but the London and North-Eastern had to make "a large transfer" from the railway compensation account reserve, which stood in the last balance-sheet at some £8½ millions. At the end of 1924, £2½ millions was withdrawn from this fund to pay a dividend of 2½ per cent. on the deferred ordinary stock, which required £3 millions. Traffic receipts for the half-year are down by £563,000, the company being, of course, peculiarly sensitive to depression in the mineral trades. As will be seen from our table, prices of the stocks are very much below the highest figures of 1925, which were touched early in the year. There was a sharp rise in prices on Thursday, when Bank Rate was lowered, and this partly accounts for the moderate yield on the ordinary stocks. In the circumstances, the very high yield on London and North-Eastern preferred ordinary is perhaps not surprising.

American and English Railway Stocks.—A correspondent writes:—The enthusiasm of those who announced the certainty of feverish activity in the American market as soon as the dollar exchange became stabilised must now have waned; judging from the paucity of markings in American railroad stocks and bonds the public are taking little or no interest. Some of the old favourites, like

Atchisons, Pennsylvanias, and Baltimore and Ohios, are being dealt in to some extent, and this is understandable, as they are good dividend-payers and also have speculative possibilities. The bond section, however, shows signs of neglect, and the reason is fairly apparent on examination. Their price is fixed by money conditions and the investment demand of the United States market, and the best of them yield under £4 5s per cent. This is not a very attractive basis for the British investor, surrounded as he is by plums in the shape of War Loan and other securities yielding about 5 per cent. It is but natural that, apart from arbitrage and professional dealings, business in this part of the market should not have developed as some expected. Differing income-tax scales on each side of the water account for the wide disparity in yields, and when they have been "corrected" for income-tax and brought on a net basis, it is remarkable how effectively the laws of supply and demand are performing their silent duties. For instance, the yield on London Midland and Scottish debenture stock, less tax at 4s, is £4 per cent.; on Atchison Topeka and Santa Fé General Mortgage Bonds the yield is about £4 4s, which, less United States income-tax at 6 per cent., is £3 19s per cent. A very striking comparison. From the point of view of the dealer who, in pre-war days, was able to place a good number of American bonds among the banks and others, and who is now cold-shouldered in favour of the Consol market, this state of affairs is rather saddening. His occupation in this direction is now gone, unless he cares to comfort himself with idle dreams of an income-tax of 25 cents in the dollar on the other side, or the elimination, by some as yet undiscovered genius, of our own.

Shipping Freight Index Number.—A turning point appears to have been reached in the course of our Index Number of "tramp" shipping freights, based on fixtures for whole cargoes concluded in the open market. The July index figure works out at 110.41, a rise of 3.45 per cent. on the month, but representing an average level of freights approximately 8.6 per cent. lower than twelve months ago.

The movement of the various groups in the index are summarised as under:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920.....	814.31	529.89	757.52	744.81	587.02	712.16	690.95

May ".....	109.86	124.85	110.97	108.43	105.16	126.41	114.28
June ".....	109.25	104.78	108.24	105.53	100.43	112.17	106.73
July ".....	119.02	111.96	113.42	106.15	94.43	117.51	110.41

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Ino. or Dec. Points.		Index No.	Ino. or Dec. Points.
Home trade.....	107.88	+ 14.29	S. America—outwards	134.27	— 0.57
Bay—outwards.....	137.62	+ 25.89	"homewards.....	92.56	+ 10.92
"homewards.....	119.35	— 4.03	India—outwards.....	122.11	+ 1.25
Mediterranean—outwards	131.27	+ 3.81	"homewards.....	90.19	+ 6.00
"homewards.....	110.08	+ 4.63	Far East, &c.....	94.43	+ 5.34
North America.....	111.96	+ 7.18	Australia.....	117.41	+ 5.34

Factors in the upward movement recorded last month were (1) a stimulated demand for colliers ready for "spot" loading, and thus able to effect clearance before

the date on which the mining agreement was due to terminate; (2) restricted offerings of vessels as a result of the considerable quantity of tonnage laid up during the past two months; (3) tentative signs of greater activity in movement of grain from North and South America. Of these factors, only the third can be considered of a really satisfactory nature. No revival of Far Eastern business was apparent, and, it will be observed, the index number of this group is now disproportionately low in comparison with the general average. The quotation for Australia is more or less nominal.

The relation of the index to the average for 1913 may be seen from the following table:—

Month.	1913 = 100.	1923.	1924.	1925.
January.....	131.60	114.05	117.11	114.49
February.....	135.76	112.73	123.78	115.96
March.....	135.53	115.23	122.09	106.63
April.....	129.46	115.45	117.22	104.24
May.....	125.12	114.55	114.27	98.23
June.....	117.45	106.82	108.62	91.74
July.....	114.52	103.39	103.75	94.90
August.....	113.16	100.16	104.43	..
September.....	110.37	103.04	110.50	..
October.....	114.42	107.86	115.55	..
November.....	119.43	111.21	112.76	..
December.....	117.39	111.81	111.21	..
Mean for year.....	122.02	109.69	113.44	..

A general rise of at least 15 per cent. in the level of freights is required before the acute depression of this summer can be said to have passed.

The American Leather Trade.—A correspondent writes: Leather trade conditions in the United States during the past few years have been much the same as those prevailing in this country. Most of the big sole and upper tanners have lost a good deal of money, and reductions of capital have been frequent. A policy of reduced input of hides and skins has also been followed, but, mainly owing to the Continental demand, values of all classes of raw stock have been maintained at a high level, while it has been found impossible to obtain prices on finished stock which showed a profit. In spite of this, however, much more leather was produced in the United States than could be absorbed, and tanners, faced with large accumulations, have had to sacrifice holdings of stock, often at great sacrifices. But latest advices from America seem to suggest that the outlook is improving. In a recent statement made by Mr H. W. Boyd, president of the Armour Leather Company, he reported that, for the first time since the American Government required reports, "stocks on hand are below the normal supply, whilst losses due to the war have now been so completely liquidated that, with prices and demand strong, the leather industry as a whole may be considered on the up-grade." One of the largest Milwaukee tanners recently stated that for some years past the percentage of profit on leather manufacture was probably the smallest of any native industry in view of the amount of capital involved. He contended that far too much leather was being produced, and that unless conditions soon altered many large concerns would have to shut down. Mr Boyd, however, thinks conditions are such that tanners may again look forward to a normal profit, although he warns the trade against expecting large profits. He contends that war-time hide and leather stocks, which at the end of 1920 amounted to the equivalent of the whole year's supply, have been so reduced that stocks on hand at the present time are about 1,000,000 sides less than a reasonable normal amount. This does not mean a shortage, but it does mean that the excessive stocks of American and imported leather which followed the war have been so disposed of that trading operations can now be conducted on a normal basis. The above views are satisfactory to British readers, as improvement in this country always follows on a betterment in American industry; moreover, it cuts away any fear of any dumping here of surplus American stocks of leather.

The Finance of Iraq.—The report of the Financial Mission to Iraq, undertaken by Commander Hilton Young and Mr R. V. Vernon, and published as a White Paper (Cmd. 2438, price 1s), is an interesting but rather disquieting document. It starts from this position:—For

1923-4 and 1924-5 the Budget of Iraq actually showed a surplus, amounting, for the latter period, to 60 lakhs of rupees. This surplus has, however, been turned into a deficit by the imposition on Iraq of two heavy new charges. The first is the obligation to bear a part of the burden of the debt of the Ottoman Empire—some 80 lakhs, in fact. The second is the new military burden. In 1924-5 the actual expenditure on the Army was 101 lakhs; in 1925-6, under the arrangements recently made between the British Government and that of Iraq, it will be 135 lakhs. The surplus thus becomes a considerable deficit. Faced with this problem, the Commissioners found that the general character of the Budget can hardly be altered substantially either by increasing revenue or reducing expenditure, though they have some suggestions to make under both heads. The broad facts are, as stated by them, that "Iraq is a small country of some 3,000,000 inhabitants. It emerged recently from a foreign domination that was hostile to all progress. There has not yet been time for the secure establishment of public order. It lacks much of the apparatus essential to a developed State. It started life without a financial balance. As an independent State, it has to support an Administration which is necessarily far more expensive than its former one." There is probably no historical instance of an infant State expected to do so much so soon. They propose the calling of a "temporary halt" in such services as Public Works, Education, Irrigation, and Agriculture, not because they are not desirable and even necessary, but because they cannot be afforded; an increase in Customs and Excise to yield an additional revenue of 30 lakhs; certain other taxes to yield minor sums. But "the result is, when all has been done that can be done, the Budget is still faced with a deficit for 1925-6 of 49.25 lakhs." In that situation, either a part of the Ottoman debt must remain unpaid, or "the military programme contemplated by the recent arrangements must be substantially reduced." Which alternative should be adopted they do not, of course, state; they do, however, suggest that the British Government should definitely cancel the debt charged under the head of transferred assets on the railway account, and "that a substantial concession be made in respect of the railways, by way of a postponement of British claims. Further, that the military programme should not be expanded they regard as vital to all their calculations. [We are of opinion that under present conditions any further substantial increase in military expenditure must be inconsistent with the establishment and maintenance of national solvency.] They throw out the somewhat sinister suggestion that a saving (possibly 20 per cent.) could be effected by the introduction of conscription, but on the necessity of confining military expenditure to its present limits they are definite. It is on that hypothesis that they have framed the suggestions they make for detailed reform. The present land revenue system, they find, is "unsatisfactory and uneconomic." The levy which actually reaches the Treasury is very much smaller than that exacted from the cultivator. Corruption is rife. There has been a tendency on the part of spending Departments to secure comfort for themselves by overestimating, though "habitual overestimation of expenditure is the worst of all nuisances to those responsible for general financial policy." The Report concludes with a plan for the establishment of a railway corporation, and the suggestion that, either through the Trade Facilities Act or otherwise, advances might be made to the British Government for railway works and replacements and for bridges, the Basrah Customs possibly forming a suitable special security. The minimum amount required would be about £600,000—a modest sum in these days of millions.

Deposits by Reinsurance Companies.—An interim report has been issued by the Departmental Committee which is inquiring into the working of the Assurance Companies Act, 1909, dealing with the question of statutory deposits by reinsurance companies in this country. The Act of 1909 was not intended to apply to reinsurance companies, which do not carry out direct insurance business with the public. That was made clear during the passage of the Act through Parliament, and was accepted as the law by the Board of Trade for several years. But in its drafting the Act has been since held by the Courts of

Scotland and by the House of Lords to impose upon reinsurance companies, both native and foreign, a liability to put up deposits of £20,000, and to make returns as required by the Act. In accordance with these legal decisions, the British reinsurance companies have made the statutory deposits, but the foreign reinsurance companies with branches in this country have so far declined to do so. The Departmental Committee, which is now sitting, examined the whole question, and reported unanimously that "companies which transact reinsurance business only, whether fire, accident, or employer's liability, ought not to be treated as doing these classes of insurance business for the purposes of the 1909 Act, and that the Act should be amended so as to secure this result. If the law is altered to give effect to our recommendations in this regard, provision should, we think, be made for releasing their deposits to such companies of this class as have made deposits under the 1909 Act." It is unlikely that the Board of Trade will at once act on the recommendations of the Committee. The most probable course will be to await the full report of the Committee in the autumn, and then to lay before Parliament next year a Bill to amend the Assurance Companies Act in those respects which are held to be desirable. The reinsurance question can be dealt with then. In the meantime, it would clearly be illegal to release the deposits of British reinsurance companies made under the existing Act. The Committee's principal reason for recommending that reinsurance companies should be put outside the Act was because reinsurance is done with the direct insurance companies and not with the public, and that "the bodies which contract with these reinsurance companies are fully capable of securing adequate protection for themselves, and ultimately for their policyholders, and often do so by retaining a considerable proportion of the reinsurance premiums, or by requiring a deposit of securities."

Guinness's Report.—The accounts of Arthur Guinness Son, and Co., Limited, for the year ended June 30th last have appeared with commendable promptitude, when the laxity of so many industrial concerns in this direction is considered. They show that after the slight decline recorded a year ago, profits have recovered. Gross receipts amount to £13,220,814, compared with £12,528,137 in 1923-24, so that with expenses showing a small decline from £10,237,134 to £10,121,266, the net profit is £3,099,548, against £2,291,003. The reserve fund receives £400,000, in comparison with £200,000 in the preceding period, while the ordinary distribution absorbs £2,400,000, in contrast with £1,950,000. The following table affords an interesting comparison of results over a period of years:—

	Receipts.	Ex- penses.	Net Profit.	Reserve, Depreciation, &c.	Ordin'y Dividend.	Rate %
	£	£	£	£	£	
1908-9	2,218,160	1,096,522	1,121,638	280,000	700,000	14
1909-10	2,465,713	1,195,090	1,270,623	325,000	775,000	15½
1910-11	2,629,180	1,301,511	1,327,669	335,000	825,000	16½
1911-12	2,541,030	1,328,241	1,212,789	255,000	825,000	16½
1912-13	2,527,237	1,443,119	1,084,118	185,000	825,000	16½
1913-14	2,752,974	1,514,726	1,238,248	235,000	700,000	14
1914-15	4,181,655	2,721,206	1,460,449	585,000	700,000	14
1915-16	5,472,922	3,962,122	1,510,800	531,000	800,000	16
1916-17	4,920,287	3,014,157	1,906,129	235,000	800,000	16
1917-18	4,105,393	2,083,307	2,022,086	235,000	800,000	16
1918-19	5,858,854	3,808,174	2,050,680	285,000	800,000	16
1919-20	12,941,420	9,677,513	3,263,907	735,000	1,000,000	20
1920-21	18,187,514	14,558,324	3,629,190	519,407	1,250,000	25
1921-22	14,570,320	11,691,967	2,878,353	235,000	1,450,000	29
1922-23	13,759,584	11,084,264	2,675,320	235,000	1,800,000	24
1923-24	12,528,137	10,237,134	2,291,003	200,000	1,950,000	26
1924-25	13,220,814	10,121,266	3,099,548	400,000	2,400,000	32

The rate of dividend on the ordinary stock is increased from 14 to 24 per cent., so that in spite of a reduction in the bonus from 12 to 8 per cent. stockholders actually receive a total payment of 32 per cent., which compares with 26 per cent., and is the highest ever made by the

company. The reserve fund now aggregates £1,500,000, and the sum carried forward is £832,918, against £713,822 brought in.

Bass, Ratcliff, and Gretton.—There was a slight increase in the gross trading profit of the well-known brewing concern of Bass, Ratcliff, and Gretton, Limited, for the year ended June 30th last, but expenses rose by a larger amount. The balance available for distribution, however, was larger than last year by £40,000, sundry revenue having produced nearly £23,000 more, and £30,000 more having been brought into the accounts. The following table gives results for a number of years:—

Year ended June 30.	1914.	1920.	1921.	1922.	1923.	1924.	1925.
Gross trading profit.....	749,607	1,113,121	1,158,172	1,205,795	1,167,135	1,222,864	1,267,530

Ord. dividend.....	204,000	224,400	224,400	224,400	224,400	265,200	265,200
Rate.....	15 %	11 %	11 %	11 %	11 %	13 %	13 %
Reserve, &c.....	50,000	160,000	100,000	100,000	100,000	100,000	150,000
Carried forward.....	64,676	61,970	73,085	66,748	63,571	93,429	66,097

Last year's increased distribution on the ordinary shares of 13 per cent., free of income-tax, is repeated, and includes a bonus of 2 per cent., and by reducing the balance forward by some £27,000, the directors are enabled to transfer £50,000 to reserve and £100,000 to the reserve for property depreciation. The reserve fund now amounts to £1,000,000, against paid-up ordinary and preference capital of £3,400,000. Total assets figure at £8,613,400, including £800,000 for goodwill and trademarks, which can hardly be called an extravagant figure. Licensed properties show an increase of £179,000, but there are reductions of £137,600 in sundry debtors, of £80,500 in cash, and of £84,600 in investments. An analysis of the balance-sheet will be found in the usual column.

Union Cold Storage.—A substantial improvement in earnings is shown in the report of the Union Cold Storage Co., Limited, for the year 1924, gross profits being £121,000 higher at £848,100. The comparative table below shows results for several years past:—

	1913.	1919.	1920.	1921.	1922.	1923.	1924.
Gross profits.....	137,094	306,360	467,393	558,765	581,589	726,904	848,070
Deb. interest, &c.....	31,727	58,133	72,118	74,676	83,424	72,830	61,329
Net profit.....	105,367	248,227	395,275	483,999	498,166	654,074	786,741
Brought forward.....	23,806	51,066	71,717	87,497	104,028	109,922	127,842
Reserve & depreciation	126,173	299,293	466,992	571,496	602,194	761,996	914,582
Prof. dividend.....	43,185	78,777	87,939	108,667	133,472	138,826	138,504
Ord. dividend.....	46,109	118,800	261,556	328,800	328,800	395,830	596,800
	..	50,000	30,000	30,000	30,000	100,000	100,000
	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)
Carry forward.....	36,879	71,716	87,497	104,028	109,922	127,840	149,278

Out of the sum transferred to depreciation reserve, £63,500 of debenture stock has been purchased and cancelled. Debenture and mortgage interest absorbs £59,500 and the dividend on the 6, 7, and 10 per cent. preference shares £526,000. In June last the preference was increased to £11 millions by the issue of £3,220,000 in 6 per cent. preference shares, the dividend on which in a full year will absorb £193,200. The balance-sheet shows that secured loans and bank overdrafts have been reduced by £907,100 to £1,509,000, and creditors by £2,709,500 to £3,853,500. Net advances to associated companies figure as a separate item in the present balance-sheet at £1,380,300. A year ago they were included with sundry debtors and stock in trade. The latter item now stands at £3,040,700, representing a reduction, making allowance for the separation, of £3,424,300. The property item is £281,100 lower at £13,784,400, and cash is £19,800 higher at £377,700.

Oversea Correspondence.

UNITED STATES.—STOCK MARKET TENDENCIES—RAILROAD EARNINGS—MONEY AND CREDIT—STEEL CORPORATION—THE GOLD STANDARD.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 28.

RENEWED strength in the stock market after a period of irregularity is the chief matter of interest at the present moment. The burst of strength is the more interesting because it has come as something of a surprise. With the July re-investment demand disappointing in the sense that it was pretty thoroughly anticipated during June, with the bond market reacting, with stocks dull, and with thoughts turning to the probability of higher money during the fall, it was assumed in many quarters that a period of digestion had set in. Even when high-priced specialties began to move upward sharply, attention was directed to the fact that the body of the market was remaining practically stationary. Many observers concluded that the market was tired, and that the "pools" and professional operators were merely giving it the appearance of strength. Now, however, the market has become quite active again, and spectacular advances have occurred in a considerable number of directions. Motor shares, and particularly those of truck and bus companies, have stood out, but so have utilities, while there has been increased interest and strength in rails. At the moment the market is beginning to give, in fact, the appearance of a general advance. Rising prices always create more optimistic views of the situation, and some of the recent sceptics are beginning to say that the steadiness of the market as a whole during the recent period of quietness was a reflection of the absence of speculative activity, and that the sharp rises in specialties were due to the meagreness of the supplies of stocks that were for sale. Whatever the real position may be, the fact cannot be doubted that the market again is active and decidedly strong.

Part of the rise undeniably is due to the growing conviction that business will be good during the rest of the year. Part of it also is due to the excellent earning statements for the first half of the year, that are now being published. Despite the pessimism that existed in certain quarters earlier in the year, a host of important corporations are revealing good gains in earnings, as compared with their showings in the corresponding period of last year. Another supporting factor in the market is the excellent showings made by the railroad earning statements for June. The returns are incomplete as yet, but there is no mistaking the decided nature of the improvement over the statements of a year ago. Some competent judges believe, in fact, that the Class 1. roads will be able to show net revenue of between \$75,000,000 and \$85,000,000 for June. Such a record would compare with about \$60,000,000 in June of last year, and would represent a return of nearly 5 per cent. on the valuations set up by the Interstate Commerce Commission. Certainly the railroads are in splendid condition. Their physical assets have been rehabilitated, their earnings are good, and their credit has been much improved. Under these circumstances they are in a position to contribute to general prosperity through the exercise of their great purchasing power.

One factor that serves to restrain the exuberance of market followers is the money situation. Credit is still plentiful and cheap, even though the tone of the money market is, perhaps, slightly firmer. It would surprise no one if current ease persisted for a few weeks more. Nevertheless, it is realised that the combination of an industrial revival and the usual autumn pick-up in farm and business activity is pretty certain to increase the commercial demand for credit. Since gold no longer is coming into the country, this extra credit would have to come either from the investment or security loan accounts of the commercial banks or from the Federal Reserve system. What shrewd market followers are asking them-

selves is whether the Federal Reserve banks will make sufficient credit available to sustain a large volume of market activity as well as that in industry and commerce. On the one hand, they believe that the Federal Reserve authorities wish to take care of all the legitimate demands of commerce, and that they wish, having in mind the situation regarding the pound sterling and the gold standard in general, to keep money rates as low as practicable. On the other hand, they realise that the Federal Reserve authorities would not be likely to countenance a misuse of credit for speculative purposes, and that while the Federal Reserve authorities might not be disturbed by a mild rise in commodity prices here, they would hardly view the prospects for an inflationary boom with equanimity. The developments of last March demonstrated the control which the Federal Reserve banks had over the strategic position even stronger than it was last spring. By withholding credit or taking it away from the speculative markets, they undoubtedly could greatly affect the course of events in the latter. Just how the Federal Reserve authorities will shape their policies as the situation develops is a matter of the highest interest and importance.

