

The Economist,

WEEKLY COMMERCIAL TIMES

Bankers' Gazette and Railway Monitor :

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CIII.,

BEING FROM JULY TO DECEMBER, 1926, INCLUSIVE.

LONDON:
PUBLISHED AT THE ECONOMIST OFFICE,
3 ARUNDEL STREET, STRAND, LONDON, W.C.

MCMXXVI.

THE MONEY MARKET.

THE market borrowed heavily from the Bank of England in the last three days of June in connection with the usual pressure at the turn of the half-year, and short loans in the open market commanded 5½ per cent. on Monday and Tuesday and up to 6 per cent. on Wednesday. On Thursday, the first of July, there was a heavy turnover of funds, and although large amounts fell due for repayment to the Bank, short loans were in ample supply down to 3 per

cent. There has been little business in the discount market, and rates have eased, the quotation for three months bills yesterday being $5\frac{1}{8}$ – $\frac{3}{8}$ per cent., the lower figure being the more usual rate. A reduction in Bank rate next week is now being taken into account as a possibility. Yesterday's Treasury bills were allotted at an average of about $4\frac{1}{8}$ per cent.

	July 2, 1926.	June 25, 1926.	June 18, 1926.	June 11, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	$\frac{1}{4}$ (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount Call	3	3	3	3	2 (Dec. 3, '25)
Houses Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{8}$ – $\frac{3}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$ – $\frac{3}{8}$	..

Thursday's Bank return showed the effects of borrowing, both by the market and by the Government, in connection with the end of the half-year. Government Securities were increased by £11,450,000, and Other Securities by £35,829,500, and as Public Deposits were reduced by £8,167,600 there was a large expansion in Other Deposits, which were £54,330,800 higher. The stock of coin and bullion increased by £264,500, but as the note circulation increased by £1,316,800 the Reserve declined by £1,052,300, and with the large increase in Liabilities the Proportion fell by 7.6 to 17.1 per cent. Currency notes were increased by £147,100 to £294,036,200, which includes £1,301,100 for notes called in but not yet cancelled. The fiduciary issue is £236,485,100, or £11,417,400 below the maximum for 1924.

NEW YORK MARKETS.

Our New York correspondent cables:—Strength in railroad and industrial shares, with some increase in activity, has characterised the week. The feature has been a rise in Steel Corporation common shares to the highest price in history and a new high level in General Motors, both on the expectation of a stock dividend and, perhaps, extra cash payments. A new plan for the so-called Nickel Plate railroad consolidation is being voted on by constituent roads. The terms of share exchange are more liberal. Business as the half-year ends is generally better than was expected a few months ago, and moderate optimism again predominates. Steel production has set a new high record in the first six months. Money is easy, and lower rates are expected during the month. The discounts of the Reserve System are higher on account of July 1st dividend and interest payments and other financial transactions. The ratio is 75.3 against 76 per cent. The financial community is watching France, and while scouting the idea of a loan here at this time, has great hope that good will come of the Expert Committee's recommendations.

THE STOCK MARKETS.

Gilt-edged stocks have moved up this week on anticipations of an early reduction in Bank rate, and the foreign market as a whole is better, with the exception of French bonds, which have fallen away on the further collapse in the franc. Home rails have fluctuated a little, but Argentine railway stocks have been a good market, and the foreign railway market generally is attracting a fair amount of business. The rubber and oil share markets are listless, but tea shares are a little better. Textiles are out of favour, apart from Courtaulds, which rose to nearly 7. Cable stocks are better, and the tobacco group continues active. Buying from the Cape keeps the Kafir market active, and De Beers have again risen sharply, while activity in the platinum group has revived, and has to some extent distracted attention from other mining markets. Of the week's industrial capital issues, those of Marks and Spencer, Andersons' Rubber Company, O-Cedar, Limited, and Duophone and Unbreakable Record Company were oversubscribed.

THE COMMODITY MARKETS.

There has been no marked development in the commodity markets this week. Business remains limited, whilst stocks of raw material and fuel are beginning to

show signs of depletion. Foreign coal cargoes continue to arrive, and an increasing quantity of outcrop coal is being used. Pig-iron prices show a further increase, but foreign iron is being imported on a cheaper scale. In the cotton trade raw material rates have declined, and buyers are cautious in placing their orders. However, a few special sales have taken place for India and the Near East. The undertone of the wool market remains confident. Wheat prices show a slight advance, though trade continues quiet. A steady tone prevails in the sugar, tea, and coffee markets, but rubber is dull. Among non-ferrous metals tin prices have been irregular, whilst copper has received fair support. The lead market has been generally firmer.

FOREIGN EXCHANGES.

On the foreign exchange market business has been more active, especially towards the end of the week. Sterling, which has been very firm, reached at one time on the 30th \$4.86 $\frac{1}{2}$, a point well over the par of exchange. Since then it has weakened again somewhat to \$4.86 17-32, but there are no signs as yet of any downward swing. Forward rates at $\frac{1}{8}$ – $\frac{3}{8}$ cent below spot for one month ahead show no change on last week's quotation. As usual lately Paris has provided the main centre of interest. From a closing rate of 168 $\frac{1}{2}$ on the 25th, quotations fell as low as 166 at one time on Monday, on optimistic views as to M. Caillaux's plans, but after that the fear of difficulties with the Chamber has again brought a rapid rise up to as high as 182 at one time yesterday morning. From this again there was a slight reaction to 181 $\frac{1}{2}$ a little later in the day. Forward rates, however, show a marked widening, one month being $3\frac{1}{8}$ f above, as compared with last week's $1\frac{1}{8}$ f, and three months $8\frac{1}{8}$ f, as compared with $4\frac{1}{8}$ f. Until the Finance Minister's statement has been announced and considered by the Chamber it is idle to attempt to foresee immediate movements. Brussels also has moved upwards again, from 169 $\frac{1}{4}$ to 179 $\frac{1}{2}$, with no immediate prospects of stability, while the lira, in spite of all attempts at economy and control, has followed the upward jump of the franc, and risen again from 133 $\frac{1}{4}$ to 137 $\frac{3}{4}$, the highest figure yet quoted. On news of political trouble the peseta has been less steady, and, after a slight improvement, has shown a tendency to rise again, being quoted yesterday morning at 30.22, as compared with last week's 30.21. Amsterdam at 12.11 $\frac{3}{4}$ shows no change, Switzerland at 25.14 $\frac{1}{2}$, as compared with 25.12 $\frac{1}{2}$ has moved slightly in our favour, while Berlin at 20.43 $\frac{1}{2}$ is almost the same. In Scandinavia, Stockholm has moved from 18.12 $\frac{1}{2}$ to 18.13 $\frac{1}{2}$, Copenhagen from 18.35 $\frac{1}{2}$ to 18.36, while Oslo has improved a little from 22.19 to 22.16. In Eastern Europe the only movement of note is the further sharp improvement in the Bucharest rate, on excellent harvest prospects, and the probabilities of reforms by the new Government, from 1.095 to 1.020. In the East the rupee is much the same at 5 59-64d, while the yen has appreciated from 18 11 $\frac{1}{2}$ d to 18 11 5-32d. In the silver market business has been dull, with very little movement pending news of the monsoon. Hongkong has fallen away slightly from 2s 3 $\frac{3}{4}$ d to 2s 3 $\frac{1}{4}$ d. Shanghai from 3s to 2s 11 $\frac{1}{2}$ d. In South America Rio is very slightly lower at 7 25-32d, as compared with 7 $\frac{1}{2}$ d. Buenos Aires, however, has moved up sharply from 45 3-32d to 45 $\frac{1}{2}$ d, and Monte Video from 49 $\frac{1}{4}$ d to 49 $\frac{1}{2}$ d. Valparaiso has depreciated from 39.70 to 39.90 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the eleven days ended June 30th:—

(000's omitted.)			
EXPENDITURE.		RECEIPTS.	
Supply Services	12,310	From Revenue ..	14,077
Interest, &c., on Debt	4,724	Increase in Debt ..	4,617
Sinking Fund	692	Decrease in Balances ..	335
Sundries	1,503		
	19,029		19,029

Total revenue from June 19th to June 30th amounted to £14,076,600. Customs produced £1,786,000 and Excise £1,077,000. Estate, &c., duties yielded £1,390,000. Property and Income-tax amounted to £2,982,000 and Super-tax £960,000. The eleven days' operations in-

creased the National Debt by £4,617,000, and caused the following changes:—

(000's omitted.)			
National Savings Certificates ..	+ £ 250	Treasury Bills	£ 1,913

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Imperial Bank of Persia, Co-operative Insurance Society, United British Insurance, Hudson's Bay Company, African and European Investment, Anglo-Argentine Tramways, Calcutta Tramways, Hongkong (Selangor) Rubber, Pindenoya Rubber and Tea Estates, John Brown and Co., Edward Lloyd, Van den Berghs, Mond Nickel, Brakpan Mines, and Spring Mines. At the meeting of the Hudson's Bay Company, the Governor was optimistic as to the future of Canada and of the company.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE RESCUE OF THE FRANC.

DURING the next few days France will pass through a critical phase in her financial history. The report of the Committee of Experts is to be published in Paris to-day, and early next week the Government must declare its policy. Whether the Chamber will continue to play the political game to the bitter end and frustrate this last attempt to grasp the nettle firmly, or whether it will rise to an exceptionally favourable opportunity of dealing with the national crisis is still doubtful. Ominous voices are already heard condemning the experts' report in advance. There is, however, on the other side gratifying evidence that M. Caillaux is setting about his task with determination and vigour.

A most significant move is the change in the personnel of the Bank of France. The late governor was justified, and had the support of the Council of Regents in refusing to use the Bank's resources to support the exchange so long as the Budget was in disequilibrium, and there was no assurance that other necessary steps would be taken to put the currency on a permanently stable basis. But, unfortunately, the late management, which had held on to the idea of restoring the franc to its pre-war parity long after the possibility had vanished into thin air, was not prepared to take the lead in any alternative plan of stabilisation, and on the only policy which it firmly believed in—namely, the limitation of the note issue within the prescribed maximum—it had to give way time after time under pressure of circumstances. The appointment as governor of M. Moreau—a former *chef de Cabinet* of M. Caillaux in pre-war days, and Governor of the Bank of Algeria—and of Prof. Rist as deputy-governor presumably means a change of outlook. M. Caillaux has promptly repudiated the idea that these appointments were intended in any way to fetter the independence of the Bank. On the contrary, they point to a more vigorous banking

policy. M. Moreau's views are not well known in England, but Prof. Rist has had many opportunities of expounding his views, not only on banking, but on the economic situation generally. He is committed to the view that France must return to the gold bullion standard, as practised to-day in England; that the gold in the Bank is sufficient for the purpose, and that the Bank of France, like the Bank of England, must defend its reserve by the free use of its discount rate. It is to be presumed that he has been asked to go to the Bank to carry out this policy. It may be taken for granted also that this view has been substantially accepted by the Committee of Experts—otherwise the appointment could not have been made. The Committee, however, had not only to deal with banking policy, but had to take a general survey of the financial situation. It was not specifically instructed to deal with the Budget, but it obviously could not prescribe a remedy for the restoration of France's monetary situation unless it was satisfied that the Budget was in equilibrium. The points that arise in this connection are familiar. The Budget balanced in the spring, but it has been put out of gear by the expenses of the Morocco campaign, and by the increasing cost of administration due to the depreciating franc, with its inevitable consequences—a higher cost of living and higher prices. It is not in the least likely that a committee largely composed of bankers would recommend that these increases should be offset by proposals for reducing the interest on the debt, compulsory funding of short-term loans, or other schemes calculated to diminish rather than increase confidence. The Committee, therefore, had to look for some further sources of revenue—in which connection it was almost bound to follow the lead of recent Finance Ministers, who in the circumstances in which France finds herself have favoured indirect as against direct taxation on the grounds that they are immediately remunerative, and that the yield rises with rising prices. The Committee's report should finally set at rest all doubt on the question of Budget equilibrium.

Apart from the Budget, the Committee had two problems to face—the difficulties of the Treasury in meeting the enormous mass of maturing short-term and floating debt, and the problem of stabilising the franc. Fundamentally, they are one and the same problem, for if the French investor is satisfied that his francs will retain their value he will renew them on maturity, and create—as he has always done in the past—a firm market for French Government securities. But public opinion has been so shaken that French financial opinion considers it necessary that special steps should be taken to guard against a large-scale demand for reimbursement. It has, therefore, been proposed to create a special organisation for dealing with the short-term debt, to which will be paid a fixed sum from the Budget sufficient to cover interest and to form a small sinking fund; and that as the war and the first phase of reconstruction is past, there should be no further increase in the amount of National Defence bonds. A Government whose outgoings are continuous all the year round must have some means of dealing with an irregular income, and if the foregoing plan is put into effect provision must be made for a small floating debt. But in comparison with the huge short-term debt of France, which amounts to nearly 45 per cent. of the total internal debt, this is a minor matter which can be readily arranged. It is sound policy to distinguish the latter from what is in effect merely the Government's working capital.

There remains the question of stabilisation. The experts are in favour of a return at a very early date to the gold bullion standard—i.e., free convertibility of francs into gold bullion for international trade purposes, but not into gold coin for currency. Unfortunately, this cannot be done at once. What still remains to be done with the Budget must first be accomplished; but an even more essential preliminary is the ratification of debt agreements with America and England, while it is also considered essential that there should be a stabilisation loan. Actually it may prove, as has so often been proved elsewhere in the last few years, that this last is not really required. But if England found it prudent to open large credits in America a year ago, France, who has a much greater feeling of distrust and hesitation to overcome,

may well require strong and tangible proofs of foreign support in her supreme financial effort. The international debt problem is more difficult. There is strong opposition in France to accepting the Berenger agreement without a "safeguarding" clause, under which payments would be reconsidered or suspended in the event of conditions arising that would make it impossible, or economically harmful, for France to pay—whether arising from internal difficulties or external events, such as the default of Germany. Such a clause is essentially reasonable in view of the recognition by America that these debts must be based on "ability to pay," for no one in this world can possibly foretell what the "ability" of the European nations will be 50 or 60 years hence. The burden of the debts would, for example, become clearly intolerable if there were a substantial increase in the value of gold. This question has acquired fresh significance from the belief in France that Mr Mellon is in favour of the debts to the U.S. Government being converted into debts to private individuals in America by the sale of bonds. Such a plan would make it difficult to reconsider the debts in the future in the light of "capacity to pay," for any alteration of the terms would involve a default on the bonds of the nation concerned. In view of the elaborate provision in the Dawes plan for preventing the annuities being pushed to the point of interfering with the recovery of Germany it would seem unreasonable to close the door to similar adjustments in the case of the European debts. The European agreements, however, all contain options—providing, for example, for the postponement of payments in certain cases, and the rate of interest is so variable that the plan of selling the obligations to the public is unlikely to be realised. On the other hand, opinion in America seems adamant against the inclusion of any "contingent" clause, and France must therefore face the alternatives of ratifying or doing without American credit. Until these political issues are settled a definite announcement of the return to gold would clearly be premature, and in the meantime the only possible course would be to use the Bank's gold or foreign credit to control the exchange. But unless it is certain that the final scheme will be put through no foreign credits are likely to be forthcoming, and the transaction, like so many of those that have preceded it, would be little better than a waste of money. The conditions for stability must be created before any control of the exchange can be usefully attempted.

In the circumstances the experts cannot possibly propose a specific rate at which the franc should be tied to gold. It should probably be at a better rate than the rather panic figures of the last few weeks. On the other hand, it is hardly practicable to restore the franc to a level equivalent to its internal purchasing power which would be at about 125 to the £. Between these limits some compromise must be found. The final selection is of great importance, for on it depends the extent to which internal prices must rise, and the degree to which holders of fixed-interest securities are in fact to be deprived of purchasing power. Whatever compromise is decided upon, however, there will unquestionably be serious economic consequences involving reduced exports, and a restricted home market. Like other countries, France must expect to pass through a stabilisation crisis with a certain number of failures and unemployment. But France is not so vulnerable to these influences as more highly industrialised countries, and she may therefore hope that her difficulties will be less acute than those experienced elsewhere.

Neither the Committee of Experts nor any other body can put forward for France a solution of her problems which will hurt nobody. Many of the recommendations are bound to be unpalatable in various quarters; there is already a vigorous political campaign not only against ratification of debt agreements, but against any further foreign credits, arising in part from the very intelligible disinclination of Frenchmen to run deeper into foreign debt. Any proposal for balancing the budget will, it is to be feared, also be met with dogged opposition. Nevertheless, the position of the franc, which fell on Friday to over 182, is such as to inspire a determined effort to put an end to the present deplorable situation. There is hope, if public opinion can contrive to concentrate in support of

the experts' report and to press the Government to carry it out. We believe the report to have been inspired by disinterested regard to the necessities of the situation. Our Coal Commission is perhaps a warning not to put one's trust in commissions; but in the sphere of European finance expert committees have had a singular success, and we sincerely trust the present French Committee will maintain this excellent tradition.

THE CONSTITUTIONAL CRISIS IN CANADA.

LAST week we noted an interesting debate in the Canadian House of Commons on the constitutional aspect of Canadian participation in Imperial foreign policy. Meanwhile, an internal political crisis has arisen in Canada which has necessitated action by the Governor-General, Lord Byng of Vimy. The Governor-General, of course, represents the Crown and not the Government of the United Kingdom, and whether or not his action has been constitutionally correct in a difficult Parliamentary situation involving a nice point of constitutional procedure, the Government of the United Kingdom is not involved in the responsibility. There is no ground whatever for supposing that Lord Byng's action reflects their views or ideas, or, again, that, acting on his own initiative, he has sought to favour one Canadian party at the expense of another. Nevertheless, it is slightly unfortunate, at a time of such delicacy in the relations between Canada and the United Kingdom, that the Governor-General, who by tradition is a distinguished subject of the Crown hailing not from Canada itself, but from Great Britain, should have taken a different constitutional line from that which the King, whose representative in Canada he is, would take nowadays in a similar Parliamentary situation in Great Britain. This may arouse in Canada a resentment which may not be confined to the party which has immediately suffered. In external questions, and not least, perhaps, in those which concern inter-Imperial relations, Canadians are apt to think and feel nationally and not on party lines. Witness the unanimity of the support which Mr Mackenzie King received in the recent foreign policy debate, notwithstanding the party storm which was brewing. And it is significant that the only hint of dissent in that case on the Conservative side was a gesture from the Conservative leader, Mr Meighen, the new Prime Minister, which went even further than Mr King's motion in asserting the independence of Canada from United Kingdom control, real or imaginary.

The present internal crisis in Canada—in which Lord Byng, and through him possibly this country, has been involved—has arisen because in Canada, as in so many Parliamentary countries, the traditional clear-cut Parliamentary system has latterly broken down. A balance between the Liberal and Conservative parties is now held by the Progressives, representing the farming interests, particularly those of the Western Provinces. The two main parties are so near one another in their present Parliamentary strength, and the Progressive balance is so uncertain in its operation, that it was only with the utmost difficulty that, at the beginning of this year, Mr King was able to form a Government after the last general election. This initially weak Liberal Administration has had to stand the strain of a strenuous Conservative attack upon what appear to be serious shortcomings in the Canadian Customs administration; and under this strain the Ministry's indispensable support from the Progressive group has steadily melted away. Last week three private members' motions, of which the Government was in favour, were defeated in the House of Commons; and though this was not technically a defeat for the Government itself, Mr King foresaw that a defeat of a formal kind was imminent. As Mr MacDonald in this country asked, and obtained, a dissolution from the King in 1924 in order to forestall defeat in Parliament on the Campbell case, so, last Monday, Mr Mackenzie King went to King George's representative at Ottawa in the hope of forestalling defeat on the Canadian Customs Inquiry. In this case, however, contrary to the latest precedent in the United Kingdom, a dissolution was

refused, and Lord Byng sent for Mr Meighen, whose own following in the House was only slightly stronger numerically than Mr King's, and who would be equally dependent upon the doubtful factor of Progressive support. Mr Meighen was sworn in on Tuesday, and on the same day the new Ministry was defeated by one vote (115 to 114) on the question whether the Speaker was right in ruling that a Liberal amendment to a Conservative vote of censure on a certain Liberal ex-Minister was in order. On Wednesday, however, the Liberal amendment itself was defeated by 10 votes (119 to 109), nine Progressives supporting the new Government. But early yesterday a Liberal motion of no confidence in the new Government was carried by one vote.

Thus, Mr Meighen's position seems hardly more secure than that of his predecessor's, and a dissolution may quickly prove to be necessary, after all. Doubtless Lord Byng argues that there is no likelihood of a general election returning a House of a different complexion from the present; and that, with this prospect, it is better to spare the country the expense and turmoil of a great general election as long as possible. Nevertheless, a meticulous adherence to contemporary constitutional practice in the United Kingdom would, perhaps, have been Lord Byng's safest course.

THE MONETARY HALF-YEAR.

BUT for the general strike in May and the long-drawn-out coal dispute the monetary history of the past half-year might have been more eventful. As things are, the story of the money market in the first six months of 1926 can be briefly told. Bank rate has remained unchanged at 5 per cent., although the New York Federal Reserve Bank's rate of rediscount has been twice altered—from 3½ to 4 per cent. in the first week in January, and from 4 per cent. to 3½ per cent. in the third week in April. The latter movement might have been followed by a reduction in Bank rate here, for the gold position was good and the margin between Bank rate and market rate of discount had broadened. The crisis in the coal dispute, however, was approaching, and any change was naturally deferred until the industrial situation became clearer. The continuation of the coal stoppage since the general strike was called off has no doubt prompted the Bank Court to delay making a change which on purely financial grounds would appear to have been warranted. The Bank of England has been steadily adding to its gold stock, the net influx during the six months being well over £5 millions; the net efflux since the restoration of the gold standard has thus been reduced from £11½ millions at the beginning of January to a little over £6 millions. For some little time past the Stock Exchange has been discussing the possibility of a reduction in Bank rate, and arguing that, apart from the fact that such action might appear inappropriate with the coal mines still closed, there is no other reason for maintaining the official minimum at 5 per cent. Gilt-edged stocks, in fact, have risen during the past week or two on anticipations of an early reduction in Bank rate. But while a change in a downward direction appears to be justified by the technical position—namely, the disparity between London and New York rates, the wide margin between Bank rate and the market rate of discount, and the accretion to the Bank's gold reserves—it has to be remembered that the period during which the inward flow of gold can be expected to continue is coming to an end, and the usual demand for dollars for financing autumnal imports is likely soon to reverse the stream. Before many weeks have elapsed, therefore, it may appear inadvisable to make the change to a lower Bank rate, which, under the most favourable circumstances, could hardly be expected to hold for any length of time. Moreover, the usual argument that a reduction is desirable in the interests of trade and industry does not hold good while the coal deadlock continues. Industry, indeed, does not at the moment appear to be hampered by a scarcity of working capital, but is rather at a loss to find an outlet for idle funds, to judge by the flow of money into investment channels.

To turn to the history of the half-year, January opened under fairly stringent conditions, and the unexpected

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
67 Milk Street.

BUENOS AYRES:
99 Florida.

HAVANA:
Pedro Gomez Mena Bldg.

Collections effected and documentary credits established in all parts of the United States for banking correspondents abroad.

Special Representative:
24, OLD BROAD STREET, LONDON...

announcement of the increase in the New York rate to 4 per cent. produced some apprehensions of an increase in Bank rate, but these soon subsided. Heavy tax collections, however, prevented any substantial increase in the supply of funds, and from time to time the market had recourse to the Bank of England. After the turn of the March quarter conditions became a little easier, but throughout the half-year there have been few periods when funds were not distinctly usable. As may be seen from a table below, the average rate for short loans has been well over 4 per cent., as against less than 3½ per cent. in the corresponding half of 1925, and less than 2½ per cent. in the preceding year.

The discount market has been influenced throughout the period by the almost continuous Continental demand for commercial bills, and was, therefore, less sensitive to stringency in the money market, with the result that the margin between the average rate for three months' bills and Bank rate has been wider than in the corresponding period of 1925. The average rate of weekly allotment of three months' Treasury bills varied in the first quarter between £4 17s 11d per cent (January 8th) and £4 2s 3d per cent. (February 26th), and in the second quarter between £4 11s 3d per cent. (May 7th) and £4 5s 1d per cent. (June 25th). The following table shows the daily averages for discount rates and money rates during the first half of this year and of the previous four years:—

DAILY AVERAGE FOR FIRST HALF-YEAR.

	1922.	1923.	1924.	1925.	1926.
Bank rate	£ s d 4 7 1	£ s d 3 0 0	£ s d 4 0 0	£ s d 4 12 0	£ s d 5 0 0
Market rate (3 months) ..	2 19 0	2 4 0	3 7 6	4 4 0	4 9 6
Margin	1 8 1	0 16 0	0 12 6	0 8 0	0 10 6
Short loans	£ s d 2 18 0	£ s d 1 10 1	£ s d 2 9 10	£ s d 3 9 8	£ s d 4 1 2
Deposit rate (banks) ..	2 7 1	1 0 0	2 0 0	2 12 0	3 0 0
Margin	0 10 11	0 10 1	0 9 10	0 17 8	1 1 2

It will be seen that the margin between deposit rate and short loan rate has been very much wider than in the four preceding periods, and from all aspects the figures for the past half-year look satisfactory from the joint-stock bank shareholder's point of view.

The floating debt showed the usual substantial reduction at the end of the March quarter, followed by an expansion since then, of which the greater part was in Treasury bills. The payment of War Loan interest was followed by a substantial increase in advances from Public Departments at the beginning of June, but as compared with this time last year, these advances are £35 millions lower, while Treasury bills have been increased by £16 millions. A possible explanation is that the Public Departments are now holding larger amounts of Treasury bills, for the monthly banking figures indicate no increase in the holdings by the banks or the money market:—

FLOATING DEBT.

	December 31, 1925.	March 31, 1926.	June 30, 1926.
Bank of England Advances ..	£ 16,500,000	£ None	£ 12,500,000
Public Department Advances ..	164,641,000	139,441,000	149,501,000
Treasury Bills	635,500,000	564,855,000	612,925,000
	816,641,000	704,296,000	774,926,000

Apart from the two changes in New York already referred to, the most interesting movements in bank rates abroad have been the three reductions by the Reichsbank, which have lowered its rate from 9 to 6½ per cent. Since March 11th, when the Belgian Bank rate was raised to 7½ per cent., all changes have been downward, including the restoration of the 7 per cent. level by the National Bank of Belgium:—

CHANGES IN OVERSEAS BANK RATES, FIRST HALF OF 1926.

Date.		Date.	
Jan. 7	N.Y. F. Res. raised 1% to 4%	April 19	Norwegian reduced 1% to 5½%
12	Norwegian " 1% to 6%	22	N.Y. F. Res. " 1% to 3½%
12	German " reduced 1% to 8%	23	Belgian " " 1% to 7%
13	Prague " " 1% to 6%	May 11	Danzig " " 1% to 7%
19	Danzig " " 1% to 8%	20	Indian " " 1% to 5%
27	Austrian " raised 1% to 7½%	7	German " " 1% to 6½%
Mar. 11	Belgian " raised 1% to 7½%	10	Indian " " 1% to 4%
27	German " reduced 1% to 7%	24	Danish " " 1% to 5%
31	Austrian " " 1% to 7½%		

The final table shows the movements of the principal foreign exchanges:—

Centre.	Method of Quoting.	Par Level.	Rate, Jne. 30, 1925.	Rate, Dec. 31, 1925.	Rate, Jne. 30, 1926.
Paris	Francs to £1	25.22	107.60	128½-130½	173½-174½
Berlin	Marks to £1	20.43	20.43	20.37½	20.44½
Vienna	Schillings to £1	34.56	34.46	34.38	34.42
Amsterdam	Florins to £1	12.107	12.15	12.06	12.11
Copenhagen	Kroner to £1	18.159	33.46	19.62	18.56
Rome	Lire to £1	25.22	137½-138½	120-120½	134½-134½
Switzerland	Francs to £1	25.22	25.03	25.09	25.14
Madrid	Pesetas to £1	25.22	33.46	34.3½	30.08
Lisbon	Pence to escudo	534	2½-4½	2½-2½	2½-4½
New York	Dollars to £1	4.86	4.86	4.85½	4.86½
Buenos Aires	Pence to dollars	47.58	45½	46½	45½
Rio de Janeiro	Pence to dollars	18	58	58	48
Montevideo	Pence to dollars	51	48	50	48
Sao Paulo	Dollars to £1	13.33	41.0	39.80	39.90
Calcutta	Ster. to rupee	gold sov.	1/6½	1/6½-7/8	1/5½
Hong Kong	Ster. to dollar	2/4	2/4	2/4½	2/5
Shanghai	Ster. to tael	3/2	3/2	3/1½	2/11½
Yokohama	Ster. to yen	24½	1/8	1/8½	1/11½

The most satisfactory feature is the strength of sterling exchange in New York, which has been maintained in the neighbourhood of par during the past few months. Other gold exchanges have also moved slightly in our favour on balance. A substantial recovery has been scored by the Spanish peseta, but on the other side of the picture is the collapse of the French and Belgian francs, and to a lesser extent of Italian lire. In the East, the Japanese yen has made an appreciable recovery.

HALF-YEAR'S NEW CAPITAL.

IN spite of the temporary cessation of capital issues caused in May by the general strike, the total of new capital applications in the London market in the first six months of the current year exceeds that for the corresponding period of 1925 by £8½ millions. This was largely due to the big figures of the March quarter, when the total was £75 millions, against £47.6 millions in the March quarter of 1925. For the second quarter the total was £64.4 last year and only £45.7 this year. A comparison of the totals and of the activities of various classes of borrowers quarter by quarter for recent years is given in our first table:—

(In Million £'s.)

	Total.	British Government.	Foreign and Colonial Govts.	British Colonials.	Foreign Govts.	Foreign Railways.	Finance & Mining.	Exploration.	Rubber and Oil.	Balance (Mainly Home Industry).
Total whole year, 1919.	1,017.4	805.8	14.8	2.9	15.3	18.3	160.3

1926—1st quarter	75.0	5.4	16.9	16.1	1.5	3.9	29.2			
2nd "	45.7	2.1	18.7	10.6	1.7	1.6	9.7			

Our compilation only deals with new money, issues for replacement of existing securities being excluded. Nor do we include such temporary Government borrowings as Treasury Bills and Ways and Means Advances. The British Government total for the second quarter of £2.1 millions represents £2.2 millions of 4 per cent. Treasury bonds, less £100,000 excess of encashments over new sales of National Savings Certificates. The last figure in the last column shows that the depressing industrial conditions of the moment have checked issues for home industry and trade. At the same time, the embargo having been lifted, foreign and colonial borrowers figure more largely. This fact is clearly brought out by the next table, which analyses the destinations for which the new capital was required:—

DESTINATION OF NEW CAPITAL.

	1913.	1922.	1923.	1924.	1925.	1926.
United Kingdom—						
Government	£ nil	£ 304,258,900	£ 63,727,000	£ 10,542,900	£ 6,950,000	£ 7,566,800
Other	20,324,400	44,444,400	28,627,600	33,839,500	71,749,500	58,967,800
British Possessions—						
Government	14,324,300	41,582,300	39,937,900	25,231,000	14,661,500	22,969,000
Other	28,678,300	7,917,000	12,850,700	12,724,500	13,462,300	9,735,100
Foreign countries—						
Government	22,629,500	13,066,600	25,561,900	16,025,000	nil	12,700,500
Other	34,403,100	37,505,000	11,196,500	7,220,900	5,187,900	8,826,000
Grand total	120,359,600	448,774,200	181,301,600	105,584,000	112,011,200	120,765,200

The position regarding London's lendings abroad this year and in previous periods becomes clearer still if we set out the following details:—

FIRST HALF-YEAR.

	1913.	1923.	1924.	1925.	1926.
Total of new issues	Mln. £ 120.3	Mln. £ 181.3	Mln. £ 105.6	Mln. £ 112.0	Mln. £ 120.7
Destined for domestic use	20.3	92.4	44.4	78.7	66.5
Destined for British possessions	43.0	52.2	38.0	28.1	32.7
Destined for foreign countries	57.0	36.7	23.2	5.1	21.5

Reference to these two tables reveals a distinct decline in the proportion devoted to home purposes, and the rise in foreign borrowings is more pronounced than that recorded by colonial borrowings, the reason being that a year ago the former were more closely affected than the latter by the embargo. But even so, a comparison with the first half of 1913, when, as it happens, the total of new capital raised in the London market was almost identical with the figure for the first half-year, shows that recent tendencies will have to be developed very much further before we approach a geographical distribution in the proportions recorded before the war. Borrowings in the London market in the first two quarters of this year and the first half of 1925 are analysed below in 30 groups:—

Description.	Total, First Half-year, 1925.	First Quarter, 1926.	Second Quarter, 1926.	Total, First Half-year, 1926.
British Government Loans	£ 6,950,000	£ 5,455,100	£ 2,111,700	£ 7,566,800
Colonial Government Loans	13,839,500	8,134,000	14,835,000	22,969,000
Foreign Government Loans	nil	8,800,500	3,900,000	12,700,500
British municipal and county loans	16,218,500	15,707,500	10,634,300	26,341,800
Colonial corporations	685,000	388,000	nil	388,000
Foreign corporations	1,350,000	nil	nil	nil
British railways	17,214,000	nil	nil	nil
Colonial railways	1,681,200	nil	nil	nil
Foreign railways	875,000	1,500,000	1,717,200	3,217,200
Australian mines	nil	nil	nil	nil
South African mines	60,000	791,100	791,100	1,582,200
Other mines	1,781,800	489,400	846,300	2,917,500
Exploration, financial and invest. trust.	7,890,300	3,422,500	2,382,000	5,804,500
Breweries and distilleries	470,000	20,000	nil	20,000
Stores and trading	210,000	126,500	nil	126,500
Estate and land	2,675,400	2,060,600	350,000	2,410,600
Rubber	3,019,300	620,000	474,600	1,094,600
Oil	720,000	2,028,000	1,334,200	3,362,200
Iron, coal, steel, and engineering	4,094,800	4,518,100	nil	4,518,100
Electric lighting and power	3,346,000	3,920,700	641,700	4,512,400
Tramway, omnibus, &c.	33,700	nil	232,500	232,500
Motor traction and manufacturing	35,000	2,083,400	250,000	2,335,400
Gas and water	564,000	159,400	85,000	244,400
Hotels, theatres, and entertainments	210,600	nil	75,000	75,000
Patents and proprietary articles	1,149,000	5,367,000	nil	5,367,000
Docks, harbours, and shipping	1,984,500	839,600	nil	839,600
Banks and insurance	24,523,600	9,388,100	5,001,200	14,389,300
Manufacturing and Miscellaneous	112,011,200	75,028,400	45,736,800	120,765,200

Apart from the increase in Colonial and foreign Government loans, referred to above, the large total raised by home municipal and county authorities is a feature of this table. Increases under the head of electric light and power and exploration and docks, harbours, and shipping are also prominent. Rubber plantation companies took rather more, but home railway issues, which a year ago absorbed over £17 millions, have not been in the market in the past half-year. The drop in the figure for the last group in the table gives fresh evidence of the decline in the proportion of issues for general home purposes.

The half-year has been notable for the number of large issues, the chief of which are listed in the following table, together with prices of issue and present quotations in the market:—

Issued Week Ended, 1926.	Name.	Amount of Issue.	Issue Price.	Price June 23, 1926.
Jan. 16	Queensland Government 5 % Inscribed Stock (1940-60)	£ 2,500,000	98	98
Mar. 17	New South Wales 5 % Inscribed Stock (1935-45)	4,000,000	98	98
June 5	New Zealand Government 5 % Inscribed Stock (1946)	6,000,000	98½	2½-2½ pm
June 12	Govt. of Victoria 5 % Inscribed Stock (1945)	3,000,000	98½	2½-2½ pm
June 26	Govt. of Commonwealth of Australia 5 % Stock (1945-75)	6,000,000	99½	2½-2½ dis
Jan. 9	State of San Paulo Coffee Institute 7½ % Sterling Bonds (1956)	4,000,000	94	102½
Jan. 23	Chilian Government 6 % Bonds	2,809,000	94	96½
Mar. 27	State of San Paulo (Waterworks) 7 % Sterling Bonds (1936-56)	2,500,000	96	1½-2 pm
June 12	State of San Paulo Coffee Institute 7½ % Sterling Bonds (1956)	4,000,000	97½	1½-1½ pm
Feb. 27	London County 5 % Stock (1946-60)	7,000,000	96½	102½
May 1	Glasgow Corp. 5 % Red. Stock (1945-55)	3,000,000	par	par
June 19	Birmingham Corporation 5 % Stock (1946-56)	5,000,000	par	2½-2½ pm
April 24	African Railway Finance Co. 5 % Debentures (1936-51)	1,150,000	99½	par

May 29	D.R. Cotton Mills 6½ % Cum. Pref. £1 Shrs.	2,250,000	21½	21.9

* Guaranteed under Trade Facilities Act.

Comparison of the last two columns shows an almost general appreciation over issue prices, and reveals the effect of anticipations of easy money conditions on fixed interest securities of a new and attractive type.

THE COAL PROBLEM.

(BY A LABOUR CORRESPONDENT.)

THE coal problem has been discussed as though its solution were merely a matter of reducing wages and lengthening hours of labour. The proposals of the Mining Association were summarised by Sir Herbert Samuel as follows:—

So that if we were to sum up these proposals generally, they would stand thus: that the miners are to be required to work an additional hour without any extra remuneration directly for that hour; that wages would have to be reduced in the districts, varying from a small amount in South Wales of 6d a week up to 5s and 6s a week in some of the more important districts, and rising to over 15s in Lancashire and Cheshire; that the owners would have to effect a reduction of 10 per cent. in other costs; that railway rates would have to be reduced by 25 per cent.; that we should have to contemplate the immediate dismissal, even though it might be temporary, of perhaps 100,000 men; and at the end of this the industry as a whole would be earning no profit, but would be run at a loss of about 3d per ton?

Mr Evan Williams replied:—

The position that has to be faced at the end of April is probably worse than is shown here, because we shall not by that time have had the reduction in railway rates, that is quite certain, and the economies that we contemplate are possible in other costs will not have been brought about; and it seems to us that there is no getting away from the position that under a 7 hours' day it is hopeless—absolutely hopeless—to maintain the coal industry of this country in existence except on a very much reduced scale, and we regard the return to 8 hours as the one concrete certain element which can be introduced to meet that position at the end of April.*

It will be seen, therefore, that if the mineowners obtained all that they asked the industry as a whole would not be run at a profit, and it is clear that unemployment in the industry would be increased. Obviously, the industry cannot continue to be run at a loss. The argument of the owners, however, is that the measures they propose would reduce costs, and that reduced costs would lead to larger markets. But the question is by no means as simple as the owners would lead the public to believe.

If after costs are reduced there is still a gap (as would appear to be likely) between costs and profitable prices, there is no possibility of a reduction of prices. If there were no fall in prices, then, apart from other circumstances, sales would not increase. Even if there were a reduction of coal prices, it is not safe to assume that the increased output available for the home market would be sold. If the reduced price of coal made it possible to produce British goods at competitive prices, then there would be an increased demand for British goods, and, therefore, for British coal. A fall in prices might have important results for the iron and steel trades, but such a reduction as is practicable, having regard to the present economic condition of the mining industry, would not have an appreciable effect on shipbuilding, the textile trades, and other manufacturing industries, and though it might result in some increase in coal purchases, such increase would not be on a scale likely to rescue the coal industry from its plight.

The distribution of the home consumption of coal in 1913 and 1924 was as follows:—

	1913.	1924.
Domestic	18.2	18.7
Gasworks	9.1	9.2
Electricity works	2.7	4.3
Railways (for locomotive use)	7.2	7.5
Bunkers (for coastwise vessels)	1.0	0.7
Coal mines	9.8	9.2
Miners' coal	3.2	3.7
Pig-iron manufacture	11.5	7.8
General manufactures and all other purposes	37.3	38.9
	100.0	100.0

There is no reason to suppose that such a reduction of prices as is feasible would in the immediate future lead to any marked increase in consumption for domestic purposes, and in most of the other items in the foregoing tables. Its main effects would be upon the last two items, accounting for less than half the home consumption, and unless lower prices led to substantially increased production of iron and manufactured goods, there would not be a considerable increase in the demand for coal.

As regards foreign markets, the situation is even more difficult. The world's capacity for coal consumption is by no means unlimited. Indeed, the limits of expansion are definitely restricted. Consequently, with an increasing capacity for coal production, there must be an increasing severity of competition for foreign markets. It is not to be forgotten that whilst in 1870 this country accounted for a half of the world's output of coal, and in 1896 for a third, it was in 1925 only responsible for one-fifth of the total output. British coal, however, remains an important factor in the world's markets. In 1924 its exports amounted to over one-half of the total coal exports of the world. Whereas in the years 1909-13 we exported 88.37 million tons, in 1924 this volume had shrunk to 81.75 million tons, and in 1925 to 68.97 million tons. It is obvious that to recover prosperity exports must be increased, the present markets held, and other markets, representing one-half of the world's markets, successfully entered.

This is easier said than done. It is not at all certain that it can be accomplished by lower prices. By means of the subsidy, the British taxpayer has been financing cheap coal in foreign markets; Germany complains that her coal has been exported at much less than home prices, and that, therefore, her exporters are financing cheap deliveries to Germany's foreign competitors. In other Continental countries, coal prices have been artificially lowered by means of freight reductions. It is said that last year one-fifth of the American coal produced was sold at a loss.* The price of inland coal in Great Britain as compared with pre-war is much higher than is the price of export coal. The mineowners claim that this disparity will in time disappear, but the Coal Commission point out that "it is more likely to do so through an increase in export prices than through the decline of inland prices. There is ground for believing that Germany, our powerful exporting rival, cannot sell profitably at the prices now ruling, so that sooner or later the export price may be expected to rise

* See "A Brief Survey of the Coal-Crisis Literature." By Dr M. Eastman. International Labour Bureau, May, 1926.

* Evidence, January 12, 1926. Question 15,816.

still further, and combination amongst the British exporters may help it to do so.[†]

Is it possible to expand markets by means of lower prices when prices are at present uneconomically low? Further, if an attempt is made to lower prices, will it succeed in extending British exports? It would be natural for any steps taken in this country to be followed by other countries. As the Coal Commission said regarding an increase in the hours of labour, "if Britain lengthened her hours, then other countries would certainly consider whether they should not follow suit. In this way, any gain in power of competing with foreign coal might be swept away. All that would have been achieved would be a general lowering of the standard of leisure in all mining countries."[‡] If prices are cut by reducing wages, then our foreign competitors will by a similar step, or in some other way, bridge the gap.

The degradation of labour conditions offers a dubious way of escape from our difficulties. Two other ways are open. The first is that of industrial reorganisation. Whilst this country has been considering reorganisation, other countries have been carrying through great changes. In Germany, Britain's chief competitor, the developing "coal war" has led to far-reaching measures of reorganisation, and she is now proceeding to exploit to the fullest possible extent scientific discoveries. There has been a good deal of discussion on the need for improved organisation, the closing down of uneconomic mines, and the utilisation of scientific methods. The same movement has been taking place in other countries, though with less success. In America the *Journal of the United Mine Workers* has bluntly declared that "there are too many mines and too many miners."

This policy on the part of the coal industry is one from which Britain cannot stand aside. Logically, reorganisation must extend to the better utilisation of coal, and the extraction to the fullest degree of the hidden resources in coal. The result of these developments will be the more efficient production of coal and its scientific treatment. The consequence will be, however, that the output of coal and coal products will probably expand more quickly than the world's capacity to consume.

The effect of this improved output may be to reduce prices, and it will increase consumption, but it is doubtful whether the world will adapt itself to the utilisation of these resources sufficiently quickly to absorb, for a time at any rate, the larger output, though there will be this advantage over the present situation, that the coal industry will be supplying not merely coal, but a new range of products—more efficient power, oils, and chemicals—which will add to the world's resources. The nations which are first in the field will be in a strong position to obtain and maintain foreign markets. Hence the importance to both Britain and Germany of the policy of reorganisation and development.

It would appear inevitable, however, that economic pressure will result in the closing of unproductive mines, and in the disbandment of considerable numbers of mine workers. The process of closing uneconomic pits has indeed already begun on the Continent, and the number of employees has been reduced. A similar development cannot be avoided in this country.

But these changes will not solve the problem of foreign markets, for the exporters of each country will in pursuit of their own interests seek an expanding outlet in markets abroad. This situation may be met in two ways. In the first place, if the working conditions of miners are as far as practicable standardised on an international basis, markets will go to those whose methods and organisation are, broadly speaking, more efficient. This would clearly be to the good. Secondly, the markets of the world might be served on some co-operative plan. There are obvious dangers and grave difficulties in this proposal. But there is undoubtedly a movement of opinion in this direction, and one which will most probably find expression at the forthcoming International Economic Conference. The proposal that markets and prices should be determined by international arrangement has been sponsored by Sir Alfred Mond and Mr Frank Hodges, and by certain

German leaders. It may be that we are still far from a practicable scheme, and one, moreover, which would be in the public interest, though there seems to be no doubt developments on these lines will take place.

The real problem which faces this and other countries is one of utilising the great productive capacity of the coal industry for the enrichment of the world's resources, and the elevation of the standard of life of the population. The danger is that it may become more and more the cause of a degradation of labour standards, of uneconomic price-cutting, and of large scale ruin. The path of lower wages and longer hours is the path of danger. The whole question in its ramifications, and in its paradoxes, is one of the most difficult of the many problems with which this and other countries are faced.

THE NEED FOR INDUSTRIAL PUBLICITY.

CLOSE on the heels of the Report of the Board of Trade Committee on Company Law there has appeared a pamphlet,* written by a voluntary committee, which contains a plea for greater publicity in regard to the facts of industry and trade, and makes a series of specific proposals. The report acquires considerable weight from the standing of its signatories. It is signed by three representative employers, viz., Mr W. L. Hichens, of Cammell Laird and Co., Mr Kenneth Lee, of Tootal, Broadhurst, Lee and Co., and a member of the recent Royal Commission on Coal, and Mr Seeborn Rowntree, of Rowntree and Co.; and by three prominent Trade Unionists, namely, Mr Brownlie, of the Amalgamated Engineering Union, Mr Frank Hodges, of the Miners' International Federation, and Mr A. Pugh, chairman of the General Council of the Trade Union Congress. The committee also includes, among others, Sir William McLintock, representing the accountancy profession, and Mr Harold Brown, the expert on company law.

The committee restate the general arguments for publicity with which our readers are familiar. They point out that "until the maladies of British industry have been properly diagnosed and means have been found for watching the progress of the patient, it is very hard to prescribe a remedy. The present committee has not attempted in any way to consider any problems of policy, but it is unanimous in thinking that the economic information available in Great Britain is quite inadequate to enable the country to deal with the difficult economic questions with which it is faced." This is a serious criticism of our present methods, and as the considered judgment of a mixed but representative jury is worthy of careful consideration.

The brochure deals with information needed (a) in connection with industrial relations, (b) as a means of modifying the violence of trade fluctuations, and (c) from the point of view of investment. In regard to the first of these points, the committee emphasise that sporadic information suddenly produced for the purpose of making a case during an industrial dispute is often worse than useless, and that it is only by constant and fullest disclosure of the facts that suspicion can be removed. Moreover, this information is not only needed for the protagonists themselves, but it is essential if the public whose opinion must ultimately decide these issues is to form a balanced judgment. The committee surveys the information which is at present available in various trades. The result of this recapitulation is to re-enforce the case for publicity, for it leads to the conclusion "that in a number of instances the collection of complete and reliable statistical information has proved to be most useful in industrial negotiation. On the other hand, it shows that only in a few industries is there any systematic effort made to collect and to make continuous use of such information." The committee proposes as a minimum that there should be collected and published in regard to each of our main industries figures showing (a) total production in both money values and in quantities, (b) the

cost of materials, (c) the cost of labour, (d) general charges, (e) balance available for interest, dividends, and profit (f) number of wage-earners, separating sexes. This proposal does not raise any problems which are not already dealt with by the census of production, but the committee's view is that the collection of this information should be continuous. This minimum of information would, however, be useless unless it is complete for the industries concerned, and the committee is, therefore, driven to suggest that it should be made compulsory. Their proposal is that "the Board of Trade should be given statutory power to inaugurate a scheme of publicity on the lines we have suggested, and that the Board should itself collect and publish the information if it can find no other body to do the work. Where, however, in any industry there is some adequate and representative body which is able and willing to implement the scheme, the Board of Trade should permit it to do so, and should delegate to that body its own powers of compelling the disclosure of the facts required. The principle of compulsion should extend only to the information which we prescribe as a necessary minimum, and any industry undertaking to work the scheme itself should be required to compile and publish that minimum. Any industry, however, which finds it possible and useful to add other items of information to the minimum prescribed should be encouraged to do so."

In regard to industrial fluctuations, the committee gives an exhaustive survey of the great efforts that have been made in the United States to compile economic information. The survey is supplemented by comments of prominent Americans on the system that has thus been developed. The character of the questions asked shows that the committee were alive to the possibility that the development of statistics might be carried to extremes, for their first question was: "Is the enormous expenditure on statistics in America of real value, or is it a luxury which only a rich country can afford?" They went on to ask whether the use of such figures diminished trade fluctuations; whether full information as to output did in fact influence production; whether the statistics were reliable; whether they checked booms or enabled industry to run with smaller stocks. The answers given to these questions by a dozen correspondents, ranging from the President of the United States Steel Corporation and of the International Harvester Company to the President of the American Federation of Labour and several of America's leading economists, have evidently been formulated with studied moderation; but they are definitely favourable. It is recognised that there is a certain amount of overlapping, duplication, and possible waste; but it is agreed that the statistics are well worth their cost. On the vital question as to their effect upon trade fluctuations, it is interesting to find that the professors are, on the whole, more cautious than the business men, who agree that the figures have had a stabilising effect on trade, though Mr George Roberts, of the National City Bank, finds it impossible to distinguish the influences of publicity from other causes in producing the comparative stability of trade since the end of the post-war boom. The compilers of the present report, in dealing with the relation of statistics to trade stability, emphasise the importance of supplementing the production figures already discussed by information as to stocks, deliveries, and orders. They recommend that in appropriate cases the Board of Trade should have power to require information from the manufacturers under these heads, and "to issue regulations applying to each trade after consultation with its representative association."

Finally, the report deals with the position of the investor. This section presents the argument from the point of view of the public interest which lies behind many of the recommendations of the Committee on Company Law. "The problem here is a very difficult one, for it is generally assumed that it is to the interest of the individual firm to refrain from giving any information which might encourage competition. But the community cannot accept this view. The theory of private enterprise presupposes that capital and labour flow in those directions where they are needed most, and that this movement is brought about by high prices, high profits, and high wages. The concealment alike of profits or of

losses tends to check the adjustments that should take place in the public interest. Our discussion of this subject starts from the assumption that company accounts, and particularly the accounts of concerns which control the economic destiny of large parts of the community, are not of interest merely to the shareholders or to the creditors of the company, but are a matter of general interest, and that, therefore, company law should be based on this assumption." The committee did not deal with prospectuses, but merely with company accounts, and its specific recommendations are as follows:—

It should be obligatory on all public companies to issue a balance-sheet annually.

This balance-sheet should be available not only to shareholders, but to members of the public on demand and on payment of a small fee.

These accounts should be published promptly, not more than six months after the conclusion of the accounting period to which the balance-sheet refers.

The preceding obligations shall be imposed upon private companies whose assets exceed, say, £2,000,000. In the case of a company owning property largely financed by mortgage, the value to be included for this purpose would be the net value after deduction of the mortgage.

Companies controlling subsidiary concerns shall publish annexed to their own balance-sheet either:

(a) The balance-sheet of the subsidiaries, or a summary of the assets and liabilities of the subsidiaries, or a consolidated balance-sheet.

Or (b) A statement of the net trading results of the group. Some of us would go further, and require every company's balance-sheet to be accompanied by a list of concerns in which it holds a majority of the voting shares.

In the statement of its capital, every company shall indicate the number of shares issued for consideration other than cash, except in the case of the capitalisation of reserves.

Every company shall show separately in its balance-sheet:

1. Its tangible assets, with a further subdivision into:
 - (a) Fixed assets—land, buildings, &c.
 - (b) Investments in subsidiary companies.
 - (c) Liquid assets—cash, debtors, stocks, realisable assets, &c.
2. Its intangible assets—goodwill, &c.
3. Assets such as preliminary expenses, discount on debenture issues, &c.

In the case of fixed assets and intangible assets the basis of value shall be clearly indicated.

The exact basis of valuation—cost or market price—of stock in trade should be clearly stated.

The committee adds that progress in this matter "is not solely to be achieved by means of provisions in statute law. On the one hand, it is to be anticipated that the tendency to adopt standardised forms of accounts suitable to particular kind of businesses, whether compulsorily imposed (as in the case of railways and other public utilities) or adopted because of their proved utility, will gradually cover an increasing part of the economic field. On the other, we confidently look for a development in the practice and traditions of accountancy, in the fostering of which it is clear that a great part must be played by the accountancy profession."

In several respects the report of this committee is of more significance than that of the Board of Trade Committee. On some important points it goes further; it concentrates more upon broad economic purposes and less upon technicality; and, finally, it is the agreed pronouncement of thoroughly representative employers and trade unionists. On the Board of Trade Committee Labour was inadequately represented, and that report suffers in weight from that fact, since the interests of the great mass of the workers are closely bound up in the whole question of the reform of company accounts in the direction of greater publicity.

PROF. RIST ON THE ECONOMIC SITUATION OF FRANCE.

In view of the new efforts at a reform of French financial policy and the prominence in these new efforts of M. Charles Rist, the well-known French economist, who is a member of the French Currency Expert Committee, and who has just been appointed Deputy-Governor of the Bank of France, M. Rist's views on French financial and economic problems are a matter of immediate interest. We, therefore, give below a summarised translation of those views as expressed by M. Rist in a foreword to "La France Economique en 1925," an annual reference book published by Société Anonyme du Recueil Sirey, 22 Rue Soufflot, Paris, 5e.

ADVERSE exchanges and rising prices are the outstanding features of 1925. Currency depreciation has dominated French economic life, and its effects have been felt in every department. Up to April of last year prices were moderately steady; in May they moved up, as the dollar appreciated; in the last quarter the upward curve became steeper, and the year closed with an index figure of 650, against 500 at its opening, and 100 in July, 1914. This movement followed the depreciation of the franc, which was accompanied by a growing gap between the world prices and real (gold) prices at home, which widened from 3 per cent. in 1922 to 20 per cent. in 1925. This large and continuous rise of internal prices is the pivot around which all the other phenomena of our economic life revolve—rising wages and constant strikes or threats of strikes; troubles in the civil service; rises (belated and insufficient) in railway rates; rising rates of interest; falls in fixed-interest bearing securities and even in stocks with variable dividends; a growing gap between the rents of new and "Rent Restriction" houses, with depreciation in the capital values of the latter, &c. Among other results is an arbitrary redistribution of fortunes and incomes. Wealth no longer bears any relation to effort or to saving. These results have been aggravated by exceptional legislation, moratoria, export prohibitions, Customs "co-efficients" bearing unequally on different trades, &c.

True, production has not diminished, though building shows signs now of contraction; but its distribution has ceased to be normal. Our favourable trade balance is only a temporary result of the advantage given to French goods in foreign markets by our adverse exchange. For instance, gold prices of the products of the metallurgical industry, f.o.b. Antwerp, are below those of 1913, despite the rise in world prices. On the other hand, the value per unit of weight of imported raw materials has risen 37 per cent., while that of exported French manufactures has fallen 25 per cent. Increased exports of French goods are paying for equal or diminished imports of foreign goods. If the cheap purchases made in France by foreigners are taken into account, it is clear that France is actually giving more to the foreigner in return for less. The nominal rise in profits hides this fact from our export industries; the others are suffering from increasing difficulties, chief among them being the notorious dearth of new capital available on the market.

Saving is ceasing. The progress of life insurance business has been checked. In 1924-5 the total sum assured increased by only 8 per cent., against 40 per cent. in 1923-4; and if this increase is translated into gold values, it is actually a decline. Accident insurance is the only form that is developing *pro rata* with the number of accidents. But insurance is only a secondary form of saving compared with direct investment, which has seriously declined. New industrial share issues have fallen off; in 1925 they totalled only 1 milliard, against 3 milliards in 1923. Some undertakings, deceived by nominal profits, have tied up their resources in extensions which threaten to crush them later on; others, e.g., the electrical industry, either cannot get the funds they require, or only at a prohibitive 10-12 per cent. If they are driven

to seek foreign capital at a lower rate, they ought not to be prevented. New capital issues, as a whole, fell from 3,600 millions in 1924 to 2,600 millions in 1925.

Short-term money, on the other hand, is easy. Uncertainty makes everyone want to have his assets liquid. The deposits of the four big banks have gone up by 5 milliards; those of all banks by 10 to 12 milliards, and those of the savings banks by 2 milliards.

The attitude of our public authorities in this pathological situation has been arbitrary and blind. The Government has, it is true, abandoned its pernicious fiction of the identity of gold and paper, and has issued a loan at a guaranteed exchange rate; but it continues to oppose any such action by individuals, and it remains practically impossible to insert in contracts a stipulation for the employment of gold-loan coupons. Yet, while the Government still refuses to return frankly to gold—which is the only real, because it is the only international standard—the public is adapting itself to the real position. The pressure of daily needs is actually making a new stable standard. More and more, sellers are inserting in contracts a right to vary the terms in accordance with the foreign exchange, and making their prices conditional on payment in cash.

These, of course, are mere palliatives. Nothing short of stabilisation, based on foreign credits, on the use of the Bank reserve (which represents 40 per cent. of its circulation), and on a financial programme designed to cover a period of years and rigorously adhered to, can terminate a state of things which, by its uncertainty, makes any extended enterprise impossible, and thereby retards the economic progress of the country, at a time, too, when, thanks to stable currencies, our competitors are returning to long plans and large ideas.

The return to the gold standard is not the only step that needs to be taken if we are to return to normality. In every department of economic life we are floundering, and terrified of freedom. Take the case of international trade. There the absurd law of 1919 bars us from reverting to the sound commercial practice of most-favoured-nation treatment, which even the United States has resumed. True, tariff revision is talked of. It is easy to imagine what that means. Apparently it is not yet thought to be high enough, although the very meagre increase in our Customs receipts over 1913, despite increased duties and the fact that imports are below the pre-war level ought to show the blindest that the tariff is more than high enough already.

I have no intention of underestimating the efforts that have been made and the results that have been achieved so far. The restoration of a unified Budget in the teeth of a Parliamentary obstruction for which every party must share responsibility, and the more or less satisfactory settlement of the reparation and inter-Allied debt problem for the years immediately ahead, are stages on the road to financial improvement and the monetary stabilisation which are vitally urgent necessities in every department of our economic life. The next stage must be the restoration of credit. Out of a national income this year of 180 milliards, the State will handle 40 milliards. In addition its debts amount to immense sums. This shows how much its wisdom, or its imprudence, will count for in our destiny. Its first care should be to reduce rather than to increase its liabilities, and to reassure its creditors. To that end every form of financial impracticability must be renounced, the impracticability of the old regime, no less than revolutionary impracticability, and a return made to those proved methods which, originating in the 17th century in Holland, and pursued in the 18th by England, were in the 19th the foundation of the strength and independence of every State where movable property is largely developed. They impose on a debtor State the same obligations that apply to the private debtor—clarity of accounts, respect for engagements, submission to the normal conditions of the capital market, with no efforts to manipulate them. Then the State, in its turn, could in virtue of its abandonment of any abuse of privilege insist that its rentiers, like other citizens, pay their fair share of taxation—on one condition, namely, that it guarantees them a stable currency.

Notes of the Week.

The Eight Hours Bill.—The Government's Bill, making an eight hours' day permissible in the coal mines, passed its third reading in the House of Commons on Thursday, and it is to be debated in the House of Lords on Monday and Tuesday next. Unless some development takes place in the direction of fresh negotiations, which might induce the Government to postpone the debates in the Second Chamber, this measure will be placed on the Statute Book on Wednesday, and in the meanwhile it is expected that mine owners, without waiting for the Bill to pass its final stages, will post at the pits the statements of the terms on which they are prepared to reopen the mines. At the close of his speech in the House of Commons on Thursday, the Prime Minister said that if the Miners' Federation would accept the Samuel Report with all its implications a settlement even now was possible. But although Labour members suggested a week's adjournment, and asked whether, if the miners accepted the report, the Bill would be withdrawn. But no "authoritative move towards acceptance" was forthcoming, and the Bill passed its third reading by 332 votes to 147. It remains to be seen whether any such move will be made this week-end on the Labour side. The prospect of such a development seems remote. For although the Eight Hours Bill is so obnoxious in the eyes of Labour that the leaders would be greatly relieved to find some way of preventing its passage into law, the House of Commons debate revealed a stiffening rather than a relaxation of the miners' attitude. The debate began with a stormy scene, in which violent epithets were hurled at Ministers, and Mr Bridgeman, who moved the third reading, was subjected to continued interruption. Moreover, such Labour members as Mr Hartshorn and Mr Varley, who in previous discussions have made conspicuous efforts to contribute something constructive in the cause of peace, delivered speeches of the most uncompromising kind. The former ranged himself behind Mr Cook, pronounced the Prime Minister to be the greatest of all enemies of the working classes, and said that the Government's policy meant a lengthening of the duration of the stoppage; while the latter stated that the Government "have absolutely gone out of their way to throw sand into the wheels of the machinery which some of us were constructing." The temper, therefore, becomes more and more unpropitious to settlement, although just a chance remains that in the next day or two the miners' leaders may carefully consider whether it is worth while to make some move in the hope of preventing, by hook or by crook, the placing of the Eight Hours Bill on the Statute Book.

The Quarter's Revenue.—The revenue statement for the first quarter of the financial year 1926-27 shows a decline of £22,340,400 in revenue and an increase of £4,401,500 in expenditure in comparison with the corresponding period of the previous year. To some extent this unsatisfactory state of affairs is no doubt due to the general strike and the closing of the coal mines for two months, but the individual items of the return give no direct indication of this. Customs and Excise receipts, for example, are up by £1,896,000 and £975,000 respectively, death duties are £2½ millions lower, and income and super-tax have fallen by £10,856,000 and £4,810,000 respectively. The fall in income-tax is no doubt partly due to the fact that it is now being levied at a lower rate, and also that arrears were called in more strenuously in the March quarter. Special receipts show a drop of over £6½ millions. On the expenditure side, £4½ millions less has been paid to the Sinking Fund, but the fighting services have taken £3½ millions more and the Civil Service £4½ millions more. The full return is set out in a later column. This shows that the floating debt has been increased during the quarter by £70½ millions. The deficit at the end of the first quarter of the financial year is £78 millions, revenue being £146.8 millions and expenditure £224.8 millions, and has been covered by an increase of £48 millions in Treasury Bills and of £22½ millions in Ways and Means Advances, by an issue of £3½ millions of 4 per cent. Treasury Bonds, and by a reduction of £4 millions in Exchequer balances.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits. 1,512,884

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted on application. On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1. JAMES STEUART, Chief Manager.

Our Index Number.—Changes in commodity prices in June were comparatively unimportant, and our Index Number shows a change of only 6 points in an upward direction, the total being 4035 as compared with 4029 at the end of May. June, however, is the first month of 1926 in which a decline has not been registered, and the net decline in the six months amounts to 216 points, as may be seen from the following table:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
Basic (avg. 1901-5) ..	500	300	500	400	500	2200	100.0

The most important changes last month were in the textiles and minerals groups. In the former a drop in raw cotton was partly offset by rises in hemp and jute, while in the minerals section there was a sharp advance in pig-iron, stocks having been reduced to a minimum. In the absence of quotations for coal, the figures for that commodity have not been altered in the past two months. The principal contributor to the decline of 216 points in the half-year is the textiles group, with a drop of 156½ points, in which jute, silk, and wool are prominent. Minerals are practically unchanged, and a drop of 22 points in the miscellaneous section is entirely due to the fall in rubber. Primary foodstuffs show a decrease of 43 points, more than half of which is accounted for by potatoes. The following table shows the changes in each commodity's index number as compared with the end of December last, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	104	— 6	Cotton, A	84	— 9	Copper	47	— 2

The increase shown by the latest figure over that recorded at the end of July, 1914, is 57.3 per cent. This compares with 57.1 per cent. a month ago and 65.8 per cent. at the end of 1925, as may be seen from the table below, which also shows the relative position of the five groups:—

End of,—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Mar., 1920	261	260	484	269	309	325.6
Dec., 1920	233	229	209	261	230	230.9
Sept., 1922	151	194	181	150	148	163.3

May, "	153	194	159	155	139	157.1
June, "	154	194	156	158	138	157.3

At this time last year the increase shown over the pre-war figure was 69.6 per cent.

Russian Propaganda.—The Government issued, and the House of Commons discussed, at the end of last week a Blue Book containing a large number of documents revealing the relations between Russian Communist organisations and British Communists. The document is a voluminous one, but it contains no single big revelation. It is made up of a series of letters showing a host of minor dealings and transactions between the Communists of the two countries, and makes it perfectly clear that money has been flowing here in small quantities to be used by our own agitators to promote Communist ends not only in this country, but in other parts of the British Empire. We do not propose to follow, or even to attempt to summarise, the wearisome detail of this Blue Book. But one or two general statements may be based upon it. The sum total of the dealings revealed constitute an interference in our domestic affairs, concerning which we have every right to make the strongest protests to the Soviet Government, whose degree of direct or indirect responsibility is not, however, easily determinable. One of the conditions of the Anglo-Russian Trade Agreement was that propaganda of a subversive nature should cease. It has not ceased, and we have reason for protest. But as the pages of the Blue Book are turned over it becomes clearer every moment that the whole scope of the Russian effort of interference is so petty as to be almost ludicrous. It is a molehill, and even if a molehill be rank, it is absurd to pretend it is a mountain. Indeed, the most striking point in the whole collection of documents is the piteous complaint of our home Communists that money received falls far short of promises. They cannot get enough money from Russia, so to speak, to set a square yard of the Thames on fire. Even the price of the wages of a stenographer is not forthcoming, and letters have to be copied by an office boy. That is not the way that revolutions are financed, and the degree of fury that the Chancellor of the Exchequer and Lord Birkenhead have worked up over the whole affair is so disproportionate to its importance as to make these august persons look almost as ridiculous as some of the "humble disciples" of Lenin whose activities are given so gratuitously an advertisement by this Government publication. An influential section of the Conservative Party would like the Cabinet to break off relations with Russia, because of this miserable dribble of propagandist money. Those who take this view lack a sense of proportion. The nation's greatest need is more trade. Government policy should aim at making it easier, not more difficult, to trade with all countries, including Russia. To throw over the chance of expanding trade with Russia because of these deplorable and indefensible, but wholly insignificant, proofs of Communist intrigue would be about as sensible as to cut off one's nose to spite one's face, or, shall we say, to refuse the chance of a happy marriage because one's future mother-in-law is of an incurably interfering nature. Fortunately, Sir Austen Chamberlain preserves a sense both of humour

and of proportion, and refuses to yield to clamour. In his speech in the House of Commons, while roundly condemning the Russian propaganda, he refused point blank to take it as a basis for breaking off relations. Trade between the Russian people and the British people is growing. Ministers will be wise to give it every chance of growing, and to leave Scotland Yard to watch the course of affairs, which they are perfectly capable of doing, while British manufacturers and merchants do business that will put more British workmen into employment.

The Situation in China.—The long foreshadowed meeting of Chang Tso-lin and Wu Pei-fu in Peking, which was the logical sequel to their joint operations against Feng Yu-Hsiang, has at last taken place. That Pompey and Caesar should meet in friendly counsel and not in arms is at least one point gained for the cause of peace; and for the moment their co-operation will be stimulated by the recrudescence of military activity on the Mongolian front—where Feng's forces are still in being, though Feng himself is in Moscow. It hardly seems possible, however, that Chang and Wu should maintain a condominium over Peking without quarrelling. The mere juxtaposition of their forces in the capital might at any moment lead to a *fracas* between the troops, while the leaders will have inexhaustible opportunities for difference of opinion over the making and unmaking of Shadow Cabinets—purporting to represent an All-China Government. Meanwhile, the co-operation between the two Northern leaders, precarious though it is, has apparently been sufficient to induce Sun Chuan-fang—who recently proclaimed an independent State in five East Central provinces—to enter into relations with the Southern Knuminchun Government at Canton. Thus, if and when Chang and Wu fall out, there will probably be a coalition in existence to intervene decisively on one or other side, or else to sweep both the Northerners away and then to quarrel over the spoils in its turn. In other words, the revolving wheel of Chinese politics shows no sign of approaching the term of its revolutions; and the hardest diplomatic gambler would scarcely venture now to bet which of the *petit chevaux* will be found opposite the winning post when the machine comes to rest. In one respect, the Knuminchun has an advantage over the rival powers; for whereas those other forces are all individual military dictators, who may die or grow old or take to excessive drinking or opium smoking, the Knuminchun is at least a political party with a non-military basis, which may survive the fortunes of its momentary leaders. It is a party, moreover, which has a very strong hold over the numerous and wealthy Chinese colonies abroad—e.g., in the Straits Settlements—and this is an important card in its favour in the present protracted and economically disastrous conflict between Canton and Hongkong. Hitherto, in China itself the power of the Knuminchun has never extended far beyond the limits of Kwangtung Province, but latterly it has shown a tendency to radiate northwards, and, when rival *tüchüns* eventually cancel each other out, it may eventually be left in possession of the field. The Knuminchun have been treated as outcasts—by other Chinese forces, as well as by foreign Governments—because they have thrown in their lot with the Bolsheviks; yet it would be an error to expect stability in this single point of Chinese politics when all else is in flux. A partnership dictated by convenience may be dissolved when interest points another way. Is it out of the question that a friendly understanding should be reached between the Knuminchun and the British Government? Such an understanding might not only terminate the disastrous commercial impasse at Canton, but might be the first step towards restoring political stability in China as a whole.

Economic Interests in Abyssinia.—The Government have just published as a White Paper (Cmd. 2680 of 1926) the text of an Anglo-Italian exchange of notes regarding the respective economic interests of the two parties in Abyssinia. This agreement is a corollary to a tripartite agreement of 1906 between Great Britain, Italy, and France, in which the three parties gave one another a free hand to exploit certain economic possibilities in

Abyssinian territory. The share at that time assigned to France was the completion of a railway from her port of Djibouti, at the mouth of the Red Sea, to the Abyssinian capital, Addis Abeba. Italy was to construct any railways west of Addis Abeba, between the Italian colonies of Eritrea and Somaliland. The interests of Great Britain and Egypt were recognised in that portion of the Nile basin which lay in Abyssinian territory, more especially as regarded the regulation of the waters of the Blue Nile and its tributaries. France promptly exploited the opportunities assigned to her. Great Britain and Italy have arranged for the exploiting of theirs at this twenty years' interval. The Tripartite Agreement of 1906 (like a succession of similar agreements concerning, but likewise not signed by, Morocco) started off by providing that the three signatories should co-operate in maintaining the political and territorial *status quo* in Ethiopia, and by laying down that a number of previous conventions incorporated in the agreement did not infringe the sovereignty of the Emperor of Abyssinia. Again, in answer to a question from Commander Kenworthy regarding the recent Anglo-Italian exchange of notes, Sir Austen Chamberlain stated in the House of Commons on Wednesday that this transaction "cannot by any latitude in interpretation be held to import economic partition." He added that the documents have already been communicated to the French and Abyssinian Governments, and that their assent will be sought in separate correspondence. It may further be pleaded that the British and Italian *desiderata* are legitimate and innocuous in themselves. At the same time, the practice of two or three Powers arranging for the disposal of economic assets in the territory of another Government without consulting that Government or securing its simultaneous assent is objectionable in principle, and this practice vitiates both the Tripartite Agreement of 1906 and the Bipartite Agreement of 1925. In the latter Agreement, moreover, the two signatories agree to press their respective claims by joint diplomatic action at Addis Abeba, and not to desist from their respective efforts until both sets of claims have received satisfaction. This pledge not to make a separate peace suggests something unpleasantly like a diplomatic war.

Trade Barriers.—The Council of the International Chamber of Commerce, at its twenty-first meeting in Paris on June 25th, unanimously approved a resolution from the Committee on Trade Barriers, which included the following clauses:—

"That present economic conditions, due principally to the war, are rapidly becoming unbearable in most countries, and especially in Europe; and prompt remedies are essential if the eventuality of economic disturbance which would affect all countries in succession is to be avoided."

"That stabilisation of currencies is absolutely necessary; excessive tariffs and prohibitions of importation and exportation are dangerous; transportation of persons and merchandise is obstructed; Customs tariffs and classifications lack clearness and uniformity, and changes can without notice be introduced into existing tariffs; treatment of nationals and foreigners is unequal; that the situation is extremely critical; and the committee desires to make a practical effort to suppress the most dangerous barriers and those which it is possible most quickly to remove; and believes it is necessary not to analyse facts already known, but to seek remedies."

The Council resolved to call the attention of the Governments to the gravity of the situation, and to the necessity for taking steps to remedy it without delay. Sir Alan Anderson was elected chairman of the Council and Acting President for the remainder of the term of office of Mr Walter Leaf, who, we regret to state, has been obliged to relinquish the office owing to ill-health. The next Congress of the International Chamber will meet at Stockholm on June 27, 1927. The work of the Trade Barriers Committee is providing a useful prelude to the forthcoming Economic Conference of the League of Nations.

The French Debt: Corrected Figures.—Our Paris correspondent writes:—The discovery, since the publication of the last issue of the *Economist*, that a serious error appears in the figures set forth in M. Dausset's report on the French public debt, as printed in the copies of the document officially issued to the members of the Senate, entirely vitiates certain of the conclusions drawn, in the article published last

BANK OF ATHENS

Head Office: ATHENS.

Paid-up Capital

BOSTON: ATHENS BANKERS CORPORATION,
15, KNEELAND STREET.

London: 22, Fenchurch St., E.C.3.

week, from the data furnished by the report. The document has now been reproduced in the *Journal Officiel*, in which the error in question has been repeated. The effect of the mis-statement is to represent the debt which was owed by France to Great Britain at the end of 1925 as having been exactly 1,000,000,000 gold francs (say £40,000,000) less than it really was. It is imperative, therefore, that a correction should be made at the earliest possible moment, and that the conclusions justifiably drawn last week from the erroneous figures should be modified to accord with the facts. The official report states that the total amount of French Treasury bonds in the hands of the British Government at the end of 1924 was equivalent (including capitalised interest) to 15,853,996,000 gold francs, and that on December 31, 1925, the total was 15,016,387,000 gold francs. The obvious conclusion was that during 1925 the debt owing to the British Treasury had been reduced by 837,609,000 gold francs, or rather over £33,000,000. The real total of this portion of the French debt at the end of 1925, however, was not slightly over 15 milliards, as stated officially, but 16,016,387,000 gold francs (or an increase of 162,391,000 of the year, instead of a reduction of 837,609,000). This increase of the main debt was due to the fact that, although the amount due to the Bank of England and that representing the purchase price of the British Army stocks in France are being steadily reduced every year, no attempt has yet been made to reduce the principal of, or even to pay the interest on, the main debt, which continues to increase annually owing to the addition of accrued interest charges. The debt to the Bank of England was reduced last year by 151,320,000 gold francs, and a further 75,356,000 of was paid off the balance due for war stores. The two payments, amounting together to 226,676,000, were more than counterbalanced by new additions to, and interest charges on, the main debt during 1925, equivalent in round figures to £6,500,000. On balance the total French indebtedness to Great Britain was increased last year by 85,715,000 gold francs, or about £3,500,000. After allowing for the erroneous understatement by 1,000 millions and taking into account the payments made during the year to the United States, Uruguay, and Egypt, the total of the French public debt at the end of 1925, as compared with the end of 1924, was as follows (the foreign debt in gold francs and the internal in paper):—

	1924.	1925.	Inc. or Dec.
Total foreign debt . . .	36,479,707,000	36,438,653,000	41,054,000
Total internal debt . . .	280,637,020,000	286,380,331,000	+ 5,743,311,000
Grand totals . . .	317,116,727,000	322,818,984,000	+ 5,702,257,000

Even this statement, however, must be taken as subject to further correction or confirmation, as there is, apparently, a further error of 2,000,000 in the official figures representing the total of the internal debt in 1924. This is returned as having been 280,637,020,000, whereas the detailed items cast up as totalling only 278,637,020,000. Whether the discrepancy is due to a printer's error in one of the detailed figures or merely to a mistake in the casting it is impossible to say.

Conditions in Northern Ireland.—Our Belfast correspondent writes:—On Tuesday the Belfast Corporation approved the arrangements for the creation and issue of £2,000,000 5 per cent. stock at 99. The loan is for general development purposes in connection with gas, tramways, electricity, housing, road improvements, erection of schools, and for advances under the Small Dwellings Acquisition Act. The issue is the largest which has been made by the city, but it is pointed out that Belfast's indebtedness—about £15 per head of the population—is relatively low. The coal situation is much easier, and the railway companies, which reduced their services some time ago, are now running normally again. The situation in the linen industry remains comparatively unchanged, although a somewhat better demand for finished linens is being met with in the United States and Canada. It is reported that renewed efforts are being made to obtain the application of the Safeguarding of Industries Act to the linen trade. Complaints are numerous regarding the severity of the competition experienced from Continental countries with exchange rates below their purchasing power parities, and which are at present enjoying a differential advantage against which it is considered that the North of Ireland trade may legitimately claim protection. The price of flax is also regarded as still too high. A reduced acreage is believed to have been sown in Ireland this year. The season has been very favourable for agriculture, and sowing was completed exceptionally early. The embargo upon imports of fresh pork from the Continent has stimulated interest in pig breeding which has been comparatively neglected by Ulster farmers during recent years. Last year the agricultural statistics showed that there were only 111,500 pigs in the province—or little more than half the average number during the five years 1909-1914. When it is remembered that there are over 100,000 agricultural holdings exceeding one acre in size in Northern Ireland—the vast majority of them small—the very small number of pigs is somewhat amazing in view of the reputed advantages enjoyed by small holdings for milk and bacon production. As a consequence the Northern bacon curers draw a considerable part of their supplies from the South. An increase in breeding has undoubtedly occurred in the North during the past few months, however, but dissatisfaction is expressed at the fluctuations in the price of pork which have been occurring recently.

General Electric Results.—In spite of the fact that the ordinary shareholders do not receive any immediate benefit in the shape of increased dividend, they will, none the less, be pleased to note that the profits of the General Electric Company, Limited, during the year to March 31st last, were even better than those for the preceding twelve months, in which period also a substantial increase had to be recorded. The exact measure of recent progress can be ascertained from the following comparative table:—

	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.
Net profit	796,149	566,582	751,486	835,561	1,029,983	1,076,809
Brought forward	175,668	348,094	217,024	217,121	212,452	214,256
Depreciation	971,817	914,676	968,510	1,009,682	1,242,435	1,291,065
Depreciation	8,000	182,431	243,775	241,241	238,528	235,623
Pension fund	157,915	161,746	182,031	184,044	191,320	195,250
Reserve	17,266	15,283	14,219	13,346	15,546	16,919
Preference div.	229,344	232,594	248,765	252,000	258,000	252,000
Ordinary dividend ..	211,198	105,599	105,599	105,598	158,398	160,648
Carried forward	348,094	217,024	217,121	212,452	214,256	310,624

The net profits rose during the year from £1,029,983 to £1,076,809, the shareholders again receiving 7½ per cent. The depreciation account receives about the same

as a year ago, although the reserve appropriation at £120,000 is roughly £50,000 lower. On the other hand, the amount carried forward has been raised from £214,256 to £310,624. It is a pity that whereas profits were formerly separated into the two items, "Profit from Trading Account" and "Income from Investments," in the latest report the two are lumped together under one heading. This in itself is not a serious matter, but it is the more unwelcome as the retrograde step is taken at a time when the call for more illuminative accounts is becoming more and more insistent. The balance-sheet shows that sundry debtors, including amounts due from subsidiary companies, have gone up from £3,183,523 to £3,377,024, and creditors from £1,723,966 to £1,824,853. A decline in the holding of British Government securities from £899,078 to £790,992 has been accompanied by an increase in other investments from £1,361,864 to £1,494,770. The balance-sheet discloses a strong financial position, goodwill and patents, loose plant, &c., and fixtures and installations each being taken at a nominal figure of £1. Total reserves are now £830,000.

African and Eastern Trade Corporation.—The directors of the African and Eastern Trade Corporation, in presenting their accounts for the year ended December 31st last, are able to record that "the gradual improvement in trade referred to last year has been fully maintained during the period under review." In support of this statement the profit and loss figures show an increase in net profits from £471,049 to £501,815. As will be seen from the table given hereunder, however, earnings are still very much lower than they were in 1922:—

	1922.	1923.	1924.	1925.
Net profit	739,774	442,353	471,049	501,815
Brought forward	41,003	242,394	271,985	319,870
Depreciat'n, reserve, &c. ..	780,777	684,747	743,034	821,685
Prof. dividend	200,000	60,000	67,500	91,000
Ord. dividend	128,322	133,799	134,921	141,283
Carried forward	210,061	218,963	220,743	254,000
	(8%)	(8%)	(8%)	(8%)
	242,394	271,985	319,870	349,360

With the addition of the sum of £319,870, representing the amount brought in from the previous year's accounts, the total available balance is brought up to £821,685. This time depreciation receives £60,000, compared with £25,000, although the income-tax reserve is only augmented by £20,000, against £30,000. The present accounts show that the issued ordinary capital has risen by £218,511, and the preference by a similar amount. This accounts for the increased disbursements to the shareholders shown in the table given above. The balance-sheet figures show no changes of major importance during the twelve months, although it is shown that cash has increased from £162,756 to £223,512, while sundry debtors account for £355,775, whereas a year ago they figured for £194,378. Stocks are nearly £400,000 higher at £2,397,798. The bank overdraft has been slightly reduced at £196,940, and the reserves (including depreciation) now figure for £684,000 more at £2,684,015.

Morris Motors.—An interesting new company registration recorded this week is that of Morris Motors (1926), Limited. This most prominent mass-production motor-car producing concern has hitherto been a private company, and now becomes a public company. The nominal capital is £5,000,000, divided into 3,000,000 preference and 2,000,000 ordinary shares of £1 each. Mr W. R. Morris himself remains as managing director. This event is of great interest to the investment world, as it is taken to foreshadow a public issue of shares at an early date.

Spiers and Pond.—The well-known London catering firm of Spiers and Pond, Limited, has this year to record a further decline in earnings. The directors, however, pass no comment upon this downward movement, leaving the shareholders either to assume that it is not worthy of special note, or that it is a more or less natural reflection of the depression in trade. It may here be of interest to note that during the period covered by Spiers and Pond's

accounts J. Lyons and Co.'s profits rose by £36,378 to £154,960, while during the year ended October last those of the A.B.C. went up from £146,970 to £147,062. The fall in profits is not, it is true, of serious extent, but it, none the less should be noted that it follows similar movements in the two preceding years. The accounts are made up to March 31st last, and the latest figures are given in comparative form below:—

	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.
Profit	£ 136,072	£ 145,748	£ 155,901	£ 148,614	£ 147,341	£ 130,828
Deb. int., &c.	31,209	41,590	36,126	35,022	38,391	38,604
Net profit	104,863	104,158	119,774	113,592	108,950	92,224
Br'gt forward	15,652	22,531	13,114	12,651	13,516	13,917
Reserve, &c.	120,515	126,689	132,888	126,243	122,466	106,141
Directors	22,000	22,000	22,000	17,000	17,000	7,000
Dividend	5,000	5,000	5,000	5,000	5,000	4,611
Carried forward	70,984	86,575	86,540	86,544	86,549	86,553
	(12½%)	(12½%)	(12½%)	(12½%)	(12½%)	(12½%)
	22,531	13,114	19,348	17,699	13,917	7,976

Gross profits, it will be seen, contracted from £147,341 to £130,828, while net profits work out at £92,224, compared with £108,950. Thus, with the addition of the sum of £13,917 brought in, the disposable balance is approximately £16,300 lower at £106,141. The shareholders do not have to suffer (receiving the usual 12½ per cent.), but the reserve allocation is cut down from £17,000 to £7,000, and the balance carried forward is reduced from £13,917 to £7,976. The balance-sheet does not show much alteration, the most important movement being a re-arrangement of the investments. The reason for this is not given by the directors. The accounts show, however, that while the holding of British Government securities has declined from £107,608 to £79,230, the item "loans to and shares in subsidiary companies" has gone up from £20,778 to £54,825. Presumably, therefore, a proportion of the gilt-edged investments has been sold to finance certain of the subsidiaries. Shareholders, however, will have to wait until the meeting for an explanation.

Co-operative Insurance Society.—The detailed valuation report of this society for the five years ended December 31st last has been issued. In the ordinary life department the Institute of Actuaries table was used with 3½ per cent. interest, and in the industrial department the English Life Table, No. 8, also with 3½ per cent. The valuation was on a net premium basis throughout. The assets were revalued as at December 31st. In the ordinary department, with funds of £2,700,250, the surplus was £329,341, and in the industrial section, with funds of £1,550,851, the surplus was £42,005. In the ordinary life section £221,296 was apportioned to policyholders with immediate participation and £70,000 reserved for policyholders under the deferred bonus plan, £38,045 being carried forward. The reversionary bonus declared was at the rate of £1 18s per cent. per annum on the sums assured, together with a special reversionary of 10s per cent. for every year for which a bonus was allotted at the 1920 valuation. At that valuation the bonus was at the rate of £1 per cent. for each year since 1910. In the industrial life section £32,513 was apportioned to policyholders and £9,492 carried forward. It is recommended that valuations and distributions of profits be annual in future, the next to take place as at December 31, 1926.

Mining Notes.

Shamva.—Once again the annual report of this Rhodesian company, which operates a huge deposit of low-grade ore, discloses a weakening of the position. Reduction operations were handicapped by various adverse factors—the increased hardness of the ore, shortage of labour, and excessive rains; while the revenue was affected by the disappearance of the gold premium. Thus the net profit came out £41,500 lower at £85,700, necessitating a fresh cut in the dividend, notwithstanding that the carry-for-

ward was further drawn upon. We summarise the results of the past three years:—

	1923.	1924.	1925.
Ore crushed	649,500	675,300	656,800
Gold yield	90,230	93,960	88,165
Cost per ton	108.26d	108.06d	108.18d
Net profit	£ 118,900	£ 127,200	£ 85,670
Dividends	£ 135,000	£ 120,000	£ 90,000
Rate per cent.	22½	20	15
Taxation, &c.	£ 8,360	£ 12,970	£ 11,240
Carried forward	£ 30,500	£ 24,760	£ 11,520
Ore reserves	1,852,400	1,450,100	1,234,020
Value	3.4	3.5	3.7

As foreshadowed in the 1924 report of the consulting engineer, an increased development programme was carried out, but it failed fully to replace the ore extracted, the quantity showing a fresh contraction of 216,000 tons. The grade, however, shows an improvement of 0.2 dwt. These figures reflect the irregular character of the results secured, especially in the South Parallel Section. It should be noted that the latter section above the fault, also the western end of the Cymrie above the first level, are practically worked out. During the current year work has been in an even more serious degree than before affected by floods, a loss of nearly £4,000 being recorded for March; hence the absence of any interim distribution. In May the earnings recovered to £8,000, and it is hoped that for the remainder of the year conditions will be normal. The ore reserves, however, have further declined, the tonnage at the end of March being computed at 1,139,000 tons, or not much over one and a-half years' supply for the mill. In these circumstances the firmness of the share quotation appears a little remarkable.

A Rand Fusion.—In connection with the last annual report of the East Rand Proprietary, referring to the refusal of the Union Government to guarantee an issue of second debentures in connection with the proposed amalgamation with the Cinderella Consolidated, we added that "the parties concerned will have to hammer out a scheme of finance unaided." This they have succeeded in doing in a shorter period than might have been anticipated. According to cables received during the week, a scheme has been formulated under which the East Rand Company will be reorganised with a capital of £1,500,000 in 10s shares. Of these 1,532,500 are to be allotted to the present proprietors (in the proportion of two for every three £1 shares now held); 231,900 are to be allotted to the members of the Cinderella (or in the proportion of about one in respect of four); then the members of the two companies are to be offered a total of 518,700 shares at 10s 6d under the guarantee of three finance houses—the Central Mining, the General Mining, and the Johannesburg Consolidated, who will receive as consideration a commission of 6d per share and an option for two years upon 500,000 shares at 12s 6d. Out of the funds provided £250,000 will be devoted towards the repayment of the existing debenture issue of the Cinderella (£500,000), the balance of the consideration being 100,000 new shares. One great advantage of the present scheme is that it will permit the ore from the Cinderella ground to be treated at the East Rand Proprietary's reduction plant—whose capacity is largely in excess of the capacity of the mine. It may be recalled that the East Rand's only dividend in recent years was 3½ per cent. for 1924. The Cinderella Consolidated has been shut down since the middle of 1913; the accounts to December, 1925, showed a deficit of £309,000. The last ore reserve computation gave: fully-developed payable ore, 466,500 tons, value 7.1 dwts; partly developed ditto, 558,300 tons, value 6.4 dwts; also a tonnage in suspense. At the end of 1925 the ore reserves of the East Rand comprised 1,961,500 tons, value 6.5 dwts. Unified, both properties should be able to show improved results.

Nigerian Tin Results.—The annual statements of three of the more important Nigerian tin mining enterprises have come to hand during the past few days. That of the Ropp—whose belatedness is attributed to the recent absence of the chairman in Rhodesia—shows the slightly reduced profit of £110,600. The output decreased by 200 tons to 1,350 tons, but the effect of the shrinkage was partly offset by the enhanced price received for the

metal. The final dividend of 5 per cent. makes a total of 65 per cent., as against 80 per cent. in respect of 1924. The possible effect on the share market of the lower dividend for 1925 was negated by the declaration of an interim distribution of 20 per cent on account of the current year. Rights have been secured over additional areas. At 8,650 tons the ore reserves indicate a shrinkage of 1,100 tons during the twelve months. In view of this, there would seem reason for the shareholders to keep an eye on the progress of events. As regards the Rayfield, the most agreeable feature is the further amelioration which has taken place in the financial position. The profit of £39,350 fell nearly £10,000 short of the 1924 total. Once again the fixed 10 per cent. dividend on the preference shares was paid and the sur-

plus devoted towards clearing the decks. Moreover, £12,500 was received from the sale of certain leases. Thus the company has been able to extinguish the balance of the loans and the mortgage. The shrinkage of 50 tons in the output is explained to be due to the deficient rains. The company holds nearly half the capital in the Entesee Trust, an associated undertaking which last year paid a dividend of 12½ per cent. It would seem reasonable to expect on account of the current year a dividend on Rayfield ordinary shares, which have received nothing since 1919. Like the other two companies, the Ex-Lands earned less last year than in 1924, although the difference is small. The company has, however, followed the questionable procedure of bringing into the appropriation account £10,400 premiums received on the issue of the

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned period of the Year ending March 31, 1927, as compared with the corresponding period of the preceding Year.

	Quarter from April 1 to June 30, 1926, compared with the corresponding Quarter of the preceding Year.		Increase.	Decrease.
	Quarter ending June 30, 1926.	Quarter ending June 30, 1925.

Treasury, June 30, 1926.

balance of the share capital. It is thus able to pay an additional 2½ per cent., besides writing off various items. The reduction in profit in the face of a slightly increased output realised at an enhanced price arises from growth in the working expenditure. Additional plant has just been installed, and the consulting engineer estimates that, taking the year as a whole, an increase of 50 per cent. in the production should result. On the basis of last year's dividend total of 27½ per cent., Ex-lands 25 shares, at 4s 6d, yield about 12 per cent.

UNITED STATES.—ACTIVE MARKETS—BUSINESS OUTLOOK—MOTOR CAR COMPETITION—OIL POSITION.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 22.

FURTHER strength developed during the past week in the securities market, and carried a goodly number of shares up to new high records for all time. The common stock of the United States Steel Corporation, for example, exceeded its best price of the war and post-war periods in selling at 139½. General Motors common, which has shared leadership in the rally with Steel common, came within two points of its previous high in advancing to 148½. Meanwhile oil and railroad shares have continued to show consistent strength. A broadening out of interest and an increase in activity has occurred during the past week, a greater number of shares being traded in, and the turnover on one day reaching up close to the two and a-half million share mark. Public participation has increased, although it cannot yet be called enthusiastic. The bears still say that the upswing is nothing but a rally in a bear market, and that business is declining consistently from a peak made this spring. The bulls, on the other hand, maintain that business again is improving, and that with present supplies of cheap money a greater bull market will be had this year than last. Brokers' loans, incidentally, increased during the last week for which data are available, that ended June 16th. The gain amounted to \$43,000,000, and brought the total as reported to the Federal Reserve Bank up to \$2,517,000,000. This figure still is some \$624,000,000 below the peak for the year.

Certainly there have been some signs of improvement in business. Steel buying has picked up appreciably during the last few weeks, and the prices of a few steel products have been advanced. Several of the non-ferrous metals have also moved up to slightly higher quotations. Some observers are inclined to regard these movements as significant, in view of the fact that the index of wholesale commodity prices prepared by the Bureau of Labor Statistics showed stability during May. It rose 0.3 of 1 per cent. to 152 per cent. of the 1913 average, this being the first advance in this index since last August. This statement of the case perhaps overstates it slightly. The index moved very little during the last quarter of 1925; but it did recede rather markedly during the first quarter of this year. In any event, it has been more stable during the current quarter, and now shows signs of moving upwards. The circumstances suggest the possibility that business has been undergoing a slight recession, from which it may recover during the autumn. Favourable to this view is the fact that business at no time this year has been really bad; on the contrary, it has been remarkably good. Nor has it been unhealthy in the fashion that is typical of the top of "ideal" business cycles. There has been no inflation of commodity prices, no loss of efficiency or slowing down of the business turnover, no congestion of credit and no advance in money rates. Business has remained remarkably efficient. At the same time employment has continued full, with wages at top levels. With commodities cheapening, public purchasing power obviously has remained high. Accordingly, it is quite apparent that a recovery in business after a slight breath-catching recession is entirely possible. It is too early as yet to say whether something of this kind is on the cards, particularly as no very clear line is obtainable at this juncture on the crops; but the fact remains that prices are

Every Description of Home and Foreign Banking Business transacted

showing somewhat greater steadiness and that many bankers report a slight improvement in business. The depression that was predicted on statistical grounds has failed to appear. The pessimism that was created by the March break in the share market has been dissipated. The disposition at the moment is to take a steady view of the situation, and to recognise the possibility that recovery rather than reaction may be the next development.

Competition continues to be the feature of the motor industry. That the total volume of business is good is demonstrated by the May production figures. Close on to 395,000 passenger cars and over 51,000 trucks were produced in the United States during the month, as compared with 384,000 and 45,000 respectively in May of last year. The May output was slightly below that of April, but, seasonal tendencies considered, there is nothing remarkable about that. For the first five months passenger car output of the United States and Canada amounted to 1,816,000, as compared with 1,580,000 last year, while truck output totalled 227,000, as against 201,000. For this good business, however, the manufacturers are struggling keenly. A certain amount of price-cutting has developed, Ford, for example, reducing his prices \$15 to \$45 a model. His new low prices bring the touring car with self-starter and balloon tires down to \$380. It is apparent, however, that price-cutting does not furnish the solution of the problem, and even in the case of Ford it is looked on as a temporary expedient. The public during the past year or so has insisted on improved cars, and has been willing to pay for its preferences. Consequently, many new models are impending. Willys is bringing out a new light-weight, low-priced car that will have four wheel brakes and pressure oiling, and that is expected to add to Ford's troubles. Several makers of four-cylinder cars are expected to go to sixes, and a number probably will utilise single sleeve valve motors. Hudson, which has followed the Ford lead for years in making its play on low-priced coach models, is stated to be about to bring out an all-steel coach at a higher price. Meanwhile, there are persistent rumours that Ford will take the plunge away from the four-cylinder model, to which he has clung since 1908, and go in for a six. Some believe that this "six" will be a two-cycle affair on Diesel lines. In any event, the next few months in the automobile industry promise to be exceedingly interesting ones.

Oil shares continue to be well bought on the excellent statistical position of the oil industry. Production has increased slightly since early in the year, but is still running materially behind last year. As yet there have been no gigantic new pools such as have upset the equilibrium of the industry repeatedly in the last several years. At the present moment there is a rapid development of what promises to be an excellent oil-bearing region in the Texas Panhandle, but the increased output that probably will come from this source is not expected to prove seriously disturbing to the price structure. Many rumours have been spread during the past few weeks with regard to mergers, but they have been less reliable than those of some months ago, which were followed by consolidations. The name of the Marland Oil Company, in which the Morgans have an interest, has been mentioned frequently, but this company is committed to nothing in the merger line. Atlantic Refining and Union Oil of California also have been mentioned, but the fact seems to be that the strength in the shares is due to the buying of operators who thought that mergers ultimately might develop or who saw a chance to make a turn in the market

rather than to actual merger negotiations. Mergers for some of these companies may be logical, and ultimately may develop; at the moment, however, the basis of agreements does not seem to exist.

FRANCE.—THE NEW CABINET—BANK OF FRANCE CHANGES—STABILISATION AND RATIFICATION.

(FROM OUR CORRESPONDENT.)

PARIS, June 30.

THE tenth Briand Ministry appeared before the Chambers for the first time yesterday, and its prospects of accomplishing the work of financial restoration, which it has ostensibly been brought into existence to carry out, may perhaps be gauged by the fact that the franc, which was quoted officially at 169.40 when the market closed yesterday, has dropped during to-day to 173.

The new Cabinet's greatest weakness, perhaps, is that it has been drawn entirely from the groups of the Left, and that none of the sections further towards the Right, on which M. Briand will almost certainly have to look for an appreciable amount of support, if his Ministry is to survive, are represented in it. If technical ability, however, fitted to cope with the present critical situation counts for anything, the new combination has enough and to spare. M. Caillaux has with him at the Ministry of Finances, as Under-Secretaries of Finance and of the Treasury respectively, MM. Piétri and Duboin, who rank high among the unusually strong group of financial experts belonging to the present Parliament. Both have a remarkable fund of financial ideas and of sound financial imagination, as their numerous published dissertations have shown. M. Nogaro, who was given the portfolio of Minister for Public Instruction, as much because of his ability as a financial expert as for his standing as a scholar, is another element of strength. The same may be said of M. Chapsal, the new Minister of Commerce, who has won a solid reputation, first as a high official of the Ministry over which he now presides, and latterly as a very able president of the Customs and Excise Commission of the Senate, which has played an important, although non-spectacular, rôle in connection with Budget modifications recently. MM. Chapsal, Nogaro, Piétri, and Duboin and five others of their colleagues hold Ministerial rank for the first time, so that the new Cabinet (which totals twenty-two) cannot be said to be lacking in new blood. General Guillaumat, who has replaced M. Painlevé at the War Office, has come direct from the command of the Armies of Occupation on the Rhine, and has never before figured in Parliamentary life. He is understood to be the personal nominee of M. Caillaux, and his presence at the political headship of the Army is regarded as significant, in view of the rumours that have been current for some two years past as to the possibilities of a Nationalist coup d'état.

The general criticism is that the new Ministry, instead of reflecting the universal desire for the financial situation to be taken in hand firmly, and without regard to party political interests, is far too "Gauchist" in composition to be able to deal with the problem solely from the national point of view. There is also a widely expressed fear that, although the Ministry is nominally under the command of M. Briand, the real dictator of the Cabinet may prove to be M. Caillaux, whose recent tenure of office as Finance Minister is regarded as having by no means added to his authority. This impression was deepened by the disclosure that M. Caillaux, before accepting office, insisted on being also given the vice-presidency of the Ministerial Council, which has for many years been held by the Minister of Justice, and which carries with it the duty of acting as Premier during the latter's absence.

The dramatic action of M. Caillaux in dismissing M. Robineau from the post which he has held for several years as Governor of the Bank of France, came with a distinct shock to public opinion, in view of the fact that the Cartel des Gauches have been persistently calling for the head of this old and tried officer ever since they came into power two years ago. The shock was all the greater from the fact that M. Caillaux took this step unexpectedly, three days before the first appearance of the new Ministry before Parliament. M. Robineau's dismissal was made known in the form of an official

announcement in the *Journal Officiel* to the effect that M. Robineau had been appointed Hon. Governor of the Bank, and that M. Moreau, director-general of the Banque de l'Algérie (the second of the French banks of issue), and inspector-general of finances, had been appointed to succeed him as Governor. An official *communiqué* sent to the newspapers added—in allusion to alarm that has been repeatedly expressed to the effect that the aim of M. Caillaux and his political friends is to transform the Bank into a purely State institution—that "M. Moreau will maintain firmly the independence of our great bank of issue, whose credit must remain distinct from that of the State." M. Moreau was *chef de cabinet* to M. Rouvier, who was Premier in 1905-6, and he has also filled a corresponding post under M. Caillaux himself.

It will be remembered that there have been frequent allegations for many months past of friction between the responsible directors of the Bank of France and the Government, and particularly lately, during the tenure of the Ministry of Finance by M. Caillaux, and more recently by M. Raoul Péret. The latter's resignation a few weeks ago, indeed, was alleged to have been primarily due to his inability to induce M. Robineau to consent to allow the Bank's gold reserve to be utilised by the Government as a guarantee for credits for the purpose of supporting the franc on the exchange markets. M. Robineau's dismissal is regarded by a large section of opinion as directly due to political considerations, and the view expressed by Cartellist journals—to the effect that "the first act of the new Cabinet has been to strike plutocracy at its most typical and most mischievous point," and to bring about the destruction of "a State within the State" which had become "the citadel of reactionism"—is generally considered as revealing the motives of M. Caillaux's first important official act in his new post. The alarm caused by M. Robineau's dismissal was somewhat allayed yesterday by the publication of an official statement by M. Caillaux asserting that "there has not been and cannot be" any question of utilising the Bank's gold reserve as a guarantee in connection with any foreign loan, and there the matter remains for the moment.

The dismissal of M. Robineau synchronised with the nomination of M. Briand, Senior Deputy-Governor of the Bank of France (and one of the members of the Committee of Experts which is now drawing up recommendations for the restoration of the financial situation) to replace M. Moreau at the Banque de l'Algérie. M. Leclerc was promoted to the post of Senior Deputy-Governor, and Professor Charles Rist, of the Paris Faculty of Law (another member of the Committee of Experts) was appointed Deputy-Governor of the Bank of France.

The formal declaration made to the Chambers by the new Ministry yesterday was received in a distinctly lukewarm manner in the Lower House, and almost chillily in the Senate. As the text confirms, the statement lacked greatly in precision and proved disappointingly foggy. The Government intimated that it proposes to devote itself solely to financial restoration. The Budget having been balanced, no further "notable effort" will be required from the taxpayer, and the Government realises the necessity "to modify a fiscal system which experience has shown to embody certain abuses." It proposes therefore, to reduce substantially the general income-tax rates and the scale of taxation on securities. According to reports in political circles, M. Caillaux has the intention of compensating for these reductions by appreciable increases in the succession duties. The declaration confined itself, however, to forecasting the modification of the existing categories of taxation and the imposition of stricter methods of collection. The real task of the Government, it is recognised, will lie in removing the danger to the Treasury arising from the floating debt, and in this connection it will base its policy on the report of the Committee of Experts. This done, it will be able to approach "the essential portion of its programme: the stabilisation of the franc," by erecting "the barrier of a reasonable convertibility and to re-establish, on the basis of new but fixed parities, the security of transactions and of contracts, the normal play of business affairs and the legitimate remuneration of labour and capital." The Government relies on the co-operation of the Bank of

France, the independence of which, the declaration significantly repeats, will be scrupulously respected. The Government recognises that Allied Debt settlement will be necessary before stabilisation can be brought about, and insists on the question of the ratification of the Washington agreement being speedily accomplished. No mention is made in the declaration of the limitations and restrictions of consumption, of which so much has been heard, and the declaration concludes with an urgent appeal for a speedy return to the old Parliamentary electoral system, in replacement of the present form of proportional representation. The Government, after the reading of the declaration, asked that the discussion of its financial policy be postponed until Tuesday next, by which time M. Caillaux hopes to be able to present definite proposals. One reason for this adjournment was that the report of the Committee of Experts is expected to be completed by the end of the week, and on this M. Caillaux proposes to base his plans.

The ratification question has now assumed first importance, and there is every indication that, in view of the increasing opposition to the terms of the agreement, the Government will be obliged to make a further attempt to secure easier conditions. This question may be found to override all others during next week's debate.

GERMANY.—THE SIX MONTHS' BOURSE BOOM—BURGSTRASSE METHODS.

(FROM OUR CORRESPONDENT.)

BERLIN, June 30.

THE Bourse quotations upward movement, which began on the first Bourse day of the year, has taken an extraordinary character. Foreigners are directly and indirectly interested in it. All along, but in particular during the past month, there has been heavy foreign buying, not only by sound-money countries, but also, and at times predominantly, by French and Belgian speculators, whose paper francs, indeed, have small purchasing power for mark securities, but who buy German stocks in the hope of preventing further loss, and of recouping themselves for past losses. This is one form of the "Flight from the Franc"; and, so far, these speculators have not only prevented further loss, but have made money through the rise in mark stock quotations. Calculation shows that a French stock buyer who put his already depreciated francs into certain German stocks when they stood lowest last year, could to-day sell them for a sum in marks equal to the same sum in gold francs. American buying has also been heavy. The usual phenomenon of Bourse booms is witnessed, that the outside public buys either near the top or, at least, after a great rise; and as a result of this, trading is so active that Bourse hours are sometimes found insufficient for coping with business.

Compared even with Wall Street booms (the present has lasted five years), the German six months boom has been extremely rapid, so that solid, not naturally speculative stocks, such as those of the great coal and steel concerns, stand at fourfold prices above the lowest level of 1925, which was in most cases reached late in the year. Further, there have been only two reactions of dimensions worth mentioning, one in February, following the initial January rise, and the other in April. The former embraced almost all stocks, but from the latter were excepted the dyes and electrotechnical stocks, which continued to soar. Shipping stocks, on the basis of the American Restitution Bill, began to rise weeks before the end of 1925, and reacted at the beginning of April, on receipt of unfavourable news about this Bill; and the leading papers in this class, though sharing in the latest boom, have not yet reached their level of April 1st.

The boom has proceeded group by group, according to old observation. While all stocks rose more or less, the movement began with the shipping, next the dyes and electro-technical, and next the oils, chemicals, and steel-coals. The latter are really the great Bourse papers, and they would normally lead the market, but their movement was retarded by delay in the formation of the Western Steel Trust, and later by doubt as to its foreign financing. It was only after the conclusion of the Trust's American loan that the movement upward became very rapid. Thus

in January-May Gelsenkirchen rose only from around 60 to around 100, but it has since risen to 160. Dyes rose almost without a break, I. G. Farbenindustrie (Dyes-Nitre Trust) from about 102 at the beginning of the year to around 248. A good example of electro-technical is Siemens and Halske, which rose during the six months from around 63 to 175. Deutsche Erdoel (Oil) rose in the six months from around 60 to around 148. Hamburg-American rose from around 105 at the beginning of the year (about 44 low point of 1925) to over 160 on April 1, and is now around 155. Another group which gained is potash. These stocks, however, being dividend-payers, stand permanently high, and they are relatively steady. Aschersleben Potash rose from about 95 at the beginning of the year to around 150.

How long this boom is going to last cannot be foreseen. It is impossible to say whether the major bull movement has nearly reached its top, or whether, if not, a temporary minor reaction will come. That the upward pace has been so very rapid is no surprise to students of Continental Bourses, who know that bull movements of given dimensions (absolute differences in quotations) are usually more rapid than bear movements of the same dimensions. Experienced speculators know that the further a particular rise has gone the more probably it will end in a drop, owing to the overbought condition of the market, and to the fact that most buying is on margin or credit. But the Berlin movement has been so much helped by cheap home money, foreign money, and growing business confidence, that its chronic overbought condition has so far had no effect; and on the day of writing the BURGSTRASSE (which is the name of Berlin's Capel Court) is engaged in another upward leap. Some time, not far off, however, either the major boom will reach its end, and be followed by a long decline, or if that does not happen there will be a severe reaction before the upward movement is resumed. In either case those Germans or foreigners who persist in buying after a rise may easily suffer loss, especially if they are buying on margins or credit insufficient to withstand a considerable drop in quotations.

Apart from the group character of the boom, there have been disparities in the rise due to another cause. While the Bourse reports, indexes of quotation averages, and diagrams all indicate enormous rises, the majority of stocks have risen very moderately, though of late their pace has grown. This majority consists of stocks quoted only in the "Unity Market." To understand this the organisation of BURGSTRASSE trading must first be understood. There are three forms of trading and three different markets. First comes the "Futures Market" (*Terminmarkt*). In this there are fortnightly settlements and no cash settlements. To the Futures Market belong only stocks of big companies, which are also active stocks. The present list contains 64 stocks. Dealings for future settlement in these 64 stocks must be in considerable units, usually 6,000 or 7,000 nominal. The number of stocks is steadily being increased. Persons who want less must buy in the Unity Market (*Einheitsmarkt*). Futures dealings may be prolonged beyond a fortnight by a system differing from that of London, and necessarily from that of New York, where all dealings are theoretically for cash, and where there are no settlement days. In the Futures Market there are continuous quotations, as in London and New York. All prices actually traded at are recorded and quoted, though there is no ticker, and the ordinary newspapers usually print only high and low or opening and closing quotations. Next comes the Variable Market. It embraces about 100 stocks and some bonds. Here the stocks are mostly important and active, though in general less so than those in the Futures Market. The Variable Market takes its name from the fact that, as in the Futures Market, stocks are quoted for every deal; but it differs from the Futures Market in that stocks are bought and sold for cash. In practice payment is within three days of the deal. If the Futures list is to be increased, this would in most cases be done by transfer to it of stocks already on the Variable List. Stocks may be bought "variably" only in certain minimum units, but the units are smaller than those of the Futures List, and the usual minima are 2,000 and 3,000 marks nominal.

Finally, comes the Unity Market (*Einheitsmarkt*), which is currently called the "Cash Market," but this is an error, because also "variable" stocks are sold for cash. In the Unity Market are bought all stocks not quoted in either of the two first-mentioned markets, and all stocks in the two first-mentioned markets which are dealt in in nominal values below those given. As some 1,000 securities are quoted on the Bourse, the Unity Market is much the biggest. But most of the stocks quoted exclusively in it are either inactive or are the issues of smallish companies. For the Unity Market there is only one quotation a day, and all deals on this market must be made at that quotation. Stocks quoted continuously or "variably" on the Futures Market and Variable Market have also their Unity Market quotations. All Unity Market quotations are fixed by an official broker (not a jobber), who does not himself deal, and who is paid by both buyer and seller a percentage on the value of each deal. His quotations are the price which will fit the greatest number of orders, whether with limits or at best (*bestens*). With an active stock this is a complicated process. Where the supply of a stock is inadequate to meet all buying orders at the limits given, the supply is partitioned *pro rata*. If a stock is inactive, and if an order to buy or sell at best can be executed only by paying or accepting an unreasonable price (as compared with the last preceding quotation), the Bourse Committee "strikes" the stock, and the would-be buyer or seller is spared an unprofitable deal. The Bourse quotation lists show by means of abbreviations not only the prices at which business has been done, but also other features of the trading. Thus where all buyers and sellers have been satisfied appears opposite the quotation "bz" (*bezahlt*, or "paid"), the addition of a G (*Geld*) means that the demand, though in part satisfied, exceeded the supply, and G. *etwas bz.* (something paid) means that the supply has far from satisfied the demand. There are corresponding abbreviations for use where offers have exceeded the demand. No native or foreigner who does not understand these technicalities is competent to buy or sell German stocks. Often foreigners, who have paid as much as 5 per cent. more than the quotations in the brief cabled reports to abroad, believe that they have been overreached; but even bigger differences often appear between a quotation on the Unity list on one side and on the Futures or Variable list on the other; and the cabled reports do not indicate which market is meant.

Trading in futures was suspended during the war, and restored only last year. Before the war the settlements were at the month's end. To-day, in order to reduce the risk, they are fortnightly; but there is an agitation in favour of a return to monthly settlements. In order to ensure that all obligations shall be fulfilled at each fortnightly settlement, the Berlin Bourse has a guarantee fund, to which bankers and other institutions which act as intermediaries in trading subscribe in rough proportion to their importance. The banker in turn, of course, requires his private buyers and sellers to give him sufficient security. This system has worked well, and no difficulties have yet been experienced on any settlement day.

AUSTRALIA.—COMMONWEALTH AND STATE FINANCE—QUARTER'S BANK FIGURES.

(FROM OUR CORRESPONDENT.)

MELBOURNE, May 27.

THE conference between Commonwealth and State Ministers to consider the proposal of the Commonwealth Government to discontinue *per capita* payments by it to the States, now made mainly on the basis of 25s per head of population, and, at the same time, to discontinue the Federal income-tax (except as regards companies, and as regards Government securities already subject to that tax) has been without result, as the State Ministers have not seen their way to agree to any arrangement on the subject. The Commonwealth Government and Parliament, however, have full powers to decide the question for themselves, and it is, therefore, open to them to discontinue the *per capita* payments without consulting the States. If this were done, whether by arrangement or otherwise, the States would have to raise additional direct

taxation by reorganising their individual systems, while the taxpayers as a body would not gain, as reduction in the expenditure of the Commonwealth and States is not proposed. A further point is that even if the Commonwealth withdrew from the field of income-tax, it would be at liberty to re-impose it at some future time if a Government with a lavish spending policy came into office, a matter depending upon the electors, and that the Commonwealth is in a position to contemplate relinquishing the Federal income-tax in return for the discontinuance of the *per capita* payments to the States is due to the exceptional buoyancy of the Customs revenue, which, in case of any reduction in imports, would not necessarily be permanent.

The quarterly average returns to March 31st of the fifteen ordinary banks (exclusive of the Commonwealth Bank of Australia) relating to liabilities and assets within Australia and New Zealand (but not including London figures) show deposits, advances, and cash items comparing with the previous quarter and twelve months previously as follows:—

	March 31, 1925.	Dec. 31, 1925.	March 31, 1926.
Deposits—			
Australia	£ 251,483,695	£ 247,155,107	£ 261,216,723
New Zealand	53,090,842	49,726,896	51,314,674
Total deposits	304,574,537	296,882,003	312,531,397
Advances, &c.—			
Australia	208,373,310	222,416,610	222,547,743
New Zealand	49,898,909	54,748,666	54,438,610
Total advances, &c.	258,272,219	277,165,276	276,986,353
Cash items—			
Coin and bullion (Australia and New Zealand)	29,466,807	34,042,581	34,063,544
Australian notes and cash with Commonwealth Bank	28,684,773	23,855,912	26,372,111
Legal tender notes of other banks (New Zealand only)	269,806	216,748	269,773
Total cash	58,421,386	58,115,241	60,705,428

The increase in deposits for the quarter is the normal result of realisation of wool, wheat, and other articles of the season's production. As, however, the total value of production for 1925-26 is appreciably smaller than for 1924-25, the supply of fresh money derived therefrom is so much less, and this is likely to affect the monetary position as the present year advances, especially as the banks continue to experience an active demand for accommodation from their customers. Comparing the figures for Australia and New Zealand together with a year ago, the increase in deposits is £7,956,860, while advances, &c., have increased by £18,714,134. Taking Australia by itself, deposits show an increase of £9,733,028, and advances, &c., an increase of £14,174,433. The latter movement includes an increase of about 4½ millions in Government and municipal securities, after allowing for which the increase in ordinary advances has been fully equal to the increase in deposits in Australia for the twelve months.

The principal figures (within Australia) of the Commonwealth Bank of Australia, not included above, compare as follows:—

	March 31, 1925.	Dec. 31, 1925.	March 31, 1926.
Deposits	£ 26,051,895	£ 33,487,620	£ 24,253,615
Savings bank deposits	39,750,611	42,015,315	42,740,488
Balances due to other banks	3,309,563	4,261,505	5,241,729
Discounts, loans, &c.	12,489,389	11,353,877	12,735,245
Government & municipal securities	38,758,386	39,263,843	39,564,551
Coin and bullion	2,559,566	7,380,449	8,225,582
Australian notes	9,252,489	8,847,851	7,527,681
Balances due to other banks	4,669,798	2,594,931	2,547,152

The fluctuations in the deposits of the Commonwealth Bank are largely the effect of movements in the Government account.

Coin and bullion held by the ordinary banks in Australia and New Zealand and by the Commonwealth Bank in its banking department, as above, together with the gold reserve against the Australian note issue, amount to £68,289,126, against £57,326,373 a year ago, the increase being due to last year's imports into Australia.

INDIA.—CURRENCY AND EXCHANGE—AGRICULTURAL IMPROVEMENT—COTTON INQUIRY—GOVERNMENT LOAN—REPAYMENT OF STERLING SECURITIES.

(FROM OUR CORRESPONDENT.)

CALCUTTA, June 3.

BANK rate, after remaining at 6 per cent. from early December, fell to 5 per cent. on May 20th, and, it is forecast, may drop to 3 per cent., certainly to 4 per cent., during the period of the official loan operations. Exchange keeps steady, the offer of Reverse Councils, though unutilised, sufficing to avert the decline at one time threatened as the result of speculative operations which ceased immediately Government disclosed its hand. Official intervention on these lines has been criticised as involving an attempt to prejudge the recommendations on this point of the Currency Commission; nevertheless the action taken involves no real departure from the policy previously pursued. A permanent fixation of the rate at 1s 6d is now anticipated, also adoption of the gold bullion standard instead of the gold exchange standard hitherto operative, the process of reform also probably including the transfer of the paper currency either to the Imperial Bank of India or to a new central bank super-imposed on all the other institutions now existing. A Banking Development Committee is expected to carry the campaign against the "hoarding habit" a stage further.

Preliminary inquiries intended to prepare the ground for the Agricultural Commission are in full swing, and a considerable expansion in the scope and operations of the central and provincial agricultural departments is foreshadowed, the present yearly outlay in this direction falling short of the financial assistance extended to a single industry, viz., steel manufacture, whose development affects only a relatively insignificant fraction of the total population, compared with agriculture. In Bengal, to take one province only, the investigations into jute alone are officially calculated to be yielding 1,000 per cent. per annum on the expenditure incurred. Taking all the Bengal crops together, the Director of Agriculture estimates an "immediate possibility" of adding Rs. 10 crores per annum to the net income of the province, merely by a wider distribution of the improved official types of seed, the realisation of this increase requiring no outlay of capital in the shape of manures, irrigation works, or other expenditure of any kind. Nevertheless the use of improved types of seed is, of course, only the first stage, for by economic manuring and a suitable rotation of crops a further increment of profit is always realisable. Furthermore, there is no doubt that the introduction of irrigation on a wide scale would not only insure existing crops, but enable cultivation of other profitable crops to be undertaken. Unfortunately, in Bengal irrigation has been sadly neglected.

Figures of cotton mill production in the Bombay Presidency for the year ending March 31st last indicate a smaller curtailment of output in consequence of the strike-cum-lockout than was expected. In thousands of lbs yarn production totalled 423,451, against 474,292 in 1924-25, and 398,552 in 1923-24; the corresponding figures for piecegoods being 342,030, against 347,672 in the preceding year, and 307,915 in 1923-24, whereof grey and bleached piecegoods totalled 242,468 last year, 241,208 in 1924-25, and 217,077 in 1923-24. Outputs of mills situated outside the Bombay Presidency are not yet available. After prolonged negotiations a fiscal inquiry has now been sanctioned, and will provide the opportunity for a thorough probing of the conditions governing the production and distribution of cotton manufactures in this country. Penalisation of "sweated" imports from Japan is the Indian millowners' objective, and no suggestion will arise of imposing higher duties on goods of Lancashire origin. A preferential duty, securing taxation of all non-British imports, is possible, but perhaps hardly probable, unless, indeed, the impending elections effect important changes in the composition of the Legislative Assembly, in which event, as a political "gesture," a preferential duty might perhaps be reckoned among the possibilities. Viewed as a solvent of the difficulties of the Bombay mills, the elimination or curtailment of Japanese competition can be regarded only as a mirage, destined, like

the abolition of the excise duty, to leave the existing position practically unchanged. A Bombay-Manchester monopoly of the Indian market will not increase its consumption of piecegoods, on the contrary, any stiffening of prices so contrived would merely accentuate the general tendency among consumers, faced with high prices, to "do without," or resort to inferior products. In the ultimate analysis, the real source of anxiety should be not that Japanese goods have passed into consumption so freely, but that, despite their low price-level, the demand for them has been on so limited a scale. The lesson is that before the pre-war standard of imports can be restored, piecegoods prices must fall even below the Japanese conception. That view may shock Lancashire's complacency, but its corroboration may be found in the heavy decline in imported piecegoods in 1925-26.

Joint-stock registrations, which reached their peak in 1919-20 with 948 companies, commanding an authorised capital aggregating 282 crores, reinforced in the succeeding year by 1,039 companies authorised to raise 148 crores, have, since that hectic period, experienced a steep decline, the end of the boom flotations coming in 1921-22 when registrations were limited to 717 companies making a relatively modest demand for 81 crores. Thereafter enthusiasm waned, and contact with industrial realities was restored. As a consequence, in 1922-23 registrations did not exceed 496 companies (34 crores); in 1923-24, 432 (27 crores); the bottom of the incline being reached with 411 companies registered in 1924-25, with an aggregate authorised capital of approximately 21 crores. A slight recovery is now recorded, the figures for 1925-26 showing 473 ventures, asking 30 crores, little of which has probably been paid up. Even so, liquidations still exceed registrations, the former in 1925-26 totalling 473 companies, with an authorised capital of nearly 36 crores, compared with 502 declared defunct in 1924-25, claiming an authorised capital of almost 59 crores. The process of deflation has extended, with a few exceptions, to Stock Exchange valuations of the shares of joint-stock concerns still in operation.

Concurrently, and to some extent consequentially, there has been a rapid appreciation in Government securities, equivalent to approximately 10 per cent. in the past twelve months; the average yield at present quotations falling somewhat below 4½ per cent., with every indication of falling still further in the next few months. In effect, Government now monopolise the loan market, and could raise this year 20 to 30 crores without difficulty, whereas, apart from conversion operations, they are asking less than 5 crores, and only require this to pay off various sterling securities, including, apart from the balance (£900,000) of the 7 per cent. loan, a selection from the following railway debentures: Assam-Bengal, £300,000; Bengal-Nagpur, £1,900,000; Madras and Southern Mahratta, £500,000; total, including the 7 per cent. loan, about £3,600,000. Unless there is a radical and unforeseeable change in the Indian financial outlook, this gradual liquidation of sterling securities will probably remain a permanent feature of Indian budgeting, abnormal years naturally excepted. Combined with the continued private purchase from this side of the same class of securities, the result will be to release British capital now invested in India for utilisation in other countries less competent to meet their own capital requirements.

ARGENTINA.—CEREAL SHIPMENTS—A BANK IN TROUBLE—A DOLLAR LOAN.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, May 25.

THERE is not much change to report in the general situation as compared with a month ago. Cereal shipments are being well maintained, though a "ca'canny" campaign on the railways during a busy export period, happily now subsiding, has been exercising a detrimental effect on the movement. Moreover, while it would be going too far to assert that the great British strike had any very serious repercussions in this country, it undoubtedly led to a good many nervous speculations, while it lasted, as to its possible outcome and the ultimate influence on Anglo-Argentine trade, so that the news of the triumph of common sense was hailed with manifest relief.

The leading organs of Argentine opinion were particularly impressed with the orderly conduct which was observed throughout the whole of those trying days. The grain shipments in April comprised 370,910 tons of wheat, 199,233 of maize, 157,185 of linseed, and 58,537 of oats, bringing the totals for the four months of the year up to 1,223,987, 803,820, 709,215, and 262,509 tons respectively. This means that while the wheat output is more than 600,000 tons below that for the corresponding period of 1925, maize, linseed and oats are all on the up-grade, resulting in quite a healthy increase in the total. With regard to maize, the Ministry of Agriculture has now issued its first estimate for the season, which forecasts a yield of 7,087,000 tons. This falls short of the bumper crop on which many had been building their hopes, and in some quarters the opinion is freely expressed that the Ministry has erred on the side of caution. Nevertheless, even if an approximation to this figure is obtained, there will be little cause for complaint, seeing that it represents an increase of well over 2 million tons in comparison with last year, and also makes a good showing against the average yield of the preceding five years, which was 5,312,700 tons. The improvement is officially ascribed to an additional area of 589,300 hectares having been brought under cultivation, together with satisfactory yields reported up to the date of the forecast, and the quality of the grain is generally considered as good. On the whole, the grain position is by no means unsatisfactory, allowing for the wide difference between this year's prices and the more favourable ones which ruled last year. Rates are holding without much variation as compared with last month, a drop in wheat being offset by a harder tendency in maize. Wool shipments from October 1st to May 20th were 257,924 bales, comparing with 171,514 in the same period last year, but the market is passing through a quiet time at the moment. In meat exports during January-April there is a rise in chilled beef, but all frozen meats show a falling off as a reflection of the slump in the Continental demand.

The exchange position, after an unsettled tendency during the general strike, is again fairly steady, the present sight quotations being about 45½d on London and \$109.40 on New York. Rates for advances and discounts are inclined to be easier with the decreasing demand. The bank statements for April show the following totals, the corresponding figures for March being given in brackets:—Deposits, \$3,474,487 gold and \$3,439,580,242 paper (\$3,423,426 and \$3,406,618,050); discounts and advances, \$4,208,278 and \$2,980,964,469 (\$4,265,330 and \$2,977,463,817); cash reserves, \$24,530,401 and \$752,990,038 (\$23,735,482 and \$762,542,777); subscribed capital, \$44,704,190 (same) and \$352,453,515 (\$360,687,884).

The retail trade is still slack, but the bankruptcy returns for April were not quite as gloomy as those for March, the liabilities figuring at \$12,288,924 (paper), as against \$15,640,643, and being little different from the figure for April, 1925, which was nearly \$12 millions. One bank has closed its doors and applied for a meeting of creditors, but affairs are not quite so serious as that statement would appear to convey. This is the Banco Comercial del Azul, which was founded 37 years ago in the town of that name, situated in the southern part of the Buenos Aires province. Down to recent times it carried on a sound and satisfactory business in developing the local industries, with particular reference to livestock, and possessed four branches, one of which is located in the capital. Trouble has been developing for some time owing to friction on the board, and it is alleged that a vigorous campaign has been waged by persons interested in discrediting the bank. Furthermore, the Buenos Aires office is understood to have lost heavily by endeavouring to compete in exchange and other banking business with the immeasurably stronger establishments already in the field, a policy doomed to failure from the beginning. The inevitable result was that the depositors took alarm, a run set in, and the last straw was the rejection of one of the bank's cheques, for \$100,000, by the Clearing House. According to a statement presented with the petition, all obligations can be met, but even in that event it will be a genuine pity if, after having done such useful work in the past, the bank should now disappear.

The latest financing arrangement by the Government consisted of a long-term loan of 20 million American dollars to provide for the impending expiry of credits, against which \$10 millions had been drawn by the Ministry of Marine and \$5 millions by the War Ministry. The deal was made with Messrs J. P. Morgan and Co. and the National City Bank of New York, to whom the bonds were issued at 94½ per cent. These expire in 1960, and bear 6 per cent. interest and 1 per cent. cumulative amortisation. Upon being placed on the New York market they were subscribed several times over within a few minutes. This transaction compares with a loan of \$45 millions last June at 92 per cent., and another of \$29 millions four months later at 93½, the improved terms on this occasion calling for no comment.

It is understood that the Government will ask Congress to authorise an expenditure of \$32 millions paper on two cruisers, two destroyers, two gunboats, and three submarines, with a combined displacement of 15,000 tons, independently of the naval programme which is still awaiting approval. This represents the cost of eight first-class destroyers ordered under the Naval Budget of 1909, but which, as a consequence of the war, were never delivered. It was at first announced that the money was available for this purpose, and that the President's decree to the Ministry of Marine would be sufficient, but it now transpires that during the régime of Dr. Irigoyen it was dissipated among other Government departments in the light-hearted manner which characterised that administration.

ROUMANIA.—THE PARLIAMENTARY ELECTIONS—FOREIGN LOANS—CROP CONDITIONS—IMPORT TARIFF—EXCHANGE—OIL PRODUCTION.

(FROM OUR CORRESPONDENT.)

BUCHAREST, June 15.
The elections for the Chamber of Deputies, which took place on May 25th, and for the Senate three days later, worked out in accordance with expectations by giving General Averescu's so-called People's Party a substantial majority in both Houses. The membership figures are not vitally important, since they afford neither a true indication of the political sentiments of the country nor of the party which a year or two hence—if not sooner—will be called upon to form the next Government. As elections are handled in Roumania it is always a "walk over" for the Government in power; and, while it can at least be argued that the political backwardness of the Roumanian peasant class makes it necessary that some measure of "control" be exercised over the electoral contests, some of the methods employed by the Government's agents in the recent elections were crude in the extreme. They were vigorously condemned even by the newspapers which support the late Bratianu regime.

What is important, however, is what use General Averescu intends to make of his Parliamentary majority. So far he has made no clean-cut statement regarding the Government's legislative programme. There has been a great deal of talk about securing foreign loans, "collaborating with foreign capital," stimulating exports, reorganising the country's transport services, &c., but nothing whatever to indicate that the members of the new Government are agreed upon a definite financial and economic policy, or, in fact, that they have a definite policy in any direction. Whenever suggestions are made that seem like a deviation from the policies of the former administration, the Bratianu newspapers are quick to point out that the Constitution prohibits this, or the State and the National Bank regulates financial policy, &c. In brief, General Averescu is expected merely to follow in the footsteps of the Messrs Bratianu.

Parliament will assemble before the end of this month, and presumably we will then learn whether the new Government really intends to "cut loose" from the former regime or whether the appointment of General Averescu as Premier was merely in the hope that the securing of foreign loans would thereby be made less onerous. It is significant in this connection that representatives of the Treasury are already in Rome empowered to close a loan for 200,000,000 lire, which the

Italian Government has promised to help Roumania to secure. The belief at first was that Italy spontaneously offered this loan as an act of friendship to her Latin sister in a moment of acute financial need. Mr Vintila Bratianu, the late Minister of Finance, was prompt to condemn the acceptance of the Italian offer, and subsequent developments seem to indicate that he was right, since the Italians are now stated to have introduced various conditions (namely, purchase of submarines, settlement of war debts, &c.) of which no mention was made when the loan offer was first announced by General Averescu. The main points made by Mr Bratianu, however, were that an amount of 200,000,000 lire is insignificant for Roumania's needs, and that long-term loans ought not to be contracted in unstable currencies.

Heavy rains and floods throughout the kingdom during the past fortnight have raised serious doubts as to the condition of the crops. Earlier expectations were that Roumania this year would have the best wheat harvest of any post-war year, but recent storms have now caused a modification of these expectations. Good harvests this year are vitally necessary, but what is of even greater necessity is the perfecting of the machinery for transforming the exportable surplus therefrom into gold currencies. Roumania raised in 1925 some 2,000,000 tons of maize more than she needed for her home consumption. The greater part of this surplus, however, still remains unexported, and with little prospect now of moving it out before the new crop comes in. A strong agitation is now taking place for currency inflation to finance the movement of the new crop; otherwise, it is pointed out, there is neither the credit nor the circulating medium available for financing a crop movement. Mobilisation of railway rolling stock is also in contemplation, so that grain can be moved from the interior to the ports during the autumn months. Transport facilities are now woefully inadequate, and, even if climatic or financial conditions do not prevent the marketing abroad this year of considerable quantities of grain, transport conditions probably will.

Effective as from June 5th, the new Government promulgated a revision of the import tariff rates on all commodities classified as metallurgical products and textiles. The rates on these commodities were revised upward in a drastic—and nonsensical—manner by the Bratianu administration on April 1st last, the increases in many cases reaching as high as 1,000 per cent. The new rates effective on June 5th, it is stated, in no case raise the rates prescribed in the General Tariff Act of August, 1924, by more than 300 per cent.

After the collapse early in May to a record low point of 1,500 lei to the pound, exchange has improved steadily to a present quotation of 1,150. There is, however, no longer a free market in lei exchange. Since the sharp decline last month the National Bank has begun to exercise control over all purchases of foreign exchange in this country. Such purchases can be made only through the banks that have specific authorisation to sell, and no sales are allowed to be made until the buyer first produces a permit from the Exchange Control Office. These permits are issued only for bona-fide commercial transactions, and not before the actual due date of a bill. A foreign company having lei balances on deposit with local banks can only convert such balances into foreign currencies as and when authority from the Control Office is secured. As lei deposits outside of Roumania are probably insignificant, and as a free market no longer exists in this country, the present rate of 1,150 to the pound is therefore more or less artificial. The ability of the National Bank to maintain this rate—or to improve it still further—depends entirely upon the early securing of foreign loans and the sale abroad of the present season's harvest surplus.

With an estimated crude oil production of 240,000 metric tons for the present month, the total output for the first half of 1926 will reach 1,400,000 tons, against 857,325 and 1,062,000 tons respectively for the corresponding periods of 1924 and 1925. Exports of refined products for the first three months of 1926 reached a total of 224,656 tons, the comparative figures for 1924 and 1925 being 62,072 and 130,762 tons respectively. In spite of growing transport difficulties and the burdensome restrictions imposed by the Government, the oil companies are

showing a high degree of activity, and—unless a breakdown in the transport services brings about an early curtailment of field work—crude output in the autumn will come very close to a figure of 300,000 metric tons per month.

Letters to the Editor.

THE GOVERNMENT'S COAL POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read your leading article on the above subject in your last week's issue, and will you permit me to give what I consider substantial reasons why the Government's coal policy is perhaps much nearer right than you suggest? The eight-hours' day, I take it, was not absolutely rejected by the Samuel Report, and the new Bill only makes it permissive. The Minister of Labour stated in the House of Commons on 28th inst. that with a lengthening of hours economies would amount to something like 2s per ton. A letter appeared in *The Times* on the same day from Mr Ben Greene, showing that there was at present 3 per cent. more world production of coal than could be used, and it was that small percentage of surplus that kept the price low. If this gentleman is correct, but a small improvement in world's trade would wipe out this surplus. But I believe that with the exception of Russia all the exchanges that are now not stabilised are about to be, and that we are about to witness a great revival in world's trade. Without an increase of coal output, industry would not have sufficient, without a great increase of price, which would hinder improving trade enormously. Opinions have been expressed from weighty quarters that a great revival of trade is about to take place. Indeed, you yourself state in your leading article, "The only crumbs of comfort are that the effects upon the whole volume of the country's economic activity are not nearly so great as might have been expected, and there is in industrial circles a considerable degree of confidence that if coal peace is achieved soon, trade may be quickly recovered." This is most illuminating. For if this is the position of affairs, despite these disastrous strikes, what will be the state of world's trade when they are settled and the exchanges are stabilised?—Yours obediently,

PERCY H. JOSEPH.

West Bay Bungalow, Westgate-on-Sea, June 29th, 1926.
[We hope that our correspondent's optimism with regard to an expansion of the demand for coal will be justified by events. But it is surely the height of rashness to base calculations, as the mine owners appear to do, on the assumption that this expansion in demand will be sufficient to prevent the longer working day from leading to a fall in coal prices. We would also refer our correspondent to an article on a previous page of this issue.—Ed., ECONOMIST.]

Books and Publications.

BOOKS RECEIVED.

Coal: Ways of Reconstruction. By Members of Leplay House. (London) Leplay House Press, 65 Belgrave road.

A symposium, the contributors to which include Professor Geddes, Mr George Sandeman, Professor Cecil Desch, and Professor Douglas Hay.

Ferguson's Ceylon Directory for 1926. (London) Ceylon Observer, 180 Fleet street. 25s.

OWING to the general strike the issues of the "Economist" for May 8th and 15th were considerably delayed. Copies of these numbers may be obtained from the usual agents or direct from the office of the "Economist," 3, Arundel street, Strand, W.C.

Covering over 2,000 pages, this is a year-book, as well as a directory, for Ceylon, of all whose activities and happenings full information is given.

Atkins Manual, 1926. (London) Geo. D. Atkins and Co., 1 Drapers' gardens.

Gives detailed information regarding a number of important companies whose shares are quoted in London, amongst which lighting and power companies predominate.

International Crop Report and Agricultural Statistics.

June, 1926. (Rome) International Institute of Agriculture.

West Ham, An Impartial Study of the Facts. By the Editors of the "Poor-Law Officers' Journal." (London) 27 to 29 Furnival street.

Foreign Affairs, July, 1926. (New York) Council on Foreign Relations, 25 West 43rd street. \$1.25.

The July number includes articles on "The Coal-mining Deadlock in Great Britain," by Sir Josiah Stamp, the "Foreign Policy of Soviet Russia," by M. Rakovsky, "National Monopolies of Raw Materials," by Jacob Viner, &c., &c.

The Banker. July, 1926. (London) Eyre and Spottiswoode, Limited, 1 and 2 Goldsmith street, Fleet street. 1s.

Mr William Graham, M.P., in an article entitled "Curbing the Godfatherly State," discusses the Trade Facilities Act. Mr F. A. Szarvasy writes on "Issuing Houses and Their Functions," and the Earl of Selborne on "Banking in British West Africa."

Economica. June, 1926. (London) London School of Economics, Houghton street, Aldwych. 2s 6d.

Contains memoirs of Professor Lilian Knowles, by Sir William Beveridge and Professor Graham Wallas, and an article by Professor Edwin Carman on "Adam Smith as an Economist."

Report of Proceedings of the Second Conference of the Association of Special Libraries and Information Bureaux. (London) Association of Special Libraries, &c., 38 Bloomsbury square. 5s.

Earl Haig's British Legion Appeal Fund. Poppy Day Report, 1925. (London) 26 Eccleston square.

Davide Ricardo. By A. Loria. (Rome) A. F. Formigini.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
July 6.	July 8.

The Stock Exchange is looking for an early reduction in the Bank Rate. Talk of the Rate being lowered to 4 per cent. on Thursday in this week received no particular following, having regard to the incidence of the end-of-June monetary requirements. But next week it is hoped that the Bank Court will see the way clear to bring down the Rate, and, in anticipation, gilt-edged stocks are stronger in their various sections. Conversion 3½ per cent. is the principal feature. The newly-issued Commonwealth Fives, with which underwriters were left to the extent of 61 per cent., strengthened to ½ discount after being ½ discount. Belfast has been in the market with a two million pounds 5 per cent. loan at 99, and several other similar issues are expected in the near future.

French bonds have fallen away, but the tone of the foreign market, apart from these, is better, with improvements in Chinese, Mexican, Brazilian, Argentine, mid-European, and other bonds, money coming plentifully into the market on behalf of the speculative investor. The announcement that Mexico is about to meet some of her coupons, resulted in a fairly widespread improvement in Mexican issues, and the recent nervousness which brought about a slump in Chinese bonds has been replaced by a restoration of confidence.

Home railway stocks have fluctuated according to the anticipations, differing daily, in regard to the length of the coal stoppage. Argentine railway stocks are a good market, further improving under the influence of purchases by the speculative investor, whose activities in this department we have mentioned on several previous occasions. Brazilian railway stocks are also firm. The foreign railway group attracts a good deal of business.

Rubber shares are inclined to be better, notwithstanding the dulness of the raw material and the piling-up of stocks week by week. The tea market is somewhat irregular, though prices are good on balance. Public interest appears to have ebbed out of oil shares; at any rate, for the time being. Cour-

taulds have been up to nearly 7, on completion of a big American order, and Snias strengthened again after a reaction. Textiles, generally speaking, are out of favour. The iron and steel movements are negligible. Spiers and Ponds went back a little upon the report, notwithstanding the maintenance of the 12½ per cent. dividend, and General Electric recovered, the figures showing up well. Cable stocks and shares are better, stock being very scarce. The wireless group is inanimate; Burndeps keep flat.

Shipping shares are colourless. The insurance market is still a little uncertain of itself, and jobbers admit that business is very difficult. In the banking group, foreign and colonial shares are principally in demand. Tobacco shares continue prominently active, with Godfrey Phillips a strong spot. Underwriters of the Telephone Manufacturing issue received 94 per cent. of their subscriptions, and the price opened at 1s discount. The strength of gas stocks is tolerably well held. Inquiries arise as to when the next developments in connection with the London electricity supply shares are likely to take place, but nobody knows for certain.

The Cape is keeping the Kafir Circus alive with liberal orders in Sub Nigels, East Rands, West Rand Consols, General Mining, and a few other speciality shares, apart from which there is not much going on in the gold list. De Beers have further spurred, optimism now being engaged upon estimates of what the next dividend, six months ahead, is likely to be. Other diamonds strengthened in sympathy with De Beers. The Rhodesian market is better, Chartered standing out with peculiar firmness. The platinum group has revived, and a more lively atmosphere characterises South Africans than has been apparent for a long time past. This activity is distracting attention from other mining markets, prices in which are suffering from the competition. Eastern tin shares are easier; in West Africans there is nothing doing, and, apart from a little animation in Lena Goldfields, the Russian list shows no features. Burma Corporation and other base metal shares are disposed to droop in price. The British public's part in the present South African excitement is not an active one so far.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows :—

Belfast Corporation.—This is an issue of £2,000,000 5 per cent. stock at 99 per cent., redeemable 1946-56. Principal and interest will be charged on the consolidated rate, which covers all the expenses of the corporation chargeable to rates and upon all the revenues of the corporation. Provision has to be made for the redemption of the issue by sinking fund. The proceeds of the present issue are required for gas, tramway, and electricity undertakings, housing, road improvements, &c. The rateable value of the city is £1,800,132, a penny rate

producing over £7,500; the population is 414,844. In the current financial year the gross revenues of the corporation, including local rates and receipts from its undertakings, are expected to exceed £3,000,000. This is a trustee investment.

Gas Light and Coke Company.—Authorised share capital £25,545,980, all of which has been issued. Of the authorised loan capital of £8,542,776, £7,881,505 has been raised. In an advertisement containing these and a few other particulars of capitalisation, it is stated that the company has sold £1,642,770 of fully-paid 5 per cent. debenture stock at 97½ per cent. net. This stock is redeemable at par on January 1, 1957, or at any intermediate January 1st after 1952, on six months' notice. It ranks *pari passu* with the existing £5,602,620 3 per cent. perpetual debenture stock. The advertisement is described as being "for general information only," and it is not made clear whether it is the intention of the directors to apply for a Stock Exchange quotation.

Glasgow General Omnibus and Motor Services, Limited.—Capital, £300,000, divided into £300,000 ordinary shares of £1 each. This is an offer for sale of 250,000 ordinary shares of £1 each at par. The company has been formed particularly to carry on the business of a motor services company in all its branches and to purchase a fleet of 70 motor omnibuses. A site in the centre of Glasgow, at which the buses will rendezvous, is being acquired. The purchase price of this site will absorb £60,000, and the estimated cost of erecting and equipping the building is also £60,000, leaving the sum of £130,000 available for the purchase of motor vehicles, working capital, expenses of this issue, &c. The support which the company will apparently obtain from the London General Omnibus Company gives it some advantage. The issue was over-subscribed.

Anglo-Canadian Pulp and Paper Mills, Limited.—Capital \$8,000,000, in 80,000 7 per cent. cumulative (as from October 1, 1929) preference shares of \$100 each, of which 70,000 are issued, with \$10 paid up; 135,000 ordinary shares of no par value, all of which are issued; and £3,000,000 6½ per cent. guaranteed mortgage debentures. This is an offer for sale of £1,800,000 6½ per cent. 30-year guaranteed mortgage debentures at £99 per cent. The debentures are jointly and severally guaranteed as to principal, premium, and interest by the Daily Mirror Newspapers, Limited, and the Sunday Pictorial Newspapers (1920), Limited, whose combined excess assets over liabilities, according to the last audited balance-sheet, are given as £2,665,712. The guaranteeing companies have one other guarantee outstanding—namely, in respect of principal, premium, and interest of £1,600,000 6½ per cent. debenture stock issued by the Daily Sketch and Sunday Herald, Limited. The company was incorporated in 1924 under the laws of the Province of Quebec, and has acquired timber limits, situated on the Manicouagan River, which cover an area of 2,237 square miles. It is estimated that these contain 8,000,000 cords of wood, sufficient to manufacture more than 5,000,000 tons of paper. The total estimated cost of construction of the paper mills proposed to be erected is approximately \$11,500,000. It is expected that two paper machines will be producing paper by the end of 1927, and the remaining two a year later, together having an annual output capacity of over 130,000 tons. A well-secured issue of its class.

Plummer, Roddis, Limited.—Issued capital £275,000 divided into 100,000 5 per cent. cumulative preference shares of £1 each and 175,000 ordinary shares of £1 each. This is an issue of 300,000 7 per cent. second cumulative preference shares of £1 each at par. The company was incorporated in 1896, and owns drapery stores situated on the South Coast. It has also subscribed and paid in full at par for the whole of the issued ordinary share capital of Kennards (1926), Limited, of Croydon (namely, 125,000 shares of £1 each), and this company has agreed to purchase the whole of the undertaking of Kennards, Limited. The present issue is made for the purpose of providing for the acquisition of these ordinary shares, rebuilding the premises at Hastings, and repaying bank loans. It is stated that the profits of the two businesses during the past four years, after making adjustments for non-recurring expenditure, and after providing for bad and doubtful debts, all trading expenses, interest on loans and mortgages (other than those now to be repaid), but before providing for taxation, are as follows :—1923, £67,632; 1924, £72,250; 1925, £73,352; 1926, £80,716. The assets of the two businesses, at the date of their last balance-sheets, are given as £559,953. A fairly good issue.

Marks and Spencer, Limited.—Issued share capital £680,000, divided into 350,000 7 per cent. cumulative participating preference shares of £1 each and 330,000 ordinary shares of 10s each. This is an offer for sale of 350,000 7 per cent. cumulative participating preference shares of £1 each. It is provided that in each year after payment of the preference dividend of 7 per cent., and before paying any dividend on any other shares, not less than £7,500 shall be set aside as a preference share reserve fund until it totals £73,500. After payment of 7 per cent. on the preference and ordinary shares,

the preference are entitled to a further dividend up to 3 per cent. out of their proportion of the surplus profits remaining. The company was recently incorporated, but the business was founded 38 years ago, and now owns 140 stores in London and its suburbs and most of the principal provincial towns in Great Britain. The object of the present issue is to provide for the construction and equipment of further stores. Profits, before charging interest on bank loans, depreciation, income-tax, and corporation profits tax, are stated as follows :—1922, £64,576; 1923, £62,481; 1924, £78,789; 1925, £73,832; and 1926 (being four days less than the year), £100,089. Total net assets, including the gross proceeds of the present issue, are given as £763,899. A fairly good offer, but regard should be paid to competition from certain quarters. Over-applied for.

South American Gold and Platinum Company.—In order to comply with Stock Exchange regulations, particulars are advertised of the above company. The share capital is \$10,000,000 in \$5 shares, of which 1,760,000 have been issued. In addition, there is outstanding \$500,000 of 7 per cent. income notes. The company was incorporated on October 11, 1916, and, as originally constituted, had a capitalisation of 2,000,000 shares, par value \$5 each, of common stock, and 30,000 shares, par value \$50 each, of 7 per cent. cumulative convertible preferred stock. In addition, there was authorised \$1,500,000 face value, 10-year 7 per cent. convertible income notes. Of this capitalisation 200 shares of common stock were subscribed for and issued to the incorporators of the company for cash at par; 1,699,800 shares of common stock (of which 250,000 shares have been donated back to the company for treasury purposes) and 30,000 shares of preferred stock were issued at the formation of the company in payment for all the shares of Anglo-Colombian Development Company, Limited, all of which were acquired from the Consolidated Gold Fields of South Africa, Limited, in which some of the present directors of this company have a beneficial interest, and 60 per cent. of the shares of the Pacific Metals Corporation. Substantially all of this 60 per cent. was owned beneficially by General Development Company (a corporation) and Lewisohn Brothers. Some of the present directors of the company are shareholders in the General Development Company, and one of the present directors was a partner in the firm of Lewisohn Brothers. \$500,000 of the convertible income notes were sold at par to provide the company with working funds. In July, 1919, there were sold by the company, for cash, at \$7.50 per share, 300,000 shares of common stock, the proceeds of the sale being used to retire the preferred stock and to place the company in possession of additional working capital. On October 5, 1922, 10,000 shares of common stock were issued in part payment of the entire capitalisation of the Quito River Mining and Dredging Company. Prospectusless.

Monolithic Building Company, Limited.—Share capital £150,000, divided into 137,500 8 per cent. cumulative participating preference shares of £1 each and 250,000 ordinary shares of 1s each. The preference shares are entitled to one-half of the divisible profits after receiving the fixed 8 per cent. dividend. This is an issue of 100,000 of the former and of the latter. The company has been formed to acquire and develop the sole British rights in the system of "poured-in-situ concrete construction," and to work this process in the erection of houses on a mass production scale. The total value of contracts entered into to date, it is stated, exceeds £600,000. Purchase price payable to the vendor company is £23,250, £10,750 being in cash and the balance by allotment of 5,000 preference shares and 150,000 ordinary shares. Certain royalties will be payable by the company, and all machinery, tools, &c., will be taken over at a valuation. Of the purchase price, £3,000 may be attributed to goodwill. The company is also acquiring the total share capital of the Conducal Construction Company (4,650 ordinary and 45 founders' shares) for £3,000 in cash and 10,000 fully-paid preference shares. Applicants for preference shares will be allotted one ordinary share in respect of each preference share allotted. The board is a responsible one, but the venture is of a type from which considerable risk cannot be eliminated.

O-Cedar, Limited.—Capital £200,000, divided into 100,000 8 per cent. guaranteed cumulative participating preference shares of £1 each and 100,000 ordinary shares of £1 each. This is an issue of 100,000 of the former, the whole of the ordinary shares being held or controlled by the parent company. The preference shares are unconditionally guaranteed as to both capital and 8 per cent. interest by the O-Cedar Corporation, of the United States, and are entitled to a further participation up to 4 per cent. out of the surplus profits divisible after payment of 8 per cent. on the ordinary share capital in any one year. The company was registered as a private company in 1914, and was converted into a public company in January, 1925, its business being the supplying of mops and other goods to European and other countries. The proceeds of the present issue are required for extending plant, agencies and foreign depots, &c. Net earnings of the guaranteeing company, it is stated, averaged over the past five years

our policyholders. In the C.I.S. the policyholders get the full benefit of the profits earned on their contracts.

The surplus shown in this section as a result of the valuation is £42,004. Of this sum £32,513 is being distributed amongst the policyholders, and £9,492 has been carried forward unappropriated.

The society proposes to increase the benefits of all policies issued up to December 31, 1919, where the sums assured are less than those granted under the present prospectus. These additional benefits are being granted as a reversionary bonus. Any policies issued after that date which assure a sum less than that given under our present prospectus will receive in the event of the policy maturing during 1926, either through death or survival, the benefits granted under the present prospectus.

In addition, as Table 25 has been from its inception a "with profit" table, it has been decided to allot a reversionary bonus at the rate of £1 per cent. for each year's premium paid during the quinquennium, the sum assured for this purpose being the sum assured on maturity at the longest term.

THE FUNDS OF THE LIFE DEPARTMENT.

The ordinary life funds at the end of 1925 were £2,700,250, an increase of £491,558 during the year.

In the industrial section the funds at the end of 1925 were £1,550,851, being an increase of £474,718 during the year.

In the ordinary section the interest, rents, and dividends amounted to £116,803, and in the industrial section £62,609.

As is inevitable in an expanding business, each year brings an additional income from interest on invested funds, and in consequence it is to be expected that the growth of funds will proceed at an ever-increasing rate.

ANNUAL VALUATION.

Before leaving the life department I would mention that the committee has decided to adopt an annual valuation for the distribution of profits, the first such valuation taking place on December 31, 1926. It is anticipated that further satisfactory results, both in the ordinary and industrial sections, will be shown. Altogether, it can be stated that the prospects of the life department are of an extremely favourable character.

FIRE DEPARTMENT.

The premium income for the year was £173,737, being an increase of £11,697 over 1924. The claim rate for the year was extremely favourable, being 30.3 per cent. of the premium income; the fire fund of the society now standing at 63.9 per cent. of the premium income. The expenses in this department were 40 per cent.

These results show that the business is very well selected. The premium rates are very favourable. I would suggest that those responsible for the placing of business, such as brokers, and desire to be in touch with a first-class insurance office working on non-tariff lines, might very well examine the rates and accounts of the C.I.S. with a view to placing business.

The usual bonuses to co-operative societies are being paid in connection with the insurance of their own risks.

£40,000 was transferred to the profit and loss account.

ACCIDENT AND GENERAL DEPARTMENTS.

The combined premium income was £544,793, as against £400,373 during 1924, an increase of £144,420. The expenses of the department were 35 per cent., as compared with 39 per cent. during 1924.

A reserve of 40 per cent. of the premium income for unexpired risks has been made, and the amount of additional reserve has been increased from £21,010 to £26,469.

The funds in the employers' liability section at the end of the year were £113,483, representing 125.17 per cent. of the premium income; the funds in the personal accident section were £17,935, being 141.28 per cent. of the premium income, and in the general insurance section the funds were £249,683.

The large increase in business is primarily due to the increased volume of business in connection with the insurance of motor and motor-cycle risks. It has been found necessary to revise the rates for motor insurance as from May 1, 1926, in view of the claims experience of the society. It will readily be understood that, with a risk of this character where road accidents are increasing and the Courts taking a very serious view of the damages to be paid in connection with third-party risks, the rates must be revised in accordance with the experience of the society from time to time.

ASSETS.

The total assets standing at the end of the year were £4,929,057, as compared with £3,859,022 at the end of 1924. For the first time in the history of the society the increase in the value of the assets during the year was more than £1,000,000.

The mortgages on property within the United Kingdom showed a further large increase, being £1,444,777, an increase of £734,565 over 1924. It is a considered policy of the society to issue these mortgages, with a view to helping co-operators to overcome the difficulties which they experience owing to the lack of housing

facilities. The character of each application for a mortgage is very carefully examined by the committee, and our experience up to date shows that the interest is being promptly paid, and that no case has arisen where the society has been involved in any loss as a result of granting such mortgages.

Arrangements have been made whereby our parent institutions will advance the money in future in connection with our house purchase scheme up to a certain amount, it being the desire of the committee that the funds of the C.I.S. should be widely distributed amongst the various classes of securities.

British Government securities at the end of the year were £1,255,357, being an increase of £219,613 on the year. It will be observed that industrial and provident societies' securities, which at the end of 1924 stood at £377,155, have now been reduced to £61,101.

The securities representing the funds are of a very satisfactory character. Irredeemable securities have been valued at the mean market prices on December 31, 1925. The redeemable securities have been taken at their ledger values, which are either at or below original cost. In any case, where the original cost is above the redemption price the ledger values are reduced by means of a sinking fund to a redemption price as at the earliest date of possible redemption. The value of Stock Exchange securities so computed, less the investment reserve fund, is greater than the value shown in the balance-sheet. The society's mortgage securities have been re-examined; the security for every loan is satisfactory.

Freehold and leasehold properties of the society have been re-valued by the society's surveyors. As a result of same a sum of £2,322 has been written off.

The general reserve fund now stands at £70,945. The net income from the ordinary section yielded the high rate of £4 17s 6d per cent., and in the industrial section £4 17s 3d per cent.

You have sufficient information in front of you, both from my remarks and from the information contained in the balance-sheet, the accounts, and the report of the actuaries, to satisfy yourselves that as a result of the year's work the society has considerably increased the security to its policyholders.

Personally, I think it is essential that in an institution like the C.I.S., the security of the society must be the first care of the committee. When that has been established, then progress within the limits of sound finance must be maintained vigorously.

STAFF.

The C.I.S. has further increased its staff during the year. The outdoor staff now numbers 2,615, the total number of full-time employees being 3,295, an increase of 356 during the year.

We still feel that the C.I.S. has not yet fully covered the activities of the co-operative movement as a whole, and the committee will not be satisfied until the C.I.S. has reached that position until it is able to protect against loss by means of assurances every co-operator and his dependents in the country. I think it is essential that an agent of the C.I.S. should be in a position to call at a member's home week by week or month by month, as the case may be, and our organisation must be directed to that end.

We are, as a committee, extremely well satisfied with the manner in which the work of the society is being done. It is very difficult sometimes to realise the character of the problems which arise. In my position I perhaps come more closely in contact with such problems than in the case of our shareholding members. All our difficulties are in process of being overcome, and the character of the organisation is such that, with an enthusiastic staff, the magnitude of the C.I.S. as an insurance office is bound to become greater as the years go by.

I shall be failing in my duty if I fail to state that the committee fully appreciate the loyal and helpful service which has been rendered by the staff during the year, and I feel sure that in asking the staff to continue its efforts we shall not have to ask in vain.

ZADRUŽNA GOSPODARSKA BANKA D.D.

(The Co-operative Economic Bank & Savings Co., Ltd.),

at LJUBLJANA, JUGOSLAVIA.

BRANCHES: Bled, Celje, Djakovo, Maribor, Novisad, Sarajevo, Sombor, Split, Šibenik. Foreign Correspondents for Yugoslavia of The American Express Company, New York, and agencies: National Bank of South Africa, Pretoria; Commercial Bank of Australia, Melbourne, and branches.

Remittances to and from Yugoslavia. Bills collected. Banking and Exchange Business of every description transacted.

IMPERIAL BANK OF PERSIA.

IMPROVED CONDITIONS IN PERSIA.

The thirty-seventh ordinary general meeting of the Imperial Bank of Persia was held, on the 30th ultimo, at the Cannon street Hotel, London, Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said: In February, 1921, Reza Khan Pehlevi, the commander of the Persian Cossacks, recognising the emergency and the need for immediate action, marched his men from Kazvin to Teheran and induced the Shah to appoint him Minister of War. He at once proceeded to reorganise and improve the army, to put down with a strong hand the trouble in Mazanderan and several other local disturbances, and gradually, with much wisdom and moderation, to make his influence felt in every branch of the administration. In short, first as Minister of War and later as Prime Minister after the Shah's departure for Europe, he ruled the country with much success, and his personality appealed so strongly to the imagination of the people, that at last, a few months ago, after the Mejliss, or National Assembly, had formally recorded a vote deposing the absent Ahmed Shah, a Constituent Assembly, called together to consider the position, decided by a practically unanimous vote to invite Reza Khan to assume the crown in his place.

What has occurred, you will perceive, is not merely the deposition of the ruling sovereign, but the overthrow of a dynasty. To anyone acquainted with the history of Persia, I think, the astonishing thing is the orderliness and quietude with which this momentous change has been accomplished.

TRIBUTE TO SHAH.