Publication, after the close of the markets to-day, of the second quarter earning statement of the United States Steel Corporation furnished another surprise that should be pleasant to those bullishly inclined. The report showed that the corporation made net earnings of \$40,624,222. The most optimistic estimates had placed the figure at no higher than \$36,000,000. The latest return compares with \$39,882,992 in the preceding quarter, when operations were being carried on at a very high rate, and with \$41,381,039 in the most excellent second quarter of last year. As operations declined materially during the second quarter, the good earning statement probably reflects in part the higher prices that obtained on shipments made during this quarter as compared with those of the previous quarter. The surplus available for dividends amounted to \$21,889,004, or \$3.06 a share. This makes the earnings for the first half of 1925 equal \$5.99 a share. The corporation, in other words, is easily earning its regular 5 per cent. and its extra 2 per cent. dividends.

Much attention has been attracted here by the reports of labour troubles on your side. One thing that our people are not impressed with is the contention that your industrial troubles are due to the installation of the gold standard. The resumption of gold payments may be a factor in the situation, but the opinion here is that it is a small one. Your industrial difficulties are regarded as a more or less natural heritage of the war upset. Our people note that the decline in commodity prices that you have felt this spring has been far from a local affair. A coincident decline in commodities occurred on this side of the water, and for quite different reasons than the restoration of the gold standard on your side. Those who blame all your troubles on the restoration of sound money are thought to be pushing a theory of rather doubtful value to extreme limits.

FRANCE.—BUDGET FIGURES—DEBT CHARGES—DAWES PLAN AND PAYMENTS IN KIND.

(FROM OUR CORRESPONDENT.)

PARIS, August 5.

It is now possible to dissect to some extent the totals of the Budget for 1925, and ascertain how the total estimated expenditure and revenue, each amounting to slightly over 33,000,000,000f, has been made up. The estimated expenditure for the year is made up as follows:—

	Francs.	%
Public debt services.....	18,573,589,632 (or 56.1)	
Parliamentary salaries, &c.....	44,526,710 (or 0.1)	
Army, navy and other Government departments.....	12,870,470,702 (or 38.8)	
Cost of exploitation of State monopolies, inland revenue collection, &c.....	1,349,108,524 (or 4.1)	
Repayments, restitutions, and "Irrecoverables".....	299,485,000 (or 0.9)	
Total credits opened.....	33,137,180,018	

The estimated revenue for the year is made up as follows:—

	Francs.	%
Taxation	25,381,092,000 (or 76.6)	
Yield from State monopolies and industrial exploitations by the State	2,641,810,584 (or 8.0)	
Revenue from State property	376,280,000 (or 1.1)	
Recettes d'ordre (from sundry resources) ..	1,871,162,094 (or 5.6)	
Exceptional resources	1,605,000,000 (or 4.8)	
From reparations (Dawes plan receipts)	1,275,500,000 (or 3.9)	
	33,150,844,678	

As will be noted, the Budget is only approximately balanced, and has not attained the super-equilibrium desired by M. Caillaux. It was the Finance Minister's desire that this year's estimated receipts from the Dawes Plan should be excluded from the 1925 Budget, and the money directly devoted to meeting expenditure arising out of the war, and also that revenue derived from exceptional resources and amounts received from taxation in excess of Budget estimates should be utilised for debt redemption; but under the force of things both these counsels of perfection had to be ignored for the time being. The Finance Minister, however, insists that he shall be free to apply them to next year's Finance Act.

The 18½ milliards of expenditure comprised under the heading of "Public Debt Services" not only comprises the normal interest charges on the whole of the floating and funded debt, both internal and foreign (with the notable exception of the so-called "political" debts due to Great Britain and the United States), but also the whole of the civil and military war pension charges. M. René Théry sets forth details of the credits authorised by the 1925 Budget in respect of the debt services as follows:—

	Francs.
Internal debt—	
Interest charges on war loans in the form of Perpetual Rentes, 1917-1920	4,354,903,358
Interest on National Defence Bonds	419,150,000
Interest on Treasury Bonds of over one year	1,889,870,000
Interest on Treasury floating debt	3,150,000,000
Service (interest and redemption) of Redeemable Rentes (3 per Cent. and 3½ per Cent. pre-war issues, and 1920 5 per Cent.)	1,079,657,140
Annuities of war losses' damages	683,400,000
Service (interest and redemption) of Crédit National Bonds	1,800,000,000
Cancellation of public debt equivalent to the amount of Rentes surrendered in payment of special tax on war profits	110,000,000
Sundry annuities and repayment of advances	166,205,701
Total (or 73.5 per cent. of the whole)	13,653,186,199
Foreign Debt (exclusive of "Political Debt")—	
Interest on short-term operations abroad	98,000,000
Interest on bonds handed to American Government in payment for war stocks	367,000,000
Interest on bonds handed to British Government in payment for war stocks	5,275,000
Service (interest and redemption) of loans contracted in U.S. in 1920, 1921, and 1924	661,500,000
Total (or 6.1 per cent. of the whole)	1,131,777,200
Life-interest debt—	
War pension annuities (or 12.6 per cent. of total debt service)	2,335,538,000
Civil pensions	600,000,000
Military and naval pensions	670,000,000
Sundry pensions and allowances	183,088,283
Total (or 20.4 per cent. of whole)	3,788,626,283
Grand total	18,573,589,682

The fact that M. Caillaux has found it necessary, in order to balance his Budget, to include on the revenue side 1,605,000,000 coming from "exceptional sources," and 1,275,500,000 from the estimated receipts under the Dawes Plan and other Reparation payments, in no way, M. René Théry argues, justifies adverse criticism of the sincerity of the Budget. The 1,605,000,000 derived from the "exceptional sources" in question is made up as follows:—

	Francs.
Special tax on war profits	775,000,000
Liquidation of war stocks	450,000,000
Excess revenue over Budget estimates	380,000,000

The 1,275,500,000 which the Finance Minister expects to receive from the payments made under the Dawes Plan and kindred sources is composed as follows:—

	Francs.
Receipts in cash and kind under Dawes plan	1,100,000,000
Sundry other receipts (recettes d'ordre)	32,050,000
Receipts from alienation of material, revision of certain awards for war losses	143,450,000

The figures set forth above, it may be taken for granted, will be found to have been substantially modified when M. Caillaux reveals his proposals for his 1926 Budget, which he is now preparing. Next year's yield from the Dawes Plan will, it is practically certain, cease to figure on the revenue side of the account, and the deficit thus arising will have to be met by still further additional taxation. From what sources this additional taxation will be obtained is still unknown, but it is quite likely that M. Caillaux, instead of satisfying himself with a percentage of the profits made by the insurance companies, will revive his recent proposal that the State shall in future appropriate a full 50 per cent. of the total premiums received by them. A similarly heavy demand may also be made on the petroleum industry, which he also regards as another "practical monopoly in which the State should participate."

Meanwhile, the dislike of the French industrial and trading classes for that portion of the Dawes scheme which provides for a substantial proportion of the Reparations to be made in kind has reached rather a critical stage. It is no secret that the amount of raw materials and manufactured goods which it was hoped this country would absorb under the payments-in-kind clauses of the Reparation scheme has been disappointingly small. Traders have found that they can buy direct from the German manufacturer on better terms and with less inconvenience than through the medium of the Reparations machinery. Manufacturers in this country naturally bitterly object to be deprived of the profits they would reap if German Reparation deliveries were suppressed, and they had their own market to themselves. Not only, they argue, are they certain to suffer direct loss through Reparation payments being made in kind, but the German manufacturer is thus being doubly assisted to compete with them in other countries. Just as French private interests of one kind and another were able to defeat the proposals for a portion of the Reparation payments to be made by bringing German labour into France, and by utilising German machinery, &c., for the carrying out of various great public works, so there now appears to be a danger that an essential part of the Dawes plan will prove unworkable.

The list of commodities that may be utilised for making payments in kind, it will be recalled, was limited to such categories of goods as can be produced in Germany itself, subject to the proviso that the cost of the labour expended on them shall exceed that of the material employed. Thus raw leather, of which France requires a large quantity, and which she imports from abroad, was excluded, because Germany, if called on to make Reparation payments in the form of leather, would also have to purchase it from abroad, and consequently would find it equally convenient to pay in cash. Boots and shoes were included in the list, however, because the greater part of the price would be represented by labour cost. "Why," it is asked by the French shoe manufacturer, "should we accept German-made boots and shoes instead of cash, in payment of Reparations, when by so doing we are depriving our own workmen of their wages? Pay us in cotton, or wool, or anything else which we have to buy elsewhere, in any case, and which we transform ourselves."

The proportion of Reparation payments which it was agreed to take from Germany in kind this year has been realised to such a small extent that there is a good deal of nervousness in French official quarters as to how to find means to enable the country to absorb the quantities of goods necessary to prevent this part of the Dawes plan from collapsing. At an important inter-Ministerial conference yesterday, in which the Premier and MM. Briand, Caillaux, and other leading Ministers, as well as many high officials took part, the whole situation was seriously discussed. On the one hand, it was urged that greater publicity should be given to the possibilities and advantages of purchasing supplies under the provisions of the Dawes plan. On the other hand, it was urged that, as private purchasers, in the form of French manufacturers, traders and contractors, have failed to absorb the quantities of German goods necessary to make this part of the

Dawes plan a success, the State should intervene. The Minister for Public Works has recently contracted for the supply of a large amount of dredging plant, it is reported. The suggestion is made that advantage should also be taken of the fact that a large amount of machinery and other plant is now required in connection with the electrification of the French railways, and that these supplies should also be purchased under the Dawes scheme. How British foreign trade and British unemployment may be affected in this connection will be seen by a study of the schedules of commodities which Germany is able to furnish for the purpose of making Reparation payments in kind.

GERMANY.—TARIFF—TAXATION—CURRENCY— TRADE BALANCE—INDUSTRY—INDUSTRIAL CAPITALISATION—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, August 4.

IN spite of the compromise reported last week on the Tariff Bill, the exact nature of the food duties is still in doubt. The Centre Party, which agreed to minimum duties on livestock and meat in exchange for the abandonment by the Agrarians of grain minimum duties, is having trouble with its consumer and Catholic trades union representatives. These declare that the abandonment of the grain minimum duties is illusory, because the majority parties have pledged themselves to oppose any commercial treaty that admits grain at lower duties than those which in the original Bill were fixed as minimal (i.e., 35 marks per ton for wheat and 30 marks for rye). The Centre desires new amendments favouring the consumer. A Socialist Reichstag motion for removal of the Sales Tax from all foodstuffs, and its reduction from April 1st next to ½ per cent. for all wares was defeated, and the tax has been fixed at 1½ per cent. (against 1½ per cent. at present), the luxury sales tax at 7½ per cent. (against 10 per cent.). The tariff is being strongly attacked by representatives of traders and consumers, who declare that the real aim of the Government or of its majority is to impose the maximum duties in the Bill, and not, as was professed, to use them merely as a means of exacting concessions from other countries. The Central Association of Wholesale Merchants has expressed itself in this sense, and in particular has declared against the increase in the textiles duties. The plan is to put the new tariff in force on October 1st. The duties on grain, dairy produce, livestock, meat, sugar and some other foodstuffs will, however, come into force a fortnight after the Bill is passed.

A compromise in the dispute over the subventions has been come to by the majority parties, and will probably be accepted by the States and municipalities. It provides for subventions of 75 per cent. of the income and corporation income-tax yield, to a guaranteed sum of 1,575 million marks per year; and 35 per cent. of the sales tax yield, to a guaranteed sum of 525 millions; in all, 2,100 millions. The revenue side of the 1925-26 Budget has been re-submitted to the Reichstag in a radically revised form, putting the yield of taxes at 6,343.8 million marks as against 5,239.7 million marks in the original Budget. The estimate is now as follows:—

	ORDINARY BUDGET. (000's omitted.)	Marks.
Income-tax		1,700,000
Corporation income-tax		300,000
Property tax		500,000
Sales and luxury sales tax		1,500,000
Capital transactions taxes		130,000
Traffic tax		282,000
Customs		365,050
Tobacco		560,200
Sugar		185,000
Beer		174,000
Spirits monopoly		150,000

The ordinary revenue, including 145.8 millions from sales of railway corporation shares, is 6,498,688,000 marks, and

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits \$14,000,000

*The National Bank of Commerce
in New York places complete
banking services at the disposal
of its customers throughout the
world, bringing them in contact
with all phases of commerce and
industry in the United States.*

LONDON REPRESENTATIVE
2 & 3 Crosby Square, Bishopsgate,
London, E.C.3

the extraordinary revenue 576,833,000 marks, total revenue being 7,075,521,000,000 marks. The extraordinary revenue consists of 225 millions from coinage, 56 millions surplus on the ordinary Budget, 150 millions from the surplus of 1924, and a second 145.8 millions from sale of railway shares.

The money market at the end of July was extremely strained. The supply of day loans ran short, and interest rate rose in four days from around 8½ to 12 per cent. Apart from such temporary fluctuations, interest rates are higher than they were in the spring, and it seems that the permanent tendency is upward. Mid-August usually sees a demand for money for movement of crops. The Reichsbank's policy as regards discount rate and credit rationing is not to be changed. Addressing the Bank's Central Committee on these points, Dr Schacht announced that he intends to increase further the gold reserve, which is now 1,103 million marks, by purchasing gold with the bank's reserve of legal-cover exchange. He characterised the use of exchange as cover for circulation, as permitted by the Bank Law of August, 1924, as a makeshift, and declared that "cover in coined and uncoined gold is far preferable." The Bank Law permits 25 per cent. of the legal cover to be held in exchange. It is surmised that this decision is a result of arrangements come to during the recent visit of the Governors of the Bank of England and of the New York Federal Reserve Bank. Since the end of 1924 the reserve of legal-cover exchange has risen from 253 million marks to 368 million marks; but the bank's holding of non-legal-cover exchange, which appears among "other assets," has declined heavily, though by what amount exactly is not shown. This decline, as Dr Schacht reported, is due in part to the continuing passive trade balances, in part to the calling in of short-term foreign credits, against further conclusion of which he issued a new warning. The Savings Banks report further rapid increases of deposits.

Prussian Savings Bank deposits increased by 391 million marks to 797 million marks in the first half of the year. The bi-monthly commercial bank balance-sheets for June 30th show increases of all chief entries. Totals for the four "D" banks, the Commerz und Privat, and the Mitteldeutsche Credit, are:—

	(000's omitted.)	July 30th.	June 30th.
All assets	4,789,389	5,013,707	
Bills	1,010,177	1,095,175	
Correspondents	658,120	698,802	
Advances on wares	360,128	343,525	
Debtors on current account ..	2,100,697	2,252,082	
All creditors	3,942,572	4,127,357	
Deposits	1,444,209	1,549,236	

Deposits in the State banks tend to increase more rapidly than in the private commercial banks, the cause being the hoarding of tax yields by public bodies.

The Prussian Trade Ministry's monthly report for July describes improvement in the potash, brewing, printing, and (in part) textile industries, but states that, in general, the home selling market has not improved. Bankruptcies in July numbered 797, against 709 in June. The wholesale prices index number for July 29th was 133.9, against 134.3 one week earlier. The cost-of-living index for July was 143.3, against 138.3 in June. In the iron and steel industry a sudden revival of activity has taken place. The Steel Syndicate had already reduced the production quotas for August to 65 per cent. of the full quotas when the revival began, bringing the first upward movement of prices for months. The increasing demand was stimulated by better reports from the engineering branch, and in part by further progress made in cartel formation. The Bars Syndicate has at last been formed. Bars rose from 124 to 129 marks per metric ton, and other rolled goods accordingly, but the prices of ingots, blooms, and billets remained unchanged. A syndicate for rolled aluminium has been founded. This organisation, it is reported, will pursue the same policy as the Raw Steel Syndicate, maintaining prices at home, but granting a price rebate to manufacturers on aluminium used in the production of goods for export. The electrical industries are very active, owing to increasing electrification and to municipal orders. The electric cable works have orders for nine months ahead. The consumption of copper in 1925 is estimated at 320,000 metric tons, as against 290,000 tons in the last pre-war years. The potash branch continues to flourish. Sales in July totalled 95,603 metric tons of pure potash, as against 47,297 tons in July, 1924. Sales in the first seven months were 829,270 tons, against 374,804 tons in the same months of 1924.

The conversion of company balance-sheets to a gold mark basis is now practically complete. An analysis published in the *Berliner Tageblatt* for 911 companies whose securities are quoted on the Berlin Bourse shows:—

	(000's omitted.)	Pre-War Capital.	Paper Mark Capital.	New Gold Mark Capital.	Sealing Down Ratio.
		7,874,000	72,363,400	8,835,300	8.3 1

The new gold mark capital is about 10 per cent. greater than the pre-war capital. A considerably greater increase would be shown if banks and shipping and insurance companies, which have fallen heavily below their pre-war capitals, were omitted. The new capitals of the purely industrial companies are mostly much larger than the pre-war:—

	(000's omitted.)	Pre-War Capital.	New Gold Mark Capital.
67 Chemical companies	424,900	1,035,700	
224 Metal & engineering companies	980,100	1,380,300	
79 Textile companies	52,300	101,900	
78 Mining and smelting companies	1,260,000	2,149,100	
25 Breweries	62,900	93,300	
44 Electrical companies	754,900	917,600	
10 Potash companies	65,100	403,300	
44 Food companies	120,800	166,600	

The Bourse last week was again depressed, and the first two days of this week saw no improvement. The shortage of money checked speculation. Mining and metal stocks had big drops—up to 5 per cent.—to-day. Paper mark loans fell very heavily last week, and they now average about 77 per cent. below the quotations of the beginning of the year.

CANADA.—CROP PROSPECTS—FEDERAL REVENUES — PRICES — UNEMPLOYMENT SITUATION — INDUSTRIAL CONDITIONS—MINING INDUSTRY.

(FROM A CORRESPONDENT.)

OTTAWA, July 24.

A SPELL of very severe drought during the latter half of July undoubtedly wrought considerable damage to the wheat crop in various areas of the West, and in some districts the deterioration is estimated as high as 30 per cent. Hailstorms and the sawfly have also caused some loss, but the excellent condition which the crop enjoyed before these vicissitudes has not been in the aggregate seriously impaired, and the latest bulletin of the Dominion Bureau of Statistics forecasts that the wheat yield for the whole of Canada will be 365,000,000 bushels, which is an increase of 103,000,000 bushels over last year's figures. The estimates of the C.P.R.'s economic service and other authorities are even higher. Other grain yields are estimated as follows:—Oats, 468,949,000 bushels, as compared with 411,000,000 bushels in 1924; barley, 86,105,000 bushels, compared with 86,753,000; rye, 12,970,000, compared with 14,000,000; flax, 10,480,000, compared with 9,694,000. The index figure of crop conditions shows wheat at 106, as compared with 92 last year, and there is almost a parallel improvement in the other crops. The total area of all field crops sown is estimated at 56,103,000 acres, as compared with 55,821,000 in 1924. The crop in the West may still suffer some damage before the harvest begins at the middle of next month, but it is now a safe calculation that it will be substantially larger than last year's yield, and as prices are keeping reasonably high, the West is returning to a mood of greater optimism. In Ontario conditions are variable; the crops in the Eastern regions of the province are well above the average, but in the Western and Southern sections they have suffered from drought. Pastures, however, have been good, and the dairy industry is flourishing. In Quebec the cereal crops are somewhat below the average, but the fodder and root crops are good, and in the maritime provinces all the crop prospects are excellent.

It is at last possible to record a welcome, if modest, improvement in the revenue returns. For the first quarter of the fiscal year, from April to June, inclusive, the Federal revenue increased some \$3,000,000 over last year's figures. The chief source of increase came from the Customs, which totalled \$31,000,000, being an increase of \$2,000,000, and there are indications that the expansion in imports which began at the end of April and contributed this increase will continue. At the end of the first quarter the national debt stood at \$2,378,000,000, which is a decrease of \$11,000,000 from the total on June 30, 1924.

The index number for wholesale prices compiled by the Bureau of Statistics reveals them as practically stationary, the figure for the end of June being 158.8, as compared with 159.1 at the end of May. Thirty-eight quotations were lower, 44 higher, and 154 were unchanged. There was the usual seasonal fall in vegetable products, but animals and their products, on account of higher prices for hogs and cattle, rose from 131.3 to 132.5. There was a decline in the price of iron and its products, but fibres, textiles and textile products, owing to advances in cotton, silk, and wool, rose to 197.7 from 194.4.