More than one factor has, I think, contributed to this result. The Shah, of course, had the support of the army, but some credit must be given to the reforms of 1906, and to the creation of the National Council, or Mejliss, which has enabled the people to express their wishes by votes instead of by recourse to arms. Also in Persia, as in other countries nearer home, the stirring events of the Great War seem to have exercised a tonic effect on the population, and to have made them impatient of slack and inefficient government, intolerant of subversive tendencies, and ready to welcome the guidance of a strong and able leader who has shown that he has the true interests of the country at heart. Such a leader Reza Shah has proved himself to be during the past five years. He has given the country internal peace and just government. With the aid of the American advisers he has greatly improved its financial position. He has displayed great energy and enterprise in developing its resources, and, as I told you last year, he is now giving his serious attention to the improvement of the means of communication by railways and roads, which is one of the crying needs of Persia.

The up-to-date methods now in force in the Teheran Treasury are due to the initiative of the financial adviser, and the quarterly return of revenue and expenditure now regularly issued by his department gives a useful summary of the reforms instituted. As you will realise, the value of a banker is shown in an emergency. Emergencies and reforms call for expenditure very often in advance of incoming revenues, and I am glad to say that we have always been able to afford the Persian Government Treasury officials the financial accommodation they have needed from time to time.

The Shah's coronation, as no doubt you have heard, took place with great éclat on April 25, and I am sure you will wish on this occasion to join the board in expressing very respectfully our earnest hope that His Imperial Majesty may have a long and prosperous reign.

BANK'S POSITION.

At one time during the year, owing to the failure of the crops, severe scarcity—in some places approaching famine—prevailed in the northern provinces of Persia. In spite of the famine and notwithstanding the fact that some disorganisation of business and loss to traders resulted from the embargo imposed by the Soviet Government on all exports of produce from Persia to Russia except cotton, owing to a diplomatic dispute concerning the Caspian Sea fisheries, trade on the whole has been well maintained, and the business of the bank has expanded in a very satisfactory manner. As a consequence we have found it desirable to open new branches at Birjand, Burujird, and these will, we hope, add to the volume of our business. The increasing prosperity of the country is clearly reflected in the bank's position, and I think we may claim that the statement of accounts is very satisfactory. The profit and loss account is, I think, equally satisfactory. The net profit at £129,401 is a record in the history of the bank, and it enables us to increase our annual transfer to the reserve fund from £30,000 to £50,000, to write £30,000 off the bank premises account, to raise the final dividend to 6s a share, making a total of 10s per share for the year, and to carry forward a sum of £33,967 14s 1d.

The report and accounts were unanimously adopted.

UNITED BRITISH INSURANCE COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The annual general meeting of the United British Insurance Co., Limited, was held, on the 29th ult., at Caxton Hall, London, Mr C. H. Dodd (the chairman of the company) presiding.

The general manager and secretary (Mr H. F. Baker) having read the auditors' report and the notice convening the meeting having been accepted as read,

The Chairman, in moving the adoption of the report and accounts, said that he regretted to say that this year the figures of the departmental accounts were of a disappointing nature, but he hoped to be able to show that there was nothing in them to cause concern when they considered the facts connected with each of the accounts. In the fire insurance account they would note that a loss had been made of something like £25,000. That was due to one special loss, which, considering the size of their account, might be described as a catastrophe. The greater portion of a town in South America was burnt out, and the company was saddled with a considerable sum in respect of it, but the risk was an absolutely proper risk for the company to take; it was one of those incidents which might happen to any company at any time in its career. Had their fire account been larger the amount of the loss would not have been very serious, and but for that particular loss the fire account would have showed a profit. From both the accident and the employers' liability insurance accounts there were transfers to profit and loss. In those branches of insurance their company was as yet young, but they were building up by degrees a good and profitable account in each. In the motor and general insurance account there was a loss of some £10,000, a fact which when he first saw the figures had caused him some uneasiness. An analysis of the figures, however, had disclosed the fact that the loss had been due to causes entirely inseparable from motor insurance generally; there had been no large single loss, and no risk had been accepted that would not have been taken by any other company. They were gradually building up year by year a very substantial business in their motor account, and what had happened was again one of those unforeseen occurrences that any company might have to face.

MARINE INSURANCE ACCOUNT.

As to their marine insurance account, it had been necessary to fortify that by transferring £50,000 from profit and loss and £60,000 from general reserve. That step would have been taken a year ago, but the board had been awaiting the adjustment of certain matters in respect of income-tax and excess profits duty, on account of which they had now received a repayment of about £25,000. It was unnecessary for him to labour the question of the condition of the marine insurance market. At the moment there was practically no profit in the business at all, and for the time being they were underwriting only such business as would help them to conserve their really excellent connection. Until things generally became better in the shipping world and in the trade of the country generally, it was impossible to look for anything satisfactory in the way of profits from marine insurance. They had to face that fact, and it was a serious matter for a company like theirs, which was formed originally to do marine insurance, and had worked up a very large business; but the directors were meeting the situation by building up business in other directions until such time as the marine market should come into its own again.

Their life account showed an improvement of some £9,000 on the year. Life business was of very slow growth, but it was very sure, and it was quite a good branch for the company; it was one of those classes of insurance out of which they would have to look for profits in the future.

UNITED STATES BRANCH.

He was glad to say that they had managed practically to wind up the United States branch. A year ago the United States branch stood in the balance-sheet at £102,000. The realisation had yielded more than they, perhaps, had really hoped to receive, and they had been able to place £50,000 to reserve out of the amount received back from that branch, while they now had over in this country £100,000 which last year was in America, and which had been invested and increased the dividend-paying capacity of the company. All that they wanted in the United British was a revival of business generally, and a certain amount of time to bring it in to a prosperous condition.

The report and accounts were adopted, and after some discussion it was resolved: "That the scheme in reference to the capital of the company set out in the directors' circular of June 15, 1926, be and is hereby approved, and that the directors be and they are hereby authorised to carry the same into effect," and the articles of association were amended to permit the scheme being carried into effect.

HUDSON'S BAY COMPANY. IMPROVED RESULTS OF THE YEAR.

A general court of the Governor and Company of Adventurers of England trading into Hudson's Bay was held, on the 29th ultimo, at the Cannon street Hotel, London, Mr Charles V. Sale (the governor) presiding.

The Governor, in moving the adoption of the report and accounts, said the profits for the past year amounted to £394,000, against £339,000 a year ago, and, after making the usual deductions and writing off the expenses of the new issue, £350,654 was carried to the balance-sheet, against £333,730. From the land account it would be seen that, while a deficit of £33,246 was brought forward from previous years, the improved demand for lands and a decrease in taxation made it possible to carry a surplus of £35,541 to the balance-sheet. The net result of the many-sided activities of the company had enabled the governor and committee to pay an interim dividend of 10 per cent., and to recommend a final payment of 10 per cent., making a total dividend for the year of 20 per cent. from the profits of trade on the original £1,000,000 of ordinary shares, together with 3½ per cent.—which was not liable to income-tax—from the realisation of lands. The proposed distributions would leave £102,235 to be carried forward to the next account, against £101,455 brought in from the previous year in respect of trade, and a surplus of £541 to be carried forward in respect of land, against a deficit of £33,246 a year ago. Taking into consideration the difficulties which had been experienced, and the fall in prices, not only in furs but of general merchandise, they felt that these results might be regarded as satisfactory.

FUR TRADE.

With regard to the fur trade, the total collection was about 10 per cent. greater than in previous years. The realised prices were, however, lower than at any time during the last six years and averaged about 60 per cent. less than those obtained in 1920. They had hoped for better figures, but they had the consolation of feeling that the trade in general was now on a sounder basis than it was when prices were inflated.

The three outstanding features in the land department which deserved attention were a decrease in receipts from the sale of town sites from £23,000 to £13,000, an increase in receipts from the sale of farm lands from £215,000 to £282,000, and a decrease in taxation from £193,000 to £163,000.

While their disbursements for taxation amounted to over £3,000,000 in the last 15 years, they should not regard this sum as altogether a loss, but must set against it the development which brought their land within reasonable reach of road, rail, and steamer, which founded villages and cities and established schools and public services. These should eventually reflect themselves in the value of the company's property.

CANADIAN LAND VALUES.

When they came to the question of what their lands were really worth, he might point to the fact that at the present time the price of land in the prairie provinces of Canada was lower than similar land anywhere else in North America, despite the fact that the average tax on farm lands was lower in Canada than in the United States, and that the average yield of spring wheat was high. The available figures suggested that the prices of farm lands in Canada were as low as they ever would be. Here, then, was the great inducement which Canada held out to the immigrant farmer—the cheapest land with the highest yield in the North American Continent. In these circumstances there should be no need to emphasise the great benefit of migration to Canada.

Their latest ventures they grouped together under the heading of development, and the results secured from their development department more than compensated for the failure of the project for introducing reindeer to Baffin Land. They had undertaken a diversified programme of preliminary work, and were commencing with their problems at the foundation—namely, the health and welfare of the people upon whom their trade must depend for production—and they now had all the organisation for a very highly qualified and efficient research department.

Giving the latest information regarding the company's general prospects in Canada, he said that the Fur Trade Commissioner expected that the company's total fur collection for the new outfit would be equal to the previous one. The Land Commissioner stated that sales for the five months since February 1st were 120,000 acres, against 54,000 acres in the corresponding period a year ago, the total gross receipts being \$1,100,000, against \$710,000 a year ago.

The manager of their British Columbia and Southern Alberta stores said that there was every reason to believe that a decided improvement would be shown at the three large stores in this zone during the year ending January 31st next; while the manager of their Manitoba, Saskatchewan, and Northern Alberta stores reported that conditions were better than they had been for several years.

The report and accounts were unanimously adopted.

AFRICAN AND EUROPEAN INVESTMENT COMPANY, LIMITED. YEAR OF PROGRESS—GOOD PROSPECTS.

The twenty-first ordinary general meeting of the African and European Investment Company, Limited, was held, on the 29th ultimo, at the Cannon street Hotel, London, Mr. C. F. Rowsell presiding.

The Chairman, in moving the adoption of the report and accounts, said that the accounts submitted at the last meeting were for 18 months to December 31, 1924, and for the purpose of comparison he had reduced the figures in the profit and loss account for that period by one-third, as otherwise the comparison would be misleading. The dividends received for the year amounted to £49,718, as against approximately £42,000 for the year 1924; the profit on sales amounted to £68,080, as against approximately £52,000 the previous year; and rentals and farm revenue amounted to £38,260, being approximately the same as the previous year. The income for the year, therefore, amounted to £156,058, as against approximately £133,633 for the previous year. That showed a very satisfactory increase in receipts, and he thought they might look forward to a still further improvement in the current year.

The profit which remained to be carried from the appropriation account to the balance-sheet was £45,380, as against about £4,658. In view of this substantial profit the directors had given very careful consideration to the question of the payment of a dividend, but they considered it would be in the best interests of shareholders to carry this amount forward, and not declare a dividend for 1925. If, however, conditions continued as favourable as they were to the company's interests at the present time, the board would consider the question of declaring an interim dividend for the current year. Coming to shares and debentures in other companies, these stood at £1,479,259. The quoted shares stood at £749,708, and their market valuation on December 31st was £1,072,224, showing an appreciation of market value over cost of £322,000.

LAND INTERESTS.

With regard to their landed interests, during the year they had sold certain portions of farms as the result of the policy of dividing their large farms into smaller areas, and he was glad to say that in every case the prices secured had considerably exceeded their book cost, and the valuation was secured; in each case they had retained all the mineral rights. The 10,000 morgen of freehold land acquired from the East Rand Mining Estates, Limited, was situated on the Far East Rand, and was an exceedingly valuable area from an agricultural point of view, as well as from its mineral possibilities. Upon the farm Grootvlei (one of the farms acquired) was situated the mining property of the Grootvlei Proprietary Mines, Limited, the bulk of whose capital they held. The extension of the main reef on this property had been proved by a complete series of boreholes. The development and equipment of the deep level properties in this portion of the Rand, however, required very large working capital; it was also desirable that a greater area should be secured by the addition of ground controlled by the Government. There was a considerable amount of ground belonging to the company which would also eventually be worked profitably for coal. The company now held some 571,334 morgen, which, with the 171,225 morgen belonging to the Bechuanaland Farms, Limited (in which they were the sole shareholders), made a total area of 742,559 morgen, equal to 1,571,628 English acres.

INDUSTRIAL INTERESTS.

Turning to their industrial interests, the Vereeniging Estates, Limited, had more than fulfilled the expectations held in respect of it. The chairman of the company recently stated that, after providing for depreciation, the net profit for the year 1925 was £135,542, as compared with £95,654 for the year 1924, £76,252 for the year 1923, and £17,451 for the year 1922—an increased net profit of £118,090 for the year 1925 over that of 1922. The Vereeniging Estates, Limited, had just declared a dividend at the rate of 10 per cent. per annum.

The company held also a large interest in the Union Steel Corporation (of South Africa), Limited, which had been for some time now a dividend payer. As the result of an issue made some time ago of £300,000 debenture stock they had been able to complete the blast furnace at Newcastle which they had acquired. This was, of course, an exceedingly important development for South Africa, as hitherto the Union Steel Corporation had had to rely upon scrap for its output. It would be a very short time now before they were producing from locally manufactured pig-iron.

The chairman then dealt with their mining share interests, which had shown during the year a very great improvement owing to important discoveries. In conclusion, he said he had mitting next year would again be one showing substantial improvement in all directions.

The report and accounts were unanimously adopted.

ANGLO-ARGENTINE TRAMWAYS COMPANY, LIMITED.

TARIFF QUESTION STILL UNSETTLED.

NEGOTIATIONS WITH THE MUNICIPALITY.

The forty-second ordinary general meeting of the Anglo-Argentine Tramways Co., Limited, was held, on the 1st inst., at Winchester House, Old Broad street, London, Mr William Morris presiding.

The secretary (Mr J. S. Anderson) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, after expressing regret at the absence of Sir George Touche, said:

I will now ask you to consider a brief summary of the figures relating to last year's working. I do not think I need go into them in detail, as the usual information is already before you.

The passenger traffic was maintained at much the same level as in the previous year. The population of the City of Buenos Aires at the end of the year was estimated at 1,926,689, an increase of 2.4 per cent. on 1924. We carried 559,537,275 passengers, which gives the equivalent of 290 rides per head of the population for the year. The total receipts from passenger traffic amounted to £4,562,804.

Adding to this the returns from advertisements, tolls, rents, cargo haulage, &c., the aggregate gross receipts in Buenos Aires amounted to £4,657,078, against £4,640,363, an excess over the previous year of £16,715.

In normal circumstances we should have anticipated an increase of about 4 per cent. in passenger traffic, but there were several adverse factors.

Omnibus competition became more acute during the latter months of the year. The weather was unfavourable, and there was also a slackening of business activities.

The total expenditure amounted to £3,588,402, against £3,580,563. The cost of renewals was notably in excess of the sum transferred to renewals reserve a year ago. A larger allocation was, therefore, made in the year under review. Heavy expenditure will be necessary for some years, in order to maintain the installations in perfect working condition.

The taxes paid to the Municipality were £482,976, against £486,043 in the previous year, or over 10 per cent. of the gross receipts. The slight reduction is due mainly to an extension of our tracks. Under its concession the company has to pay 6 per cent. of its gross receipts, and an additional 12 per cent. when these receipts exceed \$50,000 per kilometre of track.

Our track mileage now amounts to over 600 kilometres (373 miles), and in addition we have some 50 kilometres (31 miles) of track in our stations.

PROFITS AND ALLOCATIONS.

You will observe, from the figures which I have quoted, that the gross receipts exceeded the expenditure by £1,068,676. This is the sum which is carried to the net revenue account. To it must be added interest on investments £33,906, and transfer fees £378, making a total of £1,102,960.

The net profit thus remains at less than 5 per cent. on our invested capital. It must be admitted that this is a poor return on debenture and share capital of over £20,000,000 invested in a public utility company. The prospect of something better than that is required to encourage the provision of large additional capital sums. The balance brought from last year was £24,046, giving a total of £1,127,006 to be dealt with.

The standing charges for interest and sinking funds and the annuity payable to the City of Buenos Aires Tramways Co. absorb £667,356.

The balance has been apportioned as follows:—In payment of the dividends on the 5½ per cent. cumulative first preference shares, for the year 1925, £176,000. The like dividend on the 6 per cent. cumulative second preference shares, £183,000. In augmentation of the contingencies fund, £50,000. In writing down the book value of investments, to correspond with their market values, £10,000. £40,650 is then carried forward. This is a modest £16,604 more than last year. These various apportionments account for the total of £1,127,006.

Again, for the 12th consecutive year, we regret to report that the position does not justify the declaration of a dividend on the ordinary shares. The holders of these shares have been extraordinarily patient.

They recognise that the hardship of their lot is due to circumstances beyond the company's control. The position is none the less a very unsatisfactory one from every point of view, but we still hope for better things.

PENSIONS—THE LEGAL POSITION.

You will remember that, under the National Pension Law, the company has to contribute 8 per cent. on the salaries and wages of its employees.

As stated at our last annual general meeting, one of the provisions of this law was that the charge involved should be borne

by the consumer, and, in the case of electricity and gas companies, this practice has been established.

When the law was promulgated our tariff was 12 cents; and it was provided that should the tariff be reduced to 10 cents the municipality would come to an understanding with the company concerning the manner in which its contribution of 8 per cent. to the National Pension Fund would be met.

As the Council has not authorised an increase of fares to meet the extra charge, the company was constrained to withhold its contributions until its position had been established in the Courts.

We reported last year that the Court of First Instance gave a decision in our favour. The case was subsequently taken by the Pension Fund Board to the Court of Appeal, when the decision of the Court of First Instance was confirmed as stated in our report.

I mention this matter to-day in no contentious spirit, but as a matter of record.

The legal position appears to be that, as the law was based on a contract between the public authorities (in this case the Municipality) and our company, its terms were binding on the Municipality.

In the interests of all concerned it was desirable to get the legal position placed beyond doubt.

Now that this is no longer in question, it is hoped that the way has been cleared for an amicable and comprehensive arrangement whereby the dispute can be settled in an equitable manner acceptable to all parties.

TARIFF QUESTION.

This brings one back to the whole question of the negotiations with the Municipality. In order that the position might be thoroughly understood, we gave you, a year ago, a plain narrative of events, which, up to that time, had taken a disappointing course.

These events chiefly concerned the ad-referendum agreement with the Municipality of Buenos Aires. That agreement had for its main objects:—First, the solution of the traffic problem, which is urgent, with an urgency that increases month by month; and, secondly, such reasonable tariff revision as would enable the company to raise the wages of its employees, while, at the same time, improving its services to the community. There is no need either to repeat or to continue that narrative to-day.

THE NEW AGREEMENT.

After the experiences reported a year ago, we at once set to work on fresh plans, with the result that a new ad-referendum agreement was concluded in August last, and submitted to the Council. This new agreement is comprehensive in its scope, and is intended to effect great and radical improvements in the traffic conditions of the city.

It provides for very important works, involving large capital expenditure, so it is hardly necessary to add that the basis of fares must be such as to justify the expenditure.

The new ad-referendum agreement has been supported by the Financial and Technical Commissions, who have been appointed to examine it in detail, but it still awaits the decision of the Municipal Council.

As this meeting is held rather later in the year than usual, we had hoped the delay, for which the general strike is partly responsible, might have enabled us to report something more definite. Unfortunately, we are not yet in a position to do so.

In the circumstances, I do not think anything would be gained by discussing the terms of the proposed agreement to-day. To deal with them superficially would not be satisfactory; and you would not desire me to review them in detail at the present stage.

It would be a vain employment, for it would not be possible for a general meeting to go usefully into questions which require long and close study.

NEW GENERAL MANAGER.

They have received that study from the board, the company's engineers and traffic experts, and, above all, from our new general manager, Mr. Marcel Rongé.

Mr. Rongé entered upon his duties in March, 1925, a little over a year ago. We have all been impressed by the untiring energy and ability with which he has faced the complex problems which confronted him in Buenos Aires.

Although occupied with the larger questions to which I have referred, he has also succeeded in giving close attention to the work of administration, and has carried out certain measures of reorganisation which are bringing about economies in working.

Naturally, such changes are slow in action, and it is not until they have been in force for some time that the full savings can be shown.

WELFARE WORK.

If up to the moment my remarks have not been too encouraging there is one feature of the company's interests to which I can refer

with pleasure. In spite of the restricted receipts, we have kept the welfare of our staff always in mind.

Let me mention examples of this. The Mutual Aid Society, which started from very small beginnings some years ago, is now installed in its own handsome building in the centre of the city. It is equipped with up-to-date surgical appliances and pharmacy, and equals the most modern establishments of this nature.

The extract from the general manager's report which has been published contains some striking figures, indicating the nature and importance of this side of the company's activities.

The Sanford Home is a home of rest for the children of our employees, erected on high ground near the river's edge, about eight miles from Buenos Aires. The cost was borne by our large-hearted colleague, Mr Sanford, who, unburdened by his 86 years, paid a visit to the home in February of the present year. On the occasion of his visit 83 children were there. The number of children who enjoyed a holiday in the happy and healthy surroundings of the home last year was 571.

A sanatorium has been added, where sickly children receive medical attention. I need not tell you with what enthusiasm Mr Sanford was welcomed by the committee of workers, who act as an advisory body, and by the children.

THE FUTURE.

When we turn from a review of last year's happenings and look to the future, we see a realm of speculation in which forecasts are useless.

Undoubtedly there must be great changes in traffic conditions in Buenos Aires before very long. At the moment everything is in suspense. We must await the decision of the Municipal Council, but we are not awaiting it idly. It is unfortunate that, for the first six months of the present year, our receipts have declined. This is due to an aggravation of causes which were in operation last year.

Omnibus competition, trade depression, and an exceptionally heavy rainy season all helped to diminish takings.

With commendable energy, the manufacturers of motor buses have entered Buenos Aires, in the hope of inducing the authorities to adopt the newer form of transport.

Our manager, living in Buenos Aires and possessing a wide experience of traffic conditions in Europe, does not, however, view the new development with alarm, but it would be a great mistake to think we are indifferent to it.

Our technical advisers have studied the conditions of almost every capital of the world.

We have the good fortune to number, as one of our colleagues, Sir Frederick Sykes, a director of the London General Omnibus Co., and an expert in this form of transport.

We are thoroughly alive to all the aspects of the situation, but until our tariff question is settled you will not expect us to make—nor would it be to your interest that we should make—any announcement of policy.

Fifty years will have expired this year since the Anglo-Argentine Tramways Co. was registered under its present title. The company was one of the pioneers of tramway traction in the Argentine. It has participated in the progress of the city of Buenos Aires, which now holds the proud position of being the sixth largest city of the world.

In fact, our system forms an integral part of the municipal life of the city, and furnishes a considerable part of the Municipality's income.

BOARD'S POLICY.

We have at all times adopted a policy of progress and expansion. We have made the first underground railway in South America, and it is the aspiration and policy of the directors to continue the company's enterprise, of which our services to-day are a standing example. We are prepared to further its progress by constructing other subways. We are anxious to show our good feeling towards those whom we employ by granting them increased wages. We have in mind a scheme for workmen's dwellings, and we look forward with confidence, with the continued growth of the city, to the help of the Municipality in making the realisation of our programme of advancement possible.

We feel that if the spirit embodied in our ad-referendum agreement, to which reference has been made, is reciprocated by the authorities, the way will have been opened to a speedy attainment of those ends.

Major-General Sir Frederick Sykes, G.B.E., K.C.B., C.M.G., M.P., seconded the motion, which was carried unanimously.

The Chairman having referred to the resignation of Mr H. F. Gunning, moved that the appointment of Mr William Davy Dawes as a director be confirmed.

Mr Charles H. Sanford seconded the resolution, which was carried unanimously.

The retiring directors and auditors having been re-elected, votes of thanks to the chairman, directors and staff terminated the proceedings.

JOHN BROWN AND COMPANY, LIMITED.

COAL STRIKE—PLEA FOR CO-OPERATION.

The annual general meeting of the shareholders of John Brown and Co. was held, on the 29th ultimo, at the Royal Victoria Hotel, Sheffield, Lord Aberconway (the chairman) presiding.

In moving the adoption of the directors' report and balance-sheet, the Chairman said: The coalowners were compelled to give notice that the pits would have to close unless some concessions were given by the men, but the miners' leaders refused to discuss either wage reductions or longer hours, or, in fact, anything that would lower colliery costs. The owners are straining every nerve to balance costs and selling prices, said Lord Aberconway. We are willing to adopt any course which is economically possible. We might have had a friendly discussion with some of the miners' leaders, and we could have done that, but, unfortunately, the occasion was seized upon by politicians, and, to make matters worse, the Communist influence seemed to be dominating the executive of the Miners' Federation.

Some of their leaders have openly avowed the wish to continue and intensify the strife, and have begun to preach revolution as their ultimate object. I am perfectly certain these men do not represent the sentiment of the miners in this country. I am only sorry that they cannot come and have a sensible conference with us without the interference of these political and Communist leaders. We owners want to pay the highest wages the trade will allow, but in this case I do not see how we can get along without some concession from the men. We are not fighting the miners; they are not fighting us. We are both up against a stone wall, and it is our duty to give each other a helping hand to get over that wall, and we can only do it by friendly co-operation. If the home market alone were considered, we could raise the price of coal, which would mean a tax upon the whole population; but we can only make the mines pay by a full output. The home market does not absorb the full output, and we must have our foreign markets, and if possible increase our export.

PLEA FOR CO-OPERATION.

During the last 12 months, so far from increasing they have been decreasing, and we are faced to-day with German, Polish, and American competition. What was to be done? The miner is a partner in the trade, and he always gets the highest share of the results. Was it too much to ask him to confer with us and enable us by his co-operation to maintain our industrial position? I hope some of the miners' leaders will really realise that the function of a trade union is to protect the men's interests and not to injure trade.

Touching on the recommendations of the Coal Commission, Lord Aberconway said that some of the recommendations were obviously difficult, if not impossible, to carry out. A great many were worth more than sympathetic consideration and ought to be put into practical effect, such as combines of colliery concerns in various districts, union of interests in relation to sales or in relation to output, and union of interest, possibly, in respect of capitalisation, because there could be no doubt that to combine a number of firms gave them a much stronger financial position, and enabled them to work to greater advantage than when running by themselves.

IRON AND STEEL PRICES.

At the Atlas works they had employed the same number of men during the year and had done a little more work for the Government and about the same in general trade. Prices had been declining. Iron and steel goods were selling to-day within 20 per cent. of pre-war prices, while fuel was 40 per cent. higher and wages 60 per cent. higher. Not only did the Indian and South African railways buy from the Continent, but we were importing a good deal into this country.

Many people who had watched the course of trade were expecting a very considerable increase in trade during the autumn after the strike was over. He only hoped they would be justified. There would undoubtedly be a big rush, and he hoped John Brown's would benefit.

At Clydebank a fair amount of work had been found for the yard. Several large vessels had been delivered, and other orders had been taken. In addition to the two Australian cruisers, they had a steamer for the Canadian Pacific and two large steamers for the South American trade, and other vessels.

With regard to the balance-sheet, there was an increase of £250,000 in debentures and a similar increase in sundry creditors. This was explained by the increase in stocks, and work in progress amounted to £735,000, or more than double the £344,000 at which it stood last year. On the other hand, the mortgage debenture loans stood at £1,305,000, as compared with £1,055,000 last year. One almost balanced the other. Owing to the large amount of shipbuilding work, they had issued further debentures. There was no dividend on the ordinary for the first time for 50 years. The money was still in the firm, but they felt that having regard to the industrial conditions, and especially the charges incidental possible.

Sir Charles Ellis seconded the resolution, which was carried unanimously.

EDWARD LLOYD, LIMITED.

SUBSTANTIAL PROGRESS.

EFFICIENCY AT THE MILLS.

The 36th ordinary general meeting of Edward Lloyd, Limited, was held, on Wednesday, June 30th, at the head office of the company, 4-7 Salisbury Court, Fleet Street, London, E.C. 4, Mr Frank Lloyd, the chairman and governing director, presiding.

The secretary (Mr T. Gerald Denson) having read the notice convening the meeting and the report of the auditors, the Chairman, in moving the adoption of the report and accounts, said:—

"This meeting was originally summoned for Tuesday, May 11th, but after the notices had been sent out the General Strike was declared, and was still in progress on that date. It was, consequently, found necessary to postpone the meeting until the future course of events could be more accurately foreseen. When the General Strike was declared our men were instructed by their unions to withdraw their labour, in common with all other paper workers, and the mills were shut down until the strike was called off, resulting in a heavy loss to the firm and very serious disturbance to the operations of the company. Owing to the prolonged coal stoppage we still have grave difficulties to contend with, and we cannot tell what further losses we may sustain, though we have every reason to hope that the mills may be kept in full operation, however long a settlement of the coal dispute may be delayed.

PROFITS AND DIVIDEND.

"As you will have seen in the report, the profits for the year show an increase of £27,405 3s 1d as compared with 1924. After bringing in the amount brought forward from last year the sum at our disposal, after paying the interest on the preference shares and the interim dividend on the ordinary shares paid in October last, amounts to £205,589 2s 2d. Your directors recommend the declaration of a final dividend of 1s 3d per share, free of income-tax, making 10 per cent. for the year, the placing of £10,000 to the pension fund, and the carrying forward of £120,589 2s 2d to the next account.

CONSERVATIVE POLICY.

"In view of the present high cost of building and machinery and the large expenditure we are making on extensions and improvements, together with the balance of outlay still to be made in respect of the garden village, now rapidly nearing completion, your directors are of opinion that it is wiser and more prudent to conserve our resources and to carry forward a substantial sum to meet these commitments and to make some provision for the losses resulting from the present industrial disturbances. It is only by the pursuit of this conservative policy over a number of years that we have been able to bring the mills up to their present high state of efficiency, and thus put the business on a permanent and enduring basis, a policy which I am sure you will agree is in the best interest of all concerned.

PAPER MAKING AND PULP MAKING.

"Both Sittingbourne and Kemsley Mills are running very satisfactorily, and have attained an efficiency fully up to our highest expectations, the output of the combined mills showing an increased production of 32,788 tons for the year. The grinding of our own pulp has turned out very well, as it has improved the running of our machines, and is yielding a fair return on the capital invested in this branch of our manufacture. The cost of steam power for grinding pulp is very high as compared with water power in other countries. Nevertheless, we feel that the experiment has been quite justified.

THE ACCOUNTS.

"An examination of the balance-sheet reveals an increase of £9,320 13s 7d in stocks and book debts, a decrease of £4,754 4s 6d in cash, and an increase of £245,358 6s 1d in credit balances and bills payable. Investments are reduced by £4,861 2s 8d and the bank overdraft by £66,805 19s 6d. The capital expenditure during the year on freehold land, buildings, and machinery amounted to £334,075 1s 7d, the bulk of this being on account of the garden village, whilst the balance was divided about equally on improvements to Sittingbourne and Kemsley Mills respectively.

THANKS TO THE STAFF AND EMPLOYEES.

"I am happy to have this opportunity of expressing our gratitude to the staff and employees at Sittingbourne, Kemsley, and Ritham Dock, and in London for the admirable work accomplished by them during the year. The heads of departments have frequently testified to the enthusiastic support they have experienced from every grade, and to the wonderful *esprit de corps* which animates the workers in every department.

"I desire also to acknowledge with thanks the good work of the staff and employees of the mills in Norway, and to assure them of our appreciation of their success in keeping up the high standard of quality for which they are so famous."

Lieut.-Colonel J. R. Garwood, D.S.O., seconded the motion, which was unanimously adopted, and a final dividend of 1s 3d per share (free of income-tax) was declared, on the ordinary shares, making with the interim dividend already paid 10 per cent. for the year 1925. The sum of £10,000 was also placed to pension account.

The retiring directors, Mr R. B. Miller and Mr H. W. Clarke, were re-elected, and Messrs Turquand, Youngs, and Co. were reappointed auditors.

The meeting concluded with a vote of thanks to the chairman, directors, and staff.

VAN DEN BERGHS, LIMITED.

SUCCESSFUL YEAR—INCREASED PROFIT.

The twenty-sixth ordinary general meeting of Van den Berghs, Limited, was held, on the 2nd instant, at Winchester House, London.

Mr Henry Van den Bergh, who presided, said that for the half-century they had been engaged in the margarine trade they had endeavoured to establish the article on a sound basis as a staple article of food in this country. During that time a most remarkable change had taken place in the discrimination of the British public as far as foodstuffs were concerned. They realised that enormous strides had been made in that direction, and were proud that they had been able to keep pace with those improvements, and been able so to perfect their commodity that it stood relatively higher as a suitable article of food than ever it had done before. The extensive improvements in the methods of manufacture were gradually eliminating the cheaper and undesirable grades in which in the past had tended to bring the trade into disrepute. The latter were being replaced by better qualities, and as a consequence the margarine trade now stood on a higher level, and was in a more satisfactory state than it had ever been before.

INCREASED SALES.

The sales of margarine had increased generally during the year, but more particularly so in their own proprietary brands. Their

well-known "Blue Band" continued to lead the way, not only in this country, but also in the other countries of Europe where their associated companies were operating. In the export trade there were signs of a large and permanent trade developing. The company's profits had been considerably increased, and they were able to resume dividends on their ordinary shares. With regard to the great industrial upheaval which had taken place during the current year, any interference with transport seriously affected those who were engaged in the provision trade. However, thanks to their very efficient organisation, they had been in a position to fill all orders, and every one of the company's customers had been supplied in due course with his requirements. For those satisfactory results they were indebted to the loyalty of their staff, who had worked with untiring energy in order that there should not be any interruption of the supplies to their customers, and he desired to express his thanks and his great appreciation of the manner in which they had performed their tasks, often under great difficulty and personal inconvenience. He was sure that those remarks would be warmly endorsed by all those who were familiar with the details of the working of their business. The outbreak of the strike had also been remarkable for the very gratifying offers of assistance which had been made voluntarily by many of their wholesale and retail customers in the country, who had immediately placed their warehouses and transport at the company's disposal. He thought shareholders would agree that that was strong evidence of the very cordial relations which existed between the company and its thousands of customers all over the country. They considered it a splendid testimonial to the value of their trade connections.

RAW MATERIALS AND THE STRIKE.

Another point he would like to emphasise was that since the strike a great rise had taken place in the prices of the raw materials which were used by them in their manufacture. Fortunately, however, they were well bought, and were consequently not obliged to pay the increased prices. They studied the course of the markets very closely at all times, and it was a matter for congratulation that they had been able to provide themselves at reasonable prices with sufficient quantities of the oils, seeds, and fats which they required to cover themselves for some time to come. In former reports they had stated that the matter of enemy debts had not yet been settled. They had now got a little further, and the first case to come before the Arbitral Tribunal had been decided in the company's favour. That gave them great hope that the other cases still subjudice would also be decided in a manner favourable to the company.

With regard to the accounts, the totals of both the assets and liabilities appearing in the balance-sheet showed a substantial increase on the figures placed before the shareholders a year ago. Capital expenditure had been decreased by about £21,000, and from that shareholders would see that to a certain extent depreciations had been written off in excess of the sums expended on the maintenance and improvement of their factories, which were in a high state of efficiency. The net trading profit amounted to £425,708, which was an increase of £130,000 over the profits realised for the year 1924. That increase, which was a substantial one, had enabled the directors to recommend the payment of a dividend on the ordinary share capital of 2s 6d per share, and he was highly gratified at being able to submit that result to the shareholders.

The report and accounts were adopted.

CALCUTTA TRAMWAYS COMPANY, LIMITED. RESULTS OF A DIFFICULT YEAR.

The ordinary general meeting of the Calcutta Tramways Co., Limited, was held, on the 29th ult., at 1 Queen Victoria street, London.

Mr John G. B. Stone, who presided, said that the result of the year's working, after providing for debenture interest, preference dividend, and the interim dividend on the ordinary shares, was an available balance of £159,560. It was proposed to allocate £88,000 to depreciation and general reserves, to write off suspense account £7,289, to contribute £2,068 to the staff provident fund, to pay a final dividend on the ordinary shares of 3½ per cent., making 7½ per cent. for the year, free of income-tax, and to carry forward £37,703. The decrease in their receipts was attributable to two things. One was the loss occasioned by the severe communal riots which were so serious and prolonged as to lead to the exodus from Calcutta of great numbers of the class of public who travelled by tram, and it might be some time before confidence was sufficiently restored for those people to return to their normal occupations.

The second was the competition by independent 'buses. As long ago as August, 1921, the company had put a few 'buses on to test if they could be made a paying proposition at the low fares which were essential in Calcutta. Early last year other 'buses had begun to appear, and their popularity had led to so rapid an increase that

the number of vehicles had now reached some 400. While those vehicles had no doubt deprived the tramway company of a large number of passengers, they believed their competition had reached its zenith and was beginning to weaken. The point had also been reached at which the licensing authorities were refusing on certain routes to issue any further permits.

They had inaugurated a system of transfer tickets between their 'buses and trams, and had also arranged with the railways for a combined railway and tram season ticket. The returns already showed that those facilities were appreciated and taken advantage of by the public. They were extending the tramway, the particular extension being made at the request of, and in agreement with, the Improvement Trust to open out an adjoining area for development, and the company were to receive a guarantee of interest for ten years, by which time the line should pay for itself. They particularly welcomed that requisition from the Trust as evidence that they looked on the tramway as the form of service needed for Calcutta.

The report and accounts were unanimously adopted.

MOND NICKEL COMPANY, LIMITED.

SUBSTANTIAL INCREASE IN PROFITS.

The twelfth annual general meeting of the Mond Nickel Co., Limited, was held, on the 2nd inst., at the Grosvenor Hotel, London.

The Right Hon. Sir Alfred Mond, Bart., M.P. (the chairman), said that the profit and loss account showed an increase in net profits of £112,000. He thought that, in view of the conditions of trade generally, they could congratulate themselves on that very substantial increase in their profits. It was accounted for by an increase in the gross profits of £85,100, a decrease in the debenture interest of £26,400 and a net decrease in general charges and corporation profits tax of £1,500. The reduction in debenture interest was due to the reorganisation of capital effected during the year, whereby they had redeemed the 8 per cent. stock and created a 5½ per cent. stock.

It would be noted with satisfaction that their quick assets in the shape of stock, debtors, and cash exceeded their current liabilities by no less an amount than £1,500,000—a most satisfactory position for a company like ours, which had to carry large stocks of raw materials and finished goods.

The additions amounting to £81,800 to properties in the United Kingdom were chiefly due to expenditure at the Clydach Works and on the new precious metals refinery in London, which was operating very satisfactorily with good results as regarded both economy in costs, and efficiency in that important branch of their operations, the recovery of the platinum group from their residues. They had succeeded during the year in obtaining a contract for refining Onverwacht platinum, which was also turning out quite satisfactorily, and they were open to undertake similar work for others.

Their employees' participation scheme, which had been working for just over a year, was, as far as he was aware, unique in character. It was not a profit-sharing scheme in the ordinary sense, although it had the effect of increasing the profits of the company and of sharing any increased profits between the employees and the company. The object of the scheme was to promote the personal interest of all employees in effecting savings in production costs. It would be realised how substantial the contribution of employees might be in that direction by giving closer and more careful attention to their work, avoiding waste of time and material, and suggesting improvements in the process or in the plant. The scheme provided that savings in costs were divided between the company and the employees according to a scale by which the whole of the savings up to a certain amount was given to the men, and over and above that figure it was divided between the company and the employees.

The report and accounts were unanimously adopted.

SPRINGS MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

"A MOST SUCCESSFUL YEAR."

The seventeenth ordinary general meeting of shareholders, held in Johannesburg on May 21, 1926, Mr F. R. Lynch presiding.

The Chairman, in moving the adoption of the report and accounts, said: We have again had a most successful year, and if for comparative purposes we ignore the gold premium received during 1924—seeing that the amount received during 1925 was negligible—and deal only with standard values, the results are the highest achieved in the history of the mine.

The tonnage milled totalled 791,300 tons—an increase of 21,300 tons for the year. Working profit (standard value) was £706,952—an increase of £45,226. Revenue per ton milled at 38s 0.63d is

6.43d per ton lower than the previous year's figure; but, on the other hand, working costs were reduced from 21s 4.8d to 20s 2.2d, an improvement of 1s 2.6d, and the resulting working profit was 17s 10.42d per ton milled, as compared with 17s 2.25d per ton for 1924, or an increase of 8.17d per ton.

The development footage for the year totalled 23,211 feet, a slight increase over the previous year, namely, 265 feet. Two very important facts are brought to light by this comparison. In the first place, the amount expended on practically the same amount of development footage was £90,025 in 1924, against £84,544 in 1925. Further, in 1925 the tonnage developed was 1,053,282 mine tons, the cost per ton being 1s 7.3d, whilst in 1924 694,368 tons were developed at a cost of 2s 7.2d per ton, so that not only was the cost per foot considerably reduced, but, in addition, the tonnage developed for practically the same footage was increased by no less than 358,914 tons, and the cost per ton on the total tonnage developed shows a decrease of 1s per ton.

The ore reserve was increased on balance by 40,000 tons to 3,312,819, the value being 8.41 dwts over 58.99 inches. The stope width is slightly greater than at the end of 1924, and the stope value slightly lower, but, when calculated out to inch-dwts, there is a reduction of 9 inch-dwts, the total being 496 inch-dwts.

Our revenue from gold and osmiridium totalled £1,505,557, whilst our working expenditure amounted to £798,605, leaving £706,952 to be carried down to general revenue and expenditure account.

Interest received, &c., less debenture interest and donations, increased this figure to £712,069, so that the credit to appropriation account, after adding the amount of £51,502 brought forward from last year, was £763,571. Appropriations therefrom were as follows: Government and provincial taxes, £70,467; Government participation in profits (equal to 24.170 per cent. of the profits of the company), £172,107; renewals to plant, £6,422; dividends Nos. 15 and 16 (equal to 3¼ per cent.), £465,986. The resulting balance of £48,589 was carried forward to this year's accounts.

During the first quarter of this year 201,400 tons were crushed, yielding a working profit of £179,565. The yield per ton milled was 37s 7d, working costs 19s 9d, and profit per ton 17s 10d. Both grade and costs are below the results for 1925, but, as the one balances the other, the profit per ton is practically the same.

Mr W. J. O'Brien, O.B.E., M.L.A., seconded the motion, which was carried unanimously.

BRAXPAN MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

GOOD RESULTS DESPITE NATIVE LABOUR SHORTAGE.

The twenty-third ordinary general meeting was held in Johannesburg, on May 21, 1926, Mr F. R. Lynch presiding.

The Chairman, in moving the adoption of the report and accounts, said: The tonnage crushed, 977,700 tons, is again a record, and exceeds the previous year's figure by 79,450 tons. The working profit at £659,680 is £4,465 below that for 1924; but it must be remembered that in 1924 we received £102,601 net gold premium, whilst last year the gold premium was nil, so that, taking gold at the standard value and excluding the gold premium, the 1925 results are better than those for 1924 by £98,136. The yield at 32s 6.9d is lower by 5.2d, but, on the other hand, working costs at 19s 1d per ton show a reduction of 1s 5d, the resulting profit per ton milled at 13s 5.9d being practically 1s per ton better than in 1924.

These results, I think you will agree, are very good, but we should have done even better if we had not suffered from a serious shortage of native labour during the last quarter of the year.

The development footage for the year totalled 24,875 feet, of which 16,935 were sampled; of the latter 7,945 feet, equal to 46.9 per cent., were payable, the average width being 49.48 inches, the value 11.47 dwts, and the inch-dwts figure 568. The percentage payable as well as the average width are slightly below the 1924 results, but the average value is rather higher, and the inch-dwts figure shows an improvement of 29.

The ore reserve was estimated at 2,816,720 tons, the stope width being 71.23 inches, stope value 7.62 dwts, and the inch-dwts 543. The tonnage is lower by 31,820 tons, but the width and value are both slightly higher, so that the resulting inch-dwt figure is higher by 18.

The total amount to the credit of appropriation account was £728,935, made up as follows:—Unappropriated profit as at December 31, 1924, £57,984; balance of development suspense account taken to credit, £3,303; balance of general revenue and expenditure account, £667,648. This has been dealt with as follows:—Government taxes, less adjustments, £78,813; Government participation in profits (equal to 14.260 per cent. of the

profits for the year), less £16,793 adjustments from the previous year, £95,208; appropriations against capital expenditure, £25,000; for reconditioning plant, £3,223; dividends Nos. 26 and 27 of 4½ per cent., £484,500. The balance of £58,985 is carried to this year's accounts.

The quarterly report for the first three months of this year states:—The tonnage crushed totalled 246,400 tons, the working profit being £168,170. The yield per ton milled was 32s 2d, working costs 18s 6d, and the working profit 13s 8d; whilst the yield is 5d per ton milled lower than the average for 1925, the working costs are 7d lower, and the profit is 2d per ton higher.

Mr J. L. Jourdan seconded the motion, which was carried unanimously.

HONGKONG (SELANGOR) RUBBER, LIMITED.

DIVIDEND OF 30 PER CENT.

The fourteenth annual general meeting of Hongkong (Selangor) Rubber, Limited, was held, on June 29th, at 7 Martin's lane, London, Mr W. Arthur Addinsell, chairman of the company, presiding.

Mr J. Lewis, on behalf of the secretaries (Messrs Bright and Galbraith, Limited) read the notice convening the meeting and the report of the auditors.

The Chairman said: Gentlemen,—Owing to the period of prosperity through which the rubber-producing industry passed during the last financial year—resulting in our securing an average net price of over 2s 7d per lb for the crop harvested—your directors present a profit and loss account showing a net profit of £18,017. This compares with £2,413 earned to December 31, 1924. We are thus able to recommend a final dividend making a total of 30 per cent. for the year, as against 3 per cent. for the preceding year; to commence a reserve account by allocating £2,000; and, after the usual reservations, to carry forward £2,260.

This excellent result has been secured on a restricted crop, which amounted to 202,149 lbs only, against the company's present standard production figure of 344,514 lbs. Although we may not secure the same average net price for this year's crop, we can confidently anticipate an increase in the output. For the first five months 119,000 lbs was harvested, and, in normal circumstances, the total for the year should approximate 320,000 lbs. It is proposed to increase the planted area by 50 acres, which will slightly reduce our capitalisation per acre.

We are advised that the major portion of the jungle reserve is swampy, owing to its close proximity to the Klang River, which at certain periods of the year overflows its banks, and it is doubtful whether there is any appreciable area which can be economically cultivated.

During last year we were approached by an eminent firm of mining engineers, who were scout boring on various properties adjoining and in the neighbourhood of our estate, to allow our jungle area also to be bored for tin. An arrangement was made by which this company should ultimately benefit if the operations prove successful, and scout boring has been in operation for some time.

With the fickleness of mining propositions, a considerable area has proved barren. It is possible, however, that a comparatively small area of about 100 acres will on closer investigation reveal a lead of tin which could be successfully worked. Obviously, this would be too small a proposition to be economically operated as a separate unit, and it may be to the best advantage of this company for the land to be disposed of to other interests, who, we understand, are testing areas outside our boundary, and which probably forms a continuation of the same tin lead to which I have referred. I hope that shareholders will not become unduly elated at these remarks, because, as I see it, nothing in the nature of an Eldorado can be visualised. Shareholders may rest assured that the moment anything tangible is evolved they will be notified.

Reverting to rubber, the whole area has been maintained throughout the year in first-class condition.

The report and accounts were unanimously adopted, and the proposed dividend was approved.

PINDENIOYA RUBBER AND TEA ESTATES, LIMITED.

INCREASED PROFIT—BRIGHT PROSPECTS.

The sixteenth ordinary general meeting of the members of Pindenioya Rubber and Tea Estates, Limited, was held, on the 28th ultimo, at the offices of the Rubber Growers' Association, 2 Idol lane, London, Mr H. B. Vuille (the chairman) presiding.

The Chairman said that the net profit, after deducting all annual expenditure, was £13,296, being the equivalent of 20½ per cent. on the capital. In the general profit and loss account £2,995 had been written off, being the cost for erection of new coolie

lines, in the purchase of machinery and 37 acres of forest, opening up of 20 acres of tea, and the upkeep of immature rubber. The expenses incurred in the conversion of share capital, amounting to £223, were also debited, the net result was £12,456 available for distribution, which compared with £4,197 7s 2d last year. The board recommend the payment of a dividend of 12½ per cent., less tax, to place to general reserve £3,000, and to carry forward £1,381.

A small area of 37 acres of good land adjacent to Pindeniya was in the market last year, which the directors decided to buy. The cost was £316, and the area was planted up with tea early this year. The total planted area showed an increase on the figures of last year. There were 944 acres in rubber in bearing and 72 acres to be tapped this year, 275 acres under tea in plucking and 64 acres of young tea planted in 1925-26. Both estates were now fully planted, and were valued in the balance-sheet at £48 per acre. An extended programme of cultivation was put in force, the benefits of which were shown in the increased crops harvested, and as greater tea and rubber outputs would be obtained during the current year, it was expected that the cost of production would be reduced. The tea manufactured was 135,370 lbs, compared with 108,493 lbs previously, while the net profit earned was 4.07d per pound, as compared with 2.76d. They secured 219,044 lbs of rubber, as compared with 177,020 lbs in 1924, and sold this at a net profit of just over 1s per pound, as against 2.03d per pound for the previous year.

The visiting agent sent them good reports of the two estates. Weeding was well in hand, and the drainage programme instituted last year continued. Although rubber had fallen to the neighbourhood of 1s 9d per pound, this price represented a satisfactory profit to producers when associated with full production. The directors looked forward with confidence to a good year in tea, and considerably enhanced profits on both their products at the end of the current season.

The report was adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER

Tenders for £40,000,000 in Treasury Bills were opened on July 2, 1926, and the total amount applied for was £63,990,000. For bills at 3 months, dated Monday to Friday, £98 18s 11d, about 50% and above in full, Saturday at £98 19s 2d, and above in full. The amounts allotted were—In bills at 3 months, £40,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.

branch at High street, Shanklin, Isle of Wight, under the management of Edward Spuring Knight, D.S.O.

To fill the vacancy caused by the death of his Grace the Duke of Montrose, K.T., the late governor of the National Bank of Scotland, Limited, the directors have appointed the Right Honourable the Earl of Ronaldshay, P.C., G.C.S.I., G.C.I.E., at present deputy governor, to be his successor as governor, and Sir Hector Munro of Foulis, Bart., one of the extraordinary directors, to be deputy governor.

Lloyds Bank, Limited, announce that Mr E. D. Vaisey has resigned his seat on the board, but will continue to serve as a member of the committee of the Capital and Counties Bank section.

The Midland Bank announces the opening of a new branch in Outram street, Sutton-in-Ashfield, Nottingham, under the supervision of Mr E. M. Ellis, manager of the Leeming street, Mansfield branch.

The Equitable Trust Company of New York announces the retirement, as of June 30, 1926, of Mr Edward J. Chappell, London manager, after 40 years' service with the company and its predecessors.

A branch of the Commercial Bank of Australia, Limited, has been opened at Toowoomba (Queensland).

We are informed that Sir Edward James Reid, Bart., nephew of Lord Revelstoke and the Hon. Cecil Baring, has been appointed a managing director and an assistant secretary of Baring Brothers and Co., Limited.

AMERICAN WHEAT MARKETS.

The downward movement in prices has continued this week, though in a less marked degree. The market has tended to fluctuate owing to conflicting crop estimates and changeable weather reports. Export demand, too, has been somewhat disappointing. Quotations:—

	Jan. 2, 1925.	July 2, 1925.	Jan. 7, 1926.	June 24, 1926.	July 1, 1926.

Chicago (No. 2 Winter)—Cents per 60 lbs	177	143½	176½	137½	134½

† Previous day's quotation.

COAL.

Our Cardiff correspondent writes:—Coal supplies in South Wales this week have been supplemented by the release of detained cargoes and by the arrival of cargoes from foreign ports. There is not, however, sufficient coal available to meet the requirements, and it is estimated that this week only between 10 per cent. and 15 per cent. of the finishing departments of the tin-plate works were able to continue operations. Advices from the Baltic Exchange report abnormal activity in the fixing of tonnage for the transport of American coal to the United Kingdom and to foreign markets normally dependent on the United Kingdom. It is anticipated that the South Wales coalowners will post their new wage offer early next week, and there is reason to believe that the terms will include the payment of the pre-stoppage wages for three months under an eight-hour day, and that after three months the minimum will be 28 per cent. on the 1915 standard rates, as compared with 42.22 per cent. under the 1924 agreement. The iron and steel industry is suffering severely from lack of fuel and shipments from the scarcity of bunker coals. Last week the receipts from the tin-plate works totalled 80,382 boxes, and as there was a lull last week in the export trade the stocks have increased from 47,083 boxes to 72,644 boxes. Prices have further advanced, and as high as 24s 6d to 25s per basis box has been paid for prompt delivery.

OTHER METALS.

TIN.—The market for tin displayed quiet features during the week, prices being irregular but firmer on balance, with buyers somewhat indifferent. Standard cash sold at £273 5s-£271 15s and £273 10s, three months £272 10s-£271 and £273 10s. Sales in the East were reported at £280 15s-£278 10s and £279 15s. COPPER continued in fair support, but prices fluctuated slightly closing easier. Dealings were recorded in standard cash at £56 12s 6d-£57 2s 6d and £56 15s, three months £57 10s to £57 17s 6d and £57 11s 3d. LEAD generally firmer, with sellers reserved in face of a good demand. Good soft foreign pig, July, sold £29 17s 6d to £30 7s 6d and £30 2s 6d, September £29 15s-£30 10s and £30 1s 3d, October £29 18s 9d to £30 10s and £30 2s 6d per ton. SELLER opened easier, but steadier, since on buyers' showing more disposition to operate. July sold £33 5s to £33 15s-£33 11s 3d, August £33 13s 9d, September £33 10s-£33 13s 9d, October £33 8s 9d-£33 13s 9d-£33 11s 3d per ton. ANTIMONY dull and easier. English special brands £79 10s to £80. Foreign refined £60 per ton ex warehouse. ALUMINIUM.—Home trade £120, export £125 per ton. QUICKSILVER firm. Spot quoted £15 10s per bottle. TIN PLATES firm. I.C. coke prompt 25s to 26s per box f.o.b. Swansea. WOLFRAM quiet. Forward 13s to 13s 6d per unit c.i.f.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The situation in the British steel works becomes worse as the coal strike continues, and only a few of the lighter branches of the industry are still working. As a consequence of the closing down of the British works there has been a considerable demand for Continental steel which foreign manufacturers have scarcely been in a position to take full advantage of owing to the disorganisation arising from the fluctuations of the franc exchange. The foundries engaged in producing the lighter articles have been able to continue working in a number of districts, particularly in Scotland, and the demand for foundry iron has been considerable. The demand for semi-finished material has slackened somewhat; for finished material it is fair, and is, of course, being met almost entirely from foreign sources. In the tin-plate trade merchants are complaining that attractive orders are being placed with American and German works.

Our Middlesbrough correspondent's report, dated July 1st, is as follows:—Pig-iron: Although the price of No. 3 Cleveland pig-iron has been advanced as high as 84s, business has been done to-day at something less than this figure. With the exception of one works the stocks have been practically cleared up, but the output of the two furnaces remaining in blast seems to be sufficient for requirements at the moment. No. 1 foundry is quoted at 86s 6d per ton; No. 4 foundry is quoted at 83s per ton; No. 4 forge is quoted at 82s 6d per ton. Foreign iron is being imported at lower prices than quoted above for Cleveland pig-iron. There are still fair stocks of hematite in this district, but these are being depleted. The price, however, is not more than 79s for East Coast mixed numbers, and No. 1 is offered at 79s 6d. Manufactured iron and steel: Foreign ship plates are coming into the Tees at £6 10s per ton, delivered, against the home price of £7 17s 6d. Other quotations are as follows:—Steel ship angles, £7 10s; iron bars, £11; steel rails, £8 5s. Iron ore: There is no business whatever, but best Rubio ore is still nominal at 21s 6d per ton, c.i.f.

Our Sheffield correspondent writes:—The week has developed no marked change in local industrial conditions, except to absorb most of the limited stocks of raw material and fuel. No steel is being melted, but there is considerable production of finished steel goods in the lighter branches consuming only a little coal, and also where electrical and gas power are used. An increasing quantity of outcrop coal, salvaged in various parts of the West Riding coalfield, is going to the steel and tool works, and has become a recognised marketable product. As much as 40s per ton is being paid for it. A little foreign coal has also been bought locally. The heavy trades cannot solve the fuel problem, and must remain idle until the collieries are working again. Sheffield does not appear to have lost any important contracts owing to the dispute, but many orders are being held up. File makers are moderately well employed, but tool makers are less active. The plate and cutlery branches are depressed.

Our Glasgow correspondent writes as follows:—Available supplies of pig-iron are now commanding premiums, and standard G.M.B. No. 1 is quoted at over 81s per ton. Two furnaces are still in blast, but the scarcity of fuel in other industries is reacting on the demand for pig-iron, with the result that prices mentioned can generally be shaded. Shipments are steady, the tonnage last week being 426 tons, of which 291 tons were on foreign account. For the corresponding week of last year, the figures were 470 tons and 355 tons respectively. Nothing fresh can be reported in the position with regard to heavy steel works, which, with one exception, are closed. Inquiries for heavy and light steel plate and frame steel for Spanish and Chilian Navies have been received, and works have now a fairly satisfactory amount of orders booked and awaiting execution. Steel re-rollers, iron works, and sheetmakers are for the most part producing on a reduced scale, and are kept busy on urgent demands. Exceptionally heavy shipments of galvanised sheets have been made during June from Glasgow, and some makers are unable to promise delivery before October or November. Demand is still very heavy and prices advancing, the lowest figure quoted for No. 24 gauge being £16 10s per ton, f.o.b.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Conditions in this market are better than might be expected. The mills, of course, are beginning to feel the pinch of the coal shortage, and production in all departments is being curtailed, but there is a strong belief in the ability of the trade as a whole to make a good recovery when fuel restrictions are abolished, and this quiet confidence in the future is largely responsible for the steadiness of values. Actual business is mainly confined to comparatively small weights for immediate requirements, but this week spinners appear to be more interested in quotations for tops, particularly merino and fine crossbreds. The outlet for crossbred medium and low quality yarns is much too restricted to permit of any freedom of buying, especially as stocks of crossbred wool and tops and yarns are large, but in the finer descriptions, both tops and yarns, there is a very firm tone. In the piece-goods trade there has also been more inquiry, and little difficulty is experienced in selling the finer cloths if delivery can be arranged. For this reason there is a fairly good movement in stock lots, in certain descriptions of which concessions can be obtained from holders who are anxious to reduce their stocks. New business, however, is difficult to arrange in many cases on account of the uncertainty regarding delivery. A feature of the trade is the brisk demand for home-grown fleece wool at the country sales, prices in many descriptions being well above those obtainable in Bradford.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The date of the opening of the forthcoming season in Australia has been settled. The opening sitting will take place at Sydney on August 30th, followed by Adelaide on September 10th, Brisbane September 14th, Perth September 21st, and Melbourne September 27th. No doubt plenty of buying limits will be called to make every sale successful. As far as can be seen, Australia is enjoying a fairly good winter season, and July will see sheep shearing begin in good earnest in New South Wales. It can be taken for granted that by August shearing will be general throughout the whole of Australia. Early sheds will commence in West Australia in the first week in July. A three-days' sale began last Tuesday at Brisbane, 37,000 bales being available. This is largely new clip from stations which begin to shear in autumn, and cable information indicates a firm market, values being maintained on the Sydney level. We are not surprised at this, for notwithstanding the very unsatisfactory conditions obtaining among manufac-

AGENTS AND CORRESPONDENTS THROUGHOUT THE WORLD.

turers in the West Riding, the Continental section remains fairly good, with both France and Germany ready buyers. The result is that all good combing wools are selling freely. The trade is awaiting with interest the announcement of the quantity of wool available for the London auctions which will commence on July 13. If, as is expected, the quantity is about 150,000 bales, the sales will last three weeks. This should see the finish of the marketing of the last Colonial clip, although we fully expect a fair weight of New Zealand crossbreds to be available for the September series. We do not expect any big quantity of second-hand parcels of merino quality to be offered during July or September, but there are still large weights of New Zealand crossbreds which owners are patiently waiting to sell. Unfortunately, there is not yet any indication that owners will be able to realise the cost price, and in view of this it is remarkable that Bradford has again been by far the biggest buyer of New Zealand wools. It would be some encouragement to owners if trade showed any signs of improvement, and so enable buyers to get out on the right side with their Colonial purchases. The Eastern half of Europe is the proper outlet for the big weight of crossbreds now held in this country, and a good harvest throughout Germany, Russia, and the Balkan States will provide the best incentive for development in the clearance of the large stocks of crossbreds now held here.

THE COTTON TRADE.

LIVERPOOL, July 1, 1926.

Business during the week has again been very slow, and prices are reduced about 20 points. Crop reports generally are favourable, and the sentiment is bearish. Spot sales for the week June 25th to July 1st (inclusive) are 25,000 bales. Of these 13,380 are American, 490 Brazilian, 2,950 Peruvian, 4,850 Egyptian, 2,800 African, 420 East Indian, and 110 sundries. Imports for the same period are 37,605 bales; these include 11,561 American, 1,406 Brazilian, 10,191 Peruvian, 6,502 Egyptian, 4,036 African, 604 East Indian, and 3,305 sundries. Quotations to-day are:— Middling American, 9.24; F.G.F. Sakel Egyptian, 16.05; uppers, 11.80; fair Brazilian, 9.34; G.F. mod-rough Peru, 12.00; smooth, 11.09; F.G.F. Tinnivelly, 8.20; middling West African, 8.99; and G.F. East African, 11.20.

MANCHESTER, July 1, 1926.

Business in the market throughout the week has been of very limited dimensions. The feature of interest has been the further downward movement in raw material rates, and buyers have exercised extreme caution in placing orders. In cloth for India, operations have been confined to small lots, chiefly in light fabrics and fancies. There has been very little activity for China. Tentative bids have been about in bleached shirtings for Egypt, but not much has been done. Printing and finishing styles have attracted some attention for West Africa, but the turnover for South America remains very disappointing. Production is being affected to a larger extent than ever by the coal shortage. American yarns for home use have dragged in demand, and prices have favoured buyers. Apart from a few special sales for India and the Near East export numbers have been slow. A restricted turnover has taken place in Egyptian spinnings.

THE JUTE TRADE.

DUNDEE, July 1.
Speculative operations are meantime controlling the price of raw jute. In new crop fibre there is little actual consuming interest, the dull state of trade in the producing sections lending no incentive

to spinners to secure a portion of their supplies for next season. The prospects for the new crop are so very favourable that there is every expectation that a good crop will result from an increased area under cultivation compared with last year. The figures for last year have been revised, and increased by 200,000 acres. Fears of a scarcity of steeping water, reports of which sent prices higher, have been dispelled by a plentiful fall of rain in all districts, with exception of Daisee, where more rain is required. Spinners here are under the impression that prices of jute will be reduced, and are holding off. There are no sales being reported to test the nominal rates ruling. Speculative sellers would be prepared to accept £38 for first marks actuals for August shipment and £37 for September, but the equivalent rates which spinners are obtaining for their yarns are pounds per ton under these limits. Old crop fibre is neglected, first marks ruling at £45 on spot or for shipment. The lower prices which have prevailed for yarns have brought out more interest on the part of buyers, and a fair business has been done in hessian qualities at 3s 5d for common 8 lb cops and 3s 6d for medium spools. At these rates buyers are not inclined to go far forward for delivery. Sacking 8 lb chains have been done at 5 1/2d, and 24 lb web at 4 1/2d lowest. Rove has been sold at from £37 10s for 48 lb and £28 for 200 lb. Twist is lowest at 5 1/2d, and business done up to 6d, according to quality, for three-ply 8 lb. Cloth buyers are still only operating from hand to mouth, though a slight improvement is noticeable in some quarters in regard to the size of the orders placed. For 10 1/2 ounces 40 inches 4 1/2d is being accepted and 3 7/8d for 8 ounces. Calcutta goods are ruling very steady, but there is still a lack of confidence in this branch.

HIDE, LEATHER, AND ALLIED TRADES.

The tone of the hide market remains firm, in spite of the reduced input by tanners. At the auctions held in Bermondsey on Thursday last best ox again made from 5 1/2d to 7 1/2d per lb, seconds from 5 1/4d to 7 1/4d, the latter advancing 1/4d in several classes. Heavy best cows were unsold, but lights made 5d. Calfskins sold in the best selections from 6d for heavy to 11 1/2d for light. Wools realised 5s to 9s 3d, hogs 4s 6d to 11s, and lambs from 2s to 5s 6d each. The demand for imported hides is inactive. S.A. fregoric hides are barely steady, and 7 1/4d has been accepted for best Argentine ox, Montevideos making 7 1/2d. Dry hides remain firm at recent quotations, dry Americans selling at 10 1/4d to 10 1/2d. The Chicago position is cabled as firmer, with best heavy packers selling at 13 cents. The turnover in sole leather has been much better this week than was anticipated. Manufacturers are in the market for light bends in small quantities, although there has been a better

ONTARIO

CANADA'S LEADING MINERAL PROVINCE.

The Province of Ontario is the richest mineral province in the Dominion of Canada. The value of the annual output has increased from \$39,313,895 in 1910 to \$85,792,636 in 1925. From the Porcupine, Kirkland Lake, Cobalt, Gowganda, South Lorrain and Sudbury camps, metals of a total value of over seven hundred millions of dollars have been produced.

GOLD MINING.

Ontario's annual gold output now equals three-fifths that of the whole of United States, and this Province occupies third place among the gold-producing countries of the world. In addition to the established mines of Porcupine and Kirkland Lake, other potential producers are being developed at Larder Lake, Goudreau, Lightning River, Boston Creek, Red Lake and other points. The production in 1925 was 1,461,058 fine ounces, and dividends paid amounted to \$8,233,468.

SILVER MINING.

More than one ton of pure silver is added to the world's stock every day by Ontario's mines. The Cobalt, Gowganda and South Lorrain camps produced 10,217,315 ounces, worth \$7,084,864, in 1925. Dividends to the end of last year aggregated \$91,951,725.

NICKEL-COPPER.

The Sudbury mines produce 90 per cent. of the world's requirements of nickel. In 1925 the nickel output had a value of \$15,946,673, copper \$4,764,682, and platinum metals \$1,675,706.

Fair mining taxation, sympathetic co-operation of the Government, and fields of great promise, combine in assuring a mining era of great importance in Ontario. Maps and geological reports, mining laws and other information may be obtained on application to

W. C. NOXON, Agent-General for Ontario,
163, Strand, London, W.C.2.
Hon. CHARLES MCCREA, Minister of Mines,
Thos. W. GIBSON, Deputy-Minister of Mines,
Toronto, Canada.

demand for 10/12 lbs. Repairers are also taking a good deal of sole leather, paying from 24d to 28d for suitable selections. Upper leathers are rather dull, but there is an inquiry for light willow calf, and coloured and black glacé for the Russian boot. Prices of leather remain firm all round, with sole leather rather scarce. In the boot centres business is thinning down owing to the coal strike, but makers of women's and children's shoes are still fairly well off for orders.

CHEMICALS AND FERTILISERS.

Business in the chemical market has been rather more difficult during the past month, with prices generally unaltered in the absence of large-scale demand. A fair routine activity is in evidence, but is confined to small lots for near requirements. Export inquiries are a little more numerous. Coal tar products are in short supply, and prices are firm. Lead products are rather dearer. Seasonal chemicals, including citric and tartaric acids, sodium hyposulphite and anhydrous ammonia, are in good request at improved rates. The fertiliser market is neglected, spot demand being limited and quotations nominal. Basic slag and ground rock phosphate, however, are in good request for autumn delivery. The new season quotation for ammonium sulphate is not yet announced, but cheaper rates are foreshadowed.

Comparative representative quotations are as follows:—

	1925.							
	July 1.	June 1.	May 1.	Apr. 1.	July 1.	June 1.	May 1.	Apr. 1.

VEGETABLE OILS AND OILSEEDS.

Markets all round have had a quieter, and in some respects easier, feeling in the past few days. Linseed oil on lower seed values and poor demand from consumers, declined about 20s per ton, but is rather steadier now at £33 15s per ton, naked, ex Hull mill prompt, and delivery to December, with the January-April position at a small premium. The decline in cotton oil seems to have stimulated demand to some extent, but prices are about unchanged at £39 10s for crude Egyptian and £41 for ordinary refined. Very little is passing in other vegetable oils, prices of which are only barely maintained. In the oilseed section only a small business is reported in linseed. Plate to Hull have been done at £16 2s 6d to £16 6s 3d for shipment to September. Trade in the new Indian crop is negligible. In the absence of support from crushers, Egyptian cotton seed has further declined, and is now available at £9 17s 6d on spot and £10 on passage, and July shipment. Crushing mills are running below normal capacity.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—General steadiness governed the market, and moderate clearances resulted in spot parcels. Of British refined Messrs Tate and Lyle's cubes, 33s to 33s 6d; crushed, 30s 9d to 31s; granulated, fine, coarse, 29s 7 1/2d; No. 1, 29s 4 1/2d; No. 2, also London and T.L.S., 29s 1 1/2d; ditto July, 29s. Crystallised West India, 24s 9d to 26s, as to sample. White Mauritius, spot, 26s to 26s 6d. Czecho granulated, spot, 27s 6d; ready for shipment, sold, 14s 9d to 14s 9 1/2d; August, quoted 14s 10 1/2d; November-December, 15s 3d, f.o.b., Hamburg. Dutch "J," granulated, spot, 27s 6d; ready, 14s 9 1/2d; November-December, 15s 5 1/2d, f.o.b., Rotterdam. American granulated, July-August, 15s 6d to London, and 15s 9d outports, c.f. and i. terms. Belgian crystals, prompt, 14s 9d, f.o.b., Antwerp. Polish crystals, prompt, 14s 1 1/2d, f.o.b., Danzig. Cuban basis, 96 per cent., July-August, 11s 10 1/2d, c.f. and i., U.K. White terminal market steady, and transactions were of fair dimensions. July delivery, sold, 14s 1 1/2d; August, 14s 4 1/2d, 14s 3d; October, 14s 7 1/2d; December, 15s, 14s 11 1/2d; March, 15s 6d; May, 15s 8 1/2d to 15s 9d and 15s 7 1/2d per cwt.

COFFEE.—A steady tone prevailed on the spot, and business proceeded with fair freedom. Kenya, bold, sold, 122s 6d to 140s; Costa Rica, ditto, 146s to 179s; Matagalpa, bold, 156s 6d to 163s; Mexican Maragogipe, 187s to 192s. Futures quiet, but steady.

COCOA.—Spot market quite steady, and a fair demand predominated. Trinidad, sold, 73s to 74s; Grenada, 68s; Accra, 58s. Accra F/F, July-August, quoted, 52s 6d; intermediate, 49s 6d, f.o.b.

TEA.—Indian auctions during the week totalled 42,000 packages. With buyers showing more confidence, good progress was made, and prices in most cases were fully steady. Pekoe, sold, 1s 4 1/2d to 2s 3d; broken orange, 1s 5 1/2d to 2s 2 1/2d; very fine orange pekoe up to 3s 4d. Ceylon sales of 31,600 packages evidenced good competition for all the finer liquoring parcels at firm to slightly dearer rates, but commonest went in buyer's favour. Pekoe, sold, 1s 4 1/2d to 1s 8 1/2d; broken orange, 1s 6 1/2d to 1s 11d. Java and Sumatra auctions totalled 9,780

packager. There was a good demand, and general tone of market ruled firm, especially for best sorts, which tended dearer. A few very common parcels sold at low prices. Pekoe, sold, 1s 4 1/2d to 1s 4d; broken ditto, 1 1/2d to 1s 4 1/2d; pekoe souhong, 1s to 1s 3d; orange pekoe, 1s 3 1/2d to 1s 5d; broken orange, 1s 2d to 1s 7 1/2d per lb in bond.

RICE quiet, but held for full rates. Rangoon, Two Stars, spot, London, sellers, 16s 10 1/2d; June-July shipment, 16s 4 1/2d, c.i.f., London. Broken quiet. Italian, also Spanish, unaltered. Japanese peas, spot, 35s; September-October, 27s 9d. Madagascar butter beans, spot, 26s 6d to 28s 6d, as to quality; afloat, 25s. Rangoon hand picked, May-June, 12s 4 1/2d per cwt, c.i.f.

SPICE.—Pepper steady, with a moderate demand in forward positions. Black Singapore, f.a.q., May-July, quoted, 9 1/2d; August-October, 8 1/2d; Lampung, May-July, 9 1/2d; August-October, sold, 8 1/2d; Muntok, L.S., May-July, 1s 4d; August-October, 1s 2 1/2d; Zanzibar cloves, spot, 10d to 10 1/2d. Pimento, spot, 6 per lb. Tapioca firm forward, and sales in Singapore, July-August, to Havre at 16s 6d; Sago flour dull. July-August, quoted 15s 1 1/2d per cwt, c.f. and i., U.K.

FRUIT (Dried).—Currants market firm, but quiet. Amalia, quoted 30s to 31s; Gulf, 32s to 35s; Pyrgos, 29s; Vostizza, 40s to 50s; Patras, 31s to 33s; Australian, new, 46s to 53s. Sultanias quiet. Australian, new crop, 70s to 90s; South African, bleached, 72s to 75s; Californian, 42s to 62s. Dates quietly steady. Siam, quoted 10s 6d to 11s; Khadrawie, 15s to 16s, as to quality. Raisins, Valencia, in short supply, and quarter boxes quoted at 30s to 35s; but South African sell readily at 37s to 41s. Evaporated fruits in moderate request. Californian apricots, fancy, 140s; Australian, 125s to 135s; South African, new Royals, best, 140s. Plums, Californian, new, 20/30, quoted 106s; 50/60, 52s; 90/100, 37s; Oregon, 30/40, 64s; 35/45, 55s. Pears, Californian, extra choice, 80s; fancy, 95s; Lake Country, fancy, 105s. Apple rings, Californian, extra choice, 55s to 60s; Canadian, 54s per cwt.

CANNED GOODS.

CANNED FISH.—Sardines steady, with buyers showing rather more interest. Portuguese, 1/2s quoted 4s 3d to 6s per dozen tins. Salmon firm, with moderate transactions. Red, tall, 1 lb, 60s to 65s; tall pink, 28s to 29s; 1/2 lb, pink, 41s. Lobsters realised full rates on scarcity. Best 1/2s, quoted 16s to 170s, and 1/2s, 95s to 97s 6d.

CANNED FRUIT.—Californian fruits move off steadily at about late rates, but pears tend easier. Higher quotations are indicated for apricots and peaches of 1926 pack. Californian Bartlett pears, choice, 24-2 1/2s, 13s 6d to 14s; seconds, 10s 6d to 11s. Californian peaches, choice, 11s 6d to 12s; standard, 10s to 11s; seconds, 9s to 9s 6d. Californian apricots, choice, 12s 6d to 13s; standard, 10s to 11s; seconds, 9s per dozen tins. Singapore pines in moderate request, on spot, with fair supplies on offer. South African and Hawaiian sell steadily at late rates. Italian tomatoes in better demand forward, while spot stocks are decreasing.

CANNED MEAT firm but quiet. Danish lunch tongues, however, sell readily. Corned beef 6s quoted 38s to 46s, as to quality. Danish lunch tongues range from 120s to 130s; American quoted 135s, with best at 140s. Ox tongues firm, though some parcels of New Zealand are offering cheaply. Cooked boneless hams are moving off freely, and finest Danish quoted 1s 8 1/2d per lb for cases of six tins.

CONDENSED MILK.—Market without material change, with a generally quiet demand. Some Belgian brands on the market met with good attention, especially for evaporated, quality being excellent and prices attractive.

HONEY quiet, apart from New Zealand, which moved off steadily. New Zealand quoted 50s to 55s; Australian, 40s to 45s; Jamaica ranges from 40s to 55s; Haiti, 37s 6d to 50s; Cuban, 37s 6d to 50s; Californian, 45s to 60s per cwt.

RUBBER.

Market remained generally dull and featureless. Plantation standard, spot, and July, sold, 1s 8 1/2d; August, 1s 8 1/2d; September, 1s 8 1/2d; October-December, 1s 9d to 1s 9 1/2d; January-March, quoted 1s 9 1/2d per lb.

GENERAL.

HEMP.—Only limited dealings in Manila parcels at easier rates. J. August-October, quoted £39 10s; K, ditto, sold, £30 5s to £29 10s; L, quoted £30 15s; and M, £27. New Zealand nominally unaltered. African Sisal steady. No. 1 Tanganyika, July-September, quoted £43 10s; Kenya, £43 per ton.

SHELLAC.—Steady, quiet. Fair T.N., standard, on spot, 125s to 130s; August, 123s 6d; October, 122s 6d; December, 119s cwt.

COPRA.—Steady, though business proceeds slowly. F.M.S. Straits,

THE BANK OF TAIWAN, LIMITED.

Talks on Tyres

OF what is a Tyre made? Many people would answer—"Rubber," but Rubber is only one of the many ingredients which go to the construction of the modern tyre. Quite as important a constituent is COTTON—the basis of the strong and tough "casing."

The fine long-staple Cotton Cord used in Dunlop Tyres is constructed in the Dunlop Cotton Mills at Rochdale—the largest self-contained Cotton Mills in the world.

Untiring care in selection of raw materials, ceaseless examination during manufacturing processes, constant tests for road worthiness—these are some of the vital factors ensuring the supremacy of

DUNLOP TYRES

and reasons why you can—

fit Dunlop and be satisfied

THE MONEY MARKET.

HEAVY repayments to the Bank of England, and some calling in of money by the joint-stock banks for balance-sheet purposes, produced considerable stringency in the short-loan market during the past week, and as much as 5 per cent. had sometimes to be paid for money for liquidating indebtedness to the Bank. Applications for the large number of new issues which have been offered

during the week have involved a considerable turnover of funds; towards the end of the week, however, the tightness was slightly relaxed, and short loans eased to 4 per cent. With less disposition to look for an early reduction in Bank rate, discount rates have hardened to $4\frac{1}{2}$ per cent. Yesterday's Treasury bills went at a higher rate than last week—namely, $4\frac{1}{8}$ per cent.

	July 9, 1926.	July 2, 1926.	June 25, 1926.	June 18, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	$\frac{1}{4}$ (Dec. 3, '25)
Banks' Deposit Rate	3%	3%	3%	3%	2 (Dec. 3, '25)
Discount, Call	3%	3%	3%	3%	2 (Dec. 3, '25)
Houses' Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	..

The Bank return showed an increase of £171,400 in the stock of coin and bullion, but the note circulation expanded by £512,400, so that the Reserve was £341,000 lower. Government securities were reduced by £14 millions, and Other Securities by £28½ millions, and as Public deposits increased by £6 millions Other deposits were £49 millions lower. With this decline in liabilities the Proportion rose to 22.9 per cent. Currency notes outstanding were increased this week from £294,036,200 to £296,018,600, which includes £1,300,600 for notes called in but not yet cancelled. The fiduciary issue is £238,468,000, or £9,434,500 below the maximum.

The Reichsbank reduced its rate of discount from 6½ to 6 per cent. on July 6th. This is the fourth reduction since the year opened with the rate at 9 per cent. The Bank of Poland reduced its rate from 12 to 10 per cent. on the 7th inst.

NEW YORK MARKETS.

Our New York correspondent cables:—Moderate activity continues in the share markets, with strength in industrial favourites, such as U.S. Steel and General Motors and better-class rails. The Stock Exchange report shows an increase of \$159 millions in brokers' loans in June. This rise, however, is less in proportion to the gain in share prices. Building contracts let in June in the North-Eastern States are only 2 per cent. less than a year ago. Railroad freight traffic continues at record high levels. Steel operations are maintained at close upon the previous month's figures and well above those of a year ago. Commodity prices were slightly lower in June, Bradstreet's index number showing a decline of 0.1 per cent. as compared with May and of 8.1 per cent. on the 12 months. It now stands at 138.2. The decreases are principally in foodstuffs, and due to the drop in wheat as the harvest proceeds. Dun's index number is 1.1 per cent. below May and 8.1 per cent. below a year ago. The Reserve system shows a large increase in discounting, owing to the cashing of dividend and interest cheques and holiday cash demands. The reserve ratio for the system is 73.2 per cent., against 75.3 per cent. a week ago and 76.1 per cent. a year ago.

THE STOCK MARKETS.

Business in the stock markets has been fairly active in certain sections, but the gilt-edged market has been a little heavy, partly owing to the tightening in money rates, which has dissipated anticipations of an early Bank rate reduction, and to the competition of new issues. The foreign market remains good, but French bonds are flat on the relapse of the franc. Home rails keep fairly steady, and Argentine and Brazilian rails have been strong. Rubber and oil shares are quiet. In the industrial market the tobacco group is still the centre of attraction. A feature yesterday was the sharp drop in Courtaulds on the reduced interim dividend. The Bank dividends had little effect on prices, and insurance shares continue to droop. In the mining section South African shares have been active, the Cape being a consistent buyer. Some of the Mexican favourites have strengthened.

The majority of the week's new issues were rapidly oversubscribed, but the Belfast Corporation issue of £2 millions in 5 per cent. stock at 99 was an exception, underwriters being left with 75 per cent.

THE COMMODITY MARKETS.

Trade in most markets is dull, a settlement of the miners' dispute being eagerly awaited. In the coal market interest lies chiefly in the importation of foreign coals, larger quantities of which are arriving. Conditions in the pig-iron market remain unchanged, and very little home-manufactured iron and steel is available. Cotton, however, shows a little more activity, and cloth inquiry for India has broadened. The Colonial wool sales re-open in London next week; in the meantime, wool values are being well maintained. Wheat remains firm, though buying orders are not heavy. Coffee continues steady, but tea and sugar are rather less active. In the rubber market trade is restricted. Among non-ferrous metals, copper is steady and a firm tone prevails in tin and lead.

FOREIGN EXCHANGES.

It has been rather a lively week in the foreign exchange market, with a considerable turnover in both the franc exchanges and in dollars. Paris from 182½ on the 2nd fell to 180½ on Saturday, in anticipation of the expert's report. The political difficulties of the Government, however, neutralised its effect, and there was little movement on Monday. On Tuesday there were some fluctuations, but the closing rate of 180½ showed little change. It rose, however, to 183 on Wednesday, and on the following day there was a rush up to 190 at one time, with a final quotation of 189½. Yesterday morning it opened easier at 187. The situation has been radically altered by the unexpected outspokenness of the Report, which provides in the main a sound scheme of stabilisation, if it can be enforced. M. Caillaux has made great efforts to carry it through the Chamber, and success, which at one time was extremely doubtful, seems now more likely. It would be unwise, however, in the present state of French politics to indulge in over-confidence, although it is being realised that the rejection of the Report would deal a heavy blow at French credit. Meanwhile, the urgency of the situation is shown by the latest Bank of France statement, which records an increase of nearly 950 million francs in the Note issue, and of 350 millions in advances to the State, which brings the latter item perilously near the legal limit. Forward rates narrowed from 3½f to 2½f per month above spot. Heavy offerings of Belgian francs, in particular from Amsterdam, had a disastrous effect on the rate. From 184½ on 2nd it rose to 189 by Monday, and after a slight recovery to 187½ on Tuesday, to 192½ on Wednesday. On Thursday it closed at 202, after touching 209, and opened yesterday at 203. Forward rates are unchanged at 1½f per month above spot. Italy suffered in a similar manner, rising from 139½ on the 2nd to 146½ on Thursday, but recovered, with assistance, to 142½ yesterday morning. Madrid has moved somewhat erratically between 30.36 and 30.85, yesterday's opening quotation being 30.65. New York has shown a weaker tendency during the week, falling from 4.86 15-32 on July 2nd to 4.86 11-32 on Monday. Tuesday saw a recovery to 4.86 7-16, but it depreciated to 4.86 11-32 again on Wednesday, and to 4.86 9-32 on Thursday, opening at the same figure yesterday. It is too early yet to say whether the adverse seasonal movement has actually set in, but in any case it cannot be much longer delayed. The industrial situation in this country and the general European situation are scarcely favourable factors at the moment. Forward rates have narrowed slightly from 13-32 to 10-16 cent below spot for one month. Switzerland has moved against us from 25.13½ to 25.11½, and Berlin from 20.43½ to 20.42½, while Stockholm, after moving from 18.13½ to 18.14½, reacted yesterday to 18.13½d. Copenhagen has been fairly steady around 18.35, but Oslo has risen from 22.16 to 22.25. Vienna, Prague, and Budapest are unchanged, but Warsaw has improved from 50 to 45. In Eastern Europe Bucharest has weakened from 1,025 to 1,070. In the East the rupee is a shade weaker at 15 5¼d, and the yen at 15 11¼d. The silver market has been slack, with a slight demand from India, but little movement in prices. Hong-kong is unchanged at 25 3¼d, and Shanghai at 25 11¼d. In South America Rio has fallen slightly from 7¼d to 7¼d. Buenos Aires is steady around 45¼d, but Monte Video has

risen from 49½d to 49½d. Valparaiso has improved from 39.90 to 39.80 pesos.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—National Bank of New Zealand, Argentine Navigation (Nicholas Mihanovich), Aramayo Mines in Bolivia, Howard and Bullough, Bidor Rubber Estate, Charterland and General Exploration and Finance, Union Corporation, Ohlsson's Cape Breweries, Tamplin and Sons Brewery, Brighton, Lobitos Oilfields, and Ex-Lands Nigeria.

INSURANCE SUPPLEMENT.

With this number our readers will find a Supplement reviewing the progress and prospects of insurance. The topics dealt with include the recent experience of life offices, the increase of business, mortality, an analysis of their funds, valuation results and bonuses; the results of fire insurance in the past year; and the results recorded in the last reports from the marine insurance world. The Supplement is not a mere record of company results, but a general survey of the insurance problems of the day.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE COAL DISPUTE AND THE HOURS ACT.

WITH the passing of the Eight Hours Act this week the coal dispute enters upon a new, and, it is sincerely to be hoped, a final phase. But what turn the dispute will take it is as yet impossible to foresee. Whatever merits the Act might have had if passed as an agreed measure, when passed in the face of the opposition, not only of the miners, but of the Labour Party, it is bound to be regarded merely as offering the owners the opportunity to impose their own solution. During the debates, both in the Commons and in the Lords, where an unusual "scene" marked its final stages, it has been constantly reiterated from the Government side that the Bill is merely permissive. All that this phrase means is that within the limit of eight hours the question of actual hours to be worked is a matter for collective bargaining, and the result will depend upon which side is the stronger. Lord Robert Cecil defended the Act in the Lords on the ground that it opened an alternative option to the industry as compared with lower wages, and it has been constantly suggested that this additional option is in keeping with the spirit of the Commission's Report, which, though condemning an increase of hours, suggested that if the two sides of the industry asked Parliament to remove the seven hours' limitation Parliament should legislate to that effect. But the present Act is obviously not the result of a joint suggestion, and in any case the Commission never contemplated a wholesale return to eight hours working, which it rightly considered would cause a much greater increase of unemployment than any alternative solution. It clearly had in mind an extension in particular

districts, or, alternatively, a general increase of perhaps a quarter of an hour a day in order to approach the working day on the Continent. The present Bill permits the working of longer hours than in any coalfield on the Continent except Upper Silesia, and it is evident that the owners intend to make it universal. It seems fairly clear that they will only succeed if in the process they are able to reduce the organisation of the workers to impotence. The reason for the workers' resistance is intelligible enough. An increase of hours in times of bad trade is a most unsatisfactory proceeding. Reduction in the hours of labour is one of the most definite of the signs of industrial progress. As between good and bad times, wages or profits must inevitably vary, but a reversion to longer hours of work gives the appearance of a set-back to economic progress, and every worker feels that it will be extraordinarily difficult to regain the ground lost, whereas a temporary reduction of wages would, in the case of the coalminers, automatically recover as soon as times improve. Moreover, this change in the working day is certain to be imitated on the Continent. Indeed, a move of this kind, which the Commission feared, is already threatened in Germany. The net result which the worker fears is lower wages for more work.

The future will be clearer in the course of the next few days, for it will then be seen whether the men drift back to work on the terms which have been posted in the last few days. If they do, it is likely that conditions will be settled by district negotiations under which there may be comparative and temporary peace, though the Government must be well aware of the sinister possibility that for the next five years the coalfields will be in a state of constant unrest and agitation for a restoration of the seven-hour day. We can conceive the possibility that on a complete and frank carrying out of the Commission's proposals for the coal industry as a whole the men might agree to greater elasticity in regard to hours, but it is difficult to believe that they will settle down under a general eight-hour day. The alternative possibility is that the men may stand together, and, apart from a few abnormal cases, remain out. In this case we shall have to wait for the renewal of negotiations, as though the Act did not exist. In this latter event the Act will merely have had the effect of stiffening the attitude of the miners and making negotiations more difficult.

In almost every district the owners have offered the same wages during the ensuing three months as were paid in April, but thereafter the minimum will be reduced to that under the 1921 agreement. The following figures, taken from a table given in the *Times*, show at a glance what the offers of the owners for the next three months are:—

	Underground.			Surface. Pithead and Screen- men.
	Hewers.	Timber- men.	La- bourers.	
	s d	s d	s d	s d
South Wales, no reduction	90 6	67 11	52 9	54 6
Yorkshire, no reduction	83 2	77 9	55 3	55 10
Durham, 10% reduction	64 6	58 3	42 5	51 9
Scotland, no reduction	71 0	73 0	54 1	41 1½
Notts and Derby, no reduction ..	85 5	76 4	56 2	52 4
Northumberland, 10% reduction ..	59 5	56 6	41 4	57 6
Warwick, slight increase	86 0	68 10	50 6	48 0
S. Staffs and Salop, no reduction ..	82 9	53 1	45 7	40 1
Forest of Dean, no reduction	63 2	46 8	43 4	37 3
Bristol, no reduction	69 4	53 8	47 1	54 8

Most of the offers tacitly imply that the ratio for the division of the proceeds of the industry remains 87 per cent. for wages and 13 per cent. for owners, as in the 1921 agreement. In their original notice, however, the Yorkshire owners explicitly reverted to the ratio of 85 and 15 per cent. But the Government took strong exception to this, and the Yorkshire owners came into line with their colleagues, while the passage of the Hours Bill through the House of Lords was delayed.

The fact that the mines have been idle for two and a-half months means, of course, that it will be more practicable

to pay good wages in the immediate future, but if the 1921 minimum is enforced thereafter, the miners will, in fact, be asked to accept after September the terms put forward by the owners on the Friday before the general strike—viz., the 1921 minimum with an eight-hour day. If the dispute ends on these terms the miners have only themselves to blame, for they are much worse terms than could have been secured at almost any time since the Report of the Royal Commission was published. They will also have lost the opportunity of insisting upon the complete carrying out of the Royal Commission's Report. In a dispute of this kind it requires great political wisdom to know when to bargain and when to stand fast; but even more it requires courage to lead a retreat from an indefensible position. If the owners' move fails to break the Miners' Federation, the latter will shortly have one more opportunity, not to dictate terms, but to make a peace which will permit the restoration of the industry, and not destroy, as the present policy is destroying, the prospects of a livelihood for hundreds of thousands of its members.

Meanwhile, the prestige of the Miners' Federation and its leaders has not been enhanced by the publication of the report which the T.U.C. prepared for submission to the conference of executives which was to have been held on June 25th, but was postponed. The report strongly criticises the policy of the miners' leaders. Referring to their adherence to the position of "not a penny off wages, not a minute on to the working day," the Council "say without hesitation that it is not leadership merely to stand by whilst hundreds of thousands of men and their families starve on a slogan." "Puerile" is the epithet applied by the Council to the policy of the miners' leaders. Nevertheless, we have to recognise that these leaders are the men deliberately elected by the miners to conduct their affairs, and until the miners themselves elect others to take their places it is with these leaders that the Government, the owners, and the public have to deal. A change of attitude and outlook among the leaders can only filter through from the rank and file, and the process must come about by slow degrees and hand in hand with a growth of confidence. The essential thing about any settlement that may be reached is that it should be such as will permit the development of this confidence and change of attitude. We hope that while the miners' leaders are digesting the strictures passed upon them by the T.U.C., the owners and the Government will allow this fact to sink into their minds.

DOMINIONS, STATES, AND GOVERNORS.

RECENT events in Canada and Australia have brought to the forefront a constitutional question of great interest and importance, both for the relations between the different self-governing communities in the British Commonwealth, and for the British system of responsible Government in general. At the beginning of last week the Governor-General of Canada exercised his powers by refusing a dissolution to the then Prime Minister of the Dominion—an action which in some quarters has exposed him to scarcely merited criticism, but which has also called attention more widely to the fact that, by tradition, the Governor-General of Canada is a British subject chosen from among the distinguished men of another of His Majesty's dominions. At the end of the week a correspondence was published which arose out of a request from five of the six premiers of Australian States to the Secretary of State for Dominion Affairs at Westminster, that in future the Governors of States should be chosen not, as they also are now chosen by tradition, from among British subjects in the British Isles, but from among the people of the several States themselves. In a memorandum by the Attorney-General of the dissenting State of Victoria, in which this request is combatted, it is mentioned incidentally that "in Australia it is well settled that a Governor has the right, if he thinks fit, to refuse a dissolution when asked."

Juridically, perhaps, the two cases are not on all fours.

The States of Australia do not, like the Commonwealth or like Canada, possess Dominion status—a status which now appears to imply that the prerogative of the representative of the Crown in this or that Dominion shall be identical with, or, at any rate, not more extensive than, the contemporary prerogative of the Crown itself in the United Kingdom. The State Governments of Australia have descended from the former Colonial Governments without a break of continuity, and in the Colonial Governments of Canada before the grant of full responsible Government, as well as in those of Australia, the Governor's prerogative included the right, among others, of refusing a dissolution. Technically, therefore, it may be inadmissible to argue from the constitutional practice in the States of Australia to the constitutional theory in the Dominion of Canada. Yet the two cases do throw light on one another, and the coincidence that they should have come to a head simultaneously points to the existence of a general question which goes rather deeper than outward constitutional forms.

It may be noted at the start that the five Australian State Premiers, in making their request, were careful to make it clear that they were thoroughly loyal to the Crown, thoroughly satisfied from the personal point of view with the succession of Governors that had been sent to them from Great Britain, and thoroughly desirous of maintaining the bonds of Empire unity. Their request, however, was opposed by a number of representative bodies of people in the five States themselves, as well as by the State of Victoria officially, and Mr Amery, while re-asserting, on the British Government's behalf, the recognition that the ultimate decision in this matter rests with the people of Australia, has refused the present request on the ground that Australian opinion generally is not indubitably in favour of the change, and certainly not so strongly in favour of it that a subsequent demand for its reversal is not likely to arise.

The cogent reasons for the opposition to the request, which is evidently considerable throughout Australia, are set forth in the above-mentioned memorandum by the Attorney-General of Victoria, which is the outstanding document in the correspondence. He gives first, as a secondary consideration on which he does not insist, the non-political reason that the appointment of British subjects from the United Kingdom to Australian State governorships fastens the personal links between the different parts of the British Commonwealth of Nations. His main reason, however, which he develops with great ability, is that the present arrangement "enables responsible government as developed in the British Parliamentary system to be operated with the same ease and efficiency as in Great Britain." He picks out the position of the Sovereign in our system as "possibly the most successful phase" in it, and, indeed, the pivotal factor. The elasticity and changeability of the Executive and Legislature which, *ex hypothesi*, have to be highly developed in a Government which is to represent the changing will of the people, necessitate the presence of some non-changing factor in the constitution. "This permanent element in Great Britain is the King, and in an Australian State the Governor"; and the person who performs this function must be not merely permanent, but detached, impartial, and above suspicion of partiality. These two qualities of permanence and of recognised neutrality are secured in the case of the King by the hereditary principle and by the prestige which surrounds a hereditary monarchy. But the King's representatives overseas do not possess these qualities as their birth-right. If they are to stand outside the party politics of those communities, governed on the British Parliamentary system, in which they have to perform the King's function, this must be secured in some other way; and under the present system it is secured, most happily, by bringing them from another community which lives under the same form of government, but which is divided from the country in which they have to act by so great a distance that the two communities lead separate lives, so that a member of the one has no personal stake or pre-judice in the affairs of the other.

There are historical precedents for this in the constitutional practice of the ancient City States of Greece and the mediæval City States of Italy, which secured the

necessary element of permanence and impartiality in their political life. There is also a precedent for the double function of the Crown, as at once the permanent factor in the British constitution and the constitutional link between the fully self-governing members of the British Commonwealth of Nations, in the position of the Princeps in the early Roman Empire, who was at once the supreme magistrate of Rome and the link binding together the congeries of self-governing City States of which that Empire consisted. It is remarkable that, in the British Commonwealth, as the self-government of the Dominions develops, the function of the Crown as a symbol of union increases in importance. This is pointed out in the Victorian Attorney-General's memorandum, and it was emphasised not long ago—somewhat unexpectedly—by General Hertzog in South Africa. So far, we may congratulate ourselves that our constitution shows a power of growth and adaptation that is not unequal to the extraordinary demands which are being made upon it. But we must always keep our eyes upon the possible danger of lagging behind in the matter of adaptation to the changing demands of successive developments.

FRENCH CURRENCY REFORM: THE EXPERTS' REPORT.

(BY OUR PARIS CORRESPONDENT.)

THE text of the report of the Committee of Experts which has prepared a plan for the restoration of the French national finances, which was made public on Sunday, is a document of over 20,000 words, to which are attached a series of elaborate statistical appendices. It deals fairly and frankly, and without political bias—as might be expected from the distinguished bankers and economists who form the committee—and places the cold realities of the situation plainly before the nation.

The report, as the committee points out, "forms a complete whole," the object of which is to bring about a stable currency. This the experts believe will be attained by the application of a long series of measures, which may be divided into four categories: (1) Budget reform, (2) fiscal reform, (3) Treasury reform, and (4) currency reform. The essential characteristic of the present situation being currency instability, due to (1) budgetary deficits, (2) the abuse of short-term loans, and (3) inflation, the Committee recommend that measures shall be taken to assure an absolute balancing of the Budget, to place the Treasury in a position of ease, and to stabilise the franc. A rough outline of these measures may be set out as follows:—

An energetic cutting down of public expenditure;

To be followed by the establishment of elastic resources of revenue, giving an immediate yield;

The Bank of France to be rendered independent by taking away the facility of direct or indirect recourse to borrowing from the bank to meet new public expenditure;

The gradual reduction of the debt owing by the State to the bank;

The proper functioning of the Treasury to be ensured, and an important part of the floating debt to be taken out of its hands, thereby bringing it back to its normal rôle;

National Defence Bonds and short-term bonds to be transformed into redeemable stock by means of voluntary consolidation;

Stabilisation of the currency (with the least possible delay and with the aid of the Bank of France), which alone can render possible the efficacy of the preceding measures, retain, attract, and repatriate capital and prepare the return to free circulation of capital in the near future;

The securing, in order to aid stabilisation, of loans in foreign currencies for as long a term as possible, and to arrange for credits abroad;

To adopt an economic policy that will tend to attenuate the crisis that will inevitably follow a return to sound money, and to re-establish national prosperity.

The experts insist that the carrying out of this programme must be based on "the exact observance of its engagements by the State, and on the settlement of the inter-allied debts."

"The members of the Committee are unanimous in believing that the measures set forth, if applied progressively and logically, are of a nature to ensure the restoration of the situation; that continuity of views and of efforts is necessary, and that fragmentary programmes and partial solutions will be fragile and inefficacious; that it must not be concealed that financial restoration will be accompanied by difficulties and sufferings, and that all postponement will only aggravate these. If France will only impose discipline upon itself, work with union, ardour, and perseverance at the task of re-establishing itself, and produce and economise more, order and economic prosperity will not be long in returning."

The experts insist that Budgetary methods must be profoundly reformed forthwith, and recommend that—

(a) The Minister of Finance should be preponderant in all financial questions. "His rôle should no longer be confined to finding revenue to meet expenditure proposed by his colleagues."

(b) The Budget should in future be definitely voted in its entirety before the beginning of the financial year, which should begin henceforward on April 1st (the system of *douzièmes provisoires* or monthly votes on account to be suppressed).

(c) The Budget should include all revenue and all expenditure, all revenue now diverted from the Treasury to be restored to it, and all autonomous Budgets, such as that of the Postal Department, be suppressed; the present régime of "common funds," under which an important part of the revenue from excise duties, the tax on turnover, &c., is diverted to special purposes ("often to the encouragement of local administrative expenditure") should also be abolished.

(d) Parliament to abandon, at least temporarily, its right of initiative in regard to expenditure, which should be left to the Government. "In the present situation the extension of industrial exploitation by the State should be avoided."

(e) Greater publicity as to the results of Budget operations, and in regard to revenue and expenditure in France in connection with the working of the Dawes Plan for Reparation payments. The Committee pronounces firmly against any reduction of expenditure of a contractual character (such as that connected with the public debt), but urges sweeping reductions in departmental expenditure, and in connection with grants made by the State for local purposes, in which latter case the local authorities should bear a greater share than at present. It forecasts increased taxation during the present year, to meet debt consolidation and redemption charges, of at least 2,500 millions, and of nearly 5,000 millions in regard to the Budget for 1927.

The experts pronounce vigorously against the present Socialistic demand for direct as against indirect taxation, and take the view that direct taxation on production and labour do not spare the consumer. They urge that the only taxes capable of ensuring a balanced Budget, in present circumstances, are imposts on commodities of large consumption, which furnish an immediate and regular yield which will increase with the rise in prices.

The Committee insists that the *bordereau* or *carnet de coupons*, and the affidavit system, are incapable of procuring any appreciable increase of revenue, and can only provoke exportation of securities and capital, and should therefore be revoked. It advocates modifications of direct taxation and succession duties that would have the effect of increasing the yield while reducing "the excessive rates." It describes the present imposts on dividends from French stocks and shares as "exorbitant in a great number of cases," and recommends "a notable reduction of transfer duties" as a means of "attenuating the most crying abuses." The recent increase to 60 per cent. of the nominal rate of the general tax on incomes (plus an

additional 25 per cent. in the case of bachelors), the experts declare "unjustified by results, discouraging to saving, and to the spirit of initiative, hampering in regard to accumulation of capital, and provocative of fraud and evasion. A reduction of this tax is desirable." On the other hand, it is suggested that, in view of the rise in commodity prices, the rate of exemption from income-tax should be raised from 7,000f to 10,000f. Revision upwards of customs duties, the tax on turnover (to a uniform rate of 2 per cent. on all transactions), the duties on railway and other forms of transport (by an additional 15 per cent. on passenger tickets and freight rates), and on sugar, wines, beers, and ciders, is also recommended.

Exceptionally, in view of its peculiar circumstances, the experts recommend that the tobacco monopoly, in order to ensure proper industrial management, should be rendered autonomous and placed in charge of an Office National des Tabacs, and that the sale price of tobacco should be raised to accord with the fall in the franc.

"Profoundly convinced that inflation must be brought to an end," the experts "have sought means to fix definitely the limits of the State's borrowings from the Bank of France and the total of the floating debt, to provide every possible guarantee for redemption, and to bring about consolidation as soon as possible."

In regard to National Defence Bonds, which have in the past been a source of trouble to the Treasury when demands for repayment have exceeded subscriptions, they dismissed in turn the methods of forced consolidation, a tax on capital, forced loans, and a cutting down of the rate of interest payable. "Confidence in the execution of its promises by the State is indivisible. The Committee consider that it is absolutely indispensable to pursue a policy of voluntary and progressive consolidation of National Defence Bonds as soon as it shall become possible."

"It appears to be of prime importance henceforth to remove National Defence Bonds entirely from the Treasury and to place the duty of ensuring their service in the hands of a 'Caisse de Gestion des Bons de la Défense Nationale,' to be administered by the Caisse des Dépôts et Consignations."

Representatives of the Ministry of Finance and of the Bank of France would have seats on the board of this fund. The experts propose to fix the maximum figure of the bonds in question at 49,000 million francs, and that "a first consolidation loan" shall be issued as soon as possible. Holders (together with holders of three-ten-year short-term bonds) might also, the committee suggests, be given facilities to exchange their bonds against existing issues or others of a new type. The committee proposes that the suggested new caisse shall be provided with:—

(1) A budgetary annuity equal to the total of the interest due to the bonds in existence, which annuity would be paid over to it at the beginning of the financial year.

(2) A redemption annuity of at least 500 million francs, also from the Budget, which would be used to extinguish National Defence bonds.

(3) An initial endowment to a substantial amount, which might be increased in the future, and be used for redeeming bonds. (This initial annuity, the experts suggest, should be furnished by one of the foreign loans to be obtained by the State. The latter would hand over to the Bank of France the foreign currency resulting from the loan, and its value in francs (up to a total of 4,000 millions) would be placed in a special account opened by the bank at the proposed new caisse. The experts suggest that this special account, by its mere existence, would tend to increase the confidence of holders. Later on, when other financial operations of a similar nature (notably, the mobilisation of the Obligations provided under the Dawes Plan) have been carried out by the State, 50 per cent. of the resultant value in francs might be utilised in a similar manner, until the credit balance of the account was equivalent to 20 per cent. of the nominal value of the National Defence Bonds still in circulation.

(4) Independent of these resources, the caisse would also receive the net yield from the tobacco monopoly, as a special guarantee, which the caisse would be able to

utilise at will for the purpose of securing temporary advances, &c.

The Bank of France, the report points out, would continue to discount National Defence bonds, as at present, which would enable them to remain in public favour. It is proposed that a statement should be published every fortnight showing the exact situation of the caisse.

The renewal of short-term ordinary Treasury bonds, up to a maximum of one year (which now total 2,600 million francs), should cease, the bonds being paid off as they mature by the new caisse.

Short-term Treasury bonds (three to ten years) and short-term Credit National bonds the Committee propose should continue to be left for the Treasury to deal with, and should be progressively reduced either by consolidation loans or by redemption, the first consolidation loan to be issued to cover the maturities of the 7,000 millions of 1922 Treasury bonds which mature next year.

The debt owing to the Bank of France the Committee recommends should be reduced at the rate of 1,000 millions per annum, drawn from the Budget.

To meet immediate end-of-the-month and pressing emergencies, the experts recommend that the Treasury be authorised to furnish itself with ready money by the issue of 5,000 millions of ordinary Treasury bonds, but independent of the present issue, which would pass to the proposed new caisse, and would disappear in the near future. Other free money would be drawn from the first foreign credits, which would give the Treasury sufficient elasticity in future.

Stabilisation of the franc, the Committee points out, is inseparable from its other recommendations. "The foregoing recommendations presuppose currency stabilisation; on the other hand, their object is to render this possible." Stabilisation presupposes the existence of a large stock (1) of foreign currency to prevent the fall of the franc, and (2) of francs able to absorb the surplus foreign currency on the market. The State not being in a position to undertake this operation, it must be carried out by a bank of issue (as in Austria, Hungary, Finland, Great Britain, and Czechoslovakia), and in this case by the Bank of France. The means to carry out the operation would be based on the existence of the bank's gold reserve and stock of foreign currency, supplemented by such short or long-term credits as the institution can obtain either directly or through the medium of the Government.

The utilisation in the first line of the bank's gold reserve being objectionable, the indispensable means must be furnished by outside help in the form of the long-term loans already made to or to be made to the Government, of credits to be secured by the Bank of France, and of private and commercial credits. The Committee suggests that the credits to be secured by the State and the Bank for the first operations may be placed at \$200,000,000, or its equivalent. The experts insist that such help can only be obtained if the Washington Agreement for the settlement of the Franco-American debt is speedily ratified, and a definite settlement also come to with Great Britain. If this is done the credits may be secured, and the law against exportation of capital may soon be abrogated.

The moment when stabilisation will be brought about will depend, the report states, on when the other measures proposed are put into effect. The level at which the franc will be stabilised cannot yet be fixed, and a choice will have to be made between two extremes, namely, the rate of the franc as shown by the index figure of the cost of living at the moment of the stabilising operation, and the rate effectively reached by the franc at the same moment on the exchange market.

The report foresees that the stabilisation operations will be divided into three periods:—

(a) A period of prestabilisation, with oscillations of the exchange round a figure more or less fixed upon in advance (the maximum authorised advances to the State by the Bank having been finally fixed—without rendering obligatory the fixing of a similar maximum for the note circulation—while the gold reserve would be reinforced by the acquisition of domestic gold currency at a price bordering the rate of exchange).

(b) A period of stabilisation in fact (during which the

Bank will buy and sell gold and foreign currency at fixed prices).

(c) A period of legal stabilisation, which will date from the moment when the preceding situation, in fact, will be confirmed and legalised.

The last portion of the report deals with the economic consequences of stabilisation, and the steps to be taken to overcome the industrial and other difficulties that will be inevitable.

A PROSPEROUS BRITISH INDUSTRY.

At a time when there is so much real industrial depression, which in itself tends to call forth dismal jeremiads and sweeping statements as to the inefficiency and out-of-date methods of British industry, it is pleasant to be able to produce several illustrations to the contrary, one of which is furnished by the engineering trade, and more particularly that part connected with the manufacture of motor cars. In recent issues of the *Economist** we have surveyed briefly the economic and financial progress of the British motor trade, which, though it does not occupy so predominant a position as is the case in America, has become one of the greater British industries. We showed that the success achieved in the production of vehicles of a high level of mechanical efficiency has not been accompanied with so great a degree of financial success, so far as figures were available. Profits have been recovering during the past two years from the slump of 1921 and 1922, when the profit and loss accounts of most of the motor manufacturing companies recorded debit balances, and a list of 27 joint stock concerns showed that profits in 1925 were about 10 per cent. of the total capital invested. But this list did not include the figures of several large engineering concerns, the most profitable side of whose business has admittedly been that connected with motor car production, nor those of Morris Motors, Limited, the largest firm of light-car producers, which hitherto has been a private company, and has not published any accounts. This concern, which manufactures the well-known Morris-Oxford and Morris-Cowley cars, is now being floated as a public company, with a capital of £5 millions, divided into £3 millions of 7½ per cent. cumulative preference shares, and £2 millions of ordinary shares. The whole of the ordinary share capital is being issued as part of the purchase consideration for the business, while the preference shares are being offered to the public at par. The issue is not being underwritten, Mr W. R. Morris, the Governing director of the company, having undertaken to take at par, without commission, any part of the issue not subscribed by the public. A full three months' dividend on the preference shares is to be paid on October 30th, although the final instalment of 5s per share is not due until September 16th.

The large capital with which the company is now being floated represents the building up of the business out of accumulated profits, the actual amount of capital supplied in the form of cash having been only £45,400. The amount payable in respect of goodwill and pending contracts is £1,641,000, the tangible assets on December 21st last amounting to over £3½ millions, of which more than three-quarters of a million were in National War bonds. Moreover, the expansion has occurred since the war, for although Mr Morris started making motor cars in 1913, the total output for the year 1919 was only 337 cars. Since then the annual production has been as follows:—

1921	2,927	1924	27,551
1922	5,166	1925	48,712
1923	17,286		

The first Morris cars were produced at Oxford in 1913, but before the war a works had been opened at Cowley, and, with the demand exceeding capacity, a contract for the supply of engines from America was arranged. The outbreak of war, however, nipped the programme of expansion in the bud, and the factory was engaged for four years on the production of munitions and mine sinkers

for the Admiralty. In the two years immediately following the war, when there was an extraordinary boom in the motor-car trade, during which prices soared to almost fantastic heights, Mr Morris appears to have displayed considerable perspicacity. Having realised that the market was in a very unstable condition, he held his hand, and was therefore not caught in the ensuing slump which temporarily overwhelmed the motor-car industry of this country. In fact, it was during this period that Mr Morris seized his opportunity, and by drastic reductions in prices, made possible by the adoption of mass production or "flow" production methods, obtained a substantial proportion of the home market for light cars, and laid the foundations of a world-wide reputation for an efficient product. Moreover, the rapidity of expansion appears to have been in no way hindered by the temporary removal of the McKenna duties. It is a matter of interest that the original design of 1912 has not been fundamentally altered, and the standardisation of design has made production on a large scale possible and economical. The company now owns or controls factories at Coventry and Birmingham for the manufacture of engines and certain parts, and over 9,000 hands are directly employed, but the policy of purchasing certain parts from specialists is still pursued. The new company is taking over four businesses—namely, Morris Motors, Limited, Morris Engines (Coventry), Limited, Osberton Radiators, Limited, and Hollick and Pratt, Limited. Profits before deducting tax, but excluding interest on investments, amounted to £951,300 for 1923, £916,000 for 1924, and £1,235,500 for 1925, so that the dividend on the preference shares appears to be amply covered. Moreover, it is provided that 25 per cent. of the profits, after payment of preference dividend, is to be placed each year to reserve until a sum of not less than £1,000,000 is accumulated. In view of the rapidity with which the majority of recent new issues have been oversubscribed, there seems little reason to anticipate anything but success for the offer by Morris Motors.

In conclusion it may be mentioned that the relations between Mr Morris and his employees have throughout been happy, and this fact must account in no small measure for the success achieved by the undertaking. While not wishing to deprive Mr Morris and his directors of any of the credit due for this satisfactory state of affairs, we may suggest that a similar story can be told of the relations between capital and labour in the motor industry in other countries, notably in the United States and France. The explanation probably lies in the fact that motor-car production is a young industry, able to start with a clean sheet, free from the innate prejudices of a chequered past.

THE HALF-YEAR ON THE STOCK EXCHANGE.

THE Stock Exchange entered on 1926 with some considerable hopes of active times ahead. Expectations were, perhaps, principally centred upon an early revival of the boom in rubber shares, which had been the feature of the autumn, and among the disappointments of the half-year that has just closed prominent place must be given to the slump in the price of raw rubber, which, in spite of the publication of series of excellent dividends and reports of plantation companies, effectively prevented any revival of the share boom. Indeed, over the first three months general business in the House shrank to proportions which compared very unfavourably with the autumn, and then the shadow of the approaching Budget and the Labour crisis crept over the markets. Thus the half-year, generally speaking, has seen quiet times.

Naturally, in the investment world, as well as in every other branch of the country's economic life, the half-year will be mainly remembered for the ordeal of the great general strike and the coal stoppage. A feature of the critical days of early May was the firm front shown by the markets. On the first day of the general strike quotations were, as a precautionary measure, marked down a few points all round. But the precaution proved to have been almost unnecessary. No panic, and, indeed, no big selling movement, showed any signs of developing. After a day or two selling orders predominated, and though the volume of business was necessarily restricted, prices, generally, at the close of the general strike were well up to the levels that had been recorded before it was declared. The firmness of markets in the face of a threat of unknown proportions, and the calmness of investors, mainly deprived of news and information, was not the least remarkable feature of that notable period. This stout resistance was undoubtedly assisted by the fact that the crisis, when it arrived, found the markets in a very healthy condition, the quietude of the early months having sufficed to straighten out the speculative positions built up in the early winter.

A brief epitome of the half-year is given in the following table compiled from the *Bankers' Magazine* index number of the market value of 365 representative securities:—

(December, 1921 = 100.)				
	Fixed Interest Stocks.	Variable Dividend Securities.	Total.	
December, 1925.....	108.8	132.5	116.5	
January, 1926.....	110.2	132.6	117.5	
February, ".....	110.8	131.6	117.6	
March, ".....	109.6	129.2	116.0	
April, ".....	110.1	128.7	116.2	
May, ".....	110.2	131.1	117.0	
June, ".....	110.2	133.6	117.9	

It will be seen that the index number for variable-dividend securities closed the half-year higher than it began, while on balance fixed-interest stocks have exactly maintained their level.

Although the story of the money market in the half-year was featureless in so far that no change in Bank rate was made during the period, monetary considerations, nevertheless, exerted important influences upon the course of the markets. Early in the year the New York Federal Reserve Bank's rediscount rate was raised from $3\frac{1}{2}$ to 4 per cent., and this event caused temporary fears of dearer money here. By the time these fears had subsided the shadow of the Budget and the coal crisis was beginning to creep over markets. Then came the general strike and the long coal stoppage, which, by slowing down production and industry, has diverted funds normally employed in financing manufacture and trade into high-class investment channels. At the same time, hopes of a reduced Bank rate, fully justified by the Bank's position, and in all probability only postponed because of the coal crisis, operated in support of gilt-edged stocks in the last month or so of the half-year. These influences sufficed to counteract other factors, such as the general pessimism engen-

dered by industrial troubles, and towards the end of the period the strong competition of new capital issues, and were largely responsible for the maintenance of gilt-edged values.

Although it is perfectly logical that serious trade troubles mean a strong gilt-edged market, it is not so easy at first sight to explain why the index number for variable-dividend securities should have risen in the last two months, which must have gravely affected the year's profits of hosts of companies in a wide variety of spheres. Actually in the month following resumption of work after the general strike—that is, from May 19th to June 18th—the market value of 38 representative commercial and industrial shares is shown by the *Bankers' Magazine* to have advanced from £461.2 millions to £483.6 millions, or by 4.8 per cent. This may be taken as indicating a belief that the coal stoppage is not so ruinous in its effects as some are inclined to suppose, and that, when it is over, recovery may be rapid.

The half-year's price movements are illustrated in the following brief table, where for a number of prominent securities prices are shown for the beginning of the year, for the eve of the general strike, and for the end of the half-year:—

	Price Jan. 1, 1926.	Price End of April, 1926.	Price End of June, 1926.
5% War Loan	100 $\frac{1}{2}$	99 $\frac{1}{2}$	100 $\frac{1}{2}$
3 $\frac{1}{2}$ % Conversion Loan	75 $\frac{1}{2}$	75 $\frac{1}{2}$	76
Great Western ordinary stock	88	87	86
L.M.S. ordinary stock	76	73 $\frac{1}{2}$	72
French 5%	13 $\frac{1}{2}$	11 $\frac{1}{2}$	10
German 7%	102 $\frac{1}{2}$	102 $\frac{1}{2}$	104
Courtaulds (£1)	7 $\frac{1}{16}$	6 $\frac{1}{16}$	6 $\frac{1}{16}$
British American Tobacco (£1)	5 $\frac{1}{16}$	6 $\frac{1}{16}$	6 $\frac{1}{16}$
Bradford Dyers (£1)	3	2 $\frac{1}{8}$	2 $\frac{1}{8}$
Vickers (6s 8d)	8/9	7/6	7/6
Dunlops (6s 8d)	1 $\frac{1}{16}$	1 $\frac{1}{16}$	1 $\frac{1}{16}$
Westminster Bank (£20, with £5 paid) ..	18 $\frac{1}{2}$	18 $\frac{1}{2}$	18 $\frac{1}{2}$
Anglo-Dutch Plantations of Java (£1) ..	3 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$

The traffic losses of British railways, compensated by substantial but by no means balancing savings in expenditure, make the maintenance of dividends dependent upon directors' willingness to draw upon reserves, and the comparatively small drop in the quotations reflects belief in that willingness, and also in the ultimate safeguard for shareholders afforded by the standard revenue clauses of the Railways Act of 1921. On the whole, the foreign market has been firm, with a rising tendency at the close of the period, but the slump in the franc has had its effect on French bonds. The rubber share market, the scene of feverish excitement last autumn, has reflected the fall of 60 per cent. in the half-year in the price of the raw commodity, but the continuation of the restriction scheme has revived confidence that the price will not drop further, and steadiness has marked this section recently. The oil share market has had its occasional periods of activity; tea shares have been dull, and nitrates have had a rather severe setback, because of growing fears of synthetic competition. In the mining sections, Rhodesians, towards the end of the year, received marked attention. Rand gold shares have been fairly good, but the midsummer dividends were somewhat disappointing. Among home industrials, iron and steel shares have, naturally, been under the heavy cloud of industrial troubles, but some of the leading favourites have been the centre of vigorous dealing. This is particularly the case with the tobacco group, and such prominent issues as Dunlop and Courtaulds. The most conspicuous rise shown in the table above is recorded by Brazil Traction, which has benefited from Continental buying.

Altogether, although the half-year has brought disappointments, and stock market business has been at times more restricted in volume, yet there is much reason for satisfaction and relief in the investment world. The investor whose holdings are spread among fixed-interest stocks has suffered no depreciation of capital, while the discriminating investor in industrials can find little to complain of in the experience which has befallen him in one of the most difficult periods in post-war history.

AN INDEX OF ELECTRICAL PRODUCTION.

DURING the last few years economic research has tended more and more towards examination of the basic factors which govern trade activity, but, hitherto, it has produced disappointingly few results. The trade cycle is almost as great a mystery as ever, and although we can follow, through a complexity of indicators, its main tendencies with some degree of accuracy, we have not yet got down to fundamentals. Whether it will ever become simplified to such a degree that the industrialist and the business man can accept it without question, and plan developments accordingly in his own trade, is, at the very least, doubtful. Even in the United States, the industrial executive of importance places beside its general trade index a particular index bearing on production in its own works, with subsidiary charts dealing with sales, employment, wages, labour, turnover, manufacturing costs, and freights. Those indices merely assist the American business man in gauging the response of his own organisation to general trade conditions; his own experience and his own judgment must function as before on the evidence of data which cannot be charted.

In this country the position is even worse: beyond certain financial returns, such as bank advances and clearings, certain statistics dealing with production in the coal-mining, iron and steel, shipbuilding, and certain sections of the textile industry, with foreign trade, employment, tonnages entered and cleared at the ports, and transport on the railways, nothing of direct value for estimating the trend of economic and business activity exists. The basic industries, such as engineering, textiles generally, chemical manufacture, metal-working, automobile construction, waggon and carriage building, paper manufacture, and printing remain still outside the range of investigation, and, even in the United States, little has been done to clear up the mystery.

It is obvious, therefore, that an index of industrial production is necessary before any real effort to meet and control the vagaries in the trade cycle, to elaborate a national economic policy, which would serve our interests most effectively as an industrial country, and smooth away the causes of trade disputes, can ever be attempted. The index of production, to be reliable, would require to be based on data which could not be influenced by factors foreign to it—such as price fluctuations due to variation in gold values, or weight changes due to scientific and technical progress (in an industry like engineering, for example). It should, above all, be simple, since mere complexity resultant from the immense accumulation of detail, or from the efforts of statisticians to remove the last traces of seasonal or long-period fluctuations, may destroy the value of the index to the industrialist or business executive. The test of such an index would lie exactly in the recognition by the latter that it had a direct value for him without dubiety regarding statistical method. It is doubtful whether such an index can ever be created, since it must, in its very nature, depend on data of only relative and not absolute value, and the work of co-ordination and elimination might be sufficient to destroy those subtle differences which, in the aggregate, may determine whether progress or depression is to result.

The only index of manufacturing activity which would be fairly representative and accurate enough to justify its adoption would be that of power consumption by industry—provided that one form of power alone was used, or that one form of power was responsible for a high percentage of the industrial output. At one time steam consumption, or, alternatively, coal consumption, would have sufficed for this purpose, but the advent of electricity has complicated matters. Industrial electrification has proceeded so rapidly since 1913, largely owing to war exigencies and the trade boom of 1920, that electricity may now be regarded as the main motive force in many important industries, above all in iron and steel, engineering, coal-mining, chemical manufacture, and shipbuilding. In iron and steel, engineering, and chemical manufacture an index based on the consumption of electricity would be

directly representative of activity in production, since those industries are over 60 per cent. electrified; coal-mining is less satisfactory, since electrification has only taken place to the extent of 45 per cent. to 50 per cent. in this country, while textile electrification is less, at about 35 per cent. A combination of returns of the consumption of coal and electrical power by industry would come closest to the ideal, if allowance were made in the coal returns for consumption for electrical power generation.

The importance of electricity as a factor in industrial activity has been recognised in the United States and Germany; in both countries a monthly index of electrical power production is now issued and grouped with other indices of trade activity. It was believed that a similar index would have considerable value in Britain, even allowing for the fact that the electricity supply industry is still a growing industry, and that electrification of industry is not yet by any means complete. The index would show the fluctuations in activity in those firms that had adopted electricity as a motive force—i.e., in the most progressive firms, and for that reason alone would tend to be optimistic. On the other hand, it is still fairly true to state that a severe trade depression or a marked revival would affect all the productive units in an industry, whether electrified or not, and that the curve of electrical power consumption would be genuinely representative of an entire industry during important movements.

The index, now published, was calculated from the returns of units generated by power stations belonging to supply undertakings in industrial areas outside of London. It was impossible to obtain returns from private industrial power stations, but the choice of districts, as noted below, was made with a view to omitting those areas where a large number of industrial firms generate electricity for their own purposes—namely, South Wales, the Central Midlands, and Central Scotland. London was omitted from consideration, owing to the predominance of the lighting, commercial, and traction demand, and the small part played by industry in the total consumption of power in the area. It is only in East London, West Ham, Stepney, and Poplar that industry accounts for the greater part of the output of electricity, and those three undertakings will be covered, probably, in an index referring to them alone. The selection of the undertakings was influenced by four considerations:—

1. That they should be efficient and important enough to be affected only in a small degree by any reorganisation carried out under the new legislation;
2. That over 70 per cent. of their total output of electricity should be devoted to industrial power consumption.
3. That they should operate in well-defined industrial areas where one industry or group of industries predominates;
4. That they should, in combination, represent over 70 per cent. of the total output by public supply undertakings in their areas.

All four considerations were met in framing the index. The undertakings submitting returns showed, in some cases, an industrial power demand of over 95 per cent. of their entire sales; in other cases, 60 per cent., but the general average stood above 70 per cent. The importance of such a factor is obvious; lighting, domestic and commercial supplies could not, even at their most violent periods of fluctuation, throw the index out of balance, and rob it of its value as a guide to industrial activity, while, in large industrial areas, the rapid progress achieved in the lighting and domestic demand for electricity might exaggerate the upward trend of the index, but would not suffice to veil entirely severe depression, or betray too soon an improvement consequent on better trade conditions.

The areas chosen were the North-East Coast, Sheffield, Rotherham, and the West of Scotland as representative of the coal-mining, iron and steel, shipbuilding and heavy engineering industries; the South-West Midlands, of the general engineering and automobile industries; South-East Lancashire with Blackburn and the West Riding of Yorkshire, of the cotton and woollen textile industries; the Mersey, Severn, and Humber, of marine transport, docks, and general trading. The total of all the undertakings covering those areas and included in the index was sufficient, with certain chemical and jute areas of

supply, to give account for 79 per cent. of the total energy generated by all undertakings. In the coal-mining, iron and steel and shipbuilding districts the percentage was higher still at 83 per cent., and in general engineering districts at 90 per cent., but in the textile districts the work of discriminating between supply to coal mines and other industries precluded certain undertakings with a small textile load, and reduced the degree of representation to 70 per cent.

In any case, the index in its present form is based on sufficient data to be of value in indicating the trend of electrical power production in the principal industrial centres of Britain. It should be remembered that power supply in the areas included under certain industries may extend to other industries as well; Manchester is an important engineering as well as textile centre, and the Lancashire Power Company supplies millions of units to collieries, but the industry predominant in Lancashire is the textile industry, and the area has been classified accordingly. The most complete and most directly representative index is undoubtedly that of coal-mining, iron and steel, shipbuilding and engineering, for those four industries account for over 90 per cent. of the industrial output of their areas, but that of the textile, chemical and general engineering indices comes close to it.

If we deal now with the actual construction of the index, the main points to be noted are:—

1. The output of electricity affords as satisfactory an index as consumption since the ratio between output and consumption remains constant, consumption being about 83 per cent. of production.

2. Week-end operation means a reduction by one and one-third days in the length of the working week, as far as comparison of load curves for many undertakings proved.

3. The lack of a series of normal years since 1914 has made correction for seasonal fluctuation impossible. The first normal trade year since the conclusion of the war was the year ending March 31, 1924, and the monthly average output, corrected for week-end operation, during that year has been taken as a base. It may be possible after a number of years to discover a moderately accurate formula for damping down seasonal fluctuations, but the index must remain, at present at least, untouched.

4. The average daily output during each month, with a correction made for week-end operation, was taken as the material for the index. In this way artificial fluctuations caused by differences in the length of the months were avoided. The general index for the whole country was based on the aggregate of all the undertakings included under the different industries, with an additional return from a Scottish undertaking which could not be classified, and, as such, constituted an average with which the other indices might be compared.

INDEX OF PRODUCTION OF ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

* Prepared by the economic and statistical department, the British Electrical and Allied Manufacturers' Association.

Examination of the figures shows certain disadvantages which are inseparable from a growing industry—the tendency towards exaggeration of upward and downward movements, the steady upward trend through fluctuation which may or may not correspond to greater industrial activity. On the other hand, the relation of one group of industries to another in the progress of industrial manufacture emerges clearly, while any well-pronounced change in industrial conditions—such as the recovery in trade during the latter half of 1924, the depressing influence exerted by the introduction of the gold standard in 1925, the marked recovery towards the end of 1925 and in the first two months of 1926, the collapse in April due to the impending strike in the coal industry—is translated at once into the index. A trade boom would be betrayed by the index as soon as it had begun, while a depression would affect the figures with equal rapidity. The value of the separate indices lies, above all, in the indications they afford of prosperity in particular industries or groups of industries compared with other industries.

In the first half of 1924 the coal-mining, iron and steel industries were most active, followed by chemicals and marine transport; engineering and textiles were seriously depressed. In the first half of 1925 chemicals were still active, but engineering had risen definitely above the other industries, and remained there until April, 1926. We can date the first signs of recovery in engineering from December, 1924. Textiles have been consistently most depressed of all, particularly so in the first eight months of 1925, but they improved towards the end of the year. Coal-mining, iron and steel and shipbuilding lost ground in April, 1925, and became more and more depressed as the year went on. The influence of production for stock in February, 1926, brought the curve temporarily above the general average.

As far as it is possible to judge from the general index, 1925 represented a period of great potential activity, which was translated into reality in the first three months and the last three months of the year. The period between, even allowing for seasonal fluctuations, was disappointing, the only industry not affected being chemicals. The first two months of this year promised greater activity, but the heavy decline of April has served to neutralise it to some extent. It is clear, however, that, granted stable conditions, the year 1926 would have represented an improvement on 1925, but the incidence of the coal lock-out and the general strike has made this now impossible. In the returns for May, which will be published in the next Monthly Supplement, the effect of those disturbances will be illustrated.

LIPTONS' POOR YEAR.

The decline in the net profits of Liptons during the year ended March 31st last was so severe that the directors are unable to pay a dividend on the 9 per cent. preference share capital. This is the more disappointing as, although the previous accounts showed a substantial shrinkage in earnings, the company's previous record had been a prosperous one, and it was hoped that the 1925 setback was merely temporary. The summarised figures since 1902 are given below:—

Year Ended March.	Gross Profits.	Expenses, &c.	Net Profits.	Deprecia- tion.	Div.
£					
1902.....	228,202	39,441	188,761	19,063	% 8
1908.....	274,335	83,935	190,400	27,624	8
1912.....	307,207	103,922	203,285	51,341	6
1913.....	315,606	111,967	203,639	41,095	6
1914.....	314,949	131,461	183,488	23,202	6
1915.....	272,182	149,509	122,673	*262,274	nil
1916.....	295,089	125,645	169,444	45,104	nil
1917.....	442,776	140,189	302,587	44,057	7½
1918.....	544,322	126,222	418,100	44,055	12½
1919.....	579,678	130,902	448,776	47,411	12½
1920.....	644,564	177,005	467,559	51,866	12½
1921.....	433,230	158,061	275,169	57,103	12½
1922.....	561,833	167,521	394,312	82,601	12½
1923.....	547,342	140,374	406,968	69,912	12½
1924.....	502,758	129,809	372,949	80,704	10
1925.....	349,674	126,006	223,668	80,955	nil

* Including £220,889 drawn from "premium on shares account."

Notes of the Week.

There was, it will be seen, a small saving in expenses, but it was not nearly sufficient to offset the contraction in profits. The latest report states that a subsidiary company, called Lipton Properties, Limited, was formed on October 3, 1924, the main object being to acquire certain properties "representing some of the company's valuable trading positions, which the directors have found it necessary and advisable to purchase outright." Since this formation a number of properties recently purchased by Liptons has been acquired by the new company, whose shares are held by Liptons. This operation is reflected in the balance-sheet, for, while the item of goodwill and properties has declined from £2,314,865 to £2,219,850, investments have gone up from £180,586 to £305,895. At the same time, investments have been divided up, and are now shown under the two headings, "British and Colonial Government securities" and "trading investments and loans to and investments in subsidiary companies." The former of these two items stands at £134,951, and presumably represents securities held against the savings bank deposits of £133,160, although no substantiation of this assumption is available in the accounts. The balance of profit and loss carried forward a year ago was stated to be subject to corporation profits tax. The directors now report that the taxation liability can now be fairly accurately estimated at £23,500, and they have, therefore, transferred £25,000 from the reserve, thereby reducing that fund to £300,000. A small overdraft of £9,917 is shown in the present accounts.

During the year Sir John Ferguson has been appointed deputy-chairman, and his wide knowledge and experience of financial matters should be valuable. The directors record that an exhaustive inquiry is being energetically instituted into the organisation and management of the whole of the company's business, "from which a great improvement in results is to be expected, and shareholders may rely on every possible means being taken to bring the business back to a state of high efficiency." Shareholders, however, will not be greatly consoled by this promised investigation. They were told last year that in view of the disappointing results for the previous 12 months steps had been taken to remedy the defects in the management, which it was expected would prove effective. On the contrary, things have gone from bad to worse. Sir John Ferguson only occupied the position of deputy-chairman for one month during the last financial year, and, therefore, could not be expected to make any impression on the results. The state of things, the causes of the decline, are not disclosed in the report. When we compare the highly profitable results enjoyed by companies in a similar line of business—which are progressing every year—the case of Messrs Lipton becomes all the more unexplainable. When a great business of its kind shows a continuous drop year by year it means that there is something radically wrong with the management and organisation. An inquiry instituted by the directors is not likely to be effective. They have had opportunities and failed. Sir John Ferguson cannot, by himself, revolutionise the management. Besides financial control, what is wanted is expert management. Sir Thomas Lipton, while he built up his great business, was a host of experts in himself, but the decline of the company in the past two years suggests the need for reorganisation. The fact alone that Sir Thomas is the largest shareholder, and therefore the heaviest loser, does not help other shareholders who invested on the strength of his reputation and his firm's record. It is not too late to retrieve the position in the fortunes of the company, but it will be necessary for the shareholders to take the matter in hand and see that the promised investigation is carried out by independent men and is of a thorough, searching character.

Mr Thomas and the N.U.R.—The annual general meeting of the National Union of Railwaymen, which opened at Weymouth on Monday, fulfilled the forecast that storms were inevitable. Proceedings were opened by a presidential address from Mr Dobbie, the feature of which was a violent personal attack upon the Prime Minister. This was followed by an amazing incident. A member moved a resolution to exclude from the meeting any Press reporters who were not representatives of trade-union papers. Mr J. H. Thomas told the Conference that the motion would make them ridiculous, and that it was unworthy of a representative Conference. It was, nevertheless, carried, and, as a protest, the whole of the pressmen present, including the representative of the *Daily Herald*, left the meeting in a body. This was a bad start, which went far to stultify the Conference in the eyes of the public; and it was thought to indicate an extreme temper that was likely to show itself in support of the motions brought forward by various branches for the dismissal of Mr Thomas from his office of secretary. At Tuesday's proceedings Press reporters were absent, and only an epitomised account of them is available. It is clear, however, that Mr Thomas completely confounded his enemies, showed that their attack was instigated by Communists, and vindicated to the satisfaction of the meeting his action during and after the general strike. So once again, as often before, Mr Thomas has triumphed over the efforts of sections of the railwaymen to obtain his head on a charger. His victory is the greater this time because the attacks upon him had behind them all the force of the discontent over the terms of the recent settlement and the friction that has arisen over the question of reinstatement. On Wednesday the chief business was the passage of a resolution:—"That this Congress emphatically protests against the action of the railway companies in violating the recent strike settlement by victimising a large number of members of this union." Strong words were spoken about the way in which the companies had carried out their agreements. Mr Thomas frankly acknowledged that the unions had acted wrongly towards the companies by coming out on strike without due notice, but urged that the leaders had "done the big thing" by calling off the general strike, and that it was the more obligatory, therefore, on the companies compulsorily to carry out the subsequent agreements. "When we meet the companies for further interpretations," said Mr Thomas, "I hope the spirit of tolerance and justice will prevail." The protest motion he called "a gesture and a warning" to the companies. With the coal stoppage continuing and restricting the volume of railway traffic, difficult problems must arise over reinstatement, and, even with the best will in the world, the companies could hardly avoid friction. We hope, however, that they will meet Mr Thomas's appeal with a determination to remove difficulties. If they do this, Mr Thomas's wish to "avoid industrial warfare," coupled with the renewed prestige in the N.U.R. which this week's proceedings have given him, should greatly improve the railway labour outlook. Yesterday the Conference refused the miners' request that the railways should boycott imported coal.

The Franc Crisis.—The continued fall in the franc reflects the uneasiness which is felt both in France and abroad as to the fate of the latest and most thorough-going attempt to stop the rot in French finances. The report of the Committee of experts, summarised in another column, which has been well received in financial circles has inevitably run up against all kinds of political predilections. It is, however, not so much the financial proposals of the experts, or of M. Caillaux, that have raised opposition as the declaration in the report, which is supported by the Minister, that the debt settlements with England and America must be settled before stabilisation is possible. The opinion of the Chamber is strongly against either ratifying the Berenger Agreement without a "safeguarding" clause, or incurring further foreign debt even for the sake of the blessed word "stabilisation," and it

will take the most astute Parliamentary management if the Ministry is to secure its vote of confidence. The fall of the franc to the neighbourhood of 200 is, however, a portent the significance of which cannot be denied or obscured. As to the report itself, there is room for plenty of discussion and criticism of particular points as, for example, its proposals in regard to increased customs duties, and a certain lack of courage in handling the return to the gold standard. Clearly this is a matter which involves certain risks, but if one waits until all conditions are propitious, the result may be to put off taking the plunge indefinitely. It would go a long way towards restoring confidence if M. Caillaux would take the risk of laying down in advance a definite time-table of measures culminating in a return to gold at a specific date. Parliament would take a great responsibility if it ventured to delay such a programme at any point, for it would advertise to the world that there would be new delays in putting an end to the present disorganisation.

The Constitutional Question in Canada.—Since we wrote last week the political situation in Canada has unfortunately become more complicated and more embittered. The Liberals refused to accept the constitutionality of the position created by the Governor-General's action. They moved that the new Conservative Ministers, even though they were not receiving emoluments, ought to have resigned their seats in Parliament upon taking office, and that they could not legally administer the Departments assigned to them by Order in Council. In the small hours of the morning, on the Friday of last week, this motion was carried by one vote (96 to 95)—the Progressive, Miss MacPhail, again returning to Ottawa to vote, and again deciding the issue. Thereupon the Governor-General was asked—for the second time within a week—for a dissolution, and this time, of necessity, he granted to Mr Meighen what he had refused to Mr King. The general election is being fought on the constitutional issue, and on this the Progressives seem to be lining up on the side of the Liberals. A prominent Progressive, Mr Garland, has suggested that Mr King had no moral right to ask for a dissolution in order to escape defeat; but that, the request having been made, the Governor-General had no right to refuse it. Mr King and his followers are making the chief plank of their election platform a direct attack on the Governor-General for having acted unconstitutionally and in a manner calculated to undermine self-government in Canada and to depress the country towards its former status of a Crown Colony. In the Liberal Press, if not among responsible political leaders, this attack is being pressed in rather violent language. This is much to be deprecated—partly because it is personally unfair to Lord Byng, who was placed, by the evolution of Canadian politics, for which he had no responsibility, in an exceedingly difficult position, in which he could hardly fail to give offence to one or other party. It is also unfair, besides being impolitic, to suggest that the question of the relation between the Dominion of Canada and the United Kingdom is involved in the issue. It seems to be perfectly well ascertained—as, indeed, was only to be expected—that Lord Byng acted entirely on his own responsibility, without consulting the Government at Westminster (a course which would have been improper, and which probably never occurred to him). Meanwhile, the constitutional question of the precedents on which a Governor-General of a Dominion ought to act is being keenly discussed—not only in Canada, but in other Dominions: for example, South Africa. The general view in South Africa seems to be that Crown Colony or State or Provincial precedents are irrelevant, and that the real question at issue is the nature of the Crown's Prerogative in the United Kingdom at the present day.

Guardians and Necessitous Areas.—The complete tangle into which the guardians of the West Ham Union have involved themselves over their distribution of poor law relief has led the Government to introduce a measure entitled the Boards of Guardians (Default) Bill, which, in face of strenuous opposition from the Labour Party, passed its second reading in the House of Commons on Monday. It is avowedly an *ad hoc* measure, designed

to deal with the peculiar case of West Ham, but it places in the hands of the Minister of Health a weapon which may be used, should similar circumstances arise elsewhere. No one can dispute that the Government had to take some strong step over West Ham. The guardians had completely "outrun the constable"; they had spent £500,000 more than they received from the rates; they paid a high scale of relief, which they refused to modify; they allowed, as Mr Neville Chamberlain proved to the House of Commons in opening Monday's debate, a grave degree of corruption and waste to grow up in the administration of relief. Under such circumstances the Government were obliged to take action. The form which their action takes in this Bill is briefly this. The Bill confers on the Minister of Health the power to remove guardians who are not performing their functions properly, and himself to appoint such persons as he may think fit to take their places. This proposal produced from the Labour Party an amendment refusing to proceed with the second reading on the ground that the Bill "destroys a fundamental principle of the constitution that local government shall be vested in the elected representatives of the people," and that it "enables nominees of the Minister to disburse public moneys without any control by ratepayers who provide such moneys." Mr Chamberlain defended his policy on the ground that a new election of guardians in the West Ham Union would be useless. Once more we should merely have recipients of relief voting into office those candidates who promised the highest scales. That is probably true; but there are grave objections to the course taken by the Bill. It is wrong in principle that nominees of a Minister should distribute public funds without any responsibility either to those who provide the funds or to Parliament. There is one practical alternative course open to the Government, and that is in the relief of the burden on necessitous areas by spreading the cost of distress relief over large areas, which include prosperous districts. Whether or not this course should be developed to the point of making relief of distress entirely a national burden, it is a line of action which is far preferable on every ground to that followed by the Bill introduced this week.

Cost of the General Strike—A Supplementary Estimate* has been presented to the House of Commons this week to cover the expenditure incurred in connection with the general strike and for the purchase and import of coal rendered necessary by the coal stoppage. The charges in connection with the general strike total £433,000, and are made up as follows:—

	£
Civil Commissioner, Organisation, & Miscellaneous Services	78,000
Food Organisations (England and Wales) (net)	119,000
Transport Organisations (England and Wales)	20,000
Coal Organisations	35,000
"British Gazette" (net)	16,000
Civil Constabulary Reserve	65,000
Grants in respect of Police Expenditure	100,000
	433,000

When one recalls the rash surmises current at the time of the general strike, these figures seem remarkably small, and the public will be pleasantly surprised to find that the enormous output of official activity was so cheap. The net expenditure on the *British Gazette*, at £16,000, is far less than was commonly expected at the time. This item provided an interesting debate in the House of Commons on Wednesday, when Mr Churchill, in answer to attacks on his not impartial conduct of the *Gazette*, impenitently disavowed the intention of aiming at strict impartiality. "I decline utterly," he said, "to be impartial as between the fire brigade and the fire," and concluded by saying that if a similar emergency arose again he would pursue the same course. The White Paper also includes a vote of £3,000,000 for the purchase and importation of coal. Coal imported by the Government, it is explained, will be sold at a price estimated to cover the total cost, and receipts will be used to make further purchases. The £3,000,000 is to be used to finance original purchases until receipts begin to come in, and to cover any loss which may be incurred

* White Paper 99. Price 2d.

on the liquidation of stocks not resold when the stoppage comes to an end. This vote produced the inevitable opposition of Labour, who accused the Government of buying German coal in order to starve British miners into submission. But, obviously, any Government of any party colour would be bound to take what steps it could to avert a coal famine.

Parliamentary Review of Expenditure.—A correspondent writes:—Last year, for the first time since the end of the war, British expenditure increased. This year there is further increase, and it is plain that the broad effects of the coal stoppage must be seriously to aggravate the financial problem. These facts have revived the criticism of the effectiveness of the Parliamentary review of expenditure. In theory Parliament discusses the general issue on the Budget statement, and on the second and third reading of the Finance Bill; the Committee stages are devoted to specific amendment and new clauses. Of late the general discussions have not been productive in concrete suggestion for economy, and it is now recognised that the floor of the House is not the place for the precise and fearless analysis which the situation demands. In theory, also, the 20 days in Supply should be devoted to such a review. But of late each Supply day has been chosen mainly because of some Departmental controversy or grievance; very little, if any, reference has been made to the actual expenditure involved. This experience has revived the proposal that the Estimates Committee should be made much more powerful than it now is. It is clear, however, that Parliament will not agree to the appointment of an officer for the Estimates Committee similar to the relationship of the Comptroller and Auditor-General to the Public Accounts Committee; and until such an appointment is made, and the Estimates Committee obtains the power in its sphere which the Public Accounts Committee now possesses in *post-mortem* review of the accounts, effective effort will not be found in that quarter. Parliament is apparently not prepared to contemplate an Estimates Committee running alongside the Minister, the Department affected, and the House of Commons—at all events, as an effective reality. Hope lies, therefore, with the Public Accounts Committee. This year, in its review of more than £800 millions of expenditure, its hands have been greatly strengthened by last session's decision to look to large policy as well as to the actual accounts. That decision has made it possible for the Committee, in dealing with the Appropriation Accounts, 1924-25, to discuss what is being done now—a step of importance which is plainly in the public interest. But however hard the Public Accounts Committee may work, the fact remains that the review is *post mortem*; and the taxpayers deserve something better than that. Hence the suggestion that a permanent Commission within Parliament should be appointed, carefully chosen from the House, the Public Accounts Committee, and the Estimates Committee, of limited numbers, pledged to make this the first charge on their Parliamentary effort, provided with such Departmental assistance as is required, with access to the Chancellor of the Exchequer and other Ministers with concrete proposals as they emerge, and with power to try to relate financial steps to the needs of revival in industry and commerce. Nothing on the strict French model is suggested, and it is not proposed to delegate duties which belong to Parliament as a whole. The aim is, rather, to obtain within Parliament the services of a group of men to do what is not being done now—get down to the systematic analysis of the detail for the purpose of eliminating blocks of expenditure for which the present surface analysis and criticism indicate that there is no real justification.

Crop Prospects.—The monthly report of the Ministry of Agriculture and Fisheries states that all corn crops improved during June, but more sun is needed to strengthen the straw, which is generally of a good length. Wheat is generally strong and healthy, but there are some thin crops of a poor colour on wet low-lying land. Over the whole of the country there is promise of a full average yield. Barley is generally satisfactory and on present appearances the yield per acre is expected to be up to

average. In nearly all districts winter oats are usually more promising than spring sown, the latter being often backward, although usually healthy. Present anticipations are that yields will be over average in most divisions, the northern and north-eastern divisions and North Wales being the most promising. Except in the northern and north-western counties and Wales, where early varieties were damaged by frosts during May, the yields of new potatoes are generally about average. Main crops, although not so forward as usual, are generally strong plants. On present appearances fully average crops may be expected. Mangolds improved during the month, but require more sun. Turnips and swedes are generally satisfactory, but in some districts the young plants were damaged by fly, and re-sowing was necessary. Where weather conditions have made it possible to keep the land clean and to single the plants early, sugar beet is a promising crop. In the south-eastern district hops made good growth after the warm weather arrived, but are still somewhat backward. The crop is generally healthy, but in some cases the bine is rather slack. Haymaking started somewhat later than usual this year, and only became general about the last week of the month. A good proportion of the seeds hay had been carted by the end of June, and had been secured in good condition. The average yield per acre of seeds hay over the whole country is forecast at 29 cwt, or nearly $\frac{1}{2}$ cwt above average. Meadow hay is estimated to be rather under the average of the last ten years, with a prospective yield of 20 $\frac{3}{4}$ cwt per acre. The best hay prospects are in the eastern half of the country. The supply of labour has been sufficient for requirements in most parts of the country, and in some districts, owing to the industrial conditions, more men have been offering themselves for casual work than farmers have required.

New Capital in America.—Through the courtesy of of Messrs Dillon, Read, and Co., Chicago, who have cabled preliminary figures for the past half-year, we are able to give the following comparative table of new capital raised in the United States in the first six months of each of the past three years:—

	(000's omitted.)		
	1924.	1925.	1926.
Companies	1,709,801	2,129,827	2,226,131
Foreign Government..	190,940	184,631	191,099
Farm loan	125,500	102,597	99,500
Municipal	800,435	727,924	523,262
Canadian	22,318	38,658	68,615
U.S. Possessions.....	5,835	4,050	3,540
	<u>2,858,829</u>	<u>3,187,687</u>	<u>3,112,147</u>

The maintenance of huge figures for new financing by companies reflects the continued economic activity in the United States.

American Cotton Crop.—Our Manchester correspondent writes:—The Crop Reporting Board of the United States Department of Agriculture has published its first statistics on the cotton crop for 1926-27. The condition of the growth on June 25th has been given as 75.4 per cent., as compared with 75.9 per cent. a year ago. This report was rather below expectations. On the other hand, the big estimate of the area under cultivation has been a surprise, the total being given as 48,898,000 acres, against

46,348,000 acres same time last year. It should be mentioned that the acreage for the current season was revised a little time ago to 48,090,000 acres, the amount picked being given as 46,053,000 acres. The yield per acre is estimated at 158.5 lbs, as compared with 147.7 lbs last year. The final out-turn of the growth will depend upon whether the various influences affecting the crop during the remainder of the season are more or less favourable than usual. If developments are as unfavourable to the crop as during 1921, 1922, and 1923, a total production of about 13,726,000 bales might be expected. On the other hand, if later developments are as favourable to the crop as during 1924 and 1925, a total production of about 16,294,000 bales might be expected. If an average of the figures announced is taken, a crop of 15,635,000 bales is indicated. It may be mentioned that the output for the current season of 1925-26 has been estimated at rather more than 16,000,000 bales. The figures published at the end of last week did not have any vital effect upon prices, as the official reports were very largely in line with private advices. Whatever may be the future price level for cotton, there seems to be every probability of extensive supplies of American descriptions during the next twelve months. The carry-over at the end of next July will probably be more than 6,000,000 bales, and with a yield for next season of, say, 15,000,000 bales, the total supplies will be about 21,000,000 bales. It is rather difficult to anticipate in any way what the consumption is likely to be, but it is probable that the requirements of users will not be more than 14,000,000 bales. Prices for American cotton are now lower than for about five years back, but owing to the prospective big supplies many people in trade circles hold bearish views as to future values. It should be pointed out, however, that futures in the New York market for next crop months are being sold at round 16 cents, and such a price level is not above the cost of production in many parts of the American belt.

Bank Dividends.—The interim dividends announced by the joint-stock banks and the discount companies for the past half-year do not show any important changes, as may be seen from the table below:—

	Per Cent. per Annum.						
	1919	1920	1921	1922	1923	1924	1925
Bank of Liverpool and Martin's	16	16	16	16	16	16	16

Union Discount	14	14	14	15	15	15	15

† On old capital.

(t) Also a special cash bonus of 10s per share, free of tax.

The National Provincial pays at the rate of 18 per cent. per annum, as against 16 per cent. at this time last year. This, however, merely brings the distribution into line with that paid for the year 1925, which was raised to 18 per cent. Conditions during the past half-year have, on the whole, been favourable for the bankers. With Bank rate unchanged at 5 per cent., and a margin of over 1 per cent. between the average short loan rate and deposit rate, profits should have been well maintained. The volume of advances, according to the monthly figures, remains high, but whether the industrial depression will tend to a reduction in this direction remains to be seen.

Shipping Freight Index Number.—During the month of June there were, once more, no quotations available for outward shipments of coal from the United Kingdom. Accordingly, in the following table, which summarises the movement of the various groups in our Index Number of "Tramp" Shipping Freights, the June figures are again

duplicated. The figures given first in black type show the results obtained by interpolating the April figures for each of the coal routes included in the Index; the figures in italics record the results on the basis of the available freight quotations—i.e., without coal. In both cases a rise in the total Index figure is indicated. Taking the homeward routes alone (the italic figures), the percentage increase over the corresponding figure for last month amounts to 8.56 per cent. When the April coal figures are incorporated, the Index Number, 108.04, represents a rise of 5.32 per cent. over the similarly calculated Index for May:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100

January, 1926.....	115.92	114.12	116.10	119.58	102.78	135.53	117.00
February, ".....	116.52	97.85	114.86	118.52	95.05	119.29	110.35
March, ".....	115.88	93.37	116.94	114.57	87.92	96.14	104.14
April, ".....	112.40	95.00	116.57	109.16	83.90	97.03	102.34
May, ".....	111.41	102.60	115.76	107.90	78.12	99.70	102.58
June, ".....	114.12	102.60	110.04	72.65	78.12	99.70	96.29
June, ".....	110.81	105.04	121.06	120.43	98.33	92.58	108.04
June, ".....	112.32	105.04	120.62	97.70	98.33	92.58	104.43

The month's changes in the Index of each group and sub-group (coal freights excluded) are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	100	0	S. America—outwards	120.62	+10.58
Bay—outwards.....	124.19	+1.62	India—outwards	97.70	+25.05
Mediterranean—outwards	100.45	+1.97	Far East, &c.	98.33	+20.21
North America.....	105.04	+2.44	Australia.....	92.58	+7.12

Conditions in the open chartering market during the past month were dominated by the unprecedented volume of tonnage taken up for the carriage of coal from the United States to the United Kingdom. For this business, which is, of course, not included in our Index Number, rates of freight rose steadily throughout the month, and ultimately reached the high figure of 18s to 19s a ton. This development had the effect of attracting considerable quantities of tonnage from other quarters, and though homeward business from other overseas markets could not be described as better than quietly steady, quotations rose sharply, as will be seen from the foregoing table, in several directions. Trade in European waters was very slack, but there was evidence of a slight revival of inquiry for tonnage from India and the East. Grain from North and South America moved in moderate volume, but Australia called for little tonnage.

The relation of the Index to the average for 1913 may be seen from the following table, the italic figures for May and June being those obtained without coal freights:—

Month.	(1913 = 100.)	1923.	1924.	1925.	1926.
January.....	114.05	117.11	114.49	100.57	100.57
February.....	112.73	123.78	115.96	94.85	94.85
March.....	115.23	122.09	106.63	89.51	89.51
April.....	115.45	117.22	104.24	87.97	87.97
May.....	114.55	114.27	98.23	88.17	88.17
June.....	106.82	108.62	91.74	82.69	82.69
July.....	103.39	103.75	94.90	89.76	89.76
August.....	100.16	104.43	95.87	95.87	95.87
September.....	103.04	110.50	98.19	98.19	98.19
October.....	107.86	115.55	99.49	99.49	99.49
November.....	111.21	112.76	102.23	102.23	102.23
December.....	111.81	111.21	104.67	104.67	104.67
Mean for year.....	106.69	113.44	102.22	102.22	102.22

The figure for last month, excluding coal freights, is not very much below that of June a year ago, which dipped to 91.74.

Stock Brokers' Commission.—The Stock Exchange Committee have had in front of them during the past few weeks certain matters that relate to Stock Exchange brokerage, and more particularly to agents who claim that they are entitled to a return of commission on business which they, the agents, introduce to brokers. The Stock Exchange rules surrounding this matter of commission, writes a Stock Exchange correspondent, are still insufficiently well known for the public to understand the position as it prevails to-day. Clients are aware that when they deal, either as buyer or seller, through a bank the bank receives half the gross commission which the broker charges. The broker gets 50 per cent., pays all the expenses in connection with the carrying-out of the business and the bank receives the other half of the gross amount. Some solicitors take similar terms, but others refuse to do so on the ground that acceptance of commission is too risky a proceeding to make it worth their while to accept it from Stock Exchange brokers. The client may expect, and generally does, that his broker will return him half commission upon any order that is executed and which involves more than £2,500 in cash. Up to £2,500 the proper commission is to be charged. Beyond that the broker is permitted, at his own discretion, to charge a less commission than that laid down in the scale. In addition to banks, solicitors, the Public Trustee, and other such agents, there is a considerable body of men who claim to do an agency business on behalf of clients and with members of the Stock Exchange, claiming from the latter half-commission on all the orders that go through their hands. It is with this latter class that trouble is continually arising. The definition of agent is a little difficult to make. In some cases where a good deal of Stock Exchange business is transacted on behalf of a company, its directors, and others closely connected with it, a small syndicate may be formed for the express purpose of receiving half the broker's commission on all the business that is done for this particular group. The Stock Exchange rules make a feeble effort to preserve the broker's rights, and, as in the cases where more than £2,500 is involved and the commission concession is allowed, the broker is forbidden to return commission to anybody in connection with such orders, nor is he allowed to make any concession on the agent's personal business. In theory, the broker must retain, as a minimum, 50 per cent. of the scale laid down in the rules. The agent knows the latter as well as, if not better than, the broker. He also knows the keen competition which exists for Stock Exchange business, and he takes full advantage of this knowledge. Should one broker refuse to break the rules in the way which the agent suggests, he will be told that plenty of other brokers will do the business; and instances are quoted every day in the House of the way in which rules are broken under the stress of this competition. The remedy lies to some extent in the hands of the Committee, who could tighten up, if they desired, the outlets through which brokerage is permitted to filter into the hands of outsiders. A still more effective remedy lies, however, in the hands of Stock Exchange members themselves. If every broker in the House would abide loyally by the rules that are laid down for the benefit of all the brokers in the House, a great step would be gained in the direction of restoring to the brokers those rights which at present are at the mercy of anyone who likes to evade them.

The Position in Hongkong.—Within a week, writes our Hongkong correspondent, under date June 5th, the Colony has lost two of its foremost citizens by the deaths of Mr P. H. Holyoak and Sir Paul Chater. Both had served with distinction on the Executive and Legislative Councils for long periods, and both were men who had devoted much time and great ability to the furtherance of the commercial interests of Hongkong. The confusion of Chinese politics becomes more profound as month succeeds month. In Peking there is a Cabinet on paper, but only one Minister is functioning, and the Central Government has lost what little substance it ever had. The provinces in the neighbourhood of Shanghai are certainly under the control of an enlightened militarist, but already there are signs that Marshal Sun Chuan Fang cannot resist the temptation, which besets every Chinese leader, of enlarging his sphere of influence. As for the South,

there is nothing but chaos. General Chan Kai Shek's coup, by which Russian influence was extirpated, figured well, but, unfortunately, the effect was short-lived. Chinese politicians of Bolshevik sympathies returned to renew their activities, and although at the recent annual Conference of the Kuomintang Communism was officially banned, further developments in the situation have nullified the resolution passed by the Moderate majority. Last week General Chang arrested his Chief of Police, and this action was followed by the hasty departure of several prominent members of the Canton Executive who were regarded as Moderates. Among the number was Dr C. C. Wu, who announced that he was leaving Canton in order to open up negotiations with the Hongkong Government. It turns out that his departure was in the nature of a sudden flight for safety, and he has sought an asylum in the foreign settlement of Shanghai. He and his colleagues left so hurriedly that the Canton Executive was unable to secure a quorum, and General Chang has had to promote to high office subordinates who, like himself, are not Cantonese. The Soviet agent, Mr Borodin, remains in Canton, and has recently been joined by a Russian General, who was Dr Sun Yat Sen's principal military adviser. It would seem, therefore, that whatever moderating influences were at work in Canton have been frustrated, and the ground cleared for a further effort to establish a Soviet. Against this, however, must be set the evidence of a bankrupt Treasury and the cessation of the flow of money and stores from Russia. Moreover, the people of Canton are beginning to show signs of restiveness, and the demand for the abolition of the boycott is becoming more insistent. Uneconomic trading is telling its tale, and it is beginning to dawn on the consumers that they, and not the foreigner, are contributing to the funds of the Strike Committee. Despite the sudden change in the outlook, the Chinese here are still of opinion that the boycott will come to an end in the near future. While many markets remain stagnant piece goods dealers have been extremely active, and, thanks to the lower level of Manchester prices, a fair quantity of business has been brought to book during the past few weeks. There has been no buying on a normal scale for fully two years, and with stocks both here and in the interior at a low ebb it is felt that when trade is re-established there will be a brisk demand. Orders being placed now are for shipment towards the end of the year, and there is every hope that by that time the usual trade channels will have been reopened. Nevertheless, buying is on a cautious basis, and dealers are not confident enough to cancel their recent instructions for the elimination of chop-tickets. Manchester goods are wanted, but they must hide their identity, as any trace of their British origin may render them useless for shipment to the interior.

Home Railway Prior Charge Stocks.—It is not to be supposed that absence of fluctuation in the prices of Home Railway stocks implies indifference on the part of the public at a time when labour troubles are so very present in the branch of trade that particularly affects the Home Railway companies. Proprietors of Home Railway stocks are watching, with an interest that tends to deepen into anxiety, the developments which take place day by day in connection with the coal stoppage, for Stock Exchange brokers are informing their clients that upon the outcome of the present situation is likely to depend to no small extent the decision of the directors with regard to the interim dividend payments that should be made next month. Announcements will come within the course of the next two or three weeks, and, if the coal stoppage has not been cleared up by the time that the boards meet to discuss interim dividends, the impression is strong that the dividend policy of all the railway companies will lie in a conservative direction. On the other hand, if the coal position is clearer, and the possibilities point to an early resumption of work, anticipation in the Stock Exchange looks for the directors to treat the dividend matter with as wide a liberality as they deem discreet, paying due regard to the fact that Home Railway stocks are held by so wide a circle of investors who are dependent, either completely or in part, for their income upon the dividends which they draw from Home Railway stocks. It is not

only in regard to the ordinary stocks that anxiety is raising its head. The London and North-Eastern Railway may find it difficult to meet out of revenue the dividend on its 4 per cent. second preference stock, the price of which, about 57, is sufficient indication of the uncertainty felt as to the outlook for this security. The company's 4 per cent. first preference has come down quite lately from 70 to the present price of 67½, at which the yield is 6 per cent. on the money, a return which looks high from a trustee security in one of the big Home Railway companies. The second preference is also a Trust stock, and the yield at the present level is 7 per cent. on the money. Home Railway prior-charge stocks are sustained in price by the steadiness of gilt-edged securities as a whole, and by the willingness of investors to absorb sound securities which are available. It may be of use to set out a choice of the stocks on offer in this section, for not in every case is supply to be obtained:—

	Int.	Price.	Yield.	Int. Paid.

Of the Tube Railway stocks which are guaranteed by H.M. Government, about £5,000 City and South London 4½ per cent. second debenture is on offer, at the time of writing at 93 ex dividend, the yield being £4 17s per cent. on the money. With the exception of London and North-Eastern second guaranteed, the prices of debenture and guaranteed stocks in this list are affected but little by labour or coal considerations. The securities fall into the lists of money stocks, and are therefore influenced mainly by the factors that control movements in gilt-edged issues. The preference stocks, third in the sections above, pay a certain respect to the prospects which surround the dividends on the companies' ordinary capital.

Distillers Prosperity.—The policy of extension and development which is being pursued by the Distillers' Company, Limited, has so far proved decidedly beneficial to the undertaking. The present accounts cover the 12 months to May 15th last, so that it is now possible to see exactly what effect the acquisition of the Buchanan-Dewar-Walker interests has had upon operations for a full year. From the table below it will be seen that gross profits have risen by nearly a million to £2,367,337, which compares with £906,700 two years ago:—

YEAR ENDED MAY 15th.

	1914.	1921.	1922.	1923.	1924.	1925.	1926.
Gross profits	£ 310,993	£ 597,582	£ 642,337	£ 815,100	£ 906,744	£ 1,403,783	£ 2,367,337
Brought forward	19,223	100,526	108,994	98,770	107,546	119,529	116,552

Balance	164,524	410,919	401,958	484,407	544,040	1,014,617	1,984,993
Preference div.	13,499	11,432	11,521	12,293	57,582	102,663	105,600
Ordinary div.	130,000	290,493	291,667	364,568	366,927	1,288,978	1,657,840
Carried forward	21,025	108,994	98,770	107,546	119,531	116,585	121,554

The total number of shares issued in respect of the amalgamation referred to above was 6,497,732 ordinary shares, in addition to which further acquisitions have necessitated the issue of 63,794 ordinary shares. The total issued capital is thus raised from £6,000,000 to £12,561,526, and now consists of £10,361,526 in ordinary and £2,200,000 in 6 per cent. preference shares. During the period under review the company secured interests in the

Scottish Malt Distillers, Limited, Herbert Green and Co., of Hull, and Macdonald, Greenlees, and Williams (Distillers), Limited, but with the exception of the first named, whose ordinary shares were exchanged for an equal number of new D.C.L. ordinary, all the transactions were settled for cash. The result is shown in the increase in the balance-sheet item of "investments at or under cost" from £4,127,634 to £11,168,387, while loans to subsidiary companies have advanced from £3,257,437 to £4,048,242. The balance of expenses in connection with the increase of capital and acquisition of Buchanan, Dewar, and Walker shares has been reduced by £100,000, and now figures in the balance-sheet at £200,000. The allocation of £200,000 to the reserve brings the total of the fund up to £650,000, while with appropriations of £5,000 and £25,000 the fire insurance fund and superannuation funds are brought up to the respective totals of £165,000 and £266,443. The only other change in the balance-sheet which is worthy of note is a jump of approximately £600,000 in loans from subsidiary companies, which now aggregate £1,676,098.

William Cory.—Bearing in mind the depressed conditions prevailing during the past year the figures disclosed in the annual report of Wm. Cory and Son, Limited, coal contractors and exporters, are eminently satisfactory. It is true that a small decline occurred in net profits, but this was of almost negligible extent, being a mere £7,000 in a total of £533,932. It will be seen from the table given below that the ordinary proprietors have received 15 per cent. for the past five years. The employees' capital again receives a similar return. A summary of results in recent years is given below:—

	1914-15.	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.
Profit	£ 215,328	£ 601,405	£ 588,194	£ 577,986	£ 540,994	£ 533,932
Brought forward	44,511	391,812	478,839	451,826	464,053	488,808
Deb. interest	259,839	993,217	1,067,033	1,029,812	1,005,047	1,022,740
Written off	37,000	37,000	37,000	37,000	37,000	37,000
Reserve, &c.	6,000	..	..	..	..	..
Prof. dividend	42,500	42,500	42,500	42,500	42,000	42,500
Ord. dividend	115,000	427,514	427,514	427,514	427,514	427,514
(10%)	(15%)	(15%)	(15%)	(15%)	(15%)	(15%)
Employees' shs	1,108	7,364	8,194	9,325	9,725	9,491
Carried forward	58,231	478,839	451,825	464,053	488,808	506,235

These figures seem to show that in times of trade depression well-conducted and efficiently organised companies are able to do well, for in the past six years—particularly trying ones for the coal trade—Cory's ordinary shareholders have received dividends totalling 95 per cent. But, of course, it should be appreciated that Wm. Cory and Son are engaged in distributing coal throughout the world. Turning to the balance-sheet, the reserve fund, which has received no allocation since 1923-24, stands at £800,000. The accounts show a strong position, and assets include £2,148,034 of gilt-edged securities. It is a pity the directors make no comment on the results of operations, especially since they could have taken for themselves some measure of credit at having looked after the affairs of their undertaking so well.

A Wireless Tragedy.—In April, 1925, there appeared a prospectus of Burndept Wireless, Limited, formed "to acquire the undertaking and assets of Burndept, Limited, the well-known and successful manufacturers." Ten days or so ago there appeared the first report of this "well-known and successful" manufacturing company, and a most remarkable contrast it provides between the expectations of Mr Burnham as vendor to the public and the achievement of Mr Burnham as managing director of the company. In a letter published in the prospectus Mr Burnham wrote:—

I am of opinion that the company can reasonably expect to earn a profit for the ensuing year of at least £100,000. I am also of opinion that a further profit of £30,000 in the first year will be derived from the company's holding in Radio Accessories, Limited, making a total profit of £130,000 for the year.

In the report (which covers a period of 10 months of the "ensuing year") Mr Burnham says:—

Your board regret that, in spite of vigorous efforts, it has not been possible to earn profits in the manner contemplated when the company was incorporated. The economies were of necessity too late to avoid the small loss shown in the accounts submitted.

The "small loss" is £3,562 over a period of 10 months—say, £4,200 over a period of a year—so that the rosy glow of the prospectus (1925) and the dreary daylight of the report (1926) compare as follows:—

Prospectus.	Report.
£ 130,000 profit	£ 4,200 loss

The business reflects no credit on anybody concerned with the promotion, and at the forthcoming meeting shareholders would do well to press for information about (1) the resignation of the chairman; (2) Mr Burnham's gross miscalculation of future profits; (3) the enormously heavy working expenses; (4) the disposal and the present ownership of the vendors' shares. The balance-sheet is as sorry a document as we remember seeing. Investments in Radio Accessories stand at cost, £45,000, whereas their true value must be much less, and there is a heavy uncalled liability on the shares. Preliminary expenses stand at £25,883, goodwill and patents at £16,822, stock and work in progress at £129,592, cash at £2,540. Altogether, this seems to be a case for searching inquiry. As things stand the report and prospectus provide Socialists with just the kind of mud they want to throw at the capitalistic system.

Consolidated Assurance Company.—In the absence through illness of the chairman, Mr E. Colquhoun, the melancholy duty of reading his statement to the shareholders was undertaken by Lord Amptill. The financial situation as set forth, with commendable candour, could scarcely be worse. The ascertained losses under the marine reinsurance contracts have already reached £500,000, and are expected to amount to £750,000 before current risks have been run off or reinsured. In the meantime the deposits of funds held by the ceding companies are the principal assets. It appears that the greater number of these companies are prepared to use these deposits to pay liabilities to themselves as they accrue—instead of holding the deposits up until the contracts have run off—and it is hoped that this release of otherwise locked up assets will obviate the necessity of applying for a formal winding-up order. But no hope is held out of saving anything from the capital. A call in four instalments of the unpaid 18s a share on 470,740 shares was made in May, with results which have yielded far less than might have been anticipated. Many of the shares are held by companies and firms already in liquidation, and the total proceeds of the call are estimated at no more than £88,216. The directors claim that the company is solvent, and that all liabilities can be met if the assets be realised, including the deposited funds, but that the chance of any of the company's capital being saved is "very remote, almost impossible." Though the question of cutting the knot by going into liquidation was not explicitly before the annual meeting this week, it was in the minds and on the lips of all speakers. The marine department, the source of loss, is recognised as hopeless, but there were signs that the board and the committee of shareholders appointed in May were disposed to favour the provision of new capital to carry on the fire and general reinsurance departments. The difficulties and the rather forlorn outlook were recognised. The net underwriting surplus of these departments during the past 20 years was given as 3 per cent. of the premiums, and it was rather vaguely hoped that future economies and good fortune might raise the net surplus to 5 per cent. of the premiums. The shareholders will be faced before long with the issue, and have to decide whether they are willing to provide more money to restore, if they can, the earning power of the company, or to let it disappear. One may doubt, after studying the frank statement of the chairman and the views of the shareholders' committee, whether the company's fire and general reinsurance business is worth the effort to continue it under the shadow of past losses and with the possibilities of ultimate failure. The prestige of the company has gone, and will not readily be restored.

Bisichi Tin.—With this Nigerian enterprise, 1925 proved a disappointing period. The directors had made a departure in the installation of a dredge, which was expected to contribute to the output of the year. Delays occurred in the erection of the machine—indeed, it has not yet come into effective operation—and, owing to shortage of labour and water, the production from the previously existing sources of supply fell off, the yield being no more than 447 tons of concentrates, as against 630 tons in 1924, albeit the average price realised of £188 17s 6d showed a moderate expansion. Thus the gross profit came out at £27,850, in place of £49,700. After providing for depreciation and taxes and writing off the balance of the amalgamation expenses, £29,200 remains. This sum, which is represented as to £22,000 by surplus cash assets, irrespective of shares in an associated company, is to be carried forward in view of the extra expenditure which will be incurred in bringing the dredge to the producing stage. Comment has been made upon the action of the board in selecting a type of dredge which has proved a failure in the Malay States, even though the conditions in Northern Nigeria are not quite the same as in the other locality. The manager explains that for convenience of flotation the machine was built about 850 feet away from the tin-bearing ground. At first it appeared to be working satisfactorily, but a belt of clay was encountered, which strained the gear and blunted the blades. The necessary adjustments are now being made, and the directors suggest that judgment should be suspended until a fresh trial has been carried out. The Bisichi is one of the Nigerian concerns which sets out its reserves. While these were last year drawn upon to some extent, they still figure at 8,670 tons. This quantity represents something like 10 years' work, even on a materially expanded scale. Some useful rearrangements have been effected in the company's titles, and additional ground has been acquired. It would seem good policy for those interested to await the outcome of events.

Charterland and General.—A fresh expansion is shown in the earnings of this prosperous finance investment enterprise. For the year ended May 31st the income totalled practically £200,000, whereof £156,200 represented difference on realisations. In the nine months to the corresponding date of 1925 the figures were £132,400 and £90,000 respectively. Receipts from interest, &c., last year proved much the same as before. Of the balance of £172,400 available after payment of an interim dividend of 10 per cent., £100,000 is transferred to general reserve, following £92,150 previously; £3,000 to excess profits duty reserve, following £68,000; and a final dividend is declared of 20 per cent., leaving a somewhat enhanced balance to go forward. Moreover, the increased dividend, which compares with 20 per cent. for the preceding nine months, is paid upon a capital swollen by the allotment of bonus shares in the proportion of one for every two. On last year's dividend the shares yield over 12

per cent. As regards the portfolio, the company has disposed of the interest formerly held in Josiah Smale and Son, and has secured participations in the Northern Platinum, Otavi Mines, Singapore Traction, Tanganyika Diamonds, United Exploration, and Willoughby's Consolidated. The holdings now figure at £492,400, as against £301,500 at the end of May, 1925.

LORD STANLEY OF ALDERLEY will preside at the meeting of the Royal Colonial Institute, on Tuesday, July 13th, at 8.30 p.m., at the Edward VII. Rooms, Hotel Victoria, when Commissioner D. C. Lamb will give an address on "Our Heritage—The Empire," in which he will give some impressions of his recent tour.

Oversea Correspondence.

UNITED STATES.—SHARE MARKET RECOVERY—STEEL COMMON—MONETARY OUTLOOK—BUSINESS POSITION—THE PROBLEM OF THE FRANC.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 30.

RESUMPTION of the forward movement in the share market has been the feature of the past week. The rally that started during the latter half of May, and which carried the market out of the trading range that had held it since the end of the March liquidation, paused about a week ago. By that time industrial shares had, on the average, recovered about two-thirds of what was lost in the March break; the railroad shares had made good nearly all their loss. As the rally paused, it became apparent that the technical position of the market needed strengthening; a reaction seemed due. During the past week this reaction took place; a goodly volume of profit-taking and a fair amount of short selling developed. The selling was well taken, however, and it was noticeable that the market tended to grow quiet on recessions. By the start of this week the shorts began to feel uncomfortable. They found difficulty in covering. Whereupon bull operations were resumed, with the result that last week's losses have been regained, while a number of the "good" shares already are in new high ground for the year, and some of them in new high ground for all time. Rails have remained conspicuously firm throughout, and oils also have held their favour. Market leadership has continued to rest, however, with the common shares of the United States Steel Corporation and the General Motors Corporation. Steel common has reached the highest price for all time at 142, which is approximately 25 points above the year's low; General Motors common has touched a new high record at 148½, and this price is only ¼ of one point below the high for all time made in the big bull market of last year.

To explain the strength in Steel common there is no "inside" information whatever. It is common knowledge, of course, that the corporation is in an extremely strong position; that it has enormous reserves, a remarkably strong cash position and adequate earnings, and that it easily could present the stockholders with a generous stock dividend. But there are no discoverable indications that a stock dividend is coming just at this time. Decision in the matter lies with Judge Gary, chairman of the corporation, and the Judge, while willing enough to discuss general business conditions and a wide range of political and social subjects, keeps his counsel perfectly with regard to his plans for the corporation's financial future. Accordingly, it must be assumed that the steady and heavy buying of Steel common is based on a belief that the stock is cheap, and that with the kind of money and capital markets that we have, and seem likely to have, the shares represent an attractive investment. Incidentally, it may be noted that the last sale of stock to the employees was made at 136, which suggests what the management thinks the shares are worth.

In the case of General Motors common there is more definite information to go on. The corporation earned \$7.50 a share in the first quarter of the year, and reliable

estimates now place the net for the second quarter in the neighbourhood of \$9.50 a share. Accordingly, it is apparent that the earnings for the first six months will amount to about \$17 a share. These earnings are unprecedented for the corporation, and have come at a time when the corporation has no funded debt and an unnecessarily strong cash position. They make it readily apparent why the directors are considering a substantial stock dividend—one of perhaps 33 per cent. The strength in General Motors is the more noticeable because it comes at a time when everyone admits that the automobile business has become extremely competitive. However, it is amply apparent that the manufacturers who have caught public favour are unusually prosperous. The keenness of the competition springs from largeness of productive capacity rather than from any lack of public demand. That competition will grow even keener may be judged from the fact that several of the makers are enlarging their plants or adding new models to their lines.

Meanwhile brokers' loans, as reported to the Federal Reserve Bank, show a moderate increase over the low point touched in May. In the week ended June 23rd, the last for which data are available, they rose some \$15,000,000, and the total of \$2,533,000,000 is \$124,000,000 above that for May 19. It is still, however, \$608,000,000 below the high touched early in the year, when the level of security prices was little higher than at present. It may be inferred that the situation is considerably healthier than at the earlier date. At the moment the tone of the money market is slightly firmer, call money on the Stock Exchange having touched 5½ per cent. this week. This firmness is believed likely to prove transitory. Very large settlements have to be made on July 1st, and these naturally have some effect on the money market, even though the Federal Reserve system reduces the disturbance to a minimum. The outflow of money for dividends and interest to-morrow, July 1st, is expected to be the largest in history, statisticians placing the minimum at \$550,000,000, and feeling that the total may run as high as \$650,000,000. A year ago the figure was about \$450,000,000. These figures, perhaps, help to explain current strength in the securities markets. Our investment fund is constantly replenishing itself, while the supply of domestic mortgage bonds is not increasing as fast as formerly.

The better feeling with regard to business prospects continues. The fact that business has held up much better than the statisticians prophesied has made a considerable impression. The steel industry is, perhaps, typical in this respect. Operations during June held up close to 80 per cent. of capacity, and the summer bids fair to witness a degree of activity well above those experienced during the past three summers. Better buying came into the steel market during the last six weeks, and prices took on a firmer tone, although it is difficult to determine whether prices hardened on account of better buying or whether buying was better because prices were about to be marked up. In any event, advancing prices do not seem to be consistent with a declining steel market. Estimates made during the past few days indicate that steel production for the first six months will set a new high record for all time. The trade now feels that the year's production may exceed that in 1925, which was wholly remarkable.

Our bankers naturally are quite interested in the current dispatches from Paris, which report Caillaux as linking debt ratification with fresh credits, and which mention the names of Governor Norman and Governor Strong in connection with the credit talk. Their greatest hope seems to lie in the report of the Committee of Experts, which apparently will recommend the revaluation of the franc and the restoration of the gold standard. Our bankers are not inclined to believe that the granting of fresh credits is conditioned merely on debt ratification. Their view-point is that there is little value in arranging credits unless the credits would be used for a certainly successful purpose. Pegging a paper currency does not appeal to them as an operation likely to ensure the safety of a credit. In short, they believe that the restoration of the gold standard is the real cure for the French difficulties. It seems likely that under these circumstances the resumption of specie payments will be as essential for

credits as debt settlements. As for Governor Strong, it is assumed that he is as much impressed with the value of the gold standard as Governor Norman is supposed to be.

FRANCE.—THE EXPERTS' REPORT—M. CAILLAUX'S STATEMENT—BRITISH AND AMERICAN DEBTS.

(FROM OUR CORRESPONDENT.)

PARIS, July 7.

THE report of the Commission of Experts, appointed at the demand of M. Raoul Péret during his term of office as Finance Minister, was transmitted to the Government on Saturday evening, and very wisely made public 24 hours later. The document can only be described as the most important of its kind that has been issued since the publication of the Dawes Plan for Reparation payments. For the first time the French people have been placed in possession of the plain facts of the country's financial situation, as seen by accepted authorities who are free from suspicion of political bias. The effect on the general public has been to create a feeling of satisfaction that the worst is now known, and to inspire a strong desire that the politicians should now manifest sufficient patriotism to consent to efface themselves, as the experts suggest, and leave the recommendations to be translated into action, through non-party channels, as quickly as possible. When the Chamber met again yesterday, however, and listened to the grim statement made by M. Caillaux, as a prelude to the financial discussion on which the acceptance or rejection of the experts' plan depends, even the party politicians were nearly cowed into silence by the facts the Finance Minister for the first time revealed.

The State, he announced, has borrowed a further 17,500,000,000 from the Bank of France within little over a year past, and at this moment the Treasury has only 500,000,000 of this total left, the whole of the rest having been absorbed. Why? Because, owing to having been continually forced to borrow, the State has tired out the lenders. In 1925 reimbursements of National Defence, Treasury, and other floating debt bonds exceeded new issues by 10,500,000,000, so that the 10,000 millions of additional money borrowed from the Bank was more than absorbed in advance. Had a portion of the Morgan loan of \$100,000,000 not recently been appropriated for current expenditure, the legal limit of borrowings from the Bank would have been exceeded to-day by nearly 1,000,000,000, which would suggest, although the Finance Minister did not say so in exact terms, that something like one-half of the effective original amount of the loan still remains available.

M. Caillaux might have added—and that he did not do so was probably due to the fact that the situation is notorious—that this exhaustion of normal resources is particularly serious at the present moment, owing to the circumstances that, in consequence of the speeding-up methods recently applied, the amount of arrears of direct taxation in respect of the past financial year is practically nil, while not a single demand note has yet been issued for direct taxation imposed by the 1926 Budget (owing to the complexity of and delay in voting the Finance Bill for the current year).

Turning to the situation of the Treasury in regard to foreign engagements, the Finance Minister reminded the Chamber that this country is at present paying on an average, for interest and redemption charges on its foreign debt, "about £25,000,000 a year, equivalent to 4,500,000,000f." He added the following categorical statement:—

"I assert very plainly that it will be impossible to continue to pay this if sterling rises any higher, because we shall be compelled to overwhelm the taxpayer. I will go so far as to declare that it will be impossible for us to pay this amount unless we are able, as we have hitherto been able to do—for the purpose of postponing maturities, and for arranging facilities of payment—to secure credits from what I recently described as happier countries from the financial point of view. And we shall be able to obtain such credits only if we settle our debts. . . . We shall have to pay £8,000,000 in the month of August, which is

equivalent, if I know how to calculate, to between 1,200,000,000 and 1,300,000,000f."

M. Caillaux insisted that the possibility of France finding a way out of her present immediate difficulty "depends largely, if not entirely, on the settlement of her political debts." As to the British debt, he hinted at a probable modification in favour of this country of the provisional agreement arrived at last year. The negotiations with London, he explained, have been resumed, and it would be unfair not to state that approval of the agreements already arrived at, "with the ameliorations that we are seeking in them, or with certain assurances, of which some have already been secured by us," would appear to be indispensable. (M. Caillaux, during his 3½ hours' speech, made no reference to the Franco-American agreements now awaiting ratification, no doubt in view of the pending interpellation of the Government on this subject by M. Franklin-Bouillon.)

The Finance Minister made it clear that, "although the Government does not intend to follow servilely the plan presented," particularly in regard to the mass of the taxation which the experts' commission recommends shall be immediately applied, he has adopted practically the whole of their plan as his own. A stern intervention by M. Briand, provoked by an interruption from one of the Socialist leaders, convinced the House that the Ministry as a whole is solidly behind the Finance Minister on the whole programme to be submitted. This solidarity, it is to be presumed, will obtain not only in respect of the detailed fiscal and other more or less normal measures to be laid before the House, but also as concerns the demand that "full powers" shall be conferred on M. Caillaux to enable him to carry his and the experts' plans into operation by Ministerial decrees, independent of Parliamentary discussion and approval. The challenge which the Government threw down at the outset of the debate initiated last night is probably the boldest and most courageous put forward by any French Government during the past half-century. The outcome of the next three

or four sittings—for the debates are not expected to finish before Saturday morning, in view of the 20 or more interpellations notified—will constitute either the beginning of the first real effort to place the national finance on a sound footing, or perhaps the prelude to speedy national bankruptcy.

The Government's real difficulty will lie in reconciling the moderate majority in the Chamber, in whose hands the fate of the whole plan now lies, to what a large section of the House regards as the two fatal blemishes on the scheme as a whole; but which the Government insist are vital to its success. The first of these is the Government demand that the Franco-American agreement shall be ratified, although not necessarily immediately, and that an immediate settlement shall be arrived at with Great Britain on the lines laid down in the conferences with Mr Churchill last year. The second rock on which the whole plan may be wrecked is the demand that "full powers" shall be conferred on M. Caillaux to carry out the details of the plan independent of Parliamentary control. Opposition to the latter project is obviously based almost entirely on personal antagonism to the present Finance Minister, which is perhaps not surprising in view of his varied past career and the distrust, amounting almost to anxious fear, with which many of his political opponents regard him owing to his alleged arrogance and ambition for power.

The opposition which is being manifested to any kind of settlement of the British and American debts on anything like the lines of the existing proposals is by far the most serious obstacle in sight. This was clearly shown this evening, when the attack on this part of the Government's programme was vigorously opened by no less a person than M. Franklin-Bouillon, the President of the Foreign Affairs Commission. His argument in regard to the Washington Agreement was that not only must the American "bill" be very seriously revised as to details of account before there can be any question of any agreement being concluded, but that in any case (1) the much-discussed "safeguard" clause must be added to the agreement (for the protection of this country in case Germany fails to continue payment under the Dawes plan), and that (2) a transfer clause similar to that accorded to Germany for her reparation payments is indispensable, in view of possible continued currency trouble. M. Franklin-Bouillon had practically the unanimous support of the House when he insisted that means must also be taken to prevent eventual commercialisation of the French debt by the American Government.

A substantial section of opinion throughout the country is showing growing alarm at the possibility that any loans that may be obtained from America or Great Britain, under present circumstances, may result (although productive of immediate benefit) in Anglo-Saxon domination that would place this country in a situation similar to that at present filled by Germany under the Dawes Plan. Finally, there is a growing fear that the industrial and economic crisis that, as pointed out by the experts themselves, will inevitably follow the application of their proposed remedies, may prove worse than the existing disease. Technical critics of the experts' plans insist that, as applied by M. Caillaux, they will prove to be merely a further experiment in inflation, although skilfully disguised, and that instead of sound financial reforms, the Government is merely proposing new expedients that will place the national sovereignty in peril. Incidentally, it is reported that the three successive levels at which M. Caillaux hopes to stabilise the franc would range from 180 to 140.

GERMANY.—REICHSBANK AND CREDIT—INDUSTRY—NEW FOOD DUTIES—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, July 7.

YESTERDAY, for the third time this year, the Reichsbank reduced its discount and advances rates, without getting any certainty that it will thereby regain control of the credit market. The abundance of money is too great, despite a rise in interest rates sharper than usual during

the June month-end settlements. The new Reichsbank discount rate is 6 per cent., the new advances rate 7 per cent. The last preceding reduction was on June 7th, the earlier reduction was on March 27th. During all this time, and even since yesterday, the price of money in the open market was much lower than the Reichsbank's rate, the exception being, of course, the interest charged by banks for overdraft credits, but for years past this interest has not pretended to reflect the cost of money, being professedly a means for compensating the banks for the fall off in their Bourse and capital emission business. Although Bourse and capital emission business have revived, the banks continue to charge high interest.

Movements of the chief Reichsbank items in the first half of 1926 sufficiently indicate the decline in the credit pressure, despite the official cheapening of credit:—

(In Millions of Marks.)

Date.	Exchange Cover.	Discounts.	Circulation.	Rediscounts.
December 31, 1925	402	1,914	2,960	473
March 31, 1926	481	1,215	3,159	413
June 30, 1926	324	1,288	2,971	..

The decline in the exchange cover is new, and is apparently due to repayment of foreign loans and credits, to the smaller recent export surpluses, and probably in some measure to new undertakings outside Germany. Discounts have fallen by about one-third. Circulation has been practically unchanged; indeed, the total circulation of all currencies has been stationary (5,181 to 5,180 million marks). The complete disappearance of the rediscount liabilities is the most significant of the changes. Six months ago the Reichsbank, though even then the credit pressure upon it was not very severe, was glad to hand on about a sixth of its discounts to public bodies (Treasury, railways corporation, posts, &c.), which had superfluous cash temporarily idle. To-day the bank has to fight for discounts. Apart from that, the public bodies (owing to tax reductions and other causes) have less need for short-term investments. The brief-lived rediscount system served an admirable purpose in regard to Federal finances. Instead of being a permanent debtor, with continual bank debts varying in amount, by which means it was never without money and yet never had money lying idle, the Republic, with its undisbursed cash, was a permanent creditor which could always get just what money it wanted, which, again, owing to the possibility of rediscounting, never had any money lying idle.

The revolution in the capital market is even more remarkable than that in the money market. It is due to some extent to the same cause. Whereas short-term money is plentiful owing to industrial depression, so is capital plentiful because many business men, foreseeing no speedy industrial revival, are locking up liquid resources in long-term investments. This tendency was already so marked a couple of months back that the Reichsbank president, Dr Schacht, saw danger in it. Remembering how the industrial working-capital famine of 1924-25 was largely caused by the locking-up of cash in expansions and modernisations during the mark-depreciation years, he feared that when industry next time revives, money necessary for working-capital will be once more found tightly locked up. At present the locking-up process is proceeding headlong. Just as four years ago it was a common dogma that Germany would never again have sufficient fuel, so a year ago it was universally proclaimed that decades, if not generations, would pass before she could put up capital for public loans, or for industrial enterprises. All the industrial debentures for steel, electrical, and other enterprises were issued abroad—in America, Holland and Switzerland, and later in Great Britain. Yet last week

witnessed the spectacle of German capital competing against American to acquire a big enough share in the new Steel Trust loans, and German reproaches were addressed to the greedy Americans for taking too much. This was at a time when the six-months' Bourse boom, which was then at its highest, was being financed, and when three-quarters of a million unemployed were being supported. In fact, the reaccumulation of capital in Germany represents a natural process of recuperation just as the superabundance of fuel represents a natural process of adaptation. Thrift, industry, and ingenuity accounted for the recoveries. Although during the inflation years Germany's position was never as bad as was believed by foreigners who measured the devastation by the dollar's exchange in Berlin, the recent recovery is still very great; indeed, the past eight years provide a good illustration of the doctrine of many economists that the effects of war and civic disturbances upon a healthy country are usually overcome with great speed. A great deal has yet to be done. The half-yearly report of the official Reichs-Kredit Gesellschaft, which is always an informative publication, implies that the present industrial stagnation, unlike the brief periods of stagnation in the inflation years, will be prolonged; put otherwise, that Germany has now reached the condition of Great Britain as a country in which serious unemployment is more or less chronic. If that is so, the abnormally small number of German unemployed in the past—less than 20,000 four years ago—was merely an indication of economical instability, and the present stagnation indicates a recovery to conditions which are normal (in the post-war sense) and stable.

Bankruptcies are still declining; in the first week of July they fell to 74, against nearly 500 a week in the first two months of the year. They are now much below the pre-war average, which was 700 or 800 a month. This, however, is largely due to the decline of the deflation crisis, by which the weaker companies and firms were eliminated. The number of unemployed in the first half of June shows practically no change. The Prussian Trade Ministry's monthly report for June admits a general improvement, which was considerable only in the coal branch, and embraced not only coal (as a result of the British strike), but also lignite. The iron and steel industry has improved, though this is not stated in the report. The Ingot Steel Syndicate, which rationed production to 65 per cent. of the normal during all the past year, has rationed it for July to 67½ per cent. In textiles the report mentions a slight improvement. Chemicals were satisfactory. To-day's report from the Ruhr coal district is optimistic. Sales in the "competitive districts," that is, mainly sales abroad, reached in June 3½ metric tons, or 25 per cent. more than in May, which was also a strike month, and daily consignments to the competitive districts were 141,000 tons, against 107,000 tons. The pits' mouth stocks of coal, however, declined in June by only 1,000,000 tons, and remained at 8,000,000 tons, most of which is not exportable coal. The lowest weekly output of Ruhr coal this year, 1,514,000 tons, was in March; since the beginning of June the weekly output has always exceeded 2,000,000 tons, and in the fourth week was 2,207,000 tons. Although this has pleased the coal masters and helped to drive up Gelsenkirch, Harpener, and other leading coal stocks to great heights, the view held by competent persons is that Germany in the end will lose more than she gains from the British strike.

Skilled wages in May (in 11 industries and on the railways) were exactly the same as in June, averaging 46.02 marks per week, and unskilled wages were unchanged at 35.95 marks. The Government has put through a temporary compromise over the food duties, which were stored by the Minor Tariff Law of August 18, 1925. The law enacted that until August 1, 1926, reduced duties should be imposed, after which the autonomous duties would be applied, in so far as they were not earlier reduced by commercial treaties. Certain products, such as malt, beans, flour, and other milling products, are not affected by the compromise; but they are, or will be, the subject of treaty negotiations, so that the autonomous rates upon them will probably be reduced. From August 1st the duties, as compared with the pre-war treaty duties and pre-war autonomous duties, will be:—

	Marks per 200 Metric Lb.	August 1, 1926.	Treaty.	Pre-War.	Autonomous.
Rye	5	5	5	7	7
Wheat and Spelt	5	5	5.50	7	7.50
Fodder Barley	2	2	1.30	7	7
Oats	5	5	5	7	7
Buckwheat	5	5	5	5	5
Maize	3.20	3	3	5	5
Cattle*	16	8	8	18	18
Sheep*	16	8	8	18	18
Pigs*	16	9	9	18	18
Meat	37.50	27	27	45	45

Margarine	20	20	20	30	30
Canned Meat	40	60	60	75	75
Conserved Milk	40	20	20	75	75

* Live weight.

The Bourse last week had another rise, which was, in the main, confined to the leading stocks, but to some extent secondary stocks followed the leaders. The conclusion of the Steel Trust loan led to some of its companies' stocks rising to fourfold their lowest level of 1925. This week there has been a sharp reaction, and to-day the market was undecided. Yesterday, owing to the over-bought condition of the market, the Reichsbank rate reduction had no effect in stopping the decline. The *Frankfurter Zeitung's* index for July 3 (based on 100 on January 2, 1925) shows 103.62; but an index which included the mass of inactive and secondary stocks would show a much lower figure. It is stated that some foreigners who unwisely began buying at the top of last week's boom have suffered considerable losses.

ITALY.—THE REAL MONETARY PROBLEM—BALANCE OF PAYMENTS—BUDGET SURPLUSES—CIRCULATION AND PUBLIC DEPOSITS.

(FROM OUR CORRESPONDENT.)

TURIN, July 6.

THE vagaries of the rate of exchange, which has gradually increased from the level of 125 lire to the pound sterling at the end of April to about 140 lire at the present time, continue to be the most important problem in the economic life of Italy. I will try to indicate what is, in my judgment, the exact economic point on which the solution of the problem depends. It is not the so-called balance of trade. True, we have had, in the first four months of the year, an excess of imports over exports of 3,761.1 million lire; but we had an almost exactly equal excess in the past year of 3,746.1 million lire; and even if we suppose that the total excess for the whole year will be the same as in 1925—viz., 7,896.8 million lire—we do not get at a figure appreciably higher than the pre-war figures, which oscillated around 1,200 million gold lire from 1860 onwards—i.e., from the birth of the united Italy we always had an excess of imports over exports, and rates of exchange were frequently at par. In 1923 and 1924, notwithstanding the excess of imports over exports, the international balance of payments was evenly balanced, remittances of emigrants, expenditure by foreigners travelling in Italy, national merchant marine income, &c., making up for the commercial gap. We have not, for 1925 and 1926, figures for the invisible items of the balance of payments, but there is no probability that they will differ very much from past experience.

The Budget balance is no longer a factor in the falling value of the lira. Whatever opinions may be held about present Italian politics, one fact is certain—that figures published in the official documents over the signatures of the Director-General of the Treasury and of the Accountant-General of the State are undoubtedly true. Charges of forged figures, which I sometimes see in foreign newspapers, are absolutely untenable. The published figures show the real situation of the Italian Budget. I am almost tempted to say that the situation is too strong. In the first 11 months of the past financial year the surplus of revenue over expenditure was 811.8 million lire. And this is not the end of surpluses. In our system of accounting, in the revenue figure we include the taxes

to be recovered, and on the expenditure side the disbursement to be made on account of the appropriations of the year. At the end of the year the Treasury retains more or less big sums of money, which are not technically surpluses, because at some future date, possibly a very distant date—let us say 1930—a call can be made on them for meeting belated expenditures appropriated in 1925-26. Cash surpluses are, therefore, much larger than Budget surpluses.

How much larger cash surpluses are than Budget surpluses can be judged from July 1, 1925, to May 31, 1926, figures; the surplus of actual revenue over actual expenditure was 3,049.6 million lire, as against 811.8 million lire Budget surplus. True, the difference is not technically a surplus; it may, in fact, be expended one or two, or perhaps 10, years hence. But, as a matter of fact, it is not being expended at present, and it is highly probable that, in the course of time, many appropriations will become obsolete, and the corresponding expenditure never will be made, so that what is at present only a cash surplus will become a true Budget surplus.

Our Treasury is, therefore, in a very strong position. The Finance Minister can boast of a Budget surplus of about 800 million lire, and of an additional unexpended surplus of 2,200 million lire. These surpluses are, for the time being, so big that the Finance Minister can view with equanimity the increase in prospective public works expenditure, which is the consequence of the Government's grandiose programme of reconstruction of Southern Italy.

The only feature which calls for explanation, and for a very prudent policy, is a different one, on which financial critics usually do not lay any stress. In spite of the big Budget and cash surpluses, the Treasury found it necessary to increase the total of public internal debt from 90,847 million lire at June 30, 1925, to 92,033 million lire at May 31, 1926. Why? The reasons are many, and it would take too much space to enumerate them. Among them is one which bears directly on the paper money problem, and which can be explained only by a reference to paper issue figures:—

(In Millions of Lire.)

	Bank of Issue and State Notes Issued.		Com- mercial Discounts.	Sums Held by the State Treasury in Current Account at the Bank of Italy.
	For Trade Account.	Total.		
	1	2	3	4
December 31, 1923 ..	6,185.8	19,674.3	4,690.2	2,011.2
June 30, 1924	6,054.6	19,952.8	4,638.3	756.5
December 31, 1924	6,788.6	20,541.9	4,483.6	807.7
June 30, 1925	8,268.8	21,117.0	5,225.6	236.2
December 31, 1925 ..	8,766.0	21,449.6	5,929.0	1,550.2
May 31, 1926	7,416.3	19,816.5	6,168.3	2,471.0

The figures in columns 1 and 2 are good; the total of paper issue, after reaching top figures at the end of 1925, is diminishing, and is being kept under the 20 billions level, which is the safety line of our foreign exchange. Also figures of issues of notes for trade account are at present decreasing. But column 3 shows that commercial discounts—that is, the mass of bills and acceptances discounted by the banks of issue—are continually increasing. Our banks of issue, notwithstanding the limitation of note issue, support an expanding structure of commercial and industrial activity. They do not support the expansion by the increase of their private deposits, for these deposits are practically stationary. The means of support come out of public deposits. After decreasing to a minimum of 236.2 million lire at June 30, 1925, public deposits rose to the big figure of 2,471 million lire at May 31, 1926. This figure of public deposits at the banks of issue is, perhaps, the most significant one in the interesting and well-compiled monthly bulletin of our Treasury. It means, in short, that the Treasury utilises the best portion of its Budget and cash surpluses in keeping a big deposit at the Bank of Italy; and this public deposit is the source from which the Bank of Italy draws the means to make larger advances to commerce and industry, notwithstanding the decrease in note issue. As it is, public deposits are note issues in being. For, if the Treasury were to diminish its deposits to 236.2 mil-

lion lire as at June 30, 1925, then the total note issue would be forced to jump up by about 2 billion lire. This is the crux of the present situation, which lies not in the balance of payments, not in the Budget situation, but in the risk of an increase in note issue consequent upon an unforeseen obligation causing the Treasury to withdraw deposits from the Bank of Italy. The monetary problem, from a strictly monetary point of view, can be put thus: how to keep the total note issue under the 20 billions level, even when the public deposits are reduced to their normal level of, let us say, 500 million lire.

Italy has solved other bigger financial problems, and she will solve this lesser monetary problem. Gradual restriction of discounts by banks of issue to the $4\frac{1}{2}$ billion lire level, gradual corresponding increase of discounts by other ordinary banks and savings banks through an increase of private saving—these are the only visible methods by which it will be possible to put an end to the risky business of financing industry through public deposits. Signor De Stefani decreased public deposits from 2,011.2 to 236.2 million lire; the present Minister will, no doubt, attentively watch this last door remaining open to a possible increase of circulation, and close it in the course of time against all future threats against the stability of the lira.

CZECHOSLOVAKIA.—POLITICS—STABILISATION OF BALANCE-SHEETS—COAL—SUGAR.

(FROM OUR CORRESPONDENT.)

PRAGUE, June 26.

THE Ministry of Officials has found its task of functioning as a Cabinet by no means easy. Actually created to pilot through Parliament measures which were essential, but which no ordinary party majority, or combination of parties, had the least chance of passing, it has just succeeded in passing the new Corn Laws and the Clergy Emoluments Act, after the most heated struggle that this new Republic has yet known. The twenty-nine parties which have hitherto fought on racial as well as social grounds have now ranged themselves into Socialists and non-Socialists, and with the German and Magyar minorities taking an active interest in current affairs, the way seems open for a new Ministry based upon real community of interests. To what extent the future success of Czechoslovakia depends upon this policy, only those well acquainted with the actual situation here can fully understand. The Socialists have carried their opposition to these measures so far as to demand the resignation of the Foreign Minister. Dr Benes holds the Socialist mandate, but he is by no means a strong party man, in the narrow sense of the term, and he is not likely to agree with this. An examination of the text of the new Corn Laws shows quite clearly that they are framed with an eye to the continuance of the policy of commercial treaties as much as to the interests of the agrarians. Thus Article 2 empowers the Government to apply lower duties in the case of imports from States which have (or will have) commercial treaties with this Republic.

In order to meet the increases in the salaries of the Government officials, recently sanctioned, Dr Englis, the Finance Minister, proposes to obtain the necessary 1,000 million Kc. to a very large extent out of the duties on sugar, alcohol, and cereals.

The new Bill for the Stabilisation of Balance-sheets is one which will meet with approval from all those desirous of obtaining reliable information as to the true state of business in this country. Hitherto, owing to the fluctuations in the value of money, a "balance-sheet" has been a very unsafe guide as to the true state of an enterprise. All the items, though nominally in the same monetary unit (Kc.), are actually in crowns (Kc.) from various periods of inflation, and, therefore, of varying value. Thus, for example, further knowledge than the mere statement in a "balance-sheet" is generally necessary in order that the present-day value of the capital written off or the profits made can be obtained. The stabilisation of balance-sheets is intended to enable undertakings to convert all their accounts into present-day purchasing power, and is necessary, not only from the point of view of credits, exchange quotations, &c., but

also in order that the new "Tax on Earnings," which is to be a form of direct progressive taxation, may be properly carried out.

While there are many obvious reasons for so doing, it is yet to be deplored that the new Bill makes stabilisation optional rather than obligatory, as was the case with the "gold" balance-sheets under the system adopted in Germany and Austria. Also, on the assumption that items of current capital have already accommodated themselves to the new conditions, only in the case of permanent capital items is stabilisation considered necessary.

The Czechoslovak coal industry, which has been badly hit during the last few years, has benefited of late from the coal strike in England. Exports, especially from the Morava Ostrava district, show a large increase during the last few weeks. The amendment to the Coal Tax Act of 1923, which seeks to free from export tax all coal or coke dispatched abroad, will remove a long-standing complaint of the coalowners, and render considerable help to the industry.

The sugar industry has felt rather keenly the effects of over-production during the past season, and there are still large stocks on hand. The total production for the eight months ending May 31st was greater than for the whole season 1924-25:—

	(In Tons of Raw Sugar.)	
	1924-5.	1925-6.
Production	1,406,376	1,502,509
Home consumption	256,595	258,703
Export	841,401	812,023
Stocks in hand	315,196	447,057

(May 31st.)

England is still the chief country to which Czechoslovakia exports her sugar, with Switzerland and Austria far behind:—

	(In Tons of Raw Sugar.)	
	1924-5.	1925-6.
England	140,300	153,700
Switzerland	72,400	88,700
Austria	73,100	71,800

Exports have fallen from 1,350 million Kc. in April to 1,219 million Kc. in May, owing especially to a decline in exports in cotton (— 60 million Kc.) and coal and timber (— 59 million Kc.).

The index of wholesale prices, which on May 1st stood at 928, had fallen by June 1st to 926 (135 gold parity); butchers' meat and cereals have risen, but there has been a distinct drop in hops, jute, hides, and butter. Stagnation still continues on the Prague Bourse, both home bank shares and industrials showing a downward tendency.

CANADA.—AGRICULTURAL CONDITIONS—BUDGET CHANGES—THE CUSTOMS SCANDALS—BRITISH EMPIRE STEEL CORPORATION—GENERAL BUSI- NESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 13.

AGRICULTURAL conditions are still very variable in Canada. Continuous warm weather fails to come to the Eastern provinces, and although oats, barley, and hay are doing reasonably well in Ontario and pastures are abundant, the season is two or three weeks later than usual. Things are even less propitious in the Maritime provinces and Quebec, where it is abnormal for seeding not to be completed at this date, and there are apprehensions that the crops in these regions will be disappointing. In the West the seeding of all grain has been virtually completed, and the young wheat crop is well rooted, and has been coming along in satisfactory fashion. But now complaints are coming from numerous areas of a lack of moisture, and, as a consequence, there has been some damage from high winds and soil drifting. There are also ominous reports that the cutworm plague has appeared with great virulence in a number of districts, and unless heavy rains come soon will spread rapidly and work great damage. However, the Government index figure for crop conditions in the West still places them

well above the average level for the past decade. In British Columbia and Ontario there is promise of a good fruit crop, except in the case of peaches, which will be light.

The Parliamentary session is now in its penultimate stages, and prorogation is expected before the end of June. Before the committee stage of the Budget ended the Government made further concessions of a substantial character to the motor manufacturers, and the general impression is that they are now in possession of just as much protection as before the introduction of the Budget. The latest sop consisted of the abolition of the 5 per cent. luxury tax on cars under \$1,200, provided at least 40 per cent. up to the end of this fiscal year and thereafter at least 50 per cent. of the finished car is of Canadian origin, and since this tax is retained on American cars the concession is equivalent to 5 per cent. more tariff protection. The Conservatives were quite ready to acquiesce in a change which tended to help a protected industry to survive, and also amounted to a self-confession of error on the part of the Ministry; but less intelligible is the failure of the Progressive Party to protest at the whittling away of the only tariff reduction which they were able to wring from the Government. Before the session ends the Ministry has one difficult hurdle to face in the shape of the report of the Customs, which has just concluded its hearings after four months' steady work, and is now engaged in drafting its report. It is expected to make unanimous recommendations on a number of points, such as the need for a thorough reorganisation of the Customs Service and the prosecution of offenders to secure restitution of revenues lost by fraud; but on the political aspects of the disclosures a sharp cleavage of opinion will develop, and majority and minority reports will be forthcoming. The Conservatives will endeavour to arraign the Government, and particularly the present Minister of Customs, for complicity in the scandals, and the Liberals will bend their energies to applying the necessary whitewash. The Opposition are certain to make their indictment the basis for a want of confidence motion, and, if they can build up a strong enough case, they may get the support of enough Progressive and Independent votes to defeat the Government.

A crisis long expected has now developed in the fortunes of the British Empire Steel Corporation. Its application for increased protection which the Tariff Board is now hearing had been accompanied by a good deal of propaganda to the effect that it could not avoid bankruptcy unless higher duties on steel and coal were established. Now it is practically certain that on July 1st default will take place on the bonds of the Dominion Iron and Steel Company, one of its constituent units, and obviously if it cannot earn enough to pay its bond interest, the position is serious. If it came to bankruptcy, that, which would entail the closing of the great steel plant at Sydney, as well as numerous mines and other subordinate industries, would spell disaster for the northern areas of Nova Scotia, and accordingly, on July 13th, the representatives of that province combined to force a special adjournment of the House of Commons to discuss the situation. They painted the consequences of the collapse of "Besco" in the darkest colours, and entreated the Government to come to its rescue before it was too late. The suppliants on behalf of "Besco" declined to suggest any specific remedies, but, as they harped steadily upon the calamitous effects of foreign competition, the inference was obvious. Replying for the Government, the Minister of Finance explained that it could do nothing until the company made a frank statement of its actual position; there was in existence a comprehensive report upon its affairs, and an offer had been made to submit it to the Premier and the Finance Minister, but not to the other members of the Cabinet. Until, therefore, said Mr Robb, the company was ready to take the whole Cabinet into its confidence, it could expect no consideration. The truth is that this corporation commands little public sympathy; the circumstances attending the merger to which it owes its existence were disliked; an enormous quantity of water was injected into the stock, and the management has been unhappy in its relations with labour. But things have now come to a pass when only a drastic reorganisation of the corporation's financial structure involving heavy sacri-

fices by different classes of stockholders, seems necessary.

Owing to the cold weather the anticipated improvement in business has not materialised, and merchants report that the sales of summer clothing and other seasonable commodities have so far been disappointing. However, most manufacturers are reasonably busy, and the car-loading figures indicate that the movement of merchandise is on a substantially larger scale than at the corresponding date last year. One favourable factor is the large increase in the programme of new building construction; the 57 million dollars of new contracts placed in May form a record for this month in Canadian history, and a great number of industries, which furnish building supplies, are profiting by this activity. The building boom is also helped by a fall in cement prices, due to a price-cutting war now in progress between the Canada Cement Company and the National Cement Company; the latter has the backing of a group of rich French-Canadian capitalists, and finds itself able for the first time to challenge the supremacy of its older rival. The foreign demand for butter and cheese has been disappointing, but export trade in cattle is brisk. Great activity is still visible in the northern mining camps, and the range of the country's metalliferous area is constantly being extended by fresh discoveries. Optimistic reports are forthcoming at intervals from the new goldfield at Red Lake, and it is now claimed that even richer finds have been made in the adjacent regions known as the Woman River and Birch River districts; at least prospectors are flocking to the latter places and staking many claims.

Books and Publications.

BRITISH WAR FINANCE.*

THIS is one of the publications of the Carnegie Endowment for International Peace, and is presumably designed chiefly for the information of the future historian. To him it will be a godsend, for it will save him from the task of wading through innumerable pages of Hansard, over which the eloquence has been spread of the House of Commons in Committee of Ways and Means. Messrs Hirst and Allen have done their work with most exemplary industry, patience, and thoroughness, but they have also exercised a self-restraint which is as disappointing to their readers as it must have been irritating to themselves. When one opens a book on the subject of expenditure with Mr Hirst's name on the title-page, one does so with the pleasure with which one used, in the days when cricket was cricket, to watch W. G. Grace go to the wicket; one expects hard-hitting and the brilliant display of a great talent. Instead of which Messrs Hirst and Allen have given us what consists almost entirely of a summary of the Parliamentary debates on the war and after-war Budgets, with a certain amount of Press criticism. Their own expressions, which might have been so incisive and stimulating, as to the methods of our rulers in financing the war are hardly ever allowed to appear. They adopt the Thucydidean method, with this grave disadvantage, that instead of comparing the speeches of the leaders themselves, they take patient extracts and summaries from the real article. In the next edition they must really put this right, and provide a chapter in which they will tell the reader what they themselves think about the mass of fact and detail with which they have presented him. And a few tables showing the chief features of each Budget, and of the war-time Budgets as a whole, would be a useful addition. As it is, the reader who turns over these pages is struck chiefly by the enormous amount of work put into the book by the writers, and by the really high standard of most of the debates which it summarises.

* "British War Budgets." By F. W. Hirst and J. E. Allen. Oxford Press. 15s net.

BOOKS RECEIVED.

The End of Laissez-Faire. By John Maynard Keynes. (London) Hogarth Press, 52 Tavistock Square. 2s net.

An essay based on two lectures delivered by Mr Keynes, namely, the Sidney Ball Lecture at Oxford University in 1924, and a lecture delivered before the University of Berlin in 1926.

Modern Finance and Industry. By A. S. Wade. (London) Sir Isaac Pitman and Sons, Limited, Parker Street, Kingsway. 5s net.

The aim of the author, who is City Editor of the *Daily News* and the *Star*, is to give a clear sketch of the important elements in the British financial organisation, and some of the ways in which it reacts and is reacted upon by industrial and trade movements. A very readable sketch of the mechanism of our financial system.

Britain's Economic Plight. By Frank Plachy, jun. (London) Ernest Benn, Limited, Bouverie House, Fleet Street. 7s 6d net.

A critical but appreciative review of Britain's industrial position by an American journalist. Worth reading.

German Colonisation Past and Future. By Dr Heinrich Schnee. With introduction by William Harbutt Dawson. (London) George Allen and Unwin, Limited, 48 Museum Street. 5s net.

A defence of Germany's pre-war colonial administration. Dr. Schnee, who was formerly Governor of German East Africa, also develops the thesis that the return to Germany of her colonies is "an act both of duty and of necessity."

The American Task in Persia. By Arthur C. Millspaugh. (London) T. Werner Laurie, Limited, 30 New Bridge Street, Blackfriars. 15s net.

The author, who is Administrator-General of the Finances of Persia, tells the story of the American Financial Mission in Persia since 1922, and explains and interprets Persian characteristics and Persian problems. He is imbued with a belief in the genuineness of the Persian people's desire and capacity for progress. It is the work of an able and practical enthusiast, whose experiences are as interesting to the reader as his work should be valuable to Persia.

La Dépréciation et la Révalorisation du Mark Allemand et les enseignements de l'expérience monétaire allemande. Par André Fourgeaud. (Paris) Payot, 106 Boulevard Saint-Germain.

A French study of the great depreciation of the mark, its causes and its effects, and also of the results of the subsequent mark stabilisation. The author suggests certain lessons for France from this study.

Die Deutsche Rentenbank-Kreditanstalt (landwirtschaftliche Zentralbank). Von Dr. jur. Hans Pröhl. (Berlin) R. Gürgens, Unterwasserstrasse, 8. 5 rm.

The author gives us a clear insight into the methods by which agricultural credit can be obtained in Germany. A full explanation is given of the law governing the formation of the Rentenbank-Kreditanstalt (landwirtschaftliche Zentralbank), and the scope of the bank's activities is described in detail.

Kartelle und Kartellepolitik. Von Dr. Max Metzner. (Berlin) Carl Heymanns Verlag, Mauerstrasse 44. 5 rm.

A short, historical account of the development of the cartel system in Germany. Special attention is also given to present-day problems.

Währung und Kredit. Von R. G. Hawtrey. (Jena) Gustav Fischer. 15 rm.

A German translation of R. G. Hawtrey's well-known book, "Currency and Credit."

OWING to the general strike the issues of the "Economist" for May 8th and 15th were considerably delayed. Copies of these numbers may be obtained from the usual agents or direct from the office of the "Economist," 3, Arundel street, Strand, W.C.

Wirtschaftsstatistisches Jahrbuch, 1925. (Wien) Kammer für Arbeiter und Angestellte, 1 Ebendorferstrasse, 7. A comprehensive survey of economic conditions in Austria in the year 1925. Many useful statistics are given relating to each separate industry, foreign trade, the cost of living, the money market, population, &c.

Can We Compete Abroad? By C. C. Martin. (New York) National Foreign Trade Council, India House.

A practical examination of the position of American industry in regard to competition in foreign markets. The author gives a confidently favourable answer to the question which forms the title of his book. A book which should be read by British exporters who compete with American goods in world markets.

Is Credit Necessary in Export Trade? Addresses by E. B. Filsinger and D. W. Fernhout. (New York.) National Foreign Trade Council, India House.

In a foreword Mr A. S. Hillyer, Chief of the Commercial Intelligence Division, Bureau of Foreign and Domestic Commerce, at Washington, says: "This pamphlet should be on the desk of every American export executive as a handy reference."

Les Finances du Mexique, 1892-1911. Par C. Diaz Dufo. (Paris) Librairie Félix Alcan, 108 Boulevard Saint-Germain.

This is a French translation by M. Albert Dupont of the second edition of a work published in Spanish.

International Labour Review. June, 1926. (London) George Allen and Unwin, Limited, 40 Museum Street. 2s 6d net.

Contains an article by Professor Irving Fisher on "A Statistical Relation between Unemployment and Price Changes."

The Slavonic Review. June, 1926. (London) Eyre and Spottiswoode, Limited, 9 East Harding Street. 5s net.

The Empire Cotton Growing Review. July, 1926. (London) A. and C. Black, Limited, 4 Soho Square. 1s.

Produktivität. Von Frieda Wunderlich. (Jena) Verlag von Gustav Fischer. 14 rm.

This book deals with the theory of production in economics. Part I. gives a critical review of the theories current from the Middle Ages up to the time of Karl Marx. In Part II. economic aims and desires are dealt with from the philosophical point of view. In Part III. the modern theory of production is expounded.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
July 20.	July 22.

BUSINESS in the Stock Exchange has been tolerably active in various part of the House. Anticipations of a possible fall in the Bank rate were general in the early part of the week, but quickly evaporated, and there is no great expectation now of the rate coming down next Thursday. The gilt-edged markets are slightly dull in consequence of the tightening of money rates, which, following upon the stream of new issues, has brought about a little selling and given the market a heavy aspect, for which some of the dealers declare there is no other reason than lack of business. The Union of South Africa loan of four million pounds of 5 per cent. stock, offered at 100, did not arouse enthusiasm.

The foreign market remains good, and there is a constant demand for the mid-European, Brazilian, and other semi-speculative investments which yield high rates on the money, and, therefore, attract capital from the speculative investor. Mexicans are firmer, and South American bonds as a whole remain in request. Paris has been rather a seller on balance, but not sufficiently to counteract the effect of the purchases made on British account. French bonds are flat on the dive in the value of the franc.

FOREIGN EXCHANGE TRANSACTIONS ARRANGED.

CHIEF FOREIGN BRANCH:
168 Fenchurch Street, London, E.C. 3.

The Home Railway market is somewhat concerned about the dividend outlook. Present-day holders of Home Railway stocks appear to be of the die-hard class, which intends to keep its stocks and to see the thing through, as colloquialism has it, rather than to take fright at this late stage and to sell stocks at to-day's figures. There is an impression that if the coal stoppage were to be settled a sharp reaction in prices would take place, a consideration which deters bear selling. Prices, therefore, are little changed on the week. Argentine and Brazilian Rails have been strong, a good deal of money going into this market, while other foreign rails, apart from Nitrates, present a steady front and attract favourable notice. Nitrate producing shares are still under the influence of the nervousness felt in regard to the outlook of the fertiliser in view of synthetic competition.

The rubber market keeps hard, although the price of the commodity lends little support to the share market. Tea shares are better on the week; in the oil group public attention is lacking. Tobacco shares hold the field as the chief centres of interest, speculative and investment alike. Violent rises in Godfrey Phillips and R. and J. Hill shares stand out as the principal feature. Other tobacco shares have been good on the whole. Disappointment was caused by the tardiness of announcement as to an Imperial Tobacco expected bonus. Courtaulds fell sharply to just over 6 on the reduction in the interim dividend, and textiles, generally speaking, lean to the dull side. The bank dividends have had little effect on prices. The shipping market is entirely placid. Insurance shares continue to fall, upon sales by people who want to get better yields for their money than are offered in the insurance group. Brewery stocks and hotel shares are steady. City of London Brewery and Hoare ordinary are buoyant. Cable issues are better, the Eastern group in particular showing improvements, while in wireless there is nothing fresh going on. The iron and steel market moves erratically. People are afraid to sell lest there should be a sharp rise upon resumption of work in the coal trade, and are equally afraid to buy in view of the losses that many of the companies must have sustained during the past three months. Various new issues have been fairly well supported, though the stag is by no means as avid as he was last month.

South African shares in the gold-producing companies, diamond, land, and finance groups have spent a week which has been almost exciting. The Cape has been a consistent buyer of a few specialised favourites. On the other hand, Paris proved a fairly persistent seller of shares to which the Cape has been taking a fancy. The circle of interest has widened amongst British speculators; on balance a number of rises are shown on the week. The animation has been continued until 5 o'clock and later in the street markets night by night, and more animation has been seen amongst South African mining shares this month than has been the case for a long time past. This has had the effect of detracting from the temptations of other mining ventures. Tin shares remain good, so far as the Malaysians are concerned. Several of the Mexican favourites have strengthened. Burma Corporations are a firmer market than of late. Gold Coast Amalgamated were a good feature amongst West Africans.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

Union of South Africa.—This is an issue of £4,000,000 5 per cent. inscribed stock, at par, redeemable 1945-75. The revenues of the Government of South Africa alone are liable in respect of principal and interest. A cumulative sinking fund has been established for the redemption of South African debt. The loan is raised for railways, harbours, irrigation works, land settlement, and other public works. This is a sound gilt-edged stock. We should like to see Empire Governments setting a valuable example in publicity by giving detailed information and figures of debt or financial position.

Coventry Corporation.—This is an issue of £1,000,000 5 per cent. inscribed stock, at par, redeemable 1954-74. Principal and interest will be chargeable on the whole of the rates and revenues of the Corporation. Provision has to be made for the redemption of the issue by means of sinking fund. The proceeds of the loan will be applied to the extension of the electricity and gas undertakings, to works of street improvement in the city, to the repayment of existing debt. The total outstanding debt is £3,767,794, of which £2,740,837 is in respect of reproductive undertakings; the estimated population is 135,000. The rateable value is £606,831, a penny rate producing £2,170. This is a sound trustee investment.

Stockton-on-Tees Corporation.—This is an issue of £735,000 5 per cent. stock, at par, redeemable 1946-66. Principal and interest are secured upon the Corporation funds and revenues. Provision has to be made for the redemption of the issue by means of sinking funds. The proceeds will be applied for the purposes of water works, gas works, electricity works, housing, &c., and for paying off a number of existing loans. The rateable value of the Corporation for all purposes is £290,193, and the total outstanding debt is £2,246,164, of which £1,696,840 is in respect of reproductive undertakings. This is a good trustee investment.

Reading Corporation.—This is an issue of £520,000 5 per cent. stock, at par, redeemable 1946-56. Principal and interest are secured on the estates, property, rates and revenues of the Corporation. Provision has to be made for the redemption of the issue by means of sinking funds. The proceeds will be applied for housing, education, tramways, street improvement, and other purposes. The rateable value of the borough is £560,463, a rate of one penny in the pound producing about £2,200; the estimated population is 94,624. The total outstanding debt is £1,693,368, of which £642,170 is in respect of housing and reproductive undertakings. This is a sound trustee investment.

Auckland Electric Power Board.—This is an issue of £250,000 5 per cent. £100 debentures to bearer, at £97

per cent., redeemable 1946. The issue is secured by a special rate of two-sevenths of a penny in the £ on the rateable value of all rateable property in the Auckland Electric Power District, this being on March 31, 1924, £50,491,865. A sinking fund of 2½ per cent. per annum will be provided. The loan, which is the second instalment of an authorised loan of £650,000 (of which £250,000 has already been issued) is to provide funds for water power conversion and general extension purposes in connection with the board's electricity undertaking in and around the City of Auckland. The licensed area of supply is approximately 3,000 square miles, containing a population of about 150,000. It is stated that about £175,000 of this issue will be expended in Great Britain. An excellent investment.

Province of Westphalia.—This is an issue of £835,000 7 per cent. 25-year sterling bonds, at £98½ per cent., to bearer. Payment of principal and interest will be secured by a trust deed to be executed by the Westphalian Government in favour of the Deutsche Waren-Treuhand A.G., who will act as trustees of the loan, and also by the deposit with the trustees of certificates of indebtedness in respect of the advances made by the Government out of the proceeds of the loan to communes, waterworks, and other public utility undertakings. The bonds will be redeemed by means of an accumulative sinking fund commencing in 1927. The Province of Westphalia has an area of about 7,800 square miles and a population of 5,000,000, while public and private properties are valued at approximately £650,000,000, and its revenue in 1925 was about £1,500,000. The proceeds of the present issue will be utilised almost exclusively, it is stated, in making advances to communes, waterworks, and other public utility undertakings. The Province, it is stated, has no bonded debts other than those which were contracted to be paid in the old German currency, "and are practically negligible." In these circumstances the present issue is very well covered both as to principal and interest, and the yield offered is commensurate with the risk involved. Application for permission to deal in the bonds on the London Stock Exchange will be made in due course.

Morris Motors (1926), Limited.—Authorised capital £5,000,000, divided into 3,000,000 7½ per cent. cumulative preference shares of £1 each and 2,000,000 ordinary shares of £1 each. This is an issue of 3,000,000 7½ per cent. cumulative preference shares of £1 each. The company has been formed to acquire, as a going concern from January 1, 1926, the business of motor-car manufacturers carried on by Morris Motors, Limited, and associated companies, which was begun in 1912. The properties to be acquired comprise an area of about 118 acres, the whole of which, with the exception of about 16 acres, is freehold, an area of about 1,405,000 square feet being covered with modern brick and steel buildings. These have been valued at £1,647,200. The combined profits, before deducting income-tax and corporation profits tax, are stated to be, for the last three years, as follows:—1923, £951,332; 1924, £916,038; and 1925, £1,235,545. The total net assets (exclusive of goodwill) are given as £3,358,956. The total purchase price payable for the businesses and assets (including payments in advance apportioned to January 1, 1926) to be acquired by the company other than the interests of the Pressed Steel Company of Great Britain, Limited, amounts to £5,000,000, to be satisfied as to £3,000,000 in cash and as to £2,000,000 by the allotment to the vendor companies of 2,000,000 fully-paid ordinary shares of £1 each. Interest is also payable at the rate of 7 per cent. per annum on the total purchase consideration as from January 1, 1926, to the date of completion, but the company will have the benefits of the profits of the businesses purchased as from January 1, 1926. The amount payable in respect of goodwill, patents, and pending contracts is £1,641,044. Since January 1, 1926, the company has arranged with Morris Motors, Limited, to acquire from the latter the right to allotment of debentures and shares in the Pressed Steel Company of Great Britain, Limited, the total amount of cash payable not exceeding £500,000. The company will also acquire the whole of the fully-paid share capital of £10,000 of the Morris Oxford Press, Limited. We make further reference to this flotation in a leading article. The preference dividend appears to be substantially covered, and the widespread popularity of the company's products will doubtless contribute to the issue's success.

Bintan Rubber Estate, Limited.—Capital £250,000, divided into 250,000 shares of £1 each. In addition there is an issue of 7 per cent. first mortgage debenture stock. This is an issue of all the debenture stock at par, and stock, when fully paid, will be convertible at the option of the holder into shares at par up to and including January 1, 1930, such option to be exercisable on January 1, 1927, or thereafter on January 1st in each year. The stock will be secured by a trust deed in favour of Royal Exchange Assurance providing for a deposit with the trustee of the whole of the issued shares of the Dutch com-

pany (the Exploitation Maatschappij Bintan Plantations), and a floating charge on the remainder of the assets and undertaking of the company. Any outstanding stock will be redeemed at 105 on January 1, 1946. The company shall, after January 1, 1930, have the right to redeem the stock at 105 on giving six months' previous notice. The company also reserves the right to purchase the stock in the market or by tender at or under 105. It is stated that the earnings of the estate of the Dutch company from January 1, 1926, after providing for the interest upon the purchase price from that date in accordance with the contract to purchase and the debenture stock interest and working expenses, will be available for dividend at the close of the company's financial year on December 31, 1926, upon the 110,000 shares now issued. The company has been formed in particular to acquire as a going concern and further develop the property known as the Bintan Estate, situated on Pulau Bintan, an island in the Riuw Archipelago between Singapore and Sumatra. The estate consists of about 12,000 acres, of which 3,107 acres are planted, mature rubber of various ages covering 1,975 acres; the balance consists of immature rubber planted between 1919 and 1925. The purchase consideration is £178,000, payable in cash, plus interest at 8 per cent. per annum from January 1, 1926, from which date the company has the benefit of the earnings of the estate. The proceeds of the present issue, after providing for the purchase price, preliminary and other expenses, will leave about £20,000 for working capital, further development, and the general purposes of the company. The capital cost per planted acre, excluding 365 acres reported to be poor and 88 acres to be replanted, based upon the amount of debenture stock issued, is £41 9s 1d; and based upon the amount of debenture stock and issued share capital, subject only to the deduction of the cash working capital, is £75 7s 2d. The capitalisation is reasonably low, and the directorate an experienced one.

Clayton-Murdoch, Limited.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. The issued capital is £52,000, divided into 40,000 7½ per cent. cumulative participating preference shares of £1 each and 120,000 ordinary shares of 2s each. The preference shares, after receiving the 7½ per cent. cumulative dividend, are entitled to one-third of surplus profits available for dividend, after a 7½ per cent. non-cumulative has been paid on the ordinary shares. The company was incorporated in 1923, and was formerly Clayton-Murdoch Gas Appliances, Limited. Its objects are, among other things, to carry on and execute all kinds of manufacturing, trading, commercial, financial, and other operations. The company owns:—(a) 4,710 (out of 10,000) preference shares of £1 each and all the ordinary shares in F. Slyth and Co., Limited. (b) All the ordinary shares and half of the management shares in J. Matthew and Son, Limited. (c) 70 mortgage debentures of £100 each in Todman, Ryall, and Co., Limited. The company has also contracted to purchase all the issued capital of Badams and Co., Limited. The businesses of Badams, Matthews, and Slyth are described as textile undertakings. The total purchase price works out at £36,981, exclusive of Badams, Limited, the price of which has not yet been fixed. Preliminary expenses amount to £2,649. The advertisement is one of the poorest of its type we have ever seen, much essential information being omitted from it. Details of the assets acquired are not given, and there are no particulars of past profits either of the purchasing company or of the newly-acquired interests.

Kennards (1926), Limited.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. The issued share capital is £240,000, divided into 110,000 7½ per cent. cumulative preference shares, 5,000 employees shares, and 125,000 ordinary shares, all of £1 each. The company was incorporated on June 28, 1926, in particular to acquire the drapery store of Kennards, Limited, of Croydon, which was established in 1853. Net profits, it is stated, during the past four years were as follows:—1922-23, £23,256; 1923-24, £23,417; 1924-25, £21,605; and 1925-26, £23,800. The net assets on February 10, 1926, excluding goodwill, are given as £170,340. The vendors receive £220,000, payable as to £215,000 in cash and £5,000 by the allotment of 5,000 employees' shares of £1 each. The purchase price appears on the high side; and the margin behind the preference shares is none too considerable.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

ARAMAYO MINES IN BOLIVIA COMPANY.

SUCCESSFUL RESULTS OF THE YEAR.
CHAIRMAN'S REVIEW OF POSITION.

The sixth ordinary general meeting of Campañie Aramayo de Minas en Bolivia was held on Wednesday, June 30th, at the company's offices, 16 Quai de la Poste, Geneva, the Chairman, Mr Carlos V. Aramayo, presiding.

The Chairman said: Ladies and gentlemen,—As you will have seen from the directors' report and balance-sheet, which has been circulated among the shareholders and which is now before you, the balance of profit and loss at December 31, 1925, as remitted by the local administration in Bolivia, shows a profit of Fr.7,387,070.38 as the result of the year's working.

Owing to the continued improvement in the rate of exchange of the Bolivian dollar, the rate having risen from Fr.1.75 in 1924 to Fr.1.83 in 1925, there is a profit in exchange. To this has been added a small profit arising from "Investment" account, and the total of these two items, amounting to Fr.486,077.11, has been carried forward in reserve to next year.

The profit for the year is increased by the addition of interest on deposits and investments, amounting to Fr.221,323.39, making the total profit for the year Fr.7,608,393.68, against Fr.5,794,153.03 for the previous year, being an increase of Fr.1,814,240.65 for the year 1925.

SALES OF VARIOUS PRODUCTS.

The sale of tin barrilla during the period under review was 2,895 tons, at an average price of £134 9s 6d, against 2,202.35 tons sold in 1924 at an average price of £125 8s 10d. The sale of silver sulphides was 1,316,251.864 troy ounces at a price of 33.9d, against 939,895.756 troy ounces at a price of 35.5d, and that of rich silver ore was 207,622.195 ounces at 28.7d, as against 418,898.83 ounces at 32.7d in 1924. The sale of copper cement was 249.20 tons at an average price of £33 2s 7d, against 115.64 tons at £33 11s 6d in the preceding year. The sales of bismuth have been extraordinarily high, but the price during the first three months of the year was very low.

The total production of tin barrilla (60 per cent. concentrates) in the various mining sections of the company was 3,194.05 tons, as against 2,572.50 tons the year before. The production of metallic bismuth in bars, residues and export ores was 182,361 kilos, as against 210,731 kilos, and that of silver in sulphides, rich export ore and copper cement amounted to 1,683,949.16 troy ounces, against 1,521,315.24 troy ounces in 1924.

The cost of production of tin barrilla was reduced from £74 6s 8d in 1924 to £72 7s 10½d in 1925, notwithstanding the exceptional expenses incurred due to the exploration work carried out in the mine of San Bartolomé at Chorolque and the constantly increasing taxation. This decrease in the cost of production is due entirely to the greater output of Chocaya.

WORK ON THE MINES.

The total metres run during the year was 1,302.40, as against 1,531.20 in 1924. For the same reasons as expressed in last year's report, the development work has been of a limited character in the three sections of the mines.

The new shaft of San Bartolomé has reached a depth of 105 metres. At the present moment the crosscut to the lode at the 100 level has been driven more than 50 metres. This research work, which is of great importance, has encountered geological conditions of an unexpected character, and it is not possible to foresee what the results will be.

The development of the Chocaya mine continues satisfactorily, and it is noteworthy that the width of the vein in the lower levels has increased considerably, having attained an average of 1.82 in the level 264. It is true that the proportion of "gangue" is higher and reduces to some extent the tin contents. Owing to this fact, a more careful separation on the picking belt is called for, so as to maintain a sufficiently high grade of ore for treatment.

RESERVES.

In spite of the increase in the ore extraction, which was 26,758 tons in 1925, against 16,406 tons in 1924, the new reserves prepared amount to 18,947 tons, of a grade of 114.59 ounces of silver per ton and 3.11 per cent. of tin over an average width of 1.506 metres. This brings the total reserves of this mine to 262,617 tons, of a grade of 73.25 ounces of silver per ton, and 5.19

per cent. tin over a width of 1.225 metres. In this calculation the veins of "Llampera" and "Judios," rich only in silver, are included, which decreases the average tin contents. Without taking these into account the average of the rest of the mine would be 5.60 per cent.

The running of and the recovery from the Telamayu mill is favourable, but we have not yet been able to treat the quantity of ore we had expected owing to the fracture of the iron spokes of the rotors of three new electric alternators, which occurred a few hours after being put into service. These alternators were to serve the purpose of centralising and increasing the electric power of the mines and mills. This unforeseen occurrence can only be explained by the bad quality of the material employed in the construction of the rotors. The manufacturers have replaced them, and they have been already forwarded to Bolivia. They will be installed as soon as they arrive, and there is reason to believe that in the latter half of this year we shall be able to feed the mill to its full capacity.

CURRENT YEAR'S WORKING.

I have recently received the results of the first five months' working for 1926, which show that, as compared with 1925, the production of tin has increased by 147 tons, silver by 82,000 troy ounces, bismuth by 2 tons and copper by 20 tons.

The export of rich silver ore has been stopped; the production of silver, however, has increased, as is seen by the before-mentioned figures, the whole of the present output being provided by the treatment of ore at Asllani and Telamayu.

The technical staff in Bolivia deserves our best thanks for the loyal and effective manner in which they have fulfilled their duties. Our general manager, Mr Malcolm Roberts, has returned to Europe after a prolonged stay on the mines. He will continue to give his valuable assistance in the capacity of consulting engineer in conjunction with the managing director. Mr Carlos Navarro, who has been in the company's service a great many years and whose loyalty and ability deserves the greatest recognition, has been appointed sub-manager, and during Mr Roberts' absence will be in charge of the general direction of the company's affairs in Bolivia with full powers. He will be assisted by Messrs Fairfull Smith, Davis and Jeffrey, managers of the various sections and by other able engineers.

DISTRIBUTION OF THE PROFIT.

In view of the result of the profit and loss account and balance-sheet presented to you, the board propose that you should approve the interim dividends paid during the year 1925, amounting to 20 per cent., to transfer to statutory reserve the sum of Fr.300,000, and to carry forward the balance of Fr.6,532,414.30.

After the reading of the auditors' report the following resolutions, proposed by the board, were carried unanimously, namely:—

The meeting approves the statement of accounts presented for the year 1925 and gives entire discharge to the directors, especially to Mr Carlos V. Aramayo, as regards the management of the company's affairs in his capacity as managing director.

The four interim dividends, totalling 20 per cent., paid during 1925 are confirmed.

The declaration of a bonus of 10 per cent., also for 1925, is approved, as well as the transfer to statutory reserve of Fr.300,000, and the balance of Fr.6,532,414.30 is carried forward.

TRIBUTE TO DIRECTORS AND STAFF.

A motion heartily congratulating the board, and especially the chairman, upon the excellent results achieved, and warmly thanking Mr Malcolm Roberts and the staff in Bolivia for the able services rendered by them during the past year, was carried with acclamation, the meeting expressing, at the same time, its best wishes for the health of the former chairman and managing director, Mr F. A. Aramayo.

The Chairman informed the meeting that the board had decided to pay a third interim dividend on account of the current year, payable on August 2nd next, together with the bonus of 10 per cent. to all shareholders. That is to say, as far as the registered holders are concerned, to all those registered on the books of the company on July 21st.

The proceedings then terminated.

NATIONAL BANK OF NEW ZEALAND, LIMITED.

GOOD RESULTS—INCREASED PROFIT.

The fifty-fourth ordinary general meeting of the National Bank of New Zealand, Limited, was held, on the 7th instant, at 17 Moorgate, London, the Hon. William Pember Reeves (the chairman) presiding.

Mr Arthur Willis (secretary and London manager) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said that the issue of shares which was completed in September last increased the paid-up capital of the bank to £2,000,000, and the reserve fund, with the £20,000 now being allocated, would stand at the same figure. Note circulation showed a slight increase of £11,782, while their liability on account of deposit and current accounts was £10,438,468, which was £384,443 less than last year. Bills payable and other liabilities, on the other hand, showed an increase of £406,163 and stood at £2,734,579.

On the assets side coin and bullion and cash at bankers, at £1,393,351, showed a small decrease of £11,366. Investments were £1,010,486, as compared with £2,000,236 last year; bills receivable and bills discounted had decreased £120,070, from £2,248,827 to £4,128,757; while advances were £10,023,506, as against £8,905,738 in 1925, an increase of £1,117,768. Remittances in transit between branches were £563,516, as against £409,517 at March 31, 1925. The total of overdrafts, discounts and British bills was £14,152,264; last year this total was £13,154,564.

DIVIDEND AND BONUS MAINTAINED.

The net profit was £333,087, as against £279,826 last year, an increase of £53,261, or, including the carry-forward, a total increase of £65,400, which reflected the increase of £1,000,000 to their capital resources. This balance they showed after paying a bonus to the staff of £14,000. The dividend and bonus which the directors proposed to pay to the shareholders were the same as last year—namely, a 12 per cent. dividend and a bonus of 2 per cent. They had allocated £10,000 to the pension and gratuity funds, and had again increased the carry-forward, which, at £173,044, was approaching two-thirds of the present dividend and bonus.

It had not been an easy matter to expand their gross profits, which, after allowing for the use of the fresh capital, showed an increase of £55,762. The fall in prices of New Zealand exports had affected their bill business, as had also the lateness of the season and the British seamen's strike. The greatest adverse influence, however, was the, perhaps, too drastic reduction in exchange rates agreed to by the Australian and New Zealand banks after the restoration of the gold standard.

OVERSEAS TRADE.

In the financial year to March 31, 1926, the overseas trade of the Dominion was:—Exports, £48,697,000; imports, £53,025,000; surplus of imports, £4,328,000. The total exports were £6,080,000 less than last year, and the imports £3,200,000 higher, an adverse movement of £9,280,000.

With regard to wool, in the year ended March, 1925, 553,828 bales were exported, valued at £17,379,000. In the year ended March, 1926, 605,946 bales were exported, valued at £13,284,000 only. The production of dairy produce fell during the year under notice by 16,000 tons. The average price realised for butter was about 1½d less than in 1925, although cheese averaged about the same price. Nevertheless, dairy produce again led in value of exports, the amount being £15,575,000, or 32 per cent. of the total exports. Fortunately, the year was a satisfactory one for meat producers. The export of frozen meat was valued at £9,831,000, and showed an increase of 160,000 cwt in quantity and £531,000 in value as compared with 1925.

The Chairman described at some length his recent visit to the Dominion; and said that since his previous visit, 30 years ago, the progress had been great and the change remarkable—fortunately, almost always a change for the better. The chief problems of the Government were financial. Faced with the probability of a shrinking revenue, it was looking around for ways of effecting economies, but its real difficulty was the necessity of limiting borrowing. At the end of March, 1925, the net public debt was over £214,000,000; since then the Government had borrowed £11,000,000 over here, and £5,000,000 locally, the latter sum at 5½ per cent. This pace was too hot to last, and it was to be hoped that the new Minister of Finance would face the disagreeable task of slackening. In March of last year, moreover, the indebtedness of local bodies was over £47,000,000, and must now be larger.

Evidence of the high standing of New Zealand's credit in London had been given by the reception of the recent loan of £6,000,000. The High Commissioner brought it out at a very favourable moment, and it was, as a flotation, a remarkable success.

The report and accounts were unanimously adopted.

SECURITY FIRST

ROYAL
INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

LOBITOS OILFIELDS, LIMITED.

SUCCESSFUL YEAR'S RESULTS.

The eighteenth annual ordinary general meeting of this company was held, on the 6th inst., at Winchester House, London, E.C.

The Right Hon. Lord Forres, P.C. (the chairman), who presided, said that the directors were again able to submit a satisfactory report. Out of the profit balance of £266,410 the directors recommended a final dividend of 25 per cent. and a bonus of 15 per cent., less tax. As the dividend was at the same rate as that for 1924, but was payable on a larger capital, there was every reason to be satisfied with the result. It was contributed to in substantial part by remunerative voyages of their steamers chartered to others, and in part by the larger production of oil in 1925, as compared with 1924. Production increased from 175,766 tons in 1924 to 223,740 tons in 1925. It was the policy of the board to continue opening up the field, and to increase the production. They had a very large new territory, the development of which would involve them in further outlays. Additional capital would ultimately be required, and then shareholders would have the opportunity of subscribing for new shares on advantageous terms.

A railway about 25 miles long had been constructed from Lobitos to a camp named El Alto, which formed a new centre of work, and was being equipped with the necessary workshops, stores, and other requirements. Some of the wells in this new territory were proving excellent producers.

During 1925 112,394 feet were drilled, as compared with 94,018 feet in 1924. With growing production they had been obliged to add to their storage capacity. Including new tanks at present under construction, the tankage amounted to 60,000 tons. Owing to increase in shipping they had in hand the extension of port facilities at Lobitos and Cabo Blanco.

Referring to the visit he paid to Lobitos in January last, the chairman said that he found the enterprise in a satisfactory condition.

Turning to the company's interests outside Peru, he said that their shareholding in Anglo-Ecuadorian Oilfields, Limited, had not yet reached a dividend-earning stage, but that company was making progress of a solid kind, although not so rapid as they could wish.

Production this year continued to increase, and amounted to 122,845 tons for the first six months, as compared with 104,974 for the corresponding six months last year.

The report was unanimously adopted, and a resolution was passed approving the policy of forming subsidiary companies in England or elsewhere to acquire and manage certain of the company's local interests and properties.

UNION CORPORATION, LIMITED.

ANOTHER SUCCESSFUL YEAR.

THOROUGHLY SOUND POSITION.

The annual meeting of shareholders of the Union Corporation, Limited, was held, on June 11th, at Johannesburg, Mr P. M. Anderson presiding.

The Chairman, in the course of his remarks, said:—

We have again to report that our profit shows an advance, though the difference on this occasion is more moderate than has been usual with us. The realised profit, less writings off, has risen £18,170 to £424,055, and the net profit £3,664 to £352,766.

Our dividend at 4s 6d per share is the same as last year, and we have improved the reserve account by £84,972 and the carry forward by £7,765, or a total of £92,737, as compared with an increase of £33,802 in the previous year. Our reserve account and carry forward together amount to £449,210, or just over 50 per cent. of our issued capital. Our position generally can be regarded as thoroughly sound.

SOUTH AFRICAN INTERESTS.

The operations of the gold mining companies in South Africa in which we are principally interested—namely, the Modderfontein Deep Levels, Limited, and Geduld Proprietary Mines, Limited—were normal during the year, and their outlook is entirely satisfactory. The main feature of their results during the past

year was the loss of the important revenue derived in recent years from the so-called gold premium, but this loss was in a large measure offset by further reductions in working expenditure.

MEXICAN INTERESTS.

In regard to the Mexican interests of the corporation, as stated in the report, our plans in connection with turning the properties of the Compania Internacional Minera to account, have been extended and enlarged, with the result that the time of reaching the production stage has been postponed, and the capital expenditure has been increased. We hope that milling will commence in August next or thereabouts. The proposition is a low-grade one and with a limited life, subject to any additional ore which may be opened up as a result of development work, and the enterprise is largely dependent, so far as the value of the present ore reserves is concerned, upon the price of lead.

SAN FRANCISCO MINES OF MEXICO.

The San Francisco Mines of Mexico, Limited, paid dividends amounting to 3s 9d per share for the twelve months to September 30th last, an increase of 6d over the preceding year.

The more recent results have been effected by lower metal prices and a combination of unfavourable circumstances which particularly affected the period from December. On April 8th the new addition to the reduction plant was started up, and as this augments the milling capacity by nearly 50 per cent., it should result in materially raising the rate of profit. The company has secured an option over the Clarines-Reforma group of mines, and if the development of this property comes up to expectations, it may lead to a considerable expansion of the company's operations.

MAEKUBEE AND BRITISH ENKA ARTIFICIAL SILK COMPANIES.

Our investments in the Maekubee Company and in its offspring, the British Enka Artificial Silk Company, to which reference is made in the directors' report, call for a word of comment. We have deemed it advisable to take an interest in these enterprises, not only because, in our opinion, there is good reason to anticipate that the use of artificial silk will continue to expand and to be a growing factor in the textile industry in all its branches, but mainly because of the experience and high technical skill in the manufacture of the highest grade material of those with whom we are associated in these enterprises. It is the assurance of their co-operation which has led us to launch out into this new, and, as we believe, very promising sphere of industry. The report and accounts were adopted.

HOWARD AND BULLOUGH, LIMITED.

SATISFACTORY RESULTS OF A DIFFICULT YEAR.

The thirty-second annual ordinary general meeting of the shareholders of Howard and Bullough, Limited, was held at Globe Works, Accrington, on the 7th instant. The Chairman of the company, Sir George Bullough, Bart., presided.

The report of the directors and auditors and balance-sheet were taken as read.

In moving the adoption of the reports and accounts the Chairman said: You will all have had an opportunity of perusing the reports and accounts for the past financial year, and with your permission we will take them as read.

In the remarks I had the pleasure of submitting to you on the last occasion, I referred to the increased demand for machinery then prevailing, and this kept our works fully going for a considerable period. Later there was a falling-off, the expected continued improvement in the cotton trade not having materialised. A very steady demand from Germany had been operating for some time, when rather suddenly a great stringency set in and the German cotton trade underwent a declining change from which it has not yet recovered. The higher customs tariffs put in force some months ago will not render competition for that market any easier.

Our trade with France is at present very restricted through the fallen exchange value of the franc, which for the time being places us almost out of competition, and enables French machine makers to supply in their own country under high protective tariffs at prices altogether beyond the English makers' reach. In Japan the customs tariffs against us have recently also been increased, and this is likely to react on our trade with that country. The long-forecast abolition of nightwork in Japanese cotton mills has not yet matured, and it is now stated that it is expected to come into force in 1928. When this comes into force much new machinery will be required to compensate for the compulsory curtailment of working hours.

Having regard to the trade conditions generally, which I hope may soon assume a brighter phase, it is satisfactory to be able to report a trading profit of £154,817.

It will be observed that the "sundry debtors" item in the balance-sheet stands at £426,817, largely accounted for by the

more extended facilities for payment which nowadays have to be conceded. This has its direct bearing also on the bank overdraft shown. Considerable capital is nowadays required to finance the large business we are engaged in, and you will, I think, agree with the policy of carrying forward the balance of £159,946 to next account. I beg to move that the report of the directors and auditors as presented in the balance-sheet be allowed and passed.

The resolution was duly carried, after being seconded by Mr R. Loynd, of Clayton-le-Moors.

Mr R. S. Crossley, J.P., of Accrington, congratulated the directors on the very satisfactory state of the balance-sheet, and moved that a dividend be paid for the half-year ending May 31, 1926, at the rate of 6 per cent. per annum, less income-tax, on the preference shares; and a fourth quarterly dividend of 2½ per cent., making with the dividends already paid 10 per cent. for the year, less income-tax, on the ordinary shares.

Mr H. Hay, of Manchester, seconded, and the resolution was agreed to.

Colonel H. Wilson, of Mirfield, expressed his pleasure in moving the re-election of Mr James Bancroft, M.B.E., and Mr George Boothway as directors of the company. This was seconded by Mr J. A. Hall, of Fairhaven, and afterwards unanimously approved.

Mr Boothway, on behalf of Mr Bancroft and himself, expressed thanks for their re-election.

The auditors having been re-elected, a vote of thanks to the chairman terminated the proceedings.

EX-LANDS NIGERIA, LIMITED.

GOOD RESULTS AND PROSPECTS.

The fourteenth ordinary general meeting of Ex-Lands Nigeria, Limited, was held, on the 6th instant, at River Plate House, London.

Mr H. G. Latilla (chairman and managing director), who presided, said that the year's profit was £35,267, the balance from appropriation account being £36,118, after allowing for the interim dividend of 5 per cent. paid last July. A further interim of 17½ per cent. was paid in February, and they now proposed to pay 5 per cent., making 27½ per cent. for 1925. They proposed, also, to pay an interim of 5 per cent. for the current year.

During the year 405 tons of tin concentrates were produced,

realising £65,293 net, against 400 tons and £59,732 net in 1924. The average content of the concentrate was 72.275 per cent., and the price of metallic tin varied during the year from £265 to £285. The sales of concentrates averaged £165 6s 5d per ton, against £152 19s 7d in 1924. The fact that the profit, £35,267, was less than that of the previous year (£36,746) was due to higher rates of wages owing to keen competition for labour in the tin fields.

With regard to the item of £48,438, representing shares in another company, they had realised about one-third at a satisfactory profit since the date of the accounts, and the balance also could be disposed of at a profit. This purchase marked no change in policy. They were faced with the position that the working of a considerable area of their proved payable ground was likely to be affected by the claim of a neighbour for the use of water which was imperative to this company. Discussions took place along the lines of a purchase by the company of additional ground, but the directors of the neighbouring company, Anglo-Nigerian, could not see their way to deal with this one block. Under advice, the shares were purchased. There was no reason why an arrangement satisfactory and profitable to both companies should not be made, and experts on both sides would agree the terms. Anglo-Nigerian, which had excellent chances of emulating the success of Ex-Lands, was earning profits, and should pay a dividend this year.

The consulting engineer estimated the ore reserves of Ex-Lands at 3,700 tons of 70 per cent. concentrates, but this had no relation to the probable tonnage. For some years past, notwithstanding what had been taken out, the reserves had not been depleted. They might accept his statement that the company had a long life before it, and that if the price of tin remained at about the present level they would receive dividends of 40 per cent. for the current year.

The report and accounts were unanimously adopted.

BIDOR RUBBER ESTATE, LIMITED.

RECORD PROFIT AND DIVIDEND.

The ordinary general meeting of the Bidor Rubber Estate, Limited, was held, on the 7th inst., at the Rubber Growers' Association, 2-4 Idol Lane, London, Mr Edward G. Dane (the chairman) presiding.

Mr E. A. Bull, representing the secretaries (Messrs Bosanquet, Traill and Co.), having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, and the payment of a final dividend of 30 per cent., less tax (making 60 per cent., less tax, for the year), said: The profit constituted a record in the history of the company, and the year's dividend would exceed by a margin of 10 per cent. the highest which had yet been paid. The net profit amounted to £39,682 5s 2d, to which had to be added £3,837 16s 11d brought in from 1924-25, making a disposable balance of £43,520 2s 1d. An interim dividend of 15 per cent. in December and again in April absorbed £15,000, and after paying the directors' special remuneration of £1,250, they recommended a final dividend of 30 per cent., making a distribution of 60 per cent. for the year, the transfer of £10,000 to reserve, and carrying forward a balance of £2,270 2s 1d. The directors had decided to strengthen their financial position by transferring £10,000 to reserve, bringing the total of that account up to £15,000, thereby enhancing the stability of the company and safeguarding it in the event of emergency. They had gathered a crop of 407,000 lbs, which, including sundry receipts, realised the high average price of 2s 9½d per lb. This was practically double the 1s 5d obtained for the previous year's harvest of 266,800 lbs. Included in the 407,000 lbs was an amount of 47,165 lbs, being rubber produced in excess of the exportable allowances, and this had been valued in the accounts at cost.

With regard to the current year, they had budgeted for a crop of 522,000 lbs, which, unless unforeseen setbacks in labour occurred, he anticipated there would be no difficulty in harvesting. Their policy for forward contracts had been a very simple one, viz., to sell forward sufficient to cover expenses of the season's production. Actually, for the calendar year 1926 they had sold 72 tons at about 1s 11½d per lb.

The report and accounts were adopted.

ARGENTINE NAVIGATION COMPANY (NICOLAS MIHANOVICH) LIMITED.

GREAT IMPROVEMENT IN RESULTS.

The seventeenth ordinary general meeting of the Argentine Navigation Company (Nicolas Mihanovich), Limited, was held, on the 6th instant, at Winchester House, London, Lord Kysant, G.C.M.G. (the chairman), presiding.

SCOTTISH UNION & NATIONAL INSURANCE COMPANY.

ESTABLISHED OVER ONE HUNDRED YEARS.
ASSETS £13,500,000.
FIRE. LIFE. ACCIDENT. MARINE.
Edinburgh: 35, St. Andrew Square.
London: 5, Walbrook, E.C.4 and 4, St. James' Street, S.W.1.

The Chairman said: From small beginnings, more than half a century ago, with a few lighters plying in the River Plate between the ocean vessels and the shore, the business had developed into the present big coastal and river transport organisation, having a fleet of 253 vessels of 80,529 tons gross register, and carrying on passenger and cargo services in the River Plate and its affluents and to and from the adjacent republics, together with towage and lighterage services, salvage operations, shipbuilding and ship-repairing work. The results for 1925 show a marked improvement over those for 1924, when there was an actual loss on the year's working. After making provision for depreciation there was a credit balance on the year's trading of £213,690, and the debit balance of profit and loss account had been reduced from £535,771 to £322,081. During the year under review there was a satisfactory increase in gross revenue, due mainly to additional mileage covered and increased volume of general cargo carried.

He referred last year to the question of a possible rearrangement of the capital of the company, and stated that the matter was receiving the serious consideration of the directors in order to deal in the best possible way with the position arising out of the large debit balance consequential upon the prolonged labour troubles they had experienced in carrying on the company's regular services in the River Plate. While the board were considering the problem, the general position in Argentine showed material improvement, with the result that for the year 1925 the company, after making provision for depreciation, had been able to very considerably reduce the debit balance. As for the first half of 1926, this improvement had continued, and in these circumstances, the board had not considered it necessary to give further consideration to any scheme of rearrangement of capital. During 1925 there was a satisfactory increase in the number of passengers who travelled by their vessels, and the quantity of cargo carried was considerably greater. Their towage services showed a falling off in revenue, and earnings from salvage services were less.

The report and accounts were unanimously agreed to.

CHARTERLAND AND GENERAL EXPLORATION AND FINANCE COMPANY, LIMITED.

SUCCESSFUL YEAR—GOOD PROSPECTS.

The ordinary general meeting of the Charterland and General Exploration and Finance Company, Limited, was held, on the 9th instant, at the Cannon Street Hotel, London.

Mr Edmund Davis, the chairman, in moving the adoption of the report and accounts, said that the capital had been increased from £163,815 to £255,061 by the issue of the bonus shares, and the board of directors had resolved to issue the balance of the capital to him at the then market price, namely, a premium of 7s per share. In the previous accounts the general reserve was £92,146, which was capitalised, and in the present accounts a new general reserve had been created slightly in excess of the previous one, which now stood at £100,000. An interim dividend had already been paid, and directors' percentage of profits, which absorbed £26,236 out of the profit and loss account figures, leaving £172,422, and the transfer to general reserve and excess profits duty reserve, £103,000, left a balance of £69,422, out of which was recommended a payment of a final dividend of 20 per cent., less income-tax, making a total dividend for the year of 30 per cent. This would absorb £52,000, and leave £17,422 to be carried forward, subject to directors' percentage of profit. The distribution of 30 per cent. this year was equivalent to over 47 per cent., including the bonus shares.

The investments at June 30th, at market prices or at their own valuation where there was no quotation, came to £768,200, showing an appreciation of £275,780 over the amounts standing in the accounts, and taking the cash and debtors, less creditors, at May 31, 1925, figures, the total came to £772,170, or 14s 10d per 5s share. The result of the operations showed a balance of £186,179, an increase of £58,361 when compared with the result of the period covered by their previous accounts, which were for nine months.

The company was largely interested in the Rhodesian and General Asbestos Corporation, which continued to show remarkable progress. For the financial year ended March 31st, 1924, the sales amounted to £338,585, for 1925 £529,307, for 1926 £633,818. For its quarter ended June 30, 1924, the sales amounted to £94,840,

for 1925 £121,899, for 1926 £165,575. Out of the profits since the date of its registration on July 12, 1917, 13½ per cent. had been paid in dividends, and 245,000 fully-paid shares had been distributed as a bonus, which on June 30, 1926, had a market value of £704,375. In addition, 105,000 shares had been offered to shareholders for subscription at par when the price was £3 7s 6d per share.

The resolution was carried unanimously.

OHLSSON'S CAPE BREWERIES, LIMITED. IMPROVED RESULTS—INCREASED PROFITS.

The thirty-seventh annual general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 8th inst., at the Great Eastern Hotel, London, Mr Gerald Buxton (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: We are pleased to be able to present accounts which show a considerable improvement upon those of recent years. The high quality of the company's products has been maintained and the sales substantially increased, with the result that the year's profit, after making all necessary provisions, amounts to £122,498, as against £100,208 a year ago.

Having referred to various items in the balance-sheet, the Chairman said: With regard to the profit and loss account, after adding to the year's profit the transfer fees and the amount brought forward, we have a total of £139,850. After meeting the usual charges, dividends upon both issues of preference shares and the interim dividend of 2½ per cent. on the ordinary shares, and transferring £10,000 against depreciation of plant and machinery, we propose to pay a final dividend on the ordinary shares of 5 per cent., less tax (at the rate of 2s in the £), leaving £33,070 to be carried forward.

From the reports we receive, I think I may say that the trade of the Dominion generally, on which a business like ours must, of course, depend, is making steady progress.

The brewing trade in South Africa, as elsewhere, is not overlooked by the Legislature when searching for something to tax. The Excise duty, which was doubled as a war measure, remains at the scale then fixed, and even in the last Budget a further 33½ per cent. was added to the duty on malt, the object of which was obscure to us, as the brewers already buy such of the barley as is suitable for malting that the country produces, and would willingly buy more if it were available. This was duly represented to the authorities concerned, but without result.

The crying need of that enormous area is population, though in a census recently taken it appears that in certain districts at least there is some increase in the white population.

A measure for the ostensible purpose of consolidating the liquor laws of the various States of the Union, but which went considerably beyond that, was introduced by the Government this year. It was, however, referred to a Select Committee, to whom evidence was offered by representatives of all branches of the liquor trade and others. Until the Committee has presented its report—which will not be until Parliament meets again next year—we shall not know what shape the Bill will ultimately take.

The report and accounts were unanimously adopted.

TAMPLIN AND SONS BREWERY, BRIGHTON, LIMITED. ACQUISITION OF KIDD AND HOTBLACK.

The 37th annual general meeting of Tamplin and Son's Brewery, Brighton, Limited, was held, on the 8th inst., at the offices of the company, Richmond terrace, Brighton, Mr Alexander Miller-Hallett, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said that he was once more glad to be able to report steady progress and consequent success. While not wanting to go too largely into self-congratulation, he thought they would agree with him that the company had more than held its own during the past year, both as regarded trade and quality. They would notice from the accounts a large reduction in the expenditure for alterations, but he warned shareholders that there probably would be some increase in that direction during the current year.

The Stock Exchange quotation of their shares showed the opinion that was held of their company in the commercial world, which he felt sure shareholders would consider very satisfactory. Turning to the accounts, the gross profit was £174,567. The board suggested the payment of a final dividend on the ordinary shares of 1s per share, making 2s per share, less tax, for the year, and a bonus of 1s per share, less tax, which would absorb £12,400, leaving £36,211. Of this amount they were placing £5,000 to reserve, thus bringing it up to £106,000, and carrying forward £31,211, as against £28,357 brought forward.

He then came to what he felt sure the shareholders would consider a most interesting announcement, and which would probably be a surprise to most of them, namely, the acquirement of the old

and prosperous business of Kidd and Hotblack by their company. The negotiations had taken a very long time, and it was necessary to postpone the general meeting in order that he should be able to make the announcement from the chair that day. The board had not the slightest doubt that the acquisition of this business would lead to the strengthening of the parent company. It was proposed to form a subsidiary company to take over the properties belonging to that business. The subsidiary company would be making an issue of £200,000 in 6 per cent. debenture stock to provide part of the purchase money. The prospectus of the new issue would be sent to all their stock and shareholders, and as far as possible they would receive preferential allotment.

The resolution was carried unanimously.

BULLION.

The following statistics of imports and exports of gold for week ended July 7, 1926, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported in Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	To—	£
British West Africa	17,091	Netherlands	27,300
British South Africa	786,688	Germany	15,291
Other countries	755	France	27,300
		Egypt	9,000
		Java	4,100
		Kenya	1,069
		Straits Settlements	54,600
		British India	100,115
		Ceylon	22,500
		Other countries	405
Total declared value of imports	804,534	Total declared value of exports	261,011

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

ARRIVALS.		WITHDRAWALS.	
July	£	July	£
3—S. Africa	250,000	3—Spain	78,000
5—S. Africa	112,000	5—Holland	5,000
6—Bars bought	nil	6—Spain	12,000
7—Spain	nil	7—Holland	5,000
8—Spain	nil	8—Spain	7,000
9—Spain	nil	9—Spain	10,000
		9—Spain	13,000
Total	367,000	Total	150,000
		Net arrivals, £217,000.	

Messrs Samuel Montagu and Co. write on July 7th as follows:—

GOLD.

During the week under review the Bank received on balance £195,000, increasing the net influx since January 1, 1926, to £5,927,000, and decreasing the net efflux since the resumption of an effective gold standard to £5,668,000. The Bureau of the United States Mint, in co-operation with the United States Bureau of Mines, finally estimates the refinery production of gold in the United States during the calendar year 1925 as 2,411,987 ounces, valued at \$49,860,200.

SILVER.

Fluctuations of the price have again kept within very narrow limits. Speculative interest connected with the yen or otherwise has been almost absent, and business has consisted mostly of closing contracts and reopening them simultaneously for a new period of two months. Some inquiry, following the improvement in monsoon conditions, has set in from the Indian bazaars, but there is little disposition to raise prices, for supplies are readily available at advancing rates. America has kept more or less in touch with this market. Without taking any pronounced view, the undertone may be described as slightly improved. United Kingdom imports and exports of silver during the week ending the 30th ult. were:—

Imports.		Exports.	
	£		£
Netherlands	12,650	France	17,450
U.S.A.	44,809	Hungary	32,920
Mexico	240,930	British India	6,000
Other countries	6,780	Other countries	1,548
	305,169		57,918

The refinery production of silver during the calendar year 1925 in the United States has been finally estimated by the Bureau of the United States Mint as 66,155,424 ounces.

NOTICES.

The Banque Française et Italienne Pour L'Amérique Du Sud, of Paris, announces the opening on July 3rd of a branch at Bahia (Brazil).

Mr Kenneth Methven Carlisle, a director of Liebig's Extract of Meat Company, Limited, Oxo, Limited, and South American Cattle Farms, Limited, has been elected to a seat on the board of the Bank of London and South American, Limited.

The National Provincial Bank, Limited, announce that a branch of the bank is now open at 64 High street, Slough, under the management of Mr R. G. Adamson. A branch is also now open at 158 Victoria road Wharf, Fratton Bridge, under the management of Mr W. T. Reed, of the Portsmouth branch.

The directors of Lloyds Bank, Limited, announce that Mr G. F. Abell, formerly manager of the City office, has been appointed a joint general manager of the bank, and that Mr S. P. Cherrington and Mr S. Parkes have been appointed joint managers of the City office. Also that a branch of the bank is now open at 68 Uxbridge road, Shepherd's Bush, W.12, under the management of Mr C. M. Jeram; and a sub-branch at Jesmond (Cradlewell), under the management of Mr Henry Smith, of the Osborne road branch.

Barclays Bank, Limited, announce the opening of a new branch at Northfields, 140 Northfield avenue, West Ealing, W.13, under the management of Mr A. Coucher, who is also manager of 41 Broadway, West Ealing, branch; also a new sub-branch at Harrow road, Sudbury, Middlesex, under the management of Mr W. A. J. Sullivan, also manager of 104 High road, Wembley, branch.

The Midland Bank announces the opening of a new branch in Parade Buildings, Shirley, near Southampton, under the management of Mr F. J. Robbins. An office has also been opened at 1 High street, Overton, Hants. Arrangements have been made for the opening of a branch of the Midland Bank in the grounds of the Royal Agricultural Show to be held at Reading from July 6th to July 10th. This branch office will be in Stand No. 87, and will be open for business each show day from 11 a.m. to 3 p.m.

Bradbury, Greatorex and Co., Limited, announce interim dividends as under:—Ordinary shares at the rate of 6 per cent. per annum; second preference at the rate of 6½ per cent. per annum. Warrants will be posted on July 31st.

ONTARIO'S MINERALS

The Province of Ontario contains 407,262 square miles—over three times the area of the British Isles. Seventy per cent. of this vast area is underlain by pre-Cambrian rocks, pre-eminently the metal-bearing formations of this part of America. The gold fields of Porcupine and Kirkland Lake, the silver mines of Cobalt, South Lorrain and Gowganda, the nickel-copper of Sudbury, and the iron ores of Michipicoten, abundantly testify to the mineral riches of this vast region.

GOLD.

Ontario is now one of the leading sources of gold. In fifteen years the annual production has increased from \$42,637 to \$30,207,545. The Kirkland Lake and Porcupine mines paid \$8,233,468 in dividends in 1925. New camps are being developed at Larder Lake, Boston Creek, Lightning River, Goudreau, Red Lake and other points.

SILVER.

In silver, the production from Cobalt, South Lorrain and Gowganda amounted in value to \$243,440,641. The mines of South Lorrain and Gowganda are turning out quantities of ore as rich as any ever mined in the early days of Cobalt. The output in 1925 was 10,217,315 fine ounces valued at \$7,084,864, and dividends aggregated \$1,868,506.

NICKEL-COPPER.

The product of the Sudbury mines last year was worth in nickel \$15,946,673, and in copper \$4,764,682. Important quantities of metals of the platinum group are also recovered from the Sudbury ores, the output in 1925 being valued at \$1,675,706.

There are yet many thousands of square miles practically unprospected, where the pre-Cambrian formations in all probability contain deposits of gold, silver and other metals as rich as any yet discovered. Copies of the Mining Laws, geological maps and reports may be obtained on application to W. C. NOXON, Agent-General for Ontario, 163, Strand, London, W.C.2. HON. CHARLES MCCREA, Minister of Mines, THOS. W. GIBSON, Deputy Minister of Mines, Toronto, Canada.

Reports and Notices.

Owing to the death of their late chairman, Mr F. D. Bowles, J.P., the Pearl Assurance Co., Limited, inform us that at a board meeting held on the 2nd inst. the following appointments were made:—Mr George Tilley, chairman of the board; Mr Frederick James Roll, director; and Mr William Norman Proddow, F.C.I.S., secretary.

We are informed that at a general meeting of the members of the British Insurance Association, held on July 8th, Mr Geoffrey Marks, C.B.E., F.I.A., of the National Mutual Life Assurance Society, was elected chairman, and Mr J. J. Atkinson, of the Royal Insurance Company, Limited, was elected deputy chairman of the association.

BANKS.

LONDON AND EASTERN TRADE BANK.—The first report and accounts to be issued by the London and Eastern Trade Bank, which was established in 1920, cover a period of 17 months to May 31st last, and show a paid-up capital of £600,000, deposits of £753,400, and acceptances of £608,700. Loans and overdrafts stand at £804,300, investments at £773,300, money at call at £270,000, and cash at £150,100. In future the accounts are to be made up to June 30th.

NATIONAL BANK OF AUSTRALASIA, LIMITED.—For the year ended March 31, 1926, a net profit of £568,254 is disclosed. This compares with a net profit of £538,832 for year ended March 31, 1925, and £498,168 for year ended March 31, 1924. Adding £114,704 brought in, there is an available balance of £682,958. The ordinary dividend remains unchanged at 10 per cent., absorbing £400,000. The sum of £110,000 goes to reserve fund, bringing it up to £241,000, while £50,000 goes to reduction of bank premises, and £122,958 is carried forward.

RUBBER, &c.

BERTAM CONSOLIDATED RUBBER.—The crop of rubber for year ended March 31, 1926, was 2,053,556 lbs, against 1,314,941 lbs in preceding year. The average price realised was 2s 5.65d per lb, against 1s 5.49d per lb, in preceding year. The profit for the year was £181,284, against £54,846. The ordinary dividend is increased from 20 per cent.

J. W. BENSON, LIMITED.—The net profit for year ended March 31, 1926, amounted to £51,391, against £46,274 for the preceding year. It is pointed out that the net profit includes dividend on the shares held by the company in Hunt and Roskell, Limited, to December 31, 1925, and interest on other investments received to March 31, 1926. The ordinary dividend is again 12½ per cent. The carry forward is increased from £103,926 to £114,513. Total assets amount to £904,600, against £889,619 in preceding report. Properties, plant and goodwill stand at £457,774, against £457,701. Stock-in-trade and book debts stand at £210,392, as compared with £181,220. Investments at cost stand at £210,343, against £220,310. Cash is a £26,091, against £30,387. With regard to liabilities, creditors stand at £23,018, against £16,349. Reserve is at £163,477, against £161,848.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Growing cereals are making good progress under favourable climatic conditions, and there is every prospect of average yields, particularly with regard to wheat and barley. Stocks of old native wheat are practically exhausted, only small quantities being avail-

HARRISONS & CROSFIELD, LTD.

able and prices largely nominal. Imported descriptions were fully maintained in sympathy with forward firmness, especially for North American descriptions, near at hand parcels being reservedly offered and a moderate business transpired. In the floating and American hard winter descriptions, despite heavy yields of advices were the principal factors. The closing tone, however, was quiet. Steamers of No. 2 hard winter July loading sold at 51s 3d and a small vessel 52s 9d, with part cargoes at 53s. No. 1 and Pacific August 20th loading 52s 9d, ditto early August 53s 3d. Feeders firmer and La Plata maize in better demand at higher rates, due in a measure to the freight position, though closing below 480 lbs. c.i.f. terms. Wheat maintained. No. 1 Northern Manitoba Barusso 61 lbs 57s 3d, Australian 61s, choice white Karachi 60s 3d,

all ex-ship per 406 lbs. English nominally 14s-14s 4d per 112 lbs free on rail. Flour steady. London standard grade quoted 51s, town whites 52s, patents 53s-54s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 45s 6d-48s 6d, Minneapolis 46s 6d-48s, Australian 43s 6d-44s per 280 lbs ex-store. Maize firmly held. Plate new 33s landed, ditto ex-ship to arrive 32s, No. 2 white flat African landed 35s per 480 lbs. Barley firmer. Californian quoted 36s-47s, ditto Chevalier 50s-55s, Chilian Chevalier 41s-57s, ditto brewing 34s-46s, Australian Chevalier 44s-46s ex-store, Smyrna 32s-40s ex-ship per 448 lbs, No. 3 Canadian Western ex-ship 30s, No. 4 ditto 29s 6d, American malting 48 lbs landed 30s, Plate ex-ship 28s 6d, Russian landed 29s 3d per 400 lbs. English nominal. Oats fully steady. La Plata ex-ship 22s, landed old 24s, new 23s 3d, No. 2 Canadian Western ex-ship 20s 6d, landed 28s, No. 2 Canadian feed ex-ship 23s 6d, landed 24s 6d, Chilian tawny ex-ship 22s 6d-22s 9d, landed 24s, American 38 lbs ex-ship 23s 6d, landed 24s 6d, mixed feed ex-ship 19s 6d, landed 21s per 320 lbs. English 10s-10s 6d per 112 lbs free on rail. Millers' offals quiet. Broad bran quoted 5s 6d-5s 9d, middlings 6s-6s 6d, fine ditto 8s, bags included, ex-mill, feed oatmeal 7s 3d, light oats 6s 9d, ground oats 11s 9d per cwt free on rail. Oatmeal unaltered. London made flaked quoted 18s 6d, rolled oats 17s 6d, medium also fine cut 17s 6d, coarse also medium pinhead 17s 6d ex-mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1925-26, 1924-25, 1923-24, 1922-23.

AMERICAN WHEAT MARKETS.

Prices show a fairly steady improvement this week, buying on export account having been well maintained. A spell of hot, dry weather, with heat damage to crops, has been reported from several districts, but beneficial rains have since fallen. These, together with foreign reselling, caused a slight fall in prices at the end of the week. Quotations:—

† Previous day's quotation.

IRON AND STEEL.

Our Middlesbro correspondent's report, dated July 8, is as follows:—Pig-iron: Until the coal strike is settled, and the works can resume operations, there is not likely to be any change in the market conditions. No. 3 Cleveland is still quoted at 84s per ton, and mixed numbers hematite at 79s, with No. 1 at 79s 6d. Manufactured Iron and Steel: There is very little home manufactured material obtainable, and prices remain as follows:—Steel ship plates £7 17s 6d, steel ship angles £7 10s, iron bars £11, steel rails £8 5s. There are still some quantities of both pig-iron and steel coming in from the Continent at prices below the home market. Iron Ore: A little business is being done for delivery commencing after the coal strike, but the nominal quotation for best rubio still remains at 21s 6d per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—Confidence in an early settlement of the dispute seems to be fairly general in this district. No section of the community has suffered more from the trouble than the heavy steel department of Sheffield, where unemployment is increasing. Buying of Sheffield steel goods from various parts of the country, too, is becoming more and more restricted, and output is in excess of requirements. The milling of fine steels has ceased, because no more coke suitable for the process is available. There is no demand for ferro-alloys used in steel making. Prices have sagged in consequence, and tungsten could now be bought several pence per pound below the pre-strike quotations. A moderate amount of work continues at the foundries, and there has been very little interruption to the output of ironwork for the building trade, which is still brisk. A regular business is now being done in "outcrop" coal. Mixed with the better qualities it can be used with advantages for certain processes in the iron trades. Small but increasing quantities are coming in from pits

which have re-started, but the old pithead stocks are exhausted. Foundry coke is still available.

Our Glasgow correspondent writes as follows:—Iron and steel production is fast approaching complete stagnation. Sheet mills which have been able to carry on during the last two months are now closing down, and only one large works and one or two smaller concerns are now in operation. Pig-iron production has now entirely ceased, so that, with the exceptions above referred to, the Scottish iron and steel trade is now at a standstill. Stocks of pig-iron are getting scarcer, shipments from the Clyde being well up to the average. For last week the shipments totalled 566 tons, of which 449 tons were on overseas account. For the corresponding week of last year the figures were 444 and 390 tons respectively. Quotations are higher for all classes of material for delivery after the strike, the feeling being that, whatever the outcome of the miners' dispute, costs are certain to advance. Steel plates are £7 15s per ton, black sheets £11 10s per ton, and nothing under £16 10s per ton is quoted for 24 gauge galvanised corrugated sheets for shipment, f.o.b. Glasgow. The only contract of importance noted this week is a special type of cargo steamer for Australian owners secured by the Burntisland Shipbuilding Company, Limited. The propelling machinery will be supplied by Messrs David Rowan and Co., Limited, Glasgow.

Our Cardiff correspondent writes:—The South Wales coalowners have this week submitted to the miners the terms under which they are prepared to reopen the collieries under an eight-hour day. They provide for the continuance of the pre-stoppage wages for the three months ending September, after which wages are to be regulated by the proceeds of the industry, subject to a minimum wage rate of 28 per cent. upon the 1915 standard rates compared with the 42.22 per cent. paid up to the end of April. The subsistence wage allowances payable after September are to be varied either by mutual agreement or by the independent chairman of the Conciliation Board. The miners' representatives were invited to meet the owners to consider these terms, but the invitation has been refused. On the coal market interest has been centred in the importation of foreign coals. Regular services have now been established for the supply of German coals, but the bulk of the orders recently placed abroad have been for American coal. The coals discharged during the week have assisted some of the local manufacturing industries. No difficulties are being experienced in the discharge of foreign coal cargoes. Owing to the increasing scarcity of small coals some of the patent fuel factories have been compelled to close down.

In the tin-plate industry a few more mills have been operating this week, but for stock tin-plates prices have advanced to 25s 6d per basis box. The quotations for plates in course of manufacture are about 23s 6d, while for August supplies they are between 20s 6d and 20s 9d. Last week receipts from works totalled 70,690 boxes and the shipments 83,218 boxes, stocks thus being reduced to 60,116 boxes. Prices of steel bars are unchanged at £6 5s and of galvanised sheets at between £16 5s and £16 10s.

OTHER METALS.

TIN.—Tin market ruled firmer in sympathy with stimulating advices from the East and reserved sellers, though later dealings were attended by some irregularity. Standard cash sold at £274 10s-£277 10s, with three months at £274-£277 10s, £277 5s. Sales in the East were reported at £281 5s to £284, c.i.f.

COPPER.—Liberal offerings during the week were readily absorbed, and a steady tone governed proceedings, though slight irregularity was noticeable at times. Standard cash was dealt in at £56 18s 9d to £57 10s, three months £57 15s-£58 5s

foreign pig. July sold £30 1s 3d to £30 17s 6d, August £30 5s to £30 3s 9d and £30 17s 6d, September £30 5s to £30 17s 6d, October £30 2s 6d to £30 17s 6d.

SPELTER proved a firm market, with liberal dealings. July sold £33 15s to £34 1s 3d, August £33 16s 3d, £34 2s 6d, September £33 16s 3d, £34 2s 6d, October £33 15s to £33 17s 6d to £34 2s 6d per ton.

ANTIMONY lower. English special brands quoted £74 10s to £75. China crude spot £45, regulus £60.

ALUMINIUM.—Home trade nominally £120, export £125.

QUICKSILVER firm. Spot £15 10s per bottle.

WOLFRAM firmer. Prompt shipment quoted 14s, forward 14s 3d per unit, c.i.f. terms.

THE COTTON TRADE.

LIVERPOOL, July 8, 1926.

The market has shown more activity during the week. Crop accounts have not been quite so favourable, and with rains being reported in various districts and the appearance of the weevil and other insects prices have hardened. Short covering has been noticeable. Spot sales for the week July 2nd to July 8th (inclusive) are 24,000 bales. Of these, 15,870 bales are American, 610 bales Brazilian, 1,650 bales Peruvian, 1,550 bales Egyptian, 3,430 bales African, 820 bales East Indian, and 70 bales sundries. Imports for the same period are 54,395 bales, these include 31,938 bales American, 2,573 bales Brazilian, 1,583 bales Peruvian, 11,057 bales Egyptian, 2,057 bales African, 4,038 bales East Indian, and 1,149 bales sundries. Quotations to-day are: Middling American, 9.37; F.G.F. Sakel, 15.85; uppers, 11.65; fair Brazilian, 9.47; G.F. mod. rough Peru, 12.00; smooth, 11.22; F.G.F. Tinnivelly, 8.30; middling West African, 9.12; and G.F. East African, 11.30.

MANCHESTER, July 8, 1926.

Although the tone of the market has continued quiet, some spinners and manufacturers have reported rather more inquiry. Considerable interest is being taken at the moment in raw cotton news, and the firmer prices have caused some surprise in view of the healthy outlook for supplies. Cloth inquiry for India has broadened, but sales of importance have been quite isolated. Better cables have come to hand with regard to the monsoon rains. Only small transactions have been put through for China, chiefly in fancies. Slightly more inquiry has been met with for Egypt and the Near East. It has been difficult to sell printing and finishing styles in lots of any weight. Fair advices are coming through from the home trade. Quotations in American and Egyptian yarns have been rather steady, and some spinners have met with a slightly improved demand, but conditions generally remain very unsatisfactory. Calico printers, bleachers, and dyers are now feeling to a greater extent the coal shortage.

THE WOOL TRADE.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The fourth series of London sales will commence next Tuesday. The quantity announced as being available is 147,000 bales, which is adequate to meet all current needs. New Zealand is very adequately represented by 49,000 bales—more than the combined arrivals from New South Wales, Queensland, and Victoria. In addition to the New Zealand offerings, there were 17,200 bales of South American crossbreds. We therefore feel that the quantity of this

description is fully equal to all requirements. It is regrettable that the home trade is in such a poor form for a series of sales, the interval being dominated by the coal strike. This has resulted in a curtailment of consumption, seriously affecting the position of crossbreds in particular. Looking at the probable course of values, we think merinos will not show a great deal of change, but under present conditions anything can happen to crossbreds. The bulk of the buying will have to be done by the Continent, both in merinos and crossbreds, if last sales' rates are to be maintained. The financial conditions in France during the interval cannot have made for a prosperous industry. However, the French textile industry continues to enjoy considerable prosperity, and judging by recent events in Bradford it would seem as if both Germany and Russia are able to buy considerable weights of wool. Everybody will be glad if last sales' closing rates are maintained, higher values not being anticipated. In July shearing begins in good earnest in the Commonwealth. Fair rainfalls have been reported over large areas during the past two weeks, and on the whole Australia is enjoying a fairly good winter. Central Queensland seems to be the exception, a cable last week reporting very dry conditions on important pastoral properties. What surprises us most is an estimate of an increase in the next clip of 100,000 bales. Apparently the increased sheep stocks are going to produce this extra weight of wool, but experience proves that when sheep have been on dry pastures for nine months of the year it always means less wool per head. Judging by the state of trade in England and America, the same quantity as was produced last year will be adequate to meet all requirements. The British textile industry is seriously affected by the coal strike, and the general trade of the country is suffering severely.

Our Bradford correspondent, writing on Thursday, says:—The market is awaiting a settlement of the coal dispute. Available supplies of fuel are sufficient for the short time running in the mills, but much of the coal is of inferior quality, and the price is excessively high compared with the normal value of English supplies. Business is mainly confined to sales of small weights of tops and yarns for immediate requirements, and there is a complete absence of speculative buying in all sections of the industry. Merino tops are well held at late rates, and the indications point to values being maintained. The raw material position will be tested in London next week when the Colonial wool sales reopen, and topmakers are largely depending on the strength of the raw material position. Crossbred tops, with the exception of the finest qualities—which are firm in sympathy with merinos—are dull and prices show much irregularity, especially in the lower descriptions. Stocks of crossbred wool are heavy, and consumption has been unsatisfactory for several months past, largely on account of the lack of demand from Germany for both tops and yarns. At present most spinners are working three days a week, and even this curtailed production is in excess of users' requirements so far as crossbred yarns are concerned. Some improvement is noticeable in the demand for piece goods, both home and export markets showing more interest. But for the fact that manufacturers are unable to guarantee delivery far ahead, a good business could be done in both men's and women's wear.

THE JUTE TRADE.

DUNDEE, July 8.

On Tuesday last the district returns of the acreage under cultivation for the new jute crop were issued in Calcutta, giving the figures as 3,605,000 acres, excluding Nepal, which is generally estimated to be about 50,000 acres. These figures forecast a record crop of jute for next season. The average yield per acre is 3 bales, which would show a total outturn in the vicinity of 11 million bales. The world's normal consumption is estimated at 10 million bales, so that with a supply in excess of requirements there is every reason to anticipate a decline in prices of raw jute. The abnormal figures have had the effect of bringing business in all sections to practically a standstill. For some time past buyers have been waiting for lower prices of all commodities, and so far as yarns are concerned the market has already been discounted. With common 8 lb cops selling at 3s 5d and 8 lb spools at 3s 6d, spinners would require to purchase their raw material at round about £30 per ton. The rates now named by speculative sellers

AMERICAN EXCHANGE-PACIFIC NATIONAL BANK

Six Branches in New York City

are £37 for August shipment of a short group of first marks, and £35 for August-September, with lightnings at £2 under these limits. Extremely few offers are coming through from Calcutta for the new crop fibre, and there is no understanding of the reserved attitude adopted by shippers. Old crop material is now more or less neglected, only a few small lots being disposed of on spot at £45 for good first marks, and £42 for lightnings. Stocks of jute on the Continent are not large, and Continental spinners will require to make further purchases of old crop before the new fibre becomes available. Business in yarns has ruled extremely slow. Spinners, however, are not inclined to make further reductions, and adhere to 3s 5d for cops and 3s 6d for spools. Other yarns are about unchanged in value.

Cloth buyers are all holding off in anticipation of lower prices. The rates accepted by manufacturers depend upon the size and suitability of the order, and seldom can they obtain the quoted prices of 4½d for 10½ oz 40 in hessians and 3½d for 8 oz. Only very small quantities are being purchased to satisfy immediate needs.

HIDE, LEATHER, AND ALLIED TRADES.

The domestic hide market remains steady, with slight advances on certain classes required by tanners. At the Bermondsey auctions on Thursday best ox made from 5½d to 8½d, and seconds from 5½d to 7½d—a few fractional advances being noted. Best cows remained unsold in firsts, heavy lights making 5½d. Calfskins were steady at last prices, best selection making from 6d to 11½d. Wools sold from 5s to 9s 3d, hogs 4s 6d to 11s, and lambs from 2s to 5s 8d. each. Tanners seem rather more anxious to buy imported hides, although the coal strike is retarding business. Argentine ox are now selling on a basis of 7d to 7½d, with Montevideos offering at 7½d. Dry hides are quiet, and little business is passing at slightly lower figures. Cables from Chicago report the packer market as sold up, with quotations for best heavy hides at 13 cents.

Although owing to industrial conditions business in sole leather is below normal, a fair turnover in bends is reported. Light bends of 6-8 lbs are wanted badly at about 16d per lb, and supplies are short. Ten to 12 lbs and 12-14 lbs are also taken regularly by repairers. Prices all round are firm. Offal is as firm as ever, and there is a brisk demand for shoulders from 12d to 13d.

In upper leathers trade is quiet; sampling for the Russian boot is, however, frequent, and sellers of light willow calf and glacé are hopeful of big business later. Carriers are very slow, as there are very few orders for artisan boots from the industrial centres.

The coal deadlock is steadily affecting the boot and shoe trade, and most centres report a falling off in orders. Makers of women's shoes are still the best off for orders, whilst a fair trade is being done on export account.

VEGETABLE OILS AND OILSEEDS.

Markets continue dull, and only a modest amount of business appears to be passing. Linseed oil, except for a small demand from needy consumers, is quiet, and the value about unchanged on the week at £33 15s per ton naked ex Hull mill spot and delivery to December. A small premium is required for January-April. Cotton oils are also more or less inactive, and prices are not so firmly held despite scarcity in near positions. Current values are for crude Egyptian £39 10s and ordinary refined £40 10s per ton ex Hull mill. Soya oil is scarce and a shade dearer, but all other kinds are without quotable change. In the oilseed section linseed has been dull, with crushers for the most part holding aloof. A small trade was done in Plate around £16 2s 6d for seed afloat or early shipment, since when the market has become firmer and prices advanced 5s per ton. Indian linseed is more pressing offered, but demand is poor, current business in Calcutta seed to London having been done at £18 2s 6d July-August and £18 1s 3d June. Egyptian cottonseed has been neglected, and now offers at £9 12s 6d afloat and July loading to Hull.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Market without new feature. A moderate business was effected in spot parcels, chiefly British refined, at previous quotations. Forward positions steadily held, but buyers remain reticent. Czecho granulated, ready for shipment, quoted 14s 9d; August, 14s 10½d; November-December, 14s 1½d, f.o.b. Hamburg. Dutch J, ready, 14s 9½d; November-December, 14s 4½d, f.o.b. Canadian granulated, July-August, to London, 15s 9d; outports, 15s 10½d, c.f. and i. terms. Belgian crystals, prompt, 14s 7½d, f.o.b. Antwerp. Polish ditto, 14s 3d, f.o.b. Danzig. Raw refining kinds quiet, though steady. Cuban, 96 per cent., July-August, 11s 10½d, and West India preferential, 15s 3d, c.f. and i., U.K. There was a fair business in the white terminal section at generally steady rates. August, sold, 14s 0½d; October, 14s 5½d; December, 15s 0½d to 14s 9½d; March, 15s 2½d; May, 15s 7½d to 15s 6d cwt.

COFFEE.—Spot market continues very steady, and in the case of Costa Rican descriptions slightly dearer rates were secured. Only a few bags East India were offered, mostly unattractive qualities. Kenya, bold sizes, sold, 11s to 14s 6d; Costa Rica, ditto, 14s 6d to 18s; Matagalpa, very fine bold colory, 16s 6d to 16½s. Futures steady, quiet, and December sold, 8s 3d.

COCOA.—A moderate demand for spot lots, and market steady. Summer Ariba sold, 95s, Accra F/F, grade July-August, quoted 53s, f.o.b.

TEA.—Indian auctions embraced some 31,000 packages. All desir-

able liquoring parcels met a good demand at fully steady rates, but common disclosed occasional weakness. Pekoe, sold, 1s 4d to 2s 4½d; broken orange, 1s 4½d to 2s 3d. Ceylon sales of 28,000 packages moved with fair freedom at about late rates. Pekoe, sold, 1s 3½d to 1s 9d; broken orange, 1s 5½d to 1s 11½d. In auction, 10,600 packages Java and Sumatra were offered, and though demand was rather less active than of late, no material change occurred in prices for medium and good liquoring teas. Commonest kinds, however, moved in favour of the buyer. Pekoe, sold, 1s 2½d to 1s 3½d; broken ditto, 9½d to 1s 6½d; pekoe souchong, 1s 1½d to 1s 3d; orange pekoe, 1s 3½d to 1s 5d; broken orange pekoe, 1s 2½d to 1s 7½d; and flowery ditto, 2s per lb in bond.

RICE firmly held, but no improvement in demand. Rangoon, two stars, spot, London, 17s; June-July, 16s 3d, c.i.f., U.K. Spanish, spot, 22s to 22s 3d; oil-dressed, 22s 4½d to 22s 7½d. Italian, June shipment, 21s 6d per cwt. Beans quiet. Rangoon H.P., June-July, 12s 4½d; Madagascar butter beans, spot, 26s to 28s, as to quality. Japanese peas, spot, 35s 3d; September-October, 27s 6d cwt.

SPICE.—Pepper quietly steady. Singapore black, f.a.q., May-July, quoted, 9½d; August-October, 8½d; Lampung, May-July, 9½d; August-October, 8½d; Muntok, L.S., May-July, 1s 4d; August-October, 1s 2½d. Pimento, spot, buyers, 6d. Zanzibar cloves, spot, 10d to 10½d per lb. Tapioca steady, quiet. Singapore flake, to Havre, July-August, sellers, 16s 6d. Sago flour, July-August, 15s. Desiccated coconut, spot, halves, 44s 6d; afloat, 40s 6d cwt.

FRUIT (Dried).—Currants quiet but prices firm, on scanty offerings. Amalia, quoted 30s to 31s; Gulf, 32s to 35s; Pyrgos, 29s; Vostizza, 40s to 52s; Patras, 31s to 33s; Australian, 46s to 53s. Sultanias quiet. Australian, new crop, 68s to 88s; South African, bleached, 70s to 75s; Californian, 55s to 60s. Dates firmer, on improved inquiries. Siar, quoted 11s 3d to 11s 9d; Khadowie, 17s 6d. Raisins, Valencia, in short supply, and quarter boxes quoted at 30s to 35s; but South African in demand at 38s to 42s. Evaporated fruits quiet, apart from apricots, which move off freely. Californian apricots, fancy, 140s; Australian, 125s to 135s; South African, new Royals, best, 140s. Plums, Californian, new, 20/30, quoted 106s; 50/60, 52s; 90/100, 37s; Oregon, 30/40, 64s; 35/45, 55s. Pears, Californian, extra choice, 80s; fancy, 95s; Lake County, fancy, 100s. Apple rings, Californian, extra choice, 55s to 60s; prompt shipment, 48s; Canadian spot, 54s per cwt.

CANNED GOODS.

CANNED FISH.—Sardines: Best qualities in small supply, but with the new Portuguese pack now coming forward, the shortage will be relieved. Portuguese, ½'s quoted 4s 3d to 6s per dozen tins. Salmon firm, with a moderate trade passing. Red, tall, 1 lb, 60s to 65s; tall pink, 28s to 29s; ½ lb, pink, 41s. Lobsters firm while in light supply. Best ½'s, quoted 16s to 170s, and ¼'s, 95s to 97s 6d. Japanese crab scarce, but larger quantities are coming forward. Crayfish unaltered.

CANNED FRUIT.—Market without material alteration, trade being adversely affected by the industrial situation, though prices remained steady. Californian Bartlett pears, choice, 24-2½'s, 13s 6d to 14s; standard, 10s 6d to 11s. Californian peaches, choice, 11s 6d to 12s; standard, 10s to 11s; seconds, 9s to 9s 6d. Californian apricots, choice, 12s 6d to 13s; standard, 10s to 11s; seconds, 9s per dozen tins. Singapore pines in moderate request, on spot, with larger supplies on offer, but forward position remains strong. South African and Hawaiian move off steadily at late rates. Italian tomatoes in better demand forward, while steady on spot.

CANNED MEAT firm, but business restricted. Danish lunch tongues sell steadily. Corned beef 6's quoted 38s to 46s, as to quality. Danish lunch tongues range from 120s to 130s; American quoted 135s, with best at 140s to 142s 6d. Ox tongues firm. Cooked boneless hams continue in request, and finest Danish quoted 1s 8½d per lb for cases of six tins.

CONDENSED MILK.—Market generally unchanged and trade quiet, both for machine-skimmed and full cream.

HONEY quiet, though New Zealand sells steadily. New Zealand quoted 50s to 85s; Australian, 40s to 47s 6d; Jamaica ranges from 40s to 55s; Haiti, 37s 6d to 50s; Cuban, 37s 6d to 50s; Californian, 45s to 60s per cwt.

RUBBER.

Only restricted trading again ensued, and the market seems to have developed something like a fixed tendency. Plantation standard developed 8½d; spot and July, sold, 1s 8½d; August, 1s 8½d; September, 1s 8½d; October-December, 1s 9d; January-March, 1s 9½d. To New York, standard European estate sheet, July, buyers, 1s 8½d per lb.

GENERAL.

JUTE.—The market took a sharp downward turn on the publication of the preliminary forecast by the Indian Government of 3,605,000 acres, against the final of 3,100,000 last season. With excellent prospects for a large crop, selling pressure naturally ensued, especially for new crop positions. Firsts, May-June, Continent, sold, £40 to £39 10s; August, new crop, from £35 10s to £32 15s; September, £33 10s to £31; October, £32 to £30. Lightnings, August, £33 10s to £31 5s. Hessians and twills fairly steady in near positions, but lower with regard to distant.

NATIONAL PROVIDENT INSTITUTION

The results for the Year 1925 show INCREASES in:—

The Net New Business Transacted,
The Premium Income received, and
The Rate of Interest realised on Investments,
and DECREASES in:—
The amount paid for Claims by Death, and
The Expense Ratio.

Full particulars of the Office and the Policies it issues can be obtained from

48, GRACECHURCH STREET, LONDON, E.C.3.

HEMP.—Manila steady, quiet. J. August-October, quoted £39 10s; K. £30; L. £31 10s; and M. £27 5s. New Zealand idle. African Sisal, No. 1, £43 per ton.

SHELLAC.—Market steady, quiet. Fair T.N., spot, 127s 6d to 132s 6d; August, 121s; October, 121s; December, 118s per cwt.

COPRA.—Business was again kept down. F.M.S. Straits, June-July, to Rotterdam, quoted £29 7s 6d; Dutch East Indies, £29 2s 6d; Ceylon, £30 15s. South Sea F.M.S., £28 5s; and ditto smoked, to Marseilles, £27 15s. Palm kernels quiet. May-June, to Liverpool, quoted £21; July-August, £20 15s per ton.

TALLOW.—Messrs Colchesters and Woolner write on July 7th as follows:—The tallow market was perhaps steadier during the week, and prices were maintained to-day. A fair amount of business transpired in South American for shipment, but Australian is still unworkable. The stock in London on June 30th, as returned by the wharves, amounted to 15,714 packages, showing an increase during the month of 448 packages. At auction to-day 415 casks tallow were offered, and 234 were sold. Quotations are:—Australian mutton: Fine, 45s 6d; good to fair, 44s 6d to 43s 6d; dull to dark, 42s 6d to 40s 6d; hard, 45s. Australian beef: Fine, 45s 6d; good to fair, 44s 6d to 42s 6d; dull to dark, 41s 6d to 40s; sweet, 45s 6d. Present shipment from Australasia: Good mixed, 44s 6d, nominally. Present shipment from South America, 44s 3d. The market letter is unchanged. Town tallow, 39s 6d per cwt. Rough fat, per 8 lbs,

24d; melted stuff, 29s 6d per cwt. Quotations are:—Town, 40s, net cash, naked, ex works. Country: Frail casks, 40s; home melted, shipping casks, net, f.o.b., good coloured, 43s 6d; fair to dull, 42s to 39s 6d. Bone fat: white none; pale, none; benzine, 36s; melted stuff, 36s, f.o.b.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £22 to £38; Cochinchina, £25 10s to £50; Ceylon bristle, £17 10s to £23; cinnamon leaf oil, 44d; citronella, Ceylon, 1s 7d; Java, 2s 4d.

THE MONEY MARKET.

MONEY was in short supply in the early part of the week, owing to the calling in of loans by the joint-stock banks in connection with their monthly balance-sheets, and on Tuesday the market had to borrow at the Bank at 5½ per cent. Later on supplies became distinctly more plentiful, and short loans were obtainable down to 3½ per cent. Business in the discount market has remained quiet, but

rates hardened with the earlier stringency in money to 4½-5 per cent. This level was maintained in spite of the easier tendency of money, owing, it is to be presumed, to the fact that possibilities of a lower Bank rate are rapidly receding. The Bank's acquisition of gold this week has reduced the net efflux since the resumption of the gold standard to less than £5 millions.

	July 16, 1926.	July 9, 1926.	July 2, 1926.	June 25, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	4 (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount (Call)	3	3	3	3	2 (Dec. 3, '25)
Houses (Notice)	3½	3½	3½	3½	2½ (Dec. 3, '25)
Market rate (3 months' bills) ..	4 ¼	4 ¼	4 ¼	4 ¼	..

Thursday's Bank return showed an increase of £814,100 in the stock of coin and bullion, and a reduction of £748,600 in the circulation, so that the Reserve was £1,562,700 higher, the Proportion rising to 24 per cent. Government securities rose by £1,405,000, and Other securities were reduced by £1,683,600, and as Public deposits declined by £7,146,100, Other were £8,416,800 higher. Currency notes outstanding were reduced this week by £3,058,800 to £292,959,900, which includes £1,300,000 for notes called in but not yet cancelled. The fiduciary issue is £235,409,800, or £12,492,700 below the maximum.

The monthly statement of average weekly balances of the London clearing banks for June, printed in full on a later page, shows the normal increase in deposits at this period of the year. As will be seen from the aggregate figures of the nine English banks below, this movement has been accompanied by a sharp increase in bills discounted:—

	Dec., 1925.	Feb., 1926.	Mar., 1926.	April, 1926.	May, 1926.	June, 1926.
Capital and reserves	121.0	122.2	123.6	124.2	124.2	124.2
Acceptances	108.2	105.6	100.6	95.7	92.4	87.8
Deposits (incl. undiv. profits, &c.) ..	1,646.8	1,606.5	1,587.8	1,590.4	1,589.8	1,630.1
Total liabilities	1,876.0	1,834.3	1,812.0	1,810.3	1,806.4	1,842.1
Coin, notes, balance at bank, and cheques in course of collection ..	255.2	235.2	236.2	236.4	239.3	250.9
Money at call	178.6	110.5	109.7	116.3	112.7	121.4
Investments	286.1	278.9	272.2	269.9	268.7	267.9
Discounts	231.0	209.8	187.2	187.6	185.7	210.4
Loans and advances	846.8	863.7	876.3	874.3	877.4	873.2
Cover for accept., premises, &c.	138.1	135.2	130.4	125.8	122.6	118.3
Total assets	1,876.0	1,834.3	1,812.0	1,810.3	1,806.4	1,842.1

The increase of £40 millions in deposits has been balanced by increases of £25 millions in discounts, of £11½ millions in the cash item, and of £9 millions in money at call. Investments were slightly lower, and there was a drop of over £4 millions in loans and advances.

NEW YORK MARKETS.

Our New York correspondent cables:—The share market retains a strong tone, and sentiment is now optimistic as to autumn business. The steel industry is still operating at 80 per cent., and buying is better. Business prophets now see a possibility that the recession of the second quarter is over. Share prices are on the average close to the previous peak, but brokers' loans, which are about 200 millions above the lowest of May, are still 500 millions below the spring peak. There is considerable interest here in Caillaux's next move, as the Churchill agreement has at the present time no significance from the point of view of securing modifications of the Berenger agreement. The absence of prompt ratification of the latter has changed the situation in regard to the possibility of American credits. It appears that Caillaux must choose between pressing ratification of the Berenger agreement or face many months of delay before securing help for the stabilisation of the franc. The Reserve statement reflects the passing of the mid-year dividend and interest payments with a drop of \$100 millions in discounts and also a decrease in the circulation. The ratio for the system is 74.9 and for New York 79.4 per cent.

THE STOCK MARKETS.

The Stock Exchange has had a fairly busy week for the time of year, though public interest appears to have been checked. With the likelihood of an early reduction in Bank rate now more remote, the gilt-edged market has been inclined to sag, but declines have been unimportant. The debt settlement with France produced a recovery in French railway issues, but the most active stock in the foreign market has been the new Westphalia 7 per cent. scrip, which went to 1½ premium. Home rails are flat on the dividend outlook, but foreign rails are mostly steady. The rubber market keeps quiet, and there has not been much doing in the oil market. Speculative interest in industrials centres round Courtaulds, a small improvement having occurred after the sharp slump. Hudson's Bays advanced on the announcement of oil prospecting on the company's lands. Those sections of the mining market which were recently active have suffered a little from profit-taking. Underwriters of the Coventry, Australian, and South African loans were left with 78, 61 and 74 per cent. respectively, but the Westphalia 7 per cent. loan was oversubscribed, as were also the issues by Morris Motors, United Dairies, and Ampang Tin Dredging, Limited.

THE COMMODITY MARKETS.

The volume of business recorded shows little change on the week. The importation of foreign coals continues, but complaints as regards its quality are numerous. The price of pig-iron has been further advanced, and buyers are few. Very little business is being done in manufactured iron and steel. Conditions in the cotton market remain dull, though inquiry has broadened, and a fair business in piece goods for India has been transacted. The London wool auctions this week have proved satisfactory, values being well maintained. In the wheat market prices show little variation, a steady tone prevailing, though demand is quiet. Sugar quotations remain unaltered, and coffee is in fair demand. An irregular tone prevailed in the tea market, where inquiry was of limited dimensions. The rubber market is quiet, with prices fairly steady. Among non-ferrous metals tin commands higher prices, lead is firm, whilst the market for copper is active.

FOREIGN EXCHANGES.

Conditions in the foreign exchange market have been rather feverish, with interest almost entirely centred on the rapid depreciation in the franc exchanges. Paris, from a closing rate of 185 on July 9th rose to 187½ on Saturday and to 196½ on Monday. On Tuesday the signing of the debt agreement between Great Britain and France brought about a recovery to 189½, and on Wednesday, which was a holiday in Paris, the rate was steady around that figure till the afternoon, when New York entered the market as a seller of francs and raised the rate to 191½. On Thursday, however, there was a further break to 198, and yesterday morning the rate opened at 202½, a fresh record. Forward rates have widened from 2½f per month to 6f for one month and 14½f for three months above spot. It is impossible to forecast the result of the debate now beginning on the Government's proposals for special financial powers, but it is significant that the concessions made by the British Government in the Debt Agreement have not produced a more lasting result on the exchange. Apart from the Treasury situation and the impossibility of keeping the Bank of France advances and note circulation within the legal limit much longer, the most unsatisfactory feature is the lack of confidence in France itself, which is chiefly responsible for the present movement. In Belgium the rate rose from 203 on the 9th inst. to 207½ on Saturday. On Monday it broke away to 234 on the publication of the National Bank statement, which showed an increase of 117,000,000 in the note circulation. It was brought down, however, to 215½ on Tuesday, and to 200 at one time on Wednesday, though it subsequently reacted to 206½. On Thursday it rose to 209, and opened yesterday morning at 211½. The Belgian Government has also asked for, and has obtained, special financial powers, and is taking energetic measures to deal with the situation, which is

complicated by the determined efforts of speculators. So far, however, little result has been achieved by the authorities. Forward rates have widened sharply from 1½f per month to 7f for one month and 14f for three months above spot. Italy rose from 137½ on the 9th to 144½ by Monday, and, after recovering to 140½ on the following day, slowly depreciated, till 144 was again quoted early yesterday morning. Madrid, after depreciating from 30.65 to 30.75 over the week-end, recovered to 30.61, but subsequently rose again to 30.76½. New York is slightly firmer on a quiet market. From 8.86 9-32 on 9th inst. it fell to 4.86½ on Monday, but rose again to 4.86½ on Wednesday. On Thursday it closed at 4.86½, and opened at the same figure yesterday morning. Forward rates are steady around 7½ cent. per month below spot. Amsterdam has moved against us from 12.11½ to 12.10½, and Switzerland from 25.11½ to 25.10½. Stockholm, on the other hand, has depreciated from 18.14 to 18.15½, after touching 18.16½ on Thursday, while Berlin is steady around 20.43. In North-Eastern Europe Oslo has moved from 22.16 to 22.19½, and Copenhagen from 18.36 to 18.35½. Helsingfors is unchanged at 193½. Vienna, after falling from 34.42½ to 34.39½, rose again to 34.42, but Prague, Warsaw, and Budapest are unchanged. In South-Eastern Europe, Athens has weakened from 395 to 405 owing to the difficulties of Cabinet making, but Bucarest has improved from 1070 to 1052, after touching 1095. In the East the rupee is steady at 15 5 29-32d, but the yen rose from 15 11½d to 15 11 15-64d, though it subsequently fell to 15 11 3-8d. In the silver market Chinese sales had a depressing effect until the end of the week, when there were signs of a reaction. Hongkong fell from 2s 3½d to 2s 3½d, and Shanghai from 2s 11½d to 2s 11½d. In South America, Rio is steady around 7½d, but Buenos Aires has risen from 45½d to 45½d, and Monte Video from 49½d to 50d. Valparaiso is unchanged at 39-70 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the ten days ended July 10th:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	16,011	From Revenue	21,087
Interest, &c., on Debt	9,063	Increase in Debt	4,670
Sinking Fund	574		
Sundries	23		
Increase in Balances	25,757		25,757

The Revenue for the ten days ended July 10, 1926, amounted to £21,086,600, as compared with £24,079,600 in the corresponding eleven days last year. Customs and Excise were lower at £2,978,000 and £1,339,000, against £3,548,000 and £1,558,000 respectively. Property and Income-tax brought in £7,630,000, against £9,019,000, and Super-tax amounted to £1,360,000, against £1,730,000. Ordinary receipts were lower at £820,300, as compared with £940,100, but Special receipts amounted to £599,100, against £15.

The week's operations increased the National Debt by £4,670,900, and caused the following changes:—

(000's omitted.)			
	£		£
Treasury Bills	+10,287	National Savings Certificates ..	450
Public Dept. Advances	+ 8,750	Bank of England Advances	-12,500
		Sundries	-1,416
	+19,037		-14,366

The floating debt was increased by £6,505,000 to £781,431,000.

FINANCIAL YEAR, 1926-1927 (April 1 to July 10, 1926.)

£		£	
Total Expenditure ..	250,594,392	Raised by Revenue ..	167,933,279

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Ottoman Bank, P. and O. Banking Corporation, Wiener Bank-Verein, Vienna, Australian Estates and Mortgage, African and Eastern Trade Corporation, General Electric Company, Distillers, Phoenix Oil and Transport, Anglo-Ceylon and General Estates, Bertam Consolidated Rubber, Dalkeith (Ceylon) Rubber Estates, Java Para Rubber Estates, Wm. Cory and Sons, Liptons, Bisichi Tin (Nigeria), Apollinaris and Johannis, Spiers and Pond, and International Tea Company's Stores.

FACTS PLEASANT AND UNPLEASANT.

In his annual summer discourse at the Mansion House last Wednesday to the merchants and bankers of the City of London, the Chancellor of the Exchequer drew a fair picture of the condition of England in the throes of a great industrial upheaval, preceded by a little homily on "sound finance." After pointing out the difficulty of unravelling the mysteries of finance and of drawing sound deductions from phenomena—such as cheap money, increasing imports or exports, or falling exchanges—which might at different times be due to diametrically opposite influences, he comforted his audience with "some very broad, simple truths, which gave a sort of rough-and-ready rule-of-thumb guide through all these mysteries and tangles." These rules applied equally to public and to private finance. Everyone knew what they were: "Cultivate peace and goodwill. Work hard. Avoid profusion. Save. Balance your budget and pay your way. Pay your debts. Pay them quickly. Let your word be your bond. Do a fair day's work for the money you earn, and make sure you are paid in an honest and stable currency." Mr Churchill added that to adhere to these paths was not always pleasant, and that the Chancellor might expect to be scolded for following them. We should have had the more confidence in Mr Churchill if he had added to his catalogue a few of the first principles of international trade—as, for example, that in the long run you cannot sell unless you also buy, and that you do not increase employment by stopping imports. But perhaps to Mr Churchill truth is relative, and that what he hailed as truth at the age of forty is an outworn shibboleth at fifty-four.

But Mr Churchill did well to remind the country of the importance of a stable standard, not merely to merchants and bankers, but to the mass of the people.

A people had the right to ask its Government for sound finance and stable currency. They were inter-dependent. Sound finance was essential to a stable currency, and could not itself exist apart from a stable currency. If the measure of value fluctuated widely, no computation of values could remain in equilibrium. Sound finance and stable currency did not benefit the rich alone. On the contrary, it was the poor man who suffered most when lavish expenditure led to Budget deficits and Budget deficits to borrowing and borrowing to what is called "the creation of money," without any corresponding increase in the creation of real goods. It was the rich man who could transfer his wealth most readily into other currencies. It was the poor man whose narrow margins were soonest pinched by an increased cost of living. Sound finance and stable currency had been the financial policy of Great Britain, whatever party had been in power, ever since we emerged from the tumult of war.

The Chancellor might have drawn an object-lesson of the dangers of the opposite policy from the present position of our Western European neighbours. A few months ago we had come to regard the exchange difficulties of Europe as practically settled. Yet the foreign exchange tables which appear in our weekly statistics show that the French franc, which a year ago stood at 104, has touched 200 this week; the Belgian franc, which was 105 last July, has touched in the last few days 235, and the lira, which has for a long time past been between 120 and 130, touched 144. We might add that the Polish zloty, which a year ago was at 25.40, is now in the neighbourhood of 50; while the drachma, which was below 300, is now in the neighbourhood of 400 to the £. In the case of Belgium the currency has lost half its value in less than four months, and the movements of recent weeks can only be compared to those of the mark in 1921 and 1922. The outlook, both domestic and international,

would indeed be disquieting if the pound sterling were—like these currencies—still drifting about on a sea of uncertainty.

The Chancellor proceeded to discuss the effects and cost of the coal dispute. He showed that its effects were particularly heavy on the heavy industries, whereas large groups of progressive and expanding industries had stood, and were still standing, the strain remarkably well. He pointed to the figures of unemployment, with which our readers are familiar, as showing that since the general strike the position has not sensibly deteriorated. The same conclusion is borne out by the railway traffic returns, which have shown a substantial recovery since the third week of May. The following table shows in comparison with last year the receipts before the strike, those for the three weeks covering the general strike, and those for the subsequent weeks of the coal stoppage:—

TRAFFIC RECEIPTS OF FOUR CHIEF RAILWAYS.						
	17 Weeks to May 1st.	Three Weeks covering General Strike.		Seven subsequent Weeks of Coal Stoppage.	Total to Date.	
Passenger....	23.9	2.3	10.4	36.6		
Goods	35.0	1.6	8.3	44.9		
Total	58.9	3.9	18.7	81.5		
INCREASE OR DECREASE COMPARED WITH CORRESPONDING PERIOD OF 1925.						
Passenger ..	+ 0.3	— 2.0	— 3.1	— 4.8		
Goods	+ 0.7	— 4.4	— 4.6	— 8.3		
Total ..	+ 1.0	— 6.4	— 7.7	— 13.1		
PERCENTAGE INCREASE OR DECREASE COMPARED WITH 1925.						
Passenger ..	+ 1.3	— 46.5	— 23.0	— 11.6		
Goods	+ 2.0	— 73.3	— 35.7	— 15.7		
Total ..	+ 1.7	— 62.2	— 29.2	— 13.9		

Thus the reduction in recent weeks is less than 30 per cent. If we take account of the fact that road transport has been fully maintained throughout, this means that the total transportation of goods and persons has been reduced by a very much smaller percentage, nearly all of which—in the case of goods—will doubtless be shown to have occurred in the heavy trades. This concentration of the effect of the dispute on certain trades is further borne out by the foreign trade figures for June, which are fully analysed in another column. The figures, naturally, show reduced exports; but again this decrease is concentrated in one or two directions, for Mr Churchill was able to say that, "Making allowance for the fall in prices, and for the loss of all coal exports, the export trade of June this year had been practically the same in the midst of these grave troubles as in the corresponding month last year."

But at best these are only mitigations of a deplorable situation. It is exceedingly hard to say what the loss to the nation from reduced economic activity amounts to. The total national income is in the neighbourhood of £4,000 millions, or, say, £77 millions a week. The loss of production may be guessed at between £12 and £15 millions, rising later, perhaps, towards £20 millions, as conditions deteriorate during the summer months. It is not to be expected that general considerations will weigh very heavily in the minds of the miners, who have been persuaded that by solidarity they can protect themselves against inroads being made on their standard of living. But it is a serious consideration that the Chancellor puts before them when he asserts that the industries which have prospered and offered increasing employment are those which are free from the great organised labour unions. We must be very careful in this connection to avoid fallacious conclusions. On balance, the collective bargaining by trade unions has made for industrial peace, and in many of the highly organised trades trade union policy has been directed towards fostering, or, at all events, not hindering, efficiency. There is a regrettable tendency in the public mind to assume that trade unionism and *ca' canny* are identical; but when this idea is analysed the examples given are almost invariably quoted from the older branches of engineering, or from the building or printing trades. In some of the greatest of our industries payment by results and wage methods designed to stimulate output are the settled policy of the unions concerned,

and in one of the trades Mr Churchill had in mind—viz., iron and steel—the employers would be the first to repudiate any suggestion that its troubles are due to its trade unions. At the same time, it is a fact that our most troubled industries are those in which unionism is highly developed. It cannot be assumed that the depression is the consequence of labour organisation, but both conditions result from the fact that these are our old-established industries. For reasons beyond our control our monopoly has gone, and in competing with newcomers they suffer from old plant, old traditions, old methods of organisation, and conservatism generally on the part of both employers and workpeople. Against these disadvantages there are only the very perishable assets of old trade connections, reputation for quality, &c. In the regeneration of these industries, in which the initiative must come from the employers, the trade unions must play a great part. Any industry in which the labour organisations are dominated by ideas of class warfare or the desire to destroy, employment and wages must inevitably droop. Even goodwill alone is not enough; but it must be accompanied by determined efforts to secure economical production, whether on the railways, in the mines, or in the factories. There is no escape from this necessity even in home markets. Railways must prove more economical than transport by road or air; coal undersell oil and other means of power; cotton repel the attacks of other and new textile fabrics. If trade unionism is to justify its existence it must pursue the interests of its members during the next few years to an extent it has never done before along the line of co-operation with employers in striving after increasing efficiency.

These are the ideas inspiring the Coal Report. Only by accepting the Report in the letter and the spirit can the coal industry look forward to a reasonably prosperous future. There have been signs this week of willingness on the part of the miners to accept the Report, with all its implications, as a basis for peace; but the intervention of the Churches and of the T.U.C. have not yet produced any tangible results. Mr Herbert Smith's 13 weeks are, however, nearly up, and if the hope that the miners would drift back to work on the eight hours' basis proves false, the time will soon be ripe for a settlement on the basis of the Report.