The good crop prospects have had a heartening effect upon the general business situation, and wholesalers report that country storekeepers are disposed to buy more freely than at the corresponding date in previous years. Retail trade in the cities and towns is experiencing the usual holiday dullness, but business has merely been transferred to the summer resorts, and the influx of American tourists, which is greater than ever this year, will leave behind large sums of money in the favoured districts, like the shores of the St Lawrence and British Columbia, which they frequent. The unemployment situation has been completely eased for the moment, and the Department of Labour's employment index figure, placed for July at 96, was higher than for any parallel date in the last four years. Indeed, some difficulty is anticipated in securing sufficient labour to harvest the crop, and it is estimated that some 60,000 extra hands

will be required in the prairie provinces. The position of the iron and steel industries is gradually improving, and many of the plants report a much better demand for their products. The new Conservative Government in Nova Scotia is making valiant efforts to end the industrial conflict in Cape Breton, whose effects have been very serious for the economic life of Nova Scotia, but both parties are exceedingly stubborn, and a settlement is not yet quite assured.* Most of the textile plants are well occupied with orders, but their owners and managers continue to wail about the disastrous effects of British competition. The pulp and paper mills are fully employed, and the American demand for newsprint seems to be insatiable. This industry shows an amazing record of expansion, and during 1924 there was an increase of almost 42 million dollars in the capital invested in it, which was at the end of last year estimated at \$459,457,696.

Despite some unpleasant revelations about individual mines, the mining industry, particularly in Northern Ontario, is in a very flourishing condition. The mines in the Porcupine area have shown a gain of 17 per cent. in output during the past year, and in the second quarter of 1925 the gold mines of the Northern Ontario region produced approximately 360,000 fine ounces of gold valued at \$7,398,561, as compared with 336,231 ounces valued at \$6,992,553 in the first quarter. Some British capital is interesting itself in this mining development, but it is still exceedingly timid in comparison with American capital.

What threatens to be a very bitter controversy has developed between the provinces of Ontario and Quebec in connection with a projected railway planned to provide much-needed communications for the new Rouyn mining field, which, although lying within the boundaries of Quebec, is merely an abutment of the Ontario mining fields. The latter are served by the Temiskaming and Northern Ontario line, which is the property of the provincial Government of Ontario, and authority has been sought by it to build a branch to the Rouyn field. The business interests of Montreal, however, are exceedingly anxious to secure a share of the profitable business of these mining communities, and at their bidding the provincial Government of Quebec is resisting the plans of the Ontario Government; they want the C.P.R. or the Canadian National to build a line which will give direct and easy communication between the new mining field and Montreal, and refuse to allow the Ontario railway a right of way over the extensive portions of Crown land through which it must pass. The Ontario Government are demanding that the Federal Ministry exercise the powers of expropriation for railway purposes which belong to it, and at present the issue has been shelved until the courts render a decision upon a legal point. But sooner or later the King Government will be faced with the problem of a ticklish administrative decision upon this question, and it will have the unpleasant alternative of either offending its Quebec supporters or exposing itself to the charge that the domination of Quebec has prevented it from acceding to the quite legitimate demand of another province. Some political experts argue that the difficulties involved in this decision make it quite certain that a Federal general election will be held this autumn before it is necessary to formulate any policy on this issue. The results of the provincial election in Nova Scotia cooled the enthusiasm of many of the Government's supporters for an appeal to the country during the present year, but election forms and ballots are being printed and other preparations are going ahead. The final decision is likely to depend upon the result of another provincial election, which takes place in New Brunswick on August 10th, and if the Liberals retain their present control of this provincial legislature, the dissolution of the Federal Parliament is likely to be announced immediately afterwards. Meanwhile, Mr. MacKenzie King is understood to be planning a reorganisation of his Ministry; a number of the present Cabinet are anxious to withdraw from active public life, either to the comfortable haven of the Senate or to public posts of different kinds, but he is said to be experiencing some difficulty in finding substitutes who can competently fill their places.

* Since this was written the miners have voted for a return to work, and the proposed terms of settlement have been accepted by Steel Corporation's directors.

UNION OF SOUTH AFRICA.—DECLINE OF GOLD DIVIDENDS—LOW GRADE MINES—ORE RESERVES.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, July 7.

In the first five completed months of 1924 the total value of the gold production of the Transvaal was £2,017,806 in excess of the par value, but the net "currency premium" was very much less, owing to the heavy exchange charges imposed by the banks for bringing a portion of the proceeds back to South Africa. The net price of gold for the first half of 1924 was 92s 9d per ounce, or 8s 9d over normal, representing 2s 7d per ton on the basis of an average yield of 6.55 dwt per ton. This year there has been no premium, and on an estimate of 14,150,000 tons crushed for the six months the loss of premium represents £1,827,700. Savings in operating charges have been only 7d per ton (19s 3d, as against 19s 10d), or less than a quarter of the shrinkage in premium, and representing over the period £412,000. In the face of a net decline of £1,415,000 in revenue (subject to the profit on about 250,000 more tons crushed), it is impossible that dividends of the gold mines could have been maintained at last year's level. As a matter of fact the total is £4,137,397, as against £4,610,110. A maiden dividend by New State Areas, which has to pay an unconscionably high royalty tax to the Union Government, brings in £112,500, but Durban Deep and Geldenhuis, which made distributions a year ago—the latter at Christmas as well—have fallen by the wayside. A year ago the total was swollen by arrear payments by the Robinson Deep, which paid £287,500, or a quarter of a million more than during the past six months. The ten mines of the Far East Rand will distribute £3,048,146, or practically three-quarters of the Rand's total. Excluding New State Areas, dividends are 18 per cent. less owing to the disappearance of the gold premium, while no fewer than 12 producing mines, employing 28 per cent. of the European labour force, declared no dividend.

Mr P. M. Anderson, the President of the Chamber of Mines, at the quarterly meeting last week, pointed out that since the disappearance of the premium many mines were working without profit to shareholders, and the hostile attitude of the Government in hampering forms of legislation—such as Mining Regulations Amendment, Government director on mining boards, colour bar, increased phthisis burdens, &c., "must lead to the abandonment of hope on the part of the owners and the closing of such mines, causing serious unemployment." Sir Evelyn Wallers, past-president on many occasions, doubted whether the real gravity of the position was properly appreciated by the Rand community, and assuredly it was not by the Government. None of the legislation was designed to help the industry.

The *South African Mining Review*, in its current issue, analyses and collates the ore reserve statements of 35 producing gold mines. They now show a total of 91 million tons, an increase of about one and a half millions, to which the chief contributors are Simmer and Jack (owing to inclusion of ore in the former Simmer Deep ground), 1,100,000 tons; Crown Mines, 525,000 tons; City Deep, 400,000 tons; and Brakpan Mines, in the two last-named cases accompanied by a fall of half a dwt in value. Geduld has added 250,000 tons, and Government Areas 330,000, with maintenance and improvement in value. In the West Rand, both Randfontein and West Rand Con-

solidated have put on half a million tons. The most serious decline was one of 650,000 tons at Nourse, while three other subsidiaries of the Rand Mines group reveal important decreases. Some of the old Central Rand mines have drifted into a parlous position, and are making poor profits. While Geduld and Government Areas are obtaining a yield corresponding closely with the average assay value of the reserve, New States are yielding one dwt below, but Modder Deep and New Modder are recovering in excess of ore reserve values, probably owing to narrowing of stoping widths.

DENMARK.—EXCHANGE—AMERICAN LOAN.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, July 27.

THE violent rise of the value of the Danish krone is the all-pervading problem of the day, and it is discussed as eagerly as was the corresponding drop in the past. The parity of the krone in proportion to the dollar is 3.73, and the lowest value was 48½ per cent. on November 9, 1920, the dollar rate being then 7.68. At New Year, 1925, when the dollar rate was 5.69 kr., and the value of the krone consequently 65½ per cent., it was decided by law that during the two years next following, the Nationalbank should be bound to bring about a slow improvement of the value of the krone, according to a definite plan, by which the dollar rate was not to exceed certain figures; for instance, during the second half of 1925 a rate of 5.60 kr., corresponding to a value of the krone of 66½ per cent. The actual development, however, has been quite different from that presumed by the law. The krone has now reached 84 per cent. of its par value, the dollar rate having dropped to 4.39½ kr., by far the greater part of the improvement having taken place during the last month.

It will not be difficult to point to a number of facts which may account for the rise of the Danish currency. The deflation policy maintained by the Nationalbank during the last few years in connection with the falling tendency of the prices of the world market has forced trade to adopt a tentative policy with regard to purchases from abroad, and by this means effected a considerable improvement of the balance of trade of the country. January showed an excess of imports amounting to 22,000,000 kr.; February, 25,000,000 kr.; March, 15,000,000 kr.; and April, 10,000,000 kr.; while, on the other hand, the month of May showed excess of exports of 14,000,000 kr., the value of the imports being 14,000,000 kr., while that of the exports was 154,000,000 kr. The fact that this year there are prospects of record crops in Denmark—the work being so far progressed that the drought will hardly do much damage—of course, plays a part in the optimistic views on the exchange situation.

As one of the principal causes of the rise of the krone has been mentioned extensive bull speculations from abroad, especially from America. It is, however, unquestionable that the importance of this fact is very much exaggerated. An official summary of the position of the Danish banks as at June 30th shows that the extraordinary purchases of Danish kroner from abroad during the past half-year cannot be estimated at more than about 20,000,000 kr. The speculation taking place is more of an inland phenomenon, and is of a special character. Had not the Nationalbank and the equalising fund effected very considerable purchases of foreign exchange lately, the rise of the value of the krone would have been still more violent.

During June the Nationalbank has increased its exchange holdings—which are booked at par—from 38,000,000 kr. to 65,000,000 kr., while a year ago the holdings were only 3,500,000 kr. The equalising fund, which was established at the end of 1923 for the purpose of regulating the exchange market, and which contracted a credit abroad of £2,700,000 and \$10,000,000, was practically exhausted after a few months' activity—so violent was the demand for foreign exchange. During the intervening period the fund has been of no practical importance, as it had no opportunity to re-establish its exchange holding. During the last month the fund has effected

purchases to such an extent that it is fully re-established. Apart from the holdings of the Nationalbank and the equalising funds, there is an exchange credit of \$40,000,000, which was contracted early in the year, and is still untouched. In judging whether the krone can be maintained at the value which it has now reached, it must be taken into consideration that visible means of support amounting to £15,000,000, or £16,000,000, or \$75,000,000, are available—a fact which may exercise an enormous influence on a market as limited as the Danish.

The Danish State has converted the 8 per cent. American Loan of \$25,000,000, contracted in 1920, into a 5½ per cent. loan of \$30,000,000. The old loan was redeemable at 110 per cent., and as the price of issue of the new loan is 97.27 per cent., the State obtains only \$1,681,000 more than what is used for the redemption. While the effective interest for the old loan was 8.98 per cent., that of the new will be only 5.76 per cent. The new loan has been contracted through the Guaranty Trust Company, New York.

HUNGARY.—CROPS—INDUSTRY—TRADE RETURNS.

(FROM OUR CORRESPONDENT.)

BUDAPEST, AUGUST 1.

THE latest estimates for the harvest, while satisfactory and encouraging, do not point to anything like a bumper harvest such as that of 1923. The amount of wheat is given at 17.20 million quintals, against 14.89 for last year and 18.42 produced in 1923, but it is much better than for the preceding years. Rye is given at 7.40, against 5.61 yielded in 1924, but 8.16 in 1923; but here, again, it is greatly in excess of 1921 and 1922. Barley is estimated 4.58, against 3.20, but 5.37 in 1923—also less than for the preceding years. Oats is about the same as the years before 1923, but considerably less than that year (3.71), though much better than 1924 (2.28). The reports as to the other crops are, on the whole, quite good, maize and sugar-beet having profited much from the recent rainy weather. Potatoes, "roots," garden produce, tobacco, hops, and hemp all have a good appearance, and promise well. Perhaps the best crop of all those yet predicted is that of onions, which is expected to amount to 7,000 or 8,000 wagons, more than double the yield of last year, although the price has fallen. To note the importance of the yield, it may be stated that in 1924 the export of onions was 256,445 quintals; in 1923, 327,917. On these lines, the export for 1925 should reach well over half-a-million quintals. Potatoes and maize, said to have benefited much from the recent rains, might well prove to yield record crops.

Considerable sales of cattle—cows and steers—to Turkey—300 cows and 100 steers—are reported, and a cattle and horse show is announced to be held at Vacs, a large riverside town not far from Budapest, in September, while an agricultural implement exhibition is to be held in a provincial town in the month of August. These are, indeed, welcome signs of industrial and commercial activity in many directions. The chief danger is lest there should be too much optimism, which is what seems to cross the mind of Commissioner Smith, from the note of warning to be read between the lines of his most favourable reports. Hungary is by no means out of the wood, and care and economy are needed more than ever to bring to a happy conclusion the work so well begun and carried on under the auspices of the League of Nations.

The trade figures for the month of June are now available, and are again encouraging. The value of the imports amounts to 47.1 millions of gold crowns, about a million less than last year, while the exports are 45.8, against 35.4, a very satisfactory increase. The passive balance of 1.3 is not quite so good as the 0.2 for May, but the two months together compared with last year show a remarkable improvement, an adverse balance of 1½, against 25.1. For the six months of 1925, however, this balance is 60.1, against 58.2 for 1924. For the four months since February there is an adverse balance of only 13 millions, against 39.4 millions for the same period last year.

Books and Publications.

FISCAL POLICY AND PRACTICE.

MR McDougall's book* may be commended to the attention of everyone concerned with the present state of the Empire and with the policy which the British Commonwealth ought to pursue in years to come. Mr McDougall's most original work is a theory of international trade, highly interesting, but, unfortunately, quite absurd. He argues that "the national value of exports can be assessed from two points of view: firstly, by the amount of employment of labour, skill, and capital required in each category; and, secondly, by the amount of national wealth created in the production of goods that are eventually exported" (p. 37). Therefore, "the most important industries to the national economy are those in which raw materials obtained from the soil or seas of Great Britain, for the winning of which wages are paid to British labour, are worked up by process of manufacture to the most highly finished products" (pp. 38-9). By this test he finds that the "value to the nation" of exports diminishes as one passes from "finished goods produced from British raw materials" to re-exports. He proceeds to the propositions that "direct" trade between two countries is preferable to triangular trade, because the latter (why not the former also?) can leave one nation at a disadvantage; and that what he terms "competitive" trade—e.g., between Great Britain and Germany—is less beneficial than "complementary" trade—e.g., between Great Britain and Australia.

When these assertions are more closely examined their specious plausibility drops from them like a garment. The foundation of economic life, the corner-stone of all efficient labour, is the principle that an individual, an industry, and a nation should devote their efforts and energies to the production of goods which they can make, immediately or after a period of training, with a minimum outlay of labour, capital, and skill. From the path thus laid down deviation can be justified only by the necessities of national defence. And since various nations enjoy various relative advantages, their joint and several interests will generally be best served if each concentrates on what it can make the best. It follows that all international trade is "complementary," for then, to use Mr McDougall's words, "each country is supplying the other with goods which it lacks," and "an interchange of this nature should be purely beneficial to each" (p. 53). Those who dispute these propositions will be at once converted if they will only realise that the exact signification of "lacks" is "lacks the power to make some commodities cheaply," and that the criterion of cheapness is their relative or comparative (not their absolute) cost in the several countries concerned. Were this doctrine of comparative costs more easily and more generally understood, many erroneous and misleading arguments in favour of Protection would be straightaway swept from off the face of the earth.

Thus the *soi-disant* original part of "Sheltered Markets" is fallacious, and such of Mr McDougall's arguments as rest upon it therefore collapse. The rest of his book either conjures up baseless fears about the decline of British trade or states the uncontroversial truth that development of the Empire is greatly to be desired. Mr McDougall has imbibed most of his pessimism by contemplating the drop in percentage figures of Great Britain's share in the total import trade of various countries. The growth of international trading in raw materials and the development of other industrial nations amply account for this phenomenon, and in the result the share of world trade left to Great Britain is—momentary vicissitudes of adjustment apart—ample to ensure our prosperity. Nevertheless, in spite of all its faults, "Sheltered Markets" deserves close attention because it will probably be often requisitioned in future political controversies, and because, though jejune in style, it is the work of a singularly honest man who never wittingly conceals facts adverse to his argument, and who even points out when and where his evidence fails wholly to support his case.

* "Sheltered Markets." By F. L. McDougall. John Murray 5s net.

Very different is Mr Hirst's book,† which instructs and edifies, heartens and entertains. This convenient and lucid conspectus recounts the history of Free Trade, "a theory, an idea, and a practice," which have assured to Great Britain her "comparative immunity from a tariff which would raise the cost of living and production to the grievous detriment of our manufactures, commerce, and shipping." Mr Hirst shows how the seed of liberal economic doctrines was sown by Hume and the Physiocrats, flourished in the vigorous mind of Adam Smith, and ripened in the practice and policy of the youthful Pitt. He traces the relapse into Protection during the fierce struggle of the Revolutionary and Napoleonic wars, and relates the epic of Richard Cobden, whose courage, reason, and assiduity, fortunately seconded by events, themselves tragic but happy in their outcome, inspired Peel with the noble resolution to sacrifice a career to a conviction. From 1846 to 1903 British trade grew almost unfettered by tariffs, and British prosperity, thanks not least to this freedom, increased and multiplied. Those who have forgotten or who never knew the "raging tearing propaganda" of Mr Joseph Chamberlain will be encouraged in the midst of our present difficulties by the account of the overthrow of Protection in 1906; and few, even amongst those concerned chiefly or solely with public affairs, will not be grateful to Mr Hirst for his summary history of Protection and Free Trade since the war; for the turmoil and commotion of these years have distracted men's minds and made them forgetful of the foundations on which British wealth and well stand broad based.

Forty years ago Lord Randolph Churchill in Blackpool said: "Your iron industry is dead, dead as mutton; your coal industries, which depend greatly upon the iron industries, are languishing. Your silk industry is dead, assassinated by the foreigner. Your woollen industry is in *articulo mortis*, gasping, struggling. Your cotton industry is seriously sick. The shipbuilding industry, which held out longest of all, is come to a standstill. Turn your eyes where you will, you will find signs of mortal disease." Later on Mr Joseph Chamberlain lamented similarly. Our own ears are assailed by an identical cry. The nostrum prescribed on all three occasions has been Tariff Reform; but whoever reads Mr Hirst's book will see from the record of the past that the wisdom of the great Victorian days has not been overthrown, and that "the theory, the idea, and the practice of Free Trade," neither tarnished nor weakened by time, are no less necessary to-day than in any other period of our history.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, August 12. ACCOUNT, August 13.

The reduction from 5 per cent. to 4½ per cent. in the Bank rate, on Thursday morning, came as a great surprise to the Stock Exchange, where such an alteration was entirely unexpected. Two or three weeks ago members had been discussing the possibility of a rise in the rate, and although money has been showing signs of getting cheaper, a fall in the Bank minimum caused unbounded astonishment in the House. It was promptly labelled as being a political move, coming as it did a few hours before the momentous debate in the House of Commons, on the arrangement made between the Government, owners, and miners on the coal question. The Stock Exchange had been far from satisfied with the terms, but, making the best of a bad job, argued that if matters had been allowed to proceed to extremes, the result might have been worse than the remedy now proposed.

There has not been much business. The rending of the rubber boom has reduced trade in the rubber share market to a slender shadow of its July self, but a fresh jump in Courtaulds and Bradford Dyers enlivened the Industrial market, while, amongst mining shares, both the Cape and Paris have been supporting their usual favourites. The Stock Exchange population is greatly thinned by the usual holiday exodus.

The feature in the Consol market is the way in which the recently issued scrip stocks are moving upwards. They make rapid progress under the genial influence of absorption by investors who put safety first, and are content with 4½ to 5 per cent. on the money. The War Loan and Conversion responded to the Bank rate news, and most of the other British Government stocks present a harder aspect. In the foreign market Germans have weakened, and French bonds have given way to some extent. Chinese are lower. Mid-European bonds hold their prices. Peruvian Corporations, Mexicans, and Turkish Unified, together with Brazilian bonds, have gone back.

The Home Railway market fell sharply upon publication of the agreement in the coal trade. What led to the drop was the fear that, if the coalminers are to have their demands satisfied by means of a subsidy, this will lead to demands from railwaymen on similar lines. From the lowest prices touched, there was substantial recovery, after the fall in the Bank rate had been announced. Undergrounds had not suffered so much as the rest, and their recovery was correspondingly less.

Grank Trunk Pacific debenture, after a fall from 42 to 32, recovered a point or so. Argentine Railways continued their mild improvement. The offer made by the Cordoba Railway to the Argentine Government for the sale of its stocks has fallen through, owing to the delay on the part of the Government to come to a decision. Cordoba stocks thereupon advanced, the hope being expressed that the company can do well on its own account. Nitrates have been good, attracting, however, little public interest.

Rubber shares went back on the fall in the price of the raw material caused by release of "uncoupons" rubber stocks, and by a concession which is said to have been made to some of the big producers that they should be allowed to turn out 500 lbs to the acre instead of 400 lbs as at present. Moreover, the standard production limit was raised by 10 per cent. a week ago, and this, it is anticipated will bring a good deal of additional rubber to market. Moreover, rubber share speculators are rather tired. Tea shares, on the other hand, are better, and in the oil market a sharp rally in British Controlled, the full extent of which was not held, aroused some little interest. The oil share market commands more hopefulness than business.