THE PROBLEM OF CHINA.

DURING the last few days the situation in China has shown signs of improvement in certain respects. The Tariff Conference at Peking appears definitely to have survived the capture of the Central Government by Chang and Wu from Feng (though its survival is no guarantee that it will achieve anything positive). Wu has ordered his subordinates to release the revenues of the salt gabelle, which they had seized, and has asked Chang and Sun (who controls the hinterland of Shanghai) to take identical action. And, most important of all, a delegation has gone from Hongkong to Canton to negotiate for a termination of the boycott. Thus two fresh conflicts which threatened to arise between the Chinese and the foreigners have been averted, while the most serious of the existing conflicts—the boycott of British trade by Canton—may be at last on the way to a settlement. Yet, important as these events are, they are all of them simply vicissitudes in the day-to-day relations between China and her neighbours. The fundamental problems of that relationship remain what they were.

With regard to the civil war in China, there has been little to report during the past fortnight. The duumvirate of Chang and Wu has not broken down, and Sun is in neighbourly relations, if not in partnership, with the two momentary masters of Peking. Yet the two radical Governments in Inner Mongolia and Canton remain in being, and there is no reason to expect that the duumvirs will be able to overthrow them or that, in the unlikely event of their doing so, their partnership would survive the elimination of their common enemies. All the precedents of Chinese history—in which centralism and *Klein-staaterei* have alternated in what, by our standards, is an almost inconceivably slow rhythm—point to the gradual consolidation of half-a-dozen local units out of

The New York Trust Company

New York City

the fragments of the centralised Manchu Empire. On the analogy of the past, these units would continue completely independent of one another and chronically at war, until, after a few centuries, the centralisation phase came round again in its cycle. Hitherto, however, China has been a world in herself, and the barbarians on her borders have been mere gnats and mosquitoes, who have disturbed her comfort without threatening her life and health. The present pressure of the foreign problem is unprecedented. China has now been incorporated economically—and perhaps intellectually as well—in a world-wide society which has been brought into being by the wholly alien civilisation of Western Europe. In these new circumstances, the deep Chinese instinct for self-preservation may prevent particularism from going to its traditional lengths. The phase of anarchy and disunion in the Chinese cycle may therefore this time be less acute and less prolonged, and the new local units may agree to confront the Western world as a federal State, with a constitution modelled on those of the great overseas English-speaking countries or of the future decentralised India.

Meanwhile, pending the formation of an effective Federal Government in China, there is the present duality of a shadow Central Government at Peking and effective Local Governments at half-a-dozen provincial centres; and among foreigners, driven desperate by the almost hopeless task of dealing with the Central Government over local problems, the question is being asked insistently: Would it not be better to recognise the realities and deal with the Local Governments direct over the pressing problems of the moment, which, after all, are usually for the most part of local concern? The difficulty here is that, by the Nine-Power Treaty, signed in Washington on February 6, 1922, we have bound ourselves to respect not only the sovereignty and independence, but the territorial and administrative integrity of China, and have agreed that there shall be full and frank communication between the contracting Powers concerned whenever a situation arises which involves the application of the treaty in the opinion of any one of them. This would seem to preclude either Great Britain or any other single Power from taking separate action, particularly in the direction of entering into separate relations with local Chinese authorities. If so, the treaty obligation bears hardly upon us, considering the preponderance of British material interests in China over those of other foreigners, and the troubles into which our own interests have fallen latterly—troubles which demand rapid and vigorous remedies.

Yet behind this problem of entering into friendly and practical relations with the real holders of power in China as she is to-day there lies the even wider and more fundamental problem of establishing satisfactory social and personal relations between foreign residents in China and the Chinese as individuals. For centuries the Chinese looked down pharisaically upon other men as barbarians. Rather less than a century ago we English—followed by the other Western peoples—compelled the Chinese to enter into a relationship with us in which their status was that of "natives." To-day the Chinese, having dealt

with foreigners successively as superiors and inferiors, are insistently demanding to live and work with us as equals. The relation of equality is no doubt the most difficult of the three, but the Chinese are in deadly earnest in demanding it, and it is remarkable how the Westerners are coming round to the view that this equality will have to be conceded. No doubt, over concrete questions—such as the rendition to the Chinese of the Shanghai Mixed Court—the two parties are very far apart. The Chinese are unwilling to accept less than the immediate fulfilment of their *desiderata* integrally, while the Westerners are unwilling to make thorough-going concessions, even in instalments (though they might surely have learnt from the case of Turkey that in this matter it is better to concede generously than to wait for the change to be extorted by force). In principle, however, there seems to be a general recognition among the foreigners—or at least among the British—in China that if we want to keep our trade in China we must live on good terms with the Chinese, and that we can only get back on to good terms with them by reconciling ourselves to the establishment of equality of status. The question is: Can this intellectual conviction be translated into action? When a situation changes very suddenly—as has happened now in China—it is not so difficult to recognise the fact and to discern what changes should be made in order to meet it. It is much harder to put those changes into practice; for practice—especially the practice of daily relations with our fellow-men—is based on habit, and habit cannot be modified in a day. The present habit of foreign residents in China is the outcome of nearly a century of privileged status. Can the foreigners unlearn the habit of treating the Chinese as "natives" with sufficient speed? And can the Chinese restrain their growing impatience of a humiliating status sufficiently long to allow the Westerners the necessary time for re-orientation? It is in the interest of both parties that their relationship should be adjusted satisfactorily, and that no irreparable breach should occur during the transition period.

THE DEBT SETTLEMENT WITH FRANCE.

ON Monday Mr Churchill and M. Caillaux put their signatures to an agreement for settling the Franco-British debt, and thus regularised one of the major outstanding financial problems of the war. The annuities now laid down are based upon the provisional agreement made between the same negotiators last September, the only important new point in this connection being that the rates at which the annuities shall rise during the first five years to the normal figure are now definitely fixed. The payments are to be as follows:—

	Miln. £.
During the financial year 1926-27	4
During the financial year 1927-28	6
During the financial year 1928-29	8
During the financial year 1929-30	10
During the financial years 1930-31 to 1956-57 inclusive..	12½
During the financial years 1957-58 to 1987-88 inclusive..	14

The agreement further provides that all outstanding accounts in connection with war claims shall be considered closed, and the British Treasury shall be entitled to retain any sums due to France in respect of these claims. As this amounts to about £2 millions, the Treasury will in effect benefit in the first annuity year to the extent of £6 millions instead of £4 millions.

These annuities amount to £799½ millions, but their present value, reckoned at 4½ per cent. discount, amounts to about £264 millions, which compares with a nominal debt of £653,127,900. This latter figure, however, includes the counterpart of £53½ millions worth of gold remitted to London by the French Government during the war under the Calais Agreement; this debt is not to be regarded as being repaid by the above annuities, but will remain as a non-interest bearing debt, which will need to be repaid if and when France has this sum at her disposal and desires to procure that amount of gold for France. Any plan for doing this must be the subject of a further agreement. The principal of the debt now amortised should therefore be regarded as approximately £600 millions. The present agreement (on a 4½ per cent. basis) in effect writes it down to 44 per cent. of its nominal value, a figure which compares with a writing down of the Italian debt to about 17 per cent. of its nominal amount. On a rough calculation the American debt settlements, calculated on the same basis, represent the following percentages of their nominal value:—

	Nominal Debt. Million \$.	Present Value of Annuities at 4½ %. Million \$.	Percentage of Fulfilment.
Great Britain	4,600	3,800	82½
* France	4,221	2,008	47
Italy	2,042	535	26

* The annuities are calculated on 4,025 millions, the difference being due to an abatement of accrued interest.

A comparison of these figures with those agreed upon between Great Britain and her Continental debtors shows that the strict principle of *pari passu* has not been adhered to. On the other hand, Great Britain stands to gain in the case of both Italy and France in the annuities to be received in the first ten or twenty years. Thus the first ten annuities from France to Great Britain amount to £103 million; the first ten annuities to be paid by France to America under the Berenger settlement (the details of which were given in full in the Budget Supplement of the *Economist* of April 17th) amount to 93 millions, although the debt to America is one-third greater than France's debt to Great Britain. If in the next ten or twenty years there is a general revision of these war debts, Great Britain will have had somewhat the best of the bargain. From the point of view, however, of the immediate European situation, all such figures are of less importance than the conditions attaching to the agreement or embodied in the annexed correspondence, which are in substance as follows:—

France is to be entitled to postpone payment of up to one-half of the annuities for three-years, such postponed payments bearing 5 per cent. interest. This clause in a sense meets the problem that would be raised if the French exchange situation made payment difficult. It follows similar clauses in other settlements.

Great Britain repeats that she does not want to take more from her Allies than she pays to America, and provision is made for crediting her Allies if any year her receipts from Germany and the Allies together exceed her American annuities.

The debt is not to be commercialised, which means that throughout its currency of 62 years it will always be possible for it to be amended by negotiation between the Governments.

Finally, M. Caillaux lays down that France's ability to pay depends upon her receipts from Germany, and that if, "for reasons outside the control of France, such receipts should cease completely or to extent greater than one-half, a new situation would be created, and the French Government reserves the right in such an event of asking the British Govern-

ment to reconsider the question in the light of all the circumstances then prevailing." In his reply Mr Churchill reaffirms that the debt is based upon the sole credit of France; that in the event of a German default Great Britain as well as France would lose, and that any reconsideration of debts must take this into account. But, subject to this consideration, Mr Churchill does not object to M. Caillaux's reservation. He adds that if any modification is to be made he would expect other creditors of France to make similar modifications in order to secure equal treatment among the creditors.

It is, of course, true that if France were unable to pay her debts no paper undertaking would be of much value. But an understanding of this kind, while not making France's payments dependent upon the working of the Dawes Plan, does, in fact, enable France to reopen the question without incurring the odium of being a defaulter. As a business proposition this proviso, as well as the others included in the agreement, is a very reasonable one. Both settlements take account of France's presumed capacity to pay; but there is little to be said for making elaborate provisions for tempering Germany's payment to her economic condition, while insisting that France should pay a certain sum regardless of changing circumstances. Taken together, these conditions make it probable that the French Chamber will accept the agreement. If America could be persuaded that it was to her interest to attach similar conditions, and by so doing make certain of the ratification by the French Chamber of the Berenger settlement, the prospects of saving the franc would be immensely improved. Unfortunately, it is not now possible for any arrangement to be made with America that can be ratified by the Washington Senate until the end of the year, and in any case there is no sign as yet that the administration would accept a "safeguard clause" even in the compromise form agreed upon last Monday. Nevertheless, it is urgent that both debt agreements should be settled. We feel certain that if the American Government could see its way to an agreement of this kind, which would almost certainly be then ratified in France, and if upon it there were built a sound plan for stabilising the franc, the American Senate would not in December take the responsibility of throwing the whole situation back into the melting-pot. Our New York correspondent, however, does not hold out much hope in this direction.

But in this connection it is important to remember that a settlement of the debt problem, though it has been an essential preliminary to financial stabilisation in Europe in every case from Great Britain to Hungary, is not in itself a cure. Moreover, the prestige which a debt settlement gives to a country, and the tonic effect which it has upon its exchange, may be very speedily lost if the occasion is not seized for taking other essential measures. Italy provides a warning on this point. In the spring of this year her credit was greatly enhanced by the settlement of both her major war debts; but in the last month her exchange has twice seriously weakened, and the stabilisation loan which she holds in America is in danger of being frittered away. The lira is still one of the unstable currencies, and if after balancing her Budget and settling her debt Italy is not yet ready to link it to gold, it is natural that foreigners should begin to lose confidence in it. The example is an important one for France, whose exchange has fallen this week to 183 to the £. The situation can only be saved by vigorous measures, and, as we pointed out last week, by a time-table laid down in advance. In this connection the Experts' Record is disappointing. It declares in favour of stabilisation as soon as possible, but it makes elaborate provision for various stages in this process. These stages may, in fact, be required; but to set them out formally gives the impression of a long-drawn-out procedure. Moreover, the report makes vague allusions to the disadvantages of using the Bank of France's gold. It is just this kind of timidity that undermines confidence. What the world wants to be assured of is that at the critical moment the whole gold reserves of France will be thrown into the scale. A gold reserve is an expensive and useless luxury unless it is used to effect. It is a comfort to an army to know that it has ammunition in reserve, but it does not stir its enthusiasm if it is told that there are strong reasons against sending these munitions to the front.

INDUSTRIAL PROFITS.

OUR analysis for the past three months of the profits of industrial companies does not, of course, show any of the effects of the general strike or of the coal stoppage, since the accounts reviewed cover for the most part the financial year ended March 31st, or an earlier date. In fact, the increase in net profits is the largest quarterly increase recorded since the corresponding period of 1925. During the past three months the profit and loss accounts of 442 companies were analysed in the weekly table of profit and loss accounts, and these show aggregate net profits, after payment of debenture interest, &c., of £60,489,400, an increase of £4,654,800, or 8.3 per cent., in comparison with the profits of the same companies in their preceding financial year. During the past 12 months the accounts of 1,475 companies have been analysed, and these show an increase of 7.3 per cent. in aggregate net profits, as may be seen from the following table:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in		Increase.	
		1924.	1925.	£	%
Third quarter	233	17,772,534	18,626,799	854,265	4.8
Fourth quarter	340	32,012,191	34,074,192	2,062,001	6.4
		1925.	1926.		
First quarter	460	48,026,891	51,691,026	3,664,135	7.6
Second quarter	442	55,834,678	60,489,439	4,654,761	8.3
	1,475	153,646,294	164,881,456	11,235,162	7.3

Since the last quarter of 1922 there has been an unbroken series of increases, but even so the declines recorded in the slump of 1920-21 have barely been made good, as may be seen from the appended list of quarterly percentage changes in net profits:—

	1920.	1921.	1922.	1923.	1924.	1925.	1926.
First quarter	+26.9	+3.5	-43.4	+41.4	+8.7	+9.1	+7.6
Second quarter	+37.8	-8.4	-33.7	+22.1	+3.0	+11.1	+8.3
Third quarter	+41.9	-42.4	-23.5	+65.2	+2.3	+4.8	..
Fourth quarter	+27.1	-52.9	+3.9	+11.4	+13.3	+6.4	..
	+32.6	-20.1	-29.0	+30.6	+6.6	+8.7	..

An examination of these figures shows that the profits recorded during the past quarter are approximately on a level with those of 1921, which were 8.4 per cent. below those of the boom year, 1920. But this is only a rough approximation, and cannot be used as an argument that British industry is now making profits nearly as large as those of the post-war boom, for our list of companies includes many concerns whose profits are earned overseas, including rubber and oil companies. Moreover, our next table shows that the profits of some of the major British industries, such as iron and steel, shipping and textiles, are still on the downward grade. This classifies the profits disclosed during the past 12 months into 20 groups of companies, giving a comparison with those of the preceding financial year:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Year Ended June 30.		Increase.		Decrease.	
		1925.	1926.	£	%	£	%

Trust	76	5,412,749	6,161,114	748,365	13.8	..	..
Waterworks	27	767,891	813,111	45,220	5.9	..	..
Miscellaneous	383	56,210,540	59,325,546	4,115,006	7.4	..	..
	1,475	153,646,294	164,881,456	11,235,162	7.3	..	..

The showing made by the iron, coal, and steel group of 103 companies appears all the more dismal when it is pointed out that this decline of 60 per cent. follows a fall

of 28 per cent. in the corresponding table published a year ago. The motor and cycle, shipping and textile groups, on the other hand, recorded increases a year ago of 99, 15, and 6 per cent. respectively. The decline in the motor group, in fact, is due entirely to the figures of one firm, Crossley Motors, whose latest profit and loss account showed a net loss of £285,900, against a profit of £15,800 in the preceding year. It will be seen that a very large proportion of the total increase in net profits is accounted for by the nitrate, oil, and rubber sections—87 per cent., to be exact—while the brewery group more than accounts for the balance of the increase. The land group has done very well, and a good showing is made by the public utility companies, especially the electricity group.

The next table shows the distribution of profits in each of the past four quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1925.				
Third quarter	18,626,799	11,930,751	3,435,529	3,260,519
Fourth quarter	34,074,192	20,292,366	5,122,119	8,659,707
1926.				
First quarter	51,691,026	30,496,402	9,288,401	11,896,223
Second quarter	60,489,439	37,052,402	12,509,670	10,926,867
	164,881,456	99,772,421	30,365,719	34,743,316

The principal feature of this table is the lower proportion reserved in the past quarter. The last column, it should be mentioned, includes the differences in sums carried forward, as well as specific allocations to reserve. The figure of 21.1 per cent. for the 12 months compares with 22.3 per cent. for the preceding 12 months, when 58.2 per cent. of profits went to ordinary shareholders and 19.5 per cent. to preference shareholders.

The following table shows the method of distribution adopted by each of the groups:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
Breweries	11,696,282	6,694,695	1,530,965	3,470,622
Canals	568,976	264,833	46.5	61,384
Elec. Light. & Power	5,487,733	1,667,002	30.4	2,700,935
Gas	2,489,229	2,108,640	84.7	2,700,935
Hotels, restaurants, &c.	2,013,866	1,179,043	58.5	286,618
Iron, coal, and steel	4,110,146	4,191,831	102.0	2,116,866
Land, mortgage, &c.	6,473,546	3,685,095	57.0	1,869,204
Motor and cycle	1,409,185	776,850	55.1	454,738
Nitrate	1,696,690	1,117,325	65.8	579,365
Oil	13,714,461	8,919,391	65.0	3,046,375
Rubber	11,870,207	9,582,883	80.8	2,046,890
Shipping	4,315,830	2,153,020	49.9	909,503
Shops and stores	7,141,301	3,853,075	54.0	1,458,432
Tes.	4,984,029	3,642,600	73.1	1,046,785
Telegraphs, &c.	4,284,097	2,647,756	61.8	1,333,408
Textiles	14,625,361	9,307,084	63.5	3,015,109
Tramways	1,700,746	621,958	36.6	390,501
Trusts	6,161,114	3,355,023	54.5	1,328,563
Waterworks	813,111	481,415	59.2	101,961
Miscellaneous	59,325,546	33,522,902	56.5	12,871,732
	164,881,456	99,772,421	60.5	34,743,316

The figures for the iron and steel group disclose an unsatisfactory state of affairs. They include those of Bolckow, Vaughan, Ebbw Vale Steel, Iron and Coal, and Armstrong, Whitworth, whose withdrawals from reserve funds were respectively £249,300, £300,000, and £900,000. Many other companies in this group made smaller withdrawals or substantially reduced their balances in hand. Several groups, on the other hand, show a conservative distribution policy, notably the electricity, telegraph, and nitrate companies. The rubber section, in which there is very little preference capital, distributed nearly 81 per cent. of profits to ordinary shareholders and reserved 17.2 per cent.

In the next table we give the ratio to total ordinary and preference capital of net profits and of amounts reserved in each of the past four quarters:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1925.			
Third quarter	189,651,020	18,626,799	3,260,519
Fourth quarter	276,290,069	34,074,192	8,659,707
1926.			
First quarter	453,009,241	51,691,026	11,896,223
Second quarter	532,173,126	60,489,439	10,926,867
	1,451,123,456	164,881,456	34,743,316

The ratio of profits to total capital at 11.4 per cent. compares with 10.7 per cent. a year ago and 9.9 per cent. two years ago. In July, 1921, however, a ratio of 13.2 per cent. was recorded. The ratio of the amount reserved is the same as at this time last year.

The average rates paid on the three classes of capital quarter by quarter since the beginning of 1923 are set out below:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1923	1924	1925	1926	1923	1924	1925	1926	1923	1924	1925	1926
1st quarter	4.61	4.62	4.63	4.64	5.7	5.3	5.3	5.4	9.2	9.6	10.5	10.9
2nd "	5.08	5.17	5.40	5.14	5.4	5.5	5.8	5.8	9.9	10.1	9.9	11.7
3rd "	4.90	4.77	4.96	4.96	4.3	4.9	5.0	5.0	7.8	9.0	9.9	9.9
4th "	5.03	4.94	5.30	5.30	5.4	5.8	5.6	5.6	9.6	10.0	11.0	11.0
Year.....	4.90	4.92	5.11	5.11	5.3	5.4	5.5	5.5	9.3	9.8	10.3	10.3

The average rate paid on ordinary capital in the past quarter is the highest for many years, the nearest approach being 11 per cent. recorded in the last quarter of 1925. The average rate of debenture interest in the last quarter is slightly lower than at this time last year, the decline being partly due to redemption of short-term borrowings at high rates of interest.

The final table shows the average rates paid on the three classes of capital by the various groups, together with the ordinary rate shown in our article a year ago:—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Interest.	Ordinary Capital.	Rate of Dividend.	Rate of Div. a Year Ago.
Breweries	£ 36,180,634	4.8	£ 27,442,190	5.6	£ 41,335,312	16.2	14.5
Canals	2,091,000	3.7	5,484,310	4.3	6,693,103	4.0	3.9
Electric lighting and power.....	22,084,612	5.2	20,667,859	5.4	24,530,384	6.8	6.8
Gas	10,793,638	3.9	9,124,668	4.2	38,267,160	5.5	5.5
Hotels, restaurants, &c.....	6,757,262	4.5	9,713,519	5.6	9,618,993	12.3	9.9
Iron, coal, and steel	54,816,360	5.9	56,767,434	5.6	56,731,799	3.3	4.1
Land, mortgage, &c.....	25,007,596	4.4	19,844,742	4.6	42,399,761	8.7	8.2
Motor and cycle	6,478,604	6.6	8,277,700	2.1	16,726,450	4.6	4.1
Nitrate	3,231,100	5.0	nil	..	10,606,430	10.5	12.0
Oil	8,635,620	5.5	26,147,647	6.7	47,608,252	18.7	18.3
Rubber	2,175,841	6.6	1,793,184	13.4	48,103,073	19.9	6.9
Shipping	22,853,302	5.2	24,058,075	5.2	38,111,732	5.7	6.1
Shops and stores	8,881,478	5.1	25,755,976	7.1	28,332,365	13.6	11.7
Tea	941,172	5.2	5,066,962	5.8	11,023,346	33.1	35.1
Telegraphs, &c.....	5,806,835	4.8	6,483,694	4.7	30,436,723	8.7	8.6
Textiles	17,413,130	4.6	4,225,291	5.0	64,560,559	14.4	14.1
Tramways	24,011,109	4.8	12,287,412	5.6	14,700,460	4.2	4.0
Trusts	41,112,430	4.2	34,583,515	4.3	36,837,632	9.1	8.1
Water	3,342,323	4.3	4,423,951	5.2	7,346,833	6.6	7.2
Miscellaneous	75,699,576	5.1	204,922,161	6.3	259,332,799	12.9	12.8
	£ 378,313,232	5.0	£ 548,820,290	5.5	£ 902,303,166	11.1	9.9

The high rate of preference dividend shown under rubber is due to the inclusion of participating preference shares under this heading. It will be seen that in only five groups has the average rate of ordinary dividend been reduced in comparison with the preceding year. These five groups are iron, coal and steel, nitrate, shipping, tea, and water-works. The most prominent increase is that recorded by the rubber group.

THE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

DURING the past quarter the conditions prevailing in the Lancashire cotton industry have not improved. Demand in yarn and cloth has been of limited dimensions, and producers have been adversely affected by the general strike, and to a larger extent by the coal dispute. In the circumstances complaints have increased in volume, and stock-taking results for the past half-year have been very disappointing. Values in the raw material have not changed very much. On the other hand quotations for manufactured goods have favoured buyers owing to the inadequate demand and more pressure for orders from producers. An unfavourable factor in the situation has been the money stringency, and failures have been of frequent occurrence, although it is perhaps surprising that more cases of financial difficulties have not been mentioned.

On March 31, 1926, the quotation for middling American cotton on the spot in Liverpool was 10.23d. Prices tended to favour buyers, and 9.90d was posted on April 21st. After a slight reaction there was another downward

movement to 9.81d on May 3rd. A stronger feeling then prevailed, and the quotation on May 26th was 10.37d. June brought lower values, the figure on the 30th being 9.30d. Since then there has been a reaction, the quotation on Wednesday last (July 14th) being 9.8d. Owing to the depression in Lancashire, and less satisfactory industrial conditions in the United States, the consumption of American cotton has fallen off. It is estimated that the carry-over at the end of this season will be over 6,000,000 bales. The outlook for the new growth is generally healthy. The estimated acreage is of record dimensions, and according to the latest statistics of the Government there is a probability of a yield of over 15,500,000 bales. World consumption at the present time is on a basis of rather less than 14,000,000 bales per annum. During the last fortnight there have been persistent reports of unfavourable weather in the cotton belt, and increased damage to the plants from insect pests, especially the hopper flea. Although some of these advices are discredited by people in England, the fact remains that the crop is in need of hot, dry weather, whereas rain is being experienced in many parts. On March 31st the quotation for fully good fair Sakellaridis Egyptian cotton on the spot in Liverpool was 15.85d. There was an upward movement in values in April, the figure on the 22nd being 16.65d. After a slight decline there was a further rise by May 25th to 17.35d, whilst the quotation on June 8th was 17.45d. There followed an easier tendency to 16.05d on June 30th, whilst on Wednesday last (July 14th) the figure was 16.25d. It is believed that the Egyptian crop for this season will be about 8,500,000 cantars, and the prospects for the coming twelve months are encouraging, there being every likelihood of another big output. Prices for the article are somewhat complicated by the action of the Government in purchasing from time to time. The stock in Alexandria is much larger than a year ago at 1,570,000 cantars, against 370,000 cantars.

It has been a very trying three months for manufacturers of cloth. The demand has not been anything like sufficient to meet the requirements of makers, and a feature of importance has been the relative smallness of individual orders. Large and important merchant houses that usually purchase goods in thousands of pieces have been content to buy hundreds of pieces. The fact is that our customers have had no confidence in prices, and there has been a disposition in all quarters to restrict commitments as much as possible. For India inquiry has been fairly extensive, and in one way and another a moderate turnover has taken place. Owing to the coal strike and uncertainty as to future production, difficulties have arisen in arranging delivery terms, and very few dealers on the other side have been prepared to grant a strike clause in contracts. This hindrance to trade has been particularly noticeable with regard to Calcutta. On the whole, trade for Bombay, Madras, and Karachi has broadened somewhat. The bulk of the business has been in light bleaching descriptions, and only occasional sales have been put through in grey staples. The monsoon season at the beginning was rather unsatisfactory, and there was some anxiety, but during the past fortnight the rains have developed, and the outlook for a successful season is distinctly better. It has been very difficult to arrange contracts of any moment for China, and the political situation in the Far East is really no better. Recently clearances at the auctions in Shanghai have not been good, and the prices secured have not been equal to replacement costs. In Egypt and the Near East generally stocks are fairly heavy, and fresh business lags behind. Rather more activity has shown itself for the outlets of West Africa and Morocco. Only restricted operations have occurred for South America. Business for the Continent has been rendered difficult by the abnormal exchange rates. Very fair reports have come through from the home trade, although the industrial situation throughout the country has been against activity. Useful clearances, however, have recently occurred in the retail and wholesale establishments, and stocks are comparatively low. With regard to production, many firms are now being compelled to close down as a result of the scarcity of coal, but, considering the length of the strike, more weaving machi-

nery is running at the moment than might have been expected.

The following is a comparative table of cloth shipments from the United Kingdom, the figures being given for the six months ended June in each year:—

		£
1913	yards 3,582,788,800	48,756,738
1924	sq. yds. 2,224,012,700	75,635,829
1925	sq. yds. 2,284,112,500	79,290,645
1926	sq. yds. 2,040,057,600	62,411,835

Spinners of yarn have not been able to improve their position in any way whatever, and most companies have lost ground. In the American section it was necessary early in June for the Masters' Federation to recommend curtailment of production by 50 per cent., this being done to meet the coal situation. It was suggested that owners should run their mills alternate weeks, thus making the output equal to 24 hours per week, as compared with 35 hours per week formerly. The majority of firms appear to be making their own arrangements as to restricting the production, but the average output is not more than 50 per cent. of the full capacity of the machinery. The offtake in twist and weft has continued very poor. In order to cope with the situation, the Masters' Federation has revived the idea of basic prices. A scheme has been put forward, and approved by a big majority of the members. It has been decided, however, not to put the proposals into operation until industrial conditions are more settled. The general demand in Egyptian yarns has not been at all healthy, and some spinners have lost ground. In this section producers are being compelled to curtail their coal consumption to 75 per cent. of the normal, and the output of yarn is thus restricted. There has not been much activity in yarns suitable for shipment abroad, business being irregular and not of any weight.

The following is a comparative table of yarn shipments from the United Kingdom, the figures being given for the six months ended June in each year:—

	Lbs.	£
1913	106,409,000	7,512,062
1924	87,486,600	14,682,791
1925	96,815,500	16,462,934
1926	87,905,600	11,487,626

The future of the industry depends to a considerable extent upon the length of the coal strike. Until there has been a definite settlement of this trouble and the men have returned to the pits, there is little or no hope of a trade revival. It is getting almost impossible for manufacturers to guarantee deliveries at a specified time, and, owing to the uncertainty, buyers are refusing to place orders. The attitude of customers is also affected by the possibility of lower values, although there is rather less anticipation of a development of this kind. It is held that all the good news is now available with regard to raw material supplies, and that any change in the outlook is bound to be adverse. In the meantime the policy of dealers and merchants in manufactured goods operating from hand to mouth for many months is bound to result in a shortage of supplies sooner or later. Now and again there are distinct signs of some of our outlets abroad being in greater need of larger shipments. It is reported that manufacturers of cloth have smaller supplies of yarn by them at the weaving sheds than for a long time back. Although the immediate prospects are not bright, there is a confident feeling in trade circles that business will improve in the autumn. It is taken for granted that the coal trouble will be out of the way and the conditions for business be healthier by that time.

THE HALF-YEAR'S OVERSEAS TRADE.

THE figures of our overseas trade for June show a substantial recovery in comparison with those for May, which covered the period of the general strike, imports being over £16 millions higher, British exports nearly £5 millions higher, and re-exports over £3 millions higher. The June totals, however, are slightly below those of April, and as compared with June, 1925, there is a substantial decline in both imports and British exports, though re-exports are a little better. The value figures

THE FIRST NATIONAL BANK OF BOSTON

for June as compared with the same month of last year are as follows:—

MONTH OF JUNE.

	1925.	1926.	Increase (+) or Decrease (—) in June, 1926.
	£	£	£
Imports	110,984,860	97,504,361	— 13,480,499
British exports	58,893,190	50,107,041	— 8,786,149
Re-exports	10,600,201	10,753,335	+ 153,134
Total exports	69,493,391	60,860,376	— 8,633,015
Excess of imports over total exports	41,491,469	36,643,985	— 4,847,484

Coal—of which only 34,500 tons were exported—iron, and steel, and manufactures thereof, and cotton yarns and manufactures account for nearly the whole of the decline in British exports, which is to a considerable extent a matter of lower prices, while on the import side, apart from wood and timber, the decline is mostly accounted for by the fact that in June of last year there was a rush of imports of manufactures which would be subject to the new duties on July 1st, including silk and silk manufactures and motor-cars. The import figures for June of last year, in fact, were abnormal. As compared with June, 1924, imports are £9 millions higher, while British exports are £12 millions lower, and that the import excess is, therefore, £20 millions greater than it was two years ago.

Turning to the figures for the half-year, we find that there has been a reduction of 5 per cent. in the import of manufactures here again the abnormal imports of the first half of last year, a mainly responsible:—

SIX MONTHS JANUARY TO JUNE.

	1925.	1926.	Increase (+) or Decrease (—) in 1926.
	£	£	£
Imports	575,512,233	602,556,031	— 74,972,202
British exports	392,617,170	338,214,247	— 54,444,923
Re-exports	77,908,087	66,598,983	— 10,850,104
Total exports	470,525,257	404,813,230	— 65,295,027
Excess of imports over total exports	207,419,976	197,742,801	— 9,677,175

In the first half of 1924 the surplus of imports was less than £136 millions, British exports in that period being £388 millions. Of the decline of £54½ millions in British exports coal accounts for over £9½ millions, but the bulk of the remainder is under the heading of articles wholly or mainly manufactured. Cotton manufactures are down by £22½ millions, and woollen and worsted manufactures by £6 millions. Iron and steel and manufactures thereof show a decline of £1¼ millions, but non-ferrous metals and manufactures are £1½ millions up. In the case of iron and steel the decline is a matter of price, but the following table, which gives the quantity figures of some of our principal exports for the first half of each of the past four years, tells a gloomy story:—

	1923.	1924.	1925.	1926.
Iron and steel and manufactures thereof	2,215,643	2,024,417	1,831,416	1,900,814
Cotton yarns	70,225,700	87,486,600	96,815,500	87,905,600
Cotton piece goods	2,106,868,600	2,224,012,700	2,284,112,500	2,040,057,600
Woollen tissues	69,365,500	75,503,000	66,517,900	56,926,700
Machinery	222,755	219,509	253,721	240,087
Motor cars	2,252	6,124	12,778	14,946

It will be seen that the volume of exports of iron and steel and manufactures thereof was larger than in the first

half of 1925, but the value figures declined from £34 millions to £32.3 millions. The quantity of plates and sheets and railway material exported increased, but in other directions the volume was lower. The reduction in the volume of cotton exports was also accompanied by lower prices, and the same is true of woollen and worsted manufactures. The increase in motor exports occurs mainly under the head of light chassis, Australia alone accounting for an increase of 3,325.

From the next table it will be seen that price changes are to a substantial extent responsible for the movements in the value figures of imports:—

	First Half of 1925.		First Half of 1926.	
	Quantity.	Value.	Quantity.	Value.
Wheat	46,796,021	£35,371,871	46,645,388	£30,830,081
Barley	4,603,338	2,962,862	4,143,588	1,935,089
Raw cotton	9,761,245	66,934,523	8,188,482	43,645,825
Sheep and lambs' wool ..	4,647,540	49,810,158	5,474,683	42,597,296
Raw rubber	760,214	6,113,706	1,534,720	18,620,109

In the first four items prices were substantially lower, but while the quantity of rubber imports was approximately doubled, the value thereof increased more than three times. Imports of coal in the six months were 606,718 tons, valued at £976,896, of which 600,634 tons, valued at £966,290, were in June. Imports of food, drink, and tobacco in the six months fell by £19 millions, prices again being responsible for a substantial proportion of this decline. Imports of manufactures declined by £25 millions, of which £2½ millions occurs under the heading of cutlery, &c., £8 millions under silk and silk manufactures, £3½ millions under other textiles, and £4 millions under vehicles.

The bullion and specie figures for the first half of each of the past three years have been as follows:—

	Imports.	Exports.
January-June.	£	£
1924.....	25,488,405	38,692,492
1925.....	23,401,980	24,595,860
1926.....	23,025,363	15,161,853

Exports of gold in the past half-year amounted to only £9½ millions, as compared with £18 millions in the first half of last year, while imports were unchanged at just under £18 millions.

The figures of shipping engaged in the overseas trade show that in the past half-year the tonnage cleared with cargoes was 26,119,117, against 30,698,151 and 31,561,345 respectively in the first half of the two preceding years. An analysis of the chief value figures for June and the six months of this year and last will be found in the statistical section of this issue.

NEWSPRINT AND TIMBER SUPPLIES.

LORD ROTHERMERE, in introducing the Anglo-Canadian Pulp and Paper Mills, Limited, which has been incorporated in Canada, to the investing public, gave some striking facts regarding the terrible drain on the timber resources of the world occasioned by the manufacture of paper. He said that "not one in a thousand of its consumers" (the public) "ever gives a thought as to the sources of supply or as to the quantities in which the raw material (for paper) exists." His lordship, in the course of his very interesting article, referred to the fact that newspapers are multiplying fast in every country, the circulation of some of them reaching figures that were beyond the wildest conjecture a few years ago. He alluded also to the enormous sizes of Sunday editions of some of the papers in the U.S.A. (200 pages being quite a usual size, with daily editions containing from 36 to 60 pages), and he estimates the world's annual manufacture of newsprint at 5,400,000 tons, "each ton requiring about one and a half cords of wood." One cord of wood equals 128 cubic feet, and one Petrograd standard equals 165 cubic feet. Multiply the annual tonnage by 192 (1½ cords), and divide by 165, and we obtain the total quantity in Petrograd standards, the standard basis of measurement on this side of the world for house building and general construction woods.

$$\frac{5,400,000}{1} \times \frac{192}{165} = 6,283,000 \text{ Petrograd standards.}$$

This is equal to six times Finland's annual exports of house building and general construction woods, and represents in quantity half as much again as the annual total sawn wood exports of the leading timber shipping countries of Europe—i.e., Finland, Sweden, Russia, Norway, Estonia, Latvia, Lithuania, Poland, Germany, and Czecho-Slovakia.

Pine and spruce (the popular red and white woods respectively of the timber and building trades of the United Kingdom) for wood pulp purposes are usually young growth trees, and it is a fact that whilst these are sacrificed in such enormous quantities for the making of newspapers (and for fire-lighting purposes the morning after publication), the demands of the newspaper proprietors in the American and European Continents (the natural homes of conifers) are in keen competition with colliery owners for young timber for the pits. Whenever the price of pitprops is proportionately higher than for pulpwood, some whitewood (i.e., spruce) is exported in the form of props. In brief, when pulpwood is in good demand for paper the young trees are used for paper, and vice versa.

This is illustrated by the export statistics of pitprops and pulpwood from Finland in 1925 and 1913, quantities of which have been converted into Petrograd standards to keep our statistics uniform:—

	Pitprops.	Pulpwood.
1913	404,000	113,111
1925	276,888	311,332

From this it is easy to see that the colliery proprietor and the newspaper proprietor are at issue, and that higher prices given for wood for newspaper production mean, in the end, higher prices for coal. We get very little pitwood from Canada. Of the four and a half million pounds sterling spent on imported pitwood during 1926 the British Empire is not included specifically in the Government returns, the only British imports of these descriptions that we can trace in this respect being 378,000 loads from Newfoundland, at an estimated cost of £107,000. This situation as regards our supplies of young trees, either for paper or for pitprops, from our Empire overseas is explained by the fact that the American newspaper proprietors are keen buyers, and on a large scale, of such, as they are also of European wood-pulp; and they are also coming—slowly, it is true, into the buying market for the mature growth trees converted into the form of sawn deals, battens, boards, and planed boards for house-building and general construction work.

It was stated in a report issued a few years ago by the United States Forest Service that three-fifths of the original timber of the United States has gone, and timber there is being consumed four times as fast as it is being grown, whilst the remaining quantities are becoming more and more difficult of access. At the time inquiries were being made prices of pitwood had risen in 20 years in various mining districts by 100 to 400 per cent.

It cannot be over-stressed that the great and ever-increasing inroads into the world's forests for material for the making of paper must, in due time, have a very great and prejudicial effect on the prices of pitwood, as well as on prices of mature timber for houses, by this ruthless slaughter of young trees. The present reckless squandering of young forests far outdoes the good accomplished in the intensive plantings by progressive Governments, by "Arbor Days," "Save the Forest (from Fire) Weeks," and the fighting of fungus and insect pests that do such material damage to young and old trees, all of which reforms are being carried on with such enthusiasm in all parts of the world. Even before the war, costs of timber for house-building work, although fluctuating a little according to supply and demand, showed a marked upward movement, and this is likely to continue faster in the future, especially if the producing countries do not over-supply the European timber-consuming markets as they have done during the past few years.

Lord Rothermere's new and great acquisition will produce about 45 years' supply of timber for the projected mill. It is to be hoped, however, that before the expiration of that period inventive genius will have discovered something less valuable than trees for newsprint, and that the then remaining resources of timber owned by the new company will be used principally in the providing of material for the making of the home and for the general comfort of man, for which trees were first intended.

THE POLITICAL CRISIS IN CANADA.—I.—THE CUSTOMS SCANDALS.

(BY OUR CANADIAN CORRESPONDENT.)

SMUGGLING is a very ancient industry common to all lands and climes. There was once a minor rebellion in the United States known as "The Smugglers' War," and anyone who has read two books called "The Smugglers" and "Smuggling Ways and Smuggling Days," by the late Lord Teignmouth, will realise how extensively the art was practised in Britain down to the middle of the nineteenth century, when the protectionist system was broken down. But during the last 75 years smuggling as a regular industry on a commercial scale had virtually disappeared—the profits simply did not compensate for the risks which had to be run. However, on the North American continent the situation changed when there came into force in the United States and large areas of Canada sumptuary laws which prohibited the sale of alcoholic liquors in any shape or form. But these laws were passed in face of the strong disapproval of large minorities, who declined to regard them as possessed of any moral sanction, and persistently set themselves to flout them. In every "dry" area on that continent there are thousands of "wets," many of them people of ample purses, who were determined not to be bereft of their usual supplies of liquor, and are willing to pay higher prices than before for it. Here was demand, and there were not lacking enterprising spirits who were ready to provide the supply. Now smugglers must have some base of operations, and the sea, while freely utilised, had many disadvantages, especially in winter. Obviously the land frontier offered easier facilities, and when Quebec, the province of Canada lying nearest to the richest and most populous section of the United States, declined to countenance prohibition, it made available a magnificent base of operations for the smugglers. It cannot be alleged that smuggling and bootlegging were not rife in other provinces, but Quebec, which also contains the great ocean gateway of Canada, offered the best facilities for its development, and it was soon flourishing there on a voluminous scale.

Just at the time when the smuggling industry was beginning to attain great dimensions, there was appointed as Minister in charge of the Customs Department a veteran French Canadian politician, now known as Senator Bureau. During his long career in the Commons Mr Bureau was one of its most popular figures; he was a very skilful politician, but his easy-going disposition, his cynical habit of mind, and his perennial willingness to oblige friends, made him the worst of administrators. It was impossible for him to be a ruthless disciplinarian with his subordinates, and as on the liquor question he was frankly and pronouncedly "wet," it was quite beyond his power to take stern measures to cope with an industry which was only violating laws, despised by himself as absurd and obnoxious, and which was bringing handsome profits to numbers of his compatriots. The result was that at a time when the administration of the Customs Department should have been vigorously tightened up, it was actually relaxed, and subordinate officials were allowed the widest latitude. So smuggling grew by leaps and bounds. Liquor moved in all sorts of guises, from "wet" to "dry" areas, without serious let or hindrance, and from its marketing to thirsty Americans millions of dollars flowed into Canadian pockets. Day and night high-powered cars moved across the international frontier carrying supplies of liquor which had been brought in from Europe via Montreal to American consignees, and dozens of motor boats plied on the inland waterways on similar errands. There were seizures and confiscations, but the risks were not great, for a high official was hand in glove with various gangs of smugglers. Not only did he connive at their operations, but he generously allowed them to use as a rendezvous a farm owned by himself near the international boundary. He was, moreover, a trusted officer of Senator Bureau, and if any trouble arose he was always ready with explanations, which his chief cheerfully accepted at their face value.

Naturally, the smuggling of liquor from Canada soon aroused the attention of the authorities charged with prohibition enforcement in the United States, and they made representations to Ottawa which were backed up by powerful Canadian papers like the *Toronto Globe*. The King Government was forced to take action, and an arrangement was entered into for close co-operation between the American and Canadian Customs authorities to check smuggling across the international boundary. But the regulations devised were more honoured in the breach than in the observance; Canadian Customs officials were instructed not to sign clearance papers for liquor cargoes consigned to points in the United States, but they signed them by the dozen for shipments billed to Yokohama, Mexico City, and St Pierre Miquelon, and when the consignments thus visé were subsequently encountered at the boundary heading straight for some thirsty American city like Detroit, obstacles to their further progress were rarely raised. The inland waterways of North America apparently abound in craft of supernatural speed, which are capable of leaving a Canadian port at sundown with a cargo of liquor consigned to the Bahamas or Vera Cruz, and being back at their berths next morning with their cargo safely delivered.

Seafaring folk came to regard Montreal as the port offering the best facilities for smuggling in the universe, and the tribe of smugglers which deals in narcotic drugs—an even more profitable line than liquor—were soon making free use of its possibilities. An international gang of drug smugglers, whose European headquarters are at Basle and Antwerp, found almost unhindered entry for the supplies destined for their North American trade, whose annual value ran into millions of dollars. Almost perfect arrangements existed at Montreal for their unobstructed passage; each consignment of drugs invariably arrived in six containers labelled cocoa or mustard, and three of them, which were marked with an almost indiscernible blue cross, were invariably opened by the vigilant Customs officials, and by the genuineness of their contents procured unchallenged entry for the other three, which contained the precious drugs.

The motor-car thieves of the United States, whose operations were on a gigantic scale, were able to use the Montreal Customs House as a regular clearing depot for their booty. They drove the stolen cars across the boundary, and deliberately courted capture and confiscation for non-payment of duties, serenely confident that their confederates in the Customs Service would in due course restore the cars to their possession by the device of a faked public sale, which created a new Canadian title for the cars and facilitated their disposal.

As long as the smugglers confined their energies to alcoholic liquor, motor-cars, and narcotic drugs, the public as well as the Customs officials acquiesced in the situation, and isolated protests from religious and other reforming bodies fell upon deaf ears. But the smugglers soon found out that return cargoes of highly dutiable goods, like silks, laces, cigarettes, rubber articles, &c., offered attractive opportunities for augmenting their profits, and they promptly turned their experience in evading Customs barriers to a wider field.

Soon merchants and manufacturers were confronted with very serious competition from goods which had never paid duty, and there was scarcely a city or town where intelligent "flappers" did not know of certain stores selling silk stockings and blouses at prices substantially lower than what reputable shops demanded. Then the merchants and manufacturers bestirred themselves, and formed an organisation known as the Commercial Protective Association to cope with the smuggling evil. It employed trained investigators to collect evidence, and speedily found the chief offenders. But when it submitted convincing evidence of the misdeeds of one of his subordinates Senator Bureau declined to entertain any doubts of his honesty and competence, and actually gave him promotion. So appeal was made to Premier King himself, and a long array of facts about smuggling was placed before him. Mr Mackenzie King professed deep concern, and promised resolute action by the Government. A measure increasing the penalties for smuggling was passed last session, and the help of some additional investigators was lent to the Commercial Protective Association; but the resolute action which was required was not taken,

and smuggling, so far from being checked, grew in volume.

So the Commercial Protective Association, disgusted at the indifference of the King Government, approached the Conservative Opposition, and put them in possession of the evidence collected. When the Federal Parliament met in January and the struggle for party supremacy was raging, the Opposition were only too glad to avail themselves of the formidable weapon which had been placed in their hands. They waited their opportunity, and Mr H. H. Stevens, the ex-Minister of Trade and Commerce, launched very sweeping and categorical charges against the administration of the Customs Department. Faced with these, the Government had no alternative but to appoint a Special Committee of Parliament to investigate them. It consisted of four Liberals, four Conservatives, and one Progressive.

The general tenor of the evidence offered to the Committee clearly demonstrated that the smuggling industry had grown to gigantic dimensions, that it was no longer confined to alcoholic liquors and narcotic drugs, and that it owed its prosperity not merely to the passive connivance, but to the active co-operation of many Civil Servants, whose recreancy to duty increased their incomes. Many of the cases dealt with by the Committee partake of high comedy, and it would require the pen of a Captain Marryat to deal adequately with such episodes as the strange career of the famous craft known to fame as the barge "Tremblay." This vessel, which had been hired by august potentates in the bootlegging industry of the United States to convey from Gaspé to Montreal a cargo of alcohol valued at \$250,000, brought from a Belgian port, was caught by officers of the Quebec Liquor Commission at a small port on the St Lawrence, while she was discharging her precious freight in the dead of night into a fleet of waiting motors. Everyone on board was placed under arrest, the liquor was seized, and the vessel was taken to Montreal. When it arrived there the resourceful Mr Bisaillon claimed it as treasure treve for the Federal Customs Department, and assumed charge of it. However, two of the American owners of the cargo, one of whom bore the engaging name of "The Gorilla," were allowed to escape and vanish into the blue. Mr Bisaillon was arrested, but was acquitted, and the captain and crew of the barge secured a most generous settlement from Ottawa, for, on payment of the modest sum of \$1,700, their boat, which had been caught in a smuggling fraud involving \$250,000, was released to resume its lucrative activities.

Equally interesting is the subsequent history of the liquor seized on the "Tremblay." Its transportation from the dock to the Customs warehouse provided a chance for a Bacchanalian orgy to numerous stevedores and truck-drivers, and while it lay in storage a substantial quantity was pilfered. The balance remained in storage until the eve of the general election of 1925, when the Hon. G. H. Boivin, who had succeeded Senator Bureau, sold it at a bargain-counter price to a firm of distillers, which has now been proven guilty of persistent smuggling and grave revenue frauds.

But perhaps the most disturbing feature of the revelations was the abundant proof that time and again the course of justice had been deliberately perverted through political influence for the benefit of smugglers who were apprehended. There were honest officials in the Customs Service who did their duty and made arrests and seizures, but usually thereafter the wires to Ottawa would begin to burn with pathetic messages from the political friends of the culprit to the effect that a deserving citizen must not be persecuted for a trivial offence. It was one such case which was the real cause of the downfall of the King Government.

Moses Aziz is an Assyrian immigrant who has risen to distinction in the bootlegging profession in New Brunswick, and last summer, when he was caught red-handed—not for the first time—with a supply of illicit liquor, he was sentenced to a heavy fine and three months' imprisonment. But he was a zealous worker in the cause of Liberalism, and when Mr Robichaud, the local Liberal M.P., sent an urgent message insisting that the prison gates must not close upon one who would be a "precious help" in the general election, then approaching, the tender-hearted Minister of Customs promptly stayed the

gaol sentence, and Mr Aziz remained at liberty until the facts were revealed by the Committee. It was a gross case of political interference with the course of justice, and the Conservatives, who were able to point to the serious view taken by the British House of Commons of the similar, but infinitely less serious, allegation brought against Sir Patrick Hastings in 1924, made the most of it.

But such interference was not confined to politicians on the Liberal side, for the Chief Whip of the Conservative party was shown to have laboured assiduously for the mitigation of the penalties imposed upon an offender who had tried to bribe a Customs officer. Altogether far too many Members of Parliament displayed a hopelessly inadequate sense of their public responsibilities, and were ready to exert their influence for the benefit of political friends, regardless of the fact that they were thereby aggravating the demoralisation of the Customs Service.

The Committee was able to arrive at a unanimous report by agreeing to leave the political aspects of the case to the verdict of the House of Commons, and the document which it submitted to Parliament contained a very comprehensive review of the condition of affairs in the Customs Department. It found that for a number of years it had been undergoing steady demoralisation, and that the process had been accelerated under the régime of Senator Bureau, who had shown a very inadequate appreciation of his duties. It recommended a wholesale reorganisation of the Department, to be assisted by the dismissal or retirement of a number of important officials. It also submitted a long list of other recommendations, for changes in administrative methods, for a reduction in the number of ports of entry, for the prosecution of numerous offenders who are now charged with revenue frauds, for the establishment of a special secret service to cope with the smuggling evil, and other reforms. It admitted that its investigation had been incomplete and covered only a limited area, and suggested its continuance by some tribunal. It was when this report came up for discussion in the House of Commons on June 22nd that the political crisis began.

Notes of the Week.

Housing Progress.—In the course of the speech with which he introduced the estimates for the Ministry of Health in the House of Commons on Tuesday, Mr Neville Chamberlain gave some important figures concerning the pace at which the shortage of houses is being reduced. In the five years before the war, he told the House, the average number of houses of all classes completed was 61,000 per annum. For the 12 months ended March 31st last the figure was 173,000, of which about 153,700 are classed as working-class houses. The rate of progress, said Mr Chamberlain, is still increasing. The Ministry of Health estimates a sum of £8½ millions comes under the heading of housing grants. Of this £370,000 is for grants under the 1924 Act, £750,000 is in connection with houses built under the Act of 1923, while no less than £7,320,000 is incurred under the provisions of the Act of 1919. The Exchequer liability in regard to houses under the 1923 Act is £6 per house per annum for 20 years, and under the 1924 Act £9 for 40 years. Under the Addison scheme, Mr Chamberlain said, the annual cost to the Exchequer is at present £41 per house, and the liability lasts for 60 years, subject to certain reductions as loans, roads, &c., are paid off. In addition to this, charges in respect of houses now being erected are growing. It is, therefore, as Mr Chamberlain admitted, very necessary to keep a careful eye on the position. Opportunity for revision in regard to part of the expenditure will shortly arise, for under the Act of 1924 the position regarding the present housing subsidy has to come up for review next October. Meanwhile, it is satisfactory to hear that "we are well on the way to a solution of the housing problem."

Our Berlin Ambassadors.—The retirement of Lord d'Abernon was foreshadowed as long ago as last autumn (when we gave an appreciation of his career as the first British ambassador in Germany after the war). It is now announced that his retirement—which was postponed pending the implementing of the Locarno Agreements—will probably take place in the autumn of this year, when the admission of Germany to membership in the League of Nations is expected to be consummated. Lord d'Abernon has held one of the most important diplomatic posts under the most difficult conditions, and what he has achieved will no doubt be appreciated, particularly by his successor; but even the entry of Germany into the League will only remove some difficulties at the cost of creating others, and during the next phase it will still be a vital interest of both countries that the British representative in Berlin should enjoy the confidence of the German Government and should be in a position to give them frank, though friendly, counsel if occasion arises. It is already announced that Lord d'Abernon's successor is to be Sir Ronald Lindsay. It is a big step from Angora to Berlin; yet a diplomatic post in Turkey is at least a test of its holder's judgment and character, and Sir Ronald Lindsay, in carrying the Mosul negotiations through to a successful conclusion, has deserved well, not only of his own country, but of the country to which he is at present accredited. It is interesting to recall that in the pre-war period a German diplomatist of outstanding ability, Baron von Bieberstein, was similarly promoted from Constantinople to London. That appointment was intended to improve the relations between Germany and Great Britain. The hope was prostrated by Baron von Bieberstein's premature death. On the present occasion, we may hope that Sir Ronald Lindsay may long hold his new position, and may carry on the good work which Lord d'Abernon has been doing at Berlin as successfully as he has conducted his equally difficult, though perhaps not equally important, task at Angora.

The Belgian Monetary Crisis.—The serious slump in the Belgian franc has stimulated the Government to vigorous measures. Last week a plan was announced for the industrialisation of the railways, which, with the help of additional import duties recently voted, will create funds for the amortisation of the floating debt. The railway Bill sets up an autonomous organisation, to which will be leased the right of exploiting the railways for 75 years. The new company will issue marketable shares to the Government, and thus enable the latter to convert its property into cash. This week this measure has been followed by a law conferring on the executive for six months wide powers relating to the note circulation, the position of the Bank, loan supplies, &c. The Government will restrict the use of white flour, and has apparently decided to deal with the telegraphs and telephones in the same way as it is dealing with the railways. The measures reflect the alarm which is felt in Belgium, and are a determined effort to avert the consequences of the disastrous failure of the scheme of stabilisation that fell through last March.

Ministers and Directorships.—Your politician is never less impressive than when he is in a mood of self-conscious virtue, and he is never more virtuous or more self-conscious than when he is (a) smelling out a financial scandal in an opponent, or (b) rallying round the honour of one of his own leaders. If he is in opposition, you may rely on it that he will be a high-grade political purist, eager to protect our sacred public life from the taint of private interest and gain. If he is on the Speaker's right hand he will be full of points of honour anxious to protect our sacred public life from a campaign of mud-slinging which must make it impossible for "any decent man to enter the House of Commons." It follows that debates such as that on Mr Neville Chamberlain's position as a director of companies taking public contracts do not raise the dignity of the House of Commons, and the cynic with a memory of reasonable length must find a certain grave amusement in watching the Labour Party trying to be nasty without being libellous, and the Unionist Party red-hot with anger at charges, to him, unreasonable and a thousand times less scurrilous than the famous Marconi campaign of pre-war days. Nor were the argu-

ments employed to justify a Minister holding directorships of this kind as convincing as they were meant to be. The Prime Minister in a *reductio ad absurdum* proved that if this kind of objection holds good, no one but penniless foundlings ought ever to sit in the House, a line of argument that would justify any Minister of the Crown in holding any kind of position in any public company or private firm. On the other hand, it seems strange to argue that an ordinary directorship is wrong, but a directorship held by a trustee is right, for the basis of this argument is that a man is less concerned for the welfare of a business when he is managing it for beneficiaries than when a share of the profits flows into his own banking account. That may be true, but it is a very poor compliment to the trustee-Minister. The distinction between private and public companies, too, is difficult to follow. Why is it better for a Minister to be a director of a public company that has no Government contracts than of a private company that has a dozen or so? On the whole, the sound rule is that no Minister of the Crown should be a director of any company, public or private. His work as Minister ought to occupy his whole business time, and if he is doing his job as Minister properly, the company should have nothing to gain by keeping him on the board, and ought to be glad to release him for his country's good.

The Revised System of Export Credits.—The announcement this week that the Government has brought into force the revised system for export credits recommended in March by the special Committee of Inquiry has been promptly followed by the issue of detailed regulations and instructions by the Department of Overseas Trade. The Committee examined closely the then existing practice of operating guarantees under the Export Credits Act, and had before it proposals for giving official support to the method of credit insurance operated by the Trade Indemnity Company. The conclusion reached was that the most hopeful means of assisting exporters of British goods would be to permit the guarantee or insurance of longer and fuller credits for an experimental period, now fixed at three years. It is hoped that the experience gained during that time will encourage insurance companies and banks to undertake a class of business which at present fails generally to attract them. It is an essential part of the system that the goods in respect of which guarantees are issued must be wholly or partly produced or manufactured in the United Kingdom. Normally, applications would not be considered in respect of goods shipped on consignment, but applications in respect of definite sales from stocks which have been shipped on consignment with the Department's approval may be considered. All applications for guarantees must be submitted through a bank so as to indicate that the proposed insurance or guarantee is one which cannot be effected through ordinary channels. The regulations respecting guarantees fall into three classes. In the first the guarantee is given without recourse to the exporter of the goods, and in such cases the amount of guarantee must not exceed 75 per cent. of the amount of credit granted to the importer. In the second class a guarantee for the full amount of the credit may be obtained, with the provision of full recourse to the exporter subsequently in case of default. The third class, described as intermediate, provides facilities under which guarantees can be given for the whole or part of the credit, either without recourse to the exporter or with such recourse as may be agreed. In these cases the guarantee may not exceed 75 per cent. of the credit unless approved security be provided. The guarantees granted will either be endorsed on the trade bill or given in the form of a letter of guarantee, and the Export Credit Department will make good its guarantee immediately its liability accrues, provided the protected bill be held at its disposal. The new system is limited to three years, and no fresh applications for guarantees can be considered after September 8, 1929. Though every application will be examined by an advisory committee (of which Colonel Sidney Peel is chairman), traders are assured that absolute secrecy will be observed, and that they need have no fear lest their affairs be disclosed to competitors. The Export Credits Department, which is administered by the Department of Overseas Trade, has its offices at 31 King Street, London, E.C. 2.

Iron and Steel Production.—As was inevitable, the coal stoppage has brought the heavy iron and steel industry practically to a standstill. Of the 147 furnaces which were blowing at the end of April, only 23 were still in operation at the end of May and 11 at the end of June. The production of pig-iron in June amounted to 41,800 tons, compared with 510,300 tons in June of last year, while the production of steel ingots and castings was only 32,800 tons, compared with 585,400 tons a year ago. The following table shows the number of furnaces in operation and the production of pig-iron and steel in each of the first six months of this year and last:—

(In Thousands of Tons.)

	Furnaces in Blast.		Production.			
	1925.	1926.	Pig-iron.		Steel Ingots and Castings.	
			1925.	1926.	1925.	1926.
January	172	144	574.5	533.5	605.1	640.4
February	165	146	541.9	502.0	652.3	703.8
March	169	151	607.9	568.5	684.7	784.1
April	158	147	569.8	535.1	597.6	661.0
May	157	23	574.7	88.8	651.6	45.7
June	148	11	510.3	41.8	585.4	32.8
Total	..	..	3,379.1	2,273.7	3,776.7	2,867.8
Monthly average ..	..	..	563.2	378.9	629.4	477.9

Before the coal stoppage there was a distinctly upward tendency, which is shown also in the foreign trade figures which we give below:—

IMPORTS AND EXPORTS OF IRON AND STEEL.
(In Thousands of Tons.)

	Imports.		Exports.	
	1925.	1926.	1925.	1926.
January	234.8	221.7	325.4	336.7
February	234.9	228.5	298.8	339.5
March	244.9	258.5	312.2	406.5
April	274.4	261.8	297.5	313.0
May	205.4	166.6	322.1	273.8
June	201.7	233.4	275.7	321.3
Total	1,396.1	1,370.5	1,831.7	1,900.8
Monthly average ..	232.7	228.4	305.3	315.1

Exports, which attained a figure of over 400,000 tons in March, fell to 313,000 tons in April on account of the Easter holidays, and in the following two months to 273,800 tons and 231,300 tons respectively as the result of the coal stoppage. In spite of the stoppage, however, exports in the first half of 1926 were slightly higher than in 1925. Since steel furnaces are to such a large extent idle, exports in May and June must be largely the result of re-rolling imported semi-finished material; imports, which amounted in June to 233,400 tons, included 65,900 tons of billets, blooms and slabs, and 34,000 tons of sheet and tinplate bars. Of the 231,300 tons of iron and steel exported in June, 39,800 tons were galvanised sheets (compared with 60,800 tons in the previous month), 35,700 tons tinplates and sheets (33,800 tons in May), 22,200 tons pig-iron, and 18,800 tons rails. Coal exports in June were, of course, negligible, and amounted only to 34,485 tons. Imports of coal, on the other hand, amounted to 600,634 tons, but the Board of Trade returns do not analyse the source of the imports.

The Half-year's Shipbuilding.—The shipbuilding returns, issued by Lloyd's Register for the quarter ended June 30th, indicate that, while the activity of this industry continues to decline, the disturbing effects of the general strike and the protracted coal stoppage have been less marked than might have been expected. Whereas the coal strike of 1921 caused a contraction in the volume of tonnage commenced in this country from 393,000 tons in the first quarter to 69,000 tons in the second quarter of the year, the tonnage commenced during the quarter now ended totalled 168,000 tons, or only 25,000 tons less than in January-March, 1926, and actually 7,000 tons more than in the last quarter of 1925. Moreover, a parallel movement occurred abroad, the tonnage commenced in foreign countries having fallen from 194,000 tons in the first quarter to 163,000 tons in the second quarter of this year. Launchings during the quarter totalled 172,000 tons in Great Britain and 204,000 tons abroad, as compared with 191,000 tons and 270,000 tons respectively

in January-March—the foreign figures recording a relatively greater decline than the British. Satisfaction, however, that our shipbuilders are succeeding in overcoming to some extent the difficulties of the present situation is necessarily chastened by the following comparison of output in the first six months of this year and of 1925:—

TONS LAUNCHED, JANUARY-JUNE.

	1925.	1926.
U.K.	637,000	362,000
World	1,199,000	836,000

The tonnage under construction in Great Britain on June 30th was 841,000 tons—only 1,700 tons less than at the end of March, but 252,00 tons less than a year ago, and representing little more than 40 per cent. of the activity of 1913. It is, however, satisfactory to note that the present quarter has witnessed no increase in the quantity of "suspended" work. The tonnage building abroad totalled 1,129,000 tons, a fall of 38,000 tons as compared with three months ago. Of the total world tonnage under construction—1,971,000 tons, or about 57 per cent. of the June, 1913, level—no less than 885,000 tons (i.e., 45 per cent. of the total) were motor ships. The corresponding percentage of motor to total tonnage building in this country was roughly 35 per cent., but reference to the returns of work commenced shows that, relatively, we are gaining ground as motor shipbuilders, 76,000 tons of motor shipping, or 46 per cent. of the world total, having been laid down in British yards during the past quarter, against 75,000 tons, representing only 35 per cent. of the aggregate for all countries, in the corresponding period last year. The recent spurt in Italian motor-ship construction appears, temporarily at least, to be declining, but the past quarter saw a marked expansion in the motor tonnage laid down in German yards—viz., 37,000 tons, against 6,000 tons in the previous quarter. Of the 41 motor vessels of over 2,000 tons burden building in this country, it is noticeable that 34 are over 5,000 tons in size, while the world figure of 170 motor vessels of all sizes over 100 tons now under construction includes 56 motor ships each between 6,000 and 10,000 tons, and 12 exceeding 10,000 tons gross burden. Equally significant of the development of internal combustion for ship-propelling is the table issued by Lloyd's Register, showing that whereas the total indicated h.p. of marine engines now under construction or in process of installation amounts to 636,000 in Great Britain and 1,553,000 in the world, 278,000 i.h.p. in this country and 782,000 i.h.p. in the world are oil engines. The world total of steam engines is about equally divided between turbines and reciprocating types.

The World's Water Power.—One of the most remarkable developments in the history of civilisation is the enormous growth throughout the world during the past 10 or 15 years in the generation of electricity by means of water power. To-day hydro-electric plant of over 35,000,000 h.p., writes a correspondent, has been installed, calculated on the conservative basis of 70 per cent. of the normal water supply for 70 per cent. of 24 hours, and the rapidity of the growth in almost every industrial and semi-industrial country is shown by the fact that the figure in 1921 was only 23,000,000 h.p. In other words an increase of about 50 per cent. has taken place in the last five years, and the rate of advance will probably be even greater in the immediate future. Hundreds of millions of pounds of capital have already been invested in hydro-electric schemes with very satisfactory results to all concerned, and the driving of turbines, coupled to electrical generators by means of water, is a very natural step. It possesses many advantages, being efficient, scientific, continuous in operation, and devoid of troubles with smoke, dust and dirt, ash and clinker, and conveyance of coal, while it requires little labour and attendance. On the Continent, for example, almost every country is rapidly engaged in developing water power to the utmost, especially France, Switzerland, Germany, Italy, Spain, Norway, and Sweden. Thus in 1921 all Europe was developing 8,877,000 h.p. from water power, but in 1923 the figure was 12,300,000 h.p., an increase of nearly 40 per cent. in two years, while in the United States over 15,000,000 h.p., and in Canada over 4,000,000 h.p. is now being generated on the same lines. One of the most interesting examples of this modern de-

velopment, both technically and commercially, is New Zealand. At present extensive hydro-electric equipment is in course of erection, and when this is completed at the end of 1930 New Zealand will require 1,000,000 tons of coal less per annum, the present consumption of 2,500,000 tons being reduced to 1,500,000 tons. In the North Island there are 3 main hydro-electric stations, Mangahao, Arapuni, and Waikaremoana, as well as a number of smaller ones. Mangahao was completed last year, and is now rapidly being worked up to the full output of 24,000 h.p., while the first section of Arapuni, 65,000 h.p., is under construction, and this will eventually be doubled. The whole country, both the North and South Islands, is being covered with a network of power wires. From the investment point of view there is no difficulty in raising the capital, and the Manawatu-Oronua Power Board District, covering 1,300 square miles, with a population of 40,000, is a case in point. No work was undertaken until 12½ per cent. interest on the capital became assured, as a result of most detailed study of the conditions. The total inland water power of the world is estimated at 425,000,000 h.p. How large is this figure may be realised from the fact that Great Britain has at present a total installed plant of about 10,000,000 h.p., mostly operated by coal.

The Artificial Silk Industry.—The event of outstanding importance in the artificial silk industry during the last month, writes a correspondent, has been the reduction in price to the consumer. Investors in Messrs Courtaulds, Limited, have rather naturally concentrated their attention upon the effect of the price reduction on that firm, and the announcement that the firm had decided to revert to their usual rate of interim dividend was the signal for a considerable fall in the price of the shares. The connection between the price reduction and the interim announcement by Courtaulds cannot be ignored, but there are other factors, such as the coal strike and the large expenditure made out of profits on extensions, which might well account for this slight drop. Whilst in this country interest is centred upon the downward trend of prices charged by Courtaulds, it must be borne in mind that this is a world-wide movement, foreseen by none so well as by Courtaulds themselves. During the first half of 1926 imports of artificial silk yarn into this country have increased from £26,493 in January to £38,250 in June. This figure, is, however, somewhat misleading, as the actual weight of imported yarn has increased from 110,116 lbs in January to 197,171 lbs in June, which proves that very considerable price reductions have been made in Continental yarns. Further, the United States producers, led by the Viscose Company, made a very substantial "cut" as from July 1st this year. In view of these facts, it is necessary for the industry to readjust itself on a lower price basis, and the day when each consuming country caters to a very large extent for its own consumption is drawing a step nearer. It is a peculiar fact that despite the Customs tariffs in both this country and in the U.S.A., the weight of imports has steadily increased in recent months. Whether the latest price reductions made will be sufficient practically to eliminate the imports from Italy, Germany, and other European countries into England and U.S.A. remains to be seen, but one result obviously will be a greatly increased interest in the chemistry of artificial silk with a view to cost reduction. On the export side of the account, the industry has much to be congratulated upon. Despite the coal and general strikes, the totals for April, May, and June, 1926, are respectively £338,031, £395,297, and £455,966. These figures refer to manufactured artificial silk goods. In yarn exports the figures for April, May, and June are 470,540 lbs, 420,309 lbs, and 514,045 lbs respectively. In other countries there has been little material change during the last month, with the exception of Italy, where the industry is faced with a serious position as a result of the large proportion of production which has of necessity to be exported, the changes in the market requirements, and the price reductions in all countries. For some time Italy has been using every endeavour to extend her trade outside of Europe and North America. The fact, however, that in a general sense artificial silk may be produced in any country will, as in the case of Japan,

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

prove another difficulty in the way of countries dependent upon exports. This will be a more important factor in the case of Italy than in that of Great Britain, for the reason that Lancashire and Yorkshire manufacturers have always held the leading position in the fancy and high-grade lines which will possibly in a few years' time be the only imports required by many countries who have not now established an artificial silk industry, but who are seeking every opportunity to commence.

Land Settlement.—Recent Parliamentary and other reviews of the schemes of British land settlement, particularly for ex-Service men, following the war have confirmed the impression that much of the effort must be regarded as definitely uneconomic in character. The leading Acts were passed in 1919. Very soon afterwards considerable land in England and Wales and in Scotland was acquired. The acquisition of the land, together with the erection of many of the buildings on the holdings, proceeded at a time when post-war prices were at their peak. When the slump in agricultural prices came it was clear that the holdings could carry nothing like the capital expenditure which had been incurred. It was therefore decided to have a revaluation of the holdings. This is now almost completed. Everywhere it has involved substantial reduction, which, properly expressed, means that the State has shouldered further loss; but, unless there is a further break in agricultural prices, it is believed that the valuation is now such as to bring the holders as near to the payment of an economic rent as can be achieved in existing conditions. Generally speaking, in spite of the adverse conditions they have had to encounter, the holders have done remarkably well. The percentage of failures has been small. For the future, however, it will probably be the policy of the Government not to confine settlement so largely to ex-Service men; the desire is rather to accept as many as possible of the applications of men who are familiar with agricultural work and conditions. In this way Parliament will tend more and more to put the general scheme on an economic basis. But further steps are necessary, since it is generally agreed that the holders have had a very hard battle to fight. The progress of co-operation among all classes of British agriculturists is notoriously slow, but critics of the finance of the scheme are urging that a special effort should be made to recommend its benefits to the smaller men, particularly in the co-operative purchase of ingredients for the soil and co-operative use of the latest and most efficient agricultural machinery. This is an effort to secure for small men some of the advantages and the economies of large-scale farming. Co-operation and the earlier application of the results of research are believed to be urgently necessary if the men, on the revaluation which has taken place, are to maintain economic status. Some of the Parliamentary critics fear that a further revaluation may be necessary. If conducted on similar lines to the last, it can only involve additional burdens for the taxpayer; if an attempt were made to express it in terms of higher rent the holders would probably be defeated in the initial stages of their difficult task. From both points of view, therefore, it is believed there is at once safety and economy in the combination of co-operative method with the adoption of the fruits of research on land almost exactly similar to that of the holdings of the ex-Service men and others who have participated in the benefits of these Acts.

Reparation Payments.—The statement of the Agent-General for Reparation Payments of receipts and payments under the Dawes Scheme for June shows receipts of 93.8 million gold marks and payments of 89.9 millions. Total receipts for the first ten months of the second annuity year amount to 917 million gold marks, and payments 930.3 millions. In the second year Germany has to find 1,220 million gold marks, as against 1,000 millions in the first annuity year. In the table below we compare the figures for the first ten months of each annuity year:—

RECEIPTS and PAYMENTS (on Cash Basis, Reduced to Gold Marks Equivalents).
(Million Gold Marks.)

Receipts.	First Annuity Year, Sept. to June (incl.).	Second Annuity Year, Sept. to June (incl.).	Payments.	First Annuity Year, Sept. to June (incl.).	Second Annuity Year, Sept. to June (incl.).
Cash withdrawn from proceeds of German External Loan, 1924.	669.9	210.0	Payment to various Allied countries.	661.7	826.9
Budgetary contribution.	..	192.4	Expenses of Commissions.	20.5	16.6
Transport Tax.	..	..	Service of German Ex-ternal Loan.	58.8	80.0
Interest on Railway Bonds.	100.0	450.0	Discount on payments in advance, &c.	2.9	6.8
Interest on Industrial Debentures.	..	62.5	Cash in hand.	25.9	93.7
Exchange Differences & Interest Received.	0.2	2.1			
	770.1	917.0		769.8	1,024.0

In the first year the full 1,000 millions was received—800 millions from the external loan, and 200 millions from interest on railway bonds. Payments to allied countries totalled 789 millions, of which 740 millions went to Great Britain, France, Italy, and Belgium. In the current annuity year these four countries have received 780.2 millions, as compared with 621.4 millions in the first ten months of the first year. The following table shows the division of these payments:—

(Million Gold Marks.)

First Ten Months.	To Great Britain.	To France.	To Belgium.	To Italy.	Total Four Countries.
Arising on Account of Reparation Recovery Act—First year.	134.5	17.5	..	..	152.0
Second year.	166.1	33.5	..	..	199.6
Occupation costs—First year.	26.9	118.7	18.6	..	164.2
Second year.	17.2	50.0	7.8	..	75.0
Deliveries in kind—First year.	4.5	189.3	59.7	51.7	305.2
Second year.	0.3	360.3	86.0	59.0	505.6
Total—First year.	165.9	325.5	78.4	51.7	621.4
Second year.	185.6	443.8	93.8	59.0	780.2

Other payments in the current year to date include deliveries in kind of 31.4 millions to Jugo-Slavia, 7 millions to Roumania, 5.1 millions to Portugal, and 2.6 millions to Greece.

Empire Fruit Supplies.—The third report of the Imperial Economic Committee deals with fruit. It includes a general report on the imported fruit trade, followed by detailed reports on apples, citrus fruit, soft fruit, dried fruit, bottled and canned fruit, fruit pulp, jam and crystallised fruit, nuts and bananas. The Committee have collected and summarised the facts, and have presented them clearly and systematically. It cannot fairly be said that they have thrown much new light on the subjects of their investigations. There was, indeed, little left for them to discover which could not already be found in previous reports. But it is, no doubt, an advantage to have the case stated in a convenient and compendious form. The report emphasises at the outset the increasing importance of fruit in the national dietary, as well as in the accounts of overseas trade. They estimate the consumption per head in the United Kingdom in 1924 at 100 apples, 70 oranges, and 30 bananas, all of which except 38 per cent. of the apples are imported. The net increase of imports of fruit in the last 20 years has been 248 per cent., as compared with 95 per cent. for wheat and 149 per cent. for meat. These percentages represent values and not quantities, but they nevertheless indicate a growing demand for fruit in comparison with the primary necessities of subsistence—a fact which is significant not only of a wider diffusion of dietetic knowledge, but also of a rising standard of living among the people generally. The Committee have struggled to restrain themselves within the limits of their reference and of the restrictions imposed

on the scope of their recommendations. The spirit of Protection and Imperial Preference permeates the report, but they have to recognise that schemes of embargo and licence, which were strongly pressed upon them, are barred by the most-favoured-nation clauses in various treaties when read in relation to the Anglo-German Commercial Treaty, and, further, that the policy of Customs preferences was, by the decision of the Imperial Conference of 1923, ruled out of their purview. In these circumstances they state "the only policy which seems to us to be immediately available is that which we have described in our First Report as a policy of developing voluntary preference on the part of the consumer." This policy must be based on (1) the organisation of the producer within the Empire and (2) the mobilisation of the consumer within the United Kingdom. The "mobilisation of the consumer," they add, depends on providing such indications of origin that the consumer may be enabled to exercise a "voluntary preference," and also on such "educative publicity" as will induce him to see that "it is in his own business interest, apart from all sentiment, to buy from his own best customers." In another part of the Report the Committee give the reasons on which they found the assumption that the "best customers" of the British consumer are within the Empire. The appointment of an executive Commission charged, *inter alia*, with the organisation of a campaign of educative publicity is advocated, and it is suggested that it should be entrusted with certain powers of financial assistance from the Exchequer. Perhaps the most arresting statement in the Report is that the Committee, after careful investigation, came to the conclusion that "under the present system, or lack of system," the cost of distribution of fruit in the United Kingdom is, on an average, "about equal to the whole cost of growing, carrying, and handling up to, and inclusive of, the primary sale in the United Kingdom." If this is approximately true, it would seem that in this direction lies the best chance of effective action in the interests both of producers and consumers.

New Zealand Trade and Production.—Our Christchurch correspondent writes:—The trade returns for the March quarter of 1926 give clear evidence of the developments predicted in earlier communications to *The Economist*. The heavy fall in export prices has caused a serious adverse balance of trade. The following summary table, giving exports for the 12 months ending March 31, 1926, as compared with the corresponding period of 1924-5, shows the position clearly:—

Export.	Quantity.		Value.	
	Unit.	1924-5.	1925-6.	1924-5.
Wool	000's.	554	606	£000.
Butter	Bales.	1,370	1,156	17,379
Cheese	Cwt.	1,455	1,348	12,063
Meat (Frozen)	Cwt.	2,983	3,143	6,162
				9,300
Total exports		..	..	54,771
				48,698

While the value of exports has dropped by slightly more than £6,000,000, the value of imports has advanced by £3,200,000. The result is an excess of imports amounting to £4,300,000. To this visible excess of imports must be added interest and similar payments which must be made abroad, officially estimated at over £5,000,000 annually. The Government Statistician now publishes each year an estimate of the "true" volume of exports per head of population. This is arrived at by estimating the quantities per head exported at the values of 1900. Over 99 per cent. of the exports can be treated in this way, and the result is a fairly accurate indication of the actual volume of exports. The quantities exported show a moderate increase in recent years, but an estimate made by the Department of Economics of Canterbury College, and published by the Canterbury Chamber of Commerce, shows that, if local as well as export production is considered, there has been an actual decline of productivity per head in recent years. The figures arrived at are

summarised in the table below and compared with the official index of export productivity:—

(1910 = 100.)					
Official Index "True" Volume of Exports.	Canterbury Index Productivity.	Official Index "True" Volume of Exports.	Canterbury Index Productivity.		
Per Head.	Per Head.	Per Head.	Per Head.		
1900	85	91	1920	77	91
1905	85	84	1921	76	93
1910	100	100	1922	84	116
1915	94	98	1923	86	101
1918	82	60	1924	..	100
1919	75	117	1925	..	97

The wider fluctuations of the export table are to be expected, but it is interesting to find the greater falling-off of productivity in the total production. This bears out the argument of the Canterbury College investigation, that much of the stagnation is due to the "sheltered" domestic industries and to the extension of Government interference in industry. The census returns of occupations bear out this conclusion, since they disclose a definite drift from the directly productive occupations to such activities as Governmental administration, commerce, and transport. The percentages of the population engaged in these industries may be summarised as follows:—

	Directly Productive.	Not Directly Productive.
1891	63.7	23.4
1901	62.6	25.0
1911	57.1	29.7
1921	54.2	34.0

The greatest decrease in the productive classes is in the primary farming industries, which in the last 30 years has fallen 23 per cent. This is not inconsistent with the relatively greater productivity of the export industries which has been due to the greater importance of dairying in this period. In dairying there is greater productivity than in other types of farming, but the actual productivity within each type would seem, if anything, to be falling.

American Fruit and British Labour.—The issue of the third Report of the Imperial Economic Committee on Food Stuffs produced in the Overseas Parts of the Empire (Cmd. 2658), which deals with fruit supplies, has produced a chorus of headlines in the Press emphasising the monopoly which American interests have secured in the supplies of fruit, principally apples and bananas, to the United Kingdom. Whilst the general truth of this assertion is incontestable, writes a correspondent, there are certain points about the working of the United Fruit Company, the principal offender as regards bananas, which mitigate the disadvantages of the monopoly to this country. It is not generally realised that in Guatemala and Honduras, to mention two important areas worked by the United Fruit Company, something over 50 per cent of the salaried estate superintendents are British, many of them ex-officers, and that the proportion of English personnel tends to increase at the expense of all other nationalities. The United Fruit Company appears to be pretty well convinced that the English colonist is more suitable for their purpose than the average American young man, just because he is a colonist and comes to them with the full intention of staying out his contract and making his home for some years in the areas to which he has been appointed. The proximity of the United States and the temperament of the average American prevent this sense of permanence. The United States presents so many opportunities for work at home that it is a bad breeding ground for colonists. This tendency for Englishmen to work under American capital in Central America, especially in the cases of agriculture and railways, is likely to extend with the ever-increasing grip of the United States on that part of the world. A second point is that a very large proportion of the manual labour in the banana industry in those countries is performed by British negro subjects from British Honduras and the West Indies, as the average indigenous native has not the necessary physique. Each centre of the United Fruit Company has its own commissariat for its employees, and the more Britishers there are the more will their taste

have to be catered for with United Kingdom goods. Whilst Elders and Fyffes give employment for a large British personnel, theirs are not the only ships built for the company in English yards, as the United Fruit Company's own vessels are in some instances built in this country, three having been recently ordered in Belfast. These considerations, coupled with the fact that the United Fruit Company's shares can be bought freely by anybody, show that though that organisation may have a stranglehold on the English consumer of bananas, certain benefits do nevertheless result to British subjects and British trade.

Swiss Trade Difficulties.—Our Geneva correspondent writes:—The situation of Swiss foreign trade is still very unsteady. The slight improvement recorded during the first quarter of the year did not persist in April and May, when imports as well as exports showed a decrease on the preceding months' figures. In April the value of imports was 182,141,184f (£7,285,647), as against 208,796,790f (£8,347,871) in March, and 200,303,825f (£8,012,153) in April, 1925; on the other hand, exports totalled 144,970,730f (£5,798,830), compared with 160,313,782f (£6,412,671) in March, and 164,718,189f (£6,588,727) in April, 1925. A slight improvement was registered in May, when imports totalled 191,427,337f (£7,657,993), as against 186,031,562f (£7,441,265) in May, 1925, while exports rose to 147,299,795f (£5,891,991), compared with 191,049,383f (£7,641,975) in May, 1925. A close examination of figures shows that the total exports of the four chief industries (watches, silk, cotton, and machines) for April and May taken together are far inferior to the corresponding period of 1925; watches show a decline of 17 million francs (£680,000), silk goods of 21 millions (£840,000), cotton goods of 13 millions (£520,000), and machines of 6 millions (£240,000), together a drop of 57 millions (£2,280,000). But, on the other hand, the position of these industries, though unsatisfactory, has improved since the beginning of the year. The British strike did not affect Swiss foreign trade as much as was anticipated. In April imports from Great Britain totalled 11,179,362f (£447,174), compared with 14,593,699f (£583,748) in March, and exports to her 29,406,724f (£1,176,269), as against 30,072,878f (£1,202,915) in March. In May, owing to the strike, these figures fell respectively to 9,167,000f (£366,640), and 20,480,000f (£819,200). The precarious situation of the Swiss export trade is more clearly shown when the 1926 returns are compared with those of the preceding years. In 1913—the last normal year—the monthly average of Swiss exports was roughly 114 million francs (£4.56 millions); in 1920 it was 273 millions (£10.92 millions), that is slightly above the 1913 average, when it is assumed that, in the meantime, prices had gone up by nearly 100 per cent.; in 1921 it was 178 millions (£7.12 millions). That average dropped during the two subsequent years, when the after-war economic crisis was at its height, and it only reached 146 millions (£5.84 millions) in 1922 and 1923; it rose to 172 millions (£6.88 millions) in 1924, when conditions began to improve, but it decreased to 169 millions (£6.76 millions) in 1925; for the first five months of 1926 the average is 144 millions (£5.76 millions), or below the 1922-23 figures, a very disquieting result indeed, though it should be borne in mind that, owing to the drop in prices, the 1926 average represents a greater quantity of goods than did the 1922-23 average. The general economic outlook does not seem very promising at the present moment. Apart from trade and industry, which are decidedly slack, agriculture is now passing through very hard times in consequence of the continued bad weather. Late frost damaged the fruit trees, which have been subsequently harmed by rain and vermin, so that the fruit crop will be reduced to small dimensions; vineyards also suffered from the cold and damp weather, but their condition is more hopeful, though far from good; other crops—wheat, potatoes and the production of vegetables—will be very poor. On the whole, the agricultural production is expected to be far worse than that of the preceding years, which was already under the average. Prospects are therefore rather gloomy, and in some quarters it is feared that the present economic

difficulties may be the forerunners of an economic crisis which will be nearly as bad as the one that prevailed during 1922 and 1923.

Japanese Competition in Textiles.—Japan is slowly but steadily stabilising its position as a textile manufacturing country. The Japanese market for textile machinery has improved recently, writes a correspondent, and it is quite certain that in the comparatively near future there will be many new mills erected and also extensions to existing mills. A Parsee millowner, on a recent business visit to this country, suggested that there might be some joint action or co-operation between Lancashire and Indian manufacturers to defeat Japanese competition, but this seems unlikely, for it is recognised here that even if Japanese competition were effectively disposed of the Indian mills would probably still be able to undersell us. It is undeniable that as far as India is concerned Japanese competition has had a marked effect on the yarn trade. As an Indian journal pointed out recently, taking the last three quinquennial averages, exports in this trade have dropped since 1914 from 174 million pounds to 133 millions, and lastly to 37 million pounds, this latter figure being a little more than one-fifth of the average of the pre-war quinquennium. India's very large and lucrative yarn trade with China has been practically destroyed, owing partly to the erection of cotton spinning and weaving mills in that country, but principally owing to the competition from Japan. Artificial silk manufacturers are now obtaining a very satisfactory demand from India, but the growing demand for artificial silk in Japan is tempting Japanese speculators to turn their attention to increasing materially the output in that country, and it will be interesting to see if they attempt to capture the Indian market. It is possible that home consumption may be as great as production for a considerable time, and thus prevent exporting; during three years—1922-3-4—the consumption rose from 250,000 lbs to 2,000,000 lbs, and the ratio of increase is still maintained.

English Sewing Cotton.—As will be seen from the following summary of recent results, the English Sewing Cotton Company has, since 1922, fallen upon lean times. The decline in profits shown in the latest accounts—to March 31st last—is even more severe than that recorded 12 months ago:—

	1913-14.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.

(15%)	(15%)	(15%)	(20%)	(20%)	(20%)	(20%)	(20%)
Reserves, &c.	125,000	105,501	198,353	196,514	187,405	165,359	153,795
Carried forward	105,501	198,353	196,514	187,405	165,359	153,795	122,799

* Includes £150,000 transferred from reserve for equalisation of dividends.

Although £150,000 was withdrawn from the dividend equalisation reserve—reducing that account to £250,000—the disposable balance, after meeting depreciation and debenture interest, is about £10,000 lower than in 1925. In spite of this falling away in earnings, however, the ordinary shareholders, in addition to the generous dividend of 15 per cent., still receive a 5 per cent. cash bonus, making a total return of 20 per cent. once more. The balance-sheet shows a fairly strong financial position, reserves totalling £900,000, against an issued share and loan capital of a little under £4 millions, and assets totalling £5½ millions. At the same time, the steady decline in profits during the past few years points to the necessity for the adoption of a cautious policy by the board. With little sign of any material improvement in the cotton textile industry, we hardly think the ordinary shareholders could reasonably have cavilled at the retention in the company's coffers of the £100,000 required to pay the 5 per cent. bonus. Stock-in-trade has declined from £732,967 to £597,087, and a small decrease in investments has been accompanied by a reduction in the cash item from £72,164 to £46,430. The amount due to subsidiary companies has gone up from £139,091 to

£191,752. Nothing is this year placed to the credit of the employees' pension fund, which figures in the balance-sheet at £97,690. The allocation last year was £11,692. The directors express regret at the non-payment of a common stock dividend by the American Thread Company.

British Dyestuffs Position.—The reconstitution of the British Dyestuffs Corporation has already wrought beneficial changes in the financial position of the undertaking. For the 17 months to March 31, 1925, a net profit of £526,000 was earned, but £437,800 of this was required for depreciation, so that a debit balance of £360,600 still remained to be wiped off. The directors, therefore, decided to effect a reorganisation of the capital and to remove the Government's financial interest in the corporation. The latest balance-sheet, covering the year to March 31st last, shows these changes in detail. The issued capital is now £4,775,580, all in ordinary shares of £1 each; it formerly totalled £9,197,112, consisting of £4,117,121 of preference, £4,085,797 of preferred ordinary, and £994,194 of deferred ordinary shares. The value of land, buildings, plant, and machinery has been reduced from £2,958,498 to £1,699,233, and now that this item approximates more closely to its true value than was formerly the case, the depreciation allowance has been cut down from £437,832 to the reasonable sum of £80,000. Thus, although net profits in the current report are reduced to £253,517, after deducting the year's depreciation allowance, the balance remaining is £173,517, or nearly £85,000 higher than when profits totalled £526,500. Stocks are down from £1,320,324 to £1,023,503, and sundry debtors from £646,886 to £468,120, although cash and investments (shown together) account for £2,078,053, in contrast with £3,247,321, the reduction being due to the payment of £980,136 to the preference shareholders under the reconstruction scheme. The item of £251,552, representing preliminary expenses, has disappeared from the accounts, while goodwill, patents, and trade-marks, which formerly were put at £750,000, have also been eliminated. Sundry creditors have declined from £338,070 to £319,812. The directors report that following the Government's surrender of its shareholding in the company Sir Henry Birchenough has retired as a Government director. Sir Alfred Mond has also left the board, owing, it is stated, to pressure of other business. Lord Ashfield, the chairman of the company, in drawing attention at this week's meeting of shareholders to the result of operations for the past year, stated that the profit of £253,517 "is not as satisfactory a result as we should have liked to place before you, and, when we seek for an explanation, we find that it is entirely due to the reductions in prices obtained for our products, which have been continuous throughout the year, and which represent a fall of not less than an average of 5.6d per lb as compared with the preceding period. This severe fall in prices can only be met by a lower cost of manufacture arising from reduced prices of raw materials, labour, and other direct charges of production, by an increased volume of trade, or by a reduction in the cost of operative and standing charges arising from increased technical efficiency and economy in works and administrative methods. Until such increased trade does arise no great improvement in our turnover can be expected, although it is some satisfaction to be able to say that, in spite of these adverse circumstances, the corporation's volume of trade has been more than maintained during the past year; but even should these factors be favourable, it is, nevertheless, upon technical and administrative efficiency that we must chiefly rely to improve our position, and again I find myself in the position of being able to report to you that considerable progress in these directions has been made, and that much has been accomplished towards meeting the decline in selling prices." During the year the company acquired control of Scottish Dyes, Limited, "for the purpose of consolidating, extending, and improving the manufacture of vat dyestuffs."

Glasgow Corporation Tramways.—We have for several years past given the accounts as they appeared of the Glasgow Corporation Tramways, one of the most successful municipal enterprises in the country. For many years,

after making provision for depreciation and renewals, the tramways undertaking showed a profit and contributed to Common Good Fund of the City of Glasgow. Of recent years, however, there has not been a surplus after making the provision for depreciation and renewals on the scale, which the City has set up as appropriate. For the year ended May 31st last the deficit, as it is properly called, amounted to as much as £137,851, as compared with £80,276 in 1924-25. The details are of interest. The income from traffic was £2,263,107, as compared with £2,352,470, and the working expenses £1,653,526, as against £1,746,000, the net surplus on working being £609,581 in 1925-26, as compared with £606,469 in 1924-25. The addition of interest made the available revenue £659,915, against £634,407. The principal items to be deducted were interest payable, sinking fund, and depreciation and renewals. Their total for last year came to £797,766, as against £714,683, resulting in the deficits as shown above. Depreciation and renewals were put at £526,752, as against £490,073. The depreciation and renewals fund at the end of the year in May last stood at £1,839,789, as against £1,398,198 a year before. The provision made by the Glasgow Corporation for the depreciation and renewal of its system may seem excessive, and the deficits of recent years a matter of precautionary bookkeeping rather than business losses. Yet it is far better to be too lavish in provision for depreciation and renewals than not to set aside enough. Details are given of the percentages written off year by year, and they are adhered to whatever may be the result reached in apparent deficits. The Corporation writes off every year £1,000 a mile of single track, 15 per cent. off the electrical equipment of cars, 20 per cent. off other rolling stock, 10 per cent. off the power station plant, and so on. In addition, all current repairs, other than renewals, to track, plant, and rolling stock are paid for out of current revenue. In so far as one may judge from the rather complicated accounts, and in the absence of an official summary and explanation, the whole tramways system of Glasgow could be scrapped without involving a capital loss to the Corporation.

Eagle Oil Transport.—The Eagle Oil Transport Company, Limited, has to report another slight decline in gross profits in its accounts for 1925 just published. Owing, however, to the cancellation of £142,000 of the seven-year notes and to the fact that no allocation was necessary for the corporation profits tax reserve, which last time received £7,000, the net profits work out approximately £4,000 higher than in 1924:—

	1921.	1922.	1923.	1924.	1925.
Issued share capital	5,000,000	5,000,000	5,000,000	5,000,000	5,000,000
7½ per cent. notes ..	3,000,000	3,000,000	2,458,300	2,321,650	2,179,350
Gross profits	1,066,440	1,502,363	1,183,473	1,131,238	1,128,553
Net profits	944,316	1,237,277	936,240	915,308	919,297
Reserve and deprec.	536,042	692,838	750,000	750,000	750,000
Preference dividend	160,000	160,000	160,000	160,000	160,000
Ordinary dividend	172,756	300,000	nil	nil	nil
Rate	(8%)	(10%)			
Carried forward ..	+ 75,517	+ 84,440	+ 26,240	+ 1,692	+ 9,297

The directors again report that the vessels have run satisfactorily, and, the ordinary shareholders having waived their right to any dividend for the year, there has been transferred to depreciation reserve the sum of £750,000. This fund has now reached the substantial total of £4,144,934, and as the amount previously set aside for repairs has exceeded actual expenditure by £73,097, this sum goes to the repair reserve, bringing it up to £631,083. The total amount of notes outstanding is now £2,179,350, having been reduced from the original issue of £3,000,000. Cash has advanced from £1,918,179 to £2,431,062.

Victoria Falls and Transvaal Power Company.—This important enterprise—whose title is rather a misnomer—continues to exhibit steady expansion. Last year's net profit of £363,900 compares with £349,850 in 1924 and £294,200 in 1923. The dividend on the ordinary shares is raised by 1½ per cent. to 14 per cent., a rate comparing

with 10 per cent. for 1923, 8 per cent. for 1922, and 5 per cent. per annum previously. The usual addition of £50,000 to reserve raises that fund to £400,000, and leaves the increased balance of £126,700 to go forward. Comparison of the balance-sheet items indicates further capital expenditure upon a considerable scale. After allowing for depreciation, there is a net addition of £243,900 to the power stations, &c. For the first time the outlay and liabilities in connection with the Witbank station appear as a separate item—at £782,700. Of the three 20,000 kilowatt installations projected, the first was started up at the end of April. It is expected to exercise a beneficial effect upon the working costs of the Transvaal mines. Naturally, the disbursements above referred to, in conjunction with debenture redemption upon an increased scale, have trench upon the company's resources; but, even so, on December 31st the free cash amounted to nearly £400,000, plus £1,334,300 of gilt-edged investments. The capital of the company is £1,000,000 in ordinary shares and £2,000,000 in preference shares. The latter carry 6 per cent. cumulative in priority to the ordinary, and participate in surplus profits *pro rata* until they have received a total of 10 per cent. for any year. Current quotations are: preference, 34s; ordinary, 2½. The price of the former includes a final dividend of 1 per cent., that of the latter 11 per cent. On the basis of last year's dividends, the yields shown are respectively 6 per cent. and 5½ per cent.

Parent Trust.—Once again it is not possible to obtain any exact comparison of the results of the Parent Trust and Finance Company for the years 1924-25 and 1925-26. This is because of the fact that in the accounts issued 12 months ago only half of the net profit of £523,797 then shown was applicable to the year covered by the accounts, the balance being dividend and profit accrued prior to that date. But by halving the 1925 figure and comparing it with that given in the accounts for the year to April 30th last, a more or less accurate guide is obtained. As the net profits shown in the present accounts are £252,755, and as the half of the previous net figure is £261,898, it can safely be assumed that the company has been able to maintain its position during its financial period ended in April. The balance-sheet shows that general investments and holdings in allied companies are practically the same as a year ago; loans by the company have gone up from £149,161 to £413,901. The directors again report that in their opinion "the above investments are fully worth this sum." The auditors bear out this statement, for they remark in their certificate, "the majority of the company's general investments have market quotations which show a greater value than the figure at which they were brought in. We have had placed before us," they continue, "a schedule of the remainder of the investments, together with the directors' valuation of same, which shows that in the aggregate they are fully worth the sum at which they are brought into the balance-sheet. Sundry debtors have been reduced from £88,717 to £27,494, while sundry creditors have also declined from £110,557 to £69,192. On the other hand, the item "loans to the company against security" has been increased from £380,117 to £901,636, although forward commitments in respect of new business are approximately £70,000 lower at £292,960. The ordinary shareholders are not this time given the 4s bonus declared in respect of 1924-25, but their dividend rate is kept at 8 per cent., while the deferred share capital also receives a repetition of the 20 per cent. dividend. Nothing is transferred to the reserve fund, which figures for £720,655, the balance carried forward being £69,482, against £63,374 brought in.

Sun Life Assurance Company of Canada.—This Canadian office, which has been operating in this country for many years, publishes remarkable figures for last year. The new policies issued numbered 57,944, assuring £39,755,559 net, an increase of £11,509,042. This business for one year was larger than the total assurances the company had in force 13 years ago. The re-assurance of life contracts from the First Reassurance Company of

Hartford, U.S.A., amounted to £6,271,387 net. The life funds increased from £54,203,056 to £59,918,226, and earned 6.41 per cent. interest. The profits of the year, based on the increase in the valuation of securities made by the Government authorities, are stated to have been £4,451,976, but in taking credit in the books the company has deducted £616,438 from the official valuation placed in the assets. The contingency accounts have been increased by £513,699 to £2,054,795. The sum of £1,574,545 was paid or allotted as profits to policyholders during last year, and £1,342,324 added to the undivided profits.

Transvaal Gold Output.—The output of gold of the mines of the Transvaal during the month of June, 1926, amounted to 852,145 ounces of fine gold, as against 849,214 ounces in May, 1926. The output for the month of June, 1925, amounted to 780,251 ounces of fine gold. The following table shows the monthly output for the past seven years:—

	1920.	1921.	1922.	1923.	1924.	1925.	1926.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

	187,448	186,696	193,070	200,279	203,331	205,874	205,917	205,594

The number of natives employed at the gold mines shows a slight decline on the month.

Mining Notes.

Tronoh Mines, Limited.—This week there have been issued the annual statements of three of the Malayan tin-dredging enterprises in which British capital is interested. On the whole, the results shown must be described as a little disappointing, operations having been adversely affected by shortage of labour or other drawbacks. Nevertheless, surprisingly little effort has been exerted upon the market quotations for the shares, which are partly based upon expectations for the future. The sales of tin ore last year of Tronoh Mines amounted to no more than 979 tons, as against 1,290 tons in 1924, the output from the dredges being 483 tons in place of 637 tons. An increase of some £13 in the average price realised partly offset the decline in quantity; nevertheless, the profit came out distinctly lower than before. The Tronoh, of course, is a finance as well as a mining undertaking, hence its revenue account shows receipts from various sources. Last year's income from the sale of tin ore was supplemented to the extent of £21,700 by interest and dividends, and nearly £15,000 profit on the sale of investments, both of these items showing a small increase. Despite the reduction in output, mining expenses increased, the net profit figuring at £66,700, in place of £82,500. The dividends totalled 4s 6d per share, in place of 5s previously; but from the balance of £63,500 brought forward from 1924 £25,000 has been deducted in respect of the issue of bonus shares. Once again £10,000 odd is written off property account, leaving £45,600 to be carried forward. Investments now figure in the balance-sheet at £180,700, an increase of £19,700, notwithstanding the realisations already referred to. They

comprise principally Trustee securities and shares in the Sungei Besi and Sungei Way undertakings. By the share bonus above named and an issue of a like number of shares (on bonus terms), the capital has been increased to practically £250,000. The cash position is strong, the funds in hand at the end of last year amounting to £112,000. Additional resources were provided for the purpose of installing two dredges on the new area acquired about a year ago. It is intimated that at the forthcoming meeting particulars may be given of still a further new area. On the basis of last year's actual dividends the shares yield less than 8 per cent., but, as indicated, there are the prospects of a considerable expansion within the next 12 to 18 months, the company having at present only three dredges at work.

Sungei Besi.—Like the associated undertaking above referred to, the Sungei Besi turned out less ore in 1925 than in 1924, the totals having been 550 and 592 tons respectively. The 1925 metal fetched £8 4s per ton in excess of the 1924 average; the disparity between the prices realised by the two companies is a little curious. The net profit, after providing for ordinary depreciation, figures at £39,300, in place of £46,200. No change is made in the dividend total, 4s per share again being paid. On the present occasion nearly £19,000 is written off property, plant, and machinery account, in place of only £3,350 previously, leaving a balance of £26,100 to be carried forward, as against £29,940 net brought in. An important factor in the position of this company is the installation of a hydro-electric scheme which will permit a substantially increased output at a reduced average cost. The directors announce that full particulars of the position as regards this scheme, and also the large additional areas acquired by the company, will be given at the meeting, which is to be held next Tuesday. On the basis of last year's dividends the shares yield less than 5 per cent., the market quotation making allowance for the enhanced profits to be derived from the expansion in operations. In Stock Exchange circles a still higher price for the shares is expected.

Lahat.—In the first half of 1924 the operations of this company were adversely affected by an accident in the northern section of the mine. The profit amounted to £12,250, as against £20,200. However, two dividends of 1s per share each were again paid. So far from the results of the past year showing the expected recovery, there is an actual shrinkage in the returns, the profit figuring at no more than £10,800. One dividend of 1s per share was paid, the bulk of the remaining profit being utilised in writing off plant, development, &c. An inspection of the details given regarding the operation of the various workings does not suggest that the outlook for the current year is particularly bright. Of last year's mine profit of £72,900, no less than \$34,750 was provided by tribute. Two new workings contributed \$37,700; but, even so, the working profit amounted to only \$72,900, as against \$102,000 in 1924. So far as can be estimated at the moment, the shares appear to be fully valued at the current price of about 22s 6d.

South Kalgurli.—Whereas the great bulk of the formerly well-known West Australian undertakings have either shut down altogether or are dragging out a difficult existence, this company continues to earn substantial profits, and to pay satisfactory dividends. In the year ended March 31st last the increased tonnage of 95,400 was treated for a gross yield of £193,000, to which was added £6,000 from the bullion reserves; the latter partly counterbalanced the great reduction in the premium on the gold sales. After providing for taxation, and also £5,000 for depreciation—the latter did not appear previously—the net profit for the past year stands at £31,500. Once again the directors announce a final dividend of 1s 6d per share, making a total of 2s 6d for the year on the 10s shares, which are quoted in the market at about 13s 6d. The ore reserves show expansion, both in quantity and value. The blocked-out tonnage is now reported at 215,000 tons, value 9.17 dwts, as against 195,000 tons, value 9.07 dwts, twelve months ago; and the probable

ore at 99,000 tons, worth 6.63 dwts., in place of 67,000, value 6.42 dwts. The expansion in output is an outcome of additions to the treatment plant, and it would appear that a further slight increase in the monthly average has been made since the date of the balance-sheet. Altogether the outlook appears hopeful.

Oversea Correspondence.

UNITED STATES.—STOCK MARKETS—NICKEL PLATE MERGER—COTTON CROP FORECAST—FRENCH DEBT.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 6.

A TRIPLE holiday having passed since the last writing, the supply of market news to be reported, naturally, is somewhat restricted. It may be stated, however, that the upward movement in the share market has been continued and with the same leadership. The common shares of the United States Steel Corporation reached a new high for all time at 144½, while those of the General Motors Corporation achieved similar distinction at 151½. There has been no fresh news to support the rise in Steel common other than the fact that the steel industry continues to do better than had been expected, and "inside" information on the corporation's financial plans still is notable for its complete absence. In the case of General Motors, the management has announced plans to spend \$40,000,000 out of earnings for additional developments, this sum including \$18,000,000 to enlarge existing automobile plants, \$12,000,000 to double the capacity of its Fridgidaire electric refrigeration machine plant, and \$10,000,000 to finance the development of the "Driveurself" system of renting motor-cars. The chief force behind the buying movement in the corporation's shares remains, however, the big earnings and the expectation of a liberal stock dividend. Incidentally, it is understood that since the absorption of the Fisher Body subsidiary the General Motors' cash position, including in this holding of Government securities and acceptances, amounts to over \$190,000,000.

Railroad shares have continued to show strength, buying in them being stimulated by excellent reports of earnings loadings. In the week ended June 19th the Class I. roads loaded 1,043,000 cars with revenue freight, this making the fifth consecutive week in which these loadings ran past the million mark. The volume of freight which the roads are moving is substantially exceeding the volumes transported at this season of the past six years. For the year to date 23,974,000 cars have been loaded, as compared with 23,335,000 in the comparable period of last year. Meanwhile, it has become apparent that the Van Sweringen Brothers, of Cleveland, have prepared a new plan for the consideration of the Inter-State Commerce Commission in order to achieve their greater Nickel Plate system. It will be recalled that after the Commission passed unfavourably on their first plan, the Cleveland Brothers released the stock deposited thereunder, gave the objecting minority representation on the Chesapeake and Ohio board, eliminated interlocking directorates, and removed the provisions with respect to non-voting stock to which the Commission objected. It is understood that under the new plan the Chesapeake and Ohio common stockholders will be guaranteed 5 per cent., and will receive, in addition, a half-share of new Nickel Plate common, which sold at 108 when trading in it was suspended last February. Under the old plan, the Chesapeake and Ohio stockholders received for 100 shares of their stock 55 shares of new Nickel Plate preferred and 55 shares of new Nickel Plate common. It is expected that Hocking Valley common stockholders will be treated in the same way. Pere Marquette common is expected to receive share for share of new Nickel Plate common, as against 85 shares of Nickel Plate for 100 of Pere Marquette under the old plan. The terms for Erie, it is understood, are unchanged. If the Commission passes favourably on the new plan, which seems to have taken cognisance of the objections that the Commission raised to the first plan, the movement toward consolidation of the

railroads will have received a considerable encouragement.

The better tone in business persists. The advent of warm weather has furnished a stimulus to seasonal trades which was missing during the greater part of the spring. In addition, the steadier tone in commodity prices, the strong rally in the share market, and the many evidences of active trade have made a considerable impression upon the imaginations of business men. Business failures in June, as reported by R. Dun and Co., are the smallest in number since last November, and are the smallest in aggregate liabilities since September, 1923. Instead of speaking of impending depression, as many of the prophets did at the end of the first quarter, a cheerful view now is being taken of the prospects for the second six months of the year.

The Department of Agriculture's first forecast of the growing cotton crop—that of June 25th—points to another big outturn. The condition is placed at 75.4 per cent. of normal, which is slightly below that of a year ago, and a little less than the trade had expected. The acreage—48,898,000—on the other hand, is somewhat larger than had been expected, and indicates, using the method of former years, a crop of 15,635,000 bales of 500 lbs gross weight. In order to satisfy the clamourings of certain Southern Congressmen, the Department has prepared an estimate on the assumption that the rest of the season is as unfavourable as during 1921, 1922, and 1923; the indicated crop on this basis is 13,726,000. On the other hand, the Department states that if the rest of the season is as favourable as 1924 and 1925, the yield will be 16,294,000 bales. Last year's big crop, it will be remembered, amounted to 16,086,000 bales. Meanwhile, the commodity has been fairly steady and distinctly quiet at around 16 to 17 cents a pound for the new crop.

Wall Street has been favourably impressed with the report of the Committee of Experts on the French financial situation. It has also been pleased with the new personnel at the Bank of France, although it must be understood that the Street regards the independence of the bank as a matter of fundamental importance. Our bankers are little disposed to believe, however, that French ratification of the debt funding agreement can be traded for assurances of new French credits in this market. Debt ratification and the decision to return to the gold standard are, in their opinion, the necessary preliminaries to the granting of credits. Without these two steps the obtaining of fresh credits would be futile; with them, the credits would flow naturally and would not be in danger.

FRANCE.—THE VOTE OF CONFIDENCE—DEBT AGREEMENTS—TOBACCO MONOPOLY—PRICES—COAL.

(FROM OUR CORRESPONDENT.)

PARIS, July 14.

THANKS to no fewer than three very plain-spoken and courageous speeches by M. Caillaux, and to M. Briand's repeated assurances that the Ministry as a whole stood solidly behind the Finance Minister, the Government last Friday secured the vote of confidence it asked for, and the first—and perhaps the worst—of the series of dangerous pitfalls in the way of the Caillaux financial reform scheme was safely passed. The vote was secured by a majority of only 22, it is true, and the Government was saved only by the fact that 32 of the members of M. Louis Marin's powerful group, the Union Républicaine Démocratique, voted for it (in spite of their leader and some 60 of their comrades voting against, while seven other members of the group abstained). Now that the Socialists have declared open warfare against the Briand-Caillaux combination, and the support of the Radicals and Radical Socialists seems acquired by the Ministry, the Marin group of 102 deputies appear to hold the Ministry's fate largely in their hands. Last Friday the whole of the 96 Socialists present voted against the Government, while 99 Radicals and Radical Socialists (including M. Franklin-Bouillon) voted "for," 22 "against," and 10 abstained (many of the latter being disappointed ex-Ministers). These facts are significant in view of the further circumstance that M. Tardieu, who seems to be making a very serious bid for office once more, on a frankly independent basis, voted against the Ministry, after scoring heavily

with his criticisms of the financial proposals. Before the week-end, such was the pessimistic effect of the Government's dangerously small majority, there was a good deal of open speculation in the newspapers as to whether the new Ministry could last until the adjournment for the Fourteenth of July national holiday. Reflection, however, and an analysis of the division lists, led to less gloomy conclusions, and M. Caillaux's success in London has still further justified the slowly growing optimism which is now entertained as to the Ministry's prospects of forcing its plan into operation.

It still remains an open question, however, as to whether the Chamber will consent to give M. Caillaux the practically dictatorial power (on strictly limited lines) which the Government is to ask for on his behalf, for the purpose of enabling the modified financial proposals to be forced through without having to undergo the fatal process of detailed Parliamentary discussion. Newspapers of all shades of opinion are urging deputies to drop sterile party warfare and allow the Government to devote itself wholeheartedly to the realisation of the financial proposals as set forth in the experts' report. M. Caillaux revealed during Friday's debate that not less than 10,000,000,000 of French capital has been transferred beyond the frontiers to escape the excessive taxation recently imposed, and to be safe from the persistent Socialist threats of a confiscatory capital tax. Public opinion agrees that unless confidence is restored, and this flight of capital is stopped, national disaster is to be feared.

The last week's debate showed that, apart from the question of granting M. Caillaux the "full powers" asked for, the Washington and London debt payment agreements are proving the most serious obstacle to the acceptance of the Government's plans. Opposition on this point came from three quite different quarters. M. Franklin-Bouillon (President of the Foreign Affairs Commission) insisted that it will be useless for the Chamber to ratify the Washington agreement unless there is a certainty that it can be carried out, and unless Parliament knows beforehand that it will really receive advantages (in the form of a definite promise of credits). M. Louis Marin also made the ratification question the touchstone of the whole situation. The Socialist leader, M. Léon Blum insisted that the Washington agreement, if ratified, would render stabilisation impossible, unless it is accompanied by a transfer clause, which the American Government has hitherto declined to accord. M. Blum's argument, further, is that financial restoration can only be accomplished by means of a capital tax, and that the Government will inevitably find itself faced with the choice between forced consolidation (which M. Caillaux has categorically repudiated) and further inflation.

A substantial section of Nationalist opinion insists that the simplest way out of immediate difficulties would be for the tobacco and other monopolies to be commercialised, and there certainly seems to be a good deal in favour of such an argument. M. Caillaux reminded the Chamber last week that when a business firm is in difficulties it makes an effort to secure credit, even from its rivals. The Minister might with equal truth have pointed out that firms in such a situation also usually make efforts to realise their assets to the best advantage. It is notorious that several tentative offers have been made by British and American capitalists to take over the tobacco monopoly for a term of years on terms that would not only furnish the Government with a substantial sum of badly needed ready cash, but also guarantee an annual revenue at least equal to that yielded by the monopoly at present. The only obstacle to such a reform—for reform it would undoubtedly be, both in the interests of the State and of the consumer—lies in Socialist hatred of every form of private industry, no matter how much the State and the consumer might profit therefrom.

The conclusion of the Franco-British agreement has been received with somewhat mixed feelings. On balance, the indications are that it will be accepted, although grudgingly, by the Chamber. Fortunately, the House is on holiday, and Deputies will have time before M. Caillaux appears before it on Saturday to gauge the opinions of their constituents. The hope is entertained that the London agreement (thanks to the concessions contained in the "annexed letters" in the form of promises that safeguard and transfer clauses shall operate) will induce

the Washington Government to prove less unyielding. The thinly veiled protest made by Monday's demonstration of 50,000 ex-soldiers against the terms of the Washington agreement is also expected to have a similar effect on the American Government. The absence of all possibility of the commercialisation of the French debt bonds that are in the hands of Great Britain is a subject of deep satisfaction, and a similar guarantee is regarded as almost certain to be secured from Washington. The funding of the debt to Great Britain is estimated as equivalent to a saving of between £300,000 and £400,000 a year, which has hitherto been expended by this country in respect of the renewal of the existing bonds. There is less satisfaction in regard to the arrangement that has been come to concerning the £53,500,000 of French gold that was pledged with the British Government during the war. The situation of this gold has long been a subject of irritation to French opinion, and this irritation will not be lessened by the realisation that, under the agreement, the gold, although it will remain technically the property of the French Government, will have to be rebought against regular payment, as though it were the absolute property of the British holders. The question arises whether its value should not disappear from the assets side of the Bank statement and reappear in the form of further advances to the State.

The index figure representing wholesale prices at the end of June, which has just been issued by the Statistique Générale, shows a rise of 52 points on the month, of 90 points as compared with the end of April, and of 109 points since March; in other words, it indicates a rise of 7½ per cent. since the end of May and of 16½ per cent. during the past three months. The detailed figures are as follows (based on 100 as representing wholesale prices in 1914):—

Nature of Articles.	Number of Categories.	Index Figures at End of		
		April.	May.	June.
General index figure.....	45	664	702	754
Foodstuffs—				
General figure.....	20	561	597	646
Vegetable foods.....	8	583	637	731
Meat foods.....	8	514	525	533
Sugar, coffee, cocoa.....	4	624	673	717
Raw materials—				
General figure.....	25	753	794	848
Minerals and metals.....	7	726	757	837
Textiles.....	6	876	933	971
Various commodities.....	12	696	734	781

The general figure indicates a rise of slightly over 75 per cent. during the past 12 months, the figure for the end of June, 1925, having been returned as 422, while that for January, 1925, was given as 408. The detailed figures, showing the rise by categories, offer one or two curious apparent discrepancies. The general figures for foodstuffs and raw materials, respectively, indicate almost a uniform rise, the former having risen by 49 points on the month, and the latter by 54. While the figure for meat has gone up only eight points, that for vegetable foodstuffs has risen 94 points, which seems unthinkable at this time of the year unless it has been seriously affected—which has almost certainly been the case—by recent speculative dealings in foreign wheat. In raw materials, again, the figure for minerals and metals has risen 80 points on the month, while that for textiles, which would seem to be equally affected by the recent heavy fall in the exchange value of the franc, has gone up only 38 points. The figure for retail prices in Paris (which is based on the prices of 13 articles of common necessity, of which only petroleum is of foreign origin) shows a rise of 22 points on the month, and is returned as 544, against 522 for May, 503 for April, 497 for March, and 422 for June last year. The corresponding figure for the whole of the French towns of over 10,000 inhabitants is returned for the end of May at 523, against 435 for May, 1925. The index figure representing the cost of living for a Paris workman's family of four persons is returned at 507 for the end of the June quarter, as compared with 473 at the end of the March quarter, 412 at the end of June, 1925, and 377 on the corresponding date in 1924.

Coal production figures for May indicate a total output of 3,942,128 tons for 23 working days, as compared with 4,200,222 tons for 25 working days during May, 1925.

Daily production figures show that the total number of workers employed during May was 171,396 (as against 170,048 in January last; 160,445 in January, 1925; 144,680 in January, 1924; and 136,147 in 1913), while the comparative daily output was 310,568 tons in May (as against 315,204 tons in January last, 311,991 tons in January, 1925, and 203,208 tons in January, 1913). The total output for the first five months of the year has been 21,047,758 tons, as compared with 19,871,998 tons during the corresponding period of 1925. Practically the whole of the increased output was recorded during the first four months of the year, the figures for May showing an increased output of only 13,404 tons. It is evident, therefore, that the large quantities of French coal exported to Great Britain during the past few weeks, owing to the miners' strike there, have been taken from accumulated stocks, which are necessarily limited. The returns show that daily production in the Pas de Calais and Nord coalfields during May totalled 105,638 tons, or 14,341 tons per day more than the average of 1913.

CANADA.—POLITICAL CRISIS—CROP SITUATION—RAILWAY EARNINGS—U.S. CATTLE DUTIES—MINERAL PRODUCTION—IRON AND STEEL PRICES.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 29.

THE strange parliamentary crisis which suddenly developed over the Customs scandals and caused the downfall of the King Government, has dwarfed all other events in Canada and left a situation even more complicated and uncertain than that before its advent. Mr Meighen has accepted an invitation to form a Ministry, and has named a "shadow" Cabinet; its members will only be acting Ministers, as their acceptance of salaries would automatically entail their retirement from Parliament and obliterate the majority which destroyed Mr King. The Conservatives have announced that they propose to complete the unfinished sessional business, including the adoption of the report of the Customs Committee and the amendment of the Customs Act, and the Liberals have set themselves to thwart this plan, as the passage of the censuring amendment would be a millstone round their necks at a general election. Accordingly, when the debate on the Customs report was resumed to-day, they moved a fresh sub-amendment, which eliminated the censure clauses and suggested that the investigation be continued by a Commission of three judges, one to be nominated by each party. The Conservatives challenged their right to move it, but the Speaker ruled it in order, and when the new Government appealed to the House against his ruling they suffered defeat by a majority of one. The debate is now proceeding on this sub-amendment, and the Liberals obviously intend to pursue obstructive tactics until they compel the Government to resort to closure. They are not disposed to show the slightest accommodation to the Meighen Ministry, and their ultimate object is to force an immediate dissolution, which Mr Meighen now wants to avoid. Since the King Government's Budget had elements of popularity, and Quebec is convinced that it has once more been singled out for persecution in connection with the Customs scandals, the time is not exactly propitious for the success of a Conservative appeal, and Mr Meighen, according to the *Ottawa Journal*, which is usually cognisant of his plans, would prefer to secure time for the formation of an attractive Cabinet, and to meet Parliament next January with a legislative and fiscal programme which would form the basis for an appeal to the electorate in the spring or summer of 1927.

The crop situation is regarded as quite satisfactory. An absence of moisture had been causing considerable anxiety in the prairie provinces, but last week the drought was broken in most districts by heavy rainfalls and the ground thoroughly soaked. There will be some loss of crops in districts where the drought and high winds did damage, but even in these areas a substantial recovery can be hoped for. Warm weather has followed the rains, and growth ought now to be very rapid. Hay crops and pastures are doing very well, and livestock is in excellent condition. In the Eastern provinces, owing to the absence of warmth, the crops are still backward, but

the plentiful moisture has rooted them well, and they are in a healthy condition, ready to take advantage of warm weather if it comes. The Ontario yield of apples will not be heavy, but there are prospects of a very good crop in Nova Scotia, Quebec, and British Columbia; other fruits also promise well. Following the lead of the prairie provinces, the United Farmers of Ontario have decided to organise a wheat pool for their province, and the preliminary steps have been taken.

The latest car-loading figures for the week ending June 19th indicate that the movement of merchandise continues at a volume well above the figure for the corresponding period of last year; the total of 63,956 cars is a gain of 1,652 cars over the previous week, and of 12,669 cars over the parallel week of 1925, and the aggregate for the year to date shows a total gain of 140,358 cars, or more than 11 per cent. During May the net earnings of the Canadian National system showed an increase of \$2,826,425 as compared with May, 1925, and the net earnings for the first five months of the year are placed at \$12,915,582, as compared with \$4,174,721 for the parallel period of 1925, a gain of 209 per cent. The net profits of the C.P.R. for May, \$2,448,876, are equally satisfactory, and are 1½ million dollars above the figure for May, 1925. For the first five months of the year the aggregate net profits of the C.P.R. have been \$11,129,583, which is an increase of nearly five million dollars over the \$6,213,195 earned in the parallel period of 1925. The Railway Commission is still busy with its general investigation of the rate structure of the Dominion, and the improvement in earnings will strengthen the case of the Western and Maritime provinces for lower rates.

The cattle industry in the West has been suffering severely for some years from exclusion from the American market, and the King Government, fortified by the knowledge that the farmers of the maize-growing States are anxious to have access to their old supply of Canadian store cattle, have made repeated approaches to Washington with a view to securing some alleviation of the existing duties on cattle. Accordingly, just before he left office, Mr Motherwell, the late Minister of Agriculture, publicly announced that every advance made by the American Government in the way of reducing the duty on Canadian cattle would be met by a corresponding reduction in the duty on American cattle, and there were hopes, in view of the disturbing evidence of political revolt in Iowa and other Middle Western States, that some response would be forthcoming. But the advent of a Conservative Ministry which is committed to policies of tariff retaliation will terminate any such prospect.

The Bureau of Statistics has issued a report on non-metallic mineral production in 1925, which shows that its total value amounted to \$115,587,316, an increase of nearly 4½ million dollars over the figure for 1924, and the highest total in this group of industries since 1920, when prices were much higher than to-day; increased production being visible in practically every single industry. There is still great activity in drilling for oil in the Turner Valley area near Calgary, but while a large number of wells have produced abundant quantities of wet gas, the amount of commercial oil secured so far has not been large. The geological difficulties encountered by the drillers are great, but the people of Calgary persist in the hope that a great oilfield lies at their gates, and speculation continues in the shares of the scores of oil companies which have been floated.

The Tariff Board is still hearing the application of the steel companies for increased protection, and continuous propaganda is being disseminated to the effect that unless it is granted the Cape Breton district of Nova Scotia will be brought to the verge of economic ruin. But official figures show that there has recently been some improvement in the iron and steel trade. Overseas iron from Europe, which has been entering American ports at low prices, has not secured any serious hold upon the Canadian market, and the increased volume of new building construction has brought the local plants a great many valuable orders for structural steel. The motor manufacturers no longer talk about shutting down their factories, and General Motors has actually commenced the construction of an addition to its Oshawa plant costing \$500,000.

Commodity prices showed a downward tendency in May, the wholesale price index number of the Dominion Bureau of Statistics being 157, as compared with 160.6 in April. Seven of the eight main groups moved downward, and one remained stationary; for the greater part of the decline lower seasonal prices for milk, butter, and cheese were responsible. The Bureau's index for 31 industrial common stocks (weighted according to the quantity of stock outstanding) was 182.8 in May, against 186.7 in April, and the index number for 23 preferred industrial stocks fell from 98.2 to 95.5; the figure for ten public utility stocks, on the other hand, rose from 85.4 to 86.1, and the bond index figure was virtually stationary.

JAPAN.—POLITICS—NEW LEGISLATION—FOREIGN TRADE—SILK PRICES.

(FROM OUR CORRESPONDENT.)

TOKIO, June 11.

DURING the latter part of May Mr Wakasuki, the Premier, tried to make a Coalition Cabinet with the third party and thereby strengthen the position of his Minority Government. But his attempt failed owing to the refusal of the third party to throw in its lot with the present Government. The Premier eventually "reconstructed" his Cabinet by merely reshuffling portfolios. Mr Hamaguchi was transferred from the Treasury to the Home Office, and Mr Hayami, the Minister of Agriculture and Forestry, succeeded Mr Hamaguchi. The official investiture formally took place on June 3rd. It is believed that the general policy of the reconstructed Ministry, and, in particular, the avowed policy of financial retrenchment and rigid economy, will remain unaffected by the change of Ministers. But the Government's position has by no means been strengthened.

The regulations as to the operation of the revised Factory Act (which is rather overdue) were published on June 7th, and the Act will come into force on July 1st. On the same day there will also come into operation the industrial laws regarding Employment of Young Persons and Children, Miners' Compensation, repeal of the Peace Law which makes even "peaceful picketing and persuasion" criminal, and the new Trade Disputes Act. Under the new Factory Law night employment of women is forbidden after August 31, 1929. The cotton industry, being the large employer of women, will be the first to be affected adversely by the prohibition of night work. Only 17 working hours a day being available under the new regulations, the present ten-hour shift system will have to be re-arranged on an 8½-hour-day basis, and to maintain the existing capacity of the mills, additional spindles and looms must be installed in each establishment. This will inevitably lead to reduced earning capacity of the cotton mills and higher cost of production.

The trade returns for May are rather discouraging, the previous improvement having been arrested. The returns show that imports at 221,319,000 yen were 16,517,000 yen higher than in the corresponding month of last year, while exports at 161,523,000 yen were 9,164,000 yen lower, the excess of imports over exports at 59,796,000 yen being 25,681,000 yen higher. The increase in imports is accounted for by iron and steel (+ 5.7 millions), wheat (+ 5.7 millions), and sulphate of ammonia (+ 5.9 millions). The drop in exports is almost solely accounted for by cotton manufactures, which are 9.4

million yen lower; the raw silk figures reveal a slight increase, despite the heavy fall in prices.

The reversal in the course of trade shown in the May figures is obviously due to the improvement in the yen exchange. It may be too hasty to forecast the possible depression in the export trade on the basis of one month's record, but it can safely be predicted that, with the appreciating exchange, the merchandise export excess in the second half of the year will be much less than in the corresponding half-year of last year. Though the total import excess during the past five months at 364 million yen is 132 millions less than in the corresponding period of 1925, the gain will then be largely offset by the prospective decline in exports.

The spring cocoon crops are arriving at the markets. They are quoted at 8.40 yen per kamme on an average, being nearly 2 yen lower than last year. Bankers, profiting by last year's experience, are said to be now rather cautious in extending credit to reellers.

Despite silk-reellers' demands for funds for the purchase of cocoons, the money market has been generally quiet. The yen-dollar exchange is steady around \$47. Availing themselves of the improvement in the value of the yen, certain industrial companies are making arrangements for repaying part of their loans raised in the foreign markets. The Bank of Japan's wholesale index number for May recorded a further drop of 4.32 points, reducing the total to 234.57, which is 86.5 per cent. above the level of July, 1914.

NORWAY.—WAGE SETTLEMENTS—MORE STABLE EXCHANGE—TRADE BALANCE—BUSINESS OUTLOOK.

(FROM OUR CORRESPONDENT.)

OSLO, July 3.

IN the course of the past month a number of wage-rate questions have been settled, and apart from the municipal workers' strike in Oslo, and a few other conflicts of minor importance, settled conditions now seem to have been established as far as wages are concerned. The reduction in wages varies from 13 to 17 per cent. It is much to be regretted that the workers did not at once realise the necessity for accepting the consequences of the higher krone value, as the employers have had to do long ago. If they had only accepted at once what they had to accept in the end, they would have saved about 20-25 million kroner in wages, and the serious set-back which our industry has suffered would have been avoided.

However, the resumption of work in the various industries, together with the more stable exchange conditions brought about through the Exchange Regulation Scheme, which was sanctioned by the Storting on June 15th, has given cause to a certain optimism as to the immediate future. The general summer slackness in business, which is now beginning to operate, makes it perhaps difficult to tell whether this optimism is justified, but there have lately been promising instances of increased activity in some of our industries.

Although the trade balance improved by 22 million kroner, for the first five months of the year, as compared with the same period of 1925, the estimates for May this year show that the decrease in the total volume of foreign trade has been considerable. Imports during May, 1925, amounted to 114 million kroner, while the figure for the same month this year is 89.4 million kroner. Exports have dwindled from 80.5 to 56.4 millions, which is the lowest figure on record for a long period.

The wood, pulp, and paper markets are at present rather featureless, the summer quietness and the unsettled conditions in Britain, our chief market, being responsible for this. The cod fisheries in the Finmarken landed record quantities, but the total value of the fish will be considerably below last year's figure, on account of the rise in the krone. This is also the case with the catch of whale oil in the South Seas, which has now been estimated at approximately 480,000 barrels, against 410,000 barrels in 1925.

Statistics on the position of the private banks (joint stock banks), as at the end of May, reveal the fact that for the first time this year there is a slight increase in deposits (e.g., from inland depositors), while loans are

reduced by 23.8 million kroner. The item "due to foreign banks" has been reduced by 14.1 million kroner. There has been a marked interest in Norwegian krone bonds from foreign quarters, and this has given the bond market a tone of greater activity than usual at this time of the year. According to *Ökonomisk Revue*, the downward movement in prices is continuing, although rather slowly, the index number for June being 195.3, as against 196.4 for May.

Books and Publications.

THE MACHINE AGE.*

It becomes constantly more difficult to envisage the complex modern industrial world as a homogeneous whole or complete entity concerning which it is possible to predict its probable course, its real objectives, or its essential nature and rational basis. Is it drifting, whither we know not, impelled by mighty forces we see not nor comprehend; or are its leaders, assuming there are such, consciously directing it towards some preconceived, carefully-thought-out, and worth-while objective? And what are its real objectives? There seems an urgent need to-day for the broad philosophical grasp and outlook, but the nearest approach to this appears to be a quasi-philosophical attitude, which often takes the form either of fierce declamation against the machine or a calm, despairing acceptance thereof.

It is perhaps hardly fair to say that Mr Gareth Garrett, in his new book, is afraid of the machine, but he would apparently have us believe that our modern civilisation is being dragged along in the trail of the machine. At one time mind was master and created the machine. Has it now come to pass that the machine seeks revenge and would enchain mind and so reverse the rightful order of things? One line of approach to this interesting field of speculation is to say that the materialism of the eighteenth and nineteenth century was largely responsible for the glorification of the machine, and it should be the part of a true philosophy of the present to put the machine in its right place. Something of the kind must surely be attempted, according to our author, for modern industry and the machine age are rapidly getting beyond control, and may carry mankind to ultimate destruction! The machine is said to obey laws of its own, including a law of growth, which causes it to spread over the whole world with ever-increasing momentum. This may sound fantastic to the hard, practical business mind, but let us for a moment consider the example of watchmaking. A watch was at one time a highly expensive hand-made article, which might take a skilled craftsman many years to achieve. The machine enters, how or where we do not exactly know, either as an insignificant serpent into an idyllic Eden, or as a benefactor bringing cheap watches to the million, and the skilled craftsman disappears. First there is the ten-dollar watch for the million, then the two-dollar watch for the ten million, and there is no apparent limit to this process. The craftsman is replaced by thousands of machine minders. Is Mr Garrett going to contribute anything of real value to the discussion of a problem which has become nauseating, or merely push it to its logical absurdity and leave it? Apparently the latter, accompanied by dark prospects in other directions. Despite the most amazing mechanical efficiency, mass production, superhuman salesmanship, instalment and credit systems, the point of market saturation is ultimately reached, and the problem of surplus arrives. Export is no real solution: world markets, too, become satiated, and there begins the painful process of regulated production, fixed prices, and closed down or part-time factories. Mr Garrett, indeed, expresses the view that the industrial equipment already existing in the world is so great that if, for one year, "it were worked at ideal capacity, the product could not be sold for enough to pay the wages of labour," to say nothing of other costs.

But instead of reducing or limiting industrialism, there is a feverish impulse to carry it still farther in countries

already highly industrialised; and agricultural and semi-agricultural countries are smitten with the same impulse. With these latter in the arena there comes an increasing tendency towards a lower standard of living—e.g., Italy or Japan have much lower labour costs, and Western Europe must also accept a lower standard in order to compete. But is this necessarily so, with the example of America before us? And the case of America also seems antagonistic to Mr Garrett's hypothesis that prices of agricultural produce must rise with increasing and more intensive industrialism. This is very far from being the case in the U.S.A., and does not take account of vastly improved methods of farming, use of new and better fertilisers, and so forth.

The general conclusion is that the principle of gain—"a survival of piracy"—must be replaced by the principle of mutualism: a help-one-another spirit among the nations.

THE CHAMBER OF SHIPPING.

DELAYED by the general strike, the annual report of the Chamber of Shipping of the United Kingdom* has now been issued in the form of a volume containing also a report of the annual meeting and statistical tables and diagrams. To the report itself reference was made in the *Economist* of February 20th (page 344). The bound volume preserves the record in a form convenient for reference, and adds the useful statistical information. Its pages serve also as a reminder of how great nowadays is the number of the international problems in which shipping is a factor. Because of this, shipowners are obliged to take note of and keep in touch with various international movements. Indeed, their Chamber—a resolution at the annual meeting declared—is "concerned" at the growth and multiplication of international organisations, and the resolution emphasised the point that these other bodies should not take up questions unless there is good reason to know that action will be generally acceptable. Nevertheless it appears, from a reference to proposals for compulsory passenger insurance, that this question is being examined by shipowners with a view to the promotion of an international convention and legal changes which may be by no means generally acceptable. Some further steps in connection with this project were reported quite recently. In an analysis of the scheme in

* "Chamber of Shipping of the United Kingdom, 1925-26." Annual Report. (London) Witherby and Co.

OWING to the general strike the issues of the "Economist" for May 8th and 15th were considerably delayed. Copies of these numbers may be obtained from the usual agents or direct from the office of the "Economist," 3, Arundel street, Strand, W.C.

the *Economist* of April 10th the circumstances that no one had taken up the passenger's side of the matter was mentioned, and it was queried whether there is good ground for sweeping away the legal rights of ordinary passengers and imposing on them a new financial burden in exchange for very limited insurance benefits. Naturally, however, the Chamber of Shipping looks at the shipowners' side of this and other questions. Its business is to press shipowners' views, and the annual volume provides a convenient summary of their attitude on current questions.

BOOKS RECEIVED.

The Christian Ethic as an Economic Factor. By Sir Josiah Stamp. (London) Epworth Press, 25-35, City road. 1s net.

This is an expansion into a short book of the "Beckley" lecture, delivered this week at the Wesleyan Conference by Sir Josiah. A brilliant treatise on the application of Christian principles to modern social and economic problems.

In the course of his treatise, Sir Josiah says: "If I had my way, before anyone is allowed to go on a platform and win applause by expounding our present discontents, attacking our system because by not following the Christian ethic we have no proper standard of life, due to maldistribution of wealth, I would compel him not only to spend three minutes with the super-tax statistics, but also a week with a cold towel and the Census of Production reports."

Elementary Economics. By F. R. Fairchild, E. S. Furniss, and N. S. Buck. Vols. I. and II. (London) Macmillan and Co., St. Martin's street. 12s 6d per vol.

These volumes are the result of the practical experience gained by three professors of Yale University in teaching economics to beginners. The authors' purpose is to produce a text-book which, while eliminating certain defects which they have found in other text-books, will give to the student who pursues his economic studies no further a broad knowledge and understanding of the economic world to-day.

The Theory of Gratuitous Credit. By J. C. Finlay. (Guildford and Esher) Billing and Sons, Limited. 7s 6d net.

The author examines the laws governing the future of civilisation, shows how civilisations develop to a certain point, and then decay, and puts forward his theory as to how that decay may be prevented. He aims at repudiating "the ghastly idea that the biological and psychological foundations underlying society, insist upon the doctrine of 'the inevitability of gradualness' as applied to the economic reorganisation of civilisation."

England's Gain by Free Imports. By Harold Cox. (London) National Association of Merchants and Manufacturers, 14 Mincing lane.

A pamphlet giving an able summary of the leading points in the Free Trade case.

Industrial Securities, 1926. (New York and London) Moody's Investors' Service. \$25.

The 1926 edition has been largely extended. It now runs to well over 2,500 pages, and the new additions make it more than ever indispensable to students of American industries, with whose finances it deals exhaustively.

Stock Exchange's Ten-Year Record of Prices and Dividends, 1916-25. (London) Fredc. C. Mathieson and Sons, 16, Copthall avenue.

A very valuable reference book for all who wish to follow long-range movements of security prices, compiled with great care and accuracy.

The Nineteenth Century and After. July, 1926. (London) Constable and Co., Limited, Orange street. 3s net.

Palestine and Near East Economic Magazine. No. 1. July, 1926. (Palestine) Mischar W'Taasia Company, Limited, P.O.B. 21, Tel-Aviv.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
July 20.	July 22.

PUBLIC interest in Stock Exchange markets underwent something of a check by reason of the hot weather, coupled with the feeling of disappointment felt at the unlikelihood of an early reduction in the Bank rate. The latter served to exercise a slightly depressing effect upon gilt-edged securities, though the declines are of no particular consequence; less, in fact, than could have been expected, having regard to the recent flood of new issues. The Union of South Africa 5 per cent. loan, offered at 100, was left with underwriters to the extent of 74 per cent. Coventry underwriters received 78 per cent.; Commonwealth Fives were taken by the public up to 39 per cent. of the total offered.

The settlement arrived at during the past few days in regard to the repayment of French war debts to this country helped to bring about a trifling recovery in French National bonds, and a more marked improvement in French railway issues. The most active stock in the foreign market this week has been the new Westphalia 7 per cent. scrip, allotments of which were on a modest scale. The price rose to 1½ premium. Brazilian bonds are better. There is still a noticeable absorption of speculative foreign bonds, and this tends to keep up the prices.

Home railway stocks are flat on sales by holders rendered nervous of the dividend outlook. The first announcements will be made next week, and there is a general fear that, in view of the continuance of the coal stoppage, railway boards will cut the interim dividends. Hopes of rapprochement brought about better prices on Thursday. Argentine rails advanced strongly, fell back again, and then recovered. Brazilian and other foreign rails are steady. There is nothing doing in nitrates, although a less gloomy view is taken of the outlook.

Business in rubber shares is very quiet, and in the absence of support the disposition has been for prices to sag. Tea shares have followed along the same line. In the oil market a recovery of British Controlled shares followed publication of favourable news from the company. Burmah Oils are quoted ex rights, and this has attracted a little buying from the Middle East, without, however, affecting the price to any noticeable extent. Courtaulds remain the feature around which speculative interest in industrials revolves. After the fall from 6½ to 5½ a modest improvement occurred, but evidently confidence has been shaken by the reduction in the interim dividend, and the market is in a very sensitive condition. Textiles as a whole are dull. The feeling prevails that industrial companies must be suffering from the slackness of trade induced by the coal crisis, and the public, therefore, are disposed to go quietly in their share purchases. Tobacco shares were sold pretty freely at the beginning of the week, but recovered, however, when rumours revived of the expected bonus on Imperial Tobacco shares being declared somewhere about the end of this month. This rumour became discredited, and the price fell back. Trust companies' stocks are harder. Banking, insurance, and shipping issues show few changes. The cable group is good, thanks to the Eastern Telegraph Company having secured a concession for cable and wireless work from the Greek Government for the next half-century. On the other

hand, cable construction shares came on offer with noticeable freedom, and this section, which has been advancing so rapidly of late, suffered a check. Marconis and other wireless shares are easier. The brewery market attracts languid attention, but prices keep very firm. Iron, coal, and steel shares, which show no movements of consequence, are mostly a trifle easier on balance. Brazilian Tractions, after their brisk rise on the recent report, fell back a little on profit-taking. In electricity supply and gas company stocks, the usual seasonal stagnation prevails. Public appetite for all good-class preference shares is unabated.

The Cape manages to maintain noticeable interest in a comparatively small number of companies. Amongst these, Sub-Nigels and Springs provide the outstanding features of strength. The gold producers are less in the limelight than they were earlier this month. Anglo-American Corporations, with some of the other finance company shares, gained ground. The sparkle in diamonds was subdued to some extent by the willingness of speculators to take the substantial profits that have accrued to many of the recent buyers. Chartered improved upon the announcement made by the company that a further sale of land had been made. In other Rhodesians the changes have been uninteresting. Tin shares went back on a decline in the price of the metal, but the decline was easily recovered. Some of the Mexican mines are a little better. West Africans and the miscellaneous mining shares aroused mild attention without this causing any special change in values. The Stock Exchange is fairly busy, considering the time of year, and next week's settlement is likely to be a tolerably heavy one for July.

NEW ISSUES.

United Dairies, Limited.—Issued capital, £4,977,844 divided into 2,753,918 6 per cent. non-cumulative preference shares of £1 each and 2,223,926 ordinary shares of £1 each. This is an issue of 496,000 6 per cent. non-cumulative preference shares of £1 each at par. The company was registered in 1915, its business comprising wholesale and retail milk businesses in London and suburbs, condensed milk factories, creameries, butter factories, &c. The freehold property of the company and subsidiaries, it is stated, in the London area alone now exceeds £1,000,000 taken at cost, less annual depreciation. The proceeds of the present issue will be applied to the development of the company's business and general purposes. Net profits during recent years are given as follows :—1921, £356,185; 1922, £452,691; 1923, £468,623; 1924, £506,541; and 1925, £509,145. The reserve fund, it is added, now amounts to £500,000. On the basis of last year's profits, the preference dividend is covered more than twice over, but since the prospectus gives no statement of total assets, the investor is unable to see precisely the margin of security behind the preference capital.

Welwyn Garden City Limited.—Issued share capital, £205,691, divided into 205,691 7 per cent. cumulative ordinary shares of £1 each. In addition, there is an issued loan capital of £285,670, of which £150,000 consists of 6 per cent. debentures of £50 each and £135,670 of 6 per cent. development bonds. This is an issue of £100,000 6½ per cent. debenture stock at par. The stock will be secured by a floating charge on the undertaking of the company, excluding its un-called capital, and subject to specific mortgages which may from time to time be created, and ranking after the debentures and development bonds already issued. Beginning in 1934, provision is to be made for the redemption of the stock by annual drawings. The company was formed in 1920 to establish near London an entirely new industrial, and residential town of 40,000 to 50,000 inhabitants. It is stated that over 1,400 houses have been built and occupied or are approaching completion. The population is nearly 4,000. The proceeds of the present issue will provide for further expenditure upon roads, sewers, water mains and other services. Sir H. Trustram Eve, it is stated, valued the company's freehold estate (but excluding the waterworks and other important undertakings) in 1921 at £198,000, in 1923 at £249,500, in 1924 at £289,725, and in 1926 at £402,000. Surplus value of assets for the security of this issue is given as £237,205. The revenue accounts of the company, before charging the proportion of interest chargeable to revenue, but after meeting all other charges, including depreciation, &c., show the following balances of profit :—1922, £5,815; 1923, £9,144; 1924, £10,888; 1925, £17,372; and 1926 (subject to audit), £23,189. This is an issue which deserves the support of opulent investors who have a considerable proportion of their funds in Government securities.

Sudan Building and Agricultural Company, Limited.

—In order to comply with Stock Exchange regulations, particulars are advertised of the above company. The issued capital is £400,000, divided into 200,000 7 per cent. preference participating shares of £1 each and 200,000 ordinary shares of £1 each. The company was incorporated under the provisions of the Sudan Companies Ordinance, 1925, on April 6, 1925, to acquire the business of the merchandising and contracting firm of Stamatopeou Brothers, which carries on operations in the Sudan, Abyssinia and elsewhere, and with it various interests, including certain plots of building land in Khartoum and other towns, an option on 15,000 acres of agricultural land in Gezira, and the benefit of negotiations with the Government for erecting a warehouse at Port Sudan. The purchase consideration was £280,000, to be satisfied as to £200,000 in ordinary shares and as to £80,000 in cash, and an option to subscribe for a further 100,000 ordinary shares at par up to April 21, 1930. Stocks, plant, &c., were to be taken over at a valuation for cash. The various interests and properties have been or are being reported on by a committee of experts. The Khartoum building sites are described as being "in the most favoured and important positions," and the agricultural land as having been "carefully chosen during many years" and being "strategically valuable, commanding as it does large areas of hinterland belonging to the Government." Although "prospectless" this is a proposition with fair speculative possibilities.

Ampang (Perak) Tin Dredging, Limited.—Share capital £170,000, divided into 170,000 shares of £1 each, of which 40,000 will be issued as fully-paid in part payment of purchase consideration, the present issue being the offer of the balance at par. The company has been formed particularly to acquire lands situated in the State of Perak, Federated Malay States, and to work and exploit them for tin. The properties comprise an area of about 811 acres. The consideration payable to the vendor is £75,000, payable as to £35,000 in cash and £40,000 in fully-paid shares of the company. After payment of the cash purchase price, underwriting commission, and preliminary expenses, the present issue, it is stated, should provide approximately £80,000 for working capital and general purposes of the company. The directorate is a strong and practical one.

John Delaney (Horton Limeworks), Limited.—In order to comply with Stock Exchange regulations, particulars are advertised of the above company. There is an issued share capital of £130,000, divided into 129,950 ordinary shares of £1 each and 1,000 deferred shares of 1s each. In addition, there is a loan capital of £125,000 in the form of 7 per cent. first mortgage debenture stock, 1926-44. The company was incorporated on July 27, 1925, in particular to acquire the business of lime burners, quarry owners, and coal merchants carried on by John Delaney, Limited, and Miss Carrie Delaney in Yorkshire. The total purchase price was £256,000 in cash, with interest from March 31, 1925, until payment at the rate of 5 per cent. per annum. The company also took over from John Delaney, Limited, a contract for the purchase of freehold land for the sum of £10,525. The preliminary expenses (exclusive of commission on the debenture stock) are estimated at £7,000. Presumably it is assumed that outside investors will not be interested, for the information given is of little value to them.

Malayan and General Tin Trust, Limited.—In order to comply with Stock Exchange regulations, particulars are advertised of the above company. Share capital £50,000, divided into 200,000 shares of 5s each, of which 100,000 have been issued for cash and 1s 3d per share has been called and paid up. The company was incorporated on April 8, 1926, to carry on business as a financial and investment trust, more particularly in connection with tin mining and dredging. Subject to the actual preliminary expenses, which are estimated at £1,000, and are payable by the company, the whole of the proceeds of the issue of the 100,000 shares above-mentioned will be available as working capital and for the general purposes of the company. The details given in the advertisement are not, in our opinion, sufficient in themselves to warrant outside investors risking their capital in such an enterprise.

Dredging Development Company, Limited.—Capital £75,000, divided into 75,000 shares of £1 each, of which this is an issue of 60,000 shares at par. The company has been formed in particular to assist in the financing and development of gold and tin dredging properties in any part of the world. It has acquired from the Dome Mining Corporation, Limited, a licence to work a portion of the corporation's alluvial gold mining concessions in Spain, and also an option to use the dredge already erected. The proceeds of the present issue will be applied to the purchase of a new dredge. The company will pay the corporation 50 per cent. of the net profits earned by the present and the new dredge, and in addition a rent of £1,000 per annum will be paid if the present dredge is used. The company will purchase from the corporation, at a valuation, the manager's house, workshop and store already erected on the site. The terms of the licence seem onerous, and the issue can only be described as highly speculative.

Zinc Corporation	4,484	Lead concentrates and 4,394 tons zinc concentrates.

BURMA CORPORATION.—During June 27,175 tons of ore were mined; 25,000 tons of ore were milled in the treatment plant, producing 9,050 tons of lead concentrates; 9,090 tons of lead-bearing material, including 40 tons of high grade ore, were smelted in the blast furnaces, producing 4,114 tons of high grade lead for treatment in the refinery. Refinery products were 4,206 tons lead and 386,954 for silver. Of silver production, 52,110 ozs were recovered from the treatment of copper matte. For silver, 65 per cent. lead and 47.8 per cent. zinc. In addition to the above, 980 tons of copper matte were produced from the treatment of accumulated smelter by-products and 4,256 tons copper ore; 124 tons of antimonial lead were also produced. Included in the tonnage of refined lead is 392 tons recovered from the smelting of copper ore.

ELECTROLYTIC ZINC.—Production during four-weekly period ended June 30th, 3,647 tons zinc; silver-lead product for shipment to Port Pirie for realisation, containing 750 tons lead, 78,000 ozs silver. The above production included 125 tons zinc used at company's works at Riden.

NORTH BROKEN HILLS.—For June 36,970 tons of crude ore were treated, producing 6,480 tons lead concentrates, averaging 64.7 per cent. lead, 28.8 ozs silver per ton and 7.4 per cent. zinc; also 5,960 tons zinc concentrates, averaging 47.8 zinc, 6.5 per cent. lead and 7.4 ozs silver per ton.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

COMPANY MEETINGS, &c.

WIENER BANK-VEREIN, VIENNA.

RESULTS OF THE GOLD BALANCE-SHEET.

The fifty-sixth ordinary general meeting of the Wiener Bank-Verein was held in Vienna on the 21st ult., M. Karl Stoegermayer (the chairman of the company) presiding.

After recalling the splendid record of 51 years of untiring work wholly devoted to the bank's prosperity by the retiring chairman of the committee of the managing directors, M. Bernhard Popper-Artberg, the abridged report runs as follows:—

In compliance with the law, we have drawn up "the opening gold balance-sheet" as per January 1, 1925, in accordance not only with the provisions of said law, but also with the precepts of commercial caution, and with due regard to the institution's future probable earnings; in most instances the reassessment remains below the limits allowed by the law.

When comparing the accounts as per January 1, 1925, with those as per December 31, 1924, one notices an increase of cash, bills, and debtors that is due to the fact that the balance-sheets of such branches abroad as are kept in foreign currencies do no longer stand in the ratio 1:1, but have been converted into schillings at the exchange rate of the day, an important reserve having thus been released.

Securities were entered at the day's quotations; syndicated shares were increased by 5.7 million schillings by means of a reassessment of a few items only, while most items were maintained at the previous low assessment figures. Real estate, including, besides three bank buildings, several apartment houses, and building plots, also in the Succession States, are reassessed at 10 million schillings, a figure far below the actual valuation of experts.

The liabilities contain substantial reserves for definite purposes, such as extraordinary requirements for the years 1925 and 1926. The reassessment shows own means amounting to 60 million schillings, of which we propose to apply 20 millions to (12 millions ordinary and eight millions extraordinary) reserves; the share capital would thus amount to 40 million schillings to be divided into two million shares of 20 schillings each, so that one new share would be allotted to three old shares of 3,000 krone each. The separate gold balance-sheet of the Hungarian branch in Budapest shows a working capital of one million pengő.

THE PAST YEAR.

The year 1925 shows the striking difference of developments during that period. Public finances have continued to improve, so that the League of Nations was able to decide that the financial control should cease. The Austrian currency is permanently stabilised, and, notwithstanding the successive reductions of the bank rate from 13 per cent. to 9 per cent., the cover of the notes issued by the National Bank has substantially increased. The balance of trade shows encouraging signs of improvement as against 1924, and no symptoms of crises, such as were experienced in 1924, were registered; trade and commerce had nevertheless to labour under almost insurmountable difficulties. An adaptation to the situation created by the disruption of the Dual Monarchy can only be achieved very gradually.

Among the measures of prime importance the promotion of home agriculture has made satisfactory progress. The marketing of Austrian industrial articles abroad and the emigration of the excess native labour are, on the other hand, meeting with almost insuperable obstacles arising from the attitude of most European countries, and chiefly of the Succession States.

The Austrian commercial policy is consequently being forced to move in the direction of increased protective tariffs. These unfavourable circumstances of the private economy reacted of necessity on the banking business; while the banks have successively reduced their fees in the interest of commerce, they found no compensation in an adequate increase of the volume of business, or in profitable financial transactions, save a few public loans.

If we were, nevertheless, able to obtain results that do not remain substantially behind those of the preceding year, that is due to the extension of our current business, concurrently with an unwavering saving policy that led chiefly to a reduction of our staff and to the closing down of such branches as did no longer pay. The number of our branches is at present 55, of which nine are in foreign countries. Our affiliated banks—the General Banking Corporation of Bohemia, Prague; the General Banking Corporation of Poland; the Landesbank für Bosnien und Hercegovina, Sarajevo; and the Banque Balkanique, Sofia—have all developed favourably, and distributed the same dividends as last year. Among the industrial concerns in which we are interested

in Austria, Hungary, Czechoslovakia, Yugoslavia, and Germany, the electricity, rubber, and paper companies and also the Hungarian mining and steel companies, to some extent also the breweries and weaving mills and the transportation companies, show favourable returns, while other companies have, owing to the economic depression, either curtailed or ceased paying dividends.

The results of the year are as follows:—

ASSETS.	
	S
Cash	11,069,022.69
Bills	47,184,875.22
Debtors:	
Balances with banks	\$55,013,069.28
Other debtors	183,656,360.29
Securities	238,669,429.57
Payments on syndicated shares	3,387,933.12
Real estate	26,116,670.85
	9,821,578.75
Total	336,249,510.20

LIABILITIES.	
	S
Share capital	40,000,000.00
Reserve funds	20,000,000.00
Provident fund	500,000.00
Dividend account	308,539.00
Surtees on bills	5,973.44
Deposits and current accounts	270,946,427.18
Profit and loss account	4,488,570.58
Total	336,249,510.20

PROFITS.	
	S
Interest account	12,131,589.87
Profit on securities	986,682.19

Provident fund	1,219,940.35
Taxes and fees	4,933,457.24
Depreciation on real estate	121,000.00
Net profit	4,488,570.58
Total	31,108,093.04

DISTRIBUTION OF PROFITS.

The Chairman proposed, on behalf of the board of directors, to apply 3.6 millions of the net profits to the payment of a dividend (i.e., schillings 0.60 for one old share), schillings 0.5 millions to the provident fund of the staff, and, after paying the bonus to the directors and staff, to carry over

THE OTTOMAN BANK.

ECONOMIC RESTORATION OF TURKEY.

PROLONGATION OF BANK'S CONCESSION—DIVIDEND PROSPECTS.

The annual general meeting of shareholders in the Ottoman Bank was held, on the 12th inst., at Winchester House, Old Broad street, London.

General the Hon. Sir Herbert A. Lawrence, G.C.G., presided. The secretary (Mr Charles E. L. Corthorn) having read the notice convening the meeting,

The Chairman said: Ladies and gentlemen,—I have been informed that this meeting is properly constituted, and I presume that it is your pleasure that the report and balance-sheet circulated among you should be taken as read.

Before entering into details of our work during the past year, I propose, as usual, to recall briefly to you the general economic conditions of the countries in which we operate.

The work of economic restoration in which Turkey has been engaged since the war has been pursued by the Government during the year 1925 with an energy and perseverance which deserve the fullest recognition.

Official encouragement has been given to agriculture, which is the basis of the economic system of Turkey. The abolition of the tithe, the distribution of seed to farmers, the provision of motor-tractors—all these are measures which have contributed to the improvement in recent harvests.

Our bank has been pleased in this sphere to afford to the Banque Agricole that assistance which it is its natural function to supply.

AGRICULTURAL CONDITIONS.

Weather conditions have been generally favourable to the varied crops which are produced by the fertile plains of Anatolia with their diversity of climate, and, although all hopes have not been realised, it can be said that marked progress has been made by agriculture in comparison with preceding years. Thanks to the increase in the area sown, cereals showed an increase during 1925 of 40 per cent.

Transport conditions, unfortunately, were not equal to the distribution of the harvest, and thus, notwithstanding the increased production, it became necessary to import a certain quantity of foreign wheat in order to supply the needs of the population.

Tobacco tends more and more to take the first place among national products. Its cultivation extends throughout the territory of the Republic. Last year the yield was slightly less as compared with that in 1924, but the loss in quantity appears to have been fully compensated by an improvement in the quality obtained.

The cultivation of cotton in Cilicia shows steady progress. The crop for 1925 is estimated at 100,000 bales, as against 70,000 bales for the preceding year. This result still falls short of the capacity of this rich alluvial region.

The Smyrna Hinterland suffered severely from drought, and the quantity of figs and raisins produced was below the average. As to the other products of the country, opium, silk-cocoons, and nuts, the results have been unequal. Livestock has only been reconstituted slowly since the war, and the production of wool and mohair still remains far below pre-war levels.

EXPORTS AND IMPORTS.

I have spoken thus about agriculture because it supplies the great bulk of the country's exports, and on the welfare of agriculture depends the commercial balance of the country. This again entails other consequences, for in a country whose invisible exports are negligible the movement of the exchange follows the ebb and flow of exports in a seasonal rhythm. The commercial movement in itself shows a steady increase. The value of exports rose in 1924, while imports increased in a lesser proportion.

In 1925 figures are only available for the first ten months. They show that the same tendency persists for the growth of exports to exceed that of imports. It will be seen not only that the commercial movement is increasing steadily, but that the adverse trade balance is falling. The increased value is not solely due to a rise in prices or to fluctuation in the exchange. If we examine the tonnage statistics we realise that a real progress has been registered.

The sterling exchange, which, at the end of 1924, was quoted at 875 Turkish piastres, continued to rise during the first months of 1925 until it reached 975 piastres towards the end of February. The period of exports, when it arrived, caused the Turkish pound to appreciate again, and, at the beginning of August, the pound sterling stood at 800 piastres.

Harvest estimates, however, proved in some cases to have been too optimistic, and at the same time a fall in prices on foreign markets encouraged exporters to hold their stocks. The improvement in the Turkish pound, therefore, could not be maintained, and, on December 31, 1925, the pound sterling stood at 910 piastres.

GOVERNMENT'S MONETARY POLICY.

Credit is due to the Government of the Turkish Republic for its monetary policy. This is above criticism. The present régime had no sooner taken in hand the affairs of a country just emerging from ten years of war than it found itself face to face with difficulties of an economic nature. Notwithstanding this, it has not increased the amount of notes issued. Its only action in regard to currency has been with the object of replacing notes issued during the war by new notes.

As local capital is scarce and is fully employed, assistance is indispensable to the development of the country. It becomes natural, therefore, to look abroad, and it is to be hoped that, so soon as the question of the foreign debt of Turkey is settled, assistance will be furnished on a scale sufficient for the country's needs.

OTTOMAN PUBLIC DEBT.

The distribution of the Ottoman Public Debt between Turkey and the other successor States was continued in 1925 in accordance with the provisions of the Lausanne Treaty. This formality was completed and the Turkish share definitely fixed as to both capital and annuities. Negotiations then took place between delegates of the Turkish Government and representatives of the bondholders with the object of establishing a basis for the service of the loan. Unfortunately, these have not, up to the present, led to any agreement.

The Grand National Assembly has set itself to achieve the balancing of the budget. Revenue and expenditure in the budget for 1926-27 are estimated at about 190,000,000 Turkish pounds. It is hoped that further reductions in expenditure will be effected, and that the year will end with a surplus. In this connection it must be borne in mind that the Turkish Government, in carrying out a legitimate railway policy, has burdened its regular budget with considerable capital expenditure, which is met usually by means of extraordinary resources.

Agreements with neighbouring Powers have been concluded lately by the Government of the Turkish Republic. The most recent of these is the Mosul Agreement. Such diplomatic questions as had been left in suspense by the Treaty of Lausanne have now been settled.

Our Constantinople offices and our branches in Anatolia, Roumelia, and Cilicia have all profited by the recovery which we have indicated above, and show improved results this year as compared with recent years.

EGYPT, GREECE, AND CYPRUS.

Conditions in Egypt during the past year have been less favourable than of late. The country is largely dependent upon its cotton crop, and the fall in price from 2s 6d per lb in August last to the present price of 1s 4d per lb has had its effect on the trade of the country in general.

The outlook, however, is promising, and the Egyptian branches of our bank continue to expand and to take their share in the commercial activities of the country with more favourable results.

In Greece, where at present we have branches only in Salonica and Cavalla, our current business continues to afford every satisfaction. We should mention, however, that, in spite of our efforts, we have not yet succeeded in obtaining from the authorities an interpretation, which we can regard as equitable, of the laws which rule certain of our pre-war engagements.

In Cyprus the last six months of 1925 showed an improvement on the first half-year, and improved prices counterbalanced a diminution in crops. The Agricultural Bank, established by ourselves in 1925, has already shown that it fills a place in the economic life of the island.

MESOPOTAMIA, PERSIA AND SYRIA.

In Mesopotamia the balance of trade is still adverse, and conditions during the past year have not been favourable, but recent events permit an encouraging view of the future. By the Mosul Treaty of June 5th a long-standing dispute has been amicably settled, and the development of the country can now proceed confidently.

In Persia our branches have been compelled to work on conservative lines during 1925. Losses were incurred by importers through the fall in prices and the rise in the exchange rate. The political situation, however, is now more settled, and the latest reports tend to show that during 1926 an improvement in results may be expected.

In Palestine and in Trans-Jordan, where we have established

a branch at Amman, the outlook remains favourable, and results continue to be satisfactory.

In Syria our filiale, the Banque de Syrie et du Grand Liban, has been very little affected by the disturbances of the past year, and the profits earned have easily permitted the maintenance of a dividend of 6 per cent.

EUROPEAN INTERESTS.

In Yugoslavia the Banque Franco-Serbe, in which, as you know, we have important interests, has proceeded further with the consolidation of its position.

The Bank of Roumania continues to work in a satisfactory manner, having distributed an interim dividend for the six months to June 30, 1925, at the rate of 5 per cent. per annum.

Finally, our London and Paris agencies, with their sub-offices in Manchester, Marseilles, and Tunis, have continued to develop their business on active lines.

AGREEMENT WITH THE GOVERNMENT.

In the course of the past year we had the satisfaction of reaching a definite agreement with the Turkish Government as to the conditions of the prolongation of our concession. This, as you know, was due to expire on August 4, 1925. On March 10, 1924, our representatives signed in Angora an agreement which embodied the prolongation of the concession until March 1, 1935. The law, dated April 22, 1925, by which the Grand National Assembly ratified the above agreement, came into force on July 29, 1925, by decree of the Government. By the terms of the new agreement the fundamental status of the bank and its essential privileges are confirmed for a period of 10 years.

BALANCE-SHEET ITEMS.

I now pass to the balance-sheet, which is in your hands. The assets and liabilities in foreign currencies have been converted into sterling at the rates in force at December 31, 1925; that is to say, Turkish pounds have been converted at the rate of 910 piastres to the £1, as against 875 piastres in 1924, while francs have been converted at 130, as against 87.50. This latter difference is the most considerable which has taken place in the course of any one year since the war. It has absorbed an important part of the profits of the year 1925. Provision for doubtful debts has been constituted from the profits of the year as well as from reserves previously made.

The accounts thus made up show an available balance of £410,040 0s 4d, taking into account the amount of £326,951 10s 7d brought forward from the preceding year. When we recommended to you last year that this amount of £326,951 10s 7d should be carried forward, we informed you that it was our aim, by the provision of suitable reserves, to guard the assets of the bank against risk of depreciation in the foreign currencies which figure among them. We added our hope that this result would shortly be attained.

PROVISION FOR DEPRECIATION OF CURRENCIES.

The committee now recommend that out of the available balance of £410,040 0s 4d a sum of £400,000 should be devoted to the constitution of a provision for depreciation of currencies, &c. We have reason to hope that this provision will henceforth be sufficient to meet any likely eventualities.

In establishing the balance-sheet on a sterling basis, the necessity of providing each year an ascertained depreciation in the assets in foreign currencies has been inevitable. With the establishment of this provision we hope that we have attained the end which we have constantly had in mind.

Any future depreciation which may occur will be chargeable to this account, and from January 1, 1926, if nothing abnormal occurs, profits should be available for the distribution of dividends to our shareholders. Should you endorse our recommendation, the balance to be carried forward will be £10,040 0s 4d.

Our staff in all grades, both in the East and in the West, has continued to give us proof of devotion and loyalty to our institution.

I would ask you to join with us in expressing your appreciation of their services.

I move: "That the report and accounts now read be received and adopted."

M. Félix Vernes seconded the resolution, and it was carried unanimously.

The Chairman: I now have pleasure in moving: "That Monsieur le Baron Hottinguer, Monsieur le Comte Frédéric Pillet-Will, and General the Hon. Sir H. A. Lawrence be and they are hereby re-elected members of the general committee."

The Lord Oranmore and Browne, K.P., P.C., seconded the resolution, and it was unanimously approved.

VOTE OF THANKS TO COMMITTEE AND STAFF.

Mr Arthur Hood: Mr Chairman and gentlemen,—I wish to

propose a vote of thanks to the general committee and to the staff both here and abroad. After listening to the chairman's most interesting speech, one of the best which we have heard from the chairman of this bank, I hope on behalf of the shareholders that the difficulties which he will have to face in the future will be very much less formidable than they have been in the past.

Mr Arthur Bradbury seconded the vote, and it was unanimously accorded.

A brief acknowledgment by the Chairman concluded the proceedings.

ANGLO-CEYLON AND GENERAL ESTATES COMPANY, LIMITED.

SATISFACTORY RESULTS FROM TEA AND RUBBER.

The fortieth annual ordinary general meeting of the Anglo-Ceylon and General Estates Company, Limited, was held, on the 15th instant, at 6 Laurence Pountney hill, Cannon street, London.

Sir Edward Rosling, who presided, said that, to commence with their Ceylon interests, the tea crop again showed a satisfactory increase of 217,305 lb, the crop secured being 3,798,539 lb, as compared with 3,581,234 lb in the previous season. Weather conditions had been on the whole favourable. The whole of last season's crop had not yet been sold, the delay being largely due to the general strike. The quality of their tea had been well maintained, and the average price realised had been slightly under 1s 7d per lb net, as compared with just under 1s 6d in the previous year and 1s 4½d in 1923-24. The cost showed a reduction of approximately ½d per lb. Up to March 31st last they had spent in the last three years some £27,000 on coolie lines, water supply, and improved sanitation, and they expected to spend at least as much in the next three years, after which they hoped the expenditure necessary would not be more than was required for general maintenance.

Their cacao crop had been disappointing, amounting to 4,864 cwt, netting 56s 4d, as compared with 6,284 cwt, netting 65s 5d, in the previous season. The shortage was due to the dry weather in August and September, causing the early settings to dry off. Prices showed a drop of 9s 1d per cwt, partly owing to a rather large percentage of lower grades due to the adverse season. The new clearings on Gala Ella, a division of Mahaberiattenne, were reported as satisfactory. There were now 127 acres of young cacao on that division which should eventually prove a valuable addition to the estate.

GOOD RETURNS FROM RUBBER INTERESTS.

Rubber showed a considerable improvement, their exportable allowance amounting to 229,403 lbs, as compared with 178,207 lb in the previous season. The price realised was 2s 6d net, an increase of 1s 2½d over last year. Their Ceylon interests as a whole showed a working profit on the year of £116,783.

Mauritius had again proved a disappointment, and, although very considerable economies had been effected, the low price of sugar had prevented any profit from being earned. The expenditure in Mauritius was £162,295, as compared with £193,320 in the previous year, and the amount of sugar produced was 14,777 tons, against 13,537 tons in 1924-25. During the year under review they had entered into an agreement with the shareholders of the Kandahena Company (a Ceylon property) to purchase all the shares of that undertaking. They were well acquainted with its working and its prospects. In Mauritius they had purchased part of the Richie Bois estate, the other portion having been bought by a local company. The property was situated on their Britannia boundary, and by that purchase they expected to secure 20,000 tons of cane for the Britannia factory, which should be of assistance in further reducing costs.

CURRENT YEAR'S PROSPECTS.

In regard to the prospects for the current year, with the addition of the tea from Kandahena they expected a crop of 4,000,000 lb. The market for Ceylon tea was to-day lower than a year ago, which he thought was entirely the result of the coal strike, and with a return to normal times one would expect to see an improvement in prices, as the statistical position was quite sound. The estimated rubber crop was 330,000 lb, as compared with 224,421 lb last season. They had sold 120,960 lb for the nine months ending December 31st at an average price of 2s per lb. Their standard production was 411,330 lb, and at present they were on 100 per cent. basis, but, of course, they could not say if that would be continued throughout the year. In regard to sugar, the prospects showed a slight improvement, in that prices were fractionally better than the average obtained for the last season's crop, and costs showed a further reduction. Crop would commence next month, and the indications pointed to a total of rather over 16,000 tons sugar.

The report and accounts were adopted.

THE P. AND O. BANKING CORPORATION, LIMITED.

CHANGED INDIAN MONETARY CONDITIONS.

VISCOUNT INCHCAPE ON ECONOMIC AND FINANCIAL CONDITIONS.

The sixth ordinary general meeting of shareholders of the P. and O. Banking Corporation, Limited, was held, on the 9th instant, at 122 Leadenhall street, London, the Right Hon. the Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E. (the chairman), presiding.

The Secretary (Mr Charles Selbie) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, with your permission we will take the report and accounts as read, as usual.

I think you will agree with me that the results for the year, considering the difficult times we have gone through, are not unsatisfactory. There have been some changes in our figures since last year, which I will explain.

The decline of over a million in our current deposit and other accounts largely arises from a change in monetary conditions in India, and is accounted for almost wholly by the contraction in the fixed time deposits which we have been in the habit of taking at our Indian branches.

We have been expecting a fall in rates which banks and others would be willing to allow for six and twelve months' deposits—for these rates are to some extent determined by the rates at which the Government of India can borrow, and the greatly improved financial position of India has enabled them to consolidate and convert a large portion of their short-term debt contracted during and after the war at 5 per cent. and 6 per cent., free of tax, into the long-term issues on the basis of between 4½ per cent. and 4¾ per cent., less tax.

INDIAN IMPORTS AND EXPORTS.

The reduction in our holding of bills arises from a diminution in the export trade of India during the year under review. In spite of a good monsoon last season, and, although the balance of trade is still very largely in favour of India, there has been a considerable contraction, both in the imports and exports of that country. Shipments of grain, tea, wool and oil-seeds materially declined, and the increase in the value of the exports of jute and jute manufactures has not been sufficient to offset the decrease in other directions. The import trade shows an even greater contraction, and a very large proportion of the decrease, I am sorry to say, occurs in the exports from this country to India. On the other hand, we have seen a welcome increase in the trade with the Straits Settlements, where the active demand for rubber and tin has spelt a period of prosperity, and I am glad to say that we have had our share of the increased trade of Singapore.

HONGKONG AND CHINA.

In Hongkong and China the position continues to be very obscure, but, despite the political and other influences impeding the restoration of normal conditions in that part of the world, there are signs that traders are endeavouring—and with success—to adjust themselves to the new conditions of both distribution and marketing which are being imposed upon the unfortunate traders of China by the unsettled state of affairs.

In our cash and money at call and short notice we have a satisfactory reserve of over 24 per cent. against our liabilities on current and deposit accounts; our investments show an increase, due in some part to a larger holding of Indian Government securities, which have greatly advanced in value by reason of the improvement in the Government's financial position.

This, indeed, has been one of the most satisfactory features of the year's history, so far as Indian conditions are concerned, and that Government is now in a position to enter upon the task of once more placing the rupee on a firm and stable basis. This question has been under investigation by a Royal Commission, who have, I understand, submitted their report within the last few hours, and though unable to speak with certainty, I confidently anticipate that the result of their deliberations will be to stabilise the rupee at rs 6d, which was the rate recommended by that extremely able Finance Minister of the Government of India, Sir David Barbour, as far back as 1892, when the closing of the mints to the free coinage of silver was under consideration.

BANK'S PROSPECTS.

As to the prospects of the bank, I am glad to be able to say that the work which has been done during the last five years has resulted in our having established good and valuable connections, not only in London but all over the East. When trade recovers—as it will undoubtedly do—we shall find ourselves equipped to take a share in the activity which will ensue.

We owe a great deal to the loyal and energetic devotion of our

staff at home and in the East, who have spared no pains to set up a sound basis for the future expansion of our business, and in our colleague and general manager, Mr Gubbay, who goes off tomorrow on a well-deserved holiday, we have a tower of strength.

The first five years of our existence coincided with a time of world-wide fluctuations in prices and in exchanges, but gradually, one after another, the elements of instability are beginning to pass away, and I look forward to the time when the fruits of prudence and careful husbanding of our resources will yield us the advantage which we have a right to expect from the policy we are adopting. I feel sure the board will have your support in their determination to build up our reserves year by year.

As I came into the room one of the shareholders—a very influential and very large shareholder—told me he had come to propose a counter resolution. He said he wanted a larger dividend; but, after talking to him for a little time, I found he was only joking, and that he quite realised that we were proceeding on the right course.

Of our affiliated bank, the Allahabad Bank, I am glad to say that it continues to make quiet and steady progress.

Since its affiliation to us it has increased its reserves from 4½ lakhs to 44½ lakhs, against a paid-up capital of 35½ lakhs.

The management and staff of that bank deserve our approbation for the care and prudence they have exercised in the conduct of its business.

The working of the Allahabad Bank during the year which has just ended has enabled it to pay its usual dividend of 12 per cent., with a bonus of 6 per cent., less tax, and to increase its carried forward from Rs.2,75,000 to Rs.3,47,000. So far, during the current year it has done well—better than last year.

Three months of the current year have gone by with satisfactory results, and, if we can only get settled conditions of labour, without being too optimistic, we may look forward with confidence to the future.

EFFECT OF COAL STRIKE.

The unfortunate coal strike has cost the country many millions. All classes, including the miners, are suffering from it, and the revenue will have to be made good by one means or another—very probably by increased taxation. The Government, with admirable patience, has exhausted every means to secure a fair settlement for both sides, but the obstinacy of the miners' leaders has barred the way. They don't seem to realise that they can't get out of a pint pot more than a pint, and they have shown an absolute disregard of economics. I am hopeful that the alteration in the law—which was made last night—which will permit a miner, if he so desires, to work eight hours a day instead of seven, may bring about a resumption of coal-raising in this country. No man could have striven harder than the Prime Minister has done to bring about peace in the coal industry.

CONDITIONS IN FRANCE.

In April last I sent a letter to the *Times* from Paris, which they were good enough to print, on the financial situation in France. I had the audacity to suggest that unless our friends took the bull by the horns and taxed themselves sufficiently to balance their budgets, which they have not done for many years, and made arrangements to discharge their debts to America and Great Britain, financial chaos would overtake them, and that this was the last thing we wanted to see happen to our great and friendly neighbour. Unfortunately, things in France since then have gone from bad to worse. When I wrote in April last the pound sterling could only buy 140f. To-day it can buy no less than 186f or 187f. From a purely selfish point of view we don't want to see the value of the franc slipping further away relatively to the pound or the dollar, and I hope our friends across the Channel may be able to stabilise their currency before it is too late. It would be a lamentable disaster if what occurred in Germany were to occur in France. So far as this country is concerned, although it has cost us dear, we must congratulate ourselves on having balanced our budgets, avoided inflation, got back to the gold standard, and stood up to the debt we incurred in America.

I now beg to move: "That the directors' report and statement of accounts for the twelve months ending March 31, 1926, be and the same are hereby adopted."

Before asking one of my colleagues to second that resolution, if there are any questions which members of the corporation wish

to put to me, I shall be glad to answer them to the best of my ability.

Mr Alastair Cameron (deputy-chairman) seconded the motion.

SHAREHOLDER'S CONGRATULATIONS.

Sir Alfred Lewis said he had no questions to ask, but he would like to congratulate the chairman and his colleagues, as well as the management, on the excellent statement which had been submitted to the meeting. It was a very remarkable thing that, during such trying and adverse times as they had been passing through, the directors had been able to present a statement showing, practically, that the profits had been maintained, notwithstanding that during the last three years the bank's resources had contracted. He had no hesitation in saying that those results reflected the magnificent management which the bank enjoyed, and he was confident that it must have a fine career in front of it directly the trade of the East and the conditions of world economics had improved. In offering his congratulations on the excellent report he wished the bank every prosperity in the years to come.

The motion was carried unanimously, and a dividend of 5 per cent., less income-tax at 3s 1.72d, was declared.

The retiring directors (the Right Hon. the Earl of Selborne, K.G., G.C.M.G., Mr F. A. Johnston, and Mr. W. M. S. Gubbay, C.S.I., C.I.E.) were re-elected, and Messrs Peat, Marwick, Mitchell, and Co. were reappointed auditors.

On the motion of Mr Langham Reed, seconded by Mr Pitt, a cordial vote of thanks was passed to the chairman and directors, as well as to the staff in London and in the East.

The proceedings then terminated.

AUSTRALIAN ESTATES AND MORTGAGE COMPANY, LIMITED.

EFFECTS OF THE DROUGHT—THE WOOL POSITION.

The annual ordinary general meeting of the Australian Estates and Mortgage Co., Limited, was held, on the 14th instant, at the Cannon street Hotel, London, Mr Andrew Williamson (the chairman) presiding.

The Chairman, in the course of his speech, said:—In view of the distribution last year of a dividend of 6 per cent. and a bonus of 4 per cent., or a total of 10 per cent., it must have been a disappointment to our shareholders that for the present year we only recommend the usual dividend of 6 per cent., without any bonus. I must, however, remind you that the previous year was one of exceptional—indeed, quite abnormal—prosperity for the whole pastoral industry owing to the high prices then ruling for wool, which reached the maximum towards the close of that year (1924), when we were fortunate in participating to a large extent in the benefit of these highest rates. The general position of the pastoral industry has been very different in 1925, and the year embraced in the present accounts has suffered from a severe fall in prices, which over our whole clip was equivalent to a reduction of over 8½ per lb. The adverse effects of the slump in values were to some extent modified by the substantial increase in our wool clip. This fall in values not only greatly reduced the revenue from our wool, but also resulted in lower prices per head from the live stock sold, and, of course, affected the profits of the agency business at all our branches. The profits from our sugar interests were also less. Moreover, we received no distribution from Bawra, whereas we got over £40,000 in 1924. Our expenditure on improvements has also this year been exceptionally heavy. This year's earnings, however, were sufficient (after transferring £25,000 to general reserve and £5,000 to pension fund reserve) to provide a bonus of 2 per cent. in addition to the 6 per cent. dividend, and this distribution of 8 per cent. in all your directors would have recommended but for the drought which has prevailed for many months on most of our properties in Queensland.

The season in that State in 1925 was such as to leave our properties in a very dry condition at the end of the year, although had the usual summer rains fallen this would have been remedied almost immediately. Unfortunately, instead, since the end of the year, there has been a serious drought of gradually increasing intensity. On the stations affected the lambing is practically a failure, and mortality in aged sheep, weaners, and lambs has been heavy.

The gross profit for the year, including revenue from properties, interest on mortgages, and investments, commission, and other profits was £356,085, or a decrease from the high figure of the previous year of £104,071.

REVIEW OF 1925.

I will now endeavour to present a brief review of the operations of the company during the year embraced in the accounts. The main factors affecting our annual earnings are, of course, seasons and prices. While during the year the seasons were far from ideal, they were yet upon the whole such as to admit of

good returns from our pastoral estates. The seasons were most satisfactory in Central, Southern, and Western New South Wales, and our properties in those areas did remarkably well. In the north of New South Wales and over the border into Southern Queensland dry conditions prevailing early in the year developed into drought, and the position there was not relieved until just on the close of the year, when good rains fell. Further north alterations of extreme heat and heavy rains succeeded each other, the former having to a great extent a neutralising influence on the latter, and the pasture although plentiful was dry. With, however, only two or three exceptions conditions on our various properties during 1925 were not such as to cause anxiety, and we were able to mark a very fair percentage of lambs and to conclude the year without any undue mortality in our stock as a whole. Our wool clip was again satisfactory in quantity, but it was not quite equal to that of the previous year in quality. Our clip amounted in the grease to 21,764 bales, against 15,866 in the previous year arising from our getting the full benefit of our recently acquired additional properties. The gross proceeds, however, amounted to over £44,000 less, and our station expenditure was heavier owing to the working of our new stations, the greater number of sheep shorn, and a large clip.

To sum up what I have said regarding the outlook for the current year, our stations in New South Wales are enjoying a better season than they have done for years and the prospects are excellent. Our Queensland properties, on the other hand, are in the grip of a bad drought (one of the most severe since 1902), which in any case must seriously affect this year's profits, and the measure of the damage will be the duration of the drought. Notwithstanding the contraction of the spending power of the country here caused by the disastrous suspension of the coal industry, with its paralysing effect on other industries, including wool textiles, and the unsettled state of Continental exchanges, the price of wool, especially of merino, keeps remarkable firm, with if anything an upward tendency, which augurs well for the course of the market when the industrial horizon clears.

The report and accounts were unanimously adopted.

GENERAL ELECTRIC COMPANY, LIMITED.

FURTHER PROGRESS—LARGE INCREASE IN PROFITS.

The annual general meeting of the General Electric Co., Limited, was held, on the 12th inst., at Magnet House, Kingsway, London, Mr E. G. Byng (vice-chairman) presiding in the absence, through indisposition, of the chairman, Sir Hugo Hirst, Bart.

The Chairman read the speech dictated by Sir Hugo Hirst, in the course of which he stated that the profit from trading account and income from investments was £47,000 more than in the previous year, which was satisfactory in itself, but short of what at one period during the year they were led to expect. The steady upward movement referred to at the two previous meetings as regarded the demands for the company's products continued noticeably during the first six months of the last financial year. The moment the coal cloud appeared on the horizon and other labour questions became the topics of the day progress suddenly stopped, and some of the seeds which they had sown, and from which they hoped to reap, did not mature. There had been a marked improvement in the income from investments, which item, on the advice of the auditors, had this year been included in the trading profit. The transfer to reserve of £120,000 compared with £172,000 in the previous year, but they were carrying forward £310,000 as against £214,000. As to the balance-sheet, in spite of heavy expenditure on "loose plant, tools, patterns, fixtures, installations, and patents," they had been able to keep these items down to the nominal sum of £1. Also, they had been able to do an increased business, and incur capital expenditure on buildings and machinery of over £100,000, and a similar amount on trade investments without materially affecting their liquid finances, which were close on £1,150,000. All this showed how steady, careful work had made the company one of the healthy and strong engineering concerns of the country. When the year ended there was no reason why an increased dividend should not have been declared, but, as they were watching the effect of the present industrial situation, the board considered they were not justified in adopting a higher standard.

EFFECT OF COAL STRIKE.

It was a pity that the country did not seem to get a real fighting chance. Things had been settling down, unemployment dropping from week to week, and, in the same ratio in which it dropped, the company's sales seemed to expand. With the exception of a few industries, everybody was beginning to do better, and then came this upheaval which must impoverish the country and enrich our competitors, and which, if things were not settled quickly, must throw us back again for years. Coal mines were not working, many steel works, pottery, and other industries had shut down; other works (including some of their own) had to work reduced

hours on account of the reduced power supply; raw materials for many industries were getting scarce.

In his opinion, nothing but a well-thought-out scheme which enabled the fullest application of electrical and chemical science in the furthering and treatment of coal would give a real and lasting cheapness of production, would bring peace in the industry, and enable us again successfully to compete in the export markets. When the value of a product was admittedly mainly represented by wages, it was a crime and a heresy to stick to the slogan, "Not a minute on and not a penny off." The Government in the past had done much good to trade and industry by the Trade Facilities Act, but nothing they had done in that direction could equal the benefits to the country at large when the time came that this Act might extend its benefits to the reconstruction of the coal industry. Better selling arrangements and a better spirit in the industry were wanted, but he was sure they would come automatically when the opportunity of sharing success showed itself.

ELECTRICITY BILL.

With regard to the Electricity Bill, Sir Hugo said he was a strong protagonist of it, and saw great and lasting good to the industries of this country if the Bill passed into law. He hoped nothing untoward would happen to prevent the Bill going through soon. Every day's delay did untold harm. For manufacturers it would prove of particular assistance in their struggle with countries who had a lower standard of living. If, as the Bill provided, after, say, five years the electric current was ubiquitous throughout the country, the opportunity of its use would be greatly enhanced, and if, as the Bill provided, voltages and periodicities were gradually becoming standardised, the British manufacturer would have at last a chance of proper mass production. He would not only be able then to supply apparatus wanted in the house, factory, and the farm cheaper, and thus popularise the demand, but he would also be able to produce at such prices that he could enter again more freely the markets of the world.

With regard to the company's different departments and their activities in different territories, they were very satisfactory and healthy on March 31st, the end of the financial year. Their future depended not so much on what they could do electrically as on the general welfare of the country. If the latter was assured he had no fear for the future of the company.

The report and accounts were unanimously adopted.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.

WEST AFRICAN EXPORTS.

Mr J. H. Batty, chairman of directors, presiding over the annual ordinary general meeting of the African and Eastern Trade Corporation, Limited, held in Liverpool on the 9th instant, said the whole of the ordinary shares, amounting to 4,000,000, had now been issued, and there were only 648,835 six per cent. cumulative B preference shares remaining unissued. Liabilities showed a decrease of £213,540. Reserves showed an increase of £34,927, and this year £60,000 was set aside out of profits for depreciating factories and buildings in West Africa, and also for writing down the value of various river steamers. The underwriting business had proved satisfactory during the past year.

YEAR'S PROFITS.

The profits for the year, after providing for all losses in subsidiary companies, and including dividends on investments, were £501,815 19s 11d, being an increase of £30,767 on 1924. After making provision for £60,000 to depreciation fund, £20,000 to income-tax reserve, £10,000 to superannuation fund, and writing £1,000 off office furniture, there remained to the credit of profit and loss account £589,401 7s 2d, as against £540,612 11s 5d. On the whole they had reason to congratulate themselves on the results of the past year. So far the ensuing year indicated that in spite of the grave upheaval caused by the General Strike and the prolonged coal dispute, the results for the current period should show somewhere about the same returns. Nevertheless, the directors did not feel justified, at the present juncture, in distributing a larger final dividend than 4 per cent., making 8 per cent. for the year. The dividend would be raised directly they could safely do so, and provided profits were maintained. Hitherto it had been the course for the official year to close at December 31st. Recently it had become increasingly obvious that this was a most inconvenient time, and their directors had come to the conclusion that taking stock and balancing at that period dislocated the business at a time of its highest pressure, and they had decided to adopt September 30th as the end of the official year.

WEST AFRICAN EXPORTS.

Every effort should be made in the West African colonies to produce the raw materials required by the Mother Country, and money spent in that direction should prove of much benefit to the native population. The accumulation of wealth by the natives could only come by encouraging them to grow the produce badly needed in European and American markets. Palm-oil imports into the United Kingdom for 1925 had been 83,019 tons, as against 85,017 tons in 1924, and the United States imported 61,700 tons in 1925, as against 45,450 tons in 1924, and 10,350 tons in 1921. If the demand continued it would not be long before the imports into the United States would exceed those of the U.K. The importations of palm kernels into the U.K. had dropped during 1925, while the imports into Germany were steadily increasing. The Gold Coast Colony exports continued to expand, and the quantity of cocoa exported was 213,238 tons, and he was satisfied that consumption was keeping apace with production, and the market price of Accra cocoa should remain somewhere about the present level. The Gold Coast Colony had now become the second most important exporter of manganese ore, and they might expect to see this tonnage still further increased when Takoradi harbour was available, and steamers could be discharged and loaded alongside wharves. Nigeria may be looked upon as one of the most valuable possessions of the Crown, and was certainly Britain's largest colony in West Africa, and was only at the beginning of its development. The exports had increased from £8,250,000 in 1921 to £17,000,000 in 1925. Nigeria had great potentialities.

PALM-OIL INDUSTRY IN THE EAST.

One of the directors, Mr A. A. Cowan, had returned from a visit to Sumatra and the East firmly convinced that the palm-oil industry was well established there, and they in West Africa had seriously to reckon with this new competitor, and devise some means whereby the situation could be successfully met and the interests of the natives reasonably safeguarded. The company possesses in the British Cameroons a freehold estate consisting of 6,000 acres, and the directors had under consideration developing this land for palm-tree cultivation. The company own two rubber plantations comprising about 2,700 acres, of which 2,200 acres were now producing, and they compare with the best estates in Malaya and Sumatra.

In conclusion Mr Batty moved the adoption of the reports and accounts, which was seconded by Mr Robert B. Miller, and carried unanimously.

A final dividend on the ordinary shares of 4 per cent., less tax, was declared, making, with the 4 per cent. interim already paid, a total dividend for the year of 8 per cent.

The retiring directors, Mr R. B. Miller, Lieut.-Colonel Wm. Nicholl, and Messrs Mazzini Stuart and J. Tunnicliffe, were unanimously re-elected, and the auditors (Messrs Harwood Banner and Son) were reappointed.

DISTILLERS COMPANY, LIMITED.

DESTRUCTIVE EFFECT OF THE HIGH SPIRIT DUTY.

DECREASE IN CONSUMPTION OF HOME-MADE SPIRIT.

The forty-ninth annual general meeting of the Distillers Co., Limited, was held at Edinburgh, on the 15th inst., when Mr William H. Ross (chairman of the company) presided.

The Chairman, in moving the adoption of the report and accounts, after paying a tribute to the late Lord Stevenson, said: I shall now deal with the figures in the balance-sheet before entering upon matters of more general interest. Turning first to the assets, you will have observed that land and buildings appear at £21,000 over last year, while plant and utensils show a decrease of £11,500, or a net increase on these two items of £9,500. This addition was caused through the necessity for building two large new bonded stores and other necessary extensions in the course of the past 12 months, at an approximate cost of £70,000. The difference between that sum and the increase appearing in the balance-sheet represents the depreciation which your directors have thought it advisable to provide in the case of those properties which are no longer required as working units.

Investments now appear at the rather formidable figure of over 11 million pounds, or £7,040,753 over the figure at which they stood last year. Needless to say, this increase is due to the acquisition of the Buchanan-Dewar and Walker ordinary shares, amounting to nearly 6½ million pounds, and to the other acquisitions mentioned in the report, all of which appear in our balance-sheet for the first time. I shall have something to say about this item later on. Sundry debtors and bills receivable show a reduction on last year's figures of £80,000 and £66,700 respectively, while stocks and cash are increased by £6,700 and £94,200. Loans to subsidiary companies are increased by £790,000, due to heavier stocks held by these concerns; but, on the other hand, the loans from subsidiary companies have also increased by £595,000, so that, with the exception of about £200,000 furnished by the parent company, these subsidiary companies have provided the additional working capital themselves.

THE INCREASE IN CAPITAL.

The expenses in connection with the increase of capital and acquisition of shares was reduced by £100,000 in terms of last year's report, and a further £100,000 is recommended to be written off this year, which will then leave only £100,000 to be provided in future years. Looking now for a minute at the liabilities side of the balance-sheet, the increase in the ordinary share capital has already been explained in the report. The preference share capital as well as the various debenture debts remain as before. The reserve, fire insurance, and superannuation funds have each been increased by the sums mentioned in the report. I might here mention in regard to the superannuation fund that, seeing this fund is wholly employed in the company's business, our practice is to add to the fund 5 per cent. interest on the annual balance and to debit the fund with the total pensions paid out each year. The effect of this in the past year was that the outgoings exceeded the revenue by about £124, and in view of other beneficiaries coming on to the scheme in the course of the year your directors thought it prudent to add a further £25,000 to the amount of the fund, so that it may be placed in the position of being self-supporting. The liability for carriage on spirits in bond is down by £2,225, while sundry creditors are also reduced in amount by £220,000.

It is somewhat difficult to compare the balance at profit and loss account this year with last, owing to the fact that only the final dividends from the Buchanan-Dewar-Walker Companies came to this company last year, while the present year's figures do not embrace the total revenue earned by the other businesses acquired during the year. Taking the figures as they stand, however, it would appear that, with exception of the reduction of £50,000 in the sum added to the superannuation fund, all the other appropriations, including the dividends recommended, remain the same as before, while we carry forward £5,000 more than the previous year. Of this apparent reduction in the profits of £45,000, the higher debit for income-tax is accountable for £29,000.

VALUE OF THE INVESTMENTS.

I wish now to revert to the figure in the balance-sheet classed under the term "investments," which forms such an important item in our general assets. A year ago I indicated that we were considering the possibility of presenting the accounts in the form of a consolidated balance-sheet: in other words, to split up the amount described as "investments" into its component parts. For trade reasons we have come to the conclusion that this is for the moment undesirable, but I wish to take our shareholders so far into our confidence by giving you such information as should satisfy you as to the soundness of our position. In the first place, these investments for the most part comprise shares in other distilling or cognate companies having objects similar to the parent

company. In the second place, while many of these shares have been acquired at a premium over par in companies where goodwill forms an integral part of their assets, a consolidated balance-sheet, if produced, would show that the whole of these goodwills and premiums on shares are more than set off by reserves provided on the other side, mostly by the companies themselves, but partly from investment reserves provided by the parent company, and that such a result is arrived at without encroaching on the general reserve and other funds which figure in our own balance-sheet. This means that, after writing down the properties embraced under "investments" to very safe values and keeping the stocks at their original low valuations, we have solid assets for every penny of the £11,168,000 without taking any credit for the value of the goodwills.

I think this information ought to be satisfactory to the shareholders, and make up to a large extent for the absence of a consolidated balance-sheet.

THE DESTRUCTIVE SPIRIT DUTY.

Ladies and Gentlemen, I have finished my review of the accounts and now propose to touch upon the principal topics concerning our business. I have referred to whisky as being still our main product. How long it will remain so depends largely upon how long the Chancellor of the Exchequer means to exact the present exorbitant rate of duty, which is gradually but surely bleeding the whisky trade to death. Year by year the consumption of home-made spirits in this country is decreasing, and for the year ending March 31, 1926, we have reached a fresh low record—if we exclude the two years 1918 and 1919, when control was in operation—of 12,074,000 gallons. This compares with a relative figure of about 28,000,000 gallons in 1916. However gratifying the total party may regard these figures, they can give little satisfaction to the Chancellor of the Exchequer, to the distilling and its allied trades, or to the large mass of the public who desire to indulge in the moderate use of whisky either as a medicine or as a beverage. We have every sympathy with the Chancellor in his anxiety to hang on to an easy method of raising revenue, but he must be fair and see that each section of the population is bearing its reasonable share of the burden. Hitherto our request for a reduction in the duty has been met by refusal unless we could guarantee that there would be no loss of revenue occasioned thereby. Why should whisky be the only commodity which is required to stand this test? When a reduction in the duties on tea, sugar, or any other commodity has taken place, has the same condition ever been made? Is the position not simply this, that during and immediately after the war all taxation, both direct and indirect, had to be increased without mature consideration and by the easiest methods possible, but on the understanding that those sections of the public upon whom these special burdens fell would receive relief as and when the finances of the country would permit or so soon as the burden could be distributed more evenly over the whole population? Surely the time for a more equal distribution has now arrived by broadening the basis upon which the country's revenue is collected.

CURTAILING THE PRODUCTION.

Meantime it is necessary for the trade to adjust itself to the existing circumstances. A year ago I uttered a word of warning that to meet the diminished consumption too much whisky was being produced. Fortunately the distillery generally appreciated the position, so that the malt distillers from the beginning of last distilling season, and the grain distillers from January 1st of this year have made substantial reductions in the total production. This will not be fully reflected in the figures until we get the official return for the year to March 31, 1927. In the opinion of those most competent to judge, however, this reduction has not gone far enough, and a further cut will be necessary during the coming season. This necessity might, of course, not arise if a reduction in duty could be brought about, thus allowing of a moderate increase in the consumption.

Apart from the distilling end of the business your directors are well pleased with the share of the whisky trade which is coming their way through their various distributing companies, and it confirms them in the wisdom of having brought these two branches of the business into association with each other.

The prospects for the trade in industrial spirits are also distinctly brighter since the acquisition of a substantial interest in the business of Herbert Green and Co., Limited, of Hull, as although that business in itself could not permanently have competed successfully with this company, it had elements for working mischief both to itself and to others which have now been removed. In other directions we are exploring new fields for the development of trade in industrial alcohol, and derivatives thereof, both at home and in the Colonies, so that our interests may be even more widely spread than they are at present.

THE FUTURE OUTLOOK.

Apart from those circumstances to which I have already alluded.

the only dark spot in the industrial horizon is the unfortunate deadlock in the coal industry. If this dispute could be satisfactorily settled, which it can only be by a reasonable compromise, then I predict a quick recovery in British trade generally, in which our company must participate. Meanwhile we have the consolation that we are in a very strong position to withstand the strain which we, in common with all industrial companies, are called upon to bear while this internecine struggle continues, and while I have endeavoured to put before you the unfavourable as well as the favourable features of our business, I believe if this cloud were definitely removed and we were given fair and reasonable treatment at the hands of the Government, there is nothing to prevent a continuance of that success which has consistently followed our efforts for close upon half a century.

I have now pleasure in moving the adoption of the report.

Mr George Readman seconded, and the report and accounts were unanimously adopted.

APOLLINARIS AND JOHANNIS, LIMITED.

FURTHER PROGRESS—PROGRESS OF "PRESTA" ENTERPRISE.

The twenty-ninth ordinary general meeting was held, on the 13th inst., at the Holborn Restaurant, London, Mr Alfred R. Holland (chairman of the company) presiding.

In moving the adoption of the report and accounts, the Chairman said that the past year had been marked by further progress, the profits having risen from £60,350 to £68,280. A sum totalling £26,095 had also been set aside since the reconstruction of 1923 for redemption of debentures and debenture interest certificates. The company's position since it resumed operations after the war had continuously improved, and there were many favourable factors to record. Liquid reserves at the bank had increased by £11,000 and stood at over £36,000, and the carry forward amounted to some £60,000.

As the reserve fund of £210,000, employed in the business, had not been interfered with during the reconstruction, it would probably not be necessary to make further allocation to it for some time to come, consequently if later profits showed further expansion there was no reason why then there should not be a small dividend, as the carry forward was already sufficient for the prior charges of one complete year.

The cool weather, however, of this present spring and summer, as well as the circumstances of the General and Coal Strikes, were, unfortunately, deterrent factors, as much entertaining had been cancelled, with consequent loss of trade to the company. Had it not been for these adverse circumstances which had occurred during the first quarter of this current year, he would have felt even more optimistic in forecasting the payment of a small dividend for the year to come.

The Managing Director (Mr Francis J. Schilling), in seconding the adoption of the report and accounts, specially referred to the new enterprise which the company had undertaken in connection with the manufacture and sale of sweetened beverages which were being placed on the market under the trade name of "Presta." A small freehold factory had been erected and fitted at Colindale, near Hendon. An artesian well had been sunk some 300 feet deep, and "Presta" Aerated Waters had already been introduced and placed on the market. The sale was only commenced some three months ago, but already about 1,000 new accounts had been opened. Though too much should not be expected in the way of profits in the initial stage of any new business, yet it was felt and believed that this new "Presta" enterprise would in time materially improve the position of the company.

The report and accounts were unanimously adopted.

BERTAM CONSOLIDATED RUBBER COMPANY, LIMITED.

GOOD RESULTS AND PROSPECT.

The ordinary general meeting of the Bertam Consolidated Rubber Co., Limited, was held, on the 13th instant, at River Plate House, Finsbury circus, London, Sir West Ridgeway (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The outstanding feature in our report and accounts is the profit for the year of over £181,000, compared with about £55,000 for the previous year.

The result has been brought about by a substantially larger crop and an improvement of rather over 1s per lb in the price realised for our rubber. Against this there is an increase of about 1d in the f.o.b. cost. The actual estate cost was practically the same, but the additional items are rather larger, due firstly to the increase in the export duty, but more particularly to the amount we have set aside for estate staff bonuses in respect of the year. These bonuses are based, as before, upon the dividends paid, and I believe it is the wish of you all that our estate staff should share in the prosperity of the company.

About 42 per cent. of our production was sold under contracts for delivery in the East and in America, and the balance was shipped to London and realised there. Our experience, on the whole, has been that sales of a moderate proportion of the crop under contracts for future deliveries have been advantageous. The average price realised for our crop was rather over 2s 5½d per lb.

The main expenditure on capital account was our purchase of the Taisho estates in July last. The Balamah estate, which has been purchased, is a property almost adjoining one of the divisions of Taisho. The purchase of the Taisho estates having been effected by the issue of our unissued shares, it was decided to replace the unissued shares and to increase the authorised capital to £400,000 by the creation of a further million shares of 2s each, and this was done in January last. There is no proposal to issue the additional shares at present, but we felt that a reserve of unissued shares should be available in the event of its being found possible to acquire additional approved properties. We have no intention of purchasing additional properties simply for the purpose of adding to our acreage, and if we do decide to take over any other plantations it will only be after we have satisfied ourselves that the earning power of any such property would be more than sufficient to justify a further increase in our issued capital.

Our present area of rubber plantations, including the new estates, is 8,475 acres, practically all mature, and our issued capital is £300,000. The capitalisation per acre is therefore about £35 per acre without allowing for our reserve land or our interest of more than one-seventh of the Bertam Extended Estate.

We hold 100,000 shares in Bertam Extended Company, representing the interest in that company's estate to which I have just alluded. That company has now arrived at the stage of paying a dividend, and the market value of the shares is about 3s 9d, although they are retained at the value of 2s. in our balance-sheet.

You will see we have written off the expenses of the new issue of shares and the stamp duty on increase of capital against the premium on the issue of new shares, and we propose to add the balance of share premium account to the general reserve, bringing the amount on that account up to approximately £165,000, the larger part of which is, as you will understand, included in the cost of our estates.

The only other item on the balance-sheet to which I will allude is the liquid assets. These at the date of the accounts amount to close on £200,000, inclusive of the rubber in transit and Bertam Extended shares at present market value.

As to the prospects for the current year, we estimate a production of about 2,500,000 lb. This estimate is on the basis of our being permitted to export rubber at the full rate of the standard allowance, and if it is necessary to reduce the amount allowed to be exported it may be necessary to modify this estimate.

I venture to think you will consider the company's record for the past year as eminently satisfactory, and, so far as I am able to judge, there is every reason to hope for at least as satisfactory results for the current financial year.

Mr A. P. Hadow seconded the resolution, which was carried unanimously.

PHENIX OIL AND TRANSPORT COMPANY, LIMITED.

SATISFACTORY AND PROFITABLE EXPANSION.

The sixth annual ordinary general meeting of the Phoenix Oil and Transport Company, Limited, was held, on the 15th instant, at River Plate House, London, Sir Edward Manville (the chairman) presiding.

The secretary (Mr Arthur J. Pegg) having read the notice convening the meeting and the auditors' report,

In moving the adoption of the report and accounts, the Chairman stated that the past year had been marked by steady and consistent progress in all the affairs of the company, and that progress was to some extent indicated in the balance-sheet. The net profit in 1925 was £284,230 after making due allowance for depreciation, or a sum of £58,620 more than for the immediately preceding twelve months. That the directors considered to be satisfactory progress.

CRUDE OIL PRODUCTION.

The basis of the prosperity of the company had necessarily to depend primarily upon the production of crude oil, and that had shown steady expansion year by year, having increased from 42,000 tons in 1922 to 267,000 tons in 1925, while the output for the first six months of the present year was at the rate of over 320,000 tons per annum. Last year saw a very appreciable extension of the company's area of proven oil lands, and in that connection he was pleased to record the fact that the departments of the Rumanian Government concerned had redeemed their promises in the fullest possible measure.

The extent to which the general drilling programme had been carried on was an indication of the efforts which they were making with a view to increasing production, and while 62,900 feet were

drilled in 1924 78,700 feet were drilled in 1925, which was a very satisfactory increase. The enlarged programme which it was the policy of the board to adopt meant an increase of 50 per cent. in drilling activity, and drilling on that increased scale was actually in hand, the results of which should begin to become apparent in the near future.

Last year he told the shareholders that a very interesting and important discovery had been made of a third oil horizon on their Moreni properties; since that time they had drilled a considerable number of wells into that sand with uniformly satisfactory results. Tests were now being made to ascertain whether that new horizon extended to their neighbouring fields of Bana and Gura Ocniței. The favourable opinions they had previously formed of the Government lease and the new perimeter at Gura Ocniței had been justified, and they were looking forward to a large increase in the already satisfactory yield of oil, where, owing to the area in their occupation being in one large block, they were able to carry on systematic and economical development under ideal conditions.

REFINING AND MARKETING.

As to the company's refining activities last year, he was able to state that at their three refineries they were dealing with sufficient oil to enable them to be efficiently worked, and then he expressed the hope that complete capacity would soon be reached. Now not only was that the case, but they had almost completed the enlargement of the capacity of the refineries in order to cope with the increasing production. Arrangements for the distribution of their products in Central Europe have progressed during the year, and they had now retail distribution establishments in Austria, Southern Germany, and Jugoslavia, while they had also a business established in Hungary. Bulk shipments of products were being made to England and other countries in Europe, and there had been no difficulty in disposing of all the oil they produced. The material increase in the drilling programme and improvements at the refineries, &c., had called for large expenditure, but it was satisfactory to learn that the funds absorbed had been largely met out of revenue.

The Chairman concluded by referring to the dividend for the year (7½ per cent.), and said there was every reason to believe this year's distribution would be on a larger scale.

MANAGING DIRECTOR'S REMARKS.

Capt. T. S. Masterson, D.S.O., M.Inst. P.T., responding to a request that he should address the meeting, said they had not been very fast in getting to the position at which they had arrived, but he and those associated with him believed that steady progress was better than a flash in the pan. It was with a programme which envisaged steady progress that they had rested content, and he was glad to say that that programme had given results better than he and his colleagues out there had expected. The equipment of the property had been maintained; the fields of the various companies amalgamated had been consolidated, so that they had become one entity for the purposes of working; the refineries were also being perfected by the installation of modern plant, and the funds for the purpose had been largely supplied out of revenue.

The resolution was carried unanimously.

WM. CORY AND SON, LIMITED.

SATISFACTORY RESULTS OF A DIFFICULT YEAR.

The thirtieth annual ordinary general meeting of Wm. Cory and Son, Limited, was held, on the 13th inst., at the Cannon street Hotel, London.

Sir A. C. Cory-Wright, Bart. (the chairman), in moving the adoption of the report and accounts, said that the directors were again in the fortunate position of being able to place before the shareholders results which, in view of the fact that trading conditions during the 12 months under review had been seriously hampered by the acute depression of the coal industry and the overhanging cloud of a disastrous labour upheaval at the collieries, they would, he thought, meet with the approval of the shareholders.

The profit for the year, after charging all expenses, &c., amounted to £533,931, and the directors recommended a final dividend of 10 per cent. on the ordinary and employees' shares, making 15 per cent. for the year, and that £506,234 be carried forward.

Their home trade had fully maintained the previous year's tonnage, and, notwithstanding extremely keen competition, that branch of their business showed an increase in volume, although the margin of profit was less. Owing to the increasing use of oil fuel for bunkers, their coal supplies for that purpose showed a falling off; it was, however, in the circumstances, not a very serious reduction, and was more than compensated for by the increase in oil fuel which they had supplied both in the United Kingdom and abroad. Their export trade had to some extent suffered for reasons that had been prominently brought before the public, and which were fully set forth in the report of the Coal Commission.

It was satisfactory to record a large increase in the supplies of oil fuel which the company had made during the past 12 months. Undoubtedly both fuel and Diesel oil for ships, especially passenger liners, was displacing coal at an increasing rate. Since the close of the financial year the fear that the removal of the Government subsidy might result in a complete cessation of work at the collieries had unfortunately proved only too well-founded. Coming at a time when the industry of the country was beginning to show evidence of revival after a long period of depression, a stoppage of one of the most important industries of the country was nothing short of a calamity. This company had endeavoured to meet the requirements of customers by the importation of foreign coal, and its ships and plant were fully employed.

The report and accounts were unanimously adopted.

LIPTON, LIMITED.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The annual general meeting of Lipton, Limited, was held, on the 12th instant, at Winchester House, Old Broad street, London, Sir Thomas J. Lipton, Bt., K.C.V.O. (the chairman), presiding.

The Chairman first referred with regret to the resignation of Mr J. F. Gregory, and, proceeding, said that the directors were pleased to have Sir John Ferguson as a colleague in the capacity of deputy-chairman and finance director. He was sure that Sir John, with his all-round experience, especially in the region of finance, would prove a most valuable addition to the board.

Sir John Ferguson, K.B.E., said it was a matter of the greatest regret to the board to have to report a decrease in net profit. The ramifications of the company were so widely spread and of such a huge and inter-dependent character that it would take much longer time than he had yet had at his disposal to submit well-considered proposals to his colleagues. He then analysed the salient items in the accounts.

ADVERSE FACTORS.

The Chairman said that nobody could feel more keenly than he himself that the results had fallen so much below the board's expectations. The reasons for the unfortunate state of matters were various, and he would mention one or two. The prolonged depression of trade and the consequent unemployment had contributed mainly to the decrease in profits, much of their business being carried on in districts which had suffered most from the adverse conditions which had existed for so long. Also, the reduction in the prices of several of the commodities in which the company dealt largely had had a very serious effect on profits. Competition was never so keen in the commodities which the company manufactured, or in which they dealt, as it was to-day. Every possible care and attention was being given to the question of economies, and no effort had been spared in any direction with the object of reducing expenditure and increasing profits—of course, keeping in mind the proper and efficient working of the business. He frankly admitted that the results for the past year or two had been most disappointing, but he would ask shareholders to bear in mind that in many important directions the company's operations had been satisfactory. He knew that the business was sound at the core, and that efficient, energetic, and capable handling would bring it back to its former state of prosperity. He had founded the business, starting in a single shop in his native city of Glasgow, and he understood the business as well as any man could. It represented his life's work, and it was his intention to see it restored to its former position before long. He was prepared to sacrifice all ideas of rest and recreation in order that the business should regain its wonted position. The board knew the possibilities of the business. They knew their public, and they were satisfied that, given a more normal condition of affairs in the country at large, they could once again show the shareholders substantial and satisfactory results. The chairman concluded by moving the adoption of the report and accounts.

Sir John Ferguson seconded the resolution.

SHAREHOLDERS' REMARKS.

A shareholder said he feared Sir John Ferguson would not be able to accomplish much unless he had a perfectly free hand.

Mr Howard said the report was the worst in the 28 years of the company's existence.

Mr Johnstone said Sir Thomas had done his best, but it seemed that he had absolutely failed. They should call upon him to resign his control of the company and let Sir John Ferguson have an absolutely free hand.

A lady said that as a practical woman she could not see how a banker could manage a grocery business alone. Sir Thomas Lipton was perfectly capable, and with the co-operation of the new financial director he would pull the business together.

Sir Charles Russell gave a legal ruling at this stage that the amendment proposing the resignation of the chairman was out of order, explaining that notice was required of a special meeting for such a purpose.

Replying to the discussion, Sir John Ferguson said the over-draft of a company was no indication of its financial position. Their indebtedness to their banks in London, he emphasised, was now less than it was three months ago. The board would make a strong point of ensuring that the management of the branches should be second to none in the future. Much work would have to be done and great reorganisation undertaken before prosperity could be regained, but that would be done if at all possible. If he found that he could not succeed he would tell them immediately. A great deal of work would require to be done, and many changes made in the organisation before the company was able to regain its former level of prosperity. That result could, he firmly believed, be attained by giving excellent value and the very best quality at the right price, with the most efficient and courteous service possible to the public, together with a close and sympathetic contact between headquarters and the branches. That was what he would consistently advise and continually strive for.

The resolution was carried.

SPIERS AND POND, LIMITED. ACQUISITION OF NEW BUSINESS.

The forty-second annual general meeting of the shareholders of Spiers and Pond, Limited, was held, on the 9th inst., at the Hotel Cecil, London, Mr J. Douglas Broad presiding.

The Chairman, in moving the adoption of the report and accounts, said: The trading profit shows a decrease of £16,858, and there is a small increase on interest and transfer fees of £346, leaving a net profit of £92,224, which, with the balance brought in, gives £106,140 to be dealt with. We recommend a final dividend of 7½ per cent. on the ordinary shares, making 12½ per cent. for the year; a transfer of £5,000 to reserve, bringing that up to £155,000, and a further grant of £2,000 to the sickness and benevolent fund, leaving to be carried forward £7,976.

The reserves available for any further depreciation of assets taken over and general purposes now stand at £297,187, of which £210,346 has been provided since the reorganisation of the company eight years ago. This is a pretty good record, seeing that with the present year's dividend of 12½ per cent. we have returned during the period 97½ per cent. of the company's capital in dividends, exclusive of the share bonus distribution of 20 per cent.

During the year opportunity has offered to acquire a business on favourable terms, which promises more profitable employment of our money, and whilst we have not yet had a full year's trading, results to date are quite satisfactory.

Our turnover has been fully maintained, and the decreased trading profit is entirely due to increased cost. We have been faced with very considerable increases in certain departments of our business in wages, without being in any way able to recoup ourselves. I referred, when dealing with the accounts, to the acquisition of another business. During the year we have examined many proposals, and the concern we decided to purchase was that of the old-established multiple-shop tobacco business of A. H. Cornish and Company, and we anticipated this will turn out to be a profitable investment.

All your properties have been fully maintained out of revenue. Improvements have been carried out at Blackpool, where the lounge has been modernised. We have also recently completed an extensive alteration at your Bushey Hotel, which has now an imposing lounge and first-class garage accommodation. During the current year we contemplate considerable improvements to our Empire Hotel at Bath, our Valley of Rocks Hotel, Lynton, and at Bailey's Hotel, South Kensington.

The report and accounts were unanimously adopted.

BISICHI TIN COMPANY (NIGERIA), LIMITED. RESULTS OF A DIFFICULT YEAR.

The annual meeting of this company was held, on the 13th instant, at the Cannon street Hotel, London, Mr James Gardiner presiding.

The Chairman, in moving the adoption of the report and accounts, said that the working profit was £31,359 and the net profit £18,805, the latter after providing for depreciation (£4,912) and taxes (£4,136). The final £3,424 of amalgamation expenses was being written off. They had again had a season adversely affected by the climate. The dry season work, through rain, ended much sooner than usual, but without benefit to the wet season operations. Not only was the rainfall 30 per cent. less than the average, but a large proportion came in heavy storms, causing loss of time through flooding the workings. Through the seasonal conditions the yardage treated decreased by 146,030 cubic yards, being 472,478 cubic yards, and the falling off in output of 183 tons was thus largely due to a factor beyond human control. Working costs suffered correspondingly, amounting to £77 3s 9d against £58 13s. With ground of a value of only 1.37 lbs per cubic yard the figure, however, was not unduly high. The output realised a

gross price of £188 17s 6d, compared with £180 5s 1d—a very satisfactory figure. The price of the metal continued good, being now £277 per ton.

As to the future he was still an optimist, the statistical situation indicating a high price for some time to come.

At the last meeting he dealt with the early completion of the dredge. More difficulties and delays had been experienced than were anticipated, however. Adjustments of greater or less importance were usual in a new plant, but they had proved to be more extensive than was expected, involving obtaining new parts from England. The strike here had delayed shipment, and they were expected to leave by the next boat sailing from Liverpool. He was content to await the results of running the machine when the new parts were in place, and, while holding an open mind, he believed the engineers' advice to adopt this plant would ultimately be justified. The company had proved reserves of 8,665 tons, apart from large sections of unproved ground.

The report and accounts were unanimously adopted.

DALKEITH (CEYLON) RUBBER ESTATES, LIMITED. GOOD YEAR—STRONG FINANCIAL POSITION.

The sixteenth ordinary general meeting of the shareholders of the Dalkeith (Ceylon) Rubber Estates, Limited, was held, on the 12th instant, Mr C. M. Buckworth (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: We are fortunate in having at this meeting both the visiting agent and the estate manager, who will, I know, be pleased to answer any questions concerning the working of the estate.

The Chairman having expressed regret at the deaths of Mr A. J. Gordon Field and Commander A. J. Farquharson, R.N., continued:—The 1925 accounts are so fully detailed in the prints circulated to you that there is little left for me to say in regard to them. A net profit of £47,190 was earned, as compared with £8,130 in the year 1924, and we propose a final dividend of 12½ per cent., less tax, making 25 per cent. for the year, as against 10 per cent. last year. The book value of the estates has been written down to £55 per acre, and as the whole of the acreage is planted and in bearing, the real value of the property is considerably in excess of the figure shown in the balance-sheet. The financial position is exceptionally strong, as, after paying all our expenses for seven months of the current year and also the payment of the final dividend, we shall have £30,000 cash at bank, plus the proceeds of one month's rubber still to come in.

Now, as regards the future, our standard production is 814,400 lbs, and the estate expects to harvest that weight at the same f.o.b. cost as last year—7½d per pound. This figure could have been reduced but the board has sanctioned additional expenditure on artificial manure, new machinery, more coolie lines and general cultivation so as to bring up the estate to a high standard of efficiency.

I may state that no manure had been put out for the last seven years, but a quarter of our acreage has had a full application this year. During the last twelve months 300 additional coolies have been recruited, and the labour force is reported as contented. The various new Government regulations we are continually faced with are difficult to keep up to, but everything is being done to make the Tamil coolie contented and comfortable, for without labour a full crop cannot be secured.

About 57 per cent. of the 1926 crop has been sold forward at 2s per pound, which assures a good profit. For the balance we hope to secure a price of 1s 9d per pound, as we will get a good premium on our crepe soling.

Mr Ronald J. Farquharson seconded the resolution, and it was carried unanimously.

JAVA PARA RUBBER ESTATES, LIMITED. RECORD RESULTS FOR THE YEAR.

The fifteenth annual general meeting of Java Para Rubber Estates, Limited, was held, on the 12th instant, at 2-4 Idol lane, London.

Mr Noël Bingley presided, in the absence of Mr R. J. Arnold (chairman of the company) through illness.

The Chairman, in moving the adoption of the report and accounts, said that the results shown were the best in the company's history. The sales of produce, including the value of stock on hand and in transit, amounted to £153,186, being £58,000 more than in the previous accounts. The coffee crop, which was slightly less than the previous year, realised roughly 15s per picul less, but the reduced profits from coffee were more than offset by the higher prices obtained for the rubber. In spite of having a forward contract for five tons per month during 1925 at 1s 5½d per lb, which was made as long ago as November, 1924, and also of the fact that there was a considerable quantity of rubber unsold at the end of the year, which had been taken into the accounts at

1s 8d per lb, the average selling price for the whole year was 2s 10½d per lb, London equivalent, as compared with 1s 6½d for 1924.

The final result of the year's working was a profit of £86,421, as compared with £37,340 in the previous year. An interim dividend of 15 per cent. was paid on October 30th last, and the directors now recommend a final dividend of 20 per cent., making a total dividend of 35 per cent., or double that of last year. A sum of £25,000 had been placed to reserve, leaving £28,557 to be carried forward.

In the current year they estimated to have a rubber crop of 950,000 lbs, and, as 605,119 lbs had been collected to the end of June, the estimate might be considered perfectly safe, although the dry season was now commencing, when crops would fall considerably. They had sold forward 90 tons of this year's crop at prices varying from 1s 9½d to 3s 11½d, London equivalent, and averaging 2s 5d per lb. The coffee crop was estimated at 10,000 piculs, and it was believed that the estimate would be reached, although the crop was considerably later this year than last. Only 1,100 piculs had been harvested to the end of June. They had sold forward 3,500 piculs at an average of 54 6-7 guilders per picul, equal to £4 11s 6d per picul, or £3 15s 4d per cwt.

Colonel the Hon. E. Coke seconded the resolution, which was carried unanimously.

INTERNATIONAL TEA STORES, LIMITED. CONTINUED PROGRESS OF THE BUSINESS.

The thirty-first annual general meeting of the shareholders of the International Tea Company's Stores, Limited, was held, on the 13th instant, at Winchester House, Old Broad street, London, Mr G. Collier (vice-chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Although making no claim to prophetic vision, I did venture to suggest to you at our annual meeting last year that, with sane and progressive management in conjunction with much hard work, we had every reason to expect a continuance of the steady increase of profits that we have been able to show over a period of more than 20 years. I am glad to be able to tell you to-day that my forecast has been realised, and that the trading profit is £445,304 13s 7d, or over £6,000 more than in the previous year—not a great increase, you may say, but in 1925 we presented an exceedingly good balance-sheet, showing an increased profit over the previous year.

You will note that we have increased our freehold properties to £907,899, following a definite policy of this company to buy the freehold of our branches whenever possible—a policy which, I may tell you, has stood us in very good stead.

You will also see that we have issued a further £250,000 7 per cent. preference capital. This became necessary if we were to continue to develop our business with the push and go of previous years.

There is another matter of fundamental importance to us, as distributors of food, upon which I feel I must touch. I refer to the general strike of May last.

When certain sections of a community decide to withhold their labour, the natural sequence usually is that other sections must work double and even treble time. I am glad to say that the response to that challenge by every section of the workers of this company was magnificent. Our chairman has already expressed his personal gratification, by letter, to every individual member of the staff, and I desire, on behalf of the board, to take this opportunity of recording their appreciation of the services rendered.

Now, with regard to the future, I am confident that we shall soon return to the normal conditions usual to the industry of this country.

Mr F. Drowley seconded the resolution, which was carried unanimously.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LIMITED.—By cable for the week ending July 7, 1926. Production, 44,932 barrels; shipments, 44,171 barrels. A new well, No. 116, in the western extension of the El Mene field was completed on July 9th, making 2,000 barrels per day.

HAMILTON'S OIL CONCESSIONS (ROMANIA), LIMITED.—Production for June, 100 tons (May, 130 tons).

LAGO OIL AND TRANSPORT CORPORATION.—Shipments for week ending June 18th, 109,431 barrels.

MEXICAN EAGLE OIL COMPANY, LIMITED.—The production for the week ended July 3, 1926, was 132,000 barrels.

TAMPICO OIL, LIMITED.—The total production on the company's properties in Mexico during June was 43,644 barrels, in respect of which the royalty due to Tampico Oil, Limited, amounted to 3,273 barrels.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—The production for the week ending Wednesday, July 7, 1926, amounted to 1,014 tons.

BULLION.

The following statistics of imports and exports of gold for week ended July 14, 1926, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	To—	£
Germany	86	Belgium	415
Transvaal	1,610,376	Netherlands	20,000
		Germany	9,400
		France	69,155
		Switzerland	22,000
		Spain	18,000
		Austria	4,650
		Kenya	2,775
		Straits Settlements	22,200
		British India	24,000
		Other countries	617
Total declared value of imports	1,610,462	Total declared value of exports	191,812

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

ARRIVALS.		WITHDRAWALS.	
July	£	July	£
10	nil	10—Holland	10,000
12	nil	12—Spain	49,000
13—Bars bought	194,000	12—Spain	6,000
13—S. Africa	750,000	13	nil
14—Bars bought	35,000	14—India	25,000
15	nil	14—Straits Settlements	5,000
16	nil	15—Spain	12,000
Total	979,000	Total	119,000
Net arrivals, £860,000.			

GOLD STANDARD RESERVE.

Statement showing the form in which the balance of the reserve was held on June 30, 1926:—

	40,000,000	
	40,000,000	

SIDNEY TURNER, Accountant-General.

India Office, July 12, 1926.

Messrs Samuel Montagu and Co., write as follows on July 14th:—

GOLD.

During the week under review the Bank received on balance £829,000, increasing the net influx since January 1, 1926, to £6,756,000, and decreasing the net efflux since the resumption of an effective gold standard to £4,839,000.

SILVER.

The tendency of the market under review has been downward until to-day. Sales on China account have been more or less continuous, and it was necessary to reduce prices somewhat before bears—Indian and others—could be tempted to cover. The monsoon news continues to be favourable, and were it not for the market lacking vitality, orders for shipment to India would probably be more in evidence. America gave some support last evening, and to-day bear covering and other inquiry caused a sharp recovery. United Kingdom imports and exports of silver during the week ending the 7th inst. were:—

Imports.		Exports.	
Denmark	£	Germany	£
U.S.A.	16,850	British India	13,600
Canada	42,654	Other countries	15,407
Other countries	7,407		7,700
	532		
	67,443		36,707

Reports and Notices.

Mr J. Wilson Theobald has retired from the board of the Central Argentine Railway, Limited, and Mr Walter Kennedy Whigham, of Messrs Robert Fleming and Co., has been elected a director to fill the vacancy.

Messrs Vickers, Limited, announce that they have appointed Messrs Glyn, Mills and Co., 67 Lombard street, London, E.C. 3, registrars to the company as from July 19, 1926. All transfers of stocks and shares and correspondence relating thereto should as from that date be addressed to Messrs Glyn, Mills and Co. at the above address.

BANKS.

EQUITABLE TRUST COMPANY OF NEW YORK.—The consolidated financial statement of condition of the Equitable Trust Company of New York, as of June 30, 1926, which includes foreign offices, shows deposits \$408,479,024, increase of \$52,185,919 over March 25, 1926. Total resources, \$518,705,332; increase, \$88,432,508; surplus and undivided profits, \$21,468,392; increase, \$7,029,321.

OTTOMAN BANK.—The report for 1925 states that in the preparation of the balance-sheet assets and liabilities in foreign currency have been converted into sterling at the rates ruling at December 31, 1925. After making the provision necessary both for this conversion and for bad and doubtful debts out of revenue and pro-

visions previously made show an amount available of £410,040, including £326,951 brought forward from previous year. The committee recommend that £400,000 be placed to provision for future depreciation of foreign currencies and other contingencies, and that £10,040 be carried forward.

STANDARD BANK OF SOUTH AFRICA, LIMITED.—The net profit for year ended March 31, 1926, amounted to £570,989, as compared with £508,952 for preceding year. The sum of £109,150 was brought in, making £680,139 available. The ordinary dividend is 14 per cent. for the year, and a bonus of 2½ per cent. is paid, making a distribution of 16½ per cent. for the year, against 14 per cent. for the preceding year. The sum of £75,000 is put to bank premises account, while £125,000 is put to officers' pension fund. The carry forward is £112,326. Total assets amount to £65,080,463. Cash stands at £9,348,977, against £9,871,099. Native gold in hand and in transit is at £142,776, against £314,166. Investments stand at £5,102,395, against £5,085,268. Bills of exchange are at £7,281,311, against £6,705,152. Bills discounted stand at £29,835,012, against £32,315,196. Deposits amount to £47,031,133, against £49,416,227.

UNION BANK OF AUSTRALIA.—The net profits for the year ended February 27th last amounted to £627,612. The profits for the previous year were £590,399. It is proposed to place £50,000 as provision for new buildings and £50,000 as an addition to the bank's reserve fund, which is thereby increased to £4,200,000. The ordinary dividend is 15 per cent. for the year, as before, free of United Kingdom income-tax. The balance carried forward is £95,513, against £92,902 brought in.

MISCELLANEOUS.

AUSTRALIAN ESTATES AND MORTGAGE COMPANY, LIMITED.—The gross profit for 1925 amounted to £356,086, against £460,156 for 1924. The sum of £25,000 is added to reserve, making reserve account £300,000. The sum of £5,000 is put to superannuation fund reserve. The dividend on the ordinary stock is 6 per cent., against 10 per cent. for preceding year. The carry forward is increased from £8,778 to £25,713.

ceived 10 per cent., but nothing has been paid since April, 1925. The report states that the company's trade is now being carried on with more satisfactory results. At March 31, 1925, creditors, loans and bank overdrafts stood at £882,445, and on March 31, 1926, they had been reduced to £474,390.

Visible supplies of wheat in Canada, at 24,368,000 bushels, show a decrease of 1,535,000 bushels, as compared with the previous figures. Supplies last year stood at 21,549,000 bushels.

COAL.

Our Cardiff correspondent writes:—The imports of foreign coals into South Wales ports are increasing. Several cargoes have arrived this week, and a larger number are expected during the coming week. There are serious complaints against the quality of the coals that have been supplied from Continental ports. The depletion of local stocks has now reached a point where the supplies under the control of the distributing authorities is only about one-ninth of what it was at the commencement of the strike. There is a fairly large quantity of coal banked at the colliery sidings, but miners have threatened to withdraw safety men if these coals are loaded for purposes of distribution. The owners' terms for the working of eight hours have been rejected except in a very few isolated and unimportant cases, but it is significant of an altered attitude on the part of the workmen that at a mass meeting held this week in one district a resolution was adopted, with the support of one of the members of the executive committee of the South Wales Miners' Federation, recommending negotiations on the basis of a wage reduction for a seven-hour day. With the assistance of imported coal a few of the bar mills in the tinplate industry have this week resumed work, but approximately about 80 per cent. of the plant is still idle. Tinplates from stock have reached 26s 6d per

box, but for forward delivery the current price has been about 20s 3d per box. Shipments continue, and stocks have been reduced to 44,911 boxes. Tinplate bar prices are unchanged at £6 5s per ton, and galvanized sheets are steady at between £16 10s and £17 per ton.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Little hope is expressed of the iron and steel trades being restored to anything approaching normal conditions before September. There has been a large volume of inquiry of late for Continental iron and semi-finished material. Deliveries have been hampered by the strike of the dockers at Antwerp, and this has added to the difficulties of English steel manufacturers, as the finishing departments of their steel works are depending solely upon the Continent for supplies. The inquiry indicates that the British works which have been able to keep going by using Continental semi-products have been able to do a good business. The English home demand for finished steel material has been active throughout the strike period, and this no doubt accounts for the anxiety of the rolling mills to obtain supplies. On the other hand, the export markets remain apathetic, and business is principally confined to small orders.

Our Middlesbrough correspondent's report, dated July 15th, is as follows:—Pig-iron: The price of No. 3 Cleveland pig-iron has been further advanced, and is now quoted 87s 6d per ton, but it is difficult to buy as stocks are practically all sold. Hematite: There is more hematite iron available than Cleveland, but this condition will not last very long, as stocks are being rapidly depleted. Makers, however, still maintain the price of mixed numbers at 80s. per ton. Manufactured iron and steel: There is very little doing in finished iron and steel, as most of the mills are idle. Quotations are nominally as follows:—Steel ship plates, £7 17 6d; steel ship angles, £7 10s; iron bars, £11; steel rails, £8. Iron Ore: Best rubio ore is nominally 21s 6d per ton, but no business is doing.

Our Glasgow correspondent writes:—There is now no production of pig-iron or steel in Scotland, and, even if the coal dispute is settled at an early date (which does not appear likely) none of the steel works or heavy rolling mills will start this month as holidays commence this week. Shipyards and engineering shops are closing for at least ten days, and in some instances the holidays are being extended to three weeks owing to the dull state of trade, in addition to the fuel scarcity. Consumers of pig-iron are not exhibiting any keenness to buy at the advanced rates, and stocks are fairly plentiful. No business for forward delivery is being done at present. In the steel trade, for delivery after resumption of work, advanced prices are quoted, and several works have quite a good tonnage booked. Only one or two of the sheet works and the smaller re-rollers using imported semi-raw material are likely to make a start after the holidays. The exports of pig-iron from Glasgow Harbour last week totalled 316 tons, of which 227 tons were on foreign account. For the corresponding week of last year the figures were 165 tons and 112 tons respectively.

Our Sheffield correspondent writes:—Sheffield industry is gravely affected by the shortage of fuel, but these firms with important contracts on hand have purchased Continental coal at prices ranging between 45s and 55s per ton at works. This is being used in the manufacture of stainless and other steels. In addition, colliery reserves of unwashed smalls have been purchased at prices in the neighbourhood of 12s per ton at pit; before the dispute this was scarcely saleable at 15s 6d per ton pit. The trouble has been that coke for the manufacture of crucible steels has been unobtainable, but a few of the biggest works have made shift with their existing reserves augmented with supplies of Durham coke and Derbyshire coke produced at slow heat in the beehive furnaces. There is no dearth of gas or electricity for power purposes. The lighter industries are thus well placed for power purposes, but, unfortunately, there are very few orders to be obtained in the present state of uncertainty, and works are only working at part capacity. The heavy steel and engineering departments are mainly closed because they are big consumers of fuel, and it does not pay to buy coal at present prices. The big open-hearth steel plants are closed down. In the cutlery trades there is virtually no home trade of importance being booked. Both London and provincial buyers decline to buy normally. The only orders are for job lots at special prices. The electro-plate and pewter ware branches are variously employed. Some few firms are well booked.

OTHER METALS.

TIN.—The market for tin opened the week with a quiet tone, but subsequently improved on stimulating advices from the East, combined with a good demand, both on Continental and American account, which resulted in a higher price level. Dealings were recorded in standard cash at £277 10s to £280 15s, £280 5s, three months £277 10s and £280 25s 6d. Sales in the East were reported at £285 5s to £286 15s. COPPER proved an active market, both Continental and American interests participating, and a firmer tone ensued. Standard cash changed hands at £58 to £58 2s 6d, three months £58 10s to £59 2s 6d and £59. LEAD again firmer, with business on a liberal scale. Good soft

foreign pig, July, sold £31 2s 6d to £32, August £31 to £31 18s 9d, September £31 2s 6d to £31 15s, October £31 to £31 15s. SWEETENED, while slightly irregular at times. July sold £34 6s 3d to £34 10s and £34 2s 6d, August £34 7s 6d to £34 10s and £34 2s 6d, September £34 7s 6d to £34 12s 6d and £34 7s 6d, October £34 7s 6d to £34 12s 6d and £34 8s 9d, November £34 10s to £34 7s 6d. ANTIMONY dull. English specials quoted £74 10s to £75, foreign refined £49 to £51, c.i.f. ALUMINIUM.—Home trade nominally £118, export £120 ton. QUICKSILVER firm. Spot quoted £15 10s per bottle. WOLFRAM firm. Prompt quoted 14s to 14s 6d per unit, c.i.f. TIN PLATES firm. I.C. Coke, prompt shipment, quoted 26s, forward 20s 6d, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, July 15, 1926.

There has been a little more activity in the market during the week. The Masters' Federation announce that an adequate majority has now been secured in favour of basic prices for American yarns, but the scheme will not be put into operation until after end of the coal strike. Reports are again to hand of excessive rains in the belt and further insect damage. Spot sale for the week July 9th to 15th (inclusive) are 20,000 bales. Of these, 11,110 are American, 850 Brazilian, 2,750 Peruvian, 1,550 Egyptian, 3,120 African, 530 Indian, and 90 sundries. Imports for the same period are 47,124 bales. These include 12,453 American, 3,853 Brazilian, 13,299 Peruvian, 7,804 Egyptian, 690 Indian, 8,451 African, and 484 sundries. Quotations to-day are: Middling American, 9.89; F.G.F. Sakel, 16.15; uppers, 11.90; fair Brazilian, 9.99; G.F. mod.-rough Peru, 12.00; smooth, 11.74; F.G.F. Tinnivelly, 8.75; middling West African, 9.64; and G.F. East African, 11.70.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The results of the London wool auctions this week have, on the whole, been satisfactory. There is quite a good demand for wool, notwithstanding the adverse factors operating in this country, and Continental users are also in need of supplies. The steadiness of values indicates confidence in the future, and so far as fine wools are concerned good business is anticipated after the coal dispute is settled. In the meantime, business is very restricted, only comparatively small weights of tops and yarns being bought for current requirements. Most mills are working only three days a week, and neither spinners nor manufacturers are inclined to place orders for future delivery. Merino and fine tops are firm at late rates, but there is some irregularity in medium and low crossbreds. Demand for yarn is small, and mainly for the finer counts and qualities. Botanies are firm in sympathy with merino wool and tops. The position of crossbred yarns, however, does not show much improvement. Competition is resulting in a good deal of price-cutting, and both in tops and yarns offers are being made at prices well below replacement values. Reports from Germany speak of gradual improvement in financial conditions, and it is hoped that trade with that country will soon be possible on a larger scale. Piece-goods are moving well considering the general industrial position, the home trade being the best outlet at present. Prices are firm for the better-class fabrics.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The fourth series of London sales commenced last Tuesday, and considering the serious disadvantages under which the general trade of the country is labouring, the results must be regarded as eminently satisfactory. During the whole of the time in which the usual course of trade has been interfered with we have maintained that merinos were in a very sound position, and the sales have confirmed that opinion; in fact, the position is better than we expected. It must be clear to anyone with a practical knowledge of the trade that if there had been no coal strike merinos would now have been making distinctly more money. As things are, we are satisfied that the position is healthy, but in view of the near approach of the opening of another selling season it is doubtful whether there is scope for higher values for the raw material. Home trade spinners and manufacturers are having to face serious handicaps, but whilst there is not yet any sign of improvement, and none can be expected until mills are able to obtain an adequate supply of suitable coal to run full time, a remarkably determined spirit is being shown. Some withdrawals have taken place in London of scoured lambs, but, generally speaking, fine wools have met with a very good reception. Values are fully on a parity with those ruling last series. Continental representatives were prominent among the buyers the first day, and will remain there to the end of the series. It would almost appear that, whilst the British textile industry loses ground, the Continental section is developing, and we are afraid that the lower overhead charges are enabling French and German manufacturers to sell where hitherto British goods have been favoured. South African merinos have also met with a very hearty reception, the market for greasy parcels being very firm, and snow whites slightly stiffer. Crossbreds have met a better market than the majority expected. Good 56-58's qualities are very firm, sometimes a fraction dearer, and the reception of medium and coarse crossbreds has been a trifle better than was anticipated. Prices for these are par to 5 per cent. lower, and fine slipes are just a little irregular. The chief difficulty of the wool trade is that it is impossible to guarantee delivery, and export houses are consequently losing business. The home trade has certainly received a serious blow so far as retail demand is concerned, but the hot weather is encouraging the buying of light-weight summer goods.

THE JUTE TRADE.

DUNDEE, July 15.

The figures giving the estimated acreage under cultivation of raw jute for the coming season were confirmed by the Director of Agriculture in his official statement issued in Calcutta yesterday. The crop conditions on the whole are very good, though in the

Daisee districts slight damage has been done. In spite of the prospect of a record crop of jute, balers are most reluctant to make offers of fibre. The Calcutta mills have been purchasing to a small extent, but until the price falls to a more reasonable level it is not expected that business on a large scale will be transacted. Prices this week have shown steadiness under the reserve of sellers, but so far as this market is concerned there are no sales taking place. The rates named are purely nominal. First Marks actuals to Dundee being obtainable at £35 for August shipment, and at £33 for September. The continuation of the dull state of trade does not induce spinners to operate in the fibre at these comparatively high prices, which are much in excess of the return obtained for yarns. The price of £28 for October shipment of Daisee assortment is considered to be fairly reasonable, and if business in yarns assumed larger dimensions there is the feeling that the purchase of raw jute would commence in earnest. Buyers of yarns are still withholding their orders for large quantities in the hope that prices will further recede in their favour. The prospects for the spinner are very discouraging. For common 8 lb cops not more than 3s 3d can be obtained or 3s 4d for 8 lb spools. Other yarns are also lower at 5½d for 8 lb sacking chains and 4½d for 24 lb weft. Twist has been sold at from 5½d to 5½d for 3-ply 8 lb. Rove is only taken in small lots at from £36 to £37 for 48 lb, and at £27 to £29 for 200 lb, according to quality. Portugal is in the market with 120 tons 10 lb warp and weft, delivery of which is required in August. Cloth buyers are placing an increased number of small orders for delivery immediately. Manufacturers are shading their terms to 4½d for 10½ oz 40 in, and to 3½d for 8 oz, and even less would be accepted for orders of respectable dimensions. Calcutta goods have been firmer this week on account of reports from Calcutta of a good business passing at that centre. Prices have been raised by speculative sellers to 3s for 10 oz 40 in, and to 2s 6d for 8 oz for July-September shipment. Spot goods are finding small outlet at 3s for 10 oz and at 2s 6d for 8 oz.

HIDE, LEATHER, AND ALLIED TRADES.

In spite of the depression caused by the prolonged coal strike and the reduction of tanners' input, prices of market hides remain steady. At Thursday's Bermondsey auctions best ox made from 5½d to 8½d, and seconds 5½d to 7½d per lb—a few fractional advances being noted in the former class. Calfskins were steady from 6d to 1½d per lb, and wools sold from 5s to 9s 3d, hogs 4s 6d to 11s, and lambs from 2s to 5s 8d per skin. Tanners have been buying frigorific hides rather more freely at the easier rates, and best Argentine frigorific ox are now offering at 7d. Montevideo are offering at 7½d and dry Americanos at 9½d. Business in sole leather is still moderate with prices firm, as stocks are low at the tanneries. Light weights of bends are still taken freely by manufacturers, whilst 8/10 and 10/12 lbs bends are wanted in fair sized quantities by repairers. German sole leather is still arriving, but in much smaller quantities. In upper leather trade is quiet; carriers of kip leathers are very slack, as few orders are coming in from makers of artisan boots. Coloured kid is still selling, and a fair amount of sampling is going on in connection with the Russian boot, kid and light willow being favourites. Exports of British leather for the first six months of 1925 and 1926 were valued at £2,787,411 and £2,426,370, and imports of dressed leather for the same periods at £3,779,002 and £3,674,393. The boot trade is quieter. Exports of British-made footwear for the first six months of 1925 and 1926 were valued at £2,462,271 and £2,314,003, the decline being largely due to the fall in the demand from the Irish Free State.

VEGETABLE OILS AND OILSEEDS.

Markets all round have had a steadier tone this week, and more business has been done. Linseed oil is dearer in sympathy with seed, and has advanced to £35 per ton naked ex Hull mill for prompt and July-August delivery, later positions being quoted at a small premium, in which a fair business has been done by speculators. Cotton oils, after a period of weakness, are firmer, crude Egyptian advancing to £40 10s and ordinary refined to £41

THE BANK OF TAIWAN, LIMITED.

(Registered in Japan, 1899.)

Issues its own notes in Formosa, conducts General Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

prompt. Soya palm kernel and other soft oils are only a slow trade, and values about unchanged. In the oilseed section linseed has been in better request both by home and Continental consumers. The sharp rise in freights is reflected in higher prices of Plate linseed, for which Hull buyers have conceded £16 17s 6d on passage and up to £17 15 3d for September-October shipment. Indian linseed is in improved demand, Calcutta to London having been done at £18 10s June-July. Only a small trade has been done in Egyptian cottonseed, current value of seed afloat and for early shipment being around £10. Shipments of linseed continue at a good level, and the quantity available for export from Argentina and India this year has been reduced to 784,000 tons, as compared with 723,000 tons actually shipped in the corresponding period of last year.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—A dull tone prevailed for actual sugar, business being of a retail character, though prices of British standards remained unaltered. Messrs Tate and Lyle's cubes quoted 33s to 33s 6d; crushed, 31s 3d; B, ditto, 30s 9d; coffee crystals, 33s 6d; nibs, 33s 6d. Granulated-stoved, 31s 7½d; fine, also coarse grain, 29s 7½d; No. 1, 29s 4½d; No. 2, also London and T.L.S., 29s 1½d; mineral, water white, 29s 6d; icing cases, 35s 9d; bags, 36s 3d; pulverised, 32s 6d. Castor, finest, 34s 1½d; A, 33s 7½d; B, 31s 6d; yellow crystals, 26s 1½d. Foreign neglected, and trend of value in buyers' favour. Czech, granulated, spot, 27s 3d; ready for shipment, 14s 6d; August, 14s 7½d; November-December, 15s, f.o.b., Hamburg. Dutch "J," spot, 27s 3d; ready, 14s 7½d; August, 14s 9d; October-December, 15s 1½d, f.o.b., Rotterdam. Belgian crystals, prompt, 14s 6d, f.o.b., Antwerp. Polish crystals, prompt, 14s, f.o.b., Danzig. Canadian granulated, spot, 27s 9d; prompt shipment, 15s 6d, c.i.f., London. Mauritius crystals, spot, 26s to 26s 1½d. Cuban basis, 96 per cent., July-August, sellers, 11s 9d, c.i.f., U.K. White terminal market opened easier, but since steadier. August sold, 13s 9d to 13s 9½d; October, 14s 2½d; December, 14s 7½d; March, 15s 0½d; May, 15s 4½d per cwt.

COFFEE.—Moderate supplies were brought forward at public sales, and a fair demand prevailed at generally steady rates. Kenya, fair bold to good, sold, 133s 6d to 142s; peaberry, 110s 6d to 139s. Uganda, common to good bold, 111s to 126s; peaberry, 99s 6d to 120s 6d. Costa Rica, good to fine bold coffee, 169s 6d to 183s. Mexican, Maragogipe, fair greenish, 185s 6d. Futures quiet, and December, sold, 89s 3d.

COCOA.—Market generally quiet on spot, but late rates were maintained. Accra, for shipment, July-August, sold, 52s; intermediate crop, also new crop, 48s per cwt., f.o.b. terms.

TEA.—At public sales 20,292 packages Indian were offered, mostly comprising new season's, the first representative sale of the new crop. The tone was very irregular, and with only a limited inquiry, a considerable quantity was withdrawn. Common and plain liquoring kinds mostly showed a decline of ½d to 2½d per lb. Some invoices from Travancore met with fairly good support, though quotations often marked a drop of ½d to 1d per lb. Pekoe, sold, 1s 4d to 1s 9d; broken orange pekoe, 1s 5½d to 2s 1d. 26,000 packages Ceylon experienced more competition than for Indian, though prices were somewhat irregular and frequently ruled ½d to 1½d per lb lower, particularly for plain liquoring broken pekoes. The strongest inquiry was for best broken orange and medium pekoe suitable for export. Pekoe sold, 1s 3½d to 1s 7½d; broken orange pekoe, 1s 5½d to 1s 10½d per lb, in bond. China descriptions were in fair request, and new season's Keemun to arrive sold up to 3s, and old Keemun from 1s to 3d. Common monings realised 7d to 7½d per lb. In auction, 7,769 packages Java and Sumatra experienced a quiet demand, and prices show a decline of ½d to 1d per lb. Common and medium grades show the chief drop, but best pekoe's only fractionally lower. Pekoe sold, 1s 0½d to 1s 3d; broken pekoe, 9½d to 1s 4½d; orange pekoe, 1s 0½d to 1s 4½d; broken orange pekoe, 1s 0½d to 1s 5½d; pekoe souchong, 1s 1½d to 1s 1½d per lb, in bond.

RICE.—Market quiet, with an easier tendency. Rangoon, two stars, spot, London, sellers, 16s 10½d; July-August shipment, 16s 1½d, c.i.f. Spanish, spot, 22s to 22s 7½d, as to quality; July shipment, 21s 9d to 21s 6d. Italian, July shipment, 21s 6d. Straits quality, July-August shipment, 15s 10½d, to Cuban main ports, c.i.f. terms. Beans quiet. Madagascar butter beans, spot, 26s to 28s, as to quality; afloat, 24s 9d. Rangoon, hand-picked, July-August shipment, 12s 4½d. Peas slow. Japanese, spot, 34s 6d; September-October, 26s 9d cwt.

SPICE.—Pepper quiet. Black Singapore, spot, sellers, 10½d; May-July shipment, 9½d; August-October, 8½d; Lampung, spot, 10½d; May-July, 9½d; August-October, 7½d; white Muntok, spot, 1s 4½d; L.S., May-July, 1s 3½d; August-October, 1s 1½d. Pimento, spot, 6½d. Cloves, dull. Zanzibar, spot, 9½d to 10d; July-August shipment, 9½d per lb. Tapioca unchanged. July-August, sellers, 16s 3d. Sago flour slow. Sarawak to U.K., July-August, sellers, 14s 10½d, c.i.f. Desiccated coconut steady. Fine, on the spot, 45s; medium, 44s 6d; June-July shipment, 39s 9d; July-August, 39s 6d. Ginger, Japan, spot, 60s; West Coast African, spot, 37s 6d and 35s, c.i.f., per cwt.

FRUIT (Dried).—Currants firm, but business limited. Amalia, quoted 30s to 31s; Gulf, 32s to 35s; Pyrgos, 29s; Vostizza, 40s to 52s; Patras, 31s to 33s; Australian, 46s to 54s. Sultanias slow of sale. Australian, new crop, 66s to 85s; South African, bleached, 70s to 76s; Californian, 55s to 61s. Dates continue in request. Siar, quoted 11s 3d to 11s 9d; Khadowie, 17s 6d. Raisins quiet. Valencias are practically out of supply on spot, but South African offers at 37s to 42s. Evaporated fruits quiet. Californian apricots, fancy, 140s; Australian, 130s to 140s; South African, new Royals, best, 140s. Plums, Californian, new, 20/30, quoted 105s; 50/60, 52s; 90/100, 37s; Oregon, 30/40, 63s; 35/45, 55s. Pears, Californian,

International Securities Trust
OF AMERICA

A MASSACHUSETTS TRUST

First among American Investment Trusts

Resources over \$12,000,000

True to Form.

A recent analysis of 15 thoroughly representative British Investment Trusts shows that their average dividends paid on Common Shares fell only 1% during the war period, and have consistently risen to 11% in 1926. Average market quotations have advanced 70% since 1917.

The International Securities Trust of America has demonstrated an even greater earning capacity during its five years of existence. Its investments, comprising more than 500 different seasoned securities, afford an unequalled distribution of risk.

extra choice, 75s; fancy, 85s; Lake County, fancy, 100s. Apple rings, Californian, extra choice, 55s to 60s; prompt shipment, 48s; Canadian, spot, 54s per cwt.

CANNED GOODS.

CANNED FISH.—Sardines: Market generally quiet. Fair supplies of the new Portuguese pack are coming forward. Portuguese, ½s quoted 4s 3d to 6s per dozen tins. Salmon steady, with moderate inquiries. Red, tall, 1 lb, 60s to 65s; tall pink, 28s to 29s; ½ lb, pink, 41s. Lobsters firm, and the pack this season is expected to be on the short side. Best ½s, quoted 165s to 170s, and ¼s, 95s to 97s 6d. Japanese crab scarce, on spot, and further supplies are awaited. Crayfish unaltered.

CANNED FRUIT.—There is a steady trade passing at generally firm rates. Quotations for new Californian pack are slightly dearer for peaches and apricots, but lower for pears compared with those ruling at corresponding period last year. Californian Bartlett pears, choice, 24-2½s, 13s 6d to 14s; seconds, 10s 6d to 11s. Californian peaches, choice, 11s 6d to 12s 6d; standard, 10s 6d to 11s 6d; seconds, 9s 6d. Californian apricots, choice, 12s 6d to 13s; standard, 10s to 11s; seconds, 9s 3d per dozen tins. Singapore pines in moderate request, on spot, with fair supplies on offer, but forward offers are sparingly made. South African and Hawaiian in better request, and prices firm. Italian tomatoes unaltered, on spot, while a fair business is reported in new pack.

CANNED MEAT firm, but quiet. Danish lunch tongues sell steadily. Corned beef 6's quoted 38s to 46s, as to quality. Danish lunch tongues range from 120s to 130s; American quoted 135s, with best at 140s to 142s 6d. Ox tongues firm. Cooked boneless hams are in good demand, and finest Danish quoted 1s 8½d per lb for case of six tins.

CONDENSED EVAPORATED MILKS.—Market unchanged in price, with a better call for the latter, owing to warm weather. Machine-skimmed sweetened, 11s 3d to 12s; full-cream unsweetened evaporated, 19s 6d to 25s; ditto sweetened, 21s to 25s upwards.

HONEY.—New Zealand in steady demand, but other descriptions quiet. New Zealand quoted 50s to 85s; Australian, 40s to 47s 6d; Jamaica ranges from 40s to 55s; Haiti, 37s 6d to 50s; Cuban, 37s 6d to 50s; Californian, 45s to 60s per cwt.

RUBBER.

Quiet, and prices fairly steady. Plantation standard sheet, spot, also July, sold, 1s 8½d; August, 1s 8½d; September, 1s 8½d; October-December, 1s 8½d to 1s 9d and 1s 8½d; January-March, 1s 9d per lb.

GENERAL.

JUTE firm with a fair trade in force. Firsts, to Continent, August, sellers, £33 10s; September, £31 10s; October to December, £30 10s. Lightnings, August, quoted £31 10s; September, £29 10s. Hessians and twills dearer.

HEMP.—Manila inactive. J grade, August-October, quoted £39 10s;

K, ditto, £30; L, £31; and M, £27 10s New Zealand High Point, July-August, sellers, £36; fair, ditto, £33 10s. African Sisal, No. 1 Tanganyika, August-September, £43 10s; No. 1 Kenya, ditto, £43 per ton.

SHELLAC steady. Fair T.N., orange, spot, 122s 6d to 127s 6d; Futures, August, also October, 119s 6d, and December, 117s 6d per cwt. **COPRA** quiet and easier. F.M.S. Straits, to Rotterdam, July-August, quoted £29; August-September, sold, £29 2s 6d; Dutch East Indies, July-August, £28 1s, quoted; F.M., South Sea ditto, £27 17s 6d; kiln dried, £27 7s 6d. Ceylon, £30 7s 6d. Palm kernels steady. June-July, to Liverpool, sellers, £20 15s; July-August, £20 12s 6d per ton.

TALLOW.—Messrs Colchesters and Woolner write on July 14th as follows:—The tallow market was quietly steady during the week, and prices were maintained to-day. Inferior sorts met a fair demand, while good coloured kinds received only moderate attention. At auction to-day 502 casks tallow were offered, and 323 were sold. Quotations are:—Australian mutton: Fine, 45s 6d; good to fair, 44s 6d to 43s 6d; dull to dark, 42s 6d to 40s 6d; hard, 45s. Australian beef: Fine, 45s 6d; good to fair, 44s 6d to 42s 6d; dull to dark, 41s 6d to 40s; sweet, 45s 6d. Present shipment from Australasia: Good mixed, 44s 6d, nominally. Present shipment from South America, 44s 3d. The market letter is unchanged. Town tallow, 39s 6d per cwt. Rough fat, per 8 lbs, 24d; melted

stuff, 29s 6d per cwt. Quotations are:—Town, 40s, net cash, naked, ex works. Country: Frail casks, 40s; home melted, shipping casks, net, f.o.b., good coloured, 43s; fair to dull, 41s 6d to 39s 6d. Bone fat: white none; pale, none; benzine, 35s; melted stuff, 35s, f.o.b.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £22 to £23; Cochin, £25 10s to £50; Ceylon bristle, £17 10s to £23; cinnamon leaf oil, 44d; citronella, Ceylon, 1s 7d; Java, 2s 4d.

discount market was at first firm, with the rate for three-months bills at $4\frac{3}{4}$ per cent., but with easier money and a stronger Continental demand rates gave way on Thursday and Friday, the quotation for three-months bills yesterday being $4\frac{1}{4}$ per cent. Yesterday's Treasury bills, as anticipated, went at a slightly more favourable rate for the Government—namely, just over $4\frac{1}{4}$ per cent.

	July 23, 1926.	July 16, 1926.	July 9, 1926.	July 2, 1926.	Previous Rate and Date Changed.

Market rate (3 months' bills)	$4\frac{1}{4}$	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	..

Thursday's Bank return showed an increase of £398,800 in the stock of coin and bullion, and a decline of £121,800 in the note circulation. The Reserve was thus £520,600 higher, the Proportion rising to 24.5 per cent. Government securities were increased by £1,615,000, and Other securities reduced by £2,933,800, Public Deposits declining by £1,740,700 and Other Deposits rising by £960,100. Currency notes were reduced by £978,800 to £291,981,000, which includes £1,299,600 for notes called in but not yet cancelled. The fiduciary issue is £234,431,500, or £13,417,000 below the maximum for 1926.

NEW YORK MARKETS.

Our New York correspondent cables:—The share market is reacting after the recent buoyancy, but the undertone is rather steady, with short-term money plentiful and reports from industry showing a maintenance of the recently improved tone. Concern is felt over French political ineffectualities, but it is realised that the fiscal problem is capable of solution when the politicians are ready. There is much regret at the controversy over the American debt policy, as no useful purpose is served. It is considered ironic that attacks are directed against Mr Mellon, who has led the forces of moderation throughout the negotiations and takes a broadminded view of European problems. It is worth noting that his statement as to the reasonableness of the Berenger Agreement was made to help Caillaux, but came too late, and that his letter, which contained the unhappy reference to British borrowing, was part of a general reply to a domestic attack upon the Administration's whole funding programme. Mr Mellon certainly wishes no controversies, and his letter is an example of the results of starting these controversies. The Reserve banks show a continuance of the midsummer decrease in borrowings, with discounts for the system and for the local bank materially reduced. The ratio for the system is 76 and for the New York bank 83 per cent.

THE STOCK MARKETS.

This week's settlement passed off without any of the trouble which had been anticipated in some quarters, but a good deal of stock has been realised to provide money to meet differences on certain industrial shares in which a bull account existed. The demoralisation of the franc has led to violent fluctuations in inter-bourse securities, and the general result has been the diversion of funds into gilt-edged stocks, which have been remarkably firm, notwithstanding the recent heavy flow of new issues. Home rails have been listless, but foreign railway stocks, as a whole, are fairly steady. Rubber shares are dull, and oils are mostly lower. Among industrials, Imperial Tobaccos gave way in the absence of a bonus with the interim dividend, but recovered later, and other tobacco shares are good. Kaffirs have suffered from French sales. The issues by Tamplin's Licensed Properties of £200,000 6 per cent. debenture stock and Timengor Tin Mining Company were over-subscribed.

THE COMMODITY MARKETS.

All markets continue to reflect the subversive influence of the coal stoppage. Imports of foreign coals again show an increase, a fair number of American cargoes having reached South Wales this week. Business in domestic pig-iron is stagnant, but re-rollers, tinplate

makers, &c., are using an increasing quantity of foreign material. The cotton market is less active than last week, lack of confidence in the current price level having induced caution among buyers. The demand for raw wool is remarkably well maintained, and jute is a little steadier after recent weakness. Wheat has been quiet all the week, prices having an easier tendency in sympathy with American markets. Sugar is steady at recent rates, coffee and tea well sought after, especially the finer qualities. The rubber market is dull, prices remaining below the 1s 9d level. Among non-ferrous metals tin prices have been in sellers' favour, copper has been irregular, with dealings on a fairly liberal scale, and lead active and firmer.

FOREIGN EXCHANGES.

The franc again occupied the centre of the stage in the foreign exchange market, and the fevered conditions to which we referred last week continued. They went, indeed, from bad to worse, under the influence of the political developments in France, the rate rising or falling according to the confidence or the reverse inspired by the particular Minister or combination for the time in power, or likely to be in power. The Belgian franc was the next most important centre of attraction, as might have been anticipated, and after that the lira. The high premiums on forward rates in each case shows the inherent weakness of the position of these three currencies; but for them the market was comparatively dull. On the 16th the franc opened weak, after closing the previous day at 197 $\frac{1}{2}$ -198 $\frac{1}{2}$, and touched 209, but recovered at the close to 201 $\frac{1}{2}$. Forward rates were one month 7f, and three months 20f above spot. Belgian francs similarly touched 212, but closed at 205, three months forward rates being 15f above spot. The lira at 143 was rather better. On the 17th the franc steadied, especially forward rates, on the publication of M. Caillaux's proposals, and after recovering to 197 $\frac{1}{2}$ eased to 200. Forward rates were 6f and 13f to 15f for one and three months respectively. Belgian francs recovered to 197 $\frac{1}{2}$, forward rates being unchanged. The lira weakened to 145 $\frac{1}{2}$. The defeat of M. Caillaux's programme, on the 19th, pulled the franc down to 227, and 235 was touched at one time, but a rally at the close improved the rate to 222 $\frac{1}{2}$. Forward rates went to the month 10f to 12f, three months 23f over spot, and the forward market was more or less demoralised. Belgium, after opening steadily, fell to 218, but recovered to 210; forward rates went worse to one month, 10f three months, 19f over spot. Further weakness was evident in the lira at 145 $\frac{1}{2}$ -146 and forward rates were 10 lira above spot for three months' delivery. On the 20th francs opened disastrously at 231, touched 238, and wound up at 229 $\frac{1}{2}$; forward rates were worse by 50 centimes. Belgium closed worse at 219 after touching 223, and three months forward rates were 25f above spot, as against the previous 23. The lira broke to 153, but forward rates were unchanged. On the 21st the access of M. Herriot to power and fears of a capital levy accentuated the flight from the franc to such an extent that the rate touched 250; but rumours of his impending fall caused a reaction to 220, at which rate it closed after a slight break. Belgian francs similarly opened at 224, rallied to 211, and wound up at 213, but three months' forward rates were worse at 28 francs above spot. The lira opened weakly at 154, but rallied after the publication of the Budget figures to 149 $\frac{1}{2}$, but forward rates advanced to 11 lira above spot for three months. On the 22nd Paris fluctuated between 202 and 210 and closed at 217, three months' rates advancing to 24f above spot. The Banque de France returns showed increases of 550 million francs in advances to the State and 87.8 million francs in the note circulation. Brussels opened at 203, fell to 214, and closed at 212 $\frac{1}{2}$; three months' delivery advanced to 30f above spot. The lira was steady at 150, but 14 $\frac{1}{2}$ lira above spot were asked for three months' forward. Yesterday an improvement set in on the news that M. Poincaré had succeeded, at the time of writing, in forming a Cabinet, and the rate was 210, bid forward rates being down to 9f and 20f above spot for one and three months. Brussels was also better at 208, and the lira at 149 $\frac{1}{2}$. New York has been fairly steady at about 4.86 $\frac{1}{2}$ -7 $\frac{1}{2}$, but there was weakness on 21st and 22nd at 4.86 $\frac{1}{2}$ -7 $\frac{1}{2}$. Amsterdam moved rather against this country to 12.09 $\frac{1}{2}$ -3, after opening at 12.10 $\frac{1}{2}$ -1.

Berlin was weakish at 20.42 at the beginning, but recovered to 20.43 at the end. Switzerland was temporarily weaker at 25.12-25.13 on 22nd. None of the other European currencies call for comment. South American currencies showed steadiness throughout except the milreis, which declined sharply on 21st to 7 15-32 from 7 $\frac{1}{16}$. The rupee was steady at 1s 5 $\frac{1}{8}$ d. In the Far East Shanghai was weaker at 2s 10 $\frac{1}{2}$ d, as against the opening rate of 2s 11 $\frac{1}{2}$ d. Silver prices ruled lower under the influence of China selling, and bears were tempted to cover by the falling rates. The spot rate is now 29 $\frac{1}{16}$ d and forward 1 $\frac{1}{8}$ d higher. For the first time for a considerable period silver was shipped from China to London, which indicates that the saturation point of this market has been reached owing to the steady transfer of silver from the United States.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 17th:—

EXPENDITURE.	(000's omitted.)	RECEIPTS.	£
Supply Services	7,550	From Revenue	16,674
Interest, &c., on Debt	733		
Sinking Fund	392		
Road Fund	1,079		
Sundries	483		
Increase in Balances	64		
Decrease in debt	6,373		
	16,674		16,674

Revenue amounted to £16,673,800, against £20,033,900 for corresponding period last year. Customs yielded £1,325,000, against £1,356,000, and Excise £5,480,000, against £7,016,000. Property and income-tax yielded £4,467,000, against £5,431,000, and Super-tax £600,000, against £740,000. Special receipts under Miscellaneous produced £1,161,200, against £2,315,000.

The week's operations reduced the National Debt by £6,373,000, and caused the following changes:—

(000's omitted.)			£
National Savings Certificates ..	£ 50	Treasury Bills.....	-10,003
Public Dept. Advances	+ 4,050	Sundries	- 470
	<u>+ 4,100</u>		-10,473

The floating debt was reduced by £5,965,000 to £775,466,000.

FINANCIAL YEAR, 1926-1927 (April 1 to July 17, 1926.)

£	£
Total Expenditure .. 260,830,775	Raised by Revenue .. 184,607,088
	Decrease in Balances .. 3,838,932
	Amount borrowed .. 72,384,755
Total	260,830,775

ESTIMATES for FINANCIAL YEAR 1926-7.

£	£
Expenditure	820,641,000
Revenue	824,750,000
Surplus	£4,109,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—The Standard Bank of South Africa, Bank of Roumania, Rock Investment Company, British North Borneo Rubber Trust, Eagle Oil Transport, Taquah and Abosso Consolidated, and Bodega Company. At the meeting of the Rock Investment Company Mr M. C. Harman explained the conservative policy adopted, a dividend of only 1 per cent. being paid on the ordinary stock, although 23 per cent. was earned.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a new index of electricity production, and a review of the present position of Russian Agriculture.

THE CRISIS IN FRANCE.

THE French Chamber has once again dashed the hopes of all those, whether in France or abroad, who thought that the Briand-Caillaux Ministry, backed by the Expert Committee, might be able to steer the franc safely into port. Last Saturday M. Herriot descended from the chair, and marshalling the combined forces of Left and Right in the Chamber, defeated the Government on the question of granting special powers to the executive to deal with the financial situation. M. Herriot launched his attack on the laudable grounds of defending the rights of Parliament, but within two days his own short-lived ministry proved that he had no alternative plan, and his adventure, apart from sending the franc down to 242 to the £, merely gave another illustration of the ineffectiveness of the present French Chamber. Although M. Herriot secured a promise of support from the Socialists, he had no common ground with those who had combined with him to turn out the previous Ministry, and, indeed, it quickly became evident that his unfortunate Finance Minister, M. de Monzie, could only extemporise makeshift proposals to deal with what he found, as soon as he got to the Treasury, to be a desperate situation. In fact, he found the Treasury practically empty, and the only legacy of the Government is a Bill hastily passed after M. Herriot's downfall to permit France's foreign balance, including the small balance of the Morgan loan, to be used to keep the Treasury going for a few hours longer. M. Herriot's action precipitated something very like panic in Paris, and has brought down upon his own head, and that of the deputies, a wave of popular disapproval for having checked a serious effort to deal with the crisis. At the time of writing it appears that he will be succeeded by a small Ministry of National Defence under M. Poincaré. But it still remains to be seen whether M. Poincaré, or any other Prime Minister, will secure the necessary authority to deal with a situation which is rapidly becoming desperate. To the outside observer it would seem that during the last two years every possible combination of the present French Chamber has been tried, but has failed to produce a stable majority strong enough to put through a strong policy; and that the time is long overdue for trying what would have been done in this country months ago, namely, an appeal to the country in the hope that there would be better success with a fresh Chamber. It would then soon be evident whether it was essential to give the executive exceptional powers. We may add that the history of these two years illustrates the importance of the British plan of giving the Government sole responsibility for the Budget instead of allowing the Chamber to produce innumerable alternative finance Bills of its own.

The events of the last few days recall the time when the currencies of Central Europe were collapsing. The shops have been showing unwillingness to part with their goods, the public have been rushing to convert their money into commodities, and there is beginning to be a disposition to charge prices in accordance with the exchange rate of the franc. There are still many who hold that the franc cannot possibly experience an extreme slump comparable to that of the mark. It is true that the Budget has been nearly balanced, that France's economic position is good, and that she is not very dependent upon foreign trade, which, in any case, has not shown any strong adverse balance. In such circumstances the comparative level of prices in France and elsewhere establishes a normal to which the exchange should return—the purchasing power parity of which so much has been heard in recent years. But it is equally important to remember that if confidence is undermined, and for psychological reasons the exchange deteriorates far below this normal, and if this lack of confidence persists, it will alter, slowly at first, but later more rapidly, the internal conditions which determine the normal exchange rates. As soon as the French population begins to realise that prices and wages measured in francs are measured in a unit which has no stability, and as soon as the country begins to think in terms of index numbers internal prices will move more rapidly; a given movement of the exchange will be followed more

promptly by internal movements, and the value of the franc will deteriorate with increasing acceleration.

To this downward slide there is no limit, unless an absolute limit is set to the currency circulation—in which case the Government, whose expenses have been mounting up, would be faced with the disagreeable alternatives of raising money at exorbitant rates or by forced loans, or of repudiating its liabilities in some form or another. Needless to say, either course would accentuate the exchange difficulty by increasing the incentive to fly from the franc. The advantage of limiting the currency in a crisis of this kind is that it makes the Government find other means of meeting its obligations; but it is a clumsy means, which may precipitate social consequences of a very serious kind. On the other hand, if proper steps are taken to meet the nation's obligations, and are combined with measures to stabilise the currency, the amount of the note circulation is a matter of minor importance, which, subject to certain limitations, will adjust itself automatically to the country's needs. In the circumstances M. Poincaré is practically bound to get authority for one more extension of the note issue, and pick up at once the problem of stabilisation at the point at which M. Caillaux left off. This will involve the grant of wide powers to the executive which we fear will be given with a bad grace, if at all.

In this connection France compares unfavourably with her neighbour, Belgium, who has faced the same crisis with much greater determination. Parliament, though no less jealous of its prerogatives, has given the King for the time being very exceptional powers, which are described in a later column, and has set to work energetically to convert State property into cash with a view to reducing the floating debt. In the case of the railways and other undertakings this will only be effective if the new companies are given adequate charging powers and provided there is a large enough market in Belgium to absorb long-term securities, such as railway stock. In the task of replacing floating debt by securities representing State property, the Government will have many financial conundrums to solve; but it is evident that Belgium has the will to grapple with her acute difficulties. The keen and prompt appreciation by the Belgian Parliament and people of the necessities of the situation, compared with the more vacillating procedure in France, is perhaps due, among other causes, to the fact that Belgium is far more dependent on foreign trade than is France (her foreign trade in 1924 was equal to 185 dollars per head against 109 dollars for France), and that her whole economic life is therefore much more international in outlook. Matters in France, however, have reached such a stage that the French nation will require its leaders to act at least as firmly as those of her northern neighbour.

Meanwhile the British Parliament, under pretext of discussing the Caillaux-Churchill agreement, has roamed once more over the whole topic of the international war debts. The question, so far as it relates to the American debt, we discuss on a later page. As to the French debt settlement, the debate in the House revealed nothing new and showed no genuine difference of opinion. Mr Snowden, it is true, complained that Mr Churchill had abandoned the *pari passu* basis, but the Chancellor had no difficulty in meeting this criticism. If we add in the full value in 1980, it is true that we have the worst of the bargain, but if we confine our attention to the present generation, Great Britain's settlements are the more valuable. A more serious criticism is that in the annexed letters, which admit that France may ask for a modification of the terms if Germany wholly or partially defaults, it is implied that the Dawes Plan will last for the whole period of 60 years, or that the debt agreement must be reconsidered. This possibility seemed disquieting to the House, and it is indeed true that very few have contemplated that the Dawes scheme can last for so long. Technically, there is at present no limit to the Dawes scheme, since the total amount to be paid was not dealt with by the Dawes Committee. But it is fairly clear that, if circumstances arise which make necessary a radical revision of the Dawes plan, or if political conditions are such as to make it possible to wind up the whole of this disturbing business of international payments, international war debts must be included in any such general liquidation. The House, however, showed its common-

sense in endorsing the view that it was desirable to give France as much help as possible in putting her financial house in order. As Mr Hilton Young pointed out, we ought to concern ourselves as business men more with new business than with old debts. Our commercial ledger is of more importance than our ledger of public finance, for Britain is like the manufacturer to whom orders matter more than interest. To assist France towards monetary stability is of far more importance than a few figures up or down in the amount which we ask her to pay over a long period of years.

THE INDUSTRIAL OUTLOOK IN GERMANY.

BRITISH traders in overseas markets have learned by experience that it is extremely unwise to plan new developments, fix prices, or submit tenders without some reference to the possibility of German competition. This being a commonplace of present-day trade, it is the more surprising to find that a really sound and useful knowledge of the present industrial organisation of that country, and its future potentialities, is possessed by only a very small minority of people in England. The implications of the extremely important measures of reorganisation which have followed the Versailles settlement, the adoption of the Dawes Plan, the inflationary period and subsequent stabilisation, &c., are seldom realised here, although their effect on the competitive power of Germany, particularly during the next decade, cannot but be considerable. The British Electrical and Allied Manufacturers' Association have therefore performed a distinct service by compiling a report on the present state of German industry, based on numerous statistical tables, and written in a manner both lucid and concise.* Although the report, which is to be published shortly, is primarily concerned with the position of the German electrical industry, it includes a number of valuable facts relating to that country's industrial economy as a whole, and the following paragraphs are largely based on the conclusions reached and set forth in the ultimate chapter.

The association find that the introduction of the Dawes Plan has modified German economic conditions so radically that historical comparison and analogy are practically useless for the comprehension of the vital factors affecting the present situation. With the success or failure of this Plan lies the whole future of Germany. Is the present machinery likely to function until German Reparation indebtedness has been cleared away? An affirmative answer would presuppose four essential conditions:—

(a) That the wealth-producing capacity of Germany will be increased so greatly that the sum of £125,000,000 annually required for the scheme will be found from the national surplus. (b) That the adverse balance of trade existing before the war will be made good, and a surplus equivalent to the difference between £125,000,000 and the total of invisible exports be realised. (c) That the world market for manufactured goods will have increased so greatly that an additional £100,000,000—£125,000,000 from Germany will be absorbed without difficulty—the manufactured goods in question being almost wholly iron and steel, engineering and electrical products, textiles and chemicals—or, alternatively, that displacement in the world market through intense competition from German firms will be such that manufacturers in other competing countries will yield ground to the extent required to give Germany an export surplus of £100,000,000. (d) That the actual transfer of the sums required by the Dawes plan annually will not take place, and that they will, instead, be invested in German industry and agriculture. The fulfilment of these conditions, the association do not hesitate to say, will involve a state of affairs which few British manufacturers can afford to contemplate with equanimity:—

The Dawes plan will reduce the standard of living in Germany, force deflation to a lower level than even now to encourage a surplus of exports, encourage a dumping policy on the part of German firms, and cause a serious and permanent depression in the basic industries of Britain.

This is, of course, merely an emphatic restatement of the doctrine enunciated by Sir Josiah Stamp and other economists some time ago, but in proceeding to draw the moral that "it is essential for manufacturers in this

* "The Electrical Industry in Germany." (London) The British Electrical and Allied Manufacturers' Association (Inc.), 36 Kingsway, W.C. 2. 10s 6d.

country to press for a drastic revision and even abolition of the Dawes Plan in their own interests," the association would appear to be giving an extreme lead which opinion in other industries may not yet be sufficiently ripe to follow.

Passing to an examination of the financial factors in the German equation, the association come to the conclusion that—

the reorganisation of industrial finance after the period of inflation to meet the requirements of stabilisation on a gold basis is now complete. The result has been an improvement in the relations between capital invested and capital actually productive. There is now closer co-ordination between them, and the position of the balance-sheets is theoretically stronger now than even before the war. On the other hand, the work of deflation has robbed industry of any surplus capital it may have had for expenditure on new plant, on new sales organisations and on new amalgamations, and made the cost of financing higher than before the war. The financial position of the German manufacturer is now greatly improved as far as those branches of manufacture are concerned where only standard articles on mass production lines and with a rapid turnover are produced. In heavy contracts and non-standard manufacture, where the turnover is slow and liquid financial resources are necessary to see the work finished, the German manufacturer is at a disadvantage.

A most important legacy of the inflationary period has been the difficulty of executing orders dependent on the obtaining of financial accommodation stretching over a considerable period:—

Before the war the manufacturer, producing for the home market, discounted bills with his bank which were often renewed on maturity, and so became part of the debenture and loan capital of the concern. Now, the manufacturer cannot obtain short-term capital for long-term purposes owing to the diminished resources of the banks, and must be in a position definitely to redeem short-term bills on maturity, while the price of financial accommodation has become so high that his competitive position is seriously affected. He cannot, therefore, take on contracts extending over a long period without making provision for finance on a long-term basis, and his quotation must be raised accordingly. The principle of financing contracts by arrangement with the banks who could use "short-term capital," procured in London and New York ostensibly for general purposes, but actually for advancing German trade abroad, has become difficult of application. Financially, German competitive ability has thus been seriously weakened.

Numerous efforts have been made to overcome this disadvantage. From the United States German manufacturers have obtained new loan accommodation by fixed interest-bearing issues, secured on their plant and material. State credits for industry have been introduced on a large scale, modelled on the British Trade Facilities Acts. Such credits, which run to an estimated total of £60 millions, partake of the character of subventions, since the rate of interest demanded is less than 2 per cent. The main industries assisted have been iron and steel, shipbuilding, and general and agricultural engineering. In addition, an export credits scheme has been established, for engineering especially, which may lead to a revival, on a limited scale, of the pre-war system of financing contracts abroad.

The events of the last few years have left their mark also on the theory and practice of industrial organisation in Germany:—

Dependence on foreign capital combined with the economic utilisation of immensely increased manufacturing plant has effected four important changes. The vertical combine—i.e., from raw materials to the finished articles and finance—has no longer the power it once had owing to incomplete utilisation of the productive resources available at each stage of the combine, and is almost certain to disappear as the final development of industrial organisation. The trust is gradually exerting greater influence, and the tendency is to limit its range of production to one horizontal group, with absolute control of manufacturing capacity in that group and rigid adherence to the quota system. The United Steel Trust is a recent example, while the report of the Dye Trust, Interessengemeinschaft Farbenindustrie A.G., composed of the six great dye firms of Germany, shows that, in one industry at least, the trust has justified itself. The Kartell is yielding ground slowly to the trust idea, but there is no indication of the abandonment of the Kartell principle, in engineering at least. The protection of the home market is such that a comparatively inefficient association of manufacturers like the Kartell can still prosper. Price-fixing has become general practice down the whole range of German manufacture, in electrical engineering as well as in chemicals and textiles, and the tendency has been to maintain a gap between home prices and export prices, in some cases equivalent to as much as 25 per cent. State participation in industry has acted as a disintegrant of organisation for manufacture. The tendency is now for the large undertaking to form special companies to take over special branches of production, procure State assistance for itself, and allow the State to participate in the formation of those new companies. State participation, in manufacture as well as in public service undertakings, has grown with remarkable rapidity, and a central control company, the Vereinigte Industrie Unternehmungen A.G., has been created to cover the whole range of participation.

On the technical side the introduction of modern machinery is in process of effecting far-reaching economies

in production. The great industrialists, profiting by the errors of the past, are scrapping inefficient and obsolete machinery, making a new division of labour, in which human power is more and more fulfilling its proper function of control, and generally co-ordinating the national productive capacity into a coherent industrial machine of great and improving efficiency.

Germany has practically recovered from the disturbances caused by political developments, and is now producing at about 90 per cent. of the pre-war average. In coal-mining, iron and steel the pre-war average has been reached; the study of heat economy has reduced effectively the consumption of coal and rendered available a large tonnage for exports; engineering generally is still depressed, but electrical manufacture has now exceeded the pre-war output.

As regards the industry with which they are chiefly concerned, the association find that the German electrical manufacturer has lately become an increasingly formidable force in world competition. From his home market comes a steady demand, due primarily to the deliberate choice of electricity as the chief means towards increasing industrial production generally, and, secondarily, to the impetus which representatives of the electrical industry on the board of the German State Railway Company are in a position to give to the policy of railway electrification.

National co-ordination of electricity supply, both for strategic and economic purposes, has been conceived on a basis of large power zones operated by a central undertaking where public control, direct or indirect, has been a feature in its creation. The powers exerted by the finance corporations, and through them by the manufacturers, on the formation of electricity supply companies and the allocation of orders have been weakened by this work of co-ordination, but technical developments have tended to reinforce the monopoly enjoyed by the great electrical manufacturers. The power market in Germany is strong enough to keep manufacturers busy to above 80 per cent. of their capacity and allow them to introduce a system of dumping in foreign markets where competition is specially keen.

With the domestic market for his wares thus secured, the German manufacturer finds himself in a position to sell abroad at prices representing factory cost alone, without margins for profit, depreciation, or capital charges, and he has obtained a full share of the recent improvement in European conditions.

In 1925 German electrical exports to European countries increased 45 per cent. over those of 1924, and accounted for 73 per cent. of the total electrical exports. In 1913 the corresponding percentage was 71 per cent. Europe absorbs over £11,500,000 of German electrical goods annually and not much more than £1,500,000 of British electrical goods. Although the British total exported to European countries is higher now than in 1913, it is clear that there is still room for development of the European market by British firms.

In countries outside Europe, where the two are in competition, however, the odds are more in favour of Great Britain. In South America, China, and Japan the position of British firms is particularly strong; their main competitor has ceased to be Germany, and is now the United States.

In the matter of production costs the German electrical manufacturer enjoys at present a certain advantage over his British colleague.

Prices of raw material products were distinctly lower in Germany than in Britain throughout the whole of 1925. At the beginning of this year, however, a certain equilibrium had been reached, and, roughly speaking, it may be said that the British manufacturer, so far as raw material prices are concerned, is at a 10 per cent. disadvantage compared with his German confrère. As regards finished products, the difference is about 20 per cent., although present prices do not represent the true economic position of Germany industry. This increased advantage is due principally to the lower rates of wages and the longer working week in Germany, but the present trend of wages is such that some part of this advantage will be lost within the next few months, especially if the policy of deflation is continued.

The picture thus presented of a powerful industrial state, driven by the necessity of fulfilling its external obligations into a policy of internal development *à outrance*, may be a little overdrawn here and there, but in its essentials it is sound enough, and the lessons it teaches may well be taken to heart by British employers and employed. German captains of industry learned early to appreciate the disadvantages of an ultra-individualistic spirit. In financial and monetary matters, recognition of the true secret of prosperity, viz., "liquidity," came much later, but the process, though painful, has certainly not been fatal. Altogether the German industrial machine of to-day would appear to be in process of reaching a notably high level of efficiency, and industrialists in this country can scarcely afford to shut their eyes to its possibilities.

THE BANKING HALF-YEAR.

THE interim dividends paid by the English joint-stock banks were at the same rate as for the corresponding period of 1925, with the exception of the National Provincial, which paid at the rate of 18 per cent. per annum, against 16 per cent., and the Lancashire and Yorkshire, which paid at the rate of 24 per cent. per annum, against 20 per cent. In the former case it is merely a matter of bringing the interim dividend into line with the increased dividend of 18 per cent. paid for the year 1925, while the Lancashire and Yorkshire paid up an additional £2 per share on its capital out of reserves, making the shares £10 paid, and the extra payment just announced is equivalent to the old rate on the enlarged capital. In the absence of any figures of profits, we are left entirely in the dark as to the half-year's results, for the mere fact that dividends have been maintained does not of itself indicate that profits have not increased, or for that matter declined. For even with a substantial increase in profits the directors of the banks would be unlikely in the present state of affairs to make any addition to dividends; while, on the other hand, a reduction in profits would have to be very substantial to warrant a reduction, considering the hidden reserves which the banks are known to possess. A glance at the monetary history of the past half-year, however, suggests an increase in banking profits rather than a decrease. Bank rate remained throughout the period at 5 per cent., so that the main supply of revenue—namely, interest on advances—should have averaged 5½ per cent. or more. Again, the average rate for short loans was higher than usual at over 4 per cent., the actual margin over the rate paid on deposits being £1 1s 2d per cent., which compares with 17s 8d per cent. in the first half of 1925 and 9s 10d per cent. in the first half of 1924. It may be that larger allowances have had to be made for bad and doubtful debts in view of the paralysis in certain industries, but investment depreciation will have made no call on profits during the period.

Turning to the figures of the half-yearly statements as at June 30th, we append a table comparing the aggregate figures of the "big five" banks with those of December 31st last and of June 30, 1925:—

(Million £'s.)

	June 30, 1926.	Compared with Dec. 31, 1925.	Compared with June 30, 1925.
Paid-up capital	62.9	+ 1.7	+ 2.3
Reserves	50.7	+ 0.4	+ 2.0
Acceptances and endorsement	77.4	- 19.8	- 2.4
Deposits (including undivided profits)	1,515.8	- 6.3	+ 6.8
Total	1,706.8	- 24.0	+ 8.7
Cash, notes, balances at bank, and cheques in course of collection ..	248.2	- 9.9	- 4.2
Ratio to deposits	(16.4%)	(- 0.6%)	(- 0.3%)
Money at call and short notice	101.0	- 4.8	- 0.6
Investments	242.9	- 16.3	- 21.8
Discounts	197.6	+ 6.2	+ 9.2
Loans and advances	812.5	+ 19.4	+ 26.7
Premises and sundries (including cover for acceptances)	104.6	- 18.6	- 0.6

THE most striking feature in the comparison with this time last year is the increase of nearly £27 millions in loans and advances. It might have been expected that this movement would have been accompanied by a larger expansion in deposits than that shown above, but the figures show that the increase in loans has been met by sales of investments, which of itself tends to lower the volume of deposits. Cash in hand and money at call are also lower than they were twelve months ago, but discounts are £9 millions higher. The decline in deposits as compared with December last is a normal movement, and acceptances are usually lower at midsummer than at the end of the year. This year, however, they are slightly below the total shown at this time last year. The expansion in advances has been larger during the past six months than in the preceding half-year, and there has also been a heavier decline in investments.

In the next table we show the changes in the items of the individual banks as compared with six months ago:—

COMPARISON with DECEMBER 31, 1925.
(Million £'s.)

June 30, 1926.	Barclays.	Lloyds.	Midland.	National Provincial.	Westminster.
Deposits	- 2.1	- 2.0	- 1.1	+ 1.7	- 2.8
Acceptances	- 6.5	- 5.4	- 2.4	- 1.6	- 3.9
Cash, &c.	- 1.9	..	- 1.9	- 0.9	- 5.2
Money at call	+ 1.5	- 2.3	+ 1.7	- 0.6	- 5.1
Investments	- 5.6	- 7.2	- 1.4	- 1.0	- 1.1
Discounts	+ 1.2	+ 2.0	- 1.6	+ 1.1	+ 3.5
Advances	+ 2.6	+ 6.4	+ 2.0	+ 2.7	+ 5.7

The expansion in advances is common to all the banks, though larger than the average in the case of Lloyds and Westminster. Each of the banks has reduced its investments, the largest decreases being shown by Barclays and Lloyds. The investment holdings of the five banks are now as follows:—Barclays, £60 millions; Lloyds, £53.2 millions; Midland, £39.8 millions; National Provincial, £41.1 millions; and Westminster, £48.8 millions.

The changes shown by the figures of the five principal provincial banks are smaller and show a different tendency with less uniformity:—

COMPARISON with DECEMBER 31, 1925.
(Million £'s.)

June 30, 1926.	Bank of Liverpool & Martins.	District Bank.	Lancashire and Yorkshire.	Manchester & County.	Williams, Deacons.
Deposits	- 0.9	- 3.0	- 1.1	..	- 1.5
Acceptances	- 3.0	- 1.8	+ 0.1	- 0.5	- 0.8
Cash, &c.	- 0.8	- 2.0	- 0.1	- 0.2	- 0.3
Money at call	+ 2.5	+ 0.6	..	..	- 0.3
Investments	- 0.2	..	..	+ 0.1	- 0.1
Discounts	- 1.6	- 0.9	- 0.1	- 0.2	- 1.8
Advances	- 0.8	- 0.6	- 0.6	+ 0.4	+ 0.9
Advances	- 3.0	- 1.8	..	- 0.6	- 0.7

None of these banks has increased its total of advances, and in three cases discounts have been reduced. Investments are all lower, but two banks show a larger total of money at call.

In the concluding table we give the ratios of the advances of the big five banks to their deposit liabilities at the dates mentioned:—

RATIO of ADVANCES to DEPOSIT LIABILITIES.

	June 30, 1926.	June 30, 1924.	Dec. 31, 1924.	June 30, 1925.	Dec. 31, 1925.	June 30, 1926.
Barclays	45.0 ..	48.1 ..	46.5 ..	50.1 ..	50.0 ..	51.2 ..
Lloyds	52.7 ..	45.9 ..	48.4 ..	52.3 ..	54.1 ..	56.4 ..
Midland	56.9 ..	54.2 ..	53.5 ..	56.9 ..	56.2 ..	56.9 ..
National Prov	45.0 ..	50.1 ..	51.5 ..	52.3 ..	52.8 ..	53.4 ..
Westminster	48.1 ..	40.3 ..	44.7 ..	47.8 ..	46.3 ..	48.9 ..
Total	50.7 ..	48.0 ..	49.0 ..	52.0 ..	52.1 ..	53.7 ..

* Union of London and Smiths.

Lloyds and Westminster, which recorded the largest increases in advances, show the largest increase in this ratio during the past six months, that of the former being not much below the Midland Bank's figure, which for each date given in the table has been easily the highest. The average figure is now appreciably above the pre-war ratio.

THE LULL IN SPECULATION.

THE Stock Exchange Account which closed this week presented certain features of unusual interest and difficulty, for while the make-up prices reveal nothing like a general fall, the two-week period saw a rather sharp set-back to speculation in industrial shares, while the French crisis and the renewed slump in the franc not only sent French descriptions down, but also cast their shadows over markets in which Paris is apt to take a lively interest. Additional factors, of course, were the effect on public confidence of the long continuance of the coal stoppage, which, while it releases funds for investment, puts a progressively darker tinge to the industrial

outlook, the approach of the summer holidays, and a somewhat intensive campaign of new issues. The following table, which must not be taken as typical of market movements as a whole, shows some of the more conspicuous falls over the period of the Account:—

Security.	Price, July 5.	Price, July 19.	Fall.
French 5 % Rentes	9½	8½	1
French 4 % Rentes	8½	7½	1
Great Western Ord. Stock	86	84½	1½
L.N.E.R. Pref. Ord. Stock	53	51½	1½
L.M.S. Ord. Stock	72½	70½	2
Bradford Dyers' Ord. (£1)	52½	49½	3
Watney, Combe, Def. Stock	290	272	18
Callender's Cable Ord. (£1)	67½	63½	4
Courtaulds Ord. (£1)	61	53½	7½
Joshua Hoyle Ord. (£1)	26½	24½	2
Rylands and Sons Ord. (£1)	28½	26½	2
Siemens Bros. and Co. Ord. (£1)	28½	26½	2
Burmah Oil Ord. (£1)	63½	51½	12
Zinc Corporation Ord. (10)	55½	52½	3

In many sections movements are slight and irregular, and there are many rises to set against these falls. But it may be said that a feature of the Account has been the lull in industrial speculation.

Why so sudden a halt should have been called to speculation in the industrial markets of the Stock Exchange, writes a Stock Exchange correspondent, it is a little difficult to decide. The rock upon which the bullishness broke up was undoubtedly the reduction in the interim dividend of Courtaulds. This reduction of 3d a share, as compared with a year ago, is a bagatelle, so far as money is concerned, and Courtaulds could have easily maintained the previously paid 1s 6d per share, free of tax, had they deemed it discreet to do so. The fact that the board decided upon so trifling a reduction served, however, to set in train a good deal of uneasiness among holders of shares in other popular industrial companies. People who had been running after industrials, and buying the shares more on tips than on sound reasons, became suddenly frightened. Confronted with a drop of a pound a share from the recent best in the price of Courtaulds, the holders of other industrials started to turn out their shares at a pace which upset a number of sections in this particular market, and which made its effect felt throughout the House as a whole. Here and there recovery ensued from the lowest prices touched, but there is no doubt as to the check that has been laid upon the speculative spirit and the greater reluctance which has sprung up in the minds of the ordinary investor to take such risks as are involved through the purchase of shares on the top of a previously long rise in prices.

Some surprise is expressed at the nature of the selling that has occurred, which suggests that a fairly extensive bull account prevailed. Previous evidence of this had not been obvious in the market. Nowadays, however, people are more willing than they used to be to pay for what they buy, either with their own money, or with that borrowed from bankers and others whose names serve to cover the widespread character of the buying movement in various shares. When the actual holders become apprehensive, and want to sell, the shares come out of the names of nominees, well known in that capacity only. It is difficult to tell at the present time whether there is a large bull account or not in the shares of some particular company, for, apart from the position open in the Stock Exchange market, it is customary for a much larger hidden account to be built up beneath the names of nominees of a bank or some other financial institution. The bull account is there; that is the point, and the fact of there being but a moderate position open in the Stock Exchange does not by any means imply that the holders of the shares are strong enough to keep them in the face of adverse conditions prevailing in industry or finance. The Courtaulds drop pressed home, as nothing else could have done, the fact that the present labour disturbances, added to the General Strike and its aftermath, will have to be paid for by someone or other. Those people who hold the view that the present investment movement is an artificial one, and is merely due to the fact that capital is not required by industry, are quick to point out the unjustified character of the rises which have occurred in so many industrial stocks and shares. The bull account is still considerable. In addition,

there has been a lot of staggard during the past month or so of new issues. Of this the Morris Motors issue affords a striking example. Having been very largely oversubscribed, the scrip quickly went to 1s 6d discount. The stag is notoriously timid, and rushes to get out of his stock at the first profit which becomes available. On the other hand, he is not always so ready to cut a loss, but is very frequently willing to run his commitments rather than to get out of them at a loss in order to be ready for the next thing that offers. The reaction which has taken place among industrial stocks and shares merely serves to emphasise the danger of following the speculative markets heedlessly, and with the idea of skimming some microscopic profit. Fingers can be burned by this process, as may be instanced by one case in which a man bought 1,000 shares last Friday night, intending to take a profit of 3d a share, and who was thankful to cut a loss of no more than 1s 4d per share on the following Monday morning. Another, who had resisted the temptation to be a bull of Courtaulds on a rising market, chanced to buy 100 shares on the night before the dividend cut was announced, and he got out of his liability next day with a £75 loss. Such instances, multiplied many times over, are a feature of Stock Exchange speculation at the present time, and it is not very surprising that there should be a noticeably lessened demand for industrial issues on the part of those who hitherto had been following the markets with eagerness, and, until a week ago, with a good deal of success.

MINERAL ROYALTIES.—AN ILLUSTRATION FROM SOUTH AFRICA.

(FROM A CORRESPONDENT.)

ONE of the recommendations of the Coal Commission, about which there has been comparatively little disagreement, is that the ownership of coal deposits should be acquired by the State. In countries where development is recent, and vested rights have not been allowed to grow, it is recognised by everyone that minerals are a proper endowment for the community, and not for a private person who happens to have come into possession of the farm land lying over them; in Britain a legal decision of several centuries ago gave the coal to the private landowner, so that now it is necessary to buy him out for a considerable sum. The landowner's rights are expressed in the form of a "royalty" which is practically a rent, except that the national resources for which it is paid are exhaustible, whereas farming land yields revenue for an indefinite time. It has long been recognised that rent of land is due to superiority over land which will only just pay to cultivate; the same is true of minerals. There are deposits which will just about pay for the labour and capital needed to work them, and other deposits so much richer that business men will gladly offer a substantial rent to be allowed to exploit them.

The difficulty is to make sure beforehand how much a mineral deposit is worth. When a farm is available for leasing, the farmers of the neighbourhood can form a pretty close estimate of the crops it is capable of yielding and the cost of working it, so that competition will settle the rent offered, and there is no risk of a serious error of judgment. But a prospective mine can only be very imperfectly explored by boreholes, and studied by aid of the geology of the surrounding country, so that an exploiting company may be very far out in estimating how much profit is to be made. In these circumstances the rent offered is only a rough guess; the plan that has become customary in Great Britain is the very crude one of paying so much per ton raised—sixpence or a shilling commonly. It follows, naturally, that there are a good many mines which make abnormally high profits owing to their luck in striking a rich seam, while there are others which are called upon to pay a royalty for the privilege of raising coal on which they are losing money.

The methods that were used in the early days of the Witwatersrand were different, but equally unsatisfactory; however, a large area to the east of the Rand, which is Government property, has become available for leasing

in recent years, and there a new and more scientific plan has been introduced, chiefly through the efforts of Sir Robert Katze, the Government mining engineer. This is based upon the principle that the body of capitalists who undertake to exploit the gold ore known to exist on the land should have a reasonable prospect of making customary profits, and should be encouraged to do their best by the hope that profits may be somewhat above the average; but that if the ore should turn out to be particularly rich, the benefit should accrue to the owner rather than the exploiting company. With this aim, an estimate was first made, on the basis of what was known of the geology of the district, of the yield to be expected and the cost of working; a lease was then offered, according to which the rent paid to the Government was to be a percentage of the profits made, the percentage rising as the profits were larger. After some experience, a suitable relation between the two quantities was found, and was embodied in an algebraic formula, which is now an integral part of the leases; in the case of land put up more recently, the tendering consists in stating what constants the tenderer is willing to insert into the formula!

However, it is possible to understand the method even if one is ignorant of algebra. To take the lease of West Springs as an illustration: this is so arranged that if out of the gross proceeds of the gold extracted not more than 10 per cent. is profit, no rent is payable. If the business turns out more fortunate the rent rises, rapidly; with profits 25 per cent. of gross income, rent is 39 per cent. of profits; with profits 50 per cent. of gross income, rent is 52 per cent. of profits, and so on.*

In order to carry out such a plan it is necessary that accounts be kept very strictly in accordance with a prescribed system, and that the term "profit" be carefully defined. This, one need hardly say, is all to the good. There would be less trouble on the British mines if the accounts of the companies were open to inspection by auditors representing a public authority; indeed, publicity of accounts is an important safeguard in all industries. The promoters of businesses that have anything of a public character should not be granted the privileges of organisation under the laws of limited liability without a reasonable measure of publicity, and the coal-mining industry certainly has a public aspect.

This is by the way: the essential feature of the East Rand lease is that it retains for the State as much as possible of the natural value of minerals. A rougher plan does not secure this. The assumption of risk by the exploiter will probably lead to the royalty offered being less than the true average value of the mineral rights; but, even if it were equal to that average, in practice the Government's receipts will be less, for if the mine is unsuccessful, the owner has to reduce or abandon his royalties, while, if it turns out to be exceptionally rich, the owner gets nothing additional. Thus if our Government, after spending a hundred millions or so in acquiring the mineral rights, were to introduce a more scientific system in leasing new ground, it is probable that the yield of royalties would be increased, and the purchase might turn out to be a good investment. The matter should be investigated: the South African system would not be copied without modification. A knowledge of the technique of coal-mining, and of its economic circumstances, is needed to formulate a definite plan, but the principle is clear: the share going to the company should be appropriate to the capital it supplies and the intelligence and efficiency with which it conducts the business of mining, while the share going to the State, as owner, should be appropriate to the natural richness of the ground.

The South African Government has benefited considerably by adopting the sliding scale lease. It is true that certain areas offered recently have not been let, but that is not due to the form of the lease. Gold mining is passing through an unfavourable period, owing to the fall in the purchasing power of gold, so that it is difficult to raise capital for it on any terms.

* The formula is $y = a - b \div x$.

Where x is the percentage ratio which profit bears to gross income (after allowing for amortisation of capital) and y is the percentage of such profit to be paid to the State. a and b are constants offered by the tenderer.

NITRATE PRODUCING COMPANIES.

THE past year has not been a happy one for Chilean nitrate companies. Both Messrs Aikman (London) and Henry Bath and Son refer in their half-yearly reports on the industry to the increasing competition of artificial fertilisers. Messrs Aikman estimate the consumption of artificial nitrate fertilisers during the year to June 30th last (in terms of pure nitrogen) at 1,187,000 tons, against 1,088,000 tons in the preceding twelve months, and 970,000 tons for the year before that. "The feature," they say, "has been the large increase of synthetic nitrogen products, the production of which is estimated at 583,000 tons, against 450,000 tons, and 355,000 tons for the two previous years. The production of by-product sulphate of ammonia has remained more or less stationary, being estimated at 280,000 tons, against 275,000 tons and 275,000 tons respectively. The consumption of Chilean nitrate has fallen back, the figures in terms of nitrogen amounting to about 324,000 tons, against 363,000 tons, and 340,000 tons for the two previous years." The falling-off in consumption during the past year is attributed to a multitude of causes, the principal one being that the production of synthetic nitrogen products has increased at a greater rate than was anticipated, the actual increase having amounted to 133,000 tons of nitrogen, as compared with an estimate of 75,000 tons made at this time last year. Prices per unit of nitrogen were consistently and substantially lower than the price of Chilean nitrate, and, therefore, the latter merely filled the gap (after the production of the former was absorbed) and showed a reduced consumption of 39,000 tons in terms of nitrogen, which more or less corresponds with the increase in production of synthetic products over the figures estimated a year ago. The other contributory and important causes were the unsatisfactory methods of distribution, as compared with the excellent selling organisation of the combined producers of synthetic nitrogen, the opportunity given to inland dealers of conducting a safer and more profitable business in competitive nitrogenous articles, the violent fluctuation in Continental exchanges, the encouragement given to and the heavy subsidy paid on sulphate of ammonia by the French Government, and the low prices ruling for cotton and sugar beet, which are the most important crops for which nitrate is used.

The following table, showing shipments, production, and stocks for various periods, is compiled from statistics presented in the half-yearly report of Messrs Aikman (London), Limited. The figures for the six and twelve months ended June 30, 1914, 1924, 1925, and 1926 are shown:—

(In Thousand Tons.)

	1914.	1924.	1925.	1926.
Shipments to Europe and Egypt for six months ending June 30	831	380	388	315
Shipments to Europe and Egypt for twelve months ending June 30	2,025	1,066	1,279	1,099
Shipments to United States for six months ending June 30	310	524	720	499
Shipments to United States for twelve months ending June 30	547	930	1,101	926
Shipments to other countries for six months ending June 30	41	68	62	76
Shipments to other countries for twelve months ending June 30	87	145	144	172
Production in Chile for six months ending June 30	1,455	1,150	1,156	1,239
Production in Chile for twelve months ending June 30	2,822	2,184	2,371	2,569
Visible supply for Europe and Egypt at June 30	416	127	217	314
" " United States " "	84	62	122	117
" " other countries " "	11	20	23	18
Stocks in Chile at June 30	754	1,021	856	1,28
Total supply in eight at June 30	1,265	1,230	1,218	1,677

* Estimating production in June at 160,000 tons, and shipments at 52,000 tons to Europe and Egypt, 16,000 tons to the United States, and 8,000 tons to Japan and other countries. † Excluding about 60,000 tons reserve stock held by the American Government.

Deliveries in Egypt have been very satisfactory, nitrate having maintained its premier position in that country and having obtained a large proportion of the increase in consumption of nitrogen. With the exception of United Kingdom, Spain, Holland, and Italy, where consumption has been maintained at about the same level, all European countries show substantial decreases. In France the falling-off amounted to 34 per cent., owing to the large

subsidy granted by the French Government to sulphate of ammonia, which has been sold at £1 to £2 10s per ton cheaper than nitrate. Of the 94,500 tons delivered from Germany and Baltic ports, it is estimated that 25,000 tons were consumed in Poland, 42,500 tons in Czechoslovakia, 20,000 tons in Germany, and 7,000 tons in Russia and neighbouring countries, against 56,000 tons, 58,000 tons, 20,000 tons, and 6,000 tons respectively last year. In Poland, the falling-off, amounting to 55 per cent., was mainly caused by the financial difficulties ruling there. The Chilean exchange has fluctuated during the six months between 39.20 and 40.00, closing at 39.90 pesos to the £.

In our next table we show the amount brought in to the 1924 and 1925 accounts of a group of representative nitrate companies, together with net profits for each year and how the available balances were utilised:—

Name and Year.	Brought In.	Net Profit after Payment of Dividends.	Ordinary Dividend.	To Reserve.	Carried Forward.
Angela Nitrate	1924 3,801 1925 4,225	23,638 25,166	17,500 17,500	5,000 Nil	4,942 12,291
Lagunas Nitrate	1924 15,128 1925 13,526	16,398 18,465	18,000 9,000	Nil Nil	13,526 22,991
Lautaro Nitrate	1924 147,377 1925 372,149	671,375 1,048,513	446,603 728,000	Nil Nil	372,149 692,663
New Pacocha and Jazampca	1924 3,719 1925 5,208	4,684 1,213	3,195 Nil	Nil Nil	5,208 6,421
Rosario Nitrate	1924 29,180 1925 28,584	50,552 37,592	51,150 35,719	Nil Nil	28,584 30,457
Salar Del Carmen	1924 16,494 1925 7,884	33,985 22,199	42,625 17,462	Nil Nil	7,884 12,591
San Sebastian	1924 5,948 1925 8,046	7,668 3,299	5,570 Nil	Nil Nil	8,046 11,345
Santa Rita	1924 12,605 1925 15,912	20,808 15,812	17,500 10,000	Nil Nil	15,913 21,724
Tarapaca and Tocopilla	1924 29,878 1925 40,477	41,599 38,855	31,000 Nil	Nil Nil	40,477 79,312

Apart from the £9,000 distribution of the Lagunas Nitrate Company for 1925 noted above, the company has made a distribution as a special dividend of 13s per share, free of income-tax. The Lautaro ordinary dividend was payable on a largely increased capital. It is not surprising in the circumstances outlined above, to find that most of the Chilean producing companies were unable to maintain profits at the 1924 level. The Angela and Lagunas companies, however, both secured higher net profits, while the Lautaro seems also to have done very well, although, in this instance, direct comparison is not possible, owing to the inclusion of the figures of the Compania de Salitres de Antofagasta for six months of the year. The unsatisfactory financial position of the companies is reflected in the "reserve" column of the foregoing table, which shows that none of the undertakings are building reserves for contingencies, all of them preferring to carry larger amounts forward.

Our next table shows the principal assets and liabilities at the end of the past two years:—

Name and Year.	Principal Liabilities and Assets.						
	Share Capital and Reserves.	Debentures and Loans.	Creditors.	Properties.	Stocks.	Cash.	Investments.
Angela Nitrate	1924 110,933 1925 119,854	..	121,073 115,471	40,477 40,477	57,311 51,538	9,867 15,841	32,792 31,750
Lagunas Nitrate	1924 1,000,000 1925 1,000,000	..	37,635 44,534	817,765 819,270	118,635 114,466	56,850 66,148	75,092 75,092

† Includes bills payable.

The Lautaro is now the most important undertaking. During the year the capital was increased to £6,560,000, and authorisation given to the local board to purchase the assets and take over the liabilities of the Compania de Salitres de Antofagasta. The purchase price was £2,560,000, payable in cash, the shareholders of the Antofagasta Company subscribing for the 512,000 new shares issued by the Lautaro. With the object of refunding the balances of loans contracted by the Antofagasta Company and of providing the necessary capital for con-

THE FIRST NATIONAL BANK OF BOSTON

24, OLD BROAD STREET, LONDON.

struction and enlargement purposes, a new loan of £1,500,000 was floated in October last in the form of 6½ per cent. debentures, of which £1,000,000 was issued in 1925 and £500,000 in February last. The only other alterations in capital were the issue of 25,000 shares of £1 each by the Santa Rita to the San Patricio Company, and of £400,000 of 6½ per cent. first mortgage debentures at £95 per cent. by the Tarapaca and Tocopilla. The expenses of the issue were provided by a withdrawal from the share premium account, reducing that item from £27,602 to £5,934. The Rosario Company's bank loan was raised from £19,000 to £163,000, while the Salar del Carmen secured an advance of £35,000. Stocks, in most cases, are higher, as are both creditors and debtors. Most of the companies hold more cash than a year ago.

Our final table shows prices, dividends, and yields of the companies listed above:—

* Free of income-tax.

As regards the outlook, both Messrs Aikman and Messrs Henry Bath view the competition of synthetic nitrate with anxiety. Messrs Bath expressed the hope in their report that the meeting in Valparaiso between the Producers' Association and the importers will result in the formulation of plans for reducing the handicap under which Chilean nitrate has suffered during the past season. Investors will therefore be the more disappointed at the news that the conference has been productive of no definite result. The comparison between nitrate and sulphate prices in countries outside the range of cheaper freight facilities, state Messrs Bath, threatens to be even more unfavourable for nitrate. "The reduction of 10s per ton in the price of nitrate has been effected by the producers without assistance from the Chilean Government in the form of a reduction of export duty. If this endeavour.....could be followed by a similar reduction in the export duty by the Government, the resultant lower price should be instrumental in increasing consumption and in reviving the waning interest in the article which was so noticeable last season. In any case," they add, "it is desirable that the Government's intentions should be made known without further delay, for it is evident that the present uncertainty is acting as a deterrent to new business." Messrs Aikman suggest that with the probability of the world's supply of nitrogen (exclusive of Chilean nitrate of soda) for the year 1926-27 amounting to about 1,020,000 tons of nitrogen, the prospects for nitrate are uncertain and the advisability of the Chilean Government assisting the producers to place the national commodity before consumers at a competitive price is all the more urgent. A reduction in duty of 1s

per metric quintal would probably meet the case, and if combined with an improved and reorganised method of marketing, the prospects for consumption of nitrate during the next twelve months would be considerably better.

THE POLITICAL CRISIS IN CANADA.—II.—THE PARLIAMENTARY DEVELOPMENTS.

(BY OUR CANADIAN CORRESPONDENT.)

ON June 22nd, when Mr Mercier, the Liberal chairman of the special committee which had been investigating the administration of the Customs Department, moved the adoption of its report, Mr H. H. Stevens, a Conservative ex-Minister, after delivering a slashing attack upon the Government for its complicity in the scandals, moved a long amendment which condemned the practice of political interference with the course of justice for the protection of offenders, directly censured the conduct of Mr Boivin, the Minister of Customs, and charged the Government with full responsibility.

Upon this amendment a long and stormy debate took place, in which party passions ran high. Mr Boivin made a very skilful defence of his conduct. Mr Mackenzie King spoke vigorously in his defence, but he indulged in a very unfortunate defence of Senator Bureau, whom the committee had condemned, and it made a very unfavourable impression upon the House. Mr Meighen and other Conservatives pressed home their indictment, and bent their energies to converting the Progressives, who were in the rôle of jurymen, to the view that the incompetence and corruption which had been uncovered, demanded the condemnation of the Government, unless normal standards of political morality were to be disregarded. The Progressives, who had been giving the Government steady support, were in a difficult quandary, for while a very damaging case against the Ministry had been established, they hesitated to put in power a party committed to a policy of high protectionism, and private meetings of the party revealed an almost equal division of opinion. Eventually, on the third day of the debate, a Labourite, friendly to the Government, moved a sub-amendment which sought to eliminate the censure features of the Stevens amendment, and provide for the continuance of the Customs inquiry by a judicial commission. Amid scenes of great excitement and before packed galleries, it was rejected by a majority of two. A brace of other divisions which followed immediately on a ruling of the Speaker, and another sub-amendment, revealed the fact that sufficient Progressives were voting against the Government to make certain the passage of the amendment of censure, and the Liberals, after an all-night sitting, secured an adjournment on June 25th by a majority of one. During the week-end Mr King and his colleagues discussed the situation, and it was decided to advise a dissolution of Parliament.

It then became the turn of Lord Byng to be faced with a difficult dilemma. A dispute is now raging between constitutional pundits about the exact status of Governor-Generals. Originally they were political officers of the Imperial Government, sent out to control and direct, and armed with very wide powers, but the weight of informed authority, including Sir Robert Borden, the former Conservative Premier of Canada, holds that, as the result of the advance in political status achieved by the Dominions in recent years, they must now stand in the same relation to their Ministers as the British Sovereign does to his. There exist precedents in pre-Confederation Canada, in New Zealand in its colonial era, and in Tasmania as late as 1914 for Governors refusing a dissolution to Ministers who asked it, but since these cases did not involve Parliaments of self-governing dominions, they should not apply; and since in Britain there is no case of the Crown refusing dissolution within the last hundred years, Lord Byng could not, under ordinary circumstances, have ventured to reject the Canadian Premier's advice.

But there were exceptional circumstances to justify the refusal which he gave; he had already given Mr King a dissolution ten months before for the avowed purpose of securing a clear majority, and when Mr King failed, and himself and half his Cabinet were defeated, Lord Byng had shown exceptional consideration for him, and been

severely criticised in the Conservative Press for not demanding his resignation. Now Mr King, facing imminent defeat on a vote of censure, was seeking a second dissolution as a means of escape, and, obviously, if it had been granted, the precedent would have been established that Governments could always avoid censure for their sins by taking refuge in a dissolution. But once the decision—which would have been popular—to reject Mr King's advice was taken, Lord Byng proceeded to act with a maladroitness which reveals the peril of entrusting high political offices to soldiers without Parliamentary experience. Mr King, having been refused dissolution, had no alternative but to resign, and thereafter Lord Byng would have acted wisely if he had insisted that the verdict of Parliament on the customs scandals must be taken before his resignation could be accepted. At least he should have accepted Mr King's offer that he hold his resignation in suspense until a new Premier could be found. But Lord Byng committed the major error of sending an immediate acceptance, and the first result was that the country was left without any sort of Government for 24 hours. The Governor-General, however, invited Mr Meighen, the Conservative leader, to form a Ministry, and the latter, after receiving some vague assurances of support from Mr Forke, the Progressive leader, which were later repudiated by most of the latter's following, accepted office. There was a substantial quantity of unfinished business before Parliament, but it was chiefly supply and non-controversial bills, and the normal practice would have been for the outgoing Ministry to have facilitated its peaceful completion.

If Lord Byng had held Mr Mackenzie King's resignation, the latter could not have refused his request to facilitate public business, but his precipitate acceptance of it freed the Liberal leader from all obligations, left him with a real grievance, and set him free to embark on tactics of protest and obstruction. Mr Meighen was also left in a very embarrassed position. On accepting the Premiership, he himself had automatically lost his seat, and he could not appoint other regular Ministers without endangering his fragile majority. So he resorted to the device of appointing acting-Ministers without salaries, and sent half-a-dozen of them to the Commons to pass the vote of censure, and wind up the session's business. They succeeded in the first, but failed in the second enterprise.

From the moment that Lord Byng rejected Mr King's advice to grant dissolution, the Liberals manoeuvred to make the issue one of constitutional rights; their immediate purpose was to demonstrate that there was in reality no Meighen Government, that in the absence of the formalities usually inseparable from the creation of Ministers, the men in charge of the country's affairs were only private members, devoid of any proper Ministerial status, and that they were quite powerless to complete the work of the session. They established their case, and made it effective by the dramatic defeat of the new Meighen Government by a single vote on a want-of-confidence motion in the early hours of July 2nd. Mr Meighen was then faced with a most unpleasant alternative. He had either to admit his inability to control Parliament, or he had to get rid of it by securing instant dissolution. He advised the latter course, and Lord Byng, who had no course open but to stand by him, granted his request. The axe fell, and the fifteenth Parliament of Canada in full career came to an end, while most of the work of the session, with a few notable exceptions like the Budget, went by the board. Then Lord Byng further aggravated his offences in Liberal eyes by not following the usual practice of attending Parliament in person to announce dissolution, of which the news was communicated to most members by messengers in the corridors of the Parliament building. Leading Progressives have also denounced his conduct as Cromwellian, and it has added fuel to the flames of criticism directed against him.

The issue now goes to the electorate, and there are signs that the contest, while it may develop great bitterness, will at least produce an honest cleavage in Canadian politics. The Conservatives will endeavour to keep the customs scandals in the foreground, and argue that too much stress should not be laid on minor breaches of constitutional proprieties which contrived the expulsion from office of a corrupt and incompetent Government. If the

Liberals are defeated in the approaching election they will not sit down submissively under defeat, but will keep the issue alive. They will become a party pledged to the abolition of English Governor-Generals, and from this it would be a very short step to becoming a party advocating political independence. In the election the Liberals will raise the battle-cry, "Is Canada a Crown Colony or a Dominion?" and will contend that the constitutional clock has been set back to the days of British military governors endowed with almost autocratic powers, and that all the hard-won battles whereby progressive steps in autonomy were secured must be refought. They will rely on the steady growth of nationalist sentiment in Canada since the war, and will play up to it assiduously.

Powerful newspapers have been sedulously advocating the removal of the legal trammels created by the existence of the British North America Act, a statute of the British Parliament passed in 1868, which is the only authority for Canada's constitution. They assert that while *de facto* Canada enjoys all the attributes of a full-fledged nation, *de jure* she is still a subordinate political community bound and fettered by the terms of a statute which her own Parliament has no power to amend. Lately they have been concentrating on a demand for the abolition of the system of Canadian legal appeals to the Imperial Privy Council, which lately declared *ultra vires* a law of the Dominion Parliament, but they have been urging that the Canadian Parliament should make a declaration of constitutional rights which would proclaim to the world at large its complete autonomy, and set itself in exactly the same position as the British Parliament.

At present the leaders of the Progressive party and the Labour members show a disposition to make common cause with the Liberals on the constitutional issue, and in an appeal to the electorate to vindicate the rights of Canadian nationalism against the pretensions of Imperialism, as represented by Lord Byng and Mr Meighen. Faced with such a campaign, the Conservatives, who cannot now hope for gains in Quebec, and must win support in the West if they are to prevail, may, as the contest proceeds, decide to accept the credit as well as the blame accruing from Imperialist proclivities, and advocate comprehensive schemes for the political and economic consolidation of the Commonwealth. In that event there would emerge from the election a clear-cut division between two parties, one strongly Nationalist, and the other avowedly Imperialist, and the politics of Canada would undoubtedly thereby be brought to a healthier condition.

Notes of the Week.