Courtaulds have been the leading feature of the week, rising to well over £6, on hopes of a bonus issue of preference shares. This had the effect of strengthening Bradford Dyers, which spurred strongly, and, at the same time, of adding firmness to textiles all round. Tobacco shares are better, Godfrey Phillips being the chief attraction; Imperials, too, were good at over £5. The iron and steel market hardened, upon the settlement of the coal crisis, but shipping shares remained dormant, nor has there been any activity in banking, insurance, or trust companies' stocks. Roadmaking shares are better, Cements more particularly, thanks to the recent favourable report issued by Eastwoods. Gas stocks drooped a little, but electricity supply shares are unaffected by the Industrial disputes. The newspaper market braced up, with Allied Newspapers ordinary a lively feature of strength. Catering shares exhibited a better tone. Guinness rose to 600 on the dividend, and brewery issues remain good as a whole.

The Cape has taken more interest than usual in its favourites. Langlaagte Estates were vigorously supported, and shares in various companies interested in the platinum business, notably Central Mining and Rand Mines, have improved. The market generally speaking is better. Paris and Brussels have been buying Tanganyika and Zambesias. Diamonds went ahead on the reported conclusion of another agreement in the diamond trade. Malayan Tin shares, together with some of those in the Cornish market, attracted buyers' attention as the price of tin advanced. West Africans are neglected. There has been a little more doing in copper, owing to the strength shown by the metal, and the mining markets as a whole cannot complain as much as they generally do of being left out in the cold so far as business is concerned.

The Stock Exchange Committee decided at their meeting on Tuesday to make no alteration in the contango-day for rubber shares.

NEW ISSUES.

Sabrang Rubber Estate, Limited.—Authorized capital £500,000, in £1 shares, of which 250,000 have been issued. This is an offer for sale of 100,000 shares at 30s per share. It is stated in the advertisement that the company was formed in 1920, to acquire an estate of about 5,250 acres in Perak, of which 3,269 acres are planted. Crops and net profits are given since 1920. The latter have varied from £5,993 in 1920 to £20,584 in 1921. Last year they were £17,050. It is stated that, apart from a 5 per cent. dividend in respect of last year, all profits since formation have been carried to reserve, which now amounts to £40,000.

COMPANY MEETINGS, &c.

ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED. CHAIRMAN'S REVIEW OF RUBBER AND TEA POSITION. FORWARD SALES.

The fifteenth ordinary general meeting of the Anglo-Dutch Plantations of Java, Limited, was held, on the 6th instant, at the Cannon Street Hotel, London, the Hon. C. H. Strutt (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: You will perhaps wonder why, with the profits from our products reaching £90,000 more than last year, and having received nearly £50,000 more from the Dutch company than in the previous year, we are only able to increase our dividend by 1 per cent., and then only by taking £20,000 from our income-tax account. The disappearance of £50,000 from the net profits is easily explained. In 1923 we received in interest on our London investments £31,000 more than last year, owing to need of the capital in Java, and we have had to pay £21,000 in respect of debenture interest. We were also rather unfortunate last year in having to make £10,000 further depreciation on some of our assets taken over by the Utilities Company.

The transfer of the assets to the Utilities Company is now almost completed, and we hope that, by charging the P. and T. Company on the basis of Government charges, the proceeds will soon be able to provide the Utilities debenture interest. In 1924 we had under our guarantee to pay £3,000 on behalf of these debentures, and also we thought it proper to write off £3,300 of the expenses of our oil exploitation, which expenditure we did not think ought to be kept as an asset in our company's books unless and until we see some successful mode of dealing with it. It must not be forgotten that in the last three years we have spent a largely increased amount on capital account independently of the purchase of new estates. The amount spent in 1922 was only just over £250,000, increased in 1923 to £620,000, and in 1924 to £631,000. Of our different cultures only just over half are now in production, and we therefore have a heavy load to carry of capital expenditure for the sake of the future.

RUBBER.

Last year I had a note of pessimism in my speech about the price of rubber, which at that time was very disappointing. It was not that I did not believe that the Stevenson scheme would be successful in having a temporary effect on the price of rubber, but I was afraid the native rubber might be so augmented in production that the ultimate effect might be injurious to the English rubber producers, and I was still more afraid that the suggested selling combine would give the Dutch and native growers outside a still greater advantage over ourselves. The potential production of rubber was at the time, and, in fact, has been ever since, larger than the consumption, so it was only by restrictions in some form or other that it was possible to prevent the price becoming unprofitable. The Dutch and native production was increased, not directly owing to the restriction, but to the rise in price incident thereto, and if this rise in price has temporarily come from increased demand, not only should we have had, without restriction, the Dutch and native rubber rushing into the market, but we should have had the same thing happen from our English plantations which were not tapping all out during the low prices. Therefore, there was no hope, especially with the large stocks we had, that the price would permanently rise at all unless the potential production was decreased by some means or other to a smaller actual production. If the potential production could not be kept down to some extent whilst the price was rising, there was no hope for the industry.

BUYER'S FOOLISH POLICY.

This essential condition was brought about by the Stevenson scheme, which was framed in such a way that the interests both of the buyer and seller seemed to be safeguarded. The price was

made to pivot round 1s 3d a lb, a price at which no buyer ought to complain. I confess my error in not realising that the scheme would not prevent the price of rubber going up to its present figure, but when I make a mistake I always ask myself what was the reason for it; and I think that when we look at the workings of the restriction scheme, the action of the buyers with regard to it has taken everyone by surprise. When the price of rubber went below 1s 3d we were prevented by the Stevenson scheme from producing and selling a large proportion. The higher the rubber went the more we were encouraged to produce and sell, and we did so. The producers of rubber not only sold what they had on hand, but willingly sold a large amount of produce ahead, when they would get a price which was higher than that round which the Stevenson scheme was meant to pivot. What did the buyers do? When the price, in spite of the scheme, was 1s 10d or less, instead of feeling that now was their chance to buy, they held off from the market, and on two occasions when by small purchases they could have brought about a quicker release of rubber, they did not succeed in taking advantage of it, although I have been informed that on the last occasion they did intend to, but their agents unintentionally frustrated their endeavours. I asked the chairman of one of the biggest companies in America why they, with the Stevenson scheme staring them in the face, did not buy when rubber was cheaper. He replied that it was owing to the action of the banks, and not of the manufacturers, the banks refusing to advance the money for that purpose at the time; but he seemed to have no satisfactory answer to give when I suggested that they could have bought in advance. The much larger demand from the Continent lately has evidently come as a surprise to the American buyers, as well as their own large demand, and has also helped to upset the equilibrium of the Stevenson scheme.

FORWARD SALES.

It is personally very aggravating as a director to have the extremes of prices which rubber has exhibited during the past few years. There has, I hear, been controversy going on as to the wisdom of forward sales. Those who are against it are able for the first time for some years to point out that their refusal to adopt it has been to the advantage of their companies. We have on Anglo-Dutch sold forward part of our crop in most years, though on some occasions the price was too low to make it worth while. We sold 564 tons forward during the year 1920 at an average of

1s 9½d f.o.b. Batavia, or a London equivalent of 1s 10½d, the London average for the year eventually turning out to be 1s 10½d, and 564 tons forward in 1921 at 1s 10d, against a subsequent market average of only 9½d. In 1922 we sold 646 tons at an average of 1s 8½d, the average market price being subsequently 9½d for the year. In every year the advantage thus rested with the forward sales.

For the last three months of 1922 and the whole of 1923 and 1924 we sold the entire output on first-grade rubber to the General Rubber Company at what was practically the equivalent of 1d per lb premium, the rubber being delivered ex factory Java, but paid for on the basis of London landed price. The 1s 0½d we got for the 1924 crop ex our factories pretty well corresponded to the 1s 1½d London average for the year. The maximum and minimum price in this year acted against us, as during the last three months the market price was higher than our maximum of 1s 4d, and the loss on those three months practically wiped away during the year most, if not all, of the premium that we should otherwise have got from selling in Java at London prices. We have made a new contract with the General Rubber Company which we hope and believe will prove satisfactory. We have a large acreage of plantations now coming into bearing, and we shall see, both this year and next, a considerable increase in our output.

We anticipate we shall export next year a rubber crop of between seven and eight million pounds, and for that year our forward sales to date amount to approximately three million pounds at an average of 1s 10½d.

TEA.

Of any one product tea last year realised by far the largest share of our profits. I told you at our last meeting of the forward sales we had made of a third of our crop, and later on we increased it to a half by a still better forward sale, and I may tell you that up to date the price of the half sold forward is considerably better than the price of the spot market. Although we are creating a garden reserve to write off our rubber 24 years from coming into bearing and our tea in 50 years, I have no doubt that under the greatly improved system of management we shall prolong the profit-bearing capacity of the trees and shrubs beyond our earlier expectations. We have already applied to date £41,500 to this reserve. There is no doubt that Java tea all over the island, and, I may say, especially on our property, is improving in quality. We have still large reserves of land suitable for tea. Mr Hammond considers that if we plant up all we can for ten years we shall scarcely have exhausted it. The cost of the factories is the weak point in tea, but we shall certainly extend as far as we can where no heavy factory increase is made necessary by so doing.

The Chairman, having dealt with their coffee, sisal, and tapioca interests, &c., continued:—It may be thought strange, and even wrong, that after 15 years we are still making our foundations strong. No one policy can ever suit all investors, but ours has been to unite progress with stability, and we hope this will in the long run suit our shareholders. We have heard from some of our shareholders that they would appreciate an interim dividend. When we have been obliged to hold over our meeting until after the holidays we have managed to provide one, and we will see if it is possible to do it earlier in the year if our funds permit, but I must warn the shareholders that our funds have been lately—and may be yet for some little time longer—rather short in the early months of the year.

The report and accounts were unanimously adopted.

LA GUAIRA AND CARACAS RAILWAY COMPANY, LIMITED. DEVELOPMENT IN PASSENGER TRAFFIC.

The forty-third ordinary general meeting of the La Guaira and Caracas Railway Company, Limited, was held, on the 5th instant, at Moorgate Hall, London.

Mr J. A. Goudge, C.B.E. (the chairman), in moving the adoption of the report and accounts, said that he could sum up the results of the year under review by saying that there was a very slight variation in the quantity of goods carried, a loss in one direction being offset by an increase in other branches of traffic. The noteworthy feature was that they had developed their passenger traffic by means of special rates and facilities, tickets at special rates having given them an increase of passengers from 18,000 to 50,000 during the year.

The competition of the cart road still continued. They had been faced with that competition for so many years that they had almost come to regard it as a settled condition of their working. That road was now being laid with cement, and there was no doubt that the competition would be accentuated in the future. The gratifying feature was that the company's traffic had been increasing in spite of the cart road competition; that was to say, the motor traffic in goods and passengers was practically new business. It might be that they had not been taking their full share of that new business, but they had not yet suffered in their takings by that competition. The work on the cart road was being pushed on, but they did not anticipate that the road from La Guaira to Caracas would be completed much before the end of next year. The board had had under consideration for over two years the question of meeting that competition, or an intensification of it. The only solution seemed to be that of electrification. If the necessary assurances could be obtained from the Government, and the directors were satisfied about the prospects of electrification, the shareholders would be called together, perhaps in a few months' time, to resolve upon the matter.

As regarded prospects, the directors had every reason to think that the results of the current year would be more or less equal to those of the year under review, although they anticipated a decrease on exchange. There was no doubt that under the settled and enlightened Government of General Gomez the country was working its way towards a condition of great prosperity. Oil developments would materially assist the Republic, and in addition the Government had undertaken very serious work in the improvement of the roads. The company's relations with the Government were good.

The report and accounts were unanimously adopted.

cent. on the preference shares, they recommend a dividend of 5 per cent. on the ordinary shares of the company for the year ending June 30, 1925, of which 2s 6d per share is payable on July 31st and the second 2s 6d per share is payable at December 31 next, less income-tax. They further recommend that £5,000 be carried to depreciation account. The sum available for distribution would thus be allocated as follows:—To debenture interest, dividend, and income-tax, £27,125; to depreciation account, £5,000; carry to next account, £2,207.

YORK STREET FLAX SPINNING COMPANY, LIMITED.—The profits for year ending June 30, 1925, after deducting interest paid on debenture stock and allowing for bad debts, amount to £7,695; add balance of last profit and loss account, £22,722, making £30,417; deduct income-tax and sundry expenses, £16,012, leaving £14,405; to be applied to pay dividends on 6 per cent. preference capital, £15,000; on 7 per cent. preference capital, £21,000; on ordinary capital, £24,000; leaving to be carried to new profit and loss account £4,405. From the above statement it will be seen that, in addition to the interim dividends paid on January 31st last, the directors propose to pay dividends for the half-year ended June 30th at the rate of 6 per cent. per annum on the 6 per cent. preference capital, and at the rate of 7 per cent. per annum on the 7 per cent. preference capital. The directors regret that the result of the trading, owing to the severe drop in values and the marked decrease in the volume of business done, especially in the last four months of the company's year, is such that they are unable to see their way to propose paying any dividend on the ordinary capital in respect of the half-year ended June 30th last.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions were not favourable for harvesting, owing to frequent rains, which rendered the ground too soft for reaping machines. Reports of the crop are somewhat variable, but it is generally anticipated that a full average yield will result. With a spell of drier weather first samples of new crop wheat should soon be seen on the market. Fine samples of old crop experienced rather better support, and prices ruled firm in view of the general situation. Imported varieties were also accorded more attention and values responded to higher forward offers. In the floating and forward cargo section sellers adopted reserved measures following improved foreign cable advices, together with a better milling demand and improved inquiries on Continental account. Steamers No. 1 Northern Manitoba afloat sold at 63s 3d, No. 2 ditto 62s 3d; Australian afloat, 58s. to 58s 3d as to position; Rosafé, 62½ lbs, July 29th, 59s 10½d; Baril, 62½ lbs, loading, 57s 9d, August 20th 58s 7½d; and Barusso, 63 lbs July 13th clearance, 58s. Maize cargoes also firmer, and a fair demand prevailed for near positions. Steamers of La Plata afloat sold 42s 4½d to 42s 6d, ditto August 15 clearance 41s 9d, August 17th 41s 9d, all per 480 lbs. Wheat firmer. No. 1 Northern Manitoba quoted 65s 3d, No. 2 ditto 64s 3d, No. 3 63s 3d, Australian 62s 6d, Rosafé 62½ lbs 63s 3d, Barusso 62½ lbs 62s 3d, all ex ship, per 496 lbs. English old quoted 11s 6d to 12s 2d per 112 lbs, free on rail. Flour dearer. London standard grade quoted 48s 6d, patents 50s 6d-51s 6d, town whites 48s 6d per sack, delivered in the Home Counties, with 6d to 1s per sack less deliveries in London districts. Of imported, Manitoba patents range from 47s-50s, Minneapolis 47s 6d-48s 6d, Kansas patents 46s-47s, Australian 42s-42s 6d per 280 lbs, ex store. Maize firm. Plate, ex ship, quoted 44s 6d; ditto landed, 46s 6d; white flat African, ex ship, 47s 3d per 480 lbs. Barley firm. Californian quoted 45s-52s, Chilian Chevalier 60s-65s, brewing 52s-56s, according to quality; Australian, 57s-63s, ex store, per 448 lbs; No. 3 Canadian Western, ex ship, 38s 6d; Karachi, 38s 6d; Morocco, 38s; American malting, 48 lbs, ex ship, 37s 6d; Tunisian landed, 37s 6d per 400 lbs. English quoted 10s 6d-11s 4d per 112 lbs. Oats steady. Plate, ex ship, quoted 26s 3d, landed 27s 6d; No. 2 Canadian Western, ex ship 31s 9d, landed 33s; No. 2 Canadian feed, ex ship 25s 6d, landed 26s 6d; Chilian Tawny 27s 6d landed, No. 2 white clipped American, ex ship, 25s 3d, all per 320 lbs. English quoted 10s-11s per 112 lbs, free on rail. Millers' offals firm. Broad bran quoted 8s 6d, middlings 8s 6d, fine ditto 9s 9d, bags included, ex mill; powdered oat husks 6s 3d, feed oatmeal 8s 3d, ground oats 12s 9d per cwt., free on rail. Oatmeal steady, with a better demand. London made flaked 19s, rolled oats 18s, medium also fine cut 18s, coarse also medium pin-head 18s, ex mill; ordinary Scottish oatmeal 19s 6d, American ditto 17s 6d-18s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1924-25, 1923-24, 1922-23, 1921-22.

1924	19,783	912	4,511	12 9	11 9	10 2

AMERICAN WHEAT MARKETS.

The markets have been, on the whole, firmer this week, on reduced private crop estimates, reported damage by storms in some areas, and increased purchases by mills. Better weather reports and quietness on export account were responsible for a subsequent decline of prices. The Canadian Dominion Bureau of Statistics has issued a report of the condition of the cereal crops on July 31. In Ontario, the quality is well above the average, but in those districts which have suffered from a shortage of moisture the yield will be below that of last year. In Manitoba, crops on light soil are not filling well, but on heavier land the prospects are fair to good. In Saskatchewan, wheat prospects indicate that the yield is slightly above the average. The crops have suffered little damage, except from lack of moisture, and have been exceptionally free from rust and hail damage. Wheat cutting will be general by August 10. In Alberta the south-eastern portion of the province has suffered severely from drought, but other portions will harvest average to good crops.

Recent market quotations are:—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated August 6, is as follows:—Pig-iron: Owing to the holidays the weekly market was not held, most of the works being closed. There is very little inquiry from abroad. Cleveland No. 3 G.M.B. pig-iron is quoted 70s 6d per ton, and mixed numbers East Coast hematite 75s 6d per ton. Manufactured iron and steel: The steel works are still very badly off for orders, except for constructional steel. The follow-

THE STANDARD BANK OF SOUTH AFRICA, LIMITED

(with which is incorporated the

AFRICAN BANKING CORPORATION, LTD.)

Bankers to the Government of the Union of South Africa; to the Imperial Government in South Africa; and to the Governments of Northern and Southern Rhodesia, Nyasaland Protectorate, and Tanganyika Territory.

AUTHORISED CAPITAL	£10,000,000
SUBSCRIBED CAPITAL	£8,916,660
PAID-UP CAPITAL	£2,229,165
RESERVE FUND	£2,893,335
UNCALLED CAPITAL	£6,687,495
	£11,809,995

Board of Directors.

(a) Suspense account written off.

ing remain the principal quotations:—Steel ship plates, £8 10s; steel ship angles, £8 5s; iron bars, £11 12s 6d; steel rails, £8 10s. Iron ore: There is still no business doing in foreign iron ore, and 20s 6d is purely a nominal seller's price for best Bilbao Rubio, c.i.f. Tees.

Our Glasgow correspondent writes:—The market for pig-iron was quieter this week, as a result of the withdrawal of immediate danger of a stoppage of supplies. A fair amount of business was done, however, at prices on the lines of recent quotations. Shipments from Glasgow Harbour last week totalled 1,312 tons, of which 1,270 tons were on foreign account. For the corresponding week of last year the figures were 635 tons and 190 tons respectively. The majority of the steel and iron works have now resumed after the annual holidays, but orders are scarce, although export inquiry is more encouraging. Shipyards are not getting sufficient orders to replace the large tonnage recently launched, but negotiations are on foot in several directions, which, it is hoped, will lead to the placing of several substantial orders. The sheet trade continues active, demand from the Far East being, if anything, more insistent, and it is only with difficulty that early delivery of even small lots of light gauges can be procured. Galvanised and corrugated sheet makers are well booked for the month of August.

Our Sheffield correspondent writes:—The majority of the steel works are closed for the whole of the present week, as the practice is extending of concentrating the holidays of men and staffs, as well as repairs, within the August Bank Holiday stoppage. Melting operations at the open-hearth plants, however, have not been suspended, although still working at greatly reduced capacity. Rather more activity in acid steel is reported, and there is a fair demand for special engineering parts, both forgings and castings. From a tonnage point of view, however, the volume of work at the steel foundries is unsatisfactory. Business in hand tools continues brisk, and the export of these is well in advance of the figures for 1913. Large Russian orders have just been delivered for files, saws, edge tools, and tool steel and common steel. To secure this business, sellers are giving nine months' credit. Prospects in the hematite pig-iron trade are a little better, and the placing of an American order in Middlesbrough for 5,000 tons of special iron has brushed up conditions in the Cleveland district. The cutlery and plate branches are flat and unprofitable. Consumers of fuel are looking for easier prices as the result of the recent settlement, and no considerable buying is taking place. Some of the panic orders for coal and coke, placed when the prospects of a stoppage of the colliers seemed inevitable, have since been cancelled.