America and War Debts.—In the House of Commons on Monday a debate, originally intended to centre upon the Caillaux-Churchill debt settlement, ranged over the whole subject of inter-Allied war debts. A section of the British Press has recently taken the opportunity to make trouble by launching a most ill-advised campaign of agitation against the attitude of America on this matter. We shall never get to a proper understanding of this difficult question until we realise that the war was not America's war in the same sense that it was Europe's war, and that the United States was not, and could never have been, a party to it to the same whole-hearted extent as were England and France. America's contribution in materials and subsequently in men was of decisive importance. Europe must never cease to be grateful for this assistance voluntarily given. If America ever agrees to modify or cancel the international debts it will be as a further voluntary addition to her contribution towards the war. There is not the least hope of such a contribution being made until Europe has shown that she has settled down in peace, and that she has put her whole heart into the task of making a renewal of such a war impossible. America's attitude will certainly not be improved by irritating comments from this side, belittling her war effort or endeavouring to point out what view she ought to have taken on the great war issue. Such comments merely have the effect of making the position more difficult for those who are genuine friends of Europe. The discussion has, however, produced another series of long-

distance retorts between the British and American Treasuries arising out of some comments recently made by Mr Mellon, which unquestionably lay him open to effective rejoinder, for his statement is as wide of the mark as the observation on the other side in the historic Balfour Note that "under the arrangement then arrived at the United States insisted, in substance if not in form, that, though our Allies were to spend the money, it was only on our security that they were prepared to lend it." Mr Mellon says "that England borrowed a large proportion of the debt for purely commercial, as distinguished from war, purposes, to meet commercial obligations maturing in America, to furnish India with silver, to buy food to resell to the civilian population, in order to maintain the exchange. American loans to England were not so much to provide war supplies as to furnish sterling for home and foreign needs, and to save England borrowing from her own people." This statement has resulted in the publication in detail of the objects on which British borrowings were spent (these were given in full in an article in the *Economist* of April 4, 1925, page 641). But whatever the details may be it is absurd to imagine that any line could possibly be drawn between purchases made for war and other purchases at the height of the Great War. The Treasury was not authorised by Congress to advance money for any other purposes than for prosecuting the war, and to attempt to divide up the food purchases in the United States by Great Britain, according to whether it was consumed in the field, in British hospitals, or in British homes, in lieu of similar supplies which British ships brought from other sources, and delivered to the Allies, including the American army, is fantastic. We have always endeavoured to dispose of the false assumption, so often made here, that the supplies we bought in America on American credit were not used by Great Britain. But it is none the less appropriate to remember the other side of the question, namely, that while we were borrowing in America for our own purposes, and the general purposes of the Allies, we were also lending sterling to the Allies for expenditure in England. These funds had to be supplied by the heavily taxed British taxpayer, or from internal borrowing. If America had acceded to our request to finance the European Allies for the last two years of the war in all respects, including their purchases in England, we should probably not have had to borrow in the United States. Mr Churchill's statement, issued on Friday, presents the situation completely and fairly. On this occasion he has had the best of the argument.

The Churches, the Miners, and the Government.—Since we last wrote an important development has taken place in the coal dispute, though it cannot be said that it has resulted in any definite progress towards a settlement. Representatives of the Anglican and Free Churches have met the executive of the Miners' Federation and have obtained from them a written statement of terms, which they suggest as a basis for the termination of the coal dispute. These terms are:—

I. Immediate resumption of work on conditions obtaining on April 30, 1926, including hours and wages. The settlement, when arrived at, shall be on the basis of a national agreement.—(Signed) A. J. C.

II. A national settlement to be reached within a short defined period, not exceeding four months. In order to carry through Clause I., financial assistance to be granted by the Government during the defined period, under a scheme to be drawn up by the Commissioners who prepared the Report. The Commissioners shall be reappointed for this, and for the other purposes mentioned in the following clauses.

III. The terms of the reorganisation scheme and the reference to wages in the Report to be worked out in detail by the Commissioners, and the results to be incorporated by them, as far as may be necessary, in a Parliamentary Bill or Bills.

IV. Those parts of the reorganisation scheme capable of early application to be put into operation at the earliest moment practicable.

V. The Government to give assurance that those parts of the Report which require legislative sanction shall be placed on the Statute Book at the earliest possible moment.

VI. At the end of the defined period, if disagreements should still exist, a Joint Board, consisting of representatives of both parties, shall appoint an independent chairman, whose award in settlement of these disagreements shall be accepted by both parties.

These terms represent a definite departure from the *non-possumus* attitude taken up by the miners, for they admit the possibility of arbitration on the question of wages

after a preliminary period when the reorganisation proposals of the Coal Commission have been worked out. Mr Baldwin at once pointed out that the suggestion of a renewed subsidy was against the Commission's recommendations and was impossible, and at an interview with the Churches' representatives apparently indicated that there was no likelihood of the Government using its influence with the owners to induce them to accept a settlement on this basis. The public, however, is still in the dark as to where the Government stands in relation to the new situation which has arisen, for it cannot be denied that this concession on the part of the Federation is a step in the direction which the Prime Minister has so frequently required. The owners' position is fairly clear. They hope and believe that the men will, in fact, return, slowly at first, perhaps, but later more rapidly, on the terms that they have proposed on an eight-hour basis. If a substantial move in this direction occurs after the Bank Holiday it is presumed that district discussions will commence. The owners are waiting for some one district to take the step, and attention in this direction is naturally fixed on Warwickshire, where the terms involved mean an actual increase of wages. It has, however, yet to be shown that the owners' optimism is justified. What the position of the Government is is more obscure. It appears to change from time to time, perhaps according to the news from the coalfields. It is, however, to be hoped that in the debate on the Report stage of the Mining Industry Bill, which is now through Committee, the House will be able to extract from the Government a statement as to whether they consider the drift back to work with district agreements as a desirable termination to the dispute, or whether they are waiting for further steps from the Miners' Federation. In this connection it is important that they should let it be well understood in the mines all over the country what are the conditions on which they are prepared again to negotiate with the object of securing a rapid and general settlement.

The Government and Trade Disputes.—The great experiment of the general strike and its dramatic end of necessity brought into the arena of active discussion the whole question of the present law as it affects the rights and privileges of trade unions and the conduct of trade disputes. The more hot-headed of the Government's supporters allowed the "surrender of the T.U.C." to go to their heads, and quickly set up a clamorous demand for legislation that would cut the claws and clip the wings of the trade union movement. Such a clamour was bound to arise. If those who rule the trade union movement allow themselves to overstep the mark of discretion, and even of legality, they cannot complain if reactionaries go to the opposite extreme, and seek to seize the opportunity of the collapse of the general strike for a bold effort to break a movement whose national services they forget, and whose present leaders and objects they hate. It is to the credit of Mr Baldwin that he refused to allow the fire-eaters in his party to drive him into foolish action with regard to trade unions. But his commendable caution in this matter could not be expected to be to the taste of one wing of his party; and their dissatisfaction found some slight expression on Tuesday, when, in the House of Lords, that "Prince of Die-Hards," Lord Banbury, moved the second reading of a Bill whose sole aim was to repeal the Trade Disputes Act, 1906. He eventually agreed to an adjournment of the debate after a speech by the Lord Chancellor, Viscount Cave. The latter is scarcely of the left wing of the Conservative party, and his speech revealed not merely a desire for legislation, but also the existence of Government proposals to be introduced at a later date. There are many people in all parties, and thousands of trade unionists among them, who feel that the general strike brought into the foreground questions relating to the conduct of trade disputes which cannot be allowed indefinitely to remain as they are—questions especially of the strike ballot, of intimidation, and of legality of lightning strikes. The Lord Chancellor contented himself with touching upon those broad questions upon which legislation might be desirable. Even the extreme right wing of the Conservative party must be aware that this whole question is one of the most delicate, and that the future of the Govern-

ment, and of the party, depends in no small measure upon the way in which it is handled. Whatever be the line which the Government takes, it must be a line which leads itself to no suspicion of hostility to trade unions, and one which, while not forgetting the great national benefits achieved by the trade union movement, aims merely at removing excrescences from a position which might threaten to develop towards tyranny rather than freedom or democracy. If the Government needed any reminder that their handling of this question has a very great bearing on the political future, the Wallsend election result will have provided it.

The Reform of the House of Lords.—If the Great War had not occurred, it is hardly likely that the House of Lords as at present constituted would still to-day be the second Chamber of our legislature. For the Parliament Act of 1910 was the first step in a reform which was bound in the course of time to pass into another stage. The Parliament Act curbed the powers of the second Chamber as at present constituted. But, in the bitter controversy which raged around that measure, both parties clearly realised that the situation established by the Act was not one that could last indefinitely. Indeed, the reform of the House of Lords was a plank in the platform of the Liberal Government which the first year of war brought to an end. Since the end of the war a continuous series of more urgent problems has kept this great constitutional question in the background. But it remains, none the less, a constitutional question of the first magnitude, and great political significance attaches to the visit of a Conservative deputation to the Prime Minister in connection with this subject on Tuesday, and to Mr Baldwin's repetition of his previous pledge that the Government intends to present a scheme for the reform of the second Chamber during the lifetime of the present Parliament. To the non-partisan in politics it appears to be impossible that we should in perpetuity have a second Chamber in which, by the nature of things, one of the three political parties holds an immense majority, and another is most exiguously represented. Nor is it easy to fit into the scheme of democratic development a House whose members are augmented by Honours Lists faster than they are depleted by natural causes. Lord Middleton, who, in speaking for the deputation, professed to voice the views of between 200 and 300 Conservative peers, claimed the partial retention of the hereditary principle, but recognised that the Upper House should be properly representative of all parties in the State. The public memory is notoriously short, and relative values have changed, but all who can cast their minds back 15 years must realise that here is a question which may prove a touchstone of Conservative fortunes. With the plea that the present House of Lords must be remodelled into a smaller and more efficient body more representative of and more in touch with the public opinion of the country, all but the blindest partisans must agree. But if the reform, to which Mr Baldwin has once more pledged himself this week, is to command the approval of the country, he will obviously have to resist powerful pressure from a strong section of his supporters to use his majority at Westminster for purely party ends. Mr Baldwin is indeed likely to find himself faced by a dilemma. The huge body of Conservative peers are hardly likely to volunteer to commit suicide, nor is the large Conservative majority in the Commons likely to approve any such proposal. Yet, on the other hand, any undemocratic proposals for constitutional reform will rouse a public feeling that will probably reflect itself in overwhelming defeat at the polls. Here, then, is one—trade union legislation is another—question, upon the handling of which will in no small measure depend the political history of this country in the next decade. The "die-hard" section would like to settle the question by a referendum—a hoary political suggestion which has a way of raising its head when tariffs or Lords reform come into the limelight. Mr Baldwin's reply to the deputation, however, makes it tolerably clear that he will resist this proposal, and by making his legislation for the reform of the second Chamber the last act of his Government (possibly two years hence), will put the problem before the country as a leading electoral issue. That is the proper course. But no plan for a new second Chamber, however democratic, can be satisfactory if it

stands by itself. It should be coupled with a reform of our whole electoral system, so as to make Parliament a proper reflection of public opinion.

Speeding Up the Census Returns.—We observe that the Solicitor to the Board of Trade has at last been instructed to take legal proceedings against firms who have persistently, in spite of repeated warnings, neglected to send in particulars of their businesses for 1924 as required by the Act. At the Clerkenwell Stipendiary Magistrate's Court, last week, the first small batch of summonses came on for hearing. In six cases the magistrate convicted delinquents and imposed penalties amounting to from £10 to £15. Seeing that the actual penalties legally enforceable against these defendants amounted in some cases to £700, and in one instance to £900, it is obvious that the magistrate treated these first fines in respect of the new Census very leniently indeed. A second batch of summonses against Census delinquents will come on for hearing at Clerkenwell on the 28th, and we may expect many more in London and other centres. We find from enquiries at the Board of Trade that a very large number of firms seem definitely to have made up their minds not to make returns. It was against such delinquents as these that proceedings were taken last week. The Census of Production Act provides for fully adequate penalties against such people if magistrates will see fit to impose them. As we point out above, the six firms fined on Wednesday might have been punished by the imposition of as many pounds in fines and costs as they were made to pay shillings. No doubt if the hearing of the very many summonses already applied for by the Solicitor to the Board of Trade merely result in nominal penalties, the Board will be compelled to press strongly for really stiff fines, perhaps of hundreds of pounds in specially bad cases. The patience of the President of the Board, who, of course, must have been the final authority to tell the Solicitor to go ahead, has been too long-suffering. The batch of delinquents fined last week had, we understand, all become nearly a year late with returns before long last summonses were served upon them. There are many thousands of firms just as late. These will now no doubt rapidly be dealt with. Inquiries made in authoritative quarters show how long-drawn-out has been the patience of the Board. Take the cases of last week. All the defaulters had received at least six individual notices giving warning of the increase in pressure. Let us briefly run over those applicable to all the Clerkenwell defendants. Their schedules were legally due for return three months after the date of issue of those schedules—that is, between June and September, 1925. Early in the autumn of last year firms in default were gently reminded of their incomplete schedules. About December of last year they were told that they really must hurry up. In March the returns completed were demanded within a month. In June the Solicitor to the Board wrote to say that legal proceedings would really be taken forthwith. Now at last, in July, steam has begun to be raised in the engine of legal machinery. And high time too, if we are to have a Census which will be really accurate.

British Firms and the French Debt Agreement.—Satisfaction is expressed in industrial circles at the inclusion in the Anglo-French debt agreement of an undertaking by the French Government to compensate British businesses located in France, whose plant, &c., was damaged during the war, on approximately the same basis as similar concerns of French ownership. This clause of the agreement is the consummation of efforts extending over the last four years, in which a Committee of the Federation of British Industries, under the chairmanship of Mr H. W. Lee, of the Fine Cotton Spinners' and Doublers' Association, has played no small part. Up to the present the French Government, which, compensating its own nationals for their war losses on the basis of replacement value, has not seen fit to make more than a trifling *ex gratia* payment to British firms similarly placed. The amount involved has been placed at something like £6½ millions, and the benefit will accrue chiefly to businesses with headquarters in Yorkshire, Lancashire, and Nottinghamshire, and branches in Northern France. The French and British

Treasuries may be congratulated on a just and equitable settlement of a matter which had naturally given rise to a certain amount of resentment on this side.

Employment in June.—Owing to the shortage of fuel and power resulting from the continued stoppage in the coal mines employment during June remained bad. According to the *Ministry of Labour Gazette*, among the 11.9 million workpeople insured under the Unemployment Insurance Acts of Great Britain and Northern Ireland, the percentage unemployed at June 21, 1926, was 14.7.* This compares with 14.5* per cent. a month ago, and 11.9 at June 22, 1925. The total number of registered unemployed at the end of June was approximately 1,699,000*, as against 1,675,000* at the end of May, and 1,368,000 a year ago. Among the members of Trade Unions the percentage unemployed was 12.9* at the end of June, compared with 13.2* at the end of May, and 12.3 at the end of June, 1925. The following table gives the monthly movements in trade union figures for some years past:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.								
	1913.	1920.	1921.	1922.	1923.	1924.	1925.	1926.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	2.9	6.9	16.8	13.7	8.9	9.0	10.6

December ..	2.6	6.0	16.5	14.0	9.7	9.2	11.0	..

* Excluding workpeople in the coal-mining industry who ceased work owing to the dispute.

Employment remained bad in most of the large coal-using industries, and in such industries as iron mining, pig-iron, iron and steel, tinplate, and pottery manufacture, and shipbuilding, many works were either partially employed or completely idle. With skilled workers in the building trades and in agriculture, employment was, however, fairly good. It was also good in some sections of the printing and clothing trades.

Cost of Living.—There was a further rise in the cost of living during June. On July 1st the index number of the Ministry of Labour stood at 70 per cent. above the July, 1914, level. This compares with 68 per cent. a month ago, and 73 per cent. on July 1, 1925. The following table shows the monthly movements of the index figure over a number of years:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)

1st Day of	1918.	1920.	1921.	1922.	1923.	1924.	1925.	1926.
Jan.	85-90	125	165	92	78	77	80	75
Feb.	90	130	151	88	77	79	79	73
March ..	90	130	141	86	76	78	79	72
April ..	90-95	132	133	82	74	73	75	68
May ..	95-100	141	128	81	70	71	73	67
June ..	100	150	119	80	69	69	72	68
July ..	100-105	152	119	84	69	70	73	70
Aug.	110	155	122	81	71	71	73	..
Sept.	110	161	120	79	73	72	74	..
Oct.	115-120	164	110	78	75	76	76	..
Nov.	120-125	176	103	80	75	80	76	..
Dec.	120	169	99	80	77	81	77	..

For food alone the index stood at 61 per cent., showing a rise of 3 per cent. on last month's figures, and a decrease of 6 per cent. as compared with last year. The rise in the percentage was chiefly due to the seasonal increase in the price of potatoes.

The Finance of Small Holdings.—The finance underlying the new Small Holdings Bill of the Government, applied in this case to England and Wales, but presumably to be extended later to Scotland, deserves consideration. The problem falls easily into three stages:—(1) Pre-war conditions, when these holdings could only be established on an economic or self-supporting basis; (2) the land settlement

schemes for ex-Service men and others in 1919, when, in the conditions then prevailing, no attempt was made to attain self-supporting methods, when several millions were spent in settlement, and under which, as indicated recently in these columns, it was necessary to achieve a fresh valuation, reduce the rents to the men, and write off heavy loss, to be borne by the taxpayers; and (3) the present proposals. In substance they suggest that the county councils should have power to provide small holdings where they are satisfied they can be run successfully; and power is also given to provide them where there will be a loss. The Government explain that they are advised by the county councils that it is at present impossible to try to revert to pre-war economic methods. Accordingly, it is thought that with prices as they are, each holder can now be settled at a cost of something less than £750, compared with the £900 of the 1919 land settlement schemes; that the annual loss per head will be £25, against the £50 of the 1919 basis; that if 2,000 holdings annually are established, or 8,000 in the next four years, the aggregate loss will be £200,000, of which three-quarters, £150,000, will be borne by the State, and one-quarter, £50,000, by the local authorities, which for all practical purposes will be the county councils. The imposition of any part of the burden on the local authorities is a new departure in the finance of British land settlement; hitherto the loss on all schemes having been borne in full by the Exchequer. Taking the 8,000 holdings at £750, the Government thinks that capital of £6 millions in all must be raised. Part of this will be found by the local authorities in the open market; the rest will be found under the Public Works Loans Board, but it is agreed that the rate will be not less than 5 per cent., and in many cases will probably be more. Part of the difficulty of the 1919 scheme was due to the high cost of capital outlay when prices were at their peak, and part was due to the comparatively high rate, 6½ per cent., for the money put up. The Government appear to have made insufficient allowance for the fact that, with their scheme in the field, prices will probably harden again, and in any event the saving in the interest charge will not be impressive, especially when it is recognised that the holdings are not on an economic basis. In these circumstances the loss may move upwards from the £25 annually contemplated to some figure nearer to the £50 of the admittedly philanthropic ex-Service men's land settlement schemes following 1919. If this proves to be the case the lessons of that experience may be regarded as having been thrown away. The Public Accounts Committee and other financial authorities in the House of Commons have repeatedly urged that any future scheme should be on a self-supporting basis. Having regard to the efforts which have been made to put the 1919 men on that footing, it seems odd that the Government should risk the anomaly of a fresh subsidised class. But the fundamental criticism is that the new scheme will probably make an early revaluation of the holdings, with further loss to the State, inevitable; and that, more than anything else, will tend to kill public interest in small and cottage holding schemes. With great force it is pleaded that it would be better to lay a foundation of agricultural co-operation, research, and other sound encouragement, and on that ask the holders to be self-supporting. Admitting that the aggregate finance of the present scheme is pettifogging when the magnitude of the land problem is considered, it remains true that loss on a small scale, and on indefensible economic principles, may be sufficient to destroy public support for the larger and sounder proposals which are admittedly required if considerable numbers of useful citizens are to be settled remuneratively on British soil.

The Present Position of Percentage Grants.—In some quarters it has been suggested that Lord Meston has agreed to call his Committee together for the purpose of considering a draft report on the detailed inquiry into the system of percentage grants. It will be remembered that, arising out of criticism of the system by the Geddes Committee, the Meston Committee spent much more than a year in detailed investigation; that members were scattered by the two general elections of 1922 and 1923; that successive Governments have pressed Lord Meston as chairman to present a report; that Lord Meston has

replied that he circulated a draft to members which did not meet with the approval of some of them; and that the Financial Secretary to the Treasury stated recently in the Commons that it had been impossible to get a report, and that the Government intended, in any event, to make their own inquiry. The position is in many respects extraordinary; but the subject of immediate interest is not the dispute with the chairman of the Committee, but the practical effect of what are believed to be current proposals for the Exchequer, the taxpayer, and the ratepayer. Most of the grants, like those for education and the leading departments of public health, are on the basis of 50 per cent. of approved expenditure from the Exchequer and 50 per cent. from the locality; venereal disease treatment receives 75 per cent. Exchequer grant; and there are certain port, sanitary, and other services for which the State finds the total outlay. The great bulk of the evidence tendered to the Meston Committee was in favour of the retention of the percentage grant system, with certain administrative improvements. But the present Government have announced that they intend to replace it as far as possible by block grant. It is now clear, however, that that block grant, or fixed amount, may be itself a variable quantity. The intention is to collect all information possible, on the basis of the finance of the present year, regarding the actual needs of the local authorities; to give them a guarantee of at least that amount for a period of, say, three years ahead; to ask them to accept this form of fixed State grant, with the concession of some relaxation of the considerable centralised control which the percentage grant system involves; and to give that method a trial in the interests of an effort to carry the campaign of Exchequer economy into the relationship with the local authorities. It appears that so far as the inquiry has gone, especially in the collection of data from the authorities, the tendency is to confirm the Government in the decision which it has publicly announced. On the other hand, the increase in unemployment, the great weight of relief which the coal stoppage has thrown on many of the local authorities, together with the adverse report of the recent Committee on necessitous areas, and the probable downward revision of the housing subsidy under the Wheatley Act of 1924, have strengthened the determination of the local authorities to resist any movement which would in their judgment shift the burden from national to local shoulders. In substance, their case is that many of these services, especially in public health, are comparatively new; that they are urgently required; that a change in the system of 50 per cent. of approved expenditure would inevitably involve their curtailment at a critical stage; and that the loss in other directions would be greater than the apparent gain to the Exchequer. It is thorny controversy, and in the circumstances there must be general regret that the Government are evidently not to have at their disposal the report of the Committee over which Lord Meston presided, with the conclusions arising from a mass of what is known to be highly expert and very valuable evidence.

Prosperity in South Africa.—In his speech to the shareholders of the Standard Bank of South Africa, Limited, at the annual meeting on Wednesday, the chairman, Mr W. Reiersen Arbuthnot, said that conditions in the bank's field of operations are improving, that trade in Africa shows increased vitality, and that the directors consider that the improvement is based on a really sounder situation, which appears likely to continue for a time unless quite unforeseen circumstances arise. "We do not pretend to prophesy what the future—even the next twelve months—has in store for us, but the outlook appears to us to be favourable; our business generally is, in our opinion, in a healthy condition, and our losses are not above normal." For this reason the dividend distribution is increased by a 2½ per cent. bonus, which restores it to the level paid for the four years previous to 1921-22. The net profit increased by £62,000 to £571,000, which is the highest since 1919. As to the past year, Mr Arbuthnot described it as one of prosperity, which affected the Government finances, so that the Union Budget statement showed a surplus of £500,000, against an estimated deficit of £187,000, and the railways a surplus of £673,000, against an estimated deficit of £61,000. The

shortage of sterling due to the reduction in South African exports during the shipping strike led to a rise in exchange rates in September, but towards the end of the year, when exports of produce to Europe were exceptionally heavy and the supply of sterling correspondingly more plentiful, the movement of rates was naturally downwards. Since then the accumulation of money in South Africa as the result of gold being sold locally, instead of in London, has resulted in an increased demand in South Africa for English sterling, with the result that our rates have returned to the level of a year ago, being now based on a charge of 15s per cent. for cable remittances from South Africa to London. The mining position is satisfactory, the absence of serious industrial trouble and reduction in the cost of stores being responsible for the excellent results obtained.

Underwriters and Underwriting.—Matters which concern the underwriting of new issues arouse more controversy than any other point connected with Stock Exchange business, writes a Stock Exchange correspondent. When an issue is made of shares at a price which, matched against that of similar shares already existing in the market is very attractive, it is generally held by the public that no necessity exists for the shares to be underwritten. Proprietors arise in their wrath when they see that the underwriting commission is practically a free gift to the favoured circles that are allotted it. In numbers of cases the practice of underwriting new issues of shares offered at a low price is not considered to be worth the expense in which it would involve the company. The one great argument which is, indeed, the only excuse that can be found for underwriting in some cases is that if there should happen to be some violent cataclysm, financial, physical, or international, between the time in which the subscription lists open and that when they close, the company might run the risk of not getting money that is essential to its credit and well-being. The shareholders would thereby be losers for the sake of having begrudged, through their directors, the payment of underwriting commission. It has happened in the past that an issue which, beforehand, appeared to have every chance of a big public success, has proved a failure, owing to some unexpected happening within the time that the subscription lists were open. Apart from this, the offer of underwriting in all instances as those where new shares are being offered at an obviously low price arouses sharp criticism. With the Colonial and Corporation loans, which have recently been so prolific, the underwriting commission is usually either ¾ per cent. or 1 per cent. Neither rate can be deemed extravagant in view of the probability of the loans not being fully subscribed by the public. These issues are made with such close calculation in the matter of price as to render it always a matter for some little doubt as to whether underwriters will get out or be left with a fair slice of their obligations. The Morris Motors 7½ per cent. preference issue made the other day, in which 3,000,000 shares were involved, was not underwritten at all, although the prospectus stated that Mr Morris was prepared to take any shares which were not subscribed by the public. The price promptly fell to 1s discount when the allotments appeared last Monday, and, after a further descent to 1s 6d discount, rallied to 6d discount. The question was raised as to whether the fall would have been so marked had the issue been underwritten. In point of fact the underwriting of 3,000,000 shares would not have made any difference in this case, because it was stated that the issue was over-subscribed, and underwriters would therefore have been released from the necessity of taking shares. Where underwriters get left with a large proportion, such, for instance, as was the case with the recent Telephone Manufacturing Company offer of shares, where the underwriters received 94 per cent., the tendency is for the market in the shares to be a bad one for weeks, possibly for months, until the shares are absorbed by the public. Using the Telephone Manufacturing case as an example, the underwriting commission was 4½d and over-riding 1½d per share, so that anyone who secured the full terms paid 7s for the shares, which were offered at 7s 6d. Being left with 94 per cent., the commission was of little value in helping the price, for the underwriter rarely wishes

to retain shares that he subscribes, his object being to get out as soon as possible. In professional underwriting this is frequently done whether there is a profit or a loss. Until underwriters, therefore, are out of their shares the market in any stock in which they are left with a proportion of their obligation is bound to be liable to the disturbance caused by continual dislodging of fresh lines from underwriters until these are taken by the public investor or speculator, and the market can settle down on to a normal basis of demand and supply on the part of the public.

The Capital Bonus and Income-Tax.—A legal correspondent writes:—The taxpayer, nursing gloomily his feelings of helplessness in the presence of the Revenue authorities, may be excused if he follows with almost grim delight the buffetings which those authorities sustain in the Courts in their repeatedly thwarted endeavours to get bonus capital distributions treated as income. The Crown's great effort in recent years was made in the case of the Inland Revenue Commissioners v. Blott, when it tried to extract super-tax upon bonus shares distributed to shareholders out of a capitalisation of accumulated profits. That attempt failed. As was mentioned in these columns on March 20th the Revenue made another attempt in the case of the Inland Revenue Commissioners v. Fisher's Executors. Here the distribution of undivided profits was in the form of debenture stock, instead of shares, as in Blott's case, and the Revenue sought to establish a difference in this distinction; but this effort to catch the taxpayer also proved a failure. This month yet another attempt has been made. It has not gone farther than the Court of Appeal, but that Court has been equally definite in turning down the Crown's arguments. The case is the Commissioners of Inland Revenue v. Wright. Mr Wright was a shareholder in a company which decided to increase its capital by issuing 90,000 new shares. It offered to the shareholders one new share for each of the existing shares, and at the same time declared out of its reserve fund a bonus dividend of £90,000, which the shareholders could, if they chose, allow to be applied in satisfying the sums payable in respect of the new shares. The resolution at the meeting of the company for putting through the scheme gave the directors power to withdraw the money from the reserve fund, "so that the same may be available for distribution among the shareholders as capital free from income-tax." The shareholders were in due course notified of the arrangement, and told that those not accepting the offer would have their shares otherwise disposed of, and would be paid cash for the full nominal amount of the shares not accepted. Mr Wright accepted his offer of new shares in full—and the Revenue demanded super-tax in respect of their value. In the High Court Justice Rowlatt lent a favourable ear to the Crown's contention that the option to take shares instead of cash differentiated the case from Blott's case. This perhaps was merely consistency on his part, for (as already noted in these columns) he had ruled, in Commissioners of Inland Revenue v. Cook, that where a company had purported to capitalise its undivided profits, and distributed them among the shareholders in the form of new shares, but had given the shareholders an option to take their distribution in cash instead of shares, that was not a capitalisation; and so he held the shareholder liable to pay super-tax alike upon the amount taken in cash and the value of what was taken in new shares. But the Court of Appeal, in Wright's case, has not been troubled with this effort after consistency, and has decided that the shares did not bear the character of income. Assuming there is no reversal of this decision in the House of Lords, we may then state the present position of bonus share distributions to be as follows:—A company may capitalise its undivided profits, and distribute them among its shareholders as new shares (Blott's case) or debenture stock (Fisher's case); and the shares or stock reach the recipient as a capital accretion, and not as income, and this whether the distribution is an absolute share distribution or whether the shareholders have been given the option of taking cash instead of shares (Wright's case); in any of these events the shares or stock so received are not taxable as income received during the year. But (it may be added, in view of the railway companies' attempt to get undivided profits which have been

used for capital expenditure treated as capital) the company must, of course, first turn the profit fund into capital by the normal process of creating shares or stock with it.

International Business Problems.—Several problems closely touching every-day business figure in the list of subjects to be discussed at the 34th Conference of the International Law Association, which opens at Vienna on August 5th. Among them is the question whether rules can be agreed upon to determine the date (in relation particularly to marine insurance contracts and general average adjustments) when rate of exchange should be fixed. Much confusion has prevailed of late years owing partly to conflicting decisions by Continental courts, and a committee of the association, composed of representatives of Lloyds and others along with French, Dutch, and German members, has worked out some draft rules for incorporation by reference in contracts. If these are agreed upon and adopted a position of greater certainty will be brought about. To reach this result, however, some existing differences of opinion will have to be reconciled. The matter involves a number of points of detail, but also a broad question of principle, and it is on the latter that the cleavage exists. The British law fixes the date for calculating exchange as that when a breach of contract occurs, or when a debt falls due for payment, but in certain Continental circles the alternative of the actual date when payment is, in fact, made is preferred. Some other subjects of more general commercial interest are included in the Conference programme, and, in view of their being discussed, the International Chamber of Commerce will be represented. These further matters include proposed rules to be applied to contracts of sale where the parties have bargained across a frontier, but have not expressly agreed which national law shall govern the contract. Commercial arbitration and bankruptcy, in their international aspects, are the subject of reports by committees on which discussion may arise. A draft international convention on territorial waters is also to be brought forward again, having already been debated at a previous Conference. To enable consideration to be given to these, as well as other subjects, the Conference will sit in three sections, reporting at the end to a general assembly of the members.

International Mercantile Marine.—Additional interest attaches to the accounts of the International Mercantile Marine Company for 1925 owing to the announcement made at the end of last week to the effect that the negotiations for the purchase of the White Star Line have "by mutual consent" been terminated. The Oceanic Steam Navigation Company (White Star Line) was acquired by the International Mercantile Marine in 1902, although the vessels of the fleet continued to have British registry. Reports of an impending purchase of the shares of the Oceanic Steam Navigation Company by a British group have been in circulation for several months, and in April it was stated that a provisional agreement for purchase had been reached, and last month, at a meeting of shareholders of the International Mercantile Marine, the sale of the White Star Line to a British syndicate, in which Furness, Withy and Co., Limited, were understood to be the principal shipping interest, was authorised at a price announced as between £7 millions and £7½ millions. No explanation of the abandonment of the negotiations is given, except that it is "owing to present circumstances and conditions." Various rumours have been put about in connection with the breakdown of the plan suggesting the intervention of various powerful influences, ranging at choice from the American Government to the Bank of England or large shareholders in the companies concerned. We believe these rumours to be entirely groundless, and that it is unnecessary to look farther than to the sombre condition of the shipping industry and the difficulty in such circumstances of coming to satisfactory terms. The accounts show that the net results of operating the International Mercantile Marine Company and its subsidiary companies (American Line, Red Star Line, White Star Line, Atlantic Transport Line,

Panama Pacific Line, and Leyland Line), after deducting depreciation, was a loss of \$1,540,100, as compared with a loss for the year 1924 of \$1,079,300. Before deducting depreciation (for 1925 \$5,656,100 and for 1924 \$5,756,200) there was a profit from the actual operation of all the steamers and business of the company and its subsidiaries, after payment of all expenses, taxes, and bond interest, of \$4,116,000, against \$4,676,900 for 1924. The year's deficit reduces the surplus standing in the balance-sheet to \$19,552,600. The paid-up capital is \$101,596,800, of which \$49,871,800 is in common stock and the balance in preferred stock, while the fleets, after deducting \$66,325,200 for depreciation, stand at \$170,687,900. The tonnage of the combined fleets at December 31st last was 1,120,422 tons. The report states that 1925 earnings were somewhat reduced by the seamen's strike, particularly in connection with the Australian services, and this has also been prejudicial to the 1926 earnings. The general strike in Great Britain and the coal stoppage have affected earnings this year, which are not as favourable as for the corresponding period of 1925. Total earnings from passenger business in 1925 were slightly better than in 1924, but freight traffic decreased.

The Preferred Ordinary Share.—A Stock Exchange correspondent writes:—Industrial preference shares of good class have been bought so persistently that the majority of them now stand at levels which to the older-fashioned view seem to be extremely high in view of the modesty of the yield that the current quotations admit. There are 5 per cent. preference shares, of which British-American Tobacco and Courtaulds make good illustrations, which stand almost at the point of par, and which return little, if any, more than 5 per cent. on the money, some of them, indeed, ranking higher, in relative price, than Colonial municipal bonds. It is useless to suggest that holders of these shares should part with their interests, because so complete is the confidence reposed in the companies that proprietors of the preference shares are as content to hold these as they are to put the money into a redeemable stock, such as War Fives. It is rather more singular, perhaps, to observe that people still want to buy these shares, notwithstanding the levels which the quotations have reached. In defence of the investors, it may be conceded that a preference share in a first-rate company can be fairly described as nearly gilt-edged, owing to the lavish manner in which the dividend service is covered on annual figures extending over a period of years. Nevertheless, the old-fashioned mind cannot get away from the feeling that, in the business of any industrial concern, there is usually that element of chance which removes the share capital from the category of purely gilt-edged investment. Other preference shares are also advancing in price. It is not an easy matter to get 6 per cent. with such security as can justify the holder of the stocks and shares in feeling that he is perfectly safe. At the same time, there is a demand on the part of the public for 7 per cent. as a minimum on their money. In order to get this rate, people have to take more risks—and they are content to take them—than would have been considered discreet two or three decades back. During the last week or so, another class of ordinary shares has been coming into notice, more particularly in the industrial market, and that is the preferred ordinary share, a somewhat favourite class amongst companies that have sprung into being within comparatively recent years. There are 8 per cent. preferred ordinary shares that stand between 18s and 23s, the security of which is, of course, none too well established, but which appeal not only to the speculative investor, but to the hosts of little trust companies which make a living out of the purchase of high-yielding stocks and shares. The trust companies pay their dividends from this high rate of interest, added to the proceeds of a little mild speculation, speculative investment, underwriting, and such-like sources of income. However greatly their procedure may be deprecated by the solid and austere-managed trust companies, the smaller concerns in this branch of finance are not above taking risks in the purchase of the more speculative types of stocks and shares. Their example is followed by many private investors, to whom 8 per cent.

on their money offers a temptation difficult to resist. So long as the speculative character of the shares is recognised, nothing can be said against this legitimate form of investment. It may be well, however, to point out that in a preferred ordinary share the line which divides it from a common-or-garden ordinary share is often very thin. Where the preferred ordinary will yield 8 per cent. on the money, the question should be asked whether there is sufficient margin, in the shape of profits divisible to ordinary shares for the preferred ordinary to be regarded as likely to prove tolerably secure. Did misfortune overtake the company, the "preferred" portion of the title would offer but a slender protection against loss, and the shareholder would be left wondering to what extent he was any better off than the proprietor of ordinary shares. The eagerness to obtain a fixed high rate of dividend is met by frequent postal offers of shares that afford it, and for which a good case can be made out on paper. We say nothing against the attractions of these offers, but we would enter a quiet warning to the investor who receives these recommendations that preferred ordinary is not the same thing as preference, and that safety, where this is essential, will be better consulted by acceptance of a more modest return from a less speculative investment.

Furness, Withy, and Co.—The accounts of Furness, Withy and Co., Limited, for the year ended April 30th last show a slight decline in profits, which are shown "after making provision for taxation." The figure given is £523,000, which compares with £528,700 a year ago. The usual allowance of £200,000 is made for depreciation, and after payment of preference dividend, which requires £60,000, and a repetition of the 7½ per cent. dividend on the ordinary shares, paid free of tax, a sum of £150,300, or £37,000 less, is carried forward. The following table summarises results since 1908:—

	Total Profit.	Depreciation.	Reserve, &c.	Dividends.	Ord. Rate.
	£	£	£	£	%
1908-9	267,075	114,897	..	166,361	5
1909-10	332,992	145,417	..	163,302	5
1910-11	440,732	179,603	50,000	220,620	7½
1911-12	653,207	240,000	125,000	270,620	10
1912-13	756,141	350,000	125,000	270,620	10
1913-14	620,928	350,000	..	270,620	10
1914-15	653,548	350,000	15,000	268,431	10
1915-16	1,386,960	350,000	300,000	463,125	20
1916-17	*787,564	350,000	200,000	456,250	20
1917-18	645,077	200,000	..	456,250	20
1918-19	747,661	..	300,000	452,500	20
1919-20	1,004,821	500,000	..	452,500	10
1920-21	782,944	300,000	..	452,500	10
1921-22	655,207	..	200,000	452,500	10
1922-23	552,511	200,000	..	356,250	7½
1923-24	572,443	200,000	..	358,122	7½
1924-25	528,742	200,000	..	358,122	7½
1925-26	523,044	200,000	..	360,000	7½

* After payment of two years' Excess Profits Duty.

The balance-sheet, which is analysed in another column, shows a reduction of £92,300 in the fleet and investments in associated shipping companies, which are included in one item amounting to £4,781,500. No mention is made in the report of the contract with a German firm for the supply of five motor vessels, but it is to be gathered from the report of the committee inquiring into the shipbuilding industry, to which reference was made in a recent issue, that the ships were supplied at a heavy loss by the German firm, and that this addition to the fleet of Furness, Withy and Co. has been made at a cost considerably below present market value. Other noteworthy changes in the balance-sheet are reductions of £534,100 in creditors, £216,200 in cash and bills, and £156,600 in cash and debtors.

British Celanese.—The accounts of British Celanese, Limited, for the year ended February 28th last show an increase in gross profits from £408,800 to £446,200, but, thanks to payment of Excise duty of £65,900, the net profit of £139,000 compares unfavourably with £193,500 for 1924-25. Both these amounts, however, were acquired for depreciation, and the debit balance at profit and loss account remains unchanged at £565,800. The directors

state that operations showed a satisfactory result for the first half of the year under review, but they were swollen by a trade artificially stimulated by the approaching imposition of the silk duties, and they were under no illusion that such results could be taken as normal. During the second half-year, on account of the general state of trade, the great disturbance of the market caused by the silk duties, and the inevitable damage consequent on recent controversies, conditions were abnormally bad. In accordance with the directors' promise to secure an independent report, Sir William Peat, after a prolonged investigation, has presented a report to the board, his own summary of which is circulated with the accounts. This report endorses the policy of the directors and the steps taken to put it into execution, the only criticism being concerned with one department, where fresh plant was laid down and the output increased before certain technical difficulties had been completely overcome. The demand for the company's yarn, says Sir William, is still increasing, and prices show a tendency to hold in face of lower competitive prices. "If these conditions continue, and the requirements of the company's fabric departments increase according to normal expectations, it may become necessary to seek some means of increasing the productive capacity of yarn. This situation has not arisen, and, in present circumstances, the further expansion of the fabric departments appears to be the course likely to prove most advantageous."

Oversea Correspondence.

UNITED STATES.—STOCK MARKET STRENGTH—THE STEEL TRADE — COMMODITY PRICES — OIL — FRENCH CREDITS.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 13.

THE continued advance in the share market now has carried railroad shares well into new high ground for the year, and has lifted industrials up close to the highest average level for all time. The volume of loans to brokers meanwhile is growing at a moderate pace, being up in this district, according to the statistics gathered by the Federal Reserve Bank for the week ended July 7th, by \$37,611,000. This brings the total, according to these tabulations, to a level some \$194,000,000 above the low touched on May 19th, after the effects of the March break had been fully reflected. This level is, however, still \$538,000,000 below the level touched early in the year. Meanwhile the somewhat similar figures tabulated from its members by the New York Stock Exchange show that brokers' loans rose from \$2,767,000,000 on May 28th to \$2,926,000 on June 30th. The high point for this tabulation, which is made on a monthly instead of a weekly basis, was reached on February 28th, when the loans stood at \$3,535,000,000. On either basis the conclusion is the same, namely, that the market has recovered approximately to the previous peak with the use of nearly \$600,000,000 less of brokers' credit than on the previous occasion. It is assumed that this circumstance reflects a healthier technical condition, and that the public participation on the recovery still is moderate. Both of these inferences seem to be justified. This does not mean that the advance has been the result of manipulation by speculative cliques. The reverse seems to be true. The buying seems to have come in large measure from institutions and wealthy individuals, and thus to have represented an overflow of investment demand.

At the moment the movement shows some signs of broadening out into more speculative directions. Leadership in the advance remains pretty generally where it was. Rails have continued conspicuously strong, and the common shares of the General Motors Corporation perhaps have furnished the leading feature. The latter have made

a new top for all time at 158½, this figure comparing with a low level of 113 made on the March reaction. The extraordinarily strong cash and earning positions of the company (whose net probably will reach \$200,000,000 in 1926), and the prospects of a liberal stock dividend, continue to be the chief motives behind the advance. Despite the keen competition, successful automobile companies are having a very profitable year, and some of them, such as the Packard and Nash companies, already have made extra distributions to their stockholders. The anticipated new models are now beginning to make their appearance, and seem to be meeting with a favourable reception.

Reports from the steel industry are good. Ingot production set a new high record during the first six months of the year, and buying of steel has improved during the past two months. April seems to have represented the poorest month of the year as far as bookings are concerned. May was better than April; June was better than May; and the last half of June surpassed the first part of that month. The loss in the unfilled orders of the United States Steel Corporation during June amounted to 170,000 tons, this comparing with 218,000 tons in May and 512,000 tons in April. Meanwhile, production is holding remarkably close to 80 per cent. of capacity, shutting down for the summer has been on a smaller scale than expected, and the price situation is pretty satisfactory to the manufacturers. Certainly the steel situation has held up much better than had been anticipated by the statisticians and business prophets, and the latter are now forced to recognise the possibility that business and industry may make a "double top" this autumn just as the share market already has.

Some further weakness in commodity prices during June was disclosed by the Dun and Bradstreet indices. The former declined by 1.1 per cent., the latter by 0.1 of 1 per cent. However, it is apparent that the rapidity of the decline has been diminishing, and the last few days have seen material rallies in such commodities as cotton and wheat. Here, again, cognisance must be taken of the possibility that a reaction has about run its course, and that autumn business may bring a recovery. Rains in the growing areas have helped cotton prices, fostering the belief that insect damage and the like may cut into the large crop estimates that the Government has prepared. Wheat has been helped by the reports on the Canadian crop, which suggest that excessive yields north of the border are improbable.

Some anxiety over the oil situation has been displayed during the past few days, but seems to have no very great foundation. A reduction in the price of Pennsylvania crude and reports of successful wells in new areas roused fears lest the equilibrium of the industry be overturned after the fashion of the past several summers. However, it is recognised in informed quarters that Pennsylvania crude has lost its former significance as an indicator of the general crude oil position, the Pennsylvania oil being used locally and being unimportant in volume as compared with the outputs of the mid-Continent and California fields. As for the new wells, they are not expected to alter the situation greatly. The crude oil position, in fact, is considered strong. Stocks of gasoline, on the other hand, are very large and over-production has existed in the mid-Continent field. However, corrective measures were taken a few weeks ago, while consumption of gasoline is tremendous. There have been rumours of an impending reduction in gasoline prices, but responsible persons in the trade declare that they see nothing to indicate it.

The course of the political efforts to deal with the French financial situation are being watched with great interest. The French, apparently, are still working on the idea of foreign credits, and seem interested to know whether reservations to the debt-funding agreement would interfere with the securing of credits on this side of the water. They seem unaware that the situation with regard to American credits has changed materially since Ambassador Berenger sailed home. At that time it seemed that objections would not be made to credits if a sound financial basis for the granting of credits existed. This attitude was conditioned, however, on the understanding that the Berenger agreement would be speedily ratified in France. The failure to secure this ratification has, one may assume, altered the matter in its essential aspects.

FRANCE—THE FALL OF TWO MINISTRIES—HERRIOT'S FAILURE—THE FINANCIAL PREDICAMENT.

(FROM OUR CORRESPONDENT.)

PARIS, July 22.

THE fall last Saturday of M. Briand's newly-formed and tenth Cabinet placed the whole plan for financial restoration again in the melting-pot, and at the time of writing this (Thursday) evening the outcome is still uncertain. M. Briand's defeat was due to a combination of simultaneous but mutually independent attacks launched respectively by M. Louis Marin's powerful group of Nationalists, by M. Herriot and the bulk of the Radical-Socialist Party, and by the Socialists. The occasion was the presentation to the Chamber of the Government's proposals for bringing into operation the greater part of the vital portions of the plan recommended by the Committee of Experts, and, above all, of the demand by M. Caillaux for "full powers" to legislate in this connection by Ministerial decrees, these latter to be subject to formal ratification by Parliament in six months' time, but to become operative immediately after signature by the President of the Republic.

In principle, neither the Chamber nor the Senate would have any deeply rooted objection to conferring this power to legislate by decree, provided the personage to whom such power is given enjoys the confidence of the country in general. The objection in the case of M. Caillaux was that it was feared, in view of his past history, he would be likely to misuse his dictatorial powers. If force of character, clearness of vision, and financial ability were all that would be necessary, M. Caillaux, it was admitted, was well fitted for the task. Unfortunately people have never forgotten that, during the judicial investigation that preceded his arrest on charges of treason during the war, a notorious document entitled "The Rubicon" was discovered among his papers, in which was set forth, in his own handwriting, a detailed plan for a *coup d'état*, which, it was fairly clear, foreshadowed the assumption of dictatorial powers by M. Caillaux himself. To make matters worse, it was discovered, before M. Caillaux went down to the Chamber on Saturday to ask for the "full powers" recommended by the experts, that the clause in the Bill concerning this point had been drafted (as M. Tardieu subsequently pointed out) in practically the same words as the corresponding clause in the famous "Rubicon."

From the moment the Bill "instituting measures designed to ensure financial restoration and the stabilisation of the franc" was introduced on Saturday afternoon, it was evident that the "full powers" asked for would be refused. M. Herriot seized the opportunity, in accordance with what is now known to have been a prearranged plan, to vacate his seat as President of the Chamber and deliver an impassioned protest against the Bill as a violation of the constitution and of parliamentary rights. This protest he claimed to make not in his capacity as a private member, but as the Speaker of the assembly. What M. Briand described as the "tragic duel" between himself and M. Herriot was followed by an attack of quite a different character by M. Louis Marin, who stigmatised as "frightful" the Government's demand that full powers should be conferred on M. Caillaux. He quoted with approval Professor Keynes's statement in a Paris newspaper that "the essence of the Bill is M. Caillaux's demand for full powers, which will enable him to lay hands on the Bank's gold reserve." "If I were prepared to entrust anybody with full powers," said M. Marin bluntly, directly addressing M. Caillaux, "it would not be you!"

Behind this personal question, however, as everybody knew, was another and quite as powerful objection on the part of the Marin Nationalists, who insist that under no circumstances must a French Parliament ratify the Franco-American debt agreement, nor must the country find a way out of the present financial trouble by availing itself of foreign credits. As ratification of the American and British debt agreements and immediate aid through the medium of foreign credits are the twin keystones of the experts' plan, it is difficult to see how the recommendations that have been put forward can any longer be re-

garded as practicable, no matter what Cabinet may now succeed to power.

In the vote of confidence which ended the debate, the Socialists and Communists, who voted solidly against the Ministry, had the support of 48 of the 136 Radicals and Radical-Socialists, and of 60 of the 102 Marin Nationalists. Defeated by a majority of 45 (288 against 243), M. Briand resigned. On Sunday universal astonishment was caused by the announcement that the President of the Republic had called on M. Herriot to form a Ministry. The effect on public opinion was electrical. M. Doumergue was sharply criticised for his action, on the ground that M. Herriot is the very last man who should return to power in present circumstances, but it is difficult to see how he could have acted otherwise, in view of the fact that technically speaking M. Herriot's friends still compose the majority of the Chamber (although, in fact, it is the Marin Nationalist group who appear to command the situation).

The effect on the franc was disastrous. From 199, which was the official closing price when the market closed for the week-end, prior to M. Briand's fall, the franc was marked down to 220 when the market reopened on Monday morning. By noon, when it was announced that M. Herriot would probably succeed in forming a Ministry whose programme would include further drastic predatory legislation, the franc had dropped to 235—a fall of 36 points in three hours. The rot continued until a fresh low record of 245½ was set up. Simultaneously conditions approaching panic seized investors everywhere. Selling orders were received in masses by every mail by Paris and provincial bankers. The fear of a new Herriot Government was so great that the expatriation of capital was reported to be resumed on a greater scale than ever. Enormous quantities of short-term Treasury bonds were presented for discount to such an extent that some of the small banks began to hesitate to accept more. M. Herriot himself was hooted by the crowd outside the Elysée, and foreign tourists were booed by excited crowds in Montmartre.

Fortunately, reaction set in immediately the list of M. Herriot's new Ministry was made public, and it was seen that he had failed to secure the co-operation of any of the non-Cartellist parties. It became evident, 24 hours before the new Government met Parliament, that it was foredoomed to immediate overthrow. Yesterday morning the franc, which started the day at 243, rose by noon to 226, and to 222.75 at 3 o'clock, two hours before the new Ministry were due to appear before the Chamber. On a vote of confidence the new Government was defeated by 290 votes to 237.

Before the Ministry resigned, however, it was imperative that provision should be made immediately to meet the pressing needs of the Treasury. M. de Monzie, the new Finance Minister, had previously informed the House that the authorised limit of borrowings from the Bank of France had practically been reached, and that at that moment there remained only 60,000,000 of available at the Bank. In the circumstances, he warned the House that unless further cash was made available immediately a suspension of payments by the State was inevitable. Accordingly he (the Minister) proposed, whether the Chamber approved or not, to direct the Bank to utilise the remainder of the Morgan Loan, in accordance with the convention between that institution and the State. This convention, it will be recalled, provides that the yield from this loan to the State (about \$89,000,000 net) shall remain in America in dollars, and be under the control of the Bank. It is stipulated, however, that the French Government shall have the right to dispose of the currency in case of need, and to call on the Bank to hand over to it the whole of the difference in its value in paper francs above 5f 18c to the \$.

M. Caillaux informed the Bank by letter on July 15th that the Government intended to take advantage of this provision, and called on the Bank to place the money so transferred at the disposal of the Treasury, subject to the passing of a special Act authorising this use of the cash. It is understood that the balance available is, in round figures, \$33,000,000, so that the amount available for the immediate relief of the Treasury should be in the neighbourhood of between 1,200 and 1,300 million francs.

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$35,000,000
Undivided Profits \$6,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world, bringing them into contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE

2 and 3, Crosby Square
Bishopsgate, E. C. 3

During the discussion it was announced that the Bank of France had written intimating that it would agree to the course proposed by M. Caillaux only on condition that, in view of the currency needs of the Bank, the present legal limit of the note circulation (which was fixed on December 2nd last at 58½ milliards) is raised by a corresponding amount. After brief discussions in both Houses a Bill was approved "raising the existing limit by a sum equal to the yield from the present cessions" (derived from the Morgan Loan). This law, which became operative on promulgation in the *Journal Officiel* this morning, enables the authorised limit of the note issue to be raised, while maintaining the State's borrowing power at 38,500 millions, to which it was automatically reduced on December 31st last. Whether the increased note issue can or cannot be described as equivalent to further inflation is a problem for the experts to solve.

The problem to be faced by whatever Cabinet may succeed M. Herriot's unfortunate combination is how sufficient cash is to be obtained to meet Treasury obligations during the next six weeks. M. Caillaux, in his swansong to the Chamber last Saturday, showed that the outlook for the immediate future was tragic. The payments to be made include the following:—

	Francs.
July 31—Public services (salaries, &c.), about	550,000,000
Aug. 1—Interest on purchase price of American stocks, \$10,000,000 (say, at 40frs to the dollar)	400,000,000
" 1—Instalment of agreed portion of Morgan loan, \$350,000 (or, at 40frs to the dollar)	14,000,000
" 16—Interest coupon on 5 per cent. irredeemable rentes	235,000,000
" 18—Due to Great Britain, £1,000,000, or at 200* ..	200,000,000
" 25—" " £2,500,000, " " " ..	500,000,000
" 25—Interest coupon on 6-year bonds, 1925	68,000,000
	1,967,000,000

* Repayment of commercial debt.

As already stated, there was this morning a sum of 60,000,000 of still available at the Bank of France. The sale of the Morgan dollars may be expected to yield immediately, say, 1,250,000,000, and the balance may be

expected to come from current revenue from taxation. The total revenue from all sources last month was 2,404 million francs, and July may be expected to yield a similar total, although how much of this still remains unspent, in view of the present precarious hand-to-mouth system, is doubtful. Nothing can be expected from the new direct taxation imposed by the 1926 Budget, as the demand notes have not yet been sent out.

The announcement last night that M. Poincaré had accepted the task of forming a Cabinet has had an inspiring effect on public opinion, which was reflected in a continued recovery in the franc throughout the day, now that the possibility of another Herriot Ministry has been removed. There is ground for hoping that by to-morrow evening M. Poincaré will have succeeded in forming a really non-party Ministry, which will devote itself solely to the task of financial restoration. It is reported that the new Cabinet may include MM. Briand, Barthou, and even M. Herriot.

GERMANY.—LABOUR CRISIS—FINANCES—CREDIT—INDUSTRY—FOREIGN TRADE—CROPS—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, July 21.

THE continuance of severe unemployment has compelled the Cabinet to prepare for relief works of a comprehensive and permanent kind. The belief that the heavy winter unemployment would, according to precedent, decline in the summer was long ago abandoned, and it is now plain that Germany has settled down to chronic post-war unemployment similar to that of Great Britain, due to much the same causes, and entirely different from the violent but brief labour market crises of the inflation years. In the second week of June there was an improvement, but no appreciable improvement in the whole month occurred. The number of unemployed in the labour unions at the end of June was 577,748 out of 3,160,000 members, as against 595,092 out of 3,260,000 at the end of May. In the Metal Workers' Union the percentage of unemployed in June was higher than in April, in the Textiles' Union higher than in May. The percentage of partly employed in all the unions together has, however, fallen, but individual unions show considerable rises. The large number of foreign workmen, which was formerly necessary and desirable, is a factor which is being taken into account in the proposed general regulation. The most reliable estimate is 278,000; newspaper estimates, which were mistaken, varied between 850,000 and 1,000,000. The Government proposes to raise a loan of 200,000,000 marks, perhaps more, for financing productive relief works. It declares that it cannot provide work for all the present 1,700,000 unemployed. At present relief works in shifts are largely in practice, and about one-third of the unemployed have been so accounted for. In Saxony the unemployed engaged in relief works are changed every six weeks. The proposed federal relief works include large construction undertakings for the railways and posts and telegraphs. The Railways' Corporation is to be advanced 100 million marks for this aim, and several bridges, including the long Elbe Bridge at Stendal, will be reconstructed. The Posts and Telegraphs Department will provide employment for electrical and metal workers, and will also do some general building. A big canal will be constructed in Upper Silesia, and the eastern part of the Mittelland Canal, an undertaking which has been the subject of hot dispute for a generation, will be completed. A large sum will also be spent in road-making. Home colonisation, by construction of dwellings, will be pushed, with the result, it is hoped, of replacing with Germans 150,000 foreign season workers on the land.

The gross receipts from taxation in the first quarter (April-June) of the present financial year were:—

	(000's omitted).	Estimated for Whole Financial Year.
Total	1,455,391	6,465,300
Thereof, direct taxes	973,260	4,506,000
" indirect	481,902	1,959,300
" Reparations pledged..	461,229	1,907,000

The general sales tax yielded only 219,588,505 marks out of 974,000,000 marks estimated for the whole year. This tax has been reduced since the present revised Budget was prepared. Income-tax yielded 470,192,737 marks out of 2,100,000,000 marks estimated for the whole year. Customs, in spite of the drop in imports, yielded 166 out of 580 millions estimated. The sugar tax brought in only 56.7 millions out of an estimated 265 millions, or less than its quarter's share.

The new French franc collapse has made a great stir here, but has not shaken confidence as severely as earlier collapses. The general belief is that the new shock will enforce a currency reform, owing, as in Germany in 1923, to the increasing uselessness of the currency for home trade, following its supersession in foreign trade. The Berlin money market has continued fluid, and the day rate after the mid-month settlements fell back to 3 to 5½ per cent. The settlements imposed no serious strain, despite the fact that liabilities under Bourse speculation in futures were much the biggest on record, and that one official bank (but not the private banks) ceased financing prolongations. Speculation has been extreme, and it is stated that the turnover in some 60 stocks which may be sold for future settlements on certain days exceeded the turnover in the 900 stocks which are sold for cash. The Reichsbank's circulation in the week ending July 15 declined by 154 million marks to 2,738 million marks, discounts by 80½ million marks to 1,192½ million marks. The Reichsbank's last discount rate reduction has not so far enlivened credit operations. The private discount rate (bills up to 55 days) remains 4½ per cent.

The business situation shows no material improvement except in coal, and to some extent in iron and steel. Bankruptcies in the third week of July fell to 147, which is less than one-third of the high rate of February. Pig-iron production in June was 720,081 metric tons, against 736,206 tons in May, and 941,201 tons in June, 1925. In the first half of 1926 production was 4,161,974 tons, against 5,571,878 tons in the corresponding half of 1925. The stock of unsold coal on the Ruhr continues to decline. The Ruhr coal output in the last recorded week (July 4-10) rose to near the highest weekly figure of the year.

The June foreign trade balance was passive—for the first time since November, 1925. The figures are as follows:—

In Thousands of Marks.			
IMPORTS.			
Livestock	8,551	..	10,004
Food and drinks	282,176	..	292,892
Raw and half-manufactured materials	324,439	..	386,861
Manufactured goods	87,777	..	102,167
Wares only	702,943	..	791,924
Gold and silver	3,766	..	4,018
Totals	706,709	..	795,942
EXPORTS.			
Livestock	945	..	1,151
Food and drinks	25,532	..	27,036
Raw and half-manufactured materials	154,533	..	179,554
Manufactured goods	547,953	..	551,015
Wares only	728,963	..	758,756

723	779		+ 56
703	730		+ 27
792	759		— 33

In June the import of wares increased by 80 million marks, as compared with May, 62 millions of the increase being raw and half-manufactured materials. An increase of imports under these headings was expected after many months of low imports. Imports under the other groups also increased. Exports of manufactured goods increased slightly. Imports of all kinds (precious metals excluded) were the largest since October, 1925.

The crops index (in which 2 is "good" and 3 "medium") shows:—

	July 1, 1925.	July 1, 1926.
Wheat, winter	2.4	2.6
" spring	3.1	2.7
Rye, winter	2.5	2.9
" spring	2.9	2.8
Barley, winter	2.5	2.7
" spring	2.9	2.5
Oats	3.2	2.6
Potatoes	2.7	2.9
Sugar beet	2.8	3.0

Much damage was done in June by rain. This month still heavier rain has fallen.

The Bourse has had the expected reaction, but it is not yet possible to say whether the bull movement will be resumed. The *Frankfurter Zeitung's* stocks index for July 17 was 98.57, against a high point this year of 103.62 on July 3 (basis 100 on January 2, 1925). The stocks which have receded most are in general those which had the most rapid rises.

BELGIUM.—FINANCIAL DICTATORSHIP—EXCHANGE CONTROL—FLOATING DEBT CONSOLIDATION—COAL.

(FROM OUR CORRESPONDENT.)

Ghent, July 19.

PARLIAMENT has delegated to the King, for a period of six months, its legislative powers relative to financial matters in order to enable the Government to take without delay the steps which the financial situation may require. The Executive is empowered, by means of decree, to contract loans, alienate national property, recognise the validity of stipulations based upon gold value in public and private contracts, increase all taxes and duties so as to prevent a reduction in the real value of their yield; take all measures for reducing inflation, for bringing about the repatriation of capital, for counteracting information liable to affect unfavourably the credit of the State, for ensuring the provisioning of the population and a reduction in the consumption of luxuries, and for controlling and sanctioning the execution of the above measures.

Bankers are only allowed to supply foreign exchange against presentation of documents, and only to such persons and firms who will declare, in writing and upon their honour, that they possess no foreign exchange reserves. With the exception of sea freights and maritime insurance, all payments between firms established in Belgium are to be made in francs, but it is permissible to take as a basis the rate of exchange upon the day of payment.

In order to enable a consolidation of the floating debt the Belgian State Railways will be leased for a period of 75 years to an autonomous company with a capital of 11,000 million francs, represented by 1,000 million francs ordinary shares, which will remain in possession of the State (and will give it the majority of votes), and 10,000 million francs preference shares, which the State will offer to public subscription. A first issue of 2,000 million francs of these preference shares will be made shortly, and will serve chiefly to consolidate the five-years Treasury bonds falling due in December next (1,880 million francs). The yield of these shares will vary to a certain extent with the exchange fluctuations, so that it is probable they will find ready subscribers.

It is further intended to hand over at a later date the State telephone and telegraph service to a National Society, the State receiving in return 300 million francs ordinary shares, which would remain in its possession, and 1,500 million francs preference shares, which would be offered to the public.

If we take into account the extraordinary taxation of 1,500 millions yearly, which is to be levied for four consecutive years, and assuming that the shares of railway and telegraph and telephone societies are subscribed entirely by the public, this would give the State the following extraordinary resources between now and 1930:—

Extraordinary taxation, 6 milliards preference shares; railways, 10 milliards; and telegraph and telephone, 1½ milliards; or, together, 17½ milliard francs. Against this

amount stands the following indebtedness which can be claimed between now and 1932:—

Six-months Treasury bills and special bills placed abroad, about 6 milliards; five-years Treasury bonds, falling due December 1st next, 2 milliards; Treasury bonds, falling due between 1927 and 1932, about 1½ milliards; Post Office cheque service and State Savings Bank, about 3 milliards; or a total of 12½ milliard francs.

The above figures do not include the debt of the State to the National Bank, incurred after the armistice, for the repayment to their Belgian possessors of the marks left by the German occupation (more than five milliards). They include, however, the special advances made by the Bank to the State since May last, for the repayment of six-months Treasury bills falling due. These special advances have been authorised by Parliament for an amount not exceeding 1,500 million francs; up to July 15th the State had borrowed from the Bank, against this amount, 1,000 million francs, this being an increase of 100 millions since July 1st. The Minister of Finance has announced that 75 millions of the State debt to the Bank have already been paid off by means of the yield of the taxes specially intended for debt redemption.

Receipts from taxation continue to be in excess of estimates, revenue from direct taxes for the first half of 1926 exceeding by 231 million francs those for the corresponding period of 1925.

The Belgian Government and the Belgian population are sparing no sacrifice to fight inflation and to bring back the note circulation to the level of early 1926, viz., 1,000 per head (total 7½ thousand million francs). A speedy return to the gold standard appears, however, not yet to have been definitely decided upon, as the Minister of Finance has lately expressed the opinion in Parliament that a return to the gold franc is not yet desirable, seeing that it would cause a tremendous increase in prices and throw thousands out of employment. It remains to be seen whether a speedy return to world prices, even at the cost of an industrial crisis (which will have to be faced sooner or later when stabilisation comes), would not be preferable to the slow process of impoverishment through which Belgium is going at present, owing to the discrepancy between the internal and external purchasing power of the franc.

The coal strike in England has not failed to stimulate Belgian coal trade. In June, Belgian collieries have extracted 2,100,570 tons, against 1,846,440 tons in May. Stocks at the Belgian collieries totalled 1,290,850 at the end of April, 947,590 at the end of May, and 468,710 tons at the end of June.

POLAND.—EXCHANGES—TRADE BALANCE—COAL EXPORTS—POLISH BANK—CROP OUTLOOK—STOCK EXCHANGE.

(FROM OUR CORRESPONDENT.)

WARSAW, July 19.

THE rapid rise of the zloty during recent weeks is a quite unexpected event, which shows how difficult and uncertain are all prophecies in the domain of economics. Experience teaches that the period before the new crops are harvested is the most difficult for Poland. The stocks of cereals being exhausted, the country is obliged to import food from abroad, so that the trade balance moves in an unfavourable direction. This leads to a great demand for foreign currencies, and entails a rise in their quotations.

Contrary to the experience of recent years, we are now observing an increase in agricultural exports. During the first five months of the year the exports of articles of food amounted to 257 million zlotys, as compared with 118 millions during the same period in 1925. The exports of cereals during the first five months of this year were much greater than in 1925, as may be seen from the figures below (tons):—

	1925.	1926.
Wheat	0	36,108
Rye	283	87,459
Barley	13,578	61,818
Oats	41	43,511

The great exports of cereals before the new crops are probably due to the fact that great stocks were kept back by speculators who expected a rapid rise. In other agri-

cultural groups we also observe an increase in exports which are the result of the steady progress of Polish farming. In May the quantity of exported eggs exceeded 8,000 tons, while during the first five months of last year it reached only 10,000. The exports of this product have doubled in comparison with last year. Exports of timber are rising equally. From 1,181,700 tons in 1925, they increased to 1,753,800 tons this year.

To this must be added the flourishing state of the Polish coal trade, which is the result of the English strike. In June 1,391,000 tons of coal were exported, which, in comparison with the exports in May (704,000 tons) is an increase of nearly 100 per cent. This is a record figure, surpassing even the results during the occupation of the Ruhr. The exports to the United Kingdom amounted to 281,000 tons, 192,000 tons were sold as bunkers in Danzig. Exports to Austria increased by 73,000 tons, to Sweden by 34,000.

A new market has been opened for Polish coal in Russia. An agreement has been signed with the Soviets, according to which the mines of Upper Silesia and of Congress Poland will deliver from July to November 500,000 tons of coal. The deliveries are destined for Northern Russia, in the first instance for the district of Leningrad. The coal will be partly transported by railway, partly by water through Danzig.

The increase of the exports of agricultural products and of timber and of coal is exciting a very favourable influence on Poland's trade balance. Exports in May amounted to 181 million zlotys, as compared with 131 millions in February, 132 in March, 163 in April. Imports have decreased from 118 millions in April to 106.4 millions in May. The excess of exports over imports in May amounted to 75.8 million zlotys. For the first five months of the year this excess reached nearly 300 million zlotys.

The favourable state of the Polish trade balance has completely changed the conditions on the foreign exchange market. While hitherto the demand for foreign currencies exceeded the supply there is to-day a contrary tendency. The Polish Bank, which for more than one year has been obliged to struggle against a fall of the zloty, is concentrating its energies in an opposite direction. The prevention of a too rapid rise is now the chief problem with which the banking administration is faced.

The reserve of foreign currencies of the Polish Bank is rising rapidly, as may be seen from the figures below:—

(Million Zlotys.)			
	Foreign Currencies.	Sold.	
End of March	49.4	134.1	
April	51.4	134.2	
May	53.4	134.4	
June	78.5	134.6	
July 10	94.8	134.8	

The outlook for the coming months is favourable. The crop reports are good. It is expected that the yield of cereals will not be very different from that of last year. The crops of wheat are estimated at 15 million centals (15,762,000 in 1925), for rye at 51 millions (65,388,000 in 1925), for barley at 15 millions (16,773,000 in 1925), for oats at 31 millions (33,115,000 in 1925).

After a long period of absolute inactivity and of depression the Stock Exchange is again buoyant and full of optimism. During the last fortnight some shares have risen by 100 per cent.

DENMARK.—TRADE DEPRESSION AND CREDIT—UNEMPLOYMENT—PRICES—BALANCE OF TRADE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, July 16.

At the invitation of Mr Stauning, the Prime Minister and Minister of Trade, a meeting was held at the end of June between representatives of the Government, trade, and the banks. The principal subject of the negotiations was the present state of the money market, one object being to develop and consolidate the co-operation between the banks themselves and between these and the trades. While the meeting was merely of a preliminary nature,

it must be regarded as a link in a chain of negotiations with the object of relieving the depressed state of trade. From the reports to hand it appears that a discussion has taken place on the question of the concentration and modernising of industry, a subject which has been investigated on previous occasions, for instance, by the so-called "Industrial Committee" appointed by the Ministry of Trade.

While at the meeting in the Ministry of Trade the affairs of industry were discussed—in relation to the money market and the credit restrictions in force—the affairs of agriculture were the agenda for a meeting of nearly 3,000 delegates recently held in Odense. On this occasion the impression was that the principal Danish trade was badly affected by the depression, as a result of which secured as well as unsecured debts have become much more of a burden than at the time they were contracted. From agricultural quarters it was strongly claimed that rates, taxes, and dues should be reduced, for instance, by means of a reduction of the number of Government officials and their salaries, while the intention to maintain a free-trade policy was still upheld. In a resolution passed by the meeting, a decided opinion was expressed against a customs policy, which will increase the cost of food for the population generally, and against an active customs policy, which would entail a danger of leading to tax-wars, to the serious detriment of the agricultural trade.

Generally, the impression is that the effects of the deflation are at present more of a burden than ever. Unemployment has been increasing for some time, and, according to the latest figures, the number of unemployed was 46,500, against 22,700 a year ago. It is hoped that employment will be better in the near future, when the next semi-annual price index for the cost of living is published towards the middle of August. The wages of labour will be regulated on the basis of this figure, and some concerns have at present closed down, awaiting the new index. For January the figure was 194, against 219 for July, 1925. It cannot be said beforehand what the figure will be in the present case, but a reduction of 7 to 8 per cent. is expected by the Press, and this would reduce the index figure to about 180 (80 per cent. more than in 1914), and cause a corresponding reduction of wages.

As far as the wholesale price index is concerned, there has been a decided stagnation for the last few months. Below are the figures of the Statistical Department for the first half of 1926:—

January, 1926	172
February, "	165
March, "	158
April, "	157
May, "	158
June, "	157

Apparently there is much to indicate that trade has come into a period of rather stable prices, in contrast with the previous half-year, when the rise of the krone was so violent. It is clear that this firmness is advantageous to merchants, who have long been hampered by incalculable exchange fluctuations. In these circles, as well as in others, it created satisfaction that as from June 24th the National Bank reduced its rate of discount from 5½ per cent. to 5 per cent.—a step which came as a surprise to most people. On the other hand, the National Bank has expressly stated that this reduction of the discount does not mean an increase of the credit facilities available for trade.

The balance of trade is still strongly in favour of Denmark—which is in itself another sign of stagnation. During May the value of the imports was Kr 128,000,000, against Kr 115,000,000 in April and Kr 144,000,000 in March. At the same time, the value of the exports was Kr 131,000,000, Kr 137,000,000, and Kr 143,000,000 respectively. While March thus showed an excess of imports of Kr 1,000,000, the months of April and May showed excess of exports amounting to Kr 22,000,000 and Kr 3,000,000 respectively. Altogether the exports during these three months exceeded the imports by Kr 24,000,000.

ARGENTINA.—LEGISLATIVE DELAYS—CROP PROSPECTS—FOREIGN TRADE—FINANCIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, June 26.

The opening of the ordinary session of Congress, which, in accordance with custom, should have occurred at the beginning of May, has just been fixed for July 1st. It was only yesterday that the Chamber of Deputies eventually succeeded in "constituting" itself, having been too busily engaged in wrangling over the qualifications of its newly elected members, with the usual interchange of recrimination, to trouble about settling down to business, which has long been clamouring for attention. Meanwhile, these two months have been wasted without the delivery of the Presidential Message, and, needless to add, without any Budget. The position in which President Alvear is placed has become more and more anxious and embarrassing, since for all practical purposes he has been left with the government of the country on his own hands. The problem with which he is confronted is how far the Executive can go in the direction of sanctioning urgent measures without overstepping the constitutional limits of its authority, which in certain respects are not too clearly defined. Some three months ago he very properly dismissed an extraordinary session of Congress for the simple reason that after four months had been absolutely wasted last year's Budget was no nearer approval than when the proceedings opened. More recently he has taken the course of issuing, on his own initiative, bonds for the purpose of meeting the claims of Messrs Walker, the contractors for the new port works, and enabling the work to be continued after a long interval during which everything had been at a standstill. Congress had been complacently holding up its authorisation for the last two or three years, not for any special reason, but merely because that is its little way. To have waited until it chose to signify its pleasure in the matter would have been to protract indefinitely an intolerable situation in the port, which without these necessary extensions is badly short of those facilities which shipping concerns are entitled to expect for their vessels in Buenos Aires. It may be a bad heresy against the democratic idea, but there are a good many people in this country who are reluctantly being driven to the conclusion that if only a President of Dr Alvear's stamp were permanently assured—unfortunately, there is much virtue in that "if"—it would be an exceedingly good thing for Argentina if the powers which Congress has virtually abdicated were to pass into the hands of an Executive which knows its business and can be trusted to devote some attention to the national interests.

The grain shipments continue to move in satisfactory volume, the exports for the first five months of the year, in round figures, being 1,500,000 tons of wheat, 1,170,000 tons of maize, 900,000 tons of linseed, and 330,000 tons of oats. There is no reason to doubt that it will be possible to maintain a steady output throughout the remainder of the year. Recent weather conditions have been favourable, and the Ministry of Agriculture has just issued a second maize forecast, improving the earlier figure by 13,000 tons. On this basis, the yield would be as much as 50 per cent. over that of last year. It is reported that the area sown has increased by 589,300 hectares, that the farming methods have greatly improved as the result of a campaign by the Ministry to that end, and that the present harvest is the best for the last five seasons. All this lends colour to the theory that the possibilities were purposely discounted in the preliminary estimate. It must not, of course, be forgotten that prices are not as favourable as they were in 1925. This is rendered painfully clear by a return issued by the National Statistics Department, showing the bad start which was made in the first quarter of the year. From the following table it will be seen that there was a reduction of 13.2 per cent. in the volume of exports and of 22.6 per cent. in the corresponding value, this last being spread over all commodities:—

VOLUME (Tons).				
Produce.	First Quarters.		Difference.	Per Cent.
	1925.	1926.		
Pastoral	388,518	409,412	+ 20,894	+ 5.4
Agricultural	2,649,528	2,262,067	— 387,461	— 14.6
Forestral	103,688	67,266	— 36,422	— 35.1
Others	158,458	126,537	— 31,921	— 20.1
Totals	3,300,192	2,865,282	— 434,910	— 13.2

VALUE (Gold Dollars).				
Produce.	First Quarters.		Difference.	Per Cent.
	1925.	1926.		
Pastoral	110,786,668	95,771,998	— 15,014,670	— 13.6
Agricultural	164,418,831	116,962,546	— 47,456,285	— 28.9
Forestral	6,005,391	4,122,957	— 1,882,434	— 31.3
Others	5,121,466	4,666,601	— 454,865	— 8.9
Totals	286,332,356	221,524,102	— 64,808,254	— 22.6

Apart from the factor of lower prices, it is certain that a better return will be possible for the half-year, and the railway traffic receipts to the end of the financial year on June 30th, which will reflect a fairly substantial increase in general, should suggest that there is not so very much to complain of in the actual position. For the rest, exchange at about 45½ sight on London and 108.70 on New York is rather better than a month ago. There is not a great deal of local capital seeking investment at the moment, and discount rates are holding firm. The total discounts and advances, according to the bank balances for May, fell from \$2,980,964,469 paper to \$2,895,573,274, though the gold figure rose from \$4,208,278 to \$4,322,274.

Short-term obligations amounting to between 62 and 63 million paper pesos have been renewed during the month for a further 180 days at 4½ per cent. The total of the internal and foreign short-term loans stood on May 31st at \$478,509,908 paper, being a decrease of \$750,810 as compared with the end-April figure. Of this \$87,151,817 corresponded to the obligations recently contracted in the United States, the balance being internal debt.

The Chamber of Deputies of the Buenos Aires Province has just completed its consideration of the Budget for the present year, which fixes the expenditure at \$120 millions. Last year's deficit was over \$14 millions, and this will be met by raiding the public works fund deposited with the Provincial Bank, while a committee has been appointed to investigate the alleged irregular loan transactions of the preceding Administration. It is even stated that the deficit is a good deal larger than here indicated, owing to \$15½ millions of the current year's revenue having been availed of to cover expenditure contracted in 1925.

The bankruptcy return for May showed abnormally high liabilities at \$49,448,834. For the purpose of making any comparison, however, the estimate presented by the Banco Comercial del Azul must be deducted, which reduces the figure to \$14,654,397. Even this, however, cannot be regarded as a satisfactory showing as against the \$12,288,924 in April, \$13,127,683 as the average for the first four months of 1926, and \$13,638,494 in May of last year. The retail trade is by no means out of the wood as yet.

OWING to the general strike the issues of the "Economist" for May 8th and 15th were considerably delayed. Copies of these numbers may be obtained from the usual agents or direct from the office of the "Economist," 3, Arundel street, Strand, W.C.

Letters to the Editor.

PUBLIC DEPOSITS AND TRADE FACILITIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The thanks of everyone interested in the above subject are due to your Turin correspondent for his excellent letter of July 6th.

It has been a mystery to the ordinary man why Italy, with not only a balanced Budget, but with a large Treasury cash surplus, should still be unable to stabilise her exchange, and, indeed, to prevent it falling.

Now, this is explained by your correspondent, who shows that the Italian Treasury, by keeping its large cash resources at the Bank of Italy, enables that institution to support an expanding structure of commercial and industrial activity notwithstanding a decrease in note issue; and then points out that any unforeseen obligation causing the Treasury seriously to deplete its cash deposits would automatically cause a corresponding heavy increase in note issue. This contingency, therefore, appears to be the sole cause of the weakness in the lira.

May the ordinary man inquire, does not the same condition apply to our own Government?

Our currency note issue has expanded from £285,616,000 in March, 1923, to £296,019,000 in July, 1926. Although our commercial and industrial demands for capital are not active just now, our demands for financing the present flood of new capital issues are very active indeed; is there no danger of our currency being further inflated, or the Bank's reserve being only protected by a substantial rise in its rate before long? How any ordinary person could have expected a fall in the present Bank rate it is difficult to understand.—
Yours faithfully,
G. S. PAWLE.
July 11th, 1926.

Books and Publications.

BOOKS RECEIVED.

The Evolution of Modern Capitalism. By J. A. Hobson. (New and revised edition.) (London) The Walter Scott Publishing Company, Limited. 7s 6d net.

This is a new and revised edition of Mr Hobson's standard work first published thirty-two years ago. It contains a long supplementary chapter discussing the economic changes wrought by the war, especially the changes in the attitude of the State towards industry, in the distribution of wealth, and in the relative position of chief industrial countries. It also analyses some of the chief problems of reconstruction.

Histoire Economique et Sociale de la Guerre Mondiale.
Les Finances de Guerre de la France. Par Henri Truchy. 15f. *Les Dépenses de Guerre de la France.* Par Gaston Jéze. 20f. *La Main-D'Œuvre Étrangère et Coloniale pendant la Guerre.* Par B. Nogaro et Lucien Weil. 8f. *Tours et la Guerre.* Par Michel Lhéritier. 8f. (London) Oxford University Press, 11 Warwick square.

These are four new additions to the Economic and Social History of the World War, produced under the auspices of the Carnegie Endowment for International Peace.

The Presidential Primary. By Louise Overacker. (London) Macmillan and Co., St Martin's street. 12s 6d net.

A study of the process of the selection of the President of the United States. Twenty-six States, the author tells us, have attempted direct popular control of Presidential nominations by providing laws for the election of delegates to national conventions, or a preference vote for President, or both. This book is an analysis of these various laws and an evaluation of them as instruments of popular control.

The War Period of American Finance, 1908-1925. By Alexander D. Noyes. (London) G. P. Putnam's Sons, 24 Bedford street.

Mr Noyes, who is well known as a leading American financial authority, writes this book as a continuation of his previous volume, "Forty Years of American Finance."

Das Schicksal des deutschen Kapitalismus. By M. J. Bonn. (Berlin) S. Fischer, Verlag.

Economics for Commercial Students and Business Men. By Albert Crew, assisted by W. G. H. Cook and L. Ashmore. Seventh edition. (London) Jordan and Sons, Limited, Chancery lane. 5s net.

In compiling this book special attention has been paid to the requirements of the various public and professional examinations. It is, in fact, a text-book for those preparing for many examinations in which economics is a subject.

A Handbook of Company Law in Scotland. By William Elder Levie. (Edinburgh) William Hodge and Co., Limited, 12 Bank street. 10s 6d net.

This handbook is based on lectures given to accountancy students by the author under the auspices of the Society of Accountants, in Aberdeen, and is intended principally for those who do not have ready access to statutes and reports.

The Tragedy of Waste. By Stuart Chase. (London) Macmillan and Co. 10s 6d net.

An incisive inquiry into the sources and extent of economic waste, with special reference to American industry and social conditions.

A Peaceful Revolution. By Oswald Wildridge. (London) The C. W. Daniel Company, Graham House, Tudor street. 6d net.

A pamphlet containing a series of articles reprinted from the *Northern Daily Telegraph*.

The Edinburgh Review. July, 1926. (London) Longmans, Green, and Co., Limited, 39 Paternoster row. 7s 6d net.

Contains articles on "Canadian Nationalism," by J. A. Stevenson; "The Native Problem in South Africa," by W. E. C. Clarke; "Industry, Politics, and Public Opinion," by Sir Ernest Benn, &c.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
August 10. August 12.

THE Stock Exchange settlement which finished on Thursday in this week was thought likely, in advance, to give rise to a certain amount of trouble owing to the stormy character of the fortnight over which the account had extended. The wild fluctuations in the franc served to upset many of the more speculative markets, and the continuance of the coal stoppage helped to impose a further check upon cheerfulness and enterprise. As it happened, the settlement passed off without trouble. There has been a good deal of stock realised to provide the money with which to meet differences on Courtaulds and a few other industrial shares in which a bull account existed. The demoralisation of the French financial position led to violent fluctuations in the prices of inter-bourse stocks and shares.

Circumstances such as those which are now current in the markets have the effect of driving money more and more into gilt-edged stocks, and, notwithstanding the liberal outpouring of new loans during the past six weeks, the supply has been readily absorbed, with the result that War Fives and most of the other gilt-edged issues present a very firm front, many rises being marked on the week.

French Government, municipal and railway bonds have been flat. The railway prices gave way by points at a time, but

were marked up just as readily when sentiment momentarily changed. The influence of Paris made itself felt in various directions amongst foreign bonds, but Brazilians have held their ground with a fair amount of strength. A new Hungarian loan was reported as the next big issue likely to come in this market.

Home Railway stocks have been curiously inert. The week's traffics were very poor, but led to no particular selling. The Argentine railway market, after being strong, turned downwards on sales of stock by people who wanted money for other purposes. Other foreign railway stocks as a whole are fairly steady, having regard to the prevailing circumstances.

Rubber shares are dull, a number of small falls having occurred. Probability points to the exportable allowance being maintained at 100 per cent. in the new quarter, starting August 1. The tea share market is easier, people beginning to sell their tea shares rather than wait for the improvement that is expected to take place some months hence. The iron and steel list is moving within very narrow limits. Amongst oil shares, French sales caused declines in some of the leading descriptions. Courtaulds formed the hub of active speculation, but interest in these has been eclipsed by the excitement caused by the Imperial Tobacco interim dividend announcement, which turned out to be 7½ per cent., tax free, the same as a year ago. The anticipated bonus remains an anticipation. Imperial Tobacco fell from £5 10s to £5 6s before they recovered to 11½d. Other tobacco shares are good, hints of bonuses serving to keep prices buoyant notwithstanding unfavourable factors elsewhere.

Banking and insurance shares have moved hardly at all, and the shipping group is a trifle easier, though movements are negligible. Remarkable activity sprang up in Morris Motors preference, where the price fell sharply to a discount on the allotments, to recover, however, most of the loss. A little buying of Liptons helped to strengthen the price of these shares. Marconis are weak on fears of the forthcoming dividend announcement. The cable group, on the other hand, has further improved upon its previous strength, though the construction shares are still disposed to droop. Brazilian Tractions have declined on Paris sales.

French selling led to falls in a good many Kaffir and Rhodesian shares. Diamonds were dull for the same reason. Tanganyikas and Zambesias improved, the dividends being better than expected. The tin share market moves, on one day up, and on the next down. The Middle East continues to be a buyer on balance. Canadians have been wanted by Montreal, and Mexican shares are better in places, as the Stock Exchange says. Rios have risen and fallen according to the movement in the French rate.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows :—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded		136,973,561		
NATIONAL SAVINGS CERTIFICATES.				
April 1, 1926, to July 17, 1926 .. Dr	£ 450,000			
Net sales week ended July 17, 1926, 50,000.				
To the Public—				
The Ship Canal Portland Cement, £600,000 6½ % First Mort. Deb. Stock, issued at 97½ % (July 19)	600,000	585,000	60,000	525,000

1921	139,290,281			367,948,656

Ship Canal Portland Cement Manufacturers, Limited.

—Issued share capital, £263,904, divided into 111,639 7½ per cent. cumulative preference shares of 15s each, 900,000 ordinary shares of 4s each, and 3,500 deferred shares of 1s each. This is an issue of £600,000 6½ per cent. first mortgage debenture stock at 97½ per cent. The debenture stock will be secured by a first specific mortgage or charge upon the lands, building, plant, &c., and a first floating charge on the remaining property and assets. It will be repayable by means of a cumulative sinking fund of 2 per cent. per annum, beginning in 1928. The company, whose capital was reorganised in 1924, owns cement works at Ellesmere Port and shale and limestone quarries at Garth and Little Orme, North Wales. The figures of production of cement at the Ellesmere Port works are given since 1922, and have risen from 50,718 tons in that year to 181,280 tons for the year to March 31st last. The proceeds of the present issue are required to pay off existing debentures and bank loans, and to provide for extensions, &c. The total value of the company's properties on a "going concern" basis is given as £1,501,624, while the net assets, exclusive of goodwill, are stated to be £1,533,110. Net profits for the years ended March 31, 1925 and 1926, before charging interest, depreciation and taxation, were, it is stated, £80,486 and £108,063 respectively. The amount of existing debentures is not stated. The company appears to have a good backing.

Tamplins Licensed Properties, Limited.—Share capital

£100,000 in £1 shares, in addition to which there is £500,000 of 6 per cent. first mortgage debenture stock authorised. Of the latter £200,000 is now being issued at £95 per cent. The stock will be secured by a trust deed constituting a first specific mortgage on freehold and leasehold properties, which are being purchased by the company for £300,000 in cash and a floating charge on remaining assets. The deed securing the stock will provide for redemption by means of an annual cumulative sinking fund of 1 per cent., which will be applied either by purchase at a price under par or by drawings at par. The whole of the stock will be redeemed not later than December 31, 1959. The company also reserve power to redeem stock on six months' notice at 102½ per cent. if the notice expires on or before January 1, 1937, and thereafter at par. The company has been formed by Tamplin and Son's Brewery, Brighton, Limited, to take over and acquire from them various licensed and other properties which are said to consist for the most part of premises belonging to the brewery business of Kidd and Hotblack, Limited, of Brighton. The business of Kidd and Hotblack, Limited, was originally established in 1821, and was formed into a limited liability company in 1906. It has been carried on under the supervision of the members of the Hotblack family down to the date of sale. The licensed properties included in the sale to this company are 87 in number, of which all except three are freehold. Tamplin and Son's Brewery, Brighton, Limited, which will be responsible for the rent and covenants of this lease, was incorporated in the year 1889. The annual dividend paid on the ordinary share capital of that company since its incorporation is stated to have averaged not less than 10 per cent., and has for the last four years, including bonuses, been 15 per cent. The purchase price, payable by Tamplin's Brewery, is £303,145, payable as to £203,145 in cash and the balance in Tamplins 7½ per cent. "B" cumulative preference shares, together with a sum to be ascertained by valuation in respect of stocks and loose effects. The purchase price to the present company is £300,000 in cash. It is a great pity that no figures of past profits are given in the prospectus. A well-secured industrial debenture in its class.

Triumph Trust, Limited.—In order to comply with Stock

Exchange regulations particulars are advertised of the above. The issued share capital is £200,000, divided into 999,500 preferred ordinary shares of 2s each and 1,000 deferred shares of 1s each. After a cumulative preferential dividend of 10 per cent. per annum has been paid on the preferred ordinary shares, the remaining profits (after providing for reserves, &c.) are divisible as to one half among the holders of the preferred ordinary shares and as to the remaining one half among the holders of the deferred shares. It is intended to issue £100,000 of 7½ per cent. registered convertible notes at par, repayable at £105 per £100 on September 1, 1936, and convertible up to April 1, 1929, into 10 per cent. preferred ordinary shares at the price of 2s 6d per 2s share, such conversion to take place on April 1st or October 1st in any year. It is also intended to repay £3,550 10 per cent. cash deposit certificates out of the proceeds of the above issue of notes. The company was incorporated in 1923 as a private company, and converted into a public company in 1925. Its objects are to carry on the business of an investment trust, finance development, general trading company, and other businesses. It is stated that since the inception of the Trust the cumulative dividend on the preferred ordinary shares has been regularly paid. For the years 1924-5, 1925-6, however, an additional 2½ per cent. was distributed, making 12½ per cent. per annum for each of the periods mentioned. No figures of revenue are given. Application is being made to the

London Stock Exchange for permission to deal in the 999,500 preferred ordinary shares. Investors should bear in mind the difficulties with which most finance undertakings are faced from time to time.

Camp Bird, Limited.—Share capital £2,100,000, divided into 749,625 8 per cent. cumulative preference £1 and 13,503,750 ordinary 2s shares, of which 649,625 preference and 2,750,051 ordinary shares have been issued. This is an issue of 1,650,000 ordinary 2s shares at 4s 3d per share. The company was formed in the year 1900 to operate the Camp Bird Mine in Ouray, Colorado, and up to 1920 paid to its preference and ordinary shareholders dividends to a total of £2,288,000. Camp Bird Mine was closed down in the year 1920; the plant and machinery has since been carefully preserved and is reported to be in good order. The company has over a period of years acquired interests in various corporations operating in Mexico and elsewhere, thus changing its character from that of a mining company to a mining investment and holding company. The company has no liabilities other than the arrears of preference dividend, which will be satisfied as to £136,421 in cash out of premiums derived from the shares now offered, and as to the balance by the issue of £113,684 7 per cent. funded income certificates repayable out of profits. The assets of the company, after providing for the above-mentioned dividend arrears, are valued by the directors at approximately £1,150,000. Quoted securities as at the end of approximately 80 per cent. of the total, and cash, including balance of the proceeds of this issue, over 15 per cent. After repayment of the arrears of preference dividend from the proceeds of this issue, the company expects to have available cash working capital of approximately £200,000. The chief holdings of the company are in the Santa Gertrudis Company, Limited, and in the Mexican Corporation, Limited. Fairly full particulars of these companies are given in the prospectus, but we should have liked some revenue figures included.

Temengor Tin Mining Company, Limited.—Share capital £200,000 in shares of £1 each. This is an issue of 60,000 shares at par. The company has been formed for the purpose of acquiring mining certificates and sub-leases over and working properties containing alluvial tin deposits situate at Temengor, Grik, Upper Perak, in the Federated Malay States. Certain areas extending approximately to 180 acres are being acquired immediately. Application has also been made to Government for land adjoining the areas now acquired by the company approximating a further 534 acres, and it is hoped that such application will be favourably considered as soon as this company can submit plans and surveys for the necessary tailings dam, and can give an assurance that it is in a position to carry out such work. The purchase price of £75,000 is payable as to £20,000 in cash, and £55,000 by the allotment of shares. Under the sale agreement the vendor company (Malayan Tinfields, Limited) has agreed to assist the company, so far as it is able, in obtaining grants from the Perak Government of mining leases over the additional properties, some 534 acres in extent, which it will be desirable to acquire should the working of the original property prove successful. As consideration for such agreement the company has agreed, in the event of its acquiring within three years not less than three-fourths in area of such further properties, to issue a further £20,000 of fully-paid shares in its capital to the vendor company, and a proportionately reduced number of shares should it acquire less than three-fourths in area of such further properties. The 60,000 shares now offered have been underwritten for a commission of 6 per cent. A speculative proposition.

ACTIVE SECURITIES.

SULPHIDE CORPORATION, LIMITED.—During the six weeks ended on June 26, 1926, 11,483 tons of Central and Junction Mines ore, together with 2,610 tons of slimes, were milled at the Central Mine, producing 2,402 tons of leach concentrates (including 215 tons from the de-leaching plant), which assayed 43 ozs silver, 62 per cent. lead, together with 2,824 tons of zinc concentrates, assaying 10 ozs silver, 7 per cent. lead, 48 per cent. zinc per ton, and 881 tons of special slimes, assaying 10 ozs silver, 17 per cent. lead, and 7 per cent. zinc per ton.

COMPANY MEETINGS, &c.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

SUCCESSFUL YEAR—INCREASED PROFIT.

DIVIDEND MAINTAINED—BONUS DISTRIBUTION.

YEAR OF PROSPERITY IN SOUTH AFRICA.

POSITION AND PROSPECTS OF VARIOUS INDUSTRIES.

The 113th ordinary meeting of shareholders in the Standard Bank of South Africa, Limited, was held, on Wednesday, the 21st day of July, 1926, at the Cannon street Hotel, Cannon street, London, E.C., Mr W. Reiersson Arbuthnot presiding.

The secretary (Mr Herbert G. Hoey) having read the notice convening the meeting,

The Chairman authenticated the correctness of the Register of Transfers by impressing thereupon the seal of the company.

The directors' report and accounts were taken as read, and the Secretary read the auditors' certificate.

The Chairman then addressed the meeting as follows: Ladies and gentlemen,

Prosperity for South Africa. Since we last met I am glad to say that South Africa has, on the whole, enjoyed a year of prosperity. This must be attributed largely to the unusually favourable weather enjoyed during the greater part of the year, which enabled agriculturists to reap an unprecedented crop of maize and largely increased crops of other cereals, while owners of livestock also did well. As a result many farmers were able to make good the losses suffered during the previous year of drought, to improve their farms, and to pay off liabilities.

The weather conditions were not so favourable in certain districts in the West and South-West of the Cape Province, where the rainfall was insufficient, and in the Eastern Transvaal, Zululand, and Natal, where it was excessive. Elsewhere, despite a general fall in prices, farmers, on the whole, were able to realise satisfactory profits.

Present Year's Prospects. As regards farming prospects for the present year, for the three months from November to January a period of drought supervened, which effectively destroyed all chances of a maize crop for this season comparable with that of last year. At the same time, considerable damage was caused by insect pests.

Though the good rains which have since fallen came too late to effect more than a moderate improvement in the maize crop, they have greatly benefited the veldt, and the majority of sheep farmers are facing the winter without undue anxiety. Many cattle farmers are, however, finding their land overstocked, and the resulting selling pressure has brought the prices of all except prime stock down to a low level.

Farming prosperity was reflected to a considerable extent among the business community, and it may now safely be claimed that, on the whole, the business of the Union is gradually reaching a sounder footing; indications of this may be seen in the insolvency statistics.

Budget Surplus. The effect of the prosperous year on Government finance is shown by the fact that the Union Budget statement showed a surplus of £500,000, against an estimated deficit of £187,000, and the railways a surplus of £673,000, against an estimated deficit of £61,000.

Throughout South Africa an active policy of new railway extension is still being pursued, while at the same time much attention is being paid to the improvement of the old systems, chiefly by the electrification of the Natal main line and the Cape Town suburban line.

While on the subject of railways, may I say how much we deplore the disastrous accident which occurred on the Cape Town line a few weeks ago. I am sure I am voicing the feelings of the whole body of our shareholders when I say that we sympathise very deeply with South Africa in the loss of a number of valuable lives and in the grief and distress which the accident has brought into so many homes.

Exchange Position. The South African exchange position has varied but little in the course of the year.

The shortage of sterling, due to the reduction in South African exports during the shipping strike, led to a rise in exchange rates in September, but towards the end

of the year, when exports of produce to Europe were exceptionally heavy and the supply of sterling correspondingly more plentiful, the movement of rates was naturally downwards. Since then the accumulation of money in South Africa as the result of gold being sold locally instead of in London, has resulted in an increased demand in South Africa for English sterling, with the result that our rates have returned to the level of a year ago, being now based on a charge of 15s per cent. for cable remittances from South Africa to London.

Satisfactory Mining Position. The mining position may be regarded as satisfactory, the output of gold having been more than maintained, while the cost of production was considerably diminished. The absence of serious industrial trouble and reductions in the cost of stores, &c., were partly responsible for the excellent results obtained, but these were mainly due to increasing efficiency of management and improvements in mining appliances and metallurgical practice.

The market for diamonds has, for the most part, been good. The demand for polished stones on the Continent of Europe is still small, but business in Great Britain and the United States continues to be satisfactory.

Southern Rhodesia. In Southern Rhodesia farming conditions have been generally favourable; in some districts the rainfall has been excessive, but the outlook, on the whole, is promising.

Nyasaland. While Nyasaland experienced excessive rainfall early in the year, prospects there have since improved.

South-West Africa. In South-West Africa rainfall was below normal during the year under review, and, though a certain amount of rain has since fallen, the immediate outlook cannot be regarded as favourable.

Portuguese East Africa. We are still unable to carry on normal business in Portuguese East Africa owing to the currency difficulties arising from the decision of the Portuguese Authorities to make the local sterling notes inconvertible.

A Decree providing for the withdrawal of the notes from circulation was recently signed in Lisbon, but some trouble appears to have arisen in Lourenço Marques as to its observance, and the position is still very unsatisfactory. Meanwhile, the British banks there are unable to secure the redemption of their holding of the notes.

Until the Authorities see their way to arrange for their currency to be placed on a better footing, it is obvious that the business of the territory must suffer.

East African Territories. In the East African Territories the period under review may be summarised as one of steady progress, despite adverse climatic conditions, and the advance made is reflected in the trade figures.

These territories have two of the greatest possible assets in the fertility of the country and a large native population. With these advantages and a continuity of the present type of settler to turn them to their best economic use, there can be no question of the future prosperity of East Africa.

Road and rail transport is opening up fertile parts and making possible development of their latent resources.

Influx of Settlers and Capital. The most important factor making for progress in Kenya is, undoubtedly, its European farming community in the Highlands. The past year has witnessed a steady influx of both settlers and capital, and largely increased areas have been put under cultivation. Generally, the season has been indifferent owing to irregular rains, but the Trans Nzoia and Uasin Gishu areas have been more favoured in this respect.

Mr Lowndes, our London manager, has recently returned from an extended tour throughout East Africa, which has given him an opportunity of getting into touch not only with the bank's staff out there, but also with the Government officials and the business and farming communities. He has also been able to make the personal acquaintance of many of the bank's clients, besides seeing for himself, on the spot, and being able to discuss local conditions and problems, and this will, I feel sure, have been of great value to him and to the share holders.

Many of you come into personal touch with Mr Lowndes and know the qualities he possesses, which are sure to result in his visit bearing good fruit. Mr Lowndes is present with us to-day, and, to spare his blushes, I will refrain from enumerating those qualities.

I speak from my own experience when I say that it is a pleasure to do business with him, and I have no doubt whatever as to the impression which he will have made on those with whom he came in contact on his tour of East Africa. (Applause.)

If you will turn now to the balance-sheet in your hands, you will see that the figures reflect a satisfactory expansion of our business.

The deposit, current, and other accounts now stand at £49,416,227, being an increase of nearly 2½ millions on the 1925 figures. Drafts outstanding and acceptances under credits have risen by £384,000, and bills for collection by £870,000. These items are naturally subject to considerable fluctuations, but at the same time they reflect in a general way any growth or falling away of our business.

The item of profit and loss has increased from £390,000 to £449,000, but that I will deal with in a moment.

On the assets side of the balance-sheet the first thing to strike you will, no doubt, be the strength of our cash position, as, in spite of the increase in our liabilities in deposits, our total of cash, bills of exchange and remittances in transit, is over 38 per cent. of our liabilities for note circulation and deposits.

Our investments remain practically unchanged at a little over £5,000,000, and you will note that, as usual, they appear in the balance-sheet at, or under, cost, and below the market values as at March 31st.

Bills of exchange are £576,000 lower than last year, due chiefly to the reduction in our purchase of bills drawn against shipments of gold. As most of the gold is now being sold in South Africa, instead of London, as formerly, it follows that there is a big reduction in the supply of these bills available for negotiation.

On the other hand, there is a substantial increase of about 2½ million pounds in the amount of bills discounted and advances to customers, which reflects a very satisfactory expansion of our earning powers.

Bank property and premises stand at about £14,000 less than last year, this being the sum by which our writings off exceeded the expenditure on new premises during the year.

Our new London premises are now approaching completion, and before long we hope that many of the difficulties and discomforts due to lack of accommodation during the last few years will be finally overcome.

I feel sure that all shareholders will agree with the wisdom of writing down the value of our premises year by year. With the figure still standing in the balance-sheet at over one and a-quarter millions, we have considered it prudent to allocate £75,000 out of profits to bank premises account.

If you will turn now to the profit and loss account, you will see that the net profits for the year amounted to £579,988, being an increase of £62,037 on last year's figures, a result which we think you will regard as very satisfactory.

Including the amount of £109,149 brought forward, we have a total of £680,138, from which has to be deducted £156,041 paid as an interim dividend in January.

This leaves available £524,097, from which has been appropriated £75,000 for premises, so that the amount now to be dealt with is £449,096.

My predecessor in the chair last year referred fully to the necessity for making provision for our officers' pension fund, and there is no need for me to say more than that, after careful consideration, we have decided to recommend that the sum to be set aside for the pension fund this year shall not be less than that approved last year.

I am happy to say that the balance still available enables us to recommend the payment of the usual final dividend of 7s a share and in addition a bonus of 2s 6d a share, leaving a balance of £112,326 to be carried forward to the next account. (Applause.)

These figures speak for themselves, and I hope that I am not mistaken in thinking that the message they convey will be a pleasant one to the proprietors of this bank. (Hear, hear.) They indicate that conditions in the field of our operations are improving, that trade in Africa shows increased vitality, and that we are recovering from the effects of the bad years through which South and East Africa passed after the war.

Your directors consider that the improvement is based on a really sounder situation, which appears likely to continue for a time unless quite unforeseen circumstances arise. But for this fact they would not have felt justified in recommending the payment this year of a bonus, but would have considered it their duty to increase further the bank's reserves.

In saying this, I do not wish to be misunderstood. We do not pretend to prophesy what the future—even the next twelve months—has in store for us, but the outlook appears to us to be favourable, our business generally is, in our opinion, in a healthy condition, and our losses are not above normal, for, however much banks may be accused of being overcautious and conservative, the fact remains that in banking business losses are inevitable from time to time. Having regard to the hopeful conditions to which I have alluded, we have felt that it is only fair to our shareholders that they should derive some benefit from the improved position and receive an addition to the regular dividend of 14 per cent. per annum. (Applause.)

During the year under review a branch has been opened at Shabani, Rhodesia, and a sub-branch at Potgietersrust, in the Transvaal. In addition, thirteen agencies have been established at various points in Africa, where the prospects of business have justified our representation.

As is usual on these occasions, we have prepared some particulars in regard to the chief industries of South and East Africa for the period under review.

South African overseas trade showed a marked increase during the year, exports totalling £89,266,219 and imports £67,799,316, compared with £84,304,931 (including the premium on gold) and £65,894,781 respectively in 1924. The expansion in exports, which was mainly due to an increase of about £6,000,000 in the value of farm products and an increase of about £1,500,000 in the value of diamonds, was the more remarkable as it was achieved in spite of the disappearance of the gold premium (estimated at about £4,000,000 in 1924) and a sharp fall in the value of wool.

As a matter of interest, it may be stated that if the 1924 prices for gold, wool and other commodities had been maintained, the value of exports during 1925 would have been some £9,000,000 higher than the figures shown.

The following figures represent the trade of East Africa for the year ending December 31, 1925:—

Dividend and Bonus.

Improved Position—Favourable Outlook.

New Branches and Agencies.

Trade Returns.

East African Trade.

KENYA AND UGANDA.

TANGANYIKA.

It is satisfactory to note that approximately 68 per cent. of the 1925 imports into these territories originated in the British Empire.

Minerals.

In Southern Rhodesia the value of the combined mineral output declined from £4,478,499 to £4,134,260. On the other hand, the value of base metals produced increased by £55,871.

The development of mineral deposits in the East African territories is increasing in importance. Gold, diamonds, tin, mica, and salt are being exported from Tanganyika, while indications of coal, asbestos, copper, and corundum are being investigated in various parts of East Africa.

Gold Mining Industry.

1925 was the highest on record, amounting to 9,599,702 fine ounces, compared with 9,597,634 fine ounces in 1924. Owing to the disappearance of the gold premium, the approximate gross value declined by

£3,828,149 to £40,776,942. This loss of premium was, however, offset to the extent of about £1,700,000 by savings in realisation charges—following the resumption of the gold standard—and by reductions in costs of production. The working profit of £12,565,892 was, therefore, only £2,084,944 below that earned during 1924.

Apart from the disappearance of the gold premium, the industry during 1925 had to face a serious disability in the shape of an acute shortage of native labour, due to the excellent maize harvest, which rendered it unnecessary for the usual number of natives to leave their reserves in order to find work. Since the end of the year, however, the comparative failure of a portion of the new maize crop has caused a large increase in the supply of labour available.

The achievement of the mining industry in more than maintaining the output of gold, and at the same time in considerably diminishing the cost of production, must be regarded as very creditable.

The Rand refinery continues to deal satisfactorily with the whole output of the mines, and during the year ending September 30, 1925, 10,468,571 ounces of standard gold and 940,950 ounces of fine silver were refined.

The prospects of the gold mining industry this year are considered good, and production should reach a higher level than that attained in 1925.

In Southern Rhodesia the gold produced last year was valued at £2,539,543, compared with £2,939,563 in 1924. Of this decrease the disappearance of the gold premium was responsible for £193,000, and decline in output for £206,000.

The value of diamonds produced in the Union during the year increased from £8,033,406 to £8,198,128, and sales from £6,752,499 to £8,663,244. The output was composed of mined stones to the value of £6,201,510, and of alluvial stones to the value of £1,961,618. The value per carat of mined stones increased by 2s 10d to £2 17s 8d, and of alluvial stones by 9s 10d to £7 19s 5d.

Exports during the year were considerably in excess of production, and the unexported surplus carried over from 1924 was largely liquidated.

The output of diamonds in South-West Africa amounted to 514,956 carats, compared with 492,696 carats in 1924. Sales during the year totalled 693,174 carats, valued at £1,888,867, compared with 449,846 carats, valued at £1,224,441 in the previous year.

The output of coal in the Union increased by about half a million tons during the year, and at 13,007,141 tons created a new record. This increase was more than accounted for by the expansion of the Transvaal industry, both that of the Orange Free State and Natal showing a slight decrease.

Generally speaking, the outlook for the export trade remains somewhat uncertain, but the internal position is fairly satisfactory, and seems likely to improve.

The value of the coal output of Southern Rhodesia during 1925 was £324,511, compared with £265,992 in the previous year.

The copper production of the Union during the last three years has been as follows:—

Copper.

Year.

1923

1924

1925

Prospects of present developments in the Transvaal are regarded as encouraging, while great activity is reported from Northern Rhodesia, where new mines are just reaching the producing stage.

In the Belgian Congo shortage of labour is tending to delay progress, and the 1925 output of 90,000 tons showed an increase of only 5,000 tons over that of 1924, as against an expected increase of 15,000 tons. Development is proceeding, and, provided labour difficulties can be overcome, an annual output of 200,000 tons is expected in about three years' time.

Prospecting is being vigorously carried on in various parts of the Transvaal, and it is evident that platinum-bearing formations exist over a very large area.

It is not yet possible to speak with any certainty of the future of the industry, but a large amount of useful exploratory work has been carried out which, in the opinion of technical men well qualified to judge, indicates that a large extent of platinum ore is capable of being profitably worked at the present price of the metal, and, in fact, at a much lower figure, provided the estimates and anticipations regarding the metallurgical side of the business are approximately reliable.

No actual production was declared down to the end of 1925, but

during the first three months of 1926 about 1,300 ounces of crude platinum, containing about 75 per cent. of pure metal, were obtained from one mine, and several other mines are expected to reach the producing stage in the near future.

The position of the tin-mining industry has continued satisfactory; the market price throughout the period under review has been firm, and the prospects generally for the present year appear to be very favourable.

The figures given below indicate the output of tin in the Union during the last three years:—

Year.	Tons.	Value.
1923	1,424	170,337
1924	2,051	305,398
1925	1,937	298,973

The output of asbestos produced in the Union during 1925 was valued at £152,115, compared with £110,075 in 1924.

A good demand prevailed during the year, and mines were at times unable to cope with the orders received.

The value of asbestos produced in Rhodesia during the past three half-years was as under:—

Six Months Ending	Value.
31/12/1924	336,741
30/6/1925	306,215
31/12/1925	459,765

The main difficulty confronting the asbestos industry in Rhodesia has hitherto been lack of transport facilities, but in view of the approaching advent of the railway to Shabani, the outlook for the industry appears bright.

Further extensions of asbestos producing properties in Rhodesia which are recorded should largely increase the output.

The value of chrome ore produced in the Union was £21,001 in 1925, as compared with £2,446 in 1924, and in Southern Rhodesia the output was valued at £337,318, as against £432,482 in the previous year.

The industry is expected to benefit greatly by the construction of the railway to Shabani, to which allusion has already been made. There is no difficulty in disposing of the production of ore, a strong demand existing for the mineral in America, England, and Germany.

The following are the values of sales and shipments of the more important of the other minerals produced in the Union during the past two years:—

	1924	1925
Silver (in gold bullion)	142,670	134,454
Silver (in other minerals)	69,800	32,388
Osmiridium	102,886	170,995
Lead	153,288	57,389
Corundum	13,284	13,229
Soda	9,844	13,480

The preliminary results of last year's agricultural census give the total production of maize in the Union for 1925 as over 24,000,000 bags of 200 lbs each. There was, therefore, an increase of nearly 13,000,000 bags, or 118 per cent., over the 1924 figures, and of nearly 5,000,000 bags, or 26 per cent., over those for 1923, which represented the largest crop previously recorded.

The expected yield of the 1926 crop will be far below that of last year; the drought, together with destruction caused by insects, compelled many farmers to replant their maize, in some cases more than once, and consequently it was feared that a large part of the crop would not have time to ripen before the winter set in. Conditions have improved, however, and it was hoped that at least 12,000,000 bags would be reaped, but cable advices received this morning reduce the unofficial estimate to 9,000,000 bags.

Down to the end of the year overseas prices of maize remained satisfactory, and by December 31st some 10,000,000 bags had been exported. During January overseas prices declined sharply, while local prices advanced in expectation of a short crop. As a result exports fell away, and since the end of January have practically ceased. Up to the present rather less than 11,000,000 bags of last season's crop have been exported, and as local consumption is estimated at between 10 and 11 million bags annually, it appears that there are still some 2-3,000,000 bags of surplus maize in the country. Though local prices have now declined, a considerable gap still exists between local and export prices, which must be adjusted before export can be resumed.

In spite of abnormal rains in many districts, the Rhodesian maize crop is expected to be normal, and in some districts distinctly above the average.

The value of chrome ore produced in the Union was £21,001 in 1925, as compared with £2,446 in 1924, and in Southern Rhodesia the output was valued at £337,318, as against £432,482 in the previous year.

The industry is expected to benefit greatly by the construction of the railway to Shabani, to which allusion has already been made. There is no difficulty in disposing of the production of ore, a strong demand existing for the mineral in America, England, and Germany.

The following are the values of sales and shipments of the more important of the other minerals produced in the Union during the past two years:—

	1924	1925
Silver (in gold bullion)	142,670	134,454
Silver (in other minerals)	69,800	32,388
Osmiridium	102,886	170,995
Lead	153,288	57,389
Corundum	13,284	13,229
Soda	9,844	13,480

The preliminary results of last year's agricultural census give the total production of maize in the Union for 1925 as over 24,000,000 bags of 200 lbs each. There was, therefore, an increase of nearly 13,000,000 bags, or 118 per cent., over the 1924 figures, and of nearly 5,000,000 bags, or 26 per cent., over those for 1923, which represented the largest crop previously recorded.

The expected yield of the 1926 crop will be far below that of last year; the drought, together with destruction caused by insects, compelled many farmers to replant their maize, in some cases more than once, and consequently it was feared that a large part of the crop would not have time to ripen before the winter set in. Conditions have improved, however, and it was hoped that at least 12,000,000 bags would be reaped, but cable advices received this morning reduce the unofficial estimate to 9,000,000 bags.

Down to the end of the year overseas prices of maize remained satisfactory, and by December 31st some 10,000,000 bags had been exported. During January overseas prices declined sharply, while local prices advanced in expectation of a short crop. As a result exports fell away, and since the end of January have practically ceased. Up to the present rather less than 11,000,000 bags of last season's crop have been exported, and as local consumption is estimated at between 10 and 11 million bags annually, it appears that there are still some 2-3,000,000 bags of surplus maize in the country. Though local prices have now declined, a considerable gap still exists between local and export prices, which must be adjusted before export can be resumed.

In spite of abnormal rains in many districts, the Rhodesian maize crop is expected to be normal, and in some districts distinctly above the average.

The value of chrome ore produced in the Union was £21,001 in 1925, as compared with £2,446 in 1924, and in Southern Rhodesia the output was valued at £337,318, as against £432,482 in the previous year.

The industry is expected to benefit greatly by the construction of the railway to Shabani, to which allusion has already been made. There is no difficulty in disposing of the production of ore, a strong demand existing for the mineral in America, England, and Germany.

The following are the values of sales and shipments of the more important of the other minerals produced in the Union during the past two years:—

	1924	1925
Silver (in gold bullion)	142,670	134,454
Silver (in other minerals)	69,800	32,388
Osmiridium	102,886	170,995
Lead	153,288	57,389
Corundum	13,284	13,229
Soda	9,844	13,480

As regards East Africa, it is computed that at June 30, 1925, there were 155,916 acres under maize, and the amount exported from Kenya in 1925 was valued at £416,964. This year the crop has been disappointing, owing to irregular rains, and the export is only expected to reach three-fifths of last year's total.

In the Western Province of the Cape the 1925 wheat crop failed to reach expectations, and gave a yield rather below that of the previous year. In other parts of the country, however, the yield was far above normal, and the total for the whole country, according to the preliminary results of the Agricultural Census, amounted to over 2,000,000 bags, an increase of approximately 350,000 bags over the 1924 figures.

The yield of Kaffir corn amounted to nearly 2,500,000 bags of 200 lbs, compared with approximately 1,250,000 bags in the previous year. As a result of this remarkable increase, Kaffir corn, for the first time on record, figures as an important item among exports from the Union.

Some progress is being made in improving the quality of cattle, but far too many farmers are still content with indifferent or poor stock. Generally speaking, progressive farmers prefer dairy farming, and the production of really high-class beef is not yet very large. A market for South African beef has recently been found in Italy, and exports of beef increased in value from £96,000 in 1924 to £256,000 in 1925, but it is to be feared that the quantity of beef exported will remain disproportionately small compared with the number of cattle in the Union until the quality of beef produced is materially improved.

In Rhodesia the cattle industry is making steady progress, but the difficulty of suitable markets has been increased by the closing of the Union market to cattle weighing less than 1,050 lbs. A considerable outlet has, however, been found by large purchases for purposes of meat export.

Trial shipments of cattle on the hoof have been made to England. Good prices were realised, though the heavy costs of transport greatly reduced the margin of profit.

Dairy farming in the Union continues to make good progress, and the quality of stock shows steady improvement. This branch of farming has the advantage of providing a regular income throughout the greater part of the year, and for this reason is being increasingly combined with other branches.

In Rhodesia the dairy industry is rapidly growing in importance, and exports of the produce show a steady increase.

Wool.	EXPORTS.	
	Quantity.	Value.
	lbs.	£
Average 1920-24	179,759,000	12,676,000
Year 1924	174,595,000	15,764,000
Year 1925	208,616,000	15,095,000

Compared with 1924, the average value of grease wool exported during 1925 fell from 1s 8½d per lb to 1s 5½d per lb. Prices, after reaching their highest point in December, 1924, fluctuated considerably, but are now generally steady, and it is thought that a more stable basis has been reached. Present prices are remunerative to the farmer, and it is believed that a moderate but steady price-level will ultimately prove more beneficial to producers and consumers alike than the alternations of high and low figures that have taken place in recent years.

Improvements continue to be made in methods of farming, and especially in the classing of wool and its preparation for market.

Mohair.	EXPORTS.	
	Quantity.	Value.
	lbs.	£
Average 1920-24	15,573,000	869,000
Year 1924	13,666,000	1,142,000
Year 1925	11,560,000	836,000

During 1925 exports fell by 15 per cent. in quantity, and 27 per cent. in value. At present the demand is dull, and little business is passing. Those concerned in the trade are, however, confident that the demand, which is governed to a certain extent by fashion, will sooner or later revive.

Ostrich Feathers.	EXPORTS.	
	Quantity.	Value.
	lbs.	£
Average, 1920-24	331,000	419,000
Year 1924	384,000	353,000
Year 1925	270,000	204,000

This industry shows signs of further retrogression, and there is little demand for feathers. The prices now obtained are not re-

munerative, and for some time past farmers have been devoting their attention to other classes of farming.

Exports from the Union during the year, compared with those of 1924, were as under:—

Hides and Skins.	Quantity.	Value.
	lbs.	£
Hides, 1924	31,440,000	973,000
1925	26,908,000	911,000
Skins, 1924	37,251,000	2,186,000
1925	32,803,000	1,795,000

Prices of sheepskins declined by about 12 per cent. in sympathy with the price of wool, but those of hides and goat-skins increased by about 11 per cent. and 12 per cent. respectively.

Prices of hides are at present firm, while those of skins are fairly steady. Hides and skins were exported from Kenya, Uganda, and Tanganyika during 1925 to the value of approximately £600,000.

The cotton crop of Uganda is by far the most important item in the East African trade, and the prosperity of the territory depends entirely upon it. It is wholly native grown, and practically everything in Uganda is secondary to it. The area under cultivation is steadily spreading, and extending northwards. The growing and marketing are carefully controlled, and a very definite policy regarding ginneries is in force.

This year a definite setback occurred, owing to late rains. The export figures are as follows:—
1924—128,604 bales of 400 lbs each, worth £3,486,565
1925—196,023 " " " £4,685,992

The 1926 crop is estimated at 150,000 bales. This falling off, combined with the reduced price of 17-18 cents per pound, as against 28 cents last season for raw cotton, is a factor which will adversely affect trade.

The year 1925 proved disappointing to cotton growers in South Africa. A greatly increased acreage had been planted, and a crop of about 25,000 bales was expected. Much damage was, however, caused by the heavy rains which began in January, and continued until May, and the final yield of the crop, according to the ginneries' returns, amounted to only 15,119 bales, of which a considerable proportion was discoloured or immature.

Cotton Market.	EXPORTS.	
	Quantity.	Value.
	lbs.	£
Average, 1920-24	1,881,000	94,000
Year 1924	3,299,000	171,000
Year 1925	6,981,000	350,000

The market remained fairly satisfactory throughout the selling season, which concluded in October, and export prices averaged only about 3 per cent. below the level of 1924. Since then, however, prices have fallen sharply in view of the large American crop, but in spite of this the acreage planted is little, if any, thing, below that of last year.

This year's crop is estimated at about 25,000 bales, about 60 per cent. more than the quantity gathered last year.

The Nyasaland crop for 1925 is estimated at 1,800 tons of lint, compared with 1,000 tons in 1924. Of this total about 525 tons were grown in the Port Herald District. This result was achieved notwithstanding the almost complete failure of the first crop, and it is therefore all the more pleasing that the second growth was remarkable both for quality and quantity.

In Rhodesia the crop is expected to be considerably better than that for the previous year, except in the Bulawayo District, where, owing to the lateness of the rains, the prospects are fair only. In spite of their unfortunate experiences in 1924 and 1925, farmers are still confident and the acreage under cotton is being steadily increased.

The position of the wine industry in South Africa is now more assured. It is estimated that the present vintage will produce some 100,000 leaguers of wine of various qualities which represents approximately a 40 per cent. surplus.

There is a large demand for dried grapes for export to America, which tends to restrict the output of indifferent wines.

The output of sugar in South Africa for the year under review was the largest on record; the figures compared with the previous year's being as follows:—

Sugar.	OUTPUT.		EXPORTS.	
	Quantity.	Value.	Quantity.	Value.
	lbs.	£	lbs.	£
Average, 1920-24	320,000,000	65,207,000	65,207,000	785,000
Year, 1924-25	322,506,000	18,656,000	18,656,000	179,000
Year, 1925-26	478,926,000	119,908,000	119,908,000	767,000

Owing to the lateness of the rains the outlook for the coming crop is not as promising as at one time seemed likely, but with the increased acreage under cane it is generally expected that the final yield will exceed that for 1925.

A good quality sugar is being grown in parts of Kenya and Uganda adjacent to Victoria Nyanza, the whole product being absorbed by the local market.

The fruit-farming industry in the Union is making rapid progress, and, as some doubt is felt concerning the ability of the English market to take the quantity of fruit which will be available for export in a few years' time, attempts are being made to open up markets on the Continent, and these are being watched with great interest.

Cold storage facilities at the ports are being improved, and the causes of deterioration of fruit in transit are being gradually eliminated.

The dried fruit section of the industry has been somewhat handicapped by the heavy fall in the prices of dried fruit in European markets during the last few years. The total value of fresh fruit and dried and preserved fruit exported during the year amounted to £920,000, as against £649,000 in the previous year.

The value of tobacco exported from the Union during 1925 showed a slight improvement, but is still far below the totals reached in the years immediately following the war.

The 1926 yield from the Western Province is expected to show a material increase, and the Transvaal crop, while of average dimensions, is expected to be of particularly good quality, but the Natal and Orange Free State crops have suffered from drought and the yield will again be below normal.

Exports of tobacco from Nyasaland during 1925 totalled 6,917,439 lbs, compared with 7,044,175 lbs in 1924 and 5,158,326 in 1923.

In spite of heavy rains prospects for the coming season in this territory are satisfactory. The yield is estimated at 3,700 tons, an increase of 600 tons on 1925, while the quality is expected to be better than that of last year's crop.

With the good markets which are being experienced overseas the outlook generally is good.

Tobacco-growing in Rhodesia continues to make progress. Farming conditions are at present favourable, and the present crop is estimated at approximately 5,000,000 lbs, of very fair average quality. If the present good prices are maintained, it is expected that a considerably larger acreage will be devoted to tobacco in coming seasons.

Wattle Bark and Extract.	EXPORTS FROM SOUTH AFRICA.	
	Wattle Bark.	Wattle Extract.
	Value.	Value.
	£	£
1924	584,000	257,000
1925	781,000	328,000

The increased export prices realised during 1925 were due to the good demand which existed up to last September. Since then there has been a considerable falling off, owing to the slackening of Continental competition and the practical withdrawal of Germany from the market, and prices have steadily declined.

The demand from the United Kingdom has been fairly consistent, but the requirements of that country are principally for ground bark.

In Kenya at June 30, 1925, there were over 65,000 acres under coffee of various ages. The amount exported during 1925 was 147,257 cwts, valued at £823,901, and although this quantity was slightly lower than 1924, the value increased by nearly 30 per cent.

Coffee is one of the principal crops of Tanganyika, and the exports from that territory increased from 105,222 cwts, valued at £352,529, in 1924, to 120,186 cwts, valued at £481,055, in 1925.

In Uganda efforts are being made to introduce the growing of "Robusta" coffee as an alternative crop to cotton. Careful experiments have been made, and an excellent coffee has been produced. The exports for 1924 were 41,093 cwts, valued at £167,695, and for 1925 29,884 cwts, valued at £140,019. Owing to the lateness of the rains, the bulk of the 1925 coffee crop will be reflected in the 1926 export figures.

The Natal tea industry does not appear to be progressing, and crop estimates are again in the neighbourhood of 1,000,000 lbs.

In Nyasaland progress continues to be made, and exports during 1925 totalled 1,155,781 lbs, compared with 1,038,504 lbs in 1924. With the increased acreage coming into bearing this year, together with more efficient methods of handling the crop, the figures for 1926 are expected to show a large increase.

Apart from coffee, the principal crop in Tanganyika is sisal, which is grown largely in the Coast areas.

The export figures for 1924 were 18,428 tons, valued at £644,835, and for 1925 18,276 tons, valued at £688,451.

The acreage under this crop in Kenya has increased. The area of sisal over three years old, at June 30, 1925, was 35,610 acres, and the amount exported for the year was valued at £531,129, as compared with £396,777 in the previous year.

Copra to the value of £160,800 was exported in 1925 from Tanganyika and £35,915 from Kenya and Uganda.

Rubber became a more important item in East Africa owing to increased production consequent on higher prices.

Exports from Kenya and Uganda for 1925 were 8,722 centals, valued at £72,710, compared with 6,100 centals, valued at £18,954, for 1924, practically all of which was produced in Uganda. Tanganyika exported 9,752 centals, valued at £59,801, as compared with 1,771 centals, valued at £5,462, in 1924. The average price per cental of 100 lbs realised increased from 3s 2d in 1924 to 8s 6d in 1925.

Cloves are grown on the two islands, Pemba and Zanzibar, and the trade there is entirely dependent upon the crop results. Business during the past season has been quiet. A new decree has been promulgated for regulating the quality of cloves offered for sale. Whilst this cannot fail in the long run to improve the quality, its immediate effect has been a restriction of business owing to a considerable proportion of the stocks in the hands of dealers not being up to the defined standard.

For 1926 the crop is estimated at 150,000 bales, which is a normal figure.

The output of ground nuts from Tanganyika in 1925 was disappointing owing to the unfavourable season, and in some cases diseased plants.

The export for 1925 was valued at £178,685, being about half that realised for the previous year.

The coming crop is estimated at 12,000 tons, and it is stated that record figures from Tabora district are practically assured.

The exports of ivory from East Africa for 1925 were valued at £172,702, most of which came from Tanganyika.

The export of carbonate of soda from Kenya shows a satisfactory increase from £154,306 in 1924 to £213,680 in 1925.

Whale oil exported from the Union during the first eleven months of 1925 was valued at £370,768, as against £233,236 during the corresponding period of 1924.

Off the Natal coast 1,294 whales were caught, an increase of 271 over the figure for 1924, and the total value of the catch, which produced over 8,000 tons of oil, 3,300 tons of fertilisers, 500 tons of whalebone, 500 tons of bones, and 220 tons of finners, was approximately a quarter of a million pounds.

In South-West Africa about 240 whales were treated during the season, and oil and other products to the value of nearly £60,000 were exported.

Exports of fish from the Union during the year totalled £332,000 in value, compared with £306,000 during 1924.

From an examination of the official figures, it appears that considerable improvement in employment has taken place in South Africa during 1925, particularly in the case of coloured and native workers.

This is borne out by the reports from independent sources, all of which agree that industrial unemployment is not so serious as it was a year ago, and that, with the exception of the "unemployable" class, comparatively few industrial workers are out of employment.

The electrical industry in its various branches continues to expand. Many electrical schemes are being undertaken throughout the country, while the new power stations in process of completion for the Government will add greatly to the country's output of electricity.

Manufacturers of foodstuffs are making good progress; millers are reported to have had a satisfactory year; while jam-makers have an almost complete monopoly of the local market, and are hoping to build up an export trade. Canners of cray-fish have been handicapped during the present season by small catches. France is still the principal market for this product, but increasing quantities are being taken by England, Australia, Italy and Belgium.

Tanners have been generally busy, and boot and shoe factories appear to be fully occupied.

The wagon-building industry had a prosperous year during 1925 on account of the additional transport needed for the large maize crop.

The textile industry is having considerable difficulty in making headway, in spite of heavy protection, but some progress is being made in the manufacture of blankets and rugs.

With regard to other individual industries, builders, contractors, brick and tile makers, manufacturers of furniture, &c., have been generally well employed in meeting the active demand which exists for increased living and business accommodation and equipment—principally in the urban areas.

I will now conclude by moving the first resolution, viz.:—

"That the report and balance-sheet to March 31, 1926, now presented, be adopted" (Applause),

and I will ask my colleague, Sir David Barbour, to second it.

Sir David Miller Barbour, K.C.S.I., K.C.M.G.: I have much pleasure in seconding the resolution which has just been proposed by the chairman.

The Chairman: Before putting the resolution to the meeting I will give the shareholders an opportunity of making any remarks they may desire to make on the report and accounts (A pause.) If there are no remarks, gentlemen, I will put the first resolution to the meeting. Will those in favour of it kindly signify in the usual way? Those against. That is carried.

I have now to make the formal declaration of dividend.

Declaration of Dividend. "As empowered by the articles of association, on behalf of the board, I now declare a dividend for the six months ending 31st March of 7s per share on 445,833 shares, as a final dividend for the 12 months ending on that date, with a bonus of 2s 6d per share (making, with the interim dividend, a total distribution at the rate of 16½ per cent. per annum), subject to income-tax, to be paid to those shareholders whose names appeared on the register on the 30th day of June, and to become payable on the 24th instant."

Mr R. E. Dickinson: I have much pleasure in proposing:—

"That E. Clifton Brown, Esq., J. Fairbairn Re-election of Finlay, Esq., C.S.I., and the Right Hon. the Earl Directors. of Selborne, K.G., be re-elected directors of the company."

Mr Horace Peel: I have much pleasure in seconding that proposal.

The resolution was unanimously adopted.

The Chairman: I will ask Mr Retallick to propose the next resolution, which it is usual to put from the other side of the table.

Mr J. J. Retallick: Mr Chairman and gentlemen, I beg to move:—

"That A. T. Turquand-Young, Esq., F.C.A., Sir Gilbert Garnsey, K.B.E., F.C.A., and Roderick M. Peat, Esq., F.C.A., be re-elected auditors of the company for the ensuing year at a remuneration of 400 guineas each."

These gentlemen are well known and highly respected, and know thoroughly all the workings of the bank. I feel that we cannot do better than re-elect them for the present year.

Mr Joseph Nissim: Mr Chairman, I have very great pleasure in seconding this resolution.

The resolution was unanimously agreed to.

The Chairman: Ladies and gentlemen,—
Vote of Thanks to the General Managers and Officers of the Bank. Although we have now completed the actual business of the meeting, I have one more resolution to move, and that is:—

"That the thanks of the meeting be given to the general managers and other officers for their valuable services." (Applause.)

I know it will receive your hearty support, and I feel sure that it will give you as much pleasure to pass it as it does to me to put it to you.

We have reason for congratulating ourselves to-day on the results of the progress of the bank, as indicated in the figures we have just considered, and it must be quite obvious to all shareholders that these results could only be attained by the continued zeal and devotion of our large staff. Your directors are glad to have an opportunity of placing on record their appreciation of the conspicuous ability with which the very heavy responsibilities of our vast business have been shouldered by our general managers in South Africa and the senior officials in London, East Africa, and New York. At the same time, we realise that all their zeal and ability would not achieve such favourable results without the loyal support of the whole of the staff from top to bottom. We are grateful to them for their devotion to the interests of the bank, and we believe that you, as shareholders, will be pleased to express your appreciation of the value of their services. (Applause.)

It gives me personally very much pleasure to move the resolution, and I will ask Mr Gilmour to second it.

Mr T. L. Gilmour: If I may say so, Mr Chairman, it is, I think, not only appropriate but extremely desirable that the resolution which you have moved should be supported from this side of the table. It is perfectly true that we, as shareholders, have

not the same opportunity which you and your colleagues have, sir, of gauging the value of the services rendered to the bank by the staff, but I think that each one of us must have had some personal opportunity of coming into contact either with the higher officials or with some members of the staff, and I am sure that I am speaking not only on behalf of a majority of the shareholders, but on behalf of the whole body of the shareholders, when I say that it gives us extreme pleasure to associate ourselves with this resolution. It is, I am sorry to say, some 15 years since I had the pleasure of being brought into personal contact with the staff in South Africa, but, incidentally, I may say that it was as a result of the impressions which I formed of the bank in South Africa that I first acquired an interest in this great corporation. I have, however, as others have, no doubt, had opportunities, during the visits paid by Mr Gibson from time to time to London, of being brought into contact with him, and of observing the zeal and ability with which he has protected and defended the interests of the bank, and there are, perhaps, more here who have been brought into contact with the officials in London. I was extremely pleased to hear the words which the chairman used in reference to Mr Lowndes and the visit which he has paid recently to East Africa, and I feel sure that the shareholders will endorse every word that fell from the chairman's lips. I should like also to say that we are, if I may say so, extremely fortunate in the whole of the superior members of our staff. I have been brought into contact with Mr King and Mr Hoey, and I am sure that we can congratulate ourselves upon the possession of their services. Gentlemen, we are proud of our bank, but a bank is a composite thing. The directors play a part which I should be the last to minimise, and the shareholders also play an important part; but I venture to think that the staff play a part which is not less important than the part played by those other entities I have named. And what is the result? I claim that to-day the Standard Bank of South Africa has in a peculiar degree the confidence of the public, and I claim that it is due to the co-operation of those varying elements. Gentlemen, I have the greatest pleasure in seconding the resolution.

The Chairman: Ladies and gentlemen, it has been proposed and seconded that the thanks of the meeting be given to the general managers and other officers for their valuable services.

The resolution was passed unanimously.

The Chairman: That concludes the business of the meeting, gentlemen.

Sir Frederick Eley, Bart.: Mr Chairman, it is my pleasurable duty to propose a vote of thanks to the board, but before formally moving it I should like to congratulate the direction and management on the year's result, on the increased distribution—no doubt very fully considered—and, what is to my mind more important, the great financial strength and liquid position as disclosed. The Standard has long enjoyed the position of a classic in our overseas institutions. Its reputation is second to none, and one day perhaps some historian may try to record what the bank has done for South Africa and for the pioneers and settlers there. Those who understand, as some of us do, the class of business which comes within the category of its operations, appreciate the many difficulties which must from time to time confront the board of a bank like the Standard, and it is the highest credential to the gentlemen who have constituted the directorate since its inception 64 years ago, of whom you, sir, and your colleagues to-day are worthy successors, that during that period the shareholders' and depositors' interests have been jealously guarded, and that, while doing this and building up a great bank, the legitimate claims for assistance to its customers and the development of trade in that country, and the opening up of its resources, have been fully responded to. It gives me much pleasure formally to move:—

"That the cordial thanks of the meeting be awarded to the directors for their attention to the affairs of the bank, and to the chairman for his conduct in the chair."

I will call upon Sir William Mitchell Cotts to second the resolution.

Sir William Mitchell Cotts, Bart.: Mr Chairman, I have very great pleasure in seconding this resolution. I think we as a body of shareholders to-day have to congratulate ourselves upon having such a body of directors to preside over our affairs. They have very great knowledge and very varied knowledge of the world's markets, and I think we could not be better represented. I have very great pleasure in seconding this resolution.

The resolution was cordially approved.

The Chairman: On behalf of my colleagues and myself I thank you very much, gentlemen, for your kind expression, and Sir Frederick Eley and Sir William Mitchell Cotts for the kind words they have said about us.

The proceedings then terminated.

BANK OF ROUMANIA, LIMITED. ROUMANIA'S SOUND FINANCIAL POLICY.

The meeting of the Bank of Roumania, Limited, was held, on the 21st instant, at Winchester House, Old Broad street, London, General the Hon. Sir Herbert A. Lawrence, G.C.B., presiding.

The secretary (Mr F. P. Carrington) having read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: The balance available, after making provision for bad debts and income-tax, amounts to £14,472 10s 4d. The board recommends the payment of a final dividend of 3s per share, less income-tax, and that the balance of £2,566 14s 4d be transferred to contingency account.

The business of the bank continues to be satisfactory. The working expenses, however, are heavy, due to the relatively high cost of living, and the rate of exchange at which we have to convert our lei profits reflects adversely on our profits in sterling.

When inflation has once started it is difficult to arrest the movement. The Government of Roumania have declared their intention of following a policy of non-inflation, and they have attained a considerable measure of success.

The policy of a restricted fiduciary circulation, while it assists to steady the exchange, has caused a stringency of money. The scarcity both of cash and banking credits has continued during the year 1925, and commercial transactions have been restricted.

The unusually limited export of grain last autumn had a pronounced effect on business, and instead of great activity, such as is usual in the autumn, general stagnation was experienced. This, of course, has had its effect on the bank's earnings. However, we confidently look forward this year to better business.

SOUND FINANCIAL POLICY.

In the early part of this year the Minister of Finance, when introducing his Budget for 1926, said:

"By balancing our Budget and at the same time stopping monetary inflation, by resuming the service of both pre-war and post-war internal and external public debts, by consolidating the floating debts, by meeting, in short, our liabilities of all kinds, we have amply demonstrated that we have not only the will but also the power to fulfil our contractual obligations up to date."

With the conclusion of the agreements for the consolidation of war debts between Great Britain, the United States of America, and Roumania at the end of last year, Roumania has now consolidated all her public debts with the exception of the war debt to France.

The value of imports into Roumania from all countries amounted to 30,098 million lei, and exports to 20,025 million lei, showing an adverse balance of about 1,000 million lei.

Trade between Great Britain and Roumania remains steady, and, in fact, shows a slight improvement. The exports from Roumania to this country were valued at £2,278,000, as against £2,208,000 in 1924. Imports into Roumania from Great Britain were valued at £3,071,000 (of which cotton goods represented £1,504,000), as against £2,851,000 in 1924.

AGRICULTURAL POSITION.

Taking the important industry of agriculture, the total area cultivated was greater than that of 1924 (20,670,000 acres, as against 28,400,000), and the yield per acre of all cereals was also greater. This was satisfactory so far as it went, but the exports of grain fell from 1,406,300 tons in 1924 to 841,500 tons in 1925. It is estimated that at least 1,500,000 tons of cereals are stored in Roumania awaiting exportation. The falling off in exports of grain may be accounted for by the drop in world prices of grain, the lack of efficient railway transport to the coast, and the heavy export duties. These export duties were reduced in July last, and further brought down in March this year, and it is anticipated that this latter reduction will encourage holders to sell their stocks. This year's crop promises to be very good, and the winter weather has been distinctly favourable for the autumn sowings.

The brightest spot in Roumania's economic life is the oil industry, which is undoubtedly flourishing, and the production for 1925 was a record for Roumania, reaching 2,313,000 tons, as against the previous best production of 1,882,000 tons in 1913 and 1,850,000 in 1924.

Exports of oil went up from 435,000 tons, valued at 3,366 million lei in 1924, to 783,000, worth 5,668 million lei, in 1925. It is estimated that nearly double this quantity will be exported during 1926.

A change of Government has taken place since the close of 1925: the Liberals, who had been in power, with Monsieur Jonel Bratianu as Prime Minister, since 1922, resigned in the early part of this year. The new Cabinet has as its head General Alexandre Averescu.

Lord Oranmore and Browne seconded the motion, which was carried unanimously.

SECURITY FIRST

ROYAL INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

ROCK INVESTMENT COMPANY, LIMITED.

FURTHER PROGRESS—BOARD'S SOUND POLICY.

The fourteenth annual general meeting of the stockholders of the Rock Investment Company, Limited, was held, on the 20th instant, at River Plate House, London, Mr Martin Coles Harman, the chairman of the company, presiding.

The secretary (Mr R. J. Harper) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: This is the second annual meeting of the company at which I have had the honour to preside. The report and accounts now before you indicate, I am glad to say, a further improvement in our position both as regards revenue and capital.

The ordinary stockholders will remember that last year I informed them that in the interests of the debenture stockholders and the preference stockholders the board intended to adopt a most conservative policy in regard to dividends upon the ordinary, and that, at any rate, until the depreciation had been completely made good and in addition a really handsome reserve fund had been built up they should not expect more than a nominal rate of 1 per cent. dividend. Thus it comes about that, although we have earned in the year under review at the rate of about 23 per cent. upon our ordinary, we are paying out only 1 per cent., and are retaining the balance in our surplus revenue account, which is now over £35,000, or equivalent to about seven years' dividends on the preference stock.

The reward of this abstinence upon the part of the ordinary stockholders should be a greatly increased asset value later on.

You will have noted with pleasure that the auditors' report this year is free from any qualifications.

The figures of the balance-sheet are, I think, more or less self-explanatory. For the purposes of easy reference, the previous year's figures are quoted in red ink. The figures on each side of the balance-sheet show a considerable increase, but if you deduct the securities sold in advance from the investment item it will give you a fairer idea of the actual growth.

The past year has been a very busy one for your directors, their associates and staff. It would have been quite impossible to have made the further progress which has been made during the past year without the wholehearted assistance of our associates and staff, and among the latter I should particularly like to mention Mr Harper, our secretary, who is, in my opinion, entitled to the warmest thanks of the stockholders for the thorough manner in which he has carried out his onerous duties.

COAL STRIKE AND FRENCH EXCHANGE.

We are sorry to meet the shareholders to-day under two shadows, one being one of the most calamitous industrial disputes that has ever afflicted this country, and the other being the conspicuous weakness of the French exchange.

The coal strike will certainly have an adverse effect upon the balance-sheets of numerous industrial companies. What its permanent effects will be upon the commercial and financial interests of this country must be left to the future to be seen. It is to be hoped that the loss will be a temporary one, and that it will be more than made up for over a period by a better mutual understanding between the conflicting parties, and, above all, by a better appreciation of the economic standpoint, which is so often overlooked. Unfortunately, the longer the dispute lasts the more permanent are its dire results likely to be. So far as we are concerned, although we cannot hope to escape altogether its inevitable general ill-effects, we have at present no special reason to fear that our progress will be greatly retarded even if the struggle is to be still further prolonged.

So far as the franc is concerned, fortunately we have carefully avoided franc investments, so that any harm we might suffer under that head could only arise indirectly through the general disturbance which violent fluctuations in the value of the currency of such a near neighbour as France is might in certain circumstances bring about.

Mr D. C. Levin seconded the motion.

SHAREHOLDER'S TRIBUTE TO THE BOARD.

Mr Cooper said that, after listening to the speech from the chair on the position of the company, he thought it would be admitted that the progress made since the present board took control in October, 1925, had been amazingly rapid. In fact, he thought

that the results which had been obtained were a miracle of financial achievement. He sincerely hoped that the board would continue their conservative financial policy.

The resolution was then put to the meeting and unanimously approved.

The Chairman then proposed that a dividend of 1 per cent., less income-tax, be paid upon the ordinary stock.

Mr Wm. Harman seconded the motion, which was carried.

The retiring director (Mr Martin Coles Marman) was re-elected and the auditors (Messrs James Meston and Co., chartered accountants) were reappointed.

TAQUAH AND ABOSSO CONSOLIDATED, LIMITED.

RESULTS OF DIFFICULT YEAR—NATIVE LABOUR SHORTAGE.

The ordinary general meeting of Taquah and Abosso Consolidated, Limited, was held on the 23rd instant.

Mr T. F. Dalglish, the chairman, said, in the course of his speech: The ore treated amounted to 105,776 tons, against 96,326 tons in 1925, an increase of 9,450 tons. The value of the gold recovered gave a return of 36s 10.6d per ton, against 45s 11.1d the previous year, when we had the benefit of a premium on the standard value. The recovery per ton—leaving premium out of account—is 6s 4d less, which is explained by the reduced tonnage and lower average value of the ore taken from the Taquah Mine, which, as you know, is richer than that from the Abosso and Adjah Bippo mines. The working costs, on the other hand, show a substantial reduction of 3s 2.4d per ton, which in the circumstances your directors consider very satisfactory.

The ore reserves have been taken at 450,570 tons, as against 529,270 tons last year. The latter figure included 86,400 tons in the Taquah Mine, of which 16,055 tons were broken in the stopes during the year. As it is difficult to say how much of the remaining ore can be extracted profitably, since the diminishing tonnage must bear the whole of the fixed charges, your directors have considered it wiser to eliminate this figure entirely from the estimate of the developed ore. As a further precaution against loss they have written off £10,000 so that the cost of the ore reserves may be put at a safe figure.

RESULTS IN NO. 15 LEVEL.

The most interesting feature in the Abosso Mine is to be found in the No. 15 level, 200 feet below No. 14, on which driving has

been commenced. The internal shaft and two winzes 490 feet apart has been sunk on the reef a total of some 550 feet, and have disclosed the high average value of 44s per ton over a width of 50 inches. We look forward, therefore, to opening a block of good-grade ore here much above the average value, and this at the bottom of the mine. The sinking of the internal shaft is being pushed on to the No. 16 level.

The result of the year's working has been disappointing, and is attributable almost entirely to the shortage of native labour. The average number of natives on our books in 1924-5 was 3,300, while in 1925-6 it was only 2,758, a drop of 16 per cent. That this percentage is not reflected in the number of tons crushed, which actually shows an increase of about 10 per cent., is entirely due to the introduction of jack-hammer drills in the stopes. At first there was the usual objection on the part of the natives to adopt a new appliance, but this was overcome, and the efficiency gradually improved as the natives became accustomed to use the drills. The latest figures I have are those for the months of March, April, and May. A maximum of 28 drills were then at work in the stopes and on development. Forty-five per cent. of the ore from the Abosso and Adjah Bippo mines was broken by these drills, and the proportion is gradually being increased month by month. During this period machine-broken ore was found to be 2s 9d per ton cheaper than ore broken by hand, and the saving ought to be much increased as more drills are brought into operation. Not all of our stopes are suitable for machine drilling, but wherever possible it is being introduced. We now have 45 drills on the mines, and when the new engine, now nearly erected, is available, we should have 30 drills working in stopes, 10 on development work and five in reserve or under repair. We are therefore encouraged in the hope of reaching the monthly tonnage of 10,000 tons which our general manager considers necessary for profitable working.

CHANGE OVER TO JACK-HAMMER STOPING.

The past three months have given disappointing results, but in justice to our staff it must be recorded that they have encountered and surmounted an almost record rainfall, and its consequent difficulties. It will be recognised that in changing over from hand-stoping to jack-hammer stoping much re-arrangement of the plant has been involved and additional power and pipe-lines have had to be installed. The new engine, already referred to, should be in commission next month. It is anticipated that we shall then gradually be able to do the most of our stoping in Abosso and Adjah Bippo mines with these drills, and to proceed with development at a greater rate.

Although jack-hammer drills will go a long way to help us to attain the crushing we aim at, they will not dispose of the question of shortage of labour. We still require more hammer-boys and more shovel-boys. Our efforts jointly with the other mines to recruit labour in the Northern Territories during the year have been a complete failure, and we have been dependent on obtaining casual natives in the Colony. Early this year, in response to our representations, the Colonial Office withdrew the embargo on recruiting in Nigeria. An agent was sent there, but here, again, I am sorry to have to tell you, we failed, as with so much industrial activity in that country the available supply of native labour has not exceeded the demand, and there is naturally in such a progressive country some disinclination to encourage the migration of the natives.

The report and accounts were adopted.

BRITISH NORTH BORNEO RUBBER TRUST, LIMITED.

STRONG FINANCIAL POSITION.

The seventeenth ordinary general meeting of the British North Borneo Rubber Trust, Limited, was held, on the 21st instant, at Winchester House, London, Sir Ivor Philipps, K.C.B., presiding.

The Chairman, in moving the adoption of the report and accounts, said: Our reserve account has now reached the round figure of £50,000, and, as I told you last year, it will be our endeavour to continue to add to this regularly. The loan from our bankers at £53,000 is lower than it has been for some years, but this is only in anticipation of the amount we knew we should require for dividend. On the other side of the balance-sheet the book value of our investments is shown at £518,054, which is about the average for the last six years. We took advantage of the rise in rubber share values to dispose of a certain proportion of our holdings. We realised nearly £42,000 profit in all, of which £40,000 came from rubber. But we have since made numerous purchases at prices some way below the best of rubber shares whose dividend prospects are particularly bright, with the consequence that we have now 44½ per cent. of our total investments in rubber, compared with 40 per cent. at June, 1925. The first item on the receipts side gives the amount received in interest and dividends on our investments, less the interest paid on our bank

loan. The sum actually received during the year amounted to £40,965, and this was after deduction of income-tax. It compares with £19,573 last year. Underwriting commissions also were considerably in advance of 1924-25—£2,567, compared with £1,207.

The net revenue carried to balance-sheet amounted to £39,611, approximately two and a-half times that of the previous year, which was £15,807. This improvement enables us to recommend a dividend of 8 per cent. for the year, together with a bonus of 1 per cent. The sum distributed, together with the managing director's commission and income-tax on directors' fees, amount in all to £30,775, and will thus leave £6,115 to be carried forward. Shareholders at the general meeting in 1920 voted that directors' fees should be paid free of tax. But your board resolved that they would not take the tax unless the dividend paid was 8 per cent. or more. You will, perhaps, like me to remark on the valuation of our share holdings. At June 30th it was clear that our issued capital was intact, and that, in addition, the valuation showed a substantial surplus equivalent to nearly 8s per share. On the break-up value of our investments it will be thus seen the value of each share would be about 26s after the dividend has been paid.

The report and accounts were unanimously agreed to.

EAGLE OIL TRANSPORT COMPANY, LIMITED.

STRONG POSITION—REPAYMENT OF OUTSTANDING NOTES.

The fifteenth ordinary general meeting of the Eagle Oil Transport Company, Limited, was held, on the 20th instant, at Winchester House, Old Broad Street, London, the Hon. Clive Pearson (the chairman) presiding.

The secretary (Mr C. H. M. C. Wilson) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen—I am pleased to be able to report that your vessels have given satisfactory service throughout the year under review. Their condition has been well maintained, and we have again been able to add to our repair reserve in consequence of the amount spent in repairs having been less than the amounts set aside for this purpose. This reserve, which has been built up to meet the cost of Lloyd's special surveys and the increased repairs which must necessarily arise as your vessels grow older, cannot be expected to show a continuous increase as in the past, and, in fact, as the heavier survey expenses come to be incurred in due course, we must anticipate a gradual depletion thereof.

The freight market for tank steamers showed no improvement over the previous year, and reached a very low level at the end of 1925. As a consequence, our original chartering agreement remains suspended, but, since the ordinary shareholders have again waived their right to a dividend, our revenue enables us to pay the maximum dividend of 8 per cent. on our preference shares, and for the third year in succession to write the substantial sum of £750,000 off the cost of our vessels.

REPAYMENT OF OUTSTANDING NOTES.

Turning to the balance-sheet, a further £142,300 of the company's notes have been purchased and cancelled, and I would mention that it is our present intention to exercise our option of repaying on June 30th next the whole of the notes outstanding at the stipulated price of £101 per cent.

The depreciation and sinking fund reserve stands at £4,144,934. The repair, &c., reserve now appears at £648,849. Creditors show a reduction of some £167,000, while cash shows an increase of some £513,000.

Since the date of the balance-sheet we have sold the s.s. "San Gregorio," one of our older vessels. The price received is regarded by your directors as satisfactory.

ARRANGEMENT WITH ANGLO-MEXICAN PETROLEUM COMPANY.

You may be interested to hear that as from January 1st last we have entered into arrangements whereby our associated company—Anglo-Mexican Petroleum Company, Limited—who are the marketers outside Mexico of the whole of the products of our charterers, have undertaken, with due safeguards to your interests, the management of your fleet. The relations between that company and ourselves have always been very close, and the arrangement has been entered into in the interests of efficiency and economy. I may say that the Petroleum Company has taken over the entire shore staff of the company, including your former manager and his technical staff, to whom our thanks are due for the efficient running of our fleet. Our thanks are also due to our staff afloat for the good services they continue to give to the company.

I beg to move: "That the report of the directors, together with the accounts of the company, for the year ended December 31, 1925, be received and adopted."

Sir Robert Waley Cohen, K.B.E., seconded the resolution, which was carried unanimously.

The Chairman proposed: "That the payment of the dividend in respect of the year ended December 31, 1925, on 400,000 cumu-

lative participating preference shares of the company at the rate of 6 per cent. per annum, together with a final dividend of 2 per cent., making 8 per cent. for the year, be and is hereby confirmed."

Mr A. S. Debenham seconded the motion, which was unanimously approved, and the formal business having been transacted, the proceedings terminated.

THE "BODEGA" COMPANY, LIMITED.

RESULTS OF PROHIBITION IN THE STATES.

The forty-sixth ordinary general meeting of the "Bodega" Company, Limited, was held, on the 23rd instant, at 42 Glasshouse Street, London, Mr H. W. Walmisley (the chairman) presiding.

The secretary (Mr G. H. Beardon) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the profit of the company for the financial year ended March 31 last amounted to £22,028, showing a slight increase over that of last year. The company's branches throughout were in good order, and were as up to date as it was possible to make them having regard to the class of business transacted in them. They had recently purchased a freehold fully-licensed property known as the Victoria Hotel, Great Yarmouth. Extensive alterations, redecoration and refurnishing had just been concluded, and the board were of opinion that the company now owned one of the most up-to-date hotels in that historic old city, and they looked forward to doing a profitable business there.

DROP IN WHISKY CONSUMPTION.

He had read in the papers that the consumption of whisky for the year ending March 31, 1926, was given as 12,074,000 gallons, a fresh low record, and compared with a relative figure of about 28,000,000 gallons in 1916. He understood that the port wine trade in the United Kingdom was at the moment also a declining one. Regarding the imports of sherry from Spain, the consumption in the United Kingdom was small as to be practically negligible.

Apparently at the moment the question of prohibition lay dormant, but it had a knack of suddenly becoming very wide awake, and it was their duty always to be on the alert. Sir William Arbuthnot Lane, on his return from America, had stated that prohibition was really a farce in America. One could get liquor anywhere. The poorer people got the poisonous stuff and the richer got the good. Sir William had seen more drunken people in a month in America than he had seen in England for the last two or three years. Figures issued by prohibitionists showed that drunkenness was increasing in America, whilst in England and Wales there had been almost a progressive decrease in convictions for drunkenness and in crime since 1913. It was contended that in the whole of America the convictions for drunkenness during the prohibition years showed a decrease over the wet years of 44.3 per cent. The reduction, however, in England and Wales without prohibition during the same years, 1913-23, had been much greater. A very remarkable fact was that the decrease in drunkenness during the wet years was as great without prohibition as the reduction claimed during the prohibition period. American cities were still more drunken than English cities.

LOCAL OPTION AND TOTAL SUPPRESSION.

On October 19, 1925, Mr Leif Jones, at Manchester, said that they had taken to local option because it was the shortest way to reach the total suppression of the liquor trade, whilst on December 1, 1925, Mrs Walter Runciman had said that local option was the

only practical method of attaining the total suppression of the drink trade.

For the current year the directors were pleased to be able to repeat the dividend of 5 per cent. actual paid last year, with the addition thereto of a bonus of 1 per cent. actual. Shareholders would, therefore, receive this year 6s a share on their £5 fully-paid ordinary shares and 4s 9 3/4d a share on their £5, £4 paid, ordinary shares.

In 1911 the net profits of the company were £15,100, the dividend on the ordinary shares and bonuses equalled 3 per cent., whilst the carry-forward was £8,500. In 1920 the net profit was £64,600, whilst the dividend on the ordinary shares and bonuses equalled 12 1/2 per cent. and the carry-forward was £70,200. In 1923 the net profit was £19,375, the dividend 5 per cent., and the carry-forward £25,884, whilst in 1926 the net profit was £22,029, the dividend 5 per cent. with a bonus of 1 per cent., and the carry-forward £20,220.

A considerable discussion ensued, in the course of which an amendment was proposed for the appointment of a committee of investigation, but ultimately the report and accounts were adopted.

rather surprising that prices have receded so little. Nevertheless, the heavy reduction in the bear position during the last week or so is not likely to improve the undertone of the market, for it has removed a like proportion of potential capacity to buy. The shipment of silver from China to London has not taken place for many years. This movement indicates that the persistent transfer of silver from the United States to China has exceeded the latter country's powers of digestion. America has kept fairly in touch with this market by selling at every advantageous opportunity. United Kingdom imports and exports of silver during the week ending the 14th inst. were:—

	Imports.	Exports.
U.S.A.	101,045	71,104
Mexico	155,174	50,625
Canada	57,270	8,221
Other countries	19,600	
	333,089	129,950

INDIAN CURRENCY RETURNS.

* Half-yearly.

† Tax free.

offered, and the few lots available are held above milling value. Imported kinds also move off slowly, and prices tend in favour of buyers. In the floating and forward section trade is restricted, owing to fluctuating Continental exchange rates, and most descriptions were obtainable on slightly lower terms, being influenced by more favourable Canadian crop reports. Feeders, however, ruled firm, especially for La Plata maize in near positions. Steamers of this quality afloat sold 31s 9d to 32s 6d, and July clearance at 31s 3d per 480 lbs. Black Sea barley August sold 28s, and Tunisian July-August 28s per 400 lbs to U.K., c.i.f. terms. Wheat easier. No. 1 Northern Manitoba quoted 62s 6d, No. 2 ditto 61s 3d, No. 2 mixed Durum 57s, Barusso 61s 5s 6d, Australian 61s, all ex ship, choice white Karachi 61s 6d landed per 496 lbs. English nominally 14s 2d-14s 6d per 112 lbs, free on rail. Flour quiet. London standard grade 52s, town whites 53s, patents 54s-55s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported sack less for deliveries in the London districts. Of imported Manitoba patents range from 47s-49s 6d, Minneapolis 48s-49s, Australian 44s 6d per 280 lbs, ex-store. Maize firm. Plate new 35s 6d landed, ditto ex-ship to arrive 33s 6d-34s 3d as to position per 480 lbs. Barley maintained. Californian 36s-47s, Chilian Chevalier 50s-57s, ditto brewing 35s 6d-48s, Australian Chevalier 45s-46s ex-store, Smyrna 33s-47s ex-ship per 44s lbs. No. 3 Canadian Western ex-ship 30s, No. 4 ditto 29s 9d, American malt-ing 48 lbs landed 30s, Plate ex-ship 28s 9d, Russian 29s 6d per 400 lbs. English nominal. Oats: Plate descriptions tend firmer. La Plata ex-ship 22s 3d, landed 23s 6d, No. 2 Canadian Western ex-ship 27s, landed 28s, No. 2 Canadian feed ex-ship 23s 6d, landed 24s 6d, Chilian Tawny 22s 6d-22s 9d, landed 24s, American 38 lbs ex-ship 23s 6d, landed 24s 6d, mixed feed ex-ship 19s 6d, landed 20s 9d per 320 lbs. English 10s-10s 6d per 112 lbs, free on rail. Millers' offals firm. Broad bran 6s 3d-6s 9d, middlings 6s 9d-7s, fine ditto 8s 6d, bags included, ex-mill, feed oatmeal 7s 9d, light oats 6s 9d, ground oats 12s 3d per cwt, free on rail.

Oatmeal dull. London-made flaked 17s 6d, rolled oats 16s 6d, medium, also fine cut, 16s 6d, coarse, also medium pinhead, 16s 6d ex-mill per cwt.

AMERICAN WHEAT MARKETS.

Prices have declined this week, with the breaking of the hot, dry spell that was prejudicing crop prospects in Canada and the North-West, the advent of cooler weather and beneficial showers, and inactive export demand. A good deal of realising pressure occurred in the later stages. Quotations:—

	Jan. 2, 1925.	Jan. 7, 1926.	July 8, 1926.	July 15, 1926.	July 22, 1926.
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs	183	160	152½	159½	155
Chicago (No. 2 Winter)—Cents per 60 lbs	177	176½	137	143½	139½

Visible supplies of wheat in Canada, at 24,074,000 bushels, show a decrease of 294,000 bushels as compared with the previous figures. Supplies a year ago stood at 19,677,000 bushels.

COAL.

Our Cardiff correspondent writes:—During the present week a large number of coal cargoes, principally American, have been discharged at the South Wales ports, chiefly for the service of the Great Western Railway Company. Chartering on account of foreign imports has continued active, with cancelling dates extending till the end of August, and advices from Hampton Roads, as well as from Hamburg and Rotterdam, report increasing congestion. The Egyptian State Railway contract for the supply of 150,000 tons

over August and September is reported to have been placed with Messrs Watts, Watts and Co. at 34s 6d per ton c.i.f. Alexandria for South Wales coals, and at 36s c.i.f. for American coals. It is feared that in consequence of the strike this large order will be lost. Another contract diverted this week has been one for 30,000 tons for foreign depot bunkering purposes. There are no indications of any intention on the part of the miners' leaders to negotiate on the basis of the eight-hour terms.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange. Reports of quiet trading are general. There are a number of finishing mills still working under extremely difficult conditions and on somewhat precarious supplies of fuel and raw material. For the most part they are using imported coal, eked out with outcrop coal and such fuel as they may be able to obtain, and are, of course, confining their attention entirely to the working up of foreign raw and semi-finished products. The demand arising from this source has occasioned a considerable strengthening in the Continental markets, and supplies for anything like early delivery are not easily obtained. The strike of the Belgian dockers has been settled, and traffic conditions in Belgium are practically normal; but the fluctuations in the franc exchange have seriously disturbed the market.

Our Middlesbrough correspondent's report, dated July 22nd, is as follows:—Pig-iron: Business is absolutely stagnant, there being very little iron produced. Makers of No. 3 Cleveland G.M.B. are asking up to 90s per ton f.o.t. Hematite pig-iron is still obtainable in fair quantities, the quotation being about 80s to 81s per ton. Manufactured iron and steel: There is no new feature in this branch, most of the works being idle. There are no changes in quotations:—Steel ship plates, £7 17s 6d; steel ship angles, £7 10s; iron bars, £11; steel rails, £8. Iron ore: No transactions in foreign ore are taking place, and best Rubio is still nominal at 21s 6d per ton, c.i.f. Tees.

Our Glasgow correspondent writes:—The position in the iron and steel trade shows no change. Stocks of pig-iron are dwindling, and prices are firm at the recent higher levels. Demand from abroad for finished materials is steady, and those iron bar and sheet mills which are still able to operate (after the present holiday stoppage) are obtaining higher prices for their output. Sheet makers have full order books for both black and galvanised sheets, and the higher level of prices recently reached is not likely to be cut for some considerable time. £16 10s per ton is now being offered by exporters for galvanised corrugated sheets 24 gauge for any delivery this year that can be obtained. Several good engineering contracts have recently been secured by local firms, among which are one for 200 railways carriages for the L. and N.E. Railway placed with Motherwell firms, and a contract for the reconstruction of the Haven Bridge placed with Sir Wm. Arrol and Co., Limited, Glasgow, by the Yarmouth Port and Haven Commissioners.

Our Sheffield correspondent writes:—Activity in the finished steel and tool branches continues to be maintained at a fairly substantial level, and although stocks are now running low it has been possible to obtain sufficient supplies of raw and semi-material down to the present time. There is no Derbyshire or Northamptonshire pig-iron available, however, and British wire rods are unobtainable. The rolling mills are curtailing operations. Heavy steel is at a standstill, except that a few railway tyres and axles are being made. Several foreign orders for manufactured steel placed in Sheffield have been sent for execution to Germany. Locally, however, losses of business on account of the stoppage have not been considerable. Supplies of foreign outcrop coal have increased, and prices are easier. Both are giving results in excess of expectations, but the high cost is fatal to earning profits. A large batch of Russian orders for files and tools has just been completed, and the comparative absence of work from that market is responsible for quietude at numerous factories. Conditions continue slack in cutlery and plate, but the downward tendency appears to have received a check.

Our Cardiff correspondent writes:—In the iron and steel trade the position is practically unchanged. The tinplate works and other factories still operating are dependent almost entirely on foreign bars, the supplies of which are increasing. Receipts from works last week totalled only 27,787 boxes, compared with 51,277 boxes the previous week, but as the shipments were only 28,782 boxes, compared with 64,482 boxes, the stocks increased to 50,916 boxes. There has been no alteration in prices.

OTHER METALS.

TIN.—The market displayed firmer features, while influenced by higher Eastern and American cables and a fairly good demand from consumers. Later dealings were attended by some irregularity, though the general trend of values moved in sellers' favour. Sales were recorded in standard cash at £281 10s to £287 10s, and three months £281-£283. Business in the East was reported at £289 7s 6d to £290 17s 6d, £289 7s 6d and £289 17s 6d per ton c.i.f. terms.

COPPER slightly irregular on liberal offerings, while American markets were quieter, due to conflicting opinions regarding the functioning of the proposed U.S. Control Association. Dealings here, however, continue on a fairly liberal scale, comprising standard cash at £57 10s-£58, £57 17s 6d-£58 2s 6d, three months £58 12s 6d-£58 17s 6d-£58 10s and £59 1s 3d per ton.

LEAD active and firmer, though top points were not maintained, as sellers continued prominent, while some irregularity ensued. Good soft foreign pig July sold £32 2s 6d-£32 8s 9d, £32 5s-£32 3s 9d, August £32 to £32 6s 3d, £32 3s 9d, September £32-£32 3s 9d and £32 2s 6d, October £31 17s 6d, £32 2s 6d and £32 10s.

SPELTER opened steady, but after a quieter interval the market developed firmer features. July sold £33 17s 6d-£34, August £34 to £34 6s 3d and £34 5s, September £34 2s 6d, £34 6s 3d, October £34 2s 6d to £34 10s, November £34 7s 6d to £34 10s ton.

ANTIMONY quiet. English Regulus £74 10s to £75, and foreign £61 per ton ex warehouse.

ALUMINIUM.—Home trade nominally £118, export £120 per ton. QUICKSILVER firm. Spot £15 10s per bottle.

WOLFRAM firm at 14s to 14s 6d per unit.

TIN PLATES steady. I.C. coke prompt 25s 6d to 26s, and forward delivery after settlement of strike 20s 3d to 20s 6d per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, July 22, 1926.

The cotton market has continued quiet but steady, and business has been a little more active. On the whole weather news has not been quite so favourable, temperatures having been reported as too low. The United States Agricultural Bureau report is due tomorrow, and this has tended to restrict business. The spot sales for the week 16th to 22nd inclusive were 23,000 bales. Of these 14,770 were American, 1,250 Brazilian, 2,000 Peruvian, 2,060 Egyptian, 2,000 African, 400 East Indian, and 520 sundries. Imports for the same period were 46,295 bales, these including 24,833 American, 1,751 Brazilian, 8,491 Egyptian, 7,641 African, 3,245 East Indian, and 334 sundries. Quotations to-day are:—Middling American, 10.06d; Egyptian Sakel, 16.30d; uppers, 12.10d; fair Brazil, 10.16d; G.F. mod-rough Peru, 12.00d; smooth, 11.91d; Tinnevely F.G.F., 8.95d; West African middling, 9.81d; and G.F. East African, 11.65d.

MANCHESTER, July 22, 1926.

Business in the market during the past week has been uneventful, buyers continuing to limit their purchases. There is not sufficient confidence in current rates for customers to display any real enterprise. Uncertainty exists as to future raw material values, but there is no fear of any distinct rise just at present. In cloth for

India a miscellaneous business has been done, but on the whole demand has been less active than last week. Contrary reports have been received from China, and business has been at a low ebb. No operations of any importance have taken place for the several minor outlets. Quotations in American and Egyptian yarns have been rather steadier. Trading, however, has been within a narrow compass, the requirements of buyers being unimportant.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The best that can be said of this market under present conditions is that the tone keeps fairly good. Coal is being obtained at a price that is almost prohibitive, and the mills are running short time more on account of the scarcity of orders than on account of lack of fuel. There are one or two encouraging features, however. The demand for raw wool, both at the Colonial sales in London and at the country fairs, is remarkably good in the circumstances, and the price of raw material is being maintained in a way that indicates confidence in the future. As a matter of fact, most descriptions are above the Bradford parity, and although both topmakers and spinners are badly in need of new orders, they are well advised not to continue selling at prices below replacement costs. As things are, the demand for tops is mainly confined to the finer qualities, but the actual turnover is small, as users will only cover immediate and pressing requirements. There is very little business in the lower qualities, and prices are very irregular. This is even more noticeable in yarns than in tops, and all the indications point to trade running on the finer qualities when existing restrictions are removed.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales this week have continued to make good progress, although there is not much actual change in values. In view of the marked depreciation in the franc, French and Belgian buying has been quieter, but there has been not the slightest evidence of any breakdown in prices. Merinos in particular, have continued to move most encouragingly, and are making values on a parity with last series. The home trade is a fairly free buyer, which is a satisfactory feature. What amazes everyone is the quantity of second-hand parcels catalogued. Wools have come for re-sale from Boston, Bradford and France, owners in the last-named country no doubt being tempted to turn the wool into English currency for future use. Offerings of new clip wools from Queensland have been bought freely by the Continent, at prices which hardly looked likely a good fortnight ago. A special feature of the series is the very good figures paid for New Zealand scoured merinos, up to 5½d being realised. This compares exceedingly well with the best Queensland combing scoureds at 4½d. South African wools this week have slightly eased, both scoureds and greasy parcels hardly fetching the extreme prices of last week.

Crossbreds do not show very much change. Good fine half-breds are barely maintaining last sales closing prices, and most crossbreds in the grease have lost ground about 5 per cent., but that is very little considering the limited trade in these wools. No doubt the slight ease in fine half-breds is due primarily to the lessened purchases of France. There is no change in slipes, which continue to make last sales prices for all good qualities and fair length lambs, while short clothing wools suitable for the blanket trade are very firm indeed. Scoureds are distinctly dearer, largely due to their comparative scarcity, America, Scotland and the Yorkshire trades all being keen to purchase. The auctions finish next Wednesday. Concerning the great handicap under which the home trade is working, the results of the series so far cannot

Associated with Harrisons Ramsay Proprietary Ltd., established throughout Australasia

but be regarded as satisfactory. If the home trade had been running its mills full time, merinos would have been distinctly dearer, while crossbreds would also have maintained fully last sales level.

THE JUTE TRADE.

DUNDEE, July 22.

The steadier tone of raw jute prices has proved temporary, and an easier tendency again prevails. Shippers are still reluctant to offer fibre for the early positions of August and September, and fairly high prices are the rule. The crop prospects have been very favourable, and in some quarters not less than twelve million bales of an outturn are looked for from season 1926-27. Consumers at all centres are keeping out of the market, under the impression that values will fall several pounds per ton. The ruling values at present are £36 for First Marks actuals for August shipment, and at £34 for September. Sellers would entertain £32 for October shipment. Daisee assortment is being offered at £27 for October-November shipment, but there are no buyers. Spinners are displaying no interest in these rates, which are far in excess of the prices at which they are compelled to dispose of their yarns. An attempt was made to further depress prices of jute yarns, but spinners made a determined stand, and would not accept less than 3s 1d for common 8 lb cops, and 3s 2d to 3s 3d for 8 lb spools. Values of other yarns have not fallen in proportion. Sacking 24 lb weft has been sold at 4½d to 4½d, chains at 5½d to 5½d, twist at 5½d to 5½d for 3-ply 8 lb, and Rove at from £35 to £37 for 48 lb, and £26 to £28 for 200 lb, according to quality.

Cloth buyers have been more in evidence during the past week, but the quantities purchased are insufficient to prevent a further depreciation of prices. Manufacturers have entered orders at from 4½d for 10½ oz 40 in hessians, and from 3½d for 8 oz. The Calcutta goods market has been interrupted by holidays. Prices rule from 32s 3d for 10 oz and 26s for 8 oz, July-September shipment. Spot prices have eased to 31s 6d for 10 oz and to 26s for 8 oz, business done.

HIDE, LEATHER, AND ALLIED TRADES.

The domestic hide market remains firm, and prices at Thursday's Bermondsey auctions were unaltered. Best ox sold again from 7½d to 8½d, and seconds from 5½d to 7½d per lb. Best heavy cows remained unsold, but lights made 5½d. Calfskins were steady, best selections selling from 6d to 11½d. Woolskins made 5s to 9s 3d; hogs, 4s 6d to 11s; and lambs, 2s to 5s 8d each. The imported hide market is firming up, as Germany and Russia have been freely buying of late. Home tanners are also interested, in spite of the reduced input, so that 7½d is now asked for best Argentine ox and 7½d for Montevideos. Dry hides are rather quiet, and 9½d has been accepted for B.A. Americanos. The Chicago position is called as strong, with best native steers quoted now at 15 cents.

Although trade in sole leather is regarded as quiet, there is sufficient demand to keep stocks well within compass. Now and then a tanner with an accumulation of bends seems prepared to sacrifice a little to clear, but on the whole the market is firm. As the end of the season approaches the demand for upper stock gets less, and only small parcels of coloured glass, willow calf and patent are wanted. The boot and shoe trade is rather quieter, as the prolonged coal strike is badly affecting the demand.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

In spite of the disturbance in industry occasioned by the coal dispute, house building during the past month has been proceeding most satisfactorily, and has been the sheet anchor of the timber market. The early months of the year found merchants faced with very large stocks of building woods, but with the good demand for timber for housebuilding and other construction work, the late opening of navigation, and the delays in shipping in early May owing to the general strike, stocks now are below the average, and the spot market is in a much stronger position than seemed possible in the closing days of April. Even if there were a rush of imports, the latter would only be anticipating the expectations of a good general demand for wood as soon as the miners returned to work. Building woods on the spot, therefore, have become firmer in value during the past month, and are likely to remain so provided no untoward event occurs in wood shipping circles to upset the poise of the trade here. The main point at issue is whether the North of Europe shippers can exercise a little more patience, and not press goods on to the British market until those bought and still to come forward have arrived and met with a satisfactory reception. Swedish and Finnish exporters, however, seem to be gauging the future of the British market accurately, are in no hurry to sell, and are firm in their asking prices. Wood shippers

from these countries have yet to sell each a third of their total export cut for this season, and although the Continental consuming countries (France and Belgium particularly) cannot be depended upon to buy largely this year, the general demand in this country should increase markedly with the close of the coal stoppage. Importers are now buying moderately for autumn delivery, but the future of the free on board and spot timber markets this season depends largely on the action of the British miners.

In the hardwood section of the trade mahogany log imports decreased in volume in June, but these additions could have been well dispensed with owing to the present poor inquiry. For other hardwood logs, however, imports have shown appreciable declines this year. Sawn hardwood imports have also declined in volume materially compared with last year, especially from the United States, and as the market continues dull for these descriptions, the falling off in supplies will not be regretted by holders of stocks. The furniture trade, according to official information, is only fair, but it is not too much to expect that with this year's record house-building the demand for furniture woods and furniture should increase steadily.

The pitwood market is lifeless. Imports, as expected, have declined considerably, and when the coal trade is resumed colliery owners are likely to be faced with higher charges for pitwood on account of the increase of freight rates occasioned by the shortage and high prices of bunkers.

VEGETABLE OILS AND OILSEEDS

Markets this week have been fairly steady as a rule, but in cases somewhat erratic. Linseed oil, in sympathy with seed, is dearer on the week, but prices are considered too high by consumers, who have been far from active buyers. Current value is about £35 10s per ton naked, ex Hull mill, prompt and to December, a small premium being quoted for the January-April position. Cotton oils are steady and scarce for early delivery, crude Egyptian being held for £41 and ordinary refined offering at the same figure. Soya, palm kernel, and other oils are about unchanged in value, but a poor trade. In the oilseed section linseed has commanded some measure of speculative interest, and on strong advices from Argentina, Plate to Hull was actually done at £17 7s 6d at the close of last week. This was followed by a sharp decline of 10s, since when the market has recovered to £17 2s 6d for seed afloat and August-September shipment, and £17 5s September-October. The strength of the position lies in the main in the fact that notwithstanding a record exportable surplus this season the balance remaining for export between now and the end of the year is less than that shipped in the same period last year. The cost is also being added to by the advance in freights, about 10s per ton in the past six weeks. Calcutta to London has been done at £18 12s 6d for July-August, but closes firmer. New Egyptian cottonseed is now offering for October loading at £10 10s 3d per ton to Hull.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Fair absorption continues with regard to spot parcels, and prices show no material alteration, while unchanged in the case of British goods. Czecho, granulated, spot, sold, 27s 1½d; July, 14s 8½d to 14s 9d; August, 14s 9d; November-December, 14s 10½d f.o.b., Hamburg. Dutch J, spot, sold, 27s 3d to 27s 2½d; ready, quoted 14s 9d; November-December, 15s, f.o.b., Rotterdam. Belgian crystals, prompt, nominally 14s 6d, f.o.b., Antwerp. Polish ditto, 14s 3d, f.o.b., Danzig. American and Canadian granulated, spot, 27s 8½d; July-August, to London, 15s 6d; and outports, 15s 9d, c.f. and 1. terms. Raw refining descriptions steady, and 6,000 tons Cuban 96 per cent., August, sold, 11s 9d to 11s 6½d, c.f. and i., Europe. White terminal slightly easier, with fair dealings in force. August, sold, 13s 9½d to 13s 7½d; October, 14s 2½d; November, 14s 3½d; December, 14s 7½d to 14s 6d; January, 14s 9d; February, 14s 10½d; January-March, 14s 11½d; March, 15s 0½d to 15s; May, 15s 4½d, 15s 5½d, 15s 3½d.

COFFEE.—Spot market disclosed general steadiness, and there was a fair off-take, particularly with regard to desirable qualities. Kenya, fair bold, sold, 136s 6d; peas, 148s 6d. Uganda, bold, 106s 6d to 122s; Matagalpa, 137s to 153s; Costa Rica, 174s 6d to 193s; peas, 155s; Maragogipe, fine coloury, 221s. Futures ruled firm, and May delivery sold, 88s.

COCOA.—Only small transactions on the spot, but at recent rates. Accra F/F, August-September, sold, 52s 6d, f.o.b.

TEA.—Indian auctions totalled 12,900 packages, for which generally quiet competition was experienced. Commoner qualities frequently ¾d to ¼d per lb lower, but good liquoring Dooraos commanded support at steady rates. Pekoe, sold, 1s 3½d to 1s 8d; broken orange, 1s 3½d to 2s 1½d. Ceylon sales embraced some 28,000 packages, and general run of quality cannot be described as attractive. Good to fine teas were steady, but medium and common ¾d to ¼d per lb down in most cases. Pekoe, sold, 1s 2½d to 1s 8d; broken orange pekoe, 1s 5½d to 1s 9½d. Java and Sumatra auctions amounted to 8,820 packages, which met with good competition for most descriptions, and prices disclosed no essential alteration. Best broken and leaf tea, suitable for export, were occasionally dearer. Pekoe sold, 1s 0½d to 1s 3½d; broken ditto, 9d to 1s 5d; orange pekoe, 1s 1d to 1s 4½d; broken ditto, 11½d to 1s 8½d; pekoe souchong, 10½d to 1s 2d per lb, in bond.

RICE.—General situation nominal, as demand at the moment is quite dormant in all directions. Two stars, Rangoon, spot, London, 16s 9d. Oiled Spanish, August-September, sellers, 21s per cwt, c.f. and i., London. Beans and peas dull, and mostly previous quotations.

SPICE.—Pepper quieter, and forward positions ruled slightly weaker. Black Singapore, f.a.q., May-July, quoted, 9½d; Lampong, May-July, 10½d; August-October, 8½d; Muntok, L.S., May-July, 1s 4½d; August-October, 1s 2½d. Pimento, spot, 6½d per lb, and July-August, steamer, to London, 58s 6d per cwt, c.f. and i. Cloves dull. Zanzibar, spot, 9d to 9½d; August-October, steamer, nominally, 8½d per lb, c.f. and i. Sago flour, July-August, 15s, per cwt, c.f. and i., U.K. Tapioca neglected, and nominally unaltered.

FRUIT (Dried).—Currants steady, but business still restricted. Amalia, quoted 30s to 31s; Gulf, 32s to 35s; Pyrgos, 29s; Vostizza, 40s to 52s; Patras, 31s to 33s; Australian, 46s to 52s. Sultanias move off slowly. Australian, new crop, 66s to 85s; South African, bleached, 70s to 76s; Californian, 55s to 61s. Dates steady. Siar, quoted 11s 3d to 11s 9d; Khadrowie, 15s to 16s. Raisins quiet. South African, 37s to 42s. Evaporated fruits: Apricots scarce, and realise full rates on spot while very firm forward, but other kinds in quiet request. Californian apricots, fancy, 140s; Australian, 125s to 135s; South African, new Royals, best, 140s. Plums, Californian, new, 20/30, quoted 105s; 50/60, 52s; 90/100, 37s; Oregon, 30/40, 63s; 35/45, 55s. Pears, Californian, extra choice, 75s; fancy, 85s; Lake Country, fancy, 90s. Apple rings, Californian, extra choice, 55s to 60s; prompt shipment, 48s; Canadian, spot, 54s per cwt.

CANNED GOODS.

CANNED FISH.—Sardines: Market unaltered, with a scarcity of fine quality. Portuguese, ½s, quoted 4s 3d to 6s per dozen tins. Salmon quieter. Red, tall, 1 lb, 60s to 64s; tall pink, 26s to 26s 6d; ½ lb, pink, 41s. Lobsters quiet. Best ½s, quoted 160s to 162s 6d, and ¾s, 92s 6d to 95s. Japanese crab scarce, on spot.

CANNED FRUIT.—Market generally unchanged, and trade is adversely affected by the industrial situation. Californian Bartlett pears, choice, 24-2½s, quoted 13s 6d to 14s; seconds, 10s 6d to 11s. Californian peaches, choice, 11s 6d to 12s 6d; standard, 10s 6d to 11s 6d; seconds, 9s 6d. Californian apricots, choice, 12s 6d to 13s; standard, 10s to 11s; seconds, 9s 3d per dozen tins. Singapore pines in quiet request on spot, with fair supplies available. South African and Hawaiian in moderate request, while forward business is restricted by high prices asked for the latter. Italian tomatoes quiet unaltered.

CANNED MEAT firm but quiet, but there is a good demand for Danish lunch tongues, which tend dearer. Corned beef 6s quoted 38s to 46s, as to quality. Danish lunch tongues range from 122s 6d to 132s 6d; American quoted 135s, with best at 140s to 142s 6d. Ox tongues firm. Cooked boneless hams continue in request, and finest Danish quoted 1s 8½d per lb for case of six tins.

CONDENSED AND EVAPORATED MILKS.—Market practically unchanged. Machine-skimmed sweetened, 11s 3d to 12s; full-cream unsweetened evaporated, 19s 6d to 25s; ditto sweetened, 21s to 25s upwards.

HONEY.—New Zealand sells steadily, but other descriptions quiet. New Zealand quoted 50s to 85s; Australian, 40s to 47s 6d; Jamaica ranges from 40s to 55s; Haiti, 37s 6d to 50s; Cuban, 37s 6d to 50s; Californian, 45s to 60s per cwt.

RUBBER.

There is nothing fresh to note in this market, which continues very quiet. Plantation standard sheet, spot and July, sold, 1s 8½d to 1s 8½d; August, 1s 8½d to 1s 8½d; September, 1s 8½d to 1s 8½d; October-December, 1s 9d to 1s 8½d; January-March, 1s 9½d to 1s 9½d per lb.

GENERAL.

HEMP.—Manila quietly steady. J, August-October, quoted £40 15s; K, £30 5s; L, £31 10s; and M, £28. New Zealand quiet, and H.P.F., August-October, quoted £36 10s; and fair, £34. African sisal steady. No. 1 Tanganyiki, July-September, £43 10s; ditto Kenya, £43 per ton. Only a small inquiry for Italian, but sellers adhere to previous a-k-ing prices.

SHELLAC.—General quietness prevailed. Fair T.N., spot, 132s 6d to 135s; August, 124s; October, 124s; December, 120s per cwt.

COPRA.—Prices eased slightly as buyers adopted a good deal of reserve. F.M.S. Straits, August-September, to Rotterdam, quoted £28 17s 6d; Dutch East Indies, ditto, £28 11s 3d; Ceylon, £30; South Sea Islands F.M.S. quality, £27 15s; and smoked, to Mar-seilles, £26 17s 6d. Palm kernels dull. July-August, to Liverpool, quoted £20 3s 9d per ton.

JUTE.—This market continued on a downward course, mainly for new crop positions, owing to reserve of buyers, and cable reports of beneficial rains in the districts of production. Continental spinners absorbed fair quantities of old crop on spot and near at hand at comparatively steady rates, but Dundee operated quietly. General trade in manufactured goods is decidedly slow. Firsts, spot, Hamburg, sold, £43; ditto, near steamer, £42 10s; new crop, July, £37 to

£36 10s; August, £33 15s to £32 5s; September, £31 to £30; October, £30 to £29 5s; October-November, also November-December, £30 to £29 5s. Lightnings, August, sold, £31 to £30 10s; September quoted £28 10s.

ESSENTIALS.—Market strong for menthol and peppermint oil. Menthol, spot, sold, up to 19s; October-December, 16s 6d; January-March, 15s 9d, 16s, 15s 9d; Japanese peppermint oil, spot, sold, 10s 6d to 11s; October-December, 9s 10d to 10s; January-March, 8s 6d to 10s. Refined camphor, spot, 2s 11d; crude, 2s 7d lb.

TALLOW.—Messrs Colchesters and Woolner write on July 21st as follows:—The tallow market was very quiet during the week, but prices were maintained to-day. There was rather more disposition to sell, but with less disposition to buy little business resulted. Shipments of tallow from Australasia during June amounted to 3,931 tons, against 6,900 tons during the corresponding month of last year. At auction to-day 1,255 casks tallow were offered, and 189 were sold. Quotations are:—Australian mutton: Fine, 45s 6d; good to fair, 44s 6d to 43s 6d; dull to dark, 42s 6d to 40s 6d; hard, 45s. Australian beef: Fine, 45s 6d; good to fair, 44s 6d to 42s 6d; dull to dark, 41s 6d to 40s; sweet, 45s 6d. Present shipment from Australasia: Good mixed, 44s 6d, nominally. Present shipment from South America, 44s. The market letter is unchanged. Town tallow, 39s 6d per cwt. Rough fat, per 8 lbs, 2½d; melted stuff, 29s 6d per cwt. Quotations are:—Town, 40s, net cash, naked.

ex works. Country: Frail casks, 40s; home melted, shipping casks, net, f.o.b., good coloured, 43s; fair to dull, 41s 6d to 39s 6d. Bone fat: white none; pale, none; benzine, 35s; melted stuff, 35s, f.o.b.

MISCELLANEOUS.—Cocoanuts quoted 23s per 100. Coir yarn, Ceylon, £21 10s to £37; Cochin, £24 10s to £49; Ceylon bristle, £17 10s to £23; cinnamon leaf oil, 4½d; citronella, Ceylon, 1s 7d; Java, 2s 5d.

METROPOLITAN CATTLE.—July 22.

THE MONEY MARKET.

SUPPLIES of floating credits this week have been amply sufficient for requirements, in spite of some calling in by the joint-stock banks, and short loans were obtainable down to 3½ per cent. The discount market was easier, being affected by the Continental

just over £4 millions. Three months' bills were quoted yesterday at 4½ per cent.

	July 30, 1926.	July 23, 1926.	July 16, 1926.	July 9, 1926.	Previous Rate and Date Changed.

Market rate (3 months' bills)	4½	4½	4½	4½	..

Thursday's Bank return showed an increase of £392,900 in the stock of coin and bullion, but as the note circulation expanded by £673,100, the Reserve declined by £280,200. The Proportion, however, rose to 26 per cent. owing to a decrease in Liabilities. Other deposits falling by £9,479,500, while Public deposits rose by £2,115,300. Government securities declined by £5,615,000 and Other securities by £1,417,600. Currency notes were increased by £1,915,100 to £293,896,100, which includes £1,299,000 for notes called in but not yet cancelled. The fiduciary issue is £236,347,100, or £11,555,400 below the maximum for 1926.

NEW YORK MARKETS.

Our New York correspondent cables:—After a moderate reaction the share market is rallying briskly, partly on short covering and partly in response to excellent earnings statements. The United States Steel in the second quarter earned \$4.20 per share, compared with \$3.88 in the first quarter and \$3.06 in the second quarter of last year. Similar figures for General Motors are \$9.83, \$7.50, and about \$6.00. A 50 per cent. stock dividend is expected to be announced at the August meeting. Meanwhile, reports from the steel industry and general business are encouraging, and while call money is cheap, the firmer tone for time money reflects the belief that rates will rise towards the end of the year. There is gratification here that the unfortunate and fruitless controversy over the British debt is dying down. It is hoped that Poincaré's programme to save France will succeed, but some scepticism exists.

THE STOCK MARKETS.

With the approach of the holiday season, business in the Stock Exchange has been irregular and patchy. Gilt-edged stocks, however, retain their firmness, and the public demand for scrips of recently issued Colonial and Corporation loans continues. In the foreign market the issue of the Counties of Hungary 7½ per cent. bonds, which was heavily oversubscribed, attracted attention. French bonds have been moving erratically, but Brazilians were in some demand. Home rails have been listless, the reduction from 2½ to 1½ per cent. actual in the L.M. and S. interim dividend being practically without effect. Canadian railway stocks are better, and Argentine rails moved upwards. Rubbers have been heavy, and oils irregular, and the feature of the industrial market has been the fall in tobacco shares on rumours of a war between the combine and non-combine companies. Mining shares have been inclined to droop.

THE COMMODITY MARKETS.

Approaching holidays and the continuance of the coal stoppage are responsible for the quiet conditions prevailing in many markets. Increasing supplies of foreign fuel are being received, but the inability of home producers to guarantee delivery dates has led to the loss of a large contract for South Wales coal this week. The heavier branches of the iron and steel trades remain largely inactive, owing to the dearth of imported fuel, but tinplate manufacturers have increased their output, and a fair degree of activity is predicted for the industry generally on the resumption of normal conditions. Slightly more interest has been taken in raw cotton, without any marked effect on prices. Piece-goods merchants continue to restrict commitments. The London wool auctions have closed without any serious drop in

values, though fair quantities are being held over. Bradford tops and yarns are steady, without sufficient bulk business to test the market. Wheat has been steady without marked buying interest. Sugar, coffee, and cocoa are steady. A larger business has been done in tea at slightly advanced quotations. Rubber is unchanged, buying support having been forthcoming to prevent a possible 20 per cent. cut in export quotas under the Stevenson scheme. Among non-ferrous metals, tin has advanced on higher Eastern cables, copper has been firm, with a fair business passing, and lead dearer in sympathy with American quotations.

FOREIGN EXCHANGES.

Interest has again been centred on French, Belgian, and Italian currencies, and the volume of business has been large, with wide fluctuations in the rates. The successful formation of the Poincaré Government brought down the Paris rate from a closing price of 207 on the 23rd to as low as 187 at one time on Monday. This figure was not long maintained, and by Monday evening the quotation was again 195½. After that, with the beginning of difficulties in the Chamber and the weakening of the first outburst of confidence, rates moved up again to 203½ on Thursday morning. On forward rates the discount—9½ for one and 23f for three months—remains very high, and the outlook is still completely obscure. The Brussels rate has followed much the same course as Paris, moving from 202 on the 23rd down to as low as 183 at one time on Monday, and up again to 199½ on Thursday morning. The discount on forwards is 12f for one month and 23f for three months. At the same time, there would seem to be some slight indications of a steadying tendency as contrasted with Paris. The lira has had an unfortunate week, moving from 149½ on the 23rd, after a slight recovery, to as high as 154½ on Tuesday and 155 on Wednesday. On that day intervention brought down the quotation to 150½, but on Thursday, with the rate at 151½, the tendency again seemed upwards. The dollar rate has shown little movement, dropping back ¼ from \$4.86 11-32 on the 23rd, rising again to \$4.86 9-32 on Wednesday, and remaining at the same level on Thursday. Forward dollars stand at ½-10 premium for one month ahead. Madrid has been fairly steady, moving up only from 31.37½ to 31.83½. Oslo has also gone slightly in our favour. The European gold exchanges, following New York, have moved a little against us. In Eastern Europe, Warsaw, at 44, shows a further slight improvement, but Bucharest is not quite so good at 1,072½. In the East, the rupee has fallen from 1s 5 61-64d to 1s 5 29-32d, and the yen from 1s 11½d to 1s 11d. The silver market has been steady, but with no show of confidence. Hong Kong has weakened from 2s 2½d to 2s 2¼d; Shanghai from 2s 11½d to 2s 10½d. In South America, Rio, after being slightly higher, is 1-32d dearer at 7 19-32d. Valparaiso, at 39 pesos, is also dearer as compared with the 39.70 quoted a week ago. Buenos Aires is the same as last week at 45½d, while Monte Video has fallen from 49½ to 49d. On rumours of stabilisation plans, Lima has moved to 25½ per cent. as compared with 26½ per cent. a week ago and 30½ per cent. at the beginning of the month.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 24th:—

EXPENDITURE.	£	RECEIPTS.	£
Supply Services	8,170	From Revenue	13,148
Interest, &c., on Debt	671		
Sinking Fund	886		
Sundries	563		
Increase in Balances	102		
Decrease in debt	2,756		
	13,148		13,148

Revenue yielded £13,147,600, against £12,300,700 in corresponding period last year. Customs produced £2,536,000, against £2,384,000. Excise yielded £2,867,000, against £1,130,000. Property and Income-tax brought in £3,433,000, against £4,288,000, and Super-tax £550,000, against £750,000.

The week's operations reduced the National Debt by £2,756,000, and caused the following changes:—

(000's omitted.)	£
Public Department Advances	1,900
National Savings Certificates	150
Sundries	546
Treasury Bills	160
	2,756

The floating debt was reduced by £2,055,000 to £773,411,000.

FINANCIAL YEAR, 1926-1927 (April 1 to July 24, 1926.)

£	£
Total Expenditure .. 271,120,814	Raised by Revenue .. 197,754,689
	Decrease in Balances .. 3,737,370
	Amount borrowed .. 69,628,755
Total	271,120,814

ESTIMATES for FINANCIAL YEAR 1926-7.†

£	£
Expenditure	825,727,000
Revenue	824,750,000
Deficit	£977,000

† Revised in Exchequer Return dated July 26, 1926.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Underground Electric Railways of London, Union Bank of Australia, Mercantile and General Insurance, British North Borneo (Chartered) Company, United Dominions Trust, Parent Trust and Finance, Furness Withy and Co., Malayalam Plantations, Threlfall's Brewery, Transvaal Gold Mining Estates, Tanganyika Concessions, and Zambesia Exploring.

The Report of the French Financial Experts.—With this issue will be found a supplement consisting of an English translation of the report recently presented by the Committee of French Financial Experts appointed in May by M. Briand's Government.

DEVELOPMENTS IN THE COAL DISPUTE.

This week Parliament has once more spent several hours talking about the coal dispute, but so far as can be seen at the time of writing a settlement by agreement is as far off as ever. It is possible that the Conference of Miners' Delegates that is meeting on Friday of this week may result in some change in the situation. But if this does not happen, it is important that the Government should take fresh stock of the situation, for if Parliament rises, the members of the Government disperse, and the public get into a holiday mood, it will be difficult to bring the influence of either Parliament or public opinion to bear for a considerable time. If no settlement is reached within the next ten days, there are two possible ways in which the situation may develop. The first is that contemplated by the owners, &c., at all events, by the majority of the Mining Association. It is that as soon as Bank Holiday is past some district association will open local negotiations, and that the moment this signal is given other districts will follow suit. Those who hold this view for the most part believe that work will be resumed before the end of August. The owners have more than once made it perfectly clear (a) that they dislike the Coal Commission's Report and believe it to be unsound, and (b) that they are stoutly opposed to arbitration on wages and hours. In these circumstances there is little likelihood that there would be much profit from a direct approach by the miners to the owners even if the former were disposed to make it.

The obvious drawbacks to the owners' solution from a national standpoint are, first, that it means a peace that will undoubtedly contain the seeds of a fresh war,

and, secondly, that it will tend to create more unemployment than the alternative of lower wages. Both alternatives are ways of reducing the cost per ton, and mean that production will be larger than the amount that could be marketed at the high cost price prevailing in April. (The actual sales before the stoppage were artificially stimulated by the subsidy, and, therefore, have no relevance to the problem.) This concentrating of production, however, may, in fact, not happen if as soon as markets begin to be over-stocked the pits work a reduced number of shifts per week instead of some of them closing down. This would mean that earnings would, in fact, fall, and that the men would work a few days a week only for eight hours. Even in this event, however, the change would have the disadvantage of inviting Continental coalfields to increase their hours of work, since the eight and a-half hours bank to bank which the Eight Hours Bill implies is half-an-hour in excess of the miners' day in Germany and Western Europe. This line of argument does not mean that the rigid seven-hour day is necessarily the ideal solution in all cases, and there are strong arguments for some greater elasticity than existed under the late régime—provided it is introduced, as the Commission suggested, with the concurrence of the men. But that is a very different thing from endeavouring, as the owners' policy aims at doing, to put the whole industry back to the full eight-hour day.

But whether it is good or bad, the owners' plan holds the field and the immediate question is not so much its merits but whether, in fact, it will succeed. About one-third of the Warwickshire men have gone back, the numbers have fallen appreciably this week, and at the time of writing there is no sign of any noteworthy movement elsewhere. For the Government to leave things alone in the belief that the owners' forecast is correct is at best taking a long chance on a solution which has grave drawbacks. If the owners prove to be wrong there is a real danger that we may find ourselves in September with nothing done. This would be a very serious position for the country. In the last week or two the expectation that there is still time for a trade revival in the autumn has been weakening, and the prospect of further prolongation of the stoppage may well result in the definite loss of orders which up to the present have merely been held over. Foreign coalfields are getting a firmer grip on markets which normally belong to us, and this is equally, perhaps even more, the case with our iron and steel trade markets, which means that one of the collieries' best customers may have its demand permanently reduced. Factories all over the country are exploring the possibilities of oil fuel, and in numerous other ways the long drawn-out stoppage is weakening the permanent markets of our coalfields. The parties concerned will be wise not to overlook these points, simply because on the return to work there will be a momentarily brisk demand for coal. The only possible argument on the men's side for this policy of holding on is that either the owners may be driven to the end of their resources or the Government, in view of the public discomfort, may be driven to its knees and compel the owners to accept the miners' terms. Neither of these is in the least likely, and it is inevitable if the Government steps in after another two months that the terms ultimately arranged should be substantially the same as those that would be arranged this week by an impartial tribunal.

These considerations were no doubt in the mind of Mr Baldwin when he discussed the possibilities of arbitration in the House on Monday. Mr Baldwin explained, not very convincingly, the reasons for his inability to regard the terms brought to him last week by the Bishops as offering a basis for renewed discussion. His rejection was based primarily on the proposal for a subsidy, but he also found difficulties in the proposal to bring the Commission together again to work out details of reorganisation, on the ground that the Government could not agree to delegate its powers of legislation in advance. But he went on to say that he thought at the beginning of the dispute, and he thought now, that the dispute was one that could properly be settled by arbitration. Later, he repeated that there was nothing to stop negotiations, and he saw no difficulty in setting up an impartial tribunal

acceptable to both sides. If such a tribunal were set up, he could see no reason why it could not begin by making up its mind what would be the effect of the proposals in the Mining Bill now under discussion, and also on the subjects to be discussed by the various committees that were being appointed, i.e., those on methods of selling, research, &c., before proceeding to reach conclusions as to the question of wages or hours. We believe the Prime Minister intended in this part of his speech to open the door to discussion of terms on which negotiations might be resumed.

Unfortunately the House failed to seize the opportunity to push it further open, for there were obviously several leading questions which should have been asked. If, for example, an arbitral tribunal, before considering wages and hours, is to take into account the subject of sales organisations as indicated by the Prime Minister, does this mean that he would undertake to give effect to any recommendations that the committee might make, or that the tribunal must wait till that committee reports? Again, does the Prime Minister contemplate a return to work on pre-stoppage conditions, and if not, how long does he contemplate that it would take the tribunal to make up its mind on the effect of the Government's reorganisation plan? Again, if the tribunal is to consider the question both of wages and of hours, does he consider it reasonable that any modification of hours which the tribunal might propose should be restricted in the manner suggested by the Commission, namely, that they should be freely accepted as an alternative by the men—a proviso which, as we have already pointed out, means in practice that they must be accepted by the men on a ballot? Finally, if he could arrive, in discussion with the leaders of the miners, at what he would regard as a fair basis of negotiation, would he be prepared to bring pressure on the mine owners to accept arbitration on such terms in the event of refusal by the latter? Such points as these should have been vigorously pressed by the spokesmen for the miners in the House. They failed to do so. It is, however, clearly still open for the Miners' Executive, if they realise how futile for all concerned the policy of dragging on the dispute must be, to seek answers to these and many similar questions. Last week the miners showed for the first time a willingness to arbitrate, but the Government disliked the terms proposed. This week, the responsible head of the Government still repeats that he thinks arbitration—and clearly his speech implies national arbitration—preferable to a policy of a drift back to work. The Government is so deeply committed financially and by reason of its legislation as a Party, to the present controversy that it cannot disinterest itself from negotiations which might take place on an arbitral basis. It is, therefore, essential that, as early as possible, the Government should be pressed to define on what terms it is prepared to use its influence to bring about the resumption of negotiations.

THE DEBT CONTROVERSY.

Now that the exchange of manifestoes by the British and French Treasuries has apparently ceased, we may, perhaps, hope that the international bickering between England and America on the international debt question will cease. We urged last week, and would repeat, that Britain has nothing to gain, and there is danger that we may lose a great deal of international goodwill, by carrying on the discussion and creating the quite false impression that we are trying by a side route to reopen the settlement reached in 1923. But even if this were not so, we could wish that the stunt Press would refrain from attempting to exploit the position, for it seems impossible for the writers in the popular Press to state the case correctly. For example, the very day after the Treasury manifesto of last Friday, a journal with an enormous circulation in its leading article mis-quoted Mr Churchill by stating that "Had we not stood as guarantor for the repayment of the cost of the foods and munitions supplied by America to our Allies, in all human

probability the British debt to the United States would never have been incurred." Yet even the man in the street should realise by now that the United States lent money direct to France and Italy to pay for the goods which those countries purchased in the United States. What Mr Churchill said was that if the United States had been willing to finance not merely the purchases of France and Italy in the United States, but also their purchases of coal, cargo space, textiles, and other war needs which they had to buy in Great Britain—"the sterling requirements of the Continental Allies"—the dollar balances which we should thus have indirectly acquired would have enabled us, without borrowing, to pay for the food, copper, cotton, and other American products which we needed for our own use, and "in all human probability the British debt to the United States would never have been incurred." The grounds on which the American Government refused to extend its advances to the European Allies have been so frequently explained in our columns that we do not propose to go over the ground again. It is, however, clearly impossible to get a fair view in England of the American debt so long as the unfortunate twist given to the matter by the Balfour Note and by the use of such phrases as "underwriting the allied purchases in America" is not straightened out.

If, however, British publicists would only leave the matter alone there would be a very much better chance of American and British opinion coming to look at the matter in the same light, for there are unquestionably many Americans willing and able to interpret the European point of view to America far better than any of the interested parties can do. A notable example is the article by Professor Edwin Gay (former member of the War Trade Board and Chairman of the Division of Planning and Statistics of the War Industries Board) in a recent number of "Foreign Affairs."* Professor Gay starts by rehearsing the story of reparations imposed upon France in 1815, and what happened to the inter-allied war debts of the Napoleonic period. In 1816 the House of Lords attacked the Premier, Lord Liverpool, on the Government's "expensive and disinterested generosity" in regard to the debts owed to England by her Allies. His critics urged consideration for the English taxpayer, who had borne a burden unparalleled in history.

Lord Liverpool explained in regard to the chief item, the Imperial loans of £6,200,000 to Austria, contracted in 1795 and 1797, that conditions following 1797, the date of Austria's last interest payment, had made it impossible to ask her for repayment. Instead, in 1803, 1809, and 1813 England had advanced subsidies to Austria. As for the next largest obligation, the Dutch loan to Russia guaranteed by England, amounting to a little over two million pounds sterling, the English Government in 1815 had taken over half of the debt, and under the circumstances he thought it unwise "to stir the question." The Austrian debt, with accumulated interest, totalling £15,600,000, was liquidated finally in 1824, when Austria, although she evidently regarded this political obligation as not a debt justly due, settled by a payment of £2,200,000. A loan to Portugal of £600,000, floated in England in 1809, with Government guarantee, was remitted in 1815. The only remaining loans, the comparatively small items of £200,000 to the House of Orange in 1813, and £200,000 to the French Bourbons in 1814, were repaid. According to the careful archive studies made by Dr Silberling, the total sum of bills drawn and bills and specie remitted for British subsidies and loans abroad, from 1793 to 1816, was £61.3 millions, of which at least £53 millions represented subsidy payments. Beset with difficulties of the gravest character at home, with taxes at an unprecedented height, with such serious financial complications that Ricardo was supporting a demand for a capital levy, with agriculture in distress and industry languishing, with an army of unemployed, and with riots in her manufacturing towns, England, nevertheless, showed expedient moderation toward France, and prudent forbearance toward her Allies. On the matter of the war debts it is probable that the historian of the future will judge that the English chose a wiser course a century ago than that which the United States is now pursuing.

Professor Gay proceeds to discuss the present American attitude, and imagines that the historian of the future will record that "whether from motives of partisan politics, accentuated by the after-war reaction, or from callous indifference, or from sheer ignorance, a policy was followed, from 1920 to, perhaps, 1930, which was difficult to explain or commend. Not the least of her errors, endangering her political and economic future, was the insistence upon the substantial repayment of the war debts from her former associates in the war; or perhaps

* "Foreign Affairs," April, 1926. (New York) 25 West 43rd street. \$1.25.

the initial failure of political judgment in granting aid during the war by loans rather than by subsidies." He proceeds to develop the view that expenditure on war cannot possibly be treated in the same way as commercial transactions, and imagines that if reflection had been possible in 1917 the country would have rejected any bickering about the sanctity of contracts. In support of this thesis he quotes a report of President McAdoo, who, in 1919, said that "The service of these loans in assisting to hold the battle fronts of Europe, until the might of our heroic army could be felt effectively, made possible, beyond the shadow of a doubt, the ending of the war in the fall of 1918. Without this aid to the Allied Governments the war unquestionably would have been prolonged, if not lost, with the resultant great additional cost in life and treasure." Five years later the Commander-in-Chief of the American forces himself, General Pershing, emphasised the same viewpoint when he declared that if it had not been for the Allies, "who held the lines 15 months after we entered, it might well have been lost.... We were responsible for their having to hold the line, and we advanced the money which made it possible for them to hold it. But I believe part of that expense should now be borne by the United States." We do not follow Professor Gay in his prophecy of the change which he thinks will take place during the next two or three years in American opinion, and, indeed, which was taking place until the unfortunate recurrence of the discussion on this side. But it must be evident that advocacy of this kind is far more potent than anything that can be said by a British writer. If it succeeds, then a reconsideration of the whole of the tangled problem of these international payments may before long come under international review. If not, the nations of Europe, including Great Britain, should contrive as best they may to make the payments due to the United States, recognising that while America may not have made as great a contribution to the war as she could have afforded, she nevertheless made a most decisive one, and that her entry into the war was an important factor in influencing the war itself, and in its moderating effect at the Peace Conference, for which future generations will never cease to be grateful.

THE WORLD'S SHIPPING.

EXCLUDING small craft of less than 100 tons burden, the merchant tonnage owned in the world, as recorded in the new edition of *Lloyd's Register Book*, amounted in June of this year to 64,784,000 gross tons. This figure represents a net increase during the past twelve months of 143,000 tons (as compared with a net addition of 618,000 tons during the previous year), steam and motor tonnage having expanded by 292,000 tons, while the tonnage of sailing ships contracted by 149,000 tons. The following table (based on the *Register Book's* statistics) contrasts the relative triennial growth of British and world shipping in the last six years and in the six years immediately prior to the war:—

Year.	Gross Tonnage (in Millions) owned in—					
	United Kingdom.			World.		
	Steam & Motor.	Sail.	Total.	Steam & Motor.	Sail.	Total.
1907.....	15.9	1.1	17.0	34.0	5.4	39.4
1910.....	16.8	0.7	17.5	37.3	4.6	41.9
1913.....	18.3	0.4	18.7	43.1	3.9	47.0
1920.....	18.1	0.2	18.3	53.9	3.4	57.3
1923.....	19.1	0.2	19.3	62.3	2.8	65.1
1926.....	19.3	0.1	19.4	62.7	2.1	64.8

Between 1907 and 1910, a period of trade depression for merchant shipping, British tonnage increased by roughly 3 per cent., and world tonnage by a little over 6 per cent. In the three years ending with 1913—a prosperous time for shipowners—the expansion in the British fleet amounted to 7 per cent., against a 12 per cent. increase in world's tonnage. Turning to the post-war years, it will be observed that between 1920 and 1923 British tonnage in-

creased by 5.5 per cent., and the world total by no less than 13.5 per cent. This remarkable expansion, due to heavy launching of tonnage contracted for before the collapse of the 1919-20 "boom," and to the rebuilding of Germany's lost fleet, is sufficient to account for the pronounced excess of tonnage which has encumbered the freight market during the last five years. Since 1923, however, a condition of comparative stability in the quantity of tonnage afloat has been attained. During the past three years British tonnage has risen, and world's tonnage decreased, by approximately one-half of 1 per cent.

From the point of view of international trade, however, the sailing tonnage (a rapidly disappearing entity) is of comparatively small importance. Moreover, the figures in the foregoing table include not only American and Canadian Lake vessels, but a considerable quantity of wood and composite steamers, still in existence, but of limited competitive value. Accordingly, in the table which follows, only steel and iron steamers and motor ships are taken into account. For brevity, the fleets of Denmark, Sweden, and Norway are combined under the head of "Scandinavia," and, for better comparison, the 1914 tonnage of Austrian ownerships, now non-existent, is included with the Italian figure for that year:—

Country.	STEEL and IRON. STEAMERS and MOTOR SHIPS (excluding Lake vessels). (Millions of Gross Tons.)					
	1914.	1923.	1924.	1925.	1926.	
U.K.	18.9	19.1	18.9	19.3	19.2	
British Dominions	1.4	2.2	2.2	2.2	2.3	
U.S.A.	1.8	12.5	11.8	11.6	11.1	
Italy	2.5	2.8	2.7	2.9	3.1	
Germany	5.1	2.5	2.9	3.0	3.0	
France	1.9	3.2	3.2	3.3	3.3	
Holland	1.5	2.6	2.5	2.6	2.6	
Scandinavia	3.7	4.3	4.4	4.8	5.0	
Japan	1.6	3.4	3.7	3.7	3.8	
Other countries	4.1	5.3	5.2	5.4	5.7	
World total	42.5	57.9	57.5	58.8	59.1	

* Including Austrian tonnage.

The figures given above provide a clear picture of the progress of national ownerships during the past four years. Comparing 1926 with 1923, it will be noted that the only country whose tonnage records a shrinkage is the United States. The Dutch fleet has remained on balance stationary. All other leading shipping countries have extended their tonnage. In the past twelve months, however, substantial expansion occurred only in the case of Italy, Scandinavia, and "other countries," the last named being effected, there is reason to think, largely through purchase of superannuated vessels from British owners.

Mere comparisons, however, of aggregate tonnage owned by different countries have a strictly limited utility, since they take no account of the factor of relative efficiency of units owned. This factor is impossible, in the case of the shipping industry, to measure statistically, since incalculable elements, such as management, personnel, and organisation, necessarily enter into the problem. Some light, however, is afforded by the classification of vessels, carried out by *Lloyd's Register*, in age-groups. Thus, it is to be noted, the total tonnage, 5.7 millions, owned by "other countries," includes no less than 1.8 million tons of vessels 25 years of age and

upwards, whose competitive efficiency is small. It is remarkable—and greatly to be regretted, from the point of view of the shipbuilding industry—that the tendency to cling to these antiquated and usually outworn ships is not confined to the lesser maritime countries, but seems to be steadily increasing all round, the tonnage 25 years old and over growing larger, while tonnage under five years old declines, as the following summary will indicate:—

AGES OF STEAM AND MOTOR SHIPPING.

Year.	(Million Gross Tons.)			
	Under 5 Years Old—	25 Years Old & Over—		
	British.	World.	British.	World.
1922	6.01	25.01	1.53	7.07
1923	5.57	21.93	1.56	7.42
1924	4.95	16.56	1.62	7.77
1925	4.92	13.09	1.65	8.25
1926	4.55	10.40	1.68	8.81

It is satisfactory that the aged tonnage owned by this country has increased proportionately much less than that owned abroad, but, even so, it is difficult to justify the retention under the British flag of nearly 1½ million tons of these venerable, and not always seaworthy, vessels. What proportion of the total represents security for bank loans is a point on which full information would be interesting.

The world figure of nearly nine million tons of outdated shipping (approximately five million tons may be placed as in the "tramp" class of vessel) clearly represents a considerable deduction to be made from the total sea-going fleet, if an estimate of "effective strength" is to be arrived at, from the aspect of international competition. Manifestly no great exactitude for such an estimate could be claimed, but if, from the world's total of 59 million tons sea-going steel and iron motor vessels and steamships, the following deductions are made, viz.:—

Coasting and fishing vessels, say	5,000,000
Say two-thirds of all vessels 25 years old and over	6,000,000
U.S.A. "war-built" ships incapable of use, say	3,000,000
Tankers, about	6,000,000

Then the total tonnage available for ocean transport of passengers and cargoes, other than bulk oil, is reduced to 39 million tons. The margin of "efficient" tonnage afloat over requirements is in all probability very small—if, indeed, there is any margin at all—and the present difficulties of the shipping industry are predominantly caused by the retention in commission (particularly among foreign ownerships) of tonnage which relies on cheap labour to overcome its mechanical and structural shortcomings, and which sound policy would condemn to the scrap-heap.

Unfortunately, this policy is not being followed. As compared with pre-war "normalcy," scrapping is still proceeding at a high rate, but is apparently slowing up. The following are the latest figures:—

TONNAGE BROKEN UP.		
	U.K. Tons.	World. Tons.
Average 1908-13	84,000	171,000
1922	120,000	315,000
1923	184,000	963,000
1924	254,000	1,174,000
1925	199,000	653,000

According to *Lloyd's Register* the amount of tonnage being broken up in 1926 shows so far a further decline, but it is to be hoped that this tendency will soon be reversed. If the world's mercantile marine is to be kept as an efficient instrument of transportation, at least a million tons require to be scrapped annually during the next decade.

Two factors will probably hasten the process of scrapping. In the first place, experience continues to prove the superior economic efficiency of larger ship units. The recent tendency for the smaller type of vessel between 1,000 and 5,000 tons burden (the typical pre-war "tramp") to be superseded by ships of greater carrying capacity is illustrated by the following table, in which the numbers of vessels over 1,000 tons in size are arranged in three groups:—

SIZE OF UNITS.

	Number of Ships of Gross Tonnage Between			
	1,000 and 5,000 Tons.	5,000 and 8,000 Tons.	Over 8,000 Tons.	Total Number Over 1,000 Tons.
British†—				
1923	2,957	1,182	390	4,529
1925	2,906	1,214	395	4,515
1926	2,841	1,228	404	4,473
World—				
1923	10,226	3,580	791	14,597
1925	9,977	3,622	823	14,422
1926	9,763	3,665	864	14,292

† Including Dominion ships.

Alike in the case of British and world tonnage, it will be seen, the last three years have produced a diminution in the total number of vessels above the usual size of normal coasting craft, but this reduction has been effected wholly at the expense of the smallest of the three size-groups shown above, both the other groups recording steady growth.

As compared with world tonnage, the composition of the British mercantile fleet is still tending in the direction of relatively larger ships, as the following analysis of tonnage illustrates:—

STEAM AND MOTOR VESSELS OVER 1,000 TONS GROSS.		
Size.	British.	World.
1,000-4,000 tons	21	31
4,000-8,000 tons	53	52
Over 8,000 tons	26	17
Total	100	100

All the available evidence as to trading conditions suggests that the 1,000-4,000 tons class is destined for progressive contraction at the hands of the shipbreaker.

The second factor which should stimulate replacement of obsolete ships is the remarkable development of motor-propelled tonnage. The percentages of the total world fleet driven by various methods of propulsion are being strikingly altered, as the following figures show:—

	1914.	1924.	1925.	1926.
Steamers (coal-fired) ..	88.8	66.2	64.8	63.2
" (oil-fired) ..	2.6	26.8	27.5	28.2
Motor ships	0.5	3.1	4.2	5.4
Sail	8.1	3.9	3.5	3.2

Including auxiliaries, there are now 3,493,000 tons of motor shipping afloat in the world, against 2,714,000 a year ago, and 1,666,000 in 1923. During the last three years, the steam shipping in the world has actually shrunk by nearly 1½ million tons, while in the last five years motorship tonnage has increased by 176 per cent. Of the 2,343 motor vessels now built, 1,704—representing 415,000 tons in all—are craft of less than 1,000 tons burden. Excluding this type of motorship, the relative position of British ownership of motor tonnage to world ownership appears as under:—

MOTOR SHIPS OF 1,000 GROSS TONS AND OVER.		
	British Tons.	World. Tons.
1925	718,000	2,310,000
1926	938,000	3,078,000

The leading foreign ownerships of motor vessels exceed 1,000 tons gross are Norway, 467,000 tons; Germany, 285,000 tons; and Sweden, 272,000 tons. In the passenger and cargo-liner class (vessels of 6,000 gross tons and over) Great Britain owns 73 motor ships, amounting to 598,000 tons, out of a world total of 192 motor ships of 1,574,000 tons in all, to which Germany contributes 174,000 tons, and Italy 144,000 tons.

In conclusion, it is well to emphasise that, excepting for our share in the general tendency to cling to obsolete vessels beyond their period of useful service, there is nothing in the evidence afforded by recent issues of *Lloyd's Register Book* which should weaken confidence in the supremacy of Great Britain as a maritime country. Leaving out of consideration the special circumstances surrounding the hypertrophied American fleet, it is true that the tonnage of our competitors has increased rela-

tively to ours both as compared with 1914 and (to a much lesser extent) as compared with three years ago; but, as has been indicated in the foregoing tables of figures, this tendency existed long before the war, is not becoming aggravated, and is a feature requiring to be qualified by full consideration of comparative efficiency. The British proportion of modern tonnage, of motor ships, and of the larger type of vessels likely to prove increasingly the dominant factor in international trade, provides good augury for our shipping future.

A PETROL TAX?

(BY A CORRESPONDENT.)

It is Mr Churchill's hope to introduce within the lifetime of the present Parliament a petrol tax in place of the present vehicle tax. The arguments in favour of the petrol tax are becoming familiar through advertisements in the Press which are paid for by one of the motoring bodies. The motorist is informed that the petrol tax is a just system of taxation, that it makes the payment of a road tax proportionate to road usage, that the motorist will pay his tax as he goes and will not pay if he does not go, that if he is the fortunate owner of two cars, only one of which is in use at a time, he will no longer pay double tax as he does to-day, that he will never need to lay up his car to save taxation, and that all these blessings would be attained if he pays one small annual registration fee and the rest of the tax automatically through the petrol pump or the petrol tin. Unfortunately the motorist is never told by the advocates of the petrol tax exactly how much he would pay through the petrol pump or the petrol tin. Nor is he encouraged to view the possible objections which the commercial users of the roads would raise against a tax on motor spirit.

Perhaps the first thing which the motorist would realise is that the petrol tax has already had a history which is not inspiring. The Finance (1909-10) Act, 1910, imposed a Customs duty on imported motor spirit and an Excise duty on all home-manufactured spirit amounting to 3d per gallon, with a rebate of 50 per cent. in respect of motor spirit used in commercial goods-carrying vehicles, hackney vehicles, and in motor-cars used by fully qualified doctors. Motor spirit used for purposes other than road traction was excluded. In 1915 the duty was increased to 6d per gallon and the 50 per cent. rebate conceded to veterinary surgeons, commercial travellers, and relieving officers. In 1920 this scheme of petrol taxation, complicated by the system of rebates, was abandoned as unsatisfactory. A Committee, under the chairmanship of Sir Henry Maybury, appointed by the Minister of Transport, had presented a majority report in March, 1920, which condemned the petrol tax wholeheartedly, and recommended the introduction of the present system of vehicle taxation. The rebate system had involved the Inland Revenue in endless trouble and expense in examining the claims of small users, evasion of the tax was becoming widespread, and the tax became only partial in its operation. This was partly because of the difficulties in defining "motor spirit," partly because in 1919 benzol, shale oil, and home produced petrol were excluded altogether. The Excise duty, in fact, was abandoned, and the Customs duty proved unsatisfactory in operation. How does the situation to-day differ from that in 1920?

The whole question of motor taxation was reviewed once again in 1922, when, in response to pressure from the motoring bodies, in particular from Mr Stenson Cooke, who signed the minority report in favour of the petrol tax, the Minister of Transport asked Sir Henry Maybury's Committee "to take into consideration the objections to the present system of taxation in the light of experiences gained, and to report whether any more satisfactory alternative method of taxation can be devised or the present system be modified." In 1924 this Committee finally reported (1) "We cannot find any system of taxation capable of practical application under the existing circumstances which we recommend as likely to be more satisfactory than the system of vehicle taxation now in force," and (2) "The present system can be modified to

mitigate to a substantial degree some of the objections found to exist in practice."

Modifications of the vehicle tax were made, and the case against the petrol tax remains the same, except that in two particulars it has become stronger. In the first place, a tax on petrol would have to be almost double the 6d tax which was abandoned in 1920; in the second place, the exclusion of benzol from the tax, to which Mr Churchill has apparently committed himself, would be a more odious form of protection than any imposed under the Safeguarding of Industries Act. As regards the first of these objections, the expenditure on the roads has now risen to £20,000,000 a year, and if this sum is to be realised by a petrol tax on the 500,000,000 gallons of motor spirit consumed in the year, the tax would work out at about 10d per gallon. The expenses incurred by the petrol companies in collecting and accounting for the duty would increase the cost of petrol by an additional 1d or 2d per gallon, so that it appears that the motorist would pay an additional 1s per gallon for his fuel if the petrol tax were re-imposed. Evasion of a tax of this magnitude becomes important. A petrol tax is successfully applied in many States of America because, as it amounts to only one or two cents per gallon, it is not worth while to attempt to evade it. But it would be worth while to attempt to evade a tax of 10d or 1s, and apart from mere fraud, the difficulty in defining petrol still makes evasion an easy matter for the honest but ingenious chemist.

This technical point is of the greatest importance. The Government chemist, in his parting words to Sir Henry Maybury's Committee, said: "If it does not appear that we chemists are not able to give you a specification for this substance, such as we can give for a pure substance, the reason is that it is not a pure substance—it is an ungodly mixture." These words are the more cogent to-day, seeing that various chemical substances can be mixed with kerosene to make an efficient and "non-pinking" motor fuel. Kerosene fractions might, therefore, be imported for motor spirit purposes without being liable to taxation. Petrol is not a definite substance. It is made by distilling crude oil, but in the distillation process it is impossible to say where petrol ends and kerosene begins. It is not sufficient for the purposes of a petrol tax to say that the tax will be imposed upon any fuel which the motorist puts into his tank because petrol is used for other purposes than road transport, which may or may not be excluded from the operation of the tax. For instance, petrol is employed in the manufacture of paints and varnishes, and for rubber goods. It is used by dyers and cleaners in large quantities. The internal combustion engine is used for all sorts of power purposes other than road traction. The uses of petrol off the roads are much more varied to-day than when the petrol tax was imposed. How are these uses to be excluded? Whatever specification is devised—and, of course, any amount of specifications have been suggested—the danger is that it will be found to be either too narrow, and to allow too much to escape, or too extensive, and to include much that is not intended to be taxed.

If the opportunities and excuses for evading a petrol tax are to-day more varied, the expenses and difficulties in administering and collecting the tax are so much worse. Instead of a single tax scheme, as is now in operation under the vehicle tax, there would be a five-fold tax scheme involving a vehicle tax at a reduced rate, a customs duty, an excise duty, a licence duty for all refiners and distributors of motor spirit, and a self-assessment system by way of declaration with possible permits and refunds. It may, therefore, be assumed that the opposition of the Inland Revenue authorities to a petrol tax would be all the more intense to-day.

As regards the exclusion of benzol from the proposed scheme, there are probably 20,000,000 gallons of home-produced benzol being used by motorists each year. This means, assuming that on an average a gallon of benzol takes a motor vehicle 10 miles, that 200,000,000 car miles will not be contributing towards the wear and tear resulting from that mileage. In other words, petrol users would be mulcted so much extra to pay for those 20,000,000 gallons. And that extra would not go towards the upkeep of the roads, but would go into the benzol producers' pockets. Benzol mixtures are worth in the market a little

more than petrol, and if, under the petrol tax, the prices of petrol were advanced by 1s to 2s 7½d and 2s 8½d per gallon, benzol mixtures would also be advanced to 2s 9½d per gallon. A more odious form of protection could scarcely be devised. The consumer would pay more without receiving any benefit. The benzol makers would declare handsome dividends.

Sir Henry Maybury's Committee doubted whether the petrol tax was really a more equitable form of raising revenue for the roads. Some private motorists would certainly pay less. Some would pay more. For example, a motorist paying a £30 tax on a six-cylinder car and using 1,000 gallons of petrol a year would, under a 1s tax, be paying £50 a year to the Government. Certainly, the motorist who owns two or more cars would score heavily, but he is precisely the kind of road user who, on the accepted principle of capacity to pay, should pay more and not less to the State. There is already a differentiation against the pleasure motorist. Just as the holder of a season ticket on the railways pays less for his use of the railway because he is presumed to be earning his livelihood, so the commercial or business motorist is paying less for his use of the roads for the same implied reason. And it is even uncertain that the petrol tax would make the person who does most damage to the roads pay the most heavily. Commercial vehicles, especially motor-omnibuses working in hilly districts or in large towns where frequent stoppages are entailed, would use a disproportionate amount of petrol to their wear and tear of the roads. The present vehicle tax is not ideal and can operate harshly on some users, but it would appear to be more equitable than a petrol tax for the commercial users, and from the point of view of the Inland Revenue the only practicable form of raising revenue for the roads.

PROVINCIAL GAS COMPANIES.

In our issue of April 17th, on page 776, we examined the results of London gas companies in 1925. In order to complete the picture of the progress of gas undertakings in England, we propose in this article to analyse the results of seven representative provincial concerns. On the whole, the results achieved last year were eminently satisfactory. The depression in trade has not, apparently, greatly affected revenue, from which circumstance we may reasonably deduce that any decrease which may be taking place in sales of gas for commercial and industrial purposes is being more than made up by an increased demand for household and domestic use.

The table given below shows the quantity of gas sold by six of the concerns comprised in our list during the past two years:—

Name.	Year 1924.	Year 1925.	Inc.	Name.	Year 1924.	Year 1925.	Inc.
Bournemouth	8,061,259	8,684,928	7.7	Newcastle	18,956,233	20,118,564	6.1
Brighton	10,103,753	10,589,106	4.8	Sheffield	14,585,243,000	14,876,770,500	6.3
Cardiff	8,275,116	8,513,381	2.9	Wolverhampton	1,005,553,000	1,055,997,000	5.0

† Cubic feet.

All the companies included in the above list, it will be seen, sold more gas in 1925 than in the year preceding. The biggest gain was recorded by the Bournemouth, where the figure rose by 7.7 per cent. This was followed by the Sheffield with 6.3 per cent., and the Newcastle with 6.1 per cent. The Cardiff undertaking showed the smallest percentage increase, namely, 2.9 per cent.

Our second table shows the chief items of revenue and expenditure, together with the balance of net revenue:—

Company.	Revenue.				Expenditure.				Balance Net Revenue.
	Sale of Gas.	Rentals.	Residuals.	Total Receipts.	Maintenance.	Disbursements.	Total Expenditure.		
Bournemouth	1924 291,623	32,338	98,934	422,895	197,546	47,628	245,174	177,721	245,174
Brighton	1924 335,936	34,098	98,111	468,145	208,318	47,908	256,226	211,919	256,226
Cardiff	1924 401,733	68,836	123,685	594,254	349,750	107,117	456,867	137,387	456,867
Cardiff Gas	1924 329,618	37,816	96,236	463,670	293,335	61,690	355,025	108,645	355,025
Cardiff Light & Coke	1924 324,062	39,212	87,746	451,020	278,109	62,145	340,254	110,766	340,254
Liverpool Gas Co.	1924 1,027,912	29,938	36,067	1,093,917	973,120	145,668	1,118,788	1,118,788	1,118,788
Newcastle-on-Tyne & Gateshead Gas Co.	1924 657,344	102,762	336,631	1,096,737	613,591	181,752	795,343	301,394	795,343
Sheffield Gas Co.	1924 591,191	27,647	215,981	834,819	504,682	93,245	597,927	236,892	597,927

beginnings is clearly shown, the gold value of her overseas trade increasing nine-and-a-half times over in the thirty years ended 1905. Both the United States and Japan have greatly strengthened their position since the war, while Germany has fallen several places in the list of trading countries. In our earlier review of the League of Nations' Memorandum we referred to certain evidence of a definite shift of the trade of the world from the Atlantic to the Pacific Ocean between 1913 and 1924. From what has been stated above it will be seen that this was no new tendency, but rather an accentuation of a process which had been going on for many years. According to a table given in our earlier article, the gold value of the total trade of a number of representative "Atlantic" countries was only 18 per cent. greater in 1924 than in 1913, while that of certain "New World and Pacific" countries showed a 92 per cent. increase. In the table which follows we have set out the figures for the same countries, at decennial intervals, from 1875 to 1905:—

VALUE OF TOTAL TRADE (IMPORTS plus EXPORTS) of COUNTRIES NAMED
(Million Florins.)

	1875.	1885.	1895.	1905.

† Includes Newfoundland.

The tendency for the New World to outstrip the Old was certainly much less marked than during the subsequent war period, but its existence can be clearly traced for thirty or forty years back. In this respect, as in so many others, the war would seem to have intensified forces already present, rather than initiated a new order in the economic sphere.

Finally, we may indicate the broad development of those areas which are now numbered among the British Dominions, over the stirring times of the last fifty years. The varying parts which each has played in world commerce are shown below:—

SHARE OF THE BRITISH DOMINIONS IN WORLD TRADE.

	1875.	1885.	1895.	1905.	†1913.	†1924.
Australia	2.59	3.09	2.47	1.55	2.06	2.50
Canada	1.71	1.41	1.35	1.82	2.37	4.25
South Africa	0.52	0.44	1.35	1.58	1.74	1.48
New Zealand	0.46	0.45	0.40	0.49	0.56	0.90
India	3.60	5.14	3.28	3.64	4.25	4.69
Total Dominions	8.88	10.53	8.85	9.08	10.98	13.82

† League of Nations' figures.

Although "Imperial" trade as a whole increased, roughly, *pari passu* with that of the rest of the world towards the end of last century, the experience of the various countries was far from identical. While a predominantly agricultural State such as New Zealand has obtained a practically constant share of the world's trade over the last 50 years, the decline in the importance of the

export of precious metals in the case of Australia, and its increasing importance in South Africa find expression in the above table. Canada's enhanced position among commercial nations has been built up almost entirely since the war on the basis of her wheat trade. To her must be given the chief credit for the appreciably larger share of the world's trade which the Dominions have secured in the last few years.

Notes of the Week.

France's New Government.—Since we wrote a week ago M. Poincaré has succeeded in creating a "cabinet of all the talents," in which he has included both M. Briand and M. Herriot. Indeed, there are no fewer than six ex-Prime Ministers in the Cabinet. At the same time, it is a striking illustration of the rapidity with which offices change hands in France that there are more than as many left outside. The Cabinet is perhaps a union of personalities rather than a union of parties, for M. Herriot's own adherents are by no means solidly behind the Government. The prestige of the new National Cabinet was, however, sufficient to give it the substantial majority of 227 on a vote of confidence on Tuesday last after the Ministerial Declaration had been made. It must, however, be confessed that the Declaration, on the strength of which the Cabinet secured this handsome testimonial, is not very reassuring. It contains professions of patriotism and the need for national reconciliation, and appeals to the Chamber to cut short discussion and get to work, but as to what the Government is going to do we are left in the dark. No mention is made of stabilisation, and while the Government's tax policy is to be a combination of indirect contributions recommended by the experts and some imposition on accumulated wealth, part of which will furnish a sinking fund for the National Defence Bonds, the inference to be drawn from the report is that France is still to be in a state of uncertainty as to her monetary situation, and that an attempt is to be made to raise the level of the exchange before it is linked to gold. Indeed, it is admitted that the Government will not within a few weeks, or within a few months, solve the financial problem. This looks much too independent to inspire very much confidence, and we shall await with some concern a further development of the Government's plans.

The Eclipse of Zinoviev.—Zinoviev made his name in this country during 1924—first by his violent attacks on Mr MacDonald's Government, and his appeal for an intensive revolutionary campaign in Great Britain, at the conferences of the Russian Communist Party and the Third International in the summer of that year, and secondly, by the celebrated letter which, whether apocryphal or not, has become indissolubly associated with his name. The Anglo-Russian negotiations of 1924 made it evident that Zinoviev—entrenched in the Political Bureau of the Russian Communist Party and in the chairmanship of the Third International—was at cross-purposes with other Bolshevik statesmen, e.g., Chicherin and the men behind Chicherin, who were primarily responsible for the government of the U.S.S.R., and were therefore more concerned to improve the international position of the U.S.S.R., both economically and politically, than to exploit the U.S.S.R. as a base of operations for promoting world-revolution. At that time the Russian Communist Party—which was and is the driving force behind the Government of the U.S.S.R., and also behind the Executive Committee of the Third International—proved unable to compel the respective leaders of these two organisations to work in harness, with the result that the Anglo-Russian negotiations ended in a fiasco. Now, after two years, the Russian Communist Party has definitely and drastically declared against Zinoviev, and this event may have a profound influence on the foreign policy of the U.S.S.R., on the relations between the U.S.S.R. and the Third International, and on the activities of the latter organisation. On Saturday last,

July 24th, Zinoviev was officially expelled from the Political Bureau of the Russian Communist Party by the Central Committee. He still remains chairman of the Executive Committee of the Third International, but when the Third International holds its annual congress at Moscow this year, and proceeds to the election of a new chairman, it appears that the Russian Communist Party will either prevent Zinoviev from being put up for re-election, or will vote against him. In either case, their opposition will have a decisive effect. The charge against Zinoviev is that he has used his official position in the Third International improperly in two ways: first, in order to mobilise on his side the non-Russian Communist Parties affiliated to the Third International, and to put them in opposition to the Russian Communist Party in the Third International's proceedings; and secondly, in order to build up an opposition within the Russian Communist Party itself by secret and underhand means. Zinoviev's offence is a flagrant breach of party discipline. The inference is two-fold. On the one hand, the rigidity of organisation in the Russian Communist Party is still increasing; on the other hand, the temper and policy of the Party are becoming less revolutionary. The recent discord, it is suggested, has been accelerated by the death, last week, of Dzerzhinsky, whose principal claim to notoriety lies in his organisation of the Tcheka, or the Committee for Combating Counter-Revolution and Speculation, a "machine of terror" responsible for the murder of many thousands. His successor as head of this body has not yet been appointed, the selection apparently presenting considerable difficulty. The appointment of a Triumvirate, as was done after the death of Lenin, is suggested as a way out of the difficulty, it being regarded as dangerous again to entrust any one man with so much power as was given to Dzerzhinsky.

America and Allied Debts.—Our New York correspondent writes:—Recent international discussions of the inter-Allied debt funding agreements are causing the judicious on this side of the water to grieve. The statement that Secretary Mellon gave out last Thursday, the 16th, with regard to the liberality of the Berenger settlement apparently has been taken in certain quarters on your side as being intended to reflect on Great Britain. Mr Mellon's intention was nothing of the kind. His real purpose seems to have been to help Caillaux, who still seemed to have a chance to carry his programme for fiscal reconstruction through the Chamber, and who seemed likely to experience his greatest difficulty in getting the Berenger settlement ratified, this ratification, both Mr Mellon and M. Caillaux knowing, being essential to the securing of credits on this side of the water. As things turned out, Mr Mellon's statement came too late to help Caillaux, but not too late to stir up a number of belligerent persons, both here and abroad. Similarly with his letter on the subject of our debt settlements that was published on Sunday, the 18th, the circumstances must be appreciated in order to realise its significance. Mr Mellon had, some little time ago, received an open letter from a gentleman in Massachusetts, in which the Government's whole programme of debt settlements was severely criticised. The Secretary had a general answer prepared, and finally dispatched his answer just before sailing for a vacation abroad. As it happened, this was the day after the issuance of his statement for Caillaux's assistance. In his letter Mr Mellon took up the several points of criticism singly and entered a general denial. The paragraph to which Mr Churchill took exception might have been more happily worded. It said: "It must be remembered that England borrowed a large proportion of its debt to us for purely commercial as distinguished from war purposes—to meet its commercial obligations maturing in America, to furnish India with silver, to buy food to be resold to its civilian population, and to maintain exchange. Our loans to England were not so much to provide war supplies as to furnish sterling for home and foreign needs and to save England from borrowing from its own people." Mr Churchill's comment on this has brought a statement from the Treasury which admitted that total British expenditures aggregated \$7,219,408,669, but

which declared that of this \$1,853,612,246 was covered by reimbursement from other Allies out of funds loaned by the United States, and that the latter sum was not provided out of England's "own independent resources." There remained \$5,366,000,000, of which \$1,682,000,000 represented "exchange and cotton purchases." Most of this item, the Treasury contends, went for the maintenance of sterling exchange at the pegged price. The Treasury contends that England spent approximately \$760,000,000 out of cash from her own independent resources, and not the \$4,000,000,000 that Mr Churchill is reported to have mentioned. It may be noted that the Secretary had no intention of starting controversies in issuing his statements, and that their appearance in close conjunction was accidental. On the one hand, he was attempting to help the effort for financial rehabilitation in France; on the other, he was merely making his reply in a controversy that had been directed against him. The feeling in the financial district is that little will be served by carrying the controversy further. Questions of relative generosity are of little point when they are complicated by differences of opinion as to the line of greatest selfish advantage. It is well to remember that the administration here has its public to consider, just as foreign Governments have, and that the debt settlements represent its best judgment as to what may be obtained in the way of practical compromise.

Abyssinia and the Anglo-Italian Agreement.—In the House of Commons last Monday, two interesting facts came out in Mr Locker-Lampson's answers to questions from Mr Buxton. The first fact was that the concession of the right to contract the Lake Tsana barrage is now the only material advantage that we are seeking in Abyssinia. Mr Locker-Lampson justly pointed out that this was in the interest of irrigation in Egypt and the Sudan, and was not—at any rate in any direct way—an advantage for Great Britain. It also means that, as compared with the tripartite Anglo-Franco-Italian Agreement of December 13, 1906, the new agreement represents a concession on Great Britain's part towards Italy. In the 1906 Agreement we not only safeguarded British and Egyptian interests in the Nile Basin (as far as this lies in Abyssinian territory), more especially as regarded the regulation of the waters of the Nile and its tributaries, but we earmarked for ourselves all railway construction in Abyssinia west of Addis Abeba, save for lines connecting Italian Somaliland with Eribrea, which were left to be constructed by Italy. The new agreement concedes to Italy exclusive economic influence in Western Abyssinia, save for the regulation of Nile water. It is, presumably, in return for this concession that we expect, as Mr Locker-Lampson declared on Monday, to secure Italian support in subsequent negotiations with the Abyssinian Government over the Lake Tsana question. Mr Locker-Lampson admitted that the latter Government alone can authorise the construction of the Tsana barrage, and he expressed the hope that we shall be able to show the Abyssinian Government that this work will serve the interests of Abyssinia as well as of the Sudan and Egypt. On the question of material fact, there is no reason to suppose that the projected Tsana works will do any injury to the local Abyssinian population, or that the additional water which will thus be secured for irrigation in Egypt and the Sudan could be utilised in Abyssinia itself (where the Blue Nile flows through a deep and narrow gorge). On the other hand, the additional water is urgently needed in the two countries lower down the Nile, and every addition to the common water-supply of Egypt and the Sudan will help to ease the political tension over the allocation of Nile water which has now for some time existed between them. Thus there is nothing to be said against, and much in favour of, the Tsana barrage in itself. The doubtful point is the method by which the British Government has lately sought to promote its construction. Is it proper that the British and Italian Governments, over the Abyssinian Government's head, should promise each other support in securing certain material interests in Abyssinia? And, while our objective (i.e., the Tsana barrage) may be inoffensive to Abyssinia, can the same be said of that exclusive

economic influence in Western Abyssinia which we have conceded to Italy in exchange for her good offices? In the forthcoming Anglo-Italian negotiations with Abyssinia, will it be possible to draw the line between persuasion and pressure? This brings us to the second interesting statement made by Mr Locker-Lampson last Monday. The Abyssinian Government has invited the observations of the League in regard to the Anglo-Italian exchange of notes, and on the 24th of this month H.M. Government received from Geneva a copy of the Abyssinian Government's communication to this effect.

Estimates Committee and Parliamentary Finance.—Certain decisions of importance to the financial system of the House of Commons, arising from a series of recommendations by the Estimates Committee, have just been taken by the Government. The committee recommended that the Civil Service Estimates should be reclassified in nine categories on broad objective lines; that votes should be regrouped in classes so as to show, as far as possible, the complete functions and expenditure of each department; that Civil Service Estimates should in future be called the Civil Estimates; that the Estimates Committee should be increased in size, so that all the estimates may be examined every year; together with certain other recommendations urging that members of the Estimates Committee should be excused other Parliamentary duty, that it should have power to appoint persons from outside its own body to serve on any of its sub-committees, and that arrangements should be made for the Parliamentary discussion of its reports. In substance, the Government have replied that they agree to the proposal regarding the re-classification of the estimates; they are willing to provide a Treasury witness for the sittings of the committee; but beyond that they cannot go, so that the recommendations, for all practical purposes, may be regarded as dead. The Public Accounts Committee, to which any change in principle must be referred, or, indeed, any change at all, apparently do not take the view that there is no more than minor improvement in the present proposals. They and the Treasury consider that the re-classification is probably overdue, and that it will be to some extent to the advantage of Parliament in the consideration of the estimates. It is urged, of course, that if the change is approved it should remain in force for a substantial time, with seven or ten years as a minimum, since the arguments against too frequent change in this sphere are overwhelming. The re-classification will not in any way weaken the comparison of the estimates with their predecessors, and there is definite gain in having expiring war-time services brought into a final group at the end, destined to disappear completely when the obligations under the various heads are eventually discharged. The broad object of the re-classification is to make the estimates present a clearer picture of the services to which public funds are appropriated; in substance it may be said that this object is achieved. The Government approval is limited in character; the Treasury and the Public Accounts Committee regard the step as valuable in its way; and the re-classification will, therefore, take effect in the near future. The next task is to persuade the rank and file of Parliamentary membership to understand the nature of the change, and co-operate to make the review of expenditure by the House of Commons much more efficient than it can claim to be in existing conditions.

American Cotton Crop.—Our Manchester correspondent writes:—The Crop Reporting Board of the Department of Agriculture at Washington has published statistics as to the position of the American cotton crop on July 16th. The condition on that date is given as 70.7 per cent. of normal, against 75.4 per cent. three weeks earlier and 70.4 per cent. at the same time last year. The indicated crop is now 15,368,000 bales, against the estimate of 15,635,000 bales on June 25th. The final out-turn of the crop will depend upon whether the various influences affecting the crop during the remainder of the season are more or less favourable than usual. If developments during the remainder of the season are as unfavourable as during 1921, 1922, and 1923, a total production of

about 13,476,000 bales might be expected. On the other hand, if later developments are as favourable as during 1924 and 1925, a total production of about 16,628,000 bales might be expected. The Bureau in a supplementary report says that nearly all States have recently experienced favourable conditions for plant growth, but as a result of the late start, cool nights, and the loss of early bloom through widespread ravages of the cotton hopper, much less fruit than usual sets. This leaves crops more exposed than usual to late weevil damage, which may prove a serious menace in a number of States should weather conditions be favourable for developments of these insects. Although there is the promise of another big yield, prices have advanced during the last few weeks. On June 30th the quotation for middling American on the spot in Liverpool was 9.30d, whilst on Tuesday last the figure was 10.11d. Lancashire spinners are always slow to believe adverse news from America with regard to the crop, but according to cable advices there has been decidedly more activity during the past fortnight in manufactured goods in the United States.

Northern Ireland's Trade.—The Irish Free State trade statistics for May, which were published at the end of last week, show an adverse balance of £1,331,000—the smallest since November of last year. The total excess of imports over exports during the twelve months ended May, 1926, was £17,740,000. The very large adverse balance shown by the southern portion of Ireland upon a total trade of just over £100,000,000 arouses interest in the position so far as the six counties are concerned. Unfortunately, writes a correspondent, it is only with difficulty that the trade position of Northern Ireland can be ascertained, and the only year for which even an approximate idea of the trade balance can at present be arrived at—by the combination of statistics obtained from a number of sources—is 1924. Since Northern Ireland and Great Britain form a single unit for fiscal purposes, Customs entries are not required in respect of the trade between the two countries. Very valuable statistics of the cross-channel trade, however, are collected by the Ministry of Commerce from the various port authorities. The returns only relate to quantities, but values are assessed. In addition, particulars are obtained from the Customs authorities regarding the direct trade between Northern Ireland and foreign countries. In 1924 it was estimated that the total sea-borne imports of the province amounted to £58,911,000, and the sea-borne exports to £57,801,000. The figures for 1925, as given by Mr. H. M. Pollock, the Minister of Finance, in his Budget speech, were imports £59,500,000, exports £60,000,000. The estimated value of the principal imports in 1924 were: cotton goods, £6,961,000; maize, £3,377,000; flax, £2,838,000; coal, £2,442,000; wheat flour, £2,025,000; machinery, £1,904,000; woollen goods, £1,451,000; and boots and shoes, £1,363,000. In the case of exports, the predominant position occupied by the linen industry in the life of the province is shown by the value of the linen goods exported, which amounted to £18,413,000 in 1924, in addition to linen yarn valued at £1,962,000. The value of ships built and repair work done for owners outside Northern Ireland was £4,191,000. Other principal items in the list of exports were live stock, £4,988,000; cotton goods, £4,715,000; whisky, £3,292,000; eggs, £2,184,000; thread, £1,577,000; machinery, £1,475,000; and bacon and hams, £1,459,000. These figures, in respect of both imports and exports, include goods consigned to and from the Irish Free State via Northern Ireland ports. In the case of live stock and eggs this transit trade is considerable, but in the case of other commodities it does not appreciably modify the figures given above. The statistics suggest that an improvement in the linen and shipbuilding trades would speedily be reflected in a substantial increase in exports. The value of the total overland trade between Northern Ireland and the Irish Free State, as shown by the annual statement of the trade of the United Kingdom for 1924, was as follows:—Imports, £9,916,000; exports, £7,395,000. In addition, there is a transit trade between Northern Ireland and places outside Ireland, principally to Great Britain via Greenore, which, according to the

Trade and Shipping Statistics of the Irish Free State, amounted to £380,000 inward and £509,000 outward in 1924. The result is to show total imports amounting to £69,207,000, and total exports amounting to £65,702,000. Particulars regarding the coasting trade between Northern Ireland and Irish Free State ports have not been published, so that the position remains indefinite. If this coasting trade is ignored, however, the statistics available show an excess of imports amounting to three and a-half million pounds. The question of invisible exports remains. Addressing the Ballymoney Chamber of Commerce some 18 months ago, Mr H. M. Pollock stated that he estimated the invisible exports of the province exceeded two millions pounds annually.

Austrian Bank Balance-sheets.—The gold balance-sheets for 1925 of eight of the Austrian banks, including the Kredit-Anstalt, the Boden-Kredit-Anstalt, the Länder Bank and the Wiener Bankverein, show a substantial decline in receipts, and practically no change in total expenses, in comparison with 1913, the aggregate net profit being 27.8 million schillings for 1925, against 129.8 millions for 1913. Salaries, pensions, and current expenses were 90 millions, against 64.3 millions in 1913. The aggregate balance-sheet figures compare as follows:—

	(Million Schillings.)	1913.	1925.
Capital	1,009		233
Reserves	516		104
Deposits and creditors	4,688		1,993
Total liabilities or assets ..	7,544		2,397
Bills	1,379		244
Cash	168		69
Securities	357		117
Participations	348		159
Debtors	4,156		1,703

The ratio of liquid assets, bills and cash to total liabilities varies considerably among the different banks, being highest—21.3 per cent. in 1925, against 23.7 in 1913—for the Länderbank, and lowest—8.7, against 19.7 per cent. in 1913—for the Kredit-Anstalt.

The Stock Exchange and Vendors' Shares.—The Stock Exchange Committee at their meeting this week decided to confirm their decision, reached three weeks ago, to delete the rule which ran:—

The Committee will not allow dealings in shares or securities issued to the vendors, credited as fully or partly paid, until six months after the date on which permission was given for dealings in the shares or securities of the same class subscribed for by the public, but this does not necessarily apply to reorganisations or amalgamations of existing companies, or to cases where no public shares are issued, or to cases where the vendors take the whole of the shares issued for cash.

Various sequelæ have also been deleted, and the rule book is now shorn of provisions that were placed there after discussion, within the committee room and outside of it, which aroused the keenest interest and no slight amount of heat. The deletion, writes a Stock Exchange correspondent, occupied far less attention than did the original passage of the rule. Stock Exchange men are agreed that the rule has become out of date, and, therefore, in its present shape, superfluous. When it was passed the now common practice of "offering" shares by a bank, corporation, company, or private firm had not attained the popularity that is now its vogue. Shares were either offered on a prospectus, or were introduced by the ordinary methods of market-making. The sale of an issue by a company to an intermediary party who passed on the shares to the public was not unknown, but it was seldom employed in the case of a public offer. The vendors' shares rule was introduced in order to stop certain obvious abuses that were inevitable if vendors had the right to sell their shares immediately a market started in those which were subscribed by the public. The intermediary stepped in, bought the whole issue, and, bound by no Stock Exchange rule as to vendors' and public shares, re-sold the total amount through the medium of that offer of shares wherein certain prospectus protections became conveniently shelved. The Stock Exchange

Committee have been faced with two alternatives, and they have chosen the easier course of deleting, rather than of tightening, rules that, in their current form, were obsolete. By some critics the committee are charged with a retrograde policy in this matter that will open new avenues to undesirable innovations. Attention has been drawn on several occasions in these columns to the greater risks run by the public in buying shares upon the strength of an "offer" instead of a proper prospectus. The Stock Exchange Committee's technical requirements, in the way of documents, &c., are no less exacting in the former case than they are in the latter. Whatever defence this may allow to the "offer" of securities, the practical business man knows that the prospectus information, from the public standpoint, has to be more ample and explicit if the public support—save in the case of Government and similar issues—is to be obtained. The Stock Exchange Committee could have fortified, had they chosen to do so, the rules relating to transactions in vendors' shares, and the austere-minded maintain that this is the course dictated by regard for public safety. Time alone can demonstrate whether the forebodings of the critics are justifiable, or whether the committee have acted wisely in abolishing an obstacle set up to check questionable methods, now that more modern methods have shown the ease with which financial traffic can drive a gyratory route around it.

The Vegetable Oil Industry.—The returns relating to the vegetable oil industry of Great Britain reveal the somewhat significant fact that in the past six months a substantial decrease in the imports of oilseeds, nuts, and kernels was accompanied by a marked increase in the quantity of vegetable oils imported from abroad. Thus, while the oilseed crushing and extracting mills have dealt with a smaller bulk of raw material and produced less oil, the consuming trades apparently have relied to an increased extent upon the imported article. The gross imports, according to the Board of Trade figures, were 791,367 tons of oilseeds, &c., as against 933,458 tons in the corresponding half of last year, a decline of 142,091 tons, equal to 15 per cent. Linseed at 184,026 tons showed an increase of 30,000 tons, but cottonseed at 306,807 tons was 6,400 tons down, and soya beans at the very low figure of 28,056 tons were over 84,000 behind. Imports of all other oilseeds were lower, and nuts and kernels at 232,792 tons were 53,500 tons lower, or, adjusting re-exports, 50,536 tons less than at the same date last year. Whatever may have been the influence of the general strike and the coal stoppage upon the British oilseed crushing industry, the falling-off in soya beans and nuts and kernels coincides with greater activity in these articles, more particularly palm kernels, in Continental mills. At the same time, we imported 22,226 tons of soya oil, the equivalent of 200,000 tons of beans, which in earlier years would probably have been crushed in English mills. Now that it is possible to ship the oil in bulk in the water ballast tanks of steamers homeward bound from the Far East, it is not difficult to understand this development, though so long as there is a good market, as there is, on the Continent for the cake or meal produce, beans in this case will continue to be imported into Europe. The net imports of refined and unrefined vegetable oils into the United Kingdom in the six months totalled 95,671 tons, against 84,854 tons, an increase of over 10,800 tons. The principal items, beside soya oil, were palm and coconut oils, in addition to which there figured fairly large imports of linseed, cotton, and rape oils, these latter three affording evidence of the keen competition of mills in Holland and Belgium in our home market. This, however, has not been so keen of late. A specially notable feature has been the greatly-increased amount of linseed absorbed by the Continent this season. The shipments from Argentina, India, and the Baltic, the principal exporting countries to Europe from January 1st to the middle of July was not less than 937,150 tons, of which about three-fourths will go to the Continent. The total is 50 per cent. in excess of a year ago, and with 274,000 tons shipped to the United States and 18,000 tons to Canada and Australia, the aggregate world shipments were thus just over 1,230,000 tons, leaving an estimated balance to be exported over the

remainder of the year of 680,000 tons, against about 700,000 tons shipped in the same period last year. Lower prices of linseed, and, therefore, of the oil product, seem to have given a good stimulus to demand. The export trade in vegetable oils from this country in the half-year showed a satisfactory increase of over 8,000 tons, the total of refined and unrefined being 72,599 tons, as against 64,489 tons.

British Investments for Non-Residents.—The general increase in taxation since the war in practically all countries has not encouraged the investment of money in British securities by non-residents. The severity of income-tax, of course, varies considerably. At the same time it is not difficult to appreciate the reluctance of foreign investors to take up British securities on which they would have to pay British income-tax as well as having to contribute towards the national exchequer in their own country. At the same time we do not think it is as fully realised as it might be that there is a large number of British securities available on which non-residents would not be liable for tax here. It is with pleasure, therefore, that we learn that Messrs Frederic C. Mathieson and Sons have just issued a small pamphlet giving full particulars of these securities. It should, however, be made perfectly plain, in the first instance, what exactly is meant by the term "non-resident." Apparently, say Messrs. Mathieson, a non-resident is "a person who does not reside and has no intention of residing in Great Britain or Northern Ireland for some time. If, however, a person has resided in the United Kingdom for more than half of the income-tax year.....the Inland Revenue will endeavour to obtain the tax for that year....." The securities available to these persons range from the 5 per cent. War Loan to a lengthy list of commercial and industrial, mining, railway, financial, land and investment, banking, and British Colonial issues. Non-residents can obtain interest without deduction, or recover if income-tax is deducted, in the case of Colonial and foreign Government and corporation loans and Indian Raj and Zemindary issues, and dividends and interest on holdings in Indian, Colonial and foreign companies, which are duly paid through agents in London, and so they can escape the tax altogether. In the case of American railway loans, these are liable to American taxes, and this income-tax is rather troublesome; if the income from this source is small, foreigners to the U.S. do not have to pay tax if they make a declaration as to the amount of United States income. Some American securities pay interest which are not liable to income-tax, but which may be liable to surtax. With regard to mines, South African companies pay a profit-tax, which is reckoned as income-tax by British Inland Revenue authorities; this tax is, however, levied in such a way that it allows for the amortisation of the capital spent before the profit-tax is charged. It is an allowable deduction in carrying on the business, and is not reflected in the dividend, on which no relief can be claimed, however small a person's income.

Life Assurance Benefits Extended.—The directors of the Clerical, Medical and General Life Assurance Society announce some interesting changes in office practice which will be to the benefit of policyholders. In the first place it has been decided to grant intermediate bonuses in respect of premiums paid during the current quinquennium, 1926-31, on all participatory policies which have acquired a surrender value and are surrendered before June 30, 1931. The effect of this upon the society's "prime cost" or discounted bonus policy is that all current arrears of premium will be repaid out of the intermediate bonus, thus leaving the ordinary surrender value to be paid in full. The directors have also decided that in times of peace, and, except in very special circumstances, they will issue whole-world and unconditional policies to all English officers holding His Majesty's Commission in the Royal Navy, British Army, whether at home or abroad, and in the Indian Army without extra premium. For most parts of the world the directors will grant to civilians whole-world and unconditional policies without extra premiums, or at extra premiums on a very reduced scale. No extra

premium, for instance, will as a general rule be imposed upon officers in the mercantile marine, mining engineers, coal mine officials, or civilians holding good positions in India and the East.

United Dominions Trust.—The affairs of the United Dominions Trust are mainly of interest because of the fact that the undertaking specialises largely in financing purchases of motors and other engineering products on the deferred payment system. The company is run on lines similar to those of many of the American finance companies, which at the moment appear to be one of the features of the commercial activities of the U.S. The composition of the directorate is also not without interest. Sir Edward Mountain, of the Eagle, Star, and British Dominions Insurance Company, and Mr F. R. A. Shortis, vice-president of the Guarantee Trust Company, is an interesting combination. Recent estimates in the *Economist* (June 5, 1926, p. 1084) as to the extent to which the deferred payment system had developed in this country, indicated a comparatively new phase of our economic life. Sir Edward Mountain, at the annual general meeting, mentioned that during the year the company had provided banking facilities to the engineering and allied trades, especially to the motor trade, which had made possible the movement of a considerable volume of merchandise. This service had the effect of liquidating stocks which otherwise might have remained frozen in the factories, and had enabled the machinery users to procure new and needed equipment, and that, in turn, had its effect on other industries. It is reasonable to assume that the company has an extensive field for profitable exploitation in front of it.

Oversea Correspondence.

UNITED STATES.—MARKETS—INDUSTRIAL SITUATION—OIL.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 21.

ALTHOUGH the security market is experiencing a reaction at the moment, it is doing so only after a further show of strength, during which its leaders, General Motors and United States Steel common, made new high records for all time, the former at better than 170 and the latter at 145. Sentiment still remains predominately optimistic, the reaction, which so far is moderate, having been anticipated on technical grounds. Meanwhile, with the early July settlements past, short-time money has been growing cheaper, as is consistent with the seasonal tendency. Call loans on the Stock Exchange were renewed at 4 per cent. yesterday and to-day, and this kind of money was obtainable outside the Exchange for $3\frac{3}{4}$ per cent. There has been a slightly firmer tone in the time money market with regard to the more distant maturities, such as six months, this firmness apparently reflecting an expectation that active trade later in the year may make larger demands for commercial accommodation; but the earlier maturities still are obtainable at $4\frac{1}{2}$ per cent.

Meanwhile, industrial news continues good, or, at the least, is better than had been expected. The steel industry continues to receive orders and to operate at higher rates than had been hoped for, the mills as a whole still keeping up close to 80 per cent. of capacity. Steel prices show no signs of weakness. The showing is distinctly encouraging in the middle of the summer season, and particularly so in view of the fact that the railroads, which are prosperous and well supplied with funds, have not started their autumn buying campaigns. Public buying of automobiles, although affected by the season, remains extraordinarily good. Thus the General Motors Corporation's dealers sold 117,000 vehicles to the public during June, and while this figure compares with the record-breaking total of 141,000 for May, it is greatly in excess of the figure of 75,000 for June a year ago, and of the 65,000 for June of 1924. Incidentally, the General Motors statistics show that the proportion that closed

cars make up of the corporation's sales has risen from 19 per cent. in May, 1922, to 59 per cent. in May, 1925, and to 79 per cent. in May of this year.

As to the general outlook, the statisticians and business prophets, who became bearish in the first quarter of the year and predicted reaction in the second quarter, are now hedging on their prophecies of recession. Most of them admit that business prospects for the third quarter are good, and while some of them predict reaction for the fourth quarter, some have swung all the way around and are frankly bullish. Meanwhile, the index of wholesale commodity prices prepared by the Bureau of Labour Statistics continues for June the indication of greater stability that it gave in May. The average level rose 0.4 of 1 per cent., as compared with a rise of 0.3 of 1 per cent. shown by the May figure. The various groups shared the stability shown by the index as a whole. While the indication of this index is slightly different from that given by the Dun and Bradstreet indices, which are made up for the first of each month, and which have shown slight recessions during the past two months, it should be noted that the Bureau of Labour Statistics index is the best weighted, and that all three indices point to greater stability after the decline that began toward the end of last year and ran rather fast during the first quarter of this year. It also may be noted that wheat prices now are showing greater strength, partly in reflection of the idea that the Canadian crop will not be excessive, and that cotton is rallying on weather reports and a belief that the impending Government crop report will show a material reduction in the predicted yield.

Weakness of a moderate character in oil shares during the past week has reflected the unsettlement produced by the reduction in the price of Pennsylvania crude (which was not broadly significant), fears of new pools, and, perhaps, the weak character of the following that the oils seem to attract. At the moment fears over the stability of the price structure of petroleum and its products seem not particularly well founded. The mid-Continent crude market seems still firm, and while stocks of gasoline are large, consumption is extremely so. Reports were circulated last week that the Standard Oil Company of New Jersey was about to retire its \$200,000,000 issue of preferred stock, an operation that would require \$230,000,000 in cash. These reports, which have been current from time to time for a year or so, are premature. The directors of the company undoubtedly would like to retire their preferred stock, which carries a 7 per cent. dividend, and probably hope to do so at some time. However, it is well known that the Jersey company has no love for bonded debt, and the flotation of bonds to retire the preferred stock is quite improbable.

FRANCE.—THE NEW GOVERNMENT—M POINCARÉ'S PLANS—NEW FINANCE BILL—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, July 28.

THE best evidence that could be desired as to the effect of the advent of the new Poincaré Government is that as soon as it became known last Thursday that the ex-President of the Republic had consented to attempt to form a "Ministry of National Unity," the franc once more began steadily to improve. The actual announcement of the names of M. Poincaré's Cabinet gave the franc a further sharp fillip, and, before the new combination for the first time faced the Chamber on Tuesday, exchange rates showed an improvement of close upon sixty points. The effect of the change of Government on the franc has been shared by practically every aspect of the nation's activity. Confidence is obviously returning to a substantial extent, and all parties—with the exception of the Socialists—appear determined, for the immediate future at least, to ignore purely party squabbling, and to work together for the national weal. The first trial of strength between the new Government and the Opposition yesterday resulted in a division on a vote of confidence, which may be regarded as indicative of the probable outcome of the detailed discussion of its finan-

THE MERCANTILE BANK OF INDIA, LTD.

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted on application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STUART, Chief Manager.

cial proposals. The Government, in a House of 489, secured a majority of 227 (358 against 131).

With a view to expediting Parliamentary business, a long list of very desirable new rules of procedure was hastily brought into existence a few days ago, among them being regulations to limit the loquacity of deputies, which has been the cause of so much futile eloquence in the past. These will operate very much on the lines of those with similar objects which are in use in the House of Commons. The Government brought one of the most important of these into operation for the first time when it proposed that the discussion of its financial proposals shall be regarded as a matter of "extreme urgency," which the House approved by 418 votes against 31. On this occasion the Socialists abstained *en bloc* from voting, the minority including the 28 Communist deputies. The prospects are, therefore, that the Chamber is at last determined to settle down in earnest to the solution of the problem of financial restoration.

The Government's new financial proposals "for the creation of new fiscal resources and the endowment of a *caisse d'amortissement*" were made public yesterday, and it is expected that the Finance Commission will find itself able to complete its consideration of them within a maximum of six hours this evening, so that the discussion of them by the full House may begin forthwith. The detailed proposals indicate that M. Poincaré has by no means based his plans for financial restoration on the recommendations recently presented by the Committee of Experts. The experts laid down that stabilisation of the franc is the first condition of financial restoration, and the whole of their recommendations were based on this. "Without stabilisation," they reported, "neither equilibrium of the Budget nor of the Treasury can be attained," and they insisted that stabilisation of the currency can only be attained by the aid of foreign credits and the utilisation of the gold reserve. The Poincaré Government, on the contrary, take the view that the fall in the value of the franc is merely a consequence of other evils (the flight of capital, bad management of the national taxation and fiscal policy, &c.), and that if these evils are remedied, confidence will return, and the franc will in time right itself. France asks for sound money, and M. Poincaré insists that if the taxpayers will provide sufficient money to place things on a level keel once more, and the France that saves and the France that works will both put their shoulders to the wheel, sound money will automatically return. The experts based their conclusions on purely technical grounds; M. Poincaré has decided to base his policy on moral and psychological factors. He proposes to ask for the immediate imposition of 5,000,000,000 of additional taxation (in supplement to that legalised by the 1926 Budget Act), and for further drastic reductions of expenditure. He rejects absolutely all question of a moratorium, consolidation of existing debt or further inflation, and he calculates on restoring the franc by "a stricter and more skilful fiscal policy." By these means he expects to obtain, at the same time, security for the Treasury and super-equilibrium of the Budget.

The preamble of the new Finance Bill sets forth that the sole object of the measure is to restore internal credit, which is the first condition of all attempts at currency restoration. To achieve this, Parliament must (1) completely balance the Budget, (2) undertake immediately the amortisation of the public debt, and (3) vote the

measures necessary to attract or retain capital in France. "The currency malady from which France is suffering," the Bill declares, "is not the outcome of an adverse balance in foreign trade.....but due to the continual flight of capital. This hemorrhage must be stopped before everything." The flight of French savings abroad is undoubtedly due, the Bill insists, to the instability of the currency, to the excessive scale of certain taxes—notably the general income-tax, the succession duties, and the transfer duties on securities—and the abuse of vexatious and inefficient methods of control. This was the view taken by the Committee of Experts in their recent report.

The detailed proposals set forth in the new Finance Bill are admittedly only a first instalment, and other economic, financial, and currency proposals are to follow in due course. In the first clause of the Bill the Government asks for powers immediately to effect by decree substantial economies in the administrative services, down to December 31st next, "by suppressions or fusions of employments, of establishments, or of services." In view of the fall in the value of the currency, the Government asks power to increase specific fixed duties to a degree not exceeding six times the tariffs that existed on July 1, 1914 (with the exception of the sale price of tobacco, which must not exceed four times the pre-war price). Substantial increases are proposed in the Excise duties on beers, wines, &c. (but not on spirits), and in the taxes on railway tickets and goods traffic and on motor-cars and maritime transports. The tax on turnover is raised to a uniform level of 2 per cent. *ad valorem* on all internal transactions, and to 1.30 per cent. all round on exports (on which the turnover tax now ranges from .20 to 1.30 per cent., according to category). The tax on income from securities is increased by 50 per cent. while that on income from foreign securities (*non-abonnés*) is raised from 18 per cent. to 25 per cent. (*sans décimes*). Reductions are proposed in the annual transfer tax on certain categories of securities. The incidence of succession duties is completely recast, on the basis of considerably reduced duties in cases of direct successions and marked increase when property passes into the possession of distant heirs, the proposed rates varying from 7½ per cent. in the case of an estate of 500,000 francs passing to a direct descendant in the first degree to 35 per cent. where the inheritor is unrelated to the testator or related only in the fourth degree. Income-tax rates are revised in detail according to category. An additional 660,000,000 francs is asked for in connection with military and civilian pay, 400,000,000 francs to provide for "foreign debt charges not covered by special revenue," and an additional 961,250,000 francs to meet interest on the floating debt of the Treasury. The greater part of the increased revenue provided for, it will be seen, is to be drawn from indirect rather than direct taxation.

The foreign trade returns for June show that this aspect of the nation's economic life continues unsatisfactory and that the country is continuing to purchase more than it is selling. The month's exchanges disclose a total deficit of 509½ million francs (as against 630 millions in May, 150 millions in April, and 75 millions in March). The adverse monthly trade balance, which began to show itself in July, 1925, has now continued for exactly twelve months. The total excess of imports over exports for the first half of 1926 amounted to 2,691,415,000 francs, as against a surplus of exports amounting to 2,570,114,000 francs during the corresponding period of last year. The detailed figures are as follows:—

	First Six Months of		Increase in 1926.
	1925.	1926.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	3,780,785,000	5,219,593,000	+ 1,438,808,000
Raw materials	12,637,406,000	20,349,207,000	+ 7,711,801,000
Manufactured goods ..	2,592,213,000	3,845,516,000	+ 1,253,303,000
Totals	19,010,404,000	29,414,316,000	+ 10,403,912,000
Exports—	Francs.	Francs.	Francs.
Foodstuffs	1,686,474,000	2,199,957,000	+ 513,483,000
Raw materials	5,903,202,000	7,541,674,000	+ 1,638,472,000
Manufactured goods ..	13,990,842,000	16,981,270,000	+ 2,990,428,000
Totals	21,580,518,000	26,722,901,000	+ 5,142,383,000

The total exports during June amounted to 4,671,554,000 francs, as against 3,484,233,000 francs in June, 1925, while imports totalled 5,180,955,000 francs (as compared with 3,124,373,000 francs). In view of the chaotic situation created by the continued fall in the franc, the real position may perhaps be gauged best by the fact that exports during the past six months have had a tonnage of 819,453 tons more than during the corresponding period of last year, while imports increased by 565,234 tons only. In other words, while the quantity of exports increased during the six months by 5½ per cent., their value rose by about 24 per cent., whereas the weight of goods imported increased by less than 2½ per cent., while its value rose by about 55 per cent. The figures indicate that, not only is there now a serious adverse balance in the "visible" exchanges, but that, owing to the franc having fallen 40 points during June (from 139 to 179), the payment received for many of the consignments exported must have been insufficient to provide for the replacement of capital.

GERMANY.—CREDIT—PRICES—INDUSTRY—FUSIONS—CROPS—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, July 27.

THE Cabinet has prepared a Bill to regulate the use of Article 48 of the Constitution. This may be considered a final act in the liquidation of the inflation process. The Article, which empowers the President of the Republic—in practice the Cabinet—to issue ordinances overriding the Constitution in case of emergency, was liberally used for the extra-parliamentary regulation of currency and financial questions connected with the mark depreciation, and was even used to regulate the Valorisation problem. Very often it was illegally applied, but this abuse of authority, though protested against, was tolerated on grounds of expediency. For such applications there is no longer any excuse, and the Article will be reserved for the emergencies contemplated when it was drafted, that is, in the main for civic disturbances. An agreement between the Republic and the interested States for completion of the Mittelland-Canal has been come to. The works include completion of the chief canal (Peine-Burg), with the following parts of the southern approaches:—Canal from Leipzig to Kreypau, canalisation of the Saale from Kreypau to Halle, a branch canal Bernburg-Leopold-Stassfurth, and a branch canal to Brunswick. By the execution of this plan will be settled a controversy dating from 1886, which arose from opposition by Junker agricultural interests, and which for years was Prussia's most important internal problem.

Money is still very plentiful. Good borrowers can get day-money at 3 per cent., month-money at 5 per cent. Prussia's issue of 40,000,000 marks of 6½ per cent. Treasury bills was overbought. The banks, being unable to obtain sufficient short-term investments, have been buying bills abroad. Supplies of exchange have come in from the realisation of foreign loans. The Government is granting a new credit of 100,000,000 marks to the Railways' Corporation for bridging and permanent ways and possibly for electrification. Before the issue in June of 150,000,000 marks Railway Corporation Preference Shares, the Republic had given a temporary credit of 100,000,000 marks, most of which had already been spent on new locomotives and on the permanent way. The 150,000,000 marks from the Preference Shares will be partly used for electrification of the Berlin urban railways. The Gold Discount Bank, which has already advanced 250,000,000 marks to agriculture, is reported to be about to advance a new 100,000,000 marks for terms of three to five years, in order to enable farmers to convert their bank debts into mortgages. Deposits in all German savings banks at the end of May totalled 2,258 million marks, practically all of which has accumulated since the currency stabilisation. Belated figures, for Prussia only, show that credit was more rapidly restored after the stabilisation than is believed. New mortgages in the cities in 1924 totalled 2,665 million marks, against 705 millions in 1913; in the country 1,346 millions, against 787 millions.

The cost-of-living index (100 in 1913-14) for June was 140.5, against 139.9 in May, and a high point of 145 in August, 1925. The wholesale prices index on July 21st was 126.3, against 128.1 on July 14th, and 134.8 average for all July, 1925. A law rescinding the ordinance against high prices has come into force. Some parts of this exceptional legislation were earlier abolished. Traders in food-stuffs are still compelled to take out licences.

The labour market has undergone no material change. Unemployed on July 1st numbered 1,742,567, against 1,750,000 on June 15th. The coal situation is very satisfactory. The last week recorded shows an average daily output on the Ruhr of 366,596 metric tons, the highest for a long time. The daily average for 1913 was 379,840 tons. In June, coal output in all Germany was 11,756,386 tons, as against 9,890,607 tons in June, 1925, and 11,794,143 tons in the same area in 1913. (Saar output in all years excepted.) The respective figures for the first half-years were 65,746,086, 64,564,584, and 69,878,503 tons. With exception of pig-iron, the iron and steel situation has improved. The Ingot Steel Syndicates companies are producing to the full 67½ per cent. of their output capacity, whereas a month ago they had only enough orders for their 65 per cent. ration. The Pig-iron Syndicate retains unchanged in August its prices and selling conditions. The new French franc collapse has intensified competition in pig. The scrap-iron market is more active, with rising prices. The increasing adoption of gold-pricing by French and Belgian firms will, it is expected, put an end to "exchange dumping" in the West. The English demand for semi-finished material has increased; home orders for railway material have also increased, as also export trade in heavy rails. The bars (home and foreign) and sheets markets have improved. German producers of thick sheets have gained from the fact that the low franc exchange has brought French and Belgian works orders in excess of their capacity. The recent Wire Industries agreement has resulted in a rise of prices. Steel Syndicate prices, also Tubes Syndicate prices, are unchanged. The output of pig-iron in June was 720,081 metric tons, against 736,206 tons in May, 1926, and 941,201 tons in June, 1925. Output in the first half of 1926 was 4,161,974 tons, against 5,571,878 tons in the corresponding half of 1925. Exports of coal in the first five months of 1926 were 6,551,885 tons, against 1,900,274 tons imports. Exports of iron and steel and wares thereout in the five months were 2,085,288 tons, against 378,090 tons imports. Exports of machinery were 185,040 tons, imports 15,129 tons. The coal export figures do not include Reparation deliveries. Those who remember the prophecies of five years ago—that Germany must lose her economic self-sufficiency as a result of the Versailles Treaty—find these figures very satisfactory, though it is true that the foreign trade balance and foreign payment balance would be much more satisfactory if Germany had not lost so much iron and coal.

The International Tubes Syndicate between Germany, France, Luxemburg, and Belgium has been formally perfected to date for three years from June 1st. Separate syndicates of the different territorial groups will conduct all selling, and while the respective quotas in the total sales will be regulated, no central selling organisation will be created. The existing Continental agreement with Czechoslovakia is brought into the syndicate. As a result of the agreement the prices of tubes have been put up. The Steel Trust (*Vereinigte Stahlwerke A.-G.*) has purchased for about 20 million marks the Rombach Company's smelting establishments in Bochum, Engers, and Rendsburg. The trust has concluded with the Stumm concern a leasing agreement, with power, it is understood, to buy the Stumm's works at any time within the lease term of 30 years. Many cartels, fusions, agreements, and price-conventions are reported in other branches of industry.

Further heavy rains and violent local storms have caused apprehensions as to the crops. But while it is stated that 125,000 hectares of agricultural land have been flooded, only a small part of this area was under grain crops, and no harm at all has been done in districts where the hay crops were already got in. It is stated that the

quite exceptional floods will not materially influence the total crops. Fodder crops are reported to be particularly rich. The grape and fruit crops were damaged by frost in May, and are considered unsatisfactory.

The Bourse last week was unsettled, and the average stock quotation fell slightly. The only stocks in great demand were banking, which continued to rise. The high-priced speculative stocks mostly stand 8 to 15 per cent. below their highest levels, which were reached at the end of June. This reaction is fully normal in view of the uninterrupted two-months' bull movement of May, and June. The inactive stocks, having risen very little, have as a rule receded very little. There is a great disparity between the yields at present prices of different classes of stocks. The Dyes Trust stock, which pays a 10 per cent. dividend, yields at quotation price of 250 only 4 per cent., while small but thoroughly solid private railway and other companies which pay 4 to 6 per cent. dividends can be bought at 50 to 75.

CANADA.—THE GENERAL ELECTION—THE MEIGHEN CABINET—NEW FINANCE MINISTER—CROP CONDITION AND ESTIMATES—THE AFFAIRS OF BESCO—PRICES.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 13.

THE business community regards with feelings akin to dismay the prospect of the second disturbance from a general election within a year, but they will gladly tolerate the inconveniences of what promises to be a peculiarly bitter contest if it provides Canada with a Government possessed of a clear majority and able to pursue definite clear-cut policies. The date of the polling has not yet been announced, but all the parties are busy organising their forces, and candidates are already being nominated. Mr Meighen found the process of Cabinet making no easy task, and the difficulty of reconciling warring factions among the French-Canadian Conservatives has induced him to leave four portfolios vacant of which three will be allocated at a later date to French-Canadians. However, Mr E. L. Pateenaude, who served in the Borden Government, until he resigned over the conscription issue in 1917, joins the Cabinet as Minister of Justice, and Sir G. Perley will represent the English-speaking element in Quebec as Secretary of State. The most interesting appointment is Mr R. B. Bennett's selection as Minister of Finance. Mr Bennett is a very able lawyer, who rose to the leadership of the Alberta Bar, and, after serving an apprenticeship in provincial politics, came to Ottawa in 1911. He was on the verge of Cabinet rank when, differing with the Union Government, he dropped out of active politics in 1917, and he has since devoted his energies to his law practice and some large manufacturing enterprises in which he was interested. He is now rated a very rich man, and, as he is the director of numerous industrial and financial corporations, he will be branded as a representative of "big business," but, on the other hand, agrarian leaders in the West will testify that he was a cordial backer of the co-operative wheat pool movement from its inception, and lent it very useful assistance. He is an excellent man of business, and his varied experience and intellectual equipment ought to ensure his success in his new post. Messrs Guthrie, Tolmie and Stevens all served in previous Cabinets, and Sir H. Drayton, who, owing to poor health, has not taken a portfolio, was Minister of Finance from 1919 to 1921. Mr Black is a wealthy ship-owner from Halifax, and Messrs Chaplin and Ryckman represent the industrial interests of Ontario. The general verdict is that the new Cabinet is highly presentable, but does not possess any commanding strength. There is general regret that Mr Meighen failed in his efforts to enlist the services of some outstanding national figures like Mr Hume Cronyn, a former Liberal, who is now President of the Mutual Life Assurance Company and other corporations; but they feared to embark upon the stormy waters of politics. An attempt was also made to bring back Sir Robert Borden to public life, but he was disinclined to face the ordeal of a contested election, and the Senatorial seat now vacant in Nova Scotia which he would

have accepted cannot be filled until after the general election.

Crop conditions continue to be very variable. In Eastern Canada so far the summer has been abnormally cold and wet, and, while hay and pastures have profited by the abundant moisture, the growth of grain and other crops has been disappointing, and they have not yet made up for their late start. An average yield of fruit is promised, but the weather has been too cool for the important tobacco crop of Western Ontario to prosper. The western grain crop got off to a good start, but the third crop survey of the *Manitoba Free Press*, published on July 10th, records a certain setback. It reports that owing to cool weather in the latter half of June there was very little growth, and that in many districts the wheat crop is heading out on a short straw averaging from 18 to 24 ins. in height. A heat wave in the first week of July did considerable damage, especially in Saskatchewan, and out of 304 reports received from individual points, 54 rate the wheat crop's condition as unfavourable. But within the last few days heavy rains have fallen over wide areas, and helped the situation. Conditions in Alberta are more satisfactory than in the other provinces. The survey also shows the conditions of the coarse grains, like oats, barley, and flax running from fair to good.

These conditions are reflected in the first preliminary estimate of the grain crop of 1926, just published by the Dominion Bureau of Statistics. It places the total acreage planted to wheat at 22,492,000 acres, as compared with 21,972,732 acres in 1925. All of this, save about three-quarters of a million acres, is spring wheat. It forecasts the probable total yield of wheat at 348,626,000 bushels, which is substantially below the final yield of 417 million bushels in 1925, but it is being recalled that the corresponding preliminary estimate last year only forecast a crop of 365 million bushels. The preliminary estimates for the crops of oats, barley, rye, and flax are respectively 458,840,000 bushels, 100,624,000 bushels, 11,762,000 bushels, and 8,419,000 bushels.

Matters have moved rapidly to a crisis in the affairs of the British Empire Steel Corporation. Following the appointment of the National Trust Company as receiver and manager for the Dominion Iron and Steel Company, it is now predicted that similar steps are contemplated for another of the subsidiary organisations, the Nova Scotia Steel Company. The affairs of the corporation are evidently in a difficult position, and although hopes are now being raised that the return of a Conservative Government with a clear majority would mean increased protection for the coal and steel industries of Nova Scotia, the prospect of such assistance is far from certain, and even if it were forthcoming a drastic financial reorganisation could not now be avoided. There is great anxiety in Nova Scotia about the situation, for even the temporary closing of the various plants would mean serious unemployment, and affect the prosperity of the whole province.

Commodity prices show a tendency to decline, the index number of the Bureau of Statistics for June being 155.7 as against 157 for May; although four of the main groups moved upward declines in the other three groups, especially in the vegetable group, which fell from 180.7 to 173.7, were sufficient to send the total index downward. On the other hand, security prices moved upward in June, the Bureau's index figure for 31 industrial common stocks being 187.7, as compared with 182.8 in May, a gain of nearly 5 points. Paper stocks declined from 187.6 to 181.4, but milling stocks rose from 209.6 to 219.6. Ten public utility stocks showed a rise from 86.1 to 88.1. The index number for bonds fell from 107 to 105.1, due to the influence of Dominion Iron and Steel Company bonds. Bank stocks were virtually stationary, but they have been moving upward in a steady climb for the last year, and this process is now being attributed to American efforts to secure substantial interests in Canada. It is rumoured that an investment corporation which is controlled by Dillon, Read and Co. has been a heavy purchaser of Canadian bank stocks. The employment situation is very satisfactory, and the index number for June stood at 101.0, as compared with 94.3 on May 1, 1926, and 94.5, 95.2, and 97.3 on June 1, 1925, 1924, and 1923

respectively. There has also been a very gratifying inflow of immigrants, but it is still doubtful what proportion of them become permanent settlers, for on June 30th it was reported that about 4,000 newly arrived British people were waiting at Windsor, Ont., which lies opposite Detroit, to be on hand for the beginning of the new U.S. immigration year on July 1st, when fresh quotas were started.

The final foreign trade figures for the fiscal year ending March 31st last are now available, and, as given below with comparative figures for the two previous years, show a gain of 377½ million dollars over the total for 1925, and have only been exceeded in the peak year, 1921:—

	YEAR ENDING MARCH 31.		
	1924.	1925.	1926.
Imports	\$ 893,366,867 ..	\$ 796,932,537 ..	\$ 927,402,732
Exports, domestic and foreign	1,058,763,297 ..	1,081,361,643 ..	1,328,537,137
Total trade....	1,952,130,164 ..	1,878,294,180 ..	2,255,939,869

The percentage gain in imports was 16.4, and in exports 22.9 per cent. The favourable balance of trade is computed at \$401,134,405, which is a gain of 116 million dollars over the previous year, and has only been exceeded in the war year 1918. Trade with the United Kingdom was valued at 672 million dollars, which is a gain of 124 million dollars, or 22.8 per cent. over the figure of 548 millions for the previous year; of this gain, exports accounted for 89.8 per cent., and imports for 10.2. The increase in trade with the U.S. was about 159 million dollars, but here imports accounted for 63 per cent. of the increase and exports for 37 per cent.

INDIA.—COTTON TARIFF INQUIRY—JUTE OUTLOOK —INDIAN TOBACCO—MOTOR TRANSPORT.

(FROM OUR CORRESPONDENT.)

CALCUTTA, July 8.

As forecast in my last letter, a special Tariff Board has been constituted to investigate the causes of the present depression in the cotton mill industry, and to suggest the measures which might be taken to restore it to prosperity, and there is fairly general satisfaction with the personnel of the new body as well as with its terms of reference. The attitude of the millowners, however, differs from that of the general public, and may be described as indicating reluctant acquiescence rather than cordial approval, inasmuch as their own programme, which they did their utmost to force upon the Government of India, contemplated an inquiry so shaped and governed that interests of consumers would not have been taken into consideration. In short, their proposal, as expounded in the official proceedings of the Bombay Millowners' Association, was that "The personnel of the committee and the terms of reference should be settled in consultation with the Committee of the Millowners' Association"; "the inquiry should be limited to the mill industry in Bombay"; and, finally, "Government should pledge itself to take action without delay in accordance with the recommendations of the Inquiry Committee." These suggestions the Government of India, quite rightly, declined to consider, the Commerce Member insisting (a) that the personnel must be a matter for the Government of India; as well as all the factors affecting it, and not merely Japanese competition; and (c) that it was quite impossible for Government to pledge itself to accept the recommendations of the Inquiry Committee, though, naturally, it would be quite prepared to give such recommendations the most careful consideration. In summary, while the millowners demanded that their own opinion as to the causes of the present position of the industry should be accepted without further analysis—a packed committee, taking confidential evidence, being appointed solely to frame a new tariff—the Government refused to accept in advance either the millowners' diagnosis or the suggested prescription. In view of a recent communication from Manchester to *The Economist*, it is necessary to attempt to determine to what extent Lancashire interests connived at a proposal which the leading commercial weekly in

India has caustically described as "one of the most indefensible bargains ever suggested to a Protectionist Government."

The proposal outlined was put up to the Government of India in April. Meanwhile, as I indicated by a brief quotation from the Millowners' Association report in my last letter, Manchester and Bombay mill interests had been in consultation, and had agreed on a definite plan of action. In the Millowners' Association report for February it was announced: "Members are aware that the severe but very unfair competition which the cotton textile industry of this country is meeting from Japan, and the measures to offset this competition, occupy the foremost place in the committee's programme of work this year. The whole question was very exhaustively discussed at a meeting of the committee early in February, in which Mr J. H. Rodier, chairman of the East India Section of the Manchester Chamber of Commerce, was also present at the special invitation of the committee. After a prolonged and very interesting discussion, it was resolved: (1) That the present policy of the association should be (a) to press for abrogation of the Commercial Treaty with Japan; (b) to demand additional import duties on piece-goods and yarns imported from countries where labour conditions do not conform to the conditions laid down in the Washington Conventions regarding hours of work, employment of women at night, and minimum age of employment; (2) that a sub-committee consisting of Mr N. N. Wadia, Sir Victor Sassoon, Mr A. Geddis, and Mr H. H. Sawyer be appointed to draft a representation, detailing the association's case for presentation to the Government of India, the Press, and the members of the Legislative Assembly. Mr Rodier stated that he was in general agreement with the policy advocated, and promised that he would place the committee's views before the Manchester Chamber of Commerce on his return to England. He anticipated that Lancashire would give her whole-hearted support to the committee's policy, especially in view of the assurance given to him that the association's policy did not include any intention to increase the import duties on Lancashire goods."

Whether an agreement in such terms, and reached in such circumstances, represents a pact (the phrase to which the Manchester organisation objects), an understanding, or merely an *entente* is of less importance than the fact that it has been definitely agreed that no question shall arise of imposing a higher import duty on Lancashire products. The probable sufferers will be neither the Bombay or Lancashire millowners, who are combining to keep up prices; but, on the one hand, the consumers of mill products, who are to be debarred from buying piece-goods below the Bombay-Manchester parity, and, on the other hand, the handloom industry, which has as large an outturn as the Indian mills, and which stands to lose heavily, in the event of higher duties being imposed on imported yarn, in favour of the dearer and inferior qualities manufactured in this country. Taking the Calcutta market, imports of cotton goods, compared with the preceding year, dropped by Rs. 8 crores, the Collector of Customs, in his annual report, summing up the explanation in the remark that: "The Lancashire mills worked short time and the fixed rates agreed on for sales represented an advance of about 170 per cent. over pre-war prices, which is still considerably above the advance in grain and seed values on which the consumer depends for his purchasing power." It may be added that export trade, however important, reflects the economic condition of so small a percentage of the total population as to form a very misleading test of the purchasing power of the average cultivator. Concerning Japanese competition, the respective contributions to Calcutta's imports of cotton goods in 1925-26 were:—

	United Kingdom.	Japan.	% against % last year.
Twist and yarn	34	56	64
Grey goods	93	6	3
White goods	98	14	1
Coloured goods	69	25	12

According to the official trade report, one advantage which Japan enjoys is that certain of her products, e.g., grey shirtings, striped drills, cotton flannelettes, coarser types of poplin, low qualities of prints, &c., are consumed largely in Japan, only about 10 per cent. of the total pro-

duction being exported to India. She is thus in a position, not merely to ship speculative consignments not covered by contracts, but also to give immediate shipments on cabled orders which from Manchester or Bombay would probably require two to four months of delivery.

A jute crop of about 110 lakhs of bales is expected this season, compared with about 87 lakhs last year. Mills continue to work at a loss in some instances, which points to disappointing dividend declarations in the near future, but it goes without saying that the larger crop will result in the development of an entirely new situation in respect of mill operations in 1926-27. Cultivators and middlemen earned record profits on the crop just disposed of, but prices reached a level at one stage at which mills here or abroad absolutely refused to trade, thus indicating that a limit had been reached at which jute ceased to be a profitable purchase for the varied purposes for which it is usually utilised. This year there should be sufficient jute, at reasonable prices, to meet all requirements, assuming, as we may, that Calcutta mills will remain indefinitely on short time.

A Tobacco Bureau will be established shortly at Pusa (India's chief agricultural experimental station), and, it is hoped, will initiate improvements in cultivation, curing, &c., which, in due course, will enable Indian tobacco to take the fullest advantage of the preferential rate of 1s 6d conceded to Empire-grown tobacco by the United Kingdom. It is considered that the acclimatisation and hybridisation of American tobaccos offer a large field for the improvement of the cigarette tobacco industry in India, and, at the same time, that it is by the cultivation of these types that the export trade can be profitably expanded. The type of leaf required for export is the same as that required for cigarette manufacture, namely, a bright leaf having the colour, flavour, and texture of Virginia.

UNION OF SOUTH AFRICA.—IRRIGATION—MINING SHARES AS ANNUITIES—CENSUS FIGURES— RAND'S FUTURE.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, July 7.

THE statement is made that the Minister of Justice proposes to hand over the control of the Irrigation Department to General Kemp, Minister of Agriculture. When the Pact Government was formed, irrigation came under the Lands Department, so irrigation appears to be the "shuttlecock" of different departments. The *Star* points out that many schemes have been carried out since the first up-to-date Irrigation Act was passed 20 years ago, but the position to-day is both "muddled and dangerous." The Government has put over £4,000,000 into board schemes alone, and its total commitments are between £5,000,000 and £7,000,000. Some authorities put the figure much higher. But its security for all this money is far from satisfactory. Large areas of land which might be irrigated are lying idle, and the cultivated area cannot bear the total water rate necessary to attain a financial balance. There is a loud outcry for deferred rates, lower rates, a writing down of capital expenditure, and so on.

The Irrigation Finance Commission summed up the situation in a sentence: "Where a decade ago the land was crying for water, the land and the water are to-day crying for settlers." Mr F. E. Kanthack, Director of Irrigation some years ago, expressed a doubt whether the total area of land in the Union, potentially cultivable, considering only such land which is good enough to bear the high capital charges involved in bringing it under irrigation, amounted to more than 2 per cent. of the total extent of the country, that is to say, 10,000 square miles out of 473,000 square miles, but some authorities express the view that Mr Kanthack sets a somewhat high standard.

Some life assurance companies, and especially those domiciled in Canada, are pushing annuity contracts, advertising that they can offer over 10 per cent.; this, of course, means with extinction of capital. But a prospective annuitant may do better by purchasing Rand gold-mining shares. For example, Crown Mines may be relied upon to pay 6s a year on 60s, which is exactly 10 per

cent., and the life is a long one, possibly between 25 and 30 years if costs be reduced to the region of 15s, and perhaps so without that proviso. Illustrations used in propaganda frequently take the age of the prospective annuitant at 65. Such a person has an expectation of 11½ years' life on the British offices O.M. table (1893) or 11 years under the English experience No. 8 table. Crown Mines is embarking on a substantial capital expenditure in order to open up the large areas acquired during recent years, but unless anything unforeseen happens should easily stabilise its dividend at 6s per share; this would call for £554,000, whereas 10 months' profits (the usual formula on the Rand, the other two being absorbed by taxation and miscellaneous charges) at current rates would be £880,000. Thus the dividend requirement is only about five-eighths the divisible profit—surely an ample safety factor as regards maintenance of regular distribution. The ore reserve actually developed represents three and a-half years' supply. "Modders" yield 10 per cent. gross (i.e., without sinking fund) and Government Areas the same, assuming a distribution of 8s 6d half-yearly (the June profit was £220,000, of which rather more than half would accrue to the Government). Modderfontein's reserve, after allowing for sorting, presents fully five years' assured supply of ore, and of profits. The actual "lives" of these three mines may be said to average double the expectation of life of a man of 65, and the assured profit period covered by the ore reserve from one-third to half such period. Legatees would have the benefit of all dividends paid subsequently. It would, therefore, seem that, at any rate for a portion of the capital, investment in high-class mining shares should be considered for annuity purposes, though it is recognised that the security is not absolute, as it is in the case of a contract with a first-class assurance company—City Deep and Van Ryn Deep have demonstrated that.

Preliminary results of the Census of the Union for 1926 reveal an increase of 142,900 white persons, equal to 10.06 per cent. in five years. The total white population is 1,672,106. The Cape Province has 704,898, the Transvaal 606,763, the Orange Free State 202,191, and Natal 158,254. Natal shows the greatest increase, 15.65 per cent., the Transvaal 11.64, the Cape 8.39, and the Free State only 7.23. There are 36,208 more men than women. Adult males number 452,270, and these have to bear the bulk of direct taxation, and a substantial portion of the indirect taxation as well. Viewed in relation to population, the taxation is fairly heavy.

The feature of last month's (June) mining returns is the profit of £220,341 secured by Government Areas, a record for this or any other Rand mine, and, one imagines, for any gold mine the world has yet seen. Its superiority over the New Modderfontein is nearly £50,000. With gold at 91s 6d per ounce, a profit of £206,900 was earned in October, 1924. Costs were reduced to 16s 1d on the large tonnage of 200,000, but as they were only 3d higher on the basis of 161,000 tons in January, it is fully expected that when the additional plant is fully "tuned up," and, perhaps, crushing 215,000-220,000 tons, there is a likelihood of their being reduced to the region of 15s 6d, at which point they would "tie" with the lowest rates on the field, even those of companies doing an insignificant amount of development. The ore reserve would be automatically increased by lowering the pay limit from 4 to 3½ dwts.

Much public attention has been evoked by the Government Mining Engineer's report on the Far East Rand, wherein he advocates further leasing of fresh areas either to new companies on the Far East Rand or as extensions to existing concerns, as has been done recently in the case of the Crown Mines. Sir Robert Kotze is of opinion that mines having an annual crushing capacity of 6,620,000 tons will expire after five years, and another set with a slightly larger capacity in the five years, making a shrinkage of 48 per cent. in the next decade or so. In fifteen years' time he expects the annual crushing of the Rand's existing producing mines to be lowered by 82 per cent., or from 28,600,000 tons to a mere 5,125,000. As mines last longer than calculated, he thinks the reductions will actually take place a couple of years later in each case. Of course, the position would be materially altered if new mines were brought into being, but at the present moment there are no developing mines. He con-

siders that the excision of eleven millions sterling in the years' output consequent upon the strike of 1922 created a severe depression, felt in South Africa for at least two years. The depression, owing to shrinkage in mining operations, "will approach and come into being more slowly, but it will not be less certain. If in ten or fifteen years the output is curtailed by half, that means a reduction of nearly £20 millions. Even though we have other and expanding sources of wealth, such a substantial reduction in gold output must have serious effects." Mr H. O. K. Webber (one of the directors of the Barclays Bank (National Bank of South Africa division) urges the necessity of reducing costs all round to the region of 15s a ton. Unfortunately, Sir Robert Kotze is only able to indicate that some 5,932 claims "have a chance of being leased in the near future." Of these 2,373 claims on Grootefontein have been leased to the Sub-Nigel, accounting in large measure for the substantial rise in the price of the shares, though remarkably good development has been equally important, 519 have been sold to the Crown Mines, and 400 leased to New Kleinfontein since the report was framed. This leaves only 2,640 claims in Geduld East, which has been unsuccessfully offered since 1917, none of the tenders being acceptable. It is understood that the Union Corporation's tender of 1922 was rejected as being conditional on the results of investigation, a principle since conceded in the case of the Sub-Nigel.

NEW ZEALAND.—UNEMPLOYMENT AND IMMIGRATION—PRICES—BANK OF NEW ZEALAND.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, June 17.

THE advent of winter, together with the development of the financial stringency due to over-importation relative to the lower export values of last season, has resulted in a greater volume of unemployment than the Dominion has experienced since the depression of 1921. There is always a certain amount of seasonal unemployment, usually not enough to cause comment, due to the contraction of farming employment in the winter. The aggravation of this seasonal difficulty by the prevailing financial stringency has attracted much attention in the past week or two. No accurate statistics are available of the volume of unemployment; but the estimates current run into some hundreds in the four chief centres. It is probable that the numbers will increase rather than decrease. The absolute numbers are small, and the general standard of living remains high; but unemployment on a fairly wide scale is unpleasant in New Zealand, and its occurrence excites a degree of concern that would be thought excessive in less fortunate lands. Besides the actual registrations of male workers, there are many indications of lessened employment among youths, and also among women and girls whose family connections are sufficient to maintain them by lowering the pay limit from 4 to 3½ dwts.

Meanwhile the continuing stream of immigrants is exciting a good deal of hostile comment. Normally New Zealand can absorb a quota of immigrants which varies round about 10,000 annually, but those who arrive at a time like the present add considerably to employment difficulties. A large part of the decrease in employment is due to the relatively unfavourable position of the farming, and especially of the pastoral community. Costs, especially the mortgage interest on inflated land values, remain high, and the ruling prices for wool enforce labour economies. The following table, summarised and adapted from the valuable revised index number of wholesale prices recently published by the Government statistician, indicates the difficult position in which the the pastoralist finds himself:—

	WHOLESALE PRICES IN NEW ZEALAND.		
	Group IV. B. Wool, Hides, Skins, Tallow, &c.	Class III. Materials for Farming Industries.	
1919	100	100	
1920	105	124	
1921	49	101	
1922	67	83	
1923	84	80	
1924	104	91	
1925	88	87	
1926 (April)	79	86	

These figures show clearly that with a falling price-level the products of the pastoral industry fall by big jumps ahead of the (mainly manufactured) materials which the pastoralist must buy. The average fall from the 1919 price-level is 16 per cent. for the produce, and only 6 per cent. for the materials. This is a handicap which is intensified in periods of financial difficulty like the present, and accounts in no small degree for the unemployment now being experienced.

The announcement at the present juncture of the very substantial profits made by the Bank of New Zealand is certain to cause criticism, particularly if, as seems likely, a Bill is brought again before Parliament to provide for a further capitalisation of undivided profits. The position of the bank since its reconstruction in 1893-5 is unique. The Dominion Government is its largest shareholder, and appoints the majority of its directorate, including the chairman, as well as the auditors. It is a matter of satisfaction that the bank, which is by far the greatest financial institution in the Dominion, should be on such a sound basis, with adequate reserves and ample liquid assets. But the capitalisation of undivided profits at intervals of three years or so, together with the payment of substantial dividends, and the generous provision of reserves, both visible and secret, in a period when prices are falling, and the primary industries are struggling with heavy mortgages at high interest rates, is sure to arouse hostile comment. Much of this in the past has been ill-informed, and directly mainly to an agitation for lower rates of interest on overdraft, a step that can easily be shown to be full of dangers. The real point of criticism is not in the level of the actual rates, but in the wide margins between lending and borrowing rates for capital, buying and selling rates for exchange, and in similar profit margins. The banks in New Zealand pay no interest on current account, there is a vexatious internal exchange charge, and the margin between the interest paid on fixed deposits and the overdraft rate is obviously wide enough to return substantial profit. There are other banks operating in the Dominion, but the Bank of New Zealand is *primus inter pares*, and could easily take the initiative in making warrantable concessions to its customers along the lines indicated. Under ordinary competitive conditions such concessions would undoubtedly occur, and it is probably only a matter of time before pressure from the farming interests forces the Government either to use its power with the Bank of New Zealand in this direction, or to undertake some alternative and more dangerous form of credit institution such as a rural credit bank or a State bank.

Books and Publications.

WEALTH AND DEBT.*

PROFESSOR SODDY is a very great chemist, and he has come to the conclusion that "the stinging-nettle of economics, boldly grasped, need no longer obstruct the path of the social reformer who would give peace and economic freedom to the world." This is good and great news, but if the Professor means, as he seems to, that anyone who reads his book will find in it the necessary glove for grasping the nettle, he will have to make his meaning much more clear before many of his readers will be able to start with confidence on the provision of peace and freedom. He tells us much that is interesting and suggestive, and much that is open to question. What he calls "virtual wealth" is the aggregate money in a community, which "represents the aggregate value of the wealth which the community prefers to be owed rather than to own." This "negative quantity of wealth," he says, "I term the virtual wealth of the community because the community is obliged by its monetary system and the necessity of having one to act as though it possessed this much more wealth than it actually does possess." Having rambled round the subject in a curious and interesting manner for some 300 pages, the Professor

* "Wealth, Virtual Wealth, and Debt, the Solution of the Economic Paradox." By Frederick Soddy, Professor of Chemistry in the University of Oxford. Allen and Unwin. 10s 6d.

sets out his practical conclusions. He favours what looks like a managed currency regulated by an index number "continuously ascertained by a national statistical authority," but his only novel suggestion is that some £2,000 millions of National Debt should be cancelled and the same sum of national money issued "to replace the credit created by the banks"; and then the banks "should by law be required to keep national money £ for £ of their liabilities for customers' deposits in current account, and only be permitted to lend money genuinely deposited into their keeping by its owners, who give up the use of it for the stipulated period of the loan." It is difficult to see how this proposal could work, and still more difficult to see how banking and business could work after it had been carried out. The suspicion that Professor Soddy has not really studied the system that he proposes to reform is confirmed by his pathetic complaint that "it is a great pity that the exact amount" of Treasury notes "issued does not seem to be publicly known." A large number of the public knows that the exact amount is published, and has been published from the beginning, every week.

BOOKS RECEIVED.

Elements of Statistics. By Professor A. L. Bowley. Fifth edition. (London) P. S. King and Son, Limited, Orchard House, Westminster. 18s net.

A fifth edition of Professor Bowley's standard text-book on the subject, first published in 1901. Certain chapters have been recast, and Part II., which deals with the application of mathematics to statistics, re-written. The whole is intended to form a general introduction to the theory and practice of statistics for all persons whose business is to handle them, or to whom a general understanding both of their utility and limitations is important, and provides an invaluable guide to the theory and practice of statistical method.

Organisation and Scientific Management as Applied to the Coal Industry. With foreword by Prof. W. J. Roberts. Published by the Author, Park View, Port Talbot. 4s, post free.

The author reviews the position and opportunities of those responsible for every step in the process of bringing coal from seam to pit-head, and makes valuable suggestions which may be commended to the attention of those concerned.

Fourth Year Book of the International Federation of Trade Unions, 1926. (Amsterdam) International Federation of Trade Unions.

Printed in three languages, and contains full particulars as to the centres affiliated with the Amsterdam International, the International Trade Secretariats, &c., with a number of useful statistics of world trade unionism.

Towards Socialism or Capitalism? By L. Trotsky. (London) Methuen and Co., Limited, 36 Essex street. 2s 6d net.

The author's purpose is declared to be "to estimate the true value of (Soviet Russia's) economic development." The Marxian State's *apologia pro vita sua*.

An Academic Study of some Money Market and other Statistics. By E. G. Peake. (London) P. S. King and Son, Limited, Orchard House, Westminster. 15s net.

Sets out the results of researches into certain monetary and other statistics, the results falling broadly into two parts concerned respectively with (a) rates of interest, discount and exchange, (b) prices of commodities.

City of Birmingham Financial Statement, 1925-1926. (Birmingham) The Council House.

This valuable review of municipal life and progress follows largely the same lines as in previous issues, and contains the usual fullness of detail on all points. A supplementary volume, "General Statistics and Epitome of the City's Accounts," will be found useful by those desiring a bird's-eye view of the activities of the city of Birmingham.

International Crop Report and Agricultural Statistics. July, 1926. (Rome) International Institute of Agriculture.

The World Race for Trade. Reprinted from articles which appeared in the *Daily Chronicle* between March 9 and June 4, 1926. (London) United Newspapers, Limited, 34 and 5 Salisbury square. 6d.

A spirited reply to criticisms of Britain's trade progress and methods, based on a review of conditions in seven other countries, including the United States, Germany, France, Belgium, and Italy. *Stock Exchange Investments for Non-Residents.* (London) Fred. C. Mathieson and Sons, 16 Copthall avenue. 6d.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. August 10. ACCOUNT. August 12.

BUSINESS in the Stock Exchange has been very erratic and patchy. Some of the markets continue to attract a good deal of attention, but the majority of brokers and jobbers admit that they find it difficult fully to employ their energies during business hours. The strength of the gilt-edged section is one of the features, while amongst industrials falls in tobacco shares stand out conspicuously, the decline being occasioned by talk of a "war" between the combine companies and a trio of other manufacturers.

Public demand for the recently-issued scrip stocks of the Colonial and Corporation group has assisted to give a firmer appearance to this list, and the War Loan and other British Government funds have shown a strong disposition. Home Railway prior-charge stocks, however, lack the public's favour, weakness in the market for Home railway ordinary stocks reacting upon securities of the fixed-interest variety.

In the foreign market, the advent of the new Counties of Hungary 7½ per cent. bonds, offered at 98, aroused popular interest, and the subscription lists were closed very promptly. The underwriting commission of 1½ per cent. was easily earned. French bonds have been rising and falling in mercurial manner, and in accordance with the kaleidoscopic changes in French politics. French railway and municipal bonds have followed in the direction set by the Government bonds. Brazilians were again accumulated by their consistent supporters. The recently issued Westphalia Sevens from 1½ premium went back to ¾ premium. Peruvian Corporation stocks are slightly better.

Home Railways are heavy, and the market is very friendly. The Undergrounds kept firm, sustained by expectations of what Lord Ashfield might say at the Underground Electric Railways meeting, held on Thursday in this week. Canadian Railway stocks are better, Grand Trunk Pacific putting on several points and taking Canadian Northerns with them, on a vague hope that the Dominion Government will do some-

thing for the benefit of the bondholders. Argentine Rails moved upwards.

Rubber shares are heavy. It is considered practically certain that the exportable allowance over the next quarter of the year, which begins on Monday, will remain at 100 per cent., instead of being reduced to the 80 per cent. for which anticipation had hoped. Tea shares are almost stagnant. In the oil market the movements are irregular and unimportant, governed by speculative operations, of which a fair proportion have been in the nature of closing accounts in preparation for the holiday season. Aerated Bread shares enjoyed a sharp spurt, without, however, holding the full extent of the rise. Courtaulds have been animated, without getting far away from 5½. Tobacco shares came down with a run amidst excited dealings, on the report that the combine firms were about to enter upon a war with three of the principal outside competitors. Newspaper shares strengthened as a direct result, it being assumed that, if there were to be a tobacco war, an intensive campaign of advertising must necessarily be inaugurated. No official confirmation of the reported "war" was forthcoming, so tobacco shares rallied and newspapers went back.

The banking market is still disposed to be dull, though Colonial and foreign shares keep very firm. Siemens, amongst the construction descriptions, spurted to 30s before a slight reaction occurred, and other shares in this market are better. The House has been hoping that a settlement will be reached in connection with the coal stoppage over the August Bank holiday, and a little buying of iron and steel shares took place in consequence, Guest Keens being put up in price. The brewery market is good. A satisfactory dividend on Watney deferred helped the list. In trust companies' stocks, and in the shipping market, the tendency is harder for choice. There has been a good deal of option dealing during the past few days, more particularly in those shares which have fallen in price, and in which a recovery might occur after the holidays if the coal crisis should be ended. Gas Light and Coke stock is better, on the company's Bill having been passed by the House of Lords. Morris Motors preference fell away to 1s 4½ discount.

The Cape's interest in Sub Nigels, West Rand Consols, and a few other speciality shares in which Johannesburg has recently taken a hand, is not quite so aggressive as it was, with the result that prices are now moving quietly. The influence of Paris upon some of the popular inter-bourse mining shares had the effect of reducing Kaffir gold prices by small fractions. Amongst diamond shares, De Beers preference came in liberally, and the price went back, but other diamonds are not a bad market, though business in them is meagre. Mining Corporation of Canada came into request on account of what was said to be Montreal interests. The tin share markets are steady on the whole. On one or two days this week the list of West African shares showed no alteration from the opening to the closing of the market. Rio Tintos gained strength from French support.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—

1921 ..	143,156,781	1920 ..	367,549,656	

Counties of Hungary Sterling Loan.—This is an issue of £1,250,000 7½ per cent. 20-year sterling bonds at £98

per cent. The bonds are to be redeemed in or before 1946 by the operation of an accumulative sinking fund, which is to commence in 1927. It has been arranged that the Government shall collect and pay to the trustee the gross road tax of each county. If the amount so collected for any county in any half-yearly period be insufficient to cover at least twice such county's portion of the half-yearly service, the Government will collect and pay to the trustee such county's tax for exemption of public work, and if these taxes be insufficient the Government will procure the levy of a special additional county tax. Last year the two taxes yielded the equivalent of over £600,000, while the annual service of the loan requires less than £125,000. The trustee will hold a special reserve fund for each county, provided in the first instance out of the proceeds of the issue. This reserve fund will equal one-fourth of each county's portion of the annual service of the bonds. If drawn upon, the fund must be replenished out of the next revenues. In addition, a sum sufficient to cover one half-year's service of the loan will be continuously retained by Messrs Rothschild and Sons. Further, no county can incur any liability ranking in priority to or *pari passu* with the loan without the trustee's consent. The net proceeds of this issue are to be applied by the counties as to approximately 80 per cent. for road construction and as to the remainder for hospitals, electricity works, railways, water works, county halls, and housing for employees. A good high-yielding investment, which was quickly over-subscribed.

The Perak River-Hydro-Electric Power Company, Limited.—Authorised share capital £1,000,000, of which £500,000 in 8 per cent. cumulative preference shares and £332,000 in ordinary shares of £1 each are issued. There is an authorised loan capital of £2,600,000, consisting of £1,250,000 5 per cent. debenture stock and £1,350,000 7 per cent. participating debenture stock. The 5 per cent. stock is to be issued before December 12, 1926, and redeemed at par between 1931 and 1951 by annual drawings commencing in 1931. The participating stock has a charge upon the lands, works, and undertakings subject to the 5 per cent. stock. It will be repayable at 105 at the option of the respective holders on June 30, 1951, or on any interest date thereafter, subject to six months' previous notice and at 105 in the event of liquidation. To provide for such repayment a sinking fund of £42,525, calculated to repay the whole of such stock at 105 on June 30, 1951, will be set aside each year, commencing in 1931. The company is entitled to apply the sinking fund in purchasing stock on the market. The £500,000 8 per cent. cumulative preference shares have, it is stated, been subscribed for at par by the Federated Malay States Government. Dividends on these shares will not become cumulative until January 1, 1930. The unissued ordinary shares cannot be issued except with the consent of the Federated Malay States Government. This is an issue of £1,275,000 of the above-mentioned 7 per cent. participating debenture stock at £96 per cent. The trust deed will provide for the payment to the trustees the whole of the profits of each year which it is determined to distribute and which remain after providing for the service of the debenture stock, and the dividend on the preference shares, up to a sum sufficient to pay a further 2 per cent. on the participating debenture stock. The British Government has agreed, on certain conditions, to guarantee principal and interest on the 5 per cent. stock under the terms of the Trade Facilities Act. The company has been formed to develop electric power supply in the State of Perak. It is stated that a dam on the Perak river, a water power station, an auxiliary steam power plant, and transmission and distribution lines are to be constructed. It is further stated that the cash balance of the present issue will provide for preference dividend and debenture interest during the period of construction, the provision of working capital in excess of the sum recommended by the consulting engineers, and the provision of approximately £200,000 for contingencies. The Federated Malay States Government has the right to purchase the undertaking at the expiration of 50 years, "subject to provision for proper compensation." The concession provides that all machinery and equipment shall be of British manufacture. As a high yielding investment the stock now offered possesses attractions, although it has £1,250,000 of debenture stock ranking before it.

British Canadian Packing Company, Limited.—Share capital \$499,900, divided into 49,990 ordinary shares of \$10 each, of which 28,000 have been issued. This is an offer for subscription of 20,000 ordinary shares of the par value of \$10 each at 4½ 2d each. The company was formed in 1925, and is incorporated under the New Brunswick Companies Act, its objects being particularly to establish abattoirs, packing and cold storage plants in New Brunswick and the Maritime Provinces. The proceeds of the present issue, after payment of the expenses of the issue, will be used for the necessary working capital to enable the purchase of livestock from the farmers, to permit of advances to them so that they may be able to replenish their stocks of cattle, sheep and pigs, and to arrange for marketing in Britain and elsewhere. The com-

pany has erected at a cost of \$150,000 (including buildings, yards, railway sidings, &c.) a modern and up-to-date abattoir and packing plant, and has leased 3½ acres of land having a waterfront. The president of the company states that "arising out of the formation of the company, a special Act to give financial aid to the abattoir and packing industries received the support of all political parties and was passed unanimously—the only instance so far as is known of this kind of unanimous support for legislation in the Maritime Provinces. Under this Act is sanctioned an issue of \$100,000 25-year 5½ per cent. bonds guaranteed as to principal and interest by the Government of New Brunswick, and a supplementary Order in Council was issued temporarily reserving the benefits of this Act to the British Canadian Packing Company, Limited. The company does not propose to avail itself of this Act unless further working capital is required." The advertisement contains many lengthy and optimistic references as to future prospects. Investors, we should imagine, will be loath to part with their money on the strength of these forecasts alone.

Associated Tin Mines of Nigeria, Limited.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. Authorised share capital £200,000, divided into 800,000 shares of 5s each, of which 400,000 have been issued. The company was formed on May 31, 1926, in particular to acquire from the London Tin Syndicate, Limited, certain leases and prospecting licences, covering in all some 8,000 acres of alluvial tin-bearing ground, situated in and around the Juba Valley and the Jarawa River on the Bauchi Plateau of Northern Nigeria. The Jarawa River areas have since been resold to Jarawa Tin Dredging, Limited. The Juba properties are well reported on by one of the directors. After meeting all the preliminary expenses and after paying for the areas which it has acquired, the company has in hand the sum of £27,000 available as working capital. The purchase price paid for the above-mentioned properties was £120,000 in cash and an option on the 400,000 unissued shares of the company at par until December 31, 1927. The purchase price received by the company for the Jarawa River property was £50,000 paid in cash and £50,000 by the issue of 200,000 fully-paid shares of 5s each of Jarawa Tin Dredging, Limited. In common with the shares of kindred undertakings, those of this company can only be regarded as speculative. The directors are men of experience.

New Merton Board Mills, Limited.—Capital £120,000 divided into 80,000 7 per cent. cumulative preference shares and 40,000 ordinary shares of £1 each. This is an issue of all the preference shares at par. The preference dividend is unconditionally guaranteed by the Inveresk Paper Company, Limited, to whom have been allotted at par the 40,000 ordinary shares. The company has been formed, it is stated, for the purpose of acquiring the freehold factory, machinery, and plant originally built and equipped in 1922 at a cost of approximately £300,000 (formerly known as the Merton Board Mills), and manufacturing all classes of cardboard and folding box boards for cartons and containers. The Inveresk Paper Company, Limited, which is the promoter of this company, negotiated the purchase of the above mills, with a view to ensuring for its associated company, Backhouse and Coppock (1926), Limited, supplies of the products to be manufactured by the company. The net profits of the Inveresk Paper Company before charging taxation are stated to have amounted in 1921-22 to £51,165, for the 13 months to September 30, 1923, £43,301, and for the year to October 31, 1925, £44,694. No particulars of the assets of the guaranteeing company are given. The purchase price is £37,500, payable presumably in cash. The issue is a small one which does not particularly appeal to us, although the guarantee is a point in its favour. It is stated that the issue was over-subscribed.

with oil palm cultivation, and his report was widely circulated; so far this form of cultivation has not been taken up. Then there are our extensive nipah*tracts, which offer great possibilities for alcohol and sugar manufacture. For future prosperity this company must rely upon the development of the plantation industry in all its varied forms.

The report and accounts were adopted.

The re-election of the Right Hon. Sir West Ridgeway and Sir John Hewett was lost on a show of hands, and in the case of Sir West Ridgeway a poll was demanded, the result of which will be announced later. In the case of Sir John Hewett, the Chairman announced that as opposition had been offered to his re-election, he had Sir John's authority to withdraw his name.

As the resolutions had been negatived under the deed of settlement, the meeting automatically stood adjourned for 14 days.

FURNESS, WITHY, AND COMPANY, LIMITED.

DEVELOPMENT AND EXPANSION OF THE BUSINESS.

FOREIGN COMPETITIVE CONDITIONS.

The thirty-fifth annual general meeting of Furness, Withy and Co., Limited, was held, on the 28th inst., at Furness House, Leadenhall street, London.