Our Cardiff correspondent writes:—The settlement of the coal dispute has completely disorganised the Cardiff coal market, the

temporary strength which the market derived from the fear of a stoppage having been displaced by a weakness probably more severe and widespread than at any other time this year. Very few traders have a clear knowledge of the implications of the terms, and actual business, therefore, has not only been of a hand-to-mouth character, but of extremely restricted proportions. Prices on Thursday were from 1s to 2s 3d per ton less than a week ago, and lower than when the market was at its worst in June. The following are the current approximate quotations:—Best Admiralties, 25s 6d to 26s; seconds, 24s 6d to 25s 6d; best dries, 25s to 25s 6d; Black Veins, 24s to 24s 6d; Western Valleys, 23s 6d to 24s; Eastern Valleys, 23s to 23s 6d; best steam smalls, 14s 6d to 15s; ordinary cargo smalls, 13s to 13s 6d; coking smalls, 14s 6d to 15s; anthracite best large, 43s to 47s 6d; Red Vein, large, 27s to 31s; machine-made cobbles, 51s 6d to 53s 6d; French nuts, 52s 6d to 55s; stove nuts, 48s to 51s; rubbly culm, 13s to 14s; coke (special qualities), 40s to 45s; patent fuel, 23s 6d to 26s; pitwood, ex ship, 39s 6d to 40s 6d. In the tinplate industry production this week has been suspended, but the general tone of the market is unaltered.

METALS.

A firm tone governed tin; the market further improved, in face of stimulating Eastern advices, combined with fairly liberal buying orders. Holders consequently adopted reserved measures, though movements were attended by slight irregularity, especially with regard to forward positions, and top points were not maintained. Standard cash changed hands at £264 5s to £265 5s and £263 15s and £264 10s; three months, £267 to £268 5s and £266 7s 6d to £267. Sales in the East were reported at £271 to £273 5s, c.i.f. terms. Copper proved a very active market, offerings being readily absorbed, with chief attention centred on forward positions, while prices, after slight fluctuations, ruled dearer on balance. Standard cash sold £62 7s 6d to £62 17s 6d, and three months £63 10s-£63 6s 3d and £63 16s 3d per ton. Lead in good support at firmer rates. Good soft foreign pig, August, sold £36 10s-£37 15s; September, £36 7s 6d-£36 15s and £37 6s 3d; October, £36 to £37 2s 6d and £37; November, £35 17s 6d-£36 17s 6d and £36 15s per ton. Spelter firmer, values responding to liberal buying orders. August sold £35 15s to £36 11s 3d, September £35 15s to £36 5s, October £35 10s to £36, and November £35 10s to £36 3s 9d per ton. Antimony firm. English specials quoted £74 10s to £85 as to make and quantity, foreign refined £64 10s to £65 10s per ton, ex warehouse. Aluminium nominal. Home trade and export £118 to £120 per ton. Quicksilver firm; spot quoted £14 per bottle. Wolfram firm; spot 17s 6d to 18s per unit, ex warehouse.

MONEY was scarce in the early part of the week, chiefly, it would seem, owing to the considerable amount that has been transferred, through revenue payments, and the sale of Treasury bills in excess of maturities to the Public Deposits at the Bank of England. Borrowing from the Bank was necessary both on Monday and Tuesday, but after that conditions were more comfortable. Discount rates were barely steady, bank bills being scarce, while a further reduction in Bank rate is regarded as a possibility to be reckoned with.

SCHOOL OF COMMERCE.
Day and Evening Courses in preparation for Commercial and Secretarial careers, and external Comm. degree of London University.
A three years' Day Course is open to students of 16 years of age or over.
For full particulars and those of the Evening Course to be obtained from the Principal.

	Aug. 14, 1925.	Aug. 7, 1925.	July 30, 1925.	July 24, 1925.	Previous Rate and Date Changed.
Bank Rate	4½	4½	5	5	4 (Mar. 5, '25)
Banks' Deposit Rate	2½	2½	3	3	2 (Mar. 5, '25)
Discount/Call	2½	2½	3	3	2 (Mar. 5, '25)
Houses' Notice	2½	2½	3½	3½	2½ (Mar. 5, '25)
Market rate (3 months' bills) ..	3½	4	4½	4½	..

The Bank return showed a decrease (of which £240,000 was accounted for by exports) of £243,000 in the stock of gold, but, on the other hand, notes had returned from circulation to the extent of £1,066,000, so that the Reserve was £823,000 higher on balance, though its proportion to liabilities had declined by .6 per cent. to 30.6 per cent. Borrowing by the market was reflected in an addition of £3,376,000 to Other securities, and Government securities were also £710,000 higher; Other deposits however, were less than a quarter of a million higher, Public Deposits having expanded by over 4½ millions. Currency notes outstanding were reduced this week by £4,268,100 to £301,216,100, which includes £1,330,800 for notes called in, but not yet cancelled. The fiduciary issue is £243,635,300, or £4,510,100 below the maximum for 1924.

The monthly return of average weekly balances of the London Clearing banks for July shows an expansion in deposits and a further decline in acceptances. The following table compares the aggregate figures of the nine English banks:—

	June, 1924.	Dec., 1924.	Mar., 1925.	May, 1925.	June, 1925.	July, 1925.
Capital and reserves	119.2	119.4	119.6	119.6	119.6	120.1
Acceptances	85.3	109.9	113.9	99.8	90.2	84.5
Deposits (incl. undiv. profits, &c.) ..	1,651.9	1,656.1	1,605.0	1,598.1	1,624.5	1,633.2
Total Liabilities	1,856.4	1,885.4	1,838.5	1,817.5	1,834.3	1,837.8
Coin, notes, balance at bank, and cheques in course of collection ..	249.1	259.7	237.1	236.2	253.9	244.0
Money at call	108.1	112.8	108.0	104.3	113.0	114.6
Investments	349.3	328.8	308.2	300.0	292.6	286.3
Discounts	245.0	234.6	202.3	200.1	205.5	228.5
Loans and advances	791.7	811.2	840.8	848.6	850.5	851.0
Cover for accept., promises, &c.	113.2	138.5	142.1	128.3	118.8	113.4
Total assets	1,856.4	1,885.4	1,838.5	1,817.5	1,834.3	1,837.8

There was a further slight increase in loans and advances and a big jump in bills discounted, which have been offset by a decline in cash and another reduction in investments. In July of last year movements on the credit side were of a similar nature, but deposits declined by £10 millions.

NEW YORK MARKETS.

Our New York correspondent cables:—The recent rising tendency in markets has been followed by some irregularity, while the tone of the money market is slightly easier. Opinion is divided as to the likelihood of moderately firmer rates in the autumn. Wheat reacted sharply on the Government estimate of a crop of 679 million bushels and the Canadian estimate of 375 million bushels. The estimate for maize is reduced to 2,950 million bushels. Cotton is lower on the official estimate of 13,566,000 bales. Steel prospects appear favourable. Much interest has been aroused by the reduction in prices of automobiles and oil. The Reserve System reports a moderate decrease in discounts and Government security holdings, with a reserve ratio of 75.5 per cent.

THE STOCK MARKETS.

The Stock Exchange was half-prepared for a further reduction in Bank rate this week, but when "no change" was announced, gilt-edged stocks held their ground, the House still being of opinion that a further reduction is not unlikely in the near future. French bonds have been unaffected by the Anglo-French conversations, but middle-European issues are a little better. Home rails, now quoted ex-dividend, have lacked support, but Argentine rails have spurred on dividend prospects. Rubber shares keep steady, but tea shares are dull, and oils have been heavy on price cuts in the United States. Courtaulds have been the feature in industrials, having risen at one time to 135s. Other textiles and the tobacco group have been firm. There has been some selling of Kaffirs and tin shares have given way, but the diamond group spurred on the new diamond trade agreement.

THE COMMODITY MARKETS.

The commodity markets have been slightly more active this week, though conditions remain quiet in many cases. Purchases of pig-iron are still restricted in view of a possible lowering of quotations in the near future, but rather better business has transpired in manufactured iron and steel. Coal prices show a tendency to sag owing to scarcity of buying orders. In the cotton trade inquiry is maintained fairly well, but sentiment as to values is less strong, and commitments are being limited. Business in woollen textiles remains stagnant in the absence of a settlement of the wage dispute. Wheat is firmer in sympathy with conditions overseas. Potatoes have been in fair demand, but the fruit market is less active. Sugar has been steady at recent rates, tea steady as regards finer grades but weaker as regards commoner varieties. Rubber is lower on the week, but forward positions show a firmer tendency. Among metals tin and copper have declined, and lead is easier.

FOREIGN EXCHANGES.

If anything, the foreign exchange market has been even quieter than last week, with little or nothing to stir the dulness of the holiday season. The only feature of interest has been the further weakness of the French franc on last week's poor Bank return, and some doubts as to the extent of the success of the gold loan. This week's return makes a considerably better showing, but so far the rate has shown little response. From a closing price of 103.55 on the 7th the quotation moved up to over 104 in the early part of the week, and at times, on the 12th and 13th, stood at 104.25. Yesterday morning, however, it was somewhat better again at 104.05. Brussels, in sympathy, has moved up from 107.45 to 108, while the lira, after considerable fluctuations, is slightly higher at 134½ than the 134¼ quoted a week ago. Forward rates in Paris have broadened a little to 45.50 centimes above for one month, while Brussels is narrower at par—2 centimes below. The dollar rate has continued very stable round \$4.85½, at which it stood yesterday morning, as compared with \$4.85½ a week ago. Forward rates are slightly wider at 7-32 cent per month premium. Amsterdam has moved slightly against us from 12.08½ to 12.07½. Switzerland has remained steady at 25.01, while Madrid shows a sharp jump from 33.66 to 33.73½. Of the Scandinavian rates, Oslo and Copenhagen have been steadier than of late, a tendency to appreciate in the middle of the week being at once checked. Stockholm and Helsingfors show little movement, while Berlin, Vienna, Budapest, and Prague are all practically unchanged. The zloty in the middle of the week showed a further tendency to run away, in spite, or, perhaps, as the result, of stringent methods on the part of the Central Bank, and on Wednesday was up to 27.50. Yesterday morning, however, there was a recovery to 26, and excellent harvest prospects, together with the reduction in imports shown in the most recent figures, suggest that the recent trouble will be overcome. In the East the rupee stands at 1s 6½d, very slightly cheaper than last week, while Japan is also slightly lower at 1s 8 11-32d. The silver market has been even more featureless than before, a slight rise being due to the almost complete absence of supplies. Hong Kong is unchanged at 2s 4d, Shanghai at 3s 2d. In South America, Rio shows a further slight improvement from 5½d to 5 29-32d, while Monte Video is the same at 49½d. Buenos Aires, however, has gone down from 45½d to 45½d, and Valparaiso has depreciated from 40.20 to 40.30.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 8th:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	6,879	From Revenue	14,666
Interest, &c., on Debt	2,722		
Sinking Fund	114		
Increase in Exchequer Balances ..	4,581		
Decrease in Debt	14,666		

The Revenue for the week amounted to £14,666,400, as compared with £12,240,200 in the corresponding week last year. Customs were higher at £2,201,000, against £1,753,000, while Excise was slightly lower at £827,000, against £849,000. Property and Income-tax brought in £4,922,000, as compared with £5,384,000, while Super-tax amounted to £600,000, against £610,000. Ordinary receipts were lower at £8,300, against £248,600, but Special receipts brought in £12,400, as compared with £600. The week's operations reduced the National Debt by £4,581,500, and caused the following changes:—

(000's omitted.)			
Treasury Bills	£ 3,696	Public Department Advances ..	£ 8,250
National Savings Certificates ..	50	Sundries	77
	+ 3,746		— 8,327

The floating debt was reduced by £4,495,000 to £778,206,000.

FINANCIAL YEAR, 1925-1926 (April 1st to August 8th).

£		£	
Total Expenditure ..	288,463,565	Raised by Revenue ..	252,178,719
		Decrease in Balances ..	3,702,428
		Amount borrowed ..	32,582,418
Total	288,463,565	Total	288,463,565

ESTIMATES for FINANCIAL YEAR 1925-1926.

£		£	
Expenditure	799,400,000	Revenue	801,060,000
Surplus	£1,660,000.		

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Mercantile and General Insurance Company, Mitchells and Butlers, Anglo-Austrian Bank, Watney, Combe, Reid, and Union Cold Storage. Mr Richard S. Guinness, at the meeting of the Mercantile and General Insurance Company, commenting on the increased premium income, said that in home business the increase was a small one, but the foreign income, owing to certain treaty arrangements, showed a considerable increase.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

INTERLUDE AND RETROSPECT.

HARD times and bad trade are powerful influences, but two things apparently they cannot do—they cannot reduce the consumption of tobacco and they cannot interfere with peoples' holidays. The world seems to be as busy holiday-making this August as in the most spacious summers of our prosperity. The moors are full of plutocrats; the golf courses crowded with middle-class parents and schoolboys; the seaside, from Deauville to Southend, is packed with trippers of every social class. London is in charge of a skeleton staff left behind to continue the essential services, such as writing leading articles and publishing newspapers.

As Parliament adjourns, and its members scatter on their holidays, we naturally look back over the first nine months of its career, and try to assess the value of its performances. November to August is a useful accounting period, and a tolerably accurate profit and loss account is possible. Starting with high hopes and the encouragement of a tremendous victory at the polls, supported by the votes of thousands of neutral electors who genuinely feared the prospect of revolution, and genuinely believed that trade must improve under a steady Conservative Government, has the Cabinet justified the hopes and the confidence which shone so brightly on its birth?

If good trade be the test of good government, Mr Baldwin's administration is written down a failure, for in the unsettled régime of the Socialist Premier, trade was better than it has been under Mr Baldwin. The promises

of renewed prosperity, which were made so freely at the last election, have not been fulfilled, and we may make up our minds that politicians of whatever colour and complexion never will restore it, for the power of Government to affect trade is mainly negative, and is far more prone to wound than to heal. The discrepancy, therefore, between the hopes and the performances will not be insisted on by any reasonable critic, except possibly those who see in the gold standard the source of all our recent difficulties. We should be more disposed to give the Government credit for a temperate foreign policy which has certainly not thrown obstacles in the path of a European recovery. Mr Chamberlain has shown himself an interesting and reasonable Secretary for Foreign Affairs, and our international relationships, except in regard to Russia, where other members of the Government have been allowed far too great a freedom of expression, have not deteriorated under his charge. In domestic policy, too, the Government has displayed a measure of wisdom in tackling one of the most urgent problems of civilisation, the care of dependents left helpless by the death of the breadwinner. The line of approach to the problem is open to criticism, but it is a great deal to the good that a Conservative Government should move in the matter at all.

On the other side of the account, unhappily, the sheet is not clean, and in much that Mr Baldwin's Government has done we can see not only blundering mistakes, but just that questionable type of political manoeuvring which is said to be most foreign to the Prime Minister's character, and from which, above all things, he was to redeem his country. The unpleasant episode of the cruisers, which consisted of a stand-up fight inside the Cabinet, a balancing of party considerations and electoral chances, and finally a surrender to the open menaces of the Board of Admiralty, showed up both the Premier and the Chancellor of the Exchequer as very undignified figures, and its effect has not been neutralised by economy speeches, and the appointment of the new Committee of three to save money in thousands where the Government is wasting it in millions. The whole business has a look of compromise and barter of principle which does not augur well.

The same lack of guiding principle was evident in the handling of the coal dispute, and the Prime Minister's unhappy alternations of resistance and surrender. But, most of all, it has been seen in the Government's attitude to Free Trade, and its dishonourable entanglements with Protection. At the election, as everyone knows, Mr Baldwin, by pledges repeated and emphasised, limited the fiscal changes open to his Government, and thereby won the votes of many Free Traders, who were persuaded that Protection was not an issue. But, unhappily, the more reactionary type of Unionist is Protectionist first, with his Unionism a very bad second, and the deadweight of this reactionary type has been influencing the Government from the very first, and impelling it, contrary to honour and pledges, to introduce Protection right and left. The Budget was Protectionist, and provided an admirable example of the behind-scenes bargaining and negotiation which go to the making of a tariff, and to the enrichment of a protected minority at the expense of the whole nation. Still more striking was the case of Nottingham, which exercised the right kind of pressure at the right spot and the right moment, and, in open breach of the Prime Minister's pledge, got one of the earliest slices of the tariff melon. This unsavoury episode is the worst blot on Mr Baldwin's career and the record of his Government, and it makes one wonder how our politics will develop if the Protectionist wing of the party finally gets its way.

On the whole, the position of Mr Baldwin has not been strengthened in these nine months, and we detect a recognition of this fact in the first beginnings of a campaign to "boost" him back into popularity. The Baldwin cult is being propagated by means of pen pictures, of which the following, taken from the *Times*, is a good specimen:—

Mr Baldwin has brought into public life a pleasant savour of freshness and health. It is the fragrance of the fields, the flavour of apple and filbert and hazel nut, all the unpretentious, simple, wholesome, homely but essential qualities, suggestions, traditions

of England that Mr. Baldwin has substituted for the over-charged, heavy-laden, decadent atmosphere of pre-war days.

A Prime Minister who needs to be "boosted" with such highfalutin nonsense must need "boosting" very badly. And what a commentary on Nottingham lace!

BRITISH GOODS AND FOREIGN TARIFFS.

THE application of index numbers to express the relative burden upon British manufactured goods of Dominion and foreign tariffs, and also to enable tariffs now to be compared with what they were before the war, has to be made with caution and to be interpreted with even more caution. Index numbers will not stand the strain which so frequently is put upon them. Nevertheless, in competent hands they are a great deal better than nothing; they do give us a rough means of measuring relative movements.

In the "Survey of Overseas Markets," prepared under the auspices of the Balfour Committee, an attempt is made to set forth by means of index numbers "the relative *ad valorem* incidence of Customs tariffs in 1914 and in December, 1924, as affecting British trade." The investigation was limited to 18 important foreign and Empire markets, and to our exports of typical goods "wholly or mainly manufactured." The value of the manufactured goods taken into account was over 80 per cent. of the total manufactured exports. A system of weighting was adopted, and the results expressed as a general average. "The utmost that can be claimed for these figures," say the compilers, "is that they may be useful as indices for purposes of comparison as between different countries and different years, when the basis on which they have been calculated is borne in mind. The figures have no meaning in themselves, and are purely relative. No one figure can give an absolute indication of the level of any country's tariff." We give below the figures as printed on page 545 of the "Survey." The Netherlands index for 1925, calculated from the new tariff, has been added:—

Country.	Index Number expressing the Estimated <i>ad valorem</i> Incidence of the Tariff applied to British goods in—	
	1914.	1924.
Empire Countries—	Per Cent.	Per Cent.
India	24	10½
Australia	6½	9½
Canada	15½	13½
Union of South Africa	7½	9
New Zealand	8½	8½
Foreign Countries—		
U.S.A.	19½	32
Germany	17½	10
Argentina	24	20½
France (and Algeria)	21½	12½
Japan	19½	10½
China	5	5
Netherlands	2½	2½ (41 1925)
Brazil	88	41
Belgium	10	8½
Egypt	8	8
Italy	18½	15½
Spain	42	37½
Sweden	23	12½

The most interesting feature of this comparison is that, apart from India—which has "gone Protectionist"—and the United States—which by the tariff of 1922 has surpassed its previous records in extravagant protection—the tariff walls which our manufactured goods have to surmount are in most cases lower than in 1914. The Dominion tariffs, except those of Canada, have, after allowing for preference, all gone against us. The reduction in the Canadian index number is mainly due to the 10 per cent. preferential rebate now granted on all rates which are over 15 per cent. *ad valorem*. But even then the Canadian tariff is higher than that of any other important part of the Empire. The average level of the Australian and New Zealand tariffs are kept down by the duty free admission of cotton goods which bulk so largely in our export trade. If cottons were left out of account, the index numbers for Australia would be 10 and 15 per cent. for 1914 and 1924, and those for New

Zealand would be 12 and 13 per cent. The way in which the latter-day Government of India (which grants no British preference) is rushing up tariffs against us and extending protection is ominous, to say the least. Already India, at 10 per cent. on the average, is approaching the level of Canada, and Canada is actually higher, after allowing for preference, than Germany, or France, or Japan. If, as so many preach, we must look for our overseas markets of the future to the self-governing Dominions, we must do all that we can to foster in the minds of their people a sense of joint interests with us. We shall not convince them of the folly of piling up tariffs if we ourselves—as the present Government is doing—go in for protection by instalments.

The Balfour Committee also attempt to show by means of index number percentages the "effective preference" enjoyed by British goods in the self-governing Dominions. We give the figures. It will be observed that the percentages given under the *ad valorem* duties on British goods correspond with those in the main table, but that it would be misleading to add the columns of British duties and preference together to get the average level of duties charged against foreign goods. All these figures are calculated in terms of British manufactured exports, and not of the manufactured goods, in many cases quite different, exported to the Dominions from foreign countries:—

	1914.		1924.	
	<i>Ad Valorem</i> Level of Duties on British Goods	Extent of Preference Over Foreign Goods	<i>Ad Valorem</i> Level of Duties on British Goods	Extent of Preference Over Foreign Goods
Australia	6½ per cent.	3½ per cent.	9½ per cent.	11½ per cent.
Canada	15½ per cent.	5½* or 6½† per cent.	13½ per cent.	5* or 8½† per cent.
Union of South Africa	7½ per cent.	2½ per cent.	9 per cent.	2½ per cent.
New Zealand	8½ per cent.	3½ per cent.	8½ per cent.	12 per cent.

* Over countries enjoying Intermediate Tariff Rates (France, Italy, Belgium, Netherlands).
† Over countries subject to General Tariff Rates (Germany, United States of America).

In so far as British goods are concerned, the effective preference in Canada is much the same as it was before the war, and so also is that of the Union of South Africa. In Australia and New Zealand the preference has risen considerably, though in Australia there has been a substantial increase also in the general level of duties applicable to British goods. For instance, in the iron and steel and machinery groups the duties are practically twice as high as they were in 1914.

The fall in the *ad valorem* percentage of tariffs in many foreign countries has been due to the rise in world prices and to the failure of the attempt to keep pace with them by the system of quotients, as in France. The effect for the moment is to make France, Germany, and Japan quite moderate tariff countries, and neither Holland nor Belgium, in spite of tariff revisions, has gone very far in the march towards Protection. In Germany, when the import restriction system lapses, an increase in tariff duties is to be expected. The Japanese duties are mainly specific, and have been swamped *ad valorem* by the rise in prices and depreciation of the yen. The revision of duties in Belgium has, on the whole, been favourable to British trade; the machinery and iron and steel groups have gone up, while textiles have gone down. Among the high tariff countries, the average in Spain has gone down in spite of the tariff revision (mainly specific) of 1921-2, modified by a subsequent commercial treaty with us. On paper, the Brazil tariff remains as it was, one of the highest in the world, but the price advance has pulled down its *ad valorem* incidence upon British manufactured exports.

A study of the tables given above, and of the observations upon them contained in the Balfour "Survey," gives, upon the whole, a favourable impression. There is a clear tendency of the Dominion tariffs to rise against us, an advance not in most cases offset by the preference. On the other hand, the advance in prices and the depreciation in currencies has lowered foreign duties *ad valorem*, with the glaring exception of the United States. And even with the United States the Committee say "the

COMPLETE INTERNATIONAL BANKING FACILITIES

100 Broadway

New York City

tariff increase of 1922 has not had so deterrent an effect on our export trade to the United States as was anticipated in some quarters." After the craze for tariff revision, which began in most countries about 1920, had spent its force, there was a definite slackening and the emergence of doubt as to whether the piling up of Customs duties was a sure and short cut to national prosperity. France and Germany, partly, it must be admitted, against their will, have become with respect to British trade moderate tariff countries, and with the exception of Canada the Dominions have kept the duties operating *ad valorem* against us at less than 10 per cent.

SWEATED GOODS.

THE Parliamentary Labour Party some time ago appointed a Committee to consider the question of sweated goods, and an Interim Report dealing with the international aspect has now been published. The Report will bring but cold comfort to those who prophesied—or desired—that on this question the Labour Party would resort to Protection.

Perhaps it is with the object of making their position clear at the outset that, after outlining the problem, the Committee turn to deal with this question in a section headed, "Tariffs no remedy." "We wish to make it clear and beyond all doubt," say the Committee, "that we see no solution in discriminatory tariffs." This is not surprising in view of the fact that Mr Philip Snowden, Mr Arthur Henderson, Mr Tom Shaw, and Lord Arnold are members of the Committee. The Committee, indeed, criticise the proposal of Dr Otto Bauer, the Austrian Socialist, adopted by the Austrian Chamber of Deputies, to impose an additional import duty on goods exported from States where the hours of labour are less favourable than those laid down in the Washington Hours Convention. On other grounds they disagree with the suggestion made by an Australian Labour organisation for the exclusion by the Australian Commonwealth of all goods produced below Australian trade-union standards.

What the Committee clearly have in mind is the ultimate adoption of an international code of labour conditions, embodying Labour Conventions, and enforced by the use of the "boycott" against goods proved to be violating these standards. It is recognised that "the impossibility of fixing an international minimum of subsistence, even for European countries, owing to differences of race and climate and physiological needs, thrusts into the future the question of an international wages standard, more especially if, as would need to be the case, Asiatic countries were included." It is suggested, however, that the time is ripe for a Convention having as its object "the establishment of minimum wage machinery in different

countries, and providing that measures should be taken in all countries to adopt and enforce legislation designed to raise the level of wages in all industries to a given percentage of the average of unskilled workers' wages."

But it is admitted that, though the existing International Labour Conventions do not cover the whole range of working conditions, they provide more "standards" than could in present circumstances be enforced. And so in the end the Committee suggest as "a first step, confining the definition of 'sweated' goods to those that are made under conditions which do not conform to the Washington Hours Convention." "We are aware," continue the Committee, "that this is a restricted definition, and we would welcome a wider view, but we are so keenly desirous of establishing some practicable test of 'sweating' that we would accept a single test, such as that of the hours of labour, in the knowledge that once this was adopted, succeeding steps would be far less difficult."

The Committee envisage, as experience and confidence are gained, a gradually widening international definition of "sweating." The conditions laid down in other Conventions would, it is hoped, be added to the definition, and it is suggested that ultimately "sweated" goods would be defined as goods produced under conditions less favourable than those laid down in the International Labour Conventions. For the moment, however, we are concerned with a single condition—that of hours of labour, which has always found its way early into Acts of Parliament regulating conditions of labour.

The machinery provided in the Treaty of Peace is not, in the opinion of the Committee, adequate. The Treaty provides for action against a State which has ratified a Convention but failed to carry out its terms. Provision is made for a Commission of Inquiry, and for reference to the Permanent Court of International Justice, either of which bodies may recommend the adoption of "measures of an economic character" against the defaulting State. But the Committee want more than this. They ask for the adoption of a "boycott" in specific terms, to be enforced not only against States which ratify but do not apply the Convention, but against the goods of any State, whether it is part of the International Labour Organisation or not, and whether it has ratified the Convention or not. The Committee admit the impracticability of revising the Treaty of Peace, and suggest that "it would be possible, however, for the members of the International Labour Organisation by resolution to bind themselves, after inquiry has proved a complaint to be justified, to refuse to import the kind of goods in question from the country which had failed to observe the terms of a Convention, until it had fulfilled the conditions required in the Convention."

There are obvious difficulties in the way of carrying out a "boycott," but then the Committee would argue that there were equally great difficulties a century ago in the administration of our Factory Acts. The real question is whether it is possible to secure international standards and their reasonably effective enforcement. The Committee rightly regard the existence of the Inter-

national Labour Organisation and of the Conventions adopted by successive International Conferences as proof of the desire for such standards, and of a belief in their practicability. The question of enforcement is, however, a different one, though the Committee would argue that, admitting the need for standards, a method of enforcement must be found.

The method of inquiry into and report upon complaints is analogous to factory or mines inspection. What can be put in the place of the penalties for infringements of the law, imposed by the Courts? Can anything be put in its place at all? The Committee suggest the "boycott." They point out that absolute prohibition of import is not a new policy. As the report states, "the State has..... accepted the principle of the prohibition of imports, partly on economic and partly on moral grounds." The goods which are banned include "clocks and watches infringing the Trade Marks Act, indecent books and prints, books infringing the Copyright Acts, goods proved to have been made in foreign prisons, and infected animals."

The question is whether a sufficient number of States will agree in common to put a "boycott" into operation against the specific classes of goods proved, after complaint, to violate the Washington Hours Convention. The report deals fairly fully with the present situation as regards the Hours Convention. Austria and Italy have ratified it, subject to other industrial nations ratifying. The French Chamber of Deputies on July 8th unanimously adopted a Ratification Bill, which provides that it shall only take effect in France when the Convention has been ratified in Germany. At the recent International Labour Conference at Geneva, the Belgian Government representative declared that Belgium "was ready to ratify the Hours Convention, but it could not take such action in isolation. If the great industrial nations which were competitors of Belgium in the world's markets would adopt a similar attitude, there would be no further need for a debate on the question of ratification." At the same conference the German Government said it "sincerely desired simultaneous ratification by the principal industrial States," while the Indian delegates complained of India's difficulties because of Japan's failure to ratify the Hours Convention.

It would seem, according to the Labour Committee's view, that there is a widespread desire for simultaneous ratification and a recognition of the need for all States to conform to the Washington standard. Once ratification by the chief States has been secured, it would be argued that the "boycott" would be the next logical step in order to secure enforcement.

A difficulty, it was thought, might arise if a case arose where the product complained of was a virtual monopoly. To apply a "boycott" in such an event would be an act of heroism. But the report declares that such a situation is hardly likely to arise. The Hours Convention refers only to "industrial undertakings," and therefore this country would not suffer from the deprivation of, say, tea or raw cotton. But to meet this point it is proposed that the "boycott" shall not be applied against goods of which there is no alternative source of supply.

It is more than probable that this and other questions will create difficulties. But the Committee would then fall back upon the experience of the past, which has shown that, whilst new policies bring in their train unexpected difficulties, ways and means are usually found of overcoming them.

The Labour Party Committee base the case for their policy on economic and moral grounds. As regards the latter, the Committee have chiefly in mind the industrialisation of the world. "The conscience of the world," they say, "will not continue to tolerate the exploitation of inexperienced and unorganised workers by modern capitalism. It will, we believe, resent and destroy industrial semi-slavery and exploitation as it resented and destroyed the ownership and exploitation of slaves by the planters."

On economic grounds, they argue that inferior conditions of labour abroad are a menace to our own standard of life, and that the world has more to gain from higher standards in the countries now entering the industrial field than from the perpetuation of existing standards. Greater capacity and efficiency abroad mean, in a word, better markets for British goods.

THE POPULATION OF ENGLAND AND WALES.*

THE order of publication of the results of the Population Census of 1921 has been (i.) a Preliminary Report; (ii.) a series of County Reports; (iii.) General Reports on Occupations and Industries (reviewed in the *Economist*, May 30, 1925); (iv.) General Report on Dependency and Orphanhood; (v.) General Tables; and (vi.) Workplaces, the last named being a new departure. It may be presumed that a general report on the results of the Census as a whole will ultimately be issued. Except in the Preliminary Report, the tables have been limited to England and Wales; we have as yet no detailed statistics for Great Britain as a whole, except any we can obtain by combining the English with the Scottish results; and, since no Census has been taken in either part of Ireland since 1911, we shall never have totals or details for the United Kingdom in 1921 as a whole.

The general tables now published give the aggregates of the more important tables already issued for the counties, combining them for the whole of England and Wales, for all county boroughs, and all urban and all rural districts, and in some cases for each of six main geographical divisions. They do not, however, recapitulate the occupational or dependency tables, since these have already been issued for the country as a whole. This volume is undoubtedly the most generally important of the Census series, and as it is at a moderate price, can and should be obtained and used for reference by all who are interested in population statistics. Since it gives the more important data separately for every urban and rural district, the county volumes will not often be needed, except locally. It should be added that it completes the Census by recording the numbers of sailors and fishermen, and of the Army, Navy, and Air Force abroad at the time of Census, and contains some other matter excluded from the county volumes. Our only regret is that it was not possible to issue this essential volume at a much earlier date. Logically, no doubt, details precede summaries, but with careful organisation it might have been practicable to give precedence in the Press to these tables, for which all the material was presumably assembled two years ago.

The whole question of the acceleration of the issue of public statistics needs serious and immediate consideration, and not only with regard to Census statistics. At present very many publications do not appear till the matter contained in them is out of date, so that the expense of their compilation is to a great extent wasted. It would be more economical in the end to incur the slightly greater cost of speeding up the tabulation and publication when once the data have been obtained and verified. In particular, it is to be hoped that no trouble or expense will be spared in hastening the issue of the results of the current Census of Production.

The first section of these general tables, which relates to the change of population in the various districts between 1911 and 1921, with some comparative figures from earlier Censuses, contains little that was not already known from the Preliminary Report. The second section, which analyses in great detail housing accommodation and the size of families, is new and very important. The whole recorded population in England and Wales in 1921 was 37,887,000. Of these, 36,180,000 were considered to be members of private families, the remainder being in institutions, hotels, &c. The number of private families was 8,739,000, and the average size (including resident servants), 4.14 persons; 21 per cent. of the families consisted of three persons, 57 per cent. of two, three, or four. In 1911 the average size of the family was 4.36 persons, significantly larger than in 1921, and 53½ per cent. consisted of two, three, or four persons. In 1921 there were 1.13 families per structurally separate dwelling. The aggregate of the dwellings contained 39,786,000 rooms; 5.14 rooms per dwelling, 1.10 rooms per person. The number of rooms per person was very nearly the same in 1911 as in 1921. If this was all, there would be no

* Census of England and Wales, 1921. General Tables. H.M. Stationery Office. 13s net.

evidence of overcrowding, no shortage of houses, and no deterioration between 1911 and 1921. In relation to the last point the Census naturally cannot deal with the state of repair and fitness of buildings for habitation. The only comparison that can readily be made is by the number of persons in families living more than two to a room. In England and Wales, as a whole, this has increased from 9.1 to 9.6 per cent. of the population. In the County of London it had actually diminished, from 17.8 to 16.1 per cent. Comparative figures are shown for all urban and rural districts, pp. 86 to 120. At both dates approximately 52 per cent. of the population enjoyed the relative comfort of at least one room per person. In 1911 there were 409,000 uninhabited houses, and 38,000 being built (Cd. 8491, p. 200). In 1921 there were 205,000 houses or flats vacant on Census night, and 91,000 in course of erection. The number of "places of worship" is stated as 49,970 in 1911 and 50,377 in 1921.

Both in 1911 and in 1921 approximately one quarter of the families are recorded as living in 4-roomed houses. But, in fact, some doubt attaches to the Census account of the number of rooms in a house. In the usual two-storied house the ground floor is divided either into two or three compartments, used as scullery, kitchen, or parlour. If the householder describes one of the rooms as a scullery, it is not counted as a room, and since there is no check on the householder's statement, and there is no definition of a scullery, and commonly cooking can be done in the scullery or kitchen, and the kitchen may be regarded as a kitchen or sitting-room, it is found in practice that the statement of the number of rooms is often arbitrary. In consequence we cannot depend on the exactness of the proportions recorded of the 3, 4, or 5-roomed houses. The table on page 89 shows interesting variations from county to county. In the majority the four-roomed is the commonest type of house; but in Berkshire, Derbyshire, and Dorsetshire, for example, the number of five-roomed exceeds that of four-roomed, and in Northamptonshire six-roomed houses are the most numerous, and account for 28 per cent. of all.

In 1921 the number of inmates of institutions such as hospitals, workhouses, and prisons was 453,000. In 1911 it was about 493,000.

The principal results of the distribution of population by age, which is tabulated in the 4th section of these tables (pp. 127 to 174) have already been made known, having been ascertainable from the aggregate of the county volumes, but we now have (precisely 4 years and 19 days after the date of the Census) the first official publication of the figures.

The small number of births in the war-years 1916 to 1918 resulted in the fall in the numbers in the first line of the table. The decrease in the birth rate from 1901 to 1916 accounts for the stationariness of the entries in the second line. The war losses are seen in the diminution of the numbers of males aged 20 to 40. The natural growth of the population, born before the falling off of births after 1901 and subject to a decreasing death-rate, leads to the considerable increase in the higher age groups.

The average age of the male population increased from 28.0 years in 1911 to 29.9 in 1921, that of the female population from 29.1 to 31.2. Persons, male or female, of the potential working ages 15 to 65 formed 64 per cent. of the population in 1911, 66 per cent. in 1921; the non-effectives under 15 years decreased from 30.6 per cent. to 27.7 per cent., over 65 years increased from 5.2 to 6.0 per cent. The number of persons in the proposed new pensionable group (65 to 70 years) was 980,000 in 1921.

The sex and age distribution varies considerably from county to county. In London there were 1,165 females to

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

near Temple Bar.

Assets Exceed - - £16,750,000

General Manager: W. A. WORKMAN, F.I.A.

1,000 males, in Wales 997. In East Sussex 7.9 per cent. of the males were under 5 years, in Rhondda U.D. 11.1 per cent. In London there were 1,151 unmarried females per 1,000 unmarried males under 45 years, in Blackburn 1,214, in Glamorganshire only 925. As a Census curiosity we may state that one male aged 15 years in London is recorded as divorced, and 5 males and 3 females aged 15 as widowed, somewhere in England and Wales.

From table 43 we learn that about 96 per cent. of the children between the ages of 7 and 14 are in attendance at educational institutions. In the age year 14 to 15 the percentage falls to 29, next year to 16, and at 18 years to 3.

Less detail is given in relation to place of birth than in previous censuses, for the county of birth is not shown, so that no study of internal migration is possible. On the other hand, we have for the first time a division between visitors and permanent residents from abroad. The following tables show the kind of information available, which shows no great change between 1911 and 1921:—

(Enumerated in 000's.)

Of the 334,000 persons born outside the British Empire and here in 1921, 23,000 were visitors, the rest residents. The residents include 61,000 persons born in Russia, 42,000 from Poland, 37,000 from the United States, 33,000 from France, 22,000 from Germany, and 21,000 from Italy.

BRANCH SHOP COMPANIES.

In our issue of June 6th last (page 1125) we reviewed the accounts of a number of companies engaged in retail trade in London. We now propose to supplement this with a brief survey of the reports of a number of retail companies whose business is run on somewhat different lines, namely, that of branch distributing centres with centralised management. Our list comprises fifteen branch shop companies, including four grocery concerns, three drapers, four men's outfitters, and two chemists. In most cases the latest reports refer to the year 1924, although many cover the early part of 1925.

On the whole, results of these undertakings were not altogether unsatisfactory, although here and there it will be noticed that profits declined to quite an appreciable extent. This, however, can be readily understood if regard is paid to general economic conditions. Those concerns which have been able to show better earnings are certainly to be congratulated upon their performance in such difficult times. It is here that efficient organi-

sation and expert supervision make their presence felt. To what extent fresh blood is needed in an undertaking which has fallen upon evil days is always a moot point, and shareholders are, alas, only too often willing to accept the promise of jam to-morrow in spite of failure to produce jam yesterday or to-day. Fortunately, in branch shop companies the need for drastic action in this direction is necessary only in rare instances.

Our first table shows the amount brought forward from the previous year's accounts, together with net profit, after payment of debenture interest, and how the available balance was distributed:—

Boots Pure Drug Jan. 31, '25	9,575	26,839	8,400	6,000	—	10,764	

Boots Pure Drug Company had another good year, being able to show profits of £654,837, compared with £628,620, while the reserve fund was strengthened by no less than £246,011, against £100,000 a year previously. A good showing was also made by Isaac Walton, whose profits rose from £17,833 to £26,839, which enabled the transfer of £6,000 to the reserve fund, which received nothing last year. Increased profits were recorded by Hope Brothers, Horne Brothers, the Meadow Dairy, and Plummer, Roddis. On the other hand, the position of Chas. Baker took a turn for the worse, the debit balance carried forward amounting to £56,077, against a credit brought in of £179, although the reserve fund, which in 1923-4 was drawn upon for £12,500, was written up by £7,500. In the 1924 report the directors stated: "Fortunately, the outlook for the current year is brighter." It is evident, however, that the improvement shown at the beginning of the period was not maintained, although it is to be hoped that the expected recovery will not be much longer delayed. Lipton's also went through a bad time, the profits declining from £236,245 to £86,712, so that once again nothing was placed to reserve, and the sum carried forward was brought down from £42,884 to £25,597. Apparently the poor results achieved were due to bad trading in this country, for the report states that the company's tea and rubber estates continue to show satisfactory results, and this applies also to the export trade. The decline which occurred in the profits of the Maypole Dairy was not quite so pronounced as in the case of Lipton's, but it was, none the less, of considerable proportions, the net profits at £215,410 comparing with £433,443 in 1923. The reserve appropriation, however, was maintained at £10,000, and, in addition, £10,000 was transferred to income-tax reserve. Slight decreases occurred in the profits of Bobby and Co., the Home and Colonial, the International Tea Stores, Maynards, Pims, and Parke's Chemists, but, with the exception of Pims, whose figures fell from £3,069 to £1,865, the movements were of only minor importance.

The position as it affects shareholders is seen in the following table of dividends for a number of years past:—

	1912	1913	1914	1915	1916	1917	1918	1919	1920	1921	1922	1923	1924

* Free of income-tax.

The outstanding feature here is the remarkable change which has come over the position of holders of Maypole deferred. For 1912 no less than 212½ per cent. was distributed, but in 1916 the payment fell to only 25 per cent. The following year, however, witnessed a quick recovery, 125 per cent. being declared. From that year, however, there has been a continuous falling off, and whereas since 1921 the dividend had been 12½ per cent., results last year were not good enough to warrant a dividend on the shares. As was to be expected, Lipton's also were unable to make a payment to the ordinary proprietors, who received 10 per cent. for 1923, but, despite the small decline in profits, the directors of the International Tea Stores evidently considered prospects bright enough to warrant an extra 1 per cent., making the total for the year 20 per cent., against 19 per cent. for the previous 12 months. Maynards also increased their rate, paying 45 per cent., in contrast with 40 per cent., while Bobby's, Parke's, Boots, the Home and Colonial, and Hope Brothers and Plummer Roddis maintained their dividends. Horne Brothers was able to make its first payment—namely, 5 per cent.—while Isaac Walton shareholders received 11½ per cent., against 10 per cent. Once again Bakers paid nothing, while Pim Brothers' proprietors had to go dividendless after a very long period of excellent distributions.