Sir Frederick W. Lewis, Bart., presided, and in moving the adoption of the report and accounts said: As regards the profit and loss account, the credit balance is slightly lower than last year's figures, viz., £523,044, but none the less I feel that, having regard to the conditions that have prevailed, the result will be regarded as satisfactory. With the balance brought forward there is an available balance of £710,303. We have already paid the usual two half-yearly dividends on the preference shares, as well as two dividends at the rate of 5 per cent. per annum upon the ordinary shares, and we have again transferred £200,000 to depreciation. We now propose to distribute a bonus of 2½ per cent. to the ordinary shareholders, making a total return of 7½ per cent. for the year, free of income-tax. The balance of £150,303 will be carried forward to the current year's accounts.

As regards the allocation to depreciation, whilst it is true to say that our assets are of greater value than the amount at which they stand in our books, we have always set aside a substantial amount for depreciation to enable us to replace wasting assets by new investments, and we have continued this policy in the account now before us.

EXPANSION POLICY.

One of the consequences of this conservative policy has been that, notwithstanding the development and expansion of our business, we have not required to issue any additional cash capital, either in the shape of ordinary shares, preference shares, or debentures for nearly 20 years, and our new investments have all been financed out of our accumulated resources.

It has consistently been the policy of your directors as opportunity has offered to extend the scope of your company's operations by the acquisition of steamship lines engaged in trading to different parts of the world, whenever such acquisitions could be made on advantageous terms. We have, during the past few years, acquired the Prince Line, the Johnston Line, and the Rio Cape Line. These purchases closely followed the acquisition of a preponderating interest in Houlder Bros. and Co. and their associated groups, the whole of the share capital of the Norfolk and North American Steam Shipping Co., Limited, the Warren Line, and practically the whole of the capital of the Neptune Steam Navigation Co., Limited, all of which have been acquired, as I have already shown, without any increase of your company's capital.

WHITE STAR LINE NEGOTIATIONS.

In pursuance of this policy of extending and developing our business, your directors, in conjunction with Messrs Morgan, Grenfell and Co., entered into negotiations some months ago with Mr P. A. S. Franklin, the president of the International Mercantile Marine Company of New Jersey, U.S.A., for the purchase from that company for the whole of the share capital of the Oceanic Steam Navigation Company, Limited, generally known as the White Star Line, one of the most prominent passenger organisations running between this country, United States of America and Canada, and with important affiliated interests in the Australian, New Zealand and South African trades.

It is necessarily a very difficult matter to keep negotiations of this magnitude strictly private and their existence became prematurely known. The disclosure created a great deal of comment in the public Press, and under the circumstances the authoritative statement which was published a few weeks ago was considered desirable. Therefore, you will all be aware of the existence of the negotiations, but I regret to state that it has been found impossible to arrive at a mutually satisfactory basis for the consummation of the transactions.

Although the White Star Line is American-owned, it is, as you know, a British company, and its steamers sail under the British flag. It possesses an excellent organisation, and has a distinguished history and tradition behind it, of which it is justly proud, and whether we have the privilege of being associated with it or not, we shall follow its future progress with much interest and with every wish for its success in the coming years.

ALLIED UNDERTAKINGS.

It has for many years been my custom to make reference to our various allied undertakings, but it becomes impossible to refer to them all in any detail. It is perhaps sufficient to say that those organisations have continued to contribute materially, both directly and indirectly, to the prosperity of the parent company. Altogether we have some forty shipping, insurance, and finance companies, which are either under our control or management, and with one exception they are all doing satisfactory business. The five vessels which we contracted for on the Continent have now all been delivered, and are in commission on the New York Far Eastern service of the Prince Line. They are in every way splendid vessels and are already establishing a popular reputation with shippers.

During the year we have further added to our motor ship fleet by having placed contracts in the United Kingdom for four large twin-screw vessels, which are intended for our trade between the United Kingdom and the Pacific Coast of North America. This trade shows every indication of expanding satisfactorily, and in particular the exports from this side are showing a welcome increase.

SHIPBUILDING PROBLEMS.

In referring to the strenuous efforts that are being made by the shipbuilding industry to improve its own internal conditions, I have in mind the conclusions and recommendations of the joint committee of the Shipbuilding Employers' Federation and the shipyard trade unions, whose second report has just recently been issued. It is clear that the joint conference has throughout been conducted in a mutually helpful spirit, and with a keen desire to find a solution of their problems, notwithstanding that the wages in the shipbuilding industry, which are already low in comparison with other industries in this country, are on a higher basis than some of the Continental competitors. To quote from the shipbuilding report, the Tyne wages in the shipbuilding trade are, for skilled men 55s 6d (about 14d per hour), for semi-skilled men 41s 6d, and for unskilled 38s 6d for a 47-hour week, in comparison with 44s 6d, 38s 9d, and 33s respectively in Holland, and average rates of 36s 9d, 34s, and 29s 2d respectively in Germany for a week which is supposed to be 48 hours, but which is often extended to 54 hours, either by agreement between the employers and the shipyard workers or by Government licences, as in the case of Holland.

The passenger services from New York continue to develop satisfactorily, and in particular the expansion of the Bermuda trade has justified the placing of a contract for a new vessel which it is hoped will be ready by the end of next year.

We have also put into commission the new passenger steamer "Nova Scotia," built by Messrs Vickers, Limited, at Barrow-in-Furness, for our Liverpool, Newfoundland, Nova Scotia service, and I am glad to say that the vessel is proving just as popular as her sister ship the "Newfoundland." During the winter months, which are the slack months in the North Atlantic passenger trade, the "Nova Scotia" will make a few voyages in our regular New York/West Indies trade in order to enable us to take care of the increasing tourist travel on that route.

CONDITIONS ABROAD.

Referring to conditions abroad, I would like to quote an actual case of a steamer which we recently transferred to a foreign flag, and which shows as clearly as possible the competitive conditions with which we are contending. On this particular vessel there is a difference of £247 per month, or, say, £3,000 per annum between the operating cost under the foreign flag as compared with the cost of the same service under the British flag. I am afraid a good many comparisons could be made showing either that the British shipowner is labouring under a disadvantage in competition with foreign owners, or that the facilities of British ports, even in the handling of commodities which are of pre-eminent importance to us, very often suffer in comparison with foreign ports.

FUTURE OF BRITISH SHIPPING.

I am as firm a believer as ever I have been in the future of British shipping provided the ordinary course of economic laws is not subverted. International trade must continue, and waterborne transport is still the cheapest and best-known method of transport, but we are still too heavily handicapped by the past. If I knew when increased trade would overtake the glut of tonnage with which the seas and harbours are burdened, I don't suppose I should disclose the fact at this meeting, but the fact that I do not intend to make any prophecy must not be interpreted to mean that I am concealing the information. We can but do our best

to keep abreast of the times, and prepare ourselves for whatever the future holds. This we are doing according to our judgment, and if in the meantime we can continue to present results to our shareholders on a par with those which we have before us to-day, I think we should not be dissatisfied. Not the least of our handicaps is the continued competition from foreign Government-owned vessels which are still being operated at less than cost, as is illustrated by the figures just recently published by the United States Shipping Board in support of their application to Congress for a grant to carry them through the current year. It is stated that \$18,000,000 will be required, and out of the published results of 29 services operated by Shipping Board tonnage only one made a small profit of less than £5,000.

This resolution was seconded by Mr R. E. Burnett, and carried unanimously.

Sir Harold Snagge, in proposing a vote of thanks to the chairman, said he was glad to think, though he hoped it would not in any way interfere with their chairman's duty to the company, that the Government, who were not always quick in recognising the right sort of ability, had recognised in their chairman the man to appoint at the head of a highly important and critical committee at the present time.

Mr G. A. Harradon (Liverpool) seconded the resolution, which was carried unanimously.

PARENT TRUST AND FINANCE COMPANY, LIMITED.

SATISFACTORY YEAR'S RESULTS.

The twenty-ninth ordinary general meeting of the Parent Trust and Finance Company, Limited, was held, on the 23rd inst., at the Hotel Cecil, Strand, London, W.C., Sir Arthur Du Cros, Bt. (the chairman), presiding.

The secretary (Mr E. Morrissey) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: I am glad to say that the net profit, before deducting income-tax, of £252,754 earned during the past year compares favourably with the best previous records of the company.

The profit shown on last year's balance-sheet was £523,000, in round figures, but, approximately one-half of those earnings had accrued in previous years; the profit shown this year fully equals the amount of the earnings applicable to last year, although business has been more difficult than usual, and somewhat anxious at times. Under all the circumstances the board are satisfied with the year's results, and with the fact that they are enabled to, and are justified in, maintaining the deferred share dividend.

The balance-sheet figures show considerable variations as compared with last year. The two items of general investments and investments in allied companies show an increase, taken together, of some £100,000, which is partly accounted for by capital requirements, which were anticipated, in connection with the satisfactory development of the cotton-ginning plants in Southern Rhodesia, to which I referred last year as being one of our industrial investments. These plants are now in operation, and under normal climatic conditions should join the ranks of our remunerative investments during the current year. The balance of the increase consists of investments in three new industrial undertakings of an interesting and promising nature. Our investments in allied companies are, as previously explained, mainly in the nature of prior securities.

CHANGES IN INVESTMENTS.

An important change has been made in the character of some of our investments to which I desire to refer. Last year we held a large investment in preference shares of the D.R. Cotton Mills, Limited, which was taken into our accounts at £863,000. This, as shareholders were aware, was, in effect, a short-dated security, it being at the option of the Dunlop Rubber Company to call upon us to resell the shares to them at certain dates, and the board were bound to take into consideration that this option might be exercised. We desired, therefore, to re-invest this money in securities which would be completely under our own control, and as the opportunity of doing so occurred during the year, we negotiated with the Dunlop Company for the immediate redemption of the shares. The whole of the proceeds have since been re-invested in freehold London real estate, and the shareholders will be interested to know that the company's present cash investments in landed securities now amount to approximately £1,200,000.

BOARD'S INVESTMENT POLICY.

The policy of the board in regard to the company's investments may be stated again in general terms as having for its object (1) the retention of the whole of the company's issued capital of, approximately, £2,350,000, in sound, basic securities, the income return from which will be sufficient to meet, in full, the fixed dividends upon our preference and ordinary capital, and provide

in addition a dividend on the deferred shares, and (2) providing the funds for the finance branch of our business, which supplies the balance of our profits, mainly by the utilisation of surplus assets, that is to say, assets which we hold in excess of the amount represented by our issued capital, and also by the use of the credits which are at our command.

In pursuance of this policy the directors during the past year availed themselves of opportunities of acquiring interests in real estate under favourable conditions; on the other hand, the sale of the D.R. cotton shares, together with certain other fixed dividend-bearing securities, for this purpose, temporarily diminished the company's fixed revenue from its investments, and will continue to do so until sufficient time has elapsed to receive the benefits which are anticipated from these new interests. They are capable of profitable development, and the directors are confident that they will become an important source of strength to the company. The change over has been a recent one, and while we were satisfied to make a temporary sacrifice of revenue for the greater return which we believe will accrue to us in the future, this point should be borne in mind in comparing the results of the past two years.

Public reference has been made to our association with the Covent Garden estate and the Foundling estate, the former of which occupies some 5½ acres in the heart of London, while the latter extends to some 56 acres in the Bloomsbury district. Interests in these properties, among others, do, in fact, form part of our investments. In the case of Covent Garden, we have a large holding in the company owning this property. In the case of the Foundling estate, we hold practically the whole of the securities of the Foundling Estates Company which owns the property, subject to the payment of the balance of the purchase money. This estate was purchased with the intention of breaking up and re-selling the major portion of it, and such sales as have already been effected have been made at prices quite satisfactory to the board.

THE FOUNDLING HOSPITAL.

It is well known that the Foundling Hospital itself and its grounds, which occupy nearly nine acres of the 56 acres of that estate, have been definitely offered to the Covent Garden Estates Company, who regard this site as being a particularly suitable one for the re-establishment of Covent Garden Market, the removal of which has been proposed. The question of the suitability or otherwise of the site for this purpose is not one for the Foundling Estates Company to decide, their position in the matter simply being that if called upon to fulfil their obligations they will transfer the property upon terms which have already been provisionally agreed. On the other hand, should any better site become available, the two companies would be at liberty to rearrange their plans, and in that event the Foundling Estates Company would at once proceed to put into operation one or other of the several alternative schemes for the development of this part of the estate, which they have in mind.

Many public references have been made to the future of the Foundling Hospital and criticisms and opinions have been freely expressed upon the subject. I have noticed that these criticisms have been directed not so much against the vendors of the estate, who disposed of it unconditionally and free of all restrictions, as they had a perfect right to do, but oddly enough against the purchasers, who had acquired the property in the open market, where any individual or public body might have bid for it, had he or they so desired.

While I am in genuine sympathy with the desire which has been expressed to preserve an historic building and the open amenities of an interesting part of London, my hope of doing so is becoming rather a slender one. The feelings of my colleagues and myself in this matter must, of necessity, be governed by the fact that we occupy the position of trustees to shareholders who are the owners of the property, and the duty devolves upon us of reconciling the business side of the case with its sentimental aspects. Although these considerations must be made to square in some reasonable degree, yet so far we have received no business suggestion of any kind from those who have been interesting themselves in the preservation of the hospital, and I would suggest to them that the practical side of the question should not continue to be wholly ignored.

INTERESTS IN SAN PAULO.

I should make it clear that while approximately 90 per cent. of this company's landed investments apply to London, we are also substantially interested in two freehold land development projects abroad, one in the City of San Paulo in Brazil, and the other in the City of Durban in Natal. The directors hold a high opinion as to the position and prospects of both these undertakings. The balance-sheet of the City of San Paulo Improvements and Freehold Land Company will be published in a few weeks' time, and I recommend shareholders to examine and appraise it for themselves. I personally visited San Paulo at a time when we were contem-

plating an increase of our investment in this particular company, and Mr Sidney Van den Bergh, another of your directors, also visited Brazil at a later date. As a result of my investigations, which were confirmed by Mr Van den Bergh, we increased our holding in the San Paulo Land Company, which owns and is successfully developing extensive tracts of freehold land in and around the important city of San Paulo, the capital of the great and wealthy State of San Paulo, and generally acknowledged to be the commercial and industrial capital of Brazil as well. The expansion of San Paulo in recent years forms a striking example of progress in the history of such developments. The shares of the San Paulo Land Company should appreciate during the next few years, and your trust and its associates are amongst the largest holders.

I gather from letters which I have received from shareholders that they are under the impression that we have sold all our Dunlop investments. This, of course, is not the case, nor have we any present intention of doing so. To the best of my knowledge we are still, by far, the largest individual holders of Dunlop preference shares.

The shareholders will appreciate that the figures of the balance-sheet show this company to be in a very strong position, but the future outlook of business must give some cause for uneasiness so long as the coal strike is unsettled at home and currencies remain unstable and erratic abroad. These conditions are, in our opinion, a passing, if unwelcome, phase, but while they continue the directors are disposed to approach all new business on even more cautious and conservative lines than usual, notwithstanding that this may, for a time, involve some slowing down of the company's activities. This policy is already reflected in the decrease of forward commitments shown on the balance-sheet.

The report and accounts were unanimously adopted.

UNION BANK OF AUSTRALIA, LIMITED. SUCCESSFUL RESULTS—TRADE CONDITIONS.

The annual general meeting of the Union Bank of Australia, Limited, was held on the 26th inst., at the head office, 71, Cornhill, London.

Mr Henry P. Sturgis (the chairman) said that the net profit for the past year amounted to £720,512, inclusive of £92,901 brought forward. This had enabled the directors to add £50,000 to the reserve fund, to set aside £50,000 towards the cost of new buildings, and to pay a dividend at the rate of 15 per cent. The figures of the balance-sheet, compared with those of a year ago, showed a shrinkage of £2,190,000. On the liabilities side there was a decrease in deposits of £1,957,000, and in bills payable of £337,000, while an increase was shown in reserve fund of £50,000 and in circulation of £51,000. The decrease in deposits was largely attributable to withdrawals by B.A.W.R.A. in connection with the distribution of their funds, and to other exceptional causes. On the assets side there were increases in specie, bullion, and cash balances of £1,782,000 and in advances of £504,000, while money in London showed a decrease of £365,000, and bills receivable, &c., of £4,110,000.

The liquid assets amounted to about 95 7d in the £ of the bank's total liabilities to the public. During the year ended December 31st last there was an excess of imports (including gold) into

Australia over exports of less than £2,000,000, as compared with an excess of £3,500,000 in 1924. In view of the fall in prices for wool, these figures seemed satisfactory.

Trade throughout Australia during 1925 was carried on under favourable conditions and on a sound basis, though considerable disturbance was caused by the shipping strike, which lasted from July to November. Apart from this there were no serious trade disputes. In New Zealand trade had been satisfactory on the whole, but a falling off was apparent at the end of 1925. Seasonal conditions in the pastoral areas of Australia during 1925 were not very satisfactory, but during the last few months good rains had improved the position in many areas. In New Zealand a severe winter and a dry spring caused a serious shortage of feed, with the result that wool, meat, and dairy produce showed a considerable shrinkage. With regard to seasonal conditions and prospects at present, the following telegram had been received from the general manager: "Throughout Commonwealth conditions generally satisfactory and prospects good, but large parts inland pastoral Queensland suffering from droughts. In New Zealand seasonal prospects excellent, but trade outlook only fair owing to reduced prices for stock and produce."

The report was unanimously adopted.

ZAMBESIA EXPLORING COMPANY, LIMITED. SATISFACTORY POSITION.

The ordinary general meeting of the Zambia Exploring Company, Limited, was held, on the 29th instant, at River Plate House, 7 Finsbury circus, London, General Sir Francis Reginald Wingate, Bart., G.C.B., presiding.

The secretary (Mr L. Scotland) having read the notice convening the meeting and the report of the auditors,

The Chairman formally moved the adoption of the report and accounts.

Mr Robert Williams (managing director) in dealing with the accounts, said he thought they would agree that they showed the company to be in a very satisfactory position. The item of creditors and credit balances showed a reduction as compared with the previous year, and was mainly reserve for tax on dividends and interest. Under the heading of debtors and debtor balances, the Benguella Railway debt had been reduced from £156,481 to £51,082. The Nile-Congo debt had been increased on account of further expenditure incurred in prospecting in the Sudan. Shares and debentures of other companies stood in the balance-sheet at £819,878, as compared with £460,921 for the previous year, the increase being represented principally by additional Benguella Railway debentures and additional Tanganyika Concessions shares. The latter were acquired under the option granted to Tanganyika Concessions, Limited, in consideration of advances by their company to assist in the construction of the Benguella Railway. The money was raised by the sale at a good profit of some of their Union Minière shares, and in view of the increased market value of the Tanganyika shares the transaction proved most successful.

At current market prices the company's quoted securities alone represented a value of about £1,750,000, in addition to which they had in cash and Government securities over £460,000. The balance of profit for the year was £204,212, as compared with £52,051 for the previous year. An interim dividend of 1s per share, less tax, was paid in January last, and they proposed to pay a final dividend for the year of 1s per share plus a bonus of 2s per share, both less tax, making a total distribution for 1925 of 4s per share.

In conclusion, Mr Williams referred to the wide spheres of the company's operations. Their engineers and prospectors were now operating in great mineral areas all over Africa, in Angola, Northern Rhodesia, Tanganyika Territory, Uganda, and the Sudan, as they recognised that wealthy corporations like theirs should spend a portion of the wealth they had acquired in Africa in discovering minerals in other parts in the hope that this would lead to the opening up of the country to trade and civilisation.

The report and accounts were unanimously adopted.

THRELFALL'S BREWERY COMPANY, LIMITED. "HIGHLY SATISFACTORY" RESULTS.

The thirty-ninth annual general meeting of Threlfall's Brewery Company, Limited, was held, on the 28th instant, at Cannon Street Hotel, London, Major C. M. Threlfall (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, after expressing regret at the death of Mr F. A. Waring, said: Your board appear before you to-day submitting results which they trust you will consider are highly satisfactory. I think we may attribute our prosperity to the quality of the goods we manufacture, and the very careful supervision generally exercised throughout the business by all concerned.

As mentioned at our last annual meeting, we have by judicious advertising considerably increased the sales of our Blue Label beer, and the year under review shows a further substantial increase, thus once again demonstrating the popularity of this beer.

You will probably have read in the newspapers that under the last Budget the method of payment of beer duty has been altered. In the past the procedure of the Excise authorities was to allow three months' credit after the brewing of the beer before payment was demanded. A period of two months has now been substituted. We were hoping that the Chancellor would have seen his way to reduce the duty, which is far too high, by an amount sufficient to enable the brewers to reduce the price to the general public. Our hopes, however, did not materialise, and instead the concession already mentioned, namely, the extended period for payment of duty, had been reduced.

Alterations and improvements to various properties, where the character of the neighbourhood demands such improvements, are continually being made in accordance with the policy of your board, which is to make our establishments congenial and comfortable for our patrons. We strive as far as it is possible, and where permission is granted by the various licensing magistrates, to eliminate the old-time stand-up bar, and in its place to provide a spacious lounge, with suitable seating accommodation and tables for customers. We are convinced that this departure is highly commended by the public, as their patronage continues to increase, and our endeavours to make our licensed houses places to satisfy their wants in every respect are well appreciated.

The gross profit for the year is £428,965 8s 1d, and, after writing off for depreciation of leasehold properties and plant, increasing the fire insurance fund to £41,750, and making a reserve for salary and wage bonus to employees, there remains a net trading profit of £381,165 18s 11d.

After deducting interest on debenture stock, interest on deposits, directors' fees, compensation levy, and adding transfer fees, bank interest, and interest on War Loan, there is a net profit of £317,032 0s 3d for the year, which, together with the carry forward from last year, makes a total of £605,644 13s 5d to be dealt with.

The report and accounts were approved.

UNITED DOMINIONS TRUST, LIMITED. SUCCESSFUL YEAR'S OPERATIONS.

The annual general meeting of the United Dominions Trust, Limited, was held, on the 26th instant, at 32 Moorgate, London, E.C. 2.

Sir Edward M. Mountain, Bt., J.P. (the chairman), presided. The secretary (Mr J. P. F. De Salis) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said that he had pleasure in congratulating the shareholders on the continued progress and prosperity of the company during the past year, the profits having amounted to £37,108, as against £21,240 for the preceding year. An examination of the balance-sheet would show how satisfactory this progress had been. Turning to the liabilities side, they would see that the issued capital, fully paid, amounted to £150,000, as compared with £149,650. There was due to the banks £618,041, as compared with £426,791 last year, thus showing the expansion of the business. Deposit and current accounts were £229,885, as against £70,479. Their trust reserve amounted to £17,747, as against £7,715, and the general reserve to £10,000, as compared with £3,409 in the previous period. Liabilities on other accounts amounted to £64,699, as against £41,908, the balance of profit and loss being £28,430, as compared with £13,633 in the last balance-sheet.

Turning to the assets side, they would see that the cash at banks and in hand amounted to £112,111, as compared with £78,997; bills receivable and notes on hand, £353,966, as against £143,214; bills receivable discounted or lodged with bankers, £625,922, as against £474,758. Other assets amounted to £26,805, as against £16,618. It would be thus seen that their assets had increased from £713,588 in the last balance-sheet to £1,118,804 in the present accounts. The profit for the year, £37,108, with the amount brought in, £2,466, made a total available for appropriation of £39,574, which it was proposed to allocate as follows:—

To payment of a dividend at the rate of 7½ per cent.	
p.a., less income-tax, on the issued capital	£8,979 0 0
To general reserve (increasing this reserve to £25,000)	15,000 0 0
To sum already set aside to trust reserve during the year	11,143 18 10
To carry forward	4,451 16 2
	£39,574 15 0

SERVICE TO ENGINEERING AND ALLIED TRADES.

The company, during the year, had provided banking facilities to the engineering and allied trades, especially to the motor trade, which had made possible the movement of a considerable volume of merchandise. This service had had the effect of liquidating stocks which otherwise might have remained frozen in the factories, and had enabled the machinery users to produce new and needed equipment, and that, in turn, had its effect on other industries. The trust, by its home and foreign connections, was in a position to give a wide and adequate service to the industries for which it catered.

In conclusion, he paid a warm tribute to the efficient manner in which the affairs of the company were handled by the management. The shareholders, he said, might rest content that the continued development of the company along commercially sound and conservative lines was assured under the managing director, Mr J. Gibson Jarvie, whose wide and unique experience, both national and international, of this highly specialised form of commercial banking was well organised.

Mr P. R. Jackson seconded the resolution, which was carried unanimously.

The resolution sanctioning the payment of a dividend of 7½ per cent., less income-tax, having been approved, Sir George J. Fowler, J.P., Mr Fred A. Franklin, Mr F. R. Acheson Shortis, the Rt. Hon. Edward Shortt, K.C., D.C.L., and Mr M. C. Spencer, F.C.A., on the motion of Mr J. Gibson Jarvie were elected directors.

In proposing the resolution, Mr Jarvie stated that the progress made was all the more remarkable in face of the difficulties of the past half-year. The company was still in its infancy, and only on the threshold of its real development, and, in fact, its great potentialities were probably not yet fully realised.

The auditors (Messrs George A. Touche and Co.) having been re-elected, the proceedings closed with a vote of thanks to the chairman.

MERCANTILE AND GENERAL INSURANCE COMPANY, LIMITED.

GOOD RESULTS—INCREASED DIVIDEND.

TEN YEARS' PROGRESS.

The ordinary general meeting of the Mercantile and General Insurance Company, Limited, was held on the 21st instant, at Nos 25-31 Moorgate, London. Mr Richard S. Guinness (chairman of the company) presiding.

The secretary (Mr H. P. Hewitt) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the report and accounts submitted that day marked a period of 10 years since the present directorate and management took over the affairs of the company. Ten years ago the company was inactive, but those now in charge had envisaged the possibility of reorganisation as a reinsurance company conducted with sound finance and skilled technical management, all then existing commitments being eliminated and fresh capital supplied. The following figures, he thought, justified their stewardship. In 1916 the net premium income was £94,401. During the ten years the figures had steadily grown, and the present accounts showed a net premium income of £661,825, which included life and marine business. Their invested funds had increased from £47,091 in 1916 to £470,415 in 1925. Those were book values, and a valuation showed the market values at December 31st last to be in excess of book values. Their total reserves in all departments amounted to over £707,000.

PAST YEAR'S RESULTS.

With regard to the results of the past year, the premium income on fire and miscellaneous account showed a gross increase of £61,844 over 1924, while the net figures had increased by £53,670. That increase was spread generally over home and foreign fire and accident business, and it was satisfactory in those difficult times to be able to report a moderate increase in each department. The loss ratio showed an appreciable increase, arising chiefly in the foreign field, where unsettled conditions on the Continent told the inevitable tale in increased losses. After providing the usual 40 per cent. reserve against unexpired risks, they transferred £18,815 to the credit of profit and loss account.

The life assurance account continued to show steady progress, with a net premium income of £65,254, against £52,100 in 1924. Their policy was to foster the steady growth of that department and to neutralise as far as possible the heavy expense of commission on new business, which was inevitable with a growing account, by strict economy in management expenses.

The marine account had been opened in 1919 on the same principle as that of the life business—namely, that the company should give facilities for all classes of reinsurance. They had decided in 1922 to revise their treaty arrangements so as to reduce considerably their net premium income. For the four years 1922 to 1925 their total net premium income had amounted to £156,200, as against a net premium income in the general departments of £1,827,202. In other words, their marine premium income has been in the ratio of 8.5 per cent. only to their total premium income—excluding life—with an average of £39,000 per annum for the past four years. In the present accounts they closed the 1923 account, and, in order to provide for excess of claims for 1923 and previous years, the sum of £7,601 was transferred from profits and loss account. Of that sum £5,165 was on account of claims for 1922 and previous years, and the balance represented the deficit on the 1923 account. They carried forward in the marine account £38,789, being fully 112 per cent. of their premium income for 1925, or approximately 100 per cent. of the average income for the past four years.

PROFIT AND LOSS ACCOUNT.

The profit and loss account showed a substantial increase in interest earnings, but a loss on investments realised of £1,746, and an adverse difference on exchange of £1,611. After providing for certain other items, they placed £10,000 to reserve funds, leaving a balance of £45,779. They recommended a tax-free dividend of 8 per cent. per annum, and carried forward £40,899. The increase in the dividend was fully justified by the fact that the amount distributed was less than one-third of their interest earnings for the year.

Their subscribed capital stood at £250,000, of which £61,000 was paid up, and their register showed that shares on which there was an uncalled liability stood in the names of parties who were in a position at any time to meet in full any calls that might be made; it was the intention of the directors to maintain that position, so that their uncalled capital was an additional reserve, always available in case of need. Their invested funds and cash totalled £584,492. In conclusion he expressed their appreciation of the support given to them by leading offices throughout the world; the friendly relations they had cemented during the past ten years were deeply appreciated, and they could never forget

the support and assistance they received in their infancy, when, in a sense, they were an untried proposition. They trusted that the facts he had given as to the policy pursued and the results obtained would gratify those friends who helped them at the outset and allow them to count upon continued and increasing support.

The report and accounts were unanimously adopted.

UNDERGROUND ELECTRIC RAILWAYS COMPANY OF LONDON, LIMITED.

CAPITAL REORGANISATION SCHEME EXPLAINED.

Extraordinary general meetings of the Underground Electric Railways Company of London, Limited, and of the holders of the £10 ordinary shares, the "A" is ordinary shares, and the contingent certificates therein, were held, on the 29th instant, at Caxton Hall, Westminster, S.W., for the purpose of considering a scheme of capital reorganisation. The Right Hon. Lord Ashfield, the chairman of the company, presided.

The Chairman said:—Ladies and gentlemen,—The immediate progenitor of the company was the Metropolitan District Electric Traction Company, Limited, which was incorporated in July, 1901, with a capital of £1,000,000, mainly with the object of electrifying the Metropolitan District Railway. But shortly after that company was formed a larger scheme, involving a much larger expenditure of capital, was set on foot to provide not only for the equipment and electrification of the District Railway, but also for the construction and equipment of new underground railways in London. For this purpose the Underground Electric Railways Company of London, Limited, was incorporated on April 9, 1902, and immediately afterwards it purchased the rights and assets of the Traction Company. Part of the consideration for the purchase consisted of the cession to the Traction Company of certain contingent rights in a portion of the prospective profits of the Underground Company, and certain contingent rights in a portion of its surplus assets in a winding-up. The certificates so issued are the present contingent certificates, which are included in the scheme for the re-arrangement of the company's capital.

I now come to June, 1912, when the company acquired the ordinary shares of the London General Omnibus Company under a scheme which provided for the payment of part of the purchase price in the form of certain "A" shares in the Underground Company, the capital of that company being increased by £60,034 16s by the creation of 1,200,696 of these "A" shares, of which 1,150,480 (£57,524) were issued under the scheme. In 1914, to provide, in part, for the purchase of the New Central Omnibus Company, a further issue of 48,500 (£2,425) of these "A" shares was made.

These "A" shares entitle the holders to have divided among them substantially one-third of the profits of the company available for dividend in respect of each year, and they also have certain deferred capital rights in the event of a winding-up, and in order that these rights might be attached to the "A" shares, the £10 ordinary shareholders and the contingent certificate holders surrendered a part of their rights.

AMENDING ANOMALIES.

Since the Underground Company in 1912 acquired the London General Omnibus Company, and also shares in the Associated Equipment Company, its income has gradually improved, and though this improvement has not hitherto been sufficient to enable it to pay any dividend, I expressed the opinion, when addressing the shareholders at the annual meeting last March, that the prospects of the company were more favourable than they had been at any other time in its history. I said that we counted upon the continued development of London, and, upon a reasonable control of its traffic, and, as a final conclusion, I said we took a hopeful view of the future, assuming a continuance of industrial peace. Under these circumstances, I suggested that it would be necessary to look at the capital account and amend certain existing anomalies, before the directors could recommend a payment of a dividend, should profits for that purpose be available.

What I had more especially in mind was the necessity for remedying, what the result has proved to be, errors in the past in connection with the issue of the "A" shares and the contingent certificates. As regards the "A" shares, the divergency between the capital and income rights of the two classes of shareholders has long been recognised as creating an impossible position, because shares of a nominal value of about £60,000 are entitled to one-third of the profits of an undertaking whose total ordinary capital is roundly £5,060,000. I do not suggest that the bargain then made can be departed from in its main principles, but I do suggest the anomalous position thus created must be altered.

Let me now refer to the contingent certificate holders, whose present position will be realised on a consideration of the following facts: At December 31, 1925, the cumulative arrears of divi-

dend due to the ordinary shareholders, which would rank before the contingent certificates, amounted to upwards of £5,300,000, and, unless some change is made, all these arrears must be paid before the certificate holders could receive a penny. Moreover, these arrears would be increased in the future to the extent that two-thirds of the profits of the company for each year available for dividend are less than 5 per cent. on its paid-up capital. Therefore, there is very little income value attaching to the contingent certificates. Their capital value is also very small. Nevertheless, they form part of the financial structure of the Underground Company, and, therefore, should be taken into consideration when dealing with any re-arrangement of the capital.

THE SCHEME.

Now that I have dealt briefly with the history of the company's capital, and with the reasons which influenced the directors in determining to place before the shareholders and contingent certificate holders a scheme for its reorganisation, let me say a few words about the proposed apportionment of the new £1 ordinary shares.

The scheme leaves the total share capital practically unchanged; its object being, not to raise further money, but merely to define and equitably adjust the existing capital and income rights between the interests affected, nevertheless the larger number of shares of a smaller denomination should, we think, be of advantage to the shareholders by providing a wider market for dealing in the shares of the company.

In the end, the directors adopted as a basis for distributing the new shares, that ratio of value which over a series of years has placed upon the shares by the buyer and the seller, namely, the ratio of the market or Stock Exchange prices.

The judgment of the directors in adopting this method of valuation appears justified by the fact that the relative value of shares of the two classes, if measured by their market prices, have not changed since the scheme was issued. Although the contingent certificates, as I have already explained, may be described as having a speculative rather than a real value, the same method has been applied in valuing them relatively to the shares, namely, the method of taking relative market values.

I think it is well to refer to a question which has been raised by some of the shareholders, and that is, whether under the scheme all arrears of dividend and all preferential rights are done away with. The answer is that under the scheme all such arrears and rights are done away with.

Since the directors decided upon their policy there have occurred the catastrophes of two strikes—a general strike and a coal strike—events affecting this company, in common with all industries in the country. What the result of the strikes may ultimately be, and whether in the result we shall be in a position to pay a dividend this year, of which I am still hopeful, are questions which no earthly wisdom can answer at the present time. The directors have not altered their original proposals for putting the company's share capital upon a sound basis, because they are confident that at some time this great undertaking of London traffic must become remunerative.

The scheme was approved on a show of hands at the extraordinary general meeting of the company, and at the meeting of the holders of contingent certificates. At the class meetings of the holders of the £10 ordinary shares, and the "A" ordinary shares polls were taken, the result of which will be made known later.

TRANSVAAL GOLD MINING ESTATES, LIMITED.

DIFFICULT YEAR—IMPROVED PROSPECTS.

Mr M. T. Brown presided at a general meeting of London members of the Transvaal Gold Mining Estates, Limited, held on the 27th instant, at Winchester House, London. He stated that during the year under review they had suffered from floods and drought and from shortage of labour—all matters beyond the control of the management—which explained to a large extent the diminished profits. The mine working revenue at £287,338 was £15,350 less than in the previous year, due to a fall of 1,260 tons in the tonnage milled and to a slight drop of 1s 4d per ton in the revenue from ore milled, the latter being largely accounted for by the absence of the gold premium. Against this the mine working expenses showed a reduction of 4d per ton. The working profit at the mine was £40,756, which showed a drop of £10,065, and after allowing for the slight saving in costs, the absence of the gold premium just about accounted for the difference. Fortunately, as a set-off against the drop in net revenue from the mines, they had to record a satisfactory increase in the profits from the wattle plantations of £6,592, so that, after adding other sundry revenue and allowing for the head office and London expenses, the net profit for the year was £50,837, or only £2,686 less than the previous year—a

result that might be considered not unsatisfactory when the handicaps their managers had to fight against were borne in mind.

HIGHER EXPENDITURE ON CAPITAL ACCOUNT.

Shareholders would observe that of the £50,837 balance carried down, only £28,598 was paid away in dividends, or 5 per cent. for the year, against 7½ per cent. But an examination of the other figures would show that they spent £16,558 more on capital account and £4,844 more on prospecting, which, after taking into account £6,000 less for taxes, left them with the net result that they had to encroach upon the unappropriated balance to the extent of £25,300. It had been the policy of the board to maintain a strong cash balance to be available for emergencies. So far as the current financial year had gone, they had had the results of three months' work, viz., April to June. During that period there were crushed 48,990 tons, as against 48,330 in the same period last year. The gold recovered was 18,142 ozs, against 15,915, and the profits were £11,132, against £6,311. Those figures were, of course, subject to certain adjustments, such as any profit there might be from the plantations.

TANGANYIKA CONCESSIONS, LIMITED.

STRONG POSITION—GOOD PROSPECTS.

The ordinary general meeting of Tanganyika Concessions, Limited, was held, on the 29th instant, at River Plate House, General Sir Reginald Wingate presiding.

The Chairman said that the situation is very satisfactory. He called attention to the tribute paid to Mr Robert Williams at the last meeting of the Union Minière in Brussels for the part he had played in the creation, development, and prosperity of the Union Minière, and especially the realisation of the Benguela Railway.

Mr Robert Williams, in the course of his address, said:—You will notice we have large liquid resources represented by cash at bankers and in hand, and by investments in Government securities and loans to brokers.

That is the outcome of the policy which I outlined at your general meeting last July, namely, to utilise as a sort of working capital to keep or sell as might be best the shares of the Union Minière taken up earlier in the year in respect of our rights.

To put your company in a state of financial independence, in face of the heavy commitments necessary to ensure the rapid completion of the Benguela Railway, the board decided to take advantage of the satisfactory state of the share market and to realise those shares. As a result, while retaining intact your original shareholding in the Union Minière, in addition to which you hold the 61,834 obligations, each having a vote specially created to reserve control in the hands of the founders of the Union Minière, you now possess strong liquid reserves in cash or the equivalent, and have also made handsome profits.

Notwithstanding the strong position in which your company stands, the board consider it wise to adopt a conservative policy in face of various adverse factors, which, although affecting profits for the moment, are, I hope, only temporary. I refer to the depreciated Belgian exchange, shortage of native labour, and the low price of copper. Dealing with the exchange, which up to March of this year had for some time been quite steady at about 107, if the rate had not depreciated, the Union Minière dividend for 1925 of 175f net per share would have yielded about £300,000 sterling instead of the sum actually received of £152,000, as compared with the £250,000 realised last year from the 1924 dividend of 138f net per share.

I trust that the efforts now being made by the Belgian Government to stabilise their exchange will shortly be successful. If that can be done the actual rate of exchange will not affect your future Union Minière dividends, as the copper is sold on a sterling basis.

UNION MINIERE DU HAUT KATANGA.

The copper production was increased to 90,104 tons, and the divisible profits to 120,000,000f, as against 86,000,000f for 1924. The sale of radium has been highly satisfactory, amounting to 80 per cent. of the total sales for the whole world. Some 600 tons of tin were also produced, and the cobalt plant at the beginning of this year commenced the production on a commercial scale of substantial quantities of cobalt, for the sale of which satisfactory arrangements have been made.

A new agreement has been made with the Wankie Colliery Company, ensuring the necessary fuel supplies up to December 31, 1935. A new agreement has also been made with the Rhodesian Railways for the transport of the above fuel at favourable rates, the Rhodesian Railways giving a firm undertaking for the first time to transport such fuel, thus ensuring regular and continuous supplies. The completion of the Benguela Railway will ensure a supply of excellent fuel, if necessary, from other sources.

With regard to the transport of copper from Katanga, the said

(July 31, 1926.)

agreement provides that a minimum of 50,000 tons per annum shall be sent over the Rhodesian Railways up to 1930, or any lesser quantity subject to a penalty of £2 per ton. After 1930 there is no obligation upon the Union Minière to transport any copper over the Rhodesian Railways.

On the other hand, those railways will undoubtedly secure compensating traffic by reason of the extensive development of the Katanga mineral area, rendered possible by the Benguela Railway and the leaching process.

BENGUELLA RAILWAY.

With regard to the Benguela Railway, the Trade Facilities issue of £1,150,000 to provide the money for the purchase of British materials to complete the line to the frontier was a great success. The guarantee of the loan by the British Government, which, as I explained to you last year, was agreed to after the Government of the Union of South Africa had stated they had no objection, has been subjected to some criticism both in the South African and Southern Rhodesian Parliaments.

Our Government's decision was amply justified, firstly because they retained for British workshops a large order which would otherwise have been placed abroad immediately, the finance being, in fact, assured from our own resources, and, secondly, because they were assisting a railway which it is recognised can be of great use in the development of Northern Rhodesia, Lobito Bay being obviously that country's natural port.

The report and accounts were adopted, and a final dividend of 2½ per cent., making 7½ per cent. for the year, and also an interim dividend of 5 per cent. for 1926 were declared.

MALAYALAM PLANTATIONS, LIMITED.

SUCCESSFUL YEAR—NEW ESTATES ACQUIRED.

The fifth ordinary general meeting of Malayalam Plantations was held, on the 29th instant, at 3 Idol Lane, London, Mr H. J. Welch (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: During our financial year 1925-26 the tea crop harvested amounted to nearly 8½ million lbs, being 461,000 lbs in excess of the crop for the previous year. The f.o.b. cost of production (including loss on exchange) was 9.47d per lb, against 8.62d in 1925. The increased cost was accounted for by the increased cost of the rupee, by depreciation written off, and by commission on profits and furlough expenses payable to the staff. The average net price realised was 1s 2.35d per lb, against 1s 2.04d in 1924-25. The average yield per acre was 633 lbs, against 616 the previous year. The present estimate, made by the estates' superintendents, of the current year's tea crop is 8,845,000 lbs, and we have harvested for the first three months ended in June 2,533,503 lbs. This is an increase of 69,719 lbs over the previous year to the same date. As you previously have been informed, the whole output of tea, excepting the crop from the two estates recently acquired, has been sold forward for this year at an average gross price of 1s 4.25d per lb. London landed terms, equal to an average net price of 1s 2.43d per lb.

During the year approximately 246 acres were opened and planted with tea. Of the two new estates which we are creating and to which I referred at the last meeting, approximately 350 acres have already been cleared. This area, with another 350 acres elsewhere, making 700 acres in all, will be planted up during the current year. A new tea factory is in course of erection on our Moongala Estate, and other tea factories have been extended and additional machinery installed.

As you have been advised, during the year we purchased two desirable tea estates known as Arniekudy and Dymock, which adjoin our Wallardie and Moongala properties, and contain 684 acres of planted tea and 575 acres of reserve land. We also have negotiated for the purchase of other desirable estates, which could have been conveniently and economically worked with other properties belonging to us, but for reasons of price or otherwise these negotiations fell through.

The rubber crop harvested was 2,876,000 lbs, an increase of 282,000 lbs over the previous year. The f.o.b. cost of production (including loss on exchange) was 8.07d per lb, against 7.75d in 1924-25. The average net price realised was 2s 1.33d per lb, against 1s 5.37d in the previous year; 763,262 lbs were harvested for the first three months ended in June, a decrease of 17,563 lbs as compared with the same period last year.

FORWARD SALES.

Of the current financial year's crop, 503 tons (or approximately 45 per cent. of the estimated crop) have been sold at an average gross price London equivalent of just over 1s 11d per lb, and out of the 1927-28 crop 119 tons (or about 10 per cent. of the esti-

mated crop) at an average gross price London equivalent of 2s 8d per lb.

Our cardamom crop was 24,585 lbs, and was harvested at a cost of 2s 5.21d per lb, f.o.b., and realised an average net price of 4s 6.41d per lb.

The labour position during the year and the general health of the labour forces was satisfactory. The services of Lieutenant-Colonel Clemesha, I.M.S., a medical expert in tropical diseases and hygiene, have been continued, and he is still visiting many of the estates, with the object of reducing malaria and other diseases, and of assisting and supplementing the work of our Indian medical staffs.

The total book cost of our properties, buildings, machinery and plant, at the date of the balance-sheet, was £1,296,259.

LOW COST PER PLANTED ACRE.

After providing for the dividend proposed to-day, the surplus of our liquid assets over our liabilities, as at March 31st last, amounted to £422,250, or £15 10s per planted acre. If this surplus is deducted from our issued capital, the present net cost of our planted acreage is under £38 per planted acre, without allowing any value for our 57 square miles of reserve land on the one hand, nor anything for the cost of bringing our immature areas into bearing on the other.

The year's working resulted in a profit of £172,443 from tea, £206,894 from rubber, £2,207 from cardamoms, and £15,193 from sundry receipts and interest. Our net profit amounted to £388,533, which is £105,000 more than in the previous year.

From the sum available, your directors recommend the payment of a final dividend of 15 per cent. (less tax), making 25 per cent. for the year, to contribute to the staff retirement fund £5,000, and to transfer to taxation reserve £70,000. In addition, it is proposed that £20,000 should be transferred to general reserve (which will bring that account up to over £180,000), and after paying the directors' additional remuneration, to carry forward £40,626, against £39,821 brought in.

The report and accounts were unanimously agreed to.

GOVERNMENT RETURNS, &c.

PUBLIC INCOME AND EXPENDITURE.

RECEIPTS INTO AND ISSUES OUT OF THE EXCHEQUER.

	Estimate for the Year 1926-27. (See Note.)	Total Receipts into the Exchequer from April 1, 1926, to July 25, 1926.	Receipts. Week Ended July 24, 1926.	Week Ended July 25, 1926.

Messrs Samuel Montagu and Co. write on July 28th as follows:—

GOLD.

During the week under review the Bank has received on balance £413,000, increasing the net influx since January 1, 1926, to £7,534,000, and decreasing the net efflux since the resumption of an effective gold standard to £4,061,000.

SILVER.

During the week the market has remained steady. The pressure of selling which brought about the drooping prices of the week before has been relaxed, and Indian and other bears took advantage of the lower level to reduce their commitments. The daily business has not been one-sided, both India and China having worked both ways. America has had little to do here. On the whole the market is pursuing a natural course without any speculative bias, but, irrespective of any immediate fluctuations, is lacking in confidence.

United Kingdom imports and exports of silver during the week ending the 14th inst. were:—

	Imports.	Exports.
U.S.A.	53,031	37,200
Nigeria	20,928	32,880
Other countries	16,161	57,189
	90,120	374,639

INDIAN CURRENCY RETURNS.

Commercial Reports.**THE CORN TRADE.**

Mark Lane, Thursday Evening.

Climatic conditions continue favourable to growing crops, and rains during the past week have kept the plants supplied with moisture. The harvesting of winter oats is now general, and samples show good quality and weight. The small supply of old native wheat available was mainly taken for poultry feed, and realised full rates. Imported descriptions move off slowly, and values the turn in buyers' favour. Steamers of No. 1 Northern Manitoba October-November sold 55s 6d, and No. 2 hard winter expected to load August 28th 53s 6d, both to Continent. Feeders of however, were firmly held, particularly for passage cargoes of maize. Black Sea barley September shipment sold 27s 6d per 400 lbs c.i.f. terms. Wheat quiet. No. 1 Northern Manitoba quoted 62s 9d, No. 2 ditto 61s 6d, No. 2 mixed Durum 57s, Barusso 61 lbs 58s 6d, Australian 61s, all ex-ship, choice white Karachi 61s 6d landed per 496 lbs. English nominally 14s 2d to 14s 6d per 112 lbs free on rail. Flour quietly steady. London standard grade 52s. town whites 53s, patents 54s to 55s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported Manitoba patents range 47s to 49s 6d, Minneapolis 48s to 49s, Australia 45s 6d per 280 lbs ex-store. Maize firm. Plate new 36s landed, ditto ex-ship to arrive 33s 3d per 480 lbs. Barley maintained. Californian 36s to 47s, Chilean (Chevalier 50s to 57s, ditto brewing 35s 6d to 48s, Australian Chevalier 45s to 46s ex store, Smyrna 35s to 48s, ex-ship per 448 lbs. No. 3 Canadian Western, ex ship, 30s, No. 4 ditto, 29s 9d, American malting, 48 lbs landed, 30s, Plate ex ship, 28s 9d, Russian 29s 9d per 400 lbs English nominal. Oats firm. La Plata ex ship 22s 6d, landed 23s 6d, No. 2 Canadian Western, ex ship, 27s, landed 28s, No. 2 Canadian feed ex ship 23s 6d, landed 24s 6d, Chilean Tawny 23s, American 38 lbs ex ship 23s 6d, landed 24s 6d, mixed feed ex ship 19s 6d, landed 20s 9d, per 320 lbs; English 10s-10s 6d per 112 lbs free on rail. Millers' offals firm. Broad bran 6s 3d per 60 qd, middlings 7s to 7s 3d, fine ditto 8s 6d bags included ex-mill, feed oatmeal 7s 9d, light oats 6s 9d, ground oats 12s 3d per cwt free on rail. Oatmeal unaltered. London-malting flaked 17s 6d, rolled oats 16s 6d, medium also fine cut 16s 6d, coarse also medium pinhead 16s 6d ex-mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1925-26, 1924-25, 1923-24, 1922-23:—

	1925-1926.	1924-1925.	1923-1924.	1922-1923.

Our Glasgow correspondent writes:—Owing to the Fair holidays all the iron and steel works which had been producing (with the exception of the rolling mills of a firm in the Springburn district) have been closed down. The demand for black and galvanised sheets continues strong, and despite the reports of German competition prices are well maintained. The demand for bar iron keeps steady, but on a small scale. Considerable quantities of Continental bars and hoops are coming into Glasgow and neighbourhood. Steel works are, of course, doing nothing, but the feeling is prevalent that if fuel supplies are made available at an early date fairly good business can be obtained, and order books are already well filled for delivery after the strike. Messrs Scott's Shipbuilding and Engineering Company, Greenock, have secured a contract for a 6,500-ton steamer for the Holt Line. The engines will be twin-screw engines of the Scott-Still type. The shipments of pig-iron from Glasgow Harbour last week totalled 249 tons, of which 196 tons were on overseas account. For the corresponding week of last year the tonnages were 305 and 95 respectively.

Our Sheffield correspondent writes:—Local unemployment has decreased by some 3,000 during the past fortnight, and the average of the holiday stoppage next week will not exceed the normal. Increased supplies of fuel have enabled firms producing the lighter forms of steel to extend their operations, and mills are working at about half capacity by means of electric power and foreign and outcrop gas coke. No steel is being melted, however, and the gradual exhaustion of supplies has brought the heavy departments almost to a standstill. Semi-steel is being imported in large quantities from Belgium, France and Germany, and users are also going abroad for special kinds of steel unobtainable at home. Prices of foreign material have not been advanced appreciably, nor are sellers insisting upon contracts very far forward. The wire trade, which has been brisk, is now being curtailed, through restricted supplies of foreign rods. There is no demand for ferro-alloys, and prices are easier. Continental trade in fine steels and tools has shrunk to the vanishing point owing to exchange movements.

Our Cardiff correspondent writes:—The tinplate factories are being helped by the supplies of foreign fuel and steel, and it is estimated that the output has been increased to about 40 per cent. of the normal. Prices are practically unchanged, ranging from about 25s 6d per box for spot delivery down to 20s 3d for post strike deliveries. The supplies received by the warehouses from the works last week were slightly less than in the previous week, and in consequence of the doubling of the volume of the exports the stocks have been reduced from 50,916 boxes to 28,788 boxes.

OTHER METALS.

TIN.—The market proved active, and values responded to higher cable advices from the East, while somewhat irregular at times. Standard cash sold at £288 10s, £290, £289 17s 6d, and £291 15s, three months £283 5s, £285 5s, £284 15s, and £286 10s. Sales in the East were reported at £289 12s 6d, £290 5s, £289 18s 9d, and £292 15s. American advices were also firmer.

COPPER.—A considerable business transpired at full rates. Slight irregularity ensued, due to profit-taking, but general tone firm. Standard cash sold £58 6s 3d to £58 17s 6d, three months £59 2s 6d to £59 13s 9d.

LEAD continues in good support, and with American cables firmer values further hardened, though top points were not maintained. Good soft foreign pig, July, sold £32 15s to £33 7s 6d and £33, August £32 12s 6d, £33 7s 6d, £32 16s 3d, September, £32 10s, £33 2s 6d, £32, October £32 7s 6d to £33, and £32 10s; November £32 7s 6d to £33 and £32 10s per ton.

SPELTER firm, while in demand. July sold at £34 5s to £34 8s 9d, August £34 7s 6d to £34 11s 3d, September £34 15s, October £34 12s 6d to £34 16s 3d and £34 13s 9d, November £34 15s, £34 17s 6d ton.

ANTIMONY firm. English regulus, refined, £74 10s to £75. China crude spot £35, July-August £36, Regulus spot sold £64, July-August £58 to £60 per ton.

ALUMINIUM quiet. Home trade nominally £118, export £120 ton. **WOLFRAM** firm, and quoted 14s 3d to 14s 6d per unit, ex warehouse.

QUICKSILVER firm. Spot £15 10s per bottle.

TIN PLATES steady. I.C. coke prompt 25s 6d to 26s, and delivery after termination of strike 20s to 20s 3d per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, July 28, 1926.

A little more activity has been shown during the week, but prices record but little change. The American Cotton Bureau report, issued on Friday last, gave a condition of 70.7 against 75.4 last month, with an estimated production of 15,368,000 bales, but the figures have had very little effect on the course of prices. Reports from the Southern States state that there is rank growth, and the plant poorly fruited. There has also been too much rain. Spot sales for the period 23rd to 28th (inclusive) were 17,000 bales. Of these 7,310 were American, 510 Brazil, 3,300 Peru, 3,820 Egypt, 1,360 African, 190 East Indian, and 510 sundries. Imports for the same period were 23,611 bales. These include 11,510 American, 3,114 Brazil, 5,778 Peru, 395 Egyptian, 208 African, 550 East Indian, and 2,056 sundries. Quotations to-day are:—Middling American, 10.10d; Brazil fair, 10.20d; Peru G.F. moderate-rough, 12.00d; smooth, 11.95d; Timmivelly, F.G.F., 9.00; West African middling, 9.85d; and East African G.F. 11.70d.

MANCHESTER, July 28, 1926.

Business is slow in developing. Leading merchants still display a lack of enterprise, and commitments are restricted as much as possible. There is belief that trade will broaden when the coal dispute is over, but in the meantime the outlook is too uncertain for active dealings. In cloth for India there has been a fair amount of inquiry, but not more than a scattered business has been done, most of the buying being in light bleaching descriptions. Fresh news from China has been scarce, trade being confined to small lots, chiefly in fancies. There has not been any flow of orders for the Near East or South America, but the undercurrent of demand in home trade fabrics keeps up fairly well. Quotations in American and Egyptian yarns remain firmer. Export business for India in two folds has been rather better than recently.

THE WOOL TRADE.

Our Bradford correspondent, writing on Wednesday, says:—There is very little change in general conditions. Demand in all sections is restricted, and the small transactions reported from day to day are obviously of a retail character just sufficient for current needs. There is, however, an underlying note of confidence, and both spinners and manufacturers still believe that business will come on to the market when the industrial outlook improves. This is suggested also by the way in which wool continues to sell at the London auctions. Wool has also been lifted remarkably well at the country fairs held in various parts of the country during the last two months. In many cases prices have been paid well above the Bradford parity, but no doubt buyers have been influenced by the fact that present conditions in the consuming centres afford no guide as to trade under more normal conditions, and have taken the wool in anticipation of better times ahead. There is very little change in Bradford quotations for tops and yarns. The finer qualities are steady, but there is no bulk business to test the market. In piece goods, demand on home trade account has been encouraging, but business for future delivery is difficult to negotiate owing to the inability of manufacturers to guarantee delivery dates. This is curtailing both home and export demand.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Last Wednesday saw the finish of the fourth series of London sales, and although a slight decline has to be recorded in practically all merino values compared with the first week, it is fully covered by 5 per cent. Of course, this is disappointing to importing merchants, who were hoping that July would see prices a little higher, and that they would thus get out of their colonial purchases without loss, but at the moment the majority are carrying their stocks which if sold would leave behind a slight loss. Rather than face this, the majority think it policy to wait until the next series, when, if the coal strike is settled and the French financial tangle is straightened out, we may see somewhat firmer values. That the decline in values has not been more marked is gratifying. Though it is three months since the miners' strike commenced, and most French buyers left the sales at the end of the second week, we still think the position is sound. Consumption is certainly somewhat lacking in the home trade, for most mills to-day are having to run on foreign coal, which is costing all round £3 per ton, against £1 per ton as supplied by Yorkshire coal pits. Apart from this increased cost, business is anything but good, the strike having strangled the summer demand for new clothes among retail distributors. However, the quantity of wool actually sold clearly shows that the position is sound, and it would seem as if the forth-

coming long interval will be characterised by steady values. The month of August has often been a period of activity, for in the ordinary way manufacturers then buy yarns for their following spring orders, but only hand-to-mouth buying will be done until the strike is settled. The big stocks of crossbreds in Bradford will have to be held until later in the year. Trade on the Continent is expected to revive with the harvest; and possibly good crops in the United States and Canada will lead to larger business in clothing during the winter, which will stimulate the consumption of crossbreds. At the same time, an increased demand for yarns and piece goods from Germany, Russia, and the Balkan States will be the chief factor in the betterment of crossbred wool. The home trade prefers fine, soft handling fabrics to those made out of crossbred wool, largely because of the reasonable prices which obtain for the former. The hosiery trade is languishing, and it would seem as if production is on too large a scale until other countries are able to buy fabrics more extensively. Little increase, if any, in wool values may be expected during the next two months, but in view of the present reasonable level we consider the position quite sound.

HIDE, LEATHER, AND ALLIED TRADES.

The domestic hide market remains firm, although it is reported that, in view of shortage of coal and power, tanners will soon be obliged further to reduce input. London and provincial prices show practically no alteration, and supplies are taken as offered. The market for imported hides is also firming up, and best Argentine frigorifics are now quoted at 7½d. Continental tanners are the chief buyers, the United States not being much in the market. Cables from Chicago report the position as strong, with best heavy packers now selling at 15 cents. Dry hides are advancing, and B.A. Americanos are now offering at 10d, but no sales are reported at this figure. The demand for sole leather has fallen off owing to the close proximity of the holidays. Manufacturers show no disposition to speculate, and orders have therefore been on the small side. Light bends are still wanted, but there has been a good demand for medium weights from the repairing section. The output of sole leather has been greatly reduced, so that offal is getting scarce, and will in all probability be dearer if a sudden demand should set in when the coal trouble is settled. As regards upper leathers, the demand still runs on coloured kid and light willow, whilst patent and reptile leathers are being worked up freely. The shoe trade is quieter, although makers of ladies' and sports goods are fairly busy. Good orders for export have also been received of late for high-class men's footwear.

VEGETABLE OILS AND OILSEEDS.

Trade in the past few days has been in narrow compass, consumers generally being far from active buyers. Linseed oil has fluctuated in sympathy with seed, but is little changed on the week, current value being around £35 10s per ton naked ex Hull mill for spot and delivery to December. Cotton oils have been firm, and in fair demand, and are scarce for early delivery. Crude Egyptian is held for £41 10s, and ordinary refined offers freely at £41 prompt. Soya and palm kernel and other oils are in poor demand, and nominally unchanged. In the oilseed section Plate linseed has been influenced by adverse reports of the crop in the United States. Some speculative buying was later dissipated, and prices are easier, spot and afloat offering at £16 17s 6d, and July-August shipment at £17. Indian seed is not active, Calcutta August shipment around £19 2s 6d. In other directions very little business is doing, and crushers interested to a very limited extent. New Egyptian cottonseed is now offering at £10 16s 3d for October loading.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Steadiness was the prevailing feature, and a fair amount of business was effected, both on grocery and manufacturing account. British descriptions remained unaltered, and Messrs Tate and Lyle's granulated, from Empire sugar only and ex-refinery, attracted the attention of London buyers, while 3d cwt dearer at 28s 3d. Firmness ensued at American centres, and sustained inquiries were recorded for Cuban sugar on Chinese and Japanese account. Imported kinds sold at slightly more money. Czecho, also Dutch J. granulated, spot, sold, 27s 1½d; American, in 1 cwt bags, 27s 6d. Forward positions were mostly steady. Czecho granulated, ready, sold, 14s 10½d to 14s 9d; November-December, 14s 11½d f.o.b., Hamburg. Dutch J. ready, done, 14s 9½d, f.o.b., Rotterdam. Belgian crystals, prompt, sellers, 14s 4½d, f.o.b., Antwerp. Cuban basis, 96 per cent., August, 11s 7½d, c.f. and i. terms. Peruvian afloat, sold, 11s 6d. Terminal easier. August, sold, 13s 9d to 13s 7½d; December, 14s 7½d; March, 15s 0½d to 14s 11½d; May, 14s 5½d to 15s 3½d and 15s 5½d.

COFFEE.—Market continued steady, and on balance business proved of fair extent. Fine bold Kenya, sold, 150s; Uganda, bold, brownish, 114s to 118s; Costa Rica, bold, 142s to 180s; Nicaragua,

157s 6d; ditto peas, 153s 6d to 160s. Futures generally quiet, and May delivery, sold, 87s.

COCOA.—Only a quiet trade with regard to spot parcels, but sellers asked recent rates. Accra F/F, August-September, quoted 51s 6d; afloat parcels, sold, 51s; intermediate quoted 47s; and November-January, 45s, f.o.b.

TEA.—Indian auctions of 15,280 packages aroused much better competition, and the bulk sold at full rates to ¾d to ¾d per lb advance. Pekoe sold, 1s ¾d to 1s 8½d; orange pekoe, 1s 4½d to 1s 11d; broken orange, 1s 4d to 1s 10½d. Ceylon sales embraced some 25,400 packages. Brisk competition was experienced, and recent rates were not only fully maintained but in some cases exceeded. Pekoe sold, 1s ¾d to 1s 6½d; broken orange pekoe, 1s 5½d to 1s 10½d. Of China, some very fine Keemuns sold, 3s 3d per lb, in bond.

RICE.—With continued reserve on the part of Eastern shippers, the market is firm, with business in a measure checked on European account. Two stars, spot, 16s 6d; forward, 16s 3d; No. 3, to the Levant, 16s 3d; S.Q., to main ports Cuba, 16s 3d; No. 1 garden, Siam, 18s; super, 21s 6d. Saigon, No. 1, 16s. No. 3 Spanish, June-July, 22s 3d; oiled, 23s, to London. Broken kinds in demand and very firm. Burma I.A., June-July, 15s; 2.A., 13s 6d; Siam, C.I., 12s 10½d cwt. Rangoon bran, October-December, held for £6 ton, ex ship. Beans and peas more or less neglected at the moment.

SPICE.—Pepper in slow support, and rates barely steady. Black Singapore, f.a.q., May-July, quoted, 9½d; Lampong, ditto, May-July, 9½d; August-October, 7½d; Muntok, May-July, 1s 3½d; August-October, 1s 1½d. Tellicherry, spot, quoted 11½d; Aleppy, 10½d; Lampong, 10d; Muntok, 1s 4½d. Pimento, spot, 6½d. Zanzibar cloves, 9½d to 9½d per lb. Tapioca steady, but quiet. Sago flour, near at hand, 14s 9d; forward, 15s cwt, c.f. and i., U.K.

FRUIT (Dried).—Currants in quiet demand, but prices fully steady, especially for good quality fruit. Confectionery kinds meet with good attention. Amalia, quoted 30s to 31s; Gulf, 32s to 35s; Pyrgos, 30s; Vostizza, 40s to 53s; Patras, 31s to 33s; Australian, 46s to 53s. Sultanas quietly steady. Australian, new crop, sold, 76s; South African, bleached, 70s to 76s; Californian, 55s to 61s. Dates sell steadily. Siar, quoted 11s 3d to 11s 9d; Khadrowie, 15s to 16s; Hallowie (cases), 22s 6d to 25s. Raisins inactive. South African, 37s to 42s. Evaporated fruits without material change on spot, while forward quotations are maintained. Californian apricots, fancy, 140s; Australian, 125s to 135s; South African, new Royals, best, 140s. Plums, Californian, new, 20/30, quoted 105s; 50/60, 52s; 90/100, 37s; Oregon, 30/40, 63s; 35/45, 55s. Pears, Californian, extra choice, 72s 6d; fancy, 82s 6d; Lake County, fancy, 90s. Apple rings, Californian, extra choice, 55s to 60s; prompt shipment, 48s; Canadian, spot, 53s per cwt.

CANNED GOODS.

CANNED FISH.—Sardines experienced a moderate demand and market steady. Portuguese, ½s, quoted 4s 3d to 6s per dozen tins. Salmon quietly steady. Red, tall, 1 lb, 60s to 64s; tall pink, 26s to 26s 6d; ½ lb, pink, 39s to 41s. Lobsters in short supply. Best ½s, quoted 160s to 162s 6d, and ¾s, 92s 6d to 95s. Japanese crab firmly held, with limited supplies coming forward. Crayfish unaltered.

CANNED FRUIT.—General trade is on moderate lines, and the position mostly unchanged, though a fairly good clearance was effected during the recent spell of warm weather. Forward purchases are on a limited scale. Californian Bartlett pears, choice, 24-2½s, quoted 13s 6d to 14s; seconds, 10s 6d to 11s. Californian peaches, choice, 11s 6d to 12s 6d; standard, 10s 6d to 11s 6d; seconds, 9s 6d. Californian apricots, choice, 12s 6d to 13s; standard, 10s to 11s; seconds, 9s 3d per dozen tins. Singapore pines in moderate request on spot, but forward prices firm. South African and Hawaiian sell steadily at late rates. Italian tomatoes quiet, unaltered on spot, but there is a steady inquiry for shipment parcels.

CANNED MEAT quiet, unaltered, apart from a good demand for Danish lunch tongues, at full rates. Corned beef 6's quoted 38s to 46s, as to quality. Danish lunch tongues range from 122s 6d to 132s 6d; American quoted 135s, with best at 140s to 142s 6d. Ox tongues firm. Cooked boneless hams sell well, and finest Danish quoted 1s 8½d per lb for cases of six tins.

CONDENSED AND EVAPORATED MILKS.—Market without material alteration. Machine-skimmed sweetened, 11s 3d to 12s; full-cream unsweetened evaporated, 19s 6d to 25s; ditto sweetened, 21s to 25s upwards.

HONEY.—New Zealand moves off steadily, but other kinds generally quiet and tendency easier. New Zealand quoted 50s to 85s; Australian, 40s to 47s 6d; Jamaica ranges from 37s 6d to 50s; Haiti, 37s 6d to 48s; Cuban, 37s 6d to 48s per cwt.

RUBBER.

Market without new feature, business being of moderate dimensions and rates steady. Plantation standard sheet, spot, sold, 1s 8½d, 1s 8½d; August, 1s 8½d, 1s 8½d; September, 1s 8½d; October-December, 1s 8½d, 1s 8½d; January-March, 1s 9½d buyers, per lb.

GENERAL.

JUTE.—On cable news as to arrivals in Calcutta from up-country being much larger than anticipated, and the very slow sale for same, imparted considerable weakness to the market in the early part of the week. Buyers, however, show interest at the decline, and sustained buying led to an upward move, though some irregularity was in attendance. Dundee was closed for the holidays. Firsts, July new crop, sold, £35 10s, £34; August, £30 10s, £29 17s 6d, £30 5s, and £29 5s; September, £28 10s, £28, £28 15s, and £27 10s; October to December, £27 15s, £27 10s, £28, and £26 15s. Lightnings, August, sold, £29 10s to £28; September, £28 to £26 10s; October, £27 to £25 15s. Hessians and twills lower on the week, and trade slow.

HEMP.—Manila is a shade harder, despite quietness of trade, owing

to firmer cables from the other side; also American consuming centres. J. August-October, quoted £41 10s; K. £31 10s; L. £32 10s; M. £28 paid. New Zealand dull, unaltered. African sisal, No. 1 Tanganyika, August-October, £43; Kenya, £42 10s, c.f. and i.

SHELLAC quiet, but steady. Fair T.N., spot, 130s; August, 123s 6d; October, 124s 6d; December, 122s cwt.

COPRA—Business continues very slow, but prices disclosed no material change. F.M.S. Straits, August-September, to Rotterdam, sold, £28 17s 6d; Dutch East Indies, ditto, quoted £28 11s 3d; Ceylon, sellers, £30; South Sea Islands, £27 12s 6d. Palm kernels quiet. July-August, to Liverpool, quoted £20 5s ton.

TALLOW—Messrs Colchesters and Woolner write on July 28th as follows:—The tallow market was very quiet during the week, but prices show no quotable change. Where there is any inclination for business on the part of buyers it is rather for forward delivery than for spot or near. There will be no auctions next week. Quotations are:—Australian mutton: Fine, 45s 6d; good to fair, 44s 6d to 43s 6d; dull to dark, 42s 6d to 40s 6d; hard, 45s. Australian beef: Fine, 45s 6d; good to fair, 44s 6d to 42s 6d; dull to dark, 41s 6d to 40s; sweet, 45s 6d. Present shipment from Australasia: Good mixed, 43s 6d. Present shipment from South America, 44s. The market letter is unchanged. Town tallow, 39s 6d per cwt. Rough fat, per 8 lbs, 24d; melted stuff, 29s 6d per cwt. Quotations are:—Town, 39s 6d, net cash, naked, ex works. Country: Frail casks,

39s 6d; home melted, shipping casks, net, f.o.b., good coloured, 42s 6d; fair to dull, 41s to 39s. Bone fat: white none; pale none; benzene, 34s 6d; melted stuff, 34s 6d, f.o.b.

MISCELLANEOUS—Cocoanuts quoted 22s per 100. Coir yarn, Ceylon, £21 10s to £37; Cochinchina, £24 10s to £49; Ceylon bristle, £17 10s to £23; cinnamon leaf oil, 4½d; citronella, Ceylon, 1s 7d; Java, 2s 5d.

METROPOLITAN CATTLE.—July 29.

the Continent was taking bills at $4\frac{3}{8}$ per cent., and $4\frac{1}{2}$ per cent. was apparently the maximum working rate. Gold receipts during the week have reduced the net efflux since April, 1925, to the neighbourhood of £3,300,000.

	Aug. 6, 1926.	July 30, 1926.	July 23, 1926.	July 16, 1926.	Previous Rate and Date Changed.

Market rate (3 months' bills)	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..

Thursday's Bank return showed an increase of £717,400 in the stock of coin and bullion, and with an expansion of £483,300 in the note circulation the Reserve was £234,100 higher. The Proportion declined slightly to 25.7 per cent., owing to an increase in liabilities. Other deposits increasing by £3 millions, while Public deposits fell by £1½ millions. Government securities increased by £1½ millions, but Other securities were practically unchanged. Currency notes for the week were increased by £3,097,000 to £296,993,100, which includes £1,298,800 for notes called in but not yet cancelled. The fiduciary issue is £239,444,300, or £8,458,200 below the maximum for 1926.

NEW YORK MARKETS.

Our New York correspondent cables:—The buoyancy in the share market has carried average values to new high records, with a sensational rise in General Motors and a big advance in Steel Common. The turnover, while larger, is still materially below the high levels reached early in the year. The tendency is for the market to broaden out and deteriorate with more public participation. The rise is based chiefly on the remarkable earnings of certain companies, optimism over business prospects, and a plentiful supply of funds. Dun's price index number shows a slight drop in July, but commodity prices are now relatively stable. The steel industry continues to do better than expected, both as regards buying and production. Stories of French credits are premature, but it is noted that Poincaré is swinging towards debt ratification and the Experts' report, which would pave the way for credits. The Reserve System shows a moderate gain in discounting owing to an increase in crop-moving and autumn business demands. The ratio is 75.4, against 75.3 a year ago.

THE STOCK MARKETS.

The volume of business in the Stock Exchange has fallen to the meagre proportions normal at this time of year, though the sharp recovery in the value of the franc has served to steady the general tone, and the foreign market, in particular, has benefited. Gilt-edged stocks remain firm, and home rails have improved a little on bear covering. Argentine rails have been good, and Antofagastas gained several points. The maintenance of the 100 per cent. exportable allowance depressed rubber shares, but there was a recovery from the worst. The tea and oil markets have been quiet, and animation in the tobacco group and Courtaulds has subsided. Kaffir shares have been inclined to improve, but the disturbances in Mexico reacted unfavourably on Mexican mining shares. Underwriters of the Perak River Hydro-Electric 7 per cent. debenture stock were left with 80 per cent., and the price fell to 6 discount.

THE COMMODITY MARKETS.

Business has been restricted by holiday influences, but the undertone is largely unchanged. The importation of foreign coal continues on an increasing scale, supplies now reaching South Wales, for instance, at the rate of over 100,000 tons a week. The iron and steel trades are quiet, many of the finishing trades being hampered less owing to the shortage of fuel than to its high cost. More favourable weather reports have caused a decline in raw cotton prices, though dealings have been on a larger scale than of late. A slight expansion has occurred in the cloth demand for India, but operations generally have

been restricted by the holiday situation. Fairly large sales of raw wool have been effected on foreign account, and values are very firm. Sales of jute are limited by the expectation of lower prices following a record fibre crop this year. Wheat is in moderate demand, without much change in values, sugar steady, coffee and tea quiet. Rubber quotations have fallen on selling pressure following the decision to retain the 100 per cent. export ratio in British areas during the next three months. Among non-ferrous metals, tin has again moved sharply upwards, copper remains firm, and lead has been actively dealt in.

FOREIGN EXCHANGES.

In spite of the Bank Holiday, the past week has been one of great activity in the foreign exchange market, especially in the "franc" currencies. M. Poincaré's success in passing his Financial Bill through Parliament and in obtaining a majority in the Chamber for his Sinking Fund and Bank of France Bills, has led to a further remarkable recovery in the rate of exchange. From 203½ on July 29th, it fell to 201½ on the 30th and 199½ on the 31st. When the market reopened on August 3rd, after the holiday, it was known that the discount rate of the Bank of France had been raised from 6 per cent. to 7½ per cent. The opening rate of 181 was further reduced during the day to 178½, and to 167 on Wednesday after actually touching 162½ at one time on that day. The publication of the Bank of France return on Thursday, showing an increase of 400 million francs in advances to the State and of 1,237 millions in the note circulation, led to a reaction to 170. On Friday morning, however, following a report that the French Government intended to ask Parliament to ratify the War Debt agreements next week, the rate opened at 163½. Thus the remarkable recrudescence of confidence in France has brought about a recovery of 85f in a little over a fortnight. In the City, however, the position is viewed in a somewhat calmer atmosphere, and criticism is directed against the refusal of the Government to fix the rate at which stabilisation is to be carried out. The continuance for any length of time of uncertainty on this point would, it is felt, be as dangerous as an attempt to stabilise the rate at too low a level. The discount on forward rates has narrowed greatly, and now stands at 4f for one month and 11f for three months, as compared with 23f for three months a week ago. Brussels has recovered considerably in sympathy, but without such violent fluctuations. From 194 on July 29th it fell to 190½ on the 30th, and after reacting to 191½ on the 31st fell to 176 on the 3rd and 170 on Wednesday. Thursday's relapse to 174 was followed by a recovery yesterday morning to 170½ again. On forward rates the discount is now 7f for one month and 12f for three months, as compared with 12f and 23f respectively last week. Italy has also improved, although less markedly. On the 30th it closed at 151, compared with 148½ the previous day, but recovered to 150½ on Saturday. On Tuesday it fell to 146½ and, with slight fluctuations, to 145½ by yesterday morning. New York, on the other hand, on a quiet market, fell slightly from 4.86 9-32 on the 29th to 4.86 3-32 on the 30th, but rose again to 4.86 5-32 on Saturday and 4.86½ on Tuesday, since when it has been quoted between 4.86½ and 4.86½. Forward rates are slightly narrower at 11-32 to 9-32 cent. premium for one month. Amsterdam has moved in our favour from 12.10 to 12.11½, and Switzerland after remaining steady at 25.12½ during the week opened yesterday morning at 25.14½, while Stockholm has been steady around 18.16. Oslo has advanced from 22.19 to 22.20, but Copenhagen has fallen from 18.35 to 18.33. Madrid, on rumours of political troubles, has risen from 31.66 to 32.34. Berlin, Helsingfors, Vienna, Prague, and Warsaw are unchanged. Bucharest has improved from 1070 to 1060. In the East, the publication of the report of the Indian Currency Commission, in which a basis of 1s 6d is recommended for the rupee, led to a slight rise in the exchange from 1s 5 59-64d to 1s 5 61-64d, but the quotation was already so near to the new parity that no great movement was possible. The yen continues to improve, and rose during the week from 1s 11½d to 1s 11½d. The silver

market was disturbed by the Indian Currency Report and the possibility of future sales of silver by the Indian Government, and prices were weak. Hong Kong consequently fell from 2s 2½d to 2s 2½d and Shanghai from 2s 10½d to 2s 10½d. In South America Rio has risen from 7 17-32d to 7 19-32d, Buenos Aires from 45½d to 45½d, and Monte Video from 49d to 49½d. Valparaiso, on the other hand, has depreciated from 39.70 to 39.50 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 31st:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	7,518	From Revenue ..	10,683
Interest, &c., on Debt	1,571	Decrease in Balances	396
Sinking Fund	359		
Sundries	239		
Decrease in debt	1,352		
	11,079		11,079

The revenue for the week amounted to £10,682,600, as compared with £11,911,000 in the corresponding week last year. Customs and Excise were lower at £1,608,000 and £716,000, against £1,698,000 and £1,026,000 respectively. Property and Income-tax brought in £3,670,000, as compared with £5,467,000, and Super Tax amounted to £470,000, against £750,000. Ordinary Receipts amounted to £651,400, and Special Receipts to £200, as compared with nil in both cases last year.

The week's operations reduced the National Debt by £1,352,000, and caused the following changes:—

(000's omitted.)			
	£		£
National Savings Certificates ..	250	Public Department Advances ..	+ 3,100
Sundries	990		
Treasury Bills	3,212		
	4,452		+ 3,100

The floating debt was reduced by £110,000 to £773,301,000.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—General Mining and Finance Corporation, British Enka Artificial Silk, Cicely Rubber Estates, Semenyih Rubber Estate, and Louise and Company.

THE INDIAN CURRENCY REPORT.

To India and to the world at large it is of the utmost importance that she should be provided with a currency system which will give her inhabitants confidence in their money, cure them of their inveterate habit of burying gold, and train them in that of investment and the use of credit instruments. At the same time, it is evidently desirable to secure stability of internal prices and a link between their level and that of prices in the markets of the world. Such were the chief objects which had to be aimed at by the latest Royal Commission which has inquired into the problem of the Indian "exchange and currency system and practice," and there is good reason to hope that its recommendations will tend to their achievement. Its report sets out clearly and simply the arguments for and against the measures which it pro-

poses, and though these measures are likely to find plenty of critics, they seem to hold the balance fairly and sensibly between the aspirations of financial nationalism and the interests of India as a member of the community of nations.

To the Commission, as was clearly stated in its terms of reference, the interests of India were naturally the only question to be considered. But the action taken by any country concerning its currency is so full of possibilities with regard to its effect on that of its neighbours, with reactions on its own trade and progress, that the interests of India could only be secured through careful consideration of world interests, and the Commission will probably be held by most fair-minded critics to have gone as far as it could in satisfying nationalistic ambitions. It need hardly be said that it was with reference to India's possible demands for gold that conflict between the aspirations of extreme nationalists and the interests of other countries was most likely to arise, and it was also clear that on this point nationalism that asked for too much was certain to overreach itself. The outlook for the gold supply of the future is so full of uncertainty, and depends so much on the views that may be taken by nations asserting new-found economic strength concerning their demands upon it, that those who regard the gold problem from the world point of view tend to favour the collection and maintenance of a central gold pool, to which all the nations should be attached by gold exchange standard. Those, on the other hand, who take the nationalist view want to see their country rescued from the financial dependence which the exchange standard is supposed to imply, and endowed at once with its own gold reserve and gold currency.

On this point the decision of the Commission will disappoint both extremes, and is therefore probably right. A good deal of surprise was expressed when at the end of last year the official view of the Indian Government was expressed in favour of a gold currency for India. Writing on December 10th, our Calcutta correspondent recorded, in a letter published in our issue of January 9th, the dramatic surprise caused by "the revelation that the Indian Executive, on the advice of a Finance Minister recruited from the British Treasury, was allying itself with the indigenous demand for a full gold standard and currency," and the "pleased bewilderment" that it produced. Sir Basil Blackett, however, was more successful in delighting the financial extremists of Calcutta than in convincing the Commission. In spite of the force and lucidity with which this distinguished administrator doubtless put the case for a gold currency for India, the Commission recommends what it calls a "gold bullion standard" very similar to the system now at work in England; under it the currency will be directly convertible into gold in quantities of not less than 400 fine ounces, but gold will not circulate as money, and the legal tender of the sovereign and half sovereign will be withdrawn. In setting forth the reasons why it was unable to recommend a gold currency, the Commission mentions, among the points which it had to consider, the effect of the absorption by India of about £103 millions of gold (in addition to normal absorption for the arts, hoards, &c.) on the supply of credit, rates of interest, and gold prices throughout the world; the effect on the silver market, on "the favourite store of value of the Indian population" (that is, silver); the effect on India of the probable reaction of these proposals on silver-using countries, especially China; and the possibility of the provision of British and American credits for the execution of the plan. On the subject of the future of the gold market, so interesting to all consumers, producers, and investors, the Commission found it impossible to arrive at any definite conclusion, but was convinced that it would be most imprudent to ignore the "possibility, indeed the probability, that, unless great economy is exercised in the use of gold.....we have to look forward to a prolonged period of steadily falling commodity prices throughout the world." As to the huge stock of gold in America, the Commission learnt that "the residuum of free gold available is not in excess of the probable requirements of other countries for purposes of reconstruction." As to the raising of the required credits, both the Governor of the Bank of England and the Governor of the Federal Reserve Bank of New York "view the

proposal with alarm, on the grounds that it would retard the progress of monetary reconstruction in Europe, would upset world prices, and would be fundamentally harmful both to India and to the rest of the world." Moreover, the bankers of the United States could not be expected to encourage a proposal which would deal "such a blow to the silver market as the addition to supplies of thrice the whole of the world's production for a year," and it therefore appeared that insuperable difficulties would be encountered in obtaining the necessary credits.

For these and other reasons, which appear to be overwhelming in their force, the Commission rejected the proposal for a gold currency, the effect of which in curing the hoarding habit looks, at this distance, highly dubious. The reasons for which it also rejected proposals for a sterling exchange, or gold exchange, standard are less convincing; it considers that an exchange standard has a "refined" mechanism, and that "some knowledge of economics is necessary to understand it.....The uninstructed see nothing tangible behind the token currency to assure its value. These characteristics inherent in an exchange standard make it unsuitable to the needs of a vast community or collection of communities, the various members of which are of all degrees of education, and indeed of all degrees of civilisation." Whether an exchange standard is really much more difficult to understand than any other monetary system is a question on which much might be said; but if it be true that a large body of public opinion in India is suspicious of the mechanism of an exchange standard there is no need to look farther for arguments against it. Since at present "Indian public opinion will have confidence in one thing only as solid enough for a backing for its currency, and that is gold," the case for the bullion standard is irresistible; and if some day, when the question of the gold market is clearer, India likes to go a step farther and have a gold currency in circulation, its way will have been cleared, as the Commission points out, by the system now proposed.

As was generally expected, a gold parity equivalent to an eighteenpenny rupee was recommended by the Commission, and it is reported by our daily contemporaries that Lancashire is highly gratified, and hopes for an improvement in the cotton trade. Certainly this decision is greatly preferable, from the Manchester point of view, to the dislocation that must have followed a reversion to 1s 4d, but it is hard to see how trade can be materially improved by the maintenance of the rate which has long been current. The feature of the Report which will meet with most opposition is the recommendation that the control of India's currency and credit system shall be entrusted to a new Central Bank, instead of to the Imperial Bank of India, which was believed to have been formed in order to be made into the Central Bank when the time came. On this point controversy is likely to be vigorous. The reason for the Commission's decision is that the Central Bank should not, in its opinion, do a general commercial business, and that, since the Imperial Bank has built up a flourishing business as a commercial bank, which in India's interest ought to be maintained and developed, it is precluded from becoming the Central Bank. Most Central Banks confine themselves, in the main, to the task of keeping the accounts of the Government and of other banks, and do not do a general business, and although the Bank of France might be cited as a successful example to the contrary, the arguments in favour of keeping the Central Bank apart from the sphere of ordinary commercial banking are, in our view, conclusive. If the contrary policy is adopted there is bound to be conflict within the Bank itself between its duty as the credit-regulating authority and the desire of its branches to push its commercial business, while its power as a Central Bank makes competition with other commercial banks a very biased affair. It is significant that four of the signatories of the Report are directors of the Imperial Bank, and we hope that the considerations which have appealed to them will, on second thoughts, convince the public opinion of India of the wisdom of the proposal.

It seems likely that the Government of India will adopt

the Report, and put into effect these sane and balanced proposals. What the rest of the world wants is to see the inhabitants of India developing the banking and investment habit, and forswearing their mania for hoarding. With their new bullion standard reinforced by an ingenious system of gold saving certificates, it may be hoped that their financial practice may be more worthy, in future, of the great wealth and progress of their country.

THE "SUMMER SCHOOL" SEASON.

Nor many years ago the month of August was accounted a dead season for the newspapers. But in recent times the amazing growth of the "summer school" habit has filled their columns with reports of addresses on every subject under the sun delivered to political and other assemblies of enthusiastic searchers after truth. This development is a healthy sign of intellectual vigour, and, in the case of the political meetings, a very laudable attempt to refresh the stuffy atmosphere of day-to-day politics with the clearer breezes of first principles and political philosophy. This year Oxford has played a particularly prominent part in these gatherings, which endeavour to bridge the gulf between the academic world of ideas and the popular mind, for among a singularly full programme of summer meetings of various kinds it includes the ninety-fourth meeting of the British Association, under the presidency of the Prince of Wales.

The Prince had a very fruitful theme in surveying the progress of science over the past century, and the part which has been played by the co-operation of the State. The history of the British Association covers a period in which the theoretical and practical achievements of science have enabled it to fight its way into the universities, to overcome the opposition and secure the tolerance of the Churches, and finally to enlist in its support the active co-operation of the Government itself. The Prince's review of recent history forms an impressive catalogue. The chief landmarks before the war to which he called attention were the establishment at the end of the nineteenth century of the National Physical Laboratory for the testing and standardisation of machines, materials, &c., the Development Commission in 1908, and, under the Insurance Act of 1911, the Medical Research Committee in 1913, which has since become the Medical Research Council. During and since the war the activity of the State in this direction has increased enormously, and the list now includes eleven research boards and twenty-two industrial research associations. These bodies are concerned with matters affecting almost every aspect of daily life. The speaker did not claim that the achievements of science owe very much to State intervention. On the contrary, he expressly recognised that science thrives best in an atmosphere of freedom, and that its progress ultimately depends upon the genius of the individual. Moreover, the story he had to tell must be judged by comparison with what has been achieved by Government action in other great nations. It is, however, ground for satisfaction that the attitude of the State has so definitely changed that great social resources are at the disposal of science, and that provision for research is now ample instead of niggardly.

But if progress in the physical sciences has been almost overwhelming in its rapidity, it is not so clear that comparable progress has been made in another field which is also included under the heading of science by the British Association—namely, that of economic and social relations. If we compare our economic and industrial organisation to-day with that of 20 or 30 years ago there are very few directions in which there have been developments in any way comparable to the great technical changes that have taken place. There are many who realise that experiments are being made in the United States in regard to the organisation of industry, marketing and standardisation of products, the relations between consumers or workpeople, and the ownership of industry which may soon bring about changes only to be described as an economic revolution. It is very desirable that we

BANKING FACILITIES

100 Broadway

New York City

should not be left behind. We therefore welcome the decision of the Government to send to America a small Commission of Inquiry under the chairmanship of Sir William MacKenzie, to inquire into industrial conditions and the relations of employers and workmen in America. It is a good thing that the Government should stimulate inquiry in this direction; but it is even more urgent that British employers should themselves realise that the last word on these matters was not spoken in the nineteenth century.

In this connection it is significant to find that both at the Liberal Summer School and at the economic section of the British Association considerable time has been devoted to the question of inheritance in its social and economic effects. Sir Josiah Stamp, in a lengthy examination of some of the issues raised by this far-reaching question, points out that average wealth has increased most rapidly in the last century in England and America, where inheritance is less restricted than on the Continent. He believes that inheritance is of diminishing and not of increasing importance in causing the great inequalities of wealth which exist to-day, and that a more equal distribution of wealth would tend to diminish saving. Conversely, he calls attention to the fact that the growth of capital is to a diminishing extent due to private saving, but is now largely the result of the accumulation of reserves by joint stock companies—a further important factor being the diversion of resources from consumption to saving by means of taxation. On the other hand, there are very important considerations of social justice which were developed by Mr Henderson, and referred to by Sir Josiah Stamp. What weight should be given to the feeling—if it exists—that inheritance gives an unfair advantage to many who are not on merit entitled to a long start in the race of life. Is the advantage of the start misused? Is the feeling of dissatisfaction one which has harmful economic reactions in preventing the development of a co-operative spirit in the nation? These questions clearly do not permit of statistical answers, but it is patent that the great distinction between the social organisation of England and America is the much greater freedom of movement in the latter country between the classes than in England, where, in spite of efforts to give greater opportunity to talent, we have still a very marked division into economic classes. On the one side this shows itself in an undue emphasis on class interests in labour politics, and on the other in conservatism among employers. In a densely peopled country like England this condition is undoubtedly fostered by the inheritance system. If it is true that British industry is chiefly suffering from the inefficiency of the second or third generation employer, who owes his position to birth alone, the problem of inheritance takes on a new significance. Though Sir Josiah Stamp and Mr Henderson differ in the degree to which they would modify the right of inheritance, both agree that death duties should be very much heavier for the second and subsequent generations than for the first, and many minds are engaged on attempting to devise schemes to that end.

Such ideas may be regarded by some as revo-

lutionary and dangerous. If so, it must be admitted that Oxford is this month full of inflammable material, for the process of increasing knowledge, whether in the physical or social sphere, inevitably leads to change. As Mr Lloyd George pointed out in another connection, "the greatest revolutionary England had produced was not Cromwell, the regicide, not Robert Owen, the Socialist, not Keir Hardie, the Labour leader, not Cook, the fiery strike leader, but W. E. Foster, the narrow, stern Whig individualist, who threw open the door of the elementary schools."

THE FINANCIAL RESTORATION OF BELGIUM.

(BY OUR PARIS CORRESPONDENT.)

THE preliminary conversations which took place in Paris last week between MM. Poincaré and Briand, on the one part, and MM. Vandervelde and Francqui, two of the leading members of the Belgian Ministry, on the other, gave rise to circumstantial reports that the French and Belgian Governments had agreed to take common action for the support of their respective currencies. Inquiries show that this conclusion is, at least, premature, and that there is as yet no question of any definite alliance between the French and the Belgian francs, based on mutual action.

In view of the curious parallel which exists between the situations of the two countries at present, it may be useful to set forth, as briefly as possible, what Belgium has already done in an attempt to restore her financial situation. The steps taken in Belgium are all the more interesting from the fact that her first attempt to bring about stabilisation proved a failure, and that she is now engaged in putting into operation a plan which is based on much the same principles as those laid down by the French Committee of Experts, while at the same time it is somewhat broader and more flexible than the latter, and consequently more adaptable to circumstances that have recently arisen.

The Belgians insist that the plan developed by M. Janssen, Minister of Finance in the Poulet-Vandervelde Government, failed chiefly owing to the exigencies of the American financiers who were appealed to. These being unacceptable, the idea of securing foreign credits was abandoned. The Jaspar Ministry, which succeeded to power, became convinced that it was necessary that Belgium should rely for financial salvation solely on her own efforts—at any rate, until such time as her internal situation would have so improved as to enable her to command foreign assistance on reasonable terms—and the plan which is now apparently being successfully developed was drawn up.

The creation of a sinking fund for debt extinction is the key of the present Government's plan. This fund, which is endowed with a very substantial amount of autonomy, has for its object the reduction of all categories of the Belgian public debt—the floating debt pro-

perly so called, the debt owing to the Bank, the long-term debt, and the foreign debt. To this end the following resources have been placed at its disposal:—

(a) Normal endowments through the Budget amounting to about 450,000,000 of a year.

(b) The yield from the sale of surplus Government properties.

(c) Donations and legacies to the State, either designed for this express purpose or made without special designation.

(d) An annual endowment of 1,500,000,000 for a period of four years, derived from the yield from certain temporary supplementary taxation decreed to this object, the revenue from this source to be expended in equal monthly instalments for debt extinction purposes. It is hoped that this extra revenue during the next four years will prove sufficient to pay off the whole of the debt to the Bank, to extinguish the floating debt, and to cancel a substantial proportion of the consolidated debt.

This energetic redemption scheme has naturally necessitated a very strong effort on the part of the taxpayers. So far as direct taxation is concerned, it was considered impossible further to increase either income-tax or super-tax charges. Heavy additional burdens, however, have been imposed on real estate (which, notwithstanding general depreciation, appears to have preserved its gold value). The land-tax, for instance, has been increased by 50 per cent. The taxes on domestic servants and on horses have been doubled, and the tax on motor-cars has been increased by 25 per cent. The tax on amusements has also been increased. Increases in indirect taxation were aimed chiefly at luxury articles, with a view to reducing the importation of non-necessaries. At the same time the transfer tax, which corresponds approximately to the French turnover tax, has been doubled (so that it now amounts, as in France, to 2 per cent.), except in respect of certain foodstuffs, such as wheat, while its field of application has been appreciably broadened.

The new taxation imposed by the Jaspas Government is estimated as being likely to yield from 1,500,000,000 to 1,700,000,000 of additional revenue per annum, of which it is expected that at least 500 millions will be derived from the increased taxes on land and 530 millions from increased Customs and Excise duties.

Simultaneously, sweeping reductions of expenditure are contemplated, and power has been given to the King to make these reductions by decree. No additional public servants are to be appointed except by the advice of the Treasury and after consideration by the Cabinet. Temporary State employees are to be reduced progressively, and covenanted Civil servants are to be encouraged to retire before reaching the age-limit. A certain number of departmental services are to be either suppressed entirely or largely reduced. This will enable a substantial number of buildings used as Government offices to be given up. The carrying-out of certain projected public works, chiefly in connection with the railways, has been countermanded. The financial autonomy of local governing bodies is to be limited, and a check thus put on unnecessary expenditure.

Finally, the Belgian Government has decided to hand over the exploitation of its monopolies to what practically amounts to private industry. The King and the Ministers, in virtue of the discretionary powers conferred on them by Parliament, have promulgated a decree transferring the State railways to a "national company" for a period of 75 years. This new company will be under the control of twenty-one directors, nominated by the King from among Belgian business men, engineers, financial specialists, and railway workers. The necessary capital will be derived from public subscription. The first portion of the capital offered for subscription will consist of 2,000,000,000 of preference shares, bearing fixed interest at the rate of 6 per cent., and giving the right to a super-dividend of 3 per cent., the whole free of income-tax.

A second decree will require the forced conversion of all existing Belgian Treasury Bonds into preference shares in the new company. This step was decided on ten days previously, in view of the critical situation of the Belgian Treasury, and is to become operative forthwith. The effect of this decree will be to suppress the whole

of the Belgian floating debt, which amounts to about 6,000,000,000. In view of the fact that large parcels of Belgian Treasury Bonds are held in Holland, Great Britain, the United States, and other countries, it is understood that the new decree affects only holders of these bonds—bankers and private persons—actually domiciled in Belgium, and that special arrangements will be made with respect to foreign holders. Belgian and foreign banking firms represented in the country are officially stated to have given their support to the scheme.

A similar transfer of the Belgian telegraph and telephone monopoly is also under consideration, and is expected to become a *fait accompli* very shortly. This new company will have a capital of 1,800,000,000, of which 1,500,000,000 will be offered for public subscription, while the balance of 300,000,000 will be reserved to the State. Of the 1,500 millions subscribed by the public, 750,000,000 will be devoted to repayment of advances made by the Bank, or to the cancellation of the floating debt, and the balance of 750 millions will be utilised for the extension and modernisation of the telegraphic and telephonic system.

In view of the stubborn opposition hitherto offered by the French Socialist Party to the various proposals for dealing similarly with the French tobacco and other State monopolies, it is interesting to note that the "alienation" projects just referred to meet with the general approval of the Belgian Socialists, whose leader, M. Vandervelde, in his capacity as one of the most important members of the Government, is largely responsible for the adoption of this particular device for ensuring the financial restoration of his country.

TURKEY AND THE FOREIGNER.

(BY A CORRESPONDENT IN TURKEY.)

WITH the passing of the century-old Capitulatory régime, the foundations of which were well and truly laid in the days of good Queen Bess for the better protection of merchant adventurers and mariners engaged upon their lawful occasions in the territories and waters of the Grand Seigneur, the foreign trader in Turkey found himself, after the lapse of centuries and at almost a moment's notice, in the unenviable position of having to face a whole series of novel conditions, not the least important of which was the inevitable necessity of meeting and trying conclusions with competitors among a certain section of the native population which had in the past been relatively innocuous in the matter of trade rivalry.

It is interesting, after the lapse of some two years under these altered conditions, to take stock of the present position, and to appraise the measure of success or failure which has attended the vigorous efforts of the Government to enforce their fiscal and economic policy and the equally energetic exertions of the foreign community to hold their ground against the ever-encroaching wave of native competition. Although falling far behind the foreigner in the matter of experience, enterprise, and business acumen, the indigenous trader, shipper, or banker has been able, in nine cases out of ten, to hold his own against his foreign *confrère*, thanks mainly to a multitude of legislative expedients obviously framed with the main purpose of keeping "Turkey for the Turks."

In every branch of economic activity, whether commerce, shipping, insurance, or banking—in some of the liberal professions also, such as medicine and the law—the foreigner has had to contend with grave disabilities to which his more or less sheltered rival is not exposed. It would be manifestly unfair to the Turk to assert that the protection he has afforded to his nationals is either illegal or unnatural. He is, after all, master in his own house and free to run his establishment as he pleases. But the most ardent well-wisher, the most lenient critic of this country, must concede that the Government have not hesitated to foist upon foreign business communities a multitude of "administrative reforms" of questionable wisdom if this country and its population are to prosper. The compulsory employment by foreign estab-

lishments of an ever-increasing percentage of untrained and unskilled native personnel, for instance, the keeping of books and correspondence in the vernacular, which, it must be remembered, is a difficult Oriental language offering little scope for proficiency except to an infinitesimal number of European experts, the prohibition to transact any business whatever on a Friday, a day on which all trading and financial establishments are open throughout the rest of the world, are all of them measures well calculated to throw the machinery of commercial routine completely out of gear.

To say that the bye-laws or regulations governing these various matters have been enacted with the deliberate intention of driving the foreigner off the market, or out of the country, would be a misrepresentation of the facts. But that the Government have displayed remarkable ingenuity and imagination in devising machinery for deflecting the stream of trade and employment away from the foreigner, and directing it towards his Moslem neighbour, it would be idle to deny.

Apologists, moved no doubt by a spirit of fair play in their defence of the young Republic, and all it stands for, are wont to draw a parallel, in this question of administrative control, between Turkey and certain Balkan States, notably Bulgaria, where approximately the same conditions would appear to obtain with respect to official supervision of foreign enterprise, and the use of the Bulgarian language. The analogy is, in one sense, a happy one in that both the Bulgar and the Turk are pre-eminently peasant races, accustomed to and tolerant of constant bureaucratic intervention. But the simile is scarcely convincing when pursued to its logical conclusion, inasmuch as the Bulgarian system, from its very inception, was one of slow growth, which gave the foreigner reasonable time within which to accommodate himself to national exigencies whilst the services of foreign specialists were being utilised in training a generation of young Bulgarian officials to adapt themselves to Western administrative methods. The best friends of Turkey have felt all along that she would have been well advised to follow so considered a precedent instead of, metaphorically speaking, encouraging her youth to run before they had acquired the necessary balance to walk without a spill.

In the matter of Turkish competition, it would probably be safe to conjecture that, on the whole, the honours have been fairly divided between the two adversaries—foreigner and native. But the fact nevertheless remains that a number of foreign houses, from ready-made clothes stores to banks, have put an end to their activities in Turkey. Others again, whilst retaining a smaller organisation in this country, have gone across the border to establish themselves in Greece, Bulgaria, and Roumania, and with them, of course, has gone a goodly portion of their working capital.

Another factor which is rendering the foreign trader's position more and more precarious is the ever-increasing burden of taxation. He sees his hardly earned profits materially diminished by the interplay of income-tax, profits tax, stamp tax, municipal tax, public instruction tax, consumption tax, and numerous other imposts. No one would deny that, although potentially rich for her size, Turkey is to-day a poor country, and that, as such, her financial salvation can only be assured from within by a balanced Budget, fed on the revenue side, *inter alia*, by the taxation, without distinction of race and without tolerated evasion, of all who reside within her borders. But the far-sighted foreigner, looking ahead in the hope of ultimate relief, be it for himself or his Moslem friends, is nonplussed to find that year after year, and with a barely balanced Budget, nearly half of the State expenditure (ostensibly 46 per cent. for 1926, but, in fact, probably more) is accounted for by the upkeep of armed forces and the provision of military equipment and stores. This is obviously a domestic matter, with which the foreign trader has no concern, and Turkey, as an independent State, is at liberty to spend her money as she elects so long as she honours her obligations to her creditors. But the facts are there, and the foreign trader as a man of business and of figures, will be bound sooner or later to ask himself whether, in spite of improving trade returns, and the relative stability of the Turkish currency, as compared with that of certain European countries, the game, when all is said and done, is any longer worth the candle.

PROVINCIAL ELECTRICITY SUPPLY COMPANIES.

THE operations of the majority of provincial electricity supply companies last year were productive of satisfactory results. It might have been expected that the depression in the trade would have resulted in the earning of lower profits. As a matter of fact, however, judging by the figures of a group of thirteen representative companies, those companies operating in the big industrial centres actually did better than those whose area of supply lies in less important districts. This, in itself, is a tribute to the efficiency of the management of the companies comprised in the following table, which gives the comparative figures of profits and appropriations:—

	Year.	Brought In.	Profit.	Debiture and Loan Interest.	Prefer. Dividend.	Ordinary Dividend.	To Reserve, &c.	Carry Forward.
Bournemouth & Poole	1924	£ 7,941	£ 153,182	£ 10,491	£ 10,753	£ 37,006	£ 90,992	£ 10,881

The net profits of the Bournemouth were within £300 of the 1924 figure, those of the Folkestone were some £2,500 higher at £37,970, and those of the Isle of Thanet rose by approximately £1,000. On the other hand, the Newcastle earned about £40,000 more than in 1924 at £701,671, the Clyde Valley £20,000 more, the South Wales £36,000 more at £96,762, and the Northampton £23,000 more at £76,165. The exception was the Llanelli and District, whose profits declined from £39,369 to £38,279, and this is the only case in which the 1925 figures compare unfavourably with those of the preceding year. Reserves are not being neglected. The Newcastle, in particular, is maintaining an excellent record in this respect, and the only companies which did not augment or maintain their reserve appropriations were the Folkestone, the Isle of Thanet, and the Llanelli.

The following table compares the principal items of the last two balance-sheets:—

Name and Year.	Balance-sheet Total.	Chief Items of Liabilities and Assets.						
		Share Capital and Reserves.	Debentures and Loans.	Creditors.	Capital Expenditure.	Investments.	Cash.	D'trs.
Bournemouth and Poole	1924	£ 1,277,600	£ 941,731	£ 187,500	£ 101,110	£ 742,187	£ 398,143	£ 24,665

The alteration in the capital of the Clyde Valley was not due to the raising of fresh money during the year but to the fact that the ordinary shares issued in 1924 have since

become fully-paid. At the same time, temporary loans have been reduced from £733,414 to £299,014. The Electrical Distribution of Yorkshire, on the other hand, increased its capital during the year by the issue of 250,000 £1 ordinary shares at a premium of 6s per share. As was foreshadowed in the 1924 accounts, the Folkestone inaugurated a co-partnership scheme which involved the capitalisation of £8,000 of the reserve fund. The Isle of Thanet made no increase in its share capital, but during the year the debenture stock sinking fund came into operation, for which a special reserve account of £3,346 was established. In order to repay the 7½ per cent. debenture stock, and for general development purposes, the Llanelly issued £200,000 5 per cent. debenture stock and 50,000 preference shares, while the Midland Counties placed 250,000 preference and 250,000 ordinary shares, thus bringing the issued share capital up to £2,499,972. The Midland Electric, after the publication of the accounts, announced its intention of offering 70,000 new ordinary shares to the shareholders at par. Other capital increases were made as follows:—50,000 ordinary "B" shares by the Northampton, £400,000 5 per cent. prior lien debenture stock by the South Wales Power, and 500,000 £1 ordinary at 23s 6d and 756,000 6 per cent £1 preference shares at 21s each by the Yorkshire Electric Power.

In most cases creditors figure for more. Sundry debtors, too, are higher on balance, especially in the cases of the South Wales and Midland Counties, while capital expenditure shows an upward tendency. Investments are higher, although there was no pronounced general movement in the cash holding.

The final table gives recent dividends, prices and yields:—

Name and Amount of Share.	Dividends.				Prices of 1925.		Prices of 1926.		Present Yield.
	1922	1923	1924	1925	Hgat.	Lwst.	July 1925	July 1926	
Bournemouth and Poole (£1)	10	13	14	14	3½	2½	2½	2½	4 18 0
Clyde Valley Electrical (£1)	8	8	8	8	1½	1½	1½	1½	5 18 0
Llanelly and District (£1)	7	7	7	7	1½	1½	1½	1½	5 15 0
Midland Counties Electric (£1)	5	5½	6	6	1½	1½	1½	1½	5 16 6
Midland Electric Corporation (£1)	10	12½	15	15	2½	2½	2½	2½	5 16 0
Newcastle-upon-Tyne Electric (£1)	2½	6	7	7	1½	1½	1½	1½	6 8 0
Scottish Power (£1)	8	8	8	8	1½	1½	1½	1½	6 11 9
Yorkshire Electric Power (£1)	8	8	8	8	1½	1½	1½	1½	5 19 0

Bearing in mind the excellent results of recent years, some of the yields shown above are not ungenerous. Present prices are not very different to those ruling a year ago, and, in the majority of cases, are above the lowest touched during the current twelve months.

GERMAN COLONIAL POLICY—HUMANITARIAN AND ECONOMIC ARGUMENTS.

(BY A CORRESPONDENT.)

THE appearance in an English version of "German Colonisation, Past and Future,"* by Dr H. Schnee, the last Governor of German East Africa, may reveal to the English public something of the intensity with which the question of colonial activity is at present being discussed in Germany. Dr Schnee's argument in favour of returning to Germany her former colonies is based on her record as a colonial power in the past, and on the humanitarian policy she pursued, which he contends is evidenced by the zeal with which she promoted not only economic development, but all branches of science and learning, with a view to the improvement of the natives. Germany, he thinks, should again be permitted to take part in "this great cultural work for which she is so remarkably fitted."

This humanitarian plea, developed with great force and knowledge by Dr Schnee, is, however, not the only one being put forward. Apart from purely imperialistic arguments intended for home consumption ("Germany being a great power should have colonies," &c.), the latest line taken endeavours to prove that Germany will not be able to carry out the Dawes scheme without colonial territory, and that, therefore, it is in the interest of the Allied Powers to restore the lost colonies to Germany as quickly

as possible. The chief protagonist of this idea is no less an authority than Dr Schacht, the President of the Reichsbank, whose speeches on the subject have aroused considerable interest, first at the time of the Locarno Conference, and again in March of this year, at a meeting of the Berlin branch of the German Colonial Society. The question whether Dr Schacht's thesis is sound is of great practical importance, and demands careful elucidation.

Dr Schacht's basic argument may be summarised as follows: Germany can only fulfil her Reparation obligations by means of an excess of exports, which would have to consist largely of finished manufactured goods as Germany could produce a surplus of little else. But the creditor nations would certainly be unwilling to receive those goods, as they would compete with their own industries. It is also unlikely that investments in Germany by foreigners will be large enough to solve the problem. It only remains, therefore, for Germany to turn her activities to production of foodstuffs and raw materials for which there will always be a demand. In order to make such a development possible, Dr Schacht thinks Germany requires colonies of her own either with full sovereignty or with mandatory powers (the question of these alternatives is left open for the time being by Dr Schacht).

The number of problems raised by this argument, which may appear to be both simple and plausible, is indeed great. In the first place, it may be doubted whether the supposed unwillingness of the outside world to receive the kind of products which Germany produces to-day is not being somewhat over-estimated, especially in view of the fact that, after all, the maximum export surplus necessary would only represent a comparatively small percentage of the total world demand for industrial products. It may be pointed out, in the second place, that the production of foodstuffs, especially cereals, has lately been even less remunerative than industrial production. Has not Germany herself seen fit to subsidise agriculture by protective duties at the expense of her export industries? Coal and iron are also in a bad position. The gratuitous acquisition of oilfields, copper, or gold mines, is scarcely probable. Is it rubber, cotton, tea, and coffee that Dr Schacht proposes Germany should produce? The idea would appear to be that German and foreign private capital combined in the form of a chartered company should embark upon the production of these articles in a former German colony. Dr Schacht assures us that the terms would be made attractive to foreign capital, presumably more attractive than the purchase of shares in companies for the production of colonial products already in existence. German capacity for organisation might be able to make the foreign investments profitable, but where does the advantage to Germany, and more especially to the Reparation creditors, come in? Dr Schacht offers an explanation which it must be admitted is highly original. He says:—

"The economic absurdity of the Treaty of Versailles was clear when it was realised that at the same time as the Treaty demanded enormous payments from Germany it brought about an enormous restriction of the German currency area. Not only did it remove Germany's large colonial means of production, outside the sphere of her currency, but it also compelled her to acquire foreign exchange for the purchase of all raw materials from what had been her own colonies, thus artificially impairing her balance of payments in this respect. In the long run the economic and financial requirements of the Versailles Treaty had broken down on account of the German currency. From this it was clear what an important factor in the payment of reparations an extension of the radius of action of the German currency to the colonial sphere would be."

Germany would have to pay for her import of (say) cotton at the same world market price, irrespective of whether the cotton were produced in or outside German colonies (it may be assumed that no German colonial producer would accept a price lower than current market quotations), and these payments would ultimately take the form of export of finished products from Germany, which would go either to the German colonies or the outside world. The need to export would thus be the same in both cases, as the colonies would not give their

* Quoted from the *Times* of March 25th.

products to Germany for nothing. If the colonies had the same currency as Germany the exports to them would be credited to Germany in marks, while those to other countries would be in a foreign currency; but it is difficult to see what advantage that would give, apart, of course, from the slight increase in the profits of the Reichsbank on the issue of more notes. If Dr Schacht were correct and there were really some great advantage to be gained from a common currency, what folly it would appear to have been on the part of Holland to set up a separate currency in the Dutch East Indies with an independent central bank—the famous Java Bank—and how much they could have improved their balance of payment by counting all the imports from Java as home trade!

But is it not the case that colonies are more likely to buy the products of the home country than of other countries? Undoubtedly; but that depends not on the currency question, but on the direction of trade arising from common tastes, &c., or perhaps on Protection. Is there not lurking somewhere in the background a belief that colonies may be made to yield great profits to the home country? Such an idea is at least in direct contradiction to the principles on which mandates for the principal former German colonies are given by the League of Nations. The mandatory Power is, in the words of the Pact, bound to "secure equal opportunities for the trade and commerce of other members of the League." Thus the institution of chartered companies such as Dr Schacht proposes would appear to be impossible under the terms just quoted.

The return to Germany of her former colonies may be advisable from a humanitarian point of view, as part of a reconciliation policy between victors and vanquished in the late war, or in order to provide an outlet for Germany's surplus population; but Dr Schacht's attempt to enlist the interest of the Allies by arguing that colonial acquisitions will facilitate the transfer of reparation payments is probably doomed to failure. Any activity aiming at the exploitation of colonial territories for the exclusive benefit of Germany would in any case be contrary to the principles laid down for mandatory Powers under the League system.

Notes of the Week.

The Coal Situation—The week's developments in the coal situation may ultimately be adjudged to have brought the prospect of a settlement a little nearer, but at the moment it is difficult to interpret them with any degree of optimism. The delegate conference of the Miners' Federation, which met in London on Friday, July 30th, decided to refer the six points of the Memorandum drawn up by the Industrial Christian Fellowship (the terms of which were set out in the *Economist* of July 24, 1926, page 155), for ratification by the various districts, despite the opposition of the delegates from Durham and South Wales, who unsuccessfully moved a vote of censure on the conduct of the executive. Messrs Cook and Smith made it quite clear, however, that the arbitration clause would not be allowed to cover such matters as the length of the working day, or a settlement other than on national lines, and that a return to the *status quo* during the conduct of negotiations would be deemed as of the essence of the contract. The verdict of the districts is not available at the time of writing, but it is known that while Northumberland has accepted the proposed terms, Lancashire and Cumberland have rejected them, and lodge meetings held in South Wales suggest a similar decision in that area. In other words, feeling would appear most favourable in those districts which stand to lose least, while workers in the worst situated areas still maintain a dogged opposition to any terms involving a reduced standard of living. The Federation executive have, at least, abandoned the purely negative attitude which has done so much to protract the dispute, and made an effort to free itself from the "hand and foot" terms of the earlier delegate resolution. The district reports will be considered next week, when, it is

BANK OF ATHENS

Head Office: ATHENS.

Paid-up Capital
Drs. 72,000,000

With Offices in all the principal towns in Greece, Egypt, Cyprus, Crete, and Albania, the Bank extends facilities for Export and Import Trade between Great Britain and the Near East generally.

London: 22, Fenchurch St., E.C.3.

believed, a decisive majority for or against the Memorandum will be accepted as conclusive, while a close vote either way will be held to justify reconsideration of the whole question of future policy in the light of the present situation. Possibly the executive would like a freer hand than the delegates are in a mood to afford them at the moment. Meanwhile, there is no evidence of any further drift back to work on eight-hour day terms in individual districts, except in Warwickshire and Cannock Chase, where, despite the partial success of the efforts made by the Federation, some 4,400 and 4,300 men are respectively at work.

The Franc's Recovery.—If its success is to be measured by the exchange rate of the franc, M. Poincaré's Ministry has started with a very great victory, for the franc has dropped from over 240 to 162 to the £. This movement, which recalls the famous rise in March, 1924, has produced great satisfaction in France, and has contributed to enable the Ministry of All the Talents to pass by very large majorities its Bills for the increase of taxation. We can well understand the feeling of relief in France that after so much vacillation and failure there is at last a Government which has shown its ability to act, and to act quickly. M. Poincaré's very success makes us regret the more that he has not yet revealed any clear policy on the question of monetary stabilisation, nor shown readiness to strike while the iron is hot and settle the question once for all. In 1924 the franc was driven too high for want of any clear idea where it ought to be stabilised, and hesitation on this point to-day is, in our view, the greatest danger to the final success of the present Ministry. We hope, however, that our fears are unjustified, and we take some comfort from the fact that the text of the Banque de France Bill published on Wednesday contains a provision under which the Minister of Finance is authorised, during a period of three months, "to conclude with the Governor of the Banque de France all necessary conventions enabling the Banque de France to prepare, by means of the restoration of the franc, the stabilisation of the currency." Moreover, M. Poincaré had a conference with the Committee of Experts on Wednesday, and there is some reason for thinking that pressure has been brought to bear upon him to move in the direction of the Experts' plan. But all the statements so far made suggest that the Government is disposed to think that stabilisation is a measure which can be allowed to wait, or, at all events, requires prolonged meditation, when, in fact, the announcement of a sound and definite policy on this matter is the one thing needed to maintain the confidence which has been created by these initial vigorous measures.

* German Colonisation, Past and Future." By Dr Heinrich Schnee. Introduction by W. H. Dawson. Allen and Unwin. 5s net.

Trade Unionism in the Civil Service.—Grave constitutional issues are implied in Mr Churchill's announcement on Tuesday last, that the Government have decided that it is contrary to the public interest for associations of Civil Servants to be affiliated to outside industrial and political organisations, and intend in due course to introduce legislation dealing with the matter. The Parliamentary correspondent of the *Times*, speaking obviously from inside knowledge, has suggested that the decision is to be regarded as the first-fruits of the deliberations of "a strong Committee of the Cabinet, which is understood to include the Law Officers," on certain matters arising out of the late general strike. The Government, it is understood, have no objection to members of the Civil Service combining for their own protection, and they do not oppose the formation of trade unions, though it has not been made clear whether the right of such unions to declare a sectional strike in defence of their members' interests is involved in this measure of recognition. The Government's attitude is, of course, easily comprehensible in the light of the events of last May. The members of the unions concerned, numbering some 126,000, were not, in fact, "called out" by the Trades Union Congress, but had they been called out a nice conflict would have ensued between their allegiance to the T.U.C. and their duty to the State. The Government can hardly regard with equanimity the possibility of its energies being paralysed at the source in the event of a similar future upheaval. As it is, some obscurity surrounds the past actions of certain of these bodies. The Assistant Secretary of the Union of Post Office Workers, for instance, is reported to have admitted that his union "gave the T.U.C. help during the strike," though "the members, as individuals, took no part in it," while the Civil Service Clerical Association instructed its members that they must not voluntarily undertake work outside their usual occupation except after consultation with the branch officers, who were to be "governed by the policy of the T.U.C." Most people will probably feel that those persons to whom responsibility for the State's administration and defence has been confided, and who receive the State's money in return, should not be subject to any influence even remotely conflicting with their duties to the nation. Trade Unionism has never been recognised as permissible in the Army and Navy; the right to strike has been expressly denied to the police force; why, then, should not similar principles be applied to all members of the Civil Service? The real difficulty is to know where and when to draw the line. Workers in, say, the Foreign Office and the Home Office might be held clearly to be covered by the above premises, but what of the Ministry of Works, for instance, the duties of many of whose members are indistinguishable from those of skilled and unskilled workers outside? Ought the principle to apply equally to Local Government workers, from town clerks to dustmen? The matter is obviously much less simple than it appears at first sight. We cannot, however, admit the force of the semi-official contention that the favourable position of the Civil Servant, both as regards conditions of service and of pension rights, is an argument for curtailing his industrial freedom. Many outside employers, including all the railway companies, have their own superannuation and pension schemes, without considering it necessary to forbid their workers to affiliate themselves to the T.U.C. or the Labour party. The proposals are likely to arouse much opposition among certain members of the rank and file of the Service, though public opinion will probably be behind the Government if its measures can be shown to strike an equitable balance between the duties of its workers as public servants and their rights as private citizens. In this connection the possibilities might well be considered of an arrangement similar to that adopted by the National Union of Teachers, who, while not affiliated to any outside body, promote Parliamentary candidates from time to time. The latter, if successful, may sit on opposite sides of the House, but invariably act together on educational matters.

Rural Housing.—The Housing (Rural Workers) Bill, which was given a second reading on Tuesday last, marks a further stage in the Government's housing policy. The Minister of Health, Mr Neville Chamberlain, in introduc-

ing the measure, declared that the rural housing problem differed from that in urban areas in two important respects. It was concerned, firstly, not with a rising but a stationary population, which suffered less from an actual shortage of accommodation than from the exceedingly bad state of disrepair into which the existing accommodation had fallen; and, secondly, the possibility of obtaining an economic rent was unfortunately precluded by the depressed circumstances of the agricultural worker. The Bill enabled local authorities to submit schemes within the next five years for the structural improvement of country houses of a value (including such improvements) of not more than £400, special provision being made to exclude slums from the benefit of the clause. Assistance in approved cases might then be given by way of grant—in which case the cost of the improvements would be borne, broadly, in equal proportions by the Government, the local authority, and the landlord, the amounts provided other than by the landlord being subject to a maximum of £100—or by way of loan from the local authority during the progress of the work, limited to 50 per cent. of the amount actually expended. To facilitate the process of checking the estimates submitted, it had been decided to make the county council the responsible local body in the first place, though the Ministry would have a discretionary power to delegate the work to district councils in certain circumstances. While the Bill was generally welcomed on the Ministerial side as a practical effort to enable the "poor" landlord to effect repairs otherwise beyond his means, its opponents based their case on the arguments that sufficient powers already existed to compel the rich landlord to carry out necessary repairs, while his poorer colleague would be able neither to provide the wherewithal for the one-third share of the cost which would fall on his shoulders, nor to obtain any return thereon from his impoverished tenants; that if a subsidy were to be paid at all, it should be retained for the encouragement of new building, rather than the patching-up of old and decrepit properties; and that once the principle of the Bill were admitted, no logical reason could be advanced against the extension of State subvention to drainage and a thousand-and-one other purposes. Some of these criticisms certainly appear to carry considerable weight. The Bill is entirely permissive, and while the best type of "rich" landlord may be willing to co-operate with the State in effecting improvements in return for the moral satisfaction associated with philanthropic endeavour, his less public-spirited colleague will probably lack the inclination, and his poorer colleague the means, to do so. The £400 maximum clause would seem, further, to limit the application of the Bill's provisions to exceedingly small cottage property—e.g., it will be possible to obtain approval for the carrying-out of repairs valued at £150 to property at present worth £250 or less. The proportion between the two figures seems unduly high. The Government will probably endeavour to press the Bill through all its stages before the end of the present session.

The Abyssinia Debate.—It is so much to the good that the Anglo-Italian Agreement regarding Abyssinia should have been ventilated in the House of Commons. As on certain previous occasions, the upshot is that Sir Austen Chamberlain is well-meaning and honourable, but neither very clear nor very far-sighted in his conduct of foreign affairs. If we really want the Lake Tsana dam, the step which he has taken has hardly been a step in the right direction. No doubt it might have been difficult to get the dam without Italy's assent, but it will certainly be impossible to get it if we have aroused Abyssinia's resentment and suspicion; and this we have, perhaps, effectually accomplished by linking our limited and strictly economic desiderata with Italy's wider and less unequivocally non-political ambitions. Two distinct questions are involved: first, what are the best means of increasing the supply of water for irrigation in Egypt and the Sudan; and, second, whether the diplomatic procedure agreed upon between Great Britain and Italy constitutes diplomatic pressure upon Abyssinia? With regard to the former question, Sir Murdoch MacDonald (who as one-time adviser on irrigation to the Egyptian Ministry of Public

Works was better qualified to speak on this point than any other member of the House) pointed out that there was a feasible alternative to the Tsana storage scheme in the construction, within Sudanese territory, of an additional barrage on the Blue Nile, above the existing barrage at Mekwar. Since Sir Austen Chamberlain mentioned in the debate that the Emperor Menelik gave the British Government the refusal of the Tsana scheme as far back as 1902, it is also pertinent to mention that, after the technical aspects of the Tsana scheme had been examined on the spot and reported upon favourably by Mr Dupuis, of the Egyptian Irrigation Service, Sir William Garstin, then Under-Secretary of State in the Egyptian Ministry of Public Works, in his celebrated report of 1904 on the Nile Waters, discussed the relative merits of the Tsana scheme (in Abyssinian territory) and the Upper Blue Nile scheme (in Sudanese territory) and pronounced against the former on the ground that it would produce awkward political complications. This judgment was endorsed by Lord Cromer in a covering letter to Sir William Garstin's report. In the light of what has happened, the judgment of these two weighty authorities must be held to have been better than the judgment of Mr Baldwin's Government when it entered into these unfortunate negotiations with Italy last year. As regards the question whether the procedure laid down in the Anglo-Italian note constitutes "pressure," Sir Austen Chamberlain's opinion in the negative would appear, to the layman, to be less convincing than the affirmative opinion of the Abyssinian Regent. The British and Italian Governments have not only agreed to take identical action at Addis Abeba, they have promised one another not to desist from their respective diplomatic efforts until both demands have been accepted by Abyssinia. This pledge is cast in the same form as the London Agreement not to make a separate peace between Great Britain, France, and Russia. Pledges "not to make a separate peace" surely imply something comparable to a state of war. It is certainly a good thing that all this is to be threshed out in public at Geneva.

The Kulturkampf in Mexico.—The outbreak of a struggle between State and Church in Mexico is grave, but it is neither unforeseen nor unprecedented. The upheavals by which Mexico has been convulsed since 1910 represent the release of forces long pent-up. Under the leadership of revolutionary idealists and revolutionary adventurers, the native peasantry (who constitute the mass of the population) and the small, but well-organised and powerful, class of industrial workers have been coming into their own; and, in the course of this development, a struggle between the revolutionaries and the Catholic Church for the allegiance of the peasantry was bound to come sooner or later. The actual conflict has arisen out of the ecclesiastical clauses in the Carranza Constitution of 1917, which are just being brought into force by the present Government of President Calles. Under these clauses, all primary education has to be secular; all private schools are subject to Government supervision; no ecclesiastic may establish or direct a school; monastic orders are forbidden, as involving a contract restricting a Mexican citizen's liberty of conduct; marriage is a civil contract; State legislatures may limit the numbers of priests in proportion to the population; and only a Mexican by birth may be the minister of any creed (a measure directed against the practice of filling high posts in Mexico, in the Roman Catholic hierarchy, with foreigners). The Catholic Church has retorted by declaring an interdict, which came into force—simultaneously with the Government's ecclesiastical laws—on the Friday before last (July 30th). Collisions occurred—though apparently to a lesser extent in the provinces than in Mexico City—between the police and the crowds which filled the churches to attend the last services conducted by the priesthood. There was some shooting, resulting in bloodshed and loss of life. On the whole, however, the struggle has been conducted with moderation on both sides, considering the strength of the opposing forces and the vehemence of the feelings aroused among an excitable population. The Government, having taken over the churches as national monuments, has left them open for private worship, and this has relieved the

tension. The Catholic episcopacy, on their side, have proposed a truce in order to give an opportunity for the controversy to be decided by a plebiscite, but this proposal has been rejected by President Calles. The outcome of the struggle may turn upon two factors: the attitude of Mexican organised labour and the attitude of the United States. On Monday a great Labour demonstration on the Government side was carried out in Mexico City, in spite of opposition from a clerical wing. As for the United States, it appears that Mgr. Tito Crespi, the ecclesiastic in charge of the Apostolic Delegation in Mexico, whom the Government has just expelled, is a United States citizen. The whole conflict has also naturally aroused considerable feeling among the Catholics of the United States, who are a powerful community. It seems certain, however, that in this, as in other internal conflicts in Mexico, the Washington Administration will preserve the strictest neutrality.

Our Index Number.—Irregular movements in commodity wholesale prices in July resulted in a slight net upward movement in our Index Number, the total being 4045, or 10 points higher than at the end of June. The table below shows the changes in each of the five groups:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, tin, oil, &c.).	Total.	%
Basic (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	579	352	616	464	553	2565	116.6

" July, "	910	678	945	763	748	4045	183.9

Changes in foodstuffs were of no great importance, cereals, meat, and sugar being a little higher, while tea and coffee declined slightly. In the textiles section the most prominent change was a further sharp decline in jute on very favourable crop prospects. Wool and silk were higher, and there was a small upward movement in cotton. In the minerals group pig-iron was again higher; stocks are dwindling, and very little is being produced. Tin and lead advanced. In the miscellaneous section the feature was a sharp decline in indigo. The following table shows the changes in each commodity's index number in comparison with the end of June, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	105	+ 1	Cotton, A	92	+ 7	Copper	49	+ 1
English	111	+ 6	Cotton, E	112	+ 1			
Flour	100	— 2	Cloth	32	+ 3	Minerals	763	+ 28
Barley	67	— 2	Wool, Eng.	106	— 8			
Oats	83	+ 5	Do Aust.	108	— 3	Baltic timber ..	93	..
Potatoes	53	+ 3	Silk	102	— 11	Amer. timber ..	77	..
Rice	123	— 2	Flax	85	+ 3	Leather	60	..
Beef	72	+ 1	Hemp	90	+ 1	Petroleum	103	..
Mutton	84	+ 1	Jute	59	+ 1	Oils	75	..
Pork	111	+ 3		97	— 47	Oilseed	80	+ 3
						Tallow	70	— 1
Cereals & meat ..	910	+ 16	Textiles	945	— 18	Indigo	76	— 13
Tea	152	— 6	Pig-iron	97	+ 10	Crystals	85	..
Coffee	138	— 4	Steel rails	66	+ 2	Rubber	21	..
Sugar, cane	94	+ 3	Iron bars	84	..			
Sugar, beet	94	+ 3	Coal, steam	125	..	Miscellaneous ..	748	— 12

Mar., "	152	196	167	156	140	159.4
April, "	154	193	162	154	139	158.0
May, "	153	194	159	155	139	157.1
June, "	154	194	156	158	138	157.3
July, "	157	193	153	164	135	157.7

A feature of this table is the steady drop recorded by the textile group. At this time last year the figure was 207. The fall has been common to all the items, but most prominent in the cases of Egyptian cotton, wool, and jute.

Cotton Spinning Depression.—Our Manchester correspondent writes:—Serious attempts are now being made in the Lancashire cotton industry to relieve the severe depression which is particularly pronounced in the section producing yarns from American cotton. A few weeks ago the Master Spinners' Federation announced that the owners of 93 per cent. of the spindles using American cotton had approved the scheme of basic prices for standard yarns, but at that moment it was not considered desirable, owing to the unsettled industrial situation, to put the proposals into operation. This week, however, the Federation has announced that the scheme will come into force from Monday, August 16th. The Short-Time Committee of the Federation will meet on Tuesday next and decide upon the first list of prices. It is understood that on this occasion the Federation will begin on very modest lines, and gradually lift prices until they are on a profitable level. In this connection everything depends upon the loyalty of the members. On Wednesday last there was a meeting in Manchester of the committee of mill directors to receive a report on the replies to the recent questionnaire sent to spinners as to the formation of a limited company for the purpose of combining interests, the proposal being that all yarns should be graded by experts and minimum prices fixed. For the purpose of this ballot the number of spindles producing American yarn was taken as 28,000,000. It was stated that the owners of 19,066,438 spindles had voted in favour of the scheme, those against being 825,484 spindles, indefinite 405,604 spindles, no replies being received from the owners of 7,702,474 spindles. After a long discussion, the committee decided to recommend the trade to go forward with the scheme, and a mass meeting of spinning employers is to be held to consolidate the support so far given.

A Stolen Stamp Collection.—A case that has aroused great interest among stamp collectors, diamond merchants, and insurance companies was the subject, this week, of a judgment in the Court of Appeal; a judgment that reversed the decision of the first Court in a very remarkable way. The plaintiff was a very wealthy Belgian diamond merchant, who, like most Antwerp merchants, was well known in London, and had considerable dealings with Lloyd's underwriters. A stamp collector on a large scale, he possessed a very valuable collection, which was insured by underwriters for £44,000. This collection was stolen from an hotel in Berlin, where the assured was staying, but the albums were afterwards found with the more valuable stamps removed. A claim was made on the underwriters for £39,000, representing the insured value less the value of the stamps recovered. The assessors acting for the in-

surers, after examining the claim put forward by the collector, Mr Lek, advised the underwriters that the values placed on the stamps lost were considerably inflated. A compromise was suggested, but refused by the assured, who took the claim to Court. After a hearing that occupied the Court for more than thirty days, judgment was reluctantly given in favour of the defendant, the judge finding that the plaintiff had been led away by a collector's vanity, and had attempted to deceive by giving untrue particulars of the stamps in his collection, he being unable to say when and where he acquired his rarities. The plaintiff decided to appeal, and his counsel, addressing the Court of Appeal, emphasised the fact that the reason for appealing was to clear the hitherto unsullied name of Mr Lek. After reading the report of the trial, the Court of Appeal decided by a majority of two to one to reverse the verdict, and accepted the evidence of the assured. Lord Justice Scrutton, who dissented, expressed the opinion that unless it was absolutely clear that the findings of the judge below were wrong the verdict ought not to be disturbed. The position is, therefore, that, while Mr Lek's good name is cleared, two judgments are in his favour and two for the underwriters, and should the case go to the House of Lords the final decision will be awaited with interest. Arising from this litigation are some noteworthy points, especially the reversal of a judgment depending entirely on the credibility of a witness, the high costs, which are placed at £60,000, and the surprising number of professional men who have turned out to be enthusiastic philatelists. At least one of the counsel engaged was an expert, and it is said that one of the judges was also a collector. The case will emphasise the difficult position in which underwriters and insurance companies are placed when called upon to decide whether or not to resist a doubtful claim; it is obviously in the interests of both assured and underwriters that only genuine losses should be paid, but, on the other hand, it is no light responsibility to refuse an insurance claim on the ground of fraud.

Home Railway Dividends.—The interim dividends announced by the home railway companies are no worse than could be expected after the industrial events of the past three months. The three companies which pay interim dividends on their ordinary stocks have reduced their rates substantially, and the London and North-Eastern has deferred its dividend on the preferred ordinary stock, the Southern alone following its normal course, which is to pay a full 5 per cent. on the preferred ordinary stock, leaving the distribution on the deferred stock until the end of the year. The following table compares the interim dividends with those paid at this time last year:—

	Interim Divs. per Cent. per Annum.		Prices of Ordinary Stocks.		
	1925.	1926.	Highest, 1925.	Highest, 1926.	Aug. 6, 1926.
Great Western ord. stock ..	5½	3	111½	92	85½
London and North-Eastern pref. ord. stock	5	nil	83½	63	50
London, Midland, & Scottish ord. stock	5	3	102½	78½	71
Metropolitan Consolidated stock	4	3	83	70	63½
Southern pref. ord. stock ..	5	5	85½	79½	78

We showed in a recent issue that the gross receipts of the four large companies had declined by £13 millions, or 13.9 per cent. in comparison with the corresponding period of 1925, a reduction which cannot by any means have been covered by savings in expenditure. The directors of the London Midland and Scottish state that, although in the existing abnormal circumstances it is impossible to forecast the results for the year, they have decided to make such a provision from reserve as will enable the reduced dividend to be paid. At the end of last year this company reduced its reserves by over £1½ millions. The present reduced dividend will take £952,000 less, as against a reduction of £5,314,000 in gross traffic receipts. Six months ago the Great Western took £800,000 from reserve, but no mention of any such withdrawal is made on the present occasion, though it would seem probable that

some transfer will be required, traffics having declined by £1½ millions. The directors of the London and North-Eastern state that they have decided to defer consideration of the payment of dividends on the ordinary stocks until the full year's results have been ascertained. Interim dividends upon all guaranteed and preference stocks are to be paid, but will necessitate "a large draft" upon the compensation account reserve fund. At the end of last year this company took no less than £4 millions from reserves, its net revenue failing to cover the preference dividends by over £1½ millions. Traffics in the half-year declined by nearly £3½ millions. The traffic receipts of the Southern, on the other hand, declined by less than a million, and as only £200,000 was withdrawn from reserves at the end of last year, the present dividend would appear to have been covered by earnings. Our table shows the striking fall that has taken place in the market prices of the stocks concerned in comparison with the highest point of last year.

Tin and Tin Shares.—Our mining correspondent writes: Despite the prevalence of the holiday season and other conditions inimical to business on the Stock Exchange, a fair degree of activity has recently prevailed in the shares of tin-producing companies. This is a reflex of the advance in the price of tin, which now stands within a comparatively short distance of £300, and bids fair to go still higher. Last year's maximum was £290, that of 1924 just over £298. The end-July statistics showed the visible supplies at 13,000 tons, a reduction of fully 2,000 tons on the June figures, and representing little more than one month's supply. Possibly but for the coal stoppage at home the consumption would have been still larger, although it is to be feared that American and Continental manufacturers have benefitted from the state of affairs in Great Britain. In the light of the statistics above referred to, and with no prospect of any appreciable increase in the supplies—at any rate for some time to come—there would seem ground for a "bull" view of the prospects of tin-producing companies. So far interest has been chiefly confined to the shares of companies dredging in Malaya and Siam. With expenses on a scale in the neighbourhood of £100 per ton of metallic tin, it is obvious that handsome profits can be made. A factor in the market for Eastern shares consists in the partiality of Malayan operators for them. Quite a large proportion of the recent buying has been for account of residents in the Straits Peninsula, who are naturally in a position to know how matters are going at the different properties. Reference may be made to a few companies whose prospects can be regarded as exceptionally attractive. The Malayan Tin Dredging has now secured an increased output, thanks to the operation of an additional dredger. Another is due to start, and the whole six will be driven by electrical power. Later on a new property will be exploited by two further dredges. The Siamese, after overhauling three dredges, has just brought a fourth into commission, and expects to have another before the end of the year. As mentioned in connection with the annual reports, the Sungei Besi is completing its hydro-electric installation, which will increase the output and reduce the costs; the Tronoh is interested in this and other undertakings. Amongst recent introductions, the Eastern Siam, Tanjong, and Temengor are considered promising. The first-named was sponsored by the British Malayan Syndicate, the second by the Gopeng, and the third by the Malayan Tinfelds-Renong interest. On the basis of tin at £200, the net profits of the Tanjong are estimated at 20 per cent. per annum. Dredging should start before the end of the year.

Anglo-Dutch Rubber Results.—An excellent showing is made by the accounts to December 31st last, issued this week, of the Anglo-Dutch Plantations of Java, Limited, and the figures indicate the extent to which the recovery in the price of rubber must have benefited the larger producers. There is additional reason for satisfaction in the lucid and comprehensive presentation of the report and accounts, which might profitably be taken as a guide by

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
67 Milk Street.

BUENOS AYRES: HAVANA:
99 Florida. Pedro Gomez Mena Bldg.

Foreign exchange orders executed in the New York market for banking correspondents abroad. Commercial banking business of all descriptions transacted.

Special Representative:
24, OLD BROAD STREET, LONDON.

more reticent company directors. A comparative record of recent results is given below:—

	1919.	1920.	1921.	1922.	1923.	1924.	1925.
Share capital	£1,286,780	£1,330,170	£1,330,170	£1,330,170	£1,330,170	£1,330,170	£1,330,170
Loan capital	£1,286,780	£1,330,170	£1,330,170	£1,330,170	£1,330,170	£1,330,170	£1,330,170
Net profit	215,350	147,186	116,556	231,653	233,735	242,540	534,309
Brought forward	58,311	48,175	50,898	51,644	109,581	111,696	1,036,726
Available for distribution	273,661	195,361	167,454	283,297	343,316	374,235	644,665
Paid in dividends	225,187	144,763	115,810	173,715	231,620	251,753	435,726
Rate per cent.	17½	10 on old shares	6	9	12	13	22½
Carried forward	48,475	50,898	51,644	109,581	111,696	110,356	112,224

Net profits, it will be seen, have jumped from £242,540 to £534,309, while the dividend is raised from 13 to 22½ per cent. The increased dividend, however, has not been paid without due regard to the strengthening of the company's financial position, as £50,000 has been transferred to contingency reserve account and £20,000 to staff pension fund reserve. Moreover, the report states that although "the amount due to the directors as extra remuneration is £26,715, it is the intention of the directors to limit the amount taken this year to a sum of £15,000; the sum not taken will be written back in the next accounts." The company now controls 33 estates, with a planted area of 76,942 acres, compared with 68,678 acres at the end of 1924. Total expenditure on the estates last year was £1,101,346, of which £432,443 was charged to capital and £668,903 to revenue. The value of the 1925 produce was £1,336,396. It is stated that the reserve account opened in 1921 for depreciation of the company's rubber, tea, and sisal areas has been increased by £16,936 to £58,466. The labour supply is reported to have been sufficient, although a drought of exceptional severity was experienced during the year. The rubber crop totalled 5,997,659 lbs. against 3,650,638 lbs. and realised 2s 2½d per lb net in comparison with 1s 0½d, and while a slightly lower tea output was disposed of at practically 1924 levels, the coffee output rose from 20,397 cwt to 28,991 cwt, though the net selling price was reduced from 74s 7d to 73s 2d. On the other hand, a slightly larger Cinchona crop brought 49.17 cents per half kilogramme, compared with 42.57 cents. During the year the Sumatra Anglo-Dutch Estates was formed to take over the properties held by the Java company in Sumatra. The latter has guaranteed the payment of interest on the £250,000 first mortgage debenture stock of the new undertaking for a period of six years. It is also stated that negotiations regarding a concession for sugar are still proceeding. At the end of the current year the company's debentures become convertible into shares. It has thus become necessary to increase the capital by 250,000 shares, and the sanction of the shareholders to this step is to be sought at the meeting to be held on August 10th.

Guinness's Report.—The report of Arthur Guinness, Son, and Co., Limited, for the year ended June 30th last shows a decline of nearly a million in gross profits before payment of duties and taxation, but there was a saving of over half a million in Excise, Customs, and licences (which required £8,858,800, against £9,307,000 in the preceding year), and net profits were £452,000 lower at £2,433,300. As will be seen from the comparative table

below, this figure is under the average of the four preceding years, and 30 per cent. below the total for 1920-21 :—

	Receipts.	Ex-penses.	Net Profit.	Reserve, Depreciation, &c.	Ordin'ry Dividend.	Rate %
	£	£	£	£	£	
1908-9	2,218,160	1,096,522	1,121,638	230,000	700,000	14
1909-10	2,465,713	1,195,090	1,270,623	325,000	775,000	15½
1910-11	2,629,180	1,301,511	1,327,669	335,000	825,000	16½
1911-12	2,541,030	1,328,241	1,212,789	255,000	825,000	16½
1912-13	2,527,237	1,443,119	1,084,118	185,000	825,000	16½

1923-24	12,528,137	10,237,134	2,291,003	200,000	1,950,000	26
1924-25	13,220,814	10,335,276	2,885,538	400,000	2,400,000	32
1925-26	12,232,042	9,798,791	2,433,251	200,000	2,400,000	32

The net profit figure is struck after reserving £25,000 for depreciation and adding miscellaneous receipts of £3,300. The balance available for distribution is £3,451,800, against £3,752,900 a year ago, and includes dividends and interest amounting to £185,700 and a balance of £832,900 brought forward. The reserve allocation is reduced from £400,000 to £200,000, the 6 per cent. preference dividend absorbs £120,000, and after payment of 32 per cent. (free of income-tax) on the ordinary stock, the same as for the preceding year, there remains a balance of £731,800, or £101,100 less, to be carried forward. The balance-sheet, which is analysed in a later column, shows no very striking changes. Debtors and stock-in-trade have been reduced by £232,100 and £252,300 respectively, but cash and Treasury bills are £367,000 higher.

Bass, Ratcliff, and Gretton.—As was the case in 1924-25, the well-known brewing firm of Bass, Ratcliff, and Gretton, Limited, incurred somewhat higher expenses during the twelve months to June 30th last. Thus we find that in spite of the fact that the gross trading profit rose from £1,267,630 to £1,280,532, the net trading profit is reduced by more than £50,000 to £304,377. Although sundry revenue was slightly higher, the available balance is just over £50,000 down, owing to the smaller amount brought into the accounts. This will be seen from the following table :—

Year ended June 30.	1914.	1921.	1922.	1923.	1924.	1925.	1926.
Gross trading profit....	749,607	1,158,172	1,205,795	1,187,145	1,222,864	1,267,630	1,280,532
Expenses	455,611	880,771	925,946	857,617	851,301	908,767	976,155
Sundry revenue	293,996	277,401	272,849	309,518	371,563	358,863	304,377
Balance forward	143,153	236,894	200,528	204,394	236,796	259,466	277,868
	64,593	61,970	73,085	66,748	63,571	93,429	66,097
Deb. interest	501,742	576,265	553,462	580,660	671,930	711,758	649,342
Bad debts and invest.	80,800	80,800	80,800	80,800	80,800	80,800	80,800
Depreciation	34,266	29,980	13,514	43,889	64,501	81,661	36,869
Pref. dividend	68,000	68,000	68,000	68,000	68,000	68,000	68,000
Ord. dividend	204,000	224,400	224,400	224,400	265,200	265,200	265,200
Rate	15 %	11 %	11 %	11 %	13 %	13 %	13 %
Reserve, &c.	50,000	100,000	100,000	100,000	100,000	100,000	100,000
Carried forward	64,676	73,085	66,748	63,571	93,429	66,097	97,473

The ordinary shareholders again receive the dividend of 11 per cent., plus the 2 per cent. bonus, making a total of 13 per cent. for the year. The previous allocation to reserve took the total of the fund up to £1,000,000. This time no appropriation is made, but a further £100,000 is put to the property depreciation reserve, which was started in 1924-25, with a similar allocation, and now figures in the accounts for the first time. The item "goodwill and trade marks" remains at £800,000. During the year "licensed properties and trade loans" have gone up by a little less than £200,000. Otherwise, balance-sheet changes are unimportant.

Watney, Combe.—The accounts of Watney, Combe, Reid and Co., the well-known brewery undertaking, covering the year to June 30th last, show that the prosperity which has attended operations in recent years was continued during the past financial period, the trading profit showing a satisfactory increase. Owing, however, to increased provision for depreciation and to a rise in sundry expenses, the net profit is slightly lower :—

YEAR ENDED JUNE 30.

	1922.	1923.	1924.	1925.	1926.
Trading profit.....	1,412,961	1,415,115	1,479,694	1,891,054	1,919,671
Net profit	614,614	690,718	702,626	1,198,489	1,135,117
Brought forward	150,562	194,494	215,372	185,503	213,608
Total available	765,576	885,212	917,998	1,383,992	1,348,725
Pref. and pref. ord. dividend ..	216,249	215,007	213,945	213,945	213,945
Deferred ordinary dividend ..	254,833	254,833	318,550	1406,439	541,519
General reserve	(32 %)	* (16 %)	(20 %)	(17 %)	(17 %)
Carried forward	100,000	*200,000	200,000	550,000	350,000
	194,494	215,372	185,503	213,698	245,411

* Deferred ordinary capital doubled by capitalisation of £796,353 from reserves.
† Paid on a capital of £2,389,059, against a capital of £1,592,706 in preceding year.

The preferred dividend is maintained at 4 per cent., and the deferred shareholders receive 17 per cent. once more, in spite of the fact that during the year £796,351 of reserves was capitalised and applied to restoring the deferred capital to its original figure of £3,185,410. During the twelve months £30,000 of debenture stock has been redeemed and £40,542 of preference capital bought and cancelled. The balance-sheet shows that the holding of Treasury bills has gone up from £197,752 to £791,316, while trade investments of £63,910 compare with £35,837 a year ago. On the other hand, stocks have declined from £528,214 to £442,638, and the holding of cash has been reduced from £908,597 to £388,890. The allocation of £350,000 to general reserve brings the fund up to £359,455.

Oversea Correspondence.

UNITED STATES.—THE MARKETS—U.S. STEEL—COTTON CROP—BRITISH DEBT.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 27.
AFTER about a week of reaction, which seemed called for on technical grounds at least, the share market has taken on a firmer tone. During the reaction, which was moderate in extent, considerable short selling seems to have taken place. In any event, short covering to-day disclosed a rather scanty supply of stock, and sent the market leader, General Motors Common, up to a new high record for all time at 173. Meanwhile, the other condition that became noticeable a week or two ago, namely, a slowing down in the bond market and a firming up in the time-money market, has persisted. Bonds have been rather soft, the buying, which comes predominantly from banks and insurance companies, having slackened at about the same time that the banks decided that the more distant maturities of time money should command a slightly higher price. The firmer tone for money to be repaid in six months or thereabouts, which has established a rate of 4½ per cent., is probably a reflection of the feeling that business is improving, and that the third quarter of the year, which many of the prophets had picked out as one of definite reaction, will be a good one in business. At the same time, the feeling has become prevalent that there is no reason for assuming that the fourth quarter will not also be good. Business, in short, has proved better than had been expected, and the satisfactory showing has improved sentiment with respect to business in the next several months ahead. Meanwhile, with the banks asking a higher price for their more distant accommodation, and with the buying of bonds slackened, short-term funds have remained plentiful and cheap. Call money on the Stock Exchange is renewing at 4 per cent., which is as low a rate as has persisted for any considerable time this year. All this is, of course, quite consistent with normal seasonal tendencies, money generally being easier in the latter part of July and August, and then firming up as autumn trade and the holidays approach.

Considerable interest, in view of the strength in the shares, has been displayed in the quarterly meeting of the directors of the United States Steel Corporation, which was held after the close of the market to-day. There has been talk of a special distribution to the stockholders, but this talk has not been credited in good quarters. The event showed that it was without foundation. Only the regular dividends were declared. This does not mean that something special will not be done for the stockholders at some future date. However, it was not likely that the directors would take action when two of them, Mr J. P. Morgan and Mr George F. Baker, were abroad, while there has been nothing to indicate that the Mellon-cutting is to be done at this stage of affairs. The quarterly earning statement was excellent, as had been anticipated. Net earnings for the second three months of the year amounted to \$47,814,105, which corresponds to \$4.20 a share on the common stock. This figure compares with \$45,061,281 and \$3.88 for the previous quarter and with \$40,624,221 and \$3.06 for the second quarter of 1925. Furthermore, earnings were well maintained throughout the second quarter, despite the normal seasonal tendency toward curtailment of operations. Thus in April the figure was \$15,705,202, while in May it was \$16,159,866, and in June \$15,949,937. As steel prices have been rather firmer recently, and as operations at the mills are holding up remarkably, a good third quarter seems to be in prospect.

More hopeful views now prevail with regard to the agricultural situation. The rallies in grain and cotton prices have been fairly well maintained, and estimates of farm purchasing power, which erred on the side of pessimism, have been revised upward. The Department of Agriculture estimated the condition of the cotton crop, as at July 16, at 70.7 per cent., this comparing with the July first estimate of 75.4 per cent. The estimated yield was reduced from 15,635,000 bales to 15,368,000 bales. Last year's crop, it will be remembered, actually amounted to 16,103,000 bales. As an ample carry-over exists, the reduction in expectation and the concurrent improvement in prices have been subjected to bullish interpretation.

The controversy over the British debt settlement seems to be dying down, for which all our bankers are thankful. It has been their view that little good could come out of such a controversy, as the existing agreement is considered a settled thing (and apparently it is regarded similarly in the best quarters on your side), and as the unloosing of controversy offers the demagogues and the "haters" an opportunity that they are only too willing to embrace. Events seem to have justified this view. The judicious note with pleasure the manner in which the wise persons on your side have handled the situation, and are equally pleased that President Coolidge has let it be understood that he has no sympathy with "bump-tious" American tourists, and that he feels that we should try to understand the difficulties that are irritating Europe rather than condemn that continent for outbursts that, he feels confident, do not really represent public opinion.

The greatest interest, naturally, is being taken in the programme of the Poincaré Government. Our bankers note that the new premier expects to save the franc without foreign credits. They consider this intention extremely laudable, and sincerely hope that the effort will be attended by success. It cannot be said, however, that they are entirely sanguine of that success.

FRANCE.—NEW FINANCIAL MEASURES—DIRECT AND INDIRECT TAXATION—THE SINKING FUND.

(FROM OUR CORRESPONDENT.)

PARIS, August 5.

To many people, both here and abroad, the revelation of M. Poincaré as a Finance Minister of exceptional ability has come as a surprise. This is probably due to the fact that, owing to the rôle he has played in recent years as an intransigent nationalist politician, they overlook the fact that he has twice previously held with distinction the post of Minister of Finance—firstly as far back as 32 years ago, and secondly, some 20 years since. In French banking and political circles M. Poincaré's finan-

Bishopsgate, E. C. 3

cial genius is accepted without question. No less an authority than M. Caillaux himself is credited with having described M. Poincaré, some three or four years before the war, as "the greatest Finance Minister of modern times."

M. Poincaré's financial proposals are now to a great extent public property, and some of them have already become law. Prefaced by drastic modifications of the rules of Parliamentary procedure, designed to reduce useless speech-making to a minimum, M. Poincaré's plans may be dissected as follows :—(1) The voting of sufficient new taxation to place the Budget in a condition of super-equilibrium and remove all danger of renewed Treasury crises; (2) the creation and endowment of a sinking fund, impregnable protected against political interference, for the systematic extinction of the floating and short-term debt; (3) the accumulation, under the control of the Bank of France, of a stock of sound currency, to be mobilised when necessary in defence of the franc; (4) stabilisation and revalorisation of the franc; (5) the settlement of the inter-allied debts.

The first of these proposals, involving a total of 2,458,300,000 of additional taxation for the year ending December 31st next, and of 9,192,800,000 for 1927, was passed into law in a single sitting of the Chamber (thanks largely to the new rules of procedure and to the fact that M. Poincaré reminded deputies that every day's delay would cost the country 16 million francs, or 11,000 francs a minute). One of the outstanding features of M. Poincaré's speech on his taxation proposals was his insistence on the necessity to attract back into France the many milliards of capital that have taken flight before the threat of confiscatory legislation. The Government obtained a vote of 295 against 188 in approval of the new taxation proposals. The minority comprised not only the whole of the Socialists and Communists, but 47 impatient Radical-Socialists, while ten of the latter party abstained. The figures suggest that, seeing that 63 of M. Herriot's followers supported the Government, all danger of effective opposition may be regarded as neg-

ligible. The course of affairs in the Senate was equally satisfactory, and the Bill was approved by 245 votes to 8.

The report of M. Henry Chéron, the *Rapporteur Général* of the Senate Finance Commission, showed that the Treasury will require, before the end of the year, 2,854 millions of "exceptional resources" unprovided for by the Budget, this sum being made up as follows:—Internal and foreign debt services, 1,285,000,000; increased pay for public servants, 669,000,000; civil service pensions, 200,000,000; extraordinary expenditure in Syria and Morocco, 800,000,000; interest on advances by the bank, due to sinking fund, 300,000,000. Of the total, it is estimated that 830,000,000 will still be available from this year's yield from the Dawes Plan, leaving a net deficit of about 2,100 millions. "Exceptional expenditure" to be provided for in 1927 is estimated as probably amounting to 9,850 millions, including the 1,000 millions which has been promised to the public servants as increased pay, 300 millions for pensions, 950 millions of interest on advances made by the Bank. The Treasury will have to be prepared, further, to meet heavy maturities of bonds, totalling 3,063 millions in February and 4,405 millions in September, but these, it is anticipated, will be reduced effectively to about 3,700 millions in all, by renewals and fresh subscriptions. There are also 160 millions of six-year bonds to be paid off next year, while 3,740 millions will be required to meet foreign debt payments. The Dawes Plan, it is estimated, will yield about 4,000 millions to France next year, of which 2,000 millions will be available towards the foregoing total deficit; but it is considered advisable, in order to give the Treasury elasticity, to fix the amount of "exceptional resources" required in 1927 at not less than 9,000 millions.

Analysis of the new taxation shows that neither the Socialists nor their opponents will have much ground to complain as to its distribution between direct and indirect imposts. Out of the total of 9,192 millions involved for the remainder of this year, and in 1927, only 3,864 millions can be described as "taxes on consumption properly so called." A further 1,695 millions represents increased taxation of motor-cars, motor-cycles, and bicycles to the extent of 170 millions, while a 32½ per cent. increase in railway fares, an 11½ per cent. increase in railway goods rates, and an 8 per cent. tax on the value of freight transported on waterways are expected to yield an additional 1,695 millions. In France, transport rates have hitherto been 50 per cent. below those current abroad, and in some cases only a-tenth of those in vogue in certain "sound money" countries. The increased taxes on transport, as a matter of fact, will still bear practically the same proportion to receipts as in 1914, while the multiplication by a co-efficient of six of the fixed duties on coffee, pepper, chocolate, tea, salt, sugar, billiards, playing cards, motor spirit, and other articles is merely a readjustment of their amounts in proportion to the depreciation of the currency. (The fixation of the co-efficient at six would appear to indicate, by the way, that M. Poincaré hopes eventually to stabilise the franc at 150.) Readjustments of income-tax burdens, including a reduction of the maximum "general" tax from 60 per cent. to 30 per cent., and a substantial increase in the schedule rates, and similar modifications of the succession duties, are designed to bring to an end the flight of capital to other countries. These and other direct taxes are expected to yield over 3,500 millions of the total 9,192 millions of new taxation. The promulgation of the new Finance Act in the *Journal Officiel* brought the additional taxation for the current year into force yesterday.

The text of M. Poincaré's project for the creation of a *Caisse d'Amortissement*, or sinking fund, for the extinction of National Defence and Treasury Bonds and the industrial exploitation of the tobacco monopoly (which is to furnish the bulk of the money for the extinction of the short-term and floating debt) has been received with great satisfaction. The new organism will take entire charge of the interest services, reimbursement and renewal of the whole of the National Defence and Treasury Bonds (the maximum amount to be dealt with being fixed at 49,000,000,000). The latter will henceforward not be renewable except in the form of National Defence descriptions. The *Caisse* will "exploit, until the complete extinction of the bonds, the monopoly of the purchase, manufacture, and sale of tobacco." It will be ad-

ministered by a board of directors consisting of twenty members, who will between them constitute (1) a financial committee (composed of financial and banking experts) and (2) a technical committee (which will be more especially charged with the exploitation of the tobacco monopoly). The technical committee will have the assistance of a Consultative Tobacco Council of twenty-six members, which will include representatives of every category interested in the industry, from growers to retailers and consumers. The resources of the *Caisse* will include the net yield from the tobacco monopoly, and if this is insufficient to assure the interest service of the bonds, it will be supplemented from the Budget. The *Caisse* will also receive the yield from the succession duties, and the new tax on first sales of realty and business concerns, all unexpended balances of authorised Budget expenditure, the yield from any lotteries that may be organised by the board of directors, &c. As soon as the Bill has been voted by the Chambers, both Houses will meet as a National Assembly at Versailles, and the *Caisse* will be the subject of a special constitutional law. The tobacco monopoly last year yielded a net profit of 1,600 millions, and is estimated to produce over 2,000 millions this year and 2,600 millions in 1927.

The Bank of France has raised its discount rate from 5 per cent. to 7½ per cent., and the rate of interest on advances from 8 per cent. to 9½ per cent. As has been expected for some time, the rate of interest on National Defence Bonds has been raised by Ministerial decree, in view of the increasing dearth of money. Speculation as to the ratification of the Churchill-Caillaux agreement has been set at rest by the issue of a *communiqué* by M. Poincaré stating that, contrary to statements that have been published, "there is no question for the moment of asking for ratification by the Chambers." In this connection it is to be noted that M. Chéron points out, in his report to the Senate on the Finance Bill, that "in virtue of the provisional Pétet-Churchill agreement," £4,000,000 has to be paid to Great Britain before the end of March, 1927.

GERMANY.—UNEMPLOYMENT—FINANCES—CREDIT —INDUSTRY—BOURSE. (FROM OUR CORRESPONDENT.)

BERLIN, August 3.

The political situation is unchanged. The industrial situation tends to improve, but only the coal and iron branches show any marked increase of activity. Bankruptcies in July fell to 698, against 949 in June, and are now about one-third of the highest figure of this year. No return to good employment is considered possible before the winter, and then the usual seasonal increase must be expected. The highest, lowest, and latest figures (for the beginning of a month since January, 1925) of publicly supported unemployed are:—

1925—February 1.....	593,024
July 1.....	195,000
1926—March 1.....	2,056,179
June 1.....	1,744,539
July 1.....	1,742,567