The principal balance-sheet items are compared hereunder with those of the previous period:—

Changes in capital account have been few, the only alteration of note being an issue of 250,000 new £1 ordinary shares by the Home and Colonial, while Bobby's issued 10,354 £1 ordinary shares. Since the making up of the accounts of the Meadow Dairy Company, however, the concern has issued 100,000 £1 preference shares at 22s 6d per share.

Loans in several instances have increased. Properties, &c., in the majority of cases account for more, the only declines being shown by Charles Baker and the Maypole Dairy, but stocks, on the other hand, are lower. Lipton's stock figure is down from £406,809 to £266,911, the Maypole's from £920,349 to £798,016, those of Plummer Roddis from £29,642 to £9,629, Baker's from £245,603 to £166,688, and the Home and Colonials from £955,438 to £768,820. Cash and investments are lower in the aggregate, and while creditors have fallen, debtors, on balance, account for more.

We conclude with a table of share prices and yields:—

The price of Boots' shares has risen considerably during the year ended June last, with the result that the yield has narrowed to £5 11s per cent. A considerable amount of faith is placed in the future of this undertaking, which probably accounts for the comparatively modest yield. The Home and Colonial issues all give good returns. International Tea Preference have remained exceptionally stable during the past three years, and yield quite well at their present price, but Lipton's, after rising very substantially, are now about the same as in 1914. In only four instances, however—Horne Bros., Pims, Liptons, and Bakers—are present quotations below prices at which the shares were issued.

Branch shop undertakings have a future second to none among joint stock concerns. The one thing needful is a master-mind in control. They cater in nearly all cases for the needs of the community. Industrial depression may reduce turnover and profits, but as distributors they occupy a strong and recognised position in our modern economic system.

THE TOBACCO TRADE.

THE historian may perhaps chronicle the remarkable period through which we now pass as darkened by a cloud of industrial depression with a silver lining provided by the tobacco trade. On the whole the consumption of tobacco keeps up remarkably well, though the Chancellor of the Exchequer, in reviewing finance last April, had to record a deficiency on the estimate of £2,000,000, which represents 5 or 6 million lbs of tobacco. In the financial year 1924 the total yield was £51,880,712, and the net weight of tobacco cleared in Great Britain and Northern Ireland was 128,810,070 lbs. Coming nearer to the present, 63,987,085 lbs were retained for home

intelligence. The success of the Imperial Tobacco Company and of the large independent concerns depends on experience in buying, expert technique in the factory, and spirited marketing.

New paths have been widened or diverted by political events. One of these gives freer scope for the use of Empire-grown leaf. Since September 1, 1919, up to June 30th last the import duty on tobacco grown in the British Empire has been reduced by one-sixth. As the ordinary duty is 8s 2d per lb, the one-sixth preference has meant an advantage of approximately 1s 4d per lb on tobacco "consigned from and grown, produced, or manufactured in the British Empire." The Government, at the time of the Imperial Economic Conference in October, 1923, gave the Dominions the choice of stabilising this preference for a term of years or increasing it to one-fourth. The Conference chose the larger but precarious cake. The matter came before the Labour Parliament, and, after discussion, the recommendation of the Conference was rejected (June 17, 1924) by 13 votes. In June last Mr Churchill obtained the sanction of Parliament to the one-fourth by 277 votes to 93. The majority included several members of the Labour Party. It was stated by the Chancellor of the Exchequer that the Imperial Tobacco Company proposed "to make the whole arrangement effective upon the price of Empire tobacco at a halfpenny per ounce retail price lower than any other tobacco." The Imperial Tobacco Company and the other manufacturers acted accordingly, reducing tobaccos made from Empire leaf from 7½d to 7d per oz.

A path which has been diverted by a political event is that by which tobaccos manufactured by English manufacturers reach the smoker in Southern Ireland. On April 1, 1923, Southern Ireland separated fiscally from this country. The Government there adopted provisionally the British tariff, and they continue on that basis, with the exception that the preference on Empire-grown tobacco was, out of deference to the home growers of tobacco, rescinded by the Southern Irish Parliament on April 25, 1924. The effect of the adoption of the English tariff was to penalise the imported manufactured article which could only be brought into Southern Ireland at a higher rate of import duty than that paid on the raw material from which the home-manufactured goods are made. This led to several movements, the chief of which was the establishment of factories in the Free State by the W. D. and H. O. Wills, the Players, and the William Clarke and Sons branches of the Imperial Tobacco Company within the fiscal area of Southern Ireland. The important independent firm of Cope Bros. and Co., Limited, of Liverpool and London, made an arrangement with the firm of T. P. and R. Goodbody, of Dublin, for the supply of the Cope goods in Southern Ireland, and P. J. Carroll and Co., Limited, of Dundalk, started a factory at Liverpool, to take care of their English customers. The imports of manufactured tobacco goods from this country into Southern Ireland dropped in the first six months of this year to 32,838 lbs, compared with 553,867 lbs in the first six months of last year.

The exports of tobacco, "the produce and manufacture of U.K.," have recovered somewhat. In 1924, 18,106,350 lbs were exported, against 18,357,976 lbs in 1923 and 14,958,844 lbs in 1922. Exports are now maintaining a satisfactory level, the figure in the January-June period this year being 9,181,782 lbs, compared with 9,172,309 lbs in the corresponding period last year.

The stocks of tobacco held in this country are heavy. They total in raw leaf 347,529,000 lbs, against 141,871,000 lbs in December, 1919. Tobacco has to be bought when the favourable crop is for sale. It is stored in the warehouses at the docks till required, when duty is paid on clearance. The necessity of buying when suitable tobacco is to be had, and allowing it to mature, ensures good tobacco for the smoker, but means the sinking of heavy capital resources in the raw material.

The cigar trade has for some time been working at a disadvantage. The cigarette habit, encouraged by profuse advertising, has weakened the cigar position, and high prices have to be paid for the best cigar tobaccos. A committee of Havana cigar importers has recently undertaken propaganda to instil into the minds of the smoking public that a cigar is not, after all, a dear

pleasure compared with other luxuries which are freely indulged in. This committee have taken a leaf out of the book of the cigarette manufacturer by making more use of the advertisement columns of the influential Press. The Havana cigar is unique in its appeal, but very good cigars are made in this country. One firm reported an increase in sales in one year of their high-class cigars, made in this country, of a million cigars.

The distributive section is exercised over the post-war development of tendencies which have grown seriously under high taxation and the Shop Hours (Early Closing) Act. The legitimate tobacconist has to pay rates and taxes in respect of his shop, is prevented by manufacturers' minimum price schedules from paving a way to the bankruptcy court by selling goods retail at wholesale prices, and of his business transactions an account has to be rendered for income-tax. This being so, the sales of tobacco goods in offices, works, and other establishments by employees he considers an injustice. Another tendency is that of the use of automatic machines by publicans, confectioners, and others, whose places are open after the tobacconist's shop is shut under the existing legislation. The present position is that tobacconists are installing the machines in self-defence, and that manufacturers are giving them facilities to do so.

Notes of the Week.

The Chamberlain-Briand Conversations.—M. Briand, on his departure for Paris, said that the result of his conversations with Mr Chamberlain was that the barometer had risen and was now "set fair." The official *communiqué* and the usual inspired statements were eloquent as to the harmony of views and the progress achieved. We are so used to such glowing phrases after international conversations, that we have learned to attach little importance to them. But in this particular case there appears to be at least some solid ground for congratulation. Until the full text of the reply to Germany is published next week, it will not be possible to say exactly how much substance there is in the criticism made in certain quarters that the Anglo-French agreed proposals whittle down the functions of the League. Meanwhile, unqualified welcome may be accorded to two results of the conversations. The point that the proposed Pact is to be essentially bilateral has been emphasised, and the long and tedious method of interchange of Notes is to supersede, if the Germans agree, by direct Anglo-Franco-German conversations. Only so is it possible to hammer out any concrete agreement before the League Assembly takes place. Whether this highly important race against the clock can be won now rests largely with Germany. The Briand-Chamberlain conversations have made it possible.

French Troubles in Morocco and Syria.—Morocco has been the danger point for French Governments for some time past. It was their unwillingness to be involved in any responsibility for the drain of blood and treasure which that unhappy question is involving that caused the Socialists to decide, as a party, to refuse support to the Painlevé Government, although when the actual vote was taken, on June 24th, the majority of the Socialists went into the Government lobby. The Rifi forces still stand on territory claimed as part of the French zone, and the prospect still seems remote of peace of any stable kind, on tolerable terms, in the Rif. Marshal Petain, who went to look into the situation early in June, brought back a secret report so gloomy as to more than offset the hopes raised by the joint Franco-Spanish blockade. The depression caused by rumours as to what was in this report, indeed, became so serious that this week the Government has published the document itself, or the major part of it. Marshal Petain, dealing with the recent withdrawal, says, "The brutal truth is that we were attacked suddenly by the most powerful and best armed enemy we have ever encountered in the course of our colonial operations." The Rifs and Djebelas, Petain found, had reserves thirty

or forty thousand strong; hardy warriors accustomed to operating in precipitous country, "frugal to the point of being able to do without the convoys which burden our columns," and plentifully supplied with ammunition. Bad weather is an advantage to such fighters, and the task before the Franco-Spanish forces is, by the most sanguine calculations, a long and unexhilarating one. Meantime the French Government has other troubles on its hands. Syria is a very tender spot in French *amour propre*. There General Sarrail's openly pro-Moslem policy has roused the Jebel Druses, a remarkable Syrian tribe, to revolt. These Druses—known to most of us only from Robert Browning's play—are an austere and fanatical sect, who condemn prayer as an attempt to interfere with the Deity, and while recognising Christ as one of his numerous voices, do not in the same way accept Mohammed. Exactly what is happening, and why, is singularly hard to discover, for the French High Commissioner, General Sarrail, has imposed a severe censorship locally, and in his own despatches avoids giving any details of casualties, while, on the other hand, various Bloc National papers, headed by the *Echo de Paris*, have committed themselves to a fierce vendetta against Sarrail, whose original appointment by M. Herriot was received with an outburst of indignation by the Right. Between strategic concealment on the one hand, and political rancour on the other, truth so far remains well lost. It seems probable that the disturbance began with domestic quarrels between different factions of Druses, and that it was only when French troops intervened in the interests of order that the movement assumed an anti-French colour. However that may be, it is anti-French enough now, and General Sarrail has had to acknowledge two unpleasant little reverses. There does not, however, appear to be anything like a national uprising against France in prospect—if, indeed, the word national can properly be used of the collection of tribes that makes up Syria—and either the present High Commissioner or his successor, if the domestic campaigns against him bear fruit, will no doubt gradually restore peace. The seriousness of the Syrian trouble lies in the fact that it comes while Morocco is still causing anxiety, while the franc still hovers round 104, and while M. Painlevé is broadcasting exhortations to invest in the new internal loan. On the whole, the operations against Abdul Krim are making progress. Liaison is being established with some effect between French and Spaniards, and an offensive is on the point of being launched. The Rifi chief meanwhile has declared his peace terms, which appear to include a demand for complete independence. That means, of course, that fighting will continue.

The Mosul Report.—On August 8th the Commission set up by the League of Nations to inquire into the delimitation of the frontier between Turkey and Iraq issued its report—a purely advisory document, on which the League will have to make a decision in September, a decision which both Great Britain and Turkey bound themselves, by the Lausanne Treaty, to accept. In thus agreeing to accept the League decision, Turkey virtually renounced its rights; therefore, the League Commission in its report can and does pass from purely legal arguments to moral ones. On their basis the report finds in the "interests of the population," in economics and geography, and in popular sentiment convincing arguments against any partition; and, therefore, goes as near as its colourless phraseology can allow to recommending that the whole territory south of the Brussels line (*i.e.*, the *status quo* of July, 1923, established by the League as a provisional boundary) should be united with Iraq. This incorporation is, however, subject to two conditions. The first is that the rights of the Kurdish minority are to be safeguarded; the second that the League mandate to Great Britain should remain in force for twenty-five years. If not assured of this, the inhabitants, in the view of the report, would prefer Turkish to Arab sovereignty. The Report does not justify the adverse comments which have been passed on it in various quarters. The umpire's ruling has not yet been given, for it is the League Council that has to determine the actual frontier of Iraq. The function of the commission was merely to provide

ALL BRANCHES OF INTERNATIONAL BANKING BANKERS TRUST COMPANY

HEAD OFFICE, NEW YORK
16 WALL STREET

LONDON PARIS
26 Old Broad Street 3 & 5 Place Vendome

the Council with all the necessary data for its ultimate findings, a fact which largely justifies the incisive character of the report. It is no unreasonable incursion into politics for the commissioners to point out that if permanent stability was being sought it was necessary to distinguish between the prospects of a Mosul under the sovereignty of Turkey, under the sovereignty of an Iraq standing alone, and under the sovereignty of an Iraq benefiting for a long series of years from British tutelage; nor is it of necessity *lèse majesté* to suggest that if it be a choice between Turkey and an unsupported Iraq the political stability of the former State is greater than that of the latter. The difficulties in the way of the League Council are great, and it may be doubted whether in the end the report of the Commission will be found to have advanced matters very much. One complication lies in the fact that the "Iraq mandate," to which perpetual reference is made in most comments on the Commission's report, does not exist and never has existed as an approved document. Its place was taken by the Treaty of 1922, which created the rather anomalous relationship which now maintains between this country and Iraq. The main question for the British Government to decide is whether it is ready to allow that relationship to continue for perhaps another twenty years instead of allowing it to lapse, as the original intention was, in 1928. It does not, of course, follow that the League Council, on which Great Britain will have a voice but no vote when the Mosul question is being discussed, will favour that solution in any case, but Mr Chamberlain must clearly be ready to declare this country's policy in case the Council were disposed to attribute Mosul to Iraq on the understanding that the British connection were continued. Such an arrangement need not of necessity involve any considerable financial commitments, for Iraq, if things go reasonably well, should very soon be quite self-supporting. On the other hand, if once we became involved in military operations in defence of Iraq, they would have to be carried through at almost any cost. It is not clear, moreover, what effect such a prolongation of the British connection would have on the intention that Iraq should by 1928 have become a member of the League of Nations. In the case of original members, the League has not been over-meticulous about the condition of complete independence, as witness the case of Haiti, but whether British patronage would be considered to derogate unduly from the autonomy laid down as a condition in Article 1 of the Covenant is arguable either way. In any case, it may be hoped that this country will be scrupulous to observe, in spirit as well as letter, the pledges successive Governments have given to abide absolutely by the League Council's decision.

The Wool Textile Lock-Out.—After years of uninterrupted peace, assisted by the operations of a Joint Industrial Council that has been regarded as a model, the wool textile industry is now entering the fourth week of a serious dispute. After extended discussions, starting with a demand by the operatives for an increase of wages, which was dropped, and going on to a demand by the employers for a reduction, which was not dropped, the Industrial

body, was under peculiar obligation to assist in so important a matter, and appointed a special committee to consider what recommendations it should make. The report of this committee was presented at the meeting of the Council on the 6th inst. It was divided into two parts, the second of which dealt with familiar subjects, such as education, research, co-operation, credit, taxation, and drainage, which are not controversial. The first part propounded a "national agricultural policy," which has, at least, the merit of novelty. For the past thirty or forty years—i.e., since the political impossibility of Protection in its crude form has been recognised by the more intelligent agriculturists, devices for stimulating food production by some form of subsidy have been put forward at every opportunity. The utmost ingenuity of the interested has been directed to the discovery of the most effective and least objectionable form. The proposals are recorded voluminously in the reports of numerous Commissions, Committees, and Tribunals, and they have been discussed with untiring volubility at innumerable agricultural gatherings. It has been proposed to pay a bounty on all arable land, on additional arable land, on corn acreage, on corn production, on wheat in stack, on wheat sown, on wheat harvested, &c. The difficulty with all such proposals has been to show that if public money were spent value would be received. But all of them assumed that at least the money would be given in respect of land which was producing something. The distinctive novelty of the scheme proposed by the Council of Agriculture is that the subsidy is to be given for land which is, at the time, producing nothing. They suggest that farmers should be paid £2 per acre for all land which is in bare fallow or in fallow crops. Under the old manorial system one-third of the arable land was in fallow each year. The whole tendency of modern farm practice has been to reduce the area of uncropped land. At the present time not more than 4 per cent. of the arable land is left in bare fallow each year. That the State should offer a premium for uncropped land is an unexpected idea. But it is proposed also to pay the subsidy on "fallow crops." The term is not very precise, but it is stated to include "roots on other crops grown for the purpose of cleaning and manuring the land." Presumably potatoes, carrots, and other "market garden" crops would rank for the subsidy. Sugar-beet growers are already subsidised, but they would get an extra bonus of £2 per acre. There have been cases where by high farming farmers have grown wheat continuously for several years on the same land. Under this proposal any farmer foolish enough to do so would receive nothing, while his neighbours would be paid by the State for growing turnips or for leaving their land idle. The Council of Agriculture made a calculation of the cost to the State of giving this subsidy, and they reckon that it would not exceed £5,000,000 per annum. They would increase the public interest in their ingenious, not to say ingenuous, scheme if they would add a calculation of the value which the nation would obtain for this expenditure. It should be added that, while 49 members of the Council voted in favour of this "national agricultural policy," there were 14 votes recorded against it, thus indicating that all the members are not equally wise.

Home Crop Estimates.—The monthly report of the Ministry of Agriculture and Fisheries states that the earlier corn crops ripened quickly as a result of the hot weather, and in many districts in the southern half of England reaping was begun with winter oats in the third week of July. The showery weather in the last ten days delayed cutting, but most of the winter oats and barley was in stock in many southern districts at the end of July, and some wheat had been reaped. The yield of wheat over the whole country is estimated on the appearance of the crops while still uncut at 17.1 cwts per acre, or practically the average of the past ten years. Relatively the best crops are in the south-east. Barley is variable; winter barley is generally satisfactory, and some spring crops are fairly good, but others, especially on light land where sown late, are poor. A light yield of barley is, however, indicated, the average over England and Wales being forecasted at 14 cwts per acre, or more than $\frac{1}{2}$ cwt per

acre under average. The yield in the eastern counties appears likely to be about 1 cwt below average, but the north-eastern counties should harvest average crops. Winter oats will give very fair yields, the crop being well eared, but, as with barley, spring sowings are variable, being frequently weak where sown late. Prospective yields on the whole are, however, forecast as equal to the average, or nearly $13\frac{1}{2}$ cwts per acre. In a few districts beans have suffered appreciably from black fly, but usually they are clean and well podded, and the average yield is estimated at $16\frac{1}{2}$ cwts per acre, or $1\frac{1}{2}$ cwts above average. Peas are variable, and in many cases suffered considerably from the drought. The average yield for the country is estimated as $13\frac{1}{2}$ cwts per acre, or nearly $\frac{1}{2}$ cwt below the ten years' average. As the figures of the approximate area under each of the cereal crops, compiled from the annual agricultural returns collected in June last, are now available, it is possible to estimate, from the basis of the estimated yield given above, the total yield of the crops this year. These estimates are given in the table below, in which the final figures of 1924 are included for purposes of comparison. It is to be borne in mind, however, that the forecasts of this year's production are based on estimates made at the beginning of this month, and are consequently subject to modification:—

	1924.	1925.	Production, 1924.	Forecast, 1925.
	Acres.	Acres.	Cwts.	Cwts.
Wheat	1,545,000	1,499,000	27,260,000	25,715,000
Barley	1,314,000	1,319,000	20,280,000	18,525,000
Oats	2,038,000	1,867,000	29,980,000	25,076,000

Yields of early potatoes have generally been light, the tubers being small as a result of the drought. Main crop potatoes are healthy and look well in most cases, but those planted late suffered from the lack of rain and are not very vigorous. On the whole, only light yields are anticipated, the present appearance of the crop suggesting a yield per acre about 6 per cent. under average over the whole country. The area under this crop is returned at 493,000 acres, or 41,000 acres more than last year.

American Cotton Crop.—Our Manchester correspondent writes:—At the end of last week the Department of Agriculture of the United States Government published a further report on the cotton crop for 1925-26, the condition on August 1st being given as 65.6 per cent., against 70.4 per cent. on July 16th, and 67.4 per cent. on August 1, 1924. The indicated yield at the moment is 13,566,000 bales, exclusive of linters, against 13,588,000 bales in the previous estimate, and 12,351,000 bales, the estimate on the corresponding date last year. These figures were scarcely equal to expectations, but during the last few days it has been realised that if the plants continue to do well, there is a likelihood of the yield this season being distinctly larger than in 1924-25. Some authorities are talking of a production of over 15,000,000 bales, including linters. A great deal, of course, depends upon the weather in the belt during the next month. The Agricultural Bureau of the American Government states that the further decline in condition during the fortnight, owing to drought in portions of Texas and Oklahoma, was partially offset by the lessening boll-weevil menace in the South-East, and the better prospects in Arkansas, Tennessee, and Missouri. Excessive temperatures and hot winds in Texas have caused great damage, and the number of bolls reported safe are only half the amount of a year ago. Since the end of last week prices in Liverpool have tended to ease, and bearish sentiment has been more pronounced in trading circles.

Russia and Lancashire.—In Lancashire trade circles there has been much interest this week in the reports of the Russian Government purchasing large supplies of cotton yarn and cloth. It is rather difficult to estimate the extent of the trade done, writes our Manchester correspondent, but in round figures the orders amount in value to about £500,000, and approximately 16,000,000 yards of

cloth, and 2,000,000 lbs of yarn, have been purchased. Some of the deals have taken place through merchant houses on this side, and certain firms have refused to entertain the business owing to dissatisfaction with the arrangements as to payments. At the time of writing extensive negotiations are taking place between representatives of the Russian Government and Lancashire textile machinists, and it is understood that contracts to the extent of about £5,000,000 are pending.

The New Diamond Syndicate.—Our mining correspondent writes:—Following recent rumours, which could not be verified, and cables from New York, which met with denials on the part of the people referred to, an official *communiqué* has been issued to a section of the Press announcing that—

"An agreement has been concluded by a powerful combine which includes the firms of Barnato Bros., Johannesburg Consolidated Investment Company, the Anglo-American Corporation, A. Dunkelsbuhler and Co., and friends, and the chief South African producers of diamonds—namely, the De Beers, Premier, and Jagersfontein Companies, under which the latter sell their production to the combine for a number of years. As this combine already control the sale of the production of the Consolidated South-West Africa Company, Angola Company, and West African Selection Trust, and has a working arrangement with the producers of diamonds in the Congo district, it means that practically the whole world's output will be dealt with by one syndicate in London."

It will be recollected that for years past the output of the big South African producers has been marketed through the London Diamond Syndicate, a private institution, with which the producing companies themselves and various well-known financiers were connected. This syndicate regulated supply to demand so cleverly that even in the slump of 1921-22 the price of the stones did not fall to any material extent. Stocks were kept on hand; undue increase was prevented by the entire or partial suspension of mining operations. When the former German-owned deposits of South-West Africa came under British control, and were amalgamated under the title of the Consolidated Diamond Mines of South-West Africa, the latter also entered the fold. After a time, however, the sponsors of the last-named undertaking became dissatisfied both with the quota of the sales allotted and the prices given; and as after prolonged negotiations these difficulties proved incapable of adjustment, the company broke away from the syndicate, and its sponsors, the Anglo-American Corporation of South Africa, in conjunction with American partners, established a fresh selling agency. It has all along been evident, however, that both parties felt the undesirability of the split, with its concomitant danger of competition at a time when such might be particularly injurious. Hence, somehow, negotiations came to be renewed, and were crowned with the success above indicated. In usually well-informed quarters an impression exists that the prices of the stones are likely to be advanced. It might perhaps be mentioned that the Angola company referred to is an undertaking registered in Lisbon, which owns very comprehensive rights over the diamondiferous deposits of Angola. The Government of that country received 5 per cent. of the share capital of 9,000,000 escudos (about £2,000,000), and is entitled to a substantial proportion of the profits. By "West African Selection Trust" is intended the Consolidated African Selection Trust, which holds concessions over alluvial diamond deposits in the Akim district of West Africa. Additional machinery is being installed to increase the output, so far small. Prospecting is stated to have indicated the existence of over $2\frac{1}{2}$ million carats. As a result of the arrangement of the new combine, the shares of the leading African producers have been in demand, more especially those of the De Beers and Jagersfontein companies. Compared with the carry-over prices of July 20th, De Beers deferred (at $12\frac{1}{2}$) show an advance of nearly 2, and Jaegers (at $4\frac{1}{2}$) of $1\frac{1}{2}$. After being out of the list for three years, De Beers deferred have received

10s in respect of each of the past three half-years. On this basis they yield about $7\frac{1}{2}$ per cent. The preference shares (40 per cent.) show 8 per cent. There is the anomaly that the preference shares of the Premier company (which is controlled by the De Beers company, and occupies a position of special security, owing to the large Government interest) yield 9 per cent. On the dividends of the past two financial years—27½ per cent.—Jaegers return barely 6½ per cent.

British Trade With China.—The serious aspect of the present disturbances, so far as Great Britain's trade with China is concerned, finds striking expression in certain figures which have reached us from the Chinese Government Bureau of Economic Information, showing the percentage share of each of the more important nations in Chinese trade during 1924. The abridged table stands as follows:—

Flag.	Shipping Tonnage.		Trade.			Revenue.		
	Total Trips.	Tonnage Employed.	Foreign Trade.	Coastal Trade.	Total Foreign and Coastal.	Duties on Cargoes.	Tonnage Dues.	Total Duties.
	%	%	%	%	%	%	%	%
British	23.23	39.39	34.42	42.38	38.71	37.13	26.84	37.12

Great Britain's stake is considerably greater than that of any other Power, more than one-third of the whole of Chinese trade being in her hands. The British, Japanese and Chinese flags covered over 86 per cent. of the foreign and coastal trade last year, while America's share was less than 5 per cent., and France's less than 2½ per cent. Due weight should be given to these facts whenever commercial relations come up for discussion in the future.

Stock Exchange Transfer Work.—A Stock Exchange correspondent writes:—Having regard to public misapprehensions in connection with what may be called the mechanical part of this Stock Exchange work, it may be of service to set out, even at the risk of monotonous reiteration, the method whereby ultimate buyers and original sellers are brought into contact with each other through the medium of transfers of shares. When a client buys shares the bargain is done, as everyone knows, for a fortnightly settlement, the date of which is printed in every daily and many weekly papers. Bargains in War Loan, Conversion, and other such stocks continue to be made for cash, but, apart from these descriptions, practically everything else is settled twice a month on the pay-days appointed officially by the Stock Exchange Committee. On the day previous to pay-day, the name of the buyer of shares is written out on what is called a ticket, which gives the purchaser's names, address, and occupation; with the statement, also, to whom the ticket is passed—that is, the man from whom the shares were bought. The latter may have bought them from somebody else, who, in his turn, purchased them from a third party. In effect, those same shares may have changed hands not once, but a hundred times during the fortnight. The purchase money stated on the transfer is that, however, which is paid by the ultimate buyer. It may differ considerably from the sum received by the ultimate seller whose shares have been turned over many times during the fortnight before they reach the final purchaser. This is the reason why the consideration-money on a transfer frequently perplexes a seller, in that it is the amount paid by the ultimate purchaser of shares, not to the actual seller himself, but to the man from whom the buyer made his purchase. The ticket with the buyer's name, &c., is handed to the seller on the morning before pay-day, and, if the shares have been an active market during the account, that ticket has to travel through, it may be, dozens of hands before it arrives finally at the client who sold in the first place, and who is delivering. The Stock Exchange Clearing House steps in to obviate the necessity, in many cases, for the ticket itself to pass through so many hands. The Clearing House, by an ingenious

system of listing shares, brings into direct contact the final buyer and the original seller. That ticket, with the buyer's name on it, may not get to the final seller until the evening before pay-day or, sometimes, later than that. The seller, however, depends upon this ticket for his particulars for preparing the transfer of shares into the buyer's name, and, if he has not received it early enough for him to make out the transfer on the night before pay-day, the seller may not get the deed until the end of the week. Directly he returns it to his broker, he will receive payment. The theory is that, with the buyer's name in his hands on ticket-night, the broker can make out the transfer, send it to the seller, who, having signed it, can present it on the following day, pay-day itself, and be paid then and there, thus completing the bargain on the account day for which the transaction was done. But if the names are delayed through congestion of work; if there are a number of transfers to be sent in respect of one sale, and these transfers have subsequently to go to various companies' offices for certification; if there should be a difficulty in catching country posts, then delays are bound to occur, and the seller may not get his money until two or three days later than the pay-day. Clients frequently think that, if they sell shares for a certain day, they should receive their money at due date, irrespective of their having signed a transfer or not. A broker, however, cannot receive payment from the buyer of the shares until he, the broker, delivers the signed transfer out of the name of the seller, together with the certificate or its equivalent. A little understanding of this mechanical part of the business may enable the removal of some of those misapprehensions which occur, and which ruffle relations between the broker and any client of his who does not realise the processes through which a bargain has to pass before it can be finally concluded.

Russian Trade in May.—A correspondent writes:—Industrial output in Russia showed a sharp increase during May, and amounted to 223 million roubles (in pre-war prices), as against 213 million roubles in April and an average monthly output in 1923-4 of 129.4 million roubles. The largest increase in production is shown by the metal industry, pig-iron increasing by 17 per cent. and steel by 12.5 per cent. The oil output has increased by 6 per cent. The following table gives monthly outputs (000's omitted):—

	Monthly Average 1915.	1925.			Increase in May as compared with May, 1924.
		Jan.	April.	May.	
Coal	2,337	1,197	990	1,049	0.9
Oil	758	487	589	608	29.0
Pig-iron	346	87	100	126	122.0
Steel	..	140	139	167	86.0
Cotton yarn	47,880	33,140	33,712	35,616	81.0
Cotton piece goods	..	248,462	283,000	288,750	69.0
Wool yarn	7,200	5,256	4,995	5,186	43.0
Flax yarn	..	8,604	9,004	9,408	27.0

The transactions in agricultural and industrial products registered on the goods exchange by private people in May show an increase of 19 per cent., by co-operative societies of 1.8 per cent., and by State trading organisations of 2.4 per cent. The largest demand during the month under review was for cotton piece goods and agricultural implements. Imports amounted in May to 87.8 million roubles, as against 62.8 million roubles in April, and exports to 38.5 million roubles, as compared with 29.7 million roubles for the preceding month; the imports of rye and of cotton show an expansion of 5 million roubles and 17 million roubles respectively; some expansion is shown also by paper and by cotton piece goods. An increase in exports was shown during the month, and amounted to 5.5 million roubles in fur, 3.4 million roubles in oil, 0.7 million roubles in timber, and 1.8 million roubles in bristles. Railway traffic expanded during the month, the average car loading per day in May amounting to 16,245 railway trucks, as against 16,039 in April. The transport of oils, minerals, metals and timber showed an increase, but there was a decrease in grain and coal.

UNITED STATES.—MARKET TENDENCIES—SHARE AND STOCK YIELDS—COMMODITY PRICES—INDUSTRIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 5.

TEMPORARILY, at least, the stock market has been reassured on the immediate outlook, and bearish sentiment is much less pronounced. Buoyancy has returned to most sections of the stock list, although bonds continue gradually to droop. The manner in which a large number of leading stocks have regained their losses sustained during the selling of last week, and even progressed to fresh high levels, suggests the purely professional character of the selling. It is doubtful if very much long stock was "shaken out" of the market. If, as some say, stocks are passing from strong hands into weak, under cover of strength in specialties, the process is being applied to but few issues. As a matter of fact, the main body of stocks has made no great progress in recent weeks, and the selling last week is generally regarded as having brought such technical correction as was needed. Virtually eight days of uninterrupted advance in leading issues, circulation of reports that brokers' loans were again at the high levels of the year, and fear of stiffer money rates account for the halt in the advance, which now has been resumed.

After all, stocks do not appear to be too dear at current levels, considering money conditions and the volume of business which is being done and which is in prospect. Considered on a yield basis, good dividend-paying shares do not seem to be inflated. Call money is fluctuating between 3½ per cent. and 4½ per cent. Time funds are available at 4½ per cent. to 4½ per cent., depending on maturities, and the bulk of commercial paper is moving at 4 per cent. Meanwhile, representative sound stocks are selling to yield close to 6 per cent. The average price of twenty representative industrial stocks is now at the highest level which it has ever attained. This list of twenty stocks contains two—American Sugar common and U.S. Rubber common—which pay no dividends. Of the remaining eighteen issues, five sell at prices which have little relation to current dividend rates. These are American Can, General Electric, Mack Trucks, Sears-Roebuck, and Woolworth. Expectation of early changes in capitalisation and higher cash dividends as well as stock dividends figure largely in the prices paid for these shares. Other shares on the list from which the average price is compiled may be taken as fairly representative of the market as a whole. Following is a list of these shares, with the exceptions above noted:—

Company.	Yesterday's Average Price.	Annual Dividend.	Annual Yield.
American Car and Foundry	101	6	5.9
American Locomotive	113	8	7.2
American Smelting	104	6	5.8
American Telephone and Telegraph	140	9	6.4
American Tobacco	98	7	7.1
General Motors	89	6	6.7
International Harvester	118	5	4.2
Kennecott Copper	54	3	5.6
Texas Company	50	3	6.0
United States Realty	136	8	6.0
United States Steel	119	7	6.0
Westinghouse Manufacturing	73	4	5.5
Western Union	131	7	5.4

Average yield, 13 stocks 5.98

Although the railroad "average" prices have lagged somewhat behind those of the industrial shares, representative railroad shares are selling on a yield basis actually lower than that of the industrials. A list of railroad shares used in compiling daily average prices contains four non-dividend payers—Erie, New Haven, St Louis-South-Western, and St Paul. The remaining six-

teen, with their yields at current prices and dividend rates, follow:—

Company.	Yesterday's Average Price.	Annual Dividend.	Annual Yield.
Atchafalpa, Topeka, and Santa Fé	121	5	5.8
Baltimore and Ohio	76	7	6.6
Canadian Pacific	142	10	7.0
Chesapeake and Ohio	95	4	4.2
Delaware and Hudson	148	9	6.0
Delaware, Lackawanna, and Western	137	6	4.3
Illinois Central	116	7	6.0
Louisville and Nashville	115	6	5.2
New York Central	117	7	6.0
Norfolk and Western	132	8	6.1
Northern Pacific	67	5	7.5
Pennsylvania	46	3	6.5
Philadelphia and Reading	85	4	4.7
Southern Pacific	99	6	6.1
Southern Railway	100	5	5.0
Union Pacific	141	10	7.1

Average yield, 16 stocks 5.88

Giving full consideration to the risks involved, a 6 per cent. yield seems to indicate a fair price for shares, and that is just about where good stocks are selling. Virtually all the companies included in these lists are earning well above their dividend requirements. Splendid earnings combined with cheap money would seem to justify higher prices than used to obtain.

Of course, the much-talked-of autumn reaction may materialise. Whether it does probably will depend to a large extent on the money market. Business is becoming more active, and already money rates are a little firmer. If business continues to improve, and if commodity prices continue to rise, it may be that commercial demands for credit might cause sufficient withdrawal of funds available for the stock market as to bring about a pronounced recession. At present the banks have large sums out on call, while their indebtedness to the Federal Reserve institutions is not large. It is altogether probable that should any marked increase in commercial credit demand occur, the call money market would be the first to feel the pinch. Borrowing at the Reserve banks would come later. Changes have taken place in the past year and a-half which suggest less reliance on the Federal Reserve for help in crop moving and expanding business. Wheat is moving to market but slowly, and it is expected that less will go to seaboard for export than usual. Rural banks are now in a much more liquid condition, and it is highly probable that they will be able to get along this year with very little assistance. Moreover, most industrial corporations have so strengthened their working capital position that they are much less dependent on the banks than formerly was the case. Many of them, in fact, have for some time employed large amounts of their liquid assets in the call money market and in marketable securities.

A rise in commodity prices would, of course, help to tighten money. Some business men are beginning to appreciate the disadvantages of extreme hand-to-mouth buying. Cases in point are the rubber and leather industries. A reversion to forward buying would naturally tend to harden commodity prices. Meanwhile, commodity prices already have become steadier, and seem poised for an upward movement. Dun's and Bradstreet's indices of wholesale commodity prices appeared to-day, and both show a moderate advance during July. Dun's index for August 1st stands at 163.9 per cent. of the 1913 level, having gained 1.1 per cent. during the past month. Prices for the breadstuffs, clothing, and miscellaneous groups decreased, but these declines were outweighed by gains elsewhere. According to this index, prices are now 5.4 per cent. above a year ago, and are at the highest level since March 1st. Bradstreet's compilation shows a gain of 2.8 per cent. for the month, standing at 154.6 per cent. above pre-war, and of 12.8 per cent. over a year ago. Seven of the 13 groups advanced, four were steady, and two declined. As was the case with Dun's, breadstuffs accounted for the principal loss. Most judges, however, expect that any further rise will be but moderate, as industrial efficiency still is high and productive capacity is great.

Gradual improvement continues in the steel industry, and the principal mill operators look for further recovery

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised £23,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,458,221

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STUART, Chief Manager.

in the autumn, when railroad buying is likely to develop. Prices are showing a firmer tendency, especially in the scrap market, and a good demand for pig-iron is reported. It is understood that the Steel Corporation had a further decrease in unfilled orders during July, but the loss probably was not more than 150,000 tons. Harvesting of wheat is progressing in the north-western States, and the corn crop is making good progress. Continuance of the drought in Texas has hurt cotton, but favourable conditions elsewhere lead the majority of the trade to look for a larger crop than was indicated by the last Government estimate of condition.

GERMANY.—POLITICS—TARIFF—CROPS—CURRENCY AND CREDIT—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, August 11.

THE Reichstag session, which has almost ended, was the first real test of the Luther Cabinet, and an uncommonly severe test. All of the four chief official measures—debts valorisation, taxation reform, the subventions agreement with States and municipalities, and the Tariff—were fiercely contested in part not only in the Reichstag, but also in the Reichsrat and Reichswirtschaftsrat. They were to some extent opposed and mutilated by the Cabinet's own supporters. Although the German Legislature has always had a reputation for negative obstructiveness, these struggles were something new. In the inflation period, economical legislation, being always deprived of its intended effects by the depreciation of the currency, was not taken very seriously; and during the stabilisation period, when the Stresemann and Marx administrations held office, measures were issued in the easy shape of Cabinet decrees under "Empowering Laws." It was the defects of these decrees which forced on Dr Luther most of the recent contentious legislation. The Cabinet has governed in no very democratic way, but it has shown considerable parliamentary skill. Where other Cabinets would probably have resigned as the result of being repeatedly outvoted, it has accepted radical amendments. The Tariff Bill is the only measure that got through without important changes. The accepted shape of direct taxes, Excise duties, and debts valorisation differs very much from the Cabinet drafts, and on the subventions question the States exacted the very considerable concession of a guarantee that their reduced shares in the tax yield shall not fall below a stated sum. The session, however, has been one of progress. The four questions are disposed of for the present. The demand of the creditor classes for a reopening in principle of the valorisation issue has no chance of present acceptance, but further legislation in order to clear up obscurities in the law valorising private debts is probable.

The Minor Tariff has been forced through the Reichstag on second reading by the summary means of rejecting opposition amendments *en bloc*. The Socialists protested emphatically. Opposition to the Tariff in the country seems to be stronger than in the Reichstag, but this outside opposition has been skilfully veiled or suppressed by the dominant heavy industry. Certain finishing industries protest not only against the increasing of production cost by the duties on raw materials and food, but also declare that they do not want the increased protection given for their own finished goods. At home, they affirm, they feel secure against foreign competition,

but the higher duties will result in retaliatory foreign measures against their exports. The supplementary duties on fine steel (784 and 785A of the new Tariff) are condemned by the Solingen Chamber of Commerce as liable to injure the cutlery industry. Manufacturers of clocks and firearms and of certain kinds of musical instruments declare that they feel no interest in the increased duties; "they need no Protection." They express the view that the officially declared aim of using the maximum duties as an instrument for exacting concessions will not be attained, because foreigners realise that they cannot under any conditions compete in these branches in Germany, and they will, therefore, have no motive to bargain for reductions. The textile duty increases continue to be sharply criticised by the clothing industry. The Anglo-German Commercial Treaty has been ratified on first reading. A German-National Reichstag member, who is secretary of the Iron and Steel Association, proclaimed that the latest British Tariff measures do not accord with the Treaty condition that neither party should impose duties which specially threaten the other's export interests.

The crop conditions report records a certain damage from heat and drought, which was partly made good by later rains. Harvesting of grain began earlier than usual. The July heat did serious damage to meadows and clover fields, which were entirely burnt up in some districts. In general the crop of fodder plants will be satisfactory. The official index for August 1st for all Germany (basis 2 = good, 3 = medium, 4 = meagre) is:—winter wheat, 2.6, against 2.4; spring wheat, 3.1 against 3.1; winter rye, 2.5 against 2.5; spring rye, 3.0 against 2.9; winter barley, 2.5 against 2.5; spring barley, 2.8, against 2.9; oats, 3.1 against 3.2; potatoes, 2.8 against 2.7; sugar-beet, 2.9 against 2.8. The change during the month is small, and crops will be distinctly good.

The money market continues tight; the maximum rate for day money remaining at 1½ per cent. The Reichsbank return for July 31st shows heavy pressure. Discounts increased by 30½ millions to 1,789 millions; advances by 38½ millions to 60 millions; and circulation by 329½ millions to 2,530 millions. The circulation of all currencies on July 31st was 4,908 millions, against 4,797 millions on June 30th. The Reichsbank item "Other Assets" declined by 222 millions to 502 millions. On December 31, 1924, "Other Assets" totalled 1,654½ millions. Under this heading appears the Bank's holding of such foreign exchange as is not booked as valid reserve for circulation. The holding has heavily declined, but the exact amount of the decline is not given. The total of credits outstanding to business from the Reichsbank, the private note-banks, and the Rentenbank on June 30th was 2,720 million marks, against 2,509 million marks on April 30th.
